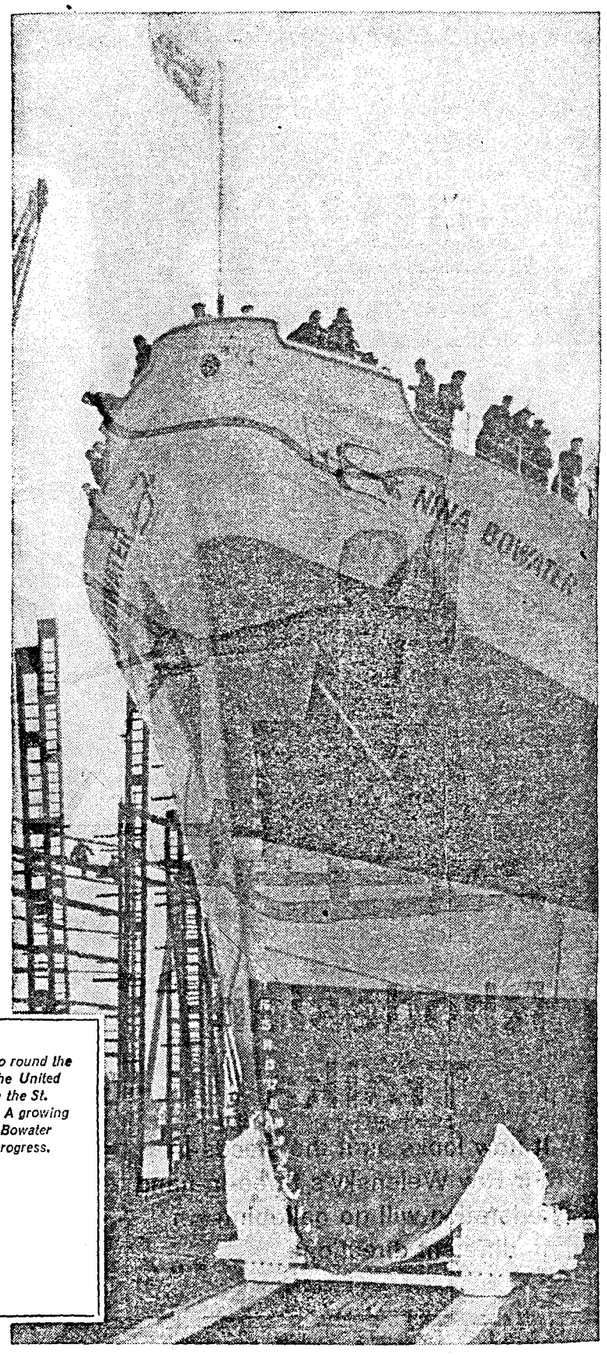
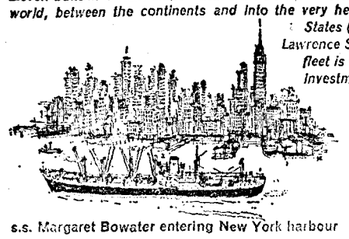
GUIDE TO CONTENTS SEE OVER



Nina Bowater takes a bow

Her shape is streamlined—325 x 24 x 247,600 (length x beam x bale capacity). She's fitting out in Montreal . . . a pulp-and-paper ship. Her holds pillar-free. Her bows reinforced against icy Northern seas. Her name 'Nina Bowater'—twelfth in the Bowater Line.



Why a fleet? Because a fleet links the world and Bowater interests are international. From forest to mill to market, Bowater ships narrow the gap (literal and financial) between all Bowater-active countries.

Their cargo: raw materials and finished products. Their route: the world's sea lanes and waterways to places where Bowater feet are firmly on the ground.

THE BOWATER FLEET

Eleven built-in-Britain ships—that's the Bowater fleet. They go round the world, between the continents and into the very heart of the United States (through the St. Lawrence Seaway). A growing fleet is another Bowater investment in progress.

INTERNATIONAL

AFRICA AND EUROPE

Mr Macleod's tactical (and not large) concessions to Sir Roy Welensky over Northern Rhodesia's constitution have multiplied the likelihood that the Central African Federation will break up. If that did happen, the best hope for Nyasaland and Northern Rhodesia might even lie in a link with East Africa (p. 15).

Talks on Algeria may soon be resumed. The pause has not produced the "new element" President de Gaulle called for (p. 46).

The **African associates** of the **common market** will want some form of compensation if they are to lose the privileges in the European market provided by the Rome Treaty (p. 47).

EAST AND WEST

Trade with Russia can help the forces of change and choice in Soviet society (p. 18).

Russia's switch from supporting the **United Nations** Charter to attacking it reflects the realisation that the powerful Afro-Asian group is not going to be pushed about by communist imperialists any more than by western ones (p. 24).

Legal quibbles have too often helped Britain to equivocate over votes on colonialism in the UN (p. 23).

INSIDE EUROPE

The House of Commons has begun to get to grips with Britain's political choice in Europe (p. 23). The concern, voiced by Mr Silverman, for eastern and central Europe, was underlined by the neutrals when the Council of the European Free Trade Association met in London (p. 23).

Talks between Italy and Austria over South Tyrol have proved abortive (p. 27).

The unrest in the French countryside shows that the Fifth Republic is unable to give expression to popular grievances (p. 26).

The approach of full employment is opening up new possibilities for Italian labour (p. 48).

SPAIN DISCOVERS EUROPE—A Survey on pages 53-60

STRONG MEN AND WRONG MEN

The crudity of General Qasim's claim to Kuwait has shocked the Arab world. But if the Arab countries protect Kuwait, they will expect something in return (p. 45).

The dispute between Mr Fleming and Mr Coyne in Canada involves a high-level argument about the relations between the central bank and the government. But an imputation on a lower level about the governor's pension has got mixed up with the argument (p. 46).

General Nasution, an Indonesian with a future, is coming to London (p. 29).

INSIDE AMERICA

Washington has not yet made up its mind how drastically to react to Mr Khrushchev's Berlin threat; meanwhile the Administration is playing slow (p. 37).

General Taylor's appointment to the White House staff to handle contingency planning on Berlin is arousing some controversy (p. 39).

Congress has just passed an exceptionally generous housing Bill (p. 38) but it is unlikely to do anything about the Administration's request for heavier taxation on American firms operating abroad (p. 40).

HOME

VICES

Pride

The bright new headwear which the Labour Party has donned looks too much like the oldest kind of hat diligently brushed up for an occasion at Blackpool (p. 17).

Psychiatrists want to see their status raised (p. 24): and the BBC is being proud to some purpose (p. 36).

Sloth

Birmingham is strangling itself by its own inaction (p. 20).

The promised Governmental re-shuffle has been less than energetic (p. 24).

Four lords have suggested a way of ending official listlessness over the new Covent Garden market (p. 27).

Avarice

The Law Lords' definition of "private gain" has worried tombola promoters (p. 26).

Gluttony

Their appetite for power has led the ETU's leaders to an unpalatable dessert (p. 22).

Shipwrights and boilermakers are squabbling over each other's plates. Ford men have been refused free second helpings and have quit the table (p. 22).

VIRTUES

Charity

The concession of air transport licences to independent airlines might begin to end the nationalised airlines' dog-in-the-manger attitudes (p. 63).

Faith

The Edinburgh Festival loses money: it needs the loyalty of its patrons—and the Exchequer (p. 34).

A new Swedish steel mill is putting all its eggs in one basket (p. 77).

Hope

Mr Brooke plans a rationalisation of water supplies to prevent a recurrence of last year's troubles (p. 65).

British Railways last year won back some goods tonnage from the road hauliers (p. 67).

COOL CLEAN FRESH AIR

SILENTLY

at less cost than ever before

In one room, or every room, the *new* TEMKON, floor-mounted, room air conditioner, silently, unobtrusively, keeps air cool and fresh, maintains the staff at peak efficiency all day.
With a Temkon air conditioner in *every* room the cost is still 30% to 50% *less* than that of a central installation.

- It's the World's quietest room air conditioner
- Unobtrusive slim-line construction and a duo-tone finish ensure that it will blend with any office decor
- —And this unit heats as well

ALUMINEX DECK LIGHTS
can be fixed so easily

Permanently weatherproof aluminium construction. Light, strong, fixed in minutes. Economical, corrosion-free — they need no maintenance. You hardly know they're there — except of course for the wonderfully comfortable daylight they give.

ALUMINEX DECK LIGHTS at the new Velindre Works of Steel Company of Wales provide overhead daylight at the lo levels. The decklights shown, on the general stores buildi supplement the general lighting of the main building Aluminex Sidewall glazing.

Consulting Architects: Sir Percy Thomas & Son.
Engineers: W. S. Atkins & Partners.

WILLIAMS & WILLIAMS *forward looking building products*

Williams & Williams make RELIANCE steel windows of every description, ALOMEGA and other aluminium windows, ROFTEN mov steel partitioning, ALUMINEX patent glazing, WALLSPAN curtain walling and many other products, all of which can be seen at permanent exhibition at 36, High Holborn, W.C.1

There's a good Ant....

The ant finds kingdom in a foot of ground.
John Brown's Body, Book 4.

Admirable ant. Not everyone's idea of a lovable pet, of course. Nevertheless, that "X" Certificate exterior belies many sterling qualities dear to the hearts of industrialists. The ant has guts; the ant has a justifiably majestic confidence in his own toughness. Above all, the ant has a keen sense of order, economy and industry. He works like mad as though he loves it – and uses space as if space did not exist. These are the qualities of "Mechanised Muscle" – the ants of modern industry – which save millions of pounds annually in space, time and effort. Is *your* company utilising existing storage space to fullest advantage? Let us check for you, free of charge or commitment.

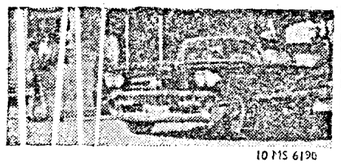
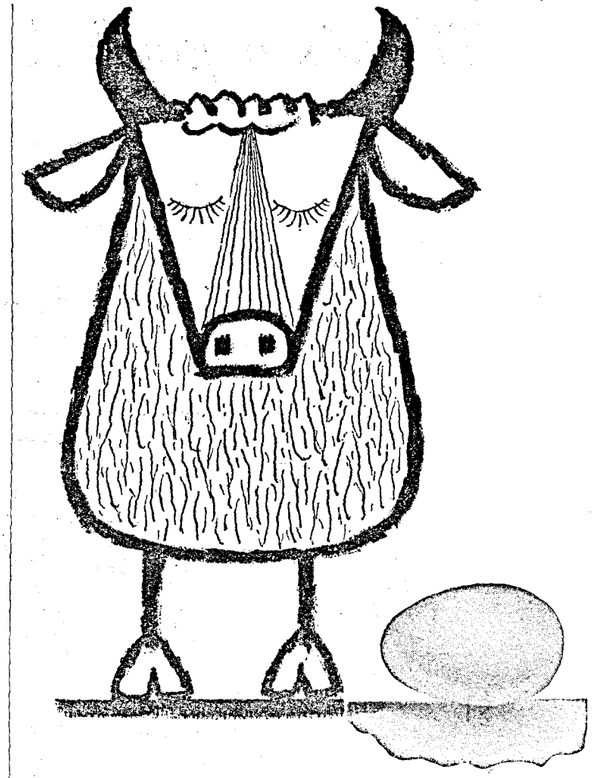
MECHANISED MUSCLE Regd

You simply won't need a slinky limousine (and all that goes with it) while you're holidaying in Malta. You'll ride around in a quaint horse-drawn Karrozzin—it's the thing to do.



Malta is gay, charming, sincere. Malta is a touch of Spain, of France, of Italy and Morocco. Malta is five thousand years of living history and traditions, reflected in the Auberges of the Knights, the cathedrals, the neolithic remains, the paintings, tapestries, sculptures. Malta is all this and unlimited sunshine too—300 guaranteed sunny days in the year.

Malta



THE MEDITERRANEAN'S YOUNGEST RESORT

P.S. *If you've got to have your limousine (and all that goes with it) you'll have it pretty soon now. For Malta's growing, growing, growing to be the gayest holiday spot on the Mediterranean.*

VERSATILITY!

Not surprise—just modest pride! We must confess to a similar feeling every time yet another example of the amazing versatility of TUFNOL is confirmed.

Bearings for ships' propeller shafts, and rudders, runners for Arctic sledges, seat rollers for the Oxford University Boat, insulators for high voltage switchgear, slideways for machine tools, control pulleys for aircraft, bearing bushes for motor cars, gears for textile looms—these are but a few of the many varied ways in which TUFNOL is being used to overcome problems of design, production or maintenance.

TUFNOL is a laminated plastics material of such versatility that no engineer can afford to ignore it.

"RACECOURSE"
by Raoul Dufy
(c) by S.P.A.D.E.M., Paris, 1961

At your leisure...

"Fine day for the race." The old joke.

The human race. And the human race—

or quite a few of it—goes to the races for its leisure,

and quite a few of *them* go racing by car

and *all* of them use petrol to do that,

and quite a few of *them* use Esso.

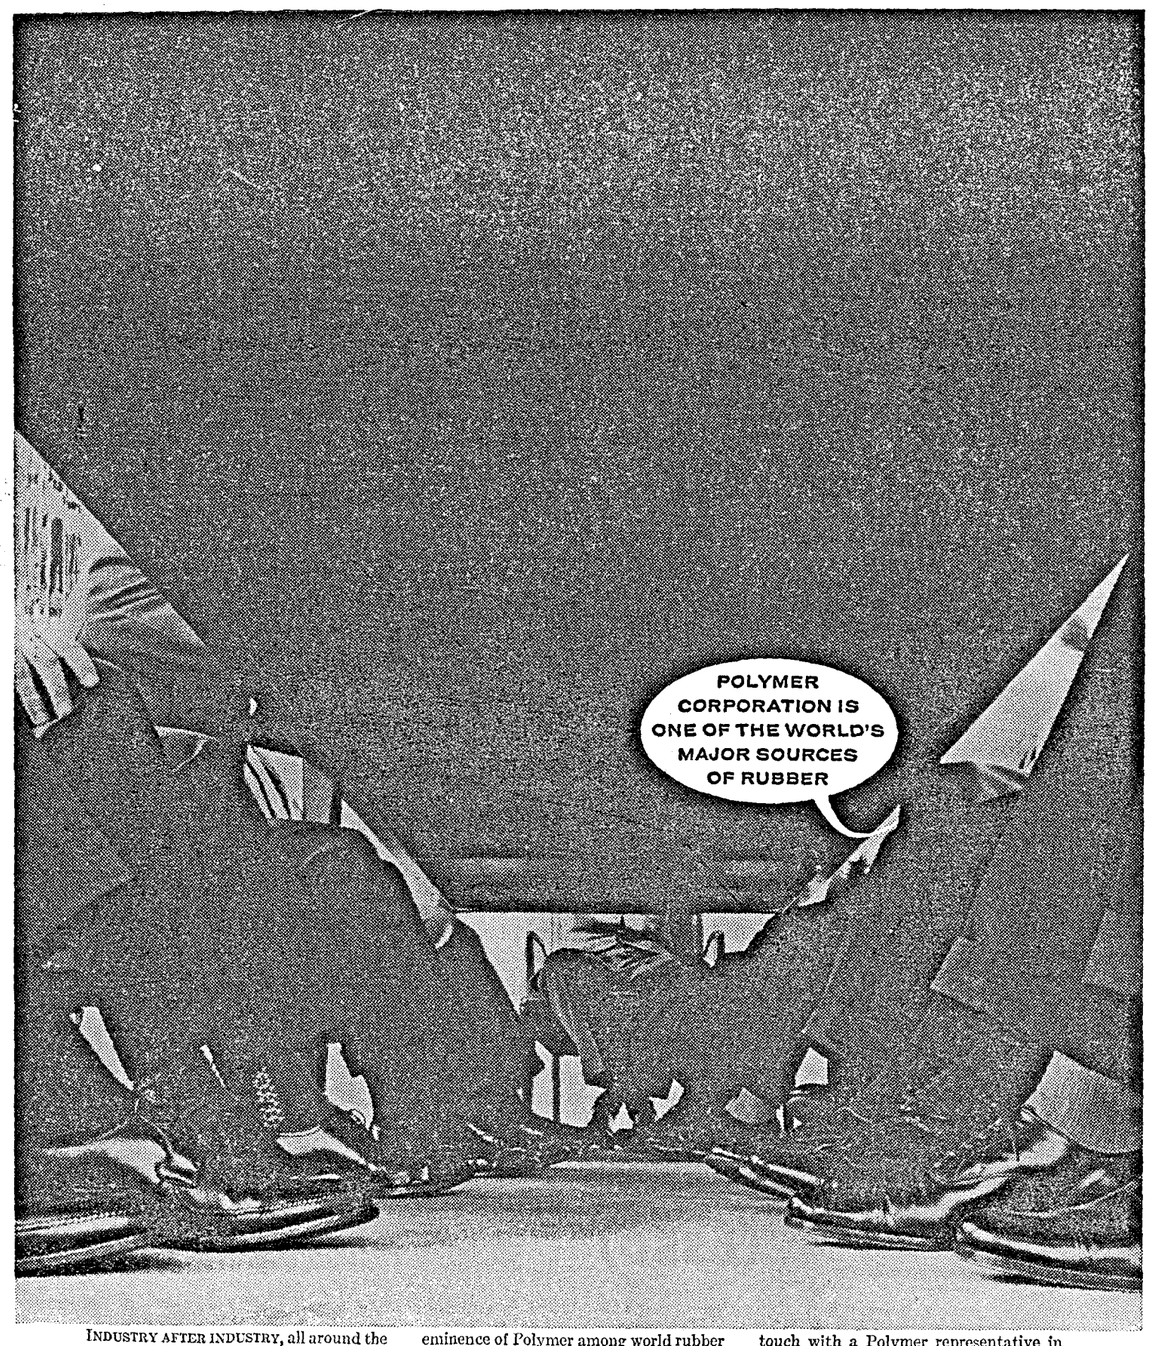
Petrol, of course, is only one part of our business—

not even a very big part, when you think

of all the ships and planes and trains and tractors

and industrial furnaces we have to keep going as well.

But it has a big part to play



in getting you humans to the races . . . or helping you

to enjoy your summer leisure

in pleasant and exciting places.

BOAC SLASHES ATLANTIC FREIGHT COSTS BY UP TO 61%

BOAC cuts all Atlantic freight rates! These cuts range from 22% for small shipments to 61% for shipments of over one ton, and special rates with even more savings on selected commodities!
These new rates, the outcome of BOAC planning and negotiating over many months, come into force from 1st September (subject to Government approval)—a major step in the drive to increase British exports.
Air-freighting now makes practical economic sense for many new types of commodities—BOAC can speed them to their customers more quickly, more cheaply.

AND A NEW BOAC FREIGHT HANDLING SERVICE—THE

'Fast Atlantic Channel'

Starting 1st Sept. a service that will ensure even faster Atlantic handling of your goods *at no extra cost.*

WHAT BOAC's 'FAST ATLANTIC CHANNEL' MEANS

SPECIALLY TRAINED PERSONNEL to answer your queries, cut down pre-flight formalities, rush consignments immediately to Atlantic freight flights.
SPECIAL EQUIPMENT—new increased warehousing facilities, radio vans throughout London delivery area for immediate cargo collection.
IN ADDITION BOAC offers ample jet capacity on all routes with departure times to meet all demands.
Only BOAC operates all-freight flights from Manchester, Glasgow and London.
MORE DETAILS For full information on rates and services ask your BOAC Appointed Cargo Agent, or BOAC offices at London, Manchester, Liverpool, Birmingham, Leeds, Glasgow and Belfast.

All over the world **B·O·A·C** speeds the export drive

Rhodesian Troika

"A troika is a carriage . . . drawn by three horses. The horse in the middle must always trot; the ones on the left and the right must always gallop. The middle one trots with his head down . . . his companions gallop along tossing their heads and are called the 'furies.'"

—Alexandre Dumas, *Adventures in Czarist Russia*

BUT Northern Rhodesia's Africans cannot be made to trot with their heads down—and Nyasaland, on the left, is galloping in a different direction from Southern Rhodesia on the right. It is hard to imagine how any driver, let alone Sir Roy Welensky and Mr Macleod, can now prevent the federal carriage from overturning. Northern Rhodesia has not been given the certainty of self-government under African control prescribed by Lord Monckton; instead, the African nationalists and the white liberals have been given the chance of a majority in the legislature if they join forces in an electoral pact that would have to be remarkably ingenious. What is more likely is that Sir Roy Welensky's party will win control. The pace of African advance in Northern Rhodesia has been slowed down to meet the demands of the white Southern Rhodesian electorate. If the Monckton report was right, this means the eventual break-up of Sir Roy's federation.

The British Government will have to face this when the conference to review the constitution of the Federation of Rhodesia and Nyasaland is resumed. It may not then be possible to resist demands for an end to federation. The theories of "multi-racialism" and "partnership," on which the federation was founded, were until recently interpreted by its politicians as meaning entrenched white government, with some black participation; now that the Europeans are being brought to accept some of the real consequences of partnership, it seems too late to save the federation. To the African nationalists in these three territories, with a combined population of eight million Africans and 300,000 Europeans, the future can only be conceived, in 1961, in terms of emerging black government, with the whites participating as individual citizens. Without this prospect, the Africans cannot be expected to see the real economic advantages of federation.

Whitehall's neat "troika" for central Africa provides for a black Nyasaland to be linked with a white Southern Rhodesia and a neutral Northern Rhodesia. This can no longer be expected to work. In Nyasaland, a triumphant Dr Banda will soon be elected to leadership of an assembly dominated by his Malawi party, which is committed to the break-up of federation. In Southern Rhodesia, there will be a referendum next month over a constitution that grants to Africans the most that Sir Edgar Whitehead, the prime minister, thinks his settler electorate will allow. If the referendum is lost, there may be a right-wing move to take Southern Rhodesia out of a federation that *is* beginning to turn too multi-racial for some white citizens; if it is won, all that may have been achieved is the chance to keep the struggle for African rule from turning violent.

In Northern Rhodesia, too, the most that can now be hoped for is that the political struggle will stay non-violent. There is no reason in the nature of the two territories why Northern Rhodesia should not have the same constitution, providing for an African-run legislature, as the one granted to Nyasaland. Africans will ask themselves why their economically more advanced territory is constitutionally behind Nyasaland (and Kenya and Uganda and Tanganyika).

Two answers will almost certainly occur to them. The first is that the Malawi party put up a tougher fight in Nyasaland, where there was no talk of co-operation until victory was won. There is a real danger that Africans in Northern Rhodesia will now turn to strikes and boycotts—as Mr Kaunda's speech on Tuesday gave warning. The second answer is that Northern Rhodesia would have been given a better constitution for the Africans if it had not been for the federation. There can be no doubt that if the new constitution for Northern Rhodesia weighs against the Africans it does so because of the drama in Salisbury and the hidden persuasion in London that were put into production before Christmas.

TRUE, Sir Roy Welensky has won only a modest victory, though his undoubted gains have been publicised as a triumph, and he has got the headlines in Britain that he requires for quotation in the Rhodesian press. Just what has he achieved? When the Northern Rhodesia constitutional conference opened before Christmas, Mr Macleod was thinking in terms of parity of representation with a possible bias towards the Africans. The white paper issued in February seemed to promise that; the white paper issued on Monday puts the bias just the other way. But, in the talks before Christmas, parity of any kind was anathema to Sir Roy's party. According to the February white paper, the United Federal Party challenged the view that there was any justification either for a substantial increase in the number of Africans in the legislative council, or for an extension of the franchise. In the event, African representation has been increased from about a third of the members to around a half, with some chance of more than half the representatives being black. The African electorate has been more than trebled.

On the other hand the Africans, who demanded a certain majority and universal suffrage, have also got much less than they asked for. The new constitution will itself be another example of the troika. Fifteen members will be elected by a lower roll on which nearly all the voters will be African. If the elections are not boycotted, most of the seats will probably be won by Mr Kenneth Kaunda's United National Independence Party; a few may be won by the African National Congress. Another 15 members will be elected on an upper roll that could be one-tenth African if all the Africans who will now get the chance to vote on the upper roll take the opportunity to register. The number of upper roll Africans was increased by about 2,000 in the February white paper; Mr Macleod threw in another 500 on Monday. All the upper roll seats might be won by Sir Roy's UFP, but, if the boundary-drawers group enough of the roll's Africans into one or two constituencies, the one or two could conceivably be won by the Liberals.

For the results in the middle group of "national" seats, a computer is needed. One of these seats is to be reserved for Asians and Coloureds, which means that specifically racial qualifications have been introduced into a British colonial constitution. The racial principle is repeated in the arrangements for electing the other 14 "national" members. In four constituencies, one member must be African and one must be European. In the other three constituencies, members can be of any colour (presumably even Asian). These 14 members will be elected by both voters' rolls, the votes being equalised so that the 70,000 lower roll votes will count for the same as the 25,000 upper roll votes. To win, candidates will have to attract 12½ per cent of the African vote and 12½ per cent of the European vote, or 400 votes from each race, whichever is the lower. This provision is a concession to Sir Roy Welensky: in February's white paper, candidates were required to win a minimum percentage of votes from both rolls, not from both races; and as there are to be about 3,500 Africans on the upper roll (and hardly any Europeans on the lower roll), this meant an advantage for the Africans, who could have got some candidates in without a single vote from Europeans.

There is, as Mr Kaunda pointed out on Tuesday, a further advantage for Sir Roy Welensky in this change, since it will presumably be easier for his party to win four hundred African votes from each "national" constituency in an African electorate of 70,000 than it will be for any party supporting Mr Kaunda to win the same number of European votes in each constituency from a total European electorate of 22,000. Two little variations—changing from rolls to races and from percentages to percentages and numbers—may thus have given Sir Roy's party the edge. But it is also possible to argue (at least until the delimitation of boundaries is completed) that the white-led Liberals still have the greatest chance of winning the "national" seats, because only they are a "middle" party capable of getting a minimum percentage of votes from both races. This would be an attractive proposition had it not been proved that white Liberal parties (*pace* Mr Blundell of Kenya) are acceptable to a majority of neither race.

The only hope for a parliamentary solution to the Northern Rhodesian equation lies in coalition, possibly a combination of the two African parties and the Liberals, supported by the Asian member. Such a coalition could serve its purpose (to keep the Africans peaceful by giving them the leading position in the government) only if Sir John Moffat, the leader of the white Liberal party of Northern Rhodesia, accepted Mr Kaunda's leadership. If he did so, he would forfeit some white votes, but no other solution would work. By taking this opportunity and offering to lead his party behind Mr Kaunda, Sir John could save the situation. This solution is part of the hopeful thinking of the Colonial Office, but there is no guarantee that it would happen. It would certainly require the manipulation of constituency boundaries, and a trafficking in votes, to give it any chance. And, if it did work, that would still not save the federation, for Sir John's party is already committed to opposing the federation and, in any pact with Mr Kaunda, that commitment would become deeper.

THE answer, for Britain, could be in east Africa. At a conference which ended in London this week Mr Julius Nyerere of Tanganyika agreed to sacrifice some of his government's power after it becomes independent in December, so that the East Africa High Commission can continue its work as the East African Common Services Organisation. In this way, Tanganyika can wait for Kenya and Uganda to advance constitutionally to the point where elected representative governments can negotiate a federal union if they wish to do so. At the same time, there is hope that Uganda's constitutional problems can be solved (a note on page 26 discusses this) and that Kenya will soon advance to internal self-government.

Such an east African federation, which could include Zanzibar and Ruanda-Urundi, would have a population of 30 million, about 90,000 of whom would be white. Whites in such a federation would be ordinary citizens, with a high standard of living and skill, but no more dominant in politics than, say, West Indians in London. The objections to federation in central Africa—that it was imposed against the black people's wishes and that it has been regarded as a device to entrench white control over the three territories—are answered in advance in the plans for east Africa. It is time for the British Government to think seriously of the probability that the central African federation may break up; if this happens there might well be an invitation from Dar-es-salaam or Nairobi to Northern Rhodesia and Nyasaland to join a union that would, in no circumstances, have to be held together by force.

Road to Nowhere?

Economic expansion is, indeed, the thing for Britain. But Labour's new plans for it tend too much to furbish up old shibboleths

THE Labour party's new policy statement provides a series of signposts for the devoted plotting their route to Blackpool for the October conference, but scarcely for many other foiled and circuitous political wanderers of the moment. It is tactically sensible of Mr Gaitskell to make it clear from the outset that the document handed down by the National Executive Committee is not intended as an election manifesto: the conference cannot, in this sense, inscribe yet another sacred text upon its tablets. Anything that allows the leadership and the parliamentary party to exercise their discretion in the formulation of policy is altogether to be desired. But the conference has to have its say. So it is now to be given five themes to knock about as it will: planning (in which is subsumed public ownership), land purchase, social security, education and taxation. None of these issues has been so circumscribed by the executive's agreed phrases as to dampen the spirits of Mr Harold Wilson, Mr Cousins or anyone else in the dinosauric brigade as they tick them off mentally on the road to Blackpool.

If the Gaitskellites have a calculation in all this, it can only be that when the entire speculative gamut has been run in Blackpool on which industries should be fully nationalised (steel and road transport are the only two specifically mentioned so far), which should have state partnership thrust upon them (like Cunard?), and which encouraged by state competition, the conference will have exhausted itself to no very great or immediate point. The appearance of unity, and possibly of vigour, will have been sustained for the benefit of the uncritical rank and file. This is not unimportant to the party image at this juncture. But the price of the advantage could be dear. Enough floating voters, seriously concerned (for the first time in years) to know what Labour really means by planning to meet Britain's current predicament, are likely to be sufficiently disabused by the conference's easy prejudices to make the exercise a damaging one. The fewer opportunities the left is given to sermonise upon portmanteau ideas in the guise of expounding and upholding official policy, the better prospect Mr Gaitskell's stock has of rising further in the country. This is surely the lesson of standing up to the dinosaurs over defence policy.

THE executive's objective of economic expansion is unexceptionable. Who would nowadays dare to draft a party statement without such an ideal figuring in the opening paragraph? If the purpose of a National Industrial Planning Board is to be as positive in its encouragement of the right kind of growth as M. Monnet's *Commisariat Général au Plan* it could no doubt do a very useful job—although a reorganisation of the Treasury machinery to this end would be an even more practical way of going about it. The doubt about whether Labour has, in fact, grasped what is needed for the implementation of a genuinely expansionary policy becomes manifest when the familiar sacred cows are found to have been installed in advance in the brand-new planning headquarters. Is it simply for expansion's sake that greater control is sought over the investment policies of pension funds and private insurance companies, or is it rather because it has been doctrinaire policy to try to get hold of them? What, in the crunch, is the real purpose of regulating the queue of major industrial and commercial projects to a greater degree than is done already? Is it, as the executive says, to get "priority developments" for growth under way; or is it, as the executive also says in its next breath, to be "a means of steering new factories into the areas where they are needed"—chiefly to mop up unemployment as and wherever it occurs? The party is evidently finding it increasingly difficult to straddle between the claims of its industrially-depressed voting strongholds, like Clydeside and Tyneside, and the needs of the growth areas in the East Midlands and further south where it lost support in 1959. It may not be irrelevant, for anyone attempting to assess the strength of the parochial impulses that still command a large segment of Labour thought, that the whole crucial question of Britain's future trading relation with Europe is shunted off more or less as an irrelevancy.

These simmering suspicions of what Mr Wilson's ideas of planning involve in practice are confirmed by the executive's proposals on compulsory land purchase. The essence of the matter must be that land should continuously come forward for development. Whatever attempts may be made to distrain on the large gains got in the process of development, the vital need is that the process shall go on, not be slowed down or held up. As enunciated, Labour's plan for the state purchase of all freeholds where building or rebuilding (above the filling station level) is projected, seems best calculated to interpose the maximum discouragement to owner and developer alike. The proposed Land Commission will first have to pronounce on whether it wants to buy the freehold or not. It will then manœuvre weightily to fix the purchase price on the criterion of "value for present use," plus just enough to

secure what is disingenuously called a "willing sale." After that it must negotiate with the prospective developer both on the local authority's and the commission's own future cut from his enterprise. It is a reasonable guess that this method of granting planning permission would, under some local authorities, bring about more jiggery-pokery than actual development. It is possible, of course, that Labour's ruminations are not intended to be taken altogether seriously at this stage; after all, less and less has been heard of the great scheme for the municipalisation of housing as the years have passed. But it is not an encouraging prospect.

This type of strangulatory approach to each major problem necessarily detracts from the sound ideas which the executive has managed to put forward in other spheres. Among these would be the demand for a national scheme for apprenticeship and training—if it were given a more precise formulation. As it stands in the document nobody (surely not Sir David Eccles) would be likely to dissent from it. There is everything to be said, too, for a new approach to sickness benefit, both in making up full wages during periods of brief, normal sickness and also in preventing hardship among families whose bread-winner is unable to work for lengthy periods. There is a worthwhile purpose (and a political advantage) to be attained by following up these lines of social reform. Whether there is as much to be said (after some admirable expressions in favour of greater university development) for lassooing the public schools is another matter. Politically, it is not likely to add any votes at all to the party. The functions suggested for the Educational Trust in overhauling the public school system have been developed from the stimulating educational discussion that is now being conducted, but they are bound to scare away middle class parents who might otherwise consider casting their votes to secure a change of governmental faces. It is disappointing and disconcerting to find, at a time when the Conservative ranks seem bereft of purposeful leadership, that so many of Labour's "Signposts for the Sixties" have simply been furbished up after ten or twenty years of indifferent exposure to the electorate.

Why Trade with Russia?

As communist economies mature, the opportunities for trade with them should grow. This may be not only good business but good politics

If the Russian exhibition at Earls Court which opens next week teaches the British as much as the British fair in Moscow taught the Russians, it will be a great success. In recent years Mr Khrushchev has done much to break down the curtain of ignorance which blinded his people to the outside world, and today the old communist picture of Russia as a materialist paradise compared with the Dickensian thieves' kitchen of the capitalist world is pretty well exploded. But there is nothing like seeing for oneself. The British fair gave Muscovites a practical chance to compare their own standardised navy-blue undies with the frivolous nylons of the decadent West, and to see for themselves that capitalists, too, can produce impressive machine-tools and scientific wonders.

What do the two fairs mean in practical trade terms? A look at the expanding Soviet economy suggests boundless opportunities. A look at the trade figures, on the other hand, with Russia taking a mere 1 per cent of British exports, shows a different picture The Eldorado may be there, but explorers often get stuck in the bureaucratic jungle, learning in the process that the role of international trade in the vast planned Soviet economy is quite different from its role in the West. Planning is easier when it does not have to include foreigners, and particularly capitalist ones who will not plan. So the planned economies have tended to cut their trade links with the outside world to the minimum. Lacking, as the planners do, a realistic price yardstick which might tell them when other people make goods cheaper, they have tended to trade abroad only when the goods they want simply are not made in Russia at all. Plenty of old hands in the trade are ready to point out that while trade with Russia may offer windfalls—either when Russian plans go wrong, or when new western products can be offered—it has no assured future.

Yet the temptation to turn away in resignation ought to be resisted both by business men and by Mr Maudling and his officials, now engaged in a—probably prolonged—series of talks with the Russians. Neither the economic needs nor the mechanics of the Russian system are quite so different from our own as they seem. In the western world one of the most striking developments of the last few years has been the swift growth of trade between the developed countries themselves—between Germany and Britain, for instance; and between western Europe as a whole and North America. The purchase of capital goods, chemicals and industrial know-how, which bulks large in this commerce between mature economies, could prove equally interesting to Russian planners.

True, a good many western business men are worried by the fear that the sale of a new machine will be followed, not be further orders, but by imitation. Yet the sale of knowledge is the backbone of trade between developed countries. What western business men have to do is not guard their secrets jealously, but find a lucrative way of selling them. Nor, in the sputnik age, should it be imagined that the traffic in knowledge need flow one way only. Mr Paul Chambers, the chairman of Imperial Chemical Industries, remarked at the end of a trip through Russia last year that ICI might soon be buying know-how from Russia as well as selling it.

A second look also makes it clear that the Russian economy, for all its inherent differences from our own, has after all its resemblances as well. A society that was supposed to banish inequality has big differentials in earnings. Unemployment, theoretically planned away, occurs just the same. Despite centralised investment the communist economies still have problems of inflation and deflation. Above all, as the Soviet economy develops, its need for flexibility becomes more apparent. When the consumer is hungry for bread and salt, a drive to maximise production may have some advantages. But when his income permits him to hope for a motor car or refrigerator, and his fancy is titivated by the telly and a first taste of foreign travel, the need for a subtler mechanism to equate supplies with demand becomes inexorable.

In capital goods the problem of adapting supply to demand is much less acute. Output of capital goods, which takes a long time and must be decided long in advance, is by nature well-suited to a planned economy. Yet for years Russian industry has been running up against problems due to excessive inflexibility. It may not be too difficult to plan a major steel expansion scheme in advance, but no plan can deal adequately with the varying demand for spares, paint, plumbing and the odd pieces of electrical equipment. In the building trade, as in agriculture, planning down to the last nail does not seem the best way to serve everyday human needs. The sheer complexity of a developed industrial economy is placing an intolerable burden on a centralised administration struggling to fit all the parts together.

Mr Khrushchev began to tackle the problem in 1957 by decentralising. But decentralisation brings problems of its own. If some local king-pin—say the head of the regional economic council in Georgia—concentrates on maximising production in his own locality, supplies to another part of the country may start falling. New co-ordinating machinery has to be set up, and then, perhaps, new overlords to co-ordinate the co-ordinators. In practice decentralisation has not gone far. Only last month a reshuffle of the system was announced.

Pressed by these problems, communist economists have begun, not surprisingly, to turn more and more to that well-tried tool, the price mechanism. All over eastern Europe textile industries have at one time or another found themselves with surplus stocks which consumers simply would not buy. And they have been forced to turn to familiar capitalist weapons—price cutting, advertising and improved design—to boost their sales. Jugoslavia has gone furthest towards a free price system. But Czechoslovakia, an old industrial country with a long export tradition, has also moved in that direction. Local industries can vary their prices to promote sales. The manager of a small state shop in Brno can set up on his own initiative a self-service laundry financed out of profits. In Russia there is less of this, but the price mechanism is already being used in the consumer industries and in agriculture, where it has become plain that only hard cash can extract meat and milk from reluctant peasants.

A point can be reached where flexibility may begin to endanger the system as a whole. If prices are allowed to determine output they can in time shift the basic structure of the plan. The search for flexibility inevitably comes up against the basic political precept—that the economy, and Soviet life generally, must be dictated by the state. Yet the more developed the economy, the more varied the range of consumer choice and the needs of the industrial buyer, the greater the need for some sort of instrument to relate supply to demand. The planners themselves are constantly worried by the need to find some sort of criterion for measuring price levels. "After the world revolution," one planner remarked, "we shall keep one tame capitalist country, so that we know what prices to fix."

The Russian planners' search for flexibility plainly has a political significance. In a way perhaps it is the fruit of the political maturity of revolution. Except in agriculture, the local party commissar no longer has to peer over the shoulders of the local managers. The managers nowadays are educated men who can be trusted to take decisions; and the economy works better if they do. But economic maturity, bringing managers and consumers alike a greater say in what is made and sold, contains in turn the seeds of political change. Power is being diffused. Russian society under Mr Khrushchev is becoming a different kind of animal from Stalin's state.

This evolution is closely related to the development of foreign trade. In Czechoslovakia and east Germany the need for flexibility in exports has been an important motive for giving managers more freedom. In Russia itself, the tail of foreign trade is too small to wag the whole economy, but it can have its influence on trends already at work. The need to keep up with export delivery dates forces managers to hold stocks and to change a good many of their habits. As technologists become better educated and freer, it becomes harder to restrain their interest in products from abroad.

It is against this background of rudimentary, but growing, freedom of choice that trade talks with Russia should be seen. Politically, more trade with the West can encourage the outward-looking forces in the communist world. Economically, the opportunities for foreign trade are growing as the economy matures. There are people in the West who hold that Russia wishes, for political reasons, to keep its foreign trade down to the minimum, but again and again the everyday practice of the Soviet traders refutes this. Of course the Russians will snatch what political dividends they can from the sale of their oil or the purchase of an African crop. But the compelling motive is to satisfy their own economy's insatiable needs.

The limit of their buying in Britain thus seems to be set, not by politics, but by their own sterling earnings. Much, therefore, depends on the success of the communists in selling exports here and on the degree of encouragement they are given. Plainly their most ambitious wishes, like the demand for a guaranteed export market, cannot be satisfied, but restrictions on their exports can at least be sensibly diminished. Oil, the commodity they have in most abundance, has its problems; but strong arguments can be advanced for allowing Russian exporters at least a regulated share of the increment in European demand for oil. Still more valuable for western economies would be the development of a healthy export of Russian capital goods and know-how.

Trade between Russia and the West, like economic co-existence generally, obviously has advantages for the Russian economy as well as our own; that is what trade is for. But in the long run the West can only gain from any process that helps to open the doors of Russia to the breath of change.

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

Out next week:

THE WEST INDIES

The report considers some of the difficulties which form a background to the Federation's plans for independence next year. Various development sectors in Jamaica and Trinidad are outlined, and British Guiana's difficulties in financing its development plans described.

Birmingham's Big Squeeze

Determined local resistance to planning, a Midlands correspondent believes, is at the root of Birmingham's troubles

THERE is nothing very novel about the land plight of Birmingham and the West Midlands conurbation. The problem has been lived with for so long, as in London, Manchester and Glasgow, that it hardly ever breaks into the headlines. Everyone is agreed that something must be done about it, and, with a few dissentients, that the solution does not lie in further urban sprawl on the periphery. The green belt, although still a legal fiction, will one day be officially confirmed, and the idea is gaining popularity. Those who have thought about the matter would also admit that the cause of increasing congestion is the growth of employment, and that new jobs will have to be restricted.

Why, then, do things appear to go from bad to worse? In the first place, it is remarkable how little factual information is available to confirm individual impressions. It is known that in Birmingham alone there are something like 100,000 houses which were either considered unfit for human habitation at various dates from 1890 onwards (like the tens of thousands of back-to-back houses which are still inhabited) or have a life of less than 15 years after some patching up by the city. Given an average life of 80 years, something like 4,000 more houses ought to be added to the list of unfit dwellings each year. It is known that there are 60,000 families on the recently-pruned housing waiting list, and that more than 10,000 new households are formed by marriage each year. The city is prosperous enough to have a marriage and natural increase rate far above the national average.

The unfit houses are demolished at the rate of 1,000 a year, or one quarter of the rate of obsolescence, apart from the backlog. Only 2,000 new dwellings are built each year (proportionately, at about half the national rate), mostly in the form of flats, and, given poor sub-soil conditions and awkward sites, the costs are enormous. The acquisition of land for redevelopment is equally hit by the shortage of ground: a single square yard in the city may cost £500, and ordinary housing or industrial land within three or four miles of the city centre now costs up to £50,000 an acre.

Appointments, Business and Personal notices, and other Classified Advertisements: pages 94 and 95

Hence the soaring burden on the rates. The annual deficiency on housing account alone is about £2,750,000, of which the rates bear over £1 million. Redevelopment adds another £500,000. The housing loss is rising at the rate of £400,000 per annum, or £50 per dwelling as far as the rate subsidy goes. The Exchequer contributes another £100, and prewar tenants make up the total loss to not far short of £200. If the city manages to build 50,000 new dwellings within its limits during the next 20 years, the annual loss will rise to £10 million. While there was still plenty of land in the dormitory areas, like Solihull or Tettenhall, thousands of families went out annually under their own steam. This outlet is now practically closed. Official overspill schemes are coping with a few hundred families a year and seem to make no difference.

THE industrial problem is also difficult to assess. According to Ministry of Labour statistics the growth of employment in the area since 1955 is well above the national average:

NUMBERS EMPLOYED
(000's)

	1955			1960			Per cent increase		
	Men	Women	Total	Men	Women	Total	Men	Women	Total
Birmingham	407	244	651	426	245	671	4·8	0·4	3·1
Conurbation	726	414	1,140	773	423	1,196	6·4	2·1	5·5
Mid. Region	1,383	749	2,132	1,443	775	2,218	4·3	3·5	4·0
Great Britain	13,960	7,500	21,460	14,370	7,850	22,220	2·9	4·7	3·5

It can be seen that male jobs in particular went up faster than elsewhere, although the tailing-off in women's employment in Birmingham itself reduces the average increase. In all, over 10,000 new jobs are created each year in the conurbation. Analysis of the figures by occupations proves that most of the increase was outside manufacturing industry. Board of Trade figures show a considerable amount of new floorspace being built in the area, but much of this is for re-building and seems not to involve substantial increases in manpower.

It is clear that this rise in employment will go on. There are plans for office building (partly on municipally-owned ground, but especially on the Calthorpe estate, and to a lesser extent on Bournville Village Trust land) which are likely to aggravate the position by another 30,000-40,000 jobs in the next few years.

The first basic obstacle to a solution to these problems lies in false civic pride. Birmingham has a "second city complex." (Manchester has recently developed the disease.) There are fears that if something drastic is done, the city may fall below the million mark. This might reduce the salaries of the chief officers and make it difficult to recruit new people. There are misgivings about loss of rateable value. The authorities have invested heavily in flatted factories and property fronting the new ring road and fear that if land is made available outside they may lose on these.

It is symptomatic that Birmingham city council has now refused to take part in a regional conference next Wednesday organised by the Town and Country Planning Association and the Midlands New Towns Society—though most other Midlands authorities are participating. The city's political parties are not divided on the overspill issue. Labour, still in power, fears that the export of jobs may relieve the extreme but profitable scarcity of hands. Nor are the Conservatives, representing mainly the small businessmen, keen; lack of capital and traditional ways of conducting their establishments characterise the local manufacturers.

Typical local proprietors or managers say they are reluctant to move from Birmingham because of their wives' shopping habits and the need to send their daughters to a select day school. (The male attachment to the golf club and lunch at the "Plough and Harrow" is probably just as important.) A lot of nonsense is also talked about "all Birmingham industries being interdependent"—this usually from firms which are, illogically, equally afraid of losing the business of selling something to another firm up the road, either because they may have to move twenty miles outside the city, or because of common market competition.

The most serious obstacles, however, lie in the lack of suitable planning machinery and the pressures which prevent more effective institutions from being created. These are all admirably summed up in the report of the Local Government Commission for the West Midlands Special Review area, published early last month. Proposals for a regional planning authority were strenuously resisted; the commission felt the terms of reference did not permit it to investigate the larger questions; and in the end it recommended only a joint board (composed of Birmingham and the new county boroughs) to deal with the matter. In essence all planning is still to consist of a succession of bilateral treaties, and general strategy will remain in Birmingham's hands.

OF course, there is no planning at governmental level. The regional office of the Ministry of Housing and Local Government closed some years ago. There is said to be some backroom research, but clearly the Ministry is entirely out of touch. After the Wythall inquiry in 1960, when Birmingham tried to get 2,400 acres of green belt land, official policy changed: the facts elicited at the inquiry were new to Whitehall. Only after the refusal of the application did the Ministry begin to investigate possible sites for new towns and large town expansion schemes.

What policies there are at high level are often conflicting. The Ministry of Housing wants to house people and would like to make the Town Development Act work, but this is not possible so long as the Board of Trade insists on sending firms, without their workpeople, to the development areas. Motorway policy makes sure that industrial development is ever more centred on the "coffin" and the fringe areas killed even more effectively. (The Ross Spur is a notable exception: a motorway from Wrexham to Hereford is needed now.)

The local authorities themselves lack the planning powers they need. They cannot prevent office employment from rising. When a firm moves out of the area, it sells its vacant site to a newcomer who nullifies the previous move, unless the city can step in and purchase the site in the open market. When a private tenant takes a house at Lichfield under an overspill agreement, his landlord sells the house with vacant possession to a new arrival from overseas.

THERE are obstacles, too, in the potential receiving areas. Often they are controlled by people who look on industrial workers from Birmingham and their factories as an Edgbastonian does on a West Indian vice den. There are people who would let a small old town die on its feet rather than permit alterations or a line of pylons to bring power. Birmingham has negotiated with over a hundred areas capable of receiving people and jobs: most of these talks have come to nothing. One day, perhaps, there will be an explosion, for the human and industrial problems daily grow worse. But meanwhile a powerful array of vested interests ensure that nothing is done. Clearly only vigorous action by the Government can save the situation. Whether this will ever come about is another matter. Why should the Government act when there is so little local pressure?

THE STATE OF EDUCATION

"The Commissioners appointed to inquire into the present state and the possible improvement of English education have made a report full of important information, and drawn up with singular care. . . . The Commissioners carefully warn us . . . that the instruction at present given is mostly defective in quality, is not given by the best persons, *is not given* on the most appropriate subjects, is *not given in the most efficient manner*, is *given not* to a steady class of habitual attendants, but to a casual class of irregular attendants. Still, after all deductions, the reassuring fact remains—nineteen-twentieths of our children are receiving an education of some sort. . . . The principle of the present system of education is that of aiding and augmenting the contributions and efforts of different localities in a degree somewhat proportioned to those contributions and efforts. The professed rule is that of helping those who will help themselves, and of not helping those who will not or who cannot help themselves. It *gives some money towards building schools to those who have* themselves other money; it gives a part of the salary of the teacher to those who can find the rest of that salary; it gives under the name of a "capitation" grant a certain fee to all schools which have scholars already. . . . Both the advantages and the disadvantages of this system lie on the very face of it, and are inseparable from its vital system. If you say you will only assist those who are really, truly, and spontaneously exerting themselves, you secure to yourself the benefits of the best co-operation; you secure that your money will be appropriately spent, fairly husbanded, and watchfully superintended; you secure that your money will be expended by the objects of your bounty as if it were part and parcel of their own bounty;—but, on the other hand, you are neglecting the weak to help the strong. You are giving to those who have, not to those who have not; you are conceding to the rich localities where good subscriptions may be expected that which you refuse to poor places where there are no opulent residents,—no person to care for anything but the rent of the houses and of the land,—where the half-pauperised, half-vicious population are left almost wholly to themselves. Such is the inevitable dilemma of the present system: it purchases a great good at the cost of a great evil. Is it wise to do so?

NOTES OF THE WEEK

LABOUR TROUBLES

Confederate Conflicts

LEADERS of the 39 unions in the Confederation of Shipbuilding and Engineering Unions—the "little TUC"—returned to their offices this week to face some awkward in-trays after their conference at Eastbourne. Their first task was to deal with three strikes—involving Smiths Motor Accessories at Cricklewood, Ford Motors at Dagenham, and Cammell Laird's shipyard on the Mersey—which sadly typify the disarray of their movement. The Eastbourne conference, however, suggested that the running fight between left and right wingers in the unions has entered a new phase. The right wing, having emerged the victors over unilateralism, are now growing overconfident on the industrial front, where the left are fighting back.

Thus, Mr Jim Matthews of the General and Municipal Workers, chairman of the conference, unwisely entered the debate on behalf of a member of his own union who spoke from the floor to express dissatisfaction with the existing negotiating machinery in the engineering industry. While almost all the delegates shared this dissatisfaction, there is a variety of motives for the discontent, and an equal variety of solutions. Mr Matthews, by seeming to support his member's private belief in a system of institutionalised arbitration under independent chairmen, merely lined up the majority of delegates against himself. The vote against reforming the existing system was not so much a vote of confidence in it as of dissatisfaction with Mr Matthews.

Mr Carron of the Amalgamated Engineering Union, the natural leader of the moderate trade unionists, also managed to stir up criticism of his personal bias. His first reaction to the strike at Smiths was to imply that its organisers must be a bunch of communists. This remains unproven, and was in any case largely irrelevant (spice being added by the discovery that two of the three strike leaders are Roman Catholics like Mr Carron himself). The most important decision of the conference was to table a new and substantial (though unspecific) wage demand. Since such a claim could lead to a major industrial showdown this autumn, it is all the more important that the cooler heads within the confederation should not gratuitously devalue their influence.

Strikes and Showdowns

THIS week's three major strikes all have the appearance of presaging, in their different ways, a showdown. The smallest, but most depressing, is that at Cammell Laird's—the site of the famous "whobores-the-holes" dispute. The same two unions are involved; this time the Shipwrights and the Boilermakers (whose attempts to amalgamate recently broke down) cannot agree on who should get the job of welding some prefabricated plates, and the customary deadlock has been reached. Work on the ship in question has been stopped, and some workers not at all connected with the dispute have been laid off. The TUC, which last year made a vain attempt to persuade the two unions to work out a more rational way of settling their grievances against each other, is to bring them together once more. It cannot be assumed that they will have better luck this time.

The muddy springs of the Smiths Motor Accessories strike probably arise out of the coexistence of a national wage agreement and an acute local labour shortage. Like other firms in areas of full employment, Smiths have paid good wages: the workers now claim that modern equipment has enabled them to increase production, and they want a commensurate wage increase. The company itself might not be unwilling to grant a rise, but, since a national wage claim is at present being negotiated, it cannot do so without upsetting other members of the employers' federation. A compromise formula has finally been evolved, and the factory started work again on Thursday morning. If the union leaders had taken pains to be adequately in touch with the workers, if the management had avoided giving the impression in the past that wage increases were a purely local affair, and if the (communist) regional officer responsible had been more energetic in urging a return to work, the disruption of car production could have been vastly reduced, if not totally eliminated.

The avowed object of the strike at Fords is to protest against the management's declaration that it will not consider a new wage increase until the unions do something more than make pious promises about stopping unofficial strikes. The Dagenham plant has relapsed into near-anarchy, and the men's readiness to strike has been increased by vague fears that the new all-American ownership may get tough. However much a strike might compromise the launching of Ford's new Classic model, the company would do well to stand firm here, since this might even strengthen the hand of the official union leaders. One of the main provisos behind the promises the unions made during their talks with the managers at the Ministry of Labour was that they should be able to win back control of their own organisations from the unofficial demagogues. But this is certainly not the last of the motor industry's current troubles: the attempts of Rootes to move some work from Coventry to Oxford and of Standard-Triumph to transfer operations from Coventry to Liverpool, are sure to give rise to more tough bargaining that may well be backed up by strike action.

ETU CASE

The Strikers Stricken

MR JUSTICE WINN'S marathon judgment in the case of the Electrical Trades Union is an example of laborious mining for hard fact amid a desert of hard swearing. Fraud is held proved against five of those in charge of the union, and the judge was clear that the union, at the material time, was "managed and controlled" by the Communist Party through its members in strategic positions: thirty-eight days of hearings, and an expenditure of some £80,000, were needed to bring to light these facts—which have been common knowledge.

The pity is that the judicial sledgehammer had to be used where an elegant *casse-noisette*, had it only existed, would have served. Mr Justice Winn expressed his sorrow that so much judicial time and public money should have to be spent on inquiring into the affairs of a body set up to promote the private welfare of those who joined it of their own free will: but, without the persistence of Mr Byrne and Mr Chapple—only two of the 240,000 members of the ETU—its affairs could apparently have continued to be run in this way without any consequences more dire than the occasional tirade on television or in the press. The TUC's attempts to get at the truth have persistently, and derisively, been brushed off by the union leadership.

Mr Haxell: not elected in 1959

The fault lies not just with the ETU's membership—who were after all, as the judge said, well served by Mr Foulkes and Mr Haxell as far as their material progress, welfare and bargaining strength were concerned. It lies with the fact that, even nowadays, the law regards the trade unions as private clubs. They register with the Registrar of Friendly Societies; but this body with the Samuel Smiles name has no powers of supervision over the elections of those inscribed on its books. After he has heard counsel's argument as to relief in this particular case, Mr Justice Winn will prescribe the amount of damages payable to Mr Byrne for being cheated out of his job as general secretary: he will also lay down whether Mr Byrne is simply to be declared elected, or whether the union is to hold a new election, whether or not under the supervision of some outside body. But it is time that a general rule was laid down for the conduct of union elections. It is no longer tolerable that the selection of the leaders of these bodies, which play a role of very real power and responsibility in the state, should continue to be treated in the eyes of the law as though their main object was to provide funeral benefits for destitute pensioners.

EUROPE

Root of the Matter

WEDNESDAY'S back-bench debate on the common market showed that the House of Commons has finally awoken to the magnitude of the decision Britain faces in Europe. Not only were many would-be speakers disappointed in their wish to speak; the House at last turned away from discussing tomatoes and the possibility of an extra tenpence a week on the cost of living to consider the vital political choice. Three main objections emerged from that strange alliance of extreme left and right which opposes British membership. Mr Silverman put the most cogent objection—the suspicion that uniting western Europe means dividing Europe as a whole. British policy, he argued, should be devoted first of all to arbitration between East and West; joining a club whose senior members were Dr Adenauer and General de Gaulle was not the way to do it. Others feared that joining the common market would disrupt the Commonwealth. Lurking behind all these doubts is the fear that membership means loss of sovereignty.

The debate also provided a clue to the difficult question of what the strange group of anti-common marketeers have in common. It is, as Mr Roy Jenkins pointed out, "a greatly exaggerated view of our position in the world." This was startlingly apparent in Mr Shinwell's incredible belief that Britain could supply the bulk of the capital the Commonwealth needs for development. It was also implicit in Mr Silverman's assumption that by staying out of Europe Britain could in some way bring the two halves of Europe (and of Germany) closer together.

What made two speeches from Europeans of the "extreme centre" (Mr Jenkins and Mr Nigel Birch) impressive, by contrast, was the feeling that they had looked at the realities of power today and done some long-term thinking about Britain's future. It was changes in the scale of economics and politics in the past fifty years that had persuaded the Six of the weakness of the small European state, Mr Birch explained. What sort of role could British policy play in the world—in East-West mediation or anything else—if Britain remained outside the new European nucleus of power and outside the special relationship which would inevitably grow up between it and the United States? What future was there for the Commonwealth if the mother country was not strong in Europe? To Mr Birch the danger Britain faces is of "mistaking memories for hopes."

Neutral Solutions

THE pull of the wider Europe further east could be felt in the discussions of the Seven in London this week. On the whole, the six smaller members of the European Free Trade Association seem to have accepted the idea that Britain may join the common market. Even the three neutral countries which are reluctant to join are realising that a British move to join may open the way to solutions for the rest. But this bowing to realities does not make the problem of the neutrals any easier in itself.

On paper, a loose association under Article 238 of the Treaty of Rome could link Austria, Switzerland and Sweden to the European community without the tight political commitment they dislike. But these countries still hanker after a broader European association, grafted on to the common market, in which they could have been full members without sacrificing too much independence. The Austrian government, for instance, dislikes being faced with a choice of either joining the common market and committing itself to integration or else being a second class "associate" outside the inner club. Whether they are associated with the community or not, one way of helping the neutrals might be to make the Organisation for Economic Co-operation and Development, of which they are full members, a lively forum.

Worries about neutrality are legitimate enough. Unfortunately they sometimes mask other feelings, still more difficult to satisfy. The small nations dislike relinquishing powers to a body that may be dominated by the large countries. Switzerland even argues that the protection of its agriculture, and its commercial independence, are essential to neutrality in another war. The point will clearly be reached when small countries, like large, have to make some painful choices.

This week, the efforts of Britain's six small partners were inevitably directed to tying Britain's negotiations as closely as possible to their own. Some ministers suggested joint negotiations. Others suggested that no country should sign a treaty unless all the others could. Britain plainly has an obligation to help the neutrals where it can. However, a point can be reached when too close a tie between the two sets of negotiations becomes absurd. If the signature of a British treaty were held back, say, by the protectionist demands of the Swiss peasantry, not only Britain but the other small states as well might suffer. The neutrals, after all, might get better terms from a community of which Britain was a member. The formula agreed upon this week, that Efta will remain in being until solutions are found for all, "thus enabling them to participate from the same date in an integrated European market," goes a very long way towards satisfying the small countries. Fortunately, Britain is not pinned down on the actual form of negotiations.

UNITED NATIONS

Less Craven Scruples

THE Foreign Office is to be congratulated on having found out how United Nations voting works. In the House of Lords on Monday, Lord Home made it clear (or fairly clear) that in future the British vote will be cast in favour of a resolution whose substance finds British approval, even if it includes a clause that is objectionable because it implies UN meddling in domestic matters or the desire for an overhasty emancipation of dependencies. The British delegate will make his objections to the offending clause quite clear, either in the course of voting on each paragraph separately or by giving an explanation of his vote, but will still be able to vote for the resolution as a whole.

Under this procedure, Britain could have supported the UN resolutions that have called on Portugal to mend its ways in Angola. It might even have been able to support the resolution of last July that authorised the sending of the UN force to the Congo. Better late than never. Britain's posture in the world has too often been marred by what Hamlet called "some craven scruple of *thinking* too precisely." The tendency to retreat behind Article 2 (7) of the UN Charter, which safeguards domestic jurisdiction, has unfortunately always seemed to be strongest when colonial questions were at issue. From now on, one may hope that nice scruples will no longer force Britain into odd bedfellowship with a dwindling band of diehards in this respect. No doubt to vote for a resolution whose every word has not won one's wholehearted assent is morally reprehensible; but it is essential to practical politics, which must needs rest on compromise. How very apt that recognition that the United Nations is practical politics, not a disputation of divines, should emerge in the House of Lords rather than in Another Place.

Mirror Images

In a book published in Moscow last year, Mr Grigory Morozov devoted 26 pages to demolishing the "anti-people" idea of revising the United Nations Charter. Quoting lavishly from Mr Khrushchev, he insisted that the charter as it stands "contains everything needed to provide effective guarantees of peace," and that "to speak as if some kind of defect in the charter would hinder disarmament means, to say the least, to display elementary bad faith."

On Monday, Mr Morozov told listeners to Moscow radio that the experience of sixteen years "shows that the structure of the United Nations and the articles of its charter must be changed to conform to the changes that have occurred in the world." Mr Hammarskjöld had been "exploiting the imperfections of the charter"; and "to make the UN an effective means of guaranteeing peace, its structure must first be reorganised."

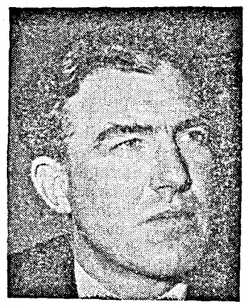
Mr Morozov's heels are not, of course, *flailing the air all by themselves*; it is Soviet dogma that has stood on its head, in a handstand no less spectacular for being unadmitted. Mr Khrushchev's present campaign is not merely one to oust Mr Hammarskjöld; it aims at revising the charter drastically. This aim was reaffirmed by the dissenting Soviet member of the committee that has just reported on the staffing of the Secretariat, and the anniversary of the adoption of the charter at San Francisco brought out a new wave of Soviet verbiage this week, including Mr Morozov's broadcast.

The "troika" idea—parity between "socialists, *imperialists and neutralists*," with veto powers for each—is dominant. The uncommitted countries are told that this is in their interest. Yet, a year ago, one of Mr Morozov's themes was their swiftly growing power in the UN, under its existing rules. The troika plan, taken with Mr Khrushchev's now revealed belief that there are "no neutral men," suggests that in fact what Russia cannot stand is the prospect of a UN in which Afro-Asians and other "neutrals" call the tune, as indeed they increasingly *do*. Their decisions cannot be represented as those of a "western mechanical majority." The Morozov of 1960 wrote —of the "imperialists"—that "the charter is a grave obstacle to their aggressive plans. That is why, not content with violating it, they seek to revise it." Mirror images can be revealing.

COLLEGE OF PSYCHIATRY?

In Search of Status

Until recently, the mental hospitals were treated as the Cinderella of the health service, although about 40 per cent of the total hospital beds are to be found in them. Because of their low repute, and because, before the health service was introduced, they were run by the local authorities, with local authority salary scales, they did not attract doctors of consultant status to work in them. Since 1948, when the hospitals were handed over to the regional boards, consultants have been appointed, and, particularly since the new Mental Health Act, the mental health services are becoming more closely integrated into the general health services.



Yet psychiatry still does not have the status its importance warrants. An illustration of this can be found in the table of merit awards for consultants given in a recent parliamentary answer. At the end of last year, 14 per cent of consultant psychiatrists were receiving some sort of merit award, compared with 57 per cent of the consultants in general medicine and 54 per cent of the general surgeons—psychiatry comes, in fact, below all other specialties in this comparison.

These merit awards are additions (ranging from £750 to £4,000 a year) to a consultant's salary, and they are made on the recommendation of a standing advisory committee. The committee consists almost entirely of fellows of the three royal colleges of physicians, surgeons, and obstetricians and gynaecologists; there is one psychiatrist among its fifteen members. The question of merit awards is not, of course, foremost among the reasons why psychiatrists are now considering setting up a college of their own; the low proportion of awards that comes their way is regarded merely as a symptom, and their chief objective is to raise their status mainly by controlling their own professional standards through their own higher examinations. A separate college is not the only course suggested. The Royal College of Physicians has offered the pathologists (who are also disgruntled, though their status as expressed by merit awards is much higher than that of psychiatrists) a separate faculty within the college [illegible] to the psychiatrists.

Psychiatrists are now being asked to express their views. If they opt, by a clear majority, for a separate college, they will then have to decide whether to start from scratch or to raise into a college the Royal Medico-Psychological Association. This body has a long history, and a royal charter, but its traditions and outlook are associated with the old-style mental hospital which is felt by many to be responsible for psychiatry's present low status.

GOVERNMENT CHANGES

Mini-Shuffle

Mr Vosper: uncertain elevation

Mr Godber: diplomatic accent

Faced with what every political theodolitician has diagnosed as a bumping pitch, the Prime Minister has passed up one more chance to rejuvenate the top of his batting order. In other fields of endeavour the ministerial changes announced on Tuesday would be read as a sign that the selectors had cast around for new talent in vain. *Since this is not* the Tories' particular plight, other criteria have clearly determined the choice. In Mr Vosper, to whom the new Department of Technical Co-operation has been entrusted, Mr Macmillan has picked a competent performer with senior ministerial experience behind him. But this is not quite the expansive, "new frontier" image for overseas aid that most people had hoped for from the expected elevation of Sir Edward Boyle. But would the Department of Technical Co-operation have been an elevation from even the Treasury's secondary heights? It seems doubtful whether the new department is meant to have any *major importance* or initiative.

Mr Godber (Minister of State, Foreign Office), who joined the Foreign Office team only last October from the Ministry of Agriculture, is known to have impressed his officials in the limited opportunities that have come his way, most notably in negotiating the cultural agreement with the Russians in January. Of the others, the one face that might be identified by a wider public is Mr Fletcher-Cooke's (Under-Secretary at the Home Office), who has performed creditably in the Tory interest on the telly. It is certainly awkward that Mr Alan Green (who is himself a good, sensible choice) should take his first knock at the Ministry of Labour during the motor industry troubles and in the absence of Mr Hare in the Commonwealth touring team. On Wednesday the Opposition's reception to the news that Dr Charles Hill would act as substitute, if required, was nothing less than rapturous. The Prime Minister has not raised Tory morale in the House, particularly among the 1959 entry, by these minor changes. Is something more fundamental, preferably including a new look at the ministerial job structure as a whole, to be expected in the autumn?

N. M. Rothschild & Sons

Capital Issues, Reorganizations and Mergers

Investment Management

ROTHSCHILD EXECUTOR & TRUSTEE COMPANY

is available for all Executor and Trustee Services

New Court, St. Swithin's Lane, London, E.C.4 MANsion House 4356

it was vital in 1944

The Company's task?
To produce ten concrete caissons each as tall as a five-storey building and weighing 7,700 tons: each to be towed across the Channel and sunk at Arromanches to form a part of an artificial harbour equal in size to that of Gibraltar. This was the Company's contribution to Mulberry Harbour—with an unarguable completion date of 150 days from start to finish

it is vital in 1961

For British industry in 1961 D-day is today. The construction of modern factories to a planned construction programme with assurance of completion on time is of vital importance

completion on time

The need for new factories to expand production demands that construction shall be carried out rapidly and economically to a planned programme, and the installation of costly plant and machinery must not be delayed. The resources of the Laing Companies all contribute to rapid and efficient construction through detailed planning, mechanisation, new operational techniques, and the development and use of new materials. Completion on time we regard as an obligation and not as a virtue

LAING

JOHN LAING AND SON LIMITED GREAT BRITAIN AND OVERSEAS

LAOS

Ticking Slowly

WHETHER they like it or not, the watches of all the delegates at the international conference on Laos are set to Laotian time. Since the Laotian anti-communists are playing for time, and the neutralists and communists believe time to be on their side, the ticking is inordinately slow. The three princes who represent these tendencies—Boun Oum, Souvanna Phouma and Souphannouvong, in that order—did, it is true, issue a joint communiqué in Zurich on June 22nd, after meeting for four days. But the only concrete outcome of this document, so far, is that Prince Boun Oum's delegation has ended its boycott of the international conference at Geneva.

The communiqué nevertheless repays study. The three princes agreed to form a government of national union but did not name a premier; this appears to be a victory for Prince Boun Oum, who does not want to interfere with the constitutional rights of the king (Prince Souvanna Phouma has nominated himself, and the communists say nobody else would be acceptable). Indeed, it was specifically agreed that the king himself should designate the government, without passing through the national assembly; this part of the communiqué is a concession to the views of the neutralists and communists who contest the validity of the last general election, held in April, 1960.

Elsewhere, too, the communiqué bears witness to tough bargaining. The importance of carrying out the cease fire is recognised (one mark to Boun Oum); the princes agree "not to recognise the protection of any military alliance" (one mark to Souvanna Phouma and Souphannouvong, who do not want Seato—the south-east Asia treaty—to apply to Laos); and the bases mentioned in the 1954 agreements are to be the subject of a special study (no marks all round; the bases are French and the communists want to keep the French out, but are embarrassed by their general desire to support the 1954 agreements).

The proposed government of national unity has not yet been formed. Prince Boun Oum has flown back to Vientiane, to report to the king; and General Phoumi Nosavan, the "strong man" of his government, flew to Washington on Wednesday to explain just how far the government had gone to meet communist wishes. Meanwhile, the Geneva conference has been marking time; it may keep on doing so until the princes get together again.

FRANCE

Potatocracy

LE CANARD ENCHAINÉ, the Parisian satirical weekly, carries in its current issue a cartoon showing St Joan whispering to King Charles, who looks very like General de Gaulle. The caption reads: "She's sure to be telling him the price of potatoes." This is a hit not only at the French president's insouciance in touring Lorraine at a time when the south-west of France, following Brittany's lead, is in an uproar over agricultural prices, but at his methods of government. A lofty blend of *realpolitik* and mysticism may be sufficient to deal with matters of foreign policy, but to most Frenchmen it seems less adequate to cope with the mundane problems which most immediately interest them, such as housing, education and food. Used as they have been, since 1870, to the *république des camarades* and its successors, they are not used to a regime which ignores minority interests and pressure groups. The great advantage of French parliamentary democracy always was that deputies were willing and able to fix things for their constituents. Now the constituents have nowhere to go, and feel their loss.

The gaullists have dismantled an essential gear of the French, or indeed of any, system of government. The state responds not to all, or too slowly, to the needs and wishes of large segments of the nation. This is partly because everything now depends on one man, partly because his subordinates are mostly mediocrities, and partly a matter of principle. It is a central assumption of the Fifth Republic that the state must be above party, and must pursue the national interest in steadfast indifference to the criticism of the "hostile packs" to left and right. Unfortunately, steadfast indifference all too often looks like simple deafness or incompetence. It should not be necessary for farmers to blockade country towns with their tractors and frighten cabinet ministers with their demonstrations in order to get their grievances attended to. It is even a criticism of the regime that, while declaring, through the mouth of M. Debré, the prime minister, that it would not be swayed by violence, it rushed through measures to deal with the complaints the moment violence raised its head.

Already, in the Toulouse area, there have been anti-regime rumblings. If General de Gaulle wants his constitution to outlive him, or if, indeed, he wants not to outlive it, he would be well advised to modify it, even if this means substituting rule by votes for rule by potatoes.

EAST AFRICA

Poor Relationships

UGANDA expresses an African personality that has been rejected by the rest of Africa. Led by its feudal monarch, the Kabaka, it is determined to cut itself off from the rest of Uganda, and to keep its system of government as near to tribalism and as far from democracy as possible. As the report presented by the Relationships Commission* admits, Uganda is an artificial creation, a collection of localities, rather than a nation. Yet the time and the continent demand nationhood, and the commission points the way.

It seeks to prevent Buganda, as the heart of the country, from becoming another Katanga. Uganda should, the commission says, be a single democratic state with a strong government at the centre. But Buganda should be in federal relationship with the centre, retaining its Kabaka, his government and civil service, and his authority over traditional matters. Foreign affairs, nationality, defence, police, and taxes must be reserved for the central government; other matters should be legislated for by both the National Assembly and the Buganda Lukiko—the assembly's decisions prevailing in case of conflict. Buganda can choose whether to elect representatives directly to the assembly, or allow the Lukiko to elect them. Three smaller tribal kingdoms—Toro, Ankole, and Bunyoro—would be given a semi-federal status halfway between Buganda's and that of an ordinary province.

This is a lot to offer, and it gives the Baganda a certainty of retaining their identity that was not enjoyed by, for instance, the Ashanti in Ghana. But it is still doubtful whether the recalcitrant Baganda will even attend the constitutional conference in September to discuss the commission's report. They may decide to do so in the hope of speeding Uganda's independence and breaking away after the British leave. The only real guarantee against this would be Uganda's membership of an East African federation.

* Report of the Uganda Relationships Commission, 1961. Government Printer, Entebbe.

TOMBOLA CASE

All A Lottery

THE majority judgment by the Law Lords that a tombola or bingo session organised for the enrichment of the Huddersfield Friendly and Trades Societies Club was a lottery unlawfully conducted for private gain has spread alarm and despondency in working men's clubs and has disturbed those churches and political party branches which have been making ends meet in the same way. *The Times* has now gone so far as to say that the decision was "clean contrary to the spirit" of recent legislation on gaming, which permits small gaming parties "promoted for purposes other than private gain", and which had led 3,000 working men's clubs and unnumbered other societies to the conclusion that they were entitled to draw revenue from a flutter-hungry public.

The taking of money from the public in order to promote what is, in any interpretation, a sectional interest must be seen to be a private gain. If it were not, a lottery open to the public and conducted for the purposes of supporting any organisation, no matter how small, esoteric or even subversive, would be permissible: there might be nothing to prevent the Jones family, say, from raising money in this way for their children's holidays. In this particular context (section 4 of the Small Lotteries and Gaming Act, 1956) the purposes of the society—the definition in the act is very wide—are irrelevant, no matter how admirable. What is important is what is done with the money, and in this case it was used unlawfully for the enrichment of the club.

The club's purposes would have been relevant, however, had the defence been conducted under section 1 of the Act, which permits the use of money obtained from small lotteries "for purposes of a society . . . conducted for charitable purposes, participation in or support of athletic sports or games or cultural activities, or purposes . . . not described . . . and not being purposes of private gain or . . . of any commercial undertaking." Into the second and last of these categories the Huddersfield club would almost certainly fit, its avowed objectives being "social intercourse, mutual helpfulness, mental and moral improvement and rational recreation", none of which can be taken to be privately gainful. But a society intending to take advantage of this exemption from the general prohibition against lotteries must register itself with its local authority, and must submit returns specifying the manner of the money's use, which must be wholly (after expenses) for the registered purposes of the society. The Huddersfield club had not registered with its authority. Presumably prospective tombola organisers will now have to look into this form of relief.

COVENT GARDEN BILL

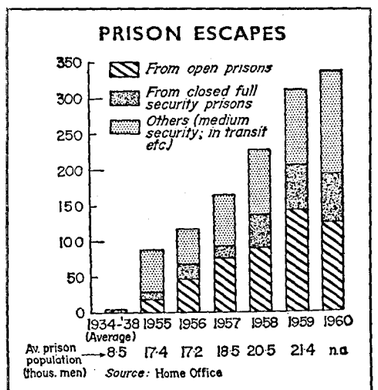
Last Chance?

AFTER a stormy and wearisome passage in the Commons, the Covent Garden Market Bill received its third reading largely because MPs had grown bored with arguing about it. The bill would set up a body analogous to the Port of London Authority to run the new market, which would be smaller in extent, far better supplied with parking room, and less of a flutter-trap than the present rambling set-up. The trouble that the traffic-jammed Londoner sees with all this is that the heavy trucks would continue to rumble through the impenetrable area around the Royal Opera House: the new bill compels the market to remain more or less *in situ*, and out of the reach of railway lines.

On Monday four bold peers—Lords Molson and Hawke from the Tory benches, and Lords Morrison and Stonham for Labour—will try to introduce an amendment in the Lords which would free the new authority to build somewhere else if it finds it more efficient, possibly at the site over the railway at King's Cross, which was at one time strongly favoured by the Transport Commission. This idea was canvassed in the Commons, but was thrown out after Mr Soames had argued that it would open up too many possibilities, and that what was wanted was action. Underlying this argument may have been the thought of the endlessly delaying objections—not least from traders now established in the market—that would have to be considered if building elsewhere were contemplated.

The four peers believe they may circumvent this argument by giving the authorities a chance for second thoughts about the market's site and allowing for future action under special parliamentary procedure—which would mean that the aggrieved could be heard if and when a new site is decided on. This may well be a good idea: the most cogent argument against rebuilding on the Covent Garden site is that nobody can foretell what changes will take place in the system of distributing fruit and vegetables. It might, for instance, be possible to extend the system of buying by sample, which is already practised for imported fruit on the London Fruit Exchange. In that case a market away from the railway lines—and thus unsuitable for bulk distribution—would be a vast white elephant.

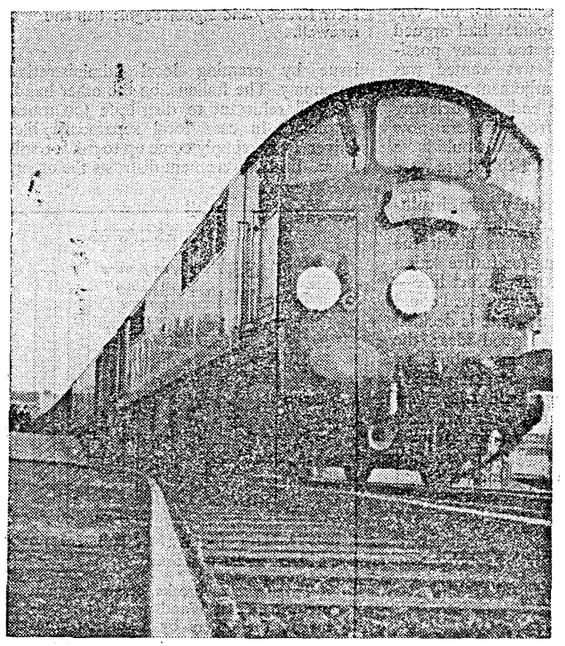
ITALY AND AUSTRIA



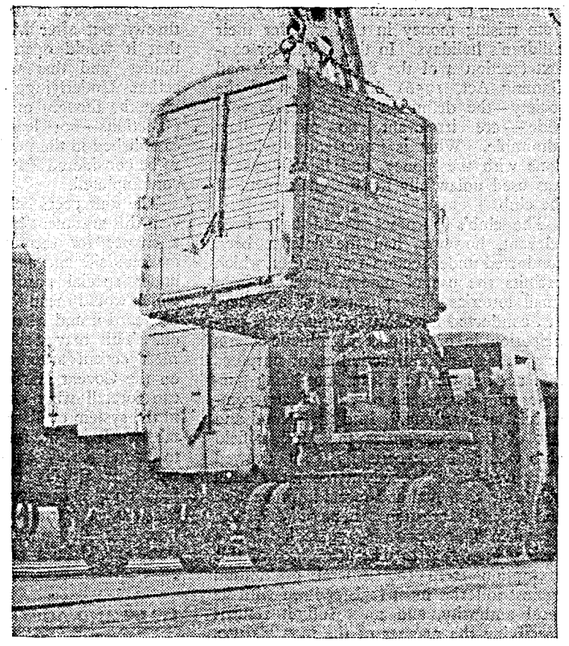
Adige Adagio

AUSTRIA'S uneasy diplomatic position between East and West has not been made easier by its latest encounter with Italy over the dispute about the South Tyrol (or Alto-Adige). The talks between Herr Kreisky, the Austrian foreign minister, and Signor Segni, his Italian opposite number, in Zürich last Saturday proved abortive and even heated. The Italians claim that they put forward reasonable proposals for greater local autonomy in the disputed Bolzano province; the Austrians regard the offer as ridiculously inadequate. The talks broke down without even reaching agreement on what should be done next.

Both sides, it seems, recognise that the situation in the province is becoming dangerous; and both believe that the calculated acts of sabotage in the last few weeks have been inspired by extremists, perhaps supported by people in west Germany. The trouble is that each appears to expect the other to find a way out. The Austrian government is prepared to renounce territorial claims and denounce local extremists once Italy has taken the sting out of the issue by granting local administrative autonomy. The Italians, on the other hand, are still reluctant to distribute too much autonomy in case local separatists, like Oliver Twist, simply come up to ask for still more. Each government distrusts the other.



Herr Kreisky and Signor Segni: hail and farewell.



Three prison breaks, one a ten-man performance at Wandsworth (1 recaptured), the others by a quartet from Maidstone (3 recaptured) and three from Parkhurst, have attracted attention this week. Seventeen in five days is an unusually high rate. but for the past six years the security in Britain's gaols has been increasingly confounded. Of the 2,100 men in open prisons in 1959, almost one in fifteen managed to escape; in 1955, it was one in ninety. The Prison Officers' Association attributes the increase to overcrowding in the closed prisons, which has necessitated the transfer to open prisons of men who would not ordinarily be considered safe for such a move. As for escapes from full security prisons, the staff, they claim, is simply too small to maintain all the requisite safeguards. If the officers were looking for a way to dramatise their case, nothing could have been more opportune—in the long run—than this gaol-breaking spree.

EXPRESS SUCCESS!

LONDON TODAY–GLASGOW TOMORROW!

Give somebody what he wants, and already you're in a fair way to success. Two years ago, we of London Midland saw there was a big demand for a high-speed container service between London and Glasgow – big enough to warrant running a special five-nights-a-week express freight train. So Condor was born.

From its first run on March 16 1959, Condor was a success. Transport managers appreciated the advantage of a regular, reliable door-to-door freight service which delivered their goods in under 24 hours – the fastest regular freight transport service between London and Glasgow, and all at competitive rates • Today, the Condor service is not only well-established but steadily growing (as more and more firms switch to rail). Can Condor help *you*? Ask your Goods Agent or Station Master about Condor – the fastest way to send your goods from London to Glasgow, the fastest way from Glasgow to London.

CONDOR-PART OF THE NEW LOOK OF TODAY'S LONDON MIDLAND

and, while diplomacy is in abeyance, the initiative passes to the local hotheads. The time may not be far off when diplomatic mediation by friendly countries might be useful and even necessary.

RUSSIA

Good Soldier Nik

It is Stalin's fate to be painted either pure white or pure black. Until his death, he was the leader of genius, the architect of victory in the last war. Now, instead of praise, he gets the blame for the early Russian reverses in the war. The twentieth anniversary of the German invasion last week provided Soviet papers and speakers with a chance to dilate on this new, and equally unbalanced, appreciation of his achievements. And Stalin is not the only victim of the rewriting of history. The conqueror of Berlin, Marshal Zhukov, has also vanished from the list of Russian heroes. But new military reputations are being made. If one were to believe Marshal Chuikov, Mr Khrushchev is a most egregious strategist; he is said to have been the master-mind behind the victory at Stalingrad. The build-up of Mr Khrushchev is not limited to military matters. Russians can now see a film called "Our Nikita Sergeyevich," retracing his glorious road from Kalinovka to the Kremlin. Even man's flight into space was the excuse for a personal tribute, our Nikita overshadowing Major Gagarin as a cosmic explorer. In fairness, it must be said that, where the cult of Stalin was frighteningly byzantine, the lesser cult of Mr Khrushchev is slightly grotesque.

But more serious notes were struck during the commemoration of the German invasion. Mr Khrushchev once again warned the United States that if it resumed nuclear tests, the Soviet Union would too. He also suggested that Russian expenditure on defence might be raised and the last few years' trend towards smaller armed forces reversed. It will be recalled that, in January of last year, Mr Khrushchev announced a major reform of the Soviet forces, involving a substantial reduction in the size of the officers' corps. Is this important reform to be shelved? Speaking at Alma-Ata over the weekend, Mr Khrushchev reiterated his challenge to the Americans to take part in an economic race. The Soviet economic programme, to be published in the near future, should show whether the Russian runner in this race is to be saddled with a larger military burden.

INDONESIA

Visitor with a Future

Next week's Indonesian guest seems bound to become the dominant political figure in his country, but only when the time is ripe. General Abdul Haris Nasution, who will be visiting Britain for the first time, has, perhaps prematurely, been seen as Indonesia's "saviour." He has been credited with the capacity of "saving" the republic from communism, or from administrative chaos, or even from President Sukarno. Such talk is misleading. General Nasution, who has been defence minister, as well as army chief of staff, since 1959, has often shown that he has a political will of his own; but except perhaps at the time of the mysterious and abortive army revolt of October, 1952, known as the "affair of the colonels," he has been consistently loyal to Dr Sukarno, to whom, indeed, he owes his meteoric rise since the president brought him out of three years of inactivity to make him chief of staff in 1955.

To question General Nasution's desire to seize power tomorrow or the day after, however, is not to doubt his importance in the further future. At 42, he is at the height of his prestige and a national figure in his own right. Only this week, one of the few ex-colonels still in rebellion against the central government brought his men back under General Nasution's orders in Sumatra. Earlier surrenders or cease-fire arrangements, mainly in Celebes, have broken the back of the rebellion of colonels and economists which broke out in February 1958. Much of the credit for these developments naturally goes to General Nasution, who, in addition, can claim the unusual distinction of being *persona grata* both in Washington, where his firmly anti-communist record is well known, and in Moscow, where the general went shopping for arms last January.

Mr Macmillan and Lord Home will doubtless ask their guest what he proposes to do with all these arms, as Mr Menzies must have done when General Nasution visited Canberra in April. For his part, the general, who happens to be the chairman of the "national front" for the liberation of west New Guinea, will want to know whether there has been any change in his hosts' views on the last remnant of the Dutch East Indies empire.

LETTERS

Immigrant Workers

SIR—It is alarming that even *The Economist* can be so blind over immigration. You say "Englishmen find themselves increasingly too fastidious to perform unsavoury or unpopular duties" and, therefore, we import West Indians to do our dirty jobs for us. Will their children allow you to treat them as second-class citizens in this way? Will it be possible to import hundreds of thousands each generation to prevent the fastidious Englishman from soiling his delicate hands? We are taking only a fraction of the Commonwealth's annual increase in population. Will not numbers make restriction inevitable? You also ask "In what way will the tensions of predominantly coloured districts be alleviated?" Surely not by allowing the pressure to grow *ad infinitum*.

In the first five months of 1961 over 40,000 immigrants arrived, as compared with 17,000 last year. It is not merely a question of the West Indies. Their population is 3 million. In the Indian subcontinent there are over 500 million people. The Indian and Pakistani governments have co-operated in keeping down the number of immigrants. Their restrictions are now breaking down. Why should they voluntarily accept restrictions which the West Indians reject? Yet in the first five months 13,400 came from India and Pakistan against 3,000 last year. If the West Indians are entitled to send their 100,000 population increase, why not India send her seven million? Africa is also starting to send her surplus population. Where is it to end? If cold common sense will not appeal to *The Economist*, figures should! The Romans became fastidious and refused either to work or to fight. They imported strangers to do their dirty work—and Rome fell! In our modern world racialism has not been solved anywhere. What criminal folly to introduce unnecessarily that terrible problem into England. Sir, it is not a question of placating me, but of saving future generations from the racial hatreds that unhappily are bedevilling the life of so many misfortunate nations.—Yours faithfully,

CYRIL OSBORNE
House of Commons, SW1

★

SIR—Many Birmingham people will read your comments with despair. If the Government imposes restrictions on immigration it will not be to placate Sir Cyril Osborne but because the Government will at last have been forced to pay some belated consideration to the welfare of the ordinary people of Britain.

Housing conditions in Birmingham and other cities are appalling. The number of children coming into the care of Birmingham Corporation does not suggest that immigrants are encumbered by less than the average number of non-working dependants, although they are more ready than our own people to shed these encumbrances.

You have not mentioned that the West Indian birth rate is 60 per cent above ours.

The density of population in England and Wales is now higher than it is in Japan. Even *The Observer* has conceded that housing conditions are serious in some cities; Birmingham is specifically mentioned. Is *The Economist* to go on in the same old way—caring nothing if young English people can have no home of their own for many years?—Yours faithfully,

Birmingham E. V. ROBERTSON

[An article on the housing and planning problems of Birmingham appears on page 20.]

★

SIR—It is interesting to observe that under the provisions of the Rome Treaty "workers will not be able to move from one country to another without a clear offer of a job; once there, they will not be able to switch jobs for at least a year, or change trade or profession for at least three."

Under the existing arrangements for issuing working permits to certain categories of aliens (especially hotel workers) in the UK the Ministry of Labour makes a similar stipulation, but there is no means by which it can be enforced. An employer, having made application and obtained permission to employ a foreign worker, can, on receiving his resignation a week or two after his arrival, either let him go or insist on his repatriation—at the employer's expense.

Many aliens, especially Italians, obtain permits to work in hotels solely for the purpose of entering this country to seek employment. This may be a good thing or a bad thing—healthy competition between employers may be beneficial, especially in occupations not controlled by trade unions—but if it is to be the practice it would be more realistic to admit it than to make regulations which will not be observed in practice.—Yours faithfully,

Bournemouth J. W. LEVACK

All Liberals Now

SIR—Your article of June 17th is on shaky ground in differentiating between "liberals," who favour British entry into the European Economic Community, and "non-liberals," among whom you choose to list "ardent planners," who do not. I would have thought that the reverse is at least as often true. Economic liberals, including the doctrinaire free-traders of the Liberal Party, do not like one bit the prospect of the Rome Treaty commitments which, indeed, are surely more attractive to the planning cast of mind (having been inspired by such "planners" as M. Monnet) than to the non-planners. Moreover, among supporters of British membership we find such "planners" as Mr Crosland and Mr Jenkins, many left-wing conservatives, the "planners" among the Bow Group, and the Liberal Party, whose younger and more leftish elements (and more inclined to socialist ideas of planning) have comparatively recently swung the party to commitment to British membership, in face of the opposition of its encrusted right-wing.

The Liberals, may I add, were comparatively late in the field. Long sympathetic to European goings-on, they were in fact enthusiastic supporters of the Free Trade Area during 1956-58 and indistinguishable from Tories. During the crucial period of the Rome Treaty negotiations and for some time after their signatures, the advocates of British membership were limited to a few (mainly) federalist lone-wolves of the left, centre and moderate right.—Yours faithfully,

ANTHONY MORRIS

Brussels

1931

SIR—Thank you for the articles on 1931; I was 16 then; "economics" was something my family with an out-of-work father and spasmodically working son practised. It was only chance curiosity and a thirst for knowledge created by my experiences in the war which prompted me to take *The Economist* in 1946.

For 15 years I have been your student yet perversely have remained at heart a socialist. Until I read your articles I wondered why. Now I know, it is the philosophy not the economics of socialism that enchains me. It may not have been a "bankers' ramp" which created the misery of my generation's youth, but it was their refusal to accept a share of the burden of putting the world right.

I accept that they have been ignorant, I see no striking proof that they have profited from the experience.—Yours faithfully,

Tunbridge Wells W. WALSH

Public Schools

SIR—I have read with interest your comment on the Commons debate on the public schools. There is one point which both the debate and subsequent discussion of it seem to have missed. You are kind enough to say—and I think rightly—that the public schools attract, among other reasons, because they provide an excellent education. You add that the answer to that is to spend money in improving the maintained system. That, up to a point, is true, and something which all of us would wish to see brought about. But it is not often observed that a system which, like the public system, consists almost exclusively of day schools, has its own inequalities. It is bound to tilt the balance heavily in favour of the larger urban areas and against the small town and the country district. It is indeed arguable already that the major inequality in English education comes of not being born in Manchester, London, or one of the other great cities with a wide range of educational opportunity.

It is here that the boarding school comes in. One of the motives for its original foundation was the inadequacy of local educational provision, and many of us feel that the boarding school has a function in evening out the inequalities caused by the geographical distribution of the population. How this should be done is a much more difficult question. If many of us regret that so little has been done to implement the Fleming Report, it is because that would have given us some evidence upon which to go. Nor does it seem to me conclusive that there should, as the Minister pointed out, be boarding places to spare in the maintained system. It indicates that the problem has not been solved, not that there is not a problem.—Yours faithfully,

H. D. P. LEE

The College, Winchester Headmaster

Teachers' Pay

SIR—Your correspondent S. Galin, in your issue of June 24th, states that: "the average wage of a manual labourer today is £14 10s. 8d. a week," and goes on to draw unfavourable comparison between this and the £600 per year offered to the teacher as a starting salary under the new Burnham scale.

Comparisons may be odious, but they should at least be accurate. What he has done is to compare the lowest rate for a teacher with the average wage of a manual labourer (or should it not be "manual worker"?). He would have painted a more correct picture had he made his contrast with one of the lower rates paid to manual labourers.

In the pottery industry, the male labourer (Group M.2), aged 21 or over, receives the sum of £8 6s. 8d. for a week of 42 hours. His annual emolument, inclusive of holiday pay, will amount to £432 14s. 2d., for which he will be at work 2,040 hours.

For his £600 per annum, the beginner-teacher will spend on the job less than 30 hours per week or 1,200 per year.

It is true that the labourer may increase his wage by working overtime—on this rate he will be practically forced to do so—but to bring his wage up to £600 per year he would have to be at work more than two and a half times as long as the teacher.

The increment, which your correspondent despises, is a built-in guarantee that the teacher's salary will double itself in 16 years. The pottery worker has no such guarantee. Any increase in his wage rates in the future will only be secured for him by his union after a bitter struggle with his employers.

The teacher receives his salary even if he is away through illness, but any such absence on the part of the labourer leads to a drastic reduction in his wages. He may also, like many pottery workers, be employed in a dust-laden atmosphere which will render him liable to contract pneumoconiosis. The teacher, at least, will be free from such risk.

Knowing all this, the labourer will be surprised to learn that he is apparently so much to be envied.—Yours faithfully,

Stoke-on-Trent, Staffs H. STEELE

BOOKS

Inside and Outside Prison

Time Out of Life

By Peter Baker.

Heinemann. 261 pages. 21s.

Probation—The Second Chance

By John St John.

Vista Books. 280 pages. 25s.

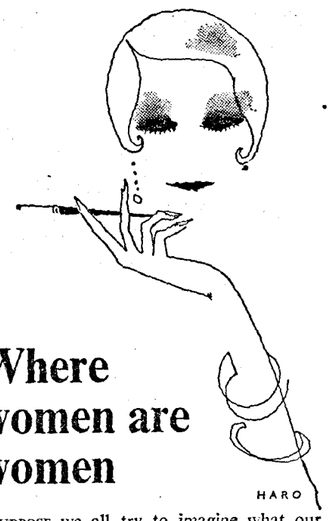
Two men are convicted of having broken the law. One is placed on probation, is called a "client" and is given the continuous support and advice described in Mr St John's book. The other is sent to prison, becomes a number and is subjected to the process of degradation described by Mr Peter Baker.

Mr Baker was the youngest member of Parliament when he was sentenced to seven years' imprisonment at the end of 1954 after pleading guilty to a financial offence. The length of his sentence seems to have been out of all proportion to his crime, but it has the advantage—for us—that Mr Baker began his imprisonment under what may be called the old regime and ended it after the breath of change had begun to blow. His sentence was served first at Wormwood Scrubs, then in Leyhill open prison and back at the Scrubs again after he had been discovered sending out forbidden letters from Leyhill—a breach of the rules which he continued to commit and which eventually caused him to forfeit some remission.

His book, which—also against the rules—he began in prison, is not very good. It lacks warmth and depth; and the standard of proof-reading is a disgrace to the publisher. The best part is the beginning, where Mr Baker does convey something of the extreme shock suffered by someone entering prison for the first time. Thereafter, his description is all too familiar from other books: the primitive lavatory arrangements; the callous medical service; the tobacco barons; the petty bullying; the serious beatings up. Mr Gilbert Hair introduced many reforms when he became governor of Wormwood Scrubs in 1956; in particular he declared, according to Mr Baker, that the prison was henceforward to be run by common sense, not by the rules. But what about prisons like Wandsworth and Walton (at Liverpool)? Reading Mr Baker's book, one cannot help wondering whether an undermanned prison officers' service would feel so harassed and out of control were the rules and the regime to be rationalised and brought up to date.

That is one reason for reading Mr Baker's book. Scrappy though it is, one can sense from it something of the unnatural, artificial prison environment in which disturbances seem bound to break out from time to time, especially if the introduction of a more liberal regime clashes with the attitude of staff who believe in the old order and try to maintain it more vigorously than ever. The book also underlines the vast gulf between a prison sentence and a probation order—the subject of Mr St John's study. Mr St John is naturally more objective and detached than Mr Baker. Although he writes with warm approval of the probation service, he is honest enough to record its failings and failures and to point out its unjustified pretensions. For the most part, he describes the work of the probation service, in all its branches, through a series of case histories. Many of these cases are, as offenders, just as bad as Mr Baker's fellow inmates, some may be worse; but it often seems quite fortuitous why the one group of offenders should have been sent to prison and the other not.

In the final outcome, perhaps, this does not matter. Prediction studies seem to show that whether an offender is placed on probation, fined or sent to prison is irrelevant in determining whether he will offend again; it is not the treatment he receives but other factors which determine his relapse or cure. Even so, even though a man may not, after all, be made a worse criminal by the degradation of prison life, he may well be changed for the worse as a person—and so may his gaolers. Mr Baker claims, rather smugly, to have emerged from prison a better man. Others are more likely to emerge brutalised and irreparably damaged in their self-respect. The prediction studies have not made the work of prison reformers superfluous. On the contrary, they still have to insist on the principle that the punishment of a prison sentence should end with the loss of liberty; that the treatment of a man once he is inside prison should be inspired by something of the spirit that informs the probation service outside.



Three Magi

Burke, Disraeli and Churchill

By Stephen R. Graubard.

Harvard University Press. London: *Oxford University Press.* 262 pages. 40s.

MR GRAUBARD, a history tutor at Harvard, has thought it useful to outline within one pair of covers the career and ideas of three eminent British conservatives: Edmund Burke, Benjamin Disraeli, and Winston Churchill. His sub-title, "the politics of perseverance," indicates what he believes such disparate characters have in common,

Where women are women

HARO

I SUPPOSE we all try to imagine what our favourite writers are like. The other week The Observer gave us a postage-stamp size portrait of Miss Katharine Whitehorn. The photographer was poised slightly above her head. It looked like a well-groomed chrysanthemum, though I can't see any resemblance between that rather farouche flower and the clear-headed, intensely practical wit that flows weekly from Miss Whitehorn's pen as Fashion Editor. If I were a buyer in a big store I daresay I'd be terrified of her criticism—if I weren't busying myself with taking her advice and rushing off to put it into action.

An example of the cool Whitehorn technique came recently when she put the ordinary clear-headed women's point of view about the mad rush every season to 'promote' a fashion colour. "What she is interested in promoting, after all, is herself." Razzle-dazzle wilts before this steely glint of truth.

. . . and men are glad of it

The whole of the women's section of The Observer is rather out-of-the-ordinary, though. Probably more men read it than any other women's pages, for a start. And where else would you find a series blatantly called "Miserable Married Women"? Or a quiet little article called "Teens and Sex" to which many other papers would have given the full ballyhoo. Anyone accustomed to burrowing into snug, smug women's sections is likely to be shaken into doing a bit of *thinking*.

I can imagine one of those old-fashioned advertisements, headed, "I used to suffer from Sunday Morning Torpor—then I discovered The Observer . . .". It's not only the wit and the good writing and the stimulus—there's a special sort of *humanity* that has something to do with it. It shows in the photographs The Observer publishes. They make most other news photographs look as though models were used.

And then when I think of Jennings, and Feiffer, and Haro, and Whitehorn, and Gardner, I realise that there are more things in The Observer to make me laugh, and think, than practically anywhere else I can recall. Roll on Sunday! J.B.L.

ADVT.

besides mastery of English prose: tenacity in the face of political misfortune, and patience to hold on—for years if necessary—till the balance tilts again. He estimates Burke as a good deal more Whiggish and less Tory than the Burke who has figured in several recent studies; Burke would undoubtedly have called himself a Whig, and a Rockingham Whig into the bargain, and it is as well to have this pointed out. Disraeli, on the other hand, once he had got away from his early radicalism, was eminently a Tory; but we are not shown much of his political activity. Part indeed of what we are shown is certainly mistaken: to say that he "seemed impervious to the new demands which politics made on those who wished to serve the greatly expanded electorate" is much less than fair to the originator of the modern British party machines.

Yet this book is not written, and does not deserve to be judged, as political history pure and simple; political history never is simple, in any case. The book covers the border country where politics marches with literature. Each of the three wise men it discusses has displayed at times a magical command of the English language, and the author, in vivid if sometimes unparseable prose, reviews their books as the key to their actions. Of the three, Churchill suffers most from this treatment. The chapter on him sketches well and clearly his birth into the Victorian governing class, and his journey from Conservative backbencher to Liberal minister and back again through office in the war coalitions; but on Churchill's period of greatness it is weak. Mr Graubard summarises the plots of several of Disraeli's novels deftly, and makes helpful inferences from them about Disraeli's character; but a summary of the plot of Churchill's six volumes on the last great war degenerates into a chronicle of military and diplomatic incident, and the central character's grandeur does not emerge. Unlike Burke, who was nicknamed "the dinner-bell" in the House of Commons because his delivery was so dreary, Churchill has been a consummate orator, an even more splendid one than Disraeli; and an essay on him as a politician with the oratory so played down is bound to seem insipid.

Practical Politician

The Political Philosophy of Jawaharlal Nehru
By M. N. Das.
Allen & Unwin. 256 pages. 25s.

DR DAS has written the perfect college textbook. He quotes, annotates, paraphrases; he makes no attempt to contribute anything of his own. Anyone who wants to know what Mr Nehru has said on every subject under the moon, from colonialism to equality, will here find his words carefully selected and conveniently grouped. Since Mr Nehru's dicta are so largely obiter, scattered through speeches, autobiography, letters to his daughter and glimpses of history, this is very useful for the student who does not want to read the several thousand pages of the sources.

What the student will find, however, is that Mr Nehru, like most great practising politicians, does not have a political philosophy at all. He has no theory of the state, or of human nature, or even of what constitutes the "good society." He is content to rely on a combination of public school ethics and Fabian objectives. The ends do not justify the means; good government is no substitute for self-government, but, nevertheless, good government is important. The self-importance of Europe is rather tiresome. Colonialism is bad. Violence is not in all circumstances immoral, but is nevertheless generally to be avoided. A hungry man may think more of his stomach than of his liberty. Marx did die rather a long time ago. Occasionally, Mr Nehru's passionate feeling for the poor and the villager burns through the words; once in a way his love for his country rises to eloquence. But that is all. Mr Nehru feels, with John Stuart Mill, that individual liberty must sometimes be restrained in the interests of the liberty of all, and that everybody should have the vote. He does not, therefore, write essays on "Liberty" or "On Representation"; he passes a Preventive Detention Act and puts universal suffrage into the constitution instead.

Mr Nehru has acted a great deal. In thought he has on the whole been content to accept what Harrow and Trinity taught him, with just a dash of Gandhi and rather more than a soupçon of Laski to give spice to the whole.

Short Wavelength

The Writer and Commitment
By John Mander.
Secker and Warburg. 215 pages. 25s.

THERE are two good ways of viewing the sea on a blowy day. One is from the top of Beachy Head, when it seems extensive, elegantly patterned and rather flat; the other is from the thwart of a small skiff, where the horizon is never more than a wavelength away, the features of interest and the relative elevation vary from moment to moment, and nobody could say that life was dull.

Mr Mander's stimulating book definitely falls into the latter class. This is no vast history of commitment, starting with Theognis and advancing through Lucretius, Tertullian, Gildas and Milton. Mr Mander is young, and essentially a man of the present age. Life begins a little dimly in the thirties and only gets into its swing after the war. He is a moralist: he likes authors who have a moral sense which carries through into their works; and among such authors he definitely, though not in the least exclusively, prefers socialists like himself. The book is in fact a set of essays about authors who interest Mr Mander, and as such can be defined as committed. They believe in something beyond their own talent and prosperity, and that belief, to a greater or less degree, affects their writing. This is, perhaps, a sufficient definition by extension; and certainly, by the time one is through with the book, one has not a much clearer idea than before about commitment as such or its effect on the writer.

To say this is perhaps to criticise the title, but certainly not to condemn the book. Mr Mander is well worth reading on his chosen authors. He is a clear expositor and a rather orthodox critic. He is a little severe about any deviation from what he thinks the author ought to have aimed at. He approves of purely psychological novels and plays; he approves even more of social and political ones; but both Mr Angus Wilson and Mr Arthur Miller are rebuked for mixing the two. Need art be so much simpler than life? There is a castigation of Mr Auden for having altered his views and his poetry (that dog has surely been whipped enough for changing his skin); a study of Mr Thom Gunn, who is dragged into commitment by his heels, for the very good reason that Mr Mander admires him; and an excellent analysis of the postwar angry and/or working-class drama.

One of the most interesting studies is a rather hostile one of George Orwell, as seen through the eyes of a contemporary socialist intellectual. It contains one terrifying passage:

> Works like *Animal Farm* and *1984* will suffer badly in the years to come. Indeed, they appear a little dated even now. We are, after all, pretty sure that *1984* is not going to happen.

Really? Can we learn nothing from Orwell about the world around us? But one must not rebuke optimism.

Citizen Shakespeare

The Life of Shakespeare
By F. E. Halliday.
Duckworth. 258 pages. 25s.

THIS book justifies attention, for it will be much read and, on the whole, does its job serviceably. As the author freely admits, the story of Shakespeare's life can hardly be told without a recurrent use of "no doubt" and "perhaps" and "probably," but speculation is here kept within the limits of discretion. We have a few records directly relating to Shakespeare; we know a reasonable amount about life in Stratford during his time, and a good deal more concerning London's plagues and politics and theatrical history. Most biographers are led from this into brightly lit conjecture, especially concerning the sonnet-story. Mr Halliday's imagined figure, however, is that of a solid citizen, with a mildly agnostic turn of mind, politically "loyal" and "conservative." Critical comment on the writings is kept to a minimum: there too discretion prevails, though in the account of the histories and *Coriolanus* some violence is done in order to make the plays bear out the biographer's notion of the man's solidity.

A wide public is consistently held in view: there are only four footnotes; the illustrations are attractively informative; recent research and conjecture, particularly from T. W. Baldwin and Leslie Hotson, is drawn on, and Mr Halliday discriminates carefully in referring to Dr Hotson's notion of the Elizabethan stage; a quotation from *The Merry Wives* is silently expurgated. Much information is indeed here offered in an easily digestible form; and most readers will thus extend their knowledge of the external circumstances in which Shakespeare wrote.

But popularisation is rarely free from factual error or the simple assertion of the unlikely. For example, *Tamar Cham* was not identical with *Tamburlaine*; the "harey the vj" recorded by Henslowe in 1592 was almost certainly not the Third Part of *Henry VI*; it is not the general view that *Faustus* was written by 1588; Shakespeare's plays had not "long been almost forgotten" when Davenant revived them in the Restoration; *Pericles* was not printed in the First Folio, though Mr Halliday, by a slip, implies that it was. And though the critical references to Shakespeare are well enough, there is some facile writing in the few references to his contemporaries, as in the flat statement that *Tamburlaine* has "no comedy" and the tiresomely conventional account of the Beaumont and Fletcher drama.

Growth for Grown-Ups

Problems of American Economic Growth
By Bruce R. Morris.
Oxford University Press. 287 pages. 20s.

THIS book has been written to arouse the interest of elementary students and the adult population at large in the problems of economic growth. Though naturally centred on the American economy a great deal of the discussion is relevant for students in other relatively advanced economies and there are useful sections on the growth problems encountered by underdeveloped countries.

An introductory chapter sets out the reasons for studying economic growth and discusses problems of meaning and measurement. This is followed by a chapter reviewing the historical record of economic growth in the United States and the main problems it has produced—business cycles, waste, inflation and so on. We are then given a systematic discussion of the main factors that will influence and determine future economic growth: raw material supplies, population, supply of capital, technological change, consumption patterns, government expenditure and controls. The detailed discussion is clear and comprehensive, though at times somewhat trivial. The author has obviously read widely in the specialist literature and produces a well balanced summary. Particularly impressive is his integration of the problems of allocation of scarce resources with the problems of growth, showing that these are not mutually exclusive branches of economics. His emphasis that growth involves costs, economic and non-economic, as well as benefits is also salutary.

The general reader may, however, find himself somewhat bewildered by the enormous range of growth "problems" that Mr Morris uncovers. This is inevitable, since scarcely any aspect of applied economics has no bearing on the question of growth and Mr Morris allows none of the fish to escape his net. Business cycles, inflation, insecurity, monopoly, large versus small business, private versus social costs, and so on, all come up for discussion, all relevantly, but perhaps reducing the impact of the analysis of really strategic factors in growth.

The very general approach adopted by the author, together with the fact that he is, explicitly, not writing for the advanced reader, makes the final result unexciting, and this may hold even for the general reader. We are told that American growth potential is great, that there is no reason why growth should not continue at past rates, or even accelerate, provided the correct policies are adopted to deal with the many relevant problems. In his summary chapter the author concedes that "many avenues toward growth were pointed out, but no guides as to which to attack first or most vigorously were laid down." He can "recommend only the general principle of concentrating on the few most vital factors stressed by those who have devoted their attention to this matter." If the final prescription seems rather tame Mr Morris can at least claim that he has supplied a "do-it-yourself" kit for the production of a more powerful analysis, and the lists of further reading that follow each chapter will prove extremely helpful to the aspiring student.

OTHER BOOKS

SCIENTIFIC RESEARCH IN BRITISH UNIVERSITIES 1960-61. Department of Scientific and Industrial Research. *HMSO.* 513 pages. 32s. 6d.

The DSIR's annual directory indexes all research in progress at British universities, both by subject and under the name of the scientists responsible for carrying it out.

THE FEDERAL RESERVE SYSTEM. Edited by Herbert V. Prochnow. *Harper,* New York. London: *Hamish Hamilton.* 407 pages. 52s. 6d.

This is an account, almost entirely descriptive and historical, of America's central banking system as it approaches its fiftieth year. Each chapter is written by an expert, from the Federal Reserve System itself, from the financial community or from the universities. No effort has been made to iron out all differences of opinion, but the editor has succeeded in securing a well-rounded picture of the institution at the present time; proposals for changes are also discussed.

REGIONS, RESOURCES, AND ECONOMIC GROWTH. By H. S. Perloff and others. *Johns Hopkins Press.* London: *Oxford University Press.* 739 pages. 96s.

WELFARE IN AMERICA. By Vaughn Davis Bornet. *University of Oklahoma Press.* 319 pages. 40s.

Mr Bornet, who is a member of the staff of the RAND Corporation, discusses the future of voluntary welfare work in the light of the immense increase in governmental responsibility for welfare, the rise and decline of the united funds (which tried to channel all giving through centralised groups) and changing needs.

CHATTO'S MODERN SCIENCE DICTIONARY. Compiled by A. Hechtingler. Edited by W. P. Abbott. *Chatto and Windus.* 559 pages. 25s.

1001 QUESTIONS ANSWERED ABOUT THE NEW SCIENCE. By David O. Woodbury. *Harrap.* 313 pages. 15s.

There is a famine of good science dictionaries on this side of the Atlantic. Both of these are English editions of books that first appeared in the United States two years ago. Mr Woodbury's is by far the less ambitious but not to be despised on that account. He is only interested in novelties, but these, after all, are the aspects of science that make the layman reach for the nearest directory. When Mr Woodbury has the answers, he is very good indeed; but he does not have them all the time. He does not, for example, appear ever to have heard of masers. But, then, nor have the compilers of Chatto's dictionary, although Van Nostrand's massive Scientific Encyclopedia carried sections on them early in 1958. It could be argued that the encyclopedia costs ten times as much as the new dictionary, and that the dictionary does not, according to its fly-leaf, "aim at comprehensiveness" although it includes 16,000 current scientific terms. This raises once again the question of how far it is worth sacrificing comprehensiveness to price in a reference book. If the compilers can find room to define "flatulence," should they not have squeezed in a few lines for the "tunnel diode"? And surely no dictionary that includes "Fletcher's trolley" should omit "Reynolds Number."

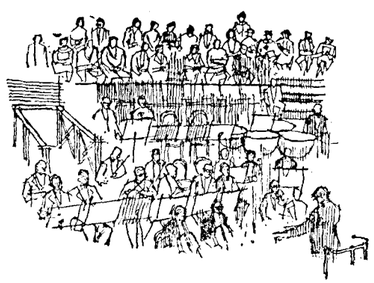
HOME REPORT

In HOME REPORT members of the editorial staff and local correspondents report on life and happenings in and around Britain.

Edinburgh's Empty Seats

FROM A CORRESPONDENT



With the advent of summer, the season of international festivals is once again upon us, and in Edinburgh the citizenry looks forward, bleakly or hopefully, to the approaching cultural invasion of August. Edinburgh's gallimaufry of music and the arts (now activated by Lord Harewood) is by no means unusual: there is scarcely a thriving tourist centre anywhere in the western world that has not augmented its seasonal revenue through investment in a local festival.

Of the larger festivals, that of Salzburg has perhaps served as the model for burghal enterprise, drawing as it does upon three vital resources: the ambience of an historic and picturesque city and an audience potential of three million who throng the holiday resorts of the Salzkammergut every year despite the capricious climate; the native talents of the Vienna State Opera, the Vienna Philharmonic and the Burgtheater, who provide the artistic backbone of the festival; and established annual state, provincial and civic subsidies totalling just under £300,000 to meet the overheads of the weeks of preparation and rehearsal and the inevitable deficiency on the operatic productions.

This subsidy is in fact nearly half the annual Arts Council subsidy to the Royal Opera House in London, and, if it seems extravagant, it should be borne in mind that the standards which have resulted have given the city of Salzburg an average annual revenue from American visitors alone of more than $5 million, while last year the estimated gross revenue from all visitors to the Salzburg festival exceeded £8 million, of which 72 per cent represented an income to the Austrian national exchequer from foreign tourists.

In broad financial terms, the Edinburgh festival has, since its inception in 1947, proved a salutary, if not quite a comparable, success. The gross revenue to the city and to the country as a whole is estimated at between £30 and £40 million over the fourteen years, of which 40 per cent is the revenue from foreign visitors —a very high percentage bearing in mind the Edinburgh burgesses' reputed attitude to strangers. Subsidy to the festival over the same period has totalled about £650,000, and the accumulated deficit at present stands at just over £90,000, including a substantial proportion of fixed assets, which is now borne on a bank overdraft.

In so far as money has been made available for investment in the arts in Britain, donations to the Edinburgh festival have not in fact been illiberal; that the festival is now an established international attraction shows clearly that, for their immediate purpose, they have been adequate. To the initial fund of just over £61,000 established in 1947, of which the Arts Council, Edinburgh corporation and local business contributed approximately one third each, the corporation made an annual contribution during the first ten years of £15,000, which was increased to £25,000 in 1958, and this year is to rise to £70,000. Arts Council contributions have risen steadily from £3,000 in 1949 to £15,000 in 1960, while since 1949 Edinburgh businessmen have contributed sums varying from £10,000 to £17,000—a relative withdrawal of private enterprise.

Gross annual expenditure has risen steeply in recent years, from £85,246 in 1947 to £246,040 in 1960, while income from the box office has also risen, though less sharply, from £64,246 in 1947 to £164,634 in 1960. Donations last year totalled £66,500, including £8,000 from the Scottish Command, being half its net profits from the regular military tattoo before Edinburgh Castle, and this shows no substantial increase over the contributions for the initial year; indeed, donations represent only one-fifth of the amount given annually to the Salzburg festival, from a nation with over seven times Austria's population.

Salzburg and Edinburgh, and their climates, possess more than a superficial resemblance, and if he does not have the flair for hospitality which is the Austrian's birthright, the canny Scot is swiftly adapting himself. As the British tourist industry grows, the potential foreign audience for the Edinburgh festival is not so far removed from that for Salzburg. The general repertoire covered by the two festivals is also largely similar, although in Edinburgh the more cosmopolitan nature of the artists engaged is an equal attraction to Salzburg's use of largely indigenous talents—if not a greater.

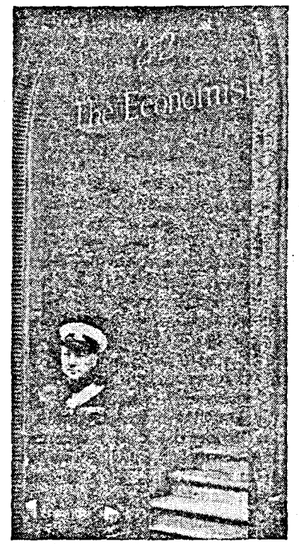
The fundamental difference between the two festivals is twofold, and in the long term view, both these factors point to the present root weakness of the Edinburgh festival and British music as a whole. The first factor is the vast difference in the amount of subsidy which each festival receives; and the second is that, while all the main events at Salzburg play invariably to a capacity audience—tickets are, in fact, at a considerable premium —ticket sales at Edinburgh last year amounted to only 74 per cent of capacity: of approximately 266,000 available seats, nearly 67,000 remained unsold.

This is not alarming, but it does account for the accumulated Edinburgh deficiency over the years. In 1960 full capacity audiences were achieved in the five concerts by the Leningrad Symphony Orchestra, whose programmes consisted largely of contemporary Russian music; and also by the Royal Ballet, giving two programmes which included no work earlier than Stravinsky's "Petrouchka." The Gateway Theatre achieved 97 per cent capacity with Bjørnsen's "Mary Tudor in Scotland," which undoubtedly excited more local interest than other items in the festival; and the Glyndebourne Festival Opera, in a far from popular programme of operas which included two contemporary works, secured 91 per cent. Other audiences, however, ranged from 85 per cent for the Glasgow Citizens' Theatre to as low as 45 per cent for the Little Ballet Troupe of Bombay and 32 per cent for La Compagnie Roger Planchon.

Opera and ballet, with their very large overheads, always require a subsidy, and it was inevitable that the Glyndebourne company, whose engagement cost £47,000, had a box-office deficiency of £24,583 despite the high attendance figures. The Usher Hall concerts, on the other hand, with their low overheads, made an overall surplus of £6,725 with an average attendance of 83 per cent. Deficits or surpluses, however, give no accurate picture of the broad financial success, to the festival as a whole, of individual enterprises, which is really to be measured by the extent of their patronage; and it is significant that the three items which maintained the highest percentages of attendance—the Royal Ballet, the Glyndebourne opera, and the Leningrad Symphony Orchestra—were the three which certainly possess an internatinal reputation.

The immense subsidy which the Russian orchestra receives (it was extended to cover a large portion of its expenses in coming here, and so enable it to be engaged at the equivalent cost of a major British orchestra) is one reason for its reputation; the benign patronage of Mr Christie has also been a basic factor in the fortunes of the Glyndebourne opera. But the Austrians themselves are prepared to pay much more to secure the artistic qualities which will make a festival ring true not once, but continually. The repertoire for Salzburg is prepared and rehearsed for many weeks in advance; Edinburgh can afford no such special productions, and as far as British orchestras, opera and ballet are concerned, must rely on standard repertoire. The Leningrad Symphony, in particular, made a mockery of the pretensions to internationalism of the Philharmonia orchestra, which was appearing in Edinburgh at the same time.

Importing opera from abroad has not in the past cost appreciably more than the engagement of British companies; the Stockholm opera in 1959 cost £48,000, the Stuttgart State Opera in 1958, £49,000, but it has been so much money lost to the national exchequer. This summer will be predominantly British fare, with the Royal Opera from Covent Garden and the London Symphony Orchestra, fresh from spectacular successes at the Vienna spring festival. It remains to be seen if their financial welfare has been properly attended to.



Non-Commissioned Custodians

FROM OUR SPECIAL CORRESPONDENT

To bow the managing director to his Bentley, to "win" an extra filing cabinet for a harassed secretary, or to wean the office boy from his habit of whistling on the stairs, there is nobody like the British commissionaire. Rounded out by innumerable mugs of tea, their bemedalled breasts bring to the motor show or the evening dog track a touch of military dignity: every male, under those searching glances, is on his best behaviour.

Three organisations—the Corps of Commissionaires, the United Services Corps and the Royal Artillery Association—enroll these sturdy veterans; while all three are of unimpeachable respectability, the original Corps of Commissionaires, set up after the Crimean war to provide jobs for disabled veterans returning to a nation in slump, remains the *corps d'élite*. Its commandant is a great-great-nephew of the founder (a brother of the third of the John Walters who ensured that the nineteenth-century *Times* newspaper deserved its soubriquet of Thunderer): the Queen is Chief Life Governor, and—a post he kept when he left the Throne—the Duke of Windsor is Life Governor. The Board of Governors can boast a Field Marshal and a Marshal of the RAF, seventeen officers of general or equivalent rank, and seven members of the Walter family. It is a powerful tradition.

The 4,628 commissionaires are all ex-regulars, mostly ex-warrant officers or NCOs, and all left their service with an "Exemplary" or "Very Good" character. Just a few rose to become officers. On entering the corps they pay £1, and each month subscribe 31s. towards the corps

expenses and to the fund which provides their immaculate black uniforms with the gleaming leather cross-belt. New recruits must also deposit £10 in the corps savings bank. The bank was originally intended to provide a nest-egg against retirement, but with increased prosperity and the growth of other means of saving deposits are now limited to £50, to relieve the corps of the burden of administering a vast fund.

The corps, however, is not an employer but an employment agency. Pay and conditions are worked out between the man and the firm which asks the corps to send a candidate along: the corps' uniform must be worn, and the firm must make a small subscription to the independent fund which pays the salaries of the corps' twelve officers

A wage of £12 a week is about the minimum in London, and many employers also pay the men's corps subscriptions and uniform levies. Duties may range from the purely ceremonial (the doorman at the Institute of Directors is reputed to be seven feet tall) to the utilitarian—Rolls-Royce employ 50 commissionaires on security duties. Many commissionaires also make an extra pound or two in the evenings or at weekends, at exhibitions or race meetings, or as doormen in theatres.

On joining the corps, the new recruit wears the insignia of the rank with which he left the service: he may be promoted within the corps according to his employment record and the number of times he turns up for the annual ceremonial parades. Service rivalries, of course, persist and provide food for the members' own *esprit*; navy men claim that the ex-sergeant majors are good for nothing but shouting and stamping, while others allege that ex-petty officers are a menace to typists. But the army is heavily in the majority: in 1959, 432 joined from the army, against 128 from the navy, the marines and the RAF.

Last year, only Edinburgh, Leeds and Liverpool of the nine provincial headquarters had members for whom they could not find jobs. The corps has at times been sorely tempted to admit former conscripts to membership, so great is the demand for

their services. Full employment means that—with profound tact—the corps can make sure that its men only work for firms of the utmost respectability, and that they do not find themselves lending a spurious gloss to strip-tease joints: it is a far cry from the days when this was a rescue operation for destitute old soldiers. The danger now is that, as the army gets smaller and retirement gratuities get larger, the scarcer veterans will turn away from the continued joys of a smart uniform—and of a much-respected status—and set up in business for themselves.

Motorists' Knock

FROM OUR SPECIAL CORRESPONDENT

NOBODY can blame the insurance companies of Britain—or at any rate those of them who are members of the Accident Offices Association—for wishing to increase their premium rates on motor car risks which, they say, are the only ones which regularly end in disaster and red ink on the balance sheet. The average motorist, however, will continue to blame the companies and to consider that, unless he is involved in a really damaging accident every year, he is not getting his money's worth.

The problem is obviously worse in congested areas. A car being used in London is extremely vulnerable, and may cost twice as much to insure as a similar one in a rural area. It will soon cost more—up to 20 per cent more within the London postal district. This selectivity is fair enough. What is not so fair, in the opinion of the motoring organisations, is that there is very little discrimination between good and bad drivers on the part of the companies, so that the careful, skilled driver is undoubtedly paying for the sins of less accomplished road-users.

Naturally there is some reward for careful driving, in the form of an annual reduction (usually ten per cent) of the premium provided there have been no claims against the company. Unfortunately this process is not indefinitely continuous: 40 per cent is the normal maximum for no-claims bonuses, and at that rate the motorist is still paying, in absolute rather than relative terms, a great deal for the privilege of covering minor damage. After five accident-free years, for instance, the average small British car would have cost about £150 in insurance—and only a really savage "prang" would cost as much to put right. A bad driver, on the other hand, might have paid £200 for those five years and have cost his insurance company as much as £100 a year; which is why insurance companies lose money on cars.

The good driver of a small saloon is in a happy position compared with the owner of even the mildest or oldest of sports cars. For some reason not unconnected with flaming youth in red two-seaters, insurance companies see all sports car drivers as hell-bent demons at full throttle: and annual premiums on this type of car may be as much as 20 per cent of the insured value in London. It is difficult to see how a company could lose, except by a write-off, after the first two years. (Journalists, too, are apparently thought of as drink-crazed maniacs remorselessly speeding after scoops.) Not only is the premium high. No cover is normally allowed to the car's passengers, and the owner must agree to pay the first part (often £50) of any claim.

NO-CLAIMS bonuses are often lost through no fault of even the best of drivers. In any accident in which blame cannot immediately be ascertained, both parties naturally claim that they were in the right. In an ordered world their respective insurance companies would argue the case, taking it to court if necessary, and the guilty party's company would pay the costs of both. It is not, however, an ordered world, and on receipt of a claim, it is the practice for an insurance company to pay up promptly, avoiding litigation, almost certain to get its money back after the next accident, but penalising whichever driver was, in fact, in the right. This is known as "knock-for-knock".

Yet the no-claims bonus seems the fairest way of spreading the burden of insurance costs, and the motoring organisations encourage it. Its great drawback is that it is not large enough to make the process of insurance both economic and an incentive to good driving. But there is some hope of improvement: members of the Institute of Advanced Motorists are usually able to get much larger reductions by way of the bonus. Perhaps the eventual answer will be swingeing premiums (£200 a year would not be too much for some London drivers) and a sliding scale bonus which relieved the careful driver of all but 10 per cent of his premium after five safe years.

BBC Takes Soundings

THE BBC has not, until lately, been a notable blower of its own trumpet; but the possibility of the award of a third and subsequent television channels to blatantly non-Reithian organisations has ended this modesty. The latest coy lifting of the bushel under which its idiot's lantern has been hidden is *Facts and Figures about Viewing and Listening*,* which, though professedly unconnected with anything the Pilkington Commission may be thinking, comes at a clearly convenient time. BBC-TV, with 24.6 million viewers in the average day, is said to be 2 million better off than ITV (and this gap has tended to widen). ITV's viewers, however, spend longer at their sets than the BBC's: and there are more of them at any given moment of the day. But there is apparently a limit (under 13 hours a week) to the amount of time even they can bear the burden and, according to the BBC, this limit is not likely to be raised by starting another channel.

BBC-TV is apparently preferred by 50 per cent of those whose education went on until the age of 17 or longer, ITV by only 37 per cent; on less cultured minds who left school at 15 or 16, ITV (52 per cent) makes a more favourable impression than BBC (30 per cent); and among those who learnt nothing after they were 14, ITV is more than three times as popular. The first group, however, constitutes no more than one-tenth of the population, and the last nearly two-thirds.

Little of the survey is devoted to sound broadcasting, and what there is is depressing. In the past ten years sound has lost 75 per cent of its evening audience, but only 25 per cent of its daytime audience, when TV is off the air. That these and the total patronage are the only significant figures given about sound radio will add further unease to those producers and listeners who believe that sound, if not now dead, will not be long a-dying in its present form. The BBC's plan to operate small, daytime "local" stations, on the other hand, may gain support from these figures.

The purpose of the survey may, as is claimed, be purely to feed the interest of experts on broadcasting. But its superficially convincing arguments for the BBC's worth, its respect for quality, and the unlettered following for ITV are hardly fortuitous. As if to clinch it all, mere numbers, according to the BBC, are meaningless (as, by implication, is TAM rating), for it has found that an audience of 6 million need not necessarily like what it sits through. Could this possibly be special pleading?

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London

Caution on the Brink

WASHINGTON, DC

EVERYBODY has been waiting for the American President to speak again. All comment, all official planning, all inter-allied negotiation have had a contingent air because it was evident that Mr Kennedy would soon be rising from his bed and his crutches and facing the television cameras anew. Nothing underlines so clearly the supremacy of his position, as the Chief Executive of the United States, as the leader of the western alliance and as the antagonist of Mr Khrushchev, with his uniformed and bemedalled militancy, in a drama that in personal confrontations takes the classical Greek simplicity of form. The ultimate decisions can come only from Mr Kennedy. On Wednesday he presented himself, erect, hale, forceful, breezy at times, prodigal of statistics and impervious to the probing of the press—much his usual self but looking a little older and a little sterner.

The President said nothing that had not been said before by members of his Cabinet. He refused to be drawn into extremes; he took a "firm but not belligerent" attitude; he restated the determination of the West to stand on its rights but declined to give Mr Khrushchev any clues to future American policy. The President has not yet made up his mind on that policy; nor has he yet made up his mind on the equally important question of how it is to be timed. He is still at the stage of taking advice on the two related issues which face him—Berlin, which overshadows all else, and the intertwined question of resuming atomic tests and organising the disarmament conference.

If this seems a long process, allowance should be made for two considerations. Mr Kennedy was blamed for not taking enough advice before he allowed the plans for the Cuban invasion to go beyond the point of no return, and an extensive if straggling public and private debate is the American way of agreeing on great national issues. The President's advisers, official and unofficial, are, like his allies, divided into two broad central groupings, with extreme elements on either wing: those who oppose any negotiations with the Russians, or at least any that carry a hint of concessions on western rights; and those who would agree to some. Many in the "tough" group would also favour prompt resumption of atomic testing by the United States.

They argue that the *status quo* in Berlin is the most favourable position for the West just because it sticks in the Russian throat; they see no advantage in changing it. They see every advantage in the "escape hatch" in Berlin which drains the lifeblood from East Germany; and they want to challenge the Russians to sign a separate treaty with the East Germans. Above all, they fear that any retreat would destroy the western alliance's belief in itself. Mr Acheson, to whom the President inclines and who is preparing a report on the Berlin situation, is believed to take this line, as do General de Gaulle and the West Germans.

The other group believes that an American refusal to discuss, or even a resistance to discussing, an issue which could detonate a thermonuclear war is no way to maintain the unity of the alliance, or to preserve the freedom of West Berlin. They fear that the neutrals would be antagonised if the threat of war over who should stamp the documents of those travelling to Berlin were brought to the United Nations. They consider that in such a matter it is impossible to refuse to talk, especially when the Russians want to talk, and that the United States would inevitably be dragged to the conference table. But even this group is very "hard" on no concession being made on western rights; even a suspicion of "softness" brings vigorous opposition.

A fortnight ago Senator Mansfield, who is the Democratic leader in the Senate but was speaking for himself, unearthed an old idea of his for uniting both East and West Berlin in a free city under international control—not knowing that Mr Khrushchev had ruled this out to the President in Vienna. Mr Mansfield was attacked for dooming Berlin to the fate of Danzig by a group of Republicans led by the liberal Senator Javits. The supposed tendency of the British to make concessions is no less unpopular, and it is thought rather snaky of them to press the question of military measures as a way of forcing American policy into the open.

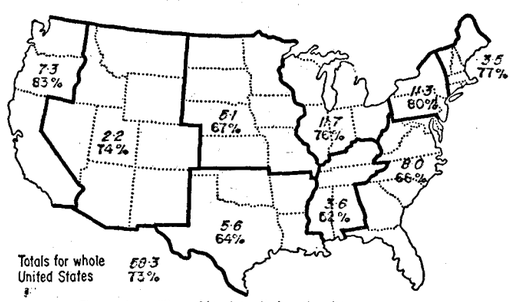
Official Washington, like the newspaper columnists, is convinced that Mr Khrushchev must be bluffing. Notwithstanding Russian arrogance (displayed in the preliminary disarmament talks last week), Americans cannot believe that he will risk war over Berlin, or even give irrevocable control of the trigger to the East Germans. They draw attention to "fuzzy" points in Mr Khrushchev's *aide mémoire*, to the hints reaching the White House in devious ways that the Russians are ready to postpone action, if only some sort of talks are started by the end of the year, if only the West Germans are not given nuclear warheads, and to Mr Khrushchev's avoidance in his latest speech of the six-month deadline that might be taken for an ultimatum. They see the whole affair in the light of a big business game of bluff, counter-bluff and double-bluff. In their view Mr Khrushchev has to bluff his East German allies into thinking that he means to ease, at any cost, their desperate plight, and bluff the Chinese people's warmongers into thinking that he is ready for the annihilating war that would hand the leadership of world communism to them. Some officials believe that one condition of any talks will be the closing of the Berlin escape hatch. Others argue that the Russians see in the whole crisis a means of diverting American attention from constructive foreign policies elsewhere in the world.

THE President's reaction seems to be to play it slow; to spend the next months stiffening allied unity and educating the public to believe that what the Russians want is not Berlin, but the liquidation of the West. The reply to the Russian *aide mémoire* will probably be issued soon after the national holiday on July 4th; later may come a lengthy White Paper giving the western case to the world (unless this is incorporated in the official reply). Bargaining positions would not be taken up until after the West German elections and the Communist Party Congress in the early autumn; then the annual United Nations Assembly would provide a world forum for arguing the rightness of the western case as well as for castigating Mr Khrushchev's thermonuclear threats, the Russian torpedoing of the test ban conference and any difficulties which the Russians make over disarmament. Only in late autumn would the West consider trying to get the Russians to back down, or to start the stalling talks that would put Berlin into a condition of permanently suspended crisis.

Though the President declined to be quoted publicly on the subject, it is conceded privately that American words must be backed up by military preparedness. Here, however, the military planners are in a quandary. The voluminous contingency plans provide for only limited "probes" of blocked access routes to Berlin before nuclear weapons are used; and for this the present forces of the North Atlantic Treaty Organisation are adequate. But to impress the Russians something positive must be done; the difficulty is that they could overtrump any strengthening of American forces in Europe easily by moving up more Soviet divisions. Flying a division of the strategic reserve forces to Bavaria, though it may be done, would be little more than a gesture. The Russians can outbid the West on conventional arms; from this military fact emerges the conclusion now being studied in detail in the Department of Defence: that the only moves likely to impress the Russians are preparations for thermonuclear war.

These fall into two parts: the easier part is to increase the state of alert in the Strategic Air Command and the British Bomber Command (which will certainly be expected); the harder part is to put civil defence into a credible state of readiness. The broad plan is to do all that can be done with the resources available in the next six months: this would exclude deep shelters, since they could not be built in time, but fall-out shelters could be made ready and stocked with food, water and medicines; instructions on fall-out and survival techniques could be distributed to the civil population; the organisation for dealing with catastrophes could be overhauled and some exercises in evacuating cities carried out. But all this would require a massive appropriation from Congress at once and this would heat up the crisis atmosphere faster than is envisaged by present plans.

Such a programme would certainly wake the civil population to realities. But the American public's readiness to support anything so drastic is problematic. It is thus hard to imagine how the game of brinkmanship is to be played. The thought of improvising it at the last moment alarms some White House thinkers who foresee that, in view of the importance of striking first with nuclear weapons in a showdown, even the probing by a patrol of the routes to Berlin could start the timetable of nuclear preparations moving on both sides far faster than the fatal military timetable which defeated the frantic efforts of diplomats to avoid war in 1914. The plain fact is that the members of the "tough" school are still using euphemisms like "partial mobilisations," "exerting force" and "exercising power" when they should be facing the implications of nuclear war. For this reason, it may be surmised, if the President continues to play it cool the policy of cautious but time gaining negotiation, backed by cautious but meaningful preparations for a nuclear showdown, may come out on top in the next few months.



President Overhoused?

CONGRESS has given Mr Kennedy more for housing than any President has a right to expect—practically everything that he asked for, both in programmes and in money. The compromise Bill which came out of the conference between representatives of the House and Senate this week was more generous than either of the Bills that went into it. With the improvement in the economic situation since he sent his request to Congress last March and his growing concern about the inflationary effect of increased government spending, Mr Kennedy may in fact be regretting the legislators' magnanimity. But the Bill will add only about $250 million to federal outlays in the coming fiscal year and the total of $4.9 billion—Republicans maintain that the amount involved is really twice that, because subsidies for public housing have been left out of the calculation—is to be spread over four years.

The President has been given more money than he wanted, for the moment at least, to help cities to solve their public transport problems. As another part of its attempt to improve urban living conditions and to prevent suburban blight—two-fifths of the money is to be devoted to redevelopment projects—the Bill also permits grants to be made to local authorities so that they can set aside land for parks, but only $50 million is allowed for this, not the $100 million which the Administration wanted. However, the President has been given $500 million, instead of the $50 million he requested, for loans to finance local public works and the programme for loans for building houses on farms has been extended. These last two clauses appealed especially to conservatives —Southerners and farmers—who have voted against housing bills in the past. These provisions, and the very expert way in which the Bill was handled and the Democratic majority held together, explain its quick and easy passage through the House of Representatives.

Reversing the usual experience with housing legislation, it was in the Senate that this year's Bill faced a crisis—as the result, oddly enough, of the defection of a liberal southern Senator—which nearly did serious damage to the only really striking new provision in it; otherwise it consists almost entirely of continuations and accelerations of existing programmes. This new provision is for government guarantees for forty-year mortgages made available to people with moderate incomes—$4,000 to $6,000 a year—for the purchase of houses in the $9,000-$15,000 price range. The President wanted these mortgages to be free of down payment but to rescue the scheme in the Senate and to smooth its passage in the House a small down payment was finally required. There are also to be loans to encourage the building of houses and flats for rent to people in this income group who, it is said, have been priced out of the private housing market without being poor enough to qualify for subsidised public housing (which is also to be stepped up under the Bill). The new programme is admittedly an experiment and many experts doubt whether it will prove attractive or practical. The still lagging building industry may get more immediate help from the Bill's provisions encouraging people who already own houses to borrow money for improving them and colleges to build more dormitories for their students.

How Good are American Houses?

Figures show millions of housing units in each region
Percentages show number which are sound with all plumbing facilities

THE 1960 Census of Housing found that 8 per cent of the residential units in the United States which had all plumbing facilities—that is, which had hot and cold running water, a flush toilet and a bath or shower inside the building—were in a deteriorating condition. Another 19 per cent were either dilapidated or lacking one or more of the plumbing facilities. In California only 14 per cent of the housing units were in these groups, while in Mississippi well over half of them were. Housing standards were far below the national average in most of the southern states and in Maine, the Dakotas and Alaska (this state and Hawaii are included in the statistics for the Pacific region but not shown on the map). There are about 5½ million housing units in both New York and California, with over 3 million each in Pennsylvania, Ohio and Illinois and 2.5 million in Michigan.

General to the White House

ALTHOUGH the appointment of General Maxwell Taylor to the White House staff, as Military Representative of the President, is not linked officially with the General's investigation of the Cuban operation, it is undoubtedly the result of the lessons learned from that affair and an attempt to ensure that the fiasco is not repeated —particularly over Berlin, to which the General is to devote his immediate attention. His investigation of the Cuban operation, and especially of the part played there by the Central Intelligence Agency, is complete and he has reported to the President on it orally. What he said is not known but it is thought that he recommended little or no change in the agency, although there may be some reorganisation after the Killian committee has finished its more detailed report. However, what General Taylor may have recommended, and what in any case the President has obviously decided is needed, is someone on the White House staff to analyse and co-ordinate reports from the CIA and other intelligence agencies. This is what General Taylor will do; he will also advise the President on all military matters, representing him abroad when necessary.

General Taylor is known as an intellectual, statesmanlike, soldier who will be able to hold his own with the pride of professors in the White House, and with the politicians too. As Army Chief of Staff he was out of sympathy with the defence planning of the Eisenhower Administration and later elaborated his theories in a book, along lines which the Kennedy Administration has followed in some of its military thinking. In particular he complained that the modernised Army was not being equipped or trained to fight conventional or limited wars. But the fact that General Taylor is so in tune with the President's outlook, coupled with Mr Kennedy's habit of bypassing official government channels of communication, has given rise to fears that the General may be going to usurp, or interfere with, the statutory functions of the Secretary of Defence and the four Joint Chiefs of Staff as the President's military advisers, to act as the single Chief of Staff which Congress has always refused to authorise.

These fears are accentuated because General Taylor's appointment came shortly after there had been a tendency to blame the Joint Chiefs for the Cuban disaster—although the President took trouble to demonstrate his confidence in them—and just as the terms of office of two of the four are ending. But General Le May, the new Chief of the Air Force, who is responsible for building the country's strategic bomber strength up to its present high efficiency, is not a man to permit any encroachment on his rights; nor, probably, is Admiral Anderson who is leaving command of the Sixth Fleet in the Mediterranean to become Chief of Naval Operations. The announcement of General Taylor's appointment stated specifically that he would not be interposed between the President and the Joint Chiefs, although he would assist the President in reaching decisions—assistance which is certainly needed by the President with his lack of experience in military matters.

Storm over the "Tropics"

FROM A CORRESPONDENT IN SAN FRANCISCO

THE pockets or purses of travellers returning from France to the United States need no longer bulge suspiciously because they want to read Mr Henry Miller's famous book, "Tropic of Cancer." June 24th was the official publication date for the Grove Press's first American edition of this controversial work, which for the past twenty-seven years has been legally unobtainable in America. Now those who can afford to pay $7.50 can buy the book openly instead of running the risk of having it confiscated by the Customs because of its allegedly obscene and pornographic passages. In fact, the first edition has been on sale for more than a month and the first printing of 30,000 copies has been nearly exhausted, although some bookshops, including a large chain in New York, have refused, so far, to distribute Mr Miller's most famous book.

"Tropic of Cancer" was written in France in 1931 and published there in 1934 when Mr Miller was 43 years old. By 1939 it had been reprinted five times in Paris and when the war brought thousands of American soldiers to France many of them discovered Mr Miller with joy. He seemed to be speaking directly to the post-war generation. By then he had returned to the United States, and he began to achieve a limited fame in his own country. At that time he was living in an isolated part of the Californian coast and his home, perched high on the side of a mountain, became a Mecca to hundreds of pilgrims.

A very shy man in his personal relationships, Mr Miller has always tried hard to maintain a certain measure of isolation from the world at large. He is a wonderful listener, an erudite and cheerful conversationalist but an unhappy lecturer or party-goer, who is miserable among large groups of strangers. For many years, Mr Miller lived precariously on the edge of poverty and once he even advertised in an American magazine for financial assistance so that he might continue his writing. He was surprised to find himself almost overwhelmed by the number of strangers who sent small and large loans. Since those days, Mr Miller's financial position has improved and it took the Grove Press more than three years to persuade him to allow "Tropic of Cancer" to be printed in the United States, even though he was offered $50,000 for the publication rights. As he himself explained his reluctance:

> I don't want to be the central figure in a great controversy about my books. I don't want to take time from my writing to be interviewed on the radio and television or for the newspapers. Besides, the people whose opinion I most care about have all read the books and I'm not interested in those who want to buy them just to look at what they think are dirty words.

"Tropic of Cancer" has been described by Mr Lawrence Durrell as a work that stands beside "Moby Dick," and as "the book of someone whose fidelity to himself has conquered the narrow confines in which we normally hem the range of subjects permissible to art." This opinion is shared by many other writers and critics, all of whom agree that the book must be regarded as a work of art. But eight years ago a federal judge in San Francisco

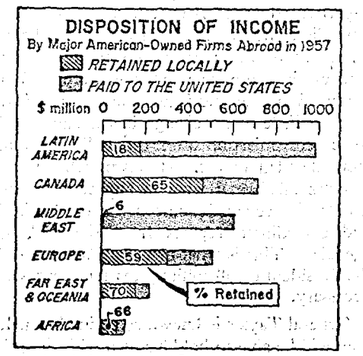
ruled that the "Tropics" books—there is a companion work called "Tropic of Capricorn"—were only pornography with an "evil stench" and upheld the seizure of two copies sent into the country by a university professor. Since that time there has been a noticeable retreat from censorship in the courts; in the most recent case the Grove Press was upheld in its right to use the post to distribute its unexpurgated edition of "Lady Chatterley's Lover."

Legal action against allegedly obscene or pornographic books can be taken on the local, state or federal level in the United States. Cities and counties have hundreds of ordinances providing for the arrest and trial of the sellers of books which are obscene in the judgment of the police. In addition, almost all the states have anti-obscenity laws. There is no federal anti-obscenity law, as such, but the federal government can take action through the Post Office and the Bureau of the Customs. Two courses are open to the Postmaster General when he thinks that "obscene" material is being distributed through the post. It can be inspected, provided it has not been sent first class, and if there is any question about its right to be sent it can be held up for a legal opinion—an opinic which may be, and frequently is, appealed to higher courts. T Postmaster General may also order the return of money se through the post in payment for such materials.

When "Tropic of Cancer" appeared last month, the Postmast General moved against it as he had in the case of "Lady Chatte ley's Lover," but this time his legal adviser decided to issue ruling on the book until a court case, involving confiscation of t "Tropics" books by the Customs, is concluded. This is the oth method by which the federal government can take action again books—through the Customs Bureau, which is under the juri diction of the Treasury and which has the legal authority to co fiscate and destroy obscene material imported into the countr For many years, the Treasury has exercised its powers of confisc tion against Mr Miller's work and it has not been possible to bri his "Tropics" or certain of his other books into the count openly. Now, there is a good chance that the Treasury will over-ruled by the courts. Just this week a federal judge in N

Privileged Dollars

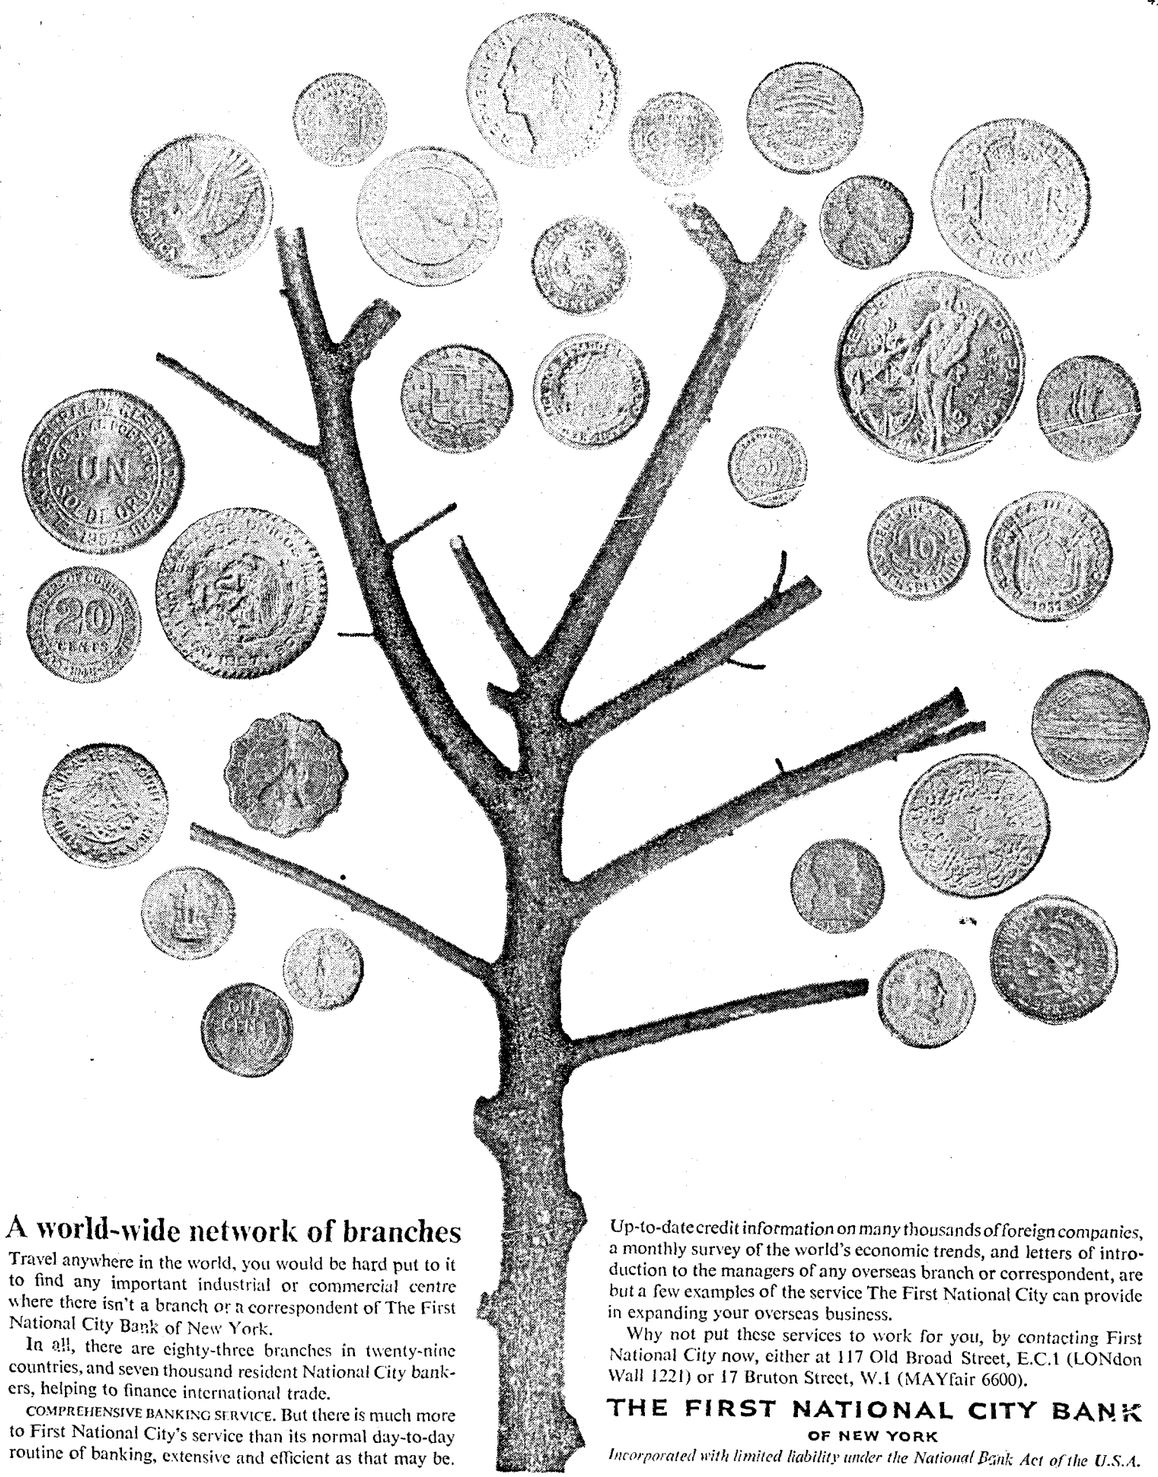
NEW YORK



THE Administration has run into strong opposition from businessmen and others in its attempt to tighten up taxation on American subsidiaries operating abroad. As the law now stands, their earnings are subject to American taxation only if and when they are returned to the United States as dividends; funds that are re-employed abroad do not come within the jurisdiction of the Internal Revenue Service. Foreign subsidiaries must, of course, pay local taxes on profits to the country in which they are incorporated, but in many countries (though by no means all) these taxes are substantially below the American rate of 52 per cent. In the second place, earnings that are repatriated now get preferential tax treatment compared with those of domestic companies.

The American tax authorities levy the corporation tax against the sum remitted to the United States and then allow the company a credit for all taxes paid abroad. But since foreign taxes have already been deducted from the money sent home, the tax credit amounts to a second deduction and the combined rate actually paid falls well below 52 per cent. In 1957, the year covered by the great census of business investments in foreign countries which the Department of Commerce published recently, about 60 per cent of the earnings of foreign subsidiaries was retained abroad.

In part of his recent tax message, Mr Kennedy asked Congress to rescind "the privilege of tax deferral" for subsidiaries in developed countries, and to provide that the American corporate tax be levied on the gross income of the subsidiary before foreign taxes are deducted. These changes, it is estimated, would produce an additional $250 million in revenue, but this is not the main consideration. The Administration has tried to emphasise that it is not opposed to foreign investment—that all it wants is equal tax treatment for domestic and foreign operations—but clearly it feels that American corporations are showing quite enough enthusiasm for establishing plants in Western Europe without being encouraged officially to do so.



Its first concern is to strengthen the balance of payments, but it is also of the opinion that some of the investment now going into Europe and Japan would be much appreciated in the domestic market; as Mr Stanley Surrey, the chief tax adviser to the Treasury, explained: "The dollar that goes abroad is a dollar not invested at home." Finally the proposed changes would close a sizeable tax "loophole." The existing law makes possible the establishment of a subsidiary in a low-tax or "tax-haven" country for the exclusive purpose of evading United States taxation; these so-called subsidiaries often amount to no more than a printed letterhead. Alternatively, companies which are conducting legitimate business abroad can juggle their finances (by transferring patent rights, management fees and so on) so as to accumulate profits in the foreign subsidiary instead of in the parent company, where they will be taxed.

At the public hearings before the House Ways and Means Committee witnesses from the business community concentrated their fire on the proposal to tax earnings that are re-invested abroad. One of the main arguments for the defence was that this change would bring only temporary relief to the balance of payments since a reduced outflow of capital was bound in the longer run to lower the volume of remittances; in 1957 such remittances were about equal to new capital

obtained from the United States. Other points made were that other countries (including Britain) follow much the same practice as America now does in taxing only repatriated earnings; that in countries where low corporation taxes are offset by high sales taxes American companies will be unfairly burdened; and that in many instances accumulated earnings have been an essential source of new capital. It was also pointed out that advanced countries such as Britain, France, West Germany, the Netherlands, and Canada tax company profits by approximately 50 per cent—so close to the American rate that little or no extra revenue would be gleaned.

It seems likely that Congress will be sympathetic to these arguments and that no changes will be made in the system of "tax deferral." The Administration is getting more support on the question of eliminating tax-havens although many people feel that this could be achieved without any very radical alteration in the law. But even if the proposed changes were accepted, businessmen probably would not curtail their overseas activities very significantly as long as Europe offers a profitable market; the Treasury estimates that the outflow of capital might be curbed by some 7 per cent.

A world-wide network of branches

Travel anywhere in the world, you would be hard put to it to find any important industrial or commercial centre where there isn't a branch or a correspondent of The First National City Bank of New York.

In all, there are eighty-three branches in twenty-nine countries, and seven thousand resident National City bankers, helping to finance international trade.

COMPREHENSIVE BANKING SERVICE. But there is much more to First National City's service than its normal day-to-day routine of banking, extensive and efficient as that may be.

Up-to-date credit information on many thousands of foreign companies, a monthly survey of the world's economic trends, and letters of introduction to the managers of any overseas branch or correspondent, are but a few examples of the service The First National City can provide in expanding your overseas business.

Why not put these services to work for you, by contacting First National City now, either at 117 Old Broad Street, E.C.1 (LONdon Wall 1221) or 17 Bruton Street, W.1 (MAYfair 6600).

THE FIRST NATIONAL CITY BANK
OF NEW YORK
Incorporated with limited liability under the National Bank Act of the U.S.A.

York decided that "Tropic of Cancer," though "nauseating and repulsive in parts," is not obscene. It is unlikely that the Postmaster General will make any move against the Grove Press until this case is disposed of finally; until then, "Tropic of Cancer" can be sent by post, instead of by freight or railway express, as had to be done with "Lady Chatterley" until it was cleared by the courts.

Perhaps just because the federal courts have become more liberal in defining obscenity and pornography, there has been an increase in local and state censorship. To some extent, this has been stimulated by branches of such groups as the National Organisation for Decency in Literature, which was established in 1938 by a group of Roman Catholic bishops. These groups and others which are purely local attempt to police book shops and news stands and boycott those which refuse to stop selling publications that such organisations consider improper. A good many of the books on these black-lists are the standard works of authors like Mr Hemingway, Mr Faulkner, Emile Zola and a wide range of other writers found in libraries throughout the country.

Court's Wide Net

LAST week the Supreme Court ended its busiest term with a record-breaking volume of decisions in cases of typical diversity; earlier in the session the Justices had ranged from rulings against members of the Communist party to one upholding the "blue laws"—the state statutes which forbid or limit the operation of businesses on Sunday. Most observers consider the hallmark of the session to have been the caution with which the Court handled deeply divisive constitutional issues. In the concluding batch of decisions the following were of particular interest or importance:

1. State courts were forbidden to admit evidence in criminal cases which had been secured illegally. Such evidence has been barred from federal courts since 1914, but to extend the prohibition to state judicial procedure meant overturning a decision handed down by the Supreme Court itself in 1949. It also involved a further stage in the process of applying the Bill of Rights to the states as well as to the federal government. Some 24 states will now have to mend their ways. The end of this double standard means that federal prosecutors will no longer be able to get round the Constitution by turning over to the state authorities evidence procured as a result of unreasonable searches and seizures. The Court was divided 5 to 4.

2. In another 5-4 decision the Justices held that when Congress, in the Railway Labour Act, required railway workers to join trade unions in order to hold their jobs, it did not mean to authorise the use of their dues for political purposes of which they disapproved. The majority reversed the Supreme Court of Georgia, which had sought to remedy this abuse by abolishing compulsory membership in railway trade unions. But the remedy which the Supreme Court suggested—that the part of their dues used for political purposes should be returned to the dissenters—is likely to benefit accountants and lawyers more than the dissident workers. Constitutional issues were not considered by the majority and the practical effect of the ruling does not seem likely to be wide. In a parallel case, in which it upheld the right of Wisconsin to require lawyers to join the state Bar Association, the Court refused to rule on whether the association may spend a member's dues on political projects which he opposes.

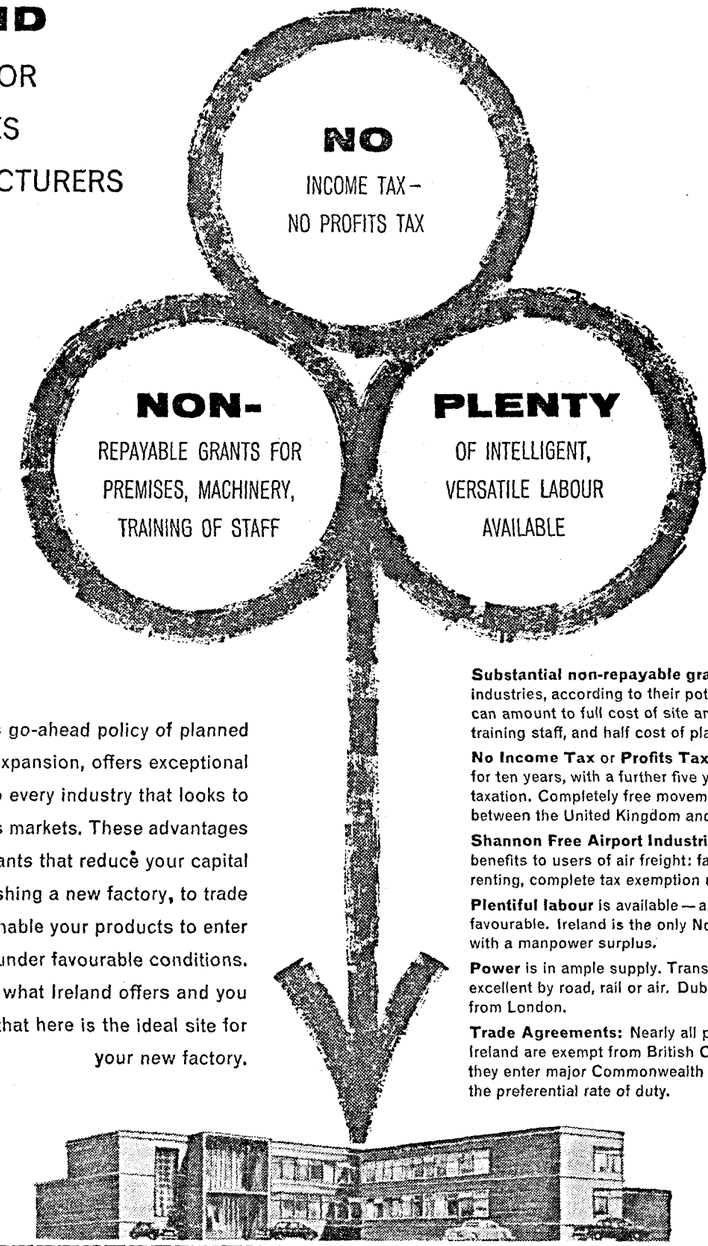
3. The Court also refused to rule on the constitutionality of Connecticut's law forbidding doctors to prescribe, and people to use, contraceptive devices, on the ground that the law is not being enforced; only one prosecution has been brought—in 1940 as a test case—since the Act was adopted in 1879. Nevertheless, all birth control clinics in the state were closed after 1940 and they remain closed. About half of Connecticut's residents are Roman Catholics.

4. The Court ruled unanimously that it is unconstitutional for Maryland (and by inference for seven other states) to make a declaration of belief in a supreme being a condition of holding public office.

5. It upheld lower courts in Louisiana in their view that the state's "interposition" laws may not be used to frustrate court orders for the admission of Negro children to white schools.

Four days after the session ended Justice Frankfurter, who wrote the historic decision requiring the Communist party to register as a subversive organisation, granted it a stay to permit an appeal for reconsideration.

Carelessness at the AEC



THE Atomic Energy Commission has confessed publicly—to its credit—that the explosion of a nuclear reactor at one of its experimental stations in Idaho last January could have been prevented. It is not clear what caused the accident, which killed three men, the first atomic fatalities in the United States, but there had been plentiful evidence previously that all was not well with the reactor and if the operator had been prudent it would have been closed down earlier. The fault lay, the commission concluded, not only with careless management on the spot but also with confusion in the chain of responsibility within the commission, extending right back to Washington. Some of those involved have now been punished, responsibility has been clarified and precautions have been tightened at all the commission's facilities, something which many experts have long urged. It is pointed out that the reactor involved was of a different type from those which produce power for civilian use and that in any case the commission applies much stricter regulations to privately-operated reactors than it does to its own.

Nevertheless the accident reinforces the view that the AEC has "a light-hearted approach to . . . the most deadly . . . process that man has ever conceived." These are the words of Justice Douglas, dissenting from the Supreme Court's recent decision that the AEC may license private firms to build a nuclear power reactor without definite proof that it will be safe, leaving that until the time comes for granting an operating licence. The case arose over a commercial reactor being built in the neighbourhood of Detroit, the first to be started near a large centre of population. Local trade unions protested that since so much money was being spent on construction the AEC would not be able to refuse an operating licence once the plant was built, even if there were then doubts about its safety. On this the Supreme Court ruled that it could not be assumed in advance that the AEC would fail in its duty of protecting the public health and welfare.

There is still pressure in Congress for taking the whole question of security out of the control of the commission on the grounds that it is too anxious to promote atomic undertakings to insist on all the necessary precautions. But the decision has at least removed one serious obstacle to the commission's policy of leaving commercial development of atomic energy to private groups; it argued that in practice it is almost impossible to devise satisfactory safety measures before a plant is built and it is essential that commercial reactors should be near to potential consumers. Plenty of obstacles remain, however, mainly as regards costs, and the programme is grinding almost to a halt. The reduction in the price to be charged for nuclear fuel well help, but not very much, and once again there is likely to be a demand in Congress for the government to play a more positive part in the industry.

IRELAND

OFFERS MAJOR ADVANTAGES TO MANUFACTURERS FOR WORLD MARKETS

Ireland, with its go-ahead policy of planned economic expansion, offers exceptional advantages to every industry that looks to British and overseas markets. These advantages range from grants that reduce your capital outlay in establishing a new factory, to trade agreements that enable your products to enter markets under favourable conditions. Study what Ireland offers and you will see that here is the ideal site for your new factory.

Substantial non-repayable grants are available for new industries, according to their potential. These grants can amount to full cost of site and factory, full cost of training staff, and half cost of plant and machinery.

No Income Tax or **Profits Tax** on profits from exports for ten years, with a further five years of reduced taxation. Completely free movement of capital and profits between the United Kingdom and Ireland.

Shannon Free Airport Industrial Estate offers particular benefits to users of air freight: factories for renting, complete tax exemption until 1983, and grants.

Plentiful labour is available — and wage levels are favourable. Ireland is the only North European country with a manpower surplus.

Power is in ample supply. Transport facilities are excellent by road, rail or air. Dublin is 90 flying minutes from London.

Trade Agreements: Nearly all products made in Ireland are exempt from British Customs duties — and they enter major Commonwealth countries at the preferential rate of duty.

Write for two informative booklets describing the unique industrial opportunities in Ireland to:

The Old World made Hercules . . .

. . . to-day Hercules is helping to build the NEW WORLD

Hercules and the Augean Stables.

It was by meeting the challenges of his age that Hercules of old earned immortality. . . . To-day, Hercules still meets challenges. More—he anticipates them. For in industrial chemistry, research by Hercules Powder Company has produced many a "break-through" leading to better things. Take packaging for instance. Packaging materials need to be sized, given strength when wet, printed, protected, stuck together. Hercules can claim many important advances in these fields. If the New World is better off for better packages, Hercules has a hand in it. Hercules has some key-words for his successes. Words like Pexol—Kymene—Pentalyn—EC—Neolyn. You should know what they mean.

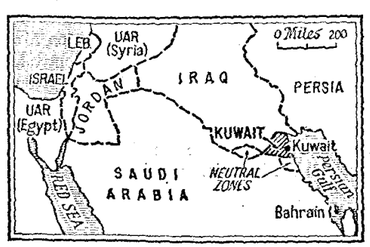
THE WORLD OVERSEAS



Baghdad Brainstorm

FROM OUR MIDDLE EAST CORRESPONDENT

IRAQ's claim to Kuwait is not in itself dumbfounding; but the brutal manner in which it was announced last Sunday has left the Arab world agape. General Qasim's reference to the ruler, Abdullah Salim Sabah, as "this Sheikh," and his announcement that he would be confirmed in his position as the Qaimmaqam of Kuwait (a sort of district commissioner) under the authority of Basra province, were both calculated insults. The bland announcement that the Iraqi prime minister had in mind a programme for Kuwaiti development, including the provision of schools and hospitals, "which are cruelly lacking," might be funny if it were less foolish.

The first subject of speculation here is the part played by the Iraqi ministry of foreign affairs. Under the able and sophisticated guidance of the foreign minister, Dr Hashim Jawad, Iraq's foreign policy has been conducted with restraint and moderation for over a year. Even in the complicated and acrimonious dispute with Persia over the waters of the Shatt al Arab, Iraq could fairly claim to be the aggrieved party, since it was Persia which unilaterally repudiated longstanding practices. Suddenly all this has changed and Iraq has emerged on the international stage as a singularly maladroit aggressor. It is not difficult to see in this one of General Qasim's periodic brainstorms, and this impression is heightened by his subsequent frivolous claim to all the lands of the former Basra *vilayet*, which include, among other places, the Saudi region of Al Hasa, where the Arabian American Oil Company has its home.

THE quick reaction of the other Arab countries has been damning. The first to enter the fray was King Saud, who has no objection to being one of the Arab world's big three in oil affairs, but would strongly resist demotion to the position of a poor second. He also has a personal interest in the affair as Kuwait sheltered his family during its exile in the late nineteenth century, and he himself was born there. King Hussein, who has just succeeded in re-establishing correct relations with the revolutionary regime in Iraq, has been less forthright than King Saud in his public statements. But it is reliably reported from Amman that he has told the Iraqi ambassador that Baghdad's claim to Kuwait will receive no support from Jordan in the Arab League or anywhere else. The government of the United Arab Republic has issued an official statement condemning General Qasim's claim in terms that gain in effect by virtue of their moderation. The Lebanese government, following its traditional policy of neutrality, is sitting on the fence, but public opinion Christian and Moslem alike, is remarkably unanimous in supposing that General Qasim has gone off his head.

General Qasim's next move is awaited with curiosity and some amusement. A few people fear that, having worked himself up to the requisite pitch of exaltation, he may actually send troops to Kuwait. But as this possibility is largely discounted (if only because Britain is committed to the defence of the sheikhdom against external aggression) the general tendency is to take a calm view of the situation, and to sit back and watch the general wriggle off a hook of his own making. The suggestion that Iraq might try to bring economic pressure to bear on Kuwait is scoffed at: there are only too many suppliers eager to take Iraq's place in the Kuwaiti market. Most well-informed people agree that discontent in Kuwait has been on the wane for several years with the development of the "super welfare" state and that such opposition as still exists looks to Cairo rather than to Baghdad. Indeed, the rift that at one time threatened to set the middle classes against the ruling family has been superseded by the friction between native Kuwaitis and the large foreign element working in the sheikhdom. Now Kuwaitis and most of the foreigners—Lebanese, Palestinians and Egyptians—are likely to forget their differences in the face of the threat from Iraq.

Ruler of Kuwait: Sheik Unshaken

Britain's position in this imbroglio is one of some delicacy. After plumbing the depths in the months immediately after the Iraqi revolution, Iraqi-British relations have been restored to a level slightly better than correct, thanks to tough and supple diplomacy on the British side. Even so, scarcely a week passes without some harassment of the Iraq Petroleum company. There is no desire by the British to throw the fruits of this uphill struggle to the winds, and comment from London has been commendably restrained. It is significant that the ruler of Kuwait, even while negotiating quietly with the British, has made his first public appeal for help to the Arab League. If the league can score one of its rare successes by burying General Qasim's claim without the ruler's having to seek help from the West, it will not only have reduced Middle Eastern tensions, but will also have picked up a *little* prestige for itself on the way.

It is expected that the league will meet shortly to consider Kuwait's application for membership. Since unanimity is not required for the admission of new members, Iraq's veto will not be operative in the almost certain event of its being the only dissentient voice. The most that Iraq could then do would be to withdraw from the league. Baghdad's decision here may well depend on whether General Qasim or his harder-headed foreign minister has the last word when the critical moment arrives.

On the assumption that the dispute will blow over, or linger on without coming to a head, there are lessons in this affair for the Kuwaiti ruling family. Despite the torrents of good advice from British officials, Kuwait has been singularly unresponsive

n the past to any appeals from the other Arab states for a share of he sheikhdom's enormous capital resources. The Kuwaitis have much preferred to invest their money safely in Europe or in real estate in Beirut or Cairo. If Kuwait is effectively defended from Iraqi pretensions by the intervention of the other Arab states, the Arabs will surely look for some return. Unless such a return is forthcoming, the next storm may find the ruler bereft of any protection except the British umbrella, appeals for which would do him little good in the long run and would certainly cause the British Government grave embarrassment.

Backwards to Evian

FROM OUR PARIS CORRESPONDENT

IN Paris, the grapevine confidently predicts that negotiations with the Algerian rebels, which were broken off on June 13th, will begin again soon, possibly next week. When the French decided to break off the talks at Evian they proclaimed publicly that these would not be resumed unless some "new element" were introduced by the other side. So far as is known, the Algerians have not made any concessions during the recess—yet it seems certain that the negotiations will be resumed. The French bluff seems to have been unsuccessful and the pause superfluous. But it is now easier to assess the reasons for the failure of the first round and the chances for the second.

At Evian both sides were trying to find out what the other would concede; neither side was willing to commit itself to anything that might prove prejudicial if the talks broke down. M. Joxe, a skilful diplomat, led the exploration. His task was to induce the rebels to put their faith in General de Gaulle's liberalism and, at the same time, to find out how far they were willing to go on the gaullist road towards "independence in association" with France. Uncertain of the Algerian response, the French tried to keep all their trump cards in hand. The future of the Sahara was not to be discussed until the very end of the conference. The price of independence included a privileged position for the European minority, special status for the main towns and French sovereignty for military bases. If the French could have controlled such commanding heights, they would have had no need to worry about the future of Algeria.

But the Algerian delegates refused to swallow such unappetizing bait. They countered the French efforts in two ways. They made the point that the government of an independent Algeria would be the only authority entitled to commit the country's future in such a way; and since France recognises neither Algeria's independence nor the rebel government, *ipso facto* it cannot expect such commitments. Secondly, they tried to shift the discussions back to the one point—Algeria's right to self-determination—on which, in theory, both sides are agreed. They proposed a discussion about the guarantees for a free vote, insisting that such a vote must be taken over the whole country and that the majority decision should be binding. The Evian talks rapidly turned into what the French call a dialogue of the deaf.

Logically, the French might have reduced their terms in order to test whether the rebels could be tempted into any form of acceptable compromise. Instead, they threatened to break off the talks. It is known that the decision to do this was the general's own. Having failed to produce "a third force" in Algeria, General de Gaulle gave the rebel leaders at Evian a chance to play this role themselves. When they refused to adopt their parts and, indeed, refused "to leave their knives in the cloakroom," the general decided to teach them a lesson. But they also refused to learn, and the only result of the break has been a worsening in the Algerian political situation. And so the talks will now start again. Already it is being whispered in Paris that the insistence on "a new element" was an invention by M. Terrenoire, the minister of information. It is part of the job of the gaullist princelets to take the blame for miscalculations.

The French delegates are likely soon to return to the shores of the lake of Geneva and face again a situation that has hardly altered during the interlude. The only new factor is the general's decision, made known on Tuesday, to bring home a French division from Algeria, and his suggestion that others will follow. The other seeming change in the French position is that more emphasis is being put on the possibility of partition should the rebels finally reject the proposals for association. Yet even this is not new. Partition has for some time been the ultimate weapon in the French arsenal. General de Gaulle himself brandished it on the eve of the Evian talks when he warned the Algerians that, if there were secession, Europeans and Moslems who voted for France would be regrouped in a given area. He repeated this threat at Verdun on Wednesday. Yet is partition really an alternative to war?

Showing some contempt for the idea of self-determination, the French are now drawing up partition plans. It is generally known that the French area would include the fertile, coastal lands near Algiers and Oran, and that it would take in the Saharan oilfields. One snag for the draftsmen is that the outlet of the Hassi-Messaoud pipeline does not quite fit into this territory. But there are other, more serious, difficulties. Moslems outnumber Europeans almost everywhere in Algeria (Oran is the only large town where the numbers are still roughly equal). The French have always argued that they will protect "faithful" Moslems and they have political as well as economic reasons for not setting up a strictly, or even predominantly, European area.

There is not the slightest doubt that the rebels will reject the very idea of partition. The inclusion of a big Moslem population in the new French area would enable the rebels to continue terrorist activities and civil war would thus be coupled with persistent attacks on the new frontiers. In strictly military terms, it might be possible to defend a reduced area with fewer troops, and the withdrawal of a division from Algeria was interpreted in Paris as the first move in such a plan. But this is less important than the fact that the war would go on, and that France's allies would find it awkward, indeed, to defend a solution that gave all the rich lowlands to the French. The theory of partition may one day join other schemes in an arsenal of obsolete weapons. It is not, in fact, an alternative choice. The only realistic alternatives in Algeria are still a settlement negotiated with the rebel leaders—or continued war.

Coyne the Baptist

FROM OUR OTTAWA CORRESPONDENT

THE increasingly shrill fight between Mr Coyne, still governor of the Bank of Canada, and Mr Donald Fleming, now probably feeling more secure as minister of finance than he has for many months, leaves countless questions unresolved. The most serious for thoughtful Canadians is to what extent foreign confidence in the Canadian dollar has been shaken, and how much inflation Mr Fleming's budget portends. Stock values in Toronto and Montreal, which were already too high in relation to earnings, have leapt up in a way that openly proclaims the expectation of inflation. Cynics say that Mr Fleming's handling of his disagreement with Mr Coyne would have been quite enough to depreciate the Canadian dollar without his having to proclaim the intention of using public funds to bring it down. It is worth noting, however, that this week the Canadian authorities have been using the exchange fund to prevent the dollar from going up.

Only last December Mr Fleming was anxiously trying to reassure foreign investors. Now he has frightened them even more than he would have done if he had adopted Mr Coyne's proposals—which he calls autarkic, restrictionist and ultra-nationalist. Yet this very loss of confidence may provide Mr Fleming with a political triumph if it brings the Canadian dollar down to, say, 95 cents without large expenditures by the exchange fund. The announcement of his intention, he may proudly say, was enough to achieve his purpose—once Mr Coyne was out of the way. The great question is how far the Canadian dollar must fall before foreign investors and speculators start to support it. Many factors will be involved in this inevitable international speculation. Probably the crucial one will be the interpretation by investors of Canadian policy.

MR COYNE'S letter to Mr Fleming this week was more unrestrained than any of his previous statements—which is saying a good deal. He said that:

> The position of the governor of Canada's central bank will be destroyed, and the whole institution will become merely an arm of a political machine if the governor is to be terrorised into resigning whenever the government of the day wants him to, without any issue of monetary policy being raised, without the government stating its monetary policy and without the government accepting responsibility for monetary policy.

Mr Coyne undoubtedly had his eye on London opinion when he explained that the directors of the Bank of Canada had acted purely as political tools (with one honourable exception out of ten) when they requested his resignation for no stated reason except that the government insisted on it. He revealed that even before the board of directors made its decision, on June 13th, he had urged that the Bank of Canada Act should be revised along the same lines as the Bank of England Act, so as to make explicit the government's ultimate responsibility for monetary policy.

Fifteen months ago, on March 19, 1960, your correspondent suggested that although Mr Diefenbaker wore a prophet's mantle, the more truly prophetic voice came from the governor of the central bank. Mr Coyne has indeed proved to be a prophet in the same mould as Jeremiah or John the Baptist. But he ends his career in a raiment of camel's hair bound by a leather girdle, eating locusts and wild honey—instead of starting that way. On the other hand, he has a pension of $25,000 a year. When Mr Fleming first emphasised this pension, in his statement on May 30th requesting Mr Coyne's resignation, it appeared to be a sure political winner. The Canadian electorate, it was supposed by all parties, would never support a man who had "voted himself" so large a pension in his early fifties. But the pension is now beginning to look more like a boomerang. It had always seemed curious that the government should suddenly discover this spring what its own directors had done in February, 1960. Mr Coyne now asserts that Mr Fleming had been told of the directors' intention six months before their decision was made, that his deputy minister had agreed that the increase was reasonable, and that the directors had been refused an interview with Mr Fleming on the very day in 1960 when they adopted the new pension rules.

Obviously, Mr Coyne's pension has nothing to do with the basic problem of the relations between the bank and the government, which has implications for central bankers in every country. Yet it is crucial in judging Mr Coyne's intransigence and its political effects. Some of the best informed members of the financial community, who are the most worried about how the status of the central bank will emerge from this controversy, say that Mr Coyne should certainly have resigned in May if this issue had not been raised. Since Mr Fleming did raise it, certainly under Mr Diefenbaker's instructions, Mr Coyne's subsequent self-defence against a palpable smear appears more acceptable.

Six and Sixteen

FROM OUR BRUSSELS CORRESPONDENT

AT Strasbourg last week the European members of the common market started to work out the details of their relationship with their African associates. Nearly 150 members of parliament from the six member countries of the European Economic Community held their first joint session with more than 100 parliamentarians from the 16 African states associated with the common market. These new republics—all of them previously French except for the Congo and Somalia—had all chosen to continue the association with the common market, negotiated for them in the Rome treaty by the respective colonial powers while they were still dependencies.

Association at present involves the gradual establishment of a free trade area between the common market and the African countries, and a development fund of $581 million due for spending before the end of 1962. As this date approaches, the practical details of association need to be adjusted, and this meeting with the European parliament was intended as an important step towards defining the future relationship. The resolutions voted in Strasbourg, which embody African wishes, can serve only as recommendations to the respective governments and to the commission of the EEC, as the European parliament has no legislative power. But the excellent atmosphere in which the session was held is in itself likely to have done something to increase the sense of alliance between the six and the sixteen, as well as encouraging cohesion among the sixteen themselves.

Naturally enough, the Africans were concerned to maintain and to extend the advantages they now enjoy. They urged, in particular, that additional money should be allocated to continue the development fund after 1962, that the fund's work should proceed more rapidly, and that the recipient countries should share effective control over its administration. With regard to technical co-operation, they asked that they themselves should decide on priorities, and they also suggested that occupational training programmes should be accelerated. But the most difficult question concerned preferential treatment for African exports, chiefly coffee, cocoa, bananas, ground nuts and palm oil. So far, since the free trade area between the community and its associates is being evolved in step with the removal of trade barriers in the common market itself, the level of preference for African produce is not yet very high. But the 14 former French colonies already trade with France on terms more favourable than are required by the Rome treaty.

This anomalous situation must be smoothed out but not, th[e] [A]frican [a]ssociates at their expense. What they asked for at Strasbourg last week was that they should receive benefits from a six countries at least equivalent to those that they now receive fro[m] France. In Germany, they complained, their goods are heavil[y] taxed under old sumptuary laws that rate some tropical products [a]s luxuries—the west German revenue from its coffee tax brings i[n] $200 million a year. The Africans asked for these and other fisc[al] barriers to be removed, and pressed for guaranteed markets a[t] prices. A further difficulty, from their point of view, is that bo[th] Germany and the Netherlands at present tend to look to oth[er] suppliers; both are good customers of Ghana and Nigeria, a[nd] Germany, in addition, has long-established trading links with so[me] Latin American countries. They are therefore unwilling to gr[ant] extra privileges to the associated African countries: a point of view that finds some support in the United States, both becau[se] of Washington's known desire to reduce preferential arrangeme[nts] and because of its concern for tropical producers in Latin Ameri[ca].

The Latin American problem is not easy. Suggestions that [the] community's most-favoured-nation tariff on tropical produce mi[ght]

be lowered were not popular either with Africans or with Frenchmen at Strasbourg. But a partial solution of the African problem might be to include Ghana and Nigeria, in some way, in the association, either through Britain's entry into the common market or by direct bilateral negotiations (the suggestion that Mali might act as intermediary with Ghana was firmly rejected by the leader of the Mali delegation, M. Mahamane Alassane Haidara). A bilateral solution, however, is not likely since, despite many expressions of goodwill towards the English-speaking countries of Africa, the conference finally voted for the exclusion of any African state "already belonging to another economic group whose aims are incompatible with those of the association." This seems to leave British membership as the only way out.

Whatever the solution, the African associated countries will have to be compensated for the disappearance of the price and other guarantees they at present enjoy in France. The Africans have certainly made it clear that this compensation will have to be substantial. Indeed, the existing links are to be strengthened by annual meetings, similar to the one held last week, to take place alternately in Africa and Europe. It may be, however, that Africans will be disappointed at the possibly meagre outcome of last week's grand palaver.

Tight Little Island

In spite of a constitution designed in 1958 to iron out racial differences, Mauritius seems as plagued as ever by inter-community frictions. These have been reflected by the delegates to the talks which began in London this week about the island's future. At one extreme the Hindu-dominated Labour party seeks full internal self-government swiftly. At the other extreme are Europeans who cast an envious eye on their French island neighbour, Réunion—a department of France, sending its deputies to Paris.

A speck in the Indian ocean, Mauritius contains within its 720 square miles almost as many problems as the Indian continent itself. It is prone to calamities ; last year it was devastated by cyclones. It is desperately overcrowded, and its one-crop sugar economy cannot, however thriving, provide employment for all. Hindus, Moslems and Christians—of Indian, African, European and Chinese ancestry—tread on each other's toes. The sugar mill owners, largely the descendants of the Frenchmen who colonised an empty island, are confronted by the teeming progeny of the humble Indian immigrants who replaced the emancipated slaves as plantation labourers. Now two-thirds of the population, these Indo-Mauritians, with a forceful elite in the towns, control the powerful Labour party. Both the tiny white population, and the larger number of Mauritians of Negro or mixed Afro-European stock, dislike the idea of full internal self-government under a Labour regime. The sugar mill owners are worried by the Labour party's dabblings with communism, though these are doubtless a local attempt to be fashionably "positive neutralist". The other group's anxieties are more direct. Descendants of the African slaves, they tend to avoid the plantations and have found their place in society as stalwarts of the civil service. Should the Labour party get control of the service—which is at present still the Governor's responsibility—they fear they might get pushed out.

These inter-racial anxieties are aggravated by the expansion of the population. They might be assuaged if the recommendations in the Meade and Titmuss* reports were carried out. These envisage the development of industries that use more labour than the sugar industry does, and a campaign for family planning. Both projects depart drastically from the island's traditions. There must therefore be political stability if they are to win support.

*The Economic and Social Structure of Mauritius, by J. E. Meade and others, Methuen, 1961. Social Policies and Population Growth in Mauritius, by Richard Titmuss and Brian Abel-Smith, Methuen, 1961.

Italian Labour Out of Step

FROM OUR ROME CORRESPONDENT

When the rate of expansion of Italian industry shot up last year by between 15 and 17 per cent (after rising for several years on a gentler curve of 7 or 8 per cent) it was easy to foresee that labour troubles were in store. Only management failed, on the whole, to grasp what was happening. For nearly forty years Italian industry had lived in a hothouse where the temperature was kept up by the enormous pressure of manpower. Industries, on the plea that they would otherwise have to turn away workers and so add to the chronic unemployment, were able in many cases to pass their liabilities on to the state. The institute of industrial reconstruction acted as a shock absorber, and a system grew up based on high returns for limited output, with risks more or less guaranteed by the state.

This static system was suited to the closed economy of the Mussolini period, but under the impact of new conditions it broke down. During the last ten years—and most decisively between 1955 and 1960—a new dynamic seized Italian industry. It was the result partly of technological innovations, partly of new market conditions, including the advent of the common market. But, in great measure, it was the product of new ideas among the political leaders about the function of state industries, thanks in large part to the impulse given to the ENI group (the national hydrocarbon corporation) by Signor Enrico Mattei. The rapid expansion of the last few years has not wiped out unemployment ; in a sense the problem is more acute than ever, because masses of unskilled labour are pouring into the towns. But highly skilled workers are definitely in short supply.

The younger generation, especially the young people from the technical schools, are keenly alive to the new conditions. Boys trained in the Fiat workshops, for instance, are finding better paid jobs outside Fiat. Both management and unions have to grapple with the fact that, for the first time, large numbers of men are entering Italian industry who are not afraid of losing their jobs. Among workers in the most progressive industries, too, the feeling has spread that labour has a right to share the increased profits from technological improvement. The unions no longer oppose dismissals on principle, but claim instead that for every workshop closed a new one must be opened. When Signor Vittorio Valletta, the chairman of Fiat, says, "Once a man joins Fiat we should like never to dismiss him," he is speaking in terms of the conditions of the past—though, to do him justice, the "professor" has an eye to the future when the ascending curve of Italy's motor industry may flatten.

At present the new state of affairs obtains in a few privileged sectors like engineering and steel. Territorially the change affects the industrial triangle of Milan, Genoa and Turin. Its symptoms are the recent protracted strike of the electrical engineering workers in Milan—where strikes have previously always been short and intermittent ; the strikes at the Ansaldo shipyards and Breda, one at Alfa Romeo, and the latent unrest at Fiat, where the management is asking the workers to accept a seasonal distribution of working hours which would introduce a 52-hour week for five months of the year.

With its 74,000 workers and its 19,000 office employees, Fiat has the biggest payroll of any single Italian undertaking. After the war its shop steward elections became a barometer of union strength in in the country, but in 1955 Fiat succeeded in isolating FIOM (the metal workers' union affiliated to the socialist and communist federation, CGIL), and the older union suffered a crushing defeat, to the benefit of the christian democrat CISL. Since then trade union affairs at Fiat have followed a pattern of their own. For several years the catholic union predominated, until it split and gave birth to a "house union" not affiliated to any national federation. In 1960 this *sindicato aziendale* topped the list, but this year it was beaten by the social democrat UIL. These fluctuations illustrate the way management plays off one union against another, withdrawing its support when any union grows too strong. But the new fact at Fiat is the appreciable recovery of FIOM this year. The communist-socialist union is not represented among the office staff, but among the workers alone it has stepped forward to first place with 29.6 per cent of the votes, and this in spite of the fact that Fiat does not allow delegates from this union to sit at the table when it negotiates with the other unions. The irony of this is that, of all the five unions at Fiat, the socialist-communist metal workers' union is the only one strong enough to discuss, or at least to appreciate, the reasons for the 52-hour week.

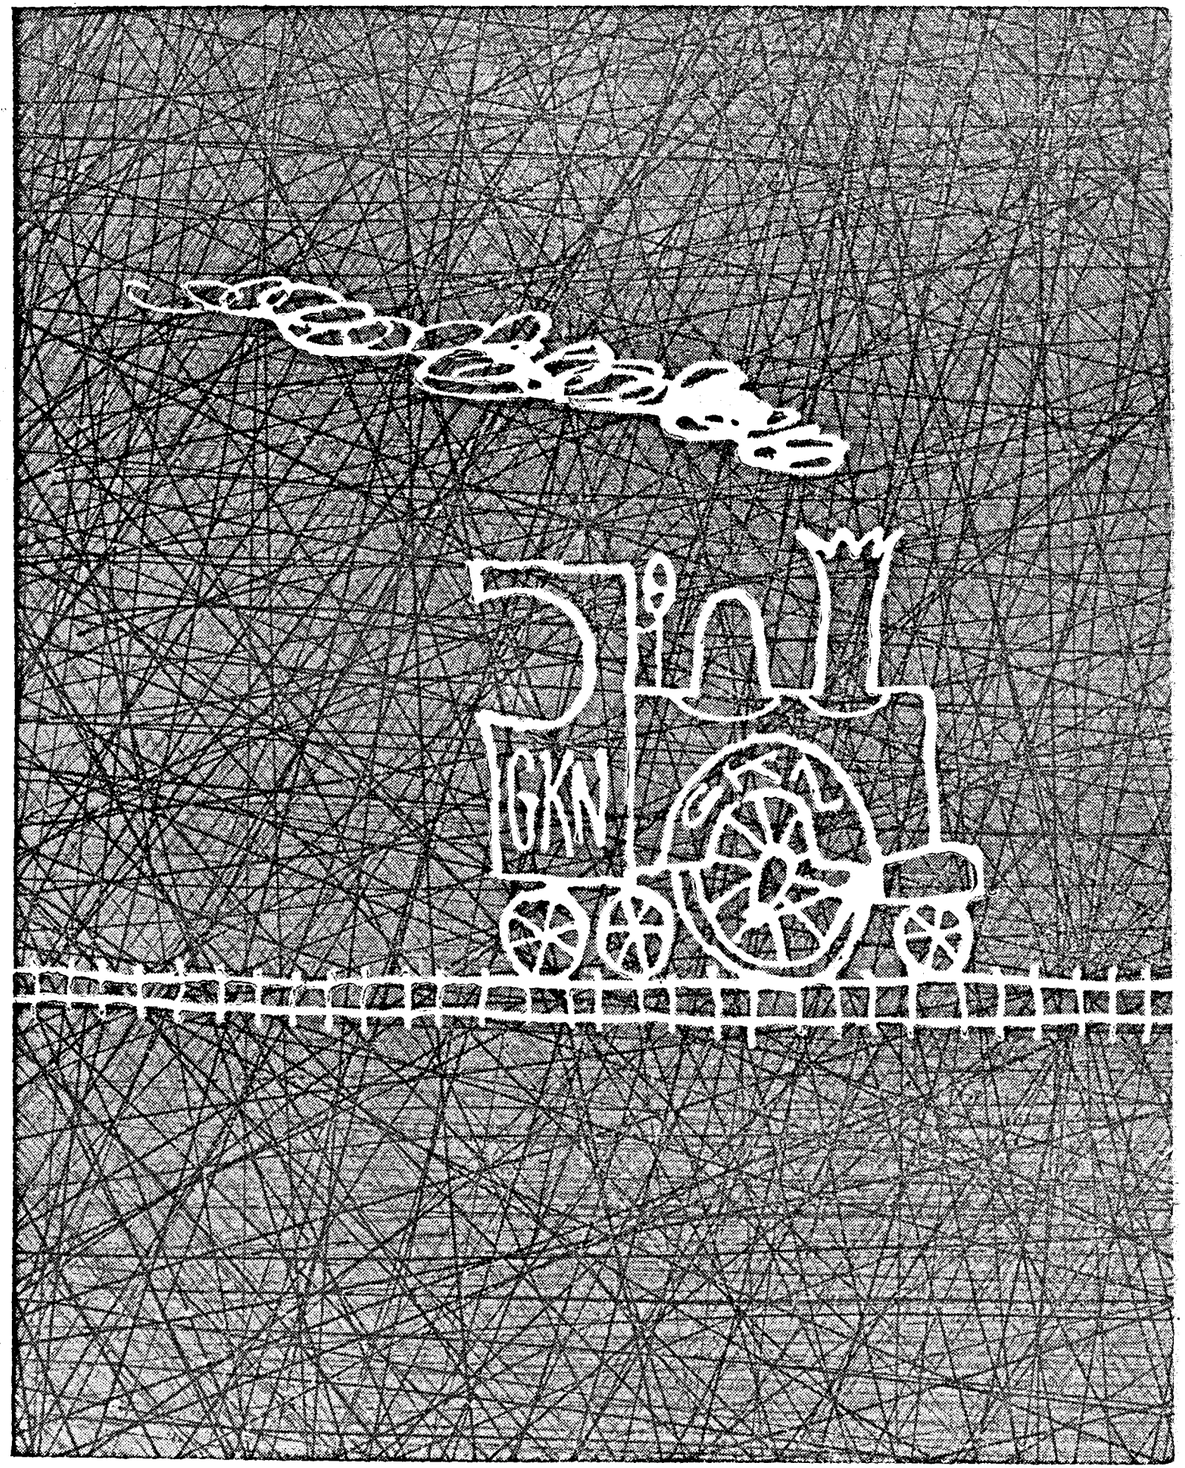
FIOM's leaders claim that the election results (which match an increase in the communist vote in the local elections last November) denote a strengthening of trade union conscience in the workers. Fiat itself points out that the "communist" union has advanced in the workshops where new young workers are being engaged. Last year Fiat took on 8,000 new workers, as against 4,000 pensioned off. The implication for the future is clear.

This does not mean that FIOM, or any of the unions, is sitting pretty. The bargaining power of labour in certain sectors has increased, but the Italian unions are intrinsically weak. They have no strike funds. Their finances are precarious (FIOM with 210,000 members has a budget of £36,000 a year). They depend too closely on the political parties from which they emanate, and they are bitterly divided between the three political federations. In spite of these inherent weaknesses, the socialist-communist and the christian democrat federations have each set up competent research units and their influence upon Italian economic development is considerable ; but it is exercised at a political rather than a trade union level, through parliament or through organisations such as the national council of economy and labour. Both the catholic and the socialist-communist federations believe that the function of trade unions is not merely to defend the workers' interests against managements, but to put pressure on the government in favour of particular industrial (or agricultural) development policies. Thus FIOM claims that its job is to get industry to produce more production goods and fewer consumer goods. It complains that the large output of utility cars affects the entire economy, and makes the government spend on motorways money that ought to be invested in schools. These criticisms (of Fiat) are tempered by the fact that the socialist-communist union has no wish to crush Turin's major industry and by the genuine admiration of its leaders for Signor Valletta as a great industrialist. FIOM also wants the numerous state-owned industries grouped under the institute of industrial reconstruction and the national hydrocarbon corporation to be used as pilot industries both as regards production policies and trade union relations. These directives, shared on the whole by the christian democrat federation, have certainly influenced government policies over the last two years—witness the steel foundry going up at Taranto, and the ENI foundry at Bari.

There is no closed shop in Italy, and in most sectors union members are less than a third of the total number of workers. The two non-communist federations, the christian democrats and the social democrats, enjoy the advantage of some discrimination by management in their favour, but in the long run such favours are a source of weakness, for they generally entail concessions. Thus the christian democrat federation lost ground in the last Fiat elections partly because it had agreed to defer the agitation against the 52-hour week. In the last analysis trade unionism in Italy is as strong as the socialist-communist CGIL, and no stronger. The old federation sets the tone. This is not to criticise the christian-democrat federation. The catholic unions have a tradition and, were it alone in the field, CISL could probably be tough. But rivalry enervates the weaker federations, while ostracism, at least in the new conditions of the labour market, strengthens the socialist-communist federation.

Between management and unions stands the government, in the person of the young and very able christian democrat minister of labour, Dr Fiorentino Sullo. He believes that big industry must learn that labour relations are not purely a matter for the two sides. There is also the law, and in Italy the law assumes that labour is always the weaker party and will not allow it to contract away its rights. He admits, however, that Italian labour legislation is full of lacunae ; an article of the constitution and a law of 1923 are almost all there is to go on. Signor Sullo has, therefore, invited industry and the unions to thrash out a new labour code to define all matters concerning the drawing-up and application of collective contracts. Such a code was laid down in Denmark in 1899 and is still valid. In Italy it will take months of patience. But Signor Sullo says the important thing is to reach an agreement while industry is expanding. The lack of a recognised labour code could be serious should recession follow the Italian "miracle."

SUBSCRIPTIONS TO THE ECONOMIST



Annual Postal Subscription by ordinary mail £4 . 10 ; overseas £5

By air see below

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

	Airmail	Air Freight
Australia	£10 6s.	$25 or £9
Canada	£9 0s.	£7 5s.

WE DO NOT STOP AT STATIONS

Even before British Railways superseded the various regional railway companies, there never has been a Guest, Keen & Nettlefolds Railway. But GKN and the world's railways have been closely associated ever since their very beginnings. Sir John Guest's Dowlais Works supplied a large part of the rails laid for the Great Western Railway from 1837 to 1841; and in 1844 they received their largest order to that date—for 50,000 tons of rails for Russia. GKN's reputation as makers of permanent way fastenings was established a century ago and has been growing ever since. But as well as rails, sleepers, chairs, baseplates, fishplates, fish bolts, fang bolts, dog spikes, spring spikes, clips and keys, GKN companies produce overhead power transmission line equipment; telegraph and telephone line accessories; steel reinforcement for concrete; and fencing, all along the line. Other railway track accessories, including switch heaters for winter use and rail lubricators for curves, are made by other GKN companies. Others again make castings and forgings in large quantities for rolling stock and modern locomotives, and one of them has recently developed a new automatic coupling for railway wagons. Another GKN company has been making bogie wheels for years. On many railway stations today, you find a row of GKN-made Sankey Vendo machines selling hot tea, cold milk, sandwiches, snacks, sweets and soft drinks —365 days and nights a year. There are hundreds of things on any railway station that are likely to owe their existence or part of it to the GKN Group of Companies. But, as we have said, we do not stop at stations . . .

SPAIN DISCOVERS EUROPE

Spain is at last showing a disposition to emerge from behind the physical and moral entrenchments that have kept it separate from Europe. In the following section our special correspondent examines this process in its political, ecclesiastical, and economic aspects, and in its bearing on western policies.

WHERE EUROPE ENDS

EUROPE has often been said to end at the Pyrenees. French geographers, in particular, tend to consider Iberia a projection of Africa. Driving through Gascony toward the ice-blue battlements that block the southern horizon—and, later, emerging from a cool Pyrenean valley into harsh Spanish sunlight—one is tempted to agree. No frontier could be more emphatic. Might not the Pyrenees be ample explanation of Spain's moral and political remoteness? Behind such a barrier, how could Spain not have been bypassed by *habeas corpus*, the Rights of Man, and the welfare state?

Of course, nothing about Spain is ever quite so clear-cut. The Pyrenees are only for short stretches a serious obstacle to human intercourse. The spurs, and the valleys, run north and south. In the Catalan and Basque regions the Pyrenees seem to act as a link, not a barrier, between the communities to north and south of them; materially and morally, the Catalans and Basques of Spain have more in common with their northern neighbours than with their fellow Iberians. A more significant geographical frontier—the true southern limit of temperate Europe, perhaps—lies undramatically along the inner edge of the "fertile crescent" of cultivation which links the Basque country, Navarra, a strip of Aragon, Catalonia and the province of Valencia. Here, spontaneously, Spaniards echo the geographers. In Lérida one is told: "Africa begins in Aragon." In Saragossa and Alcañiz one's Aragonese friends point down the Madrid road and say: "From here on you are in Morocco." On the coast north of Valencia one is told, contemptuously, of villagers who live a few miles inland: "*Son Moros!*"

Within this fertile crescent there is water for irrigation and hydro-electric schemes. Landscapes are often green, cultivation tends to be intensive, property is widely distributed and holdings are generally small. Villages are neat; houses are built of brick or stone. There is a moderately prosperous middle class with a small surplus of doctors and lawyers, and an increasingly assertive industrial working class. The standard of living approximates to that of south-west France ten or eleven years ago. South and west of Spain's fertile crescent there are oases, but in general water is scarce and most land is given over to grazing and low-yielding dry farming; property owners are few and tend to be pasha-like in their wealth and social irresponsibility; mud is a common rural building material, and many villages look as if they have been acquired second-hand from Syria. The middle class is small, workers are underpaid, apathetic and often under-employed; there is a high rate of emigration to Catalonia, Madrid and France. Living standards are slightly lower than those of rural Lebanon and Cyprus.

No major physical barrier separates fertile Spain from arid Spain. And no geographical obstacles hindered the spread of, for example, the ideas of the eighteenth-century Enlightenment or of nineteenth-century utopianism to the major cities of Spain. Locke, Voltaire and Montesquieu were read by educated noblemen and literate bourgeois on both sides of the Pyrenees on the eve of the French Revolution. Universal suffrage was provided for in the short-lived constitution of 1869, and the Spanish trade union movement took root in 1888. Since the Middle Ages the geographical barriers between Spain and north-west Europe have been less formidable than the religious and political. There was the Moorish apogee, when Spain prospered and the rest of Europe stagnated; there were the long dark nights of crusade, Inquisition and absolutism; there was Spain's deep involvement in America; there were reflexes like Philip II's circumscription of intellectual exchanges with foreign countries lest Spain's students became infected with uncatholic ideas. Europe was trouble—heresy, subversion, English piratry, French expansionism—and, the rulers assumed, the less Spain had to do with it the better.

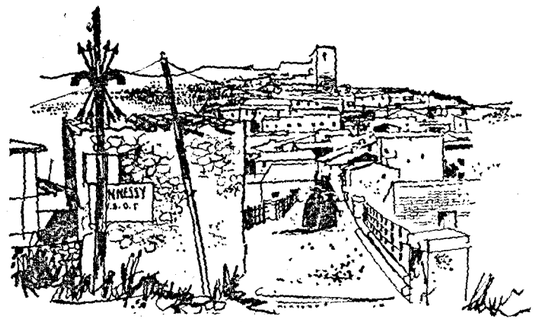
The Second Republic made a start at tearing down barriers. But, born in 1931 in the depths of the world slump, it was shackled from the start with economic difficulties. It needed

a generation of peace in which to sort out the economy, promote social reforms, generalise education and inculcate democratic ideals: it was faced in its fifth year with a revolt of army officers, ecclesiastics and big landowners, to which it succumbed just too soon to be drawn into the second world war. From 1940 to 1950 the barriers were up again. In April, 1946, Britain and the United States called for General Franco's resignation and the formation of a representative provisional government. In the same year the UN Assembly approved a resolution urging its members to withdraw their ambassadors and ministers from Madrid.

Abolishing the Pyrenees

GENERAL FRANCO's best postwar ally was Stalin. The steady build-up of cold war tension in 1948-50 not only alarmed the United States government—which was understandable enough—but set it scraping the bottom of the anti-communist barrel. Shortly after the outbreak of war in Korea it extended to the Spanish dictator a long-term loan of $62.5 million and re-established normal diplomatic relations with him, a lead which Britain, and most other western states, followed. The Eisenhower Administration concluded a mutual defence agreement with Madrid and opened the dollar tap wide. To his credit, General Franco made no pretence of espousing the democratic cause. (The general's comment on the first sputnik was that it exemplified the "great achievements" which "political unity and discipline" make possible.) But Washington is broadminded, and by the end of fiscal year 1960 Spain had received or been assured of one billion dollars in US economic aid.

During the same decade Spain was admitted, step by step, to Unesco, the United Nations, the International Labour Organisation and the Organisation for European Economic Co-operation. In 1959 General Franco's government sought and obtained advice and loans from OEEC and the International Monetary Fund. Sixty American consultants and almost as many from western Europe have arrived in Spain during the last few years to advise government officials and industrialists. Some 1,400 Spanish officials and business men have been sent abroad under the US aid programme to study American and European methods.



Simultaneously a window on the outside world has been opened for scores of thousands of families by letters and visits from Spaniards living in France, Switzerland and northern Europe. About 400,000 Spanish republicans preferred exile to submission in 1939-40; a further 350,000 Spaniards emigrated in the first postwar decade, and just now the rate of

emigration is high to booming France and Germany. Most emigrants write home in praise of the liberties, social services, amenities and gadgets they have discovered north of the Pyrenees. Many spend their three weeks' holiday-with-pay back home in Spain, dazzling the neighbours with their cars, cameras and transistor radios. (Sr A, a middle-grade bank-clerk in Madrid, has a brother, a former republican civil servant, who is now a housepainter in Bordeaux. Sr A would require four years' salary to buy a locally-produced car similar to the one his brother bought in France with the equivalent of one year's earnings. Dr B, an overworked 40-year-old general practitioner in Valencia, occupies a rented flat, has no refrigerator, and has just ordered his first car—a tiny *Seat*. His younger brother, an engineering worker in Toulouse, owns a car, a caravan and a variety of household gadgets and is buying his own home.) The influx of ten million tourists during the last two years has also alerted Spaniards to the affluent revolution that is transforming north-west Europe. And the interest of business men and economists in Europe has been stimulated by the prospect opened by the common market and the availability of a swelling volume of European capital for investment in Spain.

QUITE suddenly, north-west Europe has assumed in Spanish minds the glamour and glitter of a latter-day Eldorado. Articulate Spaniards seem, like articulate Englishmen, almost ready now to pension off their old catchphrases about overseas ties and special relationships (in Spain's case, with an increasingly indifferent Latin America) and to seek new, more purposeful, ties within Europe. Their most urgent desire is to find some means of connecting Spain to the powerline of western European prosperity; and the surest, in the view of the country's leading economists, would be membership of the common market. Not only is the dynamism of the leading common market countries attractive—their output and living standards are rising faster than those of Britain and her Efta associates—but they are doing more business with Spain than any other group of states.

The directors of the least progressive, most highly protected, private and state-controlled firms are predictably apprehensive; but expert opinion in the more dynamic sectors of Spanish industry and the most influential banking circles—the two overlap—is overwhelmingly favourable to participation in the common market. (Here the American embassy is playing a valuable catalytic role.) Intellectuals critical of the regime—and especially liberal monarchists and socialists—would also like to see Spain join the common market: they believe that the political aims of the Rome treaty, "contagion by example," and, possibly, discreet pressure from other member-states, would guide Spain back into liberal constitutional paths.

"*Il n'y a plus de Pyrénées*"? It would be rash to echo Louis XIV. But an interesting straw in the wind was the Spanish government's sudden acceptance last winter of a century-old French plan for a road tunnel under the central Pyrenees that would reduce by more than a third the travelling time between Saragossa and Toulouse. Until then the Spanish general staff had been permitted to veto far less ambitious Pyrenean road projects than this on "strategic" grounds. Now, overnight, cash down, it is the Spaniards who are forcing the pace. The Pyrenees are still there, but they seem to be shrinking.

SPAIN'S THREE PILLARS

Authority still marks the Spanish state. But the system of authority has become harder to describe than it was; and its three props have begun to sag apart

"WE are a nation of extremists," the minister's *chef de cabinet* said sadly. "We are all anarchists. Frankly, the old Anarchist Federation was probably our most representative institution before the war. That is why we need a strong Church and a strong State. Without them, Spain would be in chaos." "The workers here are not badly off," said the foreign diplomat, straightening the tiny crucifix on his desk. "They have medical insurance; when things are normal they put in a lot of overtime; and employers must obtain official sanction before sacking them. Their syndicates—sort of unions, you know—are represented in the government. And there's the Church: a man who goes regularly to mass can usually get help." "*C'est affreux*," the French lady said. "Did you know that the average Spaniard must work a whole day to be able to buy a kilo of decent meat?" "Nothing annoys me more," said the *English* lady primly, "than journalists who write about Spanish poverty. Everybody *I* know in Madrid runs an enormous Mercedes."

Generalisations and clichés lie in wait for one in Spain through every doorway, round every bend in the road. Spaniards resort to them out of loyalty to ideals and slogans they or their fathers fought for in the civil war; or because they have lost the habit of categorical discussion, political or economic; or simply for safety's sake. Foreign residents indulge in them to avoid giving offence; or to hide private embarrassments and complexes of their own; or because they are diplomats. Most of the generalisations cancel each other out. "Spaniards nowadays," one embassy man said, "are very chary of talking politics." "It's very difficult," said his colleague across the hall, "to keep Spaniards off politics." (Each, in his way, was right. The Spaniard who, in a restaurant or at a formal gathering, will shrug off a politically loaded remark or reply with a brief conformist comment, is apt when he relaxes in private to startle one with the vehemence of his opinions.) Opposition Catholics and monarchists in Madrid favoured Spanish membership of as many international organisations as possible: "Every time we join an international body we open a door into Spain, we have to play host to observers and study groups, and the regime is put on its best behaviour." Opposition Catholics and monarchists in Valencia and Barcelona asked angrily: "What has Unesco done to help us get rid of the censorship? To admit Franco into international organisations merely clothes him in respectability."

Opinion-polling is, in consequence, hazardous. There is even a shade of ambiguity—though only a shade—in the answers one gathers to the basic question: Is the regime a tyranny? That it is a dictatorship, everyone is agreed. But might it not be a more or less benevolent one? In its first few years, General Franco's rule was indeed a brutal tyranny, so vindictive that it shocked those of his Falangist, Catholic and monarchist supporters who had expected a gesture of national reconciliation. Dionisio Ridruejo, then director of the Falange's propaganda, now a left-of-centre critic of the regime, has said of this period: "Morally, the conquered became the victors." The British and American governments referred in their 1946 statement on Spain to the "absolute lack of liberty" and "harsh repression."

The regime still surprises the observer with its acts of vindictiveness. In February, 72 syndicalists were charged before a military tribunal with having attempted to organise a clandestine trade union in 1947-48, when most of them were already in prison on other political charges. In March, twenty persons were accused of having conspired in 1946 to re-establish the Catalan Left-Republican party. The wife of a socialist, now blind, who has been in Burgos prison for more than twenty years, had her jaw broken last year for accepting a remittance from a relief organisation in Toulouse. Released republicans are harried by the police and petty officials: it is dangerous for them to become involved in litigation or to be seen in the vicinity of, say, a café brawl.

Clandestine leaflets.

And yet it is still possible to agree with the American diplomat in Madrid who assures one that "the regime is undoubtedly authoritarian, but it is no longer totalitarian." There is certainly something oddly untotalitarian in the regime's present inconsistency in dealing with its adversaries. On the one hand twelve Catalans are beaten and tortured for singing Maragall's patriotic *Song of the Flag* in a public place; on the other, opposition intellectuals in Madrid distribute packets of well-printed leaflets against the government, and arrange their rendezvous over the telephone with an apparent insouciance that would be inconceivable in Moscow or, for that matter, Cairo. Some two thousand ageing republicans are still in prison, working out sentences of up to sixty years; but members of the "new wave" of resistance to General Franco concede that for political offences that would have been punished by twenty years' imprisonment in 1950, and ten years' in 1955, they now run the risk of no more than two years in jail or simply five or six days of beatings and torture.

All opposition groups agree that unfavourable publicity in the foreign press, the presence of foreign observers at the more important trials, and inquiries like the one conducted by an international committee of lawyers last winter, have played an important part in persuading the government—anxious to raise its international status—to keep its backwoodsmen on a shorter rein. But why the inconsistency? One explanation widely advanced in Madrid is that influential officers and officials are increasingly anxious to insure themselves with the opposition groups they think most likely to be represented in the regime which succeeds General Franco's. A hierarchy of political offenders has thus come into being. Intellectuals can get away with more than industrial workers, monarchists are harassed less than republicans, and

PAIN

Distant view of Burgos jail

Catholic liberals are treated more leniently than non-Catholic liberals; Catalanists and socialists come lower down the scale, while anarchists are at the bottom. Similarly, the regime's relative leniency in recent months is linked by some observers with the tensions that are building up in government circles around the problem of the succession.

THE regime rests on three pillars: the army, the Church and that somewhat shadowy political prop, the Falange. Army officers and NCOs are well paid and well cared for. (Thirty generals still on the reserve are over ninety, and four will soon be centenarians. A sergeant is paid more than twice as much as a teacher.) Their loyalty to General Franco has never been in doubt. But many responsible officers dislike the repressive role that has been thrust on them and the government's use of military tribunals to try civilians charged with political offences. Revulsion from their role is known to have impelled officers serving on military tribunals to impose minimum sentences in at least three cases recently; in one of them the sentence was more than doubled by higher authority.

A senior Spanish officer told his American opposite number recently: "We are becoming divorced from the nation. The people look upon us as their gendarmes, not as their defenders. One reason why I would like to see us join Nato and be integrated fully with other Western armies is that we may thereby become an ordinary army and cease being a political one; the morale of our men and our prestige in the nation would gain immeasurably."

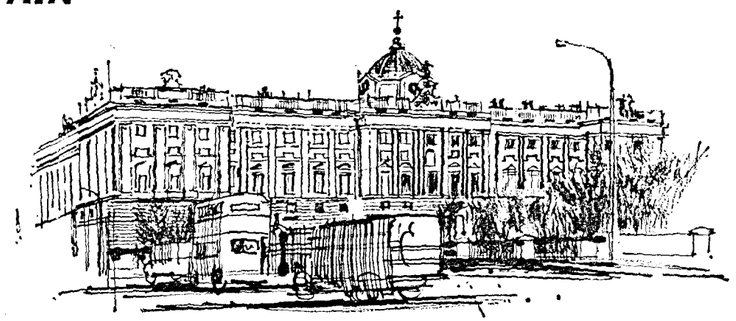
According to qualified observers, about 25 per cent of Spain's senior officers are determined that a "strong" regime must remain in being after General Franco's retirement or death: some of them would like another military man to succeed General Franco (General Muñez Grandes is the favourite candidate), others want an absolute monarchy, most would support either formula. A further 40 per cent are monarchist first and, second, either absolutist or liberal-monarchist; a return to legitimacy, to normality, to a more positive role in national and European affairs, is what concerns them most. The remaining 35 per cent cannot be classified: some are apolitical or look to the Church for a lead, others have political sympathies they take care to keep to themselves, others are ready to serve any regime that respects their pay and privileges.

The Falange (now known as the National Movement for preference, its name having gone out of fashion) remains the official, and only, party of the regime. It has long ceased to have any ideological significance. Its dogmas—a rehash of Italian fascism—are still taught in schools, but their barrenness became embarrassingly plain in 1959 when, after having applied them for twenty years, the government was obliged to do a smart about-face, seek American and western European aid, and swallow a great deal of unpalatable advice, in order to stave off economic collapse. Middle-aged Falangists who joined "the Movement" in the thirties complain, of course, that General Franco has betrayed their ideal, has applied their principles only half-heartedly, and has made too many concessions to foreign opinion and liberal capitalism. More recent recruits admit, in private, that they joined the Falange primarily for the advantages it offers in obtaining employment, promotion and housing. Once the Falange had a certain awesome prestige; now it is generally despised. Its decline is reflected in the sales of the Falangist organ *Arriba*. Despite a sensationalist "popular" style, *Arriba* is now selling only 30,000 copies a day, whereas the Church daily, *Ya*, sells 140,000, the nominally monarchist *ABC* 180,000 and the practically newsless sport-and-gossip paper, *Marca*, about 300,000. (All these figures are estimates: actual circulation figures are not published.)

The secretary-general of the Movement, Sr José Solís Ruiz, is also head of the Syndicates, the "vertical trade union" system which includes workers and employers alike; it is this organisation nowadays that provides Señor Solís with his sinews of power. He leads the populist-corporative wing of the government, in contrast to the more liberal (in economic matters) Europeanising tendency represented by Sr Ullastres, minister of commerce, and Sr Navarro Rubio, minister of finance. The "European" tide in Spanish affairs has been an adverse factor for him to contend with, though he has shown skill and resource in adapting himself. His prestige recently took a dip when the Primate of Spain, Cardinal Pla y Deniel, as well informed of the Falange's unpopularity as of working-class discontent, shrewdly selected Sr Solís as addressee of his recent protest against the disadvantage at which the Catholic Action workers' brotherhoods found themselves in last winter's elections to offices in the syndical movement.

CARDINAL PLA Y DENIEL has a delicate task. He has supported the regime since the end of the civil war. He has approved a catechism which denounces democracy and freedom of the press in crudely fascist terms. He speaks with pride of the state's "model" concordat with the Vatican, and he still refers to the revolt which brought General Franco to power, in the accepted phraseology, as the "National Crusade." For a whole generation his Church has enjoyed the sort of opportunity the propagators of all creeds presumably dream of: it has monopolised religious instruction, dominated education and guided the consciences of the nation's ruler and all his officials. Publications of a religious or philosophical nature are seen by its censors before the government censorship sees them; its inspectors have access to all schools. No non-Catholic may teach or become a journalist, a nurse, a civil servant, a policeman or an officer or non-commissioned officer in the armed forces. Ecclesiastical recommendation is necessary for responsible employment in all state-controlled industries and many branches of private business. It is difficult for non-Catholics even to get married; Protestant religious marriages are illegal, and an application for a civil marriage is turned down unless the couple can prove that neither bride nor bridegroom received a Catholic baptism; this is often difficult. Protestant services may be held only in buildings which bear no outward indication of their function, and may be interrupted by the police or gangs of youths, or banned without notice by the local bishop; such bans were recently—and may still be—in force in Saragossa, Salamanca and three other towns visited by this correspondent. Protestant prayer-books have to be smuggled in from abroad; a hymn-book in use among Spanish Protestants was printed in Barcelona on an "underground" press.

The Cardinal Primate agrees with General Franco that the separation of Church and State is "incomprehensible." ("Who can say, in a Catholic society, where the temporal ends and the spiritual begins?") But he cannot be unmindful of the anti-clericalism which the Church's identification with repressive regimes has provoked in the past, in Spain as in France and Latin Amercia. While seeking to safeguard the Church's present privileges, he must also seek to store up goodwill for the future, and to narrow the gap between the prelates and older priests who played an active propagandist role in Franco's "crusade" and the younger priests whose consciences are troubled by the oppression and moral apathy fostered by 22 years of "crusader" rule.



WELL
INFORMED
CIRCLES

De La Rue rely on skill for their future, not the chance concatenation of tea leaves; but they are pleased to see the auguries are favourable. With renewed vigour a young and lively management will address itself to the task of further expanding the business, to the gratification of well-informed circles who look to a bright future for the company. And they should know.

The Empty Palace

A TIME comes when immobility ceases to reassure and begins to inspire uncertainty. The empty royal palace in the centre of Madrid stands like a symbol of the doubt at the core of the regime. General Franco has said that he will be succeeded by a royal restoration, and has legislated on that assumption. But the pretender, Don Juan, still holds himself aloof in Portugal: his utterances are subject to censorship in Spain (they are occasionally circulated in the form of underground tracts) and it is an offence against the Spanish kingdom to discuss the likely date of his return or the nature of the constitution by which he will reign.

The monarchists are split, not only between branches of the dynasty but between principles. Some are absolutists, most are liberals. The absolutists, found mainly among the landed aristocracy, the army, the higher clergy, and the priesthood of Navarra, are on good terms with the Franco regime and hope to perpetuate its authoritarian features—and their present privileges—under the restored monarchy. Like General Franco himself, many of them wish to bypass Don Juan in favour of his son, Don Juan Carlos, whom they consider more malleable. In the last resort, most absolutists would prefer a military dictatorship or a "strong" presidential system to a genuinely liberal monarchy. The liberal monarchists, whose loosely-built organisation is called *Unión Española*, are the most active underground group in Madrid, though their agitation is confined almost exclusively to professional and intellectual circles. In the provinces they are much thinner on the ground. If their constitutional ideas prevail the king will have more power than British and Scandinavian monarchs but less than General de Gaulle; parliament and provincial and municipal authorities would be elected, and the press and trade unions would be free—"only the Communist party will be banned." It is not unusual to hear the pretender criticised in liberal-monarchist circles—for the somewhat Gaullist vagueness of his public declarations, or because, while remaining in exile himself, he allowed his son to return to Spain and thus lend the regime a cloak of legitimacy. (Don Juan's answers to these criticisms are that only if his declarations are "all-embracing" can he unite the nation; and that it was necessary for his son to return lest the royal house lose touch with the armed forces.) *Unión Española* has no dogmatic party line. Its basic contention is that if the next regime were to be either republican or dictatorial, one side or the other in Spanish politics would be so apprehensive or impatient that violence would ensue; thus, only a liberal monarchy can bridge the gap.

Unión Española is supported by many formerly republican conservatives and liberals. It enjoys the good will of most *Catalanistas* and Catholic democrats (who are the intellectual nucleus of the still embryonic Spanish Christian Democrat movement; their leader, Sr Gil Robles, a former republican minister, is probably the most influential lay Catholic leader in Spain today). On the Mediterranean coast many socialists are willing to support a liberal monarchy, at least for a trial run; in Madrid and the north, socialists tend to approve the demand of the exiled socialist party (PSOE) for a plebiscite on the constitutional issue. The man in the street displays little overt interest. Two or three Madrileños said: "Madrid is a socialist city. I can't imagine a king here." Catalans said: "A king, a taxidriver—anyone rather than Franco!" Basques tended to be republican. But the commonest type of comment in all regions was resigned: "If the Church (or, according to the speaker, the army, or *el Opus*) wants a king, we'll have a king. Who cares what we think?"

Abysmal educational standards, a subservient press and radio, and a general subjection of intellectual life to expediency may, indeed, have combined "to uproot and destroy responsible public opinion," as the Basque priests said in their protest last year; and the bread and circuses of mid-twentieth-century Spain—cheap alcohol and *tapas*, soccer and bullfights—are powerful opiates. But nature abhors this kind of vacuum, too. Most Spanish workers and middle-class intellectuals who own a radio admit that they listen "sometimes" to the communist "Free Spain" station; and most Spaniards now know something about the prosperity that ordinary people enjoy

in Europe north of the Pyrenees. Privation and ignorance can be mutually sustaining; privation and even a grain of enlightenment can be explosive. Socialists and liberal monarchists in Madrid, and communists in Barcelona, are in agreement on one basic point: "Franco is the Spanish Communist party's best recruiting agent."

Do the western powers mind who moves into that empty palace? One wonders. The Americans have an admirably alert, well-informed, well-intentioned aid mission in Madrid; but their aid programme is tainted with the original sin of its conception as the adjunct of a stopgap military policy. Their longer-term political interests have been harmed by an ambassador—now departed—who, as *The Reporter* observed, "often sounded more like Franco's advocate than our own." The French are well-informed on economic and cultural matters. Thanks to the combination of circumstances that has made of France a haven for Spanish refugees, Europe's leading nominally Catholic power and (very likely) Spain's future partner in the common market, the French are fairly popular, for different reasons, with both left and right; but their domestic political troubles have lessened their diplomatic significance in Madrid. The British, it is generally agreed, have never been liked by General Franco or by the more reactionary of his supporters. They have, consequently, little kudos to lose in that quarter, though the ingratiating tone of many official British utterances in Spain in the last two or three years shows little awareness of that fact. The liberal monarchists, on the other hand, say that the British are their natural allies. The once-popular BBC may still wean a few thousand listeners from the "Free Spain" radio if—as the latest signs indicate—it gives more space in its Spanish broadcasts to liberal points of view.

British embassy lumber-rooms the world over are littered with illusions about Britain's "natural allies." The British embassy in Madrid is uncannily like something out of an old film—a film seen in Farouk's Cairo, then in Nuri's Baghdad, again in Batista's Havana. One is responsive to the same rustic charm; one recognises the same philosophical clichés, the same *dolce far niente* dressed up as political wisdom. The film livens up only towards the end. A day comes when hard things are said in the House about Our Man in Wherever-it-may-be. Our Man, packing his bags for some other part of the world, mutters wearily about lack of long-term policy; for embassies, after all, are but instruments. And—the name of the film? Was it *Waiting for Castro*?

SHOCK THERAPY FOR THE PESETA

SPAIN'S per capita national income did not return until 1952 to the level at which it had been on the eve of the civil war. Between 1952 and 1959 it increased by an average of 3 per cent annually. Throughout the nineteen-fifties, industrial investment—much of it strongly autarkic in bias—was high, and by 1959 industrial output was 75 per cent greater than in 1948. It is interesting, however, to compare the percentage increases in representative sectors of Spain's economy with those achieved in two other war-shattered countries, Italy and Greece.

PERCENTAGE INCREASES IN PRODUCTION
1948–1958 (inclusive)

	SPAIN	ITALY	GREECE
Mining	64	165	903
Textiles	30	95	136
Chemicals	151	277	224
Basic metals	131	199	-
Electricity and gas	152	74	286
Agriculture (crops) (1935–1958)	13	32	41

Italy and Greece were, of course, ahead of Spain in the queue for American aid. But the very nature of the regime that emerged from the civil war saddled Spain's economy with a degree of waste, nepotism and inefficiency that would be intolerable in a country where the normal play of political forces could work. "Ours is neither a capitalist nor a socialist economy," a leading Spanish economist told this correspondent. "It is a predatory economy: the sort of economy you would expect an old-fashioned conquering army to impose. Rewards—in the shape of lucrative posts, monopolies and permits—for the victors; subjection for the vanquished. An export tax—the equivalent of a discriminatory tariff in foreign markets—was even imposed on one important sector recently because the economic conjuncture favoured its products and would therefore have benefited a group of business men known to lack enthusiasm for the regime. The minister responsible admits in private that the idea was imposed on him from on high."

Development was, in consequence, more expensive than it need have been, and governed at times by emotional rather than economic considerations. It was patchy and unco-ordinated, and neglected the nation's vital agricultural base. It was financed in part by the kind of forced savings that are levied by rising prices,

Some Spanish Statistics

IN response to pleas from OEEC, the US aid mission and the International Bank, a serious effort is being made to improve the reliability and comprehensiveness of Spanish statistics and speed up their publication. The selective zeal of many officials is still liable to ensnare the unwary. For example, foreign journalists may be informed that by 1959 agricultural output had increased by 59 per cent since the end of the civil war. If 1940 is taken as the base year the index for 1959 is indeed 159. But 1940 was an appallingly bad year. If the average for 1930-35 is taken as 100, the index for 1959 (itself an exceptionally good year) is 124; and 1957, 1958 and 1960 are all within a few tenths of 113. Against this must be set a population increase of 27 per cent during the same period.

Early this year government spokesmen announced that industrial production had increased by nearly 6 per cent in 1960; but the national revenue from industry in 1960 was 2 per cent less than in 1959 (more than 3 per cent at constant prices), and scrutiny of the official index showed its compilers to have given undue weight to growth-leaders. Western embassies in Madrid multiply by 2.5 or even 3 official unemployment figures, which concentrate on redundancies among "permanent" workers who may not be dismissed without official sanction: they cover only a small percentage of the "temporary" workers for whom this protection does not exist (and for whom there is no unemployment insurance), and they ignore teenage job-seekers and the rural unemployed. Similarly, foreign observers divide by 3 official totals of the number of "low-cost" housing units completed.

Skirting this statistical minefield, one gets the impression of an economy broadly similar to that of Greece or the southern half of Italy. Of Spain's active population of 11.7 million (total population: 30.1 million) 44 per cent gain their livelihood from agriculture, 24 per cent from industry and 32 per cent in services. In 1960 the national income was $7,450 million, or $248 a head. Agriculture contributed 26.5 per cent of this, industry 30.5 per cent and services 43 per cent—proportions similar to those for Cyprus and southern Italy. The efficiency of the average agricultural worker, measured in terms of wealth produced, is thus 60 per cent of the national average (the corresponding figures for agricultural workers in Greece, Portugal and Turkey are 75, 59 and 51, respectively). But industrial productivity, too, is generally low by northern European standards: in shipbuilding, for example, only 3 gross registered tons of shipping are produced per worker employed, compared with 20 tons in Sweden.

The income of the average Spaniard is one-third of that of the average citizen of north-west Europe, and he spends 55 to 60 per cent of it on food; his expenditure on consumer durables is about 30 per cent of that of the average Englishman or Frenchman; his annual consumption of steel and electrical energy is only 27 per cent of the OEEC average.

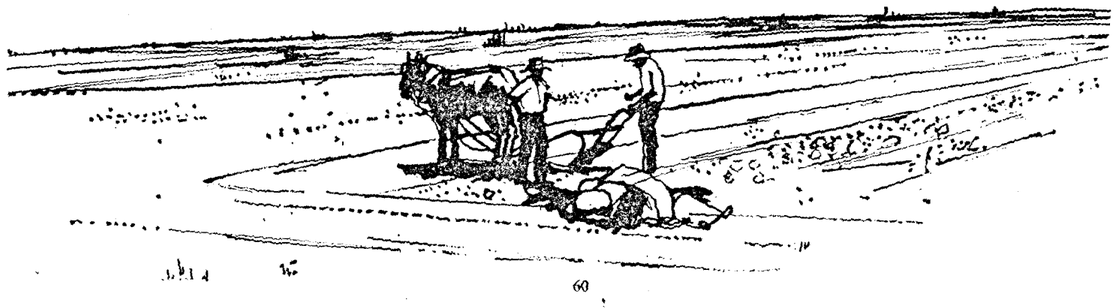
In lumping together the incomes and living-standards of rich and poor, these figures obscure the fact that, except in the north, Spain lacks a substantial middle class, and there is no "average Spaniard" who can be considered the counterpart of the average Englishman or Frenchman. But a useful index of the growth of a middle class is provided by the number of scooters and motor-cycles in use (a scooter costs a middle-grade clerk the equivalent of ten months' salary). In 1950 there were 13,600 scooters and motor-cycles on the roads of Spain; at the end of 1954 there were still only 60,000; but last year there were 650,000.

SPAIN

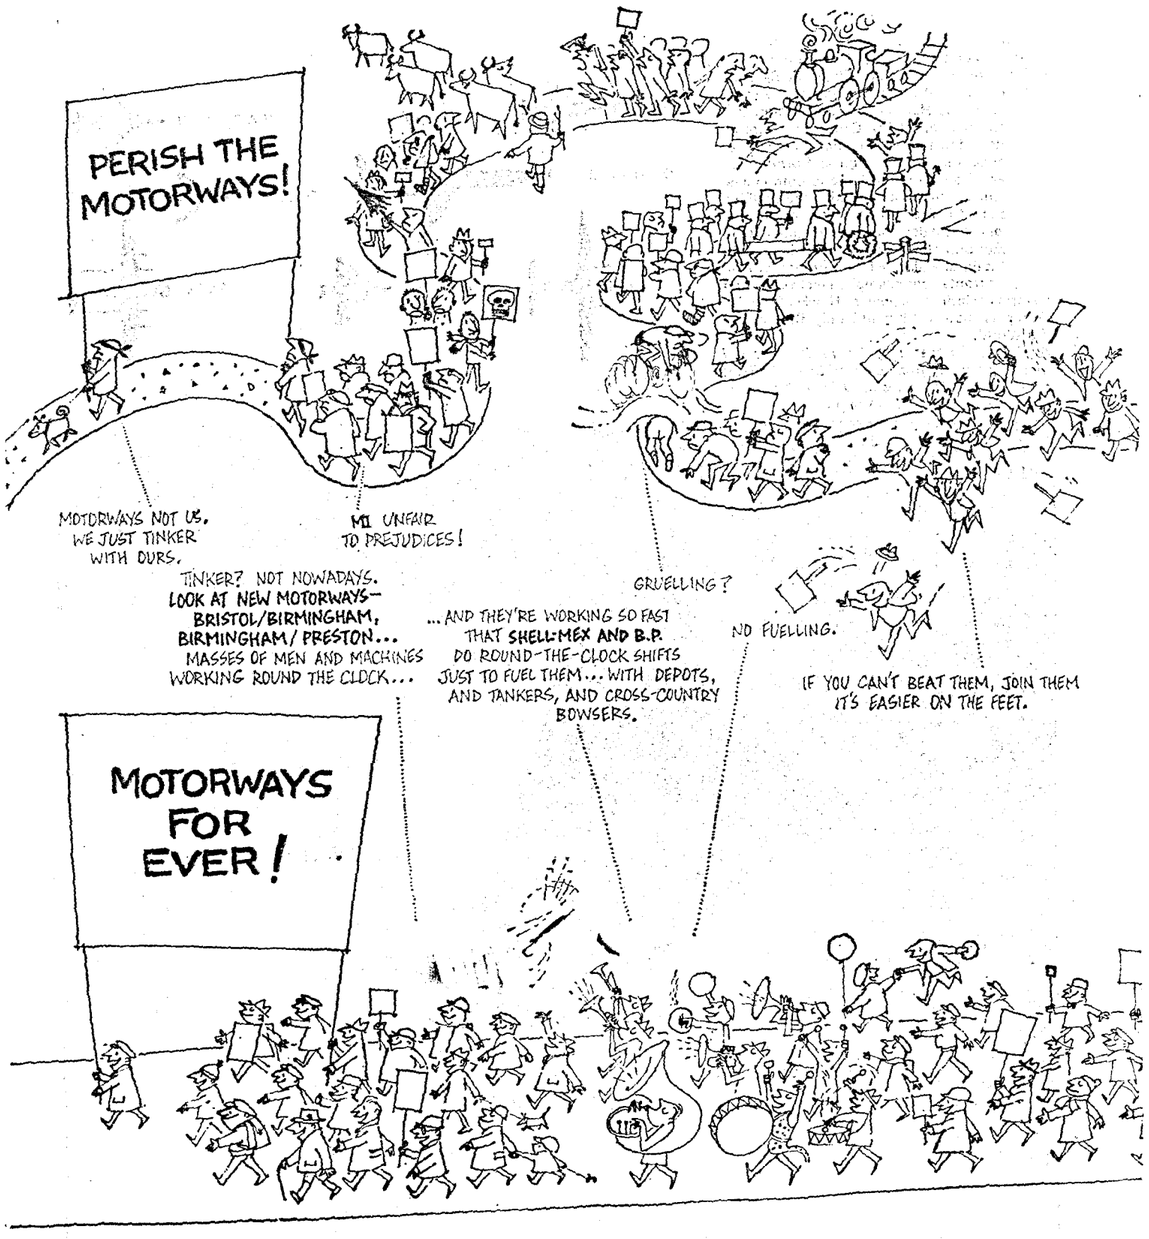
combined with a wage freeze, on the wage and salary earners; for considerable periods, although the national income rose, their real earnings diminished. Public funds were poured into enterprises unable to attract private capital and of only marginal utility. INI —the National Institute for Industry, established to handle government investments ramified through the economy—became a byword for bureaucratic elephantiasis, inefficiency, and "jobs for the boys."

INFLATION, a flight of capital and a severe balance-of-payments crisis forced the government to seek the aid of the OEEC and the International Monetary Fund; and in July, 1959, taking the advice of the two bodies, it adopted a swingeing stabilisation plan that involved devaluation, a credit squeeze, and a ceiling on government spending. Prices were decontrolled; customs and excise duties, railway fares and telephone rates were increased. To cushion the shock, loans were granted by the IMF, the European Monetary Fund, the United States government and American private bankers. Sixty per cent of Spain's imports were freed from quota restrictions, the state stopped allocating raw materials, and multiple exchange rates were abolished. These last three measures eliminated many corrupt practices.

Inflation was fairly speedily brought under control. The fall in domestic demand helped depress imports and stimulate exports —and receipts from exports and tourism flowed increasingly through official channels instead of into the black market which had been fostered by multiple exchange rates. The capital outflow ceased. Spain's gold and dollar reserves soared from $14 million in 1959 to $600 million in February, 1961.



But the social cost was heavy. A hint of the inequality of the sacrifices imposed on different social classes is contained in the fact that between 1958 and 1961 sales of scooters and motor-cycles fell by 60 per cent, while sales of cars for private use rose by 30 per cent. In Madrid 8 per cent of clothing shops (mainly those in the smarter parts of the town) increased their sales in the first half of 1960, while 54 per cent sold considerably less than in the corresponding period of 1959. Industrial unemployment soared to 300,000 (10 per cent of the industrial labour force: the estimate is that of the best-informed western embassy) by the summer of 1960. "Permanent" employees, who normally rely on overtime or a second job to help them maintain a tolerable standard of living, remained at work, but they had to make do with "basic" rates that were less than two-thirds of their normal earnings. Only rigorous security measures, reinforced by the decree of September 21, 1960, warded off disorders in the main towns. Some marginal enterprises, nourished by autarky and inflation, collapsed, as the planners had hoped; but far too many sound firms, whose growth it was important to stimulate, drew in their horns.

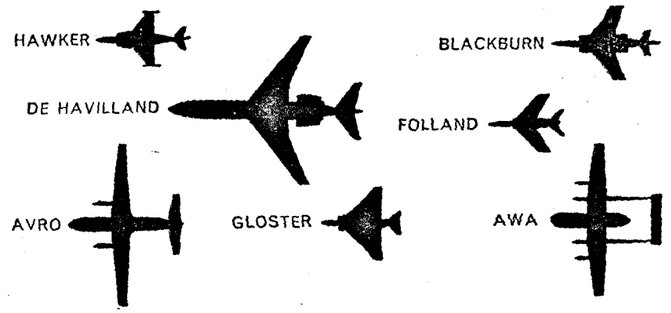


In the opinion of one leading Madrid banker, the authors of the stabilisation plan were very fortunate. They underestimated the severity of their treatment, and were saved from plunging Spain into a major slump—and possibly revolution—only by a remarkable run of good luck: the boom in north-west Europe, and the US steel strike, which helped Spanish exports; Spain's exceptionally good 1959 harvest; the 1959-60 tourist invasion; the high level of hoarded stocks (built up steadily over two years as the peseta sagged) in July, 1959; and the agility displayed by firms in helping one another (for example, in extending credit and even bartering services and materials).

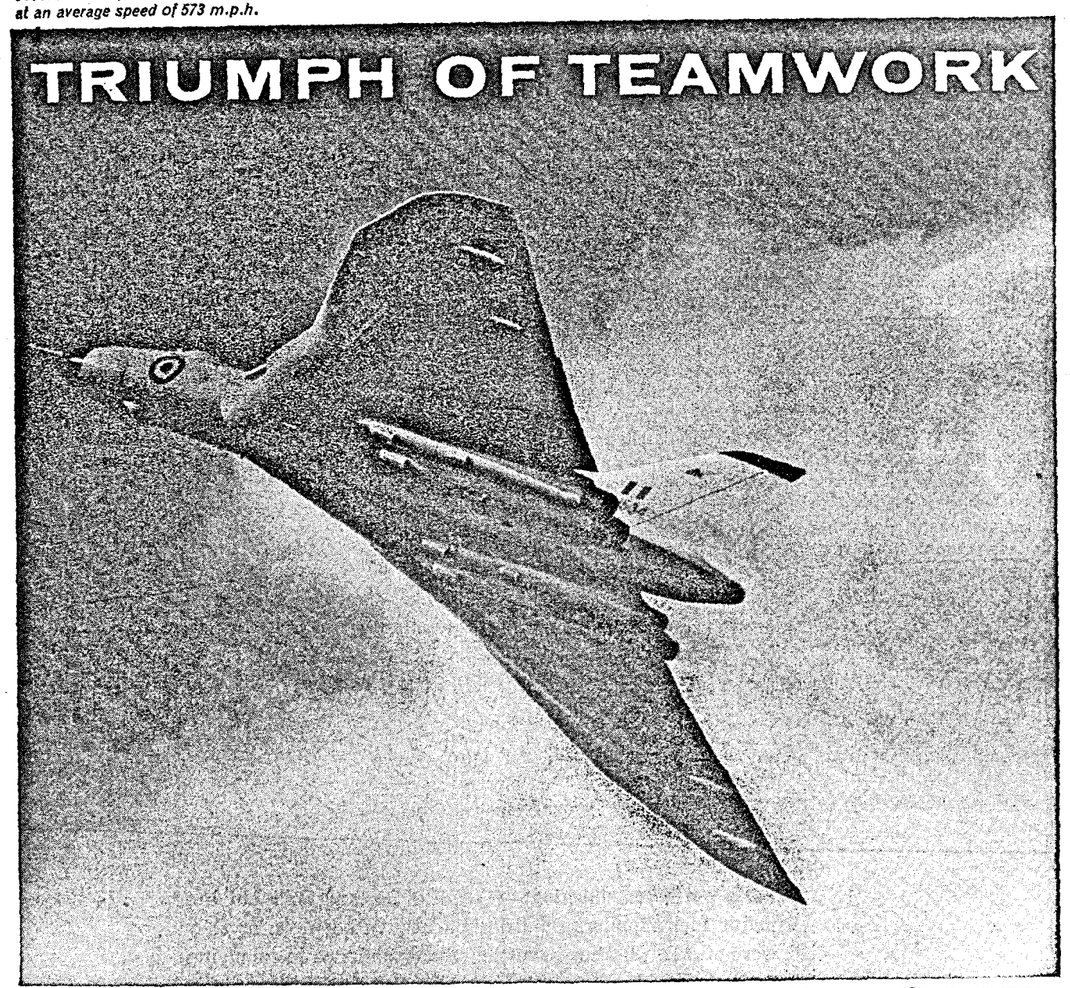
Other critics argue that the results of the stabilisation plan will remain fragile unless there are more profound economic reforms. The reforms urged include the further liberalisation and "globalisation" (freeing from bilateral quotas) of imports, the abolition of the remaining price controls, and the end of the system whereby governmental authorisation must be obtained before new industrial plant is set up or existing plant extended. Foreign investment needs more active encouragement. Legislation against monopolies is required. The banking system needs reform in several directions. Reform of the labour laws is urged, to liberalise the labour market, provide adequate unemployment insurance, increase workers' incentives, and encourage employers to use labour less wastefully. INI should obviously be submitted to normal accounting discipline: although it is allocated investment funds equal to one half of the total capital invested by private industry, it has as yet published only one report, which few economists take seriously. Most urgently, Spain needs a comprehensive development plan.

In fairness it should be said that many of these requirements are being actively studied. A strong World Bank mission which has just completed three months' work in Spain is to indicate the priorities that should be followed in the next stage of development. That the Spanish government should have asked for such a survey to be made is a mark of change.

But labour laws can hardly be liberalised without opening the door to free trade unionism. Anti-monopoly legislation and interference with INI would upset a whole beehive of vested interests great and small. And how can INI be made accountable to the public by a government that does not expose itself to public accountability? In Madrid today both supporters and opponents of the regime are preoccupied with the thought that the liberalisation of economic life is extremely hard to separate from liberalisation in politics.



Facts worth remembering:—(1) Shell-Mex and B.P. Ltd are major fuel suppliers on Britain's new Motorways, as they were on M1. (2) They have the most experience in supplying fuels to road-building machinery on the site, day or night.



SHELL-MEX AND B.P. LTD — WORKING ROUND-THE-CLOCK ON BRITAIN'S MOTORWAYS

With an immense, strange beauty all its own, an Avro Vulcan B Mark II takes the air. The Vulcan bomber is the spearhead of Britain's nuclear deterrent force and one of the many products of the Hawker Siddeley Group. The Aviation Division of the Group is a strong, fully-integrated unit combining the wealth of experience, research, design and production facilities of seven world-famous companies. It produces brilliant aircraft and guided missiles for the Free World's defence. It is the teamwork that exists between member units of Hawker Siddeley Aviation that is helping to keep Britain ahead in aviation progress. And on other fronts—for example, electronics and all forms of industrial power—Hawker Siddeley Group is also serving not only Britain, but the World.

A Vulcan bomber recently made a record non-stop journey from England to Australia. It covered the 11,500 miles in 20 hours 3 minutes at an average speed of 573 m.p.h.

WORLD LEADERS IN AVIATION RESEARCH, DESIGN AND PRODUCTION

THE BUSINESS WORLD

Clearing the Air

WHEN Professor Jack and his colleagues at the Air Transport Licensing Board last week admitted Cunard-Eagle Airways to a one service a day operation between London and New York, they struck a notable blow for more freedom in the air. Nothing perhaps will ever be the same again for nationalised airlines and chosen instruments—that is, if the Minister of Aviation, Mr Thorneycroft, endorses what the board has done. He is in for an unquiet life for the next few months. But it is time that the whole structure of international aviation, and not merely the British part in it, was put under the microscope. The rules and regulations; the treaties and quotas; the cartels, revenue pooling and profit sharing; the secret agreements; the horse-trading and knife-in-the-ribs which complicate civil flying are not apparent to the passenger. It does not necessarily follow that flying would be cheaper, more comfortable or more convenient if they were changed, but clearly it might.

For a new airline to get into business, it must first get a licence. It has to comply with the necessary engineering and safety standards as a matter of course. But it cannot get started without a licence which says where it may fly and how often. The British operating monopolies that BOAC and BEA enjoyed on their trunk routes were ended last year by the new civil aviation Act; any British-owned airline can apply to the Air Transport Licensing Board, as Cunard-Eagle did, for permission to fly on any route in competition with the corporations or with other independent airlines. In this first test case, the board was decisively in favour of more competition. Cunard-Eagle got permission to fly to New York, in competition with BOAC and with other operators; but its application to fly to Canada was rejected on the ground of insufficient traffic between London and Montreal to support a new service.

In fact, the form that competition takes will depend less on the economic criteria that enter into the judgment of Professor Jack and his colleagues than upon the attitude of foreign governments. The Air Transport Licensing Board's licence allows a British airline to carry passengers in and out of this country; it gives no assurance that its aircraft will be able freely to land at the other end. Airports are part of a country's sovereign territory and there is no freedom of peaceful entry to them such as ships have in entering docks. No foreign airline can come into an airport unless the two countries have first negotiated a treaty of reciprocal landing rights. In recent years landing rights have become increasingly contentious. For example, an international airline may want to develop its network, or re-shuffle its schedules to benefit from the improved performance of modern aircraft. To do this, it becomes involved in protracted and often unsuccessful re-negotiation of landing rights to make calls at more cities, or to serve two neighbouring cities, such as London and Paris, on one flight instead of making separate flights to each, or even to step up the number of services to points already served.

IN form, landing rights are negotiated between governments; in fact, national airlines in all countries are active behind the scenes and demand a *quid pro quo* for every "concession" their governments make. Before the United States Civil Aeronautics Board allows Cunard-Eagle to exercise its British licence to fly to New York, it may well ask for similar rights to London for an American airline—this might be for Seaboard and Western, which at present is not allowed to carry passengers on the North Atlantic although it does carry freight. Any country can refuse to admit a second British airline on routes already served by one of the corporations, irrespective of the British licence.

These inter-government agreements on landing rights all include the proviso that the airlines they admit must charge fares approved by both governments; they list the cities between which services may be operated and, in some cases, the share of passenger capacity to be allowed each airline. The working out of the details is usually left to the airlines and to serve these purposes they have evolved some of the tightest arrangements since the mediaeval guilds. That competition could ever take the form of lower fares is revolting and anathema to them. The international airlines operate their own fare-fixing cartel under the International Air Transport Association, with the approval and active connivance of their governments. Fares are worked out at the IATA meetings and then presented to the governments for rubber-stamping; this saves governments the trouble of working out each set of rates between themselves, as they have to do in the case of airlines such as Aeroflot or Icelandic Airways that do not belong to IATA.

As IATA's meetings are now organised, it is at least possible for the more enterprising airlines to bring pressure on the less enterprising and force fare cuts on a reluctant majority. When an IATA conference fails to agree (a single dissentient is enough) the airlines in theory become free to charge what they like. In practice they have never got to the point of experimenting with free rates, simply because deadlock at IATA is

always the signal for governments to give their national airlines a sharp talking to and send them back with orders to find a compromise. This happened as recently as in May when the US Civil Aeronautics Board refused to sanction free rates for air freight and insisted on an agreed fixed tariff.

For air transport operators, IATA performs the role of strict yet beloved nanny. Governments and airlines secretly enjoy its nursery tyranny—and this extends well beyond the fixing of fares into such fields as defining the size of seats, the general standards of service, comfort and meals. The result is that airlines can compete neither in price nor in performance. (For the test of this, it is only necessary to compare the lush but meretricious standards of advertising in which the international airlines commonly indulge.) Heavy fines are imposed on any airline that steps out of line. Some enterprising operators have found a temporary way round these restrictions by hiring out aircraft on charter; this allows them to cut fares by half if nearly all the seats are sold on a chartered flight. But now airlines and governments are trying to check the growth of chartering; they are already ruling that only long-established clubs and associations may charter aircraft (and then not if their membership is too big). This effectively stops a group of people combining for the common purpose of a chartered holiday flight. The Ministry of Aviation is now playing its part in this restrictionism by insisting that all chartered flights must apply to Professor Jack for a special licence, whereas formerly they did not need one. Anyone else in the business can object to the granting of a licence, and can appeal to the Minister if one is granted. This is becoming a formidable and expensive hurdle.

FARES are not the only matter in which air transport is controlled. The tendency of certain countries (not, as yet, the United States) to control the amount of capacity to be put on particular routes can severely restrict the implementation of any decisions reached by the Air Transport Licensing Board. Most countries in Europe, Asia, Africa and Australia impose quotas on carrying capacity. France, to take the nearest example, does not mind how many British airlines fly to Paris so long as the total number of seats they offer does not exceed the quota—which is already taken up by BEA. Suppose the board were to allow an independent airline to operate on the route to Paris, in competition with BEA (and others). Unless the quota could be enlarged, BEA would have to part with some of its present traffic to the independent airline. This pattern could be repeated on other routes where a quota system operates; BEA views this prospect with alarm.

Airlines show remarkable ingenuity in surmounting obstacles and their answer to the quota system has been the traffic pool. This is a bilateral cartel with nothing to commend it except that it allows an "intruder" airline to expand on routes where its growth might otherwise be blocked by local airlines appealing to their governments for protection against foreign competition. A traffic pool is simply an agreement not to compete. The two (sometimes three or four) airlines belonging to a pool lump their combined receipts on a given route and share them out in prearranged proportions. British European Airways has 16 pooling agreements, nearly one for every country it serves. The usual form is for BEA and its partner (usually a smaller and more vulnerable airline) to split their joint revenue on a predetermined basis up to a certain amount, and to keep for themselves any earnings over and above this. Such a pooling agreement has two objects: it guarantees the smaller airline a minimum income even if it carries no traffic; and it gives BEA some incentive to expand traffic above the agreed figure, since the local airline has agreed not to object.

Another type of pool, now increasingly used, provides for the sharing of all revenue with no upper limit. There may be an argument of some respectability for allowing a rapidly growing airline to buy off local opposition to its continued expansion. But what is the justification for a traffic pool that exists only to share out the takings? Some of BEA's later pool agreements take this form. So do those completed by BOAC, with the full blessing of Mr Sandys, in India, Australia and Canada. Anti-trust legislation prevents American airlines from joining pools, and so the North Atlantic remains relatively free of them. But airlines generally like the pooling system. They would rather settle differences privately than involve their governments in direct negotiation and a couple of airlines in a pool are not likely to overlook the fact that they can effectively keep out any competitor. Where they concern routes for which the Air Transport Licensing Board is hearing applications for new services, particulars of these agreements may have to be filed—with what enthusiasm can only be guessed. The point is under legal discussion and could conceivably go to a higher Court. The airlines wonder what will happen to the traffic pools if independent airlines are licensed to fly on the same routes.

But everything points at present to the Ministry encouraging, rather than discouraging, this carving-up of traffic. It had, indeed, been hoped that the corporations and the independent airlines would work out an amicable division of traffic without fighting their applications before Professor Jack and his colleagues. The sort of agreement the Ministry would have favoured appeared last year when traffic to Central Africa was divided between BOAC, the independent British United Airways and the local African airlines. Pressure was brought to bear on the corporations to offer the independents a similar cut on the routes now being contested before the Air Transport Licensing Board, so that the board's decisions would have become formal endorsements of private settlements reached out of court. But this time the corporations would not play. They may come to regret their opposition, but passengers ought to thank them for at least taking this stand against one aspect of the cosy conspiracy to hush up the fact that the air is far from free. They make much of the obvious irritants—passports, landing cards, and customs; but these are nothing compared with the restrictions, the cartels and the quotas that are worked behind the scenes with full Government approval. How can the Ministry of Aviation allow British corporations to take part in traffic pools that, at least by analogy if not in fact in law, would have to run the gauntlet of the Restrictive Practices Court in Britain? The corporations join pools because the Ministry cannot apparently protect their interests abroad. How the independent airlines fare will be the test of the Government's policy which started off with fine statements about more competition in the air, but is riddled with equivocation. If the independents need pool protection they will never be independent in any real sense.

H_2O H_2O Water under Control

Mr Brooke is thinking of rationalising the system of water supply in England and Wales by putting control over flood and drought prevention in the same hands

WHEN the Minister of Housing and Local Government was arranging emergency measures to deal with the havoc created by last year's freak combination of the wettest four months and the driest four months for centuries, he was asked by one anxious MP whether he could not "do something to solve the problem of alternating drought and flood." Mr Brooke replied, somewhat tartly but with his customary accuracy: "I am not God." He has, it now transpires, been hard at work "doing something." And the way he recently unveiled to a select few his ideas on how to achieve better regulation of Britain's natural supply of water led one senior figure in the water industry to inquire, with more than just mock acerbity, whether Mr Brooke's proposals are not somewhere to be found engraven on tablets of stone.

This sourness is pardonable, if not wholly fair. A committee was charged almost two years ago to undertake precisely this task of suggesting improvements in the present arrangements for water conservation but only recently has it got down to writing its report. Mr Brooke, who was keen to bring in a new bill in the 1961-62 session of Parliament, decided to wait no longer. Two months ago he sent an outline of the committee's proposals (or his department's: the parentage is obscure), in what was meant to be a confidential circular, to representative bodies and asked for their comments.

The response of the water supply industry to this circular has been arid. This is not merely because of the somewhat unorthodox way in which Mr Brooke has canvassed the industry before it has been presented with the detailed arguments of the Central Advisory Water Committee. The industry dislikes even more its substance: the proposals, it feels, are too radical. What Mr Brooke plans to do, in a nutshell, is to superimpose upon the present patchwork of partially controlled public and private enterprise in water abstraction a number of new "water conservation authorities," each charged with harnessing the water potential of a river basin or a group of basins and armed with full co-ordinating and executive powers to achieve this object. These bodies would take over the responsibilities of the present river boards for land drainage, flood prevention, water pollution, and the protection of fisheries. They would control all water abstraction within their watersheds, from rivers, streams, canals, and underground boreholes, by a new system of licensing. They would have the power of approval over all new development schemes of existing public supply undertakings. And they would be able to go into the business of water supply themselves, as wholesalers, either by constructing river regulating and other kinds of reservoirs on their own account or by getting an existing public water supplier to undertake them as their agent. They would then sell water to public supply undertakings or to anyone else wanting it.

The water industry suspects, probably rightly, that this marriage between flood and drought prevention is the direct result of last year's widespread flooding. Inundations on that scale occur seldom and complete prevention would mean frighteningly expensive schemes of river regulation. Moreover, it can reasonably be argued that the two tasks are not always compatible. At winter's end the public water supplier likes to have his reservoirs full, ready for the peak demand of spring and summer. But this is just the time when, if the risk of flooding is to be avoided, regulating reservoirs should be almost empty, ready to take off surplus water pouring downstream.

The industry particularly fears the proposed powers of control over abstraction and over new investment for conservation. Energetically used, these controls could lead to the freezing of existing water undertakings in their present state of development. The industry is emphatic on what it has done lately to put its own house in order. Amalgamation has reduced the number of undertakings from more than 1,200 five years ago to about 700 now—though only, it should be added, after sustained prodding from Whitehall. In a few more years, the number could come down, perhaps to 200 or 300. Capital expenditure, too, has been steadily rising, to nearly £40 million a year now. In general, the industry is in no doubt about its ability to meet a two or three per cent a year growth in demand for water from the tap.

BUT only part of the water used in England and Wales (and in Scotland) is drawn from the pipes and taps of the water supply industry. Many industrial firms and farmers, and some householders, abstract their own supplies from underground or passing watercourses. Just as any conflict between the requirements of flood and drought prevention might be more easily resolved if the responsibilities were in a single set of hands, so the competing demands of public undertakings and private abstractors ought to be better adjusted by a single conservation authority in each major watershed. There is no real co-ordination among the various drawers of water, reconciling their needs and resources over a period of years. Only in certain declared conservation areas is the tapping of underground water subjected to control under the 1945 Water Act, and nowhere is surface abstraction supervised. Yet the two are interdependent: tapping one can affect supplies from the other, and water tables in a number of areas have been dropping steadily, even alarmingly. The sharp increase in drawings of surface water to irrigate crops, in East Anglia especially, has now begun seriously to deplete the natural—or desirable minimum—flow of several rivers and streams.

Management of river basins is the linchpin of Mr Brooke's new arrangements, and these need a single overseeing eye. Changes in land drainage, in cultivation, or in building development—many things affect the flow of rainwater to streams and rivers. Conflicting interests—fishing and industrial discharge, navigation and flood regulation—have to be reconciled. More and more of the water that industry and the public will want to use will have to come from rivers. And more and more effluent from sewerage plants and factories will have to be discharged into them. In some watersheds, competition between public water undertakings for future sources of supply has already become serious.

The success of Mr Brooke's proposals would turn on what the new conservation authorities made of themselves and their powers. The need is not for blown-up river boards but for a more compact type of authority. River boards each have 30-40 members, representing a variety of local interests. Mr Brooke is deciding between a wholly nominated board of twelve and one twice as large, half appointed and half elected by local interests. Though there are few precedents (the Metropolitan Police being one) for a nominated body with powers of precept on local authorities, which the conservation authorities would have, the right choice would seem to be the fewer the better. They would need to use a judicious blend of their negative and positive powers of control. Apart from the fiat over new investment schemes, the main negative control will be the issuing of licences. In practice these would be mainly effective only over new drawings of water—existing abstractors would be entitled to a licence as of right. But not entirely so. Conservation authorities would have the power to review existing drawings, subject to appeal to the Minister; unrestricted tapping of underground water would be limited to the maximum taken in any of the three years preceding control; and riparian owners would be entitled as of right to draw from water flowing past their land only to the extent that they actually did so in the preceding three years for the "ordinary use of their households and cattle."

The main positive control would be that of planning and carrying out schemes of regulation and conservation. For this the conservation authorities would need money. And their financial powers are perhaps the most sketchily described of any in the Ministry's circular. The functions taken over from the river boards would be financed as now—from Exchequer grants, precepts on local rates, and the general and special drainage charges provided in the Land Drainage Bill now going through Parliament. As conservation authorities, however, the new bodies are to be self-financing; they will not get Government grants. Their principal source of income will be charges for licences authorising new drawings of water. Occasionally, and only as a special device to build up working capital and, presumably, to service their borrowings, they will also be able to levy a precept of up to a penny on local rates. It would seem that either new abstractions would be soaked to pay for large schemes of river regulation and water conservation, or the new authorities would not be able to do much in their early days. In some parts of the country this might not matter; in others it could, very much.

Mr Brooke has rejected arguments favouring some kind of central water authority charged with administering the water needs of the whole country. Instead, he has gone for a kind of regional control, based on watersheds. His ministry will retain general responsibility for water to Parliament, acting partly as an appellate body and partly as a central co-ordinator—for such tasks as transfers of water between watersheds. The merit of these arrangements will ultimately depend upon the resourcefulness and initiative displayed by the men put in charge of the new conservation authorities. They will have the powers; what is less sure is whether they will have money enough to carry them out.

BUSINESS NOTES

THE EXCHANGES

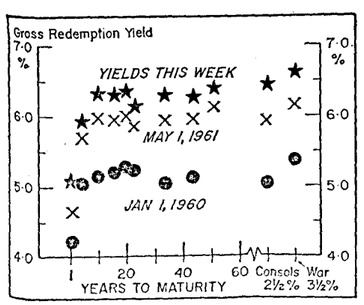
The New Slogan

STERLING regained some ground in the exchange markets at the beginning of the week. The rally, which carried the spot rate on New York up to $2.79 3/16, was almost entirely technical. Some operators had sold too much in their now familiar weekend precautions, and there was more bear covering to prepare for window dressing at the end of the half-year. But the underlying mood has not changed, and by Wednesday afternoon the sellers were back in the market, pulling the rate below $2.79 again. The selling came largely from Germany. But throughout the week sterling has been sold forward from New York, and the forward margins continued to widen even while the spot rate was rising. At mid-week the forward rate on New York steadied at a discount of 2½ cents for three months—equivalent to an annual discount on the spot rate of about 3½ per cent. The glum talk about sterling which a month ago was confined largely to London and the Continent, mainly Germany, is now in general circulation in financial markets everywhere.

The effects of Dr Jacobsson's strong reassurance a fortnight ago have largely worn off—partly because this was followed a week later by the shocks from Canada and South Africa. These are probably not quite what Dr Jacobsson had in mind, and he did refer to "major" financial centres. But exchange dealers do not make these fine distinctions. They felt, once again, a sense of let-down, and see this as confirmation of the new slogan that one must believe nothing and prepare for everything. This week's visit to Washington by Sir Denis Rickett of the Treasury and Mr Maurice Parsons of the Bank of England was described as routine, but that is the last word to apply to the task that faces the few men on whose vision and resolution this summer so much depends.

The Canadian dollar this week, somewhat surprisingly, has been steady at around 3 cents discount on the United States dollar, the rate to which it fell immediately after Mr Fleming announced his intentions ten days ago. This week indeed the Bank of Canada has already had to sell Canadian dollars to stop the discount from narrowing. Operators have been quick to cover short positions, and superimposed on this has been a fair commercial demand, partly for purchases of grain for China. But the volume of business in Canadian dollars has remained small, probably less than one half of its normal level. Dealers still think that the discount may widen to 10 per cent if United States investors begin to fear a slide in the rate. Certainly it is remarkable that operators should have covered their short positions so soon.

In Continental exchange markets, the US dollar has again been in demand at Frankfurt. This movement is believed to be attributable to official operations, but the United States authorities are succeeding in keeping a close cover over their operations.



IN THE MARKETS

Gilt-edged Still Falling

THE slide in gilt-edged went further in the first part of this week, and War Loan dipped to 52¾. This is more than four points below its level immediately after the budget, when Treasury spokesmen and most outside observers were looking forward to better times for gilt-edged; and it is eight points below the low point reached after Bank rate was hoisted to 7 per cent in 1957. How much further can the slide go?

The dominating factor in recent weeks has been the pressure on sterling, and the lack of any clear indication of what the government intends to do about it. The buying of gilt-edged earlier in the year by insurance companies and short-term speculators has dried up almost entirely, and a steady stream of selling by private investors has brought prices down further than most people would have thought possible some time ago. War Loan and the other irredeemable stocks are particularly out of favour, but the losses have extended right through the range. Since the beginning of May they amount to around three to four points on long dated stocks and around two points on the medium dated.

Quite rightly, the authorities have made no attempt to support the market, and Treasury spokesmen are again resisting the old cry that something should be done about War Loan. The one real inequity, the trustee legislation, has now been dealt with. Any argument for special support based on the thesis that present yields reflect not the current balance of supply and demand for capital but the overhang from the great lump of old wartime borrowing is specious and fallacious. There is no shortage of institutional money prepared to come in to buy dated fixed interest stock once the rate of interest is judged to be unduly high, and the gilt-edged market is fundamentally a single entity. The institutions showed themselves interested in yields well short of the current 6⅜-⅝ per cent before the balance of payments again upset their calculations.

When these ever-more attractive yields at last begin to attract, the response in prices could be sharp. The obverse of a market that everyone is getting out of is a strong technical position. But until the prospect for sterling becomes clearer few people would venture to call the turn.

A Technical Rally

HAVING fallen steadily for ten days, industrial equities rallied a little in the middle of this week. A few buyers reappeared but the market remained sensitive and uneasy. Dealers characterised the rally as technical, noting that it occurred after the *Financial Times* ordinary index had fallen just below 320. Spanning the sharp drop in prices immediately after the weekend and the subsequent minor rally, *The Economist* indicator fell 8 points to 383.2. At this level, the shares included in this indicator offer an average yield of 4.8 per cent, one half of one per cent more than was offered at the height of the boom in May when the indicator rose to 427.2.

The sharp fall on Wall Street and the news of strikes at home contributed to the decline in equities after the weekend. But the principal reason why buyers refuse to return in any large numbers to the market is the continuing uncertainty about sterling and the economy. In the decline that has taken place, all industrial groups have been affected and only in the special case of two commodity groups—lead-zinc and tin—have rises occurred in the last three weeks. The groups that have suffered the biggest losses include building material and property issues (where yields were very thin) and steel equities (which have been affected by a series of gloomy interim reports from the steel-makers). Other big falls have occurred in bank shares (reflecting a reaction to the misguided speculation that followed the Midland Bank's rights issue) and food and store issues (which have enjoyed the dubious distinction of being labelled at one and the same time "growth" and "defensive" equities and which as a result offer meagre yields). Even, however, in such unsettled conditions as these it has been possible to place a large block of Woolworth shares from a private account with the institutions just under the current price without disturbing the market.

The uncertain factor is whether the looming crisis over Berlin will take any glitter off the mark. On past experience, it may not—though it has led to some foreign liquidations of German shares.

RAILWAYS

The Year of Guillebaud

THE story of British Railways' finances in the last few years is strewn with "might have beens." Three years ago the unexpected collapse of coal and minerals traffic knocked hopes out of court. Last year it was a massive Government-induced surrender on railway wages and salaries that set back—possibly for many years—expectations of real financial improvement. The final cost of this 8-10 per cent increase, following the Guillebaud report in March, 1960, but back-dated to the beginning of that year, was £33 million. Otherwise, the Transport Commission reports for what is probably the penultimate year of its writ over nationalised transport, the results of the railways and its other undertakings in 1960 were "on the whole a little above expectations."

Had railwaymen's pay remained unchanged, British Railways' working deficit, before interest, would have dropped by £7 million. In fact, the deficit jumped by £26 million to £68 million. After charging £45 million for interest on capital borrowings before 1957 and other central expenses, the "overall" railway deficit recorded in the accounts rose by £28½ million to £112½ million, while the "overall" surplus of all the commission's other businesses rose in total by £1½ million to £11¾ million. In reality—if any figuring of railway insolvency can be said to be real in the present state of limbo before the promised financial reconstruction is put into effect—the total loss on the railways last year was £145 million on a turnover of £479 million. Interest totalling £32½ million on modernisation borrowings and deficit advances since 1957 was transferred to special account, as against £25¾ million in 1959. Moreover, since railway losses are now met out of budget revenue above-the-line, grants paid to meet losses incurred since April, 1960, have not borne interest.

The railways took in more money last year, about £21 million or not quite 5 per cent more than in 1959. Passenger traffic fell but higher fares led to a net increase of £11 million in takings or 8 per cent for the year. With freight traffic the railways' experience was almost directly the opposite. More goods were carried but freight charges were cut—for general merchandise and minerals for the fourth year running—though in total freight earnings rose by a net 2½ per cent. In 1960, the commission records, "a massive effort" was made to boost freight revenue, which provides about two-thirds of total railway income. More express freight services, offering arrival the next day, were put on and the special express services for exports were also stepped up: by the end of 1960 almost 350 inland centres were provided with these overnight train services carrying goods for export direct to ten of the country's major ports. By last December, too, almost 40 per cent of the freight train mileage was run by

rolling stock fitted with vacuum brakes. Container services were again expanded and more special tank cars to carry liquids or solids in bulk, with pressure or gravity discharging devices, were put into service. Comments at the end of a Business Note a fortnight ago on the special freight studies the commission's new chairman has put in hand could be read as suggesting that railway management hitherto had been apathetic towards ways of stimulating and encouraging freight traffic, the basic bread and butter of their business. This is far from the truth, and the words then used were unjustified and are regretted. There is need for some central analysis of freight prospects and opportunities—there always is—but that does not mean that railwaymen have not already displayed energy and resource in endeavouring to win back tonnage from the roads. Last year, in fact, they succeeded.

INTERNATIONAL FINANCE

From Square to Beat

In the fast changing world of international finance this year any topical discussion of immediate issues is in danger of being quickly outdated. Thus two high powered articles in the current issue of *Optima*, the magazine of the Anglo American Corporation of South Africa, seek to allay fears about a devaluation of the dollar. The authors are Sir Leslie Rowan, former chief of overseas finance at the Treasury, and Dr Franz Aschinger of the *Neue Zürcher Zeitung*, and they both point convincingly to the sheer irrelevance of the talk about the dollar and gold. In recent months the exchange markets themselves have seen the light, and the focus of critical attention has moved elsewhere.

But stay. This week has seen a flicker of renewed interest in the gold market, with the London dollar price up from $35.06 to $35.08½ and private demand from the Continent described as "substantial." The cause, pretty clearly, has been a remarkable series of articles syndicated among leading European papers by M. Jacques Rueff, whose name is widely respected in conservative banking circles. For M. Rueff, little has changed since 1929, and any "credit" not based on yellow metal is suspect and dangerous. His analysis bears a distant relation to the realities of credit management in the modern world.

While M. Rueff, in the unlikely company of Professor Triffin, gives dire warnings about the precarious foundations of the gold exchange standard, Sir Leslie Rowan emphasises "the dangers that will arise if countries superimpose on the fixed point of an unchanging gold price the rigidity of immobilising any foreign currency or gold reserves they may acquire (as Germany, for example, has done)"; he finds the answer "only through greater concentration of resources and flexibility in the IMF." But he is cryptic about the means, saying simply that Britain should "support to the full any efforts" to increase the Fund's resources to the necessary extent. He is not in favour of mixing up short-term international credit with long term development aid. Dr. Aschinger for his part discusses the Triffin plan specifically; he finds it preferable to an increase in the price of gold but is not convinced that its advantages outweigh its dangers at the moment.

Meanwhile, the most radical scheme of all is put forward in the current issue of the *Three Banks Review* by Professor J. E. Meade. His scheme, not altogether surprisingly, is based on flexible exchange rates. Professor Meade has always argued that under such a system, exchange speculation can play a positive role. He recognises that this may not always occur in practice, and to ensure a sufficient volume of "well-informed" speculative funds, he would like to turn the whole task of influencing exchange rates over to an international exchange fund operated by IMF, which would take over countries' entire international reserves in exchange for gold certificates. Individual countries would then be free to concentrate on economic expansion, foreign aid and free trade while the international monetary authority concerned itself with foreign exchange rates. It is a neat division. The one practical difficulty might be to find the supermen who would not only, as in the Triffin scheme, make the world's most important investment decisions but foresee the future of exchange rates as well.

HIRE PURCHASE

Bowmaker Shock

The troubles of the hire purchase finance companies are not over. On Thursday evening Bowmaker, in which Lloyds Bank has an interest of 25 per cent, announced that it had passed its interim ordinary dividend. In 1959-60, an interim dividend of 5 per cent was followed by a final of 13 per cent. The directors explained that a special investigation of the affairs of the wholly-owned subsidiary, *Midland Counties* Motor Finance, had disclosed that the provision for bad and doubtful debts made by that company in October last was "substantially inadequate." Midland Counties was acquired by Bowmaker at the end of 1958. The Bowmaker directors believe the setback to be temporary and they have taken steps to strengthen the management of Midland Counties. But they say that the exceptional provisions that will have to be made in its accounts this year, together with the normal provisions made by other companies in the Bowmaker group, may absorb the amounts available for ordinary dividends and in these circumstances consideration of any ordinary payment must await the outcome of the year's results.

BRITISH DRUG HOUSES

The Mead Johnson Plan

On July 17th, at a special meeting called by the directors of British Drug Houses to consider the proposed link between BDH and Mead Johnson of Indiana, shareholders will have an opportunity to demonstrate their independence of mind and judgment. They can then voice their protest by rejecting the directors' resolutions. To do so, the small shareholders will have to band together for there are no big institutional holdings in BDH.

The effect of the BDH proposals is to tie the company to the leading strings of Mead Johnson. The proposals are apparently designed to strengthen the trading and research agreements between the two companies; to pump £5 million of new money into BDH from Mead Johnson in the next five years; to reinforce the management by the appointment of four of Mead Johnson's directors to the BDH board; and to give Mead Johnson 35 per cent of the BDH votes. The scheme, which is approved by the two companies' financial advisers, is complicated. Mead Johnson will immediately subscribe at 25s. per share for 390,000 "B" shares, each carrying ten votes to the ordinary share's one. Up to June 30, 1966, Mead Johnson can subscribe at par for £4,563,000 of 5 per cent unsecured notes, convertible at the end of 1964, 1965, or 1966 into ordinary shares at a price corresponding to 26s. per share. As the notes are converted, a proportion of the "B" shares will be converted into ordinary shares until the "B" units are finally extinguished. From the outset, Mead Johnson would have 35 per cent of the votes but, apart from the £487,500 it subscribes initially in "B" shares, it can delay putting its money at full equity risk until the end of 1966. It has agreed to subscribe £1,600,000 in notes immediately but the remaining £2,963,000 may wait at BDH's request until the middle of 1966.

Shareholders to Decide

Mead Johnson, presumably, wants to strengthen its foothold in the British and Commonwealth pharmaceutical market and from its point of view this scheme, giving it an important say in the management of BDH, is valuable. But what does it do for BDH? It provides money at a comparatively cheap rate to repay £1,500,000 in bank loans and for future development; by bringing in new blood, it may strengthen the board of directors; and it widens the range of products that BDH can sell and extends its markets. But, as a result, the present ordinary shareholders may find themselves after 1966 with only 65 per cent of the equity in the company's growth. Nothing is very clear about the developments on which the new money will be spent or whether the prime beneficiaries of any new discoveries or developments will

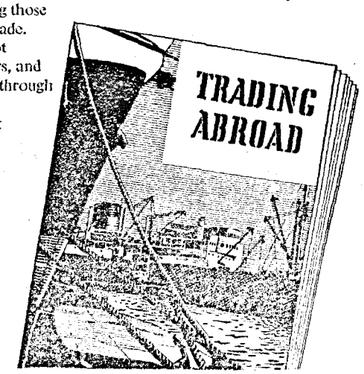
Expert aid · for **EXPORT** trade



The entire organization of the Midland Bank is available to give the fullest co-operation in the Government's drive for further exports. At the Overseas Branch in London the **FOREIGN TRADE PROMOTION DEPARTMENT** is equipped to give practical assistance to businessmen making new efforts to extend their export trade.

Some of the services which the Department is happy to provide are:

1. Information on markets and conditions of trading in countries overseas;
2. Advice on methods of payment, foreign exchange, credit insurance, etc.;
3. Obtaining the names of buyers or agents abroad interested in British exports;
4. Personal visits to manufacturers and traders for discussions on export trade problems.

In addition the Bank has its own team of specialists to assist British businessmen on questions arising from the Common Market and European Free Trade Association.

A further step has been the preparation of a revised edition of a booklet called **TRADING ABROAD.** It deals with many of the problems confronting those engaged in foreign trade. These services are not confined to customers, and are readily available through any of the many branches of the Bank throughout England and Wales.

be BDH or Mead Johnson. The scheme, moreover, leaves the present directors comfortably in office and could effectively block the chance of another company making an offer for the whole of BDH's ordinary capital.

Shareholders are being asked in effect to accept the present directors without future question and to hope that Mead Johnson will put enough life into BDH's profits to provide shareholders with a higher return. Not surprisingly, some of them would prefer a straightforward offer in cash or shares for their holdings. The affairs of BDH have not been beyond criticism. At the time of the Fisons' bid, *The Economist* questioned the advisability of introducing an announcement about an oral contraceptive into a take-over struggle. In answering this criticism, the chairman, Mr Geoffrey Eley, re-emphasised that results from clinical trials would not be available until the middle of this year. In his statement with the annual accounts, issued in May, he said ". . . sufficient clinical evidence to support a decision to market is unlikely to accumulate before the end of the year. We had hoped for rather speedier results but there is nothing that we can do to expedite the trials." This strengthened the impression that it was inadvisable to introduce news of the discovery at the particular moment that the BDH directors chose to do so. Though this may be past history, it has a bearing on the decision that BDH shareholders now have to take. If they are not satisfied with the management, they can force the issue.

OVERSEAS TRADE

Filling the Gap

THE full trade returns for May put a slightly less gloomy complexion on the sudden widening of the trade gap that shocked the City a fortnight ago. The Board of Trade suggests that imports which would have been landed in April but for the dock strike probably slipped into the May figures and therefore helped to cause the apparent interruption of the steady fall in seasonally adjusted imports. But this line of argument was not given such emphasis by the Board of Trade last month when the April figures gave the impression that an exceptionally large reduction in imports had been achieved. It is also suggested in defence of the poor export performance in May that goods that missed the boat because of the strike probably waited until after the end of the month for shipment.

The fact that £15 million of the £24 million seasonally adjusted reduction in exports last month was in exports to the sterling area is slightly reassuring. In the first place it was expected because of the retrenchment forced upon many of the Commonwealth countries, and does not therefore necessarily reflect any weakening in the competitiveness of Britain's exports. Since payment would have been made with sterling balances, it therefore has no implications for sterling, unless the Commonwealth countries import more foreign goods instead. Exports from the United Kingdom fell by £40 million between the three months to February and the three months to May. Of this, all but £5 million was attributable to a fall in exports to the overseas sterling area.

Despite the rise of £10 million to £365 million in seasonally adjusted imports in May, imports in the last three months were still 5½ per cent lower than in the previous three months. In the same period, exports were 4½ per cent lower, but the fall in imports was enough to reduce the crude trade gap between imports valued cif and exports valued fob from a rate of £66 million to £56 million a month.

BUSINESS EXPENSES

The Clubman's Subscription

THE banks are not amused that the Commissioners of Inland Revenue have been fighting a case on business expenses relating to a bank manager's club subscription. The Court of Appeal this week reaffirmed the decision of Mr Justice Danckwerts last November that the subscription was not necessarily incurred in the performance of the manager's duties. Some remarks of the judges *obiter* seem to have wounded bankers' susceptibilities because, they say very reasonably, the allowances made for expenses to bank officials have been hardly more generous than the pittances that civil servants get. But the manager was a victim of the long-standing difference between the treatment of expenses under Schedule D and Schedule E—he being assessed under the latter Schedule which carries the additional criterion for the allowance of expenses in computing taxable income of "necessarily," in addition to the "wholly and exclusively" condition for allowable expenses for assessment under Schedule D.

All this has long been recognised as inequitable and anomalous; the Master of the Rolls is not the first judge to hope that the Revenue authorities will "some day" do something about it. The Royal Commission's report in 1955 suggested the criterion "all expenses reasonably incurred for the appropriate performance of the duties of the office or employment." In the course of discussing the different treatment of expenses under the two schedules the report declared that there was no good reason for treating Schedule E expenses less generously than Schedule D expenses except to the limited extent that some difference of treatment was inherent in the two kinds of income.

But nothing has been done on this point, and when it comes up in Revenue cases there is bound to be a conflict between what the taxpayer regards as "necessary" and what the Commissioners would hold to be so. In this week's case the judicial comments ranged widely to the question of whether a bank manager who did not belong to a suitable club was capable of doing his job properly. The Master of the Rolls scented "some element of social snobbery." Lord Justice Harman asked "Do the bank's shareholders know about this? Are the shareholders told at the end of the year that they are spending so many thousands of pounds in this way?" Some bank shareholders might ask pointed questions if the banks did not spend money in this way. This suggests some element of "necessity" in the bank's mind.

If a bank reimburses a manager's club subscription that is a decision for the bank and its shareholders. It does not follow that the Revenue is bound under the present rules to accept the expenditure as "necessary" merely because the bank has decided to do so. In past cases there has been a fair degree of judicial sympathy with those to whom the strict provisions of Rule 9, which govern this matter, apply. But that has not prevented the strictest interpretation of the rule in the courts, and this has fallen severely on salaried incomes as distinct from profit incomes. The Royal Commission showed up the difficulties of defining the obligations on which the rule depends and a redefinition is long overdue.

POST OFFICE

Redeveloping the Sites

THE Post Office is losing no time in using its new freedom from detailed Treasury control. Mr Reginald Bevins, the Postmaster-General, announced in the Commons on Wednesday that he has now received reports from outside consultants on possibilities of redeveloping Post Office sites, and that these "confirm my view that the potential values that might be realised through more intensive development are considerable." Mr Bevins now plans to go ahead over a broad front. The degree of commercial development will be incidental on the smaller sites, but it will be a major element in redevelopment of valuable sites in the centre of large cities. Mr Bevins's "personal estimate" is that at least 200 postal buildings ought to be redeveloped in the next five years or so—and he expects a return on capital of 15 per cent. The Post Office is setting an example that could profitably be followed by a number of major institutions in both the public and private sector—not least the banks, which the Post Office may soon be confronting with stiffer competition.

BANK CREDIT

Still Advancing

FOR eighteen months now the monetary authorities, outside observers and bankers themselves have been waiting for

advances to stop rising. So far each indication of a check has proved false. Thus the relatively small increase of £25 million in April-May has been followed by an unusually large increase of £51 million in May-June. The bankers point to a number of special influence in the latest period, to June 20th. It covered five weeks instead of the usual four, and the late fall of the make-up day meant that advances at some banks were already swollen by the debiting of half-yearly interest, which in 1960 was reflected wholly in the July figures. Even after the large June increase, moreover, the increase in the first six months of the year as a whole is notably below that of a year before, at £268 million against £340 million. But in face of the liquidity pressures

on the banks on the one hand and the slackening in industry's stockbuilding on the other, a much bigger check on advances was expected. The fact that it has not occurred is another sign of the strength of the underlying demand for bank finance, which nowadays is geared to fixed investment as well as floating capital.

Liquidity pressures grew no worse in June, and with a rise of £80 million in liquid assets to set against that of £91 million in gross deposits the liquidity ratio improved from 31.5 to 32.2 per cent. The drying up of demand in the gilt-edged market has checked the raising of government finance in the long-term market, and bank liquidity benefits accordingly. But Barclays, with a May liquidity ratio at the bare 30.0 per cent, still felt obliged to sell a further £20 million of investments in June. This brought its ratio of investments to deposits to 15.1 per cent, below the ratios at the Midland and Lloyds but still well above the 11½ per cent now shown by the District and the National Provincial.

Shift in Lending

THE latest classification of bank advances shows some shift in the direction of lending: the continuing expansion is no longer so heavily concentrated on industrial borrowers. The credit restrictions imposed early in 1960 had only a modest effect in checking the rise in total advances. In the twelve months to mid-February these rose by £474 million, following the rise of £777 million in 1959-60; but three-quarters of the more recent increase was on account of industry and trade. The personal and professional group, hire purchase and other financial borrowers were finding it more difficult to increase their bank borrowing, though the banks were finding it equally difficult to cut it down. In the three months to mid-May, when total advances rose by

BRITISH BANKERS' ASSOCIATION
(£ million)

	3 mths. to May, 1960	3 mths. to May, 1961	12 mths. to May, 1961	Total at May, 1961

Hire purchase	+ 22	+ 13	− 2	147
Retail trade	+ 31	+ 15	+ 15	384
Industry & oth. trade	+ 99	+101	+371	2,103
"Other financial"	+ 22	+ 18	+ 15	337
Other groups	− 3	+ 7	+ 4	209
Changes in total	+213	+169	+429	3,886

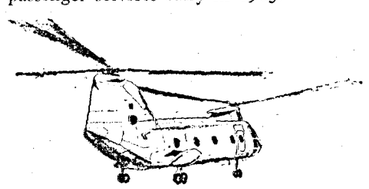
£169 million, these advances have gone ahead again. The personal and professional group secured a further £14 million, and is £25 million up on the year; hire purchase, with a rise of £13 million, almost offset the three preceding reductions; and, perhaps most surprising of all, the big "other financial" group, which was believed to be one of the first objects of the banks' closer scrutiny, enjoyed a second quarterly increase, of £18 million, making a rise of £15 million on the year.

Industry and trade, excluding retail trade, increased its advances by £101 million in the three months to mid-May. A particularly large increase was shown by chemicals, from £44½ million to £65 million, and by the textile industries other than cotton. Advances to the engineering industries rose further, to £477 million—a rise of over 40 per cent on the year. But advances to iron and steel trades, which had also been rising strongly, were marginally reduced.

RESTRICTIVE PRACTICES

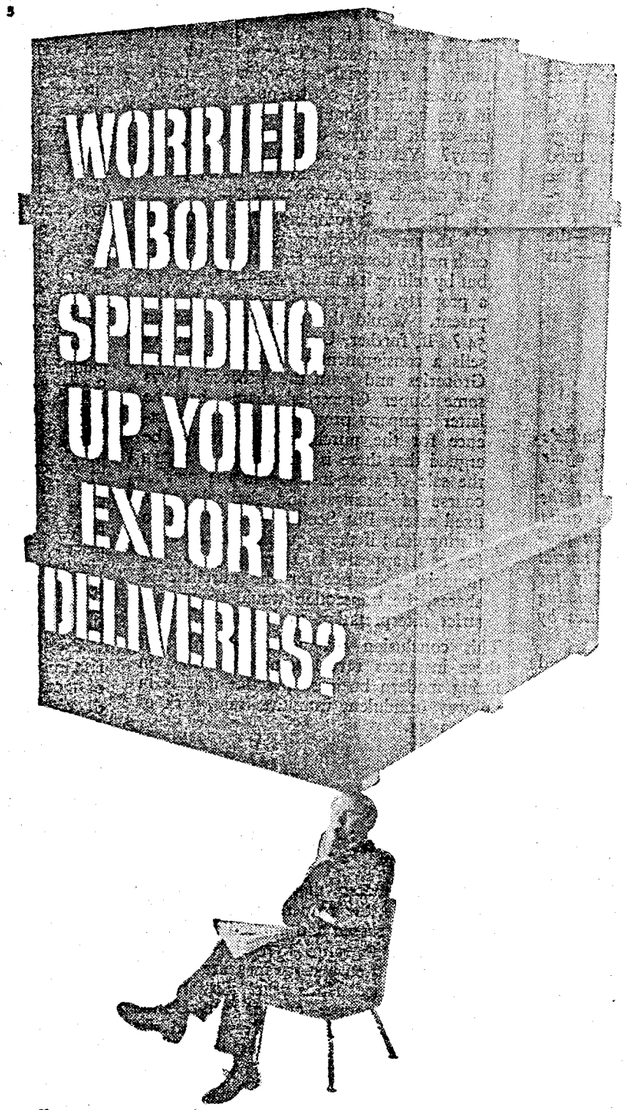
Linoleum Loses

UNLIKE the Monopolies Commission which had to come to its own view of "the public interest," the Restrictive Practices Court has been provided with the presumption that all agreements brought before it are against the public interest unless it finds that they satisfy one of seven special considerations. The system of common minimum prices, discounts, and rebates operated by the Linoleum Manufacturers' Association was accepted by the Monopolies Commission five years ago, subject to certain modifications which the association subsequently adopted where "it considered them practicable." But the amended scheme failed last week to receive the endorsement of the Court (one of whose members, Mr W. L. Heywood, happened also to be a member of the commission five years ago).



The association's case followed the now familiar pattern of claiming that abolition would lead to a price war, and thus to a debasement of quality (something that the ordinary customer could not be expected to notice on purchasing linoleum), a permanent run down of retail stocks, high prices at times of heavy demand, and a reduction of exports. The seven members of the association, sharing over four-fifths of the industry's production, had been keenly competitive on everything but price, the Court held. If they had made unduly high profits or had become inefficient, Mr Justice Russell commented, the case would have not reached a full hearing.

But fears of a price war, the Court decided, were exaggerated at the present time of buoyant demand and in view of the further fact that three of the nine firms in this well-established industry were "very



HELICOPTERS

BEA's Choice

BRITISH EUROPEAN AIRWAYS is trying to persuade Mr Thorneycroft to back a request for dollars to buy three American helicopters. The chances look good. The Vertol 107 (the company was recently bought by Boeing) may do for the helicopter what the DC 3 did for the aeroplane—turn it into a commercially viable means of transport. It is certainly the first helicopter to hold any promise of paying its way; it flies at about 150 mph with two engines—this permits cross-Channel operation—and 25 passengers. BEA and the Belgian airline, Sabena, want to start a joint helicopter service between London, Brussels and Paris and would need perhaps six helicopters between them, costing about £250,000 each; they hope that Air France will join the experiment. But even if Air France were to stay out, this would not prevent BEA from running 90-minute flights from the Battersea helicopter station to the grass field that does duty at Paris for a helicopter terminal, against a city-centre to city-centre journey of close on four hours by ordinary aircraft. The London-Brussels flight would take roughly the same time. Turbine engines for the helicopters are built under licence in this country by de Havilland, and if Mr Thorneycroft gives permission, delivery could be made towards the end of next year. BEA could then start passenger services early in 1963.

PROBLEM No. 5

GET E.C.G.D. STOCKHOLDING COVER

When you hold stocks overseas you can deliver the goods as fast as the local man. And with E.C.G.D. cover to protect you, it is as safe as holding stocks in Britain. War, riots, seizure by a foreign government—even cancellation of authority to ship unsold goods to another market—E.C.G.D. takes care of all these and a lot of other risks as well.

EXPORT WITH AN EASY MIND

large." It held, too, that price competition in the home market would not disrupt the export convention the association had with leading continental linoleum makers. The Court can decide to uphold a trade agreement if its removal would lead to a "substantial" reduction in export earnings or volume, and many associations have tried to pass through this gateway. Although the Court has appeared to look less unfavourably upon collaboration between firms where exports are concerned, only one—the Water-Tube Boilermakers Association—has so far succeeded.

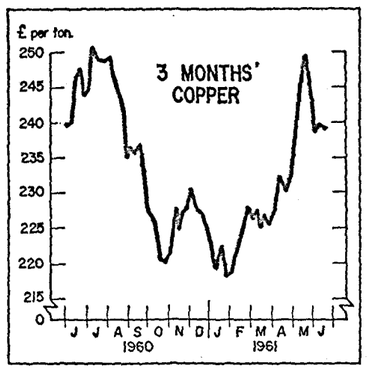
SECTION 54

Difficulties of Interpretation

A note last week on Mr Neville Faulks's official report on the Jasper affair recorded the difficulties of the banks in a strict interpretation of Section 54 of the Companies Act and the effect on quite legitimate transactions. This section prohibits a company from providing financial assistance either directly or indirectly for the purchase of its own shares. A banking correspondent illustrates the difficulties by examples:

1. A company of modest size is owned by two shareholder-directors, one of whom, anxious to retire, is willing to sell his shares to his colleague at a bargain price. This colleague, having no ready money, asks the bank to grant the company an overdraft so that he can borrow from the company to pay for the shares. The bank would turn this down as a clear breach of Section 54. But a way round the difficulty might then be found. The bank could grant overdraft facilities to the company, which, having big free reserves, could then make a cash distribution to its two shareholders. The retiring shareholder, having thus received say the equivalent in cash from this distribution of half his asking price, then obtains the other half by selling his shares at a reduced price to his colleague, who uses his portion of the cash distribution to complete the purchase. In this case Section 54 is probably not infringed; but Mr Faulks would seem to hold that the bank has "connived" at a circumvention of the law. Yet no one has been defrauded; the company's creditors are no worse off under either scheme; and the shareholders have both agreed to the scheme. On what grounds, then, should the bank turn the business down?

2. A public company has a running overdraft limit which is not fully used. Within this limit, it purchases for cash the share capital of another company, which has a substantial credit balance with the same bank. After acquiring the shares, the public company promptly borrows the credit balance of its new subsidiary and reduces its own overdraft. Is this a breach of Section 54? If it is not, what is the difference between such an action and the granting by the bank of a special temporary overdraft to cover the cost of the purchase which it was agreed should be repaid out of the credit balance of the acquired company? Yet the second action, involving a prior agreement with the bank, probably offends against Section 54.



3. The public company, after acquiring the new subsidiary, might obtain the cash not by borrowing from the subsidiary but by selling it a fixed asset—a factory or a property, for example—owned by the parent. Would this circumvent Section 54? If, further, United Cheesemongers sells a consignment of cheese to Super Groceries and with the proceeds buys some Super Groceries' shares, has the latter company provided financial assistance for the purchase? It might be argued that there is a difference between the sale of stock-in-trade in the normal course of business and the sale of a fixed asset. But Section 54 does not so distinguish; if the acquisition of an asset for cash appears in some way to give financial assistance for the purchase of shares, the transaction would seem on a strict interpretation to be unlawful.

This conclusion may seem absurd, but these instances reveal some difficulties in fitting modern business practice that is in no way fraudulent into the framework of Section 54.

COPPER

Fair for All

With a success that eludes finer calculations, the 10 per cent cuts as individually interpreted and applied by the big copper mining groups to their operations seem to have been just the measure of relief that copper needed this year. So far, consumption of copper outside the United States has shown the more restrained rise expected after the enormous increase in 1960. But at the start of the year production cuts still left big tonnages for a recovery in American consumption to absorb, and with surprising speed, American consumption has been doing so. In each month since December daily deliveries of refined copper to fabricators have increased; in the first five months of 1961 average deliveries were higher than in any full year since 1956. In May more copper was used in the products leaving fabricators' factories than in any postwar month.

In January copper dropped slightly below £220 a ton, but last month the forward price jumped to almost £250 a ton. With a vast expansion behind them, but some more development ahead, copper producers are chary of high prices; copper is particularly vulnerable to competition from other materials. Consumption in the United States has never fully regained its level in 1956 when copper climbed to more than £430 a ton. The limits within which producers like to see the price of copper are therefore narrow: some say a price of £240 a ton is fair for all, although if all consumers were equally convinced of its fairness, the perennial talks about stabilising copper prices would presumably move more convincingly towards a conclusion. But since 1958 copper has been comparatively well behaved, with prices keeping roughly within the range of £220 to £280 a ton.

Producers can thank expectations of a rise in copper prices—two separate increases of 1 cent a lb were made by American producers in May—and anticipation of strikes for copper's rapid rehabilitation this year. Though American producers are apparently sold out for June, some of the steam seems to have gone out of the demand for copper, and prices have settled at a convenient level. Dealers who handle a small proportion of copper traded in America have been selling at a slight discount below the producers' price of 31 cents a lb. Japanese purchases of scrap and ore have been sharply reduced. In London, after a dip last week which coincided with sales of copper to finance speculation in tin, spot copper recovered to £234½ a ton. The prospects from this point on are finely balanced: a political strike in Rhodesia is not impossible and strikes over wages at the Kennecott plants in America and at Anaconda's Potrerillos and El Salvador mines are still threatened. But since they restricted output, producers presumably have some unused capacity in reserve.

WOOL

Little Wavering

Although wool prices passed their peak for a dismal season early in May, the subsequent decline has been only of the order of 3 per cent to 95d. a lb for merino 64's. Considering 64's never got beyond 84d. a lb. in the first half of the season, producers ought to be thankful, but small growers in Australia are probably distracted

by the prospect that the inquiry into Australian marketing methods might hatch a scheme that will prevent such inconvenient dips in the first place. Australia's three-man marketing committee arrived in Bradford this week to hear the views of the wool textile industry. The British industry, and all other manufacturers represented by the International Wool Textile Organisation, are flatly opposed to any modification of the present free marketing of wool and are unlikely to accept any changes with good grace. The strong recovery in prices has helped to plug the hole made in Australia's overseas earnings by the prolonged decline in 1960. The gap between this season's wool cheque and last season's narrowed to £A44 million by the end of May and should obviously contract further in June.

Dominion wool prices are currently a little too firm for topmakers in Bradford who in recent weeks have obtained much less than the 111d. a lb which merino 64's tops fetched at one point last month from spinners. Though spinners, in common with the rest of the industry, enjoyed a higher level of activity in April, new orders have been harder to come by and this has been reflected in a pronounced weakening in demand for wool tops. Exports of tops, however, recovered in the first quarter of 1961; world trade in tops rose by 8 per cent, but Britain's exports increased by a fifth between the last quarter of 1960 and the first three months of this year. They were still 6 per cent lower than in the same period of 1960.

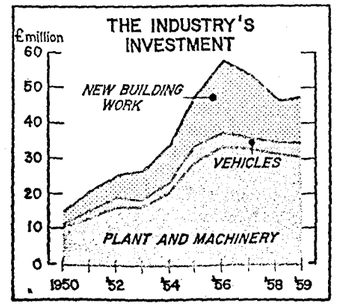
Britain imported about 14 per cent more wool in the first four months of the year, and stocks of raw wool held at the end of April increased to 201 million lbs. It is on the low stocks held by consumers that producers' hopes for firm prices up to the end of this year are based. Consumers normally increase their stocks to help to tide them over from the close of one season to the start of the next, though the extention of the Australian selling season has halved the two-month interval that was normal up to 1959. But consumption is still lagging, despite the improvement in April which might not last. British manufacturers used 6 per cent less wool in the first four months of the year. Consumption in the United States in the first quarter of 1961 was 17 per cent less than a year earlier, according to figures published by the Commonwealth Economic Committee.

INSURANCE

Peaks and Trends

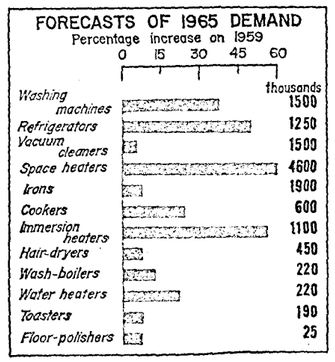
If 1959 was the driest year for two hundred years, 1960 was certainly the wettest this century but in both years insurers were badly hit by exceptionally bad fire wastage of around £44 million a year. This year should show whether these were two freak years or whether fire wastage in this country has permanently risen. In order

Continued on page 78

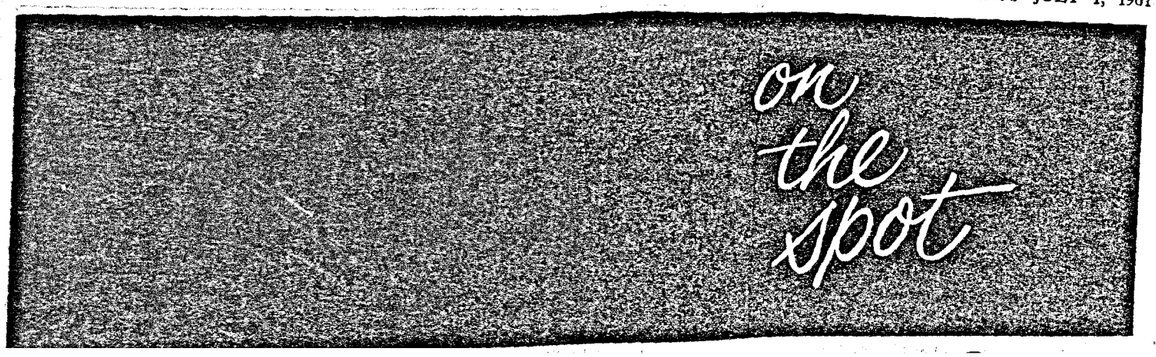


ELECTRICAL MANUFACTURING

Steward's Account



The report that Mr Stanley F. Steward, director of the British Electrical and Allied Manufacturers' Association, gave to the British Electrical Power Convention on the state of his members' collective health raised most of the questions that the industry has been privately discussing since the abortive merger talks between the General Electric Company and English Electric last summer. Crudely put, the gist of those questions is: "Who drops out?" As Mr Steward explained, the pace of capital investment in the electrical industry has been outstripping earnings which "have not risen to anything like the extent of the capital needed to generate them." This tale of falling return on capital has been spelled out in detail in the accounts of each big electrical group.



It has been accompanied by a sharp rise in spending on research. Mr Steward calculates that this doubled between 1955 and 1958 from £33 million to £65 million a year; if research done by the Generating Board, the Electricity Council and the Atomic Energy Authority is added, he estimates, the total bill would be between £80 million and £90 million a year. Electrical plant makers have been taking on two dissociated programmes of development, one for the nuclear power programme and the other for advances in thermal generating. The glamour of nuclear power has kept these latter developments out of the public eye, but the building of generating sets up to 500 megawatts working under critical steam conditions is hardly less of a technical revolution.

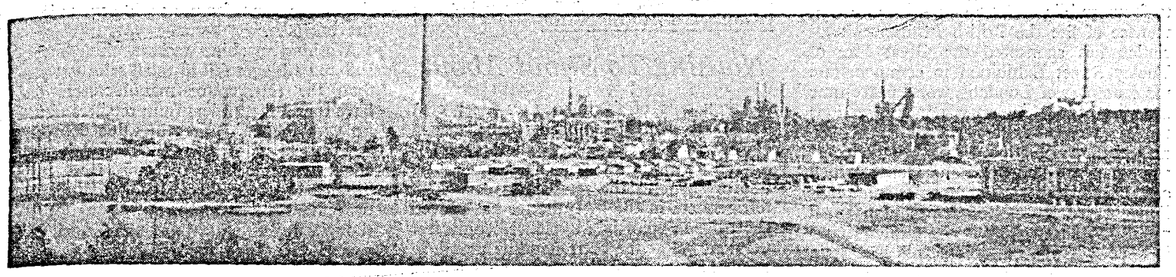
Big generating sets and big nuclear power stations mean big orders but fewer of them. Here is one source of the industry's present troubles. Four big electrical groups and three nuclear consortiums are competing for the work; it is said in the industry that there is enough for two. Certainly the recent record compels the question whether the rewards at the heavy end of the electrical business—nuclear and thermal—justify the high development cost to stay in the business. Such equipment is not a staple export—the industry's export trade is now running at nearly £300 million a year and its focal point gradually shifting from Commonwealth countries to Western Europe—nor is it specially profitable. Better profits are made, as Mr Steward hinted, in the electronics and domestic ends of the industry's business where development costs are modest.

So it is from the household market that electrical manufacturers get some stability to embark on the chancier business of making big plant. Sales of some appliances, like irons and vacuum cleaners, have reached saturation and the industry must rely on replacement orders; others, like washing machines and refrigerators, have some way to go before saturation. But Mr Steward's most interesting comments were on cookers and space heaters. Is it possible, reading between the lines of his paper, to detect some criticism of the offhand way in which the industry has set about selling such appliances? If a fraction of the development effort that goes into the industry's other products were applied to re-engineering some of the crude devices sold to the housewife, ways might be opened up to improve their efficiency, lower their cost and make headway against competing forms of cooking and space heating. It might, for example, be an education for British manufacturers to look at the layout and finish of some of the American equipment—particularly the cheaper models—on sale at the newly opened American trade centre in London, where they might learn that design is more than a question of fancy colours. This small exhibit contains unfortunately, little in the way of heating appliances. The chart shows Mr Steward's ideas of what a "special and thorough study" could do to sales in five years.

Europe's first C-E-I-R Centre now offers computer services in London

WHAT *precisely is a C-E-I-R Centre?* In brief, it is the 'operations room' for the control of any and every technique of scientific commercial and industrial management. In the United States there is already a nation-wide network of C-E-I-R Centres, equipped with the most advanced available computing systems.

WHO *are the people who run the Centre?* C-E-I-R (U.K.) Limited, the British subsidiary of the largest independent commercial computer services organization in the world. The organization has a staff of over 400 mathematicians, economists, scientists, computer specialists, and programmers.



WHY *is a London C-E-I-R Centre necessary?* Because C-E-I-R's list of clients, which includes government departments and many famous commercial corporations, has extended rapidly in Britain. On-the-spot services were urgently needed—and now here they are, with some of the world's most advanced computer facilities ready to hand.

WHEN *does a commercial or public service organization need the help of a C-E-I-R Centre?* Whenever it has any kind of management, stock-control, economic, scientific, or development problem (however large or small) that can be solved by up-to-date logical or mathematical methods.

HOW *much do C-E-I-R's services cost?* That depends, of course, upon the nature of the problem—but it is safe to say that C-E-I-R's charges, project for project, are the lowest in Europe. And that goes for the straight hire of computer time here in London as well.

WHERE *do you find out more about C-E-I-R?* By ringing up either the Main Office of C-E-I-R (U.K.) Ltd. at the number shown below, or the new C-E-I-R Centre itself. The address is: 58 NEWMAN STREET, LONDON, W.1. Telephone: LANgham 8658.

C-E-I-R (U.K.) LTD Main Office: 84 Kingsway, London, W.C.2. Tel. CHAncery 1551

SWEDISH STEEL

Venture at Oxelösund

FROM A CORRESPONDENT IN SWEDEN

His Majesty the King of Suecorum, Gothorum and some mythical lands across the Baltic—Sweden for short—has lately had a busy time putting the Royal stamp of approval on some major investments in the Swedish steel industry. This has involved not only pressing the ceremonial button but also asking a lot of pressing questions whether the expensive plant is actually going to work. A week or two ago, having set a 20-ton ingot on its thumping noisy journey through a train of slabbing and plate stands, he sat down to sup on the cooling bed of a new rolling mill in the company of some 2,500 steel workers, their wives and invited VIP's from near and far. The occasion was the formal opening of the integrated steel works at Oxelösund, built from scratch in four years at a cost of Kr. 600 million (£45 million).

No doubt the managing director of the Grängesberg Company, Mr E. Waldenström, and the manager of the works, Mr C. Sebarth, had to answer a lot of searching questions. Since 1957 these two gentlemen have pursued an idea unprecedented in the 400-year history of Swedish steel making. To old-timers steeped in the mystique of steel making and wedded to producing kilo batches of fancy metallurgical concoctions for abstruse ends, the new plant at Oxelösund borders on the immoral. Traditional Swedish steel managements regard dropping a customer—no matter how small or difficult—like stepping on bread. They have kept adding items to their production schedules until they find themselves burdened with a miscellaneous load which in alloy, shape and dimensional permutations runs into the tens of thousands. The cost of cataloguing this miscellany goes a long way towards paying for a respectable mill stand.

At Oxelösund, Messrs. Waldenström, Sebarth and colleagues have made life a great deal simpler for themselves, at least in this respect. They plan just to make medium heavy plate to Lloyd's and other underwriters' specifications, some 300,000 tons of it a year. To accomplish this, the Grängesberg Company acquired a peninsula the size of Monaco, jutting out into an ice-free patch of the Baltic, some 50 miles south of Stockholm. The untidy town of Oxelösund has been torn apart and put together again and the craggy peninsula has been levelled to provide a site for the first major coastal steel works in northern Europe. Since 35,000 deadweight ton ships can dock quite close to the mills, the transport economy of the site is impressive.

The major facilities can be summed up briefly. They include two blast furnaces, complete with coking and Cowper stoves using pelletized concentrates, with an annual output of 460,000 tons. The melting shop has two liquid-charged Kaldo oxygen furnaces each producing 100 tons of steel every two hours and a 150-ton open hearth furnace for re-melting the mill scrap, with an annual capacity of 430,000 tons. The 1,800-foot rolling plant has a DC twin-drive Mesta blooming stand capable of breaking down 20-ton ingots. After being cropped into slabs of suitable size and re-heated, the new steel is rolled to gauge in a 4-high reversible Schloeman plate stand, and straightened, sheared and trimmed to delivery size. The whole operation of turning domestic ore and limestone and American coal into ship's plate is a clean, streamlined and crisp performance. Such mechanisation has meant heavy investment, costing about Kr. 2,000 (£140) per annual ton.

The two rotary Kaldo furnaces have aroused furtive headshakings among conservatives. The Kaldo oxygen process is a domestic development that differs from the LD (Linz-Donawitz) and similar oxygenised [illegible] can handle pig iron of different qualities, phosphorous and non-phosphorous, and it is less fussy about the purity of oxygen. But it is somewhat slower. Sloshing 100 tons of liquid steel about in a furnace rotating at 25 rpm is hard on the furnace linings. A Kaldo furnace can be kept in service for only a week, or some 70 charges, before relining. Thus only one of the two expensive units is in operation at any one time.

Moreover, only two Kaldo units have been put into production previously, at the Domnarfvet Steel Works—where the prototype was developed—and at the French Sollac works. It is daring to base the entire operation on such a short run of proven experience, but the faith of the management in the Kaldo process may have been justified. The chief metallurgist claims that the furnace crew got the analysis of the very first charge exactly right and, coming down to sweaty reality, the furnace foreman has had no headaches working with a green crew. Of the present work force at Oxelösund only one in ten had experience of steel making: the others—pastry cooks, sailors, plumbers, tailors, divers, loggers, and whatnot—had to be turned into steel workers double quick. Their stay-at-home wives, fretful and insecure amid bulldozers and swinging crane loads, had also to be conditioned to a new kind of life. No doubt some rugged individualists reacted sharply to this enforced regimen of togetherness, but on the whole the exercise in what is strangely called "human engineering" seems to have worked.

His Majesty no doubt had a lively recollection of an entirely different climate of steel making at the opening of the metallographic laboratory at Sandvik Steel a few days before. Here, in a building full of electron microscopes, metallographic X-ray, and high vacuum equipment, he learned about all the dreadful things done by traces of oxygen and nitrogen to the atomic structure of iron. The two new establishments are significant of the two major trends in Swedish steel making. The traditional so-called "quality approach," enforced originally by lack of capital and by the sheer necessity of having something different to sell from the [illegible] flourishing in the shadow of a global output of 300 million tons of crude steel. The greater the tonnage of steel produced the greater the need for special purpose steels. Towards the other end of the steel spectrum, the age-old problem of making competitive tonnage steels for a slim, unprotected home market has now been tackled by a chancy specialisation on one, or at the most, a few products. On this basis the mill units can be planned to an economic size. The spectre that has haunted Swedish steel makers for more than half a century may at long last have been exorcised.

to focus public attention on the continuing menace of fire the British Insurance Association has sponsored the Great Fire of Tooley Street Exhibition to commemorate the centenary of London's worse peace-time fire since *1666*. In other non life sections too Mr H. A. Walters, the retiring chairman of the association, has far from encouraging news. The hurricane Donna which cost British insurance companies some millions of dollars dashed hopes of a small profit on underwriting in the United States in *1960*. In the motor business in Britain companies have not been able to maintain the small profit—about 2 per cent of premiums—achieved in *1959*.

Other Investments	425	7·0	448	6·8
Total	6,047	100·0	6,609	100·0

Premium income of British insurance offices from all business again reached a new peak, amounting to £1,637 million in 1960—£117 million, or 7.7 per cent, more than in 1959. Net new savings through life assurance in 1960 amounted to £490 million, compared with £423 million in 1959.

The continuing growth in premium income is reflected in a further sharp advance in the investment funds of the insurance companies and, as the table shows, once again a large part of the new money (£200 million) went into equities. But gilt edged holdings rose by £72 million, by far the biggest amount put into this section of the market in recent years. This together with increases of £74 million in debentures and preference shares and of £114 million in mortgages, reflects the attraction of high yields on fixed interest securities.

The Committee of Lloyds has decided to drop its idea of forming a company to enter the life assurance market. This would have broken new ground for the Corporation, but the chairman, Mr G. Ewart Thomson, has now said that the working party set up to look into this project has not been able to agree on a recommendation for forming a life company sponsored by the Corporation or to enable individual underwriters to participate in long-term life assurance. At the moment their life business is confined to only temporary cover for not more than five years, but it seems that the door has not been shut to further ventures by individual brokers and underwriters.

DOMESTIC APPLIANCES

Nothing To Shout About

PRICE cuts of from 10 to 15 per cent from Kelvinator, and the dismissal of 500 men by Hotpoint, show that the refrigerator industry remains sickly. The improvement in the retail sales of British refrigerators in the first quarter has proved short-lived; sales in March were only five per cent below the corresponding month in 1960, but in April they were 20 per cent less than in April 1960. Since then sales have continued to be disappointing; a heatwave for the rest of the summer now seems essential for the industry's health. Low retail sales mean that retailers, who had been encouraged by relatively high sales in the winter to build up their stocks of British refrigerators by another 140,000 in the first four months of the year, will now be more cautious buyers; and manufacturers cannot be optimistic about the prospect of ridding themselves of the 268,000 refrigerators that they still had in stock at the end of April—124,000 more than they had had a year before, but 55,000 fewer than at the end of January this year. Price cuts by manufacturers, either on old models, or by introducing new models at lower prices than those they replace, are now becoming common. Companies are still entering the industry, but such plans as those of Birmingham Sound Reproducers to do so with a four cubic foot refrigerator selling for 39 guineas will hasten the day when some of the present manufacturers will have to leav the business.

Washing machine makers, though the suffered a bigger fall in retail sales last yea than the refrigerator manufacturers dic have found that orders from retailers picke up with the new year; in value deliverie to retailers in the first quarter were onl about 10 per cent below those in the firs quarter of 1960. April showed little im provement on March; May was bette though it was still worse than April las year. The recovery in deliveries cam wholly from an increase in demand for autc matic washing machines and those that in corporate spin-dryers; deliveries of thes machines were worth 24 per cent more tha a year before, while those of the simple washing machines were worth 50 per cen less. Part of this swing to more expensiv machines, reflected in the rise in deliveries results from the introduction of new autc matic models such as the Hoover Key matic in the spring. Only the middl and higher income groups, who ar replacing older and simpler washin machines by more elaborate models, appe to be buying more; working-class buyer still seem to be kept out of the market fc the more expensive machines, costing up t £140, by having to put down a 20 pc cent deposit. A cut in the deposit for hirc purchase sales to 10 per cent is still th industry's prescription to raise applianc sales nearer to its capacity. Rumours tha the Chancellor might have to use his powe to increase purchase tax are enough to sen shivers down the industry's spine.

SHORTER NOTES

Following last week's application by the National Farmers' Union under the Customs Duties (Dumping and Subsidies) Act for additional protection against imported barley, Mr Niall Macpherson, Parliamentary Secretary, Board of Trade, announced this week that the matter was being discussed with exporters. Dumping is hard to prove; the Board of Trade often succeeds in obtaining relief for domestic producers without making an order. In the past, it has been possible to withdraw applications for duties on aluminium from Russia, tomatoes from the Canary Islands and potatoes from France. This year negotiations with exporters have covered eggs, butter and barley.

*

The directors of Dorman, Long have declared an unchanged interim ordinary dividend of 3½ per cent. Trading profits for the half year to March 31st have been running at a lower level than for the corresponding period in 1960 and at the moment orders are lower than they were.

*

The Trans Australia Investment Trust Limited is being formed through Helbert Wagg and J. Henry Schroder. It will enable British investors to obtain a spread of investments in Australia and to avoid th complications of individual claims fo double taxation relief. Initially, £3,000,00 of the issued capital of £5,000,000 will b issued in £1 shares and eventually it i intended to establish a market in the share in London.

*

Lord Cromer takes over from Lor Cobbold as Governor of the Bank o England this weekend. The vacancy o the Bank Court is being filled by Mr H. G Nelson, managing director of Englis Electric.

COMPANY MEETINGS

THE MERCANTILE AND GENERAL REINSURANCE COMPANY, LIMITED

STATEMENT BY THE CHAIRMAN HUGH KENNETH GOSCHEN

LIFE DEPARTMENT NEW BUSINESS AGAIN REACHES RECORD LEVEL

The Annual General Meeting of The Mercantile and General Reinsurance Company, Limited will be held on July 18, 1961, at the Company's chief office at Moorfields House, Tenter Street, Moorgate, E.C.2.

The following is a statement by the Chairman, Mr Hugh Kenneth Goschen, which has been circulated with the Report and Accounts for the year ended December 31, 1960:

I begin my review this year by referring to Mr E. Hurlimann's retirement from the Board. Mr Hurlimann was in fact one of the founders of the Company in its present form as a reinsurance company and he leaves us after an association lasting almost 40 years. He brought us a great deal of business, he helped to guide us on the right lines during the early stages, and throughout we have derived untold benefit from his years of experience and wise counsels. He will be sadly missed. In his place the Directors have elected Professor Paul Keller, the present Chairman of the Swiss Reinsurance Company. We look forward to having the benefit of his help and advice in the years to come.

You will notice that this year the form of the accounts has been changed. Detailed results of each of the companies in the Group have in the past been made available; but with the growth of the organisation this has made the accounts too cumbersome, so this year we are publishing a consolidated account, which gives a better picture of the results and of the strength of the Group.

The overall result for 1960 is, I am glad to say, satisfactory. The business has expanded especially in Life, where once more we can report record figures and now the passing of the £50,000,000 milestone. After several years of continuous losses in the Fire and Miscellaneous Account, we have this year a small underwriting profit. Our Canadian company has at last had a reasonable year and our companies in Australia have continued to make good progress.

An Insurance Executive said to me recently in New York "It is Wall Street which keeps us." That there is substance, as far as the "M. & G." is concerned, in this statement will be apparent to you from a study of our Accounts. The job of the professional reinsurer is to level out the peak profits and losses of the direct insurers. We believe we do a considerable service to the Insurance Market by providing this help, but in recent years there has been an ominous trend towards leaner and leaner profit margins in the business as a whole. Thus during a period of exceptional losses, such as we have been experiencing during the last few years, but which must always be expected, far too large a part of the burden has been borne by the investment income.

This year, in order to provide against the possibility of catastrophies to which I have referred, and to give strength to enable us to undertake the ever-increasing liabilities which we assume, we feel that we have not only to plough back the whole of the profit of the Fire and Miscellaneous, but also to make transfers to strengthen our Underwriting Reserves from what is, in fact, Investment Income. £150,000 has accordingly been transferred from Profit and Loss to Supplementary Provisions and a further £150,000 to Contingency Reserves. The Directors have felt, however, that they could recommend a small increase in the effective dividend and they have taken the opportunity of arranging that the dividend be declared gross instead of free of tax as previously.

Turning now to the individual Accounts.

FIRE DEPARTMENT

In the Fire Department the aggregate net premium income receded slightly from the level reached in the previous year under the impact of some important treaty changes in the home and Canadian markets. At home the concentration of the market into larger units has inevitable repercussions on the volume of business reinsured, whilst in Canada measures for improving underwriting experience and reducing administrative costs have had an even greater effect on our premium volume. Happily this was largely offset by the continued satisfactory development of our business elsewhere overseas.

The experience at home again suffered from a number of heavy fires, but overseas our business was generally profitable and the Fire Account itself closed with a small profit. We were fortunate indeed in escaping serious losses from the natural disasters which were unhappily a feature of the past year, the Chilean earthquakes, Hurricane "Donna" in the USA, and the cyclones over Mauritius. We may, however, be less fortunate in the future, and it is therefore very necessary for us to continue to rebuild up strong reserves against the possibility of these unpredictable catastrophes. As you will see from a study of the Accounts, we have taken steps to do this again in 1960.

With the continuing rise in insured values, we experience a growing demand for facultative reinsurance and we continue to do our utmost to help our friends in this way with their particular cover problems. The tendency towards concentration of the insurance industry into larger units, already referred to, is one which has not been confined to the home market. As reinsurers we are fully alive to the problem of mounting expenses that confronts many of our ceding offices, and we are always ready to consider with them simplified reinsurance methods and plans aimed at reducing their costs in this sector.

ACCIDENT DEPARTMENT

The Accident Department this year only shows a moderate increase of premium income, owing to the pruning effect of measures taken in Canada in regard to the underwriting of Excess of Loss Covers for Motor and Public Liability business. Generally, however, the business continues to advance strongly.

With restoration of the Canadian experience to a profitable basis, the adverse results of the Accident Account as a whole during the recent years have given place to a small surplus, after making due provision for outstanding and unknown claims. The heaviest burden now lies in the Employers' Liability class, more especially in Australia, where the results have been adversely affected by the many increases in benefits payable under the Workers' Compensation Acts of the various State Governments. This situation continues to receive our energetic attention and it is hoped to introduce into the Australian market a new form of treaty which will secure a more equitable distribution of the rising cost of these claims as between ceding company and reinsurer.

Turning to the other various classes of business transacted in the Accident Department, our important Personal Accident Account continues to run profitably. Our Burglary business has again been adversely affected by the scale and frequency of armed robberies that have become almost a current news item in our daily press. Motor business has also brought a loss commensurate with the heavy experience in most of the territories where we operate. This class and Public Liability are mainly reinsured by us on the Excess of Loss basis and the unfavourable results they produce are largely a reflection of the ever higher damages being awarded to the victims of road accidents. It is a pleasure to conclude with Fidelity and Contract Guarantee, both of them profitable, and with the various Miscellaneous classes that have combined to give a surplus overall.

This year the underwriting picture reflected in the Marine, Aviation and Transit Account is adversely affected by certain accounting adjustments of a long-term nature. In spite of the apparent hardening of the claims ratio in our Account, there is not, I am glad to say, any deterioration in the experience and the business continues to expand very satisfactorily. The need for rigorous selection in our Marine writings is not lessened by the guarded optimism voiced in certain sections of the direct market, and as regards Aviation business, which has contributed its full share to our expansion, there are, as is well known, still a variety of problems to be overcome. Much publicity has been given to the high values of new passenger liners and jet aircraft now in service and expected in the near future and we must be fully equipped to meet increasing demands for reinsurance cover.

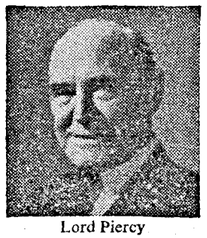
For this reason the surplus on the closed years is retained in our Fund, no transfer being made to Profit and Loss this time.

LIFE DEPARTMENT

The Life Department new business figures again reached a record level; our target for the year was £50,000,000, but in the event the net new sums assured amounted to £58,832,908. This was a great achievement and compares with £45,031,682 in 1959. In addition, our Subsidiary Life Company in Australia transacted £3,610,355 compared with £2,328,809 in 1959.

The net Life premium income was £4,074,668, as compared with £3,502,519 in 1959. The Life Assurance and Annuity Fund now totals £17,426,996.

The year marked some important extensions of our organisation overseas for Life reassurance. Our organisation in Cape Town has been extended and we are now able to give licensed cover in Rhodesia. In Australia we now provide facilities in Melbourne as well as in Sydney, and we have made arrangements to provide a more complete underwriting service in New Zealand.



The excellent progress made in our Canadian and Australian Life operations from the commencement continued unabated during 1960, and equally encouraging is the growth of our business elsewhere in the Commonwealth. We received business from no less than 28 countries outside the Commonwealth, and in this sphere also we record an increase in our business. At home, too, we had a successful year: in fact during 1960 we received Life reassurances from over 80 Life offices established in the United Kingdom, and this business accounted for 45 per cent of our new business.

You will see from the Balance Sheet that the Investments and Loans of the Company (General and Life) show, at £28,832,263, an increase of £3,842,810 during the year. The past year began with equity markets reaching a peak early in January, but signs of overstrain in the United Kingdom economy and a deteriorating overseas trading position resulted in the imposition of credit restrictions and an increase in the Bank rate in two stages to 6 per cent by the middle of the year. Although the Bank rate was reduced also in two stages to 5 per cent in the last quarter of the year, the long-term rates of interest showed an upward trend throughout the year due to the continued strong demand for loan capital. In common with many other countries, equity yields in the United Kingdom remained appreciably below the return offered by long-term fixed interest stocks and appeared to discount future growth in dividends for some time ahead. Advantage was taken of high interest rates obtained from fixed interest securities to add to our holdings of British Government bonds and Debenture Stocks and additions were made to equity holdings. Taking our investments as a whole, the amount by which the market value exceeded the book value, although not so large as at the close of the previous year, was still substantial at December 31, 1960.

Finally I want to say thank you to those who have contributed so much to these results: to the local Directors for their help and advice in guiding our Companies and Branches overseas, to the Managements and Staffs of those organisations for their hard work; to our General Manager and his team of Management and his Staff at home for their wholehearted efforts to build up and strengthen the "M. & G." I know that you would like me to express our gratitude to all of them.

INDUSTRIAL AND COMMERCIAL FINANCE CORPORATION LIMITED

Set up by the English and Scottish Banks in 1945 to provide long-period loans and share capital to businesses with no ready access to the capital market.

Lord Piercy

The Corporation's progress during the year ended March 31, 1961, in relation to recent years may be presented compendiously as follows:—

	£'000				
	1956/7	1957/8	1958/9	1959/60	1960/1
New business transacted ...	2,496	3,834	5,017	6,374	**9,503**
Gross investment ... ... (cash outgo)	2,913	3,361	4,100	6,556	**7,451**
Repayments and realisations ...	1,997	2,182	2,690	3,889	**3,725**
Net new investment ... ... (addition to portfolio)	916	1,179	1,410	2,667	**3,726**
Forward commitments	1,105	1,578	2,495	2,313	**4,365**

At the end of the period the total of Advances and Investments (less provisions for bad and doubtful items) stood at £42.1 million (£38.37 million at March 31, 1960).

The profit for the year, before interest and tax was £3,410,974, compared with £2,825,922 for the previous year, an increase of £585,052. Interest paid out amounted to £1,410,360 (£982,767). The figure was high, partly because a full year's interest on the Debentures was paid for the first time, partly because Bank Rate, on which interest payable on the Loan from the Shareholding Banks is based, was high for most of the period. After deducting interest and tax, the balance available is **£1,140,614** (£1,065,155). Adding the surplus brought forward, the amount for disposal is £1,295,270 (£1,215,450). A dividend of 6 per cent is recommended.

During the twelve months under review approaches were received from 599 new customers of which 308 were eligible for detailed consideration. These numbers compare respectively with 392 and 155 in 1959-60. Offers were made to new customers in 131 (71) cases; and to existing customers, on second or subsequent applications, in 112 (73) cases. During the year 77 new accounts were opened, and 43 accounts repaid. At March 31, 1961, the number of open accounts on the books was 694 (660).

Some interest has been manifested in the proportion of small transactions. This year, of the offers made to new customers, 43 (or 33 per cent) were for amounts ranging from £5,000 to £20,000, 79 (or 60 per cent) for amounts from £5,000 to £50,000. These figures are close to our total experience. Out of 994 applications from new customers approved, and completed, up to March 31, 1961, 330 (33 per cent) were in respect of applications up to £20,000.

There was active demand for the Corporation's facilities. Along with a full measure of the ordinary and unexciting business which is our main concern and contribution to industry, we dealt with a number of lively propositions which should have a bright future.

The ability of the UK to benefit from the higher investment in industry of 1960 and 1961 is conditioned by the healthiness of our Balance of Payments, and hence of our Reserves. The obvious solution of this problem is increased exports. The supplement to this Report shows some of the cases where we have been able to assist firms to achieve the type of success in export markets which is needed.

An issue was made in April, 1961, of £6 million 6¼ per cent Debenture Stock 1981-4 at £97 per cent., which was well received by the market. Out of this we repaid £1½ million of the Loan from the Shareholding Banks in accordance with our arrangements with them.

ICFC

Copies of the Annual Report are available from the Secretary: 7 Drapers' Gardens, London, E.C.2.

BRAZILIAN TRACTION, LIGHT AND POWER COMPANY LIMITED

(Incorporated under the L of Canada)

At the Annual Meeting of Brazilian Traction, Light and Power Company, Limited, held in Toronto on June 27th, the President, Henry Borden, CMG, QC, presided. All directors were re-elected.

The shareholders confirmed By-law No. 23 renewing the authority for the payment of dividends in shares.

In addressing the shareholders the President stated that the Company's problem has never been the lack of customers for its services but, on the contrary, the main problems have been to keep pace with an extremely rapid growth of demand and to obtain tariff adjustments so as to maintain the Company's real earning power under conditions of inflation. He pointed out, however, that the more customers the Company has served, the greater the investment in plant and equipment and the larger the scope of the Company's operations, the lower have been the net earnings expressed in dollars. For these unsatisfactory and disappointing results, he continued, there is one overriding reason, "serious and prolonged inflation without adequately compensating tariff adjustments." While the operating companies have been permitted to increase their tariffs in order to recover a high proportion of the increased expenses resulting from inflation, nothing of any significance has been done by the regulatory authorities to permit cruzeiro profits to rise to offset the depreciation in the value of that currency. The result has been that the Company's net earnings, measured on a uniform accounting basis, have been falling steadily for four years and are lower now than in the immediate postwar years.

The President then referred to the measures being taken by the new administration in Brazil of President Janio Quadros in its endeavour to bring a greater measure of stability to the Brazilian economy. He referred to two major steps already taken to restore financial order, namely the simplification of the complicated foreign exchange system and the highly successful International negotiations for financial assistance with the Monetary Fund and with government and financial circles in the USA and Europe. He stressed that it will take time for the new administration in Brazil to deal with the root causes of inflation and to prevent the recurrence of foreign exchange crises.

Mr Borden noted that there seems to be greater confidence in Brazil that measures can and will be taken by the President of Brazil and Congress to give the country the kind of stability so essential to steady and rapid economic growth. "Restoration of economic stability in Brazil," he said, "would not of itself solve the problems of the Company but it would provide the kind of environment in which progress towards solution of these problems could be expected" it, he continued, "at the root of all our problems in Brazil are inadequate earnings which prevent us from either generating or raising, by borrowings or sale of securities, the cruzeiros and the dollars urgently needed to finance improvements and expansion. The result is that not only have dollar profits been declining but the standards of our service and our ability to meet public demands have been deteriorating." This, he said, is regrettable, but in the circumstances unavoidable.

Referring particularly to electric tariffs in Brazil, the President pointed out that a thousand kilowatt hours of electricity in Rio de Janeiro costs approximately $11.00 for domestic use, at prevailing rates of exchange, as compared with $13.50 in Toronto and $41.00 in New York. He stated that the immediate objective is to get the operating companies into a position where they will be permitted to earn a fair and reasonable return on plant in service, adjusted every two years in accordance with the coefficients of monetary correction and, if this was possible, there would be a considerable improvement in earnings over their present unsatisfactory levels.

Mr Borden then referred to the statement of the President of Brazil on electric energy in his state of the union message in March, 1961, and said that from this there is reason to assume that there is an appreciation of the basic problems facing the Company and other electrical utilities in Brazil and that the authorities intend to work toward their solution. However, he added, progress towards our objectives and the stated objectives of the Government itself in the field of electrical energy will at best be gradual although we have reason to hope that progress will be steady.

Mr Borden then went on to make some observations on telephones, the Company's second largest investment in Brazil, and the variety of arrangements and jurisdictions under which the service is provided, with the State and Municipal Authorities exercising authority. This, he said, has resulted in great differences in the basic charge for telephones, for example, the charge for an individual residential automatic telephone in the State of Guanabara is about the equivalent of $1.50 per month, in the city of São Paulo about 75 cents, in the city of Santos less than 50 cents. These varying rates, he said, compare with about $6.00 a month in Toronto.

President Quadros, he noted, has appointed a work group to formulate principles for a federal telephone policy and it is expected that its report will be made public in the near future. In the meantime the Company's three main telephone concession contracts are in the course of renegotiation, and in Guanabara an Intervention Commission is endeavouring to formulate proposals designed to solve the shortage of telephones in that State. The outcome, he said, is uncertain but some fairly radical changes are likely to be proposed.

The coming weeks and months, he said, are therefore a period of major significance for our telephone operations in Brazil and he concluded by saying that it is our belief that the existing difficulties can best be overcome "by broad, national action, but whatever the decision in that respect, you can be assured that the operating companies, as always in the past, will sincerely co-operate with responsible authorities. You can also be assured that everything possible will be done to protect the legitimate interests of the shareholders."

AMALGAMATED DENTAL COMPANY

ANOTHER YEAR OF SUCCESSFUL TRADING

The fifty-sixth annual general meeting of The Amalgamated Dental Company, Limited was held on June 23rd in London, Mr Aiken Watson, QC (Chairman), presiding.

The following is an extract from his circulated statement for the year ended December 31, 1960:

I am pleased to report another year of successful trading.

In my Statement last year I spoke of the problems of fatigue in operative dentistry and the need for equipment expressly designed to avoid its incidence. I am happy to report that, after lengthy clinical tests and the imprint of professional approval, such equipment is within sight of production at our Walton factory and it is expected to be marketed in 1962. We are confident that this, together with a new type of dental chair, soon to undergo test, will become two of the finest weapons in the armoury of the profession.

These new lines with others in prospect have stretched our production capacity at Walton to its limits. A major extension to meet this and effect greater efficiency and economy in production is now under urgent consideration.

RESEARCH FOR NEW AND IMPROVED PRODUCTS

On the consumable poducts side of your business, our research for new and improved products goes on relentlessly. It is safe to say that, during the past fifty years, our standard products have kept pace with every known improvement, and no significantly successful new product has appeared which qualitatively replaces them.

Our instruments continue to enjoy professional acceptance in their conventional and new forms. The "Ash" forceps in particular is a hallmark of quality the world over.

Our medical subsidiary continues to expand both at home and abroad as the quality and ingenuity of its products become better known.

While we, as a Group, have certain advantageous dispositions in Europe we feel impelled to move cautiously pending the outcome of the present division between the Common Market and the European Free Trade Association.

Current trading is satisfactory.

In pursuance of its policy of promoting younger Executives the Board has appointed Mr Peter de Trey and Mr Walter Edser to be Directors. Both have had many years of service with the Group.

The report and accounts were unanimously adopted and a final dividend of 10 per cent on the Ordinary Stock, making a total dividend of 17½ per cent, less income tax for the year was approved.

THE INDUSTRIAL AND GENERAL TRUST

A NOTABLY SUCCESSFUL YEAR

The seventy-third annual general meeting of The Industrial and General Trust Limited was held on June 22 in London.

Sir Edwin Herbert, KBE, LLD (the chairman) presided and, in the course of his speech, said:

The results this year are, I think, exceptionally good but it must be remembered that we have received some benefit from the investment of the proceeds of the £2,000,000 Debenture Stock issued in January, 1960. We have certainly not had the full advantage as yet since half the money raised was not payable until June 1, 1960. On the other hand we have had to meet, this year, nearly a full year's interest on the Stock. It will be clear, therefore, that the greater part of the increase of some £357,000 in our gross income was due to increased revenue from our existing portfolio.

Our tax liability at £810,000 was £68,000 greater and after deducting this sum and management expenses, net Revenue amounted to £1,178,435, an increase of approximately £160,000. We recommend a final dividend of 14 per cent making 26 per cent for the year against 22½ per cent last year.

The valuation of our Investments is, this year, approximately £50½ million which represents an appreciation of more than 263 points over the net cost.

Commenting on a 10-year record of the Trust's progress included with the Report, the chairman said: From that record it can be seen, if the necessary adjustments are made for capitalisation issues and rights issues during the period, that the Ordinary dividend has in 10 years risen from the equivalent of 7½ per cent approximately to 26 per cent while the net asset value of the 5s. Ordinary Shares has gone up from approximately 9s. 2d. per Share in 1952 to 38s. 9d. at March 31st last. I am sure you will agree that this is a record of which we may, very properly be proud.

To sum up, the year under review has been a notably successful one characterised by the exceptional buoyancy of the Revenue and marked by a substantial increase in the Ordinary dividend. In addition we have been able to invest our new money more quickly and more profitably than we had expected to be able to do when it was decided to make the Debenture issue.

So much for the past: but what of the future? No man can foretell that but some of the problems which we shall have to face are clear enough. The Chairman then referred to the European Common Market, the current balance of payments position, the state of the internal economy and continued: These matters are constantly in our minds and our investments are frequently reviewed in the light of them. We do not wait upon events but endeavour as far as we can to anticipate them and thus offset in some measure their effects. The great strength of the Trust is, of course, that we have, and try to maintain a well-balanced portfolio which will see us through difficult times and respond quickly to an improvement in economic conditions. But I do not think we can expect in the immediate future to see our growth continuing at the pace of the last two years.

The report was adopted.

ASSOCIATED NEWSPAPERS LIMITED

LORD ROTHERMERE'S STATEMENT

The fifty-sixth Annual General Meeting of Associated Newspapers Limited will be held, on Tuesday, July 18, 1961, in the Memorial Hall, Farringdon Street, London, E.C., the following is from the statement by the Chairman:

In my address to you last year I said that I expected profits from our National newspapers but to some extent this was likely to be offset by increased interests. This was likely to be offset by increased revenue from our other interests. This revenue from our other interests and, in addition, there have been a number of events which forecast has proved correct and, in addition, there have been a number of events which have had an influence on the trading of our National newspapers.

It has been a year of events and in some ways a tragic year for the Press. Four National newspapers have ceased to exist as separate entities, and some others have been able to carry on only by drawing heavily on their reserves, and, as you know, there is sitting at this moment a Royal Commission to investigate the causes of the difficulties. Early last year the directors of the Daily News Limited approached us to ask if we could help in any way shdd they be compelled to close down the *News Chronicle* and *The Star*. Discussions took place which ended in our making an offer for the whole of the assets and the goodwill of the two papers, but on the clear understanding that his arrangement should only be implemented if and when the Daily News Board came to final and irrevocable decision that in no circumstances could these newspapers be carried on as separate entities and that it would be impossible to sell them as going concerns to any other buyer.

On October 18th last year, the *News Chronicle* and *The Star* were amalgamated with the *Daily Mail* and the London *Evening News* respectively. This operation was carried through with great smoothness and without disruption, and was a great credit to all those members of the staff who were involved, night and day, in the complicated details of this changeover.

"DAILY MAIL" AND THE "EVENING NEWS"

The results of the merger have been even more satisfactory for the *Daily Mail* and the *Evening News* than we had hoped. Nine months after the merger, the sale of the *Daily Mail* is now in excess of 2,660,000, an increase of 575,000 copies per day; that of the *Evening News* is in excess of 1,465,000, an increase of well over 300,000 copies per day.

With such circulation increases, adjustments in advertisement rates were clearly necessary, and revenue in both papers has surpassed all previous figures and remains buoyant in the new financial year.

"SUNDAY DISPATCH"

Two of our National newspapers have been in considerable difficulty during the past year, namely the *Sunday Dispatch* and the *Daily Sketch*. Of these two newspapers the losses on the *Sunday Dispatch* have been the greater, and amounted in the past year to nearly £600,000. This loss was incurred without any of the promotion expenses which would be necessary were we to endeavour to save this newspaper. Such promotion expenses could involve doubling the loss for several years. Your Directors decided that such an expenditure was not warranted since it would be by no means certain that such a course would restore the *Sunday Dispatch* to prosperity.

Accordingly, we have entered into an arrangement with Beaverbrook Newspapers to merge the *Sunday Dispatch* with the *Sunday Express* and at the same time, Beaverbrook Newspapers have contracted with us for the printing of a considerable proportion of the combined paper.

"DAILY SKETCH"

The losses of the *Daily Sketch*, though considerably less in the year than those of the *Sunday Dispatch*, are causing your Directors concern. We bought this newspaper with the object of trying to save it from extinction and we are still hopeful of success. With the support of the Unions considerable economies have recently been achieved and we shall do everything possible to avoid the closure of the *Daily Sketch*.

CANADIAN NEWSPRINT INTERESTS

The trend of the newsprint industry both in Canada and this country has been towards larger groups of Companies. Anglo-Newfoundland Development Company Limited has a relatively small production capacity compared with those of other groups in Canada. With this in mind and following several months of consideration and negotiation, a satisfactory agreement was entered into during April this year between your Company and Price Brothers & Company, Limited, of Quebec, whereby your Company's shares of Anglo-Newfoundland Development Company Limited were exchanged for shares of Price Brothers, resulting in your Company becoming the largest shareholder of Price Brothers. This very considerable interest is supported by our nomination of six Directors to the Board of Price Brothers by this Company.

At current levels of dividends paid on shares of Price Brothers, income to this Company as a result of the exchange of shares will be increased in the coming year.

ACCOUNTS

The profit on trading, owing to the various factors I have mentioned, is reduced to £2,140,266. Our Provincial subsidiaries have again contributed very considerably to this figure. Income from Anglo-Newfoundland Development Company Limited has been at the same rate as last year, and the increase in Trade Investment income to £366,596 is the result of a larger distribution from Southern Television Ltd. and from our Television interests in Australia.

The total profit before Taxation at £3,061,639 is, in fact, only £22,741 less than last year, disregarding the Special Newsprint Supply credit received in that year.

PROVINCIAL NEWSPAPERS

Our newspapers in the provinces have continued to make steady progress. This is the more satisfying quite apart from the purely financial point of view, for, as you are well aware, it is our policy that each paper shall provide a complete service as a local newspaper to the community it serves. The success of this policy can, I feel, be measured by the results and only strengthens our conviction that each paper must be run locally and remain quite independent of any external editorial control.

OTHER INTERESTS

Television

Southern Television is operating very successfully and the Dover satellite is proving its worth in terms of revenue. Income from Australia has increased over last year and is now becoming an appreciable part of our Trade Investment income. Our interests in Brisbane and Adelaide have not yet made any contribution, but their initial results have been satisfactory.

Ideal Home Exhibition

The fine weather in March reduced attendances at the *Daily Mail* Ideal Home Exhibition this year, but over 1,100,000 visited Olympia. Fifteen Commonwealth and foreign countries were represented and all indications are that trade was most satisfactory.

"Weekend"

The last twelve months have been difficult for magazines. *Weekend*, our only magazine, has been profitable, with advertising revenue up over the previous year. A price increase in the magazine itself in 1960 and in national newspapers in 1961 has affected the circulation less than anticipated and less than others in the same field.

Weekend is the largest selling general colour-gravure magazine in the country and we look forward to its steady development.

THE FUTURE

The steps that the Company has taken in the last year in relation to its national newspapers, and in the consolidation of investment in newsprint in Canada, will strengthen the Company and enable our resources to be developed to the full. As an immediate result, coupled with the long overdue increase in the price of national newspapers, the current year's trading is likely to show a considerably increased profit.

SAUNDERS VALVE COMPANY, LTD.

RECORD TURNOVER

BIG INCREASE IN EXPORTS

MR P. T. STEPHENS ON THE OUTLOOK

The Annual General Meeting of Saunders Valve Company, Ltd., will be held on July 20th at 23, Blomfield Street, London, E.C.

The following is an extract from the circulated statement of the Chairman, Mr P. T. Stephens:

Once again the activities of the Company have been on a substantially higher scale and the profit for the year ended March 31st, 1961, amounted to £497,565, subject to taxation of £261,500, representing an advance of 42 per cent as compared with the previous year. An interim dividend of 7½ per cent less Income Tax was paid during the year and we now recommend a maintained final dividend of 12½ per cent less Income Tax on the capital as since increased through the capitalisation of reserves by the issue of one new share for every two shares previously held.

The turnover achieved, a record, was 26 per cent higher than that of the previous year. As usual the major part of the increase is attributable to sales of Saunders diaphragm valves. In these days when this country's export performance is much in the public eye, it is satisfactory to be able to record that whereas home sales of diaphragm valves were 31 per cent higher, the corresponding increase in those directly exported was some 32 per cent higher, representing 57 per cent of total diaphragm valve sales.

EXPORT EXPERIENCE

The experience of this Company which has for years consistently exported over half its output is that there is no magic elixir which ensures success in this field. Export sales are often if not usually obtained through channels different from those at home. Different techniques are necessary but as in all sales promotion, a willingness must always be present to understand the particular problems of the market, to educate those actually responsible for obtaining orders, and lastly to keep the customer fully informed on the range of products available to him. Our experience has been that although overseas business usually takes longer to mature than home business, it is equally rewarding in the long run.

Profit margins have been maintained during the year as a result of higher activity and increased productivity, despite the necessity for absorbing a sizeable part of the increased manufacturing costs—particularly labour costs—which inevitably recur in the inflationary economic conditions in which we live.

PRODUCTION AND SALES

Production must match sales if customers are to be satisfied. A close correlation between these functions is particularly necessary for a product, such as Saunders Valve, where the production cycle is relatively short and where the customer expects a relatively short delivery period. Some assistance can be given to smooth out the effect of a sudden acceleration in the rate of ordering by stocks held in the semi-manufactured state and in the warehouses of distributors.

We plan continuously to improve the flexibility of both our production and distribution organisations and thus to diminish the difficulties which flow from sudden alterations in demand which are seldom spread evenly throughout the range of productions we manufacture. We are also giving immediate attention to increasing certain elements of our productive capacity.

During the year the Company decided to establish a branch in the Netherlands at Leeuwarden. Since then a wholly owned subsidiary company, Saunders Valve (Nederland) N.V., is in course of formation to carry out this activity. Factory premises are being built by the Leeuwarden authorities and rented to the subsidiary with an option to eventual purchase. The Company's investment in the new subsidiary will be a progressive one and the amount required will depend on the volume of production established at this centre.

COMMON MARKET ADVANTAGES

I have already commented on the increase of 32 per cent in sales of Saunders Valves for export. Orders received increased at an even higher rate—46 per cent on the previous year and of these Europe, for which the increase was 72 per cent, clearly accounted for the major part. We have been increasingly aware during the last year of rising industrial tempo in Europe in anticipation of the full economic advantages of a Common Market and that is the major reason for the increased business we have done. At Leeuwarden we shall be able to bring certain supplies nearer to European markets, though it is certainly no part of our plan to relieve our distributors from their responsibility to maintain adequate stocks for their own customers. We shall, at Leeuwarden, manufacture certain ranges of valves to standards which are particularly needed in Europe and, most important, we shall have established a base for the rapid expansion of production within the European Common Market if and when such a course becomes desirable. As to that our decision will naturally be influenced by the eventual decision—and the date when it is taken—whether or not Great Britain on its own or with some or all of the E.F.T.A. countries join with the six in the Common Market.

VALVES FOR AIRCRAFT

Sales of valves for aircraft from our Hereford factory were well maintained but due to the ever increasing technical diversification of this industry the results are not so profitable as in earlier years when long run business could be relied on to carry the bulk of the heavy overheads this industry demands.

Sales of Safran Pumps at Wolverhampton, particularly for overseas, advanced during the year and improved results were obtained. Equally sales of iron castings outside the group were satisfactorily maintained by our subsidiary, Goulds Foundries Limited of Newport.

CAPITAL NEEDS

During the current year various additions to the Cwmbran factory premises will be put in hand. Capital needs for all these expansions will be higher in the current year than last, but our available resources are adequate to provide for them.

Any forecast on profitability over the current year of an industry such as ours with world-wide ramifications must be coloured to some extent by fears of political and economic repercussions in various parts of the world—to say nothing of possible economic difficulties at home on account of the United Kingdom's recurring Balance of Payments problems. However, our order rate in every department is well maintained and I expect to be able to present comparable results in twelve months' time.

GEO. W. KING LTD.

The twenty-fourth annual general meeting of Geo. W. King Ltd. was held on June 27th in London, Mr Donald M. King, MIProdE (the chairman) presiding.

The following is an extract from his circulated statement:

The results for the year 1960 show steady progress and an advance on those for the preceding year and, in fact, the net profit, after taxation, is the largest the Company has achieved, as also is the turnover. Your Board are again recommending a dividend on the Ordinary Share Capital of 12½ per cent less tax, this being the same as has now been paid for a number of years.

Shareholders will notice that the net dividend on the Ordinary Shares costs £46,856, which is nearly three times covered by the available profits. The Directors are proposing to make an issue of Ordinary Capital by way of rights to existing Ordinary shareholders of 816,000 Ordinary Shares of 5s. each. It is proposed to issue the 816,000 new Ordinary Shares at a price of 12s. 6d. per share in the proportion of one share for every three Ordinary shares held. Unless unforeseen circumstances arise, your Board anticipates being able to recommend the same dividend for 1961 on the increased capital.

In view of the present drive for exports and their vital importance to the economy of this country, I feel sure you will be gratified to know that the percentage of direct export work of our very satisfactory order book, including letters of intent from clients, is approximately 50 per cent, which I think it will be agreed, is a high proportion of our total output.

The report was adopted.

FORSTER'S GLASS COMPANY

LARGER SALES

The forty-second Annual General Meeting of Forster's Glass Company Limited will be held on July 19th in London.

The following is an extract from the circulated review by the chairman, Col. Sir Charles Ponsonby, Bt, TD, DL, for the year ended March 31, 1961:

The results are not unsatisfactory. The net profit is £168,964 against £134,676. The improvement is due partly to increased sales, but mainly to the more efficient operation of the plant. The policy of modernising the works is yielding a reasonable return on the heavy investment we have made. This is best illustrated by the fact that the year's record result was obtained on selling prices which have remained unchanged since June, 1957, whereas costs are now £150,000 a year higher than in 1957/58.

What of the future? Although demand for your products is at present good, there are factors which will increase costs and thus make further inroads into our already narrow profit margins. One of these is the fuel oil tax which represents a direct increase of £50,000 a year in our melting costs.

Secondly, wage increases for all our process workers were negotiated in July. In addition, shift differentials affecting 64 per cent of our workers were uplifted in March, 1961. Other grades have also received increases. Considerable justification therefore exists for an increase in our selling prices.

THE FORESTAL LAND, TIMBER & RAILWAYS COMPANY LTD.

The Fifty-fifth Annual General Meeting was held on June 28th in London, Mr G. F. Taylor, CBE, the Vice-Chairman and Managing Director of the Company presided in the absence through illness of the Chairman, Sir Gerard d'Erlanger, CBE, FCA.

In the course of his circulated statement, the Chairman referred to the sharp fall in both Sterling and Pesos trading Profits which represented almost entirely the results of the Group's operations as growers of Wattle and as manufacturers and distributors of Wattle and Quebracho extract. The fundamental factor determining the profitability of those operations in

1960 was the price war which increased in intensity throughout that period.

Sir Gerard continued: The misfortune which has befallen the vegetable tanning extract industry in the shape of a collapse of the price structure obviously renders the execution of Forestal's policy of diversification more important than ever. I am glad, therefore, to be able to report substantial progress along this road and to express a reasoned hope that we are now entering upon a new phase of fairly rapid development.

Commenting on the outlook, the Chairman said that profits for 1961 would not show much if any improvement on those for the year under review. Taking the longer view, he felt that satisfactory profits should ultimately be earned in the tanning extract industry and in any event their policy was directed at a steadily increasing contribution from the non-tanning extract side of the business.

EMPIRE STORES (BRADFORD) LIMITED

YEAR ENDED 31st JANUARY, 1961

RECORD INCREASE IN TURNOVER AND PROFIT

The Fifty-second Annual General Meeting of Empire Stores (Bradford) Ltd., formerly Fattorini & Sons (Holdings) Ltd., was held at the Midland Hotel, Bradford, on June 29th, presided over by the Chairman, Mr Leo Fattorini. The following is an extract from his statement:

I am happy to tell you that once again the Company has had a record year, not only in turnover but in profits.

In the Prospectus issued last December, the Directors gave a forecast of profit of not less than £370,000 subject only to taxation and loan interest. In fact, this forecast has turned out to be conservative and, based on an equivalent calculation, I am delighted to tell you that the profit for the year recently completed amounts to £387,500.

THE COMPANY AND ITS OPERATIONS

The business of the Group is carried on in the names, or through the agency, of subsidiary companies.

By far the largest operating company is Empire Stores Ltd., a mail order departmental store whose activities account for over 90 per cent of the current sales and profits of the Group.

The management of the Company is young and enthusiastic and every opportunity is taken to continue the training of all executives, not only within the organisation, but by the use of outside courses, training schools and colleges. Each year a number of young management trainees enter the Company to ensure that trained executives will be available as the Company's growth demands, and we are always on the look out for young men of the right calibre.

Allied to Empire Stores Ltd., E. Robertshaw & Co. Ltd. is the Buying House for the retail Company, its Directors and executives making constant visits throughout the British Isles and the Continent to ensure that the flow of up-to-the-minute merchandise is continued.

Fattorini & Sons Ltd. has for over 100 years held an enviable reputation as manufacturers of sporting trophies, enamel badges, medals and regalia of all types.

Sports & Pastimes Ltd. allied with its subsidiaries The Bradford Textile Co. Ltd. and Bradford Textile (Sales) Ltd. manufactures sports and school clothing, and distributes them to schools and colleges throughout the country.

ACCOUNTS

The Consolidated Group Trading Profit before deducting directors' emoluments, audit fees, depreciation, loan interest and taxation, amounts to £437,872 compared with £319,340, an increase of more than £118,000. This represents the greatest increase in profit in the history of the Company, and reflects the success of our trading policy during the last year.

DIVIDENDS

The Interim Dividends totalling 5 per cent were paid on the Issued Ordinary Capital of £400,000 prior to the new capital structure in December, and the Directors recommend a final dividend of 15 per cent payable on the Issued Ordinary Share Capital of £750,000 as forecast in the Prospectus.

CURRENT PROSPECTS

I have before me the trading results of the operating Companies for three months of the current year. Expenditure is not increasing relative to turnover and sales to date are considerably in excess of the corresponding period, and at this stage your Directors are cautiously optimistic of another satisfactory year.

CONCLUSION

None of the results that I have been happy to put before you today would have been possible without the continued support of a very hard-working and loyal team of employees at all levels, together with the continued support of many thousands of manufacturers who continued to give us service and support. To all these may I pay my grateful thanks.

HEAD WRIGHTSON & COMPANY LIMITED

SIR JOHN WRIGHTSON'S CONFIDENCE IN THE FUTURE

The seventy-first annual general meeting of Head Wrightson & Company Limited will be held on July 20th at Teesdale Iron Works, Thornaby-on-Tees. The following is an extract from the circulated statement by the chairman, Sir John Wrightson, Bt, TD, DL:

STAFF

I feel it would be appropriate to start my review of the year's work with a well deserved tribute to our staff and workpeople. As I think you will appreciate, under the conditions prevailing during 1960, the results that we have been able to show reflect great credit on the zeal and enthusiasm of all concerned: managers, technical and commercial staff and workpeople. Each has contributed his or her part to the success of the company as a whole. It is also fitting to remember those who have diligently served the subsidiary companies in Australia, India, South Africa and on individual contracts ranging from Fiji to Poland.

We are fortunate in possessing a long-standing tradition of service to the company so that we particularly welcome those young people who have joined us during the past year: may they acquire those attributes of enterprise and enthusiasm to which we are accustomed and of which we are so justly proud.

RESULTS AND ACCOUNTS

Whilst the demand for most of our products has been buoyant, some sections of our business have had a disappointing year and it is, therefore, gratifying that we have been able to show a small increase in the total surplus on trading.

As I mentioned last year, profit margins, both at home and overseas, are lower than we have been accustomed to receive. This tendency persists. We are, however, constantly examining our cost of manufacture and improving our techniques. Furthermore, the effect of capital expenditure undertaken at our various works over the past few years is now beginning to show results. Our surplus on trading for the year was £1,714,412 which compared with a figure of £1,686,250 in the preceding year, is satisfactory considering the conditions under which it was earned. Depreciation of our buildings, fixed and loose plant, is only slightly greater than last year owing to the sale of certain assets to which I refer later.

In view of the satisfactory condition of our works and the present indications of our prospects in the markets in which we have established ourselves, your directors consider that they are justified in recommending, this year, the distribution of a higher proportion of the earnings. We therefore invite you to sanction the payment of a final dividend of 12 per cent which, with the interim of 4 per cent already paid, will total 16 per cent against last year's distribution of 14 per cent on the same capital. We also propose to add a sum of £382,401 to the General Reserve bringing this to a total of £1,000,000. In addition, we have put to Capital Reserve a sum of £108,378 being the profit shown in our books on the sale of one of our subsidiary companies.

In 1955 we acquired Colliery Engineering Limited (now renamed Head Wrightson Minerals Engineering Limited). Included in the purchase was The Cupola Mining and Milling Company, of Stoney Middleton, in Derbyshire. We have been engaged in developing the business by the installation of a modern flotation plant to produce galena, barytes and high purity fluorspar. The production and sale of these chemicals was, however, outside the scope of our engineering interests so that when our neighbours, Glebe Mines, a subsidiary of the Laporte Industries Group, approached us we agreed to the sale to them of our complete shareholding at a satisfactory figure.

EXPORT

Throughout the year under review the deliveries of plant and machinery for abroad continued in a substantial way. We could not hope to repeat every year our intake of export orders at the previous rate. We have, in fact, this year shared the experience of Great Britain in general where we would normally wish to rise above the average. Competition remains fierce and the Government's recent extension to the facilities offered by the Export Credits Guarantee Department is bound to be of great value to the makers of capital equipment like ourselves. The division of the European market into separate camps is becoming more and more evident as the pattern of the two rival trading groups becomes more set. As British makers of specialised heavy plant we are finding ourselves at a disadvantage in the European Common Market with its dynamic record of growth and, although we are pursuing our drive for exports within the European Free Trade Area, we would welcome a unification of these two trading areas within Europe.

Our wholly-owned subsidiary company in Johannesburg continues to design and contract for the full range of our home specialities, by now the majority of the equipment being made in the works of our associated company, Wright Boag and Head Wrightson (Pty). Both companies had a good year in unsettled conditions.

Head Wrightson (Australia) Pty. in Sydney has been most successful in enlarging its business and has been awarded a large contract for oxygen steelmaking equipment by the Broken Hill Proprietary Company in collaboration with Head Wrightson Iron and Steel Works Engineering.

Of our design and contracting companies, Head Wrightson Iron and Steel Works Engineering have been conspicuously successful in securing contracts during the present phase of re-equipment of the iron and steel industry, not only in Great Britain, but in Australia, Rhodesia and South Africa, in collaboration with our overseas companies.

The third of the blast furnaces at Durgapur was completed, ten weeks ahead of the stipulated programme accepted on the signing of the contract. This reflects great credit on the organisation in India and its support from this country. During the same month a further blast furnace was successfully "blown in" in Rhodesia.

At the end of the year under review we formed Head Wrightson India based on Calcutta, with a view to designing and contracting in this expanding market.

HOME

At home the year has been one of intense activity in our foundries and drop forges. In spite of the recession in the motor car industry, we actually increased the tonnage of drop forgings delivered and are now engaged in building up a healthy order book of direct export work in Europe. The capital expenditure schemes at our Steel and Iron Foundries proceeded throughout the year without affecting the tonnages produced at either foundry. The new electric steel melting plant at Stockton Steel Foundry and the new sand handling plant at our Iron Foundries both come into full production in the next few weeks.

Head Wrightson Teesdale and Head Wrightson Stockton were both affected by the difficulty of obtaining their requiremenes of steel to match their growing order books. This situation is not yet corrected and we are finding that in the case of both these companies, the works are not able to effect delivery of considerable tonnages of plant and equipment due to shortage of critical material.

The Head Wrightson Machine Company had a most successful year and the rising value of its output reflects the high level of capital expenditure which we have been investing in these works.

Head Wrightson Processes had the satisfaction of sharing in the award to our consortium of the contract for the Dungeness Nuclear Power Station. This will ensure continuity of work for our large staff of specialists engaged on nuclear designs, as the contracts at Bradwell and Latina enter their final stages. The sale of special products showed a significant advance on the previous year and we are now observing an increasing interest in our latest designs of cooling towers embodying incorrodible plastic fittings.

Head Wrightson Processes has started a new department for effluent treatment. We believe that this new service which we are offering in association with the Alfloc Water Treatment Service of I.C.I. will show steady growth and fulfil a long needed want. At the Bradwell Nuclear Power Station we have been entrusted with the pond cooling and effluent treatment plants, the latter now embodying a dezincification unit to protect the oyster beds.

Head Wrightson Minerals Engineering had a most difficult year. As foreshadowed last year when its name was changed, it is actively pursuing the field of the treatment of minerals other than coal in which its skills may be used to the greatest advantage.

McKee Head Wrightson, our associated company in London specialising in the engineering of oil refineries and petro-chemical plants, has further consolidated its position.

The year has been an exciting one for our Research and Development Division.

I think we may claim that our expenditure on research and development is probably greater than most of our contemporaries in our fields of engineering. We are satisfied that this is a rightful investment towards the future well-being of the company. Great care is taken, however, in the control of the money expended and we are constantly re-examining research projects in the light of the changing demands of our companies and the likely prospect of an early return on our efforts.

THE FUTURE

We can look forward to a year of great activity but as I have mentioned, deliveries of steel —particularly special steels—may lead to costly delays in the next few months.

ALLIED INDUSTRIAL SERVICES

RESULTS SATISFACTORY

The Annual General Meeting of Allied Industrial Services, Ltd., will be held on July 20 at Bradford.

The following is an extract from the statement by the Chairman, Mr. Frank W. R. Douglas sent to Shareholders with the report and accounts:—

Whilst we would have liked to have been able to show a greater increase in profits, we think that in all the circumstances we have not done too badly.

I am not suggesting that 1960-61 was a more than ordinarily difficult year in general but it was one in which there were definite indications that we were in for a general rise in costs. In addition there were shortages of labour in certain of our Works and the complete loss by fire of our plant at Northampton.

I have little doubt that the Northampton property, which is being completely rebuilt, will be in use as a Depot in July of this year. Other encouraging factors have been the gradual increase in output and efficiency in several of our subsidiaries and our developments at Rochdale.

The net profit of the group for the year under review amounted to £593,714 as compared with £545,734 in the previous year. It is proposed to recommend a final dividend of 22½ per cent on the ordinary shares, making a total of 30 per cent for the year as compared with 27½ per cent in the preceding year.

The year has started quite well and I think we will achieve our objective of continued expansion together with satisfactory results.

HONGKONG (SELANGOR) RUBBER

MR ADDINSELL'S STATEMENT

The forty-ninth annual general meeting of Hongkong (Selangor) Rubber, Ltd., was held on June 26th in London, Mr Jack Addinsell, chairman, presiding.

The following is an extract from his circulated statement:

Following the pattern which has been set for the past few years crop was once again in excess of the previous year and, in fact, was up by 70,700 lb., a very satisfactory increase of over 20 per cent. Although returns from our remaining small area of old rubber have continued on a profitable level the higher crop was primarily derived from our mature post-war rubber.

During the year a small area planted in 1955 with clonal seed was brought into tapping and is currently yielding very well considering the short period it has been opened up. Improving crops continue and for the first four months of the current year 136,700 lb. have been harvested as against 114,600 lb. for the year under review.

We are once again in receipt of tin tribute from Hongkong Tin. The income for 1960 is not large as the dredge did not recommence operations until September but we can, given no unforeseen circumstances, look forward to a satisfactory contribution to our profits for 1961 from this source.

It will be seen that from the sale of our rubber net proceeds at £43,593 were £9,330 higher than for the previous year mainly as a result of the larger crop since the average net price was only 1d. per lb. higher. Again as a result of the increased crop cost of production was nearly 1d. per lb. lower than for 1959; a very satisfactory reduction bearing in mind the higher wage rates in operation throughout the year. Export duty and cesses, over which the Company has no control, were up by 1¼d. per lb.

We have a profit on the year's working of £16,748. Your Board recommend a final dividend of 25 per cent making a total of 40 per cent for the year, which compares with the equivalent of 22½ per cent for 1959 prior to the capitalisation issue.

No replanting or new planting was undertaken in 1960 but a programme spread over the next five years comprising 96 acres of replanting, which will complete the rejuvenation of the old rubber, and 159 acres new planting has been provisionally agreed. The new planting is reserve land not yet under rubber which has been pronounced suitable for planting by the soil experts.

The report and accounts were adopted.

GRAND CENTRAL INVESTMENT HOLDINGS LIMITED

The Second Annual General Meeting of Grand Central Investment Holdings Limited was held on June 27th in London. The following is an extract from the Statement by the Chairman, Mr C. A. Meakin:

The profit for the year amounted to £402,000 after allowing for depreciation, etc., but before tax. This represented a reduction of some £30,000 compared with 1959.

The incidence of Taxation shows a considerable increase due to the introduction of two new taxes. The first was a retrospective levy of 15 per cent based on the 1959 profits and this surcharge cost the Company no less than £22,000 which your Directors thought it equitable to finance by reducing the carry-forward from the previous year. If this particular tax continues in 1960 we shall have to find a further £25,000 for which provision has been made. A further and most disagreeable feature of these new taxes was the introduction of a Land Tax payable at the equivalent of £1 2s. 6d. per acre, whether or not cultivated. As will be seen from the acreage statement, this Company possesses large areas under the heading of reserve land and, therefore, this particular liability assumes considerable proportions and in fact amounts to no less than £25,500 per annum. If these taxes continue to operate in addition to the present high rate of tax, the total Ceylon Tax is likely to be in the region of 75—80 per cent of the profits earned in that Country despite the allowance for replanting expenditure. This will explain, I hope, the reasons for what I consider are disappointing results of the year's working.

Our rubber crop was reasonably satisfactory and from the replanted areas we obtained the equivalent of 967 lb. per acre. As to the future and from the most recent forecast that we have received from our Agents in Colombo it is anticipated that by the end of the next ten years and provided the present rate of replanting continues, we can look forward to a crop of about 18,000,000 lb., as compared with the 1960 intake of 12,500,000 lb.

The financial aid of replanting subsidies granted by the Ceylon Government is very welcome but there is little encouragement for the future with the present heavy incidence of taxation. The measures recently taken by the Finance Minister, Mr F. D. Bandaranaike have already borne some results in that Ceylon's foreign assets by the end of March last show an increase, albeit small but certainly in the right direction. The next Ceylon Budget is due to be presented on July 27th when I can only hope that the opportunity will be taken by Government to do what it can to reduce the taxation burden on products which are the main supports of the Island's economy.

The report and accounts were adopted.

APPOINTMENTS

TAXATION. A well-known firm of Chartered Accountants in Singapore and Malaya have a vacancy for a senior appointment in their taxation department. Applicants should have a wide knowledge and experience of taxation but need not necessarily possess an accountancy qualification. The appointment, which should lead to early promotion for the right man, would suit a serving or retired Inspector of Taxes. The starting remuneration will depend upon experience but will be substantial.—Applications, with full details, should be sent to Box 1523.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the CHAIR OF MEDIEVAL HISTORY. Duties to commence as soon as possible. Salary not less than £2,600 per annum. Membership of F.S.S.U. and Children's Allowance Scheme. Applications (twenty copies), giving full details of qualifications, publications, experience, etc., and the names and addresses of at least three persons to whom reference may be made, should be sent not later than July 15, 1961, to the Registrar, the University, Manchester, 13, from whom further particulars may be obtained. Overseas candidates may submit one copy of their application.

HERTFORDSHIRE COUNTY COUNCIL

HATFIELD COLLEGE OF TECHNOLOGY
Dr. W. A. J. Chapman, M.Sc.(Eng.)

Lecturer in Marketing

Applications are invited for this post in Management Studies. Applicants should be graduates in economics and/or statistics, with experience in marketing or sales management and in training or teaching. Salary £1,370-£1,550 according to experience. Details from Registrar.

THE Esso Petroleum Company Limited has a vacancy in its Public Relations Department for AN ESTABLISHED WRITER of real talent for varied and important non-technical assignments.

Applicants should have ten years' writing experience and should be prepared to show published work.

A flair for writing will be considered more important than technical knowledge or industrial experience.

This is a senior appointment with an appropriate salary.

Write to: Head of Recruitment (Ref. 336), Esso Petroleum Co. Ltd., 16 Charles II Street, London, S.W.1.

LEEDS EDUCATION COMMITTEE

LEEDS COLLEGE OF COMMERCE

43, WOODHOUSE LANE, LEEDS, 2
Principal:
E. V. Roberts, B.Com., F.C.A.

Applications are invited for the post of LECTURER in STATISTICS. Experience in the application of statistics to management control, including OPERATIONAL RESEARCH, is looked for. Research and consultancy work with local industry are encouraged.

Salary (under review): £1,370 x £35 — £1,550. An appointment may be made above the minimum of the scale.

Application forms and further particulars may be obtained from the Principal at the College.

GEORGE TAYLOR,
Chief Education Officer.

Education Department,
Calverley Street,
Leeds, 1.

ECONOMIST

Economist with some industrial experience wanted for a new position in its Research and Development Division by engineering firm in N.E. Salary about £1,250. Full details to Box 1524.

For further appointments and other classified advertisements see pages 94 and 95

THE UNIVERSITY OF MANCHESTER

Applications are invited from graduates or holders of a suitable professional qualification for a post as TUTOR in the Department of Social Administration. The duties are concerned with the National Training Scheme for Hospital Administrators and experience in the organisation of training schemes will be an advantage.

The appointment will be for three years in the first instance and the salary will be within the scale £800 x £50 — £950, or £1,050 x £50 — £1,550 (merit bar-line) x £75 — £1,850 according to experience and qualifications. Further details and application forms may be obtained from the Registrar, the University, Manchester 13, to whom applications should be submitted by July 10, 1961.

COMPANY AFFAIRS

Cross Currents for Courtaulds

THERE is no doubt about the scope for expansion in made-made fibres: in the topical example of western Europe consumption might treble in the next ten years. Less certain is the profit margins that will be earned by producers and which groups will gain most. Courtaulds' vigorous drive to develop non-textile interests is some indication of the unpredictability of textiles. A year ago, when production was booming in Britain, investors may well have lost sight of this consideration for Courtaulds' £1 units rose to the equivalent of 60s. But in November, the interim report brought this lesson forcibly home; despite the inclusion of the results of Pinchin Johnson for the half-year, there was no significant increase in profit. After that, the sharp deterioration in demand which resulted in short-time working at one large rayon staple factory before the end of Courtaulds' financial year was evidently making a dent in profits.

Although sales rose by £32 million to £172 million, the group's net profit fell from £11,218,000 to £9,822,000 in the year to March 31st. The directors' report says that the woodpulp, packaging and plastic divisions earned more and it implies that the fabrics, chemicals and engineering divisions did well. A high price was paid for Pinchin Johnson last year, but bad luck brought a slump in motor car production and domestic appliances, the chief outlets for its paints, at the same time that consumption of man-made fibres turned down. The slump in motor production, particularly in Canada, also reduced demand for tyre yarn which normally helps to stabilise rayon consumption, although the domestic demand for replacement tyres remained strong. A factory, due to be closed, was kept in operation to meet the demand, but price cutting by foreign producers led to a substantial reduction in British tyre yarn prices.

* Excludes results of Pinchin Johnson. † Adjusted for scrip issue.

The most discouraging aspect of the full report is the world-wide setback in viscose rayon, the group's principal product. (Textiles still account for 70 per cent of the group's assets, but now for less than 60 per cent of profits.) In Australia, Canada, France and the United States results were poor. Because it is longer-established, rayon usually bears the brunt of a recession in man-made fibres. Courtaulds is making rapid progress with its new fibres, but this is a field in which many groups are competing. The British patent for nylon has expired and more competition and a further cut in prices may follow. Both ICI and Courtaulds, joint owners of British Nylon Spinners, have announced plans to produce caprolactum from which nylon 6 is made. British Enka is also planning to produce nylon 6 in Northern Ireland.

It seems fortunate that the group is able to link with the report an announcement of an agreement with Koppers Company Incorporated, a large American chemical and plastics group. Courtaulds has bought about 4 per cent of Koppers' issued capital for £1½ million and now has two representatives on the Koppers' board. The main point of the agreement seems to be that Courtaulds wishes to develop non-textile interests in the United States as well as in other countries, and an exchange of technical information with Koppers will be an important stepping stone. On the ordinary dividend rounded up to 10 per cent, Courtaulds £1 units at 36s. 9d. yield 5½ per cent.

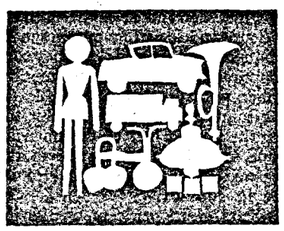
Metal Box

THE full report from Metal Box confirms the impression given by the preliminary figures that for the moment at least the group must look overseas for higher profits. The chairman, Sir Harold Roxbee Cox, says that the company's performance at home was unremarkable, because costs went up following the increase in wages and the shorter working week and because demand slackened in the last few months of the year to March 31st. Though turnover at home rose from £62.6 to £65.7 million higher wages and salaries cut into gross profits, which fell by £53,000 to £5,477,000. Overseas, sales rose by over 25 per cent, from £20.7 to £26.2 million, and gross profits by 28 per cent, from £2.3 to £2.9 million.

At home the fall in demand in the second half of the year seems to have been largely in cans for processed food and in the standard lines of containers and tubes. Sir Harold says that demand at home is likely to remain depressed for a few more months and although overseas profits should continue to improve, profits in the six months to September 30th are likely to be lower than in the same period in 1960. But the outlook for the second half of the financial year is apparently better and sales in the current financial year are expected to be better than in 1960-61.

The dividend of 12 per cent on the increased capital compares with the equivalent of 10.9 per cent in 1959-60 and at 84s., the £1 shares yield 2.9 per cent, covered 2½ times. Earlier this year the shares touched 100s. 9d. and even now the yield looks a long way ahead. Investors are discounting the rise in sales and profits which should spring from Metal Box's massive capital programme. The group, having spent nearly £6½ million on capital account in 1960-61, is already committed to spending at least £6¼ million more.

Express Dairy



IN an age of take-overs and mergers, preliminary profit statements are often difficult to interpret when the extent to which new acquisitions contributed to profits is not shown. Pre-tax profits of Express Dairy rose by £500,000 from £2.3 million to £2.8 million in the year to March 31st, but it would seem that by far the greater part, if not all, of the increase came from Spiers and Pond, acquired last November. This hotel catering concern was estimated to have earned a gross profit of about £400,000 in the year to end-September and a further £120,000 was expected to arise from Spiers and Pond's own acquisitions. As Express Dairy acquired Spiers and Pond with effect from October 1, 1959, it is to be presumed that its latest present profits include 18 months' earnings from its new subsidiary.

While any true assessment must await the full accounts it seems clear that like most other companies in the food industry, (besides its milk business Express Dairy runs a number of supermarkets) the group's profit margins have been squeezed. On the capital as increased both by rights and scrip issues and by shares issued to Spiers and Pond shareholders, the dividend is effectively maintained at 10 per cent. Not surprisingly since the results the 5s. "A" shares have fallen by 1s. 7½d. to 15s. 3d., to yield 3¼ per cent.

Hovis-McDougall

THE preliminary statement of Hovis-McDougall is another that leaves a number of questions unanswered. Profits before tax for the year to March 31st last rose from £2.4 million to £2.7 million but these included for the first time the profits of E. Marriage, which has flour milling interests in south east England. In addition Hovis-McDougall made a number of smaller acquisitions last year, including Skurrays, the motor distributors and engineers.

Continued on page 89

Boom in Toytown

CHILDREN may be thinking now more of ice cream and the sea—and possibly of the less exciting prospect of school examinations—than of toys. But there is plenty of evidence that toys are never far from their thoughts—or their parents. Evidence of this is supplied by the full report of **Lines Brothers,** by far the biggest toy manufacturer in this country, which sells under the trade mark of Triang Toys and owns Hamleys of Regent Street, the second biggest toyshop in the world. It is also one of the leading pram manufacturers. A change in its financial year to end-December means that the latest accounts cover eighteen months, including two Christmases when the bulk of retail sales are made. On an annual basis its trading profits rose from £1,391,000 to £1,769,000 and the dividend of 40 per cent represents 26⅔ per cent per annum, one third up on 1958-59.

As before, the dividend is covered over three times, the company having ploughed back substantial sums to finance expansion at home and overseas. Lines has a valuable stake in the common market; in France it is building and re-equipping more factories and it has acquired a controlling interest in J. Schowanek, a leading German toy manufacturer. Mr Lines is optimistic.

	1961 prices Jan. 3	June 29	Div. per cent	Yield per cent
Airfix Inds. Ord. (4/-)	35/6	50/-	47½	3·8
Chad Valley (5/-)	5/6	6/3	Nil	—
Lesney Products (5/-)	30/6	46/9	27½	2·9
Lines Brothers (5/-)	27/4½	37/-	26⅔‡	3·6
Meccano 'A' (5/-)	8/6	7/11½	10	5·6
D. Sebel (2/-)	2/10½*	3/2¼	15†	8·1

* Adjusted for scrip issues. † Forecast dividend. ‡ Adjusted to annual basis.

Four other public companies in this field have all recently issued reports, all showing higher profits. Perhaps the most interesting of these is **Lesney Products.** This producer of the popular "Matchbox" models of cars and vehicles became a public company only last September when its shares were offered for sale at 20s. They now stand at 47s., reflecting the rapid growth in gross profits to £332,000 in the year to January 19th. Ten years ago the company was making a small loss and profits have quadrupled in the last five years. Profits comfortably exceeded the estimate made at the time of the offer and the dividend at 27½ per cent was 2½ points above the forecast. It is covered five times by earnings but until 1963 only half the equity ranks for dividend.

With more capacity available the chairman is confident that output can be raised to meet the big demand for its toys and he says that exports to North America and Germany are substantial. But the company has had to work at lower profit margins and the retail price of "Matchbox"

SALES, EXPORTS AND IMPORTS

	1951	1955	1957	1959	1960
	(£ million)				
Toy production ...	25·3	32·2	35·9	36·1	40·5

Imports	1·5	1·9	2·4	3·2	5·5

toys in this country was raised in December from 1s. 6d. to 1s. 8d. Lesney's interests are not entirely confined to the toy industry for its commercial die casting business accounts for 15 per cent of total sales.

D. Sebel, makers of the "Mobo" toys and "Jetex" kits is another company with a policy of diversification; its furniture business, in the words of its chairman, Mr L. Sainer, "works in well during the slacker times of the year." Mr Sainer is better known as one of Mr Clore's right hand men but D. Sebel has shown few signs of the buoyant profits that might perhaps be expected from such management. Even so, apart from a sharp setback in 1957, profits have made a small but steady advance. They seem likely to rise again this year, for Mr Sainer has forecast a maintained 15 per cent dividend on the capital as increased by a one for three scrip issue.

As the table shows the return on **Airfix Industries** shares is less than half that obtainable on D. Sebel. Formed from the "shell" of Ceylon Cocoa and Rubber Company it has subsidiaries making construction kits and toys as well as novelties and household products, all in thermo-plastic materials. Its trading profits have risen from £274,000 in 1958 to £429,000 in 1960 and over that short period the ordinary dividend has been raised from the equivalent of 21¼ to 47½ per cent. This was covered three times by earnings in 1960 even though the final dividend was paid on shares issued as part payment on the acquisition of the LWG Group. The latest accounts do not include any profits from this group, which makes some of the plastic toys displayed on the counters of Woolworth and other chain stores. This acquisition should enable Airfix Industries to maintain its record of growth, while the current year's results will also include for the first time earnings of a French subsidiary. Sales so far this year have again risen following the decision to deal directly with the retailers.

An advance in profits in 1961 has been

forecast by the chairman of **Chad Valley,** which has had a poor trading record since its peak period early in the 1950's. The company makes teddy bears and other toys as well as many indoor games, and incurred a net loss of £28,000 was turned into a profit of £41,000 and this, together with the new management seems to have arrested the decline. In 1960, its centenary year, and loss account from £115,000 to £19,000 at the end of 1960.

From **Meccano** however has come further disappointing news this week. For the third year running gross profits have fallen sharply, from £240,000 to £126,000 in the year to January 31st last. This compares with a gross profit of £636,000 in 1957-58. Not surprisingly the dividend instead of being raised from 9 to 10 per cent as had been forecast has been reduced to 8 per cent. Besides its Meccano kits the company makes Dinky toys and the Hornby Dublo clockwork and electric trains. The latter are now being marketed in two-rail as well as three-rail sets and the holding of purchases by both dealers and the public before the advent of two-rail sets and the late arrival in quantity was said to be a major cause for the earlier decline in profits. The French subsidiary too has had a poor trading record recently. Now it seems that the company has run into production difficulties and costs have risen; but the Meccano directors say that trade this year is substantially higher than a year ago.

The toy industry seems to be reasonably confident about the immediate future though foreign competition is increasing. Following the lifting of most of the severe quotas imports of foreign toys rose sharply last year. Over £2 million of toys, largely of the cheap plastic type, came from Hongkong. There was also a substantial increase in the quota of Japanese toys from £180,000 to £415,000 and it seems possible that these imports will rise still further. But the British manufacturers have built up their exports which last year accounted for over 40 per cent of total production. With almost three-quarters of the toy trade squeezed into the last three months of the year it will not be until Christmas that the full impact of foreign toy imports will be felt. From the investor's point of view it seems likely that it will be the smallest of the 350 toy firms in this country which will be badly hit, for the bigger manufacturers are holding their own in the "quality" market.

The flour trade is very competitive and the chairman said a year ago that margins were limited to a bare commercial return on capital employed. This shows how important are Hovis-McDougall's attempts to diversify its interests not only into the motor industry but also in wholesale grocery, butter packaging and animal foods. The proposal to raise a further £2 million by a one for ten rights issue may indicate that the company is thinking of further acquisitions, for at the end of March, 1960, the group held almost £2¾ million in liquid form. Capital commitments then amounted to only £700,000 and these should have been easily covered by the cash flow.

The directors' present intention is that the new shares should be issued at 12s. 6d. a share, to make the rights worth about 4½d. at the current price of 17s. 3d. Assuming that the bigger dividend of 12½ per cent, against the equivalent of 11¼ per cent, is maintained on the increased capital, the indicated yield ex-rights is 3.8 per cent.

Rediffusion

As sales of television sets now depend much more on replacement demand, it has been possible to predict with confidence a fall in the rate of growth of profits among the companies in the radio and television industry. The market was not therefore surprised that the gross profits of the group rose by 11 per cent from £6,465,000 to £7,158,000 in the year ending March 31st, compared with a rise of 38 per cent in the previous year. The company's stake in Associated-Rediffusion contributed to this increase. After a heavier depreciation charge, a bigger allotment to contingencies reserve and a sharp increase in taxation from £713,000 to £1,292,000, net profits in 1960-61 rose by 13 per cent, from £1,656,000 to £1,867,000.

The group cannot escape from the effects of saturation in the television market but as most of its business lies in the field of relay radio and television it was well placed to withstand the impact of the credit squeeze. The group, through the Redifon organisation, does have manufacturing interests but most of its products, other than those used in its own relay business, go overseas. The dividend, as forecast, has been raised from 20 to 24 per cent free of tax, covered 1½ times; but the new ordinary stock resulting from the recent rights issue does not rank for the dividend. At 42s. 9d. the 5s. shares yield 4.6 per cent.

British and Commonwealth Shipping

An improvement in passenger revenue and in the volume of freight traffic was reflected in the rise of 27 per cent in the gross profits of British and Commonwealth from £6,012,000 to £7,663,000 last year. The introduction of new vessels to the fleet added to earnings but also added to the depreciation charge. The total depreciation charges however were lower as no provision had to be made for aircraft, since these interests were transferred to an associate company and now rank as trade investments. An increase in investment allowances from £1½ million to £2¼ million reduced the tax burden and therefore contributed to the rise in net profits from £2,553,000 to £4,183,000.

The group's re-building programme reached its peak last year when net capital expenditure was about £12½ million, compared with £8¼ million in 1959 and just over £12 million in 1958. The cash flow of £8 million thus covered about two-thirds of the year's expenditure, and inevitably liquid balances were reduced from £15 million to £9½ million.

Four more cargo ships were ordered last year and at the end of December ten ships were on order, against nine at the end of 1959. But the total tonnage on order is lower and capital commitments have fallen from £21¼ million to £14¼ million so that the group may, if it maintains its earnings this year, be able to finance this programme without again drawing down its liquid balances. The directors have maintained the dividend at 20 per cent, covered 4½ times, and at 36s. 6d. the 10s. shares yield 5½ per cent.

Allied Ironfounders

ALLIED IRONFOUNDERS is yet another company to report narrower profit margins on bigger sales. The rise in costs contributed to the fall of 13 per cent in gross profits, from £2,560,000 to £2,225,000 in the year to April 1st. But almost half of this decline was due to higher depreciation charges and a smaller income from investments. After a lower tax charge net profits fell by 11½ per cent from £1,332,000 to £1,183,000. The fall in profit margins seems to have been particularly marked in the latter half of the financial year as profits earned between May and August, when the group made its bid for Bilston Foundries, were higher than in the corresponding period of 1959. The dividend has been maintained at 20 per cent, though the cover has fallen from 2 to 1¾ times.

The chairman, Mr G. S. Steven, says that the building industry, which is the group's principal customer, remains prosperous; this should ensure a high level of demand for the group's wide range of products, including pipes, cookers, boilers and fires. Hardly any of these are subject to purchase tax so that the threat of the Chancellor's "economic regulator" has little meaning for Allied Ironfounders. Mr Steven says that the year ahead offers an opportunity for further expansion, particularly in central heating boilers and plastic piping (which will be marketed before the end of the financial year). The £1 shares fell recently to 66s., their lowest point of the year, but after the chairman's statement they rose by 1s. to 67s., to yield 6 per cent.

London Stock Exchange

FIRST DEALINGS:	June 12	June 26	July 10
LAST DEALINGS:	June 23	July 7	July 21
ACCOUNT DAY:	July 4	July 18	Aug. 1

THE close of the account last weekend saw the stock market in a subdued mood. Small sellers were in a majority and the opening of the new account on Monday did not see any revival of interest among buyers. The chancellor's warnings about the economic situation which, together with uncertainty about the Soviet attitude to Berlin, had discouraged buyers before the weekend continued to influence the market on Monday and Tuesday; labour troubles in the motor industry and the dullness of Wall Street were other factors making for uncertainty. But on Wednesday a small number of buyers seeking stock at low prices was enough to push prices up a little. Their net effect was not enough to outweigh the earlier falls and *The Economist* indicator fell by 8 points to 383.2, its lowest level for four months.

Gilt edged stocks were very weak. Small sellers dominated the scene, as they did in the equity market, but there was no improvement in gilts on Wednesday, and in fact on that day the short-dated stocks fell back although a change in Bank Rate was not generally expected. Conversion 4½ per cent 1964 lost 13/32 to 96⅞ and 3½ per cent War Loan fell to 52 13/32. Dominion and Corporation stocks moved in sympathy with gilt edged stocks and there was widespread selling of high-coupon stocks.

In the equity market, bank shares failed to hold their gains made last Thursday; Barclays lost 1s. 3d. to 81s. 6d. and Lloyds 4s. to 68s. 3d. Insurance shares continued to fall, Legal and General losing a full point to 33 in spite of a gain of ½ on Wednesday. Among hire purchase shares, UDT lost 10s. to 177s. 6d. Store shares met with small selling until Wednesday and House of Fraser lost 3s. 7½d. to 56s. Among food shares Associated British Foods lost 6d. to 13s. and brewery shares were also dull, with Bass losing 9d. to 24s. 6d. Richardsons, Westgarth lost 1s. 1½d. to 5s. 9d. after the dividend had been passed but the news that Cunard Eagle had been granted a licence to fly the North Atlantic resulted in a net rise of 4½d. to 15s. 9d. in Cunard shares.

Steel shares fell back over the week; Dorman Long fell to a new low for the year of 32s. 1½d. before recovering to 32s. 7½d., a net loss of 1s. 9d. over the week. Textile shares lost small amounts and cottons failed to rally on Wednesday; Courtaulds lost 1s. 9d. in all despite a gain of 1s. on Wednesday. Property shares declined on rumours that the government might request the institutions to withhold funds for property development. Oil shares were dull before the week-end and news about Kuwait led to a fall in Shell from 128s. 6d. to 123s. 9d. Tin shares rose again, with Tronoh gaining 3s. 3d. to 85s. 9d. Kaffirs showed net falls despite Wednesday's rally; Western Holdings lost 1s. 3d. to 110s. and Anglo American 3s. 9d. to 117s. 6d.

THE MONEY MARKET

REFLECTING the continuing uncertainty over a possible rise in Bank rate, the syndicate of discount houses at last Friday's Treasury bill tender lowered its combined bid for the third week running, by 2d. to £98 17s. 4d. The average rate of discount rose by 8.05d. to £4 10s. 8.47d. Total applications rose only slightly, to £391 million, and with only £250 million of the £260 million bills on offer allotted, the discount houses received 50 per cent of their application compared with 55 per cent in the previous week.

Before the week-end Lombard Street was amply supplied with money and on both Thursday and Saturday the authorities sold back bills to absorb the surplus credit. With the clearing banks preparing their half-yearly statements, the market had considerable difficulty in balancing its books early this week but large purchases of bills by the authorities were just sufficient to save houses from borrowing at Bank rate. By Wednesday conditions had eased again and rates had fallen generally by midday to the clearing banks' minimum of 3½ per cent.

In New York the Treasury bill rate fell slightly from 2.325 to 2.219 per cent.

APPOINTMENTS

COMMONWEALTH OF AUSTRALIA

CAREER OPPORTUNITIES IN AUSTRALIA FOR UNIVERSITY GRADUATES

Applications are invited for permanent positions of

RESEARCH OFFICER

£A1,290-£A1,620, in the Public Service of the Government of the Commonwealth of Australia. The vacancies exist in the Bureau of Census and Statistics and in the Departments of Trade and Treasury and are located mainly in the National Capital, Canberra. Applications will also be considered for vacancies in other Departments in the fields of Agriculture and Mineral Economics.

QUALIFICATIONS: *Degree in Arts, Law, Economics, Commerce or Science (Mathematics).*

TYPE OF WORK:

Bureau of Census and Statistics
Investigations into the whole range of official, economic and social statistics; sampling design and electronic data processing.

Department of Trade (including Trade Commissioner Service)
Research into international trade relations including commercial and commodity policy; import and export problems and general economic conditions.

Treasury
Research into economic and financial policies including public investment, balance of payments and external economic relations.

CONDITIONS OF APPOINTMENT: First-class fares paid for successful applicants and their families. Salary determined according to qualifications and experience will be paid from the date of embarkation. Advancement prospects are good and a superannuation scheme applies.

APPLICATIONS: Should be made on forms obtained from the Recruitment Officer, Staff Branch, Office of the High Commissioner for Australia, Australia House, Strand, London, W.C.2, and returned by July 24, 1961.

NORTHAMPTON COLLEGE OF ADVANCED TECHNOLOGY, LONDON
ST. JOHN STREET, LONDON, E.C.1

Additional lecturing staff will be required in the

DEPARTMENT OF SOCIAL AND INDUSTRIAL STUDIES

from September, 1961, or as soon as possible thereafter. Candidates for appointment must have a degree or equivalent and experience in the appropriate field of activity.

The work will involve teaching at both undergraduate and postgraduate levels.

(1) SENIOR LECTURER in Liberal Studies, to teach in one of the social sciences and to help in the development and organisation of courses and special lectures.
Salary scale: £1,588 p.a. x £50 to £1,801 p.a.

(2) LECTURER in Communication, to deal generally with problems in social communication and with emphasis on the presentation of *technical information, effective speaking* and the leading of group discussion.
Salary scale: £1,408 p.a. x £35 to £1,601 p.a.

Further particulars and forms of application available from the Secretary of the College, St. John Street, E.C.1.

J. S. TAIT,
B.Sc., Ph.D., M.I.E.E., M.I.Mech.E.,
Principal.

INTERESTING post available in International Reinsurance Company for man, aged up to 35, to be responsible for Information Office and Central Filing of the Company. Knowledge of a language or languages useful. Commencing salary according to ability and qualifications. Five-day week. Non-contributory pension and Group Life schemes available for permanent employees.—Box 1525.

UNIVERSITY OF MELBOURNE

(v) the study of developments in international trade of importance to the Group's interests.

Applicants should have a first or second class honours degree in Economics *or related subjects, although for one position a sound knowledge of European* languages is of greater importance. Appropriate research experience is desirable, but applications will also be considered from *candidates graduating this year.*

Applications, which will be treated in strict confidence, should set out full details of qualifications and experience, and should be addressed to:—

The Group Personnel Officer, Albert E. Reed & Co., Ltd.
Larkfield, Nr. Maidstone, Kent,
quoting reference ERI/ESA/20.

AEI

STATISTICIAN

to take a leading part in the development and application of Operational Research techniques and to act as a statistical consultant.

Applications, stating *qualifications and previous experience, to:*—

The Manager, Systems Dept.,
A.E.I. Lamp and Lighting Co. Ltd.,
Melton Road, Leicester.

IMPERIAL CHEMICAL INDUSTRIES LIMITED
Plastics Division,
has a vacancy at *its Headquarters in* Welwyn Garden City for a

CHARTERED ACCOUNTANT

aged 25 to 30, to join the Organisation and Methods Section. The duties comprise the critical analysis of commercial methods and techniques including specific surveys into departmental *organisation and procedures.* The man selected should be adaptable and have the ability to express himself clearly and logically.

Conditions of employment include a 37½-hour, five-day week, a Pension Fund and a Profit Sharing Scheme and for married men assistance is given towards removal expenses.

Apply briefly to the Staff Manager, *Imperial Chemical* Industries Limited, Plastics Division, Bessemer Road, Welwyn Garden City, Herts, quoting No. 5125/BI.

STATISTICIAN

LONDON TRANSPORT *require a* qualified STATISTICIAN for Post in Statistical Advisory Service. Responsibilities of the service *include advice to* departments on the application of modern statistical methods, including statistical design of experiments, collaboration in operational research *projects and design* and conduct of surveys. The Advisory Service undertakes the analysis, tabulation and interpretation of the results of investigations.

Applicants must possess a First or Upper Second Class Honours *Degree in* Statistics and have had practical experience of the application of statistical methods.

Salary range: £1,140 p.a. to £1,320 *p.a.* Valuable free travel. Five-day week. Contributory superannuation.

Applications to Staff and Welfare Officer, London Transport, 55 Broadway, S.W.1, quoting reference No. 143/3.

QUALIFIED ACCOUNTANT FOR MIDDLE EAST

Price Waterhouse Peat & Co. require a qualified accountant, preferably single, for appointment to the staff of their office in Addis Ababa. The climate in Addis Ababa is good and the initial tour will be for two years, the last two months of which will be on paid leave in the United Kingdom. Commencing salary after payment of taxation will be *in excess of* £2,000 per annum. Travelling expenses from and to the United Kingdom at the end of contract will be paid by the firm. Applications should be *sent* to Price Waterhouse & Co., 3 Frederick's Place, Old Jewry, London, E.C.2.

BRITISH OVERSEAS AIRWAYS CORPORATION
have a vacancy for an

OPERATIONAL RESEARCH OFFICER

as part of a team providing an advisory service for the Corporation as a whole. *Duties involve the* application of the whole range of research, mathematical and statistical techniques. Qualifications should include a good degree in the Sciences or in Economics, backed up, if possible, with some research experience and/or familiarity with computer programming. Salary in the range of £1,048 p.a. to £1,236 p.a. Contributory Pension Scheme. Opportunity for travel.

Applications, giving details of background and experience, to:

Mr. H. S. Ash,
Recruitment Centre, B.O.A.C.,
London Airport, Hounslow, Middlesex.

STAFFORDSHIRE COUNTY COUNCIL
COUNTY PLANNING AND DEVELOPMENT DEPARTMENT

Applications are invited for the appointment in the Research and Industry Section of the County Planning and Development Department of a Planning Assistant on A.P.T. Grade III (£960-£1,140 per annum) or A.P.T. Grade IV (£1,140-£1,310 per annum). The commencing salary and grading will depend on qualifications *and experience.*

Applicants should have an Honours Degree in either Geography, Economics or Geology, and have had experience in research in any of the subjects with a Local Authority, a Government Department or a Research *Institution.* The work will be concerned with mineral and economic problems connected with the survey for and the implementation of the development plan.

The Council are prepared to grant lodging allowance of 35s. per week for a period of six months and second class railway travel home every two months during the initial six months to married applicants maintaining a home outside the geographical county. *Consideration* will also be given to the granting of financial assistance in appropriate cases towards removal expenses.

Applications, giving details of age, education, *qualifications,* present and previous appointments, experience, and the names of two persons to whom reference may be made, should be sent to D. W. Riley, County Planning and Development Officer, 41a Eastgate Street, Stafford, not later than *July 12, 1961.*

Relationship to any member or senior officer of the County Council must be disclosed. Canvassing will disqualify.

T. H. EVANS,
Clerk of the County Council.

For other appointments see page 66

INDUSTRIAL RELATIONS
OVERSEAS APPOINTMENT—GHANA

Applications are invited for an Industrial Relations Adviser in Ghana for two tours of 18 months in first instance. Sound knowledge of labour relations with particular emphasis on overseas conditions essential including ability to collate details of National Agreements, to advise in meetings of Negotiating Committees and on Labour/Legal *questions, and to attend* meetings of National Advisory Committee on Labour as one of Employer Delegates. Applicant to act in liaison with T.U.C. of Ghana and be responsible to Director of Association for all Industrial Relations matters.

Salary based *on experience* and qualifications at flat rate. £2,750-£3,500.

Overseas leave after 18 months, free furnished house, car and medical attention.

Only applicants with appropriate qualifications will be considered. Applications *(in duplicate),* giving full particulars of age, education, qualifications and experience especially overseas, present salary, married or single, should be addressed to the Secretary of Ghana Employers' *Association.* C/o. The Director, Overseas Employers' Federation, 58 Clifford's Inn, London, E.C.4. Closing date for applications, July 15, 1961.

... then you would have **ANSAFONE—Britain's foremost telephone answering and recording system.** Think what this would mean. You need never miss a telephone call—day or night! Your customers, for example, can telephone their orders after office hours for prompt attention and routing the following morning. Long and involved reports from your representatives can be sent without distracting staff from more urgent work *and* during cheap rate periods. Calls may be received and recorded without disturbing an important conference. It will enable you and your staff to send messages and instructions with no need to wait for a personal reply; in other words use the telephone as a long distance recording machine!

From these few examples alone it will be obvious how ANSAFONE can increase the efficiency and capacity of *your business—but the possibilities are immense. That is* why ANSAFONE is fast becoming accepted telephonic practice all over the world. Why wait? You can help yourself, your customers and put your business ahead of your competitors by installing an ANSAFONE system now. ANSAFONE is compact, easy-to-use, *and can be rented for as little as 2d. an hour,* maintenance free.

Two important finance houses have joined forces for strength and development

Owned by two great banks

Two long-established finance houses, Olds Discount Company Limited and Scottish Midland Guarantee Trust Limited, are now linked together in Lloyds & Scottish Finance Limited which, in turn, is owned jointly by Lloyds Bank and the National Commercial Bank of Scotland.

With a capital of £15,000,000 and assets exceeding £100,000,000, the Group offers comprehensive hire purchase and block discounting facilities for the distributive trades, industry, commerce and the individual.

Traditionally, a large proportion of its turnover is in the motor vehicle business: private cars, commercial vehicles and motor cycles. The manufacturing and building industries, and other large-scale users of capital equipment and machinery, including agriculture, are employing the Group's financial facilities on an increasing scale. In the field of household equipment—radio, television, refrigerators, washing machines, furniture, etc.—its block discounting and direct collection facilities are used extensively by enterprising traders. Convenient payment arrangements are provided for individuals for central heating installations, marine craft, garages and garage extensions, boarding school fees and other such personal requirements.

Through a nation-wide network of over 100 branch offices the Group has established a reputation for efficient, courteous and understanding service to all its customers. Enquiries are welcomed at any office of the two operating companies, Olds Discount and Scottish Midland Guarantee Trust; or may be addressed to the head office.

HOME

LAISSER FAIRE

The Government's—and the trade unions'—desire to leave ill alone has given rise to some *intolerable practices*: a reform of union law on the lines of company law is urgently needed (p. 113).

MALADIE DU JOUR

The sickness of sterling needs a new prescription: past placebos have failed, and the future of the pound—and of international credit plans—depends on a long-term cure (p. 151).

The Chancellor's knife will have to cut deep, and let some blood, if Britain's moribund economy is to be revived (p. 119).

EMBARRAS DE RICHESSE

Uranium is in drastic oversupply in an inelastic market: but its prospects may be brighter after 1970 (p. 152).

The Monopolies Commission does not think Imperial Tobacco's near-monopoly a particularly bad thing: but it has advised the company to divest a large shareholding in its big rival (p. 154).

The market in municipal money is quietly booming (p. 159).

AMENDE HONORABLE

Sir Anthony Eden has deserved his earldom (p. 119). The Home Office's report on compensation for victims of violence is disappointingly evasive (p. 124).

ENTENTE CORDIALE

The Russian exhibition at Earls Court is an impressive image of the motherland—and a lesson for co-existers (p. 147).

Lord Robens and Mr Gaitskell may expect co-operation from the mineworkers; Dr Beeching and Mr Marples are not so fortunately placed with the railwaymen (p. 121).

POUR ÉPATER LES AUTRES

The confirmation of the unprecedented sentence on George Blake is open to serious criticisms (p. 122).

FAUTE DE MIEUX

The 12-mile fishing *limits are forcing new ideas* on Britain's trawler owners (p. 148). Sir David Eccles may have to accept the introduction of a new school-leaver's examination against his will (p. 122).

QUEL DOMMAGE

Equity prices are still in retreat as jobbers mark down prices to damp down selling (p. 155). Whisky and gin are to cost more (p. 168).

INTERNATIONAL

ENGLAND EXPECTS

The British Government did not wait to see whether General Qasim intended to make good his threat to Kuwait. Now the problem is to get the British troops out *while continuing* to ensure Kuwait's safety, *preferably through international* action. *Russia may gain* if Britain's stay is too protracted (p. 111).

- *In Kuwait, all is calm* (p. 128).
- Britain has been missing a great opportunity to speak out against what the Portuguese are doing in Angola (p. 118).
- The new department of technical co-operation is a puny approach for the United Kingdom to make to a great world problem (p. 122).

COMMONWEALTH INSPECTS

Australia, New Zealand and Canada are raising the expected objections about Britain's approaching negotiations with the common market. The Asian Commonwealth has made little fuss, but a surprising volume of protest has come from the African capitals (p. 115).

Wellington: Mr Sandys has done well, but New Zealand is still not happy (p. 115).

Canberra: He is finding the Australians worried (p. 116).

Ottawa: And he is not going to have it so good in Canada either (p. 117).

Emerging Commonwealth:

East Africans are inspecting plans for a federation (p. 124).

Southern Rhodesians are being made introspective about segregation (p. 129).

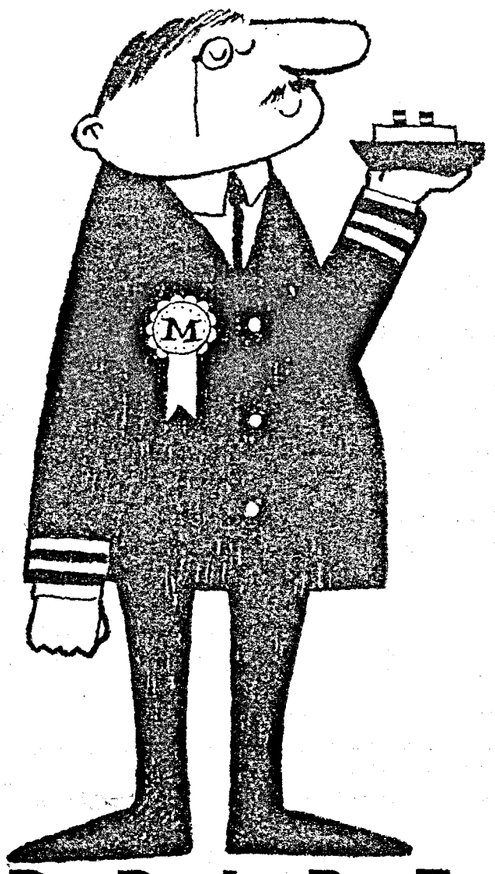
EARTH PROSPECTS

Israel has made a small skyward gesture towards getting away from it all (p. 120).

China and **Russia** have shifted uncomfortably away from one another (p. 120).

South Africa, although asked to go, has no intention of getting away from the International Labour Organisation (p. 124).

German deputies, facing an election, are singing "We don't ever *want to part from each other*" (p. 127).



Spain's democrats are getting together (p. 126).

AMERICA REJECTS

- President Kennedy's school Bill is likely to be squeezed to death between church and state (p. 135).
- Congress has been giving him a lot of other legislation but it bears little trace of frontier spirit (p. 136).
- The shipping strike has forced him to use an old piece of legislation which he has never liked (p. 136).
- His new Agency for World Peace is intended to show the world that the United States *is serious about disliking* armaments (p. 139).
- In Switzerland, disarmament is being discussed under private American auspices (p. 140).

American magazines have found a number of new ways to compete with television (p. 138).

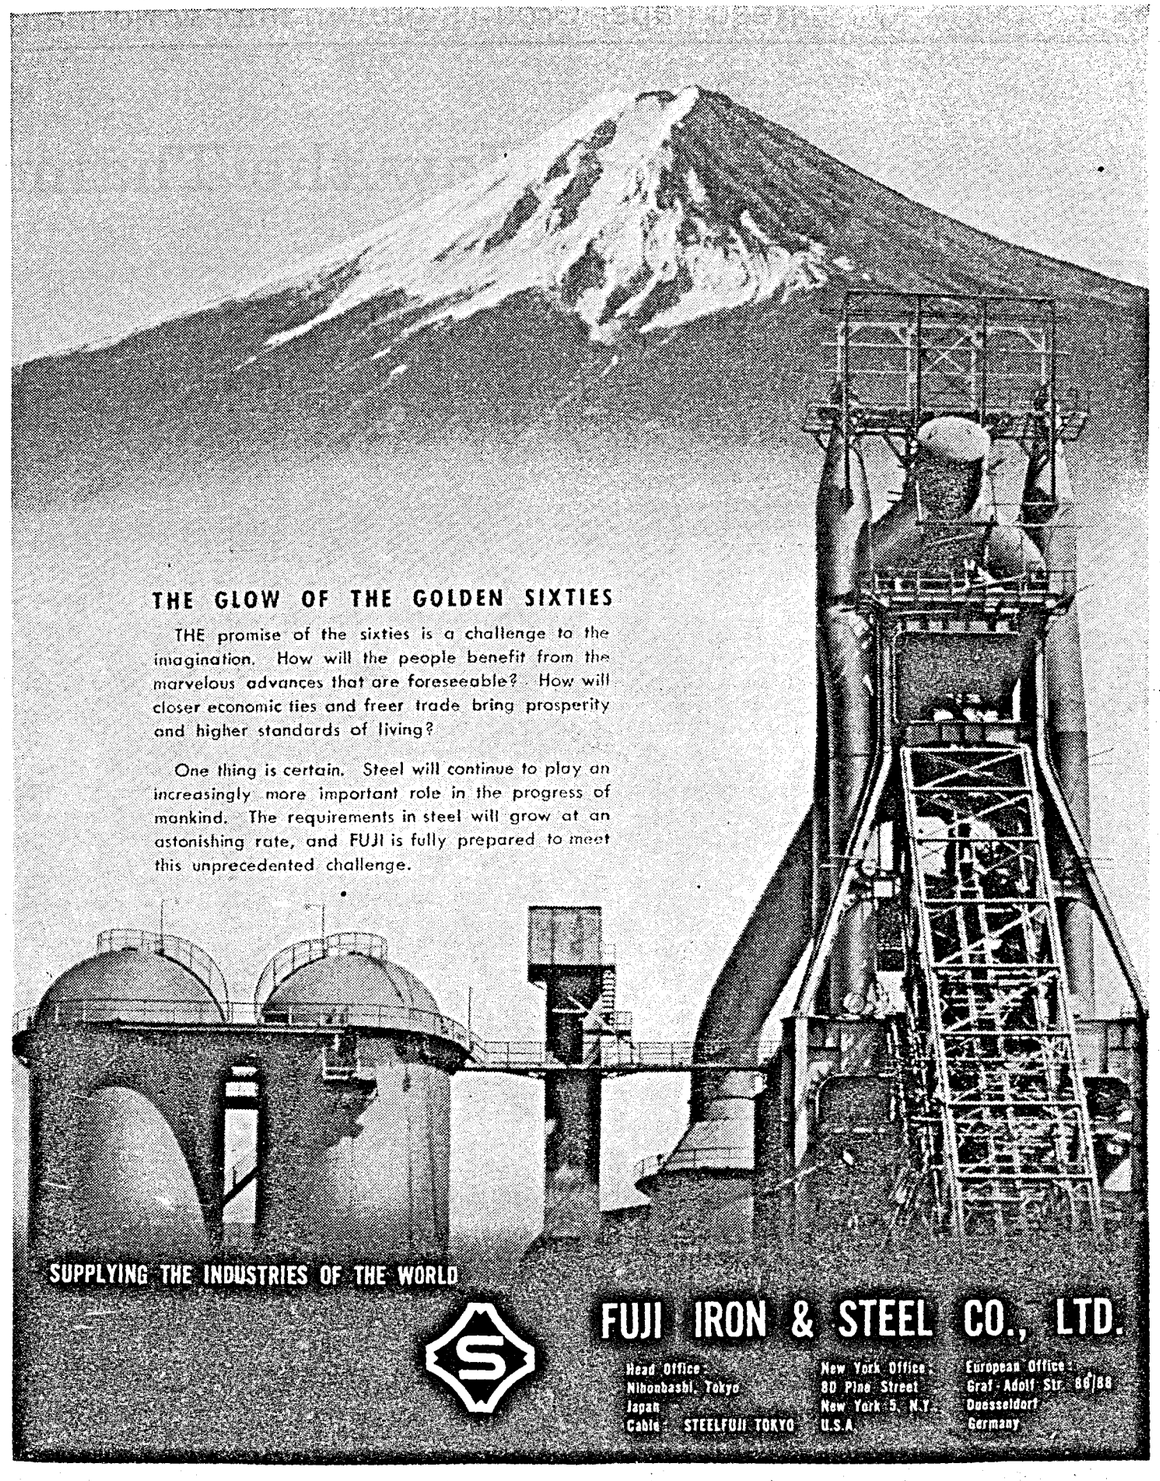
ELLISON CIRCUIT BREAKERS

the best insurance premium you ever paid

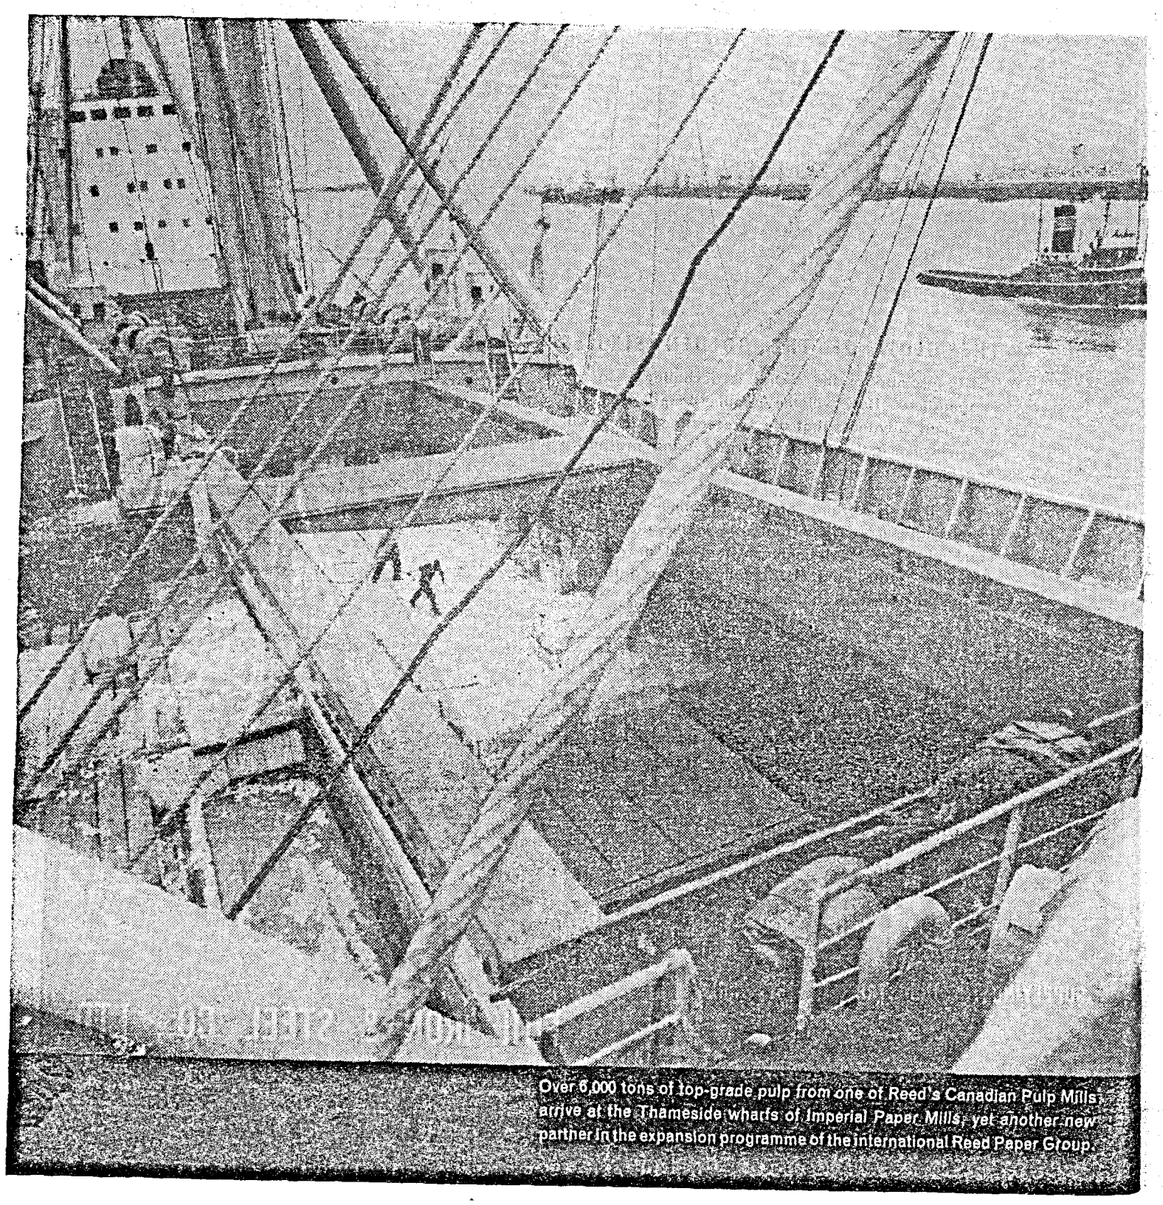
When you invest in an Ellison Circuit Breaker you are, in fact, paying a premium for long-term insurance—insurance against breakdown, disruption of production, increased costs, unfulfilled orders. A premium for complete protection of operator and plant and trouble-free service for many years.



Other forms of Ellison switchgear include high tension and low tension switchboards, motor starters and fuse switchgear. Every piece is robustly constructed with the traditional skill of Ellison craftsmen to give long, reliable service. Advanced design ensures easy accessibility and eliminates the need for frequent maintenance. Ellison provide a comprehensive consultancy, after-sales and spares service—backed by over half a century of specialised engineering knowledge.

Ellison equipment may cost a little more but it is equipment that depreciates only in your balance sheet!

GEORGE ELLISON LIMITED



PERRY BARR • BIRMINGHAM 22B

Owners of an A.S.T.A. authorised testing station.

Now the Thames flows 30,000 miles—

bearing technical, research and production experience from the Reed Paper Group's headquarters to its new colleagues throughout the world.

Over 6,000 tons of top-grade pulp from one of Reed's Canadian Pulp Mills arrive at the Thameside wharfs of Imperial Paper Mills, yet another new partner in the expansion programme of the international Reed Paper Group.

1960—A MOMENTOUS YEAR IN THE HISTORY OF THE GROUP

says Chairman Lord Cornwallis

The emergence of the Group into a significant *international* enterprise is the theme of the Chairman's statement. Overseas investments now approach £30 million, and the annual turnover exceeds £100 million.

Lord Cornwallis stresses, however, the paramount importance of the home mills and companies. "The Group is seeking means of further diversification in this country."

Here are some of the main points summarising the recent developments.

AT HOME...

The Group has broken new ground by joining with Lantor Ltd. (a member of the Tootal Textile Group) to form a new company, Aerlan Ltd., to conduct research into new methods of manufacturing non-woven materials.

Reed Medway Sacks Ltd. is one of the largest companies in the world making multi-wall paper sacks and new uses are continually being found for these versatile containers: the latest is the disposable 'paper dustbin'.

In order to participate in the fast expanding field of plastic containers, the Group has formed a new company, Reed Plastic Packaging Ltd.

The second machine for the production of the Group's high quality coated printing paper, Aerocote, has been brought into production.

At Aylesford, the largest site in Europe for the production of paper and paper products, the Group is currently investing £500,000 in a new research centre.

AND ABROAD...

Four major expansion projects have established the Group in the main trading areas of the free world—the Dollar Market, the Commonwealth, the European Free Trade Area and the Common Market.

IN CANADA, one of the major producers of newsprint, pulp and board, Anglo-Canadian Pulp and Paper Mills Ltd., its subsidiaries *and* the important Gulf Pulp and Paper Co., have joined the Group to serve the huge U.S.A. market and the fast-expanding Latin American markets.

IN AUSTRALIA, the Group now owns a controlling interest in a £2 million packaging concern —Reed Paper Products Pty. Ltd. It will serve a market that is expected to increase by 50% within 10 years.

IN THE EUROPEAN FREE TRADE AREA, in partnership with Sande Tresliperi A/S, the Group is building a £2½ million pulp and paper mill in Norway. A holding company, Reed Holding A.G., has been formed in Switzerland.

IN THE COMMON MARKET, the Group, in partnership with La Centrale Finanziaria Generale SpA of Milan, has acquired a leading packaging company and is now building a carton board mill.

La Centrale is a very old-established, large and influential company, bringing to the joint operation a background of financial and economic expertise considered by the Group to be unrivalled in Italy.

ON THE FUTURE...

Lord Cornwallis says: "I have no hesitation whatsoever in stating my opinion that the long term prospects of the Group are excellent: we are building for the future and I see no reason why it should not be a successful and profitable one. I cannot, however, be so optimistic about our short term prospects. We have serious factors to contend with, factors [such as EFTA] which are not the normal hazards of buying and selling and are outside our control. We are sure, however, that our efforts to diversify our activities in this country and all over the world will help us to survive the strains of the short term and emerge *into* the greater benefits of the long."

TRADING RESULTS

Protective Paints

— offer a complete service to industry

Prime costs vary little between one type of protective paint and another, but a considerable saving can be made in maintenance costs by reducing the frequency of application. The most effective anti-corrosive system can only be arrived at by a careful consideration of the prevailing conditions, and by selecting the most efficient paint to use under those circumstances. Griffiths Brothers maintain a staff of technically competent and experienced Representatives who will investigate your Protective Paint Problem on site and offer you advice backed by our Technical Research Organisation.

AUGUST SHUTDOWN

Your annual holiday shutdown is the ideal time for a complete re-decoration. If you have a painting problem 'phone Griffiths now.

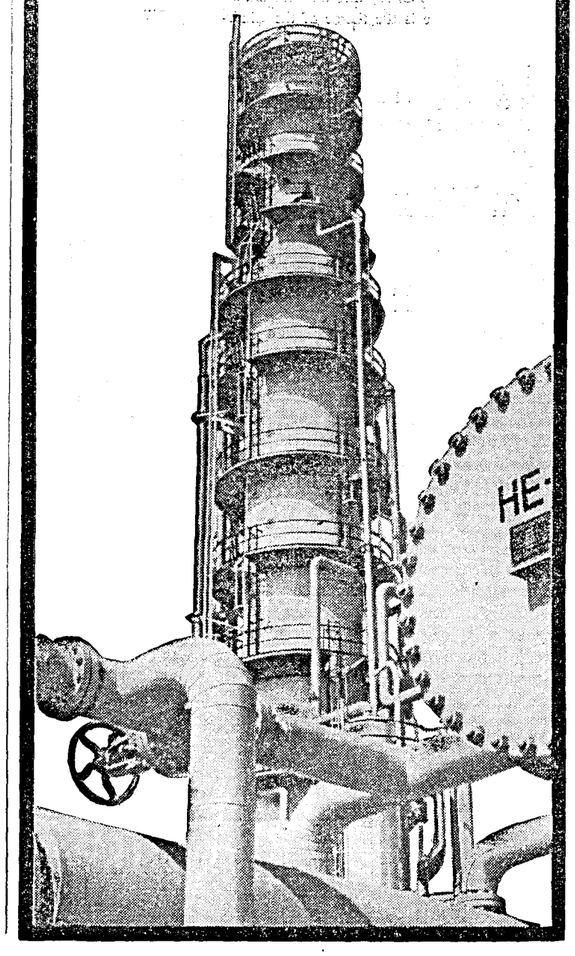
COLOUR ADVISORY SERVICE

The complete service in protective paints offered to industry by Griffiths Brothers includes a Colour Advisory Service which, at no extra cost, brings you all the benefits of a balanced decorative scheme.

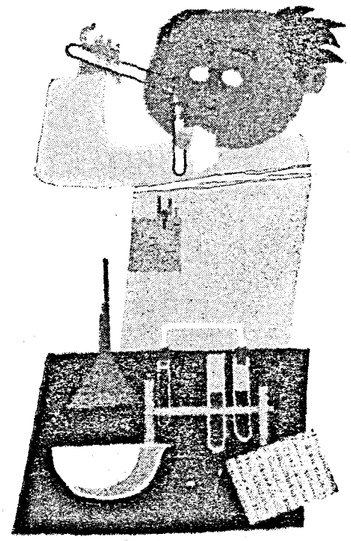
GRIFFITHS BROS & CO LONDON LTD
ARMOUR WORKS • WELL LANE • WEDNESFIELD • STAFFS.
ALSO AT:— LONDON, MANCHESTER, GLASGOW & CARDIFF.

OUR SPECIALITY IS FULFILLING YOUR PROCESS PLANT NEEDS . . .

Whatever your Process Plant needs, CHIYODA is suited to the job, large or small. CHIYODA'S permanent staff of over 900 highly capable engineers—including 450 draughtsmen—is among the best in its field. CHIYODA'S modern, large Kawasaki Factory ensures the finest in Fabrication.



It all adds up to peerless quality, competitive prices and early delivery.



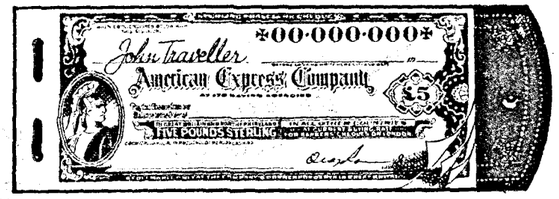
"Process Plants & Equipment Specialists"

CHIYODA

CHEMICAL ENGINEERING & CONSTRUCTION CO., LTD.

PRESIDENT A. TAMAKI
No. 3, MARUNOUCHI 2-CHOME, CHIYODA-KU, TOKYO, JAPAN
Cable Address: "CHIYOTAKA TOKYO"

Millions of Science man, hours...



...have been spent by our Development and Research Department on the problems of industry.
Our laboratories have done much to advance metallurgical knowledge and techniques.
The results have been published to the world.
Instruments like the Electron Probe Micro Analyser, the Vickers Solids Mass Spectrometer, the Solartron Vacuum X-Ray Fluorescent Spectrometer and the Siemens Texture Goniometer are so advanced in design that they are only found in a handful of laboratories.
This modern apparatus, together with traditional equipment is used to further a constant programme of research with which we are helping industry to make better use of

Nickel and its alloys

The collective experience of our Development and Research Staff is made available to you through our wide range of publications and a free consultation service.

This is what unlosable money looks like

American Express Travellers Cheques— Sterling or Dollar

Travel—with the security and confidence that your own bank gives you. Travel with American Express Travellers Cheques, the unlosable money that's as safe in your pocket as it is in your bank account. In Britain or abroad, *never carry more cash than you can afford to lose.* Take the rest in American Express Travellers Cheques—if you lose them your money is promptly refunded through any of nearly 400 American Express offices throughout the world. It's the safest way to carry money *anywhere.*
American Express Travellers Cheques, first introduced 70 years ago, are available in sterling and dollar denominations. They're spendable everywhere and they're valid forever.
Buy American Express Travellers Cheques at your bank or at any American Express office. The cost is only 1%.

Money that's unlosable—spendable anywhere

FOCUS ON EFFICIENCY WITH INDUSTRIAL DIAMONDS

More and more lenses are being formed with diamond abrasives.
Only diamond tools can cut, grind, or polish with the speed and accuracy needed today.

To find out if diamond abrasives, diamond tools, or diamond impregnated wheels can help you in *your* problem, please get in touch with the Industrial Diamond Information Bureau. This Bureau is backed by the world's largest laboratory devoted to diamond technology—The Diamond Research Laboratory in Johannesburg. For information and advice, without obligation, please write to the address below.

Flags in a Sandstorm

BLOWING some familiar allegiances awry, the latest sandstorm in the *Middle East has* swirled a British task force and a company of Saudi paratroopers into the heat of the Kuwaiti desert. The crisis, generated by Iraq's brusque and rude claim to Kuwait, does not lend itself easily to the kind of black and white treatment that depicts villain and hero neatly in allotted parts. When the sands once more lie still, the contenders will have to look to their next move, if—as now seems likely—the threatened clash does not come. Their way out of the sandpit into which they have dug themselves will be vastly more complicated than their way in.

Britain's response to Sheikh Abdullah al-Salim al-Sabah's urgent summons was quick, decisive and diplomatically impeccable. It can also be argued that it was precipitate. On Monday, Mr Macmillan acknowledged to the House of Commons that it was a difficult decision to take. But the risk of holding out in order to try to determine whether or not General Qasim was bluffing had to be weighed against the enormously increased difficulties of trying to dislodge the Iraqis from Kuwait had it turned out that he was not bluffing. It now seems probable, as our Middle East correspondent suggests on page 128, that General Qasim was flying a kite when he crudely announced his claim on June 25th. At the Security Council on Sunday, and again on Wednesday, the Iraqis disclaimed the intention they had previously plainly implied of using force to back their "rights." The reports of Iraqi troop movements in the direction of the Kuwaiti frontier remain no more than reports. Yet, clearly, preparations were under way that would have enabled the permanent Iraqi garrison at Basra to shift itself swiftly into Kuwait; and the threatening words had been deliberately spoken.

To have banked on General Qasim's eventual prudence would have been worth while only if the political cards had been heavily stacked in favour of hesitation in face of his threat. But there was no division of opinion inside Kuwait itself over the Iraqi claim (as there might possibly have been if the United Arab Republic had had the same idea first); the pledged British troops were assured of unofficial as well as official welcome. The half-reflex dismay with which other Arab governments greeted the fact of the British initiative was bound, at least at first, to have its edge blurred by their evident relief at having the burden of decision, when they were certainly not on Iraq's side in its challenge, taken off their shoulders. For the British themselves, this time only doing their diplomatic duty, the impressive speed and efficiency of a very complex military operation has given the three services a chance to demonstrate the paces that have been learnt since the *longueurs* of 1956. And Mr Macmillan must have counted, too, on the warm glow that the whole operation has sent through cooling right-wing hearts (and, perhaps, others too).

The problem now, as put by Mr Richmond, the British consul-general in Kuwait, is to turn round and go out as efficiently as we came in—as soon as we can. Mr Macmillan has said that our forces will be withdrawn only when Kuwait's ruler considers that its independence is no longer threatened; this could mean only when, which is extremely unlikely, Iraq renounces its claim to Kuwait. This is, basically, a problem for the Arabs themselves to solve both in terms of frontiers and sovereignty and in terms of wealth and oil. In 1958, after the Iraqi revolution and the British and American landings in Lebanon and Jordan,

all ways out of the tangle seemed even more solidly blocked than they seem now. It was only after the United Nations had fruitlessly explored a number of one-way avenues that the Arabs, as if exasperated by all outside interference, made temporary peace among themselves—and the obstacles went overnight.

PERHAPS the makings of a concerted Arab move are now discernible, in the fact that both Baghdad and Cairo have found common ground in regretting the depth and deviousness of the perfidy of Albion. While President Nasser has kept to the letter of the law in raising no objection to the passage of British warships through the Suez canal, his spokesmen in Cairo and at the United Nations have demanded the immediate withdrawal of British troops. Unless the British force is evacuated, the UAR will not back Kuwait's entry into the United Nations, nor, probably, its application to join the Arab League. This is the crux: who, the invading British or the wavering Arab states, will resolve Iraq's original threat? The challenge is as much to the members of the Arab League as it is to the sweaty and entrenched British troops.

Almost certainly, the portentous launching by Israel of its first space missile has galvanised, and affrighted, the Arabs at least as much as the quick response by Britain to an open threat to both its interests and its obligations. It reinforces the fears that have been going round the Middle East since Mr Ben-Gurion returned from his grand tour with the French alliance spelt out in words. The Kuwait-Iraq quarrel, contentious already among fellow Arabs, may have to take second place now. The further it sinks into the background, the better. The hope can only be that, still unsolved, it can be smudged and put among all the other claims that have been made at different times by different countries on the various territories of the Persian Gulf.

While the threat itself, from Iraq to Kuwait, only slowly recedes, the British forces in Kuwait will either have to settle down to a long wait, or be replaced by another defensive force. A long stay will be as undesirable for the British as for all the Arabs. At the best, with every extra day that the troops remain dug in in the desert, Britain is bound to lose ground in the uphill struggle that the Foreign Office has strenuously been making to get back to reasonably good relations with Iraq and the UAR. At the worst, a change in Kuwait's internal political situation might find British troops calamitously involved in local Arab affairs. But, as things are, despite the token force of Saudi paratroopers deployed alongside the British, it seems altogether improbable that replacements for the British defence force can be found from among the Arab countries. (Nor might the ruler himself entirely relish the thought of powerful, and possibly predatory, help from Saudi Arabia or the United Arab Republic.)

Except for the United Arab Republic and Saudi Arabia, which are not at all disinterested in claims on Kuwait, most of the Arab governments have been chiefly concerned to avoid committing themselves. The Arab League itself, which met on Tuesday to consider Kuwait's application for membership, adjourned until July 12th, explaining that the secretary-general, Mr Hassouna, had first to complete his joyless mission round the Arab capitals. This procrastination is not without wisdom; possibly, the most disastrous outcome of the affair would be a weakened and isolated Iraq.

Whether or not, in the present heart-searching among the various Arab countries, Kuwait is accepted into the league, the only feasible alternative to the British troops seems to be some kind of United Nations group to watch Kuwait's frontiers and the dying spasms of what was nearly a world crisis. Here there are two questions. The first straightly affects the Russians: would the Soviet Union veto Kuwait's application to join the United Nations? The second is whether the British Government itself would be prepared to delegate some of its remaining authority in the Persian Gulf.

This sudden rupture in the Arab world was not, at first, to Russia's obvious advantage. Over the past few years, the Russians have usually, without great strain, been able to distil some punch for themselves out of Arab discords. But recently the Soviet Union has been having second (and conflicting) thoughts about its pot-still in the Middle East. After a period of general but fairly restrained sniping at the United Arab Republic's treatment of its local communists, *Pravda* came out in May with a full-blooded protest at Egyptian ingratitude for favours received. Cairo retorted with a burst of righteous indignation; and in June a second article in *Pravda* tried to turn off the heat with words that combined a fatherly reproach with a modified blessing. Meanwhile, General Qasim, in Iraq, has by rule and division equally effectively brought his communists to heel.

UNDERSTANDABLY, Moscow's comments on the Iraq-Kuwait dispute were, to begin with, non-committal. Only on July 2nd did the Russian delegate at the United Nations, Mr Zorin, swing decisively to the Iraqi side, by refusing to allow that the "Kuwait area" was entitled to present its case before the Security Council. By then, the positive British reaction had greatly simplified Mr Zorin's ideological task and at Wednesday's meeting of the Security Council he concentrated his fire on British "colonialism." With some dexterity the Soviet Union seems to be emerging from the imbroglio as the champion both of Iraq and the UAR. Peking, meanwhile, has got somewhat out of step by sending a hasty telegram of congratulation to the ruler of Kuwait on the occasion of his country's independence.

But for the time being, the main initiative outside the Arab world rests with Britain, not with Russia—or Peking. The task, now that the British have discharged their responsibility, is to hand the responsibility back, not to the Russians (or the Chinese) but to the Arabs. If the Iraqis, after the brainstorm in Baghdad, have been halted in their tracks, the responsibility for guarding Kuwait's independence should rest from now on upon the collective shoulders of the neighbouring, and competing, Arabs themselves. Now that Iraq has been brought to stay its hand, after its threatening words, even an international and token force of observers could be deterrent enough in place of the swiftly emplaced and embattled British troops. The other sheikhdoms of the Persian Gulf might, with Kuwait, begin to think in terms of international rather than purely British protection. They will have to think, also, if there is to be peace in their part of the world, of co-operation not only in defence against aggression but also in the distribution of local wealth (from oil) to fuel the growth out of poverty that is the Middle East's greatest need. These should be Britain's aims, too.

Laisser Faire For Trade Unions?

DISCUSSION of reform of trade union law is, once again, in the air. The danger is that, once again, it may stay there. It is terribly difficult to energise this vast jelly of a subject into relevant parliamentary action, partly because of old-fashioned political pusillanimity but also partly because the trade unions still hold the favoured place in the instincts of progressive people that thrusting new industrial manufacturers tended to hold a century ago. Because they played the major part in raising the standard of living of the ordinary people of this country during the second stage of Britain's industrial revolution, it has become an established historical malapertism that trade unions should continue to be the last group towards which Government policy is one of untrammelled and uninquiring *laisser faire*. This week Mr Ted Hill, chairman of the Trades Union Congress, who in all other matters would call himself an ardent advocate of a planned economy, saw no inconsistency in thundering loudly that "what we have to do as a trade union movement is not to allow people from outside to tell us what to do."

One does not need to be as extreme a planner as Mr Hill—indeed, one does not really have to advance beyond about Mr Gladstone—to see that this extreme doctrine of *laisser faire* should no longer be tenable. The trade unions now play an even bigger part in public affairs than large manufacturing interests do; and the effect that a union can wreak on an ordinary worker's life is generally much more intimate and important than, say, the effect that a board of directors can wreak on an investor's shareholding. It must be time to go at least as far in legislation as the measures of company reform went in the second half of the last century. It is no more reactionary to say that the interests of ordinary trade unionists, as well as of the country, would be well served by specific legislation to protect members from depredations by occasional union sharks, than it is to say that the interests of shareholders, as well as of the country, are well served by the existence of specific Companies Acts to guard against occasional company sharks (even although all company directors are, in theory, democratically elected by the small minority of their shareholders who ever bother to vote). And it is no more logical to say that handling of trade union malefactors "is best left to the Trades Union Congress" than it would be to say that policing of the Companies Acts and Restrictive Trade Practices Act "had best be left to the Federation of British Industries."

IT is perhaps unfortunate that the catalyst which has restarted discussion has been the case of the Electrical Trades Union; Mr Justice Winn's judgment that the communist Mr Haxell was declared elected as its general secretary by fraud is subject to appeal, and the details of the case have still to be treated as *sub judice*. The ETU affair was, in any event, exceptional because the skulduggery alleged was said to have taken place in the national executive of a union which had been elected by secret ballot. There is ground for fearing that malpractices occur in some other unions' national ballots, but the communists and others who are sometimes stigmatised as "industrial wreckers" cannot be blamed for these, because communist majorities generally have no chance of getting in on them. The reason why they do not is clear. In parliamentary elections, where all parties put up candidates, experience suggests that about 3 per cent of ordinary British trade unionists are apt to vote Communist, and the other 97 per cent to vote Labour, Conservative or Liberal. In union elections the same 3 per cent generally vote Communist, and about 90 per cent do not vote at all, but there are generally enough votes still left over to make it very rare for a majority of an elected national executive to be composed of men who hold Mr Haxell's political and industrial views.

It is in local factory groups, at shop steward level, that it is much more common to find a majority of men of Mr Haxell's views entrenched in power, and to hear accusations levelled against them of the sort that were levelled against Mr Haxell. The presence of so many unrepresentative extremists in shop stewardships is traditionally explained by saying that these extremists are "close to the rank and file"; but everybody knows that another explanation is that on a local level there is sometimes more opportunity for malpractice and flouting of democracy. The difficulty of raising a campaign against an entrenched union leadership even on a national level was shown in the Electrical Trades Union case. The hardest step of all was the initial one, taken by some individual members who raised the first hue and cry, and who thereby became liable to all sorts of pressures and possible penalties for "bringing the union into disrepute." Any worker who started to work really actively against what he stigmatises as malpractices on a local level must have even more reason to fear that life might be made artificially uncomfortable for him, and that eventually he might even lose his job.

THE big unions are well aware that it is at local level that the worst instances of union malpractice and derogation from the national interest occur. That is why, in their current campaign against wildcat strikes, they are trying to give more power to decisions at the centre. But, in the first place, it is unlikely that this campaign is going to succeed; and, in the second place, it would in many ways be undesirable if it did succeed. In any healthy trade union movement a lot of functions should be, indeed must be, delegated to local union representatives, freely elected by their workmates, and working still on the factory floor. Many of the unions' (and Britain's) troubles today arise from the fact that union executives, having failed to see that these factory elections are properly conducted, like to pretend that these local groups should have less power than they are in fact bound to accumulate. The next stage is that, when these local groups have secured power, the union leaders in London prefer to pretend that they have not got it, and will not look down into the nasty things that are sometimes going on in the local woodshed.

It is at local level, for example, that work-spreading rules forbidding anybody to earn more than a certain amount become most common. It is there that most cases arise of individuals being deprived of their livelihoods because they have offended the local group in some way. It is there that

competition in obstructiveness, sending men to Coventry, individual intimidation and the general translation of trade unions into being a positively anti-productive force can rise to a peak. It is beside the point to argue whether these abuses are now common or still very rare. The point is that some of these powers of personal victimisation against individuals should not be exercisable in any free society, even when the men who are exercising them have been chosen by a majority of their workmates; and that when the stewards or other officers concerned in fact hold their positions against what would be the majority's wishes in a free election, the absence of some sort of Companies Act for trade unions stand revealed as even more intolerable and absurd.

THERE seems to be no hope of securing co-operation from trade union leaders in the legislative changes that are needed. In protesting on Monday against the analogy of the Companies Acts, even Mr George Woodcock, the normally sensible and well-balanced general secretary of the Trades Union Congress, said that, while specific legislation was appropriate for companies, who employ professionals, it would be unfair to apply the same medicine to trade unions, who rely largely on the services of voluntary workers. At first sight, this is a remarkable argument; where bodies have such great social powers as trade unions have, one would have thought that an admitted amateurishness in their organisation provided a reason for a closer guard by the state against possible injustices, not a reason against it. Mr Woodcock's argument would, indeed, have some force if the main object of any new trade union legislation were to hunt down amateur officials who had made honest mistakes, and then suddenly to crucify them by imposing heavy personal penalties. But the prime object of any legislation should be the prevention of abuse not the punishment for it; the authority implementing such legislation should work in the first instance by issuing cease and desist orders, not by starting prosecutions.

The sort of legislation that would seem desirable has often been adumbrated in *The Economist*. All unions should be obliged to register their rules with some official arbiter, who might or might not be the present Chief Registrar of Friendly Societies; the sanction to enforce registration should be that any union which did not register, or which was struck off, should no longer be protected by the main special legal privileges enjoyed by trade unions—especially their general freedom from legal penalties for actions in restraint of trade. When a union does not try to operate a closed shop, the registrar might be obliged to accept virtually any rules that it registers with him; any purely voluntary body should be allowed to conduct itself as and how it likes. But when a union does try to operate a closed shop, so that some British citizen may have to agree to be conscripted into it if he is to earn his livelihood, the registrar should be able to insist on certain conditions in its registered rules: about the proper mode of conduct for union elections; the power for the registrar himself to supervise any elections where suspicions have been aroused; absolute freedom for members to criticise the conduct of their own unions (within the normal law of libel) and to issue statements to their fellow members and the press; and formal rules for the procedure to be followed when members are disciplined for trade union offences. This last

point can be so important for the maintenance of individu liberty that perhaps there ought even to be a right of appe to the registrar against expulsion from a closed shop union the proper criterion here should be that expulsion would n take place if, on balance, the injury to the member concerne seemed to be very much greater than the collective injury i his fellows that would be caused by continuing to accept hi as a workmate.

The registrar ought also to have the power to condu inquiries into allegations of intimidation, into picketing pra tices during some strikes, and alleged breaches of these rule He should issue cease and desist orders when he discove that breaches have occurred, and take action in the cour either against a union (seeking to strike it off the registe or against an individual official only when these orders hav been deliberately flouted. This procedure could also hav relevance to the complicated legal position in respect of som unofficial strikes. Unofficial strikes in deliberate breach of contract between a union and a firm are now nearly peculia to this country, since in most other countries actions fo damages in these strikes would be against their instigator The recent decision in *Rookes v. Barnard* suggests that thi same legal position may in fact obtain here; but for th moment the TUC seems to be trying to ignore this in th hope that most British employers will find it unwise to institut such actions.

The result could be, under present law, precisely the sor of sudden unfairness against particular local union official that Mr Woodcock has indicated he would fear if presen law were changed: some day soon an unexpected action fo damages may bring down ruinous financial penalties o some small shop stewards who may merely have made som technical procedural lapses without realising that they ma thereby have become liable for paying damages for instigatin a strike in breach of their own union's contractual word If some Government-appointed registrar of trade union were set up, it would be reasonable to say that aggrieve parties who felt that they were being illegally damage by some trade union action should first file a notice o complaint with the registrar, and that such actions fo damages (even if they would have been permissible unde present law) would not then lie if the union officials concerne immediately complied with a registrar's order to desist.

IT is unfortunately idle to suppose that any legislation o these lines could now be carried through with the approva of the Trades Union Congress. It is doubly unfortunate tha these matters have come to a head at a time when relation between the Government and the TUC seem bound to becom more strained on other grounds. But the task of statesman ship is to consider the national interest, not particula worthies' *amour propre*. Most of the leaders of Britain's gre trade unions are sober, responsible, hard-working, cautiou patriotic, immensely dignified social workers, who would b likely to feel touchily hurt and insulted by any new law whic implied that they are not managing to control their own move ment in the full interests of the nation and of their ow members. The fact remains—for all but the politicall purblind to see—that under present law they are not no managing to do so.

Commonwealth Pilgrims' Progress

Mr Sandys: burning bright | Mr Thorneycroft: unscathed | Mr Hare: surprised

IT was inevitable that, as negotiations between Britain and the common market approached, Commonwealth countries would make as much noise as possible to assert their interests. The stronger the signs of hesitation in London, the louder the objections were bound to be. The reports from our correspondents on Mr Sandys's circuit of the white dominions show that the three governments most affected are not failing in their duty.

They also bring out, however, the striking differences between both the scale and the kind of problems the Commonwealth countries face. Given an unconditional British entry into the common market, and an adverse development of European farm policies afterwards, New Zealand might obviously face grave economic difficulties. Equally obviously, it should be a first aim in any negotiations to ensure that its losses in the British market are compensated for in some way. A formal association that would bring New Zealand into the common market's agricultural club, or quotas for butter, or help for its secondary industries, are among the ways in which it might be helped.

Canada's problems are of a very different kind. As our Ottawa correspondent points out, many of Mr Diefenbaker's worries are political in origin. The grave economic difficulties his country faces, and the background of pro-Commonwealth emotion that swept him into office, make it inevitable that Canada should protest against any kind of change. But, compared with the threat New Zealand faces, Canada's economic worries are small beer. If wheat and the crucial raw materials and semi-manufactures can be given reasonable access to Europe, the remaining problem for Canadian manufactures is minor in scale. It is the loss of long-term opportunities in Britain that worries Canadian manufacturers; but then it is precisely the long-run potentialities of Europe as a whole that the common market should enhance.

WHILE Mr Sandys has been touring the white dominions, Mr Thorneycroft and Mr Hare have been visiting the Asian and African capitals. By and large Mr Thorneycroft seems to have run the Asian gauntlet unscathed, but earlier this week a surprising volume of protest seemed to be coming from Mr Hare's African beat. The reports were surprising because the African territories comprise the one part of the Commonwealth that is almost bound to gain in the short run as well as the long run if Britain joins the Six. Ghana sends more than half its cocoa to the common market; Nigeria a third. Outside the common market and its African association, these countries face a real danger from the new preferential tariffs that favour France's former territories. Inside, they have a very reasonable prospect of getting access not only to the British market but to the continent as well.

In fact, the earlier reports from Ghana and Nigeria seem to have been false alarms. When President Nkrumah addressed the Ghanaian parliament on Tuesday, he said that Ghana would object to a British move unless three conditions were fulfilled: continued access to the British market; access to the European market on the same terms as the ex-French territories; and aid without strings. Since none of these conditions looks out of reach, Ghana's doubts need not cause lack of sleep. But in Africa, as in the rest of the Commonwealth, one broader lesson did emerge. While the economic difficulties of the Commonwealth may be met, its preservation as a political idea, through the period of inevitable unheaval and adjustment, will place heavy demands on Britain's diplomatic skills. Britain's plunge into Europe will require a new energy and imagination not only in Europe itself, but in Commonwealth affairs.

NEW ZEALAND

Sacrificial Lamb

From our Wellington correspondent

Mr Holyoake: dumped?

ALL Mr Sandys's powers as a diplomat have been needed during his New Zealand visit. The Government of New Zealand, under Mr Holyoake, is strictly reserving its position on the common market, and it remains highly necessary, for the sake of the Commonwealth's public relations, to demonstrate not only privately but publicly that the United Kingdom will not overlook New Zealand's vital interests while it is conserving its own. Some of New Zealand's most vocal spokesmen such as Mr F. P. Walsh, for the trade unions, and Mr John Ormond, for the meat producers, have been using strong and forceful language about the potential threat to New Zealand interests. These ancestral voices are drowning out others which try to explain the reasons why Britain finds it difficult to stay out of the common market.

This is yet another demonstration of the fact that, when unusual periods of diplomatic tension occur between the Old Country and what is left of the old Empire, British diplomacy seems to lapse into throat clearings and shufflings. The lack of any real Commonwealth ingredient in the staffing of the Commonwealth Relations Department, the Central Office of Information and other agencies

concerned with Commonwealth ties becomes painfully apparent at such times.

Mr Sandys did his best with the very difficult situation he encountered in Wellington, but it is doubtful whether he succeeded in allaying any of New Zealand's fears about the effects of the common market upon its economy, still largely based on agriculture. Moreover, even if he did succeed in bringing a measure of reassurance to members of the government, the misgivings and conjectures which are now racking a great number of New Zealanders will continue and multiply.

There is no doubt whatever that the New Zealand cabinet is anxious to be helpful, and that it realises Britain's problems, but it is scarcely to be blamed if it feels New Zealand's own problems must come first. Whatever may be the views of individual ministers, they collectively face the fact that their farming constituents are convinced that anything less than the continuation of guaranteed duty-free entry to the British market for New Zealand dairy products and meat will be tantamount to selling out. Sympathy for the British viewpoint will not allay the growing feeling that New Zealand may be made the sacrificial lamb on new altars.

MR SANDYS has undoubtedly made it plain in Wellington that the United Kingdom cannot go into negotiations with the Six with prior commitments to New Zealand or any other member of the Commonwealth. Yet that is just what New Zealand feels it must have. Arguments that the common market will eventually lead to benefits for New Zealand mean very little when the short-range problems created by loss of the guaranteed British market remain so obvious and so frightening. Last year New Zealand sold 89 per cent of its butter, 94 per cent of its cheese and 94 per cent of its frozen lamb and mutton in Britain. The economy of the country has for years been largely geared to that of the United Kingdom, and the agricultural policy of the Rome Treaty, if it is carried out, means that Britain's trade in, and production of, food must be completely reorganised. New Zealanders, with the best will in the world towards the United Kingdom, cannot see how this can be done without kicking away three of the four major props on which their export income rests. New Zealand ministers found that Mr Sandys fully understood their situation, but there are no pretences behind the scenes that the visit has done more than explain the new uncomfortable facts of life.

This is not to say that the British case for joining the Six is completely misunderstood. In the last two months, while the spate of conjecture has steadily mounted, the majority of New Zealand newspapers have done something to try to inform their readers about the issues. But they have not been greatly helped by New Zealand politicians, most of whom have avoided the subject unless thrust hard up against it. This attitude was even more pronounced during the election campaign last year.

The debate over the common market comes at a time when New Zealand has a number of other preoccupations, none of them pleasant. The Holyoake government, plainly determined to enjoy a honeymoon (even a short one), withheld the application of various restrictions until it became apparent that it could temporise no longer. The financial screws are now on; import licensing is tightening up. It does not appear to be sufficiently realised in either London or Wellington that what used to be called the bonds of Empire may be gravely strained unless the British arguments for entering the European community are more clearly, fully and forcefully expressed in New Zealand. There is an impression abroad in New Zealand that the United Kingdom is more concerned about western Europe than it is with its traditional alliances in the Commonwealth. Mr Holyoake, and the rest of New Zealand, have most of all wanted convincing words from the British side to allay this impression.

AUSTRALIA

Wallaby Worries

From our Canberra correspondent

Mr Menzies: millstone?

BY the time these words reach the press, Mr Sandys will hav had his first discussion about the common market with th Australian government. It will not have been an easy meeting One has the impression that the cabinet will have sat back grimly waiting to hear what Mr Sandys has to propose. The prim minister, Mr Menzies, in a statement earlier this week, recalle that Australia "had been assured of full consultation before an decisions are taken," and he observed that the problem had bee the subject of occasional reference during the past two years. Bu Mr Menzies continued (it would seem rather tartly), the meetin with Mr Sandys would give the cabinet its first opportunity o hearing the views of the British Government "expressed wit authority and in reasonable detail."

Will Mr Sandys be able to supply the "reasonable detail," th practical proposals that are awaited? He seems rather to see hi mission as being to persuade Australians of the advantages t Britain and themselves of negotiations with the Six, and to find out what are the essential Australian positions which should b beyond the scope of negotiation. Now Australians can see vert well the disadvantages to Britain of not joining the common marke They can even see that those disadvantages might be worse fo them than the alternative disadvantages of Britain's joining. Bu what they are anxious to know is what those latter disadvantage would be.

The fact is, however, that there is no simple set of proposa that could be put forward either by Mr Sandys or by Australia ministers. Any concessions to protect Australia's exports woul have to be negotiated commodity by commodity. Of these com modities, one of the most important to Australia is dairy product although this is not as important as it is to New Zealand. Whea would not retain a dwindling market in Britain if it not only ha to surmount the common tariff but also had to compete alongsid wheat—hard wheat, moreover—from elsewhere. Fruit, drie canned and fresh, now holds its own against American competitio only with the aid of the preference. Meat and sugar, too, a important, since in the first case over a third and in the secon over half of total Australian exports of the commodity go to Britai This is to mention only a few items, but almost every expo except wool and ores would be affected either by the loss of fre entry or by the loss or actual reversal of preference.

Economically, the threat to Australia can be summarised thu Between a fifth and a quarter of its total exports would find the present markets (mainly in Britain but also among the Six) i jeopardy. This comes at a time when Australia has a great expo problem anyway. It is true that the balance of payments proble that loomed up last year has been remedied, amid shrieks of di tress, but a fundamental imbalance remains. No one knows wh Australia can export, and to whom, in order to maintain its expa sion. If the more developed countries now gang up to prote themselves against developing countries the prospect is even mo uncertain. If the British market, which in 1959-60 took 26 p cent of Australia's total exports, were to disappear or shrink, would be a grave situation indeed.

Politically the prospect is also disturbing. New political alig ments may weaken the old, and here again the development may come at a time when old ties are weakening anyway—not only as a result of non-British immigration but also, perhaps temporarily, through the current mood. Old friendships fade. The club is not what it was. The far-flung Empire became the glorious Commonwealth; and then suddenly it seemed nothing but a millstone round Britain's neck as it tried to get into the swim with the Six.

CANADA

Awaiting the Tiger

From our Ottawa correspondent

Mr Diefenbaker: Cwthman

TRADITIONAL symbols of the Commonwealth (or, as faithful *Economist* readers would say, of "cwthmanship") are all muddled up as Canada awaits the arrival of Mr Duncan Sandys next week to discuss British negotiations with the common market. The British lion appears as a tiger. (Who could impersonate it better than Mr Sandys?) The Canadian government is cast as the young lady of Niger. Mr Donald Fleming, the finance minister, would make a succulent meal if he let himself be taken for a ride. Thus have legendary fears tended to obscure more realistic consideration of trade possibilities. They are fortified by the Conservative party's instinctive addiction to rhetoric about the Commonwealth.

If the Canadian government appears intransigent about Britain's links with Europe, it is only fair to remember that Mr Diefenbaker's first declared aim in June, 1957, was to organise a Commonwealth trade conference. His unfortunate declaration about diverting fifteen per cent of Canada's trade from the United States to the United Kingdom came later and was dropped with a plop as soon as Mr Thorneycroft and Sir David Eccles trumped it with their idea of an Anglo-Canadian free trade area. But the Commonwealth trade and economic conference of September, 1958, was held in Montreal, thanks largely to Mr Macmillan's understanding support of Mr Diefenbaker. The very fact that the conference was held satisfied Canadian Conservatives, even though it resulted in a reassertion of untarnished devotion to Gatt, a blatant attempt to reassure Washington about the purity of Commonwealth intentions, and a Canadian refusal to bind many preference margins as Britain requested—though it did bind duty-free entry for cars. If these experiences provide any guide to the present Canadian attitude, Canada may prove more realistic than expected in the real backroom bargaining over the common market—if due respect is paid to the sentiments of cwthmanship.

Yet Canadian experts agree that the United Kingdom's decision about Europe confronts Canada with a very grave and far-reaching problem. All the fears that were aroused by the original British proposal for a European free trade area in 1956 now return with redoubled force. At that time Mr Macmillan, as Chancellor of the Exchequer, rather lightly brushed aside Canadian concern about the preference on manufactured goods, saying that they constituted only ten per cent of Canada's exports to the United Kingdom. There was no question then of new tariffs being imposed on Canadian goods, but only of their losing preferential treatment. Now goods described as "manufactured" by the international classification, which includes many semi-fabricated products, constitute more than forty per cent of Canadian exports to Britain, and these goods account for practically all the increase of the last two years. The threat is not just the loss of preference, but the loss of free entry to the British market and the substitution of the same tariff as applies to products from the United States.

Even in 1956, when British currency controls still excluded most Canadian manufactures and when Canadian policy, under the direction of the late C. D. Howe, was obsessed by resources development and the export of unprocessed and semi-processed materials, far-sighted Canadians were worrying about the export of fully manufactured goods. Now, when Canadian manufacturers have had a short run at the British market with highly promising results, it is profoundly annoying to read British comments dismissing their prospects as insignificant. Moreover, it comes at the worst possible time. Mr Howe's former post is now occupied by a former Toronto manufacturer, Mr George Hees, who is vigorously pushing an export promotion drive which has surprised many of the smaller manufacturers by revealing opportunities open to them in the United Kingdom as well as other markets.

To say that Canadian sales to Britain of finished manufactures, like women's clothing, household appliances, chemicals, machinery and plastics, are still small is quite beside the point. Of course they are. But Mr Fleming would be justified in reminding Mr Sandys of repeated statements by the last three Presidents of the Board of Trade that Canada could sell in Britain many "North American type" goods. In this field the preference is vital, if only because so many Canadian manufacturers are subsidiaries of American companies.

This, of course, is not the only field of Canadian concern. Bulk exports remain fundamental. But, so far as metals are concerned, negotiations with the common market have gone moderately well; the threat to the forest industries comes from Efta rather than the EEC and has already been accepted; grains remain in the unpredictable sphere of agriculture. Canadian concern about agriculture and food products is much wider than bulk grain shipments. Again, it is not the total value of exports which matters, but the role which they play in the Canadian economy. Tobacco is vital in parts of southern Ontario, apples in Nova Scotia and British Columbia, canned salmon on both coasts, cheese in rural Ontario and Quebec.

WHEN Britain reaches the stage of detailed negotiation, Canadians should be ready to calculate what kind of concessions from the common market might compensate them for the loss of their present favoured position in the United Kingdom. Saner voices in government councils are trying to prevent rigid opposition to any and every possible British approach to Europe, because they expound the long-term view. But the Diefenbaker government is chiefly preoccupied with short-term political prospects.

In any event, the opening salvoes should not obscure the harsh realities of hand-to-hand combat which must ensue when the two ships of state grapple. Canada is still a more undeveloped country than most Canadians were ready to admit in the euphoria of the 1950s. It is in the middle of a major and structural economic crisis for which the most essential cure is the development of more secondary industries under Canadian control. Admittedly, Canada's need to develop secondary industries will from time to time lead to proposals like the highly ill-advised recommendation for a ten per cent duty on British cars made by Professor Bladen after his appointment as a one-man royal commission on the troubles of Canada's wholly American-owned automobile industry. In this respect Canada was not ready in 1957, and is still not ready in 1961, to take Britain's offer of a free trade area as a basis for negotiation. These facts could have been made much clearer. But if Mr Sandys is to prove that he is no tiger, but only Bottom the weaver, he must accept that young ladies from Niger or anywhere else may have excellent grounds for apprehension, even if their fluttering appears excitable.

Our Job in Angola

Britain can no longer turn a blind eye on Portuguese reprisals and repression

"*Ubi solitudinem faciunt, pacem appellant*": so Tacitus, in the course of the greatest denunciation of imperialism ever written. In northern Angola the Portuguese attempt at pacification involves, according to missionary eye-witnesses, the indiscriminate slaughter of men, women and children. The Angolan rebels, it is indeed true, began the beastly massacres; the Portuguese minister of defence regards them not as human beings but as "savages and wild beasts." But this cannot justify the bombing and machine gunning of villages, or the firing of the jungle grass so that the Africans can be burned out like game. The Baptist Missionary Society's estimate that at least 35,000 Africans have been slaughtered may well be too high. But 103,000 people out of a total African population of 4½ million have found it desirable to flee into exile. Statements by the refugees make it plain that most of them are fleeing from the Portuguese, not from the rebels. If the Portuguese had the confidence of their subjects they could have persuaded them to remain in Angola, and enlisted them in their counter-terrorist campaign—as the British did in Kenya.

But the wrongs done in Angola are not all of commission. Portugal has never made a serious attempt to improve the lot of the main mass of its subjects. Its record was exposed by Senhor Henrique Galvão in the famous report that led to his quarrel with Dr Salazar. Perhaps the most telling detail in that report was the revelation that the population of Angola, under the strains of Portuguese rule, was actually declining, chiefly through the process of clandestine emigration by which Angolans abandoned their own country for what they hoped would prove more agreeable conditions in the Rhodesias—and South Africa. As the illiteracy rate is 98 per cent, the infant mortality rate 60 per cent, and the average wage for Africans £20 a year, it is not surprising that Dr Salazar should feel that, in the matter of "assimilating" native Africans, the Portuguese "may have erred on the side of excessive caution."

It is by now generally accepted, even by the British Government, that such a record is the proper concern of the United Nations, guardian not only of international peace but of the Universal Declaration of Human Rights. It is for this reason that the UN set up a sub-committee to investigate the situation in Angola. So far the committee has not had much success. Its authority has been repudiated by Dr Salazar, and, although its chairman has been invited to Lisbon, it is unlikely that he will be allowed to go to Luanda. (Since the invitation to Lisbon was sent to him in his personal capacity—he is Bolivia's representative—it may not be possible for him to go even there.) Eventually, however, the committee will report, and if, as seems likely after his speech of June 30th, Dr Salazar continues to stand pat, the UN will be faced with the hard question of what to do next.

Military action is out of the question. Economic sanctions may therefore look tempting to many countries. Unfortunately for the West, including Britain, the responsibility for implementing economic sanctions would fall mainly upon western shoulders. Sixty per cent of all Portugal's imports and exports come in trade with European countries; Great Britain, the United States and west Germany account for 45 per cent of its exports and more than 40 per cent of its imports. There is the additional embarrassment that Portugal is a member of the North Atlantic Treaty Organisation. Already the conviction is widespread in Africa and the Middle East that it is Nato that has enabled France to pursue the Algerian war for so long. The suspicion is spreading that Nato, similarly, enables Portugal to fight the Angolan war. Britain has the extra load to bear that she is Portugal's oldest ally (and as such has already incurred Mr Nehru's censure) and that Portugal's only sympathisers in Africa are to be found in the Central African Federation and the Republic of South Africa—to both of which the British Government supplies arms.

If the United Nations asks for some action against the Portuguese, the demand may be awkward for the West but it will be hard to resist—the more so since the United States has, since March, been consistently liberal on the issue, thanks to Mr Stevenson's appreciation of the feelings of the anti-colonial powers. The words and actions of both France and Britain show that their governments recognise this. France has publicly urged Dr Salazar to "draw the necessary conclusions" from the fact that the French make no distinction of race and from France's belief that this principle must prevail throughout Africa. Lord Home dropped some gentle hints during his visit to Lisbon, and has since made it clear in the House of Lords that Britain cannot, for the sake of legal niceties, continue to abstain from voting for UN resolutions which express the world's distress at the events in Angola. Both nations' declarations must be understood as a clear warning to Dr Salazar that they will no longer be able to afford to appear to be on his side unless there is a change.

It is good news that the British Government has at last woken up to the situation. But Britain's reputation will not be redeemed in the eyes of the African world merely by the imposition of an embargo on the sale of arms to Portugal's overseas territories, especially as Mr Macmillan's reservation in favour of Portugal's "reasonable military requirements as a Nato ally" opens a gaping hole in the embargo. A willingness to vote with the majority in the UN is no substitute for action designed to bring the Angolan emergency to an end.

THE British Government may be missing a great opportunity over Angola. If it had the courage of its convictions, it might, basing itself on its own unequalled record as decoloniser, take the lead in persuading Dr Salazar of the course of wisdom. It ought not to be deterred by the memories, which Dr Salazar's apologists evoke, of the Mau Mau uprising in Kenya. Not all that was done in Kenya during the emergency was well done; but the success of Britain's comparatively liberal policy in the colony since then gives the British special warrant for urging a similar course on Portugal. It may be too late; it is very hard to see how Mr Roberto Holden, or any other Angolan leader, can ever now agree to work with Dr Salazar or his associates; but the attempt should be made.

Pressure should be brought to bear on Lisbon to admit the UN sub-committee—and with it the international press—to Angola. Proposals for a generous programme of aid and reconstruction, leading to eventual independence, should be worked out in collaboration with the United States and the United Nations—with the UN especially, because unilateral intervention by the West would risk the charge of neo-colonialism, and because it is only by keeping the nations of the world fully informed of the problem that such a rescue operation can be saved from being brought to nothing by international rivalry and suspicion. Above all, every attempt should be made to point out to Dr Salazar that, since Portugal lacks the resources to wage a colonial war for long, he stands to gain, not lose, in international security and goodwill by modifying his policies; and that the West, either by economic sanctions, or by large-scale aid, could break or make him.

This need not lead to a final rupture with Portugal. But a steady injection of diplomatic counsel might well encourage Dr Salazar to follow a more liberal, and hopeful, policy. If Britain is to give positive help in this, it must act now. To respond as late and as little as possible to pressures as they arise is to invite being found guilty by association with Portuguese repression. To take action to assist in the restoration of peace to Angola, and to ensure its future stability, is the course dictated by both humanity and good sense. The Government's responsibility is clear—and its recent small concessions to its critics show that it knows it.

NOTES OF THE WEEK

THE ECONOMY

Waiting for Go Slow

THE agony of waiting for the Chancellor's axe to fall is going to kill somebody or something soon. Mr Lloyd told the Commons on Tuesday that he "will be very surprised if the House rises for the recess without any statement on the economic position"; if that statement does not announce new measures of restriction, the City will be astounded. But apart from steps "to restrain increasing Government expenditure" at home—and, almost certainly, steps to make specific cuts in Government expenditure abroad—Mr Lloyd intimated that he has not yet decided which particular weapons he should choose from the many possibilities open to me." Fortunately, he seems to have rejected the idea of reintroducing building licences ("on the whole," he said on Tuesday, "the cons outweigh the pros"). He denied that he has yet definitely decided to use his new power to raise all indirect taxes as soon as the enactment of the Finance Bill arms him with it; but Sir Edward Boyle has told a television audience that the Government has "learned the lesson" that it is better to place more reliance on fiscal policy and less on monetary policy.

Where a Conservative minister thinks he has learned that lesson from is puzzling. The Tories' main experience of using fiscal policy as a mid-financial-year regulator was five or six years ago—with Mr Butler's singularly unsuccessful autumn budget in 1955 (which involved almost exactly the same kind of action as use of the new indirect tax regulator would involve now) and Mr Macmillan's "additional measures" the following February; the economy thereupon entered upon its longest-lasting period of stagnation, and also managed to run into two more sterling crises in successive years. The times when the Tories progressed most quickly from emergency to healthy reexpansion were in fact on the only two occasions when Bank rate was raised by more than 1 per cent in a single jump—under Mr Butler's Chancellorship in 1952, and Mr Thorneycroft's in 1957.

Whatever short-term measures are used this time, they are unlikely to bring lasting relief unless they are accompanied by radical new departures in long-term policy. The Government must know perfectly well what are some of the new departures required. First, and possibly significantly, complaints about restrictive practices have begun to find their way back into ministerial speeches; but to mount an assault against these practices both by management (e.g. resale price maintenance) and labour would obviously require time while complicated legislation was drafted. Secondly, and more quickly, competition could be encouraged at home by a sizeable cut in Britain's tariffs; there are signs that this may be done. But, thirdly, the real question will be whether the Government enters the lists this year against wage inflation—by vetoing exorbitant public sector wage increases and by seeing that the Ministry of Labour's arbitrational mechanism no longer encourages exorbitant private sector wage increases as well. Resolutions from a dozen union conferences in a dozen different seaside pavilions have made it clear that the trade unions would not co-operate in this, but the probable implication should be faced and accepted. It may well be that the British economic miracle will only get going after the country has overcome some large official strikes.

EARL EDEN

Four Years On

SIR ANTHONY EDEN left office in circumstances that denied him (and his critics) the normal congratulations addressed to any occupant of No. 10 Downing Street at the conclusion of his ministerial career. This may not be of particular importance to him personally (Sir Winston Churchill was denied the first fruits of the leader-writers' labours in 1955 by resigning during a newspaper strike), but in Sir Anthony's case the circumstances also prevented the balanced assessment of his qualities and services that was his undoubted due. His decision to accept an earldom four and a half years later provides the country with an opportunity to make some necessary amends.

History, with its hindsight, is likely to see Sir Anthony as the British Prime Minister who succeeded to an impossible political job. In the first place, he was the immediate successor to the greatest of Englishmen, so that if he had at once tried to play the role of party and national leader with inspirational éclat—bedecked, say, in Mr Macmillan's type of Edwardian waistcoat—he would have been told that he did not measure up to Churchillian heights; and when he did try to play that role with administrative zeal, the newspaper critics groaned that he was prosaic and dull.

Secondly, in the final fatal crunch, Sir Anthony was the prime minister who happened to preside over British fortunes in the hour when the natural decline of British power was revealed to an extent that had been, even in the earlier crises of the 1950s, unsuspected by friend and foe alike. It was his personal misfortune that the country (and, in the decisive moments, his own party) demanded more of him as prime minister than he—or, in retrospect, any other candidate for his job at that time—could conceivably have given. To say that his former great powers were already failing when he succeeded in 1955 is simply untrue. It may be some deserved satisfaction to Sir Anthony now that his policy in the Indo-Chinese crisis of 1954, one of his last major tasks at the Foreign Office, has been increasingly recognised, not least in the present actions of the British and American governments, as a model of diplomatic sense

and realism. In the balance of achievement it is only one of the counts that deserve to weigh heavily in the scale together with his brilliant record in the years between 1935 and 1945.

Sir Anthony has said that he will now feel able to take part in debates in the Lords. As the Conservative rank and file's reception of his speech at Wetherby last month showed, he will be assured of a wide audience there. It is true that the part of a retired leader who remains in parliamentary life carries its own problems and restraints—and never for a moment should they be forgotten. Even so, if something of the example of Lord Balfour, the predecessor with whose political career his own may most bear comparison, may be ventured upon, one may hope that Sir Anthony is by no means at the end of his counsel and thus service to the country.

ISRAEL

Chariot of Fire

That the Holy Land should have become a launching ground of rockets is a startling reflection on the present way of the world. In its setting of the tensions in the Middle East, Israel's first venture into space is bound to intensify Arab misgivings, excited already by the discovery last year that Israel has a reactor larger than is needed for pure atomic research. Perhaps it is intended to cause misgivings. Israel has the right of any believedly threatened country to argue that its best defence lies in a display of strength. Nor can scientists anywhere be expected to agree that the problems of local diplomacy should stand in the path of scientific research.

For a small state with few resources, Israel's sally into space is a brilliant feat. But the rocket is small, even by the standards of the Italian, Japanese and Australian rockets built for upper atmosphere research (and is even smaller than their big bomb-carrying and satellite-launching brothers in other countries). In its present form, it is almost certainly a harmless research instrument. But the Arabs, and the world, may reasonably ask where Israel goes from here. The Israelis cannot build military rockets now; they will not be able to in the near future unless their scientists are sufficient skilled in electronics to design the necessary guidance systems. Such skill has yet to be divulged. One test for the future may, nevertheless, be applied. If the rocket is a wholly innocent scientific venture, firings should be expected to proceed at the rate of up to one a month. Anything more frequent would be decidedly suspicious, and even a dozen a year would show an exaggerated enthusiasm for upper atmosphere research in so small a country.

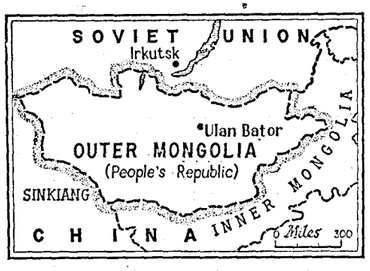
Probably Israel is getting technical advice from France. France fires similar rockets in the Sahara, and the now formalised Israeli-French alliance lends colour to the belief. The political aspects of this are more serious than the technical. If Israel even gives the impression of looking to a western power for help in developing nuclear weapons, the Arabs may decide to solicit some of their own from Russia. Thus, whether the Arab suspicions are justified or not, a new arms race may begin. It would be a tragedy if Israel's great scientific gifts, intended to bring peace and plenty to the Middle East, should become so turned in upon themselves that they came to carry the seeds of destruction.

CHINA AND RUSSIA

Peking Duck Egg

"No more cracks can be found in Sino-Soviet unity than on the shell of a duck egg," said Marshal Chen Yi, the Chinese foreign minister, in Geneva this week. He had been nettled by reports, in a dissident French communist journal and (from the apocalyptic pen of Mr Isaac Deutscher) in the *Sunday Times*, of a warning sent by the Russian leaders to comrades in various countries against Chinese attempts to win backing for Peking's policies against Moscow's. The marshal's egg seems to have something in common with the curate's. Its surface may show no yawning fissures; but is all well within?

While China was marking its communist party's fortieth anniversary with due pomp on June 30th, the Soviet leaders, far from appearing in Peking, spent the day discoursing to North Korean visitors about Russo-Korean bonds, without, apparently, mentioning China's considerable role in the preservation of the Pyongyang regime. True, the air between the communist capitals was full of goodwill messages; but no personal message from Mr Khrushchev to Mr Mao was reported, and compliments to Mr Mao were notably lacking in Soviet and east European statements on the Chinese anniversary (Albania always excepted; Rumania, interestingly, provided the only other exception to the cool rule). Several of these statements included pointed reminders that China had signed last November's Moscow formula on peaceful co-existence (the reported Russian circular accuses China of going back on its signature).



Soviet aid for China was stressed in the Soviet statements, and ignored in the Chinese ones. Moscow's foreign trade journal has just revealed that China, in its 1960 trade with Russia, ran up a debt of $320 million, which is to be paid off mainly in the years 1963-65, and that China is not now selling Russia any of the meat, eggs, rice, soya beans and oils that were formerly among its export staples, while Soviet deliveries of machinery to China have been correspondingly slashed. "China is too big to be anybody's satellite," were Marshal Chen's proud, if not too well chosen, words in Geneva this week. One may yet wonder whether, if China's economic sorrows had not restricted its freedom of manœuvre, the cracks in the Sino-Soviet egg might not already have gaped more widely.

Bone in Mao's Throat

It is surely no accident that *Pravda* reported Peking's festivities on a back page, keeping the front for a build-up of the Mongolian communist party's fourteenth congress; nor that no Soviet dignitaries were spied in Peking last weekend, while Ulan Bator this week had the pleasure of the redoubtable Mr Suslov's company, fresh from his vigil at the Indian communist conference that saw the Peking faction lose a bitter bout with the Moscow one.

If Berlin is the bone that sticks in Mr Khrushchev's throat, then Mongolia must feel the same in Mr Mao Tse-tung's. Although Outer Mongolia, as it is still widely known, rebelled against Chinese rule in 1911 and proclaimed its independence ten years later, neither Chiang Kai-shek's Nationalists nor Mao's communists have ever reconciled themselves to its separate existence, whatever the Sino-Soviet treaties of 1945 and 1950 may have said. In Inner Mongolia—still firmly within China's borders—the Chinese have swamped the local population, both by massive immigration and by a drastic revision of the Mongolian autonomous region's boundaries, so that the region now numbers seven Chinese to each Mongolian. New Chinese text-books were introduced early last year and the hours of study in Chinese were increased in the schools.

Even in the Mongolian People's Republic (Outer Mongolia)—always a Soviet satellite—the Chinese communists seem determined to compete with Soviet influence. Both Soviet and Chinese economic aid programmes for Mongolia are on a huge scale,

considering the smallness of the population—about a million—and its pastoral character. During the past five years, Soviet credits have totalled about $350 million; China's contribution has understandably been much smaller—about $115 million—but modest only relatively to Russia's. It can scarcely be doubted that these economic efforts reflect an underlying rivalry in foreign policy. And now President Kennedy is reported to be considering the despatch of an American ambassador to long-unrecognised Ulan Bator; the Outer Mongolians must be wondering if they have enough fingers to count their wooers on.

KUWAIT LANDING

Brush-fire Capacity

The swift British military build-up in Kuwait, to some 7,000 men by Thursday, is a demonstration that the Middle East forces can carry out a set-piece if they have to. This was evident, on an appreciably smaller scale, in the air lift for 2,500 men from Cyprus to Amman in 1958. Now the use of sea power in the Persian Gulf, including the commando carrier *Bulwark* and the amphibious warfare squadron from Bahrein, has provided the Kuwait intervention with a much more substantial punch. This has given a boost to Britain's pretensions to conduct a sizeable brush-fire operation, and shows that small friendly regimes can be propped up if they ask for help in good time. Nevertheless, some awkward questions remain after the congratulatory signals have been passed round. Would the British air lift have looked at all adequate if General Kassem's armour had begun to roll forward last Saturday? Would there have been sufficient tactical air support if the marines had had to make an opposed landing? Moreover, the geographical course of the Kuwait operation has underlined the growing political limitations on strategic mobility in the Middle East theatre. The 2nd Parachute Battalion was flown in Britannias from Cyprus to the Gulf, using the air space of two Cento members, Turkey and Persia, but the Cypriot government is clearly nervous about upsetting Arab opinion in the future. Within a year or two, it may be necessary to write off the Nairobi base, where the 24th Infantry Brigade has been stationed as a mobile theatre reserve, and Southern Rhodesia (assuming political stability) is too far south for convenience. Just as the passage of the Mediterranean fleet through the Suez canal has depended this time on the United Arab Republic's current political tack, so Arab and neutralist African air space could present a serious barrier in future emergencies.

This trend adds weight to the argument that seaborne task forces, employing commando carriers and the advanced type of tank landing ship, and with their own air cover will have to play the chief role east of Suez both in independent operations and in support of Cento and Seato allies. The advantage for the local commander is that he can keep his force below the horizon when a crisis first looms up, and still be able to move in rapidly with heavy equipment in the initial landing whenever necessary. Mr Watkinson has seen the need to increase this capability, and the second commando carrier, the *Albion*, will be ready next year. But new vessels, particularly among the landing craft, are urgently required if operations in less favourable circumstances than at Kuwait are to be given a fair chance of success.

UNION CONFERENCES

Coal and Rail

With the new chairmen of their industries firmly in the saddle, the railwaymen's and the mineworkers' unions held their annual conferences this week in Scotland and in tranquillity. Uproariousness was left to an outsider, Mr Ted Hill, making his fraternal address to the miners as this year's chairman of the TUC. Casting aside his favourite role as the lovable old eccentric, and appearing instead as a heedless old troublemaker, he appeared publicly to pooh-pooh ballot-rigging in the unions and said that unofficial strikes, which the miners' president Mr Ford had just attacked, can sometimes be a good thing; he thinks that they can give workers a nice rest. It was left to Mr Will Paynter, the miners' communist general secretary, to prove that the left wing need not be the lunatic fringe by making a careful plea for a wage structure in the mines which would give fair incen-

Mr Hill: eccentric or heedless?

tives to men working with the new powered equipment that the coal board is busily installing throughout the country. With Mr Ford to do the denouncing, and with Mr Paynter to work out the painstaking details, it looks as though Lord Robens (who was realistic on costs and prices when he spoke on Thursday) can at present look forward to co-operation from the union—despite the conference's approval of the inevitable wage claim. Mr Gaitskell, anyway, is sure of co-operation after the resounding repetition of last year's vote on multilateral disarmament.

Dr Beeching at the Transport Commission offers a far more tempting target to trade union orators than Lord Robens at the coal board. But in attacking the idea of decentralisation on the railways, delegates could make only hazy onslaughts on what are as yet hazy proposals. Significantly, many of them pointed to the shortage of staff on the railways in certain areas (but nobody suggested that this might make a case for regional wage differentials). The union leaders are in a restless mood and seem to have largely persuaded themselves that the days when Sir Brian Robertson was their boss were a golden age, and that Mr Marples (in particular) and Dr Beeching are the appointed and gleeful gravediggers of the whole railway industry. If they see an issue on which they could count on any measure of public support, they might well act dangerously under pressure from the middle-rank union officials. But the defeat of these militant ncos over the unilateralist issue—or rather their reduction to a state of complete bewilderment during the voting—may suggest that the rather more right wing union executive is well able to bend the union's impulses to its own sober will.

FRANCE

Murky Marks

Examiners who unjustly fail no more than five hundred pupils out of seventy thousand taking the examination—less than one per cent—cannot be regarded as monstrously culpable creatures; but the outburst of fury and distress that followed the announcement of the results of the *baccalauréat* in the Paris area (results which at first seemed more unjust than, in the end, they proved) nevertheless had good causes. The *bachot* dominates the consciousness of French parents and children even more than the 11-plus does that of the English. To pass it is to obtain at once a certificate of education, like the British "A" level, and the passport to university. It is so indispensable as a career-opener that a special word, *bachotage*, is used to express the technique which enables the lazy or less intelligent to squeeze by; and crammers' establishments, known as *boîtes à bachot*, exist solely to coax them through it.

The discovery of muddle and injustice over the *baccalauréat* 1961, therefore, came as a painful shock. Deliberate "marking down" may have been on a small scale; muddle seems to have been widespread. Pupils were told that they had received 87 marks out of 60 for history and geography; examiners in Spanish were given Latin papers to mark. The confusion seems to have arisen from the government's laudable aim of speeding up the process by which marks are decided on and announced, and of eliminating the oral examinations in July, and the supplementary exam in September for those who have failed the first, so as to remove a blight from the summer holidays.

But the result, as the teachers had warned the minister of education, was disastrous. Paid less than half-a-crown an hour for the job, with their ordinary teaching still to do, and having to cram the assessment of one-and-a-quarter million examination papers into three weeks, the teachers understandably made mistakes. The wonder is that they made no more. The blame, as a result, is being turned upon the government, which is accused of cheeseparing in its financial

allotments to education, and of being overhasty with its reforms. The need for reform, however, is generally admitted. No one approves the prevalence of *bachotage*, or the strains involved for those sitting this two-in-one examination.

PRISON SENTENCES

After Blake's Appeal

CRUEL and unusual punishments are expressly forbidden by the eighth amendment to the American constitution; and while English law contains no such formal prohibition it has always been understood that the courts will not pass sentences of such a length as to make it probable that a man will die in prison. This principle has been supplemented by the policy of the Home Office and the Prison Commissioners. When a man has been sentenced to life imprisonment — which is, in theory, the heaviest prison sentence that the law recognises — successive Home Secretaries have used their discretionary powers of release in life sentences to ensure that criminals are not kept in prison for so long that their moral and physical deterioration would prevent them from returning to the life of the community. On these grounds alone the specific sentence of 42 years imprisonment passed on George Blake, which this week has been confirmed by the Court of Criminal Appeal, would be open to grave criticism, since even if he earns his full remission for good conduct he will not be released from prison until he is nearly 70.

But the sentence is open to further objection. Under the Official Secrets Act the maximum penalty which Parliament has laid down for spying is 14 years. To pass consecutive sentences of 14 years on different charges in the indictment, and so impose a penalty in excess of this, is in effect to evade the will of Parliament; when Fuchs pleaded guilty to four charges under the same section of the Official Secrets Act in 1950, Lord Goddard felt constrained to pass the maximum sentence on each charge, but ordered that they should run concurrently. As the Home Secretary has no discretionary power of release when a specific sentence is passed, Blake will be worse off under his present sentence than he would have been had Parliament laid down a life sentence as the appropriate penalty for spying. Mr Justice Hilberry's point this week that a life sentence always remains in force and that the Home Secretary can release only on revocable licence is purely academic since no prisoner so released has ever been recalled. His claim that the sentence was necessary as a safeguard to this country seems odd as Blake would obviously never again have access to secret information; and not everybody will agree that one can deter future communist spies by making Blake's sentence so apparently savage. What the sentence is more likely to achieve is a diminution in respect for British justice —which has been admired, as Blake's counsel pointed out in his closely argued plea before the Court of Criminal Appeal, precisely because political considerations have for long been contrary to its genius and spirit.

TECHNICAL AID

Under-developed

MR VOSPER'S new Department of Technical Co-operation will have to struggle hard to make itself anything more than ordinarily useful. The department will be a source of information, and it will provide the experts, advice, and technical assistance that are at present sent to overseas countries by the Foreign Office, the Colonial Office, and the Commonwealth Relations Office. Mr Vosper will have £30 million to spend this year, taken from the budgets of the three senior departments; the disadvantage is that each of the three senior ministers will be looking over his shoulder as he spends it.

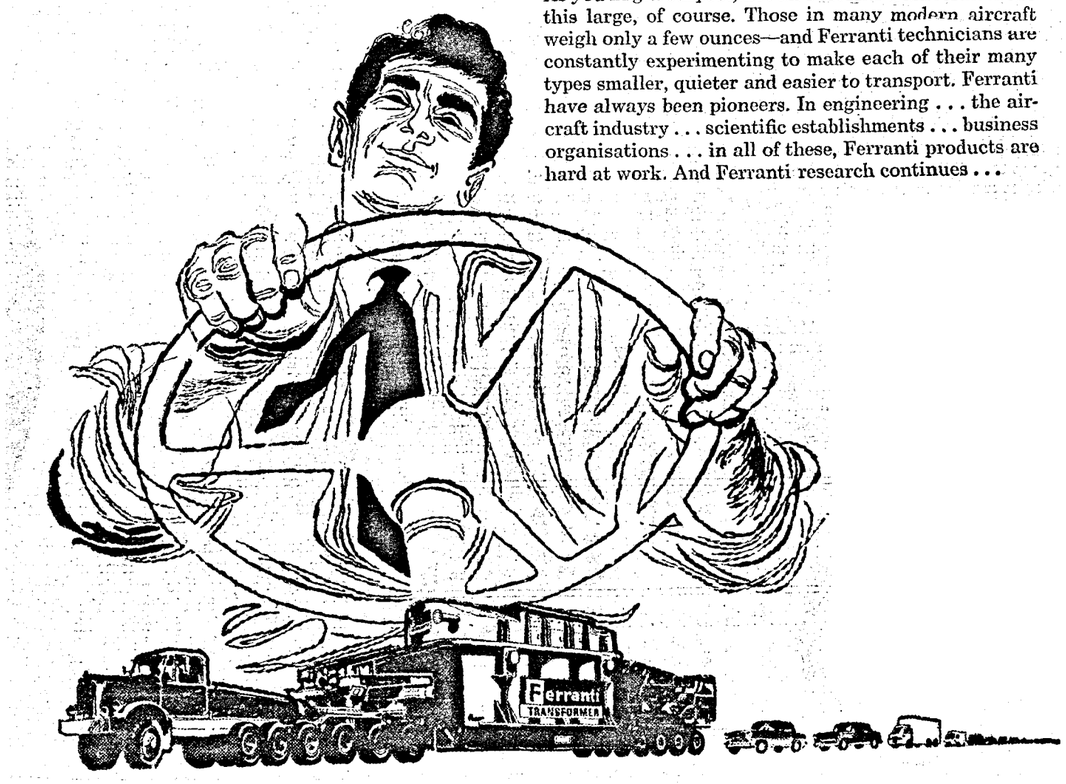
Such a department should co-ordinate Britain's technical assistance overseas, and at the same time achieve the publicity that earns a donor country the thanks for the job. President Kennedy proposes to do the same thing more grandly (and more sensibly) by putting most forms of American aid—including gifts and loans of money—under a single agency. The British Government has fought shy of this idea on the grounds that money-giving involves political decisions that should be taken by each of the three overseas departments. But, as the Americans have begun to learn, all aid should be co-ordinated on an international scale; backward countries need the planning security given by guaranteed payments spread over several years. Mr Vosper's new department should be promoted and given responsibility over the distribution of capital as well as technical assistance.

As it is, its task will be to smooth over the difficulties of pride that affect newly independent countries which have previously received their technical assistance from the Colonial Office and must now be transferred to the Commonwealth Relations Office. The department must also see that the new Commonwealth countries are not neglected altogether because they are no longer colonies. Equally important, it will have to decide orders of priority in giving technical assistance. Sir Andrew Cohen, who is likely to be the department's first Director-General, is exactly the right man for this job. He, and the department, should be given more to do. Otherwise the new department is likely to be looked on in the Civil Service as little more than a convenient way of finding a new home for at least one part of the Colonial Office's staff.

SCHOOL EXAMINATIONS

Beloe Upheld

IT looks as if the pressure building up around Sir David Eccles to implement the Beloe report is becoming irresistible. The Minister of Education has been manifestly reluctant to bring in a new school leaving certificate for children who are insufficiently bright to sit for the General Certificate of Education, but who is left on his side? The Secondary School Examinations Council, in a report this week, has upheld the Beloe recommendations against allcomers, with only minor reservations on organisational matters, including the type of regional examining body that should be set up. The council has confirmed what the Beloe committee reported: that any sixteen-year-old who can possibly pass a local or national external examination, however dubious its standards or whatever its influence on the syllabus, is already being thrust forward willy-nilly by the combined force of parents, teachers and prospective (usually small-scale) employers. It is no longer useful, the council says, to debate whether fifth-year secondary pupils should be examined. The real issue is how best these examinations can be adapted to suit the grade of pupil most likely to sit them.



The pupils concerned, as the council sees it, are in the middle strata of intelligence. They do not belong to the upper 20 per cent (the grammar school stream) for whom the GCE is designed, but near the top of the secondary moderns (just below the exceptional children there who do succeed at "O" level) there is a second 20 per cent who could aim at a lower leaving certificate in a number of subjects, and a third 20 per cent below them who might pass in individual subjects. Children of even more limited academic pretensions do not, at present, stay on beyond the leaving age in any numbers, although they may well present a problem in the future. Further stratification inside the schools, and further rigidity of their syllabuses, are among the troubles that the Minister presumably fears if he gives way.

The best, and perhaps the one sound, argument for a Beloe examination is that it may encourage more pupils of middling ability to stay at school for an extra year. The SSEC has wisely declared against entering fourth-year pupils, and against having compulsory subjects. The prime need is for flexibility at all stages and to see that nothing is done, for the sake of a scrap of paper to be read mainly by proud parents, to stop the evolution of, and constant experiment in, the most fitting educational syllabuses for pupils of this calibre. Before Beloe becomes a practical possibility it is highly desirable that there should be more time for local experiment and that the Beloe report's own call for a central research and development unit for school examinations should be implemented.

Man with power behind him

sees a bright new future ahead. A bright future, a warm future, and a comfortable one as well, in fact—because the man with a giant Ferranti transformer behind him is helping to bring the benefits of a new electrical age to hundreds of industries and thousands of homes. Incidentally, *giant* transformer, did we say? Not an exaggerated description, surely, for an iron-clad object as big as a house and weighing all of 180 tons? Other Ferranti giants recently delivered are already in action at Niagara, at the Kariba Dam and the British National Grid.

As you might suspect, not all Ferranti transformers are this large, of course. Those in many modern aircraft weigh only a few ounces—and Ferranti technicians are constantly experimenting to make each of their many types smaller, quieter and easier to transport. Ferranti have always been pioneers. In engineering . . . the aircraft industry . . . scientific establishments . . . business organisations . . . in all of these, Ferranti products are hard at work. And Ferranti research continues . . .

EAST AFRICA

Summer Saneness

MR JULIUS NYERERE is no longer the only East African with a smile on his face; even the corners of Mr Tom Mboya's mouth are beginning to twitch. Talks held in London and Nairobi during the past three weeks have brought Kenya, and with it the whole of East Africa, to one of its hopeful periods again. This one may last. The two African parties in Kenya have, on instructions from Mr Jomo Kenyatta, stopped abusing one another. Mr Ngala, the leader of the minority party and the head of the government, has seen Mr Macleod and the governor, and has subsequently said that Mr Kenyatta's return to his house near Nairobi "will soon take place."

Leaders of both parties are meeting the governor in Nairobi to talk about moving Kenya to internal self-government in 1961; if, on top of that, Mr Kenyatta is given his complete freedom he could lead a majority government of Kenya to a conference on federation before Christmas (and perhaps before the more difficult conference on the Rhodesian federation). Uganda's constitutional talks in September remain a hurdle, but an advance was made on Monday when the colony was granted a chief minister and Mr Benedicto Kiwanuka, the leader of the legislative council, was appointed to the post.

Even more helpfully, the East African leaders agreed at their London conference on the future of the East Africa High Commission to create a new body—the Common Services Organisation—which will effectively transfer power from the Colonial Office to representative ministers from the three territories. The new organisation will be run by a triumvirate of the three "principal elected ministers"—Tanganyika's prime minister, Uganda's chief minister, and, with luck, Kenya's chief minister if Kenya gets one in time. Services formerly provided by the High Commission will be run by four committees of three ministers apiece, one from each territory. There will be a central legislative assembly made up of the twelve ministers running the services and nine members from each territory elected by the territorial legislature, as well as two officials. Services may be provided to Zanzibar on an agency basis. These arrangements could be an effective foundation for a federation; the fact that they have been made is a striking example of the desire for unity in all three territories. Before the year is out, the Colonial Secretary himself may be able to smile again.

SOUTH AFRICA

How to Influence People

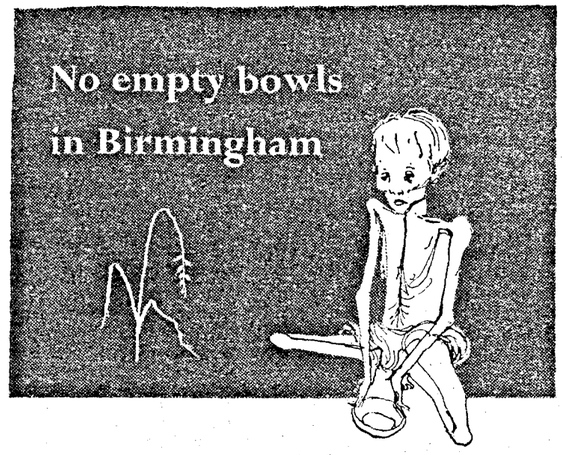
LAST week, not two months after the new Republic of South Africa left the Commonwealth, the members of the International Labour Organisation asked South Africa to leave their company too. The republic refused to go, and there is no way of making it go. This fact is perhaps the only one in favour of motions for the expulsion of South Africa from UN agencies; where there is no way of enforcing such motions, they are a means of registering the world's disapproval of apartheid. But it would be a pity if South Africa really did leave these agencies, or the UN, for then the world's contact with Dr Verwoerd, and its hope of influencing him (forlorn as that may be) would be destroyed.

Not quite all alone, the new republic is doing its best to keep the few friends it has, and to seek new ones. Pushing aside their distaste for people who are less white than themselves, South Africans are doing business with Japan and even contemplating playing rugby in Tokyo. Trade deals are being sought with some authoritarian governments in east Asia. South African Airways is practising non-stop jet runs to Europe, in case a completely black Africa carries out its threat to close all airfields to South African planes.

Mr Fouché, the South African minister of defence, left Britain on Monday after talks about military pacts and buying arms; there can be little information about what he has achieved until Mr Macmillan is asked about it in the Commons—and there is no guarantee that there will be any information about it then. But South Africa, in need of military friends, is thinking in terms of a pact with its natural allies in Africa, the Portuguese: Mr Fouché has gone on to Lisbon. Southern Rhodesia, dangerously, is toying with the idea of transforming the present white gentlemen's agreement in the southern part of the continent into a formal pact with South Africa and Portugal. The British Government must not get into the kind of muddle over South Africa that it finds itself in over Angola. It must do its best to keep Southern Rhodesia out of such a pact, and it must not give Dr Verwoerd any military assistance that helps to preserve apartheid.

CRIME

No Compensation?



THE report (Cmnd 1406) of the working party set up by the Home Secretary to examine proposals for compensating victims of crimes of violence is a disappointing document, which admits rather grudgingly that two types of scheme might conceivably be put into practice. One, it suggests, would be similar to the National Industrial Injuries Scheme with awards made by a special tribunal; the other would enable victims to claim compensation directly from the Home Secretary with an ultimate appeal to the courts. The first scheme would have the advantages that it would operate more quickly and would be less intricate for claimants. The second, it is suggested, might provide a better mechanism for picking out deserving cases from undeserving ones, a point that has some importance since quite a considerable proportion of modern crimes of violence—the statistics of which have been so widely publicised—are in fact crimes against victims who bear some blame themselves. It would not be a very good idea to allow two rival street bookies' razor gangs to live off public funds provided as a recompense for being successively slashed by each other.

The Economist

JULY 6, 1861

STRIKE IN THE BUILDING TRADES

The present strike in the building trades brings strikingly into view the utter futility of the last. On that occasion a nine hours' day was the single *sine qud non* contended for by the men. They alleged that they were overworked; that they wished for recreation; that they wished to have time to improve their minds; that they wished to have relaxation not on *selfish grounds*, but in order to become better working machines for the benefit of their masters. . . . *We always alleged that the strike*, of which the professed principle was then expounded, was only a strike for higher wages, and that the working men did not much desire briefer hours or more protracted rest. The event has proved the correctness of our conclusions much more conspicuously than we could have hoped. A nine hours' day has been conceded to the workmen, and they refuse to accept it. Many of the masters in the building trade are now willing to pay by the hour; and this of course would permit the workmen to leave off work if they really wished for relaxation, at the period at which they began to want it. But the money difficulty is too distinct. If they were paid by the hour, the working men would not get the same wages for a nine hours' day as for a ten hours' day, and this they do not wish for. The assertion that their wages afford no more than the bare *means of subsistence* is simply contrary to the real facts. An industrious workman in these trades can earn more than 30s. a week—more than thrice the amount upon which a bare *subsistence* can be, and in the agricultural districts is, unfortunately, supported. If we consider the present strike, solely in reference to the history of the last, we shall not be long in deriving an irrefragable inference from it:—we shall say it proves the secret aim of the latter to have been an enhanced remuneration, not a diminished employment.

HUNGER in a British city is now rare, but had you been born in India, Hong Kong, Algeria or a dozen other places, you would probably be desperately hungry. You would be ill from undernourishment, unable to plant the food you need, likely to die before 30.

Oxfam is changing that for many people—in two ways. First, by sending immediate food and medical help to those who need it most, and then by helping the hungry to help themselves. (For charity that is a mere succession of soup kitchens is no answer.) Typical is the aid sent to the Congo and Greece—from the first days of the African famine Oxfam sent help to U.N. emergency feeding and medical relief teams (£240,000 in all); and in Greece, after helping in the post-war famine years, we have installed 15,000 ft. of piping to bring water to the agriculture of many arid villages, provided carefully selected breeding sheep to stock farms, and blackcurrant bushes (for Vitamin C) to bring permanent new sources of nourishment to ill-fed people.

Yet the £825,000 of aid we sent last year allows us to initiate only a fraction of the many projects needed to save lives and provide a better future. It may not seem very spectacular to send 10/- or £100, but to the child whose life it can save, or the family it provides with the means to grow more food it is the most spectacular thing that can happen.

Please help us to fill the empty bowl that might have been yours.

Tasks we need to tackle now

Sink wells for waterless villages. (Many hundreds are needed in India alone, where they can make a quick and significant improvement in agriculture. Average cost £200 per well). Provide far more peasant farmers with improved seeds and stock, e.g., a goat and kid to provide extra milk in the Near East (cost £7); improved poultry stock to raise egg production and supply additional protein. (Cost of 100 chicks £12; complete 3-year project in 20 Indian villages £1,350). Train more young people for constructive careers—agricultural mechanics, carpenters, builders, light industry, modern farming. (Cost for upkeep of student in Hong Kong £60; for complete maintenance and training in Jordan for a year £230).

We could do much more if we had more voluntary helpers—in universities, schools, offices and in every town and village. Write for details.

OXFORD COMMITTEE FOR
FAMINE RELIEF
17 BROAD STREET, OXFORD.

This booklet EUROPE AND YOU, *which gives fuller information, can be obtained direct or from the Manager of any branch of Lloyds Bank.*

A word to British Manufacturers interested in Europe

LLOYDS BANK can do much more than provide introductions and information on markets, taxation, quotas, etc., for established or intending exporters.

In Switzerland, France and Belgium, it offers the services of a British bank with English speaking senior staff who are well versed in the laws and ways of these countries. With branches at Geneva, Paris, Brussels, Antwerp, Bordeaux, Le Havre, Lille, Roubaix, Biarritz, Cannes, Nice and Monte Carlo, it also has carefully-chosen Correspondents throughout Europe.

Advantages of a European Holding Company

If you intend to manufacture in Europe it may be wise to establish first a Holding Company in Switzerland, which offers several very important advantages:—

- Central situation
- Sound currency free of exchange control
- Taxation is low and can sometimes, by negotiation, be made even lower
- Retained profits can be maximised and made free for further investment in Europe or elsewhere.

LLOYDS BANK (FOREIGN) LIMITED
10 MOORGATE, LONDON E.C.2

But the difficulty of making distinctions is not one that should be regarded as impossibly daunting. Nor should the Government be put off by the fact that a successful scheme for compensation for crimes of violence might then lead to demands for compensation for crimes against property; one of the advantages of starting off with a limited scheme would be to see how it worked, and how far—if at all—it should be gradually extended to cover other types of offences. The cost of an initial experiment would be tiny. Cmnd 1406 estimates that its suggested "industrial injuries scheme" would cost only £955,000 a year and its courts scheme £1,500,000, a substantial part of the extra money required for the courts scheme being accounted for by extra administrative costs.

The weakest sections of the report are those dealing with the recovery of money from the criminal for payment to the victim, which it pays lip service to as desirable but implies is impracticable. Certainly most offenders would not have the means to make reparation and if sent to prison would be deprived of the opportunity of finding any. Yet this could be in part remedied by raising wages in prisons to a level comparable with those prevailing outside. On this point the report is virtually silent; indeed it shies away from the whole idea of reparation on the Eldonine ground that it would involve a rethinking of our present philosophy of penal treatment. Yet this is exactly what is supposed to be going on at the Home Office and is what Miss Margery Fry had in mind when she first put forward the proposal in respect of which this committee has now laid its very small egg.

SPAIN

Democrats Unite

SPANISH republicans in exile, who subscribed to a pact of union earlier this year, have now had the pact confirmed and expanded inside Spain. The underground socialist party, together with the movement for Catalan autonomy, some left-wing christian democrats and other republican groups, published a joint manifesto in Madrid last week announcing the formation of a Union of Democratic Forces. Its aim is to fight General Franco's dictatorship "by all useful means" and to set up a provisional government which will try to find out how the Spanish people want their country to be run.

Cardinal Pla y Deniel: Support for democrats

The union describes itself as "left of centre," but says it is as firmly opposed to communism as to any other form of totalitarianism. Although republican in sympathy, it is ready to co-operate with liberal monarchists and will accept a constitutional monarchy if a free vote shows that the majority of Spaniards want this form of government. Significantly, one leader of the liberal monarchist movement *Unión Española* has welcomed the new organisation as a step towards the union of all Spanish democrats. The inclusion of the christian democratic left wing in the Union of Democratic Forces is interpreted as meaning that, if a republican regime succeeds General Franco, the church will not oppose it. The Spanish christian democratic movement is still small, but in the right conditions it might grow rapidly; it is the political projection of the mildly left-wing Catholic Action fraternities for workers and youths, and enjoys the discreet support of Cardinal Pla y Deniel.

This move towards unity among democrats has been accompanied by another. The three non-communist trade union movements which commanded the allegiance of the majority of Spanish workers until 1938—the socialist, syndicalist and Basque groups—have also concluded an alliance. Their aim is to re-establish free trade unionism in Spain and—when they can—to take over the property and other assets of the Falangist *sindicatos*, the official "vertical trade unions" in whose favour their property was seized in 1938-39. An unstated purpose of their alliance is to prevent the communists—who are known to be trying to infiltrate the official trade union bureaucracy—from getting in first.

NATIONAL ASSISTANCE

Portrait of the Poor

THE latest annual report of the National Assistance Board (Cmnd 1410) provides a valuable record of the two million or so poorest people in the country. At the end of last year the board was paying out 1,857,000 weekly allowances, two thirds of them to women. About 1.3 million of the recipients were old people, another 270,000 were sick people below retirement age, 130,000 were unemployed, while the other 150,000 odd were mostly widowed or deserted or unmarried mothers who were unable to work because they had young children to care for. In all, the board estimates that only 23.5 per cent of old age pensioners were so bereft of other resources that they needed to draw national assistance last December, as did 17.5 per cent of the unemployed, 15.8 per cent of widows, and 13.3 per cent of recipients of sickness benefit; the rest are people presumed to have had some private income of their own.

But perhaps the most disturbing statistic about Britain's poor is that 732,000 of the 1,857,000 national assistance recipients were living alone; their plight must generally have been much bleaker than that of most of the 313,000 recipients who were living with grown-up sons or daughters or the 404,000 who had grown-up sons or daughters living with them.

It is a mistake to suppose that only the utterly indigent can draw national assistance; 180,000 of last December's recipients owned their own houses, and the board reports that some 641,000 had other capital assets totalling £93.4 million. But this still implies that some 1.2 million of the recipients must have been living pretty well from hand to mouth. 489,000 of the recipients were tenants of local authorities; disappointingly, only 50,000 of these were having their rents abated under differential rent schemes. The board's "ordinary scale rates"—i.e. the national minimum on which Britain now in effect judges that the poorest of its citizens can live—are 90s. a week for a husband and wife, plus dependants' allowances (ranging from 17s. to 49s. 6d. a week according to the dependants' age), plus full payment of the recipients' rent. But the board is allowed to make discretionary additions to these scales, and in approximately half of all cases last year (including three fifths of old peoples' cases) did, in fact, do so.

When a family has over five children—as 19,000 families receiving national assistance last December did—the ordinary scale and dependants' rates plus rent allowance can add up to over £10 a week. This can present something of a social problem when the indolent father of a large family finds that idleness may pay him as well as unskilled work; the board had to undertake 88 prosecutions last year to force such idlers to take jobs. Two other thought-provoking statistics from the report are that there were some 436,000 children under 16 in families receiving assistance last December; and that, in a society where workers are rapidly accumulating private resources, little more than one per cent of men involved in strikes last year had to apply to the board for help for their families while they were out on strike.

Into Europe?

The economic effects on the Commonwealth of Britain's joining the Common Market are thoroughly analysed in 'The Commonwealth and Europe'; essential reading for all concerned with Commonwealth trade and development.

THE WORLD OVERSEAS

Disappointment on the Rhine

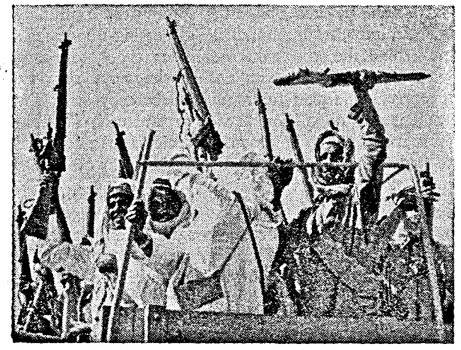
FROM OUR BONN CORRESPONDENT

ONE of the last acts of the Bundestag that has just finished its four-year run was to approve an allowance of DM 25 a month (about two guineas) for the second child of parents earning under DM 7,200 (£700) a year. Since this provision is retroactive to April 1st, and the paying offices need a few weeks to make the necessary arrangements, it is anticipated—indeed, it is most seriously intended—that a gratifying first bounty of DM 150 will be distributed to some 1,870,000 families early in September. On September 17th the west Germans will go to the polls to elect a new Bundestag.

All in all, it is scarcely surprising that most of the 519 deputies have left Bonn feeling pretty confident that they will be back again in the autumn. Some of them, celebrating in the parliamentary club at the close of their last hectic day of work, broke into a ditty much in vogue in Germany these days: "*Wir wollen niemals auseinandergehen*"—"We don't ever want to part from each other." Their glow of self-satisfaction may have been subsequently dimmed by the newspapers' cold appraisal of their four years' performance. "The legislative period of missed opportunities," one commentator has put it. Another says, "The last four years have been distinguished from the previous eight by a stylised boredom." Much worthy work has been done—to the tune of 430 new laws passed, in addition to some patching of faulty laws of earlier making.

Yet on the whole the criticism is true; this has been a boring parliament, in which little has been done to stir the public imagination, and in which few deputies have enhanced their reputations. The memorable but ominous highlights have been the approval in 1958 of nuclear arms (delicately labelled "the best modern weapons") for the Bundeswehr; Herr Wehner's speech a year ago through which the Social Democrats recanted their objections to west German membership of Nato; and the arrest in the Bundestag this year, and conviction at Karlsruhe for espionage, of the trusted, elderly deputy Alfred Frenzel. The legislation on which the deputies probably most pride themselves includes the taxation reform of 1958, which brought substantial relief to married couples both of whom work; the transfer of the Volkswagen works to private ownership through an issue of "people's shares"; and two laws regulating the progressive abolition of forty-year-old rent restrictions, and establishing order in urban building somewhat on the lines of Britain's New Towns Act.

The catalogue of missed opportunities is longer than that of outstanding achievements, and in the circumstances is perplexing. A party commanding (for the first time in German history) an absolute majority in parliament, and led by an authoritarian Chancellor, failed in its attempts to obtain special powers to deal with a public emergency; to make badly-needed readjustments in the sharing out of central and state government revenues; to reform the penal code and the national health insurance system; and even to rearrange the seating in the Bundestag after the model of the House of Commons. The generally accepted explanation of these setbacks is not reassuring. Confusion and delay were caused partly by the influence of the many pressure groups working in Bonn on behalf of minority interests, and partly by the obstructive pedantry of departmental experts, legal and technical, who were called in to advise the several Bundestag committees examining draft legislation. An immense amount of the dispersing Bundestag's work was done behind the scenes in committee: there were only 166 plenary sessions, compared with 221 in the years 1953-57. The Bundestag president's plan to stimulate debate by arranging for the government and opposition parties to face each other in the chamber was frustrated by some who objected to the cost and by others who feared that such a neat disposition of forces would foster the growth of a two-party system.

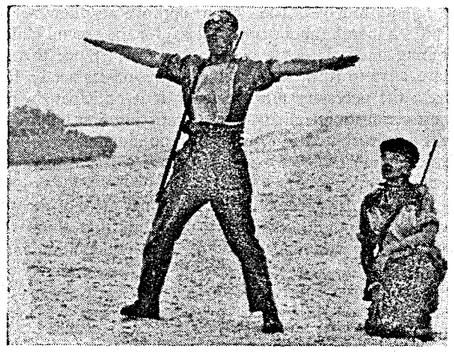


British observers cannot but think that any disadvantages that Dr Gerstenmaier's proposed innovation might entail would be amply offset by the advantages. The standard of speaking in the Bundestag is at present depressingly low. Deputies invariably read their long speeches. Few ever try to make themselves interesting and audible, or to avoid the cloggier swamps of the German language. Some of the ministers—the mumbling Herr von Brentano, for instance—are the worst offenders. The impression taken away by visitors—mostly students, who are encouraged to attend in large numbers—can seldom be a happy one. The German press is sometimes reproached for not reporting parliamentary affairs more fully. But deputies do little to provide reporters with quotable wisdom, or even folly. The west German public is aware, nevertheless, that with all its yawns and failings their Bundestag is a far, far better thing than east Germany's questionably elected, rubber-stamping Volkskammer.

AT the Bundestag's last plenary session, a statement on Mr Khrushchev's latest threat to German unity and the liberties of west Berlin was read by the president and approved unanimously. Dr Gerstenmaier spoke with force and dignity. He had the grace to begin by recalling that it was twenty years ago to the day that the Germans had launched their invasion of Russia, but, recalling also that 2,633,103 persons had fled from eastern to western Germany since the war, Dr Gerstenmaier pleaded that the lasting peace which everybody wanted could not be founded on the present division of the nation against the will of the people. The government of "the so-called German Democratic Republic," he said, could be described at best as "an auxiliary organ of the Soviet occupying power." The west Germans would welcome a peace conference, but not one at which it had been settled in advance that Germany should be perpetually divided.

The next Bundestag, which is to be elected on September 17th, has already been summoned to meet at 3 p.m. on October 15th, and its first major business will be to elect the Chancellor. There is now scarcely any doubt that he will be Dr Adenauer again, not Herr Brandt, the comparatively young hopeful whom the Social Democrats so bravely acclaimed as their alternative at the party conference in Hanover last November only a few days after a man of nearly the same age had been elected President of the United States. Herr Brandt is stamping the country indefatigably: so indefatigably that some Berliners are complaining, not wholly

for patriotic reasons, of their Burgomaster's absence in this critical hour, and Herr Schröder, the ambitious minister of the interior in Dr Adenauer's cabinet, has gibed: "The city's name is Berlin, not Brandt." But economic, political and sentimental circumstances are mostly against Herr Brandt, at least for the time being.



What still remains unpredictable is how long the 85-year-old Chancellor—the only one the Federal Republic has experienced in the twelve years of its existence—will want or be able to stick it out. To the amusement of some, the vexation of others, and the indifference of the majority, Dr Adenauer is, as usual, keeping his own counsel. He has lately dropped remarks which have suggested to some listeners that he is toying with the idea of forming a new ministry of European affairs, and another to administer aid to undeveloped countries. The possibility that he may have to form a coalition with the help of the Free Democrats, and would then require some new offices to distribute, is probably behind Dr Adenauer's ruminations. Beyond these nebulosities, his plans for changes are unknown. But it is hardly credible that Dr Adenauer himself will remain in office until 1965. Before long someone else will have to take over. Who? And for how long? Eastern and western statesmen are deceiving themselves if they really believe that by formally arranging partition they will ensure the continuance of docile parliaments and public opinion in Germany. Somewhere—it may be in western Germany, it may be in eastern—a rabble-rouser is surely awaiting his opportunity to exploit the nation's sense of injustice.

Kuwaiti defenders . . .

Secure Behind the Shield

FROM OUR MIDDLE EAST CORRESPONDENT

. . . British protectors

Kuwait

WAR clouds over Kuwait are disappearing almost as fast as they blew up. The Iraqi army has failed to materialise on the Kuwaiti frontier and the British have succeeded in deploying a small army of considerable fire power in defence of the sheikhdom. Three days after the first British troops arrived, their commanding officer declared that he was satisfied he could deal with any Iraqi attack. Since then, the build-up has continued and helicopters are as busy as bees. British troops in forward areas are suffering with characteristic enthusiasm the oven-like heat, which is aggravated by a severe sand-storm sweeping across an almost waterless desert. "Sand," reflected a marine as he surveyed the swirling desolation around him, "it gets into the bloodstream and comes out in bloody big boils."

It is arguable that if General Qasim had really meant to seize Kuwait by force, he would have acted first and talked afterwards. His choice of the opposite course suggests that he wanted to test Kuwaiti courage and the reaction everywhere else. Since he can no longer be in doubt on any of these points, the likelihood of an Iraqi invasion, always faint, has receded still further. Any lurking doubts that remain stem from General Qasim's own unfathomable character. Will he come down to earth or will he remain hitched to his wayward star? In the circumstances it is difficult to criticise the ruler of Kuwait for appealing for help.

One of the most gratifying features of the operation so far has been the warmth of Kuwaitis—not only government officials—towards the British forces. It is thirty years since a British soldier trod Kuwaiti soil. But the irony of a situation in which the British landed in force within a few days of the independence celebrations has not escaped notice. The question that is being asked with the greatest insistence in Kuwait today is not whether General Qasim means business, but when the British will leave. This is asked by the Kuwaitis without bitterness. It is a question that arises from the exceedingly odd situation in which Kuwaitis, British and Saudis stand shoulder to shoulder against another Arab state.

When confronted with this question, the ruler of Kuwait stated that the British would leave immediately the threat to Kuwait's independence disappeared. He laid the responsibility for the British presence firmly on General Qasim's head. It is taken for granted that the British will stay at least until the middle of July, when Iraq celebrates the anniversary of its 1958 revolution. This is traditionally an occasion for speeches in the course of which General Qasim may clarify his position or, more probably, obscure it in a flood of words, until it ceases to be a position at all. In any case, it should be possible in two weeks' time to form a tolerably accurate estimate of the general's intentions.

Kuwait seems to have profited already from the brief ordeal to which its mixed population has been subjected. The confusion and improvisation that marked the early days of the crisis have been resolved in an orderly fashion. While appealing to the Arab League, Britain and the United Nations, the ruler has discouraged excesses of enthusiasm within his sheikhdom. The press has been enjoined against needlessly provoking General Qasim, and the mass demonstrations that were originally planned for last Saturday were quietly called off with the suggestion that it would be better for people to register in their districts for volunteer duty. When asked why the distribution of arms to volunteers had been stopped, the ruler replied that it was useless to give arms to untrained men. A report, originally attributed to the Kuwaiti representative in Cairo, that a state of emergency had been declared in the sheikhdom has been categorically denied.

Now that the nervousness of last weekend has died down, it is difficult to find in Kuwait any trace of emergency conditions, except in those areas, relatively far from the town, where military movements continue. The accent here is rather on business continuing as usual. Feeling increasingly secure behind the shield of integrated Kuwaiti-British forces, the sheikhdom is awaiting developments in New York with confidence.

Mixed Drinks in Salisbury

FROM A CORRESPONDENT

ONE month of campaigning against the colour bar in Southern Rhodesia was celebrated in the Ambassador hotel, Salisbury, on July 2nd at a party attended by thirty people of all races. Until then the hotel had catered for Europeans only. It was the first target of the 200 black, white and Asian campaigners and sitters-in who have brought a new kind of politics to the country. For many months the Greek proprietor of the Ambassador, Mr S. E. Pafitis, had toyed with the idea of applying for a multi-racial licence under the 1959 Licensing Act, but he was afraid of his white customers. When the anti-colour bar campaign started, hotel proprietors were faced by the prospect of public ridicule. Mr Pafitis took the plunge. Moral pressure on segregated big business, and thus on the government, is the campaign's main claim to success.

The sit-in started spontaneously at the central African trade fair in Bulawayo in May, when three Africans were turned out of a restaurant as "dirty kaffirs." They resisted. Surprisingly, two Europeans promptly came to their rescue. Encouraged by this small victory, a young bank clerk, Mr Artwell Bukwe, organised a sit-in at the OK Bazaars' snack bar. Within two days the bar was converted into a cash-and-carry counter for all races, and Mr Bukwe had been acquitted by a local magistrate on a charge of trespass.

Southern Rhodesia's attorney-general has stated publicly that the restrictions in the Land Apportionment Act do not apply to places of public entertainment. In Salisbury, Dr Terence Ranger, the secretary of Christian Action, has suggested to his group that positive and practical action now be taken against the colour bars. At the same time, but acting separately, the African National Democratic Party has planned to invade all-white establishments. The Christian Action campaign was well planned; £100 was raised from supporters and sympathisers to finance trips on Salisbury's segregated bus services, as well as meals in hotels and restaurants (only the Jameson hotel serves Africans), haircuts in all-white saloons, and the use of other segregated facilities. But the NDP campaign was not properly planned; as a result, in the early stages, Mr Lovemore Chimonyo, the leader, found his sitters-in in a library that was not segregated, in a bar with an under-aged girl, and in an expensive hairdressing saloon without money.

Whatever the mistakes, the intelligent section of the Rhodesian public, lulled into apathy by government and press pronouncements on "partnership" between the races, was shocked by the extent of race discrimination unearthed by the campaigners. Southern Rhodesia's race barriers are painful to the Africans, enforced by proprietors, glossed over by the government, and taken for granted by most Europeans. This is because, in contrast with South Africa, the apartheid is disguised. There are no "whites only" notices on public buildings now—they have been removed. But in most cases the policy has not changed. The notices read, "right of admission reserved" or, rather innocently, "public convenience." It is left to the Europeans to understand the invitation and to Africans to know that they are not "the public." The Salisbury city council has laid such emphasis on the need for separate lavatories that the University College has been unable to use a recreation centre built on the campus for them by a firm of brewers. Even the Rhodesian railways, run by the government, have not been able to employ newly-trained African firemen on long routes because of that seemingly simple problem.

The sit-in campaign has so far achieved three things. First, it has compelled business men to take a new look at their practice of segregation. Several hotel proprietors have met Dr Ranger's committee of citizens against the colour bar at their own request and are now reported to be thinking hard. They have no strong arguments on the side of segregation in common law or in the declared Rhodesian policy of "partnership," however faulty and theoretical this may be. The fact that Northern Rhodesian proprietors have not lost business with the disappearance of the colour bar is another strong point against their southern counterparts. Many are waiting for a lead from Meikle's Trust, which owns the largest chain of hotels and stores in the country. The second main achievement is the desegregation of the Ambassador hotel, Salisbury Garden tea-rooms, the children's playing fields, and the lifts and food counter of OK Bazaars (the largest department store in Salisbury). The United Bus Company has announced a non-racial policy. Thirdly, the campaign has raised the morale of those Rhodesians who oppose the colour bar but did not previously know how to register their protest.

The committee chairman has received encouraging letters from a highly-placed civil servant, among others. Police have been conspicuous by their absence from demonstrations, the government has stood aloof (the secretary for justice, Mr J. W. Pithey, said the government would end racial censorship of films in August—after the referendum) and the reaction of the public generally has not been hostile. The reception of sitters-in has always been polite, except at a bar in the African township where drinkers complained that Europeans should not come into their pub while Africans were not allowed in European hotels. The committee chairman has received threatening letters from the banned but still active Rhodesian Republican Army. He has also had one from a European who signed himself as "Disgusted" and wrote: "Africans are savages and slaves—that is what they are and will always be."

Premier Found Guilty

FROM OUR HELSINKI CORRESPONDENT

Mr Sukselainen's conscience

FINLAND'S 200 members of parliament were on holiday, bathing and fishing in the country's lakes, when last week's political time-bomb went off. After a case that had been in progress more than a year, the Helsinki court of appeal ordered the prime minister, Mr V. J. Sukselainen, to be removed from his post as director-general of the Pensions Board. Three directors of the board, together with

the president of the Supreme Court of Administration, Mr Reino Kuuskoski (a former prime minister) were also removed from office. The case arose out of reported irregularities in the board's housing operations ; employees of the board were alleged to have been lent money at unduly low rates of interest so that they could get homes cheaply.

Mr Sukselainen handed his resignation as prime minister to President Kekkonen on June 29th, the day after the court's decision. Although the supreme court, to which he will appeal, is expected to reconsider the sentence passed upon him, Mr Sukselainen appreciates that the position of his Agrarian party would suffer if he stayed in office—even though it is generally felt that he did not deliberately help in breaking the law. The reaction of Finns has been an odd mixture of shock and indifference. A good many " irregularities " have been discovered in administrative bodies since the war, and officials whose activities have been investigated have not always had the courage to resign. In other countries, similar cases would lead to immediate resignation or dismissal, but in Finland it has become usual to continue in office and disregard public opinion. By contrast, Mr Sukselainen, a likeable man, has not hesitated to follow his conscience. Even his opponents have hastened to acknowledge his merits and regret the way in which his political career, at least for the time being, has come to an end.

The affair has also brought the end of Finland's 45th government in its forty-three years of independence. The minority cabinet which Mr Sukselainen headed, consisting solely of members of the Agrarian party, was formed in January, 1959, after a crisis in Finnish-Soviet relations during which Mr Khrushchev made it clear that he disapproved of the coalition cabinet that preceded it. Now the battle of the parties is resumed. A presidential election is due on February 15th next year, and it will be followed by a general election in the summer.

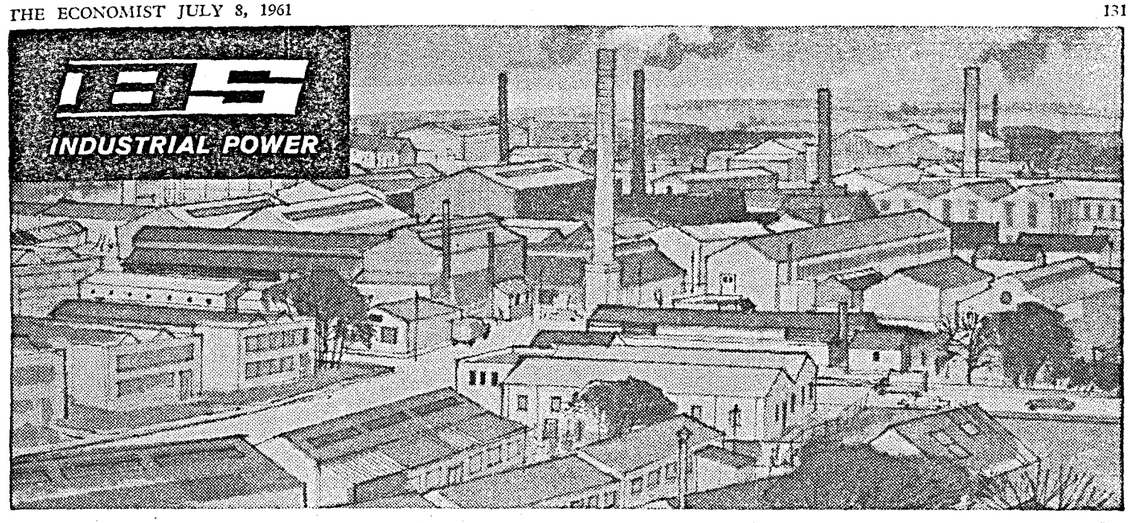
Undoubtedly last week's court decision means a loss of prestige for the Agrarian party, whose chairman Mr Sukselainen is. It is also embarrassing for President Kekkonen, himself an Agrarian, who is the party's candidate in next February's election. This embarrassment is increased by the fact that it was Mr Olavi Honka —Mr Kekkonen's foremost rival for the presidency and an ex-attorney-general—who drew attention to the building operations of the pensions board in a report last year.

WHAT happens next ? After the resignation of Mr Sukselainen, the opposition parties predictably suggested negotiations to see if a coalition cabinet could be formed. President Kekkonen and the Agrarian party may prefer to continue with a minority cabinet as a temporary solution—at least until next summer's parliamentary elections. Nevertheless, a good many people wonder whether the time has not come for Mr Kekkonen to establish closer links with the opposition in the national interest. Those who know the president report that he would like to regain the confidence of the opposition parties. It is said that the opposition is in no hurry to co-operate with the man who will be opposing their presidential candidate next February. But it cannot be sure that even the election of Mr Honka would result in the coalition it dreams of.

It is clear that President Kekkonen, relying on his popularity in Moscow, could appoint a coalition cabinet with a substantial parliamentary majority without fear of drawing down Russian retaliation in the shape of trade restrictions on Finland's head. Alternatively, if the Social Democrats preferred to stay out of the government, he could appoint a cabinet of the " bourgeois " parties alone, which would be in a very slight minority in the Diet. On the other hand, even if Mr Honka wins the presidency next year, it is likely that the communists will attack a cabinet appointed by him—perhaps with the same result as in 1958, when the last coalition fell.

General Pak's Preferment

FROM OUR CORRESPONDENT
RECENTLY IN SEOUL



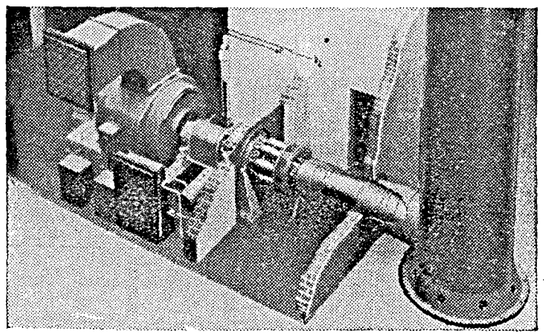
General Pak: out in front

AFTER six weeks, it seems safe to predict that, unless there is a monstrous miscalculation, the South Korean military coup will not develop along the lines of Captain Kong Le's revolt in Laos. Undoubtedly there were elements of nationalism and anti-Americanism in the limited Korean revolt, and the same righteous " throw-the-rascals-out " mood. But the causes were far more complicated than those in Laos. They included the frustrations of young officers who saw no hope of action or promotion ; a weak and inefficient central government ; impatience with some aspects of American aid ; a discontented civilian population and smouldering student unrest ; and a communist scare.

This alarm about the spread of communist influence—even if originally exaggerated and later deliberately magnified—is perhaps the most distinctive feature of the revolt. Western observers who fear that this week's take-over of power by General Pak presages the splintering of the 31-member military junta into rival factions, still do not believe that any of these factions would make a deal with the North Korean communists. The assorted generals and colonels who have been retarding the progress of " national reconstruction " with their conflicting ideas are all dedicated anti-communists ; the majority are expatriates from North Korea. The first move of the new leadership this week was to announce its plan to arrest Dr John Chang, the former prime minister, on suspicion of " links with North Korean communists."

Strangely, the only leader with an equivocal record is Major-General Pak, who on Monday replaced Lieutenant-General Chang as chairman of the Supreme Council for National Reconstruction. General Pak, who always had more influence than his predecessor, was once convicted but later absolved of suspected collaboration with North Korean communists. He is supposed to command more individual support among junta members—especially the colonels—than the less dynamic General Chang. Until this week relations between the two leaders appeared cordial and unrestrained. Neutral South Korean intellectuals insist that the pair are close and devoted friends. In Korea, however, this assurance—as disillusioned American military chiefs now warmly agree—can never be regarded as permanent.

There is no doubt that the planner of the May coup was Colonel Kim Chong-pil, a young, able and ambitious officer who, as undisputed head of the secret police and intelligence operations in the new regime, is probably now the most powerful individual in South Korea. American military authorities are understandably bitter over the coup, which imperilled the security of the front line and has revived the distrust that ex-President Syngman Rhee provoked when he defiantly released communist prisoners held by the United Nations forces in Korea. There can be only surface goodwill

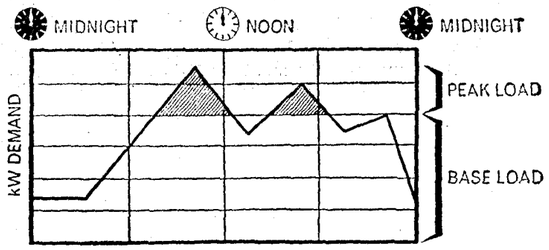


If you are a big industrial user...

...your electricity can cost you much less!

YOUR PROBLEM IS INESCAPABLE...

Heavy peak-load charges have always worried the big industrial user. For, in addition to paying for the units he consumes, he must pay a capital charge which is based on his peak demand—even if this lasts for no more than half an hour in the year!

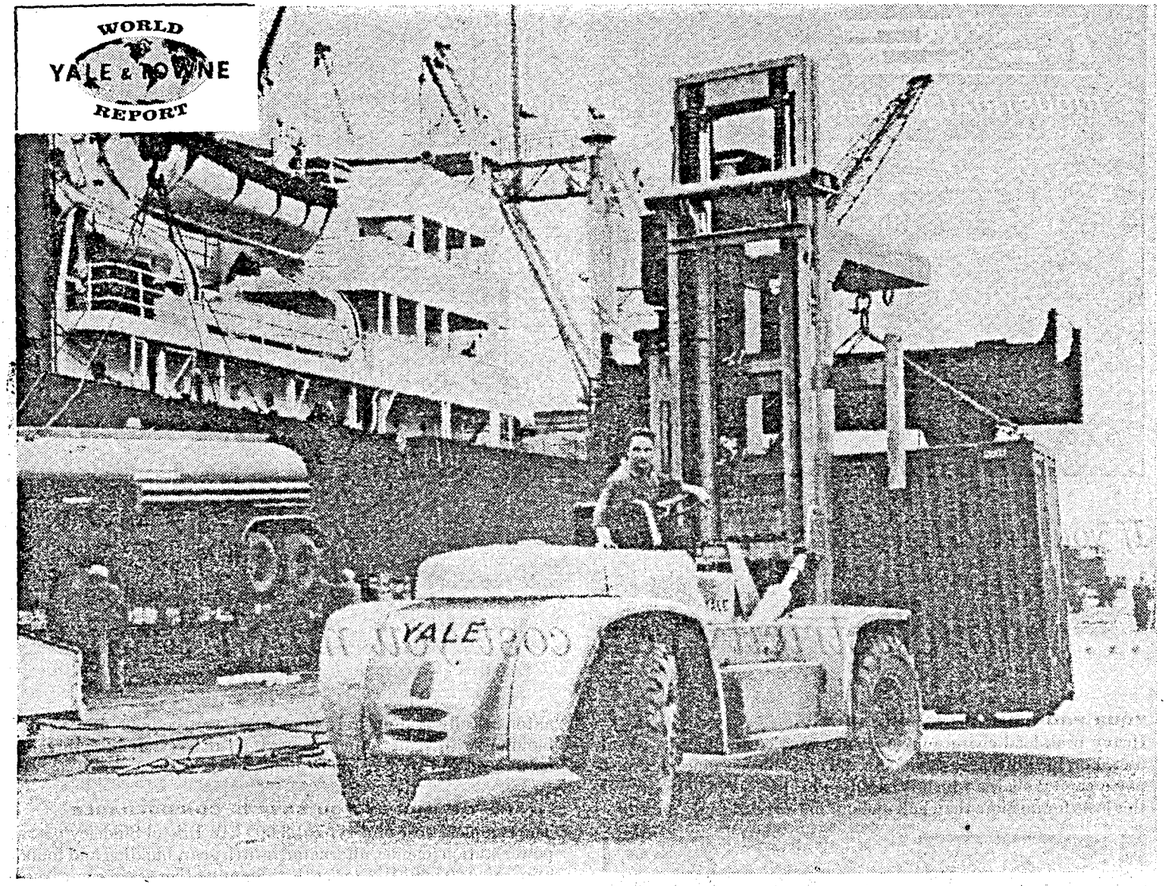


...BUT YOUR SOLUTION IS SIMPLE...

The Bristol Siddeley 3,000 kW turbo-generator is a reliable power source which radically reduces peak-load charges for a *lower capital outlay than any other installation.*

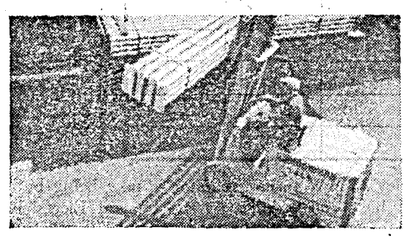
Powered by the Bristol Siddeley Proteus gas turbine engine which gives an exceptionally high output for its size, weight and cost, the Bristol Siddeley turbo-generator delivers 3,000 kW within 2 minutes of a cold start. The set, which starts and runs automatically and entirely unmanned, can be housed in a small building with light foundations. It also has a remarkably low noise level and is very easy to maintain.

...AND THE MONEY YOU SAVE IS CONSIDERABLE



The complete cost of a typical 3,000 kW Bristol Siddeley pocket power station (engine, alternator, switch gear, building and foundations) is £29 per kW—lower than for any other set of comparable power. If, for example, you have an annual peak-load requirement of 200 hours, by using the Bristol Siddeley set *you can save £10,000 in one year!* And this is after all running and normal amortisation costs have been met.

A Bristol Siddeley 15 MW turbo-generator is now being built, and this first set has been ordered by the Central Electricity Generating Board for service in 1962.



For further information, please write to: Gas Turbine Sales Manager, Power Division, Bristol Siddeley Engines Limited, PO Box 17, Coventry, England.

ANYWHERE IN THE WORLD YOU'LL FIND THE PRODUCTS OF YALE & TOWNE

ST. NAZAIRE, France.—The busy docks at St. Nazaire in Brittany demand materials handling equipment that can work hard at top speed, stay on the job and move vast quantities and varieties of goods to help reduce ship turn-around time. This Yale 18,000 pound petrol lift truck, one of many Yale trucks working at this port, is rugged, highly manoeuvrable, has fast lifting and travel speeds, and maximum visibility in all directions for the operator. Big jobs or small, Yale trucks make for more efficiency and economy.

LONDON, England.—Here, a Yale electric lift truck easily loads unwieldy structural steel tubing in unit loads onto a lorry for shipment to a construction site. This builder's merchant knows the value of using Yale trucks in moving his materials quickly, steadily and at less cost. Yale lift trucks are designed to give you long truck life, minimum down-time; efficient handling whether your loads are fragile as eggs . . . heavy as steel.

between the American command and the South Korean military junta until the release of the two front-line generals, four corps commanders and eight other senior South Korean officers who, in the crisis, remained loyal to General Magruder and who as a result are still imprisoned. Even this gesture will not restore the old trust and full harmony.

Despite the anti-communist mood of the country, American military plans now provide, for the first time, for strategy and tactics in the event of a North Korean attack. They visualise such an attack as being helped, first, by "anti-foreigner" riots inside the country, and, secondly, by major defections to North Korea from a bewildered and disunited South Korean army. The United States has two new and impressive leaders in Seoul: General Guy Meloy as military commander and Mr Samuel Berger, a career diplomat, as ambassador. The attitude of General Meloy, a Korean war veteran of disarming and deceptive benevolence, has been toughened and sharpened by his experience during the mutiny of 5,000 South Koreans at Seoul. Ambassador Berger, an intelligent liberal who suffered during the McCarthy period, is one of the State Department's Far Eastern experts. After a period of exile in New Zealand, he has made a vigorous come-back by way of Greece, where the difficulties of a proud and impoverished nationalism have been useful preparation for the troubles of South Korea. His urgent and delicate task is to help the military junta find its feet, while reconciling himself to the unhappy fact that democracy in the western image still remains a dream in South Korea.

Jobs for Whose Boys?

FROM A CORRESPONDENT AT TURTLE BAY

OVERSHADOWED by the more melodramatic activities of Mr Nacvalac (the Czech delegate to the United Nations accused of espionage), the recent report of a committee of experts on the UN Secretariat has barely impinged on the world's consciousness. More will be heard of it before the year is out; for its submission to the next General Assembly may be the signal for the biggest Soviet onslaught to date on the secretariat in general, and on Mr Hammarskjöld in particular.

The recommendations of the committee are hardly revolutionary. Briefly summarised, they mean that in the next two years at least 100 more professional posts in the secretariat would be offered to nationals of the Soviet block; while a sizeable number of additional jobs would also go to Africans and Asians. Thus the geographical lop-sidedness of the present staff would be largely redressed. A majority of the committee (the eight experts, from Britain, the United States, Russia, France, India, the United Arab Republic, Ghana and Colombia, found unanimity virtually impossible) recommended a new formula for allocating the professional posts in the secretariat among the 99 member nations. Under this formula, the population of each country would be a factor in assessing how many staff posts it should be allotted; at present, the "desirable" national quotas are based solely on the amount each country pays to the UN budget. Under the new system, every country should have a basic minimum of two staff members; thereafter, one staff member should be recruited from each country for each ten million of its population up to 150 million, and an additional staff member for each 30 million population in excess of that; the remainder of the available posts (about 1,000) should be allotted in accordance with budget assessments.

This scheme would mean that the Soviet block, whose nationals at present hold only 87 of the 1,360 posts in the category concerned, would be entitled to 253 (a target figure that hardly differs from the present "desirable" entitlement of between 214 and 305); Americans would be entitled to 366 posts (they now hold 359); and some African and Asian states' representation would be greatly increased. Hardest hit would be western Europe (which, for this purpose, extends from the United Kingdom to Greece and Jugoslavia); there the new "target" figure would be 317—against the 415 posts held at present. Britain's quota would be only 90; at the moment 140 Britons are employed in this category. Perhaps not surprisingly, some western delegations view the committee's suggestions with visible caution.

The significance of the report, however, lies less in the statistics than in the diverging political theories expressed, or implied, by the far from unanimous experts. The "troika" concept has been clearly rejected—despite ardent pressure by the Soviet representative, Mr Roshchin, who sought not merely that Mr Hammarskjöld be replaced by a tripartite executive, but that the entire secretariat be staffed on the "troika" formula—one-third from the Soviet block, one-third from the western allies, and one-third from the neutralists. A minority of one, Mr Roshchin hammered home his views, together with the Khrushchev thesis that there are no "neutral" men, in a voluminous appendix; and, into the bargain, made clear that the additional 100 jobs do not begin to satisfy Moscow's demands. The Russians' under-representation is, of course, largely their own fault. Broadly speaking, the conditions for service in the UN have been willingness to devote at least a reasonable period of one's life to the organisation; and willingness to become an international civil servant. The Russians have complied with neither condition.

It would be rash, however, to write the "troika" concept off, merely because of its rejection, in its Soviet form, by the majority of the experts. The germ of the idea is clearly detectable in the proposal put forward by the representatives of India, Ghana and the UAR: that three top-level deputy secretaries-general be appointed. Because this is milder than the Khrushchev concept, it is regarded in some western circles as more dangerous. The sponsors recommend that in selecting this triumvirate, the Secretary-General should take into account "the main political trends in the world today"; which seems to the Americans like the thin end of the wedge. Western critics of the idea argue that the authority of the Secretary-General would inevitably be reduced, and confusion and weakness would appear at the top—which, they claim, is what the Soviet Union wants.

★

MR HAMMARSKJÖLD has now published his comments on the committee's report. He shares its view that more posts should go to the new African member nations, and to the communist countries; but he recalls that his efforts to get the latter to fill their quotas have usually run into "difficulties." He condemns the Russian "troika" demand both as violating the Charter's requirement that UN staff should owe an undivided loyalty to the organisation alone, and as replacing geographical distribution by an ideological formula; he points out that "many of the states included in one or another category may not wish to be thus labelled." His own plan for reshaping the top level is to replace the present 13 officials of under-secretary rank with 9 administrative under-secretaries and 5 political assistant secretaries, one of the latter being American, one Russian, and the other three from "uncommitted" states; while Britain, China and France would have nationals among the 9 under-secretaries. Last week an Indian under-secretary, Mr C. V. Narasimhan, replaced an American, Mr Andrew Cordier, as executive assistant to the secretary-general. Mr Cordier's unrivalled experience of saving the Assembly from tying itself into procedural knots will, however, be available for at least one more session, as he has accepted a special assignment for that purpose.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

State, Church and Children

WASHINGTON, DC

EDUCATION is an explosive compound which politicians in most democracies handle with a caution born of much tragic personal experience. The United States, where education has traditionally been a function of local communities and of the states, is no exception. President Kennedy's proposals for aid from the federal government to education, moderate as they looked five months ago, possessed enough deadly ingredients to blow unwary Congressmen clean out of their seats. Then the main hazard was assumed to be the coalition of conservative Republicans, who oppose increases in either federal interference or federal taxes, and of the southern Democrats who have voted down previous education Bills because aid would have been withheld from tax-supported schools which maintained a colour bar. But the Administration calculated that it could coax its proposals through the House of Representatives once its supporters had won control of the strategic Rules Committee (which can prevent Bills unpopular with conservatives or with Congressmen generally from ever reaching the floor of the House) and once Mr Powell, the champion of civil rights, had agreed not to insist on federal aid being denied to any school which bars Negro children.

But, as so often, the storm then struck from another quarter. No sooner did it look as if, at long last, a Bill to provide federal aid for public education could be passed than the Roman Catholic bishops demanded that their own church schools should also receive such help. Thus they locked horns with the country's first Roman Catholic President, who retorted that federal grants to church schools would violate the First Amendment to the Constitution; this prohibits any law "respecting an establishment of religion." The result has been a brawl between vested interests — religious, racial and political—lasting over four months, which has temporarily cost the Administration its hard-won control of the Rules Committee, has held-up all education Bills whether controversial or not and has created an acrimonious atmosphere in Congress which casts a shadow over the remainder of Mr Kennedy's domestic programme.

Underneath this struggling heap, of course, are the needs of the children. Official surveys show that, although naturally the position varies from state to state, the country-wide shortage of classrooms, at 142,000, remains the same as in 1957; it would cost about $5 billion to remedy this. There is also a shortage of 138,000 teachers, which is reflected in the familiar pattern of oversize classes, part-time attendance, shift-teaching and under-education. On top of this, there is an even more serious shortage of qualified teachers, particularly of science and mathematics. Yet the combined spending of the states on education rises by nearly $1 billion every year. And in the next decade the high school population will increase by over 40 per cent, the college age group by nearly 60 per cent.

"Well, You're The Principal"

Even Republican Administrations have had to take remedial steps which may already have smirched the purity of state sovereignty. These have been in two main forms. The first is a series of federal subsidies for education in areas in which the federal government has set up defence installations (which pay no state taxes); these are the very broadly drawn "impacted areas." The second is the so-called National Defence Education Act, which was passed after the Russians launched the first sputnik to provide federal funds for school facilities for the teaching of mathematics, science and languages; physical culture is now to be included. These existing federal buttresses to education are due to be renewed and strengthened by the Kennedy Administration, which wishes to add to them aid for college students (notably to train more physicians). But the explosive part of this year's package (which in all amounts to about $6 billion) is a further Bill which would provide federal funds, totalling about $2.5 billion over three years, to be used at the discretion of the states for the construction of classrooms, for raising teachers' pay or for recruiting more teachers. Under the version of the Bill which the Senate has already passed this would provide about $850 million in the first year. Roughly this would permit the construction of 7,000 new classrooms plus the raising of the average teacher's salary by $400 a year (about 8 per cent) or the recruitment of 11,000 new teachers.

Measured against needs, even the "big Bill," as it is called, may seem modest. But its conservative critics fear that the states would become steadily more dependent on this aid and that both the federal contribution and the federal taxes to defray it would increase. Federal taxes, unlike state ones, are generally progressive in character and thus hit particularly those who usually vote Republican. The upholders of states' rights, led by ex-President Eisenhower, flourish the bugaboo of federal control of education, asserting that when Washington is paymaster it will want to interfere with the curriculum.

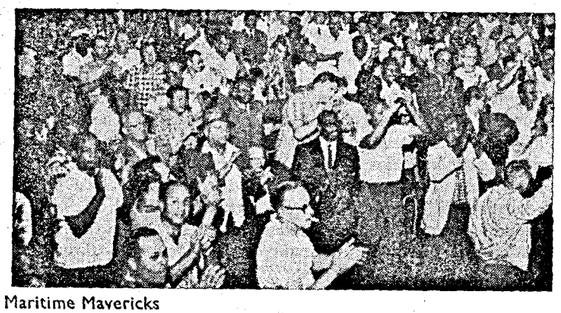
To the troubled consciences of the conservatives are added the fears of the Roman Catholic hierarchy, which sees that if the tax-supported schools improve the church schools will be less and less able to compete with them. These "parochial schools," both elementary and secondary, are also hard hit by rising costs and by the shortage of teachers.

Some 4,800,000 Catholic children attend such schools, while only 200,000 go to Protestant church schools. The Catholic schools are fast falling behind; in the next decade disaster looms unless they can secure help.

The 88 Roman Catholic members of Congress were therefore put under heavy pressure and letters, organised by the clerics, poured on to Congressional desks, addressed particularly to those northern liberals who have narrow majorities in their districts and many Roman Catholic constituents. Such tactics aroused the Protestants, in their turn, and produced a flood of remonstrances which are particularly embarrassing to the southern Democrats with their big Protestant followings. Faced with the prospect of worsened Catholic public relations, Cardinal Spellman stepped reluctantly back to the position he would perhaps have been wiser to adopt at first.

He begged the lawmakers to use their "ingenuity" to get round the First Amendment. They have been trying to do this for months; after various failures, the "ingenuity" takes the form of an amendment to the National Defence Education Act, under which private and parochial schools can get low-interest, 40-year, "soft" loans to carry out the purposes of the Act. This means that they may be used only for gymnasiums, cafeterias and classrooms for mathematics, science and foreign languages. However, the church's handicap in providing a competitive but "God-centred" education would be much reduced; some $375 million may be lent over the next three years.

Last month two Roman Catholic Democrats who are members of the Rules Committee joined the anti-spending forces of both parties on it to hold up the main Bill until this NDEA Bill was cleared. Fortunately the Administration has a lever to force both the Rules Committee and the House to approve the main Bill. This is that it also includes the authority for educational aid to impacted areas, which must be renewed this year. No "big Bill"—no more aid for impacted areas. At this point both Catholics and Baptists begin to quail, for the aid to impacted areas affects 313 Congressmen and amounts, as augmented in the new Bill, to $936 million for three years.



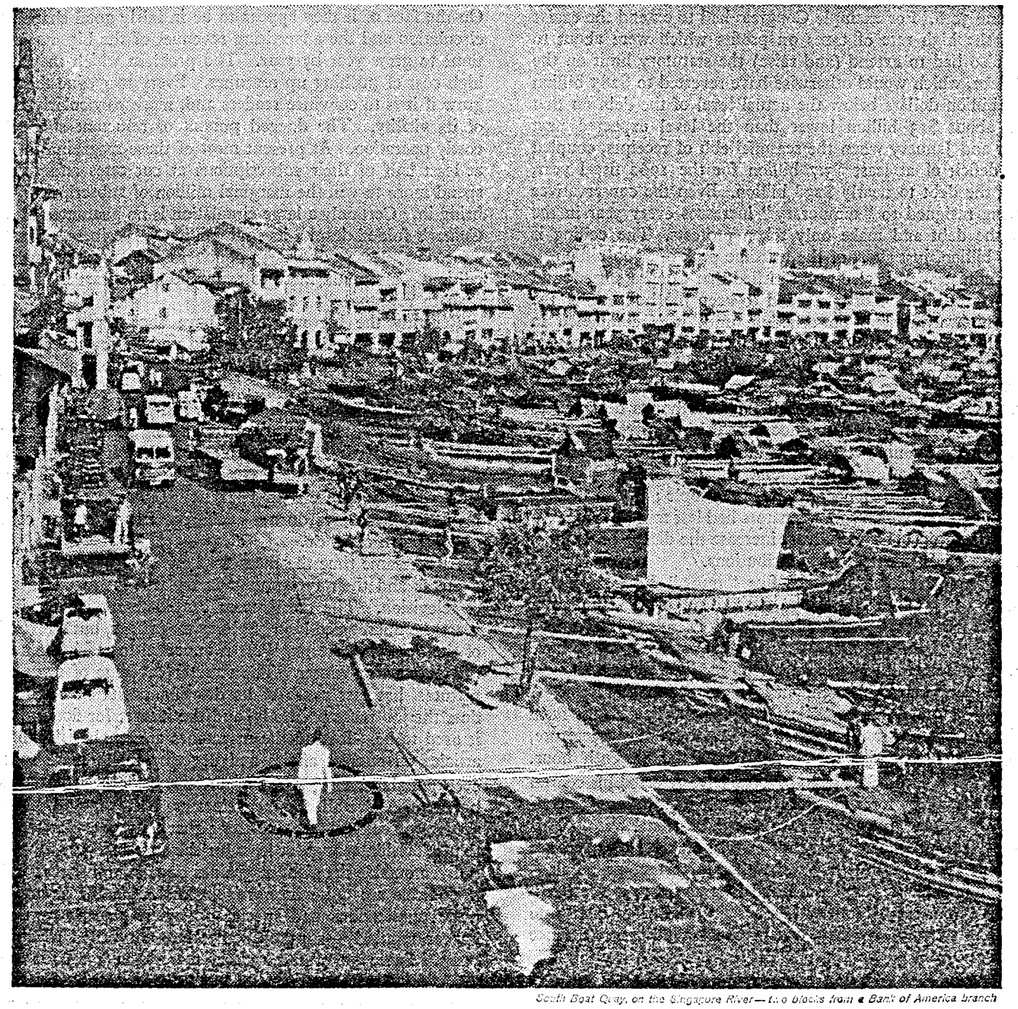
There is no certainty, however, that, if the Rules Committee releases the main Bill to the House floor first, the vital concession to the Roman Catholics in the NDEA Bill would survive the Protestant attack in the House afterwards. So the Roman Catholics on the Rules Committee are demanding that the NDEA Bill should go forward first. Unluckily, a majority on the committee seems likely to oppose clearing this Bill at all. This deadlock is not unwelcome to many Congressmen, who by now would be thankful to blame the Rules Committee for the failure of all the education Bills—except for the money for impacted areas, which they simply must have.

The Administration is still confident that the "big Bill," dragging the others after it, will pass somehow. One thing is clear: eight months after the election of a Roman Catholic President was supposed to have signalled a great step forward in religious toleration the Roman Catholic church is more vulnerable than ever to the charge of political interference and sectarian feeling was never more violently inflamed.

Reluctant Injunction

THIS week a President who voted against the Taft-Hartley Act in Congress in 1947 and a Secretary of Labour who fought it in the Supreme Court in 1959 were forced to use that unpopular Act, and thus to displease the whole labour movement, in order to get back to work the 70,000 sailors who had kept all American shipping in port for eighteen days. Even as Mr Kennedy and Mr Goldberg were asking the courts to issue an injunction against the strike under the emergency provisions of the Act they were still criticising it, pointing out that the present situation was another illustration of the need for more flexible procedures for dealing with labour disputes and that shortly they would be asking Congress to modify the law. Particular objections are that the fact-finding board which is set up under the Act to study this complex dispute is not allowed to recommend a settlement and that after eighty days, when the injunction has expired, the government will have no power to stop the unions striking again—as they threaten to do in late September.

The injunction under which ships have been putting to sea this week is only a temporary one, to be made permanent for the full eighty days on Friday unless the unions succeed in convincing the judge that Mr Kennedy is wrong in believing that the national



Maritime Mavericks

health and safety have been imperilled by the strike. But no judge is likely to argue with the President about this. Nor are the masters, mates and engineers, without whom ships cannot sail, likely to succeed in delaying the injunction by their contention that as supervisory employees they are not subject to the Act.

Rivalries between and within these and other unions and between the various groups of employers are largely responsible for the fact that not enough agreements between enough companies and enough unions were reached last week to save the President from having to resort to the injunction, hard as Mr Goldberg and his mediators worked to avoid this. Exactly who had settled with whom on which coast was far from clear when the Administration finally went to court but by that time nearly half the merchant fleet seems to have been free to sail. Three of the five main unions involved, including the largest, the National Maritime Union, agreed on a contract at the end of last week with two of the chief organisations of employers. It provided for wage increases of over 20 per cent and by-passed the issue over which negotiations had broken down—the demand of the sea-faring unions for rights on the ships which unsubsidised American companies have registered under foreign flags in order to avoid the high wages which prevail on American vessels—to the fury of the other two unions, the Seafarers' International Union, whose members work mainly on unsubsidised ships, and the engineers.

Few Frontiersmen in Congress

WHILE it has been reasonably easy for the Administration to lead Congress along familiar trails—and a good deal of ground has now been covered—the legislators dig in their toes when they are asked to do any pioneering. Last week there was a rush of legislation to the White House, but little of it was novel and much of it was inspired simply by the end of the financial

South Boat Quay, on the Singapore River—two blocks from a Bank of America branch

Man-on-the-spot . . . in Singapore. You'll find his offices on Raffles Square. In Paris, our man is located on the Place Vendôme. year on June 30th. For example Congress had to extend the excise taxes and the high rate of taxes on profits which were about to lapse ; it also had to extend (and raise) the statutory limit on the national debt, which would otherwise have reverted to $285 billion —several billion dollars below the actual level of the debt on that date and about $13 billion lower than the level expected next December and January when the seasonal ebb of receipts, coupled with the deficit of at least $3.7 billion for the 1962 fiscal year, will bring the debt to nearly $298 billion. Even the conservatives are growing resigned to " temporary " increases every year in the limit on the debt and make only token protests. The ceiling is now $298 billion, just short of the wartime peak of $300 billion.

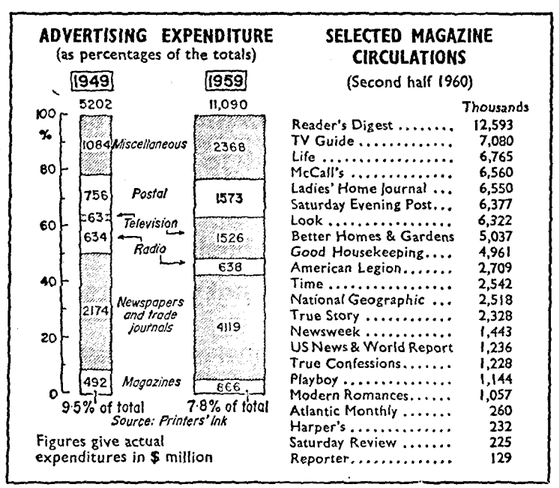
The Administration is also well satisfied that Congress has found most of the additional money needed to keep the building of the interstate highway system on schedule until it is completed in 1972, partly by extending the full tax on petrol, partly by imposing higher taxes on the road transport and tyre industries. Only $150 million a year will have to be drawn from the Treasury. By narrower margins Congress continued the federal bonus designed to persuade the states to control outdoor advertising along the interstate system ; so far nine states have qualified for this bonus. As usual, Congress was even more enthusiastic—indeed virtually unanimous—about raising benefits for old people ; unlike the big housing Bill—about which some Senators had last minute qualms—the improvement in benefits will not increase the deficit ; it is to be covered by a slight increase in contributions.

Three of the President's list of five " must " Bills have now been safely gathered in: housing, the raising of the minimum wage and aid for depressed areas—all old friends. But it is a different story when new departures are at issue. Hearings have not even been begun in either chamber on medical aid for the aged and the Administration is reconciled to no action this year. A sharper rebuff was administered last week to the President's farm proposals, to which Mr Freeman, the Secretary of Agriculture, clung gallantly (and rather obstinately) past the eleventh hour. Committees of both the Senate and House have rejected his central request for authority for producers to devise new means of controlling production, subject only to a congressional veto. This means that the same old extravagant system of price maintenance will continue for another year. Two other important proposals—long-term financing for foreign aid and federal aid to education—are bogged down. Mr Kennedy has certainly failed to instil into Congress any sense of urgency, except over spending on defence and space.

Magazines on the Rack

NEW YORK



EVER since television began distracting the advertisers, America's big glossy magazines have been searching frantically for a formula that will enable them to prosper under the shadow of Big Brother. For the most part they have tried to compete with the enemy on his own ground. By heavy expenditure on promotion and the lavish use of cut-rate offers, circulations have been pushed steadily upward. But in the last year or two the magazines have been trying another technique to get even with television. One by one they have introduced regional as well as national editions so that advertisers have the option of buying space (at a lower cost) for the region of their choice. One magazine even allows an advertiser to choose the individual states in which his advertisement is to appear.

While the common enemy is television, the energies of the mass-circulation magazines have been spent mainly in hitting at each other, even in full-page advertisements in the press. So far there have been only a few major casualties—*Collier's* magazine, for example—but several of the combatants are now in uncertain health. On the face of it they appear to be in fairly good shape ; both the circulation and the advertising revenues of the big magazines continue to grow year by year. The problem which they face is the high cost of pushing up revenues. Every magazine thinks it must grow if it is to convince readers and, more particularly, advertisers of its virility. The dogged pursuit of reluctant subscribers is a costly operation. At present most of these magazines are carrying at least half of their subscriptions at cut rates and they tend to spend more to win the marginal million of subscriptions than they bring in. Certainly a large circulation is no guarantee of solvency ; *Collier's* folded despite its four million subscribers. Similarly, the efforts to please advertisers—such as the trend towards regional editions—often add more to expenditure, at least in the short run, than to revenue.

Recently the big magazines have shown perceptible signs of changing their tactics. Encouraged perhaps by the cloud that has hung over television as a result of the revelations about rigged quiz programmes and other scandals, the periodicals have joined together in a big campaign (which includes full-page advertisements in the daily press) to point out to the advertising industry that the income of the average reader of magazines is higher than that of the average television viewer ; that many people read each copy of a magazine and that they peruse it in a leisurely fashion ; and that advertisements in magazines do not evoke the irritation that commercials on television often do.

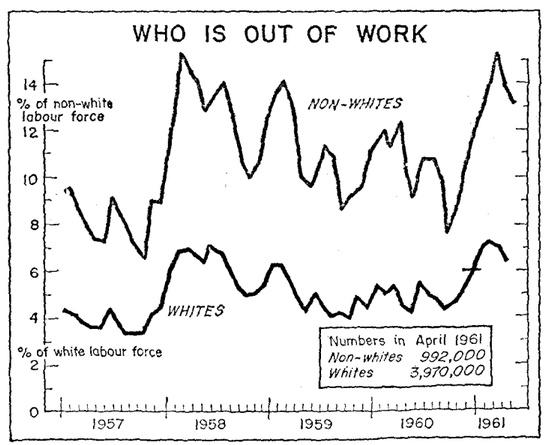
At the same time the magazines are changing their covers, their contents and their typography in an attempt to outdo the appeal of television. The most recent candidate for change is *Life*, for years the uncrowned king of glossy magazines, but a revised version of the *Saturday Evening Post* is expected to reach the news-stands this autumn or winter. The straight coverage of news, largely in pictures, has lost much of its drawing power now that television does the job more promptly, and the market for fiction is not what it used to be. Instead the magazines are emphasising background articles on current affairs and devoting much more space to the ever popular " How to . . . " articles and to such recreations as boating. Above all, the magazines are extracting all they can from the use of colour—the one thing that they can offer to advertisers that television cannot, at least for the time being.

Even outside the giant magazines circulation figures for American periodicals are quite impressive. Excluding the several thousand trade publications and special periodicals, nearly 300 magazines appear regularly—a number that has not varied much in recent years. Some 50 of these claim more than a million subscribers each, ranging from *TV Guide* to *Presbyterian Life* and from *Progressive Farmer* to *Modern Romances*. At the head of the list is the *Reader's Digest*, which until 1954 carried no advertising. But since then it has changed its ways ; in the current issue 112 of its 288 pages consist of advertisements. At the other end of the scale moderately high-brow magazines, such as *Harper's*, the *Saturday Review* and the *Atlantic Monthly*, have in the region of 200,000 subscribers each ; the *Reporter* has about 129,000. A handful of publishing houses accounts for the major part of the magazine business, but concentration has gone no farther than this. In terms of advertising revenue the largest stable is Time Incorporated, out of which come *Fortune*, *Life*, *Sports Illustrated* and *Time*. The Curtis Publishing Company (*Saturday Evening Post*, *Ladies Home Journal* and others) takes second place.

The advent of television has changed drastically the blueprint for a successful magazine. Advertisers are no longer impressed (or so they say) with sheer numbers, because they believe that on this count television can always do better. On the other hand they have evinced a growing interest in magazines that reach a distinctive group of readers. Thus, while the mass-circulation magazines have watched their profit margins narrow or disappear, other periodicals have been doing extremely well. *Sunset*, a west coast publication, rode to success on the postwar craze for outdoor living, California-style ; *Playboy* has found a remunerative market in teaching young Americans how to be men-about-town ; the *New Yorker* has become a national institution ; and *Business Week* has won the favour of advertisers through its novel policy of accepting subscriptions from businessmen only and of keeping the magazine off the news-stands. Many people used to think that new magazines were a thing of the past, but a fairly large crop is coming to market, all of them aiming for a modest circulation among special groups of readers. In the entertainment field there will be *Show Business Illustrated*, *Show*, *Bravo* (for concert-goers) and *Tape* (for record enthusiasts). Others include *Current* which reprints extracts from articles on current affairs, *Country Beautiful* and *Pool Life* which is designed for the proliferating numbers of people who own swimming pools.

Agency for Peace

IT is a fine thing to launch a new agency for peace at a moment when the world's hopes for disarmament are at a low ebb after fifteen years of fruitless discussions and when even the prospect of a ban on atomic tests is fading away. It shows that America still has faith in the possibility of limiting the arms race. No doubt this was one of President Kennedy's purposes when he asked Congress recently to carry out a Democratic pledge by creating a new United States Disarmament Agency for World Peace and Security. Too often in the past America seems to have lost the battle to convince the world that it is sincere and undaunted about the need for disarmament. The President also hopes that this unique body will take bolder initiatives and be much more effective in co-ordinating research and policy than the present Disarmament Administration, a small agency which President Eisenhower buried in the State Department.

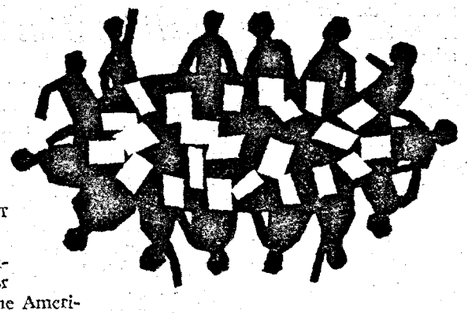


If Congress approves the Bill, on which Mr McCloy, the President's adviser on disarmament, has been working since January, the new agency will have a great deal more power, prestige and money than its predecessor. Primary responsibility for disarmament activities will be vested in its director and the agency, which will be established by legislation, will have its own budget. It will conduct research in its own laboratories into the highly technical problems involved, as well as taking advantage of work done elsewhere, and it will be free to recruit people of outstanding calibre. It will not only draw up recommendations in the disarmament field, but it will also conduct negotiations under the direction of the Secretary of State.

The greatest innovation—and something over which there has been some controversy—is that the director will have direct access to the President because, as Mr McCloy said in the letter accompanying his proposals, " disarmament considerations are so all-pervasive in scope and importance that the President must concern himself with these matters on a continuing basis." But the director will also report to the Secretary of State, in recognition of the fact that disarmament must be co-ordinated closely with foreign policy. Congress, which has been somewhat concerned about the lack of clear lines of responsibility in the Kennedy Administration, may not find this compromise altogether reassuring. The man being talked about to head the new agency is Mr William C. Foster, who was concerned with both defence and foreign aid in the Truman Administration.

Putting Jim Crow to Flight

NOTHING about the new Administration is more heartening than its determination to end discrimination against minority groups, and particularly against Negroes, in employment. It is said that the telephone wires sizzled after President Kennedy noticed that there were no dark faces among the Marines taking part in the inauguration parade and he has made history by appointing Negroes to the highest jobs they have ever held in the government service. Unfortunately one has just had to forgo his appointment because his difficulties with the tax authorities were such that the Senate probably would not have confirmed him. The Secretary of Labour, Mr Goldberg, has sent a recruiting officer to southern Negro colleges to interest their students in applying for federal jobs ; so has the Civil Service Commission. Most of these colleges train their young people for the few professional careers traditionally open to Negroes—in teaching, the churches and social work ; their curricula may have to be broadened if their graduates are to go into business and government service. About 80,000 of the 120,000 Negro college students in the country are in the South where employers tend to overlook them.



Besides setting an example itself, the Administration is forcing firms which want government contracts to do likewise. Up to now, the theory has been that such firms do not practise racial discrimination but it has remained theory, particularly in the South, to which $2.7 billion in government contracts was awarded last year. In

May the Lockheed Aircraft Corporation, the largest government contractor, signed an agreement not to discriminate against Negroes which applies not only to its plant in Marietta, Georgia, but to all its plants throughout the country, whether or not they are engaged on defence work. The Marietta plant was given a clean bill of health under the Eisenhower Administration, but in April the National Association for the Advancement of Coloured People charged it with still maintaining segregated wash-rooms and canteens; employing only about 500 Negroes out of about 10,000 employees; and keeping Negroes out of skilled and supervisory posts and out of training programmes. The most important reform may well be the admission of Negroes to these programmes, both by the firm and by the state authorities in Georgia. Bias—on the part of employers, trade unions, vocational schools and federal-state employment offices—which prevents Negroes from acquiring needed skills is one of the chief reasons why their rate of unemployment is so much higher than that of whites.

In the Marietta case the government had a tremendous stick to wield—a $1 billion contract (not yet signed) for jet aircraft which is of the first importance not only to Lockheed, but to Georgia and its white workers. But there may be cases—particularly in defence work—when it is not easy for the government to find an alternative contractor. And the government's powers are much more tenuous when it is a question of bringing a trade union to heel. Many, in spite of their protestations of virtue, are "lily white" in practice—and not only in the South. At the Marietta plant the segregated branch for Negroes has just been dissolved. Here one of the difficulties in hiring more Negroes as work expands is that there are over 3,000 redundant employees, mostly white ones who, under the contract with the union, must be recalled first.

Americans of the Round Table

FROM A SPECIAL CORRESPONDENT

A UNIQUE American social invention came to Europe for the first time this week when the American Assembly, a private, non-profit-making organisation, held a meeting at Burgenstock, in Switzerland, in co-operation with the Institute for Strategic Studies to discuss control of armaments. Twelve European countries, including the United Kingdom, provided about forty delegates and the United States and Canada sent about twenty more. Following the pattern set by the American Assembly in the past, there were three days of off-the-record discussion based on background material distributed beforehand to the delegates.

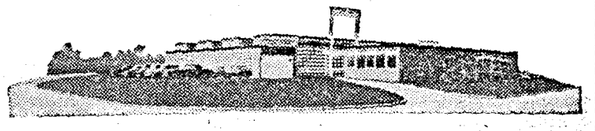
This consists of papers specially collected and edited by Professor Louis Henkin of the University of Pennsylvania and of Mr Hedley Bull's book "Control of the Arms Race." Speeches were scheduled for each of the three evenings by such distinguished specialists as Senator Humphrey of the Senate sub-committee on disarmament, M. Moch of France and Mr Ormsby-Gore, the next British Ambassador to the United States. On the fourth day Dr Henry Wriston, president of the American Assembly, will lead the delegates in hammering out as much agreement as is possible—a task at which he is a virtuoso. The costs are to be met in full by the Americans.

The purpose, as with all meetings of the American Assembly, is to search out wise answers to urgent questions and, in the process of bringing together specialists and informed laymen, to increase their understanding of each other and to make public opinion more articulate and more influential. All of these objects are considered to be essential to the effective functioning of democracy. The cross-fertilisation of ideas between businessmen, educators, professional people, trade unionists and government servants is of particular value in a country as large and as diverse as the United States. It is also in the American tradition of having people inform themselves by public discussion, which runs back as far as the "Federalist" papers. It will be interesting to see if the attempt to extend this tradition abroad—to Latin America last year and to Europe this year—succeeds.

The creation of the American Assembly was one of the best things that General Eisenhower did while he was President of Columbia University. He came back from Europe convinced that the world's problems could be solved if only men of good will could be brought together to talk them over. He persuaded businessmen all over the country to invest a million dollars in this idea and Mr Averell Harriman to donate Arden House, his home overlooking the Hudson near Tuxedo, to provide a quiet setting withdrawn from the hurly-burly of the everyday world.

For the first five years much of the money and energy of the staff went into preparing Arden House for its new functions. But in 1955, when Dr Wriston, who had resigned recently as president of Brown University, became head of the American Assembly and when Columbia University took over the day-to-day operation of Arden House, things began to look up. Dr Wriston lets no grass grow under his feet and keeps other people moving as well. As a presiding officer he is witty, fair, and a driver.

As a result the Assembly is now recognised as an effective institution in the field of adult education; it has a Charter from the Regents who govern education in New York State and, though it has a contractual relationship with Columbia and offices in one of its buildings, the Assembly has its own trustees, a small but able and devoted staff and a record of solid achievement. The great philanthropic foundations, which once passed by on the other side, are now, thanks to Dr Wriston's efforts, steady contributors. During 1959-1960 foundations, corporations and individuals contributed $226 million toward the $300 million or so needed to cover the costs of running the organisation and of the two assemblies which are now held each year; the rest of the money came from the group's own resources. These assemblies take from 12 to 18 months to prepare; the subjects covered in the organisation's ten-year life have ranged from inflation at home to the relations of the United States with the Far East.



Each assembly at Arden House is followed up by regional and local meetings held under the joint auspices of the American Assembly and other educational organisations; their conclusions are not necessarily the same as those of the original meeting. Since 1959 the findings and background papers of the meetings have been published by Prentice-Hall, Inc.; in 1959 50,000 copies were distributed to schools, universities, discussion groups, government departments, labour and industrial groups and individuals and a television film on the relations of the United States with Latin America was prepared at Arden House and the National Broadcasting Company's studios. This has been shown widely by both educational and commercial television stations.

Today's new way to

EXPAND

YOUR BUSINESS

The modern way for London businesses to expand fast is in the country. Scores of manufacturers have proved it by moving under the London County Council's Expanding Towns Scheme. They've left behind dreary, over-crowded London premises that were cramping their natural development. In expanding towns they find new prosperity that often exceeds their most ambitious dreams.

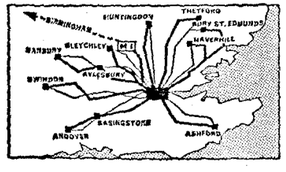
Is London holding back your business?

Why be cramped when you can expand? If you are a London manufacturer, employing mainly men, you can have this opportunity to develop in the country. You will be given expert guidance and all the practical help you need to move your factory—lock, stock and staff into the country.

The L.C.C. helps you choose a site and build or rent a bright, new factory to your specifications. Provides new homes for your staff. Helps you recruit workers if you need them! The L.C.C. may even be prepared to purchase your old factory.

Enjoy increased production—lower costs.

In the country you have plenty of room to plan your production more efficiently, and room to expand as fast as you like. Costs and rents are lower. Overheads are cheaper. Your staff will be happier and healthier living in new houses in pleasant country surroundings.



Better service for your customers.

The expanding towns are well placed for access to all parts of the country and the docks. There'll be no delay in deliveries. You'll be able to offer many of your customers even better service!

Your enquiry will be treated in the strictest confidence. Write now to the

Industrial Adviser (IC.19), L.C.C. County Hall, London S.E.1.

or telephone WATerloo 5000, Extns. 7494 and 7595.

L.C.C. OFFERS GREATER PROSPERITY IN EXPANDING TOWNS

for an extra measure of pleasure offer your clients HILTON HOTELS in the

USA

All across the United States (and in Mexico and the Caribbean, too) is a wonderful world of Hilton Hotels and Inns. Some are glamorous and world-renowned, some distinctly unusual, yet all hold forth the promise of comfort, courteous service, and just a bit of excitement. The people who serve are sensitive to the special customs and needs of guests, from wherever they may hail. This is our reputation the world over.

In whatever Hilton Hotel your clients may decide to stay, they will enjoy the American friendliness and hospitality—a hallmark of the Hilton name that has made it so justly popular. For information, communicate with any Hilton Hotel or the London Office, 36 Hertford St., tel. HYDe Park 8888, or the Amsterdam Office, Apollaan, Amsterdam-Z, tel. 73-06-22.

Piggy-backing in Clover

THE railways, which need some encouragement, have just won a decision from the Interstate Commerce Commission which, if it is not overturned by the courts, should enable them to win back a great deal of the goods traffic which they have lost to road transport. In a ruling on eight cases which have been accumulating since 1958, ten members of the ICC (with one member dissenting) upheld the cut rates offered by the railways on certain types of "piggy-back" service. Piggy-backing means the carrying on railway flat cars of motor trailers loaded with goods. When this began, the railways supplied both the trailers and the flat cars, but now they quote lower rates to customers who supply their own trailers or both trailers and flat cars. These are the rates which have been upheld over the objections of the road transport industry and of the teamsters' (lorry-drivers') trade union. Mr Hoffa, the teamsters' head, feels so strongly about the effect of piggy-backing on his men's jobs that he has insisted upon a clause in some contracts with road hauliers requiring them to pay penalties if they "trade with the enemy." But piggy-backing obviously provides the public with a popular door-to-door service; since 1955 it has tripled in volume and this year, although railway freight in general is nearly 15 per cent lower than last year, piggy-back traffic is up by 2.7 per cent.

The Transportation Act of 1958 was supposed to give the railways more leeway to lower their rates in order to compete with their rivals. The present decision is the clearest and most important step which has been taken to carry out that policy. To reach it the ICC had to satisfy itself that the rates were not so low as to amount to destructive competition; that they would not drive road transport to the wall; and that the rates cover the railways' out-of-pocket expenses, and make some contribution to their overhead costs. Another issue was whether charging the same rate, no matter what the trailers contain, violates the principle of charging different rates for different kinds of goods. On all these points the commission came down heavily in favour of the railways although two of its members think that the charges are getting close to destructive competition and will bear watching. The way now seems open to a great expansion of piggy-backing; some people are talking of the eventual disappearance of the ordinary goods wagon and the Fruehauf Trailer Company, the biggest manufacturer of lorries, thinks that eventually it may be making more piggy-backing equipment than conventional lorries.

SHORTER NOTE

President Kennedy has appointed Mr James Riddleberger, a career diplomat, to be chairman of the Development Assistance Group, which decided in March that its chairman should be an American. He has been Ambassador to Jugoslavia and Greece and in 1959 became Director of the International Co-operation Administration, the foreign aid agency. Mr Kennedy has also appointed Mr Robert McKinney, a newspaper publisher from New Mexico who at one time was American representative on the International Atomic Energy Agency, to be Ambassador to Switzerland. An extremely important post which has gone begging for months was filled three weeks ago when Mr Robert Woodward, a career diplomat and the present Ambassador to Chile, agreed to become Assistant Secretary of State for Inter-American Affairs.

LETTERS

The Laocoon Economy

SIR—The common feature of the successive economic "crises" since the war is an adverse balance of payments due to loss of confidence in the pound. This loss of confidence can be traced in each case to a pronouncement from the Government itself that any further increase in the wage level will price British manufacturers out of their export markets. Thus, Mr Selwyn Lloyd in his speech to the Association of British Chambers of Commerce on June 22nd said: "At present sterling is not over-valued; if our costs go up significantly in comparison with our competitors it will become so." An over-valued money would confront us with the alternatives of unemployment or devaluation. As there is no prospect of the wage advances, which have been accelerated in the past two years, ceasing, speculators can draw the inference that devaluation is imminent.

The Treasury does not appear to consider whether the dollar value of the pound may not itself have been long out of equilibrium. In a letter in *The Economist* of February 18th last, I summarised the statistical grounds for believing that the pound is greatly under-valued at $2.80. If that is so, it makes nonsense of the Chancellor's fears that the pound is in imminent danger of becoming over-valued, and of his valiant promise to defend the pound. But why, it may be asked, is there an adverse balance of payments? The Chancellor quite rightly attributes it to over-spending. But the remedy is not necessarily to be found in a reduction of Government spending abroad.

When there is a prospect of rising wages, traders foresee a rise of prices of manufactured goods, and give anticipatory orders for supplies in excess of their current sales—a form of spending. The balance of payments is affected partly by the direct demand for materials and components from abroad, and partly by the overloading of manufacturers with orders. This tendency can be checked if traders can be discouraged from procuring supplies with borrowed money. So long as the pound is under-valued, employers can afford to grant increases of wages, and even take the initiative in giving them in order to attract or to retain labour. Under these conditions a Bank rate of 4½ or 5½ per cent was found inadequate in 1955 and 1956 to check the expansive tendency. Within a few months of the appointment of the Radcliffe Committee, Bank rate was raised to 7 per cent, and, as Sir Oliver Franks has remarked (*Some Reflections on Monetary Policy*, p. 39), "the drain over the exchanges ceased, and the inflationary pressures at home subsided. We reached a comfortable situation surprisingly quickly."

There is a long list of measures, such as the credit squeeze, capital issues control, hire purchase restrictions, special deposits, which have been devised to regulate the flow of money. All have been inspired by a distrust of Bank rate, and none has proved to be an adequate substitute for it. The Radcliffe Committee itself, misreading the evidence it received, discarded Bank rate, and had no substitute to offer. Only in the two or three years following the rise of Bank rate in September, 1957, has our economy been free from the Laocoon contortions.—Yours faithfully, RALPH HAWTREY

London, W8

Immigrant Workers

SIR—I am astonished at your comments on immigration. Is it seriously your contention that immigrants with a low standard of living and totally different codes of conduct should be encouraged to come to this country to perform menial tasks distasteful to the indigenous Britisher? Surely the fact that the ever-increasing labour force is not matched by a corresponding increase in production points to the uneconomic use of our labour resources. Unrestricted immigration of cheap labour can only pander to this weakness.

You make no reference to the social strains that are arising as a result of this influx. The great majority of these immigrants arrive with no homes to go to, and they swarm into our already overcrowded cities with most regrettable results which must be known to you.

If the present trend continues the ultimate alternatives seem to be complete assimilation of coloured immigrants, or the creation of a minority element, neither of which would appear to be desirable.—Yours faithfully, NORMAN A. PANNELL

House of Commons, SW1

Canada's Economy

SIR—Your Ottawa correspondent's analysis of Canada's economic plight pays undue deference to the merits of a conservative monetary and fiscal policy for that country. Thus, in discussing the "political assassination" of Mr Coyne, he speaks disparagingly of "a new Budget with a Keynesian deficit running high, wide and handsome, to a disregard of the balance of payments deficit, which has always been the core of Mr Coyne's concern. . . ."

Surely this concern has been unwarranted. Because of her flexible exchange rate Canada has had the scope to pursue a vigorous expansionist policy without fear of losing exchange reserves or making her exports non-competitive. Even with long-term interest rates pegged at 3½ per cent and a budget deficit twice as large as exists at present—to pluck some policy choices from the air—Canada could balance her international accounts without the loss of an ounce of official gold or a dollar of official claims on foreign governments. The Canadian dollar would simply depreciate to a level where exports plus private capital inflows would match imports plus private capital outflows.

Actually, a good part of Canada's balance of payments deficit on current account stems from Mr Coyne's misplaced tight money policy. At a time of serious unemployment this policy induced a high level of capital inflow, a premium on the Canadian dollar, and a consequent increase in imports and decrease in exports. A change in this policy seems long overdue.—Yours faithfully, HENRY N. GOLDSTEIN

Washington, DC

Public Schools

SIR—I welcome your note on the suggested adoption of the Fleming Scheme for entry to public schools. I am sure you are right in stressing the undesirability of using public money to send a very small group of boys to these schools. Small though they are in number, these boys are the salt that savours the grammar school system, the ones who are our university candidates and who provide stimulus for their companions and for the staff. For if the public schools themselves chose the boys they would—not unnaturally—take the best. Besides, is it right for local authorities to spend money indirectly subsidising schools whose staffing ratios, accommodation and salaries may well be above the authority's own standards? They should spend it on upgrading their own schools.

Had it not been for the recent injection of much "public" money ("public" in the widest sense, as it came mostly from industry or indirectly in returned tax from the tax payer) into the public schools, the maintained schools might have by now overtaken them in science provision. Surely the solution given by the Minister—to improve the state schools so that there is no need for the keen parent to look elsewhere—is the right one. What is often forgotten, however, is that grammar schools cannot easily compete with public schools if boys coming through the state system begin their education in academic subjects only at 11, while the public schools recruit at 13 boys who are already almost at GCE "O" level after perhaps five or six years of academic subjects. The quality of its intake is a vital factor in any school's success.

As the grammar schools improve and—important point—are given more independence by the local authorities, public schools might voluntarily join the state system and English society might cease to be "two nations."—Yours faithfully,

V. J. WRIGLEY

Hemel Hempstead, Herts — Headmaster, Apsley Grammar School

Turkey

SIR—The more revolutionary 14 Turkish officers led by Colonel Alparslan Turkesh have declined offers to return home to be given high posts, ministerial ones in some cases. They have said that they were not interested in "honorific" posts; they would only return to Turkey to carry out the reforms they stood for. This, I think, is very much to their credit.

But what I also think speaks even more in favour of their ideas and their return home is the disorderly trend of events in Turkey since the National Unity Committee was split and the "14" exiled. As a matter of fact, the more the exile of the "14" lasts, the greater their chances of re-integrating the NUC.

A "coalition government," as suggested by the lords of the Turkish press, parliamentarianism "western-style" and other "democratic" games can only serve to aggravate the situation in Turkey. Whether one likes it or not, the best for Turkey is to have a spell under her own Nassers.

I believe, Sir, that the "14" will inevitably return home and execute the reforms Anatolia so badly needs. The sooner this takes place, the sooner men like Colonels Turkesh and Sami Kutchuk cooperate again, the better it will be for Turkey, the Afro-Asian world and the West.—Yours faithfully, ARSLAN HUMBARACI

Tunis

The Census

SIR—While agreeing with you that unnecessary discrepancies between the Scottish and the Registrar General's census should be removed before 1971, we would challenge the implication of your conclusion that a full census is no longer necessary. It is becoming increasingly apparent that our knowledge of the features and the functioning of our economy is mainly at a national level, while our understanding of local and regional economies within the country is extremely limited.

This is partly because statistics about the national economy (even apart from the census) have become, and are becoming, more plentiful, while those for the constituent parts remain singularly inadequate. It is impossible to produce sufficiently accurate data for each group in the Standard Industrial Classification for an area with, say, a working population of 15,000 or less, if sampling techniques (and only a ten per cent sample) are used. Yet it is at this scale that more information is required. We are falling rapidly behind many other countries where census data is obtained and published in considerable regional detail. What is needed in Britain is not more sampling but more census information for small areas so that students of regional and local economies can belatedly follow the lead of workers in other countries in unravelling the intricacies of intra-national economic growth.—Yours faithfully, G. HUMPHRYS, G. MANNERS

University College of Swansea

Signposts for the Sixties

SIR—In your article on the Labour Party's new policy statement you say: "As enunciated, Labour's plan for the state purchase of all freeholds where building or rebuilding (above the filling station level) is projected, seems best calculated to interpose the maximum discouragement to owner and developer alike." This has certainly not proved to be the case in Coventry, where over one-third of the land is publicly owned, or in the City of London, where the corporation is the biggest single landowner.

Coventry is the most redeveloped city in Britain and the properties under the corporation's management now produce yearly rentals, including ground rents, totalling half a million pounds. In the City of London, the corporation have for some time being doing virtually what the Labour Party propose. They are acquiring sites, particularly those cleared as a result of war damage, and putting blocks of land up for tender. Tenders submitted by the various property groups appear to have trebled in the last three years, and redevelopment in the City has not been noticeably discouraged.—Yours faithfully, STUART GREENSTREET

London, N6

BOOKS

Their Style is the Man

Letters and Documents of Napoleon, Vol. 1: *The Rise to Power*

Selected and translated by John Eldred Howard.
Cresset Press. 574 pages. 55s.

"BE clear, and all the rest will follow." Napoleon seems to have read critically nearly everything he signed, or even initialled. His secretaries, commanders and officials were his pupils: his stepson Eugène's circular "is too long—you would have done better to write six lines." His brother Lucien, ambassador to Spain, is bluntly told that his drafting "is often faulty." A senior officer is "too clever . . . what is wanted is accuracy, character, simplicity." And these are the qualities which hallmark the documents in the gigantic collection begun by Napoleon III, on which editorial committees worked till the end of the nineteenth century—not without some strange additions, suppressions and bowdlerisations, due perhaps to the interferences of French historians, who could be as fiercely pugnacious as Oxford dons.

Mr Howard's preface explains how he sifted and sorted until he got what he needed for the first comprehensive selection in English. Volume I gives this brave undertaking a most promising start. His documents are arranged in six sections: early years; Italy; Egypt; Brumaire; Marengo; Lunèville and Amiens. Each is put into its historical context by an introduction. The volume ends with a table of sources giving the number, date, addressee and subject of every paper. Reproductions of portraits, medals, letter-heads, signatures are worthy of the book's price.

But some of the maps are too reminiscent of the Alpine war maps of 1918—with mountains so realistically hachured that the place names in small print are almost lost—an irritation to the enthusiastic reader hurrying along with one of Bonaparte's rapidly marching columns; tactical thrills do not need the added excitement of a topographical treasure hunt.

This book, moreover, could be as academically valuable as it is enjoyable if its sectional introductions gave more guidance on controversial issues. How much did Bonaparte owe to pre-revolutionary military theorists? A few clues in Mr Howard's description of the Republican armies would encourage speculation by students of military history. Again, although Bonaparte wrote little just before Brumaire ("wise conspirators do not put things on paper"), so much has been written since, sometimes by politicians masquerading as historians, that a proper appreciation of the causes and effects of that crisis is impossible without some discussion of their arguments.

These suggestions need not lessen enjoyment of Bonaparte's superhuman versatility as displayed in his letters, orders, bulletins. In his own phrase he "shuts one drawer and opens another" as he switches his entire attention from problem to problem: the control of rapid movements by which he outfought Austrian forces much larger than his own in 1796; the organisation, equipment and co-ordination of the columns that struggled through the Alpine passes in May, 1800; the improvisation of civilian machinery to govern occupied Italy; the maintenance of morale in Egypt after the disaster of Aboukir—health centres in towns, drastic punishment of incompetent senior officers, insistence on proper inspection of wards and hospital kitchens, the manufacture of games equipment for troops in camp, music for convalescents, actors "*requisitioned*" from France. Nothing, in short, is too large for his capacity, or too small for his attention. In seven hundred documents his own words conjure up the young Bonaparte—their style is, indeed, the man.

Literary Genetics

The Garnett Family

By Carolyn G. Heilbrun.
Allen & Unwin. 214 pages. 30s.

ONE of the happiest phenomena of the nineteenth century in England, brought out by Mr Annan in his well-known study, was the fruitful inter-marriage of intelligent families, leading in some cases to an astonishing continuity of brilliance without uniformity: the younger generations have so many admirable genes to choose from. Fortunately they still intermarry, and the Garnetts are a fine example of it up to the present day. This book chronicles four successive generations of intellectuals, down to Mr David Garnett, and draws modest attention to the epigoni of the fifth and sixth generation, into whose make-up has been cast such a variety of ancestral talent from every side as to make any geneticist's eyes goggle.

Another, more recent tradition is for American scholars to write studies of these same English intellectual families. Mrs Heilbrun's book is one of these, and well above the average. It is short, unpretentious, well written and sensible. She deliberately avoids any rivalry with Mr David Garnett's splendid autobiography, and gives only the barest account of his life and works. She deals briefly with family origins and with the Reverend Richard Garnett, the effective founder of the run of intellectuals in the family, and at fair length with his son, the second Richard Garnett, author and librarian. Half the book goes to his son, Edward, the most celebrated and influential of all publisher's readers. She deals rather more shortly with his wife, Mr David Garnett's mother, Constance, whose translations brought Russian literature to the British reader.

Edward Garnett is the centre of the book: a charming character who did immense good by his devotion to literature. He is a little difficult, at times, to bring alive, because his own writings were not important, and what mattered was his influence on others. By bad luck, few of his letters seem to have survived, but many written to him still exist and some of these make the skeleton of Mrs Heilbrun's book. His closest friend was Joseph Conrad, who always said that without Garnett's encouragement he would not have gone on writing; his stormiest (needless to say) was D. H. Lawrence, and part of Mrs Heilbrun's thesis is that the help which Garnett gave to Lawrence and his influence on him have both been underrated. She has a good deal of hitherto unpublished material to support her.

It is an interesting and readable book about thoroughly nice people—a conjecture less common than one could wish.

Complexities of HP

The Control of Hire Purchase

By F. R. Oliver.
Allen & Unwin. 218 pages. 25s.

Hire Purchase in a Free Society: *Third Edition*

By Ralph Harris, Margot Naylor and Arthur Seldon.
Hutchinson. 319 pages. 30s.

THESE two books complement each other. The first is concerned with the economic consequences of hire purchase, the second with its practical working. Both are useful, but both are in some ways disappointing, and the really satisfactory textbook on instalment lending has still to be written. The third edition of "Hire Purchase in a Free Society," published by the Institute of Economic Affairs, has been extensively revised and enlarged, and now includes descriptions of instalment lending in a number of overseas countries. The book is still probably the best available guide to how hire purchase works, but it comes too close to being an apologia for the finance companies.

Dr Oliver's book is quite different. It is based on a doctoral thesis, and bears some of the marks of it. The style is often tortuous and difficult to follow, the treatment often needlessly comprehensive, exploring every dead-end avenue. On major issues of policy, the argument is inconclusive. The book would have been considerably improved by some heavy editing. But when all this has been said it is a useful contribution, which deserves to be read by economic commentators and administrators.

The economic effects of hire purchase are particularly complex in that they can be analysed only in a dynamic model that can consider the different forces brought into action at successive periods of time. Dr Oliver brings out this complexity very forcibly, though he is not always successful in picking the reader's way through it. He has an interesting discussion on hire purchase and the trade cycle, rightly showing that the effect of the cycle on hire purchase is a weightier influence than the effect of hire purchase on the cycle. Dr Oliver finds that this is confirmed by experience in the United States; British experience is no guide because of official controls.

In the argument about controls, Dr Oliver comes down in favour of them, as a counter-cyclical weapon which, by ironing out fluctuations, should not harm hire purchase or the growth of the durable goods industries in the long run. He points out that since the effect of controls is fully felt only some nine months after they are tightened or relaxed, the controls "should anticipate, if possible, the situations they are designed to rectify." And there, of course, is the rub. In practice governments do not manage to "anticipate" the turn of the business cycle: they are lucky if they spot it months after it has happened. In practice hire purchase controls are, therefore, apt to come at precisely the wrong time. Moreover, Dr Oliver does not follow through the effect of controls on the incidence of terminations, as Mr J. R. Cuthbertson has recently done. This book is a useful beginning, which deserves to be built on.

Symbol of Abundance

Supermarketing

By Frank J. Charvat.
Macmillan Company, New York. 288 pages. 48s. 6d.

SUPERMARKETS, each with a turnover of more than half a million dollars, in 1958 transacted 57 per cent of the total sales through food shops in the United States. Twenty-three years earlier, their share had been negligible. In a generation, they have become a symbol of American abundance, and have profoundly affected activities ranging from market research to town planning. Now they are in the early stages of what may be a similar development in this country.

Dr Charvat's statistical survey of their development, rationale and effects is therefore opportune, and usefully complements M. M. Zimmerman's more detailed and colourful "The Super Market" of 1955. After a sketch of the stages of development, from the Californian experiments of the twenties, through the "cheapies" of the thirties, to the larger and more lavish stores of today, there is a series of chapters on sales, gross margins, costs, and balance sheet factors, which give a comprehensive statistical picture of supermarket operations. Particular attention is paid to purchasing procedures and methods of raising finance. The second half of the book describes some effects of the supermarket: the reaction of the large grocery chains, the strong trend towards horizontal integration, and the decline of the speciality food shop.

The British business man, though he may praise American efficiency, is usually far more hostile to the collection and publication of statistics than his American counterpart, and a book like this could not be written about this country; Dr Charvat relies on material, both from the Federal Government and from the trade, which simply does not exist over here. We learn, for example, that the number of lines stocked by the average supermarket rose from 867 in 1928 to 5,600 in 1958; that trading stamps passed their peak in 1956, when 39 per cent of supermarkets used them; that in 1958, 64 per cent of supermarkets handled men's socks with an average of ten different items; that the largest chain, the "A and P", reduced the number of its branches by half—to a mere 7,073—in the four years to 1940, and that in 1937 no fewer than one-third of them were operating at a loss. The late response of the giant chains to the challenge of the supermarkets provides indeed an interesting parallel with this country, in which the three largest grocery chains have been consistently in the rearguard, with the running being made either by large concerns with their primary interests elsewhere, or by smaller enterprising firms and individuals.

"Supermarketing" is well documented, with six pages of bibliography, and much has been gleaned from the trade press which deserves this more permanent form. The statistical information, both in the text and in seventy tables, is almost always competently handled, though there is no attempt to explain, or even refer to, discrepancies in the material from different sources. When presenting the conclusion of research into the facts and figures, Dr Charvat writes clearly and precisely, without padding, and summarises the work of others effectively if uncritically. It is therefore a pity that he has been tempted into an over-ambitious final chapter, in which he becomes capable of sentences like: "Some of the best creative brainpower should be devoted to the development of new promotion ideas" and "Personalised management can lead to more community acceptance. . . ."

The discussion never goes very deep: marketing, which Dr Charvat has studied, is not economics. Nevertheless, the book can be recommended as a sound, factual and comprehensive survey of an important economic phenomenon.

New Machiavelli

Presidential Power

By Richard E. Neustadt.
John Wiley, London and New York. 237 pages. 48s.

PROFESSOR NEUSTADT, who has earned the title of the Machiavelli of the new American Administration because of his unabashed interest in political power, has written a close and realistic study of how presidents should act to attain their ends and why some recent ones have failed so lamentably to do so. An American president is not omnipotent; even where his writ runs most clearly he has to persuade other people, who have their own responsibilities and interests, to do as he wants them to. His standing with the Washington community, whose sharp eyes are on him continuously, is one great factor; his standing with the public, whose attention is much more intermittent, is another. When Mr Eisenhower abandoned his own Budget in 1957, and acquiesced in the attack on it by Mr Humphrey, the Secretary of the Treasury, the president made himself a laughing-stock, let down people who thought they had commitments from the president and gained a reputation for not knowing his own mind. President Truman made a much graver error when he and his advisers—civilian and military—failed to rein in General MacArthur in Korea; the result was that the name of Truman became asso-

IS CHINA
IN THE THROES
OF A DISASTROUS
NATION-WIDE FAMINE?

An authoritative article in the latest issue of The China Quarterly, the only Western Journal specialising in studies of contemporary China, examines the evidence and suggests the answer.

The issue also includes articles on Buddhism (by *Holmes Welch*), biographies of two noted Chinese intellectuals—Ma Yin-ch'u, the economist, and Ch'ien Tuan-sheng, the political scientist—and a set of articles on the state of various branches of science in China.

THE CHINA QUARTERLY

ciated in the mind of the public with a bloody war which it seemed impossible either to win or to stop.

These two examples provide the heart of Mr Neustadt's book; he also includes a short outline of one enterprise which, miraculously and for once, went right—the birth of the Marshall plan. He also sketches the styles of the last three presidents—Roosevelt, Truman and Eisenhower—and comes to the conclusion, not surprisingly, that only Roosevelt had the necessary preoccupation with his own power and the skill and the experience to make the most of it. But the gist of the book—that only the President is in a position to look after his own interests, and that he must act as his own chief of intelligence, sifting and piecing together gossip and making his own decisions—may not be enormously helpful to the man who sits in the White House. Mr Kennedy has done away with many of the layers of staff within which President Eisenhower was insulated and tries to work out every policy for himself. But this did not save him from a disastrous step over Cuba. There are evidently qualities with which a president has to be born or which he has to acquire from experience rather than from books.

Poet as Thinker

W. B. Yeats: ***His Poetry and Thought***
By A. G. Stock.
Cambridge University Press. 267 pages. 27s. 6d.

IT was Blake, one of Yeats's acknowledged masters, who said "I must create a system, or be enslaved by another man's." This hard necessity confronts any poet whose convictions defy the commonly accepted formulae of the society in which he finds himself. Yeats was such a one. His genius rebelled against the values of Christianity and democracy, which colour the assumptions of the average English-speaking reader. He could not write with perfect confidence until he had worked out for himself a system that took into account his own intuitions about life and death, time and eternity, soul and body. Showing better judgment than Blake, Yeats kept his theorising distinct from his poetry, so that his readers are never confronted with such obvious obscurities and enigmas as they are in the "Prophetic Books."

Some of Yeats's critics have denied that we can understand the poems without a knowledge of the underlying principles of his thought. No doubt they are right; and yet there is the undeniable fact that the poems of Yeats can give acute delight to many who would jib at "A Vision," the prose exegesis in which he presents with immense elaboration his own account of man's nature and destiny. It is an extraordinary amalgam of notions drawn from unfamiliar and sometimes bizarre sources, and Yeats himself did not claim for it the status of a gospel. It was to serve his own needs, not to correct the thinking of others, that he evolved it.

Professor Stock, the latest to join the throng of commentators on the poetry of Yeats, is far more concerned to defend the seriousness of his thinking than the general validity of his thought. She writes sympathetically of his beliefs, though it does not appear that she endorses them. What she does show is that the very heterodoxy of his convictions bears witness to his intellectual curiosity and mental activity. To some, Yeats may appear to have been credulous; but there is nothing lazy about his thinking. His system is both intricate and coherent, if his premises can be accepted. And his mature poems, compact of energy, alive with meaning, demonstrate how his own poetic confidence gained from his having formulated a body of doctrine that corresponded to his own intuitions of reality.

Miss Stock traces Yeats's intellectual and artistic development from volume to volume of his poems, giving full weight to the external events that shaped him as well as to the sources from which he derived some of his ideas. She writes with notable lucidity and grace, and with an abundance of good sense. Her book makes an admirable introduction to the serious study of Yeats for anyone who has already been captivated by the brilliant beauty of his poetry.

From History to News

Our Times, 1900-1960
By Stephen King-Hall.
Faber. 352 pages. 28s.

SIR STEPHEN KING-HALL is an indefatigable person. It seems to have occurred to him that it would be a good thing to provide our intelligent but inevitably ignorant youth with a brief and readable account of what happened between the times when school history seems to leave off and their own memories begin—a yawning gulf, is it not, but by no means a vacancy. No sooner had this idea occurred to him than it occurred to him that no one would do the job better than himself, and in less than no time it was done. Elderly and academic persons may occasionally raise an eyebrow and feel for a blue pencil, but what matter? It was not meant for them. It is extremely readable, and extremely fair-minded. Although no one would doubt its author's intense patriotism, the reader will find that neither the Germans in the first half of the period nor the Russians in the second are as black as they are sometimes painted.

And the author seems so surprisingly often to have been there himself:

> Less than five weeks had elapsed since, as a young naval sub-lieutenant, the author had heard the news of the assassination whilst attending a party on board a German warship at the naval base of Kiel, where a British squadron was then paying a social call. On August 28th his ship, HMS *Southampton*, was in action in the Heligoland Bight with the German ship on whose deck he had been dancing when the festivities were interrupted. When the war ended he learnt that a shell from the *Southampton* had burst on the quarter deck of the German ship and killed about forty men on what had been the gay dance floor.

We are told that when the author of the Acts of the Apostles joined in and took part in the proceedings he describes he indicated the fact by surreptitiously introducing the pronoun "we." There are plenty of "we-passages" in this book, and they enliven what is in any case a lively narrative.

Bare Ruin'd Choirs

English Monasteries in the Middle Ages
By G. H. Cook.
Phœnix. 282 pages, 46 plates and 41 plans. 36s.

FINIS CORONAT OPUS: this book concludes its author's four-volume task of delineating the ecclesiastical edifices of England: cathedrals, parish churches, collegiate churches, and this last (correctly including as *monasteria* or minsters what we loosely call convents or nunneries). One does not have to be a Christian, still less a Roman Catholic, to writhe with anger at what Henry VIII's commissioners did at the Suppression to the accumulated beauty of buildings and contents dating back through eight centuries. The enrichment of the new Tudor aristocracy arose from contractors' and spidermen's dilapidation. Our often scorned Victorians over-restored; but at least they revered what had gone before them.

Mr Cook makes elegantly plain what went under Henry VIII, and went for the good of greedy men. But he does more: he describes English monasticism in both its good and less admirable aspects, its administration, ritual, offices, economics, arts and crafts, beside its buildings; and he gives a wealth of useful information to tourists, as well as to expert ecclesiologists. Who would have known, apart from Mr Cook, that the law of copyright probably dates from the judgment of a Dark Ages king of Tara that one of the two monasteries there should not entice pilgrims away from the other by displaying a mere *copy* of the other's genuine treasure? Who, after browsing in this reasonably priced compendium with excellent plans and plates, will not revisit the nearest ecclesiastical buildings and gain enjoyment with interest? Mr Cook's great labour is a monument to ubiquitous beauty created by a few.

HOME REPORT

In HOME REPORT members of the editorial staff and local correspondents report on life and happenings in and around Britain.

Earls Court's Co-existers

FROM OUR SPECIAL CORRESPONDENT

EARLS COURT, that commercial panopticon rising shed-like above the seedy brickwork of the Warwick Road, SW5, has seldom cut it so fine. The Soviet exhibition, in the last throes of storming the norm before Friday's official opening, has already been, in its way, an experience in Russo-British labour relations. Once the word got about that the Russians did not take tea-breaks, unofficial comparisons of working conditions were more or less inevitable. "Me," declared a Cockney voice in a private huddle beside a model hydro-station, "London area rates. No, no, five days, five. . . ." There was much pantomime counting of fingers. "I'd say it was beyond the ordinary chaos," one of the Earls Court regulars allowed. Still, it is always hard to believe that exhibitions will ever really be ready. For their first London appearance the Russians have brought over 10,000 exhibits and done most of their own design and decoration. They mean business.

The exhibition portrays the Russians as a great, ingenious and self-confident people: this is not news. But they make no bones about their desire for trade. Representatives from the ministry of foreign trade in Moscow as well as from the trade delegation in this country will be on hand with authority to sign contracts for unlimited purchases on the spot, a businesslike approach that, they say, has not been demonstrated on such a scale before. British clients are advised that the best time for negotiations will be between 10 and 12 in the morning before the halls fill up with rouble-less exhibition-goers. The message that the Russians insist that they want to get across is not merely that they have machinery and consumer goods to sell here—"even a nuclear power station if you like"—but that their own society is developing at a pace which should open British exporters' eyes to the main chance. On July 30th, the day after the Earls Court show closes, Moscow is due to announce its economic programme for the next twenty years.

There is, naturally, an immense and apparent pride in the Soviet scientific and industrial achievements: the statistics are liberally distributed around the halls (those in the agricultural section are not free from the occasional nuance). The Soviet way of life is presented on two levels. There is the demonstration of state planning, perhaps most tellingly in the Khrushchev housing drive, the new towns and the set-pieces like the rebuilt Stalingrad. There is also the deliberate display of the ordinariness, the approachableness of the Soviet family itself. There is the bride in her wedding dress, the jazz trombonist at the club, the child clinic, the cheap and brassy-looking radiogram that would not be out of place in a Barking or Kilburn living room. There is even a display of tinned fish if you want it.

The captions and exhortatory messages can have a faintly Smilesian ring: "Exercises, gymnastics and sports mean sound health for future workers." Some are baffling: "The labour reserves emblem is known everywhere in the world." Occasionally, and almost disarmingly, the tense on some huge placard is off-beat: "In the USSR sports is taken up by millions of people." It all adds to the effect of a great striving to be understood, of a shout across a void.

The one gimmick to draw the bourgeois audience is the fashion display, with its flourish of blonde models and its intriguing news that there are over thirty Soviet fashion houses ready to set the trends. London's women correspondents, fluttering at the possibility that all this may have to be taken quite, quite seriously one day, have been phoning in for details about Moscow's personal tailors. All this reaches a different public from the massed, grey-green ranks of machine tools and the energetics exhibition. The soft sell is a sound touch. There are surprisingly few claims for Russian inventive "firsts." Lenin is quoted (topically and so excusably) on the relative place of the teacher in socialist and bourgeois societies. But the ideology, right from the opening mural of Nikita and Harold benignly seated at a diplomatic fireside (of yesteryear), is only discreetly present.

WHAT does it add up to? "Co-existence," said one of the Russians, "is really getting to know each other better." The crowds at Earls Court in the next three weeks are likely to come away with knowledge enough for at least two impressions. The first is of the unstinted effort that the Russian people have made since the war and, equally, of their growing consciousness that they now have the material evidence of success to show to any company, however critical or flippant. The second, even more closely related to British ideas of co-existence, is that no people, having toiled so long, could be prepared lightly to jeopardise its exertions and aspirations in an idle or avoidable conflict. Whatever its immediate influence on Anglo-Soviet trade (and the dig in British ribs is not intended to be an aimless gesture at this hour of dithering over the common market), the Soviet exhibition has a message very much of its own.

Hull's New Horizons

FROM OUR SPECIAL CORRESPONDENT

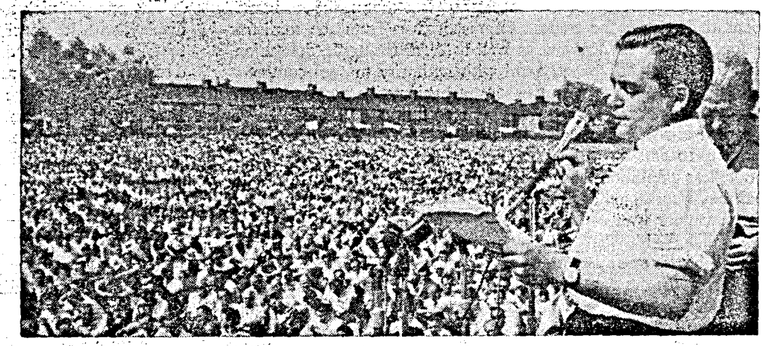
THE extension of fishing limits in northern European waters has hampered the operations, but not yet seriously diminished the yields, of the British trawler fleets. This is particularly true of Hull, where the past season has been unusually satisfactory. The lengthy phasing-in of the new twelve-mile limits, the mild weather of the past year (which, foul as it proved for landlubbers, could not have been better suited to fishermen) and the fact that, from Hull at least, no ship was lost in the past season have helped to cushion the blow and to maintain catches.

But these days of plenty cannot last indefinitely; and, for the conventional distant-water trawler, the early autumn is likely to bring the first constriction of supply as the fish move inshore within the new limits. Rather than continue a futile private war, the fishermen have resigned themselves with what grace they can muster to the inroads of new ideas.

These might not seem new in an industry less conservative than trawling. They consist in going farther to find fish, and in staying longer where the fish are. There is, however, a fairly hard limit to the length of time during which fish will maintain condition packed in ice—something less than the three weeks which is the limit of the conventional trawler's range. New systems of preservation will have to be accepted (and, of course, paid for); and the latest, and German-built, addition to the Hull fleet, the *Lord Nelson* (1,200 tons), is among the first indications of the direction that British trawling will have to take if it is not to die.

Half the *Lord Nelson's* storage space will be given over to quick-frozen whole fish, struck solid within an hour or two of its taking from the sea; the other half (making up 250 tons) will be used for the time being as a conventional wet-fish store. By filling its refrigerated compartments before going on to wet storage it will be able to maintain its catch in prime condition for up to five weeks; and it will stay out until it is full, thereby pretty well assuring itself of profitability. Its journeys will be more expensive than those of smaller trawlers, but the newly announced £17-a-day-at-sea subsidy to distant-water vessels may save the housewife's purse if not the taxpayer's.

The freezer-trawler is an answer, but only a partial one; for the frozen fish will have to be thawed and possibly refrozen for sale, adding at least one more operation to the train between catch and customer. Another company (rather earlier in the field) has built three trawlers, of much greater size, which are in fact floating factories, going farther, staying longer on their (Newfoundland) grounds and processing their catches completely—naturally at considerably higher cost. The *Fairtry* ships stay at sea for up to three months, and, instead of being whole-frozen, their fish are stripped, filleted and made ready for market on board. They employ 90 men apiece: the *Lord Nelson's* crew is 26 and the conventional trawler's 18. Both the *Fairtry* and the *Lord Nelson* have rationalised their working to the extent of hauling their catches up a ramp cut through the stern rather than swinging it, in the traditional manner, over the starboard side.

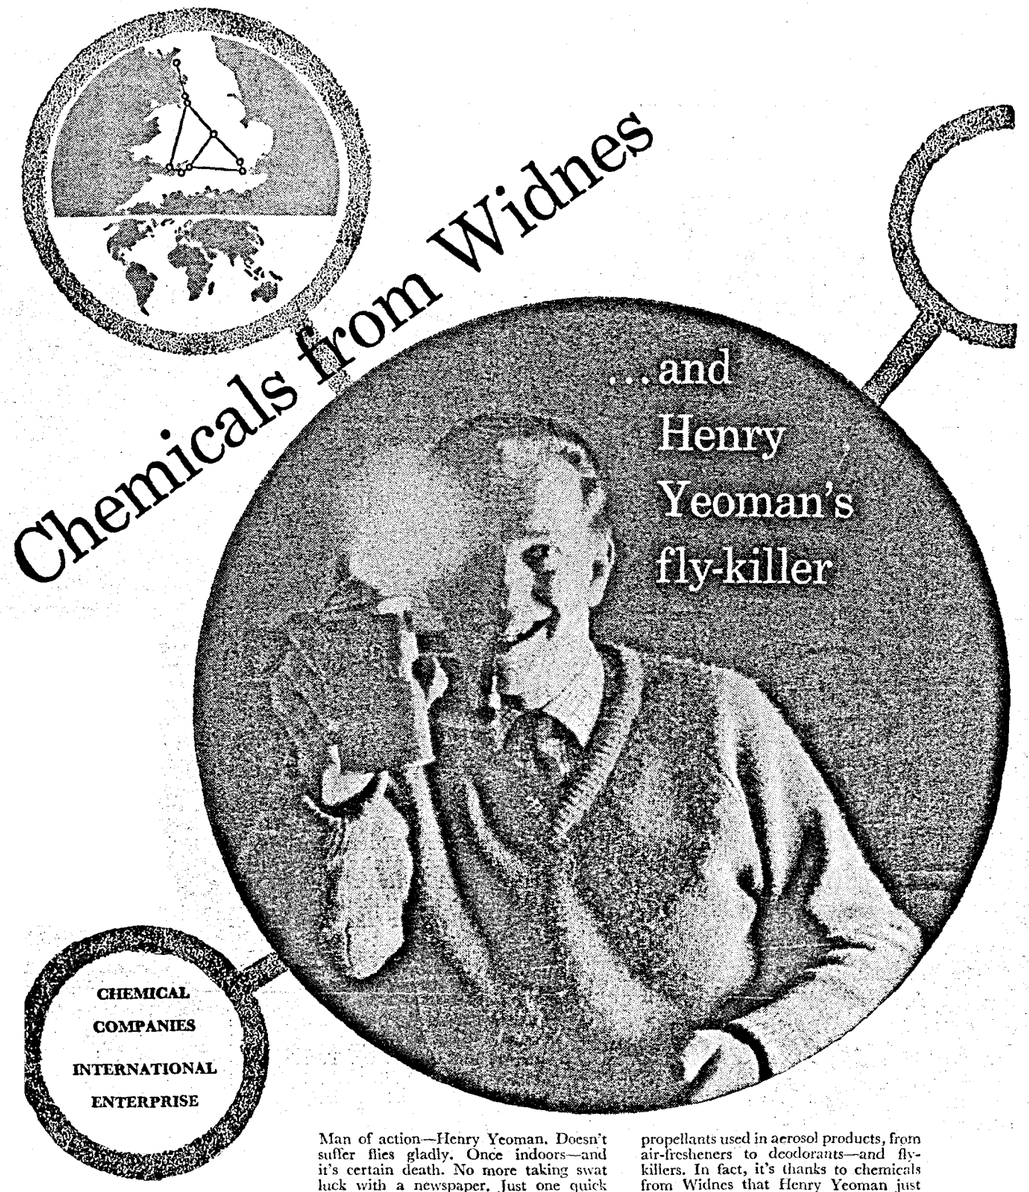


BUT even the factory-fisher is not the whole answer. The logical development is towards larger ships, freezer-equipped, going even farther afield, to the untapped riches of the African and South American coasts (well south of the equator, since tropical fish suffer an unpleasant and irreversible change on freezing). But the relation of manœuvrability and economy to size limits this development unless the *mother-ship system*, used in whaling with a fleet of tiny catchers, is attempted. And this avenue is in turn blocked by the inability of anyone, so far, to devise a means of transferring bulk fish at sea without damaging them and without making the catcher as elaborate a mechanism as its factory ship.

No sort of remotely economical floating "keep" seems feasible (an hour of rough weather would ruin the catch); and a submersible keep, while maintaining excellent condition, still presents almost insuperable handling problems. The Russians, it is said, have gone as far as experimenting with a submarine trawler, unaffected by weather, time, or the proximity of its mother-ship.

Striking Habits

IT is all too easy for the observer of strikes in the motor industry, befogged in the moralising arguments which flow so freely from both sides, to believe that car workers' strikes are merely a symptom of a deeper malaise—boredom or bloody-mindedness—engendered by up to fifty hours a week of repetitiveness on a production line. Two essays by Mr John Bescoby and Mr H. A. Turner, in the current issues of the *Manchester School* and the *Oxford Bulletin of Statistics*, can help the optimist to believe in a more rational causation.



A valid point is that the severity (not the frequency) of strikes depends on whether or not they are declared official by the unions whose members are involved. Another is that in the bigger firms more days are lost through strikes at times when cars are selling badly, although in the small companies the reverse is true. This is the case despite the fact that more strikes begin in periods of boom (perhaps because longer hours are worked, and tired men are more militant). The authors argue that, during a slump, union officials are more inclined to make strikes official in the big firms since they know that loss of production will not annoy the employers, but merely lead to a reduction in subsequent short-time working. In the minor firms, on the other hand, the unions may be aware during recessions that by striking they may drive the weaker employers to the wall, and thus destroy their own jobs in the future.

Dagenham militants: official in slumps

The major issues over which strikes now occur are wage-structures and redundancy: not a single one was traced to threats to reduce the basic wage rate. This, the authors reckon, reflects the fact that workers now demand security of employment as an element in their basic working conditions: they might also have mentioned that few employers would nowadays dare to attempt a wage cut.

Perhaps the most useful observation is the reminder that Vauxhall's, where a senior manager is in charge of labour relations, practically never has a strike at all—while BMC, with no apparent overall labour policy for its scattered factories, has by far the worst recent record, fairly closely followed by Ford: these two firms are responsible for over two-thirds of the car firms' total strike losses. The authors put the problem in its place by showing that, in recent years, the average car operative has only lost two days a year through strikes: they also, dispassionately, make an impressive case for remodelling the industry's negotiating machinery from both sides.

Man of action—Henry Yeoman. Doesn't suffer flies gladly. Once indoors—and it's certain death. No more taking swat luck with a newspaper. Just one quick squirt with deadly aerosol fly-killer. That's where chemicals from Widnes come in.

Albright & Wilson (Mfg) Ltd.—one of the companies of the Albright & Wilson Group—makes carbon tetrachloride at Widnes. And carbon tetrachloride is an important raw material for most of the propellants used in aerosol products, from air-fresheners to deodorants—and fly-killers. In fact, it's thanks to chemicals from Widnes that Henry Yeoman just can't miss!

This is only one of the ways in which A & W chemicals play a part in the life of Mr. Yeoman. As one of the biggest organisations in the British chemical industry, the Albright & Wilson Group contributes—but we could go on like this ...

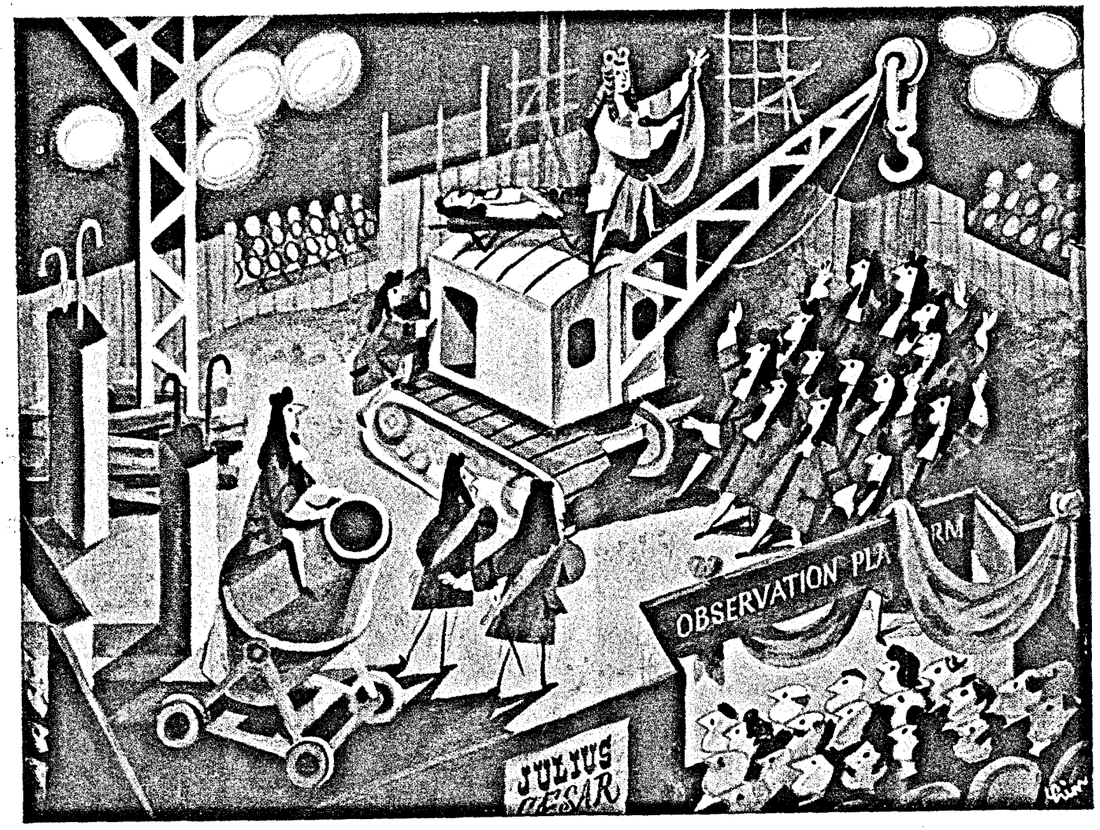
CAMERA-BLURRING PACE OF THE VW ASSEMBLY LINE IS MATCHED BY THE HIGH SPEED AT WHICH THE IBM 1401 *DATA PROCESSING* SYSTEM (FOREGROUND) HANDLES COMPLEX COMPUTATIONS FOR VW MANAGEMENT.

How to keep track of 4000 Volkswagens a day



The auto makers are putting a lot of bounce into Western Europe's *economy* these days. Volkswagen, for example, turns out 4,000 cars a day, employs 65,000 people, has risen in just thirteen years to a top spot among West Germany's industrial enterprises.

For this kind of dynamic growth, management must be on top of its problems every minute. At Volkswagen, IBM data processing systems help in maintaining this tight control. An IBM punched card with each order helps schedule colours and accessories to match demand. IBM computers analyse employee and sales statistics, make up payrolls and statements. VW's engineers are using IBM data processing systems for such problems as figuring crankshaft vibrations.

While you've been reading this, half a dozen cars have come off the Volkswagen line. We hesitate to say just how many computations the IBM 1401 computer has carried out—but it multiplies a six-digit by a four-digit number in two thousandths of a second, which gives you an idea.

REPORT ON DRAMA. The amalgamation of S.H.R.O.U.D.S. and the Foglamps resulted in a successful year, although a modern English play by Schwesker, translated into Rumanian and acted on the circular staircase of the 13th century Tower of All Spirits by 12 bus conductors chosen and rehearsed at random, did not get good notices. "If a play is basically *something* to be seen it must be seen." Accepting this principle, Stükl adapted his version of the Old King Cole story, with its chorus of junior astronomers dressed as nuns, to a specially constructed inverted dome on infra-red telescope lines. Later in the year, deliberately choosing a theatre which was not a theatre, the committee courageously hired, for its *Julius Cæsar* in Old Pretender costume, the building site for the new Budds and Hocking Central Stores. "What we liked about it was that the setting was really *used*," said the *New Schweppsman*. If it seemed natural to the actor saying rhubarb to sit on a concrete mixer when he said it he sat on it.

Future plans are many. Already in rehearsal is the new anonymous drama with its famous television-watching scene set in a nurses home. Though post-sink in tempo, the costumes are Aegean in flavour. Indeed even the director is wearing archipelagic clothes based on recent excavations.

THE BUSINESS WORLD

Sterling's Test

THE fate of the pound, and therefore of world exchange arrangements as a whole, is likely to be decided before the August holidays: the economic statement that the Chancellor of the Exchequer must make by then may be *its final test*. Sterling has been under heavy and almost unrelieved pressure for four months. It is a forbiddingly long period. In the past uncertainty about sterling has snowballed quickly, and forced the Government to concentrate its policy equally quickly. This year has been different. The Swiss, German and other European central banks have agreed to counter the actions of exchange operators and to put money into London while private holders are pulling it out. In this way the monthly losses of gold shown by the Bank of England have been kept down. The published loss of £151 million in the four months to end-June is considerable for a season in which London should be gaining reserves, but it is much smaller than the outflow of private funds in this period. The extent of this central bank assistance has successfully been kept secret. One of the few clues is a rise of £83 million in disclosed official holdings of sterling in Western Europe in the three months to end-March—covering one month of the four. But while central bank support has given continuing relief, and has prevented speculation from running utterly beyond control, speculation continues with no abatement. The reason is simple. Fears about sterling are not now based on Britain's ability to carry the short-term burden of withdrawals of capital—the international credit arrangements look after that. The fears are about the competitiveness of Britain's economy, about the sluggishness of British exports and the ever-upward course of British costs.

It is now almost a commonplace that previous corrective measures in Britain have largely by-passed the economy's basic weaknesses. The authorities have periodically applied piecemeal measures; their financial policy has been orthodox in the accounting sense; but the economy has manifestly failed to respond. Any such diagnosis—and it is now widely accepted both abroad and at home—must lead to a prescription of a new kind, boldly directed to long-run needs and facing the inevitable short-run resistances that have inhibited its application up till now. Specifically, Britain's chronic postwar weaknesses have been wage inflation, extravagant use of labour and excessive protection; and it is these that must now be frontally assaulted, with rather more attention from the Prime Minister than he has been inclined to give to home economic affairs in the past year or two. The Bank of England, in its quarterly bulletin published this week, is itself pretty blunt. Much further effort must be directed towards increasing British exports; and this

> may only be possible if the pressures that lead to a rising trend in industrial costs are kept under control and if industrial capacity continues to be improved and expanded.

This is no prescription for blinkered retrenchment. Lord Cromer begins his reign as governor of the Bank in critical weeks; it is to be hoped that he will not pull his punches.

The Government ought to be under no illusions. If its forthcoming measures comprise simply some variant of the familiar package—cuts in public expenditure, increases in indirect taxes, perhaps with an increased Bank rate thrown in—they may well be as irrelevant to external confidence as to internal needs. The two animals have always been fundamentally one. This is more than ever true this year. The international credit arrangements entail neither a permanent subsidy, as feared by some people in the creditor countries, nor any artificial ritual of retrenchment, as feared by Labour politicians. What the credit has provided is time for the working out of considered plans of reform that the domestic economy itself has long needed.

The British Government has now had four months' time, following all the time it borrowed in 1960 (again sensibly enough) by pulling in short-term private funds. A convincing programme for improving Britain's competitiveness is itself likely to require further credit in ensuing months. That is no real handicap. It is well recognised in foreign financial circles that the key point for sterling is not whether the current balance improves or deteriorates by a fraction in the second half of 1961, but whether anything is done to put it on a sound basis for 1962 and after. Indeed, if the British Government once again ducks the long-term issues, it cannot be taken for granted that either the European central bankers or the International Monetary Fund would agree to provide much further credit. Why should they?

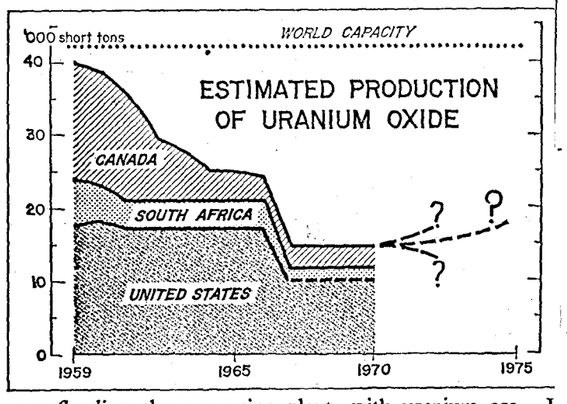
—

THE responsibility resting on Mr Selwyn Lloyd, and perhaps still more on the Prime Minister, is thus very heavy. An inadequate response will damage not only the immediate future of sterling but also the projects for wider international credit themselves, for which the British authorities have long been rightly pressing. The conservative argument against these schemes has always been that they enable and even encourage the recipients to leave their basic problems untouched, and some critics belonging to this school are

already pointing the finger at Britain. They must be shown to be wrong.

It would be sad indeed if the cause of international credit were to be compromised by Britain itself at this stage. The battle against outdated monetary ideas is difficult enough without giving them a gratuitous boost. The vague misgivings that many conservative bankers instinctively feel were voiced throughout Europe last week by M. Jacques Rueff, who has periodically had wide influence in French economic affairs. Anyone who believes that there is a satisfactory alternative to improving and extending international credit should re-read those articles carefully. For M. Rueff's own analysis carried him to an *impasse*. His unqualified rejection of the "insidious" gold-exchange standard led logically to only two possible solutions: something like the Triffin plan for replacing reserves in national currencies by international credit, or a rise in the price of gold. But neither solution was acceptable to a mind so rooted to the natural discipline of gold; and the end of all M. Rueff's dramatic analysis was a proposal for an international conference—ordered, somehow, to "undo the terrible evils wrought by another conference in Geny forty years ago.

In one sense the Rueff articles served a useful purpos they showed, more convincingly than could anyone of th opposite school, that there is no ordered way of putting th clock back. Gold : gold exchange standard: key currencie backed by IMF: true international credit—this is a natura progression. But the qualified, inarticulate support that M Rueff drew, partly reflected in a revival of private buyin of gold, is a reminder of the resistances that this progress already evokes. These resistances could clearly gain new for if the proponents of wider international credit reached a *impasse* of their own making. If, on the other hand, th British Government now takes the right kind of steps—an one should not assume too readily that it will not—the caus of more ordered international payments could attract dete mined international support, backed by an effective contribu tion from Britain.



Lifeline for Uranium

Uranium mines face a lean decade with some hope of better times after 1970

URANIUM's descent into hard times is expected to reach its nadir about 1967; it is easy, therefore, to understand the Canadian's government's anxiety to hold the Atomic Energy Authority to its letter of intent to buy 12,000 tons of uranium concentrates. A letter of intent is some way short of a contract—this is the point of argument in Ottawa in recent weeks. But if past intent becomes future fact, this business could give Canada's uranium industry the lifeline it needs between 1966, when the present contracts expire, and the 1970s, which is the earliest that buyers might come back into the market. Between the dates stretches the prospect of five barren years when it will take a miracle or a nuclear war to produce new orders for more than a few tons of uranium. To stay alive, the best mines in Canada need a throughput of 1,500 or 2,000 tons a year—which a windfall deal in 12,000 tons could provide. The Atomic Energy Authority does not want uranium; when outstanding orders have been delivered, it will be holding five years' stocks and the 12,000 tons now being argued about might represent another three or four years' consumption—it is difficult to be sure since no one knows how much will be needed for atomic weapons. If, therefore, the AEA helps the Canadian government in its bridging operation, it will be justified in demanding a slashing cut in prices. Not that a cut in uranium prices would stimulate consumption—even free uranium could not do that.

The uranium industry's troubles are twofold: they combine the effects of over-production of uranium ore and disappointed expectations about nuclear power. These are separate matters and one has quickly followed the other. Over-production arose out of ignorance about the size of the world's uranium deposits and even of the countries where they were to be found. When scientists developed the atom bomb, uranium was a commercially worthless mineral. Rapid search for workable deposits to supplement supplies from the Congo revealed uranium in the South African gold mining belt, i Australia and in Canada. More detailed search revealed deposits all over the United States, with some of markedly high grade.

America's plentiful suppplies did not emerge until Britain and the United States, acting through their joint Combined Development Agency (to which Canada also belongs), had entered into long-term commitments for uranium at high prices with South Africa, Australia and Canada. The American authorities found themselves obliged to take uranium both from Canada and from their own diligent prospectors who

were flooding the processing plants with uranium ore. I was soon clear that the United States was self-sufficient i uranium and that some of its richer deposits could undercu all but the best of the Canadian mines. The United State government, therefore, decided not to renew its contract with the Canadians when it expired in 1963 and so cut the main prop which supported the Canadian uranium industry. Th chances of the United States ever importing uranium again look slim.

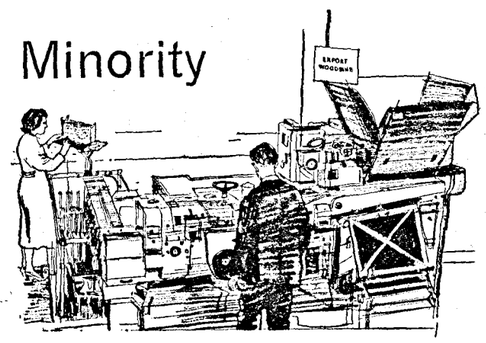
Over-production followed directly from these rich dis coveries in the United States which boosted world productio

uranium oxide to more than 42,000 tons a year in recent ears, about a quarter of it added to the stockpile. The riting was on the wall in 1958, when many countries outside ie United States, though still committed on paper to sizeable uclear power programmes, were beginning to think again.)ne by one, these nuclear programmes have been trimmed r postponed to the 1970s. In Britain, the only country with sizeable nuclear building programme in hand, construction as been slowed down and the programme effectively halved; nd it has sufficient uranium on order to meet all foreseeable equirements at least until 1971. Uranium mining faced a irtual shut-down when existing contracts expired.

THREE courses were open to the producers, all of whom had satisfactorily protected themselves against this hazard by the terms of their contracts. (They had received $11 o $12 per pound of uranium oxide, a price high enough to write off the entire cost of the mines during the contract period and to provide the more efficient producers with handsome profits.) The easiest course was to let existing contracts run and close mines piecemeal as each completed its orders. This is being done in Australia. The second course was to re-negotiate the contracts by competitive bids. With plant fully amortised, a number of mines could sell uranium today at prices ranging from just under $3 up to $4. The richest American and Canadian mines can show a profit at $3 a pound, because they use new large extraction plants with costs that are lower by $2 to $3 a pound compared with older treatment plants. Mines with lower grades of ore and smaller throughputs could not live with uranium oxide at $3, but it has been admitted in Canada that the big producers should be able to get along at $4 per pound, and would be in clover at $5. Some South African mines might also show a profit at $3 a pound or perhaps even less. Taking their plant as written off, their costs of producing uranium would be little more than the cost of chemicals to extract the small uranium residues in their gold slimes. In this respect, South Africa stands apart from other uranium producers, since uranium can only be a by-product of gold production.

Unfortunately for these low-cost producers, uranium is currently insensitive to price. The cost of primary uranium is a mere fraction of the total cost of nuclear power; quartering its price will not cause one more nuclear power station to be built. So the mines, seeing the hopelessness of new contracts at competitive prices as a stimulant to demand, have instead preferred to stretch out deliveries at the old, high prices, so keeping a good deal of the old, high profits. Orders that would have been completed in Canada by 1963 have been stretched to 1966 and South African deliveries have been stretched from 1966 to 1970. The lower rate of output involved in this stretch-out puts the less efficient mines out of production, so that the biggest, cheapest producers can be run at maximum efficiency. Ghost towns are re-appearing in the Canadian bush where the empty houses rot during the long, hard winter with three-quarters of the population gone in search of work. Only inside the United States have prices been cut. There the Atomic Energy Commission, instead of negotiating separate prices with separate producers according to costs (these have ranged from $4 to $12 a pound), is offering a flat $8 a pound to home producers—a generous price by today's standards but lower than some of them have received in the past.

UNDER all these arrangements, production of uranium oxide is expected to fall from around 40,000 tons a year to 27,000 tons by the mid-1960s and 16,000 tons by 1967. Whether it goes lower still will depend on the turn of events in Britain and Western Europe. If Britain agrees to take the 12,000 tons of Canadian concentrates, it would provide work for Canadian mines perhaps until 1970, but not enough to solve their difficulties. Some additional output might be sold at home in Canada, in Western Europe, India and Japan—not in France, which has its own mines. Although these stations would not need a big tonnage, supplying their initial charges could make a difference for the uranium mines. The problem is peculiarly Canadian. In the United States, producers look to their own government for protection. In South Africa, the mines have contracts that do not expire before 1970, when nuclear power may be reaching a turning point. From that date onwards, piecemeal investment in nuclear power stations is expected to stimulate a steady volume of demand for uranium.



The rate at which demand picks up in the 1970s will be slower if Britain agrees to take the 12,000 tons of uranium from Canada, for this will have to go into an already bulging stockpile and thus postpone by two or three years the date when new supplies are ordered. The Atomic Energy Authority, therefore, is justified in demanding a highly competitive price from Canada, but it is difficult to determine what the "right" price might be. There has never been a free market in uranium, and while some mines could break even at $3 a pound, it is not certain what tonnage they could provide, and for how long, before their developed reserves run out. The Atomic Energy Authority appears more anxious to maintain steady prices than to pick up bargains and perhaps more disturbed by the possibility of a second shortage caused by driving mines out of business than by the present size of its stocks. In its negotiations with Canada, the AEA is making its own complex calculations about prospective world demand, the rate at which this will exhaust known deposits, and the price required to call forth a given tonnage. It is also pondering whether a new agreed price should provide a sufficient margin of profit to encourage producers to continue exploration and if so, how big this margin should be. Amortisation of a new mine, for example, would probably not be much less than $2 a pound. Its calculations seem to be leading towards a price of around $5 a pound, but not more; this seems quite generous enough in view of Canadian admissions that this price yields a good rate of profit.

Some mines would certainly settle for a lower figure if they could get a bigger share of the cake. They have other reasons for appearing to be as competitive as possible at this time. Contrary to the views of the Atomic Energy Authority, the miners think it will be a long time before anyone has to prospect seriously for new uranium deposits; some of them doubt whether demand will catch up with the industry's present capacity of 42,000 tons of oxide a year much before the turn of the century. They expect a competitive battle to develop between uranium producers in Canada and the United States for orders in Europe. The Canadian mines hope to carry the battle into the enemy camp by selling direct

to American companies, if they are allowed to buy nuclear fuel. This could mean selling uranium for $3 a pound or even less—the price would in the end be determined by the production costs of the best mines in the United States. But it may take ten or fifteen years before the consumer of nuclear power begins significantly to feel the benefits of any such price cuts. Britain alone must hold roughly 20,000 tons of uranium in stock bought at old prices and valued in ver round figures at perhaps £150 million. Its civil power nee*d to 1970 are for 2,000 to 3,000 tons a year; its militar* consumption is unknown, but perhaps nearly as much agai As they tighten their belts, the uranium producers can say " w built an industry for nothing while the fun lasted." Ho much of the industry survives will involve a good deal less fu

IMPERIAL TOBACCO

King-Size Minority

BRITAIN'S approach to public policy on "single firm" monopolies has been the empirical one of piecemeal investigation and recommendation. This process has been taken a considerable step further by the proposal of the Monopolies Commission, in its report on the supply of cigarettes and tobacco and the supply of cigarette and tobacco machinery, that Imperial Tobacco Company should divest itself of its 42½ per cent equity holding in Gallaher—its main, and indeed now virtually its only real, competitor. This holding, the commission accepts, has been treated by Imperial purely as a trade investment: Imperial has not influenced, or sought to influence, the Gallaher management in their conduct of their now highly successful business, nor, it told the commission, does it intend to do so in the future. But the commission conceives it to be possible that at some time the company might decide otherwise. Moreover, the stimulus to efficiency provided by Gallaher's recent success, mostly at Imperial's expense, would be even greater if the company were not cushioned, through its shareholding, from complete loss of profit on trade won by Gallaher. A further cause of concern to the commission is that Imperial's holding of such a large minority interest in the only British tobacco company that overseas manufacturers (mainly American) might now be interested in buying effectively safeguards it from this kind of foreign competition.

To this extent the commission is saying, in effect, that Imperial Tobacco has been too successful a monopoly. It was formed by thirteen British tobacco firms almost exactly sixty years ago to head off the threatened invasion of the British market by Duke's American Tobacco Company. It bought shares in Gallaher thirty years later for precisely the same reason after it learned that American Tobacco, which a few years previously had acquired J. Wix (makers of Kensitas and still owned by American Tobacco), contemplated buying control of Gallaher. This, somewhat ironically, was when Gallaher was a very small manufacturer and before it had acquired the company making "Senior Service," the brand upon which Gallaher's subsequent drive to a 30 per cent share of the cigarette trade has been based. Between 1932 and 1946, Imperial actually owned a controlling 51 per cent interest in Gallaher, but chose not to exercise that control. In 1946, shortly after the Cohen committee on company law amendment recommended that holding companies should publish consolidated accounts, Imperial decided to relinquish even nominal control: by not taking up in full its rights in a Gallaher issue Imperial Tobacco brought its holding below 50 per cent.

THIS naturally raises the interesting, but partly speculative, question whether the commission would have come to any different view if Imperial had retained and used its original control over Gallaher. It holds that a minority interest, by a manufacturer with just over 60 per cent of the market, in another manufacturer, with almost 30 per cent, is against the public interest. But would the same view be taken of a group as large as the two companies together and conducting itself with as much restraint and making as reasonable a profit on capital employed (between 11 per cent and 14 per cent) as Imperial does now? In the case of British Oxygen four years ago, which was supplying no less than 98½ per cent of the oxygen and dissolved acetylene used in this country, and which the commission held to have made "unjustifiably high" profits, the commission recommended price control by the Board of Trade. It did not suggest that BOC be broken up into smaller companies. Mr Maudling can now hardly avoid having to lay down some kind of public policy on "single firm" monopolies. Imperial Tobacco, according to its chairman, Mr Roger Clarke, will not willingly accede to the commission's recommendation that it sells its Gallaher stock: an enforced sale of £40 million or more worth of shares is not the easiest transaction to arrange, though this is not the only way. On the day the commission's report appeared, Gallaher 10s. ordinary stock fell by 3s. 7½d. to 40s.

Whatever Imperial's sins in the past in moving to stifle competition, mainly in the 'thirties when it successfully brought coupon trading to a halt, stopped price cutting by tobacconists, and headed off competition from cheaper cigarettes made from Empire leaf paying the preferential rate of duty, the commission takes the view that the company's present, but somewhat shrunken, dominance in the tobacco industry does not offend the public interest. Nor does the 55 per cent grip on the cigarette making machinery market of Molins' Machine Company and Imperial's position as predominant buyer in that market. The commission finds fault in Imperial's rebate scheme for tobacconists, which is based upon the amount of display retailers give to Imperial brands and operates, the commission finds, to restrict competitive efforts by the smaller tobacco companies. It mentions, but does not discuss, the company's long standing agreement with British-American Tobacco Company, which precludes Imperial from exporting and BAT from selling in this country, since this agreement has been registered and will eventually come before the Restrictive Practices Court. Rather surprisingly, the commission accepts Imperial's argument for retaining resale price maintenance on tobacco goods. In a persuasive dissent, Professor G. C. Allen argues that price competition among tobacconists might work back to the manufacturers. This, he comments, would really serve the public interest.

BUSINESS NOTES

IN THE MARKETS

Still in Retreat

EQUITY prices have fallen sharply again this week. By Wednesday the *Financial Times* index, which had stood at 322 before the week end, had dropped to 308, 56 points below its peak in mid-May and only 15 points above its low-point in December. *The Economist* indicator has fallen from 383 to 368 on the week. The volume of selling remained small and the stock market had the appearance of orderly retreat rather than rout. The jobbers have kept their books well balanced, marking down prices sufficiently to damp down selling. Economic uncertainty continues to overshadow the retreat and this was made a little darker this week by another portentous but unspecific statement from the Chancellor, the publication of the gold and dollar figures, fresh news from companies about the pressure on profit margins and of more big issues of capital on the way.

Gilt-edged prices have been just a little steadier, but only because some investors were wondering whether the fall could possibly go much further. They are now asking the same question about equities. The fall in many industrial groups has been sharp, and blue chip yields, though still not lavish in a fair number of cases, at least no longer look as thin as they did in the spring. The average yield on the 30 stocks in the *Financial Times* index and on the 50 stocks in *The Economist* indicator is 5 per cent. Marks and Spencer still offers only 2¼ per cent, but Unilever yields 3¾ per cent and ICI just over 4 per cent.

Such yields are sufficient to make the bargain hunters nibble a little, as they did on Thursday, pushing the *Financial Times* index up to 311.2, but whether they are sufficient to bring buyers back in force is another question. For one thing, investors are faced with big calls for new money. The affairs of some of the companies that will be making their appeals soon are discussed

on pages 194-197, and some recent rights issues which have either drawn money from the market in the last two months or will do so in the next few weeks are listed in the accompanying table. These relate only to issues raising more than £1¼ million each, and they add up to the formidable total of more than £150 million. In the boom, these issues would have been welcomed as adding to the supply of stock. Now sentiment has changed and the market realises that these issues will largely pre-empt the money that institutional investors are willing to put into equities.

This lesson was driven home this week when Colvilles announced a £15 million rights issue; the shares will be offered at 57s. 6d. each on the basis of three-for-eight to ordinary shareholders and of 99 shares for every £400 of the 6 per cent convertible debenture. Before the announcement Colvilles shares stood at 66s. They are now 57s. 6d. The fall has occurred despite the directors' indication that the dividend will be 16 per cent, putting the shares on a yield of 5½ per cent. Colvilles, in fact, will be a money stock until the end of 1963 and earnings on it, the directors say, may be reduced. About £83 million still remains to be spent on the Ravenscraig strip mill but the directors hope to finance this without borrowing more than £45 million from the government, which is prepared to lend up to £50 million.

THE EXCHANGES

Quieter, Not Better

TURNOVER in sterling this week has been rather quieter than of late; the pattern has remained much the same. Immediately after the week-end the spot rate showed a temporary recovery, as holders who had gone very short of sterling over the week-end covered their essential needs; by mid-week the rate was drifting down again, being held at $2.78¾ by the Bank of England. Announcement of a gold loss of £47 million in June had little effect. The forward discounts remain high, at the equivalent of 4 per cent per year against the US dollar on three months' swaps, and higher still on an annual basis for shorter periods. The Bank of England has not repeated the aggressive action it adopted at the outset of speculation last March, of first letting the rate fall and then flooding the market with dollars and forcing the rate up. In the present mood of the markets there is little that technical tactics can achieve. But some market dealers had been wondering why the Bank did not let the spot rate fall nearer its limit of $2.78. On Thursday, in response to further market selling, the authorities did let the rate down to near $2.78½.

Holders of sterling everywhere have their eyes glued to the British economy and the Chancellor's forthcoming statement. Somewhat remarkably, they have given hardly a passing thought to Kuwait — which evidently reflects a different estimate from the government's of the nature of the threat. In the House of Commons, the Chancellor of the Exchequer declined to be drawn on Mr Nabarro's contribution to the favourite City game of guessing Kuwait's sterling balances. Mr Nabarro's £300 million is smaller than some of the figures that have been bruited round. The Kuwait affair has, however, had an impact on the gold markets, where buying from the Middle East has followed on the Continental purchases set off last week by the ruminations of M. Rueff. On Thursday the dollar price in London rose to $35.09½—above the New York selling price, though still well short of the notional "shipping parity."

The Canadian dollar has fallen a little this week, to 96¼ US cents. Some dealers report that the Bank of Canada has intervened to check the fall, whereas the previous week it is believed to have operated the other way. So far, however, official intervention on either side has been modest, and more in line with the old policy of steadying minor movements than with the new one of driving the rate down.

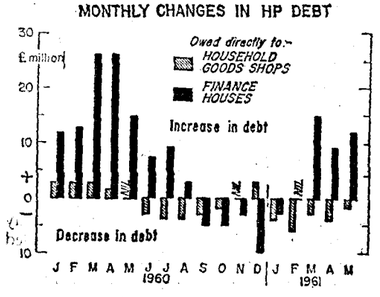
SPACE AND ROCKETS

Out of the Wood?

THIS has been a good week for rocketeers. The German decision to join the space club, though grudging and heavily hedged with reservations, saves Blue Streak from the scrap heap. The sizeable Swedish order for the anti-aircraft missile, Bloodhound, cheers on the British Aircraft Corporation. Bloodhound was originally developed by the Bristol Aircraft Company, now in BAC, and Ferranti. The Swedes have been testing a small batch bought some years ago, and since they have come back for more it is possible that this missile may indeed be as good as the RAF claims it to be—perhaps ending the long rivalry between the RAF, which sponsored Bloodhound, and the Army with its Thunderbird.

The reprieve for Blue Streak does not mean that Mr Thorneycroft's space club has arrived. The German decision in principle, to join and to accept Blue Streak as the first stage of a European space rocket, is only a first step. Two further stages are needed to put a satellite in orbit, and the Germans seem less ready to accept an Anglo-French

arrangement that would give France the design of the sizeable second stage and leave the relatively small third stage to other members of the club, presumably Germany. German industry seems determined to demand a larger share and there is likely to be tough bargaining before a settlement is reached on who builds—and pays—for what.



Britain's share of the bill seems likely to work out at the £90 million already spent on its development as a ballistic missile, plus £23 million, or a third of the £70 million thought to be required to complete its conversion into a space launcher. The scientific dividends to be expected from this massive investment are, perhaps, the least important of the returns expected. In canvassing for members of the space club, British spokesmen have stressed the military and commercial rather than the scientific benefits of going into space—military because the United States would not have the monopoly of big rocket engineering, commercial because of the big future expected for communications satellites and the indirect benefits to industry of mastering rocket technology. Scientists in Western Europe, husbanding their not over-generous research budgets, would have settled for something smaller and simpler but this would not launch a communications satellite, the first possibility that the industries of Western Europe wish to exploit.

HIRE PURCHASE

New Boom—Last Squib

THE fall in hire purchase and other instalment debt that followed the reimposition of terms controls in April, 1960, has now been almost reversed. Total debt rose by £10 million in May to £949 million, only £12 million below the peak of July, 1960. By now it may be at a new peak. In May, as in the previous two months, the rise in debt owed directly to finance houses offset the continuing fall in debt owed to household goods shops, whose total debt fell by £2 million to £306 million—£32 million lower than in May of last year. The debt owed directly to finance houses of £643 million has now passed last August's peak of £633 million.

New credit extended by the finance houses, whose main business is in vehicles, which had fallen in April, rose in May by 15 per cent, largely in response to an increase of 9,000 to 99,000 in new and used car contracts recorded with Hire Purchase Information. This buoyancy in motor sales has continued into June with 97,300 contracts registered. Contracts for commercial vehicles are 10 per cent up on a year ago, but contracts for motor cycles and scooters at 32,000 are well down—indeed, they are 14,000 below June, 1959.

Speculation on the troubles of the hire purchase industry was naturally revived last week when Bowmaker passed its interim dividend to meet a loss approaching £1 million by its subsidiary, Midland Counties Motor Finance, through a combination of general mismanagement and fraud in the period to October 31, 1960. A few people suspected that something was wrong, but they had no idea that the eventual loss would be so high. Other finance houses, however, are not unduly perturbed by this new revelation: the loss relates, after all, to the year to October, 1960. The general feeling is that there is always one squib that explodes after the fireworks party is over. For Bowmaker, the lesson appears to rest in the dangers of allowing too much local autonomy, but the question that remains is how a "substantially inadequate" provision for bad and doubtful debts can have been allowed. The directors of Clydesdale Supply Company have failed to find a buyer for this ailing Glasgow company, which operates over one hundred shops doing hire purchase and rental business, and with a trading loss of £800,000 they are recommending voluntary liquidation. One of the few hire purchase companies to get through 1960 without mishap is Regional Facilities, a small private company with outstandings of some £250,000. Its bad debts are just £755—the price of a medium-sized car.

EXPORT CREDITS

The New Facilities

THE Export Credits Guarantee Department has agreed in principle to provide medium-term finance guarantees for three export contracts worth more than £30 million. These will be the first credits guaranteed under the scheme introduced last April to help finance exports of major capital goods for periods of over five years. The contracts are still in negotiation, but it is known that they are for a steel mill, the extension to an existing mill (India's Durgapur?), and a tanker. The steel mill contracts call for credit of thirteen to fifteen years and the finance for the period over seven years will be managed by Lazards through its consortium of 28 insurance companies organised for this purpose. This will absorb the whole of the consortium's present resources of £11½ million, but Lazards hopes that by the time new ventures appear resources will have been augmented by participation from pension funds.

The Bank of England, in its latest quarterly bulletin, has now given an interesting account of why it decided on its own scheme to aid export finance—comprising the introduction of refinance facilities for the banks on export credits with less than eighteen months to run—and why it turned alternative courses down. The problem was to prevent the squeeze on bank liquidity affecting the supply of export credit. A selective release of special deposits was rejected largely because it would prejudice the character of what is intended to be a general credit control. Establishment of an export credit corporation was turned down largely because it would itself be difficult to finance—the banks would be reluctant, deposits from the public could be only short-term, while insurance companies dislike debentures of less than fifteen years. The objection to granting a general right of rediscount for export paper was that it would result in a wholesale increase in liquidity, would saddle the Bank of England with an obligation for substantial sums, and anyway would offend against the principle of rediscounting only paper that is self-liquidating.

RETAIL TRADE

Steady Spending

PEOPLE did not, after all, spend less in the shops in May, as the provisional estimates had suggested. The Board of Trade's final index, after seasonal adjustment, of 115 (1957=100), was the same as in April. But this stability masked a slight fall in the (seasonally adjusted) sales by durable goods shops, offset by a slight increase in sales by food shops; clothing and footwear shops recorded a steady level of business.

The apparent set-back to sales of durable goods was the first since the recovery started last December. A drop of 2 to 3 per cent in the seasonally adjusted index may not be too significant, but the figures suggest that any falling-off was entirely in cash sales. For while the total turnover of the shops failed to show the expected seasonal rise between April and May, credit sales of household goods shops rose by 4 per cent. Multiple shops selling radio and electrical goods, whose trade includes a particularly high proportion of credit business, did especially well; their total turnover rose 5 per cent between the two months, bringing it 22 per cent above the level of a year earlier when trade had dropped sharply following the re-imposition of hire purchase restrictions.

Although the level of retail turnover remained unchanged, seasonal factors apart, between March and May, prices of things bought over the counter rose about 1 per cent; the volume of business, therefore, fell about 1 per cent. This still meant, however, that people were buying about 1 per cent more goods than a year ago.

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-five territories extending from the Eastern Mediterranean to the Pacific Ocean.

DRINKING WATER FROM SEA WATER

R W G

THE LARGEST
VACUUM FLASH EVAPORATORS
IN THE WORLD,
TO BE BUILT BY
RICHARDSONS, WESTGARTH & CO. LIMITED

The Government of Curacao has awarded to Richardsons, Westgarth & Co. Limited a contract for two vacuum flash evaporators, each capable of producing from sea water 1,400,000 Imperial gallons of drinking water a day. These will be the largest evaporators ever built.

Richardsons Westgarth, pioneers of the vacuum flash evaporator in Great Britain, now have in operation or on order:

- Vacuum flash evaporators with the largest individual output in the world.
- Vacuum flash evaporators producing the largest total combined output of fresh water in the world.
- More land based vacuum flash evaporators than any other manufacturer.

With plant in operation in Great Britain, South America and many parts of the Middle East, Richardsons Westgarth experience in this highly specialised field is at the disposal of all who require supplies of fresh water for domestic or industrial use.

Consultants for this contract are Stichting Nederlands Adviesbureau Voor Ingenieurswerken in Het Buitenland, The Hague, in association with Tebodin, Advies-en-Constructionbureau NV., The Hague.

RW33

INDUSTRIAL RESEARCH

Value for Money

THE rising cost of research has brought new demands of value for money from those who provide the financial backing. The Department of Scientific and Industrial Research, which makes annual grants totalling £1.8 million to various industrial research associations, appears to have done some stern talking to some of them. "It is not possible to lay down an absolute minimum level of expenditure below which co-operative research organisations in general would not be viable or profitable," says the DSIR's report on its industrial grants, but following paragraphs make it plain that some of them are below that limit already and the department threatens to withdraw its support from them.

Strength through combination has become popular. The cotton and rayon industries have agreed to merge their research associations into one organisation covering cotton, silk and synthetic fabrics. The plastics and rubber manufacturing industries have agreed "enthusiastically" on a joint research plan. These cover big and wealthy industries; the knife makers, who have "now placed the Cutlery Research Council on a sounder financial basis," are far smaller. The DSIR appears to have thought carefully about helping small industries that cannot support effective laboratories of their own by farming out research with larger research associations with similar interests. There have been some grumbles that the DSIR is beginning to take on the functions of a Science Ministry—partly because industry is being chivvied into the idea that research should yield results. This is good. So is government support for the new British Industrial Biological Research Association which is to study the effects of chemicals in food.

Civil Engineering

ALL the important recent advances in civil engineering have originated in some country other than Britain, so the appeal launched this week for £250,000 a year to finance research in civil engineering in Britain is one that the industry can hardly afford to ignore. The appeal has been made by the Civil Engineering Research Council, a new body set up by the Institution of Civil Engineers, the Federation of Civil Engineering Contractors, and the Association of Consulting Engineers. The Department of Scientific and Industrial Research has offered to add nearly as much as the industry itself subscribes to the funds of the council. It does not intend setting up its own research facilities. It has plans similar to those of the new machine tool research association, and will finance projects that originate in universities or commission studies by them and in government or industrial laboratories.

Which Way in Gas

THE changes the Wilson committee suggested to the Minister of Power last August concerning the allocation of work between the various bodies conducting research into new processes of making gas from coal could at least be said to make for a tidier arrangement than the present pattern of partly overlapping and, in some directions, possibly fruitless effort. Mr Richard Wood has now announced his acceptance of the committee's logic. The Gas Council—as eventual user—is to take over responsibility for further work on Lurgi plants, on high-pressure slagging gasifiers, which, given sufficient backing and interest, may lead to improvements in the standard Lurgi process of total gasification of coal, and on any other gasifiers suitable for making town gas, such as the Otto-Rummel gasifier. The Gas Council is

Municipal Money Market

HIDDEN within the City's narrow streets an important and little-publicised market is quietly booming. It has none of the City's romantic connections with the past and its real growth dates from the mid-fifties, when the Government turned the 1,761 local authority treasurers away from the doors of the Public Works Loan Board. The market in money for local authorities has few members but a considerable and growing turnover. There are six firms and a number of stockbrokers (who can recognise a good thing when they see it) in the market. The largest firm, Short Loan and Mortgage, has only a dozen employees; with Long, Till and Colvin it does two-thirds of the business. The turnover averages about £7 million a day (i.e., thousands of millions a year) and £20 million is not unknown, although a high portion of this figure involves the turnover of money at call or seven days' notice. Not surprisingly, the commission on any transaction is very small—usually less than one-eighth of one per cent.

Capital investment by local authorities now amounts to £650 million a year, about one-sixth of the national total, and in the year to March 31, 1960, over half of this expenditure was financed by external borrowing. All but £53 million came from mortgages (so-called because the security for the loan is a mortgage on local revenues) and unsecured temporary deposits, which are an alternative to bank overdrafts. Since 1955 the total loan debt of the local authorities has risen from £4,186 million to £6,056 million, just under half of this increase coming from mortgages and about £600 million from temporary borrowing.

Since in 1955 the PWLB became a lender of last resort, it has provided new money only to those authorities that have failed to get satisfaction from the market, which in effect means only some of the very small authorities. At the same time, stock issues can cover only a small part of new borrowing, since the smaller authorities are effectively barred by the minimum of £3 million; and in any case it may take years to reach the head of the new issue queue. Moreover, some treasurers still feel that interest rates are abnormally high—as they have done for years—and rather than pay over 6½ per cent on a 15 to 20 year issue prefer to take a short-term mortgage in the hope that rates will fall.

THE LATEST RATES

Duration of Loans or Deposits	PWLB Dec. 1960	PWLB July 1961	Mortgage market Dec. 1960	Mortgage market July 1961
	Per cent		Per cent	
Seven days	...	...	5	6
Up to 5 years	6¼	6⅜	6¼	6⅜
5–15 years	6¼	6⅜	6¼	6½
15–30 years	6¼	6½	6⅛	6½
Over 30 years	6⅛	6¼	6⅛	6½

Funds invested in local authority loans come mainly from the merchant banks, the foreign and overseas banks, trusts, insurance companies, pension funds—though local sources can also be very important. A considerable part of the inflow of overseas money that came to London in the second half of 1960 was lent on short-term to the local authorities; and when, after the Continental revaluations of early March, this money began to disappear, rates in this market hardened. The market now sets the pace; last month PWLB rates were duly adjusted, as the table shows, but since then there has been a further rise in market rates.

This week, following the new departure made by Derbyshire County Council in June, Staffordshire County Council is making a direct offer of bonds at a discount—of one point on bonds repayable in seven years and bearing interest at 6⅛ per cent. These issues—Derbyshire's brought in £1½ million—are made under local Acts and the discount is limited to ¼ per cent for each year of the bonds' life, with a maximum of £5 per cent. At the moment only a few local authorities have the power to issue unmarketable bonds at a discount, but the next local government legislation is expected to extend this power.

already working on it, despite doubts about its potential usefulness, as it has the merit of not needing oxygen. The Coal Board, on the other hand, will be responsible for all development work on producer gas plants in which the gas supply industry can hardly be said to have a major interest.

At present two different designs of slagging gasifiers (in which the ash waste is turned into a liquid so that it may be removed as slag) are being developed by teams with different objects, at Solihull by the Gas Council and at Leatherhead by Constructors John Brown under a ministry contract. Since it is unlikely that both projects will find a useful application it seemed reasonable for the Wilson committee to suggest that their best features should be combined. But it will not be easy to bring both under one general direction.

Reservations about this rearrangement of responsibilities for research arise, further, from doubts about the depth of interest the gas industry has at present in total gasification of coal among all the other hydrocarbon sources—such as imported methane—that it now considers may be open to it. Until the Minister of Power has adjudicated the dispute between the coal and gas industries over the future sources of supply for British town gas—in essence between reforming imported methane and enriching lean Lurgi gas made from low-grade British coal—the coal industry is hardly likely to have a great deal of confidence in the Gas Council's keenness on complete coal gasification. Development of slagging gasifiers, moreover, is ultimately dependent upon the existence of large-scale Lurgi plants. The Wilson committee, in assuming that carbonisation must remain the most important method of processing coal in this country, may have underestimated the considerable opportunities that total gasification offers to both coal and gas. Mr Wood seems to have appreciated this: the present joint study of Lurgi economics by the Gas Council and the Coal Board, he said two weeks ago, may be extended to include slagging gasification and he hoped that it will also provide a basis for further co-operation between the two boards in work on total gasification.

FUEL DEMAND

More Awkward Facts

Forecasting future fuel demand has gone out of fashion since actual fuel consumption inconveniently, and seemingly inexplicably, fell away some five years ago. The flattening out of industrial output from 1956 until early 1959, higher than normal average temperatures in 1957 and 1959, shifts in the pattern of production between heavy fuel using industries and others, and a decided but not wholly calculable gain in fuel efficiency made varying contributions to this awkward divergence of fuel use from trend after the middle fifties. But part of the change still remains statistically unaccounted for.

INLAND CONSUMPTION OF PRIMARY FUELS
(million tons of coal equivalent)

	1956	1957	1958	1959	1960
Coal	214·0	207·6	198·7	186·9	195·7
Black oil	15·0	15·7	23·1	28·8	35·6
Other oil	23·0	21·5	24·5	27·4	30·1
Nuclear and hydro-electricity	1·3	1·7	1·6	2·0	2·7
Total	253·3	246·5	247·9	245·1	264·1
Coal: per cent of total	*84·5*	*84·0*	*80·0*	*76·0*	*74·0*

Now students of the form have a year of considerably increased fuel consumption to fit into their curves and formulae. Total inland use of primary fuels (in terms of coal equivalent) rose exceptionally by 7¾ per cent in 1960, while industrial production and total output in the economy both rose by 6 per cent. Although last year was still slightly warmer than the long-run average, it was 1.4°F cooler than 1959. The rise in industrial output was led by some of the heavier fuel using industries, such as steel. Household consumption of fuel—mainly taken as electricity—rose sharply. And there was a smaller improvement than usual in fuel efficiency—particularly, for instance, at blast furnaces where the gain was only a third of the improvement achieved in previous years. This combination of circumstances, the June issue of the Treasury's *Economic Trends* points out, was in complete contrast to what happened between 1958 and 1959. Average temperature then rose by 2°F, large fuel using industries, like steel, did not fully share in the rise in industrial output, and there was a substantial improvement in fuel efficiency. Even after allowing for last year's cooler temperatures, the increase in fuel use was still proportionately more than the higher level of activity in the economy would lead fuel statisticians to expect.

INTERNATIONAL LOANS

A Burst of Activity

When the future of the exchanges is uncertain, such private lending and borrowing over national frontiers as continues tends to be guided by an exchange view as much as by comparative lending terms. In the circumstances it is surprising that the momentum of international lending this year has not slowed down more; and an active business is still being done by the international agencies. In the past fortnight a number of important international loans have been announced.

On Wednesday the South African Treasury announced that the International Monetary Fund had agreed to grant further assistance—in a stand-by credit of the equivalent of $75 million, to be drawn in various currencies. This follows South Africa's drawing of $37½ million last December, and makes available 75 per cent of South Africa's quota. Since this aid has been needed entirely to offset an outflow of capital, the current account being in strong surplus, it is to be hoped that no more will be heard of the legal complications for such operations supposedly presented by the Fund's Article VI. The fall in South Africa's reserves has been reversed in the two weeks since exchange controls were imposed on overseas sales of its securities.

The most notable private loan of recent weeks bears the marks of current exchange uncertainties. Argentina, in a loan of $25 million handled by a consortium of European banks, including Barings of London, has agreed to a multi-currency clause that not only guarantees the investor against devaluation of the peso but gives him a stake in appreciation of the mark

From the Bank's Bulletin

The pace of public buying of gilt-edged slowed down in the first quarter of 1960, but it was still £44 million—making £530 million in twelve months. It would be surprising if it continued into the latest months of exchange uncertainty.

These figures, which analyse cash inflows and outflows on overseas securities reported to the Bank, suggest that in both 1959 and 1960 Britain was importing capital on balance through this channel. The big liquidations presumably included South African securities and, in 1960, Wall Street equities.

Miss Woolveridge will be looking after 40,000 accounts

...she is working at the control panel of the first Barclays Bank electronic computer. The opening of our No. 1 Computer Centre this week will make little apparent difference to the customers at the twelve West End branches it will serve. The book-keeping of their 40,000 accounts will be done by the computer; the information, coded on to punched tape, will pass between branch and centre by teleprinter; the only visible change will be that customers' cheques will be 'personalised' – that is, every cheque will have printed on it the customer's name and the number of his account. But the Centre is the heart of one of the most advanced systems of banking automation in the world, and represents a major advance in bank book-keeping and an important step in our continuing attempts to keep the cost of a banking account down.

'Automation' may sound to some a chilly, impersonal kind of process, but it will be operated by people brought up in the Barclays tradition of personal service. Miss Woolveridge and her colleagues have some very wonderful, very modern equipment; it will help us to maintain into the future the high standard of banking service our customers have come to expect.

BARCLAYS BANK LIMITED

'Money is our business'

We roll

red carpets out

all over Europe

Carpet rolling's a service we perform for all kinds of motorists—from first-time tyros with language troubles to seasoned travellers with savoir-faire. All our carpets are red ones, and we roll them out as readily from Lapland to Lisbon as we do from John o' Groat's to the Peloponnesos.

At over a thousand of our Service Stations on the main motorways of Europe you will find Shell Touring Information Centres where you can study maps, check up on routes or mug up on the local lore (or law). En route, you will find maps of most of the major towns to show you the way round or through.

Actually, if you get in touch with a Shell Service Station before you leave home, we will arrange to supply you with maps of the countries you will be passing through, phrase books or other material to help you.

Of course, you may be the sort who deplores planning, who wants to push off and roam at will. So be it. But it's nice to know that wherever you go, you are not far from a Shell Service Station which will do its best to help you—whether you are looking for barbers in Seville or Lautrecs in Toulouse.

YOU CAN BE SURE OF SHELL

or the Swiss franc as well. Redemption is to be by drawings between 1967 and 1973, and the average redemption yield is 7¼ per cent. This is the Argentine government's first loan in Europe since the war, and it presumably regards these stringent terms in the nature of a re-entrance fee. At the same time, Argentina has received its first loan from the World Bank—$48½ million for roads. Interest here is at the bank's usual 5¾ per cent including commission ; the term is sixteen years. Another loan for improvement of road transport has been granted by the World Bank and the International Development Association together, for a total of $25 million. The World Bank is also providing $15 million to the Industrial Credit and Investment Corporation of Pakistan, in a loan that has no fixed schedule of repayment or fixed interest charge.

For its own source of finance the World Bank continues to look mainly to Europe, and this week it has raised its first loan in Italian lire—15 billion lire, equivalent to about $24 million, in 15-year 5 per cent loan bonds at par. This notable operation marks a recognition of Italy's creditor status ; it is the first international issue on the Italian market since the war. At the same time, a traditional Continental capital exporter, Holland, has recently reopened its market for foreign issues. Borrowers include the European Investment Bank—which recently put money into Germany. Finally, the New York capital market is raising a further $25 million for Australia.

LOCAL EMPLOYMENT

Hazy Figuring

THE Select Committee on Estimates came away rather unhappily from its brief look at the administration of last year's Local Employment Act. It was upset first of all to find that, although no forecast of likely expenditure was put into the explanatory and financial memorandum attached to the original bill—unlike that for the Cotton Industry Bill, which has since proved to have been remarkably accurate—the Board of Trade had in fact done some figuring of its own. The board's witnesses explained this omission on the grounds that their calculations were very "rough and ready." They reckoned that about 80,000 jobs would have to be provided to bring unemployment in development districts down to the national average. On the assumptions that each job would require £700 worth of building and £700 worth of plant and that the whole of this capital cost would be provided by the Government in the form of loans and grants, the "upper limit" to Government spending under the Act was calculated to be about £112 million. Since this was the probable maximum, rather than a realistic estimate, the board decided to keep it to itself. The committee took the contrary view. The board's own

estimate bore no relation to figures of past spending under repealed Acts—which were set out in the memorandum—and it argued that even a qualified forecast would have been better than none at all if parliamentary control of expenditure was to be effective.

The Board of Trade, perhaps understandably, was found to have over-estimated the rate at which its provender would initially be drawn upon. It budgeted for an outlay of £19.2 million in 1960-61, the first year the Act was in operation. Principally because of the time taken to process applications, it actually paid out only £11.7 million. This year the board reckons it will have to spend £30.1 million, of which £18.1 million will be on projects already committed. So far it has had no reason to doubt this estimate, and the Select Committee was prepared to accept it. But the committee strongly objected to being given information by the board's witnesses about current activities that had subsequently to be corrected and it was even more displeased to find that the board's officials were not "equipped adequately to deal with the questions asked on the administration of the grants for which the department is responsible." This "undermined" the committee's confidence in the figures it was given and led it to propose that a full inquiry into local employment expenditure should be held in a later session.

PLASTICS

Tales of Over-Capacity

VISITORS to the International Plastics Exhibition at Olympia a week ago were brought back to the harsher realities of their industry if they listened to some of the papers read to the International Plastics Convention. They heard Mr D. G. Owen of Imperial Chemical Industries estimate that world sales of polyvinyl chloride at 1,200,000 tons compared to capacity for 1,700,000 tons ; and Mr W. A. Woodcock,

HONGKONG'S TEXTILES

Terms for a Truce

REPRESENTATIVES of the Cotton Board tactfully omitted to discuss a renewal clause in the three-year pact negotiated with the Hongkong industry in 1958, although the undertaking did make provision for withdrawal by Hongkong if economic conditions in the colony deteriorated. So the colony's manufacturers were originally left with an impression that no extension was contemplated, and recently believed that they still had time to posture before the agreement expires next January. Clearly if the pact was to be renewed it would have to be extended before buyers began to order for the coming year. But now things have come to such a pass in Lancashire that the Government has suddenly dropped its insistence that the two industries should negotiate a new agreement, and is putting forward its own proposals for extending the pact up to the end of 1962. As Mr. H. A. Angus, Hongkong's Director of Commerce and Industry, says in a letter to local manufacturers, the proposals "do not offer any significant scope for further modification." Hongkong's manufacturers are simply asked to volunteer their acceptance.

The proposals contain three main concessions: an increase of one-eighth in quotas; supplementary quotas to be granted after reviews of import requirements next year; and exemption from quotas extended to imported cloth converted into a range of goods for subsequent export. If Hongkong accepts these proposals, a supplementary quota of 10 million square yards of grey cloth would be granted this year. However, if imports of cotton yarn into Britain increase significantly, they would be restricted for the first time.

According to the British Government, restraint will be needed until Lancashire settles down after the re-equipment scheme, which stretches to the summer of 1964. But some manufacturers hold that their re-equipment programmes depend upon some form of assurance that imports will continue to be restricted. However, the advice Lord Rochdale gave manufacturers last year to go ahead with re-equipment in the expectation that the import problem would be satisfactorily solved proved sound. Though quotas are the most harmful means of protection both for the domestic industry and for exporters, if the international textile conference which will be held on July 17th, succeeds in finding any formula for regulating trade in textiles, it will be by this method, and the system is likely to be long-lived.

of Union Carbide, suggest that the world might use 850,000 tons of low-density polythene this year, though there is now capacity to make 1,200,000 tons—which will soon reach 1,550,000 tons. Mr V. N. Luke, of Shell Chemical, was able to give a slightly less alarming picture of the situation for polystyrene; world capacity will be 850,000 tons next year, and may be matched by sales by 1963.

The result of this massive over-capacity, which seems to be worse in the United States and Italy than it is in Britain, is that prices of these plastics have fallen to levels at which profits are slight, and are especially unsatisfactory for manufacturers who spend much on product development. And some companies are selling polystyrene in export markets for 15 cents a pound, 20 per cent below the already depressed American domestic price. But the authors believe that the low price level gives a great potential for increased sales at the expense of natural materials. Some of this increase in sales, however, would come from the development of new varieties of the basic materials, such as the mixture of polystyrene, acrilonitrile and butadiene now being sold in the United States, and mixtures of low-density and high-density polythene. To develop these and markets for them would require capital expenditure; and the returns on it would probably be slight. The plastics industry is indeed caught in a vicious and unprofitable circle.

CARS FOR CANADA

Bladen's Formula

AN ingenious plan to maintain protection for the Canadian vehicle manufacturing industry while, within limits, remaining expansionist in outlook and offering lower prices to motorists has been presented to the Ottawa government by Professor V. W. Bladen of Toronto University, who was appointed last year as a one man Royal Commission. His key proposal —one of a package of seven—is a new and rather clever variant of the formula providing exemption from duty if a certain percentage of the "content" of vehicles sold on the Canadian market by an overseas company is made within Canada. Professor Bladen proposes that exemption for everything right up to complete vehicles be granted if the importing manufacturer, through a subsidiary or an associated company, uses in Canada or anywhere else vehicle components and parts made in Canada above a certain percentage value of his total Canadian sales. Thus an overseas vehicle maker might be able to ship in complete cars duty free if, say, he uses Canadian clutches for all the cars he makes, provided the total value of these clutches is more than a certain percentage of the total value of his sales on the Canadian market.

The motive behind this contrivance is to strengthen the Canadian vehicle parts industry by offering an incentive for achieving longer runs and greater economies of scale. The more orthodox present arrangements for the protection of domestic manufacturers of parts bear heavily upon the smaller Canadian vehicle manufacturing plants. The Studebaker-Packard plant in Canada, Professor Bladen calculates, incurs duty on imported parts averaging about $85 for every vehicle it makes, while the General Motors plants, with a much larger share of the market and thus in a better position to make or buy parts in Canada, pays in duty only about $20 a vehicle. Under the Bladen scheme Studebaker-Packard could reduce its liability to Canadian import duty by putting Canadian-produced parts in the vehicles it sells in the United States as well as in those it markets in Canada.

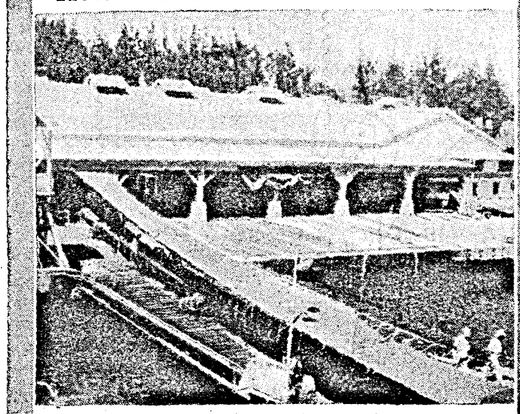
A Blow for the British

AMERICAN vehicle makers would stand to gain more than British companies from this tariff innovation, though American subsidiaries in Britain—Ford at Dagenham and Vauxhall—could be counted part of their respective parent group's operations in Canada if their Detroit managements so decided (overseas manufacturing groups would have this option, Professor Bladen suggests). The total expenditure of GM or Ford on Canadian parts would then be set against the group's total sales in Canada, and the British-made part of its sales could enter duty-free if the ratio of Canadian content was high enough. Two years ago General Motors considered—but decided against—assembling Vauxhall cars in Canada; by a long way Vauxhall is the leading British seller there. General Motors may well have to think again if the government in Ottawa shows signs of accepting Professor Bladen's recommendations, but it would now have to consider something rather more than a mere assembly operation of imported bits and pieces.

But the more serious threat to British exports lies in the Royal Commission's other major proposals. Professor Bladen recommends imposing a ten per cent duty on British vehicles and parts, which at present go in duty free while other imports pay 17½ per cent. He also suggests abolishing the excise tax on all cars and changing the basis of valuation for Canadian sales tax on imported cars from the price a foreign manufacturer charges retailers in his home market, less a notional discount, to the actual sale price less discount in the Canadian market. Paying sales tax on the value of a car at the factory gate when the cost of shipping it 3,000 miles has still to be paid to deliver it in Canada, has been a considerable competitive help to European exports. No other country places its own domestic manufacturers at such a disadvantage in meeting import competition.

Since the Canadian vehicle tariff was last reviewed in 1936, the Dominion has passed from being a major net exporter of vehicles to being a net importer. A third of all the vehicles bought in Canada in 1959 were made outside the country. European car manufacturers are now heavy exporters and they are in course of adding substantially to their manufacturing facilities. The Bladen Commission's object was to propose ways, between the extremes of high protection and free trade, by which Canadian manufacture could be strengthened to withstand this prospective intensification of foreign competition. From that point of view the Commission has produced a logical report. But its proposals will hit British sales badly, more heavily than those of perhaps any other exporting country.

BANK MECHANISATION



Barclays' Computer

BARCLAYS is the first bank to install a computer in this country and possibly the first in the world to use one for customers' accounts. It is the first major technical advance in bank mechanisation since the accounting machine and may save the banks drowning under a rising flood of cheques. This one computer and its staff of 17 is expected to handle 40,000 accounts from 12 of Barclays' biggest London branches now looked after by about 150 people. With experience it should be possible to post a far greater number of accounts on one installation.

The computer used by Barclays, with transistors instead of valves, costs £150,000 and its ancillary equipment another £100,000. This consists mainly of machines at the branches, linked by cable to the computing centre, which transfer details of the day's business into the computer; this works through details of all the accounts, debiting and crediting them and keeping a watchful electronic eye on overdrafts. Details of any balance that has changed are sent back direct by the computer to the branch and typed automatically on normal bank stationery; once a week the computer prints out details of all the accounts whether their balances have changed or not. This work should take the computer 3½ hours, and Barclays now have to think of ways of occupying it for the rest of the day.

If the experiment succeeds, Barclays might have work for six similar computers in London and for perhaps 50 over its whole network of 2,000 branches (some of which will be too small and remote to justify the expensive teleprinter links). This indicates the heavy investment facing the banks if they change to electronic book-keeping and

How Mitsui Builds World Trade

Since 1957, more than 12,000 tons of frozen tuna meat were shipped to the U.S. and France from these New Hebrides fishing facilities—the result of a joint venture between Mitsui and local industry.

JOINT ENTERPRISE—This New Hebrides fishing base is another example of how Mitsui joins with local industry to promote economic growth. As Japan's largest trading company, Mitsui knows that joint ventures can save local outlay of foreign exchange and speed industrial development throughout the world.

DIVERSITY OF PRODUCTS—All of Japan's quality products are available through this big trading company. It maintains close contact with hundreds of leading firms to give you quotations based on an intimate knowledge of the current market. In addition, Mitsui is a member of the Mitsui Group, and can call on the experience of 50 "Group" firms in virtually every field to expedite your imports.

GLOBAL TRADING NETWORK—Mitsui's 40 offices in Japan and 73 offices and affiliated companies in trading centers around the world can answer all your questions. Perhaps Mitsui can lower your cost of doing business with Japan.

the world trades with Japan through MITSUI

BRITISH INDUSTRIAL PLASTICS LIMITED
BIP

WOULD IT BE BETTER IN PLASTIC?

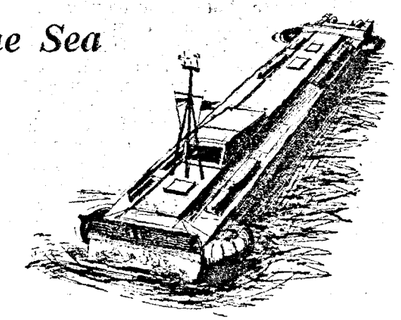
Plastic pennies? Light and strong, gay colours perhaps? No more holes in trouser pockets. But to a true-blue Englishman—anathema!

Still, Englishmen of all colours are swallowing new ideas about plastics which are almost as revolutionary as plastic coinage, though often more subtle.

Ask us at BIP—we're the people who know. There's the statue in St. David's Cathedral carved in laminated wood (laminated with a BIP adhesive); the "Glass Slipper," one of the world's biggest plastics sailing-boats (glass fibre moulded with BIP resins); and hundreds of everyday objects (made with BIP plastics) which you accept without thinking that they *are* made with plastic, just because they are efficient and pleasing to hand and eye—creaseless cottons, for example, or your steering-wheel.

What about your product? Again, ask us at BIP. British Industrial Plastics runs an Advisory Service which will take your product and tell you if and how plastics can improve it. We have been in the industry from the start and are plastics men to the marrow (we process the raw material, we build the press and tool plant, we make our own moulded products), so we know what plastics can and cannot do: our Product Design Service will work with you or for you at the drop of a hat. Up to you now to drop it...

GO ON—ASK US! WOULD IT BE BETTER WITH PLASTICS?



BRITISH INDUSTRIAL PLASTICS LIMITED
OLDBURY, BIRMINGHAM

A Member of the Turner and Newall Group

the potential size of the market for banking computers. Nearly every big bank now has a computer of sorts on order. The next advance must be a proved means of automatic cheque sorting. The first generation of cheque sorting machines being tried out by the more mechanically minded banks like Lloyds and Barclays are said not to be a complete success, but much improved versions are now coming into use in the United States. The end of the operation is to make the whole cycle of cheque sorting and account posting completely automatic with machines sorting, reading, transmitting and printing from magnetic characters and printed codes. Then the traditional bank clerk will have gone the way of Mr Kipps.

HOVERCRAFT

Sledging Over The Sea

THE new sidewall type of hovercraft that has been built by William Denny and Brothers looks like a giant sledge; the air cushion that supports the machine, as with any other hovercraft, is kept in at each side by walls that extend down into the sea, and by air curtains only at the ends. This variant on the usual hovercraft principle has the advantage that it needs much less power to support it, for the losses through the solid wall are nil whereas much power is needed to maintain an air curtain. The Denny craft, weighing 4½ tons and 60 feet long, has only two 30 hp engines to provide the air for its cushion. The power needed to propel the craft is slightly greater than on an ordinary hovercraft; the sidewalls set up some drag in the water, and the economic speed is a good deal lower—40 mph compared with 80-100 mph. But the Denny prototype does 17 knots with two 35 hp outboard motors, so the power needed is still far less than that for an ordinary boat.

The sidewall craft is likely to find most uses as a straight substitute for boats operating on rivers or other sheltered waters; the sidewalls prevent it operating in rough water, for if they rise out of the water the air cushion deflates. But it should not cost more than building a boat, and may well be cheaper than fast launches because it needs engines of so much less power. Running costs will therefore be lower, too. The prototype cost less than £10,000 to develop and build. There seems to be no sharp upper limit on the size of craft that can be built on this principle; Denny will probably make one of 200 tons next, but their limitation to calm waters will restrict their size. Denny is prepared to sell craft the size of its prototype as passenger ferries, and will start taking orders in the spring. It reports many inquiries already; this simple variant may well be the first hovercraft to enter commercial service.

NICKEL

Price of Stability

ACCORDING to Dr Thompson's history of the International Nickel Company of Canada,* it was in February, 1956, that one of his exploration team telephoned from Manitoba: "It looks like we've hit the jackpot." In that year, the United States asked nickel producers to meet "a revised expansion goal, aimed at providing a US annual supply of 440 million lb. of the metal by 1961." In December, 1956, International Nickel announced a $175 million programme for developing the Manitoba deposits. At that time, the company also raised the price of nickel to the equivalent of £600 a ton in Britain and the price remained unaltered until last week. This year, International Nickel's new mine came into production with an annual capacity of 75 million lb. Meanwhile, consumption in the United States is probably running at a level lower than 250 million lb a year and nickel bought for the United States stockpile is actually being released. Fears that the new Thompson mine would cause a sur-

* FOR THE YEARS TO COME. By John F. Thompson and N. Beasley. *Putnam*, New York; *Methuen*, London. 35s.

AGRICULTURAL MACHINERY

Chugging Along

THE agricultural machinery industry is hardly bubbling over with activity. Even at the Royal Show business has been decidedly quiet. Production of tractors, which was the one part of this industry to show any significant increase last year, has so far this year been somewhat lower. The home market for tractors and large farm machinery is now mostly for replacement. The effort now put into persuading farmers that they need better machines than those they already possess is evident from the number of new machines, such as combine harvesters, that have been brought on the market in the past twelve months.

Tractors form the largest part of the farm machinery industry. Output rose 12 per cent last year, for although home sales fell, exports rose by 20 per cent. So far this year home sales have been about seven per cent higher than in 1960, but exports have fallen. Bad weather last autumn, which made farmers postpone much of their ploughing until this spring, seems to have put them off buying tractors. Some tractor firms therefore doubt whether this year's improvement in home sales will be maintained, though better sales and lower stocks of second-hand machines give the tractor market a healthier look than last year. Fordson reports that its total sales for the first five months of the year were nearly 6 per cent higher than a year ago, with 10 per cent more sold at home and 4 per cent more exported. Massey-Ferguson states that it produced a record number of 7,389 tractors in March, but it does not reveal the average rate. It would seem that Fordson has retained its lead in tractor output.

The implement makers had a bad year in 1960; production of almost all types fell. Output of combine harvesters was 25 per cent lower than in 1959; sales are a little better this year, though makers are still having to readjust themselves to what has become a replacement market. The number in use fell by nearly ten per cent last year to 48,000 (though their capacity rose) and this is more than twice as many as were in use in 1954. Farmers are switching from tractor-drawn or small self-propelled models to the larger self-propelled types. Exports have risen a little so far this year. The industry's hopes for growth must now largely lie in overseas markets. The highly-mechanised British farms now offer machinery makers a replacement market only.

plus of nickel, despite the extraordinary growth in consumption outside America, are being borne out. International Nickel does not expect to sell more of its own nickel this year than in 1960. It will therefore have the equivalent of all of its potential production at Thompson unsold at the end of the year.

But last week the price of nickel went up by 10 per cent (to £660 a ton in Britain). Some consumers were annoyed; though many took the opportunity of easier supplies last year to lay in stocks, quite possibly some will now be paying a higher price than they bargained for when taking orders for nickel products. Though they readily accepted the prolonged period of stable prices, when inflated premiums could often be obtained for some metal, they had apparently not fully grasped the logic of the private price stabilisation scheme operated by International Nickel, under which the initiative in price changes and level of output has passed from consumers to the producer.

International Nickel supplies about three-fifths of the West's nickel and therefore cannot avoid some responsibility for its price. Mining costs have risen since 1956 (as they have for other metals whose market prices are now far lower than in that boom year). International Nickel's profit margins have thinned and the capital cost of the Thompson project has probably risen in line with the increase in other costs. Although the new mine and plant is technically superior to older workings, costs may be a little high while the mine is being run in. There will also be the cost of larger stocks of nickel, which as the company's chairman, Mr Henry S. Wingate, points out, gives consumers the assurance that nickel will always be there when wanted. International Nickel therefore raised its price and other nickel producers have followed suit. If history is repeated, the present surplus of nickel will not persist.

DRINK

Dearer Spirits

An extra 1s. 6d. for a bottle of whisky or gin is not a large increase in price—about 4 per cent—but it may make drinkers pause. So far some other companies have followed Distillers' lead in raising the prices of spirits and all are likely to do so soon in order to keep their distributors happy. Distillers is pocketing only 3d. of the extra 1s. 6d., making its share of the 39s. now paid for a bottle of whisky 5s. 9½d. Retailers are to get 6d. more, raising their share to 5s. 7½d., and wholesalers 9d. more, giving them 3s. on a bottle. Increased labour and transport costs since margins were last raised in 1957 are the chief reasons for this increase. But margins on wine and beer have been higher than on spirits since the last cut in wine duty. One of the puzzling practices of the drink trade is to give distributors the same absolute margin when duty—and thus the retail price—is reduced. As a percentage of the retail price, the margin becomes correspondingly greater. Distillers has presumably decided to head off the risk that their distributors might put less effort into promoting sales of spirits by giving them a better return.

The price increase has come when sales of spirits have been rising faster than for some time past; 7½ million proof gallons of whisky were sold in Britain in the year to last March, 15 per cent more than in the previous year and, for the first time, more than before the war. Much of this increase seems to have been concentrated into the second half of this twelve month period; exports also increased sharply with the new year, being 17 per cent higher for the first five months of 1961 than for the same period of 1960. Gin sales have risen too, though comparable figures are not available. Distillers has not taken a very big risk of losing sales as a result of the price increase. But it takes another view again of the threat of a 10 per cent rise in excise duty. This would put the price of whisky 1s. 6d. over the £2 mark, at which it feels buyers might begin to abstain. Predictably perhaps, there ars suggestions of a possible net loss in excise revenue if the Chancellor uses his new "regulator" here.

SHORTER NOTES

The British Motor Corporation has announced that, "after the most careful consideration of the preliminary studies which have been carried out, and in view of the expansion projects of the corporation already in hand," the directors have decided not to buy an interest in the German Borgward group.

*

The London barley futures market has been closed until it is known what steps will be taken to regulate imports of cheap barley. The Government agreed this week that a case had been made out for measures to prevent dumping. A further announcement was promised.

*

The inquiry made by the Northern Ireland Development Council into the effect of transport costs on industry in Ulster shows that the cost of transport to customers exceeds two per cent of sales value for only four out of fifteen industries studied. It is highest, 4.9 per cent, for milk and other food products; for seven industries it is one per cent or less. The cost of transporting raw materials is highest at 1.9 per cent of sales for light engineering and miscellaneous textiles; for ten industries it is one per cent or below.

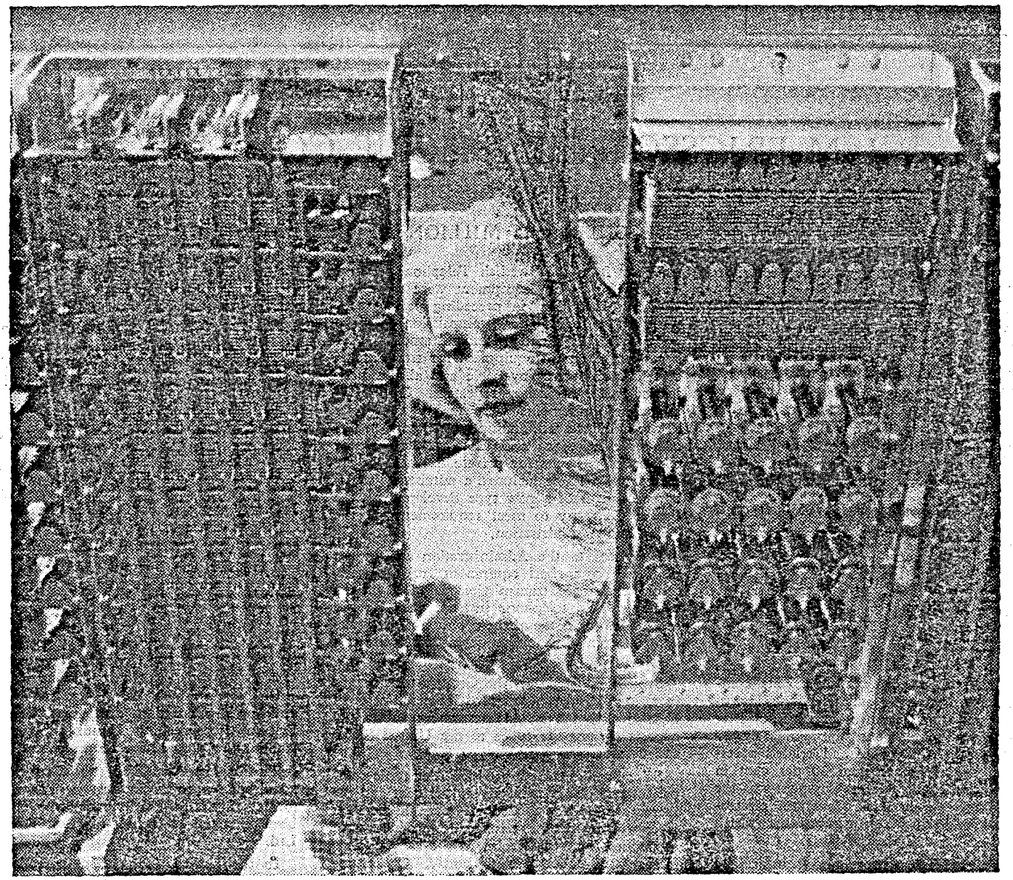
*

The abolition of entertainments duty has no doubt been the major factor in the improvement in the trading profits of Associated British Picture from £3.7 million to £5.7 million in the year to March 31st last. There was disappointment that the ordinary dividend was left unchanged at 60 per cent but the proposed one-for-one scrip issue suggests that shareholders can expect a bigger payment for the current year.

*

Sales of diamonds through De Beers Central Selling Organisation in the second quarter of 1961 amounted to £21.7 million, £2.6 million less than in the first quarter. Nevertheless total sales for the first six months of this year at £46 million compare with £43.7 million for the same period in 1960.

*



Whitbread is to split its £1 "A" units into 5s. units. This was announced at the annual meeting by Colonel W. H. Whitbread who said that lager sales through the company's own public houses had fallen by 7 per cent in the first half of this year. Lager however accounted for only 3 per cent of its total beer trade.

A girl in a million

This Swedish blonde is framed by a million contact springs. Although we have only managed to get about 5000 into the picture, there are actually a million of these springs in the crossbar switches and relays which go to make up a medium-sized automatic telephone exchange. The smooth running of the entire exchange is dependent on the operation of each and every spring. Serious breakdowns in telephone traffic would result if just one spring failed its task. That is why reliability and long life have acquired such urgent importance for the L. M. Ericsson Telephone Company. But first-rate products require first-rate raw materials. Among the materials we supply is nickel-silver plate for contact springs. These springs must never tire and, in fact, they never do — a great number of them have to perform as many as 300 million contact operations during the service life of an exchange. If you place equally heavy demands on your products, perhaps we can help you, too.

SVENSKA METALLVERKEN
EXPORT DIVISION • VÄSTERÅS • SWEDEN

Svenska Metallverken for "Semis"

Close collaboration with an extremely particular clientele has given Svenska Metallverken a leading place among companies specializing in non-ferrous metal materials for springs of the highest quality. Metallverken meets the demands of its clients by putting the results of its research work to careful use in the manufacture of the top-grade material in the springs and in turning this material into strips — straight, tensionless and whose thickness is regulated to minute tolerances.

COMPANY MEETINGS

L M ERICSSON TELEPHONE COMPANY

A SATISFACTORY BUSINESS YEAR

BACKLOG OF ORDERS REACHED $232 MILLION AT THE BEGINNING OF 1961

The eighty-fifth annual general meeting of L M Ericsson Telephone Company (Telefonaktiebolaget L M Ericsson), Stockholm, Sweden, was held on June 5th in Stockholm.

The following is an extract from the circulated annual report of the Board and the Managing Director:

REVIEW OF THE YEAR

For the Ericsson Group, 1960 was a successful year marked by expanding activity and an increasing share of business in the telephone markets of the free world. Orders booked by the Parent Company increased by 53 per cent, from $71.0 million in 1959 to $108.8 million and, for the Group as a whole, by 33 per cent, from $188.6 million, to $250.5 million.* Even excluding Power Equipment Company, the new American subsidiary which became a member of the Group during the year, the volume of orders booked was the largest ever recorded. In terms of product classifications, this volume was distributed in approximately the same ratios as in previous years. Nearly 50 per cent comprised station equipment and telephone instruments; 10 per cent was in other types of telecommunications equipment; approximately 20 per cent was in cable, wire and related accessories and slightly more than 20 per cent in other products. A notable development was the substantial increase in sales of various electromechanical and electronic components which were used on a much broader basis.

Sales by the Group were also substantially higher than during the preceding year, increasing from $165.3 million to $196.8 million and exceeded one billion Sw. kronor for the first time.

Orders received exceeded billings. The Group's backlog of orders, which amounted to slightly more than $174 million at the beginning of the year, increased to almost $232 million the year-end.

SWEDEN

For the Group as a whole, sales to the Swedish market totalled $71.2 million, compared with $68.1 million in 1959.

More than half of the Group's manufacturing operations are in Sweden. Thus production costs in this country are of special concern. During 1960 wages of both factory and office employees were increased substantially. These increases were offset to some degree by a reduction from 50 to 40 per cent in the rate of the national income tax on corporations.

Steps have been taken to effect an immediate increase in the production capacity of the Swedish factories but a scarcity of engineers and skilled labour has been felt.

* Swedish kronor have been translated to US dollars at the official parity at December 31, 1960, of Swedish kr.5.17 to US $1.00.

Orders from the Swedish Telephone Administration for station equipment were somewhat lower in 1960 than in preceding years. Offsetting this, orders for transmission material were substantial and included, among other items, amplification equipment for transmission of television signals by cable and also transistorized voice frequency repeaters. Orders for telephone instruments were higher than ever before and involved, among other items, 85,000 one-piece Ericofons and Ericovox loudspeaker telephones. Orders for private exchanges were substantial. These included a number of crossbar exchanges of a new type developed by the Parent Company to meet requirements of the Telephone Administration.

Deliveries to the Administration during the past year comprised equipment for automatic central exchanges, transmission materials, private exchanges and telephone instruments. Special note should be made of the opening of the international trunk line exchange in Stockholm last May.

Svenska Elektronrör, the Group's tube manufacturing subsidiary, recorded increased sales of high quality tubes and continuing substantial exports of long-life tubes to the United States and Canada.

Sales by Rifa, which produces electronic components, rose approximately 40 per cent and the increase in orders booked was even higher. It is expected that the transfer of production of capacitors from Stockholm to the new Gränna factory will be completed shortly. Concentration on quantity production of high quality standard capacitors has improved the profitability of these items.

EUROPE (EXCLUDING SWEDEN)

Exclusive of Sweden, sales in European countries increased to $58.4 million in 1960 compared with $47.4 million the preceding year.

In Italy, the Group's largest individual market in Europe outside Sweden, sales of Ericsson's crossbar exchanges for use in city, rural and transit exchanges were substantial. Construction of a new telephone factory in Rome is now well under way.

The outlook of Group operations in France has improved. At the request of the French Telephone Authority, the French version of the crossbar system will also be manufactured by two French telephone factories outside the Ericsson Group, on license from Société des Téléphones Ericsson.

Denmark continues to be one of the Group's largest markets for city exchanges based on the crossbar system. During 1960 exchanges of this type serving more than 26,000 subscriber lines were placed in operation, along with a number of automatic intercity crossbar exchanges comprising a total of 3,000 lines. During the year an agreement was reached with the Copenhagen Telephone Company covering the delivery of crossbar central exchange equipment for 100,000 lines.

Automation of the telephone system in Yugoslavia, utilizing crossbar central exchanges, is progressing rapidly. It has been decided to expand this program to include intercity exchanges. The Parent Company will deliver to the Yugoslav authorities equipment that will triple the size of the present telex (teletype) network in that country.

Large orders for transmission materials were received during the year from Italy, Norway and Poland, among other European countries.

ASIA, AFRICA, AUSTRALIA

The Ericsson Group's successful operations in recent years in the most important markets in Asia, Africa and Australia resulted in a large increase in the volume of orders booked during 1960. Although sales have not yet reached the same levels, they rose to $11.6 million last year compared with $6.2 million in 1959.

Cooperation with the Australian Post Office and with Australian companies licensed by Ericsson is proceeding according to plan. Substantial new orders have been received.

Through its Australian subsidiary the Group acquired a majority interest in Trimax Transformers Pty. Ltd. (Melbourne) whose name has been changed to L M Ericsson-Trimax Pty. Ltd.

In the United Arab Republic, technical cooperation with the state-owned telephone manufacturing company, licensed by Ericsson, continued as programmed. In order to speed up expansion of the national telephone system, the U.A.R. Telephone Administration concluded a new agreement with the Parent Company covering equipment for more than 100,000 crossbar lines.

The first Ericsson crossbar exchange in Tunisia was cut over during the year and new orders have been booked from that country.

Operations in Burma and Lebanon are proceeding satisfactorily.

An order was received from Thailand for the delivery of a crossbar central exchange to serve 10,000 subscribers in the capital city of Bangkok. The contract was obtained in hard competition and represents a gratifying acceptance of the Group in a new and interesting market. The Parent Company has established a branch office in Thailand.

Among the new markets opened by the Group last year, Iraq and the Eastern section of New Guinea under Australian administration deserve special mention.

LATIN AMERICA

Most of the nations in this part of the world are beset by more or less serious economic

problems—unfavourable balances of trade, inflation and a lack of foreign exchange—which affect business prospects there. Net sales billed by the Group in Latin America decreased from $23.0 million in 1959 to $22.1 million last year. When the economic difficulties in the area are overcome, a great pent-up demand for telephone equipment will certainly be exposed.

Following negotiations with authorities in Argentina, certain problems relating to the Group's operating companies in that country have been resolved and new service tariffs established, permitting a more efficient service operation. The operating companies involved have ordered equipment from the Parent Company for expansion of the telephone system. The orders include a crossbar exchange for 8,000 subscriber lines in the city of Salta and a 10,000-line exchange for the city of Mendoza.

The Group's activities in the Brazilian market have been favourable but the results have been affected adversely by the strong inflation of the economy. The Parent Company has received an order to deliver crossbar equipment for an additional 15,000 lines in Brasilia. The carrier frequency equipment for the radio link between Rio de Janeiro and Brasilia, ordered at the close of 1959, went into service in April, 1960, prior to the dedication of the new capital city. Additional orders for the same type of equipment have also been booked.

In Mexico the Group installed 16,500 lines of its 500-line selector system and also received orders for crossbar exchanges to handle 6,000 lines and transit exchange for 2,400 lines. Other orders received involved a carrier frequency system for a total of 120 telephone circuits and transistorized carrier frequency terminals for the radio link system for a total of 240 telephone circuits.

In Ecuador, where telephone service in both Guayaquil and the capital city of Quito is being

automated with an Ericsson system, the Group's branch office has been made a capital stock company.

UNITED STATES AND CANADA

Group sales in the USA and Canada totalled $33.5 million in 1960, compared with $20.5 million in 1959. The increase is due almost entirely to the acquisition last May by North Electric Company (NEC) of 96 per cent of the outstanding shares of Power Equipment Company (PEC).

Located in Galion, Ohio, where NEC also has its main plant, PEC manufactures transformers and power supply equipment for computers and telephone exchanges as well as equipment for the electronics industry. Its sales during 1960 totalled $12.5 million.

To adapt the Ericsson crossbar system to American requirements, NEC has developed two distinct systems. One, intended for use in city exchanges, has been installed in 19 communities to date. These installations cover 47,700 lines offering service to 114,000 subscribers.

The Group's Canadian sales company received from Bell Telephone Company of Canada an initial order for five rural exchanges with Ericsson crossbar equipment—which represents a significant breakthrough in this market.

RESEARCH AND DEVELOPMENT

The current growth and progress of the Ericsson Group, as in the past, is due largely to the high technical standards that distinguish Group products, research and development work is therefore pursued intensively. The Group's laboratories are expanded continuously and fitted with the most modern equipment. Activity in this field involves basic research as well as technical applications and materials testing.

During 1960 substantial technical resources of both the Parent Company and North Electric Company were concentrated on electronic telephone systems, with special reference to the electronic exchanges ordered from NEC by the United States Air Force.

A tone code system adapted for local exchanges was perfected during the year as well as a new type of rural exchange. As a result of the development of the tone code system, the latter exchanges now permit more efficient routing of traffic in network groups and better exploitation of the lines between exchanges.

Electronic registers for 500-line selector exchanges were designed during the year and will soon be placed in operation on a test basis.

To meet increasing demand by customers, the Parent Company has expanded into a new field for the Group. This is "telex," or subscriber telegraphy, a convenient and economic method of transmitting written messages between remote points.

Design work on carrier frequency terminals to carry 2,700 simultaneous telephone conversations over one pair of tubes in a coaxial cable has been completed and turned over to the manufacturing departments.

On behalf of the Swedish Telephone Administration, the Parent Company designed and delivered relay-activated, push-button-operated equipment for radio program distribution. Crossbar selectors are used to make the connections.

Development work continues on a system for high-speed transfer of data to electronic computers which are being used increasingly in both civilian and military applications.

A four-wire-terminated telephone with circuits for tone pulsing and voice frequency ringing has been designed for use with electronic exchanges.

Development of so-called reed switches designed for relays has been completed. Svenska Elektronrör has begun production of these units, initially only for the Parent Company.

In other fields and on an increasing scale, the Group's research facilities have been placed at the disposal of the military authorities in Sweden.

PERSONNEL

The large volume of orders booked, which marked operations during 1960, also produced increased personnel requirements in both offices and factories. Despite the high levels of employment created by the upward trend of the economy in Sweden, the Group was able to meet nearly all of its increased personnel requirements.

This was accomplished partly through more efficient scheduling of production in existing and new plants. The number of Group employees in Sweden increased from 14,000 at the beginning of 1960 to 16,400 at year-end. Throughout the Group as a whole, a total of 32,300 was employed at the end of the year.

EXCHANGE LISTINGS

The substantial stock equity which International Telephone and Telegraph Corporation had held in the Parent Company since 1932 was returned to Swedish ownership last Spring. Thereafter a substantial number of the Company's "B" shares were distributed in foreign countries. These shares have been listed on the stock exchanges in London, Paris and Amsterdam.

FINANCIAL STATEMENTS
THE ERICSSON GROUP

In May, 1960, the Group's American manufacturing company, North Electric Company, Galion, Ohio, acquired 96 per cent of the outstanding shares of capital stock of Power Equipment Company, also located in Galion. Inclusion of the newly acquired company in the consolidated financial statements makes them not fully comparable with the statements of the previous year.

The holding company, Teleric Inc., formed a sales company in Ecuador, Teléfonos Ericsson C.A., Quito, with a capital stock of 1.0 million Sucres, and a real estate company in Mexico, Edificio Ericsson S.A., Mexico City, with a capital stock of 2.5 million Pesos.

Through the sale of additional shares at par the capital stock of FATME, Soc. per Az., Italy, was increased from 4,000 million to 5,000 million Lire, and the capital stock of SIELTE, Soc. per Az., from 1,500 million to 2,000 million Lire. These shares have been subscribed and paid for by the holding company, SETEMER, Soc. per Az., Italy, in which the Parent Company holds slightly more than 51 per cent of the stock.

North Electric Company, U.S.A., issued 252,599 new shares of stock with a par value of $10.00 per share. Of this stock issue, which was sold at $25.00 per share, the Parent Company acquired 228,629 shares through conversion of receivables amounting to $5,715,725. This transaction has increased the Parent Company's interest in North Electric Company from 83 per cent to 86 per cent.

In addition several of the Group Companies increased their capital stocks through payment

in cash, conversion of accounts payable to t Parent Company or through stock dividends.

Total income for the Group amounted $202,470,000, an increase of $32,506,000 or per cent over 1959. Net sales of $196,840,0 ($165,340,000 in 1959) exceeded one bill Sw kronor for the first time. The Argentine a Peruvian telephone operating companies, wh accounts are not included in the consolida financial statements, had operating reven totalling $5,800,000 ($4,255,000 in 1959).

After special adjustments totalling $2,127,(($3,105,000 in 1959) and provision for ta totalling $9,579,000 ($8,598,000), the Group h a consolidated net income of $7,668,000 in 19 ($5,926,000). Total consolidated unappropria earnings at December 31, 1960, amounted $33,250,000 ($31,501,000). The Boards Directors of the respective companies propo that a total of $2,084,000 of this amount appropriated to reserves not available distribution.

When considering the consolidated finan position, it should be borne in mind that:

(1) Unappropriated earnings totalling so $8,500,000 will become subject to Swedish ta (in 1961 about 48 per cent) if and when s earnings are transferred to the Parent Compa and

(2) In certain countries currency restricti apply to transfer of dividends.

NOTES TO THE FINANCIAL STATEMENT

Note A—Special adjustments

Swedish tax regulations permit, within cer limits, deduction from taxable income amounts set aside to inventory reserves. the end of 1960, such inventory reserves m in principle, amount to 60 per cent (70 per c in 1959) of the lower of cost or market. Acco ing to accepted Swedish practice, Swedish c panies to a greater or lesser extent avail the selves of this advantage and, consequently, corded net income is affected by changes inventory reserves.

Allocations to reserves for future investme which are tax deductible under certain c ditions, are considered as appropriations earnings and not as operating expenses.

Note B—Cash

Cash includes $16,615,000 deposited on blocked bank account as security for advan received from customers and an extraordin deposit of $2,300,000 on an investment rese account with the Bank of Sweden, repayable December 30, 1961. The Parent Compa deposited $2,089,000 of this amount.

Note C—Notes and accounts receivable—trad

The receivables are shown net of allowan for doubtful accounts amounting to $1,039,0 ($740,000 in 1959).

Note D—Inventories

Inventories are generally valued at stand cost, which approximates cost on a first- first-out basis, not in excess of market. Th are shown net of advance and progress payme from customers amounting to $19,614,0 ($11,938,000 in 1959). In respect of the spec inventory reserves see Note G.

Note E—Long-term receivables

Notes and accounts receivable—trade—a shown net of allowances for doubtful accou amounting to $5,368,000 ($5,681,000 in 195 Other long-term receivables include misc laneous investments in the amount of $1,246,0 ($1,215,000 in 1959).

Note F—Special reserves for accounts receiva

The amounts set aside to these reserves ha

been allowed as deductions from taxable income. The amounts recovered are subject to tax at the rate ruling when the amount is received. (The effective rate of income tax for 1961 is approximately 48%.)

Note G—Special inventory reserves

The Group's Swedish and Finnish companies have set aside inventory reserves, and the amounts so set aside are deductible in computing taxable income for the respective years. To the extent that such reserves are restored to income, they will become subject to tax. (The effective rate of income tax for 1961 is approximately 48%.) See also Notes A and D.

Note H—Reserves for future investments

These reserves were created in accordance with a law enacted in 1955 regarding reserves for the purpose of equalizing fluctuations in business conditions. The use of amounts set aside to these reserves, which are deductible from taxable income on certain conditions, is regulated by the Government. Certain of the amounts provided, a certain portion must be deposited on a blocked account with the Bank of Sweden. In 1960 an amount of $600,000 from the Reserve for future investments was applied by the Parent Company to write down the cost of a new building in Mölndal.

Note I—Capital stock of the Parent Company

2,485,677	Class A shares, par value 35 Swedish Crowns per share	$16,828,000
3,728,512	Class B. shares, par value 35 Swedish Crowns per share	$25,241,000
6,214,189		$42,069,000

All shares carry equal rights to participation in the net assets and profits of the Company. Class A shares are entitled to cast one vote and Class B shares are entitled to cast one 1/1,000 of a vote at Stockholders' meetings.

The 1960 annual meeting of Stockholders approved a proposal by the Board of Directors to increase the Parent Company's capital stock from 163.1 to 217.5 million Crowns through a stock dividend of one new share for each three outstanding.

THE PARENT COMPANY

Orders booked by the Parent Company in 1960 were the highest ever recorded, exceeding 1959 orders by 53 per cent.

Net sales also reached a record level, increasing from $61,713,000 to $66,809,000.

In spite of higher billings, the backlog of orders increased to $140,200,000, compared with $101,500,000 at the end of 1959.

After provision for taxes of $4,681,000, the Parent Company's net income for 1960 amounted to $5,832,000 ($4,466,000).

DISPOSITION OF UNAPPROPRIATED EARNINGS

In addition to the Reserve for contingencies and the General reserve, the sum of $8,883,000, consisting of net income for the year, $5,832,000, and unappropriated earnings, $3,051,000, was available for disposition by stockholders at the annual meeting.

The Board of Directors and the President proposed that the above amount be distributed as follows:

To the Legal Reserve	$ 208,000
To a Special Legal Reserve ...	$1,180,000
To the Stockholders—Sw. kronor 3.50 per share payable against Coupon No. 34	$4,207,000
Unappropriated earnings to be retained in the business ...	$3,288,000
	$8,883,000

The report, the financial statements, and the proposals put forward by the Board of Directors were adopted.

BOARD OF DIRECTORS

Marcus Wallenberg, *Chairman;* Ernfrid Browaldh, *Vice Chairman;* Erik Boheman, *Vice Chairman;* Erik Anderberg, Wilhelm Söderman; Ragnar Woxén, Sven Ture Åberg, *Managing Director.*

DEPUTY MEMBERS

Nils Sterner, Lars-Erik Thunholm, Marc Wallenberg Jr., Stig Ödmark, were re-elected at the 1961 General Meeting.

AUDITORS

Arvid Olsson, Nils Olsson, Swedish Certified Public Accountant; John Dickinson of Price Waterhouse and Co.

BRITISH SUGAR CORPORATION
RECORDS AGAIN BROKEN

The Twenty-fifth Annual Ordinary General Meeting of the British Sugar Corporation Limited will be held on July 25 in London.

The following is an extract from the circulated statement by the chairman, Sir Edmund Bacon, Bt, OBE, TD, JP:—

The yield of 7,215,261 tons from the 1960-61 sugar beet crop was a new record for this country. It was over two million tons higher than the average of the previous five years, and almost one-and-a-half million tons above the highest figure previously recorded in 1958-59.

PRODUCTION FIGURES

Production figures for all our products were the highest on record. Sugar production, consisting of 592,775 tons of white and 311,890 tons of raw, was equivalent to a total output in terms of white sugar of 887,525 tons. The production of dried pulp in all forms was 543,253 tons and molasses produced amounted to 321,507 tons.

With such an enormous crop to deal with it is very gratifying to be able to tell you that the capacity of our factories, as the result of many years carefully-planned capital expenditure, reached a record figure of 50,600 tons per day, which is nearly 1,600 tons per day higher than the figure of last year. Nevertheless, it was only on March 1 that the last factory concluded operations.

During the last few years there have been notable changes in methods of sugar distribution, both to industry and to the home. Bulk sugar deliveries during the year to industrial users were more than five times as great as they were five years ago and continue to increase substantially. The manufacturer is able to save the labour which is required for the reception, storage, and emptying of sugar from sacks. This results in a worth-while reduction in costs to manufacturers taking sugar in bulk. Delivery in bulk also enables us to reduce labour in sugar handling, storage and transport, as a result of which we are able to make allowances to the user.

LIQUID SUGAR PLANTS

During the year we have installed liquid sugar plants at two factories and further silo capacity for 20,000 tons refined sugar is also being provided. We intend to construct more silos for storing sugar in bulk in the future.

Our distribution to the grocery trade has also changed in pattern. Self-service stores which are opening in Britain at a high rate have created an increasing demand for pre-packed goods. In the past five years demand for our packeted sugar has increased by more than a third and in the year under review accounted for 48 per cent. of our total sales. For this reason we have embarked on a scheme to expand and modernise the whole of the Corporation's packeting facilities.

We have a free technical service which provides expert advice to customers on the industrial use of sugar and includes guidance on plant installation and layout. Manufacturers contemplating the use of liquid or dry sugar in bulk will find this service of particular value.

In brief our aim is to provide our many customers with good service, and with products of high quality and wide variety, to meet their needs.

IMPORT OF FOREIGN REFINED SUGAR

In my address to you last year I referred to the import of foreign refined sugar which had affected our sales and those of the refiners. During the year under review I regret to tell you that these imports have increased. They are subject only to a small differential duty which has remained unchanged since it was first imposed in 1928 and thus has little effect as a deterrent. Moreover, nearly all foreign refined sugar sold in this country comes from countries which prohibit the import of sugar from the United Kingdom. The Corporation is in touch with the British Sugar Refiners Association and the Government on the problems involved.

At the last Annual General Meeting questions were raised regarding the possibility of obtaining ministerial approval to an increase in dividend above the rate of 7 per cent and of a possible capitalisation of reserves. Subsequently a committee of the Board had discussions with a Shareholders' Committee, then formed, and with the Ministry by whom the Shareholders' Committee had also been received. As a result it has become clear that in present circumstances Ministers would not approve a rate of dividend higher than 7 per cent. or a capitalisation of reserves. The Board recognise that there is an element of anomaly in the status of the ordinary shares, having regard to the special relationship between the Corporation and the Government and it is the Board's intention to continue to explore the possibilities which, subject to Shareholders' approval might remove this.

GODFREY PHILLIPS, LIMITED

CONTINUED IMPROVEMENT IN RESULTS

DIVERSIFICATION POLICY BEARING FRUIT

IMPORTANT AND VITAL EXPORT BUSINESS

OVERSEAS INTERESTS REVIEWED

MR P. A. GODFREY PHILLIPS EXPRESSES CONFIDENCE IN OUTLOOK

The Fifty-second Annual General Meeting of Godfrey Phillips, Limited, was held on June 30th at the registered office of the company, 112, Commercial Street, London, E.

Mr P. A. Godfrey Phillips, the chairman, presided.

Mr A. H. Grindell, the secretary, read the notice convening the meeting and Mr H. C. Medlam, FCA, read the report of the auditors.

The chairman said: Gentlemen,—You have heard read the Notice convening the Meeting and the Auditors' Report. As the Accounts and Directors' Report have been in your hands for some time with your permission we shall consider them as read. (Agreed.)

The year 1960 showed a continuation of the improvement in results which has been a feature of the accounts during the last five years. There was in fact a greater acceleration in the recovery from the nadir of 1955 than the Board could reasonably have forecast twelve months ago.

The effect of the steps which your Board has taken in recent months in divesting your Company of its unprofitable interests is of course not reflected in the Accounts before you, but it is our belief that this reorganisation of our activities should result in a sounder pattern of trade and this should enable us the better to withstand the various set-backs and disappointments, political and non-political, to which our world-wide interests make us vulnerable.

In view of past factors and those foreseeable in the immediate future, your Board feel fully justified in recommending a final dividend which makes the total distribution for the year the highest in the history of the Company.

GROUP ACCOUNTS

If you will turn to the Accounts before you, you will see that the Group Profit for the Year before charging Taxation was substantially increased to the figure of £811,809 compared with £550,303 for 1959. This increase stems from a higher level of Trading Profits together with increased Exceptional Profits due to a reorganisation of part of our Australian interests, which resulted in a profit on the repayment of Preference Shares held by the Parent Company. As might be expected such an increase in Trading Profits was accompanied by higher Depreciation and Interest Charges, the latter accentuated by an increase in the level of Bank Rate during the Year. After providing £392,436 for Taxation and adjusting for Provisions No Longer Required, there results a Profit of £435,927. Deducting £84,673 for the interests of Outside Shareholders in Subsidiary Companies, there remains a Profit attributable to the Members of Godfrey Phillips Limited of £351,254 compared with £227,116 in the previous year.

Arising from the decision to disengage your Company from the home cigarette trade we sold, towards the end of the year, and on a favourable basis, our Scottish and North of England Wholesaling Company, Thomson & Porteous Limited and the Goodwill of its Associate Company, Fairweather & Sons Ltd., of Dundee, and this transaction gives rise to the appearance in the Profit and Loss Account of the item "Transfer of Development & Contingencies Reserve £50,532." After setting aside £75,000 for Pensions, and making the transfers to General Reserve and deducting Dividends paid, accrued and proposed, there remains to be carried forward to 1961 the sum of £1,766,093—an increase of £110,934.

In the Consolidated Balance Sheet, the most marked change arises in the level of Investment in Current Assets reflecting the increased volume of trade carried on by your Companies during the Year. Fixed Assets have increased by some £424,000 and Trade Investments by £35,000. On the other side there has been no change in the Share Capital but Capital Reserves and Revenue Reserves and Surplus, insofar as they relate to the Stock and Shareholders of Godfrey Phillips Limited, are increased by approximately £24,000 and now stand at the substantial figure of £4,770,000.

PARENT COMPANY'S BALANCE SHEET

In the Balance Sheet of Godfrey Phillips Limited, the increase in the value of Shares in Subsidiary Companies at Cost reflects, in the main, the acquisition during the Year of an additional lithographic business, offset by the repayment of Preference Shares already referred to and by the sale of Thomson & Porteous Ltd.; advances and debits on Current Accounts with Subsidiary Companies, higher by £573,000, again underline the increase in your Group's total trade during the year.

In considering these figures, it will be apparent that in both the Balance Sheet of Godfrey Phillips Limited and that of the Group, the ratio of Current Assets to Current Liabilities shows a reduction on the previous year but your Board are satisfied that the resources available to the Group as working capital are adequate; in fact more has been released this year and still more will become available; part of this will be used to pay off the 7 per cent Cumulative Participating Preference Shares of Cohen Weenen & Co. Ltd., which Company it is intended to liquidate within the next two or three months.

The complexion of this Company has changed during the past year or so, as a result of our general reorganisation; it has a large Cash Balance, surplus to its own requirements, which is on loan to ourselves and is thus available as working Capital but at an uneconomic cost to the Group. In these circumstances your Board do not feel justified in prolonging the existence of this Company, the need for which in the structure of the Group has now disappeared.

The repayment of this Participating Preference Capital out of our improving cash resources will benefit Group results, and the liquidation of the Company will make for internal administrative savings. The Board constantly reviews the working Capital requirements of the Group and for many years past and through our most difficult periods we have enjoyed the most excellent relations with our Bankers, who continue to afford us their best advice and facilities.

HOME OPERATIONS—CIGARETTES AND TOBACCO

In surveying our trading during 1960, it is perhaps logical to start with our operations in the Home Market, more particularly with our Cigarette and Tobacco manufacture for consumption in the United Kingdom. The Agreement with Ardath (UK) Limited which was announced in September last and which came into effect on February 1st this year, will be fresh in Shareholders' minds and we have recently completed a virtual withdrawal from the Home Trade, by concluding an arrangement with Messrs Gallaher Limited to whom we have sold the Home Trade rights to the brands of Abdulla & Co. Ltd. Your Board are confident in the determination and ability of Gallaher Limited to promote the sales of Abdulla in the United Kingdom and this should indirectly help our very valuable Export Trade in these brands, and consequently be of great benefit to the Group.

There are many and varied measures of reorganisation which arise as a result of these arrangements including adjustments to our manufacturing capacity and to the level of our leaf stocks and packing materials, and a realignment of our plant and equipment requirements; these are proceeding and it is hoped will be completed by the end of the year.

You will, I am sure, share with your Board very great regret at the considerable number of employees who have become surplus to requirements; these were mainly factory staff and work people, many of whom had served the Company and your interests loyally and faithfully for a number of years, and we believe that the pensions and leaving gratuities which have been granted to them are fair and proper. The cost of these pensions and gratuities will give rise to exceptional charges in the current year; this will, however, not be regarded as entirely chargeable against Trading Profits but more properly to be met in part from our considerable fund of reserves.

VALUE OF FREEHOLD PROPERTIES

The release of investment in Current Assets consequent upon our reorganisation is gradual, but should become fully effective by the end of this year. Certain leasehold property has already been given up and, as already announced, some space will be freed in the Commercial Street factories and plans for its use are well advanced. Much of this space will be taken over by our expanding paper-back interests, the warehousing and storage requirements of which are considerable. We are fortunate in the timing of this reorganisation and in the availability of this much needed space.

I should perhaps take this opportunity of clarifying a matter which has through lack of understanding been somewhat mis-represented in certain sections of the Press: namely the value of our freehold properties and the capital profits which it has been wrongly assumed might be made on their sale. First let me make it clear that there will be no factories in operation which are not being put to profitable use and that such space as might be released, entirely as a result of our Home Trade reorganisation, will be relatively limited in both scope and value. It is too easily overlooked that the Group Balance Sheet figures for freehold land and buildings include not only the considerable factories essential for our diversified interests at home but also our very extensive factories in India, Australia and New Zealand all of which are vitally necessary to the maintenance of your Group's profits.

Of the Group figure of one and three-quarter million pounds for freehold land and building, Stepney freeholds represent only £650,000 and the 250,000 square feet approximately of working space that they provide house our manufacture, despatch and distribution for Export, our still not inconsiderable manufacture for home consumption, our bond storage for leaf tobacco, and all administrative and research services for the whole Group. They also have to cater for the increasing requirements of our paper-back trade to which I have referred. I hope that this brief exposition will make for a clearer understanding of the position.

CONTRIBUTORY PENSION SCHEME

The circumstances of our withdrawal from the Home Trade and the consequent reduction in the number of our employees, the new provisions of the National Insurance Act which came into force in April of this year, and the need for an established uniform Scheme to provide Pensions for our employees and those of our growing Subsidiary Companies at home, decided your Board, in the early part of this year, to introduce a Contributory Pension Scheme. In the past, pensions for retired employees have been charged against current profits but from time to time and in years of buoyant profits sums have been set aside to establish a fund to meet the very considerable liability for back service which has accrued. This fund, after setting aside a further £75,000 out of the Profits for the Year under review, now stands in the Group Balance Sheet at over £350,000, and in the Balance Sheet of the Parent Company, where the greater part of the liability lies, at £260,000. These sums, or the greater part thereof, are thus available for the establishment of the Scheme, which adequately takes care of the pension needs of all those sections of the Group not hitherto covered by a funded scheme.

Final details as to how best to finance the Scheme are now being worked out but I am happy to tell you that by the end of the present year full provision will have been made to cover the pension needs of all the Group's employees. Adequate arrangements in this respect have been in operation for some years in our main overseas Subsidiary Companies, and in the Year under review the decision of the Indian government authorities to regard staff gratuities as a legal liability has resulted in the transfer of some £52,000 from Reserves for this purpose.

Your Board is confident that the arrangement it has been able to make to reorganise the whole responsibility for pensioning its employees will receive your approval, not only for its effect on general morale in the Group amongst its workers and staff, but also for its stabilising effect on the cost of providing for this liability against annual profits in the future.

A VERY REAL INTEREST

Before leaving our Cigarette and Tobacco Trade at Home and the matters arising from the arrangements we have made to disengage ourselves from this Trade, I should remind Shareholders that as a Group we still have a very real interest in the manufacture and sale of our brands by Ardath (UK) Ltd., and by Gallaher Limited, first through the Royalty payments which will be made by the former under our Agreement and second from the benefits which can accrue to our Export Trade from a healthy trade in all these brands in the United Kingdom.

I mentioned that the recent sale of our Abdulla brands amounted to a virtual withdrawal from the Home Trade, the exception being our Boars Head Tobacco, manufactured and marketed by Pritchard & Burton Limited. This self-contained Company has held its own in a fiercely competitive field and is making a most valuable and satisfactory contribution to our profits. Together with Morris & Morris and Melbourne Hart it represents our remaining link with the Retail Tobacco Trade in this country and it is our hope that it may long continue to do so.

EXPORT TRADE

I now turn to our valuable Export Trade, which constitutes the bulk of our proprietary Cigarette manufacture in these factories. This trade is particularly vital to us, not only from its profitability and the fact that exports to a particular market are frequently the forerunner to domestic manufacture of the brand within the market, but also because it enables management and staff to keep abreast of technical developments in the manufacture of our products and to maintain the necessary knowledge and experience to enable us to advise and guide our manufacturing Subsidiaries overseas.

It should be appreciated that the growing consumer demand for tobacco goods in overseas markets is more than being met by protected local manufacture and the total of tobacco and cigarette exports from this country is at present on the decline; furthermore the constant increases in tobacco duty involve extra finance and so adversely affect the cost of manufacture for export, a factor which Chancellors of the Exchequer appear to overlook. Our staff engaged on this side of the business are therefore particularly to be congratulated in not only keeping up but actually expanding our Export sales. I am confident in their ability to maintain this trend.

IMPORTED CIGARS

Our Subsidiaries engaged in the imported cigar trade had yet another year of most successful trading. We are fortunate in possessing the importing rights to brands which have established themselves in the forefront of the wide range available to the cigar smoker. Hoyo de Monterrey, Larranaga, Partagas and Punch are names famous for their consistent quality and the pleasure they afford to the smoker and these brands continue to enjoy as great a demand as ever before.

Unfortunately there must be some concern for the continuity of supplies from Cuba in the future, but we are well served by our supporting Jamaican brands, Jamavana, Larana, and Macanudo which are recognised as among the finest available from Jamaica and are more within the reach of the pocket of many smokers.

PRINTING AND PUBLISHING

I will turn now to our remaining operations at home: our printing and publishing interests. These are a comparatively new side of our Group's business and it would be as well to keep them in their proper perspective and not to give them credit for an undue proportion of the increased profits that we are now enjoying. We occasionally read headlines and comments which refer to the Company as a publishing company; this is wide of the mark for we are still predominantly a Cigarette and Tobacco Manufacturing Group. In terms of investment and profit contribution our more recently acquired printing and publishing Subsidiaries form a relatively minor part of our total business.

In deciding to diversify, your Board pursued a policy of acquiring young businesses, ripe for development and expansion, and did not go into the market for big profit earners at what would have inevitably been a high cost of acquisition. This policy seems to be bearing fruit and we already have a nucleus of growing and developing businesses, the total investment in which barely exceeds a million pounds, and which are now making a most useful contribution to our total profits. It is, however, in their expansion and development that we are mainly interested and all our actions have been directed to nurturing and fostering them so that in due course they become big profit earners in their own right. To this end we have recently taken material steps to strengthen our management, so that not only have we provided the most suitable factories and equipment but also experienced brains.

Our lithographic printing Companies and their associated undertakings are making steady progress and we are gaining in experience of this trade every day. During the year, as I reported at this Meeting a year ago, we acquired a further lithographic Company, H. L. Vickery Limited and this has considerably enhanced the profits of this section of our business. We now have a solid stake in this industry and some degree of flexibility also, and your Board are confident that these investments will prove worthwhile and should in time make a major contribution to our profits.

GREETING CARD INTERESTS

Our Greeting Card interests are similarly placed; in an expanding industry our Subsidiary Company, Forget-Me-Not Cards Limited, is increasing its trade steadily; it has gained in stature and is developing along lines which should ensure that it remains a growing and profitable investment. It should, however, be remembered that our expansion into these fields was designed to take advantage to the full of our existing good relations with trade customers and of our Group organisation and facilities, and the true advantages which stem from these diversifications are often cloaked from view. This is perhaps especially true of our paper back business, which differs from our other recently acquired interests in that we started it ourselves from scratch.

When we launched Four Square Books Limited some three or four years ago, we did so on the basis of our acceptance in the Trade through the considerable Goodwill which we enjoy as a Cigarette and Tobacco manufacturer, and of the wide and powerful knowledge that we have of Export markets and overseas trading generally. Furthermore, we recognised that a useful part of our existing Group selling and distribution forces could be brought to bear towards the establishment of another paper-back

line in a strongly competitive field. This we undoubtedly achieved in a short space of time but without, as has to be expected, any marked degree of profitability.

ACE BOOKS

Towards the turn of the year we had an opportunity of acquiring a further series, Ace Books, together with its experienced management and this marked a step forward towards the earning of profits and the strengthening of our interests generally. Shortly after this acquisition we attracted the attention of the New American Library of World Literature Inc., who entered into negotiations with us aimed at a joint association for the promotion of paper-back books in the United Kingdom, the Commonwealth and the English speaking world. An Agreement has now been concluded, on a favourable basis, whereby we have parted with 51 per cent of our paper-back interests, although we have retained responsibility for the day-to-day operations and business of these Companies.

We shall continue to be closely concerned with the administration and management and our resources for warehousing, despatch and delivery of the product will be used to the full. In short, there is very little outward evidence of any change but we have all the advantage of the knowledge and advice of our American associates in addition to the usual trading benefits which stem from such an arrangement. Your Board firmly believes that this association will have considerable medium and long term benefits for your Company and that jointly we shall make more and quicker progress towards a much larger share of this rapidly expanding market.

FIGHT AGAINST PORNOGRAPHY

Some adverse Press criticism of the so-called American invasion of the paper-back industry has recently been evident. There are undoubtedly grounds for sustained objection to the importation of books of a pornographic variety from less reputable American publishers and we shall unite with all other British publishers to fight this threat. There is no intention on the part of our Associates, or of ourselves, to have anything to do with this type of book, nor is it any part of our plan to flood this market with over-runs or reprints of American editions.

The New American Library, publishers of Signet and Mentor books in the USA, and whom the Trade know to be foremost among American paper-back publishers, has a reputation for quality of production and range of subjects surpassed by none and the availability of their titles in the field of fiction, education and the classics should result in nothing but good for the Trade and the reading public alike.

EXECUTIVE MANAGEMENT

In all these expanding new interests executive management is the key to success and to the rate of our progress. As I have intimated, we have recently taken steps to fill urgent gaps by recruitment from outside where necessary. We believe that we are now adequately staffed at the top and that replacements should in future be available from within the ranks of the Group.

INDIA

I now turn to our overseas Companies, of which pride of place for the year under review must undoubtedly go to our Company in India.

Once again it has achieved a most satisfactory increase, both in trade and profits, and in the present year this substantial improvement is being maintained, although consequent upon this year's Budget profit margins have been cut, despite which we have reasonable hopes of yet a further record result.

I have in the past been cautious when forecasting results in that country for political and economic considerations can, at very short notice, seriously affect and even reverse the trend of our trade. Once again our special thanks are due to the Management of our Indian Company who fortunately are young enough to have many years of activity ahead of them to our great benefit.

AUSTRALIA AND NEW ZEALAND

In Australia, where spectacular advances were made in 1959 as a result of the success of our new brand, "Viscount" and of the merger with the International Tobacco Company, continued progress was made which, if not so spectacular in terms of profit, was none the less highly satisfactory. "Viscount" has continued to expand its sales, supported by a weight of advertising which should ensure the steady expansion of our business and our profits in this important market.

Before leaving the subject of Australia I should like to place on record the Board's appreciation of the great services rendered by Colonel F. H. Wright, OBE, VD, to Godfrey Phillips Holdings Ltd., whose Chairman he has been since its formation in 1951 until his retirement this year. I am glad to be able to report that he is remaining on the Board and I am confident that Mr J. S. Tait, QC, who has taken over the Chairmanship, will prove a worthy successor.

In the neighbouring Dominion of New Zealand, our brands have continued to find favour and our leading line, D. R. Filters, has forged further ahead. This is a country in which your Group has always enjoyed great goodwill and we are eagerly looking forward to the time when economic conditions there will allow some relaxation of import restrictions, thus enabling us fully to meet the at present unsatisfied demand for our imported brands.

RHODESIA

In Rhodesia the reorganisation of our leaf interests to which I referred last year, has resulted in a steady year's trading, the benefits of which under the terms of the financial structure, will accrue during the current year. Our friends and associates in this venture, Dibrell Brothers of Danville, Virginia, have put a great deal of effort and experience into this project which should bring excellent results in the future.

PAKISTAN

Before leaving our overseas interests, I should like to advise you of negotiations which have been going on for the past few months with the Premier Tobacco Company of Karachi, Pakistan. For many years we have had registered in Pakistan a Subsidiary Company which has never traded but which has been ready at the opportune moment to take advantage of the very considerable Goodwill attaching to our leading brands in India, much of the advertising and propaganda for which must flow over the borders into neighbouring Pakistan.

Premier Tobacco Company have approached us to take a substantial but minority interest in their Company, which is highly successful with increasing sales of its own brands. This is a rapidly expanding and still unsatisfied market and Premier has the sanction of Government to increase its manufacturing capacity with the help of foreign capital, and is particularly desirous of manufacturing our leading Indian brand under license. Negotiations to this end are well advanced on the basis of an investment by ourselves in terms of cash, plant and machinery.

It was a fortunate coincidence that the approach from the Premier Tobacco Company came shortly after the decision to withdraw from the Home Market in that much of the plant and machinery required for Pakistan can be supplied immediately from our own resources without the long delays involved in waiting for delivery of new machinery. We are also in a position to provide expert technical assistance, of which Premier are in need, and your Board are of the opinion that this association will be a profitable one and that we are acting wisely in obtaining a foothold in this developing country.

THANKS TO THE STAFF

Once again I should like to thank all our employees, staff and management, at home and overseas, all of whom have contributed to the better results now before you. Special thanks are due to our management and staff here at home, to whom the past few months of our reorganisation have been particularly trying and difficult.

Since I last addressed you a year ago much has happened which is perhaps unusual and outside the ordinary conduct of the business; many have been the discussions, arrangements and negotiations and they have borne heavily on my colleagues who, as always, have given me throughout their help and loyal support.

CURRENT YEAR

In conclusion, I will turn for a moment to the year 1961. Figures which are so far available indicate that we should have another good year and results should be no less favourable than those now before you. We shall complete our reorganisation here at home and will pursue the steady development of our printing and publishing activities, although too much must not be expected too soon of the latest and more recent arrangements which we have been able to make.

Given a continuation of our successful overseas trading and in the absence of any circumstances not foreseeable at this moment, my colleagues and I confidently hope to meet you in a year's time with equal satisfactory results.

ADOPTION OF REPORT AND ACCOUNTS

I now propose that the Report of the Directors and the Balance Sheet be received, approved and adopted; and that the payment of Dividends of all classes of Preference Shares and the proposed Dividend on the Ordinary Stock and Shares and the allocations as shown in the Profit and Loss Account be approved and confirmed.

I will ask Mr D. V. Littlejohn to second the Resolution.

Mr D. V. Littlejohn, TD, FCA (Joint Managing Director) seconded the resolution and it was carried.

The retiring directors, Mr A. M. Borthwick, MC, TD, and Mr C. M. Paynter, having been re-elected, the proceedings terminated with a vote of thanks to the chairman, directors and staff.

REPORT AND STATEMENT OF THE CHAIRMAN

Remarkable Growth of Hawker Siddeley Group

In 25 Years Group has Increased Turnover from £6 million in First Year to £458 million in Last 17 Months

SIR THOMAS SOPWITH REVIEWS WORLDWIDE AVIATION AND INDUSTRIAL ACTIVITIES

Reports U.K. Trading Profit £29 million; Highest Ever Order Book; Exports £56 million
Group writes off £15 million on Civil Aircraft Design and Development
Urgent Plea for British Space Programme, "It's Now or Never"

his is our Silver Jubilee year. Twenty-five years ago I reviewed e first year of operations for the Hawker Siddeley Group. ur gross sales then were £6 million.

Today, 25 years later, I am glad to report gross sales of £458 illion for the 17 months period covered by our Accounts, a gure roughly equal to £324 million for a comparative 12 onth period. I think it can be fairly said that this is a bstantial record of growth.

From this year's U.K. trading profit of £29 million we have written off expenditures on Design and Development amounting to more than £15 million. This represents only a portion of the money expended by your Group on civil transport aircraft, the AWA Argosy, the Avro 748 and the new de Havilland Trident.

Taking our revenue for the 17 months at £458 million, equal to £324 million for 12 months, this shows a gratifying increase of £64 million over our last annual report.

The Group export record continues to grow. In the period of these Accounts we have exported from the United Kingdom about £56 million and our export drive is being intensified around the world.

GROWTH

This has been another period of remarkable growth for the Hawker Siddeley Group. Since my last report we have acquired the de Havilland and Blackburn companies, thus supporting the Government's policy of concentration in the aircraft industry. I now sincerely hope that the Government will do their part and support us.

AVIATION

Hawker Siddeley Aviation has a proud record which we must maintain. We now have the capacity and the experience to produce any kind of aircraft, military or civil, which may be required.

Our range of aviation products is probably the widest of any company in the world, from the small, light aircraft to large jet airliners and powerful nuclear bombers.

We have written off £15 million in our current Accounts on Design and Development for civil aircraft, but we cannot afford to continue to absorb such heavy expenditures. Private venture projects involving this kind of Development expense are essential if we are to maintain our position in the world civil air transport market. But we can only carry forward these projects if we get continuing and substantial Government support.

INDUSTRIAL

On the Industrial side of our activities we have had a good year. Our turnover and profits have increased and the business shows definite signs of further expansion. Export orders increased significantly over the previous year in all markets despite increasingly severe competition.

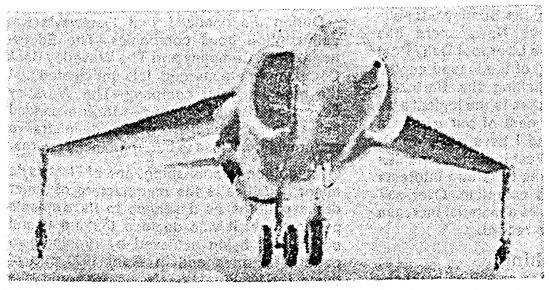
CANADA

The first signs of economic recovery in Canada are now becoming apparent but it will be some time before the Canadian economy is again in a healthy condition. In spite of current difficulties, our long term confidence in Canada remains unshaken and our companies there are tackling their problems with vigour and imagination.

SPACE

Russia and the United States have put men and satellites into Space, but this country is still debating whether or not we should enter this field of endeavour for which our national skills are so admirably suited. As a Company we have done everything we can and we are now awaiting the vital policy decision from our Government. It is now that Britain must decide to embark on a major space programme—or never!

Communications satellites should be the first general peaceful use of space and the returns from this application will amply justify the investment in developing the necessary capital equipment.



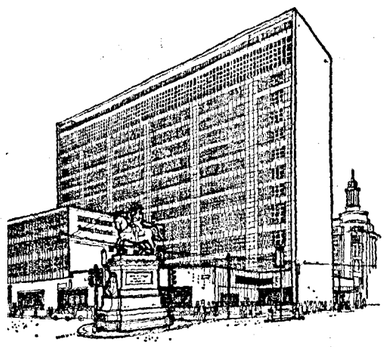
Our whole technical future is inextricably bound up with our future in Space and, to me, it is unthinkable that this nation will stand aside from Space development and allow all its potential advantages to evaporate and disappear by default.

CONCLUSION

Your Group as a whole faces the future with confidence.

Our order book at December 31, 1960, stood at £366 million, a higher figure than ever before.

We have gone through a strenuous period but the Group has emerged in strong and vigorous health. Indeed it has become one of the leading Companies in the world and one of the most powerful, well poised to attack the future.



The Hawker P1127 Vertical Take-Off Military Strike Fighter, first of its kind in the world, has a great future with its derivatives.

FINANCIAL HIGHLIGHTS

AUGUST, 1959—DECEMBER, 1960—17 months

	£
Sales : U.K. Group	314,000,000
A. V. Roe Canada Group	144,000,000
	£458,000,000

	£
Order Book at 31st December 1960	366,000,000
Trading Profit : U.K. Group	29,058,000

The Daily Mirror Newspapers Limited

An important and eventful year

New acquisitions at home and overseas

Statement by the Chairman, Mr. Cecil H. King, at the Annual General Meeting of The Daily Mirror Newspapers Limited 5th July 1961

Before reviewing the year's results I would like to take this opportunity of welcoming three new directors to your Board. Mr. C. B. de Launay is joint managing director of the Kelly-Iliffe Group and Mr. F. J. Rogers has taken the place of Mr. E. M. Gray as director in charge of production and personnel. More recently we invited Mr. P. G. Walker, managing director of Albert E. Reed & Company Ltd., to join the Board as representing our paper interests.

As you will be aware, the financial year which ended on 28 February has been one of the most important and eventful in the history of your company. The developments begun in the year will have far-reaching consequences and have already led the Daily Mirror Group to the forefront of world publishing.

The profit before taxation of the Group as a whole was £4,330,696, a reduction on last year of £1,228,027. The decrease was due to a number of factors, the most substantial of which was the very heavy expenditure incurred in promoting the Group's weekly and monthly magazines. The costs of running in new plant at our printing establishments and at the newsprint mill at Gravesend have also played their part in the reduction of trading profit. In addition, there has been an all-round increase in operating costs more than off-setting the increased volume of Group revenues from advertisements and sales.

High Daily Mirror sales

Turning now to the constituent parts of the Group and its associates, the Daily Mirror newspaper, the robust heart of our enterprises, has, under all the circumstances, had a satisfactory year. Revenue from advertisements in the Daily Mirror has surpassed all previous totals and sales of the newspaper have remained exceptionally high. The price of the paper was raised by ½d. to 3d. just after the end of the financial year and it is a measure of the loyalty of our readers that this has had only a minimum effect on sales.

Amongst newspaper staff changes which took place in the spring of this year, Mr. J. S. Nener, the editor of the Daily Mirror for eight spectacular years, relinquished the post on his appointment to the Board of the Sunday Pictorial. Mr. L. A. Lee Howard took over as editor of the Daily Mirror.

Other newspapers

Your sister newspaper, the Sunday Pictorial, which is engaged in a hard-fought circulation battle with The People, had a less successful trading year due in the main to increased promotion and production costs. The price increase of January will go some way to restore profit margins.

Of our other newspaper interests, where we share control with the Sunday Pictorial, Reveille has enjoyed a year of increased profit with sales well maintained.

In Scotland the Daily Record is making excellent progress. When we took over in 1955 the average sale was under 350,000. Since then a much improved paper assisted by a continuous circulation drive has added over 150,000 new buyers and we now have sales in excess of 500,000 copies daily. The Sunday Mail, Scotland's home produced Sunday newspaper, has maintained its sales with well above 600,000 copies a week. I have great faith in the future of our Scottish enterprise, the profits of which, in the current year, are benefiting from the recent price increase to 3d. of the Daily Record.

Newspapers overseas

Our newspaper interests are by no means confined to this country, of course, and one of our most flourishing associated companies controls five newspapers in three territories of West Africa. The name of the company, West African Newspapers Ltd., was changed to Overseas Newspapers Ltd. during the year to embrace a widening sphere of operations. An important step has been taken of moving into the Caribbean area with the acquisition of the two largest papers in British Guiana—the Guiana Graphic and the Sunday Graphic. More recently Overseas Newspapers has acquired jointly with The Liverpool Daily Post and Echo Ltd. over 62% of the issued capital of the company publishing the Barbados Advocate. The West Indies is the logical area for the further development of our overseas publishing activities and I have every confidence that both these West Indian companies will be valuable additions to Group interests when reorganization is complete. Overseas Newspapers' profit shows a material increase over the previous year's record.

Periodical publishing

I would like now to turn to periodical publishing, which exerts a very big influence on the fortunes of the Group. Fleetway Publications, responsible directly for 29 women's, children's and general periodicals, had a poorer year. This was due principally, as I have said, to the heavy expenses of promoting women's magazines.

During the year under review Fleetway launched two new publications and closed down three. First of the new publications was Honey, a full-colour monthly for younger women which has already proved its worth to advertisers. Fleetway's strong position in the children's market was further confirmed in May last year by the launch of Buster, an exceedingly popular weekly for young children, and, in the current year, by a third publication entitled June. June, a colour weekly for girls, is a companion to Princess, which was launched in January 1960 and has been a marked success from its first issue.

Women's magazines

Notable amongst our women's weeklies is Woman's Mirror, which was put into magazine format and full colour in the autumn. Woman and Home, already the best-selling women's monthly in Britain, has substantially increased in sales and Woman's Journal, supreme in its quality market, has attained its highest level for seven years. One of the early results of our acquisition of Odhams Press in the current financial year, will be the merging of Fleetway's Woman's Illustrated with Odhams' Woman in September. By this amalgamation and other means Fleetway may be enabled to reduce costs and achieve more satisfactory results.

During the financial year Fleetway's two subscription book companies—The Educational Book Company and The Waverley Book Company—were merged. It is anticipated that the resulting joint company—The Waverley Educational Book Company—with an expanded sales force coupled with administrative economies, will lead to better financial returns.

In addition to publishing, one of Fleetway's minor activities is the manufacture of paper dress patterns as a service to its women's publications. It was decided that no useful object was being achieved by running two pattern factories and in April 1960 one of these, the Weldons' operation, was sold as a going concern.

The three subsidiaries concerned with printing and book binding—Percy Brothers, Noakes Brothers and the Fisher Bookbinding Company—all had a satisfactory year's trading. Their turnover is, however, small compared with other Group operations.

Kelly-Iliffe Group

Fleetway's technical publishing is the responsibility of the Kelly-Iliffe Group, an 80% owned subsidiary. The Group underwent a structural reorganization last summer. The name of Kelly's Directories Ltd. was changed to Kelly-Iliffe Holdings Ltd. and the directory publishing side of the business was transferred to a new subsidiary company named Kelly's Directories Ltd. Thus Kelly-Iliffe Holdings Ltd. became a holding company co-ordinating the activities of three subsidiaries—Associated Iliffe Press Ltd., Kelly's Directories Ltd., and Thomas Skinner and Company (Publishers) Ltd.

These publishing concerns were added to during the year by the acquisition of Practical Press Ltd., which publishes nine periodicals mainly for the catering trades. I am pleased to tell you that Sir Bracewell Smith, who was chairman of this company at the time of the acquisition, has agreed to continue in that capacity. A further addition to the Group was made by the purchase of The Statist, an old-established economic journal, which, with Mr. Paul Bareau as editor since April, is already widening its influence.

Thomas Skinner and Company (Publishers) Ltd., which, as you know, owns the popular financial weekly for investors, the Stock Exchange Gazette, is also responsible for the famous ABC transportation time-table series and a new printing factory is being planned for their production.

At the close of the year under review the companies of the Kelly-Iliffe Group were publishing 46 trade, technical and specialized journals and well over a hundred directories and year books. Amongst them is a new Associated Iliffe Press monthly, International Plastics Engineering, which was launched to meet the world need for a journal catering exclusively for the manufacturer and user of plastics machinery.

Trade and technical journals are amongst our soundest publishing enterprises, performing an important service to industry and maintaining a high and growing level of profit. In the past year the Kelly-Iliffe Group made a record trading profit of over £1½ million—each of the three main operating subsidiaries exceeding its previous best result.

Acquisition of Odhams' Press

Prominent amongst the year's activities were the events leading up to the acquisition of Odhams Press Ltd. in March of this year. The Odhams publishing combine includes, in addition to the newspapers and periodicals produced from its headquarters in Long Acre, the extensive publishing activities of the George Newnes Group and the Longacre Press. Its technical publishing companies include Tothill Press, Temple Press, and the National Trade Press Group.

Odhams also owns a large book publishing business, a well-equipped printing establishment at Watford and an out-door advertising company, in addition to an interest in a number of profitable trade fairs and exhibitions.

The Odhams Group has a great flair for magazine publishing and I welcome its expertise. Odhams' Woman and Ideal Home, each commanding a huge market of readers and advertisers, are outstanding amongst many examples of good printing married to skilled journalism. Almost equally successful is Newnes' Woman's Own, running second to Woman in the women's field. The two "do-it-yourself" magazines, Practical Householder and Homemaker, are further successful properties.

The Odhams Group controls some 120 British weeklies, monthlies and quarterlies in all, amongst which it is not invidious to single out such contrasting titles as Country Life, Tit-Bits, Amateur Gardening and Wide World Magazine. Some indication of the variety of the Group's trade, technical and specialized publications may be gained from mention of The Contract Journal, Nuclear Engineering, Hairdressers' Journal, Electronics Weekly, Plastics and The Farmers Weekly, amongst a great many others.

Odhams' newspapers

The acquisition of the Odhams Group brought to us, in addition to its large family of periodicals, the three Odhams Press newspapers. The People, the Daily Herald and The Sporting Life.

It is no secret that while The People is a very sound business property, running second in the competitive Sunday market, the Daily Herald is not. It has, in fact, lost considerable sums of money in recent years, largely because it cannot attract sufficient advertisement revenue. No action of ours can speedily reverse that situation. Nevertheless, the linking of the Herald with the Daily Mirror Group, the chief publishers of left-wing newspapers, presents opportunities for the Herald.

We intend to bring to bear on it the full measure of our resources. As I have already announced elsewhere, under our guidance and in association with the Trades Union Congress, its future is assured for a much longer period than might otherwise have been the case. It will have editorial freedom, as a responsible political journal, to speak out strongly for the left to men and women in all walks of life. I look forward to it becoming one of the most quoted dailies in the country.

Integration of Odhams

Since the transfer of Odhams Press was completed just after the end of the financial year Odhams' operations play no part in the accounts before you. The integration of this complex group into our already extensive network of companies is a huge operation and is bound to take some time. We must expect some changes in company structure. We can be certain, however, that under the direction of Mr. Hugh Cudlipp, who became chairman of Odhams Press Ltd. last month, the company will play a vigorous role in the future of the Daily Mirror Group.

Pulp and paper manufacture

Turning now to our interest in pulp and paper manufacture, you will know that the direct control of the Imperial Paper Mills in this country and of the Anglo-Canadian Pulp and Paper Mills in Canada has been transferred to Albert E. Reed and Company Ltd. The transfer involved a share exchange and gave the Daily Mirror company a much enlarged holding in the Reed Paper Group, in whose operations we have had an interest for many years. Reed is now one of the major paper-producing companies of the world.

As a consequence of tariff reductions on many imported papers, prices in the home industry have been reduced. Reed's future is fortified, however, by good management and by diversification both at home and overseas. Reed's overseas interests include participation in the further development of the Tasman Pulp and Paper Company Ltd. in New Zealand, and the acquisition of a large group of companies in Australia. In Europe a joint company has been set up to build a carton board mill in Italy. Reed is one of the largest manufacturers in Europe of corrugated cases and the new pulp and paper mill in Norway for the production of corrugating medium is expected to come into operation in the autumn of this year. Reed is well established to meet the growing opportunities in the international paper and packaging markets. The Reed Group has emerged as a world-wide partnership producing pulp, paper, board and packaging materials in the four main trading areas of the world: Commonwealth, European Free Trade Area, Common Market and Dollar Area.

Associated Television

Our dividend income from the television programme producing company, Associated Television Ltd., continues at the high level of last year. Television advertising in Britain reached a new peak in 1960 of £77 million, an advance of nearly one third on the £58 million spent on this medium in 1959. In his budget of April this year the Chancellor of the Exchequer saw fit to impose a tax of 10% on television advertisements. While it is too early to make forecasts about the year ahead the profits of ATV's financial year ended 30 April are not affected by it. ATV enjoys its full share of the industry's prosperity and, viewed in association with the company's recent moves towards expansion abroad, we can regard its future development with the utmost confidence.

Future prospects

Arising from the very considerable growth and development of our Group you will wish to know something of our prospects for the future. Although it is always unwise to speculate about the trend of costs, I can safely say that expenditure on two of the items I mentioned at the beginning of this review, namely publicity and the running in of new plant, will be reduced in the current year. Furthermore, profit margins will benefit from the rise in newspaper prices and from operating economies made possible by the Group's new acquisitions. Taken together, these factors should lead to substantially improved results.

New premises

A fitting close to the year's events was provided by the occupation of our splendid new premises in Holborn Circus. We are proud of this building, whose imposing structure has become one of the most colourful features of the central London landscape. Within the building new techniques in newspaper production mean that we can operate with a speed and efficiency unmatched by any other newspaper organization.

Special regard has also been paid to working conditions and amenities for the staff employed in the building. To them and to all others at home and overseas who assisted in the manifold activities of the year, I wish to express my sincere thanks.

THE STANDARD BANK
OF SOUTH AFRICA LIMITED
ANNUAL STATEMENT BY THE CHAIRMAN

The Annual General Meeting of The Standard Bank of South Africa Limited will be held on July 26th at 10 Clements Lane, London, E.C.4.

The following is an extract from the statement by the Chairman, Sir Edmund Hall-Patch, GCMG, which has been circulated with the report and accounts:

During the past year developments throughout Africa have been taking place at a swift pace and, owing to increased public interest, are being amply covered by the main organs of public opinion. From this wealth of information, sometimes contradictory in character, the question doubtless arises in shareholders' minds as to how, in general terms, these developments affect the Bank in which they have a stake. I thought this year that I would attempt to answer this question rather than hold to the pattern of the Statements made in previous years.

Last year I stressed dangers then all too apparent: on the one hand the danger of trying to advance more quickly politically and socially than economics will allow; on the other hand the danger of refusing to advance at all, even when it is evident that such refusal is undermining confidence and having a damaging effect economically. Events since then have shown even more clearly that these dangers are very real and still persist. Inevitably the pace of economic advancement has been retarded.

EXTENT OF RECENT ECONOMIC ADVANCE

Despite present uncertainties, great economic strides have been made, and should not be forgotten. For example, in South Africa mineral production has climbed in value during the last five years from £290 million to £415 million, and gold sales from £180 million to £290 million. Mining has made good progress too in the Federation. In both territories primary and secondary industry has gone steadily ahead. Agriculture has shown healthy growth in East, Central and South Africa. Leaving gold aside, the total exports, in money terms, from all three areas realised £781 million in 1960 compared with £623 million in 1955, that is, over £150 million more than five years earlier. Looked at purely from the point of view of visible trade, the external account of all three areas remains strong.

GROWTH OF THE BANK

Against this background it is not surprising that the Bank, too, has grown. In the five years ended in March, 1960, our Balance Sheet total rose by some £50 million and deposits by over £40 million, our issued capital by £4 million and the Reserve Fund by over £3.5 million. The net annual profit has risen steadily and the net amount of dividends paid by more than £400,000. We have now about 850 offices in East, Central and South Africa, that is 130 more than in 1955.

PRESENT ECONOMIC DIFFICULTIES

Thus, the problems which our Bank is now facing in the various territories should be seen against a background of solid achievement and considerable resilience. This is not to minimise those problems or their severity. Not only are there the continuing stresses and strains which naturally arise in any society during the process of transition from a traditional to a modern economy, but there has been the additional shock of the developments in the Congo which, since July of 1960, have cast a shadow over the economic prospects of neighbouring territories.

This has led to a steady outflow of capital from our trading area: in some cases an outflow of domestic capital, in other cases the withdrawal of imported capital. It has been necessary for the South African Authorities to reverse their former expansive monetary policy; Bank Rate has been raised, inducing a higher pattern of interest rates; tighter import restrictions and exchange regulations are in force. In the Federation there has likewise been a steady outflow of capital. In order to check this, exchange control was introduced in February of this year. Previously, interest rates had been raised in order to induce some fall in the demand for credit. In East Africa the flight of capital has been, in the main, from Kenya where banking deposits fell during the year by £9.1 million. In Uganda and Tanganyika in the same period there were seasonable fluctuations but a net increase at the end of the period.

The effect of this loss of capital is all the more serious as every one of these territories, but especially the Federation and East Africa, is dependent on the import of fresh capital for its economic development. The withdrawal of existing funds at once creates problems.

For the banks the immediate consequences of tighter monetary conditions have been increased demands for advances. The deterrent effect of higher interest rates—these have risen in all three territories by between ½ per cent and 1½ per cent during the past year—has, however, not proved sufficient to discourage would-be borrowers. The banks in general have, therefore, been obliged to follow a restrictive advance policy in keeping with the resources available to them.

On a more personal note, all these developments have meant added strain for our staff who are having to bear their full share of the brunt of current difficulties. Shareholders will, I am sure, wish to join me in paying tribute to the unswerving loyalty and continuing efforts of our staff which have made possible the results before you for this year.

BALANCE SHEET

Referring first to the Bank's liabilities, you will see that the amount of current, deposit and other accounts has risen by over £30 million.

Turning now to Current Assets, it will be seen that the total of cash in hand, at call and at short notice, Treasury bills and trade and other bills has risen in all by some £10 million.

It will also be seen that advances have risen by some £25 million. The lower level of investments amounting to about £50 million is due, in part, to sales to meet the demand for increased advances and, in part, to lower market quotations.

PROFIT AND LOSS ACCOUNT

The higher level of Advances has been largely responsible for the increase in the amount of net profit, which this year amounts to £1,338,862. Adding the amount of £567,878 brought forward from the previous year, the total available for allocation is £1,906,740. Your Directors have considered it appropriate to propose the allocation of an increased sum amounting to £250,000 to the Reserve Fund. After allocating a further £50,000 to write down bank premises, they feel able to recommend that the final dividend to shareholders be raised by 1 per cent, making a total distribution for the year of 15 per cent. This will leave £596,115 to be carried forward to the next account.

THE PACE OF FUTURE PROGRESS

I have described how our Bank has continued to make progress despite current problems. Provided law and order is maintained and reasonable political stability assured, I am sure this progress will continue.

Although there has been a net capital outflow, traffic has fortunately not been entirely one way. Overseas investment in developing mineral resources, manufacturing, processing and assembly plants continues. Tanganyika should perhaps, be especially singled out as the subject of growing overseas interest. One cannot but be impressed by the quiet confidence with which this country, under Mr Julius Nyerere, is approaching political independence, which is to be achieved on December 28, 1961. Were evidence needed of confidence in Tanganyika's ability to borrow abroad, it is to hand in the recent Report by the International Bank for Reconstruction and Development (The World Bank). This report recommends a comprehensive programme of improvements and states that the Tanganyika Government should shape their policies on the assumption that the necessary loans will be forthcoming.

Continuing efforts are being made, generally, by national and international organisations to provide funds for essential purposes in the developing countries. It can be argued with force, in the light of present world conditions, that an appropriate proportion of whatever governmental or inter-governmental aid is made available should be channelled to Africa.

Encouraging as are the efforts of national and international organisations, development in East, Central and South Africa will continue to depend largely on the provision of private capital from abroad. In present circumstances such capital is not easy to obtain. It is essential, therefore, that existing capital resources should be husbanded and used to the best advantage.

In this connection reference has been made in past years to the difficulties caused by the provisions of the South African Banking Act of

1942. In the first place, commercial banks have had to maintain with the Reserve Bank a statutory cash reserve, on which no interest is allowed, equivalent to 10 per cent of their demand liabilities to the public and 3 per cent of time liabilities. Thus, these percentages of deposits must be earmarked for the reserve balance and the resources of the banks are to that extent immobilised. The South African Government have, I am glad to say, taken notice of representations by the banks on this point and the law was recently amended so as to give the Reserve Bank power to vary, subject to a minimum of 6 per cent, the percentage of demand deposits to be maintained with it as a statutory balance. This increased flexibility is welcome.

The commercial banks are also required to maintain in South Africa capital and unimpaired reserves equivalent to 10 per cent of their liabilities to the public, after certain allowable deductions. These deductions do not, however, include trade bills. As trade bills eligible for rediscount with the Reserve Bank virtually represent cash, they ought, in my view, to be deductible when calculating capital and unimpaired reserve requirements under the Act. The recent amending law did not, unfortunately, deal with this point.

The present requirements of the South African Banking Act are such, in fact, that any increase in our banking business demands comparatively heavy injection of new capital—either by way of fresh cash or retained reserves. At a time when fresh cash and profits may be harder to find it is gratifying to note that the South African Government have set up a Committee to examine the present banking legislation.

CONCLUSION

I have outlined the general conditions, and some of the more specific problems, which face the Bank today in East, Central and South Africa. That great economic strides have been made and that there is a strong economic foundation for further expansion is unquestionable. It is true that recent political events have slowed down economic progress throughout our trading area except, it seems, in Tanganyika. It must, however, be becoming increasingly apparent to those in authority, or those aspiring to authority, that not least in their own interests, there are certain hard economic facts which cannot be ignored. It is better, surely, if sometimes painful, to learn these hard facts early rather than too late. We are now witnessing how inevitable and inescapable is the link between economic advance and social and political progress.

To press forward hastily with political evolution is in tune with the times. By these methods attractive solutions to thorny short-term problems may sometimes appear to offer themselves. But no political advance built on insecure economic foundations is likely to endure. The development of a modern diversified economy in Central and East Africa will call for continuous effort and great patience over a long period. It is a poor service to Africa to lead its peoples to believe that the possession of political power will, of itself, bring immediately a general rise in the standard of living. These benefits can only come by hard work, increased productivity and some sacrifice of leisure which, by many in Africa, is very highly prized. It is for the leaders of all races to weigh these obvious points as they proceed with their plans for political advancement. Unless close and constructive thought is given to the economic factors involved, the realisation of political ambitions may mean, in many cases, disillusionment both to the leaders and the led. In South Africa the problem is radically different: there the very rigidity of the political system creates widespread misgivings as to the eventual outcome of the otherwise favourable economic prospects. But whatever the future holds, this Bank will seek to maintain an efficient service and continue to play its part in the economic progress of the areas where it is established. Since the earliest days of modern banking in Africa the Standard Bank has shown great resilience in periods of disturbance and I am confident that it will continue to do so.

WEBB'S CRYSTAL GLASS COMPANY

The forty-first annual general meeting of Webb's Crystal Glass Company Limited was held on July 5th in London, Mr R. E. N. d'Abo (the chairman) presiding.

The following is an extract from his circulated statement:

The Group Profit for 1960 amounts to £116,937 compared with £111,070 for the preceding year, and the Net Profit after taxation is £62,822 as against £57,636. We recommend a final dividend of 7½ per cent, less tax, making a total dividend of 12½ per cent, the same as last year.

1960 was our best trading year since 1955 and all our works reported increased sales.

Walthamstow Works: The rebuilding at this factory should be completed by the end of 1961. Turnover has increased during the year and it is gratifying to know that many of the components we manufacture are eventually exported.

Stourbridge and Edinburgh Works: During the year the rebuilding at these two works was completed. Both works enjoyed a year of increased sales and approximately 23 per cent of our crystal class was directly exported, and, in addition, there was a significant increase in the output of industrial glass ware for the Electronic Industry.

Prospects: The pressure on profit margins is becoming even more severe and it may be difficult to maintain the same level as in 1960. I anticipate that our 1961 profits will be reduced, but I am confident that the modernisation of our works will enable us to be fully competitive, and that we will obtain the benefit in future years.

The report was adopted.

HIELD BROTHERS LIMITED
PRODUCTION DEPARTMENTS FULLY EMPLOYED

The thirty-ninth annual general meeting of Hield Brothers Limited was held on June 29th at Briggella Mills, Bradford.

The following is the statement of Mr David H. Hield (Chairman) which had been circulated with the Report and Accounts for the year ended March 31, 1961.

Our Accounts this year are presented in a new and up-to-date form which we consider to be easier to read and simpler to follow than in the past.

I have pleasure in submitting our annual report showing a group profit after taxation of £169,019 as against £256,797 for last year.

From the profit available this year we recommend the payment of the half-year's dividend on the 6 per cent Cumulative Preference Stock and 16⅔ per cent on the Ordinary Stock. This is the same amount of dividend as last year but paid on the increased capital.

In addition, we have transferred £83,116 to Reserve, bringing the Group Revenue Reserves to a total of £666,329.

THE YEAR'S TRADING

You will remember that the excellent results for 1959-60 were in part due to exceptionally favourable circumstances. The same favourable circumstances have not prevailed during the year now under review. Although I am well satisfied with the results achieved I feel they might have been better but for credit restrictions.

Our production departments have been fully employed throughout the year and the output of cloth was the highest for any year since the end of the last war. Deliveries to customers, however, show a reduction compared to last year, when our figures were the highest for twenty years.

We have a full order book and full time running is assured for some months ahead.

Competition is keener throughout the world, and profit margins consequently have been narrower.

Our building programme at Briggella has been much hindered by the continually wet weather, and it will be towards the end of this year before the developments are complete.

GREYSTONE MILL PROJECT

Your Board has decided to double the spinning capacity at Greystone Mill. Work on this project will start shortly and an expenditure of some £20,000 may be incurred in this financial year over and above the commitment shown in the Accounts. The main cost of the Greystone development is expected to fall in 1962-63 and is estimated at £140,000. We are confident that these developments will prove advantageous to the Company.

The Subsidiary Companies show a small trading profit for the year but owing to an adverse movement in exchange rates we show a loss on the Consolidated Profit and Loss Account. In Canada competition is as extreme as ever but the mill has a full order book and is running to capacity.

During the year my grandson, Mr Michael D. A. Hield, has been appointed to the Board of Directors. He has been in the employ of the Company for over 10 years. He will offer himself for re-election at the Annual General Meeting.

In conclusion I wish, on behalf of the Board, to express our thanks and appreciation to the staff and all operatives for their work throughout a busy year.

The report and accounts were adopted and the dividend, as recommended, was approved.

The retiring directors, Mr W. W. S. C. Neville, MC, BEM, and Mr Michael D. A. Hield, were re-elected and the remuneration of the Auditors, Messrs Whinney, Smith & Whinney, having been fixed, the proceedings terminated.

THE BRITISH PLASTER BOARD (HOLDINGS) LIMITED

RECORD LEVEL OF SALES

The 44th annual general meeting of The British Plaster Board (Holdings) Limited will be held on July 27th in London.

The following is the statement of the Chairman, Sir Graham Hayman, which has been circulated with the report and accounts for the year ended March 31, 1961:

FINANCIAL RESULTS FOR THE YEAR

I am glad to report that the Group's profit on trading for the year to March 31, 1961, amounted to £3,193,278, being £23,668 higher than the record profits for the previous year. I must add, however, that due to the imposition of a higher profits tax, the net result is slightly less than that achieved a year ago. The United Kingdom companies of the Group showed higher profits but these were offset, to some extent, by lower earnings of our companies in Canada, where the recent trading recession and credit restrictions have affected the building industry as a whole.

After providing for taxation on the year's results of £1,738,238 (which includes profits tax at 12½ per cent compared with 10 per cent for the previous year) and taking into account adjustments relating to prior years of £27,072, there remains available for appropriation by the Group, the sum of £1,482,112. Subsidiary companies have retained £234,137 as reserves and unappropriated profits and £500,000 has been added to the General Reserve of the Holding Company.

For the second successive year, the Chancellor of the Exchequer has increased the rate of profits tax; a tax on fuel oil, which your Group uses in increasing quantities, has also been imposed. The Chancellor is also seeking powers to impose a Payroll Tax in the United Kingdom, the possible impact of which cannot be assessed at present. Undoubtedly the effect of these additional burdens on industry will either be passed on to consumers in the form of higher prices or will lead to reduced margins. In all the circumstances, your Directors feel that the dividend on the Ordinary Stock ought to be maintained at the same level as last year and they now recommend a final dividend of 7¼ per cent which, with the interim payment made in January of 4 per cent, makes a total for the year of 11¼ per cent.

Amongst the few items on the Balance Sheets which call for comments, there is a small increase of £100,000 in the Company's Ordinary Stock, which was issued to acquire the total issued capital of Britannia Folding Box Company Limited, to which Company I made reference in my Statement last year. The fixed assets of this new acquisition, as well as those of Wesco Paints Limited, Canada, which was purchased for cash during the year, and of Platrieres Modernes de Grozon, whose results are consolidated for the first time, account for £400,000 of the increase in fixed assets. We have also continued with the re-equipment of our plants and various expansion schemes both at home and overseas in order to increase capacities and achieve lower production costs.

It is of interest to recall that the last time cash capital was raised was in 1946 when there was an issue of ordinary capital yielding approximately £1 million. Since then about £14 million (including depreciation reserves) has been retained in the Group to finance new plant and extensions for the purchase of new subsidiaries at home and overseas and to provide additional working capital to finance the rapidly rising scale of our operations.

The larger amount of investments in trade and associate companies reflects the expansion of our interests in associated companies overseas and in companies on which the Group depends for supplies of certain raw materials.

The figures for stocks and debtors at March 31, 1961, totalling £8,023,000 are larger by £1½ million compared with the previous year. This increase, which includes the stocks and debtors of new companies consolidated for the first time, is an indication of the greater activity experienced during the year in all sections of the Group.

The high level of expenditure on capital account and the employment of additional working capital has resulted in the Group's main bank accounts being overdrawn at the end of the year but the Company's arrangement with its Bankers is proving adequate for present needs. As and when the Group's development programme calls for less temporary facilities, consideration will be given by the Board to other methods for providing the necessary finance, possibly by way of a debenture issue.

TRADING ACTIVITIES IN THE UNITED KINGDOM AND EIRE

The demand for building materials in the United Kingdom continued to rise and our sales of gypsum rock, plaster and plasterboard reached record figures.

To maintain our competitive position and taking into account continued improvements in our manufacturing costs, the selling prices of plasterboard were again reduced in November last. The opportunity was also taken to bring into effect a zoned delivery price scheme to the benefit of our customers.

Considerable progress is being made in the use of plasterboard for the internal lining and partitioning of buildings. This development is being assisted by the new system of construction developed by our subsidiary, Drycon Limited. Groups of houses built by this subsidiary to demonstrate the system are being sold readily at satisfactory prices and plans are made available to any contractor who may be interested.

During the year, permission was received from the authorities to enable The Gypsum Mines Limited to open the new mine at Brightling, and work on that important project has now been started. This will enable ample supplies of gypsum rock to be made available to The Gypsum Mines Limited locally to meet its long term requirements.

The Group's output of anhydrite, which is sold by us for the production of sulphuric acid, showed a slight reduction compared with the previous year. Increased quantities of acid are, of course, now being made in this country, but imported natural sulphur is being used as an alternative raw material to a greater extent.

Our Research Department is making an increasing contribution in dealing with the many special problems arising from our manufacturing operations both at home and overseas. Arrangements covering the exchange of technical information with gypsum companies in other parts of the world are also being broadened and should prove mutually beneficial.

The Davidson group of paper and paper board companies in the United Kingdom have again made an increased contribution to the Group's profits. Output for these companies as a whole was a record, both in tonnage and value, despite intense competition in certain lines of packaging products. Although wage rates and the cost of fuel and raw materials have all increased, we have to face the possibility of a fall rather than a rise in selling prices after July 1st when there will be a further reduction in the rate of import duty on paper and paper board. I must also point out that the margin between the price of Scandinavian wood pulp and Scandinavian paper delivered into this country continues to contract and there is no doubt that if this trend goes further, it will become more difficult to compete economically in some of the grades which have been traditional to our mills for many years.

However, in addition to making paper board and wrapping papers the Davidson Companies also manufacture cartons, containers and rigid boxes, paper bags and multi-wall paper sacks, film and wax wrappings on an increasing scale. Through this spread of interests, some of which you will recall have been introduced in recent years, and through our plans for further development in the future, we consider that the Davidson Group should continue to operate at a satisfactory level of profit.

Better trading conditions prevailed in the roofing felt industry, particularly during the latter part of the year, and D. Anderson & Son Ltd. improved their position. They are well placed to avail themselves of the increased activity in the building and contracting industries and to meet the demand from overseas markets.

Our engineering companies in the Midlands have had another successful year. Demand for heavy lorry fittings and agricultural accessories was exceptionally high, and the new equipment installed by our companies during the year has been fully employed.

In Glasgow, William Ross & Sons Limited experienced a difficult year of trading, partly on account of the continuing depression in the shipbuilding industry on Clydeside.

OVERSEAS

As I have already mentioned, our Canadian companies had a less satisfactory year, as the demand for building materials, particularly in the first half of the year, was seriously curtailed. Towards the end of 1960, however, following changes in the National Housing Act regulations covering the financing of house purchases, there was a marked increase in housing construction which has continued into 1961 with a consequent improvement in the demand for the products of our companies.

I am glad to report that the new plasterboard factory in Vancouver, which has now been running for over a year, has settled down well and an important share of the British Columbia market has been secured. Our insulation company, Westroc Industries Limited, had a difficult year's trading mainly through the marked decline in building activity in British Columbia. However, with a return to more normal trading conditions, we are confident that the high degree of insulating efficiency of its products by comparison with competitive materials will bring about an improvement in sales and earnings.

In January, our Canadian subsidiary, Western Gypsum Products Limited, purchased the share capital of Wesco Paints Limited. This company produces joint cement for use with plasterboard and a range of latex paints. Our operations in this latter field are at present on a modest scale but our short experience in this market leads us to be optimistic for the future and this acquisition will help to broaden the base of our Canadian operations.

Taken as a whole, your Directors are well satisfied with the progress which has been made in Canada in a comparatively short period. While the trading results last year were disappointing, they were entirely due to what is regarded as a temporary phase of recession in that country. Our various operating units are well equipped and suitably located to the markets and with the anticipated increase in house construction generally, an upward trend in earnings can be expected. The Company proposes, at the appropriate time, to extend its operations in Eastern Canada, and in the meantime, provisional steps have been taken by securing a site and a gypsum deposit to enable this project to be carried through when trading conditions justify it.

In the main, it is not practicable to export those products of the Group which are based on gypsum, and in consequence, it has been the Board's policy to develop in the Common Market area by increasing investments in plants situated in the countries of that association. In France, our subsidiaries, Platrieres Modernes de Grozon and Platrieres du Sud-Est, have been engaged in the modernisation, extension and resiting of certain plant, which has considerably interrupted their trading activities. These changes are now almost complete and should give rise to improved earnings. Our associate company, Placoplatre S.A., continues to do well. Our Belgian associate company has made progress in the past year towards achieving the desired level of turnover.

Our Swedish associate company has again had a good year, and a further increase in productive capacity is now under consideration.

Our associated and subsidiary companies in Africa continue to do well and we are hopeful that the change in the political status of South Africa will have no significant effect on the prosperity of our associate company there, Gypsum Industries Limited. The newsprint project at our Umtali plant in Southern Rhodesia, which I mentioned in my statement of last year, is up to schedule, and it is expected that the plant will commence production early in 1962 as planned.

Since the end of the financial year, an agreement has been reached with Australian Gypsum Industries Limited of Melbourne, whereby your Company will take up one million shares in the Australian company at a cost of £480,000 sterling. This holding, representing just under 9 per cent of the total issued capital of the Australian company, will make your Company the largest individual shareholder and Mr. R. S. Jukes, the Group Managing Director, is to be your Company's representative on that Board.

Australian Gypsum Industries Limited produces mainly gypsum plasters and plasterboard, and rockwool insulation products, and it has plants in Melbourne, Sydney, Adelaide, Brisbane and Mildura. The agreement between the companies which also provides for collaboration in technical and research information should be beneficial to both.

FUTURE PROSPECTS

There again appears to be a danger of a substantial rise in costs largely influenced by wage demands in excess of increased productivity which, coupled with higher taxation in the form of additional profits tax and fuel oil tax, will tend to reduce profit margins during the coming year. However, there are various projects covered by the Group's development programme, which are beginning to make their contribution to profits, and these, together with the further economies which we hope to make in our traditional operations, give good grounds for anticipating satisfactory results in the current year and continued progress.

PERSONNEL

During the year, the Board decided that the Group should participate in the State Graduated Pension Scheme in respect of all its United Kingdom employees, thereby leaving it free to make changes in the staff and operatives' pension schemes without reference to the state pension authorities.

I am glad to take this opportunity to put on record the sincere thanks of the Board to the Management and all our employees, at home and overseas, for the loyal co-operation and constructive efforts which they have contributed during the past year.

L'AIR LIQUIDE

Paris, France

The Ordinary General Meeting, held on June 16, 1961, under the Chairmanship of Mr Delorme, Chairman and Managing Director, unanimously approved all the resolutions submitted.

The Accounts for the financial year 1960 show a profit balance, after amounts have been set aside for Provisions of 25,238,548.85 New Francs, which makes it possible to fix the net dividend, payable on and after Monday, July 3, 1961, at 6.50 New Francs per share and at 40.12 New Francs per "part bénéficiare." It is to be noted that this dividend of 6.50 New Francs is payable this year on all the shares forming the share capital whereas in 1960, the shares issued at the time of the last increase of capital were only entitled to a half-coupon.

Furthermore, the Meeting re-elected Messrs Jean Delorme, Olivier Moreau-Néret and François Vernes, the retiring Directors.

In his address, the Chairman, after having emphasised the increasing importance of the consumption of oxygen produced as "tonnage oxygen" in the metallurgical and chemical industries, also drew particular attention to the possibilities of using this gas in other industries as a result of research and tests now in hand.

He stated that L'Air Liquide, true to its vocation of producer and vendor of gas, has not hesitated to finance an important investment programme in order to meet these new needs.

Finally, the Chairman stressed the development and intensification of the Company's research resources in the field of very low temperatures and quoted as an example some of the new uses of gas which it produces: the liquefaction of liquid hydrogen and oxygen for the propulsion of rockets, of liquid hydrogen and helium in the field of atomic power, for obtaining industrial vacuums, for the operation of calculating machines or of direction heads in rockets.

PORTALS LIMITED

Extracts from the Report and Accounts for 1960 and from Sir Francis Portal's Statement to the Stockholders

Meeting June 29, 1961

	1960	1959
	£	£
Issued Capital	2,756,262	2,756,262
Group Reserves	2,048,276	1,680,614
Group Trading Surplus	1,280,210	1,204,872
Group Profit, after Tax	645,747	587,120
Dividends	20%	17%

GROUP TRADING

The profit on our papermaking side for 1960 shows a slight improvement compared with the previous year. Apart from the opening months we have consistently worked on an overtime basis. Our Water Purification and Engineering Companies, now grouped under a holding company, Laverstoke Investment Trust, have had an extremely good year. The profits of this Group have again exceeded any previous figure. The in-take of new business also reached record figures, not only for the Group as a whole but for most of the individual companies.

PROSPECTS FOR CURRENT YEAR

The present position in all sections of your organisation is satisfactory with full order books both on the Bank Note papermaking side and on the Water Purification and the Engineering sides. In the absence of unexpected difficulties, the prospects therefore for the current year are promising.

RAND MINES, LIMITED

(Incorporated in the Republic of South Africa)

ADDRESS BY MR P. H. ANDERSON, DEPUTY CHAIRMAN

The sixty-sixth Annual General Meeting of the Company was held at the Board Room, Corner House, Johannesburg, on Monday, June 19, 1961.

Mr P. H. Anderson, who was in the Chair, in the course of his remarks said:

ACCOUNTS

I would refer to the reduction in the dividend from 30 cents to 25 cents announced on June 8, 1961. In their decision to reduce the dividend in respect of the first half of the current financial year your Directors were influenced not by the stringency of the present financial climate, but by long-term considerations of the proportion of earnings which it is essential the Company should retain for building up its portfolio of investments and finding and developing new business. Since Rand Mines assumed greater financial, executive and administrative responsibilities at the end of 1957 the proportion of distributable profits which it has retained for these purposes has been increased year by year; and with this latest adjustment it has now reached a level which in the view of your Board is more appropriate for its present requirements.

EXPLORATION PROGRAMME

The Company's intensive exploration programme continued to be pursued during the year, primarily within South Africa but also in South West Africa, Bechuanaland and Southern Rhodesia. As is usual in this type of work many prospects were rejected out of hand, some after a cursory examination or investigation, and only relatively few proved worthy of large scale exploration. I might mention that it is not our aim at this stage to prove the existence of low grade deposits for "lock-up" purposes. Drilling for gold took place in three areas in South Africa, all of them in the Transvaal. One of these prospects was abandoned early in the year without encouragement; one has recently been abandoned after the promise of an early borehole was unfortunately not confirmed by subsequent drilling; and drilling is continuing in the third. In addition Rand Mines has a participation in an area being drilled for gold by a company in another Group. Although gold remains the main objective of our exploration, several copper, asbestos, manganese and other base mineral propositions were actively explored during the year.

As a result of investigations in the metallurgical field it was decided during the year to incorporate a private company, the Nourse Electro Chemical Corporation (Proprietary) Limited, for the production near Johannesburg of electrolytic copper and certain by-products from scrap obtainable from local sources. Construction of the required plant is expected to commence shortly and it is planned to start production early next year. Further investigations in the chemical and metallurgical fields continue, particularly in regard to ferrochrome where our work has proved sufficiently encouraging for the incorporation of a Company known as RMB Alloys (Proprietary) Limited for the purpose of confirming the pilot plant results on a production basis and to test the market. To this end arrangements have been concluded with a local company for the use of certain of its plant and equipment in conjunction with our own pilot plant which is being transferred to that Company's site.

The total expenditure on exploration, including that of all the exploration companies, was R1,313,000 of which Rand Mines' share was R877,000 compared with R525,000 in the previous year.

While the rate of expenditure, particularly during this past two years, has been at a high level it will be recalled that in previous years comparatively little was spent in this connection. It is planned that expenditure should be at a much lower level during the next two years or so thus reducing the average over the period. Exploration work is competitive and is the life blood of mining houses. I would emphasise the necessity for and the importance of finding and developing new projects for Rand Mines if it is to play its rightful part as a parent company in a major South African mining Group.

GOLD AND URANIUM INDUSTRY

The amount received for gold during the year increased by 14 cents to R25.07 per ounce largely as a result of the high prices ruling in the last four months of the year. It is generally agreed that fears regarding the inherent strength of the dollar and the outflow of gold from the United States were responsible for this rise in the price of gold. The fact that the fears have so far proved to be wrong is significant but also significant is the further illustration that people all over the world are conscious that gold and not paper currency still remains the ultimate value and the finest basis for commercial trade.

GOLD AND URANIUM MINES OF THE GROUP

As announced early this year an important scheme has been evolved for the co-ordination and rationalisation of certain of the mining activities of the Harmony, Virginia and Merriespruit gold mines. A consortium led by Rand Mines has formed a company, Virginia-Merriespruit Investments (Proprietary) Limited, which has acquired, for R7 million, the entire interest of the Kennecott Copper Corporation of America in Virginia Orange Free State Gold Mining Company Limited and Merriespruit (Orange Free State) Gold Mining Company Limited. As part of the scheme the administration and technical management of Merriespruit has been transferred to Rand Mines. While the administrative control of Virginia remains with the Anglo-Transvaal Group, operations at Virginia's mine property will be closely co-ordinated with those of Harmony and Merriespruit. A provisional agreement has been concluded between Harmony and Virginia whereby the former will sell to the latter certain mining rights in extent 397 claims for R6 million. The agreement is subject to ratification by shareholders at meetings to be held. The scheme also provides for Virginia to tribute a portion of Merriespruit's lease area. All the arrangements have been planned with the concurrence and approval of the relevant Government Departments and it is confidently expected that the scheme will benefit both the Harmony and Merriespruit companies and will result in an extension of the profitable life of Virginia with consequential advantages not only to the local community but to the national economy as a whole.

Summarised details of operations and results of the Group's gold and uranium companies on the Witwatersrand and Orange Free State are contained in the Directors' Report.

INDUSTRIAL INTERESTS

The opportunity recently presented itself of concluding an agreement with Leo Computers Limited of London for the acquisition of an electronic computer and the establishment of a computer service bureau in Johannesburg. It is anticipated that satisfactory savings will be effected by the companies of the Group by deputing to the service bureau a great deal of work. It is expected that the bureau will furnish a new and timely service to the business community and that a reasonable return will be made on our investment.

Your Company continues to play its part in the development of the local money market.

FUTURE OUTLOOK

It is obvious that one cannot comment realistically on the future outlook for the Company without at the same time making reference to the outlook for South Africa, to which development and advancement Rand Mines has made no mean contribution and in which its future lies.

Events of the past year or so, including the country's break with the Commonwealth and culminating in the restrictive financial measures announced by the Minister of Finance in the House of Assembly last Friday, June 16th, have naturally affected the confidence of the outside world in relation to South Africa. The circumstances which have rendered it necessary for the Government to take such emergency measures are regrettable, but it is clearly their duty to protect the country's finances against the existing capital outflow. It is to be hoped that these measures will be of the shortest possible duration, because in the final analysis the solution of the country's problems requires an expanding economy.

As I see it, the future of South Africa depends on the ability to carry out new developments which will sustain and progressively advance the living standards of its peoples. As with the country, so our Company depends on new developments, in its case not only to expand but also to replace the gradual shrinkage in its present interests in the mining field. The achievement of all such developments, however, must rest upon suitable social and economic conditions in the Republic. In striving to bring about these conditions it behoves all of us who are intimately concerned with the affairs of South Africa and its future to be constructive in encouraging policies which would be beneficial to the majorities of the various sections of the population and would engender the restoration of overseas confidence in South Africa, not only financially but in the widest sense.

I suggest that in shaping a course through the complex, but not insurmountable, problems which confront South Africa, a policy of planned and gradual social change is far likelier to achieve greater stability and most lasting benefit to the vast majority of the country's inhabitants than would result from precipitate and radical action. There seems to be little doubt that the great majority of the population wish and believe their future to lie along the path of co-operation and steady advancement.

In looking back on the history of South Africa the growth and progress that have taken place over the last half century lead one to feel sure that it is on the continuation of this and the concomitant effect on living standards that the real hope exists of arriving at a successful solution of the country's present difficulties.

RICHARDSONS, WESTGARTH & CO., LIMITED

MR. O. J. PHILIPSON'S REVIEW

The Annual General Meeting of Richardsons, Westgarth & Co., Ltd. will be held on July 26th, at Wallsend.

The following are extracts from the Annual Review of the Chairman, Mr. O. J. Philipson.

The profits of the Group for the financial year to April 1st, 1961 before tax but after providing £611,600 (previous year £491,200) for depreciation, £313,200 (£252,400) for development expenditure and £238,800 (£211,700) for loan and debenture interest amounted to £128,000 (£516,900). After a net tax credit of £59,000 (tax charge of £266,000), the net profit was £187,000 (£250,900).

This unsatisfactory result, as already forecast, has been largely brought about by the intense competition that has existed these past few years and the consequent need to take on certain orders at unremunerative prices to provide reasonable continuity of production in the works. Full provisions against losses have been made in all such cases.

The profits from the use of the new 'Henderson' Graving Dock at Immingham represent its use for only part of the financial year.

No interim dividend was declared in November and in announcing this the Board expressed the hope that it would be possible to make a reduced distribution when the results for the full year ending April 1st were available. In view however of the unchanged trading outlook and as the year's results have been affected by provisions made for losses on contracts booked since November at unremunerative prices, the Directors do not feel justified in recommending any dividend payment for the year out of profits. In order however to mitigate the consequence to shareholders they recommend a tax free capital distribution of 1½d. per share amounting to £73,886 out of capital reserves.

MARINE MARKET

Difficulties facing British Shipowners are too well known to call for comment here. It is evident that there is now a large excess shipbuilding capacity throughout the world and it is clear that the advantages enjoyed by foreign shipbuilders by way of long-term credit facilities and subsidies are prejudicial to the British Shipbuilding Industry. These difficulties have been factors in the scarcity of orders and the fierce competition over such orders as have been placed.

The North Eastern Marine Engineering Co. Ltd. have successfully completed and installed the first engine of Götaverken design to be built in the British Commonwealth.

HEAVY ELECTRICITY GENERATING PLANT

The reductions which took place in the Central Electricity Generating Board's Nuclear Power Station programme and in its requirements for a much reduced number of conventional turbo-alternators of greatly increased size caused manufacturers considerable difficulties.

Following the merging of our atomic consortium interests the circumstances pointed to the desirability of collaboration between The General Electric Company Limited and ourselves by pooling our respective resources for the design, development, sales, and manufacture of heavy electricity generating and industrial power plants generally.

As a consequence the licence arrangement which has been operated for many years with Brown Boveri for power generating plants and turbine machinery in the United Kingdom to their designs is being brought to an end by mutual agreement. It is most regrettable that the course of events has made necessary this termination of a valued relationship which has existed so long and so amicably.

The above radical change in our technical relationship on power plants, by which we will henceforth be engaging in much more design effort and responsibility than hitherto, means redeployment of our technical and commercial organisations. For this increased design effort we have a considerable number of experienced staff available but there will have to be faced a substantial financial burden of design and development costs.

PRESENT AND FUTURE

Regarding Land plant, we confidently expect that the arrangements which have been made will enable us to secure a reasonable share of available turbo-plant orders for home and export and to diversify further our range of engineering products. There must, however, be a time lag, especially with large contracts involved which extend over several years, before the financial benefits can accrue.

The British Shipbuilding and Marine Engineering Industries may well be facing a major and possibly prolonged recession and certainly no positive indication of any early recovery can be seen at the present time. We believe that the importance of the Shipbuilding and Marine Engineering Industries to the economic well-being of this country is widely recognised, and it is to be hoped, therefore, that the Government will give urgent consideration in the needs of these industries.

Competition in all fields both at home and abroad is of the fiercest, and it is a serious matter that at such a time additional manufacturing costs will have to be met, such as increases in wages, steel, fuel and rates, and in respect of graduated pensions and pay-roll tax—all largely resulting from Government policy and wholly beyond our control.

The Hartlepool and Humber Works will be actively engaged during the current year, but the other Works are likely to become progressively less busy as the year proceeds, unless orders for additional marine engines or other products can be secured in the near future.

The present financial year starts with orders on hand, including work-in-progress, totalling £31½ millions, which is only 10 per cent lower than a year ago. It is of extreme concern to your Board that by reason of the combination of basic conditions referred to above and the absolute need to maintain and intensify technical and commercial effort, the figures which will be presented to you at this time next year are bound to show a substantial loss. All possible steps are being taken as part of a long-term programme to restore the profitability of the Company.

A copy of the full Chairman's Review can be obtained on application to: The Group Secretary, P.O. Box 2, Wallsend, Northumberland.

TENNANT BROTHERS

POPULARITY OF DRAUGHT BEERS

The Seventy-ninth Annual General Meeting of Tennant Brothers Limited will be held on July 26 at Sheffield.

The following are extracts from the circulated statement by the chairman, Mr H. K. Wilson:

The financial year ended March, 1960, constituted a record in the history of the Company. In the year under review we have broken that record by 4.8 per cent.

An outstanding feature has been the continued increase in the popularity of the Company's draught beers, particularly those of the stronger qualities.

The national distribution of Gold Label Barley Wine has been considerably extended during the last twelve months. The wine and spirit trade has increased in volume but competition becomes keener. Squires Gin is now accepted by the trade and public alike, accounting for over one-third of our total gin sales.

Our Retail Department has once again shown a very satisfactory return on the capital invested.

Accounts: The Group Profit before taxation at £575,026 reflects an increase of £60,570 over 1960. The dividend of 13 per cent on the Ordinary Shares is in respect of an issued Capital increased by 18,667 Ordinary Shares since the last Balance Sheet.

Your Board recommend a splitting of each Ordinary Share of £1 into four Ordinary Shares of 5s. each. Your directors consider that this will improve the marketability of the Company's equity capital.

THE MANGANESE BRONZE AND BRASS COMPANY

GROUP PRODUCTION AND EARNINGS MAINTAINED

MR J. C. BUDD'S STATEMENT

The sixty-second ordinary annual general meeting of The Manganese Bronze and Brass Company Limited was held on June 29th at 2 London Wall Buildings, London, E.C.2, Mr J. C. Budd (the chairman) presiding.

The following is an extract from the statement by the chairman which had been circulated with the report and accounts for the year ended December 31, 1960:

Your company was incorporated in 1899 and has traded under its present title since that date. For many years the company has been known throughout the industry at home and abroad as "Manganese Bronze" and in view of its present somewhat cumbersome title your Directors recommend that we should shorten the title to "Manganese Bronze Limited" to have effect from January 1, 1962.

THE YEAR'S TRADING

Sales of marine propellers have been well maintained during 1960. Elsewhere in the Group production has remained at a satisfactory level and the results are generally comparable with those of 1959.

It is possible therefore to recommend the same gross rate of dividend distribution as last year.

The Group Accounts for the year ended December 31, 1960, show a profit before taxation of £608,293 (against £610,225 for the year 1959) after charging £152,529 (£125,965) for depreciation. Provisions for taxation require £279,268 (£266,097) leaving a net profit for the year of £329,025 (£344,128).

Your Directors recommend a final dividend of 8d. per share on the Ordinary Shares, making 1s. 0½d. per share for the year (same).

In July, 1960, the Lightalloys factory at Willesden was sold. At the same time the construction of new factory buildings at Beverley to accommodate the transfer of production was put in hand. The completion of this transaction will be largely reflected in the 1961 accounts. The Net Fixed Assets at £2,687,640 show an increase of £379,238 over last year due principally to the new buildings at Beverley and the replacement of plant and machinery at Handford Works, Ipswich. It will also be noted that there is a trade investment of £10,000 shown on the Balance Sheet which is attributable to our interest in the new export sales company—Stone-Manganese Marine Limited.

Net Current Assets at £1,150,463 show a decrease from the previous year of £224,759 and it will be noted that we now have a Bank overdraft of £310,259 due to the heavy calls to finance the reorganisation pending the final settlement of the sale of the factory at Willesden and transfer of production to Beverley. Total Net Assets have risen from £3,683,624 to £3,848,103.

WORKS REPORTS

Stone-Manganese Marine Limited. In conjunction with Stone Platt Industries Limited we formed a new company to promote the export sales of marine propellers and other marine specialities manufactured by both groups of companies. The company has been in existence for less than a year, but I am happy to say that it is making satisfactory progress, and should make a useful contribution to our efforts in the export market.

Birkenhead Works. The demand for our propellers throughout the year remained at a high level and although the output was below the record figure achieved in 1958, the results were satisfactory having regard to the depressed state of the shipbuilding industry. I am also pleased to report that the outstanding commitment at the end of the year shows an increase over the previous year.

Our Proprietary Scimitar designs continue to be favoured by many shipowners and shipbuilders throughout the world and the services of our technical staff are in constant demand. Equally, the severe operating conditions of the modern marine propeller have resulted in an increasing demand for our special alloy Nikalium.

Your technical staff has also been engaged in the further development of controllable pitch propellers and a number of orders were secured during the year.

Handford Works Ipswich. Sales have again increased steadily throughout the year. There has been a greater demand for our special alloys, notably in aluminium bronze and nickel aluminium bronze.

The laboratories were extended to permit the introduction of modern analytical and metallurgical equipment to ensure that our programme of research can be extended with particular reference to the investigation of alloys to withstand the arduous service conditions called for by the engineering industry.

Elton Park Works Ipswich. The demand for sintered metal products was affected by the recession in the domestic appliance and motor car industries during the latter half of the year, but nevertheless sales were exceptionally good.

The new equipment purchased as a result of the tests made in 1959 was installed for the most part by the end of the year with a resultant expansion in production and speed of operation.

STEVEN & STRUTHERS LIMITED

Although the reorganisation of this works has taken longer than originally anticipated, the improvements to the plant and buildings have proceeded steadily during the year.

Production has expanded and towards the end of the year additional premises were leased for the manufacture of rigid foam products transferred from the Willesden factory.

CAPLIN ENGINEERING COMPANY LIMITED

With the sale of the Willesden factory it was necessary to erect new production shops at our Elton Park Works and the transfer of the whole of the plant was completed early in 1961. During 1960 it was necessary to sub-contract a considerable amount of the machining in the Ipswich area, but even under these conditions the financial results were very satisfactory. Production from the new factory should be in full operation by June, 1961.

LIGHTALLOYS LIMITED

A large foundry extension was undertaken at Beverley for the purpose of absorbing the production of the Willesden factory and it had been hoped that the transfer would be completed by the end of 1960. Unfortunately building delays and adverse weather seriously affected the programme, and production on a reducing scale had to be continued at Willesden until the beginning of this year.

DEANS AND SON (YORKSHIRE) LIMITED

The company with Lightalloys Limited now forms the Deans and Lightalloys division of the Parent Company, thus preserving the names and retaining the associations of the former companies.

A substantial building programme was put in hand during the year including a large new aluminium foundry and office block totalling over 90,000 square feet.

The delay in completing the foundry has severely restricted production of aluminium castings as well as other products. It would now appear that the installation of plant will not be complete before next June.

Despite alterations to the railway modernisation programme, the principal business of this company in public transport vehicles, with particular reference to railway carriages and motor buses, was satisfactory. The prospects for the future in these industries indicate a steady demand for our products. Considerable development work has been carried out on improvements to doors and equipment for passenger vehicles and we believe that demand for these specialised products will increase.

GENERAL

The outlook for our range of marine products, while still dependent on shipbuilding, nevertheless appears to be better than was considered possible at the end of the previous year, and the formation of Stone-Manganese Marine Limited should enable us to expand our export sales.

Prospects for wrought products are exceptionally good and our attention to research into new alloys has been more than justified.

The present recession for our sintered metal products is generally thought to be of a limited nature, and there should be a marked improvement particularly when the Motor Car Industry returns to full production.

It is too early for us to benefit from the combination of Lightalloys Limited and Deans and Son (Yorkshire) but the amalgamation of these two companies operating in similar fields should prove a valuable asset. The transfer of a large works from London to Yorkshire is a major operation and the full advantage of this re-organisation will not be obtained before 1962, and we must be prepared for a loss this year.

The report and accounts were adopted and the dividends, as recommended, were approved.

Resolutions having been passed changing the name of the Company to "Manganese Bronze Limited" on or as soon as practicable after January 1, 1962 and amending the Articles of Association, the proceedings then terminated.

THOMAS LOCKER (HOLDINGS) LIMITED

Manufacturers of Screening, Filtration, Conveying and Handling Equipment

RECORD TURNOVER AND PROFIT

MR T. C. LOCKER ON DIVERSE RANGE OF PRODUCTS

The 14th annual general meeting of Thomas Locker (Holdings) Limited was held on June 29th in Warrington, Mr T. C. Locker, MA, M.Sc., A.M.I.Mech.E. (chairman and joint managing director), presiding.

The following is an extract from his circulated statement:

The results of the Group's trading during the past year have again been a record both in turnover and profit.

Profit margins have been narrower, though the increased turnover and increased efficiency within the organisation have enabled the final result to be so good.

I am pleased to report that our Australian Company has made further progress and that their factory has been extended. The Companies in South Africa and Rhodesia have not recovered from the set-back suffered in 1959 due to the slowing down of operations in the Industries which they supply, though they have continued to obtain a fair share, on a profitable basis, of the business available. In Belgium manufacture has now commenced at our Factory near Brussels and we look forward to this Subsidiary making a useful contribution to the future Group results.

We have been able to further strengthen our reserves by appropriating £100,000 from this year's profit to the general reserve and the Directors feel justified in recommending that a final dividend of 12½ per cent be paid, which, with the interim of 7½ per cent which you have already received, makes a total of 20 per cent for the year.

CURRENT PROSPECTS

The prospects for the current year are not unfavourable; our order books are better than at this time last year. Unfortunately, the economies resulting from our reorganisation are being offset by increased costs in labour and raw materials. Conditions are likely to continue difficult, though owing to the diversity of our products the Company should not be adversely affected.

In conclusion, I wish to pay tribute to the members of the staff at all levels, both at home and overseas, for their efforts during the past year.

The report and accounts were adopted and at a subsequent extraordinary general meeting a resolution was passed amending the Articles of Association in connection with the Directors' borrowing powers.

TARMAC LIMITED

REORGANISATION OF GROUP STRUCTURE FOLLOWING RECENT ACQUISITIONS

MARKET FOR ROADSTONE PRODUCTS CONTINUES ACTIVE

BRIGHTER OUTLOOK FOR ENGINEERING AND BUILDING INTERESTS

MR CHARLES E. HICKMAN'S REVIEW

The annual general meeting of Tarmac Limited was held on June 30th at the Company's Registered Office, Tarmac Road, Ettingshall, near Wolverhampton, Mr Charles E. Hickman (the Chairman) presiding.

The following is his address which had been circulated with the reports and accounts:

It is with deep regret that I report the death on October 1, 1960 of Lieut. Commander G. C. Hans Hamilton, CBE, MA, RNVR (Retd). As Chairman of Tarslag Limited, he joined your Board in December 1959 and during his ensuing short period of office he impressed us all with his advice and counsel, based as it was on a long experience in industry.

At a recent Meeting of Directors I informed the Board that, after thirty-two years as Chairman of your Company, I felt the time had come for me to make way for a younger man, and that it was my intention, after the forthcoming annual general meeting, to vacate the Chair, albeit retaining a seat on your Board. Your Directors have accordingly invited Sir Charles Burman to succeed me as Chairman, and his appointment is one which I shall welcome and in which you may have every confidence.

The programme of rationalisation to which I referred last year is now virtually completed and, as indicated in the Directors' Report, the activities of the companies which have recently joined us are now fully integrated within the three main operating subsidiary companies of the Group. While the financial benefits of this reorganisation were not fully felt in 1960, they did help to mitigate the effect of the continued intense competition in certain quarters and the atrocious weather conditions in the second half of the year.

GROUP ACCOUNTS

The Group Accounts disclose a gross profit for the year of £1,960,473 from which is deducted depreciation of £802,651. The charge for taxation is substantially higher at £548,396, partly owing to a further increase in the rate of Profits Tax for the year, and partly to the necessity of adding £96,300 to the Taxation Equalisation Account. After allowing for outside minority interests of £14,158, the net profit for the year becomes £595,268. Capital expenditure in 1960 exceeded one million pounds and forward plans include the building of new roadstone plants, which will be necessary to preserve your Company's status as one of the leading members of the coated macadam and aggregate supply industry. The expansion of trade calls for more working capital, as is indicated in the particulars of net current assets set out in the Consolidated Balance Sheet. To meet these requirements it is more than ever necessary to conserve funds by retaining profits within the Company and it is therefore recommended that £150,000 be placed to subsidiary company General Reserve Accounts and that a dividend of 12 per cent subject to tax, be paid on the Ordinary share capital. The balance carried forward on Profit and Loss Account will then be increased by £163,455 to a total of £481,335, of which £399,082 remains within subsidiary companies and £82,253 is held by the Parent Company.

ROADSTONE ACTIVITIES

Tarmac Roadstone Limited had another highly successful year and contributed profits substantially in excess of those of the previous year. The tonnage of roadstone and other aggregates now being produced continues to increase, largely due to a greater output of slag from the blast-furnaces of the Iron and Steel Companies with which we collaborate. It gives me great pleasure to report a widening of this association with the steel industry through the conclusion of agreements to process the blast-furnace slag of the South Durham Steel & Iron Company Limited and, more recently, with the Workington Iron & Steel Company. The increasing supply of raw materials offers further opportunities for the creation of new markets, many of which are being energetically developed. Considerable progress has been made in the production of foamed slag as a lightweight aggregate and of granulated slag for use in the production of slag cement: the export of crushed and graded slag to Europe is developing appreciably, while a further activity of some note is the recovery of metal from steel slag for re-use in the normal course of steel production.

Meanwhile, the market for your company's roadstone products remains active and it is gratifying to note that sales tonnage for the first four months of 1961 has considerably exceeded that of the corresponding period of last year. This enhanced output of your Company's roadstone plants puts an ever-increasing load on the transport organisation. By constant modernisation of the fleet and first-class administrative efficiency all commitments in 1960 were met expeditiously and at a very satisfactory rate of profit. The results of the long-distance haulage business of Econofreight Transport Limited, one of the former Tarslag companies, showed much improvement, and all credit is due to those responsible for it.

CIVIL ENGINEERING AND BUILDING COMPANIES

The Group's civil engineering and building companies, now concentrated within Tarmac Civil Engineering Limited, experienced a very difficult year. Competition in the industry continued to be extremely keen and the level of prices at which contracts were let was at times ridiculously low. Your Directors declined to subscribe to such a policy, with the result that no large contract was obtained during the year. The wettest summer in living memory was another factor seriously affecting many contracts, particularly two large dams in course of construction. However, prospects for the immediate future are to some extent brighter and levels of prices show some signs of recovery. Several substantial contracts have now been obtained, among them being large civil engineering works in connection with the development

schemes of the Shelton Iron & Steel Company Limited at Stoke-on-Trent and of Steel Peech & Tozer at Rotherham, while the recent award of a contract for fifteen and a half miles of motorway in Cheshire provides a full order book for 1961. Mobile Lifting Services Limited added to its earnings and in so doing justified the capital expended during the year in maintaining the fleet of mobile cranes at a high level of efficiency.

Tarmac Vinculum Limited continued to expand its turnover, particularly in the field of structural and prestressed concrete products. The return obtained from this increased business still falls short of what is required but, here again, the results for the first quarter of 1961 show a notable improvement, and prospects for the remainder of the year seem favourable.

THE OUTLOOK

In looking to the future it is well to bear in mind that our industry is very much at the mercy of national economic conditions and the equally unpredictable weather, any sudden change in either of which can upset the best of long-range forecasts. Present indications give grounds for reasonable optimism but, nevertheless, I prefer to confine my predictions to the more immediate future and to express the view that 1961, having started well, should prove to be another successful year.

Finally, I wish to place on record my appreciation of the support and loyalty of the management, staff and workpeople of the Group. They have all put in much hard work in producing the satisfactory results of the past year and have co-operated admirably in the establishment of an improved group management structure.

The report and accounts were adopted and the dividend of 12 per cent on the Ordinary Shares was approved.

The retiring directors, Sir Charles Burman, Mr T. McMillan, Senr. and Mr G. N. Wright, MBE, TD, FCA, were re-elected and the other formal business having been duly transacted, the proceedings terminated.

AB GÖTAVERKEN

(Shipbuilders and Engineers)
GOTHENBURG, SWEDEN

A SATISFACTORY YEAR IN THE FACE OF ADVERSE CONDITIONS

NEW DIESEL ENGINE WITH RATINGS UP TO 25,000 bhp NOW AVAILABLE

The fifty-fifth Annual General Meeting of AB Götaverken was held in Gothenburg on May 16th, Mr A. Gabrielsson, Chairman, presiding. The following is an extract from the report circulated with the accounts.

ORDERS AND PRODUCTION

Considering the depressed condition of the shipbuilding industry, the results for 1960 must be regarded as satisfactory. The turnover was Kr. 361.7 million, as compared to Kr. 352.1 million for the previous year. However, it should be noted in this context that the deliveries contributing to this result were contracted for in 1955-56 when the demand for new tonnage was altogether different than during the last few years.

Nevertheless, a certain improvement in orders was noted, particularly towards the end of 1960. Six new contracts for ships and 17 for engines were booked during the year, and the total orders for ships were 666,790 dwt at the beginning of 1961, as against 773,000 dwt a year ago.

But the new orders have been accepted at very low prices and unfavourable terms, since long term credits are demanded by customers. In the absence of export credit facilities the Swedish yards have had to finance the credits themselves, although such a scheme is being explored by the domestic banks.

The demand for marine diesels was also slight during the first half of the year, but improved towards the end as a consequence of the upturn in the demand for new tonnage. But engine prices remain depressed, as a result of the competition from engine builders with idle capacity. On the other hand, the development of a large diesel engine with ratings of up to 25,000 hp has put this engine in competition with the steam turbine for installation in large ships. Since the fuel economy of the diesel engine is superior to the turbine it is expected that the new engine will make some inroads into a field hitherto lacking an alternative to the steam turbine.

The prospects of the shipbuilding industry remain obscure. On the one hand, the shipbuilding capacity has increased by the addition of new yards and the rationalisation of existing ones, whereby the output has been materially increased. On the other hand, there exists an oversupply of shipping, as evidenced by the many laid-up ships, and it seems unlikely that orders for new ships will come forth in the volume needed to keep the industry busy.

It is to be hoped, however, that when the new Arendal yard is available the Company will be in a healthy competitive position, particularly in respect of super-tankers, which appear to be the logical successors to the existing tanker tonnage.

DELIVERIES AND LAUNCHINGS

Nine vessels with an aggregate tonnage of 213,700 dwt were completed and delivered in 1960, viz.:

One motor tanker of 40,200 dwt;
One turbine tanker of 40,420 dwt;
Two motor ore-oil carriers of 34,250 dwt;
Two motor tankers of 19,330 dwt;
One cargo motorship of 11,050 dwt;
Two cargo motorships of 7,450 dwt.

Nine merchant vessels of altogether 180,700 dwt were launched during the year.

Main machinery delivered from the engine shop included 23 diesel engines with a combined rating of 197,950 bhp. Fifteen of these engines were delivered to other yards in Belgium, Norway, UK, and Sweden.

The first unit of the Company's new "large-bore" diesel engine was tested and installed in a 40,200 dwt super-tanker built by the subsidiary Öresundsvarvet. This particular engine was a ten-cylinder unit. From the tests the cylinder rating of the new engine has been put at 2,100 bhp, whereby a 12-cylinder engine will obtain a rated output of 25,200 bhp.

THE ARENDAL YARD

The work on the Arendal yard is proceeding according to schedule. The civil engineering, including grading of the rocky site and extensive fills, were completed during the year. About 560,000 cu. m. of rock and 300,000 cu. m. of silt and clay have been excavated. The two graving docks alone necessitated the removal of 190,000 cu. m. of rock. Pouring of some 30,000 cu. m. of concrete for the foundation of the docks and the pier was also nearly completed. The steel members of the assembly bays are being erected. One bay will be provided with two 150-ton overhead cranes, capable of a maximum life of 300 tons; the other will have two 80-ton cranes, in addition to other lifting gear. One of the stores is already under roof. The yard will be put into production in the beginning of 1963.

As previously mentioned, the Arendal yard represents a further development of the method of ship assembly employed by the Company for many years. As presently applied whole sections are being assembled in the open alongside the bed and added to the ship being built. The ship is launched empty and fitted out in the conventional manner.

The new yard is planned for continuous and complete assembly under roof. Work begins with the stern section at the rear end of the dock and as one section after the other is added and fitted out the assembly is moved on rollers towards the gate end of the graving dock. When the ship is completed the dock is filled with water and the finished ship towed out.

The docks permit the building of ships up to 140,000 dwt, but in order to utilise the yard capacity the two graving docks have been made wide enough to permit the assembly of two 20,000 dwt tankers alongside each other.

GROUP ACTIVITIES

During the year a new American sales subsidiary was formed under the name Götaverken American Corporation, with offices in New York City. Other wholly owned subsidiaries are:

Öresundsvarvet AB
AB Göteborgs Skeppsdockor
Rederi AB Zenit
Götaverkens Fönster AB
Götaverken Norsk A/S.

Öresundsvarvet had a satisfactory year with deliveries of five merchant vessels of altogether 106,605 dwt and launching of four vessels of 99,300 dwt. The deliveries included one motor tanker of 40,600 dwt and one 8,100 dwt refrigerated turbine tanker.

Total turnover of Öresundsvarvet reached Kr. 124.8 million (Kr. 106.0 million).

RESULTS

Net earnings after taxes were Kr. 15.0 million (Kr. 15.0 million) which together with Kr. 15.7 million (Kr. 6.7 million) carried forward from the previous year made Kr. 30.7 million available for appropriation, as follows:

	In Kr. '000
Retained in the business, as a new issue of 220,000 shares at Kr. 100.00	22,000
Reserve	1,600
Dividend of Kr.8.00 per share	4,400
Balance carried forward	2,710
	30,710

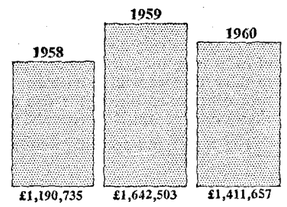
The reports and accounts were adopted.

The Bovril Group reports...

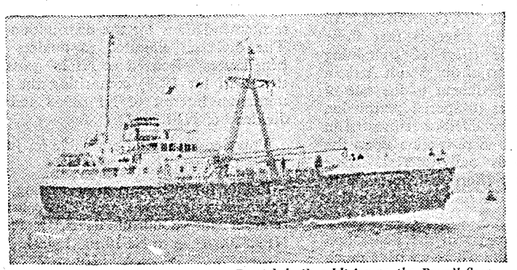
Seventh successive record sales year for 'Bovril'

Lord Luke's speech

Net profits maintained despite rising costs



THE Sixty-fourth Annual General Meeting of Bovril Limited was held on 5th July 1961 in London. The following are extracts from the statement by the Chairman Lord Luke for the year ended 31st December 1960.



LORD LUKE, *Chairman of Bovril Ltd.*

A Look at the Figures

The Consolidated Profits for the last three years before charging United Kingdom Taxation are as follows:—

The 1959 profits were the highest on record and included exceptional profits for Argentine Estates of Bovril Limited. The profits for 1960 show a substantial increase over those for 1958 as was forecast at the time of the rights issue.

SANTA ELENA, *an important new British-built addition to the Bovril fleet*

So far as 1961 is concerned the demand for Bovril has been very well maintained, despite the mild winter, and sales of most of our other products have shown an improvement, but sales of Corned Beef have not so far been up to last year's level, due to increased costs necessitating higher price levels.

Bovril Boom at Home and Abroad

This has been another year of increased sales of our main product, Bovril. There was also a steady trend towards the purchase by the public of larger sizes.

Export sales in 1960 showed a substantial increase.

Confidence in the Argentine

The Argentine has been continuing steady economic progress and has re-established confidence in itself and the rest of the world.

We have been fulfilling our programme of capital investment with new equipment for the Santa Elena factory and consolidating our cattle position with economically run Camps.

The new refrigerated river boat, the "Santa Elena", built for us by the Grangemouth Shipbuilding Company, was launched by Lady Luke and sailed out under her own steam.

On the Estancias we have further developed our breeding policy using A.I. and made progress re-seeding Camps with improved grasses.

Milk on the Upgrade

We had a very busy year in 1960 and the total volume of milk handled by the Group increased some 12½ per cent.; we are now processing in the region of 100,000 gals. per day, and considerably in excess of this figure during the flush season.

In Devonshire, Ambrosia Limited worked overtime throughout the year in order to keep pace with the demand for Creamed Rice. Sales of Ambrosia Milk Puddings during the year were the highest yet recorded

Citrus

Because of the cool, indifferent summer, sales suffered, but Gold Cup Jaffajuce was in steady demand.

Record for Marmite

Marmite Limited had a very successful year, the net profit having established a record in the annals of the Company.

New Publicity Centre

The Bovril Group has maintained its expenditure on publicity for all products in all available media. Our visitors to Head Office in London will shortly be received in a new centre specially prepared for displays, film shows and demonstrations.

People who give serious thought to the matter realise the important part advertising plays in the distribution of goods and services without which the economy would virtually come to a standstill.

Aid for the Retailer

Our relations with our wholesale friends are most cordial and long-standing and it is our intention to be co-operative at all times as they perform an excellent service by distributing our products. We are assisting the grocer by supplying him with point of sale display window shows, press advertising and television publicity and our sales force is always ready to give advice on merchandising.

A Tribute

At home and overseas our men and women have given unstintingly of their best and for this and for their loyalty we send them all our sincerest thanks.

BOVRIL LIMITED GROUP—SALIENT POINTS

Trading Profit	£1,640,405
Taxation for the year	£665,792
Depreciation	£279,225
Consolidated Net Profit	£798,699
Ordinary Dividend	£225,563
Profit retained in the business ..	£301,740
Capital Employed	£10,594,526

THE CENTRAL MINING & INVESTMENT CORPORATION LIMITED

SIR ARCHIBALD FORBES'S SPEECH

The fifty-sixth annual general meeting of The Central Mining & Investment Corporation Limited was held on July 3rd in London.

Sir Archibald Forbes, GBE (the chairman), presided and, in the course of his speech, said:

The outcome of the year's operations was, as expected, closely in line with that for 1959-60, a further rise in revenue from investments being partly offset by a fall in profits from share dealing. The net result was a profit, before taxation, of £2,448,000 which was £86,000 greater than for the previous year. Taxation (after deduction of an over-provision of £85,000 in past years) amounted to £1,029,000 leaving a disposable balance of £1,419,000.

INVESTMENTS

Net investment during the year amounted to approximately £1.5 million of which 72 per cent was in the United Kingdom, 21 per cent in Africa (or in companies with African connections), and 7 per cent elsewhere. Investment in the United Kingdom included the acquisition of a controlling interest in one industrial company (Elastic Rail Spike Co. Ltd.) and a substantial interest in another (Heatrae Ltd.). While our interests are predominantly in the mining sphere it is our intention to expand in the industrial and commercial fields in the United Kingdom and elsewhere as suitable opportunities occur. We believe that the broadening of the base of our activities in this manner will be in the best interests of the Corporation and its shareholders.

In the light of the valuation at the year end the net assets amounted to £27.1 million a fall of £1.6 million as compared with the previous balancing date which was due to the weakening of the prices of African securities as a result of the political difficulties in that continent. Of the net assets 50 per cent was represented by investments in the Republic of South Africa. Another 13¼ per cent comprised holdings in companies with mining connections in Africa generally, although it is right to mention that two major investments in this category are in companies which have substantial interests outside Africa. These proportions have changed to 44 per cent and 15 per cent respectively in terms of the latest valuation of the net assets totalling some £26 million, the fall since the close of the financial year being largely due to the further decline in the prices of holdings in companies in the Republic. It is an interesting reflection of the African situation that the current market valuation of the Corporation's own shares represents little more than the current value of the 41 per cent of the net assets which has no connection with the African continent.

AFRICAN SITUATION

Last year I commented upon the need for South Africa to restore external confidence if its future economic progress was not to be arrested and expressed the hope that a solution to the political and racial problems would be found which would be acceptable to opinion both within and outside that country.

Unhappily since then the situation has further deteriorated. The confidence of investors was seriously undermined by the events culminating in the break with the Commonwealth and was marked by a flight of capital from the country. This in turn gave rise to such pressure on the reserves of gold and foreign exchange as compelled restriction of credit and imports and subsequently the imposition of measures forbidding free movement of capital.

It is sad—especially to those of us so deeply concerned with her affairs—that a country with such a great potential for development should have so alienated world opinion that for the time being there is little possibility of South Africa being able to attract the external capital which is essential if such development is to be continued at a reasonable pace. While it is fortunate that the major part of the capital programme of the new mines in the Far West Rand, Orange Free State and Klerksdorp fields has already been carried out, a substantial amount remains to be done and it will not be easy in existing circumstances to finance this except from the internal resources of the Groups concerned. Outside mining a continuing scarcity of capital would impede the building up of secondary industry which is so important to the future economic and social stability of the country. Indeed if existing conditions persist it is difficult to see how South Africa can avoid a general slowing down of economic growth and may indeed have to face some lowering of living standards. And it would seem to me that it is only against a background of rising standards flowing from steady economic development that long-term solutions to the difficult problems which now confront the country will be possible.

It is as yet difficult to say with precision what the effect of the recently imposed financial restrictions may be on our direct operations. All that can be said at this stage is that these measures will have the effect of containing within South Africa a part of our South African assets. There is no impediment to the sale of these assets but—subject to special permission—the proceeds must be retained or reinvested in South Africa There is no restriction upon the remittance of dividends and interest. One would expect that every effort will be made to avoid any extension of the restrictions into this field.

Conditions are also uneasy in the Federation of Rhodesia and Nyasaland where we have much smaller but still significant interests. There the impact of the internal problems on outside investors arises from a different reason. The latter's confidence in South Africa has been shaken because of the impression that what is interpreted as an unduly repressive racial policy may eventually disrupt the political and economic structures. In the case of the Federation the fear is that in Northern Rhodesia the same situation may be brought about by undue haste in advancing the African to political power ahead of his acquiring the necessary sense of responsibility to exercise it. One can only hope that in both cases means will ultimately be found to enable the political, social and educational advancement of the African to move forward in balance and with reasonable speed, while at the same time protecting the interests of the European population and external investors who together have done so much to bring about the high degree of development already achieved in the countries concerned.

OTHER INTERESTS

Through our investments outside the Group we have an interest in a wide range of mining and industrial activities in Australia, North America, Rhodesia, Portugal and the United Kingdom. In all these cases dividends were, as indicated in the summary attached to the Annual Report, maintained or increased as compared with the previous year. Western Decalta Petroleum Ltd. in accordance with previous policy did not make any distribution of profit but applied the earnings to further developments.

As to the outlook for our affairs in the current year, I have indicated the anxieties which naturally surround our African interests. Nevertheless on the best judgment that one can make at this early stage I believe that even after allowing for a further decrease in share dealing profits the total revenue should in the absence of some unforeseen happening be reasonably well maintained. Moreover, bearing in mind our position as a whole and also that at the present time our activities are largely those of a holding company receiving dividends which in a number of cases have underlying cover, I see no reason to think that we will be unable to maintain our own distribution (i.e. at the rate of 2s. 6d. per share) on the capital as recently increased.

The report and accounts were adopted.

CREDIT LYONNAIS

The Bank Control Commission, at its meeting of June 14, 1961, approved the accounts for the 1960 financial year, together with the Board's recommendations for the distribution of profits. The dividend allocated to holders of "Parts bénéficiares" is fixed at NF2.- gross (equal to that paid for 1959) comprising the guaranteed minimum interest of NF0.6963 and a surplus dividend of NF1.3037.

This dividend will be payable on July 3, 1961, at NF1.76 net.

Profits for the year, after writing off sundry preliminary expenses and the constitution of reserves for doubtful debts, increased from NF9,820,783.96 to NF10,103,134.94.

The report contains a detailed review of the French economic, financial and monetary situation, and it emphasizes the excellent financial and monetary situation which prevailed, favouring the Bank's activities to such an extent that total resources increased by 20 per cent, compared with 1959.

However, in spite of the vitality and expansion of the Crédit Lyonnais in 1960, the net results show only a slight improvement, as the increase of gross receipts has been impeded by the full incidence of the reductions in interest rates and bank charges progressively applied during the previous financial year.

M. SAMUEL & CO.

PROFIT FORECAST EXCEEDED

VISCOUNT BEARSTED'S STATEMENT

The Forty-second annual general meeting of M. Samuel & Co. Limited was held on July 6th at Shell House, 55, Bishopsgate, London, E.C.

The following is the statement by the chairman, Viscount Bearsted, TD, DL, circulated with the report and accounts for the year ended March 31, 1961:

CHAIRMAN'S STATEMENT

It gives me much pleasure to welcome you to our Annual General Meeting and to present to you the Accounts for our first year as a Public Company.

In the Prospectus, your Board forecast that the profits before Taxation, but exclusive of special transactions which might arise, would be about the average of the last four years (£370,000). I am pleased to be able to tell you that, in the event, profits for 1961 exceeded those of 1960 (£495,740) as published in the Prospectus.

These results are not the outcome of an unusual number of exceptional transactions in the Parent Company, giving rise to distributable profits, but reflect the expansion of the general business of the Company, which I am glad to say is still continuing.

As was stated in the Prospectus, the published Accounts are not comparable with the Auditors' Report therein, since profits are shown after providing for Taxation and after making transfers to Contingencies Reserves (in the manner authorised for Banking Companies).

RESULT OF YEAR'S OPERATIONS

In reviewing the Consolidated Profit and Loss Account, you will notice a rise in the profits of M. Samuel & Co., Limited and an increase in receipts from the non-banking subsidiaries. The latter increase is, in the main, due to the fact that a large part of the capital of the Investment Subsidiary Company, Glendaruel Investments Limited, was invested for only part of last year, whereas during the whole of the year ending March 31, 1961, the Company was fully invested.

After transfers to Taxation and Contingencies Reserves, the consolidated profits available for appropriation show a figure of £197,111. The Preference dividend, less Tax, amounting to £11,944, was paid to September 30, 1960, on the Preference Capital, which has since been converted into Ordinary Capital.

Your Directors now recommend an Ordinary dividend for the year ended March 31, 1961, of 7½ per cent, less Tax, which, together with the Preference dividend, will absorb £126,788, leaving £70,323 of profits to be retained in the Company.

EXPANSION OF BANKING BUSINESS

During the year, the banking business continued its expansion, which you will see evinced in the Balance Sheet by an increase of nearly £2,000,000 in outstanding Acceptances and of over £4,000,000 under the heading of "Current Liabilities, Provisions and other Accounts."

The Investment Company, Glendaruel Investments Limited, which holds a varied portfolio of both quoted and unquoted shares, had a most satisfactory year and the Issue Department was also very active.

During the course of the year, the Company, in partnership with the First National Bank of Boston and Messrs Tozer, Kemsley & Millbourn Limited, has formed International Factors Limited, for the purpose of assisting trade between this country, the USA, and the Continent of Europe. The business of factoring has, for many years, played a prominent part in the economy of the USA, but it is a comparatively new activity in Europe and we hope that it will be equally successful here.

DEMAND FOR ACCEPTANCE FACILITIES

The demand for Acceptance facilities continues to be very strong but, following upon the narrowing of the differential in rates between London and other financial centres and the continued weakness in Sterling, there has been a considerable falling off in the volume of foreign deposits.

I should like to end by extending, on behalf of all Shareholders, our thanks to the Executive and Staff for the amount of time and energy they have given us in the past year.

ROTAPRINT LIMITED

SUBSTANTIALLY INCREASED TURNOVER

MR V. H. COUSIN ON GROWING POPULARITY OF PRODUCTS

The thirty-fourth annual general meeting of Rotaprint Limited was held on June 30th at the Company's Offices, Honeypot Lane, London, N.W.9, Mr V. H. Cousin (chairman and managing director) presiding.

The following is his circulated statement:

I am happy that I am able to present you with results for the year ended March 31st last which, in my view, are satisfactory. You will have seen that our profits, before taxation, rose from £510,026 to £565,842.

Higher taxation, regrettably, detracts from these higher profits and the comparative figures, after taking taxation into account, are not so pleasing, taxed profits for the year ended March 31, 1961, of £283,817 being only £7,601 higher than the figure of £276,216 for the previous year. The effect of this heavier taxation is unfortunate, and it is but human for me to consider with resentment the effect of the burden of taxation which is still further to be increased by a higher profits tax in the current year.

You will see that there are items other than taxation which affected the profits available for the shareholders; the increased capital investment in fixed assets during the year has called for higher depreciation and none of the realisable profits have been taken by the sale of investments.

THE YEAR'S TRADING

In the year under review, our turnover in Rotaprint machines both in home and overseas markets increased substantially over the previous year, leaving us with the not unreasonable hope that we shall go further ahead in the current year, having regard to the ever-growing popularity of small offset lithographic machines throughout the world.

From my last report it was clear that the benefit of the extension of our premises would not be available to us during the whole of the twelve months' period ended March 31, 1961, but we are now in full production and, subject to no deterioration in present trading conditions, we should show an improvement in the current year, which has commenced well.

The motor car industry, although by no means of major importance to the prosperity of your Company, has an increasing influence on the economy of our country and now involves a large number of ancillary trades. It was noticeable during the past year that the difficulties and setbacks in the motor industry affected our order book in some measure.

In recognition of the fact that our pre-taxed profits increased by £55,816, and bearing in mind the substantial revenue reserves, your Directors feel justified in recommending a final dividend of 23½ per cent payable on July 7, 1961, on the Ordinary share capital of £540,000, making a total dividend of 37½ per cent for the year ended March 31, 1961. This compares with the previous year's dividend of 33 per cent on the smaller Ordinary share capital of £450,000.

NEW PRODUCTS

During the year we marketed a new version of the Rotaprint Model 30/90 which has proved to be very popular. It is fitted with a chain delivery which increases the scope of the machine which will now handle a greater variety of paper and card material. In the course of the current year we hope to introduce to the market a new product, namely a pre-sensitised printing plate which, in America, has already become so popular as to have almost ended the sale of some types of non-sensitised metal plates with their lesser advantages.

The popularity of the pre-sensitised plate is gaining momentum both at home and overseas and a new department will, we hope, eventually add worthwhile profits to those arising from the machines and other products of your Company.

Important development work in other directions is proceeding as fast as the increase in our production allows, and we hope to introduce other products in the not too distant future, which should be of interest and assure further progress.

DIRECTORATE

I am sorry to report that Mr Hewitt, who has worked so closely with me for twenty-five years, retired from active service with the Company on March 31st last at the age of seventy. His presence amongst us will be greatly missed by me and my colleagues. He is happy, however, to remain a Director of your Company so that we shall continue to have the benefit of his past knowledge, sound judgment and advice.

He retires today by rotation under the Company's Articles of Association, but I shall confidently seek your support for a resolution under which I shall have great pleasure in proposing his re-election.

In the last two years the pre-taxed profits of the Company have practically doubled and it would be clear from the figures in the Balance Sheet that an achievement of this kind could not be reached without very hard work on the part of our loyal staff, who are deserving of my own, my co-Directors' and your thanks in goodly measure. It is to them that I confidently look to enable me to present you with results at our next Annual General Meeting which I hope will again portray our history of continued expansion.

The report and accounts were adopted.

HAZELL SUN LTD.

MR T. R. WALKER ON RECORD RESULTS

The Seventy-seventh annual general meeting of Hazell Sun Limited will be held on July 27th at 44 Great Queen Street, London, W.C. The following is an extract from the statement by Mr T. R. Walker, the chairman, which has been circulated with the accounts to March 31, 1961:

Last year I said that only by operating our various plants near to the maximum capacity could we hope to achieve results commensurate with the amount of capital employed in the business, and that for the first three months of the year now under review the state of our order book was most encouraging.

Unfortunately the position was less satisfactory later in the year. Nevertheless our turnover was higher than ever before, although this increase was not due entirely to higher production as price increases followed new wages and hours concessions. The profit on trading, £1,182,388 (against £756,899 last year and £882,660 in 1959) was also a record.

After provision for taxation before deducting £104,500 relief from Investment Allowances (transferred to Reserves) and the proportion of profits (after tax) attributable to minority shareholders, the balance available to members is £440,098.

Of this sum £202,611 is transferred to Reserve and £237,487 is available for dividend on the Preference Shares and the recommended 12 per cent and a Bonus of 3 per cent for the year on the Ordinary and Employees Shares.

OPERATING COMPANIES

Our letterpress plants have contributed their quota to the increased turnover and additional colour rotaries have been installed. The demand for 'paper-backs' continues to grow, and further modern equipment is on order.

Book-binding has been hard pressed throughout the year. Increasing demand for all classes of books has accentuated floor space problems, particularly the increasing proportion of the larger subscription type of book. A factory has been rented in South Wales for additional storage and binding work.

In photogravure the periodicals continued to be reasonably buoyant during at least three-quarters of the year and the demand for colour continued. The development of new techniques and new plant receives constant attention.

In offset it has been a year of progress technically and otherwise, particularly with the web-fed offset presses which we pioneered in this country. The carton side of the business continues to develop satisfactorily.

THE OUTLOOK

It is especially difficult this year to forecast the future. For the first three months of the current year there has been no marked falling off in orders in our Letterpress, Bookbinding and Offset Divisions but unfortunately the same cannot be said about Photogravure. During recent months conditions in the periodical field have changed. Circulations have fallen, particularly those of the popular women's weeklies, and mergers of journals have been announced. One of the merged journals is a product of our presses, and this loss, together with other casualties, is a matter of grave concern to your Directors.

The closing down of periodicals is no new experience; it has happened on several occasions during recent years, and in the course of time we have been successful in replacing the lost turnover.

Production costs however have increased very considerably in the last three or four years and the contraction of demand will inevitably lead to still greater competition. Management and staff will accept these new conditions as a serious challenge, and strenuous efforts are already being made to fill the gap that will arise in our production schedules in the early autumn.

Looking ahead, it would seem certain that our turnover will fall this year and a drop in profits must be expected.

The retiring Directors, Mr Emile Littler, Mr S. H. Newsome and Mr D. M. Leapman, were re-elected, and the remuneration of the Auditors, Messrs Allan, Charlesworth & Company, was approved.

THE MORGAN CRUCIBLE COMPANY LIMITED

A CONSIDERABLE TRADING ACHIEVEMENT

The twenty-seventh annual general meeting of The Morgan Crucible Company Limited will be held on July 27th at Battersea Works, Battersea Church Road, London S.W.11.

The following is an extract from the Review by Mr A. L. Stock (the Chairman) which has been circulated with the Report and Accounts:

The Group Profit before tax but after loan interest is £2,235,815 compared with £2,043,417 last year. The increase in the surplus of income over expenditure at £192,000 compares with the preceding year's rise of £323,000.

The increase in sales is 9 per cent as opposed to 17½ per cent in the previous year. Whilst overseas sales have risen in total value their percentage to total sales has dropped from 45 per cent to 43 per cent.

Though pressure on trading profit has been felt in some units of the Group, the profit rate for the Group as a whole is the same as in the preceding year. The steadying influence of a wide range of products sold in many countries made possible this considerable achievement.

Earnings before tax on Capital Employed have increased slightly to 14.1 per cent as against 13.5 per cent in 1959/60.

It is proposed to pay a Final Dividend on the Ordinary Capital of 9 per cent less tax which, together with the Interim payment of 5 per cent, gives a total of 14 per cent for the year against 13 per cent for the previous year.

TRADING RESULTS

Parent Company.—Trading results continued satisfactory in both the Electrical and Mechanical Carbon Departments, although export delivery dates were adversely affected by the high demands from the home market in the earlier part of the year.

The Crucible Department also made good progress both at home and overseas.

Home Subsidiaries.—Amongst the home subsidiaries the greatest progress was made by Morgan Refractories Ltd., whose results confirm the faith of those who launched this project with the aid of a £1,000,000 loan ten years ago.

The other principal subsidiaries do not call for special comment but have had a year of satisfactory progress.

Overseas Subsidiaries.—The general depression in business throughout North America had its effect on Morganite Canada Ltd., though not to the same extent as on Morganite Inc., New York.

Our other overseas companies held their own in the more competitive international conditions.

PROSPECTS

While the review of the accounts gives some indication of the future, it is predominantly concerned with the results of the past year, which was one of steady progress.

Despite the inroads of the additional 2½ per cent Profits Tax arising from the 1961 Budget and the additional tax on oil, but ignoring the threat of a Payroll Tax, it is expected that this year profits will reach last year's level even though the new subsidiaries will have only a nine months' financial year.

THE ARTIZANS' & GENERAL PROPERTIES

SATISFACTORY PROGRESS AT HOME AND OVERSEAS

The ninety-fourth annual general meeting of The Artizans' & General Properties Company, Limited was held on July 5th in London, Brigadier Sir Richard A-G. Calthorpe, Bt, CBE (the chairman), presiding.

The following is an extract from his circulated statement:

At home, sales of some older properties have continued and the money realised, together with new capital now represented by the £1,750,000 5¾ per cent Debentures raised in 1960, is being reinvested in the development of new office, shop, industrial and residential properties and in modernisation. Developments for sale are being undertaken in London and Birmingham by our subsidiaries Pinner Properties, Vista Flats and Vista Developments; in many cases these developments also create a very satisfactory ground rent investment for the parent company.

The active investment market for modern commercial properties continues to emphasise the long term benefits which can accrue from the development of well chosen sites; competition for sites is therefore keen and prices continue to rise. Delays arising in obtaining planning permission and shortages of building materials or labour become increasingly significant.

During 1960 construction was completed or put in hand of the following new developments, many of which had been let or sold prior to completion: 183 houses and 97 flats in London and Birmingham; 2 factories at Bedford and 3 office blocks in London, Watford and Birmingham.

In America, the Terminal Tower Company of Cleveland, Ohio, in which we hold half the issued Common Stock, has had a successful year of operations.

In Canada, Artagen Properties Investments has acquired two modern office properties in Hamilton, Ontario, to show a satisfactory return.

Pancoast Properties Developments still holds 160 acres of land at Calgary and has participated to its advantage in the purchase and resale of a Vancouver property in conjunction with our Canadian Associates.

POLICY OF REDEPLOYMENT AND EXPANSION

I commented last year upon the stable character of the Group's rental income; while some further measure of increase may be looked for from rents of properties which are still within the provisions of the Rent Acts, the main expansion of the Group's rental income must now rest upon modernisation and the completion of new developments. It is in this direction that we are concentrating our attention, but under a policy of redeployment and expansion it is inevitable that some capital must be unproductive while developments fructify. At December 31, 1960, about £1,250,000 of the Group's resources were so employed on current projects. In the light of this the accounts submitted exemplify the strength of the Group's position.

Earnings before interest and taxation have again increased. Trading income for the Group including income from investments was £709,964 as compared with £649,080 for 1959.

Gross profits from property sales and developments for sale undertaken in London and Birmingham by Pinner Properties and Vista Flats aggregated £153,000 as compared with £70,000 for 1959.

The capital surplus arising from the sale of properties by the parent Company amounted to £147,000 as compared with £87,000 for 1959 and has been credited to Capital Reserves, which now stand at £2,351,224.

Interest charges absorbed £73,000 as compared with £8,000 for 1959. The taxation charge is up by £30,000 at £333,000. Profits tax was increased last year by 2½ per cent. This approximates to £16,000 in a full year. A further increase of 2½ per cent is proposed this year: this can but have an effect, as is no doubt intended, on the amount of cash available for net dividends.

An interim dividend at the rate of 5½ per cent on the issued Ordinary Share Capital was paid in September, 1960, and the Directors now propose a final dividend of 7 per cent.

Addressing the meeting, the chairman said that Melton House, Watford, a nine-storey office block of 58,000 sq. ft., had been let to British Railways Midland Region, and an office block of 41,000 sq. ft. in Hagley Road, Birmingham, for which the building contract had recently started, had also been let—both in their entirety and on satisfactory terms.

The report and accounts were adopted.

BERTHIEZ S.A.

The Ordinary General Meeting of Shareholders met on June 23rd at the Registered Office, 5 rue Montalivet, to approve the results of the year ended December 31, 1960.

The accounts presented to the Meeting show a net profit of NF679,631 against NF397,993 in 1959. This profit was reached after allowing NF497,921 for stock in hand as against NF350,000 in 1959, and NF1,058,162 for amortisation against NF726,317 for the preceding year.

The Meeting approved payment on October 10, 1961, of a coupon of NF10 gross per NF50 (nominal) share. It should be noted that this dividend, the same as that paid the year before, applies to 60,000 shares, as opposed to 36,000 shares, as the result of the increase in capital in 1960.

The Report of the Board brings out the importance of the order book at the end of the year 1960. Seventy per cent of the orders are for export to Germany, Austria, Belgium, Spain, Roumania, Sweden, Czechoslovakia, Australia, Argentina, Canada and Japan.

It also underlines the success of the Company in increasing its manufacturing potential by the purchase of NF1,270,000 worth of new machinery and buildings at Givors, and of a new construction shop as an extension of the existing shops.

The Company in addition has continued the study of new types of machine using the most modern techniques of automation, by electronic processes, or by perforated tape.

The Meeting confirmed the retirement of M. Wilz from his position as Director and called to a seat on the Board M. Y. Pallet, Director of the Société Fives Lille Cail.

DE WENDEL & CIE

SOCIÉTÉ ANONYME PARIS

(Iron and Steel)

The Annual General Meeting of DE WENDEL & CIE. S.A. was held in Paris on May 19 with Monsieur le Comte Emmanuel de Mitry in the Chair. The following is a summary of the report presented by the Board of Directors:

REVIEW

Output and sales of DE WENDEL & CIE. S.A. rose once again and production figures comprised 6,963,262 tons of iron ore; 2,292,811 tons of pig iron; 2,703,649 tons of processed steel (including the share of DE WENDEL & CIE. S.A. in the tonnage processed by *Société Lorraine de Laminage Continu "SOLLAC"*).

Deliveries of finished and semi-finished products amounted to 2,031,965 tons and turnover for the year amounted to NF 1,620,897,167.02, including all taxes.

INVESTMENTS

During 1960 the level of investments rose once again to reach NF 141,268,668.16, and this sum was spent on new projects which included:

commencement of work on a second ore-sintering plant;

the completion of the modernisation of a blast furnace;

the construction of the first unit of a new battery of modern blast furnaces;

the installation of finishing equipment for rails and of a rolling mill for joists.

The investment programme will be continued in the coming years with the erection of ore-crushing and screening installations and an ore-sintering plant, the building of a new blast furnace and of a high capacity steel plant, and the expansion of rail and port facilities.

SUBSIDIARIES

All the subsidiaries and affiliated companies of DE WENDEL & CIE. S.A. are also continuing their expansion. This applies particularly to *Société Lorraine de Laminage Continu "SOLLAC"* which, in 1960, produced 1,683,000 tons of steel and rolled 2,023,000 tons of hot rolled strip. A third cold rolling mill with a capacity of 800,000 tons will shortly complete the *SOLLAC* plant.

PROFIT AND DIVIDEND

After provisions for depreciation amounting to NF195,093,624.31, net profit for the year amounted to NF14,118,370.70. It is accordingly proposed to distribute a gross dividend of 8 per cent, equivalent to NF4 per share.

The report, the accounts, and the proposals put forward by the Board of Directors were adopted.

CAPITAL

At an Extraordinary General Meeting held immediately after the Annual General Meeting, the Board of Directors was authorised to increase the capital from NF150m to NF250m, half of the increase to be realised by the capitalisation of reserves and the remainder by the issue of new shares for cash. The Board decided to proceed with the increase immediately, and the issue will be made very shortly.

COMPANY AFFAIRS

Associated Portland Cement

At the height of the May boom, building material shares were overvalued. Price have tumbled sharply since and are currently offering yields less thin and uninviting than they were. Associated Portland Cement, which touched 96s. 9d. earlier this year, are now 77s. 10½d. and yield just over 3 per cent, covered 2½ times by earnings. This yield assumes that after the one-for-two scrip issue the 1960 dividend will be scaled down to the odd amount of 8½ per cent. If, on the other hand, the 1961 dividend were put up to 10 per cent, the yield would be 3¾ per cent.

A dividend of 10 per cent indeed seems possible, for this year—and perhaps 1962 also—is likely to produce better results for APC than did 1960, when the group's home deliveries rose by just over 5 per cent and its share of the market declined fractionally. Already this year home deliveries have risen by nearly 10 per cent. The rise in cement prices has restored margins eroded by rises in wages and fuel prices. Export sales did reasonably well last year but they will be reduced this year and so make a smaller contribution to profits—the main exporting

Years to Dec. 31	1958	1959	1960

* Adjusted for scrip issue. † Fixed assets revalued.

kilns, it seems, are fired by fuel oil on which the budget imposed a duty. Some cement from these kilns can be re-directed to the home trade even though the works are not ideally sited for serving the domestic market. Because of transport costs, cement so diverted will earn a lower margin than normal home deliveries but a higher one than could be earned in export markets. Last year home sales of cement, aggregates and cement products produced nearly 65 per cent of the gross profit and exports about 10 per cent, with the remainder coming from investments and works sited abroad. In 1959, sales at home produced nearly 70 per cent of the gross profit and exports about 7 per cent; this 1959 pattern may recur this year, and with a higher tonnage sold than then.

The directors of APC appear to be satisfied that the demand for cement and associated products will remain buoyant for they have revised the three years capital programme to add 1½ million tons per annum to capacity instead of the 1 million tons originally planned. In all, this programme will cost about £20 million, but some money has already been spent and some new capacity is already being used. The extensions can therefore be financed from the cash flow without putting a brake on distributions to ordinary shareholders.

Beecham Group

THE Beecham Group is beginning to reap the benefit of the substantial sums spent on promoting and developing overseas markets. In the year to March 31st last the trading profits in the home market rose only fractionally, from £6,041,000 to £6,093,000; but earnings overseas jumped by 26 per cent, from £1,802,000 to £2,270,000 and contributed ninety per cent of the total increase in trading profits from £7,843,000 to £8,364,000.

At home, soft drink sales fell in a poor summer. The company also faced fiercer competition in toilet products and, as the table shows, margins again fell. The chairman, Mr H. G. Lazell, points out that some of the decline in margins can be attributed to the considerable proportion of sales now represented by soft drinks and confectionery, following the acquisition of the Corona soft drink business in 1958 and the Pascall confectionery business a year later. Though they have fallen, profit margins at home are still much higher than those earned abroad, where the cost of launching new products is heavy. Only in the current financial year do the directors expect to earn a "normal rate of profit" on sales of Brylcreem in the United States, where it is now firmly established as the biggest selling hairdressing product; but not a little of this profit will go to support the launching of Silvikrin Shampoo in that market.

Last year total advertising expenditure rose by another £1 million and spending on research by £150,000 to £750,000, half of it being devoted to basic pharmaceutical research.

PROFIT MARGINS

Years to Mar. 31	1957	1958	1959	1960	1961
	%	%	%	%	%
Trading profit/sales:					
Home trade	17·4	19·4	18·4	17·5	16·4
Overseas trade	12·3	14·6	12·7	11·7	11·8
Total	15·6	17·8	16·7	15·7	14·8
Trading profit/avge. capital employed	19·0	24·0	21·7	21·3	21·6

Mr Lazell says that several new penicillins are being developed which "will revolutionise the antibiotic treatment of disease." With the new plant at Worthing now producing the Beecham penicillins and fine chemicals, royalties are increasing and should make a useful contribution to profits this year. But heavy sums are being spent on advertising both at home and overseas and it is perhaps hot weather and improved soft drink sales that will provide higher profits this year. Further ahead, shareholders will expect the current costs of promotion to produce bigger sales. The market's assessment of the group's growth prospects is reflected in the yield of 3 per cent offered by the 5s. shares at 49s. 9d. on a 30 per cent dividend, twice covered.

Albert E. Reed

THE year which ended on March 31st was one of transition for the Reed Paper Group. By acquiring 96 per cent of the stock of the Anglo-Canadian Pulp and Paper Mills it has taken a big step towards becoming an international group; it has also set up a wholly-owned Australian subsidiary. The group has thus become less dependent upon the British market, but its interests here still bulk very large.

At home, the chairman, Lord Cornwallis, says that competition in the papermaking and converting industry is intense. Rising costs of fuel as well as higher wages have

Years to March 31	1959	1960	1961
	£'000s	£'000s	£'000s
Sales	66,234	73,996	87,667
Trading profits	6,001	6,958	9,103
Depreciation	1,723	1,804	2,512
Taxation	1,762	1,860	2,800

	%	%	%
Ordinary dividend	14	16	16
Trading profit/sales	9·1	9·4	10·4
Net profit/sales	3·8	4·5	4·3

squeezed profits and a fall in demand by manufacturers supplying the consumer durables market has forced prices down. In addition, home paper manufacturers are beginning to feel the effects of the EFTA tariff cuts: the first of these came last July which resulted in a reduction in the price of Scandinavian paper products in the British market. Lord Cornwallis says that this substantially reduced profit margins, particularly towards the end of the financial year. As tariffs were cut further at the beginning of this month, it may be that the worst is still to come.

The effect of competition on profits is masked only slightly by the acquisition of the Canadian subsidiary, three months of whose profits are included in the accounts. The effect on the balance sheet is clearer; liquid assets of nearly £4¼ million have been reduced to £1¼ million and a bank overdraft of over £2 million has appeared. This gives the group a net overdraft of £831,000 and at the year-end capital commitments amounted to £3,674,000, against £1,432,000. The need, therefore, to conserve resources at a time when profits are under pressure helps to explain why the £1 ordinary shares at 45s. 6d. yield as much as 7 per cent on the unchanged dividend of 16 per cent.

Bankers' Half-Year

So far 1961 has plainly been profitable for the banks. Interest rates have remained relatively high and advances have continued to rise, to almost one-half of deposits. Average advances outstanding in the first six months were 11 per cent more than a year before. But general economic uncertainties have recently dampened enthusiasm for bank shares, which up to May had been among the leaders in the rising equity market. Since then they have fallen sharply and the foreshadowed rights issue by **Barclays** on Thursday produced a further fall—in marked contrast to the effect of the Midland rights issue of last April.

Both Barclays and the Westminster have increased their interims. But in both cases they are exactly half of last year's total, and the market is not counting on a rise in the totals for 1961. Barclays is paying 6½ per cent., an increase of ½ per cent. Westminster's total last year was 2s. 8d. per share and it is now paying 1s. 4d.—an increase of 3d.

Martins, which paid 7 per cent and 8 per cent last year, is again paying an interim of 7 per cent. The **Royal Bank of Scotland** has raised its previous interim by ½ per cent to 9 per cent, and the market hopes that this will be followed by a final of 11 per cent to make 20 per cent for the year against last year's 18½ per cent.

Hawker Siddeley

THE statement by the chairman of Hawker Siddeley, Sir Thomas Sopwith, at the annual meeting of the group painted an intricate picture of the group's wide-ranging activities. The addition of Blackburn, de Havilland and Folland to the group makes any worthwhile comparison of profits practically impossible and in any case the latest accounts cover a seventeen-month period. The group has several promising commercial aircraft either in production or nearly ready to be produced but their financial success will depend largely on winning foreign orders. The Argosy freighter seems well set, having won orders from the RAF and an American operator. But over £15 million has been written off for design and development of civil aircraft, the AWA Argosy, the Avro 748 and the new de Havilland Trident; this seems to be a big sum for basically conventional aircraft, and shareholders must hope it will not recur in the current year. This heavy charge is over half the trading profit for the period and almost double the net profit of the British group.

The overdrafts of the British group have risen to £22.4 million, which is the same level they reached in 1958 before the £15 million issue of convertible debentures. This was no doubt aggravated by the acquisition of de Havilland, whose overdrafts totalled £7.7 million at the time of the last balance sheet in September, 1959. However, the overdrafts of the group's Canadian interests have been reduced from £10½ million in 1958 to less than £2 million mainly as a result of the sale of the group's holding in Algoma Steel.

The industrial side, which now produces 35 per cent of the group's sales, did well in 1959-60. Diesel engines and locomotives sold well and both sales and profits increased. The future for the group's profits is difficult to predict. There may be some improvement in the profits of the Canadian subsidiary, which made a net loss of £262,000 in the 17 months. The development charges should be lighter and this may enable bank overdrafts to be reduced if profits are maintained. A record order book of £366 million at the beginning of this year suggests that the group could do well; this compares with a turnover of £458 million in the previous 17 months. The virtual certainty that Blue Streak will be rescued from limbo now that Germany has joined the European space club puts Hawker Siddeley back into the front line of the rocket business with the likelihood of a foothold in space. But the ultimate well-being of the group depends on winning further orders for earth-bound equipment, especially in the highly competitive international aircraft business. At 29s. 6d. the £1 ordinary shares yield 7.2 per cent on the dividend of 10.6 per cent.

De La Rue

By far the biggest of De La Rue's three principal subsidiaries is Formica, in which American Cyanamid has a 40 per cent interest. Largely as a result of the setback in the furniture trade following the re-imposition of credit restrictions its profits fell back in the year to April 1st by 15 per cent from £1,787,000 to £1,507,000. Shareholders will no doubt be pleased that this sharp fall in profits has been more than made good on the printing and banknote side (where Thomas De La Rue reported a jump in profits of 83 per cent, from £321,000 to £588,000) and on gas and oil fired heaters (where, despite increased competition and credit restrictions, Thomas Potterton raised its profits from £257,000 to £352,000).

There are some signs of an improvement in the demand for Formica products and this together with the introduction of new materials could well set the profits of the De La Rue group moving ahead again. The chairman, Mr B. C. Westall, expects a further decline in profit margins, which fell last year from 13.4 to 12.3 per cent, but he expects this to be more than offset by higher sales.

Investment in plant and machinery last year amounted to £2¼ million and working capital absorbed a further £800,000; although the cash flow amounted to almost £1 million, net liquid assets have been reduced from £1,700,000 to only £55,000. It is not surprising that with capital commitments of £400,000 (and these do not take into account schemes under negotiation) the directors are considering the most advantageous way of raising new capital. Just over £1 million was raised by a rights issue two years ago and prior charges so far amount to only £500,000 in a 3½ per cent preference stock. The stock market, however, is expecting another rights issue; the 10s. shares at 55s. stand at their low point of the year to yield 4.1 per cent on the dividend of 22½ per cent maintained on the capital as increased by a one for four scrip issue.

Over the past two years the directors have done much to encourage shareholders to take a greater interest. Board meetings have been held in a number of cities to which shareholders have been invited to meet the directors. This year the annual meeting is to be held in London at the unusual time of 5 p.m. in the hope that more than the usual fifty of the 9,000 shareholders will be able to attend. The chairman has invited shareholders who cannot attend personally to send in questions.

House of Fraser

A CHANGE in House of Fraser's bankers from the National Commercial Bank of Scotland to the Midland Bank sparked off fresh rumours this week that the House of Fraser was intending to make a bid for Debenhams. While Sir Hugh Fraser denies having any fresh bids in mind at the moment shareholders will surely hope that at the annual meeting he will give the reasons why the bankers have been changed. A year ago the accounts showed a loan of £10 million from the National Commercial Bank (of which until last month Sir Hugh was a director) and this had been instrumental in financing the Harrods take-over.

As expected the latest accounts to January 31, 1961, show that this loan has been almost entirely repaid and at that date the bank overdraft amounted to only £817,000. Funding has been made possible through the sale of some of Harrods' properties (which have then been leased back). As a result of the sales, which reduced freehold and leasehold properties in Harrods' balance sheet from £21.6 million to £14.1 million, both Harrods' and the House of Fraser's balance sheets showed "premiums receivable" of £7½ million arising from the new leases. Harrods has lent £9.1 million to House of Fraser; this is balanced in part by a rise of £3 million in the debentures and mortgages of Harrods' subsidiaries and by the replacement of a cash balance of £766,000 by a net overdraft of £827,000. Harrods' capital reserves have been increased by just over £3 million arising from a "surplus on premiums receivable and sales of property." Shareholders will be forgiven for feeling baffled at these financial intricacies. Sir Hugh should tell them plainly what they mean and what effect they may have upon the rents the group will have to pay.

The two major subsidiaries, Harrods and John Barker, both earned higher profits last

year and contributed £330,000 to the increase of £539,000 in the House of Fraser's trading profit from £5,892,000 to £6,431,00. Moreover their contribution to the increase in net profits amounted to over two-thirds, following the substantial rise in the charge for interest in House of Fraser's accounts from £336,000 to £762,000. Presumably with the virtual elimination of the bank overdraft this charge will be reduced in the current year.

Sir Hugh says that the past year has been one of consolidation and internal reconstruction but he warns shareholders that it will be some time before the full benefits of the capital programme emerge. The new Birmingham store operated by a Harrods' subsidiary was opened last November a few months after fire had destroyed the store of another subsidiary, William Henderson. The rebuilding of this store should be completed next year but no profit from it was included in the accounts. The current year has opened with another rise in sales. In creating the shares for a one-for-two scrip issue the directors propose to leave a balance of £1¾ million of unissued ordinary stock but they say that they are not at the moment considering issuing any of these shares. On a 45 per cent dividend, covered 1¼ times, the 5s. shares at 53s. 3d. yield just over 4 per cent.

British Plaster Board

THIS is another company likely to be coming to the market for new money before long. Its chairman, Sir Graham Hayman, hints that this may take the form of a debenture issue. At the moment the company has adequate overdraft facilities with its bankers; at the end of March the group's net overdraft amounted to £517,000, against an earlier cash surplus of £737,000, but its holdings of investments, largely gilt-edged securities, were virtually unchanged at £244,000. While capital expenditure of £2.3 million was almost matched by a cash flow of £2 million, the group's working capital rose by £1½ million. At the end of March capital commitments stood at £1½ million; whether that included the £500,000 paid in May for an interest in Australian Gypsum is not clear.

Consolidated profits were little changed at £3,194,000, against £3,170,000, and after tax net profits were £20,000 lower at £1,455,000. Despite the reduction in plasterboard prices in this country last November, the companies at home earned higher profits; these were offset by lower profits in Canada, though a recent increase in house building in Canada has led to an improvement in demand. Sir Graham is concerned about lower profit margins in this country, but he expects new projects to make a contribution to profits this year and with the continuing high level of activity in the building trades he looks forward to "satisfactory results." On the maintained dividend of 11¼ per cent, covered 2¼ times, the 10s. shares at 22s. 3d. yield 5 per cent.

Fine Spinners

UNDER the current agreement with Commonwealth producers, exports of cotton yarn to the United Kingdom are not restricted. But the government's proposals for extending the agreement with Hongkong have a particular significance for Fine Spinners, which is one of the biggest yarn manufacturers. If imports of yarn into Britain increase sharply, the government proposes to impose quotas. Read in the light of the government's sudden intervention in the dispute between Lancashire and Hongkong, the review by Mr W. T. Winterbottom, the chairman of Fine Spinners, accompanying the full accounts for the year to March 31st becomes quite encouraging. Mr Winterbottom believes that once the problem of imports is settled, order books, which have shrunk, will soon be restored to a healthy level. The group has already shown its confidence by raising the ordinary dividend by 2½ per cent to 15 per cent, the highest level since the war, even though dividend payments had actually exceeded equity earnings since the boom years of 1951-52.

By any standard, Fine Spinners has had an exceptionally good year; trading profits rose from £1,822,000 to £2,682,000, and although depreciation rose by £119,000 to £693,000 and tax by £287,000 to £871,000, net profits rose from £624,000 to £1,094,000. Fine Spinners increased its output of single yarn despite the scrapping of 57 per cent of its machinery, and apparently maintained its production of doubled yarn fairly successfully after scrapping 65 per cent of its capacity. In the financial year, the group spent £1,331,000 on re-equipment and had capital commitments of £324,000 at the end of March Compensation received for scrapped machinery amounted to £1,127,000.

The recovery in profits last year understated the extent of the improvement in the group's home market. Cotton growing and livestock farming in the United States was less profitable and comparatively low profit margins in France limited the improvement reported by the group's French mills. Fine Spinners is the largest producer of yarn made entirely from man-made fibres in Britain, and has integrated the production of high-quality goods right through from raw cotton to the finished article. The group is also financially strong, holding net liquid assets of £1 million, and it should continue to do well while the cotton industry prospers in Lancashire. The £1 shares at 25s. 6d. yield 11.8 per cent.

Rediffusion

THE overseas revenue of Rediffusion rose to over £6 million last year and profit from this source helped the company to escape comparatively lightly from the effects of credit restrictions on the sale of television sets in this country. But over one-third of the increase of 11 per cent in consolidated profits came from trade investments—that is, bigger dividends from Associated Rediffusion.

For the current year the chairman of Rediffusion, Mr J. Spencer Wills, does not expect much more than unchanged profits. In the longer term he believes that the company's system of wired networks is capable of carrying colour television signals and also particularly suitable for the development of subscription television. In this field the company has now entered into a long term agreement with the Rank Organisation.

Like most companies in relay television Rediffusion has spent heavily on capital in recent years. Despite an injection of £4.5 million from a rights issue last November net cash assets by the end of March were no higher than £1.8 million while net fixed assets rose by £3.6 million in the year. The new shares resulting from the issue did not rank for dividends in 1960-61. In all the tax-free dividend was raised from 20 to 22 per cent and the 5s. shares at 39s. 7½d. yield 5 per cent.

Renold Chains

THE year to April 2, 1961, opened well for Renold Chains; its order book was strong; it had just completed a highly successful year which brought out the benefits of extensive modernisation and re-equipment between 1956 and 1959 and a rise of 60 per cent in profits. Further improvement in the past year is marked by a rise in trading profits of 13½ per cent, from £2,508,000 to £2,854,000. Depreciation costs slightly more and taxation is up from £887,000 to £1,125,000, leaving net profits 10 per cent higher at £1,019,000 against £927,000.

The group has a wide range of products, which include chains for conveyors and motor cars as well as power transmission equipment; it has several manufacturing and selling subsidiaries abroad whose profits appear to have risen faster than profits earned at home. The directors have played safe in maintaining the ordinary dividend at 10 per cent, on which the cover has risen to just over twice; at 41s. 3d. the £1 shares yield 4.9 per cent.

Land Securities

IT seemed clear from the big development programme recently outlined by Mr Harold Samuel that Land Securities would have to get more new money; and it is no surprise that Land Securities' link with the Legal and General Assurance is now to be further strengthened. Over the course of two or three years this should bring about £17¼ million into the property company. Legal and General has already subscribed £6 million in a 6¼ per cent convertible debenture and has the right to subscribe for up to 1½ million ordinary shares. Now it has agreed to take up £15 million of a debenture, to be issued effectively at 99, at a similar rate of interest. It will make an initial advance of £3 million and subscribe a maximum of £6 million in any one year up to June 30, 1964.

This new debenture is not strictly convertible but it gives Legal and General the right to subscribe for a further 1½ million ordinary shares at 30s. per share; this compares with the current price of 31s. 9d. Thus if Legal and General exercises all its conversion and subscription rights it will hold 3 million 10s. shares, or 10 per cent of the bigger and more highly geared capital.

Trust Houses

PERHAPS the most impressive point in Sir Geoffrey Crowther's statement to shareholders of Trust Houses is the size and scope of the company's development programme. Last year Trust Houses acquired the Shelbourne Hotel in Dublin and at the close of the financial year it opened the Dragon Hotel in Swansea. In August the Hertford Hotel will be opened, giving Trust Houses its third London hotel, while plans are in hand for a fourth. In Winchester and just outside Sheffield new hotels are also planned. These are in addition to a programme of extensions to existing hotels, where the plan is to add over 700 bedrooms and 800 private bathrooms.

This capital programme is expected to cost over £2 million in the next four years. This compares with a cash balance of £2.3 million, reflecting the £1 million raised last January by the rights issue. As then forecast, the ordinary dividend has been maintained at 12½ per cent on an increased capital. Net profits for the year to March 31st rose from £298,000 to £323,000, to cover the ordinary dividend just under 1½ times, but profits do not include a full year's earnings from Shelbourne Hotel (which before tax are estimated at £80,000) nor a full year's earnings on the money raised by the rights issue. If they did, Sir Geoffrey estimates the cover would be 1¾ times.

To keep to the forefront in the hotel business, Trust Houses may well have to come to the market again and benefits may accrue to shareholders through their participation in new issues on favourable terms rather than through big increases in the ordinary dividend rate (this, in any case, is limited to 20 per cent). It will clearly be some years before the new hotels produce a satisfactory return on the money invested. At 69s. the £1 shares are 13s. below their 1961 peak but still yield no more than 3.6 per cent.

Aspro-Nicholas

ASPRO-NICHOLAS added to its sales of pharmaceuticals, household products and toilet requisites in the year to March 31st and its total turnover rose by 15 per cent. Gross profits did not quite match this, rising by 12¾ per cent from £1 million to £1,128,000. The tax charge rose steeply so that net profits in fact fell back from £446,000 to £412,000. These profits were disappointing, for the directors had been hoping for gross profits of £1½ million after the acquisition of Griffiths Hughes.

The principal reason for the disappointing results was the loss incurred by a new North American subsidiary whose sales of veterinary products failed to come up to expectations. At home there were several weak spots as well. The veterinary and pharmaceutical activities yielded a low return on capital invested. Integration with Griffiths Hughes had its own costs and though the chairman, Mr Maurice Nicholas, says that greater efficiency and bigger output have helped to offset the rise in prime costs a further increase in advertising both at home and abroad has put some pressure on margins.

The reorganisation following the merger has had its effect on the balance sheet. Though an issue of 6¼ per cent debenture raised £2 million, the bank overdraft still amounts to nearly £1 million. The chairman has little to say about future prospects but clearly economies of integration must be fully exploited if rising costs are to be contained. The dividend of 14 per cent represents a small increase over the previous year's equivalent payment of 13⅜ per cent but the shares issued in the acquisition of Griffiths Hughes did not rank for the earlier payment. It is covered 1.4 times and the 5s. shares at 17s. 3d. xd yield 4.1 per cent.

Volkswagen

VOLKSWAGEN is the biggest of the European motor producers. Last year it made 724,000 cars and 139,000 commercial vehicles, all of the same basic model. Last year 30 per cent more VWs were sold in western Germany than in 1959 and they accounted for 34.3 per cent of the market, against 31.5 per cent. In the United States, sales of the VW have continued to rise while the sales of other imported cars have fallen; in 1960 VWs represented 31 per cent of imported car sales in the United States and this year the percentage share is likely to be over 40 per cent. The directors say that the sales prospects are still good but they warn shareholders that the effects of the mark revaluation cannot be determined until the end of the year. Dr Nordhoff, in his address to shareholders last week, spoke of the increase in competition and the reduction in profits that would result from the increase in the German motor industry's capacity. Volkswagen had already had its margins cut by increased costs and it might now have to raise prices.

The new 1½ litre VW that is being introduced next September is the first step to a change in the present model; though Dr Nordhoff said that the existing car will remain the basis of production for many years. At some date it will have to be replaced. This will be the testing time for the company, which has been founded on a design that it inherited.

London Stock Exchange

FIRST DEALINGS:	June 12	June 26	July 10
LAST DEALINGS:	June 23	July 7	July 21
ACCOUNT DAY:	July 4	July 18	Aug. 1

EQUITY prices, having held reasonably steady before the week-end, fell very sharply this week. Economic uncertainties still clouded the market and another statement from the Chancellor contributed to the gloom. The volume of selling, however, was not heavy as the jobbers were quick to mark prices down. The extent of the falls after the week-end is shown by *The Economist* indicator, which lost 15.2 points to 368.0, its heaviest fall this year—taking it back to the levels at the end of January. Immediately after the week-end there was some investment buying of medium dated stocks, but this was overshadowed on Tuesday by the effects of the June figures for gold and convertible currency reserves, which fell more than the market expected, and by the Chancellor's statement the following day. Over the week, however, the *Financial Times* index of government security prices showed only a small net fall. Short and medium dated stocks held steady and the fall in the irredeemables was halted: 3½ per cent War Loan gained ⅛ to 53 16/32 despite a fall on Wednesday.

Among bank shares Barclays lost 5s. 9d. to 76s. 9d. and Lloyds 5s. 6d. to 63s. 3d. The news of substantial hire purchase losses led to a fall in Bowmaker from 19s. 4½d. to 16s. 7½d. Insurance shares were also rather depressed, Pearl losing 10s. to 210s. and Legal and General ⅜ to 32⅝. The news that the Chancellor did not intend to restrict building was not enough to prevent net falls in building shares; Associated Portland lost 2s. 3d. to 75s. 6d. Among brewery shares Courage Barclay were down on the results and J. and R. Tennent lost 2s. 6d. to 36s. on the news of the rights issue. Debenhams failed to hold their gains after Sir Hugh Fraser denied rumours of a bid and they lost 4s. 7½d. to 59s. 1½d. Shipbuilding shares were depressed by the forecast from Richardsons Westgarth of a substantial loss in the current year.

Steel share prices fell back after disappointing results from Whitehead Iron and the news of Colville's rights issue. Among the blue chips ICI were 3s. 7½d. lower at 66s. 4½d. Motors lie under the shadow of the possibility of economic measures and BMC fell to a new low for the year of 14s. Engineering shares were also dull. Oil share prices held up when prompt British reactions to the Kuwait crisis reduced the extent of Continental selling. The news of difficult prospects from A. E. Reed influenced other paper shares; Bowater lost 2s. 9d. to 52s. The conclusion of the Monopolies Commission that Imperial Tobacco should sell its interest in Gallaher led to a fall in Gallaher of 5s. 6d. to 40s. Kaffirs fell once more, F. S. Geduld losing 5s. to 76s. 3d. and Anglo American 7s. 6d. to 110s.

THE MONEY MARKET

At £98 17s. 4d. the combined bid of the discount houses remained unchanged at last Friday's bill tender. The market is still prepared for a rise in Bank rate, but would now be very surprised to see it in advance of the Chancellor's general measures expected later this month. The average rate of discount last week rose marginally by 0.47d. to £4 8s. 8.94d. per cent. Total application rose by £12 million to £491 million and the market received 46 per cent of its application compared with 50 per cent a week earlier.

The incidence of the half-year end produced unsettled conditions in Lombard Street. On Friday, even after the Bank had helped the market by purchasing a substantial number of bills, funds were still insufficient to meet the strains of the half-year and eight or nine houses called on the Bank of England to share a very large amount of assistance. On Saturday, in contrast, the market opened with money on offer at the clearing banks' minimum of 3½ per cent. After the weekend credit was again tight; on Monday and Tuesday the authorities provided the market with large amounts of help.

APPOINTMENTS

British Nylon Spinners Limited

sucht für ihren Wirtschaftsinformationsdienst in London

UBERSETZER/WIRTSCHAFTSFORSCHUNGSMITARBEITER

zur Auswertung fremdsprachigen Schriftmaterials und für andere Informationsarbeiten. Mindestbedingungen sind gründliche Deutsch- und Französischkenntnisse, und auf weitere Sprachkenntnisse, besonders auf dem Gebiet der skandinavischen Sprachen, wird Wert gelegt.

Das Tätigkeitsgebiet umfasst u.a. das Übersetzen ins Englische von im Ausland veröffentlichten Nachrichten und Artikeln, sowie das Sammeln von Material zwecks Aufnahme im einem Informationsblatt.

Bewerber werden gebeten, ihre Gesuche in englischer Sprache an den Personalchef der Firma in Pontypool, Monmouthshire, unter Nummer S/236 zu richten.

GRANADA require an Organisation and Methods Officer to work from their TV Centre, Manchester. Duties will include investigation, recommendation and implementation of systems of procedure. Applicants should have had at least three years' experience of O & M. work and be able to operate at all levels in the organisation. This is a senior post for which a commensurate salary will be paid. Five-day week, generous Pension and Dependent Insurance arrangements.—Write giving details of age, qualifications and experience to Norman Price, Personnel Manager, Granada TV Network Limited, Manchester 3.

THE MILK MARKETING BOARD invite applications for the appointment of Assistant in the Statistics and Surveys Department of its Production Division. This department is concerned with the study of factors governing milk production, feeding practices, cattle population trends, etc. Applicants should recently have graduated in agricultural science or economics. The commencing salary will be according to qualifications and experience, and there are excellent prospects for the future. The appointment is permanent and pensionable after a probationary period.—Application forms from the Personnel Officer, Milk Marketing Board, Thames Ditton, Surrey.

SUBSCRIPTIONS TO THE ECONOMIST

Annual Postal Subscription by ordinary mail, UK and Canada £4 . 10 ; elsewhere overseas £5

By air see below

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail in invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

NUFFIELD COLLEGE STUDENTSHIPS

SUPPLEMENTARY ELECTIONS

Applications are invited from men or women graduates who wish to undertake research in Economics ; Politics ; Sociology ; recent Economic & Social History and Political History; Industrial Relations; African Studies; Public and Social Administration; International and Public Law or any other branch of the Social Studies.

Further particulars and the necessary forms are obtainable from the Warden. Applications should reach him by September 30, 1961.

MEDICAL RESEARCH COUNCIL

require

SOCIOLOGIST

With interest in demography, for team engaged in epidemiological studies of common diseases at their Epidemiological Research Unit, Cardiff (working in close contact with the Council's Pneumoconiosis, Social Psychiatry and Epidemiological Jamaica) Research Units and the Welsh National School of Medicine). The post entails supervision of private census taking, with time for own research. Degree and previous research experience essential. Salary according to qualifications and experience.

Applications, with full CURRICULUM VITAE, names of two referees, in writing to Professor A. L. Cochrane, M.R.C., Llandough Hospital, Penarth, Glam.

UNIVERSITY OF EXETER

Applications are invited for the post of Lecturer or Assistant Lecturer in Economics (Economic Theory). The salary will be in the ranges :

Lecturers : £1,050 — £1,850 (efficiency bar at £1,475).

Assistant Lecturers : £800 x £50 — £950.

The initial salary will depend upon the qualifications and experience of the successful candidate.

Further particulars may be obtained from the Secretary of the University. Closing date for applications (eight copies, overseas applicants one copy), July 21, 1961.

MARKET RESEARCH

PETFOODS LIMITED, manufacturers of Kit-E-Kat, Whiskas, Minx, Chappie, Lassie, Pal, Chum and Trill, require an additional

RESEARCH OFFICER

for their MARKET RESEARCH DEPARTMENT, which employs a permanent Field Force of forty interviewers.

Applicants (Male or Female) should not be over 30 years of age and preference will be given to graduates in the Social Sciences. Previous Market Research experience is not essential but would be a definite advantage. This is a managerial position and the selected candidate will be required to take charge of a small market intelligence unit and will also be expected to take part in all activities of the Department which include Consumer Surveys, retail panel work, etc.

Starting salary will not be less than £1,000 per annum and the Company operates a non-contributory pensions plan, sickness benefits and life assurance cover.

Applications giving full details of education, etc., should be sent to :—

The Chief Personnel Officer,
PETFOODS LIMITED,
Melton Mowbray, Leics.

UNIVERSITY OF OXFORD ALL SOULS COLLEGE

SENIOR RESEARCH FELLOWSHIPS

The College proposes to elect during 1962, if suitable candidates present themselves, to not more than two Senior Research Fellowships.

1. Each Fellowship is of seven years' duration and carries an emolument of £1,250 rising at £1,500* (inclusive of allowance other than children's allowance, housing allowance and table allowance) ; its tenure is compatible with the tenure of a lecturing grant of £550 to £750.
2. The person elected must have attained distinction in one of the following branches of knowledge : Law; History (including the History of Art or of Science) ; Philosophy ; Literature ; Economics, Social Anthropology, Politics, Sociology, and other Social Studies. He will be required to undertake some definite project of research at Oxford or with the permission of the College elsewhere.
3. Candidates should send their application to the Warden, not later than October 31, 1961, together with any statement they may think it desirable to submit in support of it, and to name the names of not more than three referees. They may be required to present themselves for an interview. Further particulars concerning the Fellowships may be obtained from the Warden. All envelopes relating to applications should be marked "Fellowship Application."

The choice of the College will not be limited to those who apply.

* An increase, to £1,400 rising to £1,650, is now before the Privy Council for approval.

UNIVERSITY COLLEGE OF SWANSEA

DEPARTMENT OF ECONOMICS

Applications are invited for the post of RESEARCH ASSISTANT in connection with studies in the History and Organisation of British Overseas Trade. Applicants must be graduates in Economics or Economic History. Salary in the range £500-£700 per annum together with F.S.S.U. benefits.

Further particulars can be obtained from the Registrar, University College, Singleton Park, Swansea, by whom applications (six copies) must be received by *Saturday, July 22, 1961.*

THE UNIVERSITY OF CANTERBURY

CHRISTCHURCH, NEW ZEALAND

The growing Department of Economics requires additional staff, and a new LECTURESHIP or SENIOR LECTURESHIP has been created.

The salary range for a Lecturer is from £1,250 to £1,700 per annum and for a Senior Lecturer £1,750 to £2,000 per annum.

Economists who are interested in this position are invited to write (*air mail*) to the Head of the Department before the end of July, 1961, giving some provisional information about their qualifications, special interests and other relevant facts.

Full details of the position and information regarding the University of Canterbury and its Department of Economics will then be sent to those whose applications would be welcomed.

G. G. TURBOTT,
Registrar,
P.O. Box 1471, Christchurch,
New Zealand.

UNIVERSITY OF OTAGO

Dunedin, New Zealand

SENIOR LECTURER OR LECTURER IN ECONOMICS

There are two vacancies and applications are invited for these positions.

Salary Scales : Senior Lecturer £1,750-£2,000 or Lecturer £1,250 x 75-£1,700.

Further particulars are available from the Secretary, Association of Universities of the British Commonwealth, Marlborough House, Pall Mall, London, S.W.1, or from the Registrar, University of Otago, Dunedin, New Zealand.

Applications close in New Zealand and London on *August 20, 1961.*

A WOMAN Graduate under 24 is required for the Consumer Research Section. Candidates should have the ability to interview and some aptitude for figure work. Previous experience useful but not essential.—Details to Mrs. Jarrett, Metal Box Company, 37 Baker Street, W.1.

NORTHERN RHODESIA

Statistician required for Pneumoconiosis Medical Research Bureau, Kitwe. Duties will consist of the recording, analysis and interpretation of the medical statistics of the Medical and Research Bureau and Mines Department under the Hollerith system, the supervision of Hollerith Operators and the general organisation of the statistical section of the Bureau. The officer will also have to organise statistical investigations in relation to pneumoconiosis research including the correlation of dust exposure to radiological and pathological appearance in miners, for which accurate industrial, clinical and radiological data are available. Experimental investigations in animals are also carried out. Such investigations would be done in close liaison with the medical staff of the Bureau and the candidate would be expected to participate in the preparation of scientific papers for publication. Candidates must possess a university degree in either Mathematics or Economics, and practical experience in statistical work, preferably medical statistics, is desirable.

Appointment on contract for one tour of 36 months with gratuity to in the range of £237 10s. for each completed three months of service payable on satisfactory completion of contract. Salary scale £1,020 to £2,245 a year. Starting point determined by experience and qualifications. Income tax at local rates. Free passages are provided on appointment and on satisfactory completion of contract, for officer and wife; assisted passages for children. Overseas leave at the rate of 84 days for each completed month of resident service also granted on satisfactory completion of contract. Local leave of 14 days per year granted subject to the exigencies of the service. Government quarters available at a rental between £50 and £120 a year according to salary.

Application forms from Director of Recruitment, Colonial Office, London, S.W.1 (quoting BCD 117/3/08A3).

GLASGOW UNIVERSITY

CERTIFICATE IN INDUSTRIAL ADMINISTRATION

The course for the Certificate in Industrial Administration commences on October 3, 1961 and extends over three terms concluding in June, 1962. It is designed to prepare men for managerial responsibilities by giving an insight into the background against which management decisions are taken and imparting a systematic and rational approach to business problems.

The course is intended for recent graduates in any faculty and for men in industry, commerce or the professions who are likely to be promoted to more senior posts. The latter need not be graduates but must be able to show in interview that they possess the necessary qualifications to profit from a University course.

Full details and application forms can be obtained from the Department of Social and Economic Research, Glasgow University, 11 Bute Gardens, Glasgow, W.2. The number of places is limited and those wishing to apply are asked to do so as soon as possible.

PURCHASING OFFICERS ASSOCIATION

AN EXECUTIVE APPOINTMENT

The Purchasing Officers Association is to appoint an Executive responsible for editing "The *Purchasing Journal*" and as an Economic Adviser to the Association.

A fundamental knowledge of journalism and printing will be required as well as a *thorough grounding in economics.* Responsibilities will include the preparation of publications and educational programmes, as well as *instituting* and carrying out original research on economic matters. The applicant should have speaking ability and be *willing* to travel *extensively* in the United Kingdom.

Applications, marked "Executive Appointment," should be addressed to the Director, Purchasing Officers Association, Wardrobe Court, 146a Queen Victoria Street, London, E.C.4.

TAXATION. A well-known firm of Chartered Accountants in Singapore and Malaya have a vacancy for a senior appointment in their taxation department. Applicants should have a wide knowledge and experience of taxation but need not necessarily possess an accountancy qualification. The appointment, which should lead to early promotion for the right man, would suit a serving or retired Inspector of Taxes. The starting remuneration will depend upon experience but will be substantial.—Applications, with full details, should be sent to Box 1523.

PLANNING, MARKETING, ANALYSIS

We are an advertising agency. We are up to our necks in facts. We want someone to dissect some of them and report on where they lead. The problems are various, and clarity of thought and expression, with some feeling for figures, are of more importance than previous experience in the marketing field. We will pay well, and there will be prospects of empire building. Please write to Box 1529.

FC

FIRTH CLEVELAND LIMITED

ENGINEERING · ELECTRONICS · INSTRUMENTS
STEEL · LEAD · RETAIL STORES

Highlights from Supplementary Statement by Mr. C. W. Hayward, Chairman and Managing Director, at the Annual General Meeting.

Profit Breakdown—1960

The following profit breakdown by Divisions will be of interest to shareholders:—

	%
Engineering, Electronics and Instruments ...	19.8
Metals ...	24.8
Overseas Companies ...	2.7
Retail ...	52.7
	100.0

Percentage of earnings to equity, 67.3 (57.2 in 1959) is a figure not bettered by many companies of equal size, despite Company's heavy development investment in electronics, instruments and cold forging which has not yet significantly contributed to earnings.

Fram Filters

The Filter Division of Simmonds Aerocessories, which has been selling Fram filters and separators to the Automotive and Oil Industries under licence, has been sold to Fram Canada Ltd. The latter had planned to set up their own manufacturing facilities in Europe and this would have had a marked effect on the Group's export business in these products. All personnel will be re-employed by the new Company and their pensions have been safeguarded.

Capital Proposals

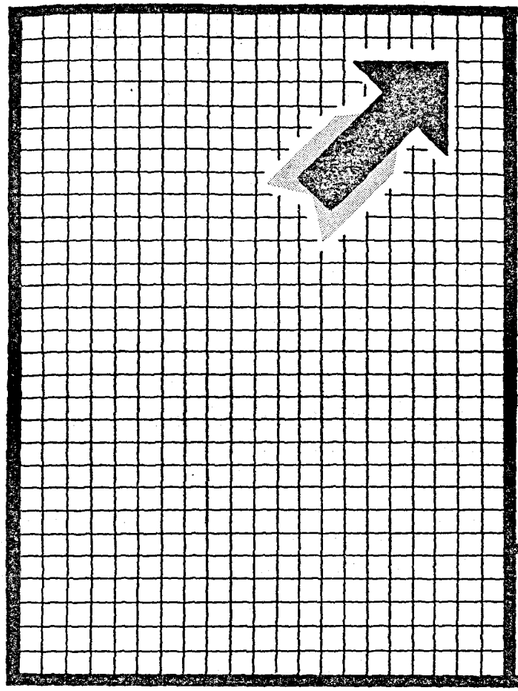
It is not proposed to issue the whole of the 4 million £1 Preference shares by which authorised capital was increased last January. Necessity of raising more than approximately £2 million is not envisaged in view of additional liquidity arising from the sale of Filter Division and certain trade and other investments which will add more than £1 million to Group's cash resources.

Outlook for 1961

All Divisions are continuing to make progress. Landmaster is showing record sales in U.K. and export markets, and 1961 turnover is expected to show substantial increase.

Solartron's new factory at Farnborough will be opened by the President of the Board of Trade, The Rt. Hon. Reginald Maudling, on July 17th and since the Report was issued they have had successful showing at Moscow Fair which resulted in some £200,000 of orders. Order book now stands at record level.

Orders worth some £300,000 have been received for the Firth Cleveland Tangential Fan which will be in production at Solartron next month.



Current year's results should not give cause for dissatisfaction provided there are no unforeseen Government or other restrictions.

The Chairman concluded by emphasising Group's inherent strength and reiterating his confidence that they would maintain in future a rate of progress in keeping with their past record.

	Turnover £	*Profit Before Tax* £
1955	14,250,000	1,379,122
1956	16,250,000	1,542,619
1957	17,250,000	1,725,519
1958*	21,000,000	1,854,050
1959	21,500,000	2,144,806
1960	36,000,000	3,067,263

Investment Opportunities in Japan!

In 1959 Japan attained the highest economic expansion of all the industrial countries of the world. Its gross national products that year increased by 16 per cent over the previous year and has seen a yearly increase ever since. This upward trend has increasingly induced overseas investments in Japanese securities.

Daiwa Securities, as one of the four largest securities companies in Japan . . . capitalized at £8 million sterling and having 4,000 employees . . . is engaged in a wide range of business, acting as broker, dealer and underwriter of securities and distributor of investment trusts. The "pioneering spirit" which has been the motivating power behind its 60 years of expansion is still very predominant today.

Make your money work for you in Japan's booming industries by investing through expert and experienced hands. For investment trusts, etc., write

reasons why Japan should be on your trading map

Reason No. 1:
Japan produces a vast range of quality products under a tremendous industrial boom sparked off by widespread technical innovation and improvement in productivity.

Reason No. 2:
The rate of Japan's economic growth has been and still is the highest in the world, even surpassing that of West Germany, and the introduction into Japan of much more foreign capital is required.

Reason No. 3:
Japan has adopted a policy of gradual liberalization of her foreign trade and new business opportunities arise daily in Japan.

Reason No. 4:
Japan has already freed foreign exchange to a significant degree. The establishment of the Non-Resident Free Yen Account System, under which Yen is freely convertible into the main foreign currencies, will especially facilitate overseas investment in Japan.

Business transactions with Japan promote our business development

NO. 7 IN A SERIES TELLING THE CYANAMID STORY

The sky is falling

Apart from man-made pollution, what is 'falling' is as homely as Chicken Licken's acorn: sunshine . . . water . . . dust. And while human beings are quite used to it, some manufactured articles don't like it at all.

Take plastics, for instance. Today plastics take to an outdoor life quite happily. There was a time when sunlight aged plastics prematurely. Not any more; for small quantities of a specialist chemical — 'CYASORB'* UV absorbers — manufactured by Cyanamid, give a protective armour against sunlight by absorbing the ultra-violet portion of the sun's rays. So we find plastics giving long, colourful service in all sorts of forms: as car seat upholstery; in the gay webbing of garden furniture; in a host of articles manufactured from man-made fibres. And other specialist chemicals manufactured by Cyanamid give us transparent packaging film that is waterproof and records that don't attract dust.

So if, today, more and more manufactured articles are displaying a cavalier indifference to the things that fall out of the sky, it is often enough thanks to new chemicals and processes researched, pioneered and marketed and put into the hands of the technician by Cyanamid.

In this and in a thousand other ways

HOME

TOUGH

Higher Bank rate and higher indirect taxes are the Chancellor's best short-term weapons against economic crisis: fewer subsidies to dying industries, more competition at home and abroad, and a firm stand against wage inflation are the necessary concurrent prescriptions for a long-term cure (p. 217).

Crisis remedies of the past (p. 270).

Abroad the rising bill for housing troops needs a closer look, in the light of Britain's promises—and its political prospects (p. 227).

At home the stock market and the exchange dealers are biting their nails and wearing out their nerves while waiting for the Chancellor's grand cure (p. 271).

Whips in the Commons—firm persuaders of stern flagellants? (p. 220).

Tough battle won: An analysis of the Trustee bill (p. 267).

ROUGH

People who try to control the trade in cotton textiles can expect a rough reply from the "rice-standard" countries (p. 265).

Scandinavian Airlines is in for a rough time and has called in a doctor (p. 280).

Rough on the honest. The latest proposals of the finance houses look like making the good customers pay for the faults of the bad (p. 272).

Taking the rough-ride out of motoring (p. 279).

REBUFF

The transport workers' conference at Brighton showed that Mr Cousins has his union's backing in his unilateral fight against Mr Gaitskell (p. 236).

Income tax: Do the pleasures of life depend, for professional men, on their tax schedule? (p. 232).

Minicabs: The minimum five-mile haul may look like a friendly gesture to taxi operators but it may take their most lucrative fares (p. 235).

Ulster's resistance to the payroll tax may lead to greater economic autonomy for the province (p. 237).

A NEW HOME FOR THE ECONOMIST (pp. 224-226).

INTERNATIONAL

ARMS AND MR K

Mr Khrushchev has halted the reduction of Soviet armed forces and increased the defence budget. But the road to Russia's place in the sun is still meant to be an economic one as well (p. 219).

He seems to have needled the United States into another increase of its own defence spending (p. 248); and the Moscow air show has shown the extent of Russia's achievement in an aircraft manufacturer's dreamland (p. 271).

Britain has been welcoming Major Gagarin as the symbol of that achievement—and as an agreeable young ambassador (p. 227).

HANDS ACROSS THE CHANNEL

Mr Sandys may not be a passionate pilgrim, but his arguments in favour of Britain joining the common market have provoked high-tempered objections in **Canberra** (p. 258) and he found a first-rate domestic political storm raging when he got to **Ottawa** (p. 261). Mr Thorneycroft has been more fortunate in both **Pakistan** and **Malaya** (p. 226); and Malaya is in process of effecting its own rapprochement with Singapore (p. 262).

On the **French** side of the Channel, economists ancient and modern are united in opposition, though for different reasons, to the "Anglo-Saxon" Bernstein plan for monetary reform. But the radical moderns hope that if the British join the common market, they will support Professor Triffin's more far-reaching proposals (p. 259). For this and other reasons Britain can be more hopeful of a welcome from the Six if it does try to join them (p. 227).

FINGERS IN THE PIES

The **Kuwait** affair has given warning to the sheikhs of Gulfdom that they must make radical adjustments of their Victorian politics to meet the realities of today (p. 222). The withdrawal of British troops from Kuwait itself may not be so knotty a problem as it looks (p. 226)—but the whole affair has not made business negotiations about Iraq's oil any easier (p. 272).

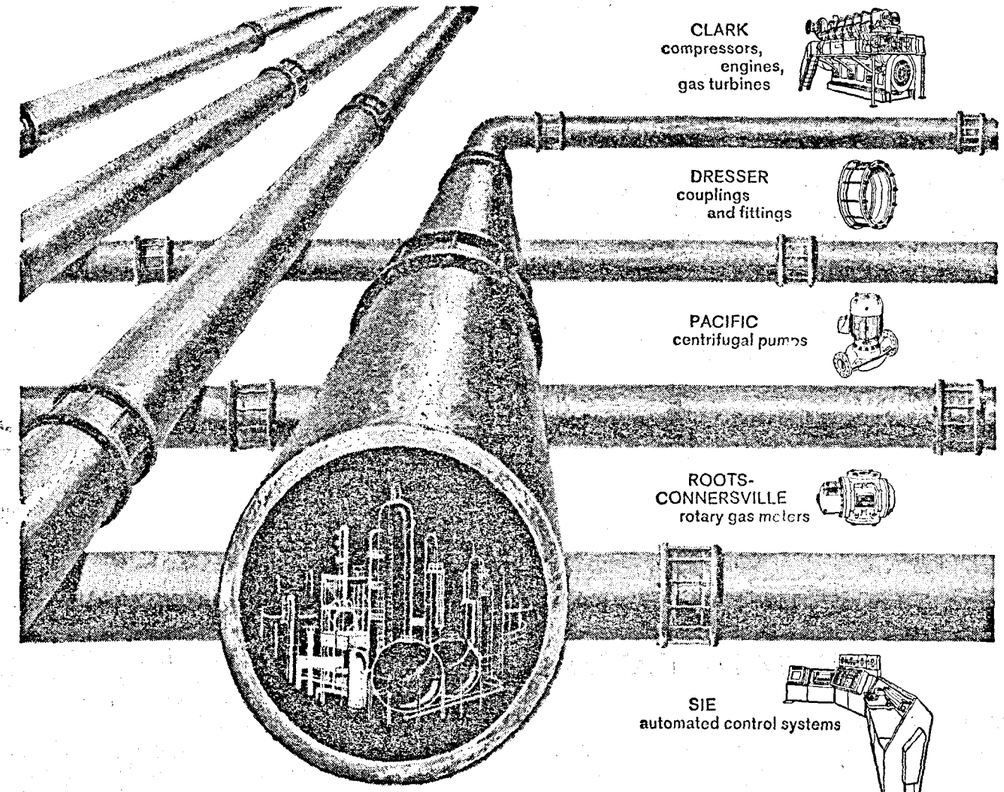
In the **Laotian** murk it is at least clear that the Americans are at last willing to extract their finger if the Chinese and Vietnamese will remove theirs too; and that is not at all what the Chinese and their friends want (p. 258).

Germans Face to Face: Dr Adenauer and Mr Brandt have been disagreeing about foreign policy (p. 238) but they are agreed that the women voters are important (p. 260).

Shouldering On: General Gürsel will, it is to be hoped, persist in his attempt to bring back democracy to Turkey (p. 231). General de Gaulle must make some final concessions if he is to succeed in bringing back peace to Algeria (p. 228).

Britain on the Wrong Foot: The CRO has got itself, instead of Dr Verwoerd, into a fix over **South West Africa** (p. 223); and the prospects of the Central-African Federation have not been helped by the treatment of Mr Kaunda (p. 235).

IN THE UNITED STATES



That Mr James Hoffa is still in complete control of the lorry-drivers' huge trade union instead of in prison is the most important fact in the American labour movement today (p. 247). Unemployment is still severe in the United States, for understandable reasons, even though the recession is over (p. 248).

Virginia remains depressingly unprogressive (p. 251).

The need to end racial discrimination against African diplomats in Washington may help American Negroes as well (p. 251).

Tourist traffic between the United States and the rest of the world is still very unbalanced (p. 252).

Detailed contents on page 217

Dresser is everywhere in the WORLD of PIPELINES

"Nearly everything but the pipe itself — anywhere in the world!" That's Dresser's contribution to the pipeline industry. Pipeline men know it, and know what a *big* contribution it is.

Just to give you an idea:

To *join the pipe together* — you need tight, permanent couplings.

To measure *how much gas flows through* — you need accurate, unfailing meters.

To *keep the gas moving* — you'll require sturdy, dependable compressors, engines and gas turbines.

To push *liquids* through the line — pipe-mounted vertical centrifugal pumps do the best job.

To *keep track* of what's happening *inside* the pipeline—it's good to have an automated control system to monitor and govern, from a remote location, such things as *valving sequence, pressure, speed of flow.*

All these necessary items of equipment can be provided by Dresser Industries, Inc., anywhere they are needed.

This far-flung group of integrated companies and licensees is uniquely able to meet supply and delivery requirements for any pipeline project.

Look to Dresser experience, Dresser technology and Dresser initiative — it can be of great help to planners, builders and operators, *everywhere in the world of pipelines.*

ANNOUNCING THE NEW LAVRADIO FERTILIZER FACTORY

NEW SYMBOL OF ANGLO-PORTUGUESE FRIENDSHIP

Portuguese and British are collaborating in a vast new project for the enrichment of Portugal's agricultural economy—the realization of a large chemical processing complex to produce the fertilizers essential to agricultural development.

The complex, known as the Lavradio Fertilizer Factory, will be the largest of its type in Portugal and will be operated by the Portuguese firm of Uniao Fabril do Azoto. British engineers of the Kellogg organization will play a prime role in the execution of the project. It will consist of a 180 tons per day ammonia plant, a 123 tons per day urea plant, and plants for the production of nitric acid, ammonium nitrate, nitrolimestone and sulphonitrate.

The project, which will produce thousands of tons of urea, nitrolimestone, and sulphonitrate fertilizers each year, will be erected at Lavradio on the Tagus River, opposite Lisbon. Much of the engineering and procurement of materials will be carried out by Kellogg International Corporation. The Kellogg organization will also carry out construction of all major process facilities.

Scheduled for completion in 1962, this complex will be of vital importance to the Portuguese economy, and the part played by British engineering will add another page to the long history of Anglo-Portuguese friendship. If you are planning to build new processing units at home or abroad, Kellogg International Corporation would be glad to show you how its services could work to your company's advantage in realizing the operating plant.

430 enemies

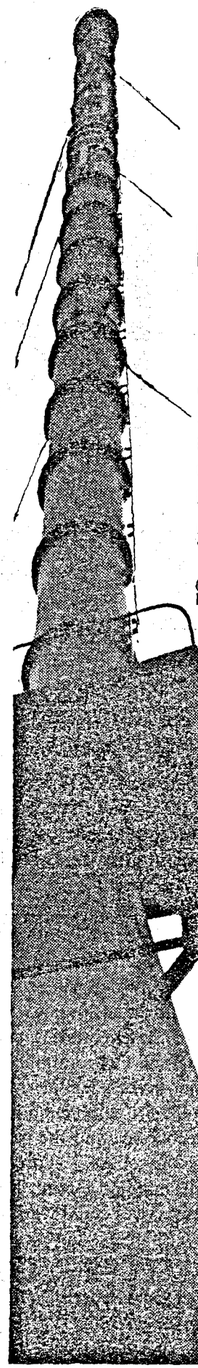
but many thousands of friends

There are up to 430 enemies of good paper production—430 variables which can spoil the consistency of a paper.

At J. A Weir we have some of the best and most modern plant in the country but this alone is not enough.

Only craftsmanship, wedded to science, can ensure the perfect paper which is part of our tradition and our job is not to mass-produce thousands of tons but to meet the exacting needs of modern printing in more modest quantity.

An important man in the constant battle against these variables is the Beaterman, for on his skill and not on the machines alone depends the final properties of the sheet.



We may have 430 enemies but, thanks to our craftsmen, we have many thousands of friends.

Just for interest you might well enjoy reading 'Talking to Papermakers'. Please let us know if you would like a free copy.

BEHIND THE DUNLOP SYMBOL

From Liverpool, tennis balls . . . from Birmingham, tyres . . . from Manchester, liferafts . . . from South Wales . . . . . from more than 40 Dunlop plants in Britain come a vast range of consumer and industrial goods. And in a dozen overseas countries the Company's new symbol identifies equally diversified and continually expanding manufacturing activities.

Only last year new factories in France, India and Rhodesia went into production, and plans were advanced for a second tyre factory in Japan. These resources and developments behind the Dunlop symbol are reflected in the progress of motoring, aviation, mining and countless other industries—and in the greater comfort and convenience we all enjoy in our daily lives.

VOLUME CC - NUMBER 6151

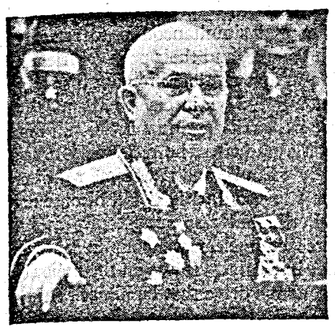
The Axe of Damocles

MR BUTLER told an audience of Yorkshire Conservatives last weekend that good might yet stem from Britain's economic difficulties "especially if our party gives a lead to the country in calling for moral values to emerge instead of materialist appetites." It is awfully difficult to see what this means; but it is to be hoped that Mr Butler is not pretending that the drab defeat which is now to be forced upon the Government as the Chancellor puts the country on to shorter commons can somehow be disguised as an act of great moral virtue. The last straw on top of economic failure will be if the British people are invited to linger and admire it. The sole criterion by which the Chancellor should choose the short and long-term remedial measures which he is now to be obliged to take is: which are likely to have the most direct and bee-line economic effect in dragging the country most quickly out of its present mess and back on the road towards prosperity?

The main short-term needs are to stop the run from the pound, and to reduce the present overload of demand at home. The most obvious direct way of inducing foreigners to keep their funds in Britain would be to make it more profitable for those funds to stay here. There is therefore some reason to feel disturbed that another Thursday has passed without Bank rate being raised: all past experience suggests that it should now go up to 7 per cent. Of the two main excuses for not using Bank rate so far, one has been that foreign central banks, under the Basle agreement, have kindly been holding on to their sterling balances at the present level of interest rates, and that it seems gratuitous to pay them 2 per cent or so more per annum for doing something they are doing already. But the answer to this is that private foreign investors are now hurrying out of sterling at an alarming pace, and that this is laying up penalties for us for when the Basle agreement is relaxed (which, some day soon, it will be). The second excuse, which does have more validity, is that by now action on Bank rate alone would not be enough, and that it will be best to fire all the Chancellor's counter-measures in a single salvo. This may be defensible provided Bank rate plays a main part when the curtain goes up. Unfortunately, the Chancellor is being urged by a motley collection of experts that interest rates should not be used at all at the present time; there are strong grounds for the suspicion that these analysts are being too expert to have any common sense.

Very much *faute de mieux*, the best auxiliary short-term weapon in the salvo might be to raise all indirect taxes by 10 per cent. There are considerable disadvantages in this idea of damping down demand inflation by heating up apparent price inflation, but use of the new regulator seems the most obvious way of cutting over £200 million a year from effective consumer incomes immediately. If it is used, it might be best to impose the full 10 per cent rise straightaway, and to emphasise that this maximum rate is intended as a short-term shift, so that the public would know that the next movement in indirect tax rates would have to be downward; they might then hold back some purchases this summer while waiting for this reduction, and with great good fortune the Government might even manage to effect the return to lower rates round about late autumn, just as the new crop of trade union wage demands will come forward and have to be refused (that they should be refused is the crux of all, if the remedial measures are to "stick"). The worst mistake would be to push the new regulator only half way, to 5 per cent, and then to find that the situation did not improve

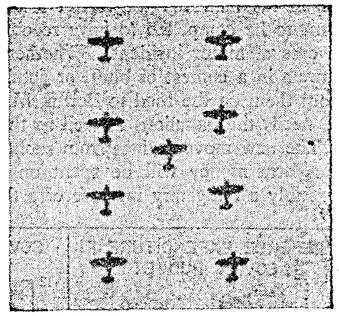
sufficiently; everybody might then begin to expect that the other permitted 5 per cent increase would have to follow, and hurry forward purchases accordingly.



It is difficult to see how any other short-term weapons to which the Chancellor may set his hand can have any sensible value. Mr Lloyd is almost certain to announce the customary cuts in public investment at home and abroad; but as usual these cuts could not easily take effect until well into 1962, when they may not be needed. The same applies to any idea of making further nibbles at the social services, which would require legislation that presumably could not become effective until well after the summer recess. There are lots of serious long-term problems about the finance of Government investment and of the social services to which the Government needs to give its thoughtful attention (the Plowden report ought to have something to say about them), but any cuts that were made in the heat of emergency would be unlikely to be thought out at all. Similarly, "instructions" to the banks to cut advances will be superfluous if the Government raises Bank rate sufficiently and handles its own monetary operations in the short-term market with proper stringency; if it does not do this, they are likely to be ineffective. One of the possible cuts that officialdom has been talking about is in overseas aid, which hardly accords well with Mr Butler's phrase about encouraging "moral values." Elsewhere in the overseas capital account, there may be more substance in the argument that some of Britain's strictly commercial investment overseas, which successive governments have hitherto eagerly encouraged, has proved a bad bargain for the country. There may be a case for changing tax law here, but once again the best way out would surely be to encourage investment funds to stay at home by raising interest rates in Britain.

If the Government does include a mass of small spending economies among its short-term "crisis" measures, instead of relying on large increases in interest rates and indirect taxes, this will be another sign of the Treasury's long-standing misconception about what impresses foreigners. The Treasury always thinks that foreigners need to be shown that Britain is not a rake but a stern counter of pennies, full of what Mr Butler calls moral worth. But in fact the most damaging foreign image of Britain is that of an insular and fussy old grandma, who fiddles continually with little things but allows big evils (like wage inflation) to go rip; the image that Britain needs to spread is that of a modern business executive, who concentrates on making big decisions to save or earn millions of pounds, and who can rely for the saving of pennies on the continuing daily work of some junior cost accounting clerk. Contrary to Treasury myth, most practical businessmen would not be encouraged to invest in a company which, having found itself in difficulties, called an extraordinary shareholders' meeting to announce such steps as the imposition of 2d. on the staff's canteen meals. That sort of economy, when it is justified, should be picked up and made in the normal course of business, not trumpeted out to devalue big occasions.

A big complication this time is that the short-term threat to sterling, if Mr Lloyd fails to impress foreigners with a change in Britain's image, is going to be inextricably bound up with the long-term measures that the Chancellor takes. The Chancellor's statement of remedial measures to Parliament is expected to come at just about the time when Britain will have to make some announcement about the next stage in negotiations with the common market; if Britain's decision is that because of Commonwealth difficulties those negotiations with Europe must be further delayed—and one is getting steadily more frightened that it may be—then it is going to become much more difficult to bolster foreign confidence in the pound. This is the big new threat close behind us, and it is a misfortune that Mr Sandys has not had more success in pointing it out to the Commonwealth. It is also a factor that makes it more than ever important that Mr Lloyd's short-term crisis measures should be accompanied by specific remedies for Britain's longer-term debilities.



Everybody ought to know by now what these two real long-term ailments in Britain's internal economy are, and what is the physic needed to remove them. The first reason for our long-term economic weakness is that Britain has constantly restricted success, and as constantly subsidised failure. A cardinal long-term error of the nineteen-fifties was that restrictions each crisis-time were specifically directed towards consumer goods bought on hire purchase, so that the main clamp was placed always on the biggest natural growing points of the economy; a precisely similar error in the nineteen-sixties would be to direct restrictions specifically to the new natural growing point of building. Always in a dynamic economy the bias should be towards shaking resources free from dying industries instead of blocking their employment in expanding ones. If the Government were really serious in its professed intention to probe down to the roots of the persistent weakness of sterling, and to cut and graft wherever a real improvement can be made, it is towards the weaker and cosseted industries that it would direct its crisis cuts: towards no more subsidies for Cunarders or horticulture or fishing, towards a real drive to close down uneconomic coal mines even in awkward unemployment areas, and so on. But everybody knows that it will not be really bold about this. What just conceivably might, and certainly ought to, happen this time, however, is that the Government may seek to encourage some more generalised weeding out of particular inefficient firms and manufacturing industries by exposing them to more competition: the logical long-term weapons to use here would be a cut in tariffs on manufactured goods, the abolition of legal protection for resale price maintenance, and legislation to curb restrictive practices enforced by trade unions.

The second and even more staring long-term ailment in the economy is that Britain cannot regain economic health so long as collectively bargained wage increases run ahead of increases in productivity by some £400 million or £500 million a year. The change needed here is to see that the vast conciliation and arbitrational mechanisms of the Ministry of Labour, together with the direct influence of Government departments as employers and the every syllable of Cabinet ministers' speeches, become directed towards an entirely new objective. The prime purpose in this field henceforth should be that of avoiding inflationary settlements instead of avoiding strikes. If a serious shift were made in this direction, then the economic crisis of 1961 could yet prove to be a moment of real recovery in Britain's affairs; otherwise the long-awaited performance that is supposed to save the pound will once again be one of Hamlet without the Prince, and with Mr Selwyn Lloyd being cast in foreign eyes as yet another grave-digger.

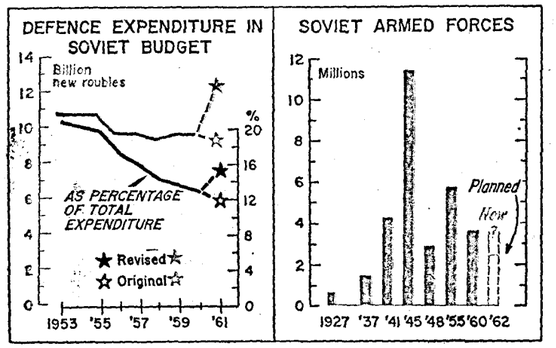
Mr K Goes Conventional

The Soviet policy of military retrenchment has lasted just eighteen months. But Mr Khrushchev may still hope to return to it

Without doubt the "prolonged applause" that greeted Mr Khrushchev's speech in the Kremlin hall on July 8th was genuine. He had just announced that the reduction of the Soviet armed forces was suspended, and that the current year's defence budget would be stepped up by a third; and he was addressing an audience of graduates from the military academies. From the civilian public of the Soviet Union, in private, a quite different reaction might be expected. By any standards, Mr Khrushchev's announcement is startling. True, budgetary defence expenditure is not an accurate yardstick of the whole Soviet military effort. It is, however, a rough guide; and a third, at one blow, is a big increase. Ordinary Russians can have received the news only with the familiar worries about the relationship between guns and butter. Outsiders have to ponder whether the measure is really "temporary," as Mr Khrushchev suggested—or whether it marks a turning point in post-stalinist history.

Stalin's successors laid less emphasis on direct military expenditure than their master had done. Nobody can accuse them of having neglected defence; but, surveying the field of national and world policy after the autocrat was gone, they did conclude that Soviet—or communist—aims could also be furthered, and probably better served, by other methods as well. Thus, the relative share of defence declined year by year in a fast growing national income. Technological change, and particularly progress in rocketry, next made it possible, and indeed necessary, to release to the economy some of the masses of manpower tied up in the conventional forces. An important step in this direction was taken in January, 1960, when Mr Khrushchev proclaimed the demobilisation that he has now suspended. Within two years, he then promised, the Soviet armed forces would be cut from 3,623,000 to about 2,400,000; and other reforms would follow. Marshal Malinovsky revealed on the same occasion that the 1,200,000 men thus returned to civilian life would include no fewer than a quarter of a million officers.

Mr Khrushchev could plausibly claim, when he announced that reduction in military manpower, that it would in no way diminish Russia's striking power. But the special stress he put upon the point left little doubt that he was answering critics at home. It was equally obvious who some of these critics were: the officers threatened by the axe and their spokesmen, the marshals clinging to their big battalions. Barely two years after Marshal Zhukov's fall, however, the service commanders were not strong enough on their own to put effective pressure on Mr Khrushchev. That he took their resistance into account at all was a sign that they still had powerful allies within the party hierarchy. The communist leaders who viewed Mr Khrushchev's policy towards the western powers sceptically were to be found in Moscow as well as Peking.



Four months after the January gesture of appeasement, Mr Khrushchev's co-existentialist line suffered its first major setback with the U-2 affair and the fiasco of the summit conference that never opened. In the period that followed, while Moscow and Peking were throwing hardly veiled accusations of heresy at each other, it was difficult to tell where the pendulum of communist policy would come to rest. An attempt to fix it was made in Moscow in November, at the gathering of the 81 communist parties. The final declaration suggested that a tentative compromise had been reached: Mr Khrushchev promised to show more revolutionary zeal in the uncommitted countries in exchange for a reluctant blessing on another attempt to come to terms with the new American President. As a proof that the door was being kept open for negotiation, the Berlin issue has been kept for months in a curious state of suspension.

December's Moscow manifesto did not end the tug-of-war within the communist world. Evidence has been piling up recently of renewed Chinese pressure. Mr Khrushchev himself has, finally, warned the western powers that the Berlin dispute will have to be settled this year. In Russia, military commanders have been coming back into the limelight—for instance, last month in the celebrations of the anniversary of the German invasion, when Mr Khrushchev put on his military uniform, no doubt for symbolistic reasons. Last Saturday's announcement is, thus, not entirely a surprise. One may even deduce what the arguments of Mr Khrushchev's critics have been from those he is now using to justify the reversal of his policy. The talk of increased defence preparations in the United States and in west Germany must have weighed heavily in the argument.

Once again—as in January, 1960, but in reverse—several factors have combined to precipitate the latest Soviet decision. Politics and strategy are here strongly mixed. Mr Khrushchev has just warned the western powers that a frontier clash in Germany carries a strong risk of turning into a nuclear conflagration. He added that such a war would spell the doom of capitalism, implying—without much evident justification—that the communist world would somehow be spared. But,

for all his boasting, the Soviet leader presumably does not want to be compelled to have recourse to ultimate weapons in case of minor incident. Whether to outface the western powers in a contest of bluff, or actually to meet a challenge from them on the road to Berlin, Mr Khrushchev now feels he needs the battalions as well as the nuclear armoury.

The new move springs from such considerations. Not all the extra money will be spent on conventional divisions; certainly a budgetary increase of a third is much more than

would have been required simply to pay for the upkeep of existing standing forces (how many have actually been demobilised so far is not known). Last Sunday's display at the Tushino airport was a deliberate demonstration of Soviet air power. Major Gagarin's presence in London is a personal reminder of the effort that Soviet rocketry represents. There will be no slackening in these fields; quite the contrary. But whereas eighteen months ago Mr Khrushchev was foreshadowing the end of conventional armies, he has now changed his mind. In Russia, as in the United States and elsewhere, the advocates of conventional forces have lately scored points against the press-button strategists.

It can be argued that Mr Khrushchev is trying to kill two birds with one stone. He wants to impress foreigners with his earnestness about Berlin and simultaneously to reassure his officers, threatened with the axe, and their political friends. Yet he gives the impression at any rate of throwing his stone with some reluctance. Not only did he, in his speech, present the new measure as provisional, pending a new decision. But, over the heads of the military graduates, he repeatedly urged President Kennedy, General de Gaulle and the Prime Minister to a conference. There, he suggested, they could discuss not only the future status of Berlin but also such topics as the Rapacki plan for a zone free of nuclear weapons in Europe. Mr Khrushchev's reluctance is natural. It was on the policy of smaller armies and more economic drive that he himself staked his reputation.

Even in his Saturday performance, Mr Khrushchev again attempted a calculation of when Soviet industrial output (estimated by him now at 60 per cent of the American) would exceed the United States level. He has not abandoned his economic challenge. Indeed, the challenge is likely to be reiterated in the new party programme, to be presented to the Russian public within two weeks. This is to be a grandiose document, tracing the uncharted road towards communism. The signposts on the road are to be economic.

Thus the heavier defence burden does not mean that the Soviet Union is abandoning the economic course it has set itself. But it does, and must, mean that the pace of advance is going to be slower as long as the "provisional" increase in the burden lasts. Mr Khrushchev may be hoping that the threat contained in his new defence programme will bring his western opponents to a conference; blackmail it may be, but it is a hope as well. From such a conference he could hope to return with something or other gained, to announce that, because of his diplomacy from strength, the alarm was over, and to revert to the course of January, 1960, with his critics confounded. This may be Mr Khrushchev's hope. It does not follow that events will obligingly conform. Nor does it imply either the abandonment, or the revision, of any basic Soviet aim.

Whips of Parliament

Are party whips increasingly, or decreasingly, important figures in the current political scene?

WHIPS—the members charged with the maintenance of party discipline at Westminster—are familiar enough creatures to their fellow members, but to the general public are shadowy and rather remote figures, flagellants whose functions, if necessary, remain somewhat unpleasant. In the last year a major (but squashed ?) revolt in the Labour party and a familiar (but increasing?) restiveness among Conservatives has brought them back into the news again.

The Government employs eleven whips as well as the Chief Whip and his deputy. Its Chief Whip, besides being responsible for party discipline, holds two official posts. First, he is Parliamentary Secretary to the Treasury and so responsible (subject to the Leader of the House) for arranging Commons business. In making these arrangements, full consultations take place with the Opposition Chief Whip. Of the eleven ordinary Government whips, four are Lords Commissioners of the Treasury, three are officers of the royal household, and four are unpaid. The Opposition appoints its own Chief Whip and assistants. It is a general rule among wise parties that their whips should be people who are not personal anathema to whips on the other side, so that the "usual channels" of Parliament should not become unnecessarily blocked. This year, in spite of the strains caused by such incidents as Labour's filibusters against Mr Powell's health charges, this tradition seems to have been very civilisedly maintained.

Secondly, the Government Chief Whip holds the office of Patronage Secretary, and is thus theoretically the source of the honours that help to sweeten the lot of the party workers in the country, as well as relieving the frustrations of those in the House. How far he really is such a source in these days, when the party's central offices have become great bureaucratic machines, and when ministers have so many other means of picking out promising youngsters, is open to argument. But the view that Government Chief Whips play a major part in recommending aspirants for minor office is important in giving them some of their power. And one source of patronage in the hands of both whips' offices which certainly is increasing now is the allotment of places on parliamentary delegations for pleasant and interesting trips abroad.

The third function of the whips—and one which the present Government Chief Whip, Mr Martin Redmayne, has called their most important—is to act as an intelligence service for the party leaders about the viewpoints of backbenchers. This is always regarded as especially important under a Tory Government. When the Labour party is in office Labour ministers continue to attend party meetings. Conservative ministers do not. Tory Cabinet leaders are therefore largely dependent on the whips to interpret the mood of the party. Because MPs and parliamentary journalists are always eager to report that cabinet ministers need to keep in close touch with the mood of their backbenchers all the time, a whispered tradition eventually grows up around every chief government whip that "he is a much more important figure in the counsels of the Government than outsiders suppose." Conservative Chief Whips, in particular, are always going to be the next-Prime-Minister-but-three. But among the most obvious recent examples the last Tory Chief Whip-but-two, Mr Buchan-Hepburn followed Belloc's parody about next-Prime-Ministers-but-three almost exactly. He never rose higher in the cabinet than Minister of Works, and has now gone off to be Governor-General of the West Indies as Lord Hailes. It remains to be seen whether his immediate successor as Chief Whip, Mr Heath, will scale the highest pinnacle now that he has gone into the cabinet, or whether he too will find the old obstacles in his way: some professional observers argue that the jollying, politicking, ear-to-the-ground activities of a Chief Whip, besides being apt to make some enemies among existing senior ministers, are not always the best training ground for very senior ministerial office where decisions have to be promptly taken.

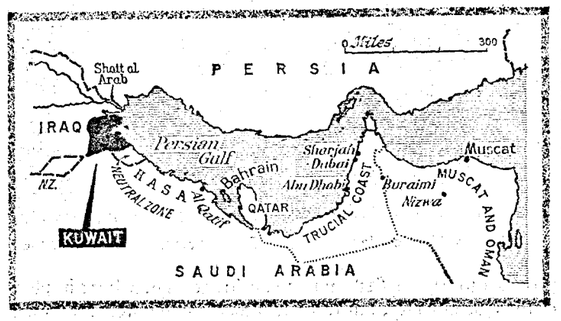
THERE remains the third function of the whips, and the one that the public hears most about: that of maintaining party discipline and party leaders' morale by making sure that as many members as possible vote in each division. The whips summon members to vote by one, two or three line "whips." A single line whip is merely routine: a two line whip carries an obligation to vote unless paired: and absence from voting on a three line whip is excused only on the most serious grounds. In securing obedience to these instructions, information, persuasion and bullying are nicely mixed.

Information from the whips about how to vote obviously causes no heart burning, although sometimes one feels that it would be better if the information given to whipped MPs were a bit fuller. During the passage of the Milford Haven Bill, which provided government aid for the reconstruction of that port, one Tory MP was heard to complain about the number of divisions he had been dragooned through "just so that that young man can marry Eva Bartok." It is when information shades into attempted persuasion, or something more, that discontent arises. There have been distinct signs of such discontent with the Government whips in Parliament's present session. In April, 67 Tory members defied the whip and voted for a proposal to re-introduce birching. In May, 7 members voted in favour of Mr Wedgwood Benn's being heard by the House. Only one member voted against the Government's

Labour's Mr Bowden

Conservatives' Mr Redmayne

proposal to pay an £18 million subsidy for a new liner in place of the Queen Mary, but three members deliberately abstained, at least 60 were absent without pairs, and the Government majority fell to 46. During the committee stage of the Finance Bill 13 Tories came out against the Government about Schedule A. Last Wednesday two more voted with the Opposition after the Welsh leaseholds debate.



The initial reaction of the Government Chief Whip, Mr Martin Redmayne, to these signs of rebelliousness was sharp. Members were carpeted and parliamentary private secretaries warned that if they voted against the Government they were liable to lose their jobs. This schoolmasterly astringency caused further resentment among Conservative backbenchers, epitomised in Mr Humphry Berkeley's tart remark that "six mildly rebellious backbenchers are of more value to a favourable Conservative image than 100 faceless men, however obedient." Mr Berkeley, one of the abler younger members returned in 1959, has voted against the Government three times in the last three months.

Since 1955 126 new members under the age of 45 have entered Parliament, but only a handful have obtained office. The rest—especially those who have been in since 1955—have grown increasingly restive. In these circumstances the Tories would make a great mistake if they put their most spirited young colts too fiercely under the whip. However appropriate rigid discipline may have been in the 1951 Parliament when the Government majority was only 17, it is singularly inopportune with a Government majority of over 100. Allowing members to vote against the Government on minor issues—and all the issues have been minor—far from weakening the party, provides it with a necessary safety valve. Nor does it harm the party in the country where constituents like to see an independent member thinking for himself (on minor issues) rather than acting as a voting machine.

On a major issue of confidence, or on any division where the rebels' real object was to break up the existing structure of their party, quite different considerations would prevail. There is no parallel between the five Labour members who defied their leaders in March over defence and were rightly suspended from the parliamentary party, and the small specific revolts of the present Conservative malcontents. What is needed now in the Patronage Secretary's office is unworried tolerance. Two of the Tories who rebelled on the Schedule A vote were parliamentary private secretaries, but they were not made to resign so it looks as if the lesson may have been learned.

A Quiver of Sheikhs

Come what may of the Kuwaiti predicament, things will never be quite the same again along the Persian Gulf

QATAR MUSCAT BAHRAIN SHARJAH

THE British silver cord has been loosed; all the Queen's gunboats and men cannot perfectly restore the peace of mind of the rich Gulf sheikhs round their oil wells, or the poor ones on their barren shores. After generations of basking under British protection, Kuwait's frightening encounter with freedom has shaken its neighbour sheikhdoms. Though they all have treaties with Britain and can call, like Kuwait, for help, they know that Kuwait's dilemma is theirs.

Briefly their dilemma, whether they are rich or poor, is that they are thoroughly dated. And the rich ones are fabulously rich without the responsibilities that great inheritance should normally bring. Tiny principalities playing at independence (under cover of being not protectorates but merely "British protected"), they may charm the curio hunter in search of Victoriana. But they disturb rational thought by their unabashed feudal systems and general untidiness. It is no sin to be small; but it is dangerous to be so small and so emphatically outmoded.

A million people, divided, and ruled by eleven proud rulers: this is the sum and content of the Persian Gulf principalities, including Kuwait at their west and Muscat and Oman facing the Indian Ocean. The Sultan of Muscat disposes, more or less, of at least half their population. So the rest of the rulers can count their subjects in handfuls. The oil-rich communities, Kuwait, Qatar and Bahrain, have a joint population of less than 400,000. The remaining 100,000 are dispersed among the Cinderella states: Abu Dhabi, Dubai, Sharjah, Ajman, Umm al Qaiwain, Ras al Khaimah and Fujairah. These are mostly lean and hungry sheikhdoms, dreaming of oil and scraping their deserts for a living. Only one is as yet, Cinderalla-wise, set along the path of its dreams. This one is Abu Dhabi. With an offshore oil strike that seems to be full of promise, Abu Dhabi expects a big oil inheritance.

The Persian Gulf region is divided not only by the utmost extremes of wealth and poverty but also by geographical differences. The seafaring men of the coasts have practically nothing in common with the pastoral tribes of the interior. How easy it is to drive a wedge between them was witnessed by the Omani revolt, urged on by Saudi Arabia, against the Sultan of Muscat and Oman (Muscat representing the seaboard and Oman the hinterland). Nor have the rulers of each state much aptitude in getting together. Though pledged by their treaties with Britain to keep the peace amongst themselves, they incline to parochial squabbles. The general form of relationship is that no ruler cares for his neighbour, but most are friends with the ruler next door but one.

With their uncertain frontiers, dispiriting feudal structures and young generations growing up with a yearning for wide horizons, these sheikhdoms are natural targets for territorial claims. Their large neighbours see no point in them, and covet their oil and their wide seaboards. If Iraq claims Kuwait today, we shall doubtless hear more tomorrow of the other claims, Saudi Arabian and Persian, that persistently hammer on the Gulf.

In Iraqi foreign policy the claim to Kuwait has been a recurrent theme ever since 1936, when King Ghazi advanced it publicly. His action caused a stir in Baghdad, where, in contrast to today's apparent apathy, there were spirited demonstrations. The fantastic rumour that his death in a motor accident soon afterwards was engineered by the British gathered strength from the theory that Britain feared his designs on Kuwait. Yet Nuri Said nursed the same ambition pursued it in private conversations, and openly declared it in 1939—when the first Kuwaiti oil had been struck.

Saudi Arabia is altogether subtler, swifter of action and not so sharp of word. Restlessly seeking advantage, it has pushed for oil and the sea wherever a weak spot offered. It disputes its frontiers with Qatar, but in friendly fashion since Qatar is a Wahhabi enclave; and more bitterly with Abu Dhabi and Muscat and Oman, who share sovereignty over Buraimi. Saudi Arabia was also embarrassingly affectionate in referring to Kuwait and itself as "one country" when it recently sent its soldiers to the defence of threatened Kuwait.

Persia claims Bahrain on historical precedents fetched up from the eighteenth century. Consistently since 1927 it has lodged formal protests against the treaties that gave it its present status as a British protected state. This legalistic approach reached its culmination in 1957 when a law was enacted in Persia making Bahrain a Persian province. The Shah has since reaffirmed this, and he can always be sure of a handclap when he points to the seats in the Persian Majlis that await the Bahraini deputies. No doubt, in designating Kuwait as an Iraqi sub-district, General Qasim was taking a leaf from Persia's book.

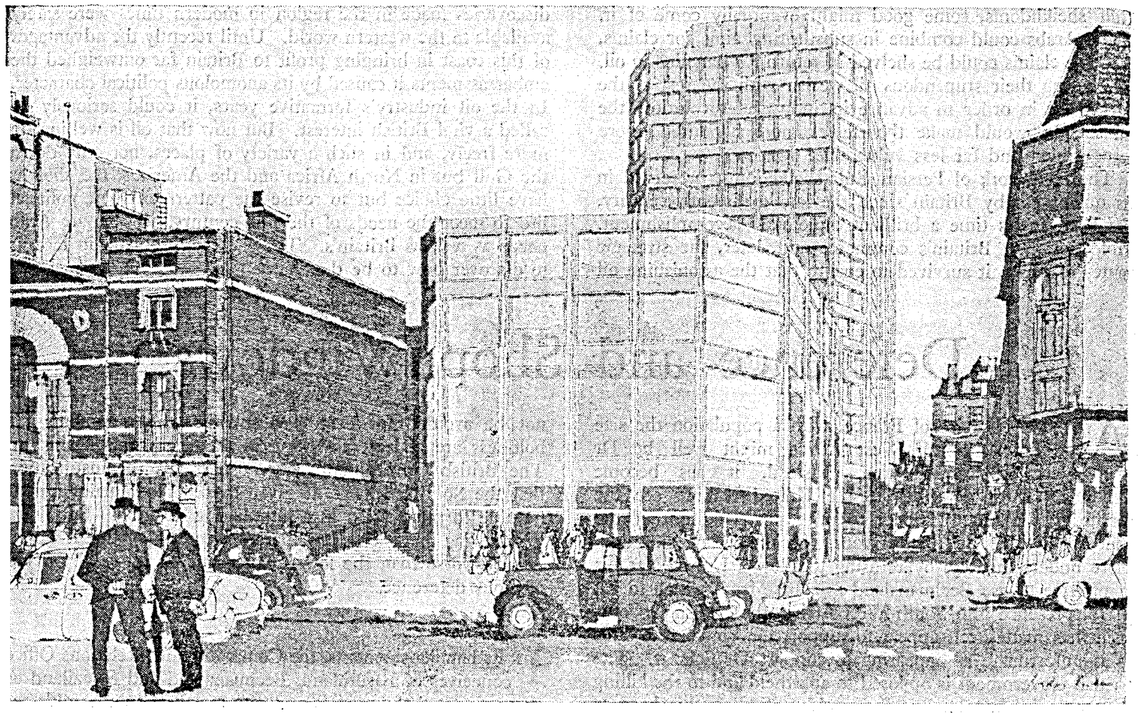
Could Iraq's claim be instrumental in making the Arab States confer on their future relationships with all the Persian Gulf sheikhdoms, some good might eventually come of it. If the Arabs could combine in substituting aims for claims, then the claims could be shelved in return for bargains in oil. By sharing their stupendous oil wealth with the rest of the Arab East in order to advance its industrial revolution, the oil sheikhs would make themselves more honoured, more responsible—and far less vulnerable.

The patchwork of Persian Gulf sheikhdoms, preserved in its quaintness by Britain since the late eighteenth century, has been in its time a brilliant diplomatic accomplishment. Protecting first Britain's commerce and, later, the strategic routes to India, it survived to ensure that the astonishing oil discoveries made in the region in modern times were safely available to the western world. Until recently the advantages of this coast in bringing profit to Britain far outweighed the embarrassments it caused by its anomolous political character. In the oil industry's formative years, it could seriously be called a vital British interest. But now that oil is welling up more freely, and in such a variety of places, not only down the Gulf but in North Africa and the Americas, the sheikhs have little choice but to revise the pattern of their political life to meet the needs of the mid-century. These are Arab needs as well as Britain's. The sheikhs' problem, in fact, is to discover how to be their age.

Deference and Shop Windows

A DESERT the size of France, with a population the size of Lyons, South West Africa might well be Dr Verwoerd's misfortune. Instead, it has become Britain's. Most delegates to the United Nations see the territory as a possible lever to prise apartheid out of the southern tip of Africa. By voting on the wrong side and, more understandably, by refusing to allow a United Nations committee to use Bechuanaland as a base from which to get a UN presence into South West Africa, the British Government has made itself appear to support Dr Verwoerd. This is as unfortunate as appearing to support Dr Salazar. The British Government is opposed to apartheid and to the killing of people in Angola, but the world is finding this hard to believe.

Britain was one of the nine countries that abstained when, in April, the General Assembly voted by 83 to none for its committee to visit South West Africa with South Africa's co-operation and "without it if necessary." The territory is at least as much the UN's business as it is South Africa's. The International Court has advised that the old League of Nations mandate, which put the administration in South African hands, did not die with the League, and General Assembly votes have repeatedly confirmed this judgment. South Africa has virtually annexed the territory given to it as a trust, and for Britain to argue that the UN cannot be allowed to break South African law by entering South West Africa makes it seem very much as if Britain endorses the integration of the territory in the new Republic.



A more easily explainable reason for not allowing the UN committee through is that South Africa could hit back at Bechuanaland itself. This is less of a danger than it seems at first sight. Bechuanaland, Basutoland and Swaziland depend for their economic lives on their ability to sell their labour and primary products to South Africa. By sealing the borders Dr Verwoerd could speeze the protectorates to death. But would he? South Africa's own livelihood would suffer by the cutting off of protectorate labour. Again, Whitehall may fear a South African attempt to annex the three territories by force—but South Africa must equally fear Britain's, and the world's, wrath if it were to try.

By their very nature the protectorates will increasingly irritate South Africa—as much when they let refugees out as if they let the United Nations in. A clash between Britain and the Republic over the status of the three territories cannot be avoided for ever. Meanwhile, the arguments for boldness are at least as strong as the arguments against it. The British Government's nervousness has the justification that the South Africans, if given cause of complaint, might be able to put Britain in a humiliating position. But there is no saying that such a humiliation is certain, or that it would be any worse than the loss of international stature by a too officious deference.

IN its happier moments, the Commonwealth Relations Office conceives of Basutoland, Bechuanaland and Swaziland as shop-windows of progress and non-racialism in the midst of the apartheid republic of South Africa. There is quite a lot of non-racialism in Bechuanaland, where Seretse Khama and his English wife are leaders of society. Mr Khama emerged three weeks ago as the most powerful figure in the territory's new elective legislature, and he can be relied on to lead Bechuanaland peacefully towards self-government.

In Basutoland there is almost as much non-racialism, and what there is could well be increased if the British Government changed its attitude towards the Catholic University College at Roma. The college needs money and official backing; in spite of its denominational character (though it admits students of every religion), it should get both from Britain. Genuine university education is no longer available to Africans in South Africa. A contribution towards the $3 million which Roma needs over the next five years would put something really bright in the shop-window.

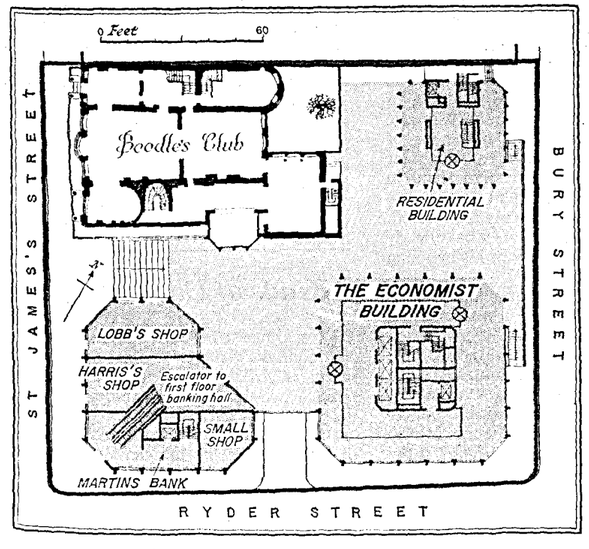
In Swaziland the amount of non-racialism is smaller. Many South Africans live there. Its economy is the soundest of the three territories, but its political advance is the most retarded. To give Africans more say in its government will require firmness from the CRO; this is the main obstacle to that kind of progress. As for economic progress, Britain's showing is not good in any of these three territories. A year ago a commission led by Professor Chandler Morse recommended additional aid of nearly £7 million for the three territories; the British Government has taken a year to decide to give £1,200,000 over the next two years. As a result, South Africa will surely stay well ahead in this peaceful economic competition: its Africans are better off than those in the protectorates, and they are likely to stay better off. The shop-windows are being shabbily stocked.

A new home for The Economist

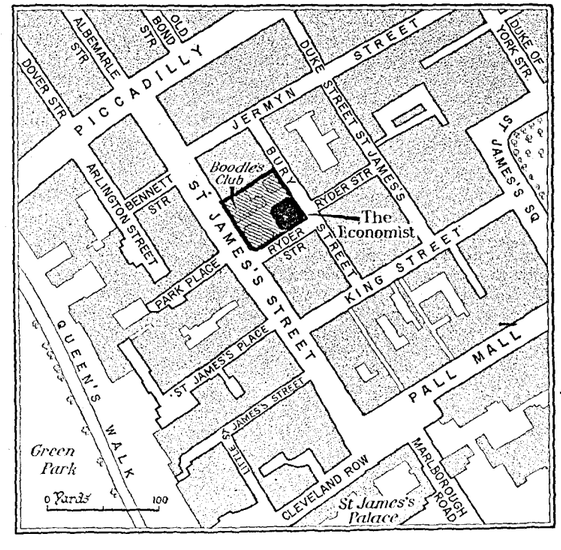
THE ECONOMIST and The Economist Intelligence Unit are planning to build a new home for themselves on the site in St James's now occupied by the present main office and by some adjoining buildings. Consent has been given by the London County Council, and, subject to one or two final negotiations, it is hoped to begin work in June 1962 and to finish early in 1964. The contractors will be Sir Robert McAlpine & Sons.

The site to be developed is shown on the plan. In addition to the present building occupied by *The Economist*, it includes three buildings on St James's Street, one on Ryder Street (all of nineteenth-century construction) and three eighteenth-century brick houses in Bury Street. On the St James's Street side, the boundaries of the site begin at (but do not include) Boodle's Club, which, with its bow-window, is perhaps the best-remembered landmark of the street. They go down to the corner of Ryder Street, along that street to its junction with Bury Street and then some fifty yards north, taking in some of the back quarters of Boodle's Club. The whole site is held on Crown leases; its acquisition, involving negotiations with the head lessees and tenants of the seven buildings concerned, has necessarily been a lengthy business in which our surveyors, Messrs Collins & Collins & Rawlence, have guided us with patience and skill.

The plans to deal with this site have from the start been governed by two considerations. First, the greatest care should be taken to ensure that any new building fits in with its neighbours, and, in particular, that the general aspect of St James's Street is not damaged. This is almost entirely a matter of proportions. The individual buildings of the street include few that are really good, and some that are downright hideous. If the street as a whole is one of the most satisfactory in London, that is a function of the ratio between its width and the general height of the buildings that line it. But, the proportions having been preserved, the second principle was that there should be no fake antiquarianism. There should be an attempt to produce a building or buildings expressing the contemporary era, and designed to take advantage of the latest technological developments.



It was also desired, other things being equal, to give an opportunity to a British architect whose work has not yet had the chance to become widely known. This was not conceived of simply as a piece of artistic patronage. The complications of modern construction produce the double result that the work of successful practitioners rapidly degenerates into salaried team-work, and that it is very difficult for fresh ideas to break in. We thought we stood a better chance of getting a building thought out afresh from first principles by going to an architect who represented himself and not a large office. After the most careful inquiry, the husband-and-wife team of Alison and Peter Smithson were appointed. Mr Maurice Bebb, who has been involved as our architectural adviser right from the start, has been appointed as associated architect.



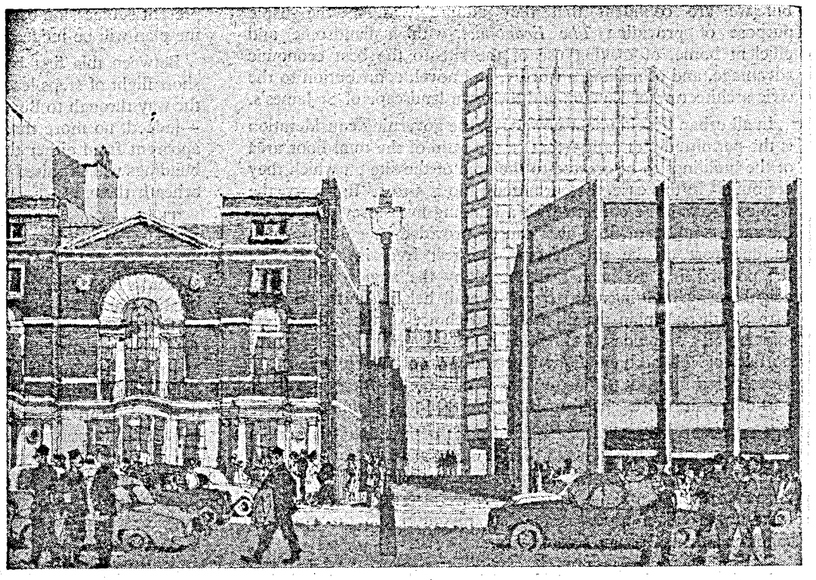
The plans that Mr and Mrs Smithson have produced have won our enthusiastic acceptance; they have been approved by the Crown Estate Commissioners, the London County Council, the Royal Fine Art Commission and, not least, by those whose premises will be affected—Boodle's Club, Martins Bank, Messrs Lobb and Harris (both well-known St James's names) and others. It would be absurd to suppose that they will be to everyone's taste; but we are confident that they admirably serve the triple purpose of providing *The Economist* with a handsome and efficient home, of making use of the site to the best economic advantage, and of making a worthy, and novel, contribution to the civic architecture of London and the town landscape of St James's.

In all urban development nowadays, the governing consideration is the permitted plot ratio—that is, the ratio of the total floor area of the buildings to be erected to the area of the site on which they are built. In this case, the permitted ratio is 5 to 1. In theory, the whole site could be covered with a building five storeys high. Or the same amount of floor area can be provided by going up high on one part of the site, leaving the rest free, in which case the possibilities are further restricted by the angles of light to neighbouring buildings and by an overall height limit. Mr and Mrs Smithson's plan makes a decided choice of the latter alternative. Not only does this make it possible to lift up a good proportion of the accommodation provided to where it will enjoy unrestricted light, but it also makes it possible to open up a large part of the site for use as a small *piazza*, open to the public.

The penalty of such a plan (if indeed it be a penalty) is quite a high tower. This has hitherto been thought alien to London. But opinions are changing very rapidly; and we believe it will not be long before the double advantage of space at ground level, and of light up above, produce a complete revolution in the accepted canons of British urban architecture.

Not all the space could, however, be put into a single tower. For one thing, there would not be room for it within the light angles and the height ceiling. For another thing, we wanted to do our duty by St James's Street. The plan as finally developed therefore provides for three separate buildings. One of these is to be at the corner of St James's Street and Ryder Street. This building has been carefully designed to be neighbourly to Boodle's Club, not merely in its overall proportions but in the balance of its elevation. It would be fatuous to reproduce the eighteenth-century decoration of the façade. But the roof line continues that of Boodle's (which will be a great improvement on the present line) and a *piano nobile* has been introduced to provide another factor of continuity. This creates the opportunity for a fine first-floor banking hall for Martins Bank Ltd., to be approached by escalator from an entrance at the corner. We are confident that by rescuing Boodle's from its present submersion between much higher buildings on either flank, the plan will be judged a distinct improvement.

Between this first building and Boodle's Club there will be a short flight of steps leading up to the *piazza*, which will extend all the way through to Bury Street. This open space will not be large—indeed, no more than a *piazzetta*—but it will be larger than is apparent from either the plans or the model, since the other two buildings will be raised above it on stilts, and the vista will continue beneath them.



The large tower, at the corner of Ryder Street and Bury Street, will rise for 14 floors above the entrance level. But the floor of the *piazza* is also the roof of another storey which, at Ryder Street, is at street level (the ground falls away to the south). The total height of the building is therefore 16 floors above street level, with a basement beneath. In spite of its height, this tower will be visible from a stretch of only 60 yards in the total 380 yards length of St James's Street itself. In plan, the tower is to be octagonal—or more accurately, square with chamfered corners. Each floor is designed to provide a ring of offices round a central core. Apart from lifts, staircases and lavatories, no part of the building will be more than 18 feet from a window. There will be no inside rooms and no dark corners whatever. *The Economist* and The Economist Intelligence Unit will occupy the greater part of this tower building, but a few floors will be available for letting.

The construction is to be of reinforced concrete, but the visible portions, especially the prominent vertical ribs, will be of Portland stone, Roach bed. Whatever it may be in plan and elevation, therefore, in colour and surface texture the building will look much more like the traditional London than if it were to be built of steel and glass. It is intended that the building shall be fully air-conditioned and the windows will not be designed to open, except for cleaning. There is no climatic case for air conditioning in London, but we believe that the arguments for it on the score of quiet and, above all, of cleanliness are decisive.

The third building, at the north-eastern corner of the site, is designed as a miniature version of the tower. All its major horizontal dimensions will be exactly half those of the larger building and it has been conceived as a link between the tower and the street architecture of Bury Street. The basement of this building will provide a Ladies' Annexe, and the first three floors residential

chambers for Boodle's Club. The remainder of the building is designed as flats, to meet the "residential component" insisted on by the town planners.

For us at *The Economist*, this whole scheme has been, and still is, an adventure. The present point, when matured and approved plans can be presented to the public, is just about the halfway stage in a process which, from start to finish, will have lasted about six years. So far, our efforts have enjoyed the sympathetic co-operation of all the persons and institutions who have had to be called into consultation. Now we come to the stage when we must hold our breath while plans are converted into reality. We trust that our readers, our neighbours and Londoners in general, as well as ourselves, will be pleased with the result when they see it.

NOTES OF THE WEEK

KUWAIT

Order of Going

GIVEN the relatively imposing size of the force that the War Office decided was necessary to defend Kuwait against the Iraqi threat, the gradual withdrawal of troops, now in process, is no more than a continuation of a successful military operation. The crux comes when a token British force is left, and it is no longer possible to postpone a decision whether to replace it with some less contentious group of observers. Whatever may have been General Qasim's original intention—or vaguer hope—Iraq has now patently put aggressive designs to one side. On the other hand, while the Iraqi claim is fresh in the air, and unrenounced, it is reasonable for the ruler of Kuwait to demand positive evidence of international, or better still Arab, support for his country's independence.

If the various public statements that have been made in these ten days were taken seriously, most of the ways out of this dusty tangle would be blocked. At his press conference on July 6th, General Qasim reaffirmed that Kuwait was an indivisible part of Iraq, adducing as part evidence that Iraqi postal services existed in Kuwait until June, 1941. The Kuwaitis have declared that their state's admittance as a member of the United Nations was a precondition of their agreeing to the withdrawal of British troops. The United Arab Republic has said that the British evacuation must come first. The Security Council meeting ended on July 7th in deadlock, with the mild British resolution affirming Kuwait's independence vetoed by the Soviet Union, and a rival resolution calling for an immediate British withdrawal supported only by Russia, the UAR and Ceylon.

In fact the diplomatic knots are far less tightly tied than this tangled spinning of propaganda would imply. The British have made it plain that they want to get out of Kuwait as soon as they can, and the ruler is far too shrewd a statesman to stand in their way. With a little ingenuity, the problem of timing can certainly be solved, especially since President Nasser has already shown considerable subtlety in his handling of the affair.

One of the significant questions now is whether the remaining British troops should be eased out by a United Nations group, probably composed mainly of Arab soldiers, or by a group under the command of the Arab League defence council. On the past history of the league, most people understandably place more confidence in the United Nations. On the other hand, if the league is not to be written off, there are good reasons for giving it, now, a chance to prove itself. At the League's meeting on Wednesday, the UAR is believed to have come out roundly in favour of a purely Arab force—with the diplomatic proviso that no troops should be drawn from countries sharing a frontier with Israel. This not only short-circuits Iraq's outrage at the prospect of Egyptian soldiers in Kuwait but also draws attention back to what the Arabs believe to be their common danger. Kuwait, for its part, if it is to have any enjoyment of its independence, has to regulate its relationship with the Arab League; and the Kuwaitis are aware of this. A Kuwaiti delegation is at present visiting Cairo and other Arab capitals. Behind the scenes, some meaningful deals may be going on that, in the end, may benefit not only Kuwait but some of its financially less fortunate neighbours.

EUROPE AND COMMONWEALTH

Kinds of Cwthmanship

THE contrast between the results of Mr Sandys's visits to Wellington and Canberra is striking. Though New Zealand sends two-thirds of its exports to Britain, its ministers agreed, in the final communiqué, that they "would understand it if, after considering the views of Commonwealth countries, the British Government should open negotiations with the European Economic Community." They emphasised, it is true, that they "could not at present see any way of protecting New Zealand's vital interests other than by the maintenance of unrestricted duty-free entry" to the British market. But they agreed, all the same, "to examine alternative methods for protecting New Zealand interests in the course of the negotiation." This positive result is a tribute not merely to Mr Sandys's power of persuasion, but to Mr Holyoake's ability to take a long view. His loyalty to Britain and to the Commonwealth idea takes the honourable form of a willingness to make sacrifices and adjustments when a vital British—and with it Commonwealth—interest is at stake.

Australia, by contrast, has much less to lose. Something like a quarter of Australia's exports come to Britain and of these nearly half may be unaffected. Only some 15 per cent of Australia's current exports would run risks if Britain joined, and hence would have to be fought for in negotiation. Yet Mr Menzies seems to have joined the no-men, opposing any British move to join. As our Canberra correspondent points out on page 258, elections are in the offing. But whatever the tactical considerations, Australia's strategy remains hard to fathom. Drawing, as it does, a growing volume of immigration from the Continent (which it is trying hard, and desperately need, to increase); and turning increasingly, as it is, to other markets, it can hardly believe that the Australian future can be sustained exclusively by a Britain cut off from Europe. Defence, politics, economics and demography all make it a natural appendage of a future Atlantic community, distant in geography but close in everything else. Mr Menzies must know this perfectly well; why, then, the display of obstruction?

In Asia Mr Thorneycroft's persuasive progress continues to make much less din. Naturally enough all the Asian countries continue to press for markets for their jute, tea, and cheap manufactures. But in Pakistan, as well as in Malaya, Mr Thorneycroft has been rewarded by clear support for a British initiative. Delhi, which he reached on Wednesday, is his most important port of call, above all for political reasons. Mr Nehru has to be persuaded that the Commonwealth can only play the part of bridge between races and continents if the bridgehead in the west is broad.

Conditional Surrender

DESPITE the grumblings from Canberra and Ottawa the British Government may yet be in a position to announce a decision to seek negotiations with the Six before the end of the month. The meeting of the Council of the seven-power Western European Union on August 1st, suggested by the Six this week, could therefore be timely. The meeting is in a sense a routine one; the six common market heads of government—whose meeting has been twice postponed—are now expected to gather in Bonn on July 18th. A meeting of the WEU Council afterwards has been expected for some time. But obviously this one could provide a special opportunity to discuss British participation both in the common market, and in any new political arrangements the Six may agree on.

Further encouragement for a British move came on Tuesday from M. Monnet's Action Committee for a United States of Europe, which renewed its urging that Britain should join the common market. M. Monnet's group are particularly anxious that the British should move fast. They regard the British move to join as the key to an accelerating process of integration throughout the west. Once Britain were to join, they argue, new arrangements for pooling currency reserves in Europe—of great value to both the sterling system and the West generally—might be made. (The background to these is discussed in an article on page 259.) More generally, integration on an Atlantic basis might get swiftly under way.

For the sake of speed these Europeans inevitably hope that Britain will not approach the community with too many detailed demands on the Commonwealth's behalf. Their preference is for general institutional guarantees, leaving the details to be worked out later. It is true that in temperate agriculture there are limits to what can be negotiated beforehand when the agricultural policy of the community is still not settled. But on some specific matters, despite the gloomy stories being spread in London, the French government, and for that matter "European" circles in Paris, do seem prepared to be more specifically helpful. Against these evidences of more helpfulness — concerning, for instance, British Africa, New Zealand, and the possible re-negotiation of certain items of the common tariff—President de Gaulle's statement of July 2nd that Britain must join "without conditions" is perhaps misleading.

DEFENCE SPENDING

The Overseas Bill

BRITAIN'S rising military expenditure overseas (which has gone up from £163 million in 1957 to £215 million last year) has earned a long, hard look from the Chancellor in his search for economies. Mr Lloyd may have some of the more dispersed, and militarily questionable, garrisons in mind. And if he decides to ask awkward questions about Hong Kong, it will do no harm at all. But although the Ministry of Defence takes a devious pride in the multiplicity of its commitments and fire brigades around the world, the basic problem is not one of the services' own making. The decision to abandon conscription and rely on attracting sufficient men into a professional army in conditions of full employment has necessarily compelled the services to embark on a series of major constructional programmes for new accommodation —including quarters for married men, hospitals and other modern amenities overseas. This has been particularly noticeable in the past three years:

MILITARY CONSTRUCTION OVERSEAS

(£ millions)

	New services to be started in year	Money voted in year	Money voted for new accommodation
Army:			
1959–60	17,026	6,700	5,055
1960–61	20,352	9,110	7,678
1961–62	35,268	14,300	11,698
Air Force:			
1959–60	10,080	5,250	1,445
1960–61	16,579	8,475	2,367
1961–62	18,138	10,230	3,662

This doubling of expenditure is by no means excessive in the circumstances: recruiting figures would be worse if it had not taken place, and the cost to the economy of reintroducing conscription would be much bigger. The chief obligation on the services is to see to it that their new buildings are going up in the right places. What, for example, is the estimated political life of the expensive new quarters under construction in Kenya? Mr Lloyd should make a fuss here.

The other major factor in the Chancellor's calculations is the cost of maintaining the British forces in west Germany, estimated to be some £60 million a year. The final west German payment of £12 million of support costs has been made and no more is forthcoming. Under the Paris treaty of 1954 Britain undertook a military commitment that has to be honoured, except in exceptional economic difficulties. While the Chancellor may be anxious about the additional sterling drain caused by the revaluation of the D-mark, he should also blanch at the prospect that would open up if (assuming the worst) Rhine Army had to be called home and rehoused in anything like the quarters that the German taxpayer has, in effect, provided for it. Since the American Treasury has also been disturbed by its military spending in Germany it is conceivable that Mr Lloyd may eventually benefit from a general inter-allied arrangement. But the immediate economies in Germany that are possible, or desirable, look small indeed.

MAJOR GAGARIN

Mr K's Ambassador

YURI GAGARIN is a personable, resplendently uniformed and well-mannered young Russian who is also the first human being to have escaped from and orbited our planet. This has been more than enough to make him the visitor of the week, if not of the year. During his rapturous stay he has contrived to add respect for himself as an individual to respect for his country's scientific achievement. He has appeared to be modestly shrewd (or shrewdly modest: it is difficult to tell in so short an acquaintance) in dealing with the press, and unaffectedly diligent in his diplomatic duties.

The acclamation that he has received in London and Manchester this week could not have been accorded to any other Soviet citizen. It is not in the least surprising that this shining ambassador of Mr Khrushchev's should now be detailed for similar triumphs elsewhere.

Major Gagarin's politics are not irrelevant to his present employment, but they have been irrelevant to the sudden popular impulse to lionise this particular young man. The qualities that have put his features on the front page of every newspaper are very far removed from those supposedly propagated by the rash of show business personalities and the trash of the gossip columns. He makes a change. If Commander Alan Shepard, of the United States Navy, likes to visit London at any time he will be no less welcome on the same terms.

The British authorities took a knocking earlier this week for their initial lack of enthusiasm over a visitor whose intended arrival seems to have caught someone palpably off balance. The eventual amends, in the form of an invitation to Buckingham Palace on Friday and a meeting with the Prime Minister at Admiralty House, have in fact been handsome. Even the most censorious cannot have expected Mr Macmillan to trail out to the airport to make an astronaut's holiday ; he has certain other tasks to perform, in running the country. But if other people's plans could be adjusted to receive Major Gagarin, could not Lord Hailsham's have been on Tuesday morning?

FRANCE

General Riddle

If President de Gaulle's television address on Wednesday contained nothing that was altogether new, it did make plain the direction in which his thoughts are at present moving. He spoke in a mellow mood of quiet confidence on the destiny of France, which he justified by a lengthy exposition of the country's economic progress—a grave rebuke for the peasant demonstrators, here—and a pat on the back for his ministers. Perhaps it is this serenity that is behind the new readiness to stiffen the western cause, on such matters as the defence of Berlin, with something more substantial than exhortations to be resolute. The recall of a division from Algeria to strengthen Nato is an encouraging event. So, in another way, is the announcement that the period of French national service is to be reduced from twenty-seven months to two years: this will weaken nobody, please many, and, by increasing the labour force slightly, will give an extra fillip to the French economy.

But it is impossible to avoid the suspicion that one topic to some extent determined the allusions to the others, although General de Gaulle dealt with it only briefly. All his visions of the future are dependent on a settlement in Algeria. Without an early one, what he can do even for Berlin is severely limited. Unfortunately there was no sign, in the condescending allusions to decolonisation, that he has yet understood what is required of him if he is to get his Algerian peace.

As his speeches during his tour of Lorraine showed, and as this one confirms, he understands so well the generosity of France's proposed scheme of "association" with Algeria, which involves a vast aid programme, that he fails to grasp the repugnance the Algerians feel to some of its details. Essentially, whether it is a question of the Sahara, the military bases, the status of the European settlers, a cease-fire, or recognition of the provisional government, the matter at stake is the full Algerian sovereignty for which the nationalists have fought for so long, and for which they are prepared to go on fighting. No proposals that seem to impair that sovereignty have a chance of being accepted ; and it can only be a question of time before the sphinx of the Elysée, as the Tunisians call him, recognises this. But the riddle is, when?

GERMANY

An Unexpected Emigrant

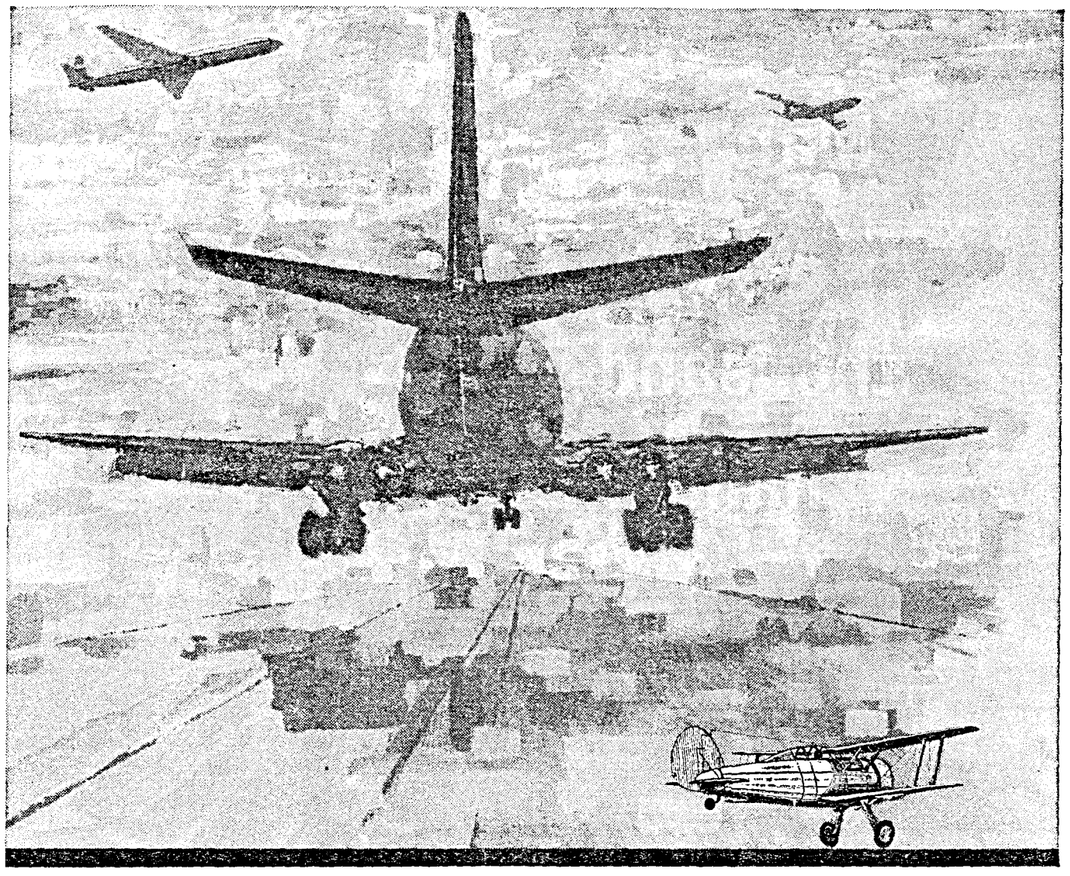
While the western powers have been answering Mr Khrushchev's proposals on Berlin in notes to the Russian government, Dr Adenauer and Herr Brandt have been publicly duelling on the subject in a fairly surprising way. On July 7th Herr Brandt proposed that the West should try and get away from the cold war by producing proposals on the German question as a whole. The West should be prepared to discuss the political and military status of a reunited Germany. It should propose a peace conference of 52 governments ; representatives of the two German states could be consulted beforehand.

Holes can obviously be picked in this proposal. Except as a way of buying time, a peace conference of 52 states hardly looks a practical way of making progress over Germany. But in general outline Herr Brandt's idea has much to be said for it. For the West the only way of getting off the Berlin hook in the long run must lie through a serious discussion of the German question as a whole. And if such a discussion is to be fruitful, it will necessarily cover not only the character of a future German government, but the reunited Germany's alliances, armaments and frontiers.

Dr Adenauer's reaction, however, has been brusque and bitter: "Mr Khrushchev is anxious to hear just this sort of thing". If Herr Brandt became Chancellor, the best thing to do would be to emigrate to the United States, he told a rally of Christian Democratic women (discussed in its other aspects on page 260) on Monday. Thus Herr Brandt's, suggestions, like most suggestions concerning the German question, are branded as dangerous appeasement.

Some of the reasons for Dr Adenauer's attack are understandable in electoral terms. It is extremely irritating for him that Herr Brandt has been able to quote in support the suggestions for a German peace treaty made two weeks ago by Herr Gerstenmaier, the Christian Democratic President of the Bonn parliament. For once it is the Christian Democrats, more than their opponents, who look divided about foreign policy.

THE CHURCH



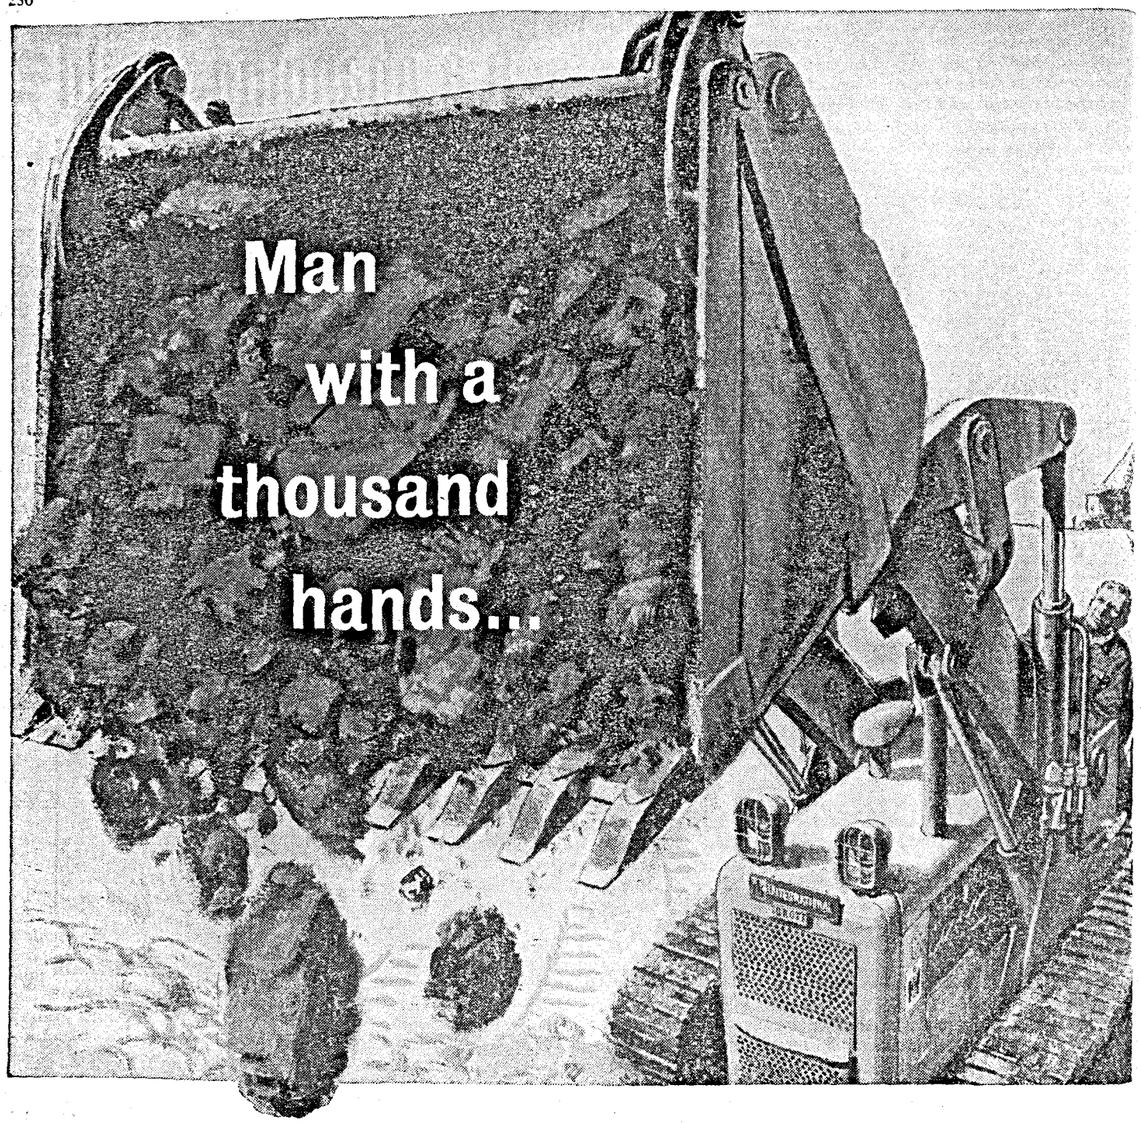
Self-Government?

The system by which the state appoints the bishops, deans and certain other office holders in the Church of England has often before been under fire. Two fairly recent commissions on church and state—under Lord Cecil in 1935 and then under Sir Walter Moberley in 1952—recommended that it should be modified, and in 1954 the Church Assembly passed a motion calling for greater autonomy. Now, after the unfortunate affair of the Guildford deanery and in line with his own expressed desire for more autonomy for his church, the new Archbishop of Canterbury has promised, if the Church Assembly wishes, to co-operate with York in appointing a commission to consider all church appointments that are in the gift of the crown.

From the church point of view the present system is theoretically indefensible. It is made worse, not better, by the final "election procedure" by the cathedral chapter. The chapter is ordered by letters patent (*congé d'élire*) to hold an election which is quite free provided the candidate named by Downing Street is elected. The solemn farce by which the chapter prays for guidance to the Holy Spirit, knowing that if His promptings are different from those of the Prime Minister they can only be followed at the price of incurring all the penalties of *praemunire* (including outlawry and confiscation of goods), causes more offence to churchmen than anything else.

What can be put in the place of prime ministerial appointment ? One suggestion is that a return could be made to the practice of the early church where clergy and laity joined together to elect their bishops. This method is used throughout the Anglican communion outside England. The Church of Ireland uses synods of clergy and laity to elect its bishops: the Church in Wales has special electoral colleges for the same purpose: the Protestant Episcopal Church in the United States uses synodal election subject to a veto (largely theoretical) of the house of bishops. But the drawback of the system is that mediocrities can tend to get entrenched in the lower levels of ecclesiastical as well as in political life, and might tend to elect others like themselves to high office. Moreover, such complete autonomy in England could probably be pur-

in a changing world



From 120 m.p.h. by compass, altimeter and guesswork to a safe 600 m.p.h. navigating by electronics—that's progress!
Mullard's contribution, a modest but vital one, is in the design, development and manufacture of electronic devices which are used in radar, navigation and landing systems, communication networks and computers. Because they fully satisfy critical specifications of performance and reliability, Mullard products are extensively used by famous manufacturers of electronic equipment.
Could we contribute to your electronic projects ?

chased only at the cost of disestablishment. A better solution might be to set up consultative bodies in each diocese to submit nominations to the crown when a vacancy occurs. The crown would be free to choose one of the names or in exceptional circumstances to reject them all and select another. This is the system used in the Roman Catholic Church where chapters send up three names to the Pope, one of which he normally accepts, but which on occasion he rejects, making his own appointment.

FYLINGDALES

In the Spidermen's Grip

On the wuthering heights.

A correspondent in Yorkshire reports :

THE construction of the early warning radar station on Fylingdales moor, near Whitby, where work stopped again last week, has been persistently disrupted by strikes and disputes. Although agreement was reached between the contractors and the steel erectors' union on Tuesday, under which talks are to go on at a site conference next week and the 72 erectors who were dismissed have been reinstated, this need not be the end of the story. The men say they are dissatisfied over bonus payments and safety conditions. Five of them had been dismissed for refusing to work 100 feet up in the high wind that often sweeps across the moors ; when the remainder came out on a protest strike they were sacked too. The management claims that the bonus scheme previously agreed to by the men allows for earnings of up to £32 a week. (The men say that the scheme is too complicated, but it is a safe assumption that they really want more money.) To add insult to supposed injury the British spidermen's complaints about the wind-force on the moors have been dismissed as thoroughly namby-pamby by visiting American constructional engineers.

Fylingdales is an Anglo-American project with a fixed (though undisclosed) date for completion. The United States is bearing £35 million of the cost and Britain £8 million. The station is part of a missile detection system linked with other posts at Clear in Alaska and Thule in Greenland—both of which have been completed. Delay at Fylingdales caused by a week's stoppage in April led to questions in the Commons, and Government assurances were given that the station would be completed on time. The pace was speeded up, but by the beginning of this month there had been no fewer than six strikes or stoppages by the men.

The spidermen are not alone in making difficulties. The use of the site itself, occupying 2,800 acres in the North Yorkshire National Park, has been bitterly opposed. Housewives have organised petitions, farmers, ramblers, local councillors and everybody with a yen for the moors have protested. But a wooden town to house about 1,500 workmen has sprung up, though only a quarter of that number are yet on the site. When, and if, construction is completed, towers supporting three antennae, each weighing 175 tons and encased in plastic spheres, will stand 200 ft. above the ground. It is a matter of minor relief to the authorities that the labour troubles among the steel erectors have not, so far, spread to labour employed by other contractors.

TURKEY

A Step towards Democracy

BEFORE the referendum on the new Turkish constitution, held last Sunday, General Gürsel and his colleagues stoutly maintained that it was an essential step in their country's return to a western-type democracy. *One hopes that they do not* now regret their idealism. For the provisional unofficial returns show that some quarter of the electorate abstained, and that of those who voted, about a third voted No. This is far from the overwhelming approval for which General Gürsel had hoped and asked.

The military regime might understandably have expected a more enthusiastic response. Whatever its faults, the new constitution has been carefully drawn up with the object of preventing the abuses of power which the Menderes regime managed to get away with ; it introduces, for example, both a second legislative chamber, and a special court for determining whether or not laws are constitutional. And energetic efforts *have been made both by members of the* National Unity Committee—many of whom have been touring the country—and by most of the press and the political parties to arouse enthusiastic approval for the constitution. A good many Turks, however, are not convinced that it was either necessary or *right to overthrow Mr Menderes.* For all these, last Sunday's referendum was the first opportunity they have had of registering their disapproval of the military coup.

That so many feel this way is discouraging to those who hope that the present regime may lead Turkey back in good order to representative institutions. On the credit side, the referendum was evidently fair and secret ; the voters felt able to vote as they pleased ; and the government has apparently attempted neither to tamper with the results nor to disguise them. In short, the Turks have in fact taken a step on the road to democratic government, and General Gürsel deserves credit for it. What matters now is that he and his colleagues should have the courage and steadfastness to pursue the admittedly difficult course they have set themselves.

The Economist

JULY 13, 1861

FINANCING EDUCATION

The expense of a local outlay from the Imperial revenue has always been an object of dread and apprehension to the Chancellor of the Exchequer as far back as financial tradition extends. He has always had a dread of defraying the special wants of a district in any other way than by a special tax on that district ; he has always been aware that those wants would increase with what they fed on, if that food were provided from a distance. This has been felt even as to the most definite and palpable of wants—the subsistence of the people. The late Mr Ricardo laid it down amidst general applause, that nothing but the local check of local taxation had prevented the burden of the poor rate from becoming greater than even we, rich as we are, could bear. Much more would this be the case with the most metaphysical, indefinite, impalpable of wants—education,—a want which no two persons will agree in limiting in the same manner,—a want which is in reality vague and infinite. We might spend untold millions from the Imperial revenue, and yet be told after all that the nation *was not educated ; that it was only* half educated ; that we had spoiled the coarse natural man, but had not produced the refined and cultivated man ; that we had spent our money with no result, or with a poor result, and, as the most eloquent of our opponents would be sure to say, with a pernicious result. *And in all probability we should not have* achieved anything very beneficial. A delicate, diffused, undetectable, or nearly undetectable quality, such as the education of a people, peculiarly requires local care, local energy, and local superintendence. Unless you interest the persons on the spot in the work to be done on the spot, the funds which are sent from London will be wasted, and the superintendence of London will be unavailing.

COMMUNIST BLOCK

Mr Popovic in Moscow

THE visit of Mr Koca Popovic, the Jugoslav foreign minister, to Moscow this week, may have made no great splash, but it is safe to assume that both guest and hosts regarded it as of particular importance. Official relations between the two countries have been steadily improving in recent years ; and although on occasion the Jugoslavs have shown a sturdy independence of the Soviet line, there are several important international issues, such as disarmament and Germany, on which their views are very close to those of Moscow. Yet in the talks this week both sides will have had grievances to air.

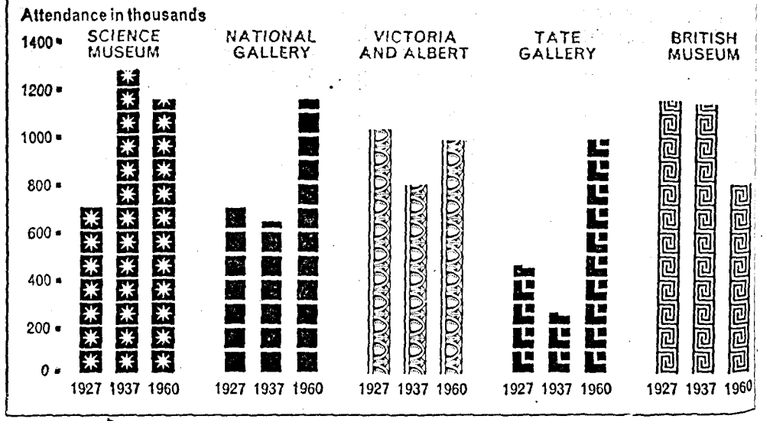
On the Jugoslav side there is growing irritation at the persistent, if intermittent, attacks by the other communist countries not only on Jugoslav "revisionism" but on all things Jugoslav ; China and Albania are the worst but by no means the only offenders. In a speech at Titovo Uzice last week, Marshal Tito—no doubt with an eye on Mr Popovic's imminent visit to Moscow—expressed his irritation with unusual frankness. He complained that not only were China and Albania waging "the most violent cold war" against Jugoslavia, but that other east European countries were trying to damage and traduce his country under the cloak of an ideological struggle.

What seemed to upset Marshal Tito most—and he was quite open about it—was the effect that this anti-Jugoslav propaganda might have on other "friendly" countries, by which he no doubt principally meant the uncommitted countries of Africa and Asia. But the Russians who always have been, and still are, worried about the effect of Jugoslav revisionist heresies on other communist parties, are now also greatly exercised by the effectiveness of Jugoslav diplomacy among the uncommitted countries. The Jugoslav criticism of power blocks and advocacy of non-alignment obviously hold great attractions for those countries, and Marshal Tito no doubt hopes to gain influence from this fact at the neutrals' conference in Belgrade in September. Doubtless it is no coincidence that the preparations for this conference should coincide with renewed attacks on Jugoslavia in east European capitals. Marshal Tito can expect these attacks to continue so long as he persists in a policy that must tend to damage Soviet influence in Africa and Asia.

INCOME TAX DECISIONS

Under Which Schedule?

LAST week two more of the recent clutch of tax cases heard in the courts raised the old question of the different treatment of expenses under schedules D (for professional earnings) and E (for employees' salaries). One case concerned a man whose employers paid the rent of his flat—£500 a year—and charged him £150. The question at issue was whether the £350 difference should be included in the employee's emoluments and taxed under schedule E, and if so whether it could be regarded as a deductible expense under that schedule. The tax commissioners answered yes on both counts ; now a judge, on appeal by the Crown, has ruled that the £350 cannot be included by the man as a schedule E expense because it was not incurred "wholly, exclusively and necessarily in the performance of his duties."



The second case has seen the culmination of the long fight between the Crown and part-time consultants in the health service. Ought the remuneration received by these consultants in respect of their hospital appointments in the health service to be assessed under schedule E? Or should these appointments be treated as incidental to the consultants' practice of their profession and the remuneration from them assessed with their private practice earnings under schedule D ? In five test cases, the special commissioners held that the whole of the consultants' income could be assessed under schedule D, and that all their professional expenses (including, for instance, the overhead expenses of running a car) could be deducted under the more liberal rule of that schedule. On appeal, however, this decision was reversed, the judge holding that the health service earnings were assessable under schedule E, and that the expenses incurred in carrying them out could not be deducted in determining the amount of tax payable under schedule D.

It was now the doctors' turn to appeal and in March last year the Court of Appea

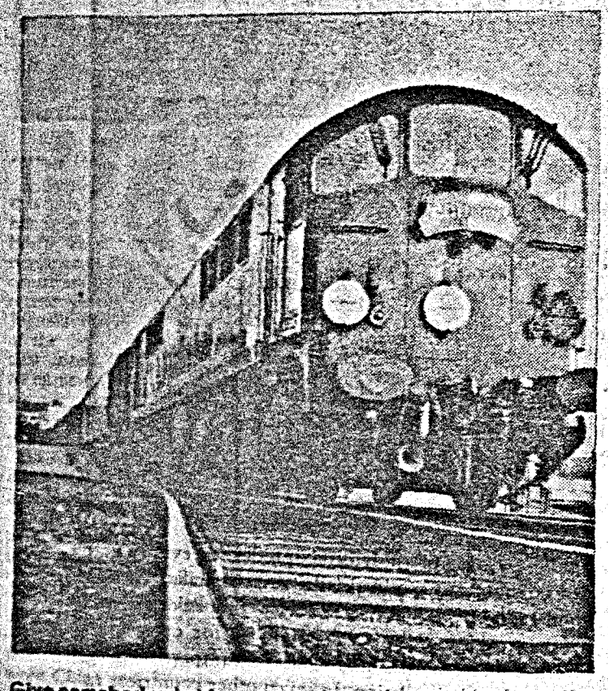
Too Stingy about Museums ?

The more-leisured, better-educated, television-instructed Briton is less museum-minded than his ancestors. He has much more taste for contemporary art, reflected in the success of the Tate, but this alone of the national institutions has really attracted modern support. The National Gallery, although it has become more popular since the 1930s, could boast of an annual attendance of upwards of a million as long ago as 1875. And visitors to the British Museum last year were fewer than three-quarters of prewar numbers. What has gone wrong ?

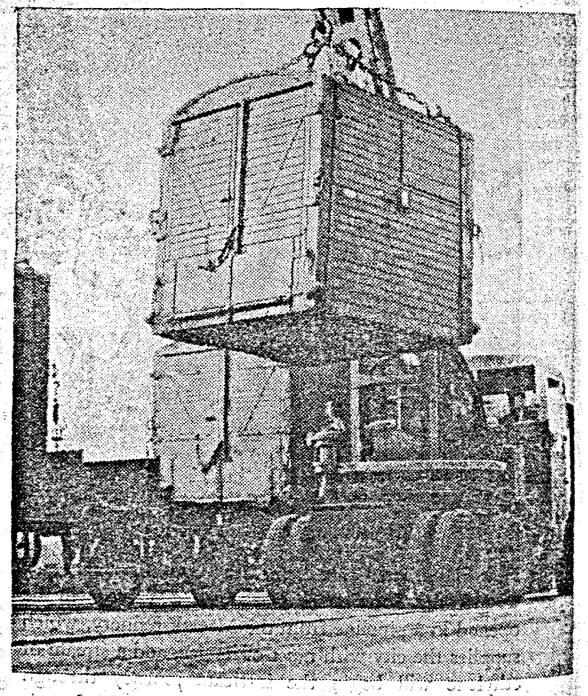
The standing commission on museums and galleries is at present making a survey of provincial museums and galleries. Its concern, in its sixth report, is with the need to improve the national institutions by enlarging the staff (to provide, among other things, for more late opening of galleries) and speeding-up the building programmes to relieve overcrowding (there are still war-damaged rooms at the British Museum). The commission again urges that there should be tax reliefs to encourage donation of money or works of art to public galleries.

Danish molecules dance an English jig

PRIBIH



New landmarks are appearing on Copenhagen's waterfront. Soon after Christmas a valve will be opened in a pipeline from the Maersk refinery, which supplies the city with most of its gas, and a stream of ethylene will begin the intricate journey through compressors and reaction vessels that will transform it into one of the world's most versatile plastics: polythene. The high-pressure process that persuades the invisible molecules of an invisible gas to choose partners, link up in long chains and form a tough, resilient plastic, was discovered by I.C.I., Britain's leading chemical company; and today it is used to make most of the one million tons of polythene produced every year throughout the world. In Britain, Australia, Canada and India, I.C.I. and its subsidiary companies operate plants making 'Alkathene' polythene for everything from squeeze-bottles and nailbrushes to packaging film and cable insulation. In seven other countries, 14 manufacturers are licensed by I.C.I. to make polythene, and to build the new polythene plant in Copenhagen, I.C.I. has joined forces with the A. P. Möller Shipping Companies. Once again, I.C.I.'s mastery of mammoth pressures and capricious temperatures will make the molecules dance.



The influence of I.C.I. research and production is felt today in every corner of the globe

Imperial Chemical Industries Ltd., London, S.W.1

EXPRESS SUCCESS!

LONDON TODAY–GLASGOW TOMORROW!

Give somebody what he wants, and already you're in a fair way to success. Two years ago, we of London Midland saw there was a big demand for a high-speed container service between London and Glasgow – big enough to warrant running a special five-nights-a-week express freight train. So Condor was born.

From its first run on March 16 1959, Condor was a success. Transport managers appreciated the advantage of a regular, reliable door-to-door freight service which delivered their goods in under 24 hours – the fastest regular freight transport service between London and Glasgow, and all at competitive rates • Today, the Condor service is not only well-established but steadily growing (as more and more firms switch to rail). Can Condor help *you*? Ask your Goods Agent or Station Master about Condor – the fastest way to send your goods from London to Glasgow, the fastest way from Glasgow to London.

CONDOR–PART OF THE NEW LOOK OF TODAY'S LONDON MIDLAND

LONDON ENQUIRIES, TELEPHONE AVENUE 7331

came down firmly on their side. Health service earnings were assessable under schedule E, but the word "profession" in the expenses rule of schedule D must refer to the practice of a profession as a whole, not merely to that part of it for which the earnings were taxable under schedule D. Last week, however, the House of Lords upheld the decision of the judge in the Chancery Division. It held that the rules for each schedule were mutually exclusive; for income tax purposes the consultants concerned were not engaged in a single activity, as the Court of Appeal had maintained.

If the House of Lords had decided in favour of the doctors, there would doubtless have been repercussions in other professions —journalists, for example, might start to lay off many more expenses against part-time freelance earnings. But the fact that the case has gone ding-dong through the whole machinery of the law, with the balance of legal opinion pretty equally divided on it, must reopen the case for saying that expenses under the two schedules should be brought more into line.

MINICABS

Strategic Withdrawal

Last weekend the proprietors of London's largest fleet of minicabs announced that their cars would no longer accept fares in Central London for journeys of less than five miles. The reasons for this withdrawal were given as (a) a desire to placate the drivers of conventional taxis; and (b) an inability to cope with the present flood of demand for their services.

The placating of the taxi-drivers is not likely to be altogether successful: the regular operators were not noticeably mollified by the news that the minicab owners had been advising short-trip customers to "take a taxi," and this formalisation of the practice will mean little to them. Indeed, the decision to impose a low limit of five miles may lead the taxi-drivers to believe that they are being attacked at one of their weakest spots. The archaic Public Carriage Laws, which control the operation of cars plying for hire, apply to fares only when these are for less than six miles (or an hour's run), after which the driver can bargain or impose what fare he likes. A journey from, say, Liverpool Street Station to Hammersmith may cost as much as twice the fare indicated on the meter—about £1. The same journey in a minicab would cost 7s. Taxi-men argue that the preference for minicabs will therefore take effect just where their cabs become profitable. Unless he can find a fare on his return journey, the taximan's run is only marginally economic between four and six miles. The sight of a taxi, Public Carriage Office type, may now become a rarity at London airport.

What has prevented the rout of the regular taxi-drivers has been the inability of anyone with limited patience to book a minicab; telephone calls for one have received only the engaged signal for hours on end. This shows how large the unsatisfied demand for minicabs is. If the first big firm in the field has withdrawn from the centre of the city, this does not mean that other operators will not open up and enter the market there. Indeed they now seem to have every economic incentive to do so. And, from the London traveller's point of view, there is every reason why they should.

NORTHERN RHODESIA

Kaffirs Are Lively

In London Mr Kenneth Kaunda, leader of the United National Independence Party of Northern Rhodesia, can walk upright. He is able to visit the Colonial Secretary as an important leader of opinion in one of the colonies. In Salisbury, apparently, he is just Kenneth the Kaffir. Exactly what happened to Mr Kaunda when he passed through Salisbury airport on his way home to Lusaka ten days ago has become a matter of public dispute between himself and Sir Roy Welensky. It is bad enough that Mr Kaunda is still a prohibited immigrant in Southern Rhodesia, the federal partner of Northern Rhodesia—and that the incidents at the airport were sufficient to provoke some Westminster supporters of Sir Roy into muttering that this was a pretty silly way of trying to keep a federation going.

Mr Kaunda has, however, proved to be the master of his temper. A three-day meeting of his party was held at Broken Hill this week, and discipline in the ranks of the 5,000 delegates was remarkably good. Mr Kaunda sensibly asked for, and got, complete personal power to direct, call, halt, or prolong any non-violent campaign against Mr Macleod's new constitution. This is Northern Rhodesia's best guarantee that the campaign will be kept as free of excess as possible; Mr Kaunda will go no further than he feels he must to retain his leadership and achieve his objectives—and there is evidence that he is the sort of man who would lay down the leadership if that meant violence.

The call must now be for Mr Kaunda's more excitable advisers to keep their tempers, too. Rightly or wrongly, the complex new constitution for Northern Rhodesia is seen by the African nationalists as being so heavily weighted in favour of Sir Roy's party that they have chosen to carry on with strikes, boycotts and passive resistance until the next constitution. They may use the ballot box as well: this does not get round the need, which apparently still exists in Rhodesian politics, for the kind of catharsis experienced in other emerging countries in east and central Africa. The tricky constitutional way may be attractive in London. But in Britain's Deep South in 1961, the kaffirs are lively.

COUNCIL ON TRIBUNALS

Business Picks Up

The second report of the Council on Tribunals (HMSO, 2s. 6d.) shows that the council had much more work to do last year, and has evidently become more conscious of its importance. Fifty-two new complaints were dealt with (31 concerning tribunals and 21 statutory inquiries), more than twice those of the previous year. As was reiterated during the Lords debate on Wednesday, the council, unless reconstituted, will soon be unable to cope with the volume of work. If it is to continue to be composed of part-time members it is desirable to increase its numbers so that a rota system can be introduced. The largest single group of complaints came from rent tribunals in the London area, but in half the council thought it unnecessary to take any action. Applications to rent tribunals have apparently fallen off partly because of the amalgamation of local tribunals, and partly because of an erroneous public belief that they were abolished by the 1957 Rent Act. The Essex chalkpit case will be treated in a special report.

The council's principal criticism of rent tribunals, apart from their restriction of appeals to points of law, is their lack of any agreed system of procedure. Presumably it would not be outside the council's powers or abilities to draw up a proper code. It considers the ban on legal representation before national health service tribunals to cause no injustice: certainly, if legal representation were allowed it would be invoked more by doctors than by complainants. The council wants the right to be present at these tribunals, but its complaint last year about lack of status at pensions tribunals has gone unheeded.

The council considered two recommendations of the Franks committee, that absolute privilege should be accorded to tribunal witnesses, at any rate when on oath, and that tribunals should have the power of *sub poena*. It rejected both of them, the first on the inadequate ground that such privilege might encourage the making of malicious statements, and the second for the more reasonable reason that individuals have the right to apply to the courts for a *sub poena*, which has never been refused because a witness must appear before an inferior tribunal. The council has not considered the pressing problem of payment of costs, which at present are irrevocable, but the Lord Chancellor indicated on Wednesday that he intended to refer the question to it. Little consideration has been given by the council to increasing its own powers. The suggestions put forward in the Lords ranged from Lord Denning's proposal that it should have power to settle whether decisions should be taken inside Government departments or before the tribunal, to Lord Lucas's plea that it should be able to call for papers and summon witnesses.

HOME REPORT

In HOME REPORT members of the editorial staff and local correspondents report on life and happenings in and around Britain.

Brothers in Conference

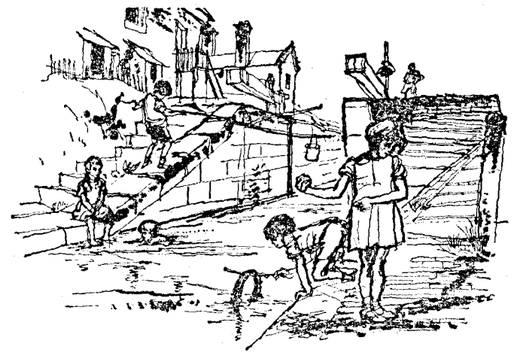
Left . . . Mr. Cousins Right . . . Mr. Brown

FROM OUR SPECIAL CORRESPONDENT

THE Transport and General Workers' Union, whose 1,300,000 members provide so much of the infantry for the labour movement and for the country's second political party, held its biennial delegate conference this week amid the domes and terraces of sunny Brighton. Eight hundred working men, elected by their fellow activists in the union's regional and trade groups, had their chance of giving instructions to the General Executive Council —the elected body which runs the union's day-to-day affairs—and to the paid officials who do the business of negotiating and bargaining on behalf of the members. The massive list of 658 resolutions from branches and trade groups throughout the British Isles having been whittled down by agreement and compression to manageable size, or bundled up into a "statement of executive policy" for delivery from the platform, each was moved by a speaker with a maximum of five minutes' talking time (and a remorseless red light to shine in his eyes when this was up): three minutes were allowed for supporting speeches.

Devon's burr, Glasgow's glottal hesitation, Ulster's nasal brogue (and the rich southern Irishness of the London building workers) promptly indicated the speakers' origins, and gave a clue to the vastly predictable local viewpoints which recurred throughout the debates. "We don't have the speakers we had two years ago," confided a genial lorry-driver from the brewing trade, "they've made them all into local officers, so they can't be delegates." With a yawn the listeners agreed: in mid-discussion a cry of "Vote" would go up from a weary audience, and the little queues of would-be orators waiting by the rostrum faded away, mouthing the phrases they were burning to deliver.

Each debate, however, was summed up by the general secretary, his time limited only by the discretion of the chair—and the chairman, sitting under Mr Cousins's massive elbow, had little inclination to intervene. Refuting, subtly rephrasing or magisterially blessing the arguments presented at the rostrum; facts at his fingertips, authority in his massive shoulders, socialist faith glittering behind his horn-rims, Mr Cousins had the conference in the palm of his hand. Brother Frank to many of the delegates, this brother was certainly big. Like Ernest Bevin, who created the union, or like Arthur Deakin, whom a veteran delegate remembered pushing a long-winded conference president forcibly down into his seat, the transport workers' leader is unmistakably a strong man—and his strength lies largely in his intelligence among a swarm of decent mediocrities. His strength—and his idealism—showed at their best in curbing a mindless movement to call for restriction on Commonwealth immigration ("I know, brothers, we have to go on being brothers, but there's a limit to which brotherhood can go"): passionately, Mr Cousins stamped out the embers of xenophobia, and only seven hands were raised to vote against him.



But while Bevin and Deakin were concerned to keep the right-hand end of the Labour see-saw firmly on the ground, Mr Cousins exerts the union's massive weight to tip the balance the other way. The decision of the conference to reject appeals for wage restraint, and to launch itself into a new campaign ("as long as there is this free-for-all we shall regard ourselves as part of the 'all'", said Mr Cousins) is the most serious threat it levelled at the government—or at the nation, depending on the point of view —but this has, after all, been the unanimous reaction of all trade unionists. It is Mr Gaitskell, not Mr Macmillan, who is threatened by some other decisions.

The first threat may come on the new Labour policy document *Signposts for the Sixties*: the success of this rallying-point for divided socialists must surely depend on its unspecificness over certain issues—notably that of nationalisation. But the conference approved a statement by Mr Cousins which leaves him free—as he explained—to seek assurances from the party leadership that it means what he wants it to mean. And what he wants it to mean is very unlikely to be what Mr Gaitskell (rightly) believes the floating voter to want it to mean.

INEVITABLY the big fight was over The Bomb: and its first round was fought out between Mr Cousins and Mr George Brown, the deputy leader of the Labour party, whose candidature for parliament is sponsored by the TGWU. Mr Brown, as an official of the union, knew very well that he had no possible right to speak at the conference: he also knew that no one else could muster the speaking time, the command of facts or the persuasiveness of Mr Cousins to swing the vital few uncommitted delegates to his side.

His first move was to get as much publicity as possible for his point of view (leading to complaints from Mr Cousins of "pressure groups" trying to influence the internal affairs of the delegate conference): no fewer than seven MPs—six sponsored by the transport workers and Mr Philip Noel-Baker, armed with his credit as a Nobel prize winner—turned up on the Sunday before the conference to address a public meeting. But the police nabbed the loudspeaker van advertising this meeting, and the Midlands delegates were tempted away by a party. Some seventy people, including a puzzled French student and Mr Brown's whole family, were all that turned up to fill the cinema hired for the evening (next week: Michèle Morgan in *Torment*). Whatever the resentment of some delegates at Mr Cousins's authoritarian organisation of the conference debates, even more of them deplored the free-lance activities of Mr Brown: his actions may even have lost as many votes for his party leader as they gained, and Mr Cousins's triumph, when it came on Thursday afternoon to rapturous applause, seemed depressingly predictable.

Death in the Water

FROM OUR SPECIAL CORRESPONDENT

THE British public does well to be obsessed with the rapacious motor car, which kills 7,000 people each year: it does less well to be so little troubled by water, in which 1,200 people perish annually. Some 700 children die each year on the roads, and strenuous attempts are made to educate the young in the perils of traffic; but the 350 childish deaths by drowning cause less of a stir. Far too many British children are still not able to swim.

This week the Thames Conservancy Board expressed concern that between 20 and 30 swimmers (mostly young boys) are drowned in the non-tidal reaches of the river (of which the Conservancy is the guardian) each year. Below Teddington, where the stream meets the noisome tidal scum, the Metropolitan Police last year recovered the bodies of 78 drowned, and rescued a further 51. In the canals of Britain, most of them unused, weed-grown and treacherous, 25 people died in 1960. Another 43 found that even swimming pools may be fatal. From their holidays, from high summer days in the river and the sea, 753 did not return. Messing about in small boats, worthwhile as the Water Rat thought it, can hardly have been as valuable as the 68 lives it claimed in 1959.

Drowning is an unnatural death. It is also avoidable. The meanest swimmer may keep himself afloat for a few minutes, but his strength will not last long. The strongest swimmer, slapped by a wave, concussed by a gybing boom or trapped by tide or current, may succumb. The boy on a dare may come safely to the opposite bank, only to find it sheer and unclimbable. The old or infirm in too hot a bath may feel momentarily faint. All or any of these may mean another death; but they need not.

The Royal Society for the Prevention of Accidents is the chief organisation currently concerned to reduce the toll. In May it launched a campaign against ignorance and complacency which, if it has effect, could cut the number of deaths on the water to those (such as the wrecking of fishing vessels in violent seas) which are truly unavoidable. Most people drown while swimming for pleasure, and the main force of the campaign is directed at persuading the great majority of Englishmen that it is dangerous to boast that they cannot swim. There is no exact figure, but an informed guess has put the proportion of swimmers able to take care of themselves in an emergency as low as one in ten of the population.

CLIMATICALLY, Britain is not conducive to training in swimming, and, perhaps depending on a nautical past, most Britons prefer to learn to sail on the surface of the water rather than swim through it. This discouragement by wind and weather is partly responsible for the dearth of facilities; possibly the proximity of the sea itself has deterred local authorities from spending too much on mere pleasure pools. The London County Council region, with its population of 3.25 million, is comparatively well provided for: in its 29 boroughs there are 80 indoor and outdoor pools (although four of the boroughs have no baths at all). Each pool must therefore cater for 40,000 or more people. But Coventry has only a single pool for 280,000 people; Swansea, two for its 160,000; and York, three for its 105,000.

Where pools do exist the facilities for learning are not always good. In London, the courses organised by the Central Council for Physical Recreation can only be attended in September, when the summer rush is over. In many centres, no facilities for teaching are available, and children must learn, possibly to their injury, from their contemporaries or elders willing (but not therefore qualified) to devote time to them. There is much in this field that could profitably occupy the time of more than one MP.

Ulster Likes Lloyd

FROM A CORRESPONDENT IN BELFAST

NORTHERN IRELAND'S resolute opposition to the payroll tax (whether or not Mr Selwyn Lloyd sees fit to impose it elsewhere) ended in as famous a victory as its Unionist MPs at Westminster have secured. Mr Lloyd has now agreed to exempt Ulster and has thereby rejoiced the hearts of the Northern Ireland Minister of Finance, Mr Terence O'Neill, who had earlier expressed his perturbation, and the *Belfast Telegraph* which, although it seldom criticises Tory policy, had declared that "the tax would arouse misgivings in those areas where unemployment is high and alternative jobs scarce, as in Northern Ireland." The sight of three Ulster Unionist MPs going into the Opposition lobby during the passage of the Finance Bill may finally have persuaded the Chancellor to desert this particular charge. But by allowing Ulster exemption Mr Lloyd has set some tongues wagging again in Belfast in the cause of a more complete separation of Northern Ireland's fiscal system from the Treasury in Whitehall.

This has long been a matter of hardened faith among a minority in Belfast. Some seven years ago Mr W. F. McCoy, a Unionist MP, began to propagate the idea that Northern Ireland would make better economic progress if it had "dominion status" with the specific power to arrange its own system of taxation. Mr McCoy's campaign managed to win the support of a small number of members in the Stormont Parliament: it looked attractive to those Ulstermen who were then complaining about the high levels of British taxation. But the idea never appealed to the Northern Ireland government nor to Lord Brookeborough, the prime minister, whose opposition was based essentially on the contention that with dominion status Northern Ireland would cease to be an integral part of the United Kingdom; any change would weaken the 1920 Government of Ireland Act which brought the Northern Ireland Parliament and state into existence.

The 1920 Act defines the financial relationship between Northern Ireland and Great Britain with the utmost clarity. The Act gave the British Exchequer power to levy and collect almost all Ulster's taxes. This is called the Reserved Revenue, although in the annual settling of accounts all the money is handed back to the Northern Ireland government. The Northern Ireland government itself merely has the power to control what is known as Transferred Taxation, chiefly death duties, entertainments tax, some stamp duties and road taxes. Even in levying these taxes the Northern Ireland Minister of Finance never departs very far from the policy of the British Chancellor. The last, and highly debatable, item in the accounting is the

annual Imperial Contribution, which Ulster pays towards the cost of United Kingdom defence, consular services and other joint charges. This contribution has varied enormously over the past forty years. In 1946 it stood in the books at £34 million: by last year it had fallen to £9 million and is expected to be even lower (provisionally £3 million) this year.

In effect Northern Ireland bears exactly the same burden of taxation as the rest of the United Kingdom. But is this satisfactory when Northern Ireland's economy, with its persistently high level of unemployment, has very different needs and problems from the British economy as a whole? Many Ulster industrialists, politicians and economists say that it is not. Professor C. F. Carter, formerly professor of economics at Queen's University, Belfast, has gone so far as to say that the Constitution of Northern Ireland (the 1920 Act) is "an economic failure." It seems to give the Northern Ireland government responsibility without power and the Treasury and Board of Trade in London power without responsibility. There has been a growing belief that financial policy determined in London, often demonstrably without consideration for local economic problems, is one of the main reasons why Ulster's industrial development has been retarded. It was no surprise that the payroll tax promptly met such stiff resistance.

A number of Ulster's industrialists, especially those concerned in the new industries that have been set up in the past 15 years, argue that the Northern Ireland government should have the power to make tax concessions that would compensate, for example, for the heavy transport costs that

Lord Brookeborough: Imperial tie

manufacturing in Ulster incurs. Another argument, particularly favoured by some politicians, is that if Northern Ireland had fiscal independence the government could use its power (as the government in Dublin has been doing for the past six or seven years) to increase its inducements to potential manufacturers. Some members of the Northern Ireland Parliament (and they are not confined to any one political party) say that the time has come for a serious review of the financial relationship with Britain. A favourite theme of these critics is that the Imperial Contribution should be abolished, because financially it means very little to the British Treasury, and the money could be used to promote and improve tourism, industry, and housing at home.

THE full consequences of such a change, however, have never been fully studied. Constitutionally, of course, fiscal independence would require amendments to the 1920 Government of Ireland Act, and that, as Lord Brookeborough has repeatedly pointed out, would mean a loosening of the ties with the United Kingdom. Changing the level of taxation in Northern Ireland also raises the ticklish question of sustaining the social services, which at present are equal to those in Britain: Ulstermen pay the same weekly contributions and draw the same benefits. But Northern Ireland is in deficit on this account and under an agreement between the two governments the British Treasury pays the Northern Ireland Ministry of Finance some £13 million a year to make up the difference. Lower taxation in Ulster without the British grant would mean fewer social services.

It is the easiest thing in the world to call for a system of taxation that would recognise Ulster's economic problems, encourage investment and attract new industries. It is no less easy to insist that the people of the area should retain all the benefits that they enjoy as part of the United Kingdom. But can the two be combined? No coherent plan has so far been put forward by the revisionists, but there are some who believe that Mr Lloyd's leniency could be a precedent that might lead eventually to a parting of the ways.

BOOKS

The First Liberals

The Levellers and the English Revolution

By H. N. Brailsford. Edited by Christopher Hill.

Cresset Press. 731 pages. 55s.

FOR a brief interval in the middle of the seventeenth century it looked as if the upheavals of the Civil War were about to lead to genuine social revolution. Before the horrified gaze of both sides in the struggle, there suddenly emerged in 1647 a party advocating liberty, equality and fraternity. Drawing support partly from the lower ranks of the New Model Army, partly from civilian backing in London and the home counties, the Levellers, as they were dubbed by their enemies in an attempt to smear them with the taint of communism, were the first genuine liberals in history. The modernity of their views is astonishing. Two or three hundred years before such notions became respectable, they were advocating equal rights for men and women, colonial freedom (they bitterly opposed Cromwell's bloody reconquest of Ireland), full equality before a thoroughly reformed law, abolition of the death penalty for petty crimes, the ending of imprisonment for debt, electoral reform on a broad based (though not full manhood) suffrage, abolition of the veto of the Crown and the House of Lords, the overthrow of clerical authority and the abolition of tithes, complete religious toleration, including Roman Catholics, and untrammelled freedom of the press.

During his later years, Mr H. N. Brailsford devoted himself to a full-length study of the movement, but unfortunately died before fully completing his task, leaving his material to be tidied up and edited by Mr Christopher Hill. Written with love and fire and passion, his book provides the most vivid and comprehensible account of the tangled events of 1647-49 that we have, based on a most detailed study of the pamphleteering of the Levellers and their opponents. It also contains some extremely shrewd assessments of the characters of the protagonists, Cromwell and Ireton on the one side, Lilburne, Overton, Walwyn, Rainsborough and Sexby on the other. Never has the dramatic story been better told of the meeting in Putney Church of the General Council of the Army in 1647, in which the believers in property rights as the foundation of the state clashed starkly with the advocates of complete human equality. On the other hand the book has done little to increase our knowledge of the intellectual or economic roots of Leveller power. The origins of Leveller ideas, perhaps in Anabaptist literature, perhaps in a traditional egalitarianism among the peasantry, are still to be explored. We still do not

know how far the movement attracted support from the urban workers or the peasantry, from the artisan, the small shopkeeper or the yeoman. Mr Brailsford does not even seem quite sure whether it was a proletarian or a petit bourgeois movement. The organisation behind the demonstrations in London and the mass signatures to petitions is still obscure.

Mr Brailsford did not live to write the concluding chapter, so we can only guess what were his final reflections. It is clear from his narrative, however, that the Leveller leaders, though eloquent propagandists, lacked the cynicism in exploiting popular economic grievances, the duplicity in tactical manoeuvres, the ruthlessness in crushing opponents and the secrecy in conspiratorial organisation that are needed to seize power and carry out a true social revolution. They were not Robespierre, not Lenin. While they were earnestly proclaiming their misty ideal of a humane, tolerant and democratic world, men more practical —and more selfish—than they were busy destroying their power. The Agitators of the Army, those remarkable precursors of the Workers' and Soldiers' Councils of 1917 Russia, were out-manoeuvred by Cromwell and military discipline was forcibly reasserted. The civilian leaders were both unwilling and unable to bring into action the London mob (which was apparently royalist by now), and they hardly even tried to arouse the peasantry. In any case it was only the very exceptional and temporary conditions of the disunity of the gentry, the freedom of the press and the burning grievances of the soldiery that had given them their chance. Their liberal ideas could have appealed to few in any class at this time, and the social structure of pre-industrial England offered no scope for a movement that threatened the authority of the landed classes.

The practical consequences of this abortive episode were entirely negative and harmful. All it did was to alarm the squirearchy into blocking the mildest of social reforms for a hundred and fifty years. Even such obvious measures as the redistribution of parliamentary seats, the speeding up and cheapening of the processes of the law, or the abolition of imprisonment for debt had to wait for the great reforming tide of the early nineteenth century, led by men who knew little of these seventeenth century radicals and owed nothing to them. The Levellers were a noble but a tragic failure.

"Il vengea Calas"

Voltaire and the Calas Case

By Edna Nixon.

Gollancz. 224 pages. 21s.

THE suicide—or murder by an intruder —of a moody Protestant youth named Marc-Antoine Calas, the attempts of a sinister society of "White Penitents" and other interested parties to claim him as a recent convert to Roman Catholicism and establish him as a martyr, the outrageous trial which led to his family's condemnation and his father's execution, Voltaire's impassioned struggle to obtain a reversal of that condemnation: these are the elements of the Calas case, an enthralling, inspiring story that has never been better told than in this exciting book.

It is a story that, as a film producer once said, "has everything." (He added: "Of course, I daren't touch it.") The scene shifts from the noisome streets and dungeons of Toulouse to Voltaire's glorious estates at Ferney and Les Délices, and thence, for the climax, to Louis XV's court at Versailles. The principal characters are of heroic stature: the noble Jean Calas, his English-born wife Rose, the sturdy Gaubert Lavaysse, above all Voltaire at his most vigorous, most compassionate, most sublime. (Voltaire's defence of the Calas family and other victims of injustice so deeply impressed his contemporaries that his sarcophagus was inscribed: "*Il vengea Calas, la Barre, Sirven et Montbailly.*") Even the minor characters are memorable: the weak, treacherous Louis Calas; the Catholic servant Jeanne who, by converting Louis, unwittingly planted the seed of the whole affair, but remained loyal to her Protestant employers when disaster struck; the splendid nun Anne-Julie; and La Pompadour, who said of the people of Toulouse: "These hotheads are more religious than is necessary for good Christians."

Mrs Nixon's book makes far more compulsive reading than most novels; but it is also a valuable work of reference, and her publishers have let her down by issuing it without an index.

The Poet as Man

The Late Lord Byron

By Doris Langley Moore.

Murray. 542 pages. 42s.

IT is bad luck for a writer when his personality exerts a spell over his contemporaries. The chances are that after his death there will be a proliferation of memoirs, portraits, impressions of "the man as I knew him," to the detriment of a sane assessment of his work. This happened with D. H. Lawrence, but more devastatingly still it happened with Byron. He has been dead now for a hundred and twenty-five years, and his poems and plays might well, one would think, have produced an impressive corpus of genuine literary criticism; but no, interest in his life has always eclipsed interest in his writings, and it still does.

Perhaps the publication of this massive book, coming so soon after the three-volume biography by Mr Leslie Marchand, may signalise the turning of the tide. There can no longer be any really large sources of biographical material untapped by research. Mr Marchand was hampered by being refused access to the Lovelace papers, the important collection of letters and documents bequeathed by Lady Byron to her

'Just the thing for busy morons'

THIS remark was Miss Fenella Fielding's inspired verdict on "The Week", that splendid piece of news-gathering that goes on at the back of The Observer Weekend Review each Sunday. If you read your paper in the train, or at the breakfast-table, and your reading is habitually punctuated by either passing the marmalade or hunting for your season ticket, the news is apt to get unbalanced. Sometimes the papers themselves contribute to this confusion by not knowing what really matters. But come Sunday, The Observer settles the count perfectly in "The Week." The man who's responsible for panning the gold from the immense amount of dross that clutters up front pages during the week is Edward Crankshaw.

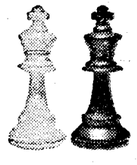
If ever there was a danger (and I think there is) of regarding the more literate Sunday newspapers as weekly magazines, I think Mr. Crankshaw goes a long way to putting this right. There, on a single page, the news of the week is brilliantly evaluated. It's not just useful in case you happen to have missed it when it was at its topical best. It's a good thing to train yourself to take a cool backward glance at recent events occasionally. Otherwise, like Pavlov's dogs, you tend to salivate furiously every time you hear the newsboy's voice.

Spotting the Aphorism . . .

I never was much of a sportsman, but there's one quiet little sport I can never resist: that of trying to decide, as the week sidles by, what will appear in the 'Sayings of the Week' section. It's a good game. Some people (Marilyn Monroe, Dr. Fisher, Gerald Nabarro, Queen Soraya, Frank Sinatra) have a genius for tossing off sayings of the week. Those winners are relatively easy to ~~pick~~, if you study form carefully. Discerning a likely outsider before the 'off' is less easy. Were you onto the Minister of Agriculture the other day? "For once," he said, "one can mention pigs with a sense of sober satisfaction." It's snippets like this which add the final touch of spice to a page which I have always found to be already very well-seasoned.

I'm storing up one or two bets for next Sunday's Observer already. But I daresay, as usual, I shall be surprised. And what a good thing that is! **J.B.L.**
ADVT.

descendants and for a long time jealously guarded by them from outside scrutiny. Much speculation had been aroused by the concealment of this obviously significant material ; but some months before her death Lady Wentworth, Byron's great-granddaughter, allowed Mrs. Langley Moore to read, catalogue and transcribe these hitherto unpublished documents, and the essential fruits of her labour are incorporated in this book. So now the great bulk of the evidence is before those who want to assess the character of Byron as a husband ; and they, of course, far outnumber those who care about what he accomplished as a poet.



Mrs Langley Moore does not by any means confine herself to what she found at Crabbet Park. Her book is a long and thorough examination of the treatment " the late Lord Byron " received at the hands of his relations, friends, acquaintances and enemies. She begins with the destruction of the poet's own memoirs, which so dramatically set the world wondering what dark secrets had been consigned to the flames on John Murray's hearth ; and she goes on to consider the exploitation of Byron's fame by some who, like Dallas, Medwin, Trelawny or Leigh Hunt, were ill-qualified to write about him, and the apprehensive moves on the part of Hobhouse, Lady Byron and Augusta Leigh whenever a new biographer entered the field.

"Drama " is indeed the word for all that concerned Byron during his lifetime and in the subsequent decades, when his enigmatic personality still kept its hold over people who had actually crossed his path. Even today, scholarly volumes are devoted to investigating his sexual aberrations. But Mrs Langley Moore's book is far from being a sensational affair or a *chronique scandaleuse*. On the contrary, it is a work of serious research, almost too heavily documented at times for the reader who is not already something of a connoisseur of Byron's reputation. The poet himself, far from being damaged by the evidence of the Lovelace papers, emerges in a less sinister light than the implacable Lady Byron, brooding for well over forty years on the wrongs she had sustained, utterly convinced of her own rectitude. The person whose reputation is utterly damned by the new revelations is Lady Caroline Lamb, whose deliberate malice in breaking up the Byron marriage has never before been made fully evident.

POLITICAL AFRICA

A Who's Who of Personalities and Parties

Edited by
Ronald Segal

Covers 420 political personalities and over 100 parties

POLITICAL AFRICA will be of interest to all concerned with world politics, and is an essential tool for everyone who has to write, think or speak about Africa.

Analysis of Companies

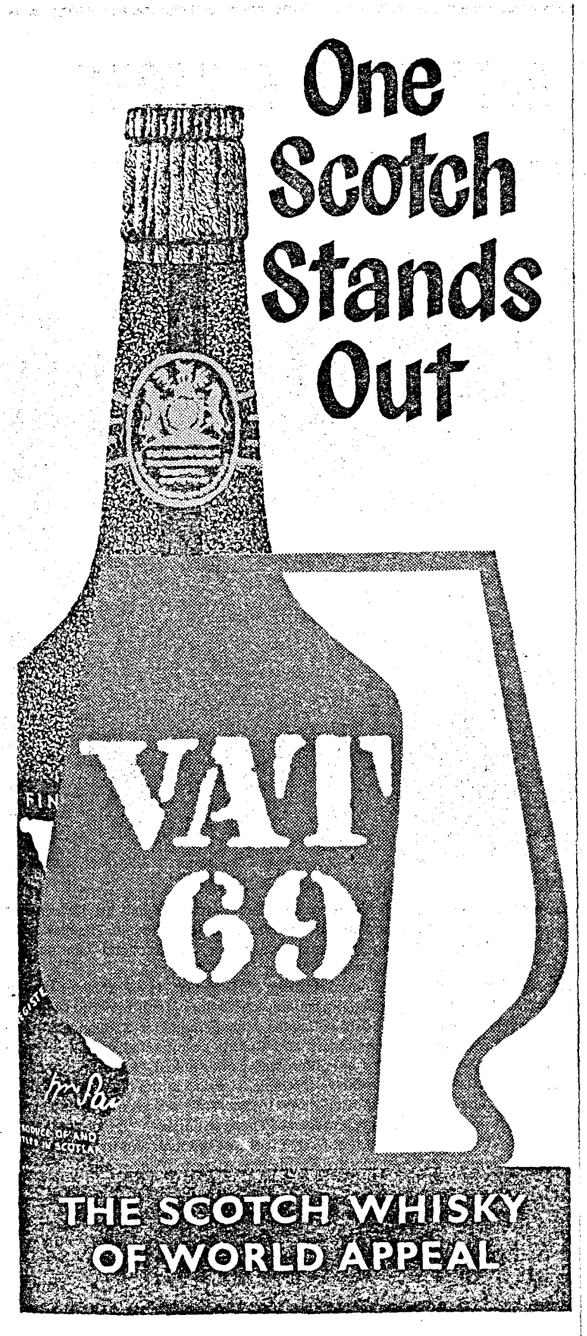
Ownership, Control and Success of Large Companies: *An Analysis of English Industrial Structure and Policy, 1936-1951*

By P. Sargant Florence.
Sweet & Maxwell. 293 pages. 63s.

IN this book, Professor Sargant Florence, assisted by five other research economists at the University of Birmingham, has analysed the accounts and share registers of a large sample of English companies from 1936 to 1951. He attempts to find relationships between a company's size, its industry, its gearing, its directors, its dividend policy, its asset growth, the dispersion of its shareholdings, and the gains that would have accrued from dividends, bonus issues and capital appreciation to anyone buying its shares in 1936. Selected items from his enormous collection of data occupy the last third of the book: the first two-thirds consists of a well written commentary based on a series of two-way tables and dashes of expert economic intuition. The number of relationships between these many variables, through time and at points of time, is too large to attempt to summarise his conclusions. It is enough to say that this book is so full of facts that it will both become a standard work for economics undergraduates and be studied in detail by many investors in the stock market. Unfortunately, there are so many difficulties in the subject matter, which are not removed by Professor Florence's analysis, that it is by no means certain that all his findings are valid.

The statistical difficulties are formidable. The size distribution of companies is highly skew and presents many sampling problems. Professor Sargant Florence simply enumerates all companies above £3 million issued capital in 1951 and takes random samples from two other size strata. There is inadequate discussion of the optimum distribution of the sample among the strata and there is certainly no suggestion that the dispersion of firms' sizes within each stratum should influence the choice of sampling fraction. Professor Florence ignores the sampling problem and, indeed, all too frequently forgets that his tables are based on a sample. He cheerfully compares one average with another and makes long lists of conclusions, but rarely mentions sampling errors or puts his conclusions to standard statistical tests.

Again, one hopes that his conclusions are unaffected by his sampling scheme or by sampling error, but it is clearly dangerous to rely on figures and intuition alone. For example, one of his many interesting conclusions is that the proportion of profits ploughed back tends to increase with the size of company ; this claim appears to be justified by Table VI B, because the largest companies distribute 36.2 per cent of "Earned for Ordinary," whereas the medium and smaller companies distribute 38.9 per cent and 47.1 per cent respectively. But the sizes of his companies range from £0.2 million to £70 million and a variation from 47 per cent to 36 per cent is unlikely to be important against a background of a three-hundredfold increase in size. In a paper read to the Econometric Society in 1956, Dr S. J. Prais analysed the dividend policies of a sample of quoted companies and presented a table which suggested that the proportion of profits saved tended to increase from 60 per cent for smaller companies to 70 per cent for larger companies. These findings are consistent with those of Professor Florence, but Dr Prais was very careful not to rely on this impression and fitted a regression equation which suggests that, as we pass from small to large companies, a 1 per cent increase in the size of profit results in only a 1.04 per cent increase in companies' savings so that the proportion of profits ploughed back is much the same for companies of all sizes. One suspects that a systematic analysis of Professor Florence's data would yield similar results and would nullify his intuitive conclusion.



The trouble is that his fellow economists may notice these limitations and be reluctant to accept Professor Florence's conclusions, even when they are probably true. This would be most unfortunate, but it is liable to happen to anyone whose research techniques are insufficiently rigorous, no matter how high is his standing in his profession.

Roman Architecture

The Golden House of Nero

By Axel Boëthius.
Michigan University Press. London: *Cresset Press.* 195 pages. 105s.

PROFESSOR BOËTHIUS'S chapter on the Golden House can perhaps be described as the Scherzo in a symphony of Roman architecture, coming as it does between major movements unfolding, on the one hand, the story of the Hellenised Italic town, and, on the other, the urban domestic architecture of the imperial age. The Golden House was "a fantastic country seat in the middle of Rome," the culmination of the Roman luxury villa, expressing

SCOTLAND'S NEWEST APPLIANCE FACTORY

Cubitts' precision planning speeds construction

ARCHITECT: Wylie, Shanks and Partners. QUANTITY SURVEYOR: James Barr & Sons

Mr. A. E. Hitchcock, B.Sc., Technical Director of Morphy-Richards (Astral) Ltd., says: "Having been closely concerned with the development of the project, I have been able to appreciate the way in which the many problems of site preparation and construction had to be overcome. Building for industry requires the closest co-operation from the Contractor who must combine speed of construction with an understanding of the specific needs of his Client. The completion of this plant on schedule demonstrates the value of this kind of co-operation."

Mr. A. F. Keary, Managing Director of Holland & Hannen and Cubitts (Scotland) Ltd., says: "From commencement to completion of a contract we like to work in very close collaboration with the clients and their consultants. Such a relationship ensures an up-to-the-minute appreciation of clients' requirements and job problems. At Dundee this close co-operation has enabled extensive areas of the factory to be handed over to Morphy-Richards (Astral) Limited for plant installation many months before the due completion date."

Close programming of construction enabled Cubitts to make half the factory floor area available for plant installation four months ahead of schedule. Thanks to this time-saving the newest domestic appliance factory in Scotland can go into production earlier than anticipated.

The new Astral factory at Dundee, covering 350,000 sq. ft., is an excellent example of how Cubitts' policy of precision planning saves time—and benefits the client. From the very beginning, Industrial Estates Management for Scotland, Morphy-Richards (Astral) Ltd., the consultants and Cubitts co-operated on detailed construction planning. Every major operation was work studied—for example, it was discovered that the best way to tackle the initial clearing of the eight acre site was by using only one excavator and ten dump trucks. They moved over 100,000 cubic yards of earth and rock within a few weeks. Then, in under three months the vast steel framework measuring 750 feet by 450 feet was erected, and the remainder of the construction work moved forward swiftly according to plan.

CUBITTS

London, Edinburgh, Glasgow, Newcastle, Liverpool, Bristol, Toronto, Montreal, Vancouver, Wellington N.Z., Port of Spain, Trinidad, Beirut.

"the love of nature . . . and the fanciful luxury and refinement that one meets in the world of the Roman aristocracy." But the people of Rome, shut out from this great demesne, were not amused. "What an artist perishes in me," Nero was to cry, and with the artist went the palace, his most original creation. Forty years later its last vestiges were to disappear under the public baths of Trajan.

The greater part of this exciting book is concerned with the less flamboyant sides of Roman architecture. In its beginnings what matters to Professor Boëthius is not the shepherds' huts on the Palatine but "the Greek and Etruscan urban system that suddenly transformed life in Rome." He shows, after that, the way that the Roman sense of symmetry reacted on Greek and especially on Hellenistic models. At the other end of his book he marshals the knowledge that has accumulated in recent years about the shops and blocks of flats in towns like Rome and Ostia and discusses their survival into medieval and modern Italy.

Coral Islands

Limuria: *The Lesser Dependencies of Mauritius*

By Robert Scott.
Oxford University Press. 320 pages 35s.

WHEN Sir Robert Scott was Governor of Mauritius he visited most of the small empty islands that were dotted about the broad maritime acres of his Indian Ocean parish. Like some other densely populated islands in the tropics Mauritius itself is a tiresome, temperamental place to govern, and one can sense from the dedicated care with which the author noted every detail of fauna and flora and scene on his travels, and the meticulous research that he carried out afterwards in archives and libraries, that these peaceful coral islands served him as a kind of mental and physical retreat. To visit them and study their history became, one feels, the thing that gave him the balance and ease of mind to carry on with the frustrations and front-window stuff of his daily gubernatorial grind.

It is this which gives light and spirit to what would otherwise have been an uninspiring book on a rather limited subject. The sub-title "The lesser dependencies of Mauritius" would have been a less exciting but more truthful title than Limuria; but one would perhaps have been less disappointed. Limuria is the name given to a submerged continent, but unfortunately the book misses out the best parts of what remains—the granite islands of the Seychelles in which Gordon of Khartoum thought he had found the garden of Eden and where others have since sought and found paradise on a pension.

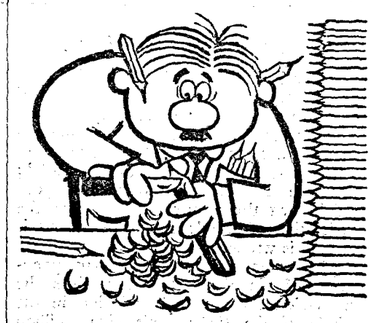
Most of the islands described in this book have Portuguese names, and the author has delved deeply to find out why the Portuguese went there and when, in their fifteenth and sixteenth century search for shorter and safer routes to India. He describes the efforts of the Dutch and the French to oust them, and shows how in the end it was the perfidious English who came last into the field and stole all the plums.

One of the most interesting things about all the Limurian islands is that they were uninhabited when the Europeans found them, except by survivals like the Dodo. They were therefore virgin land as far as man and domesticated animals and plants were concerned. It is fascinating to read what man and nature, working for the most part uninhibitedly together, have done since then in the settlement and development of these islands.

Sir Robert Scott uses two distinct stylistic brushes to paint his picture. One is clearly marked Official Despatches, and though they are good of their kind, and clear, they pall after 182 pages. For the second part of the book an entirely different brush is used, and one is tempted to wonder whether the author was not trying to gear himself down to the requirements of the *National Geographic Magazine*.

Vast and Varied

The Face of Canada



By C. L. Bennet, G. Filion, G. Clark, M. W. Campbell and R. Haig-Brown.
Harrap. 229 pages. 21s.

THERE can be "no single key." "no simple evocation of the *quality*" of a country "so varied and so vast" as Canada. In this pleasant little book five writers have each contributed a description of a well-known, well-loved region. The summing-up of the westernmost province, British Columbia, applies also to the whole nation; "We are pockets of people, set down in a vast area and linked only by difficult ways." Perhaps it is this that gives its special quality to the Canadian character, the "vivid and exciting diversity," which is "the most distinctive feature of Canada herself."

There is some graphic and discerning writing, in the descriptions of both the Canadian people and Canadian scenery, especially in the descriptions of the Atlantic Provinces and British Columbia. There is a portfolio of excellent and well chosen illustrations, but there are no regional maps; the general end-paper map is quite inadequate to guide the reader through the geographic complexities of the text. There are a number of inaccuracies: the original uranium mine, for example, is misplaced on Great Slave Lake, instead of on Great Bear Lake; there are also some questionable generalisations—surely some areas in Toronto qualified as slums at least as late as the 1930s.

Despite such discrepancies in detail, these two hundred odd pages give a remarkably effective picture of a vigorous, lively and interesting people, who, cherishing both time-honoured traditions and up-to-the-minute innovations, live in a land of many-sided beauties, a land offering a fine and stimulating mixture of problems and opportunities.

Famous pencil sharpener gets the sack!

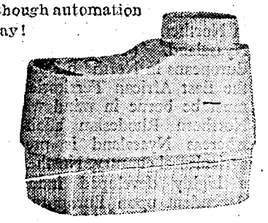
"Stubby" Carver, as millions will remember him

"Stubby" Carver, the man who cut himself out a reputation as the world's finest pencil sharpener, is out of a job.

Yesterday, after 43 years as Personal Pencil Sharpener to the Chairman of Britain's largest importers of camel saddles, he was told that his services were no longer required.

The Chairman has bought himself an *electric* pencil sharpener.

"Zum noo-fangled gadjit" was Stubby's description of it.



But the Chairman told our reporter: "It's fantastic, Sir. Entirely automatic, y'know. Not even a switch to press. You simply *dip* your pencil in, hold it there just a couple o' seconds, and you've got a *perfect* point.

"It's an immaculate-looking instrument too (not like old Stubby!). Self-contained . . . no flex trailing about. Looks extremely smart on me desk."

Stubby's dismissal is causing consternation in the pencil sharpening trade, and a Union meeting has been called for tomorrow to "ascertain the seriousness of the situation."

Meanwhile, businessmen all over the country were today sending their secretaries out to buy Kent Kordless Electric Pencil Sharpeners. It looks as though automation is here to stay!

LETTERS

Rhodesian Troika

SIR—Your leading article of July 1st does not, in my opinion, represent the kind of objective survey one normally expects from *The Economist*. The Monckton Commission did not recommend "the certainty of self-government under African control"; therefore the conclusion reached in your article that the eventual break-up of the Federation of Rhodesia and Nyasaland is certain, is wrong.

The generalisation made about the population of the three territories gives the impression that the only solution in the minds of the Federation's eight million people is a hand-over to black government, with the whites participating as individuals. The fundamental difference between this point of view and that held by both Africans and Europeans who believe in inter-racial partnership is that the latter believe that European political supremacy should give way to a direct partnership between the races in the Federation of Rhodesia and Nyasaland. Any suggestion that there should be an immediate hand-over to extremists of either colour would be strongly resisted by the moderates of all races, who constitute the majority of opinion in the Federation.

Your article implies that whites in the Federation are virtual newcomers and temporary settlers. This is quite wrong. Although there are many Europeans who have gone to live in the Federation in recent years, these people have only strengthened the ranks of a community that has deep roots socially, politically and economically in the Rhodesias and Nyasaland. The fact is that the Europeans in Central Africa are as permanent a part of the nation as the Africans, a large percentage of whom entered the territories only a short while before the arrival of the first European pioneers.

Your correspondent states that there is no reason in the nature of the two territories why Northern Rhodesia should not have the same constitution as the one granted to Nyasaland. The answer is, of course, that the two territories are totally different. Firstly, the ratio of Europeans to Africans in Northern Rhodesia is far higher than in Nyasaland. (There are, in fact, more Europeans in Northern Rhodesia than in all the East African Territories, and this fact must be borne in mind when considering Northern Rhodesian affairs.) Secondly, whereas Nyasaland is predominantly an agricultural country, Northern Rhodesia has a highly developed industrial economy dependent upon European enterprise and skills coupled with increasing African initiative and competence.

You state that the only hope for a parliamentary solution in Northern Rhodesia lies in coalition. If this is so, it is not necessarily something to be deplored—in fact, if such a coalition brought the various races together to form a government, then it would serve a good purpose. But the best solution is for a genuinely multi-racial party to be returned by the electorate. It is a grave reflection on the Colonial Office to suggest that it would require the manipulation of constituency boundaries and a trafficking in votes to give its policies any chance of success. The fact should be emphasised that the delimitation of constituencies is to be the responsibility of a judicial commission presided over by a judge or a former judge. Impartiality is thus assured.

I would hope that you would consider giving the new constitution a fair chance, and that you would exercise your great influence in the United Kingdom and elsewhere to support what we believe will be a major step forward, despite its complexity.

The Monckton Commission said:

> To break up the Federation at this crucial moment in the history of Africa would, we believe, amount to an admission that there is no hope of survival for any multi-racial society on the African continent, and that differences of colour and race are irreconcilable. We cannot agree to such a conclusion. We believe rather that the object should be to preserve the benefits of the Federation by re-casting the structure of the present association in a form more acceptable to its inhabitants.

One might fairly expect responsible opinion to encourage acceptance of the new arrangements in Northern Rhodesia as a step in that direction, and it is for this reason that I plead for an objective examination of current developments in my country rather than the abandonment of faith in the possibility of achieving a truly inter-racial solution to our affairs.—Yours faithfully,

A. E. P. ROBINSON
High Commissioner for Rhodesia and Nyasaland

London, WC2

[The Monckton Report, chapter 7, paragraph 114, states that a "comparable advance" to that in Nyasaland will be essential in Northern Rhodesia in the near future. It calls for a public declaration from the British Government "*as soon as possible*" that "*further constitutional* advance towards full self-government will be made there in the near future." It adds: "Most of us . . . are content to recommend that there should be an African majority in the Legislature and an unofficial majority in the Executive Council, so constituted as to reflect the composition of the Legislature."]

Motorists' Knock

SIR—The average motorist does not insure to get "his money's worth," as your Special Correspondent states in your issue of July 1st, but in order to secure protection. In confining his references to claims to those arising from collision damage, your correspondent ignores the fact that many cars are stolen and some catch fire. These quite normal occurrences tend to produce a heavier claim than the "really savage 'prang.'" Third party claims, to which your correspondent never once refers, may also cost thousands of pounds each to settle. Court awards in the region of £10,000, or considerably more in cases where severe injury leaves disfigurement or disablement or both, are commonplace, and the daily press reports these sad cases with sickening frequency.

"The careful, skilled driver" does not pay for the sins of the "less accomplished road user." The published rates of insurance companies are minima, and many motorists pay considerably more or have to accept restrictions in cover because of their accident records, though being human they do not advertise the fact. It is quite incorrect to suggest that a bad driver who "cost his insurance company as much as £100 a year" over a period of five years would suffer nothing more by way of penalty than the loss of his no-claims discount. Well before the end of this period remedial action would have been taken, probably by an increase in premium, and a requirement that the motorist should pay a portion of each claim himself.

Your correspondent, however, is quite correct in stating that "No claims bonuses are often lost through no fault of even the best of drivers." The bonus or discount is just what it says it is. The policyholder is only entitled to it if he does not make a claim, but it is usual to continue to allow it if his insurance company is in a position to recover his loss or is prevented from doing so solely because of an inter-office agreement.

The suggestion that insurance companies should "argue the case, taking it to court if necessary" where "blame cannot immediately be ascertained," is quite unrealistic. The great majority of motor claims come within this category and not, as your correspondent infers, a small minority of them. Cases where the liability of one party or the other is clear cut are comparatively rare. One wonders what levels premiums would reach if insurance companies did as your correspondent suggests, with all the attendant legal costs and vexing delays for policyholders in the settlement of claims while the law takes its course.

Finally, whatever incentive the no claims discount may be in practice, it must clearly have a limit: only by maintaining a certain level of premiums can insurance companies obtain the necessary pool of income with which to meet claims. The principle of insurance is that "the losses of the few light upon the many," and the premiums of those not making claims very often—which means most of us—cannot be reduced below a certain level. Accident-free motorists pay minimum rates and enjoy *maximum discounts*, but even for them the stolen car or the £15,000 third party claim may be around the corner.—Yours faithfully,

ROGER BARNETT
Chairman, British Insurance Association

London, EC2

Bank Staffs

SIR—My attention has been drawn to an article appearing in *The Economist* on June 3rd, entitled "More Starch for the White Collar," in which the term "quisling" was used synonymously with membership of bank staff associations. Care was exercised by your contributor in that it was made clear that this was an interpretation by him placed upon propaganda emanating from the National Union of Bank Employees.

At its best, the word quisling could imply a puppet, but the generally accepted meaning is surely that one so styled is a calculating betrayer of his fellows, aided and abetted by his masters.

The members of my association deeply resent this insinuation, possibly made unwittingly, and certainly without foundation, since the trade union concerned has never dared to use the word in its publications and has been careful to exclude this association from its recent campaign, supported by the Trades Union Congress, against some bank staff associations as being allegedly dominated by their respective employers. Furthermore, a few years ago representatives of the trade union freely signed a *joint agreement* at the Ministry of Labour, concluding with the statement that both the National Union of Bank Employees and the bank staff associations are properly constituted organisations entirely controlled by their members independently of the employers.

In these circumstances I consider that the linking, however inadvertent, of the word quisling with members of bank staff associations was, to say the least, unfair and not in accordance with the established facts.—Yours faithfully,

J. J. ELLIS
Chairman

Lloyds Bank Staff Association

[The phrase in our article of June 3rd to which Mr Ellis takes exception—that the *National Union of Bank Employees* "affects in its public pronouncements to regard the staff association members as dupes or even quislings"—was not intended, either directly or by implication, to express the view of *The Economist* itself, as indeed the wording should have made clear; nor did the phrase, which was simply our interpretation of the union's public attitude towards the bank staff associations generally, have any specific reference to the members of the Lloyds Bank Staff Association—who are not, we are sure, either "dupes" or "quislings."]

Spain Discovers Europe

SIR—There is light and shade in Spanish life, as in that of any other country. For this very reason a good picture of the whole can only be obtained if details, open either to praise or criticism, are inserted within a comprehensive and objective appreciation of what a country is and what its people stand for. The report in your issue of June 30th gives an impression of Spain which is fragmentary and biased.

To take a few examples. The only idea we get from your article about the Spanish Church makes it appear as a body dedicated to political intrigues and the persecution of dissidents. Not a word is said about the church's role in guiding and stimulating the ample and rich spiritual life of millions of Spaniards—an asset for Europe from whatever point of view you look at it.

If the Spanish Army worries only about securing for itself privileges and good pensions, then why should Spain be linked with the United States by defence agreements of undeniable military value?

The economic development and rising prosperity in Spain seem, in your article, to be solely the result of a series of external circumstances and of the action of a number of international organisations. We must recognise the importance of all this, but I find no reference to the hard work of Spaniards, or to their inventiveness and tenacity. Nor is there acknowledgement of the administrative planning and effort, of the political courage shown in decisions as important as the setting up of the stabilisation plan.

Equally, your correspondent's appreciation of Spanish political life shows an obsession with certain marginal groups. By adopting that method, one could describe the British scene solely by referring to the Independent Labour Party, the Communist Party, the Fascist sympathisers and the League of Empire Loyalists.

In the introduction to your report, the writer juggles with the frontiers and he does the same with the centuries. From the Arab apogee in the south (circa 932), down to the Second Spanish Republic (1931), there is only a series of dark nights. But what do we make of our most European Middle Ages, when the English princes looked for the natural alliance of Castille? What happened in our splendid Renaissance? What is dismissed as "deep involvement in America" had as its result the birth of international law and of some twenty civilised and independent countries. What sort of dark night is that, which has produced Cervantes, Lope de Vega, Velasquez and Goya?—Yours faithfully,

London LUIS GUTIERREZ SOTO
President of the Supreme Council for the Colleges of Architects of Spain

Used Cars for Export

SIR—The article entitled "New Regulators for Old" in your issue of May 27th cites two factors which have an important bearing on the home market for new cars. These are the "Cuthbertson effect" of the incidence of hire purchase commitments and—partly depending on this at the moment—the demand for second-hand cars.

The second of these factors could undergo a startling change if in this country the motor trade were enabled and, indeed, encouraged to take advantage of the tremendous demand for good second-hand cars which exists in many countries overseas. Our competitors among car manufacturing nations, notably Germany, have a thriving export business in this trade, and the second-hand cars may well be the forerunners of increasing demand also for new models. British dealers are entirely prevented from even attempting to enter this lucrative export market because purchase tax distorts values of used cars on the home market from which they must originate. Thus a car which is twelve months old may well carry a second-hand value in this country above the ex works price of the new vehicle overseas.

The export of second-hand cars could be made possible if purchase tax were to be refunded in full as the vehicle leaves these shores. The procedure for this could be arranged quite simply on the lines of the well-established duty drawback which is now applicable where items are re-exported.

—Yours faithfully, H. W. HEYMAN

Gateshead-on-Tyne

Canadian Questions

SIR—I have read with great interest and respect the articles on May 27th by your special correspondent on our Bank of Canada—Department of Finance situation.

I cannot resist, however, making two semi-critical comments. I passed on the article to a colleague with the comment: "Will you tell me the meaning of the last paragraph on page 919—which way is he going?" To which my colleague replied: "He is comfortably impaled on the picket fence and can in future take either side."

My other comment is this: I question your correspondent's somewhat patronising attitude towards the members of our cabinet, with the exception of Fleming. I often have occasion to say that I regard you English as the greatest people in the world, but sometimes you lessen your influence by a kind of unnecessary attitude of superiority. I have some knowledge from my undergraduate days (I was one of those queer creatures—a Rhodes Scholar—at Balliol) of people in the top echelon in England, and much as I admire them I do not feel it necessary to put our own best people below them, with the exception, of course, of a few like Churchill.—Yours faithfully,

J. M. MACDONNELL

House of Commons, Ottawa

[Our special correspondent was, and still is, uncomfortably impaled on the horns of his Canadian dilemma, seeing no easy way to get off. Hence his inconclusiveness. He still regards his comments on Canadian ministers as fair, and apologises for any unintended loftiness towards the men with whom Mr Macdonnell served until recently.]

AMERICAN SURVEY

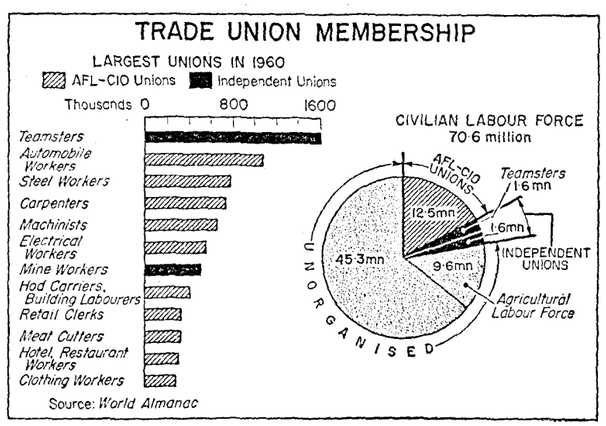
AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Hoffa the Elect

FROM A SPECIAL CORRESPONDENT

"STICKS and stones may break my bones but words are only yesterday's whispers," Mr James Hoffa told 2,000 wildly cheering delegates to the convention of the International *Brotherhood* of Teamsters last week when they re-elected him overwhelmingly as president of the largest trade union in America. This triumph, in the face of continual attack from the press and the government upon his use of the power which he has won in the trade union movement, symbolises some of the most pressing problems faced by American society.

No member of the teamsters' union was surprised by the virtual unanimity with which Mr Hoffa was confirmed in his control over the huge organisation which once represented only lorry drivers, but which is now far more comparable to a general trade union in Britain. Mr Hoffa enjoys so much support from the members that there was no need for him to rig the election of pro-Hoffa delegates from the local branches. It is one of the paradoxes of the American labour scene today that his election was carried out *in strict conformity* with the provisions of the Landrum-Griffin Act—a law to punish abuses by the trade unions which was designed, partly at least, in the hope of trapping the apparently invulnerable leader of the teamsters. But Mr Hoffa was determined that there should be no grounds for challenging his election this year, as there were last time. The board of monitors appointed by the courts to supervise the affairs of the union after a group of rank-and-file members brought a suit to contest his first election was dissolved only in March.



Few trade union gatherings have received as much attention as the one that the teamsters have just concluded in Miami Beach, Florida. According to Mr Hoffa, the watchers included the government forces which are still actively pursuing him. Before the convention he charged that more than 150 agents of the Federal Bureau of Investigation were scouring the country looking for any signs of illegality in the choice of delegates or anything else that might be used to prevent him from being confirmed in the presidency, to which he thought he was more than entitled. During the convention Mr Hoffa warned the delegates that female agents of the government might use their wiles to uncover evidence against him; and later during the proceedings he showed the delegates an electronic listening device which he said had been hidden in a television set to eavesdrop on his conversations.

Whether such accusations were true or not made little difference to the delegates, many of whom were officials of the union, but the convention acted as if it believed the charges. Mr Hoffa, sure of himself and his re-election, used the campaign against him as another opportunity to flay those business groups and politicians who, he said, fought him only because he represented the best interests of the workers. The press, radio and television were also castigated for their attacks on his "dictatorship" and his association with figures from the underworld. Mr Hoffa pointed out that in spite of these allegations the union had grown under his leadership in a period when almost every other trade union in the country had lost members.

It is certainly true that the Brotherhood of Teamsters has grown, although perhaps not as much as its public statements claim. Mr Hoffa also seems to be winning his fight with Mr Meany, the president of the American Federation of Labour and Congress of Industrial Organisations, whom Mr Hoffa characterised at the convention as a "dopey, thick-headed Irishman." The presidents of three unions belonging to the AFL-CIO addressed the convention even though the teamsters had been expelled, on grounds of corruption, by the federation and the AFL-CIO had put a ban on any pact with the outcasts. This ban has proved impossible to enforce because the help of the teamsters, with their control over road transport, can mean the difference between success or defeat to other trade unions when they engage in strikes.

Mr Hoffa announced confidently that the teamsters are going to seek new members in so many fields (some of them already occupied by AFL-CIO unions) that it would "take a Sears Roebuck catalogue to list them." He went on to predict that the teamsters will be readmitted into the AFL-CIO within 18 months adding, as an afterthought, the threat that, if they were not, he would start a rival federation. He also underlined his determination to step up vigorously the legislative lobbying and other political action already being carried on by the teamsters political arm, DRIVE, whose initials stand for Democrat Republican Independent Voter Education.

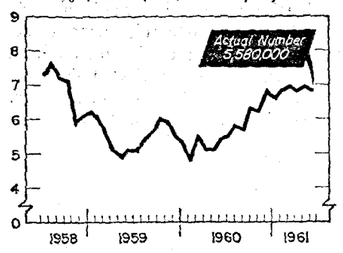
To finance the campaign for new members the convention approved Mr Hoffa's request that union dues should be raised a dollar a month and that 60 cents of this—about $12 million a year—should go to the headquarters. Part of this money will also be used to meet the rise in Mr Hoffa's salary which was approved by the delegates. He will now receive $75,000 a year, making him the highest paid trade union official in the world. His explanation for the increase—that if he were president of a corporation representing 1,600,000 people he would be paid a great deal more—reflects

his philosophy of trade unionism: it is a business like any other business in America. This attitude is obviously shared by most members of his union for, in addition to voting him an increase in salary, they gave him more power to conduct the "business" without the burden of frequent consultations with the members. Real authority is now vested formally in the headquarters; power flows from the centre to the branches, not the other way round.

The potential strength represented by that central authority poses a problem for the American economy. In recent years the teamsters' union has reflected the tendency toward larger business units in the transport industry and has also helped to accelerate that development. Now some employers and legislators profess to feel that the country may be held to ransom if Mr Hoffa succeeds in welding together a trade union structure with effective economic control over all transport by road, sea and air. Even the railways would not be immune because goods must be delivered to them and picked up by motor transport and because more and more loaded lorries are being carried "piggy-back" on the railways. To meet this possible threat there are ominous rumbles of federal legislation which would seek somehow to break up the teamsters' control of transport.

Perhaps the most astonishing aspect of the entire convention was that it revolved around a man who, most people believed four years ago, would be in prison by now. Instead, Mr Hoffa has been acquitted on the charges of bribery and wiretapping of which it seemed almost certain that he would be convicted. A third charge now pending against him, of having used the post to defraud members of his trade union in a property deal, is hung up in the courts with a good likelihood that it will drag on for years and come to nothing.

All his successes have made Mr Hoffa cockier than ever: "I may have faults but being wrong isn't one of them." Some of his less savoury associates, who worked their way up from the underworld, are still holding office in the union even though it is hard to believe that they have cut themselves off completely from their old connections. But Mr Hoffa shows no disposition to get rid of them and the convention did not seem to be disturbed by his refusal to dismiss them from their posts. At the conclusion of the election for the presidency Mr Hoffa's lone opponent, who gathered a few sickly votes, announced that he would support him as head of the union against any attacks made from outside. And so long as Mr Hoffa continues to concentrate on increasing the standard of living for his members he can probably count on similar support from all the teamsters.



Lagging Jobs

With the present worry about the long-term demand for the ever-growing supply of labour in the United States, there is naturally concern at the way in which unemployment has held steady for seven months at only just under 7 per cent of the labour force. But in fact the figures for June are fairly encouraging, especially from the short-term point of view. Total employment at 68,706,000 showed a satisfactory gain over May and was at a record for the month; admittedly this was by only a few thousand jobs and admittedly unemployment was also at a record. But both records were the result of an unprecedented influx of teenagers into the labour market as the schools and colleges closed for the summer; 1,600,000 of this first wave of war-babies found jobs while 900,000 were out of work, but only about a quarter of all of them wanted permanent employment; the rest plan to continue their education in the autumn. There was little change in the number of people out of work for long periods, although there was a drop, from 96 to 88 out of 150, in the number of industrial centres having "substantial unemployment." There was also a marked improvement in the number of adult men in jobs, which went up by 500,000 in the month; this increase was more than is expected at this time of year as was the increase in manufacturing employment which, however, still lags behind the summer of 1960.

There is nothing unusual about the failure of employment to pick up as sharply as other economic indicators after a recession. Not only do manufacturers who have dismissed employees when business has fallen off find that they can manage permanently with fewer workers on a particular operation; they also hesitate to rehire people until they are sure that there will be steady jobs for them. A recent study by the Department of Labour of the steel industry illustrates the effects of this: output of steel went up by 13 per cent between February and April, but employment in steel rose by only 2 per cent; the industry laid off 150,000 workers, one in four, during the recession and apparently does not intend to rehire more than about one-sixth of these for the present, although it has been doing well recently and does not expect the summer slow-down to be as severe as usual.

UNEMPLOYMENT

as % of labour force, seasonally adjusted

Much of the sharp increase in the country's industrial output since March has been achieved by working existing employees overtime; in June the average work week in factories was back to the 40.1 hours (including 2.4 hours of overtime) of early 1960 and average weekly earnings in manufacturing went up to a record of $94.24. This has much to do with the cheering rise in retail sales in June, for the second month in succession, a rise which is likely to continue.

Defence Tactics

The experimental Midas (Missile Defence Alarm System) which the Air Force launched this week is the first of these "sky spies" to have an orbit taking it across the Soviet Union. The function of its infra-red sensors—which are so delicate that they are said to be able to pick up the heat of a lighted cigarette eight miles away—is to detect, from the heat of their exhaust, any missiles which may be launched from Russian territory. When the whole Midas network of satellites is in orbit, it should double the present fifteen-minute warning of any missile attack which is provided by the radar screens in Britain, Greenland and Alaska. But this is rather remote comfort in a week when Mr Khrushchev has been threatening to increase Russian military spending by a third and to postpone his promised reduction in Soviet military manpower—particularly as no one knows how the Russians will react to this intruder into their air space.

The likelihood seems to be that further increases in military spending will be the American response to the heightened tension over Berlin. Last Saturday Mr Kennedy, after consulting Mr McNamara, the Secretary of Defence, Mr Rusk, the Secretary of State, and General Taylor, the President's own military adviser, decided upon a new review of the adequacy of American military strength. This call for "more words" instead of action which would impress the Russians evoked nothing but scorn from the *New York Times* and *New York Herald Tribune*. But it is being taken seriously in Washington. The report is said to be due this week or next and the Senate Appropriations subcommittee is urg-

WHY NOT WEEKEND IN MANHATTAN?

Any Friday you can leave London at eleven in the morning on a Qantas 707 jet flight and be in New York at three the same day—with the whole weekend in front of you. You can also stop over in San Francisco, Honolulu or Fiji—they're all on the Qantas westbound route to Australia. Or you can fly straight to Sydney without changing jets. And of course—it's Qantas hospitality all the way.

See your travel agent or Qantas, corner Piccadilly and Old Bond Street, London, W.1. (Mayfair 9200) or any office of B.O.A.C.

QANTAS

AUSTRALIA'S INTERNATIONAL AIRLINE

Qantas, in association with Air India and BOAC

ing the Administration to hurry if it means to ask for more money, so that the funds can be included in the $43 billion defence appropriations Bill for the current year which the House passed a fortnight ago.

The amount being talked about ranges from $1 billion to $2 billion and even as high as $5 billion—though how so much could be spent in time to affect the Berlin crisis this autumn is difficult to see. This would be in addition to increases of about $2 billion already added by Mr Kennedy to the Eisenhower defence budget. (It is these past increases which, Mr Khrushchev considers, justify the Russians in spending more.) The Air Force is already trying to obtain part of any such additional money for more manned bombers, by exploiting the alarm in Congress over the impressive display of Soviet air power last Sunday. But the Administration's view is that at the moment no more is needed for aircraft or for nuclear weapons; any new funds would be used for conventional arms and for the training of the National Guard and of the reserves if some or all of these million or so men were called up to strengthen the Army.

Senator Byrd's Dominion

SENATOR BYRD and his 35-year old political machine—the most indestructible personal one in the country—still rule Virginia, the "old dominion." On Tuesday, when Democrats went to the polls to choose their candidates for Governor, Lieutenant Governor and Attorney General (who are certain to defeat the Republicans in November), the machine and its reactionary approach to the problems facing the state triumphed all along the line. This was a bitter disappointment to the moderate progressives who had felt strong enough, for the first time, to put up a full list of candidates. It is also a set-back for better race relations and the expansion of government services necessary in the twentieth century, not only in Virginia but throughout the South. The only consolation is that Mr Albertis Harrison is a shade more liberal than the candidate for Governor whom the machine would have picked if it had not been alarmed by the challenge of the rebels.

Mr Harrison's victory had been expected. He was a much more urbane candidate, and a much more attractive one to women, than his opponent, Mr Stephens. Moreover Mr Stephens made one deplorable mistake: he denied, during the campaign, that he had ever sought the endorsement of Senator Byrd. When the Senator made public a letter, written last December, asking for just such an endorsement Mr Stephen's attacks on the machine looked hollow and self-serving. There still seemed hope, however, for Mr Stephen's running mates, State Senator Boothe and Professor Boyd, because the rest of Mr Harrison's team was too much for many influential people and some influential newspapers to swallow. The next Lieutenant Governor, Mr Godwin, favours the utmost possible segregation of the races. Both he and Mr Button, the next Attorney General, believe, like Senator Byrd, in keeping state spending and state taxes as low as possible, even at the expense of the schools and local communities.

But Virginians seem to have been unmoved by the threat to public education or by the need to foster economic growth, particularly in the depressed coal-mining areas, and thus to rescue Virginia from its present stagnation. As usual only about a third of the eligible voters went to the polls. Both Mr Boothe and Mr Boyd did better than Mr Stephens but they all failed to stimulate the outpouring of votes in the dormitory areas near Washington, in Norfolk, the great port, or in the mining towns which they needed to offset the machine's pulling power in the conservative rural areas. The rebels lacked money, and the support of trade unions and Negro organisations from outside the state was a mixed blessing, lending colour as it did to charges that the reformers were no better than "socialist spenders." Senator Byrd's sway over the old dominion has thus won a new four-year lease of life unless Mr Harrison sheds his political skin in office as has the present Governor, Mr Almond.

Bars against Diplomats

WASHINGTON, DC

IT is commonly said that one factor in the growing determination of the American Negro to assert his civil rights is the rapid spread of independent black-ruled states in Africa; it may be less well-known that the presence of growing numbers of African diplomats in Washington and at the United Nations in New York is exerting direct pressure on Americans to end racial discrimination, at least in certain limited areas. The new Administration had the good sense to realise that it was part of its policy of good-neighbourliness towards Africa to overcome the difficulties which African diplomats encountered in obtaining accommodation suited to their status in Washington; the nation's capital has not been racially desegregated for very long and, while strict colour blindness obtains in all public services, there is a considerable if unofficial racial discrimination in the large blocks of flats in good districts, mainly in the northwest area, to which the Diplomatic Corps gravitates when it does not want to live in the colonial shade of Georgetown.

Accordingly Mr Biddle Duke, the chief of protocol in the State Department, set up at the request of President Kennedy a special section to deal with these difficulties. The State Department has now called in the wealthiest property owners in the city and, with strong representations that the national security is involved, has induced them to desegregate a proportion at least of Washington's better-class housing—enough, in Mr Biddle's view, to break the back of the problem. A short time ago only 8 out of 211 flat buildings of the right kind would accept African diplomats. The State Department has always, of course, tried to help diplomats to find accommodation and a few estate agents have been willing to let flats to Africans on a "diplomats only" basis. But the department realises and has now made the property owners realise also—and state publicly—that special arrangements for black diplomats, with coloured Americans not being eligible for them, are not only intolerable to American pride, but also self-defeating insofar as they are aimed at giving the growing number of incoming Africans a favourable impression of the United States.

To provide homes for Africans has been made a test of the patriotism and wisdom of the real estate proprietors (who stand to lose money if in lowering the colour bar they lose some profitable white tenants). Equally the situation will be a test of the patriotism and good manners of the better-off white flat-dwellers in north-west Washington. The objective is now, quite simply, to open luxury apartments even in the most hallowed areas to all Negroes who can pay the high rents. Since diplomats, who cannot be sued for damages, are often classed as undesirable tenants (whatever their colour), the effect may be to give the well-off American Negro family (of which there is a fair number in the capital) a slight preference. And as some of the modern blocks offer tenants other facilities, such as swimming pools, it is even possible to foresee the breaking down of the colour bar in other directions.

The time, it is felt, is ripe; the African diplomat, senior and junior, is becoming a familiar feature of the city—though he sometimes wears his colourful national robes protectively to distinguish himself from mere black Americans. Fifteen years ago Asian diplomats from newly emancipated countries ran into some of the same prejudice, but this has now disappeared almost totally (though some Asians are darker in hue than some Africans). Another problem, however, is the great poverty of many of the

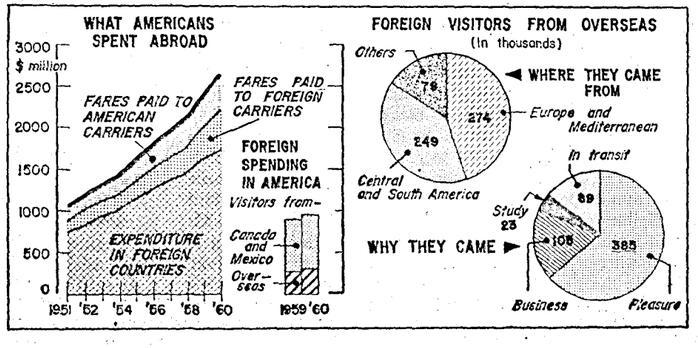
African states sending representatives to Washington and New York. They must live modestly on their meagre budgets, but they are all the more conscious of their rights and status. A snub to one is taken as an affront to a whole continent which, in this matter, has a very noticeable solidarity—enough, in fact, to affect the casting of votes in the UN Assembly.

THERE are now about 14 embassies of African states south of the Sahara in Washington, populated by about 80 diplomats and their families; this number will certainly increase and another 100 African diplomats are expected. At present the department's special section has about 30 African families on its books who want better places to live—which means flats in the "white" quarter. What the department aims at is a situation in which a black diplomat can enter any flat building advertising a vacancy without risk of being snubbed; that he should be able, in fact, to obtain housing not through the department's good offices, but on the open market. There has never been much difficulty for Africans trying to buy a house for an ambassador's or minister's residence, or for an embassy or chancellery; the department has, however, had to step in to stop them being ruinously fleeced. As discreetly as possible the department has also been working to end the snubs that Washington hairdressers, private schools, other service establishments and nearby seaside resorts sometimes hand out to Negro Africans.

But the department is also working beyond Washington. African diplomats there often represent their countries also at the United Nations and constantly drive to New York, where the United Nations works with civic organisations to handle the problem of accommodation. So the State Department has moved to end discrimination at bars, cafeterias and petrol stations along the route between the two cities. This passes through Maryland, a relatively broad-minded state; but a succession of incidents has made Africans assume that it is as apartheid-conscious as Mississippi. Now, however, the Governor has thrown his weight behind desegregation and, as the assessment of taxes on the property-owners along the road is more an art than a science, results seem assured. To maintain a colour bar and find that taxes are doubled will not appeal to many proprietors of cafés.

The State Department has a travel section whose duty is not merely to design tours for African diplomats in the United States but to make sure that there are no untoward incidents on the way. It also actively encourages African diplomats to move about with the express idea of getting white Americans, including Southerners, used to the representatives of independent Africa, and thus used to the idea that all coloured travellers ought to be received with courtesy and respect.

Unbalanced Travel



LAST year Americans continued to be the world's greatest travellers, though there are some signs that political unrest in various parts of the world and the effects of the recession are making them more cautious this year. In 1960 Americans spent $2.6 billion, 11 per cent more than in 1959, to satisfy their thirst for foreign places. In the days of the dollar gap this would have been a source of public as well as private satisfaction but, now that it is the American balance of payments which needs correction, the salient fact is that Americans spent $1.7 billion more on foreign travel than foreigners spent on visiting the United States. An article in the June issue of the Department of Commerce's *Survey of Current Business*, from which the charts and other figures in this article are drawn, devotes as much attention to incoming as to outgoing tourists.

The imbalance is worst in Europe, which is becoming more popular than ever with Americans; two-thirds of the increase last year in their total spending abroad went on travel to Europe and the Mediterranean. Their numbers rose even more sharply (by 20 per cent) than their spending (17 per cent), probably because people who go by air tend to stay a shorter time abroad than those who go by sea. Last year 602,000 Americans flew to Europe, compared with 230,000 who came by ship; even so, this was the largest number to come by sea for five years.

For the sixth year running Italy led the European attractions, partly perhaps because the Olympic games were held in Rome but primarily because so many Americans of Italian descent return to visit their families and friends and to see the old country. France and the United Kingdom were close behind. On the other hand, spending by American tourists in Mexico and Canada, which together exceeds spending in Europe by Americans, rose only slightly. The West Indies and Central America suffered because the growing vogue of the Bahamas did not offset the big drop in the numbers who went to Cuba.

Americans visiting Europe spent about six times as much there as did Europeans visiting the United States—$704 million compared with $115 million. Partly this was a matter simply of numbers: 1,634,000 Americans went abroad—832,000 of them to Europe—while there were only 602,000 overseas visitors (exclusive of Canadians and Mexicans) to the United States, 274,000 of them from Europe and the Mediterranean area. But the average American visitor spent about $840 in Europe in addition to fares; European travellers in America spent only about half that. Europeans, it seems, have the bad habit of staying with relatives when they go to the United States and thus they economise. The new United States Travel Service, which Congress has just authorised, will have to stir up interest among people with no American cousins if the campaign to persuade foreigners to "See USA" is to bear fruit in the balance of payments.

Congress has not yet appropriated any money for this new drive but the Department of Commerce, anxious to get to grips with the problem before the 1961 season is over, is already looking for a firm to do the preliminary research work in the countries which the government considers should be tackled first: the United Kingdom, Germany, France, Venezuela, Japan, Australia, Brazil, Colombia, Italy, Holland, Belgium and Switzerland.

Legislators at Odds

FROM A CORRESPONDENT IN MINNEAPOLIS

SHAKESPEARE said that there was divinity in odd numbers, but he had no experience of those American State Legislatures which meet in odd-numbered years. Originally they all met every year but by 1900 forty-three states had abandoned yearly sessions in favour of biennial ones; more recently the trend has been changing slowly back again, as government at all levels has grown bigger with the increase in the population and in the demand for public services. Nineteen of the fifty Legislatures now meet annually, although nine of them may deal only with fiscal matters in even-numbered years. Minnesota, however, is still limited by its constitution not only to biennial sessions but to a duration of no more than ninety days for each of the regular sessions.

Yet Minnesota is no exception to the trend toward bigger government. It ranks midway among the states in population, with 3,413,864 people in 1960 as compared with 2,982,483 a decade ago, and the State Legislature, which appropriated $280 million in 1951, appropriated $567 million in 1961 for the two-year period which began this month. This year, Minnesota's 67-member Senate—the largest in the country—and 131-member House of Representatives met from January 3rd to April 17th in regular session. But, as in the preceding three biennial sessions, the Legislature adjourned without having come to grips with the major problems that required solution. So, on April 24th, the new Republican Governor, Mr Anderson, summoned the Legislature back for an extra session which lasted for another six and a half weeks.

DURING this extra session the legislators did manage to settle not only the question of appropriations but also that of how to find the necessary revenue with relatively little trouble, to everyone's surprise. Two years ago, the extra session dallied for the longest time in state history over whether to enact a withholding system of collecting state income taxes; but this year Minnesota became the twenty-sixth state, out of thirty-five which impose taxes on income, to withhold a percentage of the wage earner's pay at the source. The new Minnesota law stirred up ill-will in Wisconsin, the neighbouring state to the east, by providing for withholding taxes from the wages of Wisconsin residents who work in Minnesota. This meant that the Wisconsin Legislature, which was also in session, had to change its law in order to save those unfortunates from being taxed in two states. Two years ago Minnesota had had to do exactly the same thing when North Dakota, on the state's western border, changed its law to require Minnesotans working in North Dakota to pay taxes there.

Taxes in neighbouring states are frequently a factor in determining tax policy. Governor Anderson, casting about for new sources of revenue in 1961, fixed upon a 3 per cent levy on the sale of new motor vehicles as one such source. The House agreed but automobile salesmen fell upon the Legislature in hordes to protest that this would mean the collapse of an already sick business, because people would buy their cars in Wisconsin to escape the tax. That loophole was easily plugged by levying the tax upon new cars as they were registered in Minnesota. Nevertheless, the tax on motor vehicles fell by the wayside in the extra session. So did the 3 per cent tax on all retail sales which the Senate had recommended as a substitute, and which brought cries of protest from merchants in cities on the borders of other states which have a sales tax of only 2 per cent. The state budget was balanced in the end by raising existing taxes slightly.

Such complex issues are obviously intensely political, even though the Minnesotan legislators, back in 1913, abandoned political party designations for themselves (and for judges and all officials elected locally); the only other state to elect law-makers without party labels is Nebraska. Once the candidates are elected they observe a strict factionalism which divides them into "Liberals" and "Conservatives" for the organisational purposes of choosing leaders, naming committees and dispensing patronage. It is no secret that Liberals are usually Democrats and Conservatives are Republicans—no secret to the initiated, that is. But it is never acknowledged on the ballot and as a consequence many voters choose their candidates on the basis of a familiar name. This tends to perpetuate the same people in office and, quite understandably, these old timers lead the fight against efforts to restore party designations.

Although they have no official ties with the two major political parties, the lawmakers reveal their colour when the chips are down. This year, for example, the Legislature had to arrange Minnesota's nine federal congressional districts into eight, because the state lost one of its seats in the House of Representatives in Washington as a result of last year's census. At the regular session the Liberal House adopted a redistricting plan under which two Republican incumbents would be pitted against one another, thus giving the Democrats an advantage. The Conservative Senate paired off a Democrat and a Republican. In spite of twenty-six joint conferences no solution was reached at the special session. This means that, unless the Governor calls another special session, which he says he will not do, all the congressional contenders in Minnesota will run "at large" in 1962 instead of for individual districts, with every voter in the state entitled to vote for eight candidates.

One thing the Legislature did do at the extra session, however, was to approve an amendment to the State Constitution, to be submitted to the electorate in November, 1962, which would lengthen the maximum duration of the regular biennial session of the Legislature from ninety to one hundred and twenty days. But some observers doubt whether any solution that fixes a deadline, no matter how distant, can be effective. They argue that the leaders of the majority party or any strong minority can always delay decisions until the closing day of a session so that pet Bills may be pushed through with little consideration during the chaotic rush to meet the deadline. The Council of State Governments believes that Legislatures should be able to meet as often and as long as their responsibilities require. But many part-time lawmakers object to unlimited sessions. Farmers, who must plant their crops in the spring, say that they would be unable to serve and there are others who feel that they could not be spared from their regular jobs to attend long sessions. Some day service in State Legislatures may become a full-time vocation with sufficient pay to make it attractive. This happened in the Congress of the United States, but it took a long time to arrive even there.

Vaccines—Dead or Alive?

RECENTLY when Atlanta was threatened with an epidemic of poliomyelitis 300,000 doses of Dr Sabin's new vaccine—which is given by mouth and contains weakened live viruses—were rushed to the city to immunise all the children under fifteen years of age and over six weeks old. This stock—Dr Sabin's own—represented nearly all of the vaccine in existence in the United States. But its use has been sanctioned on an experimental basis by the Public Health Service and in June the House of Delegates of the American Medical Association approved of it in principle—much to the indignation of Dr Salk, the developer of the dead-virus vaccine which has been used in the United States since 1954 and which cut the number of cases of paralytic polio to 2,218 last year; there were only 260 deaths. Only 160 of the 2,218 people who suffered paralysis had had the recommended four doses of the Salk vaccine.

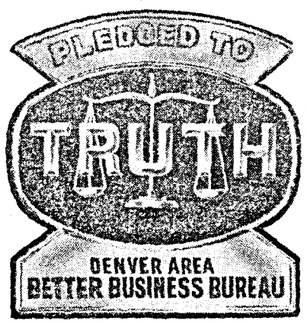
The advantages of the vaccine which contains live viruses were said by the experts of the AMA to be that it confers immunity more rapidly, a matter of importance when an epidemic is threatened; that the immunity lasts longer—perhaps as long as that gained by actually having the disease; and that it prevents those who are inoculated from acting as carriers of a disease to which they themselves are immune. Moreover, it is likely to protect everyone; the Salk vaccine is effective for only 80 per cent of those who are inoculated. This means that there is real hope of stamping polio out completely, if people co-operate—as they may when it is only a matter of swallowing a few drops of cherry-flavoured syrup. Rather less than half of all Americans between the ages of 20 and 39 have received three doses of the Salk vaccine, although the proportion is higher at younger ages, and there are disturbing signs of an increase in the paralytic forms of the disease. All authorities are urging people who have not had the full series of Salk doses to have them at once, because the Sabin vaccine is unlikely to be licensed for large-scale production until late this autumn. Six years ago, when the Salk vaccine was first put on the market, some people contracted polio from it; so far the Cutter Laboratories, the unlucky manufacturers, have had to agree to pay over $1 million in damages and they have just been ordered by the courts to pay another $675,000 to a single victim.

The pharmaceutical industry is also excited over the likelihood that by next year a vaccine will be on the market to control measles, a highly infectious disease from which there are more deaths than from polio and which may produce serious complications. In this case a "live" vaccine is also pitted against a "dead" one; the live virus gives more effective protection and requires only one dose, but, unfortunately, so far it produces too many of the uncomfortable symptoms of the disease. Further in the future—perhaps two years off—is a vaccine for infectious hepatitis, a serious and growing liver ailment.

New Haven off the Rails

THE fact that the New Haven Railroad is to be reorganised by a trustee under the Bankruptcy Act does not mean that the 30,000 commuters who rely on this line to bring them in and out of New York every day from Connecticut, Rhode Island and Massachusetts will have to add to the congestion on the already overcrowded roads or move into town. Bankrupt or not, the railway is not allowed to abandon its services without the permission of the Interstate Commerce Commission. But how the trustee will be able to keep the trains running is another matter. He will be excused from paying taxes, rent and interest but he will have to find cash for wages and supplies. Operating costs amount to about $11 million a month and average revenues come to slightly less; the $4.5 million which the company has in hand at the moment is likely to be exhausted by the end of July. The New Haven has not made a profit since 1956 and it lost $11 million during the first six months of this year. The purpose of the trusteeship is to get the company back on to a sound financial basis by cutting out inefficient operations; but most of the possibilities for such reorganisation were exhausted during the railway's previous trusteeship from 1935-47.

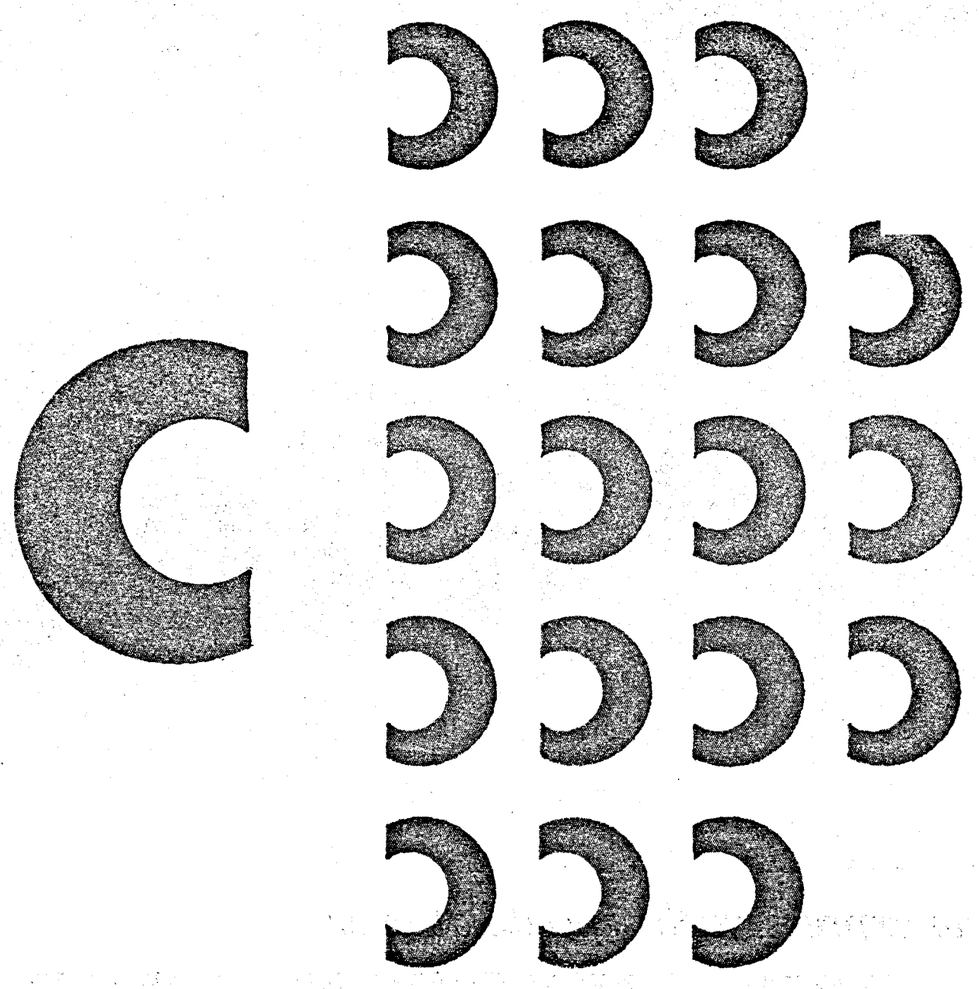
The new trustee may, however, find the federal government more willing to go on coming to the rescue than did the present management. For months only federal loans have kept the trains running and the company owes $35 million on loans granted or guaranteed by the government. But finally the ICC called a halt and last week the New Haven was ruled ineligible for a special emergency loan and thus was forced finally into reorganisation. Early this year the governments of the four states served by the line had agreed on a scheme for saving it but this was delayed too long to achieve its purpose; in any case two elements in it—lower wages for railway employees and the abolition of federal taxes on railway fares—failed to materialise.



The New Haven's difficulties are the result of a long-term declin in industry, and therefore in profitable freight traffic, in the are covered by its 1,760 miles of line, of competition from road trans port, accentuated recently by the opening of a super-highway run ning parallel to the railway, and of the increasingly uneconomi nature of the passenger services which provide a third of its revenu but on which it lost $13 million last year. Nevertheless the Ne Haven is essential both for passengers and freight and it is incon ceivable that it should be allowed to crash completely. Its pligh underlines that of similar railway companies all over the countr and the need for some special effort to save them.

Even Better Business

FROM A CORRESPONDENT IN COLORADO



HONESTY may be the best policy but it is to be advertised wit caution. That at least would seem to be the lesson learne by the Better Business Bureau for the Denver area which has bee put on probation by the national association of Better Busine Bureaux because it sponsored a "truth emblem." Its member firm could display this in their establishments and use it in their adve tising if they subscribed to a rigid code of ethical practice in the dealings with the public and paid $180 each a year to cover th cost of policing the code. About 110 shopkeepers and servic concerns had qualified when the national association condemne the arrangement at its annual meeting in May.

The goal of this association is to inculcate high ethical standard into businessmen's dealing with the public, by means of "pe suasion, publicity, prosecution." The bureaux are financed by the members and most of the larger retail and service companies in metropolitan area usually belong. With varying degrees of circun spection they try to expose at least downright "gyps" with the ai of the press and other media of publicity. But the bureaux hav always shrunk from letting members make a sales point or take commercial advantage in other ways out of being affiliated to a BBB. This is where the Denver scheme went wrong.

Its directors claim that theirs is a new and potent means of establishing a standard for the contacts of businessmen with the public and of convincing the public that there is such a standard; this, they maintain, benefits all business. They refuse to give up their idea, but they have asked the national organisation to help them to get around the objections. One way might be to get local trade associations, rather than individual companies, to join the truth emblem organisation and to have the necessary policing financed by these associations. The whole affair has caused a considerable flutter in the advertising industry, with most people apparently feeling that the Denver scheme's guarantees of ethical treatment to the public go far too far, particularly since the benefits are reaped by individual firms.

Correction: Mr Max Ascoli informs us that the present circulation of *The Reporter* is about 170,000, not 129,000 as stated incorrectly in *The Economist* of July 8, 1961.

Cape Communicative Cape have plenty to say about insulation, friction and fire protection materials—and they are ready to say it to anyone who will listen. Many of the country's largest industrial undertakings have listened critically—and acted. The result is that Cape asbestos and rock wool products are equally at home in a nuclear power station or in a new office block, in the brake drum of a bus or in a ship's engine room, in a refrigerating plant or in an oil refinery. And every new day of experience and progress provides Cape with even more to communicate.

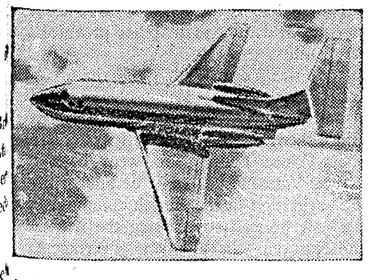
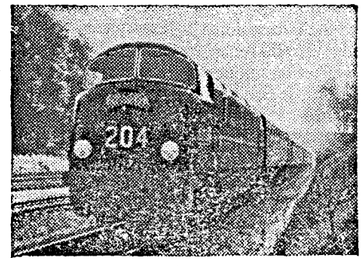
New express yacht speeds at over 50 knots...



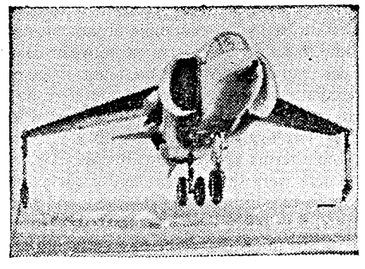
...AND BRISTOL SIDDELEY SUPPLY THE POWER

Specially designed and built by Vosper Ltd., Portsmouth, for Mr Stavros Niarchos, the 100-ft. express yacht "Mercury" has a top speed of over 50 knots. With spacious accommodation for the owner, guests and a crew of up to 11, the "Mercury" has a range of approximately 400 miles, cruising at 46 knots. Believed to be the world's fastest yacht, "Mercury" is powered by three Bristol Siddeley Marine Proteus gas turbine engines, running on diesel fuel and delivering a total of 10,500 hp.



The Bristol Siddeley Proteus has proved itself to be one of the most versatile and dependable gas turbines ever built. As the powerplant of the Britannia airliner, the Proteus has accumulated nearly two million engine flying hours in service with 12 national airlines and RAF Transport Command.

The first marine application of the Proteus was in the "B" class fast patrol boats, designed and built by Vosper L[td] collaboration with the Admiralty. These vessels went into s[ervice] with the Royal Navy in 1959, after the engines had carried 1,600 hours rigorous testing to Admiralty schedules.



Industrial versions of the Proteus gas turbine engine ar[e] in service with the South Western Electricity Board, as p[rime] movers of 3,000-kilowatt generating sets.

POWER FOR THIS
The Bristol Siddeley Viper turbojet will power De Havilland's new executive transport—the Jet Dragon. Two Viper 20's, each delivering 3,000 lb thrust, will give the new aircraft a cruising speed of 500 mph and a range of 1,000 miles. The Jet Dragon will carry up to 9 passengers and a crew of [two] in great comfort.

...AND THIS
Bristol Siddeley Maybach diesel engines power Britain's crack express train—the British Railways "Bristolian". Two Type MD 650 engines, developing a total 2,200 hp, give the "Bristolian" a top speed of 90 mph. 286 Bristol Siddeley Maybach diesels have been ordered by British Railways alone.

...AND THIS
The Bristol Siddeley Pegasus lift/thrust turbofan powers the Hawker P1127 strike aircraft—the world's first VTOL jet aircraft designed for operational service. Thrust is applied through four movable nozzles evenly disposed around the centre of gravity, providing a single power source for all conditions of flight.

THE WORLD OVERSEAS

Australia Infelix

FROM OUR CANBERRA CORRESPONDENT

In his discussions about the common market in Canberra this week, Mr Sandys is believed to have been twice surprised—first by the quiet attention with which his long, and it is said very able, exposition was received (he had presumably been warned to expect a hostile reception) and secondly by the sudden onslaught of Australian objections on the third day of the talks. Mr Sandys was unable to outline to the Australian cabinet the kind of concessions to Commonwealth exports that Britain might hope to negotiate with the common market; the explanation given here is that the Six have refused to discuss these with British ministers in advance of actual negotiations. For the present, Mr Sandys was arguing in general terms the disadvantages of remaining outside and the importance of not being a small economic unit in these days of vast ones. All these points were well taken by his listeners. But when the time came for Australia to make its reply, this turned out to be a veritable blast.

The economic case was presented by the Minister for Trade, Mr John McEwan, who explained what was at stake—namely a market for £A170 million worth of Australian exports which are now sold to Britain and the Six and which would be badly hit unless special concessions could be obtained. Unlike New Zealand, whose difficulties, although acute, would be confined to three or four commodities, Australia would suffer over a wide range of exports. If and when detailed items of trade were discussed with the Six, Australia would expect to negotiate on its own behalf. Then Mr Menzies took up the tale with the political implications, arguing that the trend towards political unity within the common market would be certain to weaken the Commonwealth relationship whose strength was already impaired by the affair of South Africa. Mr Sandys argued that declining political power would weaken the Commonwealth, too, and even—less convincingly—that closer unity in Europe might strengthen Commonwealth ties.

These unresolved difficulties of opinion are reflected in the communiqué which was the result of hours of drafting and controversy. Mr Sandys would have preferred less emphasis on political points on the ground that these were matters of opinion and not of fact (in contrast to the economic arguments) and that their inclusion would make the disagreement between Britain and Australia seem wider than it is. Mindful no doubt of the possible effect on public confidence at home of a communiqué of no agreement, Mr Sandys also sought to persuade the Australians at least to express approval of exploratory negotiations, with a view to discovering the best possible terms of accession. But the Australians were adamant.

There were several reasons for their stand. The first perhaps is not a reason but a mood—the mood referred to in these pages last week. There was a hangover of distrust and resentment from the prime ministers' conference, a hangover which may since have been dispelled by pleasant plain speaking but which, when the talks opened, was hardly such as to produce a ready accommodation. Secondly, no concessions that can be negotiated on Australia's exports will be as helpful as the existing trade arrangements; and the present is a hard time to contemplate their abandonment. The balance of payments gap is only recently remedied; unemployment, though still low, is high by Australian standards; elections are near—the Victorian state election is on Saturday and federal elections will probably be held in December. This is a time when parties and politicians vie with one another to appear as the implacable watchdogs of Australia's interests. It may be argued in reply that approval to start negotiations to explore the possibility of concessions would do no harm, and could be withdrawn if they seemed to be turning against Australia's interests. The fear is, however, that once negotiations are started pressure to continue them is great and might end with acceptance of a harmful compromise. The communiqué says that the question of accession is one for the British Government alone to decide; but that a lack of objection to opening negotiations does not imply Australia's approval. Disapproval is what is really implied, but perhaps not of a force that is intended to deter the British Government if it is convinced of the wisdom of its course.

Silhouettes by Twilight

FROM OUR SPECIAL CORRESPONDENT IN GENEVA

In the grey penumbra of the international conference on the future of Laos, the greatest difficulty is to find enough shadows to enable the current bout of shadow-boxing to continue for as long as may be necessary. By twilight, shadow-boxing is more than usually strenuous, so the sixteen delegations—including three Laotian ones—though they show willing by meeting nearly every weekday, seem tacitly agreed to limit sessions to about an hour a day. That there is a need to prolong the bout is, again, tacitly agreed; just as it was hard to get the conference off the ground in the first place, so it is hard to get to grips in the absence of a single, representative and recognised Laotian government. Indeed, if the presence of three delegations, representing the right-wing Boun Oum government, the neutralist Souvanna Phouma one and the Communist Pathet Lao movement, is taken as an example of the troika principle in action, then it has provided a useful demonstration of its futility.

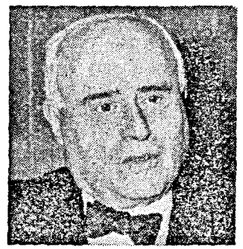
Widely, but prematurely, it was assumed that the three rival princes meant what they said when they met at Zurich last month and announced agreement on the procedure for forming a government of national unity. Since then, however, the participants have gone their separate ways. Prince Boun Oum went back to Vientiane, where King Savang Vatthana has let it be known that he does not agree with the suggestion in the Zurich communiqué that he should nominate a new premier, by-passing the national assembly. General Phoumi Nosavan—the Vientiane government's strong man—made a detour to Washington, where he told his American friends that he would not agree to the admission of Communists to a Laotian government. In Paris, Prince Souvanna Phouma has been telling callers that the next Laotian government of which only he can be prime minister, will have to include an equal number of Communists and rightists. His half-brother, Prince Souphannouvong, the Pathet Lao leader, is back in Hanoi after the inevitable stops in Moscow and Peking; out-Souvannaing the neutralist prince, he is saying that the only question now is to enlarge Souvanna Phouma's "legal" government, an argument that causes teeth to gnash among Prince Boun Oum's representatives who rightly point out that the Zurich communiqué made no such provision.

As for Prince Sihanouk of Cambodia, who first proposed the present conference and brought the Laotian princes together, he is again sulking in his tent. This cannot be called new; but it is always a disappointment when it happens. The burden of Prince Sihanouk's complaint is that "the great powers" did not like Cambodia's draft agreement on controlled neutrality for Laos. Like every draft, the Cambodian one had its imperfections, but it appears that Prince Sihanouk was hurt and discouraged by American—and even more by Chinese—criticisms of his proposals. The Americans did not like the Cambodian provision for a veto in the control commission, which was a concession to the Russians. The Chinese rejected out of hand his proposal for comprehensive control along the borders of Laos, including permanent control posts as well as mobile units; and indeed a control system that really worked would be a serious blow to Chinese and North Vietnamese plans.

To conclude from this unpromising background that the conference is a waste of time would be wrong; indeed, the two shadows that enable the shadow-boxing to continue are thrown by matters of real substance. One is the Communist insistence that the conference should give priority to a discussion of proposals for Laotian neutrality; the other, the American insistence that before doing anything else the conference should send comprehensive instructions to the international control commission in Laos, give it freedom to roam the countryside in search of violations of the cease-fire and provide it with vehicles, airborne or landborne, in which to do the job.

On Monday Mr Pushkin, the Soviet delegate, rejected Mr Malcolm Macdonald's compromise suggestion that the conference should discuss neutrality and instructions to the commission on alternate days. Nothing could sound more procedural; but in fact it is a wrangle that goes to the heart of the matter. The Americans, with British and French support, are advocating a "truly neutral" Laos—detached, that is, from the great power blocks and protected from Communist or other encroachments by a foolproof inspection system. The four Communist delegations want an "independent and neutral" Laos which Marshal Chen Yi, the Chinese foreign minister—now back in Peking—has almost shamelessly defined as a Laos from which American and French military advisers, and alleged intruders from Siam and South Vietnam, together with "Chiang Kai-shek remnants" would be excluded, the control system being purely nominal. By implication—since the Communists do not admit the well-authenticated North Vietnamese military presence in Laos—the Chinese and their friends would therefore like to leave Laos wide open to infiltration from North Vietnam—or, when the time comes, from China itself. In the light of this approach the Americans are surely right to insist on the pressing need to define the control commission's powers and give it the tools for the job, for if the commission is kept impotent at this stage it will be almost impossible to give it potency later on.

In this and other ways the Americans are leaving no stone unturned in their efforts to undo past errors. Mr Harriman, permanent head of their delegation, has been to Paris to assure Prince Souvanna Phouma of full support in the event of his following a really neutral policy, and to Rome to assure Prince Sihanouk that his efforts have not gone unappreciated. A working understanding seems to have been reached between him and the neutralist Laotian prince, and though the Americans are cool towards Souvanna Phouma's determination to place the control commission under his future government's orders, they have even recognised the inevitability of Communist participation in the next Laotian government. The prince, for his part, seems well aware of the danger of giving key posts to Pathet Lao ministers.



A new element in the conference is the return to Geneva on Tuesday of Mr Krishna Menon. Rightly or wrongly, everybody assumes that he sees himself in the role of peacemaker lately vacated by Prince Sihanouk; and expectancy runs high.

Francs, Ancient and Modern

FROM OUR CORRESPONDENT

Monnet: common currency

Rueff: back on gold

Historians may see the West's current groping towards a new international monetary system as the beginning of a new epoch, comparable in importance to the development of banking within national economies. But this groping process may also appear as a striking example of the national differences which have, in so many fields, obstructed the road to a new international order in the postwar years. On one side the two Anglo-Saxon powers, whose "key currencies," pound and dollar, are widely used as reserves by trading nations (the gold exchange standard), are proposing pragmatic measures to strengthen the present system. With their two "key currencies" under strain, they are suggesting that the International Monetary Fund be strengthened by allowing it to grant credits in the new strong currencies, the franc and the mark. Most countries have acquiesced in these ideas, but strong objections are being put by France.

Behind the French resistance lies a wide range of doubts. Plain national motives play some part. Having been forced to come so often, cap in hand, to London and New York, to get support for an ailing franc, the French are relishing their first opportunity to throw back at the Anglo-Saxons the oft-repeated advice on good housekeeping to which they were so often subjected, pointing out, in their turn, that he who pays the piper calls the tune. As in politics, the French dislike the predominance in world economic affairs which the pound and dollar have enjoyed in the postwar years. Now that the franc and mark are strong they are anxious that their new strength shall not be used just to prop up the two "key currencies" and the system associated with them. The last part of the argument seems open to dispute. The Bernstein plan, after all, which would provide greater drawing facilities in marks and francs, may well tend to make the franc and mark "key currencies" too, held, like the pound and dollar, as reserves of trading nations. But the French dislike the IMF as the arena for collaboration because its voting arrangements give America and Britain a bigger say. They regard it as the keystone of a postwar system designed to preserve the pre-eminence of pound and dollar.

A series of articles published in many parts of Europe last month by M. Rueff, the main architect of France's economic reforms two years ago, have suggested a second reason for French doubts. In

his analysis the gold exchange standard is dangerous, not because it is Anglo-Saxon, but because it is unstable and has allowed deficit countries to avoid paying their debts ; he looks nostalgically back to the gold standard. M. Rueff cannot be identified with French government policy. But his articles are a pointer to one strand in French thinking. Like the Poincaré reforms of 1926-28, the Rueff measures in 1958 marked a sharp swing in French policy away from postwar fecklessness to bourgeois orthodoxy. The conservative trait that has led so many Frenchmen to put their money in a stocking and to invest in *rentes* has come out once more. Now that France is at last able to take a respectable place in the postwar financial community, it is peering suspiciously at the improvident habits which the western world has developed in the past few years.

It would be a great mistake, however, to imagine that French opposition to the Bernstein plan stems purely from conservatism or nationalism. Another school of thought—the integrationists of the Monnet school—also takes a critical view. To them, patching up the present system (à la Bernstein) is unattractive, because it does not go far enough, and might deflect attention from the need, later on, for more radical reforms, such as Professor Triffin's plan for a pooling of international reserves. As far back as last summer M. Monnet spoke in an interview with *US News and World Report* of the possibility of "a common currency," first for Europe and later for the West as a whole.

At first sight the juxtaposition of French conservatives and integrationists may seem strange. Yet they do have vital points in common. When orthodox economists, like M. Rueff, complain about the gold exchange standard and about the schemes to prop it up, their main criticism is that it permits governments to drift into random inflationary policies. The old-fashioned bankers' remedy is to return to the automatic discipline of gold. The modern-minded integrationist puts economic growth at the top of his priorities and so will have none of this. But he, too, feels that no currency system can work without a full-blooded integration of economic policies. Where the orthodox shirk the far-reaching political implications of Professor Triffin's scheme, the integrationists feel that the plunge is necessary if western states are to regain control of their economic destiny.

Such considerations have led both ancient and modern economists in France to feel that the new currency arrangements are best made, not in the 70-nation International Monetary Fund, but in the tighter Organisation for Economic Co-operation and Development, whose members hold 90 per cent of the western world's reserves. To the ancients, the International Monetary Fund reeks dangerously of improvidence ; its location in Washington gives the undeveloped members too many opportunities for political blackmail. To the moderns, the essential integration of economic policies will simply not be possible in the sprawling IMF. They regard currency assistance to undeveloped countries—particularly when commodity prices collapse—as a vital task. But they feel that this is best carried out as an integral part of the collective effort the Atlantic community should make to develop within OECD common trade, aid and financial policies.

The French opposition to the Bernstein plan has a striking resemblance to the opposition that broke the old British plan for a free trade area. On the French side, a similar mixture of worthy and unworthy motives is leading to a growing resistance, still largely veiled in technicalities. As in the free trade area, there is the nationalist element—the *Schadenfreude* at the Anglo-Saxon plight, and the wish to assert France's role (and nuisance value). But there is also the more radical, constructive feeling that the new plans do not go to the heart of the matter. And just as over the common market it is proving possible to bypass French protectionism by coming to terms with the radical "Europeans," so, in the long run, more radical proposals than the Bernstein plan may bring new French allies against the bankers' excessive caution.

Certainly the integrationists see Britain as a potential ally in all this. They feel that if Britain, with its sterling problem, joins the common market it will be a powerful force for a radical reshaping of the world's currency system. More than any other country, Britain, with its overseas commitments and strains, has, they feel, an interest in a pooling of reserves on the lines of the Triffin plan.

At its meeting on Tuesday M. Monnet's Action Committee for a United States of Europe put forward two resolutions—one urging British membership of the common market, the other a plan for a European reserve pool (à la Triffin) for the enlarged community. The reserves of the Six, they point out, are now as large as those of the United States, and less encumbered by short-term debt. With part or all of this massive weight behind it, the position of sterling would be transformed. And once Europe had pioneered the way towards a new currency order, America would have a greater incentive than ever to join in more ambitious Atlantic monetary arrangements in OECD.

Germany's Hidden Majority

FROM OUR BONN CORRESPONDENT

The two major parties contending the Bundestag election in September have these last ten days been notably wooing the woman voter. Herr Deist, the homely-looking economics "minister" in the Social Democrats' shadow cabinet, was the star speaker at a women's conference held under party auspices last weekend in the sombre Ruhr setting of the Oberhausen steelworks. (Herr Brandt disappointingly exercised his charms only by greetings telegram from farthest Schleswig-Holstein.) While it drizzled darkly outside, Herr Deist engendered warmth and light among the long tables in the works guest house. He assured the three hundred delegates from west Germany and Berlin that German women were numerically strong enough to determine the pattern of German society.

Dr Adenauer—by the nature of things a greater luminary—was in principle not quite so encouraging when he addressed a rally of 15,000 Ruhr women staged by the Christian Democrats at Essen on Monday evening. Yet, in his way, Dr Adenauer was being just as mindful as Dr Deist of the fact that more German women than ever before are likely to vote on September 17th according to their own lights rather than those of their immediate male mentor, and that more of them than ever before are weighing the pros and cons of the rival parties from the point of view of persons who earn their own living.

Of those entitled to vote in September, the women outnumber the men by approximately 20.3 million to 16.8 million. But the women do not usually poll in such strength as the men ; and if the respective participation is roughly the same as it was four years ago—86.4 per cent of the qualified women to 89.5 per cent of the men—September's voters will consist of 17.5 million women and 15 million men. Of these potential women voters, some 9.3 million go out regularly to work ; and of these working women, 3.6 million are married, and 2.4 million have children. Some 400,000 are war widows, who have had, and perhaps are still having, to look after families on their own.

The proverbial confinement of German women's interests to *Kirche, Kinder und Küche* was broken, not so much by the upheavals and exigencies of total war, as by the tremendous demands that were made particularly upon the womenfolk after Germany had capitulated. They had to go on struggling when the menfolk were at least being fed in prison camps. With immense courage and resourcefulness, millions of widows, grass widows, and single women fended for themselves, their children and dependants in what must have often seemed hopeless circumstances. Many of them managed somehow to maintain the highest possible standards, as is testified by British observers of those days who so often saw the neat, clean figures emerging miraculously from the ruins of towns largely deprived of the normal public services. In the story of Germany's postwar recovery the early contribution of German women deserves special mention, as it does also in that of Berlin's resistance to the Soviet blockade thirteen years ago. Yet the circumstances of their increased responsibilities were at the same time peculiarly limiting. For they were occupied almost exclusively in providing the primitive necessities ; the more widening social and administrative duties that also had to be undertaken in the absence of the men were mainly performed by the armies of occupation.

At Oberhausen, the "minister" for family affairs in the Social Democrats' shadow cabinet, Frau Käthe Strobel, justly chided today's German working women for not raising their sights. Too many of these nine million, often overworked, women, she said, considered their economic and social problems to be caused by some private fate of their own rather than by changeable faults in the structure of society. In theory, women enjoyed equality with men. In practice, there were still few signs of it. A Social Democratic government would make it its business to develop the part played by women in society and see that they had a larger say in the ordering of public affairs. In what she called "the pyramid of political power" in the Federal Republic, Frau Strobel estimated that women formed 2 per cent of the government and administration ; 8 to 10 per cent of the parliamentary deputies ; 10 per cent of the parliamentary candidates ; 25 per cent of the party members ; over 50 per cent of the active voters ; and 55 per cent of the qualified voters.

Frau Strobel protested further that only 2.4 per cent of the judges were women, and only 186 university professors out of a total of 6,340. She also complained that there was a tacit conspiracy among employers to underpay women, and that most girl students at the universities and technical colleges (23 per cent of the total number of students) were inspired by anachronistic conventional ideas of a woman's career, not by a desire to cultivate their special talents or to make the most of the new opportunities for scientific and technical careers. Why, she demanded, had the Christian Democratic women in the Bundestag not done more, with their party majority, to raise the standing of German women?

But the delegates at Oberhausen were shrewd enough not to give the impression that it was career women they were chiefly concerned with. Pointing out—with one of those confident comparative calculations that leave one feeling terribly ignorant—that it takes the German worker 185 minutes to earn one pound of coffee while it takes an Englishman only 82, they promised the housewife that a Socialist government would progressively abolish the unspeakable coffee tax so beloved by the heartless Dr Erhard. And, among other kitchen promises, there would be a price council, on which women would be represented, to look after the general interests of the consumer.

No awkward questions were put to Dr Adenauer at his rally at Essen. He was among the faithful, schooled and happy to concede that father always knows best—particularly in the nasty rough and tumble of foreign politics. He appealed confidently for the women's vote on the score of the prosperity and security that his policies had given the Federal Republic. Should the Social Democrats win the election ("which I don't believe"), and if Herr Brandt were to become Chancellor, then, he said, the best thing to do would be to emigrate to the United States. This was not a very nice thing to say on the eve of his visit to Berlin whose elected and very popular burgomaster Herr Brandt is. But his listeners were delighted. At the close of the meeting, Frau Aenne Brauksiepe, one of the Bundestag deputies criticised by Frau Strobel, gave the Chancellor a present to accompany him on his electioneering campaign. It was a case containing chocolate, eau-de-Cologne, handkerchiefs, a drinking cup, a detective novel, and a copy of "Women in World History."

Testing Time for Dief.

FROM OUR OTTAWA CORRESPONDENT

After all the delays of Mr Duncan Sandys's visit to discuss the common market, he arrived on Wednesday at the height of a Canadian political crisis, with the parliamentary situation at its most explosive. The crisis has taken a form so personal and so dramatic that some observers compared it with "the Winthrop case" and others with ancient Greek drama.

It revolves, of course, round Mr James Coyne, the governor of the Bank of Canada. When the House of Commons debated the one-line government bill declaring his office vacant, the opposition parties refused to defend him, fearing, first, to take the side of a man whom Messrs Diefenbaker and Fleming attacked as having voted himself a $25,000 pension, and fearing also to be associated with the popular idea of Mr Coyne's prescriptions for the Canadian economy which they assumed to imply a measure of austerity. They attacked only the method of Mr Coyne's removal and the government's refusal to give him a hearing before the usual house committee. The government's victory seemed almost complete.

But there then appeared a *deus ex machina* in the highly improbable shape of the Senate, an appointed body often regarded as a futile anachronism. Canadian senators are appointed for life, so many for each province, by the government of the day. The Conservatives have been able to appoint only a few since they gained power in 1957, so that even now the Liberal appointments number 75 against 25 Conservatives, with two vacancies. Out of a hundred senators today, only eleven are under sixty. But these old gentlemen, who are assured of $12,000 a year for life, include at least a score of lawyers and former politicians of considerable intellectual distinction. Moreover, party ties are somewhat looser among them than in the Commons. It was natural for the Liberal majority to give Mr Coyne the public hearing that Mr Pearson's followers in the Commons could not secure. They gave him his "day in court," knowing that this would embarrass the government, and expecting that they could avoid later political embarrassment by passing the bill once Mr Coyne had been heard.

But it did not prove so easy for the senators. Mr Coyne appeared for two and a half sultry, sweaty days, in a jam-packed small committee room where reporters, senators and MPs often had to stand. He piled up a record, which no government spokesman and none of the Bank's directors appeared to answer, showing that the government had attacked the integrity of the Bank of Canada and impugned his own honour without proving any single respect in which he had violated the statutory requirement of "good behaviour," or in which he had failed to co-operate with government policy. Under hostile questioning by Conservative senators he never flinched and never failed to answer. Canadian and foreign reporters were first enthralled, then impressed and finally convinced.

The Conservative minority abandoned their attacks on his conduct before May 30th, when Mr Fleming had first demanded his resignation, and concentrated on his open defiance since. In spite of an open invitation, no one put in an appearance to refute him. The Liberal majority was satisfied that he had been unjustly accused by false government witnesses. They were quite prepared to say so—and then to pass the bill so as to keep out of political

trouble. But this easy way out was blocked by Mr Coyne in his final speech on July 12th. He reminded the senators that the governor of the Bank is appointed "during good behaviour," not during the government's "pleasure." They could not pass the Bill, he said, without declaring him guilty of misconduct. If they thought he was not guilty—as the majority certainly did—then they need not fear that he would cling to office. Since he had been thrust into political controversy against his will, he said, he knew the Bank must have new management. But unless they defeated the bill first, they must condemn him and leave the Bank of Canada forever open to similar assaults in the partisan interest of the government of the day.

Mr Coyne ended his thirty days' battle by walking out of the committee and leaving the senators with their consciences. At the time of writing, most of them appear to be ready to take the noble road and say *fiat justitia ruat coelum*. But Mr Diefenbaker and his threats of an election and reform of the senate still hang as major threats over the old gentlemen who are now financially secure until death. The way they voted was a test of them, not of Mr Coyne. In the event, on Thursday morning the Senate committee voted to defeat the government bill, and added a rider that it found Mr Coyne had not been guilty of misconduct in office. Senate rejection of the bill was expected to follow.

New Horizons for Singapore

FROM A CORRESPONDENT

In the by-election in the Anson division of Singapore this week-end the ruling People's Action party is for the first time competing with a coherent and nearly united right wing, the newly formed Singapore Alliance. Mr David Marshall and others are also running. This is the culmination of an eventful six months which, though it has not made the headlines, will occupy many pages in the Malayan history books.

Towards the end of January Malaya's prime minister, Tunku Abdul Rahman, and Singapore's prime minister, Mr Lee Kuan Yew, went on a launch trip. The ostensible object was to inspect the mangrove swamps of Jurong which, under Singapore's new five-year development plan, are to be solidified into the city's future industrial base. Since that day many signs of new thinking have reached a climax in the Tunku's speech in Singapore on May 27th; he then proposed an eventual association of Malaya, Singapore and the three territories of British Borneo. "For us in Malaya," he said to the foreign correspondents' association, "and I include Singapore in my remarks, loyalty to the Malayan ideal and way of life is fundamental." No spokesman of the Federation of Malaya has ever before "included Singapore" in his remarks in quite this way, as part of "us." Mr Lee Kuan Yew was quick to respond in his Singapore National Day speech on June 3rd, when he said: "Independence through merger is now clearly before us, and will be achieved sooner than anyone imagined two years ago."

Wider association with Borneo has its own problems and possibilities which need separate examination. But the background of political events in Singapore and the Federation is of immediate importance. In the Malayan town council elections there has been a swing away from the racialist Pan-Malayan Islamic party, even in its stronghold of Kelantan. But the ruling Alliance party has itself lost seats to the non-communal Socialist Front in many towns elsewhere. And in the parliamentary by-election at Teluk Anson (not to be confused with Singapore's Anson by-election) the former assistant minister of education, standing as an independent, won the seat from the Alliance on the issue of national education. The Tunku is now less pressed by Malay extremism, but is being forced by election defeats to pay more attention to left-wing dissatisfactions. The result is wholly admirable: renewed emphasis on racial unity and on a Malayan outlook, and the opportunity swiftly taken, to focus attention on bigger and less parochial ideals for the future.

In Singapore political events have been remarkable for their apparent complexity and apparent contradictions, yet in their unravelling as brilliantly obvious as Hercule Poirot. Their direction whether by manifest destiny or by the two prime ministers, has been masterly. In April the People's Action party lost the Hong Lim by-election to that charming, ruthless and irresponsible opportunist Mr Ong Eng Guan, chiefly remembered as the first mayor of Singapore and for his breach with the government in which he was minister of national development. The government did not expect to win the election, but its defeat was overwhelming. Mr Ong, having no party to back him, won as a magnetic individual in his old constituency, where he has an enthusiastic personal following. (He has subsequently formed the United People's party from PAP dissidents.) The PAP party machine (than which none is more efficient) created Mr Ong but failed to destroy him. No one doubts that the PAP, if it were totalitarian in its wishes, had the power of liquidation. The fact that it did not use this power is clear evidence that the PAP dictionary does not define democracy in the Russian or Chinese sense. That is comforting knowledge, not least to the Federation.

But while at the end of May the Tunku, on increasingly friendly terms with Mr Lee Kuan Yew, was proposing a joint future for the Federation and Singapore, he was also forming an alliance of opposition parties in Singapore. The Singapore People's Alliance (headed by the previous chief minister, Tun Lim Yew Hock) and the Singapore branches of the three components of the Federation's Alliance government (the United Malays National Organisation, Malayan Chinese Association and Malayan Indian Congress) are uniting in a single Alliance party, based on the constitution of the Alliance party in the Federation. In sending his PAP party machine into action for the Anson by-election, Mr Lee Kuan Yew has told his men not to be so beastly to the Alliance candidate as to endanger relations with the Federation. As at Hong Lim it is not the balance of voting that will matter. The important point is that Singapore now has a right-wing opposition closely allied with the ruling Federation party, while in the Federation the Socialist Front is beginning to form a recognisable national left-wing opposition.

Two results, of historic significance, emerge: first, that a pan-Malayan political pattern has been created, non-communal and based on democratic left and right-wing parties in each territory; second, that it is now possible for the PAP to about-face. Lacking an effective right-wing opposition, the PAP has had nothing to fight except the dragon of its own extremists, the people Mr Lee himself has called the "lunatic left." Colonial mud has been flung at the government for pursuing realistic economic policies and some of that mud has stuck. The way is now open for the PAP to resume its role as leader of the Singapore revolution and champion of the under-privileged masses. And, if one may be so bold as to predict the completion of the pan-Malayan pattern, it is now free to reach an understanding with the Federation's Socialist Front without endangering relations with the Federation government.

It is likely that Singapore and the Federation are now set on a straight highway acceptable to almost everyone. If so, history will rate the tortuous routes and clover-leaf cross-overs of the past six months as manifestations of genius. No one yet appears to have consulted the Borneo territories, who have been the catalyst of the compound.

Half a million pounds!

SPENT BY THE STEEL INDUSTRY EVERY TWENTY-TWO HOURS TO KEEP ITSELF UP-TO-DATE

Almost everything made in Britain is made either with or by steel. So the steel industry's development plans directly concern you. To keep Britain abreast of parallel developments all over the world large sums are spent. This year they amount to over £200,000,000 – about half a million pounds every twenty-two hours!
This vigorous investment programme is contributing to the prosperity of everyone in this country. Steel is transforming the world we live in because it is strong, cheap, plentiful, easily shaped. Steel can make itself useful in so many different ways. Now flexible and resilient in a spring. Now hard and tough in a cutting tool. Now workable and ductile, so that it can be pressed into the shape of a car body. Steel is the versatile metal — the *essential* metal of modern life.

A booklet "Steel in the 1960's" describing the development plans of the British steel industry is available free on application to the Information Office, Steel House, Tothill Street, London, S.W.1.

THIS IS THE STEEL AGE BRITISH IRON AND STEEL FEDERATION

Three ways to better banking

I

The Bank must offer a comprehensive service to its customers, whether private individuals or big business, and be large enough to satisfy the needs of commerce and industry on any scale.

II

The Bank must have sufficient branches in the U.K., together with facilities overseas so that customers can be provided for when on holiday or away on business.

III

The Bank must offer local knowledge and expertise, and preserve its standard of personal service in the time-honoured Family Banker tradition.

THE THREE BANKS GROUP

If you have business in Britain they would be pleased to place at your disposal their wide experience of International Banking and Commerce.

GLYN, MILLS & CO.	THE ROYAL BANK OF SCOTLAND	WILLIAMS DEACON'S BANK LIMITED
HEAD OFFICE: 67 LOMBARD STREET LONDON, E.C.3	HEAD OFFICE: ST. ANDREW SQUARE EDINBURGH, 2	HEAD OFFICE: MOSLEY STREET MANCHESTER, 2

UNITED STATES REPRESENTATIVE: 63 WALL STREET, NEW YORK

3164C

IN THE SPACE OF 10 YEARS...

. . . the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140, no fewer than 100 more than existed a decade ago. Unrivalled banking facilities are therefore available for all merchants trading with the various countries served by the Bank.

NATIONAL AND GRINDLAYS BANK LIMITED

Amalgamating
NATIONAL BANK OF INDIA LIMITED, GRINDLAYS BANK LIMITED AND THE EASTERN BRANCHES OF LLOYDS BANK LIMITED

HEAD OFFICE: 26, BISHOPSGATE, LONDON, E.C.2.

A comprehensive banking service is available at branches in the following territories:

INDIA · PAKISTAN · CEYLON · BURMA · EAST AFRICA · ADEN SOMALIA AND THE RHODESIAS

Bankers to the Government in: ADEN · KENYA · UGANDA · ZANZIBAR

THE BUSINESS WORLD

Cotton in Torment

The American industry would resist governmental limitation of its exports or restriction of its market.—
Robert T. Stevens, chairman of the American delegation to the international cotton textile conference, September, 1952.

COTTON textiles are now threatening principles embodied in the General Agreement on Tariffs and Trade. Gatt's purpose is to increase international trade by reducing discrimination, tariffs and other barriers. Its slogan might be: one world, one trading area. But last year this noble aim seemed to be qualified by setting up a study of "disruptive competition." This is an old form of competition, but it is now being seen in a new light by the industrialised countries of the West. The upshot is that the United States, Britain and Canada are now trying to slip into the Gatt agreement, wrapped in its own escape clause, quite contrary means of attaining its ends. Because their domestic textile industries are threatened, the three countries want a system of quotas so that international trade in textiles can be disciplined within their notions of orderly expansion.

Next Monday, delegates from nearly a score of exporting and importing countries will be bringing to the Gatt meeting at Geneva their inflated estimates of what they ought to export or their deflated ideas of what they should import. It will be a meeting of the white West, whose textile industries are in the toils, and the so-called "low-cost producers," less reverently called the "rice standard countries," who once helped to make Lancashire's fortune.

It was Lancashire's luck to be first in the field and to remain firmly on top until 1914. Cotton textile industries are the first arrivals in industrial revolution and they are being expanded throughout the developing world. So world trade in cottons is being transformed—older producers would say distorted—by the onrush of new manufacturing centres. No exporter can now expect to stay on top for long. Cotton is easy to grow in many countries, and workers as easily adapted to make textiles from it. After the war, protectionism in developing countries cut down international trade in textiles although world demand was still growing. It was an experience, as Lancashire found, of the snares in expanding export markets: after an initial spurt in demand following the first rise above a subsistence standard the market grows less rapidly. Developing countries soon learn to produce their own cheap cottons. When, later, they try to export them, they run into the same troubles that Lancashire experienced.

At the Anglo-American cotton textile conference held only thirteen years ago in 1948, Britain and the United States met as two major exporters, whose immediate concern was that Japan's future exports to their established markets should be moderated. A tripartite agreement followed, and in 1952 the big exporters (then reckoned to number five, including west Europe as a single unit) met to discuss markets. Ignoring objections that they were carving up the market—"serving the Empire to Japan on a plate" as some said—they managed a curious compromise based on the threat of government sanctions if the projections of future exports, accepted by the meeting, were radically exceeded.

Lancashire thought that expansion in India and Japan had been moderated by its counsel. That was not true of Hongkong, whose cotton industry had gained from the diversion of textile machinery consigned to strife-torn Shanghai in 1948 and 1949 and, no doubt, from Chinese managerial talent escaping from communism. But after its contraction and the injection of government money into the re-equipment of spinning mills, the British industry was confident. American exporters also had their heyday in the postwar boom, and the pristine liberalism voiced by the British and American delegates at the confence in 1952 will certainly sound sour in the ears of Asians at next week's meeting.

BY 1955, Lancashire woke up to what was happening in Hongkong, went, saw and came back pleading for protection. By then the industry was forgetting its earlier insistence that its export trade was absolutely essential to itself and to Britain; its main concern had become a last-ditch defence of its home market. In 1958, Britain became a net importer of cotton cloth—as did the United States for a period of about six months last year. About three years ago, both countries began to bargain with their chief suppliers for voluntary limitation of their exports. Hongkong's industry was persuaded to sign a restrictive pact with Lancashire in 1958, to which India and Pakistan acceded. Japan's exports to the United States and Canada were curbed in the same way. In 1959, the United States asked Hongkong for a similar undertaking, Hongkong asked too much in return and negotiations broke down. Canada also approached Hongkong last year, but the colony's attitude has been stiffening into a stubborness which is irritating western importers. It is a measure of the turbulence in cotton textiles that Japan has complained that, through its restraint, it has lost business in America to Hongkong. Hongkong is no less concerned about the British business it has

been losing to other exporters while voluntarily clamping down on exports. A large part of the trade in cottons has become enmeshed in a web of bilateral agreements like the tangle of driving belts that clutter an old-fashioned mill. The Geneva conference will do well if it can sort out the mess.

But the deeper significance of the meeting is that the British and American governments have taken the final short step to assuming direct responsibility for their ailing cotton textile industries: the Americans in full knowledge that quotas will reduce the efficiency of every industry they affect and the British clearly aware that Lancashire may never again be prepared to face unbridled foreign competition in its home market. Three years ago Mr Macmillan professed scant knowledge of the cotton industry but a faith that its problems could be settled "in the Commonwealth way" without intervention by the government. (He nevertheless wanted an agreement to restrict duty-free imports retained in this country in that pre-election year and skilfully helped to get it.) But when the Prime Minister recently visited President Kennedy and Mr Diefenbaker, he was apparently well equipped to talk textiles and it is not certain who got in the first word.

After its long rearguard action, Lancashire is always looking for a new defence point where it can make a stand. Thinking in the industry has been veering towards seeking safety within the confines of the European common market. British manufacturers say they would be competitive in the common market, but the Six are important net exporters and countries outside are interpreting British hopes in a common market for textiles as a move to get in to shut others out. Commonwealth producers currently have the advantage of tariff preferences of 7½ per cent on cotton yarns and 17½ per cent on cloth in Britain. As India and Hongkong see it, Britain in the common market would leave them outside a 15 per cent tariff wall while the west European textile industries worked out their own salvation. Some producers in Hongkong would not be deterred by reasonable tariffs if they were unfettered by export quotas. They have already successfully tapped the German market. But when it comes to bargaining among the big countries, the colony with its 3 million population, 99 per cent Chinese and new to the Commonwealth, does not expect its interests to top the British list of priorities.

THE argument with low-cost producers is not about unbalanced trade. Hongkong, for instance, just about balances its trade with Britain and the United States. Nor does it concern dumping, export subsidies and other malpractices which are also injuring the market. It is simply that their costs of production are so low and the quality of their output so respectable, that it is doubtful whether any western textile industry could survive free competition. Fears of this kind of disaster are calling forth great bitterness. Hongkong's industrialists are depicted by one prominent British manufacturer as a bunch of greedy rascals who aim at wiping out the British industry in order to exploit their sweated labour still further. If in fact that happened, Hongkong's labour might at any rate become less sweated; last year's boom enabled the workers to force the first general rise, of 15 per cent, in wages since the postwar re-adjustment. This was one factor causing Hongkong's exports to be less competitive with those of other producers. Now work is short in Hongkong, and workers are short in Lancashire.

After more than a generation of fierce contraction, it might be argued that Lancashire has done enough to earn a pension. The £19 million lump sum the industry will get under the scrapping and re-equipment scheme could be regarded as bare compensation for past service. Lancashire still held 35 per cent of world trade in cloth before the war, but now its share has shrunk to about 7 per cent. Lancashire's losses can be gauged by the decline in cloth production and the increase in imports, compared with the two other big importers shown in the table. Imports, which are causing such a furore in the United States, account in all for only about 5 per cent of total domestic trade in cloth. In some types of garment, however, imports are making far deeper inroads into the American market. Certainly, Lancashire could fairly argue that any sacrifices it is still required to make for the sake of bigger exports of machinery (and any political advantages) should be shared by other industrialised countries. If a favoured producer were to grow fat at the expense of Lancashire, it might in turn be gobbled up by the newer producer. The restrictionist bars are already going up in Africa, and Africa, Asia and Latin America show an undiminished desire to grow up and manufacture cottons like the rest of the world.

* 1937 for production.

While the Geneva hopefuls grapple with these problems, they should take time to consider the deeper implications of what they are doing. Cotton textiles are a major test of the practicability of free trade in manufactures between the two halves of the free world. Wool and other textiles are already lined up for the same treatment. Once hope of free trade founders in cottons, many other industries in the white West will want to shelter under the same umbrella. Before Japan has been integrated into the western trading area, a host of equally intractable problems are arising. Any agreement arrived at as a consequence of the next week's meeting at Geneva must recognise the dangers of dividing the free world's trade into white and non-white camps through a rapid dismemberment of Commonwealth trade or a hasty construction of trade blocks. The prospect of a liberal outcome at Geneva does not look good.

Lancashire conceded more to Commonwealth producers than it considered reasonable three years ago. The British Government's proposal for an increase in Hongkong's quota on renewal of the pact in January has already been rejected by the island's manufacturers. Canada and Australia wish to limit imports which their industrialists consider too high. Members of the common market might regard the request for bigger markets as just another irritating call on their generosity. American manufacturers will press for higher protective tariffs unless quotas impose a significant curb on imports. In effect the developing countries are asking for trade, not aid. Unfortunately, some industries in the West want things exactly the other way round.

Trustees on Their Mark

ANY stick is good enough to beat the gilt-edged market with nowadays. On Monday it was a belated amendment to the Trustee Investments Bill that was held responsible for its poor state. This will empower the Treasury to vary the permissive division of trust funds from 50:50 up to 25:75—the former figure in the two ratios being, in rough terms, the gilt-edged and debenture portion and the latter the maximum for equities and preference shares. It seems a little odd to have brought in such a radical shift in the bill at so late a stage, but it is not likely that the Treasury will be quick to use its new discretionary power, though it may be useful to have in reserve in future years. The critics who have been demanding greater flexibility in the bill have scored a distinct hit. Now the bill is through its final stages in the House of Commons and its enactment is to be expected in the next two or three weeks.

It is not an easy bill to analyse, and it may not be an easy Act for many trustees to operate. Most modern trust instruments give trustees wide investment powers. The bill is not intended for them, but rather for old trusts with restricted powers, for intestacies, and for future cases where no specific provisions about investments are laid down. Trustees operating under any instrument made before the Royal Assent will be able to use the powers under the Act, if they wish—the decision is entirely theirs. The same is true of, say, a local authority operating a superannuation fund with powers of equity investment under a private act. It can stay with its own act if it wishes—as it is likely to do until its equity holdings are worth half of the whole portfolio. But it will be free at any future time to adopt the new powers. Those authorities that have no private act will be able to use the new arrangements if they wish to bring ordinary shares into their superannuation funds. Trustees for private funds can free themselves of any restrictive or exclusive clauses in their trust instruments—again, if they wish. Any exclusive powers that are written into instruments drawn up after the bill is enacted will not be escapable in this way.

A number of cases can be distinguished, among the infinite variety that present themselves, as examples of what trustees may be able to do under the bill—subject to the obvious points that it is not yet law and that lawyers themselves find it awkward to interpret. In due course it is likely to produce a crop of case law.

1. A trust where investment powers were confined to the original trustee list.

At a moment of his own choosing, and with no other formality, the trustee values his fund (the bill does not define the prices to be used) and divides it equally between "narrower range" and "wider range" parts (hereinafter "NR" and "WR"). The WR part at this stage can be in only NR securities; thereafter they can be retained or, as is to be presumed, switched into WR securities. The trustee cannot transfer cash or investments from the NR fund to the WR fund unless he makes a compensating transfer of NR securities from the WR part—which for practical purposes means gilt-edged.

When property accrues to the trust from the investments it holds (for example, from realised profits) it belongs to the appropriate portion, NR or WR. But a late amendment now requires that all interest and dividends accumulated in the trust fund must be split 50 : 50 between NR and WR, no matter from which part they arise. A scrip issue in respect of an existing holding of ordinary shares would belong to the WR portion. The same must be true of a rights issue, for which the subscription price must be found from existing WR funds or from new funds accruing for WR investments. If an NR security yields a rights issue in the form of a WR security, the WR fund must find the money. The result could be, over time, that the WR part comes to represent more than half of the fund, taken at current values, and perhaps a lot more.

When property accrues to the trust from new funds it must be divided equally between the two parts. But when capital is released from the trust, it appears from section 2 (4) that the trustee has absolute discretion about what securities to release. If, however, he were tempted, say, to eliminate the NR investments and retain all the WR investments, he might offend against the "prudent man" rules long established in case law.

Splitting of trusts may involve complications under the bill. Assume that a trust originally equally divided between NR and WR investments is valued at the time of the split £600 in gilt-edged (NR) and £1,400 in ordinary shares (WR) and that two equal continuing trusts are to be created. Then the trustee must create two equal funds, each consisting of £700 in equities and £300 in gilt-edged. Where he has to distribute one portion and to maintain the other in trust, he has a wider range of choice. He can appropriate £700 in equities and £300 in gilt-edged to the continuing trust, or £500 in each, or some proportions

NARROWER RANGE INVESTMENTS

1. * *Defence Bonds* and National Savings Certificates (including Ulster).
2. * Deposits in *Post Office* Savings Bank, Trustee Savings Banks and clearing banks.
3. British Government stocks, Government guaranteed stocks, Treasury bills and tax reserve certificates.
4. Fixed interest securities of British public authorities and nationalised industries (including Agricultural Mortgage Corporation and Scottish Agricultural Mortgage Corporation).
5. Fixed interest securities issued in Britain and repayable in sterling by Commonwealth governments, local and public authorities and the stock of the Bank of Ireland.

* *These two categories do not require advice.*

6. Fixed interest securities and mortgage loans of British local authorities.
7. Fixed interest securities issued in Britain by the International Bank.
8. Debenture and loan stocks issued in Britain by a British company that has a share capital of not less than £1 million and has paid dividends on all its share capital in the five preceding years.
9. Debenture, guaranteed and preference stocks of British water companies.
10. Deposits in special investment departments of the Trustee Savings Banks.
11. Deposits in a building society designated under the House Purchase and Housing Act, 1959.
12. Freehold mortgages and leasehold mortgages with not less than 60 years to run.
13. Perpetual rent charges on land.

WIDER RANGE INVESTMENTS†

1. Any quoted securities issued in Britain by a British company which has a share capital of not less than £1 million and has paid dividends on all its share capital in the five preceding years.
2. Shares in a building society designated under the House Purchase and Housing Act, 1959.
3. Units in a unit trust authorised by the Board of Trade.

† Having split the trust fund 50 : 50 between the "narrower" and "wider" ranges, the trustee need not, unless he so wishes, confine 50 per cent of the investments simply to those listed in the "wider" range but can include in that part securities and properties listed in the "narrower" range.

between the two limits. If the continuing trust is set up with £500 in equities and £500 in gilt-edged, the distributable share would consist of £900 in equities and £100 in gilt-edged.

2. A trust confined to trustee investments plus positive power to invest in specified securities.

Section 3 enables the trustee to set aside the specified securities in a "special range" fund, and to split the remainder 50:50. When "special range" property is sold it must be reinvested in "special range" holdings or split equally between the NR and WR parts. Money to be subscribed for rights arising on "special range" property, or indeed for any investment in "special range" property, may be found from any part of the fund.

3. A trust composed of trustee securities plus the power to retain other securities from the original estate.

This is likely to be a common case, and a tricky one, since it involves an attempt to combine the powers under the trust instrument with the powers under the bill. Where the retained securities include any now detailed in the NR list, these must be taken into the NR or WR parts. All others, whether WR investments or otherwise, can be put into a "special range" fund which, as under example 2, is left entirely separate, leaving the rest of the fund to be plit 50 : 50. Since the trustee has the right only to retain these securities, with no power of reinvestment, he must divide the proceeds of sale of any "special range" securities equally between NR and WR parts. Rights on "special range" securities can be financed from any part of the fund.

4. Local authority superannuation funds.

Resort to "special range" machinery is not open to trusts that have secured a variation in their instruments by court order in the ten years before the bill is enacted; they will have to fall in with the bill or go to the court for a new variation. Nor is it open to local authorities that have private acts governing the investment of their superannuation funds—there are 19 of these. In general, their maximum power of investment in non-trustee investments is 50 per cent, which includes debentures, preference shares and ordinary shares. There may be a few that started early and pursued an aggressive equity policy, who now find themselves with 50 per cent or more of their portfolio, at current values, in ordinary shares, preference shares, and debenture stocks. These are likely to consider seriously the division of their funds under the bill. The following *pro forma* example illustrates the point:

	Cost	Current values
	£	£
Gilt-edged	1,000,000	800,000
Debentures	150,000	100,000
Preference shares	150,000	100,000
Ordinary shares	700,000	1,000,000

Under the private powers, the funds have been invested 50:50 as between gilt-edged and industrial securities. If the authority uses the new powers, its holdings will have to be divided:

NR	WR
Gilt-edged, £800,000	Equities, £1,000,000
Debentures, £100,000	
Other NR from WR realisations £100,000	

The table assumes, as would be likely, that the preference shares would be reinvested in debentures or gilt-edged in the NR. Accumulating interest and dividends must be equally divided between NR and WR. For the time being, a 6 per cent plus return on the NR part would help a WR part invested largely in growth equities at 3 per cent or less. But when these latter come to yield, say, 10 per cent on the values at which they were taken into the WR part, the accumulation of the equity fund will be correspondingly prejudiced.

These examples may be of some partial enlightenment to those responsible for administering trust funds. Plenty of uncertainties remain. One relates to the need for "proper advice," in writing, about buying or retaining any security from "a person who is reasonably believed by the trustee to be qualified by his ability in and practical experience of financial matters." Some lawyers regard this clause as a speculative attempt to codify the case law of several hundred years and do not feel too confident about it. But it seems capable of working satisfactorily and certainly less restrictively than the narrow original qualifications laid down for advisers would have done. For some trustees a lot of preparation will be necessary before they are able to take advantage of the bill. The professional trustees, on the other hand, have already gone some considerable way in preparation—selling gilt-edged and holding temporary short-term investments (with a minimal sacrifice of income, under present market conditions). To measure the gilt-edged holdings of trust accounts is a chancy exercise, and to guess what proportion of these will be switched into wider range securities even chancier. Undoubtedly, there is a considerable volume of mobilised trust money awaiting the enacting of the bill for immediate investment in equities. The recent setback in the equity market has put this section on a more attractive yield basis for trustees and the latter, if they are well organised, will in some cases have already taken firm decisions to switch a given proportion of their funds into equities as soon as this is lawful, without much or perhaps any regard to prevailing prices.

This is the basis of the argument that the Royal Assent will be the signal for a buying boom across the whole equity market. It may be so. Yet the timing may also coincide with the Chancellor's package of remedial measures for the economy which could have the opposite effect. In the longer run, after the first excitement (if there is any) is over, the consequences will become increasingly clear—more and more equities destined for the deep-freeze of long-term investment. *The Economist*, which in its modest way was urging the need for reforming the Trustee Act a generation ago, rejoices that here, at any rate, is one cause that has not been lost.

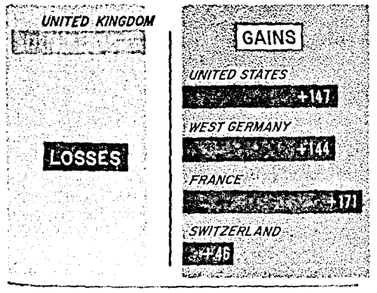
BUSINESS NOTES

STERLING



Touching Wood and Going Short

To *nobody's surprise*, sterling has continued weak in the foreign exchange market, and the volume of selling has increased. No one expects any change until the Chancellor at last tells the world what he proposes to do; and his measures will need to be convincing, on the key point of improving Britain's competitiveness, if they are to do their job in the exchange market. By postponing action for so long, leaving the financial markets thinking about nothing else, the Chancellor has stiffened the test that he has to pass.

The Bank of England has had to give substantial official support this week, even though it has let the spot rate on the dollar fall below $2.78½. Discounts on forward sterling continue high—though at the equivalent of 4½ per cent per annum on the dollar and 6 per cent on the Swiss franc and the mark they are still sensibly less than the discounts in the 1957 crisis. The market detects no evidence now of official support in the forward market. But the outflow of funds from London is probably heavier than at any time since the movement began last March. There is no reason to believe a report in the *Sunday Telegraph* that the Continental central banks stopped giving support to sterling in June and that the gold loss of £47 million was a true indication of that month's withdrawals of private funds. After the annual meeting of the Bank for International Settlements in the middle of June it was made clear that "effective co-operation" was continuing—though it was also clear that the bankers were thinking about how they could consolidate the credits. The obvious way is through the International Monetary Fund.

Britain has been inhibited from making such a drawing hitherto by its reluctance to draw US dollars. But it now seems clear that a drawing cannot wait until the proposals for increasing the Fund's resources of Continental currencies by borrowing have gone through. A drawing might therefore be announced at the time of the Chancellor's measures—with the size of the credit possibly dependent on the content of the measures. The international creditors, reasonably, may soon be getting tougher about the kind of prospectus on which they are prepared to provide more money.

GOLD AND FOREIGN EXCHANGE RESERVES IN JUNE — $ million

Accumulations of sterling by Continental central banks have reduced losses of reserves shown by the United Kingdom; but they are included in the reserve gains shown by the creditors.

IN THE MARKETS

Around and Around

The London stock markets, too, are biting their nails and wearing out their nerves while they wait for the great economic statement. While investors and dealers try to guess what the Chancellor's measures might be, and whether the markets have over-discounted them, the volume of business has contracted. Equity prices, having rallied slightly, fell again in mid-week—on Thursday the *Financial Times* index lost 5.3 points to 308.60. Gilt-edged appear to have reached some sort of resistance point. With yields on irredeemables up to 6¾ per cent the market has this week seen some switching out of dated stocks—an unfamiliar movement. But it is impossible to be optimistic about gilt-edged while sterling is in jeopardy. This is the major influence; the minor one is the trustee legislation. Thus the line up for coming months could be said to be:

Chancellor's Measures *v.* Sterling and Trustee Act.

All will depend on the strength of the home team.

In the most general terms, one may risk some hypothetical guesses about market responses to whatever the measures turn out to be. If the measures are generally judged to be inadequate for sterling the worst impact would presumably be on gilt-edged. Any indication that the government might let the exchange rate fall could be seen as an alleviating influence for equities; but if the prospect was rather for further restriction, equities could be hit equally hard. A series of measures consisting of piecemeal cuts and new imposts could affect some shares quite sharply—thus a 10 per cent surcharge on purchase tax could cause a bad knock in the car market, especially if it coincides with stiffer hire purchase. Cuts in public investment could obviously hit particular supplying firms. But a rise in Bank rate would not necessarily be bad for banks. A package that was restrictionist but of uncertain efficacy for sterling could easily depress both gilt-edged and equities together.

Really tough measures directed to reducing costs—that is, acting on wages and tariffs—ought to be a tonic for gilt-edged, even if Bank rate is raised at the same time. With the prospect of lower profit margins and strikes, such measures would bring no immediate joy to dividend prospects—but they would strengthen industry's long-term prospects. Initially, however, gilt-edged could rise and equities fall. In that case, as the market is now asking itself, would a trustee with newly gained freedom be more impressed by the rise in equity yields than he is put off by the demonstration that equities can fall in value too? So the argument goes around and around, while the prudent hedge their bets and lend to corporations at 6 per cent plus.

Berlin over Wall Street

A correspondent cables:

At 690 the Dow Jones industrial average is now midway between the peak of 710 touched in the middle of May and the 670 level to which it fell in the subsequent reaction. While a good many dealers are confident that equity prices have begun their usual summer rise there is still enough uncertainty and nervousness among investors to prompt the questions whether the rally is really yet under way and, if it is, how far it can be expected to go. There is no doubt that business is recovering but the improvement in corporate earnings is not yet marked and a rash of price cuts in chemicals, plastics, paper and appliances may hold profits down despite the rise in sales. Moreover, though Wall Street is accustomed to international crises there is plenty of worry about Berlin; while some military issues, notably aircraft shares, have attracted renewed support investors do not appear to be eager to make new commitments in any great volume. In contrast to past war scares, which usually sparked off almost indiscriminate buying on the grounds that inflation was sure to result, the

Berlin crisis is being treated more soberly—and more fearfully.

It may be significant that electronics, Wall Street's favourite growth stocks in the 1950s which were pushed up to new peaks by every earlier war scare, are now in a bear market. Competitive prices and the slowdown in defence contracts have not merely checked the growth of the industry but have led to losses for some of the prominent companies. This shake-out in electronics stocks has long been predicted but it has come at a time when the economy is recovering and when defence spending seems to be heading to new peaks. It has therefore come as a shock to Wall Street and it is responsible for a good deal of the caution now evident among speculators. The managers of those institutional funds that still have plenty of money to invest are now complaining that it is harder than ever to make a judicious choice, for the market has already discounted a vigorous recovery and the issues that can be thought to be undervalued are few and far between. Dealers do not expect any serious decline but they are not bidding prices up as they did earlier this year. Thus if the summer rally has started, it is at a walk rather than a canter.

NEW ISSUES

Hiccups in the City?

As always happens when stock markets are uncertain, the number and weight of recent new issues has been named as one of the contributing causes of the weakness. Certainly, the stock market is finding it difficult to digest all the issues and looks, indeed, as if it may soon be suffering from indigestion. This is most evident in fixed interest securities, with the 6 per cent New Zealand loan standing at 2 discount, the British Insulated and Rolls-Royce debentures at 1½ discount and the steel prior charges (on which the final call has still to be made) below their issue prices. To be certain of success a first class industrial debenture issue has now to offer about 6¾ per cent, as the announcement this week by Scottish and Newcastle Breweries shows; its offer is £4½ million of a 6¼ per cent debenture 1978-83 at 94½. But although dealings in the new shares arising from the Distillers rights issue began at a small premium, the equity market is hardly less comfortable. Rights issues press heavily upon it and the Colvilles shares, for example, have fallen to the issue price of 57s. 6d. so that the rights are worth nothing. The chance of success for the smaller issues is therefore open to doubt and several companies, indeed, have announced this week that they would be postponing their appeals. The bigger issues, moreover, are absorbing institutional money that otherwise would have been used to buy existing stocks and it must be wondered whether the life offices, after taking up their rights, will be willing to add much more to their equity holdings this year.

In these circumstances, the directors of City Centre Properties were faced with a difficult problem in deciding upon the right method to raise permanent capital to sustain their property development programme. Clearly, they did not want to limit the company's freedom to charge its properties or to borrow money; nor did they want to pay a high rate of fixed interest while the property developments were maturing; nor, equally, did they want to dilute the equity before the investments began to yield dividends. Not surprisingly, they have decided upon the issue of a convertible loan. This hybrid is not, as the institutions have made clear in the past, suitable for an industrial company; but it admirably suits the needs of a property company and the institutions which help to finance its developments. By offering attractive conversion rights, CCP is getting the money cheaply, issuing at par £18,939,830 of the convertible loan at 4½ per cent until the conversion options expire in December, 1964, and at 6½ per cent thereafter. The loan is finally redeemable in 1970. Effectively, ordinary shareholders in CCP who subscribe by right to this loan can convert each £1 of loan stock into one ordinary share at a price equivalent to 60s. in 1962, 62s. in 1963 and 64s. in 1964. The present price of the CCP shares is 56s. 3d. and before the options finally expire the directors expect to pay a dividend of not less than 40 per cent (against the current 25½ per cent). Mr Cotton and Mr Clore and certain institutional shareholders have agreed to take up the rights on £9,669,690 of the stock (that is about 51 per cent) and in doing so they will receive a commission of 1¼ per cent from CCP. This is the same as the commission paid to the sub-underwriters of the rest of the issue. The advantages of being a shareholder and a sub-underwriter at the same time were underlined when dealings began in the new loan stock at 6d. premium.

Crisis Measures of the Past

The patient underwent a major surgical operation twelve years ago but has contracted the same disease at regular intervals ever since. The doctors, although swayed periodically by changes in fashion, have shown much the same consistency in their remedies.

Measures:	1949 (*Summer and autumn*)	1951-52 (*Nov., '51; Mar., '52*)	1955-56 (*Feb., July, Oct. '55; Feb., '56*)	1956 (Suez) (*Dec.*)	1957 (*Sept.*)	1960-61 (*Jan., April, June 196; Mar.-April, '61*)
Exchange and trade	Sterling devalued from $4·03 to $2·80. Import quotas cut.	Import quotas cut.	Official support for transferable sterling ("market convertibility").	Credits from IMF, on understanding that import controls to be avoided.	Restrictions on sterling credits to non-residents.	(1961) Support for sterling from Continental central banks under "Basle" arrangements.
Fiscal	Cuts in government expenditure (notably next year's investment programmes).	Food subsidies cut, to finance income tax reliefs.	Income tax cut in April budget; purchase tax and profits tax raised in autumn budget. Tougher borrowing for local authorities. Freeze, then cuts, in public investment programmes. Ending of investment allowances.	Surcharge of 1s. a gallon on petrol.	Public investment to be frozen at previous year's level.	In mid-1960, public investment programme for 1961-62 scheduled to be kept to level of 1960-61. (1961) Smallest budgeted overall deficit since Cripps: power for two new regulators.
Monetary	Capital Issues Committee told to disallow scrip ("bonus") issues. Banks requested to curtail advances. Gloom in gilt-edged lifts yields above 3½ per cent.	Bank rate reactivated and raised from 2–2½ per cent, then 4 per cent. CIC asked to tighten scrutiny and banks to check advances.	Bank rate 3–3½–4½–5½ per cent. HP restrictions reimposed, and then stiffened twice. CIC asked to tighten scrutiny and banks to cut advances.		Bank rate 5–7 per cent. CIC asked to tighten scrutiny and banks told to cut advances.	(1960) Bank rate 4–5–6–5½–5 per cent. Special deposits called. HP restrictions reimposed—later eased. Gloom in gilt-edged lifts yields above 6½ per cent.

BANK SHARES

Prospects and the Chancellor

All the big banks have now declared their interim dividends. The announcements offered the market no surprises. The interims were all either as forecast or were raised to exactly half the 1960 total payment.

The first half of 1961 has been profitable for the banks; their dividend caution was evidently based on the uncertain outlook. What happens to bank profits in coming months depends largely on the Chancellor's new measures. An increase in Bank rate would raise the banks' earnings on advances; and average advances outstanding are almost certain to remain higher. On the other hand, use of the new tax regulators would, by increasing government revenue and in all likelihood producing an overall Exchequer surplus, tend to squeeze floating debt and bank liquidity still further. In any case, the banks face a continuing rise in staff costs: Barclays this week conceded a cut in its standard working week from 42 to 40 hours, which in practice will mean more overtime pay.

In these circumstances, and in the stock market's mood of general uncertainty, last week's announcement by Barclays of a rights issue surprised both the market and the other banks. The Midland, admittedly, announced a new issue in April, to raise £24 million. But at this time the Midland's capital funds were only 2.6 per cent of its deposits compared with an average of around 4.1 per cent for the other banks. As the table shows it is now Barclays that is in lowest place, being the only bank with a ratio below 4 per cent. If the Barclays issue were to bring the ratio to the average of the other banks, it would be in the region of £13 million.

A bank is much less dependent than an industrial company on its capital funds, since expansion depends basically on the liquid assets the Government makes available rather than on new money raised on the market. But there is a general principle that capital funds should cover at least the fixed assets. Barclays published fixed assets at June 30th were in the books at £50 million; its capital funds were £64 million. The margin is small, especially as there are certain other long-term commitments that might also be considered fixed assets. Nowadays the banks recognise that some of their advances are in fact more in the nature of fixed investments than self-liquidating loans; and while the book valuation of premises is ludicrously low, this does not strictly affect the argument about matching fixed assets with fixed capital. The other banks, except Lloyds, have their published fixed assets covered almost twice over by capital funds.

STEEL

Direct Exports Improve

In May Britain exported a greater tonnage of steel products than in any other month since the war except October, 1959, when there was an American steel strike. And as imports of steel have gone on declining, net exports of steel have risen strongly this year. The chart shows the medium-term record: in the first five months of 1961 net exports amounted to 224,000 tons against 181,000 tons in January-May, 1960. Exports of plates and heavy sections are now running at about 800,000 tons a year: those of sheet, cut back when home demand is clamant and running free when the manufacture of motors and consumer durables slackens off, have recently risen to about half a million tons a year, against the total of 528,000 tons in 1957 during an earlier motor recession; and there has been some revival of the traditional export trade in rails (to India, following a release of interim credits from this country).

Competition in the world steel market, the Iron and Steel Board commented this month, has been strong and growing. Yet not all the world's major producing industries switch as readily to the export market when home demand softens as Britain (steel output in the first half of 1961 was 1½ per cent below that of the same months of 1960): in particular, the United States has never made the massive drive for overseas sales, at prices that could be low when it is running far below capacity, that would often have seemed possible for it. Some students explain this on the grounds that American steelmakers are unwilling to do anything that might undermine home prices which offer comfortable margins even at very low operating rates. But of late, inside the United States considerable erosion of those firm home prices has developed, with certain major companies withdrawing price lists and making deals customer by customer. Modifications of some American steelmakers' attitudes towards export prices could follow.

RUSSIAN AVIATION

On All Fronts

When that mature young Soviet technologist, Major Gagarin, told his London audience that space flight was merely a matter of training and "a little knowledge" he was displaying a good many of the psychological features considered essential for an astronaut. Space is no place for the introvert, the worrier, the dreamer or the fool. It demands all the characteristics that Major Gagarin has shown during his London visit, a cheerful, uncomplicated temperament not easily ruffled and possibly not easily hurried either; physical stamina rather than strength, quick intelligence and an assured acceptance of responsibility. The Russians have been anxious to show their hero to a wider audience; they had accepted an invitation for him to visit the Paris air show early in June only to have it withdrawn by the French with an unaccustomed lack of finesse when it was discovered that his visit would clash with that of President Kennedy. They had also prepared with great care the début of their new military aircraft at the Moscow air display, held two days before Major Gagarin's arrival in this country.

The two events provided a unique opportunity to underline Russia's technical progress in aviation by demonstrating that the great effort that has gone into the development of the biggest and most powerful rockets in the world has also been matched by equal advances in manned aircraft. The Moscow show demonstrated that Russia today is probably the nearest thing on earth to an aircraft manufacturers' dreamland, covering every conceivable line

of development down to a Soviet version of that white elephant, the Rotodyne. Russia today is in the same state as Britain was in the pre-Sandys era and as the United States was before the cut-back in military programmes. Whether such great variety of aircraft is necessary, from a military point of view, is a question strictly for the birds.

Although nearly all the military aircraft on show have been identified by Western observers before, this was the first time the new types had appeared at a public display; during the past three of four years remarkably few military aircraft have been seen at Soviet air shows. During that period these new types, mainly 1,500 mile-an-hour fighters and bombers able to fly at twice the speed of sound, some with intercontinental range, were presumably still under development and the Soviet public had to make do with civil aircraft which, Western designers may be glad to note, seem to run into as many delays and teething troubles as new airliners in the West. The appearance of the new military machines will cause a flurry in the United States, not because they represent an advance on anything that the United States can build but because they represent just those types of which production has been cut back or cancelled in favour of missiles. If Mr Khrushchev wished to strain the western economies by intensifying the arms race he could not have thought of a better way to do it.

HIRE PURCHASE

Stiffer Terms and Higher Charges?

WHILE a stiffening of hire purchase terms is not expected to be enforced by the Chancellor in his forthcoming measures, it now seems likely to be voluntarily effected by the finance houses themselves. A statement last weekend by the Finance Houses Association, representing the larger companies in the business, drew attention to the "appreciable increase" in interest rates in recent weeks and to the "continuation of the trend for normal operating expenses to rise." The finance companies are therefore considering two steps: a rise in the minimum deposit to 25 per cent on new cars (compared with the statutory 20 per cent) and to 33⅓ per cent on used cars (compared with the present FHA minimum of 25 per cent); and an increase in service charges, which at present rise upwards from 7½ per cent a year on the initial amount for new cars, and may soon rise nearer the FHA maximum range of 9 per cent for new cars to 12 per cent for cars over three years old. The finance companies are also thinking about making an assault on dealers' commissions, at least to stop these rising as they automatically would in line with increased service charges.

The Finance Houses Association has not yet taken a firm decision, and in any case whatever it decides is not likely to be followed by all outside houses and by dealers financing their own business. But in the past few months, chastened by their earlier over-trading, hire purchase men have begun to see the virtues of self-imposed restraints, and have been much less ready to go ahead for more business on any terms. There is good logic, on the principles of sound hire purchase finance, for a rise in minimum deposits to ensure that the hirer has a sufficient stake in the vehicle he is using.

But an all round increase in service charges is a different matter. Admittedly, the finance houses have had to raise the interest allowances on large deposits placed with them by companies and institutions to counter the withdrawal of foreign funds. This has also greatly increased competition for money in the local authority mortgage market, which now offers 6¼ per cent for seven-day loans. But interest rates on bank overdrafts—at least at the time of writing—have not risen, and are below their level in the second half of 1960. As everybody knows, the main recent worry in hire purchase has been not the cost of borrowing money but getting hirers to repay. Apart from the 1960 crop of defaults, the finance houses feel that their costs of collection may be rising generally. Wage earners, with fluctuating weekly incomes, often find it more difficult than salary earners to meet relatively high instalments regularly. But the many people who meet their instalments meticulously will have a legitimate complaint if their own charges, which are already high, are raised in order to provide a sufficient cushion for the defaulters and the poor risks. The proper course for the finance houses is surely to introduce some kind of differential in their charges, whether by rebates for regular payment or by preferential rates on new transactions. If they do not, they will deserve to lose their best customers.

TRADE UNION INVESTMENT

Owners Now

THE setting up of the Trades Union Unit Trust is the realisation of an idea first put forward by Mr Desmond Hirshfield over eighteen months ago. His firm acts as auditors to the National Union of Railwaymen and he was the author of a scheme to establish a new unit trust fund, designed primarily to facilitate the investment of trade union funds in equities. The new trust will be managed by M. Samuel, the merchant bankers, who will also act as investment advisers to a board which includes representatives from the City and Westminster.

In the past, trade union funds have been invested almost entirely in gilt-edged, co poration and Commonwealth loans a other fixed income stocks. The mark value of most of these funds has declin steadily. The managers claim that t new trust will provide an alternative mea for trade union investment, the por folio of the trust being chosen to meet t specific needs of the unions for income (which some escapes tax). About thr quarters of the portfolio, it is thought, w be in equities and the remainder in fix interest stocks. When the units, initial of £1,000 each, are offered later this mon there should be a good response, for mo than a dozen unions have either indicat their intention to invest in the trust or a showing a close interest in the scheme though, presumably for political reaso some have shown no liking for it.

Unions will be able to purchase un with newly accruing funds or to recei them in exchange for some of their existi investments (provided that these are co sidered suitable by the managers for incl sion in the trust's portfolio). To keep cos low, units will be available only on one da a month and the charges will be below tho of other unit trusts—a ¼ per cent initi sales charge, ⅜ per cent per annum on t value of the fund up to £2 million, ¼ p cent on any excess up to a further £2 m lion and ⅛ per cent on anything above million.

Mr Hirshfield is also trying to intere the trade unions in the merits of proper investments for a part of their superannu tion, pension and provident funds. He proposing to set up a panel of proper experts, including valuers and surveyo to advise unions interested in acquiri first class property investments where t emphasis is on income rather than develo ment.

OIL

Not the Right Time?

NO invitation to Baghdad has yet be received by the reshuffled team negotiators from the Iraq Petroleum Co pany and its shareholder companies that h been preparing to recommence talks wi General Qasim since contacts were r established some weeks ago; and it m well be that in the immediate state of Ang Iraqi relations, neither side is anxious to r start the negotiations that were suspend in April. Since the original messag seeking to re-open contact were despatch by Lord Monckton of IPC and the Ho Maurice Bridgeman of BP, letters have bee sent from the Western end accepting t Iraqi demands on "dead rents," discussin other points such as relinquishment and t disposal of natural gas from oil wells in Ira and expressing general optimism in princip that a mutually satisfactory result to t negotiations could be reached. The letters had appeared before the Iraqi clai

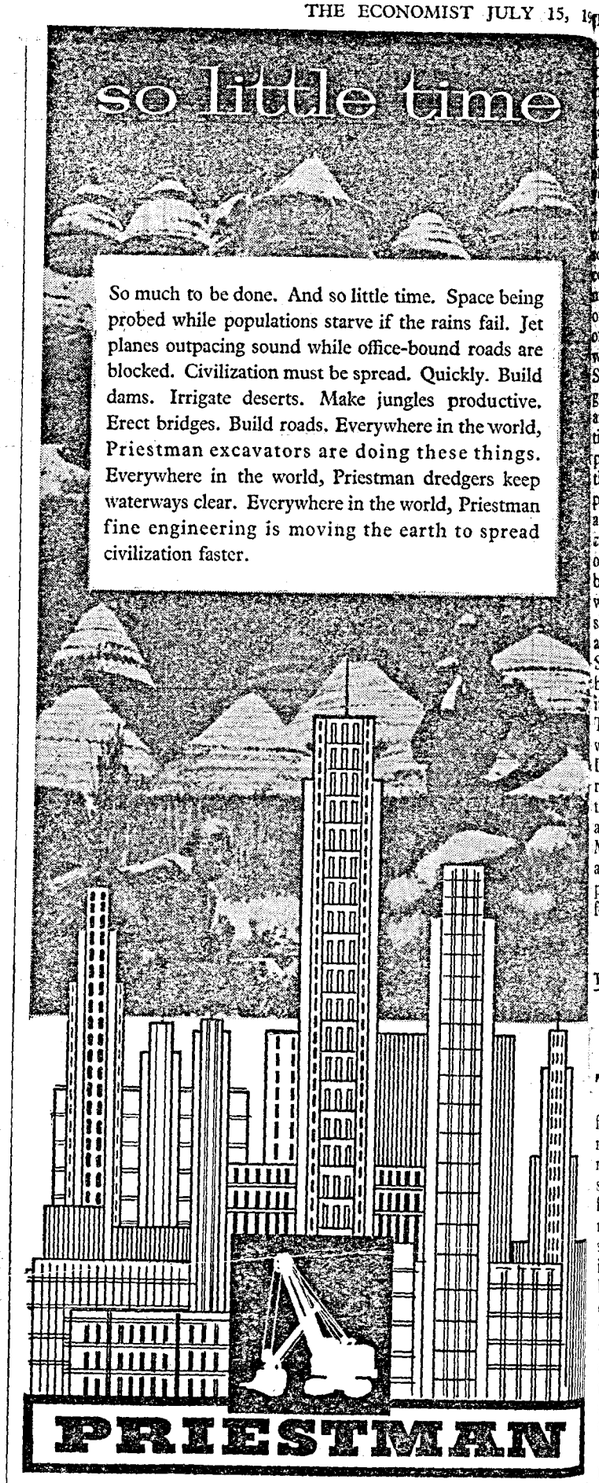
Profits a puzzle?

In seeking a solution to the profit puzzle, more and more businessmen are turning to Japan. Many are becoming aware of how profitable it is to trade in this country that offers a growing variety of quality products finding ready markets.

Many of these products are manufactured by companies in light and heavy industry that carry the Three Diamonds mark. These are Mitsubishi companies, all represented in foreign trade by their big general-trading partner, Mitsubishi Shoji.



For 90 years Mitsubishi Shoji has been showing overseas buyers the profitable way to trade in Japan. Its branches and affiliates are in all of the world's trading centres.

PRIESTMAN BROTHERS LIMITED • HULL • ENGLAND

Kuwait was put forward to have evoked me tempered satisfaction in Baghdad: aking some changes from the original egotiating team, IPC and its shareholders ad made ready to resume the discussions at originally began, with representatives f this government of Iraq, more than two ears ago.

Le quartorze Juillet is Iraq's national day f independence as well as France's ; and for ome weeks past there have been ominous onjectures about what General Qasim ight or might not do to IPC or some part of it on that day. There have been hints of nationalisation, though not of exactly what or how much might be nationalised. Since negotiations ended in April, the Iraq government has after all exercised a ban, and nominally a military one, on exploration in IPC concession areas not already in production, and some further gesture in these non-producing areas might be displayed to the Baghdad mob without absolutely jeopardising the country's precious current income from IPC's actual operations. Smarting under his rebuff before Kuwait, it might be that the General would like some alternative triumph to show the noble sons of the people: guesses among oilmen in Britain and the United States varied a good deal, but some of the best-informed held that he would not seek it via any extreme measure towards IPC. The Iraqis chose to heighten uneasiness last week with reports of an approach to the Italian state concern ENI for technicians to run IPC facilities. These reports were true, though they were denied in Baghdad as soon as it became clear that the Italian Foreign Ministry had instructed Signor Mattei that any such "alternative to the major oil companies" would be at variance with Italy's foreign policy and obligations to its allies.

TIN

In America's Court

THE International Tin Council now has no tin to sell and no export quotas in force. Effectively, it has been out of business for the past three weeks, but it has nevertheless been exceedingly busy. The second international tin agreement came formally into being on July 1st when the required number of producers and consumers of tin ratified or gave notice of their intention to ratify it. Contributions to the buffer stock were accepted in cash: producers will therefore pay £14.6 million into the buffer pool, equivalent to 20,000 tons of tin at the current "floor" price under the agreement, and will comfortably meet that from the liquidation of the old buffer stock's assets with profits from the previous five years' dealings.

Because the council tried to control tin prices and failed, it has understandably, if a little unfairly, attracted blame for the current shortage of tin. Speculation last week as the price of tin bobbed back and forth revolved round what immediate action the council might take to try to redeem its lost reputation. The obvious courses of action were three: to raise the floor price now to encourage greater production at the earliest possible moment; to begin to allocate supplies, a thorny path that it is unnecessary to follow at the present time ; or to ask the United States for help. The council decided to invoke America's help and appears to be allowing the United States six weeks in which to reply.

The council informed the American Administration of its wish to hold talks about possible disposals from the United States stockpile and fixed August 22nd as the date of its next meeting. Until it is known whether and under what circumstances short of war tin will be forthcoming from the American stockpile, the council and the market can make little of the estimates of consumption and supply with which they are now juggling. The same difficulty applies to giving producers incentives to mine more tin.

After what appears to have been a definitely two-side discussion—consumers and producers have equal voting rights within the agreement—the question of fixing new price ranges was left over until next month. Producers have agreed to examine their costs of production and presumably to present estimates for perusal at the next meeting. At the moment, there seems no case for precipitate action before some of the uncertainties are cleared up. Consumers have increased their stocks and are not particularly anxious to buy, and some speculators are willing to take their profit with prices at the current level. The spot price in London is hovering around £912 a ton, not yet dramatically higher than the council's shattered "ceiling" of £880 a ton.

GHANA

Tighter Exchange Controls

EFFECTIVE economic planning, Dr Nkrumah has decided, demands a knowledge of private capital movements ; consequently, he has extended Ghana's system of exchange control to include all foreign countries and not only, as under present law, those countries outside the sterling area. All companies and financial institutions operating in Ghana must now maintain their "uncommitted capital," or temporary surpluses, in Ghana—surrendering their sterling assets to the Bank of Ghana for Ghanaian pounds. Banks and life insurance companies however, will be allowed to maintain working balances in sterling. This move, while it should have no effect on Ghana's total sterling assets, will consolidate these assets in the hands of the central bank. It will also mean that with the London market closed the Accra money market will be asked to absorb funds beyond its means. The supply of Treasury bills is limited and at the moment the bills yield just under 4 per cent. Dr Nkrumah has also foreshadowed measures for the closer control of imports, directed in particular at non-essentials.

Full details of the new controls have still to be confirmed from Ghana and a lot must depend on how the Bank of Ghana interprets them. But it is clear that no one, resident or non-resident, may transfer funds out of Ghana without the approval of the Bank of Ghana. The intention, however, is that where in the past guarantees have been given to foreign investors, approval will be automatic. The generous compensation paid to the shareholders of the British-owned gold mines earlier in the year is generally taken in the City as a sign that this promise will be honoured.

These measures, Dr Nkrumah maintains, are not the result of weakness in the exchange position. In the four years since independence, he says, Ghana has spent £55 million of its foreign assets, and its total sterling assets still amount to £100 million—equivalent to one year's import bill. They would have been £15 million higher but for the fall in gilt-edged prices on the London market. At present Ghana has medium-dated debts of £35 million, repayable over the next eight years, and in future all external purchases for the development programme will be financed by foreign borrowing. In the coming financial year this is scheduled at £33 million.

ATOMIC ENERGY AUTHORITY

Getting at the Facts

THE Atomic Energy Authority devotes, as usual, considerable space in its current annual report to describing how it spends its time, but gives no information on how it spends its money. This is not, perhaps, entirely the AEA's fault. It is inhibited by a security system that fails to recognise that anyone who wants to know the number of people working in this country on atomic weapons has only to stand at the gates of Aldermaston any day of the week counting heads as the men go in. At a guess, however, perhaps a third of the AEA's staff of 40,000 and the lion's share of its 5,000 professionally qualified scientists and engineers work on civil research and development. This accounts for most of the staff in the research (Harwell) and reactor groups and for some of those working in its engineering divisions. The rest, apart from a London headquarters of 500, are engaged in routine production of uranium, plutonium and other nuclear materials, the manufacture of reactor fuel and its subsequent treatment ; the design, maintenance and engineering of these basic production plants, and the manufacture and development of weapons.

None of this can be elicited from the AEA's report, nor is it possible to find anywhere in its pages the fact that nearly half

Continued on page 279

Profits: Still Slowing Down

THE accounts of 892 companies were analysed in the second quarter of the year and the detailed figures of this analysis appear on pages 296 and 297. The gross trading profits of these companies rose by 6¾ per cent to £1,308 million. Most of these profits were earned in the calendar year, 1960, though about 15 per cent of the companies which published their reports in the second quarter drew up their accounts on March 31st.

The rise of 6¾ per cent in trading profits is the lowest recorded since the last quarter of 1959 and it reflects in part the large influence played by oil and food companies. The oil companies included in the latest analysis reported a rise of just under 4 per cent in profits while the food companies, including the Unilever giant, reported a fall of 1¾ per cent. A number of food companies earned higher profits and this offset all but £3¼ million of the £9 million fall in trading profits reported by Unilever. Of the other important groups, the profits of the chemical and paint companies, including Imperial Chemical Industries, rose by 13¾ per cent and those of engineering companies by 11½ per cent. The profits of companies in the miscellaneous manufacturing group rose by 6 per cent, just a little less than the industrial average. The biggest increase in profits was reported by the tobacco group and this rise of 22 per cent was closely followed by the increase of 21½ per cent reported by cotton companies. Falls in profits occurred in motors (down by 1½ per cent), shipping (down by less than 1 per cent), silk and rayon (down by 5¾ per cent) and wool (down by 7½ per cent). Unlike the rubber plantation companies, whose profits rose by 19 per cent, the profits of the tea companies fell by 6½ per cent. The latter was one of only three sections where ordinary dividends were reduced. Not surprisingly, the other two were shipping and shipbuilding, for though shipbuilding profits were slightly higher they were earned in orders that have not been replaced in the shipbuilding yards.

NET ordinary dividends rose by £25 million. This more than absorbed the increase in net ordinary earnings from £469 million to £493 million, so that the average dividend cover fell from 2⅓ to 2 times. Thus it would appear that these particular companies have reverted to the tendency discernible early last year of distributing a bigger proportion of their available earnings. While shareholders can be thankful that the directors were more generous they should view with some misgivings the decline in the rate of return on capital employed. This return can be calculated by expressing net ordinary earnings (after deducting non-recurring credits) as a proportion of net assets attributable to the ordinary capital. In the latest quarter this return fell from 8.6 to 8.2 per cent. This was the first time in two years that the average rate of return for all industrial groups showed a decline. Only three groups went against the trend: shops and stores, where the return went up from 13.6 to 14.1 per cent, chemicals and paints, where it went up from 8.0 to 8.6 per cent and cotton, where it jumped sharply from 5.8 to 7 per cent (reflecting, no doubt, the scrapping of old and surplus machinery in that industry).

The analysis of balance sheets shows that gross fixed assets rose by £523 million, or over 10 per cent. This is the bigg increase for some years. Some part of i increase can be attributed to revaluatio but the bulk of it appears to represent n investment in plant and property. In so cases this will simply reflect new acqui tions, often made on a share exchange ba This is reflected in the rise of £310 milli in ordinary and preference capital in iss This increase includes scrip issues amou ing to £128 million. The amount of n money raised by these 892 companies l year was therefore not much more th £150 million.

This left a good deal to be found el where, to finance not only the substant increase in fixed assets but also the additi of £245 million to stocks and of £1 million to debtors. In the circumstanc it is perhaps surprising that "quick" ass fell by only £53 million. The bulk of t additional investment was financed increases of £184 million in depreciati £317 million in reserves and £124 milli in creditors. In the light of this yea spate of rights issues the most notab increase was in bank overdrafts. They ro by £99 million, or 37½ per cent, from £2 million to £363 million. The intenti behind a number of the recent issu appears to have been to fund these ove drafts rather than to provide new finan for further expansion. And there may w be more to come though stock market co ditions at the moment are not very encoura ing. Whether the pressure on profit margi brought about by the rise in costs, pa ticularly of wages, will be relieved by t more intensive use of the new plant that h been installed is far from certain. With t Chancellor standing in the wings and wi such profit figures on stage it is not sur prising that investors are waiting to see wh will happen before committing themselve

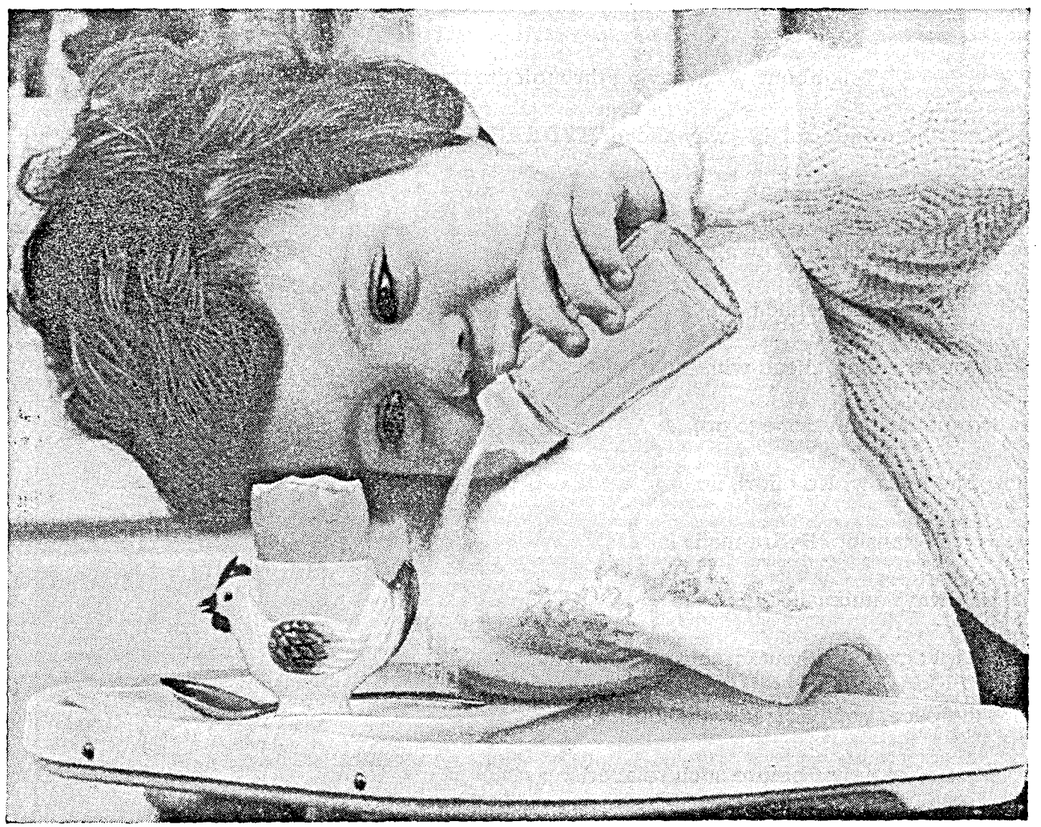
Talk about weaving through the traffic! Here's the car to do it—
the wonderful way-ahead **HYDRA-MATIC VAUXHALL!**

While others change up, change down, clutch in, clutch out, you're eeling ahead with two pedals only: one to *go*, one to *slow*. No effort, no tension. Hydra-matic is always automatically in the right gear. Without forcing the pace, you're streets ahead!



Yet never before such relaxed and pleasurable driving!

Yes, the full braking power of the engine is always available; there's no free-wheeling ... Yes, you can still 'do your own driving' when you wish ... No, Hydra-matic is not a grafted-on accessory; it has been specifically designed to team with Vauxhall's new 2.6 litre six-cylinder engine ... No, there isn't another British car offering such advanced automatic transmission below £3000.

See your Vauxhall dealer. Drive the HYDRA-MATIC VAUXHALL yourself!

HYDRA-MATIC VELOX: £775 plus £324.0.10 PT = £1,099.0.10.
HYDRA-MATIC CRESTA: £835 plus £349.0.10 PT = £1,184.0.10.
HYDRA-MATIC VELOX FRIARY ESTATE CAR: £1,392.5.10 inc. PT

Vauxhall Motors Limited, Luton, Bedfordshire.
HYDRA-MATIC is a Registered Trade Mark.

Coal is well worth its salt —to Cerebos

"COMMON" is an unkind word when applied to salt. This amazing mineral, essential to life itself, deserves an adjective as noble as its many virtues. It serves many vital purposes in industry, but its major duty lies in the home. Here Cerebos Table Salt, refined to a dazzling white purity, conjures from even the most insipid dish a mouth-watering flavour, adds a sharper delight to even the spiciest food. A meal without Cerebos salt might nourish the body, but it would certainly never delight the palate.

The men who make the big decisions at Cerebos—controlling company of the majority of domestic salt-processing firms in Britain—choose *coal* to heat their giant boilers. They choose coal because coal gives them the maximum heat for the minimum cost; because coal, mechanically stoked, is smokeless, and because coal, the home produced fuel, is reliable. Our coalfields can supply all the needs of British industry for generations to come.

When it is your duty to make decisions about fuel, remember Cerebos. They've proved that coal is well worth its salt. Follow their example—and you'll get the same palatable proof.

Some key facts and figures about the boilerhouse at Middlewich, Cheshire and Greatham, West Hartlepool

Boilers:	8 water tube
Method of firing:	Chain grate stokers
Steam pressure:	180 and 160 p.s.i. respectively
Steam temperature:	490° F. and 450° F. respectively
Max. continuous rating:	110,000 and 73,000 lbs. of steam per hour respectively
Annual fuel consumption:	39,000 tons of coal

SOLID FUEL—
more heat at less cost—and it's British
PROGRESSIVE INDUSTRY IS GOING FORWARD ON
COAL

ISSUED BY THE NATIONAL COAL BOARD

Continued from page 275

the authority's research effort—or to be precise, 45 per cent—goes on the development of new reactors (accounting for perhaps between 5,000 and 6,000 men), while another 15 per cent—say 2,000 men—are still doing research and development on the now-classic Calder Hall type of reactor. General research, including pure physics, thermonuclear research and work on isotopes, accounts for the balance; when the programme of research into thermonuclear fusion is fully developed it will make up 8 per cent of the authority's total research effort, employing between 800 and 1,000 people.

A Slight Change in Direction

THE authority does appear to have been scrutinising closely most of its research programmes; it has already recast its research into fusion in a new form, described in the annual report in great detail. It appears to be attempting now to change the direction of its reactor research, channelling it into lines previously neglected in this country. This is not an easy step since the AEA has been committed for many years to a three-stage programme of reactor development that would carry it, if successful, into the mid-1970s. But the very rigidity of this programme, the fact that it was narrowly based on one class of reactor using a graphite structure and cooled in the main with gas, has been a source of concern both in and outside the authority.

The newly formed reactor division of the authority is attempting to back down from this limb by proposing a joint research project with Canada into a reactor using heavy water in place of graphite and steam cooling in place of gas. There is much to be said for this proposal; it will use considerable Canadian experience of heavy water, which has many advantages over graphite, and give British engineers an opportunity to experiment with steam cooling, over which sections of the authority are most enthusiastic. The proposal is put forward under the guise of an alternative reactor for use in shipping which might be substantially cheaper than those studied by the Ministry of Transport—the AEA makes no bones about its dislike of these. But it must also mean that the authority is less confident than it was a few years ago about the progress of research already in hand. The next stage in commercial nuclear power, the advanced gas-cooled reactor, has recently been making heavy weather and still falls some way short of what is required of nuclear power in the late 1960s.

Is it not time now that the authority presented its accounts in a way that showed how its effort is divided between these various projects and how it spends the £78 million income that it admits to receiving

MOTORS

Smoothing the Ride

CAR springing is passing through a time of change; rubber and air springs have already replaced steel on some cars, and air has supplemented steel on others, though in the United States at least steel springs have mounted a successful counter-offensive. As cars get smaller and lighter, it becomes more difficult to design springs that give a comfortable ride while the car is empty, but are stiff enough to prevent the car sagging when it is fully loaded; passengers may make a difference of 50 per cent to its unladen weight. What is needed is a spring that will get stiffer as it is compressed—what is called a progressive-rate spring—or some means of keeping the car at the same height whatever the load. Rubber springs, as used by the British Motor Corporation on its baby cars, can have the first characteristic; so do pneumatic springs. Air springs can also be designed to provide automatic levelling, and can give much softer springing than other springs. In practice, however, this advantage has not been fully exploited because soft suspension brings problems such as roll on corners.

Pneumatic suspension was first used on a mass-produced car by Citroën when it introduced the DS 19 in 1956; three years ago most American companies began offering it as an optional fitting on their cars, and there were optimistic assumptions that it would soon replace steel springs. But it flopped; on the big and heavy American car there was little difference in riding comfort, and buyers were not prepared to pay the high cost—caused by the need for an air or oil pump driven off the engine, pipes to the wheels, and valves at each wheel to control the height. Citroën remains the most successful user of pneumatic suspension. On the road its cars do not give an immediate impression of being better sprung than a normal large car, and small irregularities in the road surface can be felt. It is when they are driven on bumpy roads that the superiority of the suspension becomes noticeable: the ride remains virtually the same as it is on smooth roads. The advantage it provides is, in fact, springing that is the same under all conditions. Borgward also uses air springing on its 2½ litre model, but to achieve automatic levelling more than to provide softer springing.

An air springing system that might cost no more than a steel independent rear suspension system has recently been announced by Armstrong Patents, the makers of shock absorbers. It is said that this would cost only £10 more than steel springs on the rear wheels. This unit is completely self-contained, needing no compressor to supply it with air, which saves much of the cost of other air springing systems, and efficient sealing means that the unit should never need more air added. Movement of the wheel compresses air, which acts as the spring, and displaces a piston in a cylinder full of oil as in an ordinary hydraulic shock-absorber—to "damp" the movement of the vehicle. Levelling is simply provided by making the movement of the wheel over bumps operate a small oil pump, which comes into use whenever the piston moves from its central position, and passes oil from one side of it to the other until it is centralised again. To provide levelling alone, Armstrong uses the same principle with ordinary shock absorbers and springs. The extra cost of this device would be about £3 if it was used on the rear wheels only.

Another simple way of compensating for the effect of increase in the load carried is used by Renault; its "Aerostable" system consists of a bag filled with air at atmospheric pressure that is used to supplement the ordinary springs on the rear wheels. When the car is empty the bag is not compressed, but it is increasingly compressed as the load grows heavier. There is therefore little change in the height of the car, and the springing gets stiffer the more the wheel tries to rise. This allows softer springs than normal to be used; the ride is smooth over small bumps, but the progressive stiffening of the springs means that larger bumps are felt though the springs cannot bottom.

The ride is not very different from that provided by the rubber springing system that BMC uses on its baby cars, which seems one of the more attractive types of progressive-rate springing for the producer of cheap cars. It costs rather more than a conventional suspension system; though the rubber spring itself is cheaper than steel spring, and can do with a simpler damper because rubber is self-damping. Even the Armstrong air spring seems a little expensive for small cars at £10 extra for two wheels; but in the medium-sized class there seems no reason why makers should not be prepared to pay £10 for better springing since they are already prepared to pay £18 for disc brakes. In America, however, cost seems now to be the dominant motive in the design of suspensions: the next change may be the single-leaf half-elliptic spring for a normal rear axle.

this year from the government, plus the unspecified millions received from the Ministry of Defence for nuclear weapons? The public image of the AEA is that of a vast research organisation; in fact it appears to devote only about a third of its effort to research and rather to be a large-scale production network. But this can only be deduced and surmised—just as the public must make what it can of the statement that the AEA's trading income last year was "nearly" £21 million, "about half" of which represented the sale of fuel elements, "approximately" £5 million the sale of electricity and "over" £1.3 million the sale of isotopes (leaving probably £5 million for the sale of graphite). Does no member of the authority ever glance at the annual budget of the Atomic Energy Commission in the United States which sub-divides expenditure under a large number of heads, including weapons ($495 million in the current financial year plus $27½ million for plant)? The same practice is followed in France by the atomic energy commission. The elaborate lengths to which the AEA in this country goes to conceal the scale of its activities merely feed existing suspicions that the public has been sold an atomic pig in a poke.

LUBRICATING OIL

Enter Veedol

TIDEWATER'S decision to enter the British market for lubricating oil with "Veedol" comes after the American independent, Ashland, has had to admit defeat in its efforts to get national distribution in Britain for its oil—and has reported its troubles to the Monopolies Commission, which is now inquiring into the workings of the "solus site" petrol station system. Of the 32,000 garages in Britain, about 2,500 are owned by the oil companies and 3,000 are mortgaged to them; in these no lubricating oil other than that of the company concerned can be sold. Of the rest, more than 95 per cent are tied to one oil company, and though most are able to sell other oils, they are usually prevented by the terms of their contracts from exhibiting other oils in the forecourt or the lubricating bay—in return for which they get bigger discounts from their main supplier. Of the 13,000 Shell-Mex and BP garages, 25 per cent sell no other lubricating oils than those companies produce; and the rest agree that these will form at least 75 per cent of their total lube sales. Such agreements, with the retailers in their present strong bargaining position, may not be easy to police.

In this sticky market for an independent, Castrol claims that it still gets roughly half the country's sales, which must account for nearly all the 25 per cent that Shell-Mex and BP allows garages marketing its products to sell. But it is much easier for an established company such as Castrol to go on selling its oil even when many garages have been induced to stop showing it, than it is for a newcomer to gain a significant share of the market under these conditions. Though Tidewater seems prepared to spend heavily on advertising and promotion—free oil changes, for example—to get its name known and its oil used, such methods are expensive, and could hardly be justified by sales if few garages stock it. But Tidewater reports that the initial response from the trade to their announcement has been encouraging, and it expects to get a large number of outlets soon; bigger discounts for retailers are one method it is employing to lure them to its sign.

Margins on lubricating oil are rather better than on most oil products now, and sales rose by nearly 10 per cent last year to reach 325,000 tons; but one may doubt whether Tidewater would find that sales could be adequate to justify a heavy investment in marketing Veedol. To enter the British gasoline market as a major would involve a far heavier investment, but might be rather more relevant to Tidewater's problems—especially after its new Danish refinery comes into operation. Selling and advertising oil will at least make the name of Veedol known to the British public.

OTHER AIRLINES' TROUBLES

SAS in Stormy Weather

BY A CORRESPONDENT IN SWEDEN

OUT of the dirty Scandinavian skies came last week a clap of lightning which flung Mr A. Rusck out of his pilot seat of running Scandinavian Airlines System, jointly owned by Norway, Denmark and Sweden, and incidentally robbed the International Air Transport Association of this year's chairman. No reason has been given by the executive committee meeting in Oslo for tossing out Mr. Rusck from his top inter-Scandinavian job in full view of the northern tax payers. Presumably it is less a case of mismanagement than a reversion by the committee to the ancient Norse custom of human sacrifice to placate the angry gods of economics.

SAS is in trouble, like any modest-sized airline with expensive jet equipment operated below the break-even point. But in addition to this common malaise, SAS is suffering from acute disorders brought about by the board's decision to engage the airline in joint ventures with local airlines in Mexico and Thailand. By these ventures the board hoped that SAS would get bridgeheads on the South American and Far Eastern markets, only to learn that such manœuvres cost high; by the last count the corporation stands to lose £2.8 million.

SAS is also in hot water with its new air terminal in Copenhagen incorporating a luxury hotel, the cost of which rose while building from the estimated £1.7 million to £3.0 million. The airline has also had to treble its terminal facilities at Arlanda, the new airport built amidst Viking graves in the woods some 50 miles north of Stockholm. When completed after 14 years of building and at costs in excess of £17 million, the Swedish air transport authority found to its dismay that the 11,000 feet runways were used only for landing practice by shrimp-like Piper Cubs. The Airlines, including SAS, stayed away because they disliked the awkward location. To appease the angry authority SAS has had to agree to move to the new field and undertake to fly direct from Arlanda to New York with near-empty DC8's.

Although SAS's business rose by 15 per cent during the last operating year the corporation lost £5.8 million flying some 270 million ton-miles. Paying for seven new DC8's and 16 Caravelles on top of these other liabilities has absorbed its share capital, and in recent weeks the Scandinavian parliaments have voted £14.5 million to keep the Corporation airborne. The private stockholders have been less eager to contribute to the prestige of maintaining an international airline The brief of the new managing director, Mr C. Nicolin, is simply to slash away at costs by some unspecified means and to fire 10 to 15 per cent of SAS's 14,600 employees. Having performed this emergency surgery Mr Nicolin will go back to his regular job as managing director of ASEA, the electrical group. A more patient and enduring person will then have to step in to nurse the convalescent through the anxious years ahead.

Until SAS is back on its feet financially, there can be no hope of resuming negotiations with the Dutch airline KLM about possible sharing of routes and equipment. But a working arrangement of this kind may be the means by which a medium-sized airline like SAS can stay alive in the jet age.

BARLEY

Dumping Dammed

LAST week's announcement by the President of the Board of Trade that a case had been made out for restricting imports of cheap barley and that he was about to make a further statement put the market in a dither. If he proposed to use his powers under the anti-dumping act to place an additional levy on these imports futures should fall. Bargains are struck on a cif basis and buyers are responsible for import duties payable on delivery. If duties here increased, the fixed discount on Russian barley would be too small. If, on the other hand, Mr Maudling took the course of action that he did in fact adopt at the end of last week, the market could be expected to rise. Because of the uncertainty, the barley futures market in London was therefore suspended from Wednesday to the end of last week.

Mr Maudling has persuaded Russia to stop delivering barley to Britain at less than £20 a ton, including import duty of ten per cent. This figure has the dual merit of being easily remembered and just about in line with barley prices at the start of last season. If Australia and France resume their sales, a minimum price will also be fixed with them. Mr Maudling's course of action may have been dictated more by the cumbersome procedure laid down in anti-dumping legislation, which his department is reviewing, than by choice. The Board of Trade never invokes the Act where persuasion will achieve the same ends. But the £20 a ton "target" did, however, come to the aid of some buyers who apparently thought that any protectionist move would raise the price of barley futures. Barley for delivery in November has now risen from £16 to £19½ a ton. Mr Maudling's target is comfortably within reach, although his edict does not apparently apply to reshipments of Russian barley.

In part that rise is a reflection of world conditions. China is absorbing large quantities of last season's crop, and the prospect for the new crop in North America is bleak. Drought threatens severe damage to crops in some areas. Manitoba has been declared a disaster area, and the United States has withdrawn export subsidies on barley and oats and is extending its price support scheme to lower grades of barley to ensure adequate supplies of feeding stuffs. Prospects for crops in the southern hemisphere have also deteriorated, but the recent rain and cooler weather should improve yields in Britain and western Europe.

SHORTER NOTES

Starways, an independent airline that already operates some scheduled services in Britain, is the first company to apply for licences to operate hovercraft ferry services; it hopes to start 19 around the British coast and across the Channel and the Irish Sea. It states that it will initially spend more than £500,000 on hovercraft for these services, which it hopes to start in about two years. It is waiting to see how the various types now under development perform before deciding which to buy; the sidewall type would be suitable for some services but not all, because it cannot operate across the mudbanks that are found in some of the estuaries over which services are planned. The company believes that hovercraft will prove more economic than aircraft over these relatively short routes.

★

Relocation of the motor industry begins to backfire: Wilmot Breeden announces that it is closing its car accessory factory at Bridgwater to concentrate its production for the motor industry in Birmingham.

★

Egypt has agreed to order capital goods worth £5 million from Britain in the next twelve months. Britain will take 25,000 bales of cotton valued at £2½ million in return. Egyptian exports of cotton have fallen sharply this season, particularly to non-communist countries; exports to Britain dropped from 28,000 to 6,000 bales in the season to June 28th. It was earlier hoped that Egypt would agree to take £10 million of British capital goods.

★

ICI has cut the price of Terylene staple fibres by 10d. a lb., a reduction of just over 8 per cent for best-selling varieties. A larger reduction has been made in 1½ denier fibre, whose price has been cut from 10s. 6d. to 9s. 2d. a lb., the same price as standard varieties.

Despite opposition led by the Industrial and General Trust a one-for-two scrip issue by Illingworth Morris in the form of non-voting "A" shares was approved at an extraordinary meeting this week. Shareholders owning 368,000 shares voted against the proposal, which was described as a "retrograde and wrong step."

★

United Breweries, which already holds 10 per cent of the ordinary capital of Catterall and Swarbricks Brewery, Blackpool, is bidding for the preference capital and the rest of the ordinary capital of that company. The offer of eight of United's ordinary shares plus 56s. in cash for every one of Catterall's ordinary shares values the latter at about 148s. Twenty-seven 6 per cent £1 cumulative preference shares in United are offered for every twenty 7 per cent £1 preference shares in Catterall.

★

South Africa has clarified its exchange controls. Overseas investors who use their blocked rands to purchase government, municipal and utility stocks with five or more years to run, will be able to take their money out of South Africa when the bonds mature.

★

Sales of domestic appliances by the area electricity boards last May can now be compared with those of May 1960, the first month after the hire purchase regulations had been imposed. Seventeen per cent fewer refrigerators were sold, explaining the present troubles of the industry, but washing machine sales were the same in numbers, confirming impressions that this industry has scarcely recovered from the blow: in value, however, its sales will have been higher because more washing machines are now of the automatic type. Sales of electric cookers were seven per cent higher, suggesting that they are continuing to gain ground at the expense of gas.

COMPANY MEETINGS

RECORD STEEL OUTPUT AT CONSETT

NEW PLANT BRINGS GREATER WORKING ECONOMY

LORD RIDLEY'S ENCOURAGING REPORT

The Annual General Meeting of Consett Iron Co. Limited will be held on August 1, 1961, in Newcastle.

The following is the Statement by the chairman, Lord Ridley, circulated with the Report and Accounts for the year ended April 1, 1961:

I said last year that the prospects at least for the first six months of the coming financial year were very good. In fact all departments worked at full capacity until the end of January, when there was some slackening in demand throughout the industry. At the end of the year we still had a full order book for plates and for light sections and strip, which are rolled in our Jarrow Mills, but for the last two months we had not been able to sell as high a tonnage of slabs, blooms and billets for further processing by other firms in the industry. Nevertheless, in the financial year we produced 979,000 ingot tons of steel. This is a record for the company, and compares with the last record output of 966,000 tons in the financial year ended September 1957.

OUTLOOK

At the time of writing, it is extremely difficult to forecast the demand for the next 12 months. We expect to sell more plates than last year, certainly for the next few months and probably to the end of the financial year, but we do not expect yet to be able to work the new mill to full capacity. There seems to be a revival in demand from consumer goods industries and motor manufacturers which should have an indirect effect on the sales of our other products, and there are some prospects of sales abroad, although at prices which are not very remunerative. Demand for our light re-rolled products from Jarrow is still good.

On the whole it looks as if for the coming year we shall be working a little below our maximum ingot capacity, but we shall have the benefit of a reduction in the cost of rolling plates, due to our new mill, and we shall be more competitive in sales of plates since this mill can roll to a high standard of accuracy and includes a wide range of finishing processes.

EFFECT OF STOCK FLUCTUATIONS

One of the difficulties of the steel industry, as of other industries, is that when there is a strong demand for steel both consumers and stockholders tend to increase their stocks, and conversely when trade is slack these stocks are reduced. This happened to a very striking degree in the recession in 1958-9 when the published figure for stocks of finished steel was reduced by over one million tons in under two years, and again in 1960 when stocks were increased by nearly one million tons.

It is very natural that in a time of shortage of steel and of high demand consumers should wish to be sure of supplies of steel and so to increase their stocks, but the resulting fluctuations in demand are very damaging to the steel industry, since a steady level of production throughout would be far more economical. I hope that the industry will be able to work out some arrangements with customers to achieve this.

NEW PLATE MILL RUNNING WELL

The new plate mill started rolling in September 1960; at that time very little of the finishing plant was completed. The output has increased gradually and in March the mill was put on to three shifts. The whole of the finishing equipment was not due for completion till the end of May, and for that reason and also because of the inevitable delays to production associated with starting up new plant, the weekly output by the end of the financial year had not reached the planned amount, though it had been steadily increasing. The quality of the product was however excellent, and by the end of March, both the yield and the operating cost were approaching the standards expected. There is no doubt that the mill and its associated plant is capable of the performance for which it was planned. One of our old plate mills was taken out of commission some months ago but the other has been kept working to supplement output until all the finishing plant in the new mill is complete.

The mill was formally opened on April 26, 1961, by Lord Mills, H.M. Paymaster General, on which occasion many of our customers and many representatives of other steel firms were present and were able to see the mill in operation. We are greatly indebted to Lord Mills for coming to help us in that way.

NEW STEEL PLANT PROGRESSING

Progress on the new steel plant continues satisfactorily, though our engineers, in conjunction with our consultants, took longer with the design of the pneumatic vessels and other necessary plant than we had expected, largely because the vessels for both types of plant are to be larger than any so far made in this country. As a result of this design work, however, there are indications that the cost of operating may be lower than originally expected.

As I said last year, one of our three blast furnaces was blown out for relining last April. It was blown in again in August after the works' holiday. Another one was taken out in April this year for relining.

REDUCED TRADING MARGINS

Although the ingot output was the highest achieved since 1957, and in spite of technical improvements and additions to plant leading to reduced costs, the gross trading margin this year was not so high as for 1957. This is accounted for by the fact that between 1957 and 1961 the Iron and Steel Board have made a gradual reduction in the maximum prices that the industry is allowed by law to charge for scheduled products, while at the same time there have been increases in wages, in the costs of coal and of other supplies, and in rates. Although these have been to some extent offset by reductions in the effective cost of ore and scrap, the trading surplus that steel companies can earn has been reduced.

Further increases of costs will result from the increase in coal prices in October 1960, the tax on oil introduced in the 1961 budget, with the possible payroll tax and the proposed abolition of industrial derating in 1963. All these together will have a noticeable effect on the cost of steel and consequentially on the resources that can be accumulated in the industry to meet the cost of replacement of plant, while the increase of profits tax in the 1961 Finance Bill will further reduce the sums available for this purpose. At the same time both the size and cost of new plant are increasing; the Iron and Steel Board should therefore see the necessity of allowing steel companies to earn enough to finance their very large programmes for replacement and development.

In the steel industry prices have been reduced continually since 1957. If the other basic industries, upon which steel depends, could similarly reduce their prices, and if additional taxation were not to be imposed, it would still be possible that relatively low prices could assist the export both of steel and of products manufactured from it.

RESULTS

The trading surplus before depreciation for this year is £5,008,659 compared to £3,906,625 last year. This is a satisfactory increase which reflects the improvement in trading conditions and a gradual increase in the economy of operation of the plant. Depreciation is higher due to the fact that the new mill became operative before the end of the year, and interest is higher at £951,492 compared to £420,256 last year, on account of increased borrowing to meet the cost of construction of new plant. The net income before tax comes to £2,473,203 as against £1,997,158 last year. Taxation would have been £1,300,000 but for investment allowances of £666,250 on account of expenditure on new plant. Profit after tax is therefore £1,839,453 compared to £1,693,990 last year.

Last year your directors felt that, in view of the large development programme, it would be prudent to recommend the same dividend as for earlier years.

I said at the last annual meeting that I hoped that a favourable year's trading, combined with successful working in the new plate mill for the last few months of the year, would enable your directors to consider recommending an increase in dividend.

Although, as I have already said, trade was good for most of the year, demand for steel fell off a little in the last few months and the prospects for the present year are a little uncertain. The new plate mill, which is far the largest item in the present capital expenditure programme, is now working and in the last months of the year has proved itself capable of making a useful contribution to the earnings of the company, but there is still the need to conserve financial resources in view of the large expenditure which the new steel plant will need. Nevertheless your directors consider that a stage in the development programme has now been reached at which they are fully justified in recommending an increased dividend of 9¼ per cent, compared to the 8¾ per cent which has been paid since 1957.

Last year we made some changes in the form in which the accounts were presented; this year we have continued this process so that we now show both the profit and loss account and the balance sheet under simple headings followed by notes which give as much detail as possible. I hope that shareholders will find these both easier to read and more informative than the older form of accounts. We have also included statistics covering the last ten years of the Company's operations which should be of interest to shareholders. It is our intention to continue this form of presentation of accounts for future years.

The Capital Reserves and General Revenue Reserves have been combined in a single General Reserve, leaving the unappropriated profit shown separately as before. This simplifies the Balance Sheet and recognises the fact that most of the Revenue Reserves as well as the Capital Reserves are now invested in new plant.

We have transferred £511,310 from this General Reserve to Deferred Liabilities under the heading of Future Taxation; this adjustment, which relates to other years, has the effect that the amount set aside for future taxation now represents the estimated tax (including the additional profits tax imposed by the 1961 Finance Bill) on the difference between the written-down value of the plant as shown in the Balance Sheet and its written-down value for tax purposes.

The company suffered a great loss on October 1, 1960, by the death of Sir Charles Bruce-Gardner, who had been a Director since 1946. Due to his lifelong experience in the steel industry and his wise judgment he made a very valuable contribution over those years to the direction of the company.

Mr E. J. Hunter was appointed to the Board on November 1, 1960; this appointment will come up for confirmation at the Annual General Meeting. I am sure that his knowledge and experience of industry will be a very great help to us.

THANKS TO STAFF

The staff and workmen of the company deserve our thanks for the way they have worked during the year, sometimes under difficult conditions. A blast furnace had to be relined and blown in, and there was a great deal of extra work involved in getting the new mill started and in the planning of the new steel plant.

The changes involved in the closing of the old plate mill and the starting up of the new mill have also had their effect on the shifts worked by a large number of men employed.

All this has been satisfactorily accomplished and shows that the company is well served by good management and loyal workers.

SENA SUGAR ESTATES

LOWER PRODUCTION AND PROFIT

The forty-first annual general meeting of Sena Sugar Estates, Limited, will be held on July 20th at Winchester House, Old Broad Street, London, E.C.

The following are extracts from the circulated statement by the Chairman, Lieutenant Colonel C. B. R. Hornung, DL, for the year ended December 31, 1960:

The result of our operations in 1960 shows a considerable reduction in the profit on trading due to a reduction in the sugar output and an increase in cost of production. I warned you last year that the persistence of dry climatic conditions would have an adverse effect on the sugar output with the result that the factories produced 102,862 tons sugar compared to 114,087 tons in the previous year. This reduction was not due to any deterioration in the quality of the cane crushed, but to the reduced tonnage per acre due to drought.

Our Lisbon Subsidiary, Sidul, refined rather more sugar than previously which was brought about by the increased consumption in Portugal. The Commission, which has to report on the reorganisation of the refining industry and the closure of the many small inefficient refineries, has not yet made its report.

Due to the reduced profit on trading, the tax charge for the Group is lower at £278,295 compared to £389,907. I pointed out last year that in future it would be necessary to increase the annual charge for depreciation and the charge in the Parent Company's Accounts is now £300,000 compared to £200,000. On the other hand, it is proposed that the amount of £100,000 for additional depreciation appropriated from profits in previous years should not be repeated. Thus the total amount written off the Fixed Assets remains the same.

RESULT OF OPERATIONS

After making provision for all charges and the retention of £14,472 by our Subsidiary, we are left with a profit of £361,402 to which must be added £191,647 brought forward from the previous year and £54,000 for taxation provision no longer required, making a total of £607,049 available for appropriation compared to £850,415.

The Preference Dividend for the year absorbs £17,916 and the interim Ordinary Dividend of 2½ per cent free of tax paid in February, 1961, required £76,781. We now propose that the final dividend on the Ordinary Stock should be 6½ per cent free from tax and thus the total dividend for the year is 9 per cent free of tax. We further propose that £100,000 should be transferred to General Reserve and £212,721 remains to carry forward.

IRRIGATION SCHEME FORESHADOWED

Having dealt with the past year, I can now turn to the future. Both Luabo and Marromeu factories started crushing on May 1st. It is still too early to make a reliable forecast of sugar production for the year 1961. A preliminary estimate of tonnage of cane available for crushing indicates rather more than in the previous year, but the tonnage of sugar will depend on the quality of the juice which cannot be foreseen. Late rains depressed the sugar content of the cane at the start of the crop.

We are actively studying the problem of installing an irrigation system to ensure the plantations against the risk of droughts such as we have experienced of late. This is a very large-scale problem indeed, but the benefits to be derived could be very substantial if thereby we could ensure a sufficiency of water at the right time. Before embarking on the very considerable expenditure entailed, we are obtaining expert advice and must continue with our experiments. Modifications of the Luabo factory mills will be completed in time for Crop 1962, enabling the factory to deal with a larger crop of cane when this becomes available.

COMPAGNIE MARITIME DES CHARGEURS RÉUNIS

(Paris)

The General Meeting of the Compagnie Maritime des Chargeurs Réunis was held on June 20, 1961, M. Francis C. Fabre presiding, and approved the resolutions proposed by the Board.

OPERATIONS

The Report of the Board of Directors gives information on the different services operated by the Company: Europe/South America, Europe/West Coast of Africa, Europe/South Africa, Europe/Far East, USA/West Coast of Africa, Far East/West Coast of Africa, Round the World (USA/Far East/Europe/USA). Taking all these lines together, there were in 1960 222 voyages, 16,995 passengers were carried and cargo amounted to 1,472,900 tons, which was a volume of business substantially equal to that of 1959.

FLEET

On January 1, 1961, the Company was operating 49 ships representing a tonnage of 314,427 gross tons of which nine ships (63,301 tons) were on bare-boat charter. Five new ships entered the fleet in 1960; one ship has been sold. A tanker of 51,500 tons is to be delivered to the Company at the end of the year. At the beginning of 1962 an ore carrier of 28,700 tons, ordered by a subsidiary company, will be delivered.

UAT

The business of l'Union Aéromaritime de Transport (UAT/Aéromaritime), the airline subsidiary of the company, has again been increased on the routes that it serves (Central Africa, South Africa, Rhodesia and Libya). The number of passenger/Km exceeded the 1959 figure of 425,544,000 and reached 503,992,000. The fleet in operation on January 1, 1961, included two four-jet DC8s, 10 four-engined DC6s, four DC4s, seven Herons, making a total of 23 aircraft.

PROFIT AND DIVIDEND

The net profit for the year 1960 was raised to NF 4,800,522 and it has been decided to distribute a net dividend of NF 3.40 per share, equal to last year.

FERRANTI LTD

The Fifty-sixth Annual General Meeting of Ferranti Ltd. will be held on July 28 at 68/71 Newman Street, London W.1.

The following are extracts from the review by the chairman Sir VINCENT DE FERRANTI, M.C., LL.D., M.I.E.E., which has been circulated with the report and accounts for the year ended March 31, 1961:—

PROFIT AND LOSS ACCOUNT

The Consolidated profit for the year amounts to £3,401,023 as compared with £4,014,890 for the year to 31st March, 1960. After provision for tax the net profit is £1,661,023 against £2,123,390 last year.

Profits brought forward at 31st March, 1960, were £541,882 and, after providing £85,750 for Preference Dividends, we have transferred to General Reserve Account £1,300,000. A Dividend of 6 per cent on the Ordinary Stock (£73,500 after deduction of tax at 7s. 9d.) is recommended, leaving undistributed profits carried forward of £603,655.

BALANCE SHEET

Net Assets as shown by the Consolidated Balance Sheet, after allowing for Deferred Liabilities and Provisions (£2,186,916) amount to £11,670,994, an increase of £1,502,803 on last year's figures, and are represented by the ISSUED CAPITAL of £4,500,000 and RESERVES AND SURPLUS of £7,170,994.

FIXED ASSETS, less depreciation, at £6,411,265 show an increase of £835,491, representing mainly the modernisation and extension of the existing plants called for by the continued expansion of output, expenditure on the new factory at Long Island, New York, and new laboratories at Edinburgh and Bracknell, and the cost of equipping the initial stages of the new London Computer Centre.

The Consolidated input, output and unexecuted orders have all increased, but the profit is below the peak figure for last year, mainly due to the depressed state of the markets in North America. **In Great Britain, also, expenditure on research and development has increased in order to maintain our position in the forefront of the fields of computers and electronics, whilst profit margins have decreased in the case of the various types of equipment which we make for the electricity supply industry.**

DIGITAL COMPUTERS

One branch of our activities making a substantial contribution towards the increased input is the sales of **Electronic Digital Computers,** in which the Orion fully transistorised Computer accounts for a large proportion of the orders taken during the year. These orders have come in from Insurance Companies, Banks, and other Institutions, and the factory at West Gorton has been completely reorganised and extended to deal with the increased business. A pilot model of the high-speed Atlas Computer, designed in collaboration with Professor Kilburn and his staff at Manchester University, is now working, and shows every promise of fulfilling the predictions made last year for its performance.

The Argus Computer, developed originally in connection with Guided Missile Systems, has also proved suitable for a wide range of major Industrial Process Control Applications, and orders have been received from Imperial Chemical Industries Ltd. for a large chemical plant control installation, and from Babcock and Wilcox Ltd. for the push-button start-up and shut-down of a large boiler installation at the Central Electricity Generating Board's West Thurrock Power Station. Both these computer control installations are milestones in technological progress and are the first of their kind in Europe.

The new Computer Centre in London, referred to last year, is now in operation, and *has already become a scene of great activity.* The Pegasus 2 and Sirius Computers have been installed.

POWER TRANSFORMERS

The total sales input of **Power Transformers** has also increased, and the input from the home market has surpassed all previous figures. Deliveries overseas include the completion of the original contract for the supply of transformers for the Kariba Project in Northern Rhodesia, and of the contract for the New York Power Authority's Niagara Scheme in the U.S.A.; for the five years ended 31st March, 1961, our export output of transformers has averaged 28 per cent. of our total transformer output.

An event of considerable importance in the transformer field is the recent judgment of the Restrictive Trade Practices Court against the Associated Transformer Manufacturers' Price Agreement. The view of the Court, that discontinuation of this Agreement should not lead to a depression of profit margins below an economic level, is open to considerable doubt, but it is too early as yet for the full effects to become apparent.

OTHER PRODUCTS

Downward pressure upon the prices of **Electricity Meters** continues, and in line with the national trend for these devices there has been a small reduction in our sales input from overseas; nevertheless, our export output of meters over the last five years (including the year under review) has averaged 57 per cent of our total meter output during that period. This fall has been more than offset by a considerable rise in home business, so that the total output for the year has exceeded all previous figures. A large programme has been put in hand for extending the department and installing more special-purpose machinery, as part of a continuous effort to lower manufacturing costs, and five new special-type meters are being brought into production.

INSTRUMENTATION FIELD

In the field of **Instrumentation,** the volume of business continues to increase slowly. Orders have been received for the Transient Fault Locator for high-voltage transmission lines, mentioned last year, and new developments introduced since then include an Electronic Summator for metering bulk electricity supplies, which has been favourably received by the Supply Authorities.

Work continues on the development of **Semi-Conductor Devices,** and the installation of automatic machinery has lowered the production costs of our Silicon Diodes and Rectifiers to levels at which they can be sold in markets that, up till now, have been met by cheaper forms of rectification. We have maintained our lead in the design and production of **T. R. Cells** and other radar duplexing components, and research into high-voltage thermionic cathodes has enabled us to extend our range of **Ceramic Diodes** to cover higher voltages and currents.

AIRCRAFT EQUIPMENT

The sales input for **Aircraft Navigation and Control Equipment** shows a substantial increase. Research and development work on Stabilised Inertial Platforms continues on a considerable scale, and very great interest has been shown in the design of a miniature platform of exceptional promise. Trials of the Flight Director Systems for the control of helicopters are expected to commence during the forthcoming year.

Our **Airpass I Radar** and Fire Control System has been in squadron service with the Royal Air Force for most of the past year, and a production order for the later mark has been received.

The year under review has been one of maximum production activity on the Bloodhound **I Guided Missile System,** and the order for Sweden has been delivered and installed; that for Australia will be completed during 1961. Development is proceeding on a highly sophisticated, fully air transportable, and longer range version, known as Bloodhound II.

The volume both of output and of development work on **Fuzes** has increased substantially. Much of the latter is based on established fuze technique, but, in addition, it includes specialised development which is required for safety and arming mechanisms for guided weapons.

RESEARCH AND DEVELOPMENT

As mentioned earlier, the scale of our **Research and Development** work continues to increase, particularly in connection with computers and electronics. A new laboratory block has been built at Silverknowes, Edinburgh, and another is under construction at Bracknell in Berkshire, the first part of which should be ready for occupation by the Autumn of 1961. **This emphasises the importance of retaining substantial funds in the business.**

In Canada, Ferranti-Packard Electric Limited still faces difficult trading conditions, but cost reductions continue to be made by improving designs and manufacturing methods, and many new product developments are under way, particularly of an electronic character, which are finding a market in the U.S.A. as well as in Canada.

FERRANTI

LONDON TIN CORPORATION

NEED FOR FRESH THINKING ON THE TIN POSITION

SIR DOUGLAS WARING'S STATEMENT

The Thirty-fifth Annual General Meeting of London Tin Corporation Limited will be held on July 14th at The Chartered Insurance Institute, 20, Aldermanbury, London, E.C.

The following is an extract from the statement by Sir Douglas Waring, CBE (the chairman), which has been circulated to Shareholders.

The Corporation's net profit for the year ended March 31, 1961, after providing for taxation, was £1,006,369 compared with £598,943 for the previous year.

The dividends paid (35 per cent against 25 per cent) took £775,660, leaving a balance of £230,709, which raised the balance on profit and loss account to £633,804. The sum of £300,000 has been transferred to General Reserve leaving £333,804 to be carried forward.

The substantial increase in our income was due in the main to the higher dividends received during the year from our tin investments, as a result of increases in exports allowed by the International Tin Council.

CAPITALISATION PROPOSALS

The capital Reserve now stands at £200,000 and the General Reserve at £1,500,000. The Directors propose that the whole of the Capital Reserve and part of the General Reserve should be capitalised and that shareholders should receive one new fully paid ordinary share for every five ordinary shares held.

INVESTMENT PORTFOLIO

The investments held by the Corporation and its wholly-owned subsidiaries, consist, to the extent of 79.2 per cent of book cost, in shares in the leading tin mining companies.

The remainder of the portfolio comprises equity holdings in Commercial and Industrial Undertakings, other minerals including Oil, Public Utilities and Trust Companies. This forms a useful counterbalance to the fluctuations which are inevitably connected with the Tin Mining Industry and it can be expanded as and when suitable opportunities occur.

The market value of the Investments shows a considerable increase as against the previous year.

THE TIN POSITION

Free world consumption of Tin in 1960 was the highest ever recorded. The latest revised figures issued by The International Tin Council show a total for that year of 169,000 tons of metal excluding the Sino-Soviet countries. A change is apparent in the pattern of world consumption. Demand has increased from the Continent of Europe and from Japan reflecting the industrial upsurge which is gaining momentum in the countries most severely devastated in the World War of 1939 to 1945, whilst the gradual emergence since that time of some of the lesser developed countries is now creating a new demand for Tin which must increase as they progress, especially because by far the largest end-use for tin is tinplate.

Free world mine production in 1960 was reported at 135,000 tons of metal. Exports from the main producing countries which are signatories to the International Tin Agreement, and the stocks they were allowed to build up, were controlled for the first three quarters of the year. Thereafter all controls were lifted. Since then, production, particularly in Bolivia and Indonesia, has not increased, and supplies from the Republic of Congo have been interrupted. Meanwhile demand for Tin has continued at a high rate.

The price of Cash Tin in London, which averaged £796 per ton in 1960 had reached £830 by early April, 1961. In June it reached £880 per ton, the price at which the Buffer Stock Manager of the International Tin Council was bound to sell, and the whole of the Buffer Stock of Tin was quickly exhausted. Since then the price has advanced to a substantially higher level, and demand continues strong.

At the time of the preparation of this statement, the International Tin Council is in session, and no doubt the whole position of estimated future production and consumption will be under review. In particular the inability of some producing countries to increase exports during a period of nine months free from Control must call for close attention, and it is pertinent to raise the question as to whether the price range agreed by the Council in the past is, as a whole, a realistic one in the light of present day conditions. Exactly a year ago this matter was discussed exhaustively by producer and consumer delegations at the United Nations Conference on Tin in New York and the delegation for Bolivia, which pre-war was for many years the second largest producer of Tin in the World, made it clear that the existing price range of £730 to £880 a ton was uneconomic to the mining industry of that country. So long as world production exceeded demand it was understandable that consumer delegations should remain unresponsive even if they were sympathetic, but fresh thinking now seems necessary and the problem should be re-examined on a long term basis especially because, in spite of intensive prospecting, no new large fields of tin have been located in the free-world as we know it for the past thirty years or more.

THE UBIQUITOUS TIN CAN

In this context it is of course relevant to raise the question of substitution of other materials in place of Tin if the price of the metal were to rise too steeply. As I have already mentioned, the main outlet for tin is tinplate. The total quantity produced in 1960 was a record of 8,640,000 long tons, which is an increase of 1½ million tons over the figure for 1959. Most of it is used in the manufacture of the ubiquitous tin can. The governing factor in the cost of materials used in the manufacture of tinplate is the price of steel and not the price of tin. The weight of a standard basis box of electrolytic tinplate in the UK is 108 lbs. Of this weight 107½ lbs. is steel and ½ lb. is tin. From this quantity of tinplate about 500 cans of a popular size are made by the can manufacturers. With Tin at £880 per ton, namely the ceiling of the price range under the 1954 International Tin Agreement, the cost of the tin in a basis box is 3s. 11½d. which is equivalent to 0.095 pence per can. A rise in the price of tin by £100 above the ceiling would account for an increase in the cost of the use of this material by about one hundredth of a penny per can. Therefore, whilst accepting the fact that there is very keen competition over various forms of packaging which makes the can manufacturer alive to every aspect of his costs, I hope that the figures which I have quoted might tend to dispose of any argument that the price of the tin element is the deciding factor in the cost of the tin container against the cost of some other type of substitute.

I would have thought that a matter of far greater concern was the assurance of future supplies of tin by means of production on a long term basis, and it is probable that too little attention in the past has been paid to this in a practical manner at the level of the International Tin Council. Even in the case of Malaya, which is the world's largest and cheapest producer of Tin, we are continually reminded by spokesmen of the Industry and by Government mining officials that the future must rest in the working of lower grade deposits by large capacity plants. This is a challenge which the Malayan miners will I know readily accept and are capable of meeting, but as the cost of these plants is now in the order of 1½ million pounds sterling per dredge it is necessary to be reasonably assured of a future Tin price range which in the long term will allow for amortisation over the definite limited life of an alluvial property and an economic return on the capital to be provided.

In spite of the probable shortfall in tin supplies this year, I have no doubt that in the long term the producing countries—given fair prices—will, between them, be able to meet all the demands of the consuming countries.

GENERAL: The outlook for Tin in the current year appears to be good, and on that basis our income for the year to March 31, 1962 will probably show an increase over that recorded in the accounts under review. It is however too early in the current year to make any reliable estimate of dividends to be received, and it is not possible to predict financial policy and other considerations affecting the distributions of individual mining companies which constitute our revenue. If no adverse conditions arise, we would hope to be able to maintain the existing rate of dividend on the increased capital proposed.

THE BRITISH THERMOSTAT COMPANY LIMITED

RECORD GROUP RESULTS

The thirty-third annual general meeting of The British Thermostat Company Limited was held on July 8 at Sunbury-on-Thames, Middlesex, Mr J. E. Sherlock (chairman and managing director) presiding.

The following is an extract from his circulated statement:

The profit before tax for the financial year ended January 31, 1961, amounted to £1,063,690 and was the highest in the history of the Group.

I am pleased to report that the re-organisation of Teddington Aircraft Controls Ltd., our largest subsidiary, has resulted in increased efficiency, turnover and profit. In my last report I mentioned that efforts were being made to diversify the production of this subsidiary and good progress is being made in this connection. The Pontardulais Works are now manufacturing stainless steel bellows and components for use in power stations, both nuclear and conventional, and other industrial equipment, and the capacity for this work is being increased.

The results of the subsidiary companies located at Sunbury, although to some extent affected by the credit squeeze and the fall off in the demand for controls for domestic appliances, generally showed an improvement in both home and export sales.

Referring now to our foreign subsidiaries, the Dutch company has made a small loss, and the reward from the French company has declined still further owing to the lifting of import restrictions; and it has been decided not to expand the manufacturing activities of these two subsidiaries until there is a clearer picture of Britain's relationship with the European Common Market.

FUTURE PROSPECTS

It is becoming increasingly difficult to predict future trends and profits. Not only is the whole pattern of trade and industry becoming more complex but action by Governments can seriously affect the profitability of a given sector of industry.

It will be some time before any benefit is reflected in the Teddington Group's Accounts of the efforts of Teddington Autocontrols Ltd., which company was formed during April, 1960, for the purpose of developing and selling new instruments in new fields. We already enjoy a large share of the home market for our present domestic and industrial products, and therefore we must look to the export market for any immediate extra business.

This is an era of full employment, increasing costs, and keener competition at home and abroad. In the circumstances it would be foolish for me to predict an increase in profitability for the current year. However, unless there is a deterioration in trading conditions, I am hopeful that the result for 1961 will not fall far short of the record result for the year under review.

Towards the end of 1960 takeover bid rumours were circulating and on no less than two occasions your Directors categorically denied that any such approach had been made. I can only repeat that no approach whatsoever was made in this connection and one can only assume that the rumours were put around by foolish and unscrupulous people.

The report and accounts were adopted and a final dividend of 9d. per share and a bonus of 4½d. per share, both less tax, making a total distribution of 1s. 4½d. per share against 1s. 0d. per share for the previous year, were approved.

PECHINEY

PARIS

(Electro-Metallurgical and Chemical Products)

The report of the Board of Directors of the Company was presented to the Annual General Meeting in Lyon on May 29th.

In the course of a review of the year 1960, the report pointed out that this year marked a new stage in the growth of the Company. There were important developments in its productive capacity of aluminium; and the regrouping of its sales of chemicals under the name Pechiney-Saint-Gobain had assisted the Company in maintaining its position in this very competitive market.

The turnover before tax rose to NF 963 million, an increase of 22.5 per cent on the 1959 figure; exports at NF 281 million (as compared with 250 million for 1959) represent 30.5 per cent of the total. Expansion has thus proceeded satisfactorily but the advent of the Common Market necessitates a continued effort if the Company is to compete effectively both within the Market and outside it.

The report then reviewed the situation in various aspects of the Company's activities: electricity, aluminium and light alloys, special metals, chemicals, and overseas trade. It also gave a résumé of the progress of various companies in the metallurgical, chemical and nuclear-energy industries in which Pechiney holds an interest.

W. E. NORTON (HOLDINGS) LTD.

The annual general meeting of W. E. Norton (Machine Tools) Ltd, was held on July 10th in London, Mr W. E. Norton (the chairman) presiding.

The following is an extract from his circulated statement:

The results achieved by the Company for the period ended March 31, 1961, reflect the continued progressive growth of the profits of the companies which are now its subsidiaries.

The net group profits (before taxation and Directors' remuneration) for the full year to March 31, 1961, show an increase of 67 per cent over the adjusted comparable profits for the preceding year. These profits have come from a corresponding growth in purchases and sales.

The final dividend of 7½ per cent for the period ended March 31, 1961, compares with the forecast of 6¼ per cent made when the Stock Exchange quotation was obtained for the Company's shares on September 23, 1960. In addition, the Directors anticipate paying an interim dividend of 7½ per cent before December 31, 1961, in respect of the current year ending March 31, 1962.

Current sales continue to be buoyant and our earnings for the first quarter of our current financial year will be substantially in advance of the results achieved during the same period last year.

The report was adopted.

ASSAM FRONTIER TEA

The 73rd annual general meeting of The Assam Frontier Tea Company Limited will be held on August 2nd in London.

The following is an extract from the circulated statement of the chairman, Sir Charles Miles, OBE:

The profit for the year ended December 31, 1960, amounts to £498,726, and after charging Depreciation of £74,000, there is a balance of £424,726, which compares with £302,624 for the year 1959.

Contrary to the experience of some Assam producers, your Company was not affected by the drought, and, with an increasing yield from the young tea areas, the crop was the highest so far secured in the Company's history, the yield from our Assam estates rising from 1,100 lbs. to 1,204 lbs. per acre. Sales proceeds increased by over £230,000 but against this there was a rise of approximately £100,000 in upkeep expenditure, largely due to the extra crop harvested.

We recommend the payment of a final dividend of 7 per cent on the Preferred Stock, making 10 per cent for the year, and a dividend of 25 per cent on the Ordinary Stock.

With regard to the current year, our crop to the middle of June is 1,279,920 lbs., a decrease of 224,400 lbs. when compared with the same period last year. During the latter part of May and early in June the weather was unusually cold and wet, and growth was checked at a time when the quality teas of the year are made. Reports on our early manufacture, however, are satisfactory.

LONDON SUMATRA PLANTATIONS

MR F. W. HARPER'S REVIEW

The Annual General Meeting of London Sumatra Plantations Ltd., will be held on July 31st at 19, Fenchurch Street, London, E.C.

The following is an extract from the statement by Mr F. W. Harper, the chairman, circulated with the report and accounts for the year ended March 31, 1961:

During the period covered by the sterling accounts now presented the majority of the plantation companies in the Group received remittances based on their Rupiah currency profits for the Indonesian tax year 1957. These constituted the largest component of the Group's sterling profit for the period, out of which the board are recommending the payment of a dividend of 16 per cent less income tax.

During the year ended March 31, 1961, total crops of 31,361,317 lb. of rubber and 6,815 tons of palm oil and kernels were harvested on the Group's estates in Sumatra, these being higher by 11 per cent and 24 per cent respectively than the crops harvested in the preceding 12 months.

Local finance has caused us acute problems and is still doing so. As you will remember, the greater part of the subsidiaries' Indonesian bank balances was frozen in 1959 and we were left in the position of having to pay taxes in respect of earlier periods out of current earnings.

Within the limits imposed by these liquidity problems, it has been the policy of the Group to maintain as progressive a rejuvenation programme as possible and to press forward the modernisation where necessary of workers' accommodation and factories. Replanting and extensions carried out on the Group's estates in the 1960 planting season totalled 2,928 acres of rubber and 321 acres of oil palms, bringing the total area planted in the last five years up to approximately 12,000 acres.

LAND TENURE

In recent years reference has been made in chairmen's addresses of companies in the London Sumatra Group to the doubts and uncertainties which existed on the subject of land tenure. Various official pronouncements had led us to expect that we should be granted new titles to all our estates for a uniform period of 30 years, but following the enactment of a new Basic Agrarian Law in September, 1960, it has now been made clear that this will not be the case. Under the Law all existing estate titles are cancelled, but the holders are eligible to apply for new rights of exploitation which in the case of foreign holders will expire on the same dates as their original titles, subject however to a maximum validity period of 20 years. The question of compensation for buildings and plant remaining on the estates at the date of expiry of the title and for immature areas planted on the strength of the above-mentioned assurances is open for negotiation through diplomatic channels.

The disappointment which is naturally felt at the change in the Indonesian Government's agrarian policy must be kept in its proper perspective and related to practical politics. From the planted area statement at the end of the report you will see that the Company will still have a very substantial stake in Indonesia for as far ahead as it is at present possible to plan.

Although there will naturally have to be some adjustments to programmes and priorities, it is your board's intention to adhere to our existing policy of good husbandry so as not merely to maintain but to enhance our reputation as efficient producers.

NEW MERGER PROPOSALS

Simultaneously with this report members will receive a copy of a letter of offer which is being addressed to the members of certain other companies operating in Indonesia with a view to their incorporation into the London Sumatra Group. Practical experience of the results of the initial merger carried out last year has left the directors more than ever convinced of its advantages to shareholders. We and the other boards concerned are confident that the further extension of the Group which is now proposed will also prove beneficial from the point of view of estate operations in Indonesia. In addition it will bring into the Group Kulai Rubber Estate, Limited, a company owning a high-yielding rubber estate in Malaya and valuable trade investments. The income from this source and from Auxiliary Investments Limited, which will be a wholly owned subsidiary if all the offers become effective, will supplement the amount available for dividend in any year during which remittances from Indonesia may be delayed. To achieve this object it has been essential to ensure that shareholders of the Bah Lias, Central Sumatra and Sialang Companies are adequately compensated in cash for the reduction in the non-Indonesian element of their investments which will result from acceptance of our offers. The consolidated balance sheet shows that the necessary sterling funds are available for the purpose, thanks to the pooling of resources which resulted from last year's merger.

THE INVESTMENT TRUST CORPORATION

The seventy-third annual general meeting of The Investment Trust Corporation Limited was held on July 6th in London. The Right Honourable Lord Latymer (the chairman) presiding.

The following is an extract from his circulated statement:

The Accounts show that the upward trend in Gross Revenue has continued. The amount at £1,597,008 (including Double Taxation Relief funds) shows an increase of £190,376 as compared with the previous year. The balance available for Ordinary Shareholders is £724,76 which represents earnings of approximately 3 per cent. We recommend that the dividend for the year on the Ordinary Shares be increased to 26 per cent. This compares with 24 per cent on a smaller capital for the previous year.

The valuation of the investments at £32,117,760 is satisfactory, being £7,410,25 greater than the previous year.

In many industries profit margins are falling and the recent increase in the rate of profits tax from 12½ per cent to 15 per cent must of necessity render increases in dividends from those British companies in which we have holdings less likely in the future. The increased charge which your company will itself have to meet in respect of unfranked income seems likely to be about £17,000. I do not think, therefore, that we should expect an increase in income during the current year comparable to the increase achieved in recent years, though perhaps some improvement will continue.

The report and accounts were unanimously adopted.

DUFF DEVELOPMENT COMPANY

The 30th ordinary general meeting of Duff Development Company, Limited, was held on July 7th in London, Mr John A. Lord (the chairman) presiding.

The following is an extract from his circulated statement:

From the Report and Accounts you will note that there was little change in the trading results from those of the previous year and I feel sure you will agree that they are equally satisfactory.

The increase in profit was in the main due to larger output, for £8,559 of the additional profit came from the increased poundage, the total output for the year 1960 of 5,137,591 lbs being an all time record, and 290,326 lbs. larger than that for 1959.

I might add that it is confidently expected that our annual production will progressively increase from now onwards, not in any spectacular fashion, but consistently, as more of the post-war replanted areas and ultimately the new extensions come into tapping. In the current year (1961) the crop is estimated at 5,250,000 lbs. of which 2,186,440 lbs. have been harvested in the first five months ending May 31st.

Your Directors have authorised the total replanting of 341 acres of rubber in 1961 and work is already well in hand on clearing a further 480 acres of jungle at Kerilla Estate, where trees for budding with the most modern clones will be planted out later this year.

The report was adopted and a dividend of 50 per cent approved.

ALLAN KENNEDY & CO.

IMPROVED TRADE

The Annual General Meeting of Allan Kennedy & Co. Ltd. was held on July 13th at Stockton-on-Tees, Mr H. W. Hollands presided in the absence of Mr T. A. Kennedy, the chairman and joint managing director. The following are extracts from Mr Kennedy's circulated statement:

I would refer first of all to the points I made last year. These were the impact upon ourselves of the recession which occurred in industry generally some time ago and the position regarding supplies of mild steel flats. As I told you we had made only a slow start to the year. We did expect to improve later in the year when two large contracts we had on the order book were due to commence. These contracts were delayed and we did not start on them till the end of December. Trade in general has improved since that time also and we have entered the current year on a better note and we feel quietly optimistic that this improvement will be maintained.

Regarding supplies of steel we remained on quota for nearly all of the year; in March, however, all our outstanding orders were suddenly fulfilled.

The profit for the year was better than it looked like being due to the improvement in trade in the final quarter and your directors recommend a final dividend of 7 per cent, less tax, which makes 10 per cent, less tax, for the year.

During the year we purchased a further piece of land adjoining our present site and this should prove to be of great value to us in the near future. Since the end of March we have completed a further extension to our main factory and without the additional land purchased we would have had little space left for expansion.

We also, during the year, patented a new method of construction of a rectangular open mesh flooring and it is our intention to commence production initially in the new extension. If our hopes are justified it may be necessary to carry out further extensions to provide adequate manufacturing facilities. We expect to be in production in the very near future.

The report and accounts were adopted.

THE STRAITS RUBBER COMPANY, LIMITED

CHAIRMAN'S ANNUAL REVIEW

The Annual General Meeting of The Straits Rubber Company, Limited will be held on August 4, 1961 in London.

The following are extracts from the Annual Review of the chairman, Mr A. P. Hamilton OBE, which has been circulated with the Directors' Report and Accounts for the year ended December 31, 1960:

The Report and Accounts now presented reflect a considerable change in the capital structure of our Company, arising out of the total acquisition in 1960 of The Sabrang Rubber Estate Limited and The Rubana Rubber Estates, Limited, the latter being already a subsidiary of this Company.

During the current year we have also acquired as subsidiaries three more companies, Badenoch Rubber Estate Limited, Bagan Serai Rubber Estates Limited and Paloh Plantations Limited, and there will therefore be further changes in the accounts next year.

All five of these companies have for many years been members of the Oriental Estates Agency Group, of which our Company was the largest unit. Further reference to these acquisitions is made in the Directors' Report.

The Accounts of the Parent Company show a working profit, after taxation, of £225,571 as compared with £199,722 for 1959. This profit includes only a proportion of the income from subsidiaries since approximately one-half of the dividends from Sabrang and approximately one-quarter of those from Rubana are not available for distribution by the Parent Company as they are deemed to be pre-acquisition profits. Dividends totalling 25 per cent have been paid by our Company in respect of 1960, which is at the same rate as for 1959.

The year under review was again a very profitable one for Rubber Producing Companies, the average spot price for No. 1 Smoked Sheet at just over 2s. 8d. per pound being some 2d. per pound higher than during the previous year. This increase in price was however to some extent offset by increased duty and wages both of which are related to the price of rubber.

REPLANTING

The majority of the areas replanted and new planted on all estates prior to 1957 are now in tapping or approaching maturity. During the five years 1957-61 approximately 9,000 acres will have been dealt with, which is at the rate of 5 per cent per annum of the total planted acreage. This means that we can look forward to some 1,800 acres of pedigree rubber reaching maturity annually over the next five years. We had intended to continue our replanting programme at approximately the same rate but owing to the recent fall in the price of rubber and taking into account the heavy cost of bringing our immature areas to maturity, we have decided to reduce our programme for 1962 to some 3 per cent of the total acreage, i.e., 1,100 acres.

PROSPECTS FOR THE CURRENT YEAR

The price of rubber (No. 1 RSS) during the first half of this year has averaged 2s. 1½d. per pound, nearly 7d. per pound less than the average price for the whole of 1960, and slightly higher than the current price. Any marked increase from these levels would appear unlikely for the following reasons.

Firstly although production and consumption of natural rubber are expected to be in balance in 1961, any substantial advance over the present price would result in considerable quantities of natural rubber being released from stockpiles in certain countries, mainly in the USA.

The second factor is the recent advent of stereo rubbers which are said to possess those technical qualities in which, hitherto, natural rubber was held to be supreme. It is understood that these new synthetic rubbers can be produced at prices equivalent to the current selling price of natural but they are unlikely to become available in substantial quantities for some time to come.

Current prices are still profitable but from the above it seems inevitable that we must expect an appreciable reduction in our profits for 1961 even after taking into account the lower export duty and wages which will be payable as a result of the fall in the selling price for our crop.

SHEFFIELD TWIST DRILL AND STEEL CO. LTD.

EXPANSION OF EXPORT TRADE

The Fourteenth Annual General Meeting of The Sheffield Twist Drill and Steel Co. Ltd. was held on July 12th at Sheffield, Mr Alexander Dormer (chairman and joint managing director) presiding.

The following is an extract from his circulated statement:

Trading conditions, which showed an upward tendency in 1959, continued to improve in 1960. Your Company's turnover was the highest ever, but the profit margins are not as good as in the past due to an overall increase in costs. The net profit of the Group before taxation for the year 1960 was £698,139, an increase of £181,061 over the previous year.

Our exports, which were a record, showed an increase of no less than 47 per cent over the previous year. Your Company's products are highly esteemed in Europe and your Board look forward confidently to big increases in sales here if Britain becomes a member of the European Common Market. We also expect to increase our exports to all other countries throughout the world where free trade is recognised.

Sales for the first five months of 1961 show a further improvement over the corresponding months of the previous year and it is expected that 1961 will be another prosperous year for your Company.

The report and accounts were adopted.

THE BUDLA BETA TEA COMPANY

The 66th annual general meeting of The Budla Beta Tea Company, Limited, will be held on August 1st in London.

The following is an extract from the circulated statement of the chairman, Sir Charles Miles, OBE:

The profit for the year ended December 31, 1960, after charging Depreciation of £24,000, is £143,251, which compares with £92,476 for the year 1959.

In a year when many estates in Assam suffered from drought, your Company, fortunately, experienced good growing weather, and as a result there was a substantial increase in crop, the total yield being over 1,250 pounds per acre. Our teas sold well, and both in London and Calcutta the Company's final sale averages exceeded those of 1959. Sales Proceeds increased by over £113,000, but against this there was a rise of some £63,000 in upkeep expenditure, largely due to the extra crop harvested.

Your Board recommend a dividend of 20 per cent, less income tax.

With regard to the current year, our crop to the middle of June is 586,720 lbs., a decrease of 45,760 lbs. when compared with the same period last year. This shortfall can be attributed to hail damage. Every effort is being made to produce clean teas and reports on early manufacture are satisfactory, both in regard to quality and appearance.

Our programme of uprooting and replanting the older tea is making steady progress and where suitable land is available we are taking the opportunity of planting out on virgin soil.

E. V. INDUSTRIALS

STEPS TO STRENGTHEN GROUP STRUCTURE

The sixty-second annual general meeting of E. V. Industrials Limited was held on July 12th in London, Sir Donald Banks, KCB, DSO, MC, TD, the Chairman, presiding.

The following is an extract from his circulated statement for the year 1960:

I accepted on December 1st of last year an invitation to join the board and was appointed chairman. Mr Michael Q. Walters also joined the board with me. In May of this year Major C. Frankland Moore, MIMechE, joined the board and was appointed deputy chairman.

After providing for taxation of £94,620 the Group's net profit for 1960 is £127,374 compared with £150,042 for the previous year. The main factors in the reduction in the aggregate profit were the increased charges for interest and a loss incurred by S. E. Opperman Limited.

Deducting the proportion of profit due to minority interests, the surplus available to be dealt with amounts to £117,795. Preference dividend absorbs £11,637 and your directors propose a dividend of 15 per cent on the Ordinary shares of the Company, against 25 per cent last year. If this proposal is approved there will remain a balance of £44,232 to carry forward against £5,211 carried forward in the 1959 accounts.

FINANCIAL POSITION

Finances were seriously overstretched by the purchase of the Westminster Construction Company Limited and H. & C. Davis and Company Limited, for which purpose a Bank Loan of £500,000 was obtained. It was hoped that this could be repaid by the raising of additional permanent capital, but when this proved impracticable the existence of the Loan and the consequent interest charges hampered the activities of the whole Group. We are advised that the circumstances are still unpropitious for inviting subscription and cannot avoid the conclusion that they are likely to remain so until the attenuation of the financial structure is remedied.

After the fullest exploration, we consider that the best course in the interests of the shareholders and of the Group as a whole is t strengthen the structure by the sale of one o more of the subsidiary companies. This cours of action is being pursued energetically and if successful sale is concluded we should be abl to repay the £500,000 Bank Loan. Moreove there will remain a limited balance of funds t meet some modest capital requirements of othe member companies and to finance measures o development which we are so anxious to under take. This proposed disposition of funds ha the full support of the bank.

Although we should obtain some relief i interest charges, an appreciable sacrifice of ne revenue would have to be faced and met. I however, trading trends to date continue, an subject to there being no unforeseen advers circumstances, we consider that the present leve of Ordinary dividend can be maintained fo 1961, although it is not your board's intentio to declare an interim dividend.

As to your Group's future, time, effort an good fortune will all be needed before the ful possibilities of these promising enterprises ca be realised.

The report was adopted.

BLUEBIRD INVESTMENTS LIMITED

The annual general meeting of Bluebird Investments Limited will be held on August 3rd in London.

The following are extracts from the circulated statement of the chairman, Mr Ralph C. Yablon, LL.B:

The profits for the year, before taxation, amounted to £645,006. Your directors recommend a final dividend of 25 per cent, maintaining the rate of the previous year at 40 per cent.

The Board proposes to increase the issued capital of your Company by a free scrip issue of one share for every four shares held on June 30, 1961.

Your Directors are pleased to be able to report that trading in the current year continues at a satisfactory level, and subject to unforeseen circumstances, it is expected that your Board will be able to recommend an increased dividend for the current year as compared with that of the past year.

Commenting on the Company's export trade, Mr Yablon said: Exports have improved particularly to Holland and Germany. In order to give some measure of our export achievement i relation to the Continental market, it is reliabl estimated that your Company exports more t the Continent annually than any Continenta manufacturer actually produces.

I believe that the prospects for our Compan are just as favourable now as ever and that w can look forward confidently to the future.

Once again you will wish me to express you thanks to our Managing Director, Mr W. E. C Knott, for his devotion to your Company' affairs and for the success which has attende those efforts and also to the staff and work people.

EDUCATION; BUSINESS AND PERSONAL

SURREY EDUCATION COMMITTEE
KINGSTON TECHNICAL COLLEGE
DEPARTMENT OF COMMERCE, LANGUAGES AND PROFESSIONAL STUDIES

BACHELOR OF SCIENCE (ECONOMICS) DEGREE UNIVERSITY OF LONDON

Applications are invited for the course commencing September, 1961. Forms and full details can be obtained from the Principal, Kingston Technical College, Fassett Road, Kingston-upon-Thames, Surrey.

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial. General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write to-day for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4. Established 1910.

STAFFORDSHIRE EDUCATION COMMITTEE
THE STAFFORDSHIRE COLLEGE OF COMMERCE, WEDNESBURY

Principal: H. Harman, B.Com. Telephone: WED. 1831-2.

As an introduction to a career in business the College conducts a One-Year Course of PRELIMINARY BUSINESS STUDIES for boys in the age group 16-18 years.

An admirable course for learning the principles of accounting and business organisation. Those with sons about to embark on a business career would be well advised to obtain further particulars of this course, which begins in September next, from the Registrar, Staffordshire College of Commerce, Wood Green, Wednesbury.

SECRETARIAL TRAINING, especially for university graduates and older students, six-month and intensive 14-week courses.—Write Organising Secretary, Davies's, 158 Holland Park Avenue, W.11. PARK 4654.

RUSSIA TODAY. Her history, development and resources are explained in map form with supplementary notes in *Soviet Union in Maps*, 5s. net.—Obtain this 32-page brochure from Your Bookseller, George Philip & Son Ltd., 30-32 Fleet Street, E.C.4.

School of Art, Watford Technical College, Hempstead Road, Watford, Herts.

COURSE IN ADVERTISING COPYWRITING

It is proposed to run a two-term full-time course in advertising copywriting commencing in September next.

Full particulars are available on application to the Registrar.

SECOND CHANCE. Has your purchase let you down? SHOPPER'S GUIDE (15s. per annum) offers a Complaints Service that can help you put things right.—Write Consumer Council, Orchard House, Orchard Street, W.1.

WELL-KNOWN FIRM OF Motor Accessories Manufacturers would like to contact a manufacturer of **CAR SAFETY BELTS** with a view to marketing their product. BOX 1526.

DIRECTORS NEED NOT ENVY associates' better secretaries: they were probably recruited through STELLA FISHER BUREAU in the Strand.

TRANSPORT ECONOMICS AND FINANCE

TRANSPORT ECONOMICS CONSULTANTS, 17 NEW BOND STREET, LONDON, W.1.

AN ADMIRABLE CRICHTON! That man's a wizard at every household detail. Where he shines most is his care in keeping a good cellar of superb f.i. CID Sherry, the fine Amontillado we all prefer.

NORANDA MINES, LIMITED
DIVIDEND NOTICE

NOTICE is hereby given that an interim dividend of Fifty Cents (50c) per share, Canadian funds, has been declared by the Directors of NORANDA MINES, LIMITED, payable September 15, 1961, to Shareholders of record August 18, 1961.

By Order of the Board,
C. H. WINDEYER,
Secretary.

Toronto, Ontario.
July 10, 1961.

APPOINTMENTS

NORTHAMPTON COLLEGE OF ADVANCED TECHNOLOGY LONDON

ST. JOHN STREET, LONDON, E.C.1.

Additional lecturing staff will be required in the DEPARTMENT OF SOCIAL AND INDUSTRIAL STUDIES from September, 1961, or as soon as possible thereafter. Candidates for appointment must have a degree or equivalent and experience in the appropriate field of activity.

The work will involve teaching at both undergraduate and postgraduate levels.

(1) SENIOR LECTURER in Liberal Studies to teach in one of the social sciences and to help in the development and organisation of courses and special lectures.

Salary scale: £1,588 p.a. x £50 to £1,801 p.a.

(2) LECTURER in Communication, to deal generally with problems in social communication and with emphasis on the presentation of technical information, effective speaking and the leading of group discussion.

Salary scale: £1,408 p.a. x £35 to £1,601 p.a.

Further particulars and forms of application available from the Secretary of the College, St. John Street, E.C.1.

J. S. TAIT, B.Sc., Ph.D., M.I.E.E., M.I.Mech.E., Principal.

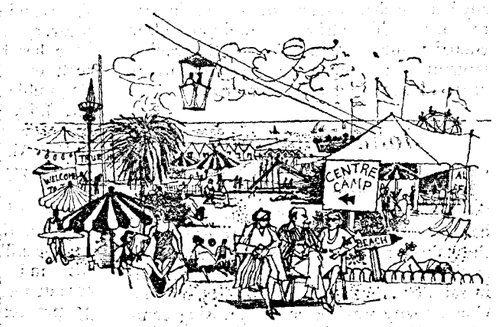
For other appointments see page 299

THE UNIVERSITY OF CANTERBURY

CHRISTCHURCH, NEW ZEALAND

The growing Department of Economics requires additional staff, and a new LECTURESHIP or SENIOR LECTURESHIP has been created.

The salary range for a Lecturer is from £1,250 to £1,700 per annum and for a Senior Lecturer £1,750 to £2,000 per annum.



Economists who are interested in this position are invited to write (air mail) to the Head of the Department before the end of July, 1961, giving some provisional information about their qualifications, special interests and other relevant facts.

Full details of the position and information regarding the University of Canterbury and its Department of Economics will then be sent to those whose applications would be welcomed.

G. G. TURBOTT,
Registrar,
P.O. Box 1471, Christchurch,
New Zealand.

COMPANY AFFAIRS

Happy Camping

HOLIDAYS are now big business in this country and those getting high wages and three weeks holiday with pay are demanding more for their money than the bed and breakfast provided by the seaside boarding house. The gregarious have found the answer in the holiday camps. Their popularity, publicity and down-to-earth showmanship are associated with the name of Mr Billy Butlin. His early struggles are well known: he arrived in this country with very little money and progressed from a hoopla stall to a seaside amusement park before that most depressing of all sights, holidaymakers in the rain, gave birth in his mind to the idea of a holiday camp. He opened the first at Skegness in 1936 and the second at Clacton followed a year later. Now **Butlin's** runs seven as well as three large hotels.

About 600,000 people chose a Butlin holiday last year and at the annual meeting of the company held this week Mr Butlin was able to tell shareholders that this figure would be well exceeded this year. Bookings are up by about 15 per cent on 1960; this is due in part to the development of Butlin's newest camp at Bognor Regis, which will accommodate over 100,000 visitors this year compared with 29,000 in its first year of operation. Thus Butlin's now has accommodation for over 65,000 people a week at the camps scattered throughout Great Britain and the newly-acquired one in Southern Ireland. At the peak periods Butlins has to turn away many thousands of bookings each year and it is trying to encourage visitors to stagger their holidays, by improving amenities in the off-peak periods. This has already had the result of keeping the camps full for longer periods of time.

A large number of shareholders turned up at the meeting—a sign, Mr Butlin noted, that normally indicated that a company was doing badly. He was speaking from first hand experience for Butlin's has not always been booming. Largely as a result of disastrous ventures in the West Indies its profits slumped in the late forties and early fifties and the dividend was cut in terms of the present capital (after this week's scrip issue) from 25 per cent in 1947 to 5 per cent in 1952. It is a very different story today with turnover in 1960 rising from £7 million to over £8½ million and profits before tax from £1.2 million to £1.8 million. The dividend, again in terms of the doubled capital, has been raised from 25 to 40 per cent and Mr Butlin is confident that profits will be higher this year. On the present dividend the 1s. shares at 10s. 6d. yield 3.8 per cent.

The rights issue left Butlin's at the end of 1960 with over £2 million in cash and short term loans so that it is well placed to finance further expansion. Once official approval has been obtained work can begin on a new camp at Minehead in Somerset. This should be opened by 1962. A new site is also being sought in the South Wales area. Clearly there is still ample room for further expansion if costs can be kept down sufficiently for a reasonable profit to be earned from prices which visitors are prepared to pay. Even on the present tariffs, a bill of £45 a week at the peak season for a couple with one child aged six and another aged three must be enough to deter a number of would be campers.

Mr Butlin estimates that his camps take half of all those who choose this kind of holiday. **Pontin's** is almost certainly the next biggest company in this field and it has been very actively taking over others, adding the Middleton Tower camp at Morecambe and Parkins camp in Jersey to its interests. This week it has sent out offers for Squires Gate camp in Blackpool and the Dolphin camp in Devon; the former offer carries with it the recommendations of the Squires' directors but the Dolphin directors, who claim to control a majority of the shares, have rejected a proposed one for one exchange into Pontin's shares. The Pontin's directors have, however, sent their offer directly to Dolphin shareholders. This is not the first offer they have made for Dolphin and Mr F. W. Pontin, the chairman, has pointed out to Dolphin shareholders that if an earlier offer made in 1958 had been accepted a holder of 4 Dolphin shares would now hold, assuming that the rights costing 28s. had been exercised, shares in Pontin's worth close to £11. The Dolphin shares have no official quotation and have apparently recently changed hands at 7s. 6d.

Pontin's profits before tax in the year to end-May are estimated to have risen by 50 per cent to nearly £250,000. A further substantial advance is expected in the current year, for at the old camps alone bookings are up by 25 per cent despite price increases and improved results are expected from the new acquisitions. A dividend of 35 per cent has already been forecast on the capital as increased by last February's one for six rights issue so that the 2s. shares at 16s. 6d. yield 4¼ per cent.

Increases in prices of up to £1 a week have also been made at **Warner's Holiday Camps** but the camps in this group also report record bookings. Last year turnover exceeded £1 million and over 100,000 people stayed at Warner's camps. Both these figures should be exceeded by good margins in 1961. The company's financial year ends in March but the accounts are usually presented early in October when the next season is usually over. Profits seem certain to show a further increase when they are announced later this year, though it is understood that the Sinah Warren camp on Hayling Island, where both the amenities and the price (17 guineas per week at the peak of the season compared with £12 in the other Warner camps) are both in the luxury class for holiday camps, again made a loss. It is apparently proving more successful this summer and is booked almost to capacity. A rise in Warner's dividend certainly seems to be discounted in the present low yield of 3¼ per cent. Last year, the chairman, Mr E. H. S. Warner, said that the directors were considering further extensions but nothing apparently has yet been decided. Any moves in this direction would probably involve the raising of fresh capital for at the date of the last balance sheet there was a net overdraft of £260,000.

British Drug Houses

THE proposed deal between British Drug Houses and Mead Johnson of America has run into a lot of criticism. But time to organise this into an effective opposition is short, since the meeting to consider the proposals is to be held next Monday. In these circumstances, hints of a prospective bidder for the company if the present directors are replaced and the Mead Johnson plan defeated are not much help to shareholders who have to decide what action to take.

The claim that a "well known public company with wide experience in the pharmaceutical field" is prepared to make a bid on these conditions has come from Mr John Horn, an accountant who has been leading the opposition to the Mead Johnson deal. But shareholders cannot become very excited over an unspecified bidder and an undisclosed bid. They might indeed be more attracted to the latest document from

Mr Geoffrey Eley, the chairman of British Drug Houses (this has some appearance of an election address rather than a circular to shareholders) though it provides little fresh information.

Mr Eley says that £3 million of the £5 million which would come from Mead Johnson would be needed by the end of 1962 and that the remaining £2 million would certainly be spent within the five year period. These are large sums and Mr Eley admits that at the time of the Fisons' bid for BDH shares he had said that no external help was needed to achieve expansion. But he continues: "That was eighteen months ago in a quickly changing world." The circular does not answer questions about how the money is to be spent and what profits may accrue. Mr Eley lists the general advantages he expects from the link with Mead Johnson: a faster rate of expansion; more extensive research and development facilities; and enhanced marketing prospects. But Mr Eley is entitled to emphasise that the directors have "not received any other offer or indeed any alternative proposal" and to describe Mr Horn's vague references to a possible bidder as "pie in the sky." Monday's meeting may be lively and many of the shareholders who, in the end, support the board will probably do so with reluctance that BDH affairs have not been better ordered.

Thomson Newspapers

LAST year was one of consolidation and reorganisation for Thomson Newspapers, which is to be known in future as the Thomson Organisation. It also produced bigger earnings, with gross profits rising by 32 per cent from £3,103,000 to £4,108,000, but profits in 1959 were adversely affected by the printing strike. The closing down of the *Sunday Graphic* and the *Empire News* late last year and a rationalisation of the group's interests in Manchester should have some effect on earnings this year.

Recent attempts by Mr Roy Thomson to add to his empire have not met with much success: Odhams finally went to the Daily Mirror group and Mr Thomson's bid for the *Belfast Telegraph* is still held up by legal difficulties. Mr Thomson is still thought to be anxious to add to his interests, and this week he has bought Odhams South Africa, but in the past his hands were tied because the company was virtually debarred from making an offer in the form of ordinary shares. Now the capital reorganisation scheme creates an ordinary capital which could be used for this purpose and it also increases the authorised share capital to £15½ million. For every ten preferred ordinary units of 5s. each held, shareholders are offered eleven 30 per cent cumulative non-voting preference shares of 5s. each and five ordinary voting shares of 5s. each. Thomson Scottish Investments holds all the 8 million of 5s. deferred ordinary shares and these are to be converted into 9.4 million of 5s. ordinary shares. The preferred ordinary stockholders receive a substantial gain in income from the new arrangements. Last year their dividend was 35 per cent. On the board's assumption of a 24 per cent ordinary dividend (covered twice by earnings), the total accruing to the original preferred ordinary shareholders will this year be 45 per cent. Although Mr Thomson says he does not contemplate at the moment any issue of shares to acquire new businesses he makes his ultimate ambitions clear enough: the reorganisation of the capital structure "will open the way for further great advancement of the company."

John Thompson

THE statement by the chairman, Mr Edward Thompson, reveals that while the John Thompson group has been hit hardest in nuclear power it has also found the going hard in its other activities. The earlier fall in orders is reflected in the fall in sales from £28½ million to £25 million. One casualty was the motor pressing company, which earned much reduced profits, while the output of the boiler division fell by almost £3 million. These two factors reduced gross trading profits from £1,332,000 in 1959 to £994,000 and, in addition, there were provisions for losses on the Berkeley power station contract and on the Australian contract. After these provisions, tax and depreciation, the group made a loss of £1,777,000, compared with a profit of £324,000 in 1959.

The residual loss on the Berkeley contract amounted to £1,687,000, but there are still possible losses of up to £850,000 to be bought into the accounts of the nuclear power company, which John Thompson owns jointly with AEL. In all, then, the nuclear contract could produce a loss of nearly £2 million. So far the group has found it possible to deal with the nuclear power losses as they arose and in this sense the group, as its commitments on the Dungeness nuclear station are comparatively small and have been more realistically costed, may have seen the worst. The losses on an Australian contract are also expected to be non-recurring. The chairman frankly admits that the unprofitable work undertaken has had a further effect in the nature of a classical opportunity cost; for John Thompson in pursuing the nuclear contracts, turned away other orders and had to lengthen its delivery dates. In all, he estimates, work which would have produced profits of between £1½ and £2 million was lost in this manner.

The final dividend was passed and the 5s. ordinary shares at 14s. 9d. yield only 1.7 per cent on the 5 per cent interim dividend. It is not clear how well the group will do in the current year. Orders now amount to nearly £38½ million, compared with £29¼ million at the beginning of last year, and some of the recent orders have been at slightly better margins of profits. However, margins in the water tube boiler-making section remain depressed. Even so, the directors hope to resume the ordinary dividend payments with an interim in November.

London County Freehold

AT 31s. 6d., London County Freehold 10s shares are some way below their earlier peak this year of 39s. 6d. They have experienced the sharp setback common to property shares and seem unlikely to stage much of a recovery until a firm decision about a rights issue has been made. It seems clear that such an issue will be needed soon. Some £3½ million was raised by a debenture issue last July, but bank advances secured on properties amounted to £1.3 million at the end of March and the chairman Mr T. J. Cullen expects another substantial increase in property assets this year. In 1960-61, they rose by £3½ million and as investment opportunities in suitable residential properties are still scarce the swing towards industrial and commercial properties has been accentuated. These now represent about 35 per cent of London County Freehold properties.

A highlight of the past financial year was the completion of Livingstone House in Salisbury, which is let largely to Rhodesian Selection Trust. The building was completed last November, so that this year will have the benefit of a full year's rent. In 1960-61, gross rents rose from £3,195,000 to £3,471,000, and at the end of March income was running at an annual rate of £3,615,000, excluding buildings under construction. Not surprisingly London County Freehold is not adding to its interests in Rhodesia, where it already owns properties worth £1½ million. It is now turning its attention to Australia, where it has purchased one building and is negotiating the purchase of two others. On the dividend as increased from 10.8 to 12.1 per cent, the shares yield 3.8 per cent. There is a prospect of a further increase in net income this year even though profits tax will take more and it is possible that within the next two years the dividend will be raised to 15 per cent. This would raise the yield to 4¼ per cent.

Express Dairy

IN his annual statement to shareholders of Express Dairy Mr Walter A. Nell, the president, makes some interesting comments on the past history of Spiers and Pond, the company's new subsidiary. A hundred years ago, its founders catered for miners in Australia and from their profits they financed the tour of the first English cricket team to Australia in 1861. But, unfortunately, Mr Nell does not tell shareholders much about the current results of the company. What contribution it made to consolidated profits last year has still to be revealed, though Mr Nell confirms that profits before tax, which rose from £2.4 million to £2.9 million in the year to March 31st, included eighteen months' profits from Spiers and Pond. At the time of the merger, Spiers and Pond's pre-tax profits from its thirteen hotels, Chicken Inns and other restaurants were estimated at £400,000 for the year to September 30th last. This would suggest that Express Dairy's other interests added little, if anything, to the advance in profits.

The group's sales last year amounted to £70 million, double those in 1955. No less than 221 million gallons of milk were handled. The emphasis in the milk distribution side of the business is still on rationalisation through acquisition, the group having acquired new retail milk businesses in the Manchester area and in Scotland. Express Dairy has been a pioneer in supermarkets, operating 25 now with 12 more planned. Turnover and profits from the supermarkets are rising; though still a small part of the group's activities, they are, Mr Nell believes, becoming increasingly important.

Last year substantial sums were spent on modernisation and development, and in spite of the injection of £1.7 million from last year's rights issue and a cash flow of £2 million, a net overdraft of £831,000 appears at the end of March, with future capital commitments amounting to £1.3 million. The growth of the business has imposed some financial strain but investors are clearly expecting earnings to rise. At 14s. 10½d. the "A" shares yield 3½ per cent on a 10 per cent dividend.

George Cohen

A YEAR ago the George Cohen 600 Group announced a 20 per cent rise in its profits and when the rights issue was announced in September the directors said they expected profits in the year to March 31, 1961, to match those of the previous year. But in the event consolidated gross profits fell by nearly 11 per cent, from £1,573,000 to £1,401,000.

The group has interests in steel-founding and steel-stockholding, machine tools, scrap metal, constructional engineering and plant hire. How these have fared individually it is impossible at this stage to judge, but it is possible that the group has been affected by narrowing margins in the capital goods industries while the introduction of a shorter working week in the engineering industry may have added to its prime costs. The dividend is maintained, as forecast, at 13 per cent, and the 5s. ordinary shares at 11s. yield almost 6 per cent.

Consett Iron

CONSETT IRON is the odd man out among the leading steel producers, for it ends its financial year on April 2nd while the others draw up their accounts at the end of September. The yield on its £1 shares at 27s. of 7 per cent is higher than those of some other steel equities. This reflects the heavy capital commitments of the company as much as the uncertainties about future profits. In 1960-61 Consett achieved a record output of 979,000 ingot tons of steel and its sales rose in value from £29½ million to over £34½ million. There was only a slight increase in depreciation but both the tax and interest charges more than doubled, to £634,000 and £951,000 respectively, so that net profits rose by only 8½ per cent from £1,694,000 to £1,839,000.

The chairman, Lord Ridley, says that last year Consett was working to capacity for all but the last two months of the year, when the demand for slabs, blooms and billets fell. He emphasises the difficulty of predicting demand this year but expects the company to work a little below full capacity. But it may sell more plates than it did in 1960-61 and there is a revival in demand from the consumer goods and motor industries for Consett's other products. Higher fuel and labour costs, however, are squeezing margins and this may not be fully offset either by the recent increase in steel prices or by the full operation of the new plate mill.

The balance sheet reveals the extent of Consett's reliance on outside funds to pay for expansion; in 1960-61, net fixed assets rose by £5 million to £30½ million and loans from FCI rose from £6 million to £9 million. A bank overdraft of £1.8 million has also been utilised; though this is but a fraction of the overdraft facilities of £9 million available to Consett, repayments of the overdrafts and the FCI loan fall due in 1965. In all, capital commitments amount to £11 million and Consett's cash flow cannot be much more than £3 million. Not surprisingly, therefore the directors have acknowledged the need to conserve resources; but they have raised the dividend from 8¾ to 9½ per cent.

Ruston and Hornsby

LAST August the chairman of Ruston and Hornsby, Mr. W. J. Ruston, reported a decided improvement in the trend of business. Shareholders must therefore have hoped that after seven lean years of declining profits this maker of diesel and turbine engines, locomotives and boilers would be able to report better trading results in the year to March 31st last. In fact, profits have again fallen, suggesting that the group has not benefited from the higher level of activity prevailing in the British engineering industry. Rising costs must be one reason for the fall of 12 per cent in trading profits from £1,367,000 to £1,205,000. The group's investment income, however, rose from £366,000 to £406,000: a year ago about 97 per cent of the group's investments were in Ruston-Bucyrus and it must therefore appear that this investment has once more added to its contribution to the group's income.

But the group's net profits fell by 21½ per cent from £626,000 to £491,000 to reduce the cover on the unchanged dividend of 9 per cent from 1.8 to 1.4 times. After the results the £1 ordinary shares lost 1s. to 25s., the lowest point so far this year, at which they yield over 7 per cent.

London Stock Exchange

FIRST DEALINGS:	June 26	July 10	July 25
LAST DEALINGS:	July 7	July 21	Aug. 3
ACCOUNT DAY:	July 18	Aug. 1	Aug. 14

THE London Stock Market enjoyed a slight rally over the week to Wednesday. The rise began last Thursday and when jobbers marked up prices the new levels held. Bear closing helped to keep prices up and the amount of investment buying increased, particularly among the leading stocks. However, the new account opened quietly on Monday as the market was uncertain about the Chancellor's intentions in dealing with the economic situation. There was an improvement on Tuesday but on Wednesday buyers held off again in the present uncertain atmosphere. Selling was still very light and prices drifted lower. But over the week *The Economist* indicator gained 5.8 points to 373.8. On Thursday, prices fell sharply.

Gilt-edged stocks fell back slightly over the week. The amendment to the Trustee Investments Bill to give the Treasury power to permit 75 per cent investment in equities instead of 50 per cent brought fears of increased switching out of gilt-edged and added to the pressure of small selling. Several stocks fell to new low levels, including Funding 5½ per cent 1982-84 which lost 7/16 to 91⅝ xd. The irredeemables continued to fall, 3½ per cent War Loan losing 7/16 to 52⅜ and 2½ per cent Consols ¼ to 38⅜—both fractionally above their lowest points. Dominion and Corporation stocks also lost ground over the week.

Among bank shares, Barclays rebounded after being marked down on news of the prospective rights issue, and showed a net gain of 3s. to 79s. 9d. Insurance shares rose but there were falls among hire-purchase shares on the news that stiffer credit terms were likely in the near future: UDT lost 5s. to 167s. 6d. ICI was one of the leaders to benefit from the slightly firmer tone advancing 1s. to 67s. 4½d. and Marks and Spencer gained 1s. 6d. to 110s. 3d. There was no consistent movement among electrical shares though both AEI and EMI hit low points during the week and each closed at 37s. 9d. Steel shares made some gains though Colvilles lost 2s. to 56s. 6d. which is 1s. below the price of the coming rights issue. Among motor shares BMC gained 9d. to 14s. 9d. and rumours that it might bid for ACV following its withdrawal from the Borgward deal pushed the price of ACV shares up by 2s. 7½d. to 77s. 7½d.

Among textile shares, cottons fell back but Courtaulds gained 2s. 3d. to 36s. 9d. Unilever improved a little after the heavy falls of the previous week and gained 1s. to 134s. 3d. despite a fall on Wednesday. Oil shares were lower, Shell Transport losing 2s. to 121s. Kaffirs generally continued to fall, though Anglo-American, Union Corporation and Free State Geduld made small gains. Tin shares also lost ground and Tronoh were 5s. lower at 79s. 6d.

Industrial Profits and Assets

The tables below continue the analysis of company balance sheets and profit and loss accounts which was introduced in *The Economist* of January 22, 1949; the figures are discussed on an earlier page in this issue.

Comparative analysis of 892 profit and loss accounts published April - June, 1961 (£'000)

THE MONEY MARKET

IN spite of the possibility that the Chancellor's crisis measures may include an increase in Bank rate, the syndicate of discount houses maintained its bid at £98 17s. 4d. for the third week running at last Friday's Treasury bill tender. The average rate of discount last week was hardly changed at £4 10s. 8.80d. per cent. Outside interest in Treasury bills has, not surprisingly, waned of late and total applications rose by only £4 million to £405 million. The market received a satisfactory 42 per cent of its application compared with 46 per cent a week earlier.

Lombard Street has had a difficult week. Money has been tight but help from the authorities has allowed the discount houses to stay clear of penal borrowing from the Bank of England. The official help was large on Friday, when credit was short following repayment to the Bank of the substantial amount borrowed a week earlier. Conditions eased on Saturday and a small amount of help was sufficient to balance the market's books, but after the weekend credit was again in short supply and the authorities provided assistance on each of the first three days of this week.

APPOINTMENTS

COMMONWEALTH OF AUSTRALIA

CAREER OPPORTUNITIES IN AUSTRALIA FOR

UNIVERSITY GRADUATES

Applications are invited for the positions of

SENIOR RESEARCH OFFICER £A1730-£A2070
RESEARCH OFFICER GRADE 2 £A1620-£A1840

in the

BUREAU OF CENSUS AND STATISTICS IN CANBERRA

QUALIFICATIONS:
University degree in Economics, Statistics or Mathematics, with at least two years' relevant experience.

TYPE OF WORK:
Senior Research Officer
Investigations into estimating specific components of statistical series, including national income and balance of payments. Analysis and interpretation of data for official statistics.
Research Officer Grade 2
Investigations into specification, design and operation of statistical collections and analysis of data.
There are opportunities in both grades to proceed to systems analysis work preparatory to the introduction of E.D.P. equipment.

CONDITIONS OF APPOINTMENT:
First-class fares paid for successful applicants and their families. Salary determined according to qualifications and experience will be paid from the date of embarkation. A superannuation scheme applies.

APPLICATIONS:
Should be made on forms obtained from the Recruitment Officer, Staff Branch Office of the High Commissioner for Australia, Australia House, Strand, London, W.C.2, *and returned by August 5, 1961.*

LABOUR OFFICER

Required by the

UNITED KINGDOM ATOMIC ENERGY AUTHORITY

Dounreay Experimental Reactor Establishment, Dounreay, Thurso, Caithness, to be responsible to the Labour Manager for the interpretation of labour policy in respect of industrial employees, including interviewing, job evaluation, industrial welfare and joint consultation.

Applicants must have had industrial experience in all aspects of personnel management. A degree in social studies or equivalent qualification may be an advantage.

Salary on the scale £900 to £1,320 p.a. according to age, qualifications and experience.

Rented housing and house purchase assistance is available for married officers living beyond daily travelling distance. Single accommodation available. Contributory superannuation.

Send postcard for application form to Personnel Manager at above address, quoting Ref 273/211.

ASSISTANT SECRETARY TO TRADE ASSOCIATION

Vacancy exists for Assistant Secretary to the National Trade Association of Department Stores. Duties embrace administration, committee work, report writing and simple accounts. Knowledge of statistical work also desirable but personality and ability more important than qualifications. Starting salary dependent upon age and experience but not less than £800. Applications, in writing, to the Director, Retail Distributors Association, Ideal House, 1 Argyll Street, W.1.

THE UNIVERSITY OF BELFAST

The Senate of the Queen's University of Belfast invites applications for the post of Assistant Tutor in Practical Work in the Department of Social Studies. The date of commencement will be October 1, 1961, or such other date as may be arranged, and the salary scale will be £700 x £25 to £875. Candidates should possess a University degree, and a diploma in social studies or the equivalent. A specialist post-graduate qualification in social work or experience in a family case work agency will be considered an advantage. Applications should be submitted by *July 31, 1961*. Further particulars can be obtained from G. R. Cowie, M.A., LL.B., J.P., Secretary to the University.

THE MILK MARKETING BOARD invite applications for the appointment of Assistant in the Statistics and Surveys Department of its Production Division. This department is concerned with the study of factors governing milk production, feeding practices, cattle population trends, etc.

Applicants should recently have graduated in agricultural science or economics. The commencing salary will be according to qualifications and experience, and there are excellent prospects for the future. The appointment is permanent and pensionable after a probationary period.—Application forms from the Personnel Officer, Milk Marketing Board, Thames Ditton, Surrey.

UNIVERSITY COLLEGE OF SWANSEA

DEPARTMENT OF ECONOMICS

Applications are invited for the post of RESEARCH ASSISTANT in connection with studies in the History and Organisation of British Overseas Trade. Applicants must be graduates in Economics or Economic History. Salary in the range £500-£700 per annum together with F.S.S.U. Benefits.

Further particulars can be obtained from *the Registrar, University College, Singleton Park, Swansea*, by whom applications (six copies) must be received by *Saturday, July 22, 1961.*

THE CO-OPERATIVE UNION LIMITED

DEVELOPMENT DEPARTMENT

Applications are invited from suitably qualified candidates for the following important and interesting positions in an expanding department. Both in positions are superannuated and based in Manchester.

(1) ASSISTANT DEVELOPMENT OFFICER
Duties involve preparation of material on financial aspects of Co-operative Movement's development problems, and particularly assessment of and advice on specific development projects of retail societies. Qualifications sought are a lively and relevant mind, a detailed knowledge of co-operative finance and trade, and appreciation of trading trends, and the ability to summarise conclusions clearly and concisely. A degree or recognised secretarial or accountancy qualification would be an advantage, as would be personal experience of development costing. As development projects need to be assessed on the spot, a fair amount of travelling will be involved. Salary, £1,450 p.a.

(2) SENIOR ASSISTANT
Duties involve research into changing patterns of trade and consumer expenditure and into possibilities of co-operative expansion into new fields of trade. Qualifications sought are familiarity with research sources and techniques, sound knowledge of retail trade, and ability in expression. Previous experience of this kind of work would be useful, and the possession of a good degree or professional qualification would be an advantage. Some travelling might be required. Salary, £1,200 p.a.

Candidates should state which position they are interested in when they write for application forms and further particulars to the Development Officer, Co-operative Union, Holyoake House, Hanover Street, Manchester 4. Closing date, *July 24, 1961.*

THE IMPERIAL TOBACCO COMPANY

have a vacancy for a young woman graduate with a good degree in Economics. Some knowledge of statistical methods is an advantage. The post is a specialised one dealing with the interpretation of the effects of economic trends on the Company's business.

Applications, giving details of academic background, should be addressed to:
THE STAFF SECRETARY,
THE IMPERIAL TOBACCO CO. LTD.,
BRISTOL 3.

BBC requires a Producer in its North American Service, which is a small production team creating topical programmes rebroadcast by networks and independent stations in U.S.A. and Canada (including French Canada). Producers devise and produce talks, interviews, discussions and radio-magazines of several types. Qualifications: good education, ability to handle wide range of ideas and people, keen topical sense, lively appreciation of the modern world and technical achievement and ability to work incisively under pressure of time. First hand knowledge of U.S.A. or Canada desirable but other experience (e.g. journalistic) directly relevant to presentation of British opinion to North American continent will be considered. Working French an advantage. Salary £1,380 (possibly higher if qualifications exceptional) rising by five annual increments to £1,780 max. p.a. Requests for application forms (enclosing addressed envelope and quoting reference 61.G.308.Et.) should reach Appointments Officer, Broadcasting House, London, W.1. within five days.

UNIVERSITY OF OXFORD ALL SOULS COLLEGE

SENIOR RESEARCH FELLOWSHIPS

The College proposes to elect during 1962, if suitable candidates present themselves, to not more than two Senior Research Fellowships.

1. Each Fellowship is of seven years' duration and carries an emolument of £1,250 rising to £1,500* (inclusive of allowances other than children's allowance, housing allowance and table allowance); its tenure is compatible with the tenure of a lecturership not exceeding £550 in £750.
2. The person elected must have attained distinction in one of the following branches of knowledge: Law; History (including the History of Art or of Science); Philosophy; Literature; Economics, Social Anthropology, Politics, Sociology, and other Social Studies. He will be required to undertake some definite project of research in Oxford or with the permission of the College elsewhere.
3. Candidates should send their application to the Warden, not later than October 31, 1961, together with any statement they may think it desirable to submit in support of it and the names of not more than three referees. They may be required to present themselves for an interview. Further particulars concerning the Fellowships may be obtained from the Warden. All envelopes relating to applications should be marked "Fellowship Application."

The choice of the College will not be limited to those who apply.

* An increase, to £1,400 rising to £1,650, is now before the Privy Council for approval.

THE QUEEN'S UNIVERSITY OF BELFAST

The Senate of the Queen's University of Belfast invites applications for a Chair in Economics or Applied Economics from January 1, 1962, or such later date as may be arranged. The salary will be £3,000 plus F.S.S.U. Applications should be received by October 16, 1961. Further particulars may be obtained from G. R. Gowie, M.A., LL.B., J.P., Secretary.

VGA

Success fits like a glove . . . on the man who fits his job.

The job you do is the most important single factor in your life. Upon it depend your happiness, your social standing and your hopes for the future.

Being in the right job—knowing that your true talents and abilities are being employed and appreciated—is a guarantee of personal success and satisfaction.

Whatever your age, the Vocational Guidance Association can find out your best talents and show you how to use them for your own advancement.

You've taken step one on your personal road to success by reading this notice. Now take step number two—write for further information to:

The Secretary,
VOCATIONAL GUIDANCE ASSOCIATION,
Devonshire Street, London, W.1.
Telephone: WELbeck 8017.

ROAD RESEARCH LABORATORY (D.S.I.R.), Harmondsworth, Middlesex, requires Civil Engineers, Physicists, Mathematicians, Statisticians in the Senior Scientific and Scientific Officer grades for work in the Tropical Section. Duties concern problems of road building and road transport in tropical and sub-tropical areas, involving soil mechanics, traffic engineering, and economics studies. Section is based at Harmondsworth and work involves regular visits overseas with, in some instances, postings for periods of one or two years on specific projects: usual Foreign Service Allowances apply. Qualifications: 1st or 2nd Class Hons. degree. For S.S.O. some years of appropriate post-graduate research is required. Salary—within range—S.O. £773–£1,267; S.S.O. £1,392–£1,714. Prospects of promotion to Principal Scientific Officer (range up to £2,478) with possibility of higher posts. Laboratory is expected to move to Crowthorne, Near Bracknell, Berkshire, in 1963–64.—Application Form and further information from Director of Road Research (address above) quoting ROAD 8YNW.

UNIVERSITY OF EXETER

Applications are invited for the post of Lecturer or Assistant Lecturer in Economics (Economic Theory). The salary will be in the range:

Lecturers: £1,050 — £1,850 (efficiency bar at £1,475);
Assistant Lecturers: £800 x £50 — £950.

The initial salary will depend upon the qualifications and experience of the successful candidate.

Further particulars may be obtained from the Secretary of the University. Closing date for applications (*eight* copies, overseas applicants one copy), July 21, 1961.

Esso

PETROLEUM

HAVE A VACANCY

in their Coordination and Economics Department for an experienced business economist aged 25-30.

This is a chance to work as a member of a team engaged in forecasting and other studies, or general business conditions, the energy market and petroleum economics.

For the right man this department provides an excellent starting point either for an economist who wants a specialist career or alternatively one who wished to be considered for broader responsibilities in due course. The man we like on will have an upper second at least and a practical sense of what is wanted of economists in business.

Applications in writing, quoting reference 341/E, to Head of Recruitment, Esso Petroleum Company Ltd., 16 Charles II Street, Haymarket, S.W.1.

HOME

A DANGEROUS THING

The Government's trepidation, during the present "crisis", over plainly desirable but awkward remedies for the real, long-standing sickness of the economy could lead to necessities as awkward and far less desirable (p. 315).

Hesitation on the threshold of Europe, if prolonged, might cost Britain its chance of having its own voice, and place, in the new world (p. 317).

A LITTLE LEARNING

Lack of scientific knowledge—and some disinclination to use it where there is no lack—bedevils British industry (p. 367).

The Plowden report on the control of public spending makes valuable suggestions; but it displays a distressing support for public ignorance of economic facts (p. 320).

Three educational experiments now afoot set out to aid the weak and civilise the strong (p. 328).

SURVIVAL OF THE FITTEST

The "big five" British motor manufacturers are becoming the Gigantic Two plus the three also-runners (p. 365).

A hire-purchase house has decided that cars are too old at five (p. 371).

PLACES NOT LIKE HOME

Expansion abroad is one industrialist's answer to Board of Trade embargoes on extending existing factories (p. 372).

Birmingham's hospitals for the aged have been the subject of a damning report (p. 360).

The outcry against German troops in Wales is mis-guided where it is not wrong-headed (p. 324).

THE WAGES OF SIN

The antique splendours of the Sunday observance laws may be chipped away by Mr Butler's committee (p. 328).

There is little the TUC can do to reform the ETU: its best hope lies in publicising the union's September elections (p. 327).

STRAWS IN THE WIND

The fortunes of the Conservative Party depend more on Mr Selwyn Lloyd than on the Prime Minister (p. 322).

Welsh leaseholders' distress may not be altogether logical: but it could present the Minister of Housing with a serious problem (p. 360).

BRITISH INSURANCE pages 379-401

INTERNATIONAL

ARMS AND THE MAN

The gloom of the growing arms race leaves the necessities of **disarmament** more starkly exposed than ever (p. 319).

The firm western notes on **Berlin** expound a willingness to face the threat of war but do not explain how to meet Mr Khrushchev's threat to make peace with the east Germans (p. 322).

President Kennedy is preparing America for military action over Berlin, should it become unavoidable (p. 335). At the same time he is becoming annoyed at criticism from the press to which he has been so friendly (p. 336). The Peace Corps, one of his most imaginative proposals, is now on its way (p. 334).

Prices are going down in the United States even though economic activity is going up (p. 339). Whether wages will go up depends in part on the current negotiations in the automobile industry (p. 341). Drought has brought a temporary easing of the farm problem (p. 336).

BONN AND THE BEAVER

Canada has based its case against British entry to the common market on grounds of high political principle (p. 344). But the summit meeting of the Six in Bonn rubs home the political arguments for a British move. Though their ship is going slow to give Britain a chance to join, it is still steering towards closer unity (p. 344).

FALLEN IDOLS

Signor Fanfani's image as leader of **Italian** catholicism's "opening to the left" is tarnished (p. 349).

But the latest **Papal Encyclical** takes sides against colonialism and allows respectability to certain socialist ideas (p. 327).

President de Gaulle has described his Prime Minister, **M. Debré,** as St. Sebastian. But some of the arrows which it is fashionable to shoot at him might have been aimed at the President himself (p. 349).

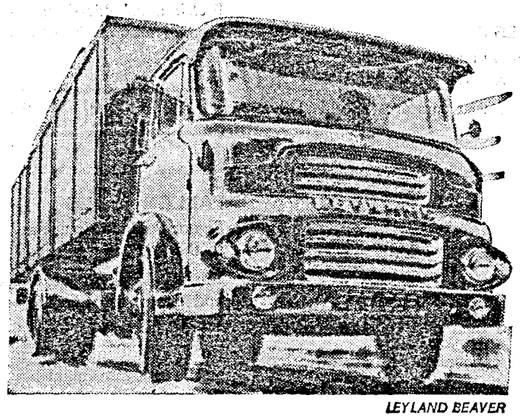
In **Singapore** a left-wing victory reflects disillusion with moderate government (p. 328).

The hope that **Persia's** new Prime Minister, Dr Amini, will bring radical reform is waning as he is forced into compromise with the Right (p. 346).

ARAB AMBITIONS

President Nasser has wisely taken up a cautious position on Kuwait (p. 323). But **President Bourguiba** of Tunis has courted the whirlwind by backing his claim to Bizerta with force (p. 323).

The **Sudan** government has imprisoned political leaders in the hope of breaking a growing opposition (p. 324).



AFRICAN ANODYNE

Mr Macleod's new proposals for **Northern Rhodesia's** constitution have maimed African trust in him. But the territory's success in avoiding trouble until now is dulling awareness of the trouble to come (p. 343).

Detailed contents on page 315

WE NEVER STOP LEARNING AT LEYLAND

From long years of experience, the Leyland Group have learnt how to give their trucks and buses everything the big 'uns should have—power, economy, guts. But even at their present high level of performance, we still aim for better things. If a Super Comet now speeds down a motorway at 70 m.p.h., then we want 80 m.p.h.—without sacrificing economy or safety. If a Claymore averages 20 m.p.g. in heavy traffic, then we're after 22-24 m.p.g. And if a Super Constructor hauls gross train weights of 150 tons—let's plan for 200 plus. We'll do all this—and more. For, although the knowledge gained from sixty years of experience at Leyland has brought us outstanding leadership and success, we never intend to stop learning.

The man who bends rivers

Joe, taking time off in the boom town of Cooma, is just one of the thousands working on the great Snowy Mountains hydro-electric scheme in south-eastern Australia. He and his fellow-workers have already dammed the eastward-flowing Snowy River, the Eucumbene and other rivers, harnessed them for power and turned them back *westward* through a system of long tunnels deep in the mountains, to carry precious water to the desert interior.

After ten years' heavy work the Snowy Mountains scheme, due to be completed in 1975, already provides one sixth of the ultimate 1,800,000 acre/feet of irrigation water a year–and more than 10% of its ultimate generating capacity of 3 million kilowatts. Atlas Copco rock drills, fitted with Sandvik Coromant drill steels and driven by Atlas Copco compressors, are being used for much of the work on these tunnels, dams and underground power stations. And this is only one of the major engineering projects in which Atlas Copco and Sandvik Coromant equipment has played a part.

Panic or Policy?

THE loud caterwauling of ministers in advance of next Tuesday's strangely delayed emergency measures has been a great mistake. Its most likely result is either that the measures themselves will appear as an anticlimax; or else that, in order to avoid looking anticlimactic, they will be made to look much more terrifying than they originally need have been. At present, the latter course seems more probable. It would now be so embarrassing to the Government if the mountain brought forth an ordinary mouse that Mr Lloyd's alternatives may appear to be to bring forth either a dressed-up bombastic mouse (possibly a very pink one, playing the anti-capitalist fool) or else a real rampaging heffalump of disinflation. Either beast would be a sign that the Chancellor is giving way to panic instead of soberly hammering out a policy that distinguishes carefully between Britain's short-term economic problems and its all-important long-term ones.

At the risk of being called complacent, one still needs to say that this country's short-term problems are by no means unmanageable, even though in the past few weeks they have been so appallingly mismanaged. It is not even necessarily true that the economy is faced this year by the threat of a sudden and persisting increase in the overload of domestic demand against supply; retail sales last month were at just about the same real level as a year before, although some temporary overheating of consumption has certainly been created since then by Mr Lloyd's extraordinary trailer advertisement that most consumer prices and taxes are likely to rise after Tuesday next.

In cool retrospect, the main thing that has happened in 1961 is that the previous illogical speculation against the dollar, which had dominated the international currency scene in the first two years after Europe's return to convertibility at the end of 1958, pretty well stopped in its tracks shortly after America's new image Kennedy administration came to power in January; and the diverted tide of speculation then turned strongly against sterling instead. This unwillingness of foreigners to hold sterling at the existing level of interest rates was in itself a warning that Britain's long-term weaknesses—its continuing cost inflation and adverse balance of current payments—had made sterling seem to be a sensible currency to speculate against. But the immediate new short-term threat to the exchange rate was one that could and should have been largely met by a rise in Britain's Bank rate several weeks ago. Unfortunately, partly because the authorities were lulled by foreign central banks' helpful willingness to hold sterling under the so-called Basle agreement, this was not done; and the fact that another Thursday has passed without action being taken must increase the apprehension that maintenance of the mistake in not raising Bank rate may conceivably have become a matter of face.

The Prime Minister told Tory backbenchers last week that old-fashioned methods of correction were not appropriate this time, which is an extraordinary conclusion for him to have drawn from the fact that neither the new-fangled method of no-correction under the Basle agreement nor Mr Lloyd's austerely increased budget surplus has so far looked like working. A decision not to raise interest rates now would be a decision to abjure use of an efficient double-barrelled weapon, in favour of using various single-barrelled weapons twice as hard. The big short-term mistake which the Government may now be making can be summed up in two sentences. A two per cent rise in Bank rate would

have the double advantage of being a bait to make it more profitable for foreigners to hold sterling and a regulator to cut down home demand. If Britain is not going to use the bait, then it will have to operate other forms of regulator (whether tax increases or very large public expenditure cuts or both) much more sternly than it would otherwise need to do.

Until these last two weeks, the one heartening feature of ministers' speeches had been their insistence that this time, at last, the Government intended to try to rectify the long-term weaknesses of the British economy as well as to meet the short-term threat before it. But now there must be an increasing doubt whether they are allowing themselves to understand what those long-term weaknesses are. *Pace* the moral puritans, it is a bleak acceptance of poverty to abandon the aim, and castigate the idea, of having it so good; one should not confuse that phrase's bad grammar with its excellent dynamic principles. Britain's ailment most certainly is not that its people are earning too much money in profits and wages in free-for-all markets. On the contrary, the trouble is that in free-for-all markets—such as markets abroad are—Britons are not earning enough; but that in some monopoly-influenced or trade-union-rigged or subsidy-protected markets at home they are too often getting profits or wages that they do not earn.

The ways to cut out the cancerous element in profits are, first, to introduce more competition into every industry (by reducing tariffs and barring legal enforcement of resale price maintenance), so that the only firms that can make large profits are those that are dynamic enough to thrive in really free markets at home and abroad; and, secondly, to stop giving Government subsidies to lame dogs. The ways to cut out the uneconomic element in wage rises are, first, to recognise that a monopoly and cost-inflating element occurs whenever Britain's present system of collective bludgeoning by trade unions pushes money wage rates higher than they would go in a free market; and, secondly, for the Government to rise strikes by turning down all above-the-market wage demands in its own sector, thus giving encouragement to private industry to do the same. This is not the same thing as a freeze in incomes; in all industries that are economically expanding and that need to attract more workers, earnings of all sorts should go ahead.

THESE are relatively simple and direct steps. It is only the extraordinary milksoppery which has soddened British political attitudes that makes it seem difficult for the Government to take them, and that gives rise to the view that one had better in fairness hit out at irrelevant targets first, with the pretence of thereby making it "psychologically easier" to hit out at relevant targets later. Here is the major and abiding curse of British politics today: the assumption that awkward things that are desirable for their own sake should never be done directly, but should always be approached deviously.

This sort of approach has lately brought a grievous threat to Britain's policy for associating with Europe, which the next article discusses. The cautious way of tackling difficulties in the way of a British entry into the common market has been assumed to be to talk a great deal about these difficulties and to talk very little about the advantages of riding past them. The theory has been that this would make those who have a vested interest in those difficulties more placated and amenable; in fact, its main result has simply been to give them more encouragement and incentive to dig in their toes. In the same way, it really would not be sensible to send Mr Sandys, Mr Hare, or Mr Thorneycroft as special emissaries to the trade union movement to talk about the Government's difficulties in saying "no" to it; and it would be worse than senseless to try to light the way to that approach by sacrificially burning at the stake a few anti-capitalist offerings, such as shareholders in any successful and expanding industries.

Yet there is now an obvious danger that Mr Lloyd may resort to some such theatrical and irrelevant action as demanding or imposing a general dividend freeze—which then by its nature would hit hardest at investment in precisely those industries that ought to be growing; which by holding back these growth industries would stunt the nation's best hopes of improving its standard of life; which by frightening away foreign and British investors could directly heighten the strain on sterling that the measures were meant to be designed to abate. The cardinal error in this crisis would be to slide into the assumption that the best way of cutting out waste in the economy is to cut down the most natural growing points first.

Possibly, these fears are too gloomy. In the short term, one suspects that almost any of the disinflationary measures which Mr Lloyd is now obviously going to take will succeed in damping down home demand pretty effectively, partly because that demand is probably not nearly as buoyant as the Government seems to assume. Unless the manner of his action succeeds in frightening foreign speculators as much as the matter of some of his speeches has already frightened his domestic friends, this plunge into disinflation should bring quick succour to the pound. In the long term, it is still possible that the heartening things that the Chancellor has said about fostering more competition should be taken at their face value, and that the more transcendental moonshine hinted at in some of his other statements should not. But the fear remains; some recent ministerial statements have been most redolent of George Bernard Shaw's aphorisms that "when a stupid man is doing something which he is ashamed of, he always declares that it is his duty" and that "an Englishman thinks he is moral when he is only uncomfortable." This seems to be a dubious form of morals; the point to make before next Tuesday is that it is certainly a chuckle-headed form of economics, which a great trading country cannot afford.

JULY 20, 1861

ASYLUMS FOR MONEY

We have heard a great deal lately of the poverty of bankers, and this has been assigned as a concurring cause for the tightness of the money market and for the low value of public securities. The accounts, however, of the London Joint Stock Banks for the half-year do not show any indication of this poverty. . . . It has surprised many persons that these great establishments should not show any signs of the poverty which has been attributed, doubtless correctly, to banks in general. *As these banks have large country* connections, it might be especially thought that they would be affected by the poverty which the bad harvest of last year has caused through the agricultural districts and among country bankers. But the peculiar nature of the business of the London Joint Stock Banks must be remembered. They are the reservoirs of *hesitating* money. Whenever there is a period of uncertainty they thrive. When a man is in doubt as to what he shall do with his money, he puts it out at interest in a London Joint Stock Bank; whenever he hesitates to buy anything because he thinks the price will be lower, he puts it at interest in a London Joint Stock Bank; whenever he is dubious whether he can continue to do his usual business with a profit, he deposits the money in a London Joint Stock Bank. He can have his money in a moment, and he obtains a high interest; for these banks are in the very best market for *making money, and can obtain the aid of the most practised* intelligence. No other establishment can compete with them in these respects. They are a sort of asylum for unemployed money, because they can bid more highly for it than any one else can bid. During the last half-year there has been much unemployed money, and therefore they have not suffered as other banks have done during the same trying period.

Britain's New Frontier

The opposition to British entry into the Common Market is mounting; but no serious alternative exists, and the opportunity will not wait

IN the past two months the reasons that have impelled the British Government to consider joining the European common market have become obscured. No wave of opinion on such a major issue, however strong, can roll forward indefinitely without some backwash, and at home the dawning realisation that Britain is on the verge of a historic departure from its insular traditions has brought out into the open those who look back instinctively to those traditions. The three ministers who have been consulting the Commonwealth have come home laden with problems—which, in fact, they went out to collect. Only two governments, it is true—those of Canada and Australia—have been open in their opposition. But each Commonwealth country has naturally pleaded for its special trading interests, and most have brought up doubts about the future of the Commonwealth as a political idea.

Yet events have meanwhile put the case for joining more forcefully than any arguments. In Bonn, on Tuesday, the heads of the six common market governments met and agreed on more steps towards political unity. They are not at present envisaging federation and even the French plans for confederation have been toned down. As our Bonn correspondent points out on page 344, the Six are indeed pausing to give Britain the chance to board the ship. They have, however, made certain decisions: that the heads of governments should henceforth meet regularly; the foreign ministers, who already do meet regularly, should go on doing so; and a commission should draft a European political statute. A further step has thus been taken towards a new system of political consultation and power.

Europe—as Mr Khrushchev's Berlin threats show—has by no means yet been displaced as the central arena of world politics. But Britain now faces the prospect of becoming increasingly peripheral in shaping its affairs as a new, incomparably bigger, group emerges on its doorstep. In the broader Atlantic context, too, the postwar phase when Britain, as the leading European state, could still hope for a special influence as America's first ally, is at an end; for the shifting facts of power force America to give the European community greater weight. The Commonwealth rightly attaches importance to maintaining Britain's voice in world affairs. If Britain finds no place in the new European structure, that voice seems destined to become increasingly plaintive and unheard, in America as elsewhere.

Meanwhile the country's sixth postwar economic crisis provides the economic writing on the wall. Through fifteen years one improvisation after another has masked the need for a radical shake-up of the British economy. The pretence cannot be kept up much longer. For a decade Britain's share of the world's exports has been steadily declining; it now faces the prospect of exclusion from the world's most swiftly growing major market. Joining the common market will not solve Britain's economic problem; but it will bring the problem home in tangible terms—and present the opportunity to solve it. Certainly no other step offers the combination of both a salutary competitive discipline and the access to new markets that should stimulate investment and growth at the same time. In sheer tactical terms a new hesitation at this stage could be disastrous for sterling; while, to glance aside at a more hopeful prospect, the plans for a pooling of reserves on a European basis now being hatched amongst the key thinkers in Paris and Brussels do seem to offer a more radical remedy for the sterling problem than any yet put forward. The pooling of power can bring, not just sacrifices, but real remedies for problems that have outgrown this island nation.

For all that, the British Government would seem to be under sore temptation to put off a decision once more, as Tories and others react nervously to the protests that have been invited from across the sea. The Federation of British Industries, which once gave a fair wind to the move towards Europe, has already succumbed to this temptation. A resolution, passed by the grand council on July 15th, accepts the idea of a common tariff, advocates a common European policy towards low-wage countries which will shift some of the burden of Asian import from British to Continental shoulders, and even grudgingly acknowledges the possibility of losing existing preferences in Commonwealth markets. But it comes out directly against "formal negotiations with the Six until existing differences have been so far narrowed as to offer the prospect of a satisfactory outcome."

FRANKLY, there now seems no likelihood that further hesitation will bring any further narrowing. A year of patient, perhaps excessively patient, British diplomacy has brought a great change for the better in the climate across the Channel, but hope and expectation cannot last for ever. The French in private exchanges have gone as far as they are prepared to go on the Commonwealth problem in advance of a formal negotiation—and that is quite a long way. They have agreed to associate British African territories on the same terms as their own, and to extend free entry arrangements to vital Asian tropical products like tea. They are prepared, it seems, to re-negotiate items of the common tariff; this could presumably take care of the vital Canadian raw materials, like aluminium

and newsprint. In Geneva, under the auspices of the General Agreement on Tariffs and Trade, a conference is meeting to work out a joint western policy to share the burden of importing Asian textiles. Here, in embryo, is the answer to the problems of India and Hongkong. Finally, the French recognise that New Zealand's agriculture must have special treatment.

There remains the problem of agriculture generally—above all, of meat and grain from Australia and Canada. With French peasants out on the barricades, German ones barracking Dr Adenauer on the hustings, and the prairies under drought, no-one can pretend this will be easy to solve. But here, too, difficulty is not a reason for delay. The common market's agricultural policies (like its African association) are now at a crucial formative stage ; it will not help New Zealand and Australia (or Ghana and Nigeria) if Britain waits to try to join until the plans have crystallised. Almost every week, some new feature of the common market takes final shape, narrowing the field open to negotiation.

The Federation of British Industries, whose resolution, though remarkably reticent on the interests of industry, contains strong views on politics, agriculture and the Commonwealth which sound very like those of the Board of Trade, declares that the common market in agriculture "*is likely to* be restrictive." That is the danger, it is true. But there is also another danger—that the British will overestimate their own present liberality, and underestimate the opportunities that would exist to make European policy more liberal if they themselves were to throw their weight on the liberal side. The latest bulletin of the United Nations Economic Commission for Europe shows that British grain prices (where subsidies protect home producers against the Commonwealth and all comers), though lower than prices in Germany, were far above those in France in the years 1956 to 1959. If Britain were to throw its weight on the side of the efficient European producers (Holland, Denmark, France) who want prices down, there could be a strong combination in favour of a relatively low-price liberal common market.

Agriculture is not the only field where mistrust may be as great an obstacle as the difficulties themselves. The FBI is worried by the uncertainty of the provisions of the Rome treaty about restrictive practices. Here the Six have, indeed, not yet decided what to do. But a visit to Brussels might have shown the FBI that there are key men in the community anxious to learn from Britain in this field. The head of the "competition" directorate of the European Commission has himself studied the working of the British restrictive practices court, and regards it as a better model for the community's arrangements than any system yet existing on the Continent. Here is a good example of the suspicious insular habit of, in case of doubt, assuming the worst.

When all the objections have been aired, an alternative to the policy of applying to join the European community, and negotiating to protect the interests of the Commonwealth and the European Free Trade Association, is impossible to find. On their side the Six have made it clear again and again that they are not prepared to accept a looser association with a large power like Britain that will water down the essential institutions and principles of the Rome treaty. Nor, for that matter, will the walls of the community's African association come tumbling down at the blast of the Commonwealth trumpet, as Dr Nkrumah still seems to hope. Unity in western Europe remains, at this stage of African emancipation, a condition of unity in Africa.

ONE other idea that has been resurrected in the past few days—that of a Commonwealth common market—merely shows up starkly the limitations of the Commonwealth (for all its reality in other ways) as an economic, or indeed a political community. Is Mr Diefenbaker or Mr Menzies prepared to tear down the tariffs and quotas against British goods behind which Australia and Canada are building up their infant industries? Is Dr Nkrumah prepared to give up his idea of an African common market for the sake of a Commonwealth one ? They are not ; their stage of national development is against it. Eighty years ago the Continental countries moved into their era of protection as they built up their infant industries, while Britain enjoyed free access to Commonwealth markets. Today, as mature economies, they are ready to bring the barriers down, while the Commonwealth countries are protecting themselves as they, in their turn, industrialise. The health of the Commonwealth itself requires Britain—free and independent just like other Commonwealth countries—to be able to adapt itself to this changing pattern.

That does not mean at all that the unique network of the Commonwealth countries cannot keep what are its real ties, and develop them. Indeed, in the new world of regional groupings, the Commonwealth's role as bridge—between regions as well as between races—should actually grow. The Commonwealth, changing fast anyway, will change as Britain becomes a part of the new Europe, but this need not be any weakening ; the alternative is a fatal debility at the heart.

Sir Roy Welensky has remarked that a British decision to join might pose a "threat to the whole Commonwealth structure," because it would impair Britain's political identity and influence ; that is the plea which Canada has entered, too. But how long will the Commonwealth mean anything at all if Britain cannot make up its own mind to take this plunge ? It is precisely in order to preserve and refashion Britain's political identity and influence that the decision is demanded. The head of a body like the Commonwealth cannot persist merely as a reflex of the limbs. Only Britain can weigh, for itself, the facts of power and wealth, and politics and defence in its home continent, Europe, and decide to do what is needed to secure its future—and so, in part, the future of all its friends.

Throughout the years of erosion of the British imperial position the British people have tended to react defensively, drawing in their horns abroad, falling back on the consolations and myths of island life. But the state of our economy today —and of the world polity—should make it plain that the Dunkirk spirit is not enough. In the common market British industry will face a rigorous challenge ; but opportunity will be there as well. In politics Britain will have to produce new energies if it is to carry its great traditions into the new Europe and not be swamped. But there, too, lies opportunity: the case for joining Europe is not just *faute de mieux* ; there is the new frontier there, political as well as economic, that this old country much needs now. It is not an opportunity that can be toyed with for long. The European Community is taking shape fast ; 1961 may well be the last year in which Britain can enter with a fair hope of helping to shape it.

A B C D of Disarmament

Fresh spurts in the arms race make it the more urgently necessary to plumb the full depth of the disarmament problem

SHAPES are sometimes clearer under dull skies than in the bright shimmer of hope. This is particularly true of the disarmament problem. Its essential outlines are too seldom recalled. Either attention is focused on those aspects of it that seem most hopeful at a given moment, or it is shrugged off altogether because there appears no prospect of progress at all. Yet a recall to fundamentals is not only needed when the outlook is grim ; it is also at such moments that the fundamentals, unobscured by fleeting hopes, emerge most craggily.

This is surely such a moment. True, Mr McCloy is in Moscow this week, still patiently prodding the Russians toward a resumption of the disarmament talks that they broke off so brusquely more than a year ago. But—especially after *Pravda's* weekend leader—nobody now envisages a serious resumption of talks before the United Nations Assembly meets in September; and nobody dares to expect from the Assembly more than another inconclusive wrangling match such as marred (and lengthened) its last session. Nor are the Geneva talks on nuclear tests any longer seen as a potential pathmaker for a comprehensive disarmament agreement. The senior American and British delegates have withdrawn from Geneva, and their governments have asked the UN Assembly to consider the deadlock created there, after thirty-two months of negotiation, by Russia's insistence on new conditions. Over all hangs the shadow of Mr Khrushchev's announcement of a dramatically increased Soviet arms effort, presented as a response to recent American moves and in turn setting off fresh American discussion of further moves, including the calling up of some reserves.

Yet even the prospect of a trial of nerves—if not of strength —over Berlin cannot altogether still the continuing debate on disarmament. The greater the danger, indeed, the more urgent becomes the need for a really searching re-examination of a problem whose full depth has still not been plumbed.

NOTHING now remains of Mr Khrushchev's 1959 formula for general disarmament except a kind of Cheshire-cat grin and whiskers. Such body as lay behind the grin has been gradually dismantled by its own sponsors. They have abandoned the four-year timetable, after Mr Tsarapkin had given the show away by insisting at Geneva on an even longer period merely to mount the monitoring of nuclear tests. They have abandoned (after light-heartedly reversing) Mr Khrushchev's absurd programme of staging, under which all non-nuclear powers were to be completely disarmed before the hydrogen-headed ICBMs were touched. The Russians have grudgingly revealed that when they say "complete" disarmament they do not mean it; they mean that each state would keep enough force to sustain its rulers in power—that is, the less democratic a regime, the stronger it would be militarily. And they now accept the need for an international force under UN authority to keep peace in a disarmed world—an idea which, less than a year ago, was reviled by Soviet spokesmen as one of imperialism's most evil devices.

Western formulae have stood up better to the test of two gruelling years. One can trace a continuous pattern of generally realistic thinking through the British outline offered to the United Nations in September, 1959, the five-power plan of March, 1960, the American elaborations of June, and the Anglo-American-Italian resolution tabled in the Assembly last November. The essential idea, that general disarmament must be so staged that nobody should obtain a dangerous military advantage at any point, has been faithfully preserved (it has now, indeed, been formally accepted by Russia, but unfortunately in a context that shows the acceptance to be purely formal). There remains, however, a glaring gap in the western formulation. The fact that the same gap is equally unfilled in the Soviet proposals, and in the suggestions offered at the UN by India and other uncommitted nations, does not absolve the western governments from the responsibility of filling it in, if they wish their plans to be taken seriously.

The gap is papered over with vague references to new peace-keeping machinery necessitating the use of a UN force. But such phrases raise rather than answer the crucial questions. In a generally disarmed world, in which, however, some states retained the substantial forces they would need to control their own peoples, how strong must the international force be to keep the peace? (Russians, at least in talk with foreigners, now throw up the idea of a force of 100,000 men, possibly with naval and air elements, but without "heavy" weapons.) Would the force be an international legion with a single loyalty, or just a congeries of national units, like the existing UN forces, whose elements are available only if their governments permit? Above all, how could the peace-keeping authority be constituted so that its necessarily irresistible military power could not be abused, without crippling its effectiveness by a system of vetoes?

At first sight, no doubt, these seem highly hypothetical questions that need not be answered until Utopia is in clearer view than it is today. But their gradual and vexing intrusion into the great debate on disarmament during the past two years suggests that they have a much more immediate bearing. Mr Khrushchev has raised the issue in the course of his onslaught on Mr Hammarskjöld, arguing that no one man can be given the power that might accrue to the secretary-general if a UN force of decisive strength began to evolve. More generally, no government is likely to commit itself seriously to the road that leads to general disarmament if it sees, at the end of the road, a system fatal to its most cherished ambitions —a system from which, once it has been established, it will be too late to escape.

Appointments, Business and Personal notices, and other Classified Advertisements : pages 415 and 416

The fundamentals of the disarmament problem are, after all, pretty simple, however unavoidably complex its superstructure. These fundamentals even lend themselves conveniently to an alphabetical arrangement. In this alphabet A stands for anarchy—regrettably, the natural condition of relations between sovereign states—and B for balance of power, the most familiar device for moderating an anarchical rivalry in arms. For all our anxious thought, we have not yet, in execution, got beyond B ; we have merely explored its limitations, while still, necessarily, relying on such security as it offers us. Meanwhile, both in negotiation and in unofficial debate, our concern is divided between the various new moderating devices that are usually lumped together under the heading of arms control (C) and the sweeping reductions involved in general disarmament (D). (The alphabet need not, of course, end there ; beyond D one might cite, for instance, E for the economic consequences of general disarmament—a whole field for study in itself, and one to which the UN is now committed ; but, for the present, the argument may be kept to four-letter terms.)

If D is now dominant in the public eye thanks to Mr Khrushchev's vestigial but still hypnotic grin and whiskers, among the pundits it is C—arms control—to which the greatest amount of brainpower is being devoted, at any rate in the West. (There is, as yet, practically no published evidence of serious analytical thinking about either general disarmament or arms control among Russians.) Mr Kennedy is still being bombarded with suggestions elaborating the existing body of ideas about how to avert "accidental" war by providing mutual reassurances ; how to check the spread of nuclear arms to other powers or into outer space ; and how to make the deterrent less dependent on vulnerably sited missiles and inadequately dispersed bombers, with their attendant risks of over-hasty trigger-quickness. Here, with such devices as the Polaris-firing submarine, C visibly overlaps with B ; the goal is to stabilise, even defuse, the balance of power.

Soviet doctrine—for example, Mr Bogdanov's pamphlet on "Nuclear Disarmament," lately published by the Institute for International Relations in Moscow—remains scathingly hostile to the whole concept of balance, and thus to all forms of arms control designed to perfect the balance. But Mr Khrushchev's latest spurt in the arms race is a reminder that, in practice, Russia too pursues balance—at tremendous cost to an economy much less productive than America's ; and the present western concentration on those forms of arms control that aim at a better balance is largely the result of the Soviet resistance to control through mutual inspection that has bedevilled the Geneva talks on tests. But it is the pace of technological advance that most seriously affects the validity of the idea of security through balance. Such a breakthrough as the successful development of an anti-missile missile or a "neutron" bomb, or a dramatically cheaper method of producing weapons of mass destruction, could only too easily upset either the balance between the super-powers or their dominant position in the world. In alphabetical terms, this would mean being driven back from B to the armed anarchy of A.

THE apparent choice between approaches to disarmament that some partisans have urged is in fact an unreal one. So long as the road to D—general disarmament—remains uncharted by reason of the nations' refusal to face its full implications, the immediate task is that of perfecting B as far as technical factors permit and piling as much of C as possible on top of it. But B and C together, however successfully developed, can yield no final security ; the road to D, however misty, must still be reconnoitred. The western governments have already looked far enough ahead along that road to glimpse the inevitable at the end of it—world government—and have shrunk back ; the Russians have steadfastly shut their eyes to it. On neither side (nor, it should be added, among the uncommitted countries) can sincerity about general disarmament be claimed until the plain facts are faced more frankly.

Several Billion Candle Ends

A first judgment on the Plowden report which was published just before we went to press

THE Plowden report on "Control of Public Expenditure" bears many of the marks of an intelligent civil servant's document ; senior officials from several departments sat on the committee with Lord Plowden and three other outsiders, and although the published report is issued solely in the names of these last four men, the views expressed carry with them a certain cachet of what is thought to be best by the wisest men in Whitehall. It is therefore reasonable to consider them with that leaning in mind. The report's main recommendation is quite obviously right. Whether or not Government planning is to be regarded as a dirty word for outside industry, it is high time that Government expenditure itself was planned. At present, says the report, "the tendency is for expenditure decisions to be taken piecemeal"; henceforth or, rather, once the necessary organisational changes have been made, "decisions involving substantial future expenditure should always be taken in the light of surveys of public expenditure as a whole, over a period of years, and in relation to the prospective resources."

The pill in the pudding is that, once the Government has made these long-term surveys, the report assumes that it should not tell anybody about them:

> It is . . . doubtful whether any Government will feel able to place these surveys before Parliament and the public. To do this would involve disclosing the Government's long-term intention for a wide range of public expenditure; and also explaining the survey's assumptions about employment, wages, prices and all the other main elements in the national economy. It would be surprising if any Government were prepared to do this.

This is an argument that no government should be allowed to get away with—at least in the extreme form that appears to be adumbrated in this so authoritative report.

In fact, the case for maximum and informed and pertinacious public debate is strengthened by a consideration of the three examples of the sorts of decisions through which the committee sagely suspects that the largest amounts of public money may be being wasted today. The main fields of waste, it believes, lie in the "no-man's land between policy and administration." The first typical sort of case "may be a subsidy to a farm or an industry or an area, given as a temporary pump-primer yet continued despite the fact that the recipient has poor prospects of ever becoming self-sufficient again." Secondly, "the social changes of the last fifteen years have altered the incidence of hardship, so that there now may well be excessive social services for some purposes and inadequate ones for others" (the report boldly suggests that some agricultural grants may come into this category). Third are cases in which quick changes and happenings in the military or international field, or in industry, agriculture or transport lead to a strong pressure for governmental action, often in the form of large capital projects: these cases often arise at short notice and with what appears to be pressing urgency, fanned by parliamentary and public opinion. The consequence may often be that they are not subjected to adequate financial examination. These are all cases in which subsequent history often shows great waste. The first two sorts of waste are of a kind that politicians find it difficult to cut out, until a mass of newspaper articles has helped to create an informed opinion in favour of doing so. The third sort of waste is implicitly blamed by the report on pressure by uninformed public opinion, but that pressure will certainly not be made easier to resist if the trend in any new system of long-term planning is for the Government to keep its long-term expenditure estimates secret to its pristine self and leave the public in the dark.

The second major potentiality for waste in the public service lies not in the way that the state takes its expenditure decisions, but in its system of control over the way in which those decisions to spend are carried out. Basically, the right trend here—to which the committee gives its blessing—must surely be to make the Treasury more of an efficiency audit organisation and to leave more of the purely detailed management of expenditure to the departments themselves. "The Treasury," says the report, "should use the submissions on individual expenditures mainly to form a judgment on the efficiency of the department's administrative machine ; and it should express its views about the administration rather than about the individual submissions themselves." In performing this salient Treasury task, the report notes that

> increasing attention has been paid in recent years in the Civil Service to comparisons of performance of units in different departments but engaged in the same field of work, such as regional offices, hospitals, research establishments ; and to comparisons of the way in which the same job is done by many departments, e.g., information work, building costs and so on.

It is important that these comparisons should be increasingly made, throughout the public service. And, once again, although one suspects that Whitehall would hate this, why on earth not publish them ?

Within the individual departments, the report recognises "the burden of work which falls on Permanent Secretaries in carrying out their triple function of policy advice, finance and management"; but hints delicately that some permanent secretaries should devote more time to the last. To help them, it recognises that "the post of Principal Establishment Officer, as adviser to the Permanent Secretary on staffing and organisation, should be regarded as one of the most important posts." Does this go far enough ? Should not most of the bigger departments have the equivalent of a general manager in them, separate from and just below the policy-advising Permanent Secretary ? Any big commercial organisation would be likely to arrange things that way ; in a newspaper, which is not an entirely jejeune analogy, the editor (as policy-maker) and general manager are always separate posts.

THE other big and remaining problem, which is not really solved by this report, is that of securing effective outside supervision over the whole machine. The report makes no mention of the case for having a senior Cabinet minister, separate from the Chancellor of the Exchequer, as a sort of director of the bureau of the Budget to oversee government expenditure as a whole. It says merely (and somewhat idealistically ?) that there should be an improvement in the arrangements to enable ministers to discharge their "collective responsibility" for this ; ministers should not regard themselves as poachers whose job is to get the biggest vote for their department, leaving the Chancellor as the sole gamekeeper.

The report also does not exactly overdo its enthusiasm for the parliamentary watchdogs in their Estimates and Public Accounts Committees. "We have not formed the impression," it says in one of several loaded negatives, "that the work of the committees, taken as a whole, is imposing an unreasonable load upon the Permanent Secretaries or upon the departments in relation to its intrinsic importance." But it does hope that the committees will realise that the Treasury cannot constantly be expected to give as much independent advice and comment to them on detailed points as it did when Government expenditure was much smaller and more directly Treasury-controlled than now. As for parliamentary control of the nationalised industries, "the over-riding consideration in our view is to strengthen the managements"; once that is done, the report implies, Parliament should be careful not to keep getting in their hair.

Undoubtedly, there is a great deal of good sense in this. There is equally good sense in another polite dig that the report makes at the politicians—and one that is especially topical at this time: the committee is all against "attempts, at moments of inflationary pressure, to impose short-term 'economies'" in current Government expenditure. These "are rarely successful and sometimes damaging"; they are "frustrating to efficiency and economy in the running of the public services."

But, when all this has been said and fairly granted, and when tribute has been paid to the high value of much of this report, the main problem of watching over so many thousands of millions of pounds of public money remains. Perhaps the best solution would be to have some such body as the Plowden committee set up to review the situation and the mechanism every seven years or so ; but next time to make it even more an outside, and less an internal, committee ; and all the time, instead of tending to hide both improvements and weaknesses under a bushel, to lay much more information about trends in the expenditure of taxpayers' money, and about internal audits of efficiency in spending it, frankly before the public.

NOTES OF THE WEEK

BERLIN

In the Web

"WE are in danger of becoming prisoners of our own pronouncements," the Foreign Secretary told the Lords on Wednesday, discussing Berlin, "and of a rigidity growing up from which no one can escape, and which might possibly lead the world into war." This kind of sensible talk is liable to be represented nowadays as feeble shilly-shallying. As President Kennedy made clear at his press conference on Wednesday, there is a mood of irritation among the western allies at the length of time it took to agree upon the latest salvo of western utterances. These were the replies, delivered on Monday, to Mr Khrushchev's Vienna memorandum of June 4th about Germany and Berlin.

Neither of these broadsides has served any purpose but to imprison each side a degree more tightly in its own web of argument. Mr Khrushchev's promise of a separate peace treaty with the east German regime by the end of this year seems to have become inescapable. The West's commitment to maintain both the liberties of west Berlin, and its own presence there, was inescapable already. But the dispute is really about something different, and this, presumably, is what made it hard to formulate the western replies. Mr Khrushchev does not threaten, in words, to interfere with west Berlin's liberties or with western access to the city. What he threatens is to hand the matter over to Herr Ulbricht's regime, which, in turn, disclaims any intention of obstructing anybody.

It is here that the West is imprisoned by its past utterances: as the American Note reiterated on Monday, the east German government "is not representative of these people" and therefore "cannot be regarded as an independent sovereign state." Therefore there can be no dealings with it. There are many parts of the world where such a doctrine would bring diplomacy to a standstill. In Berlin, it obliges the West to rely on vague threats of force to meet a situation as yet shadowy and hypothetical. This week's Notes have not, in fact, made matters any worse; if they leave uneasiness behind them, it is because the course of action to be followed by the western powers, when their difficulties come upon them, remains shrouded in perplexity.

THE ECONOMY

Playing Cluedo

IN the past week there have been six speeches by ministers who must know what Mr Lloyd is going to do next Tuesday. Inevitably, they have set off a national guessing game. The one common feature to all of them was a claim that "things have been too easy in the home market" and that "home demand is rising very fast"; one doubts if this last statement is necessarily true, but there is here a clear implication that the cuts to be laid on the domestic consumer will be pretty heavy. Everybody now seems to be expecting the Chancellor to increase all indirect taxes by up to 10 per cent.; this expectation was heightened on Tuesday when Mr Lloyd went out of his way to deny that consumer taxes are already unfairly high. Until Tuesday most people had assumed that the payroll tax regulator would not be used, but then Mr Maudling (followed on Wednesday by Mr Hare) included a passage about the need to encourage industries that have surplus labour to release it much more quickly to those that have unfilled vacancies and full order books. Other points in Mr Maudling's speech were that, unfortunately, he does "not believe in unilateral tariff reductions," but that our negotiators at Gatt have been instructed "to aim at getting for industry generally the maximum reduction in our protective tariffs that we can hope to be paid for by other people reciprocally"; and that, fortunately, he is "sure that quotas and import restrictions are wrong."

At Hawarden last weekend Mr Lloyd talked about his measures being "unexpected" as well as unpopular, and Mr Macmillan's semi-private speech to Tory backbenchers the previous Thursday twanged at the same note. Inevitably, this attracted attention to Mr Maudling's remarks on Tuesday that while wages were over 7 per cent up on a year ago ("faster than can possibly be justified by the rise in productivity"), dividends were up by 23 per cent ("far too high by any reckoning whatever"). But it was not very clear whether Mr Maudling was saying here that the Government could not legitimately do anything directly about wages (he talked later about "tragedy if we abandoned . . . social and economic freedom"), or whether he was presaging dividend controls. The most common interpretation was that the Government is going to ask for a "voluntary" freeze all round. Oddly, in the Lor on the previous day, Lord Hailsham h chosen to cite a different selection of figu about recent movements in incomes ("b tween the first quarter of 1960 and the fi quarter of 1961 profits actually fell by much as 6½ per cent while wages a salaries during the same period rose b 8½ per cent"). Lord Hailsham also stresse the need for "fairness," but added th "while profits are, in fact, at least contr lable in principle by an appropriate instr ment, that is by taxation, . . . no appr priate instrument for the direct control wage and salary increases has as yet bee devised."

All the ministers referred to the need f encouraging competition and overcomi restrictive practices, but on Wednesday M Lloyd's usual distinction between long-ter and short-term measures seemed a litt blurred. In the past, he said, "when w have averted a short-term crisis, we rath tend to sit back and congratulate ourselves and that was not going to happen this tim It is to be hoped that Mr Lloyd's definitio of "long-term measures" does not mea "short-term restrictions for ever."

THE GOVERNMENT BENCHES

Tories before the Squeez

THE Conservative parliamentary part like the Prime Minister, is anxious b not demoralised. Some of the new membe who have not got the memories of 1957 console them are a little rattled, but the o hands have seen it all before and accept th situation with a certain cynical gratitud that it has all happened now when the ele tion is still two or more years away. The are no signs of panic, only some neurosis; hence the querulous and insister demand for "leadership." Economics not the average Tory backbencher's stron point, and it is therefore difficult interpret what the party as a whole want But, in general, the most puritanical d mands for "stern measures" seem to com from only a vocal minority; the majorit although prepared for a sacrifice of orth doxy, do not really want a panic-stricke return to restriction, but will probably first follow obediently wherever Mr Lloy leads.

Mr Lloyd still holds all the cards in h hand. His budget could hardly be as popul as it once was, but his own personal stock despite the appalling insensitivity of h speech on Tuesday, has not been devalued By contrast to Labour hoots and jeers, th Tories received Mr Gaitskell in what wa almost a respectful silence as he savaged th

Government with Mr Macmillan's former slogans. The Prime Minister's prestige has certainly ebbed; the previous sublime faith in his judgment is impossible to detect and difficult to remember; but it would be absurd to conclude that the party as a whole had lost confidence in him. Certainly the Commonwealth lobby, who have never liked him anyhow, have been heartened by the ambiguous results of the recent high ministerial flittings. But if, as seems likely, what has really happened is that the white dominions have agreed reluctantly to a British approach to the Six, most Tories assume that the Cabinet will back him and that there will be no real party split. Berlin, of course, looms ahead, but here Tory anxieties are cosmic rather than partisan. The party's future—and this is the extent of its vulnerability—now probably depends more on Mr Selwyn Lloyd than on the Prime Minister. If his measures succeed in putting the economy on a secure basis for the long term then he will restore at a stroke the country's and the party's and his own fortunes. If he fails, all three will go down together.

NORTH AFRICA

Bizerta Bombshell

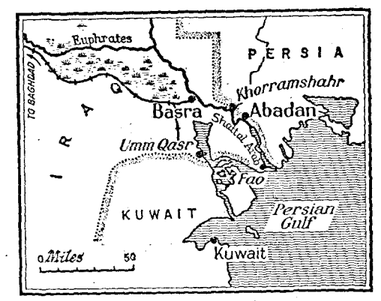
PRESIDENT BOURGUIBA'S motives for firing on the French naval base at Bizerta—assuming that his subordinates, panicked and angered by the appearance of French paratroopers, have not exceeded his instructions—can only be guessed at. At first sight the simplest hypothesis must be that he has suffered from a total loss of judgment, which the French commanders appear to have found infectious. This quarrel has flared up over a long quiescent grievance, outstanding since 1956, and subject to a gentlemen's agreement that the matter would not be raised until the end of the Algerian war. The moment is ill-chosen in view of the Franco-Algerian talks, which began again this week and require the utmost harmony between all parties involved in North Africa. The affray of Bizerta is therefore unlikely to improve Tunisia's already strained relations with the Algerian nationalists (which are discussed in the following note). Finally, Tunisia has resorted to violence without anything like sufficient justification. It is hard to think that President Bourguiba will cut a very impressive figure at the Security Council, to which he has now appealed; and it must earnestly be hoped that he will manage to extricate himself from his adventure as soon as possible.

The beginnings of a theory to account for so strange a blunder on the part of so sage a statesman do, however, exist. As the months since their Rambouillet talks have gone by without producing any real progress towards the end of the Algerian war, and without any French gesture to reward the Tunisians, President Bourguiba has increasingly felt let down by President de Gaulle. He has been attacked as a tool of the colonialists. Anxious, perhaps, to find some way of demonstrating, both to the French and the North Africans, that, in his own words, "I am not de Gaulle's crutch," he has seized on the ever present pretext of Bizerta. But it is clear that he has gone too far. General de Gaulle will hardly be prepared to make concessions now that so much blood has been spilt if he refused to do so when threatened by the Tunisian mob. He has never appeared to question Tunisian sovereignty over the base, so he can assume all the airs of injured innocence. Just now, any French retreat over Bizerta might strain the loyalty of the navy, which stood by the general during the April mutiny, and would serve as a precedent for the surrender of the Algerian naval base of Mers el Kebir, which he wants to keep.

Saharan Spanner

LINKED with President Bourguiba's Bizerta demand is one for some 11,000 or 12,000 square miles of the Algerian Sahara to the south-west of Tunisia; he claims that this area was unilaterally appropriated by the French in 1910. He now asks for it back, citing a Tunisian-Algerian agreement of 1901, and states that he is not prepared to negotiate a final frontier settlement with anyone except an independent Algerian state. But he has also said that he does not think that all the Sahara should be Algerian, and he made derogatory allusions to the patriotism of the Algerian leadership in his speech on Monday. The provisional Algerian government counter-attacked with a communiqué expressing regret at President Bourguiba's language, and restating its claim to all the Algerian Sahara. The quarrel between the allies was made palpable when not a single Tunisian minister was present to see the Algerian delegates off for Thursday's resumption of the Evian talks.

This evidence of Maghrebian disunity can hardly be called timely in view of the resumption of the Franco-Algerian negotiations; but its harm to the Algerian cause is perhaps diminished by President Bourguiba's remark that the French have no claim to sovereignty in the desert—which is the Algerian contention. It remains, however, hard to see why the Tunisian president chose to throw this particular spanner in the works at such a time. He may be convinced that "an independent Algerian government" would make no concessions over the Sahara—this would explain his hostile remarks. Or he may hope to jolt French and Algerians alike into arriving at some compromise, internationalising agreement about the future status of the Sahara; or he may merely want to reserve Tunisia's right to a voice in any permanent North African settlement.



It remains probable, however, that in the long run President Bourguiba will have achieved little by his move; and it is certain that the prospects of Algerian peace still depend on what new thoughts, if any, General de Gaulle has had since he suspended the Evian talks. In this respect it was encouraging that General de Gaulle did not mention the Sahara in his last television speech. Perhaps one, at least, of the interested parties has decided to try for what he can get rather than to stick out for everything he would like.

KUWAIT

Arab Courtesies

AS the Arab League renewed its discussions on Kuwait on Thursday the ruler of Kuwait had before him a report of the United Arab Republic's attitude. This statement appears to have been sent to him after the visit to Cairo of the Kuwaiti mission under Sheikh Jabr al Ahmad (the ruler's likely successor) and was reported in *Al Ahram* on July 17th. According to *Al Ahram*, the Arab Republic pays tribute to the ruler for never having before—neither at the time of the Suez crisis, nor the Lebanon and Jordan landings—allowed British troops on his soil.

The statement recognises that when the Iraqi claim was first made "the danger

threatening Kuwait . . . was an immediate one." British forces, it urges, must forthwith be replaced by Arab ones, while Kuwait strives to join the Arab League and the United Nations. But any suggestion that Kuwait should surrender some oil revenues, as security for Arab support, is repudiated. Cairo does not offer to lend its own army, thus attesting not only the now approved Arab principle that Arab countries bordering Israel should not do so, but also its own desire to avoid provoking the sensitive Iraqis. Thus the hard facts are faced in a conscientious way.

General Qasim, meanwhile, in his July 14th orations, flew some kites which, could they be brought to earth in a calmer political atmosphere, would make economic sense. These were his allusions to extending the Baghdad railway to "our port in Kuwait" and building a canal to carry to Kuwait the waters of the Euphrates. Both are well-rehearsed ideas and only seemed cryptic because uttered out of the blue.

They simply refer to the schemes for developing Iraq's new port, a mile from the Kuwaiti frontier, and for irrigating southern Iraq. Construction of this port, Umm Qasr, was begun this year. Designed to reduce Iraq's dependence on the Persian-shared Shatt al Arab, the first plans envisaged—ideally—a small overlap into Kuwaiti waters. The Russians are now handling the rail link; the port, amongst many useful functions, could facilitate Kuwait's own trade.

The companion project to bring water south from the Euphrates is still no more than a paper one. Nor is it to be confused with earlier plans to pipe drinking water to Kuwait from the Shatt al Arab—a neighbourly offer that Kuwait, for fear of its neighbour's motives, has steadily refused. The canal plan is, on the contrary, primarily horticultural—a means of repeating the pattern of cultivation round Basra in the whole southern corner of Iraq. The extension to Kuwait of such a prospect of greenery could obviously have great attractions: many Kuwaitis already have summer homes round Basra for the sake of its shady orchards and murmuring streams. That Basra should be brought to Kuwait may sound as portentous as Burnham Wood coming to Dunsinane. And yet it would be pleasant and feasible, if ever political good will could be established.

ARAB WORLD

Political Prisoners

AGAIN the bell tolls for democracy in the Sudan. Before setting out on his state visit to Moscow on July 17th General Abboud locked up fifteen political leaders. Two are former prime ministers, the rest prominent members of the old political parties, which are all officially banned. By contrast, General Qasim in Baghdad made the anniversary of Iraq's July 14th revolution an occasion for releasing six old school politicians, indicted for pre-revolutionary offences. These include four former prime ministers. Such political prisoners as remain in Iraqi jails are those who, like the Nasserist Colonel Arif, were convicted of subversive activities after General Qasim came to power.

The bellringer: General Abboud

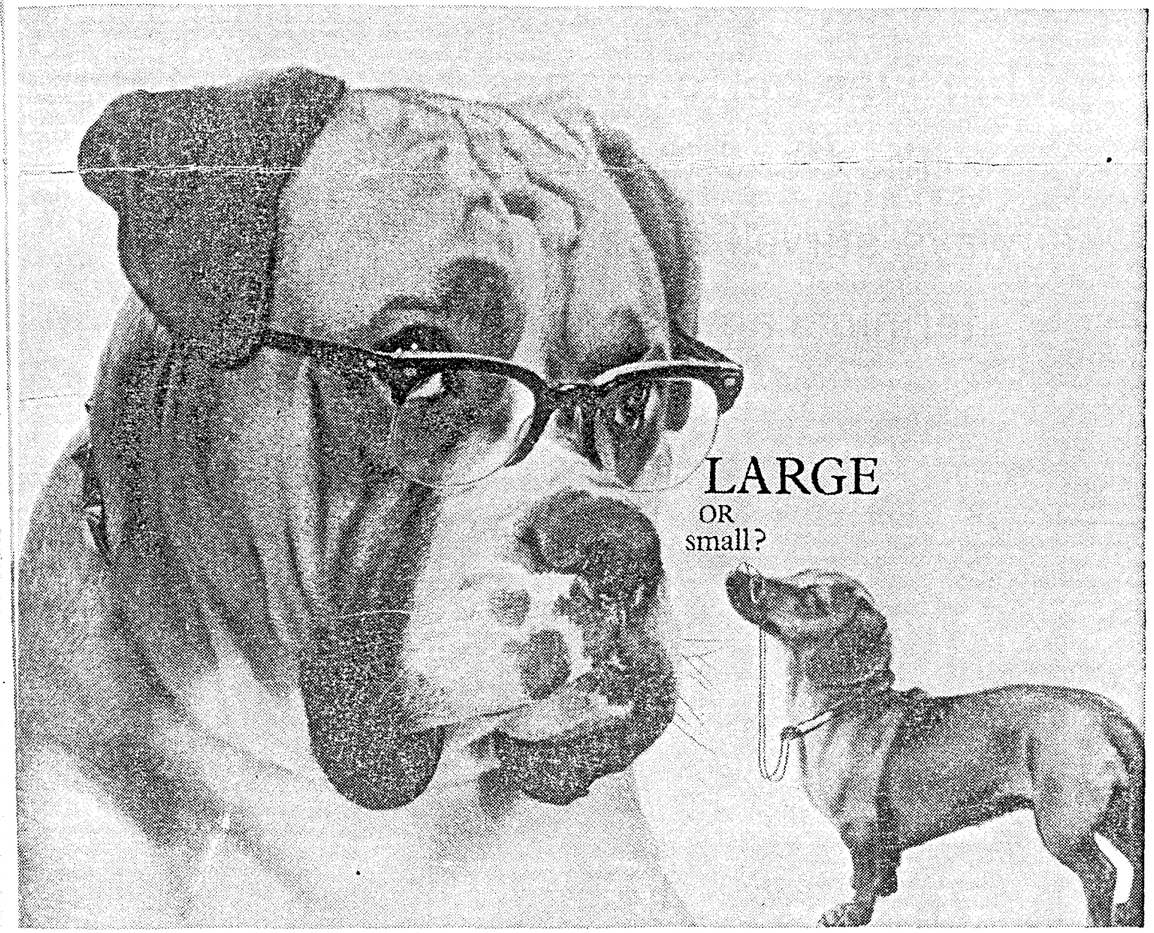
These arrests and releases reflect the respective strength and weakness of the western-type liberal virus in either country. In Iraq it is dead. General Qasim, torn in the conflict between Nasserism and communism, has little to fear from the errant pre-revolutionaries, those plodders along western paths. In the Sudan, on the other hand, liberal aspirations are alive and kicking. And the military regime has been finding the kicks of a concerted opposition rather rough. This opposition fused in June, 1960, at the call of Sayid Siddik el Mahdi, the religious and political leader, whose following is great, if not altogether predictable, and who is himself, by family and religious tradition, a little above the law. Nearly all the former parties then combined to appeal for a return to democracy; and they have recently worked to such purpose as to bring about a big railway workers' strike last month. Hitherto the battle has been waged in an overt, almost gentlemanly manner. But now the gloves are off. General Abboud has challenged the Mahdi, who remains at large with his family, the ex-officio head of a democratic leadership whose tail has been rudely cut off.

GERMAN TROOPS

Occupational Resistance

THE organised clamour against German troops coming to train in Pembrokeshire has begun to fall into the familiar pattern: a minority demonstration in the Commons (where 12 Labour MPs divided the House on Wednesday night), protest marches in the nearest large industrial towns and acquiescence (partly with an eye to the main chance) in the countryside directly affected. This was true of Clydeside's reaction to the Polaris submarine base in the Holy Loch, and it is what is happening in South Wales now. Last week-end Cardiff saw a cluster of Labour MPs on the platform and a muster of some five hundred demonstrators in the street. But Haverfordwest, more directly concerned, heard its Labour member, Mr Desmond Donnelly, categorise the protesters as puppets of a foreign government whose aim was to disrupt the western alliance at a critical time. The Castlemartin area, which will actually receive the first German tank battalion to use the War Office firing range there, has been content to ruminate on what its unemployment figures might be if the range were to go out of business.

It would be wrong to discount the sensitivities and anxieties which the arrival of 600 German troops will arouse in Wales: this is understood perfectly well in west Germany itself. But the simple fact of the matter is that alliances which this country has accepted have to be honoured, whether this means keeping the contractual number of British troops in west Germany or providing (at Nato's request) training facilities for German forces here. Fifteen years after the end of the war, there is no reason why either should be considered in any way as an army of occupation. Western defence depends on progressive military integration among its members—as Wednesday's announcement of the Midas tracking station to be set up in Cumberland has emphasised once more. The German formation is coming this autumn as an experiment; if the unit is on its best behaviour its hosts should make the effort to be too. In France (where occupation is a word with some meaning) German troops have neither caused nor aroused any fracas except among professed communists. If the Germans encounter gratuitous provocation or disturbance in South Wales Mr Donnelly's opinion of the current campaign is liable to wit substantial credence.



ARMY STRENGTH

Profumo's Plug

ALTHOUGH the Secretary of State for War exudes mild confidence that the army will reach its basic target of 165,000 men by January, 1963, he is still wisely raising his inducements to the troops. Mr Profumo told the Commons on Wednesday that regulars with nine years' service or less who sign on for another three years before next May will get a bounty of £200. This may look an attractive sum, particularly to men who are unlikely to have an immediate civilian job awaiting them. Every 5,000 men that Mr Profumo retains in this way will cost the country an extra £1 million, but they would still be at a bargain price compared with training the same number of raw recruits from scratch. The Minister should certainly do better than he did with the (appreciably lower) bounties offered to national service technicians.

The second new bid is to improve service conditions in west Germany. A further 8,000 married quarters are to be provided for BAOR in the next three years: this will double the present number. Since the Chancellor is likely to look askance at requests for substantial capital expenditure, the new quarters are to be rented from German contractors. The signs are that the services do not expect to feel the full weight of Mr Lloyd's axe on their overseas accommodation programmes. Free leaves in Britain for single and unaccompanied married men stationed in Germany are also to be increased. This is another of the minor, but sensible, measures that may now be beginning to plug the army's wastage rate.

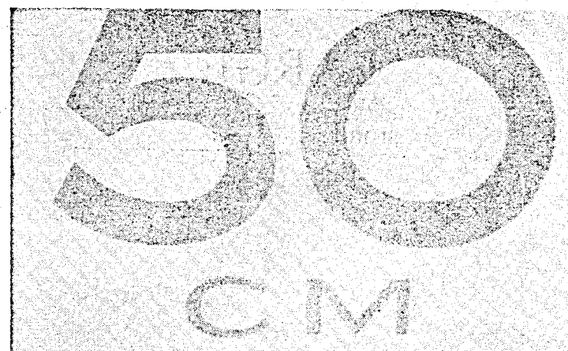
Since March the television advertising campaign has helped to increase the flow of new recruits, which is up by 20 per cent

BoTh! The contrasting world of Wimpey. Building, Civil, Mechanical and Electrical Engineering Contractors extraordinary. Small enough to be competitive on a housing contract and, of course, large enough to construct an £18,000,000 hydro-electric project on the Rio Grande. Why? Wimpey are world-wide, yet Wimpey remain local, with 13 major U.K. Centres each locally staffed and independently operative. Wimpey are mechanised to the tune of £10 million plant, yet Wimpey are people—over 26,000 expert, on-the-spot, friendly, efficient people. So . . . be it an airfield in Australia, a workshop in Worksop—or a more substantial future for yourself—get in touch with Wimpey.

Wimpey Composite Service embraces: BUILDING . CIVIL ENGINEERING . MECHANICAL & ELECTRICAL ENGINEERING. FOUNDATION ENGINEERING & RESEARCH LABORATORIES

The small, large, versatile world of

WIMPEY



Major U.K. Offices: BIRMINGHAM . BRISTOL . CARDIFF . EDINBURGH GLASGOW . LEEDS . LIVERPOOL . LONDON . MANCHESTER MIDDLESBROUGH . NEWCASTLE . NOTTINGHAM . SHEFFIELD

compared with the same three months of last year. The need is now recognised to be to get these new entrants safely over the initial hump of basic training, when the change from civilian life is liable to be most apparent. Even so, the real test is whether the army will attract enough technicians and tradesmen to satisfy its rising demands in the coming years. In this sphere selective service could still be necessary.

THE PAPACY

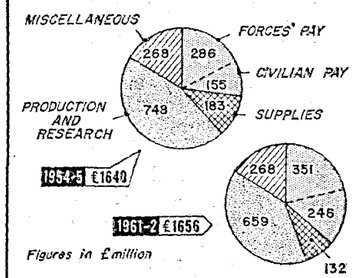
Taking Sides

POPE JOHN, who on his election was so injudiciously hailed as "a caretaker" pope, has once again made history by issuing the longest encyclical (over 20,000 words) ever to come from the Holy See ; in it he makes an urgent call to the richer communities of the world to help those countries which are struggling against hunger and poverty. *Mater et Magistra Gentium*, although just published, is dated May 15th ; it is plainly intended to bring the church's social teaching, which received its first modern formulation on May 15, 1891, in Leo XIII's *Rerum Novarum*, up to date.

Broadly speaking the encyclical represents a shift to the left in the church's attitude, and ranges the Vatican against the dying cause of colonialism and on the side of the newly emergent nations of Africa and Asia. Emergency charitable measures to help these nations are scouted by the Pope as of little use, and he calls for a full-scale, permanent, multilateral co-operation, to develop education and technology and supply the capital required for the economic development of poorer countries. The Pope is emphatic that aid should be without strings, and that the old colonialism should not be re-established in a new form. Sharing of world resources was the subject of Pius XII's first encyclical *Summi Pontificatus* in 1939, but the stressing of the autonomy of the former colonial territories is new. Science is praised for its part in raising living standards, but its use to provide "terrible instruments of ruin and death" deplored. Notably there is no condemnation of nuclear weapons as such, which some churchmen have been pressing for, and which would place considerable strain on the close understanding that has been established between the Vatican and Washington.

Socialism is discussed, with an important shift from the qualified condemnations of earlier popes, made in *Rerum Novarum* and in Pius XI's *Quadragesimo Anno*. Socialisation is now positively approved, provided there is no abolition of the right to private property—of which there should be "effective distribution amongst all classes." The encyclical ends, as is suitable for a Pope from a *contadini* family, with a declaration that urban development should not be allowed to thwart agricultural prosperity. British farmers, as they peruse the encyclical, will be pleased to see that the Pope supports price protection for agricultural products.

Counsel of Silence

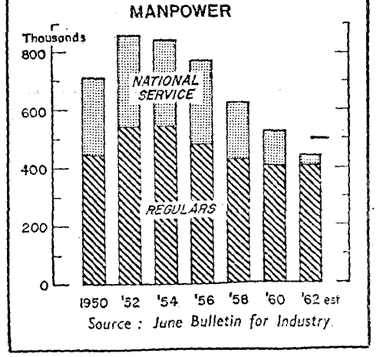


POPE JOHN'S enthusiasm for his projected Ecumenical Council continues unabated, and the date is now confidently predicted as January, 1963. This is a year later than expected, a delay due, not to machinations of members of the Roman curia, but to the German bishops, who personally asked the Pope to postpone the opening so that they could give further consideration to questions on the agenda. The council will essentially be a domestic affair of the Catholic church, and it is still undecided whether observers from other churches will be invited. If they are, an invitation is more likely to go to the professors of theology at the ancient universities than to members of the Anglican bench. Interest in the Church of England continues in Rome, and there have even been complaints that Dr Fisher's visit to the Pope has switched ecumenical interest in the Vatican away from the Orthodox towards Protestants. Canon Pauley, the Archbishop of Canterbury's personal representative in Rome, has established very cordial relations with Cardinal Bea's secretariat for Christian Unity. The Vatican's handling of the press has not been so happy. Archbishop Felici, who is in charge of the preparatory work for the council, has instructed journalists to avoid "any incompetent intervention in the preparation of the council," which they are to approach with "respectful silence." This hardly squares with the Pope's own statement a week later to the World Union of the Catholic Press, stressing "the importance of the press in creating a climate of public opinion favourable to the aims of the council."

ETU

Loose Wires

THE really important moves concerning the Electrical Trades Union this week took place outside the union's uneasy and self-exculpatory conference at Southsea. (Whatever the difficulties of Mr Byrne, popped into the general secretary's hot seat by the judge's award, he could do little to alter the realities of power among the conference delegates, over 200 of whom, out of a total of 364, were the long-familiar shock troops who support the communist leadership.) But away from Southsea trade union MPs have been searching around for an attitude to the various projects for a reform of trade union legislation ; communist spokesmen have simultaneously declared their solidarity with the ETU's leaders and denied that their party would ever condone electoral malpractices by its members. The vital fact, however, was the summons issued by the TUC general council to the union executive to meet it on Monday. At present the executive, backed by a conference vote on Wednesday, is balk-



DEFENCE COSTS

Defence expenditure has been about £1,640 million a year since 1952. It was 7.4 per cent of the gross national product in 1950, rose to 11.2 per cent in 1952 largely because of the Korean war, and has gradually fallen to 7.4 per cent in 1960.

In spite of an overall reduction in manpower from 846 thousand in 1954 to 485 thousand in 1961, forces' pay has risen from £286 million to £351 million.

MANPOWER

Source : *June Bulletin for Industry*

ing Mr Byrne's every move: the TUC, egged on by Mr Hare, naturally wants to show that it can itself do something to put its constituent bodies' affairs in order.

But the TUC's only available sanction would seem to be to expel the ETU and to try to foster a new electricians' union within the fold. Such an action would be anathema to most trade unionists, and American experience with the Teamsters suggests that it might also be unsuccessful. Mr Byrne himself has said that he does not want it—for one thing, it might mean that the present ETU's large funds would thus pass back into communist control. Perhaps the best hope for a sane outcome is that the union rank and file will elect some new faces to the executive in September. The TUC's most useful contribution would be to ensure that these elections get the maximum publicity, and that the count receives impartial scrutiny. If it cannot ensure this, and one should not necessarily blame it if it can't, then even Mr Hare has intimated that he may at last recognise that the case for new trade union legislation is overwhelming.

SINGAPORE

Warning Signs

Too much ought not, at this stage, to be read into the defeat of the ruling People's Action party in the Anson by-election in Singapore on July 15th. Mr David Marshall, who was Singapore's first chief minister, and whose victory marks the turn of his political luck, was wildly premature in calling for the resignation of "Emperor Lee Kuan-yew"—the prime minister—although, as a victory cry, his outburst was pardonable.

There are, however, useful cautionary lessons to be read in the result. One is that, contrary to previsions, Singapore is not yet ready to vote for right-wing candidates, as it was under the more restricted colonial franchise: the new Singapore Alliance formed by Tun Lim Yew-hock, another ex-chief minister, polled only 1,482 of the 8,500 votes cast. Another lesson lies in the growing power of the trade unions to influence politics, for Mr Marshall's Workers' party was stridently supported by unionists hostile to Mr Lee's basic policy of making sure that his generally anti-colonial speeches do not scare away the business on which Singapore's prosperity depends.

Mr. Marshall: luck turning

The burden of the unions' attack, led by Mr Lim Chin-siong, formerly one of the wilder fellow-travellers in the PAP, is that the government has lost its anti-colonial fervour. For the sin of knowing which side Singapore's bread is buttered on, Mr Lee has indeed seen his parliamentary strength whittled down by about a quarter, until he now has only 31 reliable members in the Assembly, compared with 43 when he came to power two years ago. He still has an absolute majority of twenty, however, and the PAP trailed Mr Marshall's party by only 546 votes in the Anson by-election.

Now that Tunku Abdul Rahman fully realises the value of Mr Lee, however different their politics, the best outlook for stability in Singapore will lie in a speedy conversion of the Tunku's dream of a greater Malaysian federation—linking Malaya, Singapore and the Borneo territories—into reality. If the matter is allowed to drag unreasonably, Mr Lee, who has pledged himself to eradicate colonialism by 1963, may be either swept aside, or tempted to compete with the lunatic left in irresponsibility.

SUNDAY OBSERVANCE

Mr Butler's Vessels

The Home Office's announcement that a departmental committee is to be set up to examine the antiquated laws on trading, sport, and entertainment on Sunday is very welcome. The legal jungle dating from the seventeenth century should afford its members some happy hunting. Why, for instance, should fish and chips be freely saleable everywhere on Sundays except at a fish and chip shop? Why does cooked (or partly cooked) tripe enjoy a privileged sales position while more sophisticated foods are banned? Cream may be sold but not in a tin, unless it is clotted cream which is saleable whether in a tin or not. Fodder for donkeys can be obtained provided it is sold at an hotel or stables. Fodder for humans can be brought to a shop and cooked there, but unlike donkey food must be consumed on the same day. Hairdressers may not ply their trade on Sundays but the mentally weak may summon them to cut their hair at home. Assemblies of spectators to watch sport outside their parish are punishable with fines of 3s. 4d. each, but within the parish they are safe—provided, of course, they are not watching bull-baiting. Sunday even affects the majestic operation of the law: writs may not be issued, and prisoners, if due to be released on a Sunday (or Christmas Day or Good Friday), are let out the day before.

Mr Butler may have been so confident that the ridiculousness of the law speaks for itself that he felt he could afford to include in his committee a number of persons who are not exactly zealots for reform. He may also have calculated (probably wisely) that changes will be more acceptable to sabbatarian opinion when first recommended by such exemplary vessels. According to the members' advance billing in the press, Lord Crathorne (formerly Sir Thomas Dugdale), the chairman, is a mild churchman, and he is flanked by Mr John Arbuthnot, the Tory member for Dover, who is a very keen one. Mr Chuter Ede is a unitarian but also a sabbatarian, and Mr W. A. Morrison, one of the printing trades union officials, has been taken to represent similar persuasions. Of the others, Mr Peter Rawlinson (who is a Roman Catholic) is likely to lead the liberal wing, supported by Mr Norman Pentland, who spends a busy Sunday conferring with his constituents at Chester-le-Street, and Miss Sylvia Fletcher Moulton, who is a practising Anglican and approves of gardening and entertaining on a Sunday, provided it does not disturb other people. The last member of the committee is Mr Robin Huws Jones, who is both a Welshman and a sociologist, and whose attitude therefore is unpredictable.

EDUCATION

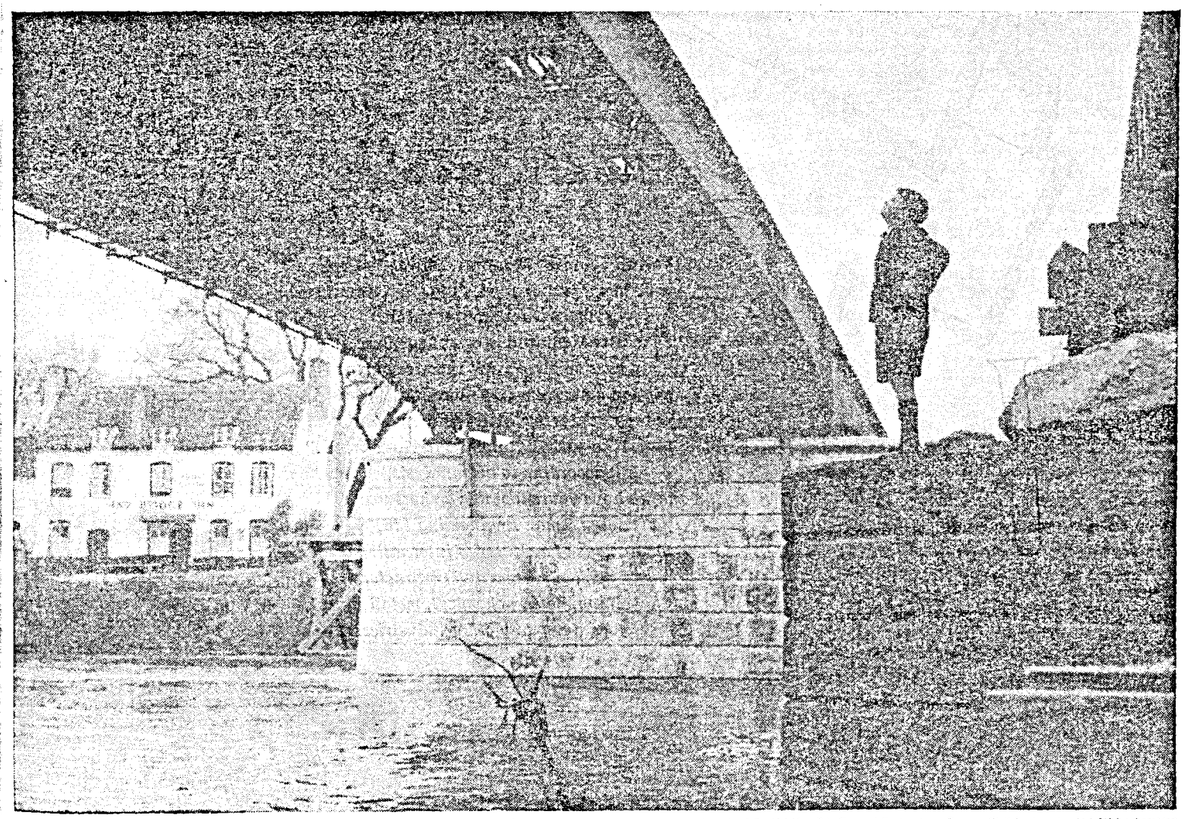
Time for Experiment

Experiment is essential to the educational system, and it is something which British schools have often been too unwilling (or unable) to attempt as they should. Now avenues are opening up. Sir David Eccles, confronted by the massive demand for a lower leaving certificate for sixteen-year-olds who cannot reach GCE standards, has reluctantly given way. But, as he told the Commons on Monday, much more knowledge of this type of examination is needed, and he intends to use both the

DURABLE CONSUMER GOODS SERVICE

Six-monthly reports combining economic forecasting and market research are available under this service for the main domestic appliances, radios and television and passenger cars.
Each report provides a unique guide to the character and extent of the U.K. market for these products. Results of 3,000 interviews are analysed to show:

OWNERSHIP BRAND SHARES
CHARACTERISTICS BRAND LOYALTIES
REPLACEMENT MARKET INTENDING PURCHASERS



with a forecast of demand for the year ahead.

REPORT No. 7 available end-July

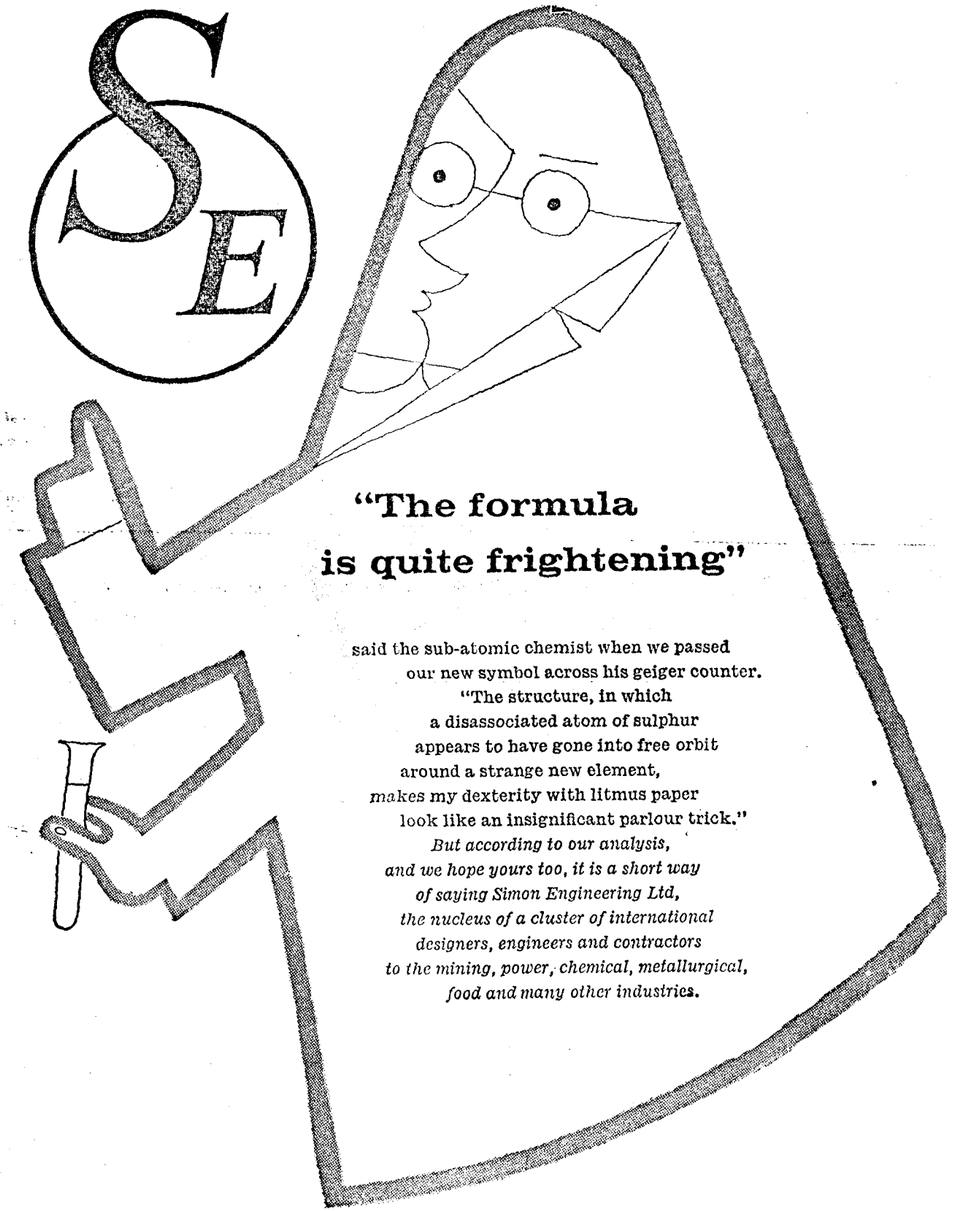
boy on the bridge

From where I'm standing the new Haw Bridge looks simply super because of the graceful shape of the welded plate girders and all this steelwork is being supplied and erected by the United Steel Structural Company (which is one of US) and when it's finished the Gloucester-Ledbury road will soar across the River Severn on three lovely spans using a total weight of 280 tons of steel which is quite a thing and just the sort of job for United Steel Structural.



How Bridge: design and supervision by Gloucester C. C. (Council Surveyor R. A. Downs B.Sc., M.I.C.E., M.I.Mun.E.), General Contractors: Tarmac Civil Engineering Ltd. Wolverhampton

advice of the Secondary School Examinations Council and a new research and development group inside his Ministry before deciding on action : no starting date for the new certificate has therefore been given. But a good deal of the onus now lies on those schools and authorities which have been participating in external examinations on their own to produce examination schemes that will improve the secondary modern syllabus, not disrupt or rigidify it. The Minister should insist on a number of pilot schemes before imposing general regulations.

A second experiment announced this week is the 43-letter alphabet devised by Sir James Pitman to help children up to the age of seven to read more quickly and rewardingly. This Augmented Roman style will be introduced at 24 schools in Staffordshire, Lancashire and Middlesex next term. Previous tests have shown promising results, most noticeably among the weaker readers for whom this phonetic aid is designed. (Any reservations about the idea stem from the prospect of some augmented letters turning up in secretarial spelling in a dozen years' time.) At the other end of the educational scale, an encouraging response is reported from the public and selective secondary school headmasters who have been invited to broaden their curriculum for sixth form work. These ABC schools (as they wish to be identified) will ensure that one-third of the periods for sixth-form pupils will be devoted to subjects other than those in which the pupils are specialising. This expansion of minority time, sponsored by 21 headmasters and Mr Boris Ford of Sheffield University, deserves sympathetic support, not least from the universities when the time comes to choose marginal candidates for places. While this is happening at the top, it will be disastrous if the trend in secondary moderns is now to concentrate on a group of "examinable" academic subjects with less regard for the "minority" time best suited to the pupils themselves.

AID AND ADVICE

Sharers and Planners

THE very poorly reported meeting which the ten-nation Development Assistance Group held in Tokyo last week was, presumably, its last. Come October, with the setting up of the new Organisation for Economic Co-operation and Development, the DAG is to become a committee of the OECD ; all the group's members—the United States, Canada, Japan, Britain, France, west Germany, Italy, Belgium, Netherlands, Portugal—will also be members of the organisation. Once established in Paris with a permanent staff of its own, the development assistance committee may be better equipped to cut through the fog that still obscures the whole problem of burden-sharing in aid for under-developed countries. At present, lip service to the idea that each advanced country ought to allot one per cent of its income to aid is hardly adequate ; for one thing, the Tokyo meeting did not manage to define what aid is, and various "donor" governments' claims to be pulling their full weight would not bear much examination if any realistic definition were adopted.

Among specific items discussed in Tokyo was the proposal, tossed rather casually by Mr Kennedy into his address to the Canadian parliament on May 17th, that the OECD should set up a "development centre" for joint studies by officials and others drawn from both the advanced and the under-developed countries. There seem to be reservations, in Washington as well as in the DAG, about even this modest-sounding idea. Is there any chance for the more definitive project, lately canvassed by Mr Gustav Papanek* of Harvard and others, for an independent "Institute for Development Planning" that would send teams of advisers on economic planning to under-developed countries at their request ?

The main argument for an independent institute is that the advisory services already provided by the World Bank and other international agencies are not always acceptable to the receiving governments, some of which might feel happier if they could get planning advice from competent people wholly free from connections with aid-giving agencies of any kind. It has been suggested that the new institute might ensure itself a reputation for complete independence and objectivity by having a kind of international consortium of universities as its main sponsors. Admittedly, the mere thought of adding one more organisation to the many already crowding the field of development aid and advice must evoke a few winces, and not only in the Bank and other UN agencies. But it may prove that this is a real gap that needs filling ; if so, it is likely to yawn wider as more and more emergent countries come to take their planning seriously.

* "A Plan for Planning." By Gustav F. Papanek. 25 cents. Harvard University Center for International Affairs.

CONGO

Sitting Tight

FOR a province that claims to be an independent African state, Katanga has odd friends—among them Sir Roy Welensky, Dr Verwoerd, and Dr Salazar. The source of inspiration for Katanga policy may not be directly traceable to these authorities, or to the Belgians who advise its ministers and run its army ; nor is it certain that *Union Minière* has everything to do with it. On the other hand Mr Moise Tshombe, head of the administration, is either a more devious politician than even his worst enemies say he is, or he is being prevented from being as receptive as he would like to be to overtures from Leopoldville.

Since his release from detention by President Kasavubu's central government seven weeks ago, Mr Tshombe, according to all reports, has hovered between "yes" and "no" to invitations to send a parliamentary delegation to join others from Stanleyville and the rest of the Congo (including "King" Kalonji of South Kasai) in Leopoldville. This week Mr Tshombe was prevented from making a decision by a sudden attack of fever. Mr Gizenga of Stanleyville was similarly laid low, but he at least sent a delegation ; and he is able to point to a statement he made on June 24th, expressing willingness to co-operate with the United Nations and the Leopoldville government. As evidence of good intentions, Mr Gizenga's administration released the eight Belgian soldiers captured when they crossed the border from Ruanda-Urundi in January. Mr Tshombe's troops, on the other hand, have once again clashed with the UN ; and two were killed by Indian troops west of Albertville on Monday. The central government officers sent by General Mobutu from Leopoldville to take over the Katanga Army have, by all accounts, not yet been allowed to take up their duties in Elizabethville. In spite of his friends, however, Mr Tshombe cannot hope to remain in his present apparently strong position for long. If the meeting of the rest of the Congo's parliamentarians at Leopoldville proves a success, Mr Tshombe, sitting on his pile of copper, will be arguing with a united opposition. Further patience and firmness from the United Nations could make his position as the black ant of Congo unity even more untenable.

GAMBIA

Paper Serpent

ONE of those curled-up paper snakes that straighten out when puffed, smacking party-goers in the face, should appear on the Gambia flag if it becomes independent. Britain's first West African possession giggles across the map like a saucy joke on Africa and on colonialism. A strip between seven and twenty miles wide, it runs 230 miles inland along the banks of the river Gambia. Most of its population of about 280,000 live in the backward Protectorate; 35,000 Gambians live in the 29 square miles marked out at the river mouth as the Colony. The Protectorate is jealous of the more advanced Colony, but no one has seriously proposed to give independence to each part separately.

What is proposed is that after the next elections, which are expected in February or March, the territory should assume full internal self-government ; and then, by two

stages of nine months each, to full independence. There are also proposals for keeping the chiefs happy (but not as happy as if they were sheikhs) and for holding a balance of power between the Colony and the Protectorate. All this was put forward at a conference in May and will be discussed on Monday under the solemn chairmanship of the Colonial Secretary.

Gambia's mistress should be Senegal, in whose close embrace the territory lies. Fortunately, the main Gambia political parties seem to be just as much for "closer co-operation" with their French-speaking neighbour as they are for independence. Only one or two small groups say they want nothing but independence within the Commonwealth, or a link with Sierra Leone down the coast. As experience in the Southern Cameroons, even further down the coast, is showing, it is hard to unite an English-administered country with one brought up in the French tradition. But Gambia has already given in on several points: its motorists have agreed to drive on the right to avoid the confusion that arose when Gambian and Senegalese traffic shared the same road; and Gambia ministers serve on co-operation committees with Senegal ministers. Just in case the joke does go sour, both the British Government and the Senegal Government are continually saying that the choice is entirely up to a representative government elected by the people of Gambia. So far, this has always been said with a straight face.

PAKISTAN

Plain Spoken

A TICKER-TAPE parade through New York, and a state dinner at Mount Vernon with almost gaullist trappings of *grandeur*, might have served as adequate highlights of President Ayub Khan's visit to the United States. But the president of Pakistan is an unconventional head of state. His address to a joint session of both houses of Congress on July 12th was no mere reading out of a prepared list of pieties. Instead, he spoke from rough notes, and struck rougher ones. The legislators he was confronting were already sharply at odds over Mr Kennedy's foreign aid programme, the sharpest opposition of all being aroused by the request for five-year borrowing powers to help aided countries plan long-term development. President Ayub told this audience bluntly that, however tired they might be of aid hand-outs, "you had better not get tired." He got an ovation.

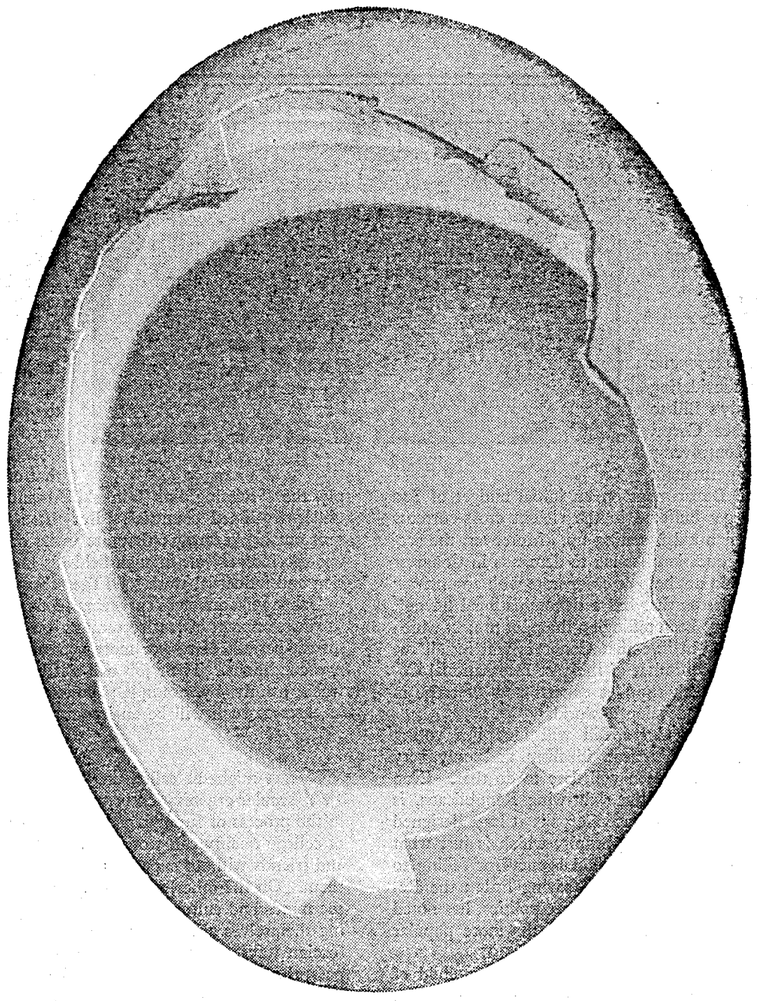
He was as plain spoken in his private talks with President Kennedy as in his public utterances. The talks were officially described as "frank and cordial;" cordial or not, there can be very little doubt that they were frank. Inevitably, the president of Pakistan took the opportunity to press for American support in the Kashmir dispute; equally inevitably, he was disappointed. His argument that Pakistanis are America's only real foul-weather friends in Asia runs up against the Kennedy Administration's keen awareness of the need to help "neutral" countries stand on their own feet. However often Pakistanis publicly express resentment at the United States' readiness to aid India without putting pressure on it, it remains true that they have as great an interest as anybody in India's success in its economic struggle. President Ayub Khan's plain words to Congress, spoken, it would seem, in the name of the whole under-developed group of countries, may well further the cause not only of Pakistan but of its big neighbour too.

SOUTH TYROL

Terrorists Miscalculate

THE terrorists who have been sabotaging railway lines and electricity supplies in the Alto Adige (South Tyrol) are defeating their own ends, however much they may disrupt this year's tourist traffic to Italy. Their activities, which began some six weeks ago, have not aroused any noticeable response among the German-speaking minority in the Alto Adige. But they are, for the time being at any rate, effectively preventing the Austrian government from making any further attempts to secure separate provincial autonomy for this minority through bilateral talks with the Italians. If negotiations are resumed—as one hopes they soon will be—the terrorists will have made it easier for the Italians to resist the Austrian demands.

Vienna appears to be getting increasingly uncomfortable about the activities of the terrorists, who are fairly widely believed to be based on Austrian soil. Naturally it has dissociated itself from them, but the Italians are not alone in feeling that it might have done so more vigorously. On Wednesday the Austrians, who are strongly opposed to the Italian wish to take the matter to the International Court at the Hague, formally asked that the South Tyrol should be put on the agenda of the next session of the United Nations General Assembly. But they can hardly hope that the cool attitude of a large part of the UN to the Austrian case last year will be much warmer now.



The Italian government, on the other hand, now enjoys the moral strength of the injured party. In the Italian Chamber last week, Signor Fanfani very reasonably pointed out that there could be no search for a peaceful settlement while terrorism continued; he did not, however slam the door on further negotiations if violence ceased. At the same time the Italian government is making a vigorous effort on its own account to stamp out the terrorism. Italian visas have been reintroduced for Austrian visitors (this unfortunately impedes tourists as well as terrorists). The Italian police in the Alto Adige have been discovering large quantities of arms and explosives (1,700 lb of explosives in the course of five days); they have also made a number of arrests. It remains to be seen whether the terrorists will be deterred by police action; some (like the Sudeten Germans in 1937) may be more interested in blocking any kind of peaceful settlement than in reaching one.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Peace Corps in Training

WASHINGTON, DC

CONGRESS is now considering President Kennedy's Bill to establish the Peace Corps, the centre of so much controversy and publicity, as a permanent agency within the State Department on an initial budget of $40 million. The Bill may get buffeted in the violent cross-currents which the debate on foreign aid is setting up. Moreover, the sectarian storm over aid to education has led to demands in Congress that the Peace Corps should not help or co-operate with any private organisation operating overseas that has a denominational flavour. Nevertheless, those who have been toiling on the pilot project which was established in February believe that Congress will install the Peace Corps as a very junior brother of the vast International Co-operation Administration which supplies experts and expertise in large quantities to the under-developed world.

To vote against the Peace Corps Bill will look like voting against American youth and American idealism and only very curmudgeonly southern Congressmen will dare to do that. Even Senator Goldwater, the leader of the right-wing Republicans, is claimed as a backer. Besides, the Peace Corps is at least designed to get certain things done, and done cheaply, which is just what many Congressmen criticise the foreign aid agency for failing to do. The cynics, though unconvinced, are saying little ; the Republican opposition, though eager to play party politics, has noted that in the country the Peace Corps is one of the more popular Kennedy gimmicks.

The Peace Corps is not, of course, simply the dream-child of one of Mr Kennedy's election speeches. Its origins go back ten years ; there has been much discussion of the idea and some voluntary effort to send Americans abroad for short periods to render personal service where it is needed. Proposals to create a "Point Four Youth Corps" were discussed last year in Congress, which authorised $10,000 for a preliminary study by Colorado State University. The concept of an organised national service to enable young men and women to undertake skilled functions in under-developed countries in ways that the ICA cannot do has taken firm hold in many university (and religious) circles. When the task force to prepare the scheme was set up under Mr Sargent Shriver, it was manned by people with some ideas of what was wanted and some, if limited, experience of what it means to work in the bush, the outback and the up-country village.

Since then two things have become clearer: first, that a considerable number of graduates and undergraduates want to volunteer and second, that help from the Peace Corps is acceptable to almost every government to which it has been explained by Mr Shriver or his aides in a series of explor tory visits ranging from Ind and Burma to Guinea a Ghana. From these have sprut a score of projects, five of whi (in Tanganyika, the Philippine Colombia, St Lucia and Chil have been announced, and f which personnel has been sele ted. About 440 people will b needed, and some began the training at the end of June.

The objective of the corps to provide talented (its ow word) Americans to do needs skilled jobs at the level belo that of the top experts: to sup ply the "missing link" in skilled and technical manpower i under-developed countries. But these volunteers are not to b sent out haphazardly ; they are to be organised in teams to carr out specific projects in such fields as health, agriculture, construc tion and industrial work. Of the schemes already announced, th in Tanganyika involves surveying feeder roads and another in Chi the development of local communities. The volunteers are to serv for set periods of two or more years under austere but not prim tive conditions. Their job will not be to advise but to do and t teach mainly by example ; however, the provision of school teachers as such will be an important activity of the corps.

WHAT might be called the "spiritual mission" of this entirel secular organisation is twofold. On the one hand it is to show in the process of supplying the much-wanted skills that American of college quality can work with local people as colleagues, equal and friends without superiority or material advantages to underpin them. On the other, its members are to gain an understanding o the minds and culture of the people they work with, thus broaden ing themselves and building up a pool of American know-how i foreign ways. The Americans thus hope to match, or rather sur pass, the advantages of countries that have had a cadre of overseas or colonial servants. The quiet statement of the Peace Corps, when offering its services, that "gladly will it learn and gladly teach," like Chaucer's pilgrim, has been received with warmth, if some incredulity.

To achieve this there must be an adequate organisation in America and abroad (where the agents and "team leaders" of the corps will come under the Ambassador in each country) ; even more important is the correct selection and training of the people who are sent. Selecting for skill and competence is comparatively easy and on paper the corps has a nucleus of skilled workers and mechanics that any African, and many Asian, countries could put to good use. Selecting for character and suitability is harder. The psychologists have their tests for "emotional maturity" as well as for flair for languages. But reliance is placed mainly on the taking of extensive references combined with elaborate biographical data, and on a further weeding-out during actual training. Willingness to serve for little more than one's expenses and a gratuity, at the end, of $75 for every month's service is a pre-

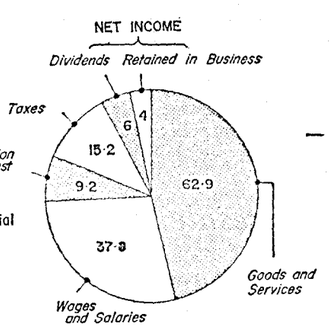
liminary screen for keenness. Training is to be arduous and is being devised by the universities that are the matrix of the idea. It will include local and area studies, brushing up skills, work in the needed languages, some "Robinson Crusoe" techniques, indoctrination in American democracy, and a physical toughening course in Puerto Rico ; further training is to take place on location. One short but valuable course for those going to Colombia consists of instruction in how to load and ride a mule. The training will take three to six months.

THE Peace Corps plans to have 2,700 volunteers overseas by the end of 1962 ; at least 5,000 have taken the qualifying test out of the 11,000 who have applied, and applications are still coming in at the rate of 200 a month. The problem may seem, therefore, to be one of finding enough projects rather than enough volunteers, even though some thirty countries have shown an interest and ideas for programmes are developing fast. The real trouble is the nature of the skills which are needed. The corps now has a reservoir of minor technicians and graduates, but it appears that most of the skills in request abroad are scarce in the United States. Teachers—even leftist Ghana is ready to snap up American secondary school-teachers—are in short supply in America. So are doctors, nurses, medical auxiliaries and veterinary surgeons, largely because of the restrictive practices of the professional bodies. America is an importer (though also a trainer) of such skills rather than a supplier of them to the needy. Even in agriculture there are difficulties: American farms no longer need, and the colleges no longer train, the type of all-round craftsman who would be useful abroad—the type produced, for a largely bygone system of mixed family farming, by the land grant colleges started at the time of Abraham Lincoln. The Peace Corps believes that this sort of college is what is wanted abroad and it is thinking of offering to create a modified version for the under-developed countries. In all this, there is refreshing evidence of flexibility, courage and a readiness to make drastic changes which would cause a British academic to curl up.

But it would be foolish to assume that the Peace Corps can or should hasten to expand its overseas service. It may be wise to go slowly (if the involvement of the President's personal prestige allows this), since the agency can begin to accumulate its own expertise only when its first teams have been tested in the field (where the psychologists, of course, intend to visit them and take their mental pulse). Nobody knows how the volunteers will react to the rigours of the job ; American cynics do not believe that they will be able to stand such a long separation from television and coca-cola and some observers prophesy that anxious mothers will soon be bombarding Senators for help. It may be true that the social and health hazards are being ludicrously over-stressed. But the mental strain of working for several years on or, rather, below the living standards of missionaries (American missionaries often have aircraft, freezers and cokes *ad lib*) but without the missionary theology or vocation can be much underestimated.

All this may be reminiscent of the Romans learning to sail triremes on land: but the Romans won the ensuing sea-battle with the Carthaginians. The organisers of the Peace Corps intend to forge this new instrument of foreign aid and influence against all odds, if Congress permits. Judgment can only await the event. Probably the greatest immediate hazard is not tropical disease or amateur organisation, but the press. Television teams are preparing to film (or fake) the heroes at work ; journalists are taking the tests ; publishers are trying to sign up volunteers to write their experiences. If this ballyhoo does not harm the corps this will probably be because its work will prove solid and unspectacular, with its joys and frustrations individual, and because its successes will be achieved in places uncomfortable to pressmen. Very much, as members of the ICA remark bitterly, like their own.

Bracing Talk



NEXT Tuesday night President Kennedy appears on television to tell Americans about the hazards which they face and the steps which the National Security Council decided, on Wednesday, should be taken to meet them. These hazards concern Berlin primarily but the Administration also fears that new crises may erupt—in south-east Asia, for example—while the attention of the free world and its military capacity are being directed toward eastern Europe. In Washington it is thought that Mr Kennedy may proclaim a limited national emergency ; this would empower him to call up a million of America's 2.4 million ready reservists. It is also thought that the proposals which he is to send to Congress on Wednesday may include a request for $3-$4 billion more in military spending—an increase of almost 10 per cent.

Such moves would go some way towards satisfying the bellicose right wing, which is likely to break away from the general bipartisan support for the President only if it feels that he is taking too soft a line over Berlin. Such a demonstration of American resolve—the details of which were being put before the partners in the North Atlantic alliance this week—would also put pressure on America's allies in Europe to show that, however slow they have proved in council, they also are willing to take unpleasant steps in the present crisis. Finally, the President, who has been criticised for giving the country too little in the way of leadership, will be able to explain what sort of dangers America faces. His problem does not seem to be altogether one of ringing an alarm bell ; surveys of public opinion suggest that most Americans feel that the risk of a showdown over Berlin—even a nuclear one—must be faced this year. But the President is seeking an alternative to the use of nuclear weapons which may require wider military service and heavier financial burdens over a considerable period.

Firms At The Top

IN 1960 the hundred largest non-financial corporations in the United States had total assets of $176 billion and revenues of $135 billion. The list of firms, which is given by the First National City Bank in its monthly letter for July, includes 55 manufacturing concerns, 26 utility companies, 16 railways and 3 retail trading companies. The largest was the American Telephone and Telegraph Company, with $22.6 billion in assets, the smallest the Erie-Lackawanna Rail Road, with $698 million. Ten years ago it was possible to get into this list of top firms with a mere $329 million in assets. Last year there were 54 "billion dollar" corporations compared with 22 in 1950 and 20 worth over $2 billion each, compared with 5 ten years earlier. The hundred largest firms had an average investment of $30,300 for each of their 5.8 million workers; their shareholders, without allowance for duplication, totalled 12.5 million.

Where The Money Went

The 100 largest non-financial corporations in 1960

Figures give actual amount in $ billion

While preparing for military action if this becomes unavoidable, the President is not losing sight of the battle in Congress over foreign aid which will determine how effectively the United States can speed the progress and retain the friendship of the under-developed countries. The over-riding issue this year is whether Congress will make efficient long-term planning possible by agreeing to give the Administration permission, in advance, to spend over $7 billion in development loans over the next five years. Mr Kennedy was sufficiently confident last week to reject one compromise. But the Bill will not reach the floors of the Senate and House for about three weeks. The President, forewarned, perhaps, by the way the House Rules Committee has killed his education Bill, has decided that it is even more important for him to win this vital battle in Washington than to go to Montevideo early next month to launch in person the "Alliance for Progress" which he hopes will mark an historic turning-point for Latin America.

Drought with a Silver Lining

THE July crop report, the most significant of the year, offers some badly-needed cheer to the Department of Agriculture but much of it is at the expense of drought-stricken farmers in the northern great plains. There more than a hundred counties have already been declared disaster areas, eligible for special loans and other aid. One reason why the total output from American fields is showing a sharp reduction this year is that the unusual dryness, and the ravages of the grasshoppers that come with lack of rain, in Montana, the Dakotas and northern Wyoming and Minnesota mean that the harvest of spring wheat is expected to be only a little more than half last year's 246 million bushels and the lowest since the era of the dust bowl. This is the grain used for high grade flour; durum wheat, for marcaroni and noodles, will be reduced even more severely. Admittedly the winter wheat crop, forecast at 1.1 billion bushels, is likely to be the second largest on record but even so the total wheat harvest will probably be roughly equal to demand in the coming year and so for once will not mean an addition to the country's huge surplus.

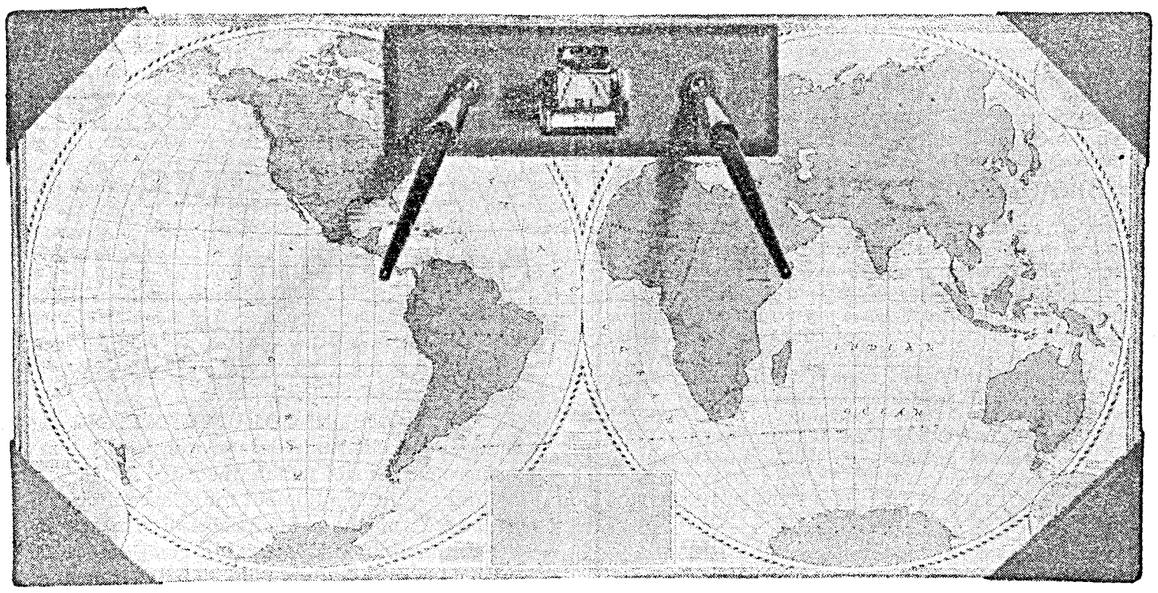
In any case Congress is about to approve legislation which should cut wheat plantings substantially next year along the lines of the emergency programme for feed grains—maize and sorghums—which was introduced this spring and which is the other main reason why agricultural output is going down so satisfactorily this year. As a result of this programme farmers have reduced their plantings of maize to the smallest since 1882 and the crop, estimated at 3.2 billion bushels, will be 20 per cent less than last year's. To meet demand at home and abroad will mean drawing heavily on the government's stocks, now amounting to over 2 billion bushels. The scheme involves large payments to farmers for maize which they have not grown, enough in one case to buy a Cadillac car, a dramatic incident which was exploited by the city-dwelling critics of the Administration. Nevertheless the success of his feed grain programme compensates the Secretary of Agriculture slightly for his complete failure to convince Congress of the advantages of his imaginative and long-term proposals for putting farm policy on a new and—he hoped—less costly basis.

President and Press Gang

WASHINGTON, DC

WHEN Mr Kennedy was inaugurated as President he let it be known that he intended to maintain the many direct personal relationships with newspaper publishers, columnists and reporters which had served him so well as Senator and presidential candidate. This delighted the pressmen—especially the upper crust with direct access to him—but the Cuban fiasco showed that private friendships would not give Mr Kennedy permanent immunity from newspaper criticism. From that time the press asserted its independence increasingly and in the last few weeks the gloves have come right off, notably with complaints about shortcomings in the organisation of the White House and the State Department, with particular reference to Mr Chester Bowles's failure to run the department efficiently. This attack mobilised support for Mr Bowles, the darling of the liberals. As a result and as happens so often, it has become impossible for the President to replace him as Under Secretary of State—if that is what Mr Kennedy wanted to do—at least for some time.

More serious are the allegations of presidential haverings between the tough and the soft lines over the Berlin situation. But the most disquieting aspect of all this is not the upsurge of press criticism, but the thin-skinned reaction of the President. After Cuba Mr Kennedy appealed to newspaper publishers for restraint on matters of "national security," an appeal which fell on closed ears, and in recent weeks the President has also protested to them about editorial fault-finding. To those who support him and the liberal Democratic line, he has even used words reminiscent of Mr Bevin's famous accusation of being stabbed in the back when he was Britain's Foreign Secretary. This hypersensitivity has extended to the foreign press; reports in leading British papers of indecision and disorganisation in Washington caused the White House not only grief but even a faint suspicion that Downing Street was involved in them.



It is surprising that Mr Kennedy, who endured the usual hard knocks of the presidential campaign, should have imagined that he could keep the press in his pocket for any length of time. Such a notion points to a rash over-confidence in the early weeks of his Administration and to a grave underestimate of the troubles that lay ahead. Mr Kennedy is credited with the ambition—no unworthy one—of being classed with the great Presidents; certainly the hour is calling for the man. But surely he must see that events, whether shaped by himself or forced on him, will inevitably determine the tone of press comment; and he should know, too, that the decisions of a President must often await history for a true verdict. Misunderstanding goes with the office.

Electrifying the West

FROM A CORRESPONDENT IN COLORADO

THE first important battle in the present Congress over whether the government should move further into the production of electricity is being closely fought: last week the House denied, and this week the Senate granted, the Administration's request for $95 million which would enable electricity to be generated from the heat given off by a plutonium plant which is being built at Hanford, Washington. Normally such heat is simply wasted. But if it were put to use in this case it would be sufficient to generate 550,000 to 700,000 kilowatts of electricity—several times as much as the biggest atomic plant now in existence in the United States, that near Chicago, which has a capacity of 140,000 kilowatts. As a by-product of the plutonium operations at Hanford the electricity would be produced cheaply enough to enter the pool of hydro-electric power in the northwest at the going wholesale rate and still make money for the government. The dual-purpose plant was authorised by Congress in 1958 over the objections of President Eisenhower, but no money has been provided for the electrical facilities.

Up to now steam generators—as opposed to hydro-electric dams—have been established by the government only in the Tennessee Valley and the proposal that it should produce electricity from

World-wide economic trends
delivered to your desk

If you were a client of First National City Bank you would receive a first class international banking service. But First National City pride themselves on providing their clients with many valuable extra services.

One important example of these extra services is the Monthly Economic Letter. This is a round-up of world-wide business and economic conditions with special reference to the United States; information of great value to any British businessman who is interested in expanding his export trade.

The Monthly Economic Letter goes not only to the bank's clients, but is also sent to the influential leaders of public and business opinion all over the world, with more than two hundred and fifty thousand copies being distributed every month.

MANY OTHER SERVICES Clients of First National City can call on many other services, too. For instance, letters of introduction can be arranged to the manager of any overseas branch or correspondent—a valuable passport to local business and local trading conditions.

There are travelers' checks, up-to-date credit information on several thousand foreign companies, and with eighty-three branches in twenty-nine countries there are many other ways in which First National City can help.

If you would like to benefit from the services that First National City provides, contact the bank at 117 Old Broad Street, E.C.2 (London Wall 1221) or 17 Bruton Street, W.1 (Mayfair 6600).

I·C·T 40-COLUMN PUNCHED CARD SYSTEMS can help your business

WHAT DOES 40-COLUMN MEAN? It means a punched card data processing system using small cards which record data in 40 columns—quite sufficient for a large number of jobs. It means a comprehensive range of 40-column punched card machines. Compared with a larger 80-column installation, it means less initial outlay, lower running costs, saving of floor space.

If you're considering a data processing system, see what 40-column machines will do for you. They are more than earning their keep for many thousands of organisations: firms operating with as few as 12 people to concerns employing over a thousand.

What I·C·T 40-column equipment can do for YOU

It will mechanise your sales and purchase accounting, and produce your statistical records. Other everyday jobs it will tackle include stores and stock control, invoicing, payroll, hire purchase accounting, expenditure control and costing. It will help you wherever you need accurate accounting and statistical information quickly.

The equipment is readily available; it is easy to put in and simple to use.

I·C·T 40-column equipment can grow with your firm

The basic machines—auto punches, sorters and tabulators—may be all you want at the moment. But you can always add summary, reproducing and electronic calculating punches, interpolators and interpreters. And you can increase card capacity by 25% without spending a penny more.

Because I·C·T's range of data processing equipment is so wide, your installation can always keep a step ahead of demands on it. Transition to 80-column machines, or to electronic computers, can be effected smoothly and efficiently at any time. Write to us at I·C·T—*now*.

ICT

International Computers and Tabulators Limited

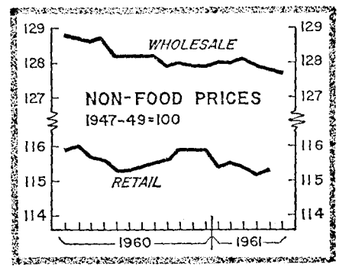
I·C·T manufacture 21-, 40-, 80- and 160-column punched card machines, as well as small and medium-sized computers.



nuclear energy has provoked the intense opposition of two powerful groups. The coal industry and its trade unions fear the loss of their markets and the private electricity companies view the scheme as a government foot in the door of atomic development and a dangerous extension of its operations in the field of generating and distributing electricity. In particular, they fear that the production of more electricity in the northwest, which is suffering already from at least a temporary surplus of capacity at its great federal dams along the Columbia River, will strengthen the case for a federal transmission system to carry this electric power to the markets of central and southern California. These lines, according to an official of the private companies, would "almost surely become the first link in a coast-to-coast federal grid tying in all the regional [public] power systems."

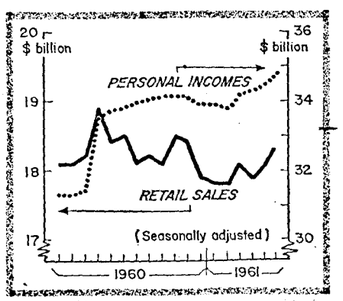
Such links would make economic sense. The peak in the demand for electric power ripples across the country with the changes in the clock; furthermore, other savings in generating facilities may be possible by directing electricity to the south in the summer, for air-conditioning, and to the north in the winter to satisfy the growing demand for it to heat houses. But the private firms fear a big loss of markets if cheap federal electricity becomes available from the Tennessee Valley to the Pacific coast.

This is no idle fear. In February Mr Kennedy ordered plans to be prepared for such inter-connection of areas where the government sells electricity; a committee is to report on the feasibility of the line between California and the northwest by November 1st. Moreover, during his election campaign Mr Kennedy promised to reverse the Eisenhower policy of "no new starts" on federal hydro-electric projects which was designed to encourage private exploitation of promising sites; he also endorsed the building, by the government, of steam plants to supplement hydro-electric resources. In the past, even under Roosevelt's policy of favouring public

Why Prices are Weak

FROM A CORRESPONDENT IN CHICAGO

PARADOXICALLY, manufacturers' prices have been moving down as their output has moved up. After a decline last year and a brief recovery early this spring, the government's index of the wholesale prices of products other than farm commodities and food has slipped recently more than a full point below the peak reached in January, 1960. This index is based on 1,750 items and shows normally only the smallest fractional changes. Moreover, retail prices, which continued to rise through most of the recession, are now falling as well, reflecting this price cutting at the factory. The monthly index of the prices which consumers pay for non-food commodities—this figure also excludes the cost of services—dropped by what is, for it, a large amount this year.



Nor do these figures tell the whole story. Much of the price trimming takes the form of quiet concessions by manufacturers, especially where large orders are at stake, which do not show on published price lists. This activity came to light in May when the United States Steel Corporation and other big producers began announcing a series of price reductions for many kinds of steel, including reinforcing bars, some types of stainless steel and line pipe. Individually, none of these are major items, but together they are important to the industry. It was explained that price shading by smaller mills had eaten into the sales of the big concerns and forced them to cut their prices officially.

More recently there have been similar developments in many other materials and components—aluminium, insulation fabrics, chemicals, electric motors and shipping cartons, to name a few. Now purchasing agents for shops are finding that producers of consumer goods are also reducing their prices. Sears, Roebuck and Company, the country's biggest retailer of non-food items, and other large Chicago firms say that they are getting their merchandise for less in almost every department, from clothing to television sets. As a result, prices in the autumn mail-order catalogues are on an average 1½ per cent lower than a year ago.

This price shaving takes a variety of forms in addition to direct cuts. The huge Frigidaire Division of the General Motors Corporation in Dayton, Ohio, for example, is handing out $25 as a "promotional allowance" for each of two models which it sells to retail shops, fully expecting them to deduct this money from the selling price of the refrigerator and spend not a penny more on promotion. Hence, a refrigerator that sold for $278 in the spring now costs $252. Steel producers are among those who are absorbing more freight charges for their customers and producers of television sets are introducing new models that contain all the features of last year's line but sell at lower prices.

Over-capacity in many industries, which makes manufacturers hungry for orders, is a basic reason for this spreading weakness in prices. Many companies expanded too rapidly in the early nineteen-fifties and their sales have never justified the full use of their plants. Appliance makers could produce twice as much as they do at present. Even after the sharp rebound in their activity this spring, steel and aluminium companies are running at barely 75 per cent of capacity. Then producers of components have lost business over recent years as manufacturers of finished goods have turned to making their own parts. For example, the Ford Motor Company now makes transmissions which it used to purchase from the Borg-Warner Corporation in Chicago. The impatience of manufacturers has been heightened by the sluggish recovery in retail sales. While they are improving now, they have lagged far behind the rise in personal incomes and shopkeepers say that the consumer has emerged from the recession reluctant to spend or to go into debt.

Lower prices have reduced some costs for both manufacturers and retail traders, but wages and other operating expenses continue to mount. Wages in the steel industry will rise on October 1st and a higher minimum wage, which will affect many factories and shops, comes in on September 3rd under a new federal law. Publicly there is more and more talk of prices going up in the near future, but privately many businessmen doubt whether there will be more than a few increases in the coming months, unless sales show enough buoyancy to employ more of the country's excess capacity.

Two facts worth remembering: (1) The fuel oil pipeline devised by Shell-Mex and B.P. Ltd was laid 23 miles from Stanlow refinery to Partington, in the Manchester area.

(2) Fuel oil is currently being pumped in at Stanlow at 240°F and coming out at the other end to feed Manchester's industries flowing merrily at 100°F.

SHELL-MEX AND B.P. LTD — FIRST LONG-DISTANCE FUEL OIL PIPELINE

ownership and distribution of electric power—to which the new Administration wishes to return—power was regarded as an incidental by-product of dams built primarily for the purposes of flood control and irrigation. Now the Westerners at the helm in the Department of the Interior talk of the provision of cheap electric power as an end in itself. Only last week, when the Tennessee Valley Authority observed the centenary of Senator Norris's birth by announcing a new low rate for electricity, President Kennedy said that he wanted to see the TVA go forward along this path, not rest on its laurels. Cheap electric power is of just as great importance to the fast-growing west as it has been to the southeast, where the TVA has worked such miracles.

DURING the eight Eisenhower years there was little change in the proportion of electricity generated by public authorities; it amounts to about 20 per cent of the total. But the industry is fighting tooth and nail and using all its influence with Congress to prevent this proportion from being increased. For example, it is asking Congress to refuse to provide the money to build the Burns Creek project in Idaho. The industry feels that there is a strong case for rejection of this scheme, which would provide virtually no water for local irrigation and thus departs widely from the traditional policy of generating electricity only as a by-product of irrigation. Because of this controversial aspect of the project, the Administration seems to have decided not to stir up a bitter fight by pressing Congress to authorise it this year.

But in another dispute the advantage appears to lie with the Administration. Private electrical firms are battling for the right to build the main transmission lines to distribute some 1.2 million kilowatts of power which will be generated, eventually, by the Upper Colorado Basin Storage scheme. Studies carried out for Mr Seaton, Mr Eisenhower's Secretary of the Interior, convinced him that money would be saved if the federal government built the transmission system and Mr Udall, his Democratic successor, has naturally concurred. The Administration may well make its strongest stand on this issue.

The country's new masters have already reversed the restrictive policies imposed by President Eisenhower on rural electrical co-operatives which, in the past twenty-five years and with the help of low-cost federal loans, have brought electricity and telephone service to almost every farm house. These co-operatives depend, in many cases, upon private firms for their supply of electricity and many wish to band together to build their own joint generating plants and transmission facilities. The policy of the Republicans was to grant loans for this purpose only when they were convinced that the REAs were unable to obtain adequate, reliable and reasonably priced supplies from private sources. They would also have liked to charge the REAs interest high enough to cover the government's cost of borrowing the money in the first place.

All this has changed under the Kennedy Administration. Last month the Rural Electrification Administration granted the largest loan in its history: one for $60 million to a group of co-operatives in Indiana to enable them to build a 198,000-kilowatt generating plant and the transmission lines to distribute the electricity. The loan is for 35 years and bears interest of only 2 per cent. The co-operatives first applied for the loan in 1957, but the Eisenhower Administration never acted upon it largely because of the opposition of the private firm which now supplies these co-operatives with almost all of their electric power. Having their own generating plant will save them about $5.5 million during the next ten years. This was the main reason for granting the loan. But the Rural Electrification Administration has also announced publicly its determination to "guarantee the co-operative device a permanent place in the American (electrical) power industry" and has promised not to let the co-operatives be victimised in any way by the commercial companies.

Wary Negotiators in Detroit

THE automobile manufacturers and the United Automobile Workers, whose contracts with the three major companies expire on August 31st, are still taking each other's measure. Neither side wants a strike and neither side wants to provoke the intervention of the government. Both are aware—the managements to their satisfaction, the workers to their irritation—that the Administration regards these negotiations as an important test of the country's ability to avoid inflation. The President's Labour-Management Advisory Committee, which met last week to seize the nettle of wage and price restraint—on which so many similar committees have come to grief—may not have been able to do so; it simply set up a number of sub-committees to consider various aspects of the nettle. But other members of the Administration have been forthright about the need for restraint; the settlement in Detroit is, as usual, likely to set a pattern for many other contracts.

Mr Reuther's task is unenviable. He needs to cut a dash to wipe out the memory of 1958, when he came away from the bargaining-table almost empty-handed; to bolster his own prestige if, as seems likely, he has hopes of unseating Mr Meany as president of the American Federation of Labour and Congress of Industrial Organisations; and to put heart into his members who have had a hard year. Over a million fewer motor cars were produced in the first six months of 1961 than in the corresponding period of 1960 and the assembly lines are slowing down for the introduction, earlier than usual, of the new models. There will be little enthusiasm for a strike. Mr Reuther's only trump is that the companies would also hate a strike which prevented them from recouping, in what they hope will be a glittering fourth quarter, the sales and profits which they have lost so far.

Last week Mr Reuther unveiled the centre-piece of his proposals; it justifies his reputation for ingenuity. Since 1948 automobile workers have benefited to the extent of $1.18 an hour from two concessions won in that year: a cost-of-living adjustment and a "productivity payment" of an additional 2.5 per cent a year. Mr Reuther suggests that 17 cents of the cost-of-living bonus should be incorporated in the basic wage structure—a "raise" which would cost the companies nothing (except the right to withdraw the bonus if prices fall). In addition he wants an increase in the productivity payment to 3.4 per cent a year, something which, it can at least be argued, is also non-inflationary. Yet on this basis Mr Reuther could claim that he had won a wage increase of 26 cents an hour. He also produced his expected demand that workers should be paid weekly salaries instead of hourly wages because this might reduce the risk of their being laid off when production falls. But his members are more interested in two other things: an improvement in the company payments which supplement the state's unemployment benefits and the assumption by the managements of the full premiums paid for health and medical insurance; at present they pay half. Late this week the representatives of the companies will begin to outline their stand; at least they cannot complain that Mr Reuther has not given them a wide variety of ideas from which to strike a bargain.

—

SHORTER NOTE

The "colour of your money" will be apparent at first glance if the Treasury accepts the idea—put forward by Mrs Elizabeth Smith, the Treasurer of the United States—of printing bank notes of different denominations in a variety of hues. Only the one dollar bill would remain the traditional green. The change would lessen confusion, reduce the number of errors and make sorting easier at banks.

What's your cup of tea? . . . if it's Asia, then your advertising medium is The Asia Magazine, Asia's newest—and biggest—international publication. For the first time a magazine with Asian-wide distribution created by Asians, for Asians, about Asia. What better background for Asian selling?

And what a market to sell to! With the Asian continent in the midst of a great economic, cultural and intellectual surge, Asian countries offer opportunities for sales growth unparalleled elsewhere on the globe. It's a market newly on the move—and The Asia Magazine's the new medium moving with it.

First issue is October 1st. The language is English—the common denominator of important Asians in industry, government and the professions. Distributed as a supplement to the most respected English language newspapers in the Orient, The Asia Magazine will reach 650,000 high-income families a week. That's almost ten times the circulation of any other journal serving the area. Yet The Asia Magazine's rate-per-page-per-thousand is ⅓ that of competing international periodicals. More people at less cost.

THE WORLD OVERSEAS

Lusaka's Marshmallow World

FROM OUR SPECIAL CORRESPONDENT

NORTHERN RHODESIA is the victim of its own relatively tranquil past. For at least three years widespread trouble over the issue of constitutional advance has seemed imminent but has always been averted. Now when a collision between nationalism and the government seems both inevitable and immediate most people fall back for comfort on the past and assure each other that this crisis will dissolve like all the rest. There is a general feeling among government officials and Northern Rhodesian Europeans that they are driving through a marshmallow world: maybe there will be a slight collision but it will hurt hardly at all.

Yet since Mr Macleod last month published the complex proposals for a new constitution, African and liberal disillusionment with the Colonial Secretary and the British Government has been almost complete. For two years Mr Kenneth Kaunda, president of the United National Independence party, has been sustained with hopes of a peaceful transition to majority rule. First the Devlin report diagnosed the malaise in Nyasaland and he could trust that the same cure would not be applied to his country. Then a majority of the Monckton commission had recommended an African legislative majority for Northern Rhodesia; and Mr Macleod himself confided during a weekend at Chequers that he was thinking of "something similar to Nyasaland." The preliminary White Paper in February was a compromise but still acceptable. The Europeans were busy adjusting their views to the prospect of an African government. Then on June 26th all Mr Kaunda's hopes were shattered.

Although Mr Macleod has maintained that the new proposals are "within the framework and spirit of the White Paper," senior officials in Lusaka will admit that fundamental changes have been made. In the White Paper, they explain, there was an attempt to equalise the two voters' rolls, each having 15 exclusive seats and a reasonably equal share in a third group of 15 seats. The new proposals are aimed at equalising the voting influence of what they call "the two major races" (a phrase which passes lightly over the fact that Africans outnumber Europeans 38 to one). In this scheme the Asian and coloured population was a complicating factor, and so it was segregated by being given a single national seat of its own. It was also successfully argued by Sir Roy Welensky's United Federal party that it would be easier for an African to gain a 12.5 per cent minimum vote among the 50,000 on the upper roll than for a European to achieve this quota among the 70,000 on the lower roll; so an alternative of 400 minimum votes on both rolls was added.

The UNIP claims (and it seems accurately) that the UFP will almost certainly win nearly all the 14 remaining national seats, especially since they have now been grouped into double member constituencies with the provision that at least four of them must return Europeans. They have only to find 400 susceptible voters among seven groups of 10,000, and no salesman worth his salt would consider that much of a challenge, so why should a party that has long been under the loving care of Messrs Coleman, Prentis and Varley and has large funds to spend on advertising.

While the UFP wags its newly acquired second tail, the other three parties are in various stages of dismay. The UNIP, which is by far the largest, has rejected the proposals and announced a boycott of any elections. The African National Congress, the rump of Mr Harry Nkumbula's old party, which claims a million members in the same unconvincing way that a fading beauty will romanticise about her age, is trying to make the best of both worlds: it has rejected the proposals "without reservation" but intends to contest the elections in order to destroy the constitution "from inside." The Liberal party is bitterly disappointed, but its leader, Sir John Moffat, has said he will try to make the constitution work; others in his small party are less amenable and would have liked to see Sir John resign his ministry rather than be seen proposing the ironically named motion of thanks to the Governor for propounding this constitution.

All three of these parties would support the proposals if the 2,000 Asian voters were returned to the national roll and the 400 minimum vote alternative was dropped. Mr Mistry has led an Indian delegation to tell the Governor they do not want separate representation. The Bishop of Northern Rhodesia has led another from the Christian Council to plead for urgent changes. Both he and Sir John Moffat have appealed for an all party conference. But the government's attitude is that any further conference is purposeless since the proposals are "irrevocable"; it will not let any part be reviewed for fear that every part might be objected to and scrapped.

There seems now no room left to manoeuvre and both sides find themselves increasing speed towards the collision. The special UNIP congress last week gave Mr Kaunda full backing for his unrevealed "master plan" to shake the foundations of government by non-violent action. The trades unions have declared they would show solidarity by striking, a threat which worries the government more than the Copperbelt managers, whose problem is world over-production. The government has provided itself with the widest imaginable security powers; thus even boycotts, whether of beer halls or of registration for voting, can be designated an offence carrying a six months' prison penalty. The police have been considerably strengthened since the proscription in 1959 of Mr Kaunda's previous Zambia Congress party, and many Europeans take particular comfort in the fierce appearance of the police mobile units which are largely composed of selected illiterates.

As a result of hurried federal legislation all European men between 18 and 50 are required to register for federal military service before August 15th. Several among the 280 European members of UNIP—who include clergymen, lawyers, school teachers and a knight—have decided not to register despite the threat of a year's imprisonment. They see all Northern Rhodesia's troubles stemming from the British Government's determination to continue federation; otherwise, they urge, the gentle, ascetic Mr Kaunda would be as acceptable as Mr Nyerere and his country's copper wealth could have made for swift development.

In March a peaceful transition for Northern Rhodesia seemed so close, after Sir Roy's call-up of territorials had been morally defeated by the forbearance of Africans trusting in Mr Macleod. Now, with that trust gone, the situation is extremely grave. There are nightly incidents between police and crowds, any one of which could flare into a riot and throw the country into turmoil.

It is widely said among liberals that one move only can avert

an early explosion. This is the resignation of the Governor, Sir Evelyn Hone, who is known to be deeply unhappy about the constitution to which he found himself finally putting his hand. It would give Africans heart and patience and would assuredly make alarm bells ring in Whitehall. Failing such a sacrifice, they see the country doomed to a state of emergency in which the detention of the UNIP leaders will be followed by bloodshed and disruption of the economy, which anyway is far from healthy now. When this is said unemotionally by decent people, who are now busy putting their property in their wives' names as they hard-headedly contemplate detention in the camps they hear are being renovated, there are surely grounds for Mr Macleod to be dissatisfied with his handiwork.

Canada Stands on Principle

FROM OUR OTTAWA CORRESPONDENT

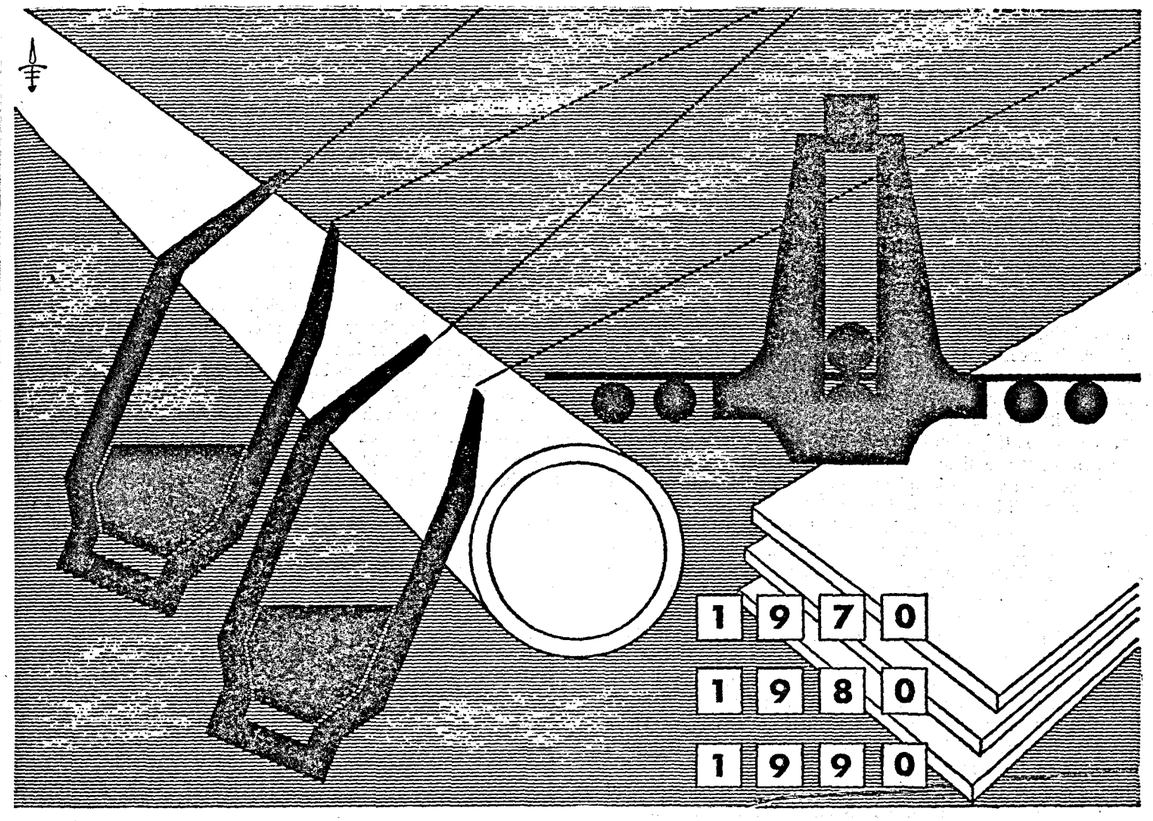
MR DUNCAN SANDYS'S talks here, which concluded the world-wide consultations of the three horsemen of Mr Macmillan's apocalypse, were nothing like as terse or unfriendly as the exceptionally blunt communiqué suggested. The conflict with Mr Sandys's views was as definite as the communiqué indicated, but the difference was not primarily based on Canada's trade interests, nor did it involve any clash of personalities. Mr Sandys had been billed as the tiger luring the young Canadian maiden into what Hollywood would call a "death ride." But two things went wrong with this advance billing.

Mr Sandys, far from appearing as a tiger, impressed Mr Diefenbaker as a man whom he could trust absolutely; and the austere Mr Howard Green, secretary of state for external affairs, surprised himself as well as everybody else by concluding, "You know, I like him." On the other side, the Canadian ministers surprised Mr Sandys by stating their objection to British negotiations with the common market on high political grounds, and by leaving Canadian trade interests on the periphery of the argument.

After his gruelling flight from Sydney to Ottawa, Mr Sandys had 24 hours' rest before meeting the Canadian ministers. He spent an important part of it grilling British officials here about Canadian attitudes. When he first met the Canadians on July 13th he confronted an impressive group of officials besides four senior ministers. Mr Diefenbaker, who had a private meeting with Mr Sandys later, was represented by his chief confidential adviser, Mr Robert Bryce, secretary to the cabinet. Mr Howard Green was accompanied by his permanent under-secretary and his other economic experts. Mr Donald Fleming, the finance minister, who was obviously tired by his bitter tussle with Mr Coyne, acted as chairman; and British sources say he did it admirably. Mr George Hees, minister of trade and commerce, and Mr Alvin Hamilton, minister of agriculture, were there; and Mr Louis Rasminsky, Canada's executive director on the International Monetary Fund and at present the hottest tip to succeed Mr Coyne as Governor of the Bank of Canada, came up from Washington for the meeting, though he was having a sticky enough time down there defending Canada's new policy of devaluation.

At the opening meeting Mr Sandys took more than two hours to expound the British attitude towards the common market. He admitted his own belief that negotiations should be started, while insisting that the Cabinet had not reached a decision. The Canadian ministers then spoke in turn, challenging Mr Sandys's view on the basic ground that British integration with Europe would remove "the British influence" from the world. Even the minister of agriculture, Mr Hamilton, hardly mentioned wheat in his concern about "the Commonwealth idea." In so far as Canadian trade interests were mentioned, it was clear to both sides that the crux of the problem was the export of Canadian manufactured goods. Mr Sandys, while he emphasised their relative insignificance in the present totals, had to recognise Canada's concern about what they might become.

From the British point of view three things have been gained from these talks. First, the Canadians recognise that Britain will decide in the near future whether to open negotiations with the Six, and there will be no more argument about holding a full Commonwealth conference or further talks before that decision is taken. Second, Mr Sandys showed the Canadian ministers that a decision to stay out of Europe would be as fateful as a decision to start negotiations. Third, if the Canadian government in its present state of confusion and defensiveness is at all able to recognise the force of logic, its arguments about the Commonwealth will become a farcical pretence unless it maintains to the fullest extent every existing British preference in this market.



Much British comment attributing Canadian intransigence to the domestic political convenience of the Diefenbaker government has been unfair. It could be very misleading if it makes Britain underestimate the genuine Canadian interest in maintaining "a British voice" to which Canada and the rest of the Commonwealth can lend support as circumstances permit. It is true, however, that the Conservative ministers are displaying their party's historic bias in favour of imperial ties, now semantically transformed by that obscure word, Commonwealth, which is untranslatable into any other language, including American. If the Liberal party were in power this bias would be much less apparent. The Liberals, who did much during their long period of power to resist centralising tendencies in the Commonwealth, would be quicker to admit that what is sauce for the goose should be sauce for the gosling too. But the fundamental Canadian concern, to maintain British and Commonwealth equipoise against the almost overwhelming influence of the United States, would be the same whatever party were in power.

Tactically, the Canadian ministers' choice of ground may have been more skilful than gentlemanly. They remain free to claim that they never regarded Britain's arrangements with the Six as a fit subject for bargaining in sordid terms of trade advantage. They were faithful to the great Commonwealth ideals even if Britain was not. But they may also have calculated that retaliatory tariff action can be taken more easily from this elevated pedestal than from the earth-bound equality of a more realistic approach.

A European Conclave

FROM OUR BONN CORRESPONDENT

HAD enthusiasm for the cause been alone the criterion, then Federal Germany's modest capital was as fitting a place as any for Tuesday's gathering of the common market's heads of government and foreign ministers. The proclaimed object of the conference was to get on with the business of integrating the Six politically as well as economically. For several days Bonn citizens had been addressed all over town by a poster advocating democratic, parliamentary control of the new European institutions and their growing force of bureaucrats. The deputies to such a parliament, it was urged, should be elected directly, not delegated, as at present, by the various national parliaments. To make control more effective, the three existing institutions—the European Commission at Brussels, the Coal and Steel Community, and Euratom—should be merged into one executive. And there was a line or two proposing that Britain and its partners of

STEEL 2000

It is only forty years, or half a generation, to the year 2000. The expected rate of growth of the world population *) from the present 2.8 billion to more than 6 billion will accelerate the process of industrialization throughout the world to an extent that will dwarf anything accomplished to date.

In such a development, steel takes a key position – in agriculture, in the field of energy and just as much in machinery, in communications and in the building industry.

In 1960, about 350 million tons of steel were produced throughout the world. Experts estimate that world requirements of steel will rise to between 1.5 and 2 billion tons. This huge demand for steel calls for world-wide cooperation.

During the last decade PHOENIX-RHEINROHR increased its annual production of crude steel from 1.5 to 3.2 million tons. Intensive long-range research and planning characterize our work for the world-wide markets of the future. Our most important products: pig iron – semi-finished products – sections – steel tubes and tubular goods – plates and plate products – clad plates – SICROMAL- and RHEINROHR-special steels.

One of our subsidiaries, PHOENIX-RHEINROHR-INTERNATIONAL, Düsseldorf, Thyssenhaus, delivers pipelines, refineries, fertilizer plants and water supply systems.

All steel users trust this brand:

PHOENIX-RHEINROHR AG VEREINIGTE HÜTTEN- UND RÖHRENWERKE DÜSSELDORF GERMANY

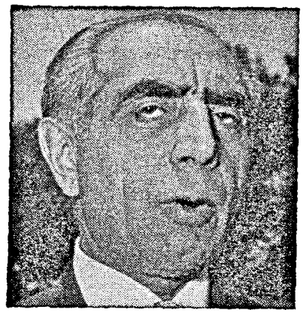
*) According to population statistics compiled by the United Nations in 1958

the European Free Trade Association should be encouraged to join in.

The poster was the combined work of the German council of the European Movement ; a German organisation, Europa-Union ; and the German branch of the young European federalists. At a public meeting held in Bonn before the heads of government arrived, sundry representatives of these eager German Europeans—among them Herr Furler, president of the European parliament, and Herr Mommer, the Social Democrats' European expert—announced that they had sent Dr Adenauer a telegram in which they restated their demands—but with one interesting modification. As a first stage towards political integration through an elected common parliament, the European Movement, the telegram said, would accept regular consultation by the heads of government so long as these meetings did not undermine the authority of the existing European institutions.

Tuesday's meeting in Bonn had been planned originally for May 19th. The two principal reasons for postponement seem to have been the unreadiness of concrete proposals for strengthening political unity, and the more encouraging swing of British sentiment towards participation in Europe. Expressing its regret at the postponement "at a time when the political unity of Europe is urgently necessary," the incipient European parliament cancelled the debate on political co-operation that it had called for May 10th. The report of the parliament's political committee, which was drawn up by M. Dehousse and was to have launched the debate, stated that political co-operation made sense only so long as it involved agreement to take decisions in common and accept the consequences. It was impossible to separate political from economic issues, as the Community was at present trying to do. If there were to be four community summit conferences a year, then the European parliament should hold at least two foreign policy debates a year. Political co-operation should be based not on a gentleman's agreement but on precisely worded written undertakings. These ideas were incorporated in the resolution passed by the European parliament on June 29th.

In the context of these aspirations the verbose declaration put out by the heads of government in Bonn on Tuesday evening can mean everything or nothing. By far the greater part of it was already composed before the statesmen met, most of it by the foreign ministers at their meeting in Rome on July 10th. All that emerges is that the heads of government and the foreign ministers will continue to meet regularly (how often is not stated, but the next meeting is to be in Rome in October) ; that political consultation is to be complemented by similar collaboration in the fields of education, culture and research ; that the European parliament's proposals of June 29th are to be studied ; and that a committee is to be appointed to consider ways and means of giving political integration "an institutional character." All this circumspection can scarcely please the enthusiastic federalists. But it is intended not only to bridge the narrowing differences among the Six but also to leave things open a little longer while Britain is making up its mind.



Nothing was arranged in Bonn that would make it any more difficult than it has been before for Britain to throw in its lot with the European community ; indeed, any such queering of the pitch was most carefully avoided. Unhappily, the purpose of British European policy has of late been exceptionally inscrutable to outsiders. Just when it seemed that the government and the country as a whole were ready to take the plunge into the common market, the three cabinet emissaries to the Commonwealth have returned with chilling reports that have apparently shaken everybody's confidence. At the same time wild rumours are rife of Britain's economic predicament. Britain's well-wishers are hoping that the expected statements in Parliament by the Prime Minister and the Chancellor of the Exchequer will clear the air before the council of Western European Union meets on August 1st.

Persian Road to Nowhere

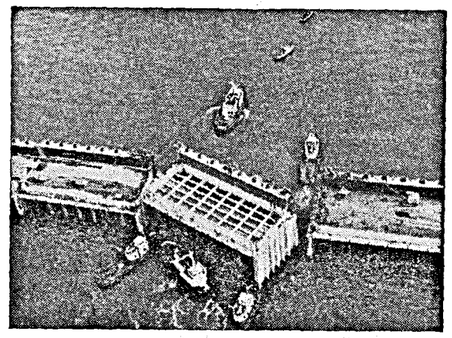
FROM A CORRESPONDENT IN TEHERAN

REFORM or revolution is still the constant theme of the speeches of Dr Ali Amini, who has been Persia's prime minister since May 5th. But the public is getting weary of waiting for him to translate his words into action, and his reforming zeal has visibly dimmed now that he is faced with the hard realities of the political situation. Few people doubt the sincerity of his desire to root out corruption and stabilise the country's shaky economy. But powerful vested interests are ranged against his reform programme.

At first, it was believed that the National Front presented the only effective opposition to Dr Amini. But now it is not the front that is giving him the most trouble. The prime minister met National Front leaders last month and seems to have convinced them that, if their agitations brought his government down, it could only be replaced by a government repressive enough to put the front out of operation altogether. The National Front leaders, who are still more concerned with keeping up their pressure for early elections than with urging a social reform programme, appear to have been partially satisfied by Dr Amini's assurance that they will be able to participate in the next elections and in the next parliament. It is hopefully assumed, of course, that Dr Amini will remain in power long enough to hold these elections.

Dr Amini: honeymoon over

The chief opposition to Dr Amini's programme for social reform has come from the right ; from the landlords, the armed services, the very wealthy, and from former high government officials, all of whose interests would be affected if the reforms went deep. The last few weeks have seen one concession after another to these groups. The proudly acclaimed programme for land distribution has not yet begun ; there is no longer any talk about reducing the size and importance of the army ; there are no signs of elections, and proceedings have not yet been started against any of the generals who were arrested earlier on charges of corruption or of the misuse of funds. Dr Amini's drive against corruption had to stop sooner or later when the chain of evidence inevitably began to involve names high up on the official ladder. Unfortunately for the prime minister, he is the apparent initiator of these concessions, and it is he, not those responsible who will bear the most blame.



It is becoming increasingly clear that Dr Amini has little control over the army, the police, or the security forces. Although he was allowed to make some cabinet changes when the Shah appointed him prime minister, he had to leave posts in these three crucial departments untouched. A few weeks ago, the National Front was prevented from holding a meeting in Qazvin, a town forty miles from Teheran, and there have been other signs that the security forces and the police are reasserting themselves. If these signs spell a return to the repressive practices of the past, then many people—intellectuals, students, civil servants, and workers too—will be alienated, and Dr Amini's honeymoon with the National Front will be over. The leadership of the front is already split and one faction is demanding a tougher line towards the prime minister.

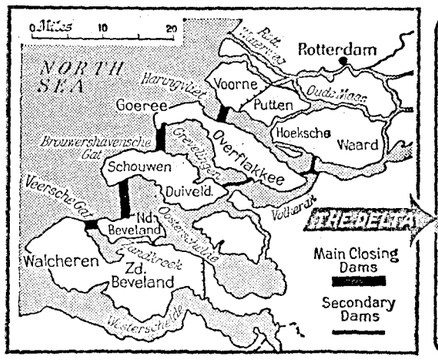
Dr Amini, it appears, is basing many of his hopes on a substantial loan from the United States. This would help the country to get over its immediate economic crisis, and would enable the prime minister to relax the credit and import restrictions that have recently been imposed. These were highly necessary, and indeed were adopted at the insistence of international banks and lending agencies who made them a condition before they would offer further loans to Persia. But they are making the merchants grumble ; and Dr Amini, in his present situation, can ill afford to alienate another powerful group. Mr Arsanzani, the minister of agriculture, recently left for Europe, where he is trying to enlist European, and especially German, aid and investment for Persia. A second delegation is expected to leave for the United States next month in an attempt to interest the World Bank in Persia's third development plan. The American Administration itself seems, at the moment, to be holding tightly on to the purse-strings—possibly waiting for signs of genuine reform before backing Dr Amini decisively.

With his hopes pinned to the United States, the prime minister has chosen to disregard the increasing pressure in favour of Persia's withdrawal from the Central Treaty Organisation and its adoption of a policy of neutrality. He has, in fact, staunchly reaffirmed Persian adherence to all existing pacts and treaties. But support for neutrality has come from surprising quarters. Non-alignment was

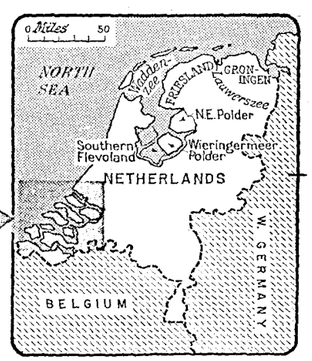
Holland's Growing Pains

FROM A CORRESPONDENT IN HOLLAND

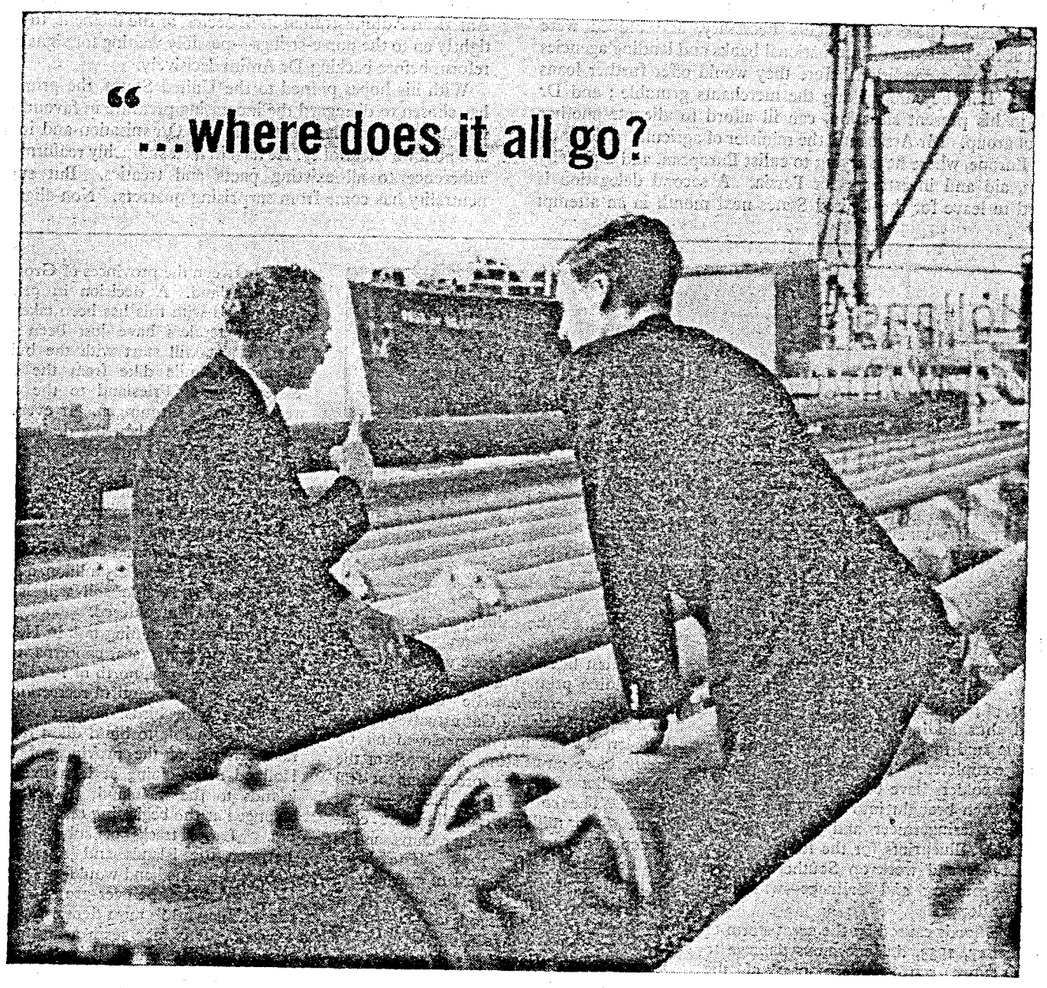
FOR the Dutch there is no slackening off in the struggle against the sea that they have waged ever since the 13th century. The ambitious scheme, started in 1927, of partially reclaiming the Zuyderzee and thus adding 550,000 acres of new fertile land to Holland, is now more than half completed. Three of the five projected polders have been drained and two have been brought into complete cultivation (Wieringermeer and the Northeast polder). Blueprints for the fourth polder are ready and work on Southern Flevoland—endiking and drainage—will start before long.



The floods caused by the great storm of February, 1953, did enormous damage to the entire south-western part of the Netherlands. Immediately afterwards, the government drew up a plan to close off four of the five estuaries, leaving only the entrance to the river Scheldt open. From a hydraulic point of view this "Delta plan" is much more difficult than the Zuyderzee scheme, because the engineers have to contend directly with the open sea and very strong currents.



Briefly, the Delta plan envisages the construction of four unusually strong dams of a total length of 15 miles, which will replace the hundreds of miles of dikes around the various islands. This closely resembles the building of the "big dam" across the Zuyderzee, but the Delta plan, unlike the Zuyderzee scheme, will add hardly any new territory to the Netherlands. Its objects are to make the southern part of the country safer against any future attacks by the sea, to create some big fresh water lakes for recreation purposes and, perhaps most important of all, to reduce the salinity of the soil in that region.



The first line of defence will be formed by building primary dams in the Haringvliet, Brouwershavensche Gat, Oosterschelde and Veersche Gat estuaries. This last estuary has just been closed off by means of seven caissons, and work at the Haringvliet estuary is proceeding at full speed. The entire Delta plan will cost some £250 million, including the construction of three secondary dams, and is to be finished by 1978. The latest hydraulic techniques, most of which have been developed in the Netherlands, are being used, and thousands of foreign engineers are coming to Holland to study them in operation.

When the Zuyderzee and Delta plans have been completed, only two further jobs remain to be done. The first one is the comparatively simple task of closing off the Lauwerszee, the small bay in the north between the provinces of Groningen and Friesland. A decision in principle to go ahead with this has been taken, and the first tenders have just been made. The project will start with the building of an eight-mile dike from the north-eastern tip of Friesland to the north-western tip of Groningen. If everything goes according to plan, the drainage and reclamation of the Lauwerszee area (some 16,500 acres) should be completed in nine years' time at a cost of some £10 million. When the dike has been constructed, 3,375 acres of arable soil and 6,500 acres of woodland will automatically be drained. At a cost of an extra £2.5 million, a further 8,500 acres of arable soil will later be reclaimed and impoldered.

The second remaining task in Holland's battle against the sea concerns the six "Wadden" islands, north of Friesland. At present they are beautiful recreation spots and haunts for birds. But it would no doubt be feasible to build dikes from the northern tip of the province of North-Holland thus joining at least five of the islands to the mainland, to which they belonged at the beginning of the Christian era. Large tracts of submerged land between the islands and the mainland would be drained and would provide extra living space for the ever-growing population of the world's most densely populated country. This may seem a dream of the future, but hydraulically nothing seems impossible and one may be sure that somewhere in one of the desks of the ministry of traffic and waterways some rough blueprints or sketches of the "Wadden plan" may be found.

"Lots of places—people we work with in Britain and Europe mainly. Every country will want petroleum chemicals eventually.

I didn't mean geographically—I meant, what's the use of all the chemicals you make at Grangemouth.

We turned out over 200,000 tons of chemicals last year, it'll be a quarter of a million this year—when you produce on that scale, it isn't just *one* use you talk of—it's hundreds. Other chemical manufacturers take most of them—ethylene, ethanol, butadiene and basic products of that sort. Our polyethylene Rigidex, gets right into your home. So do polystyrene, detergents, paints, cosmetics, synthetic rubber, pharmaceuticals and all the other things our customers and customers' customers make.

Sort of chain reaction, in fact?

Yes, that's why we keep on expanding—a possible new use seems to crop up about once a week. Industry keeps coming back for more, and this year's quarter of a million tons won't be enough for next year.

Rigidex is a registered B.H.C. Trade Mark.

not a policy one proposed publicly three months ago. But the easing of press control has provided an indication of the country's temper. Not only has the National Front given neutrality its blessing, as was expected, but support has also come from several prominent and usually conservative political figures, including a former minister, Mr Ahmad Aramesh, and a member of the present cabinet. Mr Aramesh, who is now under arrest, has claimed that during his term in the previous government, the Soviet Union offered massive aid to Persia. He also claims that Russia was prepared to help Persia exploit its northern oil fields on very favourable terms. Both these claims have been categorically denied by Dr Amini and by his foreign minister. The denials should be taken at face value, and Mr Aramesh's statements with a grain of salt. But many Persians believe Russia would be willing to pay a heavy price for Persian neutrality.

Dr Amini has no party of his own to support him through these difficult days. He can, of course, always threaten to resign in the hope of persuading the Shah to give him stronger backing than hitherto. This would have been a powerful weapon eight weeks ago when Dr Amini was at the height of his popularity. Today, its effectiveness is more questionable.

In Defence of M. Debré

FROM OUR PARIS CORRESPONDENT

THE Tsar is good and wise, it is his councillors who are wicked and foolish. Sophisticated Frenchmen have recently evolved a modern version of this old muzhik belief and M. Debré is its victim. The French President collects popular applause as he passes through Lorraine, while angry peasants hang his prime minister in effigy. General de Gaulle represents greatness, prestige, success. But if the peasants are angry, parliament thwarted or the Algerian war unfinished, the blame must be put on M. Debré. The editor of *Le Figaro* has even seriously suggested that the solution for the present French malaise lies in a change of prime minister.

The amount of abuse now poured on M. Debré is in itself a proof of how well he does his job; to be a scapegoat is part of his duties. It was not written as such into the constitution of the Fifth Republic, but it is implied there effectively enough. When vast powers were granted to a president not responsible to parliament, it might be guessed that his prime minister would fight only mock parliamentary battles. In keeping with the spirit, if not with the letter, of the constitution, General de Gaulle rapidly extended his exclusive domain to all the decisions that matter, including foreign affairs, Algerian affairs and the key questions of economic policy. There was nothing left for his lieutenant but to carry out orders and shoulder the blame for unpopular moves. In this part M. Debré's rather abrupt manner proved an asset. If France's European policies displeased foreigners the fault lay in the prime minister's exacerbated nationalism; if deputies complained that they were bullied—it was due to M. Debré's distaste for parliamentary democracy.

Poor M. Debré. The only people with legitimate grudges against him were his old companions from the banner of *Algérie Française*. Those who had plotted against the previous regime, but did not stay on the gaullist bandwagon, accused him of betrayal. No opportunity was lost for the tart reproach that the senator of yesterday, *Michou La Colère*, as they used to call him, was not to be recognised in the obedient, pliable prime minister of today. And, indeed, even in politics, where the volte-face is no rarity, seldom has a man been obliged to swallow so many of his words on so many occasions and in such a short time.

General de Gaulle does appreciate his prime minister's faithful services and his usefulness as a scapegoat. He has no need to change him now, as he made plain in his broadcast last week. Should the general's republic last long and M. Debré outlive his usefulness, there will be plenty of gaullist candidates of all complexions, from pink to true blue, for the succession. M. Debré was the right man to bamboozle the lunatic fringe on the Right. A Mollet Socialist might be more suitable, if the trade unions were to get too restless. But the premiership is unlikely to change hands before the end of the Algerian war or before a general election, whichever comes first. And whoever has the job, his duties will not change without a radical reform of the regime.

Thus justice could be rendered to M. Debré only if sophisticated Frenchmen were to discover, as the muzhiks finally did, that not all virtues are the monarch's, or all the vices those of his servants. That would be the last thing the loyal M. Debré would wish.

Signor Fanfani's Twelve Months

FROM OUR ROME CORRESPONDENT

A MOTION of no confidence in Signor Fanfani's government, presented by the Socialist leader, Signor Nenni, was defeated in the Italian Chamber on July 13th. The Socialists complained that after benefiting from their neutrality at the beginning of its career, the government had failed to keep its pledges—real or implicit—and that the prime minister was marking time while toying with grandiose development plans which he had neither the strength nor the will to put through. The outcome of the debate was a foregone conclusion, since the two left-centre parties, which have supported the government since it was formed a year ago, remained loyal.

Signor Nenni himself, it is known, considered the motion ill-timed and tried to persuade his central committee to suspend it. From a tactical point of view, as usual, he was right. This vote makes it more difficult for the Republican party, which itself is critical of the government, to carry out its plan of attacking Signor Fanfani in October, when President Gronchi's power to dissolve parliament lapses and it becomes possible to have a government crisis without risking a general election.

The skirmish last week would hardly be worth mentioning were it not for the general feeling that Signor Fanfani's parliamentary victory marks the end of a phase in Italian affairs. Since about 1954 Signor Fanfani has been generally believed to be the man who, in spite of repeated setbacks, would some day lead the Christian Democrats into a working alliance with the Socialists. Few people expect this any more. Twelve months in office have given Signor Fanfani his second great chance; but at the end of them he no longer stands out as the man of the "opening to the Left." The opponents of this policy, in his own party and outside, have ceased to fear him. The Christian Democrat left wing is looking for a new leader capable of steering the party towards the Socialists; and it has cast its eye on Signor Sullo. In the country Signor Fanfani's image has become as blurred and flickering as that of the party secretary, Signor Moro. To the Italian public the two men appear as well-intentioned Catholics who would, indeed, like to put their party and their country on a

"socialising" course, but who cannot stand up to the opposing ecclesiastical and conservative pressures.

This does not mean that no more will be heard about Catholic-Socialist collaboration, the search for which is a recurring theme in Italian politics. The new papal Encyclical, *Mater et Magistra* [published on July 14th and separately discussed on page 327], clearly opens a new chapter in the story of the relations between Catholics and Socialists. Italian Socialists have hailed it as a break with the narrow, corporative tradition of Catholic sociology (of which Signor Fanfani, in his early years, was an exponent) and as a step forward to a position from which further evolution of Catholic social thought may be possible. In the long run, it is being said here, the new doctrine should influence the political behaviour even of Italian Catholics. In the short run, this behaviour is controlled by the hierarchy, upon whom, at the beginning of his reign, Pope John devolved authority in national affairs; and the hierarchy's record in Italian politics is not encouraging.

In the immediate future, however, it looks as if Italian political alignments may settle back into quite a different mould, one in which the Socialists will be drawn into closer collaboration, not with the Catholics, but with the Communists. Such an alliance would not be on the ideological plane, but in practical matters where the two parties are thrown together by the circumstances of Italy's industrial expansion and agricultural crisis. Italian labour, demanding a bigger share of the profits of Italy's industrial expansion, looks to the Communists and, in a lesser degree, to the Socialists to press its interests. At the same time the rural community is being thrown into a turmoil by the decline in agricultural incomes. All the weaknesses of the land reform—which was conceived primarily to produce a crop of Christian Democrat votes—have come to the surface; drastic remedies, including a reform of the system of land tenure, are urgently needed. But instead of announcing a policy for agriculture—which the "Green Plan" is not—Signor Fanfani called a ponderous national agricultural conference which has merely ploughed its discordant and inconclusive way through a mass of reports.

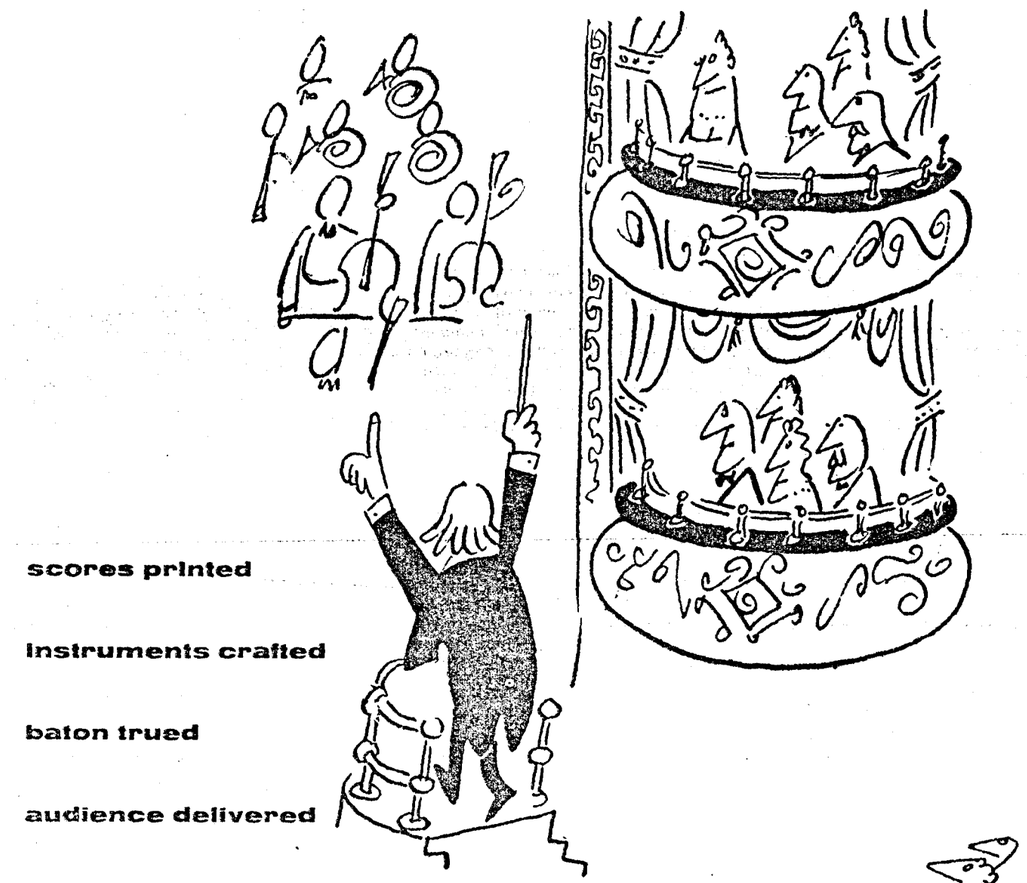
In their dissatisfaction the industrial and agricultural workers are making common cause. Last week in Florence the workers came out on strike in sympathy with the peasants. Such a thing has not happened since the time, before the land reform began to be introduced, when the landless peasants squatted on the uncultivated estates. Probably Signor Togliatti had direct action of this kind in mind when he scandalised Parliament last week by saying that to vote against the government was the least one could do.

Plainly this climate does not favour a Socialist-Catholic entente. Unless the Catholic politicians take their cue from the Encyclical instead of from the cardinal archbishops who have so far dominated the application of Catholic sociology in Italy, something like a Popular Front may threaten to reappear.

Switzerland's Foreign Invasion

BY A CORRESPONDENT

FOR the last year or so the talk in Switzerland has been about *Überfremdung*, too much land in foreign hands, too much foreign capital, too much foreign labour. There has been something of a popular outcry over the purchase of land in the Ticino canton by industrial magnates and film stars from—as it is supposed—west Germany. This led to a Swiss federal decision, which came into force at the beginning of April, that people domiciled outside Switzerland, whether they are Swiss or not, may acquire land in Switzerland only with the approval of the cantonal authorities. In actual fact these complaints tend to exaggerate the amount of property that has been acquired in the Ticino by foreigners. An article published by the Swiss Bank Corporation in June refers to 6.4 per cent of the value of the 107 most important communes at the end of 1958. The biggest foreign share almost certainly belongs to Italians, who tend to invest in building flats in Locarno (or villas in the Engadine), particularly when a heavy Communist poll in Italy has alarmed them. The people who buy up plots of poor land from the Ticinese peasants, which they then develop very profitably, are mostly German-Swiss. In the canton of Geneva a considerable amount of property has been acquired by Americans, but chiefly for administrative offices for American concerns in other parts of Europe. It is in this canton that a few Arabs have established themselves in feudal splendour.



Of late years foreign capital has shown a strong tendency to infiltrate the prosperous Swiss economy. In August, 1960, a so-called gentlemen's agreement was made by the three leading Swiss banks, to which the others subsequently adhered: it was agreed that foreign investors should be penalised if their money was put into Swiss concerns for too short a time. Owing to the persistence of the rumour that the exchange value of the Swiss franc, like that of the German mark earlier, was to be increased it is uncertain whether this merely encouraged foreign capital to remain. Another protective measure adopted by various big Swiss firms since 1959 has been to convert their bearer shares into registered shares. There is however more Swiss capital invested abroad than foreign capital in Switzerland.

More interesting, indeed, more critical, is the influx of foreign labour. It is popularly supposed that Italians naturally crowd in for the season to work on the land or in the hotels—and why not? By now, however, much more than this is happening. The number of foreign workers with temporary permits valid for up to a year, issued by the cantonal authorities, is published for February and August each year. The peak figure of 435,000 in August, 1960, will easily be surpassed in August, 1961. In addition to those with temporary permits, there is a fairly substantial population of foreigners who have been allowed to settle without becoming Swiss citizens. Thus it may be presumed that, of the whole labour force of 2½ million, well over 500,000, or a fifth, are not Swiss. About two-thirds of these foreigners are Italian. Switzerland, with a tenth of the population, has as many foreign workers as west Germany.

Many people would feel concern about this state of affairs in any case, since several types of essential work, in the building industry as well as on the farms, have virtually ceased to be done by the Swiss. In Switzerland's major skilled industry, mechanical engineering, a quarter of the labour force was foreign at the end of 1960; 67 per cent of these foreigners were Italian. (These figures, which come from the employers' federation, do not include the watchmakers.) During last winter the foreign workers in this, as in the Swiss textile industry, increased considerably, regardless of the season.

Those Swiss who are alarmed by this dependence on foreign labour are able to point out that already Italian workers are becoming hard to find. In northern Italy itself skilled labour is short; what is more, west German employers are offering better living conditions than the Swiss cantons offer. In Switzerland it has been quite exceptional for the Italians to be provided with lodging or to be allowed to bring their families; but the Germans now offer both these amenities, while the development of the common market also tends to draw Italian labour away from a non-member country. Thus the Swiss either have to revise the terms they offer, or to content themselves with unskilled labour from southern Italy and, more recently, from Spain and Greece. An agreement was made with the Spanish government in March.

Thoughtful Swiss patriots who want their country to preserve its particular political character are afraid of what they see: a choice between absorption into an integrated, industrialised Europe, and the continuing risk of a grave economic setback.

LETTERS

Europe and the Commonwealth

SIR—I was frightened to read Mr Douglas Jay's letter in your issue of June 24th. It is strange indeed to hear Labour supporting Commonwealth free trade, which, after all, is a kind of common market between English-speaking territories and some others with which Great Britain had imperial ties. But the Commonwealth trade area consists of a dominant industrial country vis-à-vis mainly underdeveloped ones which barely interpenetrate one another (for instance, Canada is more orientated to the US than to the UK), while the EEC contains regional industrial specialisation and overall interdependence. The Commonwealth economic system is in many ways another name for the colonial trade type relationship, while the EEC is a repetition of the market revolution similar to the earlier US one.

Of course, the EEC would make imports of foodstuffs and raw materials from the Commonwealth more expensive because of common tariffs on them. That is only natural. But the arguments used against that are exactly the same as those used by 19th century colonialists against the abrogation of the colonial trade monopolies. It is strange that a modern economist should support old-fashioned trade imperialism by appealing to the Englishman's cheap cup of tea.

First of all, true liberalism must not be a relationship between rich and poor (as is the Commonwealth trade area nowadays), but between more or less equal partners. Then, competition might produce the usual benefits. That is what happened in the US and what is happening on the continent, first in the Benelux Union, now in the EEC area.

Secondly, cheaper and better products in the EEC will then largely compensate Great Britain for the higher cost of tea, if the British government decides not to subsidise it. Everybody knows, and *The Economist* foremost, that British industry, every year since 1931, has lost a little more of its relative advantages over other countries because of the protective illusion of the imperial tariff barriers. To wake up to today's realities, British industries will have to face true competition from industrial countries. Then they will recover many of their comparative losses. But only true competition, and not government laws or exhortations, will do it, as recent European experience has shown.

We believe *The Economist* to be right to support Britain's entrance into the EEC. It is not a matter of political dogmatism to be pro or con. Continental socialists have been among the promoters of the common market idea and still are supporting it. Are they less social-minded than the British Labourites?

Many people here feel that something ought to be done to help underdeveloped countries in solving their particular raw materials and agricultural problems. But Douglas Jay should know that the EEC is more aware of that than many countries, studying long-term contracts and permanent assistance through special funds. Thanks to its successful experience in this specific field, and to its special interests, Great Britain, inside the EEC institutions, could contribute to an overall solution of the output, price and distribution of raw materials and the main agricultural products. Stabilisation of these is needed, inside (as shown by recent French troubles) as well as outside Europe and even the most liberal country of all, the US, has done it for most of its own products now. That seems the way of reviewing positively the relations between Great Britain and most of its Commonwealth partners and not the continuance of the glorious but in the long-term disastrous imperial preference tariffs system of 1931.—Yours faithfully,

Brussels JULES A. HORN

West Indian Workers

SIR—In your issue of June 24th you say of the West Indian Federation: "The small islands, still undeveloped, must harness their resources of land, water and labour (they have plenty of labour) and follow Jamaica's example in building up small local industries."

Owing largely to the rush to England, seemingly irrational as the flight of lemmings, it is emphatically not true that we in the small islands have plenty of labour. Agricultural production is on this account severely restricted. Artisans are disappearing from the human species. Policemen and school teachers, trained at the expense of the taxpayer, are taking unskilled jobs in British factories or on the London Underground. If our labour force were to be further depleted by "small industries," our exports (bananas, copra, cocoa, citrus fruits) would inevitably dwindle and the economic situation deteriorate further.

Incidentally, it is a misconception, encouraged by the bleating of politicians, that this wholesale emigration is the result of adverse conditions in the "small islands." Our people are going to England for the sake of change, for adventure, or because the man next door has done so. If one is tired of carrying bananas or husking coconuts it is apparently agreeable to collect fares on a bus or hump luggage at King's Cross. But the flight is of choice rather than necessity.

All this applies essentially to the units known as the Leewards and Windwards. In the large islands—Jamaica, Trinidad, Barbados—there are admittedly problems of unemployment and slum conditions. But it savours of absurdity that the same "large island" statesmen who insist, under threat of Communism in the Caribbean, that unrestricted emigration to the UK must continue, should deny right of entry into their own territories to their "poor relations," thus denying "federal kinship" and indeed making a farce of the whole federal concept.—Yours faithfully, E. NAPIER

Dominica, BWI

★

SIR—Mr Norman Pannell, MP, in his letter of July 8th, presents two alternatives as a result of the present trend in immigration into the United Kingdom: the complete assimilation of coloured immigrants, or the creation of a minority element, neither of which would appear to be desirable to Mr Pannell.

If we are to avoid hypocrisy, it must be admitted that a minority problem is already in the process of being created, and could become a permanent feature of our society if we refuse to face (as South Africa refuses) the implications of the first alternative, assimilation.

It is possibly hopeful for the future of race relations in the Commonwealth that many members of the public who belong to such bodies as the British Caribbean Association and other inter-racial organisations, try to put into practice their belief that the integration of all immigrants into the life of our community is the answer.

It would be interesting to know for what reason Mr Pannell disapproves of assimilation, considering that the present population of the British Isles is very largely the result of the assimilation of peoples from many different races throughout history.—Yours faithfully, FELICITY BOLTON,

Secretary,
The British-Caribbean Association

London, WC1

Trader or Haulier?

SIR—Your article of June 17th is a timely reminder that many of the restrictions which affect industry and trade are based upon statutory provisions. There are, moreover, strong grounds for believing that the goods licensing system is moving away from general vehicle licensing by tonnage, which was the basis of the 1933 act, and towards much stricter control over the type of goods carried, as well as over "route and area served" after the United States pattern. This belief is founded on the enormous growth, since the passing of the act of 1933, in the application of "normal user" conditions to "A" licences, even upon the renewal of formerly unrestricted licences.

Normal user conditions are not specifically provided for in either act. It is arguable that, contrary to the intentions of Parliament, there has since 1953 been a tightening rather than a loosening of statutory restrictions on public hauliers.

Oil Sales

SIR—In your issue of July 15th you make statements regarding the sale of lubricating oils "at Shell-Mex and BP garages" from which your readers may gain the impression that Shell-Mex and BP is in a position to dictate whether or not competitors' lubricating oils are sold at these garages. You refer, for example, to that percentage of competitors' oils which Shell-Mex and BP "allows the garages marketing its products to sell."

Shell-Mex and BP, in common with all other companies with a national network, has sales contracts freely negotiated with garage proprietors whereby the latter undertake to sell only the petrol marketed by the company in question, and all have been offered terms whereby competitors' lubricating oils can be sold, if they so desire. If some of these garages choose to sell only Shell-Mex and BP oils, it is naturally not a cause for dissatisfaction on our part.

You also state that garages which have mortgages with oil companies as security for loans are prevented from stocking competitors' lubricating oils. Again, so far as Shell-Mex and BP is concerned, this is not so. For several years, these garages have been free to stock any other company's lubricating oil.—Yours faithfully,

CHRISTOPHER T. BRUNNER
Director

Shell-Mex and BP Ltd.,
London, WC2

The Axe of Damocles

SIR—I am frankly flabbergasted by the suggestion that indirect taxes should be raised by 10 per cent and that foreigners might be impressed by such a move.

If the cost of living index goes up, so will the wage claims, in my view rightly so. There is absolutely no limit, other than the exchange value of the pound, to the level to which indirect taxes could be raised, because the Bank of England is a printing machine. In no sense, however, could this be called an "economy" because all that would happen, in effect, is a temporary transfer to the Government of spending power which otherwise would belong to consumers. The money gets spent just the same. The remedy is for the Government to cut its own spending, which it steadfastly refuses to do.—Yours faithfully,

OLIVER SMEDLEY,
Hon. Treasurer,
Council for the Reduction of Taxation

London, EC2

BOOKS

The Cold Odd Man

Mr Secretary Peel

By Norman Gash.
Longmans. 707 pages. 70s.

"SUCH a cold, odd man" was Queen Victoria's first impression of the Prince Consort's favourite Prime Minister. When he died in 1850, however, Peel was already a legend, embodying for Cobden "the idea of the age." Historians have agreed with both verdicts. Peel features in all the books as a major architect of mid-Victorian England; but for over a century he has remained without a full-scale biography of any sort. The sheer mass of material is clearly forbidding. Peel's papers, carefully preserved in red morocco, are voluminous and revealing, while the array of secondary sources is enormous. Yet Mr Gladstone, after a long career even more tortuous than his mentor's, left a vaster collection of papers without intimidating the biographers. Something more is needed to explain this remarkable neglect.

Bagehot declared that Peel had "the powers of a first-rate man and the creed of a second-rate man, never in advance of his time"; and Balfour, looking back in old age on his own troubles with the Conservative party, could still say that "I never can hear Peel praised with patience." Proper consideration must come late to a man whose personality repels, whose talents and beliefs can be patronised, and whose actions provide the basis for a protracted controversy. For long many Tories could not forget that Peel had "betrayed" his party and his class. Liberals might praise him for seeing the light, but anyone so slow to realise that he was in "the wrong party" could not be compared to Cobden, Bright or, above all, Gladstone as one of the true prophets.

Though the arguments need restating, it remains possible to regard Peel as a prig, a hypocrite and a timeserver; but his stock is rising. This is partly a matter of fashion, for administrators have recently come up in the estimation of historians. But an improved analysis of early nineteenth-century politics, and a better understanding of economic growth and social adjustment in that unique phenomenon, the industrial revolution in England, have also combined to focus new attention on Peel as the dominant figure of his day. The moment for the big biography has arrived, and it looks as though we are going to get it from Professor Gash.

His first volume takes the story up to 1830. The elder Peel, a cotton spinner of yeoman stock, saw his gifted son as a means of consolidating the family's new standing; and from boyhood Peel was groomed for success in the great world. Irish Secretary at twenty-four and Home Secretary at thirty-three, he had displayed his apparently effortless superiority in high office for fifteen years by 1830, and his father could die contented. But Catholic emancipation, the first real crisis in Peel's career, had given the old man some qualms, and badly damaged the image of his son as the risen hope of the stern, unbending Tories, the blue-eyed boy of the *ancien régime*. Out of power and out of sympathy with the times, Peel's future was far from certain.

Like many parvenus, Peel began by taking as immutable the conventional wisdom of the milieu into which he was projected by his father's wealth and ambition. As an overworked executive, he tended to rely on the short view, seeing life "as it appeared from a desk" cluttered with immediate problems. Yet once the pressure was strong enough, Peel's experience as an administrator and his belief that the politician's first duty was to carry on the king's government made him all the readier to change course for reasons of state. His behaviour over Catholic emancipation thus allowed him to be seen as a traitor to his convictions or a martyr to necessity, according to taste. There had been a minor precedent over the currency in 1819—and there was to be a major sequel over the corn laws.

Though he never had to struggle, Peel was an uneasy man, subject to much inner stress. Professor Gash detects a "discordancy" between his public and private faces. Compelled to create "an artificial self to deal with others," he became increasingly sensitive to criticism, and often yearned for an unthinkable escape to the secure happiness of domestic life. Given Peel's outstanding ability, sense of duty and unfortunate combination of intelligent realism with slowness to learn, there was a danger in times of change that his agony over Catholic emancipation would be repeated, and that in the end he might succumb to a vindictive, merely negative bitterness. After 1846 this is precisely what occurred.

Professor Gash sometmes seems to suggest more prescience in Peel's outlook than his evidence here will justify, and a usually admirable commentary occasionally sees that the anti-establishment dogs do not get the best of it. But this superbly produced book is worth every penny of its high price, and is not a page too long. Well written, scholarly, perceptive and thoroughly documented, this is biography in the grand manner, and its companion volume will be eagerly awaited.

Whose Freedom?

I Speak of Freedom

By Kwame Nkrumah.
Heinemann. 307 pages. 25s.

"TODAY there is a new African in the world and that new African is ready to fight his own battle and show that, after all, the black man is capable of managing his own affairs." The Osagyefo Kwame Nkrumah said this on March 6, 1957, the day Ghana became independent. The statement is included in Dr Nkrumah's new book, and it is what the book is all about. More important, it is what African politics today is all about. The black man will prove to all the world—and to himself—that he is as good as anyone else. This is "the positive assertion of the African personality"—a phrase Dr Nkrumah is almost as fond of as "Africa has a vested interest in peace."

The Osagyefo is, above all things, a personification of this need and the pity is that, in asserting Africa, he also asserts himself. He was proud, he writes, as an African to be the first African Prime Minister; to speak to the world's leaders at the United Nations; to be the first African Privy Councillor. It may be that the two personalities—the individual's and the continent's—are so much part of one another that to honour Dr Nkrumah is to honour all Africans. So there are pictures of the "victorious leader" with Mr Macmillan, with Mr Nehru, and President Nasser, and President Eisenhower, and Mr Khrushchev, and President Tito, and Mr Hammarskjöld. There is also a picture with Patrice Lumumba.

The book is a collection of speeches made over the last dozen years, interspersed with sparse comment and an unsettling amount of self-praise. Dr Nkrumah quotes the editor of his party paper, who wrote about what a good speech Dr Nkrumah made; he rarely leaves a room or hall except to tumultuous and enthusiastic applause. This lack of humility is Dr Nkrumah's greatest misfortune, for his speeches, heavy going though some of them are, embody a consistent ideology for the new Africa. It is an ideology that may not be immediately practicable, but one that cannot be laughed off.

Pan-African unity, as a means to economic and political strength, makes sense; the difficulty is that even its most dedicated proponent—the Osagyefo—would not attend the recent conference of 21 states at Monrovia because he did not convene it and because he did not like what he suspected it was going to decide. The call for the "total liberation" of Africa is unexceptionable—except, perhaps, to other African leaders, who fear that Dr Nkrumah's methods amount to subversion in countries that are already under African government.

In the long run, however, Dr Nkrumah may well be seen as the most powerful of the early continental revolutionaries, as a man whose ideal of unity may eventually turn out to be no more difficult to achieve than, say, getting Britain into the common market. He points out that the idea of independent African states was once thought of as impossible. Accra is still the capital of radical African thought, and it is far too early to say that Nkrumahism is finished.

But the ideology may be in need of a new exponent. The Osagyefo's fight against "imperialism and colonialism" in the French African states (whose leaders he regards as puppets) is basically the same fight as the one being fought by Alhaji Sir Abubakar, Prime Minister of Nigeria. But Sir Abubakar is using different tactics—at Monrovia he aligned himself with the French "puppets" in an effort to give them more self-confidence by giving them more economic and political strength.

Ghana's internal policies revolve around the idea of a total mobilisation of its people towards building up the economy and, above all, the dignity of the black man. This concept appears again and again in Dr Nkrumah's speeches. There is a constant attack on bribery and corruption, a constant call for harder work and more learning, a repeated exhortation to "serve Ghana now." In this, there can be little room for organised opposition.

In a passage from a speech made in 1959, the Osagyefo complains that, while 90 per cent of the students at the University College were being maintained by government scholarships, the college was a "breeding-ground for unpatriotic and anti-government elements." This is the Osagyefo's greatest disservice to his cause. If Africans are to prove their worth by increasingly contributing to the world's fund of knowledge and ideas, then restrictions on the freedom of African academic thought cannot be tolerated.

Victorian Vigour

Wilfred Scawen Blunt

By the Earl of Lytton.
Macdonald. 368 pages. 30s.

LORD LYTTON has written a strange book about his grandfather: vigorous, charming, informative, and yet utterly unsystematic. He skips about, in a desultory and disjointed way, from subject to subject—the constancy of wood fires in Victorian country houses, the nesting habits of Egyptian birds, the value of virginity, the Gorham judgment, the best soil for fruit trees: it is more like conversation than biography. Yet Blunt's rational radicalism and engaging humanity keep showing through. Maddening he may have been, particularly to established authorities; but it is hard not to like the hedonist who could write to a young woman much attracted to him: "My creed about these things is that it is always right to be happy, and that the fact that one is happy proves that one is good."

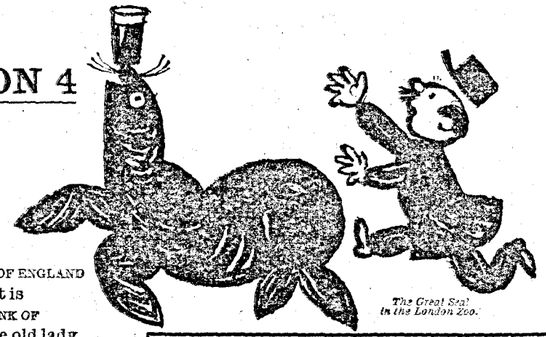
A Greek poet once recommended his readers first to acquire a competence, and then to practise virtue. Blunt had the good fortune to be born to riches, and could spend his life in the virtues of squirearchy and opposition. He did not fail to tell his contemporaries how he abominated their imperial pretensions; treating Asians and Africans as equals, he made many friends among them, and left a great name in Islam. Sometimes his prescience was remarkable. "The best chance of the East is that the nations of Europe destroy each other," he wrote in his diary thirty years before the Great War began the liberation of Asia. Earlier, in 1884, he had written to General Gordon: "consider what your death will mean; the certainty of a cry for vengeance in England, and an excuse with those who ask no better than a war of conquest. I wish I could be sure that all those who are sending you on your mission do not foresee this end." His grandson sympathises with his views, and writes with feeling that

> It is inexcusably unfair that Moslems and Pagans, Hindus and Confucians should have our accusing finger pointed at them out of the darkness we have tolerated at home in the name of Christ.

Much of the book is taken up by various aspects of the prolonged and bitter quarrel between the author's mother and her father; neither party comes out of it wholly with credit, and a good deal of the story makes painful reading. But it is useful to have an inside account of it before the remaining written secrets of Blunt's extraordinary career become available in his most private diaries. These papers, which Lord Lytton has not been able to see, are being kept under lock and key at Cambridge until 1972. This book makes it seem more likely than ever that they will be interesting reading.

Too Little and Too Late

The German Opposition to Hitler



By Hans Rothfels.
Oswald Wolff. 166 pages. 18s.

A SERIES of excited announcements by the *Reichsrundfunk* on the evening of July 20, 1944, informed the outside world that there had been a very nearly successful attempt to assassinate Hitler and overthrow the Nazi government, and that a considerable number of senior army officers were involved in the conspiracy. For some days the listening allies did not know how much to make of it. On August 9th the *New York Times* commented that the plot smacked more of "the atmosphere of a gangster's lurid underworld" than of what "one would normally expect within an officers' corps and a civilised state." The high-ranking officers had tried to carry out their plan "with a bomb, the typical weapon of the underworld." On the same day the *New York Herald Tribune* remarked

> American people as a whole will not feel sorry that the bomb spared Hitler for the liquidation of his generals. Americans hold no brief for aristocrats such as these and least of all for those given to the goosestep, and, when it suits their purpose, to collaboration with low-born, rabble-rousing corporals. Let the Generals kill the Corporal, or vice versa, preferably both.

We know now that these judgments were unjust. Herr Rothfels argues convincingly that the abortive deed of July 20th was not

LESSON 4

The Great Seal in the London Zoo.

THE CAPITAL OF ENGLAND is in LONDON. It is kept in the BANK OF ENGLAND by the old lady of Threadneedle Street.

LONDON HAS WHITEHALL where the servants are very civil, and THE CITY where the companies are very livery. PICCADILLY is a circus. WESTMINSTER is even more of one. LONDON BRIDGE is always falling down. GREENWICH is where you can enjoy Guinness in the mean time.

In a Convent Garden.

LONDON HAS PLENTY OF hubbubs. There is, for example, a Rotten Row in Hyde Park.

London also has subbubs. These are reached by the INNER TUBE which goes to Tooting, Whopping, Epping, Acting and Eeling. London is famous for jams.

CAMBRIDGE UNIVERSITY PRESS

the desperate throw of a guilty military clique trying to insure itself against now certain defeat. The staff officers were in the limelight because they alone were in a position to act. Behind them was a numerous and various group of conscientious citizens, who had known each other for years and repudiated Hitlerism long before its end could be expected. Herr Rothfels discusses the general sources and trends of the opposition to Hitler more than the fate of the individuals concerned, whose undeniable nobility lives in their statements before the People's Court, and in their letters from prison.

It is easy to ask questions comfortably from an armchair seventeen years after the event. But perplexing flaws in the conspiracy urge one to do so. How, for instance, could such a momentous issue have ever been left to the gamble of a small bomb? And why did the conspirators expect foreign help before they had proved their seriousness, and feel sorry for themselves, apparently, when they did not receive it? Herr Rothfels tells of a request made through contacts in Sweden in the summer of 1943 that the RAF should spare Berlin, Leipzig and Stuttgart until the middle of October since "the oppositional movement has its centres there and the interruption of communications would make the putsch" (then planned for September 1943) "more difficult." All this was passed to the British, Herr Rothfels observes, "but provoked no response."

The opposition to Hitler had left things until too late. Their tragedy was that not enough Germans of public standing in 1933 and 1934, who knew and detested what Hitler meant, had had the courage of their convictions. Herr Rothfels's admirable study should be read by everybody interested in the individual's response to the challenge of totalitarianism.

Social View of Religion

The Birth of the Gods

By Guy E. Swanson.
Cresset Press. 271 pages. 30*s.*

Sects and Society

By Bryan R. Wilson.
Heinemann. 397 pages. 35*s.*

Both these books are handicapped by the tendency of contemporary sociologists to desert ordinary language and to create one of their own. This is unfortunate, for each author has something of interest to say. Both of them follow in the footsteps of Durkheim in treating religion as an essentially social phenomenon, and so they look to the social needs that a creed satisfies in order to explain and analyse its character. Professor Swanson has subtitled his book "The origin of primitive beliefs," but in fact he does little to elucidate this mysterious question. What he is more concerned with is to correlate particular religious beliefs with particular types of primitive societies that practise them. On this theme he has some fairly thorough statistical tables, based on a sample of fifty primitive groups.

The difficulty here, as Professor Swanson is aware, is that he has to rely on material collected by others, and different schools of anthropology have varied notoriously in their interpretation of this material. Still, in testing his main thesis—which is that the nature of group life will determine the types of beliefs held—he comes up with some interesting correlations. For instance, he found that monotheism occurs most often in hierarchically organised groups where the authority of rulers and elders is strong. Belief in witchcraft, on the other hand, is seen as a characteristic of societies lacking a clear-cut system of political control and moral law. As he follows up such comparisons, Professor Swanson probably provides some valuable pointers to the better understanding of primitive societies; he throws less light on the actual origin of religious belief, for in a sense he starts half way along his own argument by already assuming that some kind of belief in the supernatural is universal even among the most primitive groups.

Mr Wilson leaves out the vexed question of religious origins. He has concerned himself with the way in which three Christian sects have developed in this country and how the particular needs they fulfil are related to the structure of present-day British society. The reader who can delve below the surface of Mr Wilson's technical language will find that he has made a detailed analysis of the history, the teaching, the organisation and social composition of the three religious movements. His most interesting contribution has been to highlight the relation between the doctrinal teaching of each sect, and the social status and aspirations of its adherents. Thus he argues that Christian Scientists are mainly well-to-do and the creed they follow is concerned essentially with life in this world, in this way according with Max Weber's theory that what the prosperous demand of religion is that it should justify their prosperity. On the other hand, the Elim Foursquare movement has its eyes firmly fixed on the next world where compensation is offered for the misery of this one, and its members are drawn almost entirely from the poor and underprivileged, the majority being women. The third sect, Christadelphianism, is, according to Mr Wilson, essentially a revolutionary creed that rejects present-day society and looks to God to provide a new and better social order. It is also a family-centred faith, with a strong patriarchal Old Testament streak, and while its early recruits came mainly from the poor it has today a large and increasing following among the white-collar middle class.

All this is no doubt true; but what both authors fail in some way to reveal is the precise meaning of religious experience to the individual man or woman concerned. It certainly adds to our knowledge that sociologists as well as theologians should study religion, but the danger is that among the

statistics the nature of this individual experience is left too far behind. The contribution of these two books has been to illuminate, not so much the ultimate nature of religious belief, as some of the concrete problems that currently face the churches as they try to adjust themselves to the changed tempo of modern life. In fact what is to be the social role of organised religion *in a scientific age?* This is a very big question indeed, and one on which sociological investigation ought to be able to throw a good deal of light.

France Dominant

The New Cambridge Modern History, Vol. V: *The Ascendancy of France, 1648-88*

Edited by F. L. Carsten.
Cambridge University Press. 656 pages. 40*s.*

This volume of the "New Cambridge Modern History" has been ambitiously planned: a third of the contributors come from universities abroad, so that there can be no charge of isolationism. Unity of theme is provided by the cultural and political dominance of France and by the scientific and intellectual revolutions that in each state "encountered special conditions which clothed them in unique local wrappings." The volume is also firmly planned. The first eight chapters consider the general economic problems and policies, intellectual developments, cultural and social history. Nine chapters, of which three are devoted to France, deal with western Europe and colonial relations. The last eight chapters are concerned with central, eastern and northern Europe. There are some admirable studies. Professor Betts makes a compact survey of the Hapsburg lands; Professor Skalweit of Saarbrücken has a penetrating study of political thought; Professor Wittkower writes with distinction on art and architecture; and Sir George Clark contributes a judicious and enlightening chapter on the social foundations of states.

But there are disappointments in a volume entitled "the ascendancy of France." A professor of French literature has written on the internal history of the reign of Louis XIV, while an historian, Mr Ogg, has been assigned to French culture. Professor Zeller of the Sorbonne, whose own original work has been characterised by liveliness and independence, has lowered his sights for an English audience. He is content to repeat the old myth that Louis XIV's foreign policy was primarily a search for glory, a theme loudly played in the editor's introductory chapter also. The absence of an assessment of Lionne, the master mind of French diplomacy, and of Vauban, with his great influence on strategy, devitalises M. Zeller's chapter. It is difficult to reconcile Sir George Glark's view that the peasant revolts "never overtaxed the resources of the authorities" with the fact that the breakthrough on France's eastern front by imperialist forces in 1675 coincided with the withdrawal of French troops to put down the rising in Brittany. Mr Coleman produces the traditional picture of Colbert as the uncritical mercantilist trapped by the theory of a fixed volume of trade, and fails to relate Colbert's programme firmly enough to its setting of depression economics. Professor Lough does not stress the novelty of the "new deal" inaugurated by Louis XIV in 1661, and it is unfortunate that the plan of the volume means that there is no rounded appraisal of Colbert's programme as a whole.

For an editor of a co-operative history there is the inevitable problem of discrepancies. Both Mr Carsten himself and Mr Coleman consider that Bohemia did not suffer much economic damage from the Thirty Years' War, while Professor Betts takes the opposite view. From Professor Betts's account of the famous relief of Vienna in 1683 the reader would suppose that Charles of Lorraine was far away and that the whole credit must go to the Poles. But if the reader pursues the cross-reference to the account given by Professor Kurat of Ankara, he gathers that Sobieski of Poland was merely a figure-head and that the credit must go to the generalship of Charles of Lorraine and the fighting qualities of the German troops. Again, while the editor argues for the ascendancy of France throughout this period Professor Betts claims that it was the Emperor Leopold, and not Louis XIV, who stood "at the pinnacle of glory" in 1683 and the following years.

No editor should attempt to impose an orthodoxy on his contributors, and perhaps he could best serve his readers by noting these discrepancies and disagreements. But there is a strong case for persuading historians to use the epithet "baroque" with restraint, for it is fast becoming as devoid of meaning as "feudal." Mr Kossman in his chapter on the Dutch Republic writes of "baroque absolutism," "baroque *raison d'état*," and even describes the war of 1672 as "an adventure in baroque power-politics."

Sunspots

Retire Into the Sun

By Cecil Chisholm.
Phoenix House. 199 pages. 18*s.*

An American observer suggested recently that the clause in the Rome treaty which worries the British government most concerns neither agriculture nor the Commonwealth but mobility of labour. Who, he asked, will want to work in Preston or Middlesbrough if he can obtain equivalent employment, and enjoy far pleasanter living conditions, in Pau or Milan? Here, now, is Mr Chisholm to tempt Britain's middle classes with the question: why retire to Bognor or Bridlington when Menton and Malaga are only a short flight away? Unless the British government is resigned to an outflow of skill and capital as Europe's frontiers fall, it ought at least to launch a major programme of weather-control research—an appropriate British counterploy to the Jones's man-on-the-moon projects.

Sizeable communities of British *retraités* already exist along the French and Spanish Mediterranean coasts, and in Portugal and the Canary islands, and are growing fast. Mr Chisholm, a sprightly Scotsman of 74, has recently toured what he considers the nine most promising "paradises" (his word), interviewing expatriates and collecting cost-of-living data and other useful information. He summarises the results on a very British scorecard: a possible 20 points are awarded for climate, 15 for a low cost of living, 10 each for social life, low taxation and a "clean and healthy" environment, 5 for "beauty and charm" and 3 for cultural amenities. Tenerife scores 90, Estoril 86, the coast of Andalusia 79, Languedoc 67. (East Sussex and the Isle of Wight, given for comparison, each earn 48.) The chatty but businesslike chapters in which he describes each area in turn will be of assistance both to readers contemplating retirement overseas and to anyone planning a holiday in Andalusia, Portugal or the Canary Islands.

Inevitably, a few errors have crept in. The Spanish government is praised for its economic achievements at a time when it was dependent on American and OEEC aid and advice to stave off bankruptcy; the mortgage rate in France is nearer six than one per cent; a heavy tax is payable on cars taken into Spain; the Canal du Midi was built to link the Mediterranean with the Atlantic, not the North Sea. But the basic information provided is reliable. One is inclined to disagree with Mr Chisholm only over his relative neglect of France, where property can be much cheaper—and social life far less stodgy—than he seems to think, and where both rural and urban scenery is more congenial to British eyes than some of the harsh "paradises" he recommends. In future editions his scorecard might usefully be given an extra column headed: "Possibility of violent revolution, followed by swingeing luxury taxes, property taxes and inflation." One ought, ideally, to be a prophet—or to have good contacts with the political underground—before sinking one's life-savings in Andalusia or Estoril.

OTHER BOOKS

Blue Guide to Holland. Edited by L. Russell Muirhead. 2nd edition. *Benn.* 283 pages and 28 maps. 32*s.* 6*d.*

Britannica Book of the Year 1961. *Encyclopaedia Britannica.* 564 pages. From 5 gns., according to binding.

Economics. By Paul A. Samuelson— 5th edition. *McGraw-Hill.* 863 pages. 58*s.*

Veteran and Vintage Motor Cycles. By James Sheldon. *Batsford.* 208 pages. 30*s.*

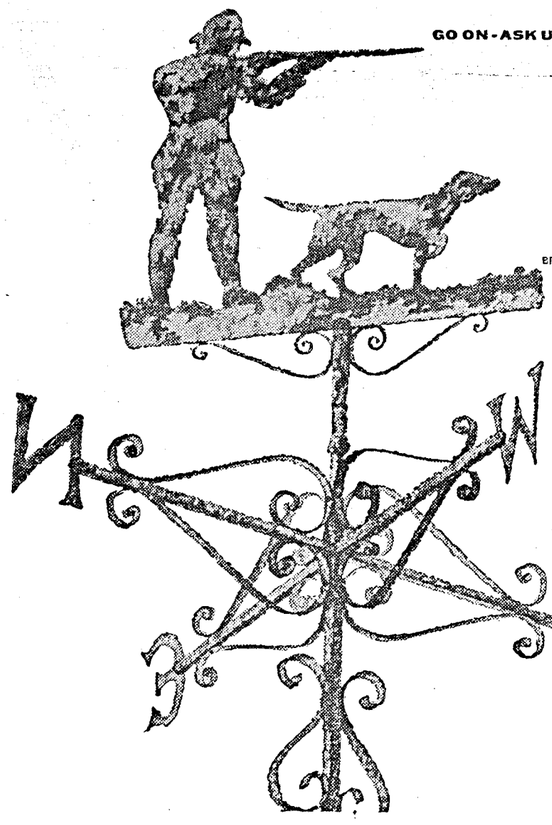
BRITISH INDUSTRIAL PLASTICS LIMITED



Would it have been better in plastics?

Squeaky old thing. Gets stuck at SSW. Now with the latest plastics it wouldn't have gone rusty, would have shifted with the breeze, and you couldn't have told the difference. But who cares about old weathervanes?

What you *do* care about is your product. No manufacturer can sit back and say: "Couldn't be bettered, dear boy." And one way to better your product may be to turn to plastics.

At BIP we are all set to tell you about plastics. We've been in the industry from the beginning, so we have plenty of ideas for using plastics to make new products and improve existing ones. Plastics on their own, or moulded with metal inserts; and plastic resins giving strength to wood, wet-strength to paper, water-proofing textiles—even insect-proofing snake-pits! Almost anything can be improved with plastics.

Yours is the first step—ask us what BIP can do for *your* product. British Industrial Plastics offers a confidential Advisory Service which will tackle any new idea. And because we know what plastics can be expected to do (we process the raw material, we build press and tool plant and make our own range of moulded products) we also give a technical Product Design Service, working on our own (without fee) or in conjunction with your designers.

GO ON-ASK US! **WOULD IT BE BETTER WITH PLASTICS?**

The Slipstream Strike

FROM OUR SPECIAL CORRESPONDENT

TRUNDLING through the suburbs to Feltham Green in their carefully polished, ageing cars, delicately skirting the flower-beds to get a fair view of the speakers, a thousand-odd unofficial strikers from BOAC's maintenance shops at London Airport formed a far from wild assembly at their mass meeting on Tuesday morning. Patiently they listened while two union officials urged them to return to work with none of their demands satisfied ("Not because we like it but because we are over a barrel"): gleefully they culled misrepresentations about themselves from the rich crop in the morning's papers. The officials dutifully went through the details of the talks which had lasted from 3 p.m. the previous day until 3 a.m. that morning, while the audience weighed up nice points of procedure and jovially interjected when, as it frequently did, the account demonstrated a further stage in the officials' climb-down. Then one member of the local shop stewards' committee urged the men to stay out, and all but one hundred hands went up to agree with him: without jubilation, the fight was to go on. "We're not out for money, you know," urged an upholsterer, "it's the principle of the thing."

The thing in question, and the cause of all the trouble, was a new system of supervision which the corporation wishes to introduce in the hangars that prepare the long-haul planes for their next flight. The corporation has itself acknowledged that the ratio of supervisors to operatives in these shops has been far too high, and a plan for reorganisation has slowly been brought into force. The present aim is to introduce a new grade of supervisor, called a "section leader," to combine the existing grades of charge-hand and inspector. The union which represents the supervisory grades—the Association of Supervisory Staffs, Executives and Technicians—has accepted the creation of the new grade, at a rate of pay £2 4s. a week higher than before for its members who will take the jobs.

The corporation argues that agreement on the new grade was reached in the appropriate negotiating panel, the trade union side of which is largely composed of representatives of ASSET: the men-to-be-supervised claim that the corporation should also have consulted the panel on which the dozen or so unions of manual workers are represented. They believe that the new system will lead to unnecessary supervision ("As if we didn't know our jobs by now"): and they believe that it will block their chances of promotion. The lurking jealousy of the manual unions against ASSET, with its higher-paid membership, was fanned by the knowledge that (say) an electrician whom it promoted to a supervisory job may, very reasonably, prefer to switch from the ETU to membership of ASSET. But the strike has not been fomented by a narrow group, or by members of one union: in startling contrast to many unofficial strikes, most of those involved actually seem to know why they have stopped work—and they are highly skilled men, earning around £18 a week (with overtime), whose spending pattern is likely to be seriously disrupted by a fortnight's loss of earnings.

They are, however, craftsmen with a very clear idea of the dignity and responsibility of their job—and, traditionally, of solid

left-wing views. A big laugh was raised by the leading shop steward, who claimed: "Even Big Jim Matthews is on our side this time"—Mr Matthews being the right-wing leader of the Municipal and General Workers. The same speaker, at a meeting on Monday, was applauded for saying that it was a "criminal shame that the nationalised airlines should have to be brought to a halt" before discussions could begin on these proposals. He was claiming it as a victory that the strikers had caused the National Joint Council for the aviation industry—the top-level negotiating body for unions and management—to discuss the new supervisory proposals for the first time. Nationalisation, to these men, ought to have meant that they were getting an active say in how their airline should be run: but they unanimously claim that they never see any member of the senior management and that decisions are taken by small committees and panels (such as the one which agreed on this new scheme) on which only a few of the interested unions negotiate with corporation officials who have no real power to take decisions.

AGAINST this background press reports of sabre-rattling by the most senior management can only increase the men's conviction that a sinister plot is afoot. Perhaps, the strike leaders will admit, the supervisory system does need revising: but, if so, why cannot the management consult them about it? The management, tired of continuous obstructionism from the airport shop stewards' movement (which led to an inquiry, and to the replacement of several stewards, in 1958), has wearied of trying to put into effect the continuous co-operation with the unions imposed on them by the act *nationalising* the airlines.

But if the theory that a few trouble-makers are at work is correct, the best move would be an appeal directly to the workpeople—1,000 men is not an unmanageable number. A series of circular letters from the chief engineer to the workpeople evidently failed to convince them of the corporation's argument that their interests were unaffected by the agreement on supervisors—which was presented to them as a fait accompli. Whatever the immediate success of the settlement reached on Thursday afternoon, when the strikers returned to work on BOAC's terms (backed by a firm order from Mr Carron, leader of the Amalgamated Engineering Union) this strike should lead to more sharp questions about BOAC's ideas on personnel management. If its scheme is really so innocuous and so properly negotiated as it claims, might not a clear explanation have avoided the loss of a quarter of a million pounds a day?

Wales on the Lease

FROM OUR SPECIAL CORRESPONDENT

LEASEHOLD enfranchisement, once an essential parcel of the Gladstonian baggage, is now a rallying cry only in South Wales. Even so, whenever Welshmen start talking about their landlords the blast still approaches incandescence. It is one of the causes which always keeps the local Labour party in good heart, but when Tory associations in the principality call for reform, when Tory MPs from South Wales (few as they are) vote with Mr George Thomas in the Commons, and when the *Western Mail* fulminates regularly against "robber barons" it means that something is up.
