While the plan and its execution raise more questions than they answer, President Nasser's motive is clear. He has embarked again on the course of stressing the cleavage between reaction and revolution in the Arab world. His drive against the remnants of the old order in Egypt suggests a fear that they might gain enough popular support to copy their Syrian friends. He has decided against trying conciliation in favour of suppression, and has staked his personal reputation on forcing Egypt, willy-nilly, along the road to state socialism. The same theme recurs in the bitter propaganda campaign directed from Cairo against King Saud, as well as against King Hussein and the "reactionaries" of Syria. It may also underlie President Nasser's decision to withdraw military support from the "feudalists" of Kuwait.

One of the chief aims of the renewed strong emphasis on revolution *versus* reaction is to erect all possible obstacles in the way of a rapprochement between revolutionary Iraq and reactionary Syria, since an association of the two would pose the most serious threat yet to President Nasser's pretension to leadership in the Arab world. It may already be too late. The economic agreements just signed by the governments of Damascus and Baghdad, which provide for drastic lowering of customs barriers and for the free flow of capital and labour between the two countries, suggest that

Chemicals from Stratford
... and Henry Yeoman's aching back

CHEMICAL COMPANIES · INTERNATIONAL ENTERPRISE

Keen gardener Henry Yeoman. At least, he was. Until a morning's digging made him think his spine was broken. Not that Mrs. Yeoman seems to care, by the way she's rubbing in that embrocation. And that's where chemicals from Stratford come in.
A. Boake, Roberts & Co. Ltd.—one of the companies of the Albright & Wilson Group—produces menthol at Stratford. Menthol is an important chemical ingredient in a wide variety of products, from after-shave lotions to inhalants and embrocations. Like the embrocation being used here, for instance, to take the ache from Henry Yeoman's back.
This is only one of the ways in which A & W chemicals play a part in the life of Mr. Yeoman. As one of the biggest organisations in the British chemical industry, the Albright & Wilson Group contributes—but we could go on like this. . . .

The Albright & Wilson Group

hey are in a hurry to get together. When Cairo radio accuses the Syrians, Iraqis and Jordanians of discussing with the British and Americans a revival of the Fertile Crescent project, it is doubtless stretching a point or two. But there is at least a flicker of fire behind this particular smoke.

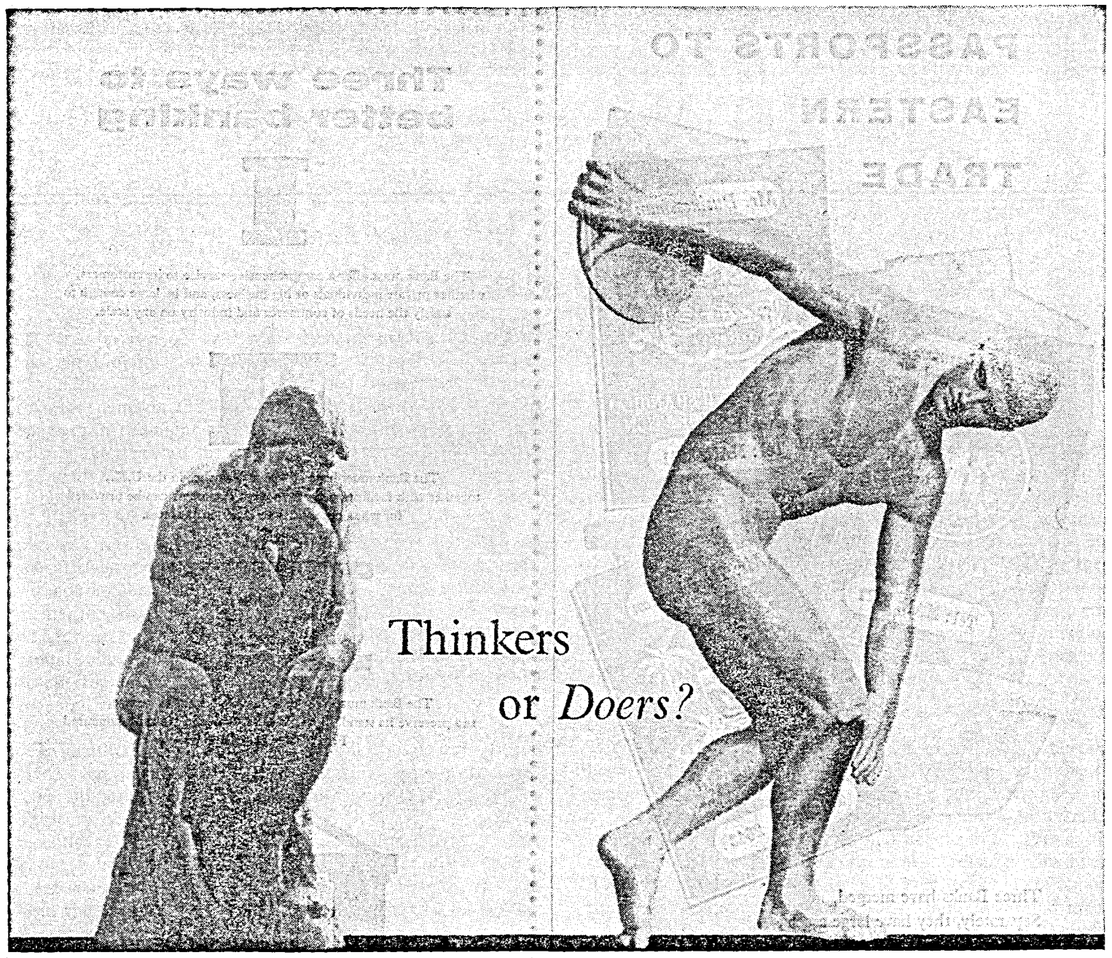
Brass Tacks in Brussels

FROM OUR CORRESPONDENT

AFTER the engagement, the marriage contract. Mr Heath's statement in Paris on October 10th about Britain and the common market undoubtedly made a favourable impression on those who heard it, and the summary released to the press (which appears to have emphasised the positive aspects of the speech) added to the atmosphere of optimism sparked off by the British decision to accept the Rome Treaty without amendment. If the exchanges which began in Brussels this week are likely to be much less starry-eyed, this is largely because in the meantime the community's negotiators have been examining the detailed implications of Mr Heath's suggestions for overcoming the three well-known major difficulties—the Commonwealth, agriculture and the European Free Trade Association.

In Paris Mr Heath had proposed that these problems should be dealt with by means of protocols to the Treaty. This proposal formally respects the insistence of the Six that the Rome Treaty cannot be substantially amended, but its significance is played down in Brussels, for protocols to the Treaty have exactly the same legal force as the articles proper. But they are only intended to cover exceptional cases, often with a time limit. The problems of the Commonwealth might prove too extensive for the Six to count them as mere "exceptions" to the principle of the common external tariff; and it is not clear here whether Great Britain for its part will be willing to make such exceptions temporary. Professor Hallstein made these points on Wednesday.

Mr Heath was apparently not specific about the various types of solution that might be found: he seemed to suggest that some Commonwealth countries might be associated with the enlarged common market as are the former French, Belgian and Italian colonies in Africa. Would such association be limited to African countries, or would it also be expected to cover India and Pakistan? Another solution mooted is that of tariff quotas; but under the Rome Treaty these are intended not so much as regular aid for non-member countries, but as a temporary means of allowing members access to necessary outside supplies. A third possible course would be to extend to Britain the kind of arrangement that at present allows France to continue its imports from Morocco and Tunisia; but this, owing to the differences of scale and kind between the French and British cases, would obviously run into difficulties both of principle and substance.



Apart from the trade-deflecting effects of such an arrangement, continued British imports of cheap food might well distort competitive conditions within the common market, and to remedy this it would probably be necessary to establish controls or levies on goods crossing the Channel—exactly the reverse of the common market's aim. A fourth approach would be to lower or abolish the common external tariff applied by the common market. This is already the case for a number of raw material imports which make up a substantial proportion of Britain's imports from the Commonwealth: if the European Commission's proposals to halve the tariff on coffee, cocoa and so on (made as part of its proposed new association agreement with the African states) were accepted, another precedent would be provided for this "global" approach.

Whatever the solutions ultimately agreed upon, it looks as if the Six will insist upon some adaptation of the Commonwealth preference system. All agree upon the importance of preserving the Commonwealth but many of them, as well as their American friends, have yet to be convinced that Commonwealth preferences are essential to this aim. Some believe that a concerted European aid effort might be as valuable to the Commonwealth countries as the preferences they at present enjoy. It seems to be recognised, however, that any adaptation of Commonwealth preference would have to be extremely gradual and that—particularly in the case of New Zealand—very generous arrangements would have to be made. The general principle underlying the community's approach to all the economic problems of its members seems to be one of gradual adaptation to a common policy assisted by community aid; and this principle seems likely to guide the community in seeking to solve the very genuine and complex problems of the Commonwealth.

On agriculture similar uncertainty reigns. Here again Mr Heath's Paris statement apparently did not propose detailed solutions, but indicated general willingness to share in the execution and, especially, the formation of a common agricultural policy. Although the Six have yet to agree on the commission's levy proposals, the process of reaching an understanding, with lobbying from pressure groups and the gradual softening up of opposition is already far advanced; final agreement may be reached at special council meetings later this month or in December, thus permitting the community to embark on stage two of the transition period on January 1, 1962. If this happens, Britain will find itself faced with at least half a fait accompli. This may be why Mr Heath in Paris asked for an agricultural transition period of the same length as that originally provided for in the Rome Treaty—twelve to fifteen years. Community farmers, on the other hand, who are now being asked to accept an eight-year transition, seem to feel that Britain's difficulties in adapting itself to community policy are in substance no greater than their own, particularly Germany's and should not require a longer period of adaptation. Some tough bargaining, therefore, seems likely here.

MR HEATH'S statement seemed to assume that Efta's problems must be solved before Britain joins the common market; and when the Danes presented their case in Brussels recently their foreign minister emphasised the importance of finding solutions for all the member countries. The Six, however, feel that the phrase "legitimate interests," mentioned in the Efta ministers' joint declaration in London on June 28th, is ambiguous; as a French representative recently remarked, one would like to know what the illegitimate interests are. The European Commission has recently been at pains to point out that association—publicly favoured by the three neutral Efta members—is an extremely flexible formula, presumably intending to imply that a full customs union like that with Greece is not necessarily on the cards for those who choose to be neutral of their own free will. Of the rest, Norway must modify its constitution before it can carry out its wish to apply for membership, and Portugal, like God in Browning's poem, has not yet said a word. How far Britain would allow its hands to be tied by these difficulties is a matter for speculation here; in the last resort it could presumably invoke the secession clause of the Efta treaty and opt out after a year's notice but nobody expects this dire situation to be reached.

For many reasons the Six genuinely want the British to join them, yet they are well aware of the dangers of enlarging the community so greatly so soon. They are finding it difficult enough to integrate among themselves; some fear that the fairly watertight union which it is their basic aim to create might turn into a leaky sieve. It is harder now to sense the current of optimism generated in Paris; but as one community official recently remarked "the new spirit shown by Mr Heath may count for more than people realise."

Both! Wimpey is a world of contrasts. Thinkers *par excellence*, for example, at the Wimpey Laboratories, where the quality of their work for Consultants, Local Authorities and Governments, has gained an international reputation. Doers too, are Wimpey—Europe and the Commonwealth's biggest building, civil, mechanical and electrical engineering contractors. Big enough to take a £20 million dam in their stride, and flexible enough to build a private house. Wimpey are world-wide yet Wimpey remain local. Wimpey are mechanised, with plant costing £12 million, yet Wimpey are people—over 26,000 efficient, on-the-spot, friendly, good-at-their-jobs people. So if you want Thinkers or Doers, for a small job in Sunderland or a dry dock in Karachi—or are thinking of a more substantial future for yourself—get in touch with Wimpey.

PASSPORTS TO EASTERN TRADE

Three Banks have merged.
Separately, they have large assets,
a fine tradition and a wealth of experience. United they offer a comprehensive service in all matters affecting business with the East and the Middle East. Their advice and help are your surest "passports" to profitable trade with those areas.

THE HONGKONG AND SHANGHAI BANKING CORPORATION
Head Office: Hong Kong.
London Office: 9 Gracechurch Street, London EC3

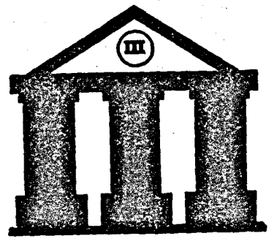
MERCANTILE BANK LIMITED
Head Office: 15 Gracechurch Street, London EC3
West End Branch: 123 Pall Mall, London SW1

THE BRITISH BANK OF THE MIDDLE EAST
Head Office: 7 King William Street, London EC4

Group total assets exceed £445 million

Three ways to better banking

I



The Bank must offer a comprehensive service to its customers, whether private individuals or big business, and be large enough to satisfy the needs of commerce and industry on any scale.

II

The Bank must have sufficient branches in the U.K., together with facilities overseas so that customers can be provided for when on holiday or away on business.

III

The Bank must offer local knowledge and expertise, and preserve its standard of personal service in the time-honoured Family Banker tradition.

THE THREE BANKS GROUP

If you have business in Britain they would be pleased to place at your disposal their wide experience of International Banking and Commerce.

THE BUSINESS WORLD

Trouble with Capital Gains

If resounding pseudo-moral arguments made good tax law, Mr Lloyd would not be in his present difficulty. It has been fully, if variously, described by a dozen political correspondents in the last ten days. Like the dog that did not bark in the night, the omission from the Queen's Speech of any reference to his proposed measure to tax short-run speculative gains has attracted remarkable attention, and elaborate efforts have since been made to explain it. Most of them have been larded with the predictable pejorative phrases ; the bill, it is asserted, will hit at the most glaring speculative operations and catch the anti-social operator, without discouraging genuine investment. Most of these comments, too, have sought to impart the simple-minded notion, which must be in Mr Lloyd's mind too, that legislation to tax capital gains will encourage trade union and public opinion to accept the wage pause and the rest of the Government's economic prescription. The pause looks like being over before the bill even appears.

Evidently this is proving no simple bill ; but no one who has given even passing consideration to taxing capital gains could have supposed that it would be otherwise. The orthodox Treasury view about capital gains—it was reaffirmed as recently as last April when Mr Lloyd introduced his first budget—has always been that the complications of taxing them would not justify the prospective net return. This has been the attitude about capital gains as a whole, not merely the short-term sort that are now thought to be so objectionable or embarrassing. But Mr Lloyd appears to adhere to the traditional view that long-term capital gains should not be made taxable and so has got himself involved in the insubstantial niceties between short- and long-term, whereas there is no ontological distinction between them. There was merit in Keynes's observation that investment should be made like marriage—indissoluble save for weighty reasons. But there can be no merit in any law that says that capital gains realised within, say, six months are "speculative" and taxable, whereas those realised after six months and a day result from "genuine investment" and should go untaxed.

It seems, indeed, from what the Chancellor said in his budget about capital gains, and from what he has said since, that he is missing a changing tide of opinion about their taxability. Since 1955, when the Royal Commission on the Taxation of Profits and Income came down against a capital gains tax, an increasing body of opinion (and not self-evidently left-wing opinion) has been questioning this immutability of doctrine, and even many of the subtleties of the Royal Commission's arguments in support of it. Today, many more people than then feel a greater response to Mr Kaldor's minority arguments for subjecting capital gains to income tax (not, he said, to surtax) with due allowance for realised losses. More people have been reaching this conclusion because of the readiness (less than it was, but still widely prevalent) with which certain transactions aimed at providing profit and therefore income can be dressed in the appearance of untaxable transactions in capital as distinct from trade. This poodle-faking is, indeed, less easy than it was; the Commissioners of Inland Revenue are much readier than they were to clip the "badge of trade" on to such transactions, whether they are paraded as being of a once-for-all nature or not, and without making fine judgments about their motivation ; and they are prepared to fight their decisions with determination through the courts. The evolving tests of what is taxable, and what is not taxable, as income nowadays bring within the ambit of taxation many gains that would formerly have escaped.

Yet the British tax code still seeks to apply a distinction between a detachable surplus arising from "an adventure or concern in the nature of trade," which is taxable income, and a profit from realising property not committed to a trade, which is an accretion to capital and not taxable. Preserving this distinction involves the drawing of increasingly fine lines. The "badges of trade" change with every widening of opportunity for economic gain. Mr Lloyd himself seemed to be closely on this point when he declared in his budget speech that firms or individuals who made a business of seeking capital gains are liable to full income tax, surtax and profits tax on them ; it was for the commissioners to decide whether a particular case fell on this side of the line, or whether it fell on the side of "genuine investment." At that stage, at any rate, he was endorsing the view that the commissioners could determine, under the existing law, whether "dealing" could be said to exist in a given case, and to act accordingly. And so he rejected "what is called a capital gains tax."

He may now be regretting this display of forthrightness. It is beginning to look as if a reasonably constructed capital gains tax, buttressed by a gifts tax, would serve the country, and the Conservative party, much better than the self-righteous nuisance that is now giving so much trouble to devise. Opportunity, means, and knowledge now confer on an ever-widening section of the community the ability to profit on the Stock Exchange and from transactions in all kinds of property. Nineteen ladies from Wallasey won the investment clubs' championship last year, with four per cent capital appreciation, based, it seems, on timely purchases of Butlins

and Dental Manufacturing; they and the other members of the association were told by Mr Whitelaw, a Conservative whip, that he thought the unions would demand restrictions on company profits as the price of acceptance of the Government's proposals for planning and wages, which sounds like two cheers for a property-owning democracy. The fact is that Throgmorton Street is no longer a top-hat preserve; the distinction between amateur and professional is breaking down here as elsewhere. The butcher and the baker pursue their bit of "tax free" quite as assiduously as the smart City gentlemen chase their bigger game; neither they nor anyone else will want telling to hold for six months and a day if that is the means of escaping tax.

Capital Gains

THE taxability of capital gains cannot be made to rest on any judgment that they are anti-social, and certainly not on any view that short-term gains are immoral, whereas "short-term plus one day" gains are not. The question is solely one of whether they should be treated as income or not. One view, which the British system has hitherto tried to preserve, is to distinguish between the "fruit" and the "tree," taxing the former but leaving the latter untaxed (except for those who deal in "trees"). The other view is to attempt none of this distinction and to roll up capital gains into taxable income, as the American Internal Revenue Code does, in one all-comprehending definition:

> "Gross income" includes gains, profits, and income derived from salaries, wages or compensation for personal service . . . of whatever kind and in whatever form paid, or from professions, vocations, trades, businesses, commerce or sales, or dealings in property, whether real or personal, growing out of the ownership, or use of, or interest in such property, also from interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, or gains or profits or income derived from any source whatever.

And this definition, the United States Courts decided at the outset, was to include any realised appreciation in the value of any assets, even though not in the course of business.

Since one can argue either way about bringing capital gains into taxable income, it is well to look at the Board of Inland Revenue's own recorded views, set down in a memorandum dated 1952 which was published with the Royal Commission's report. This first clears the hurdle about taxable capacity. There are, it provisionally concluded, some types of (realised) capital gains that are capable of bearing income taxation. But there would be "much public opposition" to the treatment as income of gains occurring on "ordinary changes of investments." Losses should be allowable, but not carried back. And having examined the impact of a highly graduated surtax on irregular gains, even when moderated by some method of averaging, the board was prepared to concede that a flat rate tax on long-term gains, as in the USA, might be preferable, or at any rate some graduation less steep than that of the ordinary income tax and surtax rates.

The pundits have recently been suggesting that Mr Lloyd's bill will tax short-term gains fully for income tax and surtax. Again, the board then saw little distinction on grounds of taxable capacity between short- and long-term gains, though it recognised that any such distinction, which would involve the definition of a holding period, would become of first-class importance, and difficulty, in administration. From these considerations, the board proceeded to outline a possible scheme, to tax realised gains on "any form of property" (other than stock in trade), with "realisation" defined to include dispossession by sale, exchange, compensated loss, gift or death. It allowed modifications for forced or voluntary conversions of property, and thought that owner-occupied property might be excluded, or any gains offset by the additional cost of a new house. It foresaw the need to prevent avoidance by using false values or spurious sales. And the gains would have to be returned on the ordinary tax declaration.

This is the barest summary of the board's outline, which itself was put forward with no illusions about initial complications and inevitable amendments. Much thought was given to the public reactions to a capital gains tax and to the effect on the board's work. It must be brooding over similar points now, even though a short-term capital gains tax would spare it the hideous difficulties of fairly computing "cost of acquisition" and the "spreading" of gains that an equitable tax on long-term gains would involve. "It is feared," the board then declared, "that the most willing co-operation from taxpayers would not be forthcoming. . . . With a tax that must be based largely on returns by taxpayers, the extent to which accurate returns are made will depend on the degree in which the tax is accepted as being levied on a proper subject matter and fairly distributed." A formidable "search for liabilities" would be involved, testing the reliability of returns against available sources of information—such as records of property transfers kept by the Valuation Office of the Inland Revenue, shareholders' returns at Bush House, Estate Duty Office records and "advertisements in the national and local press and in trade journals." The board thought that it might also be necessary to seek powers to obtain returns of transfers from the Stock Exchange, "from local authorities (re cars)," and from auctioneers and retailers in connection with transfers of such valuables as "jewellery, fur coats, antiques, pictures, stamp collections, horses, greyhounds, etc., etc." On the Stock Exchange side, it contemplated the possibility of a yearly volume of 2½ million transactions (probably on the low side even in 1952 and certainly low now) and it admitted defeat from the outset:

> It is not considered feasible to require comprehensive returns from stockbrokers. The sorting, and linking with departmental papers of some 2,500,000 items per annum would be almost impossible and probably uneconomical. It might, however, be necessary to require returns of transactions of over a certain amount, say £1,000, with a similar task of linking, etc.

Yet these horrors of policing would still be relevant to a short-term capital gains tax. It would be an optional tax in the sense that it could be totally avoided by a little waiting—short-term gains as defined for tax purposes would simply not be realised in the great bulk of cases. And the deliberate evader could make it largely optional in the different sense that the poor Inland Revenue would have less than a sporting chance of establishing dishonesty and bringing home the penalty.

Whether such an apparatus is going to be worth while to produce risible revenue and merely to extend the period over which short-term gains are taken is a matter for Mr Lloyd to answer. Among the particular cases that his bill will have to cover are the treatment of provisional documents of title in new issues and dealings in short bonds. It is imperative that these two important areas of the capital market should not

be impeded. Lord Ritchie has made his point about the new issue market under a capital gains tax, but the Stock Exchange will have to be on its guard against damage to any part of its machinery.

Two final points are worth making. Nine years ago, the board concluded its examination in these words:

> Existing stamp duties on transfers already absorb a high proportion of net capital gains. Since these duties were doubled in 1947, they have produced between £35 and £40 million a year, which represents a charge of 21 per cent of average net gains. Stamp duties on securities (which are charged before any gain or loss is made) brought in no less than £60 million in the year 1959-60. Forty-one years ago, a Royal Commission declared: "There are many categories of transactions the profits arising from which seem, to the ordinary mind, eminently suitable for income tax" and it recommended that casual gains arising from a transaction ostensibly seeking profits should be taxed. The argument has gone back and forth ever since, with the Revenue laboriously but only partially extending its grasp over such kinds of income. But it is far behind the modern way of the world. What are those Midas Ladies of Wallasey, who last year put so many investment trust managers to shame, seeking if not eventual profit?

Airports Public and Private

THE shanty town that is at present known officially as London Airport North Side (and unofficially by several less euphonious sobriquets) will not close for good until the midde of next year. But from Monday onwards rather more than half the air passengers leaving this country for distant parts—including all flying with BOAC—will saunter or puff, according to their physique, up and down the gilded ramps and stairways of London Airport's new £1.3 million "long-haul" passenger building. This is being commissioned in sections, with the airlines moving in on the heels of the builders. If at first sight it looks very much like any other new building in any other big international airport, this is because the conflicting needs of passengers who are small and numerous, of aircraft that are vast but relatively few, and of Customs and Immigration departments which are !*XX!!***!, leave architects scope for little more than small variations on the theme of a central booking-in hall, a "comb" of Customs and Immigration desks through which passengers must pass, and a departure lounge in which they sit waiting for their aircraft.

In spite of this superficial similarity, the new London Airport buildings show signs of some re-thinking about ways of getting passengers on and off aeroplanes. Passengers themselves will regret that this does not extend to keeping them under cover from the elements, even though airports in North America have shown that the damp and chilly journey across the tarmac in pouring rain can be avoided with a little ingenuity and some expense. And the biggest international airport in the world might at least have arranged for cars and coaches to disgorge their passengers under cover, instead of expecting them to jump like steerage passengers for the sheltering canopy.

It is inside rather than outside the building that the re-thinking becomes evident. The Ministry of Aviation has turned its back on the complex arrangement of numbered channels that make travellers trail through its short-haul buildings like so many penned sheep. It has also side-stepped —temporarily at least—the pitfalls of so many new continental and North American airports where passengers have to tramp interminable distances for no useful purpose that they, at least, can see. Most significant of all is the built-in flexibility which the passenger cannot see but which allows partitions to be moved and removed, staircases to be added or taken away, and the whole interior of the building chopped about to meet changing traffic requirements. London Airport officials have learnt the hard way that it is impossible to tell whether a building is adequate until the passengers come in. Since the BOAC section alone is planned to handle 2,000 passengers simultaneously arriving and departing within an hour, and the buildings themselves are expected to be adequate to meet all long-haul traffic until 1970 (estimated at 3 million people a year by that date compared with a million last year) this freedom to vary the interior layout by moving a few nuts and bolts may prove important.

If the buildings at the airport are now, or soon will be, adequate to handle air traffic into London for the next decade, the same cannot be said of the access roads leading into them. Long-haul traffic is moving from the North side, where it was next to the main road, to the centre of the airport, which can be approached only by a a single tunnel. There must be misgivings about the capacity of this tunnel. The apparent placidity with which this prospect is viewed by the Ministry of Aviation may be due in no small part to the knowledge that by the time the start-up comes, London Airport will very probably be the responsibility not of the Ministry, but of a new airport authority. The bill to set up this authority is not likely to be presented this session by the time it does become law, the four main international airports for which it will be responsible—Heath Row, Gatwick and Stansted all serving London, and Prestwick serving the North—should together be showing a comfortable working profit. The new authority would take them over as sound going concerns, which many think preferable to starting it off with a subsidy.

IF no change in ownership at these big airports seems likely for a year or two, the same cannot be said of a sizeable group consisting of seven provincial airports which between them have been losing almost as much money as they take in revenue. These can be sold or closed by the Ministry without the need for new legislation. Blackpool Corporation has been negotiating grudgingly with the Ministry for years to buy its local airport, and negotiations are being opened with several other local authorities. The municipalities' marked reluctance to take these unwanted airports off the Ministry's hands lies in the size of the losses they are currently incurring. The Ministry's last accounts to March 31, 1960, show a deficit of £2.3 million on a turnover of £2.9 million; some were earning a bare twentieth of their expenses.

Yet under certain conditions, local provincial airports can be made to pay, or to show losses small enough not to disturb the ratepayers. The second busiest airport in the country after London Airport itself is municipally-owned Southend, which handled as many as 8,000 passengers in a single day and made a gross profit in the last financial year of £96,000 on a turnover of £381,000, and which was still able to put £15,000 to reserves after meeting all charges.

These kind of results are not easy to achieve. Southend's prosperity dates only from the past few years since it became the centre of a high proportion of holiday tours, and its future is closely bound up with the attitude of the Air Transport Licensing Board towards the independent airlines, and especially the smaller ones whose existence depends on this kind of business. Airports can, however, operate on a scale much smaller than that of Southend and still keep expenses within reasonable bounds. The municipal airport at Luton is small by any standards, with an annual turnover around £50,000, yet the average cost to the rates has remained steady at approximately £2,000 a year. The deficit jumped in the last financial year to £6,000 because the airport has started on an expansion programme which involves lengthening the runway, providing new hangars and spending altogether £1½ million.

Luton has faced the dilemma of many a small airport by deciding to risk substantial capital investment in order to attract traffic; that is, in this case to be able to take short-haul aircraft up to Vanguard size. It happens, however, to be strategically placed to the north of London and at a height where it is rarely closed by the kind of bad weather that shuts London Airport. For this reason, KLM has chosen Luton for its main bad weather diversion airport and may thus have set a fashion ; small independent airlines may also make it their base because they cannot afford the high rents charged at Gatwick, which is now the "official" base for independent operators. A solid basis of regular scheduled flying is needed to make any airport pay, and a good deal will be needed to make Luton's far-sighted investment pay off.

This kind of uncertainty also limits expansion at Southend, where the authorities have steadfastly insisted on maintaining it as an airport for short-haul traffic handling aircraft no bigger than a DC6 although British European Airways would have liked to see it develop as the third airport for London. The temptation to grow and to put in facilities and navigation aids which cannot be justified by the extra traffic may be the reason why some municipal and government-owned airports in the provinces lose substantial sums already. Another may be the fact that they do not exploit alternative sources of revenue. Luton rents factory space and is planning for shops ; both Luton and Southend retail fuel to the airlines and the profit to Luton works out at 3¼d a gallon (the Ministry of Aviation might learn something here). Not all airport commandants realise that they must go out and sell their airports to airlines and agents as vigorously as if they were selling car hire or sausages ; not all of them realise the growing importance of air freight, particularly in smoothing out seasonal dips in traffic. Southend is building new freight sheds.

IT is interesting to speculate how much extra traffic might go through these and other privately-owned airports if they dropped the present practice of charging the same landing fees as the Ministry of Aviation does at its vast international airports. There seems to be an underlying fear here that any price-cutting of this kind would lead to retaliation from the ministry, on whose goodwill many municipal airports depend for meteorological services and some help in longer distance traffic control. But there seems no reason why the same charge should be made to land, say, a Viscount, at London Airport with its lavish terminal facilities, at Southend where the facilities are simple, and at Luton where they are cosily small. The standard of efficiency is probably the same in all three cases, but it is obvious that the scale of investment is not. More short-haul traffic might go through these municipal airports, so easing the strain on London, if they trimmed landing charges to their expenses. Perhaps freer pricing may follow the formation of the authority for the international airports.

A Taste of Beer

Lager and "container draught"* have been the fastest growth elements in the brewing business during the last decade. Can this growth be maintained?

TEMPORARILY the headquarters of Harp Lager are at Park Royal, where only one beer, Guinness Extra Stout, is brewed. At this brewery, probably the biggest single item of capital expenditure in recent years has been concerned with the establishment of a container draught line. Guinness is thus backing both of the new growth elements in British beer ; but it intends to spend more energy and money on lager, which it will sell through tied as well as free public houses and off-licenses, than it has on its container draught, which is sold almost exclusively in the free trade. Whitbread is another brewer backing both horses, having scored a remarkable success with its container "Tankard" and having recently signed an agreement with the Dutch lager brewers, Heineken. This agreement may, however, have more significance for Whitbread's overseas developments than for the home trade, where Whitbread houses will be selling Heineken alongside Ind Coope's "Skol" and the Belgian "Stella." Ind Coope, having developed the bottled ale, "Double Diamond," and the canned beer, "Long Life," and wishing to make the fullest use of its centralised bottling store at Burton, is putting the weight of its promotion behind "Skol" and seems less active in promoting fresh orders for its container draught beer, "Red Hand," though it already has quite big contracts in some sectors of the free trade. Watney Mann has taken the other alternative. It was the first British brewer to produce a container beer before the war and now, despite the postwar efforts of Flowers, it has the biggest share of this market. It is actively trying to widen the number of outlets to serve container "Red Barrel." But for lager it relies largely on trading agreements with Ind Coope and United Breweries ; it stocks "Skol" in some of its pubs and "Carling" in others, securing in return an outlet for "Red Barrel."

* Brewers have not agreed on a title for draught beer stored in an airtight metal cask, incorporating, or coupled to, a gas cylinder, and served under pressure at the bar. "Pressurised" is not quite accurate as some of the more usual draught beers are also served under pressure. "Keg" is short and apt, but has the disadvantage to the other brewers of being Flowers' brand name. "Canister" tastes of tin. "Container" is dull and neutral.

Except in the sense that one beer satisfies the thirst as much as any other, bottled lager and container draught are not direct competitors. Container draught is traditional English beer served in another fashion, enjoying the same advantage that bottled beer has of being consistent in taste and quality from pub to pub. Only at the last stage of the brewing process does it require specialised equipment, though the cost of that equipment and of the casks and gas cylinders with which it is distributed is sufficiently high to deter many of the small brewers from trying their hand. Lager, which requires bottom fermentation, a brewing process used generally abroad but not ordinarily in Britain, and time in storage to produce its distinctive qualities, is very different from traditional British brews. It needs its own specialised brewing plants and has a different taste from most British beers. (To this black-and-tan drinking correspondent it tastes of pears.) But to the British brewers, trying to decide where to put the weight of their promotional and development activities, container draught and lager compete for their effort and money. Are these, the trade asks itself, the beers of the future and which will sell most readily in the next decade?

Neither lager nor container draught at the moment accounts for more than three per cent of total beer consumption in this country. But in the last few years their consumption has grown faster than that of any other beers. Between the end of the war and the mid-fifties, annual beer consumption was falling ; it amounted to only about 25 million bulk barrels in 1957 and in 1958. In 1959, reflecting a reduction in duty and a hot summer, it rose to 29 million barrels, but in 1960 slipped back to 27 million bulk barrels. This year it may be of the order of 28 million barrels. Some brewers will be neither surprised nor dismayed if it levels out between 28 million and 30 million barrels per annum over the next decade. Recognising the strong competition for the customers' shillings in an affluent society, they are not basing their plans on a strong growth in total consumption. But what they do count on is some shift in demand between different types of beer. For example, lagers and pasteurised bottled ales may gain at the expense of naturally conditioned bottled beers, and container beers at the expense of traditional cask draught. The expectation is based on something more than hope. In 1950, less than 100,000 barrels of lager, mostly imported from abroad, was drunk ; by 1959, when Ind Coope introduced "Skol," total lager consumption was of the order of 500,000 barrels ; in 1960, it was in the region of 550,000 barrels and this year guesses put it at 600,000-700,000 barrels and possibly slightly more. Lager is predominantly drunk in the summer, and largely by younger people. From an equally small start, made somewhat later in the decade, the consumption of container draught this year will probably be not much less than 500,000 barrels. Here, "Red Barrel" appears to have over a third of the trade ; its sales seem to be about twice those of Flowers' "Keg" and three times as much as Whitbread's "Tankard." Like lager, this is largely a saloon and lounge bar trade ; but it has none of lager's off-licence sales.

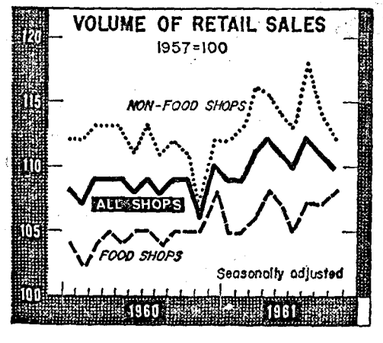
So far, the well-known imported lagers, including Carlsberg and Tuborg, appear to have held on to their volume of sales in Britain, but that hold is now being strongly assailed by the British brewers who are better placed to tie up outlets and able, because foreign lager has to vault over an extra £1 of duty per barrel, to offer a slightly higher gravity lager. The British brewers may also find it easier to get into the supermarket trade for canned beer, which may develop as a result of the new licensing law, and, if the demand is established, to offer draught lager. Their efforts are aided by the British idiosyncrasy, invented it has been said by an American GI, of drinking lager and lime. "Two per cent of 'em drink lager," one publican grumbled recently, "the rest add lime." And once the lime is in, any distinction of taste between brands is out. No brewer, therefore, cares for this drinking habit ; but for the moment he has to live with it. "Harp" will now add to "Skol" and "Carling" expenditure on promoting British lager ; their combined efforts may well have the effect of cutting down the imported lagers' share of the market. At the moment this amounts to about a quarter, slightly more than "Carling's" and slightly less than "Skol's."

IT is from the base of tied outlets that the British brewers, by spending heavily on promotion and by encouraging their publicans to press the sale of their own national brews, hope to keep any further growth in lager consumption to themselves. "Harp," for instance, must be aiming at a market share as big as "Skol's" ; it is being brewed at Dundalk (100 per cent Guinness), at Royal Moss Side in Manchester (50 per cent Guinness, 50 per cent Scottish and Newcastle) and at Park Street in London (45 per cent Guinness, 45 per cent Courage Barclay and Simonds, 10 per cent Mitchells and Butlers). The three latter companies will have the same interests in the £2½ million brewery being built at Alton ; lager brewing at Park Street will stop when Alton, which should have no difficulty in brewing 150,000 barrels a year, comes into production in 1963. At this point, no doubt, Guinness and its partners hope that the initial losses on promotion will be past and that their lager operation will begin to show a profit. By now "Skol" should have passed the break-even point, though the profit it is making must still be very small. But the British brewers' expectations of a really profitable return on their investment depends upon their ability to gain sales at the expense of the imported lagers and upon a further growth in consumption. With container draughts, their task is easier: this operation is already profitable and, as the mark-ups to the big breweries and to their publicans on them are comparable with those on bottled beers, they will not be unduly perturbed if sales from containers rise at the expense of cask draught.

In both container draught and lager, the customers appear at the moment prepared to pay prices comparable with those of top-quality bottled ales. But the brewers themselves appear to be wondering if the prices are just a little too high: to secure a further increase in consumption they will want to hold prices down or possibly to reduce them. To justify the efforts they have put into both developments, consumption of both these kinds of beer will need at least to double within the next decade. In neither case do the brewers believe this to be too sanguine a hope. Where they differ is on respective rates of growth of container draught and lager and whether either will do better than double its sales. One group feels that as lager is predominantly a summer drink, the installation of cooled cellars and cooling shelves for traditional beers will

check its growth; but that as container draught offers a consistent quality comparable with that of bottled beers it will inevitably grow at the expense of cask draught—and probably faster than lager. Others argue that an all-out effort to improve cellarage in the pubs and to impose tighter control on the quality of draught beer at the point of sale would nullify the advantages claimed for container draught, and if applied radically enough could check its growth.

This is a matter of choice between differing forms of capital expenditure, and each brewer comes up with a slightly different answer. Some of the choices and many of the guesses will, in the event, be found to be wrong, for the brewers are, at glass-bottom, trying to discern intangible changes in fashion and taste. But it would seem safe to say that in the next decade, though the traditional beers will still form the bulk of the trade, more lager and more container draught will be drunk. The prediction that container draught will grow faster and reap a bigger profit than lager is far less firm but it still may be ventured. Whatever happens the effort already devoted to these developments suggests that the regional and national brewers will continue to grow at the expense of the smaller concerns; that more brands of beer will be sold in any one public house; and that the structure of this industry, increasingly dominated by mergers and trading agreements, will set more rigidly into the pattern of "inner sixes" and "outer sevens" of breweries.



BUSINESS NOTES

CONSUMER SPENDING

Curbing What?

DESPITE the Board of Trade's assurance that it was unlikely to revise downwards its preliminary estimate of retail trade in September, this is just what it has done. The final estimate of seasonally adjusted sales (1957 = 100) is 116 compared with 117 in each of the two previous months. Taking the price element out of these calculations for the first time, by revaluation at constant 1957 prices, a new series (shown in the chart) suggests that the volume of retail business slipped a point in August and again in September, bringing it back to the rather depressed June level.

People were buying more food in September than in June; more clothing, too, although less than in August. The slackening in buying was entirely in the durable goods shops, where turnover was lower than in any other month this year. Compared with September, 1960, however, durable goods shops were doing just about the same amount of business and it was the clothing trade which was depressed. To a smaller extent, food shops have also been experiencing see-saws in trade, although the underlying trend here seems doggedly upwards and it was a growth of 3 per cent in food buying which entirely accounted for the 1 per cent rise in the total volume of spending in the shops between September, 1960, and September, 1961.

Credit sales of household goods shops have followed much the same course in recent months as the total business of these shops. After a rise which was less than is usual seasonally, these credit sales in September were only 3 per cent higher in value than a year before, the same as the margin in total sales. Outside ordinary retail trade, credit business in cars has been considerably reduced, and total instalment debt in September fell by £12 million. Figures collected by Hire Purchase Information show that hire purchase sales of new cars were still falling in October when they numbered only some 9,200 compared with 10,200 in September and 20,000 in July. October was the second month in which contracts were fewer than last year for new cars and the third month in which this was true for used cars; although credit sales of the latter recovered a little in October, rising from 44,600 to 47,400, they were still 7,000 short of the October, 1960, figure.

The credit squeeze has had its effect. But where was the buoyancy in spending that the Chancellor set out to curb? After having been falling slightly for six months the volume of total consumer spending, after allowing for seasonal factors, rose by just over 2 per cent between the final quarter of last year and the first quarter of this year, and then further by just under 1 per cent in the second quarter. By then people had 8 per cent more money than a year before but had stepped up their spending by only 3 per cent. As a consequence, the rate of saving was exceptionally high in the months just before the Chancellor announced his economic measures: indeed, if the statistics are to be believed, it was running at a record level.

MONEY MARKET

Accepting Six Per Cent?

TALK about the next cut in Bank rate has been heard rather less in the City this week than it was immediately after the reduction to 6 per cent last Thursday. The discount houses reduced the Treasury bill rate by nearly ⅛ per cent at the following day's tender, and at just under 5 17/16 per cent the rate is already on the low side in relation to 6 per cent Bank rate—though the margin is by no means excessive. The Bank of England was quick to apply the brake and, as in each of the previous weeks except that of the Bank rate reduction itself, it forced the discount market to take loans at Bank rate one day after the other. The discount houses this week have been paying up to 5½ per cent for overnight money, and while the average cost of their money is probably a shade below 5 per cent, this means that, at the margin, they are financing bills at a loss. This could still make sense at a time when Bank rate and money costs were shortly expected to fall; but now that the much expected reduction to 6 per cent has come, the penalties exacted by the Bank may not be ineffective. This modest inculcation of caution has also made its mark elsewhere in the City. The gilt-edged market lost some of its sparkle early this week, though the buyers returned on Wednesday. In the local authority money market lenders have successfully resisted a sharp fall in rates, and seven-day money, after falling from 6½ to 6¼ per cent, hardened a shade. Isolated withdrawals of foreign deposits have been reported, but these have been accompanied by a continuing inflow of money on three and six months' term.

STOCK MARKETS

To and Fro

HAVING caused no more than a ripple in the stock markets before the weekend, the reduction in Bank rate was little more than a memory this week. Both the gilt-edged and industrial markets swung first one way and then another. The volume of business remained small and at first the nervous uncertainties that have characterised the equity market for several months were again evident in a slight fall in prices. Dealers found nothing new to say about this mood, except to point vaguely to the possible effects of a capital gains tax. On Wednesday however the market drew encouragement from the Chancellor's forecast that "strong expansionary forces" would be at work again at the beginning of next year. This, together possibly with the brighter tone on Wall Street, sent prices moving up again, with the net result that over the week to Wednesday's close *The Economist* indicator was slightly higher at 356.4. On Wednesday, moreover, some institutions and some trustees were prepared to buy selected stocks in small quantities and this was, for instance, reflected in quite a sharp rise in Dunlop. Prices continued to go ahead on Thursday, when the *Financial Times* rose by 3.5 points to 298.4.

At the beginning of the week, gilt-edged prices fell back a little. This appeared to be no more than a natural reaction to the sustained rise in recent weeks, prompted by the tight conditions prevailing in Lombard Street and the further realisation that the authorities are not afraid to take advantage of the healthier tone in the gilt-edged market to bring new issues forward. The slight easing in prices was reflected in the modest premium at which dealings began in the 6½ per cent stock offered at 99 by the Bootle Corporation. At 3/16 premium, the opening price was smaller than had been expected, but when gilt-edged prices moved up again on Wednesday, partly in response to the Chancellor's statement, the premium rapidly improved to 15/32. This recovery brightened the prospect for the £10 million issue by the Agricultural Mortgage Corporation of a 6½ per cent stock, 1975-77, at 99½. Comparison with the price of the LCC and Bootle stocks shows that while the authorities have taken account of the rise in gilt-edged prices they are not forcing the pace. The dates and the yields—£6 11s. per cent to redemption and £6 10s. 8d. per cent flat—have an obvious appeal to institutional funds; but the market has noticed that £26 million in new local and public authority issues has been offered within the space of three or four weeks, and if another offer followed immediately on the heels of the establishment of a premium on the new "Farmers" loan the market might again be restrained.

THE EXCHANGES

Germany Reappraised

BUSINESS in the exchange market became notably quieter after the Bank rate cut. The firm undertone in sterling persisted, and on Tuesday afternoon the rate again began to rise, and the authorities are believed to have taken in dollars then and on Wednesday. The margin on covered arbitrage in favour of London over New York has declined, from about ⅝ to ¼ per cent on the Treasury bill comparison. At the same time as the bill rate has fallen in London it has risen in New York in line with official tactics there. At 2.35 per cent the bill rate there is still a clear three points below London, which is sufficient to attract some investors to transfer funds. But for the more cautious, the forward premium on three months' dollars now almost offsets the interest margin: it was reduced to 2-1⅞ cents by anticipatory purchases of forward sterling before the Bank rate reduction (which some operators thought would be by a full one per cent) and has barely fallen further since.

The most striking currency news of the week has been the acceleration of the fall in the reserves of the German Bundesbank, to 441 million marks ($110 million) in the last week of October. This brings the total loss last month to about 1 billion marks and the loss since July to over 3 billion marks—of which about one-third is accounted for by German credits to the International Monetary Fund. There is still plenty left in the German kitty—some $6.8 billion, or about double the London reserves with a fraction of the liabilities.

The Bundesbank is reported to have made further supporting sales of dollars this week. The weakness of the mark is largely a result of a political reappraisal. While many observers feel that the immediate Berlin crisis has eased, they have been deeply concerned about the machinations in Bonn during the past few weeks; and this, combined with the uncertainties for the future that the Berlin crisis has posed, has persuaded a number of operators that Germany is not as safe a home for their funds as it appeared before the summer.

THE DOLLAR

Gold Guarantees?

A New York correspondent cables:

THE three months credit of $46 million in Swiss francs that the United States Treasury has arranged with the Swiss National Bank is another step in the Treasury's short run defensive efforts to build up an active stabilisation fund for the dollar. Last spring the Treasury acquired D-marks for this purpose from the proceeds of Germany's prepayment of debt; more currencies could be added to the fund later. The official currency fund is of course a limited tactical weapon, but the Treasury believes that the knowledge that it exists should help to dampen currency speculation, particularly in the near term which will show a worsening deficit in the balance of payments. Official preliminary estimates are that the net deficit ran at annual rate of $3 billion during the third quarter compared to the rate of $1.7 billion in the first half of the year. These figures could touch off new doubts about the administration's ability to control the deficit.

In addition to the Swiss franc borrowing, the Treasury has been engaged in strenuous efforts to gain European fiscal and central bank co-operation over the short term should a crisis of confidence occur. It seems that the United States has been promised help at least on a temporary basis to keep the price of gold in London stable with no immediate diminution in the United States gold stock. This presumably involves gold guarantees to countries that are not converting their dollar balances. Britain and other traditional gold holders now appear to have agreed on a new policy to refrain, to a limited degree, from building up gold reserves during the present period of potential strain. The US Treasury sees this as an example of the new measure of co-operation by Europe, contrasting with Britain's 1956 drawing on IMF, which went partially into gold, and also with foreign central banks' action last year in building up their gold reserves during the period of strain on the dollar. The Treasury emphasises, however, that central banks are still free to buy gold if they wish. In the regular meetings of central bankers in Basle and of OECD in Paris the United States is stressing that steps are being taken to correct deficits in both the domestic budget and the balance of payments.

MOTOR PROFITS

BMC Holds the Line

THE fall of 51½ per cent from £32 million to £15½ million in the trading profits of British Motor Corporation in the year to July 31st was no worse than had been expected, and on the maintained dividend of 20 per cent the 5s. shares were marked up by 3d. to 14s. 1½d., to yield 7 per cent. It seems possible that in three months of that financial year BMC was making losses and in another three was doing little more than to break even. A fall of 10 per cent in the output of vehicles to 601,000 would not usually produce such a sharp fall in profits; but the cut in production was concentrated in a few months when the factories were simply ticking over but all the workers were kept on the payroll. Such an action could only be justified on the expectation of a rapid recovery in sales; this, indeed, occurred in the spring. The increasing proportion of sales that baby cars and light vans now form will have reduced the value of turnover more sharply than its volume.

The decision to leave the dividend unchanged, even though it is barely covered, suggests that more optimistic views of the future are now being taken at Longbridge. Production schedules have been set at 15,000 vehicles a week until the end of January though recent changes in models have kept production below this level in the last few weeks. But production at this rate must involve a good deal of stockbuilding, though this is usual in the winter months

and after the introduction of new models. BMC appears to have raised its share of domestic sales, from about 40 per cent to about 45 per cent, in the last three months, but this build-up in stocks could be a source of trouble if sales fail to rise by January. Dealers might then refrain from ordering more cars until their own stocks had been reduced. This would place BMC in the same predicament as it was in the autumn of 1960; but any dip in sales is likely to be less than it was then.

The choice of Mr George Harriman to succeed Sir Leonard Lord as chairman was expected. He had been groomed for many years by Sir Leonard as his successor. The direction of BMC thus remains in the hands of a production engineer at a time when the company has to face the problems of starting up the new factories that constitute its expansion programme. But he is taking over a company with a very different image from that of the combine Sir Leonard formed: one which now recognises the importance of the design engineer, and one which has pioneered technical innovations.

OIL

Enter ENI

HERALDED by scare stories and a Parliamentary question suggesting that it had made yet another frightening deal with the Russians, the Italian state gas and oil concern ENI finally appeared in the British gasoline market this week—saying that it hoped to begin marketing oil products here in 1962 provided it can build a terminal by then at one of several sites which it is considering. Mr Charles Forte, who is announced as chairman of AGIP Great Britain, the British company that ENI established some months ago, with Signor Enrico Mattei, ENI's dynamic boss, as deputy chairman, said the group now has 70 sites for the building of service stations. But he added that it will not compete in price with the major brands, and will sell on "quality and service." Mr Forte added that the products brought in for AGIP stations would not be refined from Russian crude; and that later, when ENI hopes to build a refinery here it would refine crude from oilfields where the group itself is producing oil. He added that ENI would like to get the same share of the British market as Shell Mex and BP have of the Italian—"perhaps 25 per cent."

The appearance of ENI on the British market has come when filling stations offering cut-price petrol are becoming an increasingly familiar sight on British roadsides. If one includes the French company, Total, which does sell its petrol at the regular price, some two per cent of retail petrol sales now go under unfamiliar names. Jet, the pioneer of cut-price petrol sales, now claims 400 filling stations—more than one per cent of

Methane Wins its Way

NEITHER the Gas Council nor Conch International Methane are even now prepared to state the price at which liquefied natural gas will be landed in Britain under the scheme that finally received ministerial approval last week to import 700,000 tons of it a year, or 354 million therms, for use in Britain's town gas system. With the rather complicated company structure to be employed in the shipping operation, it could even be that no c.i.f. price as such appears in their contracts; even the estimate of landed cost which the chairman of the Gas Council gave in confidence to the Select Committee on Estimates earlier this year included a provision for contingencies and a small element of profit for the Gas Council itself. However, keeping mum about the price has served the partners in methane extremely well in their recent months of political catch-as-catch-can with the National Coal Board and of competition with other potential suppliers of imported hydrocarbons for British gas supply: the other side have never known quite what price they had to underquote. And if some of their rivals' guesses that the landed cost estimate for methane will in fact be about 5.75d. a therm, these partners remain wise not to disclose it publicly; offers of naphtha and even propane have been made for significantly less than that.

Quite a cluster of companies will be involved in importing this natural gas. First, it is produced at the Hassi R'Mel gasfields in Algeria by *CFP Algerie*, and moved 300 miles by pipeline to a liquefaction plant at Arzew which will be built by CAMEL, a company jointly owned by this company, S.N.Repal which is another semi-nationalised French petroleum firm operating in Algeria, and Conch (of which Royal Dutch/Shell owns 40 per cent). The two specialised tankers that will carry it liquid to Canvey Island will be built by Vickers and Harland & Wolff, one for Conch and one for a British shipowner. They will be let on bareboat charter to British Methane Ltd., which is owned half by the Gas Council and half by Conch. Then British Methane Ltd. will have the ships actually operated by a company experienced in coal and oil shipping, which will be paid a management fee.

SOME complication of ownership indeed will ensue in the handling of the gas after it is pumped out of the tanker. The tanker terminal and special refrigerated tank farm for this liquid gas (at minus 258 degrees Fahrenheit), Sir Henry Jones said last week, will be owned by the Gas Council. He said that the Council would also own the gas as pumped through the 18-inch pipeline running up to the Midlands, and would sell it to area gas boards as methane into gasworks. The area gas boards would then convert it for use as British town gas in one way or another. An official Gas Council statement said that each area board "would be responsible" for that part of this new 18-inch main running through its own area, and Sir Henry said that each board would in fact own its relevant section of the line. Presumably, in that case, the Gas Council will pay these owners for using the line, offsetting these charges against the final price it charges the area boards that will take the gas. But in any case the gas boards will get the methane for 7½d. a therm. Degrading it to British town gas (of half the calorific value in terms of volume) will bring this up to 8½d. a therm ex gasworks (before distribution through the mains) against about a shilling a therm from carbonisation plant.

The Minister of Power's announcement last week marked defeat for Lord Robens in his efforts to delay a decision on methane until cost figures for large scale Lurgi generation of gas were available from the joint study that the Gas Council and the National Board agreed to make early this year. His statement last weekend that this study could give results in three months sounded rather optimistic. The gas and coal negotiators have not yet even finally agreed all details of the specification to be given to the contractors whom they have commissioned to do design studies for them; one had hardly have expected a report before well into next summer.

Sir Henry Jones, last week, continued to insist there was no conflict between the methane deal and the Lurgi proposals. This, again, may be too polite. Technically, one can mix rich, cheap methane with lean, and more expensive Lurgi gas to make British town gas: whether this is the most economic thing to do with rich imported hydrocarbons, though, is another matter. From the outside it still looks as if the methane deal, with a pipeline that could eventually deliver much more methane right up to the Midlands than is proposed initially, will probably preclude further development of Lurgi gasification. Coal appears to have been quite outmanœuvred in this battle; mainly perhaps because Sir James Bowman never took any interest in the Lurgi process, considering that gasification was not coal's business; so that by the time Lord Robens did take a real interest the methane project was too far advanced and the Lurgi enthusiasts lacked firm and incontrovertible figures.

707th Heaven

FAMILY IN FLIGHT . . . You're coming with Mummy and me to visit your Granny, Daddy said. In a great big Rolls-Royce 707. So I told my school-friends. I'm going to fly Air-India (stuck-up thing! said one). I shall sit on a seat of purest gossamer, with millions of jewels all round me (you're ugly! said another) and be served with big helpings of jelly on gold plates (piggy! said another). And I shall be escorted on and off the plane like the queen of all the world. And my luggage will be carried by handsome princes (big head! shouted my best friend). I don't care. I shall fly like this to

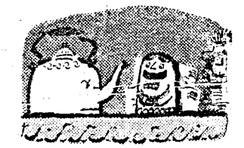
THE KETTLE AND THE MONEY-BOX

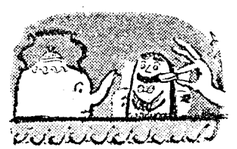
an economic fable

ONCE UPON A TIME a kettle and a money-box lived together on the mantelshelf of a farm-house kitchen. The kettle led a busy life. He was always being taken down from his place and set on the hob to boil up water for tea or for scrubbing. In fact, he started to feel he never got a moment's rest. So he began, as a way of relieving his feelings, to jeer at the money-box.



"You," said the kettle, "are nothing but an idle good-for-nothing. There you sit, with a silly smile on your face, swallowing up the money the farmer's

wife brings you. I can't see why she does it. You ought to get an honest job."—"I already do an honest job," said the money-box, as gently as he could. "Well, you tell me how," jeered the kettle. "As far as I can see, you're just something more to be dusted."

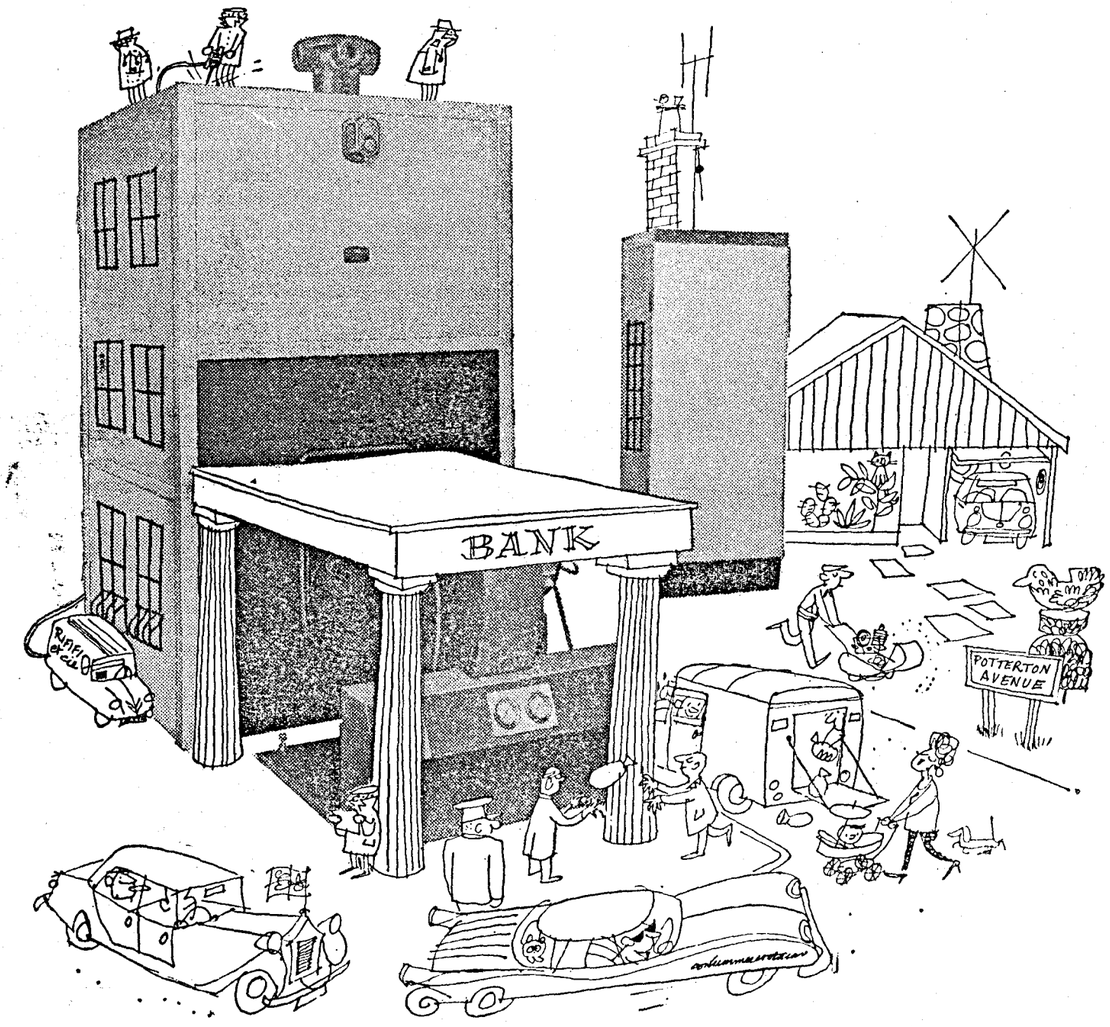


"Tell me," said the money-box, "do you remember the time when the farmer's wife left you on too long, and you boiled bone-dry and had a hole burnt in you?"—"Do I not?" said the kettle feelingly. "But I didn't see you hopping off that shelf to bring help."—"How do you think you got yourself mended then?" asked the money-box. "They sent me off to the tinker," said the kettle. "And that cost money, I imagine?" said the money-box. "Of course it did."—"And where do you think the money came from?"—"I didn't ask," said the kettle a bit huffily. "Well, it came out of me," said the money-box triumphantly. "That's one of the things I'm for. I make sure there's always money to spare when things go wrong."

"I can't see that getting one poor old kettle out of a bad spot is much to boast of," said the kettle. "It isn't—but think of all the other things I help with on the farm."—"You're just used for things for the house," said the kettle rudely. "You don't keep your eyes

open," said the money-box. "A lot more goes into me than is needed for mending you. The money doesn't just lie there either. I'm emptied every week. And then the money's used for buying all sorts of things that make the farm yield more. The farmer's new plough this spring came out of me."

"What an altruist!" sneered the kettle. "Well, if doing an important job properly—helping you, and the farmer's wife, and the farmer himself, is altruism, I suppose I am," the money-box agreed placidly. "But after all, saving's what I'm for—and I reckon I earn my keep if I'm left to get on with it. Just as you do, and all those saucepans and frying pans with you."



Then the farmer's wife came hurrying in and popped another penny in his mouth.

MORAL:

The best way of knowing a job is to do it for a living.

Potterton heat bank or bungalow beautifully

Potterton make boilers—oil-fired or gas-fired—rated from 31,000 to 2,000,000 B.th.u./hr. They are automatic, efficient, economical and purpose designed.

Potterton have been making boilers since the year dot. Very experienced people. Very reliable boilers. Pick Potterton. It pays.

Is your Potterton file up to date? For all the latest information by return post, just jot "boiler information, please" on your letterhead and send it to us.

A Potterton FOA oil-fired boiler (output: 1,000,000 B.th.u./hr.) heats Barclays Bank, York. Supplied and installed by J. Shanksmith Limited.

And a Diplomat 100 (a domestic gas-fired Potterton) supplied by South Eastern Gas Board and installed by C. Fletcher, Sons & Company Limited, Kingston, heats and provides hot water at an 8-roomed bungalow in New Malden, Surrey.

Potterton Boilers at the heart of efficient central heating — oil or gas

"Potterton" and "Diplomat" are registered trade marks.

the total. It differs from the other companies selling cheaper petrol in that it imports its supplies itself; this was always its practice, even before it was bought by the American company, Continental Oil. Total also imports its own petrol, but the other cheap brands such as Octane and VIP are supplied by various established importers.

Now that ENI has arrived, just behind the American Murphy Corporation, the effect on the majors may become more noticeable. But they still control something like 97 per cent of the filling stations through dealing contracts or in some cases ownership; they are not likely to notice it much until their retailers' existing contracts expire. Station operators may well benefit more from this competition than the final motoring customer: petrol stations are one of the scarcest commodities in the oil industry today.

PLASTICS

Down with Dumpers?

The application for an anti-dumping duty on imports of American polythene that Imperial Chemical Industries has put in motion, and which Monsanto has decided to support, canalises the resentment that the British industry feels at being less protected than its rivals. The British duty on plastics is 10 per cent, while the United States charges roughly 42 per cent on polythene. So British producers complain that it is difficult for them to retaliate in the usual manner by dumping back in the American market, whereas one British producer of synthetic rubber is said to have scotched an attempt to sell Italian SBR cheaply in Britain by dumping a consignment there last summer. Dumping is in effect the normal practice of the plastics industry; its cost structure is so top-heavy that it pays to sell its marginal production at anything more than its direct cost. The complaint against the Americans seems to be that it is in some way immoral to do this in another producer's home market—or that they are selling at prices that do not even cover their direct costs. Italian companies are said to be selling polythene in Britain at 1s. a lb, which certainly seems unlikely to do so.

The timing of ICI's move, after it has brought the price of polythene down from 2s. 2d. to 1s. 6d. in a year to match the falling American price, can best be explained by a feeling that its back is against the wall. If the price goes lower, its profits are likely to become marginal. And the continuation of cut-price exports by the United States, despite the recovery of demand in its home market, has been a reminder that this situation is likely to last. The decision of the French customs to impose an anti-dumping duty of about 5½d. a lb on polythene being imported by Spencer Chemicals of Texas may have sparked off the decision, by raising the fear that this polythene which had been going to France would start coming here.

The plastics industry has managed to grow fast despite its unprotected state. Now that it has survived its infancy, does it need or deserve protection to let it return to the comfortably fat profit margins of its youth? The industry likes to believe that high prices can speed growth by allowing it to do more research on new applications, and argues that it may have to cut expenditure if its margins do not improve. Establishments such as the new technical service and development laboratory that Shell recently opened are an expensive overhead; this one cost £400,000. But an economist may be excused if he wonders whether lower prices are not the most effective means of expanding the markets for materials that have to win new uses by replacing old ones.

DECIMAL COINAGE

En Principe?

Last spring the Chancellor of the Exchequer parried the growing pressure for introduction of decimal coinage by promising a considered statement by the end of the year. Now that this is approaching some commentators have concluded that the go-ahead will then be given. Unfortunately this is far from certain. It is true that Government spokesmen in the House of Lords indicated early this year that the great majority of representations received by the Government by then favoured a change. It is known, too, that the Chancellor discussed the matter with his counterparts from Australia and New Zealand at the otherwise unhappy finance ministers' conference at Accra. But there was no firm suggestion that the three countries should make the change simultaneously. Indeed, Mr Lake of New Zealand has declared that he would not recommend his government to make the switch while the overseas exchange position remains as it is. The British Government would presumably have rather greater difficulty in invoking its external difficulties as a reason for delay: most of the estimated cost of £100 million plus for conversion of accounting machines would be spent inside Britain.

Even this domestic cost, however, may make ministers flinch at present—it will certainly disturb Mr Brooke. There are indications that the most than can be expected is for Mr Lloyd to announce that the Government accepts decimal coinage in principle—but that it cannot be expected to make a start at this difficult time. This would be a clear misjudgment. It was Gladstone who said that the weight of evidence in favour of decimal coinage was irresistible. Today decimal money is by no means irrelevant to Britain's external task. It would have a much needed psychological effect on the British public, and it would remove a hindrance from British exporters. Finally, and not least, the international position of sterling itself provides the strongest and most urgent reason for reform: it cannot be assumed that the world will continue to put shillings and pence through its decimal-geared accounting machines for ever.

ATOMIC SHIPPING

Thumbs Down

The Minister of Transport was right to have turned down plans for subsidising the construction of a nuclear powered merchant ship, right to throw the ball back to the Atomic Energy Authority for further research, but culpably wrong in the way that he handled the whole affair. Why, in the first place, did Mr. Marples ever invite tenders from industry for a nuclear tanker when the full weight of the AEA's technical advice was against the project? Why, having received tenders from five separate groups (which have spent, individually, as much as £80,000 in preparing the tenders and a good deal more in preliminary research), did he wait ten months before throwing them out? The scrutinising committee of experts reported to him as long ago as February but the Government's decision to reject the tenders was made known only last Wednesday although industry had long realised which way the penny would drop.

The arguments against building a nuclear ship at the present time are simple; none of the reactors that can at present be built are efficient in sizes small enough to fit inside a ship's hull. The running cost of a nuclear-powered tanker might not have been significantly different from the running costs of an oil-burning one, but the capital cost would have been close to £12 million for a 65,000 ton vessel which is perhaps three times the cost of a conventional tanker of the same size. There might still have been some justification for building a nuclear-powered tanker even at this cost if, like Calder Hall, it would have served as the prototype for later, more efficient versions. But although industry argues that this is, indeed, what would have happened, the Atomic Energy Authority has repeatedly argued that nuclear ships of the future will be driven by reactors radically different from any now available. Belatedly, the Government has accepted this advice and told the AEA to go ahead with research into new breeds designed from the outset to be competitive in small sizes. Although industry submitted tenders knowing that the tanker might not be built, this is one case where the Government might consider paying some compensation for wasted work or at least, like Cunard, of compensating the tenderer who might have been successful had the ship been built.

STEEL

Down Again

Steel production in October was at the rate of 382,200 tons a week, which was 4½ per cent lower than in September and 23

per cent below the peak levels of output last year. But the Iron and Steel Board thinks that the actual drop in output between September and October was entirely due to the strike at the Steel Company of Wales; and though in the third quarter of the year, consumers' stocks of steel appear to have fallen more than in the second, some steelmakers feel this rate of stock reduction cannot continue.

The uncertainty here, perhaps, lies in the rate of actual consumption of steel—which appears to have been no better than level since the beginning of the year. Motor output is probably holding up better than the industry's steel suppliers would have expected; but demand from the capital goods industries, except for the construction industries, may now be not quite as strong.

STAINLESS STEEL

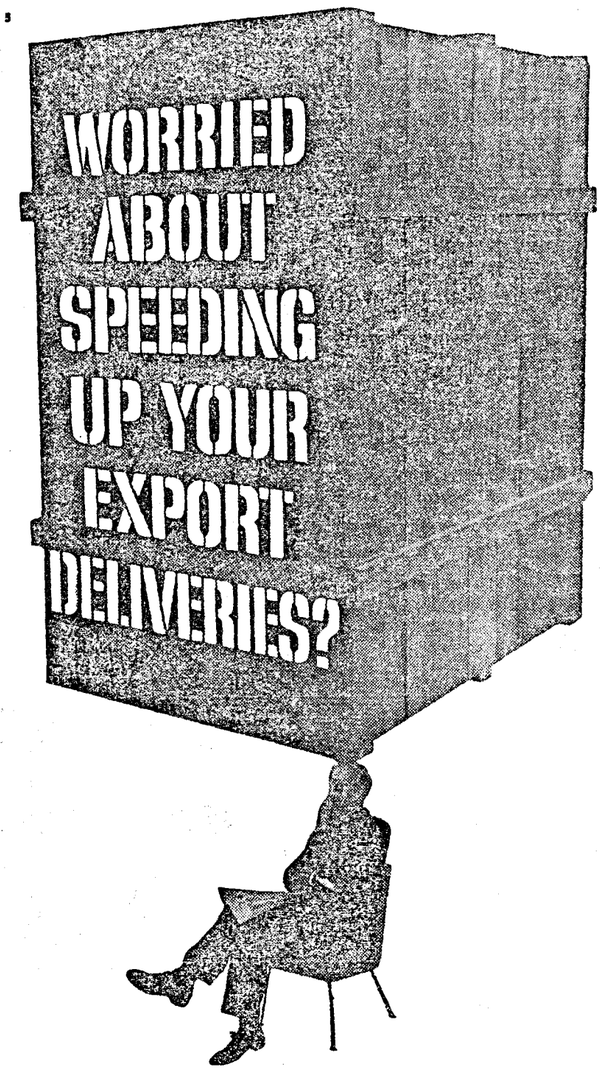
Finding Its Place

THE 1950s saw stainless steel begin to find large-scale uses, 40 years after its discovery. By 1960 production had reached 220,000 tons a year, treble that of 1950; the industry estimates that it will grow little this year, but reach 280,000 tons by 1963. With this growth record and hopes, it is not surprising that Firth-Vickers should be planning to spend £4,375,000 over the next three or four years to modernise its plant for making sheet and wide strip. The company claims that it accounts for 40 per cent of British stainless steel output, so the expansion in demand should have been profitable for its joint owners—the English Steel Corporation and Thomas Firth and John Brown.

The growing use of stainless steel seems to have been spread over domestic and industrial applications. The former now take about 40 per cent of output; the popularity of such relatively large units as stainless steel sinks as well as pots and pans help to swell the volume used. As with car trim, another application that is beginning to take significent quantities of stainless, better ways of fabricating the cheaper and brittler grades have made such uses possible. This material previously could not be pressed.

It is in fact more a chromium iron than a steel. Chemical plant and atomic energy installations have also been big users of stainless steel. The heavy capital expenditure of the chemical industry and its need for corrosion and heat resistant materials make it a natural market. In atomic energy many of the same conditions apply, but resistance to radiation counts for much as well: hence the use of thick plates of stainless steel as the casings of atomic reactors. The nuclear power station programme has been a blessing to the stainless steel producers.

How Sterling Nearly Floated



LORD BIRKENHEAD's official biography of Lord Cherwell, reviewed on page 541, contains the most fascinatingly full account that has yet appeared of the three occasions in 1952-53 when Britain came within an ace of setting the sterling exchange rate free to float. When the Conservatives came to power in October, 1951, they at first met the speculative run then in progress against the pound by pumping out dollars from the reserves, by imposing physical restrictions on imports and by persuading other sterling area countries to restrict imports too. But, says Lord Birkenhead, the view soon began to gain ground "both in Whitehall and Threadneedle Street" that a better alternative way out of Britain's difficulties would be to stop supporting the fixed sterling parity, to let it drift downwards "until the demand for pounds equalled the supply of them," and thus, in a phrase which soon became the battle-cry of one group in the Treasury, to "take the strain off the reserves and put it on the rate of exchange." Because it was felt that no one would hold a currency that suffered from the two disadvantages of inconvertibility and a fluctuating dollar value, it was proposed that current earnings of sterling accruing to non-residents of the sterling area should simultaneously be allowed convertibility into dollars; but tight exchange controls both on residents of the sterling area and on nine-tenths of the sterling balances accumulated in the past would remain. This double-headed plan became known as "Operation Robot"—reputedly, although this is not mentioned in the biography, in honour of the three Treasury and Bank of England men (Sir Leslie Rowan, Sir George Bolton, Mr Otto Clarke) who had mainly conceived it. Moreover, the essence of Robot was that it should be sprung on the world suddenly, after only a minimum of consultation with the Commonwealth and the United States.

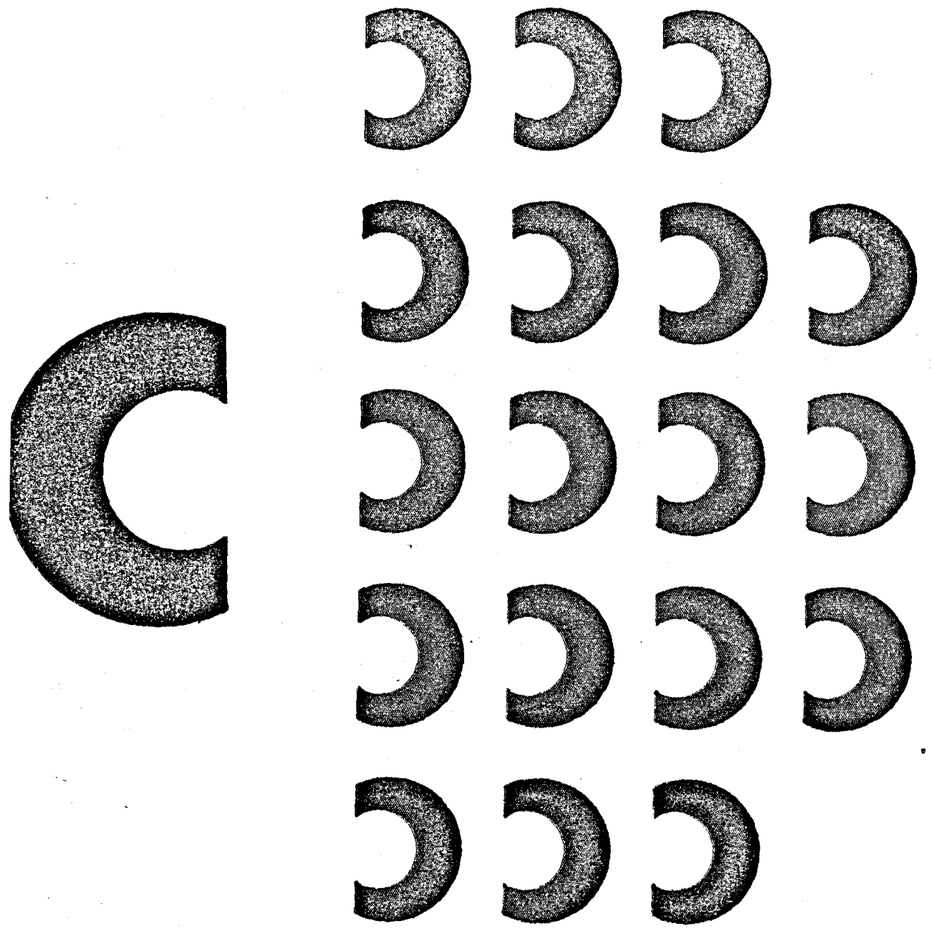
There is not the slightest doubt that Operation Robot would have been accepted, first at a hectic cabinet meeting of February of 1952 and then in a slightly modified form at a cabinet meeting in June of 1952, had it not been for the opposition of Lord Cherwell. But Cherwell, although nominally only Paymaster General, had taken up residence on the top floor of No. 11 Downing Street (the Chancellor, Mr Butler, had chosen to continue to live in his own house in Westminster); and the "Prof" was thereby enabled to keep on popping through the communicating door to No. 10, and to maintain his wartime position as principal economic adviser (and, indeed, as interpreter of all economic jargon) to Mr Churchill. Thus it was, after a "fearless struggle," that the death of Robot was brought about, and that the "Prof" saved the fixed parity of the pound.

AFTER the defeat of Robot at the cabinet meeting of June, 1952, the opposing schools turned to two different plans. Lord Cherwell—aided by his brilliant backroom economist, Sir Donald MacDougall—conceived his plan for an Atlantic Payments Union, designed to bring the United States and Canada into the European Payments Union; the main trouble about this plan, which was also being sponsored (independently and in a somewhat different form) by *The Economist* at the time, was that the United States would not wear it. The ex-Robot planners turned to their scheme for the "collective approach" to convertibility; under this Britain was still to proceed as quickly as possible to a floating exchange rate for sterling and to a slightly wider system of non-resident convertibility, but only after getting a big loan from the United States and on the understanding that three continental countries (France, Belgium, Holland) should go convertible too. This "collective approach" was accepted as Britain's official policy, and in March of 1953 Mr Eden and Mr Butler took the scheme out to Washington to ask for the support of the new Eisenhower administration; but America was unwilling to offer any loans, and the project died.

Lord Cherwell's biographer says that the full details of this "mighty battle" cannot "unfortunately yet be told"; but confirms that if the battle had gone against him Cherwell "would almost certainly have resigned." Actually, the main details that are not told in this book are probably those about the other cabinet ministers who were hurling threats of resignation about at this time; the backstage journalists' assumption in 1952 was that the leader of the pro-floating-rate group of ministers was Mr Butler and that the second-in-command of the anti-floating-rate group was Mr Macmillan. In the end, Britain went convertible with a fixed rate: if the floating rate had been accepted in 1952 or 1953 convertibility might have been achieved much sooner, and the recent economic history of Britain might have been much more dynamic. As it is, the burden of maintaining one of the world's key currencies under a regime of fixed rate convertibility has made it much more difficult to move to floating rates in future.

PROBLEM No. 5

GET E.C.G.D. STOCKHOLDING COVER



When you hold stocks overseas you can deliver the goods as fast as the local man. And with E.C.G.D. cover to protect you, it is as safe as holding stocks in Britain. War, riots, seizure by a foreign government—even cancellation of authority to ship unsold goods to another market—E.C.G.D. takes care of all these and a lot of other risks as well.

GEC 49

Cape Communicative Cape have plenty to say about insulation, friction and fire protection materials—and they are ready to say it to anyone who will listen. Many of the country's largest industrial undertakings have listened critically—and acted. The result is that Cape asbestos and rock wool products are equally at home in a nuclear power station or in a new office block, in the brake drum of a bus or in a ship's engine room, in a refrigerating plant or in an oil refinery. And every new day of experience and progress provides Cape with even more to communicate.

TAXING BENEFITS

The Fuel Bill

ONE further round between the Revenue and the taxpayer on the subject of benefits in kind was fought in the Chancery Division this week when Mr Justice Cross decided the case of *Butter* v *Bennett* in favour of the Crown. As an employee Mr Bennett was required to live in a house provided by his employers and it was in fact necessary for him to live there for the proper performance of his duties. The special provisions regarding the taxation of the expenses and benefits of directors and of employees earning more than £2,000 a year do not apply to expenses incurred by a company in, or in connection with, the provision of living accommodation if the employee is required by the terms of his employment to reside there in order to perform his duties properly.

The question at issue in the *Butter* v *Bennett* case was whether the cost of coal, heating, lighting and garden upkeep came within this exemption—could it be said to be incurred in connection with the provision of living accommodation? Mr Justice Cross decided that it could not and that all that was covered was the cost of providing and maintaining the house qua house, and not the further costs of upkeep which on a contrary view might cover not only heating and lighting but also furnishings and cleaning.

The case is of limited application. It does not cover houses provided as a general amenity for directors or employees but is confined to representative occupiers in those classes of trade where it is necessary for employees to live on the premises—bank managers, lodgekeepers, level-crossing keepers, colliery managers or the like. Alternatively, it applies where it was a common practice for at least twenty years before 1948 in a particular trade to provide certain employees with accommodation in order that they might carry out their duties properly. Such persons are, under the *Butter* v *Bennett* decision, entitled to occupy their house rent free, but to nothing more.

SCOOTERS

In the Cold

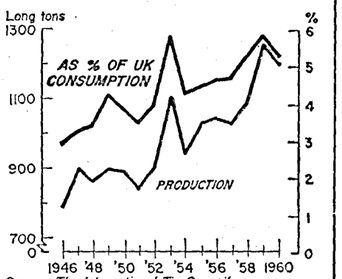
THE price cuts of £13 to £34 that Lambretta has made for the period from now to Christmas are a sign of the troubles of scooter trade. It has never really recovered from the effects of the hire purchase restrictions of April, 1960, which caught it with high stocks and past the peak of its boom. And sales this year seem to be a third lower than those of 1960. For more than a year it has been suffering from indigestion; and this action by Lambretta is its attempt to clear the decks for 1962. Imports of scooters in the first eight months of this year were only 25,000, little more than a third of the number brought in a year before and equal to British production. The drastic price cuts that Vespa made last May will have improved its competitive position in relation to the more popular Lambretta and so helped to keep up home output. This unexpected success of the British manufacturer—even if largely that of the producer of an Italian design—has helped to make Lambretta's position so awkward; despite the drastic cut in imports, stocks are unlikely to have fallen this year. The happy days of rapid expansion seem to be over for the scooter in Britain. They are bought by the young, and the proportion of those who want one seems now to be approaching stability. Scooter salesmen will have to accustom themselves to the sort of market that their confrères selling cars know.

CREDIT TRANSFERS

Catching On

SLOWLY and still rather tentatively the British public is taking to its new facilities for transferring money. The clearing banks have now embarked on their major advertising campaign explaining how the new credit transfers work, and bank managers report a modest though not yet dramatic response. The first people to convince are the organisations that send out the bills, for the new system can be used economically only if their invoices incorporate a credit transfer slip. Many gas and electricity authorities were already using this system, and the new publicity has now persuaded some of the rest to come into line. Private firms seem to be rather slower, and even some of the big hire purchase companies, for whom the scheme is particularly suited, have been slow in adapting their administrative machinery.

The increasing use of credit transfers is reflected in the figures of credit clearings passing through the Bankers' Clearing House. In October these touched a new peak of £469 million, nearly four-fifths higher than a year before. This is about 10 per cent of the value of cheques cleared through the general and provincial debit clearings, which is not a bad start; the addition of the town clearing, which is heavily weighted by City transactions, brings the total debit clearing to £22,000 million.



BUTTER

Not Yet According to Plan

AFTER a tedious charade of abortive negotiations with exporting countries, Britain has at last come to the point of dealing positively with the problem of imports of dumped butter. The President of the Board of Trade has announced that the interim solution for the six months to March 31st that received GATT's blessing at the last international butter wrangle will be enforced. If exporters do not comply, an anti-dumping duty will be levied, where necessary, after obtaining GATT's approval. In the meantime, countervailing duties, which do not require GATT's consent, might be imposed. Countervailing duties can be imposed to offset "any bounty or subsidy bestowed directly, or indirectly, upon the manufacture, production or export of any merchandise," and in practice will probably be equally effective. Similar action will be taken against any exporters not yet dragged into these discussions who try to dump butter here during this period.

The GATT plan for restricting exports—of which the details remain shadowy—has been accepted by Denmark (43,000 tons), the Netherlands, Australia (42,000 tons) and New Zealand (93,000 tons). New Zealand, with its legitimate doubts about accepting any form of restriction, is able to accept the plan because its allocation is "in line with the existing shipping programme." The same can apparently not be said of Argentina's rumoured allocation of 5,000 tons and France's share, which gave it a "disagreeable surprise." The plan must obviously be made effective soon; six weeks of the six months' period have already slipped by. The matter will certainly crop up once more at the coming meeting of GATT. Last week's action has already enabled New Zealand to raise the wholesale price of its butter by 10s. to 260s. a cwt.

CORNISH TIN MINING

Source: *The International Tin Council*

A hundred years ago, the tin mines of Cornwall and Devon supplied a third of the world's needs: Cornwall now mines only about one half of one per cent of world production. Today, most tin comes from more easily worked alluvial deposits, but in Cornwall, tin is mined from granite at depths down to 6,000 feet. Because tin is scarce—the price is once more above £970 a ton—some people think this is a good time to open some of the 1,500 abandoned mines in Cornwall, and to increase output of South Crofty and Geevor, the only two Cornish tin companies still in operation.

SPACE RESEARCH

Amber to Green

DELEGATES left Lancaster House for home last week-end carrying in their brief-cases the agreed draft of what is, for all practical purposes, a common market space plan. Of the countries that took part in the original discussions, Norway, Sweden and Switzerland bowed out and attended the Lancaster House meeting merely as "observers," leaving as the only countries outside Britain and the Six, Australia—whose Woomera launching range is vital to the plan—and Spain.

The plan—there is no agreed research programme—provides for the development of a satellite launcher engineered around Blue Streak, to be ready for firing in 1965. It is up to the scientists in the meantime to decide what they want to do with this massive launcher once it has been built. Some of them eye it today with the dubious enthusiasm of one about to receive the gift of a voracious white elephant; not many purely scientific experiments (other than some astronomical ones) want a rocket as big as the one under discussion, which they fear will eat large holes in their scientific budgets. But with each month that passes it becomes clearer that however good its intentions, the United States has not the facilities to launch research rockets for other people; it already has a queue of Ameri can scientists waiting to use the launchin pads that are available.

The driving force behind the Blue Strea plan comes from those who feel, as M Thorneycroft explained last week, that thi is Europe's last chance to get into the rocke launching business, which is potentiall capable of widespread repercussion throughout industry and communications—or of proving a flop.

To the eight other countries now studyin the draft convention, it is also the last op portunity for getting into the business a bargain prices, since more than half th investment required to go into space ha already been provided by Britain in th preliminary development of Blue Streak an

TRANSPORT BILL

Railways without the Clutter?

FEW of the 91 clauses of the new Transport Bill that the government "laid" in the House of Commons last week depart significantly from the blueprint of its intentions to unscramble nationalised transport that was provided in the white paper of December last year; and those, like the blueprint itself, appear to be pragmatic rather than doctrinaire. It is a fairly massive and complicated bill, designed primarily for a simplifying purpose: to separate out Britain's railways into a reasonably manageable entity, and to remove some of the statutory inhibitions that have hitherto prevented anyone managing them effectively.

The Ministry of Transport hopes that it will have its second reading and possibly get into committee by Christmas. There is plenty of meat in it for detailed argument in committee; the longest discussions, indeed, are liable to come over one of the least important parts of the bill, when the canal lobby gets to work on the new proposals for inland waterways. But it is hoped that "vesting date" for the transfer of assets to the new railways and other boards can be January 1, 1963. Then, after 18 months of running the moribund commission and building up what might be called a "shadow" railways board, Dr Beeching will eventually enter upon his appointed heritage.

The Railways Board, of which he will become chairman, will have here and there rather more power left to it than the government, in its first enthusiasm for decentralisation eighteen months ago, originally quite intended. Not only are the railway hotels not to be denationalised, as some Tory back-benchers hoped before the white paper was published. They are not now to be placed, as the white paper suggested, under the transport holding company that is to be formed to run the bits and pieces of transport that cannot be readily allocated to railways, London Transport, the docks or the waterways boards; the hotels are to be left in the ownership of the railways, though managed by a subsidiary hotels company.

Nor does this bill include any mention of regional railway accounting. Six regional railway boards are to be set up, appointed by the Railways Board, and exercising such powers over railway operation in their areas as the Railways Board decides to delegate, "on lines settled from time to time with the approval of the minister." In fact, the present regional railway authorities, the ministry, and Dr Beeching are proceeding as fast as possible in developing an effective system of decentralised accounting. But the scope—and the limitations—of this can only be worked out in practice, not put as principles into a bill.

FINANCIAL differences between the white paper and this bill, however, are more apparent than real; they arise mainly from the over-simplified rounding of figures, used in the white paper and from the sheer passage of time during which the railways are not ceasing to spend—or to lose—public money. There have been revisions to the estimates of the railway capital that will be written off (from £400 million to £475 million), and of the amount to be placed in a suspense account (from £800 million to £650-700 million).

At the end of 1960, the ministry could reckon the capital debt on which the railways would have to go on paying interest as, then, about £400 million; but by the new vesting date, two years more investment and depreciation, quite apart from the detailed separation of other transport assets, will have taken place and the bill understandably embodies no estimate.

So far as current deficits from now on are concerned, this bill will give the government power to lend the Railways Board up to £450 million over the next five years, until it can hope to meet its reduced capital charges (and the Inland Waterways board, similarly, up to £10 million). These boards, like the others created under the new bill, will be given the ordinary statutory duty of a British public corporation to cover or ensure that revenue shall cover all charges "taking one year with another"; but special clauses will exempt them from this duty for the first five years from vesting date.

Under the new bill the common carrier and other statutory obligations on the railways are swept away, and only London fares will remain subject to the Transport Tribunal. Coastal shippers alone will retain any right to object to railway fares charged in competition with them; and even here the minister will promise only to examine complaints *post facto*. The railways' freedom to close uneconomic lines, again, is increased, though this is not too bluntly stated. The railways will have to consult area transport users' consultative committees only when cutting out passenger services, not over freight. The area committees will send their views direct to the Minister, cutting out further delay in consideration of the issues in a central consultative committee. And consultative committees will be able to offer their views only where they feel that hardship is being caused, about alternative courses of action to alleviate this—not to argue, for example, about the railways' cost accounting for the line in question.

Did I hear you mention
'The Silent Service', Fortescue?
You did, Sir Henry...

I presume you were referring to the bearded Commander behind us, who is consuming his oysters with such evident relish.

Personalities were not involved, Sir Henry. I was merely directing your attention to the greatly increased air of quiet luxury our favourite restaurant has acquired since Cullum have installed acoustic tile ceilings.

Waiters padding softly . . . the disturbing "slurp" of soup reduced to a minimum, you mean? Wonderful, I agree. Even a cascade of crashing crockery would now scarcely distract one from the delights of Gaston's Sole a la Bonne Femme!

Remarkable, is it not, that Cullum's ceilings, by eliminating so much unwanted noise, are not only an aid to business efficiency—but also digestion!

But then, as we know Fortescue, Cullum are a very remarkable organisation. No wonder they installed over 2,000,000 sq. ft. of acoustic tiles, last year alone!

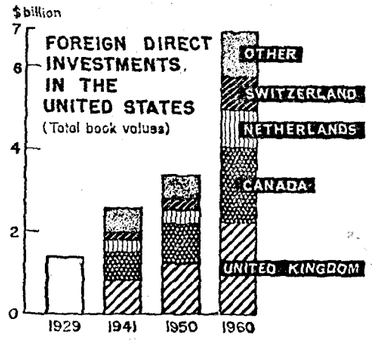
Brandy this good
has no stars on its label

No brandy of lesser quality than Fine Champagne V.S.O.P. Cognac is permitted to bear the Remy Martin label. Hence no grading by stars. The question does not arise. All you need remember is to ask for Remy Martin. In return you enjoy a superior cognac of liqueur quality. For Remy Martin *make nothing less good.* In a word, Remy Martin cater for the one man in a hundred who refuses to offend his palate—or his guests—with any brandy less good than Fine Champagne V.S.O.P. Just ask for Remy Martin.

PRIDE OF COGNAC

REMY MARTIN



the specially instrumented Woomera range. The most significant part of the draft convention is therefore that section which provides for detailed study of advanced launching systems to replace Blue Streak. These might take ten or more years to develop. It would be premature to assume that the lion's share of any development work on them would again go to Britain, but the future of any rocket industry depends on some contracts of this kind being handed round.

OVERSEAS INVESTMENT

The Dollar Balance

In a survey of foreign direct investment in the United States, the first of its kind since 1941, the United States Department of Commerce reveals that Britain's stake in American business at the end of 1960 amounted at book values to $2,248 million—not far short of the $2,475 million of direct investments that United States companies have made in Britain. According to these figures, just under half of the investment by British companies in the United States will have been made in the last decade; in 1941 the book value of Britain's stake in US business was only $712 million and in 1950 it was $1,168 million. Britain now accounts for roughly a third of all foreign investment in the United States; it is particularly important in insurance, where its investment of $900 million accounts for over half of foreign investment in finance and insurance together. Britain's other large stake is in oil; here British investment of $300 million accounts for about a quarter of the foreign-owned total.

While the total book values of direct investments that Britain and the United States hold in each other's economies are roughly equal, there is a wide difference in earnings. Figures compiled in Britain by the Board of Trade put earnings of British branches and subsidiaries in the United States in 1960, excluding the $1,200 million invested in oil and insurance, at $46 million, while the earnings of United States companies in Britain in the same year, again excluding oil and insurance which amounted to about $600 million, were $269 million.

Thus excluding the oil and insurance element (and insurance business in the United States has not of late been very profitable), Britain's proportionate earnings were still appreciably smaller than those of the United States. In general, indeed, United States investment abroad tends to be more profitable than foreign investment in the United States. The Department of Commerce puts earnings on the $6.9 billion invested in the United States at $385 million. American earnings abroad are ten times higher, on an investment total valued four times higher.

JUTE

Brisker Business

Jute is getting back to normal: some growers are complaining once more that prices are too low, while many manufacturers believe that they could with advantage be lower still. A year ago, nearly everyone in the trade agreed that prices were too high, and Pakistan, which is practically the only source of raw jute for the outside world and which appears to have been pursuing a mildly restrictionist policy in recent years, rather self-consciously took all possible precautions against a repetition of last season's crop failure.

Pakistan's new crop will probably be more than a third larger than last season's, and a comparable improvement is expected in India. The best quality jute has fallen about £80 to £128 a ton since March, dispelling the unhealthy unanimity about prices that was a symptom of last year's jute famine. A sizeable surplus of jute is required this year to make good the depletion of stocks during the past two seasons, but Pakistan and India seem to be anxious to prevent the otherwise welcome reaction in prices from getting out of hand. Now that fresh supplies of jute are reaching the trade, Indian mills have restored cuts in their working hours and restarted some looms which were sealed to preserve jute. Prices of jute goods have been reduced and business has begun to move more freely. This has enabled Dundee to get back on its feet again, and the short-time working that occurred early this year is now a thing of the past. But prices are still comparatively high; the cost of a typical hessian cloth in Calcutta has fallen by a quarter since February, but is still 10 per cent higher than a year ago. As yet there is little obvious sign that any permanent damage has been done to jute by high prices, but it might not be all that long before some effects begin to show.

The proverbial jute sack certainly seems to have come through this ordeal unscathed. West of England Sack Holdings, a sack hire group which owns 13 million sacks and lets them at a penny a week—its closest rival for the sack crown in this country is said to be British Railways—has ordered at least 7 million more from Jute Industries of Dundee. Deliveries will be stretched over five years, and the order will absorb all of Jute Industries' output of this type of seamless sack which, like the seamless stocking, is currently *à la mode*. Dundee is protected from imports of Indian or Pakistani sacks by a form of protection peculiar to this industry. Dundee cannot compete in sacking materials in export markets, but Britain does a substantial trade in secondhand sacks amounting to more than half of its imports, which will not make arguments about origin in the negotiations over Britain's entry into the common market any easier.

SHORTER NOTES

Wall Paper Manufacturers proposes to reorganise its share capital and to convert each £100 of ordinary stock into 160 new 7 per cent preference shares. The existing ordinary shares which at present carry one vote per £1 stock are limited to a non-cumulative 10 per cent dividend and thus holders will receive a 12 per cent increase in income but will have only the normal preference voting rights. The existing deferred stock is to be renamed as ordinary stock and a one for two scrip issue is to be made, after which the £1 units are to be split into 5s. units. Thus the present heavy price of 126s. will be reduced to about 21s. per 5s. unit.

★

The Standard Bank of South Africa plans to drop "South Africa" from its name, but a new subsidiary will be formed with the present name in full to run its business in South Africa.

The main point of interest in the full terms of the Rank Organisation's offer for Gaumont British is that, while Gaumont "A" and ordinary shareholders are being offered Rank non-voting "A" shares, these will in future entitle holders to attend general meetings of the Company.

COMPANY MEETINGS

BROKEN HILL SOUTH LIMITED

HIGHLIGHTS FROM MR G. LINDESAY CLARK'S SPEECH

The Forty-third Annual General Meeting of Broken Hill South Limited was held in Melbourne on October 30th.

Mr G. Lindesay Clark (the Chairman) said:

CAPITAL PROPOSALS

With the Report and Accounts, Stockholders will also have received a circular dated October 12, 1961, advising the details of the scheme for reorganising the Company's capital, to be followed by a new issue of shares.

It is proposed that the nominal capital of the Company be increased to the amount of £10 million and Stockholders will be asked later at this meeting to resolve accordingly.

The effect of the scheme will be to increase the present paid up capital of £800,000 represented by 16 million stock units of 1s. each, up to £4 million represented by 16 million stock units of 5s. each. Stockholders have been advised of the Company's participation in the Alcoa of Australia Pty. Ltd. project for the production of aluminium in Australia and also of the developments at Cobar. The Alcoa of Australia investment will require £3,663,889 spread over a period of approximately six years. In addition to this, the 76 2/3 per cent interest in Cobar may be expected to require, mainly in the second half of the next four years, funds of the order of £4 million to £4½ million, some of which may be provided from sources other than share issues.

The methods of raising additional funds will be decided at a date closer to the time when they will be needed.

FINANCIAL RESULTS

The Net Profit of the South Company amounted to £761,000 being a fall of £123,000 as compared with last year.

Although ore production was slightly higher and mining costs were reduced, the surplus from mining operations fell due to the lower prices realised for lead and zinc. Income from dividends was also affected by the passing of a dividend payment by a subsidiary, The Electrolytic Refining & Smelting Company of Australia Proprietary Limited. The increase in Administrative and General Expenses resulted mainly from an internal interest payment in respect of funds deposited by a subsidiary company, Barrier Central Pty. Limited. The provisions made for Income Tax and Mining Royalty were in total £125,000 lower than for the previous year.

After appropriating the sum of £482,000 for expenditure on Plant and Mine Development at Broken Hill during the ensuing year, a credit balance of £948,000 remains in the Profit and Loss Appropriation Account out of which Dividend No. 112 amounting to £333,333 has been declared. The balance carried forward in the Appropriation Account this year is comparable with last year's carry forward.

Some comment on the impact of prospecting and development expenditure on our accounts is appropriate in reviewing the financial results.

For Income Tax purposes expenditure on prospecting is deductible from income in the year of expenditure, and therefore it is to the advantage of the Company to finance this work from current earnings while the various prospects are in a speculative stage.

In the year under review, £183,000 was expended on prospecting and of this amount the larger proportion was expended at Cobar. In future, most of the expenditure at Cobar will be capitalised. In addition to expenditure on prospecting, substantial sums have been spent in the last few years on the development of the Western leases at Broken Hill. The rate of expenditure on this development can now be reduced.

In total, the reduction in these expenditures will result in considerable relief to the net profit position.

DIVIDENDS

A total distribution of 9d. per 1s. unit of stock has been maintained for the current year by the payment of 4d. per unit in June, 1961, and the decision to pay 5d. per unit on December 15, 1961.

REVALUATION OF ASSETS

The Board arranged for valuations by independent experts to be made of shares (other than shares in subsidiaries), debentures and notes in companies not acquired for the purpose of resale at a profit. Valuations of listed securities were made on the Board's instructions by a recognised firm of Stockbrokers, and of unlisted securities by the Company's auditors. On the basis of these valuations, and after taking into account the value of shares in subsidiary companies—the book value of which remains unaltered—the total value of all shares, debentures and notes has been conservatively revalued at £13,257,000 resulting in a capital profit of £5,345,000. Shares, debentures and notes held in companies listed on Australian Stock Exchanges which are included in the revaluation and now appear in the Company's books at £5,018,000, had a market value as at October 27th, of £5,033,000. The shares held in subsidiary and other companies not listed now stand in the books at the figure of £8,239,000.

OPERATIONS AT BROKEN HILL

Ore production at Broken Hill has been limited to the Company's commitments under the arrangement whereby world producers of lead are limiting production and sales. Increased production from the South Mine leases more than compensated for the reduced output from Barrier Central leases. The total operating cost at the South Mine fell by £1 2s. 7d. per ton to £7 6s. 0d. per ton of ore. The current international restrictions applying to lead production at Broken Hill and the lower prices now being received for lead and zinc are expected to result in a reduction in the level of earnings from the Mine in this current financial year.

ACQUISITION OF BRITISH-JUNCTION LEASES

In view of its large investments in plant and equipment at Broken Hill, it is clear that the Company should seek to extend its mining life in every way possible. The British-Junction leases which are owned by North Broken Hill Limited are located closer to this Company's main leases. The two Companies consider there will be mutual advantage if the South Company were to purchase these leases, and an agreement has been reached, subject to consent of the New South Wales Minister for Mines, to bring this about. The consideration for the purchase of these leases will be satisfied by the issue of 450,000 shares of 5s. each fully paid without rights to the new cash issue. It is anticipated that the acquisition of these leases will extend the mining life of the Company in Broken Hill for some years.

BROKEN HILL DISTRICT

Last year I mentioned that new geophysical techniques had been used in the search for further orebodies in the Broken Hill district, and during this current year, two units will be in use. This work, guided by both geological mapping and structural interpretation, has succeeded in locating several anomalies, of which two are extensive.

In view of the grade and size of the Broken Hill mineralisation, your Directors think that, notwithstanding its other commitments, the interests of the Company lie in persisting with this prospecting at least for the next two or three years by which time most of our areas will have been covered.

The exploration expenditure on the anomalies referred to above is being shared with Electrolytic Zinc Co. of Australasia Limited and North Broken Hill Limited, under the terms of the arrangement reported last year which gives the South Company a 51 per cent interest and an interest of 24½ per cent each to the other companies.

COBAR

Diamond drilling has indicated already some 18 million tons of ore averaging grade of 3.5 per cent copper as drilled.

Also, as mentioned in the Annual Report, the orebodies which vary from 29 to 40 ft. in width dip vertically between good walls and are well suited to low-cost mining.

We now intend to begin shaft sinking on the C.S.A. orebodies. Once underground development has confirmed the drilling results, these initial steps would be immediately followed by equipping the mine for production at a rate of 50,000 tons per four-weekly period. Cobar is an already-established town, linked by rail to Sydney and Port Kembla. In addition, the power grid of the Electricity Commission of N.S.W. which is connected to the town will supply power to the mines. While an increased

water supply will be needed, as well as additional housing in Cobar, the expense usually involved in equipping a mine will be reduced by the extent to which the above facilities are already available. The Electrolytic Refining and Smelting Co. of Australia Pty. Ltd. in which the South Company has a 60 per cent interest, is at the present time short of feed.

With relatively small capital expenditure this plant can be extended to smelt the larger part of the concentrates produced at Cobar. The E. R. & S. Co. is already equipped to electrolytically refine the blister copper so produced and to cast it into commercial shapes.

EXPLORATION

In addition to prospecting in Broken Hill district we have made further attempts to expand exploration during the current year. Broken Hill South Limited has joined Gold Mines of Australia Limited, a subsidiary of Western Mining Corporation Limited, in the exploration of the Moonta-Wallaroo district of South Australia. Work has already commenced in this district, which was one of the early major copper producing areas in Australia. Your Company will hold a 30 per cent equity in this project and supply most of the geophysical equipment required to carry out the exploration effectively.

An arrangement has also been made with our geophysical contractors, McPhar Geophysics Limited, of Canada, who, with Mines Exploration Pty. Limited, a wholly-owned subsidiary of Broken Hill South Limited, will jointly conduct exploration outside the Broken Hill, Cobar and Moonta-Wallaroo districts.

ALCOA OF AUSTRALIA PTY. LIMITED

For some years your Company, Western Mining Corporation Limited and North Broken Hill Limited have been interested, through their shareholdings in Western Aluminium No Liability, in the prospecting work being carried out in the Darling Ranges of Western Australia for bauxite. As the prospecting results were gradually accumulated, the existence of a bauxite deposit of great magnitude became apparent, and thoughts were at first turned to the possibility of developing an export trade in bauxite which might ultimately lead to the establishment of a refinery to produce alumina. Subsequently, the proving of large reserves of coal at Anglesea, Victoria, made possible the establishment of an integrated aluminium industry in Australia.

The economic production of aluminium requires not only large sums in capital, but also the use of specialised technical knowledge and secret processes available to long established producers. It was, therefore, desirable to enlist the support of such a producer, and following lengthy negotiations the Aluminum Co. of America (ALCOA) joined the Australian Companies in the Australian project through the formation of Alcoa of Australia Pty. Ltd., on June 14, 1961, with an authorised capital of £40,000,000 Aust., divided into 40,000,000 shares of £1 each. In a circular to Stockholders dated July 12, 1961, a general description of the project was given.

The project provides for the erection of a refinery at Kwinana, Western Australia, and a smelter and a fabricating plant at Point Henry, near Geelong.

The refinery is expected to be completed and in operation by the end of 1963. The first unit of the aluminium smelter at Geelong is expected to be brought into production by April, 1963, to be followed by the second unit to double the annual capacity. The fabricating unit at Geelong should also be in production by the end of 1963. Power for the Point Henry plants will be provided initially by the State Electricity Commission of Victoria, but ultimately it is proposed to construct a power staton at Anglesea, based on the local brown coal reserves.

The estimated cost of the project to completion is £A44 million. These funds will be found from both share and loan sources, and the Aluminum Company of America has agreed to provide loan money approximately equal to twice the share capital issued for cash, as well as its proportion of the share capital. Fully paid shares have been issued by Alcoa of Australia Pty. Ltd. to the three Australian Companies in exchange for their interest in Western Aluminium N.L. and for certain other assets. A further issue of 6,250,000 £1 fully-paid shares will be made to the Aluminum Company of America for the full and exclusive right to use, in Australia only, certain secret processes, technical knowledge and research information for the engineering, design, construction and operation of the facilities.

Your Company has received 486,111 of the £A1 fully paid shares issued, and it has applied for 3,663,889 of the contributing £A1 shares, upon which at this date an amount of 2s. per share has been paid. The South Company therefore holds 4,150,000 shares in Alcoa of Australia Pty. Limited representing an interest of 16.6 per cent. It is believed that the consumption of aluminium in Australia will grow under the impetus of new products and marketing techniques. In addition, Alcoa of Australia expects to develop an export trade in alumina, aluminium metal and semi-fabricated products, and in fact sale of a large portion of the alumina production from the Kwinana refinery is already assured.

One of the terms of the arrangements between Alcoa and the three Australian mining Companies is that, except with the unanimous consent of all Directors of Alcoa of Australia Pty. Limited, at least one-third of the net profits of Alcoa of Australia for each of its financial years, commencing with the financial year ending in 1965 shall be distributed as dividends. Consideration will be given, once the enterprise is firmly established, to listing the shares of Alcoa of Australia on the Australian Stock Exchanges. Your Directors feel confident that the South Company has become a partner in a great venture from which appropriate benefits will flow in due course.

THE ELECTROLYTIC REFINING & SMELTING COMPANY OF AUSTRALIA PTY. LIMITED

Because of its inability to obtain sufficient raw materials to sustain economic operations at Port Kembla, the earning capacity of this Company has continued to decline and has now fallen to such a level that the operations for the year ended June 30, 1961, resulted in a small loss.

While the amended copper bounty legislation which became effective as at January 1, 1961, for a period of three years, should enable the E.R. & S. Company to continue to receive raw material from certain local sources, it would seem that the return of this smeltery to its former active and profitable state will rest on the developments at Cobar.

The installation of the continuous casting plant was completed towards the end of the financial year, but it did not contribute towards the E.R. & S. Company's profitability for the period. Commercial production of high grade castings from this specialised plant has been successfully achieved and should find a ready market.

METAL PRICES

The average price realised for lead during 1960/61 was £82 6s. 11d. per ton as compared with the previous year's average of £89 4s. 10d.; the average silver price was a fraction of a penny higher at 8s. 2d. per ounce, and the zinc price fell by £4 1s. 5d. per ton from £111 8s. 6d. in the previous year, to £107 7s. 1d. per ton.

METAL SALES

The restrictions on sales of lead, in terms of United Nations Agreements, continued in force during the whole of the year. Export sales accounted for 82 per cent of the total sales of B.H.A.S., as against 79 per cent in the previous year, with sales to the United Kingdom showing a tendency to increase.

In order to bring production more into line with demand, the United States Government offered to acquire for stockpiling surplus lead stocks accumulated to December 31, 1960. The condition of the offer was that both production and sales would be restricted throughout the 1961 calendar year.

The B.H.A.S. Pty. Limited and its shareholding supplying companies have since the close of the year sold to the US Government 40,000 long tons of lead, or practically the whole of the B.H.A.S. surplus lead stocks. Because production at the South Mine has been running in line with its sales quota for some time, your Company had a comparatively small interest in the barter sale proceeds.

During the year the Commonwealth Government sought increased quantities of silver for coinage purposes, but it was not possible to meet their indicated requirements in full.

The average price of zinc on the London Metal Exchange for the year ended June 30 1961, fell by approximately 5 per cent when compared with the previous year's average More recently the fall in the price of zinc has accelerated and at the end of September, 1961 was some £16 10s. 0d. Stg. below the price ruling at June 30, 1960. Zinc was removed from restriction by the International Lead and Zinc Study Group in February, 1960, but it would seem now that an accumulation of stock is bringing pressure on the price structure. The Company's long term contract with Electrolytic Zinc Company of Australasia Limited for the sale of zinc concentrate, expires on December 31st next, and the various avenues for disposal of the mine production of zinc concentrate subsequent to that date are being considered.

WORLD MARKETS

Although the consumption of both lead and zinc continues to increase, the world production capacity also continues to be above world demand and this is the most serious factor which the industry is facing. In March last the International Lead and Zinc Study Group decided to curtail lead supplies to a level of approximately 2 per cent below estimated world consumption for the calendar year and Australia as one of the 26 member countries has abided by this decision.

The Group has just concluded a meeting in Geneva and has announced that for 1962 it is expected that supplies of lead will exceed demand. Member countries of the Group have agreed to continue curtailment of supplies at existing levels until the end of March, 1962 when the position is to be reviewed again. No action to restrict supplies of zinc has been proposed at either of these Meetings.

A new factor in the marketing of lead and zinc by Australian producers is the application by the United Kingdom to join the Organisation for European Economic Co-operation. In relation to Australian metal exports the enlarged Common Market would have a small impact only on refined lead and bullion and slab zinc. Since member countries of OEEC require to import concentrates for their important smelting industries, the marketing of concentrates in Europe would be of greater significance in the future. These considerations should be seen in the light of the expectations of expanding consumption.

GENERAL SUMMARY

Finally I would like to refer to a tendency in some quarters to regard Broken Hill South as a company reaching the end of its mining career and concerning itself chiefly with investment. In fact, as has been announced at previous Annual Meetings, the Board, for some years, has been employing the Company's resources and experienced staff in a policy of mining development and exploration. As a result of this policy, the picture of the South Company the Board would like to put before you today is that of a company with a valuable investment portfolio, with an extended life for its mine at Broken Hill and with further prospects in that district, with a 16.6 per cent interest in the great aluminium industry being established by Alcoa of Australia Pty. Limited and with a 76¾ per cent interest in the major copper project at Cobar; in all constituting a large and progressive mining Company with diversified interests in all major non-ferrous metals.

BROOKE BOND & CO. LTD

extracts from the statement of The Chairman

Mr JOHN BROOKE

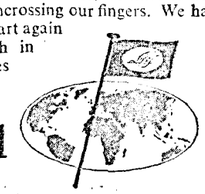
circulated with the Report and Accounts for the year to 30th June 1961, to be submitted to the Annual General Meeting on 1st December 1961

Group Net Profit for the Year to 30th June, 1961, is £2,210,825 after tax, compared with £2,397,545 last year. The Group Profit is £4,061,878. Last year it was £4,395,451. The decline in profits can be attributed to the unavoidable droughts in the tea growing areas, and to the autumn Tally Clerks Strike in Dockland.

Tea Prices and Trading At home, two unofficial strikes created chaos at the London Docks. The Tally Clerks Strike was particularly disastrous, as it came when our stocks of plain teas were low and we had to put higher priced teas into our cheaper packets at a heavy loss. Not unnaturally, market prices reacted unfavourably to the adverse trading conditions, but it is significant that retail prices remained unchanged for yet another twelve months—an encouraging sign of the soundness of the industry.

Sales News Another year of progress in which sales of Brooke Bond packet tea have increased by more than 14 million lbs. In the U.K., sales showed the greatest increase since the year following de-rationing. A vigorous advertising programme to attract the housewife, combined with demonstrations at the point of sale have helped to bring increased trade for our packet teas and for the shops concerned. The housewives of tomorrow have not been forgotten. For many years, in every packet of Brooke Bond Tea, there has been a picture card prepared by experts, which helps to encourage an interest in Natural History.

In India, tea consumption is increasing, and our Indian Company has secured its share of this trade. Brooke Bond Canada has shown another encouraging increase in turnover, and good progress has been made in the U.S.A., Ceylon and Rhodesia.



First and foremost, we are a Tea business, but it is only right to refer to our sizeable proprietary Coffee sales. They increased by 1¼ million lbs. this year.

Fixed Assets The total of the original cost, etc., of our fixed assets now exceeds £20m. Our fine new Redbourn Factory was opened in November 1960 and will feed the increasing sales in the south of England. A large factory has been purchased in Montreal and is being converted for tea and coffee packing.

Tea Plantations Our own production was about 2,000,000 lbs. less than last year. The figure is 29,760,351 lbs. This crop shortage was due to bouts of drought in North India, Kenya and Tanganyika. In South India development continues at a steady rate. In Ceylon, a fair crop was harvested, but the Ceylon government is now taking over 75% of profits in tax. New planting was carried out smoothly in Kenya.

The Welfare Insurance Company Just as good husbandry builds up the starch reserves in a tea bush, so in the insurance world, we employ 'good husbandry' to build up funds and reserves, whilst eschewing incautious development. Expansion continues in all classes of life and pension business. The Life Fund exceeded £1m. by the end of 1960, six years after its inception. The Trustee Department is now administering funds in excess of £500,000.

Prospects When making any forecast about the future of the Tea Trade, we have to keep crossing and uncrossing our fingers. We have made a good start again this year, both in terms of sales and profits.

Brooke Bond & Co. Ltd

JOHN I. THORNYCROFT & CO., LIMITED

The Sixtieth Annual General Meeting of John I. Thornycroft & Co., Limited, will be held on November 30th in London.

The following is an extract from the Statement by **Mr John W. Thornycroft**, the Chairman, circulated with the report and accounts:

Long term your Board are certain that Southampton as a port has a great future, and that the Company should participate in the prosperity that must increase year by year. The Company's fixed assets, land, buildings and plant, are primarily planned for shipbuilding, engineering and ship repairing. In valuers' language, they would be called "purpose-built hereditaments." That means that they are not readily convertible to other uses. Nevertheless, some of the plant and equipment is being used for general industrial purposes, despite some disadvantage due to their location in a terminal port area.

Unless facilities and equipment are modernised regularly, the existing assets could very easily become of little value. It must be appreciated that assets are only worth what can be made out of them year by year by obtaining work which results in a profit after all costs have been met. Despite the present depression in the shipbuilding and ship repairing industry, the Board are satisfied that the Company must invest additional capital in order to compete with Home and Continental shipbuilding and ship repairing yards. With improved facilities and equipment it is hoped that the hourly paid employees will co-operate and make available their labour on competitive terms with any other port in the world, and not waste the natural advantages that Southampton has as a terminal port. It is believed that a number of shipowners would prefer to use Southampton as a terminal port. The improvement in the roads to Southampton from the Midlands is becoming an important consideration in reducing f.o.b. costs. As more ships use the port, the necessity for more lay-by berths for periodic and major overhauls and repairs becomes more urgent.

LONDON MARINE DEPARTMENT

This section is being re-organised to give technical services, primarily to overseas customers, to assist them in building locally. It is proposed to build up a brokerage business. Owners wishing to sell craft will be encouraged to lay up either at our Northam Yard, Southampton, or at Hampton-on-Thames. Both these locations are very convenient for inspection by prospective purchasers.

"... I believe that over the years our direct stake in Europe will assume a growing importance"

MR. R. K. CALDER

The Fifty-fifth Annual General Meeting of Solar Industries Limited was held on November 3rd in Glasgow. In his statement circulated with the Annual Report and Accounts, the Chairman and Joint Managing Director, **Mr. R. K. Calder**, reported profits, before tax, of £522,707 compared with £451,790 for the previous year. Final Dividend was 12½%, less tax, making 17½% for the year. Group sales and earnings were again at record levels. Output was up by some 17%.

Commenting on the Group's activities, Mr. Calder said:

UNITED KINGDOM: "As a whole the U.K. Companies failed to maintain the pace achieved in the first half of the year but output was still up by just over 6%."

"The Foundry Division, represented by Aluminium Bronze Co. Ltd. and Trent Foundries Ltd., despite the very severe setback in demand from the motor trade, succeeded in more than maintaining output."

"The Burnley Group, which covers Burnley Aircraft Products Ltd., Universal Boilers & Engineering Co. Ltd. and Solar Weld Languepin Ltd., fully justified the confidence which I expressed last year. Both output and profits scored further notable increases."

"Atkinson's Agricultural Appliances Ltd. was not quite able to maintain the high rate of progress of the previous year. Export sales were considerably higher and every opportunity is being taken to expand this effort."

"The Plating Division, represented by the Verichrome Companies and the new acquisition, Irco Plating Co. Ltd. of Coventry, produced reasonably good results. Irco Plating Co. is now being integrated with Verichrome Plating Co."

"Scottish Aluminium Ware Ltd. (manufacturers of 'Luxaflex' Venetian Blinds), continued to make substantial progress, both sales and earnings being at record levels."

"The Draftex Group: As could be expected from the trend in the motor trade, the U.K. Companies suffered both reduced outputs and materially reduced profits.

GERMANY: "By contrast the German Company made spectacular gains in both output and earnings. Progress continues and new factory premises are a matter of urgency. A suitable site has been obtained and your Directors are giving consideration to the attendant problems of finance, etc., involved."

CANADA: ". . . we have had to provide for losses in the Canadian Companies of some £42,654, a position which, while still disappointing, is an improvement on the previous year."

THE FUTURE: "Our order book—overall—is higher by more than 25% than it was a year ago. New developments are beginning to pay off. While the deterioration in general conditions in the last six months—and particularly in the motor trade—has put a brake on our rate of progress, I feel quietly confident that this is but a pause in our continuing pattern of growth. I equally believe that over the years our direct stake in Europe will assume a growing importance and can be the base for further extensions of Group activities irrespective of whether the United Kingdom finally joins, or remains aloof from, the Common Market."

THE BRITISH LINEN BANK

STATEMENT TO STOCKHOLDERS BY THE GOVERNOR, LORD AIRLIE

The Right Hon The Earl of Airlie, KT, Governor of the Bank, has circulated a Statement with the Accounts of which the following is an extract:

In presenting the Bank's Accounts for the twelve months to September 30th last, it gives me pleasure to draw attention at the outset to the dominant feature, viz. the continued progress of the Bank's business in a year during which conditions generally have done little to assist further expansion.

Total resources have risen during the year from £109.32 million to £116.47 million—a record figure in the annual Balance Sheets of the Bank.

The main increase in individual items is in Current, Deposit, and Other Accounts which at over £93,608,000 show a welcome rise of £6,546,000, equivalent to just over 7¼ per cent.

Turning to the other side of the Balance Sheet, our quick assets—consisting of cash, cheques on other banks in course of collection, short money, and bills discounted—aggregate over £35,075,000. This represents a ratio of 32.26 per cent to the combined totals of our Deposits and Notes in Circulation, as against 29.1 a year earlier.

The book value of our holdings of British Government securities at £26,778,000 is some £1,179,000 less than the corresponding figure as per the 1960 Balance Sheet. The market value of these investments on September 30th last was in excess of the figure at which they appear in the Balance Sheet.

Our *Advances to Customers at September* 30th last amounted to £45.42 million—just under £2 million more than a year earlier. The peak was reached in April 1961, since when there has been the seasonal decline in customers' requirements which is our normal experience in late Summer and early Autumn. A special feature this year has been that, in common with other members of the British banking system, we came under severe pressure in July to exercise restraint in lending. We have loyally responded, as on former like occasions, and have again done our best to achieve the objective with a minimum of disturbance to our customers.

Greater revenue resulting from profitable employment of expanded resources—with a high average level of advances being a prominent feature—served to offset a continuing and substantial rise in our overhead costs and to bring out a net profit of £424,399. This is £12,527 above the previous year's figure, and it is very satisfactory to see the upward movement recorded in recent years thus maintained.

The sum of £76,562 has already been applied in payment of the dividend for the half-year to March 31st last at the unchanged rate of 20 per cent per annum less income tax, and it is now proposed to allocate a like sum in dividend, less tax, for the second half of the year. Declaration of a higher dividend at this time would have been well justified but, in deference to the wishes expressed by the Chancellor of the Exchequer, the Board feel that the rate should be left unchanged. Appropriations as before of £130,000 and £100,000 respectively to Staff Pension Fund and Contingencies Account will leave in Profit and Loss Account a surplus of £275,653—an increase on the year of £41,274.

HARRISONS & CROSFIELD LIMITED

REVIEW OF YEAR'S ACTIVITIES

The Annual General Meeting of Harrisons & Crosfield Limited will be held on December 6th in London.

The following are extracts from the circulated statement by the chairman, **Sir Leonard C. Paton, CBE, MC:**

Group earnings for the year have just not reached 1960's record figures. Trading in the Eastern countries was again buoyant, but Australia, Canada and America, for varying reasons, were all well below last year, both in turnover and profit. Results from UK operations were higher.

Group profit for the year was £1,618,373 from which taxation of £911,281 has to be deducted. The Directors recommend a Final Dividend of 12 per cent, repeating last year's total distribution of 15 per cent., but as a straight dividend without bonus. The Directors have refrained from proposing an increase in the distribution on this occasion in deference to the Chancellor's appeal.

Group turnover, exclusive of sales of the produce of the Plantation Companies whom we represent, was over £71 million, compared with £79 million last year. The reduction was almost equally split between the lower price of rubber handled by our own dealing departments and the fall in business in Canada.

Activity remained high and expansion in the UK continued. To broaden our insurance interests we recently acquired a substantial interest in the well-known brokers, Chandler, Hargreaves, Whittall & Co., Ltd.

We have also acquired a half-interest in the old-established firm of Elders, Walker & Co., Ltd., Newcastle upon Tyne.

The Birtley Group's new factory, reported as going into production last year, is already making a valuable contribution to profits.

There have been other acquisitions, but smaller.

Profits of Wilkinson Rubber Linatex Ltd. capped previous records.

After reviewing the Group's activities in the individual countries in which it operates, the statement continues:

TEA

Prices. During the year 1960, the total quantity of tea sold in London from North India was reduced by more than 25 per cent compared with 1959, and averaged 1d. per lb. more. South India, with a record crop, was 3.36d. higher, and Africa, also ahead in production, more than 4½d. higher. Ceylon fared less well and the year's average in London was 1d. under 1959. The total average for all tea, though reduced in overall quantity by just on 15 per cent., was slightly over ½d. per lb. higher than 1959.

The limited quantities of really top-quality tea, both from India and Ceylon, again realised record prices during 1960, though in North India the benefit in many cases was largely nullified by increased costs resulting from reduced output.

Production. In 1960, despite the serious loss of crop in North-East India and Pakistan, a total world supply of 1,548 million lb., according to the figures prepared by the International Tea Committee, was just about balanced by the recorded absorption of 1,546 million lb.

Although the fear of a shortage of tea from North India maintained prices in London in the early months of 1961, the substantial improvement in world crops over the past few months has been reflected in lower prices. This has altered the position, and the average of all prices to October is slightly below last year.

Consumption. Consumption in the UK remains steady round 500 million lb. yearly. Imports into the USA at 114 million lb. in 1960 showed an increase, and there have been small increases in some of the Middle East markets. Apart from this, little change has taken place in the pattern of consumption in the main markets of the world.

Prospects. Latest figures indicate that world crops during the twelve months will be in the region of 90 million lb. above 1960, and possibly 80 million lb. ahead of 1959, itself a year of record production.

In the long-term, as development proceeds and living standards rise in large areas of Asia and Africa, there is reason to hope that tea consumption will substantially increase. The availability of larger quantities of cheap tea should accelerate this progress.

RUBBER

Prices in 1961, up to mid-October, are down compared with the twelve months of 1960. The average for No. 1 RSS spot London was 25¼d. per lb., compared with the 1960 average of 32¼d. Larger stocks in Malaya and a possibility of further stockpile releases have moved prices within narrower limits down to lower levels. This has strengthened the competitive position of natural rubber in 1961.

Consumption. In the USA, car production is unlikely to be better than an average year. In Europe, the industry is only now emerging from an export crisis, which Germany alone has partly avoided. The UK, previously exporting some 50 per cent of output, has proved vulnerable to slackening demand from abroad and the credit squeeze at home. Consumption of natural rubber has thus fallen, both in the USA and West Europe.

World Production. Current estimates indicate the possibility of a further surplus of natural rubber in 1961, although perhaps only half the size of 1960. This is partly due to smaller disposals from stockpile. Total 1961 consumption of natural rubber may reach 2 million tons, against supply of about 2,065,000 tons (including approximately 30,000 tons from stockpile).

Prospects. Prospects for 1962 are difficult to assess. There are renewed fears of inflation: recovery in the USA is being induced by Government spending; the rate of growth in the Common Market countries shows signs of slackening under pressure from increasing costs and labour shortages: expansion in the UK depends on the success of the recent measures undertaken to restore competitive strength. Britain's entry into the Common Market, still under study, is at present an unpredictable factor.

The finest natural rubber that research and skilled husbandry can provide, and the most stable economic price that can be attained, will assure to natural rubber its proper share in the steadily expanding industrial production of the world.

PROSPECTS

Prospects. While pressing vigorously our general trading, we are increasingly buttressing the plantation and trading sections of the business with industrial activities, where the same basic qualities are needed for success.

THE PERAK RIVER HYDRO-ELECTRIC POWER COMPANY

RECORD RESULTS ACHIEVED

The 35th annual general meeting of The Perak River Hydro-Electric Power Company, Limited was held on November 8th in London, **Mr. Hugh G. Balfour** (the Chairman) presiding.

The Chairman said:

Before dealing with the business of the Meeting, it is my sad task to refer to the death of our old friend and colleague, Mr. Stewart Kilpatrick, OBE, which occurred on Friday, October 20th, last.

Mr. Kilpatrick was not only our senior director in length of service—he joined the Board in 1926, the first year of the Company's existence and had served continuously ever since—but he was a shrewd and genial colleague whose financial acumen and sound business judgment were always willingly brought to bear on the various problems which from time to time confronted the Board.

As the senior partner of Messrs Govett, Sons & Company, this Company's Brokers, he occupied a prominent position in the life of the City of London, where he will be much missed. I am sure that I speak for all who knew Mr. Kilpatrick when I say we feel a deep sense of loss at his passing.

The following is an extract from the Chairman's circulated statement:

The results for the Company's financial year ended July 31, 1961, continued to be satisfactory. Gross Revenue at £1,841,037 showed an increase of 22.5 per cent. on the previous year and surpasses the previous record year, 1957, when the comparable figure was £1,683,155.

Generating plant continued to give good service during the year. Total units generated at just under 480 million showed an increase of 24.03 per cent. on 1960. The Malim Nawar steam power station generated 243.37 million units, or 34.7 per cent. more than the previous year, while the Batu Gajah steam power station generated 76.69 million units, or 118.08 per cent. more than 1960. Unfortunately, the effective flow of the Perak River at the Chenderoh power station continues to be well below the average minimum flow for the last 31 years with the result that Chenderoh only generated 159.6 million units or 6.6 per cent. less than last year. We should reasonably expect some 190 million units in a year of normal rainfall.

INSTALLATION OF FURTHER GENERATING PLANT PROPOSED

During the year, 89 miles of high tension transmission line were constructed and energised and 71 miles of line dismantled because of normal changes in mining operations. Demand for electricity in our Concession Area showed a marked increase during the year, with the result that the distribution system is now virtually fully loaded. I referred last year to the possibility of obtaining a bulk supply of electricity from the Central Electricity Board. It is now clear, however, that, owing to the increasing demands on

the Board's system, such a supply cannot be expected for at least several years to come.

The Directors have therefore decided to proceed with the installation of two additional 20mW. generating sets and ancillary plant at the Malim Nawar power station, subject to the necessary consents of the Malayan Authorities.

Our subsidiary, The Kinta Electrical Distribution Company, Limited, had another satisfactory year and business continued to expand. The total number of units sold was 20,293,125 compared with 19,327,172 in 1960, an overall increase of 5 per cent. The gross profit of the Company from the sale of electricity increased by 12.08 per cent to £90,774 during the year under review.

Turning to the Revenue Account for the Company, revenue from the sale of current and miscellaneous income at £1,841,037 shows an increase of £338,349 over the previous year and resumes the pre-restriction rate of growth. After various deductions, including provision for taxation, the profit for the year is £407,340 as against £295,051 last year. Your Directors recommend a final dividend of 6 per cent and a bonus of 5 per cent. Taken in conjunction with the interim dividend of 4 per cent already paid, this makes the distribution to the Ordinary Shareholders for the year 15 per cent. This distribution represents an actual rate of 3.2 per cent on the total capital employed in the Company's business.

The Company's Balance Sheet at July 31, 1961, shows that fixed assets have increased by £207,442 and that the excess of current assets over liabilities is £1,018,139 as compared with £720,992 in the previous year. It will, therefore, be seen that the Company is building up a strong liquid position against the cost of the further generating plant required at Malim Nawar.

THE JHANZIE TEA ASSOCIATION

The eighty-fourth annual general meeting of The Jhanzie Tea Association, Limited, was held on October 27th in London, Mr G. A. Rainey (the chairman) presiding.

The following is an extract from his circulated statement:

The crop produced at 4,915,848 lbs. was some 100,000 lbs. less than that for 1959, most of this reduction being on the Seleng Estate, but it is worthy of note that three of the Association's gardens, Naganijan, Jaipur and Namsang, produced more tea in 1960 than in 1959. Seleng and Boisahabi, the two gardens most seriously affected by the 1959 drought, unfortunately again showed a loss over the season's working. The Board, however, feel confident that the rehabilitation measures now being taken will ensure that, in the near future, these two estates will again contribute towards the profit-earning capacity of the Association.

Higher prices were obtained in both the London and Calcutta markets and, although a smaller proportion of the crop was shipped to London, total proceeds are up by £16,000. Total revenue expenditure having remained steady, the profit on tea for the season is £101,132, an increase of £15,432 over that achieved for 1959.

As regards the prospects for the current season, it is reassuring to report that, up to the end of August, the 1960 crop shortfall has more than been made up, and that the outturn is, in fact, ahead of 1959.

The report was adopted and a dividend of 5 per cent, free of tax, was approved.

BERALT TIN & WOLFRAM

SIR CHRISTOPHER BULLOCK'S REVIEW OF THE WOLFRAM MARKET

The thirty-third annual general meeting of Beralt Tin & Wolfram, Ltd., was held on November 2nd at Winchester House, EC2.

Sir Christopher Ll. Bullock, KCB, CBE, Chairman, presided.

The Chairman, in the course of his speech, said:

WOLFRAM PRICES

The market for Wolfram has been in a sluggish and depressed condition for some time past. After a period of reasonable stability at between 150s. and 160s. per long ton unit during the first nine months of the year under review, the price fell to 120s. 6d. as at March 31, 1961. It then showed a small recovery and in June rose to 130s. 6d.; but during the past two months it has declined again and stood at the end of October at no more than 118s.

Various factors have contributed to these price fluctuations and the present weakness of the market. Among them have been sales from behind the Iron Curtain, primarily of concentrates of Russian or Chinese origin, which have been sold on occasion at very substantial discounts. Demand for wolfram from the Continent, particularly from Germany and Austria, has been largely satisfied for some time past by supplies from these sources under running contracts.

Another disturbing factor has been the availability of Government surplus stocks in this country. I am glad to say that there has been to date no repetition of the serious price debacles of 1957 and 1959, caused by these stocks being pressed on a market in no condition to absorb them. But it is obvious that the knowledge that they are awaiting sale has had, and must continue to have, an adverse influence. In my opinion, but for sales from this source, the price might well have risen to a more reasonable level when intermittent bursts of demand have occurred in the past twelve months.

Though it is only fair to say that those concerned have made every effort to avoid disruption of the market, I consider the Authorities should bring this whole question under careful review. I doubt whether it is to the tax-payers' advantage that these stocks should continue to be liquidated at what must be a very heavy loss on their original purchase price. Moreover, I regard continuance of the present state of affairs as unfair to producers in today's difficult conditions. The Authorities might well fix and announce a *minimum* price below which they will not sell; or a scheme might be devised on the lines of the Rubber disposal scheme whereby, within a prescribed price range, a "tap" would be automatically turned on and off.

It is encouraging that very large sums continue to be spent in the United States on research and experiment in the field of tungsten and its products. A recent report speaks of tungsten as one of four metals which are regarded as the most promising for rockets and similar missiles, whether for space exploration or for military purposes, and states that over $20,000,000 is being spent on research into these metals in the current year. Several interesting developments, for example in fabricating technique, have been reported as a result. If these prove capable of commercial application—and some of them have already done so—new uses may well emerge which will substantially enhance demand. And demand should in any case tend to increase over the years as world industrialisation develops and spreads into new countries. For what it is worth, the United States Materials Policy Commission estimated in 1952 that world consumption of tungsten might increase by 150 per cent by 1975.

The Board thought it right to sound a note of caution when announcing the interim in March and the proposed final dividend at the end of August. The average mean Metal Bulletin price for 1960/61 was 148s. 10d. per unit; as I have said, today's corresponding figure is only 118s. This is a fall of more than 30s. per unit (equivalent to about £113 per ton of our wolfram concentrates) and, in the case of a low-grade mine such as Beralt, such a price cannot leave even the most efficient producer with an adequate margin of profit in a period of rising costs.

The Report and Accounts were adopted.

COBALT DEVELOPMENT INSTITUTE

The Cobalt Development Institute, which groups leading cobalt producers of the free world, held its Sixth Annual Meeting in Brussels, on October 24th. Mr J. H. Lascelles, Resident Director of Rhodesian Selection Trust, Ltd., presided and was assisted by the two Vice-Chairmen, Mr Ch. Piedboeuf, a Manager of Union Minière du Haut-Katanga, and Dr Schackmann, President of the Board of Duisburger Kupferhütte.

The Assembly examined and approved the 1960 activities and financial management of the "Centre d'Information du Cobalt" (CIC), which is the executive organisation of the Institute. It also expressed its satisfaction at the setting up of two new branch offices, in Düsseldorf and London, which constitutes the outstanding achievement for the Institute in 1961.

As regards the research programme, emphasis was once more laid on three fields of application. One is concerned with the problem of air pollution by automobile exhaust gases. Research during the past two years has resulted in demonstrating the remarkable activity of cobalt oxide as a catalyst for the complete combustion of these gases, and in developing a suitable support for this catalytic agent. Next year's effort will be devoted to designing and testing a complete afterburner device incorporating the new catalytic material.

The other fields of application are the more traditional ones of magnetic materials and special steels and alloys. Here the research effort will be oriented in several directions, and will include both fundamental and practical work.

The "Centre d'Information du Cobalt" and its branch offices are at the disposal of cobalt users to answer requests related to cobalt and its applications. Information of current interest is diffused mainly through the quarterly "Cobalt," which is published in English, French and German. The head and branch offices of CIC are located at: 35, rue des Colonies, Brussels, Belgium; Battelle Memorial Institute, Columbus 1, Ohio, USA; Düsseldorf, Elisabethstrasse 14, Germany; Chichester House, 278/282, High Holborn, London, WC1, England.

THE ECONOMIST NOVEMBER 11, 1961

COMPANY AFFAIRS

Shopping and Shares

In his statement with the full report of Debenhams the chairman, Mr J. Bedford, tells shareholders that the full effects of the Chancellor's "little budget" still have to be felt. The latest figures from the Board of Trade show that apart from food almost all sections of retail trade suffered some decline in sales in September. There is further evidence of the slowing down in the rate of growth from the interim report of **Marks and Spencer** for the half year to end September; while sales reached a record figure of £84¼ million, an increase of 6 per cent over the £79 million for the corresponding period in 1960, this compared with the increase of 16 per cent achieved in the first half of 1960-61 and the increase of 12½ per cent for the year as a whole. Shareholders are left to guess whether the increase in turnover has brought a similar increase in profits; this seems unlikely if the increase in sales has been most marked in food, for margins there are slimmer than in clothing. Nevertheless the interim dividend has been left unchanged at 15 per cent on the capital as increased by the one for ten scrip issue and represents an effective increase of 1.4 points over the 1960-61 payment. There can be little doubt that the full year's payment will be kept at 47½ per cent, representing an effective increase of 4.3 points. On this assumption the 5s. "A" shares at 103s. 9d. yield 2¼ per cent.

The main interest in the **Debenhams** full report lies not so much in current trading prospects, on which the chairman declines to commit himself, as on future property developments. A year ago Mr Bedford said there were plans for developing and extending 28 existing stores over the next five years. But as a result of the credit squeeze the directors said in September that the programme of capital expenditure would be spread over a longer period. Capital commitments at July 31st amounted to £2.4 million and liquid assets then were down from £2,464,000 to £854,000 reflecting in part additional working capital; these figures pointed to the need for further funds, which were in fact raised by a £4½ million rights issue in September. The new plans for the development of the group's properties are much more ambitious and involve the setting up of a property subsidiary and the likelihood of a link with one of the insurance companies. Some plans are already well advanced and parts of the enlarged Plummer Roddis sites at Hastings and Brighton are to be given over to large blocks of flats.

The directors have decided against selling freehold properties and leasing them back; they say that "It is in our best interests to retain these valuable properties, which are the best hedge against inflation that we have." They admit however that there are short term advantages in lease-back financing but they believe that under the property subsidiary the properties will be used to "the best possible advantage."

The major challenge to Debenhams and other department stores groups comes from the continued growth of the multiples and Mr Bedford again refers to the progress made in the centralisation of the group's buying of the staple lines. It remains to be seen whether the group is moving quickly enough in that and other directions to keep step with the change in shopping habits. On the forecast dividend of 19.2 per cent. on the increased capital the 10s. shares at 57s. 3d. yield 3.4 per cent.

Electric and Musical Industries

As usual the statement from Sir Joseph Lockwood, the chairman of Electric and Musical Industries, is long and detailed, and shareholders should be encouraged by it. Many will perhaps content themselves with the last two sentences: "The prospects for the group's sales seem good and in the year to June 1962 they may well reach a total of the order of £90 millions, assuming no political crises. Although I expect group profits to be higher I would hesitate, in these conditions of intense competition, to make a forecast."

Sales in the year to June 30th last amounted to £82.4 million, against £68.7 million, but Sir Joseph points out that if the sales of the newly acquired subsidiaries, Morphy-Richards and Ardente, are included for the previous years, turnover has risen by no more than two per cent in each of the past two financial years. This reflects an increase of 8 per cent in sales of records, 13 per cent in electronic capital goods, a reduction of 11 per cent in household appliances, radio and television sets and virtually no change in the other products, which include magnetic tapes and hearing aids.

Profits before tax rose from £5,221,000 to £5,448,000. That this profit was not higher is attributed not only to the slump in consumer durables both here and in Australia but also to the heavy expenses incurred in the rationalisation of the group's household business in this country following the Morphy-Richards acquisition. Sharp increases in the depreciation charge, following the revaluation of freehold properties, and in interest charges, reflecting the rise in working capital and the financing of the cash portion of the Morphy-Richards deal, have also eaten into the trading profit. At the end of June there was a net overdraft of £3.9 million against a net liquid balance of £2.8 million. The directors do not intend at the moment to issue any new shares for cash but the issue in Switzerland of 40 million Swiss francs of 4½ per cent unsecured registered bonds, 1966-76, at par will raise £3.13 million net and this will clearly bring about some saving in loan interest.

The only shares which EMI proposes to issue are to its senior executives who are to be granted options to buy up to 600,000 shares. These options are to be for five years at a price which will either be the middle market price when the offer is made or the middle price on some subsequent date. With the shares standing only slightly above their low point and yielding 4.8 per cent on a 17½ per cent dividend at 36s. the first alternative will be the most attractive to any executives who are offered options in the near future. Certainly there will be many disappointed investors on both sides of the Atlantic if these options do not prove valuable over the five-year period. Before then the electronic group should be making good profits: so far the company admits that its profits hardly justify the amount of capital employed but all development and research costs are written off against current profits each year. Once the present recession is past Morphy-Richards should benefit from EMI's world-wide connections. Its sales of smaller appliances continued to rise last year and with the Astral refrigerator it added to its share of a depressed market at home. In the long term the uncertainties perhaps are concerned more with records, which have been so successful in recent years, than with EMI's other products. So far there is little sign of the record boom ending in this country (although it has been forecast for the past two years) but the trend is towards cheaper long-playing records and this presumably points to lower margins.

De La Rue

The interim results from De La Rue repeat a now familiar story in British industry: higher sales—14 per cent up on the corresponding period in 1960—but only a small increase in profits before tax and a small reduction in net profits. As the chairman, Mr B. C. Westall, predicted at the annual meeting late in July the Chancellor's measures have affected the progress of the group particularly the Formica group and the Thomas Potterton group which makes gas and oil fired heaters. Thus margins are below those of last year when profits of the Formica subsidiary were badly hit by the depression in the furniture trade.

If there is little evidence of progress in this country at the moment, the group's export and overseas business, which last year accounted for £10½ million of total sales of £18½ million, has made further strides. In the 28 weeks to mid-October the overseas subsidiaries raised their sales by 25 per cent and exports rose by 20 per cent, contributing together £5.9 million of total sales. While the order book shows a substantial increase over both the level at this time last year and at the end of the financial year the directors expect this to be offset by lower profit margins. They hope to pay the same total dividend of 22½ per cent.

Continued from page 597

On this not too discouraging statement the 10s. shares gained 3s. 6d. to 49s. 6d. to yield 4½ per cent; the shares have been as high as 70s. this year and the fall in their price can be attributed partly to expectations of another rights issue. At March 31st liquid assets had been reduced to only £55,000 and the directors said in July that they were considering the most advantageous way of raising new capital.

Kundenkreditbank

On Thursday dealings began on the London Stock Exchange in the equity of Kundenkreditbank, the leading instalment credit house in West Germany. This is the first time the shares have been quoted officially other than on the Duesseldorf exchange. Dealings in London, for the convenience of the British investor, will be not only in the DM 100 shares but also in deposit certificates of DM 10 nominal value each which will be made available through N. M. Rothschild. In Duesseldorf the DM 100 shares are quoted around DM 520 and the deposit certificates closed in London on Thursday at 96s. 6d. On last year's dividend of 16 per cent the yield is 2.94 per cent, about one point lower than that generally obtainable on leading British hire purchase shares. Ten per cent of the company's issued capital of DM 15.5 million (£1.4 million) is already held by British institutions, including United Dominions Trust.

The company is responsible for about one tenth of all instalment credit granted by banks in the Federal Republic, and its 1960 pre-tax profit of £600,000 is over five times the 1951 figure. Future prospects seem bright, with per capita instalment debt in Germany only about one-half that of the United Kingdom. About 62 per cent of the company's advances go to manual workers. But partly because German law allows instalment companies to take a charge over the wages or salaries of individual borrowers, bad debts in Germany have been less prevalent than in this country.

Paper Interims

With excess capacity in the paper industry it is not surprising that the interim results from three leading paper producers reveal further pressure on profit margins; the results also reflect a further reduction last July in tariffs on imported papers from the EFTA countries. Spicers was the first of the trio to report and with a maintained interim of 4 per cent came a small increase in pre-tax profits in the first half of 1961 from £445,000 to £455,000 resulting from "more than maintained turnover." There is however a twist to this: lower profits for the full year are forecast as a result of more difficult trading in recent months.

A similar picture emerges from the interim statement of Wiggins Teape for despite higher sales profits had already begun to turn in the six months to July 1st when gross profits before depreciation fell from £3,179,000 to £2,882,000. Since the end of July sales too have declined and it seems the earlier estimate of £4,850,000 before depreciation and tax will be about £300,000 too high. However the directors hope to maintain the total dividend at 14 per cent. The estimate did not include any income from Millbank Paper which is jointly owned with British American Tobacco and into which Wiggins Teape has put some of its paper interests. But the latest figure includes a dividend of £307,000 gross from Millbank and the 1960 figure has been adjusted accordingly. Wiggins Teape's share of the cost of capital developments by this new joint venture will come from 1,800,000 shares issued to BAT at 60s. per share, payable as required up to January, 1964. It seems likely that it will be some while before the new shareholders break even on this investment for the £1 shares now stand at 48s. 6d. to yield 5¾ per cent. A further £1 million of 6¼ per cent debenture is being issued at 99, one point above the price of the earlier issue of £4 million in July.

The most significant fact to be drawn from the interim results of **Albert E. Reed** is that the interim dividend has not been cut as had been feared but has been maintained at 5 per cent. The results for the six months to September 30th show sales of £56 million, against £38 million, trading profits of £5.4 million, against £3.6 million, and net profits of £1.7 million, against £1.4 million. These figures however are practically meaningless as they include for the first time contributions from Imperial Paper and Anglo-Canadian Paper which were acquired from the Daily Mirror group. It is no surprise that the chairman, Lord Cornwallis, tells shareholders that while sales have been maintained in this country profits were lower than in the corresponding period in 1960 and that for the year as a whole profits from home paper manufacture will be "significantly" lower. Nevertheless he expects profits from other home activities and particularly those from overseas to make "a very important contribution to profits." News has also come this week of a further extension of Reed's overseas interests with the announcement of plans to build a £4 million carton board mill in southern Italy. The chances that Albert E. Reed will be able to maintain the dividend at 16 per cent on the increased capital have certainly not been dimmed by this interim statement although the cover for such a payment is likely to be slender. Thus the £1 "A" shares have held up well this week but at 43s. are still close to their 1961 low and yield 7½ per cent, reflecting the many short term uncertainties and the sheer weight of recently issued capital.

ACCOUNT DAY:	Nov. 7	Nov. 21	Dec. 5

The cut in Bank Rate to 6 per cent last Thursday caused no more than a ripple in the stock market last week and investors paid much more attention to the latest company news and the prospects of a capital gains tax. Before the weekend the company news had a depressing effect on equity prices, but the market was prepared for the results from De La Rue, A. E. Reed and BMC; the fall in prices was halted on Tuesday and reversed on Wednesday. The rally was enough to offset earlier falls and *The Economist* indicator rose fractionally from 356 to 356.4 over the week to Wednesday; more gains appeared on Thursday with some buying for the new account.

The gilt-edged market was fairly busy last Thursday but around the weekend the amount of business fell, though the drop in Treasury Bill rate on Friday helped to keep prices up. After the weekend the shortage of credit in the money market and the competitive influence of the £10 million Agricultural Mortgage Corporation loan, coming soon after the LCC and Bootle issues, combined to restrict the amount of investment buying; there was also some profit-taking among short-dated stocks. On Wednesday the government long-dated tap stock, Treasury 5½ per cent 2008-12, attracted buyers and over the week the stock gained ½ to 84. Undated stocks were quiet before the weekend but War Loan went up by ⅛ to 52⅝ xd and among the shorts Exchequer 5½ per cent 1966 gained 1/16 to 98 15/16.

Bank shares had a quiet week; the leaders showed mixed movements and insurances made good earlier losses after selective buying on Wednesday. The revival in equities was due in part to the Chancellor's statement in the Commons on Tuesday that there might be expansion in the economy early next year. Electrical shares scored gains on press comment and EMI gained 1s. 6d. to 38s. over the week, mainly after the chairman's statement. Stores shares were an active market, with several anouncements this week; following early falls Marks and Spencer "A" improved after the interim results to lose only 6d. over the week to 103s. 6d. Debenhams' property development plans encouraged some buying and the shares gained 2s. 9d. to 56s. 9d.

There was some profit-taking among Tubes which came back 1s. to 66s. 6d. American interest in Beechams waned and they lost 1s. 9d. to 51s. but Unilever in their new form again attracted buyers and gained 1s. 3d. to 41s. 3d. Motor shares were firm and so were food shares, though National Canning lost 9d. to 41s. 9d. Steel shares were again out of favour, and the interim statements generally depressed paper shares, though Bowater were in demand on Wednesday and gained 6d. on the week to 47s. 9d.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended November 4, 1961, there was an "above-the-line" surplus (after allowing for sinking funds) of £14,712,000 compared with a deficit of £42,594,000 in the previous week and a surplus of £55,595,000 in the corresponding period of last year. There was a net expenditure "below-line" of £27,170,000 leaving a total cumulative deficit to date of £721,145,000 compared with £678,644,000 in 1960–61.

THE MONEY MARKET

At the Treasury bill tender following the cut in Bank rate to 6 per cent the syndicate of discount houses raised its bid for the 91-day bills on offer by 1s. 6d. to £98 12s. 11d., and the average rate of discount fell correspondingly by 6s. 0.47d. to £5 8s. 6.10d. per cent. This was not a large absolute fall after a ½ per cent cut in Bank rate but after the anticipatory reductions in bill rate it has nonetheless placed the rate 9/16 per cent below the new Bank rate. This leaves the market little room for manoeuvre, and since it is already having to pay 5 13/16 per cent for day to day money to finance bills taken up this week at 5 7/16 per cent, it is possible that the downward slide in the bill rate may soon be checked. The market's allotment of 91-day bills and the first of the 63-day bills averaged 69 per cent compared with the previous week's 66 per cent.

Credit has again been tight in Lombard Street this week and the authorities have taken the opportunity of forcing the market to borrow from the Bank of England at the penal rate on all but two days.

This week in New York the authorities increased the bill offer in order to drive-up short-term rates. The three months bill rate rose from 2.280 per cent to 2.349 per cent.

THE UNIVERSITY OF MANCHESTER

EXTRA-MURAL DEPARTMENT

Applications are invited for the post of STAFF TUTOR in Holly Royde College with the salary and status of either Lecturer or Assistant Lecturer in the University. Applicants should hold a good Honours degree in one of the following subjects:—Literature, Philosophy or Sociology. Salary scales per annum:—Lecturer, £1,050 to £1,850; Assistant Lecturer, £800 to £950. Membership of F.S.S.U. and Children's Allowance scheme. Initial salary and status according to qualifications and experience. Duties to commence on January 1, 1962, or as soon as possible thereafter. Applications should be sent not later than Monday, November 20, 1961, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF WESTERN AUSTRALIA

RESEARCH FELLOWSHIP IN ECONOMICS

Applications are invited from graduates in Economics or Commerce for appointment to the above-mentioned Fellowship. The Fellow will be required to study the costs and economic benefits of the Ord River Scheme in the north of Western Australia.

The level of the appointment will depend on the successful applicant's qualifications and experience and will be either a Senior Research Fellowship within the salary range £A2,450-£3,000 p.a. or a Junior Research Fellowship within the salary range £A1,750-£2,450 p.a. In the case of a Senior Fellow the tenure will be for a period of twelve months, and for a Junior Fellow a period of eighteen months.

It is important that intending applicants obtain details of the procedure to be followed in applying for the post and a copy of the conditions of appointment before submitting their applications. This information, together with further information about the research programme, is available from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in Australia and London, on *December 16, 1961.*

CONSETT IRON COMPANY LIMITED

Organisation and Methods

Applications are invited for the position of Senior Organisation and Methods Assistant with Consett Iron Company Limited.

Applicants should be aged 25 to 35 and have a university degree or professional or technical qualifications. Experience in the investigation and re-design of clerical procedures is essential and a knowledge of modern data processing techniques would be highly desirable.

The successful candidate will require to work in close collaboration with a team of computer programmers engaged in programming a large-scale computer, and he will require to re-design clerical routines for application to the computer. He will also require to undertake such other methods investigations as are required.

Salary will be commensurate with age, qualifications and experience; assistance may be given with housing.

Applications should be sent to the

Personnel Manager, Consett Iron Company Limited, Consett, Co. Durham.

For further appointments and other classified advertisements see pages 604 and 605

CONSETT IRON COMPANY LIMITED

Computer Programmers

Consett Iron Company will shortly install an IBM 1401 computer to control production of steel plate at their new Plate Mill, one of the largest in Europe. Additional programming staff is required for this work, and applications are invited from suitably qualified men and women. Applicants should be preferably in the 25 to 35 age group and should have a degree or professional or technical qualification. Preference will be given to those with previous programming experience, particularly with IBM equipment. Candidates with previous Organisation and Methods experience will also be favourably considered. Salary will be commensurate with qualifications and experience; assistance may be given with housing.

Applications should be sent to the

Personnel Manager,
Consett Iron Company Limited,
Consett, Co. Durham.

DOWNING COLLEGE, CAMBRIDGE

FELLOWSHIP IN HISTORY

The Governing Body hope to elect a Fellow in *History* with tenure commencing not later than October 1, 1962.

The total emoluments, including payment for teaching, will be £1,050 per annum (£850 if resident in College) together with normal Fellowship allowances.

Applications should be made not later than December 31, 1961. Full particulars may be obtained from the Master.

MILK MARKETING BOARD AWARDS IN AGRICULTURAL ECONOMICS

The Milk Marketing Board invite applications for their awards for vocational study and for research in agricultural economics. The awards are open to men and women who are graduates of universities in the United Kingdom in any subject, but preference is given to those whose degrees have been obtained in agriculture, in economics, or in social or business studies. Candidates are expected to have gained a first-class or good *second-class Honours degree*, but any qualifications of similar status may be accepted.

There are two categories of awards:

(a) STUDENTSHIPS (£600-£700 per annum) are for postgraduate students qualified to study for a postgraduate degree or diploma or to take up research work in agricultural economics;

(b) FELLOWSHIPS (£800-£1,200 per annum) are for persons who have already had experience in postgraduate study in some subject cognate with agricultural economics.

Applications should be sent not later than January 31, 1962, to the Secretary, Awards in Agricultural Economics, Milk Marketing Board, Thames Ditton, Surrey, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF SYDNEY

COMMONWEALTH BANK GRADUATE SCHOLARSHIPS

Applications are invited from graduates or graduands in Economics or graduates graduands in Arts who have specialised in Economics for Commonwealth Bank Scholarships. *Graduands may make application and* later supply, when available, evidence of final results at graduation. Commonwealth Bank Scholarships, which are tenable in the University of Sydney, are available for research in the Faculty of Economics. They are awarded in the first instance for one year, but may be renewed for a second year and, in exceptional *circumstances, for a third year. A scholar may* hold the Scholarship in the third year either at the University of Sydney or at an approved overseas University. The value of the Scholarship is £A1,000 per annum.

Further information and application forms may be obtained from the Registrar, University of Sydney, Sydney, New South Wales, Australia, with whom applications close on *December 31, 1961.*

M. A. TELFER,
Registrar.

NORTH WESTERN GAS BOARD

HEAD OFFICE, MANCHESTER

ASSISTANT ECONOMIST

Applications are invited for the above pensionable appointment in the Statistics Department at a commencing salary within the range £700/£1,015 per annum according to qualifications and experience.

Candidates should preferably be not more than 27 years of age and must hold an appropriate graduate or equivalent qualification. Preference will be given to Honours graduates *in Economics combined with Accountancy.*

The Assistant Economist will be concerned with cost and price studies within the business and with the analysis of economic trends, as they affect the gas industry. The work offers *ample scope for initiative in the application of* the economist's approach to the solution of business problems.

Detailed applications, giving the names of two referees, should reach the Secretary of the Board, Bridgewater House, 60 Whitworth Street, Manchester, 1, within 14 days.

STATISTICIAN—QUALITY CONTROL

S. Smith & Sons (England) Ltd., *wish to engage the services of a* Statistician.

Applicants should be graduates with a minimum period of two years' practical experience in quality control procedures, and be not only capable of statistical analysis, but be fully *conversant with the theory and practice* of modern statistical techniques.

The person appointed will be in charge of the Statistical Services Unit of the Quality Control Department of the Motor Accessory Factory at Cricklewood, which is engaged in quantity production of electrical and mechanical instruments and associated electrical equipment.

This post is available now and interviews will be *arranged immediately.*

Write in confidence, quoting reference SM.442, to:

The Staff Manager,
S. SMITH & SONS (ENGLAND) LTD.,
Cricklewood, London, N.W.2.

GOVERNMENT OF UGANDA

A Statistician is required in the Ministry of Economic Development, Uganda. Candidates, preferably aged under 45, should have a First or Second Class Honours degree in Economics. *Duties will include* taking charge of a section in the Statistics Branch, planning investigations into allocated subjects, analysing the results *and preparing* tables and draft reports.

Appointment on contract for one tour of 21-27 months in first instance. Inclusive salary scale £1,221-£2,448; experience taken into account when assessing entry point. Gratuity of 25 per cent on total *salary.* Income tax at local rates. Free passages. Generous home leave and education allowances. Free medical attention.

Apply in first instance with summary of personal particulars to Director of Recruitment, Department of Technical Co-operation, Carlton House Terrace, London, S.W.1, from *whom further details may be obtained.* Please quote reference number RC.206/153/01/A3 and state full name.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of INVESTIGATIONAL OFFICER in the DEPARTMENT of AGRICULTURAL ECONOMICS. Candidates should have academic qualifications and/or practical experience in Agriculture, Economics or Accountancy. Salary scale £650 x £25 to £750 x £30 to £950 with membership of the F.S.S.U. and Children's Allowance Scheme. Graduates would have an initial salary of £725 per annum. Investigational officers may be considered on reaching a salary of £800 per annum for promotion to the grade of Senior Investigational Officer (salary scale: £1,050 x £50 to £1,300 merit bar-line) x £50 to £1,550). Applications should be sent not later than Monday, November 20, 1961, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF HONG KONG

ASSISTANT BURSARSHIP

Applications for the above-mentioned post are invited from persons with good accountancy experience who hold a recognised accountancy or secretarial qualification. Experience of Hollerith punched card equipment will be an advantage. Other things being equal preference will be given to candidates who are between the ages of 24 and 30 years.

The salary scale attached to the post is £2,150 p.a., rising by annual increments of £75 to a maximum of £2,825 p.a.

Conditions of service include free air passages for the successful applicant and his wife and children, home leave, furnished housing accommodation at a reasonable rental, and a contributory Superannuation Scheme (5 per cent employee, 12½ per cent employer). Income tax rates are low.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Hong Kong and London on December 13, 1961.

Mars LIMITED

MARKET RESEARCH OFFICER
(Information)

Owing to the continuing expansion of the Company, the Market Research Department of Mars Limited wish to appoint an additional Market Research Officer.

The successful applicant will be responsible for a wide and interesting range of operations which may include packaging research, retail and consumer surveys undertaken in connection with merchandising and operational research tests, and research on advertising. The job will also involve the preparation of special reports based on available market data and the further development of general market intelligence. There would be full scope for experimental research into new techniques, and the man or woman who fills this appointment will be working in a context of a department which undertakes a large volume of research, and is fully equipped with its own field staff and data processing equipment.

Applicants should be between 27 and 33 years of age, and preferably have a degree in Economics or Psychology with Statistics as a subsidiary subject.

Salary will be in the range

£1,700 — £2,200

and the Company operates a very generous Social Security Scheme covering Pension, Life Assurance and Sickness benefits which is entirely non-contributory.

Applications, stating age, education and experience, should be addressed to:

Chief Personnel Officer, Mars Limited,
Dundee Road, Slough, Bucks.

COUNTY BOROUGH OF IPSWICH EDUCATION COMMITTEE

CHANTRY MIXED SECONDARY SCHOOL (GROUP XXIV)

Applications are invited for appointment as

HEAD TEACHER

of the above new ten-form entry Mixed Secondary School which will serve a developing housing area on the southern outskirts of the County Borough. It is designed for a five-year course, the first two years to be housed in a Lower School teaching block and the remaining three years in six House Blocks. The first stage, accommodating approximately 600 pupils, will be opened in September, 1962.

The Committee envisages the appointment of a person under the age of fifty who is a Head, a Deputy Head or holds a position of high responsibility in the Educational field.

Application forms, obtainable from the undersigned, must be received by November 30, 1961.

J. T. HILL,
Chief Education Officer.

Education Department,
17, Tower Street,
Ipswich.

A nationally known company selling to farmers, urgently requires a

MATHEMATICIAN/STATISTICIAN

who should possess either a Diploma in Statistics or have attended a comprehensive course in Statistics. The successful candidate will work under the Commercial Director, and his duties will cover a wide variety of statistical work. In the main, he will be engaged in the Design and Assessment of Experiments in Livestock Feeding, the statistical assessment of Quality Control Data for Animal Compounds, and the Operation of Plant.

There is an excellent contributory pension scheme, first-class welfare facilities and salary in accordance with experience/qualifications. Write, giving brief details of experience and career to date, to:—

THE PERSONNEL MANAGER,
THE BRITISH EXTRACTING COMPANY LIMITED,
BROMBOROUGH PORT, NEW FERRY,
BIRKENHEAD, CHESHIRE.

THE UNITED STEEL COMPANIES LTD

WORKINGTON IRON & STEEL COMPANY

Branch of The United Steel Companies Limited

STATISTICIAN

A Statistician, preferably under 30 years of age with degree in statistics or equivalent qualifications, is required at the works of Workington Iron & Steel Company (situated on the Cumberland coast near the Lake District).

The successful candidate will be responsible to the Operational Research and Work Study Manager for the application of Statistical techniques to problems in production and control. He will be responsible for providing a statistical service, and this will include the designing and supervising of works experiments.

An electronic computing service is available at the Central Department of Operational Research at Sheffield.

The company has a compulsory pension and life assurance scheme and offers opportunities for advancement throughout the departments and branches of the United Steel organisation.

Apply to:

The Secretary, Workington Iron & Steel Company,
P.O. Box 5, Workington, Cumberland.

WOMAN MATHEMATICIAN

The City head office of an international Mining House has a vacancy for a woman *graduate in mathematics or economics and statistics in a team responsible for the* evaluation of projects. Starting salary, which will depend upon qualifications and appropriate experience, would be not less than £700 per annum for successful applicant without experience. There are other benefits. Please write to The Secretary, Rio Tinto Management Services (U.K.) Ltd., Barrington House, 59, Gresham Street, London, E.C.2.

QUALIFIED SECRETARY/ACCOUNTANT

Large oil company expanding its sales and services in the United Kingdom requires a young qualified accountant to take charge of its accounting and budgetary operations. The accounting department will be based near Guildford. Prospects are excellent and a good salary will be paid to the right applicant.

Applications, with details of career including particulars of salary earned to date, should be addressed to Box 1564.

AN additional Assistant is required for the Research Section, I.C.A., Secretariat. The work involved provides a broad introduction to research in the social and management sciences, and demands a good qualification in economic and related subjects and a knowledge of European languages. *Brief details of qualifications* to be sent to: International Co-operative Alliance, 11, Upper Grosvenor Street, London, W.1, marked "Personal."

CHARTERED ACCOUNTANT

Large financial and industrial holding company requires a qualified accountant, aged under 35, to work under the direction of the Chief Accountant. Applicants should have experience with an industrial or commercial concern, particularly in budgeting and cost control and preferably also the preparation of consolidated accounts. Salary £1,500 to £2,000 per annum with commensurate pension provisions. Please write to Box TE.218, c/o Hanway House, Clark's Place, E.C.2.

UNIVERSITY OF WESTERN AUSTRALIA

INSTITUTE OF AGRICULTURE

RESEARCH ECONOMISTS

Applications are invited for appointment to two positions of *Research Economist in the* newly established John Thomson Agricultural Economics Centre. The appointees will be required to carry out operations research in Agricultural Economics. Appointment will be for a period of up to five years in the first instance.

The salary range for the positions will be identical with that of either a Lecturer or a Senior Lecturer within the University, depending on the level of the appointment. The salary range for a Lecturer is at present £A1,750-£A2,350 p.a. and for a Senior Lecturer £A2,450-£A2,950 p.a., but it is *expected* that these ranges will be increased in the near future to £A1,750-£A2,450 and £A2,450-£A3,000 p.a., respectively.

It is important that intending applicants obtain details of the *procedure* to be followed in applying for the posts and a copy of the conditions of appointment before submitting their applications. This information is available from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *December 31, 1961.*

EDUCATION: BUSINESS AND PERSONAL

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

seeing is knowing for sure

One after another, go-ahead managements are turning to a completely modern—yet already fully proven—technique to increase productivity. These managements have discovered that the ability to observe by remote control cuts costs and speeds manufacture. The tool that makes this possible is closed circuit television for industry, pioneered by Pye.
Pye Closed Circuit Television sees where the human eye cannot, is invaluable for many flow-line process systems, and enables the work of different departments to be more closely dovetailed. Almost every industry can benefit from it. The most experienced group of people in the country concerned with closed circuit television is to be found in the Industrial Division of the Pye organisation. Their experience could be placed fully and freely at your disposal.

GUIDE TO CONTENTS SEE OVER

Materials badly stored can render valuable space ineffective. The handling and storage of materials in limited space is a costly problem for all industries; but with efficient handling techniques and equipment the storage space of existing buildings can be increased by 30%! Lansing Bagnall, the largest and most experienced manufacturers of materials-handling machinery in Europe, design and build equipment for every specific handling problem in the distributive, extractive and manufacturing industries. This handling machinery covers an exceptionally wide range, from electric, petrol and diesel fork lift and reach trucks, to power pallet, stillage and jack trucks, airport and industrial tractors and trailers. The Lansing Bagnall rider electric reach fork truck, for example, can stack a load of 2 tons to a height 12ft., travel at speeds up to 5 m.p.h. and manœuvre in aisle widths less than 7½ft. Lansing Bagnall provide the most efficient and comprehensive after-sales service in the industry—with 14 regional depots throughout the country, available for the life of every truck purchased.

Recognise your need for improved handling – and Lansing Bagnall will show you how it can be done, promoting greater efficiency and economy for you. Write, or if urgent telephone, for advice on any problem of handling and storage. Lansing Bagnall will recommend, without prejudice or commitment, the most suitable solution.

INTERNATIONAL

LOYALTY IN SIGHT

The Six are now ready to welcome the British candidacy for their club but, as the meeting in Brussels last week showed, the boxing about rules of entry is no longer shadow (p. 654).

• Meanwhile, in Paris, the established members are at odds about schemes for political union (p. 656).

• Canadians do not conceal their dismay at Britain's progress towards Europe ; Mr Diefenbaker, showing a spark of gamesmanship at last, is trying to force Britain to declare its hand before he shows his (p. 657).

• Mr Douglas Jay suggests again, in a letter on p. 644, one issue on which he thinks Britain should stand firm. Argentina is worrying about the effect of the common market on its meat exports to Europe (p. 640).

Against the background of **famine in East Africa**, the British Government is showing some new initiative in thinking of ways to help backward countries with their agricultural problems (p. 634).

LOYALTY IN DOUBT

Some are shocked by the bomb tests, others by Mr Khrushchev's curt treatment of Albania and even curter treatment of Stalin's ghost. Mr Khrushchev has bruised the unity of the communist camp, but who—Russia, China or the West—stands to gain? (p. 627).

Italian communists are shattered by Mr K's tales of Stalin's crimes (p. 658). But it takes a thick brush to paint out Stalin's name (p. 643).

Dr Adenauer may not be able to rely on much team spirit from his motley new cabinet (p. 634). He has been embarrassed by his turbulent ambassador in Moscow, but Dr Kroll's initiative may, in fact, have stimulated the search for a negotiated settlement to the Berlin question (p. 629).

Dr Salazar, it seems, is immovable ; the best to hope for is that his feudal principles will eventually be buried with him (p. 632). Two new books on Portugal are reviewed on p. 646.

The chairman of the Foreign Relations Committee of the United States Senate is fighting for the loyalty of his constituents with arch-reactionaries in Arkansas (p. 669).

LOYALTY TO WHOM?

New disturbances in **the Congo** eat away at the central government's ragged authority (p. 653). The Security Council is again debating what it can do to help ; if the United Nations fails, others may have a go (p. 633).

The Queen's visit has called a truce to Ghana's political troubles —but it is only a truce (p. 653).

India wants to reduce the foreign exchange it has to spend on **oil**. Inside the country it can put pressure on the refineries ; in trading outside it lacks bargaining power (p. 679).

Mr Nehru, in Washington, has reminded his listeners that most countries are less concerned with the mighty problems of the cold war than the West would like them to be (p. 634).

General Park, who has also been in Washington, is making a show of liberalisation in South Korea (p. 638).

In Cambodia, the quality of neutrality is much strained (p. 661).

General Taylor's report to President Kennedy on Vietnam is still secret, but Washington has its ideas (p. 670).

What now happens to the Singapore base? (p. 637).

HOME

UNDER THE WEATHER

Mr Lloyd's economic policy looks now in the doldrums, perilously close to the rocks of which the Chancellor himself recently gave warning (p. 625).

October's trade figures are disappointing, but the Chancellor still feels that we are balancing our current account (p. 683).

This week's two most important strikes are hard to solve—and need probably never have happened (p. 640).

Lingering hopes of a recovery in lead prices have drifted away with the falling leaves (p. 688).

Lightship crews : the wages of boredom (p. 665).

OVER THE RAINBOW

Cash for Culture: a guidebook for a British Maecenas (p. 630).

Funds for Building: the building societies need to give their image a new shine—and they must not fear high interest rates (p. 681).

Drinking Scotsmen: the new concessions on Sunday opening north of the border do not go far enough—and may look like class prejudice (p. 637).

Special incentives for exporters are in the wind ; the Government has a narrow path to tread (p. 687).

The City is starting to think about its future role in the common market (p. 687).

The stock market seems to be in a strangely optimistic mood this week (p. 682).

BEHIND THE TIMES

Family Allowances: the Government's proposals are just plain mean (p. 638).

ETU : despite the election of a new executive, litigation continues within the electricians' union (p. 640).

Labour party : towards the long knives? (p. 633).

Bridgeton by-election : in Maxton's stronghold (p. 633).

School meals : teacher's toughest tasks? (p. 662).

AHEAD OF THE FIELD

The favoured consumer : a plethora of new private bills (p. 637).

Broadmoor : attempts to turn this mental hospital into a true prison would put the clock back a hundred years (p. 643).

Henley : the Catherine Wheel Hotel lights up a Thames-side dispute (p. 664).

Better beer: two British brewers join an international research agreement (p. 690).

Computers of the future—with a bedside manner? (p. 690).

INDUSTRY AFTER INDUSTRY, all around the world, has found that new Polysar* rubbers, produced by the Polymer Corporation Limited, have helped to solve a wide variety of raw material problems. The result has been a steady growth in production, leading to the present pre-eminence of Polymer among world rubber suppliers. Additions are constantly being made to these versatile elastomers. One of them could supply you with the answer to your raw material problems. A letter to the Marketing Division, Polymer Corporation, Sarnia, Canada, will put you in touch with a Polymer representative in one of 43 countries.

The Right Steps...

TO SOUND PLANT INVESTMENT

The soundest capital investment in a new plant or refinery is one founded on sound engineering. For this reason we strive for the highest levels of technical competence. An important part of this effort is spent in analysing, correlating, and recording the scientific data accumulated from our pilot plants, the commercial plants we have built, and from the scientific literature.

One result of this continuing programme is the Kellogg Technical Data Book . . . a major responsibility of our Design Data Group. A single volume of 437 pages in 1938, today it comprises several volumes with a total of more than 2,500 pages. Parts of the Data Book have been released for publication and are used throughout the world as standard engineering references. However, the full economic benefits of the total work are realised only in Kellogg-designed processes and plants.

To obtain additional information on how Kellogg's extensive experience can provide a sound foundation for your new plant investment, you are cordially invited to review with our engineers the various aspects of your own specific needs.

1 *Clark Non-Lube Model CRA-6 Balanced/Opposed Motor-Driven Compressor rated at 1250 bhp compresses nitrogen from atmospheric to 565 psi pressure. Vibrationless, this 14-inch stroke machine requires minimum foundation. Integrated single bundle intercoolers increase throughput and reduce bhp. Cylinder mounted intercoolers conserve space.*

2 *Four Clark-Type HS (Horizontally-Split) Centrifugal Compressors provide the Oxygen service. They are arranged in tandem with a single drive for each pair. Features of these machines include: Speed matched to drive; adjustable inlet guide vanes (for high part-load efficiency); built-in bearing alignment; up and down connections for piping economy.*

3 *Clark Isotemp "100-pound" Air Compressors. Four stage isothermal design incorporates space-saving base-mounted interstage cooling. Isolated bearing chambers at atmospheric pressure plus unique seal porting eliminates lube oil contamination of output air. (See text for space savings). Units in service all over the world. 5 to 50 thousand cfm.*

MAXIMUM-THROUGHPUT, MINIMUM-PLANT

Air Separation for Steelmaking Oxygen

To meet growing competition, steelmakers are going all out to reduce production costs ... with oxygen.

By 1965, say forecasters, new basic oxygen steel plants will be producing more than 10% of the world's steel ... at savings as high as 30% over former methods. Open hearth producers, too, are demanding big and increasing quantities of oxygen ... and making higher grade steels at lower costs.

Most Convenient Source ... Air

Steelmakers are taking their oxygen from air, right at the point of use. To keep their oxygen costs per ton of steel at a minimum, many of them (or their suppliers) take advantage of the advanced design of Clark Compressors.

On the average, air separation systems using Clark Compressors require from 25 to 33⅓% less plant area than systems using other compressors of comparable output ... with impressive savings in capital investment and in operating and maintenance costs.

Here is a specific! The two Clark *Isotemp* centrifugal compressors for handling "100-pound" air shown (3) in the foreground of the picture above require 40% less floor space than comparable machines and 50% less than compound centrifugals externally intercooled. And far less piping.

Here is another specific! In the far background of the picture (1) above is the Clark Non-Lube Model CRA-6 Balanced/Opposed reciprocating compressor that handles the nitrogen service. It's furnished as a complete space-saving package with overhung motor, intercoolers and piping. What's more, it is vibration-free and requires minimum foundation.

Much the same can be said for the four horizontally split Clark Centrifugals (2) that compress the oxygen in this plant ... maximum throughput with minimum floor space and piping.

Expert engineering assistance anywhere in the world

If you are considering air separation to produce oxygen in quantity for steelmaking or other purposes, call on Clark Bros. Co. Overseas Division for help with the compression engineering. Send over-all specifications, tons per day of oxygen needed, ambient temperature, site location, type of drive (steam or electric).

A specialist from Clark will contact you quickly with preliminary equipment selections. And remember this, you may use the currency of your choice in purchasing the equipment you select from Overseas Division, Clark Bros. Co., 122 E. 42 St., New York 17, N. Y. One of the Dresser Industries.

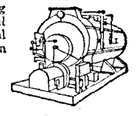
Now... CRANE INTERNATIONAL

offers industry a bigger and broader range of quality products

As leading engineers and architects know, Crane has been the outstanding leader in the valve and industrial piping industry for a great many years. Crane's reputation for quality is established throughout the industry. Crane...today...offers a greatly expanded line of products for industrial, commercial and residential use. Every Crane product is checked for quality at every step of its production. Crane maintains the industry's most complete facilities for engineering, manufacturing and testing its products.

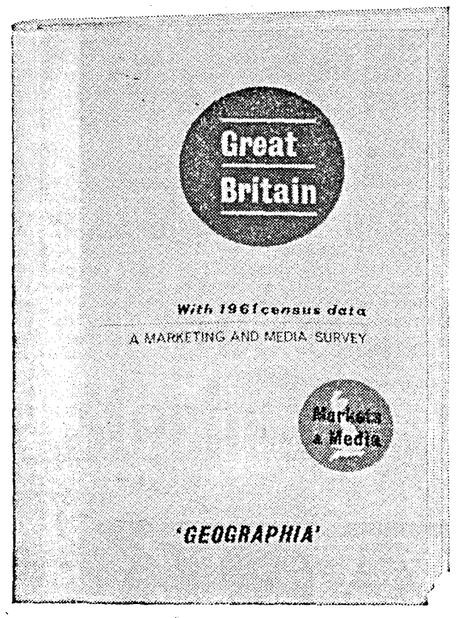
Industrial Products
Valves made of bronze, iron, cast steel and forged steel. Cylinder operators, flanges and welding fittings. Heat exchangers and feed water systems.



Engineered Products
Special valves, recorders, automatic controls, water treatment equipment, separators and purifiers, exhaust heads, deaerating and non-deaerating heaters, fabricated piping, process equipment and pumps.

Systems & Controls
Fuel and hydraulic pumps, automatic breaking systems, actuators, aircraft, missile and electronic components.

Plumbing, Heating & Air Conditioning
Baths, lavatory fixtures, plumbing brass accessories, plumbing fixtures for hospitals and institutions. Industrial and residential heating units, steel and cast iron boilers, radiators. Residential and commercial air conditioners and chillers. Combination refrigerator-range-sink units.



valves • electronic controls • piping • plumbing • heating • air conditioning • water treatment • pumps • fittings

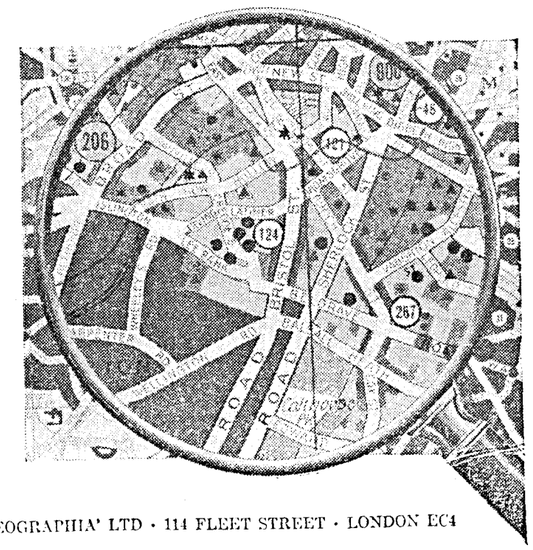
UNIQUE!-

'GREAT BRITAIN: MARKETS AND MEDIA'

A comprehensive marketing and media survey of Great Britain, listing 65 marketing regions, each sub-divided into small marketing areas. Detailed, fold-out maps are included, defining regional and area boundaries and there is concise statistical information on population, retail outlets and media facilities, including I.T.V., Press, Cinema and Outdoor Advertising, etc., in each marketing region.



This unique survey, published as a hard-cover book, will have wide application to sales, advertising, townplanning and many other commercial activities.

TWO NEW MARKETING AIDS

CONURBATION MAPS (1. West Midlands)
This is the first of a new series of maps covering 7 or 8 major conurbations, each showing the layout of the area from a commercial viewpoint. Printed in eight colours, it defines: three grades of shopping centres; three grades of residential areas (by density); five categories of industry in areas containing factories employing over 75-100 workers. Inset maps show the distribution of industrial workers and the population and retail sales of administrative areas. There is also a 32-page booklet of notes and tables. The map size is 40″ × 50″.

a world of chemistry to serve industry in Britain and Europe

The Overseas Chemical Division of W. R. Grace & Co. shares its world-wide wealth of Chemical experience with industry in many ways, in many countries. Laboratories, Plants and Sales Offices in eighteen countries are continuously developing, producing and marketing the new products and techniques which are the keys to industrial growth. Grace Chemicals match specific industrial requirements and are customer-tailored to particular production needs with the backing of long experience in the field. Grace is one of the world's foremost Chemical Companies. Its principal products include: films, plastic bags and pouches for the packaging of food products, can sealing compounds, cap lining compounds, battery separators, high density polythene, synthetic rubber and resins, polyvinyl acetate, plasticizers, synthetic catalysts, ammonia, ureas, fertilisers and agricultural chemicals, sulphuric acid, silica gel and other desiccants, nuclear reactor materials, jet engine lubricants, ultra highpurity silicon and other industrial chemicals.

Birthe couldn't hear a note

Birthe lives in Denmark. She is ten years old and studying music as an extra subject at her school. In fact, she hopes to graduate at the Royal Academy of Music in Copenhagen when she has finished her general education.
Music has always meant a lot to Birthe. But when she was only three years old it seemed she might never hear it again. After a severe case of measles, she developed chronic inflammation of the middle ear. As a result she became almost completely deaf. Only after a long course of penicillin injections was she cured. Birthe was lucky. Only 10 years earlier, before Sir Alexander Fleming's great discovery, her hearing might easily have been affected for life. Nowadays the synthesis and mass production of antibiotics is carried out by chemists all over the world. At Leo Pharmaceutical Products in Copenhagen, one of the largest chemical works in Europe, sterile oil-free air for the cultivation of penicillin and streptomycin is provided by Atlas Copco compressed air equipment. And this is only one of the great enterprises in which Atlas Copco & Sandvik Coromant equipment plays a part. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

Is the Economy Stuck?

WHAT is happening to Mr Selwyn Lloyd's economic policy? When he introduced his July measures, he said he was determined that they should not be merely expedients but should give Britain a breathing space in which to introduce fundamental economic changes, so that the country should henceforth achieve steady growth without inflation. Whether he recognises it or not, the speeches he is uttering nowadays are a complete and specific reversal of that policy: his theme now, struck alternately *allegro* and *penseroso,* is that Britain cannot afford to expand its production until it expands its exports by at least twice as much. And if world market conditions do not allow Britain's exports to go up, his remedy is to "continue to restrain home demand," for his "view is that nothing will frustrate the export drive more than the pull of the home market."

In and by itself, this is a pre-Keynesian policy for a return to a sort of reinforced automatism in economic affairs. Under it, when the state of the world trade cycle allows Britain's exports to rise a bit, production could be allowed to go forward for a while; but when the state of the world cycle forces Britain's exports to contract, Mr Lloyd's policy would oblige him to cause British production to contract twice over, not merely by the direct amount of the fall in exports but by a bit more still on top of that (in order to restrain "the pull of the home market"). This would not be a policy for ending "stop-go methods" of managing the economy; it would be a policy for quite deliberately reinforcing them.

The pain and sweat of this policy might be obscured in the immediate future because it is possible that Britain is temporarily entering a "go" period for its exports and balance of payments—although the October trade figures (discussed on page 683) certainly do not allow one to draw dogmatic conclusions that this is so. But Mr Lloyd needs to recognise that the extent to which Britain's balance of payments can be strengthened depends, tautologically, on the extent to which other countries' balances of payments are allowed to worsen. Which are these other countries? There is one major competitor of Britain that is certainly not going to allow its payments to worsen next year; the United States administration, worried by its large deficit in the third quarter of 1961, intends to take steps to try to improve its current balance fundamentally. There is a hope that Germany's current surplus may decline from now on; revaluation has already reduced its future export orders, although not its current export surplus as yet. But the Germans are suffering something of a nervous shock because people are fleeing from the D-mark on capital account (worried by both Berlin and Bonn politics) and because German production (which found its most dynamic element in export orders for so long) is much less buoyant than it was; one doubts if the Germans can or will be very good-neighbourly in allowing their export surplus to contract easily, massively and without resistance next year.

No doubt the ideal prescription for world economic expansion would be for all the developed countries to run the sort of increasing export surplus that they apparently regard as a pre-requisite for their progress and their dignity, and for the underdeveloped countries to run a concomitant increasing deficit. This latter could then be financed by an annual increase in international aid and in world liquidity, preferably pumped out through making the International Monetary Fund an international credit-creating central bank. But there has been no real

move this year towards making the IMF a new credit-creating agency of this kind. The prospects of increasing British and American exports to less developed countries in 1962 (by this one does not mean merely Afro-Asian nations, but also countries like Australia) will therefore depend mainly on whether those countries can step up their imports with payments out of their present currency balances and accumulated earnings. Some of them, particularly in the sterling area, have been artificially restricting imports this year, and may want to increase their stocks of manufactured goods soon; but the decline in some primary commodity prices since last May seems bound to keep their buying power under restraint after a while. The best tentative guess that one can make at present is that Britain's total exports should rise for a time; but that this rise may not continue (indeed, may be reversed) after about the first half of next year.

This forecast of timing may prove to be all wrong, but the timing is a matter of detail. What is blazingly obvious is that Britain has not yet improved its competitive power so far that it can look forward to adequate exports at all stages of the world trade cycle, and that under present policy Mr Lloyd would be obliged to respond to any cyclical downturn in exports by cutting back Britain's economic re-expansion, if indeed re-expansion had by then even got going. The prospect of an eventual (and possibly pretty early) stop to re-expansion could be averted only if we used the present breathing space to set in train a massive expansion in Britain's share of world exports, at the expense of the share held by our competitors. There are three ways in which this could be done, but at present the Government is treating two of them as unmentionable and the other as impracticable.

ONE way would be by a devaluation of sterling; by making many British goods cheaper in world markets, this might now put up British exports by quite a lot. But, quite apart from difficulties of prestige and of internal economic friction, the massive objection to this is that it would threaten to break up the makeshift key currency system on which (for all its faults) pretty well all international trade now depends; under present circumstances devaluation of sterling would almost certainly be followed by devaluation of the dollar and would merely set a competitive crisis of devaluations alight. The same objection applies to a system of letting the sterling exchange rate float, which might otherwise seem to be a sensible accompaniment of the sort of planning system which Mr Lloyd claims to have in mind; if British planning is really to be based on the assumption that we can expand production by 3 per cent only so long as exports increase by 6 per cent, a floating exchange rate would theoretically be a good regulator through which to express decisions about how much growth (paid for by how much internal price inflation) we really wanted at a time when exports were sticking. There would be one other circumstance for which Mr Lloyd might be wise to keep a threat to float sterling up his sleeve. If it seemed possible that by thus threatening to throw the key currency system in chaos, Britain could persuade other countries to put some new and more expansive world currency system (such as a reform of the IMF) in the key currency system's place, there would be something to be said for this British act of panache. But in the present state of international financial diplomacy, the threat would be unlikely to work; much more probably, we would get all the chaos without the necessary reform.

There remains the third possible policy, and the one to which Mr Lloyd was supposed to be committed: namely, to use the present breathing space for some major changes *in policy, in a heroic effort to make Britain an export-orientated* economy of the Erhard-economic-miracle type, fiercely competitive at the present sterling exchange rate. (Let it be made quite clear that if Britain did manage to build up a larger export surplus in this way it would cause considerable difficulties for people like the Americans and the Germans, just as the large German surplus of recent years has caused considerable difficulties for the Americans and us; but once we were in a strong position we could mitigate that difficulty by pressing for a reform in the IMF, of a sort much larger than that which the Germans and French, when they were in a strong position, so tartly vetoed this year.) Nobody denies that the efforts to achieve such an economy in Britain would have to be prodigious, but everybody ought to know by now what broad forms they should take: all of them would be desirable for Britain in their own right; and it is worth looking at how badly the Government is now failing to implement them.

THE first need for national efficiency is to concentrate Britain's resources on its most profitable and economic industries, and to close down uneconomic industries ruthlessly; everybody now pays intermittent lip service to this, but Hansard this week provides two eloquent examples of what is not being done. On Monday the Minister of Fuel virtually boasted that the Coal Board is sacking miners from uneconomic Scottish pits at a rate "rather below" that originally adumbrated in the "Revised Plan for Coal"; and on Tuesday the Commons duly debated and approved a brand new ten-year-long subsidy for uneconomic forms of fishing. Again, one obvious way to weed out inefficient industries and firms would be to cut Britain's tariffs on manufactured goods, because British concerns which could not survive free foreign competition on the home market are by definition the expendable concerns that have no hope of challenging free foreign competition in export markets; earlier this year there was much talk of the possibility of a unilateral cut in Britain's tariffs, but it is now pretty clear that nothing much is going to be done. It is true that an increase in freedom for imports from abroad might at first react badly on the current balance of payments, but it would have been worth bearing this strain and countering it by keeping up interest rates in order to attract foreign support for sterling; instead interest rates are being brought down.

If inefficient firms and industries find that their activities are cut, it is important that they should release their surplus labour promptly for employment elsewhere; this would necessitate an increase in transitional unemployment, but nothing whatever is being done to encourage or to handle this. Instead of introducing a new nationally-financed redundancy payments scheme, the Government is allowing the burden of redundancy payments to be thrown on the firms who sack the labour, so that the cost of releasing labour for redeployment is actually increased. And some of the Government's own proposed new economies have actually been directed to services which retrain the unemployed. In order to make the best use of labour resources, there is some case for redirecting new

industrial effort from the scarce-labour areas to the unemployment-surplus areas, from the Birminghams to the Scotlands, but only if this can be done in a way that does not increase costs; it is now urgent that wage rates should be allowed to be lower in unemployment-surplus areas than in boom towns.

But the nationalised industries are precisely the ones which are showing themselves afraid to introduce such district differentials; this week the nationalised electricity industry has reacted to its problem of recruiting workers in some labour-scarcity areas by offering a wage increase which it will also apply in areas where it has no problems of recruitment at all. If costs are to be held down, it is important that public sector industries should be brave about standing up to strikes; instead they are currently proving to be the first to shuffle away from them.

The part that "planning" could play in this would be by reporting on which the potential growth industries are, and setting targets for them and for the nation, like the ambitious target growth rate of 4½ per cent a year which President Kennedy would apparently like the OECD nations to start talking about; but British Treasury officials are reacting to President Kennedy's hopeful revivalist slogans rather like Dutch Calvinists react to acts of adultery, and Britain's own so-called planning mechanism is at present being kept in the pending tray while Mr Lloyd tries to inveigle the trade unions to join it. It would be worth tolerating some delay in establishing this planning council if the trade unions and employers, once they were on it, would be likely to push Britain's replanning in the directions that are needed—towards closing down inefficient industries, abandoning protection, introducing district wage differentials, encouraging resistance to strikes. But everybody knows that, once installed in positions of planning power, they would try to push Government policy in just the opposite directions. On the face of it, the story of Government muddle, misunderstanding of aims and of feeding these months of breathing space to the locusts could hardly be more complete. Is it impossible for the Treasury to wake up?

Mottled Reds

Mr Khrushchev's policies are stirring up fresh ferment in the communist camp; the rift with Peking widens

"As a mighty tree with deep roots does not fear any storm, so the new socialist world does not fear any adversity or shock." These brave words were spoken by Mr Khrushchev on the opening day of the 22nd Soviet party congress. Western sceptics would be wrong to dismiss them as wishful thinking. Yet the process of change and readjustment (and the reaction to change) that began in 1953 with Stalin's death, and was given a sharp shove forward by Mr Khrushchev at the 20th party congress in February, 1956, is not nearly worked out. It could bring adversity upon the communist world; it will certainly give it shocks.

It does not help, moreover, when the shocks are, as it were, self-administered. By the time the congress was over, Mr Khrushchev, a prey to conflicting pressures within his own party and to the compulsions of his own ideas, had been forced to administer three new shocks to the world communist movement. He threatened to explode a 50-megaton bomb and did in fact, through a miscalculation by his scientists, let off an even bigger one. He completed the process of destalinisation begun five years ago and symbolised this by authorising the removal of Stalin's body from its place beside Lenin's in the mausoleum in the Red Square. Finally, he brought his quarrel with Albania (and China) into the open in a way that can hardly fail to impair the "monolithic unity" of the block upon which he sets such store. It is still too early to have much evidence about the effects of these three events on the communist movement both inside and outside that block; in any case the effects may well be delayed and are unlikely to be given much publicity. But it is already clear that a fresh stage in the post-Stalin evolution of communism has begun.

In the long run the bomb is of less significance than the removal of Stalin's corpse or the discord over Albania. But the bomb's immediate effect is to damage the image of the Soviet Union which Moscow would like to present—and in an uncomfortably practical way. Nuclear fall-out is not an abstruse ideological issue, but a direct hazard. Mr Khrushchev's explanation that the warlike designs of the imperialists make it imperative to test ever bigger bombs will not sound convincing to party members who have to explain away the possibility of a contaminated milk supply both to themselves and to those whose support they are trying to win. Already the Italian communists have expressed their dismay and resentment at the appalling propaganda liability which Mr Khrushchev's bomb is for them. Inside the communist block, where the authorities can suppress unpleasant facts, reactions will be slower and more muted. But there is evidence that the Poles, for instance, who are relatively well informed through their greater contacts with the West, are deeply disturbed.

MR KHRUSHCHEV's attack on Stalin did not have the shock of complete novelty; it was a further (and this time much more public) instalment of an iconoclastic process begun five years ago. But it is bound to have wide and deep reverberations in the world of communism, particularly inside the communist block. There was nothing secret or surreptitious about the condemnation of Stalin this time. In the Soviet party congress he was attacked quite openly and unequivocally; the crimes committed under his rule were laid bare in a way that was bound to shake and disillusion many communists who had been taught to venerate him unquestioningly; the removal of his body was demonstrative and, for this generation of Russian leaders, final.

It is inside Russia itself, where for many ordinary Russians Stalin, whatever his failings, had been a heroic national leader against Hitler's armies, that the disturbance is bound to be

deepest. But all communist parties everywhere (except perhaps the Chinese), whether in or out of power, now have to adjust their ideas and their policies to the empty place in Lenin's mausoleum. Stalin personified a way of maintaining and extending communist power. For over five years now his way has been attacked by those communists who believe that their power cannot, and should not, be permanently and exclusively maintained on foundations of terror and repression. But they have not by any means yet carried the day against the old guard stalinists, who are either incapable or afraid of changing their outlook, or against the younger fanatics.

Inside the Soviet block the Poles, led by Mr Gomulka, himself one of Stalin's victims, have been the most successful in getting rid of their stalinist past; they can face the consequences of Stalin's disgrace with some equanimity. The Hungarian communists, too, have been outspoken in their approval of Mr Khrushchev's attack on Stalin. The east German communists, on the other hand, have been swift to show symptoms of disquiet. Their central committee has even found it necessary—presumably to stop talk about Herr Ulbricht's future—to issue a statement which says in effect that the east German comrades have nothing to fear; they have never made serious mistakes; any tendency to a personality cult (Herr Ulbricht's) was disposed of years ago. The Stalinallee, and Stalinstadt, have been quickly renamed. Elsewhere in the block there are other leaders either still in power or influential behind the scenes (like Mr Chervenkov in Bulgaria) who have never been convinced that the new ways are best; and there are younger men, of the post-Stalin vintage, like Mr Novotny, the Czechoslovak president and party boss, who though more flexible than Stalin was, and no doubt averse from repeating his excesses, keep much of the stalinist outlook.

The ejection of Stalin's body from Lenin's mausoleum is not likely to settle the long-drawn-out controversy between the stalinists and the anti-stalinists within the communist parties of the world. More probably, it will give it new life, although few will want to go as far as some Italian communists who have questioned the whole basis of the system that can allow such a phenomenon as Stalin to arise. So long as communist regimes continue to be imposed in one way or another on the people they govern, instead of being freely accepted by them, the stalinists will be able to put up a case. But in the long run, and if any more violent upheavals are avoided, the debate is likely to lose its vehemence, and change its character, as the various party leaderships are filled by younger men who have neither been implicated in, nor influenced by, the Stalin era; all the quicker, if they can produce more of the material benefits so often promised and so long delayed.

Now is the time for all good men

Harder to close in the long run may be the power-rift in the communist camp between Russia and China, which Mr Khrushchev's attack on Albania at the Soviet party congress brought into the open more nakedly than ever before. Indeed, it is not easy to make sense of Mr Khrushchev's action, unless he miscalculated the reactions to his attack. He may simply have intended to settle the hash of the troublesome Enver Hoxha and at the same time to warn the Chinese discreetly that Moscow would not tolerate a rival papacy of the communist world. But times have changed since 1948 when Stalin simply pronounced his anathema against Marshal Tito, and that was that.

When Mr Khrushchev denounced Albania, bell, book and candle, a month ago, he was straightaway rebuked by Mr Chou En-lai for washing the comrades' dirty linen in public. Still more exasperating, the eighty communist parties represented at the Soviet congress stood up to be counted for or against Mr Khrushchev; the Chinese even claim that a majority were, in effect, against him, since they failed to back his condemnation of Albania. Mr Hoxha, for his part, has bluntly declared that his party rejects the Russian criticism of Stalin; and that for the Russians to try to make their views binding on all parties "is a brutal violation of the principle of the equality and independence of Marxist-Leninist parties."

MR HOXHA's opposition to Mr Khrushchev is almost certainly primarily political: he deeply fears that the Russian leader might do a deal with Marshal Tito at his expense. But he is also acting as spokesman for the Chinese, and his appeal to "the equality and independence of Marxist-Leninist parties" hit the ideological nail on the head. Theoretical differences between the Russians and the Chinese—about the inevitability of war, the correct tactics for seizing power, and so on—have been boiling up for some time. But the rift has never before been so frankly exhibited, nor its divisive effect throughout the communist world. Fresh impetus has been given to the continuing discussion of the Chinese-Russian differences, above all among the communists in Asia, Africa and Latin America who may well feel that they have specially much to learn from the Chinese experience.

What happens now to Albania may give some indication of how far Moscow and Peking intend to push the quarrel. Will Albania be expelled from the Warsaw pact, whose members are about to meet? If so, what support will the Albanians get from the Chinese? Neither the Russians nor the Chinese can really want an outright break. But the ideological unity of the communist camp is of fundamental importance for Mr Khrushchev; to impair it is to open the way for "imperialist reaction" and "nationalist tendencies." In his view, if stalinist tendencies come to be lastingly supplanted throughout the communist camp by more flexible and less intransigent systems, making larger allowances for national differences, then Moscow's ideological supremacy will be the more essential as a binding and unifying force. It is unhappy for him that his quarrel with China has become more sharp just when the established Soviet image has been tarnished both by the historic condemnation of Stalin and by the menacing nuclear tests. The combination of all three developments could bring about the profoundest changes in the communist world, which could include a loosening of Moscow's hold. Who, if anyone—Russia, or China or the West—will be the gainer remains to be seen.

Infelix Kroll

They do not love you, Dr Kroll;

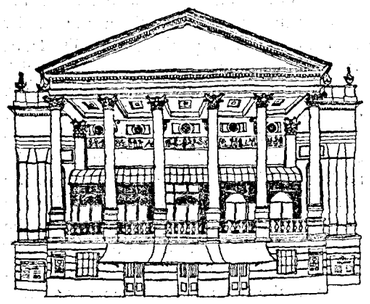
Just why not, is hard to tell

THOMAS MANN, in "The Confessions of Felix Krull," wrote about a young man who did well for himself by seizing opportunities and risking his hand. Dr Hans Kroll, the west German ambassador to Moscow, must wish that real life were as romantic. It may be that Dr Adenauer, after talking to Dr Kroll this week, and to President Kennedy next week, will modify the displeasure which led him to summon his errant ambassador to Bonn, and to label the suggestions about the Berlin crisis which Dr Kroll put to Mr Khrushchev on November 9th as "unauthorised." For the moment, however, unauthorised thinking, out loud and in the wrong place, has landed Dr Kroll in the doghouse; the lack of repentance he showed on his arrival at Cologne airport on Tuesday, when he rebuked the head of Dr Adenauer's press office for suggesting that he had exceeded his duties, is unlikely to prove the swiftest way of getting himself out again.

If the complaint against Dr Kroll were simply, on Dr Adenauer's part, that the ambassador ought to have told his government what he proposed to do before he did it, and, on the part of the other allies that he ought to have kept in step with their ambassadors in Moscow, there would be a good deal of substance to it. Dr Kroll has undoubtedly made various people look slightly silly. Two of them are Mr Llewellyn Thompson and Sir Frank Roberts, his American and British colleagues, who were sent back to Moscow by their governments last month to press on with the search for a basis of negotiation about Berlin and Germany. So far they have made little progress, partly because the search for negotiations got diverted (temporarily, perhaps?) by the squabble over the Friedrichstrasse crossing on October 27th and 28th; now a Kroll has dashed in where Anglo-Saxons have hesitated to tread.

But it is Dr Adenauer who finds himself in the most embarrassing position. This is not really because (as seems to have been suggested in Bonn) Dr Kroll's initiative will have awakened dormant fears that west Germany may one day try to come to terms with Russia independently of the rest of the western alliance. Neither the United States nor Britain is likely to find much to object to in the ideas Dr Kroll is said to have canvassed with Mr Khrushchev. The real source of embarrassment for Dr Adenauer is that at least two of these ideas—the proposal for contacts between west Berlin and the east German government, and the suggestion that both sides call a halt in the propaganda war—involve concessions that Dr Adenauer might well prefer to avoid. If, as is generally assumed, Dr Adenauer's chief purpose in his visit to Washington next week is to persuade President Kennedy to limit the concessions that might be offered to the Russians in return for a guarantee of west Berlin's freedom, it is distinctly awkward of Dr Kroll to have demonstrated that there are influential west Germans who disagree with their reinstated Chancellor.

To get the four main western allies moving towards negotiations in step, which is Mr Kennedy's present unenviable task, is remarkably like organising an eight-legged race. Dr Kroll, by getting one leg tangled up with some of the others, has complicated the task in the short run. In the long run, however, if one looks at the substance of what he did instead of at his infelicitous way of doing it, he may perhaps have brought negotiations a step closer. There is still some mystery about the exact relationship between the suggestions Dr Kroll put to Mr Khrushchev on November 9th and the four-point "Russian plan" which found its way into the western press the following day; in particular, it is not clear whether the latter came to light by way of western or Russian sources. But, by whatever channels it became public, the British Government seems to think that it expresses the Russians' present views on the subject; and Washington apparently thinks the same.



If this is so, the four points are important; not because they offer anything conspicuously new, but because for the first time they set out more or less openly what had previously been conveyed only in private conversation, or by inference. It is now known, for instance, that Mr Gromyko told Mr Kennedy on October 6th that the Russians would be willing to put off their peace treaty with the east Germans until after agreement had been reached on the future of Berlin. Similarly, the present Russian offer to make sure that Herr Ulbricht respects the West's freedom of access to Berlin, by means of a separate agreement between east Germany and the Soviet Union, may have been foreshadowed in the Russian *aide mémoire* of June 4th, which said that the question would have to be settled "by appropriate agreements with the German Democratic Republic"—without saying who was to conclude those agreements. What was discreet and veiled appears now to have been spelled out explicitly, though informally; which is one step nearer to an open Russian offer to negotiate on acceptable terms.

PRESUMABLY the allies' next step is to try to convert the informal into the formal. Mr Llewellyn Thompson and Sir Frank Roberts apparently do not plan to resume their probing operation in Moscow until after Dr Adenauer has visited Mr Kennedy, and General de Gaulle has met Mr Macmillan, next week. Then, however, they should ask the

Russians whether they admit to having fathered the proposals that appeared to come from them last week; and, if so, whether they will explain the obscurities that are still to be found in the four points. The West still wants to know, for example, what guarantees the Russians have in mind for the freedom of Berlin; what they mean by the demand that the allies should "respect" the sovereignty of east Germany (the same phrase as Mr Khrushchev used in the *aide mémoire* of June 4th); and whether the fourth point—the conclusion of a peace treaty—refers merely to the familiar project of a Russian-east German treaty, or to one covering the whole of Germany. If the Russians return even moderately helpful answers to these questions, the West might be within striking distance of the "basis for negotiations" it has been seeking since September.

The wrong way for the western governments to react to Dr Kroll's initiative is to pretend, because it violated the proper channels, that it never happened. The right way, having massaged the toes he has bruised, is to exploit the opportunity it may have offered. A substantial body of opinion in the West holds that Mr Khrushchev's lifting of the time-limit for his peace treaty with east Germany relieves the allies of the need to contrive a negotiated solution of the Berlin crisis. Almost certainly, this is a dangerous misjudgment; the present respite is a chance to renew the search for compromise by such avenues, regular or other, as present themselves.

The New Patronage

A guide to investing in Britain's arts

Royal Opera House, Covent Garden

SUPPOSE, just suppose, there were a prospective patron of the arts in Britain, not just Mr Selwyn Lloyd but an individual moneybags or a bulging industrial trust, with a lot of money to spend. This is not, one hastens to say, simply a fairy tale: such creatures can occasionally be discerned shaking their heads over the right pumpkin to alight on. How should they spend their money? Should it be in London or outside; to sustain professionals or encourage amateurs; to be distributed through bodies like the Arts Council or run completely separately? It is the kind of dilemma that makes good fairies swoon right away, and when they recover decide to settle for experimental reactors and women students' hostels. There are far too many deserving pumpkins and (sometimes less-deserving) pumpkin owner-operators all immediately and clamorously angling for the magic touch. Just in case anyone happens to be listening, here are some preferences and prejudices on what patrons ought, and ought not, to be doing in the nineteen-sixties.

The primary need, in British arts just as in British industry, is to reinforce such successes as this country already has: however unpopular this bias may be with the village halls and amateur music clubs, the biggest growing-points of the arts are where they are already professionally established. Few, if any, of the permanent companies, from Covent Garden to the provincial symphony orchestras, are at all soundly established. They have the first claim on what state subsidies there are (for the Covent Garden opera £500,000 a year, and now, for the provincial theatres, an extra £150,000) and on the local ratepayers (the Scottish National Orchestra, for example, gets around £40,000 a year from 100 local authorities). One would prefer to see this kind of help continue through the Arts Council and even to be stepped up by local authorities, who are empowered to spend a 6d. rate (4½d. in Scotland) on the arts but seldom go beyond a reluctant 1d.; and a fair proportion of what local authorities spend goes, in fact, on museums and bands in the public parks. But these state and local subsidies are invariably to cover normal running costs and nothing else. There is not a single national or semi-national institution that would not benefit artistically from a capital fund of its own.

Such funds need not be frighteningly grandiose to produce results. With the exception of grand opera, 85-90 per cent of costs should be coverable by box-office receipts if the concern is at all viable—and provided it is realistic enough to charge what the market will bear when it is assured of a sell-out (which not all institutions are). A capital fund should do two things. It should allow a good orchestra or repertory theatre to indulge in a little more experiment without worrying so much about external disasters (hot summers, an increase in television watching) that may wreck the budget unless the norm of Tchaikowsky and Agatha Christie is over-fulfilled. In this respect, it is good to see the enterprise of the small Harrogate Theatre Trust in staging a play on the bomb—"The Net"—which was commissioned by the Arts Council. But new ideas need capital if they are to take root.

The second function of a capital fund would be to raise internal morale even more by saving the company's finances from the rigours of the Arts Council's accounting, which inevitably tends to penalise success. A good financial year for an orchestra, which may include some hectic overseas touring, often merely means that the Arts Council is obliged to cut its contribution: the ideal is obviously to give people funds that they can manage themselves, building up in good years and running down in bad. This is pre-eminently a job that only private patronage can do: no political authority can reasonably be expected to will away capital for which it still feels responsible to the taxpayer and which therefore it will always believe it could manage better itself.

The second function of substantial private patronage should be to encourage the proper housing of the arts in Britain, particularly in provincial centres. Building and renovation grants are badly needed to allow otherwise encouraging ventures to continue (Mr Lloyd's bounty to the provincial theatres could not be better spent than on doing them up). Something like the Carnegie library system could work wonders for the fine arts, not least because the news of such a scheme in the offing would concentrate the minds of those local authorities whose present ideas of popular culture stop short at offering best-sellers on the rates. But three criteria for this kind of help should be strictly observed. The first, following Lord Bridges's recommendations, is that the initial efforts should be concentrated in regional capitals (not simply self-styled "festival towns") that can draw on as large a potential audience as possible; a dozen well-situated arts centres, with theatre, art gallery, concert hall, restaurant and parking space, probably costing over £1 million each, are worth umpteen scattered single-art enterprises which may come to real life for only two or three weeks a year. The needs of a festival on the Edinburgh scale do pose a special problem. It would be splendid if a patron, or patrons, could be found to give that city a modern theatre suitable for grand opera. But for the all-the-year life of the region something more modest in size would probably give even better service.

THE next criterion is that such help should not simply lift responsibility from lazy local authorities which do not stir a muscle themselves if they can help it. The Arts Council now seems to be considering a three- to five-year ultimatum to some authorities that if they wish to retain their present Exchequer subsidy for the arts they must put up their fair share too. This is a principle for private patrons to observe: local authorities might be required to provide a suitable arts centre site and private money could then finance the construction, but self-help is a necessary ingredient for any project. The third criterion should be that, besides the local authority most directly involved, other regional guarantees, particularly from parasitic suburban councils, should be asked for to underwrite the arts centre when it is in being. The Hallé and Bournemouth Symphony orchestras have worked up widespread and very useful connections in small towns and villages (which stump up 10 or 20 guineas a year) where even they are not expected to perform. Why should not a good rep. theatre or a gallery purchasing fund do the same? A new source one would like to see brought into any such arrangement is the local industrial development councils; they should have grasped by now that if they expect to get executives into their region there must be something more than pantomime to offer them.

The last major function of private patronage is much less easy to define. It ought to be, quite simply, to lose money without remorse. The need is to get at, and encourage, the individual who has (or just simply may have) creative potential but who is not necessarily the prize boy of the art or drama school. Occasionally one can distinguish the likely group where these people tend to crop up: the university milieu, the experimental theatre and the rest. There is a growing number of small awards for the more obvious, or self-publicising, of these deserving cases. But however understanding and lenient a public authority may be, there is a lingering degree of public accountability, not so much on the recipient but on the dispenser of such awards. This is a gap that ought to be filled by a private patronage which need account to no one but its own ideals, which is prepared to bury its failures year after year without losing its nerve. It would be really helpful if some travelling scholarships and living allowances were handed over without the chairman having to make a speech or worrying whether his selection committee has ferreted out as large a quota of publishable poets as the fund round the corner.

It should not matter in the last resort whether a fixed proportion of help is given outside London or not. Probably the need is greater in the provinces, and for the normal run of provincial operation (not grand opera) a smaller amount of money will do more immediate good. But better a success in London than a flop in Bruddersford. It would be wrong to insist that the amateurs should be choked off completely. Many of them, of course, happen to do very well (Wales is sometimes said to prefer amateurs anyway) and manage to fill theatres where a struggling one-week rep. cannot pay its way. But by and large it seems preferable that those amateur societies that do need assistance should get it from small local subscriptions rather than from public (or even large and centrally-directed private) patronage; local authorities' further education funds which now subsidise country-dancing ratepayers certainly ought to be overhauled so that they can contribute to those other tastes that are already developed during the school years and whose continuance should be propagated later on. It is above all the parlous financial condition of the professional arts in this country—a condition that by international standards is more than parlous—that argues most cogently for the concentration of new patronage on their succour and sustenance.

The Economist

NOVEMBER 16, 1861

FRENCH FINANCIAL CRISIS

"It is not often that the radical strength of Parliaments, their efficiency as taxing machines, is so conclusively demonstrated as by the edict signed by Louis Napoleon on the 14th instant. Our readers are well aware that for some time past there have been signs of a financial crisis impending in France. The origin of the singular uneasiness which existed in financial circles was believed to be partly the deficiency in the harvest, and partly the apprehension excited by the excessive expenditure of the State. Few, however, even of well-informed men conjectured the true state of affairs—a deficit of a thousand millions of francs, accompanied by a short supply of corn, a suspended import of tobacco, and a general depression of the great manufacturing cities. Such, however, was the fact: and the Emperor, as the truth broke upon him, roused himself to one of those fits of decisive energy, which so strangely alternate in his somewhat apathetic nature with habitual mental indolence. He sent for M. Fould—a capable financier—and . . . named him Minister of Finance. The dangers which influenced the Emperor must have been great indeed, for M. Fould's programme is nothing less than a Constitutional Budget,—expenditure, that is, absolutely limited to the amount voted each session by the Legislative Corps. . . . But will the decree be honestly carried out? We confess to a lingering doubt in our own minds as to the possibility of the Empire dispensing with some exceptional mode of meeting sudden demands. The entire system of French Administration depends so greatly on "credits," "subventions," sudden interpositions to avert unexpected calamities, and equally sudden exertions of force,—the people are so accustomed to see the Head of the State act as if he were a Providence, that the Emperor will need all his self-restraint to adhere to his self-imposed rule. He will be very apt, when the immediate pressure is passed, to grant credits "subject to sanction," which the Chamber dare not refuse, and a national "emergency" in France overrides every rule. Still he has undoubtedly made every such interference much more difficult, while he has wholly prohibited his Ministers from asking credits in which he himself is not specially interested. This last effect will be a strong security for economy; for it is the demands from every department, each moderate in itself, which make the aggregate so unendurable.

Portugal Waits

Salazarism may be kept going for a time by the daunting nature of Portugal's colonial problem

DR SALAZAR's regime, in its twilight years, has been challenged in unexpected quarters: by the Church, on the high seas and even, for a strange moment three years ago, at the polls. Above all, it has been frontally attacked in Angola. The outer world, which for long knew and cared very little about Portugal, has become better informed about the so-called New State. As a result, the tolerance which Dr Salazar so long enjoyed, as an unaccountable exception to all political rules, has been withdrawn. When Dr Salazar goes, Portugal's foreign friends, including the British, are not now likely to urge that his regime should be kept going without him.

Externally and internally, the opposition has lately been galvanised by the appearance of a new kind of leadership from General Delgado and Senhor Galvão. The Angolan war is slowly draining Portugal's scanty reserves of men, money and materials. In the long run, policies which lead to the ruin of the state must be abandoned. Willy-nilly, it seems, Portugal is going to have to yield up the empire it has held for upwards of four centuries, and which it has done so little with. At home, the feudal way of life is going to be superseded, for the stagnation has become barely tolerable to the Portuguese; and only a drastic modernisation of their economy can save the country from collapse after the loss of Angola. With these changes, the Salazarian system will lose its *raison d'être* and will crumble.

So much for the long run. But in the short run the outlook is by no means so lively. Dr Salazar, too, has read the signs of the times. Since April, when certain elements in the armed forces tried and failed to dislodge him, he has pursued a policy of ruthless repression in Angola and vigilance in Mozambique, at the same time seeking to persuade the West, by words and by nominal reforms, that an honest effort is being made to improve conditions in Portuguese Africa. The latest such device is the "Single Market," an interesting attempt to show that the New State is keeping up with the spirit of the times.

The Single Market will include Portugal and all its dependencies. Its chief arrangement is that no duties are, after a maximum transitional period of two years, to be exacted by Portugal on imports from the colonies; the transitional period before duties are abolished on goods going the other way, from Portugal to the colonies, is to be ten years. This scheme is not only intended as an economic sop, a *douceur*, for the rebellious Angolans and discontented settlers. It is also intended as an aid to Portugal's attempts to keep in with the European Six and Seven, to present its own dependencies on the same footing as those of France and Britain, and so secure, perhaps, similar treatment. Even if this technique works in Brussels, it will hardly impress the Angolans, whose economy is still governed by the convenience of Portuguese business.

Elections for a new National Assembly were held in Portugal last Sunday. The withdrawal before polling day of all opposition candidates (who had already been reduced to contesting only a third of the parliamentary seats), the impossibility of checking the government's figures, the fact that only a quarter or so of Portuguese adults have the vote, and the surveillance of the army and the secret police, make it impossible to say what the fairly heavy vote that has been announced—about 70 per cent of the electorate—really means. But the Lisbon government is at liberty to claim it as a national endorsement of its policies. Should its claim be contradicted, Dr Salazar has an unassailable line of defence to fall back on in his own theory of government. Elections, he holds, are not a means of peacefully effecting a change of power, or not in Portugal. "I have no knowledge of, and indeed I believe there is not in fact, any case of access to power as the result of success at the polls. Here, the vote follows on and confirms the choice of the supreme authority in the Nation"—meaning, surprisingly enough, the President of the Republic.

There is enough truth in this view of Portuguese history to impress members of the opposition with the futility of constitutional action. Senhor Galvão, the captor of the *Santa Maria* (about which episode he has written a valuable book*) has just said as much. Unfortunately, it is by no means clear what alternatives are open to the opposition. According to Senhor Galvão (who has broken with him on that account), the other exiled opposition leader, General Delgado, is prepared to accept the communists as allies against the Salazar regime. Senhor Galvão's own gift for dramatically effective gestures was displayed once again on November 10th, when a group of his supporters seized an airliner flying from Casablanca to Lisbon, and, after dropping anti-Salazar leaflets on the Portuguese capital, took the machine back to Tangiers. But neither leader seems to have the sort of support from inside the regime which could lead to the dictator's overthrow.

IT would, of course, be open to them, or to any other dissidents, to joint forces with African nationalism and seek the overthrow of Portuguese authority in Angola and Mozambique. But, although Senhor Galvão has sponsored a not uninteresting plan of gradual disengagement in Africa, he neither dares nor wants to make common cause with the forces of Mr Roberto Holden and the other leaders of the Angolan nationalists, whom he regards, as do most of his countrymen, as terrorists, active in a part only of Angola, and not representative even there. Similar considerations apply, with even greater force, to Mozambique where, so far, quiet reigns.

It seems probable, therefore, that Dr Salazar, with all his anachronisms, will last out his time, since those who oppose him lack the strength to destroy him, and those who have the strength have too much to lose from opposing him. Equally probably, when he dies the problems he bequeaths to his country will come to a head, and his heirs, if they are to salvage anything, for themselves or Portugal, from the wreck of his system, will have to introduce fundamental changes. The real problem for the forces of liberal democracy in Portugal is to prepare themselves for that day, and to ensure, if they can, that whoever their leader (and Senhor Galvão, for all his qualities, recalls Garibaldi, not Cavour) they will then be strong enough to profit from it.

NOTES OF THE WEEK

CONGO

Back to the Boil

U THANT, the United Nations' new secretary-general, has ordered urgent action by the UN force against the mutinous soldiers and riotous tribesmen responsible for the latest violent events in the Congo, where 13 Italians of UN air crews are now believed to have been killed (a correspondent's report on the situation there is on page 653). The UN commission set up to inquire into Mr Lumumba's murder has reported, laying the responsibility on Mr Tshombe and his colleagues. With such bitter ingredients, the Congo pot is boiling briskly as the Security Council, after nine months' silence, debates the problem again.

Since the council's resolution of February 21st, there has been at least one thing to put on the credit side of the Congo account. That resolution urged the restoration of parliamentary institutions and the formation of a government based on "genuine conciliation." The Congo parliament has since met and approved Mr Adoula's broad coalition government, which included Mr Gizenga, the head of the rival regime in Stanleyville, and which was recognised by the states that had previously recognised the Gizenga regime.

But the debit side is heavy. The February resolution urged that foreign mercenaries and political advisers should be removed and kept out. It reminded all states of their obligations, under earlier UN resolutions, not to aid or supply Congolese factions or otherwise intervene on their own account.

It authorised the UN to act, "if necessary, in the last resort," by force, to prevent civil war. So long as Mr Tshombe's regime flourishes with the pretensions of a separate state, and the outward evidences of European support, the Africans and their governments will feel that the Europeans have cheated them. The African states, Ethiopia, Nigeria and Sudan, which forced this week's debate on a Security Council so reluctant that its members could find nothing to say on Monday or Tuesday, are usually counted as "moderates"; they have all contributed helpfully to the UN Congo operation. Their pressure for strong action now is a reminder of the strain that the Katanga secession continues to place on Africa's forces of moderation. And the latest reports of disorder are a plain indication that, if no quick solution is found, Mr Adoula may be swept away by, or along with, elements who will look for outside help in quarters less disinterested than the United Nations.

LABOUR PARTY

In the Shadows

LABOUR'S bitter division between left and right, underlined by last week's contested election for the leadership of the party, has been spotlighted again this week by the elections for the shadow cabinet. Maddeningly, their results were due to be announced an hour after *The Economist* went to press; but their background is worth explaining. In recent years nominations have averaged about 40, but this time they were down to 25, not because of any burgeoning of modesty on the part of Labour members, but because both left and right were determined not to spread their votes too thinly and so let the other side in. This has long been a left-wing tactic, but the right has this year followed suit. An important feature of the voting system is the obligation to vote for twelve candidates if ballot papers are not to be spoiled. Of the 25 contestants this year, 13 were Gaitskellites, and 12 either anti-Gaitskell or extremely lukewarm. The Gaitskellite candidates were Miss Alice Bacon, Messrs Blyton, Callaghan, Fraser, Gordon Walker, Gunter, Healey, Houghton, Mayhew, Mitchison, Sir Frank Soskice, Mr Stewart, and Mr Willey. All save Miss Bacon, Mr Mayhew and Mr Blyton served in the shadow cabinet last year, and it may be surmised that Mr Gaitskell would be very happy to see any of them (but especially the first two) replace Mr Wilson and Mr Lee, the only two "lukewarms" who got in last year. But he presumably had the same hope a year ago.

What happens next? Party tempers are undoubtedly rising again, and Westminster has been full of rumours in the past week that another Labour night of long knives may begin. There might be a case for some rather discriminate knives: it would be sensible to move Mr Wilson from the image-creating shadow chancellorship to some other job, especially if he has done badly in the shadow cabinet elections: it might be right to re-impose Labour standing orders, so that ardent unilateralists who could not promise to accept them need not necessarily be confirmed as candidates for the next election. But one's guess is that a really dramatic hiving off from the whole party of 20 or 30 extreme left-wing irreconcilables, which is once again being widely canvassed, could only be achieved formally after and if Labour has suffered a further traumatic experience such as a fourth crushing repulse at the polls. In that event, the drive to reformism really might get going. The late 1960s might then see the emergence of a real Lib-Lab alliance, the first awkward essence of which would presumably have to be that the Libs would stand in as many places as possible and that the Labs would withdraw from as many as they could stomach. Mr Grimond, like Barkis, is known to be willing, but things will surely have to get a great deal worse than they have been at recent by-elections before Mr Gaitskell will be able even to contemplate this horrifying and hopeful possibility.

BY-ELECTIONS

Bogey for Bridgeton

LABOUR'S safe Glasgow constituency of Bridgeton—once the heart of Jimmy Maxton's Red Clydeside—was voting on Thursday; the result will have been announced before this issue is in readers' hands. Bridgeton is one of those peeling, rapidly depopulating, inner-ring-of-a-city constituencies where the turn-out of voters is almost invariably low, partly because quite a lot of the voters on the register will have left Bridgeton in the last year. Probably, therefore, the newspapers on Friday will be saying that the result is indicative of nothing except apathy; but it will still be worth watching it fairly closely, as it is one of the few recent by-elections in which a Liberal candidate has not appeared to plague the Tories. Instead of a Liberal there have been two other small-party candidates this week, in a constituency which Labour won in 1959 by a 26.8 per cent majority in a straight fight. The newcomers—if that is the right word for the ILP in Bridgeton—have been an Independent Labour Party unilateralist (set to plague Labour) and a Scottish Nationalist (fishing for dissidents from Tory and Labour together).

In last week's three by-elections (at Oswestry, East Fife and Moss Side) the heavier scale of Tory than Labour desertions had the same net effect as an average swing of 6½ per cent from Tory to Labour; but Tories are hoping that this was a special feature of those safe Tory seats (where there were bound to be more Tory desertions because the Tories had a bigger army to desert from) and where three Liberals appeared to fight. Elsewhere in the country

Tories must hope to keep the net swing to Labour down to the "safe" figure of under 3½ per cent (which is the general national swing Labour would need to win the next general election). If the ILP candidate at Bridgeton has won only, say, between 7 and 10 per cent of the vote—and this, in itself, is a terribly hazardous guess, lest Jimmy Maxton's ghost still walks—then the consequent depredation from Labour would just about cancel out the presumed "safe" national swing (of 3½ per cent or so) from Tory to Labour; on this basis of assumption, a reasonable Tory bogey for Bridgeton would be if the percentage voting shares of each major party have fallen by approximately the same amount. If Labour has done worse than this, it will have reason to feel very worried; while the Tories should feel perturbed if they again prove to have suffered many more deserters than Labour even from their small flock at Bridgeton, and especially if any recognisable proportion of disgruntled Tory voters has cast a protest vote even to the Scottish Nationalist.

GERMANY

Weight of Numbers

During the recent west German election campaign the two major parties both made much of the "team" which their candidate for the chancellorship, given the voters' mandate, could put into the field. In the event, Dr Adenauer has not been as free to pick and choose as he would have liked, and so can hardly rely on his motley twenty to be activated at all times by the proper team spirit. In the new government sworn in on Tuesday, Herr Erhard is still with him as vice-chancellor and economics minister; but it will be a touchy Erhard, with freshly injured chances of becoming chancellor, and authority reduced to some extent by the creation of a ministry for economic co-operation, whatever face-saving formula may be used to conceal the partition.

Herr Strauss remains in charge of defence—for the time being an outwardly contented collaborator but, like Herr Schröder, the new foreign minister, perspicuously engrossed in the pursuit of long-term advancement. Herr Krone, hitherto parliamentary leader of the Christian Democrats, has been brought into the cabinet as minister without portfolio, for more reasons than to enable Herr von Brentano to return from the foreign ministry to his old position of parliamentary party leader. One of the very few to whom the chancellor talks, and listens, the benign Herr Krone is frequently employed in mediation between his self-willed chief and ruffled colleagues. A steady demand for such services may be expected in the course of the next year or two.

It is also perfectly possible that Dr Adenauer sees in Herr Krone, now that Herr Etzel is out of the running, the least disputable person to take over the chancellorship for a brief period while the younger claimants sort themselves out. A generally liked elder (he is 67), Herr Krone should be of invaluable help to Dr Adenauer in handling the five Free Democrats in the cabinet. Of these Herr Scheel, the minister for economic co-operation, may prove the liveliest. Now 42, Herr Scheel was one of the "young Turks" of Düsseldorf who played a part in ousting the Christian Democrats from office in North Rhine-Westphalia in 1956, when the Free Democrats switched their allegiance to the Social Democrats. Such manoeuvring is banned on paper from the fourth Bundestag under the coalition agreement.

To the annoyance of the Social Democrats, who showed it by walking out of the Bundestag on Tuesday, the chancellor decided to withhold the new government's policy statement (the Bonn equivalent of the speech from the throne) until after his return from Washington. The delay may make the statement the more interesting when it comes.

INDIA AND AMERICA

Two Great Minds

Seldom is a joint communiqué as engaging in tone as the one issued on November 9th, after what it described as "four days of especially pleasant and rewarding conversation" between Mr Nehru and Mr Kennedy. The Indian prime minister "used the occasion to go deeply into the philosophic and historical background of Indian foreign policy." The "subjects covered amount almost to a map of the troubled areas of the world."

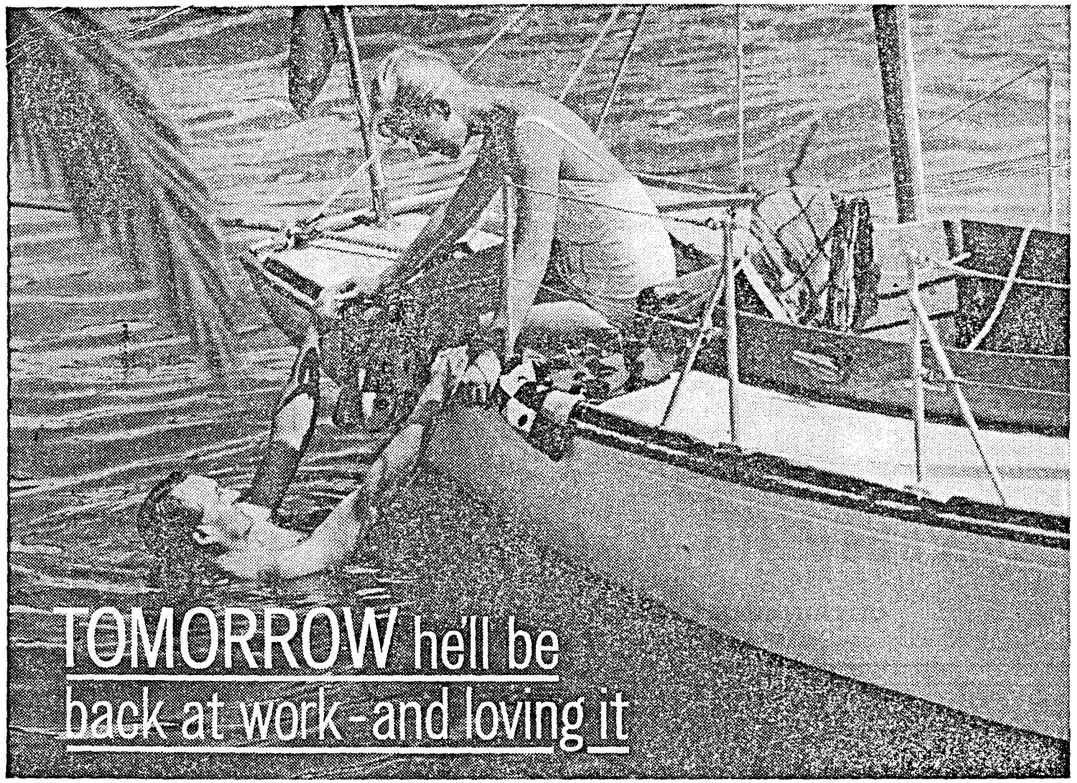
Undoubtedly Mr Nehru found it easier to get on terms of personal understanding with his host in Newport and Washington than it had been when he visited Mr Khrushchev in September. His talks with Mr Kennedy were a meeting of two wide-ranging intellects. It was not to be expected that the essential differences between India's and America's views of world affairs would be dissolved by this encounter. What it does seem to have produced is a recognition that, where they differ, their difference is a reasonable and human one.

Addressing the National Press Club on his last day in Washington, Mr Nehru dwelt on the need to understand the forces that shape each nation's outlook. In America he has encountered much criticism of the recent Belgrade conference of non-aligned governments, and he was concerned to emphasise that many of these countries are "full of their own problems," and that such questions as that of Berlin are only "at the fringe of their minds." This is indeed a point that needs to be grasped—both by westerners who sometimes mistake Asian indifference to European problems for anti-westernism, and by Asians who sometimes assume that their own problems entitle them to sympathy which the problems of others do not require.

Mr Nehru "concurred in the legitimate and necessary right of access to Berlin"; Mr Kennedy told him that every effort would be made to find a peaceful solution. They agreed on the need for a properly controlled ban on nuclear tests, a subject about which, while they talked, the UN Assembly was passing two resolutions. One, with India among its sponsors, called for a further voluntary moratorium on tests, and was opposed by both the communist and the western powers. The other, urging immediate resumption of the Geneva negotiations, was sponsored by America and Britain and supported by India and a majority of the Asian and African countries; only the Soviet block and Cuba opposed it.

FAMINE

Acts of God and Men



Emergency relief is urgently needed for about a million people in Kenya and Tanganyika who are suffering horribly from the effects of prolonged drought, now followed by brutal floods. Their situation will be critical for months to come, and the Oxford Committee for Famine Relief has launched an appeal for £1 million. Exceptionally cruel weather over the past three years has brought about the present catastrophe, but even without the weight of natural calamities to tip the scales, population and food are precariously balanced in most backward areas.

In a better-organised world, the responsibility for having increased the expectation of life in underdeveloped regions might lead, automatically, to the further responsibility of seeing that the people saved from disease should not then die of slow starvation. In 30 years' time there may be twice as many people living in tropical and sub-tropical areas as there are now; radical changes will have to be made if food supplies, also, are to double. Birth control, even if it catches on, will only be a slow and partial solution. Nor can the area under cultivation always be increased; in India, for instance, the minister of agriculture has said that all the land that is cultivable is already being farmed. This leaves the possibility of increasing the yields of present farms, and, for this, there is need, above all, for technical assistance.

It is therefore timely that Mr Denis Vosper, the Secretary for Technical Co-operation, should have announced on Wednesday that he had formed a committee to

'Men who take responsibility must take a second holiday'—medical opinion agrees

■ **Hard work won't kill you.** Men of a certain calibre actually thrive on it. But these are the very men who *must* take a second holiday. They need more than one break a year – and if they take it, they enjoy their work more. They do more of it and do it better. They enjoy living and do it better. They live longer.

This is a summary of the conclusion reached by medical men* concerned with the health of the nation's top management. Their work has convinced them that for men in important positions a second holiday is no luxury. It is an absolute necessity.

■ **In these days of rapid air travel** it is an unexpected pleasure too. A few precious days off at this time of year can now accomplish much more. For a busy man with only a long weekend to spare, Amsterdam, Paris, Madrid are possible destinations. Sun warm enough for swimming and lying in is shining now in North Africa, Greece, and the Middle East. A winter sports holiday by air is less trouble than a country weekend. And nowhere you fly by BEA is too far to return from in a few hours if work calls you back. Ask your travel agent how quickly and simply a trip can be arranged.

BEA

BEA have published a special new brochure to give you ideas about where to go, what to see, what the temperature is at this time of year. Ask your travel agent for it.

*The Health of Business Executives—Transactions of a One-Day Conference held by the Chest and Heart Association in the Royal Festival Hall, London on 29th November, 1960.

YOU NEED A SECOND HOLIDAY : ENJOY IT—FLYING **BEA**

advise him on how Britain can best provide agricultural assistance to underdeveloped countries. The committee, which is headed by Mr Bawden, the director of the Rothamsted agricultural research station, and includes Mr Arthur Gaitskell, meets on November 23rd and will discuss, among other things, how to send British agricultural experts overseas, and how to train local experts in Britain.

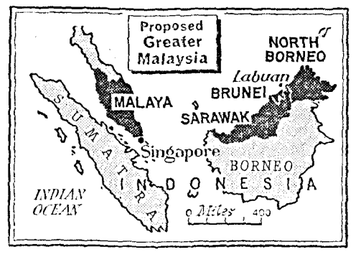
At last, it seems, the British Government is taking a straight look at the problem. Not so long ago, Britain was supplying half the tropical world with its agricultural advisers but, despite this store of knowledge and experience, lamentably little has been done since the former British territories became independent. A group of dedicated individuals has persistently been urging on the Government the project of a centre for tropical agriculture; their ideas have been allowed to drift emptily away. Now, late in the day and against the background of famine in East Africa, a ray of initiative has appeared.

PRIVATE MEMBERS' BILLS

Consumers' Champions

CONSUMERS, who for so long have been the cinderellas of the law, now have three fairy godmothers among the first six MPs on the list of the twenty members successful in the ballot for private members' bills. These six are the ones most likely to get their bills translated into law. Mr W. T. Williams, who drew first place, had at first contemplated introducing a little consumer charter; but he has wisely decided to wait for the report of the Moloney committee, which really is coming out this session, and has limited himself to some useful reforms in the hire purchase law. He seeks to raise the value of goods to which the protections of the 1938 Hire Purchase Act apply from £300 to £1,000 (which would mean that the financers of most motor car sales would be unable to recover possession of their cars without a court order once a third of the purchase price had been paid); to protect gullible housewives from over-persuasive hire purchase salesmen by allowing them to rescind a hire purchase contract within forty-eight hours of signing it; and, for the purpose of hire purchase sales, to make the dealer an agent of the hire purchase company, so that any relevant warranties would become enforceable against the company.

All these changes—which are pretty far-reaching, and which the hire purchase companies will presumably contest fiercely—were recommended in Mr Philip Goodhart's recent report on consumer protection *Choice* (Conservative Political Centre: 2s.). By chance, Mr Goodhart himself has come second in the ballot. His own new bill seeks to tighten up the Sale of Goods Act, and to prevent the issue by individual firms of "guarantees" which, in fact, limit consumers' rights. No derogation by contract from such statutory or common law rights would be allowed. His bill also provides for registration by the Board of Trade of independent testing organisations and bodies that issue guarantee seals and certification marks as aids to the public. Registration would be allowed only where the body could establish that it had achieved reasonable standards of competence and was independent of manufacturing and commercial interests. Mr Robert Edwards, fifth, who already has one piece of consumer legislation to his credit, is also considering entering the ring.



Mr Brian Batsford, fourth, wants to prevent the proliferation of large scale advertising hoardings in the English countryside. This bill needs watching; whatever one thinks about consumer goods advertising, controls over some forms of informational advertising on the highways (e.g., about where there are hotels, and where one can eat) are already in some places too tight. Mr Paul Channon, third, is considering anticipating both the Government and the common market by introducing a bill to decimalise the coinage; this ought to be done by a Government bill, not a private member's one. Mr Airey Neave, sixth, will probably introduce a bill dealing with agriculture.

MALAYSIA

Base Politics

TUNKU ABDUL RAHMAN'S conversations in London next week will set the British side a nice problem of balance between political and strategic considerations. The general debate will concern the proposed Greater Malaysia federation; but the main issue is bound to be the future of the Singapore base. The rapid erosion of Mr Lee Kuan-yew's parliamentary majority in Singapore lends urgency to next week's talks; on the other hand, the shaky military situation in south-east Asia renders inconvenient any proposals that would weaken Britain's control of the base.

Until May, the Malayan prime minister had resisted all suggestions that Singapore and Malaya should unite, on the ground that Singapore's Chinese would swamp Malaya's Malays. A merger had long been advocated by the Singapore prime minister, Mr Lee, on the ground that Singapore would be less dangerous to Malaya inside the federation than out. The Tunku was converted to Mr Lee's view by the alarming victory of an extremist defector from Mr Lee's ruling People's Action Party, in a by-election in May. On May 27th, the Tunku proposed the creation of a Greater Malaysia, to include the territories of British Borneo, as well as Singapore and Malaya, thus balancing Singapore's predominantly Chinese population with Borneo's Malaysians.

The core of Tunku Abdul Rahman's understanding with Mr Lee Kuan-yew is a proposal that Singapore's internal security, foreign relations and defence should come under the control of the federal government. The Tunku interprets this as meaning that Singapore would come under the terms of the 1957 Anglo-Malayan defence treaty. In that event, the base would be available for British action in defence of Malaya and other Commonwealth territories, but not necessarily for Seato purposes.

Should the Government resist this demand, Mr Lee's party could well be swept out of office, and a period of instability and violence might follow. The solution may lie in agreeing to put the base under Malayan control but negotiating a revision of the defence treaty.

DRINK IN SCOTLAND

Hauf an' Hauf

MR MACLAY'S compromise on Sunday drinking in his Scottish licensing bill looks ingenious—and possibly too ingenious by half. He has placated the temperance lobby by refusing, in spite of the Guest committee's recommendation, to let the 4,000 Scottish pubs open on Sundays, except for the 100-odd among them that happen to serve meals; but he is going to allow the 2,000 Scottish hotels to serve drinks for five hours each Sunday without restrictions. He has thus dealt the death blow to that legally dubious itinerant the *bona fide* traveller (the only person allowed to buy a Sunday drink in Scotland hitherto), but at the same time he has started a lively speculation on precisely what premises will be accepted henceforth as a *bona fide* hotel. The criteria followed by local licensing authorities are liable to vary. If one effect of the bill is to encourage more people to build good hotels in Scotland, where the tourist trade badly needs them to keep up its post-war rate of expansion, well and good. If it simply persuades the proprietors of various seedy and run-down establishments (some of which have clung to the temperance name because they have seen no easy profit in anything else) to open up a bar on Sunday evenings, the object of the bill will not have been notably furthered. And if it persuades pubs to add a guest room and call themselves a hotel, it will be absurd.

The aim of licensing reform in Scotland, as in Wales, should not be to balance off pro-temperance and pro-drinking pressure groups, but to move towards full freedom of individual choice and habit, providing this can be exercised in better surroundings than those of the traditional Saturday night in

Gorbals. Mr Maclay's bill will favour the tourist and the middle class, which normally patronises the hotels anyway. (Women, even when accompanied, are seldom welcome in the stronghold of masculinity that is the run-of-the-mill Glasgow bar.) But in the industrial Lowlands, where the hotels account for only a fraction of the weekday trade, the bill carries an obvious danger of class discrimination. The best argument for not opening the pubs on Sundays is that there are still far too few alternatives for non-churchgoing young people in search of a harmless evening out. If this side of Scottish life—the opening of places of entertainment on Sundays—could be lifted into the 1960s there should be an incontrovertible case for liberalising the Sunday opening law still further in five years' time. Even now, the Guest committee's preference for going all the way looks the sounder course.

FAMILY ALLOWANCES

The Wrong Economy?

It is always easy to attack any social services bill as too mean, and usually *these are occasions* which see the Labour party at its extravagant worst. But in last week's second reading debate on the new Family Allowances and Social Services Bill, at least some Labour speeches frankly sounded more sensible than Government ones. The bill is a pretty complicated, technical and largely self-balancing one. The main anomalous cases to which it directs more money are widows under sixty who will at last be allowed to reap part of the increment earned for other national insurance benefits by a husband who had deferred his retirement past the age of 65 (eventually this will cost £2 million a year); and a grant of an extra £550,000 a year for some 20,000 disabled workers who were injured before the 1946 Industrial Injuries Act came into effect. Even on this latter provision Mr Finch (Bedwellty) argued convincingly that some of the poorest cases are being treated least generously, because the bill lazily follows (instead of rectifying) some of the worst inconsistencies of the old pre-1946 workmen's compensation schemes. But inevitably the main Labour attack was concentrated on the £1¼ million a year which the Government intends to save on family allowances for apprentices. At present family allowances, on the scale normal for schoolchildren, are paid to 17-year-old apprentices in full-time training if they are earning less than £4 9s. 6d. a week (which an independent committee has defined as a "livelihood"); but henceforth they will go to apprentices only if they are earning less than £2 a week. This will reduce the number of apprentices who qualify for family allowances from 70,000 to 20,000.

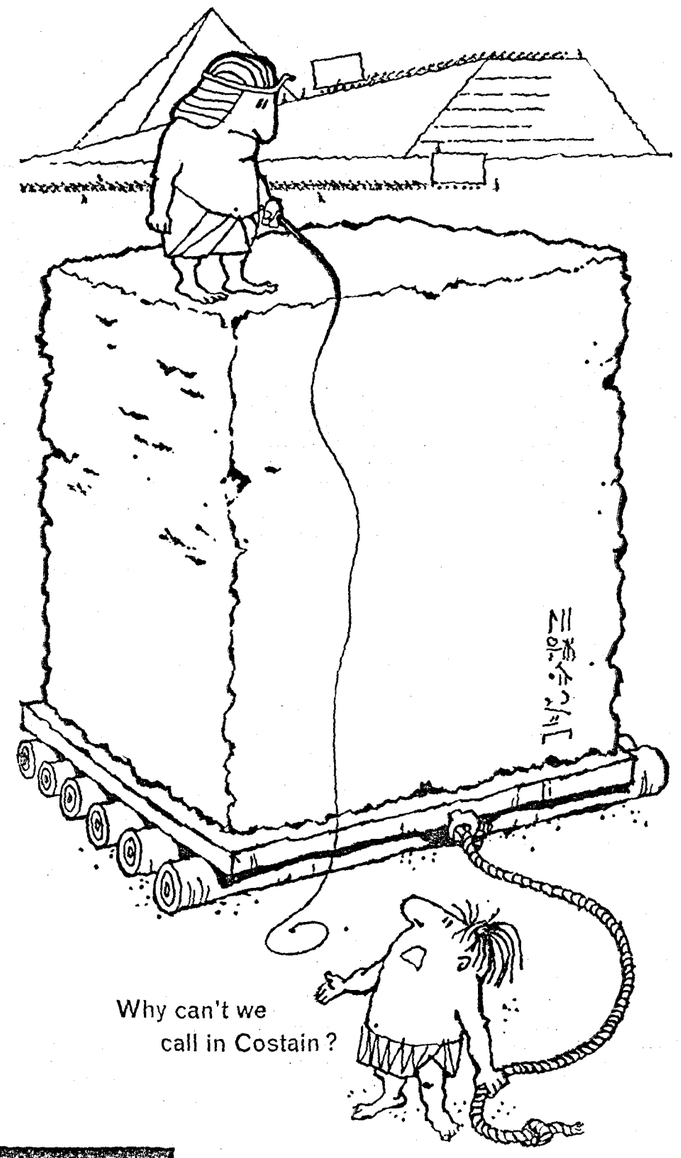
Is this reduction in the weekly income of the families of 50,000 apprentices really wise? Mr Boyd-Carpenter said that the Government should be careful not to discriminate too much between apprentices under training and other young workers or other dependants in the national insurance scheme (a wife is not treated as a dependant if she earns over £2 a week); but if industrial training is to be encouraged, discrimination in its favour is precisely what the Government should want. The minister said, secondly, that although the Government wishes to encourage apprenticeships, family allowances are the wrong mechanism for doing so. But why? Surely they are the most obvious and discriminate social service easily to hand? Thirdly, the minister was confident that this change would not discourage people from entering their sons for apprenticeships; but to a family with two apprentices, this bill could bring a cut in income of 18s. a week. It seems a bit odd to be making this saving in the same session as the Government hands out an extra £10 million a year to (generally better-off) families whose sons are lucky enough to be getting university training instead of apprentice training. Why not make family allowances to some of these apprentices subject to a family means test, like the university scholarship means test? Or, failing that, could not the Government continue family allowances to some families with more than one child in an apprenticeship?

DEFENCE

What Weapons?

General Norstad's remarks to the Nato parliamentarians in Paris on Monday have, if anything, increased the confusion about precisely how wedded he is to the idea of a conventional defence of western Europe. Largely through American example and exertion he expects to have 25 divisions, almost all in combat readiness, on the central front early next year. This is a substantial improvement on the nominal 21 divisions (15 or 16 of them said to be fully effective) which he has had up to now. He still wishes to get closer to the target of 30 divisions laid down in the staff paper MC-70. The new increase should give Nato *sufficient conventional strength to stop any* conventional thrust by the 20 Russian divisions normally stationed in east Germany. This is undeniably a useful reinsurance for the West. But the calculations should not end there.

It is always open to Marshal Koniev to summon more substantial reinforcements from Russia than the United States, Britain and France can quickly bring across the Atlantic, the Channel and the Mediterranean. Were the Russians to take this step now it might be construed as a sign that Mr Khrushchev really anticipated a shooting war in Europe. But, equally, the Russians could believe that the American build-up presaged a western intention to push along the access routes to Berlin; their desire for reinforcements could thus be defensive. The effect of such precautions on both sides of the Elbe would not be likely to reduce tension for any negotiation on Berlin itself.



General Norstad still appears to be a strong believer in enforcing a "pause" in any local hostilities, to allow Moscow time to reflect on the gravity of the situation. If this concept is still accepted, added conventional forces are a help in checking Russian aggression. But it also emerged from General Norstad's speech that he doubts whether conventional forces, even augmented, would suffice in all circumstances; he is ready to use nuclear weapons to enforce the pause if the situation is serious enough.

KOREA

Parking Restricted

It may be ungracious to suggest a connection between President Kennedy's reception in Washington on Tuesday of General Park (formerly Pak), South Korea's military ruler, and the release from house arrest four days earlier of Dr Chang, the former prime minister; but it is probably accurate. The statement issued by Mr Kennedy and General Park after their meeting, non-committal for the most part, nevertheless expressed Mr Kennedy's "gratification" at the progress made by the military government, and promised "all possible economic aid" for its projected five-year plan. To win this degree of approval from the President, who declined to receive the original leader of the military junta when it seized power last May, General Park presumably had to provide some evidence of a softening in his rigorous rule. He had already promised to hold an election in May, 1963, to elect a civilian government (specifying, however, that the election will be run by the military regime, not a caretaker cabinet). The release of Dr Chang, who was arrested on the unlikely charge of having connived at communist activity during his year in office, is accompanied by the freeing of seven former ministers and a number of allegedly pro-communist students.

General Park continues to use stringent measures against South Korea's widespread corruption, and against those who propose contacts with communist North Korea as a step towards the reunification of the country. Three officials of the Seoul newspaper *Minjok Ilbo* were sentenced to death not long ago for advocating collaboration with North Korea—the pleas of the world's press for clemency have had no response yet—and stiff prison sentences were imposed last week on three men convicted on the same charge. On the other hand, the leaders of an organisation known as the All-Asian General Federation of Anti-Communist Organisations were indicted on October 30th for holding illegal meetings. To be impartially stern is at least a sign of growing sophistication.

STRIKES

Roots of the Trouble

THE unofficial strike at the Rootes Group's components factory at Acton is now in its eighth week, and shows little sign of breaking. Despite the pleas of the Amalgamated Engineering Union, only some 250 out of the original 1,000 strikers appear to have drifted back to work: with some ingenuity Rootes have arranged their production lines so that they, and 250 men who never struck, can produce enough parts to give some employment to 3,000 out of Rootes's 7,000 employees at Coventry. But, in the absence of certain groups of specialists (notably the sheet-metal workers, who have declared the strike official), the Coventry production lines are idle most of the week. Rootes now claim that they will be unable to take back all the strikers even when they re-apply for work; the strikers in turn retort that their quarrel is now no longer about redundancy but about victimisation, since they are certain that among those who would not be taken back are the organisers of this strike and former strikes. Most of the 750 remaining strikers appear not to have reclaimed their insurance cards, so the odds are that they are at most doing casual jobs and have not gone into other factories. The plain truth is that the company, and its sympathisers who expected the strike to fold quietly up, underestimated the redoubtable—if irrational—fighting temperament of these North London workers.

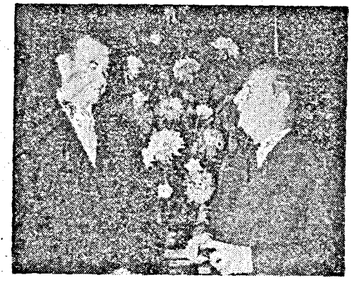
Vacuous attempts have been made to blame this strike simply on subversive communist or Trotskyist agitators. The real causes, however, sadly need (and are fortunately receiving) attention from employers of all kinds. The negotiating machinery in engineering is designed, according to the Industrial Relations Handbook, so that "each stage of the proceedings removes the question under discussion further from the immediate disputants," with the aim of ensuring that cases are dispassionately examined. This works very well if there is also close contact between employers and men at a less formal level: but it seems that Rootes have been rather out of touch with this outlying factory, while some union officials have failed to report to the men the true content of the high-level negotiations being conducted on their behalf. The moral is that the official negotiating procedure, if it is not going to lead to an impasse in which neither side can act without losing face, must be doubled by a less rigid and more continuously active form of consultative machinery—preferably in the form of a works council on which the unions play an active part.

Phoney War in the Air

THE strike of 1,000 Ministry of Aviation employees at London Airport seems as much of a muddle as the Acton affair. Some 70 loaders with special responsibilities (i.e., who can work without a foreman looking over them) wanted an extra 2½d. an hour to bring them into line with their confrères employed by the British Overseas Airways Corporation. The Ministry said they could not have it until the end of the wage pause: hence the strike. It all seems particularly silly since the men concerned will next April be transferred to individual airlines in any case, and many of the companies using the airport have long been dissatisfied by the Ministry's employees' standard of service.

The only airline to be seriously affected is British European Airways. The many European airlines who use BEA's ground services at London have been able to get many loading and handling jobs done by their own clerks and bottle-washers, but most of the corresponding people in BEA belong to British trade unions and have therefore not been asked to act as blacklegs. Perhaps the main effect of this confusing business will be to muddle up the Ministry's employees at the airport, who have been awaiting the call from Mr Cousins and Sir Tom Williamson to lead a forthcoming struggle over the pay of government industrial employees. If the shock-troops in the ranks of these M-workers —themselves the *corps d'élite* of the battle of the pay pause—are allowed to waste their energies in such petty engagements, the unions' hopes of eventual victory must be substantially diminished.

ELECTRICAL TRADES UNION

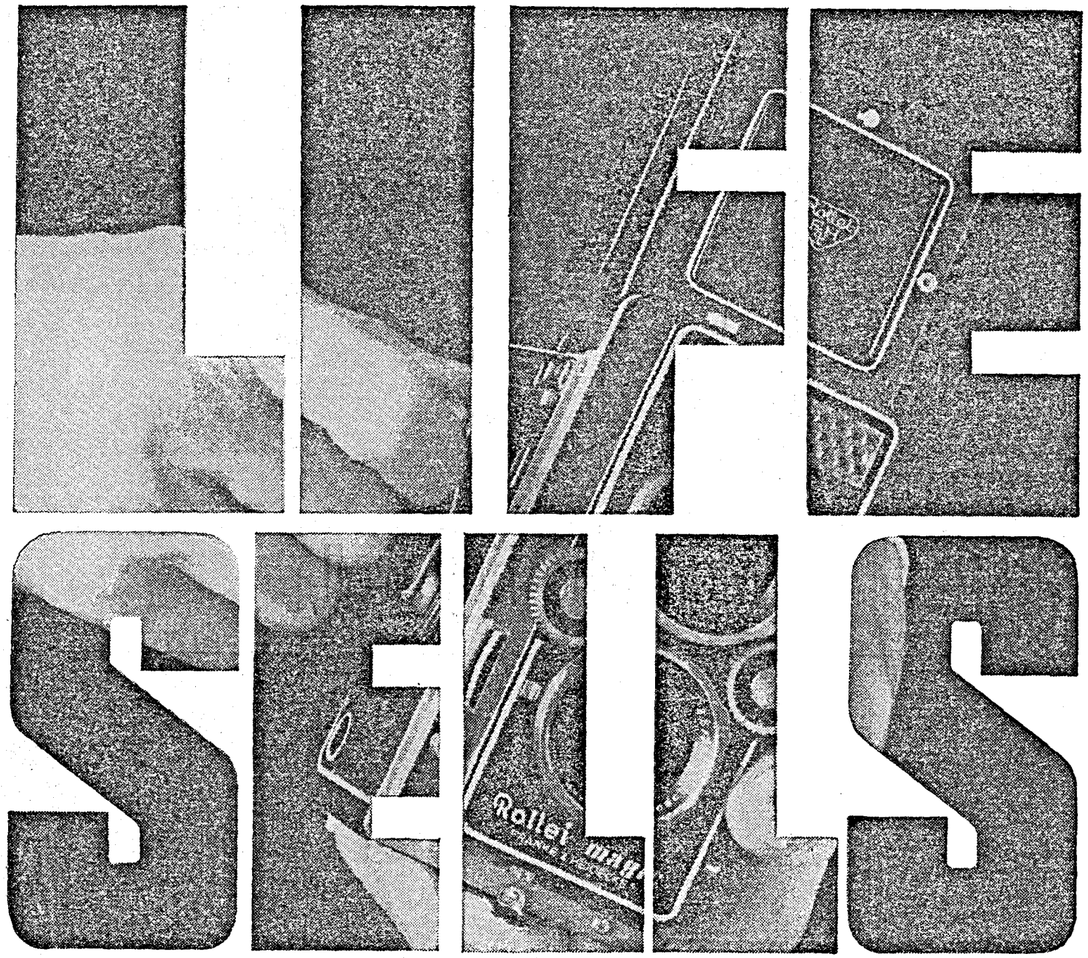


Slow March

AFTER fifteen years the control by communists of the executive of the Electrical Trades Union is formally at an end. At long last between a quarter and a third of its members have bothered to vote (and have managed to get their votes counted), compared with the derisory number who have been recorded as voting hitherto. The result is that staunch Labour men have won nine places on the executive out of eleven; against them one communist-supported candidate was returned unopposed, and another won by 185 votes. But the old communist executive, after delaying announcement of the election results for so long, have appointed one of their own number as acting general secretary in place of the ill Mr Byrne; they will control a rules revision conference due to be held next week; and the anti-communists are going to the courts to try to avert what may be the communists' last bid to retain power. The contest has lasted since 1957; allegations of vote-rigging have been rampant for years; there has been turned on this union a far fiercer spotlight of publicity than could ever hope to be generated by less flagrant suspicions of corruption. That the battle for honesty and control can still continue to drag on, in the courts and outside, is surely an indication that the present lack of any legislation governing union elections needs to be filled. But once again this week Mr Hare has run away from this.

ARGENTINA

Trains and Meat



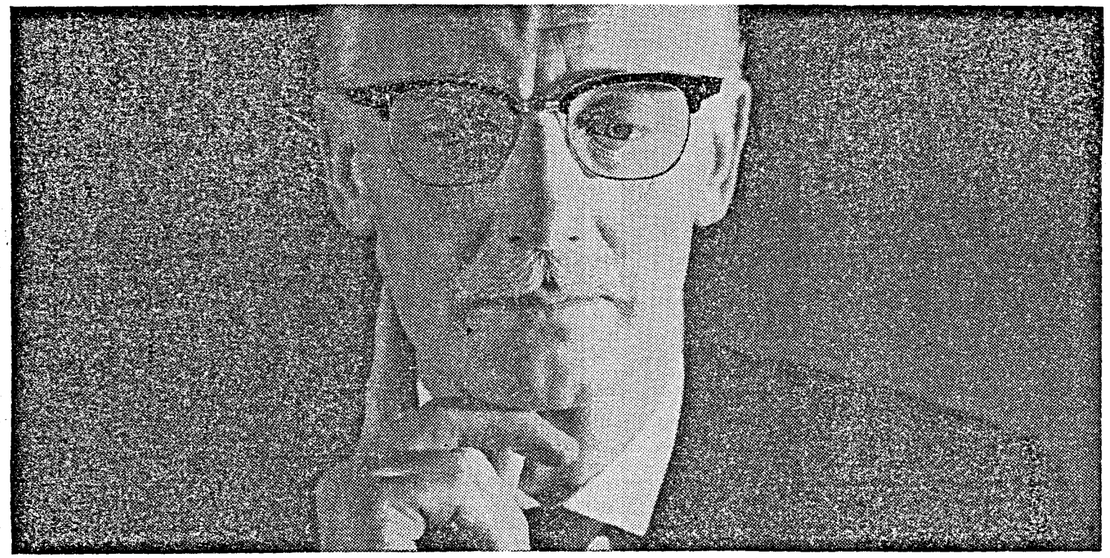
WITH congressional elections only four months off, President Frondizi has at last invited a show-down with the trade unions. The government's declaration of war was its decision, last month, to go ahead with proposals for bringing some sense into a railway system whose overstaffing and inefficiency have long been suffocating the country's economy. In August, a commission of union and government officials was appointed to study proposals for getting rid of 75,000 railway men, closing a number of branch lines, and turning railway restaurants and other side activities over to private enterprise. The commission was disbanded in October with the two sides still at loggerheads, and Dr Frondizi made it clear that he intended to implement the plan with or without union co-operation.

Here to argue: Dr Alemann with the Chancellor

Last week the railwaymen responded by going on strike, and they were supported by the confederation of labour unions, which announced a three-day general strike from November 7th. But the government claims that by the third day of the general strike three-quarters of the workers (but not the railwaymen) were back at their jobs: there is no strike pay, and there are many who realise that something has got to be done about the impossible state of the railways. By cracking the workers' loyalty to their unions, the government believes that it has won a first battle.

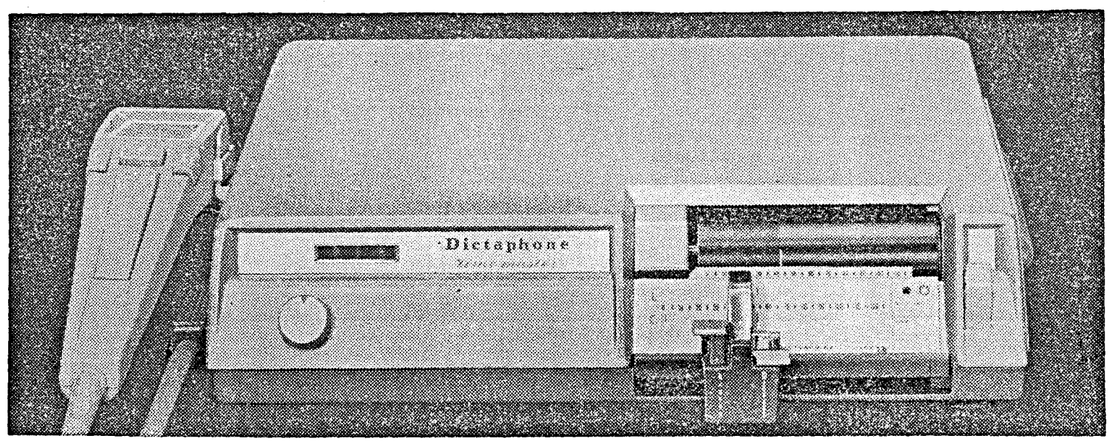
Every year the government forks out about £100 million for the railway deficit. This is money urgently needed elsewhere, if Dr Frondizi is to carry out his boast of merging the three-year-old stabilisation programme into a plan for economic development. Industrial production is up this year;

LIFE SELLS FOR FRANKE AND HEIDECKE



Commenting on LIFE International and LIFE en Español, Franke and Heidecke, manufacturers of the Rollei Cameras, say:

"The acceptance and recognition of these two magazines, their exceptionally interesting editorial and make-up, draw —in our opinion (and proven by research)—an ever increasing circle of readers. In view of LIFE's international acceptance we are in a position to give our brand name the world-wide publicity in advertising that it deserves."



Every fortnight, in 146 countries around the world, the world's best prospects and customers for all kinds of products and services turn to the pages of LIFE International and LIFE en Español to keep pace with the changing rhythm of the world. Through its advertising as well as its editorial pages, LIFE keeps them informed on new aspects of the arts, politics, science, business and modern living.

LIFE can sell for you, too. For more information about LIFE International, its new advertising edition for Europe, and LIFE's Spanish language editions for Latin America—write to Robert H. Garey, European Advertising Director, Time & Life Building, New Bond Street, London W.1.

Men who buy well,

buy DICTAPHONE TIME-MASTER

REGD. TRADE MARK

Men who value quality and service are the men who buy Dictaphone Time-Master, because the transistorised Time-Master is the quality dictating machine. It's a precision instrument designed to save time for a man whose time is valuable.

Dictating with Time-Master is as easy and pleasant as normal dictation to a secretary, but it is much more convenient and time saving. No matter where your secretary may be, you simply speak, and immediately your thoughts are on *permanent* record. Time-Master has these unique advantages because only Time-Master has the DICTABELT record.

The Dictabelt recording is permanent and visible, ensuring complete safety from accidental erasure. Reproduction is crystal clear and placefinding is instantaneous.

Dictaphone Company Limited, 17-19 Stratford Place, London W.1. Tel.: HYDe Park 9461.
Branches throughout the British Isles

The words DICTAPHONE, TIME-MASTER and DICTABELT are registered trade marks.

private foreign investment is still coming in fast; the government is busy building roads and laying gas pipelines. But the foreign exchange position is gloomy. Sales of meat are down, and Argentina has had to draw a large chunk of its stand-by credit from the International Monetary Fund, and ask for more assistance for next year.

Dr Roberto Alemann, who has been minister of economics since April, was in London at the beginning of the week on the first lap of a mission to the capitals of the common market countries. He is in Europe to argue against any system of quotas or discrimination that may add to Argentina's difficulties in selling its meat to western Europe. Whatever the outcome of the government's battle with the unions, Argentina will not have a chance of fulfilling its triple aim—stabilising the currency, promoting economic development, and starting on social reform—unless it can market its most important export commodity.

SOVIET UNION

Sic Transit

HEINE, who attributed his childish reluctance to learn geography to the changing frontiers of the Napoleonic age, would sympathise with the schoolchildren of Russia, faced with the mutations of their country's place-names. Stalin's elimination sets a record. Stalingrad is not alone. There is Stalinabad, the Tadjik capital, a Stalin peak in the Kirghiz mountains, a Stalin bay in the Kara sea. There is Stalinogorsk, Stalinsk, Staliniri. Nearly every town has its statue of Stalin. Model collective farms, successful industrial plants, diligent academies were, over many years, rewarded with the honour of bearing the Leader's name.

In Russia and outside it, the great name is being painted out. East Berlin has renamed its showpiece, the Stalinallee. Of all the homonymous towns in central and eastern Europe, only one, in Albania, looks like keeping its identity. The Poles did their changing in advance: the Silesian town of Katowice recovered its name in 1956. But there are some interesting possibilities even in western Europe. To annoy the communists, a Parisian councillor has asked for the destalinisation of streets in the red belt. Nobody, however, has yet thought of renaming the Stalingrad station on the Paris metro.

Stalingrad itself becomes Volgograd. Only 36 years ago it was still called Tsaritsyn; it fell an early victim to the stalinist cult. One feature of the cult was that the main battles of the civil war had been fought around Tsaritsyn, where Stalin had served as politicil commissar with Voroshilov's army. But the inflated legend of Tsaritsyn was rendered trivial by the grim, grand reality of the Stalingrad battle of the second world war. The historical fact of the battle of Stalingrad is not easily painted over. It is because Stalin was the ruler under which Russia fought such battles that Mr Khrushchev will not be able to get rid of stalinism by merely changing a name.

ART MARKET

Fancy Prices

TWO dozen paintings fetched $4,679,250 (£1,670,000) in 57 minutes at the Parke-Bernet auction in New York on Wednesday evening. Far beyond any sum, at current prices, ever paid before in the salerooms, $2,300,000 (£821,400) was paid for a Rembrandt and, perhaps even more surprising, $875,000 (£312,000) for Fragonard's *La Liseuse*. The highest recorded London auction price is the £275,000 paid at Sotheby's in 1959 for Rubens's *Adoration of the Magi*, superseding the £220,000 paid in the same salerooms in 1958 for a Cézanne.

Staggering though these prices are, do they exceed, in real terms, anything paid in the past? Opportunely published last week, Mr Gerald Reitlinger's book "The Economics of Taste" (Barrie and Rockliff 42s.) is packed with intelligent information about picture prices over the last two hundred years. Many of the transactions recorded were pretty sensational; perhaps none more so than the purchase in 1930-31 by a single collector, Mr Andrew Mellon, of twenty-one pictures from the Hermitage Museum in Leningrad at a cost, it is said, of about £1,400,000; this sum included £173,600 for Botticelli's *Adoration of the Kings* and £103,500 for an *Annunciation* by Van Eyck, both now in Washington's National Gallery. Even if the Soviet Union wanted foreign currency as badly today as it did in 1931, no single buyer could bid for such a collection. Other eyebrow-raising prices recorded by Mr Reitlinger include £77,000 paid by Duveen for a Lawrence portrait in 1926 (subsequently sold for £90,000) and £225,000 by Baron von Beuningen for a Van Eyck in 1940. Multiply the prewar figures three times and the 1940 figure two and a half times to approximate to today's prices, and evidently it is not only in the last few years that pictures have been changing hands at astronomic figures.

BROADMOOR

Prison or Hospital?

IN eighteen months' time Broadmoor will celebrate the centenary of its opening as the first asylum to be specially built for criminal lunatics. Proposals now being placed before the Minister of Health by the Prison Officers' Association would, if accepted, put the clock back for the full hundred years. Broadmoor has had a doctor as superintendent from the very beginning: it has always been, in name at least, an asylum, not a prison. But the association now proposes that "an experienced governor" should be appointed with direct responsibility to the Minister for security and "with the right to override the medical staff should he feel it necessary."

Early superintendents certainly regarded themselves as governors rather than doctors; but after the first world war they began to lay much more emphasis on treatment, and by the time the second war had broken out a parole system for selected patients had been introduced. The logical conclusion to this gradual change from custodial institution to secure hospital came in 1948, when under the Criminal Justice Act Broadmoor was vested, like other hospitals, in the Minister of Health, and the management of it was transferred from the Home Office to the Board of Control. The last statutory change came with the introduction of the Mental Health Act a year ago. The Board of Control was then wound up, so the manager of Broadmoor is now Mr Enoch Powell. More important, Broadmoor was no longer restricted to taking patients who had been charged before a court. The criterion for admission, as the working party on the "special hospitals" pointed out earlier this year, should now be that a patient is too dangerous or violent for an ordinary mental hospital. Clearly, the vast majority of patients will continue for some time to be criminal lunatics; but if the more flexible arrangements recommended by the working party are gradually introduced, this distinction between Broadmoor and other mental hospitals will be less clearly drawn, and a custodial regime would be less appropriate than ever.

Security must, of course, continue to be effective. The purpose of the special hospitals is to treat patients who are too dangerous for the "open door" regime which has transformed the other mental hospitals and in consequence helped the recovery of their patients. But has the clinical judgment of Broadmoor superintendents been proved at fault in this respect? Since the hospital was taken over by the Ministry of Health there have altogether been eight escape incidents, involving eleven patients, some of whom were at large for hours only—a total that puts Broadmoor in a very favourable light compared with prisons. Perhaps the one thing needed to complete the recognition of the institution as a hospital is for the staff, who are trained mental nurses, to transfer their allegiance from the Prison Officers' Association to the Confederation of Health Service Employees.

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries
Out next week:

IRAQ

The review considers Iraq's relations with its neighbours and discusses the course of negotiations between the Government and the I.P.C. The state of the economy at the start of the new ID566 million Development Plan is analysed and general conclusions are reached about its prospects.

Progress on infrastructure projects is noted. On the industrial front civil engineering work is going ahead on Soviet-aided plants, and there is considerable activity in the private sector.

LETTERS

Capital Gains Tax

SIR—The general arguments in favour of the taxation of capital gains look very strong; so long as one stays on the general level it is difficult not to be convinced, as you (to judge from your article of November 11th) appear to have been convinced. Things look rather different when one gets to the point (at which Mr Selwyn Lloyd and his advisers are no doubt at present struggling) when one has to make a decision on a particular type of tax. The possible alternatives look so much less attractive than the general idea.

You have yourself shown that the obvious interpretation of Mr Lloyd's intentions—capital gains made in less than (say) six months to be taxable as income, in more than six months to be untaxed—produces so sharp a discontinuity at the six months' point as to invite avoidance. I agree with you over that; the unfairnesses that would be created at this margin, and the distortion of administration which would occur in the effort to police it, are not a pretty picture. But if that is accepted, what follows?

The natural deduction is that one should go all out, bringing all realised capital gains within the scope of ordinary income taxation. The administrative difficulties are still serious, but they could perhaps be overcome. It would be easier to overcome them if at the same time (and consistently, I think, with the original idea of Mr Kaldor) the surtax limit for all income (unearned as well as earned) were raised quite drastically, so that the capital gains that were liable to surtax became more circumscribed. Flat-rate income tax on stock exchange capital gains could conceivably be collected through brokers, on some sort of a PAYE system. The administration of this system would be more difficult on the side of land values, but I shall not go into that.

What, however, is really alarming about a proposal of this kind (certainly if it were introduced at all precipitately) is the economic effect to be expected from it. Equity prices have come to be very largely supported by the prospect of tax-free capital gains; if this prospect were removed, who would buy shares with a yield of 2½ per cent, when it was possible to get 4 per cent on deposit at a bank? Economically, it may be freely admitted, the present relation between yields is a distortion; but it is a distortion which cannot be removed at all quickly without administering a most severe deflationary shock.

I do not think that the shock could be much mitigated (at least in the short run) by a parallel reduction in interest rates; for the balance of payments has also to be considered. It may of course be argued that the British economy is now in such a state that it requires a shock, something like this. Anti-inflationary measures are however one thing, violent deflation is quite another. The advocacy of violent deflation does not come well from those who profess concern with the rate of economic growth.

If one dislikes both of the alternatives so far considered, what is left? Only, I think, a capital gains tax outside the income tax, at a low rate (which is really the sort of thing they have in America). If the rate were low enough, it would not much matter if (at least to begin with) it only fell on capital gains made in less than "six" months. It would not be surprising if this were, in the end, all that emerges from Mr Lloyd's cogitations. But perhaps it might be as well if you started already on the job of conditioning your readers to the probable appearance of what would certainly be greeted in some quarters as a very ridiculous mouse.—Yours faithfully,

J. R. HICKS
All Souls, Oxford

The Common Market

SIR—Last June I suggested in a letter in your columns that it would be deplorably retrograde if the UK, as part of a common market settlement, were to place tariffs on any food or raw materials now imported from the Commonwealth tariff-free. In your issue of November 11th you say (page 528): "The wider the circle of integration of the rich Atlantic countries, the more essential it becomes that they shall not unite at the expense of the poorer regions. It is a refreshing feature of the new thinking in Washington that it recognises this, and indeed puts at the centre of a possible new Atlantic partnership a joint trade and aid effort to help the undeveloped and uncommitted countries. The most radical and precise suggestions in the Herter-Clayton report are for abolition of raw material tariffs by developed countries and a series of 10 per cent cuts in their other tariffs in return for 5 per cent cuts by the undeveloped ones."

I am delighted that you are at last seeing the point. But could not this new thinking in *The Economist* now lead it (as a free trade paper) at least one step further to the modest conclusion that the UK should in no circumstances place tariffs on food and raw materials which are at present imported tariff-free?—Yours faithfully,

House of Commons DOUGLAS JAY

Immigration

SIR—I have with great reluctance this morning cancelled my order for *The Economist*. I have never read more evasive editorial answers to a letter than those relating to Sir Cyril Osborne.

While every decent person must deplore immigration restrictions I cannot see how the Government can do otherwise than impose such restrictions, but they must apply to others, especially the Irish, as well.
—Yours faithfully, J. SCHOLEFIELD
Twickenham

★

SIR—Sir Cyril Osborne's arguments against immigration are so specious as to spoil a rational case for controlling immigration.

At present the majority of immigrants (a) live in colonies and (b) occupy low-level jobs. The possible danger from this is, clearly, the establishment of a dual society based on race, and its rather nasty consequences. Earlier immigrations were of a different type and scale, so that this problem was never serious.

I would have thought that controlled immigration (reasonably defined) was the least unpleasant alternative to both those who are proud of a "British way of life" and those who abhor race and colour prejudice.

Finally, I think it is worth saying that it is the Government's responsibility to make this country as attractive as possible—not to make the immigrants' native lands Utopian at the taxpayers' expense.—Yours faithfully,
West Kingsdown, Kent S. JOHN ROGERS

Finland

SIR—Clear though your comment on Finland (November 4th) may have been, I think that you leave untouched one of the possibilities prompting the latest Russian move. There is at the moment in Finland more sympathy for the West than for the Soviet block, a situation perhaps worrying to Moscow, given that there will be two elections next year. The first is for President, a position of decisive importance in foreign policy. Mr Kekkonen is noted for following a rather middle-of-the-road policy, and this, it would seem, is not one desired by a majority of the Finns. There is thus a likelihood that in the February elections he might be ousted by someone right of centre. Hence one of the Russian motives could be that, by forcing negotiations to take place at the moment, and then concluding a reasonably satisfactory settlement before February, Mr Kekkonen's position could be strengthened. Should he be successful at the polls this would not be to the Russians' disadvantage. The other election, in the summer, is for the Parliament, and negotiations concluded could ensure that the votes for the Communist party are not lost, and indeed that their increase be continued.—Yours faithfully,

A. C. HUBERT

Freedom from Want

SIR—Do vegetarians eat eggs? Lord Cherwell did. In fact I once bribed him to come to lunch with the promise of a couple of fresh eggs and some spinach when such things were only with difficulty obtainable. In the middle of the war in one of his more inspirational moods Presiden

Good old Johnnie Walker

THE SCOTCH OF SCOTCH Born 1820—still going strong

Roosevelt in a personal telegram to the Prime Minister launched the idea of an immediate conference among all the Allies to consider what could be planned at once to secure "freedom from want" when the war was over. Although the idea was clearly the President's own and very dear to him personally, for some reason Lord Cherwell wanted the PM to raise objections.

I thought this might create a very bad impression. The Foreign Secretary was all in favour of an early and favourable reply, taking the very sensible line: "What everyone looks forward to after the war is a good guzzle." I decided to brave the old lion in his den and got him to receive me. With the eggs and spinach in prospect he promised to come to lunch to discuss the reply to the President's telegram. I got Dick Law, Keynes, Hubert Henderson, Lionel Robbins, and John Maude to agree to come too.

The eggs duly arrived fresh from a hen in North London and the spinach was bought as soon as Covent Garden opened that morning. We sat down punctually at one. For some reason Hubert Henderson was for raising objections to the proposal. But, pressed particularly by Keynes, Cherwell came round eventually and by 3.25, when he had to leave for a meeting, had undertaken to advise the PM to welcome the proposal with suitable warmth. By 3.45 I had drafted a reply and sent it across to Number 10. Such were the ante-natal pangs of the Hot Springs Conference and so, I suppose, of FAO.—Yours faithfully,

Beaminster, Dorset NIGEL RONALD

Ombudsmanship

SIR—With reference to your very interesting article of November 4th, I would for the sake of good order only inform you that an ombudsman, more or less equal to the Swedish one, exists in Finland as well. I mention this only in order to show the fact that this institution seems to be generally adopted in the north.—Yours faithfully,

Helsinki R. RELANDER

The Press in America

F. J. WALKER

London, W.1

BOOKS

The Adams Brood

The Adams Papers: *Diary and Autobiography of John Adams, 4 vols.*

Edited by L. H. Butterfield and others.

Harvard University Press. London: *Oxford University Press.* 240s.

At Princeton Jefferson; at Yale Benjamin Franklin; at Harvard the Adams family. Thus, not inappropriately, the great pre-independence universities of the eastern seaboard have each annexed their deities from the national pantheon and are undertaking to honour them with the most fitting memorial: the publication in definitive editions of their collected writings. Harvard is the last to take up such a burden, but the burden it has assumed is likely to prove the heaviest of them all. It is not a mere founding father, but a whole dynasty, that the Adams archives enshrine, and that dynasty perhaps the most self-conscious and tenacious and articulate of all the great families of America.

In 1755 John Adams made the first entry in his diary. (It recorded the impact on Braintree, Massachusetts, of the earthquake that destroyed Lisbon.) Since then, with only the briefest intermissions, Adamses have been writing—and preserving what other Adamses have written. The result today is a microfilm of Adams Papers which, though stopping at 1889, runs to 27,464 feet of 35 mm. film. The papers themselves, deposited by the family with the Massachusetts Historical Society, include not only the public documents of a family that produced presidents, ambassadors, congressmen and scholars, but also the personal correspondence and private confidences of a clan that harboured some of the most eccentric and distinguished characters that New England has ever set its stamp upon.

The publication, of which these four volumes are a harbinger, has been made possible by the fusion of two great American institutions, Harvard and *Life*; the first, through its press, undertaking the publication, the second, in return for serial rights, financing the costly editorial work. If it should superficially appear that of these two angels one is more naturally an Adams guardian than the other, no doubt it is also true, as the editors affirm, that

> there is something highly fitting and gratifying in the realization that large portions of the writings of a family that for three generations devoted itself to national service should be presented to the American public in the numbers of a magazine that reaches millions of readers.

However that may be, the result, to judge by both present performance and future promise, is a great achievement. Adams

The Economist Diary

Specially designed to create an atmosphere of peaceful co-existence between the busy man, his secretary, and the world at large.

A week's appointments at an opening; a book that lies open flat on the desk

*

A diary lay-out specially designed to meet the needs of the busy man

*

72 pages of facts and figures covering the world; 32 pages of maps

*

All information easily found by means of handy thumb-indexes

*

A memorandum book, an appointments register, and a complete reference book

*

Bound throughout in red leather; title blocked in gold. Size 10" x 8"

diaries alone will run to between 41 and 47 volumes; family correspondence will run to about 20; while general correspondence and other papers could (the editors are cautious about pledging themselves to the future scale of their selection) easily run to another hundred. The audacity and devotion needed to plan such an enterprise are as much to be admired as the skill and scholarship with which it is evidently being carried out.

The four volumes so far launched contain the basic autobiographical material for the first and perhaps the greatest of the public Adamses, the founding father and the second President. He was a public man, but the diary, which fills two and a half of these volumes, was not a public document. Rather it is the repository of a set of reflections, memoranda, confessions and aspirations intended for no eye but the author's and as such uniquely revelatory of the man. Something between a quarter and a third is here published for the first time; none of it has previously been published in an adequate transcription or with the necessary annotation. The autobiography had been more nearly reproduced in the edition of John Adams's "Works" produced by his grandson in the eighteen-fifties; even so, the new edition is a great improvement both in comprehensiveness and in the ordering of the material.

Only spacious extracts could do justice to the freshness and diversity of the contents of these volumes—John Adams as sermon-taster, as lover, as natural philosopher, as lawyer, as rebel, as self-promoter, as self-inquisitor, as the perfect Bostonian (on New York: "with all the splendour and opulence of this city, there is very little good breeding to be found"), as the by-no-means-innocent abroad, as puritan and as patriot. Only use and close inspection can reveal the full excellence of the editing, in all its spacious and precise detail. The British reader, handling these beautifully produced first-fruits of a great historical harvest, cannot but mingle with his admiration a particle of envy, and ask when some of the deities of the British pantheon—William Ewart Gladstone, for instance—will find an equally fitting memorial.

Of Human Bondage

Oldest Ally: *A Portrait of Salazar's Portugal.*

By Peter Fryer and Patricia McGowan Pinheiro. *Dennis Dobson.* 280 pages. 25s.

Portugal and its Empire: *The Truth.*

By Antonio de Figueiredo. *Gollancz.* 159 pages. 18s.

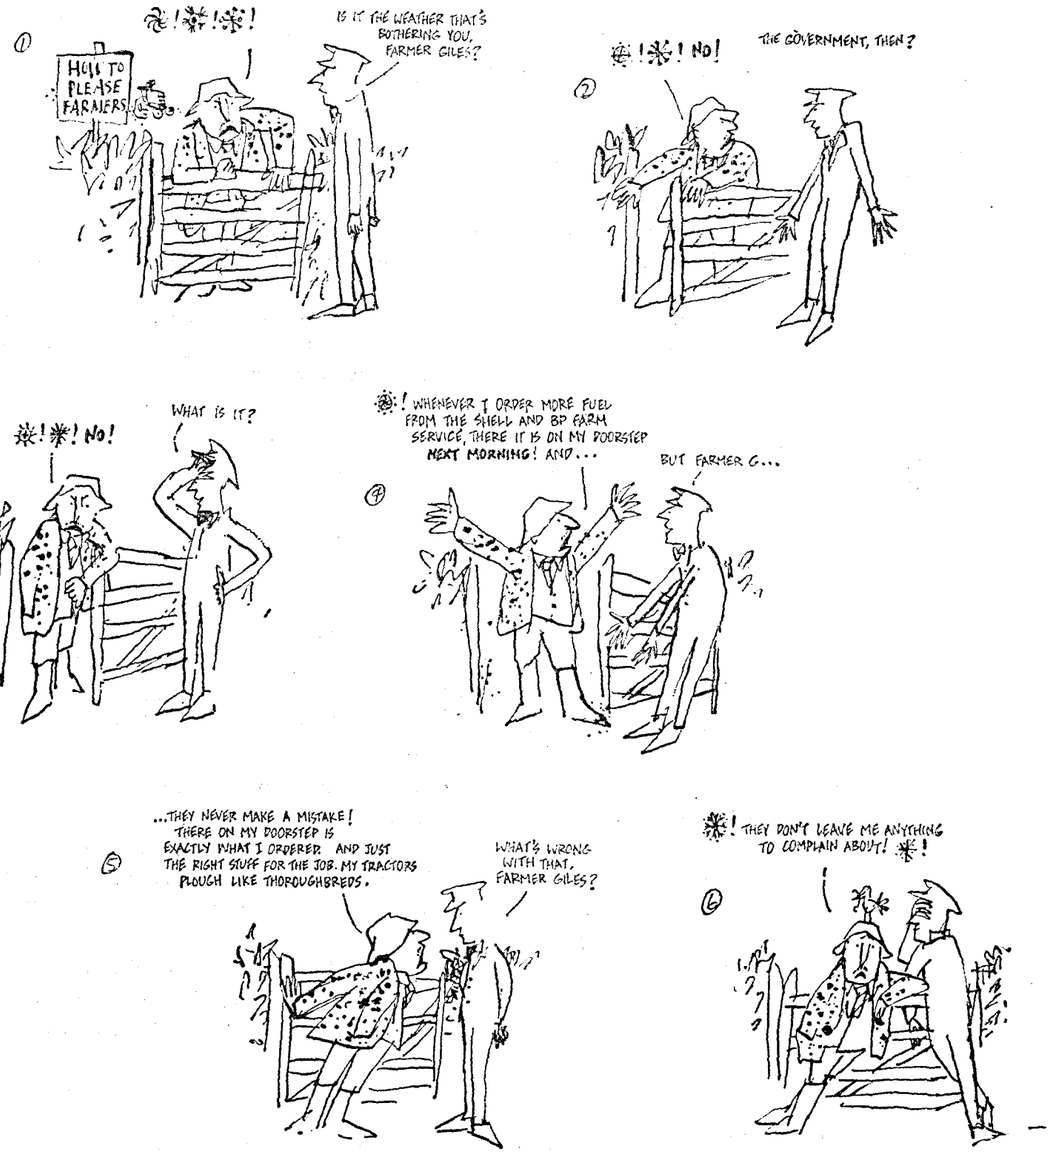
In spite of the rapidity of our education about Portugal and things Portuguese—even because of it—these two books are welcome. For one thing Portugal will survive Dr Salazar and even Salazarism. It is pleasant and necessary to be reminded of the charm and greatness of a country with so much to offer in civilisation. This Mr Fryer and Miss McGowan do superbly in the first section of their work, which is part political analysis, part travel book. Their first hundred pages contain a lively, enormously sympathetic, if somewhat too compressed account of the land and its inhabitants. They are never content to accept either the picturesqueness or the squalor of a place or institution without enquiring for the social and economic reasons for it; and what is unearthed—for example, the account of the difficulties of a children's home in Oporto—is fascinating and heart-breaking. It may seem frivolous to commend the authors equally for including a handful of Portuguese recipes, but it would be ungrateful not to do so. The way to a tourist's heart is through his stomach.

The authors of "Oldest Ally," write to interest and instruct their countrymen in the truth about a nation for which this has seldom been done; Senhor Figueiredo writes his personal testimony to the authoritarian regime he knows. His book is much the less graceful of the two, but, for the serious student, is much the more indispensable. It consists of a detailed account of the rise and nature of the Estado Novo that is unlikely to be bettered while the regime lasts. Particularly impressive is the author's command of economic and other statistical material to support his case—which is, roughly, that Dr Salazar has oppressed and impoverished his countrymen in the name of a form of fascism—which, interestingly, he traces in part to the influence of such French reactionary thinkers as Maurras and Leon Daudet. He sees more clearly than Mr Fryer and Miss McGowan that Dr Salazar is the ally rather than the tool of the business interests that make a good thing out of the regime; and his accounts of Mozambique, where he lived for a long time, and Angola, are of the highest importance for the understanding of Portuguese Africa and the nature of its problems. Senhor Figueiredo perhaps exaggerates the culpability of the nationalist rebels, but no one would care to insist on this point in view of the undoubtedly large-scale atrocities they have committed; and Senhor Figueiredo never tries to pretend that the Portuguese colonial regime is not, in the last resort, responsible for the circumstances of its impending downfall.

One point both books make strongly: the extent to which British capital and diplomatic support bolster the anachronistic regime. It is easy to assume that Britain's relations with Portugal are confined to the familiar trade in port and a common membership of Nato that have nothing to do with internal affairs. No such assumption can survive a careful reading of these books. Responding to the stimulus of ancient association British business interests have invested heavily in Portugal, and now safeguard their investments by sponsoring pro-Salazar propaganda activities in London, in which cabinet ministers have on occasion got involved. The normal courtesies of diplomatic life are used by the Salazar government as opportunities to demonstrate to the Portuguese that it has the support of the West in its internal policies. The result is that Britain loses the trust of Africans and that the Portuguese themselves, despairing of support from the democracies in the task of ridding themselves of fascism, turn naturally eastward, as Senhor Figueiredo points out when he discusses the indifference shown to General Delgado and Captain Galvao, who were refused entry. In this respect, both "Oldest Ally" and "Portugal and its Empire" are timely.

Background to Unity

Twentieth Century Christianity



Edited by Stephen Neill. *Collins.* 448 pages. 30s.

In Delhi this week opened the meeting of the World Council of Churches. And this book is appropriately a symposium diagnosing the strength and weakness of the Christian church or churches at the present time, with a survey of its changing history since 1900.

The editor of such a volume must persuade his authors, some of whom are enthusiasts, to write with a detached observation and, if with optimism, then with informed optimism. There are two authors in the volume who talk largely and vaguely of the new strength brought to the church by persecution in Germany or Russia, and one of them almost writes as though a diminution in quantity is alone the cause of a rise in quality. But for the most part the editor, who is a realist, has kept his contributors on a leash, and so has produced a valuable analysis of what has been and is happening to the Christian religion.

A historian will note the transformation in Russian Orthodoxy after 1917 and the exclusion of white missions from China in 1950; the pressure against Christian evangelism in some parts of India and Africa; the new power in the resurgent religions of the east; the consequences for Christianity of a Germany divided after 1945 and a Russia dominant in eastern Europe; the transference of the protestant centre of gravity from a Europe of Lutherans and Anglicans and Reformed to a United States where protestantism was generally more radical in character, and where the most enthusiastic missionaries were often of the extreme left; the continued pressure upon the intelligent minds of western Europe as their modes of life changed, and as scientists and philosophers continued their investigations. The great age of European expansion seemed to have ended, and with its ending missionary movement paused and began to retreat. Near one Indian city, a single village has today its catechist and Christian group, and not so long ago there were fifteen such villages nearby.

To the contrary, and as signs of hope, the historian might observe the decline among the denominations of the more absurd rigidities of churchmanship, and the readiness to converse and to plan common

Two facts worth remembering: (1) For the last 25 years Shell-Mex and B.P. Ltd have been building up the Farm Service throughout the country to help farmers. (2) Through their Farm Service, Shell-Mex and B.P. Ltd are providing farmers with fuel, lubricants and other petroleum products when they want it and how they want it.

SHELL-MEX AND B.P. LTD — HELP FARMERS FARM

For mass market selling of quality products...

Whether your interests are in fashion or furniture, cars or cake-mix, if the products are above average in quality they find a natural market among the top third of the population.... These are the men and women who appreciate excellence and are prepared to pay for it — the people who largely influence the mass buying trends of the future. If this is the public you are aiming at — a new marketing factor has arrived in Britain....

a revolutionary development in colour advertising

From the 4th February next year advertisers will have a single medium that sells with mass market impact to a quality readership — *in full colour* — The Sunday Times Colour Magazine. The readership, verging on 3 million, is comprised almost equally of men and women — 72% of these in the three highest social and income groups.

No other advertising medium offers the selling power of full colour on such a broad-based high status market.

The Sunday Times Colour Magazine will look at life and leisure with a crisp, appraising eye. Visually it will be *exciting* to open, appealing especially to the young married couples whose key purchases are ahead of them and who take readily to new ideas.

If you are supplying consumer products or services for modern living to modern thinking men and women, The Sunday Times Colour Magazine is the new way of pin-pointing the quality market *colourfully, effectively, economically.*

The Sunday Times MAGAZINE

A colour campaign in itself

First issue 4th FEB. 1962

THE SUNDAY TIMES MAGAZINE *in full colour*

action; the slow but steady progress in India and Japan and elsewhere, and the influence executed by Christian ideals upon India, an influence stretching far beyond the borders of those who profess the Christian faith; the readiness for experiment in liturgy and even in the restatement of traditional dogma, to be found even in the most conservative church of Rome, even in the still more conservative Orthodox Church, especially through the members scattered by exile into America and western Europe; the extraordinary statistics of growth in church allegiance throughout the United States; the passing beyond the old clear-cut warfare of Genesis versus Geology or reason versus faith into an argument more complex, but less contemptuous and more fertile; the natural swing of the pendulum, among some of the younger generations, against the cruder forms of materialism.

It is a prospect in part encouraging, in part sombre. It is a merit of this well constructed book that it does not blink at the sombre.

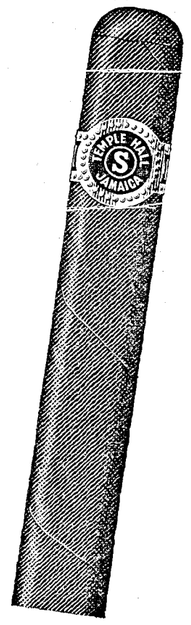
Dramatic Postmortem

The Death of Tragedy
By George Steiner.
Faber. 375 pages. 30s.

THERE used to be a preliminary examination in the Oxford English School on tragedy. The papers centred on the usual texts: the Greeks, Shakespeare, Corneille and Racine. Anything a candidate felt inclined to write was bedevilled by the limitations of having to consider in detail those formal questions unsolved by Dryden or anyone after him. Mr Steiner's syllabus is not so narrow. Indeed, he is remarkably well read. But one wonders if his thesis —the relationship between the tragic art and the western imagination—could not have appeared more striking if he had not so patiently (and interestingly) retraced all the ground in the light of this antique term "tragedy," which he is wise to define only obliquely in the course of his book. Categories are intriguingly exclusive. Here Mr Steiner and his readers are lucky in that the tragic form really does correspond to a particular expression of human feeling, which can be described by it only. The death of pastoral, for instance, or even of epic, would demand tighter critical blinkers. Mr Steiner is splendidly suggestive in his discussion of the intrusion of the un-tragic: of Christianity, for instance, or, in the post-Pascalian era, of Freud and Marx. These two are essentially Jewish, and, as he remarks, "tragedy is alien to the Judaic sense of the world." On the social and economic background he is perhaps allusive rather than suggestive: a book of this importance might have done for the development of tragedy in its crucial period what scholars like L. C. Knights and John Loftis have done for comedy.

But it is Mr Steiner's prerogative to feel that such an approach is not essential. The book's greatest virtue is his finely wielded summarising style, a semi-aphoristic assurance of which this is typical: "Racine is one of those great dramatic poets (Byron was another) who had no natural liking for the theatre." Or: "*Sardanapalus* resembles a Delacroix—vibrant in colouration, but firm in the drawing." These are the sort of striking but unexceptionable statements that have examiners reaching for their pens. One can almost hear the unwritten "Discuss" hanging over the pronouncements like a subtle form of punctuation. Incidentally, Mr Steiner is excellent on Byron, and the German romantics, but less good on Shakespeare or the moderns. Might this be the staleness of one's own familiarity, or does the ubiquitous critic have, after all, a special period and interest?

Mr Steiner is consciously trying to broaden the scope of criticism once again to include the deeply felt, panoptic, literary, meditative narrative. There is no crabbed brilliance here, no eccentric byways, no new large ideas. Mr Steiner relies on a stylistic insight into a work, and less on originality (he does not refer to other critics, however, and there are no source references; the book is cast in semi-popular form). All this is refreshingly unorthodox nowadays, and there is no doubt that Mr Steiner's method is an intended challenge to the course of twentieth century criticism. If this perhaps leads him to a disregard for minutiae (does he not confuse Lear with Gloucester?—page 36), nevertheless, the heart of the matter is extraordinarily well done. It is a pleasure to read a critic with his feet, but not his nose, on the ground.



Wistful Jeremiah

The English Gentleman
By Simon Raven.
Anthony Blond. 188 pages. 21s.

MR SIMON RAVEN has many rare and valuable qualities. He writes precisely, vigorously and economically. He is, on his own admission, a howling cad, without shame and almost without reticence. He is preposterously romantic—at times almost sentimental. He has enormous gusto, and is clearly fascinated by the spectacle of vice, especially among the rich and their parasites. He has a sharp eye, a sharp pen and great knowledge of his chosen, deplorable, field. He would be the ideal scriptwriter for an English *La Dolce Vita;* he is in fact one of our most promising comic novelists and social satirists.

"The English Gentleman" is, in places, outrageously funny, perceptive and frank. The author lacerates the world of the gossip columnists with ruthless exactitude, seeing it as the most pressing present danger to what he understands as the good, if not the sweet, life; and his criticisms have added force as he does not spare himself his own justice. The book is, in fact, distinguished—like its model, Mr Cyril Connolly's "Enemies of Promise"—by a wry self-loathing that

whatever the occasion choose

TEMPLE HALL
'Coronas Junior'

a fine medium sized cigar from the leading Jamaican factory

should ensure its survival beyond this season's publishers' lists ; but probably not so long a survival as that of the earlier work. For whereas time has, if anything, reinforced and added urgency to Mr Connolly's warnings, Mr Raven's jeremiads seem already curiously dated.

"The English Gentleman" professes to be an attempt to discredit the ideal it discusses, "justly and finally" ; but it is really a querulous exercise in nostalgia. The author gives a highly misleading account of the social and moral evolution which produced the ideal of the English gentlemen as it was understood at the end of the nineteenth century. He paints (also misleadingly) the social developments which, between 1914 and 1945, destroyed the traditional position of the country squire. He treats us to highly flavoured accounts of some chapters in his own sensational career. By the end it is evident that he does not know much of the Britain that lies outside the vision of an ex-army officer and an habitué of the shadier parts of SW3 ; and it is clear that, in spite of his repeated assertion that the gentlemanly ideal is outdated and futile, and that it needs exposure for the sham it is but still seems not to be, he is overcome with regret for it and regards it as being universally, and unfairly, despised by those who are themselves despicable.

Mr Raven pays due tribute, in one comical sideways flash, to Mr Connolly ; but his real Muse is Mr Evelyn Waugh, in his latest, least impressive phase. Like Mr Waugh, he derives most of his moral criteria from the standards obtaining in the regular army. His Waughish attitude to the modern, egalitarian Britain he inhabits can best be demonstrated in quotation:

> [Captain Wiley] liked his men, he studied their individual peculiarities, he was sometimes even indulgent to them ; but he could not take them seriously as adult and autonomous persons. I shall not argue the merits or otherwise of Wiley's view, beyond saying that when one has to do with teenage National Servicemen such a view sorts well with observable fact and answers usefully in practical situations.

Mr Raven does well not to try to argue the assumptions—repulsive and ill-informed—behind such a passage as this ; or as this:

> The old criteria of the upper class—visible prestige and lavish consumption—have now come to be accepted, in their most debased form, by the entire nation

Rubbish, Mr Raven. Do not despair so easily of the republic.

Brains, Not Pudding

A. E. Housman: Selected Prose

Edited by John Carter.

Cambridge University Press. 219 pages. 21s.; paper 10s. 6d.

MR CARTER has done a great service by bringing together these works by the last of the great stylists. To read, on end, samples of his writing over some forty years is to realise how magnificent it was, in a manner that will not be repeated: he was always Augustan, even at his wittiest. He was in turn excoriating, serious, moving and delightful ; always in the grand manner, but never pompous. To this must be added—if it needs saying of this extraordinary man—that there was always substance and usually emotion in what he wrote.

This book contains his three well-known lectures: his introductory lecture of 1892, his paper on "The Application of Thought to Textual Criticism," and "The Name and Nature of Poetry." These need no comment, except that it is a delight to have them between two covers. There are excerpts from his vitriolic prefaces. In choosing them, Mr Carter has shown restraint: he has given us only three long passages, which give Housman the opportunity of setting out his thoughts at length, with praise as well as blame, at the cost of omitting some of the most scarifying passages of abuse ; nothing is quoted from the preface to Lucan so that, alas, one misses the magnificent attack on C. M. Francken, which is unique in the literature of the present age.

There are some sixty pages, all new to the ordinary reader, of papers and reviews (most but not all on classical subjects), which have been culled from various journals. The classical papers are highly technical, and it is doubtful whether the greater part, where Mr Carter has been lavish with asterisks, or the one which he has printed in full, is harder to follow. Even so, the clarity of argument and the perfect style make them a delight to read. The few reviews of non-classical works are models of their kind. Lastly, there are a couple of obituaries (one of them the well-known paper on his friend Professor Platt), a few ceremonial pieces in the high style, and a delightful and witty fragment (all that survives) of a paper which he read on Matthew Arnold to an undergraduate society at University College.

This is a book which all admirers of Housman, and one hopes many others who like dry thought, deep feeling and good style, should buy and keep by their bedside. It only remains to say that there is a misprint on page 185: Housman would have expected it.

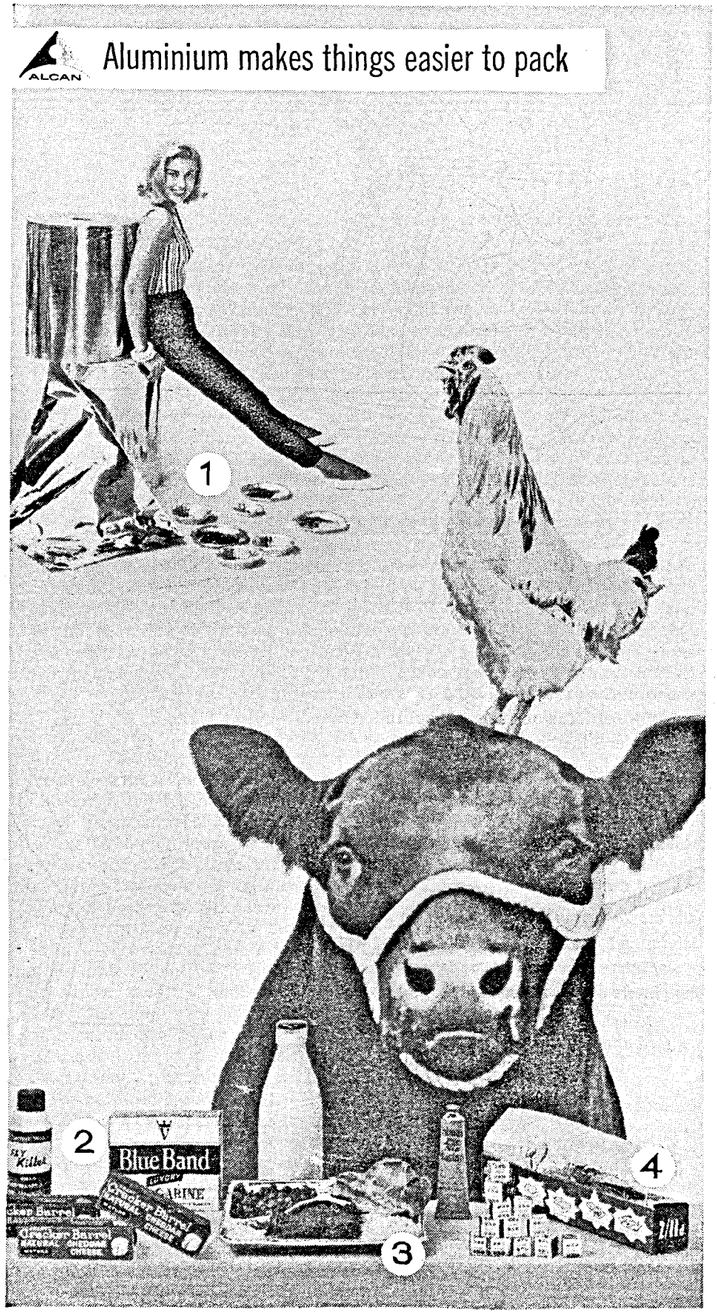
And We Are for the Night

Television: *A Personal Report*

By Robin Day.

Hutchinson. 240 pages. 25s.

THIS short record of Mr Day's crowded hours in the service of the tyrannous box will add, contrary to the publisher's assertion, very little to the debate on the future of broadcasting and its control (his two most "provocative" suggestions are for the televising of Parliament and a departure from the doctrine of "impartiality"); but it will furnish his many admirers with an exhaustless source of titillation and endless opportunities for worship. Nor is it to be scorned on these grounds by those who, unlike the Guild of Television Producers and Directors, would find it difficult to vote Mr Day the Personality of the Year: for them there is much that is entertaining and, more creditably, a great deal of information about the mechanics and techniques of television journalism, in which the author is a competent practitioner.



OTHER BOOKS

EASTERN EUROPE IN THE POSTWAR WORLD. By Hubert Ripka. *Methuen.* 281 pages. 25s.

This is a useful, well written analysis of the background to the present communist domination of eastern Europe. Dr Ripka, who from 1940 to 1948 was a minister in the Czech government either in exile or in Prague, was all his life exceptionally well placed to study the problem of the smaller countries of central and eastern Europe between the two great power blocks. He died in January, 1958, and if he were alive today he might (as his publisher suggests) wish to modify his last chapter, which contains a discussion of the consequence of the crisis in the Soviet block in the autumn of 1956, and his own ideas for a political settlement that might eventually end the Soviet domination of eastern Europe. He is at his best in his description and well-balanced analysis of the upheavals in Poland and Hungary in October, 1956; and at his weakest, perhaps, in his remarks about developments inside Russia itself and his rather inadequate references to the economic aims and consequences of communist rule.

Correction.—In a review last week of "The Beloved Land," by Vladimir Dedijer, it was stated that "Mr Djilas is in prison and Mr Dedijer is in exile in England." In fact, Mr Djilas was released from prison last January, and Mr Dedijer is legally free to return to Jugoslavia.

ALCAN Aluminium makes things easier to pack

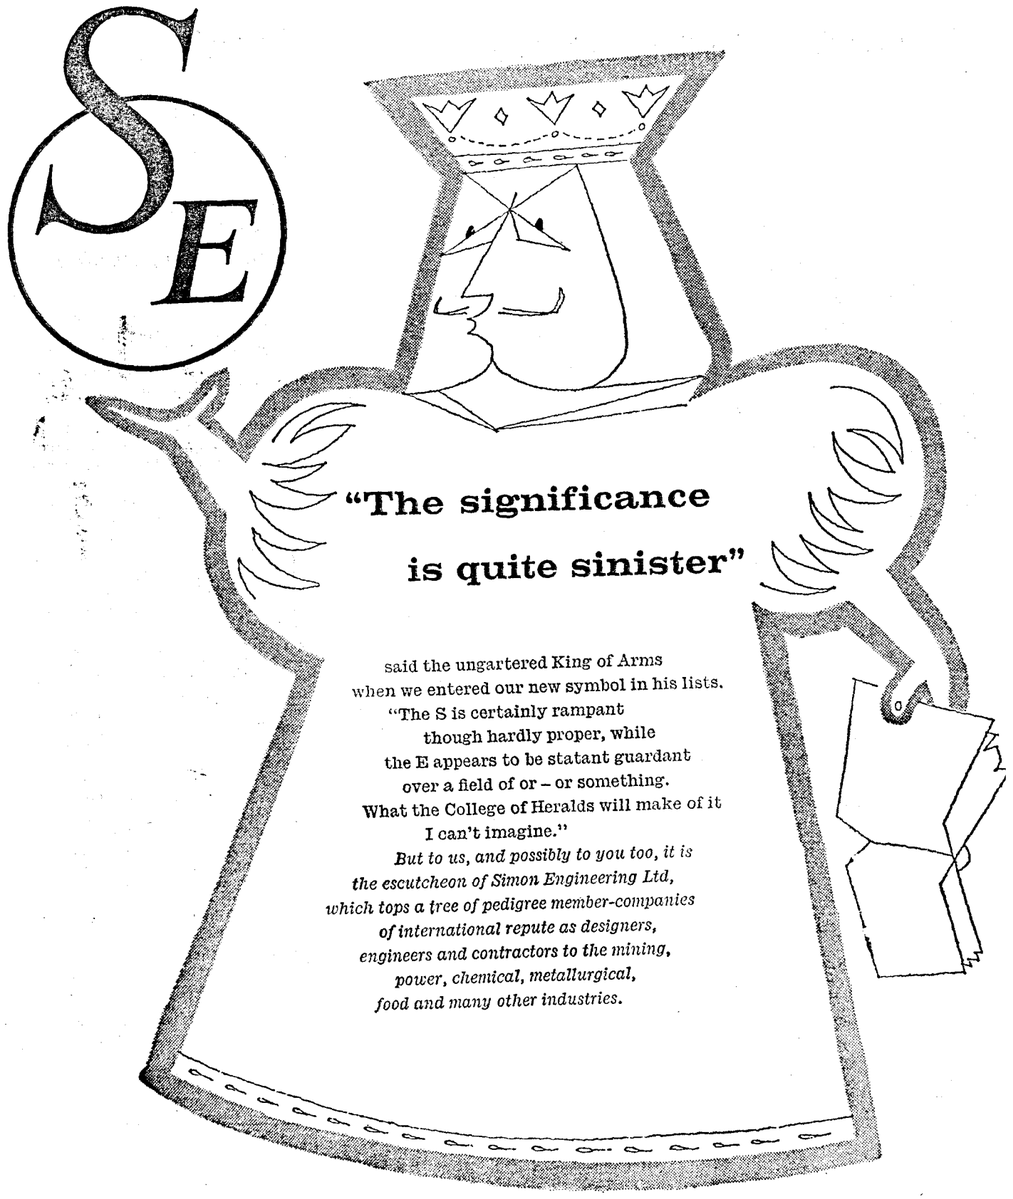
We've been foiled again . . .

with Alcan Aluminium

Every year the food and packaging industries use thousands of miles of shining foil made from Alcan Aluminium. As a food wrapping, foil is strong, and impervious to damaging light rays, moisture and air. It can be moulded into rigid food containers, easy to transport and store. Because it is an excellent conductor, foil is also used for quick and efficient cooking, and for keeping frozen foods fresh at the correct temperature. It is grease-proof, non-toxic and will not affect the colour or taste of food.

1 Light and strong Star Foil Dishes have a variety of uses. Millions of puddings a year are sold in them. Many foods can be quickly cooked and served in them. They are a good choice for picnics, too.

2 Foil, attractively printed in colour, is a bright, modern material for wrappings and packs. It is popular with manufacturers, as well as with the grocer and supermarket manager. Producers of meat cubes, cheese products, butter, mustard, margarine and aerosol products all choose foil. It ensures that their products travel well, make maximum impact on display, and stay in prime condition.



3 The new Bird's Eye "Dinners-for-One" are already a top favourite in millions of homes. These complete meals are fully prepared and pre-packed in robust foil trays that are easy to handle, and take up little storage space. Pop these dinners in the oven and—presto!—they're ready for the table in 25 minutes.

4 Star Housefoil is especially useful for cooking fish and meat. It saves money as well as time because—in speeding the cooking process—it keeps gas and electricity bills down. It keeps ovens cleaner, too. Wrap a chicken or a joint in foil and see how beautifully it cooks. The meat will reach your most discerning gastronome deliciously tender—and with all its food value retained.

Alcan, backed by the finest research and technical facilities, can answer any question on the use of aluminium. Write to: Alcan (U.K.) Ltd., Aluminium Canada House, 30 Berkeley Square, London W.1. Tel: Mayfair 9721.

THE WORLD OVERSEAS

Congo Confusion

FROM A SPECIAL CORRESPONDENT

WITHIN the last few days there was the curious sight at Leopoldville airport of plane-loads of Belgians flying into the Conga, while others, in a panic, flew out. This oddity typifies the confusion that befogs the country as the Katanga crisis drags on unsettled. The Congo may have been more lethal, more explosive, in the past ; rarely has the situation been more irrational. As well as the now traditional Leopoldville-Elisabethville vendetta, there is, at the moment of writing, a new secessionist movement in Orientale province, a breakdown of law and order in wide parts of Kasai, a serious internal split in Equateur, a half-baked attempt to overthrow the provincial government at Kivu, and a wave of Baluba bellicosity in North Katanga.

For good measure, reports of ugly incidents pour into Leopoldville every day. The total impression is disagreeable, to say the least ; yet, in the capital itself, visible tension is remarkably absent. The ordinary, amiable Congolese, with his sights usually on the next banana rather than on the confabulations of the Security Council or the palavering of his own parliamentarians, continues to display a resilience and a talent for recuperation which are his country's saving grace ; he seems ready to live with the crisis for a decade, if need be. There are moments when it seems he may have to.

For western observers—and for the United Nations—the disturbing question is how long the prime minister, Mr Adoula, can retain effectual control of the country, if things continue to disintegrate. Much sympathy is felt for Mr Adoula. He has made a brave attempt to set the country on its feet, but unfortunately only a handful of his colleagues share his sense or his enlightenment. Too many were appointed on grounds of political expediency during the period of the Lovanium Parliament, and are pathetically out of their depth in their almost continent-wide ministerial responsibilities. Faced with agitation, led by the Lumumbists, for strong-arm action to clobber Katanga, Mr Adoula, and General Mobutu with him, had little option but to launch the ill-starred offensive which soon disintegrated into mutiny and rampage.

The damage has been more psychological than military (it can hardly be described as a military disaster ; only about 20 were killed). The Adoula government has lost confidence and prestige through its association with this fiasco ; and the confidence of the Europeans has been badly undermined. The military failure has brought disorder in its wake and shown up the apparent incapacity of the central government to control or administer its vast territories. Mr Adoula is now all the more vulnerable to attack by the Lumumbists—and already Mr Gizenga, who had been lying low in Stanleyville for several weeks, has seized his chance. He has summoned a congress of all pro-Lumumbist groups in Stanleyville this weekend (November 18th) in open defiance of Mr Adoula's authority. Many observers consider that Mr Gizenga, who is still officially first deputy prime minister in the central government, is overplaying his hand ; but none the less it is a disturbing indication of the resurgence of secessionist feeling in Orientale.

No less serious for the central government is the reaction of the Europeans. The wave of brutality which broke out in Luluabourg at the same time as the military defeat has awakened all the old phobias of a year ago. Unless order and confidence are restored, Mr Adoula will find it hard to retain those Europeans—teachers, technicians, and others—on whose services his embryonic state still so much depends.

Already, however, the resilient Congolese are talking of the next offensive. Persistent requests for more direct United Nations support having been rejected on juridical grounds, the government has been casting around for military aid from outside sources—an exercise ominously reminiscent of the early Lumumba period, and a pointed reminder of what might happen if the Katanga question is not resolved. Despite the scant response to these overtures, General Mobutu and General Lundula (now apparently reinstated), locked in secret conclave, have seemed to be going through the motions of working out a new invasion plan. This time the target would obviously be North Katanga, where Mr Tshombe has virtually lost any control he ever had. Large stretches of it, including key places like Albertville (where Europeans have been fleeing from the tribesmen) and Manono, are reported to be in the hands of the Balubas, Mr Tshombe's traditional enemies. In terms of reducing the Katanga secession, this might seem a highly significant development ; but it is fraught with danger. An orgy of tribal fighting, in which Europeans would inevitably suffer, is hardly the best means of turning the tables on Mr Tshombe. It is, in any case, doubtful whether Mr Tshombe is seriously alarmed about the loss of this northern area ; as long as he firmly controls the key southern sector, with its wealth and its military supplies, he is likely to hold out unshaken.

What may be worrying Mr Tshombe more are the pressures—diplomatic, political and economic—being exerted on him from other directions. Mr Riches, the British ambassador, has recently paid a visit to Elisabethville ; there have been pointed words from Mr Spaak, and there is even talk of sanctions. To reunite the Congo peacefully looks like being slow ; to do it by military action does not seem to work. There is pressure for both, and the usual readiness to hope for a new United Nations formula which might somehow solve everything.

The Osagyefo's Umbrella

FROM A SPECIAL CORRESPONDENT IN ACCRA

WHEN Dr Nkrumah's new and provoking minister of information, Mr Tawia Adamafio, invited several representatives of the British press to a cordial private luncheon party here last Sunday, nobody could doubt any longer that the Queen's visit to Ghana was on the way to success. Nowhere has the ill-feeling between Britain and Ghana in the last few months been expressed more bitterly than in the columns of the newspapers on both sides. Dr Nkrumah's party newspapers, the *Ghanaian Times* and the *Evening News*, have howled with depressing regularity and hysterical suspicion about the machinations of the reactionary capitalist yellow press. The *Daily Express* and the *Daily Telegraph* have snapped back with alarm and despondency about Ghana's drift towards communism and the danger to the Queen in coming here at all. Only the day before the Queen and the Duke of

Edinburgh arrived Mr Adamafio called a conference of all the correspondents assigned to the royal tour, many of whom had been in Accra already for some time, and read them an ill-timed lecture on the alleged determination of some sections of the British press to distort the news from Ghana. Now suddenly all this is changed —at least in Accra. Not only does Mr Adamafio smile upon us all, but the local papers are almost beside themselves with joy, affec-

tion, admiration and respect for the royal visitors and all they represent. The cracks have been papered over with the stuff of pageantry, and barring accidents between now and Monday, when the royal party sails in the *Britannia* from Takoradi for Monrovia, Freetown, Bathurst and Dakar, this alone will have given the visit to Ghana an aura of success.

Accidents at this stage are not very likely. In view of the disturbed political situation of Ghana both internally and internationally, it was inevitable that some people would seize upon the explosions early last week to justify a demand for the cancellation of the tour. Indeed, the haste and feebleness of the explosions suggested that they were set off with precisely that in mind rather than with any serious purpose of bringing Dr Nkrumah or his government into physical danger. Essentially they seemed to be shots in a propaganda battle designed to alarm the British public and discredit Dr Nkrumah politically. It now looks fortunate that the British Government was not stampeded ; and one of the most pleasing and successful features of the tour now is that it is being accomplished, in defiance of most expectations, with a minimum of overt security precautions.

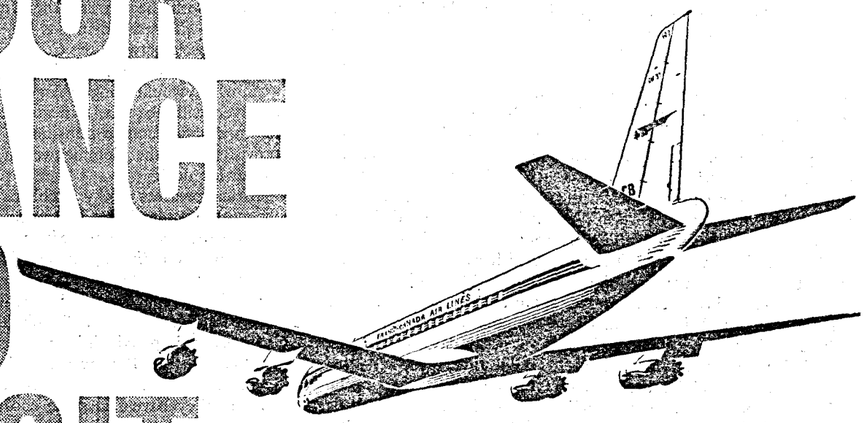
The extent of the precautionary arrests has almost certainly been exaggerated in some reports. There has been nothing like the thousand claimed by some representatives of the Ghana opposition. The real figure is probably nearer a hundred, nothing out of the way in many countries receiving a state visit, even within the Commonwealth. In any public appearance anywhere the Queen is liable to be at the mercy of the crazy assassin. Nobody, however, can point to any group in Ghana that would wish to harm her ; and those who wish most to harm the president are the most emphatic in their refusal to endanger the Queen. Dr Nkrumah, one suspects, is as well aware of this as anyone. He has done his duty by the royal party, appearing with them everywhere, even, on Tuesday, in Kumasi, where he is probably disliked by more people than anywhere else in the country. He has looked, according to those who know him well, more subdued than usual, but this may be because he is aware of his responsibility for the Queen—there is nothing Dr Nkrumah is more proud of than his position as a privy councillor. Even at his most sombre moments he must know that when he is holding an umbrella over Her Majesty to protect her from the sun, she is also holding an invisible umbrella over him protecting him possibly from something worse.

But, the Jeremiahs ask, is not that just the trouble ? Is it not wrong for the Queen to extend the protection of her prestige and charm—and she has never looked happier or more charming than on this trip—to a man who adopts such anti-democratic and anti-western policies as Dr Nkrumah ? To questions of this sort the answers can only be made on political, not security, grounds, and there really has never been much room for doubt where the political advantage lies. Had the Queen's tour been cancelled at short notice the shock to Ghana would have been immense, but it would scarcely have toppled Dr Nkrumah. On the contrary, it might have strengthened him, for many a Ghanaian who may dislike the Osagyefo's conduct and policies would dislike even more such a snub to his country and such a personal disappointment administered by his old colonial masters. Other African countries of the Commonwealth would hardly have known how to explain such a rebuff to their peoples ; and President Nkrumah's declining pan-African stock would have been given a gratuitous boost.

As it is, the Queen is here enjoying herself as much as any human being can possibly enjoy arduous tours such as these ; the Ghanaians are clearly loving the fun and excitement ; President Nkrumah is safe for the moment ; relations between Ghana and Britain have been given a new and cordial lease of life. The only question is, how long can this last ?

We should not be too sanguine. The new friendliness of Mr Adamafio and the newspapers towards Britain and the British is no better based than their old hostility was. Indeed, it is rather less so, for it does not reflect their naturally suspicious frame of mind. None of Ghana's problems will be solved by the Queen's visit. The country will still suffer from the disastrous fall in world cocoa prices, from Dr Nkrumah's ambition to be a pan-African leader, from the incipient tribalism which has to be suppressed, and from that familiar legacy of colonial touchiness and resentment that drives so many newly independent countries into extravagantly anti-western ways.

In a month or two, no doubt, when the Queen's visit has become only an agreeable memory, all these will be thrust forward again as the determining factors in Dr Nkrumah's policies ; and it would be wrong to expect that the sight of the Queen greeting the Asantahene in Kumasi will have any lasting effect on the country's course. The trend towards one-man or one-party rule, and towards closer relations with the communist block, will probably continue for some years yet. The important thing is not to regard this as an unmitigated disaster and resort to despair, but to recognise it as part of Ghana's post-colonial development and give it enough time to work itself out without either aggravation or specific condonation. It is this passive, in a way negative, function that the Queen is fulfilling here now. She is unlikely to change any attitudes permanently for the better, but she may prevent things from getting a great deal worse.



EUROPEAN HORIZONS

Crossfire at Quatre Bras

FROM OUR SPECIAL CORRESPONDENT

THE British arrived in grand style in Brussels last week for the first working session of the talks on British membership of the common market ; if necessary they were prepared to settle down at once to continuous negotiations. One suspects that they may have been a touch disappointed when, after two days of discussion, it was merely agreed that officials should meet again on November 22nd and ministers on December 8th. The mischievous may note that the talks took place, not in the glistening monolith on the Avenue de la Joyeuse Entrée, in which the community has set up house, but in another building on the Rue des Quatre Bras.

YOUR CHANCE TO VISIT CANADA

AIR TRAVEL WITHIN EVERYONE'S REACH
For family visits. For business. For autumn and winter holidays. That's what TCA 17-day Excursion Fares offer you. Return travel, Economy Class, at the lowest regular rates over the North Atlantic. Sample fares: Montreal £117. 10s. Toronto £131. 16s., Vancouver £196. 2s. And these are jet rates—they are even lower on the turbo-prop services BOAC operates in association with TCA.

TCA 17-DAY ECONOMY RETURN FARES NOW IN OPERATION

FLY TCA FOR £12·10 DOWN

GO NOW—PAY LATER TCA's Pay Later Plan gives you your ticket for a 10% deposit. To Montreal, for example, just £12. 10s. The rest in easy monthly payments over two years. (£4. 16s. 9d. per month on the Montreal fare.)

WHEN ECONOMY ISN'T ECONOMY The only thing you economise on when you fly TCA Economy Class is the fare! There's no lack of comfort. Meals are free. Service is included. There's even bar service—at a nominal price. That's the *only* extra.

TRAVEL AGENTS HAVE ALL THE DETAILS About TCA 17-day Economy Excursions. About other TCA off-season fares—for families travelling together, for emigrants—and low winter rates on propeller aircraft. About the combined TCA and BOAC service to Canada—flights every day of the week. And about TCA flights to and across Canada, serving 8 North American cities on through flights from London. With connections to over 50 others. Ask at any travel agency. Or write to the address below. *But hurry!* Most off-season fares end March 31st.

TRANS-CANADA AIR LINES AIR CANADA

142-144 REGENT STREET, LONDON W1. WHITEHALL 0851. AND OFFICES AT GLASGOW, SHANNON, MANCHESTER AND BIRMINGHAM

And the first skirmish certainly brought it home that the negotiations will be, not a party, but a hard-fought tussle.

Nevertheless both sides regard last week's exchange as a businesslike start. The two sides are still building up their negotiating positions, but the questions that the Six shot at Mr Heath on the Wednesday (November 8th) and the exchange of fire on the Thursday were an essential part of the process of groping towards a discussion of the substance. As everyone knows, the heart of the negotiation is the reconciliation of Commonwealth interests with the common market's common tariff. Both sides inevitably began by putting this issue partly in their own terms—Britain by talking of "preserving the Commonwealth," the Six of the *inviolability* of the common tariff ("exceptions must not be made the rule"). But in the end a compromise formula was agreed as a framework for the next meeting of officials. Yet another procedural difference will then have to be settled. The Six want to discuss the Commonwealth question by commodities; the British want to go through the list of Commonwealth countries in turn. The subject is thus being approached from different angles, but the lines are converging rapidly enough to bring the officials to the point next week.

The shadow-boxing characteristic of the early days of most big negotiations does not worry either side. The time spent in formal manœuvre can still be used usefully to sound out the ground privately and establish understanding. Indeed, in a good many matters solutions, though far off, are visible to both sides. But one major tactical problem is bound to complicate the argument: ways have somehow to be found of grafting the discussions with Britain on to the work the community is already doing.

IN agriculture this obviously involves some delicate surgery. The Six asked the British last week to put off discussion on agriculture until they had managed to get their own common policy under way. This postponement is understandable to anyone who knows the atmosphere in Bonn, where the main sacrifices, in the form of lower prices for the farmer, have to be made. Dr Adenauer has had great difficulty in persuading his minister for agriculture, Herr Schwarz, to remain in office and there are a good many Germans who still express the hope that the British will help them to resist the European Commission's proposals. Obviously the French, who are insisting that further progress on the common market as a whole at the end of the year must depend on progress in agriculture, and the Commission, are anxious that this shall not happen. And the indications are that the first crucial steps to put the common market in agriculture into practice will be agreed at a meeting of the ministers of the Six on November 30th.

The temporary omission of agriculture from the talks with Britain raises no difficulties for the British Government. It has already accepted the principle of a change in the method of protection (from subsidies to levies) on meat and grain, the main commodities now at stake between the Six. And if a start is in fact made at the end of this year on bringing German grain prices down, that is, from the Commonwealth angle, all to the good. It also now seems possible that the pill administered to the Germans by their partners may be sugared; they may be permitted to help peasants who lose from lower prices with temporary subsidies instead. In dairy products, which will come up for discussion later, the Commission's proposals also leave room for elements of subsidy and of regional variation in prices—which will be convenient for British butter and milk. Thus the new common policies that are taking shape leave scope for a blend of the British and continental systems, once the talks with Britain get going.

Vigorous arguments over farming matters, however, still lie ahead. Partly, no doubt, to keep the farmers quiet at home, the British have asked for a twelve to fifteen-year transition period for agriculture—the same length of time as in the original Treaty of Rome. The Six, who in practice are now embarking on an eight-year transition period, after spending three years working out their plans, feel that this is absurdly long, when British farms are on the whole more competitive than many on the Continent. No doubt, too, there will be some arguments of principle about the Commonwealth. Both the Six and the United States have made it plain that they will resist demands for new preferential arrangements on a vast scale between the Commonwealth and Europe. The only alternative seems to be worldwide agreements on, say, meat and grain which would bring in Argentina and America as well. These, however, will take time to negotiate. It will be a delicate business to work out adequate transitional arrangements in which special provisions for the Commonwealth gradually give way to a new worldwide deal.

Africa presents tricky problems of grafting—perhaps, indeed, the most difficult of all. The ambassadors in Brussels of the African states associated with the Six urged them on November 10th to get on with building up the existing association and made it plain that they wanted big tariff preferences to be maintained. "First come, first served" was their reaction to talk of bringing the Commonwealth countries in. Within the European community itself there is a widespread willingness for an association with the African Commonwealth. But the Six can hardly ignore the urgent pressure from their own associates (even if, as some suspicious folk would have it, they have had some encouragement from Paris), and on December 6th there is to be a joint Euro-African meeting of ministers to discuss the refurbishing of their association. The British Government can of course propose association for the African members of the Commonwealth. But the key lies in Africa. The Nigerians, for instance, would probably be far more successful than the Europeans in persuading French Africa to put African unity before short-term commercial interests.

The problem of bringing the British gradually into the European process also arises in political integration; this is discussed in the immediately following article. Here Mr Heath's declaration in Paris that Britain is willing to play a part is already helping to get the economic negotiations under way. At a recent European discussion in Baden-Baden one German journalist remarked that he, together with a very large number of other faithful "Europeans" in France, Germany and Italy, had been opposed to British membership until about a year ago, because they thought the British would destroy the community from within. Now they had changed their minds for three reasons. The pressure from the east, they felt, had grown; Britain was now prepared to work for political as well as economic unity in Europe; and they recognised that a new younger generation was becoming influential in Britain. The backing of the "Europeans" has practical importance, for it is already becoming clear that the European Commission will play a leading part in the talks, if only by helping the six governments to agree. France retains its specially important position, underlined by the fact that in January it is M. Couve de Murville's turn to be chairman of the Council of Ministers. But in the opening engagement at Brussels, despite momentary splits among the Six, Britain has encountered a community outlook, in which a vigilant determination to defend the common market is combined with a real wish to have a seventh member.

Europe's Second Front

FROM OUR PARIS CORRESPONDENT

WHILE the future size of the European common market is the subject of the Brussels negotiations, its future political shape has been under discussion in Paris. The representatives of the six governments failed on November 10th to agree on a common draft for a political union, and decided to try again on November 29th. The draft principally under discussion was a diluted version of an old gaullist project. That project, it will be recalled, first attracted public attention in July, 1960, when General de Gaulle sketched out his ideas about the political co-operation of western Europe to Dr Adenauer in a *tête-à-tête* at Rambouillet.

Some people greeted the scheme with misgivings, as a threat both to the existing institutions of Little Europe and to Atlantic solidarity. The French had to water their scheme down in certain ways, and to offer assurances that it was not aimed either against the Brussels institutions or against Washington. The amended version found acceptance in Bonn, but the Dutch are still proving hard to win over.

To overcome the Dutch opposition the heads of government of the Six decided (last July, in Bonn) to set up a committee which would draft a political plan for Europe. This Fouchet committee (called after its French chairman) has received several proposals, but the French draft of a European Union is the most comprehensive and has been most heard of. This new union, in the French version, would have a council, a political commission and an assembly. The heads of government (or state) forming the council would meet every four months and reach their decisions unanimously; their foreign ministers would meet not less often. The political commission would be staffed by civil servants and housed in Paris. The assembly, which would not be a new body but the existing assembly of the European communities, would have only advisory powers. The novelty in the draft is the provision that the treaty must be revised after three years in the spirit of closer co-operation. Since aims such as "a unified foreign policy" have been included among the desirable objectives, this article has been hailed as a possible sign of a future gaullist conversion from the unanimity principle to majority rule.

ARTICLE 17 of the draft provides for the admission of new members. The Quai d'Orsay let it be known on November 3rd that the French plan had British blessing—an embarrassing overstatement at a time when the Foreign Office was, in fact, happy not to have been asked to express an opinion. It is true that the French plan—with its unanimity rule and strict preservation of sovereignty—should suit British taste. On the other hand, the timing of this new venture, parallel with the Brussels negotiations, is awkward. There will certainly be those in London who point out that the political rules of the European club are being altered, without British participation, just when Britain is trying to join. But the Foreign Office has additional reasons for discretion. It can hardly rush in to back a scheme which is merely one draft among several, and which happens to be opposed by just those members who are most keen on British participation. Once again the Dutch have objected to the French plan and have asked that when political institutions are to be elaborated, Britain should be brought in.

Backed this time by the Belgians, the Dutch have attacked the French project from many angles. Defence, they say, should be left to Nato exclusively. A European government, they argue, is best approached through the merger of the executives of the existing European communities, which should be backed by a popular assembly elected through universal suffrage. They want the British in the drafting room. The Dutch have their critics in turn, who warn them of a contradiction between the two objectives they seek—European federation and Britain's full entry into Europe. But the Dutch have their reasons. Whether through federal institutions or through the British presence, they want guarantees against a Franco-German domination. Aware that they cannot make progress on the first safeguard, for the time being, they lay stress on the second.

Professor Hallstein, the president of the European Commission, was the French President's guest on Thursday, an occasion presumably used by General de Gaulle to offer reassurance to the Europeans. General de Gaulle will doubtless talk further about his scheme when he meets Mr Macmillan on November 24th. In the following week the Fouchet commission makes its second attempt to produce a common draft, and General de Gaulle is to see Dr Adenauer again. This European second front is unlikely to fall quiet.

Mr Diefenbaker and the Common Market

FROM OUR OTTAWA CORRESPONDENT

AS it looks from here, the Anglo-Canadian differences about the European common market have developed into a competition in gamesmanship between an old pro and a bunch of country bumpkins. Mr Macmillan's management of British public opinion throughout the long build-up preceding the Brussels negotiations looks like a model for Madison Avenue to dream about. Some Canadians, eyeing it enviously, are now suggesting that a more critical and less docile press might in the long run be better for Britain. North Americans find it difficult to acquire, or wholly to approve of, the sort of solidarity which in British eyes probably seems most admirable and desirable for a country entering into a fateful undertaking, whether it be war or negotiations to join a common market.

Mr Macmillan's deft manipulation of British opinion deserves part of the credit for the excellent press that Britain's approach to the common market has had in this country. But if the Canadian ministers had been equally professional in their gamesmanship, their Madison Avenue rating need not now be nearly as bad as it is, either here or in Britain. The Canadian prime minister has been outclassed by Mr Macmillan in the very art which has been claimed as Mr Diefenbaker's chief political asset. The speeches of his ministers, whether leaked from private meetings at Accra, delivered in Parliament, or vouchsafed to service clubs and other miscellaneous audiences all over Canada, have reduced Canadian opinion to confusion. Last week's Canadian newspapers were rich in articles setting forth the statements of different ministers in the same week, and of the same ministers in different weeks, in a juxtaposition that made them ridiculous.

Mr Diefenbaker took practically no part in this ministerial relay until last week, when he spoke in Halifax. Even then, the voice of the master came through uncertainly; he spoke without a manuscript and neither his exact words, nor their context, are of certain record. But the keynote was unmistakably different from previous statements by his colleagues and by his High Commissioner in London. It was as though he said, "They may talk like country bumpkins, but I am as good a gamesman as any Macmillan." Whatever the precise words, the intent was clearly to place upon Mr Macmillan the whole responsibility for any damage Canada may suffer if Britain succeeds in joining the European Economic Community. Mr Diefenbaker said he had Mr Macmillan's assurance that Britain would not sacrifice any of those vital things upon which the continuance of the Commonwealth depended; and he confidently accepted that assurance.

This sounds like the first stroke of real gamesmanship to come from the side of the country bumpkins; unfortunately, that may be the extent of its significance. Certainly it does not alter the Diefenbaker government's opposition to British entry. But it does raise the question whether superior gamesmanship is more likely to gain real victories or to end in the futility of an advertising campaign which wins professional admiration without bringing in any sales. City folk are prone to the error of taking the bumpkin's clumsy awkwardness for complete boneheadedness. On this sub-

ject, Canadians generally would agree that their government has been both clumsy and awkward. The Canadian ministers have so completely failed to explain their case that even their own people are ready to assume that they have none. The British spokesmen have brilliantly exploited these inarticulate Canadian mumblings. One might say that it has almost been established that Macmillan washes whiter, while the Canadian advertising leaves it in doubt what the Diefenbaker detergent is meant for at all.

But the final test is at the washtub. The very clumsiness of the Canadian campaign raises a doubt whether the Canadian case can be as bad as all that. Summarily, this case—which officials here argue strongly—is that the British Government was both unreasonable and unfair to expect Canada and the other Commonwealth countries to announce in advance an order of priority among their trading interests. "That may have been possible for some countries like Australia," said one Canadian apologist, "but our interests go right across the board. We have declared our interest clearly enough; but we cannot announce in advance of negotiations that we are ready to sacrifice certain items rather than others." Thus the Canadian Government believes it has taken the only possible negotiating position in insisting that the British should advance their proposals for Canadian consideration, instead of expecting the Canadians to choose which limbs shall be lopped off. It is a position consistent with Canada's opposition to British entry, which, wise or foolish, was always clearly known. Britain, it is said, is seeking to break its preference contract with Canada; surely it is normal and proper that Britain should put forward proposals. There is irritation here that the British Government should ever have expected anything else; and it is being stoked by the growing impression that the British ministers are not fully revealing the details of their European talks, even to Commonwealth countries which they have criticised for hesitating to lay bare all their thoughts.

Behind the futile front the research and design team is presumably at work, planning, one supposes, for the day when Canada has to make up its mind what to do. The Canadian formula may not be revealed until Britain has got its own common market package tied up. In a tentative way, however, Canada's backroom boys are beginning to reckon with the sort of world the Americans may fashion when the British-European bargaining is over.

Italian Communists in Disarray

FROM OUR ROME CORRESPONDENT

THE Soviet Communist party's 22nd congress has all but shattered the ideological foundations of the Italian Communist party. The shock is more stunning than Mr Khrushchev's first repudiation of Stalin at the 20th congress. Five years ago it was possible partially to conceal the implications and even the facts of the Khrushchev report from most of the communist rank and file. Not more than 20 to 25 per cent of the party members are believed to have read it or at least to know its contents. In the depressed parts of Italy many communists even knew nothing. This time concealment is impossible because, for one thing, Mr Khrushchev himself has made the facts public and, for another, news now travels faster and wider in Southern Italy than it did five years ago, thanks to television. Moreover, in 1956 the Hungarian revolt, coming so soon after the 20th Soviet congress, made it possible for the communists to rally, if only defensively, and so to put aside the ideological problems raised by the Soviet congress.

This time Mr Khrushchev's accusations go much deeper. Moreover, by implication all Stalin's contemporaries and associates are involved, including Signor Togliatti (visibly aged since he came back from Moscow), who is not far from the last surviving member of the Comintern. He is therefore under suspicion with the younger members of the party, who are demanding a complete critical historical analysis of the whole period of Stalin's dictatorship, leading, if necessary, to the rehabilitation of Trotsky. The analysis, they feel (and they are encouraged in this by the Socialists and the Social Democrats) should show whether the men or the system were at fault. These young communists have been shaken by the Socialists' thesis (expressed by Signor Nenni) that the tale of Stalin's crimes goes to prove that the system lacks institutions able to guarantee it from abuses of power. Signor Togliatti pretended at first to take this bull by the horns. Signor Ingrao, Signor Pajetta, Signor Amendola and other members of the party directorate were detailed to declare that the party must explain to the rank and file how such things (as individual and mass murders) could happen

only in a particular historical context. They were to explain the historical reasons for the errors of the personality cult. Signor Togliatti, however, seems quickly to have felt that an appeal to history could drew him onto dangerous ground—especially since Signor Nenni is perhaps disingenuously, clamouring for Mr Khrushchev to open his archives. At the Communist party's central committee Signor Togliatti cut short the "historical" argument by saying that nothing can be seriously wrong with a system which, even under a cruel tyrant, allowed the Soviet Union to make such spectacular progress as a socialist society and as an international power. For Signor Togliatti (educated by the Jesuits) the end still justifies the (stalinist) means.

The Italian Communist leaders are now confronted with the problem of whether Mr Khrushchev is going to win the last round with the anti-party group or whether he, in turn, will very soon be overthrown either by the old guard or by a *nouvelle vague*. At present they resent his failure to give them any warning that he was going to drag Stalin from his tomb. They feel that, to put it mildly, he under-rates the ideological difficulties which destalinisation creates for the communist parties in the West. Moreover, he sprang on them his new attack on Stalin just when their morale was badly shaken by his bomb tests, which have been a serious ordeal for a party whose propaganda is based on "peace" talk and had pilloried the French bomb because it polluted the atmosphere. A further cause of disquiet is the belief of some communists (and socialists) that Mr Khrushchev intends to double-cross them by coming to terms with the Americans. His aim, they allege, is to obtain a twenty years' truce so that the Soviet Union can consolidate its economic progress. Any entente between the Russians and the Americans would leave the French and Italian Communist parties with an ideological platform of rotten boards.

In spite of these motives for resentment and suspicion, the

Choose from 2 models... 3 transmissions... 15 colours!

With the new 6-cylinder models for 1962, Vauxhall gives you the CHOICEST big-car motoring. More comfortable, more exhilarating, safer than ever before, these beautiful cars are now offered with a very wide choice of alternative equipment.

TWO-MODELS – Cresta and Velox! Both luxury cars in every detail except price. Optional for 1962 are power-assisted brakes (disc type on front wheels) and individual front seats.

THREE TRANSMISSIONS –

HYDRA-MATIC, the simplest, smoothest and safest automatic transmission ever devised.

OVERDRIVE, which gives you the benefit of two extra gears.

ALL-SYNCHRO (fitted as standard), the easiest non-automatic gear changing – women drivers particularly like "synchro" in first gear.

Have a look at some of the other fine quality features shown here. Then check them for yourself at the nearest Vauxhall showroom. A trial run will prove everything in the pleasantest possible way.

Power '62
'Motorway age' 2.6 litre, 6-cylinder engine. High average speeds. Jubilant performance. Welcome economy. Long, long life.

Safety '62
New zone-toughened safety glass windscreen. New wide-sweep wipers. For high-speed drivers, disc front brakes with power assistance (optional extras).

Comfort '62
Ample room for six adults, loads of luggage. Choice of a full-width front seat, or individual front seats. Many detail refinements and extra quality features.

Hydra-matic '62
Simplest, smoothest, safest automatic transmission. Takes the tension out of traffic driving. Velox and Cresta are the only British cars below £3,000 to offer it.

Colour '62
Fifteen colours – plus, for Cresta, nine special two-tone combinations – to which Vauxhall's new long-life, high-lustre paint imparts an impeccable finish.

Prices '62
Velox £655
plus £301.8.11 P.T. £956.8.11
Cresta £715
plus £328.18.11 P.T. £1,043.18.11
Vauxhall-Friary Estate Cars from £1,258.6.5 inc. P.T. *Laycock de Normanville Overdrive* £65.12.6 *extra inc.* P.T.
Hydra-matic transmission £175 *extra inc.* P.T.

Vauxhall Velox & Cresta

Vauxhall Motors Ltd., Luton, Beds.

More than a thousand Vauxhall dealers offer top quality service with factory-trained mechanics and charges based on standard times.

Just because you're you

Your mother buys things in glass because only the best will do for you – just because you're you. She knows glass keeps its contents absolutely pure. She knows that foods and drinks in glass help to protect your health.

MANUFACTURERS LIKE GLASS, TOO. Manufacturers like glass packaging for the same good reasons as mothers. Plus the important fact that things in glass sell faster. For the best in modern glass packaging – research, design and service – they go to United Glass.

Italian Communists are unlikely to sever their relationship with the Soviet party. At the same time they fear that a too supine obedience to Moscow may reduce them to the condition of the French Communist party, which they regard as a bunch of factious bureaucrats. Stalin used to be venerated as a father figure in thousands of Italian homes. Even after the 20th congress his picture still hung in many communist co-operatives. This idol cannot be destroyed without hurting the iconoclasts. Humble Italian peasants and workers will not understand the "historical" explanation of Stalin's crimes. To them the man who led the Soviet Union to victory, and destroyed the Nazis and the Fascists, is a symbol. Now they find their beloved *Baffone* (mustachios) insulted after his death in a way which almost recalls the treatment given to Mussolini.

After the ideological crises of 1956 the Italian Communist party lost 238,000 votes. The intellectuals deserted it *en masse*. But in the 1958 elections it gained more than half a million votes. Since then membership has declined steadily (from two million to about one and a half million) and votes have increased at every local or general election at the rate of 1.5-2 per cent. As votes have become more important than membership cards, the party's organisation and propaganda have undergone a subtle change. The party is conditioned by life in a parliamentary democracy. Today in local elections it is losing votes under the shock of Mr Khrushchev's bomb tests and it is certain that many members will fail to renew their cards. But in the long run the party's future depends first on what Mr Khrushchev does next and secondly on what Signor Nenni and the Socialists do.

At present Signor Nenni is determined to press his advantage, claiming that the new Khrushchev is but the old Stalin writ small, in order to bring the Socialist party into a left-centre coalition. This would isolate the Communists, a fate which they morbidly fear. Some Socialists, however, think it would be a mistake to leave the Communists alone in opposition, attracting the votes of all the dissatisfied Left. Instead, they claim, the Socialist party should take advantage of communist disarray to stand forward as the major party in opposition, reclaiming its right of primogeniture as the first working-class party. The Socialists' division on this issue is so bitter that it may split their party.

Neutral Dilemmas

FROM A CORRESPONDENT LATELY IN PNOM PENH

THE Cambodian policy of neutrality—a neutrality so absolute that Prince Sihanouk has even been at pains to avoid too close association with the "neutralist" block—is facing its severest test. Diplomatic relations between Cambodia and Siam have been broken and the frontier has been closed. South Vietnam accuses Cambodia of harbouring Viet Cong (communist) rebels and the Cambodians, conscious that their neighbours are far more numerous and better-armed, dig slit trenches in the public gardens of Pnom Penh. Now Prince Sihanouk, in a statement published in *Réalités Cambodgiennes* on November 3rd, has threatened to turn to the communist block for assistance if the Americans do not impose restraint on their allies. What is it all about?

The explanation is partly historical. When the great Empire of the Khmers (whose descendants are the modern Cambodians) foundered in the 14th century, its vast territory was divided between the Annamites (Vietnamese) and the Siamese. If the French had not imposed a protectorate in the 19th century Cambodia might well have disappeared altogether. Even as late as the second world war the Siamese took temporary possession of two Cambodian provinces as a reward for collaboration with the Japanese. Memories of Vietnamese invasions and occupations are as vivid.

A dispute about the ownership of an almost inaccessible ruined temple on the Siamese-Cambodian border caused a temporary diplomatic rupture and closing of the frontier two years ago, but the dispute was patched up and referred to the International Court of Justice. On October 20th, however, the Siamese strong-man, Marshal Sarit, on the strength of a garbled version of a press conference given in Tokyo by Prince Sihanouk, made a violent attack on Cambodia with insulting personal allusions to the prince. Cambodia, he said, had shown its willingness to become a base for communist aggression against Siam. The Cambodians, particularly offended by the sneers at Prince Sihanouk, broke off relations, and the Siamese then closed the frontier, making it more difficult for tourists to visit the magnificent Khmer ruins at Angkor in northern Cambodia.

Observers of the Bangkok political scene are full of possible explanations of Marshal Sarit's violent speech. He may have wished to create an atmosphere of national emergency in order to forestall a struggle between rival army generals anxious to stake out a claim to succeed him. He may have wished to get greater American financial aid or an even more categorical assurance of American support in the event of foreign attack. In the past the Siamese have found that a demonstration of an independent foreign policy can pay dividends.

SUCH sophisticated explanations have no currency in Cambodia, where the army is painfully conscious that its lack of modern equipment would soon reduce it to a guerrilla role. The threat of invasion is considered real and the Cambodians point to their concurrent troubles with south Vietnam as evidence that the two pro-western countries are planning a concerted campaign. The only question seems to be whether, as the more left-wing newspapers allege, the United States is conniving at this intended aggression. Hence Prince Sihanouk's statements that he will, reluctantly, have to ask for communist assistance if attacked.

The immediate cause of trouble with Saigon arises out of the struggle between government and Viet Cong forces in south Vietnam. Partly in order to disguise the fact that it holds only two frontier-posts in strength (one of these was actually overrun not long ago) the Ngo Dinh Diem government has accused Cambodia of harbouring and encouraging Viet Cong rebels. It is true that the frontier is ill-defined and so swampy that its physical aspect alters radically with the seasons. Hence it is quite possible that Viet Cong groups slip across the frontier, but it is quite wrong to talk of Cambodian connivance, just as it would be wrong to accuse the south Vietnamese of deliberately violating the frontier because they might cross it in the heat of a skirmish. It is a pity that the south Vietnamese allegations have been repeated by certain sections of the American press, giving a handle to the left-wing Cambodian newspapers who would like to push Prince Sihanouk nearer to the communist block.

Despite mild criticisms from both right and left in Pnom Penh, there is no doubt that Prince Sihanouk enjoys the overwhelming support of the Cambodian people. Amongst the peasants he enjoys the prestige of his royal birth as well as of a brilliant orator. In spite of his international preoccupations, he has not been neglecting the countryside and, although most people still live at the subsistence level, there are signs that the high proportion of the national resources spent on education will bear fruit in the use of better agricultural and fishing techniques.

The Americans have a difficult role to play. Siam and south Vietnam are, after all, their close military allies and far stronger militarily than Cambodia. Nevertheless, they will have to point out to their allies that violent attacks on Cambodia are, in fact, only likely to produce the very state of communist domination that these allies profess to fear. At the same time the Cambodians must realise that Marshal Sarit is not just an American puppet and that American influence is limited.

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

The Eating Classes

FROM OUR SPECIAL CORRESPONDENT

DINNER at school is now a habit with over half the school-children in England and Wales, and as a habit it is still spreading. In rural areas where a child may travel fifteen miles to school education would be impossible without it, except at the cost of undernourishment. The genuine welfare aspect of the service is still a reality, too. At last year's census 3.8 per cent of children were receiving free dinners; many more were allowed reduced rates. The places where a relatively high proportion—over 8 per cent—of the dinners were free provide a commentary on the patchiness of modern prosperity. Of the towns, Sunderland, West Hartlepool, Newcastle-on-Tyne and Gateshead all came in this group. Of the counties, Anglesey was way ahead with nearly 17 per cent eating a free meal, in contrast to comfortable Hertfordshire with less than 1½ per cent.

The teachers knew the power of the weapon they had chosen when, in their salary dispute with Sir David Eccles, they threatened to withdraw entirely from supervision or any other duties connected with the lunch period. In most places this would have meant morning school only. The very fact that the meal service was seized upon as a weapon is bound up with the genuine grievances which teachers feel about the system. The Minister has recognised this and has said he is prepared to discuss ways of relieving the burden.

It is very provoking to do a service of one's own free will and then to find that it has become a permanent obligation. This is the feeling that many teachers had when the 1944 Education Act officially embedded the midday meal into the educational system. Embedded it has remained as a thorn in the flesh of the teachers who work in those schools where squalid physical conditions, poor organisation, or bad discipline make dinner-time the most dreaded hour of the day.

OUTSIDE such schools—fortunately in a decided minority—the meal system is not without its pinpricks, some of which could be alleviated by closer adherence to that part of the 1944 Act which says that school meals should not impose duties other than supervision. Collecting dinner money and accounting for it still take up too much of some teachers' time (even if a few secretly prefer dinner registers to teaching first thing in the morning). An amazing number of parents do not seem to have 5s. handy on a Monday morning for the week's payment; this and the cut price payments all make for added time consumption. A circular issued by the Ministry in March 1959 recommended only one reduced rate, but even this simplification has not been achieved by London County Council, for example. A non-teacher, such as the school secretary, may collect dinner money but again many teachers would rather do the chore themselves than have their lessons disturbed. Some Sheffield schools have used slot machines issuing meal tickets at 1s. a time, only to find children going hungry because the family's shillings are apparently all earmarked for the gas meter.

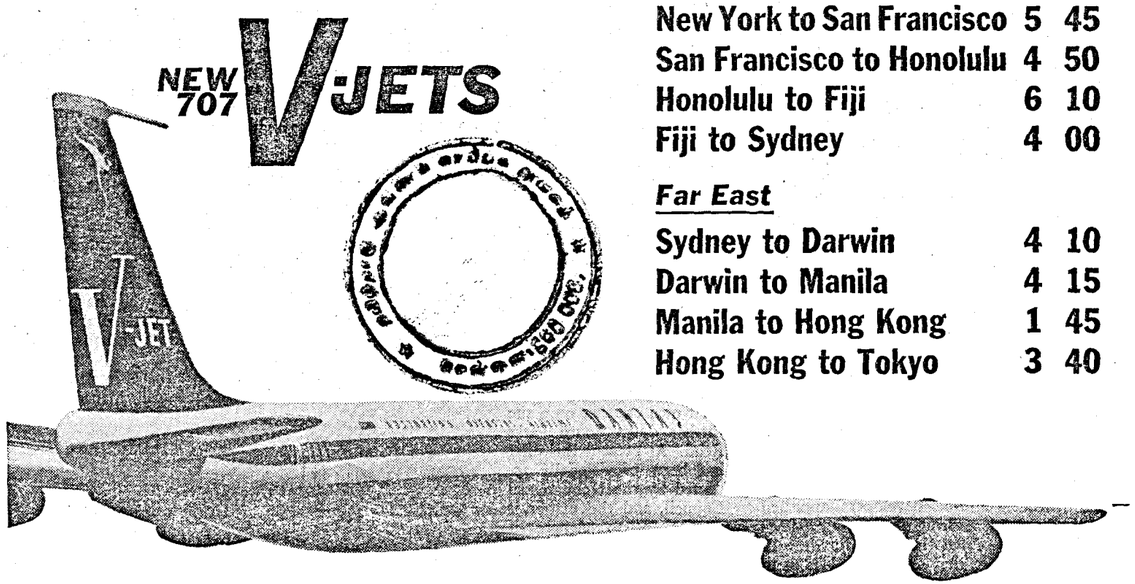
As for accounting for the money, there are now said to be no secondary or big primary schools without secretarial assistance for the purpose. Head teachers who feel they need help can ask for it from the local authority. The Ministry of Education is now paying

£1,250,000 a year for clerical work in connection with the meal service, an increase of £750,000 since 1957-8.

Expenditure on non-teaching supervisors to help with meals and meal-break playground duty has also risen—from £1,500,000 in 1957-8 to £2,250,000 now. These assistants see to queue-marshalling and so forth: there is always a teacher in general charge. The maximum number of pupils to one teacher at meal-times is supposed to be 150—it is more usual to halve this proportion. There are no rules about the frequency of dinner-duty, but an hour a week (which may be half an hour twice a week) has come to be regarded as reasonable. In secondary schools it is nearly always less. It is hard to see how this could be cut further unless the teachers were replaced entirely by assistants—which is, of course, what some of them want.

In infant schools, where the children need careful nannying, one assistant is recommended for 30 children; in junior schools the policy is one or at most two to 150 children. Secondary schools are not considered to need, and rarely have, supervisory assistance. The National Union of Teachers is campaigning for this approved level to be raised: in particular, it wants supervisory relief for the secondary school teacher.

This seems a misplaced aim, and one with which many teachers would not agree. It is one thing to find a kind, motherly person willing to help five-year-olds cut up their meat; it is quite another to hire a non-teacher capable of restoring order in a roomful of teenagers fighting each other with knives and forks. Such night-marish episodes may be rare, but the crux of the matter is that in a large, tough secondary modern school, where a teacher needs to combine the patience of the dove with the roar of a sergeant-major, few outsiders are likely to be very effective.



It all comes down to the fact that, as everyone recognises in theory but few are able to apply in practice, feeding is inseparable from social training. Nannying from five to seven is a good basis; it would be better still if things were so organised that in the junior schools adults—teachers and helpers—actually fed with the children, in as small groups as possible, and taught them that meal-time behaviour consists of more than just refraining from hitting your next-door neighbour.

The present arrangements fall hardest on teachers in primary schools, with no free periods and dinner duty probably cropping up once a week. If help to the teachers is to be increased, it is better that children's social sense should be encouraged at this stage. Finally, there are still too many schools where dining conditions are horribly cramped and squalid, sometimes necessitating as many as three sittings. In the smaller infant schools classroom feeding is common, and has not entirely disappeared for bigger children. This is one field where the authorities should, with the Ministry's backing, make determined improvements as soon as possible.

FASTEST JETS IN ROUND-THE-WORLD SERVICE . . . LOOK AT THESE FLIGHT TIMES

Incorporating a revolutionary new development in jet propulsion, the fleet of Qantas 707 V-Jets now in operation is the fastest, most efficient and dependable in international service, bringing you the ultimate in transonic jet travel (experts estimate no more big changes until the supersonics of the 1970's). Even flying to schedules like those at right, the new V-Jets are still operating well below capacity, leaving lots of power in reserve to maintain time-tables despite possible headwinds or airport delays. Experience for yourself the pleasures of travel in the newest, most advanced jetliner in the world today. Make your next overseas flight by Qantas 707 V-Jet. For reservations see your Travel Agent or Qantas, Corner Piccadilly and Old Bond Street, London, W.1. (MAYfair 9200), or any office of B.O.A.C.

Qantas, in association with Air India and B.O.A.C.

Henley at Bay

FROM OUR SPECIAL CORRESPONDENT

HART STREET at Henley-on-Thames curves widely down from the commercial end of the town to a full stop at the parish church tower, a few yards from the river and regatta course. It is graceful and pleasant rather than distinguished ; but it is tranquil and mature, and therefore possibly more valuable to its inhabitants than mere architectural merit could be. Not that it lacks merit: 20 of the buildings which flank it are on the list of buildings of special architectural and historic interest.

One of these buildings is now threatened. This is the Catherine Wheel Hotel, whose double Georgian façade at the focal point of the curve occupies nearly a fifth of the street's frontage, and is, apart from the church, its most important single feature. A property company has in mind the demolition of the Catherine Wheel and the erection in its place of six shops with maisonettes above and sixteen garages—to which the residents and borough council of Henley and the Oxfordshire county council have taken the gravest exception, supported by the indignation of the Ancient Monuments Society, the Council for the Preservation of Rural England, the Georgian Group, the Fine Arts Commission, the British Travel and Holidays Association, the Council for British Archæology and Mr Osbert Lancaster.

When the planning application was first made to the borough council in 1959, the plans were returned for revision ; but the general purposes committee did not oppose the application when it was re-presented last December. Shortly thereafter Oxford county council, in some alarm, made a preservation order on the building and, when the planning application was duly passed to them, refused it. In July, Henley borough council, with the consent of the general purposes committee, rescinded the previous decision.

But the would-be developers appealed against refusal, and, at the hearing a fortnight ago, presented their case for demolition. The street, they said, needed shops to serve the town. And their planned development would enhance the architectural wealth of Henley, get rid of a building "ripe for demolition" and spare the owners the loss of thousands of pounds.

All these contentions were disputed by the objectors, who pointed out that Henley already had one shop to every 48 inhabitants, whereas other towns, even in Oxfordshire, had as many as 330 people to a shop (and new towns recommend between 100 and 230 to a shop) ; claimed there were already eight shops empty in Henley and that the turnover of the rest was only a fifth of that in comparable shops in other towns ; and dismissed as a joke the promise to improve Henley's architecture.

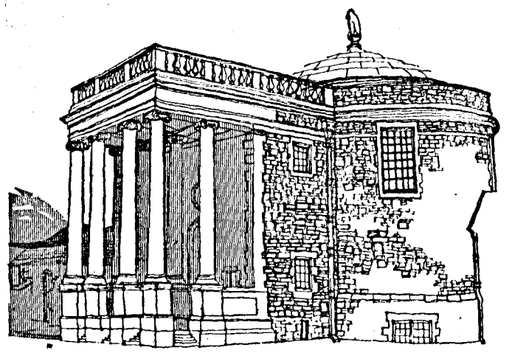
As to the losses of the hotel owners (£1,457 in five years), the citizens replied that they were not surprised, since there had been thirteen different managers during that period ; and in any case, if other hotels could make, and increase, their profits, so could the Catherine Wheel, rightly run.

It does not seem possible that the appeal can succeed ; but even if it does not, the matter will not be at an end. The owners have threatened to close the hotel and let it fall into ruin if they are not allowed to develop (and there are no powers to compel the owner of an historic building to keep it up). They may even refuse to sell it at market value to anyone interested in it as a going concern.

Perhaps the lesson in all this is that the time has almost passed when owners of desirable (and viable) property can destroy it, and with it the amenities of people living near it, without reference to anyone else's wishes or to anything but their own gain. That this is not always so has been shown by several cases of hotels in thriving country towns being replaced by "modern" facilities (which can hardly be good for tourism). Perhaps Henley, with its battalions of preservers, will redress the balance.

More About Rhodes

FROM A CORRESPONDENT IN OXFORD



THE physical expansion of the university is less obvious in Oxford than the bold intrusion of the mass-service stores into the heart of the city, but is already marked and will increase. One estimate is that about £10 million of new university and college building is likely to go up by 1970, half of it within the next few years. Some of this, like the new St Catherine's College and the new engineering laboratory, has already begun.

Priority within this programme is decided by a mixture of University Grants Committee decisions, luck and individual bargaining, rather than by overall planning. The latest example of this Anglo-Saxon empiricism is the Rhodes Trustees' offer to donate Rhodes House to the university, to be used as headquarters by the Vice-Chancellor and Registry. The trustees mean to build a new warden's house and other accommodation at their own expense on a site further down South Parks Road. At present this offer has been provisionally accepted by the Hebdomadal Council, and the matter is now open to debate—if anyone wants to.

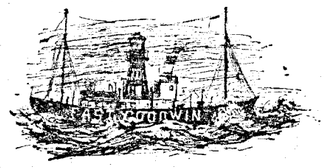
Would Rhodes have approved? At his death in 1902 he left a large sum to trustees to endow scholarships at Oxford. His intention was to prevent war by knitting together the future leaders of the Anglo-Saxon race. The scholarships were at first intended for white South Africans, other white dominions subjects, Americans and Germans, in that order. (The Germans came every year until 1914 and again from 1929 to 1939.)

Rhodes scholars (about 160 a year) now come from India and black Africa as well as from the dominions and America, and the Germans have not returned. The change in the pattern of world power has necessarily modified Rhodes's identification of its centre with the axis Berlin—London—Washington and first-class honours degrees have become almost more characteristic of the scholars than muscular imperialism. Still, with all these qualifications, the scholarships as they have worked out have been and are a powerful demonstration of the force of ideas and the creation of myths.

This cannot escape the visitor to Rhodes House, the neo-classical mausoleum to

Rhodes's memory built in warm Cotswold stone between 1926 and 1929 near Wadham College. Its echoing interior, with carvings of African animals and imperial mottoes, is reminiscent—deliberately so—of the age of Jameson, Milner, Beit and other heroes, after whom its rooms are named. Its large rooms are used for lectures, its smaller ones for conferences and university meetings. There is a big, well-organised library where you can browse in the stack

The background to the Rhodes Trustees' offer of these premises to the university is, first, the remorseless rise over the last decade and a half in undergraduate and graduate numbers (this looks as though it may level off) ; second, the scale and complexity of university projects which are likely to increase. Each year the fiction that only the colleges count, devised in a more leisured and lazy age, and demonstrated by the university administration's present cramped quarters in the old Clarendon building in Broad Street, becomes less convincing. One recent proposal was to demolish another imperial legacy, the Indian Institute (opposite the Clarendon building) and replace it with a new administrative block, over whose design heads were shaken. This plan now seems likely to be superseded by the present one.



Several points could be raised over the Rhodes House proposal. Many dons believe, like good nineteenth century liberals, in keeping the central government small and uncomfortable: they may resent its proposed emancipation. There have even been murmurs that the trustees are skilfully disembarrassing themselves of a white elephant. At a more responsible level, it could be argued that though acting within their legal powers they are endangering the continuance of the Rhodes myth, of which Rhodes House is a conscious part. Admittedly the trustees insist that the name should remain. But then what is their proposed second building to be called?

Another point is that Rhodes House is not exactly tailor-made for office purposes. Even for its present ones modern design would plan differently. Is it to be altered? If it is, would this be within the scope of the gift? Anxiety will also be felt for the library, which the trustees have stipulated shall be kept intact. Where is it to go, with the Bodleian already so crowded? And what will happen to the present Registry building? As it stands, the proposed transfer, though partly intended to save on building, seems likely to result in a good deal of it.

★

Correction.—In a report on page 548 last week summarising the Welsh poll on the Sunday opening of public houses, the advocates of opening were credited with a victory in Carmarthen, which was, in fact, overwhelmingly in favour of closing. The final score for all Wales was: for opening, 5 counties, 4 county boroughs ; for closing, 8 counties.

Sea Lights

UNTIL this week's gale died down the crew of the East Goodwin lightship spent a highly dangerous and uncomfortable time riding out the storm, attentively watched over by lifeboats, a Trinity House tender and an admiring television audience. The vessel's securing chain snapped on Sunday night and, having no motive power (which is thought to be too expensive for light vessels) she drifted four miles off station until the emergency anchor held.

This is always a risk in winter for the 34 manned light vessels at sea under Trinity House management. Later on the suburban Christmas will not be complete without news stories of the overdue relief of the Wolf Rock or some other buffeted and isolated lighthouse.

There are 230 lightkeepers of all ranks, serving 24 shore and 31 rock stations, and 400 men in light vessels in the Trinity House service. Most of them earn rather less than the £13 4s. a week of a London bus conductor (before overtime). The basic scale for a principal lighthouse keeper now rises to a maximum of £618 a year (on the 1955 scale it was £492). An assistant keeper earns a basic £543 after 20 years' service. There are numerous small allowances (4s. 9d. a day for victualling at rock lighthouses, 2d. an hour when the fog siren is sounding), and a free life assurance premium (£3 a year), but land jobs still carry far better overtime opportunities.

The master of a lightship with four years' service gets £658 a year and a seaman of equal service £568 including a compounded allowance for overtime. Although there are new allowances for long service and others for long hours at sea (£4 a week) and various inconveniences, together with a fortnight's leave for every month on duty, it is still not an attractive job by snug home-and-garden standards.

The old tradition of lighthouse families has almost broken down. The job requires much more mechanical expertise than it did, particularly since the smaller lights have been changed to unmanned apparatus. The lightships' long spells of shore leave appeal to merchant seamen and distant-water trawlermen.

The general lighthouse fund shows an expenditure of £1,824,000 on the Trinity House operation (England and Wales) last year and £581,000 by the Commissioners of Northern Lighthouses (Scotland and the Isle of Man). As a continuing imperial link the Commissioners of Irish Lights (expenditure £751,000) are still accountable to Whitehall. Since the fund is chiefly sustained by dues levied on shipping using British, not Irish, ports the arrangement is not unreasonable.

WE DO NOT LAUNCH SATELLITES

We do not launch satellites, or space probes; but travel outside the earth's atmosphere involves a great deal of work which is well within our orbit. Over 80 GKN companies are taking part in the drive to conquer new worlds; and some of the first human artifacts to reach other planets will certainly have been made by GKN. Special high tensile lightweight fasteners are one example. Rocket motor casings in a new GKN high tensile weldable steel are likely to be another. GKN welding equipment for rocket and fuel tank construction is behind this thrust into space; and in telemetry and control there are silicon iron laminations, cold forged and machined copper transistor bases, and castings for radar wave guides—all made by member companies of the GKN Group. These facts should give space travel enthusiasts an inkling of the part we are playing, in research and production, to hurry up the most exciting age of exploration ever.

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Fulbright's Fight for Survival

LITTLE ROCK, ARKANSAS

THE political witch-hunt had a great vogue in the United States at one time but it began to go out of fashion in 1952, when many Americans were ashamed that General Eisenhower sat silent on the same platform with a demagogic Senator who denounced the late General Marshall, General Eisenhower's former military superior and benefactor, as a " front for traitors " and a " living lie." But unhappily this form of persecution holds inexhaustible charm for a stubborn and active minority and one such hunt has been in progress for some months in Arkansas, and specifically in Little Rock, where four years ago armed paratroopers escorted nine Negro children through the streets of this trimly laid-out town into a " white " school and thus forcibly ended the principle of educational segregation in the state. In the South as a whole the race situation may well get worse before it gets better. But in Little Rock about fifty carefully selected Negro children now attend school alongside white children and, contrary to the dire predictions of the segregationists, the racial atmosphere in the town has improved.

Most of the townspeople, who were bitterly opposed to integration, are now rather proud of the cautious progress that has been made and of their ability to remain emotionally undisturbed even when confronted, as they have been recently, by freedom riders arriving by bus and by Nigerians putting up at the best hotel. But some Arkansans who think that the Aristotelian golden mean is just left-wing semantics are calling Little Rock a turncoat town that has become a hotbed of moderates and are trying, under the inspiration of a new red scare, to prove that the moderates are " comsymps," or communist sympathisers. Last week, in default of ridding Little Rock's schools of Negroes, they tried to rid them of a history textbook which dares to hint that American nineteenth-century railway tycoons were not the farmer's best friends. The chief targets of the new witch-hunt are school teachers and Presbyterian ministers who four years ago urged racial moderation and are now being attacked at " patriotic " rallies for alleged " softness towards communism."

To the rescue of the beleaguered moderates of his state has come Senator William Fulbright, whom the extremists would love to unseat. Senator Fulbright is a Rhodes scholar, a former president of the University of Arkansas and a Democrat who for three years has been chairman of the Foreign Relations Committee of the Senate. He is a chief architect of foreign aid, which his political foes deride as " fighting communism with gift packages." They also credit him, erroneously, with responsibility for American foreign policy as a whole. At a series of meetings Senator Fulbright has been telling the people of Arkansas that the extremists, whom with cool disdain he calls " radical rightists " because he does not think that they qualify for the more dignified title of conservatives, are unfortunate people who are unwilling or unable to face reality; therefore they have taken refuge in a form of craven and infantile escapism that, he says, reminds him of German Nazis blaming everything on Jews. He adds that it is not the moderates who are too soft to bear the burden of a continuing struggle with communism, but those who prefer to sow suspicion and distrust and to create panic among their neighbours.

THE chief panic-makers are certain institutions which seem to be well endowed by large corporations interested in military contracts. From a fundamentalist college in Arkansas recently there issued a film about communism which ten million Americans are said to have seen and which characterises Britain as a country well on the way to a communist take-over from within, with Canada perhaps not far behind. These organisations equate socialism with communism and hint that a graduated income-tax is part of the international communist conspiracy. This leads only too easily not only to witch-hunting but also to the opinion, which the extremists freely express, that co-existence with Russia is impossible, total war ineluctable and the need for " total victory " imperative.

This summer in a personal memorandum to the Secretary of Defence, Senator Fulbright deprecated close contacts between extremist organisations and high-ranking military reserve officers and base commanders. For doing so he was accused by the " radical right " of " trying to soften American resistance to communism." Mr Fulbright is ready to condemn Russia as a " powerful and resourceful enemy " but he wants to reduce America's commitments to what is practical and to preserve liberty at home while extending it abroad where possible—a maxim that Burke would surely have approved.

The Senator doubts the value of racing the Russians to the moon, does not believe that it is worth sending American soldiers to fight in the jungles to save south Vietnam from communism and thinks that a successful invasion of Cuba would have been a worse calamity than was the actual failure, since it would have shattered American relations with other Latin American countries. He would like to see the United States in closer economic partnership with western Europe and he heartily approves Lord Avon's proposal of a political general staff for the West—but he does so because he believes that the countries concerned would then be sharing America's burden more fully, not adding to it. He is afraid of the United States over-extending itself. He says that " both tradition and George Washington are plainly on my side " when he insists that the armed services should stay out of politics but that he has found it difficult to counter, by his personal appearances in Arkansas, the televised onslaughts of the extremists.

Mr Fulbright may be being too gloomy or too modest. Some people in Arkansas feel that since he began his speaking tour the position of the moderates has improved. They are still being harried but the Senator's presence and his firm words have

heartened them to fight back at their denunciators. The move to exclude the allegedly "controversial" history book from Little Rock's schools failed rather ignominiously. Last week the Governor of Arkansas, Mr Orval Faubus, a diehard segregationist who has made a successful career out of extremism, publicly agreed with Senator Fulbright that "just because a person disagrees with you does not give him the right to call you an extremist." Mr Faubus disclosed that in 1954 when he stood for Governor he was falsely accused of pro-communism because nineteen years earlier he had spent ten days at a "communistic" college. In the United States even liberals seldom deny that witches exist—but it is significant that a man like Mr Faubus should concede that witch-hunts may threaten innocent persons with burning.

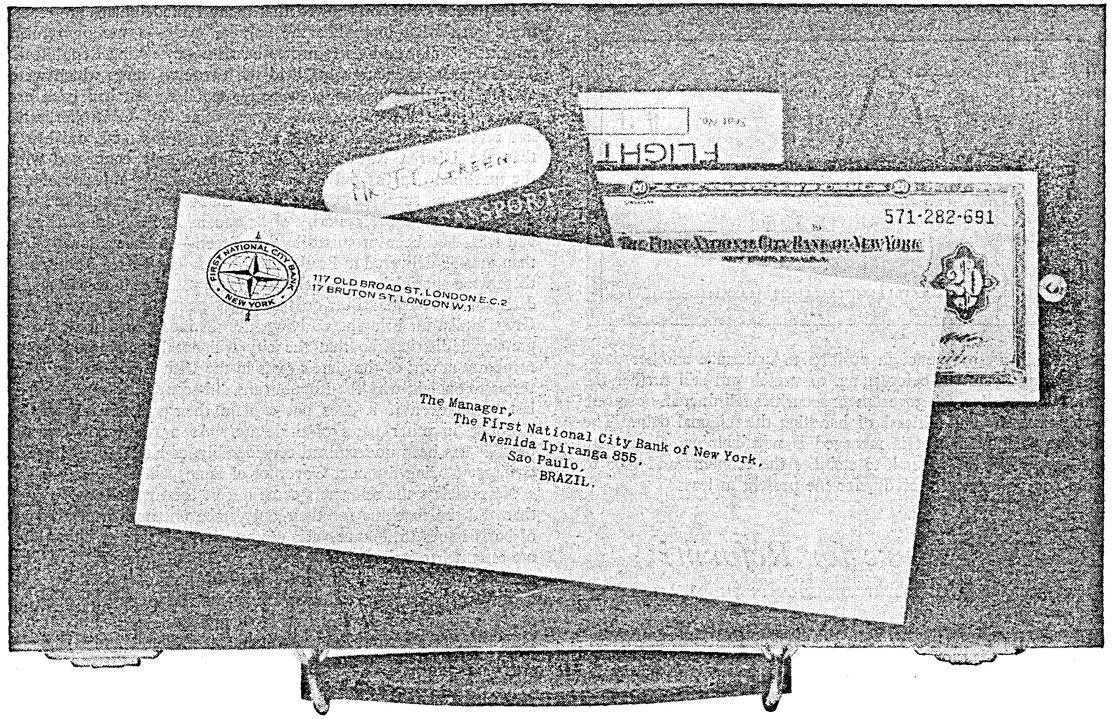
Mr Fulbright has represented Arkansas in the Senate, almost unopposed, since 1944 but next year Mr Faubus may run against him for the Democratic nomination which means election in that state. Or the Senator may be opposed by Mr Dale Alford, a segregationist Congressman who, because Arkansas is losing seats in the House of Representatives, will have otherwise to compete for a place with Mr Wilbur Mills, the powerful chairman of the Ways and Means Committee in the House. No one seems to think much of Mr Alford's chances if he runs against Senator Fulbright but Mr Faubus, who has been Governor of Arkansas for four terms and could probably get enough votes for an unprecedented fifth term, may feel that it is worth his while to try to take Mr Fulbright's Senate seat.

There are two snags to any such calculations that the Governor may be making. If he did unseat Mr Fulbright Mr Faubus, in spite of his new-found detestation of dirty tactics, would find that for him the Senate was an extremely lonely place, lacking not only in friendship but also in patronage, as the Kennedy Administration would almost certainly have nothing to do with him when it came to making appointments. The other snag would apply equally to any other contender for Senator Fulbright's seat: the people of Arkansas greatly value the lustre that his years of distinguished service confer on them and know that the state would lose its important position in some of the highest councils of the nation if he were to be replaced.

Therefore it is probable that Senator Fulbright will once again persuade Arkansans that he is the man for them and also that foreign aid is good for Arkansas cotton, rice and soy-beans and even that socialist-seeming free school lunches provide a useful outlet for surplus Arkansas poultry. Senator Fulbright reflects the pragmatic mood of America, which his critics do not. In Arkansas, as elsewhere in the United States, the antics of the extremists seem likely to be self-defeating, not for the first time.

Dilemma over Vietnam

GENERAL TAYLOR'S views on what the United States ought to do to help Vietman beat off communist incursions should be very welcome to the President. The contents of his report are still veiled in unaccustomed secrecy but it is taken for granted in Washington that it does not urge the despatch of American combat units—at least not at present. This is a relief when all the President's energies and resources are being concentrated on Berlin. He knows, moreover, that the Democrats cannot afford another Korea in Vietnam. President Diem himself has not asked for American forces and their arrival, it is felt, might inflict a perhaps mortal psychological blow on his government. They might also very possibly provoke the open intervention by the communist Chinese which the Russians have, so far, been able to restrain. Mr Nehru is said to have put this point of view forcibly to Mr Kennedy when he was in Washington.



But the President also recognises that his party would be damned as appeasers by his Republican opponents if south Vietnam should be "lost" so soon after his temporising over Laos and Cuba. Luckily General Taylor appears to feel that this need not happen if the Diem government can be helped—and persuaded—to mobilise all its resources, end political bickering and improve its tactics. The number of American military instructors in south Vietnam is already being raised from about 400 earlier this year to about a thousand and helicopters, reconnaissance jets, light bombers and road and river transport are now arriving in Saigon to improve communications and give the government's forces some of the mobility which is one of their enemies' chief advantages. None of these steps has anything to do with General Taylor's mission; they simply fulfil the promises made by the President last spring.

The first result of General Taylor's visit is expected to be help on a large scale to combat the famine that, it is feared, will follow the floods in the valley of the Mekong River. The Seventh Fleet may bring in food and other civilian supplies while American engineers repair roads and bridges. This is a task in which the United States will, no doubt, welcome the participation of other countries, particularly Asian ones; it is also a humanitarian act which will be positively helpful to the reputation of the United States in Asia, whereas military intervention could only tarnish its name and unite its critics. Moreover, a famine might well be the quickest way of bringing down President's Diem's government and putting into power politicians willing to negotiate with the communists.

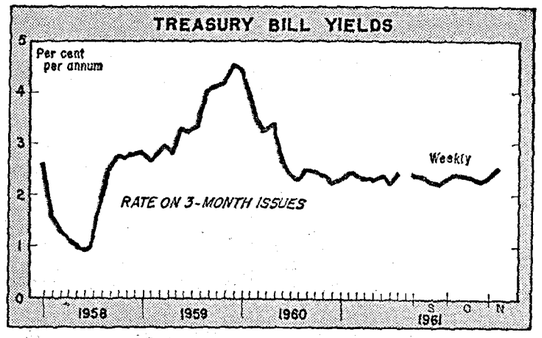
All's Well at Home

THIS week's announcement of the sharp increase during the third quarter in the deficit on America's balance of international payments had been prepared for in advance by Treasury officials; they have tried their best on their regular visits abroad to explain to foreign bankers what they are doing both to improve the immediate situation and to remedy the long-term difficulty. In their efforts to convince these bankers that the United States is not heading for inflation they are helped by the fact that the latest announcement comes at a time when the government's receipts and expenditures are roughly in balance and will continue to be so in effect until the fiscal year ends on June 30th, in spite of the deficit of about $7 billion on the year as a whole. The fact that the current Budget is in balance means that even if the economic recovery goes full speed ahead interest rates can remain low with safety as far as the domestic economy is concerned—although such rates are not so safe when the balance of payments is considered. Indeed one reason why last week the Treasury sold a special "strip" of $800 million short-term bills, with maturities ranging from 22 to 71 days, was to increase the supply of these bills and to prevent their prices from going up and their yield from going down. A fall in short-term interest rates encourages funds to flow to Europe, where yields are higher and has an adverse effect on the balance of payments.

But the main purpose of this special issue was to provide cash for paying off those holders of about $7 billion of Treasury bonds maturing this week who did not want to take advantage of any of the exchanges which were offered. In fact these exchanges were so attractive that only 7.5 per cent of the holders, instead of the usual 10 per cent, took cash, amounting to $515 million, so that the Treasury is left with a comfortable balance in hand. Holders had a choice of three exchanges: into a 3-month note at 3¼ per cent; a 4½-year bond at 3¾ per cent; or a 13-year bond at 3⅞ per cent. Over 40 per cent of the holders chose the longer-term issues and this brought a welcome lengthening in the maturity of the national debt. This result was particularly satisfactory since practically all the holders were private individuals. With no new cash needed before next July at the earliest the Treasury now feels

Your extra passport to local trading conditions

First National City's world-wide network means that there are no important industrial or commercial centres overseas where there isn't a First National City branch or correspondent.



But more is involved in this than merely a first-class global banking service. For instance, every client of First National City can claim what is virtually a passport to local business and local trading conditions anywhere in the world—a letter of introduction to the manager of any overseas branch or correspondent.

These men are valuable allies. They know local customs, local laws, and local commercial practices thoroughly. And they are experts in helping businessmen to increase their export potential.

COMPREHENSIVE SERVICE This is only one of the ways in which First National City can help a businessman. Travelers' checks, up-to-date credit information on any foreign company, a monthly survey of the world's economic and business trends with special reference to the United States—all these are invaluable to the exporter.

Why not call in and find out more about the ways in which First National City can help you? First National City offices are at 117 Old Broad Street, E.C.2 (London Wall 1221), and 17 Bruton Street, W.1 (Mayfair 6600).

FIRST NATIONAL CITY BANK
NEW YORK
INCORPORATED WITH LIMITED LIABILITY UNDER THE NATIONAL BANK ACT OF THE U.S.A.

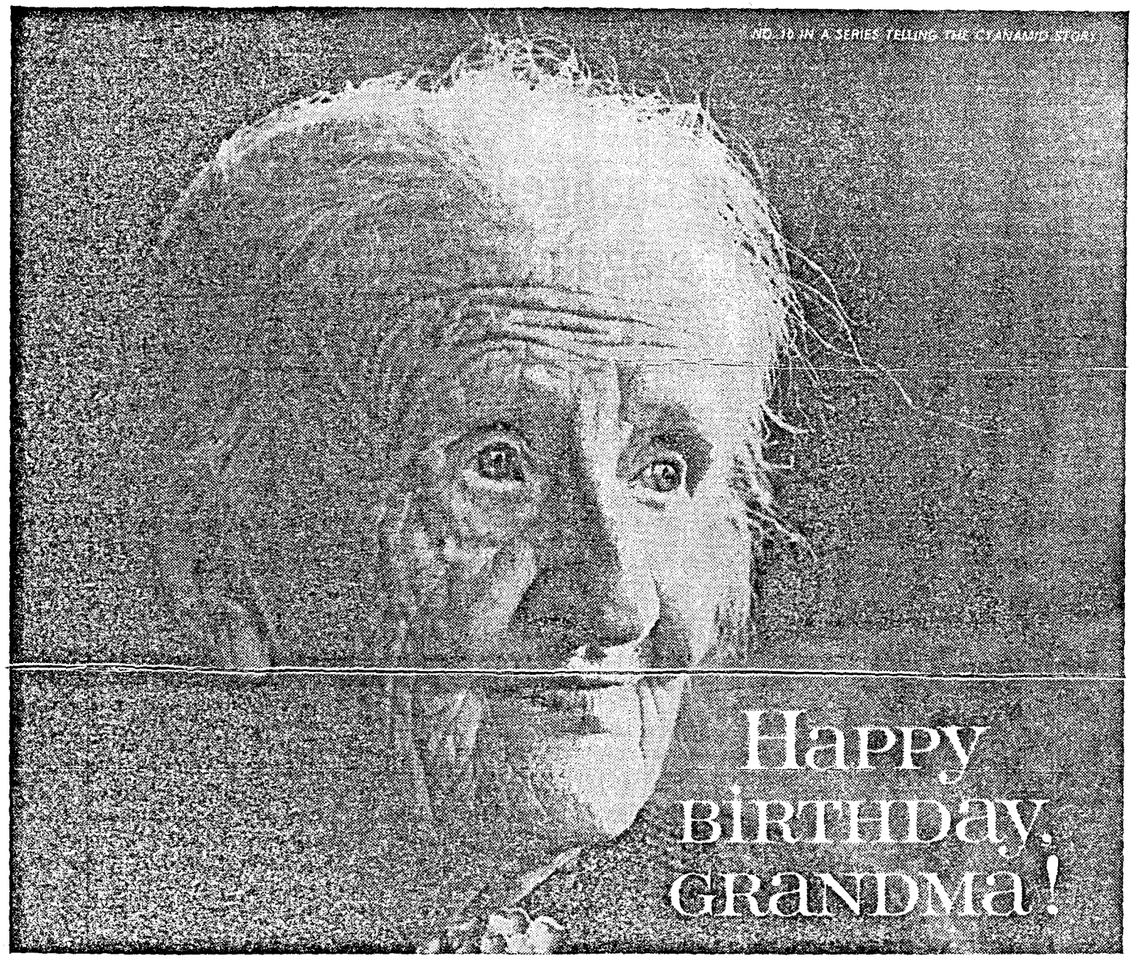
that it is in a strong enough position to undertake another debt-lengthening operation before long, to stretch out still further the frequencies with which government securities fall due, an operation which eases the difficult task of handling the national debt. The way in which this debt is managed is now helping, along with monetary policy in general, to stabilise the economy and thus to avoid any tightening of credit, for the present at least.

No Future for Reform?

FROM A CORRESPONDENT RECENTLY IN PHILADELPHIA

MR RICHARDSON DILWORTH, the Democratic Mayor of Philadelphia, is running for Governor of Pennsylvania, to succeed Mr David Lawrence, who cannot succeed himself and whose term expires at the end of next year. Mr Dilworth's candidacy will not be official for some time because once it is he has to give up the mayoralty. He will have to do that in any case at the end of 1963 since the law allows only two four-year terms; this is one reason why Mr Dilworth is determined that his desire to run for Governor shall not be frustrated in 1962 as it was on earlier occasions. Evidently he hopes that, by making it clear that he intends to fight for the Democratic nomination even if he is opposed, he will choke off opposition, that the Democratic organisation will be prepared to accept him rather than have the party divided by a bitter dispute for the nomination just before what will be a hard struggle against the Republicans for the Governorship itself.

If Mr Dilworth is the candidate it will mean that the Democratic ticket is headed by two Philadelphians—a geographic coincidence which is politically undesirable—for Senator Clark is up for re-election next year. It will also mean that it is headed by the two leaders of the reform movement which brought the Democrats to power in Philadelphia in 1952 after nearly seventy years of increasingly corrupt and incompetent Republican control of the city. But since then the Democrats in Philadelphia have built up their own machine, headed by Representative Green, one of the city's members of Congress; it is modern and efficient but not above relying for its funds and influence on the time-honoured system of patronage and favouritism which the reformers threw out of City Hall. They have tried to hold aloof from Mr Green except when they have crossed swords with him. But lately, particularly in this autumn's election campaign, Mr Dilworth has been compromising with, and even supporting, Mr Green, partly to further Philadelphia's great rebuilding programme, one of the major achievements of the reform movement, partly perhaps to protect his own gubernatorial ambitions. Mr Dilworth is especially criticised by the Republicans for not taking seriously enough a resurgence of corruption which was discovered in the city government earlier this year.



Last week's election showed that many Philadelphians are reacting against what looks like the familiar cycle—a waning reform movement followed by a return to bossism—by voting Republican. The Democratic incumbents held the two city offices which were at stake but their majorities were far smaller than had been expected while the total vote was larger. The City Controller, who had revealed the malfeasance in the letting of contracts, did better than the District Attorney, who is more closely connected with the machine. In the only state-wide election, for a Judge of the Pennsylvania supreme court, the Democratic candidate was defeated because her majority of 80,000 in Philadelphia was only half what had been promised by Mr Green—and sensationally less than that he delivered to President Kennedy last year. Admittedly there were special factors in this election; for one thing the candidate was a woman. But, on top of this, resentment against Mr Green's plan for bringing outlying suburbs into Philadelphia's congressional districts, so that the city will not lose by the current reapportionment of the state's seats in the United States Congress, seems to explain why the Republicans did so well in those suburbs last week, even if it does not explain their success in mayoral elections in other parts of the state. As a result Mr Green's prestige has been undermined considerably, as have Mr Dilworth's chances of being the next Governor of Pennsylvania.

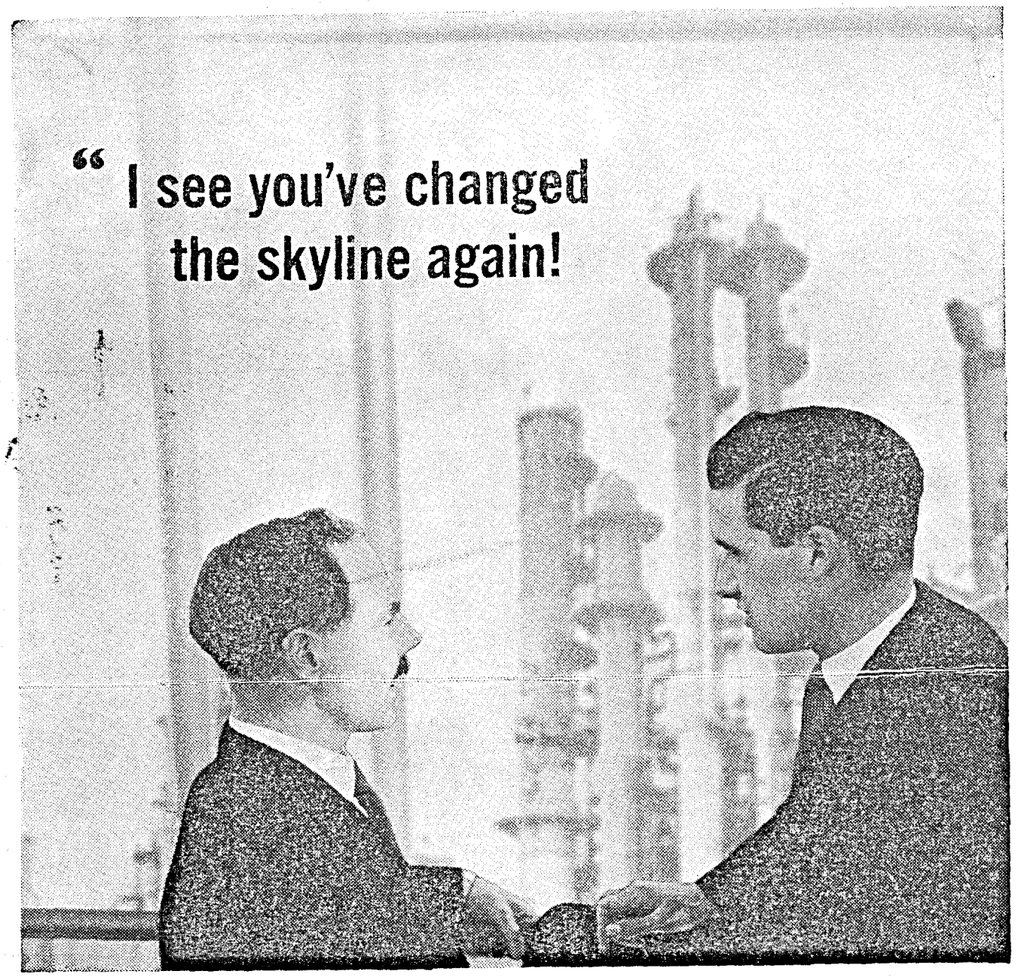
Nevertheless the reformers came out of this near-disaster better than did the machine for their only stake on the ballot, a group of bond issues to finance various improvements in the city which are essential to its redevelopment, were all endorsed by the voters, showing that Philadelphians still want the progress which is associated with the name of Mayor Dilworth. For them the question now is whether that progress can be maintained by whoever follows him, whether a man of the right quality is available and is allowed to succeed him by Mr Green. For Mr Dilworth the question is whether he will be able to put at the service of the state the imaginative drive and administrative ability which has served the city so well.

Hosts to Africa

A TWO-DAY meeting, sponsored by the State Department and blessed by the President, on "improving the experience of foreign students in the United States," which took place at the end of last month, has thrown a spotlight on a problem that has increasingly exercised thoughtful people. America welcomes more students from abroad to its colleges than any other country—a wise long-term investment—and the number is still rising. The 53,000 who came last year were more numerous by 10 per cent than those of the year before. Some come on grants from private organisations but the majority make their own arrangements and have to rely on their own resources. Fewer than a quarter come under the government programmes which were co-ordinated and improved when the new Fulbright-Hays Act was passed earlier this year. The number of Africans among these students (2,831) is double what it was last year, but still only 5 per cent of the total. Nevertheless they pose the greatest problems, which must be dealt with if they are not to return home disillusioned (some of course want to stay).

One of these problems is already familiar to African diplomats in the United States. Because of racial discrimination, it is often difficult for Negroes to secure decent accommodation or part-time employment. But all who have commented on the question recently single out, above all, the enormous difficulties many students encounter when trying to pay for their college courses. Too many of them come on grants which do not even cover tuition fees. Far too many come with a quite inadequate command of English. Lesser but common difficulties are produced by the general ignorance, among Africans, of what America is like; and by enrolments

Seventeen grandchildren and nine great-grandchildren are very happy today. It's Grannie's ninetieth birthday and the big party's in her honour. Fit and well, she'll take her tributes from her family like the fine old lady she is.



A month ago Grannie recovered from bronchitis after only a few days in hospital. Grannie remembers her youth, when the average span of life was limited to 42 years; she's had a double ration of life and she knows how lucky she is. Chronic bronchitis is a major problem in this country. Lord Cohen, Professor of Medicine at Liverpool University, recently told the conference of the National Society for Clean Air that chronic bronchitis is known abroad as the "English disease", and that the death rate for men in England and Wales, is about 50 times higher than in Denmark and 20 times higher than in Norway and Sweden. Over the past 10 years Government statistics show that this English disease has claimed 339,000 Britons and even last year 31 million working days were lost, with a consequent total output drop of £94 million.

Once there was little doctors could do about bronchitis. But modern methods and modern drugs are bringing new hope; not long ago Grannie's stay in hospital would have lasted longer. Life-saving, health-giving drugs, such as Cyanamid tetracyclines developed by the company's Lederle Laboratories Division, are the result of patient, painstaking research and development work. Yet, of the thousands of compounds screened every year, only a precious few reach the dispensary. Research and development are costly but essential for our welfare. Last year Cyanamid's research appropriation passed £10 million.

In this and in a thousand other ways

CYANAMID
SERVES BRITAIN

CYANAMID OF GREAT BRITAIN LTD., BUSH HOUSE, LONDON, W.C.2.

" Oh, you mean our new cumene/phenol plant.

Your *what*?

Our plant making cumene and phenol —two petroleum chemicals used for making plastics, pharmaceuticals, insecticides, dyestuffs, nylon . . .

Every time you mention one of the products of British Hydrocarbon Chemicals it seems to have a list of applications as long as your arm.

That's the way it is with petroleum chemicals. They *have* got so many uses —and these are increasing all the time.

Well, it certainly looks impressive from here, and it's a healthy sight.

Yes, it's the sort of industry with a future, one that people are glad to have in a place like this—it's good for everyone; engineers, chemists, trade, industry and the man-in-the-street.

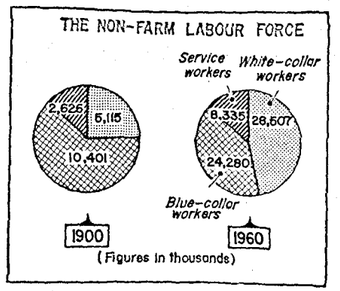
in colleges which do not have facilities for the particular subjects which interest the students involved.

Since last summer, when the miserable plight of some Africans became known, the State Department has been taking more interest in the foreign students for whom the government is not directly responsible. In June it set up an advisory council and at the meeting last month it asked the organisations which were represented for recommendations for joint action ; what seems essential is some sort of a clearing-house for African students and better methods of screening and preparing them before they come to America. But there is an immediate problem as well. The official estimate of the amount needed to relieve existing distress is at least $500,000. The State Department has already given all that it feels it can reasonably withdraw from other programmes and feels that the money can—and should—be raised from private sources. Some observers think, however, that only a rush rescue job by the government can prevent a damaging set-back to Afro-American relations.

How Much Faster in the Air?

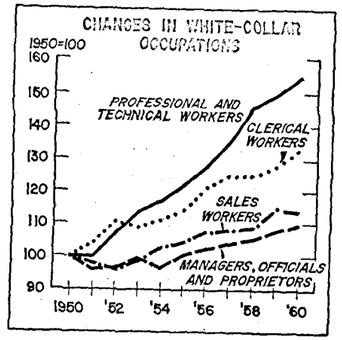
FROM A SPECIAL CORRESPONDENT



PROPOSALS to build a commercial aircraft that will fly faster than sound have at last been accepted. Before an idea, no matter how vital it may be, can break out of its cocoon in Washington and be transformed into a full-flown project, it must acquire first a set of identifying initials and, second, the unqualified blessing of Congress. Development of a supersonic transport has now achieved this status: it has been officially dubbed the " SST Project " and Congress has given it the ultimate accolade, an appropriation—in this case $11 million. This starting sum is very small in relation to the $500 million and more that will be needed before the first production model of the SST is flying, but the important thing is that Congress knows this and, even so, has given the green light. Next spring Congress will be asked for another $25 million to $35 million to carry the SST project forward; and so it will go ahead, picking up both money and momentum until SSTs are flying sometime in the early nineteen-seventies.

What caused Congress to take this first step down such a long and expensive road ? Mainly the spur of competition—the fear that the Russians would be the first to put on the market an aircraft that all the world's long-haul airlines, including those of the United States, would have to buy if they did not want to be left behind. British and French efforts to develop a SST are not considered cause for concern since both countries apparently favour development only of a supersonic transport that will double the speed of their present transport aircraft, such as the Comet and the Caravelle. There are strong arguments for such restraint. An aircraft whose maximum speed is twice that of sound (" Mach 2 " is the engineering term for this) could be built with present fabricating techniques, using already known and tested materials, and could employ advanced versions of jet engines now in the air. This would be a reasonable step forward in the march of industrial progress but the American decision is to leap beyond it. There is good reason to believe that the Russians have made the same decision.

More White Collars



DURING the nineteen-fifties Americans discovered a new phenomenon in their midst. This was the " white-collar worker," a pallid, slightly stooped, paunchy individual who disappeared into a mammoth office building on the dot of 9 each morning. He was next seen at 5 in the evening, plodding with furrowed brow to bus, subway or the 5.32 train to the suburbs. The appearance of this phenomenon, often described as a " status-seeking tool of the business machine," aroused widespread interest and concern.

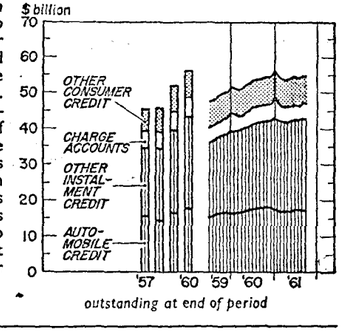
Meanwhile the white-collar worker himself—or herself—quite unperturbed, went on his or her way. A study published earlier this year by the Department of Labour* points out that about half the working Americans not employed on farms are now members of the white-collar force. Its ranks bulged sharply during the past decade, registering an increase of 27 per cent; in contrast, blue-collar workers, those who perform mostly manual tasks, showed an increase of only 4 per cent, or 1 million. By 1970 there are expected to be 37 million white-collar workers.

These workers follow a diversity of occupations ; the category includes business executives, shop girls, insurance salesmen, typists, government employees and nuclear scientists. They all have three major things in common, however. All work in offices, not factories ; all perform mental rather than physical tasks ; and all have had varying degrees of formal education, to the extent required by their particular jobs.

During the first half of the century the number of clerical workers increased at a rapid rate and by 1950 one out of every three white-collar workers was performing clerical duties. This rise was due partially to the great volume of record keeping which developed in all phases of industrial activity, but also to the expansion of industries such as banking, insurance, and government where record keeping is stressed. Between 1950 and 1960, with computors, duplicating machines and so on taking over many of the clerical jobs, professional and technical workers gained most sharply in numbers, with the increase resulting in large part from the added scientific demands of the electronic and space age, and from the speedy development of some professional and technical occupations unheard of in 1900, such as psychiatric social work and aeronautical engineering.

The white-collar worker has been able to hold his job through periods of recession with relative ease. Women, especially those over 45, are taking an ever increasing share in the group. The top median income for the group, that for professional men, was over $7,000 a year and the median period of education is 12 years with requirements stiffening. Negroes are barely represented in the white-collar ranks—registering 3.7 per cent of its total—but their numbers have been increasing slowly.

* *Monthly Labour Review, January,* February, March, 1961.



All American efforts are now to be concentrated on building a transport aircraft capable of flying at Mach 3 speeds and more. This will cost not only some $500 million, but will also mean five extra years of work. It involves a calculated risk, that of abandoning the market for intermediate supersonic transports to Britain and France, and perhaps to the Soviet Union. But, if the project succeeds, it will put the United States in the lead in development and production of the ultimate in supersonic transport: a Mach 3 aircraft which, with modifications and improvements, can be evolved into a Mach 5 transport, or even ultimately into a Mach 10 transport. Beyond Mach 10, nothing can be said: a barrier of silence has been lowered firmly on speculation of this kind by security officers.

The Mach 1 barrier is no longer a problem. Even some of the subsonic jets, such as the Douglas DC-8, have penetrated the sound barrier in steep dives and suffered no ill effect. The Mach 3 barrier is the heat barrier, at which skin friction—the air flowing over the metal surfaces—raises the temperature to intolerable heights. In the B-58 bomber (seen at the recent Paris Air Show) the United States already has a Mach 2 aircraft built of conventional materials and using a jet engine of advanced design. *But the United States has no jet aircraft or air breathing turbine engine capable of flying at Mach 3 or faster*; the X-15 aircraft is rocket propelled. Therefore the Air Force is keenly interested in the development of the Mach 3 SST and the Defence Department is co-operating fully in the new programme, even to the extent of acting as contracting officer for all funds to be spent on it. Engine development is what interests the Air Force most. The final design of the engines for the Mach 3 SST will determine most of its basic characteristics: payload, landing speed, efficiency, noise levels and even fares.

It seems likely that at least a "flying test bed" model of the long-disputed Mach 3 B-70 bomber will be built. This should help to supply some of the answers to the many questions of design raised by the SST. In a way, the B-70 has already been of help, for the debate over this project has conditioned Congress to the high probable cost of the SST. At the same time, the reasons which led to the decision to go ahead with a Mach 3 SST have caused repeated delays in the B-70 programme. A Mach 3 commercial transport represents a giant step forward and one which will break the trail for a Mach 5 transport, or whatever the optimum economic speed of a commercial transport is determined to be. A Mach 3 bomber, on the other hand, is only a small step forward from the Mach 2 B-58. What the Air Force is seeking is a comparable step forward in the speed of military aircraft. The X-15, now pressing Mach 6 in its test runs, is already an obsolete machine in the eyes of military planners. If it were not for congressional pressure, inspired in part by the depressed state of the airframe industry, the B-70 would be allowed to fade away like an old vapour trail.

As it is, at least one B-70 is certain to be built; similarly, a Mach 1.5 or even a Mach 2 test model SST will be flown. But neither of these aircraft will be prototypes, in the sense that production models will follow; they will not, in short, be "fathers" of the Mach 3 SST. The relationship will be more on the order of "kissing cousins"—the experience gained will be valuable for later and more serious efforts. If all goes well, these should culminate, sometime in the nineteen-seventies, in commercial services between New York and London in one hour (Mach 3-5) and between New York and Moonbase Alpha in one day (speed Mach 10, plus hush-hush).

CONSUMER CREDIT

Consumer credit in September continued to reflect the lag in consumer buying. Americans paid off more automobile debt than they incurred. The fall in this category—attributed to the lack of new cars caused by the strike at General Motors and to a slight decline in the proportion of cars bought on credit—was more than enough to offset increases in most other forms of consumer credit.

Metals Ask for More

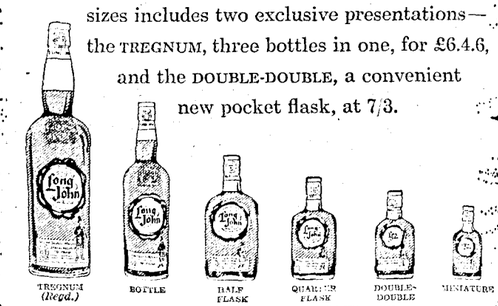
For several years the in-trays of Congressmen have received a steady flow of proposals for bringing aid to domestic producers of lead and zinc who, everyone agrees, are in a bad way. Market prices for these commodities have fallen steadily, imports have been rising again, in spite of the quotas and tariffs, and employment in the mines has dropped from 25,000 in 1952 to 9,000 now. What the operators want most is a substantial increase in import duties—to twice or three times their present levels.

Although mindful of their plight—and of the pressures exerted by their representatives in Congress—successive Administrations have baulked at actions that would antagonise America's trading partners, particularly Mexico and Canada. As an alternative remedy, Mr Kennedy proposed recently a scheme to acquire more of these metals for the already bulging government stockpile. But producers replied that they were in no mood for temporary palliatives and pointed to the failure of a similar programme adopted by Mr Eisenhower when he was in the White House. Last month Mr Kennedy agreed, somewhat reluctantly, to a scheme of subsidies restricted to small producers which would give them an estimated $16.5 million over four years. This measure represents a compromise between what the majority of Congressmen wanted and what the Administration was willing to concede and is a less generous version of a Bill that Mr Eisenhower vetoed in 1960. Small producers will be paid part of the amount by which the market price of either metal falls short of 14½ cents a pound (75 per cent for lead and 55 per cent for zinc); present prices are 11 cents and 11½ cents respectively. But the Administration successfully avoided the introduction of a permanent system of subsidies by reducing the tonnage on which subsidies will be paid to individual producers in each of the four years. The scheme falls a long way short of satisfying mineowners or miners and Bills to bring them protection from imports are certain to come before Congress at the next session just, it seems, as the Administration will be asking for broad new powers to slash tariffs.

SHORTER NOTE

A small but notable achievement of the "people to people" movement is the melting of the ice which for nine years has separated two ex-Presidents—Mr Truman and Mr Eisenhower. Last week they met in Kansas City for the rededication of the city's Liberty Memorial "to the people of the world as a symbol of international understanding." To the amazement of everyone Mr Eisenhower drove first to the Truman Library in nearby Independence, where he was warmly welcomed by his predecessor. The two had not met, except formally, since November, 1952, just after the election campaign in which Mr Eisenhower was deeply affronted by some of Mr Truman's charges.

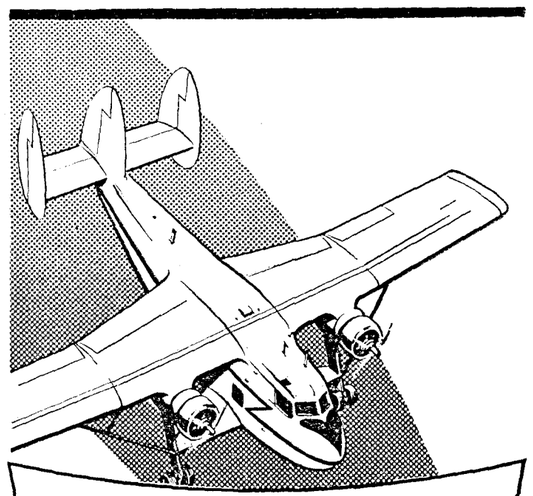
Long John



THE SCOTCH

THEY DRINK IN SCOTLAND

Two exclusive presentations



The unique Long John range of six bottle sizes includes two exclusive presentations—the TREGNUM, three bottles in one, for £6.4.6, and the DOUBLE-DOUBLE, a convenient new pocket flask, at 7/3.

DISTILLED, MATURED, BLENDED AND BOTTLED IN SCOTLAND

Prices include extra 10% duty imposed in July 1961

for LIMITED SPACE OPERATION

The Twin Pioneer 3

2 ALVIS LEONIDES ENGINES

From Jungle Airstrips in the Far East, oil sites in the Middle East and Africa or narrow mountain valleys in Austria and Switzerland. In fact anywhere where space *outside* is limited, the versatile twin pioneer is giving constant, economic service.

FROM A TAKE-OFF RUN OF 420 feet
The Twin Pioneer 3 will carry
16 PASSENGERS
OR 4000 POUNDS FREIGHT
OR 2 LARGE SURVEY CAMERAS OR
9 STRETCHER CASES OR
12 PARATROOPERS OR
4 x 500 POUND BOMBS OR
MANY OTHER CIVIL AND MILITARY LOADS

Designed & Manufactured by
SCOTTISH AVIATION LIMITED
Prestwick Airport, Scotland

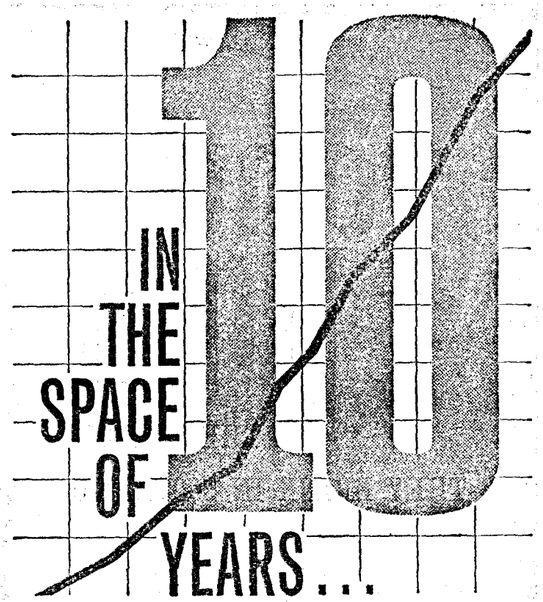
How much do you know—about JAPAN?

Did you know—

—that Japan is in the grip of a 'runaway boom'; that demand for consumer goods has reached record levels and that investment in industry has become excessive?
—that these developments have led to a large trade deficit and are threatening price stability?

Can you say—

—what precise steps are being taken by the Government to check the boom?
—whether the reserves are large enough to meet the calls likely to be made on them before the Government's measures take effect?



To learn more about Japan's problems and their effects upon the country's trade position, read the report prepared by Barclays Bank. Copies (together with copies of reports on COLOMBIA, NORWAY, SPAIN, SWITZERLAND, TURKEY and YUGOSLAVIA which have also been revised this month) can be obtained, without charge, on application to:

THE INTELLIGENCE DEPARTMENT,

BARCLAYS BANK LIMITED,

54 LOMBARD STREET, LONDON EC3

or to any branch.

. . . the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140, no fewer than 100 more than existed a decade ago. Unrivalled banking facilities are therefore available for all merchants trading with the various countries served by the Bank.

NATIONAL AND GRINDLAYS BANK LIMITED

Amalgamating
NATIONAL BANK OF INDIA LIMITED, GRINDLAYS BANK LIMITED AND THE EASTERN BRANCHES OF LLOYDS BANK LIMITED

HEAD OFFICE: 26, BISHOPSGATE, LONDON, E.C.2.

A comprehensive banking service is available at branches in the following territories:

INDIA · PAKISTAN · CEYLON · BURMA · EAST AFRICA · ADEN SOMALIA AND THE RHODESIAS

Bankers to the Government in: ADEN · KENYA · UGANDA · ZANZIBAR

THE BUSINESS WORLD

Currency and Eastern Oil

HAVE relations between oil companies and the Government of India turned down a Cuban road? This was the anxiety inevitably raised by reports from Delhi this week which suggested that in refusing to accept a set of discounts on petroleum prices urged upon them by the government, the major oil companies were threatening to cut off oil supplies to India—which at present has little oil but what they supply. Those reports, at the time they were printed, were exaggerated: the deadlock is not yet nearly as dangerous as that. But it could become so if either side were to insist on treating this argument over oil prices as indivisible.

One motive, certainly, over-rides all others in the Indian government's determination to reduce the import cost of petroleum products as well as crude oil—the need, clear and understandable, to reduce outgoings of foreign currency. That same determination, last year, won reluctant acceptance from the major companies operating in India of discounts on the prices of crude invoiced to their refining affiliates in India; this was indeed the first open "discounting to affiliates" of the present period of oil surplus, and played some part in breaking the posted prices of crude in the Persian Gulf in August 1960. The discounts given these Indian refineries then, after taking account of the posted price changes in August and September 1960 in the Middle East, now amount to about 8 per cent of the landed prices that would arise from full posted prices in the Gulf plus insurance and freights. Foreign exchange outgoings on crude, therefore, have already been cut to that extent.

One lever that helped India secure those discounts on crude was the example of another Eastern consumer determined to eke out foreign exchange, Japan. As well as the largest consumer of oil in the East, with one of the most rapid rates of increase in consumption in the world, Japan has of late become, through a mixture of commercial bargaining and government pressure, one of the toughest crude oil buyers in the world—and makes this plain for all to see. The assortment of refiners who import crude oil into Japan—some partly foreign-owned, but only one with less than 50 per cent of Japanese participation—get six-monthly allocations of convertible foreign exchange to do so from MITI, the country's Ministry of International Trade and Industry. The amount each refiner gets is set by a formula based partly on the sum he was allowed to spend previously and partly on the volume of oil he got for this, fob from his supplier: freight rates and hence cif prices do not come into the formula. The cheaper a Japanese importer gets his crude oil per barrel in the Gulf, the larger his foreign exchange allocation next time. And MITI adds a twist unusual in deals at a discount: it officially publishes the discounted prices that Japanese buyers secure.

In summer 1960, these published figures showed Japanese buyers were getting about 15 cents a barrel off heavy Middle East crudes priced then at $1.67 a barrel, and just on 30 cents off light crudes priced at $1.86. These discounts were not and are not the largest discounts any buyer gets. But the fact that they are published as regularly available to large-scale buyers there has made the "MITI reports" into a kind of shadow schedule of free market prices for Middle East crude, well below the official posted prices on which the major companies pay royalties and tax to host governments there and at which the majors mostly transfer Middle East crudes to their refining affiliates around the world. Although the argument that it could secure cheap oil from Russia was partly responsible for securing India discounts on its crude imports in summer 1960, citing the discounts that major companies were regularly giving Japanese buyers must have helped too.

WHEN they agreed to allow these discounts on crude imports to their Indian refineries, certain of the major companies concerned, such as Burmah-Shell, agreed that the saving on crude costs would not simply be retained to widen their refining margins; but neither would it go to the Indian consumer. The Indian government felt that an annual increase of some 5-10 per cent in consumption of this imported commodity was quite enough without price reductions to accelerate it; the government therefore proposed to mop up the saving itself by some form of tax. But it left the details unsettled, pending the report of a committee that it had already appointed in August 1960, to report on the internal pricing of crude oil and products. On September 27th this year representatives of the refining and marketing companies were summoned to the Ministry of Steel, Mines and Fuel and presented with one copy each of the 170-page report of this committee. Its recommendations, they were crisply informed, would come into effect from October 1st.

This committee, headed by Mr K. R. Damle, of India's Ministry of Food and Agriculture, covered the whole range of oil pricing within the country, assembling a mass of economic and financial data from the companies operating there. Its many recommendations go into considerable detail regarding marketing and distribution, and include special price formulae for the main refined products. But the key one recommends that after calculating "import parity" formulae

for these products, further discounts should be made on these parity prices, at the following rates:

10 per cent discount on kerosene, aviation turbine fuel and high speed diesel oil.
9.3 per cent discount on light diesel oil.
5 per cent discount on motor spirit.
3 per cent discount on furnace oil.

The committee recommended that these discounts should be passed on to the consumer by setting new ceiling prices for products. The Indian government, however, has decided to take the saving up in special duties imposed from October 1st, leaving product prices to the consumer where they are.

So far as this scale of discounts, or rather extra excise duties, concern the 6 million tons a year of products refined in India, their effect is simply to pass on to the government roughly the equivalent in rupees of the discounts already agreed on crude. At a meeting last week representatives of the major companies appear to have accepted this, though pointing out that the discounts actually proposed were oddly figured as between products. They also accepted various adjustments and restrictions proposed in the report on marketing charges; these were complex but not onerous. In money, these changes, including reductions in the prices of lubricants and special products, would cost the companies £7 million a year, much more than the discounts on bulk refined products detailed above. However, the committee reckoned that the companies in India should be allowed a 12 per cent return on capital employed, which is far more than the larger ones have recently been earning.

The committee and the government, however, proposed also to apply these discounts-cum-duties to petroleum products imported as such—currently about 1.6 million tons a year. This would save about another £1.53 million in foreign exchange—and transfer a like sum from the pockets of the importing companies to the government—over and above the £2.9 million a year already saved in respect of oil imported as crude. But what may be more important is that it would also establish openly published discounts on refined products traded in the world market east of Suez—where in fact, at present, prices of products other than fuel oil and motor spirit appear remarkably firm. And this is the point where the companies jibbed: they told the government they were not prepared to bring in products at these discounted landed prices.

The Damle committee had commented, quite logically on the face of it,

> as discounts are admittedly available on crude oil there is every reason to believe that discounts should also be available on refined products.

But refined product prices depend upon access to markets. The market east of Suez depends upon local and export refineries owned by the major companies, and is geographically fairly remote from independent refiners anywhere who can secure cheap crude and are prepared to export cheap products processed from it. Independent Japanese refiners get crude cheap, certainly—and are now trying to get it even cheaper—but their own booming and diverse market leaves them little in the way of excess products to export. Nor are they very significant buyers of products to balance their demand, though they get some fuel oil across the Pacific and may occasionally get distress cargoes of products cheaply. The Eastern market for products, therefore, is comparatively insulated from price competition. Even apart from the present degree of control of its refining capacity by the major companies, its main demand is for middle distillates. (India, for example, is the largest burner of kerosene in the world.) And everywhere, even in bitterly competitive markets for products such as most of Europe, it has recently been middle distillates that have been tighter in supply, and discounted the least. The scale of discounts proposed by the Damle committee may suit the pattern of Indian imports; but it is right out of line with the pattern of discounts available in markets where product prices actually are soft.

In Europe, indeed, Russian suppliers have recently been reported as telling their customers that no further middle distillates will be available during the balance of 1961, and that prices of all Russian products will be somewhat higher during 1962. This does not mean that Russian prices will then come up to those listed in world markets, or that India cannot get Russian oil. The state-owned Indian Oil Company is already importing Russian diesel oil, kerosene and turbine fuel at discounts said to be of the order of 15-20 per cent under major company prices, under a four-year contract signed in 1960, and it might be able to get more at sizeable discounts. It has limited storage and distribution facilities, but is building them up. Moreover, Russia is accepting payment in rupees.

THE government of India is perfectly entitled to minimise foreign exchange payments on oil, and set its internal taxes as it wishes. Quite obviously, from Japanese example and its own experience, the practical way to do this is to secure adequate local refining capacity and the power to make its local refiners bargain hard in a soft market for crude—either by having some refiners independent of crude suppliers, or by fiat. (None of the Indian government's own refineries is completed yet; and only one of the three planned, in Gujerat, may eventually be suitably located to process some imported as well as indigenous crude.) However, there is considerable spare capacity in the companies' Indian refineries. Since the companies are prepared to accept the new duty on products refined there, the government may find it economical in foreign exchange to let them increase crude throughput and reduce their direct imports of products accordingly. Beyond this, the government can arrange for imports of cheap products to the extent that it can obtain and handle them. The established marketers, also, are entitled to maintain product prices in any area that price-cutting competitors cannot reach; and they might well be unwise to break these prices across a whole area for the sake of direct product sales into one country alone. Over time, as the state refineries begin supplying products from indigenous Indian crude, and to the extent that the state import company goes on getting more imported products cheaper, these direct imports by the majors might in any case be expected to diminish.

The only danger here is that the government might decide to compel the companies to handle cut-price imports through their facilities in substitution for their own imports; or that certain companies, to back up a refusal to supply India with products for which they can get higher prices elsewhere, might talk of stopping crude supplies to the refineries too. The British consumer, who also on occasion sighs for the kind of oil prices that refineries bargaining at arm's length might get him, may well have mixed sympathies here. But the important thing is that this argument should remain limited to the real area in dispute.

Image of a Society

THIS title is taken from a novel concerned with the imaginary affairs of the "Saddleford Building Society." In it, the author, Mr Roy Fuller, poet and resident solicitor of the Woolwich Equitable, deliberately plays on the word "society":

> Many . . . have ceased to visualise the aims of the society, being unable to see beyond their own function as part of its complicated machinery. But one or two . . . though dedicating their whole lives to the service of the society have in fact come to disbelieve in its proposed aims; these beneath the veneer of their skill and devotion, are neurotic, unstable and unhappy, but fortunately they do not constitute any serious threat to the continuance of the society.

This could be as true of an industrial organisation as of a building society. But the first sentence is more likely to be true of a building society than the second, for the danger to a movement that is as conscious of social obligation as of economic necessity comes not so much from disenchantment with its ideals as from complacency and from the acceptance of routine as an end in itself.

The job confronting the chief executives of any building society lacks variety and in detail is largely governed by well-established precedents. The tasks of borrowing money from the public and lending it out on mortgage give rise to little in the way of new challenge to the executive power of making a decision. The stimulus that a new product, a new technique or a new market can present to an industrial company is lacking. The bustle and thrust of competition as it is understood by a commercial profit-making organisation is absent; the desire to expand is generated more from within the executives' own minds, where matters of personal prestige intrude, than from pressures from the outside. As managers of quasi-mutual funds, where the first criterion is absolute financial probity and the second to make only such a profit as will preserve the existence of the society indefinitely, they do not even have any ultimate yardstick of profitability against which to measure their achievements. Societies do indeed compare the rate of growth in their total funds, but this does not provide anything like the same stimulus.

This state of affairs has produced some diverse results. Two of the handful of dominant personalities within the movement—Sir Bruce Wycherley of the Abbey National and Mr Alexander Meikle of the Woolwich Equitable—have remained active within it. But, Mr Algernon Denham, whose recent death has been mourned by so many in the building society world—not excluding those whom he criticised so freely—always sought (though not with complete success) to remain at some distance from the day-to-day management of the Halifax. And Mr Herbert Ashworth, though remaining a director of the Co-operative Permanent, has gone into property development. Another result is that the movement as a whole does not readily contemplate change and mars much of its forward thinking by backward glances over its shoulder. Even today, when the movement's obvious task is to concentrate on getting the savings in, its executives will hark back to the 1930s when the problem was to get mortgages out. New ideas establish themselves only slowly, not being forged by necessity but moulded gradually by the pressure of circumstances. The further, moreover, one moves from the "multiple" image of the big, national societies towards the "independent shopkeeper" image of the small, local societies, the greater is the opposition towards change.

Put baldly, the choice which confronts the societies is whether to lend out what they happen to have in the kitty or to foster the spread of home ownership more positively. The first alternative puts emphasis on the technical minutiae of administration and mortgage lending, the second on the need to stimulate savings. Broadly, the big national societies have plumped for expansion whereas the small, local societies, proud of their financial rectitude, have been content to stand pat. But even the big societies are inhibited in their policies, for they are acutely aware of how hot a political issue anything that touches on housing can be and of how much odium greets a rise in mortgage rates.

THROUGHOUT the movement, there is a tendency to look back at the events of the last decade and to point with pride to the growth in funds that has taken place in the face of sharp changes in interest rates (which have been reflected in the fluctuations of the inflow of new savings to the societies) and of a rise in tax (which has squeezed the societies' margins). But much of this growth is due to the efforts of the big, national societies. Moreover, the rise in savings through the medium of the building societies has been less than the growth in personal savings as a whole; and mortgage business which by normal building society canons ought to be perfectly acceptable has increasingly been turned away because of lack of money to finance it. The building societies may therefore be criticised for not doing enough to satisfy their own professed aims of financing owner-occupied houses on economic terms. Even more worrying is the apparent lack of urgency with which the societies contemplate the further growth of demand for mortgages in the next decade. To live up to their own ideals, they must think harder about attracting more savings.

Primarily, but not wholly, the answer must lie in their attitude towards interest rates. Only with the greatest reluctance have the societies raised their investment rates up to economically competitive levels. Not until the middle of this year was the recommended rate on shares raised to 3¾ per cent, net, and on mortgages to 6½ per cent. Soon afterwards the little budget put the building societies' share rate out of line, and, as the table shows, the net inflow fell. Following the reductions in Bank rate and the clearing banks' deposit rate, the net inflow has picked up a little; but clearly the current rates are maintaining only a low level of new investment.

Yet any likelihood that the building societies will take a

determined stride into the future by raising their rates, say, to 4 per cent, net, on shares and to 7 per cent on mortgages seems more remote than ever. It would be something, at any rate, if the building societies sternly resisted any pressure to bring their present rates down. There are signs that they may, for members of the movement are beginning to talk openly about "stability" in the rates. To satisfy a bigger slice of the demand for mortgages than they have hitherto done, the societies must not be afraid of high interest rates; if that should mean putting them up again, they should do so promptly. Not that the flow of savings into the building societies is governed solely by comparative rates of interest—the money they prefer to have, and often secure, is that deposited for a fair length of time by the middle-aged, middle class investor. But even he would probably be pretty responsive to efforts to promote fixed term deposits. What the societies can offer such investors is security; and this, with attractive terms, is their big selling point. The new building societies Act, together with trustee status, has given them a new opportunity for salesmanship.

Whether they should look much beyond the range of this class of investor is more debatable. Appeals to teen-agers, who do not save much in any case, may not produce much response; but appeals which link thrift with the buying of a house through a building society mortgage deserve more attention than the societies currently bestow upon them. More societies, too, might also consider following the example of some northern societies in drawing attention to their banking image, with the emphasis on the ease with which deposits and withdrawals can be made. The pass-book system is now common within the movement; but, if the societies are to tap new sources of savings, they will have to prepare themselves administratively for a more rapid turnover of individual funds invested with them.

Whichever method or combination of methods they use, the building societies in the 1960s must create a savings image in the mind of the public if they are to satisfy the aims they have set themselves. It is still too common for a building society to be thought of as an institution from which money is borrowed rather than one where money can be invested. The name "building society" itself stands in the way. It is now, perhaps, too late to change it to the more appropriate one of "savings and loan association" employed in the United States; but in some way the words "savings" or "investment" have to be firmly associated with the title "building society." The route by which the demand for mortgages reaches a particular society is well-established in its links with estate agencies up and down the country and the societies are well aware that the opening of a branch office in a new area, while it does not add very much to the mortgage demand, does often tap new sources of savings. In the past, it has been the big, national societies that have been most active in opening new branches. But it is an expensive business, which reduces the amount available for reserve appropriation. Hence the societies wishing to expand have a practical case—as opposed to an argument in principle—when they press for some concession on profits tax.

In the past, the big battalions have done most to promote expansion by going out to look for savings. The first five of them are responsible for about 45 per cent of the movement's assets; the first ten for about 57 per cent; and the first twenty for nearly 70 per cent. These are the societies that are the most likely to adjust their ideas and their administration to the needs of the future. And if the movement as a whole is convinced that more growth must be secured, it will have to think harder about amalgamations. For the small, local society this may mean some sacrifice, but the fact is that there are far too many small societies in a local rut. The building societies have an honoured and respected name in this country. They do not have to create a brand-new image for themselves. But they do need to give it a critical look and a new polish. There are dynamic possibilities in the future which can far transcend the conservative comforts of the past.

BUSINESS NOTES

IN THE MARKETS

Mind Reading

THE mood in the equity market this week has been distinctly more optimistic than for some months past. The volume of trading has broadened but not much stock has come on offer to meet the demand, which included some switching out of gilt-edged securities by trustees, and prices have risen sharply. The *Financial Times* index bounded smartly over the 300 mark on Monday and by Wednesday it had risen to 308.3, compared with 294.9 a week earlier. In the same period, *The Economist* indicator gained 12.5 points to 368.9 With thoughts concentrated upon this rise in equities, gilt-edged stocks, which had already enjoyed a steady rise in earlier weeks, were largely neglected and the movement in their prices was restrained. The Agricultural Mortgage Corporation's offer of a 6½ per cent stock, 1975-77, at 99½ was oversubscribed before the weekend but dealings began at a small discount.

Quite why the mood in the equity market changed is difficult to pinpoint exactly. The rise in prices on Wall Street to a new peak may have had some influence as a signal of some expansion in business and trade. The stock market, too, may have drawn some comfort from the by-elections, for while the Conservative party lost votes the fact that the Labour party failed to pick them up was perhaps more significant. Primarily, however, the rally was based on a more optimistic reading of the economic prospect and on the fact that much of the depressing news which is now being reported by British industry had been discounted in the earlier fall in equity prices. In this mood, the market was prepared to shrug off the gloomy forecast from GKN and to take the trade figures in its stride. The stock market also drew more encouragement from Mr Selwyn Lloyd's muffled statements about the future than Mr Lloyd himself perhaps intended.

On Wednesday afternoon prices were marked up sharply on his statement that the improvement in world trading conditions might create a favourable opportunity to move on "from emergency or crisis steps to the shaping and development of long-term policies"; but the pace of the advance was not fully maintained on Thursday after press comment had emphasised the qualifications with which Mr Lloyd had surrounded this statement. A change of view on equities now could theoretically be based on a belief that the authorities have weakened in their determination to defend the sterling parity. Scepticism on these lines is in fact rarely voiced in Throgmorton Street. But the market's behaviour this week does suggest that some investors are prepared to back their belief that equity prices have grounded and are beginning slowly and hesitantly to move up again.

Peak on Wall Street

A correspondent cables:

INCREASES in dividends, of which the most significant was the extra dividend declared last week by General Motors, has stimulated the demand for the established market leaders, including General Motors, Coca Cola, IBM, Reynolds Tobacco and Standard Oil, rather than for the small unseasoned issues that had been supposed to have a substantial capital gain potential. The volume of trading has been heavy, but the buying has been definitely less speculative as investors are disillusioned with the growth equities that have failed to come up to expectations. Buying has been concentrated upon the blue chips that have a reasonable prospect of expanding business, higher profits and bigger dividends. Such stocks, however, are already selling at historically high price/earnings ratios and hence there is a chance that interest will switch to second rank stocks with more erratic dividend records.

Investors appear to be convinced that the lull is over and they have been heartened by evidence that the government's spending on defence is having an impact on corporate earnings. On Wednesday, the Dow Jones average rose to a new peak of 734 and Wall Street, now that its confidence in the business outlook has been restored, is thinking in terms of a strong rally at the end of the year. This could be punctuated by profit taking but in the view of some dealers it could be sufficiently strong to carry the Dow Jones average above the 750 mark.

OVERSEAS TRADE

Rising Imports Again

THERE are so many ways of looking at Britain's monthly trade figures, so many dock-strike distorted figures of past months to compare them with, that the public interpretation given to any one set of figures, particularly by the broadcasting authorities, is quite unpredictable. October's figures caused little gloom either in the stock markets or in the exchange markets. But on balance they are undoubtedly disappointing.

The seasonally adjusted series shows a sharp jump in landed imports, by £19 million to £379 million—the first significant reversal of the decline from the peak levels of the end of 1960. Why should seasonally adjusted imports rise in a month when, by all appearances, retail trade was at a low ebb and stockbuilding was still curtailed by the credit squeeze? The detailed classification due next week will deserve special scrutiny.

Exports, admittedly, picked up last month after their September drop, but at £311 million the total was only barely above that of the previous average in each of the first three quarters of this year. The upshot was that the crude deficit, which had fallen successively since the last quarter of 1960 from £83 million to £64 million in the first

quarter, £43 million in the second and £34 million in the third, widened in October for the second month in succession, from £49 million in September to £56 million. The distortion caused by valuation of imports cif and exports fob artificially swells the monthly deficit by £37 million or so; this still leaves a deficit that would surely not be covered by Britain's tenuous invisible earnings. But speaking to what this week became the National Association of British Manufacturers on Wednesday, the Chancellor of the Exchequer, after referring to the October trade figures, stated: "On current account we are probably just about in balance."

COAL

Steel's Fuel Costs

ABOUT 2½ million tons of coking coal out of the 18 million tons that British steelmakers use each year cost at least 15s. a ton more than similar coal they could import from the United States, the British Iron and Steel Federation argues in its *Steel Review* this week. Replacing this tonnage with imported coal could have saved more than £3 million a year (the average margin of British over landed prices from the United States was, in fact, about 30s. a ton); this would have reduced steelmaking costs at the ten major works concerned by more than 8s. a ton of finished steel. Britain has lost its cost advantage for coking coal against Continental steelmakers; coastal works there, in particular, are importing American coal at a long-term price of under £5 10s. a ton cif, while some British coastal works have to pay up to £7 a ton.

During the last twelve months, the federation argues, the British steel industry has had nearly £30 million a year added to its fuel costs by Government decisions. These decisions were, first, to approve increases in coal prices that cost steel £12 million a year directly and which they think added another £6 million through increases in their suppliers' prices: the decision to tax fuel oil and later to surcharge it, costing another £7½ million a year; and the decision not to allow steelmakers to import American coal, on account of which they appear to be adding in the £3 million a year calculated above. This arithmetic produces what answers one chooses: it could as properly be added up to an increase of £25 million a year that could have been reduced to £22 million. It also requires the assumption that the Government could have avoided approving any increase in coal prices in September, 1960.

Arithmetical reservations, however, in no sense weaken the federation's basic case against protection of high-cost fuel in Britain—from which export industries such as this is and serves suffer now and will suffer more when Britain is in the common market. Lord Robens has often expressed his enthusiasm to get into Europe and undersell higher-cost coal there—and also, no doubt, to take a hand in knitting Britain's kind of protection against imported fuels into that of the Six, which here and there is higher than Britain's but also includes much stronger elements of liberalism in fuel import policy. By the time Britain is in Europe, its own coal costs may not generally be as competitive as all that; and certainly its customers such as steel will have borne more of the consequences of using those British coals which are least competitive.

OIL IN EUROPE

Precedent from the Antilles

SOMEWHAT surprisingly, the Dutch government this week accepted the principle of a quota on imports of petroleum products from the Netherlands Antilles into the common market as the price of association of this dependent territory with the European Economic Community. They originally put forward a request to associate these West Indies with the common market as long ago as January, 1960; but until about a week ago what had developed into an argument between them and the French, with other member countries looking on, seemed liable to go on interminably. There were, however, signs of dispute between the Dutch foreign and economic ministries on the point: and this week the Council of ministers of EEC announced agreement on association, with a ceiling of 2 million tons a year on preferential terms for imports of refined oil products.

including that of noise, facing designers (which include the British Aircraft Corporation) of big supersonic aircraft capable of operating on the North Atlantic. If the French think that sufficient people want to halve the journey time between, say, Paris and Athens or Moscow to justify putting an aircraft of this kind into production the proper course is to wish them luck and let them get on with it. There is no doubt at all that such an aircraft can be built. The only question is the size—or indeed the very existence—of a market for it.

But reports circulating in this country and Paris suggest that any Anglo-French agreement would go well beyond the super-Caravelle and would provide not only for the construction of the existing French design, but also for a stretched long-range version that might, but more probably might not be capable of operating on the North Atlantic. It is this part of the proposed agreement that needs to be looked at with special care, because an aircraft of the second type is likely to be worse than useless. Whatever market may exist for a short-range supersonic airliner, there is none at all for a medium-range poor relation to supersonic transports capable of operating on the North Atlantic. Anyone who doubts this might compare the order books of British and American aircraft manufacturers in the decade since the big jets came onto the market.

EXPORT INCENTIVES

Something Coming?

It now seems pretty certain that the government is preparing some special incentives for exporters, which are very likely to include new facilities for export credits, will quite probably embrace concessionary interest rates on such credits, and may possibly extend beyond export credits to direct help for all exporters. The caution that the government has constantly in mind is the importance of avoiding any outright breach of international agreements which Britain itself helped to build up after the war.

In the debate last Friday on the Export Guarantees Bill, which raises the limit on Section II guarantees and Section III loans from £400 million to £800 million, Sir Keith Joseph, the new minister of state at the Board of Trade, conceded that "some countries, particularly France and Belgium, have differential rates of interest for exports." He went on to say that such differential rates are not a breach of the General Agreement on Tariffs and Trade provided this rate is not lower than "the Government concerned has to pay to raise the necessary funds." This is quite a proviso, but it would be difficult to establish that it is adhered to by France and Belgium. Sir Keith also revealed that 75 per cent of the credit business insured by the countries forming part of the Berne Union was within the stipulated maximum of five years. He seemed to take this as a sign that the rules are being kept; in fact it shows how they are breaking down, even without any estimate for the effective evasion of the rules in loans or guarantees given direct to the buyer.

On the general incentives to exporters, the Chancellor last week again poured cold water on a turnover tax, with the aid of some specious arguments ("If there were a turnover tax of 10 per cent it would put the cost of living up 10 per cent"), but he promised to look into the accelerated depreciation allowance for exporters that exist in France. By Tuesday this week he had found out that "for some reason or another the French are shortly to abandon this system." In fact it is reported that they are abandoning it in favour of giving accelerated depreciation to all manufacturers, whether they are exporters or not. Probably this is a doubtful field for discriminating between exporters and the rest, but a case can be made for allowing manufacturers themselves to write off assets at the rate they choose.

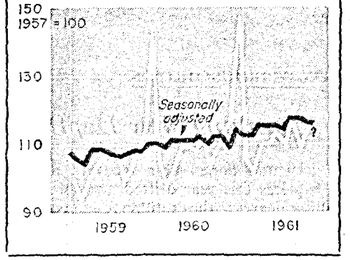
SCIENCE

A Major Breakthrough?

The biggest innovation accepted and backed by Lord Hailsham since he became Minister for Science has been the idea of development contracts awarded to industry for work on major projects too big for a company to tackle single-handed (DSIR had had the idea long before). The system is well established in the defence industries and has spilt over from there to civil aircraft, but in all other fields the principle has been up till now that the government pays directly only for what the government buys. The government has no excuse for cluttering Lord Hailsham's office with large new pieces of capital equipment incorporating advanced techniques that everyone agrees are good and desirable but which industry hesitates to embark on because of their cost and the risk that they might not work (or sell). Therefore three years ago, the Department of Scientific and Industrial Research announced that as a means of bridging this gap between pure and applied research it would consider placing development contracts with any industry or individual company that could put up suitable projects. Lord Hailsham told the House of Lords on Wednesday that the first two contracts were all but signed and marked, in his view, "a major breakthrough in the relationships between government and industry in the encouragement of science."

One of these is for computer-controlled machine tools, the other for advanced forms of computers. This selection did not occur by chance. Computer development in this country has been almost entirely government-financed by one means or another, while the machine tool industry has a great deal of lost technological ground to make up. It got, indeed, a pat on the back from Lord Hailsham for the efforts made recently to put its house in order. This change of heart, thought the Minister, stemmed from the famous controversial report on the industry's research facilities prepared by the DSIR's economics committee. Other applications being considered for development contracts come at present mainly from the engineering industries, with machine tools well to the fore, but it is plain that the government is placing increasing reliance on the economics committee of DSIR to uncover deficiencies in industries that are simply not research-minded—among which, to judge from his remarks, Lord Hailsham numbers the motor industry.

THE CITY AND EUROPE



Learning to Borrow

"City houses which formerly had the closest links with Europe have until recently tended to allow these links to become dormant," Mr Kenneth Keith of Philip Hill, Higginson, Erlangers told a bankers' conference on the common market in London on Tuesday. The City is now recognising this lapse, and is thinking a good deal about its future role in the common market. It knows that it has the largest and on the whole the best machinery for financing; what is lacking is the finance itself, and this is a reflection of the weakness in Britain's external payments accounts. "Any of you who have recently visited the Continent have, I am certain, been asked on numerous occasions if a devaluation of

RETAIL SALES

Spending in the shops probably fell a little in October. But after having been too confident about its first shot at the value of sales last time, the Board of Trade is uncomfortably cautious. The seasonally adjusted index is provisionally put at "116 to 115" (1957=100); perhaps turnover pegged level with September, perhaps it slipped a point.

Compared with October, 1960, the increase in turnover was about 3 per cent, "most of which may have been accounted for by higher prices."

sterling would not be necessary to make us competitive." Mr Keith firmly rejected this prognosis, pointing to the rise in Continental costs and the pressure of full employment.

Nor is it difficult to think of ways in which Britain's entry into the community might bolster sterling. M. Louis Camu, president of the Banque de Bruxelles, referred at the conference to more formal co-operation between central banks and to the provisions in the Rome treaty for joint support of a currency in difficulty; while Mr Keith expects, in the longer term, "a great increase in European, and perhaps American, investment in Britain," attracted by relatively high yields. Later he voiced the familiar City complaint that high interest rates were driving away lending business. But if Britain is to secure the support from foreign capital to which Mr Keith sensibly looked, the City must resign itself to doing less foreign lending and more foreign borrowing, which high interest rates will indeed promote.

ELECTRICITY

Buying Abroad

THE Central Electricity Generating Board had bought equipment abroad before its recent order for two 90 MVA transformers from Canadian General Electric was announced. But these purchases had been limited to equipment that could not be bought in Britain; some of the DC equipment for the cross-Channel cable, for example, comes from Sweden. The order for transformers is more clearly aimed at British manufacturers, whose previous pricing agreements were declared illegal earlier this year by the Restrictive Practices Court.

This reminder that there are other sources of supply open to the CEGB, and that it is prepared to use them, might have a salutary effect on the prices that British manufacturers quote, now that they can no longer be sure that they will all quote the same. The CEGB is clearly anxious to press home the advantage that it has gained from the decision of the Restrictive Practices Court. The electrical manufacturers cannot feel happy to see their sole British customer give notice that it will do its best to get their margins down on what may have been one of their fairly few profitable lines.

NON-FERROUS METALS

Plumbing New Depths

LINGERING hopes of a recovery in lead prices this year drifted away with the falling leaves: the autumn conference of lead and zinc producers brought nothing but the reversal of a tentative estimate of a shortfall in lead supplies into a very definite forecast of a substantial surplus. Because of broken pledges and the apathy shown by most producers at that meeting, it seems most likely that all that will remain to be discussed at the next meeting in March will be statistics about the likely surplus in 1962, though the study group's "informed" guess was that new supplies and consumption would be in approximate balance during the first part of 1962. After that, all voluntary curbs might be abandoned and the prospect of what could happen to prices then must chill the big Australian and Canadian producers, who appear to have borne the brunt of voluntary restrictions.

The price of lead in New York has been cut twice this month, and is now 10 cents a lb. The unexpected rise in the United States' output seems to have embarrassed both the study group's statisticians and its own market, which is protected from imports by both tariffs and quotas. The London spot price of lead has dropped £3 to £58½ a ton since the beginning of the month, which is easily the lowest point since dealings were resumed on the London Metal Exchange in 1952, and this market has again come under criticism from producers, whose prices are governed by it, for its "sensitiveness"—that is its ability to recognise a bleak prospect when it sees it.

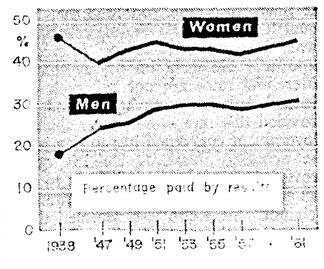
Spot zinc has dropped just as steeply as lead to £67½ a ton. The American recovery has made some impression on the stocks which have accumulated there, though a cut in the American zinc price is feared. Almost certainly there will be a surfeit of supplies throughout the world next year, though consumption should rise. The recent heavy sales of Russian zinc in London are possibly a harbinger of worse to follow.

The last-minute settlement of a wage dispute in Chile caused a fall of £4 a ton in copper and brought it back to about £227 a ton, the level at which a producer appears to have bought cash copper to support its price intermittently over the past month, though it later recovered to £228½. The "influential" support was still forthcoming and forward copper, which is not supported, sagged to a small discount. Even tin has come under pressure since the start of the month and spot supplies have eased about £7 to £966½ a ton.

Dent in Aluminium

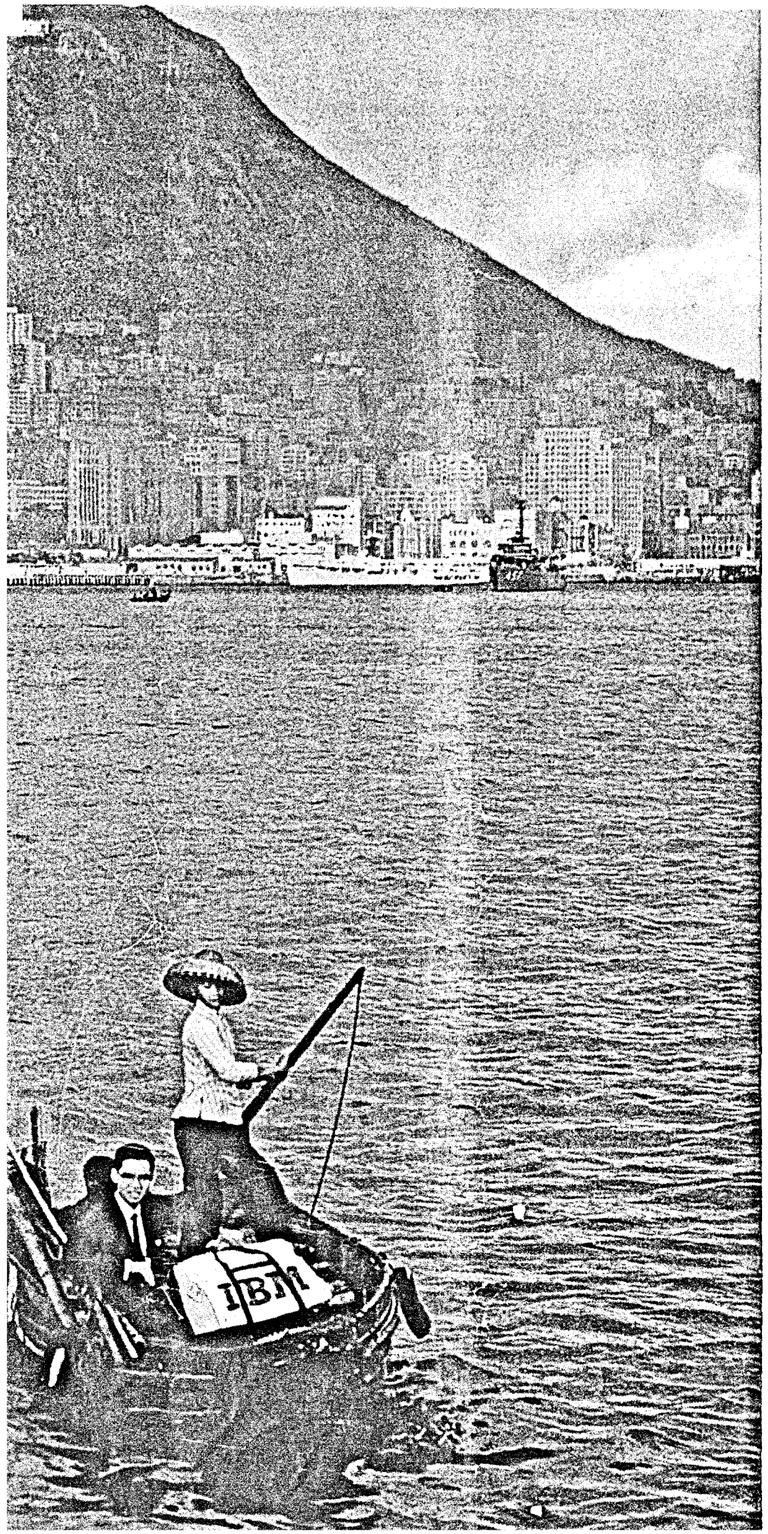
CHANGES in the price of primary aluminium are rare: throughout the world, the number of large producers is small and a policy of stable prices suits their book. The present glut of aluminium is reflected mainly in greater competition for outlets, keener prices for aluminium products and less apparent enthusiasm for developing the vast bauxite deposits in West Africa. But recently, a cut of 2 cents to 24 cents a lb for aluminium in America has caused a flutter. The spark seems to have been generated by the friction that followed the realignment of the two North American dollars. Aluminium Limited of Canada, allowed some of its American customers to buy in Canada where the price was maintained at 23¾ Canadian cents a lb—there seemed no reason for raising the Canadian price simply because of a fall in the value of the Canadian dollar. The result was a reduction in the American price, but ripples from the disturbance were not allowed to spread to Europe where prices have remained firm, though customers did hold off for a time in expectation of a price reduction here. (The price in Britain is £186 a ton.)

Expansion in the use of aluminium is not quite living up to earlier expectations. Snags have arisen in its use for cylinder blocks in motors for instance, and the fall in the price of competing non-ferrous metals has meant that it is harder to dislodge them from some uses, while in others they appear even to have won back a little ground. In the first eight months of the year, deliveries of aluminium in this country were about a sixth lower than a year earlier, but because aluminium scrap is an important source of metal and supplies will hardly taper off much while prices of virgin metal are maintained, nearly all of the fall occurred in deliveries of primary aluminium which contracted by 55,000 to 193,000 tons.



AIR RENTS

Above the Tracks

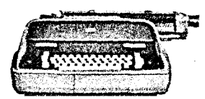


THE Transport Commission has only recently begun to develop the possibilities of renting off the air space above its railway tracks to property developers, and developers themselves may not have been

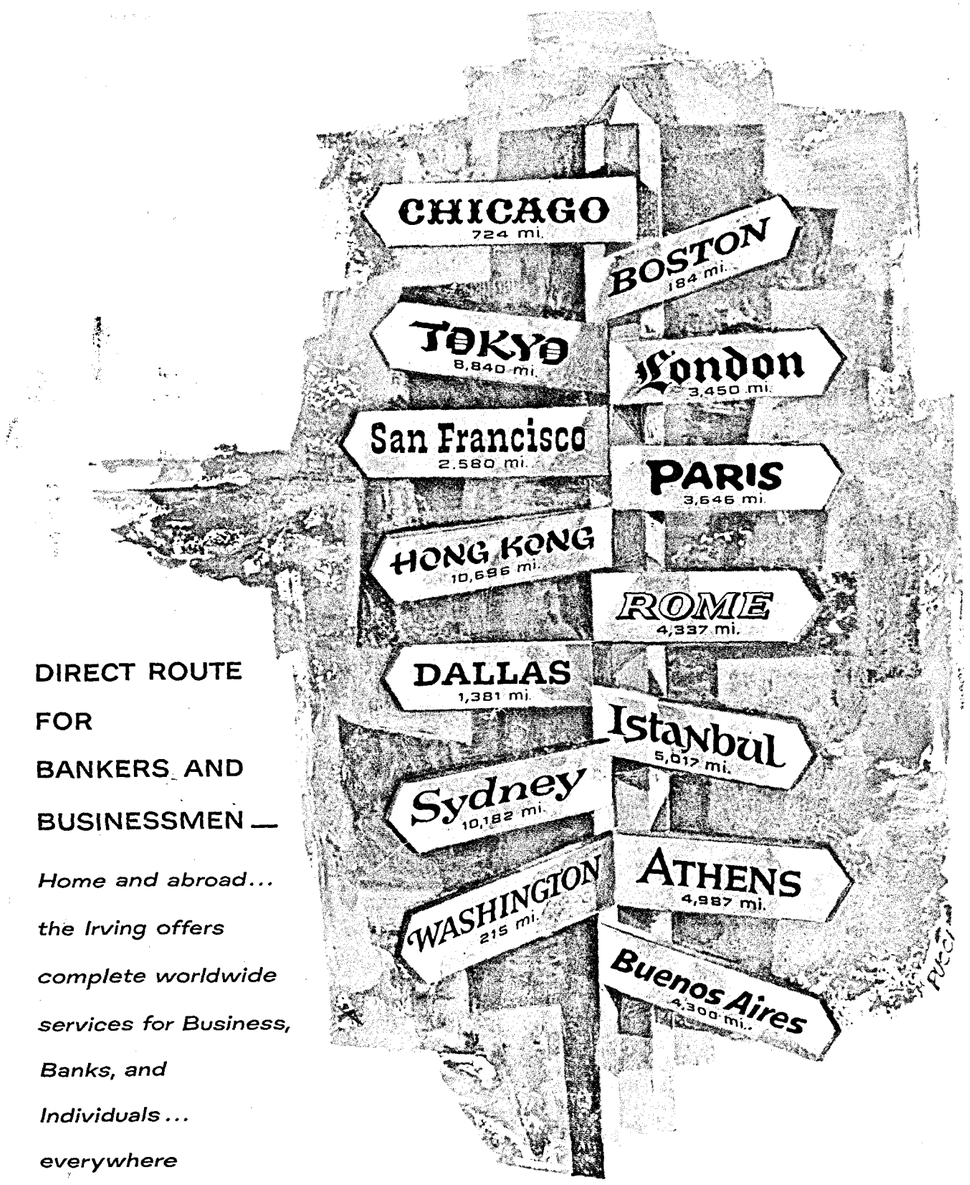
TIME AND PIECE

The Ministry of Labour has estimated that in April 33 per cent of all manual workers, and 42 per cent of those in manufacturing, were paid by results, i.e. under a scheme whereby wages vary according to the output of individuals, groups or departments. More among large firms than among small ones have such schemes. The industry group with the highest proportion paid by results was shipbuilding and marine engineering: there it was 65 per cent.

ONCE SUCH A BARREN WASTE THAT THE BRITISH SACKED THE OFFICIAL RESPONSIBLE FOR ACQUIRING IT, HONG KONG IS NOW ONE OF THE GREAT CITIES OF THE ORIENT. YOU WILL FIND IBM AT YOUR SERVICE THERE—AS IT IS AROUND THE WORLD.



Kam Leung, IBM representative, makes a sale



In the world of Kam Leung a sortie by sampan is not an everyday affair. But, as an IBM representative in Hong Kong, one of the world's most dynamic trade centres, he knows customers are where you find them—sometimes a mile off shore.

Kam Leung is ferrying an IBM Electric typewriter out to demonstrate it for the purser of a Norwegian ship anchored in Hong Kong harbour. Life afloat can be rough on machines as it is on men: the purser must have a typewriter that not only will turn out fine work quickly and economically, but will stand up to seagoing stresses. As Kam Leung pointed out, the IBM Electric is not only ruggedly built, but offers a special advantage to a customer who may be in Rio one month and Rangoon the next: practically anywhere his ship makes port in the free world, the purser will find skilled IBM service at his command.

IBM's way of doing things demands the same meticulous attention to the marketing and servicing of our products as is given to their design and manufacture. As Kam Leung occasionally makes a call by sampan, other IBM representatives have been known to travel about by reindeer sled in Norway, by helicopter in the Gulf of Mexico, by veldt-hopping private aeroplane in Africa.

There are 293 IBM offices scattered about in 90 countries. In every one of them, you will find the same enthusiasm for seeing that you have what you need when you need it—wherever you may be.

sufficiently pressed for space in city centres to think seriously of building on stilts over the tracks. Whatever the reason, two of the projects now in hand have both been started by airlines. British European Airways is putting up a new £3½ million, 10-storey terminal over the tracks at Gloucester Road and laid the foundation stone three weeks ago; British United Airways started work this week on a new £100,000 terminal stretching over several railway platforms on the Buckingham Palace Road side of Victoria Station.

This BUA terminal is much simpler than BEA's project, which is expected to be ready in mid-1963, but in a number of ways it is the more interesting. BEA has not been able to exploit the convenience of building above the tracks by having a direct link with the underground services beneath; London Transport did not think that enough air passengers were likely to use the underground to justify the cost. The Victoria Station project, on the other hand, works hand in glove with the railway. It is intended to serve air passengers for Gatwick airport (BUA will provide desks for other airlines using Gatwick) who will check in at the terminal and then board the trains waiting on the platforms below. There has been talk of providing a train every 15 minutes; there are only two services an hour to Gatwick at present, and airlines landing large numbers of passengers have complained that the railway does not always provide enough coaches to get them away.

The most interesting difference, however, is that while BEA pays a flat rent for the air rights above Gloucester Road, the Southern region of British Railways has learnt from mistakes made at London Airport and is charging British United Airways a toll charge, instead of a flat rent, based (on a sliding scale) on the number of people using the terminal. BUA's own estimates of the traffic are 350,000 passengers next year, when the terminal opens in the spring, and a million a year by 1964.

UNIT TRUSTS

Looking Up

THERE are more signs of activity in the unit trust movement, and October's net sales were much better than the unexciting conditions in the stock markets might have suggested. For the sixth successive month sales exceeded repurchases, amounting to £2,741,000, but nearly half of this total came from the Scotbits block offer. Even without this offer, however, sales were still considerably in excess of repurchases of £794,000. For the last four months repurchases have been around £750,000-£800,000 a month.

The attractions of unit trusts have not escaped the notice of trustees and many trusts are wooing these new equity investors. This week offers have come from Orthodox Unit Trust, British Industries Third Trust, Shield Unit Fund and Crosby Income. For

PUBLIC DEPARTMENT

some trustees wishing to maintain a high income on switching from gilt-edged stocks, British Industries Third and Crosby Income both offer a yield of 6 per cent. The former's portfolio is made up entirely of equities, but it includes a number of rubber and tea shares as well as copper and gold mining issues. About one third of Crosby's portfolio is in preference shares; its units are offered at 4s. 11½d. Following the subdivision of the old Shield units into three, the price of its offer has been fixed at 4s. 9½d. to yield just under 4 per cent. The Orthodox trust holds 35 per cent of its portfolio in fixed interest securities and a further 10 per cent in gold shares; at 14s. 5d. the units offer a yield of 4.6 per cent.

Some new trusts are in the offing and Board of Trade approval is being sought for the trust deed of Stockholders Unit Fund, which has been designed particularly for the small investor. It will be operated by the John Govett group which also manages a number of investment trusts and it will seek its investors from stockholders' introductions rather than by direct publicity. Reports of a link between Unicorn Securities and Royal Exchange Assurance group to form a new unit trust have been described as "unauthorised and premature." But the possibility of unit trust management being brought in to help to administer some of the big trust fund departments is an obvious possibility.

CAR EXPORTS

More for America

SHIPMENTS of British cars to the United States are beginning to reach a more respectable level this autumn. They had risen gradually during the summer, when BMC began shipping some of its new sports car models. But shipments remained well below the level of sales; in September, for example, some 2,500 were exported but 6,500 were sold. De-stocking at much this sort of rate had been going on for fifteen months. By now American dealers seem to have reduced their stocks to a level they think appropriate to the present rate of sales, and have begun to order again. Sales are now a little more than 60 per cent of those a year ago, when the decline was already well under way. This year they are likely to be under 80,000, compared with 134,000 in 1960 and 195,000 in 1959. Volkswagen alone will probably sell twice as many cars as British manufacturers this year; it remains the only European manufacturer unaffected by the slump in imported car sales.

Next year is expected to be rather better for all car sales in the United States. Importers of British cars hope to participate in this prosperity, and therefore want to build up stocks during the winter for the spring selling season. BMC reports that its dealers are taking all the sports cars that it can supply. It hopes that the Cooper versions of its baby cars will find a market in America among sporting enthusiasts—who are for the most part not the buyers of sports cars. These go to the middle-aged, who seek to recapture their youth, or anyone who wants a different second car. Standard-Triumph also reports a strong demand for its sports cars, and that Triumph remains the top-selling British make (though the different BMC names together outsell it by a wide margin). The main problem for S-TI now seems to be getting production of the TR4 built up quickly enough to take advantage of the demand for the new car. Rootes has found that demand for the Sunbeam Alpine remained fairly constant, and that sales of the Hillman Minx improved during the summer. It will soon be introducing the Super Minx as well, keeping the old model on as it has done in Britain.

The re-starting of shipments by the American-owned British companies is the most significant sign of the change in the American market. Ford announces that it began sending cars to America again last month, and has by now shipped 1,400. Most of these are Anglias, but it is also introducing the Classic and Capri to America. They will sell roughly in the price range of the American compact cars, though the Anglia costs less. Their appeal is therefore likely to be more specialised. The same applies to the new Vauxhall Victor, shipments of which will start in January. The old model was one of the most popular British cars in the United States two years ago, but sales fell away almost to nothing this year. After such an experience, it is encouraging that General Motors should find it worth importing cars from Britain again. Whether it and Ford will continue to do so after the Ford Cardinal is introduced in America, probably next year, remains the unknown factor.

WOOL TEXTILES

Opportunity Beckons?

A FALL of 2 per cent in the volume and value of Britain's exports of wool textiles this year is predicted by the National Wool Textile Export Corporation. Though exports in the first half of 1961 were 7 per cent lower than a year earlier, the improvement is not quite the revival that the corporation seems to have expected: three

INDEX

The Index to *The Economist* is published quarterly. The subscription rate is 10/- a year; single copies are priced at 2/6 each. The Index to Volume CC (July to September, 1961) is available from:

The Publisher, 22 Ryder Street, St. James's, London, S.W.1

months ago a small increase in exports was thought possible. The ending of the annual scramble for the United States' market through the imposition of a crippling but uniform import tariff affected earlier comparisons, but in Canada, Britain's largest export market, exporters suffered a severe and genuine setback, from which they have not yet fully recovered.

Since the war, Britain's exporters have been squeezed between high tariff walls around many markets and a larger volume and greater range of wool manufactures from their competitors. Though they have so far proved adaptable enough to find other outlets to replace lost markets, the alternatives diminish with the sealing off of each market by protective duties. New Zealand has recently announced an increase in its tariffs from July next. The increase is smaller than it might have been had local manufacturers had their way, but in Australia, too, local manufacturers who have obtained temporary relief from imports of cheap cloth this year are now asking for greater protection. Whether by accident or design, British exports have been given a more pronounced European slant by an increase in exports of wool cloth to common market countries this year, despite slightly more unfavourable import duties.

Many manufacturers have already made some of the necessary dispositions in readiness for Britain's entry into the common market, and the industry as a whole is in favour of it. West Germany has become the largest export market for wool manufactures since the war; the snag is that Italy holds more than half this market, and Britain's share has fallen. Exports of cloth to France and Italy have been the principal source of satisfaction this year, but exports to France have probably been assisted by that country's earlier liberalisation of imports and Italy has increased its exports of woollen fabrics to this country by about two-thirds this year.

In the give and take that would follow Britain's entry into the common market, manufacturers of cheap woollens will evidently have to take it. If, as this year, Europe prospers, the worsted and better quality woollen manufacturers ought to expand their sales. The influx of Pakistani immigrants into the wool districts will help. Labour is extremely scarce, particularly for work in a hot, humid atmosphere, and immigrants have filled the breach, though at the cost, it is alleged, of a deterioration in the quality of some products. Deliveries of woollen cloth by manufacturers in this country fell 6 per cent in the year to September; deliveries of worsted cloth were unchanged.

GAS

LPG for London

ALONGSIDE the pipeline that it is laying from Fawley refinery to a terminal close to London Airport, Esso Petroleum is also laying an 8-inch line to carry liquid petroleum gases from the refinery to go into gas supplies for London. A deal has been made with the North Thames Gas Board under which it will purchase from Esso large quantities of this liquid gas; and Power Gas, a part of the Davy Ashmore group, is to build a continuous reforming plant at Southall to convert these rich gases into the gas of lower calorific value used in British households and factories. This plant is designed with a capacity of 60 million cubic feet a day; but the board may also be using propane in other forms of peak load gasmaking.

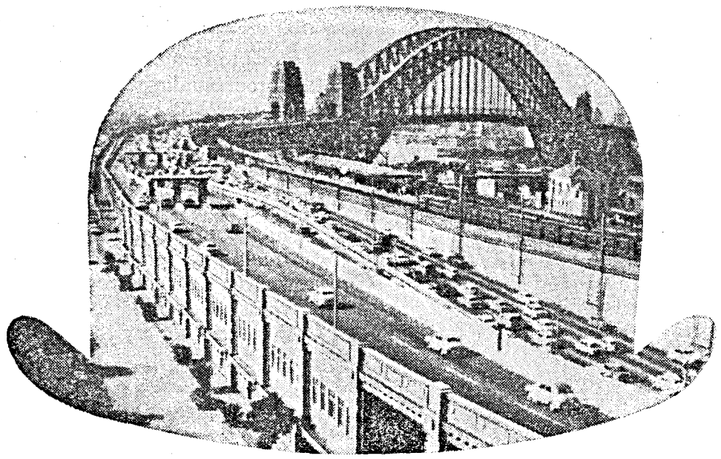
North Thames has always been the prime mover in the import of liquid methane; in that context it was strongly opposed to LPG or other imported hydrocarbons as substitutes for methane either for reforming or for enriching low-grade gas from Lurgi plants. However, the board has always stated its readiness to take all the petroleum fractions that it could from refineries within Britain. The propane, butane, and other gases contained in a broad specification LPG give this gas a calorific value per cubic foot, or per gallon liquid, of about five times that of British town gas and about twice that of methane; the gas can be liquefied under moderate pressure, as it will be in the line from Fawley, or at atmospheric pressure under moderate refrigeration. The North Thames board will no doubt be taking a sizeable proportion of the 354 million therms (700,000 tons liquid) of methane due to begin being landed in 1963 for the use of seven gas boards. The Southall plant for reforming LPG will also come into operation in mid-1963; by then North Thames may be the largest consumer of liquid gas in Britain, though there are other area boards with ambitious ideas too.

BREWING

Research Alliance

AN agreement to pool research and technical development has been signed by Ind Coope Tetley Ansell, John Labatt of Canada, Lucky Lager Breweries of the United States and Stockholm Breweries of Sweden. The main purpose of this agreement is to direct on an international scale basic and applied research designed to secure economies in production, an improvement in the taste of beer, the measurement of changes in public taste and the adaption of modern technology. How closely the work of geographically separated research teams can be blended together remains to be seen; but obviously there is room within this alliance to share out research projects and to exchange information.

The implications of this agreement, its signers have said, go much wider than research on continuous brewing and continuous fermentation. But it is these continuous processes which offer the most interesting possibilities at the moment. Members of the alliance are operating experimental continuous plants; but so are other go-ahead brewers both in this country and abroad. Labatt has a patent on continuous fermentation dating back to 1892; but there are quite a number of patents in this particular field and the brewers' principal task at the moment is to hit upon the one most suitable for their needs. In the mashing stage of brewing, continuous units have been developed that give satisfactory results and which compare economically reasonably well with the batch process. At the boiling stage, progress is not so well advanced and the major problem of linking continuous fermentation to the boiling and mashing processes is still in the experimental stage. A fully continuous process should offer the possibilities of economies in the size of plant and the use of labour, and it should give the brewers more consistent control over the quality of the beer they brew. At this stage it is unprofitable to speculate how far the continuous process could supplant batch brewing; but no doubt, as Mr Neville Thompson of Ind Coope has said, the public will have a chance to taste continuously brewed beer in a year or two's time.



COMPUTERS

Where Do We Go From Here?

COMPUTERS have become the accepted means of handling large numbers of figures, whether they be wages, pensions, stores, bank accounts, orders or scientific equations. This market alone will not, however, keep alive all the computer manufacturers at present operating in Britain. To sustain production at its present level they must now start the more difficult task of convincing potential customers that computers are just as capable of handling data that is not expressed arithmetically and sometimes looks as if it never could be. The Institution of Production Engineers, in a survey* of the applications for computers in production control laid down the following criteria: "if the problems are complex, the volume of data is high or the processing must be done within a tight time schedule"; with a slight stretch of the imagination these standards could be made to fit a whole range of human activities from oil refineries to medical diagnosis.

Some of the best brains in the computer business on both sides of the Atlantic are currently engaged in trying to extend the market into these new fields. The Department of Scientific and Industrial Research** thinks that some of the obstacles may lie with the computer companies themselves. The DSIR points out, along with some acid comments on the performance of certain ancillary equipment, that industry is often quicker to grasp the principles of automa-

PLANNING BUSINESS DOWN UNDER?

The Bank of New South Wales
will put you in the picture

The Bank of New South Wales can't exactly draw everything out of the hat for you, but if you're planning business Down Under you couldn't gain a clearer picture of current Australian and New Zealand situations than from us.
We've been in Australasia since 1817. We were the first bank there; we still are. Today we have over 1,150 offices throughout Australia, New Zealand, Fiji, Papua and New Guinea all providing key services, many of which are peculiar to the Bank of New South Wales.
We find customers take their hats off to our initiative and sense of judgment. We doff ours to them *too*, of course. There's mutual interest and respect between the 'Wales' and our customers.

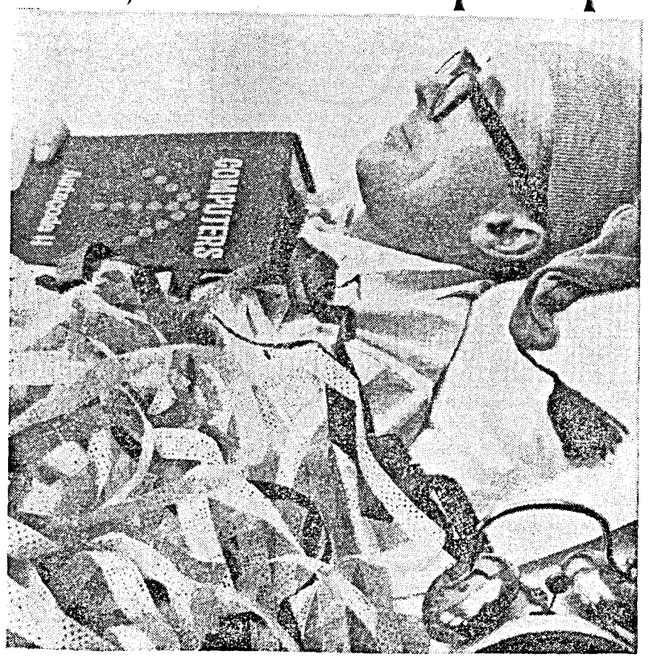
Bell, Book and Papertape



WELL, we must all sleep sometime, and I'm no exception, but don't run away with the idea that I need a rest. We at Elliotts live, eat and sleep computers, that way we work all the time on a full-time job. That's why we're a success. You can't believe it? Well, take me for example, not literally, because I'm a very important cog in the Elliott wheel, but look at me now.

I have no difficulty in getting off to sleep – and I don't count computers – because I've got it all taped! It's a matter of application and in that field computer experts are tops. What's the prime demand in computing today? Speed. And speed is the essence of our operation. Fast thinking. Fast building. Fast computers. Fast asleep!

Now, to sell computers successfully you need know-how. The know-how to produce a top flight computer at the lowest possible cost. That's what Elliotts did. And last year we made more, sold more, delivered more computers than ever before – success achieved by experience!

Now we've designed another computer. The 503. We've built into it all the ingredients of our success plus one more – speed. Speed at a sensible price too! With all the know-how to back us, we can give you the best of everything. Top quality, top reliability, top performance. *And* utilising existing 803 programmes you've no need to scrap your library or launch into new programmer training. What more could you ask for than the 503?

Come and pay us a visit. It's *not* far, and you could go a lot further before you found anything as good. Oh yes, don't take too much notice of this sleeping business. We'll have a wide-awake answer to your problems, so bring them along with you, too!

Building gentlemen in flat tops look to

Specification of Tygascrim roofing membrane can prove to be a lasting solution in the waterproofing of flat roof buildings. This lightweight membrane weighs just over 2 oz. per square yard and yet has a bursting strength of 140 lbs. per square inch. The intrinsic virtue of Tygascrim is that it neither *carries* nor *traps* the moisture which can boil out of some materials to create trouble-brewing holidays or voids in the newly laid bitumen. Even so, TYGASCRIM has the strength to reinforce and homogenise the roofing asphalt. That's why wise men with flat tops in mind will ask their building gentlemen "Have you specified Tygascrim for my roof?"

TYGASCRIM

Full details of Tygascrim can be found in Specification 1962 Roofer section—or direct from The Marketing Officer, Fothergill & Harvey, Summit, Littleborough.

Fothergill & Harvey

devise special products for industry

tion than the automators are to grasp the principles of industry. This particular criticism gives special interest to the creation within one computer manufacturer, Elliott-Automation, of an eight-man team to analyse tasks that seem to defy quantitative description and see whether in fact these are as resistant to automation as they appear. The results of some early investigations are surprising; they show that some operations thought to depend on an element of human judgment do in fact conform to fairly predictable patterns and are therefore suitable subjects for automation. This is particularly true in the process industries. Alternatively, they depend, as medical diagnosis may, on human memory and access to reference books, and a computer could efficiently stand-in for both of these. These conclusions are not likely to surprise ultra-sophisticated scientists who have studied what is known in the vernacular as the "mechanisation of thought processes." But carrying out this kind of analysis in individual factories on individual pieces of equipment like distillation columns takes considerable time and skill, and Elliott is thought to be the first manufacturer to undertake its own investigations as part of its field research.

DOMESTIC APPLIANCES

Struggling Through

AUTUMN is usually the busy time for the domestic appliance industry—apart from the refrigerator makers, whose selling season is the summer. This year sales have remained at a pretty depressed level, and it seems that only where obsolete models are being sold at cut prices are sales higher in volume than they were last year. This practice has recently spread from refrigerators to washing machines and other appliances, as their manufacturers have found it necessary to clear stocks of old machines before introducing new models. Perhaps as a result, some makers find that orders from the trade are now slightly higher than they were a year ago. Cut price selling continues with refrigerators, and may help to explain why sales were about 30 per cent higher than a year before in September. Most sales, however, are still at list price. But, as this is the off-season for their sales, the rise in total is not large and there are signs that the improvement has not been maintained. Retailers' and makers' stocks of refrigerators remain uncomfortably high for the end of the selling season—the latter are 40,000 higher than a year ago—though retailers did manage to reduce theirs during September.

Manufacturers have a gloomy prospect to face this winter. Refrigerator makers already have stocks adequate for the new year, when retailers start buying. They cannot therefore afford to make many more refrigerators during the winter than retailers will currently take, which is likely to be few. More short-time working and perhaps dismissals can be expected. Makers of other appliances should not suffer as badly, with their more evenly spread sales. But they are all facing a second year of operating well below capacity. The industry feels that it is time that the Chancellor stopped adding to its burdens. A cut in purchase tax and ten per cent deposit for hire purchase is its formula for a return to prosperity. Even this might not bring back the boom of 1959. That seems to have been an experience that comes but once, not the pattern of the future—as too many firms thought it was.

Cheaper Dishwashing

THE merger between Charles Colston and Rolls Razor to form a jointly-owned company, Rolls-Colston, brings together the pioneer and the latest exponent of direct selling. Sir Charles Colston adopted this method to get the Hoover into the home by sending his salesmen there first, and has employed it for his dish-washing machine; Mr John Bloom used it to bypass the retailer, which Sir Charles and Hoover had not done, and, he claims, to save on the selling costs of his Electromatic washing machines. Now Mr Bloom's methods have won. The Colston dishwasher will only be sold direct to the home; and its price will be cut from £99 to "something over £60," with a simpler version selling for £51. Few changes have been made in the product to match this drastic cut in price; a cut of a third would roughly match the retail and wholesale margin. Sir Charles and Mr Bloom agree that this is a net saving, when they are sending their salesmen into the home in any case; and they also gain from a reduction in the purchase tax payable on the lower price. The market has failed to respond to dishwashers as quickly as Sir Charles had hoped; claimed improvements to the machine and this drastic price cut seem the best way of getting a reasonable volume of sales.

SHORTER NOTES

Lord Cobbold, former Governor of the Bank of England has been appointed a director of the Steel Company of Wales and also of Royal Exchange Assurance.

*

Britain has agreed to import 150,000 tons of South African sugar a year for the next five years. Following South Africa's break with the Commonwealth, it lost its rights under the Commonwealth sugar agreement. Under that scheme it obtained a quota of 157,000 tons in the British market this year at a price of £45 a ton. It qualified for the Commonwealth preferential rate of duty on other exports. The price paid for South African sugar will be £35½ a ton next year, which, in line with earlier expectations, is about mid-way between the free market and commonwealth price.

*

In the year to March 31st, the sales of Remploy, the organisation which employs severely disabled people, reached a record total of £5,557,000, compared with £5,143,000 in 1959-60. Net output per man rose from £409 to £448, but the excess of expenditure over income rose by £32,000 because higher wages were paid and more workers were engaged, many of whom had to be trained.

*

Firm applications have already been received for 875,000 of the issue of up to 2 million 5s. shares being made by the Anglo-Nippon Trust at 8s. a share. As stated in these columns two weeks ago, the trust is to invest in Japanese equities with long-term growth prospects. No dividend will be paid for the first accounting period to end February, but it is intended thereafter to distribute the bulk of the income until a gross annual rate of 8 per cent has been paid.

*

The Public Works Loan Board has cut its interest charges from 7¼ to 6⅞ per cent for loans of not more than 15 years, and from 7 to 6¾ per cent for loans of over 15 years. This move follows the cut in Bank rate and the general easing of local authority loan rates in the London market.

*

The directors of Rediffusion have declared an unchanged interim dividend of 9 per cent free of tax on the capital as increased by the recent rights issue. They are also to make a two-for-one scrip issue and forecast a 5 per cent tax free final dividend on the bigger capital, which would give a total equivalent to the 24 per cent tax free payment in 1960-61.

COMPANY MEETINGS

RONEO LIMITED

LARGER TURNOVER AND TRADING PROFIT

FURTHER ISSUE OF CAPITAL FORESHADOWED

ENCOURAGING PROGRESS IN OVERSEAS BUSINESS

SIR GREVILLE MAGINNESS ON FACTORS IN NATIONAL SITUATION

The Fifty-fourth Annual General Meeting of Roneo Limited was held on November 9th at the Connaught Rooms, Great Queen Street, London, W.C., **Sir Greville S. Maginness, KBE** (Chairman of the Company) presiding.

The secretary (Mr A. C. Hall) read the notice convening the meeting and Mr H. O. Coulson, FCA, representing the auditors, Messrs Barton, Mayhew & Co., read the report of his firm.

The Chairman said:

Ladies and Gentlemen,—In accordance with our usual custom I suggest that with your permission the Report and Accounts be taken as read, but before making any comments on the Accounts I propose to deal with certain changes on the Board of this Company since we last met.

DIRECTORATE

In April of this year Mr Peter Carew decided to relinquish his various industrial interests and duly resigned from the Board. It has been my privilege and pleasure to have been associated with Mr Carew on the Board of this Company for the past eighteen years during which period he has proved to be a wise counsellor and loyal colleague. I am sure that shareholders will desire to associate themselves with the Board in wishing Mr Carew many years of happy retirement.

To fill the vacancy Mr E. D. E. Andrewes was appointed a member of the Board.

Your Board also decided to appoint two additional Directors. I refer to Mr G. V. Willson Sales Manager of the Duplicating Machines and Supplies Division and Mr J. D. Forbes Watson Sales Manager of the Furniture Systems and Contracts Division. I am confident that the knowledge and experience which these two gentlemen have acquired in their important spheres of operation will be of considerable benefit at our Board Meetings. The confirmation of the appointment of these newly-appointed Directors will come up at a later stage in the proceedings today.

CONSOLIDATED ACCOUNTS

Your Board is pleased to report a trading profit for the past year ended June 30th last of £869,823 representing an increase of £58,088 over the previous year. The net profit for the year amounted to £260,563 as against £337,798 for the previous year. The latter figure included a sum of £78,443 in respect of taxation adjustments relating to previous years and surplus on the realisation of investments thus making the comparable net profit figures of £259,355 in 1960 and £260,563 last year. You will see from the Consolidated Profit and Loss Account that the charge for taxation is some £84,000 over and above the amount set aside last year. This is accounted for by the increase in trading profits higher rates of profits tax and in 1960 we enjoyed larger investment allowances on the heavy purchases of capital equipment. To this profit for the year we have to add the sum of £349,686 being the unappropriated balance at June 30, 1960. From the resultant figure of £610,249 it is proposed to transfer £100,000 to General Reserve bringing the total of this reserve in the Balance Sheet to £1,490,000. Dividends less income tax have already been paid in respect of the 6 per cent and 10 per cent Preference Stocks and an Interim of 5 per cent on the Ordinary Shares such dividends amounting in all to £55,080. It is now recommended that a Final Dividend of 12½ per cent less income tax be paid on the Ordinary Shares making 17½ per cent less income tax for the year. After making these provisions the balance of unappropriated profits to be carried forward is £350,271 as against £349,686 brought forward from the previous year.

I shall refer later to the bank overdraft appearing in the Balance Sheet but I would draw the attention of shareholders to the item of Balance at Bankers and Cash in hand under Current Assets amounting to £193,938 which almost entirely consists of cash held by our foreign branches and subsidiaries for their own requirements.

TRADING

Our sales last year advanced by 18 per cent compared with 1960 and I am pleased to be able to report that all Divisions made their contributions to this achievement.

This increase in turnover was all the more gratifying as we had to face intense competition both at home and abroad as well as further rises in labour and material costs and it was only by the profit earned on our increased sales that we were able to offset these additional burdens.

Notwithstanding the increased factory output the demand for the products of the Company was on such a scale as to make it impossible for us to satisfy the needs of our customers and your Board considered it necessary if we were to enjoy the continued goodwill of our friends both at home and abroad to embark upon a further scheme of expansion.

The financing of these necessary extensions and additions to-date has been provided by bank accommodation but it is the intention of your Board to submit proposals for the issue of further capital when conditions are appropriate so as to provide the necessary funds to repay this overdraft and such additional finance as may be necessary to cover the balance of our capital requirements.

Your Board is pleased to be able to report that orders placed in the first four months of this year have been well maintained. On the other hand the erosion of profit margins through competitive conditions both at home and abroad will continue and may well become more intense. Your Board however is satisfied that your Company is engaged in an expanding industry which will provide opportunities for continued growth and they see no reason why they should not obtain their fair share of this growing business.

When I addressed you last year I indicated that we would derive some benefit from our new factory at Norwich during the year under review. This has proved to be the case but I am sorry to say not as much as I had hoped. We had to face unexpected delays in the delivery of plant and special purpose tools and the acquiring and training of the necessary labour for the production of our products has demanded considerable patience but I am glad to be able to add that we are overcoming these initial difficulties and that we should derive increased benefits from these works during the current financial year.

DUPLICATING MACHINES AND SUPPLIES DIVISION

We are placing on the market a new Model 550 Policy Stencil Duplicator to replace the 500 Model over which it has several important advantages. Amongst others the motor is in the machine and a stand is not therefore absolutely necessary. Moreover it is being offered to users at a price considerably less than the 500 Model.

We are also offering a new photocopying machine under the name of "Roneo Flash" and Spirit Duplicators both hand and electrically operated.

The demand for supplies continues to grow with the increased sale of machines.

FURNITURE, SYSTEMS AND CONTRACTS DIVISION

We continue to widen the range of Flushline Furniture of the most modern design and during the past year encouraged by the considerable success which we have enjoyed in the sale of Desking, introduced two years ago, we have developed a matching range of furniture such as Telephone Tables, Bookcases, Sideboard units and various space-saving layouts. We have been able to apply these various items of matching furniture to our well-established Executive unit range.

We have also placed upon the market a new range of Lockers both in styling and construction which should appeal equally to both offices and works.

For some years now we have been developing a new range of vertical Planfiles of an entirely new design and application and we are now able to offer this new line of equipment designed to deal with the difficult problem of not only filing but of housing valuable drawings.

We have also placed on the market a new exclusive range of medium priced office chairs which will meet the needs of the modern office user for comfortable, economical, and attractively designed chairs.

By the provision of these various lines we are now able to offer a complete range of furniture in both upper and medium price ranges.

EXPORTS

Having regard to the vital need for increased exports in the national interests we have spared no effort to develop our foreign business. I mentioned in my Address to the shareholders last year that our export trade had shown uninterrupted progress each year for more than a decade. It is a source of considerable satisfaction to your Board to be able to report that last year we made further progress in all sections of our overseas business which showed an overall increase of 23 per cent over the previous year. We have no illusions about the struggle which lies ahead in our fight to obtain an even larger share of export trade but we face the challenge in the knowledge that we have made encouraging progress which will inspire us in our determined endeavours to establish another new record this year.

RONEO-NEOPOST

This wholly-owned subsidiary continues to progress satisfactorily. In addition to our well-established lines we have acquired the exclusive rights in the United Kingdom for the sale of certain specialised machines for inserting and mailing, folding and signing and dating. The extension of our lines in this way will enable us to offer a more comprehensive range of Mail Room equipment. I feel that too often this part of the office tends to be neglected from the point of view of modern equipment and the economies and increased efficiency which can be derived from its installation. We shall be pleased to examine with any interested concerns the best way of improving the layout and equipment of the Mailing Department without any obligation on their part whatever.

I need hardly add that the same offer of free survey applies to any other of our Divisions and in these sternly competitive days it is of the utmost importance for us all to examine every item of possible economy whether through labour saving, space saving or increased efficiency. "To Call in Roneo and do the job properly," will continue to be a worthwhile operation.

NATIONAL SITUATION

The prosperity of our Company is dependent not only upon our own efforts. Indispensable as these are they can too easily be frustrated by circumstances over which individually we can have little control. It is for this reason that for many years I have completed my review of our affairs by drawing attention to factors in our national situation which appeared to me currently significant in relation to the prospects of our own Company.

As I look back at what I have said in previous years I find one theme constantly recurring: the vital need to keep down industrial costs so as to increase our competitive power in the world's markets. Awareness of this need has been blunted by the very fact that the United Kingdom's share of world export trade has been declining for so long and so continuously. Sudden dangers are apprehended but those that mature slowly are disregarded.

Crises due to balance of payments difficulties or to loss of confidence by foreigners in sterling have followed each other with almost predictable regularity since the war. From these we have emerged at the apparent cost merely of a certain amount of temporary inconvenience caused by the emergency measures taken by the Government, but the disastrous consequences we might have feared of failure to deal with the underlying cause of these crises have not materialised. That this has been the case is hardly due to any merit on our part. We must attribute it instead to the forebearance of other countries towards ourselves as the chief beneficiary of the international arrangements which have been developed for assisting countries in balance of payments difficulties. The man who habitually conducts his business in such a way that he has repeatedly to throw himself on the mercy of his creditors finds after a little while that their terms stiffen against him and that his own standing among his fellows declines. So it is also on the scale of the affairs of nations and part of the price we have paid in recent years without being fully conscious of it for our own failure to avoid these recurrent crises has been a steady decline in our influence both political and economic in the world.

GOVERNMENT EXPEDIENTS

The expedients to which the Government has hitherto resorted as each succeeding crisis has occurred have had because of their very nature to be relaxed as soon as they have served their immediate purpose. Apart from more or less continuous exhortation to greater productivity there has hitherto been little sign of recognition that our recurrent difficulties call for any coherent and consistent policy from any postwar Government whatever its political complexion. From the fact that the Government at the present time appears to acknowledge the need for such a policy we must draw encouragement.

At the same time we should recognise the dangers inherent in the possible extension of Government intervention in the affairs of individual industries and perhaps of individual undertakings. Mistakes by industrialists, however serious, only rarely have grave repercussions beyond their own businesses. Mistakes by Government agencies can be far-reaching and disastrous. For this reason alone it is important that the Government should keep in close touch with those responsible for the management of our industries in developing its policy so that this can be done on the basis of the knowledge and experience of businessmen whose confidence in that policy is essential.

EMPLOYMENT PROBLEM

We are committed in this country to the maintenance so far as it is in our power of a high and stable level of employment. One of the big problems with which we are faced is to find the means of preventing in conditions of high employment the continuous upward pressure on industrial costs and hence on prices of increases in the monetary rewards received by large sections of the community in active employment.

Responsibility in this matter is widely diffused. Employers by their own over-keen competition for labour have often forced wages above the levels negotiated on their behalf with the trade unions to their own and the country's disadvantage and at the risk of discrediting both the responsible leadership in the trade unions and also the established machinery for dealing with these matters. Raising wages might be an effective means by which employers could recruit workers if there were appreciable resources of labour at present voluntarily unemployed. It is often argued that by pushing up wages more efficient employers are able to draw workers away from the less efficient. This contention does not stand up to very close inspection. Often it is not a question of efficiency at all, it is rather that an undertaking manufacturing for a predominantly home market is under less discipline in regard to its costs than one making mainly for export, or that an industry the nature of whose process involves a high ratio of capital costs to labour costs attaches less importance to increases in the latter than another in which this position is reversed. High wages may encourage the replacement of human effort by mechanical power but the extent to which this is possible at any particular time varies very much from industry to industry.

So far as the trade unions are concerned there is widespread misunderstanding of their capacity to make a direct and positive contribution towards a solution of these problems. It is only too obvious how irresponsible action by a trade union can frustrate the efforts of both employers and the Government, whether such action takes the form of encouraging the union's own members to believe that they can annex for themselves a disproportionate advantage in wage negotiations at the expense of the general body of workers or of other sections of the community, or whether it takes the form of disrupting production by strikes. Such action by a union may call for and receive condemnation from other trade unions acting perhaps through the TUC. We are a very long way however from a position in which individual trade unions are likely to accept the views of the TUC even if these could be formulated as to what are proper relationships between the wages of members of different unions.

INTERESTS OF THE PUBLIC

What all engaged in industry need to recognise much more closely is that these matters are not simply the concern of employers and employees and their respective organisations. The public

as a whole is vitally interested in actions and decisions which can have so great an effect on our national well-being and the Government has a duty to intervene if the national interest is threatened.

Some people claim that there is a conflict between the Government's main declared objectives of economic policy of balancing our overseas payments, maintaining employment, achieving higher output and living standards, and avoiding inflation. To my mind most of our difficulties flow from the breakdown of the discipline inherent in the maintenance of monetary stability. If we stop inflation the other objectives will be not more difficult but easier to achieve. We shall have to recognise that any effective check on inflation involves dispelling the comfortable assurance that increases in costs can readily be passed on to the customer. This will follow action positively to stimulate competition which we must all expect to have to meet not only in overseas markets but also increasingly at home. Whilst the principal economic reason for this country joining the Common Market may be that thereby the area will be broadened within which we can sell our goods with the minimum impediment from tariffs and quotas, I believe that in the short run the main advantage may be that it will make for keener competition in our own domestic markets.

In conclusion I would like to express on behalf of my colleagues and myself to all members of our organisation both at home and abroad our sincere appreciation of their loyal and devoted services during the past year and I am sure that shareholders will wish to associate themselves with these sentiments.

The report and accounts were unanimously adopted and the dividend, as recommended, was approved.

The retiring directors, Mr E. D. E. Andrewes, Mr J. D. Forbes-Watson, Mr G. V. Willson and Sir Greville S. Maginness, KBE, were re-elected and the proceedings terminated with a vote of thanks to the Chairman.

LAKE & ELLIOT, LIMITED

A MOST SUCCESSFUL YEAR

MR C. J. LAKE ON CHANGES IN GROUP STRUCTURE

The fifty-first annual general meeting of Lake & Elliot, Limited, was held on November 7th at Braintree, **Mr C. J. Lake** (the chairman) presiding.

The following is his circulated statement:

This has been a most successful year for the Group and it is very pleasing for me to be able to report that all Departments have contributed to the much improved result over the previous year.

In recommending a Final Dividend of 8¾ per cent, less tax, on the Ordinary Capital as increased by the recent Capitalisation Issue your Directors point out that, in respect of the Financial Year just ended, the total sum distributed in Dividend on the Ordinary Capital will be the same as would be required to cover payment of 12½ per cent, less tax, on the present £1,000,000 Ordinary Capital.

As announced in my letter dated June 2, 1961, the Directors have been considering the future structure of the Group and the manner in which its scope can best be expanded. Bearing in mind the differences in the nature of the products manufactured in the Foundries and the Jack Department at Braintree and the need for a greater degree of specialisation, not only in the actual manufacturing processes, but in administration and sales techniques, it has been decided to separate these two activities. A new Company, Lake & Elliot Founders and Engineers Limited, has been incorporated to operate the Steel and Iron Foundries together with the associated Machine Shops. A further Company, entitled Lake & Elliot Jacks and Equipment Limited, has been incorporated to operate the Jack and Lifting Equipment Department. Both these Companies began trading on August 1, 1961, as wholly owned Subsidiaries of the Parent Company.

OVERSEAS

Another wholly owned operating Company has been formed in France, entitled Compagnie Lake & Elliot France, primarily to produce jacks and equipment within the Continent of Europe. A site near Calais has been acquired and it is anticipated that production on a limited scale will have begun before the end of the next Financial Year. I believe that this project will enable the Group to trade in markets which have hitherto been very difficult to enter.

Other negotiations for the manufacture of the Group's products overseas are continuing.

During the year the original Agreement with Key Company for the manufacture of refinery fittings expired and was replaced by a new Agreement with ACF Industries Incorporated who had acquired the former Key Company. To facilitate world-wide sales and service a wholly owned trading Company entitled Lake & Elliot Overseas Limited has been incorporated.

NEW ACQUISITION

On October 1, 1961, through The National Steel Foundry (1914) Limited, the Group bought the share capital of Shanks Ironfounders Limited, of Arbroath. This old-established Company produces both grey iron and blackheart malleable iron castings and the acquisition enables the Group to offer the complete range of ferrous castings: carbon and alloy steels, S.G. iron, blackheart malleable iron and grey iron.

Whilst the short-term order position in the Group is satisfactory, sustained effort is needed to keep all activities in full production as the situation could change rapidly. Little benefit from Shanks Ironfounders Limited is expected during the coming year and it may take up to five years or more before the Subsidiary Company in France is fully developed. I therefore view the coming year, not without optimism, but with caution.

In March, 1961, both your Chairman and your Managing Director completed 35 years' service with the Company and each received the now customary gold watch.

I anticipate that by the date of the Annual General Meeting both the reconstructed Technical building and the Sports Club will be occupied and in use.

I feel sure that all Members will wish to join the Directors in expressing their sincere appreciation of the splendid efforts made by all employees during the year. And in particular I must congratulate The National Steel Foundry (1914) Limited and the Jack Department at Braintree for their achievements of record outputs both in goods and in value.

The report and accounts were adopted.

LONDON MERCHANT SECURITIES

SUCCESSFUL PROGRESS

The Eighty-Ninth Annual General Meeting of London Merchant Securities Limited was held on November 9th in London, Mr Max Rayne, chairman, presiding.

The Directors recommended a dividend of 10 per cent and a free scrip issue of one new share for every two held.

The following are extracts from the Chairman's circulated review:

The affairs of the Company and its subsidiaries have continued to proceed satisfactorily, on the lines forecast in the previous review and the successful progress is reflected in the accounts.

The wholly-owned subsidiary, British Commercial Property Investment Trust Limited, is now the vehicle for all the group's property enterprises. In accordance with our established policy, independent valuations have been obtained in respect of newly completed properties and the resultant surpluses have been taken to capital reserve.

Rentals and valuations achieved in respect of completed buildings have shown gratifying increases over estimates submitted in previous reports. It is expected that the further revaluations to be undertaken during the current year will again produce a significant surplus. Additional commercial properties have been acquired and important new developments are already in hand and in train.

In particular, there has been an impressive expansion in the activities of Kensington Commercial Property Investments Limited (the subsidiary in which we are associated* with the Commercial Union Assurance Company Limited).

British Commercial acquired a two-thirds interest in the Cawder Estate comprising some 5,000 acres immediately north-east of Glasgow.

Our Canadian subsidiary has completed the assembly of a large and important site in Toronto.

Discussions are currently proceeding which may lead to the acquisition by London Merchant Securities of a substantial interest in the equity of The New River Company, Limited, and our association with the latter in the redevelopment of parts of their Clerkenwell Estate.

The debenture loan from the Yorkshire Insurance Company Limited has been taken up to the extent of £2,500,000 in the period under review, leaving a further sum of £1,500,000 available for future requirements. The overall liquidity position may be regarded with confidence.

The results of The "Sanitas" Trust Limited showed a further improvement during the year under review and the increased dividend produces a satisfactory return on our investment.

As to future earnings, lettings already concluded by the property companies indicate that significant improvements can be expected and it is to be hoped that these will be reinforced by revenue accruing from the remaining interests of the group.

The report was adopted and at a subsequent extraordinary general meeting the one for two free scrip issue was approved.

TUBE INVESTMENTS LIMITED

SIXTH YEAR OF RECORD EARNINGS

TI'S POLICY OF BALANCED GROWTH

Record earnings for the sixth successive year were reported by **Sir Ivan Stedeford, GBE,** Chairman of Tube Investments Limited, in his annual review posted to Stockholders on November 16, 1961. In the course of his remarks, Sir Ivan said:

It is my pleasure to report record results for the sixth successive year. On a turnover expanded by 20 per cent, total trading profits, after depreciation of £6,199,900 (£4,904,825 last year), increased by £1,753,660—over 9 per cent—to £20,961,123, despite a reduction of £1,700,000 in the earnings of the British Aluminium Group.

It will be seen in the Consolidated Profit and Loss Account that the profits of the B.A. Group have been shown separately from those of the main TI Group. This has been done because the large minority interest in that Company reduced the impact its earnings have on TI's net amount available for appropriation.

If we look at our results, therefore, without the B.A. figures, we can better see how TI's preponderant and traditional business has fared. This shows that the pre-tax profits of the main TI Group increased by £3.5 million. These take in the earnings of the new companies consolidated this year but not last. If, for a comparison on a like with like basis, these, too, are excluded, our profits before tax, on an expanded turnover, exceeded the record earnings of the previous year by some £800,000.

Having regard to the unavoidable susceptibility of Groups like ours to the changing conditions of the national economy, I believe Stockholders will feel that, however we look at the year's trading figures, they represent a satisfactory result. This is expressed still more clearly in the net amount available for appropriation. While total trading profits rose by approximately 9 per cent, the net earnings of the Group increased by almost 15 per cent, from £8,100,735 to £9,304,538. A significant factor accounting for this was the reduction in the proportion of profit attributable to minority interests, resulting from the substantial fall in B.A.'s profits; there was also the release of £210,000 of a provision made last year against previous losses by Canadian British Aluminium, which is now operating at a profit.

PROGRESS OF DIVISIONS

It would be an over-simplification to generalise on these figures, for we had our full crop of difficulties. In addition to lower aluminium results, the operations of our Cycle and Electrical Divisions were less rewarding. These consumer-durable companies have been subjected to official restraint throughout the year, and there is no discernible prospect of it slackening. Competition became keener for the reduced business available to these industries, and this took its toll on earnings. On the other hand, activity in the capital goods and kindred industries remained at a high level, and kept our Steel Tube, Engineering and General Divisions busy, although margins were under growing pressure.

Our steelmaking companies served with valuable effect the main purpose for which they were acquired and are being developed—that of assuring us adequate supplies of the high quality steels we must use. But they were unfairly burdened by having to carry last autumn's additions to their basic coal and wage costs, and a heavy price increase of fuel oil, without being permitted anything like adequate recompense in their own prices. The argument that cost increases on this scale should be absorbed by higher levels of productivity, affords shallow comfort when this is prevented by official restraints on demand, and when, in any case, the higher productivity is impossible before necessary development schemes are completed. In the circumstances, our steel companies did well on a much increased turnover.

I referred last year to our intention, when circumstances permitted, of reverting to our earlier practice of dividing the year's distribution equally between the interim and final payments. An interim dividend of 7 per cent was, therefore, paid in May, equivalent to half the effective total dividend of the previous year. After careful consideration of the relevant circumstances, including national policy, your Directors recommend a final payment of 7 per cent, making again a total distribution for the year of 14 per cent.

There has been no significant change in the capital structure of the Group, and, I may say, none is contemplated. The small increase in the Share Capital results from the purchase of the remaining Ordinary shares outstanding at July 1960, in Raleigh Industries Limited; the premiums attaching to them are included in the increase in Capital Reserves. The main change to the Balance Sheet arises from the consolidation of the Raleigh Industries, Loewy Engineering and Venesta Foils companies, which were last year included in the accounts as unconsolidated subsidiaries at £19.9 million. We do not intend to consolidate our sub-subsidiary, Canadian British Aluminium, which operated at a substantial profit during the year.

I referred last year to the arrangements we were making to put the finances of the B.A. Group on an independent basis, not least to enable the Company itself to raise funds as necessary for its further development. These plans matured and subsequently by medium term borrowing totalling £9 million at advantageous rates in the Swiss capital market, B.A. has repaid its debts to its bankers and to TI. These Swiss loans, together with the £3½ million Debenture Stock of Raleigh Industries, account for the substantial increase in the consolidated liability under Loan and Debenture Stock. None of it relates to new borrowing by the TI Parent Company.

£75 MILLION DEVELOPMENT PROGRAMME

It was not to be expected that the capital developments for which we issued new Ordinary capital in the spring of 1960 would yet have reached the stage of expenditure on any commensurate scale; of the £23 million gross additions to fixed assets £14 million are in respect of the newly-acquired companies. Whilst substantial progress has been made on a number of important capital projects, the rate of expenditure will now accelerate, reaching its peak in about three years.

We estimate that the capital cost of our development programme (excluding the aluminium companies) will be approximately £75 million, spread over the next five years or so. Financing it should not set a serious problem. With our existing quick assets of £25 million (excluding B.A.), plus our cash flow calculated on a conservative basis, and allowing for additional working capital, the borrowing necessary will be quite short term and comfortably covered by our banking facilities, without affecting dividend policy.

The completion of the programme should ensure our ability to meet the challenges and the opportunities which an uncertain future is certain to present. It represents no more than a continuance, at a somewhat faster tempo, of our post-war policy of modernisation and expansion and carefully-planned rationalisation or production, which has served so well in recent years.

INTERNAL EXPANSION

By this policy, our growth over the post-war years has stemmed much more from the development of our own businesses than it has by the acquisition of new companies. By far the most substantial acquisitions in TI's forty-odd years' history have taken place during the last five years. In this respect, these five years have been exceptional and are, therefore, hardly representative. But during this period, when the disposable resources of the Group have increased by £120 million, £65 million—or over half—have been devoted to the expansion of our traditional business, to the development after purchase of acquired companies, and to the provision of additional working capital. During this same period, Group earnings have increased by 85 per cent, of which one-half has come directly from the companies in TI before 1956. This represents an effective growth rate of these companies of 8 per cent per annum.

The facts show that this policy of controlled and balanced development has been sound. In this critical time of change, a valuable degree of co-ordination and rationalisation has, by it, been firmly established in the aluminium, cycle and precision steel tube industries of the country. In each of our Divisions concerned, and also in the Engineering Division, the integrated whole has acquired a strength far beyond the sum total of the parts operating as separate units. Our competitive power is correspondingly greater: and it is still growing.

We are now proceeding with a £31 million scheme, to be completed in 1964, covering a new low cost steel works and primary and strip mills. It will raise Park Gate's productive capacity from 425,000 to 800,000 ingot tons a year. This extra capacity will be adequate for our needs as far as can be seen at present. It will give the Division a total production potential of 1,300,000 ingot tons a year, and will place us among the most up-to-date and cheapest producers of steel in Europe.

The motive force which generated this important scheme was the need to bridge a gap in TI's future supply of tube steel which threatened to assume serious proportions in the next few years—a situation of the kind from which we suffered so heavily after the war—and which originally forced us into steelmaking. The new project will reduce our dependence on outside supplies by more than 200,000 tons a year, thereby giving an assured market for well over half of the additional capacity.

HIGHER EXPORTS TO EUROPE

We are pleased, though not satisfied, with our

export performance. TI's intake of export orders was £34 million, plus £8 million by B.A. A significant change has been a more balanced distribution of our exports as between Divisions. The Cycle Division has regained its former lead, but, whereas a few years ago over 75 per cent of our direct exports were made by the Cycle and Steel Tube Divisions, now our sales are more evenly divided between four, including the Engineering and Aluminium Divisions.

Our total direct exports accounted for more than 1 per cent by value of all the exports from the United Kingdom, or 2 per cent of the country's total exports of metals and engineering goods. The Commonwealth and the United States of America took 43 per cent and 12 per cent respectively; and exports to Europe increased by over 30 per cent, representing 21 per cent of our total.

CURRENT OUTLOOK

I have reveiwed TI's main affairs in a year when the country once again has run headlong into serious balance of payments difficulties. The familiar measures, with their regular disruption of industrial effort, will no doubt be effective in time in restoring our exports to an acceptable level. They have already damped down home demand generally, but as yet there has not been the compensating improvement in business from abroad.

Our results for the current year, of which only seven weeks are known at the time of writing this statement, must depend to some extent upon how short or long this transition period will be. These are obviously not the circumstances in which one could make predictions with any confidence; neither are they those which might be expected to herald another record-breaking year. I do say without hesitation, however, that TI is in a strong position to make good use of all its trading opportunities, and will be intent on doing so.

COMMON MARKET

I believe the Government is right in seeking admission to the Common Market. In the world of today, we virtually have no other choice. It has become clear that the consolidation of an Atlantic Community lies now through Europe, not outside it. After a second bout of self destruction in a generation, Western Europe's economic revival has proved the vitality of the region and the important part it could play in the world through its economic strength and political influence. Europe might succeed in playing this part without Britain. But I would prefer not to speculate on what Britain's prospects would be if we stand aloof—if the Common Market succeeded without us—or if, without us, it fell apart under pressure of political discord.

Britain's need for larger markets is imperative. We require wider scope for mass production and specialisation. We must look for partners absorbed, as Britain is, in technical progress, and we must associate with other advanced industrial countries in sharing the burden and fruits of research. In reality, these partners can only be found in Western Europe.

I do not underrate the initial cost of joining. For some time, we in TI have been making our plans on the assumption that Britain will join the Common Market. We are not dismayed at the effects this is bound to have on us all. We look upon Britain's joining as an opportunity and a challenge, which should eventually bring the greatest good to the greatest number in this country and in the Commonwealth.

PETER BROTHERHOOD LIMITED

LARGER SALES BUT SMALLER PROFIT

SATISFACTORY ORDER BOOK

MR WILLIAM THOMPSON'S SPEECH

The fifty-fourth annual general meeting of Peter Brotherhood, Limited, was held on November 14th at Winchester House, Old Broad Street, London, EC, **Mr William Thompson, MIPE,** chairman, presiding.

The secretary, Mr Joseph Gerrard, having read the notice convening the meeting and the report of the auditors,

The chairman said: Ladies and gentlemen, I feel my first duty, while presiding for the first time over our annual general meeting, is to express our deep regret that, during the past year, Mr A. Marcus Neal, after fifty years with the firm, including some twenty-five as Chairman and General Manager, indicated his intention to retire from the firm's service.

Without attempting to assess the total value of Mr. Neal's activities during his management, there is no doubt that his intimate knowledge of the business of the company, his experience, his judgment and, above all, his ready guidance in all matters will be much missed by all those with whom he worked. All who know Mr Neal will wish him a long and happy retirement.

NEW DIRECTORS

Additions to the Board during the year have been Mr K. Grant, whose promotion to the position of Assistant General Manager was reported last year, and Mr A. F. Wainwright, who has been our Chief Accountant for the past twenty years.

The appointment of these two gentlemen has caused general satisfaction and will, I am sure, be to the benefit of the firm generally.

As you will see from the Directors' Report you will be asked to confirm the election to the Board of Messrs. Grant and Wainwright later in the proceedings.

THE ACCOUNTS

Before dealing with the question of the profit for the year I should now like, with your permission, ladies and gentlemen, to refer very briefly to the accounts.

From the Balance Sheet, on the Asset side, you will notice there has been an increase of £28,536 since last year under Fixed Assets which, in the main, is accounted for by the increase in the value of Fixed Plant and Machinery amounting to £23,956. This item is being constantly reviewed by your Board who realise the importance of keeping up with the latest machine tool practice which, as you will understand, has a fundamental bearing on efficient production.

Stores and Work in Progress at £1,589,026 show an increase of £216,358 over the 1960 figure. As the increase in the value of Stores amounts to £69,776, it follows that the Work in Progress has increased by £146,582. This, I should point out, is a figure which varies from year to year according to the class of work going through our shops during the period under review.

Debtors and Prepayments at £666,726 and Cash and Tax Reserve Certificates at £466,229 show an increase of £105,394 and £41,113 respectively over the 1960 amounts. These figures, I think you will agree, indicate that the liquid asset position is being well maintained.

The only other figure I would refer to is the surplus of Current Assets over Current Liabilities, which, as you will observe, amounts to the satisfactory figure of £1,349,879.

FIGURES REFLECT LARGER ORDER BOOK

A reference to the Liability side of the Balance Sheet shows Current Liabilities and Provisions at £855,959 as compared with £586,265 for 1960, an increase of £269,694, made up, in the main, by the increase in the amount of the Creditors figure. This figure reflects a larger order book, a remark which also applies to the increase in advance payments amounting to £99,533.

Before we leave this section of the accounts I should like to draw your attention to the Capital Commitments figure of £122,000 for machinery and equipment on order at March 31st to keep our foundries and machine shops thoroughly up to date. Of this amount equipment to the value of £38,000 has already been delivered, while further orders to the value of £62,000 have since been placed by us.

SALES, PROFIT AND DIVIDEND

Sales show an increase of 13 per cent over last year's figure but, as our Chairman, Mr Neal, informed you in his statement last November, a proportion of this work had been taken at very keen prices which were bound to lead to a reduction of Profit for the year now under review.

Accordingly from the Profit and Loss Account I have to report a Profit of £421,120, before taxation, against a comparable figure for 1960 of £509,859.

Of this Trading Profit of £421,120 provision for taxation absorbs £212,800—leaving us with a net profit for the year, available for distribution and allocation, of £208,320, against £268,859 last year.

The question of a Dividend has been considered by your Board who feel fully justified in recommending a Final of 20 per cent., less tax, making, with the 5 per cent, less tax, Interim Dividend already paid, a total of 25 per cent, less tax, on the Ordinary capital.

In addition to the payment of the above mentioned final dividend and allowing for the Preference and interim dividends already paid, we further recommend the allocation of £25,000 to General Reserve, bringing this reserve to a total of £550,000, and the addition of the balance of £16,980 to Carry Forward, bringing this surplus to a total of £184,195.

FULL EMPLOYMENT FOR SOME TIME

I would now like to refer to future prospects and to inform you that at the moment we have a most satisfactory order book which will ensure the full employment of our plant capacity for some time to come.

The skilled labour position has shown a decided improvement in recent months and this additional labour, combined with the benefit of the recently acquired machine tools referred to above, will, I am sure, result in an increase in output during the current year ending March 31, 1962.

The general tendency in engineering towards increased overhead expenses and reduced profit margins must not be overlooked, but in view of our anticipated additional output, it is expected that the profit for the year will also show an improvement.

Looking further ahead, we already have orders which will ensure working to full capital well into the following year and your Directors are confident that, given reasonable economic and political stability, the continued prosperity of your Company is assured.

TRIBUTE TO STAFF AND WORK-PEOPLE

In paying tribute to the staff and work-people I would like to offer my thanks for the efforts made by them to satisfy our heavy delivery programme during the past year.

This has entailed many hours of additional work and my Directors and I wish to express our appreciation of their willing co-operation.

The Report and Accounts were unanimously adopted and the proposed dividend was approved.

The retiring directors, Mr. G. W. Wilks, TD, FCA, Mr Kenneth Grant, AMIMechE, AMIMarE, and Mr A. F. Wainwright, were re-elected and the remuneration of the auditors, Messrs. Whinney, Smith & Whinney, was fixed.

The proceedings terminated with a vote of thanks to the chairman, directors, staff and work-people.

RHOKANA CORPORATION LIMITED

(Incorporated in Northern Rhodesia)

ADVERSE EFFECT OF LOWER COPPER PRICES

UPWARD TREND IN WORLD CONSUMPTION CONTINUED

The following is an extract from the review by **Mr H. F. Oppenheimer,** the chairman, which has been circulated with the annual report and accounts:

The lower copper prices prevailing during the year and the voluntarily reduced sales resulted in our gross profit from mining operations of £8.3m. being £1.9m. less than in the previous year. The adverse effects of the world market were partially offset in our case by a reduction in the unit costs of mining and treating copper. On the other hand, the cost of production of cobalt rose sharply and operations resulted in a small loss.

Our investment income of £4.87m. was £0.65m. higher than last year, mainly owing to the receipt of the Bancroft Mines maiden ordinary dividend, and our total gross profit was £14.37m. Taxation has to be provided at the increased rate of 8s. in the £ now applicable to public companies in the Federation, and our net profit was £10.95m. compared with £11.53m. last year.

The increased tax rate has also necessitated the provision of £0.26m. in respect of additional tax on last year's profits. The directors have appropriated £1.5m. for capital expenditure, placed £0.25m. to general reserve and have recommended the maintenance of the final dividend at 5s. 6d. (net), which together with the interim dividend of 1s. 6d. makes an unchanged 7s. (net) for the year.

COPPER MARKET

At the beginning of our financial year in July, 1960, the cash price of copper on the London Metal Exchange was £254 per ton, rising to £260 later in the month. From August prices steadily receded until, in October, a low point of £218 per ton was reached.

Early in October, 1960, the two producing groups in Northern Rhodesia and certain major producers in North America and in the Congo decided to impose voluntary cuts in production or in sales with a view to correcting the imbalance between supply and demand. In the first quarter of 1961 similar action was taken by other major producers in South and North America and, at that time, it was estimated that the flow of copper to world markets would be reduced by some 250,000 tons per annum. Two of the North American producers have since returned to normal production and the effective reduction in copper supplies is now probably of the order of 180,000 tons annually.

Largely as a result of these measures the downward trend in prices was arrested and at the end of December the market closed at £228 per ton. During the first nine months of 1961 prices on the London Metal Exchange remained relatively steady with a low point in January of £216 per ton and a high point of £248 per ton in May.

LONG-TERM OUTLOOK

The past 12 months have not been free of strikes among the world's major producers. Apart from short shutdowns at various properties, there was a six weeks' strike in October, 1960, at Chuquicamata which resulted in an estimated loss of output of some 35,000 tons. During August and September, 1961, further strikes in Chile and in North America caused losses in copper production amounting to upwards of 60,000 tons. Despite this loss of copper on world markets and political uncertainty in parts of Africa there has not been any hardening in prices. The long term prospects nevertheless remain encouraging. The era of major expansion in the world's productive capacity appears to have come to an end and the upward trend in consumption promises to continue.

The increase in the cost of cobalt production to which I have referred was due mainly to difficulties in recovery and to a reduction in the overall grade.

The political developments in Katanga and the unrest in the Northern Province of Northern Rhodesia did not affect production at Rhokana, which continued uninterrupted throughout the year.

SABOTAGE IN NORTHERN PROVINCE

There has recently been a spate of attempts at sabotage of communications and public buildings apparently arising from the dislike expressed by some African nationalists of the amended constitutional proposals for Northern Rhodesia. The main campaign of sabotage and arson has, however, been centred in the Northern Province, hundreds of miles from the Copperbelt. I am glad to say that the incidence of violence has been contained by firm Government action. There is not much hope of any constitution working until widespread intimidation and violence are eliminated and I trust that those who are in a position to bring the unrest to an end will come to realise that no good will be achieved for the country or themselves by pursuing their political objectives by such means.

The influence of political unrest and uncertainty in Northern Rhodesia and in the Congo over the past year has inevitably been felt by our employees, European and African alike, but they have nevertheless continued to provide the same high standard of service and loyalty as in the past.

Copies of the annual report and accounts are obtainable from the London Office of the Corporation, 40, Holborn Viaduct, E.C.1.

MIDLAND INDUSTRIES LIMITED

INCREASED TURNOVER OFFSETS LOWER PROFIT MARGINS

The fifteenth annual general meeting of Midland Industries Limited was held on November 9th at Wolverhampton, **Mr J. H. Bean, CBE** (the chairman), presiding.

The following is an extract from his circulated statement:

The modest optimism I expressed in my statement last year has been justified by events. In common with many other concerns we have had to meet higher costs both of materials and labour and to accept lower profit margins, but this has been counteracted by increased turnover, the net result being increased profits by all members of the Group.

The Group trading profit at £141,539 is an improvement of some £34,000 on last year. After providing for increased taxation, the net profit at £66,239 shows an advance of about £13,000 over that for last year.

We are recommending a Final Dividend on the Ordinary Shares of 4½d. per share, less tax, making a total of 7d. per share, less tax (same).

The Boston Companies are now wholly located at Heath Town Works, resulting in economies of administration and improved production efficiency.

The products of the Boston Companies are being well received. The Hoskinson Smokeless Incinerator is finding its way into the plant of many of the larger organisations in this country.

The Take-Off machine for plastics, rubber and metal extrusions is accepted as one of the best produced.

The Fordhouses factory of Bettles & Sons Ltd. has enjoyed a very successful year.

During the past year the Parent Company has finalised and brought into full-scale production a new series of "MIL" Hydraulic Loader while still retaining production of the former models for which the demand continues.

In the Steam Division the demand continues for the well-tried and almost indestructible "MIL" Thermostatic Traps. Increases were achieved in the sale of Pressure Reducing Valves and other accessories produced by the Steam Division.

Orders during the first quarter of the current year for the products of the Group in general are in excess of those for the corresponding period of last year, but, profit margins are narrowing. However, providing trading conditions do not further deteriorate, I feel there are reasonable prospects for a satisfactory year.

The report and accounts were adopted.

Chairman's Statement: RHODESIAN ANGLO AMERICAN LIMITED
Incorporated in Northern Rhodesia

Political Issues have Tended to Obscure Steady Economic Progress in the Federation

ENCOURAGING DEVELOPMENTS IN INDUSTRIAL AND SOCIAL RELATIONS

Mr H. F. Oppenheimer Stresses Need to Accelerate Development of Country's Resources

The following is from the statement by the Chairman, **Mr H. F. Oppenheimer,** *which has been circulated with the annual report and accounts:*

During our financial year the majority of copper producers in the western world decided to impose cuts in production or sales to restore the balance between copper supplies and demand. These measures helped to arrest the downward trend in price, which had reached a low point of £218 per ton in October, 1960, and since then the price has remained relatively stable. The three copper-producing companies of the Anglo American Corporation Group, Rhokana Corporation, Nchanga Consolidated Copper Mines and Bancroft Mines, from which the major part of our income is derived, decided in October last year to withhold 10 per cent of their production from the market.

The profits of all three companies were affected by the lower copper price and the cut in sales, but Bancroft suffered proportionately more owing to its higher cost of production. Rhokana and Nchanga were able to maintain their dividends, but Bancroft has recommended a reduction from 1s. to 9d. net per stock unit for the year, in view of the lower profits and the programme of capital expansion. In the result our net profit for the year of £7,251,275 was slightly higher than in 1960.

After recommending a final dividend of 6s. net, which with the interim dividend of 2s. gives the same distribution as last year, we have been able to transfer £1,876,571 to general reserve. After the transfer from this year's profit and from investment reserve the general reserve now stands at £9,250,000.

OUTLOOK FOR THE FEDERATION

Our Company's prospects depend so much on the future of the Federation that members may like to have some assessment of the political and general situation. Seen from outside, the Federation may appear during the last year to have undergone a series of political crises, to have had a stagnating economy, and to have made little progress along its avowed path of partnership. Certainly if stock exchange prices are a fair indication of Britain's and the Continent's view of the future of the country, they show little confidence, with Federal Government stock yielding around 9 per cent and copper mines with large ore reserves standing on a yield basis of about 16 per cent net after Federal taxes.

Nevertheless in my opinion it has been a year of great and heartening progress politically, economically and socially. Outstanding in the political field was the Referendum in Southern Rhodesia where by a two to one majority the electorate—at present largely European—voted for a new and progressive constitution. There has been a tendency to regard this constitution simply as one which, by the introduction of a separate lower roll, will give Africans 15 seats in an enlarged Assembly of 65 members. That may well be one immediate result; but in addition to the provision in this way of African representation in the Assembly, and an immediate increase in the total number of African voters, the non-racial character of the franchise will soon lead, with normal educational and economic progress, to significant African numbers on the upper roll as well. To my mind it is wrong to consider these changes necessarily in terms of racial conflict, as most of the existing political parties have members of all races and this tendency is increasing.

The party in power in Southern Rhodesia took the situation further forward at its Congress last month by voting without opposition that the Government should press ahead with legislation to allow the acquisition of land anywhere in Southern Rhodesia without regard to race (except that the Reserve land should continue to be protected for the benefit of its African inhabitants), and to facilitate the absorption of urban Africans into a non-racial community. At the same time it voted to introduce legislation after the next election to ban racial discrimination in public places; in fact many hotels and cinemas in Southern Rhodesia are already non-racial. In Northern Rhodesia, where the major interests of our company are established, similar legislation was introduced in September, 1960, and, after a few minor incidents, the new order has worked well.

However, the indecision over the constitutional plans for Northern Rhodesia led to some loss of confidence within the Territory and to a series of acts of arson and sabotage mainly in the Northern Province. The purpose of this lawlessness appears to have been to persuade the British Government to revise the constitution it announced in June. Whether or not these proposals are revised, it is certain that the influence of African voters will grow very rapidly, and this is a concept which is becoming increasingly accepted in Northern Rhodesia. The situation as I write is now calm; and in fact at the time it was clear that the incidents caused anxiety and resentment among large numbers of the African population.

The future constitutional shape of the Federation is still undecided and no date has yet been set for the Federal review talks. The Malawi Party now in power in Nyasaland has continued to voice its opposition to the Federation, but I remain convinced that Federation provides greater prospects for economic advance and for stability than the three territories could achieve individually; and certainly the facts of economic progress since federation are impressive.

While I do not regard economic progress as a substitute for political advance, equally I believe that immediate universal suffrage in these territories carries the risk of a sharp decline in living standards, and that the considerable number of Africans who favour qualifications for the suffrage can in no sense be called stooges because they support responsible Government. Very shortly after the start of Federation I said that its chief problem was poverty and, although since then there has been a great improvement in living standards, poverty and unemployment are still the major problems.

ECONOMIC PROGRESS

While there have been great advances in industrial activity, a firm foundation for an expanding economy in the Federation can only be assured by extensive rural development, leading to a general increase in cash earnings above the subsistence level by the majority of the people in the rural areas where 80 per cent of the population live. Rural development, in my view, is not only the best immediate means of widening employment and providing better living standards for the lowest capital cost, but should in turn lead to increased industrial activity. All three territories are working on schemes for land settlement and greater productivity, and our Group has indicated to the Federal Government our readiness to make loans available to assist this type of development.

The concentration of attention on political issues has tended to obscure the steady progress made by all sections of the economy apart from the building industry. The level of industrial activity in all manufacturing groups was 9.8 per cent greater in 1960 than in 1959 and there is every indication that this year will again show substantial progress.

In the sphere of mining there has been further expansion. In Southern Rhodesia the value of mineral production was £26,380,000 in 1960 compared with £25,003,000 in 1959. In Northern Rhodesia, our Group is engaged on three major schemes involving an aggregate estimated capital cost of £15 million.

Similarly, the Rhodesian Selection Trust Group's Mufulira Mine, in which we have a substantial interest, has been engaged on a major expansion scheme involving the development of the Mufulira West Orebody.

On the Copperbelt, and at Broken Hill and Wankie, the year has seen considerable progress in industrial and social relations. Last year I referred to the preliminary agreement the copper mining companies had reached with the European-controlled Northern Rhodesia Mine Workers' Union to establish a unified wage scale with no racial bar to progress. Although in our subsequent negotiations with the Northern Rhodesia African Mineworkers' Trade Union on the implementation of these proposals we are meeting many difficulties, I am hopeful that in due course we shall reach agreement. Meanwhile Africans and Europeans are being trained side by side in the underground schools at Nkana and Nchanga to qualify for jobs previously attainable only by Europeans. We are also negotiating with the Mines African Staff Association for the advancement of Africans in the staff field. All our African employees on the copper mines have this year been brought into the Group Pension Scheme which will give them greatly enhanced security and benefits. At Wankie, as a result of new industrial agreements in Southern Rhodesia, it is intended that European and African mineworkers will for the first time be represented by a single trade union as has already happened with officials and salaried staff of all races. The mines now have football, athletics and other sports sides in which the races participate together and I would particularly like to mention the outstanding success of the Wankie football team, which reached the final of the Southern Rhodesia Amateur Cup.

BREAKING DOWN OF SOCIAL BARRIERS

The first children to benefit from the creation of The Northern Rhodesia Educational Trust by the Copperbelt mining companies were admitted to schools in 1960. About 2,400 children have so far started their primary education in new schools or classrooms built with Trust money and this year five Trust secondary schools have been opened. Plans are in hand for the construction of a new college at Mufulira to provide additional teachers.

The College of Social Service at Lusaka, named after my father, is to receive its first intake of 33 students in January next year. The enrolment includes African, European and Coloured students, both women and men, drawn from different territories in Southern and East Africa. The Outward Bound School in the Chimanimani Mountains has run three very successful courses on non-racial lines as part of a pilot project, and the permanent school is to be started next year to take about 250 boys a year from all over the Federation. With the facilities shortly to be available at such institutions as the Bernard Mizeki School, St. Ignatius College and the Nyatsime College, substantial numbers of Africans will now be able to provide their children with a public school education.

All these projects have called for considerable contributions from both firms and individuals, and it is most impressive how much time, energy and money some citizens of the Federation are ready to devote to these causes. There has also been a most encouraging increase in the provision of services, training and amenities on a non-racial basis by voluntary organisations.

While I do not for a moment suggest that there are not still grave political, social and economic problems, credit should be given to the substantial advance that has been made. It is, I think, generally realised now that in the spectacular economic progress of the first three or four years of Federation attention was diverted from urgent social and political problems, but an outstanding effort is being made to make up for the time and opportunities that were lost.

I continue to believe that the Federation, given proper encouragement, constructive criticism and time, has a great chance of creating a genuinely non-racial society with a prosperous economy. To this end it is vital that immediate action should be taken to accelerate the development of the country's resources and so to provide better living standards for the mass of the population. It is my hope that our Group will continue to contribute to this advance.

Copies of the annual report and accounts are obtainable from the London office of the company, 40, Holborn Viaduct, E.C.1.

BLYVOORUITZICHT GOLD MINING COMPANY, LIMITED

(Incorporated in the Republic of South Africa)

The Twenty-fourth Ordinary General Meeting of shareholders will be held in Johannesburg on November 21, 1961.

The following is an extract from the circulated review of the affairs of the Company by the Chairman, **Mr T. Reekie,** dated November 2, 1961.

WORKING RESULTS

The results achieved during the year under review established many new records for the Company. A new record profit from gold production of R15,965,384 was attained and the profit from the production of uranium oxide and sulphuric acid, at R3,779,000, was also the highest recorded by the Company.

DEVELOPMENT AND ORE RESERVE

The footage developed underground also exceeded previous rates. Due, however, to the need to provide connections between the new "B" series of sub-incline shafts and the recently completed "A" series and to advance the three cross-cuts from the vicinity of A2 Sub-Incline Shaft to connect with the new No. 4 Vertical Shaft which is being sunk from the surface, the additional development footage was all off-reef. In the lower grade western section of the mine, however, development continues to be of an exploratory nature on the reef horizon. About 35 per cent of the footage developed on reef was in this lower-than-average-payability area, but nevertheless the general payability of reef disclosures fell off slightly in association with a small reduction in the channel width of the reef. It is not possible at this stage to determine whether or not this represents any persistent trend. It is of interest to note the establishment of some new ore reserve blocks in the section towards the western boundary of the property.

The available ore reserve, all on the Carbon Leader Reef, re-estimated at June 30, 1961, increased by a little over one per cent to 4,531,000 tons, there being a small decrease in the gold and uranium values and in the stoping width.

NO. 4 VERTICAL SHAFT

Sinking progress during the year under review was satisfactory and, at the year end, the shaft had reached a depth of 2,472 feet below the surface. Since July, however, the intersection of a series of water-bearing fissures has necessitated further cementation and caused some delay. It is clear that considerably more serious delays and difficulties would have been encountered in this badly fissured zone had pre-cementation of the shaft area not been undertaken in the first instance. Sinking operations were recommenced early in October, and steady, if slow, progress through this 240 feet is expected.

The three haulage cross-cuts which are to link No. 4 Shaft with the rest of the mine, two on the 6th level and the third on the 8th level, were advanced steadily during the year.

ACCOUNTS

The working profit for the year from gold, uranium and sulphuric acid of R19,744,384 was increased by sundry net income to a total profit of R19,987,231. Appropriations made for taxation, mineral lease consideration, dividends, repayments of the capital portions of the uranium and acid plant loans, and current net expenditure on mining assets, exceeded the total profit by R564,590, which amount was accordingly charged against the balance of the Income and Expenditure Account, thereby reducing it to R5,531,851 at June 30, 1961. Revenue Reserves, including the unappropriated balance, plus the small unexpended balance of the uranium and acid loans, were represented by net current assets totalling R5,974,154. Of the total loans obtained to construct the uranium and acid plants, R2,982,510 remained at June 30, 1961, to be repaid in equal quarterly instalments over the ensuing 2½ years.

Of the R2,829,591 spent on Capital Account during the year, approximately two-thirds was spent on the new No. 4 Vertical Shaft and its ancillary requirements, the remainder being mainly spent on the preparatory work and winders for sinking the "B" sub-inclines, pumping equipment. Of the R4,600,000 which it is estimated will be spent during the current year, No. 4 Shaft will again absorb about two-thirds, while the "B" sub-inclines will require approximately R900,000.

In relation to the total profit for the year of R19,987,231, the provision for taxation and mineral lease consideration represented 51.9 per cent. The two dividends declared were each of 13 cents per share, and equalled 31.2 per cent of the total profit.

URANIUM

The Board considered it to be in the Company's interest, provided it could be done without financial loss, to keep the uranium and sulphuric acid plants in production for as long as possible in order to be in a better position for taking advantage of any revival in the demand for uranium. Under the revised arrangements the Company's plants will be in operation until the end of 1966, and over the increased period there is expected to be a financial gain compared with what the Company would have received under the previous contract which was due to expire in December, 1963.

BRITISH ASSETS TRUST LIMITED

IMPORTANCE OF SELECTIVE INVESTMENT

MR ALASTAIR C. BLAIR ON COMPANY'S RECORD OF PROGRESS

The Sixty-Fourth Annual General Meeting of British Assets Trust Limited will be held on December 7, 1961, at the Registered Office of the Company, 9 Charlotte Square, Edinburgh.

The following is the Review by the Chairman, **Mr Alastair C. Blair, CVO, WS,** which has been circulated with the Report and Accounts for the year ended September 30, 1961:

Shareholders who keep their Annual Reports may find it both interesting and instructive to look up their report for the year to September 30, 1957, and to read my review at that time. Bank rate had been raised to 7 per cent as happened again this year; our investments had a market value of just under £20 million, a level at which they had stood for two years after a previous sharp rise, and our income had reached £1.1 million. At that time we looked forward to a slight fall in our income which duly happened in the following year but was succeeded by three years of steady growth so that our income has now reached £1,340,000.

RECORD VALUE OF INVESTMENTS

The market value of our investments at £30,884,000 is a record for a year-end and is 9 per cent higher than a year ago although the Financial Times Industrial Index had fallen during the same period from 322.9 to 297.1. This result stems largely from our holdings of American stocks where the market which had lagged behind the British market for two years has been rapidly catching up. There has also, however, been a marked divergence of experience over the past year between different industries and different companies which has been masked by the index. This is where one can see the importance of selection of investments, and it is satisfactory that the total value of our sterling investments is virtually unchanged from a year ago in spite of the fall in the index.

The advantage to the ordinary investor of professional management of his funds through an investment trust only becomes fully apparent at a time of widely divergent trends. During the fifties it was comparatively easy for the investor to do well. In the last two years it has been harder and we expect that it will continue to be difficult during the decade to 1970, but we still believe that there will be plenty of good opportunities.

In 1957 when our foreign currency reserves were, as they are now, much in the news, we published a graph showing the rise in our dollar investments. On page 11 of the Report and Accounts we bring this table up to date and you will be interested to see the continuation of the trend and to note that our holdings are now worth $32 million having a net cost of $6.8 million which has been covered by the $7.1 million received as income and remitted to this country in the last fourteen years.

THE OUTLOOK

The future today remains as obscure as it was in 1957, and we must expect the Chancellor of the Exchequer's appeal for a pause to be reflected in our income. It is for this reason that I have looked back at the progress we have made in the last four years. We believe that if we continue to follow the policies which have guided us in the past, shareholders will be able to share fully in the increased prosperity of an age which, with all its problems, remains one of great material progress.

Mr H. G. Sharp, who was appointed a Director on April 15, 1931, has now reached the age of seventy-five and under our Article 106 he retires from the Board at the close of the Annual General Meeting. All of us at No. 9 will miss the pleasure of working with him; the Board and Management have relied on his judgment and wise counsel in solving many difficult problems during the past thirty years and I would like to put on record the Company's indebtedness to him for all that he has done during that time.

PICKFORD, HOLLAND & CO.

EXCEPTIONAL TRADING CONDITIONS

The annual general meeting of Pickford, Holland & Company, Limited, was held on November 13th at Sheffield, **Mr Ronald Steel** (the chairman), presiding. The following is an extract from his circulated statement:

This time last year our main customers, the steel trade and the coke oven industry, had been enjoying twelve months of high demand for their products and these conditions continued during the first ten months of our year which ended on July 2nd. It was impossible to keep up with our customers' requirements for basic bricks and all our works were operating throughout that period at maximum capacity. Fortunately for your company the extensions and improvements upon which we have been concentrating in the last ten years were there to meet this unprecedented demand and we have thus been able to show you a trading profit which at £467,863 is 36 per cent better than the previous year.

I referred above to the exceptionally high demand in the first ten months of our year, but I am sorry to say there was a marked falling off in May and June. At the present time we are back to the conditions which prevailed in 1958; steel production has fallen and is still falling, thus reducing the demand for our bricks, and as in 1958 our customers are adjusting their stocks to their new level of activity. In August all work on silica bricks against a substantial coke oven order was suspended because building was being postponed, and on account of this and the fall in general demand we have had to make redundant 50 of our Crook works employees to our great regret. Current sales are running considerably below the level attained in the year under review and our brickmaking plants are not fully occupied; consequently we cannot expect to repeat this year's excellent financial results unless there is an immediate upturn in orders.

As for the future we have modern and efficient plant, a well equipped laboratory and enthusiastic employees, and so I feel convinced our sales department will get our full share of whatever trade the new year may bring.

The report and accounts were adopted and a dividend of 20 per cent approved.

BERKELEY PROPERTY AND INVESTMENT CO.

RECORD PROFITS, REVALUATION AND SCRIP ISSUE

MR J. H. HAMBRO REVIEWS ACTIVITIES

The thirty-seventh ordinary general meeting of The Berkeley Property and Investment Company Limited will be held on December 4th at 41, Upper Brook Street, London, W.1.

The following is an extract from the circulated statement of the Chairman, **Mr J. H. Hambro, C.M.G.**

The Accounts show not only increased income from our properties in this country but also from the subsidiaries in Canada and the Channel Islands. In addition, our partly-owned Subsidiary Company engaged in Estate Development has begun to make a worthwhile contribution to our profits.

To give Shareholders more accurate information about the value of our Freehold and Leasehold Properties these are now shown as valued by the Managing Director, Mr R. F. Willcocks. This more realistic assessment has produced a surplus of £2,403,120.

The new Valuation which applies only to properties in this country and the Channel Islands and not to those in Canada, has been made on a conservative basis and reflects only those increases in rents which are immediately foreseeable. The surplus created by the revaluation has enabled us to set up a reserve which can be used, when necessary, to cover future fluctuations in the values of individual properties.

Apart from the new reserve, the Holding Company's Balance Sheet shows "free" reserves amounting to £855,079. Having made the decision to revalue our properties it is now proposed to use a portion of the "free" reserves to bring the nominal capital more into line with the real value of the assets. Accordingly we are proposing a free issue of three Ordinary Shares for every ten Ordinary Shares at present held.

It is the intention of your Board to recommend, next year, a dividend on the increased capital at a rate not less than that paid this year on the present ordinary capital, namely 10 per cent., subject, of course, to no unforeseen circumstances arising. I should also point out that this dividend on the increased capital is already covered by existing earnings. Your Board had indeed looked forward to making some increase this year in the final Ordinary dividend but felt bound to accede to the Chancellor's request for a "pause."

In the past we have been able to show a steady annual increase in assets and income and, subject to unforeseen circumstances, we believe that this growth should, particularly if our various developments turn out as anticipated, be more than maintained.

We do not seek a merger and would not be prepared to give serious consideration to any proposition which did not offer to our Shareholders a full value for their assets and a greater rate of growth than is possible with our existing facilities.

NEW ZEALAND LOAN AND MERCANTILE AGENCY COMPANY, LIMITED

MR MICHAEL G. H. BROWN'S SPEECH

The Sixty-Seventh Annual General Meeting of New Zealand Loan and Mercantile Agency Company, Limited, was held on November 14th in London.

Mr Michael G. H. Brown, the Chairman, presided and, in the course of his speech, said:

If you accept the strong recommendation of your Board and agree to exchange your shareholdings in this Company for shareholdings in the Company to be called "Dalgety and New Zealand Loan Limited," this will be the last occasion upon which I shall have the honour to preside over a General Meeting of New Zealand Loan and Mercantile Agency Company, Limited with you as Shareholders.

Our Company was originally brought into being in 1865 and has survived through many vicissitudes of fortune for 96 years. It may seem in some ways a pity that it should not live on as a separate Public Company for a further four years, to reach its 100th birthday.

It is interesting, and of some comfort, to think that the Company with which we recommend you should merge your interests has been established even longer than we have and carries a reputation which is as highly regarded as our own within our industry.

Assuming that the merger goes through, it becomes even more difficult to forecast the possible results of the current year's trading. There is no doubt that, in due course, many economies will be effected and these economies will be really substantial. On the other hand, half the year will have passed before the formalities effecting the merger will have been completed and several more months will elapse before the practical problems of consolidating our businesses can be overcome.

Inevitably, the actual process of merging will produce exceptional expenses and these will be incurred before the economies can be achieved. Furthermore, we all know that it is not easy to achieve economies in the home without producing personal problems for members of the family. A somewhat similar situation arises in the life of a large concern and, clearly, you would want us, on your behalf, to see that these problems are mitigated so far as reasonably possible for everyone concerned. This can mean, also, delay in achieving the full benefits of the merger.

In Australia and many parts of New Zealand conditions are dry—in some areas very dry. Unless adequate rains fall and revenue becomes more buoyant than at present, it may be that the combined results for the year ending next June will be lower than the total of the two Companies' independent results for last year.

I feel quite sure, however, that in the year ending June 1963, a substantial part of the economies for which we are looking will play their part in the form of reduced expenditure or increased business, and that other benefits from the proposed merger will accrue over the two or three years after that.

If we did not think that you, as Shareholders, would be likely to receive larger Ordinary dividends from the merged Company than you would be likely to receive from our Company continuing on its own, we should not have recommended this merger to you.

The Report and Accounts were adopted.

Groupement de l'Industrie Sidérurgique

GIS

PARIS, FRANCE

(Iron and Steel Finance)

The Annual General Meeting of GIS was held in Paris on June 30th, and the following are details of the report presented by the Board of Directors:

REVIEW

The French iron and steel industry made remarkable progress in 1960.

Output of steel increased by 13.5 per cent to 17,281m. ingot tons; exports were 2.8 per cent higher at 3,964m. ingot tons; turnover rose by 22.2 per cent to NF. 10,310m. Investments in the iron and steel industry alone, which increased by 24.3 per cent to NF. 1,255 m., reached the highest level yet attained during the period of the Third Plan for the Iron and Steel Industry.

Gross profits of the industry as a whole, before depreciation, taxes and dividends increased to 16.5 per cent of total turnover as against 14.6 per cent in 1959 and 12.9 per cent in 1958. Depreciation amounted to 13.6 per cent of total turnover compared with 11.9 per cent in 1959 and 10.4 per cent in 1958.

INVESTMENTS

Depreciation allowances were almost equal to the whole of the profits for the year after payment of taxes and dividends. Working capital and medium and long-term debts increased appreciably less than turnover. The trend away from public to private investment continued; 69.3 per cent of long and medium-term loans contracted during the year were raised from private, and only 15.2 per cent from public sources.

FINANCE

Since no new loans were guaranteed during the year, and earlier loans were repaid in the usual course, total loans guaranteed fell by about 12 per cent to NF. 182,039,308.

The eighth debenture loan of NF. 340m. issued in September 1960 was similar to the 1959 loan except for the redemption period of 25 instead of 20 years, and was equally successful. From this loan, fourteen companies received credits from NF. 1.5m. to NF. 90m. each.

PROFIT AND DIVIDEND

On April 28, 1961, the capital of GIS was increased to NF. 112.5m. by the issue of 250,000 new shares of NF. 50 face value at NF. 53.50 each.

The profit and loss account showed a net profit of NF. 1,907,591. After crediting the reserves with 5 per cent, adding the sum brought forward from earlier years, and taking NF. 409,836 from reserves, the profit available for distribution amounted to NF. 2,421,052. It is accordingly proposed to distribute a dividend of NF. 0.92 net per old share issued on December 31, 1960.

The report, the accounts, and the proposals put forward by the Board of Directors were adopted.

HARMONY GOLD MINING COMPANY LIMITED

(*Incorporated in the Republic of South Africa*)

The Eleventh Ordinary General Meeting of shareholders will be held in Johannesburg on November 20, 1961.

The following is an extract from the circulated review of the affairs of the Company by the Chairman, **Mr P. H. Anderson,** dated November 10, 1961.

OPERATIONS AT THE MINE

Negotiations for the sale of approximately 397 claims were started during the year. Although the provisional agreement of sale was not ratified until July, it was essential in the interests of shareholders to increase the development rate in order to prepare for the replacement of actual and potential working faces that were included in the areas that were the subject of the provisional deed of sale. Whether a milling rate of 200,000 tons per month can be maintained or not depends very largely on the supply of labour and on what the present exploratory development programme reveals. In order to maintain the current milling rate, ore will have to be drawn from the area to the south and west of No. 3 Shaft and a development programme to open up and explore this ground has been initiated.

The development and sampling results given for the year ended June 30, 1961, include development and sampling in the northern area of approximately 313 claims sold to the Virginia Company (known as area "A"), but do not include work done by the Virginia Mine in the southern area of approximately 84 claims (known as area "B"). As the sale was ratified in July, 1961, all results of operations given after July 1, 1961, exclude work done on behalf of the Virginia Mine.

Gravity concentration of gold in the reduction plant was finally discontinued during July, 1961, and the plant now operates on full cyanidation only. The plant is capable of milling slightly in excess of its rated capacity of 200,000 tons per month.

SALE OF APPROXIMATELY 397 CLAIMS TO VIRGINIA ORANGE FREE STATE GOLD MINING COMPANY LIMITED

The minimum purchase price of R6,000,000 is payable quarterly and the first instalment of R225,000 was received at the end of September, 1961. Stoping by this Company of 10,000 fathoms in Area "A" as provided in the agreement was completed during August this year, and full possession and occupation of both Areas "A" and "B" has now been taken by the Virginia Company.

URANIUM

The Company produced a total of 487.2 tons of uranium during the year ended June 30, 1961, leaving a balance of 2,806 tons to be supplied from July 1, 1961 until the end of 1970. With the increase in the milling rate it is now necessary to dump uranium-bearing slime that is in excess of the capacity of the uranium plant. At June 30, 1961, the approximate quantity of accumulated slime was 46,000 tons.

FINANCE

The amount spent on capital account, after

allowing for certain credits, amounted to R3,140,249 during the financial year under review. In the Annual Report it was stated that capital expenditure for the three year period from July, 1961, to June, 1964, was estimated at R4,000,000 of which approximately R2,000,000 was expected to be spent during the year ending June 30, 1962. Both the figures may be exceeded slightly, depending on the area of additional land purchased for water disposal purposes.

In addition to the Reduction of Share Premium No. 1 of 3 cents per share, Dividend No. 11 of 14 cents per share was declared on September 15, 1961.

TAXATION

At June 30, 1961 the Company had an estimated income tax loss of R3,269,000 and an estimated loss for lease purposes of R3,753,000, and no South African taxation or lease considera-

tion was payable during the year under review. At September 30, 1961, it was estimated that the tax loss had practically been extinguished and it is evident that taxation should be payable during the current financial year. For the purpose of making a rough calculation, the combined tax and lease payments that the Company will make to the State, in terms of existing legislation, will be approximately 71 per cent of any profit (less capital expenditure) that is in excess of 6 per cent of revenue.

ANGLO-AMERICAN SHIPPING COMPANY

(A Member of the International Naess Group of Shipping Companies)

CHALLENGE AND OPPORTUNITY

MR ERLING D. NAESS'S STATEMENT

The Third Annual General Meeting of Anglo-American Shipping will be held on December 15th in Bermuda.

The following is the Statement by **Mr Erling D. Naess** to the Shareholders circulated with the Report and Accounts for the year ended June 30, 1961.

As stated in the Directors' Report, the Consolidated Net Earnings of Anglo-American Shipping Company Limited and its Subsidiaries for the year, after providing for depreciation, was £398,818. This was approximately £49,000 more than I forecast at this time last year, and about £99,000 in excess of the estimates published in 1959. These results were achieved despite a slight loss in the operation of "NAESS TRADER," due mainly to unusually heavy repair and maintenance costs incurred during the year. The profits for last year included only approximately six months' earnings from three new vessels, and it is estimated that, for the current year to June 30, 1962 the Consolidated Net Profit, after depreciation and other charges, should be of the order of £600,000. The remaining vessel of the fleet, "NAESS CHAMPION," is due to be delivered in July, 1962 and, with the additional earnings from this vessel, the annual profit should, subject to unforeseen circumstances, rise to a figure in excess of £800,000.

If the trend which I have forecast is maintained over the next few months, it should be possible for the Directors to consider the recommendation of a Dividend on the Ordinary Share capital for the six month period ending December 31, 1961. However, in this connection, it must be borne in mind that the major part of the cash represented by retained earnings is required to repay loan indebtedness.

The Directors of the Companies forming the International Naess Group, being of the opinion that the various interests of the Companies might with advantage be consolidated, are engaged in exploratory discussions with a view to a possible merger between Norness Shipping Company, Inc. and your Company. It must however, be emphasised that, apart from the normal considerations affecting the Shareholders in the Companies, any scheme would be subject to the agreement of the long-term lenders and Security Holders in both Companies and to the obtaining of approval from the Authorities concerned. It will be appreciated that the last-mentioned matters are beyond the control of the Directors of the Companies but, if sufficient progress can be made, the Shareholders will be informed and proposals submitted to them.

In regard to the outlook for the Companies' shipping operations, I would like to reiterate what I said at the Second Annual General Meeting about a year ago. The trade in which our Group is engaged—namely, the transportation of bulk commodities on a world-wide basis—is a growth industry which offers great opportunities to those who are willing to accept the challenge of fierce competition and rapid change. Our minds must at all times be open to new ideas, new doors which open, new concepts of sizes and types of ships, as well as new trade routes and markets, in order to make progress in an industry which is in its fifth year of depression. With our excellent connections, modern tonnage and energetic management, I feel confident that, even if the depression in freight rates should run the full term of the Biblical seven lean years, or maybe more, our Shareholders should not have reason to be dissatisfied with their investment.

It has taken a lot of time and painstaking work to arrive at the point where our Company finds itself today, and my co-directors and I pay tribute to the Company's staff, both ashore and afloat, for their loyal efforts and collaboration in the past year.

BRITISH ELECTRONIC INDUSTRIES LIMITED

MR C. O. STANLEY ON NEED FOR LONG-TERM GOVERNMENT PLANNING

The first annual general meeting of British Electronic Industries Limited was held on November 9th in London, **Mr C. O. Stanley, CBE, LLD, FCGI** (the Chairman), presiding.

The following is an extract from his circulated statement:

For nearly 30 years we have met and dealt with many vicissitudes and changes in the electronics industry, successfully coped with enormous wartime problems and built wartime experience into many new businesses. Yet in a year when Great Britain has had the highest level of employment, the Group of Companies of which I am Chairman produces very disappointing results—results far different from what either the shareholders or the management had contemplated when the merger between Pye and Ekco was first proposed.

The chairman then dealt with the factors contributing to the "present collapse in the [illegible] received as a [illegible] which he said stemmed country in the last [illegible] of the Government in the [illegible]en they suddenly decided [illegible] of intense promotion of [illegible] market. Manufacturers

The future today rem[illegible]y had to expand production facilities to manufacture and distribute television and radio sets to meet the huge demand following the removal of all credit restrictions. As the boom developed the country's export trade failed to expand, there was not enough money either to pay for our imports of food or the essential raw materials needed to run our industries. So in April, 1960, when the boom was already dying down, restrictions of the harshest kind were clamped down on the industry.

A RACE TO RUIN

Mr Stanley continued: But a considerable time is taken to slow down factories that have built up large productions, and while this is happening, substantial stocks accumulate all over the country, tying up money, and adding extra overheads for handling and storing. Financially, manufacturers are strained to the limit and suddenly the weaker companies break. This happened in December of last year and the stocks held by these companies had to be thrown on the market at what we would call distress prices, thus setting a race to ruin.

A Socialist will say this is what happens when you have no Government planning, but most of us had a terrible experience of Socialist planning between 1945 and 1951. But long-term planning is what was needed and what is still needed. Planning need not be carried through by a Goverment machine but could result from the co-operative association, on a democratic basis, between industry, trade unions, professional economists, and the Government of the day.

POTENTIALITIES OUTSIDE TV MARKET

Mr Stanley then outlined the interests of the Ekco business not associated with radio and television, i.e. light transistorised airborne radar, nucleonics, heating appliances and plastics and then gave a picture of the potential strength of the Pye electronic group in fields entirely outside the popular television consumer market mentioning inter alia, The Telephone Manufacturing Company, Pye Telecommunications, three companies in the home electrical appliance group, the scientific instrument companies, Pamphonic Reproducers, overseas interests in Italy, New Zealand and Australia, a substantial investment in ATV, investments in British Relay Wireless and Television and Pye Records, and interests in Ireland.

Mr Stanley continued: I have only been able to deal with some of the facets of your company which may influence the future, irrespective of what happens in the domestic television business. I do not say that within a matter of a few months we can entirely get rid of the damage which was done last year, but I can say that the foundations we have built in industries other than domestic television are so broad and have such great possibilities for the future that anything we have done in the past will be very small compared with what we can do in the future.

The report was adopted.

THE WALMSLEY (BURY) GROUP

(Manufacturers of Pulp and Paper Making Machinery and Equipment)

RECORD VALUE OF CURRENT ORDER BOOK

The twenty-ninth annual general meeting of the Walmsley (Bury) Group Limited will be held on December 8th at Bury.

The following is an extract from the circulated statement of the chairman, **Mr Percy Holland:**

The consolidated profit for the year ended June 30, 1961, is £691,589 as compared with last year's figure of £927,057. After charging taxation, and after relief from taxation of £121,715 in respect of investment and initial allowances, the profit becomes £454,898 against £463,607 for the previous year. We are proposing a final dividend of 17½ per cent on the ordinary share capital; this, with the interim of 5 per cent, makes a total for the year of 22½ per cent less tax.

Sales for the year were at approximately the same level as last year. Included in the orders completed were six paper-making machines and five substantial reconstructions to existing machines. Many items of preparatory plant and finishing equipment were also supplied in addition to an output of replacement and spare parts for the servicing of machines previously in commission. A large proportion of the major orders was shipped to countries abroad and they were obtained during a period of relative quietness in the paper-making industry worldwide, with a corresponding sharpening of competition.

The substantial addition to existing facilities represented by the new Bolton Works is now rapidly nearing completion. Transfer to the new works of the patternmaking and moulding sections permits of further development and rationalisation on the engineering side in the buildings thus vacated at the Bury and Wigan works. The substantial capital expenditure to be incurred on the new Bolton works and in the further development of the Bury and Wigan works will be found from the monies received for the new shares issued to Beloit International Corporation C.A. in the early part of 1960 and from other available resources. It is not expected that further new permanent capital will be required in the immediate future.

The increase in capacity will, in due course, result in an increased output, but I must emphasise that it will take time to achieve full integration of capacity, output and sales and the benefit will equally take time to show up in the profit record.

Since January of this year orders for complete paper and board making machines have been obtained for mills in Great Britain, Norway, the U.S.S.R., Australia, Sweden, Italy, Canada and New Zealand, with the result that our order book at present stands at a level higher in value than it has ever been. Over 75 per cent of the orders on hand are for export to 28 countries. Our association with the Beloit companies has proved invaluable in negotiating for and in securing many of these outstanding orders.

Extremely keen competition continues to affect profit margins as well as to provide a spur to searching out ways and means of reducing costs consistent with a maintenance of technical excellence and a high standard of workmanship.

It is proposed that approval be given to an increase of capital and the issue by way of capitalisation of reserves of one new ordinary share for each ordinary share at present in issue. The reserves that we propose should be capitalised result almost entirely from the share premium arising from the recent subscription by Beloit International Corporation and the operation recognises the fact that these reserves are permanently employed in the Group's business.

EDUCATION; BUSINESS AND PERSONAL

EXPERT POSTAL TUITION

r Examinations—B.Sc.(Econ.), Law, Accountcy, Costing, Secretarial, Civil Service, anagement, Export, Commercial, General rtificate of Education, etc. Also many actical (non-examination) courses in business bjects.—Write today for free prospectus and/or vice, mentioning examination or subjects in ich interested, to the Secretary (G912),

METROPOLITAN COLLEGE, ST. ALBANS

call at 30 Queen Victoria Street, London, C.4. Established 1910.

TUITION FOR B.Sc. ECONOMICS

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ. B.Sc.Econ. (three if entrance is included) at moderate fees. 1,431 Wolsey Hall students passed London Univ., B.Sc. Economics exams. 1950-60. Tuition also for G.C.E., Law, Statistical, other exams. —Prospectus (mention examination) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P.17.

WOLSEY HALL, OXFORD

HOW TO REACH WEST GERMAN MARKETS

Your attendance is recommended at a special export marketing seminar at the Connaught Rooms, Gt. Queen Street, Kingsway, London, W.C.2, on November 27th and 28th. Two studies, led by four marketing specialists, will cover:

November 27th: Consumer and Consumer Durable Goods.

November 28th: Capital and Industrial Products.

Individual lecture subjects are:

* The German economy—opportunities for exporters.
* Market research and distribution—how to ensure your products reach the buyer in the manner to which he is accustomed.
* Advertising in Germany—examination of German media and practice.
* Legal considerations—problems of patent, brand name, credit, staff engagement.

Course fee: 15 gns. per member.

Apply at once to:

THE LONDON SCHOOL OF MARKETING, LTD., Newspaper House, Great New Street, London, E.C.4.

SECRETARIAL TRAINING, especially for university graduates and older students. Six-month and intensive 14-week courses.—Write, Organising Secretary, Davies's, 158 Holland Park Avenue, W.11. PARK 4654.

NORANDA MINES, LIMITED

DIVIDEND NOTICE

NOTICE is hereby given that an interim dividend of Fifty Cents (50c) per share, Canadian funds, plus an extra dividend of Ten Cents (10c) per share, has been declared by the Directors of NORANDA MINES, LIMITED, payable December 15, 1961, to Shareholders of record November 22, 1961.

By Order of the Board,
C. H. WINDEYER,
Secretary.

Toronto, Ontario,
November 9, 1961.

HATFIELD COLLEGE OF TECHNOLOGY

DEPT. OF BUSINESS & SOCIAL STUDIES

Graduate Courses in Management Studies leading to National Diploma Full-time or Part-time study

APPOINTMENTS

GOVERNMENT OF TANGANYIKA

A Senior Economist is required in the Tanganyika Treasury. Candidates, preferably below 35 years of age, should have an Honours degree in Economics not below 2nd class level; at least five years post-graduate experience in the economics field and the ability to prepare concise economic reports and appreciation. The officer will be required to assist the Chief Economist in Economic Analyses and appreciations.

Appointment on contract for one tour of 21-27 months in the first instance. Inclusive salary £2,502-£2,664. Gratuity of 25 per cent of total salary. Income tax at local rates. Free passages. Generous home leave and education allowances. Free medical attention.

Apply, in first instance, with summary of personal particulars, to Director of Recruitment, Department of Technical Co-operation, Carlton House Terrace, London, S.W.1, from whom further details may be obtained. Please quote reference number RC.206/145/05/A3, and state full name.

For other appointments see pages 713 and 714

UNESTABLISHED DISTRICT COMMISSIONERS

NATIONAL SAVINGS COMMITTEE

Several vacancies, mainly in the Provinces, for MEN OR WOMEN with knowledge of economics, organising ability, preferably with experience of public speaking and voluntary organisations. University education desirable. National salary £775 on entry (aged 25 and over), rising to £1,430. Possible establishment later. Application forms from Manager (PE 3543), Ministry of Labour, Professional & Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Closing date for completed application forms Monday, December 4th.

COMPANY AFFAIRS

Royal Dutch/Shell

THE third quarter's figures from the Royal Dutch/Shell group have a familiar ring about them; they show a much more substantial increase in the value of gross sales than in the two earlier quarters of 1961 but whereas this brought a marginal rise in income in the first half of the year all the benefit from higher sales in the third quarter has been eaten away by sharp rises in taxes and duties and in operating expenses and royalties (which rose by over £25 million in the third quarter against a rise of only £8 million in the first six months of 1961). Thus a cut of £3 million in income tax still left net income marginally lower compared with the third quarter of 1960, though for the first nine months of the year it is still £1½ million higher at £130¾ million.

SALES AND INCOME
(£ million)

	1960 Quarter (iii)	1961 Quarter (i)	(ii)	(iii)
Sales:—				
Including duties.	674·4	663·1	687·5	717·9
Excluding duties	479·7	494·8	491·0	500·0
Gross income	85·9	78·7	82·5	82·5
Net income	44·1	42·1	44·7	43·9
Gross income/sales*	17·9	15·9	16·8	16·5
Net income/sales*	9·2	8·5	9·1	8·8

* After deducting sales taxes, excise duties, etc. from turnover.

It is perhaps not surprising that after the heavy cuts in capital expenditure earlier this year capital spending remained almost unchanged at £95 million in the three months to end-September; this is about £4 million higher than the quarter's cash flow. For the first nine months, however, expenditure is still covered by the group's cash flow and the group's holdings of cash and short-term securities have now risen to £413 million, compared with £399 million a year ago.

With the tax free interim dividend maintained at 10 per cent on the capital after the one for five scrip issue, a maintained final of 15 per cent on the bigger capital is clearly on the cards and on this assumption at 114s. 6d. the £1 shares, which are shortly to be split into 5s. units, yield 7.1 per cent. This return reflects the present uncertainties and competitive pressures in the oil industry.

Beecham Group

LATE in July Mr H. G. Lazell, the chairman of Beecham Group told shareholders that sales so far in the current year were only marginally ahead of those for the previous year. It seems however that the hot spell late in August and some fine weather in September boosted the sales of soft drinks so that total sales in the six months to end September were almost 6 per cent higher than in the same period of 1960 when the particularly poor summer hit soft drink sales. But, as the table shows, bigger sales have not produced higher profits and while margins are better than they were

	Six months ended Sept. 30, 1960 (£000's)	Mar. 31, 1961 (£000's)	Sept. 30, 1961 (£000's)
Sales	26,988	29,356	28,569
Gross income	4,166	3,784	3,996
Taxation	1,965	1,842	1,885
Net income	2,194	1,933	2,104
	%	%	%
Gross income/sales	15·4	12·9	14·0
Net income/sales	8·1	6·6	7·4

in the winter period, when advertising expenditure at home and in most overseas markets reaches its peak, they are still below the levels of a year ago.

As far as the home market is concerned the chairman had forecast increased costs as a result of the Chancellor's measures, as these he thought would have the effect of increasing the prices of many of the raw materials the group uses. The long awaited improvement in margins from the field of antibiotics is apparently still to come and while Brylcreem has now gained a firm footing in America most of the profit it makes there is now supporting the promotion of Silvikrin shampoo. As forecast the group is to pay one interim of 16 per cent, against the two interims of 8 per cent in 1960-61; but the chances that the dividend will be higher than the total payment of 30 per cent in 1960-61 look slim. Even so, the 5s. shares at 50s. 6d. yield under 3 per cent.

Rootes Motors

THE halving of the gross profits of Rootes Motors from £5,864,000 to £2,912,000 in the year to July 31st is not too much of a shock, for production was running well below capacity for much of the year and while Rootes held on to its share of about 10 per cent of the domestic market its exports to North America, which were notably high throughout much of 1959-60, fell alarmingly. Tax has come down with a bump but both the depreciation provision and interest charges have risen, so that net profits have slumped from £2,228,000 to £796,000. The dividend on the ordinary and "A" ordinary has been slashed from 12 to 4 per cent. This decision, no doubt, was affected as much by the recent experience of the group, with production brought virtually to a standstill by a strike, as by the 1960-61 trading results. The stock market's reaction was to lower the "A" shares to 6s. 6d.

Tube Investments

THERE are several ways of looking at the trading figures of Tube Investments but generally they have been regarded as satisfactory and the £1 shares have since gained 6s. 6d. to 67s. 9d., to yield 4¼ per cent on the maintained 14 per cent dividend.

Without supplying a breakdown of the profits of the numerous divisions in the TI group the chairman, Sir Ivan Stedeford (who is to be succeeded at the end of 1962 by Lord Plowden, the chairman of British Aluminium) does fill in some of the gaps left by the preliminary statement. Thus shareholders are told that, excluding BA (whose profits fell) and new acquisitions such as Raleigh Industries (whose profits also fell), Loewy Engineering and Venesta Foils, profits before tax of the group rose by £800,000.

Most of this increase seems to have come from the steel tubes division which achieved record sales and earnings and which, against fierce competition, increased its direct sales abroad by 25 per cent. The engineering and general divisions also did well in overseas markets, with exports 17 per cent higher, and all the companies in these divisions "contributed well to the year's results." But it is no surprise that both the steel and the electrical divisions made smaller profits; Sir Ivan, like the directors of GKN, complains that the steelmaking companies are having to absorb higher costs without an adequate adjustment in prices. The electrical division has shared the experience of other consumer durable manufacturers and Sir Ivan can only hope for an improving market for its "Creda" products. For the cycle and aluminium divisions, now being reorganised and rationalised around Raleigh and BA respectively, the year was difficult but Sir Ivan says that the reorganisation policy is adding to the group's competitive power.

Although the Park Gate steel development project has been trimmed from £58 million to £31 million, TI's development programme is expected to cost about £75 million over the next five years. Sir Ivan is confident that this programme can be financed without affecting the dividend policy. His argument is a strong one, for liquid assets (excluding those of BA) amounted to £25 million at the end of June (reflecting in part the £21 million rights issue made in the spring of 1960) and its cash flow (again excluding BA) is running at about £10 million. But shareholders would be unwise to expect much in the way of an increase in the dividend until the programme is well advanced. Indeed, the current year could well see some reduction in the present dividend cover of over three times; Sir Ivan says that the present economic circumstances are not those "which might be expected to herald another record year." Looking further ahead, however, the development projects will bring their rewards, especially if Britain joints the common market.

Guest Keen & Nettlefolds

GKN's interim announcement was declared well after Stock Exchange hours on Friday and so the market had a full weekend to digest its rather unappetising contents. These included an estimate that pre-tax profits for 1961 would probably fall by £7 million or £8 million from the 1960 peak of £30.8 million. This warning was tempered by the directors' forecast that the dividend would be maintained at 16 per cent, of which the interim of 5 per cent is being paid for the first time on the shares resulting from the one-for-six rights issue made a year ago. The 1960 payment was covered over 3½ times but earnings in the current year, on the directors' estimate, are unlikely to cover the maintained dividend more than 2¼ times. Clearly the 1960 cash flow of over £19 million will be sharply reduced and although at December 31st liquid assets, allowing for the final rights issue instalment, amounted to £31 million, the group's high rate of capital spending will have quickly eaten into them.

This week the shares have fluctuated and finished 1s. 6d. lower on balance at 78s. 3d., to yield 4 per cent, but the rest of the market has shrugged off the sharp setback suffered by this key steel and engineering company. Some fall in profits had been forecast by the chairman in May and since then, the directors say, the pressure on profit margins, particularly in the steel companies, has intensified.

Carreras

THE swing to filter tipped cigarettes has added to Carreras' profits and there still seems some scope for further growth in filter tipped sales in this country. In the first half of this year Carreras' filter-tipped sales here rose by 35 per cent, almost double the increase of 18 per cent in the sales of all filter-tipped brands. But the chairman, Mr J. H. Hansard, warns shareholders that the 10 per cent surcharge on tobacco duty is bound to reduce consumption and that any reduction in home sales must affect costs. Profits before tax in the year to June 30th rose from £1,774,000 to £2,608,000 but these profits are not strictly comparable as the 1960-61 figures include for the first time those of Rothmans of Pall Mall which was acquired by Carreras at the time of the Rothman-Carreras integration scheme. Rothmans' profits had been estimated at £500,000 before tax but they were in fact much greater than this following a further growth in sales of king size filter-tipped cigarettes.

It is clear however that some of the improvement in profits is the result of the group's development programme which has been centred on the new Basildon factory. The latest results reflect the first full year of manufacture at this new plant. The company's development plans are not yet complete and the completion of the new administration block early next year will release more factory floor space for production. Further growth is expected not only by the management but also by the stock market: the 2s. 6d. "B" shares at 6s. 6d. yield only 3½ per cent. The low return certainly reflects the possibility of an increase in the dividend, for in raising the dividend from 8 to 9 per cent the directors said they would have paid more but for the Chancellor's request.

BICC

AS expected the interim results from British Insulated Callenders Cables reveal an improvement in profit margins in the first half of 1961, but the chairman, Sir William McFadzean, emphasises that margins still remain narrow. Sales have continued to run at a high level and, as the table shows, the improvement in margins is reflected in the rise in profits. Exports and overseas sales have also increased but profits both from BICC's Australian and Canadian companies have fallen; the latter has made a loss, but prospects there now seem a little brighter. Sir William forecasts that the improvement in profits in the first six months of 1961 is likely to be maintained in the second half of the year and that investment income for the whole of 1961 should be similar to that for 1960. It remains to be seen whether this will raise earnings per share, for the ordinary capital was increased by a one-for-seven rights issue in May. On the enlarged capital the directors have forecast a maintained dividend of 13½ per cent, but this interim report may prompt some shareholders to hope for a slightly higher final payment. On 13½ per cent. the £1 shares at 59s. yield 4.6 per cent.

Six months to	June 30, 1960 £'000	Dec. 31, 1961 £'000	June 30, 1961 £'000

Motor Components

SUPPLIERS of motor components cannot protect themselves very much from a recession in the motor industry and the stock market was therefore fully prepared for disappointing results. But in several cases the falls have proved to be less severe than had been expected. The interim report from **Pressed Steel** last week provided the biggest shock, for the interim dividend, which the year before was set at 9 per cent, has been passed. Though the group has wider interests than most other component suppliers these have provided no cushion. The railway division worked below capacity and price cutting has hit the sales of refrigerators. The directors say that but for the interruption of unofficial strikes "a reasonable level of output would have been maintained in car body production." The results for 1961 are likely to be "most disappointing" and the interim dividend was passed in view of the heavy capital commitments of the group. The 5s. ordinary shares have recovered most of an earlier fall and now stand at 17s. 6d.

The two well-known electrical component manufacturers, **Joseph Lucas** and **S. Smith,** supply the aircraft industry, but ultimately are as dependent on orders from the motor industry as Pressed Steel is. Each earned a smaller profit in the year to July 31st. The gross profits of S. Smith fell by over 36 per cent. In July, 1960, gross profits of £4 million were forecast, but in May this estimate was reduced to £3 million. The directors say that unofficial strikes in June were the reason why profits fell short of this estimate; but a reduction in the profits of the Australian subsidiary also played a part. The ordinary dividend has been left unchanged at 20 per cent, but its cover has fallen from over three times to rather less than twice. The market would not have been surprised if profits had slumped even more sharply and the 4s. ordinary shares were promptly marked up after the results were published by 1s. 4½d. to 16s. 3d., which is well above the year's low point of 13s. 6d. The fact that the profits of Joseph Lucas did not fall more than 16½ per cent also pleased the stock market and the £1 ordinary shares rose quickly by 5s. 6d. to 57s. 1½d. Although sales were fractionally higher than the total of £122 million in 1959-60, lower profit margins cut the cover on the unchanged dividend of 13¾ per cent from 3 to 2¼ times. Both Lucas and Smith shares are now on a significantly lower yield basis than the shares of the two leading British motor manufacturers.

Duple Motor Bodies, which makes bodies for buses and coaches, has raised the total dividend from the equivalent of just under 10½ per cent to 12½ per cent. Profits, including £14,000 in respect of earlier years, were virtually maintained. But the stock market was not impressed with these results as future prospects are not bright. The manufacturing programme has been scaled down and profits are expected to be materially lower. Accordingly the 4s. ordinary shares were marked down 2s. 6d. to a new low of 7s. 1½d.

A warning about the future has also come from the Marquess of Exeter, the chairman of **Birmid,** which makes castings for the motor and aircraft industries. He says that while sales in 1960-61 were virtually unchanged, rising costs cut into margins, and since the end of the financial year there has been a distinct falling off in demand. Costs have continued to rise so steeply that some contracts may prove to be unprofitable.

Combined English Mills

BECAUSE the Lancashire cotton industry has been drifting since the spring from boom into recession, a company's accounting date is the key to its results this year. But it is sometimes too readily assumed that a favourable accounting date is responsible for all differences between cotton companies' profit performance—some groups like Combined English Mills were probably better prepared for this year's recession than some of their competitors. This group spent heavily on re-equipment before the Government's reorganisation scheme, and it was among the first to take advantage of the grants towards re-equipping mills offered under the reorganisation plan. Its management has also been quick to adopt new techniques, and its success last year in adding to its share of Britain's yarn exports is a pointer to its ability to compete.

The group has a stake in the manufacture of man-made fibre yarns and mixtures spun on the cotton system for the flourishing knitwear industry and this side of the business has not been so seriously affected by the setback this year. Combined English Mills also began its financial year with an exceptionally big volume of orders in hand. The increases in trading profits from £806,000 to £951,000 in the year to September 30th, and in net profits from £401,000 to £465,000 are not, therefore, all that surprising. The ordinary dividend has, however, been left unchanged at 6 per cent (so that the £1 shares at 10s. 9d. yield 11 per cent). The caution is justified: yarn output has fallen progressively this year and in September was 16 per cent lower than a year ago. Yarn prices, despite the lack of new orders, were higher in September than they were a year earlier, but have declined quite sharply in the past two months.

Farbwerke Hoechst

AFTER the war the I.G. Farben chemical group was split into three main groups; the shares of the biggest of the three principal successor companies, Farbenfabriken Bayer received a London quotation in February and now the shares of another of the trio, Farbwerke Hoechst, are being introduced to the London Stock Exchange. Hoechst is slightly smaller than Bayer, but has an equally impressive growth record; in 1960 its sales amounted to DM2,703 million, or 11.9 per cent of the total turnover of the German chemical industry. In the first nine months of the current year the volume of sales increased by 10 per cent but in value the increase was nearer 7 per cent, reflecting the squeeze on prices and margins, which was accentuated after the March revaluation. But the directors have no doubt that they will be able to maintain the current dividend of 18 per cent on the capital which has been increased this year from DM630 million to DM700 million.

One attraction of Hoechst shares to London investors is that dealings will be possible in deposit certificates of DM5; these will be issued by S. G. Warburg. On the basis of a price of just over 600 per cent for the Hoechst shares the price of the certificates will be about 56s. 6d. The yield is 2.8 per cent but allowing for double tax relief (at a provisional rate of 5s. 2d.) the yield improves to 3.2 per cent. Such a return is warranted by the company's exceptional growth record but for the moment at least a continuation of this rate of growth looks unlikely.

Hire Purchase Results

THE preliminary results of **Lloyds and Scottish**, the hire purchase finance house owned 50-50 by National Commercial Bank of Scotland and Lloyds Bank, reveal that the consolidated profit before tax for the year to September 30th slumped by 75 per cent from £3 million to £739,000. Presumably most of this fall is due to bad debts. The full report will no doubt confirm just how quickly business that was once considered satisfactory can become thoroughly unsatisfactory. In last year's report Mr Ian Macdonald, chairman of Lloyds and Scottish and of the National Commercial Bank, said that the company had followed "a selective policy" and rejected business "which did not attain a high standard of credit rating," and that as far as bad debts were concerned "we have not had any cause for concern."

Disclosed profits of **National Commercial Bank** for the year to October 28th have fallen from £1,540,000 to £1,368,000, but the dividend from Lloyds and Scottish has been slashed from £597,000 to £184,000; this suggests that banking profits have in fact risen—as might be expected with interest rates higher and an average level of advances for the Scottish banks some 15 per cent up on the year. The directors of the bank have recommended a final dividend of 9 per cent to make 16½ per cent for the year; in 1959-60 shareholders received the same payment plus a 150th anniversary bonus of 1½ per cent. For Lloyds Bank the hire purchase setback is equally serious, for while last year's dividend from Lloyds and Scottish represented 13 per cent of its disclosed profits, it also has a 25 per cent interest in Bowmaker which has passed its interim dividend and because of bad debts is unlikely to be able to pay a final dividend.

Last year, one of the first companies to announce heavy hire purchase losses was **Charles Roberts**, whose hire purchase subsidiary S. and J. Claye, incurred a loss of £500,000. Mr Duncan Bailey, the chairman of Charles Roberts, has now announced that the company made a further loss, of £989,000. The group's loss for the year to March 31st is £912,000 and the chairman has promised "a full explanation" with the full accounts next month. So far this year the news from the hire purchase companies has usually been as bad as that of last year, and investors who were hoping in the summer that the worst was past must now be having second thoughts.

London Stock Exchange

FIRST DEALINGS:	Oct. 30	Nov. 13	Nov. 27
LAST DEALINGS:	Nov. 10	Nov. 24	Dec. 8
ACCOUNT DAY:	Nov. 21	Dec. 5	Dec. 19

THE rally in equities which began last Wednesday has continued into the new account helped by the Chancellor's statements about the prospects for the economy and the further rise on Wall Street. Investors have shrugged off more unfavourable company news as well as the trade figures. Over the week to Wednesday *The Economist* indicator rose by 12.5 points to 368.9, its highest level since the beginning of September.

The gilt-edged market had a quiet week. The long dated "tap" stock, Treasury 5½ per cent 2008-12, attracted more buyers before the weekend, many of whom switched from other gilt-edged stocks, but the early gains were lost and over the week the stock was unchanged at 84. Among short dated stocks Conversion 4¾ per cent 1963 lost ¼ to 98¼ and the undated stocks were also dull, 3½ per cent War Loan losing ⅛ to 52⅜xd. The dull tone in the market stemmed partly from trustee switching into equities. The new Agricultural Mortgage 6½ per cent stock, 1975-77, opened at a discount of ¼; it closed on Wednesday at 99¼, a discount of ¼.

Bank and insurance shares made notable rises over the week: Barclay's were 4s. higher at 88s. 6d. and District 4s. 6d. higher at 92s. 6d. while Pearl Insurance gained 17s. 6d. to 227s. 6d. Business in brewery shares was also brisk and Watney Mann gained 2s. 3d. to 100s. 3d. Building shares joined in the rise and London Brick gained 5s. 3d. to 91s. 3d. and helped by the news of bigger cement deliveries Rugby Portland gained 6s. 1½d. to 56s. 9d. Among stores, Debenhams were in demand after the news of the property development plan, but some buyers took their profits after the earlier rises; nevertheless, the shares gained 5s. 3d. to 62s. over the week. Other leaders were also higher, Marks and Spencer "A" gaining 1s. 6d. to 105s.xd. Investment buyers also turned their attention to electrical shares and AEI gained 3s. to 34s. 6d. Engineering shares held their prices despite unfavourable news from GKN and Birmid; Tube Investments advanced 1s. 6d. to 66s. 6d. ahead of the full report and the prospects of a decimal coinage system have brought a sharp rise in Averys of 6s. 9d. to 90s.

Steel shares, however, were generally lower over the week and Stewarts and Lloyds lost 1s. 3d. to 39s. 7½d. Food shares were in demand and Associated British Foods gained 7½d. to 12s. 6d. Motor shares also improved on press comment, BMC gaining 1s. 4½d. to 15s. 9d. Shipping shares improved after falling towards the end of the old account but oils were mixed—BP, which are now ex the scrip issue, gained 6s. 3d. to 42s. 3d. but Shell lost 2s. 3d. to 114s. 3d. Kaffir shares gained over the week, helped by the easing of South African import controls. Union Corporation gained 4s. 3d. to 58s. 9d.

EXCHEQUER RETURNS

For the week ended November 11, 1961, there was an "above-the-line" surplus (after allowing for sinking funds) of £53,801,000 compared with a surplus of £14,712,000 in the previous week and a surplus of £2,399,000 in the corresponding period of last year. There was a net expenditure "below-line" of £9,427,000 leaving a total cumulative deficit to date of £676,771,000 compared with £685,682,000 in 1960-61.

Money and Exchanges

THE MONEY MARKET

THE rapid fall in the Treasury bill rate, amounting to 1⅛ per cent over the previous six weeks, came to a halt at last Friday's bill tender; the syndicate of discount houses maintained its bid at £98 12s. 11d. for the £230 million of 91-day bills on offer and the average rate of discount fell by only 0.61d. to £5 8s. 5.49d. per cent. This check was not unexpected following the vigorous use of Bank rate in the money market immediately after its reduction to 6 per cent. The market's allotment of 91-day bills was only 44 per cent; its allotment of 63-day bills was 70 per cent against last week's 90 per cent.

Before last week's tender, the market was forced to borrow from the Bank of England on four occasions: this week the market has been forced into the Bank only once. Credit has been tight throughout the week, but on three days the market was given large special help from the authorities through purchases of bills. The rate for day-to-day loans has remained around 5⅛ per cent—only 3/64 per cent below the current bill rate.

In New York the three month bill rate rose sharply this week from 2.349 per cent to 2.516 per cent.

(12) Average for second quarter. (13) Average for fourth quarter.

APPOINTMENTS

Unilever

ACCOUNTANTS FOR ORGANISATION DIVISION

Unilever invites applications from qualified accountants wishing to combine the interest and variety of consultancy work with the scope offered by one of the world's largest groups of operating companies.

The posts are located in a Head Office division providing advice, and implementation of recommendations, in the wide and growing range of industries which Unilever covers round the world. Most of the immediate assignments will be in the London area or in the North of England, but opportunities will arise later for overseas responsibilities if desired.

We are looking either for Chartered Accountants, who preferably also have a degree in Economics, or for Cost Accountants, preferably with experience in Work Study.

Two levels of post are available—for men aged 32-45, already earning around £2,500, and for men aged 28-35, who are already earning at least £1,500. The younger men must have the potential to fill the more senior posts after suitable training.

Applications, giving relevant details of age, experience, salaries earned, etc., should be addressed to :— Organisation Division (ref. C. 582/7), Unilever House, Blackfriars, London, E.C.4.

All applications will be treated in strict confidence and interviews will be arranged in London or the North.

STATISTICIANS

THE UNITED NATIONS

needs statisticians to fill vacancies at New York Headquarters and Regional Economic Commissions. They will be expected to conduct research and prepare statistical tables or reports in one or more of the following fields: external trade statistics; transport statistics; price statistics; employment, unemployment and wage statistics; production and consumption statistics; social statistics; vital statistics; population statistics; national accounts statistics; and other appropriate fields.

Qualifications required are university degree or equivalent in statistics or in economics or mathematics (allied with statistics); one or more years of graduate work or of practical experience, and fluency in English or French, preferably with a working knowledge of the other.

Salary, depending on qualifications and experience, from $4,800 to $7,300 net per year, free of tax, plus cost of living allowance ranging from $935 to $2,100; plus dependency allowance, if applicable, and other benefits. In recruitment for the above vacancies, preference will be given to nationals of member states of the United Nations which are not, or are inadequately, "represented" in the Secretariat.

Applications should be sent to the Recruitment Services (Room 3646), Office of Personnel, UNITED NATIONS, NEW YORK, NY

AREA POLITICAL EDUCATION OFFICER *required* for political party organisation. Applicants should be University graduates, preferably between 25 and 45. Commencing *salary according* to experience and qualifications, not less than £750.—Write to Conservative Political Centre, 32 Smith Square, London, S.W.1.

For further appointments and other classified advertisements see pages 705 and 714

TRAINEE SALESMAN *required* in the Packaging Industry. Age 23-30. Excellent training provided with a view to being an assistant to the Sales Director and eventually taking over an area. He must be well educated, well groomed and ambitious. All replies will be acknowledged. Factory situated in the north with pleasant surroundings.—Apply to Managing Director, Box 507, Robertson & Scott, 42 Charlotte Square, Edinburgh.

ACCOUNTANT

J. & P. COATS, LIMITED, world-wide manufacturers and distributors of *sewing threads*, have a vacancy in the overseas financial control department of their Head Office in Glasgow, for a *qualified* Accountant not over 30, preferably with some years of post-qualifying commercial experience. The *appointment* is likely to lead later to an overseas posting and applicants must be prepared to take up residence *in any country* where the Company operates. Applications, in writing, to the Personnel Manager, 155 St. Vincent Street, Glasgow, C.2, should give personal particulars and work experience. Full details of the appointment will be *given* to those asked to attend an interview for which expenses will be refunded.

UNIVERSITY OF HULL

Applications are invited for the *appointment* of SENIOR LECTURER IN OPERATIONAL RESEARCH FOR MANAGEMENT to take charge of courses to be offered for a new one-year post-graduate Diploma in this subject, commencing October, 1962. Candidates should have a good Honours degree in Economics (Statistical Theory), Mathematics (Statistics) or Statistics and appropriate practical experience in industry. Appointment tenable from August/September, 1962, to allow time for organising courses. Salary scale £1,650-£2,175 p.a. with *placing according* to *qualifications* and experience. F.S.S.U. benefits and children's allowances. Further particulars may be obtained from the undersigned, to whom applications (seven copies) and the names of three referees should be sent not later than December 18, 1961.

W. D. CRAIG, Registrar.

RESEARCH IN ECONOMICS AND FINANCE

HOUBLON-NORMAN AWARDS

The Trustees of the Houblon-Norman Fund invite applications for FELLOWSHIPS OR GRANTS in aid of research into the working of industry and finance in Great Britain and elsewhere, and the economic conditions affecting them.

Fellowships, which are intended for experienced research workers, are awarded for full-time research for one year, which may be renewed for a second year. Grants are awarded for either full-time or part-time work. The amount of the awards, which will take effect from October 1, 1962, will depend upon the circumstances of the candidate and the probable expenses of his work.

Applicants must be British subjects normally resident in the United Kingdom. The Trustees are prepared to relax this rule only in exceptional circumstances.

Forms of application, which may be obtained from the Secretary of the Fund, c/o Bank of England, London, E.C.2, should be returned not later than March 1, 1962.

FEDERATION OF RHODESIA AND NYASALAND

MINISTRY OF AGRICULTURE

VACANCIES FOR AGRICULTURAL ECONOMISTS

Applicants must hold a degree in either Agricultural Economics, Economics or Commerce, or hold a similar degree and have experience in the field of Agricultural Economics.

Commencing salary, depending on qualifications and experience: £752 10s. to £1,773 15s. per annum.

Family passages, pensions, medical aid, holiday grants, generous sick and occasional leave, car advances, travelling and field allowances, low income tax, good schools (free tuition), opportunities for sport and recreation in excellent climate.

Application forms and further details from the Secretary (B), Rhodesia House, 429 Strand, London, W.C.2.

Closing date, December 7, 1961.

CENTRAL OFFICE OF INFORMATION require a SENIOR INFORMATION OFFICER (unestablished) to act as head of a small unit writing reference information papers for overseas use on British home affairs (other than economic affairs), mainly on governmental and social topics. Candidates should have a university degree, a wide knowledge of current affairs, research experience and some administrative capacity; they should be able to present factual information concisely and accurately and be prepared to submit examples of written work. Salary £1,573-£1,937.—Write, giving age, full details of experience and qualifications, to Manager (PE.3977), Ministry of Labour, Professional & Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

UNIVERSITY OF NOTTINGHAM

DEPARTMENT OF INDUSTRIAL ECONOMICS

Applications are invited for a LECTURESHIP or ASSISTANT LECTURESHIP in Industrial Economics, with special reference to Accounting. Salary scales: Lecturer, £1,050 to £1,850; Assistant Lecturer, £800 to £950. Initial salary according to qualifications and experience, plus membership of the Universities Superannuation Scheme and children's allowances.

Conditions of appointment and form of application, to be returned by December 9, 1961, from the Registrar.

ASSISTANT TO QUALITY CONTROL DIRECTOR

Required for Star Paper Mills Ltd. The position calls for an individual with experience of the application of statistical techniques in the process industries. The appointment will be a new one in the Company and offers an excellent opportunity.

Salary will take account of the qualifications and experience of the successful applicant.

The Company operates a Pension Scheme and the full cost of removal will be met.

Applications, giving full details of background and experience should be addressed to the

Managing Director,
STAR PAPER MILLS LTD.,
Blackburn,
Lancs.

CHARTERED ACCOUNTANT

required by

THE BRITISH ALUMINIUM CO. LTD.

as INTERNAL AUDITOR for the Company's factories and branch offices in England and Wales.

Considerable travelling is involved, and the ideal base is the Midlands area where a car would be provided.

After some years, there is every possibility of promotion to a static position in the Group.

A single man aged 25 to 30 years would probably be most suitable. Some industrial experience an advantage, but not essential. Salary according to age and experience, but not less than £1,000 per annum.

Applications should be sent to:—

The Group Chief Accountant,
THE BRITISH ALUMINIUM CO. LTD.,
Norfolk House,
St. James's Square, LONDON, S.W.1.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of INVESTIGATIONAL OFFICER in the DEPARTMENT of AGRICULTURAL ECONOMICS. Candidates should have academic qualifications and/or practical experience in Agriculture, Economics or Accountancy. Salary scale £650 x £25 to £750 x £50 to £950 with membership of the F.S.S.U. and Children's Allowance Scheme. Graduates would have an initial salary of £725 per annum. Investigational officers may be considered on reaching a salary of £800 per annum for promotion to the grade of Senior Investigational Officer (salary scale: £1,050 x £50 to £1,300 (merit bar-line) x £50 to £1,550). Applications should be sent not later than Monday, November 20, 1961, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

ROTHMANS FELLOWSHIPS

Rothmans of Pall Mall (Australia) Limited have set up the Rothmans University Endowment Fund to encourage higher education and research for the benefit of the Australian national welfare. The Fund is administered in the University of Sydney by Trustees on behalf of all Australian Universities.

The Trustees have agreed to establish Rothmans Fellowships at Senior and Junior levels to enable Fellows to undertake post-graduate work within a University or approved institution. The Senior Fellowship is of annual value of not more than £A4,000. The Junior Fellowship is in two grades, the first of an annual value of from £A1,000 to £A1,250, the second of an annual value of not more than £A2,300. At the discretion of the Trustees, a Fellow may be paid travelling expenses incurred in taking up the Fellowship and returning to his home.

In addition, an amount of £A500 per annum is available, at the discretion of the Trustees, to the University of institution where the Fellow is working for the payment of fees and expenses including the purchase and maintenance of equipment.

The Fellowships are open to graduates of any University but may be held at other than an Australian University only by a graduate of an Australian University. Preference in the award of the Fellowships will be given to graduates who desire to work in an Australian University.

Application forms and further details may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close on *December 31, 1961.*

UNIVERSITY COLLEGE OF NORTH STAFFORDSHIRE

Applications are invited from Honours Graduates in Economics for a RESEARCH ASSISTANTSHIP in Department of Economics. Research experience is desirable but not essential. Salary from £600.—Further particulars and application forms may be obtained from the Registrar, The College, Keele, Staffs., to whom they should be returned not later than December 15, 1961.

A CLERICAL ASSISTANT

required

for Statistical Department in the tanker section of a major Oil Company in West End. The duties include the maintenance and analysis of records and the preparation of data for punched card records. Accuracy and attention to detail are essential. Minimum age 21, preferably with at least ordinary level G.C.E. passes in English, Geography and Mathematical subjects. The position might suit an older person of the requisite background and aptitude.

Permanent, pensionable post, excellent working conditions, Luncheon Vouchers.

Please apply to Box No. 4379 c/o Charles Barker & Sons Limited, 20 Cannon Street, London, E.C.4.

PERSONAL ASSISTANT required by R. E. Walpole, Director of Market Investigations Ltd., one of the leading companies in the Market Research field, operating at this country and overseas. Applicants should be graduates in economics, statistics or related subjects, but previous experience in Market Research is not essential. The successful candidate will be required to do a wide variety of work in the first two years which will qualify him for a Senior appointment within the company. Starting salary £800-£850 per annum with substantial six-monthly bonuses.—Reply, in confidence, to R. E. Walpole, 1 and 2 Berners Street, London, W.1.

Esso

Applications are invited

for the vacancy of

ECONOMIST

at our Fawley Refinery

who will be required to work in the Accounting Department as a member of the management accounting team. He will study methods of handling and interpreting data, and the best methods of statistical analysis for management reporting.

Applicants should preferably be between 25 and 30 years of age, and should hold a degree in Economics with a qualification in Statistics.

Application forms can be obtained from:—

The Employee Relations Superintendent,
ESSO PETROLEUM CO. LTD.,
Esso Refinery,
Fawley, Hants.

ELLIOTT-AUTOMATION

The largest group of companies in Europe specialising in instrumentation, control and automation, wishes to appoint an experienced

ECONOMIST

based on its offices in the West End of London. The successful candidate will be required to engage in economic and statistical research ranging over a wide field.

A good statistical background is essential and preference will be given to one having held a similar post in related industry.

This is a new post and offers exceptional opportunities.

Please write in first instance, giving full details of qualifications, experience and stating present salary to:

Chief Personnel Executive,
70, Dudden Hill Lane, N.W.10.

UNIVERSITY COLLEGE IBADAN, NIGERIA

Applications are invited from honours graduates for three posts of (a) TUTOR or (b) ASSISTANT TUTOR in Extra-Mural Studies, one to work in Eastern Nigeria, one in Northern Nigeria and one to be in charge of Industrial Relations Programme in Ibadan. Appointments to commence as soon as possible. Salary scales: (a) £1,200 x £75—£1,650 (bar) £1,725 x £75—£2,175 p.a., (b) £950 x £50—£1,100 p.a. (or if over 28 or holding a higher degree £1,050 x £50—£1,150 p.a.). Passages paid for appointee, wife and up to five children under 11 years, on appointment overseas leave and termination. Part-furnished accommodation at rent not exceeding 7.7 per cent. of salary. Children's, car and outfit allowances. F.S.S.U. Detailed applications (six copies) naming three referees by December 22, 1961, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

NUFFIELD COLLEGE (OXFORD)

RESEARCH FELLOWSHIP

Applications are invited from MEN OR WOMEN GRADUATES who wish to undertake research in Economics, Politics, Sociology, recent Economic and Social History and Political History, Industrial Relations, African Studies, Public and Social Administration, International and Public Law or other branches of the Social Studies. The appointment will normally be for two or three years. The stipend will be according to age.

Further particulars may be obtained from the Warden. Applications should reach him not later than January 8, 1962.

UNIVERSITY OF TASMANIA

Applications are invited for the following appointment:—

LECTURESHIP IN ECONOMICS

Candidates are asked to state fully their special interests and experience within the general field of Economics. Preference will be given to candidates with particular interests in the fields of international trade or economic development, but candidates specialising in other fields will be considered. Although not essential, subsidiary qualifications or experience in Economic Statistics would be an advantage.

The salary scales for Lecturers are: Grade II, £A1,650-£A100-£A1,950, and Grade I, £A2,050-£A100-£A2,450. Appointment will be offered within either of these grades according to qualifications and experience.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *December 31, 1961.*

STATISTICIANS. At least seven posts (six pensionable under Superannuation Acts, one under F.S.S.U.) in the London area for men or women at least 28 on 1.12.61 with wide statistical experience and (normally) first or second class honours degree in statistics, or other appropriate main subject combined with statistics. Other graduates with specially suitable statistical experience considered. Salary (Inner London) £1,781-£2,483. Starting salary may be above minimum. Promotion prospects. —Write Civil Service Commission, Burlington Gardens, London, W.1, for application form, quoting 5409/61. Closing date December 11, 1961.

NORTH WESTERN GAS BOARD HEAD OFFICE, MANCHESTER

ASSISTANT ECONOMIST

Applications are invited for the above pensionable appointment in the Statistics Department, at a commencing salary within the range £770-£1,015 per annum according to qualifications and experience.

Candidates should preferably be not more than 27 years of age and must hold an appropriate graduate or equivalent qualification. Preference will be given to Honours graduates in Economics combined with Accountancy.

The Assistant Economist will be concerned with cost and price studies within the business and with the analysis of economic trends, as they affect the gas industry. The work offers ample scope for initiative in the application of the economist's approach to the solution of business problems.

Detailed applications, giving the names of two referees, should be forwarded to the Secretary, North Western Gas Board, Bridgewater House, 60 Whitworth Street, Manchester, 1.

For further appointments and other classified advertisements see pages 705 and 713

THE ROYAL COLLEGE NAIROBI

Applications are invited for the Chair of Economics. Salary £3,000 p.a. F.S.S.U. Child allowance £50 p.a. per child (max. £150 p.a.). Passages for appointee and family (up to four adult passages) on appointment, termination and leave (once every two years). Rent accordant to quarters provided £60-£114 p.a. Medical scheme for member and family. Detailed applications (eight copies), naming three referees, by December 31, 1961, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

It's the Home Service Insurance Man, the friend of the family. Through him, ten million families are investing in their own and Britain's future, by their regular payments on industrial life assurance policies.

Invest in The West Indies

How Federation benefits new investors

Economic and foreign trade policies are co-ordinated, the aim being to establish a fully diversified economy. Transport, communications and power facilities are being expanded—new harbours and roads, larger airports, all these are creating new opportunities for new secondary industries.

THE RESOURCES ARE THERE:
Oil, bauxite, water power and many minerals. Fruit, cocoa, cotton, coffee, sugar, spices, crops of all kinds. And 3½ million people.

THE SKILLS ARE THERE:
Considerable progress in education has been made in recent years and much more is planned. Research programmes of The Agriculture Faculty of the University College of The West Indies (formerly the Imperial College of Tropical Agriculture) and its other Faculties benefit the whole region.

THE MARKETS ARE THERE:
Both Americas are prosperous near-neighbours. The tourist possibilities of The West Indies are far from fully realised.

Customs Duty and income tax concessions are available

NEW LOW RATES—and the most convenient air cargo service to the U.S.A.

Pan Am reduces rates up to 63%—simplifies commodity categories to make shipping by Clipper Cargo even easier

Pan Am's new low transatlantic rates and simplified commodity listings make it more profitable than ever to ship by Clipper Cargo. In addition to savings of up to 63%, Pan Am gives you the convenience of 49 jet flights and 9 DC-7F all-cargo flights a week to the U.S.A.—a weekly capacity of nearly 385 tons!

From Europe you can ship direct by Pan Am Jet to New York, Boston, Philadelphia, Baltimore/Washington, Detroit, Chicago, Seattle, Portland, San Francisco or Los Angeles. To handle shipments of unusual size or weight, Pan Am also offers DC-7F all-cargo service to New York . . . and the *only* all-cargo service to Chicago and Detroit from Europe.

In addition to savings on rates, you spend less all along the line—insurance, handling and crating costs are much lower. And, because you save *time* with Pan Am, you are free to reinvest your money faster, increase your product turnover, increase your profits.

For a free, on-the-spot analysis of your shipping *operations*, call your cargo agent or your local Pan Am Clipper Cargo representative.

UNDER ATTACK—THE GOVERNMENT

Electricity Wages: The first horse has bolted from a nerveless Cabinet: there is now no alternative but to bar the gate to the others seeking the rich pastures of higher wages (p. 729).

London Transport, too, may be looking for a way round the wage pause (p. 743).

Airline Licences: The Minister of Aviation has failed a basic test of policy by refusing to allow competition in the North Atlantic air (p. 819).

Aircraft companies are combining to get their teeth into the carrot of NATO contracts (p. 830).

Immigration Bill: The folly and weakness of discriminating by law against coloured British subjects cannot be remedied merely by discriminating against the Irish as well (p. 739).

Nottingham's black and comely 2½ per cent (p. 753).

UNDER SCRUTINY—THE NATION

Scottish Economy: A radical and clinical report upsets some northern taboos—and provokes some stern rethinking on issues south of the Border (p. 732).

Food for planners—frequent revision of the index of industrial production can make interpretation a trying task (p. 825).

The statistics of snobbery—British towns reviewed (p. 749).

London's bastards—a rising influx (p. 740).

Transport trials—interest rates for railways and protection for coastal shippers (p. 825); and buses for East Anglians (p. 750).

Labour's Luck

One up at Bridgeton (p. 740)—where the Independent Labour débâcle leaves room for a left-wing reshuffle (p. 753).
Shadow Cabinet: no new blood drawn (p. 740).

The World's Currencies

International Banking Survey (pp. 781-817) A year of turbulent upheavals in the foreign exchange markets has left the world's major currencies in even greater need of constructive international co-operation.

- The renewed confidence in sterling is thinly based and the real lesson of the crisis is misunderstood.
- The dollar is once more under suspicion. This may frustrate efforts to correct the balance of payments (p. 762), but there is plenty of confidence at home (p. 765).
- The mark—revaluation has begun to work but new problems are arising.
- The franc—a spectacular recovery but rising prices are causing new concern.
- Canada is still struggling to depress the value of its dollar, but may have to reduce interest rates first.
- In the overseas sterling area, international aid and capital imports have brought only temporary relief.

INTERNATIONAL

STEP BY STEP

Mr Kennedy has succeeded in arriving at an agreement with Dr Adenauer over Berlin tactics; it remains to be seen if this makes it easier to arrive at an agreement with Mr Khrushchev. But he still has a little room for manœuvre (p. 731).

In Berlin itself, the West must, however, be content at present to watch Herr Ulbricht's wall-building from the wings (p. 739).

Mr Khrushchev has been putting pressure on Finland; Mr Kekkonen, resourceful as usual, is playing for time (p. 777). Russia's acceptance of the Anglo-American invitation to resume talks on banning nuclear tests suggests that it is aware of the disadvantages of treating world opinion with contempt (p. 740).

President Tito has expressed anxiety at the extent to which the neutrals' interests are being trampled on by the rival camps of East and West (p. 744).

OUT OF STEP

The rise of the common market is driving further wedges between the various groups of African states; **Nigeria** has a part to play in reversing the process (p. 734). **Canada** has improved its gamesmanship over the question of British entry to the market, but Canadian opinion is still sadly confused (p. 774).

Both sides in the proposed **Malaysian** federation know they are engaged in a race against time; but the Malayans are markedly, and perhaps unrealistically, more optimistic than the government of Singapore (p. 773).

STEPPING DOWN

Goodbye Stalin: in Czechoslovakia it has been, so far, a relatively circumspect farewell (p. 743).

Goodbye Trujillo: The intervention of the United States navy appears to have scotched an attempted return to dictatorship in the Dominican Republic, and the chance of a fidelist uprising that might have followed it—to the annoyance of Cuba (p. 749).

The Cuban-American quarrel already looks like wrecking the **international sugar agreement**—the one stabilisation scheme that, on the face of it, might have succeeded (p. 820).

Goodbye Soldiers? The Turkish army has at last found a parliamentary government it can hand over to; but it will intervene again if the politicians fail to behave themselves (p. 736).

STEPPING UP

Italy needs to increase its output of technical school diplomas if it is to maintain its dizzy rate of industrial advance (p. 780).

The flow of **oil** through new European pipelines should soon bring more fuel more cheaply to central Europe (p. 774).

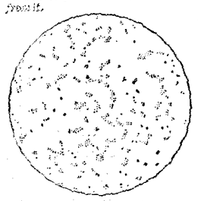
General de Gaulle has arrived at a satisfactory solution to the problem of Mr Ben Bella's hunger strike (p. 739).

STEPPING OUT

On his western tour President Kennedy has spoken up courageously (p. 765).

On civil defence Mr Nelson Rockefeller has set an example to the President (p. 766).

Detailed contents on page 729



BACILLUS ANTHRACIA
Popularly known as anthrax, a deadly disease conveyed by animal hide, hides, wool, etc.

CLOSTRIDIUM BOTULINUM
The organism causing the dreaded botulism.

CLOSTRIDIUM TETANI
This is the lockjaw-causing organism that makes strict sterilisation essential of such things as talcum powder, hospital dressings and sutures, etc.

STAPHYLOCOCCUS AUREUS
A scourge of modern medical nursing. Develops a resistance to penicillin and other antibiotics. Almost anything used in hospitals needs protection from it.

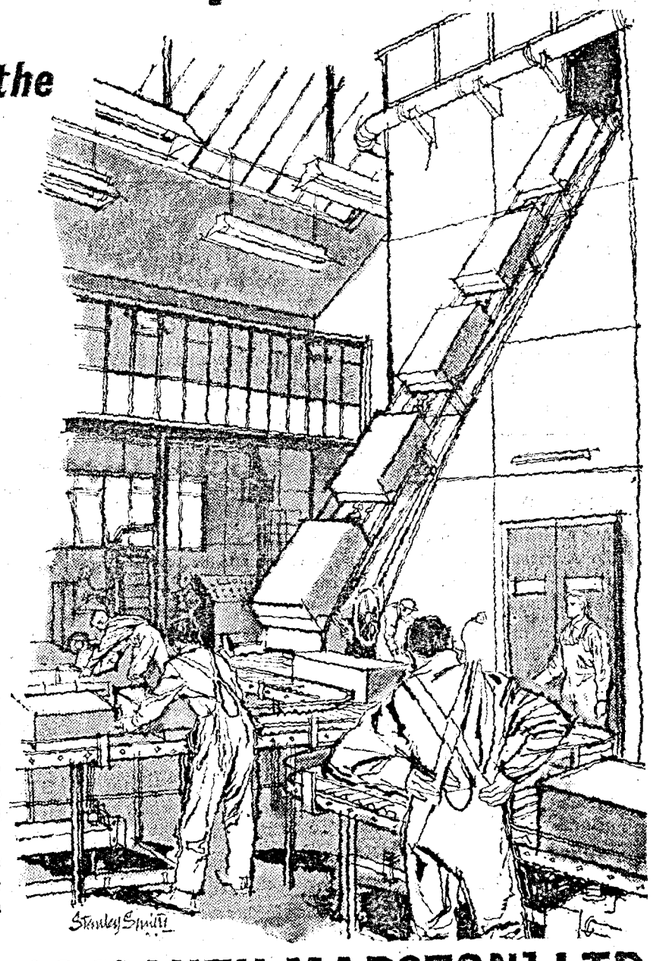
These are the problems

Sterilisation IN BULK is the new answer for hygiene

In industry and medicine expenditure of man-hours in the fight to repel *infection is a cause of* mounting concern.

Sterilisation of raw materials and other industrial merchandise medical and otherwise, has been difficult and found to cost a nation more than almost anyone imagined.

This is largely because sterilisation has had to be carried out before packaging thus wasting highly skilled hands on what should properly be a mere routine.



To this problem one answer is supplied by Vickers-Armstrongs: sterilisation *in bulk* by exposure to the cobalt-60 radio-isotope.

Advantages are great. Plant offered by Vickers-Armstrongs is completely mechanised and thus economical in man-power. Your sealed packaged goods to be sterilised are conveyed through the plant and emerge on the conveyor with all their contents surgically sterile and with no risk of re-infection.

Because neither heat nor steam is involved, most materials unsuitable for sterilisation by to-day's normal methods present no kind of difficulty and are unharmed.

Designed in conjunction with the U.K.A.E.A. Radiation Laboratories at Wantage, Vickers-Armstrongs plants are planned for throughputs of 2,000; 6,000 to 25,000; and 90,000 lb. a week, assuming a density in the packs of 6-30 lb. per cubic foot. Operation of the plant is simple, straightforward and completely safe to use and there is no residual radioactivity.

As a contribution to world health, Vickers-Armstrongs are ready to undertake design studies for particular applications of their plant with interested governments and organisations.

VICKERS-ARMSTRONGS [SOUTH MARSTON] LTD

South Marston Works Swindon England *Telephone Stratton St. Margaret 3241*

In addition to the Vickers Radiation Sterilisation Equipment, Vickers-Armstrongs (South Marston) Limited are working on technically advanced government and industrial engineering contracts for the General Post Office, the United Kingdom Atomic Energy Authority, the British Transport Commission and the War Office. The Company's design departments are based in Surrey fields, and at work on Food Processing Plant, Linear Accelerators for Radiotherapy, Hovercraft, Nuclear Research, and Nuclear Training Equipment.

SAVING FOR EVERYBODY

GOOD RATE OF INTEREST.
EASY TO BUY, EASY TO HOLD.
INCOME-TAX-FREE CONCESSIONS.

National Savings Certificates (10th Issue)

Each unit costs 15/-, becoming £1 in only seven years—equal to nearly 4½% interest free of U.K. income tax and surtax, or nearly 6½% taxable at the standard rate of 7/9. You may *hold* 1,200 units.

Post Office and Trustee Savings Banks

You may deposit up to £5,000, with no restriction up to this maximum on the amount *invested in any one year*. Both husband and wife can each enjoy £15 interest free of U.K. income tax (but not surtax) each year on their Savings Bank deposit accounts.

Defence Bonds

5% Defence Bonds are on sale in £5 units, and after seven years yield a 3% bonus free of U.K. income tax. *You may now* hold £5,000 worth, exclusive of holdings of earlier issues. *Ideal trustee investment.*

Premium Savings Bonds

Thousands of prizes, from £25 to £5,000, free of U.K. income tax and surtax, can be won each month. *Bonds cost* £1 each, and the permitted holding is now £80.

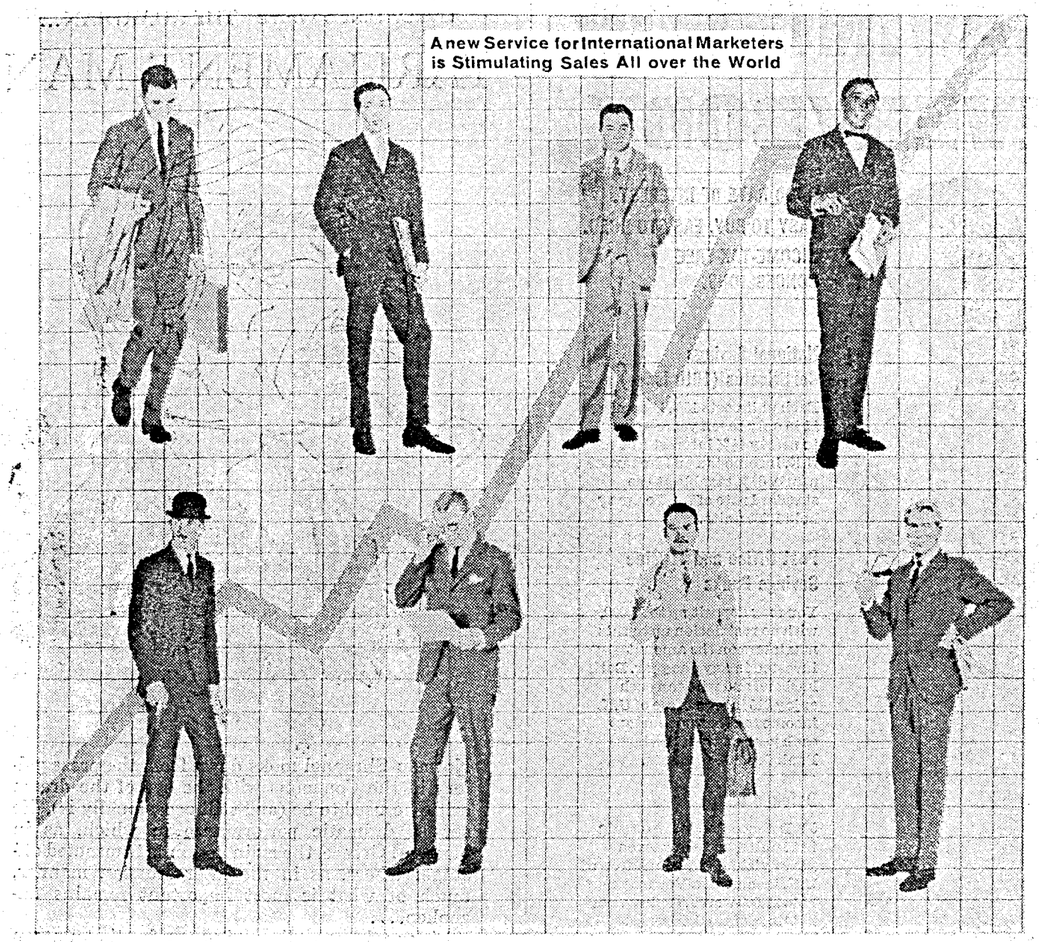
LIVELY MINDS WRITE THE GUARDIAN...

PARLIAMENT MAN



Norman Shrapnel looks down from the press gallery in the Commons with the eye of the drama critic he used to be (and still occasionally is). He sees a dramatic performance in which, as in classical Greece, the main action is transacted offstage: where, as in the later Russian manner, much of what is most important remains unspoken....

Shrapnel has a discerning eye for that unseen action, an ear cocked for those unspoken words. He has learnt, too, to interpret the ritual gestures learnt, for instance, to distinguish between the 57 varieties of what Hansard dryly notes as *(interruption)*; he knows when it signifies approval, when derision, when alarm, when relief. He has learnt to sense the emotion behind the deadpan ministerial utterance, the serious purpose concealed in the seemingly flippant rejoinder.

If The Guardian reader finds it easier than most people to read between the lines of the printed reports, it is largely because *he has* this subtle observer for guide. Giving praise where praise is due, thumbing his nose where this is the only appropriate gesture. Norman Shrapnel is perhaps the liveliest and most discerning critic of the farce, the tragedy, the *melodrama* that is parliament.

Read how Pan Am's World-Wide Marketing Service can increase your overseas sales

Recently, Pan Am announced its unique new service for businessmen, the World-Wide Marketing Service. Already shippers have discovered that this service gives them accurate, up-to-date information that may mean the difference between standing still in international markets or getting the jump on their competition.

You can share in the benefits of Pan American's world-wide experience, too. Here's the kind of information Pan Am can give you on any one of 114 trade centers throughout the world:

Expert advice on overseas shipping—on packing, rates, insurance, cartage and routings.

Free marketing facts on economic conditions, customs procedures, currency exchange, and other special information.

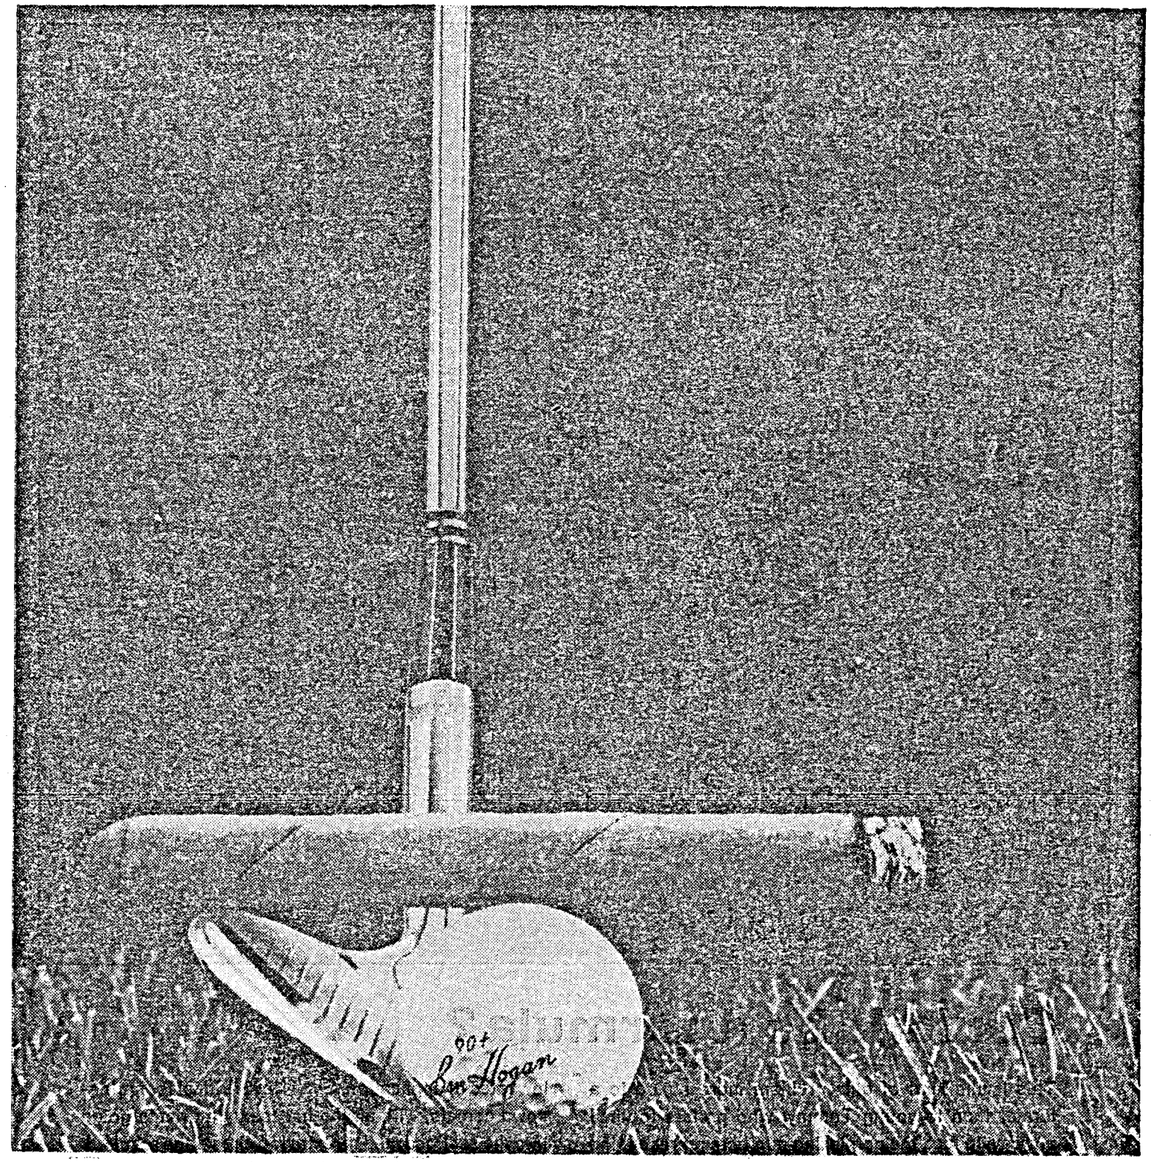
Latest news on world markets — with "Horizons," the monthly Clipper Cargo magazine, published just for shippers.

Simplified documentation—from one source speeds your product all along Pan Am's delivery chain (manufacturer to airport, overseas, to consignee).

Information about drastically reduced rates. On one route air cargo rates have been slashed 63%. Attractive new low rates put you into new markets—for new profits—faster!

World-wide representation at no extra cost. Wherever you ship, Pan Am representatives give your product individual attention.

An international viewpoint on the spot! Pan Am personnel, trained to international business methods and local markets, provide world-wide contact service.



One phone call puts you in business abroad! Call your Clipper Cargo agent or local Pan American office!

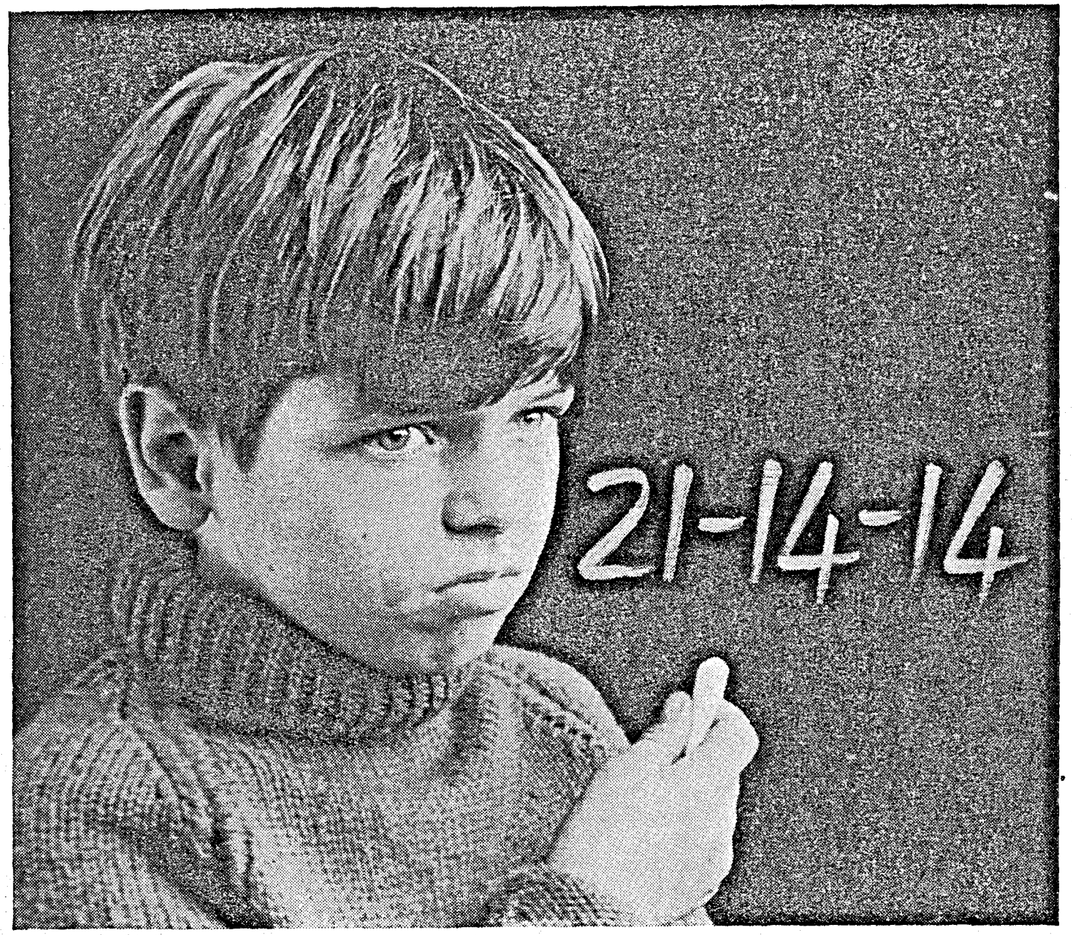
Clipper, Trade Mark, Reg. U.S. Pat. Off.



DEPARTURE: *Left-Handed Cigars or Right-Handed Golf Clubs: Examples of AMF's World-Wide Versatility.*

Left-handed or right, a properly-instructed golfer will usually prefer to play with right-handed clubs—and the AMF-Ben Hogan complete line of golf equipment is ready to accommodate him. On the other hand, a cigar smoker won't care whether his cigar is wrapped to the right or to the left, but it makes a tremendous difference in the making. Every cigar wrapped with natural leaf on cigar machinery must be wrapped either to the left or the right, depending on which half of a destemmed wrapper leaf is used. Thus, cigar machines must be designed to operate in tandem, to wrap either to the left or to the right. Solving such problems in cigar machinery, like making the best in sports equipment, is the function of the world-wide versatility of AMF. In many fields, in many lands, in many product lines, new departures take place every day—thanks to AMF International.

Could it be a formula?

This is the kind of quiz problem more suited to a farmer than to young Tommy, who prefers football anyway. In fact, the perplexing numbers represent the ratio of nitrogen, phosphate and potash in the new compound fertiliser Shell No. 2. In farm economics Shell No. 2 is important because it enables costs to be cut still more: its high concentration reduces handling in the field and saves precious storage space; the carefully balanced plant-food ratio means attractively low rates of application. Shell No. 2 is ideal for spring-sown cereals, with all the necessary nutrients going into the seedbed, and no extra top-dressings required. In addition to fertilisers, Shell produce a wide range of weed killers, insecticides, seed dressings and other chemicals for more efficient farming. For further information write to . . . the Information Officer, Agricultural Division, Shell Chemical Company Limited, 170 Piccadilly, London W.1

The Pause Electrocuted?

THE Government deserves the deepest censure for its contribution to the electricity wages surrender ; and it is no good the Prime Minister wringing his hands like an impotent Pontius Pilate and saying that it was impossible for him and his Cabinet colleagues to avert it. When the Electricity Council made its first sizeable wage offer to power workers five weeks ago, ministers should have stated publicly that they disliked even this initial offer, and that they would certainly deplore it if the Electricity Council ever came to consider for a moment going one whit beyond it ; that would have influenced the council against allowing its retreat to slide further, into pretty full-scale rout, last week. The reason why ministers did not speak out specifically and earlier was that they felt that any such rude public statement about a nationalised industry, in the middle of complicated wage negotiations, would be "politically impossible" ; they thereby showed an extraordinary professional ignorance, as politicians, of what really influences electoral votes in this country. Even on the narrowest grounds of party advantage, they must see now that their failure to fulminate in time against the possibility of surrender by the Electricity Council has made the return of a Conservative government at the next general election much less likely.

One can have differing views whether that diminished Conservative prospect is a good or a bad thing. What must be a bad thing for the whole country is the reason why it has come about. The reason is that Sir Robertson King and his fellow-negotiators on the Electricity Council have made it much more probable that the Government will now be obliged to keep in being dreary and crippling restraints on Britain's drooping production for some while ahead. This is because additional imports would necessarily be associated with any increase in production ; and it seems very unlikely that Britain can sell enough exports to pay for those additional imports if wage rates are to be jacked up by 5 per cent all round. And the wage increase granted in electricity last week—an extra £4½ million a year going to a group of workers who were previously earning £90 million a year in total—did come, properly estimated, to 5 per cent.

Britain's future prosperity now hangs tenuously on the hope that this new standard of wage inflation will not become generalised throughout the land. This will depend on determined economic resolution rather than on angry paper resolutions. That is why what has been advertised as a second defeat for the pay pause this week—the refusal of the Trades Union Congress to take its place yet in Mr Lloyd's proposed National Economic Development Council—is frankly not on the same scale of calamity. It was always fatuous to suppose that hopes of stability could be advanced merely by getting top trade union and industrial people to sit on this body. After all, the men on both sides of the electricity negotiations were precisely the sort of men who were due to sit on poor young Ned. On the union side of the negotiations, along with Mr Foulkes, were the leaders of Britain's three biggest unions ; their nominal contribution to national solvency last week was to claim that their members in electricity should have an increase of £2 a week or over 15 per cent, and their actual aim was to make as big a dent as their personal power allowed in the policy of planned restraint for wages. As trade union leaders, they did not see how their aim could be anything else ; and, so long as the bargaining atmosphere created by this electricity surrender persists, their viewpoint would not be changed by their coming to sit round Ned's table instead of round a table in Trafalgar Buildings.

On the other side of the electricity negotiations, the three top men in the Electricity Council were two experienced industrialists and an eminent professional economist; these were men who well understood the need for a national wages pause, and who would have been shocked at the beginning of these talks by any accusation that they were likely soon to be castigated as men who had broken it. But, in the end, in the present British social climate, their inner compulsion was to reach whatever agreement they could with "our chaps"; and then to use the least ridiculous arguments they could find to persuade themselves that they had not done so. The council's spokesmen have been arguing, for example, that they have at least managed to postpone the operation of the agreement for 2½ months (and have ignored the fact that they have also signed the agreement at least 2½ months earlier than anybody else would have done). There have also been hopeful calculations that if the 5 per cent wage increase lasted for eighteen months, it would be equivalent to a "tolerable" annual average wage increase of only just over 3 per cent in that period; but it is admitted that there is no suggestion in the settlement that it must last for a full eighteen months, because the "union chaps" would not have agreed to this.

These are *ex-post* rationalisations of an award which was really dictated by a wish to reach friendly agreement with the unions at almost any price that the council could deceive itself into believing might look even quarter-respectable. In present circumstances, it is only too possible that any documents that emerged from a top planning council of industrialists and trade unionists might be drawn up in much the same manner. The Chancellor's wisest course after the TUC's refusal on Wednesday would be to go ahead with establishing the "office" of salaried economic technocrats which has always promised to be the most useful part of his planning machinery; later, if the underlying atmosphere for bargaining power changes, trade union leaders and industrialists could be invited again to sit on some body which is asked to read and comment on the office's reports first.

BUT how can the underlying atmosphere for bargaining power be changed? This is the thousand-million-pound-a-year question, and it can be answered only by returning again to what the Electricity Council's apologists were saying this week. When all the hopeful glosses and honest excuses were done, the real argument of the settlers was that the alternative to this wage increase might have been a strike in the power stations; and some people have been asking rhetorically whether anybody thinks that such a strike would have done less damage to the national economy than last week's settlement.

The answer to this question is Yes. And it is vital that the British public should come to understand it. There is a clear parallel between the present situation and 1958. When Mr Cousins's London bus strike was finally resisted in that year, the eighteen months that followed saw the most effective standstill in inflationary trade union claims, but also the biggest expansion in industrial production and therefore in workers' real earnings, in Britain's postwar history. It will be impossible to get back to that standard of industrial expansion until the attitudes of that time are re-established—until it is realised that strike threats will not always pay off in inflationary settlements, but will be resisted.

There are several reasons why it would have been better to make the first stand this year in the electricity industry. The strike that was threatened in this public utility would probably have been illegal, and certainly a plain breach of the unions' signed contract that they would submit all claims to compulsory arbitration. There would not have been real unity between the leaders of the main unions involved in it; the Electricity Council presumably thinks that there would have been, but the belief that there would be a lasting love feast between Sir Tom Williamson and Mr Foulkes, Mr Carron and Mr Cousins, is almost certainly a figment of the council's imagination. The strike would not, *pace* most newspapers, have caused a total black-out in the power stations: the 20,000 men on the stations' technical staffs could—and would—have gone on operating the stations for a while, even if all the 130,000 manual workers walked out. Once breakdowns occurred, the public would have supported the Government in bringing in troops to help repair essential equipment, both because of some of the emotional factors involved (such as keeping up electric power for the hospitals) and because this would have been an unpopular strike called in spite of a generous original wage offer.

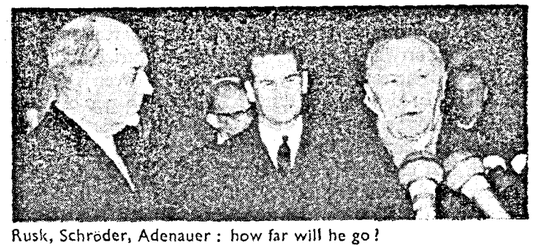
Now that the Electricity Council has given way, the only hope of avoiding enforced stagnation of the nation's real income will be if there is no similar surrender in the other big industrial wage negotiations now pending. It is folly to say that the settlement with the power workers makes it only "fair" that there should be an agreed settlement with these other workers too; what last week's incident really does is to make any further surrender much more dangerous. There are several possible front-runners next in line. Let us consider bluntly what is potentially the most awkward case—the railwaymen, whose claim was actually being discussed when *The Economist* went to press. The relevant economic considerations in this case are both clear and (as usual) intensely "politically embarrassing." The Electricity Council last week could at least plead that it needed to attract more workers in some areas, and that it had no obvious superfluity of workers anywhere; the main fault in its original wage offer was that it offered to pay the increase that might have been economically justifiable in special "scarcity of labour areas" in all areas indiscriminately. On the railways, there may also be a case for some selective wage rises to attract or keep hold of labour in scarcity areas, around London and the Midlands—although even this has not been proved. But in the rest of the country the railways do not need to attract labour; as they are now running an operating deficit of about £80 million a year, it is the Government's stated policy that they should get rid of some labour and close down superfluous lines.

Over by far the greater part of the country, therefore, the economic increase for most railwaymen's wages in 1961-62 is nought. If Mr Macmillan and Mr Lloyd would publicly and immediately say this they might still repair the damage done by last week's débâcle. But so far they have not uttered a cheep. Let the Tory backbenchers who have been needling them this week stop crying over spilt electricity, and concentrate on hammering at Mr Macmillan to make this statement about the railways—and to issue a specific guiding light about other front-runners as they approach the bargaining table. Never mind the horse that has bolted; look now at the ones prancing up to the door.

Compromising Position

Mr Kennedy may find it hard, while joining hands with Dr Adenauer, to grope for Mr Khrushchev's fingertip

TO avoid a war over Berlin, President Kennedy has had the task of working out two successive compromises. The first of these compromises, the inter-allied one, may perhaps, at long last, be within reach after Dr Adenauer's visit to Washington this week. The statement issued by the two men on Wednesday night, flashed out by the despatches of the attendant journalists, suggests that Mr Kennedy has now contrived to isolate a negotiating position on which three of the four main western powers, and perhaps even France as well, can be persuaded to stand shoulder to shoulder. The question is whether this point of assembly is anywhere near the enemy; in other words, whether the compromise between the allies is compatible with the compromise the alliance next has to reach with the Russians.



Dr Adenauer has made some modest concessions. To judge from a number of reports, particularly that in *Die Welt* of November 18th, he had made up his mind even before he set out for Washington that the allies did need to be ready to negotiate a new agreement reaffirming their rights in Berlin, and not just stand pat on the postwar occupation status. This marks him off from General de Gaulle, who repeated as recently as November 8th his refusal to negotiate at all; for a moment it has marked him off from his own foreign minister, Dr Schröder, who said on Wednesday that any "substitution" for the occupation rights would be dangerous. In order to get the Russians to sign the kind of agreement on Berlin the allies want, Dr Adenauer would apparently be willing to do one or two things to humour Mr Khrushchev's desire that the sovereignty of east Germany should be respected. He seems to have abandoned his former reluctance to let the United States, Britain and France deal with east German officials on the access routes to Berlin. For his own part, he would be ready to extend (though not by much) the range of contacts between east and west German officials. If, finally, the Russians want to put pen to the paper of their separate peace treaty with the east Germans, Dr Adenauer is unlikely to insist on interposing his dead body.

If the Russian four-point plan which came to light on November 10th is interpreted in the most favourable way, and if it really is the Russian plan, it may just possibly be compatible with the position Dr Adenauer has now adopted. Moreover, the mere fact that the Chancellor has moved to this position will make it more difficult for General de Gaulle to maintain his refusal to pick up his musket and let the diplomatic battle commence. General de Gaulle's meeting with Mr Macmillan this weekend, and with Dr Adenauer next Thursday, will show whether he can resist the combined urgings of all his principal allies.

Nevertheless, for every foot Dr Adenauer has stirred his aged bones in Mr Kennedy's direction, he has pulled Mr Kennedy a yard towards himself. It has become apparent in the last few weeks that the President is unable to bring himself to say "I recognise you" to east Germany, even if the phrase ends simply "as a matter of fact." The contemplated extension of dealings with east German officials is designed to fall well short of anything that might be interpreted as recognition. The permanence of the German-Polish frontier is another item that once might have been thought negotiable but now, at least to start with, is not. In other words, the negotiations look like being confined to Berlin alone, which may not be the impression Mr Khrushchev got from the Russo-American exploratory talks in September and October.

ABOVE all, Dr Adenauer appears to have pulled Mr Kennedy back from his earlier hopes of making at least a tentative start on the limitation of arms in central Europe. It is doubtful whether Dr Adenauer has made much progress with his suggestion that Mr Kennedy should hand over to Nato the presidential authority to fire nuclear weapons in Europe. But the Chancellor has clearly been determined, in return for the concessions he has made in other fields, to exact Mr Kennedy's acceptance of two other points. The possibility of creating "buffer zones" in central Europe, where armaments are limited, has been shelved, as Mr Dean Rusk made clear on October 28th. Dr Adenauer has also insisted on a proposition concerning nuclear weapons which is probably more important to him than who gives the order to fire: the proposition, that is, that there shall be no discrimination against west Germany in the distribution of atomic arms. The probable result is that the handing out of these weapons to the allied armies in Europe (of which the Bundeswehr is the largest) will continue at a faster pace than Mr Kennedy seemed to think desirable during the summer; the temptation for the Russians to respond by hostile measures of their own will continue, too.

Two observations are therefore in order about the negotiating position towards which the West appears to be moving. The first is that the gap between the western and Russian negotiating positions may still turn out unbridgeably wide if

Rusk, Schröder, Adenauer: how far will he go?

Mr Khrushchev does not interpret the Russian four-point plan of November 10th as obligingly as the allies hope he will. He may quite possibly require, in exchange for the agreement guaranteeing Berlin's freedom, some more substantial tokens of "respect" for east German sovereignty than a few extra contacts with east German officials. If he does, the West may find itself plunged in another round of intramural bargaining—if Mr Khrushchev gives it the time.

The second observation is that, even if the gap can be closed and an agreement signed along the lines Dr Adenauer finds acceptable, nothing will have been done to remove the underlying conditions that make Berlin a source of trouble. Mr Khrushchev's motives for putting pressure on Berlin (whatever else he had in mind) certainly included the desire to induce the West to accept the *status quo* in central Europe, and the desire to limit the rearmament of the Federal Republic.

If Dr Adenauer, having sent a few officials to chat to their opposite numbers in the Democratic Republic, immediately resumes his claim that east Germany is one day going to be absorbed by west Germany, and draws attention to his remarks by patting a growing pile of nuclear arms, Mr Khrushchev's motive for trouble-making will start to itch again; and the next Berlin crisis will not wait long. The only way in which a Berlin settlement might be made permanent (and the Berliners led to believe it might be worth while staying in the city) is to remove the communists' reasons for using Berlin as a way of twisting the West's arm. This can hardly be achieved without something like a general settlement in central Europe.

On the face of it, then, the West's negotiating position looks a shade too close to what Dr Adenauer wants, and a shade too far away from what Mr Khrushchev is willing to accept, to promise much. Fortunately, Mr Kennedy still seems to have some freedom of manœuvre left. It remains open to him to tell Mr Khrushchev that the West does not in fact intend to change the *status quo* in middle Europe, even if it cannot acknowledge it out loud at the moment; and that, even if there is to be no "discrimination" against west Germany in the matter of nuclear arms, it remains the President's intention to reduce the dependence of Nato as a whole on nuclear weapons in Europe. Such assurances, vague though they are, might just give Mr Kennedy the necessary degree of manœuvrability to stay within grasping range of the settlement he seeks.

The Most Acute Case

A disease can most easily be studied in its gravest manifestations. Analysts of Britain's economic ills should study Scotland

A REPORT* has just come out of Scotland which deserves to be called, without hyperbole, the most raptly interesting economic document to appear from there since the days of Adam Smith. It is the work of a committee appointed by the Scottish Council (Development and Industry), to which the Government seconded senior civil servants as assessors. When the committee was set up most people supposed that its main job would be to inquire why Scotland's average unemployment rate (about 3 per cent) in the last decade has remained consistently higher than the rest of Britain's (about 1½ per cent). But the committee has boldly said that, since dynamic countries like Germany have on average put up with over 4½ per cent of unemployed during this period, unemployment is not Scotland's real problem. The really worrying question is: why did industrial production in Scotland increase by only 13 per cent between 1953 and 1960, compared with the rest of Britain's 30 per cent and western Europe's 70 to 80 per cent? And the report's answer, which it propounds with a mixture of dynamism and mature wisdom that makes this a document which all British industrialists should read, is that "Scotland is suffering in an acute form from the ills to which the whole United Kingdom is subject."

The main trouble, says the committee, is that Scotland (for which hereafter also read Britain) entered the present industrial revolution with its resources heavily engaged in industries that were fated not to be growth industries. Its definition of which these non-growth industries are—its distinction between what it calls "small quantity specialised" industries and "large quantity standard" industries—runs like a banner headline through this report. The Scottish (and British) economy has always rested heavily on the "small quantity specialised article": on building a ship or a bridge or a power station for some individual customer, making bespoke clothing, producing so-called "craftsmen's goods," high quality stuff. In these industries, the whole structure and tempo of organisation are different from those in the big standardised growth industries of today. The producing firm "strives to keep in the forefront technically and to improve the article through higher performance efficiencies and longer service life"; it does not build up large junior sales organisations, because when one is contracting for building a ship or a bridge a top manager meets the top customer personally; advertising through television jingles and through close study of myriad retail and other sales outlets (abroad as well as at home) is not an important or natural art for the firm to acquire.

BUT in the "large quantity standard" industries leading the new industrial revolution—in making motor cars, television sets, refrigerators, light bulbs, mass-produced radio valves, shoes, soap, canned foods, and the like—the pattern of operations is very different. Here the "producer manufactures for stockholding and sells through retail to the public. He has to assess—and to influence by advertising—what the public wants and what price the public will pay." The sales organisation, often composed of chaps who drop their h's and are decidedly non-U types, is perhaps the most important, and certainly the most pushful, section of the firm. It is terribly difficult for both managements and men to move from one form of production to the other, and in Britain such slow switches as have taken place have often been fiercely resented. That is why it has become almost traditional in Britain—a tradition for which upper class dilettante intellectual philosophy, conservative British Labour party philosophy, and non-conformist pseudo-puritanism bear equally heavy shares of blame—to treat such words as "advertising," "high pressure salesmanship," and even "assembly-line mass production" as almost dirty terms.

In Scotland, perhaps because the older sorts of craftsmen's industries were so well established, the initial growth of the new "large quantity standard" industries was most particularly slow. Most of these new growth industries were set up first, often by young innovators, in the midlands and south. Once they had been originally established there—and this is a point which this report analyses with special skill—it became clear that there were large economies in concentrating the further growth of these industries in the same places. This was not primarily because of the traditional (and overplayed) argument that Scottish industry has to bear much heavier transport costs for these new types of goods to the main mass market of London. Three-quarters of the Scottish firms surveyed in this report reported that their total costs are increased by less than 1 per cent as a result of higher transport costs from Scotland; this sort of small differential could and should easily be wiped out, if necessary by making Scottish wage rates 1 or 2 per cent lower than southern English rates. But there have been a legion of other reasons why, once expansion of the new industries had got going in the midlands and south east of England, external economies have tended to accrue and foster further expansion there. Many of these reasons are rooted deep in the stupidest features of our national life.

FIRST, there is the appalling apprenticeship system in Britain, which means that skilled labour needed in any area is trained only to suit the needs of the industries already located in that area, and which often makes it impossible for men above the age of adolescence to move from one skilled trade to another. Secondly, there is mishandling of the whole "amenity" problem, which is aggravated by the present Local Employment Act; under this Act the Government subsidises new industries that move into bleak old decaying areas in which no pushful entrepreneur wants to live, but does not sufficiently subsidise the build-up of strong new "industrial complexes and centres which offer prospects of becoming zones of growth"—in, say, new towns outside Glasgow. In Scotland, this problem is made immeasurably worse by the artificially low rents charged by Glasgow corporation and other local authorities, a policy which penalises all mobility; this report devotes a full ten of its two hundred closely reasoned pages to castigating this low rent policy as one of the main reasons for Scotland's stagnation (and here again Scottish policy is merely an acute example of a general British ailment).

Thirdly, in the new growth industries the centrally-directed (and all-important) sales department needs to be closely integrated with both the manufacturing and research departments. For most of these new growth industries the midlands and south east of England have already managed to become the centre of Britain's scientific and industrial and sales research. "Close integration" means above all opportunity for frequent contact in meetings and so forth. The authors of this report "plotted a line on the map showing the areas within three to three and a half hours' journey by rail or road from London, probably the maximum return journey which can reasonably be undertaken in one day while still allowing some time for the conduct of business." They found a fantastically close correlation with a second line that they plotted "dividing the country into the administrative regions showing more than average and less than average growth in terms of employment between 1950 and 1960."

Fourthly, although the committee did not believe that actual *transport costs* from Scotland were a major contributory factor to Scotland's stagnation, yet one difficulty in

> the transport of goods over longer distances lay in ensuring reliability in deliveries, both in and out. . . . In many assembly industries low stocks of components are held and punctual deliveries have to be made by the supplier on a daily or even twice-daily basis. The longer the distances involved, the less likelihood of a firm's providing its own transport by means of C-licensed vehicles, because of the additional capital and effort required.

In consequence, Scottish firms have to rely for transport of goods on private or nationalised road hauliers or British Railways, and they lose flexibility of deliveries thereby. All of these factors show why it has been so difficult for Scotland to make progress once it had failed to be first in the field for the new industrial revolution. And the frightening thing, for a nation perhaps on the eve of joining the dynamic common market, is that as Scotland is to England today, so Britain could be to western Europe tomorrow; for 3½ hours' journey from London, read 3½ hours' journey from Düsseldorf.

What can be done? In the central sentence of its report the committee proclaims that it has no sympathy with anybody who advocates that "assistance for the Scottish economy must take the form of supporting the inefficient and seeking to

NOVEMBER 23, 1861

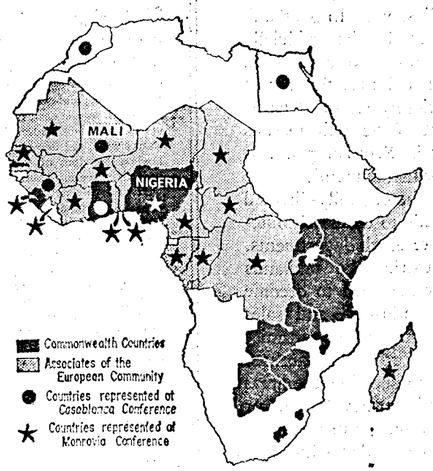
RETURN TO THE UNION?

"There are two ways of dealing with rebels who have been subdued. You may coerce them, or you may conciliate them. You may keep them down by the same forcible means by which you have *put* them down: or you may pacify them and *disarm them* by granting them what they *rose in rebellion to extort*. Can the North adopt either of these plans in reference to the *subjugated* South? Clearly not. The case of the Americans is, so far as we remember, unique in history. If the North succeed, and proceed to reannex the conquered Slave States, under what Government, under what Constitution, will they reannex them? They must either hold them as dependents, by military force and by centrally *appointed* Governors, or they must readmit them, or rather force them back into the Union, under the old Republican institutions, modified or unmodified, as the case may be. To hold by military force and to govern as *subdued* dependents six millions of men, of the same race as themselves, yet fiercer in their passions, and accustomed to the almost lawless freedom of democracy,—even if these six millions were less united in feeling than they are—is, to every sane mind, an obviously wild and impracticable scheme. To entertain it seriously, when the excitement of actual conflict was over, would indicate not so much incapacity as downright *insanidness*. The Southerners are passionate, warlike, accustomed to domineer, and reckless enough as to personal danger,—bearing little and exacting much. They are antipathic to the Northerners: they hate them bitterly and they despise them heartily—very irrationally no doubt, but that is not the question. Their feelings of animosity will, we may be certain, have been enormously aggravated by the sufferings of the war, by the exasperation of conflict, by the mortification of defeat. We ask the Federal politicians calmly to consider what army of occupation would suffice to keep down such a people, and how such an army could be paid? . . . The truth is, that the long habit and the deep ingraining of democratic institutions and ideas among all classes of Americans, will render the forcible reannexation of the Secessionists impossible. If they come back as dependents, it will be impossible to govern them. If they come back as fellow-citizens, it will be impossible to work with them.

postpone for a little by means of subsidies or controls the decay of industries or districts that had no prospect of achieving independent prosperity or growth." Instead "the policies should be designed not to prop up the inefficient but to help the innovating and progressive firm." *The aim must* be to encourage the growth of "new industrial centres and complexes" which can become breeding grounds of new growth industries. Government aid (including the building of advance factories) should go much more to new towns and shiningly reconstructed "overspill reception towns" like Bathgate-Livingston, East Kilbride and Cumbernauld, and less to the existing areas of above-average unemployment.

Next, in order to encourage mobility into these new industries and areas, Britain's "outdated apprenticeship and craft systems" must be "fundamentally reviewed" (which is the committee's euphemism for "swept away"); and the artificially low rent policy of local authorities in Scotland's decaying old industrial centres must go with them. The opportunities for "personal communication" must be improved. This does not mean that transport should become cheaper, but there should be an end to the "damage done to the economy for reasons as simple as that industrialists cannot at short notice get air passages to make contacts with their customers, to attend business meetings, or to get their customers to them." It would be perfectly sensible to make people pay more for special extra services at these peak times.

The same applies to the committee's plea for more arterial roads between new Scots industrial centres and the expanding industrial centres of England (these could well be paid for by tolls). In terms of Britain and Europe, the rationale underlying this report would presumably be in favour of the maximum possible development of new toll-financed cross-Channel communications—a Channel tunnel, or a Channel bridge, or even a Channel dam.



"This, then," the report concludes, "is the plan: not necessarily an ideal solution but one which we are confident will do the job, given the will." But is the will for these liberal reforms—for breaking down the craft and apprenticeship systems, for concentrating on the growth industries instead of the declining ones, for introducing greater mobility by higher rents and greater reliance on the market mechanism—lacking? The answer depends on whether enough individual Britons can make a fundamental change in their traditional national attitudes, deep down even in their private social contacts. Whenever any dilettante pontificates that *Britain is too much ruled* by advertising, whenever any armchair politician says that there ought to be a return to more rent control, whenever any well-meaning fuddy-duddy says that Britain's failing has been its departure from the old craft traditions—point a rude accusing finger at such men. For these are the men who are holding down the country's standard of life.

Eurafrica and Their Africa

Nigeria has a special part to play in the uniting of Africa

FRANCE, like Britain, brings to Europe a family of overseas possessions whose interests it had somehow to fit into the new structure. Late in the negotiations that led to the Rome treaty in 1957 it persuaded its five partners to associate the French African colonies with the community, together with their own colonies, principally the Congo and Somaliland. The association had three main features. The six European governments were to provide £208 million of aid over a period of five years; African exports were to enjoy free entry and high preferential tariffs not only in the French market, as in the past, but in the whole common market; in return the African associates, though still protecting their infant industries as Commonwealth countries do, would give preferences in their own markets, not just to France, but to all the Six. The African markets, hitherto tightly sealed, were to be half opened to the outside world.

The pleasant privileges for those inside the circle were, however, gall to those outside. In 1956 Ghana sent nearly half its cocoa exports to the common market. Nigeria also sent a large share. Latin American countries had similar interests. The new tariffs—*9 per cent on cocoa*, 16 per cent for coffee, 30 per cent for tobacco—would have struck a nasty blow at these exports. Dutch and German importers also disliked the tariffs. Above all, the new tariff system carried a political danger. It threatened to divide the African countries *from one* another, just when, as they advanced towards independence, it had become urgently desirable that they should unite.

Britain's decision to seek membership of the common market has brought a new and helpful element into this mosaic. If the walls were to come down in Europe, it looked logical that they should fall in Africa at the same time. Where Commonwealth goods, like Canadian manufactures or Australian grain, compete directly with European ones, Commonwealth interests are bound to be difficult to satisfy. But Europe has no competitive interest in restricting exports of Ghanaian cocoa or Nigerian oilseeds. The association for French Africa provides a natural precedent for the African members of the Commonwealth. Even the French have in the past year shown signs of seeing the wisdom of an effort by united Europe to help Africa to unite as well.

This hopeful prospect has, however, run into unexpected snags. Ghana, far from plunging happily into association with the common market (as its pure economic interest would have suggested) has been consistently rude about the whole business in the past four months. Even Nigeria has been cautious. The new Euro-African association has been branded as old colonialism in new clothes, a means of checking the development of local industries and keeping economic power in French hands. The view is mistaken, but understandable. Decades behind the high wall of the French protective system have left *the crops and economies of the French African states* far less competitive than those of Nigeria or Ghana and heavily dependent on French aid. The new states of the former French empire are sparsely inhabited (the largest has a population of 4.5 million, less than Ghana's). Many still depend on French forces to keep order. All are subject to a strict exchange control by Paris in the overseas franc zone. The rapid advance to political independence has caught them economically unprepared.

The reluctance of English-speaking Africans to be associated with the common market is matched by the resistance of their French-speaking neighbours. They see the trade and aid privileges of association as an economic asset which they do not wish to share. Far from asking that the association should be weakened, dismantled or broadened to include the African Commonwealth, they pressed in Brussels a fortnight ago for bigger and better preferences against their fellow Africans. Thus, as the states of Europe struggle to unite, the arbitrary frontiers they left on the map of Africa bite deeper than ever.

All this provides a strange commentary on the pan-African idea. Two separate groupings of African states have met in the past year—at Casablanca and Monrovia—to work out plans for closer unity. Yet in practice Africa is doubly divided—between the two preferential systems, and between the Casablanca and Monrovia groups. An examination of these divisions shows an unpleasant coincidence. The core of the Monrovia group is the French community countries, plus Nigeria, Liberia and Sierra Leone; the Casablanca group consists of heretical Guinea, Ghana and Mali, plus Egypt, Morocco and Algeria. There is a danger that west Africa will divide more and more into a westward-leaning group, associated with the common market, and a group of non-associates turning more and more towards the Soviet block.

In this situation, the countries that fit most awkwardly into the pattern may have most influence on the outcome. Guinea, despite its differences with France, still enjoys the benefits of association with the Six. Mali, though inside the association, has stood out for the Casablanca point of view by pressing for true economic independence for associates and a liberalisation of the franc zone. Incomparably more important in the drama is Nigeria. This giant among the newly independent African states (its population of 35 million is more than the whole of ex-French Africa put together) is well placed, in the Monrovia group, to press for the ideal of African unity to be given substance. If Nigeria once decided to seek association with the European common market, other Commonwealth African states might well follow.

The Nigerians have still to be finally persuaded that it is in their interest to seek association. But it would be a pity if, like the British a few years back, they underestimated their own potential influence once inside, overestimated the disagreeable features of the existing association and decided to shun the whole business.

ALREADY, under pressure from the liberal forces both inside and outside, the association between Africa and the common market is changing rapidly. On December 6th a Euro-African meeting of ministers in Paris will discuss proposals from the European Commission for reshaping the association on looser lines when the existing arrangements expire in December, 1962. These proposals provide for a halving of the high preferential tariffs on cocoa, bananas, and some other products. The association, originally designed for dependent territories, would take the form in future of a treaty of association between independent sovereign states, perhaps under Article 238 of the Rome treaty, instead of Part IV. The exchange arrangements of the franc zone would be liberalised. Aid would have the explicit purpose of helping the development of local industries and a viable agriculture.

Nigerians and Ghanaians will still not find all this this to their liking. The new institutions look too top-heavy; they are perhaps a shade too closely tied to Europe. It might be better for united Africa if the Africans could do more among themselves, with Europe helping on the side-lines as the *United States did in the* European recovery programme. Perhaps in the long run the conception of association with Europe will give place to the American idea of removing all tariffs on tropical products, together with new world-wide arrangements for aid and commodity stabilisation.

But the first step for Nigeria is to get into the association and help in shaping it. The African Commonwealth countries cannot afford to leave it to the British, the European Commission and the United States to fight their battles. Only Nigeria can persuade its French-speaking neighbours to take a step towards African unity by bringing the Commonwealth countries into relationships with Europe similar to theirs. No doubt the French community states will ask for some form of "compensation" for the loss of trade privileges in Europe. In that case adequate means of compensation—aid, commodity stabilisation plans and help for diversifying industry and agriculture—should be worked out. If the Nigerians would establish diplomatic representation in Brussels as other Commonwealth countries have done, they could quickly be drawn into the Euro-African discussions. The uniting of Africa cannot, after all, be left to the Europeans.

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

Out next week:

FINLAND

The review gives an outline of the current rapid economic development of the country and discusses the implications of the present threatening Russian attitude. It indicates how the development of internationally competitive industry is reducing the country's dependence upon raw material prices and also how this makes it increasingly important for Finland to be able to trade as it wishes; the possible consequences of the recent Russian note are examined in this context.

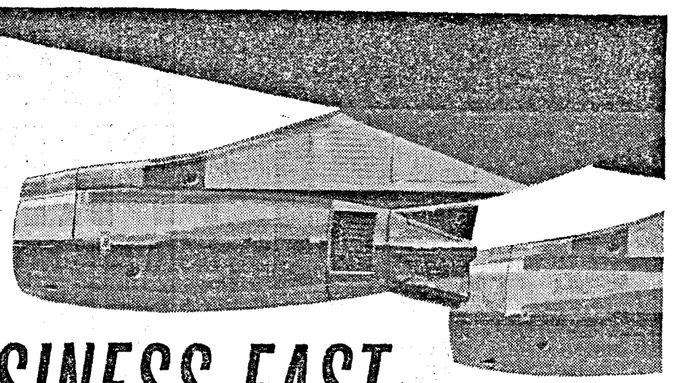
Turkey has its first elected government, under Mr. Inönü, since the army took over; but the army is still in the wings

Politics on Probation

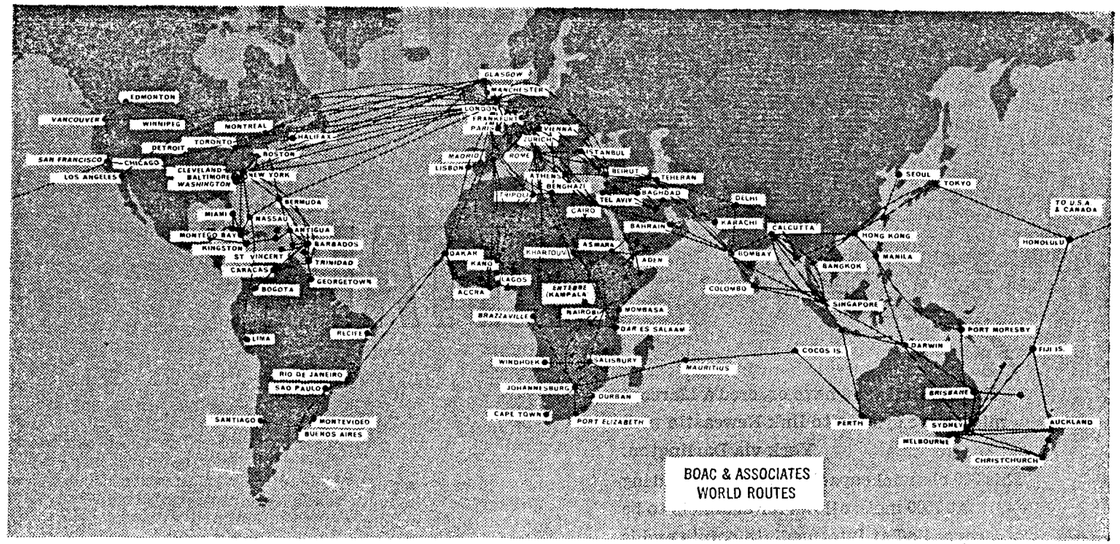
WHEN politicians become too quarrelsome, or behave in an arbitrary way, soldiers are often tempted to turn them out. This happened in Turkey eighteen months ago. Now the soldiers have tried to restore parliamentary rule, commendably enough, but without allowing for the nature of politics: the politicians remain as quarrelsome as ever. After a month of fruitless bickering, since the elections on October 15th, the soldiers have virtually forced the two largest, and most antagonistic, parties to serve together in a coalition government. Instead of contending across the floor of the national assembly, they are to co-operate in the cabinet room to rule the country. It may work; one certainly hopes so. But it is an unusual way to run a democracy.

Neither the electors nor the politicians have helped the army in its efforts to restore parliamentary government. The elections revealed once more the deep division in the country between those who want to follow in Ataturk's footsteps and turn Turkey into a secular western democracy, and those unwilling to accept such a radical break with Islam and the old ways. When the votes were counted, political power was seen to be largely polarised between Ataturk's old party, the Republican People's party, with a small majority in the national assembly, and the successor to Mr Menderes's Democrats, the Justice party, which has a comfortable majority in the Senate. Two smaller parties, the New Turkey party and the Republican Peasants' Nation party, between them hold rather more than a quarter of the seats in each house.



Faced with a parliamentary equation which made some sort of coalition inevitable, the soldiers quickly made clear their opinion that a coalition of all four parties would be best. The politicians, for their part, quickly demonstrated, in the protracted and stormy debates over the choice of a speaker for the lower house, that they found it as hard as ever to get together. In these circumstances, General Gürsel, who was elected president by Parliament on October 26th (he was the only candidate) rather naturally took his time over choosing his prime minister. There was even one dizzy moment when, finding it perhaps all too discouraging, he suggested that the government should "rotate" among the three chief parties for periods of eight months at a time.

EVENTUALLY, on November 10th, the President appointed Mr Ismet Inönü, the leader of the Republican People's party, as prime minister. The two smaller parties flatly refused to serve under Mr Inönü, and the army could, apparently, tolerate their refusal. But when the powerful Justice party showed signs of similar intransigence, the army made it plain that if the Justice party did not buckle to and serve under Mr Inönü, Turkey's new experiment in parliamentary rule would come to an untimely end. On Monday Mr Inönü presented his cabinet to General Gürsel; it is composed in equal parts of members of his own party and of the Justice party.



Paradox could hardly be greater: the army, or the small radical group of officers which is now believed to have the upper hand, has forced into positions of power and influence the supporters of the men whom it forcefully turned out of power eighteen months ago. Admittedly, the army's patience was virtually exhausted; one exasperated general is reported to have compared the political parties to ducks dabbling in the pond with their heads in the water and their behinds in the air. It may well have been argued that the members of the Justice party would do less mischief weighed down with ministerial responsibilities than free to make trouble on the floor of the assembly. Responsible men in Turkey are groping for a way of taking the venom out of Turkish politics; of replacing, in the words of the joint statement issued last week by the RPP and the Justice party, "the idea of political hostility by a civilised political concept."

Whether the right formula has been found remains to be seen. The present arrangement might have had a better chance of success if the new prime minister could have been a really compelling symbol of national unity for the deeply divided Turks. (President Gürsel himself is a widely respected figure; but neither by personal inclination nor by the prerogatives of his office, nor indeed by abilities, is he likely to become a second General de Gaulle.) Mr Inönü, known to an older generation as Ismet Pasha, who took his surname from the Anatolian village where, in 1921, he defeated the invading Greeks, is now the grand old man of Turkish politics and the living link with Kemal Ataturk; but he is also, and has been throughout his political career from the days when he served as Ataturk's prime minister, a deeply controversial figure. To make matters worse, many Turks have now chosen to make him a scapegoat for Mr Menderes's fate. He has always been acceptable to the men who overthrew the Democrat regime, presumably because of his association with Ataturk. But President Gürsel may be too sanguine in hoping that Mr Inönü will be able to wield the unifying influence of a national leader.

It may be that in Turkey political divisions have become so deep and bitter that some rather unorthodox arrangement is necessary to bridge the transition between army rule and effective parliamentary democracy. Much will depend on whether the two parties in the coalition are able to reconcile their differing points of view sufficiently to formulate, and carry out, sensible policies for overcoming the country's serious economic problems. It is at least encouraging that their joint statement should have shown a lively concern at "the present economic stagnation." Much will also depend on whether the RPP and the Justice party can each be prevented from splitting into warring factions; about 80 Justice party deputies voted against joining the coalition, and it is not yet clear whether they will accept being over-ruled. What is clear at the moment is that the army, having bowed itself off the centre of the stage, is still keeping a close watch from the wings on the performance of the politicians. If they bungle it, the soldiers will be tempted to run the show again.

NOTES OF THE WEEK

FRANCE

General Satisfaction

UNACCUSTOMED to be daunted by the international outlook, Mr Macmillan's distinguished weekend guest has probably come to Birch Grove in reasonably good spirits. General de Gaulle's recent utterances on the Algerian question have been highly optimistic, and the latest events do something to bear them out. It is true that murder continues to be the daily commonplace of life in Algeria. But the arrest of M. Dides, a ferocious critic of the government, on charges of incitement to murder, offences against the head of the state, and incitement to crimes against state security, shows that the government can still hit back at the extremists of the Right.

The happy ending of Mr ben Bella's hunger strike has improved the prospects, which had been endangered, of negotiation between the Algerian rebels and the French government.

The hunger strike was launched on November 1st by the Algerian prisoners in France as an attempt to exact improvements in the conditions of their imprisonment. Mr ben Bella appears to have associated himself with it from a desire to remind the world of his existence and to reinforce his authority among his fellow-captives; he asserted that he had no intention of holding up negotiations. Nevertheless, the provisional Algerian government felt obliged to declare its support for him, and to indicate that unless the French made some concessions the outlook for talks might be compromised. In response to opposition pressure, and alarmed by anti-French rioting in the capital, the Moroccan government began to urge General de Gaulle to release Mr ben Bella, or at least do something for him.

Now, thanks to good sense and moderation all round, the prisoners have begun to eat again. Most of their demands have been accepted, and though Mr ben Bella is still a prisoner he is being treated with unwonted consideration. This denouément represents a diplomatic success for the Moroccans; but it would never have been possible if all sides had not been most anxious to do nothing to endanger the peace talks. After such a display of reasonableness, it may be hoped that the old distrust will not keep the French and Algerian leaders apart much longer.

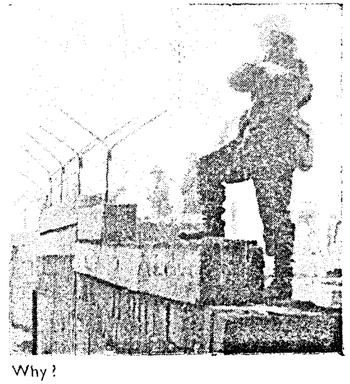
IMMIGRATION BILL

Debacle in the House

IN politics it is extremely hazardous to sponsor measures which one does not really believe in, and it is therefore nice to be able to report that the Government has got itself into an unholy mess over its Immigration Bill. Hypnotised by the public opinion polls and by the undoubtedly vociferous degree of public support for this measure, Mr Butler had probably never assumed that the second reading debate on the bill could be turned into a Conservative electoral handicap and a Labour electoral asset. But in the event the Labour party bravely stood up to be counted against the second reading. Credit for Labour's united and courageous assault on these restrictions must go to Mr Gaitskell, who by one of those stands which he is always liable to make when a question of principle is in issue routed the little group of Labour MPs sympathetic to the bill, assuaged the doubts of others, and scored a moral debating victory to which the newspapers (themselves mustering a fair majority against the bill) gave full credit next day.

For the debate brought out both the irrelevancy and the inconsistency of the Government bill. Immigrants come to Britain because there are jobs for them to do, and when the jobs are even marginally reduced (as happened in 1958) then the flow is reduced more than proportionately. The inclusion of the Irish in the bill was ridiculous from the start, and was put into the original draft as the only way the Government could think of to maintain the pretence that the bill does not create a colour bar. Mr Butler then announced that this provision was unenforceable, but that it must be kept in case it was necessary to enforce it in the future. It would be nice to think that an outraged sense of logic then stirred the Tory backbenchers to revolt, but it was not the inadequacies of Mr Butler's syllogism that aroused them but the fact that the Irish formed one of its major and favoured premises. Instinctual dislike dies hard; and when this cover for the hypocrisy that there was "no colour prejudice in the bill" was removed, a lot of Tories began to feel naked. Such indignation became evident among Government supporters that Mr Hare, gracelessly backpedalling at the close of the debate, was constrained to assure them that the intractable Irish would be dealt with after all.

The Way Out



BUT how and why are the Irish to be controlled? As to how, some kind of control at the job level by means of Irishmen's insurance cards is evidently contemplated, of which not much can be prophesied except that any intelligent immigrant will quickly be able to drive a coach and four through it. As to why, the bill really will not be made more liberal by keeping Irishmen out. The best way of disposing of the charge that the bill is based on colour prejudice would be to decide to continue to allow both Irishmen and West Indians in automatically.

Cannot this be done? Such a provision would make the bill nominally discriminatory against other Commonwealth peoples—including Asians and Africans. But they would not be treated any worse than they will be if the present bill goes through; their economies are not nearly as dependent as the West Indies' is on continued free immigration into Britain; sponsors of this bill have often argued that the West Indians could be absorbed into Britain on their own, but that Britain would not be able to maintain free entry if a "flood of immigration started from Asia." Why not make this bill merely a contingent precaution against that supposed (although almost certainly vastly exaggerated) danger?

BERLIN

Wallflowers

ON Sunday evening (wall-building for Herr Ulbricht is always on Sunday) several hundred east German labourers, watched over by east German troops, watched in turn by Russian officers, started to reinforce the wall put up between the two

Why?

parts of Berlin on August 13th. Some of the more rickety parts of the original wall were reconstructed; gaps, as at the Brandenburg Gate, were closed; in several places a second line, consisting of anti-tank obstacles, was put up. Quite why Herr Ulbricht took this action, except to register his disagreement with Dr Adenauer, who said two days earlier that the West ought to insist on the removal of the wall in any negotiations with Russia, is not clear. The move may be connected with General Clay's statement in Paris last week that there would "probably" have been no war if the allies had knocked down the wall as soon as it was built on August 13th; there have been reports recently that the Americans might push tanks through if the east Germans imposed any further restrictions on the right of allied officials to enter east Berlin.

Sunday's wall-building, however, seems to have produced, as yet, few or none of the western demands for wall-demolishing that followed Herr Ulbricht's original action. Sir David Ormsby Gore, the British ambassador in Washington, said on an American television programme last Sunday that it would have been a mistake to try to knock down the first wall. Sir David is one of the few men in high positions in the West who have said this; and he is almost certainly right. Had the allies sent their bulldozers in on August 13th, the east Germans could without difficulty have stopped the movement of their civil population a little further back, and put up new obstructions there. The allies would then have had the alternative of either knocking down the second line, which would in effect have meant invading east Berlin and very considerably increasing the chances of war, or simply standing in the rubble looking rather silly. Neither east Berliners nor west Berliners would have been any better off. The allies would also have found it difficult to say why Russian tanks should not come into west Berlin if theirs went into east Berlin. Frustrating though it may be, so long as Herr Ulbricht confines his operations to the eastern sector the allies have no choice but to be wallflowers.

NUCLEAR TESTS

Bitten but not Shy

Even in Moscow, reversals of policy are seldom as sudden as Tuesday's Soviet acceptance of the Anglo-American invitation to resume the Geneva talks on banning nuclear tests. Only two weeks ago, the Soviet block in the United Nations Assembly had been alone, except for Cuba, in voting against an appeal for immediate resumption of these talks. Mr Tsarapkin told the assembly at the time that Russia could not take up the Geneva talks again, and that the banning of tests was inseparable from a general disarmament treaty.

With its own vast programme of test explosions completed, Russia may well see in the return to Geneva a means of inhibiting the Americans from launching a matching programme. But there are limitations to this argument. The existing inhibitions on further American testing will not be decisively reinforced by the resumption of the talks—unless the talks surprise everybody by quickly producing an agreement; and that would involve an even more spectacular Soviet somersault.

Once bitten, twice shy, Mr Kennedy's administration has carefully distinguished between resuming the Geneva talks and accepting another obligation to refrain from all tests while the talks continue. In some quarters it may be criticised for going back to Geneva at all, after the outrageous breach of faith involved in the Soviet resumption of testing at the beginning of September. But the search for agreement remains worth pursuing—without illusions, but without undue shyness either.

The Soviet action in September was widely seen as proof of a total indifference to world opinion. Since then, the Soviet leaders must have been presented with some sort of balance sheet, showing a sizeable net loss of goodwill among former friends and a decline into near-bankruptcy among some of their carefully cultivated "peace" movements. The UN assembly, on a suggestion from Cyprus, had set December 14th as the deadline after which, if the Geneva talks had not been resumed, it would take up the matter again. The speed of Mr Tsarapkin's somersault suggests that Soviet indifference to world opinion may not be as total as many people have lately thought.

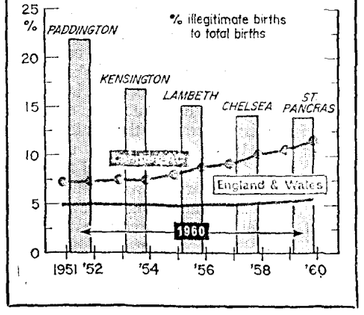
BY-ELECTIONS

Labour in the Lead

Labour has every reason to feel pleased with the result of the Bridgeton (Glasgow) by-election. It is true that only just over two-fifths of the electorate turned out to vote, and that Labour's total votes fell by nearly half compared with 1959 and its share of the poll by 5.8 per cent. But the Conservatives' total votes fell by over two-thirds, and their share of the poll by 15.9 per cent. The Independent Labour Party unilateralist secured a derisory 3.1 per cent, or only 586 votes. The Scottish Nationalist secured a full 18.6 per cent. This last figure has some interesting implications for the Liberals. Disrespectful critics will say it suggests that up to two-thirds of the 27 per cent or so of the electorate who have been voting Liberal in recent by-elections may not really have been dedicated Liberals at all: they may have been simply transitory protest voters who would have voted equally for a Flat Earther, provided he was not an extremely left wing or right wing Flat Earther, if one had chanced to come along. Passionate Liberals will deny this and say that the Liberals' policy of regional devolution made the Scottish Nationalist the sensible candidate for Liberals to vote for at Bridgeton. The truth, one suspects, probably lies uncomfortably closer to the critics' view.

Because there were so *many more* Tory desertions than Labour ones, their net effect in this by-election was the same as a 5 per cent swing from Tory to Labour, or a 6½ per cent swing from right to left if one adds the Labour and ILP votes together. The average net swing from Tory to Labour in the previous week's three by-elections (at Oswestry, etc.) was also exactly 6½ per cent. And Labour would need only a 3½ per cent swing at the next general election in order to get back to power.

SHADOW CABINET



Delayed Reshuffle

In last week's elections for the shadow cabinet, Labour MPs returned all twelve sitting members. This meant that ten of the so-called Gaitskellite slate of thirteen candidates were re-elected, and that Mr Wilson and Mr Fred Lee retained their places. Indeed Mr Wilson soared to the top of the poll with 175 votes, but perhaps this need cause Mr Gaitskell no alarm. Last year when Mr Wilson stood as rival leader he polled only 124 in these shadow cabinet elections; the extra votes he has picked up since then have come from MPs who are satisfied that he has made his peace with the leadership. This peacemaking might be eased by some changes in the shadow cabinet that now seem to be in prospect.

Mr Gaitskell seems to be in no hurry about these changes, and the portfolios are unlikely to be redistributed until just before

LONDON'S BASTARDS

The LCC recorded 6,530 illegitimate births in London County in 1960. This rise of nearly 3,000 since 1957 is largely due to the influx of unmarried, and often pregnant, women to London and the welfare and medical facilities offered to unmarried mothers. In the year ended September 30, 1960, moral welfare associations saw 3,292 unmarried mothers of whom 25 per cent were Irish and another 19 per cent were from overseas; 26 per cent were pregnant on arrival in London.

Haig in every Home

Wishing you a Merry Christmas and a prosperous New Year!

FOR CHRISTMAS: Prunes with the added delicious flavour of Haig. Soak 1 lb. prunes until soft. With 2 or 3 tablespoonfuls of water and 4 of sugar, simmer in pan until cooked. Bottle after adding 2 or 3 tablespoonfuls of Haig.

ACCLES & POLLOCK ADVERTISING DEPARTMENT REVOLTS

Resistance to Directors' plans to publicise welded and drawn welded stainless tubes

(Illustration circa 1849 modified to bring it up-to-date.)

IF it were not for the well-known fact that nobody (except the Directors of Accles & Pollock) ever reads advertisements we should now be in the difficult position of explaining what this one is all about. As it is, all we need do is to state clearly what the Directors would like to read. **HERE IT IS:-** For a long time past Accles & Pollock (sometimes miscalled Pickles & Wallop, Anchors & Poppycock etc. etc.) have been known as skilled makers, manipulators and fabricators of cold-drawn seamless precision steel tubes. The Directors would like all fifty-two million of you to know that, not only are they the country's largest producers of seamless stainless steel tubes but that they are also the leading makers of **WELDED** and **DRAWN WELDED STAINLESS** steel tubes. For many purposes, **WELDED** and **DRAWN WELDED** stainless tubes offer considerable economic advantages.

We should be most obliged if all manufacturers—potential users of stainless steel tubes—would sign the affidavit alongside for the Directors—

We I the undersigned hereby declare that I We have read and nearly fully understood Accles & Pollock's Directors statement about Stainless Steel Tubes and would like a technical booklet about them (the tubes, not the Directors).

the Christmas recess. But apparently Mr Wilson has let it be known that his marriage to the Treasury is not a sacramental one, and that a bill of divorce would not be unwelcome provided his new partner is of sufficiently high status. Presumably, that means foreign affairs, and Mr Gaitskell would be wise to give them to him. Because he dared to outface the Scarborough conference, Mr Gaitskell is and will remain in complete control of Labour foreign policy, whoever his shadow foreign secretary is. He has not managed to establish the same control over domestic policy, and that is why he should be very careful when appointing a new shadow chancellor. Mr Callaghan is said to be favourite; though he is the most amiable of men and recently one of the most loyal of Gaitskellites, one suspects that he might be a bad choice because he has always seemed to be an instinctive protectionist. (His views on transport economics are appalling.) Mr Dennis Healey, by contrast, would come to finance and economics with an open—his critics would say a blank—mind. Mr Roy Jenkins would be an admirable choice, but alas politics remains the art of the possible. Mr George Brown's new duties at Transport House should make it easy for him to give up the unrewarding brief of defence and thus allow Mr Gaitskell more scope for reshuffling. A shake up will be all to the good, but new blood in the shadow cabinet room is also badly needed. (Provided, of course, that that last phrase is not taken too literally.)

CONGO

Breaking Step

At the UN: Spaak, Bomboko

THE United Nations' representatives in the Congo will be unexpectedly fortunate if the Security Council debate now produces a clear and workable mandate for their guidance. The council's resolution of February 21st, under which they are still operating, was sponsored by its African and Asian members and supported by the United States, Britain and all other members except Russia and France, which abstained. In contrast, the Afro-Asian draft resolution tabled last week has received Soviet backing, while the Americans have offered amendments and the British have openly opposed the project.

The draft resolution would authorise the use of UN force, if necessary, to apprehend "foreign mercenaries and hostile elements." It would demand the ending of secessionist activity in Katanga province, and the withholding of all foreign support and supplies that could be used militarily against the Congo government or the United Nations. African delegates have specifically insisted that the Belgian *Union Minière* group must stop giving financial assistance to Mr Tshombe's regime in Elisabethville. The Belgian foreign minister, M. Spaak, told the council that after November 17th "not one Belgian officer or soldier" would be in Katanga; and the French delegate emphasised that if "a handful of French adventurers" were active in the Congo, this was contrary to his government's express policy. But these assurances did not turn aside the wave of Afro-Asian impatience for strong and quick action against Mr Tshombe's European supporters.

The Americans combine this desire with a wish to strengthen the central government more generally. Their amendments would broaden the resolution to cover action against secessionist moves in provinces other than Katanga, and to provide for the retraining of the Congo army, whose indiscipline has once again been tragically spotlighted. The African delegations' initial reaction was to argue that the recent reports of a new breakaway by Mr Gizenga are still unconfirmed. Mr Zorin, for Russia, said he would veto most of the amendments. And Sir Patrick Dean said that they went too far; that force should not be used even against the mercenaries; and that, if the UN did not confine itself to conciliation, it might lose Britain's support. The United Nations operation in the Congo may not have reached breaking point; but its supporters are at present, visibly and unhappily, breaking step.

CZECHOSLOVAKIA

Balancing Act in Prague

STALIN'S monstrous statue, which for more than six years has disrupted Prague's ancient skyline, is to go; a special commission, including architects and artists, is to consider how to use the site on which the monument now stands. That at least is one felicitous outcome of the 22nd Soviet party congress. The Gottwald mausoleum is also to go, and the embalmed body of Clement Gottwald, the late party boss and president of Czechoslovakia, who died soon after Stalin in 1953, is to be buried on Vitkov Hill—Prague's equivalent of the Kremlin wall in Moscow.

These decisions, published on Tuesday, were announced by Mr Antonin Novotny, the present party boss and president of Czechoslovakia, at a meeting of the central committee from November 15th to 17th. They represent a gesture—and quite a handsome one—towards the new campaign against Stalin inaugurated by Mr Khrushchev last month. But Mr Novotny has, in a typically Czech way, been thoroughly circumspect. He admitted that between

Site vacant

1948 and 1953 the personality cult had invaded the party and that Mr Gottwald had made mistakes; but he was careful to stress that in spite of his faults Comrade Gottwald's name "will remain firmly inscribed in the revolutionary annals of our party." For Mr Novotny the villain of the piece was, and remains, Rudolf Slansky, the once all-powerful secretary-general of the party, who was arrested in November, 1951, and executed a year later after playing the leading role in one of the most notorious of the stalinist show trials. According to Mr Novotny, Slansky's "depraved" methods were similar to those used by Beria in the Soviet Union; at the time they did much harm, but all those harmed by them have now been compensated and rehabilitated.

Mr Novotny has thus made his dispositions for keeping in with Moscow without undermining the bases of his own power. Ever since 1956 the Czech communists have shown a marked lack of enthusiasm for liberalising their regime; and they have refused to rehabilitate Slansky as other victims of Stalin's purges, like Kostov in Bulgaria and Rajk in Hungary, were rehabilitated. No doubt they had their reasons—and these are as valid today as ever; ten years ago, in the fierce intercommunist struggle for power in Prague, Mr Novotny got his big chance just when Slansky made his swift and spectacular fall from power. The question now is whether his repudiation of the past can stop at symbolic gestures.

WAGES

Up and Up

THE strike of 1,000 Ministry of Aviation loaders and other ground staff at London Airport was ended by giving the 80-odd senior men whose pay claim had caused the dispute a wage increase neatly disguised as a promotion. This looks suspiciously like a manœuvre by the Ministry to get round the wage pause, but was in fact a far more commonsensical operation. Next March the men were in any case due to be transferred from ministry control to that of the operating company, British European Airways. The men's complaint was that they

were getting less money than those doing similar work for BOAC: their rise of 9s. 7d. a week would in any case have come then. The only damage done was the loss of passengers and goodwill by BEA—and the drawing of attention to one of the least important of the many casual anomalies that have risen as a result of the Government's emergency wage policy.

But there are signs that yet another public corporation, London Transport, is also looking for a way to get round its wage pause problems. The executive turned down a wage claim presented last week by the busmen, but offered a special "scarcity" payment to bus drivers: drivers are 1,600 below "establishment" and conductors 1,000 below. Unfortunately, it too often looks as though the official "establishment" is set at a figure that would permit the LTE to plunge into large financial deficit by running more buses on its least economic routes. In accord with the usual Cousins line, the union rejected this offer, and there is to be another meeting fairly soon. The case for any wage increase, whether disguised as scarcity or not, will be weakened if the rise in the number of drivers that has shown itself in recent weeks continues. The supply of bus drivers is in fact most directly influenced by the demand for heavy transport drivers in private firms (where men both get higher wages and have their weekends off): competition for the available men from such firms has decreased recently with the slackening of business activity.

CRO

No Colonials Wanted?

An interesting if largely unnoticed duel has been going on in the Commons for the last two weeks between Mr Humphry Berkeley, Tory member for Lancaster, and the Commonwealth Relations Office. Mr Berkeley, whose connections with Africa are well known, is not exactly an adept toer of the party line; he took the opportunity of the debate on the address to make an assault on the apparent lack of top quality diplomatic staff in the CRO, as compared with the Foreign Office. It is significant that the CRO has been able to find heads from its own office for only half its missions overseas, a shortcoming to which the Select Committee on Estimates on the CRO drew attention two years ago. Mr Berkeley has revived an old—and insufficiently answered—hare of the last Parliament by calling it a particular scandal that the CRO has failed to make up its deficiencies in Africa by recruiting from the old colonial service. He has spent the last week bombarding the CRO with questions, which have been progressively more cunningly worded and have elicited some interesting figures. They certainly appear to bear out his charge that insufficient use is being made by the CRO of ex-colonial civil servants on the ground that they are "tainted" by being former colonialists.

In Nigeria, for example, only 3 of 26 officers with a rank of second secretary or above have had previous experience in British colonial territories in Africa. In Sierra Leone there are only 2, and in Ghana none. Thus out of 38 officers in 3 West African missions only 5 have had previous African colonial experience and two in very junior capacities. Another ridiculous anomaly is the requirement that senior colonial officers should pass a written examination before transferring to the CRO. One question recently set in one of these examinations was to "give the impressions of Mr R. Van Winkle who fell asleep in 1930, on waking up in modern Britain." Mr Braine, the under-secretary, in a debate on the adjournment—also arranged by the indefatigable Mr Berkeley—complained that such criticisms were "wounding." Most well directed criticism is.

NEUTRALS

Cold Comfort at Cairo

Wise, or perhaps just travel weary, Mr Nehru played down the importance of his brief meeting with Presidents Tito and Nasser on Sunday. President Tito's decision to fly to Egypt for the weekend transformed the Indian prime minister's routine stop-over at Cairo, on his way home from Washington and Mexico, into a tiny summit, frills and all. Mr Nehru was at pains to emphasise the casualness of the whole encounter, and certainly the tranquillising communiqué, which clutched at various straws of comfort in its efforts to affirm that peace is the most important job on hand and disarmament the means, was a reflection of Mr Nehru's discreet optimism rather than the strident anxieties of the other two.

It was not for a comfortable exchange of generalities that President Tito came to Cairo. Since the Belgrade meeting of non-aligned countries in September, it has become no easier for a faithful neutral to feel his way through a much committed world. In a speech at Skoplje on November 13th, President Tito complained, in general, of the pressures that, since September, had squeezed the non-committed; in particular, he protested against the expression of American displeasure by withholding shipments of wheat to Jugoslavia at a time when drought had placed his country in a "very unpleasant situation." Reasonably, the Jugoslav and Egyptian leaders wanted to sound Mr Nehru on his talks in Washington; they would also be glad of the chance to pool their impressions of the 22nd Soviet party congress. But at Skoplje, President Tito hinted that he was looking for something more definite than an airing of views and grievances; he urged on fellow-outsiders the importance of finding some common way of countering the disadvantages of being excluded from closed, or closing, economic circles to east and to west. (He expressed the same worries to Mr Heath in Belgrade last week.) But reports from Cairo suggest that Mr Nehru responded tepidly to proposals for joint economic action.

Possibly, this was more disturbing to President Tito than to President Nasser. Cairo has not over-played its modest diplomatic success, but it was certainly no bad thing for President Nasser to show himself demonstrably still in his place among the leaders of the non-aligned world. Even if it was incidental to his main purpose, President Tito has done a good deed for a friend who is also, in some ways, his pupil. The boost for President Nasser's reputation was timely; unfortunately, it is not his international prestige that cuts most ice among Egyptians.

SYRIA

Twice as Good

When Dr Mamun Kuzbari formed the first government of the new Syrian Arab Republic on September 29th, he told the Syrians that they would be given a chance of electing a parliament within four months. His decision to hold elections on December 1st has cut the waiting period in half; thus he is twice as good as his word. On Tuesday, he and several of his ministers resigned from the provisional government in order to present themselves as independent candidates. The resumption of party activity is to be left to the parliament that emerges from the elections, so all candidates are to campaign as individuals, not as party men. In practice, this should make little difference; the previous affiliations of most candidates are well known, and in any case Syrian parties are so loosely organised that they scarcely deserve the name. The army high command has curtly dissociated itself from any candidates electioneering in its name.

The new parliament is to devise a constitution within six months of its election. But the guiding principles have already been laid down in a covenant that was signed last week in the Damascus officers' club by politicians of many shades of opinion. This covenant lays much stress on socialism and on the rights of peasants and workers.

Appointments, Business and Personal notices and other Classified Advertisements pages 843 and 852

The Christmas gift that's traditionally right

Embassy Cigars

Inexpensive because they're rolled in Britain

Nothing is more completely right for business gifts at Christmas than a box of Embassy cigars. Embassy are made from the finest cigar leaf in the world including top quality Havana tobaccos from Cuba. They are rolled with exquisite care. Inspected and inspected again to ensure they are flawless. But although Embassy cigars suit expensive tastes they are not expensive. Wills roll them here in Britain, so you save substantially. A cabinet box of 25 Embassy President corona-size cigars costs only 68/9d for example. There are many other splendid packs to choose from. See your tobacconist.

4 Embassy Emperor large corona-size cigars in leather style case 12/8d.

Embassy CIGARS *Rich in Havana tobacco*

EC 30

But as it was partly the speed of President Nasser's advance towards socialism that provoked the revolution, it is the brakes imposed by the covenant on that advance which call for attention. Thus the state will "preserve ownership and protect individual competition"; it will encourage small investors and protect the rights of landowners as well as those of the peasants. The inference is that the new Syria will be more socialistic than it was before union with Egypt, but less so than it would have been if the union had endured.

Dr Kuzbari insists that the elections will be free, subject to bans on "altercation" and on threats to the safety of the state. This could mean much or little, according to the degree of fidelity with which local authorities interpret the government's intentions. But can anyone seriously expect Arabs to conduct a general election without altercation?

MEDICINE AND THE PRESS

Should a Newspaper Tell?

THE reporting of medical news is a post-war child—at least to the British press. It probably owes its origin to a combination of three things: the enormous advances in medicine over the last twenty years, which have made it news; the tendency of health authorities (beginning with their wartime campaigns in the field of immunisation, public hygiene and food) to use the press among other media as an ally in preventive medicine; and lastly the growing appetite of the public itself for a sensational story, which, were they willing, doctors and hospitals could always be counted on to provide.

Ought this reporting of medical news to be encouraged? Does the high pressure production of the modern newspaper make it dangerous to attempt a careful account of some development in medicine, which may become utterly misleading by last-minute cuts and alterations? Should, therefore, the medical correspondent's matter be allowed some special privileges in this respect? Can medical news be handed to the public in an acceptable form anyway, without giving a wrong impression? These were the sort of questions discussed at a seminar on medical reporting recently organised by the International Press Institute. It is clear that there are wide differences between one country and another, both in the amount and quality of medical news that newspaper readers will accept and in the readiness of doctors to co-operate with journalists in the handling of it. But there was one point to which discussion tended to recur: can medical reporting be positively harmful?

Unlike the reporting of scientific news, stories of disease and cures strike home direct on the individual. For this reason any responsible journalist describing symptoms or the discovery of a new drug is bound to ask himself whether he is causing individual distress; and for this reason some would restrict all medical reporting to the field of preventive medicine, such as polio immunisation. But this would surely be going too far. A journalist cannot after all cause an illness or create a neurosis by what he writes. The sickness is there. What he may do is to make it overt—which in some cases will be a good thing—and he may make it too overt. As a general rule, this is the worst he can do, and it would be a pity if, as a result of letting their back hair down in a discussion of their problems, medical reporters were to have inflated ideas of their own wickedness.

OECD

Growing Pains

IN the ten years between 1949 and 1959, recovery helped the six common market states to expand their total output by an average of 5.8 per cent per year. Now, though the fires of reconstruction are flagging, the new stimulus of the common market is encouraging them to aim at an average annual increase of between 4 and 5 per cent a year. The British and American economies, by contrast, have been growing at less than half this speed. The new joint target adopted by the twenty members of the Organisation for Economic Co-operation and Development on November 18th—an average annual increase of 4.3 per cent between 1960 and 1970—implies, for all the reservations about different countries moving at different speeds, that the sluggish Anglo-Saxons must catch some of the dynamism of the Six. The American sponsors of the target see economic integration as a potential catalyst for them as well.

The target will not be easy to achieve. It is a good deal more ambitious for OECD as a whole than the estimates for Europe of a recent massive survey by the Twentieth Century Fund.* But the mere fact that the present American administration subscribes unreservedly to it could give an impetus to the long-term plans of industrialists throughout the North Atlantic area. The target symbolises the fact that the new frontiersmen in Washington give growth top priority in economic policy. If existing tax structures and international payments arrangements prove inadequate to the task, then, in their view, taxes must be reformed and the payments system changed.

The studied caution of the British response—less apparent when OECD met than in London beforehand, but still evident in the long list of qualifications in the final communiqué—betrays not only stuffiness about the objective, but a misunderstanding of the choices open to Britain. Of course, it is difficult to combine rapid growth with a strong pound and stable prices; much thought may be required. But if Britain joins the common market it cannot afford to accept the regime of a hypochondriac; nor could it, indeed, if it did not. Some choose growth; some have growth thrust upon them.

AFRICA-MIDDLE EAST EDITION OF TIME

With the issue of January 19, 1962, TIME, The Weekly Newsmagazine, begins a new service for advertisers—the Africa-Middle East Edition. It's the seventh special advertising edition of TIME.

TIME Africa-Middle East will enable you to prepare special advertising for the unique needs of this vital emerging market.

From Capetown to Tunis . . . from Dakar to Cairo to Istanbul, there is an urgent demand for the kind of goods and services your company can supply. These are the people you can talk to with profit—in the new TIME Africa—Middle East Edition.

For more information, write or call your TIME representative.

TIME

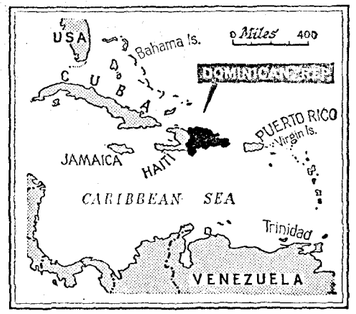
TIME U.S. 1923 • TIME LATIN AMERICA 1941 • TIME CANADA 1943 • TIME ATLANTIC 1946 • TIME PACIFIC 1946 • TIME ASIA 1961 • TIME SOUTH PACIFIC 1961 • TIME AFRICA-MIDDLE EAST 1962

a further set of backs remains to be patted, it is those of the Americans, for a continuing example of successful decolonisation.

Informed opinion has it that the accusations of corruption against the administration of the outgoing President, Mr García, played, on the whole, less part in the calculations of voters than the anti-foreign aspects of its programme. These included not only agitation against the American bases but also a "Filipino first" policy of easing foreigners, including Europeans as well as Americans and Chinese, out of key positions in the economy.

The new President, Mr Macapagal, has had his anti-American moments in public speeches, but he is considered in Washington to be more reasonable in this respect than his predecessor. His principal assets, in the eyes of the voters, have been a public and private life singularly free of scandal, and a clear attachment to principle. Thus when many members of his Liberal party deserted to the Nationalists after the victory of the late President Magsaysay's Nationalists in 1953, Mr Macapagal saw no reason to change his allegiance. He has now reaped the benefit of a swing of the political pendulum.

The fact that the pendulum has in fact swung, despite the financial resources available to the party in power, is a tribute to the common sense of the Filipinos, and it would be deplorable if Mr Macapagal's charge this week—that President García is plotting to prevent him taking office—were substantiated. The Filipinos have a right to the man of their choice.

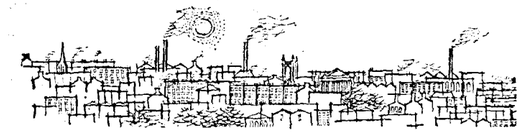


DOMINICAN REPUBLIC

Family Departure

DEMOCRACY in the Trujillo plantation, with most of the family still around, was never very easy to believe in. Last weekend, the United States, which had tried hard to convince itself that the two were compatible, had to admit that they were not; American warships appeared off the Dominican coast and the family slipped out of the island and out of power, perhaps for good. The slide began on November 15th when two brothers of General Rafael Trujillo, who was murdered in May after running the republic for thirty years, returned from a short exile in Bermuda breathing fire against their nephew, General Rafael Trujillo the younger, for giving away chunks of the family *hacienda*. Over the weekend, Rafael II resigned as chief of the armed services and left the country, President Balaguer declared a state of emergency, and Mr Dean Rusk declared that the United States would not allow the Trujillo family to reassert dictatorial domination. On Monday, 29 members of the family, including the two brothers, turned up in Florida; the American warships stayed where they were.

Since May, opposition parties have been allowed to form (provided they are not Fidelistas) and there are now three loosely organised groups. President Balaguer, who, despite his good work for the old general, has preserved a reputation for decency, several times invited these groups into a coalition; but they all refused so long as the Trujillo family stayed. Now a coalition is probable, leading, if all goes very well, to a new constitution and honest elections.



At the United Nations, the Security Council is debating with some heat the Cuban charge that the United States has been guilty of armed intervention against the Dominican Republic. Whatever the cause, unilateral action by the United States in the Caribbean is something the Cubans want discouraged. Undoubtedly too, Washington's desire to get rid of the Trujillo family (earlier last week the United States proposed a slight lifting of the partial economic sanctions against the Dominican Republic) is in effect a desire to forestall the Cuban-type revolution that might have followed a traditional right-wing coup.

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

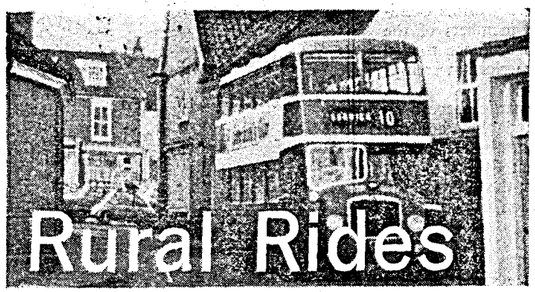
Top Townsmanship

SNOBBERY, the English vice, is the oldest and readiest differentiation between the Englishman's towns. The personal pecking-order is not unsubtle, and can be most acute of all where property values are concerned between the snootier London suburbs. Even the man from Bootle, who may not know where Southgate lies from Wanstead (may never, indeed, have heard of either of them), has been long conscious of the social curtain that hangs genteely between the Wash and the Bristol Channel.

The main conclusions of a new statistical analysis* emerging from the Centre for Urban Studies already belong to folklore. Indeed, the social effect of this folklore on the aspiring middle class has probably played a still wholly underestimated part in the great migration southwards that has gathered strength since the 1930s: the search for status (which does not mean surplus spending money) is not simply satisfied by more industrial estates for Merseyside or the Durham coalfield.

The most considerable assertion by Messrs Moser and Scott is that the mere size of the community has little effect on the differentiation (and hence social standing) of the English and Welsh towns. Judged on the 57 statistical variables available to them this is more than an assertion: it is proven fact. The sources they have had to use are those provided chiefly by the 1951 census, together with housing and health figures drawn up (presumably with varying accuracy) by the London administrative county, the 80 county boroughs, 64 municipal boroughs and 12 urban districts which had populations of over 50,000 ten years ago. From these variables they have formed four components, reflecting social class, growth between 1931 and 1951, growth between 1951 and 1958 and overcrowding. The result, both pioneering and stimulating, is to classify the towns in related groups, some (like the posh suburbs) clearly defined, others (like the north-east seaboard and Welsh mining towns) much less satisfactorily so.

The outcome is to confirm the social division of England and to emphasise the importance of housing conditions on social status. Naturally there are curiosities. Harrogate, with a higher proportion of the population engaged in finance (clipping coupons?) than London itself, has southern seaside characteristics; West Ham could be on Tyneside. The suburban struggle for precedence is clinically delineated by jobs, higher education, housing amenity and marriage age of females: thus Coulsdon is out on its own beyond



*British Towns. By C. A. Moser and Wolf Scott. Oliver & Boyd. 169 pages. 30s.

even the "exclusive" ring; Wimbledon and Twickenham are merely "mixed." The social laggards are, of course, shown up starkly: Dewsbury worst of all for water closets and baths, Gateshead with over 50 per cent of its dwellings confined to 1.3 rooms (while Doncaster, of all places, turns out to be less cramped than anywhere). It is possible to guess why Willesden and London are high up in illegitimate births, while Wigan is officially prim and pure.

Some surprises need looking into. Why should Barking have the worst cancer figures? (A rigorous MOH?) Although both Merthyr Tydfil and West Hartlepool show distinct and expected lower-class characteristics like high infant mortality, Merthyr is far less overcrowded than many other places. But is it strange that families should be leaving the north when the citizens of Carlisle have a life expectation a full nine years lower than Chigwell?

YET there must be a caveat or two. This is a survey that, as its authors would gladly admit, has had to leave out the intangibles of big-city life. When Birmingham (with all its faults as a regional centre) is classed with struggling Grimsby, and Coventry (now the only fast-grower in the 25 largest British towns) with Crewe, one suspects that something is missing. Is size quite so unimportant? The authors partly recognise the difficulty over social rating when trying to fit in Scotland. On all the housing criteria the Scots are deservedly below even Co. Durham, with Edinburgh itself something like an Athenian Burnley. The authors say: "In Scotland different standards ought perhaps to be applied. . . . Only on the strict standards set by the English suburban five-room house are the Scottish towns the poor cousins."

There are at least the remnants of strong non-suburban-minded communities in Britain outside Scotland which have rather different preferences and aspirations than, say, Gillingham and Enfield. It must be said, however, that on something like higher education—the Welsh apart—the regional reputations for other things than materialism do not show up at all. The point is that the type of urban housing that the inhabitants of the northern towns have to suffer make their regional centres so much less attractive than they should be if their younger generation (and active businessmen—the retired ones are in Worthing) are not to seep away. One suspects that if the Moser-Scott exercise is repeated on the basis of the 1961 census returns, the north will certainly not have improved its status rating.

Rural Rides

FROM A CORRESPONDENT IN NORWICH

TWO enterprising shopkeepers in the Norfolk country town of Aylsham have started to send private buses once a fortnight round twenty surrounding villages to bring people in, free of charge, to shop in the town.

Aylsham, a little market town of 3,000 inhabitants, was one of the sufferers when the Transport Commission, two years ago, closed the 70-odd miles of the old Midland and Great Northern Joint Railway, which used—at a considerable loss—to serve the most utterly rural part of Norfolk. Inadequately though this and other rural railways were used, no one in East Anglia will yet concede that the big nationalised Eastern Counties Omnibus Company has been able to provide a proper substitute. The buses, people say, do not run at the times to suit the customers. But the bus company protests that it is as much a loser on rural services as the railways, and that if it consulted nothing but economy village bus services would be cut down as ruthlessly as branch lines.

The object of the Aylsham private enterprise is to run one service that suits the particular needs of the people in the neighbourhood. It seemed to be popular on its first run, except with the shopkeepers of the neighbouring town of Reepham, who raised a cry of unfair competition. For Reepham, with a population of 1,400, also suffered from the closure of the railway, and fears equally with Aylsham the counter-attraction of Norwich itself, only twelve car miles away.

Norwich, with an ambition to extend its boundaries to embrace a population of 160,000 instead of its present 120,000, is the Great Wen for rural Norfolk. But even as little towns like Aylsham and Reepham are jealous of losing their motorised shoppers to Norwich, the small villages and hamlets are frightened of Norfolk county council's policy of concentrating new houses and schools on the larger villages and country towns, where they can most economically be given electricity, piped water supplies and sewerage.

There has been a revolt among the rural district councils against the county planners' (and the Ministry of Housing's) policy of restricting new housing development to the centres of villages, and not allowing it to straggle. This, say the RDCs, puts a prohibitively high price on sites in or near the middle of villages, and stifles private enterprise that might help to bring some fresh life into them. However well-meant the effort to conserve the countryside, and prevent the villages from developing their own version of subtopia, the effect, in the view of the average parish or rural district, is for the planners to conspire with the railways and the bus company to kill them by attrition.

Although Norfolk agriculture is more highly productive today than ever before, the permanent labour force is still diminishing through mechanisation; and with it, the population of rural districts. To counterbalance this, the county council has successfully pursued a policy of attracting manufacturing and processing industries (often from outside East Anglia) into the country and coastal towns, but the policy has not helped the small villages, except in so far as they are used as dormitories for their larger neighbours.

The county council has not set itself out to attract fresh population from London or the Midlands—all its efforts have hitherto been to find new industries for Norfolk people, as supplements to agriculture and the summer holiday trade. However, two West Norfolk boroughs—Thetford (5,000 inhabitants) and, very recently, King's Lynn (26,000)—have independently gone into collaboration with the London county council to receive surplus London population and industries under the Town Development Act.

However, Norfolk's planning officer has now warned the county that East Anglia is regarded as under-populated, and that within the next ten or twenty years it will probably be obliged, by the sheer outward pressure of the metropolitan area, to receive a million new inhabitants. He reckoned that Norfolk's share would be at least 300,000, on top of its present population of 550,000. Since East Anglia is well placed for the Rhine and the Baltic ports, the movement into Europe will be another influence drawing people and industries towards the region.

The sardonic Norfolk countrymen, nevertheless, are not slow to notice inconsistencies. They are beginning to ask how these prophecies of rapid growth in industry and population fall into line with the present

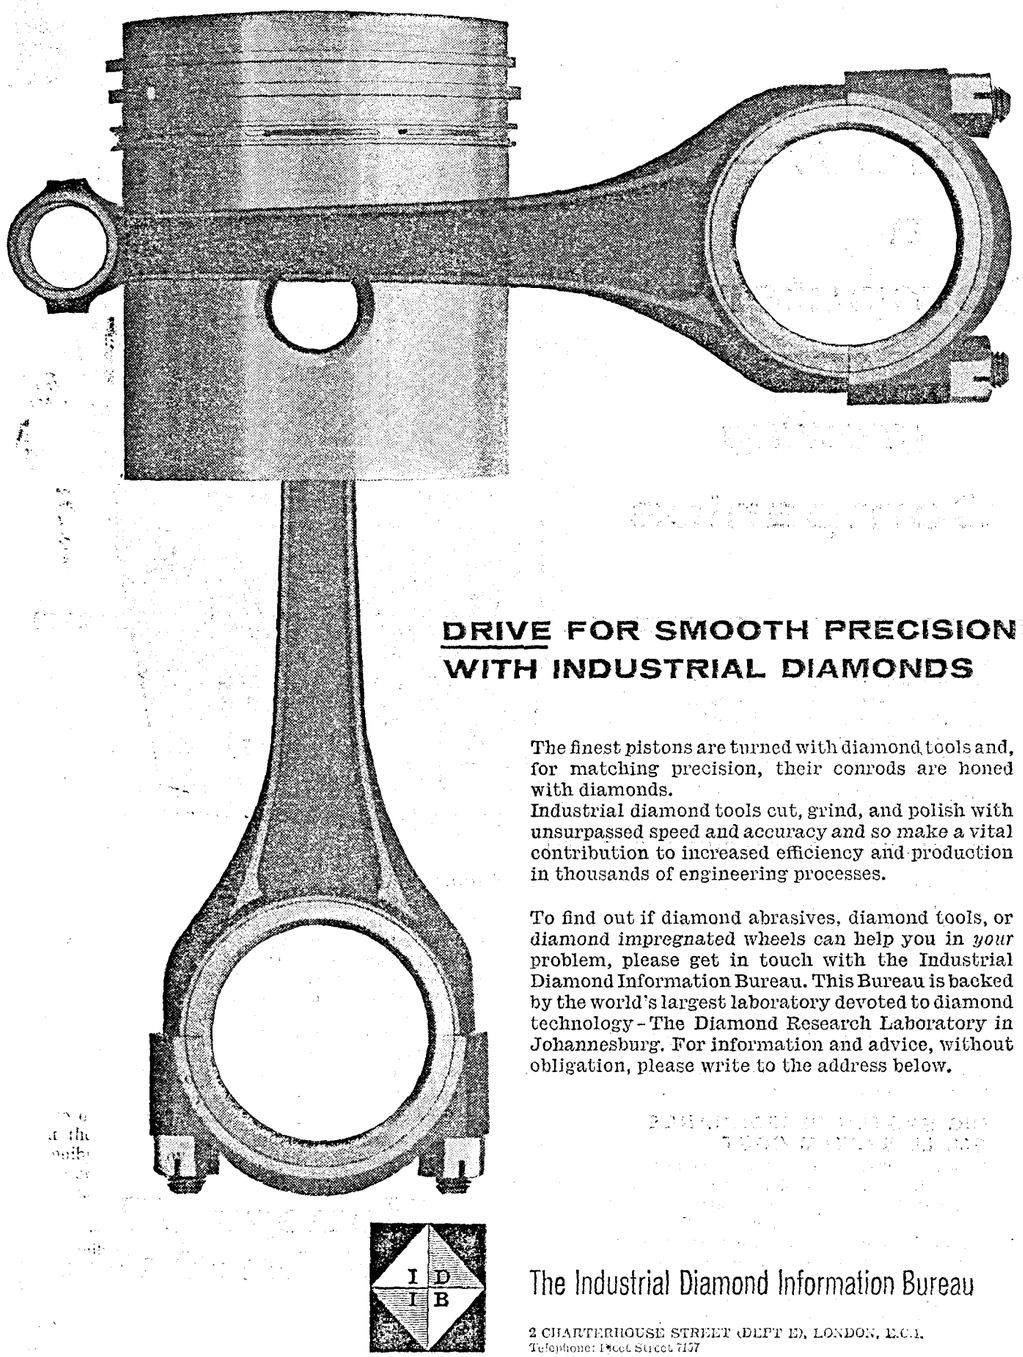
HONEYWELL
400

A short time ago, the Honeywell 800 was announced as leader of 'the new generation' of computers, able to process more data at a time than any other system. Here now is the Honeywell 400 – the most advanced small scale system for small-to-medium size companies, and divisions of large companies. It offers magnetic tape and card processing at card system cost.

FIRST STEP TO COMPUTER GROWTH

The 400 incorporates the same ancillary equipment as the 800, Honeywell's medium-to-large scale electronic system. The two computers are also compatible in the use of a similar programming language, based on simple words. The 400 is primarily intended for use as an independent data processing system . . . but it can also function as a satellite to an 800 for fully integrated data processing operations: programmes run on 'local' 400's can be easily integrated with programmes run on the head office '800'. When greater processing power is needed, graduation from 400 to 800 is a logical and economic step.



BIG SYSTEM PERFORMANCE SMALL SYSTEM COST

Honeywell 400 is a full-scale electronic data processing system complete with magnetic-core memory, high-speed magnetic tapes operating at 96,000 decimal digits per second, input at 650 cards per minute and printing at 900 lines per minute. This powerful combination has been achieved at a cost that compares favourably with that of many punch-card systems, and is lower than that of any comparable magnetic-tape system. Random Access Storage is now available for those requiring immediate access to large files (up to 12 million words).

Enquiries

Honeywell Controls Limited have established in London an Electronic Data Processing Division. A Computer Service Bureau is being set up, at which you will be able to see and use the Honeywell system. Enquiries should be addressed to: Electronic Data Processing Division, Honeywell Controls Limited, Greenford, Middlesex.
Branch Offices in principal towns and cities in the United Kingdom and throughout the world.

ontraction of their rail and bus services, nd the strict control of new building in eir villages. The Town and Country lanning Association may believe in the oming influx into East Anglia, but do Whitehall and the Transport Commission believe in it?

"What I saay," drawls the countryman, out of a lifelong distrust of bureaucracy, "is seein's believin'. But as for these hare officials, yow can allus depend on 'em ter saay one thing an' dew another."

Maxton: seven victories

Stone: 500 votes

Pink Clydeside

FROM A CORRESPONDENT IN GLASGOW

THE Independent Labour party finished a shocking fourth in the Bridgeton by-election last week (see page 740), when a truncated 41.9 per cent of the electorate nevertheless gave a Labour right-winger a handsome majority in a constituency that for nearly a quarter of a century stood four-square for Jimmy Maxton. The party's demise was briskly summed up after the poll by one veteran who declared: "Man, but the ILP took a quare auld tanking this time."

Indeed it did. Even the Scottish Nationalists, fighting the seat for the first time (apart from Miss Wendy Wood's unofficial raid in 1946) did six times as well and are cock-a-hoop accordingly. But the ILP plans to come back for more, possibly after the party has gone into voluntary liquidation and re-emerged with a new title and policy with greater appeal for the militant but non-communist left. Talks are going on within the party (with feelers outside) to achieve such a regrouping, perhaps in time for the next general election.

Something of this kind was attempted over a year ago when the ILP, the Trotskyites, the Socialist Party of Great Britain, the Syndicalists, and other left-wing minorities sought a formula for coalition, but the schisms of doctrinal difference ran too deep. The current moves may fail too, although the ILP now seems to have in mind a priority rating for nuclear disarmament, relegating pure socialism some distance down the policy scale.

What this chiefly represents is a wooing of the Campaign for Nuclear Disarmament movement (now under fire itself for ducking the electoral test). Whether unilateralism is in any sense a vote-catcher is very dubious: Mr Stone probably got the unilateralist vote at Bridgeton anyway. But to all its prospective allies the ILP is an extremely wealthy organisation by left-wing standards. It has a substantial income from its splendidly equipped printing plant (idyllic trade union conditions) which produces the *Socialist Leader* and subsidises it from lucrative commercial orders. There are party branches up and down the country which own their own halls and other assets and have thousands in the bank; yet so abject has become the party's appeal that it can muster only a bare handful of ageing members.

These staunch idealists, whose faith endures because it is never compromised, are having to face their discrediting at Bridgeton as best they can. For Bridgeton itself has changed little with the years: its 45,000 electors are relatively just as underprivileged and badly-housed as in Maxton's day. They are second-class citizens, imprisoned among the drab tenements and ancient factories that characterise Glasgow's most melancholy industrial suburb. Such places bred the type of left-wing socialism that started the myth of Red Clydeside. The ILP itself flourished on the Clyde as nowhere else in Britain, and first achieved more than local prominence in the political-industrial alliance that fomented the anti-war and anti-profiteering campaigns which caused Lloyd George so much anxiety in 1914-18.

Bridgeton knew all the ILP's great names from MacDonald to Brockway and, with its neighbouring east-end constituencies of Shettleston and Camlachie, sustained the last of the party's parliamentarians, McGovern, Campbell Stephen, and James Carmichael (who succeeded Maxton himself). But all three defected to Labour shortly after Maxton's death in 1946, and since 1950 Bridgeton alone has cost Socialism in Our Time four lost deposits. Are the prospects of the Nationalists, despite their claim of achieving a significant impact, any rosier? One doubts it: they did little more than pick up the dissident vote that represents their average by-election achievement in the past 30 years. But the ILP is plainly no longer capable of picking up anything—except the last slim chance of political survival through a general reconstitution of the left.

Painted too Black

BEFORE Notting Hill there was Nottingham—only no one remembers Nottingham's racial troubles now. One of the reasons has been the voluntary and persistently humane effort by the Council of Social Service's special Commonwealth Citizens' Consultative Committee, which has been concerned to repair "weaknesses in the host society." The committee is not only opposed to immigration restrictions on West Indians, it has thrown its weight behind a plea for legislation penalising all discrimination by race. For the past two years it has collected observations, data and opinions about the 8,000 coloured people among Nottingham's multi-racial population of 313,000.

In the eight years from 1953 to 1960 the waiting list for council houses in the city shrank from 11,000 to 6,500; the population grew by 6,000; and 9,000 new houses were built—from which it may be inferred that immigrants are not using up all the housing that true-blood Englishmen should have. Nor are they packing into and smashing up the houses they do inhabit: the city's medical officer of health reports that neither disrepair nor overcrowding is more serious in immigrants' houses than it is in the rest of Nottingham. He is not altogether happy about multiple tenancies in houses which, on sanitation and service grounds, are ill-adapted for more than one family. Another, more detailed study by a clergyman confirms his conclusions.

Few immigrants are on national assistance. Few young coloured people are unemployed; but their elders are less easy to place—particularly older women, who make up 20-25 per cent of the city's female unemployed (their menfolk form only 6-7 per cent of the male unemployed). Of those coloured people who are out of work many say it is because they will not (unless in real need) accept jobs as far below their skills as those they are usually offered.

The greatest bogey held up by restrictionists is that of immigrants' health. But in Nottingham, far from being simultaneous carriers and spreaders of everything from smallpox to leprosy, the coloured population suffers mainly from digestive troubles (being unused to British food), coughs and colds; their children suffer umbilical hernia more often than English children do; and their babies get bronchitis. Tuberculosis, it is stressed, is rare.

The crime bill is remarkably clean. Nottingham's chief constable finds only that coloured people sometimes have noisy parties, which break up when the police ask them to. But, he says, "so far there is no evidence that they engage in crime." How many other communities of 8,000 people could match that?

The Economist Diary

Specially designed to create an atmosphere of peaceful co-existence between the busy man, his secretary, and the world at large.

A week's appointments at an opening; a book that lies open flat on the desk

So Little Done

SIR—"Rare perception," you say, is required of white central Africans, and "the opportunity of meeting the educated responsible Africans who prove that the black man's need of human dignity is as great as anyone else's."

Surely the opportunity is there, on their doorstep, but it is not taken. In the course of three months' travel in central Africa last year I did not meet or hear of a single European family, apart from those of missionaries and teachers, that had ever entertained Africans in its own home. I do not include official receptions, which are no substitute for normal social contact; of this there appears to be none. In towns the two worlds, white and black, are just two worlds apart. On one side lives the European in his pleasant suburb, with good roads and sanitation: on the other, where such amenities end, the African, however "educated and responsible," in his location. I asked a Minister of the Kenya government what the white side of Nairobi knew about the black side and his answer was: "Absolutely nothing." A brilliant young Nyasalander, chosen for a scholarship at Cambridge, will consort there on natural terms with his fellows; but he has no hope of admission to the European society of his own country, unless independence brings a change to Blantyre and Zomba.

This complete social *apartheid* disappears the moment one enters the academic or, especially, the missionary sphere. There common sense and Christianity have ordained that the African shall be accepted as a man, as a teacher or priest, or as a superior in the hierarchy. The two universities are young. The churches are old in Africa; and to the traveller they appear to be generations ahead of all other European circles in their gradual assimilation of Africans into responsibility.

C'est le premier pas qui coûte. If Governors and a few "top people" were to invite leading Africans to their homes the rest would follow their example.—Yours faithfully, H. VAUGHAN BERRY
Aylesbury

Too Much Done

SIR—Your correspondent Mr Richard Whitehead (November 11th) asks why restrictions on the entry of West Indians should be any more reprehensible than t[illegible] on other Europeans or Chinese. It is surprising that the question should be asked: the answer is, of course, that for some three centuries the West Indian peoples, unlike Europeans or the Chinese, have been in all material respects integrated into the British economy—at our choice, not theirs—as closely as Wales or Scotland. The late Aneurin Bevan once remarked that the capital aggregations on which our contemporary standard of living depends originated in the wages which our forefathers were forced to go without. With equal validity he could have added our colonial peoples to our forefathers, except that the use of the past tense would then cease to be appropriate.

The people of Wales and Scotland succeeded long ago in establishing a right not merely to look for work in the British industrial machine but also to look for some equitable share in the resulting output. Britain is apparently too busy having it good to worry overmuch about extending the latter right to its erstwhile dependencies; now even in the former regard, it seems, justice is the one British commodity we are not anxious to export. Let us only hope that the spokesmen of our well-fed establishment will not persist in their tendency to deny that the purpose of the proposed legislation is what it manifestly is; the sole result of such efforts will be to reveal to the world the fact that we have lost even the last grace of shame for shameful acts.

I recall travelling in the United States with a West Indian colleague some years ago and experiencing mental jubilation at the expression on the face of an immigration officer of a southern state when my colleague told him, in very matter-of-fact fashion, that we were both British subjects. I am glad to have had that moment because the experience is unlikely to recur. I doubt very much if my colleague, cultured and civilised man as he is, would be so willing today to admit common citizenship with a people who, having so much, are showing themselves capable of so little.—Yours faithfully, EDWARD NEVIN
Dublin

So Much to Do

SIR—The only solution to the problem of the well-to-do council tenants that I have seen mentioned is to price them off the council estate, with rebates for the needy. But if, as originally intended, council houses and flats are provided as a social service for the poor, why not let the properties on a seven-year lease? At the end of it the family circumstances could again be reviewed, and, if warranted, a further seven-year lease be given, and so on.

After all, what was once a young family of school-age children later becomes, for a few years, a household of four or five wage-earners. If threatened by eviction on a given distant date, they would perhaps be persuaded to save enough money to buy a house or flat of their own. With a life-long tenancy there is no incentive at all, and expenditure on alcohol, tobacco and petrol rises, while homeless families are split up and living in squalor.—Yours faithfully,
Epsom, Surrey JANET A. GOODWIN

BOOKS

Fall Out from the New World

Reappraisals in History
By J. H. Hexter.

Longmans. 235 pages. 30s.

WITH the publication of these essays by Professor Hexter of Washington University, St Louis, the New World has come to redress the balance of the Old. Six of these eight essays are reprinted from various periodicals, and three of them, as Professor Hexter engagingly points out, were rejected by the editors to whom they were originally sent. Their collection is extremely welcome, for it makes their force and weight apparent. Professor Hexter is concerned with English history in the period from 1450 to 1650. He lays the sharp axe of a pioneer to such venerable oaks of English historical scholarship as Professors Pollard and Tawney; and he lops some branches from Professor Trevor-Roper's vernal growth. He is neither acrimonious nor pompous as he goes about his work of demolishing the myths of the middle class in Tudor England, the national state in sixteenth century Europe, and the now notorious rise of the gentry; indeed, the occasional wisecrack and touch of rumbustious gaiety show an affinity with Mark Twain, who showed a similar disrespect for the European establishment. But it quickly becomes apparent that a highly sophisticated as well as a robust intelligence is at work. The iconoclasm is backed by wide reading in the sources, a sensitive mind and the power to deploy detailed and intricate scholarship. Moreover, Professor Hexter is as much out of sympathy with American orthodoxies as with English. It was from the editor of the *American*, not the *English, Historical Review* that he received two of his rejection slips. Commenting on the "*indispensable* fervour of collecting vast stacks of 4 in. by 6 in. cards, covered with priceless, although somewhat incoherent bits of information," he asks us not to forget that "'He also serves,' who sometimes sits and thinks."

Professor Hexter's first article in 1938 on "The Problem of the Presbyterian Independents" set the tone of much that was to follow, for he there attacked the sharp distinction traditionally drawn between Presbyterian and Independents in the Civil War. His investigations led him to the agreeable discovery of "'Independents' who were not Independents adhering in a larger proportion than 'Presbyterians' who were not Presbyterian to a 'Presbyterian Church' that was not really Presbyterian." These "painfully negative" findings led him to produce in 1941 "The Reign of King Pym," a reinterpretation of the politics of the Long Parliament. Neither this book nor the article produced any ripples until after the war, when it became apparent that an under-water explosion had occurred, and that Professor Hexter had joined the nuclear club whose first member was Sir Lewis Namier. It was in 1948 with the paper on "The Myth of the Middle Class in Tudor England" that Professor Hexter showed his full destructive capacity. Nothing was left of this central explanation of Tudor history, and *the fall out from this explosion affected the* whole tract of time from the eleventh century to the nineteenth. Later explosions in the testing-ground of the history of ideas (here illustrated by the brilliant essay on "The Education of the Aristocracy in the Renaissance") showed the versatility and range of Professor Hexter's missiles.

He has not been content to show that many of the traditional interpretations of Tudor and Stuart history can be confronted with a wide range of evidence and shown to be inadequate. He has sat and thought to good purpose about the ways in which historians operate. He enjoys uncovering their assumptions and exposing their methods. Hence the interest of these reappraisals. They are not merely revisions in the light of new evidence, and not just statements of legitimate differences of opinion; they proceed from a well-thought-out position. But Professor Hexter recognises that historians who have entertained some very foolish general ideas have nevertheless done some very good work: good sense and a professional respect for the evidence have kept breaking in. He diagnoses only sporadic outbreaks of mild diseases, and his remedies are accordingly limited and moderate. Like Maitland, he does not believe that historians can profitably borrow the concepts of the natural sciences; like Maitland, he considers that historians should tell a story as well as analyse; and, above all, like Marc Bloch, he believes that the historian needs a richer, more flexible and more precise vocabulary. The propounding of ultimate solutions, he holds, has become a spiritual disorder; and his own suggestions are expressly limited to achieving "a slightly better way than the one now in use of talking about some two centuries of the history of the Western World." His suggestions have, in fact, rather wider implications; he wishes historians to ask questions that would require them to make less use of such words as *development, tendency, evolution, growth,* and make more use of such words as *think, consider, weigh, ponder, decide.*

There is a wealth of ideas in these essays, which combine fun with learning, iconoclasm with a respect for scholars of the past and present, disarming modesty with constructive suggestions. At one point he makes a cheerful proposal for a co-operative inquiry, but is quick to add that co-operative enterprises "have often provided a circuitous route to a general mediocrity quite easily and directly attainable without the inconvenience that they involve." Intellectual honesty and scholarly candour of Professor Hexter's kind are rare; at thirty shillings these essays are cheap—diamonds normally fetch a higher price.

The New Laisser Faire

Agenda for a Free Society

Edited by Arthur Seldon.

Hutchinson for the Institute of Economic Affairs. 192 pages. 25s.

THIS book is a collection of ten essays assessing, criticising and very often praising Professor F. A. Hayek's massive tome "The Constitution of Liberty." Professor Hayek's most recent work is undoubtedly an important one, but the claims put forward on its behalf by the editor of the present volume seem somewhat exaggerated. To class it with Adam Smith's "Wealth of Nations" is just silly, since there is no sign of it becoming a general seminal work, however much it may appeal to contemporary "liberals." Indeed Professor Hayek's basic principles do not advance very far from Adam Smith's or Mill's: that within a framework of law and morality social processes should be spontaneous so that the people can make the best of their own capabilities without government direction or interference, and that men should be governed by general laws and not by specific orders or directions. This latter point was developed fully by Dicey, although Professor Hayek justly takes him to task for undermining the rule of law by his misleading account, which attained such wide influence, of continental administrative law. Dicey was powerless to stop the growth of administrative agencies, but he was influential in holding up the growth of *institutions that would subject bureaucratic* machinery to effective control. The value of Professor Hayek's work is in the application of libertarian and neo-*laisser faire* ideas to contemporary society rather than in any striking originality of thought.

Every aspect of Professor Hayek's book is covered by the essayists. The economists outnumber the other contributors (there are six of them), but there is also a sociologist, a philosopher, and two lawyers. By far the most interesting, relevant and incisive essay is Professor Michael Fogarty's on social welfare. He shows how the whole concept of the welfare state has changed since the forties when the vision was one of an all-embracing state structure of social services. Today opinion is moving in favour of a more

selective form of state service, aid going to those most in need, and of a community where individuals can avail themselves of the state service as only one among a number of alternatives. The new Conservative pension scheme illustrates the trend.

Much of what Professor Hayek had to say about practical reforms certainly strikes one as somewhat unreal. To this he makes a tart reply that if we cannot learn from our mistakes we have made the most abject admission that we are incapable of using our intelligence ; but it is fair to point out that the role of the intelligence, especially in political affairs, is to assess the possible. Where Professor Hayek's book is most valuable is in his development of certain ideas which most people shy away from. His analysis of the social utility of wealthy men as important sources of innovation is an excellent example of his best writing.

Homeless Animals

Vanishing Animals

By Philip Street.
Faber. 232 pages. 21s.

Fly, Vulture

By Mervyn Cowie.
Harrap. 221 pages. 21s.

SPECIES of animals become extinct usually for one (or both) of two reasons. Either they are victims of what Mr Street defines as the "indiscriminate exploitation of economically valuable animals," slaughtered at a rate that reduces the population to vanishing point, or advancing agriculture renders them homeless. The cures are easy to prescribe but difficult to enforce: the choice lies between controlled exploitation of animals in their natural habitat or complete protection in some form of sanctuary —game reserve or zoo.

Being a zoologist, Mr Street leans more towards controlled exploitation because it is better for man and for the animals. Many people depend for their livelihood on several of the animals now threatened, the Eskimos hunting polar bear and walrus towards extinction just as much as the trawlermen now heavily over-fishing the North Sea. There is no reason why hunting should not continue providing the indiscriminate slaughter is checked and the annual toll kept within bounds much as whaling is controlled today. Several species have already been saved by this form of protection, but mainly in and around the Arctic where they are not in direct competition for land with domestic herds and crops.

Where this competition exists, as it does to a greater or lesser degree in all temperate and tropical countries, there has been until recently only one way of preserving wild game from extinction—by sanctuaries where all but the most strictly controlled hunting is barred. In extreme cases, zoos provide the last refuge for vanishing species, provided they can be encouraged to breed in captivity ; some of Mr Street's most interesting chapters deal with these problems of feeding and housing, and no one reading them will ever again look down his nose at zoos.

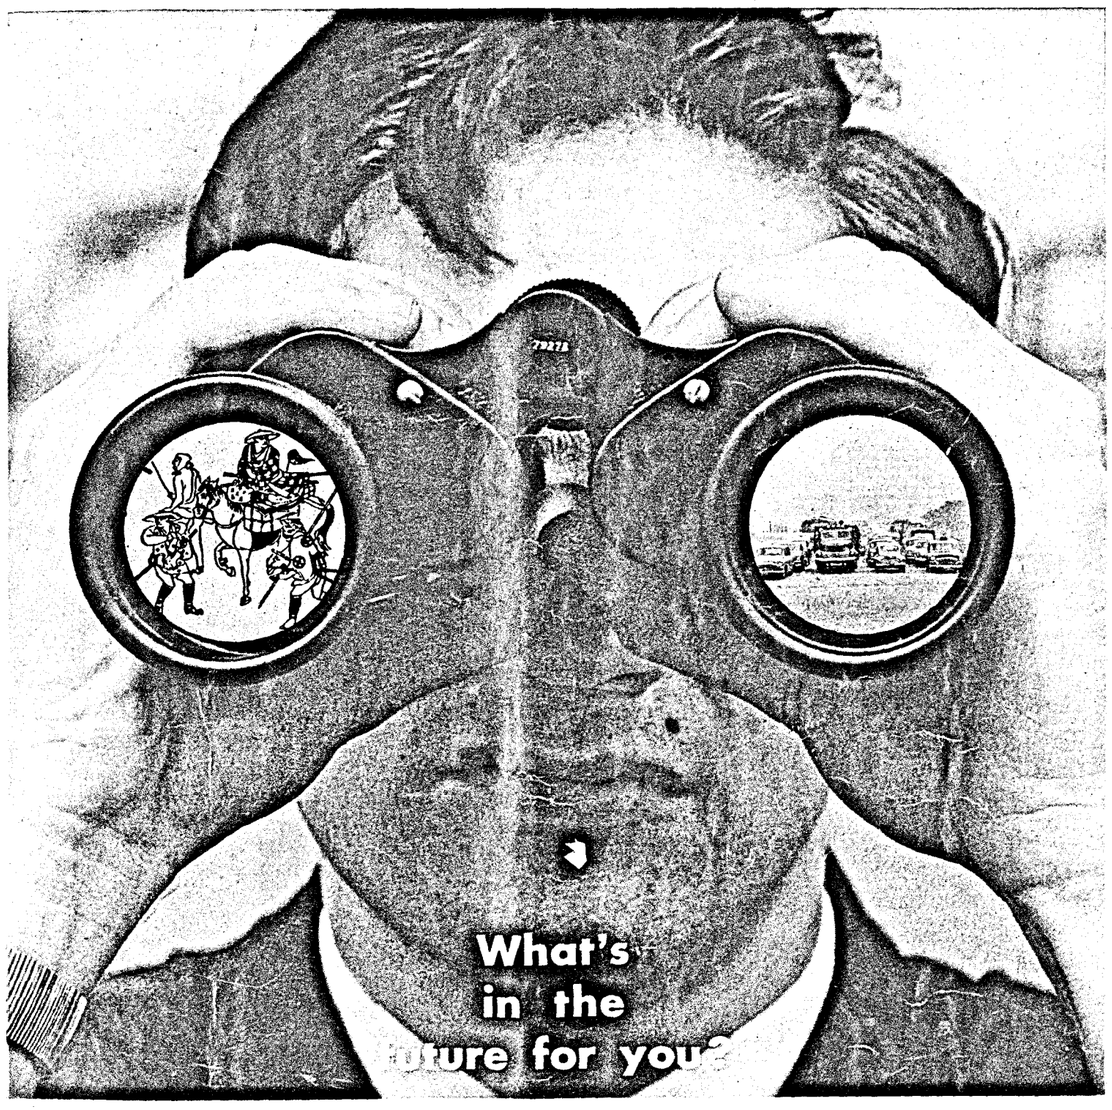
Game reserves also have their administrative difficulties, but the biggest is bringing them into being. The founding fathers of the game reserve movement are an odd collection of men who have not on the whole been zoologists, or indeed scientists at all. There was Theodore Roosevelt, President Kruger—and Mervyn Cowie, an accountant who virtually singlehanded fought the philistine indifference of white Kenya between and after the wars to start the Kenya game parks. He won his case on sentiment, not science, on the pleasure of watching at close quarters lions eat and play and wash each other's faces. In rage and exasperation he was led, as he frankly confesses, to overstate his case and overplay his hand ; he must have been an extraordinarily difficult man to deal with. But did that justify some of the quite dreadful snubs he received from his compatriots ? The pain of them is raw and fresh in this sentimental, gushing, deadly sincere book, which needs to be read beside Mr Street's pleasantly literate essays because it is the authentic, unedited raw material ; this is how, in real life, game reserves are created.

Yet Mr Cowie in his way is as much a realist as Mr Street. Both of them know that Africa is the last place on earth where game roams in much the same numbers as it has since the beginning of time. Both realise that this staggering spectacle of sheer number is what should, if humanly possible, be preserved for posterity. Both recognise that here the game sanctuary is not the answer ; it is not big enough, and the only way to retain the spectacle is to develop the commercial exploitation of this game as other threatened species of wild life are already exploited—and have therefore become valuable and worth conserving: the whales, the fur-bearing seals, the chinchilla and the polar bear. Will someone now get down to the business of showing how this can be done ?

The Federal Principle

The Structure of American Federalism

By M. J. C. Vile.
Oxford University Press. 216 pages. 25s.

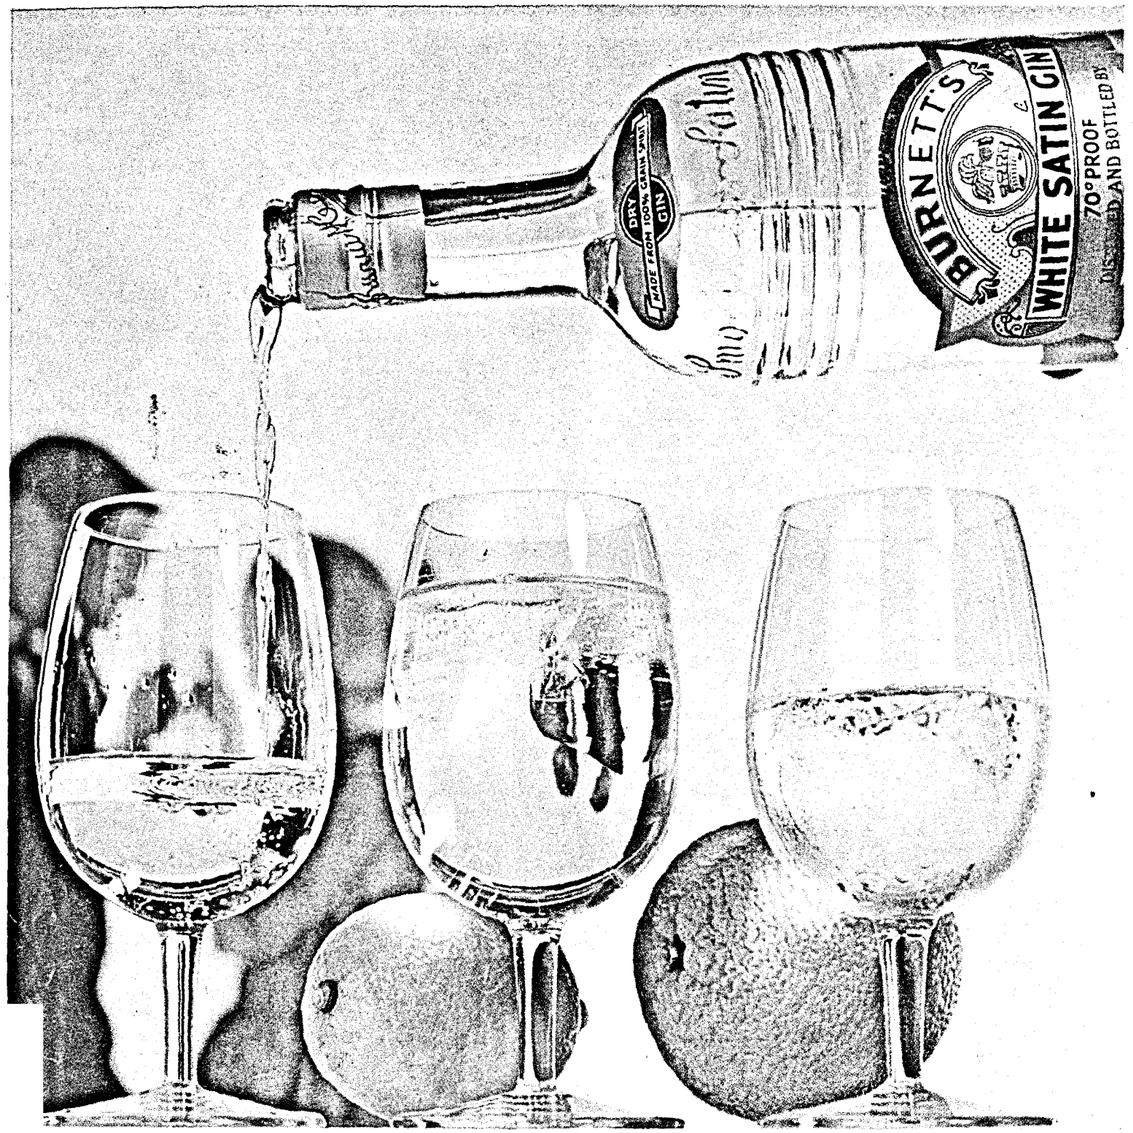


IT used to be a standing reproach by Americans that their history and institutions were little studied in British universities. And one goes on hearing it, although it has long ceased to be justified. Mr Vile's modest but important study shows that the younger generation of British Americanists need no longer confine themselves to expounding American authorities, but can make original contributions, even in a field so delicate and so quintessentially American as the interaction of law and politics in the governmental process. Although Mr Vile cannot as yet emulate Professor Brogan's ability to illustrate general propositions from a fund of detailed and often esoteric information, and although there is a certain clumsiness about his presentation of his material, he has undoubtedly made a notable contribution to an understanding of how American government actually operates.

As Mr Vile himself admits, to expound the system is one way of justifying it, and those who feel that the United States pays a high price both domestically and externally for its devotion to the federal principle will get little comfort here—but the book may have an added value from the very fact that the possibility of applying British ideas of majority rule to the infinite variety of the American scene is so firmly rejected.

What Mr Vile does is to show that the federal principle is not only a matter of constitutional law, but also the underlying factor both in the federal institutions themselves, notably Congress, and in the persistent patterns of American government, even where the new welfare functions are involved. (The broad field of economic controls through credit policy, for instance, provides perhaps the only notable exception in the domestic area.) Federalist assumptions also underlie the operations of the informal institutions of American government—parties and pressure groups. There, however, Mr Vile warns his readers against neglecting the constitutional aspect of the matter. "Excessive legalism," he writes, "has now given way, in the study of politics, to the emphasis upon party and group behaviour, but it would be a serious mistake to under-rate the role of the constitution in the working of American federalism." It is perhaps significant that Mr Vile is a product of the London School of Economics, which does not suffer from that curious wall of separation dividing political from legal studies at Oxford for instance.

The Supreme Court then, "today, no less than at any other time in American history, still stands at the heart of the political system of the United States." The fact that Acts of Congress are rarely invalidated does not testify to the contrary. It is by reviewing state legislation that the court charts the shifting borderline between federal and state responsibilities and, as in the matter of segregation, largely determines the direction in which both aspects of government must move. For, as Mr Vile rightly reminds us, it is not only necessary that the court should determine that something falls within the federal sphere ; it is also necessary that Congress should act upon this finding. Often it does not, again largely for "federal" reasons.



Mr Vile devotes rather less space to the complex financial relations lying at the heart of federal-state co-operation in the "new" fields of government. But he does bring out how strong the inhibitions have been against using federal resources to iron out inequalities between the states. What we end up with is no less than a new definition of federalism itself in which the word "interdependence" rather than "independence" is crucial. It is Mr Vile's contention that this is not only relevant to the present position when the commerce and general welfare

Have you ever taken a long, good look ahead to see what's in store for you or your company? If you have, what did you see? Did you see progress? Now, when opportunity comes knocking at your door, are you ready to catch it? If so, good. However, we believe you should go out looking for it or, better still, make it and get ahead of your competitors. If you're looking for investment opportunities in Japan — and there's plenty of them — you'll be taking the right step if you come to us. Daiwa Securities, as the largest securities company in Japan ... capitalized at £8 million sterling and having over 5,000 employees ... is engaged in a wide range of business, acting as broker, dealer and underwriter of securities and distributor of investment trusts. Make your money work for you in Japan's booming industries by investing through expert and experienced hands. If there's anything you want to know about any Japanese industry, company or stock, we'll do our best to obtain all the available facts for you — without any charge, of course. Just write

clauses have been made to carry their modern connotation, but is indeed a concept essential for understanding the whole of American history.

Four Centuries

From Alfred to Henry III, 871-1272

By Christopher Brooke.

Nelson. 288 pages. 21s.

PROFESSOR CHRISTOPHER BROOKE, in his introduction to the period "From Alfred to Henry III," has had to face a task more difficult than that of most contributors to Nelson's new series on the History of England. Those surveying later periods have two advantages : in the first place they have probably to review only one century to his four ; and in the second, they can assume a certain knowledge on the part of the reader, which he cannot. Most people know something at least about Oliver Cromwell or Mr Gladstone, but they may know very little indeed about English history between 871 and 1272. A great deal of space in this book has had therefore to be devoted to narrative, and the four centuries with which it deals are not easily surveyed at a single view. They were centuries of crowded event ; they saw great changes in the organisation and social structure of England, and because they are remote in time, an understanding of these events and changes demands an imaginative effort both from author and reader. The whole period is ranged over by academic controversy, which does not simplify the writing of an introduction aimed to be at once comprehensive and comprehensible.

Nevertheless, Professor Brooke has achieved just this combination. The narrative, which constitutes about half his book, is lucid, and has been divided into four sections. The first of these covers the period of the Danish and Viking invasions, from Alfred to Canute—the period in which, as he puts it, the foundations of an English kingdom were laid. The next section covers the Norman Conquest down to 1087, and is followed by an excellent summary of the changes wrought by this invasion. The remaining story he tells in two halves, pausing at the death of Henry II in 1189 to discuss the effects of Norman infiltration on the outlying Celtic areas of Britain. In his last chapter, having carried his narrative safely past the watershed of Magna Carta to the year 1272, he takes stock of the developments of the period as they are illustrated by a view of England's social landscape in the mid-thirteenth century.

The lines of division which Professor Brooke has thus made are not the traditional ones, but this is no criticism of his choice. As he points out, though the period saw great changes, the various processes of change did not work at a uniform rate. The story of the peasant's life in the fields can be reviewed in a single chapter ; church history, which was more directly connected both with political events and with European developments, cannot. He has therefore broken his narrative not at the points where it is interrupted by dramatic incidents, but at the points where the effects of these can be most clearly seen. It is this that wins his book its first virtue, clarity. Technical phrases and ideas that always puzzle and confuse the student, such as "the manor" and "feudalism," are explained with a lucidity that should be the envy of scholars and a joy to the teacher. They are given, moreover, strategically, at just those points where their understanding is necessary to comprehend the next instalment of the story. The introduction provides an admirable guide to the kind of mental adjustment which is necessary if one is to understand the thoughts and actions of medieval people.

Throughout the book is enlivened by Professor Brooke's judicious asides and well chosen quotations from original sources. There is a useful discussion of these in the introduction, and there are sixteen illustrations.

High Travel

Karakoram : *The Ascent of Gasherbrum IV*

By Fosco Maraini. Translated by James Cadell.

Hutchinson. 320 pages. 60s.

THIS book is so well produced that the publishers should be congratulated as well as the author. It is a pleasure merely to handle, and is beautifully illustrated in monochrome and colour ; the colour photographs are especially good.

Fosco Maraini is already well known as a Himalayan writer from his "Secret Tibet." His new book is lighter, more exciting, reading. It describes the Italian Alpine Club's successful expedition to the hitherto unclimbed peak of Gasherbrum IV in the Karakoram. By modern standards this peak is not so high—thirty years ago, the Karakoram could be seen lying low on the horizon from the summit of Kamet, only some 700 feet lower but then the highest mountain ever climbed. Gasherbrum IV is, however, probably the most difficult peak of its size ever climbed, perhaps the most difficult in the whole of the great series of ranges enclosing India on the north.

The ascent is described with a Latin lack of inhibition that makes the book the more readable by the layman, even if the hardened British climber cannot occasionally restrain a *frisson* of embarrassment. For this he will be comforted by the evocative writing, which, if he is growing old and beginning to be conscious of a fading memory, will bring back past happiness as surely as a whiff borne on the breeze of wood smoke or of pines. The horror may here and there be laid on a little too thickly, but the humours and joys of travel in high mountains are also painted so clearly that this can be forgiven.

The author is not interested only in the difficulties of the pitch he is climbing. He is intensely concerned as well both with the characters of his companions (who, who, who chose their liaison officer ?) and with the people of the mountains, of whom he writes with sympathy even when they are most infuriating.

But in a second edition will he please use either surnames or first names and stick to them ? It is too difficult to remember that Walter and Bonatti, Ricardo and Cassin, are one and the same without frequent reference to the key. A dramatis personæ of eight becomes confusingly sixteen, and individual characters are blurred.

Wages Primer

The Economics of Wages and the Distribution of Income

By D. J. Robertson.

Macmillan. 254 pages. 21s.

THE author, who is Professor of Applied Economics at Glasgow, has aimed this book both at undergraduates and at the general reader. The idea of selling one product in two markets is only a sensible one when there is very little competition, since otherwise there is a risk that each market will be lost to a rival product specifically designed for it. In the present case there are few rivals, however, since there are only one or two British textbooks on labour economics and since international differences make foreign ones a poor substitute for British ones. The author is therefore a good applied economist.

Those of his chapters which are primarily descriptive are all excellent and well adapted both for the student and for the general reader. They include discussions of methods of wage payment, institutions in the labour market, the process of wage settlement, the structure of relative wages and the distribution of income. All are clear and fairly elementary expositions of important facts.

The chapters where economic theory bulks larger are less satisfactory, though this is not to suggest that they contain positive defects. The point is rather that the perfectly proper end of simplicity has been achieved by the means of rather discursive analysis which is insufficiently rigorous for the student and inadequate, by itself, for the general reader. Thus the section on the theory of employment in the chapter on wages in depression and the section on the meaning of inflation in the following chapter, though perfectly sound, are unlikely to meet the needs of either type of customer. Professor Robertson has, indeed, attempted rather too much. Less pure theory would have left room for more applied, as distinct from descriptive, economics. There are, indeed, several rather surprising omissions.

One of these is the recent econometric investigation of the relationship between unemployment and changes in the general wage level. This research is too interesting and important to be ignored. It is true that the relevant writings are too technical for the readers of this book, but that does not mean that Professor Robertson could not have usefully discussed them in elementary

terms and provided his own evaluation of their results.

There are other examples. A single paragraph on the wage round is inadequate and some statistical examination of changes in the relative wage levels of different industries surely deserved a place in the book. It is true that British labour statistics are not much better than the typography and layout of the *Ministry of Labour Gazette*, but Professor Robertson scarcely tries to use such figures as are available on this topic.

Lastly, there is an important matter bang in the centre of the economics of wages which deserves quite extensive treatment. This is the relationship between the earnings of unionised and regulated employments on the one hand and unregulated ones on the other hand. The problem is an important issue in the context of wage inflation, for example. Some writers have asserted that unions can push up the wage level only when there is such a pressure of demand that earnings would have risen in any event. The argument is that if there were no pressure of demand, wage increases in unionised and regulated industries would create a downward pressure on wages in the rest of the economy, by increasing the supply of labour there, so that the general average could not rise. Even if this is all wrong, it ought to have been examined both theoretically and factually.

Wisdom and History

Four Studies of War and Peace in this Century

By W. K. Hancock.
Cambridge University Press. 136 pages. 18s. 6d.

SIR KEITH HANCOCK'S four studies of war and peace in this century were delivered as the Wiles lectures at Belfast last winter. They derive largely from his work on Smuts; from this comparatively narrow base he has been able to mount some striking penetrations into the problems of modern history. He begins by discussing war, which he thinks most of his fellow historians bother too little about. His economic training makes him find it "more realistic to think of defence and opulence as competing claimants upon national resources than to think of war and peace as separate segments of time." And his studies in political theory remind him that the individual powers live, in today's international anarchy, in just that dangerous grouping of all against all from which Hobbes inferred that state sovereignties must have arisen. At first glance some of his remarks seem commonplace:

> let governments first make clear to themselves what kind of peace they really need, and they will find themselves more than halfway to knowing what kind of war they must prepare for and fight—if indeed they find it necessary to fight at all.

Yet leading politicians of any nation can easily be too busy to notice this sort of fundamental point.

Sir Keith next contrasts the Versailles settlement with the peace of Vereeniging. This leads him to observe how much more likely it is that a small struggle, however bitter, will lead to a mutually satisfactory end than a "total" conflict on a world scale. This leads in turn to reflections on how small struggles can best be waged; and here his researches into Gandhi's early brushes with Smuts bear some interesting fruit. He concludes that a policy of non-violence may be useful against a constitutional regime that recognises the rule of law—though it is a policy of heroism, not of comfortable ease. His criticism of the King-Hall analysis of current international ills is telling: it is maintained that

> the nations of western Europe . . . lack the will to defend themselves by military means. . . . But, if their comforts mean so much more to them than their freedom, what reason have we to believe that they will summon up the will to fight the battle of freedom non-violently?

Lastly he considers the Commonwealth, the League of Nations and the United Nations as variant forms of international society. Always resolutely sceptical and clear, he doubts whether any authority yet in sight would be competent to wield the devastating powers which the two doubtfully prudent giants refuse in any case to surrender. These lectures make a short but sagacious and stimulating book.

OTHER BOOKS

THE PUBLIC YEARS. By Bernard M. Baruch. *Odhams.* 384 pages. 30s.

The second volume of this distinguished American public servant's autobiography takes his story from his entry into public life before the first world war through his friendships, and collaboration with Sir Winston Churchill and many American Presidents to the second world war and its aftermath. Readers of *The Economist* will be interested in his account of Lord Keynes: the two men never got on, largely because Keynes had severely criticised Baruch's book on reparations after the first war. The personality, deportment and irony of Keynes upset Henry Morgenthau Jr. and other leading Americans as well, and made Anglo-American financial co-operation more difficult. Baruch's account of his half-century in national and international affairs tells nothing new, but it reveals much of its author and his friends and colleagues.

ANNUAL ABSTRACT OF STATISTICS. *HMSO.* 340 pages. 25s.

Two new tables cover the United Kingdom's economic assistance to overseas countries, a third the sales of financial assets by the public sector. Otherwise, with much the same content as before and unchanged in price, this annual continues to give compactly an astonishing amount of information.

THE BOSS. By R. Lewis and R. Stewart. *Phœnix.* 288 pages. 25s.

Revised with new chapters on the American and European businessman.

THE FORTUNES AND MISFORTUNES OF THE FAMOUS MOLL FLANDERS. By Daniel Defoe. 407 pages. 7s. 6d. SELECTED WRITINGS. By Oscar Wilde. 374 pages. 7s. 6d. CHILDHOOD. By Maxim Gorky. 342 pages. 7s. 6d. THE LIFE AND TIME OF ANTHONY A. WOOD. 372 pages. 8s. 6d. *Oxford University Press.* World's Classics.

A GLOSSARY OF GEOGRAPHICAL TERMS. Edited by L. D. Stamp. *Longmans.* 568 pages. 63s.

Do you ride on the tube ... or the subway?

The difference may be slight . . . but even small distinctions in language and in customs can assume importance, when people in Great Britain do business with people in the United States.

The Chase Manhattan Bank, with the largest network of correspondent banks in the U.S., naturally has close familiarity with American trade practices and usages—and with the ways in which they differ *among* the fifty states. And after more than seventy years in London, too, The Chase Manhattan is equally familiar with British ways. This understanding of customs on both sides of the Atlantic can be very useful to you in your dealings with the States.

Indeed, The Chase Manhattan can be of service to you almost anywhere you do business. Its network of more than 51,000 correspondent banks, branches and representatives' offices all over the globe can provide you with every type of modern banking service, promptly, efficiently, and on a personal, *localized* basis.

When you do business anywhere abroad . . . it will help to talk with the people at The Chase Manhattan, in either of the London Branches.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

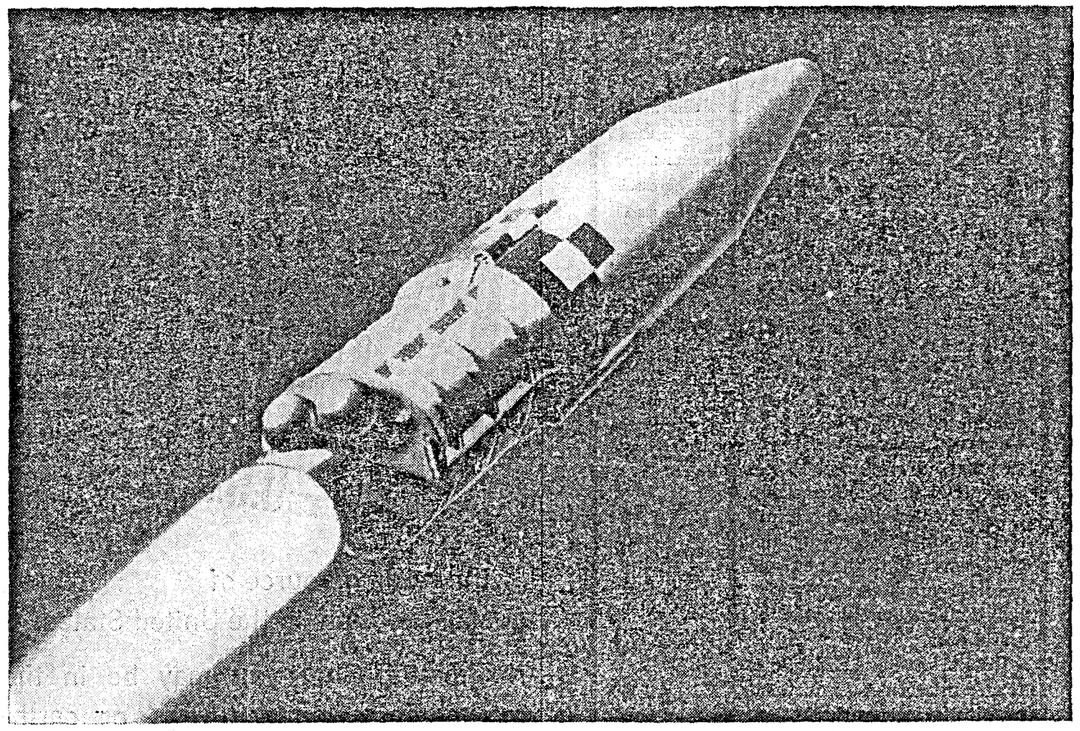
Deficit Abroad— Balance at Home

NEW YORK

ALTHOUGH a great deal of publicity has been given to the deficit in the international balance of payments of the United States and to the size of its gold stock, the notion that the dollar may be in danger was regarded sceptically by Americans until recently. Hope has prevailed that the fuss would blow over; but now the public is beginning to accept the fact that the defence of the dollar is likely to be a long drawn-out affair. This is frustrating to the world's richest nation: in conservative circles it is arousing protectionist sentiment as well as demands for cutbacks in economic aid abroad and in welfare programmes at home; liberals, while eschewing neo-isolationism, are concerned that the need for safeguarding the dollar will conflict with the government's avowed objective of accelerating economic expansion. The Administration, which has been determined to avoid choosing between extremes that would run the risk of either impeding growth or placing the dollar in jeopardy, is beginning to speak out in favour of orthodoxy by promising to balance its Budget in the coming fiscal year. Clearly, Washington is seeking to apply fiscal discipline to its domestic Budget in order to avert the doubts that may arise over the growing deficit on its foreign payments.

The Administration's officials were not unduly disturbed by the worsening trend in the third quarter of this year. Their main concern is over the first half of 1962, when the expansion in the domestic economy should generate an increased demand for imports and rising corporate profits may lead to a larger outflow of funds for capital investment abroad. This would mean a further increase in the international deficit, which could trigger a fresh exodus of both European and American short-term funds from the United States. Now that so much attention has been drawn to the balance of payments, any substantial deterioration might mean renewed pressure on the dollar even if, as the Treasury claims, the basic problem is being brought under control. Washington is fairly confident that its defences will eventually bring about equilibrium, but it is somewhat vulnerable to a quick or sudden assault.

The prospective increase in the foreign deficit will reflect an expanding economy which should be counted upon as a defence in itself. After a deficit of around $3.8 billion had been chalked up in both 1960 and 1961, the first half of this year showed a radical improvement, largely because the domestic economy was still feeling the effects of the recession while most of Europe was enjoying boom conditions. With American imports at a low level and exports strong, the trade surplus in the first half ran at an annual rate of $6 billion, or almost enough to offset the outflow of government aid and private capital. This surplus dropped to a rate of $4.2 billion in the third quarter as imports went up with the recovery in business and exports levelled off. If economic activity continues to expand, then the trade surplus will shrink further; still, a period of prosperity should also attract foreign capital, for short-term interest rates will tend to rise and long-term investment opportunities will present themselves. During the third quarter, foreign investors withdrew funds from the United States but the recent advance in equity prices on Wall Street, sparked by a resurgence of optimism about the outlook for corporate profits, may bring a return flow.



A much more serious threat will arise if the economy fails to achieve much growth. On the surface, the basic deficit would not be as large, but a lagging economy would raise doubts about the competitiveness of American producers and engender fresh fears that Washington would resort to inflationary methods to stimulate demand. Some members of the Administration have argued that the government should increase its spending to assure that there will be enough growth to absorb unemployment and excess productive capacity; they contend that the tax structure is so burdensome that it will hamper growth before full employment is achieved and that any additional restrictive measures, fiscal or monetary, would be almost certain to invite a new recession. But the Treasury —and the central bank—take the view that the economy is moving forward so that stimulants, which might encourage pressure on prices and increase American vulnerability to foreign competition, are no longer needed.

PRESIDENT KENNEDY, who listened to both sides while depending more on eloquence than action to defend the dollar, is now supporting the Secretary of the Treasury's position and his strategy. Mr Dillon and his aides are not banking on any one plan but have evolved a complex blueprint, composed of both defensive and offensive measures, designed to correct the basic imbalance in America's international financial position while minimising the restraints on the domestic economy. There is no thought in Washington of a devaluation of the dollar; this continues to be dismissed on the grounds that it would create as many difficulties as it could cure. Nor is there any disposition to carry out a massive reduction in the government account for military and economic aid. There has been some cutting back on military outlays abroad (that is, on military outlays which affect the balance of payments) and the Administration has already reached an agreement, calculated to save some $400 million a year, with west Germany. The United States is trying to persuade other countries to make similar arrangements, which in time may reduce the deficit on military spending from $3 billion to $1.5 billion a year. But there is no plan to cut economic assistance, although further pressure will be put on Europeans to increase their aid to other countries, if only to keep American expenditures for this purpose from rising.

Apart from the savings which it hopes to make in the military account, which should show up next year, the Administration is taking the traditional course of mounting an export campaign. The Export-Import Bank, in concert with a group of private financial institutions, has announced that it will provide credit guarantees for exporters. In addition they will have priority when

LOCKHEED TODAY

Lockheed has successfully orbited more satellites than any other builder in the world. Now Lockheed offers the versatile Agena, a production-line satellite suited to many missions. Only the Agena can have its engines stopped and restarted in space by radio signals from earth. This capability enables the Agena satellite to reach a precise position on orbit, to maintain it for long periods, and to carry a heavier payload.

HILTON HOTELS provide an extra measure of pleasure

A good hotel—a Hilton Hotel—will certainly enhance the enjoyment of your visit to the States. Our people are naturally friendly, trained to appreciate the fine points of courtesy, and quite sensitive to the needs of guests from wherever they may hail. This is our reputation the world over.

Hilton Hotels and Hilton Inns form a network of comfort and hospitality across the nation. Nearly every major city has its Hilton Hotel, accommodations are moderate in price and reservations can be made *in seconds* for each one of them, through any Hilton Hotel in the world. For information, communicate with any Hilton Hotel or the London Office, 36 Hertford St., tel. HYDe Park 8888, or the Amsterdam Office, Apollolaan, Amsterdam-Z, tel. 73-06-22.

ATTENTION IMPORTERS!

MADE IN NEW YORK STATE U.S.A.

... the leading source of quality products in the United States.

No matter what you may be in the market for—wonder drugs or earth-moving equipment, home appliances or machine tools—you'll find them in New York State ... in quality, in quantity, and ready for shipment. To locate suppliers that will satisfy your specific needs, write:—

STATE OF NEW YORK DEPARTMENT OF COMMERCE, DEPT. EE-4, 230 PARK AVENUE, NEW YORK 17, N.Y., U.S.A.

tax changes are worked out under the Treasury's proposals for encouraging businessmen to invest in new plant. The goal is an increase of 20 per cent in exports; admittedly this will take some time to achieve but, if other items remain unchanged, it would turn the deficit into a surplus.

Meanwhile, the Administration is counting on international co-operation going beyond the recent agreement to strengthen the resources of the International Monetary Fund. Through the Organisation for Economic Co-operation and Development the United States is seeking a greater degree of co-ordination in financial policies and is working to reinforce and refurbish some of the recent bilateral arrangements that are proving so useful to both sides. Treasury officials point out that the new spirit of co-operation is in marked contrast to the almost anarchic conditions prevailing last year, when European central banks did not hesitate to exercise their right to exchange dollars for gold. This privilege is still open, of course, but the restraint now being exhibited is hardly accidental and it is clear that the United States, which has been candidly explaining its problems to its allies, feels that a great deal more can be done to ameliorate short-term strains and improve the prospects for long-term stability.

THE immediate problem, however, is the danger that the worsening of the deficit may set off a run on the dollar. On this front the Administration's direct defences are much skimpier, for it is relying on the central bank's power to increase short-term interest rates, a power which it hesitates to use too forcibly, and the restraint of foreign central banks. Both the White House and the Treasury acknowledge that psychology is the key to the short-term problem and efforts have been made to bolster confidence.

Mr Kennedy himself launched the psychological counter-offensive shortly after taking office, when he promised that the dollar price of gold would be maintained and that the entire American gold stock would be available to meet foreign claims. Although the short-term outflow—and the preference for gold—had begun to slow before this, officials credit the pledge (which any President might have been expected to give) with restoring confidence and providing the breathing spell needed to make a start in restoring balance. The resumption of pressure on the pound sterling also relieved the strain on the dollar. Nevertheless, the deficit is growing faster than the bulwarks against it and this means that the Administration must resort once again to its initial defensive tactic of speech-making.

In its new attempt to avert a crisis, the Administration is not claiming that equilibrium is in sight in the balance of payments but it insists that in the federal Budget this is in sight. This emphasis stems from the Administration's own embarrassment at being forced constantly to make upward revisions in the size of the deficit on the current Budget. The White House's willingness to seek counsel from many sources, combined with the candour of its advisers, has also resulted in damaging confusion about its policies. Now, however, the Administration is speaking with one voice and, though some of its members may have their private doubts about the virtue of a balanced Budget in present circumstances, they are no longer expressing these publicly.

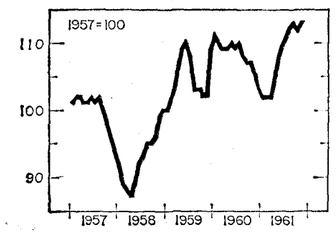
To attain a balanced Budget would have considerable psychological influence, for it should convince sceptics, whether American or foreign, that the Administration has control of its finances. Budget balancing may slow down the economy's growth, but as federal spending in the fiscal year which begins next July will be higher than it is this year—with the achievement of a balance dependent on a vast increase in revenues—the Budget itself will not have a deflationary impact. In putting so much stress on a balance the Administration is making a gamble. If it fails to achieve it—or does not come close to doing so—it may invite the crisis in confidence which it is seeking to avoid.

Lectures to the Frustrated

MR KENNEDY'S four-day journey to the west coast last week—the most ambitious he has undertaken since he became President—gave him the opportunity of saying some unpalatable things that needed to be rubbed in and thus of showing those who criticise his "uncommunicativeness" that he can speak out like a national leader. By delaying his trip until Congress had gone home he made sure, however, that his words would receive attention all over the country. The President's appeal at the University of Washington, as it had been at Arlington on Veterans Day earlier this month, was for patience and good sense at a time of international danger; his theme was that America, for all its might and the burdens that it bears, cannot impose quick and cheap solutions for all the world's ills and that negotiations, to be successful, must leave both parties better satisfied than they had been before.

The West, in particular, needs to be reminded of such realities. It is the chief stronghold of the radical right-wing groups which have been proliferating ever since the reassuring figure of Mr Eisenhower left the White House. They include the John Birchers, members of the Christian Anti-Communist Crusade, and now the Minutemen, a loosely organised confederation of small units pledged to fight communism, even to the extent of becoming guerrillas in the hills if this should seem necessary to defend their country. In Los Angeles, his last stop, Mr Kennedy dealt scathingly with groups which pretend that the communist danger comes from within because they lack the maturity to live with the real peril from outside, who sow suspicion instead of confidence and equate liberalism with communism. They are the ones who believe that the only alternatives are complete victory or complete surrender and whose clamour for solutions limits the President's freedom of manœuvre. As Mr Kennedy spoke, a large group of these self-named "Indignant Citizens" put up a picket line outside. But the speech was well-timed in a week when both the Roman Catholics and the Hebrew Union were condemning publicly the extremists of the right.

The President has other reasons for feeling satisfied with his trip. He saw and was seen in a part of the United States that was not Kennedy country at the last election; then he carried only four states west of the Mississippi. He was able to underline what his Administration has done on issues that particularly interest the West, such as land reclamation, electric power, water and reforestation. He was also able to attend the funeral of Mr Rayburn in Texas, assist Democrats to raise funds and pay tactful compliments to two veteran members of the Senate—Mr Hayden of Arizona and Mr Magnuson of Washington. Both are chairmen of powerful committees and their good will will be worth having next year when the Administration's more controversial Bills are being dealt with.



Boom-Halloo?

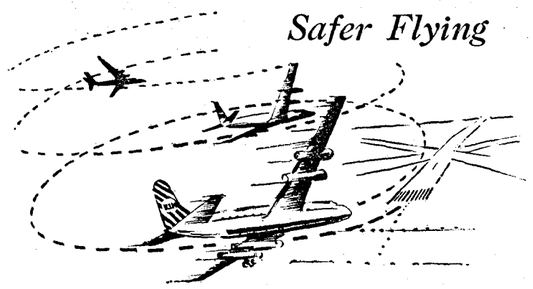
THE economic recovery, which went to ground in September, broke into the open again in October and should now give the business community a good run, perhaps right through the summer, without a check. However it will probably not be a very speedy one; steady but slow is the forecast for this recovery, a pace that can be kept up for a long time and that is more satisfactory than a fast spurt into a boom which will be followed by a slump.

October saw a return to August's record figure—which was bettered by a fraction—for the output of America's mines and factories. But the steel mills still lagged behind the other major industries and their production continued to decline during November; this was rather unexpected since stepped-up activity

in the plants of steel's big customer, the motor industry, was largely responsible for the general improvement in the industrial index in October, just as its decline in September had been due to the automobile workers' strike. The gaps left in car dealers' showrooms by that strike are now being filled but the manufacturers are not hurrying to finish the process. They prefer to spread the extra production well into the new year. This carries with it a danger that buyers who are kept waiting may decide to do without a new car altogether but so far there is little sign of this; demand has been most encouraging and shows no sign of falling off.

INDUSTRIAL PRODUCTION
seasonally adjusted

The excellent figures for car sales were the main reason why in October at last retail trade joined the upturning statistics, although it did not quite regain its record, which dates back to April, 1960. Evidently consumers have decided that the recovery can be counted on, that the international situation is not as critical as it seemed in the early autumn and that they may spend with confidence. This confidence extends even to such long-term capital investment as buying a new house; the number of these started in October was 4 per cent above the previous month for the second month running and far above the figure for a year earlier. And there is plenty of money available to pay for these purchases. Helped by the improvement in industrial activity, which pushed up factory workers' earnings, total personal income jumped in October by nearly $4 billion at annual rates, to a record of $425 billion.



Shelter State

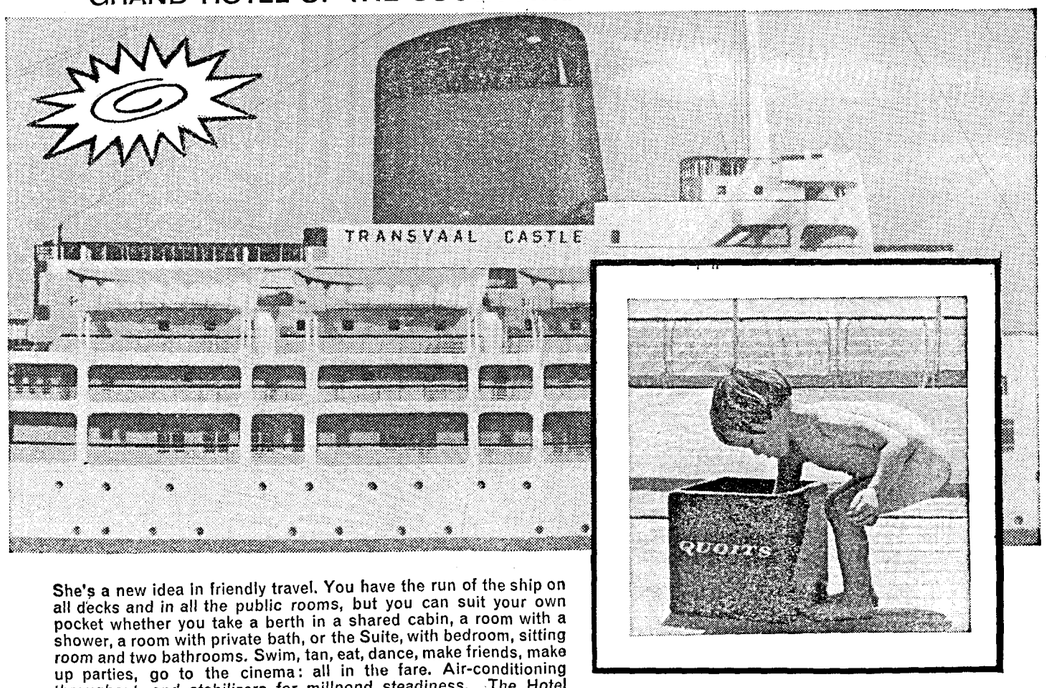
EARLY this month Mr Nelson Rockefeller persuaded the New York State Legislature to spend $100 million for shelters against nuclear fall-out—$15 million to build them in state institutions and the rest for grants (up to half the cost a person) to public and private schools and colleges which construct their own. Protection would be provided for more than 4 million people. So far this is the only notable result of all the alarm and excitement generated by the President in July when he appealed to individual Americans to prepare to survive a nuclear attack. Governor Rockefeller did not have to be convinced; he was working for shelters while Mr Kennedy was still a Senator. But the new concern of the public gave the project its majority in Albany, even though a number of state legislators who voted for it did so reluctantly.

No doubt Mr Kennedy hopes that public pressure will lead other states to follow New York's example, though few of them have a handy $100 million lying idle in a road fund and none has either New York's general resources or its priority as a nuclear target. Public pressure is also needed if Congress is to play its part next year, possibly by providing grants to the states for civil defence, but in any case by giving the federal government funds for its own programmes. But in the meantime the President is coming under serious and open attack for alarming people without giving them any clear idea of what they are to do; Mr James Reston suggests in the *New York Times* that the Administration is frightened by the war psychosis which it has unintentionally aroused. The clear guide-lines which the President promised last July are still lacking and even the issue of a new booklet on group shelters and cheaper "do-it-yourself" ones has been held up, apparently because of disagreements behind the scenes.

Recently a group of professors at Harvard and the Massachusetts Institute of Technology tried to revive the dispute over whether shelters are desirable at all and just last week Mr Walter Lippmann unmasked his own big guns, not to demolish the building of shelters altogether, but to blow up the idea that anything can be accomplished in a few months, even by creating a public panic. In his view the real protection against a calculated attack lies in the nuclear deterrent and shelters are useful only as insurance against an irrational, even suicidal, last throw by a cornered enemy. If, as is now believed, the Russians have fewer than 75 intercontinental missiles, fall-out shelters might indeed provide useful protection for a good many people. But however the academic argument goes, the President can hardly retreat at this point. Neither can he stand still. Already officials all over the country are reporting that confusion and the lack of clear directions from Washington are sapping the willingness to assume new burdens of civil defence.

Safer Flying

FROM A SPECIAL CORRESPONDENT



AT present delay—time wasted on the ground and in the air—is the price paid by the airlines and their passengers for safety. Holding an aircraft in the run-up area until it is cleared for take-off, or stacking it up over the airport until it is cleared for landing, is a time-honoured technique. It was in use when the first radio-equipped traffic control tower went into operation at Cleveland, Ohio, in 1931. It is still the system used to handle jet traffic at New York International Airport, even though it can now result in delays of many hours, particularly when the weather turns bad unexpectedly and all machines must be brought into a landing by the use of instruments.

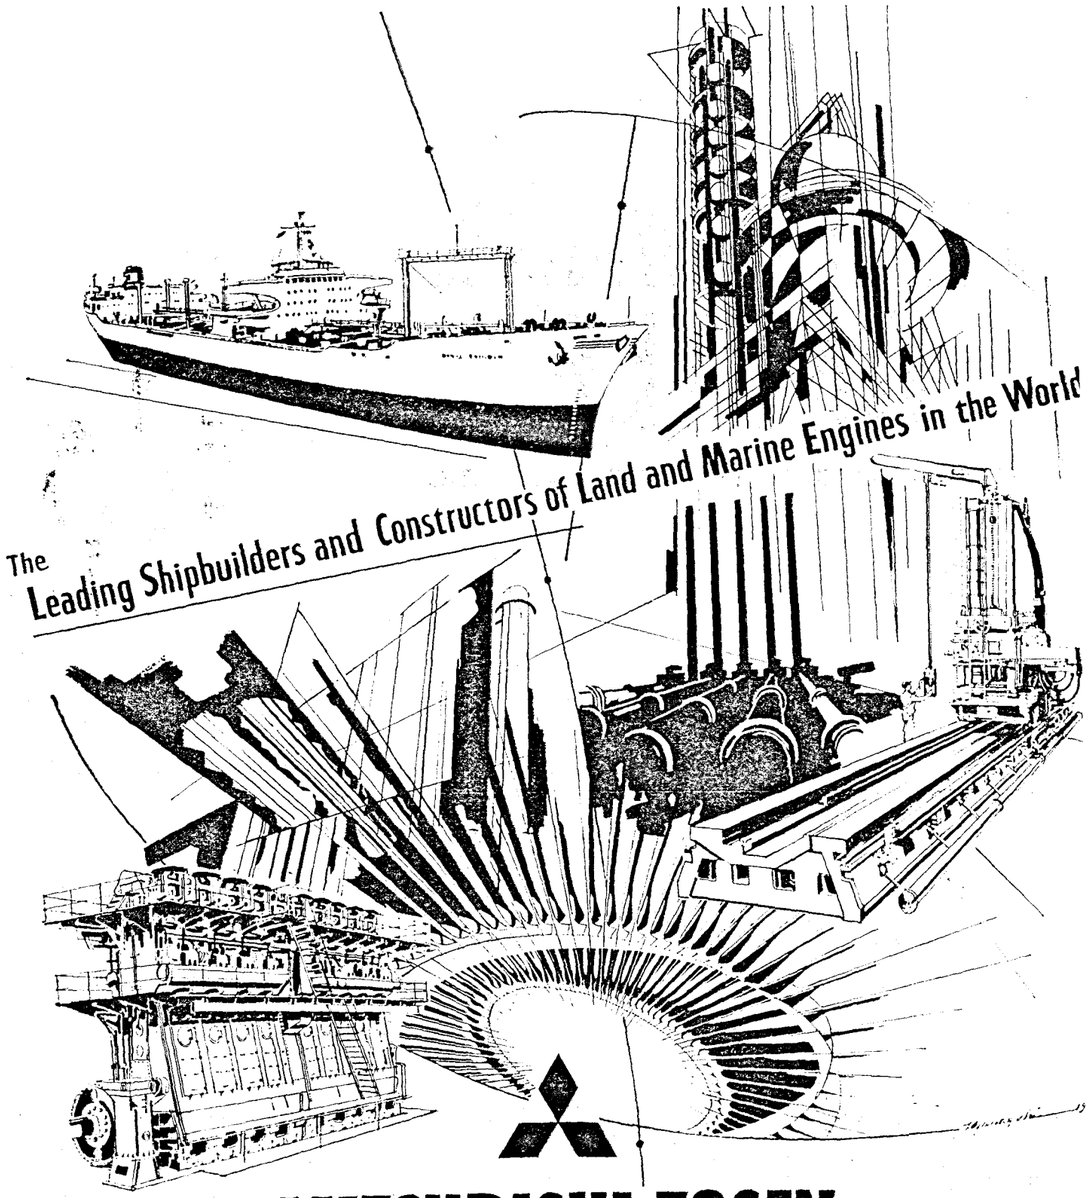
According to Project Beacon, the newly published White House study of air traffic control, these delays are fast becoming intolerable. But if they are to be eliminated other safety factors, such as electronic data-processing machines, will have to be built into the control system and the system itself will have to be modernised drastically. It works as well as it does, the report suggests, only because the staff which operates it is first class, with good morale and high professional qualifications. But in the next fifteen years the volume of controlled traffic is likely to increase by about 300 per cent. To overhaul the system to meet this load will require the spending of some $500 million for capital improvements alone during the next five years, instead of the $250 million now projected; but this will be money well spent in terms of lives—and time—saved. Since all the air traffic control systems in the world, including that of the Soviet Union, are patterned in large measure after the American system, the impact of Project Beacon—many of whose recommendations are to be put in hand at once—is likely to be of great importance.

Fortunately, the 146-page study is a model of clarity, perception and good sense. The group which wrote it does not suggest (though it must have been sorely tempted to) that the federal government should take over the running of airports from local

R.M.S.
'TRANSVAAL
CASTLE'

GRAND HOTEL OF THE SOUTH ATLANTIC

She's a new idea in friendly travel. You have the run of the ship on all decks and in all the public rooms, but you can suit your own pocket whether you take a berth in a shared cabin, a room with a shower, a room with private bath, or the Suite, with bedroom, sitting room and two bathrooms. Swim, tan, eat, dance, make friends, make up parties, go to the cinema: all in the fare. Air-conditioning throughout, and stabilizers for millpond steadiness. The Hotel 'Transvaal Castle' sails on her Maiden Voyage to South Africa on January 18th 1962, and then every eight weeks. May we send you a Brochure?



YOU DON'T HAVE TO DRESS for Dinner.

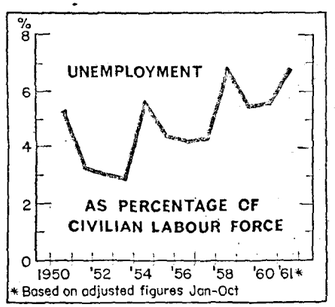
communities as a way of solving the serious problem of overcrowding. Nor does it attempt to assess the previous policies of the Federal Aviation Agency and of its former administrator ; these often isolated the agency from the airlines and private fliers whom it was meant to serve. Instead, the Beacon members accept what they found as a basis for building a better system, though they did not praise all they found. They argue that the FAA needs a master traffic control plan, an Inspector General to see that it is carried out, and a Planning Office to keep the master plan up to date to meet the expanding needs of more aircraft which are travelling faster all the time. But they told the President that

> the Task Force found no evidence of a single system plan. There were a number of partial plans existing in the various bureaux [with] co-ordination being effected on day-to-day details rather than on the establishment of an overall plan for the agency.

To show that such a master plan is feasible, the Beacon group has outlined one. It envisions the replacement of the present cumbersome method of reporting the position and particularly the altitude of aircraft, which depends on periodic radio calls from each pilot, by a semi-automatic system which would receive its information from electronic "altitude reporting beacon transponders" carried in each aircraft. Such devices should cost no more than $500 each to purchase and install.

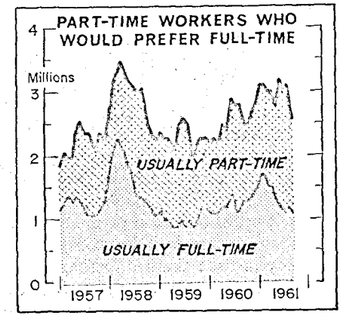


According to the report the FAA should also develop a new automatic system of ground control and departure clearance to replace the present one, which is "cumbersome and inefficient." In addition, improved lighting of runways and greater use of parallel ones would help to avoid some of today's most troublesome congestion. The Beacon technicians endorsed the FAA's decision to adopt the British visual glide slope lighting system for pilots flying in bad weather by visual reference ; it also urged the FAA to speed up its installation of instrument landing systems.

Counting the Jobless

FROM A SPECIAL CORRESPONDENT

In the last few months a considerable controversy has developed over the unemployment figures as calculated by the Bureau of Labour Statistics. These have shown a high level of joblessness (around 7 per cent of the labour force on a seasonal basis) continuously for the last eleven months, even though recently the general economic situation has been improving rapidly. This state of affairs has been used by many as evidence of the need for the federal government to take steps to create more jobs. The present argument has been stirred up largely by the opponents of such interference who contend that, by making unemployment appear worse than it is, the statistics help those who want to push the federal government into new spending programmes.



In the September issue of the *Reader's Digest* an article appeared—"Let's Look at Those Alarming Unemployment Figures"—in which the Department of Labour was accused of "juggling statistics to show progressive deterioration of the United States economic system." In a violent criticism the article maintained that the figures are inaccurate and therefore should not be used as a basis for comparing rates of joblessness in the United States and European countries, a comparison which is frequently made to emphasise the seriousness of the situation in the United States. While the article had an obvious political purpose, there is some justification for criticism of the American figures, although there is no doubt that they reflect the general trend accurately ; they prove, for example, that the rate of unemployment has doubled in the last decade.

According to the estimates of the Bureau of Labour Statistics in September, 1961, there were approximately 4.1 million people unemployed in the United States. The data on which this figure is based came from a monthly survey which entails the interviewing of 35,000 households in 641 counties and cities, with actual numerical projections being made from this sample. Included in the figure for unemployment is any person over 14 years of age who in the month of September was without a job and at the same time actively seeking work—even full-time students and housewives, for example.

In Britain no sampling technique is used and to be counted as unemployed a person has to be registered with the Ministry of Labour. The purpose in registering is both to learn of job opportunities and to collect unemployment insurance benefits ; therefore people who are not qualified for benefits may not register. Possibly the British system underestimates the extent of unemployment—the figure in September was 1.4 per cent as opposed to 5.7 per cent in the United States (without seasonal adjustment). Categories that are omitted in Britain include many married women who are not entitled to unemployment pay, some young people and some of those who are changing jobs. In the United States all such persons are included in the estimates and they may account for several hundred thousand of the jobless each month. For example, it is estimated that if teenagers were left out of the September, 1961, count of unemployed the figure would drop to 3.3 million and by 1 percentage point.

In fairness it should be pointed out that in certain ways even the high figures in the United States underestimate the problem if an acceptable definition of an unemployed person is someone who wants a job but cannot find one. The household survey method has its loopholes, for a person who is jobless but believes no job is available may genuinely answer in the negative when asked if he is actively seeking work. Furthermore, there is no special weighting in the sample for distressed areas although, by definition, the problem of unemployment is especially great in such areas. Finally, people who are working part-time but who would prefer to work full-time are not allowed for in the estimates of unemployment ; this latter group is particularly important.

The argument has become so serious that recently President Kennedy appointed a committee of six expert economists to take another look at the validity of the government statistics ; it is to examine the methods used in collecting the employment data and to reconsider the underlying definitions. It will be surprising if it gives much support to the critics.

The Beacon group was critical of the FAA for continuing to mix traffic which is operating on instruments (most high altitude flights are now made on instruments to take advantage of the positive separation and control service offered by FAA) and that which is not. This mixing of "blind" traffic with see-and-be-seen aircraft is particularly dangerous in overcrowded terminal areas. On the matter of a proximity warning device, the Beacon report merely echoed previous opinion that no acceptable device is yet available. If one is invented and adopted, the report said that it should be treated as an adjunct to the air traffic control system "rather than as a primary tool."

A great deal of the report is devoted to settling the issue of how closely a traffic control system for civilian flying should be linked to the military system for detecting hostile aircraft. Because the Beacon recommendations were unsatisfactory to the Air Force, which sought a close link, the report was held up by the White House for several weeks. In its final form, the study recommends that the Air Force should have its own highly flexible surveillance system for air traffic while the FAA should be free to develop "an optimum, modern air traffic control system built on the substantial foundation of the present system."

Dollar Sign on the White House

From the financial facts published by the Brookings Institution in a study of the presidential election of 1960 that appeared recently, two stand out. One is that a record $25 million was spent on the post-convention campaigns at a national level (an increase of 46 per cent since the election of 1956); the other is that the successful candidate, Mr Kennedy, spent $912,500 in his efforts to secure the Democratic nomination—as much, that is to say, as all his leading opponents put together. A figure that is unknown would be even more thought-provoking could it be established: the total cost of 1960's electioneering at national, state and district levels. Mr Herbert Alexander, the author of the financial section of the Brookings report, estimates that the bill may have come to as much as $175 million; Senator Morton, the ex-chairman of the Republican National Committee, puts it rather lower, at $100 million or more.

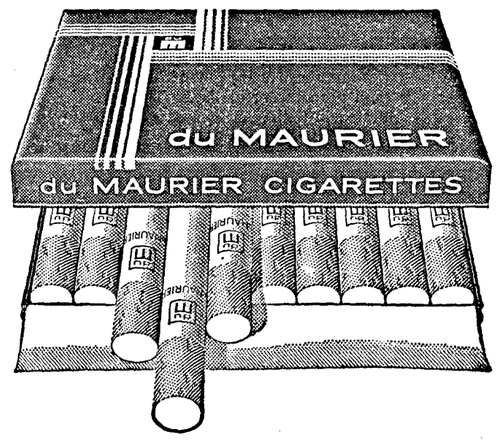
It is no wonder that even that conspicuous beneficiary of wealth, Mr Kennedy (a trifle abashed, perhaps, by the suggestion of how much he owes to mere money), has felt it necessary to do something to reduce the dependence of political candidates on large donations from a small number of rich men for help in meeting the costs of election campaigns. (Unless rich, Americans do not subscribe readily to party funds.) According to the President,

> it is not healthy for the democratic process—or for ethical standards in our government—to keep our national candidates in this condition of dependence. I have long thought that we must either provide a federal share in campaign costs, or reduce the costs of campaigning services, or both.

But federal aid might create more problems than it solved. In the name of equity minor parties would claim it as well as the Republicans and Democrats; yet to give it to them might undermine the two-party system. In the event of splits within either of the big parties it might be difficult to know to whom to give the money. And the problem of restricting the size of individual contributions would remain.

To investigate these difficulties Mr Kennedy has set up an able, bipartisan commission, headed by the author of a detailed study of campaign expenditure, Mr Alexander Heard, Dean of the Graduate School of North Carolina. The commission is to report in the spring of next year, so that Congress will have time to take any action it thinks fit on the recommendations. It will be interesting to see if either body tackles what is, apart from the size of the United States and the size of its population, the main root of the trouble, the absurdly loopholed election law. Under it no national party committee may receive more than $3 million in any one year (a ceiling so low, in American terms, that to evade it many auxiliary committees are formed, such as Volunteers for Nixon-Lodge) and no contributor may give more than $500 (but each may give to more than one committee). The present reporting arrangements are so poor that there is no record of a single Kennedy having made any contribution to last year's presidential campaign.

Fifty-fifty on Route 40



Negroes—whether they are native Americans or African diplomats—who seek refreshment along the road as they drive between New York and Washington have, from this week, about a fifty-fifty chance of equal treatment as they pass through Maryland. About half the proprietors of the small restaurants and cafes on this section of Route 40, which is much travelled by diplomats, agreed early this month to open their doors to all customers beginning on November 22nd, the day before Thanksgiving. The State Department has been disturbed for a long time by the rebuffs offered to the representatives of the new African states, but the surrender came only the day before a big "freedom ride" which the Congress and Racial Equality was preparing to stage along this route. It agreed to call off the demonstration because such a substantial number of the proprietors gave way but the ride may be revived if the rest do not fall into line by December 15th. Such "voluntary" compliance is a victory both for CORE and for Maryland's Commission on Racial Problems, which helped with the negotiations, but it may have one unfortunate result. Already there is less pressure on the State Legislature to outlaw such discrimination everywhere; even just outside Washington many restaurants still refuse to serve Negroes.

Last spring's freedom riders in the deep South also have real cause for satisfaction. On November 1st there went into effect the order of the Interstate Commerce Commission forbidding racial discrimination in railway and bus facilities—in lunch-rooms, wash-rooms and so on. Compliance has been the rule and defiance the exception. At a few places in Mississippi and northern Louisiana, city officials and police have, it is true, reinstated the racial signs which the transport firms had taken down; one operator of a terminal was arrested because he chose to obey the federal law rather than the state one which makes racial segregation mandatory. But the Department of Justice is moving energetically to have such laws declared unconstitutional. Just this week a panel of three federal judges in Mississippi knocked out three of them and agreed to issue an injunction ordering officials in one town to take down the infamous signs reading "white intrastate passengers only." Some of the southern states maintain that the federal government has no power over intrastate commerce but the federal courts have long held that discrimination in intrastate transport restricts inevitably the freedom of interstate travellers.

SHORTER NOTE

More property was destroyed by the recent fire which ravaged Los Angeles' film star belt than by any fire since that which followed the earthquake in San Francisco in 1906. Insurance payments for damage to houses and their contents may run to $24 million; the highest individual claim so far is for $260,000. The fire came after three years of drought and the speed with which it spread was accentuated because so many of the luxury homes in the area had wooden roofs and were surrounded by dense undergrowth. About 4,000 persons had to be evacuated and 460 houses were burned.

Brandy this good
has no stars on its label

No brandy of lesser quality than Fine Champagne V.S.O.P. Cognac is permitted to bear the Remy Martin label. Hence no grading by stars. The question does not arise. All you need remember is to ask for Remy Martin. In return you enjoy a superior cognac of liqueur quality. For Remy Martin *make nothing less good.* In a word, Remy Martin cater for the one man in a hundred who refuses to offend his palate—or his guests—with any brandy less good than Fine Champagne V.S.O.P. Just ask for Remy Martin.

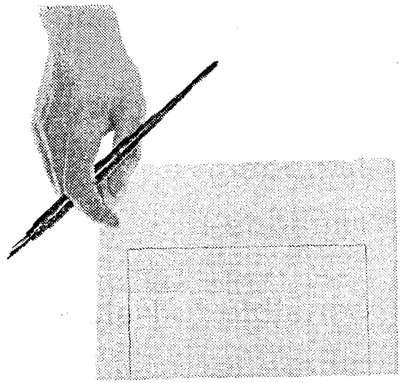
Are the Tories cruel, indifferent and selfish?

Iain Macleod replies to Sir Harold Nicolson

Recently in The Observer Sir Harold Nicolson said that he had always hated the Tories, that they were cruel, indifferent and selfish. In this Sunday's Observer Conservative Party Chairman Iain Macleod answers Sir Harold's charges in an extremely animated conversation with Kenneth Harris.



Macleod talks about what is really going on in present-day politics, about different attitudes within his party. He gives an insight into the way the parties (and the Conservatives in particular) run their Conferences.

For frankness, for forthrightness, this conversation compares favourably with the memoirs of political figures who left active politics years ago. But Macleod is a man right at the centre of things, and he is talking about what is happening *now*.

Danny Blanchflower joins The Observer
This Sunday Danny Blanchflower, captain of League and Cup winners Tottenham Hotspur, joins The Observer. He will write about football of course, and a great many other sports that interest him. His articles and reports, like his football, have a special sort of authority and originality. They are also highly entertaining. If you follow sport, you will enjoy it all the more with Danny Blanchflower.

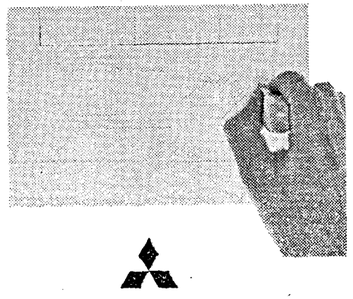
THE OBSERVER



The profit mix: pen and *han*

Trade with Japan is exceptionally profitable. Japan is buying more abroad than ever before, and its own consumer and industrial products are finding ready markets overseas.

To bring the man with the pen and the man with the *han* together for profitable business is the job of Mitsubishi Shoji. The confusions of doing business in an alien world disappear when dealing through this big general trading company.

It represents in foreign trade 30 Mitsubishi companies, each carrying the Three Diamonds mark and manufacturing many fine products in light and heavy industries.

To learn how profitable it is to trade with Japan, call at any of the Mitsubishi Shoji branches or affiliates. They are located in trading centres all over the world.

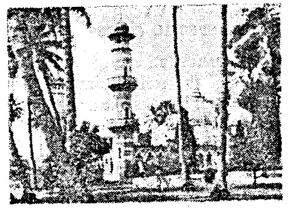
THE WORLD OVERSEAS

Malaysia: Race Against Time



AGREEMENT between the Government and Tunku Abdul Rahman on the formation of a Malaysian federation has been commendably, unexpectedly swift. Both sides seem to have recognised that here is a race against time.

The core of the agreement announced in London on Wednesday lies in the provisions for the future of the British base in Singapore. The Malayan prime minister showed himself unexpectedly flexible, if one bears in mind that he has publicly opposed the use of the Singapore base for Seato (south-east Asia treaty) operations after the merger of Malaya with Singapore and what is now British Borneo. Under this week's agreement, the 1957 defence treaty with Malaya will be extended to the other territories of the proposed federation, but Singapore will be an exception to the treaty's proviso that the Malayan government's assent is needed before British troops are used in any non-Malayan situation. Indeed, "the preservation of peace in south-east Asia" is specifically stated to be one of the purposes of the base; in context, this phrase clearly sanctions the use of British troops for Seato purposes. On the other hand, the base is to remain British in the somewhat paradoxical sense that Britain surrenders its sovereign right to transfer the right to use it, either to Seato or to another country.

The agreement is thus a compromise, and therein lies its fragility. It will incense Singapore's clamorous left wing and may well fall short of what Mr Lee Kuan-yew, the island's prime minister, feels he can "sell" to his voters. Mr Lee has publicly committed himself to submitting the merger plan to a referendum, when all the details have been worked out. This will take time. So will the proposed steps to prepare and sound out the people of British Borneo. There will thus be opportunities a-plenty for opponents to work up feeling, especially in Singapore. Such obstacles can be overcome with good fortune; but only if the need for urgency is recognised all round.

Singapore and (below) Kuala Lumpur

Malaysian Light and Shade

FROM OUR SPECIAL CORRESPONDENT IN MALAYA

AFTER Tunku Abdul Rahman had for so long shuddered away from any suggestion of embracing explosive and unpredictable Singapore, it is astonishing to find the notion of Malaysia happily absorbing all Malayan diplomatic and political thinking. The Colombo Plan conference, which coincided with the Tunku's departure for London last week, was completely overshadowed by the contemplated merger. No Malayan minister or official even considered the possibility of any hitch or delay occurring in London. The Tunku's visit was seen only as a formality—even a courtesy. Diffident American arguments that changes in the status of the Singapore base would virtually paralyse the already palsied figure of the South-east Asia Treaty Organisation were brushed aside. Because the merger, once so undesirable, was now so highly favoured, it was bound, if for that reason alone, to be a success. In effect, having decided to take the plunge which he had so sturdily resisted, the Tunku, all agreed, was finding the water fine.

The humid, languorous atmosphere in the attractive little jungle capital of Kuala Lumpur was fairly crackling with improvisation and confidence. Singapore would now be "cleaned up." The old constitution could be easily suspended if security enforcement became difficult. The result of the referendum, which Singapore's prime minister, Lee Kuan-yew (noticeably more subdued than his prospective Malayan fellow-nationals), must submit to 600,000 voters in Singapore, was a foregone conclusion. Why? Because it would not be presented as a simple "yes" or "no" ruling on Mr Lee's proposal, but as a choice between that well-understood policy and the brash, ill-advised alternative of the breakaway Barisan Socialis scoundrels. (Comrade Lim Chin-siong's forthright counter-demands for "equality" would actually surrender control of education, labour and welfare to the federation, impose Islam as Singapore's religion, and accept Malay and English—but no longer Chinese—as national languages.)

On the risky premise that reason would match passion in the referendum campaign, it was expected that the Singapore government's lucid and temperate White Paper, issued on the eve of the Tunku's arrival in London, would set the tone and style of the arguments for and against merger. With 15 members, Singapore will rank second only to Perak province (19) in representation in the Malaysian parliament. On a basis of population Singapore should have 23 or 24; but this discrepancy, it was contended, would not cause head-breaking in the streets of Singapore.

It is, of course, a fact that the existing Singapore constitution and the present "sovereign" role of the base were, in any case, due for reconsideration and revision in 1963. In the eyes of both Mr Lee and his breakaway opponents, the base is still estimated and cherished, not as a fortification, but essentially as a welfare investment maintained by the British taxpayer to provide employment, directly and indirectly, for 200,000 workers. This enduring assessment casts a lurid light on the island-state's employment and production policies.

In Singapore, however, there are more sober reservations. No one there believes that the tough leaders of the communist-backed Barisan Socialis opposition, which controls practically all trade unions in Singapore, will quietly and uncomplainingly await the deportation or imprisonment order which is assured to most of them, under Malayan decree, as soon as the merger is effective. Malayan judgment on communist party membership is unlikely to be inhibited by strictly legal processes. Already nuisance strikes are giving a foretaste of the industrial disorders which appear certain to culminate in violence, with gathering chauvinistic, if not ideological, support from the predominantly Chinese population. The bright and shining confidence in Kuala Lumpur seems reckless and dangerous among the dark realities of Singapore.

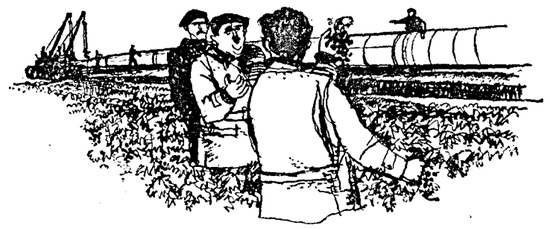
Canada's European Perplexity

FROM OUR OTTAWA CORRESPONDENT

THE Canadian government's attempt to improve its gamesmanship in dealing with Britain and the common market, reported last week, was launched unexpectedly quickly by Mr Fleming, the finance minister, who, once he got to Paris for the meetings of the Organisation for Economic Co-operation and Development, arranged meetings successively with Mr George Ball, the United States under-secretary of State, President de Gaulle, Mr Macmillan, and Mr Duncan Sandys. His gambit is understood to have been approved by Mr Diefenbaker before he left Ottawa, but it was not foreseen by any of the government departments concerned, including his own. At press conferences in London and, on his return, in Ottawa, he revealed unmistakably that this was a new attempt to restore what Madison Avenue would call "the public image" of Canadian policy.

However it may have appeared in London, the attempt has not had much success in Canada. But this was hardly Mr Fleming's fault. He was as earnest as only he can be in assuring the Canadian reporters that his London talks had been "very cordial." He did his very best to prove that all was sweetness and light between Ottawa and London. It was true, he admitted, that he still wanted to see the text of Mr Heath's presentation of the British case to the Six in Paris on October 10th. But it was not true that he had "demanded" it, or that he had been "rebuffed" as some Canadian newspapers had reported. Admittedly he had not got it, but perhaps he would at a later date. Anyway, the importance of Mr Heath's text had been grossly exaggerated because of the great interest shown in it by British newspapers.

Mr Fleming's earnest manner lacks the persuasive charm of the bearded Commander Whitehead (tonic water) or the shirt man with the black eye-patch. But the contradictions he has had to overcome in his difficult public relations exercise might have defeated the very best publicity people in London or New York. Mr Fleming understands better than most Canadians the complex political undertones of the European Economic Community. If Britain was slow to realise how much more important the ultimate political goal is for General de Gaulle and Dr Adenauer than any purely economic considerations, it is now three years since Mr Reginald Maudling's discomfiture brought the facts home. Most Canadians have still not learned them. Mr Tommy Douglas, the leader of the New Democratic party, is still advocating that Canada should join the European common market. So is Mr Eric Kierans, the speechmaking president of the Montreal stock exchange.



ONE question to Mr Fleming at his Ottawa press conference on Tuesday was, "why should not Canada join?" He answered that the Rome treaty conceived of the community as a purely European institution which just was not open to any outsider's adherence. But at the same moment his colleague, Mr George Hees, the minister of trade and commerce, was telling Toronto business men that his department was carrying out studies to determine whether Canada would gain or lose by joining the common market. Mr Hees also repeated an earlier statement that if Britain could not reach satisfactory arrangements with Europe, "the next step should be a re-examination of the possibilities of materially increasing trade within the Commonwealth." Mr Fleming evidently had not seen his colleague's speech, and showed that he did not think much of increased Commonwealth trade as an alternative to the common market.

All these things were embarrassing for Mr Fleming. But they signified less than the self-contradictions into which he was led by Mr Diefenbaker's gamesmanship. Loyally reasserting his prime minister's assertion that Canada could "rely on" Mr Macmillan's promise to safeguard Commonwealth interests, he said it would be "extremely difficult" for Britain to negotiate entry into the European Community without damaging Canadian trade. Plainly his interview with General de Gaulle had confirmed him in this view. It was pointed out to him that Mr Macmillan had never promised to avoid *all* injury to Commonwealth interests, and that Lord Amory, since his arrival here as High Commissioner, had always bluntly stated that some damage to Canadian interests was inevitable.

Mr Fleming's statements all suggested that he has himself acquired a perfectly realistic view of the compromises which Britain must make, and of the unwelcome choice of interests which the Canadian government will have to face. But his colleagues, and even his prime minister, are so busy finding ingenious ways to conceal reality that even the Canadian public is utterly confused. Thus a respectable Canadian position is in danger of being undermined, and public discussion of alternatives, which might produce the best policy for Canada's long-term interests, is inhibited.

See Thou Hurt Not . . .

the Oil and the Wine

BY OUR SPECIAL CORRESPONDENT

IMPLACABLY, an energetic, clanking machine is clutching a trench out of the soil of France. It is the only machine like it in Europe, and it looks like a combine harvester atop an old Mississippi paddle-boat. It moves forward at a steady walk and leaves a deep, wide ditch behind it. Busy, brawny men follow, commanding other machines to lay pipes by the trench-side; to provide heat for welding them; to wrap it round with scientific protection, and to bury the whole monstrous secret beneath the rudely disturbed earth of the valley of the Saône.

This is the creation of the South European Oil Pipeline; one of three that, from different points of the compass, will force an abundance of oil to flow towards central and southern Germany by 1963. It will be pumped through many hundreds of miles of steel-lined holes in the ground; holes under the vineyards and valleys of France; holes beneath the mountains of Italy and Switzerland; holes, perhaps, through the wall in eastern Europe. This may benefit the sellers of oil; it will almost certainly mean cheaper fuel for the industrialists of southern Germany.

This is partly because oil will no longer travel the long way round to the centre of Europe. The South European pipeline starts at Lavéra, near Marseilles; another at Genoa. Compared with Rotterdam and Wilhelmshaven, these ports save about five days (1,800 to 2,500 miles) tanker haul from the oilfields of north Africa, the eastern Mediterranean, or the Persian Gulf. Costs will be cut, too, because it is cheaper to move oil in large quantities through pipelines. The builders of the line from Lavéra believe that, initially, it will cost about half as much to take oil from Lavéra to, say, Karlsruhe as it now costs to take it round the coast of western Europe and down from Rotterdam. The Italian line will probably be blessed with cheap Russian crude oil; so, naturally,

MAJOR LIFE OFFICE ORDERS I·C·T COMPUTER

1301 FOR LIVERPOOL VICTORIA FRIENDLY SOCIETY

The Society's cost-conscious management will put the 1301 to work for its Ordinary Branch business, an accounting and valuation operation for 350,000 policies. Calculating speeds measured in millionths of a second will break down bottlenecks in the production of 50,000 premium renewals per month. At the same time, costs will be sliced and the speed of the job increased. Accounts for 5,000 agents will be handled with greater ease and accuracy.

£200 million assets

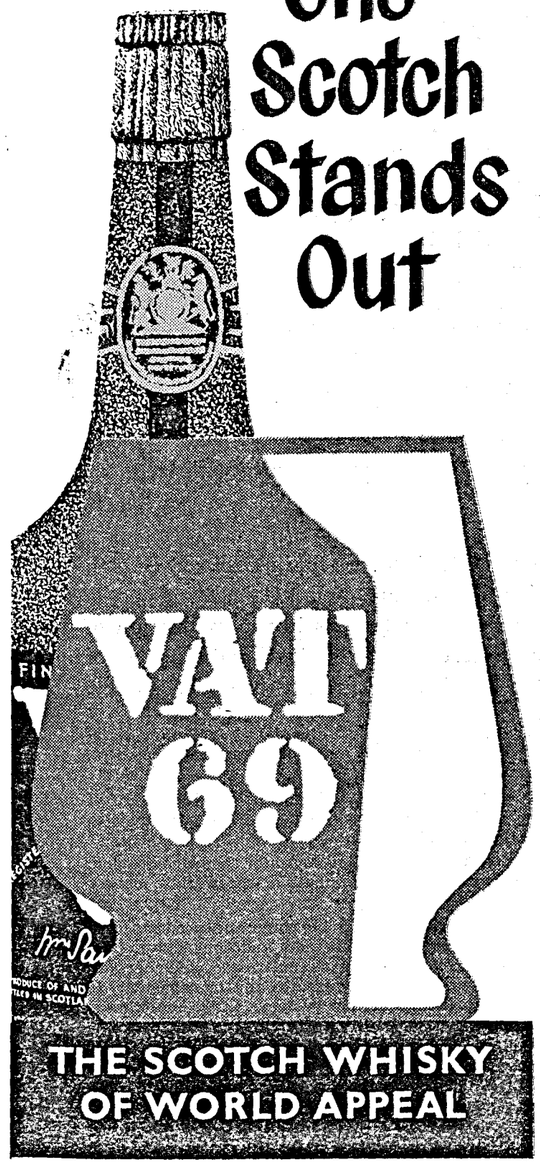
The Society has just passed the £200 million asset mark—an important milestone in its history. Significant, too, is the fact that at this time it should have chosen the 1301 data processing system to assist its vigorous management in the accounting, statistical and actuarial work around which a life office revolves.

Why do other customers go for the 1301?

Why is the 1301 so much in demand? Why have firms so distant as Sheffield and Stockholm, Melbourne and Mainz chosen it? Why is it used on such diverse applications as stores control, market research, and payroll work? Why do firms so different as banks and shipbuilders, chocolate and footwear manufacturers, invest in a 1301?

FIRST, because the 1301 is the 'pocket battleship' of computers. What it can do is out of all proportion to its cost and size.

SECOND, it has been developed for the money-saving, money-making requirements of the world's market places.



It has the right computing power and speed to tackle business problems of any size and complexity. It is flexible enough to deal with routine accounting or contribute to operational research and management. It can be applied to fit your business, NOW. And, what is most important, it can expand to meet any conceivable business development for many years to come.

Mortarboards for middle management

Until recently the only way to the top jobs in commerce and industry was through a long education in the hard school of experience. It was impossible, clearly, to cram decades into years, years into months. Until recently . . . Then a new technique called *Management Strategy* made its appearance – a technique which made it possible to shorten the time it takes for middle management to graduate to top managerial jobs. Already proved in Government departments and internationally famous commercial corporations, the Management Strategy system works likes this:

Those taking part are set a problem in manufacturing, marketing, distribution, or selling. They have all the data – costings, product variations, market conditions, budget limitations, and a host of other details – and are asked to make decisions as the operation proceeds – stage by stage. At each stage a specially programmed electronic computer indicates exactly what would have happened as a result of the decisions made, and provides a situation report and all the data for the next stage of the project. Realism is added by the introduction from time to time of 'unforeseen' events, which call for new decisions and the revision of previous ones. Such exercises can be taken by individuals, groups, or teams working in competition with each other.

The Management Strategy System is only one of the many scientific management techniques offered by C-E-I-R, the largest computer services organization in the world. At the London C-E-I-R Centre, with its advanced on-the-spot computer facilities, C-E-I-R are handling on behalf of clients a wide variety of operations ranging from routine Data Processing on a regular contract basis to the solution of the most complex industrial and commercial problems. If you have any problem, large or small, which can be solved by logical or mathematical means – then send for C-E-I-R.

will the line into Czechoslovakia from the east. About 70 miles of the line from Lavéra has already been buried, near Beaurepaire in the valley of the Rhône. It is never less than two feet below the ground; the payment made to the 16,000 landowners under whose feet it will pass is about one new franc a metre for right of passage.

In addition, damage to land and crops must be made good, and paid for, by the pipeline company (vines cut down take four or five years to grow again; the growers are compensated). Negotiations are usually smooth: the company reports only three per cent of *non* from difficult farmers so far. These will have to be persuaded, or forced by court order, to allow passage. Sometimes the arguments are heated: one farmer has threatened to plastic-bomb the line because it will run below his goldfish pond, a pond which, even for the good of Bavarian industry, he is reluctant to move. But, for the good of Bavarian industry, many miles of vineyard in Isère and Drôme lie wounded; cut by a desert-making crew that needs a twenty-metre swath along which to move its machines. The crew works well in desert: its members are experienced in the Sahara and in the Middle East. In France, when the managers have squared the people, the machines level the vineyards and work along a stretch of empty, rough soil that is the pipeline-layer's accustomed habitat. The pipes, with their bloom of new rust, the products of a delightedly busy French steel industry, lie in the mud as if dead, awaiting the welders and the embalmers.

Near Lavéra, a port made for oil, are the tanks that will store the black blood coming to put life in the pipes. They are tremendous, at least three storeys high it seems from the top, and the length of two football fields to walk around. Fourteen are being built. From the top of a tank, on a misty morning, the village of Fos-sur-mer can just be made out in the distance; on the spot, it is all magnified Meccano set and, thankfully, a verandah with a colonial-looking fronded roof under which to sip drinks after the visit.

Initially the line will carry crude oil 475 miles to two refineries at Strasbourg and two at Karlsruhe, at a rate of ten million tons a year. This throughput is expected to be trebled within a decade. The line, 34 inches in diameter, will be the biggest in Europe. An extension is planned from Karlsruhe, on the Rhine, to Ingolstadt, on the Danube. A new company, owned by four German and five international oil groups, has been set up to run this extension.

The whole line, it is reckoned, will serve twelve departments in eastern France, and north-west Switzerland, as well as Germany south of the river Main.

Pipelines are expensive: this one will cost about £45 million as far as Karlsruhe. A quarter of this has been put up by the sixteen oil companies that are sharing in the *Société du Pipe-Line Sud-Européen;* the rest is to be raised by bond issues. A large shareholder is Shell, which is building refineries at Strasbourg and Ingolstadt. Esso, with a refinery at Karlsruhe and another to be built at Ingolstadt, will be another large user.

Because of this preponderance of big companies, there may one day be arguments about the use of the lines. Shell and the South European company are both anxious to argue that the "common carrier" system used by the Americans would not make sense in Europe. The new European pipelines will take crude oil from the coast to the centre for refining: the argument is that the companies that build the lines and the refineries should have the exclusive use of them if they choose.

The French government, however, has decreed that if there is spare capacity in any privately owned pipeline it should be rented out to any company that chooses to use it. But the outside company would have to prove the spare capacity, and that may be difficult. The European Commission has suggested that the common market should introduce a "common carrier" system, to serve a co-ordinated energy policy. If this is done there will be much to co-ordinate.

The Russian system of pipelines will link Kuibyshev, on the Volga, with Poland, East Germany, Czechoslovakia and Hungary. This 2,800-mile system is expected to be ready by the end of 1963. The Italians, whose company, ENI, is headed by Signor Mattei, also have several lines planned. One is to branch north-west from the Po river, travel through the St Bernard pass, and, when completed, pump crude oil to the Italian-Swiss refinery at Aigle, in western Switzerland. The ENI line to Bavaria will feed refineries at Ingolstadt and Stuttgart. Eventually ENI expects to transport between 16 and 18 million tons of oil a year through its line; about a third to northern Italy, half to southern Germany and the rest to Switzerland and the Austrian Vorarlberg. The line should be ready by 1963.

If there is to be competition for sales in southern Germany, it seems as if the South European line will have the advantage of getting there first. So far, undistracted by peasants on either side of its private desert, the ruthless machine at Avignon has helped the pipeline-builders to move a tenth faster than planned. It seemed, on a wet morning ten days ago, to have even more ambitious ideas in mind.

On Kekkonen's Shoulders

FROM OUR FINNISH CORRESPONDENT

WHEN a new Finnish government takes office, after the parliamentary election and the election of a new president in February, it will be able truthfully to assure the Soviet Union that it intends to maintain Finland's policy of neutrality. Most Finns agree on wanting to stay outside the conflict between the big powers, to preserve their trade connections with both the East and the West, and to co-operate still more closely with their Nordic neighbours. In itself, this policy seems acceptable to everyone concerned; the trouble is that the Soviet Union's trust in Finland appears to depend on which politicians and which parties execute the policy.

President Kekkonen, who passed through Moscow on Thursday on his way to discuss the crisis between the two countries with Mr Khrushchev in Siberia, has refused in the past to dissolve parliament when asked to do so by domestic politicians. Now he has advanced next year's parliamentary elections from the summer to February 4th and 5th, as the result of a Russian request for assurances of continued friendly relations. Ten days later, 300 electors will meet to choose a new president for the following six years. It remains to be seen, after Mr Kekkonen's talk with Mr Khrushchev, whether this move will give him a period of grace to deal with the three-week-old Russian demand for "military consultations."

In advancing the parliamentary election, President Kekkonen was presumably aware that, when the Finns are subjected to outside pressure at election time, they generally react by favouring conservative policies at the expense of the extreme Left. The new parliament may therefore contain fewer People's Democrats (as the communists and their allies are called in Finland) and left-wing socialists than does the present Diet—an outcome which may be contrary to the unstated wish behind the Soviet request. Moreover, if the election favours the other parties, they will find it even more difficult than in the past to accept the participation of the extreme left wing in a government.

The Finns announced on November 14th that the Soviet government had told them it would demand joint defence talks, failing assurances of continued friendly relations between the two countries. The treaty of 1948 between Finland and the Soviet Union stipulates that if Finland, or Russia through Finnish territory, becomes the object of aggression by Germany or by powers allied with Germany, Finland will take up arms to resist the attack. It is thought that the Russians may be genuinely worried about the military strength of west Germany and about the growing west German influence in northern Europe. They may also fear that some political groups in Finland would applaud a development of this kind.

A sympathy for things German certainly exists among a limited nationalist group in Finland. But this is not comparable (although the Russians compare it) with the pro-German feelings of the 1930s and early 1940s. On the contrary, the Finnish government and the country's leading politicians are plainly concerned at the possibility that, if the cold war goes on, west Germany may be armed with nuclear weapons or given the right to produce such weapons. They fear that if that happened, a tougher west German policy towards Russia would soon follow. President Kekkonen is believed to have expressed this concern in conversations with western statesmen, most recently with President Kennedy in Washington.

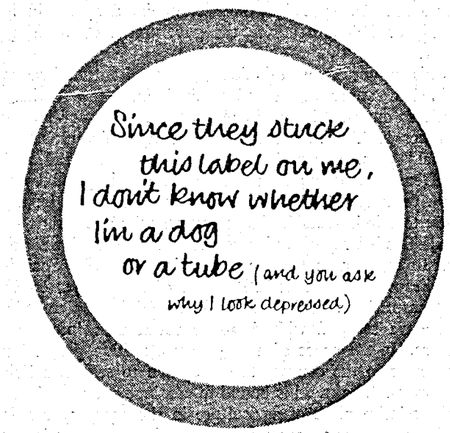
According to the Finnish statement of November 14th, Mr Gromyko, the Soviet foreign minister, told his Finnish colleague, Mr Karjalainen, that Russia had "not the slightest intention of intervening in Finland's domestic affairs." The Finns reply that it would be interference for the Russians to criticise the appointment of leading Finnish Social Democrats or conservatives to carry out their country's policy of neutrality; even more so, for Russia to apply commercial sanctions. For some people, however, this blunt response is modified by the realisation that a small nation in Finland's delicate geographical position may not be able to afford a policy that leaves the wishes of a powerful neighbour out of account.

President Kekkonen has shown skill in his past dealings with statesmen of both East and West. It is widely assumed that, largely because of this, he will be re-elected in February. In that case, Finland's most pressing problem will not be its foreign policy (about which there is no question) but its domestic political situation. Presumably the president now realises that Finland's present foreign relations depend above all on having a firmly-based government. The current election campaign does not improve the prospects of lessening party strife. After the election, however, Mr Kekkonen will face the task of creating a majority government from the democratic parties in place of the present minority government of his own Agrarian party. The wounding charges against him of discrimination and favouritism on behalf of his political friends may then cease. The hope is that Mr Kekkonen possesses enough authority in the world's capitals, including Moscow, to gain their acceptance for a government formed on the basis of the election results, whatever they are. But the Finns fear that even their most earnest assurances may be in vain if the Russians—in their concern at the present situation in Europe and, particularly, the increase in west Germany's influence—are no longer in a mood to accommodate their small neighbour's wishes.

Hasta Luego?

GENERAL DE GAULLE carried his new policy of friendliness towards General Franco a stage further on November 16th when he received Sr Castiella, the Spanish foreign minister, and assured him of "all my sympathy" for the Caudillo and his regime, "which represents a factor of stability and social peace in Europe." This compliment, going somewhat beyond what is usually thought necessary, has been made much of by the Madrid government; it may be seen as one more instalment in the French President's payment of the debt for the Caudillo's welcome decision to repress the activities of the French right-wing exiles in Spain. But his gratitude to General Franco, though understandable, has led him into ingratitude to the Spanish republican exiles in France, who served France and Gaullism well in the Resistance and, since then, in peace. The Fifth Republic was not too proud to ask their organisations for help when the loyalty of its army was in doubt last spring. Nevertheless it forbade this summer's Spanish Labour party congress at Toulouse, though when French socialists protested it permitted the congress to be held at Puteaux. Early this month it banned all Spanish republican papers published on French territory.

The principal journals affected are *El Socialista*, a sober weekly founded in Madrid by Pablo Inglesias in 1890, and three lively anarcho-syndicalist periodicals displaced from Barcelona. All four are anti-communist and anti-Castro as well as anti-Franco. They have almost as many readers in Latin America as in western Europe.



El Socialista can, of course, count on the support of the French socialist parties and trade unions (which, like the liberal *Dépêche du Midi* of Toulouse, have uttered strong protests), and its staff have sufficient faith in French democratic habits to be confident that the ban cannot be permanent. The paper's last issue, published the day after the government's decree but ante-dated to evade it, bore the front-page headline: "*Hasta luego.*" For the other three papers it may be different. Who, in these days, will break a lance for the anarchists? For these ideological orphans, the ban might well mean *Adiós*.

Every Electric Resistance Welded Pressure tube that leaves our works has a TRU-WEL label attached. This means it has passed the most exacting inspection during all stages of manufacture and that its quality, accuracy and reliability based on over thirty year's experience are ensured. TRU-WEL ERW pressure tubes are made in a wide range of sizes and thicknesses up to 5½" o.d. by ¼" wall thickness. They are used in locomotives, land boilers (including finned tubes for nuclear power stations both here and abroad), in super tankers, and in the Cunard 'Queens'. Tube Products were first with ERW tubes in Europe, first to make ERW pressure tubes in the U.K., first to develop ERW tubes with a Resistance Welded helical fin, and first in Europe to produce ERW tubes of 5½" o.d. We are the most experienced makers of ERW precision tubes in Europe.

BANKING LOOKS AHEAD...

EXPORTS AND MARTINS British banking will be required to play a vital role in the expansion of our export trade. It is a challenge that Martins is well placed to meet with its Head Office in the city-port of Liverpool, with over 600 branches at home and with world-wide connections overseas. For many years Martins has offered a range of specialised services to those engaged in overseas trade. These services are continually being strengthened and improved and the Bank is always looking ahead to provide new facilities quickly when changed conditions demand them. Information and advice on exporting matters are available from all our branches, who can call upon the special facilities of our Information Department at Head Office.

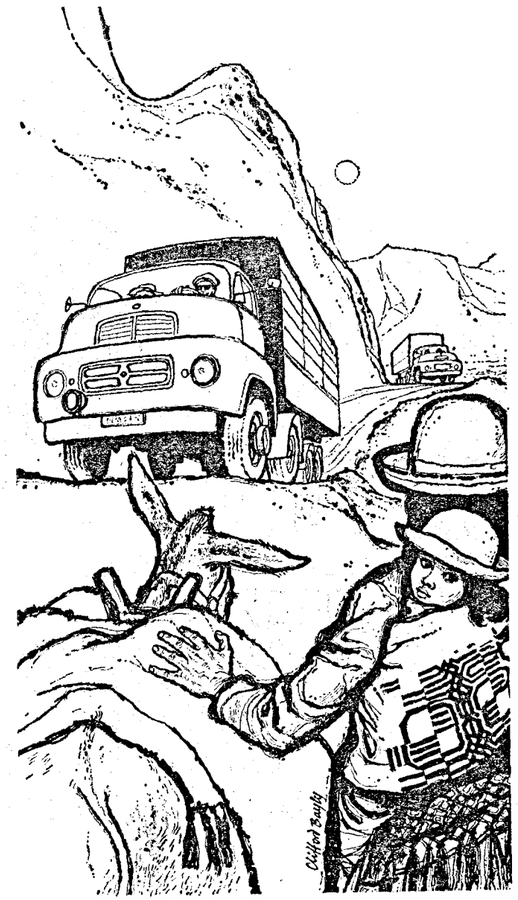
In Cultured Pearls...

Japan is

"ICHIBAN"



Cultured pearls add a unique lustre to the list of Japan's wide range of export products. Aside from their quantity and export value—rising to more than 99 per cent of the entire world output and exporting 97 per cent of Japan's total production—cultured pearls are one of the best known among the many export items. Thus, you see why Japan is "Ichiban" (first or tops) in this field.

The Nippon Kangyo Bank's facilities provided excellent opportunities for the pearl industry during the past decade. "Kangyo" which means "industrial and commercial promotion" cordially welcomes you to partake of our consultation and advisory service in all phases of commerce and industry.

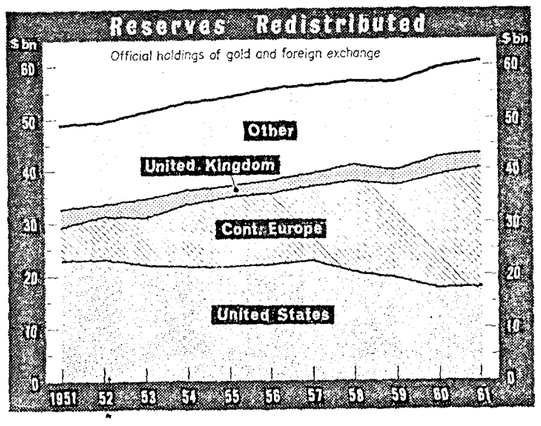
The basic defence against inflation, which lies not in any monetary formula but in the state of public opinion, is in any case by no means weak at present. In the Continental countries in which raging inflation has within recent memory caused violent disruptions in economic and social life the fear of another inflation is of course obsessive. But even in Britain and the United States rising prices are nowadays domestic political issues ; and the spread of personal savings, which in these countries are still based to a large extent on a fixed monetary value, is adding to the anti-inflationary pressure group all the time. There is no reason to believe that the United States or Britain are now more willing to allow rising prices than the Continental countries ; the difference is rather that, because of differences in their past monetary experience, economists in the Anglo-Saxon countries are not so inclined to see inflation under every bed. Above all, they broadly accept the Keynesian doctrine that inflation is produced by the balance of purchasing power in the economy as a whole, and not by the balance of the budget as such. On the Continent, by contrast, this approach is still rejected by an influential section of academic opinion ; while in the world at large it has made little mark with practical bankers. The final nonsense is that although every country draws up its budget in a different way, the same mystical importance is attached to the balancing of these quite different quantities.



There is a remarkable failure of understanding here between Keynesian economists and practical bankers, which is at bottom responsible for the present currency impasse. That the impasse exists can hardly be disputed. There is in the present international system no specific machinery for adjusting balances of payments. Exchange rates of the major currencies are demonstrably difficult to shift. Import controls are being abandoned. Yet the obvious alternative means of taking the strain, international credit, does not exist on an adequate scale, and a key group of countries—which not coincidentally happen to be the existing international creditor countries—have made it clear that they have no intention of creating it. They are willing to provide credit in limited quantities on an *ad hoc* basis, to be administered by an international body, the Fund ; but they reject out of hand the concept of a powerful Fund with large and flexible resources at its disposal. It may be that this is an argument about power—central bankers, when they are in a position to choose, have no more predilection than any other professional men for passing their power into other hands—or it may be about principles. The impasse remains, and year by year the ratio of reserves to world trade shrinks. The strains that result themselves produce uncertainty about the maintenance of existing exchange rates, so that the cardinal advantage of the fixed-rate system, which is to provide a basis of certainty and confidence for international financial dealings, is itself largely lost. In addition, the attempt to maintain fixed rates in an inadequate credit framework involves irrational restraints (i.e. restraints not justified by the state of the domestic economy) on major economies such as that of the United States, and thereby puts artificial limits on world trade and production. Something has to give. If it is not to be the present system of fixed-rate convertibility, some speedy rethinking will be needed in the financial world.

Strategy for the Dollar

To defend the dollar without damaging the economy, the United States authorities need a new attitude to interest rates—and to budget rituals.

THE widespread attention fastened on ways of easing the world scarcity of dollars throughout the early postwar period had one major unintended result: when, largely as a fruit of those earlier efforts, the United States balance of payments deteriorated in the late fifties, the turn-round from dollar shortage to dollar plenty came as a special shock. The portents discerned by a few analysts in 1958 made their mark with the world banking community in 1959 and with the financial public at large—and equally ominously with foreign central bankers—in 1960. After the explosion on the London gold market on October 20th last year nothing was again the same. It had one positive result. The United States authorities realised at last that they too had to keep conscious watch on their balance of payments and on day to day movements in exchange markets : God, it was finally established, had given no special currency dispensation to the United States. The adjustment in the official mind proceeded remarkably quickly with the advent of the Kennedy Administration, which pledged the whole of the gold stock of $17½ billion to defend the present external value of the dollar ; but there is still a good way to go, above all in clarifying ideas about the international orientation of monetary policy and, consequently, in achieving greater flexibility in fiscal policy.

In the past four years the United States balance of international payments has changed course serveral times. The current balance, which in 1957 exceeded $8 billion before debiting military expenditures (the figures in the table show quarterly rates) thereafter fell steadily until it almost disappeared in the second quarter of 1959. The net balance, including all capital items, was then in large deficit ; the annual deficit in both 1958 and 1959 was $3½-4 billion and there was then little outflow of short-term capital. From mid-1959 on, the current surplus recovered.

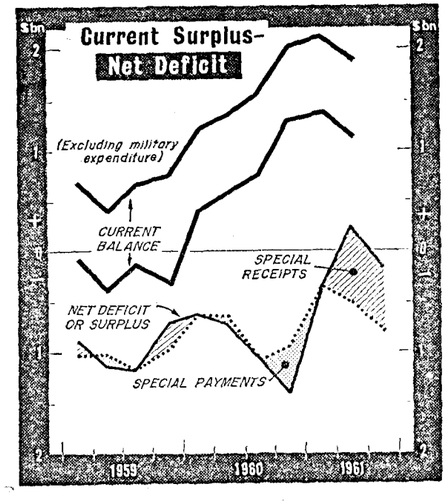
Exports rose rapidly in 1959 and in the first half of 1960, and at this point, while exports remained on their high plateau, imports fell sharply. In the first half of 1961 the merchandise trade surplus reached $6 billion at a seasonally adjusted rate—its highest for a decade with the exception of the Suez aftermath.

The deficit on current and long-term capital account (the "basic deficit") was swollen in 1960 by Ford Motor's purchase of its British subsidiary for $365 million ; even so it was reduced from its 1958-59 level of $3½-4 billion to under $2 billion. In the first half of 1961 current and long-term capital payments were broadly back in balance, even without Germany's advance debt repayment of $650 million ; but in the third quarter, as business recovery took some of the buoyancy out of the trade surplus, a basic deficit probably reappeared.

The most striking feature of the US balance of payments throughout the period is that there has consistently been a surplus on current account, if military expenditures are excluded. The surplus has not been large enough to cover the special government expenditures together with long-term and short-term capital movements. Nevertheless the point should not be lost that the drain on United States reserves could have been stopped even in the worst year of 1959 if foreign aid and military expenditure abroad had been drastically pruned.

The big improvement in the current account from the beginning of 1960 to the middle of this year was partly a reflection of the different timing of the trade cycle in the United States and the rest of the world. During 1960 and early 1961 Western Europe and Japan were booming vigorously while the United States was still in recession. Because the United States constitutes a marginal source of supply for a number of raw materials, shipments tend to increase sharply in the later stages of a foreign boom when normal supply cannot meet all demands, and this appears to have happened during 1960 and 1961.

Because cyclical factors contributed to this improvement, and are now reversing it, fears are still expressed in some quarters that the United States is no longer fully competitive in world markets. Similar fears, indeed, are to be heard in almost every major exporting country nowadays ; and neither the price level nor industrial labour costs as a whole have risen faster in the United States than they have in other countries recently. There is some evidence, however, that in the important fields of steel and engineering products, US costs and prices have risen faster than in other sectors of its economy and faster than those of its main competitors. The recent OEEC report on inflation shows that prices in the "metals and metal products" sector rose by 21 per cent in the United States between 1953 and 1959: the largest increase in Europe was 11 per cent in Norway. This may be a source of future weakness for American industry.



The flow of private American capital abroad, both long-term and short-term, has been considerable in recent years. Long-term private investment seems likely to remain strong in the future despite the discouragements of expropriation in countries like Cuba and political troubles in many parts of the world, for there is still a growing world demand for some primary products, and many attractive opportunities remain for investment not only in primary production but also in manufacturing, especially in Europe with its growing markets and lower manufacturing costs. At the same time, income on investments is likely to increase as the flow of new capital and the ploughing back of undistributed profits of subsidiaries expand the size of earning assets. So the balance here might even improve. In any case no major net drain is likely in this sector. The movement of short-term capital, however, has recently become volatile ; greater confidence in the stability of major European currencies has made United States liquid funds much more sensitive than in the past to differences between the rates of interest prevailing in the main centres of the international capital market. The outflow of $1½ billion in the second half of 1960 slowed down in the first half of 1961, but it still totalled around $1 billion. Part of this year's outflow of short-term capital is associated with the financing of trade, notably in the granting of commercial credits to Japan, but a considerable proportion must have been attracted by higher interest rates abroad.

The effect of exports of capital on the balance of payments is extremely complex. Direct foreign investment, by establishing plants abroad, is likely in the short run to have a favourable impact on the balance of trade to the extent that it stimulates the exports of US capital goods and semi-finished goods for assembly abroad. But, in so far as American-owned foreign plants produce finished goods in competition with United States manufactures and even export direct to the United States, the effect on the balance of trade and the balance of payments will be unfavourable. It is difficult to generalise over so varied a field, but there are reasons for believing

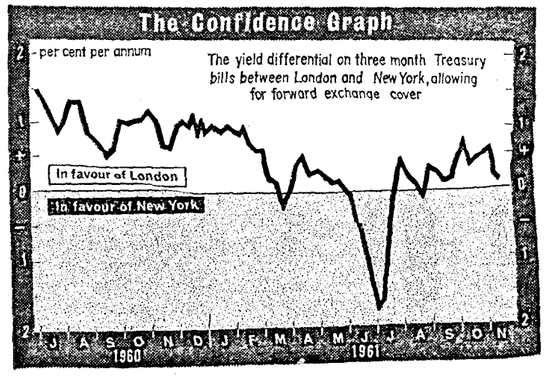
that investment in the advanced manufacturing countries such as Western Germany and Japan is more likely to damage the US balance of payments than investment in underdeveloped countries.

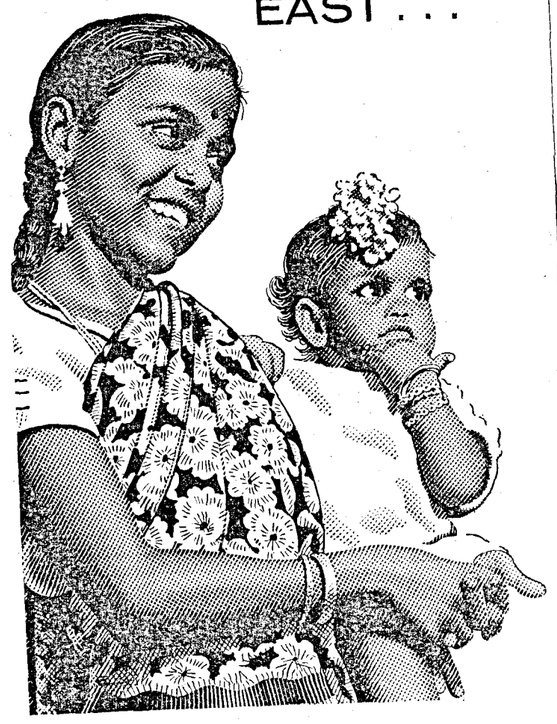
The changes which contributed most to the improvement in the balance of payments in the first half of 1961 were in both long-term and short-term capital movements. These improvements reflected on the one hand some special receipts such as prepayment of German debts, and on the other a restoration of confidence in the stability of the dollar after President Kennedy's firm expression of determination to maintain it. The improvement in the balance on goods and services reached its height in the first quarter, and is now being reversed in some degree. The improvement of 1959-61 was based partly on the comparatively low level of business activity in the United States, which kept imports in the last quarter of 1960 and the first quarter of 1961 at a seasonally adjusted annual rate of about $2½ billion below the previous peak in the middle of 1959. Now business recovery is gaining momentum in the United States, and the rate of expansion in Western Europe and Japan is faltering: imports have already turned upward and the decline in the trade surplus was a major factor in the widening of the net monetary deficit to $800 million in the third quarter. In the short term, United States exports appear to be vulnerable in one or two specific fields. Exports of jet aircraft are not likely to be maintained at the high level of late 1960; and the expansion of capacity in some of the major steel-producing countries will probably reduce US steel exports of certain qualities. On the other hand certain imports which have grown most rapidly in recent years, such as meat and motor cars, are more likely to fall than to rise.

ALTHOUGH recovery in the United States may cause some worsening of the trade balance with Europe and Japan, it could after a small time-lag improve prospects in other parts of the world such as Latin America and Canada; for present slackness in business in these countries is partially attributable to the weakness of United States demand for their products. Imports of raw materials into the United States are now likely to rise, with a consequential improvement in the export earnings of the primary producing countries and their capacity to buy back from the United States.



On long-term capital account, increasing prosperity in the United States, by giving bigger incentives for American businessmen to invest at home, is likely to provide a counter-attraction to direct investment in manufacturing capacity in other industrial countries —though desire to get established inside the European common market is likely to be a contrary influence. At the same time, increased need for working capital at home should reduce the incentive to employ idle corporate funds abroad.

As noted above, the movement of short-term capital has been persistently adverse in the past two years—without it the US balance of payments would have been in net surplus in the first half of 1961. This item in the balance of payments, more than any other, should be quickly amenable to policy; and now that the domestic economy is moving upward there is an especially strong case for the Federal Reserve and the Treasury to encourage directly the rise in interest rates that is a normal accompaniment of a cyclical upswing. The main effort should be on short-term rates, which have most influence on international interest arbitrage. During the recession the US authorities sought to prevent short-term rates from falling further, to prevent a widening of the interest differential. Now they can afford, domestically, to help close the international gap by pushing their own rates upward. Countries in Continental Europe have themselves been reducing their interest rates and thus bringing these closer to the United States level, and this movement can be expected to continue if their business activity slackens.



THUS while the constellation of a business upswing in the United States and a slackening in Europe may have adverse repercussions on the US trade balance, it should have favourable repercussions on the flow of liquid funds—just as the 1960 contrast of recession in the United States and boom in Europe helped the US trade balance but stimulated the capital outflow. But if the flow of short-term capital across the Atlantic is actually to be reversed, the monetary authorities in the United States will have to put still greater emphasis on international considerations in their policy decisions. For the time being, admittedly, they will have to reckon with Britain as a relatively high interest rate country: the aim should be to establish an interest rate differential in favour of both Anglo-Saxon countries against the Continent of Europe.

The United States authorities may therefore find it desirable to act on the flow of private capital by following interest rates abroad more closely and relying mainly on fiscal measures, including, if necessary, a substantial budget deficit, to eliminate unemployment. One big practical trouble here is of course that the financial community, both in the United States and abroad, is still highly suspicious of budget deficits in any circumstances. [illegible] only possible response to such irrational fears is to counterbalance frontally. The United States authorities should gain isolation. educating the financial public to fix its eyes on[illegible]ought to presenta- of the economy at large, rather than [illegible]ows deficits where other They could also give a good deal of [illegible]discovery of Britain's "below tion of their budget, which at [illegible]The key task is to align the budget countries would show a [illegible]nal income accounts and thereby put the the line" would be [illegible] in perspective. The automatic association accounts with [illegible] role of fiercles of budget deficit with inflationary finance must in [illegible]sted and refuted.

So far, regrettably, the US authorities show little sign of taking the bull by the horns. The Secretary of the Treasury, Mr Dillon, has chosen to skate over the current budget deficit, and has made advance promises to eliminate it next year. In the end, high interest rates are likely to be a much more effective pull in the international market than a ritually balanced budget: and if high interest rates are to be acceptable domestically, some budget rituals may have to be broken. Despite the likely deterioration in the United States trade balance in coming months the US authorities should be fully capable of defending the dollar internationally; but they cannot necessarily do so by adhering to the more old-fashioned of the market's maxims.

THIS IS THE EAST . . .

Economic development in Asia is bringing higher [illegible] vast popul[illegible] to these young people and to the an ever increasing range of [illegible] Demand for rising. If you are interested in trade with these [illegible]ly expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-five territories extending from the Eastern Mediterranean to the Pacific Ocean.

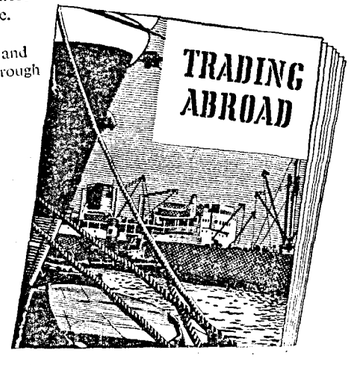
Expert aid for EXPORT trade



The entire organization of the Midland Bank is available to give the fullest co-operation in the Government's drive for further exports. At the Overseas Branch in London the
FOREIGN TRADE PROMOTION DEPARTMENT
is equipped to give practical assistance to businessmen making new efforts to extend their export trade.

Some of the services which the Department is happy to provide are:

1 Information on markets and conditions of trading in countries overseas;
2 Advice on methods of payment, foreign exchange, credit insurance, etc.;
3 Obtaining the names of buyers or agents abroad interested in British exports;
4 Personal visits to manufacturers and traders for discussions on export trade problems.

In addition the Bank has its own team of specialists to assist British businessmen on questions arising from the Common Market and European Free Trade Association.

A further step has been the preparation of a revised edition of a booklet called **TRADING ABROAD.** It deals with many of the problems confronting those engaged in foreign trade. These services are not confined to customers, and are readily available through any of the many [illegible]nches of the Bank throughout England and Wales.

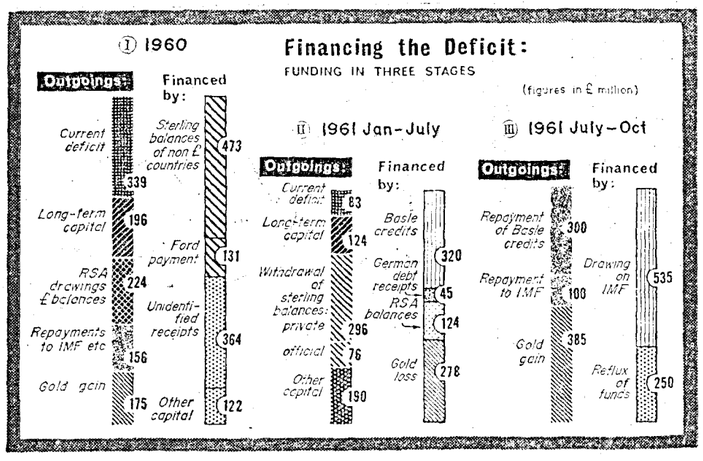
Sterling—the Real Lesson

A blind eye on wages and official ignorance about the balance of payments—these, not the credits that averted an exchange collapse, were Britain's basic economic errors of 1960-61.

STERLING'S performance in the exchange markets in the past year has been a notoriously bad guide to its true health. Throughout the whole period, the balance of payments has been weak; yet sterling has swung sharply from strength to extreme weakness and now back again to at least superficial strength. In autumn 1960 it was still riding high, strangely unaffected by the flight out of dollars into gold—even though this was just the time when the deficit in Britain's current and long-term capital payments rose to its peak, of around £700 million at an annual rate. This year the current balance of payments has been improving, and relief has also been provided by some large special investment inflows. But the improvement has not been large enough to eradicate the deficit. This is the reality that underlies the special financing arrangements in what may be distinguished as three successive phases. The loan of £535 million from the International Monetary Fund, which together with the domestic measures taken on July 25th is responsible for the latest turn in the tide of confidence in favour of sterling, was needed immediately to fund the special central banking arrangements granted between mid-March and end-June, which in turn were needed to offset a massive withdrawal of the private capital that had financed the yawning basic deficit of 1960.



It is this deficit, at two removes, that the IMF loan is primarily financing, together with the smaller deficit that has continued in 196. Admittedly Britain has already made a start in repaying IM, with its repurchase of £100 million in October. But this repayment has plainly been financed out of the inflow of short-term capital—whether of foreign funds for investment or of British funs returning with the unwinding of the leads and lags. It therefore represents no strengthening in Britain's true external monetary position, which can come only from a surplus in the baic balance of payments.

This truism does not mean however, as so many people assume, tat the inflow of short-term capital is to be despised. Private credit, no less than official credit, provides a breathing space in which to put the basic balance of payments right; and though private funds may be more volatile, this need not be of undue concern if official facilities stand ready to take over in case of need. A commercial bank does not refuse deposits that may be taken out at short notice—because it has the assurance that in the last resort it can draw on the facilities of its central bank. A comparable arrangement, unhappily, is not yet in existence internationally, but it is in effect in being for Britain at this moment. Repayments of Britain's actual drawing increase *pari passu* its undrawn standby facility at the IMF; while this remains intact, Britain has a continuing right to draw up to a total of $2,000 million from the Fund.

LOOKING back over the sterling crisis of 1960-61, with its lag of something like a year between the underlying deficit reaching crisis proportions and the implementation of crisis measures, many people have fastened the blame on the temporary credits, first private and then official, that made this delay possible. Such criticism is to be heard in high and influential places. At the Vienna meeting of IMF, Continental central bankers who were insisting on keeping a tight control on additional credit facilities for the Fund would explain privately to British delegates, in so many words: "Now look what you did in 1960. Just put up Bank rate, got in some foreign money and ducked any domestic discipline."

In fact this is not what happened at all, and there is a clear danger of the real lesson of 1960 being misread. Early in the year the British government made a major mistake, obvious at the time, in accepting the Guillebaud award to the railwaymen, thereby putting official sanction behind "fair wages for inflation." But in their financial policy the authorities took a whole series of measures besides increasing Bank rate. They exercised, for the first time, deliberate downward pressure on the gilt-edged market and thus contributed to the puncturing of the stock exchange boom. They introduced special deposits which, together with the gilt-edged pressure, made bank liquidity extremely tight. They raised taxation in the 1960 budget and imposed a check on the future growth of public investment. And they reintroduced hire purchase restrictions that finished off the already dying boom in consumer durables. By August 1960, as a result, the domestic expansionary forces had been slowed down very considerably; and it was not unreasonable to suppose that the deterioration in the current account, which was partly associated with a major rise in stock-building, would be checked and reversed in 1961.

This improvement, as has been noted, did in fact occur. Admittedly, it has not been large enough; but this was by no means obvious in autumn 1960. As late as the end of January the most pessimistic estimate of last year's current deficit was £150-175 million. It was three months later that the Treasury came out with its new set of balance of payments

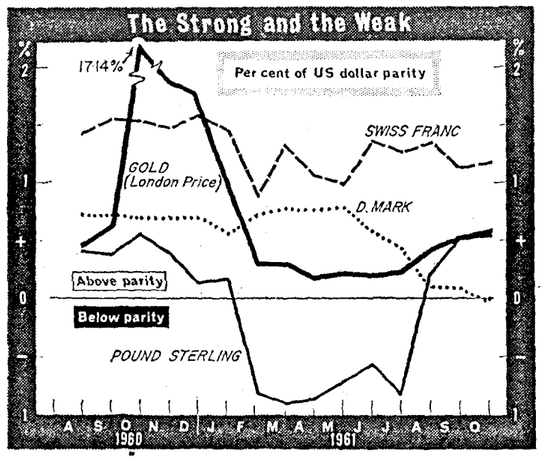
estimates that showed the deficit nearly £200 million larger, and suggested that Britain's current earnings over recent years as a whole had been still worse than was earlier thought.

This revision in the Treasury estimates came as a major shock in the early summer. In late March, there did seem a chance that sterling might ride out the intense speculation set off by the revaluations of the mark and guilder earlier that month: the Bank of England, aided by the Basle central bankers' credits, was throwing everything into an aggressive defence of sterling and was making life costly for the bears. Certainly it seems that the speculative pressure eased in April and early May—though there are regrettably still no figures by which this can be established. At this time, however, increasing attention was being fastened on the weaknesses in Britain's current account—on the decline in the invisibles, and on the large deficit that now appeared to have resulted.

By July, in the words of Lord Cromer, Governor of the Bank of England,

> it was the appraisal of the objective observer, every bit as much as the speculator, that was calling into question our ability to remain competitive in world markets or, perhaps even, our will to do so.

The key element in a country's ability and a country's will to remain competitive is its will and ability to keep a due balance between the money income it pays itself and what it can produce and sell. The real charge against the British government is first that it recognised and was willing to act upon this simple fact only when the external signals were at imminent danger, rather than when they first showed a warning amber; and secondly that it tolerated major deficiencies in the signals themselves, and the administrative network through which they were communicated to the Cabinet. Why were the balance of payments estimates allowed to become so rusty and so misleading? Why were the authorities so slow in developing new detectors that would, for example, have helped to pinpoint the inflow of funds in 1960 as they arrived and would thus have revealed the weakness of the current account? The revised estimates are far from being the last word—these in turn probably put too pessimistic a light on the current balance. But they were clearly a warning light; and one is bound to question why, when the Treasury must have known the figures by mid-March at latest, government action followed only four months later.



On the view that governments will take unpopular action only under *force majeure* such as a flight of funds that threatens devaluation, one could indeed contend that any supporting credit, whether from private or official sources, merely postpones the necessary remedial action and in the end therefore serves the recipient ill. In practice this does seem too cynical a view. The British government, as has been seen, did take a good deal of action in 1960, even if it omitted the most important action on the wages front. And most people would agree that, both in autumn 1960 and in March 1961, it was worthwhile stopping nature from taking its course, which would probably have involved dragging down the pound and the dollar with it on the first occasion and an unplanned free-for-all in world exchanges on the second. But the use of external credits does mean that much more attention has to be given, within the government machine, to signs of weakness in the underlying balance of payments—first to detecting them and then to finding the direct remedy.

The Turn in Germany?

Private capital is now leaving Germany, and export orders—though not yet actual export surpluses—are declining. Has revaluation worked?

EXCHANGE reserves have recently been flowing out of Germany at what would be regarded as crisis proportions in London. In October, the outflow was over 906 million marks, or about £80 million. The fall since the end of March now amounts to some £430 million—still reversing only just over half the inflow of 1960, but not a negligible amount. Moreover, whereas the outflow was at first produced entirely by special official operations—the large prepayment of German debts in the spring and the big participations in credits by the International Monetary Fund in the summer—the quickening outflow of the autumn reflects the withdrawal of private funds. These withdrawals are attributable to a reappraisal on two counts. The first is political, set off by the Berlin crisis and now extending much deeper than the immediate Berlin situation itself: questions have been raised about Germany's future links with the west, and fears have been heightened by the new government situation in Bonn. Fears that the Federal Republic may be "detached" from the West are far from general: but immediately such suggestions are raised they have an effect on financial confidence. At the same time, economic trends in Germany since the March revaluation, together with the ending of immediate worries about sterling, have put paid to expectations of a further revaluation, so that there are directly financial reasons too for the unwinding of the huge international bull position in the mark. It is true that the actual trade surplus since revaluation has continued to rise: but the trend of exports appears to have turned down, and export orders have been falling since the spring.

Since revaluation, in the six months to end-September, the total outflow of capital has amounted to DM 5.3 billion, and unilateral transfers have added a further DM 1.9 billion; so that there has been a big margin, of DM 3.9 billion, over the current surplus. As the table shows, the big special payments accounted for more than half the total capital outflow in these six months and without

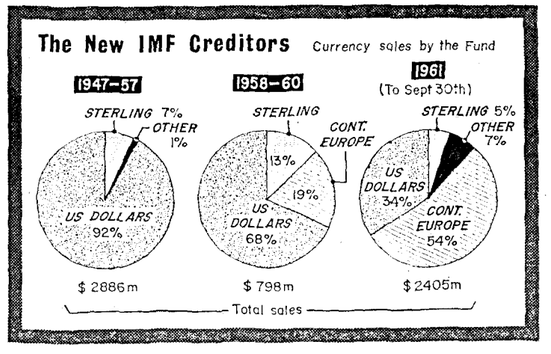
them the reserves would have continued to rise. While the German commercial banks were placing funds abroad, other movements of private capital continued to flow into Germany on balance. In the summer however the Berlin crisis and the recovery of sterling produced a sharp turn-round, and while private funds flowed out of Germany, the banks kept more of their funds at home.

In the first six months of this year the change in the net foreign exchange position of the banks contributed DM 1,703 million to the capital outflow; in the third quarter this trend was reversed and there was a net inflow of DM 36 million. The net external liabilities of the banks (the excess of foreign deposits with them over their short-term claims on foreign centres) were reduced from DM 2,526 million at the end of 1960 to DM 859 million by end-September. Foreign deposits with the German banks, after rising by DM 334 million in the second quarter fell in the third quarter by DM 340 million, and there has been talk of the Bundesbank ending the ban on payment of interest on these deposits.

The net outflow of other private capital in the third quarter was DM 100 million and this included a negative balance in transactions in securities. In April-December of 1960 there was an inflow of DM 1.7 billion on this account, and in the first six months of 1961 the inflow was still high, at DM 1.1 billion. Political tensions have now brought this inflow to a halt and although equity investment is still growing, sales of fixed interest securities in August and September produced a net outflow of DM 126 million. Another important turn-round was in the residual errors and omissions, which tend to be almost as elusive in the German balance of payments as they are in the British. During the period of exchange uncertainty, businessmen incurred foreign currency liabilities in order to set them against claims in foreign currencies which they feared might depreciate. These positions are now being liquidated, helping to produce an outflow on private capital account and a negative balancing item. The sharp turn-round in this item in the third quarter also reflects the unwinding of Germany's leads and lags—the counterpart of the reflux of funds to London.



At the beginning of the year the German government, under international pressure, launched a large scale foreign aid programme providing for loans and grants of some DM 4-5 billion a year. In the first six months of the year long-term capital payments by public authorities amounted to DM 1,156 million; in the third quarter they fell back to DM 352 million. The programme naturally takes time to mount, and meanwhile some DM 800 million that has been paid up by industry but not yet lent abroad has been placed in United States Treasury bills.

Even if Germany's foreign aid effort next year were to reach the projected DM 4-5 billion this would still be smaller than its present surplus on current account—which has reached the extraordinary level of DM 6 billion (£535 million) in the first nine months of 1961 alone. There are clear signs however that the trend may soon be reversed—though the hard-bitten analyst is bound to add that similar signs have proved illusory before.

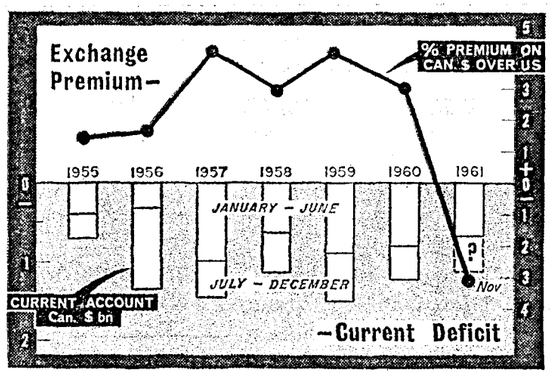
The balance of invisible items, or services, continues to move against Germany, and in the third quarter it moved into a deficit of DM 333 million. The main factor is the ever growing wave of German tourists, who, taking advantage of cheaper foreign travel as a result of revaluation, poured a net DM 730 million into their neighbours' pockets in the summer quarter. In merchandise trade, while the recorded surplus is at a new peak, there is little doubt that the export boom is slowing down. In the third quarter exports were 9.1 per cent higher than in the same quarter of 1960, compared with 11.4 per cent in the second; the Bundesbank's seasonally adjusted export figures show a steady fall since the beginning of the year, by a total of some 6 per cent. New export orders booked by German industry in September were 7 per cent down on September of last year, and were 10.7 per cent down in the capital goods sector. In August they fell below actual export deliveries for the first time since early 1959.

German businessmen now seem to be finding exporting less profitable and less fun. Since revaluation they have found it more difficult to conclude export contracts in D-marks and have had to choose between incurring the exchange risk themselves or paying the relatively high charges for forward cover. At the same time the rise in wage costs per unit of production has tended to squeeze their profit margins. There has been an increase in overseas competition, with the United States in the van, and many German firms are finding it impossible to pass these cost increases on to the export market. Theoretically they ought to turn to the home market which is not quite so price sensitive. It remains to be seen how far they do so.

While revaluation has undoubtedly worked in the right direction on the export side, it is not yet clear that it has done so for imports. For it has contributed to a fall in import prices. In the second and third quarters of the year the volume of imports rose by 9-10 per cent over the corresponding periods of 1960—broadly the same increase as for exports—but imports by value rose by only 4-5 per cent. Nor has there been any rush to import at the more favourable exchange rate. At first importers were still looking to the chance of further exchange adjustments ; now that these expectations have receded, imports could get a delayed boost.

Pressure on Germany's domestic economy has now eased at most points. The Bundesbank reports a slowing down not only in export orders but also in orders for investment goods, in stock-building, and even in pressures on building. The seasonally adjusted index of industrial production has flattened since the end of 1960, and in the third quarter a number of important industries, including textiles, coal, and iron, were producing less than a year before. The pressure on supplies of labour however has not abated, with unemployment, at 0.5 per cent, exceeded six times over by notified vacancies. Labour remains the main bottleneck to further expansion, and the easing of demand on the economy to which revaluation has contributed has had little impact in this vital sector. Revaluation has however helped to check the tendency towards higher prices: in the twelve months to March, prices of industrial products in Germany rose by 2.3 per cent, whereas since then they have barely changed. But revaluation has also helped to check the expansion in German output, which had previously been a highly effective absorbant of heavy wage increases. It is too soon therefore to draw up the final balance sheet of this exercise. It may have marked the turn in Germany's great external surplus. But especially if, for political reasons, Germany appears in coming years a less attractive home for private capital, then a large current surplus will be needed to finance the outflow of official capital to poorer countries, and a rapid rate of domestic expansion may be needed to get the aid programme accepted by the German people. By slowing down Germany's big external expansionary force, revaluation therefore creates new problems as well as helping to solve a very tough old one.



Canada's Obstinate Dollar

The Canadian authorities need to give careful attention to reducing interest rates if they are to succeed in their aim of holding down the exchange rate.

For more than a decade, from October, 1950 to June, 1961, the Canadian dollar enjoyed the singular distinction among major currencies of being officially valued at the price a free market set upon it. This position was taken in 1950 without the blessing of the International Monetary Fund, but with its acquiescence on the promise that the rate would be pegged again as soon as circumstances warranted. The alteration in exchange rate policy which was the centrepiece of Mr Fleming's June budget makes the Canadian dollar an even stranger creature. Still without fixed parities, its value is no longer to be determined entirely by the free play of market forces but is to be kept within such limits as may from time to time seem appropriate to the Canadian authorities. At the time the change was announced it was made clear that the current view was that a distinctly lower rate than the average of the last few years was appropriate, and that the resources of the exchange fund would be available to achieve this purpose.

The new exchange rate policy was not without its harbingers. A pattern of economic policies, and particularly of monetary policies, which gave Canada an exchange rate whose value stood higher during the years of disillusionment since 1957 than it had during the great boom of the mid-fifties had for some time been the target of criticism. The fact that Canada and its principal trading partner, the United States both have currencies called dollars, subdivided into cents, has, despite the lack of formal relationship between the values of the two currencies, contributed to the habit of speaking of the situation in which 100 Canadian cents is worth 100 American cents as " parity." If a fixed exchange parity were set down and decreed that 100 Canadian cents equalled only 90 US cents this could readily be understood by the Canadian laity. But as the Canadian dollar was not fixed, but left free to find its true market valuation, it was difficult to appreciate the logic of a market which sometimes seemed to make the Canadian dollar more valuable the weaker the industrial and current account position of Canada became. Even if the workings of such a market were explained so that all could understand, the question would remain: " If such is the result of a free market, wherein lies the advantage which makes Canada alone of all the major trading countries prefer a floating rate ?" Most critics suggested reverting to a normal fixed rate, and several rates had been suggested as appropriate—for example, a rate of, say, 95 US cents to the Canadian dollar. Sometimes, as a half-way house, it was suggested that Canada should adopt fixed parities but maintain a wider permitted margin of fluctuation, say 5 per cent either way, than the 1 per cent approved by the IMF.

By budget-time in 1960 the Canadian Government had begun to heed the view that the Canadian currency was standing at an undesirably high level. At that time, however, Mr Fleming contented himself with indicating his disapproval of the large volume of Canadian borrowing abroad (much of it by Canadian provinces and municipalities), which was partly responsible for the buoyancy of the exchange. This displeasure restricted the borrowing and induced a cautious attitude in the exchange market, so that in April 1960 the premium on the Canadian dollar fell from about 5 per cent to 3¼ per cent. But official displeasure proved only a modest restraint, especially as the disparity in long-term interest rates between Canada and New York tended to widen during 1960. In December 1960, Mr Fleming produced a series of measures

known as the "little budget" which gave tangible form to his earlier discouragements, in that fiscal disincentives, albeit of a mild sort, were placed on borrowing abroad. The premium on the Canadian dollar fell from an average of 2½ per cent in November, 1960 to less than 1 per cent in January 1961.

The 1961 budget was presented several months later than is usual, and it was widely believed that new departures in economic policy were being contemplated, possibly in preparation for an early election. That the exchange rate might feature in the finance minister's plans was clearly possible, and the Canadian exchange rate became noticeably less buoyant, particularly after Mr Fleming's break with the then Governor of the Bank of Canada, Mr James Coyne, came into the open. As is now well known, Mr Fleming in his budget of June 20th this year proclaimed his intention of achieving an exchange rate at a significant discount on the US dollar. The principal prongs of his attack were to be the use of the exchange fund and the encouragement of a lower level of domestic interest rates in order to reduce the incentive to borrow abroad. In this connection tactical changes were made in the authorities' debt management policies. The budget generally indicated an expansion of the money supply—although any attempt to bring interest rates down "artificially" by "irresponsible increases" in the money supply was eschewed. The exchange rate moved quickly to a 3 cents discount, and has since then been remarkably steady within the range 3-3¼ cents discount.

The state of uncertainty about the rate which existed immediately after the budget made the task of reducing the market value of the Canadian dollar a relatively simple and costless one for the authorities. In North America a discount of five cents or more was widely believed to be what the Government had in mind, and some commentators, though principally those in Europe, talked of a discount as great as 10 cents. At any rate there was clearly no hurry to cover liabilities to Canadians, whilst Canadians had every incentive to make payments to foreigners as quickly as possible, rather than wait to see just how far the new policy would be pushed. The ease with which a discount was achieved and maintained in the first few months after the budget was, therefore, no true test of the working out of the June decision. In fact between the end of June and the end of September the Canadian gold and dollar reserves fell by US $60 million, as the Canadian control, so far from having to buy US dollars to achieve a discount, actually bought Canadian funds on balance. However, the stability of the rate since the budget itself diminished the uncertainties which had put downward pressure on the Canadian dollar, and in October the discount was maintained at the 3 cents level only by large scale purchase of US dollars—Canadian official holdings of US dollars rose by $186 million in that month, that is by about 10 per cent.

This was much the largest monthly change in the level of exchange holdings for some years. It was at this point, stimulated by some unclear comments on the rate by Mr Fleming, that the feeling gained ground that the Canadian authorities might not succeeed in their attempt to maintain the Canadian dollar at a discount—though when Mr Fleming hinted specifically that the rate might be pushed down further, the discount did widen by about ½ cent to 3½ cents.

The authorities, when adopting the new policy, must have envisaged the possibility of having to use the exchange fund fairly vigorously in support of their intentions. But this poses a problem. If it becomes widely believed that only large scale and persistent buying of US dollars by the Canadian authorities is maintaining the currency at a discount, it is likely that speculators will begin to bank upon such a policy eventually being abandoned.

A speculative inflow to take advantage of a likely appreciation, such as occurred in advance of the original switch to a floating rate eleven years ago, might then develop. Is Canada's exchange rate policy facing such a test? It might conceivably do so if buying of US dollars continues on the October scale. But it is unlikely that this will be necessary. The upward pressure on the Canadian dollar which necessitated this buying may have been connected with the reversal of the leads and lags in payments generated by post-budget uncertainties. To that extent it may therefore have been exceptional. However, by the same token, the ease with which the discount was achieved initially is also unlikely to represent the norm. In coming months the Canadian authorities are likely to find it necessary to keep a more watchful eye on the two main underlying factors in the exchange market: the state of the current account, and the differential between long-term interest rates in Canada and the United States.

THERE is reason to believe that it was a marked improvement in Canada's trading position in the third quarter which made the authorities content with a discount of only 3 per cent on the US dollar. If economic revival in North America were now to lead to any significant expansion in the level of Canadian domestic investment, it would be normal to expect a deterioration in Canada's trading balance, and consequently some downward pressure on the Canadian dollar. This apart, much is likely to depend upon the Canadian authorities' ability to achieve and maintain a narrowing in the wide interest rates margins above New York that prevailed before the budget. The effective comparison is between the rate on American grade AA corporate bonds and on Canadian provincial government issues. At the beginning of June the margin was nearly 1½ per cent; it has since fallen to under 1 per cent. As a result of the changed atmosphere, and the imposition of the new fiscal disincentives, the attraction of the US market to Canadian borrowers may be ended when the margin falls below three-quarters of one per cent, as opposed to the traditional half per cent. There is, however, a general feeling that if an expansion of the Canadian money supply were used to push the US-Canadian interest differential to much less than ¾ per cent, the Canadian authorities would find the public losing confidence in the market and regarding the rate as unrealistic. If the authorities then persisted in their policy, they might easily find themselves committed to a credit expansion of the order which Mr Fleming in June was at pains to rule out, in his renunciation of "irresponsible" increases.

No great scope is left, therefore, for the stronger use of monetary policy in support of the exchange rate policy; but present policy ought to be sufficient to maintain a small discount, in the absence of a major speculative attack. The recent reduction in the National Housing Association Mortgage rate by ¼ per cent to 6½ per cent, instead of by the expected ½ per cent, indicates the caution with which the authorities now feel they must move.

Canada is unlikely to find it easy to maintain the downward

differential against New York rates. The fall of 0.25-0.35 per cent which has been achieved since the end of May has had behind it very considerable official support. The money supply rose by over $100 million a month between the end of May and the end of October; and Bank of Canada holdings of Government securities rose by over $500 million. The Government has also run down its cash balances in the attempt to avoid borrowing on the market. Something like $750 million of this year's estimated $1,200 million overall budget deficit has to be covered, and $446 million of Government debt matures in December. Such considerations may have imparted some caution to the market. However, given reasonably good market management, these do not appear very forbidding obstacles to the maintenance of interest rates at the lower levels recently established. The 1961 Canadian Savings Bonds issue is expected to bring in about $500 million, and much of the December maturity is already in the hands of the Bank of Canada. On this basis as little as $250 million of this year's large budget deficit would remain.

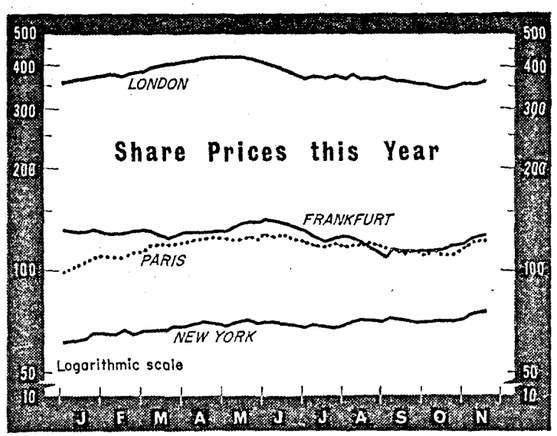
There is now every appearance of unanimity and co-operation between the various branches of the Canadian economic management. The newly established exchange rate policy is currently facing its first real test, and success will depend to a large extent upon the authorities' ability to maintain Canadian long-term rates at a level which leaves the interest advantage offered to Canadian borrowers in New York not much above three quarters of one per cent. There does not appear to be any great threat to their ability to do so from the exigencies either of fiscal policy or of debt management. And general economic considerations themselves argue for rather lower domestic interest rates, as underemployment of Canadian resources remains considerable.

Problems of a Strong Franc

Financial recovery has been spectacular, and has permitted a notable revival of the Paris capital market. But rising prices are now again causing concern.

BY A PARIS CORRESPONDENT

CHRISTMAS 1958 was a turning point in the economic history of postwar France ranking in importance with that of 1926 after the first world war. On both occasions a spectacular financial recovery was achieved by a combination of venturesome reforms. There is no need to recall in detail the measures adopted on December 27th, 1958—a "cleansing" (*assainissement*) of public finances, devaluation of the franc by 15 per cent, the almost complete lifting of import quotas, market convertibility for the franc simultaneously with other currencies, and entry by France into the common market. These measures formed an integral whole and were a complete success. In one sector, that of the balance of payments, even the most optimistic expectations were surpassed. Some improvement always follows devaluation of a currency. What was unhoped for was the appearance and continuance of the large surpluses that France has achieved for nearly three years.



First results early in 1959 left grounds for some scepticism: the return of French funds from abroad, where they had been allowed to remain more or less permissively, and the inflow of foreign funds, obscured the underlying trend in the foreign balance. In the following months it became clear that the foundations of recovery had been laid. For not only was there a considerable surplus in the balance of payment on current account, but within this the balance of trade had become positive for the first time since 1926-28. Traditionally French exports cover, on average, no more than 80 to 90 per cent of imports, and the deficit is offset by invisible receipts. Since 1959, however, there has been a persistent trade surplus. The improvement, moreover, was not accomplished at the cost of official restrictions on imports. On the contrary, the quotas were removed, and customs duties reduced. The improvement has stemmed from the buoyancy of exports.

It is in transactions with the common market that the expansion in French trade has been concentrated. The other five countries now account for about 43 per cent of French foreign trade, as against 32 per cent in 1958. Transactions with other industrialised countries, on the other hand, have remained broadly unchanged, and France's share in this outside trade has declined.

In addition to the favourable swing in the trade balance, there were gains in invisible transactions. Thus the balance on goods and services showed a surplus of $710 million in 1959 and of $637 million in 1960. The total surplus, including capital movements, was $1,037 million in 1959 and $540 million in 1960. For 1961, the surplus may rise again to $1,000 million.

These global figures need elucidation. First the 1959 surplus was swollen by the deliberately delayed repatriation of French funds from overseas. Secondly, the influx of foreign private capital, long-term and short-term, has been and still is considerable—$439 million in 1959, $358 million in 1960. The influx to the reserves would in fact have been all the more spectacular if France had not used the surpluses in its current balance to repay either in advance or when due a large part of its external debt. These repayments total no less than $1,500 million since the end of 1958. This policy has reduced France's external debt to $1,756 million—and all of it is now long term.

Despite these massive repayments of short-term and medium-term debts, the official gold and currency reserves rose from $1,050 million at the end of 1958 to $2,070 million at the end of 1959 and $2,815 million at 30th September last. At this level they rank

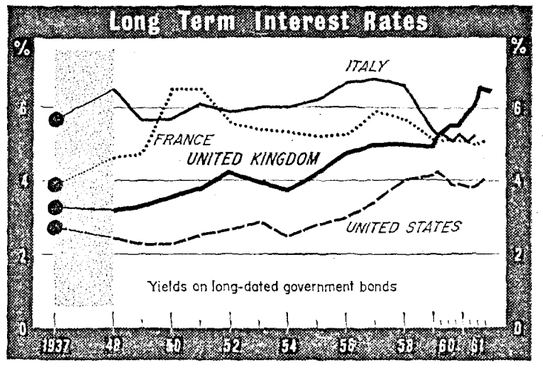
closely behind the central reserves of the sterling area (and the latter, unlike France's reserves, are encumbered by heavy short-term liabilities); come very close to Italian reserves; but are still less than half as large as Germany's.



For more than two years now the franc has been consistently strong. For many months the dollar has been maintained at its lower support point of 4.90 NF. Even during the serious political crises which have taken place, the French authorities have had no need to give any support to the franc from the exchange stabilisation fund. Within a very short period the franc has become a strong currency, much in demand. In February last, simultaneously with other Western countries, France was able to abandon the protection of Article XIV of the International Monetary Fund statutes and proceed to formal external convertibility. France's new-found financial strength, however, has brought its own problems to the financial authorities in Paris.

On several occasions France has had to seek outside aid to help support its currency, and at present finds itself being called upon in turn to come to the assistance of other countries with financial troubles. Thus in the spring France took part in the Basle agreement in support of sterling. Moreover France agreed that the franc should be used in loans by the International Monetary Fund to various countries: Britain, India, Argentina are recent examples.

If the need arose there is no doubt that France would maintain its obligations towards the dollar, and would not refuse its support in buttressing the resources of the IMF. But forewarned by its own experience of the rapidity with which a favourable situation can become worse, France has no intention of blindly undertaking obligations which it might not be capable of fulfilling. France wishes to have control over any loans which may be made in its currency. This position, clearly expressed at the IMF meeting in Vienna, has been *parfaitement comprise*.

The French money market, both short and long term, is traditionally confined within narrow limits. It does not compare in breadth with the London or New York markets. Paris holds a relatively modest position in the international money market. Since the war the need for capital funds for expansion and reconstruction, the priority given to demands from the Treasury to cover successive budgetary deficits, credit control designed to check inflation—all these have still further tightened the market for investment funds.

The 1958 monetary reform and the reversal in the balance of payments have helped to make the market more fluid. The budgetary deficit was easily covered by short-term public loans, in

Treasury bonds and the like. For the last two years the Treasury has made no further demands on the long-term market. At the same time, the reflux of funds from abroad has kept the banks well supplied. Moreover, as the danger of inflation became more remote, credit restrictions were somewhat relaxed, but they have not simply been removed. On the contrary, the obligations on the banks to take up Treasury paper in proportion to their deposits have been reinforced.

Under these conditions no considerable expansion of credit in the Paris money market could have been expected. As long as the banks—as is the case at the moment—remain heavily indebted to the Bank of France the money market is bound to remain tight. On the other hand the cessation of demands on the long-term market by the Treasury and the new-found confidence in the currency have allowed private companies to obtain more easily the capital funds they need. The part played by foreign capital in the capital market has become appreciably more important.

In 1959 the net contribution of private foreign capital, both long and short term, reached the total of $439 million, to which must be added $128 million in repatriated French capital. In 1960 this amounted to $358 million (but was partly offset by the outflow of $103 million francs of French capital from the country). Of the foreign inflow transactions in Stock Exchange securities remained at the moderate total of $46 million, though they have increased this year to $60-70 million.

The greater part of the contributions of foreign capital was in the form of direct investment—in share participations, in the establishment of branches, and various other loans. North America alone provided in 1960 $125 million, OEEC countries $91 million, and international bodies $55 million. German and Swiss capital, through the medium of finance and investment companies, was more interested in Stock Exchange transactions.

There has also been a major increase in the past year or two in foreign currency arbitrage operations. Immediately following the devaluation, the French banks witnessed a considerable increase in their deposits of foreign currency. On the one hand they borrowed foreign balances from their correspondents either for their own needs or for arbitrage operations. The total of these loans in foreign currency reached $583 million by the end of 1960, as against $477 million in the previous year. On the other hand, foreign currency deposits by French and foreign depositors rose from $320 million to $400 million in the same period.

There has been, therefore, a notable extension in the operations of the Paris market. The figures must not however be exaggerated; they are still small in relation to the London or New York markets. If, as has been said, the French promoters of the Six had hoped to make Paris the chief financial centre of Europe, this hope is far from being achieved. London, even outside the Continent, has continued to be the leading financial centre of the Six.

The French Government, in the past three years, has been successful in bringing about a financial recovery and it has been successful in ensuring that France is in a favourable position to compete in the common market. Can this progress be maintained?

French industrial activity, admittedly, shows no signs of slowing down and exports are very active. Competition, however, is hardening. Even now in the car industry there are signs that a ceiling has been reached. For three years France has been able to maintain the advantages of its devaluation. But at present these are wearing thin owing to the continuous upward trend of costs. With an almost free European market, price competition is exerting its full pressure. But the upward trend of French prices is now clear. The Finance Minister, M. Baumgartner, has issued several warnings of the danger of this trend, which, towards the end of this year

has become alarmingly rapid. Fortunately the problem is a relative one. This upward price trend is also apparent in France's nearest commercial rivals, especially Germany and Switzerland. The essence of the external problem is to ensure that the upward trend in French prices is not more rapid than it is in these other countries.

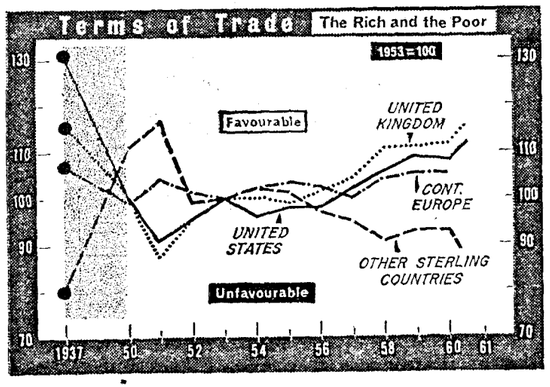
Other difficulties, however, have cropped up, the most urgent of which is the effect of full employment on wage pressure. The second arises from the inadequacy, even now, of productive investment. The third lies in the constantly increasing surpluses of agricultural products which find almost no outlet in foreign markets, even at the cost of heavy losses. This is one of the stumbling blocks of the common market. In conclusion a more remote danger is the lack of exploration by French businessmen of markets, outside Europe, in which France's competitors are already more firmly entrenched.

The future is not at all clear. But in this field it never is for any country. The financial recovery already achieved will have to be consolidated if it is not to undergo the same ephemeral fate as the "Poincaré period" of 1926-28.

Pressure on the Sterling Area

Immediate pressure on the external finances of overseas sterling countries has been eased—but not, as they would wish, by higher export earnings.

BY AN AUSTRALIAN CORRESPONDENT



For those countries in the overseas sterling area lucky enough to attract it, the inflow of capital from abroad has considerably eased the pressure on external finances this year. Tighter control of imports and a significant inward flow of capital have increased the reserves of the overseas sterling area countries as a whole. Yet the basic strength of these economies, and particularly of those that cannot attract outside capital on a large scale, depends on the strength of current exports, which in turn depends largely on prices of primary products. And the current level of prices for primary producers is more unfavourable than a year ago. A feeble recovery in prices in the early months of this year at the outset of the economic recovery in the United States has been punctured by a decline, mainly in tropical products, since the spring, and *The Economist* indicator of commodity prices has now reached its lowest point since the Korean boom. This fall is a major setback for underdeveloped countries. The optimist may, however, set some hopes on an acceleration in the growth in consumption of the cheaper primary products, and also perhaps on the efforts to buttress prices. These influences could bring some improvement before the end of next year.

The terms of trade moved heavily against the overseas sterling area in 1960, following a partial recovery in 1959: falling export prices have been accompanied by a continued rise in import prices. The deterioration was continued in 1961 after the short-lived recovery. In Australia and New Zealand, the steadily worsening terms of trade have caused major concern. This has infected the thinking of many of their responsible ministers about Britain's projected entry into the European common market. The deterioration in their terms of trade since the end of fighting in Korea is becoming more generally recognised as an important factor in the recurrent crises in their external payments, which in turn have brought severe import restrictions.

The higher prices that South Africa, Australia and New Zealand have had to pay for their imports have been accentuated by the larger proportion of capital goods and consumer durables among their chief imports. Less developed countries, whose imports of manufactures consist to a greater extent of articles like textiles that are being supplied in increasing quantities from low-cost producing countries, have probably suffered a less pronounced increase in the price of their imports. The double squeeze of declining export prices and rising prices of imports is responsible for the relative stagnation over the past five years of Britain's exports to the important markets of the older dominions. The declining purchasing power of exports—between 1953 and 1960 the volume of Australia's exports rose by 24 per cent, yet its total export receipts at £A876 million were some £A12 million lower than in 1953—has weakened the economic growth of these countries and caused them to place a disproportionate reliance on inflows of foreign capital.

Sterling balances of the overseas sterling countries fell steadily between June 1960 and March 1961, by £233 million to £2,441 million. The serious drop in the second half of 1960 was partly seasonal, and was shared by all countries with the notable exceptions of Ghana, Malaya and Pakistan. By far the most severe falls were recorded by Australia, India and South Africa. In 1961, however, corrective policy measures designed to reduce imports, assisted in each of these three cases by borrowings from the International Monetary Fund, together managed to check this loss of reserves. The result was that by the second quarter of 1961 the reserves of overseas sterling countries as a whole began to rise again, and it is likely that the trend was continued during the seasonally adverse third quarter. It is important to note that the recovery was due mainly to a check on imports and higher borrowings—not to an upturn in commodity prices.

The improvement in Australia during the spring and summer of this year was exceptionally strong. On the import side, restrictive fiscal and monetary policies stopped the import boom and left the country with large stocks of imported goods, many supplied on long-term credit from Britain and elsewhere. The level of domestic activity declined and the demand for imports fell to abnormally low levels. This was accompanied by a strong rise in exports, highlighted by sales of wheat to Communist China, but also covering a wide range of minerals, foodstuffs and manu-

factured goods. Further support has come from a record capital inflow, both official and private.

Many of the African sterling countries have shown signs of improving their balance of payments in recent months and South Africa, in particular, has checked the dangerous fall in reserves by tight import quotas and exchange control. Only two of the major countries, India and New Zealand, are still facing a heavily adverse balance of payments. India's problems, despite massive IMF and World Bank assistance, are as acute as ever. In New Zealand import restrictions should eventually reinforce the current balance, though they had made no impact up to September last.

The past year has certainly seen substantial assistance to sterling countries by the International Monetary Fund. The first arrangement with the Fund was made by South Africa in December 1960 and this was followed by Australia in April and India in July. In all the drawings totalled $462.5 million. Australia and South Africa were also granted stand-by credits, but the quick recovery in Australia's reserves has enabled this credit to be cancelled already. Further assistance has been afforded by the World Bank and its affiliates which since June last have approved several large loans for projects in India, Pakistan and Ceylon. Finally, it has been announced that New Zealand, which is a very recent member of the IMF, has entered into discussions with the Fund with the object of arranging a drawing. New Zealand has already raised a market loan in New York. It has been suggested in New Zealand that the Fund should be asked for a drawing of some £22.5 million or 50 per cent of the quota, and that a loan should also be sought from the World Bank.

Details of private capital inflow are more difficult to ascertain with any accuracy. New figures published by the Board of Trade show that direct private investment by Britain in the overseas sterling area rose by almost a third in 1960 from £100 million to £132 million, and nearly doubled between 1958 and 1960. Britain's investment in these countries is not only much larger in total than its investments on the Continent, it is rising faster too—which may not be illogical if tariff barriers are about to come down in Europe but continue or increase elsewhere. A very marked increase occurred in investment in Australia, which accounts for just over one third of the total. Britain's rate of new investment there rose from £27 million in 1959 to £47 million in 1960. British investment in the Federation of Rhodesia and Nyasaland also showed a substantial gain in 1960 of £12 million—but was nonetheless lower than in 1959. Private investment by the United States in the overseas sterling countries remained almost stationary at just over $200 million in 1960; but there was a substantial rise from $214 million to $305 million in long-term loans by the United States government.

* Holdings of convertible currencies

South Africa has recently managed to check the previous large outflow of capital, and has attracted a modest total of medium term credits from the United States and Italy. The most notable feat in attraction of foreign capital has been that of Australia. The inflow rose from £A218 million in 1959-60 to a record of £A408 million in the year to June, 1961. As intimated above, part of this capital inflow came in the form of imports supplied on long-term credit and is thus likely to appear as an import debit in the current financial year. Reliable estimates of the amount involved in such credits are not available although some observers put the figure at £A40 million and upwards. In the third quarter of 1961 there was a fall of more than 50 per cent compared with the same period of last year in the apparent rate of capital inflow into Australia.

One important uncertainty in this sphere arises from the recent official request to United Kingdom companies to remit to Britain a greater proportion of profits earned abroad. This is a matter of considerable importance to most members of the sterling area. Australia has already voiced its anxieties and a quick look at its balance of payments shows that it can ill-afford any further drain of this nature—remittances to the United States are already very high. Australia's deficit on current account has risen from £A152 million in 1958 to £A369 million in the year to June, 1961: it has needed huge private and official capital inflows to offset this growing current account deficit. Plainly there is little scope for further remittances of profits until this current deficit is reduced to more manageable proportions. If remittances are increased nonetheless, this may force a corresponding decline in outlay on imports.

The overseas sterling countries have thus succeeded in checking the fall in their reserves; they achieved a useful net surplus in the June quarter and these gains appear to be continuing in the second half of the year. Yet the recovery is thinly based—on IMF borrowings and other capital inflows on the one hand, and on limitation of imports, by direct control or by disinflationary pressure on their economies, on the other. There is no certainty of a sustained improvement in commodity prices: the state of oversupply of many primary products is growing worse rather than better. India and New Zealand are still facing serious exchange pressure. The inflow of private capital has been at high levels but may now decline slightly. Substantial repayments to IMF are due in the next few years.

Despite the improvement in reserves, therefore, it seems reasonable to conclude that a tight check will be kept on imports and that the emphasis will be to strengthen overseas reserves further. This movement will be assisted in the first six months of next year by seasonal factors, but the boost from this year's large drawings from the IMF and loans from the World Bank is not likely to be repeated in the immediate future, apart from a possible drawing by New Zealand. Imports can be expected to rise, especially in Australia, but the need to repay IMF drawings and the uncertainty about export prices may necessitate a cautious approach. Certainly an improvement in terms of trade would quickly alter this outlook. It is a prerequisite of a sustained expansion of the overseas sterling countries' own buying from Europe and the United States.

money is

A SOURCE OF INNOCENT MERRIMENT

We can scarcely think of a more agreeable sentiment, but it's also true that money can be the source of more money—which is why people invest and why we're in business.

Investing in the Japanese market is an easy way to put your money to work reproducing itself. To find out where in Japan it will work hardest, you need facts and figures, and that's where Yamaichi comes in.

Besides our regular weekly and monthly publications, industry-wide surveys, and other English-language pamphlets and brochures, Yamaichi puts out a continuing series of Special Reports on leading individual corporations. They give in concise form the major activities, plans, production, sales, and profit records, and other detailed data the wise investor wants to know.

If your money means more to you than innocent merriment, you will do well to consider taking a stake in Japan's booming economy. Yamaichi is waiting to help you.

RESEARCH AND THE JAPANESE STOCK MARKET

Research has for centuries been associated primarily with science and mathematics. But, with Nomura Securities Co., Ltd., it is the foundation for analysis of the Japanese economy. The complexities of a modern world dictate that the economist can no longer make recommendations from hunches or sudden notions. He must have accurate figures before him in terms which he can analyse . . . figures resulting from research. To aid us in our research we employ a complete staff of experienced statisticians who prepare the many graphs and charts essential to portray fully the economic structure of Japan. The results of data on industry and the general economy are compiled and studied by Nomura analysts and economists to obtain complete information on the complete market picture and the complicated constituents from which it is made. The results of their work are published periodically for our clients, to aid them in the selection of stocks and other investments in Japan.

Also, latest information on new company quotations, present economic status, and future planning are available through our branch offices and representatives throughout the world. Let us do the research for you. Write to the Nomura Securities Co., Ltd. for information on the Japanese stock market.

THE BUSINESS WORLD

No, Mr Thorneycroft

MR THORNEYCROFT, the Minister of Aviation, has failed the first major test of policy he has been called upon to decide since he returned to the Government. His refusal to endorse the grant of a licence to Cunard Eagle to fly on the North Atlantic has for the aviation industry one meaning and one only: that the Government does not intend to permit *competition in the air*. Indeed, the decision and Mr Thorneycroft's published reasons for arriving at it raise doubts about whether the Government rightly understands what the word "competition" means.

This year had been intended to mark a new phase in British flying. A new Act had come into force which purported to end the monopoly of the two nationalised air corporations; a new licensing body had come into being empowered to permit privately-owned airlines to fly services in competition with the corporations where conditions appeared to justify a second service. Among the many applications that this body received was one from Cunard Eagle to fly passenger services on the North Atlantic in competition with the British Overseas Airways Corporation. This was the first application for a major route to be heard by the board, and it was regarded throughout the industry as a test case. The board quite logically assumed that parliamentary time and *significant* expense would hardly have been expended on bringing a new Civil Aviation Act on to the statute book unless it was expected to produce *some changes in the status quo*. Accordingly, the board recommended the granting of a licence to Cunard Eagle for one daily round trip across the North Atlantic.

The Minister has thrown out this recommendation in terms that must leave the board wondering precisely what Mr Thorneycroft conceives its function to be, or why he thinks the Act was passed at all. If Mr Thorneycroft sincerely advances the bromide about "too many seats chasing too few passengers," his way is perfectly clear—to postpone the date for Cunard Eagle's licence from next summer to the one after. But Mr Thorneycroft's *real reasons* for countermanding the board's award must go deeper than this, for they draw the teeth of the new Act and turn it from a watch dog into a dozy old hound fit only to thump its tail approvingly at private airlines that know their place in the order of things and aspire to nothing higher than holiday tours and charter trade.

If the statement sent by the Ministry of Aviation to the unfortunate and disappointed licensing board on Tuesday night can be taken as a guide of Government intent, then Mr Thorneycroft is unlikely now or in the future to sanction any new services that take passengers from the corporations. The board had assumed that competition was the whole purpose of the Act. It recommended the licensing of Cunard Eagle in the knowledge that the new service would take passengers from BOAC as well as from other airlines, but considered the advantages outweighed any loss. It is not sufficient to argue, as Mr Thorneycroft has argued, that Cunard Eagle could not offer anything to passengers that they could not get from BOAC because "all the carriers are offering the same level of fares and basic standards of service to the public." There is, first, *nothing immutable about the present* ratio in which traffic is divided between BOAC and the American airlines operating into London. The airlines have *taken enough passengers from Cunard's ships for this company* to feel it is time for a *quid pro quo*. And might it not be just possible that passengers would like the option to choose to fly on a Cunard-owned airline, or that the company might actually have something to contribute from its shipping experience to the greater comfort, expedition, acceptability and economy of air travel?

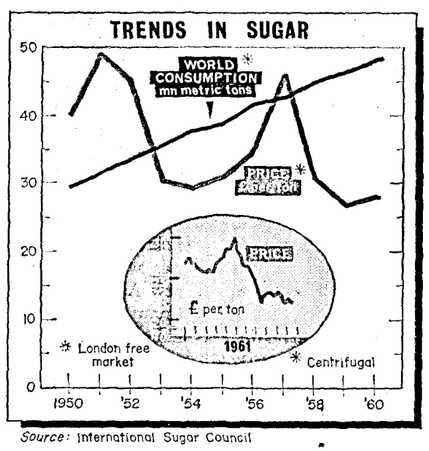
MR THORNEYCROFT's reasons are just not good enough. What Cunard Eagle has to offer lies not in the outward *trimmings that differentiate one airline in the minds of* passengers from another, but in that precious commodity, competition, even in this, the most highly-cartelised industry in the world. When airlines have to compete hard for passengers, then they cut fares. The pressure to lower fares comes from those airlines that must fill their seats if they are to stay in business, because they *cannot fall back on a* government subsidy. Airlines that appreciate that empty seats can sometimes be filled only by lowering prices to tap a wider market are willing to nag, prod and push the great complacent mass (with one or two honourable exceptions) of protected, nationalised, subsidised airlines to agree to fare cuts, even if these have to be common to all competitors.

Starry-eyed idealists, among which it is now perhaps necessary to number the members of the Air Transport Licensing Board, thought that a modest form of competitive stimulus was what the Government *had in mind when it passed* the new Act. Others, like the board of the Cunard Steam-Ship Company, which rejected a sizeable Government subsidy to *build the futile Q3* in order to invest as much as £9 million out of its own funds in new aircraft, thought they were being offered a chance to pull out of a declining form of transport and re-invest in an expanding one. How wrong, it seems, we *all* were.

Many-Sided Sugar

ONCE upon a time, only eight years ago, an international scheme of co-operation between producers and consumers of sugar was launched. It was not exactly a new venture. The world monetary and economic conference of 1933 had drawn the blueprint, and the keel was laid in 1937 when 22 countries then controlling three-quarters of world trade in sugar ratified an international scheme to regulate its production and marketing. Since the agreement freed any contracting government that became involved in hostilities (most of them qualified all too soon) the 1937 project was brought to a standstill. Its basic principles were revived and launched in the 1953 agreement. Skilful piloting brought it safely through some awful storms, but it needed its refit in 1958, and now it has all but foundered. The United States (largest importer) and Cuba (biggest exporter) have quarrelled. A meeting in Geneva early next month will decide whether the international agreement will be abandoned as a result of it.

Despite all the troubles with surpluses in the 'thirties, world production of sugar quadrupled between 1900 and the outbreak of the second world war. But since the war, the growth in sugar consumption has been greater than in any other period and faster than the growth in any other important foodstuff. What could have been more conducive to the attainment of the international sugar council's chief aims—to maintain stable and equitable prices, to improve living standards in producing and consuming countries and to foster international co-operation? In fact, despite the paraphernalia of export tonnages and quotas linked to market prices, the free market in sugar has been anything but stable. The price has fallen more than £5 a ton this year to £22 a ton in London, the lowest point since the war. No producer calls this fair.



In 1954, before the agreement was two months old, sugar dropped through the "floor" price of 3¼ cents a lb. and the maximum restriction of exports under the scheme was soon in force. The Sugar Council was extricated from that difficulty by an unexpected increase in demand by communist countries rather than by the checks and balances of the international agreement. Before its first five-year period had run out, prices had soared to 6¾ cents a lb, 2¾ cents higher than the top step of the Sugar Council's export escalator; Japan, one of the biggest purchasers of sugar on the free market, was understandably dissatisfied with the council's unsuccessful efforts to bring prices back within its "range."

THOUGH it has not given full protection either to consumers or to producers, the sugar agreement has some friends (as distinct from participants) not least among producers. Since it began, the scheme has attracted new members — though would-be exporters seeking cover under the international scheme are patently as much of a liability as an asset. If a stabilisation scheme as broadly based as the sugar agreement, which nominally embraces most of the world including communist countries, comes to grief so easily, what hope is there for agreements whose environment is even less favourable?

Sugar has enjoyed an annual rise in consumption per head of about 2 per cent, plus the growth in world population of more than one per cent a year in this century. People in underdeveloped and tropical countries, even though abundantly supplied with fruit and vegetables, increase their consumption noticeably as their living standards improve. If they increased their consumption even towards the 100 lb a head in many developed countries (China is said to average about 5 lb a head a year), an enormous rise in production would be necessary.

Some claim that sugar has a potential market in industrial uses, such as plastics, detergents and emulsifiers, that might come to match its use for food. In plastics, sugar has been outdone by petrochemicals, but its application in other fields, still subject to experiment, could make great strides. On UN Food and Agriculture Organisation projections consumption of centrifugal sugar could rise from 48 million metric tons in 1960 to 57 million tons in 1965 and 67 million tons in 1970. This is impressive in all conscience. But the fact that does not square with it is that an experiment in international co-operation in sugar is now accompanied by a shrinking of the free market.

The international sugar agreement has, indeed, experienced all the troubles that beset such schemes: stocks have sometimes seemed too large, sometimes too small; in the past non-members have increased their exports to the regulated market; quotas have sometimes been exceeded; and the free market has always been one jump ahead of moves belatedly made by the Sugar Council. A major difficulty has been created by sugar beet production in consuming countries. In 1920, the United Kingdom produced no home-grown sugar; output regularly tops 750,000 tons a year now. European production of beet sugar has risen by 10 million to 22½ million tons since 1954.

Source: International Sugar Council

IF despite all efforts the international scheme founders, it will be politics, not sugar surpluses, that are the principal culprit. Sugar protection has long been a colonial responsibility—Britain was in the business as early as 1651, and the United States began to meddle with it as early as 1789. Special sugar relations developed with the Philippines, Puerto Rico and Cuba.

The United States offers its suppliers its domestic price, less duties varying with the degree of political friendship. The price it offers all suppliers is far more attractive than the free market price. Its system of granting quotas to suppliers to fill its estimated import requirements also has a political bias; producers like the Dominican Republic which find themselves out of favour with the American authorities can expect unfavourable treatment. Cuba lost all its quota of three million tons to the United States, setting in motion the events that have all but extinguished the international agreement.

The United Kingdom with its concern for colonial possessions—the British West Indies, Guiana, Honduras, East Africa, Fiji and Mauritius—has in recent years reserved its market principally for Commonwealth suppliers. In 1913, they provided only 4 per cent of Britain's sugar needs. Helped by increased tariff preferences granted after 1931 and the co-operation of refiners in this country, they raised this proportion to more than 50 per cent in the 'thirties. Last year Britain imported 1,600,000 tons of sugar from the Commonwealth and only 600,000 tons from foreign sources. Under the Commonwealth sugar agreement, suppliers get more than £45 a ton for their basic exports to Britain this year. The present contrast between these "negotiated" prices, which are supposed to be based mainly on costs of production, and prices in the free market certainly goes as far as is reasonable towards fostering sugar production in these countries. A stroke of political compromise has given South Africa, which was recently excluded from the "rights and obligations" of this agreement, a sort of associate membership of the Commonwealth sugar block, at £35¾ a ton.

Leaving aside less important pacts, the other main importing block today is formed by the communist countries, which have hastened to support Cuban sugar. Cuba claims to have an assured outlet in these countries for 5 million tons of sugar a year on terms that suggest in hard western cash something considerably above the free market price. Cuba thus claims to have found new outlets for sugar that entitle it to an export quota under the international agreement of about 7 million tons. That would be larger than the combined export quotas of all producer members last year. The irony that Cuba may not be able to continue to fill such a large quota only underlines a basic difficulty of the international agreement. So many participants get favoured treatment in other markets that their incentive to make it function properly is diminished. Some of the communist countries of Eastern Europe, in fact, would have most to lose should the international scheme lapse. They are among the few exporters who do not enjoy a sheltered market somewhere, and imports of Cuban sugar into the communist block will only add to their troubles.

It never looked as though Britain and the United States would sink their special import arrangements in an international scheme. To that extent "international" is a flag of convenience under which the United Nations' scheme sails. The result has been to sap the strength of the international agreement and leave it without adequate means to deal with the inevitable stresses in any international attempt to stabilise commodity prices.

BUSINESS NOTES

THE EXCHANGES

A Puzzling Week

SHERLOCK HOLMES would have found this a puzzling week in the exchange markets. While the crack in Britain's pay pause caused an immediate setback on the London stock market, it has had no visible impact on the sterling exchange—which has also been seemingly unaffected by renewed talk about flexible exchange rates. Spot sterling has been in continuous demand and the rate has stayed above $2.81½, while security sterling has stayed above $2.81. It is true that sterling is being propped up by the suspicions now being cast on the dollar, but herein lies the second mystery of what did not happen this week. While the exchange markets have continued to talk the dollar down, their distrust has not been indicated in the gold markets. The London market has indeed had an unusually quiet week, and in the absence of buying interest the price has fallen perceptibly below the level of just under $35.20 an ounce at which it was previously being held down by the Bank of England. On Wednesday the price was quoted at $35.17½-19 and on Thursday the fixing was at $35.15¼. The simultaneous rise in the gold price in Hong Kong has no general significance; the market there is dominated by the ebb and flow of the constant battle between officials and smugglers, and the latest movement is reported to have been caused by the arrest of two Arabs on Hong Kong airport. Of more significance to the gold markets of the west this week have been the national holidays in Beirut and Vientiane, two centres from which a good deal of demand for gold in Europe comes. Berlin, despite its second wall, may look less worrying; and some sizeable offerings of gold have been made in Zurich—from what source is not clear. It remains mystifying why, at a time when financial operators find bad things to say about the dollar, the pound and the mark all at once, they appear to have lost interest in gold. They have not, presumably, been converted overnight to Triffinism. The exchange authorities in the United States and Britain may well say: for such relief, much thanks. They would be unwise to draw more comfort than that.

The sharpest movement on the exchange markets this week was a sudden fall on Tuesday in the Canadian dollar, to 96.25 against the US dollar at one point. There has been talk that the Canadian authorities may now be aiming to get the discount to 5 per cent, which would seem rather more like the "significant" discount foreshadowed in the budget than the 3 per cent that has prevailed hitherto.

One of the few currencies that enjoys the luxury of bullish talk nowadays is the Spanish peseta: this week there has been a report that a mission from the World Bank has recommended revaluation, from 60 to 50 pesetas to the dollar. The report caused no marked response in the London market, where the peseta was quoted on Wednesday only a shade above its parity of 168 to the pound. Spain's gold and exchange reserves have risen strongly—at the end of September they were nearly $800 million, having been built up from virtually nothing at the time of the exchange reform in mid-1959; but there is no reason to believe that the Spanish authorities are anxious to impose a brake on economic expansion so soon after they have got it started.

IN THE MARKETS

Electric Shock

EQUITY prices went smartly into reverse after the wage award by the Electricity Council last weekend; and, after a notable absence, daily price falls returned to the gilt-edged market. In the previous week the markets had been confused, though not on

balance discouraged, by the daily succession of speeches from the Chancellor. This week confusion has given way to sheer bewilderment with the government's hold over the nation's finances—while hopes of early industrial expansion which some investors had derived from the Chancellor's speeches have withered somewhat in face of the two point drop in industrial output that the Treasury now registers for September. More bad news from industry, notably from English Electric, has added to the gloom. The upshot has been that in the week to Wednesday *The Economist* ordinary share indicator fell by 12.3 points to 356.6, neatly reversing the rise of the previous week, while the *Financial Times* index fell below 300 again. In gilt-edged, price falls were limited to ½ or so on the first three days of this week, but on Thursday they ranged up to 1⅛. Buying has come to a sudden stop, so that the steady stream of small selling by trustees that has been going on ever since August has been left to make its mark. There has also been a change of mood in the discount market, which is no longer counting on an early further reduction in Bank rate and is consequently less enamoured of short bonds.

The Prime Minister's effort to plaster over the crack by speaking for Mr Lloyd in the House of Commons on Tuesday gave little cheer to the City, and drew some cynical comments. It is possible to argue that this whole episode may in the end make the government more determined to hold firm on the big claims, and specifically that it increases the likelihood of a railway strike. But this is hardly a consolation to the holder of ordinary shares. On the opposite view, that the floodgates are now open, and that sterling will not be able to withstand another major assault on $2.80, the prospect for equities, on the long view, may not be unfavourable—though gilt-edged, at least in the short run, would obviously be vulnerable. All this is sheer conjecture, but it is to conjecture that the market has again been thrown by the government's electrical failure.

MOTORS

A Glimpse of Recovery

October was another depressed month so far as the production and home sales of the motor industry were concerned; but it saw the first significant rise in exports since they began to fall in June 1960. Car output was only 18,843 a week, 18 per cent below that of October 1960 and six per cent down on last September. Much of the fall since September results from the effects on the British Motor Corporation's output of the changes to its range, and of some shortages of bought-out parts needed for the new models. Undesirable though this loss of output may be, with the consequence of delivery delays for the new models, it does help BMC dealers clear their stocks of the old models without the need for special discounts. Amongst the other makers, Rootes made no cars last month, against a few in September, but the increase in Vauxhall's output of the new Victor seems to have roughly balanced this loss. Rootes has managed to start making cars again this month, but its output is only about a 1,000 cars a week—around a quarter of capacity—with 5,200 of its men at Coventry working one or two weeks out of three. Ford and Standard-Triumph International report that their output showed little change from September to October.

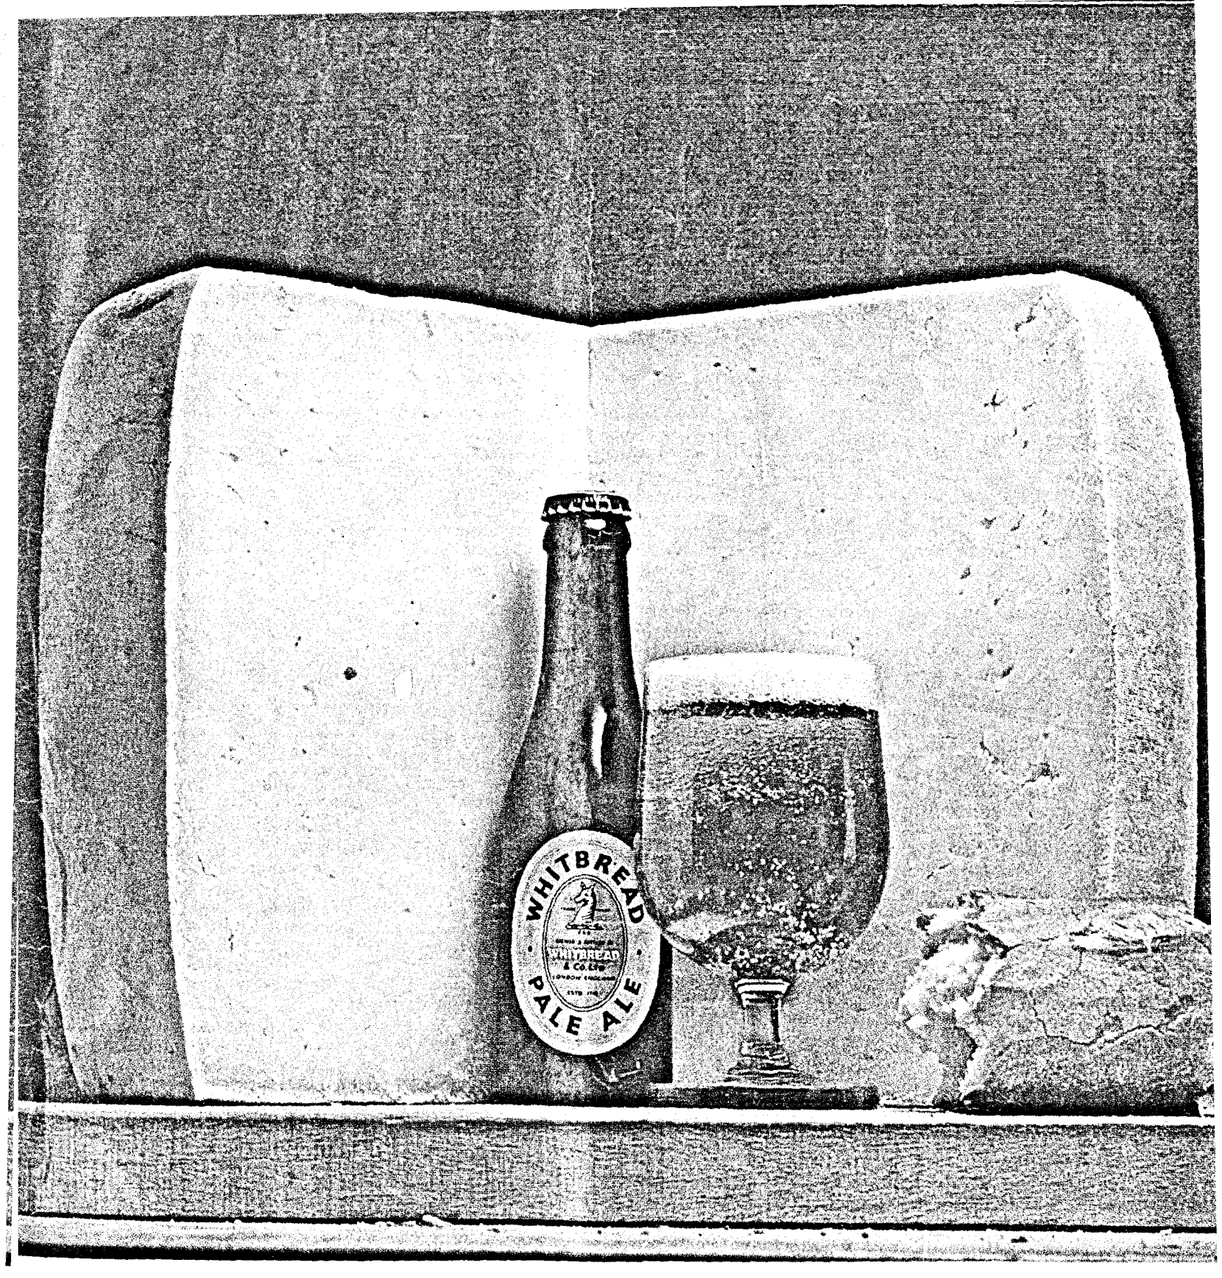
Home sales in October continued at the depressed level of September. Only 43,333 were registered, the lowest figure for October since 1957. This represents an annual rate of about 500,000 cars, compared with the 750,000 or so that will be sold this year and the 800,000 that were sold in 1960. The industry feels that these sales are too bad to last. Once Mr Lloyd begins to relax, it hopes that the buyers who are now holding off will return *en masse*, taking it back to boom conditions again. There is certainly no less reason now than there was at the Motor Show for believing that 1962 will be potentially a good year for the industry, though the immediate prospect is that sales will drift rather lower as the end of the year approaches.

The rise in exports resulted from an increase in shipments to the United States, already heralded by the industry—though only 1,600 more were shipped—and to Europe. Here the opening up of markets in France and Italy, since quotas were enlarged or abolished, remains a more significant factor than any increase in sales to established markets. Exports of commercial vehicles also rose—by 10 per cent over September and more than 25 per cent over October last year. But production fell slightly; demand for trucks on the home market is beginning to decline.

BANK CREDIT

Selwyn's Saver?

The City started talking on Wednesday of a possible increase in special deposits. This, it was thought, might be seen as a convenient way for the government to counter the impression that its financial policy is softening. The idea fires the imagination. One can see the Chancellor holding inflation at bay, a latter-day Marshal Foch: "My wage policy is punctured, my Bank rate is eroded, my planning council doesn't exist—but by raising special deposits to 4 per cent, *j'attaque!*"



The clearing bankers have indeed felt anxieties for some time that their very success in cutting advances and raising liquidity this autumn might induce the authorities to remove this surplus liquidity by another call to special deposits. It is the essence of this weapon of policy, and thereby its major defect, that it arbitrarily upsets the bankers' normal basis of reckoning. Thus none of them at present can be sure whether, with this contingent threat hanging overhead, their liquidity is adequate or not. In the four weeks to mid-November, net advances by the clearing banks declined by a further £19 million (despite a temporary rise of £9 million to State boards) and the Scottish banks reduced their advances by £3 million. This marks a further slowing down in the pace of decline—in August and September advances were falling at over £100 million a month—but this was to be expected, and it is notable that the decline has not been reversed. The banks added a further £16 million to their gilt-edged portfolios, following the increase of £49 million in the previous month, which marked the first reversal of the long liquidation of these holdings. As liquid assets fell in November by £16 million, the upshot was that the liquidity ratio fell a little from its high October level of 35.0 per cent to 34.7 per cent.

THE BANK STATEMENTS
November 15, 1961

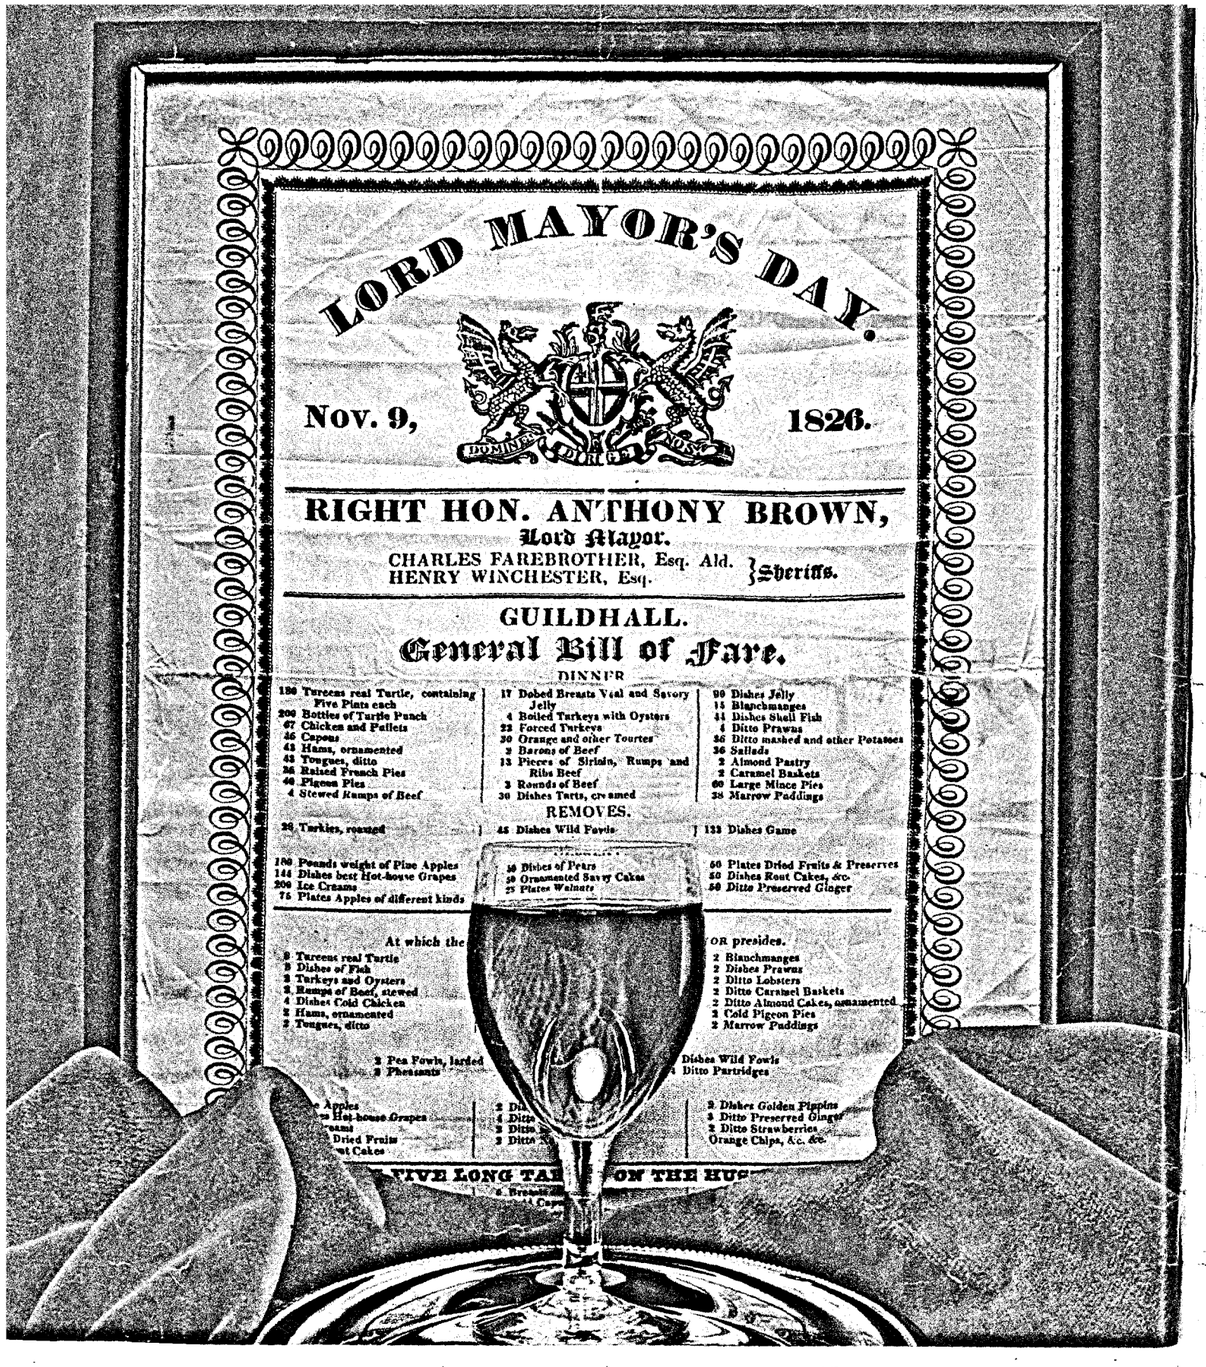
(to State Boards)	10		+ 1	−

* Excluding all transit items except ratio of advances to deposits; all ratios of gross deposits. † Ratios are of gross deposits and notes.

This would still normally be regarded as comfortable for this time of year; but this year is not normal. Apart from the special deposits threat, the banks also face the possibility of an exceptionally heavy inflow into the Exchequer, which would be needed if the final budget surplus were to attain the April and July estimates. It is quite possible, in fact, that the slowing down in spending and the at least momentary pause in wage and salary increases may erode that surplus. In the last two months, however, the Exchequer deficit has been rather smaller than a year before, and in November this contributed to an actual decline in the banks' liquid assets. The other influences were the strength of the gilt-edged market (which provides the Exchequer with non-bank finance) and the check in the flow of foreign funds to local authorities (which, unlike an inflow into Treasury bills, involves a net drain on the Exchequer to finance the purchase of the foreign exchange). The prospect both for the gilt-edged market and for the movement of foreign funds is now quite unclear: and so, therefore, is the prospects for bank liquidity.



Try a little cheese with your Whitbread.

Is it because they're both products of the sun and soil that Whitbread and cheese go so happily together? Let gastronomes dispute the reason, while other people enjoy the result—a flavour combination so clean and fresh that it will enliven the most blunted appetite. Any cheese will do (though we recommend a slightly nutty-flavoured English cheese). Any time of day will do too, from lunch time to last thing at night. So next time you serve a Whitbread, pass round the cheese board. An absurdly simple way to tickle the palates of your more sophisticated friends.

a flavour to intrigue you *a pleasure to transform you*

PHOTOGRAPHED BY IRVING PENN

How a man can still dine famously at home

You don't need a butler to make a perfectly ordinary meal seem convincingly like a banquet. A bottle of Directors' Bin will do just as well. A glass of this noble and benevolent port wine will bring the simplest supper to its end with a fanfare of trumpets. And astonishingly, Directors' Bin costs no more than 26/- a bottle.

HARVEYS PORT

TRANSPORT

Rates for the New Job

If this government were setting up a new nationalised industry today—which by nature it wouldn't—it would no doubt apply today's rates of interest for such bodies, say 6 per cent or more, to the new industry's capital. In the Transport Bill that had its second reading in the Commons this week, the government is chopping up an old nationalised industry, and putting the pieces under five new public corporations, four of them operating enterprises and the fifth a holding company. What rate of interest ought these to pay?

Formally, this bill will extinguish the debts of the moribund Transport Commission, and transfer the whole obligation to pay interest on British Transport Stock to the Treasury, which was already guaranteeing the interest on this nationalisation stock and in recent years has often had to pay virtually all of it. The £2,450 million of debt accumulated by the commission on account of capital assets and past revenue deficits, consisted of various tranches of British Transport Stock and later of Exchequer advances, issued at different dates, on which it was liable to pay a variety of rates of interest. The book value at the end of December last year was £1,931 million and the commission was liable for interest of £64 million on this, so that the average rate of interest right across its assets was under four per cent. And it is the same sort of averaged rate—which remains to be worked out as the whole grab bag of assets is sorted out between the different new pieces of transport—that the new corporations will have to pay. If the Treasury were to insist on today's going rate to all the initial capital of the new corporations, it would simply guarantee that for the next five years it had to lend the railways and the canals perhaps £10 million a year more. The rate for the railways, on which the great bulk of transport capital investment has been expended since the war, may be higher than for some of the other corporations because by the time its investment was stepped up interest rates had risen too. On about £900 million of "live" capital, plus £300 million of superannuation and savings accounts, the new Railways Board would be liable to pay £65 million in annual interest charges, or an average of just over 5 per cent; but these estimates are only approximate.

Protection for the Coasters?

The threat of stronger competition from the railways for the traffic now carried by coastal shipping that is implicit in the Transport Bill stirred up more opposition in the Commons than any other specific provision. Under existing legislation, the coastal shipowners can go to the Transport

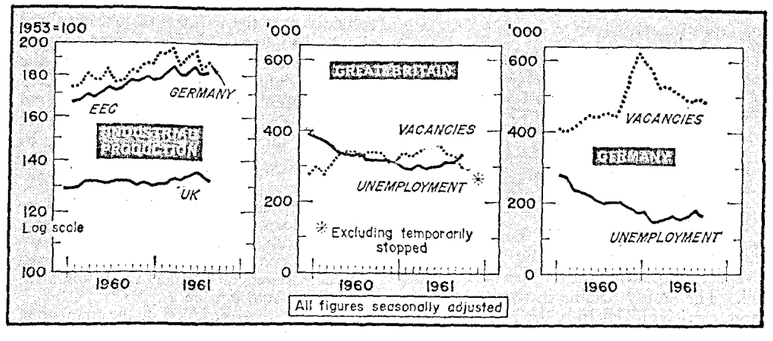
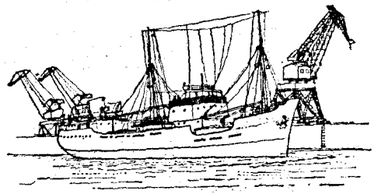
THE ECONOMY

How it Looked at the Time



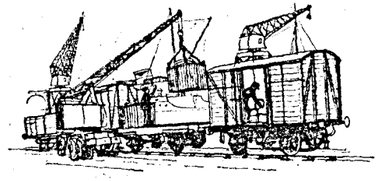
Most comment upon the month-to-month behaviour of the economy as a whole is of necessity rationalisation in the tranquillity of hindsight; and many of the explanations of what appears to have happened look pretty good until the next time the figures are revised. The degree of revision that has been applied, in succeeding months, to the last few months of the index of industrial production in the British economy this year have successively altered the state of knowledge about production in Britain to a degree that may give even his critics some sympathy with the Chancellor of the Exchequer, who has to trim the economy to what this among other meters on his economic instrument board shows. The outside commentator, looking at the up-to-date news after one month or two or three, can indulge in short-lived self-denying ordinances against over-glib explanation. The Chancellor is often less able to avoid trying to correct what may not have happened. Time and hot money wait for no man.

No explanation will therefore be offered in these columns of the latest indications of the production indices, which suggest that instead of remaining level, output in August according to the latest accumulation of data was going down, and went down another two points in September. The indications would indeed fit in with the fragmentary data on output of motor cars, durables, and steel that are available before the index for the whole of production. It would be a possible if *simpliste* explanation of the course of production as now recorded that the Chancellor's July measures of restraint on demand had an immediate and striking effect on industrial activity. But even if one trusted these latest figures more than the last lot, that would assume a very short pipeline between sales and the scheduling of production. If these figures turn out right, they suggest that various elements were moderating internal demand well before the Chancellor felt it necessary to curb it, which indeed has been suggested here before now on the evidence of



other indicators (also liable to revision).

Even as now revised, the trend of production in Britain since the beginning of the year looks to be at least as expansionary as in the common market as a whole or in Western Germany, its most important component economically. Between January and August the index of output in Germany, seasonally adjusted, actually showed a decline, though having passed higher levels in the interim; in Britain it rose from 120 in January to 122 in September (1954=100). Excess demand for labour, again, appears for the moment much stronger in Germany, where though unemployment is down to only 0.5 per cent of the estimated number of employees, the number of unfilled vacancies, even allowing for seasonal factors, is nearly three times the number unemployed and the flow of labour from East Germany has been checked. In Britain, by mid-November the number unemployed had risen to 1.7 per cent of the estimated number of employees; and this number, seasonally adjusted, exceeds the number of vacant jobs here.



Continued from page 825

Tribunal if they think that the railways are charging, or offering to charge, a rate that they either consider will put them at an unfair disadvantage or they believe to be

uneconomic. In giving the railways more freedom to set their rates as they think best, these safeguards for the shipowners will go. They will only be able to complain to the Minister of Transport *post hoc* if they suspect the railways of carrying competitive goods at uneconomic rates; and if the minister finds on enquiry that the railways are, he can order them to charge more. But there is no protection against an alternative form of competition—possible over-charging by the railways for goods transported to and from the docks, which could put up the total transport cost of movement mainly by sea. Most coal goes from the mines to the ships by rail, and coal accounts for more than 70 per cent of the cargo the coasters still carry.

Mr Marples told the Commons on Monday that he would arrange talks between the railways and the shipowners to see how this sort of discriminatory pricing could be avoided. But the supporters of coastal shipping in the House were not satisfied, though only one, Dame Irene Ward, went so far as to vote against the bill. They argued that the right to appeal to the minister if the railways undercut the coasters unfairly would be an inadequate protection. Nothing could be done until the traffic affected had been lost, and it might be difficult to recover it. The shipowners want the present protection against "unfair competition" to continue. But they add that it is not being effectively enforced; the railways are managing to undercut the coasters, so that traffic is being diverted from ships to trains. Only last March the General Council of British Shipping asked the Government to give the coasters better protection against "unfair competition" from rail and road—both of which, shipowners like to argue, get some help from the Government.

The Government did not respond, though it came under strong pressure to do something during the debates on the new bill. The steady decline in the amount of cargo carried and the number of coasters in use over the last four years seems likely to continue, however, whatever the Government may do. Much of the fall is simply the result of the switch from coal to oil—and next to natural gas—for alternative power in southern England, which has traditionally got much of its coal by sea. The shipowners hope that the common market may increase trade across the Channel and the North Sea. But only if they get protection, they say, will they feel secure enough to replace their present antique ships with modern vessels that could compete with those of the Dutch and Germans for this trade.

STOCK JOBBERS

Capital Needs

LONDON'S jobbing system may not be perfect but it makes the important distinction between jobbing principals and broking agents. Any smoothly working jobbing system has two essential needs: first, a sufficient number of jobbers competing for business; secondly, sufficient jobbers' capital to enable them to accept the risk of being "long" or "short" of stock. Income taxes and death duties have steadily eroded the volume of jobbers' capital serving the London market. As a result, small jobbers have become more and more reluctant to leave their books unbalanced for any length of time while the big ones in the gilt-edged market, even with the loan facilities open to them, have become increasingly dependent on the actions of the government broker. Since 1939, the number of jobbing firms has fallen from 324 to 89 and the number of jobbing partners from 1,123 to 520; and business, not least in the industrial market, has fallen more and more into the hands of the big jobbing firms.

While a special committee appointed by the Stock Exchange council could not see how or why this process should be arrested, it had some sympathy with the argument that in view of the increase in business the jobbers needed access to more capital. This committee has now circulated its report to the jobbers for their comments. In it, the committee mentions two suggestions that it thinks impracticable and not in the best interests of the stock exchange: first, that jobbing firms should be allowed to take in outsiders as non-member limited partners; secondly, that the partners of jobbing firms should be allowed to form companies in which the partners themselves bore all the risks of unlimited liability but in which other shareholders would have only limited liability. The committee looked with more favour on three other proposals, so long as these were strictly controlled by the council:

(1) That jobbers should be allowed to accept loan capital carrying interest that varied with the profits.

(2) That jobbing firms should be allowed to take in general partners (with unlimited liability) from outside.

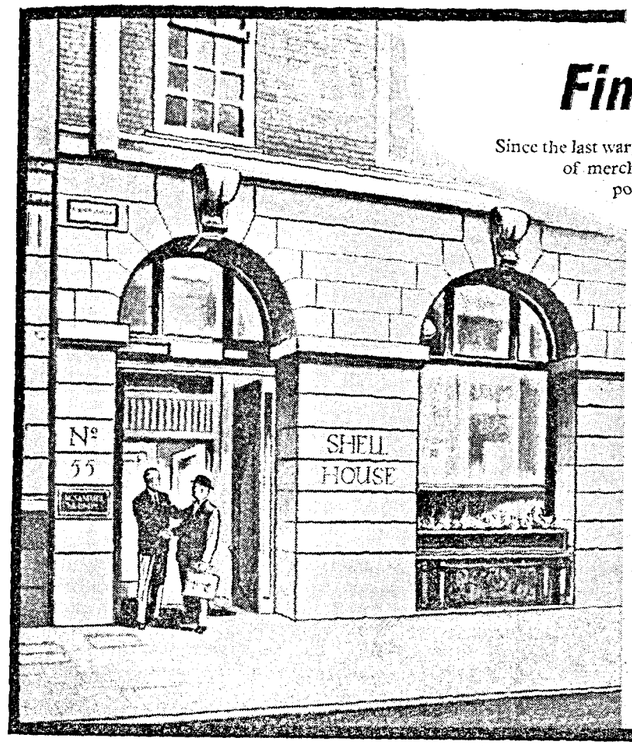
(3) That the restriction of the number of members in a corporate member company to twenty should be abolished.

The committee recognised that the implementation of such proposals as these would tend to benefit the big firms, to save the medium firms from getting smaller, but to lead to the demise of further small firms. After the jobbers have considered this report, something is likely to be done to enable them to reinforce their capital. The committee could not rule on the suggestion that tax on jobbers' dealing profits should be averaged over three yearly periods; but obviously any tax reform that allowed the jobbers to offset losses in a bad year against gains in a good year would help.

TELEVISION

Getting Back to Normal

TELEVISION set-makers are slowly working back to something approaching "normal" conditions, but at a significantly lower level of trade than that to which the industry has been accustomed. Deliveries of sets from the factories to the shops during September, the best month this year, numbered 160,000, only about half the number that the factories were sending out two years ago when television was still booming. Since then the market has reached saturation and the bulk of future sales will come from whatever replacement demand the industry can manage to stimulate. It is questionable how many retailers, or even manufacturers, yet appreciate that selling a new television set to a man who already has an old one calls for methods quite different to those used to sell a set to a buyer who has never owned one before. Trade might be brisker if more did.



As it is, the number of receivers that have been sent to the shops in the first nine months of this year are 42 per cent below the numbers that the factories were shipping in the boom year of 1959, and 17 per cent below last year's levels when the slump was setting in. The reason for thinking that these relatively gloomy figures signify an improvement in the industry's health lies in the fact that they are deliveries made from stockrooms no longer crammed from floor to ceiling with obsolete receivers. The industry began the year with 1.2 million sets in stock, representing a year's sales. By the end of September it had reduced these to the manageable figure of 225,000, although how many of these represented obsolete designs can only be guessed. The industry has managed to unload its stocks by the kind of price cuts that it shudders to remember: the people who have probably gained most from this have been the television rental companies, which have taken large numbers of old 17-inch screen sets off manufacturers' hands.

A MERCHANT BANK AT WORK

Financial Advisers

Since the last war, leading companies have made increasing use of the services of merchant banks as advisers in the broader affairs of company policy. By reason of our long experience, we are able to give valuable help in matters such as company reconstruction and amalgamations, financial reorganisation, and the raising of new funds whether by way of capital or by short or long term borrowing. Conversely, companies can benefit by consulting us on the most profitable and suitable employment of temporary funds which are surplus to their immediate requirements. We have under one roof experts on all aspects of company finance, who can be called upon at short notice to advise on a wide variety of problems, not least those which the existence of the Common Market may bring. It is our tradition to maintain close personal relationships with our customers on a principal-to-principal basis and we welcome enquiries on any financial question.

BIP BRITISH INDUSTRIAL PLASTICS LIMITED

WOULD IT BE BETTER IN PLASTIC?

Is the brick obsolete? No, never! Bricks built the Tower of Babel, and brickwork today is both fine-looking and functional. But how about plastic bricks? Wouldn't they be lighter on the hod, cleaner in the smog, even (dare we suggest) more durable?

It's happening already, of course. Not actual bricks (let's leave them alone); but in many other materials produced for the building industry plastics are proving their value, as sheets, blocks, coatings or infill foam.

British Industrial Plastics are keen to develop these new materials. What sort of thing? Architects and builders will be interested in a glassfibre streetlamp column, plastic moulds and shuttering for pre-stressed concrete work, and the admirable structural sheeting we make ourselves (this is an advertisement) called FILON. But every kind of manufacturer, in this age of prefabrication, will find a fountain of fresh thought at BIP: we have a staff to advise you (without charge) and another unit to help you design products (also free). We claim to know about these things because we process the raw material, build the press and tool plant and make our own range of products.

GO ON-ASK US!

WOULD IT BE BETTER WITH PLASTICS?

PLEASE GIVE US A PROD. We're out to help you, but our minds work faster if you'll tell us specifically what's worrying you. Or perhaps something ought to be worrying you. Is it good enough to boast: "Our cast-iron mangle, made in 1862, still going strong, what's wrong with cast iron?"

BRITISH INDUSTRIAL PLASTICS LIMITED, OLDBURY, BIRMINGHAM
A member of the Turner & Newall Group

to explain the recent upturn in imports, the full figures for trade in October shed some light on the sudden and disappointing jump in imports last month. The actual rise in the value of imports between September and October was £35 million, which adjusted for seasonal variations, the Board of Trade reckoned to have been equivalent to a true increase of £18 million. Fuels (mainly petroleum products) accounted for £6 million of this rise and basic materials for a further £6 million. Food beverages and tobacco and semi-finished manufactures each accounted for £3 million of the rise. Imports of finished manufactures increased in value, partly as a result of larger imports of agricultural equipment and office machinery, including computers. But after seasonal adjustment, the Board of Trade thinks they were again lower than the peak reached in August, and showed no measurable change from their level in September.

The increase in imports is too general to be explained by a temporary leap in imports of a few important items. That was the main hope when the preliminary trade figures were published last week. But where there have been large increases in the volume of imports, the rise is not entirely unexpected, or necessarily damaging. Among foodstuffs, imports of nuts rose sharply in October and were £400,000 higher than a year earlier. Because of the partial failure of Britain's apple crop, imports of apples rose sharply and were £500,000 higher than a year earlier. Imports of pears were £250,000 higher, and imports of all kinds of preserved fruit were £1 million larger. Tobacco imports in October increased very steeply; their value rose £7½ million to £24 million compared with £22.2 million in 1960.

Among basic materials, the chief rises in October to above the level of 1960 occurred in wool, cotton and other textile fibres. Stocks, particularly of wool, had been run down because of the previous low level of imports and a recovery was overdue. In

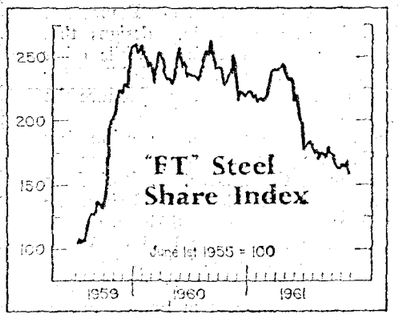
STEEL SHARES

Expecting the Worst

INVESTORS, for months past, have been taking an increasingly bearish view of steel shares and since April the *Financial Times* index of steel shares has fallen by as much as a third. This is not surprising given the progressively gloomier statements on steel output and steel stocks from the Iron and Steel Board. Up to March, stocks held by both users and merchants were still being built up, though at a much slower rate than in any quarter of 1960. But by March the turnround in stocks had begun and in the second quarter of this year steel production fell by two per cent. With steel users now prepared to hold much smaller stocks, production in the third quarter fell by 14 per cent. October's weekly output was about 23 per cent below last year's peak level, but part of this decline was due to the strike at the Steel Company of Wales.

However remote the possibility of the renationalisation of the steel industry may be, it cannot be ignored and this inhibits investors from basing their decisions exclusively on long-term prospects and forces them to think in terms of the short-run outlook. Their fears on this score have been underlined in a review of steel shares by a leading firm of London brokers, which argues that this is not a good moment to add to any stake in steel equities. Indeed, this firm of brokers believes that some of the steel companies may be forced to reduce their dividends in the rapidly approaching season of profit and dividend announcements and that it will take a much stronger revival of industrial activity next summer than seems likely at the moment for the companies to repeat in 1961-62 even the poor results for 1960-61 that they will be announcing in the next two or three weeks.

	Earnings 1959-1960	Earnings 1960-1961*	Dividend % 1959-1960	Price Nov. 23, 1961	Yield per cent
Colvilles	92·1	58	16	49/7½	6·45
Dorman Long	28·0	20	10	24/6	8·16
Firth Brown	40·6	35	12½	38/3	6·54
Lancashire	43·6	35	11	31/9	6·93
South Durham	49·5	38	12	23/-	10·43
Steel Co. of Wales	41·1	29	12½	30/3	8·26
Stewarts and Lloyds	59·1	43	15	36/10½	8·14
Summers	48·2	36	15	42/10½	7·00
United Steel	49·4	30	12·3†	38/6	6·39



* Brokers' estimate. † Indicated dividend.

The steel industry is continuing to spend heavily on capital account, but one indication of the change in its views on the medium-term outlook has already been given by the scaling down of some of the development plans (notably by United Steel at Appleby-Frodingham). But the commitment is so big that the steel companies have had to retain a much higher proportion of earnings than is usual elsewhere in the economy and a sharp fall in profits, the brokers suggest, could mean some reductions in dividends unless more capital plans are put into cold storage. John Summers and Dorman Long, they say, are the most vulnerable in this respect.

THE directors of Tube Investments and Guest Keen and Nettlefolds have already referred to the inadequacy of the price increase of one per cent granted to the industry by the Iron and Steel Board in June following the imposition of a tax on fuel oil in the budget, and it is clear that the spokesmen of the steel companies will add to the chorus of complaint about the narrowness of profit margins. The board's steel price structure is based upon an assumed operating rate of 90 per cent of capacity, but the heavy drawing on stocks in the past few months has been reflected in the reduction of this rate to about 77 per cent. Further substantial reductions in stocks in the fourth quarter of 1961 seem certain, but some steelmakers are hoping—perhaps optimistically—that by then the major steel users will have reduced stocks to what they will regard as adequate levels.

If the steelmakers' optimism is misplaced it is improbable that steel output in 1962 will reach this year's level, which in any case is likely to fall short of the original estimate of 24 million tons. On the other hand, the prospects for exports which take about 40 per cent of all steel supplies seem brighter. About one-half of the industry's output depends on gross capital formation (including stocks and work in progress) and until demand in the economy is more buoyant steel consumption is not expected to show much improvement. But capacity continues to rise and it should amount to about 28 million tons by the end of next year.

In all, it is not surprising that investors have been advised not to consider steel equities until the middle of 1962, when the prospect should be clearer. By then Britain's future relation with the common

market may be apparent. If Britain joins the common market the steel industry's prospects could be enhanced, for British steel is still cheaper than that produced by many of its competitors in Europe. But this margin of advantage is being whittled away, for coastal steel works in Germany and Italy are operating not only on imported ore but on cheap imported coal from the United States. There are thus doubts in all directions and this will depress the price of steel shares in the next few months. And even if the future does begin to look brighter by the middle of next year there is no guarantee that this will be reflected in a strong rally in steel shares, for some of the steel companies will have to raise fresh capital and the risk of renationalisation will loom larger in the stock market as the next general election draws nearer.

semi-manufactures, the big rise in imports between September and October was in non-ferrous metals. While the London Metal Exchange remains open to all, part of this increase might be involuntary. Stocks of lead and zinc held in London Metal Exchange warehouses rose sharply following heavy sales of foreign metal here. The rise in all imports last month to £378 million—the seasonally adjusted figure was identical—brought them up to their level in October, 1960. Seasonally adjusted exports rose to £311 million and the crude trade gap widened to £55 million.

VERTICAL TAKE-OFF

Carrot from Nato

MID-JANUARY is the closing date for the submission of bids to Nato for a vertical take-off fighter. As the time runs out, the aviation industries of Britain, the continent and the United States are concluding that discretion is the better part of competition. One after the other are coming together to form consortiums of various kinds for the purpose of submitting common bids. A decade's experience of Nato competitions has left aircraft companies sadder but more worldly wise. The object of holding the competitions is to standardise equipment throughout the Nato air forces; but experience has shown that neither the United States, nor France nor Britain is prepared to buy designs that originate in another country, while other Nato members expect to be subsidised for tooling their local factories to produce the winning design.

The idea of international consortiums has suggested itself to the companies as a means of preventing this kind of deadlock from forming yet again. Could the RAF or the French Air Force or the USAF turn down a fighter designed by the kind of Anglo-Franco-Dutch - German - Belgian-American consortium just formed by Hawker Siddeley in this country, Breguet in France, Focke-Wulf in Germany, Republic Aviation in America, Fokker in Holland and two Belgium aircraft companies? The answer of course is "Yes." Nevertheless, the same kind of reasoning is behind earlier agreements signed between Shorts in Belfast and Lockheed in America, and other Anglo-French, Anglo-German, Franco-German and Dutch-American consortiums. The companies reason that as members of a group they stand a better chance of getting sub-contracts than they would if they played a lone hand. But the most important long-term aspect of these agreements is that although at present they are little more than sales and licensing agreements like the British Aircraft Corporation's arrangement with the French companies Sud and Dacsault, they may eventually encourage companies to pool resources for the development of major projects. And vertical take-off is the biggest single challenge to face aviation since the arrival of the jet.

Battle Royal, Stage Two

THE Nato competition also carries the battle royal between Rolls-Royce and Bristol Siddeley into a bigger arena. These two companies offer the only effective engines on the market for vertical take-off, but their designs incorporate two completely different systems. The first round of the battle went to Bristol Siddeley, when the RAF opted for the company's single-engine system, in which swinging ducts blow the jets straight down for take-off and swing back to the normal horizontal position once the aircraft is off the ground. Rolls-Royce immediately started hawking its competing multi-engine system round the international market, keeping all the time a wary eye on the reactions of the RAF. The Rolls-Royce method of vertical take-off uses a bank of small, short-life jets for take-off only, and normal engines for normal flight. In France the formidable Dassault company, which works hand in glove with the nationalised company Sud Aviation, has opted for the Rolls-Royce system with some hope of backing from the French Air Force. So has the American Lockheed company, in its consortium with Shorts, which did most of the development flying of the Rolls-Royce system. Other companies in Germany and Holland, however, have chosen the Bristol-Siddeley method and a good deal of Hawker Siddeley's experience in building for the RAF is likely to go into the designs that these companies are submitting in their consortium with Hawker Siddeley.

The stakes for Britain are therefore exceptionally high, and for Rolls-Royce perhaps the highest for which the company has ever played. If Nato rejects the designs using the company's engines, the future for Rolls-Royce's vertical take-off work is problematical, unless the company does a quick about-turn and redesigns its engines along the lines pioneered by Bristol-Siddeley. The issue is far from clear, because there are already complaints about the relatively modest performance specified both by Nato and the RAF, the winning design may still not be acceptable to the individual air forces of Nato members.

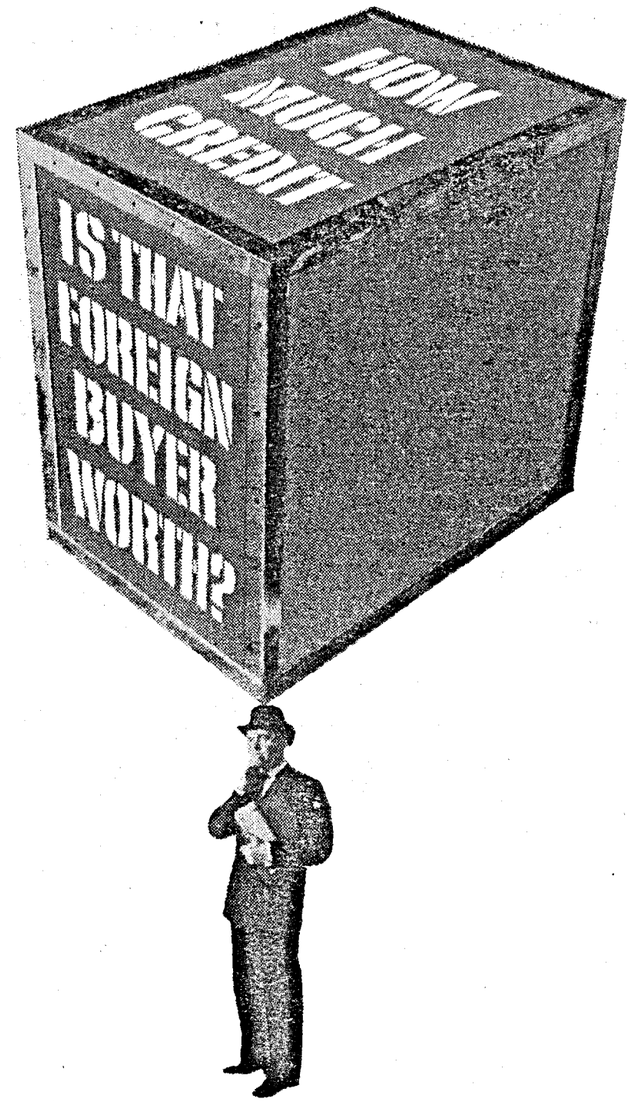
MACHINE TOOLS

How Old is Too Old?

THE survey that McGraw-Hill has made of the age of machine tools in British industry shows, in its provisional returns, that 65 per cent are more than ten years old. Though this might superficially be regarded as evidence of the backwardness of British industry, a similar survey that McGraw-Hill has made in the United States shows that there is little difference between the two countries in the average age of machine tools: and Continental industry seems to have a similar liking for aged equipment. Possessing old machine tools does not, of course, necessarily mean that the oldest are frequently used; certainly they are likely to be used less intensively than more modern tools. These will have to carry capital charges that the older machines will be free from; and the fact that they are depreciated is one reason why companies will cling on to them. They are the cheapest means of producing extra output; and wherever production is liable to fluctuate, there is a strong economic case for retaining depreciated equipment. Electricity generation is the outstanding example; peak loads are most cheaply met from old, depreciated power stations in which the running cost may be many times that of a modern station.

Another explanation for the retention of old equipment may simply be that industry does not believe that new equipment is sufficiently superior to the old machines for its use to reduce production costs. Inflation and the consequent rise in the price of machine tools in the last twenty years will have helped to produce such a situation. Whatever the reason, machine tool makers cannot be pleased to find industry so reluctant to change to their latest products. One must hope that they regard the facts revealed by this survey as a spur to make better machines rather than as an excuse to demand greater subsidies for investment.

MAN-MADE FIBRES



A Fresh Start

BRITISH Enka's rayon venture ended disastrously last month with a disclosed loss of £200,000 on trading in the first eight months of this year, bank overdrafts and loans swollen to £900,000 and a bid at par from Courtaulds for its 5s. shares. Fulfilling a promise made last month at the time of the Courtaulds bid, the Netherlands group, Algemene Kunstzijde Unie, which owned 55 per cent of British Enka's capital, is offering that subsidiary company's minority shareholders an equivalent stake in British Enkalon, its new nylon venture in the United Kingdom. Shareholders have the right to subscribe for two 5s. shares in British Enkalon at 5s. 6d. each for every share in Enka they formerly held, and dealings in the new shares are expected to start next Thursday.

Enka shareholders therefore have the unusual opportunity of participating in this nylon venture from the "green field" stage. Plans for the factory near Antrim, Northern Ireland, for which a £2 million grant is available, include a first stage to be completed in 1963 at a cost of £7.3 million and a doubling of capacity for an added cost of £4½ million in the second stage, which is scheduled to be completed in 1967. A gross profit of about £500,000 is expected in 1964, and a maiden dividend might be paid for 1965 if the profits warrant it.

The type of nylon produced at Antrim will be nylon 6, which the group thinks has better prospects in the expanding warp knitting sector of the textile industry than the commoner nylon 66. Nylon is the most im-

PROBLEM No. 2

FIND OUT FROM E.C.G.D. E.C.G.D. can give you up-to-the-minute credit ratings on 140,000 buyers in 170 markets throughout the world. Phone us up before you close that export deal and we'll suggest the right credit ceiling for your customer: and we back our judgement by insuring your business against default in payment (and a lot of other risks as well) throughout the entire credit period. Backed by E.C.G.D. you can take on new customers just as confidently as you have been handling your old ones.

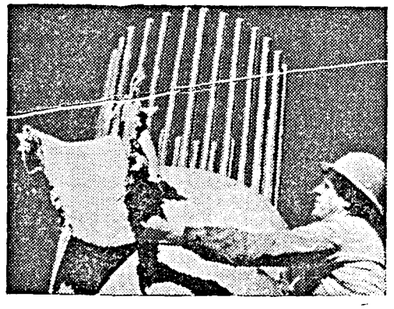
CRG 48

AUSTRALIA/country, continent . . . a world of opportunity



For Melbourne's new £3 million bridge, paperboard moulds 24 feet long are being used to cast the 60 massive steel and concrete columns. Foundations for these columns go as deep as 180 feet. The picture below shows a mould being stripped away.

AUSTRALIA PUTS PROGRESS TO PAPER

Paper production in Australia has almost doubled in less than 7 years. It is a vigorous industry—as is testified by the £A20 million shareholders' funds which have been invested since 1945. Such large-scale expansion is evident throughout the country. Current projects will incur £A14 million expenditure on new mills and plants, and a new £A5 million paperboard mill commenced production last year. Australia is confident of a continuing expansion in her industries. In such ventures she values her long-established partnership with Britain. During the last decade, Australians have attracted £A800 million from British, American and European investors. Australia is devoting 25% of her gross national product to investment in fixed capital.

Representatives of the Australian Government in the United Kingdom will be glad to provide information about opportunities in trade, investment and migration. Further information can be obtained at Australia House and at the Offices of Agents General for the Australian States.

portant of the non-cellulose man-made fibres and is expanding rapidly. World production rose by 18 per cent last year. It is not, however, expanding as rapidly as the acrylic fibres (Courtelle, Orlon, Acrilan, etc.). Shareholders who burnt their fingers with rayon, might, understandably, be wary of again backing the wrong fibre. World capacity for producing nylon is expected to rise from 876 million to 1,520 million lb between 1960 and 1962, so the potential market for nylon will not lack competition.

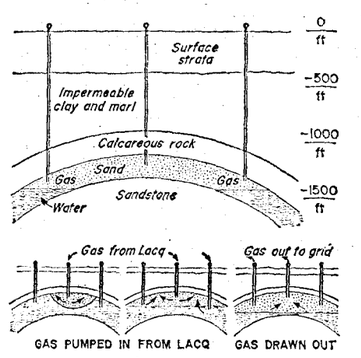
Meanwhile, according to the Commonwealth Economic Committee, there has been some improvement in world production of rayon in the third quarter of this year. Output in the United States was 13 per cent higher than a year earlier, and Courtaulds increased the price of its rayon staple by 4 cents to 27 cents a lb. In the United Kingdom, the decline in output of all man-made fibres was halted in the third quarter. Exports of filament yarns have increased, but so far there has been no marked recovery in demand at home.

SHIPBUILDING

Concentrating Research

ESTABLISHMENT of the British Ship Research Association follows the recommendations of the Department of Industrial and Scientific Research's inquiry that the arrangements for research in the industry were inadequate and should be reconsidered. The new body will combine the work of the existing British Shipbuilding Research Association with the research side of Pametrada (the Parsons and Marine Engineering Turbine Research Association) activities. The design of turbines will be hived off to a new organisation, controlled by the turbine makers and not receiving a DSIR grant, which will retain the name of Pametrada. This move helps to meet the DSIR's criticisms of combining design and research in the same organisation, which, it suggested, reduced the amount of research that was done and encouraged shipbuilders to retain their own turbine-making facilities.

The new Ship Research Association intends to extend the scope of its research beyond that which its constituents have done. Initially it plans to spend £1 million a year, £185,000 more than the two existing research associations spent in 1960—which included Pametrada's design work. It hopes that government will give the maximum financial assistance, which, "in the opinion of the industry, is vital to its success." Having shown that they can be good boys, they now expect their reward. Talks with the DSIR have started, and the new association should be legally formed by the spring of next year. By then the DSIR should



The Earth Hath Bubbles

At Chilcomb, near Winchester, and a few other places, Britain's gas industry is investigating the use of underground storage in permeable strata of the kind that might, if we were luckier, contain natural gas or oil. These, plus a few minor finds of natural gas, are the main results from several years' exploration for gas in this country. Under Chilcomb, about 750-850 feet down, there is a greensand "aquifer," or permeable layer containing water, in the shape of an elliptical anticline, which will take about 10,000 million cubic feet of recoverable gas (one has also to put in a "cushion" of gas which never comes out of storage). As yet this kind of underground storage is not actually in use in Britain (bringing it into use may indeed involve legislation). But in many other parts of the world it is—for example at Lussagnet in South-West France, of which a special correspondent gives the following account:

THE endearing thing about Europe's largest gas-holder is that it is invisible. At ground level and above, Lussagnet (in the department of Landes) is a village much like any other. Its inhabitants grow grapes and maize, rear poultry and pigs, poison themselves occasionally with mushrooms gathered in the surrounding oak-woods, and make a good *eau de vie*. But below its surface—1,400 feet below, to be precise—lurks a huge gas-bubble twice the size of the Kremlin. For Lussagnet stands on an anticlinal dome of highly porous sand roofed with impermeable rock and clay and sealed off by water; and into this dome French engineers have pumped over 600 million cubic metres of purified methane. Within the next few weeks the bubble will swell to its maximum volume, 700 million cubic metres—a maximum imposed not by the capacity of the dome but by a technical decision to keep the pressure of the gas inside it below 65 kilograms per square centimetre.

The methane is piped to Lussagnet from the natural gas-field discovered and exploited by the state-controlled *Société Nationale des Pétroles d'Aquitaine* at Lacq, 33 miles to the south. Lacq's estimated reserves are 280,000 million cubic metres, and the French authorities appreciated from the outset that without adequate storage facilities its development would be hampered. In 1956, eighteen months before large-scale production started, SNPA geologists set to work exploring promising anticlinal structures along the axis the main northbound pipeline would follow. After investigating two unsuitable sites, they pronounced Lussagnet satisfactory, and within a year 80 million cubic metres of refined gas had been stored there.

Production was thus able to go ahead without waiting for completion of the 1,800 miles of pipeline that now link Lacq with Bordeaux, Nantes, Paris, Lyons and other industrial centres; and it became possible to design the plant installed at Lacq to work round the clock at full capacity, irrespective of hourly or seasonal fluctuations in consumer demand. As a result, in less than four years

Lacq has revolutioned the French gas industry, and 46 conventional gasworks have been closed down.

THIRTY-FIVE "wells" have been sunk into and around the storage area at Lussagnet, 23 for the input and outlet of gas and 12 for observation of the pressure and temperature of the bubble, and movements of the water-table. The methane suffers no chemical change underground; only dehydration is necessary before it is fed into the national grid. Lussagnet's storage capacity is equal to that of 2,000 conventional gas-holders, yet a shift of six is sufficient to man the whole installation.

The basic techniques employed were pioneered in the United States. Coal gas has for some years been stored underground at Beynes, near Paris, and in the Ruhr; and underground reservoirs for natural gas are being brought into use in Italy and Russia. Near Marseilles a cavern is being refrigerated and equipped for the storage of Saharan gas. But Lussagnet is undoubtedly the most important achievement of its kind in Europe.

have decided how much it can afford to give; in 1960 it gave the two old associations only £130,000 between them.

RACING CARS

Why Purchase Tax?

THE Board of Trade's decision to stop refunding purchase tax on formula one racing cars is surprising. It will save only about £50,000 a year: racing cars are one of the cheaper methods of publicising British goods. Since 1950 the Board of Trade has repaid the makers the tax that they paid when the car was completed. Now it says that this concession was only intended to help that section of the industry making larger cars to get on its feet; and it considers that this purpose had now been achieved—though several of the firms affected in 1950 no longer exist, and several of those affected now had not been founded in 1950. The effect of adding £10,000 to £20,000 to the annual costs of a racing team could be crippling; none of the existing British manufacturers feels it could continue racing on the present scale if it had to pay this. They are therefore looking for ways around the regulations. One would be to complete the cars on the Continent and keep them there, never competing in British races; this would mean losing much revenue from appearance money, but it would expose the government to ridicule. Or the cars could be owned by a foreign company, and raced under foreign colours. A more hopeful move might be to challenge the legality of charging purchase tax on any racing car, and this will be done if the government does not relent. Purchase tax is supposed to be paid on cars designed for the carriage of passengers, and meeting the requirements of the Road Traffic Acts. A racing car can hardly be said to do so; makers therefore feel that they have a strong case to argue.

MOTOR CYCLES

Unhappy Prospect

THE motor cycle industry faces its hardest winter since the end of the war. No manufacturer is likely to operate at a profit this year; and other redundancies may follow Triumph's threat to sack 100 men. This is the consequence of the restrictions that the Government imposed on hire purchase in April 1960, plus a natural reaction from the boom that had characterised 1959. Sales this year have been little different from those in the latter months of 1960, but dealers were then building up stocks. They continued doing so until last summer, in the hope that sales would then rise; as these hopes were disappointed, they are entering the winter with heavy stocks, and therefore have stopped ordering from the manufacturers. Their mutual relations have been further complicated by the ending of the old distribution agreement, which was withdrawn before the Restrictive Practices Court could sit in judgment on it. The dealers, encouraged by the Motor Agents' Association, took the opportunity of making new agreements with the manufacturers to demand higher discounts. These the makers were naturally reluctant to concede; higher prices are hardly the way to raise sales. But about half have finally granted a small increase in margins, the rest maintaining the old level.

Prospects for next year are more than usually unsettled. But there are some reasons for expecting higher sales; the bunching of hire-purchase contracts in 1959 means that many will be expiring in 1962, as is the case with cars. Roughly half of all motor cycles are sold on hire purchase, though less than a fifth of all cars are; so this factor may be more important for motor cycles. And if there is a recovery in car production, motor cycle makers expect the workers in the motor industry will have more cash to spare for luxuries. Ultimately, however, the industry is hoping that two bad years will be followed by at least one good year; and that new models—such as the lightweight scooter that Triumph is developing—will help to keep the number of motor cycle owners growing.

SHORTER NOTES

Raleigh announces that it is closing some of its cycle factories in Birmingham which employ 1,500 men. In the last financial year, the sales of this section of Tube Investments fell by 12½ per cent, and its profits by 43 per cent.

★

The New York Stock Exchange has approved the listing of the shares of both Unilever Limited and Unilever NV and dealings are expected to start on December 12th. The group has undertaken to publish quarterly reports from 1964.

★

The Board of Trade has announced that it is considering ICI's application for an anti-dumping duty on imports of polythene from America. It invites interested parties to make written representations by December 8th, and adds that the application may be extended to cover other countries supplying polythene to Britain at prices that appear to be subsidised.

★

Because of tax complications the directors of J. and F. Stone Lighting are not proceeding with their plan to distribute free shares in the newly formed property company which will now be a wholly owned subsidiary of the group. They propose however to make a one for two scrip issue and expect to pay a dividend of 30 per cent on the increased capital. This is equivalent to 45 per cent on the present capital compared with the 35 per cent paid for the year to June 30th.

★

The market has been surprised by news of a £1½ million rights issue from Consolidated Gold Fields of South Africa and the reasons for the issue will be made clear at the annual meeting on December 14th. The terms, one for ten at 30s., make the rights worth about 2s. 9d. a share and with the forecast of a maintained dividend of 5s. a share the ex rights yield is 8½ per cent.

Great Universal Stores has sold its 37½ per cent interest in the Marble Arch hotel company, Mount Royal, to Mr Maxwell Joseph, the chairman and managing director of Mount Royal. At a price of 12s. 6d. a share the deal involved about £2¼ million.

★

The International Development Association has granted credits totalling $22½ million to India to increase agricultural production.

★

The Dresdner Bank, of Germany, has acquired shares in the Industrial Credit and Investment Corporation of India.

★

The directors of Lodge Plugs have announced that an offer has been made for the whole of the issued share capital and stockholders have been advised not to sell their 5s. units until they receive a further statement. Since the announcement the 5s. units have gained 5s. 6d. to 18s. 3d.

Mr. ERIC TURNER REVIEWS GROUP'S ACTIVITIES AND DEVELOPMENTS

The 100th annual general meeting of The Birmingham Small Arms Company Limited will be held on December 14 in Birmingham.

The following is an extract from the circulated statement of the Chairman, Mr. Eric Turner:

My colleagues and I are a little disappointed by the outcome of the year's trading. The figures for the first three or four months were encouraging but increased costs of production throughout the Group, together with the depressing effect of hire purchase restrictions on the sale of some of the Group's products, resulted in a marked fall during the latter part of the year. Even so, some of our activities, notably machine tools and steel, showed improved results, but these were insufficient to offset the reductions in others.

The Group profit before taxation of £2,932,745 is slightly less than that forecast in the interim statement and shows a reduction of some £485,000 from last year's figure, a fall of 14%, although the turnover of the Group slightly exceeded that of the previous year.

In present conditions your directors have decided to recommend a dividend of 7$\frac{3}{7}$rds% making 11$\frac{3}{7}$rds%, (same) less tax, for the year.

Although, taking the year as a whole, our three motor cycle companies (Ariel, B.S.A. & Triumph) enjoyed satisfactory sales, the position in the home market has deteriorated appreciably in the last few months.

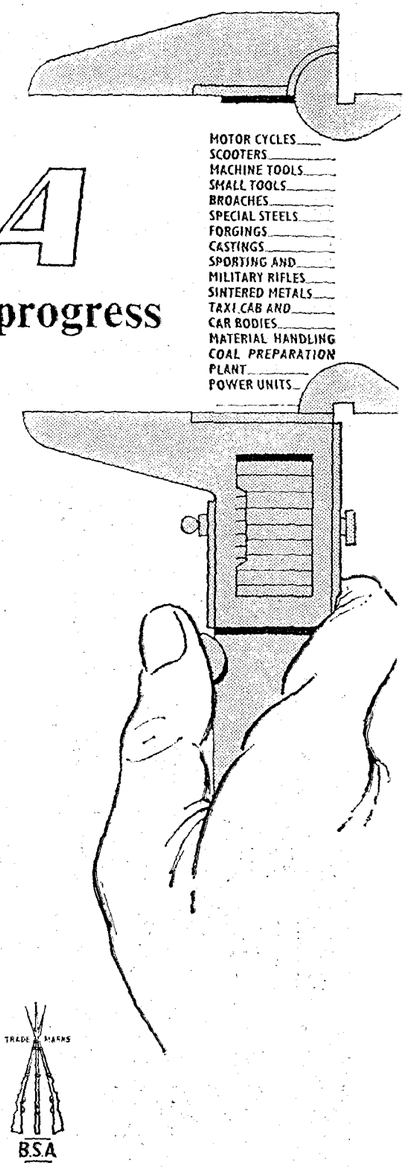
Export business is still substantial, although on a slightly reduced scale, partly because of the trend of world trade and partly because of import restrictions imposed by an increasing number of overseas governments. Nevertheless, there is a great variety of markets, capable of expansion, which are being energetically pursued by the various companies.

Scooter sales were particularly disappointing. B.S.A. and Triumph scooters are considered by the trade to be amongst the best ever produced, as well as competitive in price, and I am therefore confident that we shall find that a substantial proportion of future scooter sales will come our way.

The most important event during the year was the acquisition last January of The Churchill Machine Tool Company in Manchester. Many of the Churchill company's activities will be strengthened by its inclusion in the B.S.A. Tools Division, which is now probably the second largest machine tool organisation in the United Kingdom.

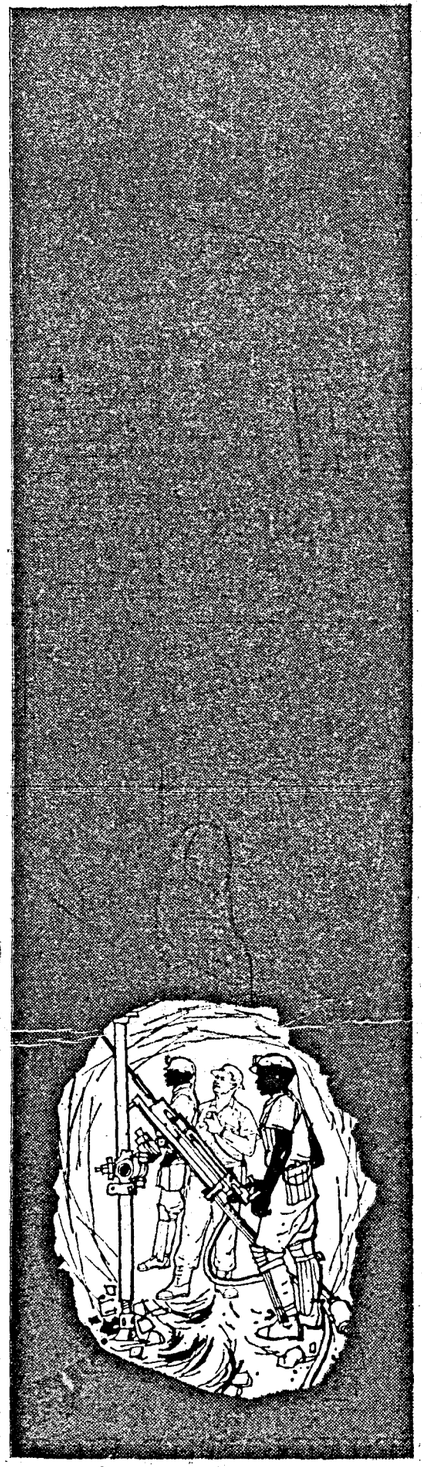
The demand for machine tools remained at a high level throughout the year and was in excess of our capacity to produce, in spite of the additional facilities which were provided. Excluding new acquisitions, the turnover for the year was up by 25% on the previous year, and we are expecting a still larger output in 1961-62.

The trading profits of Jessop-Saville Limited show a gratifying improvement over those for the previous year but are still some way below peak figures in spite of the fact that sales during the last financial year were the highest in the history of the company.



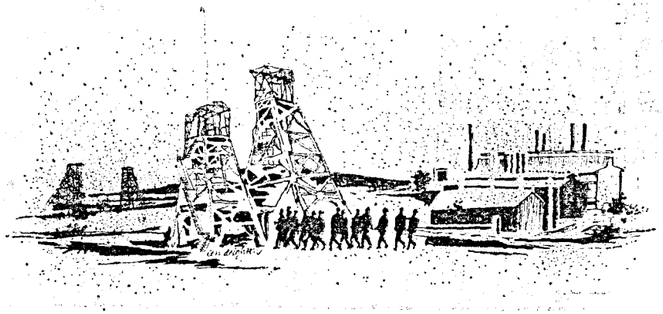
The Statement then reviewed the activities of the other units of the Group, and continued:

PROSPECTS OF THE GROUP



Trading conditions in the engineering and steel industries are at present patchy and I do not see any sign of an overall improvement in the immediate future. The machine tool companies still have full order books and we can anticipate satisfactory results from them. On the other hand, the order position for motor cycles, steel and certain general engineering companies is causing some concern and it seems likely that they may have an indifferent year.

In all the circumstances, it is impossible to forecast with confidence the results for the current year, but it seems to me that if there is no general improvement soon in some of the fields in which we operate, it will be difficult to maintain last year's figures and indeed it would be wise to anticipate some reduction but not, I hope, to a serious extent.



You will perhaps expect me to make some reference to our prospects if the United Kingdom becomes a member of the European Common Market. My broad assessment is that whilst Group prospects will not be improved in the early stages, I do not anticipate any disastrous consequences. Everybody who has the best long-term interests of U.K. industry and its employees at heart must recognise, if he does not do so already, that some of our industries are no longer competitive in price, and consequently it is essential to call a halt to the policy of granting wage increases without correspondingly greater production.

B.S.A. GROUP—30 COMPANIES SERVING THE WORLD

GROWTH OF AN INDUSTRY

Last month marked the 30th anniversary of the beginning of copper production at Roan Antelope, the first of the present mines on the Copperbelt of Northern Rhodesia to come into production. During those 30 years Roan Antelope has produced over 2 million tons of copper.

This milestone in the mine's history is referred to by Sir Ronald L. Prain, Chairman of the Rhodesian Selection Trust Group of Companies, in his annual statement to shareholders, extracts from which are reproduced on this page.

Roan Antelope still has among its employees men who were working on the mine when it cast its first copper in 1931. In congratulating them, and all others who have helped to make Roan Antelope the great mine it is today, Sir Ronald records that there are now 22,500 employees in the group as a whole, 4,000 Europeans and 18,500 Africans. Since operations on the Copperbelt began some 1,400 employees have completed 20 years' service and of these 800 are still working for the group. More than 1,000 of these 20-year "veterans" are Africans.

Looking to future development in the group, Sir Ronald records good progress with the expansion programme in the western section of Mufulira, R.S.T.'s biggest copper producer. This scheme is designed to add about 50 per cent to the mine's productive capacity and is expected to be completed in June next year. The Mufulira West scheme is one of the two largest expansion schemes in the copper industry and is a larger project than any of the new mines which are at present under development in various parts of the world.

After outlining the financing arrangements for this £14 million scheme, Sir Ronald comments: "I trust that shareholders will consider it satisfactory that this major expansion scheme looks like being achieved without calling on shareholders to subscribe any new money, and that the prospects are that the scheme will be commissioned on the original time schedule. I also hope, in a year's time, to be able to confirm that the scheme will have been accomplished within the original cost estimates".

Production of copper from the group's three mines during the year which ended on June 30 last was 202,041 long tons compared with 217,057 long tons in the previous year. This reduction was due to the policy of curtailing production to which I refer later. The average price received for copper was lower than the previous year. Sales amounted to £46,383,800 compared with £53,328,539.

Operations showed a total profit of approximately £15 million before making reserves or allowing for taxation, compared with the corresponding figure of approximately £20 million in the previous year.

The Copper Market

On the production side of the international market the main features of the past year were the relative absence of interruptions due to strikes in the producing areas, and the degree of voluntary curtailment of either production or sales which was undertaken by most of the major producers. In referring last year to our decision to cut production at the rate of 10 per cent I mentioned that the disequilibrium between production and consumption of primary copper in the free world was due less to a falling off in consumption than to steadily increasing production, including the bringing in of certain new mines.

During the past year the consumption of copper was satisfactory. In fact, 1960 was a record year, and the increase in consumption, especially in Europe, was at a rate which had not previously been equalled in any twelve months' period.

As a result of the voluntary curtailment on the one hand and the satisfactory consumption on the other, the year saw an improvement in the balance between production and consumption, though at the end of the financial year there was still some degree of over-production. The comfortable supply position was reflected, as I have already mentioned, by a somewhat lower average price on the London Metal Exchange. The variation on the Exchange was actually from £260 10s. 0d. per ton to £216 10s. 0d. per ton, with an average of £232 14s. 5d. per ton. This represents a range of £44 per ton which compares with a range of £70 per ton in the previous year.

Since the end of the financial year there have been strikes in Chile and U.S.A., and political troubles in or near the African producing areas. Despite these features the London Metal Exchange price in the first quarter of this financial year remained relatively steady at an average of £230 per ton and at the time of writing is £230 15s. 0d. per ton.

Looking forward, first on production, much will depend on whether supplies are to be affected in the coming months by further strikes in any of the producing areas. It is also of interest to note that many of the large-scale expansions or new enterprises which were embarked upon some years ago under the impetus of the high copper prices prevailing in the mid-1950's have now been completed. Those that remain to be completed are all scheduled to be finished within the next two or three years. In the absence of any announcements as to fresh mining activities, it would appear that the great increases in copper production which we have seen since the mid-1950's may not be equalled again in the next few years, though I have no doubt that taking a longer view the copper mining industry will continue to expand in line with requirements.

As far as consumption is concerned, there is no reason to suppose that it will not continue to be satisfactory, especially on the basis of the present level of prices which is conducive to continued growth in copper usage. Much will depend however on general business activity in the United States and the United Kingdom in the coming winter. Most producers would welcome the opportunity for a return to full production or sales, and no doubt will continue to watch the position closely. In my opinion decisions affecting curtailment should be based on the facts of the statistical position rather than on any short-term price movements.

Customers for our copper now number 61 covering 19 countries.

Federation of Rhodesia and Nyasaland

After outlining political events in the Federation in the past year, Sir Ronald continues:

In the field of the economy, while it has been inevitable that the position has suffered from political uncertainty, it must not be thought that investment in the country is at a very low ebb. Borrowing from abroad dropped substantially in 1959 and 1960 and is likely to remain low in 1961, but overall investment in 1960 was in fact slightly higher in real terms than in the first year of Federation. This was due largely to the investment of local savings, including continued heavy investment by the mining companies. Even at the present level investment is sufficient, by international per capita standards, to provide an increasing standard of living for a rapidly growing population.

Moreover, the Federation has what is, by African standards, a sophisticated banking and financial system which reflects the relatively advanced industrialisation of these territories as compared with others in tropical Africa. It is necessary to appreciate this degree of industrialisation if investors are to understand some of the political problems which it raises by comparison with the far less developed countries in tropical Africa with a predominantly agrarian economy. The banking and financial system to which I have referred should prove of considerable help in maintaining the economy at times such as the present, and thus indirectly in assisting a difficult political situation by ensuring that the maximum buoyancy is preserved in the economy.

The inter-relationship of politics and the economy is axiomatic. In the last two years, however, another factor has entered into our considerations. While it is obvious that political events in Africa as a whole will have a profound influence on our affairs here, it is only recently that violent changes have occurred in countries which border the Federation. In particular the situation which exists in the Congo has caused the gravest uneasiness in the territories of the Federation. It is too much to hope that there can be a quick solution to the problems of the Congo, and until more is known of this it will be necessary to qualify one's assessment of the immediate future of events here. One can only express the hope that the political solutions in the Congo as well as in the Federation will be based on the realities of a continent which is emerging into political consciousness, under world pressure, at a rate so much faster than anything which applied in the past. The determination of indigenous peoples to assume an increasing share in the political affairs of their countries is one of the strongest human and political forces of the 20th century, perhaps the outstanding historical feature of our times. It is a factor which must be faced squarely, and dealt with realistically if changes are to occur on an orderly basis.

As far as our companies are concerned, as I have stated in earlier statements, we take no part in party politics, and we support no political party. We regard our main job as that of producing copper with the maximum efficiency under our conditions, and thereby giving the greatest possible assistance to the economy which depends to such an unusual extent on the mining industry. Our industry has, I think, a record of moving with the times. It has been in the forefront of creating full opportunity for employees, irrespective of race, to advance, and has given practical expression wherever possible to the concept of racial partnership on which the Federal constitution is based.

I have tried in previous years to show that the copper mines of Central Africa have become a vital part of the structure of modern civilisation and that disturbance to their operations would not only be a disservice to the world industries which they serve, but also a disaster to the countries where they operate. The prospects of the copper market will call before long for a further opening up of the great reserves which still exist in Central Africa. Interference with these mining operations, whether by physical, political or fiscal measures, would prejudice the chances of obtaining the capital which will be essential for such expansion, for these countries have but limited internal resources.

I firmly believe that both European and African political leaders here are fully aware of the consequences which such interference would bring, and that they realise the great importance of maintaining their country's investment status. It seems therefore reasonable to expect that once the new political patterns have emerged in the next year or two there will be a renewed incentive making for the revival of overseas investment, based on the realisation that the continuance and expansion of profitable mining operations must be the first consideration of governments if the future prosperity of the people who live in Central Africa is not to be seriously retarded.

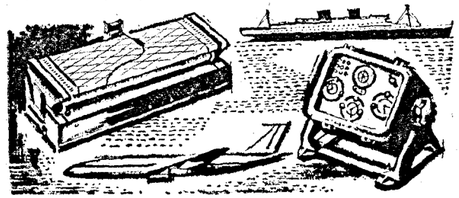
THE
DECCA
RECORD COMPANY
LIMITED

REPORT '61

TRADING RESULTS BEST IN COMPANY'S HISTORY



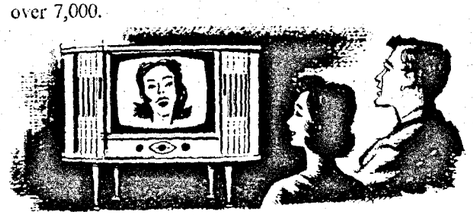
Sir Edward Lewis (Chairman) at the Annual General Meeting of The Decca Record Company Limited:

The balance from Trading Account which amounts to £3,796,000 shows an increase of £328,000. Profit before taxation amounts to £2,310,000, an increase of £143,000.

These results, which are the best in the Company's history, will I am sure be regarded as highly satisfactory, particularly as they cover a period of acute depression in the television industry.

After charging taxation and tax equalisation, the net profit amounts to £1,249,000 (against £1,261,000).

Consolidated turnover for the year to March 1961 at £24,500,000 was less than last year by some £700,000 due entirely to the fall in the sales of television receivers. All other main sections of the business showed an increase, in particular gramophone records where we fully participated in the industry's growth. Exports reached a total of £7,190,000.



We regard this figure, amounting to about 30% of total sales, as most satisfactory.

Our recording department has gained further remarkable successes; particularly in the opera field with outstanding recordings by Joan Sutherland, Tebaldi, del Monaco, Birgit Nilsson, Kirsten Flagstad, George London, Siepi, Bastianini, Fernando Corena, Della Casa, to name but a few from our world famous catalogue of some 60 complete operas.

Our turnover and profits in the North American market were fully maintained—in areas where competition is so fierce and where the costs of selling are particularly heavy.

All sections of the Navigator division have shown a substantial improvement in trading volume with total marine contracts at home and abroad now totalling over 7,000.

Decca Radar had another successful year; total marine orders have now passed the 11,000 mark. Major military, defence and civil aviation systems have been carried out on a world-wide basis.

The current year is going well. Some slackening in the demand for 45 rpm records has been offset by an increase in the sales of LP records and turnover is ahead of last year. We continue to account for more than 50% of the total export sales of records from this country. Sales of our American and Canadian subsidiaries have increased as have also those of our associate companies in Germany and Italy. Better results are expected from our radio and television activities.

Expansion of our Navigator and Radar activities has continued during the current year and group turnover is up for the first six months.

Unless there is a marked change in conditions at home and abroad we expect another satisfactory year's trading and I need scarcely add that it is our constant endeavour to maintain our record of progress.

The total dividend of 2/4 for the year was approved.

DECCA *helps so many people*

...in so many ways

ASSOCIATED BRITISH MALTSTERS

UNPRECEDENTED DEMAND FOR PRODUCTS

The general meeting of Associated British Maltsters Limited will be held on December 11th in London.

The following is an extract from the circulated statement of the chairman, **Sir Nutcombe Hume, KBE, MC:**

Last year's profit of £934,801 was £174,653 greater than in the previous year. During the year the issued capital was increased by the issue in January 1961 of 2,271,100 shares for cash at 12s. each and in April by 257,000 shares as part payment for the share capital of J. M. Collett & Co. Ltd. Your Directors recommend a final dividend of 10 per cent, thus increasing the total dividend from 12½ to 15 per cent but with a bonus reduced from 5 per cent to 2½ per cent: so that the total distribution remains the same as last year at 17½ per cent. Your Board consider that they should pursue a cautious dividend policy because there is much capital expenditure still to be met and they consider it essential that a substantial proportion of it must be met out of retained profits.

The higher profit arose largely from an unprecedented demand for our products from all sections of our trade. Despite relatively bad weather, consumption of beer exceeded expectations and in order to meet our customers' heavy demands for malt we had to push our productive capacity almost beyond its limit.

Throughout the Group the problem of 1960/61 was to find enough capacity to meet our engagements and the pressure in 1961/62 will also be severe. Nevertheless we expect it to be an easier year in which to give our customers what they want, because the quality of this year's harvest is considerably better than that of last. In consequence we have brought into effect a scheme we have long planned, of offering a quantity rebate to customers in the English brewing trade who give us exceptionally large orders and are prepared to take delivery evenly over the year. I am very glad to report that our scheme has been well received.

Not only will our big new malting at Wallingford come into full use this year but we are increasing the capacity of our Knapton malting and have built a battery of storage silos at Bury St Edmunds with a present capacity of about 65,000 quarters. If the demand for malt remains at its present level we shall be faced with the necessity to build yet another factory which will probably be alongside our silos at Bury St Edmunds.

The Export Company contributed last year the same profits as in the previous year but is facing increasing difficulty because foreign exporters of malt are subsidised by their Governments. We should hope to benefit from Britain's entry into the Common Market, but that is most unlikely to contribute anything in the current year.

STOTHERT & PITT, LIMITED

The seventy-eighth annual general meeting of Stothert & Pitt, Limited, was held on November 16th at Bath.

Mr R. A. Riddles, CBE (the Chairman) presided and, in the course of his speech, said:

Although all departments were fully employed during the year the actual financial result of our trading does not this year reflect the amount of effort put in by those working in the business. The trading margin for the year leaves us with a balance of £737,395 from which there falls to be deducted £48,310 in respect of out-of-pocket costs of flood damage in addition to the provision of £329,600 for taxation.

The current level of turnover shows an improvement on last year, but although our order book, particularly in the crane section, has been well maintained, we are faced with many problems.

In the export markets of the world the battle for survival is becoming increasingly severe and the element of British preference which formerly existed, partly due to tradition and sentiment, is now being replaced by a tendency towards world tendering under conditions which are not always as equitable as they might be. Of course we have export hopes and prospects. However, I would be failing in my duty today if I did not warn you that the years immediately ahead will not be easy and we shall have to work harder for less reward.

The report was adopted and a total distribution of 20 per cent was approved.

financing the growth of **SMITHS**

	1951/2	1960/1
Sales	£14,300,000	£38,400,000
Capital Employed	£7,900,000	£18,200,000

In his annual Statement to shareholders, Mr. Ralph Gordon-Smith reviews the source and disposition of Smiths' funds over the ten years, 1951/2 to 1960/1.

Source of Funds	£ million	Funds Utilised	£ million
Retained profits	10½	Expenditure on fixed assets	14
Depreciation	7½	Increase in working capital	6½
Miscellaneous	1	Acquisition of outside interests and miscellaneous	1
Reduction in cash balances	2½		
	21½		21½

The Chairman points out that, in contrast to the £10½ million of ordinary shareholders' money retained, no money has been otherwise raised to finance expansion.

The Board's policy will be to restore a more appropriate balance, having regard to the pattern of Smiths' business, between fixed and equity capital; and this will be achieved by the raising of money on fixed interest terms.

A copy of the 1961 Report & Accounts, which includes the Chairman's Statement and a Product Review, may be obtained from the Secretary.

HOLDERS INVESTMENT TRUST

NET PROFIT EXCEEDS £1,570,000

PURCHASE OF WILLIAM HILL (PARK LANE)

MR LIONEL BARBER'S SPEECH

The twenty-eighth annual general meeting of Holders Investment Trust, Ltd., will be held on December 14th at Winchester House, Old Broad Street, London, E.C.

The following is the circulated statement of the chairman, **Mr Lionel Barber, FCA:**

The Accounts of the Group for the year ended July 31, 1961, include for the first time the profit derived from the acquisition, as a wholly-owned subsidiary, of William Hill (Park Lane) Limited. The profit derived from that subsidiary is for the period of 14 months from June 1, 1960, and amounted to £613,779 which, with the profits of the Group from all other sources, brought the total net profit before taxation to £1,571,258.

DECLINE IN TURNOVER ARRESTED

Although the turnover from the businesses carried on by William Hill (Football) Limited and William Hill (Glasgow) Limited showed a fractional increase over that of the previous year, this would not have been so had no adjustment been made during the course of the Football Season by the inclusion of an additional quotation and an increase in odds on the Nothing Barred List of the Fixed Odds Football Coupon. This offer undoubtedly arrested a decline in turnover and although the gross profit earned during the Season was below average, it is fair to say that the additional quotation and the increased odds offered did not adversely affect the percentage of gross profit earned; moreover, it succeeded in reversing the turnover trend with the result that at the end of the Season all leeway had been made up and a fractionally higher total turnover achieved.

So far as William Hill (Park Lane) Limited is concerned, it was estimated when preparing the Circular to Members dated July 13, 1961, that the profit before taxation to be derived from that Company for the period June 1, 1960, to July 31, 1961, would amount to not less than £525,000; this compares with the actual of £613,779.

The net earnings of the Group after providing for taxation amounted to £779,775, of which £309,380, the amount attributable to the pre-acquisition profit after taxation of William Hill (Park Lane) Limited, has been applied against that portion of the purchase price attributable to goodwill which, as a result, now stands at £532,947, representing, on the basis of the profits for the 14 months to July 31, 1961, only slightly in excess of one year's purchase.

NORTHERN IRELAND SUBSIDIARY

Our Subsidiary in Northern Ireland, Debretta Limited, had a further satisfactory trading year. Great improvements were made during the year at the Newtownards Factory, thereby providing additional production facilities and better co-ordination. I should tell you that Mr Buster Sussman, the Founder and Vendor of the business to our Trust, who continued to act as Chairman and Joint Managing Director, retired by mutual consent recently and I am assured that the highly efficient management which has been built up over the years will continue to fulfil all requirements. I am now Chairman of the Company.

Mr A. G. Fletcher, who joined the Board of your Company in March, 1955, having indicated his wish to retire on reaching the age of 70, his resignation has been accepted with regret and I would wish to convey how grateful I have been for the advice and help which Mr Fletcher has been able to offer during his six years of office. Lieutenant-Colonel R. S. Rogers and Mr William Balshaw were invited to join the Board and this they have done. Lt-Col Rogers is well-known in the City and I am sure will be of great assistance to your Company. Mr William Balshaw has been the Managing Director of William Hill (Glasgow) Limited for upwards of fifteen years.

ADEQUATE LIQUID ASSETS

You will recall that the purchase of William Hill (Park Lane) Limited as from June 1, 1960, was at a cost of £2 million, of which £1 million was payable on completion and the balance in five equal annual instalments, commencing on March 31, 1962. This transaction was carried through on July 31, 1961, and as a result of this acquisition, and in spite of the payment to the Vendors of £1 million, the effect on the liquid assets of the Group which at July 31, 1960, totalled £3,220,493 and at July 31, 1961, £3,332,642 was negligible and they remain sufficient for the normal requirements of the businesses.

I regret that the Building Contractors were unable for various reasons to give William Hill (Football) Limited occupation of that portion of the new building which is essential to meet their requirements. It was thought that this would have been accomplished by the end of June, 1961, but it was found impossible to move before the commencement of the 1961/62 Football Season and consequently it may not be until the end of this Calendar year that the change of premises is made. I referred last year to the proposal that when the building has been completed and the lease granted, that a valuation would be made of the Company's leasehold interest with a view to negotiating with the holders of the 5 per cent Redeemable Preference Share Capital for the terms of the issue of those shares to be varied and replaced by Irredeemable Preference Shares. It is still intended that this be done as soon as possible and consequently the question of the redemption of the Preference Shares between July 31, 1959, and July 31, 1971, will not then fall to be considered.

With the Accounts this year you will find an analysis showing how the total profit of the Group has been earned, with comparative figures for the previous year except in the case of the new Subsidiary, William Hill (Park Lane) Limited. This will be an annual feature of the published Accounts and I hope will afford just that amount of additional information which you, the Members, will find both illuminating and interesting.

MEMBERS' CREDIT ACCOUNTS

During the year I have had several requests from Members of the Company that such members should be entitled without any formalities other than the statement that they are in fact members of the Company to be able to transact wagers with William Hill (Park Lane) Limited. Since May 1, 1961, when the Betting and Gaming Act of 1960 came into force, both the London Football and Glasgow Companies are conducting their business, with a few exceptions, purely on a cash basis, but William Hill (Park Lane) Limited continues business on both credit and cash basis. I am mentioning this matter by special request, so that if any Member not having an existing credit account with William Hill (Park Lane) Limited wishes to have one, all that is necessary is for him to apply for it, stating that he is a Member of the Company when all other formalities will be dispensed with.

As to the current Football Season, you will be pleased to know that turnover shows an increase of 26 per cent over the same period of last year and may well reach an increase of 30 per cent by the end of the Season. All we need are results favourable to the Bookmaker which, I am bound to say, up to now have favoured our Customers.

In conclusion, it is with pleasure that I thank on your behalf all employees in the Group for their efficient and loyal service.

THE IRISH GLASS BOTTLE COMPANY

(Manufacturers of Glass Containers)

The twenty-ninth annual general meeting of The Irish Glass Bottle Company Limited was held on November 16th in Dublin. The following is an extract from the circulated statement of **Mr Joseph McGrath** (the chairman).

For the year ended 27th June, 1961 there was an increase of approximately £35,000 in the net profit earned. This increase has been due almost entirely to an increase in production and sales.

In present conditions your Directors feel that the dividend should be maintained at the same level as last year, namely, at 12½ per cent less Income Tax. After providing for taxation and dividends and for the allocation to General Reserve of £50,000, bringing the total Reserve to £150,000, there is an increase of approximately £1,500 to be carried forward.

Commenting on an Agreement entered into with the Metal Box Company Limited for the establishment in Eire of a plastic packaging industry, the chairman said: This development will not only be an advantage to the Company through a diversification of interest, but will also be of considerable benefit to the National Economy as an indispensable service in the development of exports.

Once more I am very glad to report progress in the development of both production and sales of Waterford Glass Limited during the past year. There was quite a substantial increase in production and the increased production was successfully marketed. The increased sales were largely secured on export markets.

The report was adopted.

COURT LINE LIMITED

GROWING BURDEN OF SHIPOWNERS' COSTS

INSUFFICIENT GOVERNMENT AID TO MEET OVERSEAS COMPETITION

THE HON J. P. PHILIPPS ON NEED FOR MAJOR TAX CONCESSIONS

The thirty-second annual general meeting of Court Line Limited will be held on December 12th in London.

The following is the statement by the chairman, **The Hon J. P. Philipps, TD,** which has been circulated with the report and accounts:

Ladies and Gentlemen,

The year under review was yet another very difficult period for shipowners, and specially so for British Tramp Shipowners. While the graphs recently published show the Index of Tramp Shipping Freights to have hit the bottom during July and August, 1960, and the trend since then to have been fairly continuously upward with occasional minor setbacks, this by no means tells the whole story. Equally misleading were the recent headlines in one of our leading daily newspapers which read "Four-year-old shipping slump now ended."

It seems to be forgotten that during these four years the cost of running our ships has been steadily increasing so that what was considered a reasonable freight rate four years ago cannot possibly now cover both our operating costs and the higher depreciation necessary on very expensive modern ships.

It is true that freight rates have recovered somewhat, but each small rise caused foreign owners to bring out more of the old laid-up tonnage, which was regarded as practically obsolete, but, which was virtually given a new lease of life. It also gave encouragement for the placing of fresh orders for larger and faster vessels and thus every improvement in freight rates has been stifled at birth. I wonder how much longer it will be before those nationalities, who, as I explained last year, have only recently entered the trade for prestige reasons, will realise that they are not really earning profits at all after allowing for the depreciation on their fleets. Unfortunately, however, this is not a factor which would enter into their calculations or deter them from adopting their present policies.

SHIPPING'S IMPORTANT ROLE

This country is suffering from an adverse balance of trade to a large extent brought about by the serious fall in invisible earnings derived from its shipping services which it used to provide on a world-wide scale. Our Government is still doing virtually nothing to help maintain the vital Shipping Industry in its fight against the competition to which it has been subjected ever since the last war through "Flag Discrimination," untaxed "Flags of Convenience" and subsidised "Prestige Fleets." The only help they have so far offered is the Investment Allowance which would have been far more helpful if it had come earlier when we were earning sufficient profits to set it against. Is it not vital, therefore, that the Government should now permit these allowances to be credited back to previous years, when we paid many hundreds of thousands of pounds in tax, thus creating reserves to enable us to place orders for new ships with some greater degree of confidence.

In the good years after the war the Government took far too much of our income in taxation and thus prevented us from setting aside sufficient cash to keep abreast of our competitors by modernising our fleets. The Greek Government have wisely given their shipowners major tax concessions to build up every encouragement in the way of powerful modern fleets, but even if British Tramp Owners could utilise each Investment Allowance to the full, which for reasons already stated they cannot do today, it would only produce an amount equivalent to approximately 20 per cent of the cost of the vessel.

I would like again to make reference to the so-called Balancing Charge. This Charge was apparently based upon the assumption that replacement prices would remain static, but, in fact, there was a rise of 80 per cent in the cost between two similar vessels built in the years 1952 and 1957 respectively.

This rise in building costs in naturally reflected to some extent in the sale value of a second-hand vessel, but, if a British Tramp Owner sold the former vessel now, he might well find the whole of the statutory depreciation allowance he had received would be withdrawn and the resulting tax repaid to the Treasury. It can be seen, therefore, how difficult it now is to replace such a vessel having regard to the ever-rising cost of building. You will also appreciate the difficulty in raising capital either by the issue of shares, or raising loans in a tight money market subject to high interest rates, for an industry which is apparently not considered of particular national importance.

OPERATING RESULTS

I warned you twelve months ago that the results for the year ending June 30, 1961, could not be up to our usual standard. You will now see that the operating surplus was £103,112 compared to £393,769 in the previous year. Thus for the first time since the war we did not fully earn the depreciation on our fleet amounting to £217,392 per annum. We should, therefore, have had a debit balance for the year of £41,072 if it had not been for a profit of £88,737 realised on the sale of short-term investments. A credit of £28,608 on Taxation Account has been brought into Profit and Loss Account and £23,607 has been transferred from Contingency and Survey Reserve to meet expenditure on special surveys and certain repairs not recoverable under our insurance policies. There is still a balance of £315,876 to be carried forward after paying the final dividend of 3d. per share, less Income Tax, as forecast last May.

I am afraid that it is difficult at present to forecast with any degree of accuracy the results for the current year, but assuming that a continuing expansion of world trade results in an increased demand for shipping services, some improvement can reasonably be expected.

THE DIRECTORATE

You will see in the Directors' Report that Mr H. N. Haldin, one of the Directors retiring by rotation, is not seeking re-election in view of his many other commitments. We are very sorry to lose him as he and his family have been closely associated with this Company and its predecessors since 1905. Since the end of the year under review, Mr John Young, who has recently relinquished his apointment of Managing Director of the Hector Whaling Company, has joined our Board. In accordance with Article 117 of the Articles of Association his appointment can only have effect until the date of this meeting, but I strongly recommend that you now re-elect him.

These have been difficult times and I feel sure you would wish me to take this opportunity of thanking on your behalf all our staff, both ashore and at sea, for the part they have played in helping to keep our fleet running.

You will recall that in December, 1958, we took powers to issue share certificates with mechanical signatures. As it has now become common practice to dispense with signatures on share certificates and as we shall shortly have to obtain a new stock of these, I and my colleagues feel that it would be opportune to ask you for the necessary powers now. We are therefore calling an Extraordinary General Meeting to be held immediately after the Annual General Meeting.

THE ROVER COMPANY

HIGHER TURNOVER BUT LOWER MARGINS

The sixty-sixth annual general meeting of The Rover Company Limited will be held on December 14th in Solihull.

In the course of his circulated review, the Chairman, **Mr S. B. Wilks,** states: The year under review has been a difficult one in many ways, not only for us but for the Industry generally, and it is therefore particularly gratifying to be able to tell you that our overall turnover in value and in numbers of vehicles sold, has been marginally higher than last year, which itself constituted a record in the Company's history.

Despite higher turnover our profits are substantially less, and reflect the lower margins at which we have had to operate. Costs have continued, and are still continuing to rise, not only directly but also as a result of loss of output due to stoppages.

These two problems of rising costs and wasteful stoppages will have to be solved if this country is to compete successfully with its overseas competitors especially if, as seems probable, we join the Common Market.

Our plans for expanding our production capacity and improving its efficiency are proceeding satisfactorily.

During the year our Land Rover plant at Port Elizabeth in South Africa has been completed, and is now operating, and arrangements have reached an advanced stage for opening an assembly plant for Land Rovers in the Central African Federation.

We are still continuing our development of the Gas Turbine car. Our latest prototype will be undergoing extensive testing in the coming months. This latest prototype has been designed with the possibility of future production in mind and, whilst no definite date can yet be given for its introduction, our engineers are well satisfied with the progress that is being made.

Rising costs, restrictions at home and increasing competition abroad, are bound to have their effect on our current year's results. As to the long-term future, I am confident that we, in common with the rest of the British Motor Industry, whatever short-term difficulties may be encountered, will continue to expand.

ANGLO-ASIAN RUBBER PLANTATIONS LIMITED

MR P. B. L. COGHLAN'S REVIEW

The twenty-seventh annual general meeting of Anglo-Asian Rubber Plantations Limited will be held on December 4th at Winchester House, Old Broad Street, London, EC2.

In his circulated review, the Chairman (**Mr P. B. L. Coghlan**) comments on the benefits accruing from the company's purchase of Tong Hing Estate, the merger with Sungei Tukong Plantations Limited and the redemption of the whole of the Company's outstanding Debenture Stock. Together with large-scale replanting and other measures, these developments represented a general reorganisation the value of which should be amply demonstrated in the increasingly competitive conditions likely to prevail during the next few years.

Profits for the year ended March 31, 1961, had naturally been curtailed as a result of the severe fall in the price of rubber during the second half of 1960. However, these Accounts included only nine months' profits from the subsidiary company and Tong Hing Estate and, against the background of difficult trading conditions, the Trading Profit of £202,256 could be considered satisfactory. Also, good progress had been made in the Company's replanting programme with a further 829 acres completed during the year, whilst output per acre was increasing at a substantial rate.

Mr Coghlan concludes with the following survey of future prospects:

"With the advent of the new stereo types of synthetic rubber, natural rubber producers fully realise that in the not-too-distant future the Natural Rubber Industry will have to be even more competitive in both price and quality.

"The efforts of the Natural Rubber Industry over the years, with the increasing emphasis on reduction of costs by research on, and development of, pedigree high-yielding planting material, have gone a long way to assist the Industry in becoming competitive, although mainly from the point of view of cost of production. Notwithstanding these efforts, unfortunately, we have no control over the selling price of our product which is the real measure of how competitive natural rubber is with its synthetic substitute. The price of natural rubber in the past has fluctuated widely on a free world market and the level has been based mainly on the degree of supply and demand at any one time. It has, of course, been open also to the influence of political upheavals and threats of trouble or war in different parts of the world. Fluctuating prices have always been one of the main problems which have confronted producers and consumers of world commodities but this drawback is particularly emphasised when there is a synthetic substitute selling at a stable price.

"At the present time, releases from Government stockpiles and adjustment of synthetic production are playing their part in maintaining a fairly steady price for natural rubber and possibly this may continue for some time. In the long run, however, the problem will have to be solved if we are to remain fully competitive—a possible solution might be for the natural and synthetic industries to establish a closer liaison so as to become more complementary to each other than they are at present.

"So far as this Company is concerned, there is no reason for despondency. I have already indicated that the improvement in yield, leading to a reduced cost of production, should continue year by year and, given reasonably stable market conditions, it should be possible for the Company to compete quite successfully for its share in the world market."

WANKIE COLLIERY COMPANY LIMITED

(Incorporated in Southern Rhodesia)

COAL SALES MAINTAINED AT SATISFACTORY LEVEL

MR P. H. A. BROWNRIGG'S STATEMENT

The following is from the statement by the chairman, **Mr P. H. A. Brownrigg,** which has been circulated with the annual report and accounts:

Sales of the Company's products have been maintained at a satisfactory level. Although coal sales of 3,418,934 tons during the last financial year were 430,684 tons less than the previous year, this drop was anticipated and was almost entirely due to the increased availability of Kariba hydro-electric power, and a consequent reduction in coal demand for thermal power stations. Sales to other consumers were, however, generally higher than in 1960, and it is hoped that this trend will continue during the current year.

Supplies to the Rhodesian Iron and Steel Company have shown the largest single increase. Although this is due in part to the operation of their own coke ovens, for which Wankie supplies the coal, the Iron and Steel Company's total demand has risen sharply during the year as a result of an expansion of its activities.

COKE DEMAND IMPROVED

Coke demand improved during the course of the year, and by the year end, production had been increased to near maximum. Sales for the year, however, showed a small decrease compared with the previous year, but the loss of coke sales to the Rhodesian Iron and Steel Company was largely offset by increased sales to other consumers. Sales of the various by-products were generally higher, particularly the sale of tars used for road building in the Federation and the Katanga. Although sales of building bricks were lower in quantity, sales of refractory bricks were higher, and this resulted in an increase in the value of our total brick sales.

The trading profit for the year, after providing for directors' emoluments and a sum of £588,121 for depreciation and amortisation, was £1,381,257 compared with £1,555,827 last year. Our income from investments, however, continues to rise and this year reached £293,784 compared with £230,790 in the previous year.

The profit for the year, before taxation was £1,532,373. This is £106,687 less than last year, but in view of the economic conditions the outcome of the year's operations can be regarded as satisfactory. A sum of £570,000 was provided for taxation, of which £35,000 has been transferred from tax equalisation reserve. The rate of income tax applicable to the Company was increased by 6d. to 8s. in the £ during the year, which resulted in an additional tax liability of £35,454 for the year. The profit after tax was £997,373 compared with £1,084,060 last year, and we have again been able to declare dividends totalling 1s. 3d. per share out of current profits.

The acceptance of the new constitutional proposals for Southern Rhodesia has brought a general improvement in political and economic conditions in the country. We can now expect some increase in industrial development and a gradual improvement in demand for your company's products. Although a further small drop in coal sales is likely during the current year, thereafter we estimate that sales should gradually increase.

CUTS IN PRODUCTION

By agreement with the Southern Rhodesia Government the notified average selling price of coal within the Federation has remained unchanged at 20s. per ton for the past two years. As was forecast in 1959, this has resulted in a deficiency revenue at the year end, but the amount of £16,584 is considerably less than was anticipated, and is recoverable in future years in terms of the coal price agreement.

The reduced level of sales has necessitated cuts in production which have tended to increase our costs, but every effort is being made to keep costs to their lowest possible level. We have been able to avoid a price increase for the forthcoming year, and the notified average price of 20s. per ton will remain unchanged for the year commencing November 1, 1961. This may again result in some deficiency of revenue due to the Company, but any such deficiency would be recoverable in the future.

The maintenance of a stable coal price for a three year period, at a time of generally rising costs and wages, is an achievement which reflects great credit on all those at the mine.

Vigorous steps are being taken to increase the sales of coal and other products. While we are continuing our efforts in the export market, there is at present little prospect of achieving sales overseas, and it is therefore mainly in Central Africa that we hope to increase sales. We are especially concerned to promote the increased use of coal in the curing of Rhodesian tobacco for which its economy and efficiency as a fuel is rapidly being proved. There is also scope for the increased use of coal for domestic cooking and heating.

During the year, industrial agreements between the employers and the existing trade unions covering all employees, irrespective of race or colour, have been promulgated by the Government. It is intended that both European and African mine workers will, for the first time, be represented by one trade union, as is the case at present with officials and salaried staff of all races. This is a significant step in the establishment of sound labour relationships on a non-racial basis and the unions are to be congratulated on their achievement.

SMITH'S STAMPING WORKS (COVENTRY) LIMITED

MODEST PROFIT INCREASE IN DIFFICULT YEAR

The Sixty-sixth Annual General Meeting of Smith's Stamping Works (Coventry) Limited was held on November 20th at the Queen's Hotel, Birmingham, **Mr H. B. T. Wilde, FCA** (Chairman of the company), presiding.

The following is his statement which had been circulated with the report and accounts for the year ended August 5th, 1961:

I present on behalf of the Board our report on the Company's activities during the last financial year.

The trading profits of the Group were £553,919 compared with £524,125 and after providing £162,205 for depreciation against £148,877 and including other income there remains £393,627 compared with £379,263.

Taxation, which this year includes the additional Profits Tax for four months, will absorb £220,738 leaving a net profit of £172,889 compared with £181,233. The relief in respect of Investment Allowances on capital expenditure was £25,300; last year £24,000.

Expenditure on plant and equipment in the year amounted to £237,500 and the outstanding balance of expenditure sanctioned was £174,000.

I warned you last year of the effects of any period of recession on supply companies, such as ours, and in fact the demand from the motor industry began to fall in the late autumn and continued until the spring, with the result that we were not able fully to employ our plant capacity.

The troubles with which the motor industry has had to contend not only reduced their overall demand, but from time to time brought sudden interruption or suspension of schedules with consequent upset to our production flow.

Nevertheless, the output of our Works increased in the year by some 5 per cent, and this, coupled with the benefit from our capital expenditure, has enabled us to earn a modest increase in profit in a difficult year.

THE FUTURE

The immediate future is still obscure, but we believe the expansion plans of the industries which require our products will, in the long run, enable them to improve their share of the world's markets and in that belief we have expanded our production capacity. Therefore if we can but look forward to a period of greater stability in industry generally, we on our part are confident of our ability to meet and satisfy any progressive increase in demands made by our customers.

We recommend a final dividend of 6 per cent making 10 per cent for the year on the Capital as increased a year ago. The sum of £90,000 has been transferred to the General Revenue Reserves of the Parent and Subsidiary Companies, and £5,872 retained as unappropriated profits.

The trading difficulties of the year and the problems associated with the progressive installation of new equipment have been met and overcome by our staff and operatives with energy and enthusiasm and I would like to say thank you to them all.

The report and accounts were unanimously adopted.

DUCTILE STEELS LIMITED

VERY SATISFACTORY RESULTS

The twenty-fifth annual general meeting of Ductile Steels Limited was held on November 17th at Willenhall, **Mr R. Sidaway** (chairman and joint managing director) presiding.

The following is an extract from his circulated statement:

On June 24th this year we celebrated our Silver Jubilee as a Public Company. The results must be considered very satisfactory in view of the increases in cost of pensions, wages, fuel, transport and National Health charges.

The maximum selling prices of a large proportion of our Group products are controlled by the Iron and Steel Board—a body set up by the Government. Far from increasing these prices to cover increased overheads the Iron and Steel Board reduced them on November 28, 1960. Later, on June 19, 1961, an inadequate increase of 1 per cent on the maximum selling prices was granted by the Iron and Steel Board.

It is most discouraging to find that in spite of the saving we have made in the cost of production by the installation of new and expensive plant, we are robbed of the full benefit by the increased costs we have been forced to bear and over which we have no control.

In my last report I hinted at a possible slackening in demand later in our financial year. In some of our Companies this was apparent in January and this situation has progressively become worse. In an effort to make up for the reduction in demand on the home market strenuous efforts are being made to increase exports.

The report was adopted.

BUSINESS AND PERSONAL

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/25),

APPOINTMENTS

UNIVERSITY COLLEGE OF NORTH STAFFORDSHIRE

Applications are invited from Honours Graduates in Economics for a RESEARCH ASSISTANTSHIP in Department of Economics. Research experience is desirable but not essential. Salary from £600.—Further particulars and application forms may be obtained from the Registrar, The College, Keele, Staffs., to whom they should be returned not later than December 15, 1961.

For other appointments see page 852

UNIVERSITY OF MALAYA IN SINGAPORE

Applications are invited for (i) Lectureship or (ii) Assistant Lectureship in Economics. Salary scales (i) £1,148 x £39—£1,442 £1,540 x £56—£1,820 p.a.; (ii) £1,001 x £39—£1,089 p.a. Entry point according to qualifications and experience. Allowances: expatriation in range £280—£308 p.a., cost of living temporary in range £240—£360 p.a. Passages for appointee, wife and children not exceeding 12 years. Partly furnished house at reasonable rent. Provident Fund Scheme. Detailed applications (eight copies), naming three referees, by December 31, 1961, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

Statistician

UNILEVER LIMITED HAVE A VACANCY FOR A GRADUATE STATISTICIAN (UP TO AGE 28 YEARS) IN THEIR RESEARCH LABORATORY AT PORT SUNLIGHT, CHESHIRE.

The work involves the study of chemical processes, testing techniques and consumer research tests. An IBM 1620 electronic computer will be available, and there is scope for research into statistical methods.

The starting salary for newly qualified graduates with a 1st or upper 2nd class honours degree is £800 per annum; for a graduate with 3 years' research experience, £1,025 per annum; greater experience will command a correspondingly higher salary.

Applications should be sent to:
THE STAFF OFFICER (SP11), UNILEVER RESEARCH LABORATORY, PORT SUNLIGHT, CHESHIRE.

COMPANY AFFAIRS

Unchanged Interims

AGAINST the background of narrower profit margins and the Chancellor's request for dividend restraint it is not surprising that the latest batch of interim dividends from the bigger companies in British industry contains no higher payments, though two of the dividends would probably have been raised but for the Chancellor's request. By far the gloomiest of the statements accompanying the maintained dividends came from **English Electric**, whose directors have qualified their earlier forecast, made at the time of the W. H. Dorman offer, that the total dividend would be maintained at 10 per cent. They now say that "the amount of the final dividend for 1961 will be determined at the appropriate time on a consideration of the final audited figures and the prospects for 1962."

While English Electric's sales have risen and the volume of new orders has been maintained there has been a further deterioration in margins which were already very low both at home and overseas. D. Napier and Sons, moreover, has not made the improvement which it had been expected to make. The latest Government measures are also having a depressing effect on trade and they will also presumably be reflected in higher interest charges. Thus English Electric's profits for 1961 are expected to be "appreciably lower" than they were in 1960. Clearly the directors of English Electric will be most reluctant to cut the dividend, but if they do leave it unchanged it is not likely to be anything more than barely covered by earnings. This is a further blow to any hopes that the electrical equipment industry was over the worst of the slump and English Electric shares lost 4s. 9d. to 26s. 3d. but later they recovered some of this fall.

	Interim dividend Prev.	Latest	Prev. Total	Price	Yield
	%	%	%		%
English Electric	3	3	10	27/3	7·3
Hawker Siddeley...	5	5	10·6	21/6	9·9
Elliott-Automation..	5	5	13	38/1½	1·7
Amalgam. Roadstone	5	5	12½	37/1½	3·4
British Plaster Board	4	4	11¼	23/9	4·7
Berger Jenson and Nicholson.....	4*	5	14†	6/9	8·0

* For a shorter period. † Forecast.

From **Hawker Siddeley** has come a more reassuring statement than many shareholders might have expected in view of recent reports of a slump in orders and talk about the possibilities of labour dismissals (which was promptly denied by the company). These had a depressing effect on the £1 shares but they were steadier this week around 22s., about 10s. below the year's peak. With the interim dividend set at 5 per cent a total dividend of 10 per cent is implied. This is only a fraction below the scaled-down equivalent of 10.6 per cent paid in 1959-60. The directors say that results for the year to December 31st will be affected by difficult trading conditions particularly in the export field and by continued expenditure on development and research. It would be surprising however if the latter charge does not fall below the level of £15.6 million spent in the seventeen months to December 31, 1960. With a big order book on both the industrial and aviation sides of the business the outlook for 1962 is regarded by the directors as "favourable." No mention is made of the Canadian group, which is likely to be trading more profitably now, but the directors say that substantial progress has been made with the streamlining of the group and the integration of de Havilland, Blackburn and Folland. But the statement has a gloomy twist for the group's Gloucester factory will be closed by the middle of next year unless Government orders of "sufficient magnitude" are received soon.

Following an optimistic statement from the chairman last June this week's interim report from **Elliott-Automation** makes encouraging reading—as indeed it must if the current low yield of under 2 per cent is to be justified. Both orders received and deliveries in the first nine months of 1961 have shown a "substantial advance." Profits have shown a corresponding rise and while the absence of any concrete figures to back these phrases up is to be regretted the implications for the ordinary dividend seem clear. Indeed the directors say that under normal circumstances they would have felt justified in raising the interim dividend; they have deferred consideration of any increase until the final payment is declared in April.

From the directors of **Amalgamated Roadstone** came a similar declaration when they announced that profits for the year to October 31st show a "substantial improvement." There seems little likelihood that the demand for roadmaking materials will slacken and shareholders must stand a good chance of receiving something higher than the previous year's final of 7½ per cent.

The demand for building materials has also continued to rise but the warning from the chairman of **British Plaster Board** in July that profit margins might be lower has in fact come true. Slightly lower profits at home however have been offset by higher profits in Canada so that in the six months to end-September BPB's profits before tax rose from £1,699,000 to £1,721,000

The directors of **Berger Jenson and Nicholson** expect profits in the current year to show an "encouraging increase" over 1960. Clearly economies resulting from the merger of these two paint companies are now having a beneficial effect and the directors have forecast a final dividend of 9 per cent. This total of 14 per cent payment will be equivalent to the 10½ per cent paid for the previous nine months' accounting period, when the dividend was not fully covered by earnings.

Brewing Results

BACKED by Canadian Breweries and Mr. E. P. Taylor, **United Breweries** has been expanding quickly through the acquisition of other breweries, but its ambitions received a severe setback in March when Courage Barclay Simonds won the struggle for Bristol Brewery Georges. Now it remains to be seen whether the finance —or the desire—is there for United Breweries to become a major national group, as opposed to an important regional brewer. The first full year's results of the group are reasonably encouraging, though anything less than the latest achievement would have been considered disappointing in view of the rise in beer consumption and the increase in prices. The directors have raised the dividend from a forecast of 11 per cent to 12½ per cent. They have given an adjusted comparison of pre-tax profits for the companies which now constitute the group and this shows a rise of about 12½ per cent from £2,485,000 to £2,781,000.

On the adjusted profit figures, the ordinary dividend is covered just over 1½ times; and the 5s. shares at 12s. 10½d. yield nearly 5 per cent. This is higher than the average for brewery shares, reflecting some uncertainty about the group's future growth potential. Despite a £5 million debenture issue last December the forthcoming balance sheet is unlikely to reveal much in the way of strong liquid assets. Over half the proceeds of the debenture issue were needed to repay bank loans and further acquisitions will have eaten deep into the group's remaining cash holdings. There are also doubts as to whether "Carling" will be able to hold on to its share of the lager market and how far in the face of fiercer competition from both the British and Continental brewers United Breweries will be able to earn a satisfactory return on its investment in lager.

Year to end-Sept.	Gross profits 1960 £000's	1961 £000's	Dividend 1960 %	1961 %	Price	Yield %
John Smith's Tadcaster...	1,893	2,094	13½	14½	68/–	4·1
Warwicks & Richardsons	338	405	17½	19½	27/4½	3·4
Strong & Co.	748	825	22½	25	34/6	3·6
Bullard.....	411	516	16	19	24/–	4·0

As the table shows, favourable results have also come from a number of other breweries in the East, the West, the Midlands and in Yorkshire. The biggest of these is **John Smith's Tadcaster** which following the acquisition of Barnsley and Yate's Castle breweries now has about 1,700 public houses in Yorkshire and adjoining counties. Its gross profits have been adjusted to allow for these acquisitions, while the dividend is one point more than that forecast in May. The benefits of this merger can scarcely be reflected in the latest results nor the lager agreement with Carlsberg. Merger talks are now taking place with **Warwicks and Richardsons** which trades mainly in Nottingham, Lincolnshire and Derbyshire, and which has achieved a sharp rise in profits. The low yield on its shares reflects the possibilities inherent in a merger with the larger brewery group.

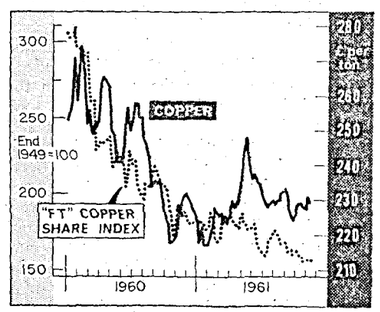
A similar return is offered by the 5s. shares of **Strong and Company of Romsey** which has trading links with Whitbread. But for the Chancellor the dividend would have been raised by more than 2½ points; some part of the increase in profits may stem from the summer holiday trade, for Strong controls about 750 houses in the west country. In Eastern England an important event in the brewing industry was the joint acquisition of Morgans Brewery by Steward and Patterson and **Bullard.** The latter's figures do not reflect the full benefits from this purchase and the bigger profit arises from higher sales and from better profit margins.

Decca Record

AT 67s. and 65s. the 10s. ordinary and the "A" shares of Decca Record stand about 10s. higher than they were when the preliminary results were published in the middle of October and about 15s. above the levels of a year ago. This partly reflects the interest of American investors in the shares, but on the maintained dividend of 23½ per cent the yields are now down to about 3½ per cent and such returns would be suspect if there were signs of a decline in sales in the gramophone record stocks from £4½ million to £6 million. The cash balances due to it from other members of the group have fallen by a similar amount. If this policy has been maintained, a further large sum must have been absorbed by stocks since June.

Roan Antelope and Mufulira in the Rhodesian Selection Trust group suffered a fall in their liquid assets largely as a result of development expenditure. The financial strength built up by the copper companies in earlier years is now an important factor because of the low investment status to which political fears have reduced them. The expansion at Mufulira that will add about 50 per cent to its productive capacity in a year's time will be financed without making any calls on shareholders, but early profits from that project will have to be retained. Chibuluma will not pay a maiden dividend this year because, having paid back a £5 million loan from the United States, it will need to provide internal finance.

Over the next three years, £6½ million will be spent at Anglo American's Bancroft mine to raise its mill output by 50 per cent. A fall in the grade of ore milled there last year was partly responsible for the sharp fall in its earnings. A £5 million loan that was due for repayment at the end of 1960 has been extended for another year. Rhokana's relatively good profit performance last year was brought about partly by a reduction in costs that would obviously not have occurred had the company not followed a policy of stocking copper.



In the production of cobalt, Rhokana appears to have suffered a considerable setback in the quality of its ore, though Chibuluma's cobalt production increased and the market price was stable.

Copper on the Level

AT some point in 1962, the prospect for copper could brighten significantly. But in their annual reviews, the chairmen of the two big Rhodesian copper mining groups do not offer shareholders much guidance about the likely pattern of results in the current financial year. The conclusion to be drawn is that they are not convinced that an improvement in copper is imminent, and that therefore the copper companies will probably continue to mark time for most of the remainder of the financial year to the end of June. The quarterly results of the Rhodesian Selection Trust group show that profits in the first quarter to September were lower than a year earlier. Copper prices began to weaken in the September quarter of 1960 and the 10 per cent reduction in production or sales put into effect at the beginning of October last year is still in force. The average price for copper was about £230 a ton in the financial year to June; and since then prices have remained at about the same level. But basing output curbs on capacity will allow some expansion this year in copper production. Mufulira, for example, would be entitled to raise its production by 14,000 tons to 115,000 tons even if restrictions remain in force.

Both chairmen, however, dwell on the sound long-term prospect for copper. The major expansion schemes are coming to an end and, on all reasonable assumptions, the demand for copper should grow. Just how much weight ought to be given to these considerations is difficult to gauge: Sir Ronald Prain thinks that "before long" the large reserves of copper which still exist in central Africa will be needed. At the moment there can be few doubts that there is too much copper for comfort; despite the output restrictions, a huge rise in European consumption last year and a strong growth in industrial production in the United States, the surplus has not been significantly reduced in the past year.

Outside North America, manufacturers' stocks have risen as much this year as in 1960. Only in the United States have they fallen, and American producers will be the first to benefit from the improvement there.

Two large American groups have returned to full production and American output in October reached a record level. Companies in the Anglo American group are paying the price for their decision to stock copper rather than to reduce output in order to achieve the 10 per cent cut in supplies. Rhokana held back 7,000 tons of copper in the year to June, raising the value of its

* Except Nchanga (March 31). † Net of Rhodesian taxes.

industry. On this score Sir Edward Lewis was reassuring at this week's annual meeting, for he said that record sales so far in the current year which began in April were ahead of last year's. While demand for 45 rpm records has slackened this has been offset by bigger sales of long playing records, on which it may perhaps be assumed that profit margins are higher. This assumption finds some support in the fact that Decca's gross profit margin in 1960-61 rose from 8.6 to 9.4 per cent.

Estimates of future teenage spending suggest that record sales could continue to expand and Decca's claim to be the cheapest producer of records in Europe implies that it has little to fear if Britain joins the common market. Moreover, the building-up of the group's navigator and radar divisions is now paying off. At sea the Decca Navigator is now used in over 7,000 ships; the most striking advance has been made in Denmark, where the Decca system of navigational aid has been adopted by the country's fishing fleet. Decca also claims to offer the most comprehensive range of marine radar sets and these are now used in over 11,000 ships. In the air Decca, acting with its French agents and Telefunken of Germany, has put forward to Eurocontrol proposals for a new navigational aid to solve the traffic problem in the upper air space. Clearly there is much in Sir Edward's statement to encourage the optimistic assumptions now governing the price of Decca shares, but it remains to be seen whether the group can maintain its current rate of growth over the fairly long period of time which is being implicitly discounted in the current yield.

William Whiteley

WHEN the directors of William Whiteley turned down a bid from the R. H. O. Hills group worth 57s. a share it was clear that they would have been prepared to recommend a bid at around that price if it had been in cash rather than a mixture of loan stock and ordinary shares. Now they are recommending a cash offer from United Drapery Stores of 55s. per share. Its success seems assured, as the offer had been accepted by holders of over half the ordinary shares even before the announcement was made. Preference holders are offered 17s. a share and the offer is worth in all about £1¼ million. This will not worry UDS unduly: at the end of January it held £6.1 million in liquid form, giving UDS, as Mr Joseph Collier, the chairman, pointed out, the advantage of being able to offer cash for anything but the biggest companies.

He also told shareholders that new businesses were increasingly difficult to find on reasonable terms; and it remains to be seen whether the price for Whiteley, which has not paid an ordinary dividend since 1953, can be justified. Whiteley's property in Bayswater is indeed valuable and this could be the major attraction; but it seems clear that UDS intends to continue the business in its present form. Some dead wood, however, will be hacked down and the staff on the trading and drapery side of the business will be strengthened. The aim, apparently, is to run the Whiteley store on similar lines to the UDS's big department store, Arding and Hobbs, at Clapham Junction. But it is in multiple clothing, both in men's and women's wear, that the UDS group's growth potential is the strongest at the moment, rather than in department stores.

BSA

THE year to July 31st witnessed a change in BSA from great, if not excessive, liquidity (reflecting the sale of the Daimler works to Jaguar) to a shortage of liquid funds (following the acquisition of Churchill Machine Tool in January). Net current assets fell from £14,310,000 to £8,824,000, and by the end of July a cash balance of £179,000 and a holding of £1,227,000 in corporation loans and government securities was more than balanced by a bank overdraft of £1,842,000. This overdraft will, however, be reduced this year as most of the corporation loans will be falling due for repayment.

The new chairman, Mr Eric Turner, says that the directors were disappointed with the trading results for the year, when gross profits fell by 14 per cent from £3,419,000 to £2,933,000. The steel subsidiary, Jessop-Saville, did well as its sales reached a new peak; turnover in the machine tool division, excluding Churchill, rose by 25 per cent and profits rose. But elsewhere the tale is not so satisfactory. Carbodies made a trading loss owing to the recession in the motor industry, and the dealers who took substantial deliveries of motor cycles and scooters in anticipation of good business this spring and summer found themselves overstocked as the season wore on. Lower net earnings cut the cover on the effectively maintained dividend of 11⅓ per cent from 2.6 to 2.2 times and prospects for the current year are, to say the least, uncertain. Mr Turner laments the plight of the small arms division, which apparently is losing government orders to the Royal Ordnance factories; Carbodies will not benefit from its reorganisation this year; and the domestic market for motor cycles and scooters remains depressed and has been unsettled by the recent bout of price cutting (in which BSA has so far not joined). In the last few months orders for alloy constructional steels have fallen, though orders for BSA's specialised steels show no sign of slackening. The machine tool division offers the best prospect and though its home orders are showing signs of falling off, export orders are still rising. But Mr Turner says that unless there is "a general improvement soon in some of the fields" in which the group operates it would be wise to expect some reduction in profits. The 10s. ordinary shares lost 1s. 3d. after Mr Turner's statement, and at 19s. 4½d. xd they yield 6 per cent.

BREAKDOWN OF SALES

	1959* Per cent	1960 Per cent	1961† Per cent

Rover

THE chairman of Rover, Mr S. B. Wilks, says that the company sold a few more vehicles at slightly higher value in the year to August 5th; but sales would have been appreciably better but for the labour troubles encountered by the group and its suppliers. The fall of 19 per cent in gross profits from £2,765,000 to £2,234,000 is clearly the result of lower margins, affected by rising costs and by stoppages. The fall in pre-tax profits would have been worse but for the reduction in the depreciation provision from its level in 1959-60 when the body dies for the models then current were completely written off. Taxation was also lower, reflecting the incidence of investment allowances, and hence net profits were fractionally higher to cover the maintained dividend of 15.8 per cent twice.

Understandably Mr Wilks is non-committal about the prospects for the current year. Costs are still rising and he offers no prediction about sales. Rover's car workers are now on a four-day instead of a three-day week, but this in itself does not guarantee better margins. In any case, Land Rovers are the group's real earners. Fixed assets rose over the year from £4.1 million to £4.9 million and capital commitments at the end of July amounted to £3.8 million (against nearly £800,000), but this is well covered by liquid assets which rose from £2¾ million to £6¼ million following the one-for-five rights issue in May. The 5s. shares at 12s. yield 6.6 per cent.

Glaxo

THE statement by the chairman, Sir Harry Jephcott, in the full report from Glaxo has done nothing to allay shareholders' fears about narrower profit margins, for he says that the current year offers no dramatic prospect for change from conditions of keen competition. Certainly the year to June 30th was perplexing enough. The price of the 10s. ordinary shares swung from 73s. 9d. (giving a yield of under 2 per cent) before the disappointing interim results in April to a nervous 52s. 6d. ahead of the final figures last month. These showed that, without Evans Medical, turnover for the year rose by seven per cent against three per cent in the first six months, and trading profits fell by 4 per cent, compared with 4.4 per cent in the first six months. Since then the shares have risen to 60s. but publication of the full report brought them down to 54s. 1½d. to give a yield of 2.8 per cent on the 15 per cent dividend.

Some foreign competitors, spurred by the excess capacity which has resulted from the growing capital efficiency of the pharmaceutical industry, have been particularly fierce competitors. Glaxo sells three-fifths of its output abroad and has therefore done well to maintain its sales. At home, Glaxo has cut the price of some of its products. The Ministry of Health still buys from foreign drug houses, and this has prompted Sir Harry to urge that the present British practice of 16-year patents be reviewed. Sir Harry says that a shorter period of patent monopoly and subsequent royalty payments for licences would be incentive enough for the maintenance of research. Sir Harry predicts still keener competition in export markets and though for the first three months of the current year sales exceeded those in the same period last year it seems likely that the cover on the 15 per cent dividend will fall below the 3.2 times provided by earnings in 1960-61.

Gomme Holdings

GOMME HOLDINGS, the makers of G-Plan furniture, have been hit harder by the credit restrictions than many of its competitors and the final dividend has been passed—as the directors forecast it would be when they passed the interim in May. The results are worse than was then feared for the group was still making a loss at the end of July, when the directors had hoped that the group would be earning profits again. In all, a net loss of £146,000 replaced a net profit of £295,000 and despite a sharp reduction in stocks, net bank overdrafts rose from £518,000 to £842,000.

Clearly Gomme must raise its sales, but the chairman, Mr H. N. Sporborg, says that this will be difficult unless the general level of demand for furniture rises. Last year the group was handicapped by reorganisation difficulties, which partly arose from the closing down of a factory in High Wycombe, but this year the group should be able to shorten the delivery times on the most popular lines. Already there has been some slight improvement; a loss was made in August, but there was a small profit in September and October. The cut in overhead costs following the reorganisation may at last be helping. The 5s. ordinary shares at 8s. 9d. are only half the price they were earlier this year, and are at their lowest point since they were first quoted in 1958.

Crompton Parkinson

IN recent years, not least the one ending on June 30th last, the results of Crompton Parkinson have been a pleasant reminder that not all the companies in the heavy electrical industry have fared badly. But now the chairman, Mr Albert Parkinson, says that the current year may bring lower profit margins on many outstanding orders. In 1960-61, when gross profits rose by eight per cent from £2,735,000 to £2,960,000, the group again encountered difficulties in the market for heavy electrical products, notably for transformers whose prices have been unsettled since the Restrictive Trade Practices Court examined the marketing arrangements of the Transformer Manufacturers Association. Batteries and lamps however did well, and cable prices seem to have settled down after the uncertainties which followed the ending of price agreements in the industry two years ago.

Mr Parkinson remains confident about the long-term outlook for the group even in the face of competition from manufacturers in the common market; but the short-term prospects seem to be threatened by rising labour costs and by a fall in demand, particularly for transformers and traction equipment. The 5s. ordinary shares at 12s.7½d. yield just under 5 per cent on the maintained dividend of 12½ per cent.

S. Smith

THE chairman of S. Smith & Sons, Mr R. Gordon-Smith, announced in the full report that this group of instrument makers is revising its finance and dividend policies. In the past decade the group has ploughed back £10½ million from net equity earnings as well as £7½ million in depreciation provisions and the directors now feel that the ratio of fixed interest capital to equity capital employed (currently one to eight) is too low when compared with the ratio of fixed assets to net current assets (currently rather more than one to one). They therefore propose to add to the existing £2 million of fixed interest capital by issuing a prior charge stock. This will probably be a loan stock. The chairman says that it will be medium or long-dated, and that it will more than cover the overdraft of the group, which stood at £1¼ million at the beginning of August, so as to allow for "foreseeable expansionary requirements" in the next few years. The higher capital gearing will be welcomed by shareholders, as it may herald a more liberal dividend policy. Mr Gordon-Smith says that ordinary shareholders will get a bigger share of available profits than in the last ten years; but last year's rate of 51 per cent is not to be thought as setting a precedent, and he hopes that a distribution of 40 to 45 per cent of net equity earnings will permit a steady growth in dividends.

The prospects for the current year are overshadowed by the Government's economic measures introduced in July and Mr Gordon-Smith does not expect the group's sales to the motor industry to show any improvement upon the 1960-61 figures, which were in any case 27 per cent lower than in 1959-60 because of unofficial strikes and the fall in demand. He says that sales to the domestic appliance industry are unlikely to grow this year because of the credit squeeze but that sales to the aircraft industry should exceed those of the peak year, 1958-59. His estimate of gross profits of £3 million for 1961-62 (compared with £2,660,000 in 1960-61) is, as he frankly admits, likely to be upset if the motor industry fails to hit the targets it has set itself and if the pay pause breaks down. The 4s. ordinary shares at 15s. 6d. yield 5.2 per cent.

London Stock Exchange

FIRST DEALINGS:	Oct. 30	Nov. 13	Nov. 27
LAST DEALINGS:	Nov. 10	Nov. 24	Dec. 8
ACCOUNT DAY:	Nov. 21	Dec. 5	Dec. 19

THE stock market has had second thoughts about the recent recovery in equity prices, and over the week to Wednesday the *Financial Times* index slipped steadily lower, falling below the 300 mark on Tuesday; over the week *The Economist* indicator fell 12.3 points to 356.6. After the weekend the decision of the power board on the pay claim caused misgivings, and these persisted after the Prime Minister's statement on Tuesday. The drop in industrial production in September, announced on Wednesday, did nothing to raise spirits in the market.

Business in the gilt-edged market was slack. Buyers were interested at first in short-dated stocks, but the power board's decision soon frightened them away. The possibility of a bank rate cut in the next few weeks became more remote and Exchequer 3¾ per cent, 1966, lost ⅛ to 98⅝. But the long and undated stocks also lost small amounts: 5½ per cent Treasury, 2008-12, lost ⅛ to 83⅛ and 2½ per cent Consols were ⅛ down at 39. On Thursday however prices fell much more sharply.

This week a growing number of sellers appeared in the equity market. Bank shares lost some of their gains from the previous week, though District was an exception and put on 2s. to 94s. 6d. Hire purchase houses also fell back, but insurance shares moved irregularly. Britannic gained ⅝ to 15½, but Legal and General lost 1¼ to 38. Immediately before and after the weekend there was a strong demand for brewery shares, resulting in part from press comment but it petered out on Tuesday. Over the week Watney Mann gained 3s. to 103s. 3d. Building shares lost their earlier gains and Associated Portland were 3s. lower at 53s. 6d. xd. ICI shares were on offer over much of the week and lost 3s. 5½d. to 60s. 7½d. Stores were quiet though J. and F. Stone gained 1s. 6d. to 30s. 3d. on the news of the bonus issue and higher dividend. Engineering shares had a dull week; BSA lost 2s. 10½d. to 19s. 3d. after the chairman's statement and Guest Keen fell sharply by 5s. 9d. to 74s. 6d. Metal Box lost 4s. to 84s. Electrical shares fell back after the forecast of lower profits from English Electric which lost 5s. 3d. to 26s. 3d.

Steel shares lost heavily before the weekend partly under the influence of a broker's circular. Lancashire Steel lost 3s. to 32s. and Stewarts and Lloyds a similar amount to 36s. 7½d. Among other leaders Glaxo lost 5s. 6d. to 54s. after the chairman's warning about future prospects; Beecham was also lower losing 3s. 2½d. to 47s. 6¾d. Motor shares fell back and BMC lost 1s. to 14s. 9d. after unfavourable press comment. Property shares were fairly steady but textiles were dull and Courtaulds lost 1s. 10½d. to 28s. 7½d.

THE MONEY MARKET

THE syndicate of discount houses raised its bid for the £220 million of 91-day bills on offer at last Friday's Treasury bill tender by 2d. to £98 13s. 1d., and received 56 per cent of its application. The average rate of discount fell by 7.78d. to £5 7s. 9.71d. per cent.

Lombard Street now sees little prospect of a further reduction in Bank rate this year. In these circumstances the bill rate is relatively low, and the chances are that in the next few weeks it will fluctuate around this level, as the syndicate manœuvres to maintain its bill portfolios. The authorities seem to be intent on keeping the rate around its present level, since the market was forced to borrow at Bank rate from the Bank of England on each of the first three days of the week.

By contrast money has been available fairly freely in the Local Authority mortgage market this week. The 7-day rate has fallen ¼ per cent to 6 per cent. This weakness in the rate is attributed partly to the success of direct advertising by the local authorities. This success is understandable since the rates offered are still around 6¼ per cent, the level they reached after Bank rate went to 7 per cent.

(1) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (4) In general males under 21 and females under 18 years of age. (5) Surveys made twice a year; annual figures relate to October survey. (6) Index revised and rebased on 1958=100 (see *The Economist*, January 7, 1961, page 59). (7) Revised series. (8) Revised series; 1958 and 1959 figures on the old basis of 1952 = 100 have been linked to 1960=100 by multiplying by 1·348. (9) April.

APPOINTMENTS

AIC EXECUTIVE SELECTION DIVISION
is advising on the following appointment

COMPANY SECRETARY

for Inbucon Ltd., and its major subsidiary, Associated Industrial Consultants Limited. The post requires experience and qualifications suitable to fulfil the combined functions of Company Secretary and Chief Accountant to this important public Company. A legal background is unnecessary but some years' experience at senior level in both fields is essential. Preferred age 35 to 45. Starting salary, according to experience, may be up to £3,000 with other benefits.
(Mr. David Young: Reference 4709.)

Brief written applications, quoting reference number, should be sent, in complete confidence to the Consultant concerned at:

ASSOCIATED INDUSTRIAL CONSULTANTS LIMITED
KNIGHTSBRIDGE HOUSE 197 KNIGHTSBRIDGE LONDON SW7

Associated Industrial Consultants

YOUR NEXT STEP IN MARKET RESEARCH?

We are looking for someone to become one of three Group Heads in this expanding Company—practitioners in consumer market research.

You need not necessarily be a Group Head or Manager now, but, if not, you must be equipped to take on that responsibility.

If you have a degree (not less than second-class honours); if you have had about three years' experience, mostly in a consumer organisation; if you are a person who can discuss a client's problems with him and propose and carry through these problems; and if you are confident that, working on these lines, you can develop business for your own Group, you will find this a good Company to work for.

Applications, which will be treated in confidence, to:

The Managing Director,
Public Attitude Surveys Limited,
Empire House,
82-86 Mortimer Street,
London, W.1

EXPERIENCED FINANCIAL JOURNALIST: Hard-working, versatile; able to analyse an investment or interview a chairman. A permanent appointment on a leading weekly. —Write Box G.549, c/o Streets, 110 Old Broad Street, E.C.2.

COMMONWEALTH AND FOREIGN AFFAIRS.—CENTRAL OFFICE OF INFORMATION requires ASSISTANT INFORMATION OFFICERS (unestablished) to write reference information papers for overseas use on Commonwealth (including U.K. dependencies) and international affairs. Candidates should be graduates with a knowledge of either the Commonwealth or foreign territories and of relevant sources of information. Some experience in preparing factual articles, reports, lectures or broadcasts would be advantageous. Examples of written work may be required. Starting salary according to experience and qualifications and will be on a scale rising to £1,214.—Write, giving age, full details of experience and qualifications, to Manager (PE.3992), Ministry of Labour, Professional & Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

GRADUATE STATISTICIAN required by Group of Agricultural and Pharmaceutical Manufacturers with Head Office in West London. This is an interesting and responsible post offering excellent prospects.—Applications, with full details, to Personnel Manager, Box 1567.

THE SECRETARIAT OF THE INTERNATIONAL RUBBER STUDY GROUP

Applications are invited for the post of STATISTICIAN, the salary scale is £900 x £50—£1,100 (assistant grade) and £1,200 x £60—£1,680 (statistical grade); the initial salary will depend on qualifications and experience. There is a Provident Fund Scheme.

Applicants should be graduates not over 30 years of age with a good knowledge of statistical methods and preferably some knowledge of economics. A capacity for detailed and accurate work and the ability to compile reports and memoranda are required.

All applicants should be able to express themselves clearly and concisely in written and spoken English and should have or undertake to acquire on appointment a working knowledge of French.

Detailed applications should be sent not later than December 1, 1961, to the Secretary-General, International Rubber Study Group, Brettenham House, 5-6 Lancaster Place, London, W.C.2.

For further appointments and other classified advertisements see page 843

KWAME NKRUMAH UNIVERSITY OF SCIENCE & TECHNOLOGY KUMASI—GHANA

Applications are invited for the post of

QUANTITY SURVEYOR

in the Architects Office under the direction of the Senior Architect.

Qualifications:
Candidates must be Associate Members of the Royal Institute of Civil Surveyors or must possess similar qualifications. In addition, they must have had at least three years' practical experience after gaining qualification. Experience acquired in West Africa desirable but not essential.

Duties will include preparation of estimates, bills of quantities, cost analysis, monthly valuations, adjustment of final accounts and other work incidental to such an appointment.

Appointments are normally for five years and may be renewed; three months' notice of resignation or termination of an appointment is required on either side.

CONTRACT SALARY SCALES ARE:
Ghanaian .. £G1,156 5s.—£G2,031 5s.
Expatriate .. £G1,386 0s.—£G2,508 0s.

Children's allowances are paid in respect of Expatriates up to a maximum of 6 at the rate of £G50 per annum per child up to the age of 10 years and £G100 per annum per each dependent child over 10 years of age in full time education up to a maximum of 21 years of age.

The University is fully residential and members of staff are normally housed in pleasant modern bungalows on the spacious campus; climate and living conditions are good.

Annual leave with three free return passages in four years is granted to members of staff and their families.

Application forms may be obtained from the Assistant Registrar, Kwame Nkrumah University, 29 Tavistock Square, London, W.C.1, who will also be glad to answer any questions about living conditions in Ghana. Completed application forms in triplicate together with two recent testimonials should reach him not later than December 26, 1961.

ENGLISH ELECTRIC

require a

STATISTICAL ASSISTANT

The Domestic Appliance Division of the Company in London are seeking the services of a man or woman to work in the Marketing Department on the Statistical analysis of market research data.

Applicants should have had some previous experience of Statistical surveys and have the ability and previous knowledge to compile detailed reports and graphs. Applicants should preferably possess a degree or be studying for a recognised Statistical qualification.

This appointment is permanent and pensionable. Apply in the first instance (giving full details and quoting reference E505X) to:—**Technical Staff Officer, Dept. G.P.S., English Electric House, Strand, London, W.C.2.**

ASSOCIATION OF MUNICIPAL CORPORATIONS.
APPOINTMENT OF SECRETARY.

Applications are invited for this appointment.

The Association is a voluntary organisation having in membership 430 city and borough councils in England and Wales, the City of London, and many of the metropolitan boroughs, together with some Northern Irish boroughs. Its work is of two main kinds—making the voice of the cities and boroughs heard in Parliament and in Government departments, giving each and advice to members on problems arising in the field of local government.

The Secretary is responsible for the organisation of the association in accordance with its constitution; carrying out the decisions of the council and committees; day-to-day contact with Government departments and Members of Parliament; and maintaining contact with the members of the association. He is also responsible for the publication of the journal The Municipal Review and the organisation and control of the Association's staff.

The salary on appointment will be £5,500 per annum. The person appointed will be required to join the local government superannuation scheme subject to satisfactory medical examination. Previous experience in local government is very desirable.

Canvassing will be a disqualification.

Particulars obtainable from the Secretary, Association of Municipal Corporations, Victoria Station House, Victoria Street, London, S.W.1.

NUFFIELD COLLEGE (OXFORD)

RESEARCH FELLOWSHIP

Applications are invited from MEN OR WOMEN GRADUATES who wish to undertake research in Economics, Politics, Sociology, recent Economic and Social History and Political History, Industrial Relations, African Studies, Public and Social Administration, International and Public Law or other branches of the Social Studies. The appointment will normally be for two or three years. The stipend will be according to age.

Further particulars may be obtained from the Warden. Applications should reach him not later than January 8, 1962.

STATISTICIANS

THE UNITED NATIONS

needs statisticians to fill vacancies at New York Headquarters and Regional Economic Commissions. They will be expected to conduct research and prepare statistical tables or reports in one or more of the following fields: external trade statistics; transport statistics; price statistics; employment, unemployment and wage statistics; production and consumption statistics; social statistics; vital statistics; population statistics; national accounts statistics; and other appropriate fields.

Qualifications required are university degree or equivalent in statistics or in economics or mathematics (allied with statistics); one or more years of graduate work or of practical experience, and fluency in English or French, preferably with a working knowledge of the other.

Salary, depending on qualifications and experience, from $4,800 to $7,300 net per year, free of tax, plus cost of living allowance ranging from $935 to $2,100; plus dependency allowance, if applicable, and other benefits. In recruitment for the above vacancies, preference will be given to nationals of member states of the United Nations which are not, or are inadequately, "represented." in the Secretariat.

Applications should be sent to the Recruitment Services (Room 3646), Office of Personnel, UNITED NATIONS, NEW YORK, NY

STATISTICIAN

G.E.C. APPLIED ELECTRONICS LABORATORIES, STANMORE, MIDDX.

have a vacancy in the Statistical Services Group. The group provides a consulting service for the organisation, and many of the problems encountered require the development of original methods for their solution. The services of an advanced digital computer are available if required.

Candidates should have a degree in mathematics, or its equivalent, with interest in modern techniques of statistics or operational research.

Applications should be made to the Staff Manager, quoting Ref. CFS/E.

WHAT IS A FELLMONGER?

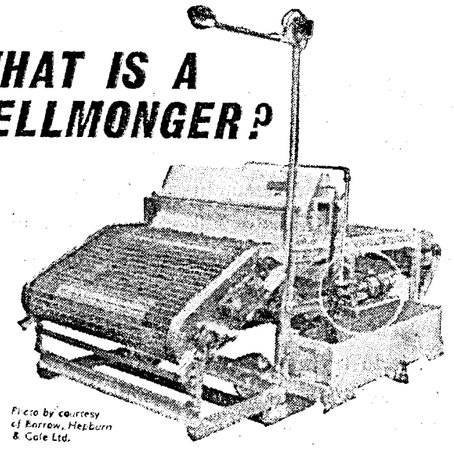

Photo by courtesy of Barrow, Hepburn & Gale Ltd.

A worthy quizmaster question?
When supplying a pump for dealing with Sodium Sulphide Lime Paste we knew a good deal about pumping the paste, but a little puzzled about Fellmongers. But there is the Mono Pump tucked away on a machine for fellmongers who prepare woolled sheepskins. Only one of the many, many duties performed by Mono Pumps on many machines, in many factories, on many processes—commonplace or outlandish.

The MONO pump

They make a lot of things from cold rolled sections

It's so exciting to be taken round a big engineering works. I saw them making parts for buses, railcars, greenhouses, refrigerators, toys . . .

I'm beginning to think that wherever I go and whatever I do I shall always see things which start their life as cold rolled sections made in Birmingham by Metal Sections Limited.

I'll bet it's great fun working there.

is knowing for sure

One after another, go-ahead managements are turning to a completely modern—yet already fully proven—technique to increase productivity. These managements have discovered that the ability to observe by remote control cuts costs and speeds manufacture. The tool that makes this possible is closed circuit television for industry, pioneered by Pye.

Pye Closed Circuit Television sees where the human eye cannot, is invaluable for many flow-line process systems, and enables the work of different departments to be more closely dovetailed. Almost every industry can benefit from it. The most experienced group of people in the country concerned with closed circuit television is to be found in the Industrial Division of the Pye organisation. Their experience could be placed fully and freely at your disposal.

DOCTOR TAKEN OUT TO DUTCH TANKER

GREAT YARMOUTH & GORLESTON, NORFOLK. At 10.58 on the morning of the 24th March, 1960, Lloyd's agent at Great Yarmouth informed the honorary secretary that there was a sick man aboard the Dutch tanker Mare Novum, which was proceeding towards Yarmouth Roads. The master had asked for a life-boat to meet him with a doctor. The life-boat Louise Stephens, with a doctor on board, was launched at low water at 1.2. There was a fresh easterly wind with a heavy swell. The doctor boarded the tanker and found the patient lying in the engine room with severe internal injuries. He decided the man was in too bad a state to be landed by life-boat. The tanker entered the harbour, where the patient was taken by ambulance to hospital. The life-boat reached her station at 1.31.

An English Coxswain

This is another true story of the Life-boat Service—typical of the work that is going on day and night, year in, year out.

The Royal National Life-Boat Institution is supported wholly by voluntary contributions.

DO YOU KNOW

that this bit of flex could be shockingly expensive?

VULCAN KNOW The condition of an electrical installation can only be determined by making thorough tests. The expert who knows how to verify the soundness of the insulation, to check the effectiveness of earthing systems, switch polarity, and switchgear, is the Vulcan Engineer Surveyor.

The regular annual inspection of your electrical installation is the greatest safeguard against the hazards of shock and fire. This inspection and protection is what Vulcan provide. It is a specialist's job.

Equipped with the finest modern instruments, the knowledge, and the experience, Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to us.

An extra specialist Vulcan Service!

We were the first insurance company to offer industry Non-Destructive Flaw Detection by Ultrasonics, Radiography, or Magnetics. This extra specialist service is now available to *all* industry—whether Vulcan insured or not. Write to us for complete details.

Vulcan ARE SPECIALISTS

THE VULCAN
BOILER & GENERAL INSURANCE CO. LTD.
DEPT. 17, 67 KING STREET, MANCHESTER 2

* *The safety of any electrical installation depends on the soundness of the earth conductors, the insulation, the wiring itself. Nothing is more ill-used than electric flex. A break at any point, and you're in for serious trouble. Many times before now, the most innocent-looking flex has hidden away such a fault. Fire, costly damage, sometimes loss of life, have been the direct result.*

HOME

House Divided

Britain's survival depends on the matching of growth in the economy with the growth in Britons' expectations, and on the matching of trade unions', and others', ideas with that reality (p. 875).

Passing the buck to the chairmen of nationalised industries may lead to their bucking the pause: the Trades Union Congress's passing-up of an invitation to plan may lead to their being by-passed (p. 882).

A pact between Labour and Liberals now might succeed only in entrenching their Tory rivals (p. 884). Shadow cabinet reshuffle (p. 890).

Passage of Arms

There are ways in which the army could fill its recruiting gap without conscription: and there are ways of redeploying the forces without squandering security (p. 880).

The two remaining wholly British manufacturers of popular cars are due to clash soon in the small-car field (p. 943).

Mr Foulkes, by a stratagem, has brought the advance of his anti-communist enemies to a halt (p. 890).

In the cab war, the taxi side has inflicted a wound on the mini-cabs: but the weapon used has, on its follow-through, done a mischief to its wielders (p. 887).

Room for Improvement

The Air Transport Licensing Board's yardstick for measuring the applications of independent airlines might advantageously be used for beating Mr Thorneycroft (p. 945).

Uproar over the new Greater London Council proposals is largely the end product of political intakes of breath: the source should not blind less partisan observers to some potential weaknesses (p. 883).

Local authority responsibility for grants towards training is a serious flaw in the Government's bill on social workers (p. 887).

The supply of new houses in Britain exceeds the estimated need, not because too many are being put up but because too few are knocked down (p. 891).

The vehicle testing programme will not succeed unless Mr Marples gives garages enough time (p. 959).

Cupboards Bare

A British draft on US gold reserves has added to the US Treasury's burden (p. 946); they are short of silver, too, but panic is far off (p. 904).

EUROPE

Things British:

Britain's approach to the common market, outlined in Mr Heath's now famous speech, is bold where Britain's own domestic interests are concerned—but loyal, and potentially undynamic, when it comes to negotiating Commonwealth interests (p. 876).

There is no absolute law that the Commonwealth must be consulted at all—even though consultation does the necessary and important job of keeping the Commonwealth together (p. 878).

Things European:

In Brussels, the negotiators are slowly feeling their way forward (p. 877).

The Six are feeling their own way towards putting a common agricultural policy into practice (p. 879).

President Kennedy has been clearing the State Department's decks for the diplomatic action which he expects in Europe and for his new and connected freer trade policy (p. 903).

In France, President de Gaulle has reminded the armed forces that their prime duty is obedience to the state (p. 882).

Mr Khrushchev has reminded the Finns that their prime duty is to be acceptable to the Russians (p. 883).

INTERNATIONAL

Russian Roulette

In *Izvestia*, former newspaperman Kennedy has brilliantly presented the Western case (p. 882).

But no one has yet convinced Herr Ulbricht (p. 883).

Mr Gomulka, trying honestly to explain stalinism, is not always convincing (p. 917).

Poker

Where the future is a gamble:—

Congo: The United Nations has given a decisive mandate on Congo policy to U Thant. A lot depends on how it is used (p. 913).

Kenya: Until Mr Maudling's visit last week, Kenyans were talking themselves into a Congo situation; the Colonial Secretary has told them to talk themselves out of it (p. 914).

Syria: The army is determined that Syrian politicians shall talk themselves into stability (p. 884).

South Africa: Dr Verwoerd is in two minds about the Jews—as they are about him (p. 888).

Chess

Moves in America:—

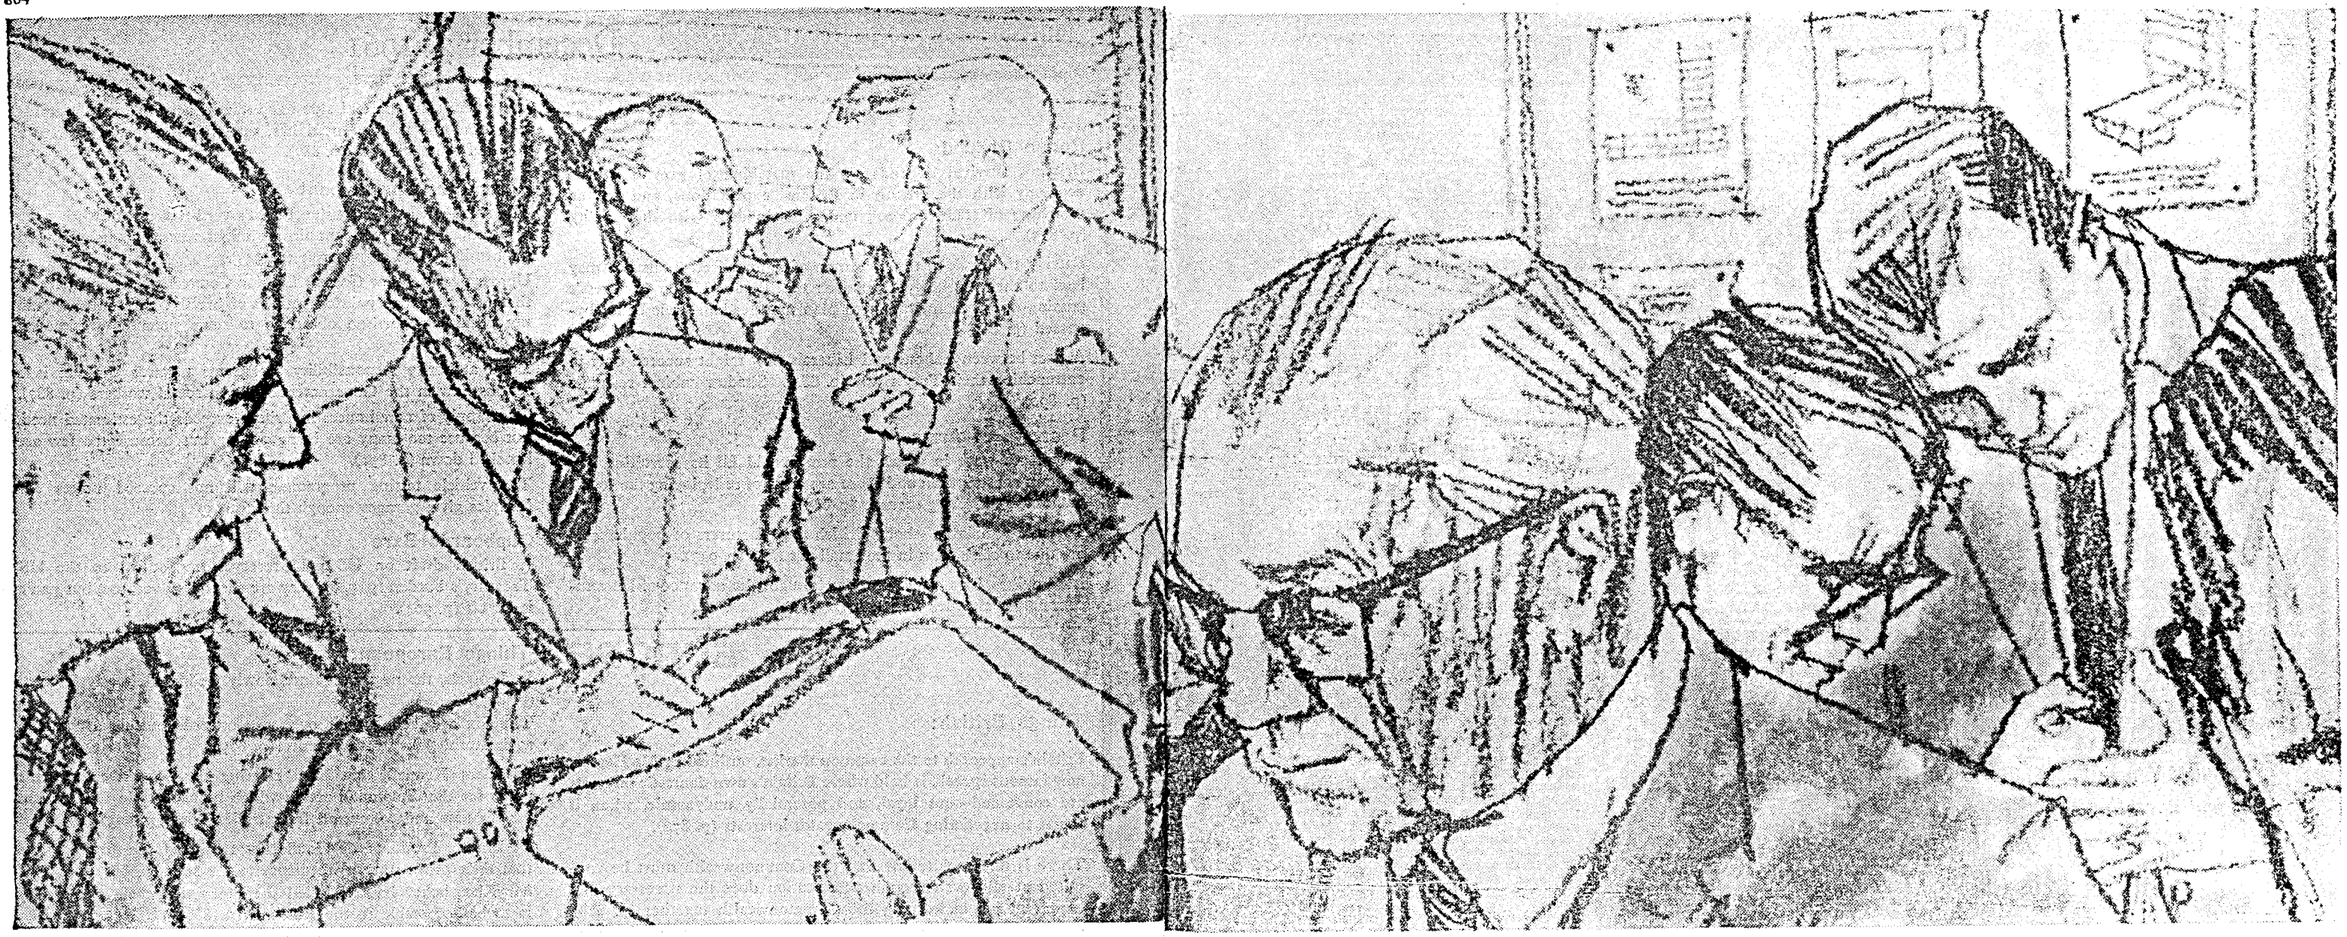
The Republicans find it hard to decide whether they need the votes of segregationists or Negroes more (p. 906).

Washington contains a unique centre for research into economics and political science (p. 909).

Urban renewal has not been enough—yet—to restore Pittsburgh's capacity to grow (p. 907).

Moves elsewhere:—

President Nasser is, unhappily, looking at international plots once again (p. 884).



Dr Amini has little need to worry about politics: the Shah will, for a while, rule Persia by decree (p. 917).

Mr Menzies is presently concerned with politics (p. 918).

PAKISTAN

Stability and a coherent economic policy give hope of economic advance. A special survey appears on pages 923-940.

Detailed contents on page 875

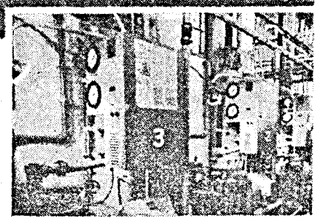
"Do you mean to say we can save 25% on our lighting costs?"

You can indeed! The new Atlas SUPER-8 circuit combines the most efficient fluorescent tube, 8 ft. 85 watt, operating at 81 lumens per watt, with new low loss control gear; and compared with twin 5 ft. 80 watt fittings used in many installations, this new development shows the following cost reductions:

15% saving on capital cost of lighting fittings
15% saving on cost of installation wiring
35% saving on cost of electricity
25% saving on total annual lighting costs

There are few lighting problems these days which cannot be solved from the extensive ATLAS range of fluorescent and tungsten fittings, and the ATLAS LIGHTING ADVISORY SERVICE is at your disposal, without cost or obligation, to offer technical assistance and provide complete lighting specifications. Ask your secretary to write for further information, or to arrange an appointment with an Atlas lighting engineer. ATLAS LIGHTING LIMITED, Thorn House, Upper St. Martin's Lane, LONDON, W.C.2.

atlas fluorescent lighting



THIS HOSPITAL CASE HISTORY PROVES ALL INDUSTRY CAN PROFIT BY USING *Clayton* MODERN STEAM

MODERN STEAM

Saves Time, Space, Fuel and Operating Expense, with Steam Production of

500 to 65,000 Lbs/Hr

Total steam requirements of the new Hospital de Zona, Monterrey, Mexico, are met with these three Model RG-176 Clayton steam generators. Capacity of this tandem plant, which occupies less than 155 sq. ft., is 15,700 Lbs/Hr.

Efficiency in steam production is important in other than hospitals. Wherever steam is used industrially — processing foods, textiles, beverages; *anything* — lower production costs mean greater profits. And costs are reduced when Clayton generators furnish the steam.

Fast steaming, compact, automatic, safe, simple to operate and miserly in fuel consumption, Clayton steam generators have modernized steam production methods around the world. For example, the three Clayton 175 h.p. units shown above have a capacity of 18,000 Lbs/Hr, and occupy only 150 sq. ft. of floor space. They replaced two obsolete, conventional boilers that required five times the area (775 sq. ft.) and produced less than half (7200 Lbs/Hr) as much steam.

Whether your steam demands are for 500 or 65,000 Lbs/Hr, Clayton MODERN STEAM can similarly solve your problem, and save you money.

For details on the above reported case history and others, write on your business stationery

Machinery Enthusiasts

There isn't much they don't know about that machine of theirs. But when it comes to industrial machinery, Wards are the people to consult. New or secondhand, Wards offer a range of plant and equipment so wide that the task of the machinery buyer is considerably eased.

In the field of new machinery, Wards is a shop window for well-known makers. In the reconditioned field, they have an enviable reputation for skilled and knowledgeable workmanship which gives a new lease of serviceable and trustworthy life to secondhand plant. The machinery user who deals with Wards seldom has to look further for his needs.

The supplying of industrial machinery is just one activity of the Ward Group of Companies whose products and services cover almost every branch of industry.

PAY LESS FOR THE WORLD'S GREAT HOLIDAY IN '61—IT'S 'VISIT INDIA YEAR'

INDIA '61 Means luxury air travel at new low costs. On domestic air routes linking 70 great cities, the Indian Airline Corporation with a flying record of twenty million reliable aircraft miles per year offers a 5% concession on selected tours.

INDIA '61 Means air-conditioned rail travel at new low costs. Indian Railways, one of the world's largest efficient networks, offers a 25% rebate. Also, combined travel-as-you-like tickets for thirty days carry a lump-sum concession. The cost of travel in India ranks among the world's cheapest.

INDIA '61 Means superb food and accommodation at new low costs. The Federation of Hotels and Restaurants of India offer 5% concessions on normal rates. In India, hotels compare favourably with the world's best in luxury. Many more tourist bungalows and converted palaces are now available. In India the best food (Oriental and European) is inexpensive.

INDIA '61 Means big game hunting at new low costs. The Shikar Outfitters' Association offer a 5% concession on schedule rates.

INDIA '61 Means front row seats for national festivals. All State Governments and cultural academies will co-operate to ensure this.

The Right Steps...

TO SOUND PLANT INVESTMENT

The soundest capital investment in a new plant or refinery is one founded on sound engineering. For this reason we strive for the highest levels of technical competence. An important part of this effort is spent in analysing, correlating, and recording the scientific data accumulated from our pilot plants, the commercial plants we have built, and from the scientific literature.

One result of this continuing programme is the Kellogg Technical Data Book . . . a major responsibility of our Design Data Group. A single volume of 437 pages in 1938, today it comprises several volumes with a total of more than 2,500 pages. Parts of the Data Book have been released for publication and are used throughout the world as standard engineering references. However, the full economic benefits of the total work are realised only in Kellogg-designed processes and plants.

To obtain additional information on how Kellogg's extensive experience can provide a sound foundation for your new plant investment, you are cordially invited to review with our engineers the various aspects of your own specific needs.

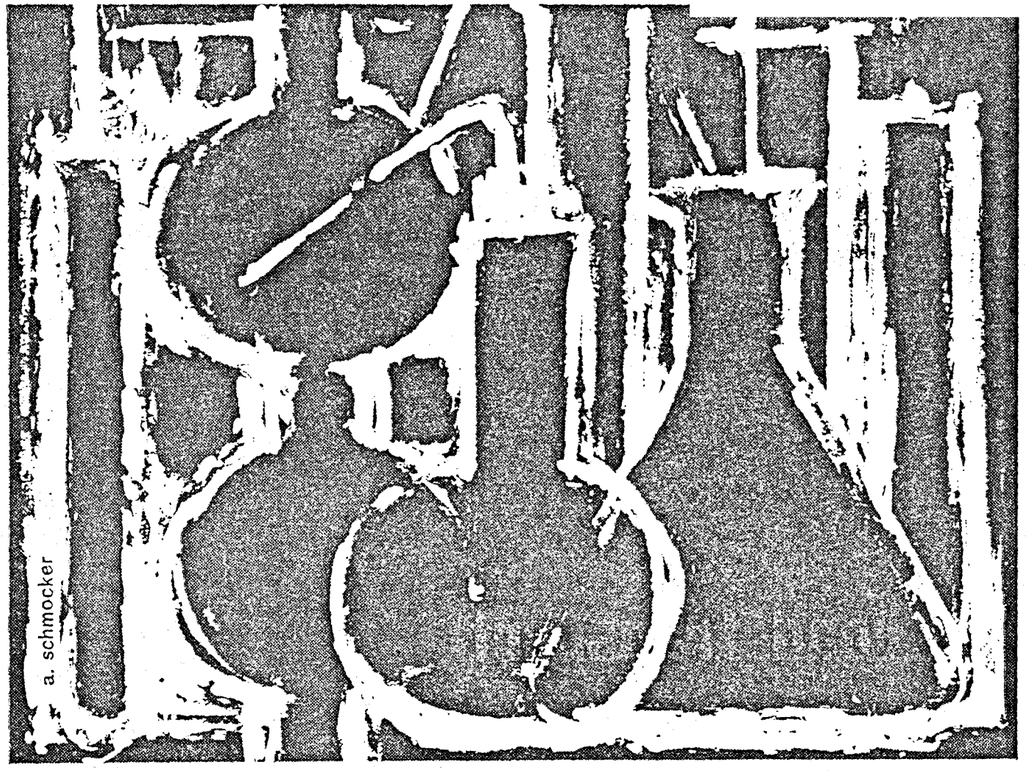
IN THE FIELD OF

INDUSTRIAL EXPANSION

MALTA is magnetic

Malta offers so many incentives to industrialists who seek expansion

- **LOW COST FACTORIES ON SERVICED SITES**
- **LOANS OF UP TO 33⅓% AND GRANTS OF UP TO 33⅓% (AND IN SPECIAL CASES UP TO 50%) OF FIXED CAPITAL ASSETS**
- **100% ON TRANSFER OF EXISTING PLANT**
- **TEN YEAR EXEMPTION FROM INCOME TAX**
- **EXEMPTION FROM CUSTOMS DUTY ON CAPITAL EQUIPMENT**
- **CUSTOMS DRAWBACK ON RAW MATERIALS AND COMPONENTS USED IN PRODUCTS FOR RE-EXPORT**



Malta's tremendous attraction lies in its perfect location—the very heart of the rich markets of Europe and the Middle East, so easily accessible from the island's modern airport, new deep-water quay. Other benefits include a new power station and large labour force.
Over twenty organisations have already taken advantage of this generous scheme. Why not you?

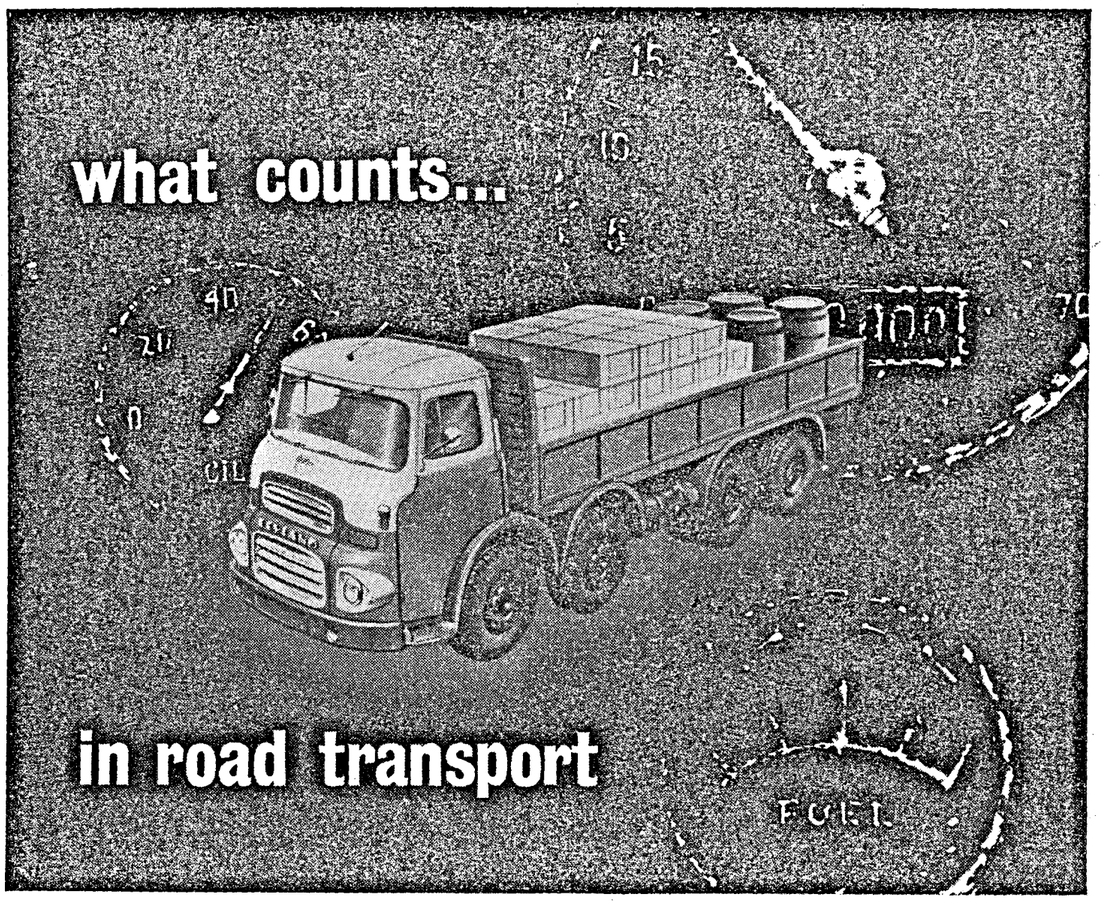
a world of chemistry to serve industry in Britain and Europe



The Overseas Chemical Division of W. R. Grace & Co. shares its world-wide wealth of Chemical experience with industry in many ways, in many countries. Laboratories, Plants and Sales Offices in eighteen countries are continuously developing, producing and marketing the new products and techniques which are the keys to industrial growth. Grace Chemicals match specific industrial requirements and are customer-tailored to particular production needs with the backing of long experience in the field. Grace is one of the world's foremost Chemical Companies. Its principal products include: films, plastic bags and pouches for the packaging of food products, can sealing compounds, cap lining compounds, battery separators, high density polythene, synthetic rubber and resins, polyvinyl acetate, plasticizers, synthetic catalysts, ammonia, ureas, fertilisers and agricultural chemicals, sulphuric acid, silica gel and other desiccants, nuclear reactor materials, jet engine lubricants, ultra highpurity silicon and other industrial chemicals.

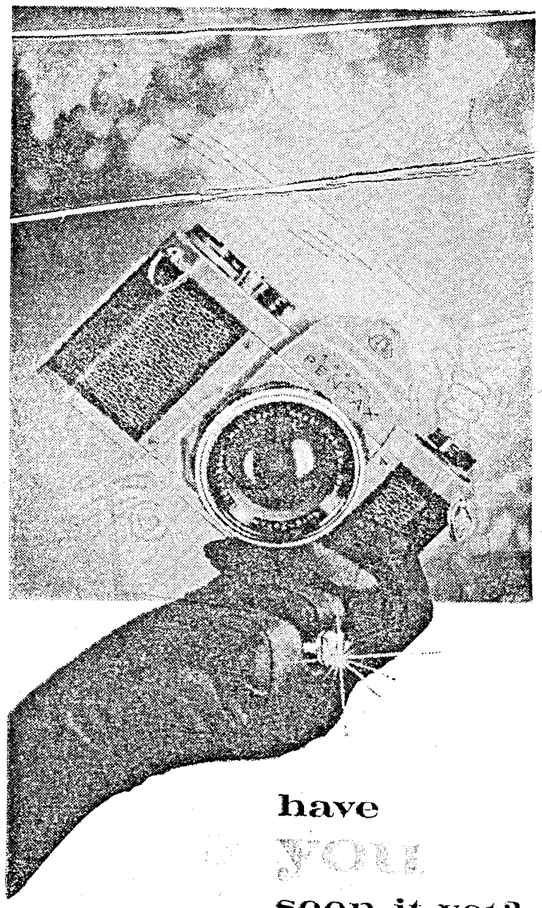
From the instruments on the dashboard of every Leyland truck, come the figures that prove its performance. Logged, they reveal its capability for modern motorway speeds . . . the superb fuel economy of the Leyland engine . . . the astronomical mileages they achieve before overhaul. Figures, in fact, which prove again and again Leyland's unequalled record for reliability, economy and long life—essentials which count most in road transport run on a tight budget.

At Leyland, every day, we receive reports from truck owners in all parts of the world. Owners, who, having bought Leylands on their magnificent record, find actual performance even more astounding.

Reports such as these:

"After logging 960,000 miles, our Leyland Octopus—still in practically original condition—has been part-exchanged for a new model." *G. A. Day Ltd., Portsmouth.*



"One of our shop foremen calls the Albion Chieftains 'the best trucks in our fleet.' Carrying 8,000-10,000 lb. payloads they are delivering 11-12 miles to the U.S. Gallon." *Yale Express System Inc., U.S.A.*

"Our 9-year Leyland Comet completed 480,000 miles with only rings, exhaust valves and main bearing shells renewed." *T. A. Jervis Ltd., Salop.*

This is a sample of the impressive weight of evidence which proves that Leyland trucks count most in road transport.

VOLUME CCI - NUMBER 6171

Fit to Survive?

TODAY'S question is not whether the Government will survive the political fall-out from its economic fumbling; there is no present option. It is not whether Mr Selwyn Lloyd is going to go on surviving personally; he at any rate seems to be determined to stand as firm as he can. The question is whether the steadily wealthier Britain which is the promise of every politician from the Prime Minister downwards, and the premise of every citizen's rising expectations, is going to be able to survive mid-twentieth-century competition, in the common market or out.

Mr Macmillan, as usual, has the words for it: "Britain cannot keep her present prosperity—let alone rise to higher levels—unless she can meet the growing competition in world markets." Have he and his colleagues also the will and the wit for it? That, and not any league table of particular Tory ministers' ups and downs, is the question-mark left by the latest faltering over the pay pause. It is the oldest question-mark in this country's postwar politics and economics. Every government of whatever colour since 1945 has had to confess the self-strangling process by which, when incomes grow more than output grows, the growth in output has to be stopped, because of the drag of home demand and higher costs on exports and the down-draught on the balance of payments and the worth of the pound. All the relevant evidence is that output, exports and real earnings have gone ahead together only during the brief spells without inflation, whether by the pull of too high demand or the push of too high wage costs. Yet no government has had the guts or guile to turn these fleeting and almost accidental proofs of the way to progress into a policy for growth; and the trade unions have gone on chasing the will o' the wisp of the biggest money wages that can be got in the soft economy from un-taut industries and escalated awards to public bodies.

The first responsibility is the Government's, not the trade unions': a responsibility not to run the economy but to create the conditions, to furnish the incentives, for its competitive growth. It is over ten years now since the Tories came back to power, and not far short of five since Mr Macmillan took over. Always until now they have broken their teeth on this economic test; and whether they win again at the next election or not, this may be their last chance to show that Tory freedom, or indeed Tory planning, works. This time, Mr Lloyd said it was going to be different—as other Chancellors have said before. In July, with the pound again in danger, he had to reinforce his austere budget balancing of April by more taxes on consumption and severer credit controls. That was first aid, and familiar. What of the cure? To stop the old chronic apoplexy of inflationary pay rises he called for the famous pause. He promised a new look at the forward budgeting of public investment and the control of public expenditure. And, just a decade after the election of 1951 when planning was the dirtiest word, he began to talk of new ways of planning for balanced growth, with targets set in proper relation for output, exports and incomes. First the pause, then the plan.

Is it all going to run into the sand again? That is the nagging fear now. A pay pause is not a policy. To freeze rewards is no recipe for growth. But, until there is a policy which puts the incentives for paying higher incomes, and the disincentives for not paying them, where these ought to be, the pause is its indispensable prelude, even at the necessity of facing strikes to enforce it.

Yet the signs are, for all this week's fresh assurances, that the pause may not be held, when a real crunch comes in a key industry; and there is no real proof yet of the programme for competitive earning that alone should take its place. If Mr Lloyd's National Economic Development Council does come into being, it looks like being yet one more instrument for industrial self-government by unathletic compromise. Nothing positive at all has yet emerged from the pause for thought and action, which the pay pause surely was: no token of any real change in the fondness for bolstering and protecting uneconomic activities, but rather the reverse; no weakening in protectionist habits yet to match the undoubted eagerness to enter the common market, with tariffs boldly down, in 1963; no schemes of practical imagination either to speed the movement of workers from unprofitable to profitable tasks or, within the world rules, to help forward British exports.

Hunt the scapegoat is a fascinating game, but not much help. No doubt Mr Lloyd doggedly desires to have a policy if he can find one. The fear is that the collectivity of ministers, like the collectivity of trade unionists, or indeed the collectivity of any national group, is still too soft-centred to face the challenge end-on, and without self-deception. If so, the implication has to be faced. It is as Mr Macmillan put it: not just devaluation (the naughty word that Mr Lloyd used to the Trades Union Congress on Tuesday) but national decline. Whether he and his colleagues are fit to survive will be decided by the electors in two years' time. Whether Britain is fit to survive, in the station to which God is still believed to have called it, is being decided all the time. On the answer depends Britain's place in Europe and the Commonwealth (which is discussed in the articles that follow), in the Atlantic community (to which President Kennedy is giving fresh significance in his face-lift for American trade policy) and in the world at large. Survival begins at home.

EUROPEAN BATTLEFIELD

Design Revealed

"In saying that we wish to join the EEC we mean that we desire to become full, wholehearted and active members of the European Community in its widest sense and to go forward with you in the building of the new Europe."

MR HEATH'S speech of October 10th, now that it has cascaded through the leak, emerges as one of the most important in British history. Although some people have been *blasé* enough to pretend that there is nothing new in it, this is really the carefully thought-out design for Britain's whole approach to Europe. Does it show the Government looking boldly enough ahead, or too timorously over its shoulder?

In all matters that concern Britain's own manufacturing and trading, the answer is that boldness has won; in this part of the speech the conversion to brave perspicacity seems to be complete. Britain "*accepts without qualification the objectives laid down in Articles 2 and 3 of the Treaty of Rome, including the elimination of internal tariffs, a common customs tariff, a common commercial policy. . . .*" It "*accepts the structure of the present EEC tariff as the basis of the common tariff of the enlarged community,*" except that (to compensate other countries in Gatt for the enlargement of discriminatory trade in Europe) we rightly support "*making a linear cut in the common tariff as it stands today . . . of the order of 20 per cent.*" Moreover Mr Heath told the common market ministers that Britain is

> "*ready, once we enter the Community, to make, in a single operation, the same cuts in tariffs on trade between member states as you will have yourself made by that date. In addition, we are prepared to move our 'most favoured nation' tariffs towards the new common tariff by a step equivalent to that which you have already taken. This would be a considerable leap forward. . . .*"

It would be a considerable leap forward indeed. It implies that at about the end of next year many of the tariffs that protect British industry are liable to be cut, in one single and abrupt operation, by something over 50 per cent.

It also now seems unlikely, after reading this speech, that British farmers will be allowed to block the way into the common market. Beneath a mountain of tactful politician's phrases, Mr Heath's most specific suggestion and request here was merely that "the transitional arrangements" before Britain is fully integrated into Europe's proposed agricultural policy might "*where necessary, continue for a period of between 12 and 15 years from when we joined.*" Such treaty provisions delaying the obligation of integration for 12 or 15 years never really mean very much. If continental Europe's common agricultural policy prospers, Britain will want to be integrated into it long before 15 years; if it does not prosper Europe's common agricultural policy will itself be changed long before then—or become nugatory.

Mr Heath, explaining

Perhaps inevitably, in present political circumstances, it is the Commonwealth part of Mr Heath's speech that is the least felicitous and the least dynamic; it is infelicitous and undynamic because it is so loyal. Mr Heath began here with the obvious debating point: special arrangements have been made in EEC for that proportion (more than 20 per cent) of France's imports that comes from territories once associated with her, so special arrangements for the 36 per cent of Britain's imports that come from the Commonwealth would not be without precedent. The nature of the precedent is that "*for some countries—Morocco and Tunisia, for example—the problem was solved by maintaining . . . their right of access to the market of the country with which they were associated. . . . Others who became associated overseas countries or territories* [i.e., associated with the Treaty of Rome itself] *gained a preferential position for their products in the common market as a whole.*"

UNDOUBTEDLY, the best solution for the underdeveloped Commonwealth countries—broadly, all of them from India down—would be to seek preferences in all Europe by becoming "associated" territories under Part 4 of the Treaty of Rome. But Europe probably would not accept the biggest of them (like India), and some of the Commonwealth Asians and Africans may refuse to apply because of political misconceptions about what "associated" status means. So Britain's "alternative approach" is rightly to ask that their tropical agricultural products—such as Ghana's cocoa, India's and Ceylon's tea—should be exempted from tariffs either (and preferably) for all exports of these commodities into all Europe, or else (as a second best) at least for these countries' exports of these particular commodities into Britain. Mr Heath was slightly less specific about his proposals for manufactured exports from these underdeveloped countries—a problem which he suggested particularly concerns the Asian Commonwealth countries and Hong Kong, but which will concern all of the others in time. But he told the common market ministers "*you will probably agree that it would not be in the general interest that the United Kingdom should erect fresh tariff barriers to cut back such trade.*"

Probably, these problems of the underdeveloped Commonwealth countries will be solved in time. Mr Heath implicitly recognised that Britain cannot hope to put up the same fight for manufactured exports from the developed countries of the Commonwealth. This will annoy Canada, whose fully manufactured exports to Britain account for less than 5 per cent of its total export trade, and which sends to Britain less than 20 per cent of its exports in all. But these figures frankly do not give Canada the right—though it is utilising the occasion—to make its voice quite so loudly heard in these negotiations as, say, Australia and India (about 30 per cent of whose total exports go to Britain), Nigeria and New Zealand (between 50 and 60 per cent), or some of the remaining colonies (at the top of them, Mauritius still sends 82 per cent of its exports to Britain). Moreover, Britain is helping Canada (and some others) by asking that five important Commonwealth-produced raw materials—aluminium, wood pulp, newsprint, lead and zinc—should not be subject to any tariff in Europe.

There remains the one field in which Mr Heath's speech may legitimately be criticised by pro-marketeers: the one subject on which one is still most fearful that the whole project could fail. This is the question of exports of temperate foodstuffs—meat, wheat, dairy products—from the developed countries of the Commonwealth. Here Mr Heath sounded rigid. "*Australia, New Zealand and Canada, in particular, have vital interests in this field for which special arrangements must be made.*" "*We shall no doubt have to consider a whole range of possibilities, including duty-free, levy-free, or preferential quotas, market-sharing arrangements, and long-term contracts.*" His ruling principle was that the Commonwealth producers concerned

> "*should be given in the future the opportunity of outlets for their produce comparable to those that they now enjoy.*"

In a changing world it is never possible to guarantee to a producer that he can be accorded for all time the same level of market opportunities as he happens to be enjoying now. It is this sentence that might perhaps have been phrased differently if Mr Heath's speech had been intended for publication. Now that it is public, the danger exists that it might come to be regarded as a rigid commitment. In that case, it could prove to be an albatross, and an expensive one: either politically expensive, as ministers struggle later to explain to indignant Commonwealth governments why they have not quite managed to live up to it; or convulsively expensive, if the whole effort to get Britain into this new order in the world were to fail, because of bitter marginal argument about some small missing fraction out of the £300 million worth a year of British imports of meat, butter and wheat from the Commonwealth. This the future will show. Mr Heath's speech is an enlightened document and marks a stage in British evolution; surely it cannot be the intention to allow so great a project to founder through final disagreement about such a relatively few million pounds' worth of tar.

This, then, is the basis of the British approach—the brief for the small team of British officials who last week started on the long, arduous business of detailed negotiation. Our correspondent in Brussels describes below the outcome of the first week's—still exploratory and rudimentary—talks.

Brussels: Work in Progress

The opening stages, between officials, of the common market negotiations are reconstructed by our Brussels correspondent

DETAILED negotiations between Britain and the common market opened on Wednesday, November 15th, in the Rue des Quatre Bras, Brussels. Sir Pierson Dixon led the proceedings for the British until Friday afternoon, November 17th, when he handed over to Mr Eric Roll and left to be available for Mr Macmillan's meeting with General de Gaulle at Birch Grove. Herr Lahr, the west German state secretary for foreign affairs, was in the chair, and delegates were present from each country of the Six, together with officials of the European Commission. Indeed, it looks as if the commission, having gained, against French disapproval, the right to speak freely during the negotiations, is now likely to play a major part, for the good reason that it naturally has a more global view of community affairs than any one of the six governments, as well as knowing by heart the Treaty of Rome, of which it is the official guardian.

The six governments had made clear during the ministerial meeting their determination to approach each problem by way of the Rome treaty. The European Economic Community, they maintain, is after all primarily an economic union, and the principle of the common external tariff is fundamental to it. It follows that, whatever the multifarious claims of Commonwealth countries to be regarded as special cases, and however large, complex and interdependent Commonwealth problems may be, the rules of the treaty must not be allowed to become exceptions and the exception the rule. One wonders if in fact there is not a risk that the Six and the Commission may forget Professor Hallstein's much-quoted remark, "We are not in business, we are in politics." However, it

is probably too early to voice fears of the damage that narrowness of vision would do.

The common external tariff was taken as the starting point when the negotiators gathered on the first morning. Sir Pierson Dixon confirmed Mr Heath's statement that the British are prepared to accept in principle the common external tariff as it will stand after the Dillon negotiations which have just re-opened in the General Agreement on Tariffs and Trade. The Six, it will be remembered, some time ago offered a 20 per cent across-the-board reduction, which began to be taken into account in tariff-fixing at the end of last year and would become definitive on January 1, 1963, if the other Gatt members were prepared to make equivalent reductions. But the two highest-tariff countries of the common market, France and Italy, are dissatisfied with present American offers, and it now seems unlikely that the Community will maintain the whole of this reduction. However, the six appeared glad to hear the British repeat their offer.

The second item on Wednesday's agenda concerned the alterations requested by Britain to the common external tariff for a number of items, including the five previously cited by Mr Heath: Aluminium, paper pulp and newsprint, lead and zinc. All these are basic industrial materials on which the United Kingdom tariff is either nil (as for the first three) or very low indeed (lead and zinc). However, several of these items are on the common market List G—that is, their tariffs were undetermined when the Rome treaty was drawn up, and were separately considered later. The tariff on aluminium, for example, was finally fixed at 10 per cent—too high for Britain's liking, for a basic material. After some study of the British list it was decided to set up a special working party of the Six and the British to examine, from November 27th onward, the estimated import requirements, present trade links, and all other relevant factors concerning each product. A report is to be made by this working party to the senior officials when they meet on December 4th.

THURSDAY morning, November 16th, began with a second co-ordination meeting of the six delegations and the commission, after which the main work of the day was a study of manufactured goods from both the industrialised and "developing" countries of the Commonwealth. It was decided that the British delegation and the commission should together prepare a statistical analysis giving details of the output and exports of the industrialised countries, as well as a similar analysis of manufactured goods from "developing" countries—with some attention in the latter case to the growth factor. Subsequently, tropical products were considered, and here also more data were felt to be necessary; a list is to be prepared in detail, by country and by product.

The discussions on November 17th were taken up by a wide review of Commonwealth questions, in which Britain presented to the Six a complete list of Commonwealth countries with their trade figures. But here again more details were felt to be needed, not only in view of the different nomenclatures in use by the Commonwealth countries and the EEC, but also because of the complexity of Commonwealth trade. It was agreed that the statisticians should be given a week to prepare the facts, broken down into suitable sub-headings. During this Friday the possible eligibility for some form of association of an unspecified number of Commonwealth countries was touched upon, but it was felt this big question was best postponed until the next round of data-gathering was completed.

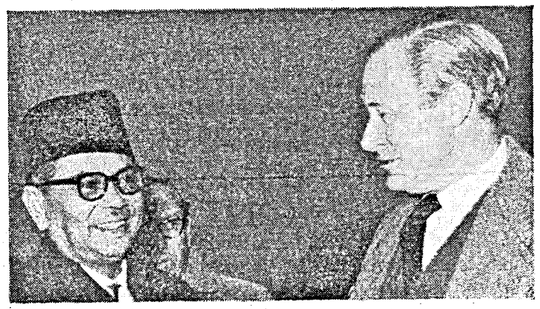
The delegations have not met during the present week, but the various working parties have been going ahead and are to present their reports to the senior officials on Monday, in preparation for the ministerial meeting on December 8th and 9th. So far, then, the talks have been fairly quiet and exploratory, with very little to show for them. The teams worked in privacy, undisturbed by the reports of the leaking of the Paris speech that had the British Press on tenterhooks. By all accounts the atmosphere was good. The Six, the commission and the British were getting to know each other in the corridors as well as in the conference rooms. This is pleasant news: rubbing shoulders frequently will probably gradually foster the necessary familiarity of each with the way the others' minds work, as it has done for the Six themselves. It is not without importance that the Six, in spite of their frequent differences, have evolved together a common style of approach to problems and a common style of presenting their case which may not yet be fully shared by the British. Do the latter, one wonders, strike an unfamiliar note? In any case both teams seem to be impressed, as they take each other's measure, by the quality of the other side. Undoubtedly they will make a strong force if they ever sit on the same side of the table.

Consulting Room

Commonwealth consultation, a necessary habit, cannot be an unbreakable one

BRITISH governments do not like to put it all on paper, as other European governments do. When matters must be put in writing, the British usually prefer the general to the specific. No one has stronger reason to cherish this ingrained British habit than the Lord Privy Seal, Mr Edward Heath. He has to talk to six European governments and the European Commission, on a project that involves the largest interests of Britain. At the same time he has to plead the interests of seven other European governments, twelve independent Commonwealth governments, and a dozen British dependencies. He and his fellow negotiators must have freedom to be flexible; they cannot accept the plea of any Commonwealth country, under the guise of "consultation," to have, in effect, a voice with a veto in what is said and written. And the more published documents there are, the less freedom they will have.

There is nothing of perfidious Albion about this. Flexibility is not always a euphemism for hypocrisy. Most negotiators know that adopting a rigid stance at the beginning of difficult discussions is one of the best ways of ensuring a breakdown at the end. In the common market talks New Zealand, for example, has a right to know the lines along which Britain will work to protect sales of New Zealand butter; but, unless there is very close understanding between the two governments, a circulation of the precise texts of all the relevant documents would make Mr Heath's task more difficult—and not advance New Zealand's cause. It would make it possible for New Zealanders to complain if the final arrangements did not conform to the exact words of the original proposals; and, if he had reason to fear such complaints, Mr Heath might be in a worse position to look after New Zealand's interests (by bargaining for the best the Six will give) than if he had freedom of movement. This contingency can be multiplied many times.



It was to establish the precedent of not telling all, and not actually to hide anything, that Mr Heath's opening speech to the common market ministers in Paris on October 10th was not circulated in full to Commonwealth and Efta governments. When others (including perhaps the Canadians) were seen to have winkled out copies for themselves, the right thing to do, as the British Government saw, was to publish it; and this was done on Wednesday. The difficulty is that it is almost impossible to keep secrets as big as this, especially when so many people are possessed of them. The danger now is that Mr Heath and his negotiators may in future feel the need to be as circumspect when

they speak to the Six in private as they would if they were speaking anywhere else in public.

This would not make things any easier. Britain, as suitor in the negotiations, is wooing governments used to thinking in careful clauses, paragraphs, sections and sub-sections. To meet the Europeans, it must spell things out in finer detail than it would, perhaps, like. To meet the Commonwealth, it must consult the affected countries when their interests come on the agenda; if leakages occur again, it may become necessary to abandon attempts to talk to the Commonwealth countries in summaries. This would be a pity.

ANOTHER kind of pressure for giving exact words to the Commonwealth flows from the belief that consultation is an absolute Commonwealth law. The Prime Minister of Malaya, for example, last week cited "Commonwealth consultation" as one of the major means of control his government would have over the Singapore base, if Malaya and Singapore join in a Malaysia federation. The written agreement between Tunku Abdul Rahman and the British Government provides for less control over the Singapore base than the Tunku is telling Malayans he has. But to him, "consultation" fills the gap.

In the same way, Mr Gaitskell attacked the government last week for not consulting fully with the Prime Minister of the West Indies, Sir Grantley Adams, over the Immigration Bill. Mr Gaitskell had a point: the Government clumsily rushed the bill

The Tunku and Mr Sandys, consulting

into Parliament before there was time for proper consultation. It was bad to tell Sir Grantley the Government's intentions, to carry them out almost immediately afterwards and then (as Mr Macmillan did) to call this consultation. But there is no absolute law, *pace* Mr Fleming, that the Commonwealth must be consulted at all.

The practice is that, on many everyday issues, the Commonwealth governments are informed (rather than consulted) in more intimate detail about British and world affairs than non-Commonwealth governments are. In 1960, more than 40,000 telegrams left Downing Street (the Commonwealth Relations Office) for Commonwealth governments; about 18,000 telegrams came the other way. This is an *ad hoc* process. On some matters of very wide interest—Berlin and disarmament, say—all Commonwealth governments get much the same telegram; on others the information is given only to those specifically interested. In many instances, "consultation" means no more than an exchange of ideas; in some (as, wrongly, with the central African federation) it is stretched to mean "negotiation".

But much information is given to non-Commonwealth countries that the Commonwealth does not get. Nato, Washington, the European Free Trade Association, are all consulted by Britain about matters that some, or all, of the Commonwealth countries are not told about. Nevertheless, the consultation that does go on is, in the words of the present Commonwealth Relations secretary, the "very lifeblood" of the Commonwealth; and it is reproduced among many less official and unofficial bodies. It does, sometimes, influence thinking on both sides. More often it merely keeps tempers. This, however, is a function of the Commonwealth and the basis of its value as a bridge between the European and the Afro-Asian worlds.

All this said, it remains true that Commonwealth consultation stops at the point where it is against the interests of any sovereign country within the group to continue it. The government of Ghana did not inform Britain before it announced its "union" with Guinea and later with Mali. The British were less than frank with their friends at the time of the Suez intervention in 1956. Consultation is invaluable; it should be encouraged as much as possible; but if it is made an unbreakable rule, it will break. This is true in the common market negotiations, in the opening phase of which the Government can justly claim that there has been more consultation than ever before. It remains true, however deeply the negotiations affect many Commonwealth countries. Responsible through its own Parliament to its own electorate, the British Government must, and presumably does, recognise that it is in Britain's interest that the Commonwealth should be satisfied with Britain's conduct. It need not, however, sacrifice Britain's own ultimate interest to that end. It must make its own consulting room.

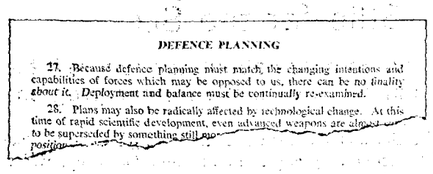
Stile for the Six

The Six have to agree about agriculture if the common market is to make further progress

WHILE the Six and the British circle round each other like wrestlers about to grapple, France and Germany, within the common market, are already locked in a fateful argument. At meetings of the ministers of the Six on November 30th and December 15th they have to decide whether to make a start on putting a common agricultural policy into practice at the end of the year. If they cannot get over this stile, the French have declared, a halt must be called to further progress in the common market as a whole. The whole momentum of the European movement is thus at stake.

The indications are that the decision will be positive. In a speech in Strasbourg on November 20th Dr Erhard, the west German minister of economics, expressed the hope that the Council would manage to get over the remaining difficulties in the way of the new common farm policy. Since it is the Germans who have to make the sacrifices, by reducing grain prices and importing more French products, the speech was important. Indeed, this week's meeting seems likely to be preoccupied more with softening the blow for Germany than with discussing whether the Commission's proposals are to be accepted.

The decision has perhaps deeper implications for German and French domestic politics than any since the common market was born. While 4 per cent of the British labour force is on the land, farm workers make up 20 per cent of the French labour force and 15 per cent of the German. The unrest in the French countryside this summer rubbed home the urgency of the French quest for markets. President de Gaulle cannot afford a disaffected peasantry as well as the threat of another right-wing coup. For Dr Adenauer, who may yet have to administer some unpleasant foreign policy medicine to the Germans, it cannot be pleasant to have to force another dose down the throats of the staunch peasant supporters of the Christian Democratic Union.



West Germany, however, cannot indefinitely maintain the present high level of protection, which masks, in parts of the country, a minute scale of agricultural operation and an almost medieval organisation of holdings. Technical change and the steady drift from the land now make possible a revolution in farm methods throughout the common market which would bring the livestock farming of all Europe up to the standards of Denmark, Holland and New Zealand. But that revolution will only happen if the barriers come down and European livestock farming can be based on cheap feedstuffs. Thus French and Dutch exporters, pressing for the move on January 1st, are pushing in the same direction as the overseas Commonwealth.

Kite over Gatt

A KITE for a new world-wide farm deal was flown in Geneva on Tuesday by M. Baumgartner, the French finance minister. He suggested that the General Agreement on Tariffs and Trade should call a conference in January of all the main producers of non-tropical farm products to work out new orderly arrangements for world markets. Subsidies (and with them dumping) should be abandoned as a method of supporting prices, and replaced by international agreements to maintain stable "normal" prices. The idea is now circulating among the common market governments, and may feature prominently in their response to the farm problems raised by Britain's application to join the Six. Mr McEwan, Australia's minister for trade, also evidently accepts the idea. It follows logically enough, after all, from a negotiation that throws into the melting-pot the interests of all the great agricultural exporters of the world—Australia, Canada, New Zealand and the United States.

Whether good will come of it depends on how far the interests of consumers are allowed to determine price levels. There is a vast difference between "normal" and profitable prices for wheat from the prairies and from Normandy. More immediate hope for the consumer was implicit in another move in Gatt this week. The current attempt to cut European and American tariffs by 20 per cent now looks near success, with only a few items, like cars and tobacco, still to be agreed. Mr George Ball, the newly promoted Under-Secretary of State, on Tuesday broached for the first time in an international meeting one of the bold new American ideas for further cuts. In future, he suggested, tariff cuts should be negotiated between America and Europe, not by individual items, but across the board. Evidently the American Administration is determined to move rapidly from fine free trade words to action.

It is good news that this proposal was well received, not only by the Europeans, but by Canada. When Mr Fleming saw President de Gaulle in Paris earlier this month, the French president reportedly told him that Canada would be better occupied backing the new American plans for Atlantic unity than harrying the negotiations between Britain and the Six. That is also the view of Mr Lester Pearson, the leader of the Canadian opposition. How right it is.

DEFENCE PLANNING

27. Because defence planning must match the changing intentions and capabilities of forces which may be opposed to us, there can be no finality about it. Deployment and balance must be continually re-examined.

28. Plans may also be radically affected by technological change. At this time of rapid scientific development, even advanced weapons are almost certain to be superseded by something still more [illegible] position.

Defence in the Next Five Years

A layman's draft of the Defence White Paper for 1962 that Mr Watkinson ought to be writing.

As previous Reports on Defence have emphasised, the Government's policy is to deter war, fulfil Britain's obligations to its allies and itself, and promote general, controlled disarmament. The present defence policy was initiated in 1957 under a five-year programme. It is now time to take stock of it in a changing world.

REGULAR FORCES

2. Voluntary recruitment was estimated, five years ago, to be capable of sustaining all-regular forces (on six-year and nine-year engagements) in the following numbers: Royal Navy 88,000, Army 165,000-180,000, and RAF 135,000. It is now apparent that by January, 1963, when the last national serviceman was to have left, the navy and air force should be able to reach those targets, except in certain technical jobs. But in the army—despite the improved rate of recruiting and reduced wastage achieved since September, 1961—there looks like being a dangerous gap. The retention of 15,000-20,000 national servicemen will bridge that gap for the first six months of 1963, but thereafter there is still likely to be a serious shortage, not so much in combat troops as in both the skilled technical grades and the humdrum supply jobs (where social status is low in all armies).

3. There are several possible methods of surmounting this difficulty. The first, which is still suggested in some quarters, is a return to general, compulsory two-year national service. This would be bad for the regular army's prestige but, even more important, it would be thoroughly wasteful of the country's manpower and resources: during national service some 100,000 men were ineffectively tied up at any one time either in training or being trained. A second method is selective service, under which the armed forces would call up for two years only those young men reaching military age whom they require for particular jobs. This is a flexible system; it works not unreasonably in the forces of the United States; and it is a solution to which the Government will resort if necessary. Its chief drawback is that the army would get a poor return in effective service from each individual draftee in proportion to the investment of its training resources.

4. The Government is therefore going to give a third method—the maximum incentive to voluntary recruitment—a full trial for the next two years. In this period it will be able to rely, if the present state of international tension persists, on its existing powers to call a sufficient number of trained reserves, together with the prospective "Ever-Readies," back to the colours whenever needed. The Government will pay attention to the movements of earnings among comparable tradesmen in civilian life, and it will make the necessary adjustments in service pay to keep the wastage from these short-supply categories to a minimum. But its chief effort will be devoted to an entirely new concept. It will seek to make the armed forces one of the main contributors to technical education and training in the country as a whole. A beginning has been made in this direction, but the present service opportunities need dramatic extension and improvement.

TECHNICAL TRAINING

5. Technical training will be costly, but it will be a national investment in every sense. The terms open to a young man anxious to improve himself, but aware of the bottlenecks in existing civilian training facilities, will cover five years from the age of 16-17. For the first 18 months he will be assured of a first-class full-time technical training, using facilities and civilian instruction equivalent to, or better than, technical college standard. In the ensuing six months he will complete his basic military training. There will then follow three years' service, engaged in the specialty he wishes to pursue. Those technicians who show particular promise after that time will be encouraged to re-engage for further training up to CAT or university standard; it will give them the opportunity of rising to commissioned rank if they stay in the services, and of being trained technologists when they return to civilian life.

6. The advantages of this scheme are threefold. First, the forces will be able to employ their skilled men for a reasonable period and will be conscious of giving them something worthwhile in return. Second, there is a reasonable prospect that a proportion of these trained men, even if they do not intend to rise higher, will choose to stay in uniform after five years. Third, the majority that are bound to be snapped up by industry will still be contributing far more to the economy, and therefore to the defence of the country, than they would otherwise be capable of: the army, in short, will be doing on a major scale what the larger and better firms are already prepared to do in supplying skilled labour to industry at large. Should selective service have to be resorted to for other reasons (i.e. to raise the total army strength to 200,000-250,000 men), it is thoroughly desirable that this kind of educational opportunity should be in being and available, as an alternative, to all those liable for call-up.

"INTEGRATION"

7. Even with this training scheme in being there will remain a need to make the most efficient use of manpower, both skilled and unskilled, in supply, maintenance and base area jobs in all the armed forces. Integration of the three services themselves, particularly of those units with combat duties, would be impracticable and unpopular. It would damage the *esprit de corps* on which efficiency and normal recruitment depend. But in the infrastructure of the three services, in the jobs which tend to have little standing with the powers-that-be or the public, there is a case for a merging of resources, both to promote efficiency and to make up for serious scarcities that are likely to persist indefinitely (for example, doctors and dentists). The maximum effort will be made to stop duplication in such matters as base hospital services, bakeries, long-distance transport, fuel supply and communications.

8. Unless the armed forces can themselves achieve a proper rationalisation of these duties, most of all in overseas bases, the Government will have to consider seriously the formation of a single, composite technical arm (the Royal Technical Services) whose purpose, and consequent pay and status, would be to run this side of service life on the best standards of the civilian economy. The difficulties, particularly in the allocation of signallers and electronics experts in warships or ground combat units, are recognised, but the opportunities for reorganisation throughout the lengthy "tail" of the modern armed forces are equally apparent.

DEPLOYMENT

9. Hitherto 85 per cent of British naval strength—the most mobile arm—has been earmarked for Nato service; and 50 per cent of the army—the least mobile—has been assigned to distant and scattered areas outside the Nato command. Nato strategy now calls for bigger conventional ground forces in central Europe. This call has come at a time when Rhine Army is finding it difficult to keep up to its nominal strength of 55,000 men. The Government accepts that it must maintain, and if need be in the long run increase, this commitment in keeping with Britain's role as a European power. But for financial reasons Britain cannot be expected to station on the continent anything like as large a force in numbers or reserves as the west Germans do. The British contribution must therefore be qualitative, chiefly in armoured formations and tactical air support.

10. The rundown in Britain's overseas garrisons has proceeded apace in recent years. There are still small savings to be made, but even in Hong Kong (10,000 men) it is difficult to do more at present because most of the troops are still required for internal security. The Government, however, intends to close the following military base establishments in the next five years, subject to the international situation: Hong Kong, Gibraltar, Malta and either Cyprus or Libya. The Kenya base will be closed before then, for political reasons. Singapore, too, will have a more restricted role in keeping with the new agreement with Malaya; here the chief strategic effort will be transferred to Darwin or Fremantle.

11. Steps will be instituted, where necessary, to recruit local security forces in order to allow as many British fighting forces as possible to be deployed in other theatres, particularly Europe. An essential corollary to these changes is the provision of more air-naval and marine commando forces capable of sustaining the policeman's beat in the Mediterranean and east of Suez, using Nato, Cento and Seato bases. Recruiting for the marines (normally very satisfactory) will be increased for this purpose. The change-over will be gradual within the five-year period.

12. The existing British contribution to the strategic nuclear deterrent will be maintained as long as the V-bombers are a credible force. Thereafter the British nuclear role will be chiefly tactical, and no specifically strategic means of delivery will be developed. Little financial saving would accrue from scrapping the independent strategic deterrent at this stage: but a vast potential financial burden for the future will be avoided by this decision not to "keep up with the Joneses" in perpetually modernising it.

The Government will continue to co-operate with the Commonwealth, encourage interdependence with our other allies, pay attention to the rising power of China and keep a close watch on all defence expenditure (especially any that seems to be being proposed on "prestige," rather than hard, practical grounds).

education, with the exception of the undefined "central area," with a population of two million, where a single education authority will inherit the rump of the LCC's kingdom.

If the scheme is acceptable at all, this special central authority (which will have the additional political sop of being more likely to be Labour-controlled) is probably a good thing. It looks as if the idea is to set up a joint educational board for the central boroughs; if so, the door will be half-opened to large *ad hoc* educational authorities in other parts of the country (which could be very useful). But the claims of the GLC to exercise a general surveillance in education (e.g. on school-building, promoting parents' freedom of choice, and teacher-training) both over this hybrid "central authority" and over the peripheral boroughs should not have been ruled out.

Considerable uncertainty also remains about precisely what powers the GLC will be given over such regional matters as general housing development, town and country planning, and traffic and highways. The GLC is to have full responsibility for overspill and will have a right of appeal to the Minister if its local development plans are vetoed by the borough concerned. This is very important, since densities are three or four times lower in the suburbs than in the centre and the GLC is the one body that can spot the opportunities for helping central London to rehouse its population. The white paper is suspiciously cagey on general planning. It says the Government has not reached "final conclusions," but its preference veers towards the boroughs except in major schemes where "it may be necessary" for the GLC to take over. All supporters of the Herbert report will regard this new plan for London as undoubtedly preferable to the existing confusion of powers; but some changes may still be needed in it to strengthen the GLC's ability to function as an effective regional authority.

POLITICAL ALLIANCES

Lib-Lab?

THE possibility of a Lib-Lab alliance to prevent the Tories establishing themselves as a more or less permanent government is being increasingly canvassed both in private and in public. It may seem an odd time to canvas it. But the idea really could become a serious one on the other side of the next general election if—which at the moment is obviously very doubtful—Labour suffered a fourth successive defeat. Already, according to a recent public opinion poll, a majority of Labour voters in the country favour such an alliance, the Liberals are more or less equally divided, and most significantly Conservative voters are overwhelmingly against.

Common ground on policy between the present Liberal leaders and the Gaitskellites might not be terribly difficult to establish. Nationalisation would be a stumbling block but the Gaitskellites are not exactly rabid for it, and the Liberals since their last conference have committed themselves to a policy of full economic planning. Disagreement over entry into the common market is not likely to survive Britain's actual entry into it. Gaitskellites and most Grimondites could work out a common policy on housing, land and the social services without too much difficulty. On defence Mr Gaitskell (or was it Mr Brown?) has already stolen Mr Grimond's clothes. Any such agreement would be impossible, however, until the left-wing of the Labour party had been hived—or hived itself—off. But on the other side of the next election, if Labour loses it, that might not seem a disadvantage to Mr Gaitskell; it might seem a positive attraction.

Awkwardly, any pact could not take the form of a straight exchange by which an equal number of Labour and Liberal candidates stood down in each other's favour. On the whole the Liberals would have to stand in as many constituencies as possible and Labour exercise a self-denying ordinance in withdrawing from some suburban and rural constituencies where Liberal chances of beating the Tories seem in any way to be good. There are only a handful of constituencies—if indeed there are any—where Liberal withdrawal would actually benefit the Labour candidate. In most places, at any rate at by-elections, any Liberal intervention draws votes from the Tories; and the withdrawal of a Liberal—even if Mr Grimond appealed for Liberal voters to go Labour—would probably give the Tories those votes back. This could lead, some time in the next Parliament, to a sort of informal pact: Labour might eventually stand aside informally in constituencies where the Liberals have established themselves as a second runner to the Tories. But a major obstacle is that a Liberal gain from Tory of twenty to thirty seats in this way would give the Liberals a real chance to challenge Labour as the principal opposition party. This is the hump which the Liberals must get over if they want to present themselves as a serious political party, and it is expecting a lot to ask Labour to help them do it.

NASSERISM

Know your Enemy . . .

REACTIONARIES at home, rather than imperialists abroad, are now the front line of the revolution's enemies. This was one of the main points in a meandering but sensible speech by President Nasser on November 25th, when he attended the meeting of the body which is intended to develop into the United Arab Republic's new pyramid of representative government. He traced the various stages of revolution and described, as if thinking aloud, how the long clash with western governments for his country's political and economic independence had given way to a domestic showdown between those who backed the social revolution and those who were now preparing to fight for their vested interests. Yet, the next day, the announcement of the arrest of four French officials for espionage flung the perfidy of imperialism once more on to the front pages of the Cairo press.

France and Egypt have never mended the diplomatic relations that were broken in 1956, but they agreed in 1958 that a mission should be set up in Cairo to look after French financial and cultural interests. It was understood by the French government, but not apparently by Cairo, that the members of the mission should have diplomatic immunity; its head, M. André Mattei, has the rank of counsellor in the French foreign service. All four members of the mission were arrested a week ago on charges of relaying information to Paris, operating a spy network, publishing subversive pamphlets and smuggling money out of the country. One of the diplomats is also alleged to have confessed to more sensational, and less probable, malpractices including a plot to assassinate President Nasser. Subsequently, several other people, including three more French nationals, a former Egyptian ambassador to Paris and the Egyptian editor of an English-language periodical, have been arrested as part of the same case.

In the weeks that have followed Syria's defection, conspiracy is breathed in with the very air of Cairo. The incident underlines what an unsatisfactory substitute for diplomatic relations a financial mission can be. But the sensationalism of the wholesale arrest and, presumably, of the forthcoming trial, seems a sadly retrograde step from the target of social change towards which President Nasser, amid all his very present dangers, is fumbling a way.

. . . and your Friend

ONE of the clearest signs yet of President Nasser's dwindling importance in the Arab world was General Qasim's decision, on November 25th, to release from prison his former comrade, Colonel Aref. In the early days of the Iraqi revolution, Colonel Aref was General Qasim's deputy and his closest colleague. But it soon turned out that the colonel was much keener than his leader on warm collaboration with the United Arab Republic; when he refused the relative obscurity of an ambassadorship to Bonn, he was arrested on trumped-up charges in November, 1958, and sentenced to death a few months later. Earlier this year General Qasim released half a dozen old-school politicians, including Rashid ali Gailani; now he has judged it safe to show clemency, too, to the leader of President Nasser's Iraqi supporters.

SYRIA

New Times, Old Politics

VULNERABLE to criticism, and to subversion, the Syrian Arab Republic is inclined to keep its troubles to itself. The

TO THE YOUNG MAN WHO WILL BE PROMOTED THIS YEAR

Right now success is on your mind. You have probably given little thought to assurance. But assurance *is* part of the pattern of success. The Scottish Mutual have studied the assurance needs of young people. Their insight can be valuable to you. And the sooner you discover assurance, the cheaper it is. Ask your Scottish Mutual representative about our various policies. There is one tailored to your needs. Or write our nearest office.

Central heating takes wing

You all know about oil-fired central heating. Lovely ambient heat as in the Bahamas. Clean as a clinic. Automatic, economic, idyllic. If you're a little jealous of those who have it, don't fret. Far, far more people will have oil heating in a few years' time.

Oil-fired central heating today is quicker and cheaper to install (or convert to) than it ever has been. There are small-bore pipes that slip through walls and tiptoe round your decorations. Trim little new boilers no bigger than washing machines. And fuel delivery that comes as promptly as a retriever.

Every day more and more people are asking us for unbiased advice on the various oil systems. If they like what they hear, in an unbelievably short time they're enjoying all the good things of oil-fired central heating — warmth unlimited, constant hot water, and a mild sense of superiority. So could you.

YOU CAN BE SURE OF SHELL

smooth speed with which the country has been swung into the elections it is holding this Friday (December 1st) is a tribute to the army's determination and to the fact that Syrian politicians, though out of practice, have not lost their touch. During the last couple of weeks there have been ructions both in the army and in the provisional government that might, if allowed to develop, have become serious. One sign of these disturbances was the arrest and dismissal of Colonel Haydar Kuzbari, another sign may have been the decision of his cousin, Dr Mamum Kuzbari, to resign as prime minister in order to campaign in the elections. Both events were played down; possibly they can be interpreted as a modest but significant triumph for those who are trying to prevent Syria, released from the tight wire of Egyptian socialism, from rebounding too violently to the right.

Parliamentary candidates were only allowed a few days for campaigning and none of them may yet use the name of their parties. The resultant confusion would probably have been worse if Syria were a less tightly knit community. Syria has been over the Big Dipper since 1958, but its ups and downs will hardly have knocked away the bonds of family and friendship that usually determine who votes for whom. Thus, there will be familiar faces to be seen when the new parliament looks round for a president. Dr Shukri Kuwatly, Mr Khaled el Azm, Mr Nazim Kudsi, Dr Kuzbari himself: old names, but in an unnervingly new situation.

MINICABS

Will Intimidation Pay?

THERE was and is every reason to welcome the appearance in London this year of small radio-controlled hire cars: they are cheap, convenient and reasonably efficient. All believers in worthwhile economic development in Britain should feel themselves to be on the side of these minicabs—against even the best arguments of the conventional taxi-drivers, most of whom belong either to the Transport and General Workers Union's taxi section or to the British Legion cabbies' organisation. These bodies, and with them the vast majority of taxi drivers, have pointed out that the new minicabs are subject to far less stringent control by the police than the traditional cab. But they have failed to carry this true premise to its logical conclusion: that the police regulations should be revised, particularly in order to permit the use as taxis of less anachronistic and cheaper vehicles. A more dangerous form of opposition has come from a minority of louts among the taxi-drivers, who have done their best to make the minicab drivers' life impossible by damaging their vehicles, hemming them in in traffic, and generally intimidating them and some of their customers.

At the beginning of this week, the intimidators may have interpreted the changes at the top at Welbeck Motors as a signal victory. This firm, although by no means the only one in the field, has been the leader and the chief propagandist for this economic innovation; the advertisements on its Dauphines have become one of London's eyesores. Mr Isaac Wolfson, its main financial backer, has now drawn in his horns, and Mr Gotla, the rumbustiously dynamic managing director of Welbeck, has chucked in the sponge now that the Wolfson money is no longer behind the firm. The "minicab war" may not be the reason for the withdrawal of these redoubtable business characters from this beneficial—and potentially profitable—enterprise. But their opponents are bound to be delighted if the firm's expansion slows down as a result.

But the new boost for the minicabs is that some of London's conventional taxi-drivers spent Thursday on strike in support of two of their number who had been jailed for three months and barred from driving for three years, after allegedly (the case is subject to appeal) harassing a minicab in a dangerous way. Under any circumstances there must be an advanced lunacy in the idea of meeting competition by a strike that temporarily leaves the whole field wide open to it. Under these particular circumstances, a strike against a court conviction and in support of alleged intimidation ought to horrify British public opinion; either Welbeck or other firms should surely benefit from this.

SOCIAL WORKERS

Wrong Source of Grants

THE Government's new "Health Visitors and Social Workers' Training Bill" sets up two training councils, both under the chairmanship of Sir John Wolfenden, to supervise the training of local authorities' health visitors (i.e. their qualified nurses who can visit people's homes) and to start the training of local authorities' social workers (i.e. their other home visitors, most of whom are women without any special training for their job at all). Obviously, it is right at present to have a flexible approach to these tasks, especially the second and brand new one. It should be left to the councils to decide how much of this social visiting work can sensibly be done on a voluntary or part-time rather than a trained professional basis. One should not make too much of a fuss yet that three of the four new pioneer two-year courses for social workers (at Birmingham, Liverpool and Glasgow) are at colleges of commerce, although the venue at London (at the North Western Polytechnic) on the face of it seems more suitable. Experience will show what the relationship of the new councils should be to the training of other sorts of (non-local-authority) social workers, such as probation officers or prison welfare officers or even officers of the National Assistance Board. But there is one feature of the new bill that seems insufficiently flexible from the start.

The local authorities, not the central government, will make the grants to the students who will take the courses which the councils will promote. In the second reading debate last week Mr Enoch Powell defended this, on the grounds that the making of grants for other forms of further education is a function of the local authorities; and it might seem that when the trained students are to serve the local authorities, the case for putting the financial onus on local councils is reinforced. But it isn't. There are obvious difficulties of recruitment when prospective health visitors can obtain training grants only if they sign in advance a contract of service with an individual local authority; few young women like to pledge themselves to work in a particular area for some time ahead. Some older candidates, of a sort whom it is particularly desirable to attract, may have no claim on any local education authority and may be, indeed often are, refused a grant. Some local authorities may be doubly unwilling to release their present untrained workers to take the new courses, when they will not merely lose their services temporarily but also have to pay their fees. Mr Powell argued last week that "we should see how the normal [local authority] machinery for grants works . . . before we consider whether it has to be displaced or reinforced." He would do better to take the advice of Mr Kenneth Robinson (Labour) and take "some reserve powers in the bill" to enable him to make some direct grants if necessary "rather than waiting until the system . . . breaks down and then having to come to the House with entirely new legislation."

VIETNAM

A Case for Strings?

A ROW that has broken out between Washington and Saigon concerns a sore point in Vietnamese-American relations: alleged strings impeding the free use of American aid. Two Saigon newspapers, clearly prompted by President Ngo Dinh Diem's government, took the Americans to task last weekend, in uninhibited language, for allegedly claiming the right to intervene in Vietnamese domestic affairs.

It is believed in Saigon that the recent American mission to south Vietnam, led by General Maxwell Taylor, urged various reforms, including decentralisation of authority and greater freedom of expression. The Vietnamese president's advisers, especially his powerful brother, Mr Ngo Dinh Nu, and Mrs Nhu, are reported as

Appointments, Business and Personal notices and other Classified Advertisements pages 977 and 978 ☞

saying that such reforms were irrelevant and, in any event, none of the Americans' business.

On the analogy of the Malayan experience, the Americans are right. The communist bands in Malaya were defeated by a combination of military and police methods, on the one hand, and political advancement on the other. True, the British were able to take the wind out of the sails of the insurgents by offering independence to the Malayans. It does not lie within the power of the Americans, or of Mr Diem, to offer Vietnam independence, which it already has. On the other hand, purely military or police measures are clearly not enough in the present situation of south Vietnam, where the communist-led bands have grown from 10,000 to 20,000 since the beginning of the year. If Mr Diem's army is to be successful the villagers must not only be persuaded that it can protect them against communist terror, but also that the protector has their interests at heart.

But if the Americans are right in principle, they appear to have failed—on the evidence of the Saigon press—to put their views over without offence. There are reports, moreover, that the various United States agencies working in Vietnam do not always pull together. Tact all round is required if the enormous joint effort in Vietnam is to bear fruit.

NYASALAND AND RHODESIA

Maudling Through

FRESH from Kenya (his visit there is described on page 914), the Colonial Secretary flew to Nyasaland on Thursday and is due in Northern Rhodesia this weekend. When he returns to London next week he will, most likely, have a discouraging African tale to tell. In both central African colonies, black nationalist opinion seems to have hardened since Mr Maudling took office. This is not the new Colonial Secretary's fault, but the blame will be his if the process continues.

In Nyasaland, Dr Banda, now minister of natural resources and local government, still opposes federation, in spite of the accession to control of the Legislature by his Malawi Congress party. On Sunday he publicly rejected federal money for a hydro-electric power station at the Nkula Falls, saying, "I would rather see the whole of Nyasaland starve to death than accept charity from Welensky." It has been put about in London that this sort of talk is politically necessary for Dr Banda, but that he does not really mean it and that, slowly, he and the Malawi party are coming to see the advantages of federation. Judging by their private statements, this is not true. The only federation Dr Banda's men privately say they would accept is one in which the whole, as well as each of the parts, has a black government. Sir Roy would not accept that.

In Northern Rhodesia, Mr Kenneth Kaunda's United National Independence party has been growing more impatient, and therefore more intransigent, than ever. It seems ready in advance to reject the sort of minor concessions to their demands Mr Maudling may make; if he is to win their trust he will have to tread carefully.

SOUTH AFRICA

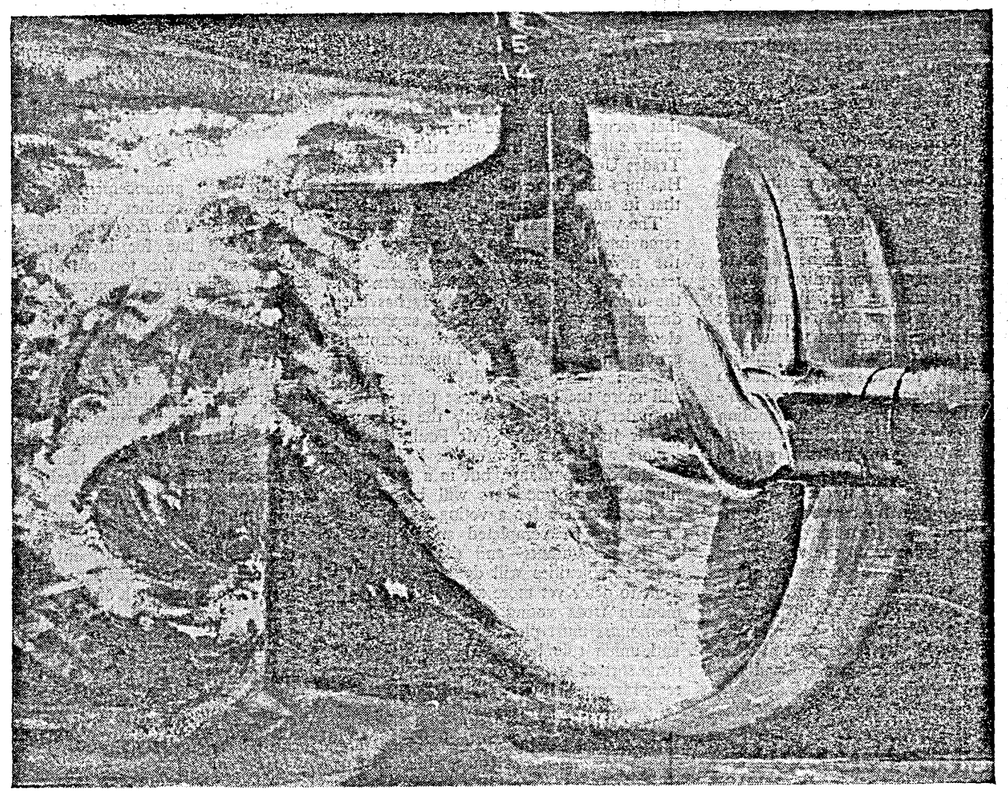
White Star

IT is twenty-five years since Dr Verwoerd joined five other professors at Stellenbosch university in an appeal to the prime minister of South Africa, then General Hertzog, not to allow Jewish refugees from Germany to land in the Union. After the war Dr Verwoerd's attitude towards Jews softened. As a small tribe isolated on a hostile continent, Afrikaners have long felt a curious sense of identity with the Jews, and especially with Israelis, who have been seen as defenders of a valiant outpost of civilisation in an Arab wilderness, who might sympathise with a similar outpost in Africa. And some South African Jews have supported the Afrikaners. They have probably sent more money to Israel than any other Jewish community of comparable size, but some have cancelled their donations this year because Israel voted at the United Nations against apartheid. Although many South African Jews have bravely fought apartheid, some give their votes—and their contributions—to Dr Verwoerd's Nationalist party.

Because of this, and because he believes above all in white unity, Dr Verwoerd has managed, as prime minister, to get along with South African Jews. But, angered by Israel's voting record at the UN, and upset at the considerable number of Jews who voted for the anti-apartheid Progressive party in last October's elections, Dr Verwoerd has reacted by trying to make the Jews hostages for Israel's actions. In a reply to a South African Jew who wrote to him deploring Israel's condemnation of South Africa, Dr Verwoerd replied last week that this was a "tragedy for Jewry in South Africa"; that it affected friendship between the two countries, and that, fortunately, "the reaction of many South African Jews and Jewish organisations was such that what might have been worse was relieved, to a certain extent, by this pro-South African reaction." Between Dr Verwoerd and their own consciences, those South African Jews who have earned the white star are in an unhappy position.

PLASTIC SURGERY

New Faces

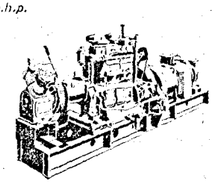


IN May, 1960, the General Medical Council struck off the register a plastic surgeon, Mr Gardiner, who had published signed articles in a women's magazine extolling plastic surgery as a means of beauty treatment: the Privy Council in May, 1961, upheld the council's decision on appeal. The General Medical Council has now acquitted seven more plastic surgeons also accused of advertising: the accusation against them was that two separate articles in women's magazines had advised readers who wanted cosmetic operations to apply to the British Association of Plastic Surgeons for the addresses of practitioners willing to undertake work of this kind. All the seven were members of the association, which Mr Gardiner was not; and the GMC sees a distinction between collective advertising and personal publicity. But the chairman of the disciplinary committee explicitly deplored the fact that officers and members of the Association of Plastic Surgeons had co-operated, wittingly or unwittingly, in the publication of the articles concerned.

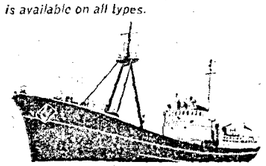
The Economist

NOVEMBER 30, 1861

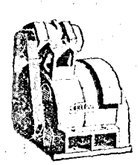
THE *TRENT* INCIDENT



The forcible seizure of certain Confederate gentlemen on board a regular English packet by a Federal man-of-war is an act contrary to the usage of civilised nations, which the Federal Government must be called on to disavow. . . . An armed vessel of theirs has taken from an unarmed vessel of ours, under irritating circumstances, certain passengers whom our ship had received on board at the port of a neutral nation, in the usual course of business, and with no fraudulent intent. Those passengers claimed our protection, and appealed to the inviolable sanctity of the British flag. They claimed the right of asylum which we have boasted that we offer on our ships and our soil to the weaker party of all countries; they asked no aid and no favour from us; they simply sought the ordinary safeguard of our laws and the common assurance of our hospitality. It is no light matter that a foreign Government should presume to touch with the tip of a finger men in such circumstances. The honour of England is tarnished by the ill-treatment of our guests; the security of our commerce is impaired by the violation of our vessel. The Americans *may* be able to justify their conduct: but they have done an act of very serious consequences, and needing very conclusive exculpation. . . . Our duty is clear. We must demand moderately, but firmly, apology for the insult, and reparation to the injured. We must require that the gentlemen who have been seized should be at once set at liberty, and that regret should be expressed for the dishonour of our national flag and for the violation of the sacred right of asylum;—and we must intimate that if they refuse we have no alternative save war. The calamity is great, but the obligation is greater.



POWER on call



The trade of civilisation depends on the sailor, scarcely less today than centuries ago. Seamen in their turn rely on unfailing power along the world's shipping lanes, on the fishing grounds; in harbour too, for an engine room can seldom sleep. Engines must run for days, weeks, sometimes months with little or no attention—and never miss a beat. They must be economical on fuel, simple to maintain. Working ships must pay their way.

Pelters supply a range of multi-duty marine auxiliary sets with engines rated up to 104 b.h.p. providing power for electrical generation, compressors, pumps and winches on trawlers, tugs and coasters. They also supply main diesel propulsion engines from 3 to 104 b.h.p.

Mirrlees "K" range of marine propulsion units are supplied to many of the world's shipping lines. Turbo charged and naturally aspirated engines are available as vertical in-line units or in Vee-Form with a power range from 123 to 7000 b.h.p. Direct reversing is available on all types.

Brush are currently supplying increasing numbers of marine diesel-electric propulsion and auxiliary installations in a wide range of ships, including trawlers, tugs, dredgers, and other special purpose vessels. D.C. generators, statically excited alternators and motors are also being supplied for ships, auxiliaries.

HAWKER SIDDELEY GROUP

Duke's Court, Duke Street, St. James's, London, S.W.1. Telephone: WHI 6177

Why? Plastic surgery was developed in war, and is still proving its worth for repairing damage caused by industrial and other accidents. Its fringe activity, cosmetic surgery, may also genuinely help those with psychological worries about their face or figure. Rather more often it may merely be an expensive luxury—trivial perhaps, but surely not unethical. Cosmetic work of either kind may lead to progress in techniques that in turn have severely practical medical uses. But a person seeking a cosmetic operation, through pure vanity, may well dislike asking his general practitioner to recommend a specialist, perhaps for fear of ridicule or perhaps because he knows his particular doctor would not agree to make such a recommendation.

Some sort of advertising, in the sense of a means of giving people sound information about plastic surgeons, may thus be positively desirable. The danger of handling such information entirely through a professional group is that its members may try to impose a closed shop and thus exclude the bold innovators along with the dangerous quacks. The relationship between medicine and money has always been tricky: but the GMC, in its comments on the case of the seven acquitted surgeons, seemed to argue that practitioners of this new and delicate art should have as much difficulty as possible in meeting potential patients who are both able and eager to pay for their service. That makes neither medical nor economic nor charitable sense.

ETU

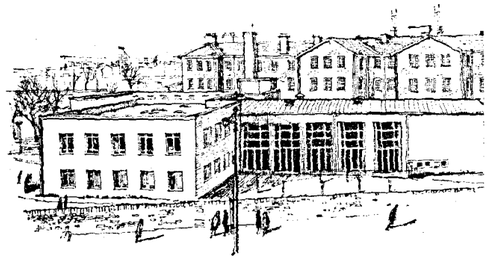
Red Circuit Rewired

MR FOULKES is sitting pretty. Last week he was chairman of the negotiators that secured the wage increase in electricity supply, and this week the Electrical Trades Union's rules revision conference at Hastings has done all the rewiring work that its anti-communist critics had feared.

The way this has been done has been by removing the power to make policy from the new anti-communist executive, and transferring it to the annual conference of the union. Hitherto this body has been dominated by Mr Foulkes's supporters, elected by tightly-organised communist groups in the branches. The other main decision was designed to strengthen still more the hand of these tight groups. In order to "comply with the judgment of Mr Justice Winn" (Mr Foulkes *dixit*), ballots will from now on be handled by chartered accountants, but in a very complicated way: members will be sent an application form for a voting form, which must then be completed and sent back to the accountants—and the addition of these complexities will doubtless be sufficient to deter yet more apathetic non-communists from voting. Once again *The Economist* must plead for union elections and union rule books to be subjected to some sort of scrutiny from an independent registrar established by legislation: meanwhile one must still hope that enough electricians will be aroused by the very ruse designed to keep a minority of communist string-pullers in power.

SHADOW CABINET

Top of the Order



THE first anouncement of the Labour shadow cabinet changes came out literally as *The Economist* was going to press, too late for more than a brief comment on the top of Mr Gaitskell's batting order. Mr Wilson as shadow foreign secretary is a good appointment, especially as Mr Gordon-Walker is to be spokesman for defence. Mr Gaitskell is himself firmly in control on foreign policy matters. Mr Callaghan as shadow chancellor is, strangely, a much more doubtful move; able though he is, and more grown-up now, he has still to learn that an expansionist economy cannot continually be twisted to protect every lame dog. Mr Healey, the nicest of men, goes into the one round hole where, in the next few months, he may be a square peg. On colonial affairs one need have no reservations about him, but as Labour's Commonwealth spokesman he could be a real thorn in the flesh of that section of the party which is wisely and diligently seeking to reconcile Labour to entry into the common market. Mr Marquand's departure for Geneva will not be entirely regretted by the pro-Europeans.

Industry's Universities

FROM OUR SPECIAL CORRESPONDENT

Bristol: revived orphanage

THE hard core of the leaders of British industry today have come up from the shop floor. In caste-conscious Britain that in itself is enough to explain the striking absence of graduates in many parts of industry. The elite industries, it is true, that have grown up most recently—chemicals, atomic energy, aircraft—send their travelling teams of selectors each year to the universities to skim the cream of the emerging scientists and engineers. But in many of the country's older industries graduates are rare, unsought and sometimes unpopular. Only two graduates were recruited into the British machine-tool industry in 1958; it is only five years since Britain's largest motor corporation began to recruit them systematically. Industrial leaders who have learned their trade inside the factory have clung to the view that it is still a better teacher than the high-falutin' Groves of Academe.

Graduates, of both arts and science, who have found their way into industry have often felt equally ill-at-ease. Training schemes by a few major firms—like the paternal British Thomson-Houston, foster-parent of so many British engineers—do provide a channel from university to management. But elsewhere the Oxbridge engineer or chemist trained for academic ends, and with a tang of class about him too, has found the Wigan pump manufacturer or the Belfast shipyard as unusable as they found him. It has been left to the technical colleges, where the bright boy in industry has worked his way up at night school, to provide staple education for most of Britain's engineers. But this gruelling struggle is hardly the best way to produce a numerous technological elite.

The new Colleges of Advanced Technology thus have a dual problem to resolve—educational and social. Educationally, they are the first attempt in British education to create a network of independent institutions with the ultimate target of educating men to the high standards of the *Technische Hochschule* or the Massachusetts Institute of Technology. Socially they have to produce men capable of fitting into industry and to persuade industry to accept and use the product. Following the White Paper of 1956, nine colleges have now been set up, some of them developed from existing technical colleges, others new foundations; these are now training some 9,000 students, with a target of 15,000 or more by 1970.

The objective of the CATs is to produce an all-rounder for modern industrial life. Students specialise—in engineering, say, or chemistry—but within their subject they cover a wider ground than university students, though they do not take each branch of a subject quite so far. They take a course of general education, too; (Man in Society, it is called at the new Bristol CAT). And their academic studies are set in an industrial background through the "sandwich course" system in which periods of college education alternate with periods in industry.

The exact pattern of the courses varies and is the subject of some controversy, but the norm is a four-year course, with six months of each year taken in industry and six in college. The academic course thus has eight college terms instead of nine at university; students have to work harder and more continuously, but they get breadth and colour from their time in industry. The finance of the students is divided, like the course itself, between the Government and industrial firms.

The success of the CATs is uneven; they are now passing through that crucial phase when success is in sight but not yet firmly grasped. All the same it is already possible to discern some of the qualities that are needed. Close partnership with industry is the first of these. The student, or the college for him, has to persuade an industrial firm to employ and pay him as a trainee during the factory half-year; and some students are also financed by firms during college term. Much here depends on the energy and tact of individual heads of faculty. Once an energetic engineering head gets local firms interested, and the news gets round that the new student trainees are useful, more firms begin to show interest. At Bristol, for example, it is hardly a year since the old technical college, housed in a Victorian orphanage, was given CAT status. Already it is attracting attention and support from local industry.

Firms with systematic training schemes can become quite paternal; one at Bristol, for example, is sending one of its foster children to its Canadian subsidiary for half a year. At first, there is an inevitable tendency—indeed a danger—for the CAT students to be absorbed by the established moppers-up of graduates—in Bristol's case Bristol Aircraft and the Atomic Energy Establishment. But smaller firms (or even British Railways) who would not have touched educated technologists before, are beginning to try out the new creature, the Dip Tech.

A second necessary quality is "status." The Government's decision this summer to remove the colleges from the control of the local education authorities, giving them independence on university lines and an improved salary scale, and raising the final Diploma of Technology to degree status, has gone far to put the new colleges on the map and lift the morale of those who teach in them. But the crowning gesture—full university status, with B. Tech. as the target of the course and a Prof. Tech. in charge—could still make a great difference.

STATUS, after all, is essential if a third factor for success—high standards—is to be attained. It is true that only educational achievement can establish an enduring reputation. But the reputation of the middle and lower rank teachers in the CATs is already good. The more successful CATs—like Bristol—are already beginning to attract boys of quality from the grammar schools and local public schools. University teachers are beginning to be drawn by the chance to get away from the ivory tower. The newness and freedom the colleges enjoy permit experiment in fields where the universities have failed to move. As in the *Technische Hochschule*, the engineering course ends with a Project, in which each student undertakes an enterprise in design. The beginnings of an attempt are being made to introduce aesthetics into the engineering training, and the head of the faculty at Bristol speaks of the *Bauhaus* with a glint in his eye. Vices engrained in British industry, like the divorce between engineering design and "styling," are being tackled at the root.

Failure, however, can be cumulative, too. Where industry has not been properly interested in a college and the inspiration for social adventure is absent, attempts tend to be made to ape the universities, with poor results. Staff, like perhaps some students, tend to be overworked. The CAT can remain a glorified Tech, neither flesh nor fowl. Donations from industry (at Bristol and elsewhere) are already enabling the CATs to start the research work envisaged in the White Paper. But though the danger of sacrificing teaching to research may one day afflict them as it does the universities, at the moment the essential post-graduate work still has far to go. The CATs are a breakthrough in British education; but there may be breakdowns too.

Over-Housed?

COULD some of the six million new houses that Dr Hill seems to think Britain might need in the next twenty years take on the shape of white elephants? According to a twenty-year look at housing needs in the current issue of the National Institute's *Economic Review*, the total population in England and Wales is likely to increase just as rapidly as in the past; but not so the number of households. Heads of households are mostly married men or unmarried people over 40 and these groups in the population are expected to increase in the next twenty years at about a quarter of the rate of the last fifty years. Making rather more sophisticated calculations to allow, on the one hand, for the younger single people who set up house on their own and, on the other hand, for the sharing of accommodation by older people, the most reasonable assumption of the situation then and now seems to be:

HOUSEHOLDS AND HOUSES
(millions; England and Wales)

	April, 1961	1980
Number of private households..	14·7	16·9
less those sharing	−0·4	−0·5
Occupied dwellings	14·3	16·4
Vacant dwellings	+0·3	+0·7
Total number of dwellings	14·6	17·1

These projections allow for a net immigration of 300,000 families in the next twenty years and for a bigger margin of vacant dwellings to deal with greater mobility, second-home ownership and excess houses in unfashionable areas. The estimates could be too cautious: if all unmarrieds over 40 chose to live in separate homes, another two million dwellings would be needed, and if all unmarrieds between the ages of 25 and 39 did likewise this would entail a further million dwellings. But these are extreme and unrealistic assumptions; what the National Institute considers maximum demand would add less than half a million to the total already quoted.

Each year some 260-270,000 homes are being built in England and Wales and some 60-70,000 houses are being demolished. The stock is rising, therefore, by around 200,000 a year. But the estimated demand (as given in the table) over the next twenty years is for about 120,000 a year. In short, the present pattern of housebuilding, according to the National Institute, would provide getting on for double the requirements in the next twenty years. Whether or not the present building rate should continue, therefore, must depend on demolition policy.

That Britain requires new housing standards is beyond dispute. About a quarter of the houses existing today in

England and Wales were built, it is believed, before 1880, and even on the fairly generous belief that a house should last a hundred years, these should all have disappeared by 1980. The demolition rate to achieve this would be nearly 200,000 a year, which would mean pushing up the present annual rate of housebuilding to rather more than 300,000 a year. Even so, according to the National Institute, "the housing stock in England and Wales might still be one of the oldest in western countries, apart from France." More ambitious planners will argue, therefore, that this programme should be speeded up.

BUT it is at this stage that planning from the aesthetic and health point of view comes slap up against the hard economic facts. According to the National Institute's most optimistic assumption about the growing affluence of the British society, it is at most the richest one-third of households who are likely to be able to afford a new house out of income in the next twenty years; certainly most of the people now living in pre-1880 houses would be unable to do so. Ideally they are moved from their Victorian blocks in the inner rings of provincial cities to slightly better, but still old, houses in the outer suburbs, while the comparatively wealthy are attracted back to the centre to the new houses which are additionally expensive because of the cost of demolition. But an orderly reshuffle of the population, moving step by step up the housing scale, is easier said than done. Reluctantly, the National Institute concludes that there will still be a need for housing subsidies in 1980. Or perhaps empty houses?

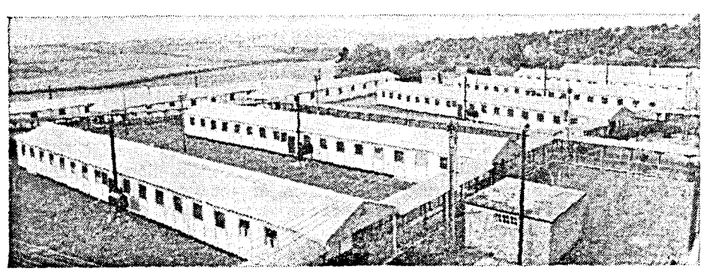
Tories Up-Staged

FOR followers of the serial melodrama, "Nottingham's Theatre" (Home Report, May 20th, November 4th), these are the latest postures adopted by the *dramatis personae*:

The attempt by the wicked uncle Tory to give his orphan ward Civic Theatre in marriage to the Emperor Moss has now failed, Moss having found the absorption of the uncle's debts weighing rather heavier in the scales than the orphan, with whose charms he was not, in any case, much taken. Tory has expressed his pained surprise; and Lab, the profligate uncle with the heart of gold, hugs himself in malicious glee at his brother's discomfiture. Meanwhile the young suitor, Theatre Trust, struggles to beg or borrow a fortune large enough to release the orphan from her guardian. It seems that Tory will have to pay for the orphan's upbringing; but Lab may one day regain the guardianship he lost for his profligacy; and where it all will end Melpomene knows.

Colds in Comfort

BETWEEN twenty and thirty volunteers assembled last Tuesday at Harvard Hospital, on the outskirts of Salisbury, for the 356th trial organised by the Common Cold Research Unit.



The unit was set up by the Medical Research Council and the Ministry of Health as long ago as 1946. It operated from the start with human volunteers, for the good reason that it has never proved possible to give the common cold to any other animal except the chimpanzee, and chimpanzees are expensive and less tractable than most humans. The immediate aims have been to grow the cold virus and develop a laboratory technique to recognise it; until such a technique is perfected the only test for the virus is to give it to a sufficiently large number of humans and see if they get colds. The unit has also been conducting a long-term study of the common cold and its habits.

There has been some success on all fronts. Cold virus has been grown, and laboratory recognition is possible; but one of the earlier discoveries was that there was more than one virus involved. It would be possible now to produce a vaccine that would protect against the one virus strain, but it would be of little use when the patient is likely to meet as he leaves the surgery any one of a number of other strains. It is believed that most colds are caused by a virus that has so far proved impossible to cultivate; more work—and more volunteers—are needed before it will be possible to produce a multivalent vaccine. But the unit is confident that land is in sight.

In the meantime there has been some charting of the deep waters; much has been learned of the behaviour of the common cold, and some cherished beliefs have taken a nasty knock. It has proved impossible to give anyone a cold by making him cold and wet. The presence or absence of tonsils or adenoids seems to have nothing to do with susceptibility. The virus finds survival difficult on a dry handkerchief. The virus has been found in volunteers within 24 hours of inoculation, and as long as 24 hours before the appearance of the first symptoms: staying home when you have a cold may save some but won't save all your colleagues. There is a close connection between the incidence of colds and the difference between outdoor and indoor humidity; colds flourish in the winter when indoor air is drier than outside, and the dryness indoors rather than the damp outside appears to be the villain of the piece.

WHAT do volunteers experience at Harvard? In the first place, they are not given damp clothes and draughts. After four days to ensure that they have not brought colds with them, they are given cold virus (or some of them are; the rest, as controls, are given water, but they do not know which are which). Well over half of them will probably fail to catch colds; and the colds that do develop will almost certainly be mild ones—in conditions of isolation there seems to be considerably less incidence of the secondary symptoms (catarrh, sore throat, sinusitis, coughs) which are the most unpleasant part of most colds.

The isolation, in groups of two or three, important experimentally, is for many the most enjoyable part of a stay at Harvard. Novels can be written, dressmaking done, examinations prepared or reading caught up with in a retreat-like peace not easily secured elsewhere. Three hot meals a day, about two-star standard, are delivered in vacuum containers, with a pint of beer, cider or orange and the newspaper of one's choice; return fare up to £3 15s. is paid, and 3s. a day pocket money is credited, for collection on emergence from quarantine. Walking is permitted over the downs, on parole: if the volunteer comes within 30 feet of anyone else he must put his handkerchief over nose and mouth.

But sometimes out on parole

LETTERS

Capital Gains

SIR—Since Professor Hicks mentions my name in connection with the current discussion on the taxation of capital gains, may I comment on his letter published in your issue of November 18th?

In the first place, as you stated in your article of November 11th, my proposal and that of my two colleagues of the minority of the Royal Commission was that capital gains should be subject to income tax but *not* to surtax. Since we never suggested that capital gains should be subject to surtax the question of raising the surtax limit "so that the capital gains that were liable to surtax became more circumscribed" never arose and was not considered. Besides, we recommended that no distinction should be drawn between short-term and long-term gains. We agreed with the view of the Board of Inland Revenue that "looking at the matter purely as one of taxable capacity there may seem little justification for distinguishing between two gains of equal amount simply because in one case the asset was held for a longer period than the other." We concluded that "any such distinction [between short- and long-term gains] is bound to be arbitrary and an invitation to tax avoidance."

Professor Hicks suggests that a tax on capital gains on these lines would have a catastrophic effect on equity prices, for without the prospect of tax-free capital gains "who would buy shares with a yield of 2½ per cent when it was possible to get 4 per cent on deposit at a bank?" This ignores that the low yield on certain equities is primarily a reflection of the expectation of a rising dividend income, which is already subject to income tax (and also to surtax). It is true that the expectation of capital gains is one of the inducements for holding growth stocks, and since this element is at present free of tax, one might expect some downward revision in the prices of low yielding growth stocks relatively to the yield of other stocks. But to suggest that a tax on capital gains would "quickly remove" the present "distortion" between equity yields and interest rates is contrary to both reason and experience. In the United States (where short-term capital gains are treated as taxable income and long-term capital gains are taxed at 25 per cent) the "distortion" represented by the reverse yield gap between equity and bond yields is even greater, both absolutely and proportionately, than in this country. (In the UK the yield of *Financial Times* industrials is 5.17 per cent, as against the Consols yield of 6.37 per cent; in the US the yield of Standard and Poor's industrials is 2.77 per cent, as against the long-term Government bond yield of 4.02 per cent.)

Professor Hicks's main contention is that the taxation of capital gains, through its effect on equity prices, would cause a "most severe deflationary shock"—a "violent deflation" which goes far beyond the scope of any "anti-inflationary measures" that can reasonably be contemplated. This is in strange contrast with the conclusion of the Report of the Majority of the Royal Commission (of which Professor Hicks was one of the signatories) according to which a capital gains tax would be most ineffective as an anti-inflationary measure. According to the report, it can be assumed that "on the whole, capital gains will be saved" which leads them to the conclusion that "it is a general principle that a tax which falls upon savings does not contribute to the control of inflation" (para. 106).

Between 1955 and 1961 Professor Hicks has clearly changed his views. But even if, for the sake of argument, one were to agree with the Hicks 1961 view, there are surely plenty of ways—e.g. suitable reductions in taxation or credit policy—by means of which any undue deflationary effect could be effectively compensated, with advantage to the balance of payments and to economic growth.—Yours faithfully,

NICHOLAS KALDOR

King's College, Cambridge

Canada

SIR—After two weeks of reading about market monsters, David and Goliath, Mickey Spillane, psychological warfare, gamesmanship, country bumpkins, washtubs, and research and design teams, I am grateful to your Ottawa Correspondent for his two final, more lucid paragraphs. Unfortunately, he implies that the recent protests by the Canadian government against Britain's joining the common market represent the views of the Canadian people. Most Canadians, however, recognise that a possible short-run loss in exports to the United Kingdom will be compensated by the long-run increase in demand for Canadian products in an expanded common market. The Canadian pulp and paper industry, to cite only one example, has stated emphatically that it favours Britain's joining.—Yours faithfully,

Balliol College, Oxford DAVID STAGER

America Discovers Europe

SIR—In a leading article which appeared in your issue of November 11th you stated: "It has been widely missed on this side of the Atlantic that President Kennedy has been trying, in the past six months, to introduce a revolution, not so much in the quantity of western aid as in the philosoph behind it."

European parliamentarians have, in fac reacted quickly and positively to Presiden Kennedy's aid message of March 22nd, an a considerable amount of thought and wor has been brought to bear on this questio within the Council of Europe. A sub committee of the political committee ha met several times to discuss the problem involved in the development of a new approach to western aid and I myself, a rapporteur of the political committee, hac the honour of presenting a report to the Assembly on this subject at Strasbourg in September. At this session there was a lively and informed debate, during which Mr Thorkil Kristensen, Secretary-General of OECD, made an outstanding speech. Recommendation 288, which was adopted unanimously by the Assembly, urged the Committee of Ministers to: express its agreement with the main lines of President Kennedy's plan, which is in accord with the policy previously advocated in the Council of Europe; increase multilateral aid to the maximum and, within two years, to at least 15 per cent of the total amount of bilateral aid; and propose in the Council of OECD the opening of negotiations with the object of stabilising raw materials markets. Further, the Committee of Ministers was asked to invite the governments of the member states of the European Economic Community and of the United Kingdom to follow, within an enlarged EEC, a liberal policy which would not impede the normal industrial expansion of those newly developing countries which are not associated with the EEC.

In Recommendation 288 the Assembly emphasised that "assistance should be on the basis of plans proposed by governments representative of their peoples and willing to play their part by taking necessary measures of governmental, social and fiscal reform."—Yours faithfully,

Brussels E. DE LA VALLÉE POUSSIN
Senator

Labour Statistics

SIR—The article in your issue of last week on "Counting the Jobless," from your special correspondent in the United States, appears to suggest that the official figure of the number of unemployed persons in Britain registered at employment exchanges and Youth Employment Offices excludes people who are not qualified for benefits. This is not so. As page 429 of the October issue of the Ministry of Labour Gazette shows, the figure of 305,000 unemployed persons on the registers at August 14, 1961, included as many as 110,000 who were receiving neither unemployment benefit nor national assistance. Of the total of 35,000 married women on the register half were in fact receiving no payment.—Yours faithfully,

R. F. FOWLER
Director of Statistics,
London, SW1 Ministry of Labour

BOOKS

Not Quite the Right Footsteps

Neville Chamberlain

By Iain Macleod.

Muller. 319 pages. 30s.

"I NEVER met, indeed I do not think I ever saw, Neville Chamberlain," says Mr Macleod in the first sentence of this very readable, no doubt potentially best-selling but really rather lightweight book. But it is clear why the subject has a fascination for the author. There are bizarre parallels between the careers of the last Conservative Prime Minister but two and the present Conservative Leader of the House. Chamberlain, although everybody forgets it now, was far out on the radical left of the Conservative party in the 1920s. He was a pioneering social reformer as Minister of Health; an immensely courageous party politician (look at his Local Government Act of 1929); an ardent would-be bridge-builder between the Tories and the trade unions; a man as unlike his brother Austen as Michael Foot is

to Dingle ("Hé thinks me wild," wrote Neville of Austen sadly on entering the House of Commons in 1919, "and I think him unprogressive and prejudiced"). If the Conservatives had won the election of 1929, Chamberlain would have become Colonial Secretary, and been a very liberal one; because they lost it, he went to take charge of Conservative Central Office instead.

Up to this stage, the analogies between the careers of subject and author are intriguing and apt; from then on, they become hypothetical and quite extraordinarily embarrassing. For it was while he was at Conservative Central Office that it became gradually clearer that Chamberlain was Baldwin's most likely successor as Conservative leader, that he was the Tories' indispensable Mr Fix-it. He returned from Central Office to become the Tories' shadow Chancellor at a crisis stage in April of 1931, and thereafter to fill his three main roles in the governments of the 1930s: as real Chancellor, as unofficial acting Prime Minister during the years of Baldwin's decline, and finally as Prime Minister in name as well as fact. And in the first and third of these roles, although Mr Macleod cannot bring himself to say so, Neville Chamberlain was an utter disaster.

Mr Macleod is far too kind about Chamberlain's failure to depart from so-called "orthodox finance" into even the first vestiges of the new Keynesianism during his Chancellorship in the bitter unemployment years of 1932-37. This was a symptom of one of Chamberlain's three great failings as a major statesman, and the only one of the three that was really right wing; namely, Chamberlain's resistance in later life to all new ideas that called for any changes in his habits of sentiment and thought. He resisted Keynesianism as he distrusted all other new-fangled gimmicks, such as fountain pens, comfortable modern clothes, President Roosevelt (quite disastrously), and abstract art.

It is easier for the author to defend his hero in the role of Prime Minister Designate after about 1935, for Chamberlain was in fact more prompt than any other prominent figure in Baldwin's cabinet to spot the need for rearmament; it is a fair point that during the 1935 general election that returned the "appeasement" government of 1938, Labour was attacking Chamberlain as a wicked warmonger (Herbert Morrison said that Chamberlain "would spend on the means of death, but not on the means of life, and that was the sort of fellow he looked too"). Yet here again the fury of Labour's particular attack upon him was stoked up by the second of Chamberlain's major failings, namely his intellectual arrogance towards the Opposition. Chamberlain never suffered fools gladly, at a time when there was admittedly a lot of foolishness on the Opposition side to suffer (so that Baldwin once begged him to remember that when speaking to the House of Commons he was "addressing a meeting of gentlemen" and not to give the impression of treating "the Labour party as dirt"). But it was the third of Chamberlain's failings that in the end cost the country most dear, in his catastrophic final period as Prime Minister and man of Munich.

Here again it was not a right wing failing, but more typically an idealistic left-winger's weakness. The fact is that, for all his skill as a committee chairman and as a draftsman of administrative reforms, the man was a fatuous wishful thinker. This trait ran right through his career from his first disastrous business venture trying to grow sisal in the Bahamas (Chamberlain's memos from there, as crops and markets failed but as he still plunged good money after bad, read just like Mr John Strachey's speeches during the groundnuts fiasco); through the pathetic post-Munich adumbration of "peace for our time"; up to and beyond the outbreak of war. "I have a hunch," he actually wrote to his sister in November of 1939, "that the war will be over before the spring." This was one of the most revealing sentences of his whole career.

It is inevitable that this book will be searched, perhaps rather naughtily, for possible revelations about the author as well as the subject. There is a highland imp that keeps on peeking out of Mr Macleod's writing; Mr Selwyn Lloyd and his capital gains taxers should read his—and Keynes's—account of the National Defence Contribution (a graduated tax on the growth of business profits) which Chamberlain tried to introduce for emollient political reasons in 1937. In another passage Mr Macleod criticises Chamberlain's tactics immediately after his appointment in 1916 as Director of National Service:

> He should have been banging his fist on the table at 10 Downing Street. And he should have taken his resignation with him. A Minister . . . is never so strong again as in his first few weeks of office. His resignation, which in a few short months may have become just a "little local difficulty," is not to be thought of when he has just been selected for a new post. . . .

Well now, one wonders, looking back on Mr Macleod's own remarkably successful ministerial career . . . ?

Sad Tale from Vienna

Dollfuss

By Gordon Brook-Shepherd.

Macmillan. 313 pages. 25s.

WHEN Mr Brook-Shepherd's "Austrian Odyssey" came out in 1957, Austrian press comment was that a more just, as well as accurate, account of the history of Austria since 1866 could hardly be said to exist. The former Vienna correspondent of the *Daily Telegraph* has now written a biography of Engelbert Dollfuss that is mainly an expanded account of the events leading up to the Nazi putsch in July 1934, which necessarily received more cursory treatment in the earlier book. And once again: no one could be fairer than this without becoming bogged down among theories on the nature of treason and the virtues of parliamentary democracy. To emphasise justice in such a context is not quite the same as to congratulate a Japanese on his courage. The ideological conflicts that rent Central Europe between the wars were, and to some extent still are, partly obscured by prejudice arising from lack of knowledge, émigré propaganda, and a tendency to judge other countries according to how far their institutions approximate to our own.

As Chancellor, Dollfuss was confronted by a Parliament which, until it took its own life by oversight, was hardly more than an instrument for blocking legislation. The Austro-Marxists took their doctrine and their ammunition from abroad; those moderate socialists who survived the Nazi concentration camps were not to take charge of the Socialist party until after the second world war. The right-wing Heimwehr, again, was controlled by extremists; both sides were unanimous in one thing only, in their denial of the validity of the Austrian state. Mr Brook-Shepherd displays the ingredients of the mounting tragedy against which Dollfuss wrestled until his death: national bankruptcy, inertia, misplaced energy, mental confusion, active and passive treachery, and, above all, a general lack of any real patriotic feeling. Dollfuss did not kill the Austrian Parliament, but when it died he put his small foot on its neck and buried it with alacrity (the author's rather pictorial style is catching); he gave the order to fire on the workers' apartment blocks. These events have been closely studied in all their gravity and in the light of every scrap of evidence that has survived. Dollfuss mastered one of the disastrous ingredients by restoring Austria's economy. The author believes that he also gave the Austrians some sense of national identity —"a patriotism of sorts." The truth or otherwise of this statement—the author calls it "one of the political wonders of the 20th century"—is hard to assess. Dollfuss made a beginning, but only Hitler could kill Pan-Germanism, just as only Stalin could kill old-style Austro-Marxism.

There can seldom have been a more lovable statesman than Dollfuss. The story of his death, untended and in agony of spirit, has often been told, but the entrancing description, new to the reviewer, of this gallant little figure trying to master the breast-stroke, so as not to cut an unnecessarily ridiculous figure while splashing in the Adriatic with Mussolini, is somehow unbearably pathetic.

Garden of Eden?

The Forest People

By Colin M. Turnbull.

Chatto & Windus. 250 pages. 25s.

WHAT was life really like in the Garden of Eden? Mr van der Post, who is no lover of the world that has since emerged beyond the magic gates, gave an enthusiastic answer in his recent book about Kalahari Bushman communities; but that particular answer, just because of van der Postian literary *Weltschmerz*, was not quite convincing. Here is a more persuasive report. Mr Colin Turnbull, an Englishman now in charge of African ethnography at the American Museum of Natural History, lived for about three years with pygmy groups in the great Ituri forest of the north-eastern Congo, learned their language, won their friendship, witnessed many of their times of festival and days of woe, and has here written a very useful and often charming book about his experiences.

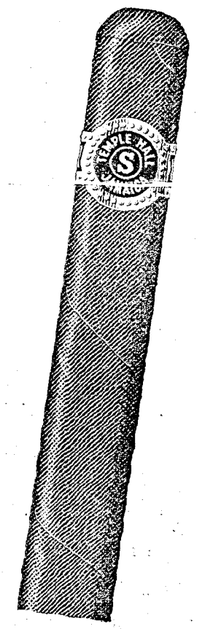
It seems evident from this—allowing for differences of habitat—that life was more than usually pleasant in the Garden of Eden: "a wonderful thing," according to Mr Turnbull, who is no metaphysician and seems to like the modern world well enough, "full of joy and happiness and free from care." Yet aside from any evidence that the pygmies of today may or may not be able to throw on the Old Stone Age (and these pygmies, even today, scarcely cultivate anything in the line of food), this book is valuable for its new material about these extremely interesting but little studied communities. It is plain, what many of us suspected, that the pygmies have been as much misunderstood as their negro neighbours. They are in truth neither nasty, brutish nor especially short-lived. Nor are they "primitive."

Some thirty years ago the learned Dr Schebesta, the dean of pygmy studies, published a little paper entitled—provocatively for those days—"*Les Pygmées: sont-ils des primitifs?*" Schebesta's paper left the question open while implying that the answer was in the negative. Mr Turnbull is more forthright. He quickly became convinced that "what little had been written about the pygmies to date gave just about as false a picture as did the thirteenth-century cartographer who painted them as one-legged troglodytes." If this writer is to be believed—and he seems both intelligent and sincere—the pygmies are primitive in nothing but the simplicity of their material possessions.

What is especially good about this book, however, is that it gets right away from the metaphysical meanderings of amateur anthropologists. Mr Turnbull likes the pygmies very much, but he never presents them in the "trailing clouds of glory" metaphor of some other adventurers into the lesser known aspects of humanity in Africa. On the contrary, the steady and persistent characteristic of these cheerfully extraverted forest dwellers, as reported here, is their sheer common sense, their dislike of religious hysteria, their rejection of the power of magic, and their capacity to understand the everyday implications of rational cause and effect. They play along with their gangling Negro neighbours—who quite unjustifiably claim to "own" them—but they escape into their forests whenever the sophistication and general rattle-tattle of village life gets too much for them. This, it appears, is pretty often.

Full marks to Mr Turnbull. When is he going to get back into the field again?

Founding Father



Sky Fever

By Geoffrey de Havilland.

Hamish Hamilton. 240 pages. 25s.

SIR GEOFFREY DE HAVILLAND'S autobiography, written in his eighties, is an old man's recollections in tranquillity: gentle, mellowed, good mannered, some-

whatever the occasion choose

TEMPLE HALL

'Coronas Junior'

a fine medium sized cigar from the leading Jamaican factory

times touching and occasionally wryly self-mocking—all the things, in short, that the aircraft industry is not. It reveals a great deal about the man himself, almost nothing about the turbulent background to the industry that he helped to found and in which he worked for fifty years. Yet these omissions do not make his book negligible, rather the contrary, for the aircraft industry has been shaped by a few men who for many years held exclusive control of its most important companies and Geoffrey de Havilland was one of these—not perhaps a genius but one of this country's great aircraft designers and perhaps its greatest designer of light machines. For many years he personally designed and personally tested every aircraft that his company produced.

The de Havilland company's prime endured as long as Sir Geoffrey was still its driving force. Then it produced two of the greatest aircraft the world has seen, the apparently immortal Moth family, some of them are still flying more than thirty-five years later and the wartime Mosquito bomber, which was entirely the company's own (and initially unpopular) idea. Of the Puss Moth built in 1929, Sir Geoffrey writes nostalgically that it "could take three people 20 miles on a gallon of petrol at 100 miles an hour, a performance that no motor car has ever achieved," a claim that gives food for thought.

Although the company continued to grow, it never quite touched these heights again. Its Vampire jet fighter did indeed become standard equipment for a staggering number of air forces. The Comet airliner was a wonderful stroke of enterprise, but one doubts, even if tragedy had not overtaken it, whether it would quite have made the grade among such immortals as the DC 3, the Viscount, the Canberra bomber or the Boeing 707.

Because the man was for so long the company, his strength its strength and his weakness its weakness, it is important to establish what manner of man he was. Contemporaries have described him as proud; Sir Geoffrey admits to shyness with strangers and shows great loyalty to old loves, whether to his grandfather's home during a none-too-happy childhood, to his Westerns "of which I have a small and precious collection all of which I know almost by heart" or to old friends who grew up in the company with him. His approach to designing was empirical, to put it mildly; he loved mucking about with machines (and he loved butterflies) but "theoretical work was less to my taste, I cannot remember ever passing an exam." In turn he looked for the same qualities in other men. He defines a good aircraft designer as a man "with much of the creative artist in him backed up by a lot of practical engineering experience. Neither deep knowledge of mathematics nor great theoretical knowledge is necessary." In that one sentence lies the key to all the glories and the explanation of all the tragedies of Geoffrey de Havilland and the aircraft that have borne his name.

Slum Clearance in Lagos

Family and Social Change in an African City

By Peter Marris.
Routledge. 196 pages. 25s.

LAGOS has an unenviable reputation for the slums forming the core beneath a thin rind of modern buildings; these slums presented the first Nigerian ministers with a test of peculiar difficulty. Any scheme to eliminate them bristled with economic, legal, adminstrative and social problems, and, in the event, with political problems as well, bedevilled with emotional crises both genuine and fomented. It says much for the strength of purpose of the minister responsible that clearance was ever started.

Mr Marris's book lucidly picks out most of these complications, and sets them vividly against a background study of a social structure increasingly out of harmony with political and economic trends. His book's central point is that the clearance scheme failed in one major respect because kind hearts are really worth more than all mod. con. and, as ardent town-planners have found elsewhere, the best of re-housing schemes will diminish human happiness if it disrupts social structure. The author also demonstrates conclusively how much greater is the disruption in Nigerian condition where society is intricately permeated by individual small-scale trading enterprise, often carried on by married women, which was stifled in a new environment.

One suspects, however, that the other major defect—the failure of the slum owners to take up or develop their plots in the cleared areas—arose from the classic fault of trying to make water run up hill. If, instead of trying to keep expatriate commercial enterprise out of the cleared areas, the administration had done everything to attract it and demand the highest possible price for commercially valuable land, the whole financial picture would have been transformed, with funds fully sufficient to minimise social hardship and ensure that cleared areas were promptly developed. This is doubtless wishful thinking, politically, and, in fairness, it should have been made clear that the scheme described was only the first step in a long-term plan, and that all these lessons can be applied in future phases of the clearance operation.

A particularly interesting observation is that a very significant minority welcomed rather than lamented their new-found freedom from what they felt as the irritation of excessive intimacy with innumerable relatives, with their importunate demands on their better-off brethren. This minority comprised the young educated, often married, men on their way up the new ladders of social and economic progress. Following this line of thought, Mr Marris draws pointed conclusions about the growing incompatibility between the old social structure and the modern states that are emerging in Africa, and poses what may in the event be the continent's major problem—that of guiding development towards a new society as stable as the old and at the same time avoiding extremes of class distinction.

This study is a model application of sociological acumen to a complex social and economic problem and should be read by those concerned with housing and allied problems in Africa.

The Means to Leisure

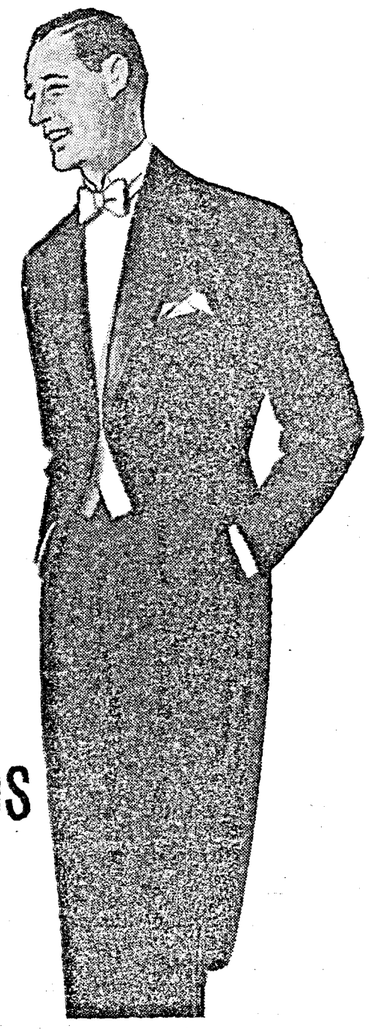
The Anatomy of Work

By Georges Friedmann.
Heinemann. 226 pages. 25s.

IN the early years of scientific management, it was presumed that the greater the breakdown of jobs into their component parts, the greater the efficiency. The trouble with this, however, was that men came to be treated as mere extensions of their machines. Today industrial theorists have come to realise that beyond a point the simplification of work creates so many problems of boredom and dissatisfaction among workers that diminishing returns may set in. As a result, in many firms the pendulum has begun to swing back a little, and some tasks are being deliberately re-combined to make their execution more complex.

In "The Anatomy of Work" M. Friedmann, a French sociologist, provides illustrations from many mass-production firms in various countries to show what can be done to give unskilled workers a greater sense of being involved in their work. At the same time the author is aware that there can be no turning the clock back to the days of craftsmanship, and the most important section of the book deals penetratingly with the social implications of this. As M. Friedmann points out, for large sectors of the population work today is but a means of buying better and more leisure. On the face of it, this seems entirely satisfactory, and certainly the British trade unions talk as if it were. However, the question that M. Friedmann suggests we ask ourselves is what will happen to a society in which work itself ceases to be a primary form of satisfaction, and is replaced by the problem of how best to enjoy oneself? The chief danger that M. Friedmann notes in the present situation is that as men are asked to be increasingly passive in their working hours, they will become altogether passive. A reflection of this can be seen in the enormous growth of prefabricated leisure pursuits, and M. Friedmann even argues that the Englishman's passion for his football pools—essentially a game of chance involving little or no skill—is part of the same passivity. The problem is certainly an important one and the author can quote Marx—and even more Freud—in support of his claim that a man who is asked to contribute nothing in his work is stunted in his whole personal relationship with society.

As for a solution, M. Friedmann can talk only of better education, a more responsible use of the mass media and a greater understanding of individual needs in the factory. Perhaps the best comfort we can draw is



Brandy this good
has no stars on its label

No brandy of lesser quality than Fine Champagne V.S.O.P. Cognac is permitted to bear the Remy Martin label.
Hence no grading by stars. The question does not arise.
All you need remember is to ask for Remy Martin.
In return you enjoy a superior cognac of liqueur quality.
For Remy Martin make nothing less good.
In a word, Remy Martin cater for the one man in a hundred who refuses to offend his palate—or his guests—with any brandy less good than Fine Champagne V.S.O.P.
Just ask for Remy Martin.

Thames Board don't just make boxes. They make "FIBERITE" cases, tailor-made to your special needs. Here are just two examples . . .

Mr. B. exports overcoats to the U.S.A. To make sure they arrived uncreased, he used to pack them in heavy wooden boxes. But a word with the Thames Board experts soon saved him a packet in freight charges. Now his overcoats arrive wrinkle-free in light-weight double-walled "Fiberite" corrugated cases, ten coats to a case.

Mr. S., a maker of metal office chairs, also trades for dollars. He used to use wooden crates. But the Thames Board experts designed him a "Fiberite" case that not only weighed less —but also took up less space, gave better presentation and was easier to handle. The secret? They just detached the backs and legs from the chairs.

Simple. But it took Thames Board to think of it.

FIBERITE
PACKING CASES

ARE MADE ONLY BY
THAMES BOARD MILLS LIMITED
PURFLEET, ESSEX AND WARRINGTON, LANCS

The word "Fiberite" is a registered trademark

TBF 41-6263-65

that the actual number of unskilled jobs is declining fairly rapidly, while the number of people in service occupations, which offer more opportunities of satisfaction, is increasing. However, even if the author cannot get round the truth that men cannot live by leisure alone, he presents his facts so clearly that this is an interesting and disturbing book. While Mr Khrushchev promises the Soviet people more leisure and the American unions talk of a thirty hour week, M. Friedmann may be perfectly right that there is already a need for better education, merely to prepare for the hours of free time that lie ahead.

Selling Advertising

Reality in Advertising

By Rosser Reeves.

MacGibbon and Kee. 147 pages. 15s.

THIS is the sort of book that might be bought by the hundred by the advertising agency of which Mr Reeves is the chairman and given away to their clients as an indication of the vigour and skill to be found at the head of that agency. According to the dust-jacket it has in fact been bought by the hundred by one of Mr Reeves's better known rivals on Madison Avenue to give away to *his* staff and clients as "A great polemic." This indicates that, although Mr Reeves is one of the most intelligent and successful of "ideas men" in the American advertising business, it is possible to disagree with him. This may be true, at a rather refined height of technical argument about copy-writing, but most of the book is straightforward to the point of banality, so that polemics hardly seem to be possible—only a rather wan and exhausted assent.

This is not to say that the book will not be useful. On the contrary, it will probably be very useful indeed to working advertising men, who will get here in a nicely got up nutshell much of the experience of one of the acknowledged masters of their craft. Non-advertising men who are willing to make the effort (it is not much of an effort since the book runs smoothly enough) to read it may also come to admire the verve with which Mr Reeves expresses himself. That being so, it will not much matter that Chapter 1 (two pages on "A Common Fallacy") could be summed up in the single sentence "advertising is only one of the possible causes of sales" and that something which Mr Reeves calls "Vampire Video" and about which he goes on for quite a number of pages could be summed up in the two words "avoid irrelevance."

Paperback Selection

Since the new university year got into full swing, there have been ever more paperback issues of new and standard works. Macmillan have produced a new series—appropriately called "Papermacs"—that, apart from the binding, is indistinguishable from the old editions; it is accordingly expensive by comparison with other English paperback series, though for each title the saving on the cloth bound edition is considerable—in most cases about 50 per cent.

Below is a guide to some of the paperbacks received by this journal in recent weeks.

Biography :—

THE LIFE OF LADY MARY WORTLEY MONTAGU. By R. Halsband. 326 pages. 8s. 6d. STALIN: *A Political Biography.* By Isaac Deutscher. 618 pages. 10s. 6d. NEHRU: *A Political Biography.* By Michael Brecher. 276 pages. 7s. 6d. *Oxford Paperbacks.*

Economics :—

THE SOURCES OF INVENTION. By J. Jewkes, D. Sawers and R. Stillerman. 440 pages. 18s. BUSINESS ENTERPRISE: *Its Growth and Organisation.* By R. S. Edwards and H. Townsend. 624 pages. 30s. *Macmillan Papermacs.*

WHAT PRICE ECONOMIC GROWTH? Edited by K. Knorr and W. J. Baumol. *Prentice-Hall.* 184 pages. 15s.

THE STRATEGY OF ECONOMIC DEVELOPMENT. By Albert O. Hirschman. 220 pages. GOLD AND THE DOLLAR CRISIS. By Robert Triffin. 195 pages. SWEDEN: *The Middle Way.* By Marquis W. Childs. 220 pages. *Yale University Press.* 10s. 6d. each.

History and Law :—

THE BLACK DEATH. By Johannes Nohl. *Allen & Unwin.* 159 pages. 6s.

VOICES OF THE INDUSTRIAL REVOLUTION. Edited by J. Bowditch and C. Ramsland. 200 pages. 10s. 6d. THE GATEWAY TO THE MIDDLE AGES. 1. Italy. 2. France and Britain. 3. Monasticism. 219, 152 and 262 pages. 12s. 6d. each. *Michigan University Press.* London: *Cresset Press.*

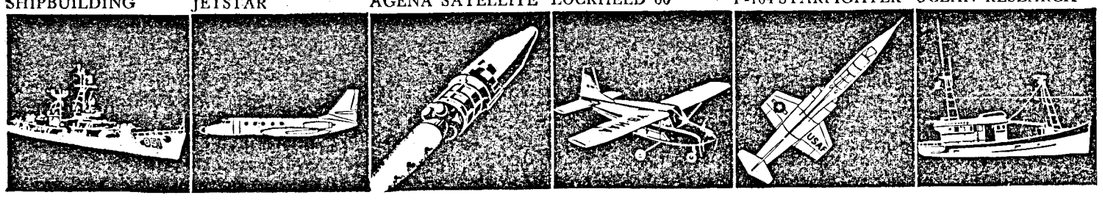
LOCKHEED TODAY

Today, POLARIS is poised beneath the seas... ready and able to spring instantly into action. The U. S. Navy's Fleet Ballistic Missile System — Nuclear submarines armed with Polaris missiles — is a bullwark of the Free World's defense. Cruising submerged indefinitely through the seas that cover three-fourths of the earth, these new subs armed with the Polaris are safe from surprise attack, able to strike any strategic target. Polaris is designed and built by Lockheed.



LOCKHEED

Helping promote free world security and progress in: Electronics, Missiles, Aircraft, Nucleonics, Satellites and Space Vehicles, Rocket Fuels, Aircraft Maintenance, Airport Management, Shipbuilding, Heavy Construction, Steel Fabrication and Cranes.

LOCKHEED AIRCRAFT CORPORATION, BURBANK, CALIFORNIA, U. S. A.

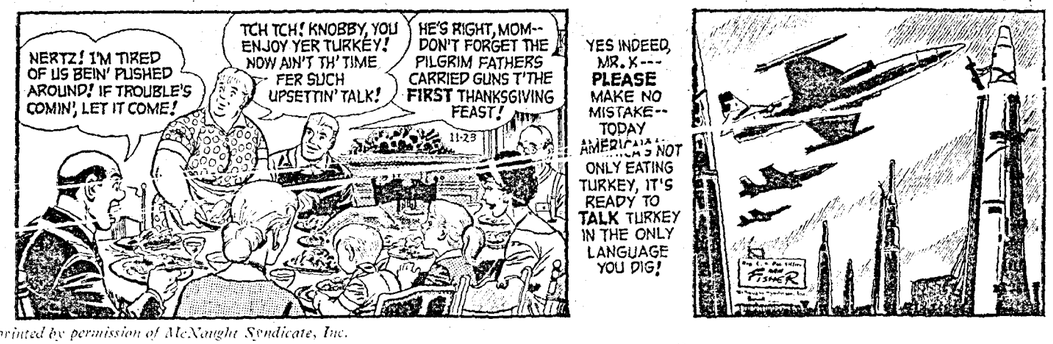
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Shipshape at State

WASHINGTON, DC



THIS week like a good sailor President Kennedy cleared his decks for action. In the Department of State in some places the right men were pulling on the right ropes but were wearing the wrong uniforms, while in others there were just square pegs in round holes. With the concurrence of the Secretary of State, Mr Dean Rusk, a small flying squad of high calibre moved from the White House into the department. Mr Rostow, one of the President's assistants for national security matters, is now the head of the department's Policy Planning Council. Mr Goodwin, another White House assistant, has become Deputy Assistant Secretary of State for Inter-American Affairs and Mr Dutton, yet another presidential assistant, has taken over from Mr Brooks Hays the important and delicate job of "selling" the Department of State's projects to Congress. The department had just come under fire from the Senate subcommittee on national policy machinery, which had laboured for two years and whose chairman, Senator Jackson, criticised the department for failing to assert its leadership across the whole front of foreign policy. Both in his opinion and in that of other critics, the department has allowed the thundering present to obscure the emerging future and has sometimes been bogged down in timid indecision and administrative sluggishness.

The biggest change this week was the freeing of Mr Chester Bowles from the managerial job of Under Secretary of State, to allow him to pay visits to the new and developing countries, with the rank of Ambassador, and to advise the President on their problems. Mr Bowles may have fought against his freedom; he is said to have spent an hour with the President before an announcement could be made that he had accepted the roaming assignment. The last time that Mr Kennedy attempted to disengage Mr Bowles from his position as second in command at the Department of State the two men also spent an hour together, but that time Mr Bowles, who was Mr Kennedy's campaign adviser on foreign policy, emerged still in possession of the title of Under Secretary; then he rightly refused to resign since this would have made it look as if he had been wrong about the attempted invasion of Cuba and his critics right, instead of the exact opposite. He was, however, noticeably left out of discussions of major decisions on foreign policy, as indeed he had been since he frowned publicly on the Cuban misadventure. Also, he was away from Washington a good deal and, though these absences may not have been entirely of his own choosing, they made it impossible for him to fulfil the proper functions of the Under Secretary, who is supposed to deputise for the Secretary of State when required. Another significant change is that the redoubtable Mr Averell Harriman, currently occupied with Laos, has been appointed Assistant Secretary of State for Far Eastern Affairs in place of Mr McConaughy.

Mr Bowles's successor is Mr George Ball, the Under Secretary for Economic Affairs, who will continue in charge of economic matters and will leave the supervision of daily administration (including some 2,000 incoming and outgoing telegrams) to Mr George McGhee, the new Under Secretary for Political Affairs whom Mr Rostow replaced as the chairman of the department's Policy Planning Council. Mr Ball had in fact been performing Mr Bowles's functions while Mr Bowles expounded foreign policy to Americans abroad and at home. This laid large burdens on Mr Ball's broad back, which Mr Kennedy now needs badly for carrying the ambitious new policy of lowered tariffs and expanded world trade that the President is expected to put to Congress next year.

The new trade policy looks towards the European common market and possibly at opening the road to an eventual Atlantic community. Mr Ball, although oriented towards Europe, is internationally minded and this, with Mr Rostow heading the planning group, ensures that the world will continue to be reviewed as a whole. Nevertheless the President is believed to be fixing his attention increasingly on western Europe and the North Atlantic alliance. At his Wednesday press conference Mr Kennedy spelled this out and indicated that Mr Bowles's new assignment—"an increased opportunity" for him—was devised to ensure that the Administration did not become so concerned with Europe as to ignore those parts of the world where Mr Bowles will now spend most of his time.

JOE PALOOKA — Day of Thanks — By HAM FISHER

Reprinted by permission of McNaught Syndicate, Inc.

While the changes that have been made are no doubt intended to screw pegs into holes of the right shape, to focus more sharply the advice that the President receives, they could conceivably concern basic policies as well as prominent personalities, though this has been denied officially. Mr Bowles has seemed to feel that American attention to western Europe may clash with America's anti-colonial role in under-developed lands. He was critical of the rearming of Germany and he once called the North Atlantic Treaty Organisation an uncertain and precariously based military alliance. The Indian Prime Minister shares those views. When Mr Nehru was in Washington his host, Mr Kennedy, appeared to be temperamentally allergic to the consolations of Asian philosophy, but subsequently he saw eye to eye with the German Chancellor on important aspects of European defence and economic strength. The President may think that the time has come to recall the old developed world to redress the imbalance of the under-developed new.

For Mr Kennedy associates himself, at least in part, with an American mood of frustration and anger which arose from Mr Khrushchev's imprudent threat to "bury" the United States and which has been aggravated by the unfriendly attitudes of some countries that are under-developed and which were recently colonies. At the end of the second world war the Americans had it in their power to dominate all nations, including Russia. Their rewards for having refrained include to date a war in Korea, apparently implacable Chinese hatred, Mr Khrushchev's constant harrying and a United Nations whose bills they mostly pay but in whose General Assembly they have a continually diminishing voice that has now become a squeak of less than one per cent. Many Americans, including apparently Mr Kennedy, believed formerly that, in addition to all these woes, by the end of this year the United States might have fewer long-range missiles ready for firing than Russia. The President now says that the United States is still ahead of Russia in total military strength. But he adds that he is resolved to pay as high a price as is necessary to stay ahead. And some Americans are so on edge with frustration when they think of the costs and the risks of an arms race whose duration and outcome cannot be foreseen that they wonder aloud if it would not be better to strike now rather than to wait for Russia's first strike.

Mr Kennedy has read Thucydides and also he probably does not believe that there can be a military victory by one side over the other in a world of thermonuclear weapons. What he does appear to believe is that possession of superior military strength can be employed to persuade Mr Khrushchev that the balance of power is not tilting towards Russia after all, that a peaceful settlement is necessary for mutual survival and that a settlement can be obtained through negotiations aimed at agreements which both sides will regard as preferable to the *status quo*. But Mr Khrushchev, the President seems to think, will not soon be persuaded of these things in Asia or Africa or even perhaps in Latin America. It is in Europe, where economic growth more rapid than that of the United States has halted and reversed communist infiltration, that the West's superior strength can be demonstrated. In Europe, it is the West that is stable, the apparently aggressive Russians who are really on the defensive. Elsewhere (until deep-rooted Sino-Soviet differences ripen and Russia's own engineers and poets raise a real clamour of disaffection) the opposite is too frequently the case.

The President cannot feel happy to be told by General Taylor and Mr Rostow that south Vietnam may be saved without the dispatch of large American forces only if the south Vietnamese government accepts American advice, when south Vietnamese newspapers under government auspices are accusing the United States of interference for the sake of profiting from capitalist imperialist exploitation. He may not feel much better about Latin America, where the 138-year-old Monroe Doctrine has been breached. Mr Kennedy did send American warships sailing into the Caribbean off the coast of the Dominican Republic—and he may yet be compelled to become quite deeply involved in guerrilla fighting in south Vietnam. Nevertheless, he seems determined that the United States shall not be over-extended in other parts of the world when he expects the real confrontation to be in Europe ; there, he seems to think, it is the Soviet block and not Nato that will back down.

On Wednesday he intimated that the quest for harmony between the Warsaw Pact countries and Nato would come best after successful negotiations over Berlin which, he hinted, might include some form of international control of the access routes. The President assured the editor of *Izvestia* at his marathon interview last week that the United States was just as anxious as the Soviet Union to prevent another war arising out of Germany ; he added that both sides should attempt to negotiate a solution making it possible to keep peace in Central Europe. But before wider issues are entered on it seems that the Russians must pass Mr Kennedy's test of "reasonableness" over Berlin.

"Silver and Gold . . . .

Have I none" or at least not enough, says the United States government, announcing first that last week it lost a record amount of gold, $300 million, leaving it with less than $17 billion worth in stock, the least since 1939 ; and secondly, that this week it has stopped selling silver on the open market because its "free" supplies of that metal are practically exhausted. There is no real reason why either of these announcements should undermine confidence in the dollar although, with speculators and private bankers as nervous and suspicious as they are, the fact that the two announcements came together may mean that they have wider repercussions than they should.

The loss of gold was due not to a flight from the dollar but to a large purchase by the British government (discussed more fully on page 946) which, according to the American authorities, was an example of the co-operation between the two countries which is now being relied on to strengthen the dollar. The suspension of sales of silver had obviously been coming for some time, since the mounting demand for the metal from industrial users, far in excess of the quantity being mined, had almost used up the free stocks which the Treasury had accumulated in the past. But the 1.7 billion additional ounces which it holds as a monetary reserve, to back $1, $2, $5 and $10 bills, is still intact, although attempts are to be made to free this silver gradually by including these denominations in the central bank's note issue. It is this decision to demonetise silver, rather than the one to suspend sales, which is this week's really sweeping change, making silver into an ordinary commodity.

This change will counteract some of the immediate pleasure of the silver producers at the price rise set off by the removal of the ceiling of 91 cents an ounce which the government's sales at that price have put on the silver markets ; the fact that it still has 22 million ounces of free silver available will restrain prices somewhat. The producers will be even more opposed to the President's request to Congress to repeal the law which requires the Treasury to buy silver at 90½ cents an ounce, a floor under the metal which dates back to the depression days of the nineteen-thirties and which is closely associated with the Democratic party and particularly with the Democratic Senators from western states. While the Secretary of the Treasury expects Congress to agree to this, much will depend on how far the price of silver has gone up when the legislation comes to be considered, how likely it is to stay up, and on the extent to which concealed stocks of silver are brought into the market by higher prices ; according to the experts, silver mines will not be reopened or new deposits developed unless the price rises to $1.10 an ounce.

We are all Self-Made Men

When it is said of someone that he is a 'self-made man', it means he has risen from humble beginnings. But the truth is we are *all* self-made, with great or disastrous results.

Many people who have won eminence for themselves in the process have found daily in THE TIMES a first-rate partner. For while it is excellent that anyone should make himself good at his job, THE TIMES broadens his horizon. Through its regular reading, he makes himself, in the truest sense, a 'man of the world.'*

There is indeed perhaps no greater help to your advancement than the wide and sharply-focused view of events which THE TIMES affords you each morning.

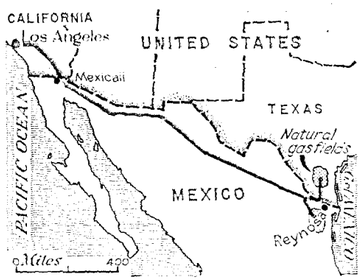
Read THE TIMES

* There are few greater benefits you can give your children than to bring them up on THE TIMES. If they are at school or college, they can get THE TIMES for the student rate of 2½d. They should write to The Circulation Manager, THE TIMES, London, E.C.4.

Republicans' Mint Julep

LAST month, in spite of repeated appeals from the Administration, Democrats in Georgia insisted that Negroes should be barred from a dinner in Atlanta at which Mr McNamara, the Secretary of Defence, spoke. A week later southern Republicans, who were holding a regional conference in the same city, rubbed salt in the wound by including fifty Negroes at a political dinner. But Senator Goldwater, the idol of the Republican right-wing, came to the Democrats' rescue next day by making an open appeal to the prejudices of segregationist southern conservatives. He said that he favoured watering down the civil rights position adopted by the Republican party last year and added that he would support a constitutional amendment making it clear that education is a matter solely for the states—a slap at the Supreme Court's decision that racial segregation is unconstitutional in tax-supported schools.

Mr Goldwater's motives may amount to no more than a dream of capturing the Republican presidential nomination in 1964 by including delegates from some of the southern states in his camp—a dream that has a little more substance since Governor Rockefeller committed a political *faux pas* by announcing that he and his wife were planning a divorce. But other Republicans seeking to establish a two-party system in the changing South may well be tempted by the conservative votes likely to fall into their laps if only the party will soft-pedal its traditional support for Negro rights. At present the Republicans send only eight Representatives to Washington from the southern states, but the old party hacks in the South who were interested only in patronage are being replaced gradually by younger, keener business and professional men; they talk hopefully of winning eight more seats next year, which would be a useful contribution to the forty-four which the Republicans need if they are to gain a majority in the House. Two special elections this month in Texas—to fill the seats of Mr Rayburn and of Mr Ikard, who has resigned—may show how the wind is blowing in a southern state where the Republican organisation is vigorous and where Democrats are beginning to repudiate their party at public "resignation rallies." Elsewhere Republican organisations are weaker, but they have started to win a few local elections, even in South Carolina.



These ripples might become a wave if the Republicans showed more sympathy for the segregationist views of Southerners whose economic interests already incline them toward the Republican camp. Some Republican organisations in the South are rigidly segregationist, in Mississippi, for example, but in Georgia at least one local leader looks ahead to the day when there will be 2 million Negro voters in the state who must not be alienated. The national leaders of the party are even more concerned about alienating the present Negro voters in the big northern and western cities. Senator Goldwater might win the South by appealing to its racial views and its growing interest in protection and lose the rest of the country.

Spanners in Government

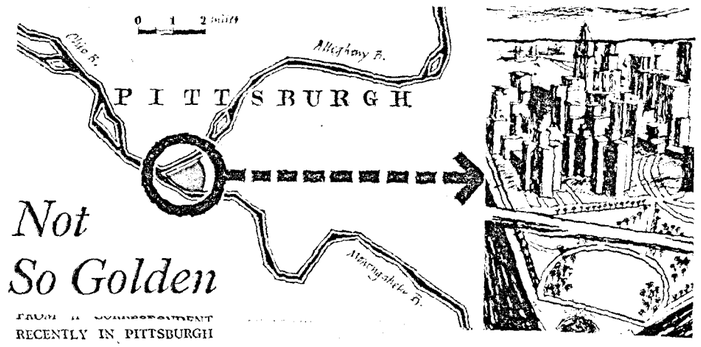
AFTER the last great war the way the American government handled its national security policies—on defence, foreign politics and economics—was reorganised to reflect the lessons that had been learnt during the struggle. But, as the cold war has become semi-permanent, there have been many doubts about whether even this new machinery provides the planning, flexibility and co-ordination to enable the right decisions to be taken in time and many changes have been proposed. Two years ago the Senate established a subcommittee on national policy machinery, under Senator Jackson, to find out how well the government is organised and manned to meet the challenge from the communist world. The committee's staff was able; its members included Senators Humphrey, Javits, Mundt and Muskie; its approach was non-partisan; and its witnesses amounted to a roll-call of many of the most distinguished public servants America has had: Mr Lovett, Mr Kennan, Mr Harriman, General Taylor and Mr Nitze among others. Their testimony makes enthralling reading.

Last week, just before the government changes were announced, Senator Jackson issued a personal "final statement" with which other members of the subcommittee are expected to agree. Its major conclusion is that no new machinery is needed and that any proposal to add to what exists should be examined with the utmost scepticism; in particular, committee-killing, rather than committee-creating, should be the order of the day. (In this respect and a few others the President has already taken the committee's advice.) But the machinery needs to be used better; it is plain that the subcommittee considers that the National Security Council was allowed to become too large and over-institutionalised and to deal too often with routine matters under President Eisenhower, and that it should be confined to presenting the President with major alternatives of policy. The authority of the Secretary of State (who in the American system is the President's principal adviser in the foreign field) should be clearer and his effectiveness greater; this apparently answers those who advocate a "First Secretary" to share the President's load.

Senator Jackson, who thinks that the main problem is to get the best possible people into the important jobs, finds a good deal to criticise on this score. For one thing the government is, he says, over-staffed; the real crime is not that this wastes money but that it wastes the time and energies of the men who are really doing the work. Higher salaries are needed to attract good people; better training arrangements are needed to give them breadth of view and of experience; and it should be made easier to bring in distinguished men from outside by relaxing and modernising the conflict of interest laws. Finally, Senator Jackson argues that a stronger Bureau of the Budget would help the President to establish an order of national priorities and that Congress, whose dealing with matters of national security is dangerously fragmented, should improve its own organisation.

Gas for Gringos

FROM A CORRESPONDENT IN LOS ANGELES



SO great is the demand for natural gas in California, as a result of its industrialisation and the growth of its population, that arrangements have been made to bring in gas from Canada; the pipelines are already being laid. Now imports from Mexico are proposed. The Southern California Edison Company, the giant electricity firm in the southern part of the state, has applied to the California Public Utilities Commission for a permit to bring in 75 million cubic feet of gas a day from Mexico to burn in its generating plants in the Los Angeles area.

Why go to Mexico for gas? The explanation is somewhat complicated. The proposal to bring in foreign gas is part of a broader project to transport natural gas from Texas to California by way of a pipeline through Mexico. The Edison Company wants to do this to obtain its own independent supply of fuel. It had this once when most of its power was generated in the High Sierras at its own hydro-electric facilities; but by the end of the war the water resources of the region were fully exploited. Since then most of the electricity sent out over the Edison grid in southern and central California has been generated in steam plants. They now carry over 80 per cent of the total load.

In these steam plants the company can burn either gas or oil as fuel and can switch from one to the other at short notice. But to prevent smog in Los Angeles the company, in common with other industrial facilities, is prohibited from burning oil from the middle of April to the middle of November. Hence, for a large part of the year, natural gas is virtually the only fuel consumed. At present the greater part of this gas is supplied by two companies which are both subsidiaries of the Pacific Lighting Corporation of San Francisco.

At the hearings now going on in Los Angeles before the Public Utilities Commission, which has to decide whether the Edison project would be in the public interest, Edison has pointed out in support of its proposal that the cost of gas for fuel has doubled in the past decade, rising from 19 to 38 cents a cubic foot, and also that the firm, which provides an electricity service to customers which cannot be interrupted, has to depend on a supply of gas

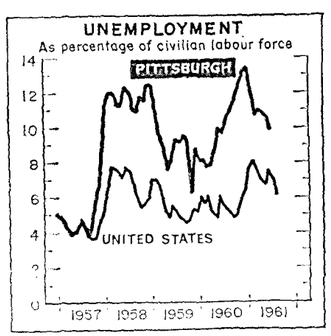
Not So Golden

FROM A CORRESPONDENT RECENTLY IN PITTSBURGH



MUCH has been written about the so-called "renaissance" of the once smoky steel capital of America—Pittsburgh. Many gleaming skyscrapers have risen on the Golden Triangle where the Allegheny and Monongahela rivers join to form the Ohio. But the new construction has been likened by one local economist to "a golden filling in a mouth full of decay." And the underlying hope—that a declining city could rejuvenate itself by its own efforts—has not been fulfilled. Now Pittsburgh has been officially labelled a "chronically depressed" area eligible for such government help as this status brings with it.

The city has made no small effort to help itself. Since the end of the war fifteen skyscrapers have been built to provide new office and hotel accommodation and many of the major companies in the area have moved their headquarters into these impressive structures. More new buildings are under construction towards the outskirts of the city, but so far progress on these projects has been held back by local political and administrative difficulties. Pittsburghers have not relied solely upon redevelopment to make their city more attractive; a programme of smoke control has been pursued strenuously, but there is still a long way to go before the air will be really clear. For example, the steel industry, one of the worst offenders, says it will not be completely "clean" until 1970—some twenty-five years after the initiation of the programme. However, much has been achieved already; a nun, who revisited the city last year for the first time since 1936, commented that "the last time I visited I had to change my cuffs and collar twice a day. This time, I changed only once a day."

But it takes more than new office buildings and cleaner air to promote real economic growth. Both industry and people are leaving the Pittsburgh area on an unprecedented scale and in most other respects the region is rapidly losing ground compared with other big industrial centres. Unemployment in Pittsburgh is running far higher than for the country as a whole—and this discrepancy is by no means unusual. Incomes in the region generally are rising at a much slower rate than in other parts of the United States and Pittsburgh itself no longer enjoys the reputation of being a notoriously high wage city. Outside the refurbished central area, Pittsburgh gives every appearance of decline. Slums can be found on all sides of the town and the system of mass transport (which is penniless) probably offers the worst service of any in the country for a fare that is exceptionally high. The roads in the city are in a deplorable state and other services, such as rubbish collection and street cleaning, leave a lot to be desired.

Pittsburgh is battling with all the usual problems that face large cities in the age of the motor car—the mass exodus of better-off families to the suburbs, the steady deterioration of public services within the city. And it has others peculiar to itself. Its failure to achieve a reasonable pace of economic growth must in large measure be blamed on the American steel industry which itself has been beset in the last few years by strikes, high unemployment and a static market for its products. And even within the steel industry Pittsburgh has been losing business to the newer and more efficient plants that have been built in other parts of the country.

But with commendable American enthusiasm the city authorities and the citizens remain undaunted and new solutions to the city's problems are constantly being produced. With the substantial help of a local financier, a Pittsburgh Regional Planning Association was established with a budget of $400,000 and a directive to find a prescription that will make Pittsburgh grow, to be published next year. According to one member of this team the opportunities for growth open to Pittsburgh are very limited but there is one real hope: that Pittsburgh may become a major centre of atomic research in the United States. Some of the largest electrical manufacturers already have their headquarters in Pittsburgh and much of their research is being done in the area.

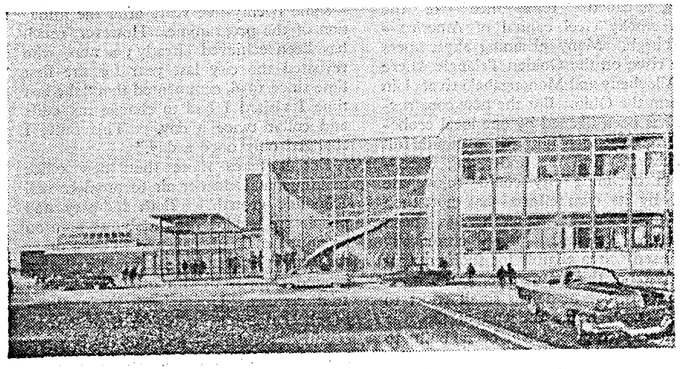
THE ABBOTT SAGA

THE PROBLEM . . . . . TO FIND a large site for which an I.D.C. could be granted, where water was available in sufficient quantities to supply a small town, where effluent—hundreds of thousands of gallons of it—could be disposed of.
TO DESIGN and build at speed a highly complex chemical plant costing over £1.5 million.
TO BUILD at a basic fixed price and to meet a very close programme.
TO GIVE possession of blocks and departments before the contractual completion date.

THE ANSWER . . . . . A highly skilled, tightly integrated team, able and willing to work with the client's own technicians . . .
. . . to the end that the combined knowledge and skills of all resulted in a functionally efficient unit, good to look at, and within which British men and women would be proud to work.

That is what we have done . . . on time.

On this project C.A.S. were responsible, inter alia, for:



FINDING THE SITE (OF 120 ACRES ON THE ISLE OF SHEPPEY)

NEGOTIATIONS WITH 17 OWNERS OF LAND

CONSULTING WITH 7 MINISTRIES AND 14 LOCAL AUTHORITIES

EMPLOYING THEIR OWN 5 CONSULTANTS AND 45 SUB-CONTRACTORS

PLANNING, DESIGNING AND ERECTING 5 INTEGRATED BLOCKS OF BUILDINGS.

The Administration Building. One of five main blocks.

Experts on Tap

FROM A SPECIAL CORRESPONDENT

IT has already become clear that the *educated approach* to government, which is so marked a feature of President Kennedy's Administration, will, like the golfing approach of his predecessor, come in for its share of criticism. But in spite of caustic comments from some quarters, the learned bodies whose aid has been invoked continue to beam at the calls for their help. One of the most interesting of these is the Brookings Institution, a small but distinguished research organisation in the heart of Washington which has worked for four decades in the fields of government, economics and foreign affairs. It was Brookings whose staff produced, in the summer of 1960, the famous study of the problems inherent in the change from one Administration to another at the *precise moment when these problems* were puzzling the Kennedy forces.

Since then the Institution has satisfied other needs, both transitional and fundamental. Because the American system, recognising no equivalent of the British "loyal opposition," provides neither staff nor quarters nor even postal addresses for an incoming Administration until its members actually move into office on Inauguration Day, groups preparing reports for the President-elect found themselves with nowhere to work between November and *January, except a park bench. In this frigid* situation the Brookings staff, which had just moved from outgrown quarters to a spacious new building, came to the rescue. It provided rooms for conferences and consultations and it had experts on government and economics whose advice could be sought. It had a reference library at once competent and pertinent; it even had a series of carrels (a mediaeval word for study space which the Oxford English Dictionary declares obsolete but which Brookings finds fitting) for harried members of various task forces.

As a research centre, Brookings is unique in Washington; its position there is not the least of its advantages. Washington is a city which is more occupied with the practice than *with the theory of government and it lacks* a recognised centre for post-graduate studies in the realm of the social sciences. To provide this is one of Brookings's dearly held aims. Its new building bears the title "Center for Advanced Studies" on the side of one wing; plans for another building which *is to have more extensive facilities for such* studies are already under way.

The desire of the extraordinary business man who gave his name and most of his fortune to Brookings was that his creation should put the insights of the social sciences at the service of the government. This is an ideal not without some peril. The social sciences are relatively new; moreover, a privately financed research organisation with a declared interest in the affairs of government does not always find it easy to convince everyone of its political neutrality. Moreover, academic institutions organised in the conventional way raise their eyebrows at the less conventional approaches which are a source of Brookings's strength.

UNMOVED by criticisms, Brookings continues to flourish. In the past six years its staff and its financial resources have both doubled. Its staff, with a hard core of perhaps a dozen scholars on permanent tenure, includes some seventy more attached to it for varying terms and under various arrangements. Its annual operating income, derived in part from grants by philanthropic foundations, grew from under $700,000 in 1954 to close on $2 million at the end of 1960; its *total assets (including the cost of its new* building, which was paid before the move was made) rose over the same period from $7 million to $16 million. Its popularity with the fund-granting foundations keeps pace with its popularity with government, which makes repeated requests for its research services. In part this popularity is due to the new liveliness of what was sometimes regarded, in earlier years, as a formidably conservative group. In the past six years Brookings's contact with modern realities has been increasing and its hospitality to newer lines of investigation has been *attracting* younger men.

The character of the Institution's output varies. Careful, classic studies in their chosen *field may* be initiated by scholars on the staff, or by men with other academic connections who desire to work under the wing of Brookings. Most of the projects for study which are given the Institution's support are expected to result in books that will be published by Brookings, although sometimes a study made under the auspices of Brookings may, for one reason or another, be published by an outside press. Each study, when it is submitted for publication, is reviewed by a specially appointed committee of experts, and revised by the author with due attention to their recommendations before it can receive the Brookings imprint. This editing by committee does not always improve a book's readability and liveliness of presentation is still suspect, but recently there has been a visible improvement in lay-out and typography, along with more alluring dust jackets.

Short "problem papers" on points of specific difficulty may be either inspired by the staff or requested by a government office or an outside group. Recently Brookings has framed a long-range programme of study and research on the social, economic, political, legal and international implications of the exploration of space for the government. And a five-year project for research and education on the economics of taxation and government expenditure is being initiated by the Institution under the guidance of a National Committee on Government Finance, with funds provided by the Ford Foundation. Other work includes technical assistance to Vietnam and the framing of a tax system for South Korea. A new departure is the State Department's request that Brookings undertake studies of development problems in collaboration with the Overseas Development Institute in London which has received a similar request from the British authorities.

In addition, the staff has recently brought into play techniques of communication at once older and newer than the printed page. Recognising that the daily contact with government affairs which is possible in Washington, like the government's need for quick answers, offers areas for study and service which are still unexplored, conference programmes of varying patterns have been devised to serve young Congressmen seeking to know more about their jobs, senior executives in different government departments eager to exchange mutual problems and solutions and the representatives of big companies who have been assigned to the capital and are puzzled by its complexity. Frankly experimental, these approaches constitute a fresh attack on the centres of isolation which develop within a big government.

So far, Brookings has limited its work in practice to the two social sciences singled out by its founder: economics and political science. It lays little stress on sociology, still less on anthropology and social psychology. Tacit recognition that these latter three may prove increasingly important, particularly to the new countries springing up from the colonialism of the past, may modify the present pattern. The president of the Brookings Institution, Dr Robert Calkins, whose broad grasp of modern problems has been a great factor in the recent expansion of the research which it undertakes, recognises that the growth of the federal government, at home and abroad, requires insights more extensive than those offered by Mr Brookings's two original disciplines.

Continued from page 907

that is interruptible. If at any time domestic users of gas are in danger of running short, the two companies can divert supplies from Edison and other industrial consumers.

The electric power company proposes to end this dependence by bringing in its own gas. Most of this—380 million cubic feet out of a total of 455 million cubic feet a day—would come from the fields of the Humble Oil and Refining Company in South Texas, on the famed King Ranch, but it would be transported to California by way of a pipeline through northern Mexico. The remaining 75 million cubic feet a day would come from Mexican gas fields across the border. While the Texan reserves are already being highly exploited, those in Mexico are undeveloped and, according to Edison experts, they are among the largest remaining sources of fuel on the North American continent.

The project has many points of interest, not the least important being the strong opposition from the two gas companies, who see themselves threatened with the loss of their biggest customer, Southern California Edison. Outside of California, the most intriguing facet of the situation is its hands-across-the-border aspect. As the plans have been drawn up, two relatively short pipelines would be built in the United States, both by the Tennessee Gas Transmission Company, one of the largest operators of pipelines in America. The first would run from the King Ranch gas fields to the Mexican border at Reynosa, the other from the Mexican border at Mexicali to the Edison electric plants in the Los Angeles area. But the largest section of pipeline, 1,200 miles long, joining Reynosa and Mexicali, would be constructed by Petroleos Mexicanos (Pemex), the Mexican government's oil and gas monopoly, which also owns the fields from which the Mexican gas would be drawn. Pemex plans to raise $165 million, the estimated cost of the construction, from the sale of bonds which would be retired out of gas revenues from Edison over a twenty-year period. American investors are expected to be large buyers of the bonds.

Mexican development would be assisted in two important ways. First, a market would be opened up for gas—and the eventual demand might exceed by many times the original 75 million cubic feet a day which Edison would contract to buy. Secondly, Mexican communities along the 1,200 miles of the pipeline would be entitled to draw on the supply, so that the economy of a wide area of the northern part of the country would benefit. In the United States there is controversy over the project and an early decision is not to be expected, but in Mexico the advantage of the proposed joint enterprise must seem incontrovertible.

Gobbling It Up

EVEN the Thanksgiving turkey has now become a "convenience" food. Last week housewives who wanted to save themselves the trouble of peeling chestnuts and their husbands the trouble of dissecting joints could serve a bird which had been stuffed and boned before it was frozen and could be carved like a loaf of bread. It may have tasted like one too and it was certainly more expensive than the traditional variety. For turkey prices were down by about 25 per cent this year. Farmers are complaining that they are actually losing money on their turkeys, even though the cost of feed is also down, and are considering whether they should accept government regulation as a remedy.

Prices will go down still further, but farmers may do better even so, if the giant turkeys now being grown experimentally become general. These successors to the postwar innovation, double-breasted turkeys small enough for any oven, are already tipping the scales at 50 pounds each, enough to feed 75 Thanksgivers—and 100-pound turkeys are being predicted. Such monstrosities are said to be less costly to produce, although "the bigger the bird, the fewer its eggs," and cheaper for consumers, particularly for the restaurants and food processors who buy about one-third of all the turkeys sold. Large birds have more meat in proportion to bone than do small ones and it is easier to cut them up, whether for blue plate specials or frozen turkey dinners.

Hamming It Up

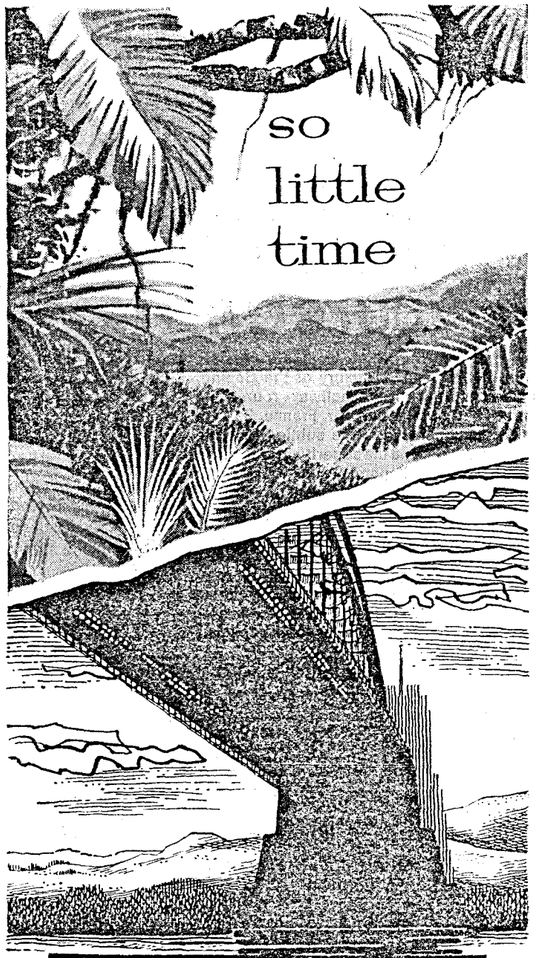
HAMS were also being blown up into larger sizes—or less solid ones. But against this consumers have revolted successfully, it seems, with the help of a new Administration anxious to redeem its election pledge that their interests would be protected. The story begins about thirty years ago when meat packers discovered how to speed up and cheapen the old slow method of preserving ham—soaking it in brine and then smoking it—by injecting a pickling solution into the meat. This increases its weight and in 1950 the Department of Agriculture ruled that uncooked smoked meat subject to federal inspection—that is, entering into interstate commerce—must not weigh more when sold than it did before it was cured, thus keeping the new product off the market. Last December the retiring Republican Secretary of Agriculture quietly amended this order to allow an increase of up to 10 per cent in weight. This was done at the request of the big meat packers who claimed that small firms, which do not sell outside their own state and are therefore not bound by federal regulation, were profiting unfairly from being able to use the cheap process.

As a result the market was flooded with moist, mild-tasting hams and the Department of Agriculture was flooded with protests. The new Democratic Secretary called a series of hearings at which the meat packers argued that consumers preferred moist hams and that they were not paying for water since lower prices allowed for this change in quality. Consumers denied that they liked the hams or were prepared to buy water instead of meat; in addition they complained that the new product did not keep well. In the middle of last month the original order was reinstated but to comfort the large packers, who are fighting the reinstatement in the courts, the Secretary of Agriculture may ask Congress to apply it to the small intra-state firms as well.

SHORTER NOTES

It is now taken for granted that Representative McCormack of Massachusetts will succeed Mr Rayburn, who died last month, as Speaker of the House. But the appointment cannot be voted on officially until Congress returns to Washington early in January. Meanwhile, should anything happen to Mr Kennedy and his Vice President, Mr Johnson, the new President would be Senator Hayden of Arizona, the 84-year-old President Pro Tem of the Senate. He is fourth in line of succession, the Speaker being third.

* * *



A Bill passed by Congress in almost record time to deal with last summer's outbreaks of aircraft "hijacking" made it piracy and a federal offence punishable by death to take over a commercial airliner by force when in flight. To assault a member of the crew is now punishable by up to twenty years in prison; if weapons are used the penalty may be life imprisonment.

* * *

The only bit of President Kennedy's tax programme which has been adopted this year is a provision authorising the Treasury to allot numbers to the 60 million people who pay federal taxes. Only a few million new numbers are involved, since most people have, and use, their social security numbers. The purpose of making the practice universal is to enable automatic equipment to pinpoint those who are not paying their taxes in full.

Priestman engineering skills are bringing peaceful plenty to peoples to whom drought once meant death. A river bridged, a desert irrigated, can transform a district and its people. Priestman are proud, not only of the way that Priestman excavators, cranes and dredgers are helping to reshape the world, but of the tremendous part that Priestman skills have played in developing the excavator as such. Men who never knew a word of English nowadays equate the name Priestman with reliability.

Do you take one of these to board meetings?

Yes, an ordinary pin. Just as good for making business decisions as it is for picking winners. Every director should have one ready in his lapel.
More seriously, though, even in the best-regulated boardrooms chance still plays its part in the making of decisions—and in really big business an unlucky guess can cost thousands, even millions, of pounds.
By helping top-level management to cut the element of chance to a minimum, C-E-I-R, the world's largest independent commercial computer services organization, has already saved literally millions for government and industry. Backed by a staff of highly qualified economists, mathematicians, statisticians, scientists, and computer specialists, and equipped with the most powerful force of independently operated computers in commercial use today, C-E-I-R can handle on your behalf any problem, large or small, capable of solution by logical or mathematical means. And that means practically any marketing, distribution, production, or development problem.
At the new C-E-I-R Centre in London, with its IBM 7090 and 1401 computer facilities, your own staff can work with ours if you wish, with offices provided—and they can use the computers on a by-the-hour hire basis. Ask your secretary to write or telephone for more details.

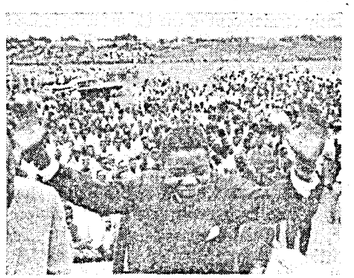
THE WORLD OVERSEAS

United Nations Without a Quixote

FROM OUR SPECIAL CORRESPONDENT

New York



SINCE the passing of the Congo resolution by the Security Council on November 24th, the United Nations' attention has been outwardly transferred to various other issues: a public debate ranging from disarmament to the Dominican Republic, while the "hot seat" issue of Chinese representation looms ahead. But the troubled Congo flows powerfully on through the heart of the jungle of the Assembly's manifold discussions.

The stream has been thickened with disenchantment and dark doubt by the warning from London last week that British support of the Congo operation was contingent on a certain manner of conducting it. About the precise intention behind the British warning, there is some uncertainty. As it was published, by the chief British delegate, Sir Patrick Dean, in the Security Council debate on November 21st, it reads:

> I must make it clear that the continued full support by the United Kingdom of the Congo operation must depend on the skill and wisdom and the conciliatory manner with which the United Nations carries out its mandate.

Those here who would dearly like to achieve a sympathetic understanding of the British position on Katanga are doing their best to satisfy their own doubts by accepting the common argument that the British Government, needing backbench support for its European venture, cannot help but pacify its domestic Katanga lobby. This tendency is assisted by the British delegation's own visible unhappiness over the new parting of the ways and its noticeable lack of conviction in advancing the appropriate arguments. But there is additional concern here over the odd way in which the essentials of the latest phase of the Congo situation are apparently being presented to—or withheld from—large segments of opinion in Britain. It has been noted that the British threat to contract out of the United Nations operation went almost unreported in London. And, to take another example, incredulous eyebrows were raised here last week when it was solemnly averred in a British speech that Mr Tshombe had been conscientiously observing the October cease-fire terms.

It is doubted here whether it is clearly understood in London what the United Nations has now publicly agreed should be done about Katanga—or what is the mood now shaping the plans to execute the agreed intention. The new mandate which the Security Council gave U Thant on November 24th is much more direct and incisive than the one previously provided by the council's resolution of February 21st. The acting secretary-general is now authorised and required to use the "requisite measure of force, if necessary" in order to apprehend, deport or detain Mr Tshombe's mercenaries and foreign political advisers. The use of force is no longer set only in the context of prevention of civil war, or authorised only in the last resort. Provision for detention as an alternative to deportation may dispose of the formerly prevalent business of deported mercenaries constantly filtering back into the Congo after a short and refreshing spell of leave—with their fares paid by the United Nations on the journey out, by Mr Tshombe's cut from the mining companies' revenues on the way back.

Mr Tshombe: charging windmill.

Nothing here supports the idea that this mandate is now to be executed in a mood of violent emotion and unreason. On the contrary, among those concerned the prevailing mood is marked by caution—and by cold, distinctly uncomforting logic. Up on the 38th floor of the secretariat tower, where the executive team that Mr Hammarskjöld created for the Congo operation now serves his successor, there is no bloodlust, no burning wish to avenge the September setback, and no illusion about the many difficulties that lie ahead. Reasoning starts from the proposition that Mr Tshombe's ability to maintain his secession rests unquestionably on his access to foreign help and personnel. This is not such a bad starting point, since it is the one assumption shared by all parties in common, including Mr Tshombe himself.

But it does not follow, and it is not being assumed, that the only course of action open to the United Nations is to mount another sudden general swoop as on August 28th and September 13th. Military limitations of the UN are now more clearly recognised. It now has the mastery of the air, which in September was dominated by the Katanga secessionists' single jet: the Dorniers which Mr Tshombe recently obtained from Germany have not reappeared in an active role since the United Nations' command warned them off. But even with the expected Ghanaian and Indonesian reinforcements, the United Nations force will remain not only weak on the ground but inhibited by several contributing countries' express opposition to any involvement in a head-on major clash. A clash forced upon the United Nations by the secessionists' own initiative might be a different matter.

There is no doubt about U Thant's explicit and sincere intention of settling matters without resort to force if that is at all possible within the time limits. Finally, he is aware how deeply the UN's own fate is involved. U Thant is on record as sharing Mr Hammarskjöld's belief that the organisation can and should play an active role, not merely a "conference" one, in resolving international problems. There is no question of the United Nations under his ægis being deliberately cut back to fulfil a conference role only. But the frustration of its hopes in regard to Katanga could cut it back to that—if not, indeed, further back still.

The men on the 38th floor today have been described as a bunch of Sancho Panzas left without a Quixote. Unkind though that phrase may be, there is no doubt about one thing: the windmills are really charging down upon them in this case. U Thant has already impressed most observers by his adroit adoption of a posture that should give him a maximum of freedom in executing the new mandate. The echo of Mr Hammarskjöld was quietly resounding. But the late secretary-general took several years to build up the posture and stature for which he will be remembered. His successor starts with a valuable inheritance in many respects—but the total legacy includes one liability, in the shape of the Congo crisis, that is more pressing and urgent than anything that was thrust upon Mr Hammarskjöld in his first years in office.

Mr Maudling's Valentine

FROM OUR CORRESPONDENT IN NAIROBI

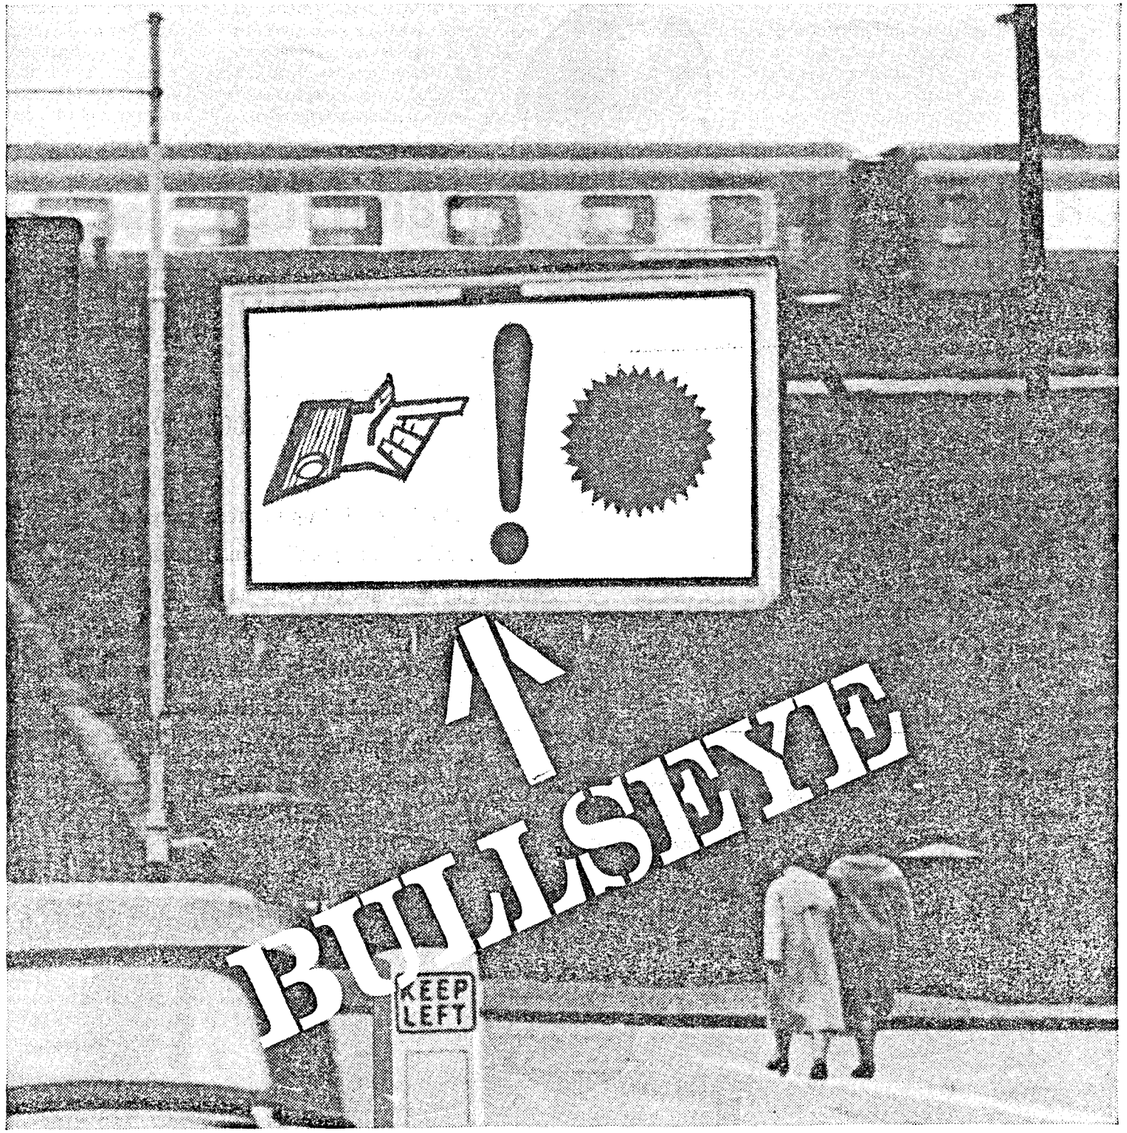
MR MAUDLING, having been handed an irritable bear by the tail in the shape of several difficult colonies, gave in his five-day visit to Kenya, which ended on Wednesday, a distinct impression that he actually enjoyed the position. More remarkable, having listened to a score of differently minded deputations, from the uncompromising Somali secessionists to a group of earnest, unassuming African women, he rejected the idea of soothing the beast with honeyed words. Instead, in his remarks made before flying on to central Africa, he was commendably frank yet unpartisan.

The political problems had to be "solved and solved soon if Kenya's economy, already sadly strained by natural disasters and flagging confidence, is not to be irreparably damaged." Britain had a great responsibility in tackling these problems, but "even greater and more direct" was the responsibility on Kenya politicians. He had seen enough, he said, to know that tribal tensions and fears of intimidation were based on truth. Indeed, he had: when he flew last Sunday to see the white farmers of Eldoret, excitement over his visit had led to a party clash in which one man was killed and a dozen injured. He had made separate appeals to both African parties to stamp out intimidation and been assured they would do their best. He called for an end to the "exchange of slogans," and a concentration on facts in preparation for the London constitutional conference in February.

If Mr Maudling had left it at that he would have provided no more than the sort of sermon Kenyans are used to hearing from the governor's lips. But he added some of his own thinking about

Mr Maudling: no honey for the bear.

the best form of constitution for an independent Kenya. Remarking that there was more common ground between the African parties than might appear on the surface, he trod carefully down the middle of this important space. The Kenya African Democratic Union, the main government party which comprises pastoral and other small tribes, has apparently left him in doubt about what it means by regionalism, though he accepts that its main concern is for individual rights. Equally he accepts from Mr Kenyatta's Kenya African National Union that there cannot be a Kenya nation without, in the Colonial Secretary's words, "a stable and competent central government." His compromise solution seems to be that in addition to this central government there should be (and he was very careful about phrasing these words) "other governing authorities with their own defined rights which do not derive from the central government but are entrenched and written into the constitution." To Kadu, which demands that central government powers should be delegated from the regions, and to Kanu, which asks that local government powers be devolved from the centre, the judicious Mr Maudling replies that both authorities shall derive their powers from an agreed constitution. He throws in a warning to the Kadu leaders that "trying to meet tribalism by tribal methods runs the danger of perpetuating it. We must try to meet tribalism by looking for individual safeguards."

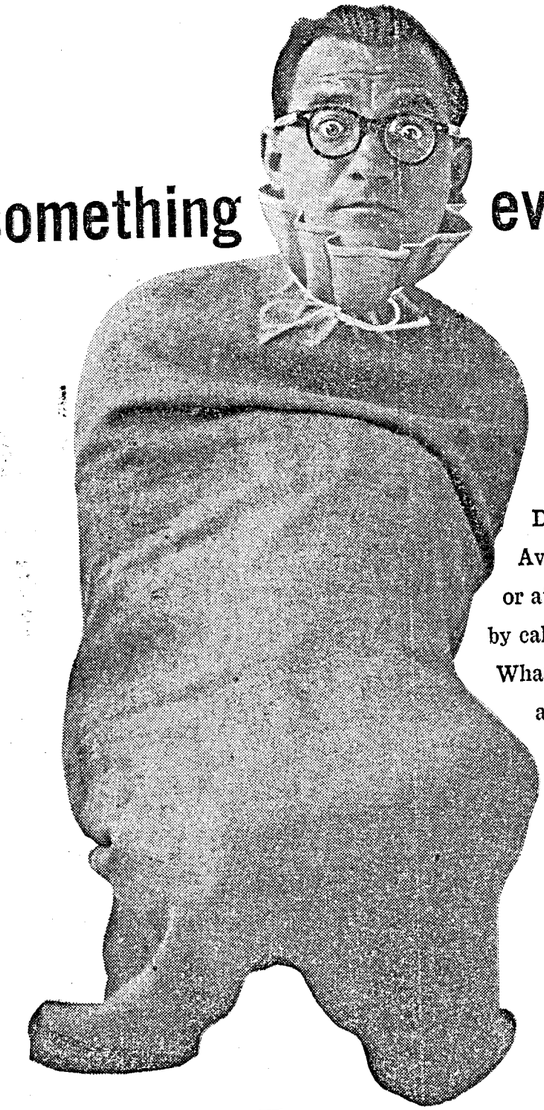


The rest of his constitutional thinking is orthodox. There should be a Bill of Rights and "a most important aid in restoring confidence" will be the maintenance of an independent judiciary. A stage of internal self-government has great advantages in his eyes in giving a chance to train the future leaders and allowing investors (whether they are the present white farmers or industrialists who may come later) a painless preview of independence. Some constitutionalists criticise the British Government for its ways with a Bill of Rights: this year's Southern Rhodesian version framed by the experts of the Commonwealth Relations Office is said to be riddled with loopholes. Some economists in Kenya suggest there is now no time left to spend on a self-government stage if the economy is to avoid ruin; the country must go straight from the February conference to elections and then independence, for only after independence will investors know the truth. It is an argument which Kanu is likely to support strongly, since its impracticable demand for independence on February 1st has been politely pushed aside by Mr Maudling.

THE Colonial Secretary rejects both these implications. He seems to argue privately that even if mistrust of the Kikuyu is so deeply ingrained in the Kadu tribes that they will not be reassured by a Kanu government's good behaviour while under the British restraints that survive into self-government, there is reasonable hope that such behaviour may develop into a habit of self-restraint with independence. There was certainly implicit recognition in many of Mr Maudling's remarks that Kanu might win the next elections with as wide a margin as the last, but this time form the government. The promotion of Mr Ronald Ngala, the Kadu president and leader of government business by only a half-step to leader of the House and not to chief minister, underlines this attitude.

All Mr Maudling said was sound sense, but he offers no magical dose to restore confidence. One European farmer summed up his interview with gloomy melodrama: "Naked I went in and naked I come out." Like his predecessor, Mr Maudling carefully avoided defining what moral obligations Britain might owe to white farmers dispossessed after independence. "Let's not think of failure, let's concentrate on preventing it," was his way of turning the awkward point. The African leaders may temper their speeches for some months in deference to him; but the Nandi tribesmen will not stop stealing nails to hammer into arrowheads. The attitude of some Kipsigis farm labourers to the famine relief fund is also distressing: when their gratified employer asked why they had contributed a comparatively huge amount, they said it was to save the Masai against the day when they would be needed as allies in war against the Kikuyu.

Such tales are unpleasantly reminiscent of the Congo and, indeed Mr Maudling said he had been warned by many deputations that Kenya might become "another Congo." The analogy, he thought, was a bad one, since it ignored the great unifying effect that Kenya's administration had had over many colonial years.



Whether or not he is right in this, Kenya was certainly talking itself into a Congo-like situation until a few days ago. Mr Maudling's visit may have been the turning-point back to sense, tolerance and peacefulness. With the arrival next week of Sir Ralph Hone as constitutional expert to advise both main parties on their proposals for the conference, the official emphasis is laid on looking into next year and forgetting the long squabbles of 1961. The lead will probably be followed by the politicians. There is some danger that many white farmers, plagued first with politic

uncertainty and then with devastating weather, will harvest the present crop and depart before a conference can offer them credible safeguards on land titles. Mr Maudling is risking this, realising that the restoration of confidence will take many months of next year. He allows himself one touch of whimsy in this deadly serious task: he has convened this conference of such fractious groups for Saint Valentine's Day.

Gift for Dr Amini

FROM OUR CORRESPONDENT IN TEHERAN

DR ALI AMINI has been able to celebrate his sixth month as Persia's prime minister with a royal gift that protects him from the opposition's demand for elections and a parliament. A decree by the Shah, announced on November 14th, gave Dr Amini special powers to carry out a specified six-point programme. If this programme is implemented, it should substantially alter the country's social and political structure. In any case, for the time being, the Shah will be ruling the country by decree, through his prime minister.

These emergency measures should remove one major obstruction that has been impeding Dr Amini's reform programme. He has been reluctant to hold new elections because he feared that they would not be free or that, if free, they would produce a parliament that was too extreme for his purposes. But the absence of parliament has prevented him from turning his proposed reforms into law. Under the royal decree, all this is changed and cabinet proposals will become law once they receive the Shah's signature.

The decision to govern by decree is based on a conviction, long held by Dr Amini, that Persia is not yet ready for full democracy. It calls, in the first instance, for democratically elected village councils and, progressively, for the election of town and city councils. At each level of this pyramid, local affairs—education, health, roads, sewage—will be the responsibility of the people themselves. This idea of democracy starting at the grass roots recalls Pakistan's plan for "basic democracy," and the Shah will probably hold the same position in the hierarchy as that held by General Ayub Khan in Pakistan.

The decentralisation of Persia's cumbersome, Teheran-based bureaucracy is to go hand in hand with a considerable reduction in the size of the vast, and sometimes corrupt, civil service. The theory is that the civil service should be cut by dismissing the honest and the dishonest, but compensating only the former; it is to be made more efficient by appointing more capable administrators. A series of decrees, based on legislation prepared by the government, should carry land reform a step further and enforce laws, long on the books, for limiting the size of land holdings. Mechanisation of agriculture is to be speeded up, and a corps of young men is to be formed to help build roads and cheap houses in the villages.

Factory owners are to be placed under an obligation to build houses for their workers, and the government is to do the same for its own employees. Factory workers are to be allowed to purchase up to a quarter of the shares of each factory on an instalment basis. The taxation system is to be overhauled to make tax-dodging more difficult for the wealthy, and thus oblige them to carry a heavier share of the tax burden. The education system, now geared to turn out a surfeit of clerks and civil servants, is to be reorientated towards vocational training and skills. According to the Shah's directives, any laws or regulations that stand in the way of this programme are simply to be ignored.

This is the plan on paper. Clearly, formidable barriers will have to be overcome if it is to be carried out. Much of the programme, and certainly those parts relating to taxes, education, land reform, housing, and corruption, were enacted into law long ago. Although Dr Amini is probably more capable than his predecessors, he will find it no easier than they did to put the reforms into effect. Landlords, wealthy business men and other vested interests, who up to now have succeeded in neutralising the prime minister's earlier attempts at reform, will undoubtedly find many parts of this plan unwelcome, and if the government fails to create honest village councils, or to reform the civil service, the whole programme could be destroyed.

Dr Amini is also facing opposition from the left wing. The National Front has formally labelled rule by decree unconstitutional, and has warned the prime minister that it will hold him responsible for this breach of the law. Although verbal protests are unlikely to have much effect on the government, a greater threat is posed by Teheran's university students. Their demonstrations for free elections, which they believe would bring the National Front to power, have helped to break governments in the past. Dr Amini faces no such extreme danger at present, especially since he appears to have the Shah's firm backing, but a clash with students would be an inauspicious start for his reinvigorated programme.

Dr Amini is unlikely to be put off by such considerations. Hopes for a reconciliation between the government and the front were shattered back in July, when the government suppressed a planned demonstration and arrested National Front leaders. Since then, senior officials, including the prime minister, have tended more and more to link the name of the front with the outlawed communist Tudeh party. The security service claims that members of a communist ring, which was smashed in Isfahan in October, have admitted that they had deeply infiltrated the National Front organisation in Isfahan.

But Dr Amini is no longer seeking wide and organised support. The new method of government indicates that from now on he will depend on the Shah's backing in order to push his reforms through. Therefore, for the time being, he can be expected to clamp down on all political activity. Persia's foreign exchange position has improved in the last six months, and support from the United States government has come in the form of timely loans and grants worth more than $30 million. These are favourable factors; that they can be a substitute for public support is doubtful.

Gomulka on Stalinism

FOR the past month Communist parties throughout the world have been mulling over the proceedings of the 22nd Soviet party congress. So far, the most revealing and moving echoes have come from Warsaw, where on November 23rd, before the Polish central committee, Mr Gomulka made his assessment of the reign of Stalin.

Mr Gomulka, who rose to leadership of the Polish communist party in the hard underground struggle against the Germans during

the war, was himself once a believer in stalinism and then one of its best known victims. Less aware than some of his colleagues of the mechanics of the Soviet system, he genuinely believed Stalin's postwar promise that each country should be allowed to follow its own national road to communism. A man of courage and conviction, he refused to toe the line when Moscow began to persecute "nationalist deviations" in 1948. He paid for his staunchness with expulsion from the party and years in jail. His more pliable colleagues, however, managed miraculously to prevent him from being actually brought to trial, so that in 1956, when the 20th Soviet party congress gave the signal for change in eastern Europe, Poland could produce, not a dead martyr, but an alternative leader. It was in the dramatic October of that year that Mr Gomulka returned to power.

SINCE the 22nd Soviet party congress last October was a logical continuation of the 20th congress, the Polish leader was Mr Khrushchev's natural ally during the Moscow debates. Last week, in his Warsaw report, Mr Gomulka reminded communist leaders tempted to take their cue from Peking that the Soviet Union's special position within the block is not only due to its past achievements, but also to the fact that it remains "the main force of our epoch . . . the main factor of security for all socialist countries." He made fun of the tiny Albanians boasting that they would never be frightened of imperialism. Mr Gomulka is now the staunchest defender of the doctrine of peaceful co-existence. In his view communism must win peacefully, through its superior economic growth, because a nuclear war knows no victors and would be "a catastrophe for the whole of mankind." Here he goes further than Mr Khrushchev, who is still tempted to say that war would spell the doom of capitalism alone. Indeed, the Poles were distinctly perturbed by Russia's resumption of nuclear tests. In a brief, and obviously embarrassed passage, Mr Gomulka felt compelled to justify this measure on the ground that it was a counter to western testing.

But the bulk of his speech was taken up with an analysis of the "deviations from the socialist idea" connected with the so-called cult of personality. In Poland, where the first indictment of Stalin, in February, 1956, had such convulsive consequences, and provoked so much heart-searching within the party, Mr Gomulka could not explain it all by putting the blame on Stalin's character. Last week he made an attempt to analyse the deeper causes of stalinism. The root of evil, in his opinion, was to be found in Russia's exceptional circumstances, in its isolation, encirclement and backwardness. The turning point probably came with collectivisation (and knowledge of its real consequences—Mr Gomulka admits—is still meagre). In the struggle against peasant resistance, the NKVD grew in stature and power. According to Mr Gomulka, the principle of the Inquisition, that confessions extorted through torture are a proof of guilt, was extensively followed in legal proceedings under the guidance of Stalin's public prosecutor, Vyshinsky.

This explanation is less superficial than Mr Khrushchev's. But Mr Gomulka's background as well as his present position prevent him from going deep enough into the matter. He does not analyse the issues involved in the struggle which ended in Stalin's victory. He simply states that Stalin should have expelled the leaders of the opposition from the party and left it at that. Mr Gomulka was most moving when answering the question why communist leaders kept silent while such crimes were being committed. Unlike some of his foreign colleagues, he did not plead ignorance. But he also thought that fear alone—"though one's head is precious"—was too simple an explanation. To explain anguished silence of so many communists who knew, or suspected, what was going on, he evolves what might be described as a communist doctrine of "the Russian revolution, right or wrong":

How many comrades, who did not fear jail or death, did not want to talk even with those closest to them about the criminal destruction of Polish communist cadres during the years of the personality cult, though they were deeply convinced that the men arrested or executed were not in the least guilty. They did not want to talk about it so as not to harm the socialist idea, so as not to give the enemy food for his anti-Soviet campaign.

The Polish leader was less clear when dealing with the present situation and prospects. He claimed that the attack on the anti-party group in Russia, whose members, he said, would not be prosecuted, was not prompted by its influence or activity within the Soviet party. But at the same time he argued that the struggle against the cult of personality was endemic within both the Russian and the international movement. He rejected the Italian idea of "polycentrism" on the flimsy ground that there was no ground for any centre at all, since each party was independent and autonomous. At the same time, however, he stated that all parties must be bound by the decisions of international communist conferences and stressed the crucial part played within the movement by Russia, the upholder of peace. His alliance with Mr Khrushchev obviously makes it difficult for Mr Gomulka to develop a coherent view of democracy within the international communist movement.

In a revealing passage of his speech, the Polish leader said that the main revelations about stalinism must come from the Russians; "if not everything has been said, so far, on their side on the subject of the origins of the personality cult, the reason is, probably, that it is still too early." As if to confirm this view, *Pravda* has published a bowdlerized version of Mr Gomulka's speech, omitting awkward references to insufficient explanations, to collectivisation or to Vyshinsky's inquisitorial methods. Such discrepancies are not surprising at this stage. French communists accuse some of their Italian comrades of the sin of revisionism. The Italians reply that pinning labels on people is not a just or useful method of discussion. Mr Novotny claims that everything is now for the best. Mr Gomulka echoes that one must seek for the roots of the evil.

Australian Election Guide

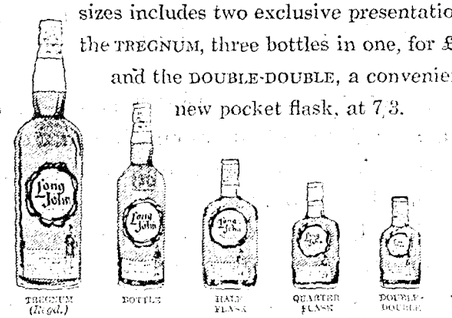
FROM OUR CORRESPONDENT IN CANBERRA

The Issues. The electors, on December 9th, will decide on these broad questions. On the one hand, has the Liberal-Country government coalition been in power too long and do we need new men with new ideas? On the other, is Labour—with its internal dissensions, with wild men still on its front bench though not in the ascendant, with its subservience to the party's federal conference—fit to govern?

More specifically, the only real issue is unemployment and the credit squeeze that produced it. The number of unemployed is falling—indeed has been falling for the past three months—but it does not fall fast enough to please the government. It is now 2.3 per cent of the work force, compared with 2.6 per cent at its height, a figure which seems high to Australians, accustomed as they had become to about one per cent of unemployment. Labour supporters claim that official figures are an underestimate and that last month's fall in the number of jobless was less than the normal seasonal fall. Few voters have personally experienced unemployment, however, as the main sufferers have been migrants who recently arrived and have no vote.

For a few days it seemed that a quarrel about internal airlines might become an election issue. Trans-Australia Airlines, owned by the government, and Ansett-ANA, a private company, operate the main internal air routes in a competition that is entirely fictional because of the extent of government control over both. These are bones of political contention because the government is assumed

Long John



THE SCOTCH

THEY DRINK IN SCOTLAND

Two exclusive presentations

The unique Long John range of SIX bottle sizes includes two exclusive presentations—the TREGNUM, three bottles in one, for £6.4.6. and the DOUBLE-DOUBLE, a convenient new pocket flask, at 7/3.

DISTILLED, MATURED, BLENDED AND BOTTLED IN SCOTLAND

Prices include extra 10% duty imposed in July 1961

FASTEST JETS IN ROUND-THE-WORLD SERVICE

The most efficient, most dependable jetliners in international service, the new Qantas 707 V-Jets take off quicker, fly higher, cruise faster. Look at these flight times!

Earthmoving equipment from Caterpillar U.K.

THE BEST ON EARTH – FOR STERLING

Daily from Caterpillar U.K. come rugged earthmovers like this big-job 235 h.p. D8H Tractor—or the versatile 65 h.p. D4C Tractor, or the fast-loading 955F Traxcavator. All are British-built in every detail to the Quality standards that have won for Caterpillar world-wide 'the greatest name in earthmoving'. All are ready to prove their reputations on the toughest going anywhere—*for sterling*.
To nations on the move for progress, around the globe, Caterpillar U.K. is a vital sterling source of an increasing range of British-built Cat equipment. Tractors, Traxcavators, bulldozers, scrapers, rippers and a large inventory of genuine Caterpillar parts. And solidly behind this supply is a world-ranging Dealer Service Organisation of the utmost reliability.

CATERPILLAR
Caterpillar, Cat and Traxcavator are Registered Trademarks of Caterpillar Tractor Co.
World's Greatest Name in Earthmoving

to favour the private company and the Labour party the public one. The Labour party lately accused the minister of civil aviation, Senator Paltridge, of pressing a small rural airline, East West Airlines, which is linked with TAA, to sell out to Ansett. Then the Labour government of New South Wales arbitrarily reallocated to East West Airlines some routes now operated by an Ansett subsidiary, Airlines of New South Wales. Mr Menzies, however, has now persuaded the premier of New South Wales to defer the whole matter until after the elections.

Hardly a breath of controversy stirs elsewhere. Melbourne University students have demonstrated against the so-called "White Australia policy," but without public support. Australia's policy in New Guinea, its treatment of aboriginals, even the common market have hardly been worth a heckle, and world questions play no part at all.

The Rival Policies. The prime minister is standing pat on the record of his 12 years in office; on the prosperity and development that have accompanied it, on the recent defeat of inflation and the continued confidence of overseas investors. He draws his listeners' attention away from recent difficulties towards future benefits arising from the development projects, totalling about £A200 million, in which his government is a partner: the modernisation of the Townsville-Mount Isa railway, serving the great copper and zinc mines and also cattle stations on the way; the improvement of coal ports in New South Wales and Queensland; the establishment of a steel industry in Western Australia; and the provision of modern rolling-stock for the Broken Hill-Port Pirie railway. He glances at the menace of communism, particularly in south-east Asia, in order to ask whether the adherents a divided Labour party are the people to handle it. His only promise is that ten instead of 20 years' residence in Australia should be the qualifying period for the old age pension.

The leader of the opposition, Mr Calwell, on the other hand, promises everything: a supplementary budget providing a deficit of £A100 million; an increase in every kind of social service payment; large grants to the states for housing at lower interest rates; special grants to the states for schools (in which, except in its own sphere of the Northern Territory, the Commonwealth has hitherto played no part); federal help with the technical and agricultural education of aboriginals; a corporation to develop the north; a comprehensive national health service, to replace the limited contributor schemes now run by the state; equal pay for women in the Commonwealth public service; and a return to the automatic quarterly adjustment of wages to the cost-of-living index.

All this, Mr Calwell optimistically reckons, would cost only about £A160 million, which he would find from loans and from the increased revenue of a prosperous economy. Far from increasing taxation to meet the bill, he declares he will reduce it. He would allow "reasonable" transport costs to and from work as an income tax deduction, and he would make special tax concessions to attract people to the empty north.

The Australian Labour party (ALP) has undertaken (as indeed have the Liberal and Country parties) to help and subsidise export industries that are hit by the common market. Its opponents argue that all export industries would be hit by Mr Calwell's inflationary programme, and that he would therefore perhaps end by subsidising them all. But Mr Calwell denies that inflation would result; and he would close the inevitable balance-of-payments gap by restoring import restrictions. The confidence of overseas investors is not, to him, a major factor.

Significantly, Mr Calwell promised not to raise the question of nationalisation during the life of the next parliament. Without a referendum, indeed, he is constitutionally unable to do so; but it is something of a defeat for his left wing that he should have had to make this acknowledgement.

The policy of the splinter Democratic Labour party (DLP) is of more significance than usual in this election because the party may emerge holding the balance of power in the Senate. Its leader, Senator George Cole of Tasmania, promises more or less everything that Labour promises in the sphere of the social services, and would double defence expenditure as well. He made the usual denunciation of the Labour party's communist leanings, which would lead, he said, to "treasonous collaboration with the enemies of Australia."

Except from the DLP, little has been heard this time of the communist scare. The ALP has at last got its recalcitrant Victorian executive to make a move against "unity tickets"—how-to-vote cards in union elections on which Labour and Communist candidates appear side by side. The party successfully backed its own candidate against the Communist candidate for general secretary of the Waterside Workers' Federation, a union which for more than twenty years had been dominated by a notable Communist, the late Jim Healy; and Mr Calwell states firmly that his party is anti-communist. There is, however, probably sufficient doubt about this to attract enough votes to the DLP to keep Labour out of power.

The Prospect. Because they object to being put on the same footing with the communists and such, the Liberal and Country parties have refused to appear on the Australian Broadcasting Commission's television programme presenting all the candidates. Their absence will not win them votes. Nevertheless they are still expected to win, although with a reduced majority. Labour is unlikely to win any seats in Victoria, where the DLP is stronger than ever and where satisfied clients have recently returned Mr Bolte's Liberal-Country government (there is also a separate Country party there) with his majority increased by one. In New South Wales 23 years of Labour rule have dispirited the Liberals and the government's best hope is to hold what it has. This hope is fading now that the *Sydney Morning Herald* has got off the fence on Mr Calwell's side. In South Australia, where a long Liberal-Country party rule has been accompanied by rapid industrialisation, the even balance is unlikely to be disturbed. In Western Australia, the Liberal-Country party government is popular, but can hardly expect to repeat its spectacular victory at the last election, when it won all seats but one. Tasmania has voted more or less fifty-fifty for many years, and seems unlikely to change much. It is in Queensland, where the government now holds 15 seats to Labour's 4, that seats are expected to be lost. Queensland has been hardest hit by unemployment, the state Liberal-Country government is not much respected, and there are several marginal seats. There is, however, from the Liberal-Country party point of view, a useful splinter party in the Queensland Labour party, which is affiliated to the DLP.

The worst the government has to fear would seem to be a dead-

THE MOTOR INDUSTRY

locked Senate, since more government than Labour senators have to face the electorate this time. But the draw for places on the ballot paper has put more government men than Labour near the top of the list; and this is worth a good deal, because many voters, not having the faintest idea which candidate belongs to which party, vote straight down the ticket. The Liberal-Country organisation hopes to ensure that this advantage is not lost in spoilt papers which in the last Senate election were more than 10 per cent of the total.

Christians in Asia

FROM A SPECIAL CORRESPONDENT IN NEW DELHI

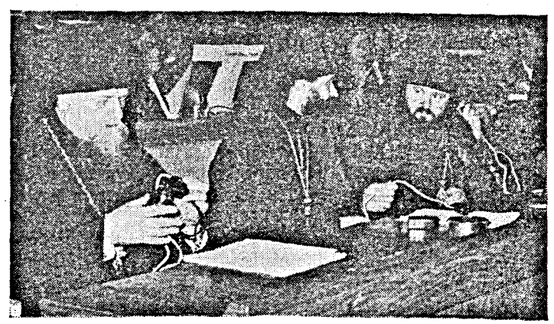
Vice-President and an Ordinary Person

ASIA has been seeing a lot of religious conventions. Buddhists from twenty-five countries have been in Phnom Penh, the capital of Cambodia, for the sixth conference of the World Fellowship of Buddhists, and now some twelve hundred Christians, from every country except China, are meeting in New Delhi for the third Assembly of the World Council of Churches. Practically within sight of the temples of Hinduism and Islam, the Christian host set up its tented *shamiana* and staged its main deliberations in the Vigyan Bhavan (House of Wisdom) which the Indian government has elaborately equipped with an all-embracing translation system. Archbishops in puce, bishops in beards, professors in droves, ordinary laymen and lay-women in "ordinary dress" have been bundling about New Delhi in buses and cycle-cabs; they astonished Vice-President Radhakrishnan by swarming across the ex-viceregal lawns to photograph him. As one watched him chatting with the Archbishop of Canterbury, the vice-president's professorial dictum from his Oxford days came to mind: "Christians are ordinary people making the most extraordinary claims."

It is just those claims to uniqueness that scare religious Asia. Hinduism would be happy to have Christianity alongside its parade of gods; Buddhism welcomes its teachings about peace and serenity; even Islam, its ancient foe, is not averse to a kind of armed neutrality. But when 1,200 people gather to assert that Jesus Christ is *the* Light of the World and the *only* revelation of God, and when they bolster their claims with the investment of much money in propagating their belief, and choose the capital of India to proclaim it in, then Asia hardens its heart.

The big drive of Christianity in Asia, conducted under the protective banners of imperialism and colonialism, has come to an end. Pockets of the faithful have taken root in a few places. Here in New Delhi it is a meagre company, but in southern India Christianity makes its mark, and it has also astonished the rest of the Christian world by cutting out "denominationalism" and forming the United Church of South India. Asian Christianity is well represented here, and, like western Christianity, is organising itself in face of the omnicompetent state religions exalted by renascent nationalisms. It must be conscious of itself and its own mission in Asia, or gradually wither in the life of a ghetto.

What is that mission? It was partly the purpose of this great assembly, organised by the thirteen-year-old World Council of Churches, to answer that question. In the West, for a thousand years and more, Christianity formed the nations and even extended its sway across the Atlantic to the older New World. It offered its doctrine and preached its ethics until men not only believed but changed their way of life, and saluted the New Testament as the holy book of conduct. It is not likely to accomplish that miracle in the newer New World of Asia. The secularised society has already caught up on it so that institutions, both social and political, bear the state mint mark. The long dream of a Christian social revolution must remain a dream in Asia.

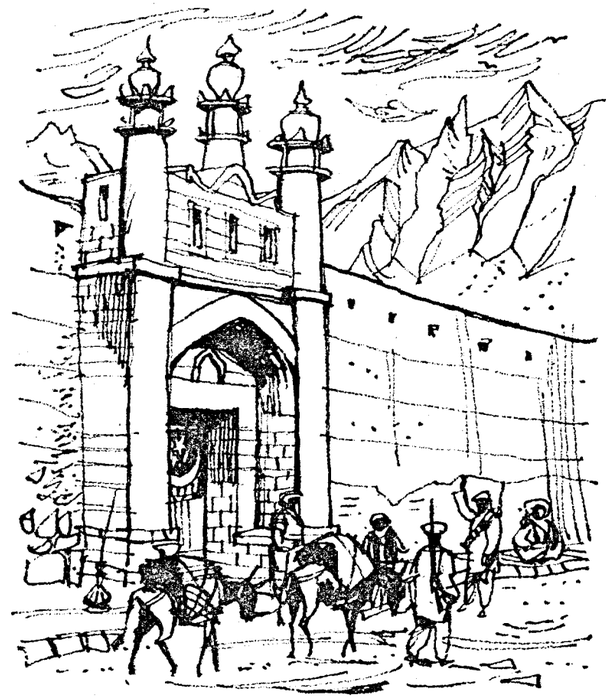


There was plain speaking to the western churches, too, at New Delhi as they move through their post-Christian era. Much of it came from Dr Egbert de Vries, the able director of the International Institute of Social Studies at the Hague. He said:

> One of the basic lessons to be learned by the churches in the West is to differentiate between the message of the Gospel and the socio-economic-political structure of modern western society. There is no hope for a retreat into a pioneer puritan or a pietistic attitude of free man in a free society or of a free soul in an unfree society. Dynamic society walks in, though the doors be shut. . . . Western society is thoroughly secularised.

In these circumstances Christianity either retreats into prophecies of "apocalyptic doom," or moves out into campaigns of personality evangelism as represented by Dr Billy Graham, whose presence at the New Delhi assembly was perhaps a recognition that even he is looking for some other way to penetrate the hard shell of secular materialism that encases both East and West. Christianity is on the road of the long haul. Ecumenicals hope that the gradual evolution of the "ecumenical movement," which now incorporates so many varying Christian traditions, may be an answer to the frustration surrounding Christianity both in the West it once conquered, and in the East which has largely rejected it.

This movement has now brought the Russian Church into its orbit. Here at New Delhi their delegation of sixteen were received with a muted, but obviously sincere, welcome. They are to take part in the life and work of the World Council particularly in questions of faith and unity, but the message from Moscow did not exclude participation in social and economic questions. It remains to be seen whether this young Council will be able to carry the weight of Orthodoxy that has now shifted the balance of the Council's life from Europe and America to the Middle East and Asia. No longer can it be accused of being a pan-Protestant movement financed by the churches of the United States.



Next year the Vatican Council is to meet in Rome. It is tempting to meditate on the possibility of a world-wide religious front in which the Great Schism of Christianity may be healed by a renewed conception of its world mission. To save its life in Asia, Christianity must propagate; in doing so it may renew its own unity. Such is the Asian dream of this New Delhi assembly which has stretched its hands across the barriers of the centuries to both Orthodox and Roman, to Protestant and Anglican, to Pentecostalist and Evangelical.

Muted welcome for the Russians

THIS IS THE EAST...

Pakistan were Olympic Hockey winners at Rome, 1960

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-six territories extending from the Eastern Mediterranean to the Pacific Ocean.

THE CHARTERED BANK

(Incorporated by Royal Charter, 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

West End, London branch: 2 Regent Street, London, S.W.1 · Branches in the United Kingdom also at Manchester and Liverpool and in the United States at New York · Agency in Germany at Hamburg.

Branches in Pakistan at Karachi, Chittagong, Lahore, Lyallpur.

Associated Banks: Allahabad Bank Ltd. (Incorporated in India) The Irano British Bank (Incorporated in Iran)

PAKISTAN

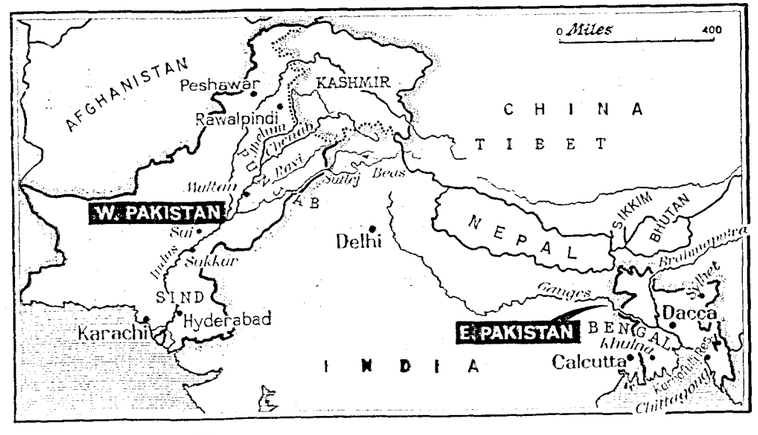
THE BEGINNING

In recent western discussions on economic aid, the dea has gained ground that it should be concentrated on ommunities in which stability and coherent economic olicies give hope of rapid advance. Most experts nd most agencies have their own short lists. But ne can be fairly certain that Pakistan now appears on hem all.

Few people would have forecast this confidence in akistan's prospects when, fourteen years ago, the state ame painfully to birth. Frontiers based on allegiance o the Moslem faith severed many old arteries. East akistan lost its port, the pivot of its railway system and he whole industrial complex processing its jute. The rontier cut asiant the vast Punjab irrigation system. There were no head offices of major firms, few banks, and virtually no industry.

Pakistan's inheritance in terms of trained men and women seemed almost more disastrous. The relative backwardness of Moslem education had long been a particular cause of the Moslem's fear of Hindu domination. Trade and industry—such as there were—had been in Hindu hands. Pakistan virtually had to invent a professional and administrative middle class.

To these dire and direct results of partition must be added four other major difficulties—general poverty in the new state's resources, an extraordinary divergence between its two Wings, the instability of its politics and the hostility of neighbouring states.



THE BEGINNING 1 Poverty

PAKISTAN lacks most of the mineral resources needed for modern industry. Coal supplies are very small and the one promising reserve is in remote and difficult country. The only known iron ore reserves are also deep in the mountains; they may prove too remote to exploit at all. Oil exploration has revealed no promising fields so far. Only the discovery of large supplies of natural gas at Sui and Sylhet has relieved an absolute shortage of fuel.

Agriculture employs three-quarters of the population, provides about 55 per cent of national income and 66 per cent of the country's earnings of foreign exchange—the percentage rises to 95 per cent if one includes jute and cotton manufactures. Much of the land requires an enormously expensive effort of irrigation to bring it to maximum production. This may seem strange in East Pakistan where, after the monsoons, the country appears almost literally awash. But the monsoons themselves are irregular, and they provide abundant water for only a few months in the summer.

In West Pakistan, any sizeable addition of arable land depends upon costly extensions to the largest irrigation system in the world. Partition cut across this system, and it has taken a decade to reach an agreement on re-allocating the waters. Briefly, the scheme allots the waters of the three eastern rivers—Beas, Ravi and Sutlej—exclusively to India and the three western rivers—Chenab, Jhelum and Indus—to Pakistan. Water from the western rivers will be carried across by eight new canals to replace the water once flowing down the eastern rivers from the headwaters—water which is now reserved for India. True, the bulk of the cost is to be borne by grants from western governments. It is also true that the scheme will enable Pakistan to keep its supplies flowing over the dry months, and increase its hydro-electric power capacity. Yet much of the work is substitution, not new creation, and will absorb skills and materials desperately needed elsewhere.

Moreover, most of West Pakistan's 23 million irrigated acres appear to be affected by water logging or by salinity. Each year, perhaps 30,000 acres go permanently out of cultivation. As one flies over the *doabs*—the irrigated lands between the great rivers—it looks as though some scrofulous skin disease had infected the fields. The green crops give way to widening circles of bald whitish soil, or peter out in stagnant water. This desperate condition is in part due to the high content of salt in the Indus plain—once an inland sea; in part, to the very gentle incline of the plain which has impeded natural drainage. Canals, too, cut across natural lines of drainage, and they have not been lined; as a result the water table has been forced up by irregular flood-

ing and constant seepage. The whole system was designed to repay its capital cost quickly by distributing the water to as many farmers as possible. But a little water, like a little learning, has been found to be a dangerous thing, because it fails to wash away the salts which evaporation, and the transpiration of plants, bring to the surface.

More tube wells to pump out surplus water and lower the water table, a greater release of irrigation water to flush out salt properly, far more care in the alignment and lining of canals, proper drainage on the farms themselves—all these are essential remedies. Some of them are incorporated in a master plan drawn up in 1961 by the West Pakistan Water and Power Development Authority (WAPDA) after consultations with a group of international experts. It is an enormous scheme ; over ten years, the cost would exceed £450 million, about two-thirds of it requiring foreign exchange. There is no hope of securing these sums from Pakistan's own resources. Yet without action on some such scale, farming productivity in West Pakistan must steadily decline.

THE BEGINNING 2 The Two Wings

THERE is almost a hint of some vast cosmic prank in the bringing together in a single state of two regions a thousand miles apart and so opposite in physical structure and way of life. The West is a land so arid that only massive irrigation keeps it from reverting to the desert ; the East, a land that seems to threaten as constantly to slip away into a world of water. In the West live men of mountain and desert, exposed for centuries to the culture of Persian and Central Asian conquerors, reflecting some of their confidence and pride of race ; in the East, "web-footed" Bengali farmers of swamp and plain, who share with their neighbours in India one of the great Indian literary languages, and have an almost unbroken history of subjugation—to Hindu zamindars, to British rule, and earlier still, to Moslem conquerors from the West.

The sole link is thus allegiance to the Moslem faith, rejection of Hinduism. It is a powerful force. Yet in the Middle East, where Islam is reinforced by a single Arabic tongue, it has not so far sufficed to promote a sense of common nationhood.

In East Pakistan, the cross-currents of affinity with a common all-Bengal language and culture have eddied across the Moslem mainstream and drawn additional strength from other disparities between East and West.

Well over half the population live in the East Wing, but in less than one-sixth of Pakistan's total area. The density of population in the West is 140 to each square mile ; in the East it is 922. Yet economic development has been pushed much more vigorously in the West Wing. Although East Pakistan's jute and cotton provide about three-fifths of the country's earnings of foreign exchange, virtually every index of prosperity favours the West. At the end of the 1950s income per head in East Pakistan was about £20, in the West £25. Expenditure on development in the East (in 1959-60) amounted to £26 million, in the West to £45 million. Large-scale industry contributed three times more to national income in the West than in the East.

The same disparities appear in administration. In the first decade of independence, few East Pakistanis reached senior official positions. It was not surprising that a certain degree of disgruntled separatism appeared in East Bengal's politics before parliamentary activities were suppressed in October, 1958.

THE BEGINNING 3 Unstable Politics

DURING Pakistan's first years of appalling difficulty, leadership still lay with the Moslem League, the party which, like the Congress party in India, had been virtually the sole instrument in the struggle for statehood. But the next phase proved less fortunate. One can picture what might have been the political disarray in India if, by 1952, not only Gandhi and Vallabhbhai Patel but Nehru, too, had disappeared from the scene. Jinnah died within a year of independence. His closest lieutenant, Liaquat Ali Khan, was assassinated in 1952. The Moslem League disintegrated. Politics split up among partisans of rival leaders ; there were six prime ministers in five years, cabinets forming and falling in French profusion. This manoeuvring accentuated the divisions between the East and West Wings.

In East Pakistan, partition had brought with it a rough and ready land reform. The Hindu landlords—the zamindars—fled. The tenants took over the land. This profound social change gave political life more popular roots in the East. Parties were mass parties and had profound attachments to local Bengali issues. This provincialism did not make cabinet-forming in Karachi any easier, especially since West Pakistan not only remained dominant but conducted its politics on a far more conservative basis.

In West Pakistan, no social revolution accompanied partition. The landlords were Moslem and remained. Since most of the largely Hindu middle class had fled to

India, the landed gentry, many of them enjoying feudal rights over land, justice and administration on estates as large as medieval fiefs, became dominant in politics. The rise of urban, industrial interests had not gone far enough by the mid-1950s to break the closed ring of patronage and semi-feudal control.

Some entrepreneurial talent did emerge with remarkable speed. It was, and is, confined to a small group. If Hindu and foreign-owned business is excluded, it can be estimated that two-thirds of all Pakistan's private enterprise is controlled by no more than 0.5 per cent of the population. Most of these belong to traditional trading groups and may be descendants of trading castes converted from Hinduism. But the smallness of the community only underlines the vigour of its thrust. In Pakistan, as in all developing countries, the step from importing manufactures to producing them has been crucial. In fact, the change has here been so distinct and rapid as to resemble a film of a familiar process being projected at three times the normal speed. In 1947, Pakistan had virtually no large importing firms. The Europeans remained clustered round the great ports of undivided India. The few Hindus had left. Into this vacuum stepped the Mennons, the Khojas and the other trading groups. They quickly made large profits out of the new state's insatiable desire for every kind of import. But by 1952, foreign reserves were running low.

The more far-sighted importers realised that unless they turned to the production of goods to replace imports, they would soon be out of business. Using their accumulated profits, they moved massively into manufacture. The fact that, in undivided India, cotton and jute produced in the Moslem areas had been processed elsewhere also speeded industrialisation. In 1949, India devalued its rupee, and when Pakistan did not follow suit trade was cut off. Exports of jute to Calcutta were halved since Indian banks would not finance the movement of jute. The only alternative was to begin manufacture in Pakistan. Between 1950

and 1954, an index covering the output of seventeen major industries showed an increase of nearly 200 per cent.

By 1957, these "new men" were beginning to exercise more direct political influence. Since, however, parliamentary institutions were swept away only a year later, it is difficult to say what effect they might have had on the balance of power. In other Moslem lands the combination of an old landowning aristocracy with new thrusting merchants-turned-entrepreneurs has not produced stability. The result in Egypt, Iraq, and Persia has been a blend of conservatism and rapacity calculated to make parliamentary institutions incurably unstable.

Pakistan's new industrialists, however, strenuously reinvested at least three-quarters of their profits in further industrialisation. They sought out new fields of venture. They were relatively moderate in their standards of living. They avoided the common trap of putting the bulk of their money into urban construction or real estate. Industrial expansion went vigorously ahead. By 1958 the index of industrial production (1950=100) was up to over 400. But there were less admirable features. When import controls were imposed, after 1952, power to make or break a firm was often handed to junior and not well-paid officials. In such circumstances, an industrialist's need for a permit, meeting the clerk's need for money, leads inevitably to corruption.

And the difficulties went beyond corruption. Parliament was ready to vote large sums for development which incidentally aided the burgeoning economic interests of the new men or brought rate-free water to the feudal estates. But it could not be brought to accept the full disciplines of control and taxation which rapid development demands. Industrial expansion and large public expenditures forced up the demand for imported raw materials and manufactures. Taxation failed to keep pace with expenditure, though revenue increased by 16 per cent. The government resorted to deficit financing, and inflation expanded domestic demand even faster. Even after the devaluation of 1955, the Pakistani rupee remained—and remains—overvalued. Overcheap imports encouraged further demand. Between 1956 and 1958, internal prices rose by 20 per cent and foreign exchange reserves fell by nearly 40 per cent.

Much valuable development was taking place in industry, power and transport, but the strains were growing too. Disaffection in the East, frustration at parliament's failure to introduce land reform in the West, the pressures of inflation, and distrust of the new industrial interests produced a malaise which could be turned against the politicans. At this point, the army intervened and established martial rule.

THE BEGINNING 4 Hostile Neighbours

IN most newly independent countries, the army offers the only immediately available form of alternative leadership. In Pakistan the army's position was strengthened by the fact that, alone of the services inherited from undivided India, it had the tradition and self-confidence born of a large rôle in the old society. And after partition the rôle was enlarged by the hostility of Pakistan's neighbours.

In the first decade of independence, efforts by Afghanistan to detach Pakistan's Pathan tribes and unite them in a separate "Pakhtoonistan" state were a constant irritant. But the more serious difficulties followed on the divorce from India. Massacres accompanied the rupture, lengthy disputes over property and compensation followed it. Trade was violently interrupted after the Indian devaluation of 1949. No agreement was reached on the division of the Punjab waters. But the worst dispute concerned Kashmir. While Pakistan urged a plebiscite to determine the Kashmiris' allegiance, India stood on the legal rights it claimed from the maharajah's accession to India. Again and again, the two states moved to the brink of war ; and the unresolved crisis constantly revived the fear in Pakistan that India was hostile to its very survival.

In these conditions the army has had especial influence. Military expenditure never fell below thirty per cent of the central budget. As political uncertainty grew inside the country and the Indian press commented—with what Pakistanis saw as pleasurable anticipation—on the instability of the "Pakistan experiment," there was a certain air of inevitability about the army's interventions in 1958 as "saviour of the state."

Such, then, were the difficulties inherited by Pakistan, such the turmoil of its first decade. Yet today it rates among the more stable economies in the developing world, and it is to be a major beneficiary of the West's new initiatives in economic assistance. Clearly some very large transformation has occurred.

A FRESH START

A FRESH START 1 The Political Frame

WIDESPREAD revulsion at the incoherence and corruption of public life had led to the army's intervention in October, 1958. The first steps of the new regime were designed to restore popular confidence. General Ayub Khan kept the framework of civil administration, but put army officers in key positions in his cabinet and in provincial government. Military courts were set up to deal with corruption. By fixing price controls and limiting commercial profit margins to 6½ per cent, the new government reversed for a time the precipitous rise in prices. By September, 1958, the cost of living index had risen ten points in just over a year. By December of the same year it had fallen by twelve. Thereafter, it is true, these controls proved impracticable, and were made virtually inoperative. However, the increase in prices since 1958 has been less steep.

The issue of land reform in West Pakistan was taken up quickly and its general shape decreed by January, 1959. Its essence lay in redistributing to tenants and landless families all land over and above 1,000 unirrigated or 500 irrigated areas. Compensation—at a lower rate than in India—would be paid in 25-year government bonds, and the new owners would pay for the land in instalments, also over 25 years. Fragmented holdings would be consolidated and further divisions forbidden. A special commission had the responsibility of seeing the reforms carried through within the year. In fact, it has not been able to stop all the loopholes and enforcement does not always seem to have been rigorous.

The mildness of the land reform—a man is still a very rich farmer with 500 acres of irrigated land—reflected the conservatism of the new political climate. The soldiers did not so much want changes in social structure as a return to decency and probity and to a sense of service to the community. There was no bloodshed and little violent repres-

sion during the seizure of power, and this relative mildness has been maintained. A few newspapers were suppressed, a few critics of the new regime received gaol sentences—a practice which has continued since. But, for the politicians, the normal punishment amounted to no more than rustication.

This is all quite far from the anger and violence of many past military pronunciamentos. It recalls rather the relatively mild repression once practised by the British raj. The analogy cannot be pressed too far, since the British were alien rulers, bent on checking too impatient a demand for self-determination, while the military regime represents the will to survive as a sovereign nation. Not aims, but attitudes, have a faintly familiar air. There is profound faith in the small man, a widespread concern that he should not be tricked or exploited by a tiny group of better educated, but not necessarily more responsible, city dwellers, a marked prejudice against "trade" and "money-grubbing."

President Ayub Khan has declared again and again that his regime is not opposed to democracy, only to "the mess" the politicians had made of it before 1958. In his view, constituencies with 100,000 voters and more meant that the voter could have no knowledge of either candidates or issues. In their place the regime introduced late in 1959 "union councils"—or "basic democracies"—based upon blocks of about 1,000 voters. In these small units, it was said, a man could know what he was voting about. Officials and nominees are added to the councils, leaving the elected representatives with a two-thirds majority. Delegates from the union councils are then sent up to the next level and so on up the pyramid of councils to the level of the two provincial councils. As the pyramid rises, the proportion of nominated and official members grows. The experiment in some ways resembles the steps by which, during the evolution of British colonial rule, popular opinion was slowly associated with the official element on the governor's council.

The opposition to this approach comes—as it did so many times in British colonial history—from the educated middle classes, above all, the legal profession. It was the Chief Justice of West Pakistan, Mr. Justice Kayani, who protested in 1960 that liberty was being sacrificed in the name of good and orderly government and that "there were quite a few thousand people who would prefer freedom of speech to a new suit of clothes." And the dominance of West Pakistani elements in the government gives the dissatisfaction in the East almost a colonial tinge of resentment.

President Ayub Khan's personality—direct, soldierly, full of calm good sense—has inspired wide confidence, especially in West Pakistan, in the mission he had set himself and his brother officers. Perhaps too much should not be read into the plebiscite of February, 1960, when the 80,000 councillors of the "basic democracies" expressed their support for him. No alternative was offered. But they gave him a 95 per cent affirmative vote.

A FRESH START 2

Beyond the Frontiers

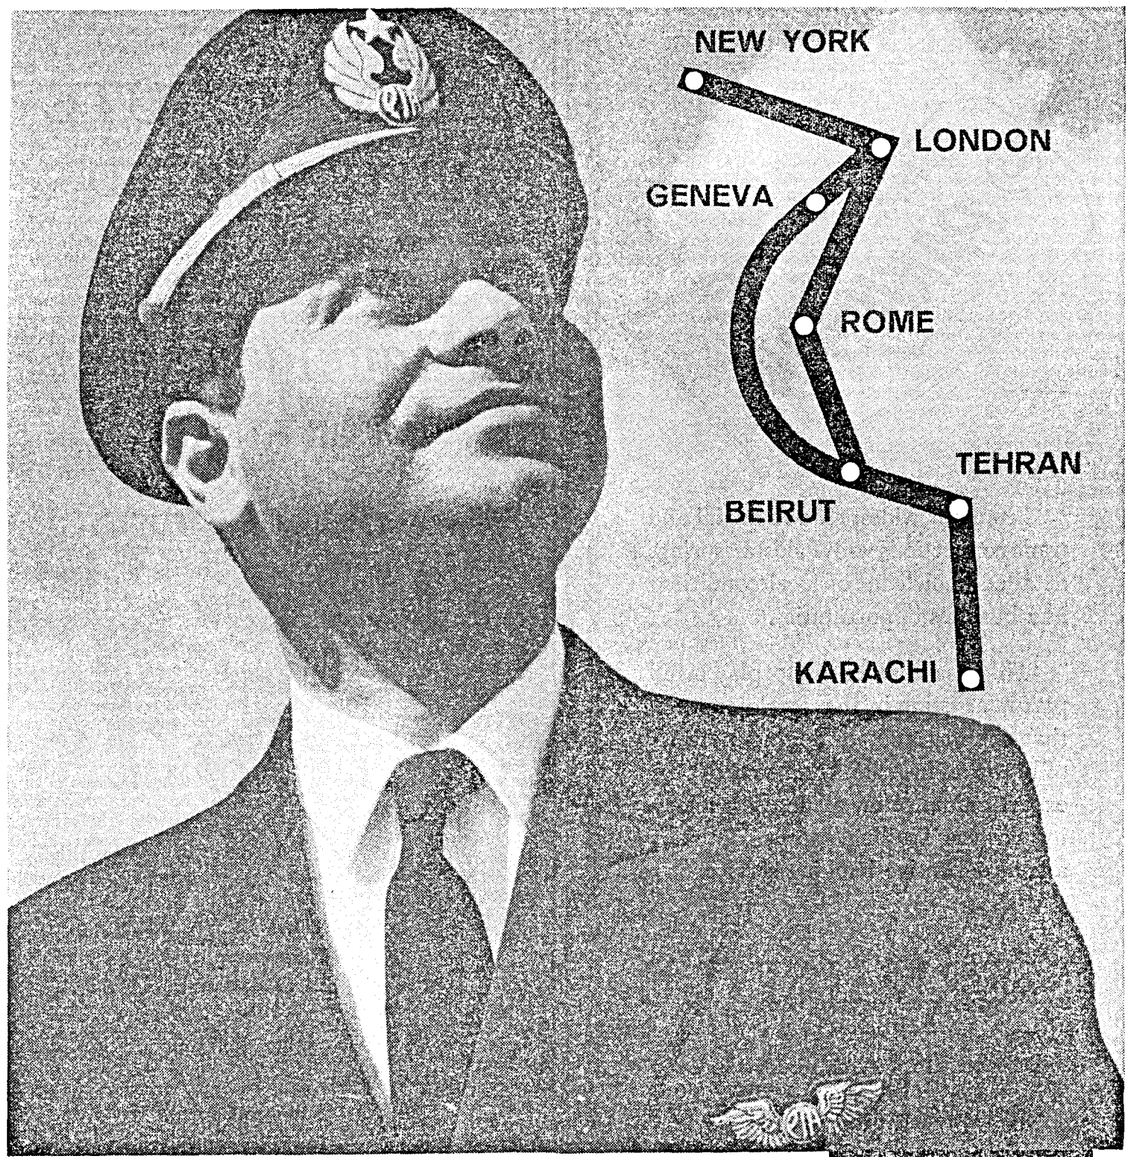
In the soldiers' eyes, one of the most damaging consequences of Pakistan's tumbling governments before 1958 was the threat to the very survival of the country. Fear of India, fear for its own survival, coloured all Pakistan's external relations. When it joined in the treaty system put together by Mr Dulles after the Korean War, ostensibly it accepted the Central Treaty Organisation (originally the Baghdad Pact) and the South-East Asia Treaty Organisation as defences against communist encroachment. But the treaties were widely discussed inside Pakistan as a reinsurance against India. Not surprisingly, India, too, interpreted them in this sense.

There can be no doubt that President Ayub Khan has lessened a neurotic strain in Pakistan's foreign policy. The fact that he is himself a Pathan and that Pathans play a prominent part in the new regime has blunted the force of Afghanistan's agitation for a separate Pathan state. But the chief gain in confidence has been in Pakistan's relations with India. This is not to say that any cordiality or basic trust has been created; but fear has lessened, especially the neurotic fear of re-absorption. By 1960, public opinion had steadied sufficiently for the president to make a new effort to put Indo-Pakistan relations on a saner basis.

He has himself summed up his reasons for making the attempt. In a recent issue of *Foreign Affairs*, he wrote:

As a student of war and strategy, I can see quite clearly the inexorable push of the North in the direction of the warm waters of the Indian ocean. This push is bound to increase if India and Pakistan go on squabbling with each other. If, on the other hand, we resolve our problems and disengage our armed forces from facing inwards as they do today, and face them outwards, I feel we shall have a good chance of preventing a recurrence of the history of the past, which was that whenever this subcontinent was divided—and often it was divided—someone or other invited the outsider to step in.

China's fierce repression in Tibet, its building of military roads across Indian territory, its wooing of the hill peoples, its rejection of the accepted Himalayan frontier—all these have sharpened Pakistani concern for the defence of the subcontinent. Nor has India's rather tardy acknowledgement of the pressure reassured its neighbour.



This, then, has been the spur to the president's attempts to secure better relations. During 1960 economic problems—a settlement of the still outstanding issues of post-partition compensation and debt, a general renewal of trade—were seriously discussed and some limited agreements reached. Minor frontier rectifications were carried through. President Ayub Khan took the first initiative in meeting Mr Nehru and attempted to base their relations upon respect and understanding. But this has not proved easy. Between soldierly directness and the intellectual's sense of the many-sidedness of things, the road to understanding and confidence is exceedingly narrow. It is not surprising that, in the effort of reconciliation, a great triumph has—so far—been accompanied by as great a failure.

The triumph is, of course, the Indus Waters agreement which Mr Nehru and President Ayub Khan signed on September 19, 1960. It is true that almost the entire expense of the scheme has been undertaken by the western powers—a constructive contribution to the avoidance of war that has received less than its due of worldwide appreciation. Yet the broad outline of the scheme has been clear since 1954. It was the relative improvement in relations that made it possible for Mr Nehru to pledge—against considerable opposition at home—a sizeable Indian contribution to the plan and for President Ayub to accept a compromise over the flow of water from the three eastern rivers during the ten years needed to build the new canals, to offer a small but direct Pakistani contribution to the scheme, and to shoulder the burden of debt implied in the two large external loans to Pakistan. Sir William Iliffe and his colleagues of the World Bank deserve unlimited praise for the way they rode out the rising and falling tides of Indo-Pakistan hostility for a decade. But the principal to the dispute also proved that even when

the life and death of peoples are at stake—for, in both lands, water *is* an issue of life and death—sanity can overcome anger and fear.

Such a spirit has been sadly absent in the discussion of the Kashmir dispute. In his urgent search for a common Indo-Pakistan stance on defence, President Ayub Khan has probably been prepared for a measure of compromise. There are indications that, if Pakistan secured better control of the upper Indus valley and some concessions about water storage on the upper Chenab, it would drop the demand for a general plebiscite. It has always been the Indian argument that a plebiscite in Kashmir would reopen old communal wounds and threaten the security of forty million Moslems still living in India. Whether or not the leaders in Pakistan accept this argument, there is evidence to suggest that they would be prepared to accept an adjusted partition and not demand the transfer of the whole state. But so far Mr Nehru has not been prepared to accept either the need for a joint strategic approach to the two nations' northern frontier or the compromise over Kashmir which this would entail.

As a result, the relations between the two countries have once again been deteriorating. Moreover, Pakistanis now resent President Kennedy's new warmth towards India. President Ayub Khan made no secret of this during his visit to Washington in July. This in turn led India to denounce his undiplomatic frankness and to express perturbation over the jet fighters which America was supplying to Pakistan. The weary round of accusation and counter-accusation has started again.

A FRESH START 3

Planning for Growth

The Shape of the Plans

POLITICAL consolidation has provided a firmer base for the next phase of economic advance. The regime may be military, but the bulk of its thought, work and ambition turns on increasing the country's resources—one more reminder that any comparison with the old British pro-consuls has strict limits. The imperial administration saw good government primarily in terms of law and order. For President Ayub Khan and his ministers, good government is above all government which will increase national income by over a fifth before 1966. A strategy to achieve this advance is spelt out in Pakistan's second five year plan (1960-65), published in the middle of 1960.

The first five year plan ran from 1955 to 1960, with development expenditures of £386 million in the public sector and £300 million in the private sector. Industrial production, which had doubled between 1950 and 1954, doubled again by 1960. Government policy played a large part in the expansion, directly by public investment in new industries and loans to private entrepreneurs, indirectly by expansion of the country's capital overheads. Publicly owned electric power capacity tripled—from 200,500 kW in 1955 to 654,000 kW in 1960. In West Pakistan a thousand miles of new roads were built and a thousand more improved. The figure for roads in East Pakistan — 665 miles — was, typically, smaller, and plans for expanding water transport lagged behind. University enrolments rose from 3,900 to 7,400, and the number of students graduating each year in engineering increased from 274 to 400. Again typically, agricultural graduates only went up from 150 to 180.

Yet "infrastructure" was not neglected in agriculture. More than a million acres came under irrigation; two and a half million more were improved by better drainage, more regular supplies of water and flood control. The government's ultimate ability to stabilise the grain market was increased by a doubling in the capacity to store food. Government encouragement also made possible about a fourfold increase in the use of fertilizer. Yet the first plan failed in its chief aim. The aim had been to increase national income by at least 15 per cent over the five years, with a 7 per cent increase in per capita income. Since population grew much faster than the forecast and national income rose only by 11 per cent over the period, the utmost that could be claimed for per capita income was an increase of perhaps 2 or 3 per cent in the five years. The increase in consumption was probably higher than this in West Pakistan; the only possible conclusion is that the poverty-stricken people of East Pakistan were hardly any better off at the end of the plan.

The results were thus disappointing; the reasons why need to be borne in mind in assessing the prospects for the second plan. The major difficulties were weaknesses in administration, continued stagnation in agriculture, failure to mobilise domestic resources, and the unsolved problem of foreign exchange.

The broad aim of the second plan is to increase national income by 22 per cent in five years. Since the census of 1961 has revealed a rate of growth of the population of 2.2 per cent a year and since the government's support of birth control can hardly show any results for at least a decade, the hoped-for increase in per capita income is only about 10 per cent. To achieve this, investment of the order of £1,725 million is proposed—to which has to be added a direct, not reimbursable Pakistani contribution to the Indus works of £45 million. The sum is now more than twice the expenditures undertaken under the first plan.

Cost of Second Five Year Plan
(1960-65; revised estimates)
£ million

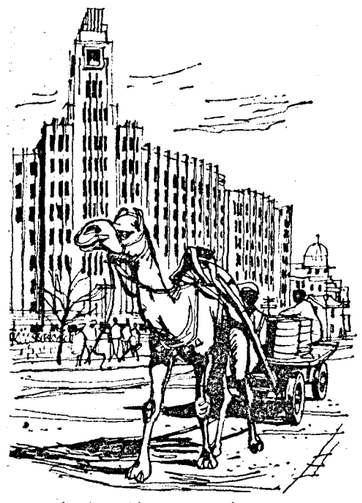
Installed electric capacity (net)	000 kW 906	1,272	40

Between 1959 and 1961 the estimate of cost had been revised upwards by as much as 21 per cent. Internal and external prices rose. More aid was "tied." More detailed accounting increased some estimates. There was a larger carry-over of uncompleted projects from the first plan. The final breakdown is set out in the accompanying table.

Problems of Administration



During the first plan, it became clear that the public authorities concerned lacked the drive and efficiency needed for full success. In part the problem—as in India—has sprung from the very qualities of the old Indian Civil Service. Trained in the traditions of Whitehall, with every emphasis on probity and careful audit, the accurate answer next year if need be, not the proxi-

mate answer today, officials hate the quick decisions and inspired guesses that rapid development requires. Again as in India, they have an instinctive distaste for the ways of the business world and a—possibly unconscious—conviction that the economic decisions they make are more likely to be "in the national interest" than those which are influenced by the "random" outcome of market forces. And the finance ministry, more certain of its own judgments than of those of any other department, insists on minute reference and audit.

The official's beliefs incline him toward *an absolute priority for all projects in the* public sector and a tendency, in allotting foreign exchange, to treat the private sector as residual. His distrust of the market is reinforced by a confusion of aims familiar to anyone who lived in Britain in the first five years after the war—the confusion between maximising wealth and maximising welfare. In a country of grinding poverty it seems just and right that the necessities of the masses—food, lodging, textiles—should be cheap. Yet price controls have the effect of increasing consumption and discouraging greater production, thus aggravating the shortages or building up flourishing black markets. For years, Pakistan's grain production remained more or less stationary, while vigorous smuggling went on across the Indian frontiers. A further refinement of this confusion has occurred in the vital field of foreign exchange. To encourage exports, exporters of certain goods have been offered a bonus in the shape of 20 per cent of the foreign exchange they earn to use as they wish. A heavy excise duty has also been placed on some commodities to discourage local consumption. When, however, increased exports of tea created local shortages and higher prices, the government introduced price control and cut the export quota. Similarly, when larger exports of cotton goods put pressure on domestic prices, the government abolished the export bonus on cotton yarn. The desire to secure cheap consumption cuts across the fundamental aim of rapid economic expansion.

PARADOXICALLY, industrial expansion has not been very inhibited. Business men may, as in India, have complained bitterly about the licensing system and the "eighty permits" they need before a new undertaking can be launched. But the rate of growth in the industrial sector has been among the highest in the world. Industry has received massive government assistance, directly in loans from the Pakistan Industrial Development Corporation (PIDC), indirectly from public investment in the rest of the economy. It has enjoyed the almost complete protection offered by the licensing of all imports. It has paid less than a true market price for its domestic capital. Its imports under licence have been in the nature of a continuous subsidy since the Pakistan rupee is considerably overvalued. Industry, in short, has *done* well. The chief consequences of ineffective planning and performance are to be found elsewhere—in the failure to stir up agriculture, in the insufficient mobilisation of resources. So many of the best official minds have been bogged down in licensing and controlling that other major needs have suffered neglect.

Now, however, there seems to be a general resolve to simplify and revitalise procedures. Financial control has been decentralised, accounting and audit are being reconsidered ; a special projects division has been

set up in the cabinet secretariat to follow the progress of agreed plans and decisions ; and the small, efficient Planning Commission is to be strengthened by seconding to it the best possible professional staff. Special agencies have been set up to carry out particularly urgent tasks. Water and power development authorities have been established in each Wing ; a new agency will develop East Pakistan's inland water transport ; two new agricultural corporations are envisaged. Here the government has been encouraged by the aggressive success of the PIDC, which can claim much credit for the rocketing growth of industry.

But the change which can, in theory at least, do most to lessen the administrative load is the decision to leave the bulk of development in the hands of private enterprise and hence to accept, within broad limits, the guidance of the market. Some steps to lessen controls have already been taken. Sixty-two items have been placed on automatic licensing—the importer's licence is simply renewed when he has used up his quota—and this extension now covers 118 industries instead of only 14 in the earlier period. The new procedure covers iron and steel, metals, lubricants, rubber, explosives and other industrial materials and should permit four-fifths of the industrial sector to cover their full import needs. To discourage importers from bringing in inessentials, duties on luxuries have been increased while duties on essential raw materials have been halved. This has encouraged some advisers to suggest that in domestic production, too, high excise duties on luxuries and inessentials might replace licensing and direct control.

Among other steps taken in this direction is the ending of control over grain sales. Henceforth the government will rely on its control of adequate stocks of grain to give floors and ceilings to food prices. Again, up to a certain level of investment an entrepreneur can now enter certain industrial sectors without a permit. A wider relaxation will depend on the effect of these first steps. The cumulative effect should be to transfer more and more decisions in the industrial sector to the entrepreneurs.

In general, the government has small reason to worry about the capacity of business to fulfil its share of the plan. The record of achievement is manifest. In addition, industry is encouraged by liberal depreciation allowances and by a tax holiday for new ventures. Excessively high tax rates on foreign business have been lowered. The types of production which the government wishes to encourage—cement, textiles in cotton and jute, light consumer industries using local raw materials—are just the type into which early industrialists tend to go. And both domestic and foreign enterprise should not be too difficult to attract, by way of a tax holiday lasting four to eight years, according to the location they choose, into such tried favourites as plastics, petrochemicals and synthetic fibres. The new plan begins under the sign of administrative relaxation. This should free the authorities to pursue urgent tasks elsewhere.

The Agricultural Front

There is no doubt about the first of these tasks. In Pakistan, as in virtually every other developing economy, no plan can succeed unless momentum can be achieved in agriculture. Apart from such cash crops as sugar cane, tea and tobacco, agricultural output has remained more or less stationary over the last decade, despite the extension of irrigation and the bringing of five million more acres under crops. From 1948 to 1958 rice production fluctuated, according to the weather, around 8 million tons, wheat around 3 million tons, jute around a million tons, cotton lint around 280,000 tons. The reasons for the stagnation comprise all the misery of Asian agriculture—fragmented holdings, unproductive landlord-tenant relations, uncertain rainfall, primitive techniques. But planning and administration have played their part. Controlled food prices turned the terms of trade against the countryside and discouraged rural investment. Meanwhile, keen entrepreneurs in the cities pressed for loans and scarce foreign exchange ; and the parts of the government dealing with transport and industry had more competent and aggressive leadership than the ministry of agriculture.

With this question of competent manpower, we reach a crucial weakness in virtually every administration in the developing world. Agriculture was the Cinderella of the old colonial system. Pay, prospects and

cations for education as well. The second plan proposes more than a doubling of educational investment. The proportion of children between 6 and 11 attending primary school—which increased very little between 1954 and 1960—is to rise from 42 to 60 per cent by 1966. The aim is primary education for all by 1970 and compulsory schooling up to the age of 14 by 1975. Whether this results in farmers better able to adopt modern methods will depend very greatly on the emphasis given to agricultural training in the schools, and above all on the opportunities which farming offers to young people. Otherwise, primary education will only accelerate the drift to the cities. In high schools in rural areas, there is to be more instruction in agriculture. Three agricultural universities are to be established and the annual graduating class increased from 380 to 600. Yet it is impossible to read the government's plans without wondering whether agriculture should not enjoy an even higher priority. New polytechnics and training centres are to cater for industrial craftsmen. There is to be new emphasis in science and engineering; graduates are to number 700 a year. In comparison, the agricultural projects still seem conservative in relation to the immense load improved agriculture has to bear.

However, one of the most hopeful new features of the new period of planning is that the government has accepted virtually all the major recommendations of the commission on food and agriculture. If the two new agricultural corporations secure as much talent and autonomy as have such bodies as WAPDA or PIDC, a new phase of thrusting, competent administration could lie ahead. And the demonstration effect of a breakthrough in a number of "project areas" may turn the means of modern farming from a blueprint into an insistently demanded right.

The Mobilising of Resources

As we have seen, lack of budgetary discipline, expenditure that outran resources, deficit financing and finally inflation undermined the economy's performance under the first plan. A vital test of success in the second is the extent to which the need to mobilise more resources has been squarely faced. The adjoining table suggests that the government has taken the lesson seriously. It will be seen that the element of deficit financing is very small, and has been even further reduced in the latest estimates. The higher yield of existing taxes is expected to make at least £60 million available for development from the revenue budget—provided military expenditure can be stabilised and administrative expenses go up by no more than 2 per cent a year. Modest budget surpluses in recent years and firmer financial discipline in the cabinet make this forecast at least possible. Public services and corporations are expected to earn investible surpluses. Additional taxation is to produce £130 million. Taxes introduced in the 1960/61 budget should, over the five years, equal about half the proposed increase.

True, no new taxes have been proposed for 1961/62, but the finance minister has spoken only of a "respite," and no doubt further taxation will be introduced to cover the balance.

In the financing of the semi-public sector —the sphere of autonomous public corporations, some of them with private participation—the bulk of the new capital is to come from government loans already provided for in the estimates of public revenue, from surpluses earned by the corporations, from foreign loans and from private participation. Similarly, nearly three quarters of private investment is to be provided by government loans, foreign participation and the reinvestment of earnings. The element of fresh credit creation is small.

This level of domestic investment should be perfectly feasible. True, it implies that more realistic rates will be charged for public services such as electricity and transport, but the government has now accepted the idea that a public corporation must pay for its own expansion. The plan, wisely, relies more on reinvested earnings and budgetary surpluses than on that hitherto very modest performer, the Pakistani private saver—although prize bonds have been introduced to tempt him to a little more courage. And the general level of saving is still low. Domestic savings at the end of the plan will still be no more than 8.6 per cent of gross national product. It is a modest and therefore attainable figure.

Is it too modest? The unusual and disturbing feature of the financing of the plan is the degree of its dependence upon foreign assistance. It may be relevant to ask whether a more ambitious mobilisation of domestic resources should not be attempted, and the scale of external assistance related more directly to internal performance.

Second Plan: Governmental Resources

£ million

	Original plan	*Revised estimates*
Revenue surplus	60	
Customs duty on commodity aid imports	38	182

Additional taxation	75	131
Deficit financing	75	11
Foreign aid :—		
Development assistance	300	425
Counterpart funds from US defence support and commodity aid	188	222
Total	863	1,097

Problems of Foreign Exchange

Admittedly one of the chief factors that has inhibited more rapid investment in the last six or seven years has been the absolute shortage of foreign exchange. Many attractive lines of investment have had to be postponed because the essential component of foreign exchange was lacking. The crucial question in the next decade is whether this absolute stringency can be reduced.

Part of the answer lies with the Pakistanis. The relative failure of agriculture has seriously weakened the country's balance of payments. The figures bear repetition. The products of field and herd provide 66 per cent of Pakistan's exports—95 per cent if one includes cotton and jute manufactures. If more domestic cotton had been available, there would have been less of a tug of war between consumption and exports. Above all, greater production of food grains would have spared the country the import of millions of tons of foreign grain over the last decade—only a part of them covered by American surpluses made available under Public Law 480.

Yet much of the problem of foreign exchange lies outside Pakistan's own control. Its exports are goods for which foreign demand is very inelastic and domestic demand increasingly lively. The prices of raw materials fluctuate unpredictably. Western quotas fix limits to the export of textiles. European excise duties hold down popular consumption of tea. All exports face strong competition from other Asian suppliers. The problem is the same as India's—a traditional pattern of exports dominated by lines in which progress is virtually bound to be slow. The export bonus scheme has had encouraging results. It is to be continued until 1965. But it cannot double the rate of exports in five years which, without external aid, is what Pakistan would need to achieve. Nor is there any hope of private foreign investment expanding rapidly enough—as, say, in Canada—to make good sluggish exports. The government encourages investment, and has reduced taxation on foreign enterprises roughly from 60 per cent to 50 per cent; and industries established during the second plan will enjoy a tax holiday varying from four to eight

years. Yet the planners are probably right in expecting fresh foreign investment to flow in at no more than £21 million a year.

Their modest expectation of the country's ability to expand its export earnings in the next five years is set out in the accompanying table. It illustrates not only the narrow field of manoeuvre in the export drive but also the uncertainties which complicate the task still further. Exports of cotton manufactures are expected to fall off and not return to the 1960 level until 1964-65. This is wholly due to the diversion of yarn to the hungry domestic market. The figures for jute and tea represent an even less tractable kind of difficulty. A poor jute season combined with a recovery in world demand for jute increased Pakistan's earnings by nearly £16 million in 1960/61. In the same season, a catastrophic drought in the tea areas reduced tea export earnings to almost nothing. It is against this alternation of feast and famine that the forecasts have had to be made, and the planners have very wisely preferred to err on the side of caution.

But the necessary modesty of their calculations leaves unsolved the basic dilemma of the economy. Simply to maintain its present rate of production and growth, imports ought to amount to £1,032 million over the five years of the plan. Thus, even before there is any question of a development plan, the balance of payments shows an unfavourable gap of £188 million. To this must be added the entire foreign exchange component of the plan—£634 million. The success of the whole enterprise turns on Pakistan's ability to attract—in loans, grants, commodity aid and private investment—the equivalent of £820 million in foreign exchange over the five years.

PROSPECTS FOR PROGRESS

PROSPECTS FOR PROGRESS 1 The Domestic Scene

THE outlook for Pakistan as its second plan develops is much more encouraging than at the beginning of the first plan, and very much better than in 1947. Many earlier weaknesses are on the way to correction. The present leaders' devotion to the national interest is not in doubt. Within the administration, a wholly new interest in the problems of planning and executing development has ousted the complacent belief that a well trained "generalist" could turn his hand to anything—a parallel to India's discovery that retired railway managers cannot run every type of public enterprise from refineries to steel mills. There is a movement toward substituting effective indirect controls over the economy for direct regulation. The result may be not only gains for industry in terms of speed and flexibility, but also the release of first-class official minds for the much more complex problems of agriculture, where there is no present alternative to direct governmental action since there is no eager class of entrepreneurs. The "wind of change" in administration is veering to the quarter of greater efficiency and speedier decision.

The outlook for the plan in the short run is thus reassuring. The longer run inevitably poses other questions. President Ayub Khan's autocracy is mild. It has rusticated certain politicians, removed some critics, and censored certain views; but it does not exercise anything like a pervasive control over popular opinion and activity. The educated middle class are somewhat restive. They will grow more so. They will also grow in numbers and influence as the educational plan turns out hundreds of new graduates every year. If Pakistan's promised constitution can combine executive stability with genuine consultation and representation, if its economy can grow to provide employment and hope for the new men, they may become caught up in the exciting task of nation-building. But they are intellectually too alert and are increasing too fast to accept indefinitely political or economic stagnation. Their discontent is particularly lively in East Pakistan.

Gen. Azam Khan

A similar question mark hangs over the question of mass support for the regime. So far there is a good deal of aquiescence. But the longer run, on any historical analogy, should be more difficult. Pakistan is passing through the first stages of modernisation and capital accumulation. These are usually years of strain, since a people who are by definition poor have to begin to save and the extension of urban life and the market economy creates all manner of social and personal tensions. Moreover, in any society relying primarily on private enterprise for its development, industrialisation implies the emergence of entrepreneurs accumulating enough capital to carry investment further, who can easily look like exploiters to the men lower down. If, as in parts of Latin America, *nouveaux riches* in the city form a political and social alliance with *anciens riches* in the countryside, the situation is virtually a recipe for Castro-type revolt.

There seems no immediate danger of this kind of social upheaval. Urban workers are a tiny minority—there are still under a million registered trade unionists in a population of over 90 million. The farmers in East Pakistan own their own land. In the West, a first essay at land reform has at least broken the old immobility. The Moslem faith may continue to provide a strong social cement, especially in the daily confrontations of the village *panchayat*.

Yet East Pakistan presents especial risks. Poverty is greater there, development is slower, an almost colonial sense of dependence on the West wing aggravates local grievances. Natural disasters—violent typhoons on the coast, drought in the hills—have eaten away the economic margin in the last two years. The president has appointed a governor of energy and goodwill in the person of General Azam Khan, but it cannot be said that he has made any really significant improvements so far. However, government spending on development is now to increase in the East wing—from £74 million during the first plan to £400 million in the second. In fact, the increase is so sharp that there is some doubt whether the administrative structure can carry such a load. In addition, if the United States agrees to a large programme of extra releases of surplus commodities, most of them will be channelled to East Pakistan. There is no doubt that the government intends to carry through a much more vigorous programme in the next five years. It may come in time to check a disturbingly widespread mood of discontent.

In other words, the political prospects depend upon the success of the plan. Population will go up for decades to come. The backwardness of women's education in a Moslem land is one more obstacle in the way of birth control. Unless economic growth can reach 3 or 4 per cent a year, the hopes of a modest increase in well-being will be illusory. If it falls even lower, a catastrophe lies ahead. But beyond a certain point, the prospects for development lie outside Pakistan's control. They depend on external peace and outside support.

PROSPECTS FOR PROGRESS 2 Neighbours and Friends

THERE can be no question about the settlement that would give the greatest hopes of peace and progress to both Pakistan and India. President Ayub Khan's definition has already been quoted—a reconciliation permitting them to concert the defence of the subcontinent. To it one might add a greater degree of economic cooperation and trading to ensure that the growth of each developing economy helped the growth of the other. At present, commercial exchanges have not recovered from the long wrangle over devaluation. The Pakistan rupee was not restored to parity with the Indian rupee until August, 1955, and no real effort has been made to expand trade since then. Today India provides only about 5 per cent of Pakistan's imports and buys less than 4 per cent of its exports. If a determined effort were made to settle the outstanding issues of debt and compensation between the two countries, the way would be opened not merely to resume normal commerce but to increase it as both economies expand. In the epoch of the "common market," it is tragic that one of the greatest potential markets in the world should be subjected to arbitrary divisions. There must, in any case, be long and intimate co-operation over the carrying out of the Indus Water scheme. Ideally, it should be extended to wider fields.

Yet it is impossible to count on such an outcome. Pakistan may now have enough national self-confidence to enter on a new and more co-operative phase in its relations with India, but the Indians show little sign of giving a high priority to reconciliation. There is not the slightest hint of any reconsideration of Kashmir. And without compromise over Kashmir, no real political détente is possible.

Could outside agencies help to bring it about? Here one must consider both the negative influence of communist expansion in south-east Asia and the possibly positive influence of the West's deep interest in the development of both countries. Hitherto communist pressure has caused the two governments to react in opposite ways. Pakistan has joined the western-inspired defence pacts—Cento and Seato. India has been a leading exponent of the policy of avoiding entangling alliances and pushing to the limit a readiness to believe in the communist powers' unaggressive intentions. While Pakistan was joining in military alliances, India was drawing up the *Panch Shila*—the five principles of peaceful co-existence—with the Chinese.

Jute under the microscope

Theoretically, the collapse of the *Panch Shila* approach before the reality of Chinese repression in Tibet and Chinese invasions of Indian territory should have lessened the gap. But in fact India rejects as strenuously as ever any military links with other nations and, if anything, suspects Pakistan even more sharply than before of using its military connexion with America to strengthen its position not *vis à vis* the communist powers but in the dispute over Kashmir. President Ayub Khan, feeling rebuffed after what were genuine overtures of conciliation, now makes no secret of his distrust. As we have seen, he went out of his way in Washington in July to deplore the new attention shown to India by the Kennedy Administration and to assert that Pakistan alone is a reliable friend in Asia. (It is, in part, disillusion with western refusal of direct support over Kashmir that has led Pakistan to accept Russian assistance in oil prospecting.) Thus the poison of the unresolved Kashmir conflict continues to affect every part of the tragic, wasteful, potentially disastrous relations between the two neighbours.

Could the western powers exert any influence to improve this relationship? Any direct political effort would be most unwise. The post-colonial relationship between Asia and the West has to be based on strict respect for sovereignty and realization that political interventions, however well meaning, dissipate good will. Yet, as the Indus Waters agreement has shown, indirect influence, aimed at developing recognisable common interests and backing them with imaginative assistance, can avert disaster and create a climate for better things. In the context of 1961, the chief contribution the West can make to the stability of the sub-continent is to ensure that the development programmes in both countries go ahead and that their political disputes are not given an extra biting edge of economic stringency.

What are the prospects? Judging by the past, they are reasonably good. Over the last decade, Pakistan has received £670 million in

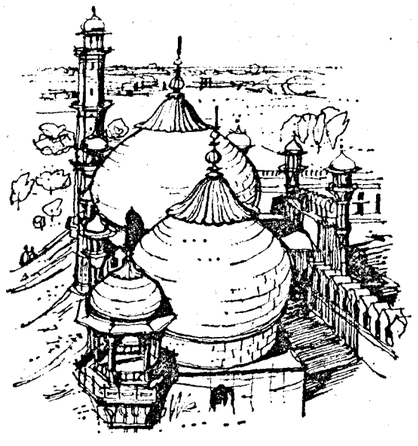
The Sukkur Barrage

aid from the West, and aid programmes will certainly continue. At present, three different but complementary approaches are being considered. The first two, at this stage, concern only the United States. After President Ayub Khan's visit to Washington, President Kennedy agreed to send out scientists and engineers to study Pakistan's daunting problems of water-logging and salinity within the framework of WAPDA's master plan. No decision has been taken on future finance. It is, however, arguable that there should be not only an American but a world interest here. As the tide of the world's population rises other deserts will need to be irrigated, and Pakistan could serve as a laboratory in which the possibilities are examined for the benefit of all mankind.

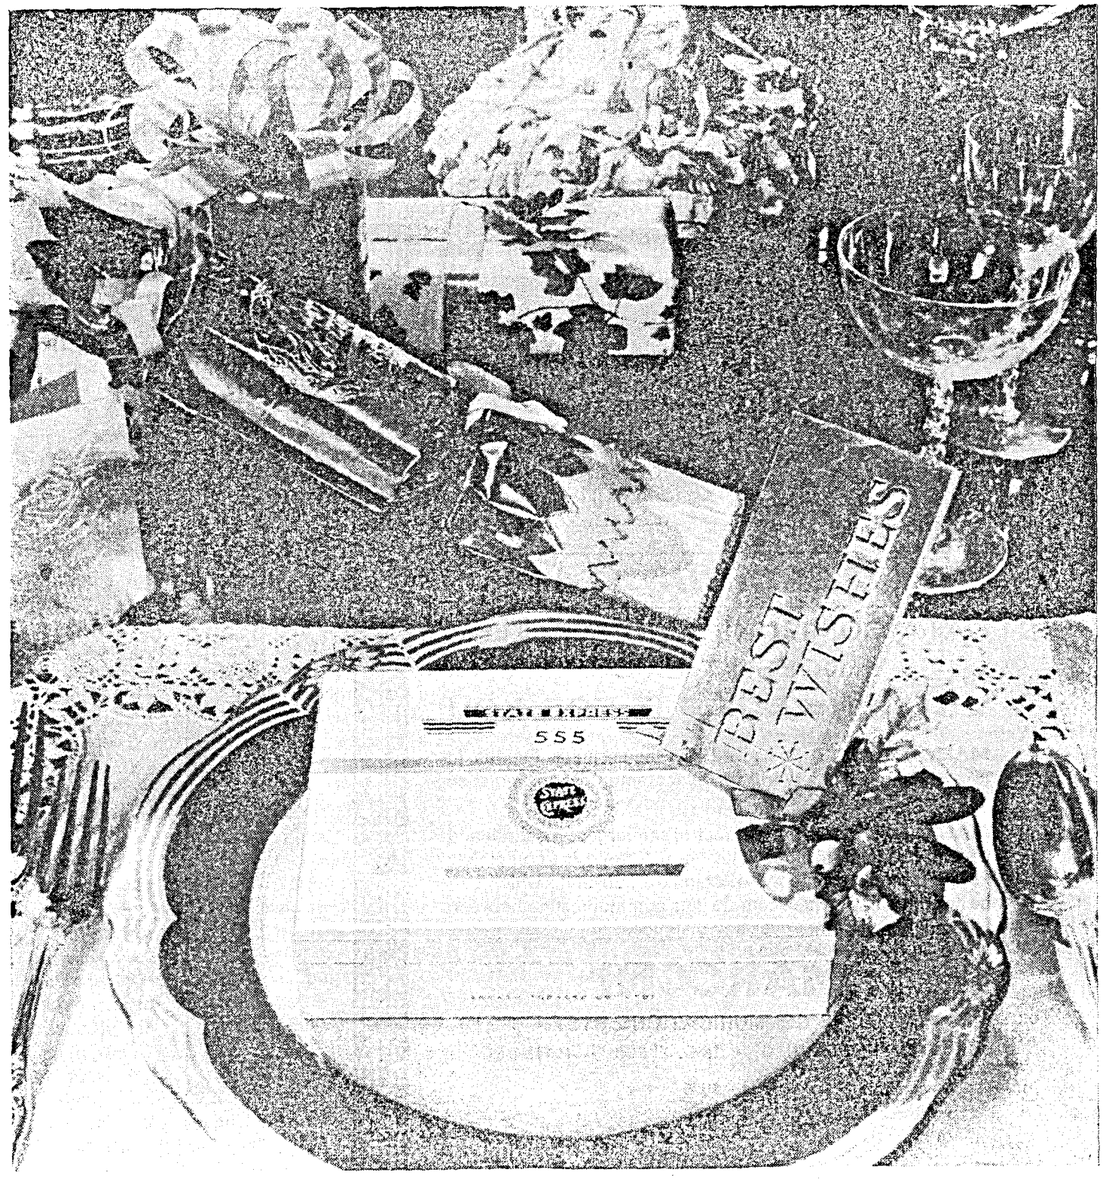
The second line of approach covers an expanded programme, under US Public Law 480, of releasing surplus grain, cotton, animal feeds, and some additional foodstuffs from American reserves. The United States is prepared to consider supplying some £230 million worth of such commodities—including 6,250,000 tons of grain and 30,000 bales of cotton—with the aim of allowing Pakistan to undertake a much more ambitious mobilisation of unemployed and underemployed labour, especially in East Pakistan. Any new wages would be spent almost wholly upon extra food and upon cotton cloth (at present the average Pakistani uses only a quarter of the average Indian's very low consumption of cloth). The chief aim of the extended PL480 programme is thus to permit a greater mobilising of domestic resources without unbearable inflation.

There remains the third and most vital line of approach—the foreign exchange needed to keep both the economy and the plan on the move. In this year's negotiations with the western aid consortium*, the Pakistanis were unlucky. Only a few weeks earlier, India had been guaranteed virtually the full amount requested for the first two years of its third plan—£820 millions. By the time Pakistan's turn came some members of the consortium had grown weary of well doing, and the sum offered to cover the first two years of the Pakistan plan—£190 millions—proved to be only about half the estimated need. No doubt the American administration, in its new imaginative and generous mood, could have bridged the gap. But part of this mood is a shrewd determination to see that its western partners foot their share of the bill.

Britain and Germany had just increased their offers to India under American pressure. They were not so amenable when Pakistan's turn came round. However, the consortium will meet again and Pakistan's request for a firm figure of some £360 million for the first two years of the plan will be reconsidered.



It is to be hoped that in spite of the alarms in Europe, the uncertainties of Britain's economy (some of its contribution might legitimately take the form of "tied" loans) and the preoccupation of all the European partners with the next phase of negotiations in the Common Market, Pakistan's plan will receive a more favourable response at the next meeting. Pressures in Europe are real and



* The United States, Britain, West Germany, Japan, Canada, France and the World Bank.

harsh enough. But the western Powers should have learnt by now that to neglect apparently less urgent problems simply allows such problems to explode into current disasters with all the more inevitability and speed. The communists conduct their strategy on a global basis, pressing here, there and everywhere while the western powers tend to rush about after them, the fire engines always one step behind the fires. Today, apart from Kashmir, there are no major fires threatening the Indian sub-continent. But this condition depends absolutely on the fulfilment of both the Indian and the Pakistan plans. There is no sense in waiting until the fires begin. And the plans offer the best and most immediate means of seeing that they do not break out.

One must remember that in proportion to the needs of a densely populated land, the Pakistani second plan—like India's third—remains very modest. Even if all goes well, the annual increase in income per head will not be more than 2 per cent, and this from a base of about £23 a year. All that the whole great effort proposes is that the economy should begin to lift off the depths of desperate poverty. Men and women are not going to "live it up" at western expense. For millions of them, the plan represents the marginal ability to live at all. Without it, the present relative peace of the sub-continent would founder in ruin or anarchy.

If the western powers decide to meet Pakistan's full need for foreign exchange over the next five years—£820 million—the annual contribution is not much more than one-sixteenth of one per cent of their combined national income, a sum which they smoke and drink away every few weeks. Even if the plan were an irresponsible gamble, it could be carried without a ripple on the surface of western prosperity. And it is not irresponsible. The Pakistan regime has shown capacities for leadership and commonsense rare in the turbulent first decades of independence. The administration has surmounted unimaginable difficulties and is now transforming itself to become a more effective instrument of economic growth. The plan itself has been carefully prepared. The tasks it proposes are practicable in the view of outside experts. No one can guarantee that the effort will fully succeed. Wars, invasions, floods, all the hazards of monsoon agriculture cannot be ruled out. But western nations have had in the past to act on odds considerably less favourable than these. And if they have now decided to act only upon certainties, they can be certain of only one thing: that the forces of history—which again and again have favoured the venturers, and even the gamblers—will begin inexorably to pass them by.

Motor Profits Now

It takes a lot to depress the chairmen of the two remaining large British car manufacturers. Lord Rootes can hardly nowadays be as optimistic as Mr George Harriman of the British Motor Corporation; but he was able to tell shareholders in his annual statement last week that Rootes' new models have been enthusiastically received, even if the losses from the company's recent strike may not be made good in the rest of the current year. Mr Harriman feels it necessary, "though gloom and despondency are all the fashion," to assert "my firm confidence in the future of the industry in general and of the British Motor Corporation in particular." The group has demonstrated this confidence by holding its dividend, though this is only just covered by profits; Lord Rootes decided to cut his dividend from 12 per cent to 4 per cent, though profits were still large enough to cover the old dividend 1¼ times. The losses from the strike at Rootes must be a heavy burden; if they are so large that they may not be recovered this year, the figure may well exceed £3 million.

Both companies can be fairly satisfied with their performance last year, for neither did worse than the industry as a whole. Vehicle output fell 21 per cent in total, but that of BMC fell only 10 per cent, from 669,000 to 601,000, and that of Rootes about 18 per cent. BMC was sustained through the year by the growing popularity of its baby cars—it took the public more than a year to realise their merits, and forget the somewhat porous reputation that the earliest examples acquired—and by the growing practice of buying a light van to use as a car. These successes allowed it to increase its share of British makers' sales on the home market from 39.9 per cent in 1960 to 41.2 per cent in the first half of 1961. The output of light vans rose 45 per cent; all types of commercial vehicle accounted for 33 per cent of BMC output. Where the group did lose was in export markets. Shipments to the United States, in particular, were 69,000 fewer than in the previous year, representing more than the total fall in the company's output. But its share of British car exports rose from 33.8 per cent to 39.9 per cent.

BMC thus strengthened its competitive position. But it is surprising that a fall of £35 million in sales should cut profits by £16 million in a year when there were no model changes. The price increases that the company made this autumn suggest that its margins were proving inadequate. One might suspect, however, that the management did not cope as well as it had hoped with the problems of last winter's slump. The strike at Pressed Steel last April must have also hit BMC profits, by again bringing output nearly to a stop. In all, the company lost 34,000 vehicles from strikes during the year.

Rootes naturally suffered a bigger fall in profits than BMC; it was operating at only about 65 per cent of capacity, while BMC managed to run at 80 per cent. Even this rate of output is better than had been expected from Rootes in a year when it can have exported few cars to the United States—which had taken about a quarter of the company's exports in the previous year—and when its second best export market, Australia, also reduced imports sharply. But Rootes was able to hold on to a steady 10 per cent of the home market, while Vauxhall saw its share slide as sales of the old Victor died away, and Standard-Triumph's share fluctuated widely.

A rapid expansion of van production did much to help Rootes last year; commercial vehicles accounted for over a quarter of its total production. The strengthening of this side of the business has been one of the management's chief innovations in the last few years, and it has paid off handsomely. The new forward-control light vans that the company introduced in 1959 seem to have done most to improve the company's standing in this market. But the company did well, despite these aids, to keep itself profitable when running at 65 per cent of capacity. And it does not look as if its non-manufacturing activities cushioned the fall in output. Rootes was among the first companies to reduce output in the autumn of 1960, whereas BMC was the last; and in consequence Rootes seems to have had a less serious stock problem and to have been able to raise output sooner in the spring. By preventing such abrupt fluctuations in output, shrewd management must have helped to maintain profits.

What are the prospects for these companies in the current year? Anyone who wants to invest in the motor industry has now to choose between them and the Continental companies. Ford and Vauxhall are in their parents' hands: to buy Rover is now really to invest in

commercial vehicles, and Jaguar has a somewhat specialised appeal with its one per cent yield.
Most of the Continental shares offer pretty exiguous yields, too ; and now that Rootes offers something similar, the potential investor who wants immediate income out of motors finds himself driven back to BMC or nothing.

NOBODY reading Mr Harriman's statement could doubt that he expects that the company will do better this year than last. Now that the winter has started and home sales have slumped without affecting BMC's belief that output can be kept as near capacity as possible until the end of January, there can be little risk that the company will suffer the same troubles as last winter. If home demand rises in the spring as it did last year, BMC should be able to keep at a profitable level of output throughout the year. The new models are one reason for the happier situation this winter ; dealers need to build up stocks of them. Another is the recovery in exports, especially those to the United States ; instead of sending no cars there, BMC is shipping 900 sports cars a week. Mr Harriman adds another reason for optimism: stocks of BMC vehicles throughout the world are falling, so that the prospects for exports are that recovery should continue.

Next year is an even more difficult one than usual for which to predict home demand for cars. If Mr Lloyd does nothing to stimulate demand, as looks more possible now that his wage freeze seems to be thawing, one of the factors that was being relied on to produce a rise in demand may have gone. But there remains the fact that the public is saving—or reducing its borrowings—now, and should therefore soon have more cash to spend on durables. And the Motor Show gave makers the impression that many people would spend this money on cars. BMC should be able to take at least as big a share as it did last year, though the competitive appeal of its modified medium-sized cars has yet to be tested against that of the new Victor and the Rootes models. And it is also too soon to tell what appeal the chromium-plated Elfs and Hornets of its baby car range will prove to possess. But the increased prices should anyway raise its margins. Its expansion programme will not increase capacity much this year ; the new assembly hall will not come into use until next August. But the company will have to carry the overheads of unfinished factories, and the cost of switching lorry and tractor production to Scotland.

Rootes's prospects for next year are dominated by the effects of the strike at its Acton works. When that ended yesterday after twelve weeks, it had cost the company fully two months'

output, at a time when its new models should have bee helping to strengthen its position in the market. In August the last month before Rootes was hit by the strike, its shar of the market seems to have risen to roughly 12 per cent though the Super Minx had not then been introduced. Th price cuts on the old Minx and the Gazelle, and the introduc tion of the Singer Vogue, accounted for the rise. These however, must have narrowed the group's margins, thoug the high prices of the Super Minx and Vogue should have th opposite effect—so long as these do not affect sales. Roote now covers a wider spread of prices with its cars than before and it should be able to keep a rather larger share of th home market. So, with production going again, Rootes ca expect to be doing rather better than it was last year ; lik BMC, it is sharing in the recovery of exports. It too has onl a limited amount of new capacity to fill this year, now tha it is making more models. The big rise comes with the ne small car, in the spring of 1963. The present year might wel have proved more profitable than last for both BMC an Rootes, but for the latter's labour troubles.

Both these companies have very large capital commitment BMC invested over £20 million last year and seems likely t spend more this year ; outstanding commitments total £1 million and a further £36 million will be spent in the nex three years—its expansion plans seem to be stretching an growing. Last year its liquid assets fell from £29 million t £18 million ; if profits should not rise this year, BMC woul be needing to borrow by its end. Rootes was better place last July, with cash exceeding capital commitments ; but th strike must have altered this.

Apart from the prospect of entry into the common marke which will face these and other British producers with th need to increase sales outlets there, BMC and Rootes fac another common problem—keeping their new capacity busy Rootes's ambitious plans for its small car may make its prob lems bigger than BMC's. It is unlikely that Rootes can matc BMC's or Ford's prices, and it will be competing with them If it can equal the engineering qualities of the BMC babie with more style, it might be able to get a reasonable share o the British market. But in a venture like this, the smaller firm is facing a dilemma. Should it stick to the medium-size market, where its volume is comparable to that of BMC an Ford, but the scope for expansion is limited ? Or should i beard them in the small car market, where they are wel established and its volume is likely to be smaller than their and its costs higher. Since the war, Rootes has chosen th first course: it seems now to have changed its mind. Thi may offer greater rewards—but at greater risk.

Pecking Order in Aviation

"The benefits of competition cannot be achieved painlessly."
—Air Transport Licensing Board.

PROFESSOR JACK and his colleagues at the Air Transport Licensing Board emerge with great credit from the marathon series of hearings during which they sought this summer to establish a new, competitive pattern for aviation in Britain. Whether in future their decisions are accepted by the Minister of Aviation or reversed by him, as the Cunard Eagle's licence to fly the Atlantic was withdrawn last week, the board has made aviation history, for it has defined, for the first time, the conditions under which reasonable men (as distinct from politicians) think that competition should be encouraged in the air and the limits beyond which they think it would do more harm than good. Conservative administrations have groped for a decade to find a criterion that would give independent airlines room for growth without undermining the nationalised air corporations. The board's own yardstick was explained on Tuesday in the lengthy preface to its judgment on more than 70 applications for new air routes inside Europe which it heard during the summer.

Briefly, the criterion amounts to this. There is room for a second British airline on any route already served by one of the two nationalised air corporations where it can be shown that the nationalised corporation could reasonably expect to continue carrying at least the same number of passengers after the new service began as it did before. Another way of putting it would be to argue that where traffic was growing fast enough to require extra flights with new aircraft, an independent airline should be allowed at the outset to provide this extra capacity, not BEA or BOAC. Applying this formula to some of BEA's routes, the board demonstrates that while it would check the growth of the corporation for perhaps the first year of the new service (but not, by definition, cut into the volume of traffic already carried by the corporation), BEA's traffic would soon start to rise again, but necessarily at a slower rate than in the past. This formula is based on estimates about past and future traffic, and the board quite deliberately discounts arguments of BEA showing that the corporation's long-term plans already took account of this future traffic. Plans, it hinted, can be changed at short notice.

This formula has its flaws, but it does at least give airlines some guide to what applications are likely to succeed—with the board at any rate—in the future and what may not ; without it, they would have to go repeatedly through the expensive and time-consuming process of putting each case to the test in order to discover what the board would wear. But of more relevance to the present differences of view between minister and board is the fact that here the board has spelled out precisely how it interprets its terms of reference under the new civil aviation act. This interpretation differs at several important points from the views expressed by Mr Thorneycroft last week when he countermanded the board's decision to allow Cunard Eagle to fly on the North Atlantic and from those of Sir Fred Pritchard, the commissioner appointed by Mr Thorneycroft to hear BOAC's appeal against the board's award to Cunard Eagle. Both appeared to reject the idea, cardinal to the board's formula, that some check would have to be accepted on the corporations' rate of growth if *lebensraum* for the independent airlines were to be provided.

The minister now has to make up his mind whether to stick by his own interpretation, which would make nonsense of the new Act, or whether to climb off a creaky limb with what grace he can muster. Meanwhile, it is worth considering whether the board's formula for competition is a workable one. Applied to this summer's applications, it gives the independent airlines only one-third of the routes for which they asked and not starting until 1963. On the remaining two-thirds the traffic was not regarded by the board as potentially buoyant enough. These licences will indeed allow them to fly into almost every country in Europe this side of the Iron Curtain, except to Germany and Cyprus, and to several points inside the British Isles. But the board's formula does not always allow them to fly to the particular destinations they wanted, nor do the licences add up decisively to an economical network for each operator. The formula will not provide enough work for the aircraft that the independents now have on order, and which they presumably would regard as the minimum fleet that they could make to pay. This is the kind of gift horse whose teeth have to be looked at, however ungraciously, because there is a real danger that the beast will eat the independent airlines out of house and home.

THE success of the board's policy is bound to depend also on the reaction of foreign governments to it. When the board recommended a licence for Cunard Eagle to fly on the North Atlantic it knew that the United States government was unlikely to raise difficulties at the other end ; not so in Europe. With the exception of Holland, the Scandinavian countries, Eire and possibly Belgium, European governments may well allow in a second British airline only if BEA cuts its flights proportionately. This would be intolerable ; there is no justification for asking BEA to surrender existing traffic to the independents, nor does the board intend this to happen. If it is assumed that the air agreements negotiated between the governments of most European countries work on a rule of thumb formula that divides traffic 50-50 between the two national carriers, it could in theory be argued that the arrival of a second British airline does not upset this ratio, since the new airline is merely providing extra services that would otherwise have been put on by BEA. This would be the proper line for the Ministry to take. But, unfortunately, matters are not as simple as that ; in addition to these agreements which are necessary if the air service is to be flown at all, BEA's silver-tongued negotiators have made their own private arrangements with the majority of European airlines which have the effect of allowing BEA to carry a great deal more than its formal 50 per cent of the traffic. It is these pooling agreements that may make life difficult for the independents unless BEA decides to be "co-operative," which would be asking a lot. In the case of France, for example, the board frankly admitted that the only way for the independent airline, British United Airways, to exploit its licence for two

daily flights to Paris would be to join the Air France—BEA pool. How much competition is there in a cartel of three?

It is noticeable that the board's new formula also establishes something approaching a pecking order among airlines. At the top are the two nationalised corporations, whose existing traffic must never be eroded. Below them in rank come the two independent airlines with the most vigorous backing from the shipping companies; Cunard Eagle and British United Airways. The two biggest shareholders in this latter group are Furness Withy and Blue Star Line, with 20 per cent each, followed by Clan Line and British and Commonwealth Shipping with 16 per cent each, Whitehall Securities and Mr. T. L. Guinness with 10 per cent each and the Hunting group with 8 per cent. The board said that there was little to choose between these two. It gave BUA the skeleton of a European network to add to its African routes, and Cunard Eagle one to Scandinavia and inside the British Isles.

A good deal lower down in this ranking come airlines such as Silver City, also backed by shipping companies (in this case P and O), but ones that, in the board's view, are apparently reluctant to increase their investment to any significant extent. Silver City got no new licences for reasons that could be summarised by the board's comments on its application for flights to Marseilles and Genoa: "It did not appear to us that the applicant was willing to invest in the modern aircraft which will undoubtedly be required if this route is to be operated successfully." This is a statement of considerable importance, since it serves notice that the board has no time for airlines that are going to put less effort into developing routes than the corporations might have been expected to do.

This does not hold out much promise for airlines at the bottom of the pecking order, the small private and charter companies holding on by their fraying boot laces. Skyways, from which the Bibby line has recently pulled out, did not figure in the current round of applications, but several other small airlines did. With them the board was sympathetic but firm. It gave some new routes to the Liverpool-based company Starways. It said that it would have given Tradair the routes it asked for if that company could have found financial backers. Tradair is now in the hands of the receiver. Altogether, nearly a dozen small airlines may have gone out of business by the end of the year.

There are perhaps 60 private air companies in the country, about 30 of them operating passenger services of one kind or another. Some of them are well and sensibly managed, but conditions have been made increasingly difficult by competition from newcomers who have undercut their bids for holiday charter flights operated by travel agents—the small airline's bread and butter. Overseas Aviation, in particular, is said to have taken much traffic last summer from other small airlines, leaving them with a good deal of idle capacity. It is little comfort to them that Overseas Aviation is now out of business; the traffic lost to that airline has pushed several of them into the red as well. The fact that passengers of Overseas and of another now dead company, Falcon, were stranded at times during the summer has made the board look with much more care on the financial resources of each airline, before granting licences for holiday flights this coming season. This takes time and meanwhile travel agents cannot wait. By long-standing custom, travel agents begin their sales campaign the week-end after Christmas; plans have to be drawn up and brochures printed long before then, and if the small British airlines are not able to get licences before the deadline, the travel agents simply have to go elsewhere, usually to foreign airlines outside the control of the licensing board.

This is a sad state of affairs and it suggests that the days of the really small airline may be numbered. The board itself thinks that much of their charter traffic will find its way on to the normal scheduled services run by airlines at the top end of the pecking order. Nevertheless, British aviation may be the poorer when small, enterprising and reputable companies like Air Safari and Tradair can no longer find a place in it.

Crosses of Gold and Silver

A round-up of a remarkable week in international finance, in which the markets have done some quick homework on the principles of bimetallism and the British authorities have made one bow to gold and another to international credit.

Curiouser and Curiouser

JUST before last weekend bullion dealers were reporting a marked lightening in the demand for gold, and the London price dropped quickly from its effective support point of just under $35.20 an ounce to $35.15. Exactly why this occurred at a time when the exchange markets are spending their time deciding which of the major currencies is weaker than the other is not immediately apparent, but it is none the less welcome. It was a little strange, therefore, to learn at the weekend that whereas private operators were losing their preference for gold, central bankers were not; the United States showed a gold loss for the week of $300 million, the largest on record, and almost entirely attributable to a conversion of dollars by the Bank of England.

There was no immediate reaction in the gold market, which remained quiet at the beginning of this week—though the revival in gold shares got a new stimulus. Then on Wednesday the gold bullion market was reawakened by the jolt given by the United States Administration to the silver market. This had long been expected, and the big speculative position that has been building up in silver has fundamentally no relation to the quite differently based speculation in the gold market. This did not stop some commentators from docketing the removal of the silver peg as another manifestation of weakness of the dollar, and the shades of bimetallism from putting in a reappearance.

There was no reaction to the rise in silver, it is encouraging to report, in the exchange markets, where sterling continued generally strong and the dollar generally weak. The recent strength of sterling has been an interesting commentary on the power of the printed word. The words "devaluation" or "flexible exchange rates" have probably been used more often in British newspapers in the past three weeks than they were in the previous three years. This is not because devaluation is considered basically more likely now than it was a few months ago but because people have suddenly become less inhibited in using the word; and this is a distinction that exchange operators, so far, seem to have understood. They did react, however, to Wednesday's report that the Chancellor had told trade union leaders that Britain was facing the danger of devaluation. Although this drew the quick correction from the Treasury that the Chancellor had referred to this as a threat existing in July, not now, sterling was sold from New York on Thursday.

IMF Good—

THE one welcome item in the week's exchange news was a further repayment by Britain to the International Monetary Fund, of £50 million. This follows October's repayment of £100 million, and reflects a continuation, at a rather less hectic pace, of the inflow of funds. These repayments, which now cover some 28 per cent of the drawing of £535 million, increase *pari passu* Britain's standby facilities at the Fund, which could immediately be drawn on if the flow of funds were reversed. The July drawing was made exceptionally large, to achieve a decisive impact on the speculative mood. Now that the tide is running the other way it is obvious good sense to push the money back into the Fund—and this month Britain has repaid not only in dollars but in marks and French francs. The Treasury points out, as it must, that the repayments reflect no corresponding improvement in the underlying balance of payments: they are being financed by an inflow of capital, some of it representing the reversal of leads and lags in current payments and some an inflow of foreign funds. There are as yet no statistical indications of its size. The latest figures of sterling balances published this week show a fall of £208 million in the holdings of non-sterling countries in the September quarter—but this was largely the result of repayment of Basle credits to Continental central banks. Allowing for this, it looks as if European balances rose in these three months as a whole. But balances of North American, Latin American and other non sterling countries fell—the residual group, which includes Iraq, showing a particularly sharp fall of £40 million to £250 million, compared with £340 million at end-1960. The balances of overseas sterling countries were unchanged at £2,604 million.

—Gold Conversion Bad

BRITAIN'S repayment to IMF was a constructive step for sterling and for world payments as a whole. Its conversion of dollars into gold the previous week was not. It is true that the United States Treasury, very wisely in the circumstances, has not voiced any criticism of this conversion, even in private. It is anxious to do everything to support the strengthening of sterling, since it recognises that the fate of the two key currencies is linked together. And it accepts the Bank of England's contention that one key currency must be backed by gold and not by another key currency.

This has long been part of the financial folklore; but has it, in present circumstances, any real basis? For it is surely difficult to put too much importance on the colour of the money by which sterling's external liabilities are backed when the total of that backing is itself a bare one-third cover. If all the sterling IOUs are presented, the bank will not be able to pay anyway, whether its one-third backing happens to be held in gold or in dollars. Once the logic of the linked fate of the key currencies is accepted—and it must surely be accepted in London if it is in Washington—then the traditional habits require a thorough revision.

The real backing behind sterling as a key currency, as has been demonstrated at least three times in recent years, lies not in its gold reserves but in its access to IMF and other sources of international credit. Britain's quick repayments to IMF are now helping a little in getting the world used to using that institution as an international credit clearing, and one hopes that they will help Dr Jacobsson get his scheme for supplementary facilities drawn up, as he had rather boldly predicted it would be, before Christmas. But Britain, which depends so much on the extension of international financial co-operation, must lose no opportunities of making its own contribution to it. They will serve it better than an extra $300 million in gold metal.

Silver Off the Peg

THE United States Treasury has relaxed its grip on the price of silver sooner than expected. The speculative pressure had built up from rising demand for industrial and coinage uses, which were pressing on the United States source of supply. The monetary implications in the United States are discussed on page 904. The United States Treasury took 46 million oz of silver for minting its subsidiary coinage last year, and must have been responsible for a significant part of the reduction of 92 million oz in the Treasury's "free stock" of silver since the end of last year. American industry drew 22 million ounces from the free stock last year to supplement domestic production and imported supplies and presumably required most of it for genuinely industrial purposes. That still leaves room for a considerable volume of speculative purchases this year.

Though the US Treasury's vaults are not directly open to foreign purchases, buyers in Britain did have the opportunity to participate in this silver-tipped speculation, though compared with the scramble that ended the International Tin Council's attempt to stem the rise in tin prices last summer, the silver speculation was an extremely refined affair.

Mainly because of heavy imports from China, supplies of silver imported into Britain rose by 10 million oz to 21 million oz in the first ten months of the year. Imports from the United States accounted for one million oz of this rise. Allowing for larger exports of silver bullion, alloys, coins and silverware, net imports so far this year have been greater than consumption in 1960. The initial rise in the price of silver—in London of 5½d. to 85½d. a fine oz for spot supplies, and 9⅝ cents to 101 cents an oz in New York—gave the short-term speculators their chance to take a quick profit. Business was substantial, but not as hectic as some people had expected; silver has by no means been a small man's speculation.

Many guesses have been made about what will happen following the suspension of silver sales by the US Treasury: the most plausible is that the price of silver will not rise very much higher. It must be remembered that the silver peg was originally a prop, and now that the United States will stop minting newly-mined silver, a significant part of the gap between new supplies and annual consumption will be closed—this is estimated to have been about 150 million oz in 1960. A comparatively small rise in the value of silver may do the rest. It might stimulate greater exports from Eastern countries, and a further rise would soon make the melting down of some silver coinage worth while. The US Treasury still has the remainder of its free stock which it may use to prevent a runaway in prices and manufacturers have presumably bought as much silver as they could. One difficulty might be that restrictions in the purchase of silver are rare, and the metal is now a more convenient hedge against inflation than ever.

BUSINESS NOTES

THE ECONOMY

Slightly Sourer

ALTHOUGH it sees signs that British exports are becoming a little more competitive, the National Institute of Economic and Social Research, in its latest *Review*, is not as optimistic about the trade balance early next year as it was in September. The slowing down of expansion in Western Europe and the consequential loss of earnings in primary producing countries affect two markets on which British sales overseas depend significantly. The institute thinks that export performance may already have begun improving; but it also reckons that even a mild resumption of stockbuilding, after a period in which stocks have been run down, would strengthen the upward trend in imports. Both exports and imports may go on rising for a while; but there is less room for confidence that exports will rise much the faster.

The institute thinks that the Chancellor's July measures brought about a slight dip in national output between the second and third quarters of the year—an appreciable fall in consumption, probably some decline in inventory investment, outweighing a continued increase in fixed investment. But it feels reasonably clear "that the top of the current investment boom has almost been reached and that 1962 may see a downturn"; investment in manufacturing may be lower next year than this, and the increase of about five per cent planned in public investment is unlikely to offset this completely. Linking its prognoses abroad and at home, the institute concludes with cold detachment that "if the improvement [in exports] is not reinforced over the next few months, it will be clearer than ever that domestic restraint is not an adequate way of operating on the balance of payments, and the case for a major reappraisal of external economic policy will become powerful." This institute, which might be described as the best NED we have, modestly refrains from any further contributions to the chorus about planning.

Investment Uncertain

THE latest figures of new orders for the engineering industries and for machine tools suggest that the trend towards lower demand at home, but higher demand abroad, may now have been reversed. But since the August figures suggested just the opposite, one should not accept this too readily. While new orders for engineering and electrical products from the home market were two per cent lower than in 1960 during the third quarter of this year, they were six per cent higher in September than a year before; export orders were four per cent above the 1960 level. New orders for machine tools have shown even sharper fluctuations. Export orders in September were six per cent below those received a year before, though from May to August they had been 50 per cent above the 1960 level; and they are said to have remained below the 1960 level in October. New orders from the home market in September continued the recovery that was noticeable in August, and although six per cent lower than a year ago they were showing quite an improvement on the preceding months; up to the end of July the average had been 20 per cent below 1960.

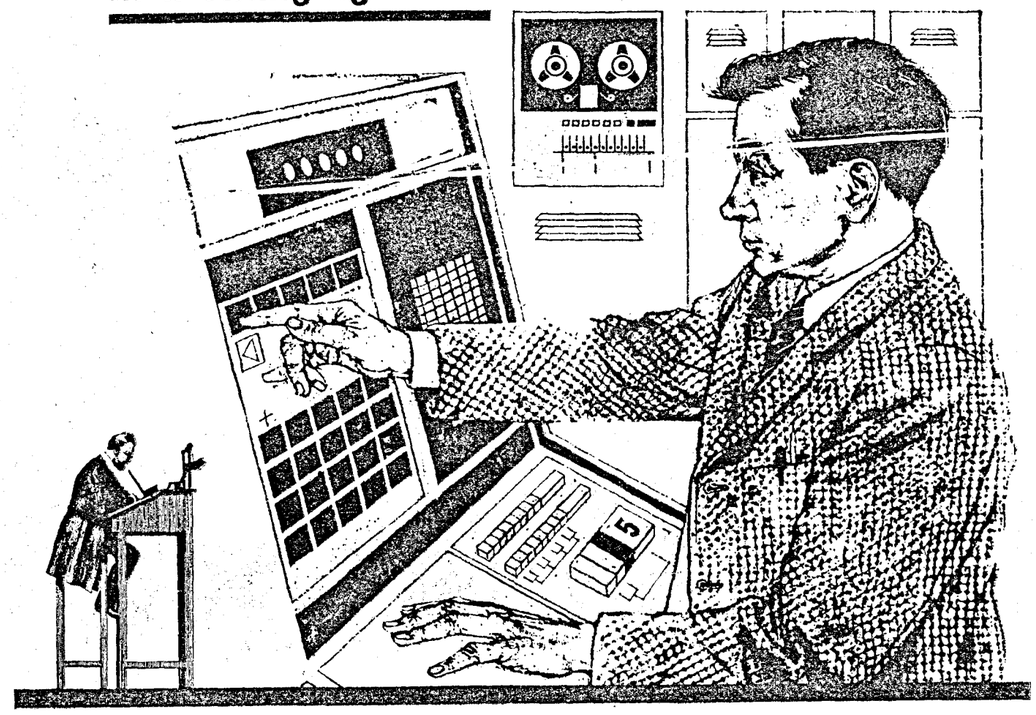
Monthly fluctuations such as this in orders received by industry are often no more than the result of the fortuitous timing of big contracts. New orders for engineering goods from the home market, for example, fell more in August this than last year; the rise in September might be no more than a reaction. The trends in orders for machine tools, however, might be rather more durable.

IN THE MARKETS

Good for Kaffirs

THE fall in equity prices that followed the shock of the electricity wage award was checked this week, and prices were on balance edging upward. The strong affirmations of "toughness as before" by the Prime Minister and the Chancellor had some influence, but confidence in financial stability is far from restored, and Mr Lloyd's reported remarks to the trade union leaders, even with the doubtful benefit of the subsequent official gloss, did not help it. For the equity market, the implications of financial toughness on the one hand and a renewal of inflationary strain on the other are far from clearcut: no one is sure, in the new investment climate of the sixties, whether inflation is still good for equities, and strikes are still bad.

The one section for which recent events have been plainly favourable has been the Kaffir market. The *Financial Times* index of gold shares reached 61.1 in mid-week, about 17 per cent above its low point in July. This recovery has a twin base: increasing speculation about a depreciation of the dollar and other currencies in terms of gold, together with rather better feelings about South Africa following th rise in reserves and limited relaxations i exchange control on foreign resident: Some London brokers are now saying tha the South African authorities must befor long lift these restrictions altogether, whic would bring London prices back into lin with those in Johannesburg. It should b noted, however, that further restrictior have been imposed this week on Sout African residents holding liquid assets ove seas.



For gilt-edged, by contrast, the electricit award was an unmitigated blow, and whil the market has presented a steadier appeai ance this week, the optimistic mood of th early autumn has disappeared. Institutior that were implementing important change in investment policy, buying more fixe interest stocks and switching from shor dated into long, have been stopped in the tracks. The market believes that this week better tone owes something to official groon ing: the authorities are now preparing t deal with the £758 million of 4½ per cer Conversion stock that matures on Februar 15th. A conversion issue is expected befor Christmas, and the intake of the maturin stock by the government broker as well a the market impression that the authoritie want to create a more favourable basis fc the conversion have contributed to the firm ness of short bonds. The market is gues: ing that the authorities will offer not onl another short—1965 and 1967 are two po: sible dates—but also a medium dated stocl which the government broker needs if he to retain his grip on the market. Substar tial sales have been made in recent montl from the "long tap," the 5½ per cent 200: 12 stock, but it seems unlikely that th authorities have come near the end of it y —£500 million was issued in October la year. The market is hoping that part of th maturing stock will be paid off in casl This would boost bank liquidity, and th authorities have to weigh whether this a time to do so.

GAS

Money for Methane

"ABOUT £7 million or more" was th Gas Council's estimate a month ag of the cost of the two specialised tanke that are to be built to carry methar refrigerated to Britain. "Or more," appeared this week, meant "or £10 million This is the sum that is now to be raise in the City by the two companies set up t build the tankers, subsidiaries of Conc International Methane and of Hould Brothers respectively. These vessels will l

in a changing world

If ten Dickensian clerks with ten pens worked ten hours a day for ten years, how many sums would they have done? Fewer, no doubt, than one modern electronic computer can do in ten hours.
In commerce, in industry, in research and in defence, the computer is performing prodigious tasks today—saving time, saving money, saving valuable manpower.
And Mullard's contribution to this revolutionary development? Principally in the shape of memory cores and assemblies, transistors, valves and other specialized devices, but also to some extent in know-how.
Mullard research and applications laboratories play an important part in satisfying the urgent and critical needs of the designers of modern electronic equipment. Could they also be of service to you? If you would like to find out, please write to us at the address below.

Mullard products used in computers include:
FERRITE CORES · MATRIX ASSEMBLIES
COMPLETE STORAGE SYSTEMS
HIGH SPEED LOGIC AND CORE DRIVING TRANSISTORS
SEMICONDUCTOR DIODES
SPECIAL VALVES · THYRATRONS
COLD CATHODE TRIGGER AND COUNTING TUBES

let on bareboat charter for 15 years to British Methane Imports, a company owned half by Conch and half by the Gas Council ; but the ultimate security, in effect at least, is the council's long-term contract to buy methane from Algeria via this operation.

The smaller part of the finance will be provided on loan to the two shipowning companies by the banks, and repaid in the earlier years of the charter. The greater part will come mainly from insurance companies. This will take the form of cumulative preference shares issued by the two companies, carrying a rate of 8 per cent, to be gradually redeemed during the term of the charter. Until the money is actually put up, there will be the normal holding commission to lenders of one per cent.

Inside Britain, the Gas Council will be investing £18 million in other elements of this scheme to supply cheap gas ; at the other end in Algeria Conch and the French will be involved in another £14 million on a gas liquefaction plant. The council has clearly been anxious to minimise drawings upon public funds for this investment. Sir Henry d'Avigdor-Goldsmid in the Commons this week suggested that precedent set in the financing of these tankers offered " a convenient way of getting round the ruling of the Treasury " on public investment. But the whole methane deal has Government approval, and the council is not itself directly the investor, even if it is providing the really significant security in its promise to buy the methane that will pay off the charter. One consequence of keeping this actual investment outside its own responsibility—and the ships after all will be operating abroad in a business in which the council cannot be expected to have any competence—is simply in cost. The rate of interest charged on Exchequer advances to nationalised industries is geared to the long-term rate of Government credit ; at present it would probably be at about 6¾ per cent, not 8. That, certainly, is a rate with a Treasury guarantee ; but any binding contract entered into by a nationalised industry, ultimately, has that guarantee too.

COAL

More Expensive for Some

At the end of 1960 the National Coal Board's accumulated revenue deficit after paying interest came to £78 million, which was £16 million more than the board's internal funds could cover: it is authorised to borrow from the banks in such circumstances, " but it could not then secure necessary accommodation from the banks." The Minister of Power then arranged to advance this sum temporarily to the board. Its operations this year will mean a current deficit and increase this margin outstanding over internal funds, and may do so again next year ; so this week the Minister sought authority from Parliament to advance up to £50 million up to the end of 1962. This is separate from the board's borrowing on capital account for fixed investment, long-term and short-term limitations which have already been set by Parliament. Mr Wood obtained his authority ; the board, in the meantime, announced increases in a number of coal prices and which is approaching key wage negotiations with the miners, came in for much criticism and unsolicited advice.

The price increases announced this week are at least—and at last—selective. They are confined to coals produced in Scotland and the North West, another division losing very heavily ; to anthracite, of which consumers have always been anxious to get more than was available, at prices that have never covered the full cost of mining it ; and of large coals, which are costly to produce and hold back the efficiency one can achieve with mechanisation. There would be no reason to quarrel with these selective increases, which are better than general increases right across the whole coal supply, if they had been applied equally. They have not, in fact, been applied to domestic consumers, who must be among the largest consumers of them ; the board has said it may have proposals to make about house coal, but not this winter. If it may consider the domestic market much more vulnerable to competition than those industrial markets to which it is raising the prices, there could be some commercial argument for this. But surely it is not worried about pricing itself out of markets that it can hold only by selling coal at a loss.

BUTTER

Double Dutch to the Irish

Despite their prickliness and procrastination, all but one of the exporters of butter to Britain who attended the GATT conference in September have now meekly accepted GATT's solution for the butter problem. This would reduce exports to Britain by 20,000 tons in the six months to the end of March by cutting supplies from countries other than " traditional " sources —Australia, New Zealand and Denmark— from 60,000 tons in the corresponding period a year earlier to 36,000 tons. Only the fighting Irish—offered a quota of 4,000 tons against exports last year of 10,000 tons —still refuse to submit.

Quotas for other suppliers are conditional upon control of all imports. Fulfilling a promise made earlier this month, the Board of Trade has accordingly scotched all further imports of Irish butter. Since Eire is not a member of GATT, an anti-dumping duty is the most convenient weapon, and it was imposed this week. The degree of dumping has been assessed at 205s. a cwt, but adding a round sum of 200s. a cwt would have served as well : the dearest butter on the market costs little more than 300s. a cwt. New Zealand raised the price of its butter 20s. to 270s. a cwt last month, but has not yet made any further increase in its prices.

One would have thought that during the many tedious discussions of the butter problem this year all that could be said would have been said. But in setting out their objections to the GATT scheme in a white paper, the Irish still have some pungent comments to add. This paper gives the first authentic account of the GATT negotiations which the United Kingdom has attempted partially to conceal (like weightier negotiations) in an ineffective smokescreen.

In Irish eyes, all exporters were making losses and were therefore technically guilty of dumping when the price of butter dipped to 250s. That should have debarred New Zealand and Denmark from making their applications for anti-dumping duties to the Board of Trade. Eire claims to be " one of the oldest traditional suppliers of butter to this market "—an uppercut aimed at these two competitors. It also claims the lowest milk prices in Europe and the highest consumption of butter per head—a jab at European suppliers who have been asked by various butter bodies to reduce the surplus by eating more butter and milk products themselves. If, Dublin says, all Europeans ate as much butter as the Irish, then, bejabers, there would actually be a shortage.

The Irish case—it encompasses the virtual disappearance of Eire's £5 million egg trade with Britain since 1950 and the fact that among butter exporters only Australia and Eire run a trade deficit with this country—is evidently more confusing and exhaustive than intentionally hypocritical. A group of grocers in the north-west has protested at the duty on Irish butter and calls for " a full inquiry " into international butter supplies. Heaven forbid ! Enough damage has already been done.

STEEL

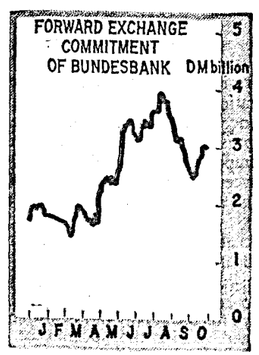
Board and Authority

Britain's Iron and Steel Board has a good deal more power over the British industry than the Luxemburg High Authority has over European steel: what will happen to it when Britain joins the common market and ECSC? This is the main question overhanging this issue inside the British steel industry today: in a London discussion this week Mr C. R. Wheeler, president of the British Iron and Steel Federation, made no more than a discreet reference to it, but Dr van Kleffens, London representative of ECSC, offered a detailed comparison of the differences in powers between the two supervisory bodies. There was no formal contribution from the board itself.

Dr van Kleffens pointed out that the Iron and Steel Board

> has jurisdiction over a wider range of products than the High Authority ;
> can arrange for the supply of raw materials itself, and [advise the government to] provide production facilities that it con-

siders necessary but private steelmasters won't install;
has to approve all private development;
may order the cost of transport to be published;
can levy contributions for payments related to the import and distribution of steel-making materials.



The High Authority's powers on all such issues are more circumscribed: but it does have powers to guard against internal levies and quantitative restrictions in member countries' discrimination and special taxation subsidies and cartels, with which the board is much less concerned.

The effective future of the board when Britain goes into Europe is certainly a matter of some uncertainty: whereas the BISF, which for some years perhaps has been in relative decline, may be on the way back to somewhat greater strength. Mr Wheeler commented modestly: "Certainly the steel federations of the six present-day Community members have taken on new and important functions since the opening of the common market: and our federation may possibly follow the same course." His final words may indeed have indicated the direction in which he feels the federation's functions might develop: "We have all I think learnt a great deal since the bad days of the early thirties about the wastes of reckless unfair price cutting in a highly-capitalised industry such as steel."

Das Swapengagement

THE Bundesbank's autumn review of the German economy includes two new items, a chart of the bank's forward exchange commitment and a table of foreign borrowing by German industry, which have a special international interest: no other central bank publishes this information. The chart traces the Bundesbank's forward commitment on the re-purchase of dollars against marks from the commercial banks, mainly in connection with the transfer of short-term funds to foreign centres. These covered transfers rose sharply under official stimulation after the mark revaluation. The turn-round in German reserves after July, however, put pressure on liquidity and the banks reduced short-term balances and investments abroad by DM 1.5 billion from mid-August onwards. At the same time official policy also shifted: the Bundesbank announced that it would repurchase dollars at a discount of one quarter per cent instead of at the spot rate (earlier it had actually offered a forward exchange premium) and the minimum forward swap period was increased from two to four weeks. By the end of September the bank's commitment was DM 2.6 billion. At the same date total assets of the banks in foreign money markets were DM 4.4 billion, and short-term credits were DM 1.2 billion, which suggests that despite earlier losses after revaluation a substantial part of these assets were not covered by a forward exchange contract. In October the banks again put money abroad as the money market became fairly liquid and the Bundesbank reduced the yield on money market paper. Last week, a further cut was made in minmum reserve ratios, restoring them to the level of October, 1959, to help the banks over the extra liquidity demands of December.

Foreign borrowing by trade and industry has for some time been an element of growing importance in movements in reserves, especially at times of currency speculation; but in national balance of payments figures the bulk of this borrowing is usually lost in residual errors and omissions. The German authorities have now made direct enquiries from business firms and have published estimates of direct external trade credit. The residual item however, which includes the commercial leads and lags, is still large. But the analysis shows how closely this commercial borrowing follows the swings of confidence in the exchange market.

MAGAZINES

Thomson Buys Again

MR ROY THOMSON has finally secured his toehold in the British magazine business—said toe being now shod in a stylish if slightly Edwardian buttoned boot. *Illustrated Newspapers*, of which Mr Thomson last week bought a 55 per cent interest for about £800,000, reputedly from nominees representing the interests of Sir John Ellerman, is best known for its three traditional picture magazines, the *Illustrated London News*, *The Sphere*, and the *Tatler and Bystander*. These date from before the fuller development of photographic journalism—some would say, indeed, that their illustrations by artists who used to work at fantastic speed did the job better than any illustrated journalism since, and certainly they gave more recognisable detail. Since that style of illustration passed away, these journals have never set out to rival the photo-journalism of *Life*, the late *Picture Post*, or even *Illustrated*. Of late they have somewhat adapted their format to more modern styles, but have hardly altered in spirit.

The Illustrated Newspapers group also publishes trade papers for the drapery and tailoring trades, owns the publishing house of Michael Joseph, and has a substantial printing establishment. Mr Thomson is offering minority shareholders the same terms as he did the majority—one 5s ordinary share in the Thomson Organisation plus 9s. in cash for every six 5s shares in Illustrated, representing now 5s. 1½d. per Illustrated ordinary share. He has described it as the nucleus of the magazine group that he wants to develop. It can hardly be mentioned in the same breath, so far, as the mammoth Fleetway-Odhams empire, part of which Mr Thomson failed to buy early this year. But no doubt Mr Thomson will apply to the existing enterprise his own unsentimental and pragmatic business approach; and it will form a base from which to launch any new creations he may have in mind in the magazine field.

THE JASPER GROUP

Schemes and Claims

EVEN before the conviction of Messrs Murray and Grunwald on charges of fraud in July, 1960, rumours of schemes to unscramble the affairs of the Jasper group of companies were abroad. There have been several more since. In a letter to shareholders of companies in the Jasper group Sir Dingwall Bateson, who along with two other nominees of the State Building Society was appointed to their boards early this year, has described these schemes as "still-born." Yet another scheme, with which rumour associated the name of Mr Isaac Wolfson, was mooted this summer. Sir Dingwall and his associates were pressed by interested parties (including the State

The Old World made Hercules . . .

Hercules and the Augean Stables.

. . . to-day Hercules is helping to build the NEW WORLD

It was by meeting the challenges of his age that Hercules of old earned immortality . . . . To-day, Hercules still meets challenges. More—he anticipates them. For in industrial chemistry, research by Hercules Powder Company has produced many a "break-through" leading to better things. Take packaging for instance. Packaging materials need to be sized, given strength when wet, printed, protected, stuck together. Hercules can claim many important advances in these fields. If the New World is better off for better packages, Hercules has a hand in it. Hercules has some key-words for his successes. Words like Pexol—Kymene—Pentalyn—EC—Neolyn. You should know what they mean.

Building Society and certain banks) to allow time for this scheme to be prepared. But he now tells shareholders that he and his fellow directors have "never in fact seen the essential terms of the 'scheme,' which involves many other parties besides yourselves, and we have little knowledge of such other parties." Hence he and his associates decided to "proceed without further delay, but with some regret" to pursue in co-operation with the State Building Society the claims of the individual companies against Harewood and Company (a firm of solicitors in which Mr Grunwald was a partner) and others. This would seem to point to legal action in the courts. But the situation has again been confused by a request from the authors of the latest scheme to continue negotiations and by Sir Dingwall's comment that he and his fellow directors would be "only too ready to listen to any proposals."

At the same time, the State Building Society, Lloyds Bank City Office Nominees and Mr Maxwell Joseph have proposed the appointment of new directors to the board of Lintang Investments, whose take-over formed the central piece of the Jasper case. Among the new directors proposed are Sir Dingwall and Mr J. H. Robertson, who are both directors of the State Building Society, and Mr Maxwell Joseph, one-time chairman of Lintang Investments, who is mortgagee to 3,365,258 and beneficial owner of 179,072 of its 5s. shares.

The principal stumbling block in the schemes mooted in the past appears to have been the failure of the principal shareholders in the Jasper companies (these include Mr Murray and Mr Grunwald) to agree how much each of them individually was prepared to give up. Any scheme which brought in outside interests might well resolve some of the uncertainties, and the prospect of an early repayment from a realisation company, which would be the essence of any such scheme, might be attractive to the smaller shareholders in the companies. But, presumably, such a scheme would not be set in train unless there were some hope of an eventual profit to its authors; this, in view of the rise in property values, might not be too remote a possibility. The pursuit of individual legal claims would take much longer to produce any tangible result; but, in Sir Dingwall's view, it might produce "a better result in the long run." Whatever method of unscrambling is chosen, it will be to the advantage of both the shareholders and depositors of the State Building Society and the shareholders of the Jasper companies if direct negotiations between the "fellow victims" resolve the question whose money it was that was misapplied in the various transactions.

ROAD HAULAGE RATES

Blaming the Chancellor

THE Road Haulage Association has taken pains to explain that the increase of 7½ per cent in rates that it is recommending is a consequence of government policy. The higher excise duty imposed in the budget and the increase in fuel tax that came in the little budget are the main factors blamed here. The statutory increase of 3 per cent in wages that will begin in the new year and be combined with a cut in the working week from 44 to 42 hours may count for more; it will mean an effective increase of 10 per cent in earnings. The National Association of Road Transport Clearing Houses has also recommended a 7½ per cent increase in rates to its members. But British Road Services has got to decide whether it will follow its privately-owned competitors in this increase in charges.

Operators may feel they cannot increase charges as the RHA has recommended. The railways would be glad of any opportunity to win back traffic from the roads; in August their freight traffic was 10 per cent lower than a year before, while that on the roads was 3 per cent higher. And some sections of road haulage have found business rather disappointing in recent months. The amount they have to carry reflects the level of industrial production; and the fall in the output of such industries as steel, cars and durable goods hits those who carry for them. But Christmas means that the biggest part of the road haulier's trade—carrying food—is booming; and so is the second largest—carrying building materials. Increases in charges are therefore likely to be far from uniform.

OIL

Pipelines In and Out

FOLLOWING a visit to the Zelten oilfield in Libya last month, it was temperately observed in these columns that "pressure maintenance could pose some technical problems." This week Standard Oil of New Jersey announced that it proposed to begin water injection into the Zelten structure, which will involve, among other things, building a second 110-mile pipeline to the one that it formally opened in October. This pipeline—one of 36-inch diameter, as against the 32-inch line that carries Zelten oil to the Mediterranean coast—will eventually carry 500,000 barrels a day of salt water in the opposite direction, to be pumped into the underground structure in order to keep up underground pressure and keep the oil flowing up and out to the coast.

This "re-pressuring" project is one of the largest ever undertaken outside the United States; it is most unusual to decide upon this technique so soon after the field has come into production. One can often, again, inject back into the structure the gas that comes up with the oil; but at Zelten the oil is "unsaturated," and if gas is pumped back in it simply dissolves. The water technique will involve a power plant at the terminal port, Marsa el Brega, and a transmission line to Zelten, for the water

pipeline will require much more pumping power than the oil line does. Oil flows from Zelten with very little assistance ; once having surmounted a fairly low escarpment near the field, it flows the rest of the way by gravity. By the same token, a pipeline to move water the other way will presumably have to be pumped most of the way.

The volume of water eventually envisaged—which in this case will be injected around the flanks of the field, and not in the centre as in most "waterflooding" projects—is very large. Jersey has never estimated publicly the eventual flow of oil that it expects from Zelten ; but at the outset it may be bringing in more salt water—which it has specially to treat to reduce corrosion dangers for the line—than it takes out oil. The investment will be about $50 million, which is perhaps about a third as much again as the group has spent so far on Libyan oil ; but over the producing life of a rich oilfield—which can be prolonged by re-pressuring—that may not make much difference in cents per gallon.

SHARE TRANSFERS

Forcing the Pace

ACTING on his own initiative and, apparently, without consulting the Stock Exchange or other interested bodies, Mr Graham Page, MP, who was behind the 1957 Cheques Act, has brought forward a private members' bill on stock transfers. In December, 1960, a committee consisting, among others, of representatives of the Stock Exchange and the Bank of England, put forward recommendations to simplify the transfer of securities. Last October Mr Anthony Barber, Economic Secretary to the Treasury, said that the Government was considering what legislation might be involved. Presumably, this legislation will be based on the committee's recommendations. Mr Page appears to be trying to force the pace, for fear that the Government might postpone action on share transfers until after the Jenkins committee has reported.

His bill, moreover, allows for an alternative procedure in share transfers which after due deliberation the advisory committee rejected. It plumped for a system which would still require the principal (that is the seller of the securities) to sign the transfer form. Mr Page's proposals would permit this procedure but, in addition, they would allow the principal to authorise his agent (who would normally be his stock broker) to sign the transfer form. The authorisation would be given by an endorsement of the share certificate. The principal features of either the "stock transfer form" or the "endorsement" procedures are that only one transfer form needs to be signed, even if the holding has to be split among a number of buyers, and that the signature need no longer to be witnessed. Further more, Mr Page's proposals would permi photostatic copies of the transfer form signed by the seller or his agent, to be use for the signatures of the purchasers (or thei agents) if the holding were to be split. Thi could lead to practical difficulties for th brokers and the company registrars and, i similar circumstances, the committee er visaged the use of "brokers' transfe forms" which would circulate only betwee brokers' offices and company registries. I preferring the "stock transfer form" pro cedure the committee saw some disadvan ages in any "endorsement" system. recognised that endorsement, because of i simplicity, might be popular with share holders but that it might well add to th administrative burdens of the compan registries. Like other private member bill Mr Page's proposals will have to take the chance on a crowded Friday afternoon. H could fail to get a hearing but, by intro ducing the possibility of an endorsemer procedure for stock transfers, he may forc the Government to make its intentions plai

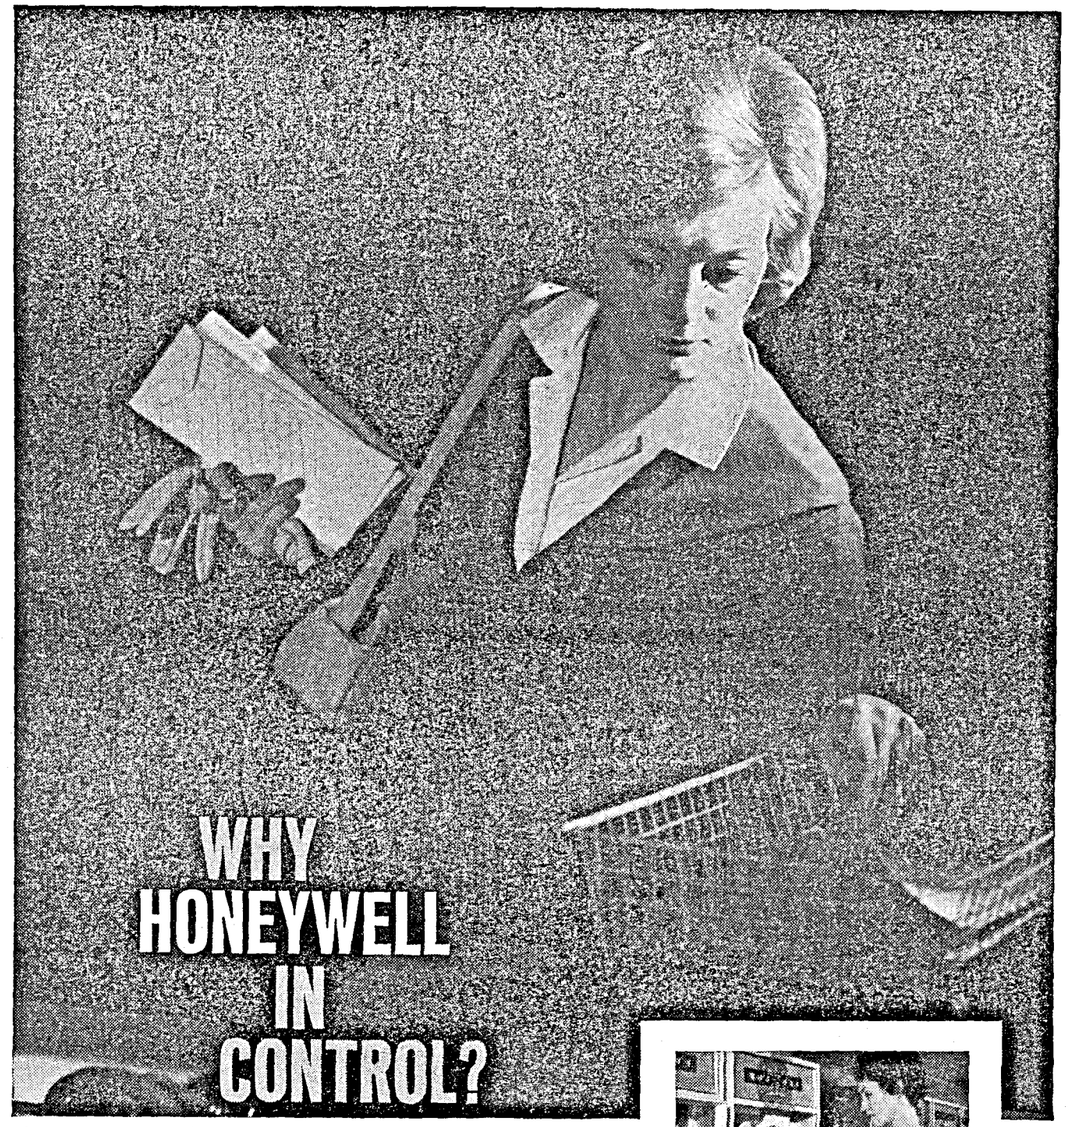
TELEVISION



Competition in the Slot

IN arbitrating between the three major companies contending for rights to provide a Pay-TV service, the Pilkington committee may have to take into account not only each group's ability to provide "super-programmes" 365 days of the year, but also the kind of Pay-TV system they propose. The heart of each system is the meter which turns on the programme when the customer has put in his coins, or bills him at intervals for those he has seen. These meters have proved difficult to design ; the first to be used, and reputedly the best, was designed by Paramount in America, and has been installed at an average cost of £20 a meter in a Toronto suburb. The patents that protect this design are said to have made it difficult for other companies to produce a satisfactory alternative ; rights to it are held in this country by British Telemeter Home Viewing, a company backed by British Lion, Granada, Paramount and the two newspaper groups, the Financial News and Manchester Guardian. The Paramount box was demonstrated in London this week in a version that works on coins only and gives no credit ; this seems a little antique ; certainly nothing is more off-putting than fumbling with the florins late at night with the programme about to begin.

The coin box designed for the Rank organisation's Choiceview system is considered by many to be less neat than the Paramount box, but it can be adapted to give credit and it could also be cheaper to make although it would carry development costs that British Telemeter will not incur. But the capital cost of installing Pay-TV in any house will not depend exclusively on the cost of the meter, it will also be influenced considerably by whether the house is already wired to an existing wire relay service. If not, the cost of wiring could be heavy. It seems inevitable, therefore, that Pay-TV, if it comes, will be operated in conjunction with the existing wired relay networks. If subscribers are already paying a weekly rent for their wired television set, the Pay-TV service riding on its back can break even at low figures ; Rank, therefore, already has an agreement with the rel company, Rediffusion. British Telemet might be expected to come to a simil agreement with the other big relay compan British Relay Wireless.

This leaves the third company, Briti Home Entertainment, undecided so f either about the form of box or the ty of wire relay that it will use but the compa should not be under-rated on that accou It has a formidable backing of talent, a when the technical issues have been settle the success of Pay-TV will depend exc sively on the quality of programmes it c provide. Hence the fact that each compa is backed by substantial sections of the fil industry and the talks that take place fro time to time about a merger of all thr groups. Feature films (and filmed versio of current plays) might, it is thought, run for as long as a week on the Pay-T channels. With a potential target audien of a million on the wired relay services, t could provide a substantial income. On however, if viewers are willing to play. Canada they are not ; latest reports sh that they are spending an average of l than 7s. a week, where the service nee about 10s. to break even. By exploiti existing wired relay services with th guaranteed income from rental of about 1 a week, British companies estimate they c break even at about 3s. and upwards a we —that is on a combined income of upwar of 13s.—provided the potential audien is big enough.

they make things simpler

Honeywell know how to put simplicity into complex electronics. They have designed electronic computers that work from a language of simple words. They have taken 'the modular' idea from architecture and used it to re-design process controls as simple plug-in units. They have built a range of room thermostats without moving parts... Honeywell's ability to keep things simple and make them work automatically means faster output from offices, greater productivity in factories, more comfort in the home. This is now not simply a success story—it's a world wide tradition.

sick, and in the tug-of-war between East and West for a larger share of it, the communist countries appear to have dragged their opponents almost over the line. Wolfram has fallen from 150s. to about 90s. a long ton unit this year; it is claimed that a further fall of 10s. would close every wolfram mine in South America. Following the experience of 1958 when a price in the region of 60s. a unit caused wholesale closures, this is no idle threat.

The communist countries appear to have held the large slice of the British market that they captured last year. In the first ten months of this year, imports of wolfram ores from unspecified foreign sources were maintained at 3,700 tons out of unchanged total imports of 5,800 tons. Most of these unspecified imports were presumably from communist countries. Now that this category has swollen to its present proportions, it is surprising that the Board of Trade has not caught up with events and begun to publish a more detailed breakdown in its monthly trade statistics.

If the communist countries succeed in forcing other mines out of business, they might gain considerably from the subsequent rise in prices. But the point that western producers are pressing is that this would not be merely a tactical market advantage, but also a military one. Tungsten, derived from wolfram, has many uses; a major one is in the hardening of steel for building warships, armoured vehicles and the like. It also has an extremely high melting point and is therefore used in rockets.

The contraction of its military uses has contributed to the present weakness of wolfram, but during the Korean war the price of wolfram leapt to 600s. a unit. When prices fall sharply, some of the mines that cease production are only closed temporarily, but there is always a significant number of permanent casualties. The possibility of a shortage of wolfram seems remote now, but this communist export offensive, which may be about as innocent as the attempt to sell more lead, zinc, grain and oil to western nations at whatever discount on prevailing prices is necessary, certainly has some genuinely disquieting features.

INVESTMENT ANALYSIS

A New Journal

THE first issue of *The Investment Analyst* deserves a warm welcome. It marks an important stage in the growing prestige of the Society of Investment Analysts in this country. Most of the matters discussed privately by its members cannot be put on public show; but the journal, to judge from the first issue, will give the society a voice from which the investing public can gain much. The first issue contains three articles: Professor Victor Morgan writes on the flow of investible funds; Mr J. G. Blease, of the BOAC pension fund, on the use of computers as an aid to investment analysis; and Monsieur R. C. Larcier, manager of the Eurosyndicat Investment Research Bureau, considers the analysis of European securities.

Because of its nature and of the author's forceful comments, M. Larcier's article will attract considerable attention. The principal obstacle, he says bluntly, to full-fledged security analysis in Europe is the lack of reliable information from companies and, because of the relatively small pressure of institutional investment, there is little thrust to get the information improved. Except in France and Belgium, there is no strong tradition of ordinary share investment by private individuals, and companies still believe that it is dangerous to give information that might be used by competitors, the fiscal authorities or the trade unions. Hence, despite legal requirements, sales, profits, net earnings, assets and liabilities are often what the directors and managers choose to show; that is not a "true and fair" view of a company's affairs that the British accountant needs. In Europe there is usually no legal requirement on a company to produce properly consolidated accounts.

The investment analyst on the Continent is thus confronted with much the same situation that faced his counterpart in this country before the passing of the 1948 Companies Act. He is forced to extrapolate from industrial and governmental statistics and has to lean heavily on "inside information." (The Eurosyndicat Research Bureau, for example, does not use earnings figures as these are practically meaningless but has to make do instead with ratios based on the cash flow.) In general, this article will help to bring home to British and American investors how little hard information is available to guide their buying of European securities.

VEHICLE TESTING

So Little Time

MR MARPLES has done his best to give the garages a busy Christmas, by allowing the 16,000 of them that act as official testing stations little more than five weeks to test the 1½ million cars, motor cycles and light commercial vehicles that are between seven and ten years old. The average 20 a week would be a reasonable task for each station; but the variations in demand between areas means that some individual stations are likely to be overstrained. Most drivers tend to leave the test until the weekend; the garages had reckoned that three months would be needed to get all the remaining vehicles tested. Their problem is not just testing the vehicles; most garages are also asked to make the cars fit to pass the test, and the load that this puts on their repair facilities is more of a burden than the testing itself.

If large numbers of vehicles still remain untested at the end of the year and the police have to turn a blind eye to the lack of a test certificate for a time, respect for the whole scheme may decline. It has so far been accepted as one of the more sensible means of improving road safety, despite the lack of a uniform standard in the testing procedure. Mr Marples must try planning further ahead.

PAPER AND BOARD

Ifs and Buts

FOR an industry that has little to lose if Britain joins the common market, the British Paper and Board Makers' Association is surprisingly reserved in its support of this move. The common market's projected external tariff on wood pulp supplies is 6 per cent, and at present they enter this country duty free. If the Scandinavian countries are linked with EEC, the association fears that they might gain an even greater competitive advantage over the British industry than their present easy access to cheap raw materials.

The association's other main reservation, that it should not be expected to bear the "brunt of Nordic competition" as it is now doing can hardly be a genuine proviso. It sounds more like an attempt to gain extra publicity for its case against the lowering of tariffs between members of EFTA. Unless Britain joins the common market, the only prospect under EFTA is a bigger Nordic invasion. EFTA tariffs have already been reduced by 30 per cent, and the association declares that further reductions in the near future would add to the industry's difficulties. Last week five EFTA members including Britain agreed to bring forward the date of the next 10 per cent reduction in tariffs to March 1st. Originally, this stage in the reduction of tariffs would not have been reached until July, 1963.

After the latest reduction in EFTA tariffs at the beginning of July, output of paper and board in this country declined three per cent below its level in the corresponding quarter of 1960. But mill stocks began to fall following a sustained rise in the previous nine months, though at the end of September they were still more than a sixth higher than a year earlier. Only packing and wrapping papers showed much improvement, and a further increase in the output of these products is likely in the current festive quarter.

Assuming that all manufacturers in western Europe are soon in the same market, the position of the British paper and board industry will be far from comfortable. According to the UN Food and Agriculture Organisation, there will probably be a surplus of paper and paperboard manufacturing capacity in 1965.

BUILDING SOCIETIES

A Grown Up Image

IN a recent speech to some members of the Building Societies Institute Sir Bruce Wycherley, the managing director of

the Abbey National, said that the building society movement "can afford a grown up image." By this, he appeared to be implying that the appeal for new savings should continue to be aimed at the middle aged and the middle class. Indeed, he added: "If we can link ourselves with the enthusiasm displayed by some advertisers for the 'young married' elements we will have gone quite young enough." Sir Bruce clearly sees little profit in appeals to teenagers to save, but he does see some in efforts to promote saving through a building society in advance of the purchase of a house. Beyond such specific appeals, Sir Bruce would seem to be content with a more imaginative and more modern display of the qualities already attached to building society savings—the rate of return, security and the ease and convenience of withdrawals and payments. This view leads him to point to the virtues of stability in interest rates.

On both scores he is no doubt right—so long, it may be added, as the rates are high enough to compete effectively with other savings media. The past, as Sir Bruce said, can beckon "perhaps a little too invitingly because it is a story of success" and the essence of his speech, which touched on a large number of topics, was clearly to set the movement thinking more in terms of the future—of the growing demand for mortgages and of the need to attract the savings to satisfy the demand.

AIR SHOWS

Biennial Farnborough

THE decision of the Society of British Aircraft Constructors to hold the Farnborough air shows on alternate years in the future will be greeted with almost universal relief by the industry. The exceptional standards which make Farnborough the peer of air shows has been met in recent years only at the cost of exceptional bills. A big company now budgets for a minimum of £30,000, without allowing for the disruption of work at the factories for weeks before the display itself. Some members of the industry have been grumbling that this money might be better spent on more salesmen visiting more customers, especially in a summer like the one just past, when they had to take part in one major international air show at Paris in June and a second at Farnborough in September.

The force of these arguments is strengthened by the long gestation period of modern aircraft and missiles; the fact that it has become impossible to find something new to show every year does not seem to reduce the numbers of people who attend the bigger shows like Farnborough, but it weakens its reputation as a shop window. Not, indeed, that there is any evidence to show that participation at air shows influences sales; indeed, salesmen complain that the press of visitors makes serious discussions impossible. Unfortunately the sensible decision to alternate Paris and the Farnborough shows in the future will not reduce pressure on the industry to appear in other international air displays in Germany and Italy, whose organisers are obstinately attempting to boost them to major events in the aviation calendar against all indications to the contrary.

SHORTER NOTES

In the past week both Morgan Crucible and S. Smith have made bids for Lodge Plugs. The former's bid of 16s. 6d. for each 5s. share has not received the support of the Lodge Plug directors; Smith has made a firm bid of 18s. per share which might be improved upon after receiving further information on Lodge's prospects. A complication to the deal is Morgan Crucible's holding of convertible notes which could give it a 22 per cent interest in the equity, but Smith's offer will not depend on any arrangement being made with regard to these notes.

*

Correction: In a Business Note last week it was said that stocks of television receivers had fallen since the beginning of the year from 1.2 million to 225,000 by the end of September. This second figure represented manufacturers' stocks only. Manufacturers' and retailers' stocks together were in fact 576,000, so the de-stocking has not been as drastic as our note suggested.

*

Production of man-made fibres in October rose to 52.8 million lb, compared with 50.2 million lb a year earlier. In the first ten months of the year output declined from 494 million to 468 million lb. Courtaulds will stop producing tyre yarn and cellulose film at British Enka's factories at Bolton and Aintree. More than 1,000 workers are affected.

*

The sales of the British plastics industry in the third quarter of this year were 13 per cent higher than a year before. Those of thermoplastics rose 19 per cent and those of thermosetting materials rose four per cent. As stocks of thermoplastics were rising fast last year but were stationary this year, production showed little increase. Much of the increase in home sales comes from a fall in imports; consumption rose by only about eight per cent.

*

The new chairman of Lloyds Permanent Building Society, Mr Ernest Partridge, says that despite the loss in the first half of 1961 the accounts for the year as a whole will show a revenue profit. He hopes that early next year the Society may approach the Registrar to revoke the bans imposed on the society under its previous management.

During the year to March, 1961, the Board of Trade agreed to build nearly 5 million square feet of factory space, costing about £21 million, in "development places," and to grant or lend about £29 million to industrial firms as an inducement to move there. This £50 million was approved in respect of 62 factories or extensions built for renting to industry, 27 companies offered building grants, and 108 projects for which loans or grants were approved. This is shown in the first annual report, published this week by the board under the Local Employment Act of 1960, which altered the pattern of government assistance to areas of "high and persistent unemployment."

*

The directors of Gloucester Railway Carriage and Wagon have recommended shareholders to accept the bid from Winget which offers two Winget 5s. ordinary shares and £4 19s. nominal of new 7 per cent convertible loan stock for every nine 10s. Gloucester ordinary shares. The assets of Gloucester have been written down by £625,000 net and would contribute 55 per cent of the assets of the new company; shareholders would receive 45 per cent of the enlarged equity.

*

Although the sales of Allied Ironfounders were slightly higher in the first 28 weeks of the year to March 31, 1962, higher costs have cut profits by 17 per cent compared with the same period last year. The directors have cut the interim dividend from 7½ to 5 per cent. For 1960-61 a total dividend of 20 per cent was paid.

*

The rate of interest payable on newly issued tax reserve certificates was last week reduced from 3½ to 3¼ per cent.

INDUSTRIAL SITES TO LET

Sites available at East Gateshead Industrial Estate for lease for general and light industrial development. All main services. Direct road access to East Coast Ports. A. 1, Newcastle and Gateshead Quays and Railway Goods Yard. Local labour available.

Enquiries to the Town Clerk, Town Hall, West Street, Gateshead 8.

MODERN FACTORIES TO LET

The following modern STEEL-FRAMED SINGLE-STOREY FACTORIES, each equipped with central heating, gas, water, and electrical services are available, on a rental basis, for early occupation on the undermentioned Industrial Estates. The estates are provided with communal canteens and have good transport facilities.

Applicants will be referred to the Board of Trade for consideration and approval of their projects subject to the terms of the Local Employment Act, 1960. Under this Act Government assistance may be available. Applications for storage accommodation cannot be considered.

CARFIN (12 miles east of Glasgow).
(1) Area 1,200 sq. ft. Ridge Roof Construction.
(2) Area 29,500 sq. ft. Ridge Roof Construction. (There are three factories of this size.)

CHAPELHALL (12 miles east of Glasgow).
Area 5,400 sq. ft. Ridge Roof Construction. Yardage available.

HILLINGTON (on the western boundary of the City of Glasgow).
(1) Area 18,600 sq. ft. Ridge Roof Construction. Yardage available.

LARKHALL (17 miles south-east of Glasgow).
(1) Area 11,800 sq. ft. Ridge Roof Construction. Yardage available.
(2) Area 1,500 sq. ft. Ridge Roof Construction.

PORT GLASGOW (17 miles west of Glasgow).
Area 22,600 sq. ft. Ridge Roof Construction. Yardage available.

DUNDEE (83 miles north-east of Glasgow).
Area 11,900 sq. ft. Ridge Roof Construction.

RUTHERGLEN (Glasgow). Individual Site, For Sale or To Lease.
Area 28,400 sq. ft. North Light Roof Construction. Yardage available.

Each Factory listed has a roof height of at least 12ft. to underside of truss.

COMPANY MEETINGS

THOS. W. WARD LIMITED

The fifty-eighth Annual General Meeting of Thos. W. Ward Limited was held on November 24, 1961, at Sheffield. **Mr H. W. Secker, OBE** (Chairman), presided and, in the course of his report, already circulated, said:

"The Group operated throughout most of the financial year under conditions of uncertainty and uneasiness not conducive to the maintenance of that atmosphere of confidence which is essential for the successful operations of a Group such as ours. As we now know, the worst fears were confirmed by events, and we find ourselves in the midst of another credit squeeze.

Judged against such a background, it gives me a considerable amount of satisfaction to be able to present Accounts showing record figures for the Group, both of turnover and profit, and I would like to acknowledge the valuable contribution made by Directors, executives, staff and workpeople throughout the Group to the results which have been achieved.

GROUP RESULTS

Of the increase in Group turnover of approximately £2½ million, the overall increase in Subsidiary Companies' turnover is £1,600,000 and that of the Parent Company £900,000.

The percentage profit before Tax on the Group turnover of £52 million has fallen slightly to 5.67 per cent compared with 5.69 per cent for the previous year, and the Profit before Tax on the Capital Employed is slightly lower at 18.13 per cent compared with 18.28 per cent.

PARENT COMPANY

The tonnage of scrap delivered to the steel industry from our scrap and shipbreaking divisions has been maintained very near the level of that of the preceding year. But, as I mentioned last year, in times of such a high level of activity, competition for scrap intensifies, and due to this and increasing costs, profits have shown a substantial fall.

In our shipbreaking yards we have adequate supplies of vessels for demolition, but due to a shortage of suitable labour, and the recent drop in demand for scrap, we are working below capacity with no prospect of early improvement.

So far as the Machinery Division is concerned, a high level of activity has been maintained in all sections. Our Factory Planning and Installation Department has also had a very satisfactory year, and it is gratifying to note that its specialised services are being called on by an increasing number of customers. Excellent progress has been shown by George Cooper & Sons, in the manufacture of nuts and bolts, with a satisfactory increase in profits.

Contractors Plant Division has achieved a record profit, and we can look forward to a continuance of the high level of activity during the coming year. The Foundry Supply Division, which supplies a wide and varied range of equipment, has shown a very satisfactory increase both in turnover and profit. Conditions were active in Wagon Repairing and the year has also been one of continued activity in Works Dismantling.

We continue to expand our turnover in the Railway Siding Construction and Constructional Steelwork Divisions, but conditions are so very competitive, that profit margins on some contracts are very narrow, and indeed, in some cases, practically non-existent.

CEMENT AND QUARRIES

The tonnage despatched by Ketton Portland Cement Co. Ltd. was slightly lower than in the preceding year, but the profit was well maintained, and its associated company, the Ribblesdale Cement Co. Ltd., is now reaping the benefit of capital extensions. The new 5th unit at Ketton should be completed within the course of the next year, but no benefit from this can be expected in the current year.

Our quarries in Westmorland and Cornwall were fully employed, and indeed could have accepted a greater volume of orders had it not been for labour shortage.

The output and profits from Eldon Hill Quarries were somewhat affected by extremely poor weather conditions during the first half of the financial year.

ENGINEERING

Successful results have been shown by Thomas Smith & Sons (Rodley) Ltd. despite a shortage of skilled labour. The order book for excavators is good, and I am happy to report that the crane side is busier now than at this time last year. John Smith (Keighley) Ltd. have experienced a good demand for overhead cranes of all types, despite keen competition, and the order book is very satisfactory.

I am pleased to report an improvement in the results of Fredk. Town & Sons Ltd. Modernisation of designs is proceeding, and the order book is good, but the shortage of skilled labour is presenting a very serious problem. There has been a marked improvement in the results of Woodhouse & Mitchell, and orders for their lathes and turret milling machines are now on extended delivery up to 18 months.

Turnover achieved by the Widnes Foundry & Engineering Co. Ltd. was the highest ever recorded, and the specialised work on which Widnes concentrate has been in good demand.

Darlington Railway Plant and Foundry Co. Ltd. has been actively engaged on foundry work but there has been a fall in demand for switches, crossings, and ancillary equipment. Railway & General Engineering Co. Ltd. have had another very satisfactory year. Trading conditions have remained highly competitive, but through internal reorganisation and the introduction of new machinery, profits have been maintained.

MANUFACTURE OF IRON AND STEEL AND NON-FERROUS METALS

In spite of adverse conditions Wolverhampton & Birchley Rolling Mills Ltd. have operated to capacity throughout the year, and have achieve another record in production. This increase production to some extent offset the effect increased costs, but with no commensura increase in selling prices there has been son falling away in profits. The Company h derived considerable benefits from mechanisatic installed in recent years, and the scheme replace one of the mills at the Wolverhampc Works, to which reference was made last yea is now in progress.

Benefits continue to be obtained at Jol Williams (Wishaw) Ltd. from the new sheet mi and profits showed a welcome improvemer during the first six months, but due to a fallir away in demand the final profit for the year h not reached the level anticipated.

It has been a reasonably satisfactory year f Midland and Low Moor Iron & Steel Co. Ltc and The Alexander Metal Co. Ltd. has aga shown a material increase in tonnage ar deliveries.

VEHICLES

Satisfactory results have been shown bo by E. H. Pickford & Co. Ltd. and the Deighto Motor Co. Ltd. Sales of new cars are som what lower than the previous year, but sales commercial vehicles have increased slightly.

MISCELLANEOUS

Conditions have been difficult for Dick Asbestos and Insulating Co. Ltd. and Anchc Insulating Co. Ltd. as highly competitive cor ditions prevail in the insulating industry, an although the overall figures have been mair tained, profit margins have remained ver slender.

Watsons (Metallurgists) Ltd. have had a extremely satisfactory year, resulting in a furth increase in profits. Plans are now being impl mented for the erection of a new factory to gi further capacity.

Ward Longbottom Ltd., George Hassall Ltd of Stoke, and Frank Parker & Co. Ltd., London, all maintain consistent and satisfactor results.

OVERSEAS TRADE

In those sections of the Group engaged in th export trade everything possible is being don to increase turnover. To this end personal cor tacts abroad are being maintained through visi from Directors and senior executives of th Parent and Subsidiary Companies.

The Overseas Subsidiaries have made sati factory progress and the French Company h made a good start to the new financial year, bu although the Australian Company made headwa it has been affected rather adversely during th last few months by the recession and cred squeeze in the Australian economy.

The Swedish Company has again made pro gress and plays a particularly valuable role i selling excavators in Sweden for Thomas Smit & Sons (Rodley) Ltd.

RAILWAY AND SHIPPING CHARGES

Despite the recession in the Steel Industry towards the end of the financial year and the abundance of cheap and convenient road transport, traffic payments to the British Transport Commission have again exceeded £1¼ million and I am glad to record the continued co-operation existing between the Commission and this Company.

APPROPRIATION OF PROFIT

The Group Profit relating to the Parent Company is £1,463,932. £430,316 has been retained in Subsidiary Companies, so that there is a balance of £1,033,616 available for appropriation, out of which after Interim payments of £147,468 remains a balance of £886,148. Your Board recommends a transfer to General Reserve of £600,000, to bring that Reserve to a figure of £2,925,000, and the payment of a Final Dividend of 10 per cent less tax on the ordinary share capital. £781,378 is carried forward to next year.

The total Dividend of 13¾ per cent less tax has been maintained at the same rate as the previous year, partly to meet the request made by the Chancellor of the Exchequer that dividends should not be increased in the present situation, and also to finance a relatively heavy programme of Capital Expenditure during the current year of £2,038,000.

BALANCE SHEET

The Consolidated Balance Sheet shows a total of Capital and Reserves of £13,982,347, and with the additional Reserve for future income tax due 18 months ahead, the net worth on book values totals £14,904,295. Current Assets again show a satisfactory cover of 2.2 times over current liabilities.

FUTURE PROSPECTS

The recent decline in steel production has resulted in a reduced demand in the current year for scrap from our yards and also from shipbreaking. A recovery in steel production could quickly improve the position, but any further reduction could have a serious effect on our profits.

From an assessment of the order books of those sections of the Group engaged in the supply and manufacture of engineering products, and from the enquiries which continue to be received, it would appear that we can anticipate maintaining their profits at a satisfactory level over the next 12 months. I would also anticipate that we can look forward to maintaining profits in our Cement and Quarrying interests at or around the level of the past year, but our Rolling Mill results will be largely dependent on the level of activity in the motor industry.

To conclude, I think it is obvious that the factor which will have most influence on our profits in the future months is the level of production in the steel industry, and at the present there are no signs of improvement in the outlook."

The report and accounts were adopted and the dividends recommended declared. The retiring Directors were re-elected and the auditors re-appointed.

Founded 1778

"I am pleased to report once again a successful year's trading"

Mr. John Bedford

Chairman and Managing Director

The Annual General Meeting of Debenhams Limited was held in London on November 29th. The following are the salient features from the Chairman's circulated Statement.

TRADING RESULTS

The trading conditions during the year under review were by no means easy. I am, nevertheless, pleased to be able to report once again on a successful year's trading in the Group. The Consolidated Trading Profit amounts to £8,598,983 and the net profit before taxation is £7,219,230, showing an increase of nearly 11% on last year.

DIVIDENDS AND ASSETS

The Directors recommend a Final Dividend of 1·4d per share be paid on the Ordinary Shares, making 1·11d per share for the year. This is the same rate as that paid for the previous year, but it is payable on the Ordinary Capital as increased by the one for ten scrip issue in November, 1960.

The Consolidated Balance Sheet shows the continuing growth and expansion of the Group, the total assets having now reached £71,500,000.

EXPANSION

Our efforts to expand have been directed towards the purchase of stores in the popular field.

As good businesses become more difficult to acquire the Directors' present policy is the purchase and development of sites in towns in which the Group is not represented, and the purchase for expansion of properties near or, if possible, adjoining existing popular class stores.

CAPITAL RE-ORGANISATION

The Directors have decided to put forward a plan for acquiring the outstanding minority interests in twenty-six subsidiary companies, covering in all thirty-six different classes of capital.

The acquisition of these minority interests will permit greater flexibility in Group financial arrangements, facilitate re-organisation and save much administrative work.

PROPERTIES

I believe that in the long term it is in our best interests to retain our valuable properties, which are the best hedge against inflation that we can have. Schemes are being prepared to make sure that these sites are used to the best advantage. It is proposed to put the management of our properties under Debenhams Property Company, whose function will be to see that they are being used to the best possible advantage.

FUTURE PROSPECTS

It is difficult to forecast with any degree of certainty the future outlook. Our progress is inevitably linked with the economic condition of the country. Given conditions of reasonable stability, I am confident that the long term prospects for the Company are good.

THE WALL PAPER MANUFACTURERS LIMITED

PROPOSED REORGANISATION OF CAPITAL STRUCTURE

Group's notable efforts to foster vital export trade

MR. IVAN C. SANDERSON REVIEWS DIVISIONAL ACTIVITIES AND DEVELOPMENTS

The 62nd Annual General Meeting of the Company was held on the 29th November in Manchester. The following is an extract from the statement by the Chairman, Mr. Ivan C. Sanderson, circulated with the Report and Accounts :—

Wallpaper Division

Wallpaper sales suffered in comparison with the year before because of the two-year cycle of the decorators pattern book trade. It is natural for distributors to seek to reduce their stocks for the second year against the desire to build up stocks strongly for the first year.

We have continued to bring each one of our manufacturing units up to a state of highest efficiency in order to increase productivity and reduce the cost of unit manufacture.

Paint Division

In this Division we contended with a squeeze in margins, dictated by rising costs all the way round. Under these conditions, there could be temptation to debase quality, which the Walpamur Company in common with Smith & Walton and Farmiloes, completely resisted.

Paper Division

This Division has done very well in sales. Margins have been under pressure and a lower profit is reported. The Division will continue to undertake major capital expenditure over the next two years with a view to faster running of our machines.

Sanderson Division

This Group of Companies manufactures wallpaper and furnishing fabrics as a basis of its business. The attention paid to export has given these factories an exceptionally good position in overseas trade.

Another main activity is wholesale distribution of wallpapers, furnishing fabrics, laminates and fancy papers in the U.K. and world wide.

On the 15th August of this year the Division acquired one of the best wholesale Houses for furnishing fabrics in the United States of America, J. H. Thorp & Co. Inc., of New York with branches in the leading cities. The Division now has a base from which it can develop the sales of Sanderson fabrics throughout the U.S.A.

Research Division

We are rehousing our research in order that the scientific and engineering sections can be centralised and so allow our chemists, physicists and research engineers to work together under one roof and in most favourable conditions.

Retail Division

This organisation has had a successful year. It is our earnest endeavour to make our shops attractive and to cater for everyone who takes upon himself or herself the growing hobby of do-it-yourself.

EXPORT TRADE

The Board recognises the vital part which export trade plays in contributing to a high standard of living in this Country.

Our Wallpaper, Paint and Sanderson Divisions continue to improve their existing world wide connections both for distribution and manufacture. It is not possible to be important, either as an exporter or as an overseas manufacturer or distributor, without being strong at home as a trader and also financially. We have to bear competition from North America, Europe and the Orient. A successful overseas trader generally has to stock, warehouse and give services in the form of showrooms to customers. It is not possible always to get an immediate return on the heavy expenditure which is called for. It is for this reason that strength at home is imperative. I believe that the overseas investments we have made, and which are substantial, will stand us in good stead and will help in the United Kingdom balance of payments.

REORGANISATION OF CAPITAL

A Scheme of Arrangement will be submitted in due course to the Stockholders and to the Court for reorganising the capital structure of the Group bringing the capital more into line with assets employed and to improve the marketability of the Deferred Stock.

The Report and Accounts were adopted.

COMPARATIVE FIGURES 1952 to 1961

Year ended 30th June	Group Profit before Taxation	Taxation	Net Dividends paid to Shareholders	Cash Flow (profit retained in Business plus Depreciation)	Group Net Assets	Additions to Fixed Assets in the Year
	£	£	£	£	£	£
1952	2,148,025	1,266,943	272,373	897,620	14,988,633	841,335

NATIONAL COMMERCIAL BANK OF SCOTLAND LIMITED

STATEMENT BY IAN W. MACDONALD, CHAIRMAN OF THE BOARD

The third Annual General Meeting of the National Commercial Bank of Scotland Limited will be held on December 21st, in Edinburgh.

The following is the circulated statement by the Chairman, **Mr Ian W. Macdonald, CA:**

REVIEW OF OFFICIAL MONETARY POLICIES

Any review of the British banking field during 1961 must necessarily begin with a recognition of the serious and disturbing situation which developed in our external monetary position. In my statement a year ago I made the comment that sterling was strong and the monetary reserves had been increasing contrary to seasonal expectations "but possibly at the price of camouflaging the weakness of this country's visible balance of payments." As the months passed it became evident that the balance of payments position—visible and invisible—was deteriorating to a dangerous extent. Sterling increasingly came under heavy pressure resulting in a crisis position which was tackled in the measures taken by the Chancellor in July 1961. The Banks were directly affected by these decisions in two ways: (1) by a further call for special deposits, bringing the totals to 3 per cent for the Clearing Banks and 1½ per cent for the Scottish Banks: (2) by a request to be particularly severe on lending proposals related to personal consumption—including finance for hire purchase—to property development and to speculative building. The Banks some time before had been encouraged by the authorities to accept the special deposit scheme in the expectation that this would act as an automatic regulator of advances and thus avoid any repetition of restrictive directives or requests. It is therefore disappointing that on the latest occasion when there was need for credit restraint the authorities not only applied the regulator but also issued further requests. One wonders if this implies a lack of official confidence in the effectiveness of the special deposit scheme to provide the necessary braking power. However that may be, it must be recognised that neither the volume nor trend of bank advances can be altered immediately by external control measures of any kind. Bank lending policy and consequent decisions can be varied without undue delay, but it is many months before the effect of any variation is reflected in the total of bank advances. Since this time-lag is inevitable, it is open to question whether the authorities are wise in naming groups of borrowers or in specifying business activities in their requests. By the time the brakes start to bite, the economic situation of the groups or activities selected for restraint may need a touch of the official accelerator. In this present economic climate, with summers and winters each stretching to little more than twelve months, timing and time-lags have acquired much greater importance, and an official policy of blow hot/blow cold over short periods may well do more harm than good.

The increase in the Bank Rate to 7 per cent created the short term influences which the authorities can now expect. The pressure on sterling was quickly reduced and the customary upward adjustment of all short term domestic interest rates had a restraining effect on the demand for credit. It is now evident that the domestic monetary system is conditioned to absorb both violent and moderate changes in Bank Rate without undue disturbance.

Turning again to the commercial banking scene, for some time the rate of expansion of deposits has been considerably less than the rate of growth in national income and accordingly a reducing proportion of the national monetary cake has been at the disposal of the Banks. It seems likely that this trend will continue as long as the major participants in the monetary cake —the wage earners—are paid in cash and conduct their personal finances on that basis. It is not easy to sell the advantages of a bank connection to people who live mainly in a cash world apart from the use of Post Office services for savings and for the payment of hire purchase instalments and football pool "investments." The recent introduction of the Credit Transfers system may, however, encourage more people to use bank services, including current and savings accounts.

Perhaps the most significant feature in British banking which emerged during the past year has been the tendency for advances to level off after three years of steady and at times rapid growth. It is probable that policy decisions by the Banks—as opposed to official directives—have been in large measure responsible. In a situation where advances may be approaching 50 per cent of customers' deposits there is clearly need for restraint, particularly when modest increases in available funds are skimmed off by the authorities into special deposits. Thus it could be that the expansion phase in bank advances is over, certainly until such time as retained deposits show a marked upward turn. Today's position is of course much healthier from a banking standpoint than that prevailing during the postwar years up to 1958. A retail deposit bank—to use an American expression—is not fulfilling its proper function unless it is able to lend about half of its deposits to its borrowing customers. Moreover, the whole domestic interest rate structure is geared to that basic principle and a reasonable profit from banking operations cannot otherwise be achieved.

THE SCOTTISH ECONOMY

Before examining our own accounts and results I would like to refer to the Scottish economy. Unfortunately we are still not matching the national growth average in our industrial activities. The depression in the shipbuilding and marine industries is more serious than a year ago and has not yet been compensated by developments taking place in motor vehicle construction or other lighter industries. I hold the view that, to achieve a balanced economy, Scotland needs more of this type of development than is yet in sight.

RESULTS

Our own results for the year have suffered a measure of setback due to a considerable reduction in the dividend we received from our hire purchase investment in Lloyds & Scottish Limited. You will shortly receive the accounts of that company and in my chairman's statement I expand the major causes of the heavy drop in earnings. Suffice to say at this stage that there were two main sources of trouble: (1) losses from bad and doubtful debts in one of the United Kingdom motor divisions which concentrated on the second-hand market and (2) a considerable loss incurred by an overseas subsidiary company. In recent months there has been internal reconstruction of the Lloyds & Scottish group and one operating company now handles all new business in the United Kingdom with integrated management. We have every reason to believe that the long term prospects for the group are good.

Our profit for the year is shown at £1,368,224 compared with £1,540,358. This reflects the lower dividend from Lloyds & Scottish. Our banking profits were well maintained in spite of rising costs and heavier taxation. Out of the year's profit the Board has appropriated £200,000 to Contingency Account, £250,000 to the Officers' Pension Fund and £15,000 to the Widows' and Orphans' Fund. Interim dividends at the fixed rates less tax on the Preference Shares and at 7½ per cent less tax on the Ordinary Shares have been declared and paid. It is now recommended that on the two Preference Share issues final dividends be paid making in all 10 per cent and 5 per cent respectively. The Board also recommends payment of a final dividend on the Ordinary Shares of 9 per cent (making 16½ per cent for the year) less income tax. These dividends are the same as in the previous year, but Shareholders will recollect that a 150th Anniversary bonus of 1½ per cent was also paid a year ago.

The Balance Sheet shows that deposits at £228 million have increased slightly but not significantly during the year. As I stated earlier, this relatively static position of deposits can only be described as disappointing. The increase of over £1 million in the note issue to almost £42 million reflects our share of the increased cash in the hands of the public. Our liquidity ratio, which is measured by comparing cash and other quick assets (£96 million) with our liabilities to the public by way of deposits and notes in circulation, works out at 35.6 per cent which is much the same as a year ago and is regarded as satisfactory.

Loans and Advances to customers are higher by some £6 million at £107 million. At one stage during the year the volume was substantially greater but in recent months there has been

a tendency for advances to fall—in line with the national experience. The above figure of advances is equivalent to 47 per cent of deposits and this underlines my earlier suggestion that the potential for further lending is becoming increasingly dependent on a growth in deposits.

There has been a further reduction in our portfolio of British Government Investments by over £5 million to £52 million, the proceeds having been applied in financing the higher level of advances. These investments are all in dated securities with an average life of rather less than five years, and the aggregate market value is greater than the amount stated in the Balance Sheet. It is interesting to note that three years ago the two separate Banks had total advances of £66 million and aggregate British Government Securities of £98 million. Today's position is much more to our liking.

IMPROVED STAFF BENEFITS

During the year we have had a series of meetings with the representatives of our Staff Association. This is an active and energetic body supported by a majority of the staff. After negotiation we reached agreement on a number of matters such as minimum salary rates at retiral, an extension of the salary scale for women, and minor improvements in the terms and conditions of service. In addition, we jointly formulated a scheme relating to the transferability or deferment of pension rights. Previously, if a member of the staff left the service of the Bank (apart from retiral), no pension credit could be given in respect of the years spent in our service—on the principle, no doubt, that the person leaving had contributed nothing to the pension fund. We felt that this system was out of line with current thought and practice and created an unreasonable obstacle to freedom of choice of occupation or employer. Accordingly the new arrangement broadly provides for the transferability or deferment of accrued pension rights in favour of anyone who leaves us after ten years' employment, and this I think may fairly be claimed as a valuable addition to the benefits available to the staff.

TRUSTEE AND INVESTMENT DEPARTMENTS

From time to time it is appropriate that I should refer in this statement to some of our ancillary activities. Two of the services which we offer our customers have made particularly rapid strides in recent years. I refer to the activities of the Trustee and Investment Departments. There is clearly a growing appreciation in the public mind of the advantages to be gained in appointing a Bank to act in a trustee capacity in the management of investment portfolios and other assets. The main inflow of new business does not come from the estates of persons deceased but from our customers who consider us well qualified to manage or supervise all or some part of their personal or family investments. As a measurement of the recent growth of these departments, the staff has been more than trebled in the past five years.

BOARD CHANGES

During the past year Sir Hugh Fraser, Bart., and Mr Harald Peake resigned from the Board —the latter in view of additional duties involved in his appointment as Chairman designate of Lloyds Bank. We are sorry to lose the benefit of their advice and counsel based on their wide and varied business experience.

We have welcomed as new members of the Board Mr R. J. Henderson, who was formerly associated with the Bank in the capacity of auditor, Lord Lloyd, whose appointment maintains an informal link with Lloyds Bank, and Mr John McQueston, who is managing director of Lloyds & Scottish Finance Limited

I feel sure that Shareholders will wish to be associated with the Board in thanking the General Manager and all officers and staff for another year of successful achievement in running the affairs of the Bank.

S. SIMPSON LIMITED

(Manufacturers of DAKS clothing)

The twenty-eighth Annual General Meeting of S. Simpson Limited was held on November 23rd in London.

Dr. S. L. Simpson, the chairman, presided.

The following is an extract from his statement:

In keeping with the policy indicated in my last year's report your company has endeavoured, with a large measure of success, to maintain the prices of its main products and this has been greatly appreciated by our customers in the retail trade, with whom we continue to share sound trading and cordial co-operation.

The demand for DAKS clothes throughout the home and overseas markets continues at a high level and potential expansion is indicated in several directions. For this reason I am glad to announce that the extension to our Scottish production unit, forecast in my last report, was completed recently and opened on October 3rd by the President of the Board of Trade, whose presence on this occasion was very much appreciated. This extension is particularly important for our export trade but will also play a part in meeting the needs of our expanding home market.

GRATIFYING ACHIEVEMENT IN OVERSEAS MARKETS

Your directors have always considered the export of your company's products as an essential part of trading and have always borne in mind its importance to the national balance of trade. Our trade with overseas territories again showed an increase over last year's figures, which in themselves were a record. This is most gratifying in view of the depression in certain territories in which we trade and I consider it to be a great achievement which says much for the efforts and enthusiasm that continue to be shown by your directors in expanding our overseas markets. The recession in the United States did not permit us to maintain the excellent sales figures of an exceptional 1960 year, but orders for their fall season are in keeping with general economic recovery in that country. The Canadian turnover showed a small increase and the sales to Australia, which is a restrictive tariff trade area, were well above those of the previous year. We have received our first order for DAKS clothing from Japan and much interest was shown in DAKS clothing displayed at the trade fair in Moscow. Your company has substantially increased its turnover with other markets outside Europe. Our trading with Europe has also shown a noteworthy increase and we are prepared to take full advantage of any results arising from the Common Market negotiations.

The report and accounts were adopted.

HARRIS LEBUS LTD.

EFFECT OF RESTRICTIONS

The fourteenth annual general meeting Harris Lebus Ltd., was held on November 3(in London, **Mr Oliver Lebus,** the chairm presiding.

The following is an extract from his circula statement for the 52 weeks to July 14, 1961:

Stockholders were warned by my predeces at the meeting last year of the savage effect th hire purchase restrictions were having on t furniture industry and that there was eve probability of short-time working and a fall profit. In February there was a change in leg lation in so far as the repayment period w extended to three years, but the effect of t change was insignificant.

In June your Board, being aware of t decrease in profits and the generally adver conditions, decided not to pay an interim div dend. Since then the Chancellor of t Exchequer has felt it necessary to impose r strictive measures on the economy general The restriction on lending by the banks a finance houses for the purpose of hire purcha trading can only have a considerable effect o an industry so dependent upon this form support.

Furniture is an integral part of a hom House purchase is not subject to such crippli restrictions. I suggest that furniture should l looked on in this context instead of being ass ciated with luxuries such as motor cars, televisio sets and certain appliances which have contr buted so largely to the increase in th outstanding hire purchase debt in the last tw years.

APPROPRIATIONS AND DIVIDEND

Out of the trading profits of £255,586 shown £86,250 has to be set aside for interest on th debenture stock. It is also necessary to provid £108,038 for taxation on the profit of the perio In spite of the reduced profits and the likelihoo of the current year being no less difficult, you Board recommend a dividend on the Ordinar stock of 2½ per cent.

During the last few years the Company ha expanded materially in fields allied to furnitur at home and in furniture production overseas The upholstery and transport divisions hav maintained their valuable contribution to th group profits and the subsidiary dealing wit hire purchase finance has increased its alread important share.

The Company continues to make its contribu tion to the currently small volume of furnitur exports from this country and is exploring th possibilities of developing this important aspec to larger proportions, with Europe very muc in mind.

With the economic and international problem that beset the country, the furniture industry which for 18 months has been operating at wel below capacity, is unlikely to prosper greatly The current financial year will inevitably be a difficult one.

Your Board is confident that the measures it i taking, some of which in the short term are costly, will in the long run bear fruit and add to the Company's strength.

The report and accounts were adopted.

ROOTES MOTORS LIMITED

ENTHUSIASTIC RECEPTION OF NEW MODELS

LORD ROOTES ON EFFECT OF UNCONSTITUTIONAL STRIKES

Lord Rootes (The Chairman) in his Statement to Members said:

The year to July 31, 1961, covered by the accounts of the Group was characterised by a deteriorating national economy associated with economic difficulties in most of the countries with which we trade.

We ourselves also suffered interruption from unofficial strikes including some at certain of our major suppliers.

These conditions at Home and Abroad brought about a reduction in the production of our cars from the peak of the previous year, although our commercial vehicle business continued to expand.

The problems of the USA market which began to appear at the time I made my last report accelerated in intensity and have been a factor in the reduction of earnings for the year under review. The worst has now passed and in recent months the demand from the USA has shown a major improvement.

Australia, traditionally one of our good markets, has passed through a difficult economic period and in consequence our subsidiary in that country showed a fall in profits compared to the previous year.

Here again, however, recently there has been a relaxation of credit restrictions and we look forward to an improved level of business in the future.

ESTABLISHMENT OF BUSINESSES IN SIX EUROPEAN COUNTRIES

Europe with the United Kingdom's probable entry into the Common Market, has of course, greatly occupied our attention and we have now established our own businesses in six countries. We are confident that this policy will prove to be sound in the future.

We appreciate the formidable nature of the problems with which our Government is faced in securing economic stability. That they have not so far succeeded in arriving at a satisfactory solution, makes equally formidable the task of industry in grappling with the ever-changing scenes in most of the overseas markets, whilst concurrently its Home market demand is constantly unsettled by short-term fiscal "regulators." The credit squeeze, increases in purchase tax, in car licence rates and in tax on fuel oils are some of the changes which of late have adversely affected the demand in this country. These factors, combined with wage increases have also brought in their train a range of direct and indirect cost rises—such as in steel, coal, telephones, postage and rates, to mention but a few of those arising in recent months.

The Board recommend a dividend of 4 per cent, less income tax on the Ordinary and "A" Ordinary Shares for the year ended July 31, 1961.

LABOUR DIFFICULTIES

You are no doubt aware of the very serious labour difficulties with which we have had to contend for many weeks past.

Your Directors have long given a large amount of their time to the important factor of labour relations. Generally we can claim that these are good throughout the Group, with the exception however, of one manufacturing unit in the London area. Unfortunately during the past financial year we suffered a great number of unauthorised stoppages at British Light Steel Pressings Limited and on September 4th a major strike occurred involving the greater part of the hourly paid employees.

This strike was called in total disregard of the procedure for avoiding disputes established by agreement between the Unions and the Engineering Employers' Federation and continued in spite of the Union's instructions to the strikers to return to work and also of other efforts made jointly by the Unions and the Federation.

The challenge to industrial law and order was such that your Directors had no alternative but to oppose it.

Group production was completely paralysed and many thousands of employees of our own and of suppliers have been thrown out of work. At the time of making this Statement a partial resumption of work has taken place but the position is still far from satisfactory.

As this unfortunate dispute has not yet been solved, it is not appropriate for me to comment on many of its phases. I must, however, make my views clear. Although we adhered strictly to the terms of the Agreement expressly designed to avoid unconstitutional strikes, a number of members of the Unions who are the other parties to the Agreement have ignored them completely. In consequence we have been forced to suffer heavy financial losses, the livelihood of thousands of innocent workers has been taken away and the export trade of the country has been adversely affected.

In the competitive world trading conditions of today and in view of this country's balance of payments position, the nation cannot afford unconstitutional strikes of this nature which paralyse production and seriously jeopardise our exports.

FUTURE DEVELOPMENTS

I have just referred to the heavy losses we have suffered and which at the moment are continuing. Whether it will be possible for us to recoup them during the present financial year is doubtful.

In these circumstances we have given careful consideration to the programme of future developments on which we have embarked. I am glad to say that there will be no alteration to any of our major plans.

The construction of the works at Linwood, near Glasgow, in which our new small car will be made, is progressing speedily and we hope to be able to announce our car with production in reasonable quantity in the Spring of 1963.

With regard to our various products, these continue to hold their high place in public esteem. Moreover, we have recently introduced new model Hillman and Singer Cars and also new Commer Trucks which have been enthusiastically received both at Home and Overseas. The current order book is a good one and I hope that our labour problems will soon be resolved and allow us in the very near future to meet the demand of our dealers and the public.

REGIS PROPERTY

CAPITAL INCREASE APPROVED

The twenty-third annual general meeting of Regis Property Company, Ltd., was held on November 28th in London, **Sir Aynsley Bridgland, CBE,** chairman, presiding.

The following is an extract from his circulated statement:

Our net profit for the year has increased from £171,736 to £207,345. Our net property revenue increased from £629,224 to £751,738.

This net profit of £207,345 is derived from properties having a book value of £11,642,923. As the market value of our properties is considerably in excess of the book value it will be appreciated that there is a considerable leeway to be made up in the way of rents before our income shows a reasonable return on our investment.

The time-lag in increasing our rents is due to two factors—(*a*) of the 2,298 flats owned by us there are still 528 rent controlled and (*b*) the offices still suffer very substantially from the lower level of rents which were obtained immediately after the war.

Rents for our flats are below the average which is being achieved today for comparable accommodation and our flat properties should provide us with a steadily increasing revenue as the rents are adjusted to present-day values. On the other hand, the office rentals receivable under leases granted some 14 years ago will rise substantially as new leases are negotiated. The past year shows some evidence of this and further large numbers of these leases will be falling in over the next four years.

EXPANSION POLICY

Our plans for further expansion are governed by the present high cost of money. We do not think it advisable to use our very considerable financial resources, available by arrangements agreed in principle, until interest rates are more reasonable except in certain cases where we feel the cost can be justified. It may be argued that such an attitude is too conservative under present-day conditions but your Board feel that when the right time comes, as it surely must, we shall be able to profit by our refusal to undertake risks in borrowing monies on long term at a high rate of interest.

We are asking you to agree to increase our authorised share capital to £7,000,000 by the creation of a further 3,000,000 unclassified shares of £1 each.

It is not proposed to issue any of the unissued share capital immediately but it is obvious to your Board that any future plans must not be hampered by any lack of room to manœuvre especially as in many cases time is limited when negotiations suddenly fructify. In view of the size of the proposed increase of capital I should perhaps make it quite clear that no issue of shares will be made which could affect the present control of the Company or alter the general nature of its business without the prior consent of the Members in General Meeting.

The Board recommend a final dividend for the year of 7½ per cent. (Total, 12½ per cent.)

The report was adopted and at a subsequent extraordinary general meeting the increase of capital was approved.

THE INDUSTRIAL FINANCE CORPORATION OF SOUTH AFRICA LIMITED

At the Fourth Annual General Meeting of the Company held on November 13, 1961, the Chairman, **Dr. H. J. van Eck,** referred to the increase in profits from R23,324 in 1960 to R43,416 for the year ended June 30, 1961, and also to the fact that by virtue of the recent call of 5 cents per share the Company's paid-up capital now stood at R1,250,000 while the issued capital remained at R10,000,000.

NEW BUSINESS

No new business commitments were entered into during the financial year but the Company recently agreed to assist in financing the expansion of a successful enterprise in the Cape Province to the extent of between R350,000 and R500,000, partly by way of an equity investment and partly by way of a loan.

STIMULATION OF EXPORTS

The Chairman indicated that the recent overseas trade missions had established that there were many opportunities for the export of South African products, but had also advocated a vigorous follow-up by the manufacturers themselves. Keen competition had, however, to be expected from other exporting countries and exporters were also faced with the problem of financing these imports particularly when related to heavy capital goods where purchasers expected credit facilities. The provision of this type of finance was receiving the Board's detailed attention.

FUTURE PROSPECTS

Dr. van Eck expressed the view that there were definite signs of a revival of interest in industrial development. A number of important overseas and local corporations had decided to embark upon substantial expansion schemes in South Africa and the new extensions being undertaken by Iscor, Sasol, Foskor and Escom were positive steps which were both encouraging and timeous. He was hopeful therefore that before long increasing calls for financial assistance would be made on the IFC which remained a source of substantial venture capital to private enterprise. He felt that the limited use made of the IFC's resources to date was to some extent tangible evidence of the country's strength in overall financial resources.

STERLING CABLE COMPANY LIMITED

HIGHER OUTPUT OFFSETS RISING COSTS

MR JAMES S. CLARK ON SATISFACTORY CURRENT ORDER BOOK

The thirteenth annual general meeting of Sterling Cable Company Limited was held on November 24th in London, **Mr James S. Clark** (chairman and managing director) presiding.

The following is his circulated address:

Ladies and Gentlemen, I have the pleasure to submit the Report of the Directors and Accounts of the Company for the year ended March 31, 1961.

The Group profit, before tax, was £70,468, compared with £53,129 last year. Income Tax requires £29,855. The Group profit, after tax, is £40,613, out of which we have provided for Preference Share redemption £5,772, and for the Preference dividend, less tax, £6,112. The recommended Ordinary dividend of 7½ per cent, less tax, will require £18,605, leaving £10,124 to add to our carry forward, which now totals £79,014.

PROFIT MARGINS

Last year I told you of the healthy state of our Order Book—the exceptional range of types of cable for the Export and Home markets. As the year progressed it became apparent that the level of prices at which these orders were booked, although improved, still left much to be desired. A considerable portion of our business is taken at firm prices (except for metal variations), which means that all increases have to be absorbed by, and so decrease, the profit margin. There was a steady increase in operational costs throughout the year. Happily we were able to offset the full effect of these rising costs on our contracts by greater and more efficient output.

Our Order Book remains satisfactorily varied and adequate—output is at an all-time high. Profit margins are still below the 1958/59 level, modest as those margins were. We are optimistic that the results for the current year's trading will again show improvement.

EXPORT MARKET

Export continues to be our main preoccupation, and is responsible for approximately half our output. We have been entrusted with the requirements of power, control, and instrumentation cables for many overseas projects of great size and complexity, and again it is our privilege to express our thanks to the Consultants and Contractors concerned for their continued splendid support. The enthusiasm of our staff and operators combined with the compactness and flexibility of our organisation makes it possible to solve the problems constantly met with in the Export market.

The cable industry has to move in front of the times. It must play its part in providing that vital necessity—cheap power. This means constant technical and practical development, the use of new materials requiring new plant and modern methods. Such developments cannot be realised unless there are reasonable profit margins stemming from stabilised trading conditions. Let us hope that goodwill and good sense will create and preserve these essential conditions.

Our team has once again demonstrated both efficiency and goodwill, and I know you join with me in passing on our high regard and warm appreciation.

The report and accounts were adopted.

RANSOME & MARLES BEARING CO. LTD.

LARGER EXPORT TURNOVER

The Forty-fifth Annual General Meeting of Ransome & Marles Bearing Company Limited was held on November 28th at Newark, **Mr Edward W. Senior,** CMG, chairman, presiding.

The following is an extract from the chairman's circulated statement for the year ended June 30, 1961:

Last year I referred to the effects of the credit squeeze on consumer durables with particular reference to the Motor Industry. A definite recession developed, and it was not until the last two months of our financial year that any appreciable improvement occurred; in point of fact, the output of passenger vehicles in the year under review was 25 per cent lower than in the previous year and, naturally, we did not escape the effects of this reduction in demand.

Notwithstanding these difficult trading conditions, the net trading profit of the Holding Company, after taxation, amounts to £727,177, against £837,778 in the previous year. A second interim dividend of 10 per cent has been paid, making the distribution the same as last year.

Good progress has been made in the construction of the Annfield Plain factory extension which should be in operation in the near future. The purchase of the original factory has been completed. The cost of the extension is estimated at £330,000 and is included in the figure of Capital Commitments, £913,681.

The increase in the Capital reflects the Scrip Issue made last December. The purpose of the Rights Issue was fully explained in the letter of July 7th to shareholders, and the effect of this issue will be shown in next year's accounts. The way in which the rights were taken up was very gratifying, and your Directors are satisfied that the Company now has adequate working Capital.

Our efforts in export markets, in face of keen competition, were rewarded by an increase of 30 per cent in turnover, although the results from two of our subsidiaries, Australia and Canada, were adversely affected by the difficult economic conditions in those countries.

Our associated manufacturing company in Australia—United Bearing Corporation Pty. Ltd.—is developing its manufacturing facilities rather more slowly than had been hoped because of the recession in Australia. We are, however, pleased to see that the Australian economic situation appears to be improving.

SATISFACTORY ORDER BOOK

The order book has shown a slight increase over the year and stands at a satisfactory level. Sales at present show an improvement over the corresponding period of last year.

We are dependent on the requirements of all Engineering Industries; demand from the capital goods industries remains at a high level, but it is doubtful if the full effect of the "Little Budget" has yet been felt on consumer durables, and whether, therefore, the trend will be similar to that of last year. I am, however, hopeful that the diversity of our interests will enable us to maintain a level of output adequate to produce a satisfactory year's trading.

The report and accounts were adopted.

GEO. ADLAM & SONS

LARGER PROFIT & DIVIDEND

The fifty-fourth ordinary general meeting of Geo. Adlam & Sons, Ltd., was held on November 27th at Bristol, **Mr W. Walker, JP,** chairman, presiding. The following is an extract from his circulated statement:

I referred last year to keener prices in tendering due to competition, also to the shortages of stainless steel causing idle time and unrecovered overheads which later would lead to heavier costs to meet delivery promises.

The Directors' intentions at that time to take all possible steps to minimise those losses are reflected in the results whereby a profit was made this year, before taxation, of £33,869 as against £7,916 last year.

During the last two years I have referred to the Directors' policy of looking to the future development of the business rather than in paying dividends, or rather, high dividends. The Directors recommend 10 per cent as against 5 per cent last year.

The order book is very good, particularly on stainless steel tanks. This large order book has affected the Company in three ways—shortage of finance, delay in developing diversified products and shortage of production space.

The steps outlined and the high order book made it impossible to deal unaided with production problems. Your Managing Director, Mr Young, with a colleague, Mr Rymer, are the owners of V.P. Sheet Metal Limited, a private company in Cheltenham. That Company owns a factory, part of which it has occupied for many years and part of very recent construction, together with machinery, much of which is complementary to your Company's plant.

It became obvious that by pooling new products, using managerial and executive staffs, labour forces and machinery for the most useful work, and having two Works available, better total results could be obtained; also after complete integration economies would be effected over a few months. Accordingly, your Directors have negotiated the purchase of the issued capital of V.P. Sheet Metal Limited.

Your Directors intend before March 31st next to make a capital bonus issue (not yet determinable) to the Ordinary Shareholders.

The report was adopted.

TOLEDO WOODHEAD SPRINGS

EXPANSION IN EXPORT TRADE

The twenty-third annual general meeting of Toledo Woodhead Springs Limited will be held on December 20th at Coronation Works, Aycliffe, Co. Durham.

In his Letter to the Shareholders accompanying the Report and Annual Accounts 1960-61, **Mr Frank Woodhead** states:

The group trading profit for the year before deduction of depreciation is £142,968. This profit is less than my expectation when last addressing you, but as you will no doubt recollect December of last year saw the beginnings of a serious recession in the Motor Car and Truck Industry. This depressed condition consequently affected our sales at home. Had it not been for the rapid and considerable growth in our export trade, the figure of profit would have been substantially less.

I am glad to say that while business in general is not quite up to the liveliness of fifteen months ago, nevertheless our improving export trade and general business position leaves us without concern about the immediate future.

In fact our confidence in the continuing growth of this Company has led us to making further extensions to our Coronation Works, at the same time installing machinery which will substantially improve the productive potential of the company. In fact we expect to spend some £60,000 on additional machinery.

With the contracts and orders already placed and the long term arrangements which have been entered into, I feel sure that the year ahead of us holds beginnings of a substantial increase in the company's turnover and a rise in its profitability.

Although the group profits for the year are less than last year's best figures, your Board has complete confidence in the growth of this company and has pleasure in recommending a final dividend of 12½ per cent, making a total distribution of 20 per cent as last year, but on an issued capital 50 per cent greater.

BRITISH COATED BOARD & PAPER MILLS LIMITED

MR WILFRED HARVEY'S STATEMENT

The twenty-fourth annual general meeting of British Coated Board & Paper Mills Limited was held on November 22nd in London, **Mr Wilfred Harvey** (the Chairman) presiding.

The following is his circulated statement:

The Consolidated Profit and Loss Account shows a balance of profit for the year after providing for taxation of £149,470 as compared with £138,322 in the previous year.

Your Directors are pleased to be able to recommend a final dividend of 20 per cent, less tax, making a total for the year of 27½ per cent, less tax.

The Notice convening the Annual General Meeting includes a Resolution for increasing the Company's borrowing powers. The present limit of £550,000 was fixed in 1937 and is now quite inadequate for our current business needs. The proposed new limit of £1,500,000 should be adequate for the Company's foreseeable requirements.

During the year we have created and brought into production a wider range of papers which has enabled your Company to increase the volume of sales, and although the margin of profit has been less the increased turnover has been responsible for the increased profit.

As to the current's year's trading the paper industry as a whole has now to meet severe competition from abroad and the margin of profit with ever increasing costs cannot be maintained unless the volume of sales increase and to this end our Organisation is doing everything possible to meet the position.

Once again I wish to pay tribute to my Colleagues on the Board and to the loyal services rendered to the Company by all our employees.

The report and accounts were adopted and the Resolution increasing the Company's borrowing powers was approved.

B.M.C. Vehicle Capacity Increased —Reply to Export Challenge

Europe now a key market
World-wide servicing coverage

Mr. George Harriman, in an introduction to the Annual Statement to B.M.C. Shareholders paid tribute to Sir Leonard Lord, K.B.E., on his retirement as Chairman. Other points from the Statement are as follows:

In this, our 10th year, the difficulties at home and abroad were numerous and stubborn, but were met with vigour. Despite the sharp fall in profits, the Board are confident of the future and recommend an unchanged dividend. This confidence is based on having improved our competitive position within the British motor industry. Improvements in specification are enabling us to face competition at home and abroad with renewed vigour.

Higher performance and re-styled sports cars have rejuvenated US demand. Looking at export prospects broadly, it is encouraging that B.M.C. vehicle stocks throughout the world are now declining, giving confidence that the decks are now being cleared for more export progress in the early future.

At present the combined home and export demands are calling for most of the vehicles we can make, and we must hope that the home market can consistently provide a solid basis for future planning of the expansion essential to our place in export markets.

In the past four financial years, B.M.C. exports to Europe as a whole have advanced by 79 per cent and are still rising. These results were not fortuitous. They came from having the right models, backing them with sound service, and by encouraging a number of loyal and good distributors.

B.M.C. Service Ltd. enjoyed a record year and is currently supporting our distributors and dealers throughout the world with peak availability of parts. We have also introduced a unique new warranty providing very much wider cover.

Looking to the future—and knowing what we have achieved in the past—we journey onward with confidence, well equipped with adequate resources and alert and eager both to resolve the problems and to enjoy the opportunities that lie ahead.

THE BRITISH MOTOR CORPORATION

CRAIGIELEA RUBBER PLANTATIONS

The thirty-sixth annual general meeting of Craigielea Rubber Plantations Limited will be held on December 19th in London.

The following is an extract from the circulated review of the chairman, **Mr H. T. Karsten.**

As a result of the acquisition of the entire capitals of Johore River Rubber Plantations Limited, Layang Rubber Plantations Limited and Middleton Plantations Limited the issued capital of Craigielea has been increased to £792,001 and the Group acreage under rubber now stands at 14,196 acres.

The Group net profit for the year amounted to £106,843, of which £52,403 was in respect of Craigielea and £54,440 was contributed by the Subsidiaries. These results enable a dividend of 12½ per cent to be paid for the year, as against the 15 per cent which was paid last year on the smaller capital of £353,063.

Having referred to the year's crop figures for Craigielea and also for the Subsidiaries since acquisition, which gave a total of 5,330,000 lbs., the chairman continued:

The crop for the first six months of the current year totals 2,737,000 lbs. and is a little ahead of the output for the corresponding period in 1960.

The average spot London price for No. 1 Smoked Sheet for the first six months of the current year was approximately 2s. 1¼d. per lb. or some 4d. per lb. lower than the average price for the previous year. The price has since dropped to around 1s. 10d. per lb. and consequently the results for the current year are likely to be significantly less favourable than those for 1960/61.

MERLIMAU PEGOH

The fifty-second annual general meeting of Merlimau Pegoh, Limited, will be held on December 21st in London.

The following is an extract from the review of the Chairman, **Sir Harry Townend,** for the year to March 31, 1961:

The Group profit, after taxation, amounted to £278,124 as against £235,022 in the previous year. Included in this figure is £16,093 attributable to Dennistown Rubber Estates, which became a Member of the Group during the year, but nothing on account of our interest in Middleton Plantations which was sold to Craigielea Rubber Plantations in exchange for cash and shares in that company. The results enable a total dividend of 20 per cent to be paid by way of interim payments of 6 per cent and 14 per cent on the capital as increased from £1,118,267 to £1,153,388. Last year a total of 25 per cent was paid.

In referring to the Group's crop figures, the chairman said that the satisfactory increase shown during the year under review had been maintained in the current period, the crop for the first six months having risen from 5,860,000 lbs. to 6,627,000 lbs.

He continued: Replanted areas progressively reaching maturity and increasing yields from mature post-war replantings have contributed to the increased output.

The average spot London price for No. 1 Smoked Sheet for the first six months of the current year was approximately 2s. 1¼d. per lb. or 4d. per lb. lower than the average for the whole of the previous year. The price has since dropped to around 1s. 10d. per lb.

SOUTH AFRICAN IRON AND STEEL INDUSTRIAL CORPORATION

DR F. MEYER'S ADDRESS

Dr F. Meyer, chairman of the South African Iron and Steel Industrial Corporation Limited (Iscor), in addressing the thirty-second ordinary general meeting of shareholders at Pretoria on November 22nd, said:

The net profit for the year ended June 30, 1961, after taxation, amounted to R22,360,495 compared with the previous year's figure of R22,244,634.

For the first time in the Corporation's history the annual ingot steel production exceeded the 2,000,000 ton mark. During the year under review the two works produced 2,212,244 ingot tons. It is interesting to note that only nine years ago the Corporation for the first time produced more than one million ingot tons of steel per annum.

The net sales value of all the products sold during the financial year amounted to R112,516,424 compared with R116,029,392 for the previous financial year.

These figures included the export to overseas countries and African territories of 85,342 tons of steel, 62,275 tons of pig iron, and 2,565 tons of coke oven by-products. The invoice value of these exported products amounted to R8,829,000.

The total supply for the year of rolled and drawn steel products from local and overseas sources was estimated at about 1,892,000 tons, an increase of 216,000 tons over the adjusted figure of 1,676,000 tons last year, or 13 per cent more,

Of this tonnage, producers in the Republic supplied 90 per cent, Iscor's share being 76 per cent, whereas in the previous year the corresponding percentages were 92 and 77.

During the financial year a slackening occurred in the local demand for certain steel products. The Corporation decided to maintain maximum production as far as possible and, as when the same thing happened three years ago, to find export markets for those products which the Republic did not require. As already mentioned 85,342 tons of steel and 62,275 tons of pig iron were exported up to June 30th. Since then exports have continued. For the first three months of the current financial year export orders for iron and steel products to the value of R6,330,900 have been secured. The whole matter of greater export of Iscor products is receiving attention.

With the exception of minor adjustments in Iscor's price structure there has been no general price increase in the course of the year under review. In fact, since 1952 there has been no general upward adjustment in Iscor's prices, which is in contrast with what has happened in all other steel producing countries.

The Corporation's annual production capacity has now reached the target of 2,350,000 ingot tons, and the extension scheme costing R112,000,000 is nearing completion.

With regard to the R560,000,000 major extension scheme, referred to in my last statement, a thorough study has been made of various aspects and some tenders have already been received. It is expected that approximately three-quarters of this amount will be spent in the Republic on equipment which can be made here, on the construction of the many buildings required, on the provision of the necessary services such as tracks, roads, water, power, etc., and on the manufacture and erection of the plant involved. It is too soon for these plans to affect the local engineering industry but it should not be long before this will take place.

It is proposed to carry out this major expansion programme in consecutive steps. Apart from a comparatively small addition of 150,000 ingot tons per annum at Pretoria the first two major steps will be effected at Vanderbijlpark.

The Pretoria additions and the first steps at Vanderbijlpark should be in operation in 1966 and the second step at Vanderbijlpark not later than 1969. This should bring Iscor's annual ingot capacity to between 3,800,000 and 3,900,000 tons. The exact tonnage can still be amended if necessary before 1969.

There is no need at the present moment to decide on the exact scope nor on the geographical site of the further steps in this expansion programme. It is an opportune time to explain that the reasons for planning additions to our existing works before establishing a works at a third site are, firstly, the very much higher capital expenditure required to provide the same increase in our steel manufacturing capacity at a new site as compared with that of enlarging an existing works; secondly, the lower overhead and general costs per ton that can be achieved when expanding existing facilities as compared with those likely to be incurred with a separate works; thirdly, the time factor and staff problems.

During the year a total of R30,100,313 was paid out in direct salaries and wages while R2,666,972 was spent on indirect benefits.

C.L.R.P. INVESTMENT TRUST LIMITED

INCREASED INCOME

The Thirty-first Annual General Meeting of C.L.R.P. Investment Trust Limited was held on November 29th in London. **Mr H. D. Curry,** chairman and managing director, presiding, stated that the consolidated revenue showed an increase over the 12 months of £20,440, or nearly 9 per cent. The mid-year report on April 19th showed an increase in total revenue of 16 per cent and it may be recalled Mr Curry then warned that growth was unlikely to continue on that scale. The board now recommended a final payment of 11½ per cent, making the total dividend for the year 19 per cent.

The valuation of the portfolio at August 31st last showed an appreciation of £2,171,200 over the book value of £2,097,996.

By the time of the mid-year report in April the Investors Chronicle monthly securities index for industrials had climbed 107 points to a peak of 587.3 at which period the break-up value of the 5s. ordinary units was approximately 25s. 0d. In the following four months to the 31st August there was a recession and the index fell to 493.7, i.e. 93.6 points, or nearly 16 per cent, whereas the fall to 24s. 10d. at that date in break-up value of the 5s. units was negligible in comparison.

The report and accounts were adopted.

THE ECONOMIST DECEMBER 2, 1961

COMPANY AFFAIRS

Banks and Hire Purchase

INVESTORS who are showing their usual interest in bank shares in advance of the January dividend season should on balance be pleased with the full results of the **National Commercial Bank of Scotland.** These show, admittedly, a drop in disclosed profits from £1,540,000 to £1,368,000, but this fall is more than accounted for by the fall in the bank's dividend from its hire purchase interest in Lloyds and Scottish Finance, from £597,000 to £184,000. Apparent banking profits have therefore risen by nearly £250,000, or 25 per cent. The full accounts of Lloyds and Scottish are due next week, but in the meantime Mr Macdonald, chairman of both the bank and the hire purchase company, has said that the "measure of setback" in hire purchase earnings is due to losses incurred by a subsidiary in Jamaica as well as by operations in Britain.

In his statement accompanying the bank's accounts, Mr Macdonald draws attention to the general sluggishness of bank deposits. And although credit transfers are encouraging more people to use the banks, he sees no likelihood of a large increase in deposits so long as wage-earners are paid in cash. This is substantially true—and one lesson for the banks is surely to make their deposit rates competitive. Deposits at the National Commercial increased by less than one per cent in the year to October 28th—although the Scottish banks as a whole secured an increase of three per cent. Mr Macdonald also points out that with advances approaching 50 per cent of deposits any further lending is becoming increasingly dependent on a growth in deposits. And in this respect he feels that the recent levelling out in advances is more a reflection of the banks' own caution than of official action and requests.

While the National Commercial's dividend from its hire purchase interest has fallen by nearly 70 per cent the National Provincial Bank's wholly owned subsidiary, **North Central Finance** (formerly North Central Wagon Finance), has maintained its dividend at 20 per cent and its profits before tax for the year to September 30th have risen from £874,000 to £1,410,000, which is close to the 1959 level of £1,580,000. This is the first piece of good news from a hire purchase company for a very long time. The chairman, Mr Duncan Taylor, was one of the few people in the hire purchase field who treated last year's setback as something more than an isolated slip-up. "It is unlikely," he said then, "that there will be any material improvement in the near future." The recovery in profits this year has occurred at a time when business has been running at a lower level and when borrowing costs must have been somewhat higher. The company has obviously been successful in chasing its defaulters: last year accounts with two or more rents owing were stated at some three per cent of balances outstanding. The National Provincial did not increase its representation on the board after last year's setback, but the board was strengthened last March by the appointment of Mr John Paterson. He had previously been managing director of Rootes Acceptances, a subsidiary of Astley Industrial Trust.

Handley Page

IN the next few years the profits of Handley Page will largely depend upon the number of Herald aircraft that are sold. On this, Sir Frederick Handley Page is optimistic. Between 80 and 90, he says, will have to be sold to recover development expenditure already written off (£3.3 million) and the costs of production and production tools. So far, Handley Page has sold 19 and it has options on seven more. There is still a big gap; but Sir Frederick expects greatly increased sales in the near future and arrangements have been made for stepping up production in 1962 and 1963. Were sufficient Heralds eventually sold the amount available for dividends and free reserves would rise appreciably, as development costs on the aircraft, which in past years absorbed a good deal of the cash flow, would be recouped.

This prospective improvement in liquidity will not take place immediately. At the end of last December the company owed more than £3¼ million to the banks and the value of stocks and work-in-progress was high, partly reflecting delay in settling redundancy and price claims arising from the cancellation of part of an order for Victor 2s. This also delayed the publication of the accounts. These make a good showing, for gross profits in 1960 amounted to £1,051,000 (against £573,000) even though as much as £798,000 (against £452,000) had to be written off before striking the profit balance. Work was withdrawn from sub-contractors; the commercial division is more diversified and Sir Frederick expects it to contribute progressively to earnings in the coming years; and sub-contract work was accepted from other companies. Handley Page has maintained a high level of activity this year and Sir Frederick says that this year's results will be at least up to those of 1960. Hence a further dividend of 15 per cent should present no difficulty. Indeed, if the dividend decision were again delayed there might be the possibility of something more than 15 per cent. for in deciding upon the 1960 payment the directors deferred to the Chancellor's request and did not reconsider their dividend policy. The future of the 5s. shares, currently yielding 7½ per cent at 9s. 9d., may therefore be more hopeful, though hardly full of dynamic promise. So much turns on the number of Heralds that are sold; but the spectacle of steady commercial effort by the one independent company left in the aircraft industry is not to be despised.

Metal Box

THE surprise in the Metal Box interim statement was not that profits fell in the six months to end-September, for in June the chairman had indicated that some fall was likely. It was the revelation that while demand at home had picked up quickly, progress recently made by the overseas subsidiaries has been abruptly halted. The accompanying table shows that profit and sales at home had risen and also that margins have actually improved. On the other hand, sales overseas, though well up on those for 1960 are below those for the six months to March 31st, and profit margins have fallen sharply.

The directors say that margins are still under pressure, but they expect profits for the full year to March 31, 1962, to be close to those of 1960-61. They hope to maintain the dividend at 12 per cent on the capital as increased last January by the one for six rights issue. On this forecast the £1 shares at 82s. yield under 3 per cent. This return fully discounts the prospect of growth in the short term and looks well ahead to the long term effects of the group's expansionary policies, reflected in the £4¼ million spent on fixed assets in the past half-year.

Following the interim statement has come news of a take-over bid for Wallis Tin Stamping, the Dorset manufacturers of metal bottle caps and refrigerators. The offer to both Wallis preference and ordinary shareholders is an exchange into Metal Box shares, with preference holders maintaining their income though losing their present voting rights. On the terms of one Metal Box ordinary for every five Wallis 2s. ordinary shares, equity shareholders will suffer a slight loss of income, receiving 12 per cent (against the equivalent of 12½ per cent). However, the offer is worth 16s. 6d. against a pre-bid price of 14s. 3d.; before this year the price of the Wallis shares had not risen above 10s. since 1953 as the company's dividend policy has been conservative. The offer has been approved by holders of ordinary and preference (including Bovril) with about 45 per cent of the votes.

Joseph Lucas

IN 1959-60, the profits of Joseph Lucas did not rise nearly so quickly as those of its principal customers in the motor industry; but in the year to July 31st last an increase in the sales of its components to the commercial vehicle and aircraft industries and comparatively stable sales in the replacement market helped to cushion the fall in its profits. But for much of the year business with the car makers was unprofitable, and as stocks piled up and margins narrowed the group's cash resources dwindled, so that by the end of July there was a bank overdraft of £1,347,000.

Overseas the group fared ill in Australia and Canada but went ahead with expansion plans in France and Germany. The chairman, Sir Bertram Waring, says that in order to finance further developments in the common market the group intends to raise a long-term loan outside the sterling area. The group spent £5 million on capital account in 1960-61 and with outstanding commitments amounting to £4.2 million it is not surprising that Joseph Lucas is looking for new capital funds. In the short run the group should be able to maintain its sales outside the motor industry, but its immediate prospects are dimmed by the low return on components sold to it. Looking further ahead, the Joseph Lucas group has geared its development plans to those of the motor manufacturers and if, for instance, sales fail to rise to match the increase in capacity in the British motor industry it is difficult to believe that Joseph Lucas would be unaffected. So far, however, its profits have swung less violently than those of the motor industry and this is reflected in the yield of 4.9 per cent offered by the £1 shares at 56s. 3d. on a maintained dividend of 13¾ per cent, covered 2¼ times.

	1958-59 (£000's)	1959-60 (£000's)	1960-61 (£000's)

Gross profit/sales	9·9	8·8	7·9

Birfield Industries

THAT the good results from Birfield Industries have not surprised shareholders is due to that company's commendable enterprise in publishing quarterly figures of sales and profits. For those less well acquainted with the company, but knowing something of its connections with the motor industry, the results must seem surprising, for sales in the year to July 31st were up by 11 per cent, from £26.9 million to £28.1 million, and profits before tax up by 28 per cent, from £2.6 million to £3.4 million. In fact car components account for about 35 per cent of Birfield's sales and commercial vehicle components for a further 13 per cent but it was sales outside the motor industry which brought about the advance in profit. These included farm machinery, garage equipment, blotting paper, powder metallurgical products and filter units. Trade with the motor industry, moreover, was helped by the good demand for constant velocity joints, used particularly in mini-cars.

After a rise in stocks from £4.4 million to £6 million, the group's overdraft had risen from £354,000 to around £1,250,000 by the end of June. In addition a loan of £1 million, raised to finance the acquisition in America of Bound Brook Oil-Less Bearing, is outstanding. But with a net cash flow of over £3 million and capital commitments not expected to exceed £3 million over the next 18 months or so the company does not contemplate an issue. At 65s. the £1 shares yield only 3.1 per cent and with profits showing a slight fall so far in the current year they may look high enough—though not necessarily too high for the maintained dividend of 10 per cent on the capital as increased by a one for five scrip issue is covered almost six times.

Gas Purification

A DIFFICULT year of trading has made its further mark on Gas Purification's already unimpressive balance sheet: against a cash balance of only £34,000 at the end of June were ranged bank bills and overdrafts of £1.2 million. Big stocks held by the major subsidiary, Grundig, were one reason for this state of affairs but stocks are now being reduced and the cash balances will be reinforced by the sale of the machine tool division of Smart and Brown and of a lease held by another subsidiary for £475,000.

Shareholders may wonder about cutting off noses and spiting faces for the sales of Smart and Brown rose by 20 per cent and its profits rose almost three fold in the year to June 30th—in sharp contrast to the performance of the whole group, which lost £15,000 net, against a profit of £811,000. However, the chairman, Mr D. D. Mathieson, has described the machine tool division's record as "inconsistent." The results of Grundig tape recorder subsidiary he admitted were "extremely disappointing"; it was hit late in the year by the revaluation of the mark, which added to the costs of supplies from Germany. The change to direct trading also required extra finance and distribution and other costs rose sharply. Mr Mathieson said that prospects in the tape recorder field are now "much more encouraging."

Changes in the board room have accompanied the increasingly depressing news from the group and shareholders who receive no dividend, against 35 per cent, will hope that the appointment of Mr Joseph Green, the group's third chairman within a year, will lead to more profitable trading. Presumably, one of his first problems will be concerned with the raising of further finance. Investors have learnt the lesson of the industrial holding company the hard way: the 5s. shares of Gas Purification now stand at 6s. 9d., compared with this year's peak of 19s. and the 1960 peak of 34s.

THE stock market was in a hesitant mood before the weekend, with equity prices moving lower on Thursday but rallying on Friday as the pressure from sellers was outweighed by bear covering. Buyers held off, disappointed by the TUC decision to postpone the question of joining the national planning board and worried by comment on the vulnerability of sterling. But the new account opened with equity prices rising steadily if slowly throughout the first half of the week; but the level of business remained small. Over the week *The Economist* indicator gained 0.3 of a point to 356.9.

Gilt-edged stocks felt the influence of misgiving in the market about the pay pause and the stability of the pound last Thursday but small buying on Friday was enough to push prices up again. On Tuesday and Wednesday buyers were again predominant and short dated stocks which had lost ground before the weekend responded to investment demand. Exchequer 5½ per cent 1966 gained 7/32 to 98⅜ while among medium dated stocks Conversion 5 per cent 1971 and Conversion 5¼ per cent 1974 remained unchanged at 92 15/16 and 92¼ xd respectively. Long dated stocks were steady but there were small falls among the irredeemables.

In the equity market selective buying helped to raise prices and the gains were generally held in the face of a few profit takers. Building shares were irregular but Associated Portland made good some of their recent losses and closed 2s higher at 55s. 6d. Rumours of a take over bid for J. and F. Stone pushed the price up sharply to 33s. 6d. but the shares fell back later to 30s. 9d., only 6d. higher over the week. Other store shares were fractionally lower. Among chemicals ICI moved erratically throughout the week to close 1s lower at 59s. 7½d. Metal Box fell ahead of the interim results but improved later on bear closing to lose only 1s. over the week at 83s. After many lean weeks steel shares revived in front of the dividend season. United Steel was outstanding and gained 2s. 10½d. to 41s. 3d.

Some industrial shares however felt the effect of unfavourable news. Gas Purification lost 1s. 6d. to 6s. 9d. following the full report, and Allied Ironfounders 3s. 9d. to 44s. after the lower interim divident. Food shares were dull early in the week but rallied on Wednesday; Tate and Lyle gained 1s. 7½d. to 48s. 3d. ahead of the results. Paper shares fell back under the influence of the EFTA tariff cut and Bowater was 1s. 3d. lower at 44s. 6d. Oil shares gained under the lead of Shell Transport which rose 3s. to 115s. 3d. Kaffirs rose on the news that the US gold reserves were at their lowest since 1939. Most interest focused on finance houses and Union Corporation gained 3s. 3d. to 61s. 3d.

EXCHEQUER RETURNS

For the week ended November 25, 1961, there was an "above line" deficit (after allowing for sinking funds) of £38,261,000 compared with a deficit of £7,907,000 in the previous week and a deficit of £45,381,000 in the corresponding period of last year. There was a net receipt "below-line" of £23,034,000 leaving a total cumulative deficit to date of £732,850,000 compared with £748,827,000 in 1960-61.

Money and Exchanges

THE MONEY MARKET

THE Treasury bill rate continues to hold firm: at last Friday's bill tender the average rate of discount for 91-day bills fell by only 0.31d. to £5 7s. 9.40d. per cent. The syndicate of discount houses put in an unchanged bid of £98 13s. 1d. for these bills. This week the authorities have again given the Bank rate screw a small twist; on Tuesday and Wednesday two or three houses were forced to borrow small amounts from the Bank at the penal rate. The market received 42 per cent of its application for 91-day bills, against 56 per cent in the previous week—the offer of £220 million was under-allotted by £10 million—but it improved its quota of 63-day bills from 85 to 90 per cent.

Credit was in fairly free supply before last weekend and the authorities found no need to help the market. Rates for short loans opened at 5¼ per cent and fell to the clearing banks' minimum of 4½ per cent by mid-afternoon. On Monday, however, the authorities gave the market a moderate amount of help by special purchase of bills, and on Tuesday this help was large, but it was not sufficient to save part of the market from calling on the Bank for its final balances.

APPOINTMENTS

ECONOMIC INTELLIGENCE

MORGANITE RESEARCH AND DEVELOPMENT, Limited, Battersea, London, requires an ECONOMIST to co-ordinate the intelligence picture of the chief overseas markets of The Morgan Crucible Group, with emphasis on Western Europe.

The Group sells nearly half its production overseas. Products include carbon brushes, crucibles, resistors, refractories, electrical and electronic components and a wide range of other specialised industrial requirements.

The successful candidate will need to have, or be capable of acquiring, a good reading knowledge of French and German; and will be required to learn the scientific and applied economic basis of several industrial technologies. The techniques employed have little in common with those used in consumer market research. Nine months' preliminary training will be given.

Initial salary between £1,200 and £1,800 per annum depending on qualifications.

Please write, to:

The Staff Manager,
Morganite Research and Development Limited,
Battersea Church Road,
London, S.W.11.

COMPUTER DEVELOPMENTS—STAGE II

In 1957 RECKITT & SONS decided to introduce a computer into their Head Office and a National Elliott 405 was commissioned in 1959. This computer is now handling a considerable volume of work, and some expansion of the staff is necessary to enable further important developments to be undertaken.

We wish to appoint:

A CHIEF PROGRAMMER to supervise the adapting of a wide variety of commercial works for an ADP system. This appointment will interest an experienced programmer, especially one who has used a 405 and is ready to accept greater responsibilities in an expanding company with very wide commercial interests.

PROGRAMMERS to tackle particular projects with the emphasis on foresight and the capacity to plan rather than to code.

We shall welcome enquiries from those with a degree or professional qualification, who understand the significance which a computer can have in a commercial organisation, and these enquiries should be addressed to:

Personnel Director,
Reckitt & Sons Ltd.,
Dansom Lane,
HULL

EXPERIENCED FINANCIAL JOURNALIST. Hard-working, versatile; able to analyse an investment or interview a chairman. A permanent appointment on a leading weekly.—Write Box G.549, c/o Streets, 110 Old Broad Street, E.C.2.

UNIVERSITY OF THE WITWATERSRAND
JOHANNESBURG

LECTURER OR JUNIOR LECTURER IN DEPARTMENT OF ECONOMICS AND ECONOMIC HISTORY

Applications are invited for appointment as Lecturer or Junior Lecturer in Economics. Duties are to be assumed on 1st March, 1962, or as soon as possible thereafter.

The salary scales payable are as follows:—
Lecturer R2,460 x 120—R3,420
Junior Lecturer R1,740 x 120—R2,100
In addition, a vacation bonus is payable at Public Service rates.

Intending applicants are required to obtain a copy of the relevant information sheet from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1. Applications close in South Africa and London on 31st December, 1961.

UNIVERSITY OF OXFORD
HEAD OF DEPARTMENT OF SOCIAL AND ADMINISTRATIVE STUDIES

The University proposes shortly to appoint a Head of the Department of Social and Administrative Studies, whose duties will be to give instruction in Modern Social Institutions, to engage in research, and to have charge of the department. Stipend on the scale £1,975 x £75—£2,425. Applications by January 11, 1962, to the Secretary of Faculties, University Registry, Oxford, from whom further particulars may be obtained.

For further appointments and other classified advertisements see page 978

UNIVERSITY OF OXFORD

Notice is given that the Readership in Sociology is vacant and that the Electors intend to proceed to an election. The salary will be on the scale £1,975 x £75—£2,425 plus children's allowances. Applications are invited in nine copies, naming three referees but without testimonials, to be received not later than January 11, 1962, by the Registrar, University Registry, Oxford, from whom further particulars may be obtained.

CONSUMER RESEARCH

MANAGER

for its Consumer Research Division. He will be in the age bracket 28-40 and will have been for some years in a position of Executive responsibility for Consumer Research Surveys Sales and Servicing, and therefore used to negotiating with Senior Executives in Client companies. This appointment will offer him a very good working environment, with considerable opportunity for both the development of his division's operations and personal progress in a Company with high standards.
Full details to:

BOX 1555
The Economist Newspaper Ltd., 22, Ryder St., St. James's, London, S.W.1.

PRITCHARD WOOD

have a vacancy for a

RESEARCH EXECUTIVE

in the Market Research Section of their Consumer Research Department. The candidate should be a graduate, preferably with some background in economics or statistics, and should have an aptitude for thinking quantitatively. He should have worked for several years in the market research field, and have had experience of designing surveys, interpreting research results and writing reports.
Please apply in writing, giving details of education, experience and salary required, to:

Personnel Manager,
Pritchard Wood & Partners,
197, Knightsbridge, London, S.W.7.

ASSISTANT FINANCIAL MANAGER required for Nitrogenous Fertiliser Plant, situated in Trinidad, W.I. The Company forms part of a large international group with world-wide activities mainly in the Chemical field.
The work will entail the supervision of accounting procedure to Profit and Loss and Balance Sheet level, the maintenance and development of a modern system of budget and cost control, the presentation of statistical information to management and investigation into accounting office methods and procedures. The position holder will report to the Company Financial Manager.
Applicants should be qualified Accountants with at least five (5) years' industrial accounting experience, preferably with a chemical company using a modern system of management accounting.
A satisfying career abroad and a starting salary in excess of £2,000 per annum will be offered to a suitable person aged between 27 and 33 years, preferably married.
After one year and ten months' service in Trinidad the applicant will be granted two months' home leave with passages paid for himself and family.
Applications, in the first instance, should be addressed to: The Managing Director, Grace Brothers, Ltd., 143/9, Tenchurch Street, London, E.C.3.

UNIVERSITY OF EDINBURGH
CHAIR OF ECONOMIC SCIENCE

The Chair of Economic Science is to become vacant on 1st October, 1962, and the Electors, who are the Curators of Patronage of the University and the Master and the Treasurer of the Company of Merchants of the City of Edinburgh, desire to make an appointment in the near future.
The Salary of the Chair will be not less than £3,000 per annum.
Applications (twelve copies), including the names of two referees, should be lodged, not later than 15th January, 1962, with the undersigned from whom a statement of further particulars may be obtained.
CHARLES H. STEWART,
Secretary to the Curators of Patronage.
November, 1961.

GOVERNMENT SOCIAL SURVEY

The SOCIAL SURVEY DIVISION of the CENTRAL OFFICE OF INFORMATION invites applications for the posts of ASSISTANT COMPUTING OFFICERS. The Division is responsible for official sample survey enquiries covering a wide field of social and economic problems with a variety of research methods and maintaining high technical standards. The principal duty is the analysis of survey data, using both punch card equipment and an electronic computer. The qualification required is a mathematical background to at least G.C.E. 'A' level or, alternatively, experience in a similar post involving a knowledge of statistical techniques. Some familiarity with computers would be an advantage, but training in programming will be given to successful applicants, if necessary. The posts which are graded ASSISTANT INFORMATION OFFICER are unestablished, but there are regular opportunities for establishment. Starting salary will be fixed according to experience and qualifications and will be on a scale rising to £1,214.—Write, giving age, full details of experience and qualifications, to Manager (PE.3611), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4.

OVERSEAS DEVELOPMENT INSTITUTE
RESEARCH OFFICERS

The Overseas Development Institute requires two research officers to work on problems of world development and aid of all kinds. One should be a professional economist; the other should be of similar standing but have specialist training in another subject (preferably a social science). Candidates must have good academic qualifications and considerable research experience.
Salary: Within the range £1,500-£2,500 p.a. *Appointment for 3 years in the first instance.*
Applications should be sent by 18th December, 1961, to the Director, Overseas Development Institute, 160, Piccadilly, London, W.1, from whom further information can be obtained.

Trainee
COMPUTER PROGRAMMER

If you are a young lady, aged 18-22 with a lively intelligence and a sound educational background having reached "A" level in maths., this position will interest you. Complete theoretical and practical training will be given and a salary commensurate with age and experience will be paid during this training period rising progressively to a four-figure salary for senior programmers.
Conditions of service are excellent with 3 weeks holiday every year. The Company operate a non-contributory pension scheme.

Please apply to:
Miss Walker, Personnel Officer
MARS LIMITED,
Fairlie Road, Slough, Bucks.

ECONOMIST

Large manufacturers, with a considerable interest in the export market, are looking for an ECONOMIST who can apply a knowledge of the European—and world—economic scene to a quantitative appraisal of long-term market trends for individual products, particularly in newly-developing countries.

A man or woman, who has the appropriate qualifications and experience, may expect to earn around £2,000 immediately.—Box 1570.

CANNING HOUSE

(The Hispanic and Luso Brazilian Councils)

The Councils invite applications for the post of Director-General of Canning House in succession to Sir John Taylor, K.B.E., C.M.G., who is retiring in 1962. The broad objective of the Councils is to encourage closer cultural and diplomatic relations with Latin-America and generally to assist British companies which have commercial and financial interests in or trading relations with Latin-America. In pursuance of these objectives Canning House maintains close relations with Government Departments, Latin-American Embassies in London and its own sponsor members. Applicants should, apart from fluent Spanish, have a wide knowledge of political and economic developments in Latin-America generally and also have some administrative or diplomatic experience at a high level. Salary and conditions of service would be a matter of arrangement.—Please reply to Box 1571.

TECHNICAL Marketing. Investigations into effects of Technical changes on your Sales. Qualified Engineer, with Technical and Economic experience is available as part-time consultant. Will find new outlets, and advise on Marketing aspects of new products.—Box 1569.

For other appointments see page 977

VICTORIA UNIVERSITY OF WELLINGTON

NEW ZEALAND

SENIOR LECTURER IN ECONOMICS

Applications are invited from suitably qualified persons for the above-mentioned post. The Council would hope to attract an applicant who was qualified to teach advanced classes in Economic Theory but applications will be received from persons who are qualified in other branches of Economics.

The salary will be £1,750 per annum, rising by two annual increments of £100 and one increment of £50 to £2,000 per annum. The initial salary will be determined according to the qualifications and experience of the appointee.

Approved fares to Wellington will be allowed for the appointee, his wife and his dependent children. In addition, actual removal expenses will be allowed within certain limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in New Zealand and London, on *January 5, 1962.*

UNIVERSITY OF HULL

CHAIR OF SOCIOLOGY

Applications are invited from candidates with appropriate qualifications and experience for appointment to a newly-created Chair of Sociology tenable from 1st October, 1962. Salary not less than £2,600 p.a., together with children's allowances and F.S.S.U. benefits. Further particulars may be obtained from the undersigned, to whom applications (12 copies) and the names of three referees should be submitted not later than 31st December, 1961.

W. D. CRAIG, Registrar.

LEEDS EDUCATION COMMITTEE

LEEDS COLLEGE OF COMMERCE

Applications are invited for the post of LECTURER in STATISTICS. A lively, well-trained mind with a strong practical bias towards the applications of statistics to management control, including Operational Research, is looked for. Research and consultancy work with local industry are encouraged.

Salary at present £1,370 x £35—£1,550. Proposed scale from 1st January, 1962: £1,600 x £40—£1,800.

Application forms and particulars from the Principal, College of Commerce, Woodhouse Lane, Leeds, 2.

GEORGE TAYLOR,
