This, then, is the issue that unites Welshmen even when Sunday drinking divides them. They are mortified (although not wholly surprised) that so far they have not noticeably persuaded Mr Henry Brooke, wearing all three of his ministerial hats, of the justice of their complaint. Mr Brooke did allow, however, in a Welsh debate last week, that he would look into any difficulties that were made known to him, and solicitors in the principality have been sent an official circular to state their views on the current market in leasehold renewal and purchase of freeholds. The Ministry of Housing, Local Government and Welsh Affairs could be submerged quite soon.

Ground leases of 99 years or less, giving the right to the landlord to take possession of any building erected on the site when the lease itself falls in, are not exclusive to South Wales, although elsewhere freeholds and 999-year leases are more common. Short leases also exist chiefly in London (where the tenantry takes such practices more in its stride), on Merseyside and in some seaside towns like Bournemouth, Eastbourne and Southport. They are the result of a landlord, or group of landlords working in concert, choosing to take a small annual ground rent, plus the right of reversion, instead of selling the freehold outright. How seriously the landlords of a century ago counted on eventually securing the homes other people had built on their ground is a moot point. (They had to give up their claims on chapels under the Places of Worship (Enfranchisement) Act of 1920.) The initial leaseholds did, however, assist housing development at the time when, in the South Wales valleys and towns like Cardiff (with three original landowning families) and Swansea, a first rash of working-class houses was springing up.

Now the early leases are running out and in the next twenty years many more will do so. The present outcry has come because Welsh householders, either in order to be provident or because they want to sell the actual houses that they own and move away, have tried to buy their ground freeholds and found that prices have suddenly jumped in value.

There are inevitably some householders in South Wales who have not previously grasped what the leasehold system implies: those that have built or bought the bricks and mortar of their own homes are understandably distressed to find that they do not own in perpetuity what they thought they owned. (It is estimated that something of the order of one-third of leasehold property is occupied by the ground lessee: in the remainder the lessee is renting to the sitting tenant.) It is disingenuous, however, to make too much of this. Over half a century of political agitation for leasehold enfranchisement has, in effect, persuaded every householder with half an ear cocked that 20 years' purchase of the ground rent is a fair and normal price for the freehold. So it may have been (and some landlords were bought out for this) in the past, but rising property values and the closeness of reversion have substantially inflated the market. The popular feeling is that, whatever the majority finding of the Jenkins committee ten years ago against drastic reform, the situation in South Wales is now radically changed.

THE focus of discontent has threatened to centre on Western Ground Rents, Ltd., which controls a number of Cardiff leases and which, its critics claim, has been both reluctant to sell freeholds and demanding more than the occupiers want to fork out for a renewal of leases. The company (largely through one of its directors, Mr John Foster, who sits in the Commons for Northwich) has answered that it is prepared to sell freeholds, but that it charges the market price, which is not unfair when the usual object of the householder applying for the freehold is to sell at the market price himself. The company also says that, in fact, only two of its leases have fallen in during the past three years and only 7 more will do so in the next ten years.

The burden of complaint, both in th Commons and on the spot, is that whil there may be exemplary landlords there ar also bad ones. It is not too difficult, eithe to find the impoverished widow who ha been lucky enough to pay a few shillings year and now, on market values, may hav to find £20 or more. And there are inc dental problems, too, which account fc middle-class distress. Mortgages, fc example, are hard to come by if the leas has less than 30 or 35 years to run. Som landlords are also insisting that the house holder shall only use the insurance firr that they select. (The Church of Wales ha been criticised for insisting on giving bus ness to an ecclesiastical insurance com pany.) All this adds to the hereditary feel ing that the absentee ground landlords hav never contributed a penny to development that the leases exist for speculation an profit, and that the original landlords ha merely appropriated common land in th beginning.

There have been signs that some of th leading opponents of the system ar coming round to the view that, if and whei reform does arrive, the landlord who ma be compelled to sell the freehold at th occupier's demand will have to get com pensation at more than the old 20 years purchase. This is not quite what a numbe of their supporters have in mind. So far however, Mr Brooke seems to believe tha the protection available to the occupie under the 1954 Landlord and Tenant Ac is sufficient. The act gives the householde continued occupancy in the event of a dispute over renewing the lease, but at ful economic rent—which is also unpopular There may be a case for separate treatment in South Wales if general reform is held tc be out of the question. Leasehold arouses little dissatisfaction where the tenant has a choice of the property he can occupy. In many of the South Wales valleys and ever in parts of the larger towns freeholds or indefinite leases are still very few and far between. Unless the choice is loosened up, Mr Brooke may find himself with a serious revolt on his hands.

Mr Powell's Headache

FROM A CORRESPONDENT IN BIRMINGHAM

THE Minister of Health, Mr Enoch Powell, again refused in the Commons on Monday to set up an inquiry into the state of affairs revealed by the report on medical services for old people in the Birmingham hospital region. But if the public surprise and anxiety in the Midlands are any guide the Minister has not heard the last of the affair. Rarely has an official document discussed so openly and in such documentary detail the shortcomings of any part of the hospital service.

The author of the report, Dr J. H. Sheldon, is a member of the hospital board and has worked for many years in Wolverhampton, Mr Powell's own town. Dr Sheldon assumed the report was to be confidential and consequently "there are many places where the phraseology has not been

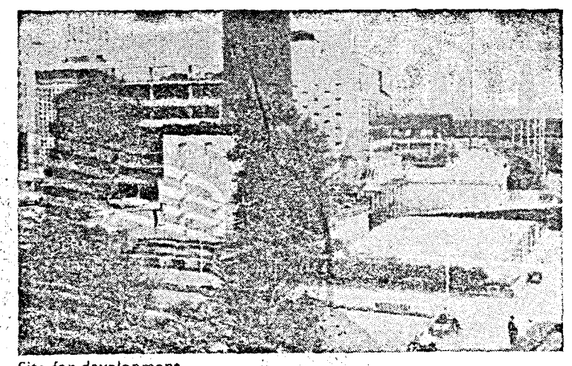
emasculated to such a level of neutrality as might be thought more apt for general publication."

It fairly bristles with comments such as: "After adequate pictorial records have been taken (for the sake of the social history of the future) the only thing to be done with East Hamlet Hospital, Ludlow, is to blow it up and rebuild," or "These buildings [Burton Road Hospital, Dudley] were inherited by the regional hospital board as slum property and, as with similar structures in other groups, their only value for the future would lie in preservation as a museum of Victorian social history."

Dr Sheldon minces no words in talking of primitive facilities, typical Victorian workhouses, appalling fire risks, overcrowding, insanitary barrack-like buildings and degrading conditions for patients and staff. His findings have been described by the vice-chairman of the board, Mr David Rhydderch, as "the most damning yet publicised by a regional hospital board. Every word is true, and we have known it for a long time. We accept the report as a challenge, and I can promise the public that if we get the money we shall tackle and resolve the problem."

There, indeed, lies the heart of the difficulty. Since the report appeared Mr Powell has been under pressure from Midland and other MPs to act swiftly, but the official attitude is that the report was part of the board's 10-year development programme and that reports from all the 14 regional boards must be considered before priorities can be decided. This is an answer which has scarcely satisfied some of the questioners, who, as Mr Victor Yates, the Labour member for Ladywood, said on Monday, are concerned about the "great anxiety" the report has engendered.

DR SHELDON comments, in particular, that: "The dominant feature of the geriatric services is that their problems are not static but actively increasing." Although the regional figure of 1.34 geriatric beds per thousand of population is reasonable compared with the generally accepted yardstick of 1.2, there are serious deficiencies. In the Black Country the figure is only .70; in the West Bromwich area it is .56—a level at which "it becomes virtually impossible for the hospitals to provide a service for the older ages except at the expense of the younger, or vice versa." In any case, Dr Sheldon suggests, a figure of 3 geriatric beds per thousand would be a more reasonable estimate at the present time.



At least six hospitals in the region have conditions so deplorable that he recommends replacement. "Many of our present hospital buildings were never designed to be anything more than human warehouses. An immense effort has been made by many hospital management committees to upgrade these institutions and make them more suitable for modern geriatric work. Nevertheless it would seem better to plan in future for replacement rather than rejuvenation."

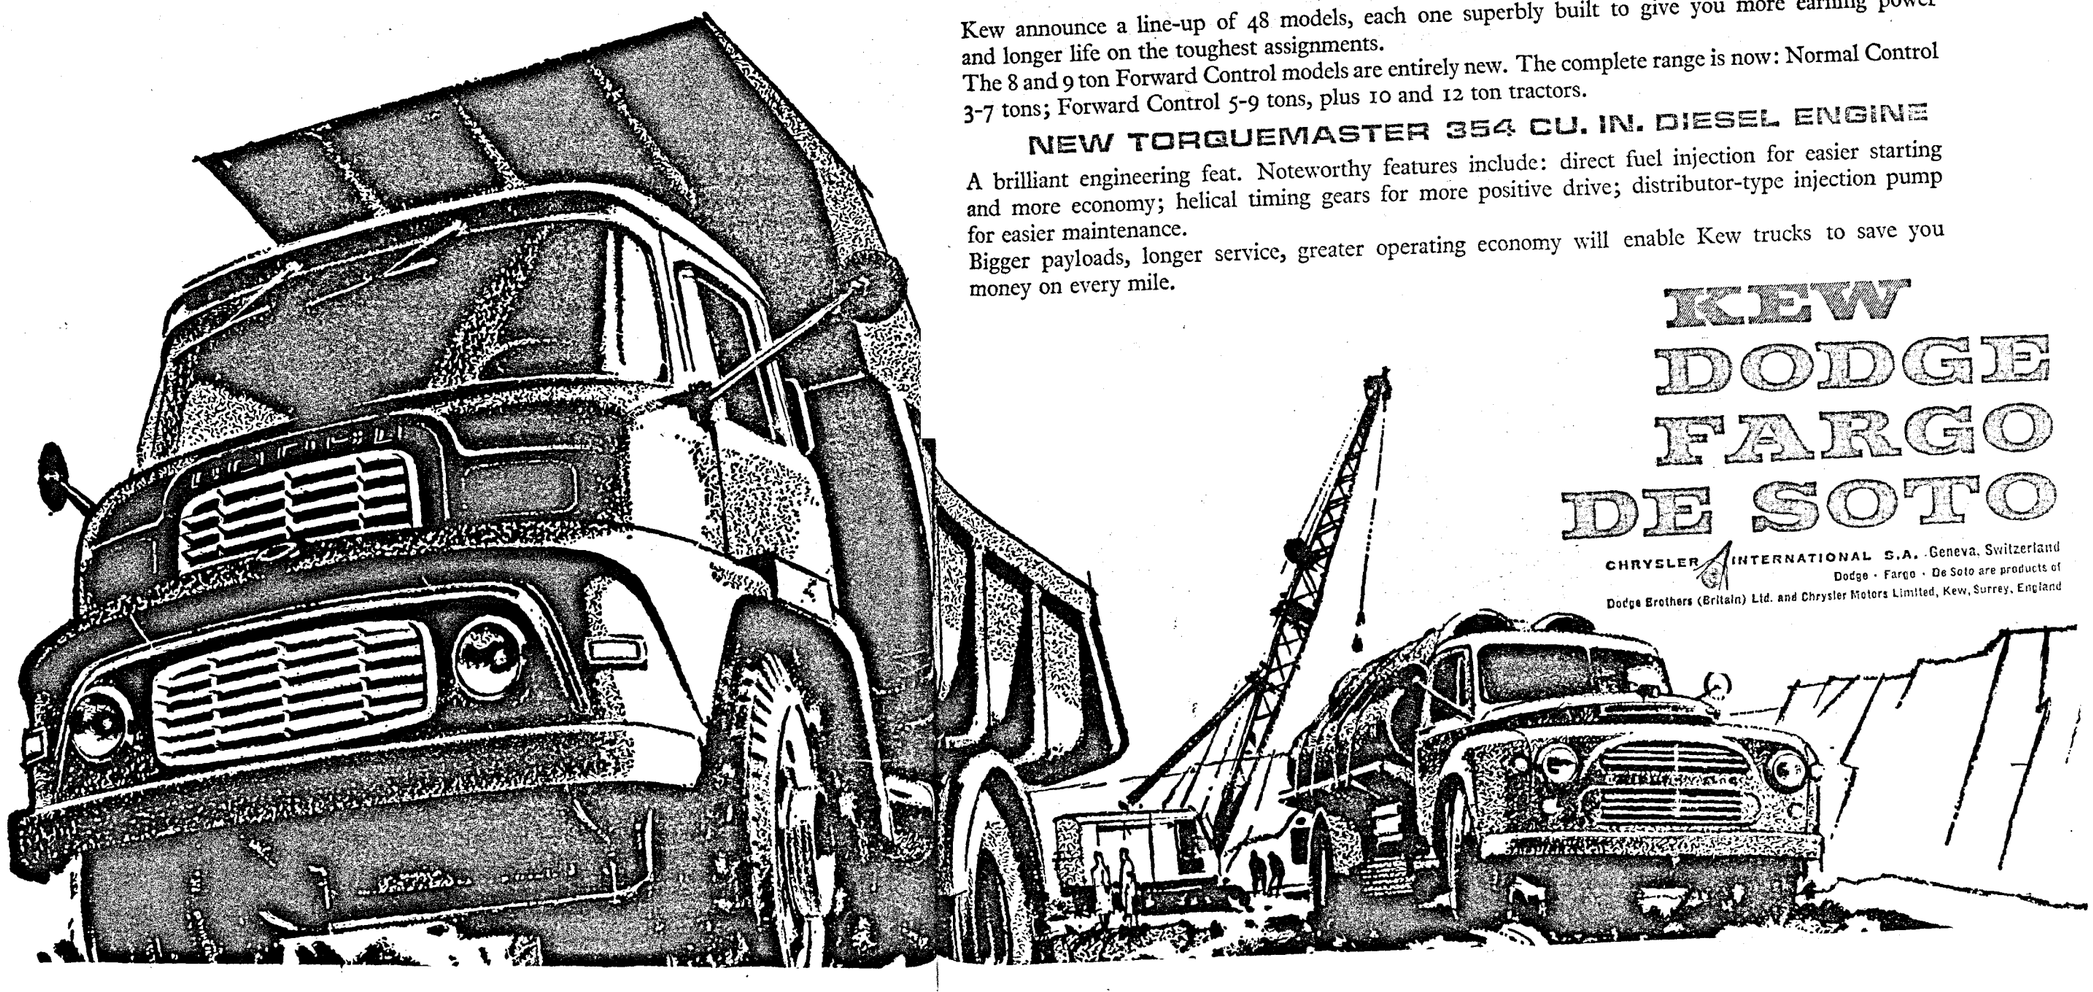
But there are brighter spots. "It would be wrong to leave the matter of buildings without paying a tribute to the devoted work of the nursing staff, who so regularly make the patients happy and contented while themselves working under conditions that are often difficult and occasionally even disgusting." Further, under the chairmanship of Mr Rhydderch, a design team has prepared plans for a Midland geriatric unit designed to be put up quickly and economically at a cost of between £45,000 and £50,000. The board is asking for more than 80 of these units to be included in its 10-year programme.

The units can be used with existing hospitals, thus allowing the patients to stay within their own area. This is regarded as a cardinal principle: "The community should endeavour to look after their own aged sick." The units incorporate space for exercise and occupational therapy, a general purpose room, four single rooms for the noisy patient or the seriously ill and adequate toilet and bathing facilities. Each provides beds for 32 patients and room for day patients: "Patients are happier if they attend a unit where they are known to the staff . . . patients can become absorbed into a small community where they can fit in and even help in the care of their less fortunate colleagues."

The report fills 227 pages, and took almost 18 months to compile. It reaffirms, in local terms and with great detail, what has been accepted for some time, that the growing pressure on the hospital services in support of the elderly is "a major challenge of the immediate future."

Thespian Chancellor

Site for development



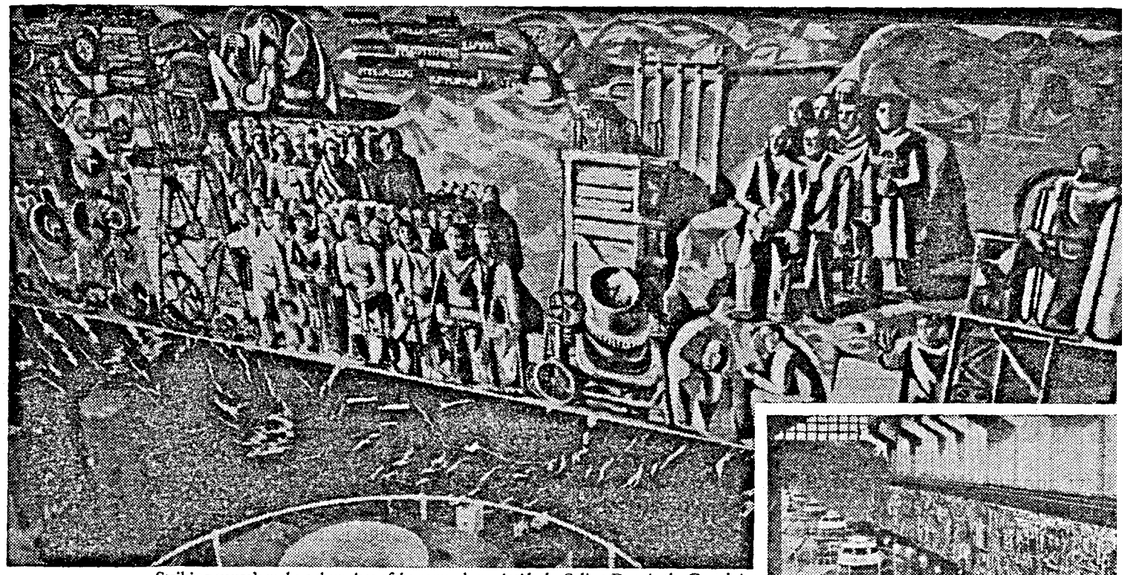
MR SELWYN LLOYD'S one-night stand in the role of patron of the arts, when he announced last week that the Government is to make available the £1 million allotted to the National Theatre in 1949, was a boon to cartoonists, who promptly portrayed various ministers performing in funny economy hats. This moment of impending stringency does, indeed, seem a funny time to make such an announcement: but, as far as it goes, the Chancellor's statement seems to provide a satisfactory way in which the Government can fulfil its obligation and match London County Council's bold offer to put up the other £1,300,000 which (according to present estimates) will be needed to build the theatre. The Government is also to subsidise the new theatre to the tune of £400,000 a year, to cover drama, opera and ballet performances in the new building.

And there, for some critics, is the rub. Clearly the Chancellor intends opera and ballet to be worked into the scheme. But how, precisely, is it to be done? The Joint Council for the National Theatre includes representatives of all the various quasi-national stages in the country—the Old Vic, the Royal Shakespeare Theatre at Stratford, and Sadler's Wells. The new theatre, for which the joint council now has to work yet another set of plans, would necessarily have to include two auditoria—and there could still be a need for the Old Vic, just down-river, to provide a second straight theatre auditorium. The LCC, however, seems inclined to leave the present Old Vic building sternly alone. There is a good deal of negotiation and planning to be completed before anyone can pronounce on how the project is likely to shape. But the drawing together of the best existing institutions (with, most desirably, a restaurant serving better food than that at the Royal Festival Hall) might go some way to making a real entertainment centre on the South Bank site. This would make the best use of the Government subsidy (as well as any further grants from the LCC or private bodies). The necessary proviso is, however, that the theatrical performances are put on by a director competent enough—and subjected to criticism tough enough—to ensure that the national theatre does not become yet another monument to the British lack of official taste.

new FROM kew

NEW MODELEW ENGINES . . NEW STYLING

NEW KEW TRUCI ARE BEST EVER



Kew announce a line-up of 48 models, each one superbly built to give you more earning power and longer life on the toughest assignments.
The 8 and 9 ton Forward Control models are entirely new. The complete range is now: Normal Control 3-7 tons; Forward Control 5-9 tons, plus 10 and 12 ton tractors.

NEW TORQUEMASTER 354 CU. IN. DIESEL ENGINE

A brilliant engineering feat. Noteworthy features include: direct fuel injection for easier starting and more economy; helical timing gears for more positive drive; distributor-type injection pump for easier maintenance.
Bigger payloads, longer service, greater operating economy will enable Kew trucks to save you money on every mile.

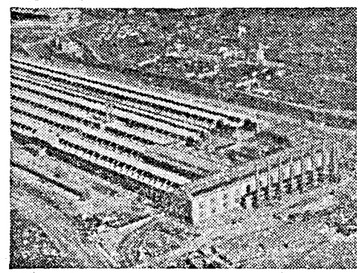
Striking murals *make a showpiece of the power-house inside the Saline Dam in the Cantabrian mountains. The power-station was equipped by English Electric under a comprehensive contract.*

The turbine hall of Saline power-station contains fou English Electric 50,000-h.p. turbine generating set. Transformers, switchgear and control gear were als supplied by English Electric.

NEW FOUNDATIONS IN SPAIN

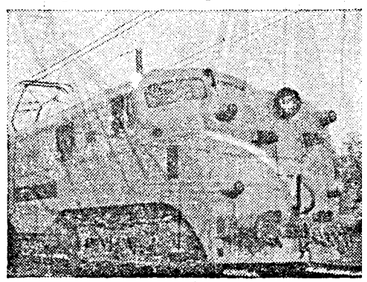
How she will meet a trebled demand for power

SPAIN has won great credit for her achievements in industrial expansion during the last fifteen years: in particular, steel, cement and engineering have pushed ahead rapidly—three basic industries which make a solid foundation for a strong economy.



It is in the development and use of her electric power resources that Spain can point to her most telling successes. The plentiful supply of power is fundamental to all industrial growth, and Spain plans to treble her 1950 consumption of electricity by 1963.

English Electric in Spain



Britain has had a considerable share in this development, notably as Spain's principal supplier of hydro-electric plant, and The English Electric Company is playing a leading part in many enterprises. Dams at Salime and Silvon in Asturias to feed hydro-electric power to the industries of the north, power-stations to supply Madrid—for these and other projects English Electric has supplied generating plant, switchgear and motors, while work is now in progress for new stations on the Tagus at Torrejon and Valdecañas, which will together feed 400,000 kilowatts into the Spanish power network.

Another project, now completed, is the great new steelworks at Avilés. For this, English Electric supplied a large variety of electrical equipment under a comprehensive contract. And in the modernization of the railways, English Electric has built 75 powerful new electric locomotives to haul freight in the mountainous areas of the north.

The relationship is mutually fruitful. Spain knows she can depend on the store of technical knowledge, skill and research which lie behind every contract with English Electric, while English Electric gains in Spain further valuable experience, which it can use in other countries and at home.

The steel mills of Ensidesa at Avilés. English Electri supplied under comprehensive contract electrical equip ment for the three rolling mills, including the firs blooming mill twin-drive in Spain.

One of the 75 English Electric 3,000-h.p. Co-Co electric locomotives supplied to the Spanish National Railways (RENFE).

THE BUSINESS WORLD

Big Two in Motors?

IT is high time that familiar expression, the "Big Five," as applied to the British motor industry, was publicly interred. As at an international conference table, it is more realistic nowadays to talk of the "Big Two." By the spring of 1960, British Motor Corporation and Ford Motor Company between them accounted for about 70 per cent of all cars sold in this country (with roughly four BMC cars selling for every three Fords) and more than 75 per cent of British car exports. The three smaller members of the big league, Rootes, Vauxhall, and Standard-Triumph International—in that order—share another 20 per cent of the home market, leaving the remainder to imported makes and the British sports and specialised cars, such as Jaguar and Rover. Rootes has roughly maintained its share in the last year, if not in the last two, but S-TI and Vauxhall have lost heavily.

On the assumption that about 800,000 new cars will be sold in Britain this year, which is reasonable unless Mr Lloyd tips the industry back into recession, BMC is likely to market about 320,000, Ford about 240,000, and the smaller three about 160,000 between them. In the boom conditions of 1959 and early 1960, the three smaller companies were in a much happier position; they had increased their share of the home market to more than a quarter as sales rose after the Suez recession, and had been able to attain production runs for certain models comparable with those of BMC and Ford: output of the Minx, for example, was second in numbers only to that of the Anglia. Now their chances in the low-priced car market have become, even for Rootes, problematical.

The competitive position of these "Next Three" appears even less comfortable in view of the rate at which their present manufacturing capacity is being worked. In May this year, their output averaged only about 50 per cent of capacity, while both Ford and BMC were running as close to their capacity as labour troubles among BMC's suppliers and at Ford's Dagenham plant allowed. The difference in the profitability of operations between the "Big Two" and the "Next Three" has probably been even greater than the difference in their actual production: only Vauxhall among the smaller three has a very large commercial vehicle section to fall back upon. Out of the entire industry, only BMC and perhaps Ford (since it introduced the Classic) still lack capacity to meet demand for all their cars at this summer season of peak sales.

Why have the two largest car manufacturers strengthened their hold on the British car market? Last winter's slump in home sales and exports was the immediate cause, for it cut demand below the industry's capacity for the first time in three years. The smaller firms, too, had relied heavily on sales in the North American market; and the collapse there undermined their efforts at home. BMC and Ford, again, had introduced new models more recently than the other three companies: except for S-TI, which had brought out the Triumph Herald, the smaller groups were caught with relatively old models as their biggest selling lines. The BMC babies and the Anglia would not nominally be considered competitors for the Minx, Herald and Victor. But the upgrading of style and performance in small cars that they represent has made them competitive. The Anglia in particular has taken sales from the Minx and the Victor, and the Minis from the Herald. The combination of excellent handling qualities and good performance, even at the expense of appearance, that was intended to put the Mini-Minor and Austin Seven in the utility car market has in fact given them a social status and an appeal to sporting drivers that has made them competitive, in a sense, with almost any car up to a Jaguar. They have limited the opportunity for any more expensive small car avowedly designed to confer social status on its owners. Mini-Minors now account for a quarter of BMC's sales in Britain, and have been the most important factor in its growing competitive strength.

BUT BMC and Ford have not gained all their increased dominance from the appeal of their small cars. Their older and larger models, such as the various versions of the A55 and the Consul and Zephyr, have all proved to have a stronger sales appeal than comparable models from the smaller manufacturers. The BMC bigger cars still sell well, if for exactly the opposite reasons to those for the Minis' success. Ford added to its range last month with the Classic; though this clearly will not sell in such large numbers as a cheap car like the Mini-Minor, its sales may for the most part be a net addition to those of the company and so to its market share—partly at the expense of BMC's 1½ litre cars, but more, one might expect, of the Minx and Victor. One factor that has helped the biggest companies and hampered the others, Vauxhall and S-TI more than Rootes, is the resale value of their cars; when prices fell last year, those of the biggest companies' cars fell less than those of the others.

Alterations in the expansion plans of the smaller companies, following this further decline in their market share, have been smaller than one might expect. Either the optimism that characterises the motor industry is indestructible, or these makers consider that their only hope of survival is to increase production with help from new models. Vauxhall is the only firm that has publicly admitted modifying its plans, though it seems that S-TI has also quietly postponed a large part of its new schemes.

Vauxhall has switched its emphasis from cars, its fastest-growing market when the plans were made eighteen months ago, to lorries which have become the brighter part of its business. While Vauxhall's share of the car market has fallen, Bedford trucks have gained sales both at home and overseas. The new plan for 1963 is for a manufacturing capacity of 250,000 cars against 200,000 at present, and against an increase to 300,000 that had been announced earlier. But the company now envisages being able to produce 150,000 commercial vehicles, instead of the 100,000 for which it was planning earlier (a figure that has in fact already been attained). Vauxhall still intends to build a new factory at Ellesmere Port on the Mersey; but this will make mechanical parts for assembly into vehicles at the firm's car and lorry factories in Luton and Dunstable, instead of complete commercial vehicles.

The S-TI group says that its long-term expansion plans remain unchanged, and that it still intends to build a new press shop and sub-assembly factory on Merseyside, in addition to an extension, which is now nearly finished, to its existing body plant there. This extension is intended as much to make the company less dependent on outside suppliers as to increase capacity. But no date for starting the new factory has been given.

Rootes has more plainly kept to its original expansion plan. The principal feature is the new factory now going up at Linwood, in Scotland, to assemble the small car that the company intends to add to its range in the autumn of 1962. This plant will be capable of turning out about 150,000 cars a year. In addition, Rootes is still doggedly pursuing its intention of increasing the capacity of its existing factories in the Midlands for the size of car it makes now and for commercial vehicles. In all, it seems that Rootes is aiming to step up its capacity for cars by as much as 80 per cent.

The new facilities planned by the two bigger companies are more certain of being fairly fully used soon after they are available. The first of the new BMC factories, that at Bathgate in Scotland for lorries and tractors, should be ready this autumn; when truck and tractor production is shifted there from Longbridge and other Midland factories, BMC will have capacity for another 1,500 baby cars a week. When the new assembly hall at Longbridge and the new body pressing plant at Llanelly start production next spring, capacity for the BMC babies will reach the target of 8,000 a week. The new Pressed Steel body plant at Swindon to make bodies for BMC will be ready early next year too, though the date of its commissioning has yet to be announced. This may add perhaps a further 4,000 cars a week to BMC's capacity, with the ample room for additional assembly at Longbridge.

Ford will have to wait a little longer for a substantial increase in capacity. Although it has now moved all lorry and van production from Dagenham to Slough and Southampton respectively, making more space at Dagenham to produce mechanical parts, its assembly capacity for cars is not much higher than the present output of around 9,000 a week. The new plant at Hailewood on Merseyside will provide body building and assembly capacity for an extra 4,000 cars a week, but it is not due to become available until the autumn of 1962 and appears, too, to be slightly behind schedule.

WHAT chances have the three smaller companies of winning back a bigger share of the market from BMC and Ford? They have gained a little from shortages of BMC and Ford cars this summer; in the longer run, all depends on the next round of new models that they introduce. S-TI, for example, has been able to make something of a come-back with its Herald 1200. But the three companies are likely to find, as have smaller firms in the American motor industry, that the biggest manufacturers can afford to change models more often because they have so much larger annual outputs over which to spread the cost of tooling. The improvement in the engineering standards of BMC, which is likely in the long term to change all its popular cars to the front-wheel-drive layout that has proved so successful on its baby cars, will make it more difficult for the smaller companies to offer better engineered cars; while the increasing emphasis placed by Ford on styling is making it more difficult for them to offer cars that are decisively smarter.

ESTIMATES OF THE INDUSTRY'S CAPACITY

	Now		1963	
	Cars	Comm. Vehicles	Cars	Comm. Vehicles
BMC	575,000	185,000	900,000	275,000
Ford	500,000	125,000	700,000	160,000
Rootes	220,000	30,000	400,000	50,000
Vauxhall	200,000	110,000	250,000	150,000
S-TI	175,000	25,000	200,000	50,000
Others	60,000	50,000	75,000	75,000
Total	1,730,000	525,000	2,525,000	760,000

Their best chance of winning a substantial increase in their share of the market may be to find some need that the bigger firms are failing to satisfy, as American Motors did with the compact car in the United States. Its achievement showed that a small firm can save itself from the jaws of death with one successful model. But the traditional diversity of the British makers' model ranges makes it more difficult to find such a gap: S-TI's intelligent though slightly expensive entry into one has been partly spoiled by the unexpected popularity of the BMC babies. Though we may see fewer models in the future, it is all too easy for a big producer to offer a variant on a basic model made in really large numbers to satisfy the sort of specialised market that the smaller concerns might seek to concentrate on. Rootes faces a difficult task indeed with its plan to invade the small car market with a car "different" from those of BMC and Ford.

The first test of the smaller concerns' ability to earn their living will come this winter; the decisive one may be in 1963, when BMC and Ford will have all the capacity they are likely to need, and the other firms can no longer get orders that these firms cannot meet. Unless they have been able by then to produce some new models of significantly greater sales appeal than those of BMC and Ford, one must doubt their ability to claw back a big enough share of the market to allow them to go on competing in the mass-produced car market—barring any technical innovation that might radically reduce the cost of tooling.

The association of two of the three smaller companies, S-TI and Vauxhall, with flourishing commercial vehicle manufacture at least assures their future existence. If new models should fail to raise their car production to adequately profitable levels, one can see them concentrating their activities on commercial vehicles. It is certainly hard to imagine General Motors or even Leyland (the respective parent companies) amalgamating with BMC or Ford, though they might be prepared to sell parts of their car factories that they did not need to make light vans. Rootes has nowadays only a small commercial vehicle business, though it is trying to enlarge this; and must stand or fall as a car maker. So far it has declined possible amalgamations with S-TI or Rover, and chosen to stand alone. There should be room for another company after BMC and Ford in large-scale production: probably Rootes and Vauxhall will have to fight it out for this place of third producer. At present Rootes is in much the better position; but General Motors is likely to fight for its place in British car manufacture.

Government in Science

THE day after the House of Commons held its first-ever debate on science policy, Major Yuri Gagarin arrived in this country and Soviet officials took the opportunity over lunch to give the new Parliamentary Secretary to the Minister for Science a lecture on the effectiveness of Soviet planning in research. It so happens that Lord Hailsham's unique un-Ministry is currently preoccupied with the more delicate exercise of planning scientific research without appearing to do so. His appointment as Minister for Science nearly two years ago was an attempt to find a workable compromise between this country's old and honourable traditions of scientific freedom and the obvious fact that large sections of British industry could fossilise during the next decade, failing an injection of technological plasma into their thickening arteries. Despite a noticeable change in the air since Lord Hailsham's appointment, has the compromise come off?

In the first place, Lord Hailsham is not Minister for Science, period; he is only Minister for Some Forms of Science. The government as a whole is spending more than £300 million a year on research and development in its various forms, but only a third of this comes within Lord Hailsham's bailiwick. To be precise, he is answerable to Parliament for the £80 million that the Atomic Energy Authority will spend on research, production (though not weapon production) and building this year, for the £15 million that will be spent by the Department of Scientific and Industrial Research, the £6 million to be spent by the Agricultural Research Council, the £4 million of the Medical Research Council and the £500,000 of the Nature Conservancy. Apart from atomic energy, none of these is a spender of big money.

Much larger sums, probably running now at about £250 million a year, are spent by the defence departments on research, though not exclusively on weapons research. The Ministry of Aviation, which handles most of these funds, is responsible for research on civil as well as military aircraft and for a sizeable whack of space development; it also sponsors much research in the electronics industry, one of the fastest-growing forms of technology in this generation. Other departments than Lord Hailsham's office, again, are responsible for fuel research and research into communications; and he has virtually no say in the affairs of the National Research Development Corporation, which answers to the Board of Trade for the way that it lends out its £10 million grant to finance new technical developments.

There may be good administrative reasons for this division of responsibility, although the suspicion must remain that it has just grow'd like Topsy; and no one is specially anxious to have the trouble of un-growing it again. Since the government is paying for an estimated two-thirds of all the research done in this country, there might be some advantage in having the whole distribution of scarce scientific resources under continuous review from one central point.

The present arrangement seems to place almost excessive reliance on Lord Hailsham's powers of persuasion, impressive though these are. He has no financial control even over those institutions for which he is nominally responsible. Each of them negotiates directly with the Treasury each year and calls on the Minister for Science only if the Treasury refuses to give them all they ask. This is said to result in a higher general level of government support for science than would be the case if the Minister had a science budget out of which he allocated resources at his own discretion. But it deprives him of the authority of handling the purse-strings.

An analogy is sometimes drawn between the powers and the position of the Minister for Science and those of the Minister of Defence. Both, it is true, are nominal overlords of a group of spending departments, and both are formally responsible for co-ordinating the policies of those departments. But here the resemblance ends. There is such a thing as a defence budget and there is an annually reviewed defence programme. Science has no equivalent of either of these and perhaps could never have; so the weakness of the historic first debate on science policy arose in no small part from the fact that MPs did not know what they were talking about. They had no information about what, precisely, the government was doing in the field of science, how much it was spending, how the effort was distributed among the various disciplines, and its policy for the future. To discover even so simple and basic a fact as the amount the government spends on research, it is necessary to wait for the three year review carried out by the Department of Scientific and Industrial Research: the latest available figures are themselves three years old. They show that in 1958-59, the government spent more than £300 million, and the country as a whole about £480 million, on research and development. Half this total came then from the defence departments and 28 per cent from industry; but a rapid shift may have been taking place between the ratios of civil and military spending since then. Yet accurate information is

essential: the government is constantly under pressure from sectional interests to support, in the name of "science," projects that are not scientific.

Scientific research is a means to more than one end; but one of the most important is certainly the technical strengthening of British industry to help keep the economy viable. Lord Hailsham's main interest at present is not so much extracting money from the Treasury for science, but trying to arrange that what research is done is properly done and that its potential results get practical application. Heavy government-financed spending on research in the aircraft, electronics and atomic energy industries at least enables them to make use of the results. Indeed, these industries actively press for advances at the extremes of technique; and the new processes, degrees of precision and new materials that they require do filter back into the general practice of the engineering industries.

In spite of its vast importance as a spender on advancing technique in defence-orientated industries that offer considerable by-products to the rest of the economy, there are inherent limits to the government's power to promote technical development in a free economy. It can pump money into the Department of Scientific and Industrial Research. It can subsidise collective research for industries from the largest to the smallest. It can get rough, as it has done recently, with the staffs and directors of its research establishments, hoping to make these operate efficiently on projects that should be of value to the industries they serve. But it cannot drag managing directors of individual companies by the hair into those laboratories and force them to apply the results to their own atrophying production techniques. Too many companies seem to think the annual subscription to their research association absolves them from the need to take any further interest in the distasteful subject of research and new methods. It is not inevitably the small industries that are at fault; many small and some very old industries make quite good use of co-operative research through government-sponsored research associations. It could be argued that the bigger, stronger companies can be relied on to do their own research, or at least develop the results of research into commercial production; and many do. But some of the country's most powerful industries, and even of its biggest traditional exporters, are coasting along on past knowledge. These illustrate what is happening to the British manufacturing economy today: less developed countries are catching us up, and more lively developed competitors are bringing out new products that we cannot match.

LACK of interest in or respect for government research is not always industry's fault. Some industries may shut their eyes to the need for research, but sometimes whole laboratories shut their eyes to the needs of industry or to the need to make results intelligible. The purpose of a given piece of research and the way it could be used in industry very often need to be spelled out in fairly simple language before the average production manager can begin to grasp its importance. This may reflect badly on a company's lack of properly qualified staff, but scientists must take industry as they find it. The DSIR realises the need for improving communication here: it is trying to make it easier for industry to understand what the government-sponsored research associations are doing.

There are signs also that the government intends to put more positive pressure on industries that are not making adequate efforts in research and it has several means of doing so. One is the type of public inquiry that recently pilloried the machine tool and shipbuilding industries for their scientific backwardness, and that is now being carried out in, among others, the textile machinery industry. This has its own problems: official reports pillorying British industries are gleefully quoted by competitors abroad, and the quality of the investigators is not always beyond challenge. But these reports do offer some spur to further action. Conversely, there is the threat to withdraw government support from co-operative research associations that are not properly supported by their industries; this reverses the old policy of doing everything possible to keep research alive among the unbelievers. Yet a third might be the rarely-used power to enforce a compulsory research levy on a whole industry.

A fourth, positive step is the industrial development contract. All defence work and much civil aircraft development are done by this means; the government sometimes finances all, and sometimes only part of the cost of development, on the argument that this is too heavy for a manufacturer to bear alone—particularly in defence where there is primarily only one customer. The DSIR was given powers, a year or so ago, to place the same kind of contracts in industry. This is a new, and so far hardly tried tool outside the specialised defence industries, though the Post Office and other nationalised industries sometimes use it. Some development contracts are being placed for advanced machine tools; and there is probably a case for offering development contracts for certain high-speed computers.

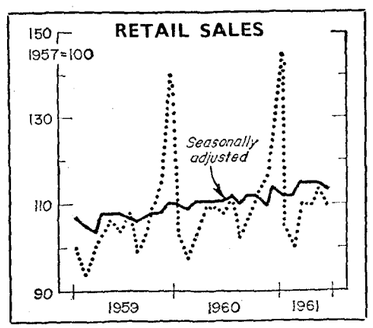
Gaps exist also in basic research; the Advisory Council on Scientific Policy, last autumn, singled out astronomy, seismology, pure mathematics, oceanography, and taxonomy, and readers may like to make their own additions. Where progress is hampered by the high cost of equipment, the government can help by paying for one large installation to be used co-operatively by several universities; it is providing experimental nuclear reactors on these conditions and may do the same for telescopes. But where the scientific discipline is unpopular, there is little the government can do; graduates cannot be forced into branches of science in which they are not interested, nor can universities be forced to make those branches more attractive. It has taken much coaxing to persuade Cambridge to aid seismology.

If the purpose of Lord Hailsham's appointment was to introduce some over-riding co-ordination into the government's scientific policy, then he cannot be said to have got very far. But if its purpose was rather to plug some of the gaps in British science, then he has probably done as much in two years as any man can. Drastic reviews have been carried forward of the work of the laboratories directly under his control; some have been closed down and others may be opening others. Major shortcomings, in the laboratories, in industry and in the universities have been publicly exposed—and so, incidentally has the myth that Britain is short of scientists. Some of this was in train before he was appointed; but he has supported a fairly radical scrutiny and given it a public voice. Positive, corrective action to improve the shortcomings will prove more difficult and it is not even clear whether Lord Hailsham has yet a fully adequate prescription, let alone the powers that he would need to apply it.

BUSINESS NOTES

THE ECONOMY

More Input, But No More Output

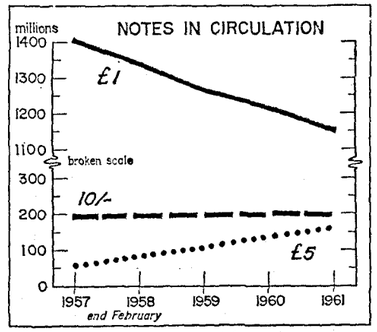


IF the Chancellor did not happen to be in the final stages of devising measures to restrain demand and cut output back, the conventional reaction to this week's news of industrial production in May would be concern that it still showed no significant rise from the plateau along which it has jogged for over a year. As he will presumably be anxious to ease the pressure of home demand on the factories, the failure of total industrial output to rise may not bother Mr Lloyd much; his anxieties centre on costs and on the amount of their output that industries manage to export. The rise in costs, particularly labour costs, has resulted primarily, however, because employment and wages have risen while output has not. Whether lowering total demand and output, which will probably further increase labour costs, would be more successful than letting home demand flow unchecked and just possibly getting some more output out of the existing labour force, though leaving management freer not to bother about exports, is one of the nice points he is no doubt still considering.

In itself, however, this little-more-than-level course of total industrial production remains puzzling. Since output turned upward in late 1958, we have had an increase of some 15 per cent in production, with an increase of about 3 per cent in industrial employment; but that was achieved by the beginning of last year. It seems a rather limited return on the biggest wave of industrial investment ever put into this economy. Was much of the investment between 1954 and 1960, then, misdirected or misapplied? The current pattern of demand, perhaps, is geared a little less towards consumer goods and a little more towards investment (construction and capital goods manufacture, both relatively labour-intensive) than the businessmen deciding on that investment may have expected. And the builders of plant and machinery have certainly given more thought to re-equipping their customers, which yields money, than to re-equipping themselves, which costs it—though the one process cannot sharply be dissociated from the other. Much capital equipment is wholly or largely custom-built; and certainly Britain's capital goods industries have been modernised much less than most of the engineering or process industries that make intermediates or goods for the final consumer. Britain in recent years has drummed up some business, not quite as cyclical as of old, for the capital goods industries; but perhaps the task of strengthening resources in these industries to do that business efficiently is largely still before us. It would certainly be disconcerting to have to accept that the successful diversion of resources into capital investment (and machinery exports) from consumption, which is a gain in economic efficiency, must needs mean employing these resources with lower technical efficiency.

Is Consumption Moderating?

ON the side of demand, retail sales are said to have dropped somewhat in June, with the value of total sales, allowing for seasonal variations, likely to be about 113-114 (1957=100) against 115 for each of the previous three months. This probably means that retail sales last month—when the warm weather may have tended to reduce the amount of food people bought—will have been lower in actual volume than a year before, in June, 1960. In that month, the index of retail sales stood at 111, so that the value last month was only 1½-2 per cent higher. And during the twelve months prices in the shops had probably risen nearly 3 per cent. The total index of retail prices, which takes account of elements of spending such as rents which have risen more than prices in the shops, had reached 114.6 (January, 1956=100) by June, against 110.9 in June, 1960. One cannot make too much out of one unusually slow month in the shops; but there are hints from manufacturers of durables and cars that even apart from what Mr Lloyd may do the shine was already gone off their orderbooks.



The latest indicator of capital investment, provisional statistics of industrial building schemes issues with development certificates during the second quarter of the year, shows that rather fewer schemes, which however totalled about 28 per cent more floor space, were approved than in the first quarter of this year. Both the number and the factory area approved, however, were much lower than in the early months of 1960. So far as the building of new plant is concerned, that 1960 peak may by now have moved onward to the actual sites; and emphasis may be shifting to the hardware to fit into the factories.

The Bank's Prescription

THIS year the Bank of England's annual report returns to the slim shape it enjoyed before the Radcliffe Committee goaded it into explaining the Bank's policy. Since the bulk of the explaining is now done, and of late much better done, by the quarterly bulletin, it remains for the annual report to put the year in perspective.

The report has no doubts about the causes of our present troubles. It is the repetition of the old story: increasing home demand; rising stocks of imported materials; and full employment—all coinciding with a deterioration in the balance of payments, this time intensified by the virtual disappearance of invisible earnings and hidden by the inflow of foreign funds. Not that the report disapproves of capital movements: generally they "can be welcomed if they take place in response to changes in interest rates" since they can provide time for steps to be taken to correct underlying disequilibrium. This is the chance that Britain missed in 1960. Speculative movements on the chance of parity changes however are a different matter. In this connection the Bank characterises the revaluations of March as "a serious shock to confidence" from which recovery is likely to take some time.

Under the Basle arrangements between the European central banks and the active policy of the IMF, the Bank concludes, "the major currencies are now in a far stronger position than they were before to withstand the pressure of short-term money

movements." But these arrangements do not change basic situations; they only give time for longer-term policies to have effect:

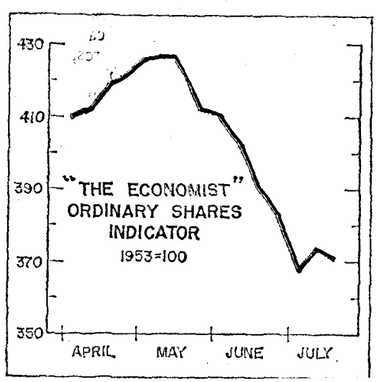
> No effort should be spared to correct any underlying weakness in the balance of payments. The United Kingdom is enjoying high levels of prosperity and employment. If they are to be maintained they will have to be earned in an increasingly competitive world.

IN THE MARKETS

Man Tuesday

On Thursday there was no prologue to Mr Selwyn Lloyd's swelling act, Bank rate being left unchanged at 5 per cent. But by the middle of the week the money market and gilt-edged markets had even stopped asking whether there would be a change before next Tuesday. They like the rest of the stock market were apprehensive Robinson Crusoes, wondering quite what the faint footprints in the sands of the Chancellor's week-end statement and the economic debate foretold. Would their Man Tuesday be a cannibal or a savage friend? They could not guess, but what was significant was not that gilt-edged prices drifted idly or that equities fell to the lowest point of the year on Monday following the Chancellor's week-end speech but that equity prices rallied sharply in the following days.

The volume of selling was small and the jobbers slashed prices ruthlessly to discourage selling. But once the *Financial Times* index had fallen close to the 300 mark, a fair number of private investors were prepared to take a chance and buy. The hint in the economic debate that dividends as well as wages might be frozen did not lead to another fall in prices. Indeed, they continued to rise, rather to the jobbers' surprise, though admittedly, the bids were only for small quantities of the bluest of blue chips. Buyers were taking the long view that at current prices and yields some equities are cheap and might even offer a short term gamble that Mr Lloyd's measures and regulators will not be terrifyingly savage and that he may draw back from imposing the absurd clamp of dividend limitation.



Private investors have made all the running and the institutions have stayed out of the market. They have reasons of their own for doing so in addition to the economic uncertainty; not the least of these is the call being made on their funds by new issues and property participations (of which the arrangement between Capital and Counties and Norwich Union Life and the Prudential is the latest). With fixed interest securities, the institutions are now calling the tune: the Rothschild Investment Trust has placed a small debenture at just under 7 per cent to redemption while Wiggins Teape's £4 million issue for a 6¾ per cent debenture, 1981-86, at 98 offers £6 18s. 5d. per cent to redemption. With such fixed interest yields on offer and with plenty of rights issues around, it would be extraordinary if the insurance offices' appetite for equities was as keen as it used to be. But those who look for silver linings will not miss the significance of the remarks by the sponsors of the Tilmanstone Investment Trust that "profitable opportunities for investment will continue to arise" and by the sponsors of the Rothschild Investment Trust issue that "over the next few months there are likely to be attractive investment opportunities in the United Kingdom."

STERLING

A Little Stronger

The underlying mood in the exchange markets appears to have moved in sterling's favour this week. Certainly there seems to be an inverse relation between the amount of misery British Chancellors offer as a solution to Britain's problems and the outside world's confidence in sterling. Mr Selwyn Lloyd seems to have offered just the right amount of gloom in his speech of last Saturday to provide a rally in sterling.

On Monday the spot rate on the dollar hardened from $2.78½ to $2.78⅝, a rise that was more than could be accounted for by the covering of essential needs by holders who had gone short of sterling over the

weekend. The market put the improvement down to bear covering in the belief that neither Tuesday's measures will remove any chance of a fall in the sterling exchange rate. The Bank of England has given no official support this week and the market has detected small purchases of dollars by the Bank when the spot rate has improved beyond $2.78¾. This improvement in the spot rate has been accompanied by reductions in the discount on forward sterling. By mid-week the forward discount on the dollar on three months' swap had fallen to the equivalent of 3¼ per cent per annum, against 4 per cent in the previous week, while that on the Swiss franc was 5 per cent after touching 6 per cent last week. Some of the firmness may have been attributable to reports from New York that Britain intends making a "substantial drawing" on the IMF. These reports have not been confirmed in London, but such a move would certainly be a welcome adjunct to next Tuesday's measures. Following the announcement of an unchanged Bank rate the spot rate weakened to $2.78½ in a very quiet market.

OVERSEAS TRADE

Half-Way Stage

If the provisional figures for overseas trade in June are not exactly glorious they at least dispel fears that an even bigger trade gap was budding in May. Exports (seasonally adjusted) which had dropped from £306 million fob to £282 million in May, recovered promptly to £331 million in June. In the past two months, exports have therefore been running at about the same level as in the first half of the year and about 3 per cent higher than the average for the whole of 1960. The dock strike that was prolonged into May seems to have shifted into June some exports that rightly belonged to May, but whether £24 million of exports would have been affected in this way is doubtful. Disappointing motor car exports have been holding back the improvement in total exports this year and some recovery in June would not be unexpected.

Imports at £366 million cif show scarcely

* Ex dividend. † May 10th. ‡ Adjusted for scrip issue. § July 19th.

any change from the figure for May, but in the second quarter imports were 6 per cent smaller than in the first three months of the year, and in the first half of the year they were 1½ per cent lower than the average for 1960. The average for the second quarter was £7 million a month lower than the most favourable quarter in 1960. Even so, in view of the relatively static level of industrial production for most of this period they could have been expected to fall further.

However, the nightmare of a trade gap of the proportions of that of 1960 seems to have vanished with May. After the bulge in exports in June the crude trade gap (exports valued fob and imports on a cif basis) has been cut from £72 million to £53 million a month in the first half of the year. A further improvement of about the same order will be necessary in the next six

months to put the true balance of merchandise trade into credit this year. During the second quarter, some further deterioration in invisibles might have occurred. To judge from the Chancellor's statement last month, the government was only then beginning to draw in its horns and cut its expenditure abroad; the revaluation of the deutschemark in March will not have helped here. The balance of payments for the half-year is therefore unlikely to provide any pleasant surprises.

Although the export credit guarantees offered by ECGD have been improved, the latest quarterly figures show only a modest increase in business. Complaints about the inadequacy of its services may therefore have been exaggerated. New commercial insurance in the second quarter of 1961 was £189 million, 17 per cent higher than a year ago, but below the £195 million recorded in the first quarter of 1961. The value of short-term policies outstanding rose by only £17 million to £777 million during the quarter. The volume of medium-term business, which tends to fluctuate fairly widely between quarters, fell to £13 million, compared with £30 million in the previous quarter and £39 million in the corresponding quarter of 1960. The bright spot is the guaranteed loan scheme introduced last April. Already five projects involving some £40 million have been authorised, although this does not necessarily mean that the British exporter will get the contract.

HIRE PURCHASE

Thumbs Down for Old Cars—and New?

United Dominions Trust has made itself popular with its fellow finance houses, but alarmed the motor trade, by its decision to handle no hire purchase business on cars more than five years old unless the dealer selling one takes responsibility for any losses. These older cars are the sort on which the finance houses have lost most in the past, because they have fallen sharply in value—so that the owner may find that the car is worth less than he owes on it—and they are the most likely to break down. In either case the owner is tempted to default. The other finance houses are therefore likely to follow UDT's lead, though they may not all draw the line at the same age of car; some think that five-year-old cars are still reasonable risks, but none wants to finance cars that will be ten years old by the time that they have been paid for. The reason for this decision is underlined by the results of UDT for the year to June 30th, when profits fell sharply from £3.8 million to £2.4 million. UDT has made substantial provisions for bad debts and unexpired risks, of which an exceptional provision of £500,000 forms part. The ordinary dividend has been maintained at 26½ per cent on the capital as increased by a one-for-two rights issue and it is now covered 1¼ times.

The motor trade fears that the result of UDT's move will be a sharp fall in the prices of the older cars, which have already been declining in the past three months. The finance houses may then find that they have more defaulters on recent hire-purchase contracts, as owners see the value of their cars fall below the amount they owe for them. The lower prices will also affect new car sales; even though few owners of really elderly cars are numbered amongst the buyers of new cars, they are likely to be potential buyers of the used cars that are part-exchanged for new ones. A sharp fall in the value of their cars can quickly affect that of newer models, and at one remove the part-exchange allowances that dealers can give when selling new cars. And if dealers find it difficult to sell their stocks of old cars, as they did a year ago, these will form a block to the movement of cars through the trade that will make dealers unwilling to take any used cars in part-exchange for new ones. There are already signs that this is happening, with dealers offering cash buyers discounts, or at least free accessories. But new car sales remain high; in June they equalled those of a year before at 84,000.

An autumn recession in new car sales is more probable after this latest move from the finance houses; a combination of lower prices for used cars and perhaps of increased purchase tax on new cars might well produce a repetition of last winter's conditions. These would seem certain to arise if the industry's worst fears are realised, and any increase in purchase tax is regarded as temporary. Buyers might then hold off during the winter, much exaggerating the seasonal fall in sales, perhaps returning in the spring—when, according to past experience, the Chancellor might feel able to ease the industry's lot and thus to heighten the seasonal boom.

SHIPBUILDING

Investigations for Ever

The latest prescription that Mr Marples has produced for the ills of the British shipbuilding industry is an investigation of the reasons why some British shipbuilders have placed orders abroad. This, he told the House of Commons last week, should show where the British yards are less efficient than their foreign competitors—something which, one might have thought, any British management that had the qualities necessary for its future survival might already have found out for itself. Certainly any shipyard that does not know whether its foreign competitors work one or two shifts a day, which was the example Mr Marples gave of the sort of information that this survey could produce, is ignorant of the ways of the business world. And though Mr Marples was at pains to emphasise that this investigation implied no criticism of British shipowners who have bought ships abroad—which would scarcely be appropriate since the British industry presumably hopes to go on getting export orders itself—his many references to the £140 million of orders lost to the British shipyards in the last three years are liable to produce this impression. So are the remarks of Vice-Admiral Hughes Hallett, parliamentary secretary to the Ministry of Transport, who said that "British shipowners would very soon be in jeopardy if they were forced to depend to any large extent upon foreign shipbuilders." This is, after all, just what Britain wants foreign shipowners to do.

Research in the shipbuilding industry is still, it appears, a matter for discussions between the Ministry of Transport, the industry, and the Department of Industrial and Scientific Research. The most positive statement that Admiral Hughes Hallett would make was that the British Shipbuilding Research Association might be developed into a research organisation that studied the design of ships—which is at present outside its scope—as well as methods of building them.

Mr Marples pointed out that the British shipbuilding industry has one great advantage over those of most other countries; the needs of British shipowners account for about 70 per cent of its normal output. And the greater ease with which the building of a British ship can be supervised if it is built here goes some way to offsetting higher building costs. This seems quite a large enough cushion to soften the effects of foreign competition—much of which comes

from countries such as Sweden and Germany, which can hardly be accused of obtaining lower costs by paying lower wages.

LONDON AND MANCHESTER ASSURANCE

Directors at Odds

Now that the former chairman of the London and Manchester Assurance, Lord Grantchester, and the new chairman, Mr Lewis G. Whyte, have published their statements it is clear that there was a genuine difference of opinion between Lord Grantchester and the rest of the directors on how to respond to tentative proposals for a merger from Eagle Star. It does no injustice to either party to say that the kernel of the matter was that Lord Grantchester was prepared to consider the letter from Sir Brian Mountain as a possible basis for further discussion and negotiation and that the other directors, interpreting Sir Brian's reference to an "auction" as precluding a negotiation about terms, were not. Lord Grantchester's interpretation was that Sir Brian was not willing to engage in a "battle" with a rival bidder. He says that Sir Brian's memorandum "did not rule out the possibility of a cash offer, or an exchange partly in shares and partly in cash."

The directors met on June 8th to consider Sir Brian's letter. On this, Mr Whyte says to the shareholders:

> At the end of the meeting all your six directors agreed that a reply should be sent to Sir Brian Mountain declining his proposals. You will see, therefore, that there is no truth in any suggestion that Lord Grantchester reached a different conclusion from the rest of the Board in this matter.

Lord Grantchester, referring to these sentences, says:

> This statement is strictly accurate but fails to disclose that my attitude throughout had been to keep an open mind and seek more information. All my co-directors, however, were unwilling to consider the matter further and, as I was in a minority of one, I agreed to concur in the decision at which they had arrived. It was in these circumstances that I signed the reply sent to Sir Brian declining his proposals.

In his statement Lord Grantchester then goes on to explain that at the next board meeting on June 22nd his colleagues indicated that they wanted a new chairman. He continues:

> I had the impression that they did not like the way I regarded Sir Brian's approach and they asked for my answer there and then. However, it was later agreed that my answer should be deferred until another meeting of the directors had been held on June 27th.

At that meeting, Lord Grantchester indicated that he would resign on July 13th. Thus it is apparent that while Lord Grantchester was prepared to consider the possibility of a merger with Eagle Star the other directors on the grounds set out in Mr Whyte's letter, were not. The proper course of resolving such a dispute is resignation.

LOCATION OF INDUSTRY

Nuneaton or Giessen?

A lively and fast-growing firm of toolmakers, Clarkson (Engineers), has told the Board of Trade that, as it has been *refused permission* to expand its existing factories at Nuneaton in Warwickshire and told it must go to some area of high unemployment, it will instead expand its factory in Giessen, near Frankfurt. The company maintains that in some place like Jarrow or Clydeside it would lack the services of the sub-contractors that it needs, and it doubts whether it could recruit suitable labour. It already has a branch factory at Giessen, for Germany is the company's biggest export market; it knows that it can find the sub-contractors and labour that it needs there, so this seems the more economic site. It would then supply the British market and some exports from Nuneaton, but the new markets that it wants to exploit in the Far East, Australia and south America, for which much of the new capacity is intended, would be served from Germany.

The Board of Trade and the depressed areas have done well in the past out of motor manufacturers who were too anxious to start their expansion schemes to worry overmuch about the effect of moving into a new area on their costs. It takes a case such as this one to expose the absurdity of a blanket refusal of permission to build factories that may add to employment in currently prosperous industrial regions. Nuneaton is near Coventry, and Clarksons says that it could recruit the 1,000 new workers *that it would* like to employ from the men who now go from Nuneaton to Coventry to work. With immediate prospects for the motor industry clouded by Mr Selwyn Lloyd, and the long-term prospects of sharper competition for the two Coventry car makers, Rootes and Standard-Triumph, the Board of Trade might have felt it worth encouraging firms that are not dependent on the motor industry to expand in this area.

COURTAULDS

A Revealing Speech

The report of Sir John Hanbury-Williams read in his absence at Courtaulds' meeting this week was important both for the facts it disclosed and also for the insight it afforded into the company's philosophy. Sir John could give little guidance on the results shareholders might expect from the group this year and no consolation for past misfortunes other than the steady and impressive rise in income from non-textile interests. In the first three months of the current financial year profits were less than in the corresponding period in 1960. As that was the most profitable period for the group in 1960 this is not surprising. In the remaining nine months of the current financial year, profits are expected to improve on last year's performance, but in alluding to the increased difficulty in maintaining profits at the 1960-61 level, Sir John implies that 1961-62 might not be the year of recovery that some shareholders had hoped.

Exactly half of Courtauld's income was derived from textiles last year, compared with 60 per cent in 1959-60. Textiles still accounted for 70 per cent of the group's assets. Of the group's net assets of £208 million, a third was invested overseas, and exports rose from £14 million to £21 million in 1960-61. The turnover of the whole group was £172 million.

SOURCES OF PROFIT*

(£ million)

	1958–59	1959–60	1960–61
Textiles	5·4	10·5	6·6
Raw materials	2·3	3·2	3·1
Non-textiles	3·1	4·3	5·3

* Excluding income from trade investments.

In his statement, Sir John focused attention on viscose rayon, which was at the root of the group's disappointing results last year. Viscose rayon is the dominant man-made fibre, holding 70 per cent of the world market. In terms of weight, the expansion in viscose and acetate between 1950 and 1960 was 50 per cent greater than in the newer man-made fibres. However, in that period the new synthetic fibres increased their share of the market from 4 to 21 per cent. Sir John claims that man-made fibres tend to be complementary rather than competitive with each other, and that in the long term the continuing expansion in cellulosic fibres is more significant than their relative rate of growth. They are nevertheless more prone to temporary setbacks, and are subject to more intensive competition than the newer synthetic fibres. On the important subject of the group's recently acquired paint interests, the chairman has little to say. The group is pressing forward with the reorganisation that is necessary "before the full benefit of this investment can be realised."

IRAQ OIL

Relinquishment in Iraq

General Qasim of Iraq this week announced that in addition to accepting his position on the "dead rents" issue, the Iraq Petroleum Company had agreed to relinquish 90 per cent of the unexplored territories that it holds under its various concessions; he added that his negotiations with IPC "would end in the second half

PASSPORTS TO EASTERN TRADE

Three Banks have merged.
Separately, they have large assets,
a fine tradition and a wealth of experience. United they offer a comprehensive service in all matters affecting business with the East and the Middle East. Their advice and help are your surest "passports" to profitable trade with those areas.

Group total assets exceed £445 million

How much do you know—about EAST-WEST TRADE?

Can you say—

—by what percentage U.K. exports to Russia and her satellites increased during the first five months of this year—and what was their total value?
—whether payments are made satisfactorily, and why it is so necessary to ensure that the terms of a contract are punctiliously observed?

Did you know—

—that the Soviet Government authorised the purchase of no less than 95 per cent of the exhibits displayed at the recent British Trade Fair in Moscow—and that there is hope of a substantial increase in next year's quotas for British goods?
—that Poland is at present negotiating British contracts worth about £10 million, and that her purchases of capital goods from Britain could increase to some £30 million a year?

These points, as well as many other aspects of East-West Trade, are dealt with in a report prepared by Barclays Bank. Other reports revised in July deal with Argentina, Australia, France, Iceland, Italy, South Korea, Thailand and Uruguay.
For copies of these, and of reports on any other of the main trading countries of the world, please apply to:

THE INTELLIGENCE DEPARTMENT
BARCLAYS BANK LIMITED
54 LOMBARD STREET, LONDON EC3
or to any branch

of *next month* definitely in our favour." This figure of 90 per cent of the unexplored areas has never been revealed by IPC, but is in fact the figure over which negotiations had long gone on: relinquishment of 75 per cent would take effect immediately revision of the agreement was completed, and the remaining 15 per cent would be handed back to the government by instalments over a period. Nor is there any reason to doubt that in the letters recently sent to Baghdad seeking a resumption of talks IPC may have accepted this percentage of relinquishment, though the question of just how the areas for relinquishment should be demarcated may still not be agreed.

Relinquishment—which is a principle common where oil is developed under mining laws, but which appeared in the main Middle East oil countries for the first time (though in a special form) in the Iran Consortium agreement, and was later incorporated into the Aramco agreement in Saudi Arabia—was not provided for in the Iraq concessions. But in practice any improvement in the terms granted to one government soon spreads to all others in the Middle East. Relinquishment is a reasonable principle in resource development, which has come to the fore in oil of recent years: Libya, for example, has had territories relinquished by exploring companies and has let these out to others before actually achieving any commercial exports of oil. But it does, if the areas surrendered are relet and successfully developed, mean yet more potential production to sustain the oil surplus.

Up to the time that *The Economist* went to press, an invitation to Baghdad to reopen negotiations had still not been received by the team from IPC and its shareholder companies that has been waiting in London for the opportunity to start bargaining again. General Qasim has received an acceptance of his position on dead rents and on relinquishment, and substantial agreement on certain other matters such as Iraqisation of staff and directors had already been reached before the negotiations were suspended in April: but his demands about natural gas do not seem to have been accepted, and nothing has been said recently on either side about the knottiest point of all—Iraqi participation in ownership of the operating company. The general obviously has it within his power to show his people "a decision definitely in our favour" at any time, by simply settling for what the oil companies have agreed already. But further significant advances on what he has gained so far might not be had so easily.

IMF

Help for India

INDIA'S foreign exchange reserves at 103 crores, equivalent to £77 million, have never been lower; combined with the statutory gold holding of 118 crores, they are perilously close to the Reserve Bank's legal minimum reserve of 200 crores. Last week the International Monetary Fund agreed to a drawing by the Government of India equivalent to $250 millions. This is no mere bolster for the reserves; the exchange is needed for immediate payments. For this reason the drawing is to be in six currencies: $110 million in United States dollars; $60 million in pounds sterling; $45 million in Deutsche marks; $15 million in French francs; $15 million in Italian lire; and $5 million in Japanese yen. This is the first-ever drawing of Japanese yen, which is not a convertible currency. The total drawing is 42 per cent of India's quota; India has still outstanding $63 million from a drawing of $200 million made in 1957.

India's present problem is to cover the payments deficit until the first payments of the $2,225 million of aid promised in May by the World Bank and the Aid India consortium are received. Although the loans are promised, negotiations on the terms have still to take place; and it seems unlikely that payments into the government's accounts with the Reserve Bank will occur before the end of the year.

BUILDING SOCIETIES

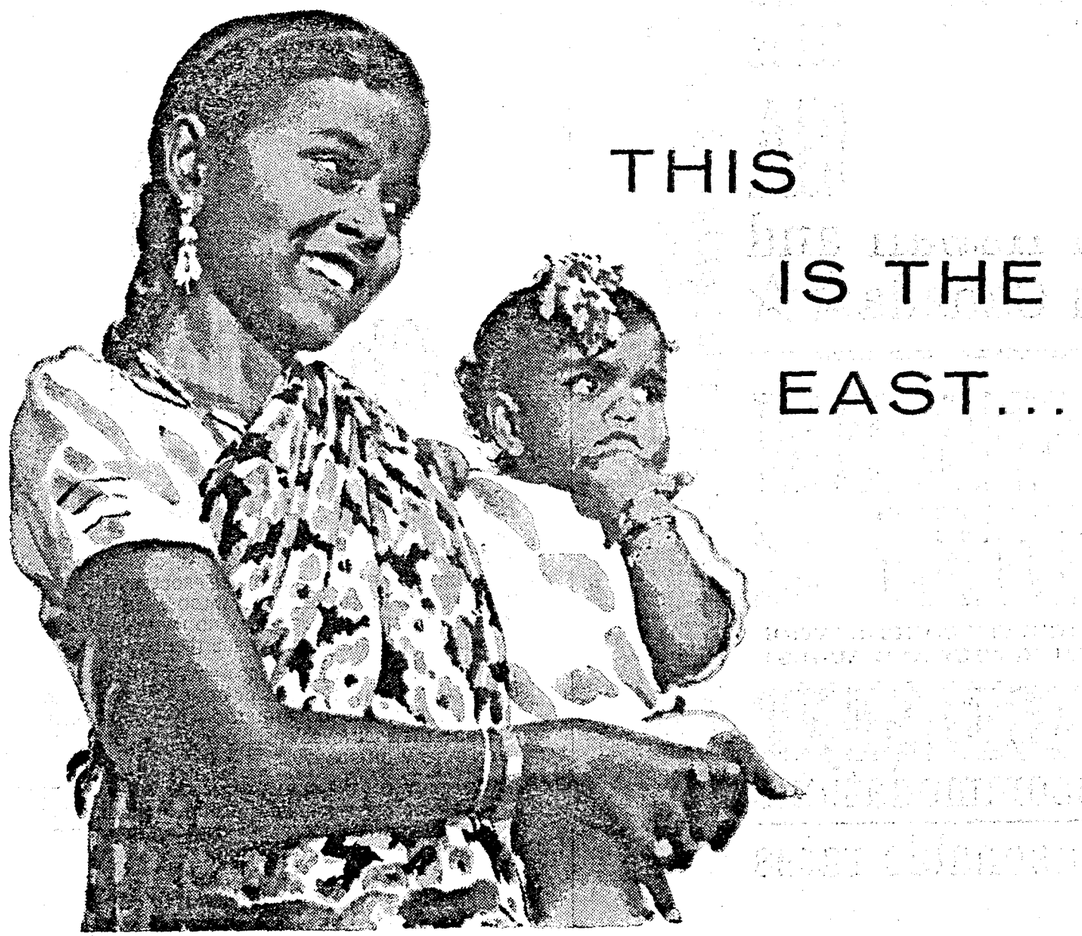
A Time to Worry

WHETHER the increase in rates recommended by the Building Societies Association from 3¼ to 3½ per cent, tax paid on shares and 6 to 6½ per cent on mortgage

COTTON TEXTILES

Gatt Not Playing Ball?

From a correspondent in Geneva



THE cotton textile conference has turned out to be one of the most exciting things that have happened to GATT for a long time. More than a hundred textile lobbyists followed in the wake of powerful national delegations, ready to pop champagne at anyone willing to listen to their story. Mr George Ball, the United States Under-secretary of State for Economic Affairs, turned up with a hastily prepared scheme to solve present and future textile problems. His proposals were divided into two parts: a long-term plan dealing with the orderly expansion of trade in cotton textiles from 1963 onwards and an interim scheme to deal with the current problem.

It reaffirmed the principle of giving the developing countries access to markets in industrial countries; these are asked to give the developing countries a chance to earn foreign exchange by the export of products in which their special skills and circumstances made them most competitive. As expected, his short-run solution was a call on countries at present applying absolute prohibitions or quotas to open their market or enlarge their quotas and to establish a multilateral system of trading, instead of the various actual bilateral agreements.

As a long-term solution, he proposed that an international textile committee should be set up within GATT to guide exporting countries into gradually opening markets without disrupting anyone or anything in the process. Naturally, there is as much disagreement among the exporters as the importers. The Japanese might be willing to support the committee if a quantitative scheme could be negotiated at the five-day conference—they are unwilling to support a vague plan of good intentions only. India and Pakistan do not want their bilateral agreement with the UK to suffer multilateral dilution. Hongkong is suspicious of any restraint on its exports and sees traps everywhere. A short-term agreement seems to depend on the attitude of the members of the European Economic Community. Unless Italy and France liberalise their imports, relieving the United States' textile industry of some of the pressure of foreign imports, it may adopt a sterner policy towards imports. Everyone, except the thirty very prosperous-looking American textile lobbyists in town, agrees that this would be a bad thing.

On Wednesday, the EEC countries thrashed out a counter proposal to be presented on Thursday. They are likely to resist any long-term engagement. They feel that if they agree to the establishment of the ITC they will be committed to IT_2C, IT_3C, IT_4C, etc., standing for toys, transistors and typewriters, but they realise that an immediate solution has to be found for the pressing problem of textiles.

The American delegation obviously needs some tangible signs of progress to take home. This is most likely to take the form of an offer of quota extensions by some countries for 1962 and a proposal to set up a working party to study a longer-term solution before 1963. Though it is the EEC countries who are being asked to expand their quotas, half-way through the conference, it is the United Kingdom which holds the key to the success or failure of the meeting. Britain is responsible for Hongkong and might restrain its representatives. But Britain faces increased imports if a multilateral solution is found. If all exporters had equal access to all markets, Japan would gain greater access to British and Commonwealth markets. But policy dictates that there should be no cutting down of imports from Commonwealth countries. No wonder leaders of Commonwealth delegations had to miss cocktail parties to thrash this one out among themselves.

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-five territories extending from the Eastern Mediterranean to the Pacific Ocean.

was sufficient was open to doubt at the beginning of June when the recommendation was made. The doubts must be even stronger now, for though the increase in the share rate does not become generally effective until October, many societies believe that the small stimulus to the net inflow of money arising from the recommended increase has already occurred. The societies, like the rest of the economy, are faced with a period of austerity. Restrictions on building development, if they are introduced, could reduce the demand for mortgages and so, too, could a rise in taxes on consumer goods. But the latter could have an equal, if not greater, effect on the flow of new savings to the building societies. So would a tightening of the screws on credit. All the societies feel they could do in such circumstances would be to tighten their belts and to ration mortgages to accord with a diminished flow of savings. But patient acceptance of what they hope will be only a temporary check to expansion should not prevent them from asking what are the proper rates for shares and mortgages. Many of them have, in fact, already canvassed the answer: not less than 4 per cent on shares and not less than 7 per cent on mortgages.

CO-OPERATIVE PERMANENT BUSINESS

	Dec. 31, 1959	June 30, 1960	Dec. 31, 1960	June 30, 1961
Receipts	20,572	21,017	18,241	18,674
Withdrawals	21,967†	17,793†	18,326	17,855
Mortgage advances	18,849	15,249	20,181	19,598
Mortgage repayments	17,203	15,474	18,337	16,441
*Liquidity ratio per cent**	*15·2*	*14·0*	*16·0*	*14·0*
Reserve ratio per cent*	2·4	2·0	2·7	2·8

* At market values. † Includes accumulated interest.

The inadequacy of the rate of shares has long been recognised by societies which offer, in some form or another, subscription shares at a higher rate. The Co-operative Permanent, which as its latest figures show has been deliberately going slow so as to build up its reserve ratio, is now to join this number, offering 4½ per cent, tax paid, to savers who agree to subscribe regularly up to £10 a month for four years with an option to continue their subscriptions for another four years at the end of the initial period. It hopes to raise its net reserve ratio to 3 per cent by the end of this year and it has been one of the societies making eager use of Government money for lending on mortgage on older properties. In the present mood, a further extension of these facilities looks highly improbable.

BRITISH DRUG HOUSES

Another American Bid?

THE affairs of British Drug Houses are still undetermined. Just when it seemed likely that the link-up with Mead Johnson would receive the necessary approval from shareholders, a second proposal was received from William R. Warner, the British subsidiary of the American company, Warner-Lambert Pharmaceutical. Mr Geoffrey Eley proposed formally to adjourn for a fortnight Monday's meeting to consider the Mead Johnson scheme, the maximum period for which Mead Johnson will keep open the proposed deal.

The meeting, however, turned out to be anything but formal. About 50 shareholders attended and it lasted about 45 minutes, mainly occupied by questions to the chairman about the spending of the £5 million from the Mead Johnson deal and the current valuation of the company's properties. The one point of substance to emerge was that the link-up with Mead Johnson would have been approved but for the Warner intervention, for Mr Eley said that proxies showed 2,400,000 in favour and just under 500,000 against the resolutions.

Up to late on Thursday nothing in the way of firm proposals had been announced by William R. Warner. British Drug Houses and its advisers Hambros Bank, were still engaged in discussions with Warner's British subsidiary, which is advised by Samuel Montagu. According to Warner's letter to BDH last week, its business in this country is comparable to that of BDH and the group has ample resources to finance any reasonable expansion. It claimed that its range of products, which includes Richard Hudnut and Du Barry cosmetics, Veganin, Listerine, and Sloan's Liniment, is wider than that of Mead Johnson. The letter suggested that a merger might be achieved through a new holding company acquiring the shares of both companies or "by such other means as may be advised."

Shareholders must await the terms that Warner is prepared to offer and see whether they hold out a better prospect than the Mead Johnson scheme. So far, the latest development has evoked no response from the "well known company with wide experience in the pharmaceutical field" which Mr John Horn, leading the opposition to the Mead Johnson scheme, declared was prepared to make a bid if that deal fell through.

HOSIERY AND KNITWEAR

Trends and Fashion

AFTER many fat years of new materials to use and new markets to exploit, expansion comes easily to the hosiery and knitwear industry. This year, while sales of other textiles have slipped into decline, knitted goods have been scoring gains of up to 10 per cent. In May, when sales of all textiles fell by 7 per cent, sales of knitted goods were still 3 per cent higher than a year ago. But not all knitters are on velvet, and contraction, where it is necessary, is not being taken in such good part. To judge from complaints, some degree of distress is being suffered in socks, stockings and gloves and even underwear has felt the chill. Some exacerbation of this distress seems likely. Gloves have been hit by imports from Hongkong and Italy, and underwear is beginning to be exposed to similar competition. Socks have suffered from their almost total immunity to fashion and stockings from their susceptibility to the same force.

Hard-wearing synthetic fibres have prolonged the life of the humble sock to the point at which contraction of the industry had to follow. Feet that are insensitive to the greater comfort of woollen socks are likely to be equally unimpressed by the wider range of socks, including the more garish varieties, now on sale. Stockings are readily destructible and sales are increasing, but the switch to seamless types has taken business from some manufacturers. The switch entails ordering new machinery, and its acquisition takes time—too much time, say some manufacturers. They claim that by the time they get their new machines, fashion might have changed, and it is better to import foreign stockings, pay 33⅓ per cent import duty and supply them to their pressing customers. More than 2,000 new machines were installed in the year to March 31st, and more than 3,000 were still on order at that date.

Profits are no longer so lush in the stocking trade and production costs are probably higher than they need be. Imports account for about 5 per cent of total supplies, but imports, partly as the result of the temporary shortage of suitable machinery, are rising sharply. Last year imports of socks and stockings—mainly the latter—leapt from 14 million to 20½ million pairs and up to May of this year, imports were a sixth higher than in 1960. That may be a foretaste of what is to come rather than a temporary stopgap. Exports stuck at 24½ million pairs last year and they have since fallen steeply.

A productivity team that visited Italy last year and issued its report in June was certainly impressed by the efficiency of its stocking industry and its export potential. In other knitted goods, the Italian flair for style has sold Italian products in competition with garments of allegedly superior quality. Competition from Continental knitters therefore seems likely to intensify. At the same time a back door into the United States market has been partially sealed. By reducing the quantity of goods than can be imported from Canada by American visitors, the United States has reduced imports.

HARDWOOD

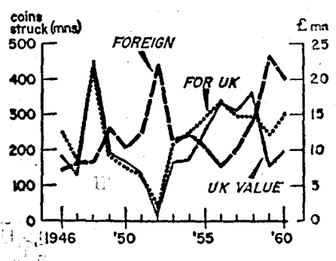
Log-jam in Ghana

GHANA'S proposed nationalisation of exports of unsawn timber threatens to bring the log trade to a standstill. Unless a form of contract is agreed soon business may dry up before the date for the inauguration of the new marketing scheme—already postponed from July to September—arrives. Ghana's demand that in future the trade should be subject to Ghanaian law is one stumbling block.

Though many countries, jealous of their sovereignty, wish to impose their own conditions, few succeed. Even Russia, an important exporter of timber to the United Kingdom, has failed to obtain this concession for timber. Export taxes of 5 or 7½ per cent have also been suggested in Ghana, but the proposals have been withdrawn. Four agents for Ghanaian timber in the United Kingdom have been appointed after a delay, but they have been unable to make any progress in drawing up a new form of buying contract, mainly because of apparent inefficiency on the part of Ghanaian officials. Ghanaian shippers would like to sell more timber, but cannot until an agreed contract exists. A pilot marketing scheme involving wawa logs has already come to grief; it has merely resulted in a sharp reduction in exports. Ghana's hardwood exports to Britain last year were worth £7 million. Half of those exports consisted of logs.

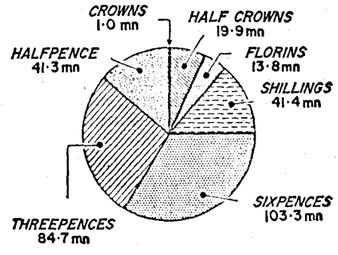
British buyers also have been reluctant to invest heavily in hardwood before they know what steps the Chancellor will take next week. Prospects for the furniture industry looked brighter in May; orders on hand rose to £9.3 million, compared with £8.5 million a year earlier, despite an increase in deliveries. But stocks of hardwood are adequate, and the level of activity is not too encouraging. Some demand for hardwood has been met from alternative sources; the Ivory Coast and the Congo have obtained some of the business that would have gone to Ghana. Prices are unlikely to weaken: freight charges on imports from the Far East are to rise in September.

ROYAL MINT



Numismatist's Delight

The ninety-first annual report of the Royal Mint, complete with full page cartoon of the Mint in operation, is the third since Mr J. H. James brought his lively mind and pen to the post of deputy master. This year's report is well worth seven shillings of any numismatist's money. The number of sixpences in circulation has doubled in the past ten years and, at 1,400 million, they are joining pennies as the most common coins in circulation. Although 300 million pennies were returned to the Mint as surplus in the last decade, a sudden demand in the autumn of last year exhausted stocks and the penny is likely to be struck again this year.



In a "requiem for the farthing" the deputy master traces the history of this small coin from its inception in 1279 by Edward I, to its demonetisation last New Year's eve. It was one of the oldest British coins and originally weighed one quarter of the obsolescent silver threepenny piece of our own times. It was the first coin to use the figure of Britannia, adopting this design in 1672 from a bronze coin of Antonius Pius issued 1,500 years earlier. The artistic conception in modern coins, Mr James feels, does not compare well with that of former times. The artist and engraver have lost contact and they, he suggests, must be brought together again. The last great design in English coinage was probably Pistrucci's George and Dragon, adopted one hundred and forty years ago and Mr James regrets that the "art of coinage attracts so little attention from the general public." It is a regret that some people in this country who have come to appreciate the convenience and style of many European coins will share.

COINS STRUCK AT THE ROYAL MINT

TOTAL 1946-60

UNITED KINGDOM 1960

The Royal Mint works continually at full capacity by supplementing its UK coinage demands with overseas orders. Although no pennies have been struck since 1953, there are still more of them circulating than any other denomination; in the total of 6,600 million coins in circulation at the end of 1960 there were 1,500 million pennies, 1,400 million sixpences, 1,000 million halfpence, 900 million shillings, and 700 million threepences.

SHORTER NOTES

There were 258,500 people unemployed in Great Britain on July 10th, which represented a slightly smaller fall since the month before than is expected seasonally. The figure, allowing for seasonal variations, has not altered much since the beginning of the year: it still represents only about 1.2 per cent of the estimated total of employees in Britain.

★

Arrangements have been made for Norwich Union Life Insurance and Prudential Assurance to make available to Capital and Counties Property £18.3 million on a secured debenture to cover the cost of principal developments planned over the next seven years.

★

There has been further evidence this week of cross fertilisation between the leading European stock markets. Following the placing of a large block of shares in Finsider, the biggest Italian steel company, arrangements have been made for the issue by S. G. Warburg, the paying agents, of deposit certificates. These will be in varying denominations of units of 500 lira each. The shares which can be dealt in under rule 163(1)e on the London Stock Exchange now stand at 20s. 9d. to yield 2¾ per cent. This is to be followed shortly by a full quotation in London of the shares of Montecatini, the Italian chemical group. The shares of Imperial Chemical Industries are already quoted on various foreign stock exchanges and soon they are to have a quotation on the Amsterdam Stock Exchange.

★

In a reference to a scrip issue in non voting shares by Illingworth Morris in last week's issue it was stated that holders owning 368,000 shares voted against this proposal. Votes in favour of the issue totalled 5,804,000.

★

Subscriptions are being invited for 3¼ million 2s. shares at 4s. each in Tilmanstone Investment Trust. The chairman is Mr Harold Drayton. In February, almost 84 per cent of its funds was in equities and at the end of June the net asset value per share was 3s. 9½d.

THE ECONOMIST JULY 22, 1961

Are Investment Policies Changing?

The growth in the volume of new money to be invested by the insurance industry continues. In 1959 the article in this series, referring to 1958, was entitled "Investing £1 million a Day." Last year the average daily increase in assets was over £1½ million.

THE percentage distribution of insurance office assets at book values shows little evidence of any significant change in investment policies; the movements were almost all of the same pattern that has persisted now for a decade. Variations in policy emerge more clearly, however, though still only approximately, when the total yearly increases in assets are broken down into categories:

PERCENTAGE OF YEAR'S INCREASE IN ASSETS REFLECTED IN CHANGE IN CATEGORIES†

	Increase in Total Assets* £ m.	Gilt-edged	Debenture	Pref.	Ord. shares	Other S.E. Securities	Mortgages	Property
1952	181	—	17·7	Decrease	22·1	10·5	27·6	14·9
1953	234	26·1	19·7	5·6	17·9	4·7	15·0	11·5
1954	289	10·7	24·2	10·0	33·6	3·8	12·5	8·0
1955	283	Decrease	19·8	7·1	29·0	2·5	31·1	11·3
1956	265	Decrease	17·4	3·0	27·5	0·8	36·2	10·6
1957	321	Decrease	26·2	2·2	30·8	Decrease	27·1	14·6
1958	358	10·9	17·0	0·3	24·6	6·4	18·7	14·5
1959	486	6·6	16·9	1·9	36·0	6·2	15·4	11·5
1960	530	11·9	11·5	0·2	34·2	2·7	21·1	11·1

*Figures refer to 44 offices between 1952–1956 and to 45 offices between 1957–1960. †The percentage may not add up to 100 owing to the incidence of decreases, changes in current assets, etc. The figures allow for the writing up of assets by the Royal Group in 1956 and for the redistribution of book values as between equities and fixed interest securities by the Prudential in 1958.

On these figures, gilt-edged attracted a higher proportion of funds in 1960 than in any year since 1953. It seems that insurance portfolios may have absorbed some part of the considerable volume of stock sold to investors other than the banks by the authorities in the latter part of 1960. In all these sales totalled about £370 million of gilt-edged securities and the increase in the gilt-edged holdings of the insurance offices is equivalent to about one-sixth of this. Debentures seem to have declined in attraction, though the expectation of heavy commitments in steel prior charges may have accounted for some reluctance to buy other debentures. Even in 1960, however, the increase in insurance companies' holdings of debentures equalled half the new issues of industrial debentures during the year.

Possibly the most surprising figure is the relative decline in the allocation to property in a year when the interest of the companies in this field was so frequently in the news. "Property" in insurance company balance sheets refers to properties held directly on their own account. Interests acquired in property companies would appear under the respective headings of debentures, mortgages, or ordinary shares. Many large projects announced recently have involved commitments to advance money in the future, with more limited current investment; again, this form of property interest would not appear under "property." Such participations may go some way to explain the buoyancy of investment in mortgages. Growing competition among property companies, fed by insurance funds, for sites ripe for development and for attractive property investments may also help to explain the slowing down in the proportion of new investment money going into property investments on the offices' own account.

Ordinary shares accounted for a higher proportion of the increase in assets than in any year except 1959. Yet, paradoxically, it might well be that 1960 introduced a period in which the appetite of insurance companies for ordinary shares will be less eager. Insurance companies have for some time been building up their interest in ordinary shares by allotting a higher share of investible funds to equities than the proportion which ordinary shares previously represented of their total assets, either at book values or in most cases at market values. But in all probability the proportion of assets at market values in ordinary shares at the end of 1959 was greater than the proportion of investible funds devoted to equities in 1960. A number of insurance company reports have specifically mentioned the fact that the level of equity purchases on the market fell quite sharply last year, and that the continued high level of investment in equities owed much to the high level of rights issues. Such issues typically offer the chance of investment at higher yields than those offered by stocks of equivalent status purchased normally in the market, and in most circumstances will be taken up almost as a matter of course by insurance companies. Thus the insurance companies may have been less active purchasers in the open market in 1960 than in 1959, and their purchases did not have the effect of increasing further the proportion which ordinary shares represented of the market value of total assets.

THIS was partly the result of the movements in stock prices. The Actuaries' Investment Index showed a 4.7 per cent fall in industrial ordinary shares over the year, while the price of 2½ per cent Consols fell by 10 per cent. In practice the fall in the value of insurance companies' fixed interest holdings, which are largely in redeemable securities, will not have been as great as this. Thus with ordinary share values falling slightly less than fixed interest values and new investment going slightly more heavily into fixed interest securities than equities and property, then if at the end of 1959 the distribution of invested assets at market values was roughly half and half as between fixed interest investments and equity investments (ordinary shares and property taken together), this relationship would have been about maintained by the year's purchases.

Perhaps there is some evidence of a reluctance to see the proportion of equity investments in the total (using market values) rise much beyond the present level. The recent distribution of increases in balance sheet assets for those companies that led the way in equity investment suggests that some consideration inhibits the increase in the proportion of assets at risk beyond a certain point. The companies listed below each had at least 20 per cent of their assets at book value in ordinary shares in 1953:—

PERCENTAGE HOLDINGS OF ORDINARY SHARES AT BOOK VALUES FOR SELECTED COMPANIES

	1953	1957	1958	1959	1960

UK Provident.....	25·0	30·8	30·2	36·8	36·5
45 Offices.....	11·9	16·4	17·7	19·3	20·5

It would seem reasonable to expect these offices to have the highest margins between book and market values for their equity holdings, and to have been faced earliest with the problem of deciding the extent to which they were prepared to see their portfolios consist of "risk" assets. Clearly some of them have been more restrained in recent years in adding to equity holdings than the industry as a whole. There may be some significance in the fact that equities as a proportion of assets at book value fell in nine of the 43 life funds analysed last year, whereas in 1959 falls were recorded in only four cases.

Because an insurance company's liabilities are fixed in money terms, and its policies assume some minimum rate of return upon investment, to be dependent beyond some point upon assets of which both the market value and the earning power are in principle highly variable, would leave too much open—which the insurance industry does not like doing. The actuarial principle of matching the average term of assets to that of liabilities also serves to limit the willingness to hold equities, by giving rise to a positive requirement for a substantial volume of redeemable fixed interest securities, since equities are perpetual securities while the average term of liabilities might be 20 or 30 years in many cases. It may be on these grounds that some offices have over the last year or so begun to feel the need for restraint in their equity purchases. A continuation of the pattern of investment of recent years, in which big investments have been made in equities and the value of equities in general has been rising, might gradually augment the number of offices finding it necessary to reconsider the balance of equities in their portfolios.

The present structure of stock market yields may also inhibit the life offices' purchases of ordinary shares. The purchase of low yielding "growth" stocks has always presented life offices with a problem. Even if one is convinced of the long run superiority of a low yielding growth equity to a more conservatively priced ordinary share, the fact that for some years the income from the higher yielding investment would exceed that from the "growth" stock implies that to purchase the "growth" stock favours those policyholders whose interest in the fund stretches well into the future and is to the prejudice of those whose policies are nearing maturity. This problem of fairness between generations of policyholders has today been extended to the whole field of equity investment by the apparently firm establishment of the so-called reverse yield gap. In 1959 and early in 1960, perhaps, the acceptance of low yields on ordinary shares, despite this consideration, seemed justified by the imminence of substantial increases in earnings and dividends. More recently it has begun to seem possible that the lapse of time before low yields are justified by future income growth may prove a more serious matter than it appeared to be in 1959.

Whether the impact of the changing mood of insurance investment policy will be apparent in the balance sheet figures for 1961 is uncertain. It was noticeable that, during the period of strongly rising equity markets early this year, insurance companies were generally believed to be participating in the market only to a very limited extent. This could be ascribed to their greater sophistication in appraising economic uncertainties. But it is unusual for them to stand aside at a time when active markets provide one of the few occasions when stock is available in sufficient quantities. That they appeared to be standing aside in the spring, therefore, suggests that they were less anxious to add to their "risk" assets. It is true that there are again plenty of rights issues this year, and the possibly more modest requirements of equities by insurance funds this year may be largely satisfied by them. Nonetheless, the proportion of new funds allocated to equities may still exceed the 20 per cent at book value of existing total assets, so that a further rise in the percentage of assets at book value in ordinary shares is possible. The real test of the theoretical and practical limits that should be set upon "risk" assets as a proportion of total funds would be presented by a renewed strong rise in equities, taking their proportion at market value to new high levels. The allocation of money in new investment might then assume a quite different pattern from that of recent years.

(n) Excluding Century assets. (b) Including assets of fire and accident branches. (c) Excluding assets of capital redemption branch.

Poor Underwriting Results

HOPES that general underwriting would show a profit in 1960 have been disappointed. In spite of record fire losses and severe storm damage on both sides of the Atlantic, fire account profits before charging overhead expenses were not far short of the balance in hand at the end of 1959. There was, however, a considerable setback on the much larger accident side of the business. The leading insurance companies, whose accounts are analysed in Table I, showed losses on general underwriting to the tune of £2.9 million, after providing for overhead expenses and tax. Increased transfers from life annuity and capital redemption funds still left the deficit at £500,000. Interest income had to meet this loss as well as the cost of higher dividends; but the buoyancy of the revenue from the assets of the general funds yielded £8,155,000, only marginally less than the surplus in 1959, to be added to free reserves.

A further improvement in the profitability of the bulk of the business done by British insurers in the United States was swamped by the havoc wrought last September by the hurricane Donna. Most of the British insurance companies that operate in America once again made an underwriting loss which, as Table X shows, totalled $12.4 million, compared with a loss of $8.3 million in 1959. Last year's fire wastage in America exceeded the record damage in 1959; on the other hand, the rise in motor premium rates in the United States has at last gone a fair way towards eliminating the heavy losses on this side of the business. Though familiar cries of woe have arisen from the marine underwriters and though cargo premium rates are still under pressure, surpluses transferred from marine funds in 1960 by the offices included in Table I amounted to £4.1 million, the largest profit since 1956.

This was the fifth successive year in which the insurance companies lost money from non-life underwriting. Profits are bound to fluctuate from year to year when premiums are based on long-term experience that includes (except in accident insurance) large, but relatively infrequent, claims. But the record of the past five years, and in particular the relapse in 1960, poses the question whether there may have been a fundamental change since 1955, when the offices included in Table VI made a net underwriting profit of £4.2 million from non-life premiums of £500 million.

UNDERWRITING losses in the United States have been the main cause of the trouble. The American system of control, with its frustrating delays in securing approval for rate increases no matter how justified these may be, has rightly received most of the blame. Fierce competition for the most desirable business abroad and, to a lesser extent, at home has also eroded profit margins. There is, nevertheless, no reason why general underwriting should not make money once again, though a return to the profits of the earlier postwar years does not seem likely; the net underwriting profits of the companies included in Table VI was £7¼ million in 1950 from premiums of less than half the £750 million received in 1960. The increase in rates for British motor insurance will help but it will not have a marked effect on this year's figures. If fire and accident underwriting breaks even after meeting overhead expenses, most insurance men will regard 1961 as successful. Fire losses in the first half of this year rose in North America, amounting to $670 million (against $604 million). At home there was a welcome reduction with fire losses amounting to £20.6 million (against £26.9 million). But it is too soon to assume that the abnormal losses of 1959 and 1960 are over; in each of these ye fire wastage was about £44 million, co pared with a previous annual average about £25 million.

Interest income from non-life assets h comfortably covered the underwriti deficits, financed higher dividends and making useful contributions to free reserv It is this buoyancy of non-life inter income which has made insurance shar popular with investors. They look for, a have duly received, steadily increasing di dends, although for many insurance co panies, non-life underwriting profits ha been few and far between. Insurers do n do badly if they can avoid underwriti losses on their non-life business, for t increase in premium income floats intere earnings up with it. Transfers from t rapidly growing life, annuity and capit redemption funds are also rising. Com pared with an annual average of £800,00 in the preceding ten years, £1,300,000 w brought into the profit and loss accoun of the leading composite insurance co panies included in Table I and X in 195 but the transfer was £1,500,000 in 1959 a £2,400,000 in 1960. Following bon declarations, the Eagle Star transferre £310,000 in 1960 (against £136,000 i 1959), the London Assurance £175,00 (against £30,000), the Northern £232,00 (against £33,000), the Norwich Union Fir £330,000 (against £25,000) from the Sco tish Union National fund, the Phœni £125,000 (against £7,000) and the York shire £208,000 (against £114,000). Mor than one quarter of the 1960 dividends o the Northern, Norwich Union Fire and Yorkshire were covered by life departmen transfers. For the offices as a whole th proportion of dividends covered by life department transfers was 12 per cent i 1960, 11 per cent in 1955 and 13 per cen in 1950.

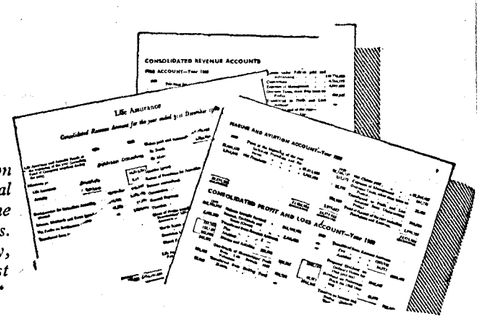
the new men . . . the computer-minded

This is the age of computers—and the progressive men who *use* computers; of time saved, waste saved, money saved. Sooner or later you'll need one in your business. Sooner than competitors—or later? The decision is yours. . . .

Another decision: which make of computer? Worth remembering . . . Ferranti offer you a wider range of computers, programs, training facilities and services than any other company. And current Ferranti activities include Nebula (Natural Electronic Business Language for commercial programming), Orion (revolutionary new "second generation" computer) and Atlas (most advanced super-speed computer system in the world).

Which type of computer? Here Ferranti can be helpful indeed. They'll tell you if you can't make economical use of a computer at all. But probably you can. Look at three spheres of business where Ferranti have proved their worth.

PROCESS CONTROL. A major chemical company is installing a FERRANTI ARGUS computer for complete automatic control of a manufacturing plant. The ARGUS will replace about 100 conventional control devices and also provide information for analysis.



750,000 INSURANCE POLICIES are processed monthly by each of the PERSEUS computers in Stockholm and Cape Town, which keep policies up-to-date from punched cards and also print renewal notices. By any standards, by far the biggest job ever done on British computers.

NOT ALL USERS ARE OWNERS. The Wimpey Organisation bought time at Ferranti's London Computer Centre, using a standard frame-analysis program on steelwork design for the new Ascot grandstand. Many clients use Ferranti's 'do-it-yourself' programming aids.

FERRANTI RANGE OF COMPUTER SYSTEMS

Insurance Accounts: An Investor's Guide

Insurance shares are now ranked among the growth stocks of the London Stock Exchange but they are a type of equity investment requiring special knowledge and understanding. Much of their recent popularity is due to the energy and skill of a handful of stockbrokers in explaining their complexities. Without such guidance the lay investor, lacking the expertise of an actuary, may find it difficult to judge the merits of an individual share. The most serious obstacle to his understanding is the necessarily complicated form and matter of an insurance company's accounts.

THE form in which insurance company accounts are returned to the Board of Trade is minutely prescribed by the Insurance Companies Act, 1958. Because of the considerable amount of detail required, the Board of Trade returns are only rarely available for publication at the time of the annual general meeting, and the abridged accounts which are then presented to shareholders inevitably give considerably less information. The investor, in fact, has to look at three distinct sections of the accounts: the departmental revenue accounts; the profit and loss account; and the balance sheet.

The departmental revenue accounts are the trading accounts of an insurance company. Normally they are presented separately for fire, accident and general, and marine business, though some companies in their published accounts—and all must in their Board of Trade returns—further subdivide the accident and general account into personal accident, motor vehicle, and miscellaneous business. Revenue accounts are also presented for life and annuity business. The income of a fire or accident account as normally published consists of the premiums received, and the outgo includes claims (both paid and outstanding), commission, expenses of management, certain taxes and the increase in departmental reserves. The balance of premiums that is not actually required to pay claims and expenses is available for investment and the income from the investment of these departmental funds, though earned by the fire or accident premiums, is normally carried straight to the profit and loss account and not shown separately in the departmental revenue accounts.

A large proportion of fire and accident business is transacted on a yearly basis—although the long term business is increasing—and on December 31st the business on the books for which premiums have been paid in the preceeding year will range from policies taken out on January 1st, for which there will be virtually no liability (apart from unnotified claims), to policies taken out on December 31st, which will be at risk for the whole of the ensuing year. It is therefore customary to set aside a fixed percentage of the year's premiums for this "unexpired risk"; a common figure is 40 per cent, though higher percentages up to 60 per cent are not unusual. This reserve forms the fund of the fire or accident department on December 31st. Any difference of income over outgo, less any increase in the reserve required by an increase in the premium income, is available for transfer to the profit and loss account and may be regarded as the profit of the particular account. This amount can be expressed as a percentage of the year's premiums and the "profit ratio" so calculated provides a basis of comparison between different accounts and different companies. An expanding premium income will appear to reduce the profit, because at least 40 per cent of the additional premiums will be required to augment the reserve against unexpired risks. But provided that underwriting is profitable shareholders will look for an expanding premium income as pointing to an increase in earnings and an increase in investment income from the larger fund.

The marine revenue account is similar in form to the fire and accident account, but owing to the length of time taken to settle claims this account is usually kept open for two, three or four years. Accounts are often shown separately for "current year," "last preceding year" and "previous years," and transfers are made to the profit and loss account only from the accounts of "previous years." The total reserve for outstanding claims for all years is always more than the premium income for the current year. The ratio of reserves to premium income is often used as a rough indicator of the strength of the fund. A steep rise in premiums will have the effect of reducing the ratio for merely statistical reasons. Similarly a transfer to the profit and loss account will reduce the ratio. But, provided such points are kept in mind, this ratio is one of the few yardsticks that an investor can apply to a marine fund.

THE life and annuity revenue accounts cannot be interpreted in the same way as the accounts of the other departments. These accounts show each year the fund at the beginning of the accounting period, the additions by way of premium income and interest (less tax) and the outgoings consisting of claims, surrenders and expenses, the balancing item being the fund at the end of the accounting period. What the revenue accounts do not show is how the fund compares with the liabilities which it has to meet. In order to assess the liabilities an actuarial valuation must be made at the end of every five years; this is the minimum requirement but many offices value at three-yearly intervals while industrial-ordinary offices value annually. A comparison of the amount of the fund with the value of the liabilities shows how much surplus there is available. What proportion of the surplus the directors consider is distributable is shared between policyholders and shareholders according to the company's articles, but the shareholders' portion is nowadays rarely more than 10 per cent and generally rather less. It will be seen that life department revenue accounts unaccompanied by the periodical valuation tell the investor very little. The most helpful factor therefore to watch, between valuations, is the net rate of interest earned on the fund. This is normally found by the formula:

$$\text{Rate per cent} = \frac{2 \times I}{A + B - I} \times 100$$

Where A = fund at beginning of year; B = fund at end of year; I = net interest earned in the year.

Since the surplus on a life fund consists to a large extent of interest profit a comparison of the rate of interest so calculated with the rate assumed in the previous valuation will give some rough indication of the emerging surplus on the life fund; but such a comparison leaves a considerable margin for error, not least because the

BEFORE IT'S TOO LATE...

. . . find out whether you too can secure £10,000 in capital and income benefits for dependants in return for an annual premium equivalent to a shilling or two per day, according to age. For instance, at age 25 next birthday, the normal annual premium represents an outlay of less than 1s. 4d. per day.

Particulars, example and rates are included in the booklet "Family Protection Scheme" which can be obtained on request, without obligation, from

necessity of setting up adequate reserves for an increase in business will almost certainly have the effect of holding up the emergence of surplus.

For a composite company (one transacting life business together with fire, accident and marine business), the chief items of income in the profit and loss account are the transfers from the revenue accounts (underwriting profits) and interest, dividends and rents (investment income). When a surplus is declared after an actuarial valuation of the life, annuity, or capital redemption funds, it is usual for the shareholders' allocation to be transferred to the profit and loss account in equal annual amounts over the intervening period—the two to five years—before the next valuation. Other miscellaneous sources of income include transfer fees (for those companies which still charge them), trustee fees, and exchange and investment profits. Profit and loss outgo consists mainly of taxation on investment income, other UK taxation, and any overseas taxation not already charged in the departmental accounts. Provision for staff superannuation is also fairly heavy and, in addition, there are miscellaneous provisions such as bad debts or losses on exchange. The balance between income and outgo, which includes the office's underwriting results for the year, may be regarded as the net earnings after tax for the year available for the payment of dividends. Underwriting is notoriously a cyclical business and no company would be expected to show a consistently upward trend of underwriting profits. The investor commonly uses as a guide the ratio of net earnings to the net dividend to establish the earnings cover; he would be well advised to use this ratio in conjunction with the cover provided by the gross investment income for the gross dividend. It is, in fact, investment income that is the yardstick of success and the indicator of dividend prospects. In 1957, the worst of recent years in underwriting experience, the dividends of twenty large companies were barely covered by earnings; but they were covered one and a half times by investment income. In 1960, the dividends of the same companies were some 75 per cent higher, and they were covered one and one third times by both net earnings and investment income.

In the balance sheet, liabilities include the capital, capital and revenue reserves, the departmental funds and various other liabilities and provisions (of which the most important is "claims admitted but not paid"). The life fund assets and life fund liabilities usually cancel each other out in the consolidated balance sheet, and a life fund balance sheet is presented separately. The total of capital and the capital and revenue reserves represents the "free reserves" and when divided by the number of shares corresponds roughly to the "net asset value" of an industrial share. Assets include fixed and current assets, and it is usual to group together the fixed assets in categories—mortgages and loans, government and municipal stocks, debentures, preference shares, ordinary shares, property and other investments—and to express each category as a percentage of the total.

An assurance company is not required to show the market value of its investments but only to certify that they are, in the aggregate, fully of the value stated. For the majority of insurance companies, government stocks are worth less than their book value while ordinary shares are worth considerably more. The percentage in each category, by book value, may therefore be misleading in terms of market value but by subtracting the book values of the previous year from those of the current year the investor can gain some idea of the categories in which new money has been invested over the year. Then by examining the various stock indexes, he can judge whether a policy of, say, investing in debentures rather than industrial shares is likely to have been successful.

Prospects for Graduated Pensions

Easter Monday, April 3, 1961, brought into force the scheme of graduated pensions introduced by the National Insurance Act, 1959, with its provisions for contracting out, by their employers, of employees covered under adequate occupational schemes.

A LARGE number of pension schemes are based on insurance contracts, and in respect of these the life offices, pension consultants and insurance brokers shouldered a great burden of work in the preceding months to ensure that employers were fully advised. Virtually all employers who elected to contract out received their "Certificates of Non-participation" in time—clear evidence of the success of their efforts and those of the Registrar and his staff. In addition, many new schemes, with benefits generally above the maximum provided in the state scheme, were introduced for the specific purpose of contracting out.

It was heartening to the life offices that in the event the number of employees contracted out was over 4¼ million, against an original estimate by the government of 2½ million. There is good reason to believe that this number will increase. Many offices, consultants and brokers will be encouraged to persuade employers to bring their employees under an occupational pension scheme and then contract them out. The contracting out arrangements will involve considerable administrative work, but schemes secured by insurance contracts will carry the assistance of the life offices in these and other matters. The co-operative attitude adopted by both the Ministry of Pensions and the Registrar of Non-participating Employments has been of the greatest assistance to those concerned with the detailed arrangements.

Immediate thought has concentrated on the specific question of whether or not to contract out of the graduated part of the new state scheme. But in the long run the most important aspect of the National Insurance Act, 1959, may well be that it introduced compulsory preservation rights into occupational schemes. This matter has been under considerable discussion since the war, figuring prominently in the reports of as many as three official committees and in the discussions of professional bodies such as the Institute of Actuaries. The broad consensus of informed opinion was that preservation of pension rights on a basis graduated according to length of service was desirable but that, in the absence of compulsion, it was likely to develop only slowly. This element of compulsion has been introduced by the National Insurance Act, 1959. The outcome of the provision for contracting out is that no fewer than 4¼ million people are now entitled to compulsory preservation of pension rights at the maximum level of benefits provided by the state graduated scheme. Admittedly, this level of preservation is low, but since the beneficiaries represent some 40 per cent of the total present membership of occupational schemes, there can be no doubt that an entirely new situation has been created and that the level of preservation itself will rise.

Compulsory preservation of pension rights in respect of contracted-out employment may be effected either under the occupa-

tional scheme or by means of a "payment in lieu" under the state scheme. There is clearly a practical minimum to the pension which can be preserved under occupational schemes, and for this reason it will be some years before employees acquire preserved pensions under a number of different occupational schemes. When this situation does arise, however, co-ordinating the payment of such pensions may present a problem. No formal announcement has been made by the representative bodies of the life offices, but they have already given a great deal of thought to the matter and when the problem becomes a reality they are likely to be operating suitable arrangements for co-ordinating the payments in respect of a number of pensions preserved for one individual under schemes secured by insurance contracts.

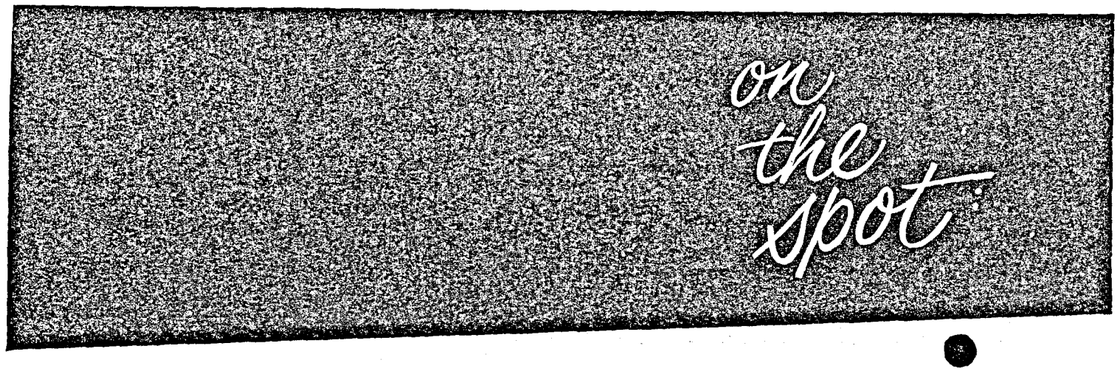
Since the possibility of a graduated element in the state scheme was first raised in the Labour Party's booklet *National Superannuation* in February, 1957, there has been much speculation about the effect on the pensions business transacted by the life offices. There can be little doubt that, as on previous occasions when extensions have been made to the state scheme, it has brought a considerable net increase in business to the offices. Even where employers have decided not to contract out, they have in most cases decided to continue their own private arrangements unaltered and very few have entirely cancelled their arrangements.

So there is plenty of encouragement for life offices, consultants and brokers to direct their main efforts to the provision of more adequate pensions for the so-called "uncovered 50 per cent" who are not at present covered by an occupational scheme. An obvious corollary to this is that time spent in altering existing private arrangements of whatever kind for insubstantial reasons will not be in the widest interests of the private sector as a whole.

The burdens imposed on the life offices, consultants and brokers by the alterations to the pensions background brought about by the *Finance Act, 1956*, and by the *National Insurance Act, 1959*, have inhibited the spread of private pension schemes. The Finance Act, 1956, led to the wholesale remaking of existing schemes secured by insurance contracts so as to afford employees and employers the advantages of more favourable tax treatment. For offices running a large number of schemes, this task was far from complete when they had to give detailed attention to the proposals which culminated in the National Insurance Act, 1959. It would assist the spread of private pension provision if the government forbore from further legislation in this field for some years.

Variable Insurance Contracts

Insurance contracts providing variable forms of annuity and life benefits are comparatively new in this country, the first appearing in 1957 and the latest this year. These policies link the value of the benefits with the price movement of units in a unit trust or with the value of the investments in a special fund.



THE reasoning behind the variable annuity is that, broadly speaking, ordinary share prices should move in line with other prices and that on retirement the annuitant's real income will be protected to some extent against any fall in the value of money. The policyholder secures the maximum return (it could, in theory, be a loss) and the office writing the policy shoulders none of the investment risk, as it would if it backed a conventional annuity by a fund of ordinary shares. The policyholder gains the full equity advantage but he also carries the full equity risk. This, in other words, is an annuity for the sophisticated policyholder who realises that his income on retirement may vary quite widely. The variable endowment schemes link the sum payable on death or maturity to the price of the underlying units and the policyholder carries the risks and advantages of an equity portfolio.

VARIABLE ANNUITIES

THESE specialised forms of contract have been issued by two offices, the London and Manchester and the Northern, for several years. The policies are issued only to self-employed and other persons for whom no approved pension arrangement is available. Those who can hold these policies and the amounts of premium which they can pay are set out in the 1956 Finance Act, which allows the premiums paid to be offset against relevant taxable income. The offices can recover most of the tax deducted from dividends received on investments so that in effect there is a gross roll-up of premiums.

The London and Manchester plan provides benefits linked in value to the day-to-day price of Investment Trust Units. The minimum premium is £200 in any year and the premiums are converted into a number of variable annuity units which are payable from an agreed pension age between the 60th and 70th birthdays. Normally the annuity is payable for a guaranteed minimum period of five years and for life thereafter. The current price of Investment Trust Units determines the number of annuity units secured by each premium paid; similarly, when annuity payments fall due in the future, the value of each payment will be based on the then current price of Investment Trust Units. The London and Manchester contract guarantees the rate of expense, investment yield and the mortality risk, so that the policyholder is concerned only with fluctuations in the price of Investment Trust Units; any profit or loss on the other factors is the affair of the London and Manchester. If the policyholder dies before the selected pension age a return is made to the estate in cash of all premiums paid under the policy. The policyholder can also elect to accept a reduced personal annuity to provide for a reversionary annuity to his wife should she survive him.

The **Northern** plan works on different lines. All premiums paid are carried to a special variable annuity fund which, normally, is invested entirely in ordinary shares. The fund has to bear the expenses of running the business within certain limits; but subject to this, all the benefits—capital appreciation, investment income and mortality profit—accrue to the policyholders. The minimum first premium is £100 and the method of operation is to allocate for each premium received a number of "accumulation units" based on the current value of these units, which is tied to the value of the investments in the special fund. The policyholder need not decide at the outset when the annuity will begin and may choose, in due course, any date between the 60th and 70th birthdays. A variety of options are available: he can choose an annuity in variable form or for a fixed amount; he may take it for life only or for a period not exceeding 10 years and for life thereafter; and he can reduce his personal annuity to include his dependants' reversionary annuity in the contract. If a variable annuity is selected, the "accumulation units" are exchanged for a number of "variable annuity units" when the annuity begins and the quarterly annuity payments then vary with the value of these units. Should

Europe's first
C-E-I-R Centre
now offers computer services in London

WHAT *precisely is a C-E-I-R Centre?* In brief, it is the 'operations room' for the control of any and every technique of scientific commercial and industrial management. In the United States there is already a nation-wide network of C-E-I-R Centres, equipped with the most advanced available computing systems.

WHO *are the people who run the Centre?* C-E-I-R (U.K.) Limited, the British subsidiary of the largest independent commercial computer services organization in the world. The organization has a staff of over 400 mathematicians, economists, scientists, computer specialists, and programmers.

WHY *is a London C-E-I-R Centre necessary?* Because C-E-I-R's list of clients, which includes government departments and many famous commercial corporations, has extended rapidly in Britain. On-the-spot services were urgently needed—and now here they are, with some of the world's most advanced computer facilities ready to hand.

WHEN *does a commercial or public service organization need the help of a C-E-I-R Centre?* Whenever it has any kind of management, stock-control, economic, scientific, or development problem (however large or small) that can be solved by up-to-date logical or mathematical methods.

HOW *much do C-E-I-R's services cost?* That depends, of course, upon the nature of the problem—but it is safe to say that C-E-I-R's charges, project for project, are the lowest in Europe. And that goes for the straight hire of computer time here in London as well.

WHERE *do you find out more about C-E-I-R?* By ringing up either the Main Office of C-E-I-R (U.K.) Ltd. at the number shown below, or the new C-E-I-R Centre itself. The address is: 58 NEWMAN STREET, LONDON, W.1. Telephone: LANgham 8658.

THE LONDON ASSURANCE

HEAD OFFICE: 1 KING WILLIAM STREET · LONDON · E.C.4

the policyholder die before his annuity instalments begin, his estate receives the net value as at the date of death of the accumulation units standing to his credit.

VARIABLE ENDOWMENT ASSURANCE

THE premiums under the first four of the five plans discussed below are eligible for life assurance tax relief within the usual limits. Under the fifth plan the endowment assurance policy forms part of an approved pension arrangement where the premiums are paid by the employer and therefore attract tax relief.

The **Equitas** policy issued by the London and Edinburgh is an endowment assurance which guarantees a basic sum but links the value of the benefit with the price movement of shares in the Unicorn Trust. The policies are issued for terms of 5 to 25 years. For a policy for a basic £1,000 for a term of 10 years, as an example, each year's premium can be regarded as securing one-tenth of the basic sum assured. On the first premium, the policyholder obtains a benefit related to the value of a number of share units corresponding to a purchase price of £100. Further calculations are made at each renewal date on the basis of the then current price of the share units. When the policy matures, a cash settlement is made on the basis of the value of the share units deemed to have accumulated over the term, but with the guarantee that the sum payable will not be less than the basic £1,000. If the policyholder dies during the term of the policy, the cash settlement is made up of the value of the share units deemed to have been purchased to date of death plus the proportion of the basic sum assured not converted into share units. This again is subject to the guaranteed minimum payment. So far this is the only policy offered with a guaranteed minimum sum payable on death or maturity and this is allowed for in the premium.

British Life Office and British Life Units offer another plan, **British Life Unit Assurance.** This provides by means of an endowment assurance an initial sum assured and a target of not less than £1,000 to be invested over the life of the policy in the units. Policies are issued for terms of 12, 15 or 20 years and the premiums are payable quarterly. The plan includes an investment programme showing the amount available for investment in British Life Units on each quarterly renewal date at the current price. The essence of this scheme, as distinct from the Equitas plan, is that the investment of cash into units steadily increases with each premium paid. At the end of the period the accumulated holding of British Life Units is passed to the policyholder. Should the policyholder die during the period of a contract designed, say, to implement the minimum investment programme of £1,000, the amount available would be the British Life Units already secured plus a cash payment of the balance of the investment programme not completed (that is £1,000 less the sums already invested in British Life Units).

The **M & G Trust Assurance Plan** is a variable endowment assurance issued by M & G Trust (Assurance) Ltd in association with London Life. The initial cash sum assured is equal to the total premiums to be paid over the term of the policy. Each premium paid, less a fixed management charge and the cost of assuring the cash payment on death, is invested in units of the M & G General Trust Fund, which are allocated to the policy, together with the income from accumulated units, which is invested in further units which are similarly allocated. In effect, this is a roll-up of dividend income. Policies are usually for terms of 10 to 35 years but with maturity age not beyond 70. The minimum annual premium is £20. At the maturity date the accumulated trust units are passed to the policyholder. On the death of the policyholder during the term, the benefit is made up of the fund of units built up under the contract plus a cash sum equal to the whole of the annual premiums which would have been paid from the date of death up to the end of the term.

The British Shareholders International Trust, in association with Eagle Star and Guardian, offer the **Executive Savings Scheme,** which provides a variable endowment assurance where the sum assured is shown as a number of BSIT units equivalent to a cash sum of between £1,000 and £4,000 based on the price of units on the date the policy begins. The initial premium is one-quarter of the cost of the units followed by uniform annual premiums over the term of the policy. In effect, the office immediately purchases BSIT units equivalent to the total sum assured in advance of the receipt of most of the premiums. On maturity the BSIT units secured by the policy are transferred to the policyholder ; on death during the term, the units secured are transferred to the estate.

The British Shareholders Trust in association with the Eagle Star has recently introduced a plan—**BST Unit Retirement Scheme**—similar in method of operation to the Equitas policy. The BST policy, however, is not generally available to the public but is intended to provide part of the benefit under an approved " top hat " pension scheme. A feature of a " top hat " arrangement is that normally a part (usually one-quarter) of the value of the benefits at pensionable age may be commuted for a cash payment, which under current regulations is not liable to income tax or surtax. Under the scheme an endowment assurance policy is effected by the employer in terms of BST units to a value not exceeding the part of the member's total retirement benefits which it is expected may be commuted. Over the term of the policy the sum so assured is gradually changed into the value of a number of BST units. On retirement the BST units are transferred to the member who can retain them as an investment or sell them ; the balance of the pension arrangement securing an annuity is provided by a separate policy. On death during the term, the amount payable will be a proportion of the basic sum assured plus the value of the number of BST units deemed to have been purchased.

REGULAR SAVING IN A UNIT TRUST PLUS LIFE ASSURANCE COVER

BRITISH SHAREHOLDERS INTERNATIONAL TRUST in association with the Eagle Star has produced a plan called the **Regular Savings Scheme,** for regular savings in BSIT units, by which any individual aged under 55 can contract with BSI Trust to buy a fixed number of units (between 10 and 100) each month at the price then ruling. The contract is for one, two or three years. Should the person die during the period of the contract the life cover provides the value of the balance of the units which would have been purchased to the end of the contract. Thus if a policyholder who has contracted to buy 10 units per month for three years dies at the end of the second year, his estate will receive the 240 units already accumulated plus a cash sum equivalent to the value of 120 units at the date of the death. To the extent that the death benefit is the value of a number of units of fluctuating price this is a form of variable assurance. The cost of the life cover is met by the trust.

*

DEFERRED annuity contracts, as a rule, cover a long period of years, partly while the premiums paid are accumulating and thereafter while the annuity is being paid. Variable annuities appeal to that section of the public who believe that, taking a long view, an investment in equities will give the best results. Premiums received by the two offices concerned amounted to about £380,000 in 1960. It is reasonable to suggest that a combination of a fixed annuity contract and a variable annuity contract may provide the ideal method of providing a retirement annuity of the self-employed type permitted by the 1956 Finance Act. Some of the variable endowment assurance plans have only recently been offered and it is too early to assess the success of this form of life assurance. If variable life assurance proves popular, then similar plans may well be devised to meet the public demand.

BRITISH INSURANCE

Pension Schemes with Profits

This article is based on answers to a questionnaire sent out to twenty-eight insurance offices that offer deferred annuity policies with a participation in profits.

In their nature, life assurance and pension policies are long-term contracts. In a pension policy, the period between entry into a scheme and normal retiring date may be as long as 40 years and the pension may be paid for 15 years or more; the complete span may thus cover over 50 years. To determine the premiums which ought to be paid, the actuary of the office concerned has particularly to take into account the rate of interest he should earn on the premiums received and the rates of mortality which are expected. Economic and fiscal considerations which may vary from time to time will affect the rate of interest while rates of mortality may be positively affected by medical discoveries.

Before 1939 the rate of interest which could be earned by an office on its funds was relatively stable. In 1928 some offices were assuming in their premium calculations a net rate of interest as high as 4½ per cent and were prepared to guarantee premium rates in respect of all benefits to be bought for then members of a scheme. Since 1946 interest rates have fluctuated widely and may continue to do so in the future; this has made the assumption of a rate for calculating premiums more problematical. An actuary has to exercise reasonable caution, and at times the interest earned exceeds what he assumed. This has led, within the last decade, to the development of with profit deferred annuity policies which benefit the employer if the rate of interest earned is higher than the rate assumed. The policy premium under a with profit contract is, however, higher than under a non profit contract, but against this the employer is entitled to receive a bonus based on the profits of the office. At the moment this bonus may be sufficient to reduce his total outlay under a with profit contract below that under a non profit contract. But a marked fall in interest rates or an appreciable lengthening of the expectation of life would result in lower bonuses—or in an extreme case, perhaps, no bonus at all.

The number of offices offering a deferred annuity policy with participation in profits has steadily increased. There are now twenty-eight, representing about one-half of those transacting life business. Three of these offices issue policies only on a with profits basis for new schemes. For most of the offices which have been offering a choice between the two types at least 50 per cent of the premium income under new schemes last year was in respect of with profit policies, and in some cases practically all the new business was with profits. Many offices require a minimum number of employees or a minimum annual premium before they are prepared to undertake a with profit scheme. Seven offices have no minimum, but broadly speaking the smaller the scheme the more restricted is the field of choice of an office. On the other hand, there is no maximum limit on the number of employees or the premium payable.

The conditions applicable to a with profit policy, the methods of sharing in the valuation surplus and the methods of arriving at the cost to the employer vary from office to office. There are also different ways in which the contributions payable by the employer may be calculated. Any comparisons of outlay, unless accompanied by a detailed explanation which would be outside the scope of this article, would therefore be misleading. But irrespective of whether the pension benefits are secured under a with profit or a non profit policy, there are three methods by which the costing of a scheme can be carried out—annual premium, single premium and controlled funding.

Under the **annual premium method,** when an employee enters the scheme, the cost of his prospective pension at the normal retiring date is spread evenly over the years of his future service and the cost of any future increases in pension are similarly spread. In a contributory scheme the employee bears his proportionate share of the cost.

Under the **single premium method** pensions are purchased from year to year as they accrue. For example, if according to an employee's salary grade he earned £15 of pension for each year of service in that grade, that amount of pension would be bought each year. In a contributory scheme the employee's contribution is applied in the first place to purchase as much as possible of the pension due to be purchased for him in a particular year and then the employer purchases any balance. The actual amount of the pension purchased by the employee's contributions and the cost to the employer of the balance will depend upon the age of the employee on the date on which the pension is purchased. As the employee becomes older so his contributions will purchase a smaller amount of pension, leaving a greater amount to be purchased by the employer. Taking two schemes similar in all respects, under which both numbers and benefits remain static, the cost under the annual premium method in the earlier years is greater than under the single premium method and lower in the later years. In practice, employees leave or retire and their places are taken by younger employees so that taking into account all factors the single premium method is the one usually adopted. It is, however, unsuitable for very small schemes where it could lead to wide fluctuations in cost.

The third method, **controlled funding,** attempts to keep the cost of pensions to employers more level. On certain assumptions about rates of interest and rates of mortality and taking into account the ages of the employees covered by the scheme and their salaries, it is possible to estimate what contributions will purchase the pensions as they emerge. The employer's contributions are therefore allocated as they are paid towards the pensions according to the seniority in age of the members of the fund. Such a method of funding is more suitable for large schemes and when used in conjunction with a with profit policy produces an arrangement similar to a self-administered fund. Not all three methods are offered as choices by all offices transacting with profit business. Nine offices, for example, only offer the controlled funding method. But of the other offices practically all offer the employer a choice of at least two, and some offer all three.

Another method of securing the pensions of employees is to build up a fund by a **deposit administration contract.** The aim here is to set up a fund from which the necessary amount of capital is transferred to purchase pensions as and when they become payable. Two offices issue this particular type of policy and a charge of 5 per cent is made only if the moneys are applied to purchase a pension elsewhere in the market. The contributions to the fund are, broadly speaking, calculated on the same principles as those used in the controlled funding method. The interest element in these schemes is, in the case of one office, geared to the yield on its life and annuity fund and in the other to the rate of bonus declared on a defined class of endowment assurances.

The offices with one exception are prepared to attach guarantees to their premium rates. The guarantees vary from office to office and in order to compare the guarantees offered by any two offices regard has to be paid to the rates of interest assumed in the calculation of the premiums. A lower rate of interest assumed should, for example, enable an office to grant a longer period of guarantee. The outlay on, or the amount of, the pension is affected by the bonuses declared and there are various methods by which the bonus is translated into relief or benefit to the employer or pensioner. The simplest form is adopted by a number of offices which declare their bonuses as cash discounts of premiums. The actual method of calculation varies as between one office and another ; for example, one office calculates the bonus on the average actuarial reserves held during the triennium under review, while another calculates it on the total premiums actually paid. In other cases the bonus is calculated by reference to more than one factor, including, for example, the yield on the office's life and annuity fund or the yield on 2½ per cent Treasury stock. In such cases the aim is to give the employer the benefit of the difference between the assumed rate of interest and the rate earned.

Other offices declare bonuses as a percentage increase in the pension and four offices declare a maturity bonus when a pension becomes payable. In these cases the bonus may be allowed to remain as a permanent increment to the pension. This gives employees an increase in benefits without an increase in outlay. Alternatively, the bonus may be taken into account in calculating the amount of pension to be bought by the employer ; this reduces the amount of pension to be bought by him in any particular year and consequently the total cost of the scheme in that year. In their initial calculations some offices assume that a certain rate of bonus will be declared, and the employers' outlay is then calculated on this assumption. In such cases the outlay will be reduced only if the rate of bonus declared exceeds the rate assumed. A reduction in interest rates would, however, be slow to depress bonuses because of the yields obtained on past investments.

THUS there are several methods of costing, various guarantees attaching to the premium rates and various forms of bonus or rebate. The variety of contracts offered makes it easier to meet the varying requirements of employers. In some cases the benefit is immediate ; in others it is deferred. An employer who prefers to rely upon an insurance company to guarantee the payment of pensions and other benefits can, by effecting a suitable with profit policy, secure advantages comparable with those which, in current economic circumstances, are available to a self-administered fund. Such an arrangement could, taking into consideration all factors, prove no more costly, and might even be cheaper, than a self-administered fund. Moreover, it is not necessary to secure all the benefits under a pension scheme on the same basis ; an employer can, for example, secure one half on a non profit basis and the other half on a with profit basis. These matters are obviously complex ; and any employer who feels that a with profit policy might be the most suitable means of providing pension benefits for his employees will need the guidance of an expert in pension business.

Home Service Insurance

HOME service life assurance has been out of the public eye during a decade of Conservative rule. Its progress has been more pedestrian than that of the ordinary life and pensions departments, but industrial life funds now exceed £1,400 million and the business makes an annual contribution to savings of the order of £75 million. Last year, in fact, industrial assurance funds rose by more than £80 million, though the number of industrial assurance policies in force has continued to decline. The decline has been wholly in policies for which premiums are being paid and the number of free paid-up assurances has risen.

New industrial life sums assured in 1960 by the ten leading offices included in table VIII, which account for over 90 per cent of the total business done by the 14 insurance companies and 90 or so friendly societies in this field, rose by £21 million to £357 million. As in the ordinary life branch, endowment assurances have predominated. The aggregate industrial life premium income of the ten companies was £178½ million, compared with £170¼ million in 1959. Expenses absorbed 32.6 per cent of these premiums, a slight reduction on 1959. Expense ratios in industrial assurance run at about twice the average level in ordinary life business, but the offices towards the lower end of the scale cannot fairly be criticised, when the cost of collecting premiums at the policyholder's door weekly or monthly is taken into account ; this is, after all, the essence of the business. Costs in fact are being held down in the face of increases in wages, which form a substantial part of industrial life expenses. In 1949, the average expense ratios for insurance companies and for collecting friendly societies were 29.0 per cent and 39.5 per cent respectively ; in 1959, the corresponding figures were 31.6 per cent and 36.1 per cent. High expense ratios are nowadays confined almost entirely to small collecting societies whose annual premium income does not exceed £2,000. In 1959, the latest year for which official statistics are available, the average expense ratio for the 55 societies in this category was 63 per cent.

Industrial branch policyholders share in the prosperity of the offices. In the Prudential, for example, the current industrial branch bonus is 38s. per £100 assured, plus an additional bonus on death or maturity at the same rate as in the ordinary branch.

The lapse ratio rose in 1959 against the postwar trend. For industrial assurance companies it was 17.1 per cent in 1959, compared with 15.2 per cent in 1958 and 24.3 per cent in 1949 ; for the friendly societies the lapse ratio was 18.0 per cent in 1959, compared with 16.5 per cent in 1958 and 23.2 per cent in 1949.

BRITISH INSURANCE

Bumper Bonuses

HOLDERS of life policies that participate in profits are doing better than ever before. Competition for new business ensures that the unprecedented prosperity of the offices is reflected fully in bonus rates and bonus declarations this year have left the 1959 high water mark well behind. These bonuses stem largely from high interest rates and buoyant income from equities (including property let at rack rentals). They do not owe a great deal to increasing longevity. The charge for the death risk in the predominant endowment assurance class is now so small that there is little scope for profit from this source. Nor, given booming new business, can economy in management contribute much. New whole life and endowment assurance policies at first show a book-keeping loss; the costs of getting the business and setting up the policy can absorb the whole of the first year's premium and are written off immediately, being recouped over the whole term of the contract. The majority of with-profits policyholders benefit also from the gearing effect of the surplus from non-participating business (including pension schemes), though a few offices keep separate participating and non-participating funds.

** Examples of recent bonus increases.
S=Simple bonus. C=Compound bonus. *On UK policies: different rates apply overseas. † Excluding special bonuses. ‡ On endowment assurances; a higher rate of bonus is paid on whole life policies. § Minimum rate: bonuses on sliding scale. ‖ 42 offices.

Two of the leaders in the industrial-cum-ordinary field have improved on the rough justice that is done by the simple bonus system which is usually adopted by the offices. Neither simple bonuses (based on the sum assured alone) nor compound bonuses (which get nearer the mark by bringing existing bonuses into account) closely relate the period that each policy has been in force to the incidence of the profits which are being allocated. Since 1956 the Prudential has been declaring a supplementary bonus on policies which become claims by death or maturity, in recognition of the prior claim of older policyholders to "the substantial increases in the dividends on our holdings of ordinary shares in this country . . . that had largely arisen from investments made in the past." The current rate (additional to the normal bonus for 1960 of 56s. per cent simple) is 15s. per cent simple for each year that the policy was in force before 1959, with a ceiling of £27 for each £100 of participating sum assured. The Royal London Mutual, which exceptionally for an industrial-cum ordinary office declares its bonuses qui quennially, has allotted simple bonuses 40s. per cent for 1956 and 1957, 44s. f 1958, 48s. for 1959 and 50s. for 196 together with a special bonus of 10s. P cent for each year of the quinquennium.

What is the scope for further increases the bonuses on ordinary life policies? Pr vided that the yield on their assets continu to rise, many life offices should be able improve on current bonus rates. But furth progress by those at the top of the tab may be more difficult. Life offices do n

SPECIAL BONUSES FROM CAPITAL GAINS

* At book value. † Single payment. C=Compound S=Simple.

declare bonuses that they cannot reasonabl hope to maintain. At current premium rates, an average gross yield on new money of well over six per cent is required to cove a reversionary bonus of 50s. per cent pe annum compound. Unless investment of significant proportion of the accruing funds in the right sort of equity is abandoned it will be hard to get this kind of return.

With-profits policies should give a very fair measure of protection against inflation if current bonus rates are maintained. Future bonuses depend mainly upon the interest surplus (which is measured by the excess of the yield on the invested funds over the net rate of interest assumed in the premiums). Bonuses are thus vulnerable to ultra-cheap money and to dividend limitation. Neither of these nightmares of earlier postwar years seems likely to keep investment managers awake at nights in the foreseeable future.

COMPANY MEETINGS

LAPORTE INDUSTRIES LIMITED

Extracts from
the Statement by the Chairman
Mr. P. D. O'Brien

The Year's Trading

Group income for the year of £3,333,525 before taxation is not substantially different from that of the previous year. In common with many other companies we have experienced higher expenses, increased competition and reduced profit margins.

One year's results, however, must be viewed in perspective, both in relation to the past and to the future. Over the last ten years the history of Laporte has been one of growth, but between each major advancement there has been a period of consolidation. We are broadly in that position today. We have reached a period in which we are reaping the benefit of past capital expenditure, but also in which new plants are being erected which are not yet contributing to Group earnings.

Research and Development

Research and development work is of fundamental importance to the future growth of the Group.

Most companies of the Laporte Group have their own research teams but it is felt that there is a pressing need to devote attention to longer-range research in broader fields.

Personnel

Our personnel department pays constant attention to ensuring that conditions of employment are fully in keeping with modern trends and also that recruitment is on such a scale and of such a standard that the efficiency of the Company can always be maintained.

During the current financial year the Company has announced details of an improved scheme designed to reward employees for long service whilst as regards recruitment, methods consist of regular contact with all the major seats of learning in the country.

The Future

It is the responsibility of your Board continuously to be looking forward with the object of developing the Company, and I should now like to mention individually some of the steps taken in this direction.

TITANIUM OXIDE. Such is our faith in the future prospects of this product that certain decisions have been taken which we believe will enhance the opportunity of the Company to share in the development of this product overseas.

(*a*) *Australia.* As a result of the findings of a technical team sent to Western Australia in late 1960, an agreement has been concluded with the Premier of Western Australia and his Government to establish a £A4 million plant in Bunbury.

We believe that there should be no difficulty in finding a ready market for the output of the plant.

(*b*) *U.S.A.* An agreement has also been made with the internationally known American Potash & Chemical Corporation to erect a plant on the west coast of the U.S. and design teams on both sides of the Atlantic are hard at work to bring these plans to fruition.

(*c*) *India.* It is proposed to extend our Group interest in conjunction with our Indian partners by the establishment of a new company which will manufacture titanium oxide under an agreement with Laporte Titanium Ltd. The Laporte Group interest will be substantial, but a minority one.

ORGANIC CHEMISTRY. This branch of chemical manufacture is expanding more rapidly than any other. Consequently, when the possibility arose to acquire the shares of Howards & Sons Ltd., who are already well established in this field, we took advantage of the opportunity to negotiate the acquisition of this company.

ELEKTROCHEMISCHE WERKE MUNCHEN AKTIENGESELLSCHAFT. For a number of years your Company has had a friendly relationship with EWM, and as your Directors had decided that an established position in the European continent was in the best interests of the Group, we negotiated with the previous owners of EWM to acquire that company. Together we stand a great chance of reaping some of the rewards that should arise from manufacture and sale within the European Economic Community.

Conclusion

We are living in a world of change; but a world of change is also a world of challenge and it is the responsibility of your Board to grasp such opportunities as these newer conditions may offer. The plans and actions I have outlined above are positive measures designed to promote the growth and prosperity of the Laporte Group.

TRADING

Business in fibres was steady at the start of the year and advances were made notably in 'Courtelle', 'Tricel' and nylon, but towards the late autumn sales of viscose staple fell off in the United Kingdom with a consequent effect on profits. Rising costs and lower average selling prices in export markets affected the profitability of some products.

The results of our Canadian and American subsidiaries suffered severely from intense price cutting, and this unsatisfactory state of affairs continues.

Trading in some of our non-textile activities, e.g. chemicals, woodpulp and packaging film, showed an improvement, but the profits of Pinchin, Johnson & Associates were lower than last year due to the reduced demand for paint as a result of credit restrictions on sales of motor cars and domestic appliances.

RESEARCH

The major part of the research effort continues to be in fibres. Considerable increases have been achieved in the strength of viscose tyre yarn and improvements made in the strength and abrasion resistance of 'Tricel' yarns. Work has also been done in developing modified forms of 'Courtelle' acrylic fibre which will in due course extend the market for this important fibre.

Two new finishes for viscose fabrics have been brought to a commercial stage. The first produces very stable fabrics which can be boiled without noticeable shrinking; the second is applied to washable linings.

Work on petrochemicals has been accelerated and a development plant erected at Spondon to make peracetic acid and various epoxy derivatives.

NEW INVESTMENT

'Courtelle' capacity is being trebled at Grimsby, and a 10 million lb. plant has been built in France. British Cellophane are again extending capacity at Barrow-in-Furness.

We are further expanding our chemical activities at Spondon and at Trafford Park. Plans have been announced to build a 10,000 ton plant for caprolactam monomer under the new Snia Viscosa process.

We have maintained our minority interest in Snia Viscosa by taking up our rights in last year's issue at a cost of £1.8m., and have invested a further £1.5m. in the Usutu project in Swaziland to produce pulp for paper and board. A 4 per cent. holding has been acquired for £1.5m. in the Koppers Co. Inc., a leading American chemicals and plastics firm, as a first step in exploring areas of mutual interest.

FUTURE PROSPECTS

Concluding his statement, Sir John Hanbury-Williams said: "Group profits in the first three months of this financial year were less than those for April, May and June, 1960, which was the best quarter of last year. The remaining nine months of the year should show some improvement over those of last year, although the widespread uncertainty of the present economic situation must increase the difficulty of maintaining profits at last year's level."

Copies of the Directors' Report and Chairman's Statement can be obtained from the Secretary, Courtaulds, Ltd., 16, St. Martin's-le-Grand, London, E.C.1.

Courtaulds have important manufacturing interests in the United Kingdom, Europe, Africa, Asia, Australia and America, and world-wide trading connections.

NOTES

1. Under the Port of London Act, 1928, Sections 7 (3) (*d*) and 8 (2) the Authority are liable to pay out of gross revenue, to secure the solvency of the Pension Fund, annual sums as under :—
   (*a*) £67,672 for a period of 40 years from 1st April, 1929.
   (*b*) £34,795 for a period of 40 years from 1st April, 1939.
   (*c*) £133,517 for a period of 30 years from 1st April, 1954.
   (*d*) £145,094 for a period of 40 years from 1st April, 1959.
2. Under Clause 20 of the Port of London Authority (Upper Division Staff) Widows' and Orphans' Pension Fund Trust Deed, 1955, the Authority are liable to pay out of gross revenue, to secure the solvency of the Pension Fund, an annual sum of £3,960 for a period of 27 years from 31st March, 1958.
3. Under Clause 8 of the Port of London Authority (Industrial Division Staff) Pension Fund Trust Deed, 1959, the Authority have given certain guarantees to secure the solvency of the Pension Fund.
4. There were outstanding contractual commitments at 31st March, 1961, in respect of Capital Expenditure, estimated to amount to £1,300,000.

SIMON,
Chairman of the Authority.

J. TAIT,
Chairman of the Finance Committee.

G. EDNEY,
Chief Accountant.

REPORT OF THE AUDITORS TO THE PORT OF LONDON AUTHORITY

As Auditors appointed by the Ministry of Transport under the 109th Section of the Port of London (Consolidation) Act, 1920, we report that we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Authority so far as appears from our examination of those books. We have examined the annexed Balance Sheet and Revenue Accounts which are in agreement with the books of account. In our opinion, and to the best of our information and according to the explanations given to us, the said Balance Sheet, and the Revenue Accounts, together with the notes thereon, respectively, give a true and fair view of the state of affairs of the Authority as at 31st March, 1961, and of the operating results for the year ended on that date.

DELOITTE, PLENDER, GRIFFITHS & CO., Chartered Accountants.
5 London Wall Buildings, London, E.C.2. 10th July, 1961.

Published by Order of the Port of London Authority pursuant to the provisions of Section 109 (4) of the Port of London (Consolidation) Act, 1920
London, E.C.3. 11th July, 1961 E. S. BIRCH, Secretary.

THE LONDON & EDINBURGH INSURANCE COMPANY LIMITED

A VERY SUCCESSFUL YEAR

MR G. J. STEWART'S REVIEW OF WORLD-WIDE OPERATIONS

The forty-second annual general meeting of the London & Edinburgh Insurance Company Limited was held on July 13th in London.

The following is the circulated statement of the Chairman, Mr G. J. Stewart.

The increased profit for 1960 is a welcome sign that some, at least, of the troubles that have beset the insurance market for the past few years are behind us. However, it is as well to remember that profits and losses in our business are quite largely geared to such unpredictable and uncontrollable causes as economic trends, political upheavals and even vagaries of the weather.

The end months of 1960 were not favourable on the American scene. Nevertheless, our business is now very diversified and, with our world-wide operations, losses in one territory are usually compensated elsewhere.

Our participation in Marine underwriting is now getting too small in relation to our total premium volume, and we shall be taking steps to increase this section when suitable arrangements can be made. The results for 1960 were better than in the preceding year, and the carry forward in the Marine Fund amounts to 210 per cent of our 1960 premium income.

The Non-Marine portfolio underwritten by our London agents, B. D. Cooke and Partners, suffered from some of the prevalent problems of the American casualty field, and we sustained a small loss.

The Aviation account, always expanding with the new high-valued equipment, shows a gradual improvement in loss ratio, and the company is participating substantially in the new premiums that are flowing in.

HOME AGENCY BUSINESS

Our Home Agency business once more produced satisfactory results—the premium income increased by 15 per cent and, for the first time, gross premiums reached £500,000. As in the previous year, fire losses in the United Kingdom were again heavy and there was also no improvement in burglary losses. This is the experience of the market generally and I regret to say adverse results are likely to continue in the absence of a substantial increase in rates. In spite of these difficulties, however, and although providing for a corresponding increase in premium reserve—the account once again made a useful contribution to our overall profit.

Canada again was our star performer, all the more creditable because our main business there is automobile. We seem to have now secured the pattern of turning out an annual profit from this otherwise most difficult branch of insurance; but here I must sound a note of caution. A reinsurance contract, hitherto profitable, has been showing considerable losses in 1961, and although this contract has now been terminated, we shall have to absorb the run-off during the year.

LIFE DEPARTMENT

Our Life Department had another very good year and, although no attempt has been made to force the pace, we actually received in the year new orders which bring our total sums assured to more than £1,000,000. The bulk of these orders were for our now universally known "Equitas" policy, which is still the only Endowment contract geared to equity shares, in our case the shares of Unicorn Trust, with a built-in guarantee of the Sum Assured.

It is well known that in the early years of a life fund the expense ratio must of necessity be high and you will be pleased to hear that for 1960 the expense ratio—excluding commission—has been reduced from 30 per cent to 20 per cent of our net annual premium income, whilst the fund at the year end has more than doubled at £119,657. This account has now developed into a strong financial position, but nevertheless we have decided to increase its reserves still further by an addition of £5,000 from Profit and Loss Account.

Another good turning point is that we have received an initial dividend from each of our two subsidiaries, Unicorn Securities Limited and Dillon, Walker & Company Limited, which adds £10,100 to our gross profit.

The market value of our investments at the year end was £66,865 greater than the book value, and this surplus had increased to £125,000 by mid-June, 1961.

INVESTMENT INCOME

The investment income climbed to £105,852 and in view of this, and the generally strong position of the Company, your Board has recommended the dividend be increased to 15 per cent, which is covered more than one and a half times by the investment income alone.

We transferred a further £25,000 to our General Reserve Fund, increasing it to £150,000. The balance carried forward in our Profit and Loss Account now stands at £39,194, which compares with £34,787 brought in at the beginning of 1960.

All in all, a very successful and satisfactory year, due largely to the untiring efforts of our agents, staff and many loyal friends to whom once again we extend our grateful and sincere thanks.

CHAIRMAN'S ADDITIONAL REMARKS

My annual review for 1960 has been in your hands for some time now giving a brief report of your company's position and progress.

You have probably noticed in the Fire and Accident Revenue accounts that an item of fully earned premium, for which no reserve provision is necessary, increased quite considerably during 1960. The volume of these special contracts, quite profitable to the company, has substantially reduced during the current year and will more approximate to the 1959 figure by the end of 1961. Our regular term and treaty business carries the customary reserve.

I would like now to mention a personal matter. In June, 1960, the whole market suffered a severe loss by the death of my friend Reginald Cheesman, who had given such valuable service to this Company, particularly in the early years when we took over the management. I would like to express the sympathy of us all to our marine underwriting agents, Bland, Welch & Company, in the great loss they have sustained.

The report and accounts were adopted.

BRICKWOODS LIMITED

SATISFACTORY CURRENT TRADING POSITION

The 70th annual ordinary general meeting of Brickwoods Limited will be held on August 11 at Portsmouth.

The following are extracts from the Directors' General Report:—

The very poor summer of 1960 militated against all businesses such as ours, whose main area of operations are concentrated on the south coast and which rely to a great extent upon seasonal demand. However, soon after the turn of the year there was a marked recovery in our trade and we were able to finish up with a small overall increase in sales.

Smeeds Limited and Sunshine Hotels Limited, which Companies respectively control the Group's Off Licence Shops and Managed Houses and Hotels, and The Southern Table Water Company Limited, manufacturers of the well known SOTA Mineral Waters, all played their usual important part in the organisation's prosperity.

The Profit of the Group before Taxation amounted to £901,420, an increase of £13,206 over the preceding year. Taxation takes £441,484 against £416,964 the previous year. The Directors propose a Final dividend on the Ordinary Stock of 10 per cent plus a Bonus of 2 per cent making, with the interim dividend already paid, a total of 17 per cent for the year (1960 15 per cent plus a bonus of 2 per cent)

In the Directors' General Report of 1957 mention was made of steps being taken which would clear the way for the closing of our King Street, Southsea brewery, but we thought that at least five years would elapse before this could be done.

Since 1957, large works have been and are still being carried out at Admiralty Road Brewery and it is hoped that the substantial brewing output of King Street will be brought over to Admiralty Road towards the end of 1962. Considerable economies in certain overhead costs should then become apparent.

FUTURE OUTLOOK

The increase in Profits Tax levied by the Chancellor in 1960 has adversely affected the net profit in the accounts now presented and unfortunately a further rise in this penal tax imposed this year will have to be found in respect of the current trading period. With the Standard Rate at its present level of 7s. 6d. in the £, the total of Income Tax and Profits Tax in the current year will be no less than 53¾ per cent of the taxable profits.

The benefit of the Easter trade was felt in March this year, but a warm and generally dry spring and a fine Whitsun have made the first three months' trading in the current financial year satisfactory, but only a long fine summer will produce really good trading prospects for an essentially holiday area such as ours.

LORRAINE-ESCAUT

At the annual general meeting held on June 13, 1961, and presided over by M. Roland Labbe, the balance sheet for the year 1960 was adopted. Net profits stood at NF 18,737,000 and the meeting approved a gross dividend of NF 7.65 per share on capital which during the past year was increased from NF 206,250,000 to NF 226,875,000. This represents a net dividend after tax of NF 5.82, as against NF 5.35 for the preceding period.

Both the Board's Report and the Chairman's address indicated that output of Lorraine-Escaut in 1960 had risen to 2,120,000 tons, as against 1,874,000 in the previous year, an increase of more than 13 per cent, equivalent to the increase in total national output of iron and steel.

The output of the French tube industry in 1960, exclusive of heavy welded tubular products, rose from the 1959 figure of 862,000 tons to 990,000 tons, and the contribution of Lorraine-Escaut towards this output was 359,000 tons as opposed to 326,000 tons in the previous year, showing an increase of 10 per cent. On the other hand, the output of heavy pipe-line and gas conduit products fell, owing to the unusually urgent circumstances which governed the placing of these large orders. Output of heavy welded tubular products from the Lorraine-Escaut foundry at Sedan was 40,000 tons, against 110,000 tons in 1959.

However, since the beginning of the 1961 period the output of heavy tubular products has picked up and is henceforth secure as far as the Sedan works is concerned until February, 1962.

The Company's turnover rose from NF 1.196 million in 1959 to NF 1.340 million in 1960, representing a 12 per cent increase.

Concerning future development by the Company, account should be taken of the recent important agreement made between Lorraine-Escaut and Usinor, which provides for the use by Lorraine-Escaut, in return for financial assistance, of 10 per cent of the hot rolling and 20 per cent of the cold rolling capacity of the new Dunkirk works in the course of construction by Usinor. This agreement will enable Lorraine-Escaut to improve its position considerably with regard to sheet steel and to the supplies for its works producing tubular steel products, whilst limiting its financial undertakings to its real needs on this score.

The same principle was behind the agreement made at the end of 1960 with the Société des Hauts Fourneaux et Forges de Saulnes et Gorcy for the mutual development of a wire rolling mill which is to be set up by the latter firm in its foundries. Lorraine-Escaut will be in a position to use half the output of this mill, which is of the order of 30,000 tons a month.

New equipment which has been brought into use in the different premises of Lorraine-Escaut are: an ore crushing plant at the Moulaine mine, a large blast furnace and a Martin process furnace at Longwy, as well as an electric furnace at Anzin. Other undertakings are in progress or are being initiated within the framework of the Fourth Equipment and Modernisation scheme—amongst which may be mentioned the expansion of the Thomas de Senelle steelworks by the setting up at Longwy of a pure-oxygen steel plant and the equipping of a new mill for commercial sheet steel and small girders.

For the first five months of the present financial year Lorraine-Escaut has produced 944,420 tons of steel as against an output of 892,660 tons for the same period in 1960, which represents an increase in output of 6 per cent; output of heavy tubular products exclusive of heavy welded tubular products at Sedan has fallen off slightly in comparison with the corresponding five months of 1960, with 153,000 tons against 156,000 tons, but output remains nevertheless slightly up on last year's monthly average. With regard to the Sedan mills, output at end of May was 46,560 tons of tubular products as against 33,000 tons at the same date in 1960.

The total sales, at May 31st, was of the order of NF 605 million, 7 per cent above turnover for the first five months of 1960.

ANGLO ORIENTAL PLANTATIONS

CONTINUING PROGRAMME OF CAPITAL EXPENDITURE

The second annual general meeting of Anglo-Oriental Plantations Limited was held on July 12 in London, Mr G. F. A. Burgess (the Chairman) presiding. The following is an extract from his circulated statement:

The consolidated net profit before tax is smaller than for 1959, largely because of lower net sale prices of rubber.

Palm oil prices have also been lower but thanks to a larger crop and some reduction in costs, the total working profit of this commodity (including Kernels) showed an increase.

The Copra crop and the small profit on it are down and will soon be reduced almost to vanishing point as the bulk of the remaining acreage is felled and replanted in oil palms.

There was a small loss on Manila Hemp. The position will right itself as the productive acreage increases.

The replanting programme, to which I referred last year, has been fully implemented during 1960, and we have spent £49,529. We intend that replanting shall proceed steadily at much the same rate as in 1959 and 1960.

Capital Expenditure by the Group on the replacement and improvement of the Buildings, Machinery, etc., amounted to over £24,000. To maintain full efficiency will require annual expenditure on average of at least this amount and probably more. We expect to have to enlarge this year the factory at Sungei Choh where crops are increasing rapidly and we must also anticipate having to spend considerable sums on improving our capacity to process palm oil and kernels.

THE OUTLOOK

So far as the short term future is concerned, the fortunes of your company, like the fortunes of all companies engaged in producing primary commodities, depend largely on the state of world trade, particularly in the USA and Europe. In my view there are many signs that the USA recession is a thing of the past, whilst industrial activity is elsewhere on the upgrade. Moreover, producers of commodities cannot now disregard the growing marginal importance of Japan.

The results of your company for 1961 are likely to be adversely affected, unless there is a sudden and substantial rise in the price of natural rubber during the second half of this year. It should not be thought that I am advocating too high a price for rubber, but it is at least to be hoped that the price will remain relatively stable, and thus enable the producers of that commodity, including your own company, to make a fair and reasonable profit and to maintain the replanting programme, which continues to be a vital necessity.

In 1961, we hope to harvest 9.2 million pounds of rubber and 1,460 tons of Palm Oil. As I have already said, profits are likely to be lower this year than in 1960, unless there is an appreciable upturn in rubber prices, but I hope that when we next meet I shall be able to put before you results which you will not find unsatisfactory.

The report and accounts were adopted.

THE METAL BOX COMPANY LIMITED

EXTRACTS FROM THE REVIEW BY THE CHAIRMAN SIR HAROLD ROXBEE COX

The company's income from sales and investments during the year was a record at £91,918,000, which is an increase of £8,526,000 over the previous year. The profits have risen, after all charges and taxation, by £384,000 to £4,843,000.

Both in sales and in profits the Overseas Company has had an outstanding year and is responsible for all the increase in the company's profit. The performance at home, despite an increase of over £3 million in turnover and a good start to the year, was in total unremarkable, chiefly because of an easing in demand in the last few months of the year and an increase in costs due to shorter working week and higher wages.

The year has also been noteworthy for the unusually heavy expenditure on buildings and equipment of £6,349,000, and expenditure on a similar scale is likely in the present year.

Sir Robert Barlow retired from the Chairmanship of the Board on 31st December, 1960, after nearly twenty years' distinguished service as Chairman, and became honorary President.

HOME

At the time of the issue of ordinary shares to stockholders at 57s. 6d. employees were given the opportunity of acquiring up to 300,000 shares at the same price. Loan facilities of 47s. 6d. per share were made available to them and it was a condition of the issue that the shares were to be held until April, 1963.

The result was gratifying, 3,757 employees applying for a total of 287,935 shares, which were allotted to them in March, 1961; 78,831 shares were bought outright and 209,104 were bought with the assistance of a loan.

OVERSEAS

The overseas subsidiaries have had a particularly good trading year. Their sales in total were 26 per cent higher than last year, at a record figure of £26 million.

The profit yield on sales was more than maintained and the profits before tax rose by £647,000 to £2,947,000, another record.

ASIA

India. The Indian company has had another record year though the tinplate situation remains precarious.

At Bombay the volume of business extended the present capacity to the utmost. Negotiations for a new site are, however, well advanced, and it is hoped before long to begin building a new factory.

Pakistan. In our associated company in Pakistan progress is continuing. Extensions to the Karachi plant are in hand and it has been decided to build a factory near Chittagong, East Pakistan.

Malaya. During the year there was a revival in the demand for canned pineapples. Meanwhile the company continued to widen the range of its production and is no longer entirely dependent on one industry for its prosperity.

Malayan Breweries have started to can beer and this will necessitate the production of beer cans in Malaya. A fish canning industry has been set up in the Federation and at Petaling Jaya milk canning has begun.

At Petaling Jaya we have opened a new research centre.

AFRICA

South Africa. Despite the difficult conditions, the company enjoyed its most successful trading year and the Walvis Bay factory was kept exceptionally busy meeting their demands.

The South African company began to make plastic containers in Johannesburg.

Central Africa. The Central African company made good progress. The second factory, at Bulawayo, should be ready early in 1962.

East Africa. The demand for meat cans and other products is increasing and we are putting down additional equipment both at Thika and Dar-es-Salaam. Our new acquisition, Plastics (Africa) Limited, has also received additional equipment.

West Africa. We have been granted pioneer status by the Federal Government.

WEST INDIES

In October a two-year agreement was negotiated which we hope will ensure settled labour conditions during that period.

We have decided to build a factory in Trinidad, and our application for pioneer status has been granted.

EUROPE

Italy. Now that the S. Ilario factory and offices have been completed we have a unit which is second to none in Italy, equipped to give Italian canners a service far ahead of anything available to them before.

During the year we acquired the business of Italbox with a factory at Lesmo, just north of Milan. The Italian company has also embarked on plastic bottle production. It is intended to use the Sesto factory for the development of plastics, general line and cap business.

Our company has not yet reached the profit-making stage but prospects in Italy are good.

EXPORTS

Export orders booked were a record at £4,085,000 of which £1,865,000 was for machinery. Shipments were also a record at £3,117,000. There were considerably increased demands from overseas customers for our plastic laminations and aerosol cans.

THE OUTLOOK

The reduced home demand which characterized the last few months of the year under review is likely to continue for the first few months of 1961-62. Consequently, although the overseas subsidiaries show every sign of continuing their progress, we do not expect the half-year ending on 30th September, 1961, for the company as a whole to be as good as the half-year which ended on 30th September last.

There are signs of home demand increasing later in the year; I shall be disappointed if overall sales do not surpass this year's record.

The Metal Box Company is, in two senses, widely spread. It has a great many different products and it makes them in a great many different places. It makes them of metal, of paper, of plastics. If the advance slows up a little on one front, it can quicken on another. Looking at the company as a whole, I see its steady advance continuing.

At the Annual General Meeting held last Thursday the report and accounts were approved.

KULIM RUBBER PLANTATIONS LIMITED

Issued Capital (£1,750,000 authorised):—£1,603,237 fully paid.

Summary of first Group Accounts (covering the eighteen-month period ended December 31, 1960, for Kulim and one wholly-owned subsidiary, fifteen months for one other, and the twelve months to that date for the remaining two wholly-owned subsidiaries):—

Group Trading Profit (after charging £92,000 for renewals and replacements)	£436,799
Taxation	£173,437
Dividends paid (Gross £357,407)	£218,910
Net Current Assets	£345,281

The following are extracts from the annual report and circulated review of the Chairman (Mr P. B. L. COGHLAN):—

EXPANSION.—The Accounts cover a period of great expansion in the Company's interests and activities. From being the owner of three Estates having a total planted area of 5,180 acres, the Company (by the acquisition of the whole of the issued capitals of its four subsidiaries) now possesses ten Estates having a total planted area of 20,854 acres with a current rubber output of about 12,000,000 lbs. per annum. This represents a highly satisfactory yield of 830 lbs. per acre in tapping and it is hoped that this will be increased to nearly 1,000 lbs. per acre within the next two or three years.

IRON ORE DEPOSITS.—Prospecting for iron ore was carried out during 1960 over parts of one of the Group's Kedah Estates by a Chinese mining firm. Prospecting is continuing and, to date, the mining firm has exercised its option to lease areas for mining on terms which provide for the payment to the Company of a total minimum royalty of approximately £53,000, subject to Government mining certificates being obtained. It is now expected that the first of such certificates will be received shortly.

FUTURE PROSPECTS. — Generally speaking, the outlook for natural rubber is favourable and, as world trade conditions improve, there should be a steady demand for our product. Certainly, it would appear that although we are entering into a more competitive era, it should at least be one of more stable market conditions than hitherto.

Annual General Meeting:—July 21, 1961 (19, Fenchurch Street, E.C.3).

LONDON & OVERSEAS FREIGHTERS

A REMARKABLE ACHIEVEMENT IN YEAR OF CONTINUED DEPRESSION

MR BASIL M. MAVROLEON'S STATEMENT

The thirteenth annual general meeting of London & Overseas Freighters Ltd. was held on July 17th in London, Mr Basil M. Mavroleon (Chairman and Managing Director) presiding.

The following is an extract from his circulated review:

The passage of another year must have brought us closer to the improved freight markets which I am confident lie ahead, but the prospects for the immediate future are no brighter than they were at this time last year.

That our Operating Surplus has been halved is known to you, but the maintenance of this level of trading profits is little short of remarkable in the prevailing depression.

For many years we have enjoyed the security, stability and profitability of long-term charters with the major British oil companies. All but three of these fixtures have now expired and the charterers concerned were not able to offer any further employment for the tankers thus becoming free. Fortunately this state of affairs coincided with the entry into the chartering market of the Government of the USSR. They were seeking tonnage for world-wide trading on a period basis, and it thus became possible for for us to secure 3 to 4 years' employment for 9 of our tankers. Moreover, the freight receivable under this arrangement is linked to the "going" market rate, thus not only is your Company assured of a minimum income during the difficult time ahead, but it stands to benefit from any substantial improvement in tanker rates. These fixtures will contribute at least *£3,000,000 annually to this country's invisible* exports.

DIVIDEND

The aggregate dividend on the Ordinary Shares—the Restricted Shares not ranking for dividend—is at the rate of 17½ per cent in accordance with the intention expressed at this time last year. It is gratifying to be able to make this distribution without encroaching upon the accumulated profits of previous years.

FLEET AND BUILDING PROGRAMME

The fleet has remained unchanged throughout the year, but two of the five tankers on order referred to last year have been launched and should commence trading during the current financial year. Arrangements have been made to substitute two dry-cargo ships of 12,500 dwt for the second 32,000 dwt tanker on order in Holland and your Board is at present negotiating for the substitution of dry-cargo ships for the two remaining 34,000 dwt tankers on order in Sweden.

These changes are in accordance with the declared long-term policy of building up a mixed fleet of tankers and dry-cargo ships and will have the effect of placing the earning-capacity of the fleet on a broader footing at any time when the tonnage competing for the carriage of oil proves to be greater than that for other cargoes.

ASSOCIATED COMPANIES

London and Overseas Tankers Ltd. has also been affected by the depression in the tanker freight market, but earned an Operating Surplus of about £570,000. The two tankers belonging to this Company are now trading on a similar basis to those of your Company.

The first of the two 34,000 dwt tankers on order in Sweden is due to be launched this month and should be completed next February. The second tanker is due for delivery later in 1962 and will complete the present building programme.

London and Overseas Bulk Carriers Ltd. has enjoyed a successful year's trading with its bulk carrier, making an Operating Surplus of some *£280,000*. Arrangements have been made to change the contract for the construction of a dry-cargo vessel in Germany to provide a 19,000 dwt tanker to fulfil a Time Charter which the Company has acquired.

Austin & Pickersgill Ltd. are now benefiting from their modernisation programme and are in a position to quote prices which are competitive with those of any other shipbuilding nation. For the time being profit margins are being reduced—in some cases forfeited entirely—in order to secure the flow of orders necessary to keep the Yard in operation. The output of the Yard during 1960 was the highest on the River Weir and the time required to build ships is being constantly reduced.

DIRECTORS

Mr W. E. Loveridge and Mr. W. F. Pascoe, OBE, retired at the end of the financial year. Sir Gilmour Jenkins, KCB, KBE, MC, and Brigadier E. J. Shearer, CB, CBE, MC, have been appointed Directors in their place.

The report and accounts were adopted.

MILLARS' TIMBER & TRADING CO., LTD.

RECORD TURNOVER

The annual general meeting of this company was held on July 13th in London, Major A. W. Bird, DSO, managing director, presiding.

The following is an extract from the directors' statement for 1960:

The consolidated profit and loss account shows a trading surplus of £312,035, an increase of some £44,000. After allowing for taxation and depreciation, the net profit is £120,500 (£98,251). A dividend of 8 per cent on the Ordinary capital is proposed.

Exports of Jarrah and Karri throughout the world were well maintained, but owing to the high cost of production and competition, profits were not as good as they ought to have been.

Millars' Machinery Company again increased their turnover, but profits fell away somewhat. There is intense competition in this trade. The Wellpoint Service which operates for de-watering foundations continues to be highly successful. In India we continued to forge ahead and again achieved a record turnover and a fair profit. David Roberts Son & Co. (Bootle) Limited had a successful year and showed improved profits.

The total Group turnover showed an increase of over 10 per cent and constituted an all-time record. Regarding the current year, it seems on the facts as we know them at present that the results should be as good as those for 1960 and possibly better.

The report and accounts were adopted.

COMPANY AFFAIRS

Distillers Plans Ahead

SHAREHOLDERS in Distillers now have to decide whether to take up their new shares resulting from the one for ten rights issue. To aid shareholders in their decision Sir Graham Hayman, the chairman, has brought his statement forward by a month so as to fill in a few of the gaps left by the circular which accompanied the allotment letters. Sir Graham tells shareholders that total sales last year rose by 13 per cent to £263 million but, as the table shows, the increase in profits was smaller than this as margins were lower.

In the year to March 31st all the increase in earnings came from the whisky and gin divisions, which earned 82 per cent of total profits. On the industrial side keen competition was reflected in reduced profit margins and for the first time in seven years investment income remained virtually unchanged at £2.4 million. By far the biggest of these investments is a 50 per cent stake in British Hydrocarbon Chemicals, which has started to build a new petroleum chemical centre in South Wales. Sales of chemicals and plastics showed a "satisfactory increase" and while he expects no relaxation in competition Sir Graham is confident that Distillers can share in the potential expansion of demand in the future. It is on the expansion of these sides of the business in the next three years that much of the £30 million of development money will be spent. One project recently announced by the directors is a synthetic rubber plant using a process developed by Distillers' research department; this may be a Neoprene type of rubber, as the company has done much work on new methods of producing it.

Year ended	Mar. 31, 1960 £'000s	Mar. 31, 1961 £'000s
Sales	233,000	263,000
Trading profit	32,906	34,839
Net profit	16,866	17,224
	%	%
Trading profit/sales	14·1	13·2
Net profit/sales	7·2	6·5

As already announced additional whisky warehouses are being built to house increasing stocks of whisky; for the industry as a whole stocks had risen from 267 million to 297 million proof gallons at the end of March. The industry still seems to be confident about the future trend in sales. Last year Distillers' sales at home rose by 14 per cent to 7½ million proof gallons. Domestic sales were thus restored to the prewar level, but they now represent only about one quarter of total sales. Exports again rose but at a slower rate than in recent years. North America continues to be the biggest single export market even though competition is intense but Sir Graham draws particular attention to the substantial increase in sales in European markets.

In the short term the increase of 1s. 6d. per bottle of whisky and gin should go some way to restoring margins, even though Distillers retains only 3d. of this increase. Against this, however, is the threat of the Chancellor's regulator, although the export trade would remain unaffected. But however well whisky and gin sales thrive, shareholders must be conscious of the cost of the group's industrial developments. They may well be encouraged however by Sir Graham's statement that these developments should enable the company "substantially to increase the present volume of trading and to achieve further improvement in earnings."

The new 10s. shares issued at 32s. 6d., having fallen to a premium of only 3d. at one stage, now stand at 10½d. in their present unpaid form. The old shares at 33s. 7½d. yield just over 4 per cent on the forecast of a maintained dividend of 13½ per cent on the enlarged capital.

Hoover

THE 5s. shares of Hoover fell by 6s. 6d. to 36s. 6d., the lowest point so far this year, following an interim report which revealed a further sharp fall in profits in the first half of this year. Profits are now running at about half the level of a year ago. Compared with the second half of last year, which was itself a lean period, gross profits are nearly 22 per cent lower and net profits nearly 40 per cent lower. Last year it was possible to blame hire-purchase restrictions, but the Hoover directors have now revealed that sales in the first half of this year were only marginally lower in the home market than those of a year ago. Thus, while the credit squeeze may have prevented sales from rising at home, clearly narrower margins account for the latest decline in profits. Wages and material costs have risen and Hoover has had to bear the cost of introducing new models on a highly competitive market. Moreover, Hoover is the biggest British exporter of washing machines and vacuum cleaners and this year it has met intense competition in Europe. The directors are not optimistic, saying that "with the general economic uncertainty prevailing there is little evidence of any improvement in trading conditions during the coming six months."

Six months to	June 30, 1960 £'000s	Dec. 31, 1960 £'000s	June 30, 1961 £'000s
Gross profits	4,013	2,360	1,965
Taxation	1,980	872	1,069
Net profit	1,960	1,423	859

The directors have maintained the interim dividend at 5 per cent, but a maintained final dividend of 40 per cent must at least be open to doubt, especially if the Chancellor's measures have some bite to them. The price of the shares would seem, indeed, to discount some reduction in the dividend, for on last year's payment the yield is 6.8 per cent.

Arusha Industries

WITH the exception of Mr Lindsay Carstairs, the former chairman, the directors of Arusha Industries have recommended the rejection of the proposed loan of £1½ million to the company from Federated Mortgagee Corporation of New York. Now the issue is left to shareholders to decide at a meeting to be held on the last day of this month. If the loan is rejected Mr Carstairs will resign from the board; if it is approved, Sir Harold Gillett, the present chairman, and his fellow directors will resign.

Sir Harold has strong grounds for recommending rejection of a loan which carries interest of 6½ per cent and which is repayable in equal quarterly instalments within three years. This, as Sir Harold points out, would involve Arusha in repayments of £585,000 in the first year, £553,000 in the second and £520,000 in the final year and Mr Carstairs has given no clear indication of how these payments could be met beyond saying that "non income producing assets" could be sold. The directors are indeed doubtful whether repayment from capital resources would be practicable in view of the prior charge which the proposed debenture would create.

The directors also object to the conversion option on the loan, which gives the lenders the right to convert 50 per cent of the outstanding loan into ordinary shares at a price equivalent to 8s. a share. This option, they submit, could result in a substantial interest in the company's equity passing at the discretion of the lenders into other hands without the consent of the main body of shareholders.

Clearly if the loan is to be endorsed, shareholders will require more specific assurances from Mr Carstairs as to how the repayments are to be met. On the other hand, no specific proposals have been made by the other directors of Arusha beyond the suggestion made by Sir Harold in his statement in March that the raising of further capital would have to be linked to those businesses which can stand on their own feet. He has however assured shareholders that if the loan is rejected the directors will consider urgently other means of resolving the company's financial difficulties. The most pressing problem is the repayment of the £1,257,000 bank loan; it is now four months since Sir Harold told shareholders that the bankers had said their patience was not inexhaustible. Meanwhile the 4s. shares which jumped to 12s. on the first announcement of the loan have fallen back to 8s. 7½d. Shareholders must be patient while Sir Harold and his fellow directors frame their plans and, in the mean-

time, they should not hesitate to reject the loan proposals as they now stand.

Balfour and Darwins

A NEW holding company, Balfour and Darwins, has been formed to merge the two Sheffield steel companies, Arthur Balfour and the Darwins group. As a preliminary step, Arthur Balfour is making a one-for-ten scrip issue. Then the 10s. shares of both companies will be exchanged on a one for one basis for 10s. shares in the new company. Holders of Darwins 6 per cent £1 preference shares will receive a 6 per cent preference share in the new company. On a full acceptance Darwins' shareholders will hold about 49 per cent of the new equity and Balfour shareholders about 51 per cent.

Combined profits for 1961 should not be substantially less than those for 1960, but profits earned before June 30th will be treated as capital reserves in the new holding company. Only those earned in the record six months will be available to pay a forecast final dividend of 10 per cent, making a total of 16 per cent for shareholders of both companies. This will be a maintained payment for Darwins' shareholders but it will raise the dividend to Balfour shareholders from the equivalent of 10.9 per cent. The directors of the holding company consider this increase is justified because while the equity earnings of the two companies have been similar in the past, Balfour shareholders have received a lower rate of dividend.

The merger will not immediately lead to an improvement in profits but the directors are explicit about the long-term advantages. Balfour and Darwins are of similar size, with about 75 per cent of their products complementary and 25 per cent. parallel. The merger will widen the range of products and markets. Balfour has an extensive range of tool steels and engineers' tools and has built up many export connections through foreign subsidiaries and agencies, while Darwins has a Dutch interest which could be readily expanded if Britain joined the Common Market. At 27s. Balfour 10s. shares are on a prospective yield basis of 6½ per cent and at 25s. 3d. Darwins 10s. shares yield 6¼ per cent.

Associated British Picture

THERE is enough in the report and accounts of Associated British Picture Corporation to encourage shareholders, but they will be wise to adopt the generally cautious attitude of the chairman, Sir Philip Warter. In the year to March 31st last both the cinema and television interests of ABP made a good recovery from the 1959-60 setback. The profits of the group's cinemas nearly doubled from £1,413,000 to £2,701,000, largely as a result of the abolition of entertainments duty, and following a reorganisation of its facilities, ABC Television achieved an increase in profits from £2,347,000 to £3,017,000. In all, the group's trading profit rose by over 50 per cent from £3,761,000 to £5,717,000 and net profits now cover the maintained dividend of 60 per cent 2¾ times.

Sir Philip tells shareholders that the company must retain its cash resources to take advantage of any new developments in the entertainment field and the decision to leave the dividend unchanged has given the balance-sheet a very different appearance, a net cash balance of £181,000 being replaced by liquid assets of £3,923,000. The proposed one for one scrip issue could therefore herald a bigger dividend—profits and the Chancellor permitting. Last year cinema attendances fell by only 3 per cent, the smallest decline for some years, but Sir Philip is not yet certain whether attendances are now levelling off. Like the Rank Organisation, ABP is investing some of its money in bowling alleys; four cinemas have already been converted into bowling alleys and two others will be converted this year. On the commercial television side of the business, no one can be certain what is in store when the present contracts expire in 1964, though it is not unnatural for Sir Philip to hope that ABC Television, now only a weekend contractor, will be given wider responsibilities. On the unchanged dividend the 5s. shares at 51s. 3d. xd yield 5.9 per cent.

Hadfields

IN April an industrial and financial consortium, Steel Trust Limited, was formed to provide much-needed capital for Hadfields, which has interests both in steel rolling and in the manufacture of paper-making machinery. Following an extraordinary general meeting in May, five new directors were appointed to the board, including the head of the consortium, Sir Peter Roberts, MP, who is now the vice-chairman. The directors have now announced that in view of the uncertain state of demand for steel, the increase in costs and the comparatively small rise in steel prices the interim dividend is to be reduced from 3 to 2 per cent.

Steel Trust is subscribing for 2,616,184 ordinary shares of £1 each at par, of which 10s. per share was paid last month with the second instalment due in October. These shares do not rank for the interim dividend but will be eligible for the final dividend for the year to September 30th on the partly paid capital. The consortium will hold over 41 per cent of the Hadfields' equity and it has a strong say in its management. But it made the investment in the full knowledge that there was no prospect of quick returns. The tone of the latest announcement suggests that with higher costs this year and additional ranking capital the final payment may also have to be cut. The 6 per cent dividend paid for 1959-60 was not fully covered by earnings and profits this year will almost certainly be lower. On news of the lower dividend the ordinary shares were marked down to 17s. 1½d., but they recovered later to 18s. Earlier this year the shares stood at 25s.

London Stock Exchange

FIRST DEALINGS:	June 26	July 10	Ju
LAST DEALINGS:	July 7	July 21	A
ACCOUNT DAY:	July 13	Aug. 1	A

THE stock market has spent another w under the shadow of the Chancell axe, a prey to rumours of higher purc tax, payroll tax and dividend limitation. extreme sensitivity of investors was reflec in the small volume of trading, which itself helped to exaggerate price moveme Before and immediately after the week buyers held off and jobbers marked pr down; on Monday the *Financial Times* dustrial ordinary index fell to 301.4 lowest point for the year. This lower l of prices tempted some buyers intere mainly in the blue-chips. Together bear covering as the end of the Acc drew near this demand was sufficien push prices up on Tuesday and Wednes But over the week *The Economist* indic showed a net fall of 3.4 points to 370.4 lowest level since the beginning of F ruary.

Gilt-edged stocks held their prices be the week-end, supported by the impro trade figures for June and the fact that B Rate was not raised. Immediately after week-end, however, prices fell a little, e cially at the short end of the mar Exchequer 5½ per cent 1966 lost ⅝ to but irredeemable stocks made small ga 2½ per cent Consols rising by ¼ to 38

Among bank shares Barclays lost 1s. to 78s. 3d. xd, though Lloyds, Midl and National Provincial moved against trend and registered small gains. Un Dominions Trust gained 2s. 6d. after news that it would not finance the purch of cars over five years old, but this was enough to offset earlier losses and the sha made a net loss of 2s. 6d. to 165s. Ins ance shares fell before the week-end, many of them made good their losses; R Exchange, indeed, gained 5s. 6d. to 112s. Brewery shares fell back, Watney M losing 5s. to 86s. 6d. Building shares w also lower, Taylor Woodrow losing 1s. to 20s. 9d. Fear of the Chancellor's int tions and the news that retail sales w lower last month caused an initial drop store share prices, but Woolworth House of Fraser were slightly up on balan Debenhams lost 3s. 3d. to 54s. 9d. over week, and Marks and Spencer 1s. 7½d. 108s. 7½d.

On balance steel shares made small g over the week, notably Stewarts and Llo which gained 2s. to 45s. 1½d. Unile gained 5s. 3d. on Wednesday, recovering earlier falls and gaining 1s. 3d. over week to 135s. 6d. BMC lost 4½d. 14s. 4½d., in a dull market for motor shar Property shares again declined, but follo ing news of its financial arrangements w Norwich Union and the Pru' Capital a Counties showed a net gain of 10½d. at 4 Oil shares also continued to fall, Sh Transport losing 2s. to 119s.

EXCHEQUER RETURNS

For the week ended July 15, 1961, there was an "above-line" surplus (after allowing for sinking funds) of £5,294,000 compared with a deficit of £22,260,000 in the previous 8 days and a deficit of £4,327,000 in the corresponding period of last year. There was a net expenditure "below-line" of £4,649,000 leaving a total cumulative deficit to date of £250,348,000 compared with £220,000 in 1960-61.

Money and Exchanges

THE MONEY MARKET

AFTER submitting an unchanged bid for three weeks running, the syndicate of discount houses reduced its bid by a modest 2d. to £98 17s. 2d. at last Friday's Treasury bill tender, and the average rate of discount rose by 7.67d. to £4 11s. 4.47d. Another week has passed without the market making any real attempt to anticipate an increase in Bank rate. Outside bidders, however, take a different view of the Chancellor's likely measures, and total applications fell by £27 million to £378 million. The market received 47 per cent of its application against 42 per cent a week earlier.

It has been an easy week in Lombard Street. For the first time in several months, a week has passed in which the authorities have not had to give any assistance to the market by the special purchase of bills. This week the authorities sold a small number of bills on Friday and Tuesday to absorb the surplus credit. On Wednesday, although it was the clearing banks' make-up day, credit was again comfortable. This unaccustomed ease was due to Government disbursements, large bill maturities, and, it was suggested, to the influx of foreign money following the recovery in sterling.

(1) Current statistics of employment by industry, based on the 1958 Standard Industrial Classification, go back only to May, 1959. Manufacturing employment for earlier dates is shown on the old basis (1948 SIC). (2) Engineering and electrical goods, shipbuilding and marine engineering, vehicles, metal goods. (3) Textiles, leather goods clothing, food, drink and tobacco, timber, furniture, paper, printing and publishing. (4) Number registered as unemployed expressed as a percentage of the estimated number of employees. (5) Dorset (excluding Poole) was transferred from the Southern to the South Western Region on May 12, 1958. (6) Average for first quarter. (7) Great Britain. (8) Excluding all screening losses normally amounting to around 5,000 tons a week. (9) Average for second quarter. (10) England and Wales (11) Generation for public supply. (12) Deliveries. (13) July 258·5. (14) July 1·2. (15) July 396.

APPOINTMENTS

MODERN MANAGEMENT TECHNIQUES

OPPORTUNITIES FOR ACCOUNTANTS AND ECONOMISTS UNDER 30

The modern techniques employed by the finance staffs of Ford Motor Company Limited range from broad studies of economic affairs through complex financial analysis to systematic cost controls and mechanised accounting. A number of vacancies at different levels and on widely differing work are available in these staffs for men under the age of 30 with a university degree or professional qualification. These positions require ability and provide exceptional background for progress into senior management positions. Applicants are invited to send brief particulars (marking envelope CC/109E) to

H. G. PEARMAN
TRAINING AND RECRUITMENT DEPARTMENT
FORD MOTOR COMPANY LTD., DAGENHAM, ESSEX

AGRICULTURAL ECONOMISTS (one main grade, one Assistant, two main grade or Assistant) in Ministry of Agriculture, Fisheries and Food. Pensionable posts in London for men and women. Age on June 1, 1961, at least 26 (main grade); at least 21 and normally under 28 (Assistant). Qualifications: 1st or 2nd Class honours degree in economics, agriculture, horticulture or closely related subject, or comparable relevant qualification; also, for main grade at least three years' appropriate post-graduate or other experience. Knowledge of statistical methods or practical experience of agriculture or horticulture an advantage. Duties include investigation of changes in financial conditions of agriculture and factors affecting agricultural output, analysis of farm accounting data, and preparation of memoranda on farms and trends of agricultural management advisory work. Inclusive London salary scale: (main grade) £1,402-£1,719; (Assistant) £793-£1,282. Starting salary may be above minimum in both grades. Promotion prospects.—Write Civil Service Commission, Burlington Gardens, London, W.1, for application form quoting 5342/61. Closing date August 10, 1961.

YOUNG ECONOMIST WANTED

for training in Research and Survey Work by Economic Adviser of world-wide Organisation. Training starts with code numbering of newspaper articles, simple system of code numbers reference files for Survey Data. Knowledge of foreign languages an advantage.—Write, giving particulars and starting salary required, Box 1532, Economist Office.

UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

Applications are invited for the post of DIRECTOR OF THE RHODES-LIVINGSTONE INSTITUTE OF SOCIAL RESEARCH, LUSAKA, NORTHERN RHODESIA.

The Director will be a full time member of the staff of the College, but will be stationed at the Institute headquarters in Lusaka. He will be the responsible administrative officer of the Institute, and will be expected to direct the research activities of the Institute staff, to plan further research and in general to stimulate social research in both the Rhodesias and Nyasaland. A sound academic training in one of the social sciences and a broad interest in other social sciences is essential. Salary scale: £2,350 x £100—£2,650 p.a. Passages to Rhodesia for appointee, wife and dependent children on appointment, with allowance for transport of effects. Superannuation and Medical Aid Schemes. Unfurnished accommodation at rent of 15 per cent. of salary. Overseas passage for appointee every second year. Detailed applications (eight copies), naming three referees, by August 18, 1961, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

ARTHUR GUINNESS SON AND CO. (PARK ROYAL) LTD. require a Statistician for their Statistical Department at Park Royal. Qualifications: an Honours Degree either in Maths with a Diploma in Statistics or B.Sc. (Statistics) or B.Sc. (Econ.) with Statistics or Computational Methods in Part II. Applications from those who have graduated this summer will be considered. Salary: £875 to £1,700 (the point of entry will depend on age, qualifications and experience). Five-day week; three/four weeks' leave per year (this year's holiday arrangements honoured), non-contributory pension scheme.—Please write, stating age education and experience, to Personnel Manager, Park Royal Brewery, N.W.10.

THE METAL BOX COMPANY LIMITED
requires an
INFORMATION OFFICER
to take charge of its Commercial Information Service and Library at Head Office, Baker Street, London, W.1. The work covers all aspects of packaging and its user industries. Previous experience an advantage.
Apply to
Head of Staff Division,
THE METAL BOX COMPANY LIMITED.

UNIVERSITY OF ST. ANDREWS

Applications are invited for the post of LECTURER IN POLITICAL ECONOMY in St. Salvator's College, St. Andrews. Preference will be given to particular qualification in the teaching of welfare theory and social economics. Salary scale £1,050-£1,850; starting salary according to qualifications and experience. F.S.S.U.; family allowance; grant towards cost of furniture removal. Six copies of applications, with the names of three referees, should be lodged by August 19, 1961, with the Secretary of the University Court, College Gate, St. Andrews, from whom further particulars may be obtained.

FIRCROFT COLLEGE
SELLY OAK, BIRMINGHAM 29

Applications are invited for the post of *Resident Tutor*. Fircroft provides one-year residential courses in liberal studies for workingmen. The applicant should be qualified by his degree and experience to lecture in the range of ECONOMICS, POLITICS, TRADE UNION STUDIES or INDUSTRIAL RELATIONS and to undertake individual tutorial work.

Salary on University scales: £800 by £50 to £950 with possible promotion to next grade (£1,050 by £50 to £1,400). Only bachelor accommodation available.

Further particulars from the Warden.

CITY AND COUNTY OF NEWCASTLE UPON TYNE
CITY PLANNING DEPARTMENT

PLANNING ASSISTANTS, Grade A.P.T. I (£645-£815 p.a.).

Two vacancies exist for research workers in the Research Group of the Policy Division of the Department. A wide range of basic and specialist research projects are included in the programme which should interest young graduates with initiative and an interest in physical, social and economic problems. Preference will be given to graduates in economics, geography, statistics or sociology.

The appointments are subject to the National Scheme of Conditions of Service, the Local Government Superannuation Acts and the passing of a medical examination.

Applications, stating age, qualifications and experience, together with the names of two referees, to reach the City Planning Officer, 2 St. Nicholas Buildings, Newcastle upon Tyne, 1, by Thursday, July 27, 1961.

JOHN ATKINSON,
Town Clerk.

Town Hall, Newcastle upon Tyne.
July 12, 1961.

PHILIPS ELECTRICAL INDUSTRIES LTD.
have a vacancy for an
ACCOUNTANT
as a
SENIOR DEPARTMENTAL ASSISTANT

The requirements is for a man aged about 30, at or about A.C.C.A. qualification. Experience in financial budgetting, the analysis of company balance sheets and methods of company finance would be essential, and the post calls for the ability to write concise reports. A knowledge of the fundamental principles of Dominion taxation and of costing would also be advantageous.

This pensionable post offers interesting and varied duties, and will carry good conditions of employment.

Please apply in writing, with details of experience and qualifications, to:

Personnel Officer (D/743/4),
Philips Electrical Industries Ltd.,
Century House,
Shaftesbury Avenue,
London, W.C.2.

THE SCOTSMAN requires a young
FINANCIAL REPORTER
who will join their City Office in London after an initial six months' training in Edinburgh. He must have a sound, basic knowledge of finance and commerce and must be able to report on Company affairs, stock market trends, &c. Applications to *Production Editor*, North Bridge, Edinburgh.

BIRMINGHAM CHAMBER OF COMMERCE

Applications are invited for the post of male Assistant to the Secretary. Age group 21-30. Personality, tact, educational background and ability to write clearly and to express ideas well are important. Preference will be given to graduates in arts, commerce, economics or law, or to persons with professional qualifications. Good prospects for promotion. Contributory pension scheme.

Applications must be "Confidential" giving full personal details and salary required should be sent to the Secretary, Birmingham Chamber of Commerce, P.O. Box 360, 75 Harborne Road, Birmingham, 15. Applications should be received by 28th July.

THE MILK MARKETING BOARD invite applications for the appointment of Assistant in the Statistics and Surveys Department of its Production Division. This department is concerned with the study of factors governing milk production, feeding practices, cattle population trends, etc.

Applicants should recently have graduated with honours degree or experience, and there are excellent prospects for the future. The appointment is permanent and pensionable after a probationary period. Application forms from the Personnel Officer, Milk Marketing Board, Thames Ditton, Surrey.

BUCKINGHAMSHIRE EDUCATION COMMITTEE
SLOUGH COLLEGE OF FURTHER EDUCATION
Principal: R. Edgar, M.Sc., M.A.
DEPARTMENT OF MANAGEMENT, COMMERCE AND GENERAL EDUCATION

Applications are invited for the post of Lecturer to teach Economics and Statistics up to and including Final Professional level.

Candidates should be suitably qualified. Experience in teaching and industry or Commerce would be an advantage.

Salary on the Burnham Technical scale for Lecturers Gr.:—£1,370 x £38 to £1,550.

Application forms and further particulars may be obtained from the Principal, College of Further Education, William Street, Slough, Bucks, to whom completed forms should be returned within fourteen days of the appearance of the advertisement.

ECONOMIST

Young Economics Graduate required by Turner Brothers Asbestos Co. Ltd., Rochdale, manufacturers of asbestos and glass textiles, belting and specialised products, to assist in market research, sales analysis and economic intelligence work. The position will provide an excellent opening for someone intending to make a career in industrial market research and it could also be the avenue to wider opportunities for the man who makes a success of it. Applicants who are interested in this permanent and well-paid career should send full details to the Chief Personnel Manager, Turner Brothers Asbestos Co. Ltd., Rochdale.

GOVERNMENT OF HONG KONG

A Statistician (Special Duties) is required in the Commerce and Industry Department, Hong Kong. Candidates, preferably under 35, should possess an Honours Degree in Economics (with Statistics as one of the subjects taken). Previous experience in the preparation of National Income Statistics is essential. Duties will consist of the preparation of National Income Statistics and of estimates in respect of recent years; also the setting up of machinery and training of local staff for the compilation of future estimates of National Income.

Appointment will be on contract for 18-24 months. Salary, depending on experience, in scale £2,955, £3,045, £3,135, £3,225 (male): £2,216, £2,284, £2,351, £2,419 (female). Contract gratuity of £68 15s. (male) or £56 5s. (female) for every completed period of three months' resident service. Free passages. Generous home leave. Free medical attention. Apply, in first instance with summary of personal particulars, to Director of Recruitment, Colonial Office, Sanctuary Buildings, Great Smith Street, London, S.W.1, from whom further details may be obtained. Please quote reference No. BCD 149/51/06A3, and state full name.

MATHEMATICAL ECONOMIST

I.C.T seek a Mathematical Economist for their Planning Division in Park Lane to assist in the development of a mathematical model of the Company. Applicants (male or female) should be aged between 21 and 35 and possess a good honours degree.

Write to the Manager, Personnel and Training Division, International Computers and Tabulators Limited, 149 Park Lane, London, W.1, quoting reference PD/5ME on letter and envelope.

SECRETARY/RESEARCH ASSISTANT required for Commercial and Economic Analyst of large industrial Company, S.W.1. Must have first-class shorthand typing and ability to extract and tabulate statistical and commercial data. University degree and statistical experience an advantage but not essential. Good salary and luncheon vouchers. —Write Box 1531.

UNIVERSITY OF OXFORD
ALL SOULS COLLEGE
SENIOR RESEARCH FELLOWSHIPS

The College proposes to elect during 1962, if suitable candidates present themselves, to not more than two Senior Research Fellowships and carries an emolument of £1,250 rising to £1,500* (inclusive of allowances other than children's allowance, housing allowance and table allowance); its tenure is compatible with the tenure of a lecturing grant of £550 to £750.

2. The person elected must have attained distinction in one of the following branches of knowledge: Law; History (including the History of Art or of Science); Philosophy; Literature; Economics, Social Anthropology, Politics, Sociology, and other Social Studies. He will be required to undertake some definite project of research in Oxford or with the permission of the College elsewhere.

3. Candidates should send their application to the Warden, not later than October 31, 1961, together with any statement they may think it desirable to submit in support of it and the names of not more than three referees. They may be required to present themselves for an interview. Further particulars concerning the Fellowships may be obtained from the Warden. All envelopes relating to applications should be marked "Fellowship Application."

The choice of the College will not be limited to those who apply.

* An increase, to £1,400 rising to £1,650, is now before the Privy Council for approval.

CADBURY'S

Seek applicants for the senior post in their Consumer Research Department at Bournville. A man in the age range 25-35, experienced in Market Research, and preferably with a degree in economics and a working knowledge of statistics, is required to carry out social and economic research relevant to the Company's affairs. Through his Department he will handle a wide variety of consumer research enquiries; initiate consumer surveys both qualitative and quantitative with Agencies, follow the progress of such surveys to the report stage and interpret results and present them to policy making bodies. He will direct general economic research; supervise a small team of investigators; and himself undertake occasional pilot enquiries in the field. Applicants, who should state age, experience in this field and present salary, should write to:

Personnel Manager,
Cadbury Brothers Ltd.,
Bournville, Birmingham, 30.

TRANSLATOR FROM AND INTO FRENCH/ENGLISH

Applications are invited for post with the Air Ministry as Civilian Translator from and into French, at Fontainebleau, France, for a period of three years in the first instance.

Candidates should be British subjects by birth and should have at least a 2nd class honours degree in French but exceptional applications may be considered from candidates without this academic qualification if they are able to show that they possess the required command of French and English.

Both male and female candidates may apply. *Commencing salary* £788 p.a. (at age 25 or over) on scale £618 at age 21 to £1,184 p.a. plus Foreign Service and Rent Allowances. *Application Form* from Manager (PE.2378), Ministry of Labour, Professional & Executive *Register, Atlantic House, Farringdon Street,* London, E.C.4.

THE National Federation of Housing Societies (recognised under the Housing Act, 1957, as the central organisation for non-profit housing), is expanding its organisation to launch and direct a national campaign for providing both family housing and housing suitable for old people through Housing Associations and Co-partnerships.

Applications are invited for the newly created post of Director at the Federation's office in central London. Appointment initially for three years. Age 40-55. Salary of the order of £3,000 according to qualifications. Experience of housing association work an advantage but not essential.—Application forms should be obtained before July 31st from the Secretary to the Federation, 12 Suffolk Street, S.W.1.

MARKET SURVEY AND PRODUCT RESEARCH

A vacancy exists for a man with first-class training and experience to be responsible for the market survey and *product research activities of a major Company in the motor industry in the* Midlands.

quainted and it is desirable that they should possess sound Sales or Commercial experience.

It is desired to appoint a man within the age limits 35/45 to this important position and the salary associated is up to £2,250 per annum.

Letters of application, which will be treated in the strictest confidence, should give full details of age, training, experience and present salary.—Write, Box No. 1533.

AN Agricultural Economist is required to undertake a Survey of Peasant Farm Economics for the Government of British Honduras. The purpose of the Survey would be to provide detailed knowledge of specific crop economics and the economics of the smallholder, which is needed to plan agriculture and crop policies.

The project would probably take up to two years' field work plus a writing-up period of six months.

Further particulars may be obtained from the Secretary, Colonial Economic Research Committee, Room S.608, Colonial Office, Great Smith Street, London, S.W.1, reference RES/B.234.

THE Economist Intelligence Unit wishes to appoint a graduate in Economics, Law or a related subject, to assist in studies of certain industries throughout the world. Age 26 to 35. Good German, French or other languages an advantage. Detailed applications to: Research Services, The *Economist Intelligence Unit*, 22 Ryder Street, as soon as possible.

IMPERIAL CHEMICAL INDUSTRIES LIMITED

has two vacancies in its Economics and *Statistics Department* in London for young men with a year to till prior to University for *statistical and economical* research work. The post would provide a useful and practical background for young men who intend to read economics.

Candidates should write brief personal details to Head Office Staff Department (SMW), Imperial Chemical *Industries Limited*, Imperial Chemical House, Millbank, London, S.W.1.

PART-TIME LECTURERS in Economics and Statistics are required for evening classes commencing next September and preparing students for professional examinations.—For details and application form apply to the Secretary, City of London College, Moorgate, E.C.2.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER in SOCIAL ADMINISTRATION. The person appointed will be required to undertake research in Social Administration and to assist in the *supervision of practical work*, as well as in the ordinary teaching duties of the Department. Salary scale £1,000 to £1,850 per annum with membership of the F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than August 31, 1961, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF CANTERBURY

CHRISTCHURCH, NEW ZEALAND

The growing Department of Economics requires additional staff, and a new LECTURESHIP or SENIOR LECTURESHIP has been created.

The salary range for a Lecturer is from £1,250 to £1,700 per annum and for a Senior Lecturer £1,750 to £2,000 per annum.

Economists who are interested in this position are invited to write (air mail) to the Head of the Department before the end of July, 1961, giving some provisional information about their qualifications, special interests and other relevant facts.

Full details of the position and information regarding the University of Canterbury and its Department of Economics will then be sent to those whose applications would be welcomed.

G. O. TURBOTT,
Registrar,
P.O. Box 1471, Christchurch,
New Zealand.

CITY AND COUNTY OF NEWCASTLE UPON TYNE

CITY PLANNING DEPARTMENT

Applications are invited from *suitably qualified* candidates for the following appointment:

REDEVELOPMENT DIVISION

ASSISTANT PLANNING OFFICER, Grade A.P.T. IV (£1,140-£1,310 p.a.). Design experience an advantage.

The appointment is subject to the National Scheme of Conditions of Service, Local Government Superannuation Acts, and the passing of a *medical* examination.

Applications, stating age, qualifications, experience, present and past appointments and salaries, together with names of two referees, to reach the City Planning Officer, 2 St. Nicholas Buildings, Newcastle upon Tyne 1, by Thursday, July 27, 1961.

JOHN ATKINSON,
Town Clerk.

Town Hall, Newcastle upon Tyne.
July 12, 1961.

ECONOMIC ANALYST

IBM UNITED KINGDOM LIMITED requires an assistant in their Economic Analyst's Department. Minimum requirements are an Honours Degree in Economics and three years' experience in an economic research organisation or *similar department of a business con*cern. A firm grasp of statistics is essential.

The department advises the United Kingdom Company on all aspects of economics affecting its environment *and operations. Close liaison is main*tained with economists of associated companies on the Continent and in the United States of America and the department co-operates in their work programme.

A man keen to work hard and intelligently, largely on his own initiative, can make an effective contribution to this international team of economists.

Applicants, stating age, education and previous experience, should apply to the

Personnel Manager,
101 Wigmore Street, London, W.1,
quoting Ref. GA/EC/411.

THE DEPARTMENT OF LIBERAL AND SOCIAL STUDIES

KUMASI COLLEGE OF TECHNOLOGY

GHANA

Applications are invited for the post of LECTURER IN ECONOMICS.

The Lecturer to be appointed will be required *to teach Economics up to General Degree Standard and to contribute to the development* of a broad scheme of Liberal Studies to be offered to technological students.

Contract appointments are normally for five years and may be renewed. Three months' notice of resignation of an appointment is required on either side.

The CONTRACT SALARY SCALE (under review) is:

£1,063 15s. x £57 10s. — £1,865 15s.

Point of entry to the scale is related to previous experience.

In addition children's allowances are paid up to a maximum of three, and a gratuity at the *end of the contract period at the rate of £150* for each year of satisfactory service.

The College is fully residential and members *of staff are housed in pleasant modern bun*galows on the spacious campus; climate and living conditions are good.

Application forms and further information may be obtained from the Assistant Registrar, *Kumasi College of Technology*, 29 Tavistock Square, London, W.C.1, who will be glad to answer any questions about this appointment.

BBC requires Producer (British) in its Pacific Service, which is a small production team *creating spoken word programmes* rebroadcast *in Australia and New Zealand by both public* service and commercial radio stations. Emphasis is on topicality, and output includes talks, magazine-programmes of sport and actuality, and discussions and interviews on current ideas. Candidates should have sound education, ability to handle wide range of ideas and people, lively appreciation of aspects of modern Britain interesting to the *[illegible]* Australia and New Zealand. Diction acceptable to overseas ears an advantage. Calibre more important than experience. Salary £1,380 (possibly higher if qualifications exceptional) rising by five annual increments to £1,780 p.a. Application forms for application forms (enclosing addressed envelope and quoting reference 61.G.328 (ec.) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

THE CO-OPERATIVE PARTY invites applications for the post of RESEARCH OFFICER: salary £975-£1,115: superannuation scheme: knowledge of the Co-operative movement essential. Application forms from the Co-operative Party, 54 Victoria Street, London, S.W.1, not later than August 3.

THE UNIVERSITY OF SHEFFIELD

Applications are invited from candidates with *special interest in industrial economics and/or* problems of business management for a RESEARCH / TEACHING FELLOW in APPLIED ECONOMICS. Duties to begin October 1, 1961, or as soon as possible thereafter. Initial salary according to qualifications and experience in the range £750-£1,000 with F.S.S.U. provision and family allowance. A grant towards removal expenses will be made. Further particulars may be obtained from the Registrar, to whom applications (four copies) and the names and addresses of three referees should be sent by August 19, 1961.

ECONOMIST/STATISTICIAN

Applications are invited from Hono[urs] Graduates for the appointment of Economic Statistician with the Committee for Scotla and Northern Ireland of the White F Authority.

Generally the duties are to undertake econo[mic] surveys and research covering the various a[s]pects of the fishing industry and to maint[ain] and analyse fishery statistics.

Applications should be made on a prescribed form. Intending applicants m[ay] obtain further particulars regarding duties s[alary] conditions of service and the form of applica[tion] from the Secretary/Solicitor, Commiss[ioners] for Scotland and Northern Ireland, 5 Dor[set] Street, Edinburgh.

UNIVERSITY OF DURHAM

CHAIR OF STATISTICS

Applications are invited for the Chair of Statistics tenable in the Newcastle Division of the University. This is a newly established po[st] and the candidate selected will be expected to take up the appointment on 1st January, 196[2] or such other date as may be arranged. Sala[ry] in accordance with the Professorial scale (£2,60[0] £3,000 a year) with family allowance and me[m]bership of F.S.S.U.—Further particulars m[ay] be obtained from the undersigned, with wh[om] applications (12 copies) must be lodged n[ot] later than 25th September, 1961. (Candidat[es] outside the British Isles may submit one co[py] only.)

Registrar, Durham University Office, 1 Kensington Terrace, Newcastle upon Tyne 12th July, 1961.

Better Rails for Smoother Travel...

Trains run smoother on Yawata's trouble-free rails; experienced railroadmen know the difference, and so do passengers. Yawata's rails, famous among engineers, are standard equipment for railroads in many lands.

Manufactured in a variety of types and sections, Yawata's heavy rails, high-frequency head hardened rails, elevator guides, third rails for subways and high "T" rails conform with the most exacting standards. For greater versatility, Yawata's high "T" rails are produced in lengths from 18 to 83 feet, and in weights between 50 to 112 pounds per yard.

However, we are prepared to supply sections and sizes to meet every railroading need.

Wherever performance and long-lasting service count, Yawata's rails are "choice."

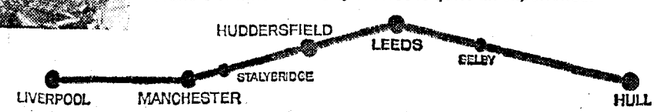
EXPRESS SUCCESS!

TRANS-PENNINE INTER-CITY



Over the hills and far away – a cross-country trip linking some of Britain's busiest industrial centres and passing through some magnificent scenery on its way – this is the Trans-Pennine route. With the introduction of the fast new Inter-City diesel trains, the run is proving immensely popular with local residents, with tourists who come for the ride, and with businessmen plying between the cities of Liverpool-Manchester-Huddersfield-Leeds-Hull. So, too, are the newly improved through services between Liverpool, Manchester and Newcastle.

What's so special about these new trains? First, the Inter-City diesels themselves – fast, quick off the mark at stations: with clean spacious interiors where passengers can stretch their legs at ease: with 'Griddle' buffet cars serving light meals at any hour. Second, the fast frequent service across the Pennines: a comfortable journey through an exciting landscape, seen through panorama windows while you relax in armchair comfort. Whether on business or pleasure, you'll find the new Trans-Pennine Inter-City service is quite an experience.

INTERNATIONAL

COUNT-DOWN?

President Kennedy's firm but unprovocative speech on Berlin has given a lead which Americans are ready to support (p. 451).

The President is searching for a third course between retreat and nuclear war (p. 438).

• In Britain, the Ministry of Defence seems to be marching on a third course between the Foreign Office and the Treasury (p. 438).

ON THE PAD

Once Britain and the European common market have made up their minds about one another, it will be time for launching the idea of Atlantic union—a thought that might give cheer to the Commonwealth (p. 435).

• The British Government is on the point of announcing its intentions about the common market (p. 439).

• *The work of the "Eurocrats" who serve the European Economic Community is described* (p. 449).

BLAST-OFF

Bizerta: Mr Bourguiba's precipitation of the clash is to be deplored but, even so, Bizerta is not worth the destruction of the remaining hopes of a peaceful Maghreb friendly to the West (p. 434).

Tunis: Bourguibism—moderation, friendliness towards France and the West, fiery oratory, and skilful bargaining—may be one of the casualties of the battle of Bizerta (p. 448).

Morocco: American bases may seem to be too high a price for Moroccan politicians to pay for getting as much aid as all the rest of Africa put together (p. 447).

Angola: Portugal's foothold on the west coast of Africa looks less secure than ever (p. 444).

REFUELLING

US Aid: The long-term authority for development loans, which is the heart of this year's foreign aid Bill in Washington, has surmounted its first hurdle. But stiffer ones will follow (p. 452).

Washington: For the time being the American budget may seem to be slipping out of control, but the Treasury's recent refinancing shows that it is solving its problems in managing the debt (p. 454).

UK Aid: British economic difficulties have hit plans to give Tanganyika a much needed £12 million (p. 444).

Rhodesia: White voters in Southern Rhodesia have decided to feed 15 Africans into the colony's previously all-white parliament (p. 440).

• But the referendum campaign has injected more bitter racial feeling into Southern Rhodesia (p. 446).

Space Note: Builders in Chicago—including one British firm—are tapping one kind of space in which the country's railway capital is unusually rich—the "air rights" over stations and the permanent way (p. 445).

HOME

SURGERY

Mr Selwyn Lloyd's harsh surgery is not as crude as some have been saying: if the patient can weather the post-operative shocks—and if the surgeon can keep his nerve—a good recovery may be hoped for (p. 431).

WHERE THE KNIFE WAS USED (pp. 467-471)

The TUC has taken a lancet to the swollen effrontery of the ETU's executive, and may heal itself in the process (p. 440).

The amputation of English teachers' hopes for a larger pay rise might have been more drastic but for the recent award to their Scottish colleagues (p. 439).

Labour's plan for building land purchase has atrophied, and will have to be quietly excised (p. 443).

THERAPY

Mr Gaitskell's stay at the Labour Party conference at Blackpool could be something of a rest-cure (p. 443).

The healthy revulsion of the public and the local council is the good blown in by the ill wind of Smethwick's colour-conscious council tenants (p. 444).

REMEDY

The Postmaster General's medicine has not altogether cured the Post Office's ills (p. 473).

England's provincial theatre is in a parlous state: an Arts Council report explores means of reviving it (p. 457).

A breakthrough in research has brought a vaccine for the common cold nearer—but hopes should not be too high (p. 445).

MALADY

Tory members' reception of the Chancellor's measures has not been rapturous; but the party is far from rupture, and its unity could be strengthened by the crisis (p. 439).

Merseyside is suffering a congestion of the tunnel, and will need to resolve conflicts of prescription to arrive at a cure (p. 458).

The fevered spending in some (but by no means all) shops just prior to the Chancellor's cuts may give way to lassitude or coma in months to come (p. 457).

MIDWIFERY

The boom in Britain's birthrate is the major factor in the breakdown of official population forecasts (p. 437).

INDUSTRY AFTER INDUSTRY, all around the world, has found that new Polysar* rubbers, produced by the Polymer Corporation Limited, have helped to solve a wide variety of raw material problems. The result has been a steady growth in production, leading to the present pre-eminence of Polymer among world rubber suppliers. Additions are constantly being made to these versatile elastomers. One of them could supply you with the answer to your raw material problems. A letter to the Marketing Division, Polymer Corporation, Sarnia, Canada, will put you in touch with a Polymer representative in one of 43 countries.

Squirrels have the right idea or do they?

You probably thought this advertisement was going to draw a neat little parallel between the nut-storing efficiency of the squirrel and Lansing Bagnall equipment. So did we. Regrettably, the squirrel let us down.

Contrary to what seems to be a common supposition, squirrels do *not* efficiently stock-pile their winter food in holes in trees. They randomly bury it all over the place, one nut at a time, and then have to go scratching around whenever they feel hungry... Never mind; delightful little creatures, aren't they! Even so, and our strong British love of animal life notwithstanding, it might be an idea not to introduce squirrels into any discussion you may raise with us. Mention "Mechanised Muscle" by all means – no disillusion there! "Mechanised Muscle" gives your handling and storage the high efficiency which modern conditions demand. You can depend on it.

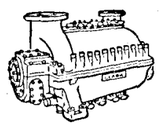
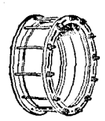
THE MONEY THAT MANAGEMENTS SAVE THROUGH MOBIL ECONOMY SERVICE



More than £6,000 a year at Kellogg Company of Great Britain Limited

KELLOGG COMPANY OF GREAT BRITAIN LTD found that the roll neck bearings used in flake roll machines were averaging only two months' life. So they took their problem to the experts in lubrication—Mobil. Mobil advised the installation of mechanical grease pumps using a special grade of Mobilgrease. The annual cost of replacing the bearings of each of the flake rolls has been £312 . . . but since the introduction of Mobilgrease the life of the bearings has been considerably extended, and there has been no loss of production time through bearing failure. During one year of operation, after applying Mobil's suggestions, Kellogg's made a direct saving of over £6,000 in replacements, maintenance, and production time.



WORLD-WIDE EXPERIENCE OF INDUSTRIAL LUBRICATION This example of the value of Mobil Economy Service is typical of many that could be cited from almost every industrial area of the world. In all these areas, the world-wide Mobil organisation is applying more than 90 years' experience to the cutting of lubrication and maintenance costs.

ONE PLAN TO MEET ALL LUBRICATION NEEDS The value of Mobil Economy Service is the value of expert knowledge methodically applied; it is a matter of assessing all the lubrication needs of a business collectively, considering how they can best be met with the fewest different lubricants in the smallest quantities, and making sure that every one concerned knows how to use the lubricants to the best effect with the absolute minimum of work. The astonishingly large savings that are often achieved are the measure of the experience and skill that Mobil bring to the consideration of every industrial lubrication problem.

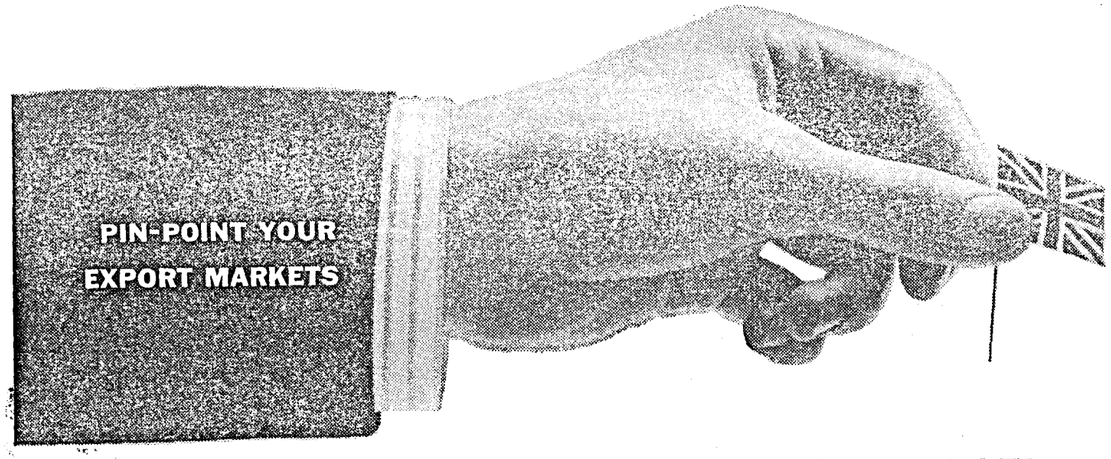
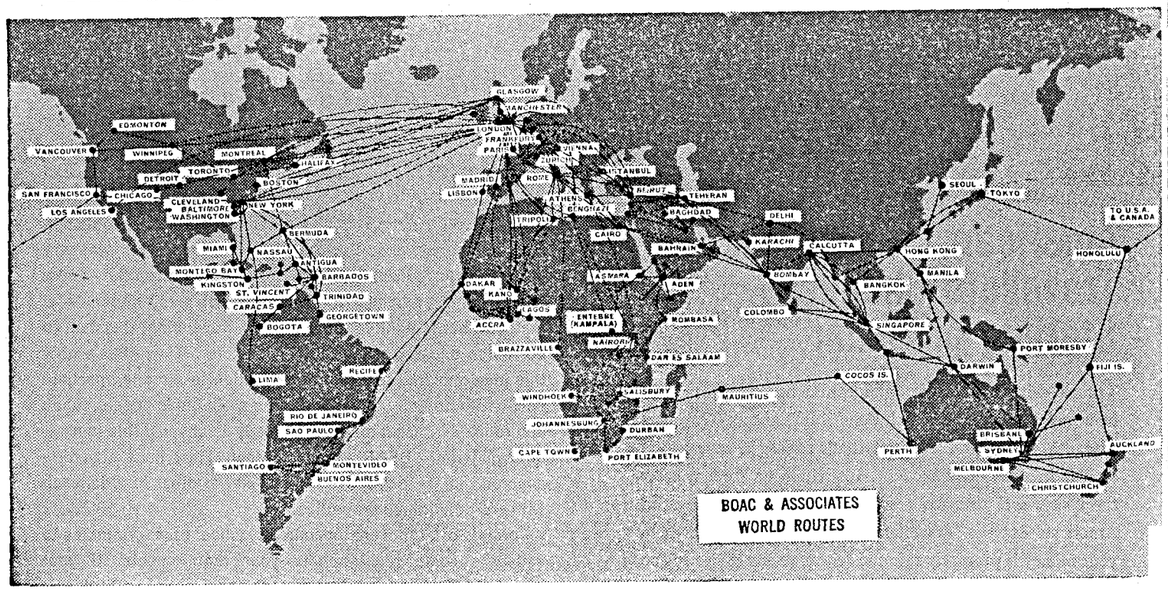
Bear-sign of Tufnol



Those people born under the sign of the Bear have few grudges to bear because they reach the top of their professions. Bear men become chief purchasing officers, chief engineers, chief draughtsmen and chief designers. Bear men are perfectionists who are liable to behave like bears with sore heads unless they find a *material that combines the properties* of many materials—a material that is light yet strong and hardwearing, resistant to corrosion and a good electrical insulator. They also expect this ideal material to resist deterioration in storage, machine easily with ordinary tools, and to be available in sheets, tubes and rods. Many Bear men have already discovered this remarkable material—"BEAR" brand Tufnol. They have also discovered that Tufnol is available in eleven other brands, each with pre-determined properties.

All brands of Tufnol are laminated plastics; *each* formulated to satisfy specific requirements—*your* requirements. If your birthday falls between January 1st and December 31st, this could be your lucky week—the week you discovered Tufnol.



'Phone or write to your local Tufnol Branch Office and we predict you'll thank your lucky stars.

VOLUME CC - NUMBER 6153

The Great Deflation

MR SELWYN LLOYD's statement of measures on Tuesday was much more sensible than most of the minatory noises that he and his colleagues had made before it. It also looks a good deal more radical than many people have so far credited. The Chancellor seems to have made a very sharp step indeed in the direction of short-term deflation, and has intimated that this is meant to prepare the way for a major (though much vaguer) change in the Government's methods of long-term economic management. The questions to be asked this weekend are whether his short-term cuts have gone too far, and whether his new long-term policy will be translated from rather mottled words into enduring action.

Because most of his immediate cuts have been familiar in their manner, there has been some tendency to underestimate how tough they may prove to be in extent. The main key to them is the 7 per cent Bank rate. This is certainly the right first key to have turned; indeed everything that the Chancellor said on Tuesday confirms one's belief that it should have been turned several weeks ago. The deficit on Britain's current balance of payments is now "substantially" lower than a year ago, but a flight of short-term capital has turned last year's rise in the reserves into this year's substantial fall; this is the classic situation in which interest rates need to be raised to attract short-term capital back to Britain. But on top of its orthodox, though quite stringent, two per cent rise in Bank rate, the Bank of England has also called for more special deposits from a banking system that is already very short of funds for commercial lending. The consequent squeeze on credit looks as if it could be severer than anything known since the war. And on top of all this the Chancellor has raised all indirect tax rates by 10 per cent, which he estimates should "withdraw purchasing power from the economy at the rate of £210 million per year." In previous crises there has been lengthy discussion whether the Government should use mainly monetary or mainly fiscal policy; this time Mr Lloyd has used both.

Taken together, these measures probably add up to the biggest immediate cut in demand that has been deliberately imposed by a British government on any single afternoon in peacetime history. And it is very difficult to believe that the state of demand is now nearly as buoyant as it has been on several occasions when much milder measures have been used. Although the Chancellor said on Tuesday that "in the three months since the budget, home demand has continued to increase and is likely to increase even more than was then foreseen," the suspicion persists that he still does not quite know which copy of Bradshaw to look at. When the budget was drawn up, the Chancellor was relying mainly on the economic indicators for February, which suggested that the trend towards demand inflation was relatively mild. Thereafter, most of the figures for March and April pointed to a fiercer increase in inflationary pressure and it was apparently at this stage that the Government decided that it must bring forward fierce measures of restriction. But, since then, the retail trade statistics for May and June have seemed to suggest that demand was moderating, and it is a little surprising that the Government has decided quite so easily that these are indicators to be disregarded. If Mr Lloyd's judgment has been wrong, and if he has imposed his cuts on to a home market that was already off the boil, then domestic demand for a wide range of consumer goods could now spill over into quite a pronounced recession.

There will be differing views why Mr Lloyd has decided to risk this. Critics will allege that unnecessary loquacity may be the mother of some of this austerity; that Mr Lloyd had made so many speeches in recent weeks saying how tough he was going to be that a real squeezing had to follow so much squawking. But there are at least two good economic reasons why his sternness may have come at the right time. Although demand in the home market may now fall quite sharply, there are signs that in overseas markets (especially America) it may go on increasing quite fast; if there is anything in the theory that goods which are thwarted from being sold at home then flock into ships' holds to be exported, the next few months could provide excellent conditions for testing it. Secondly, there may be a need for a cold short-term nip in the air if Mr Lloyd's new long-term policies of planning are to begin to take effect. And that these should take effect is now the real thing that matters.

What Planning Means

THE road to more planning will not be easy. Although the Trades Union Congress has long proposed that the Government should plan, it is going to scream blue murder now that the Government tries to do so. For it has been obvious for years past that the main thing that needs to be planned is that trade unionists and other earners should not annually get much more money before they have earned it. What the Chancellor said about the need for "better co-ordination" of "the Economic Planning Board, the National Production Advisory Council on Industry and various other advisory councils" adds up, first and foremost, to a recognition that they should henceforth actually tell people the facts and figures and current aspirations of economic life. And the figure that in future they most need to proclaim with a loud voice—even though it cannot be with a unanimous voice, because their trade union members will not at first agree to this—is their planned estimate of what is the safe average increase in personal incomes that has been made possible each year by the previous year's increase in productivity.

On Tuesday, the Chancellor intimated in rather muffled terms what his view is of the safe average increase for this year; it is a pity that he did not phrase this part of his speech much more brutally. Between 1959-60 and 1960-61, he said, personal incomes rose by £1,450 million and production by only £650 million, so that this year "there must be a pause until productivity has caught up." What this means is that in most occupations, except those where expanding sales make it sensible to raise rewards in order to attract more people into the trade, the safe average increase for wage and salary rates will be nought. For the longer term, the Chancellor said that he wanted to "discuss with both sides of industry the implications for the various sectors of the economy" of his belief that "an annual increase of 3 per cent in the gross national product is feasible, but only if we have a 6 per cent annual increase in exports." What this means is that even when production starts to rise again the Government's guess (which can of course be amended if production manages to rise by more) is that the safe general increase in personal incomes in the average year will be only about 3 per cent.

Everything now depends on whether, when each major wage claim reaches its crunch, some figure for the year's relevant "safe increase" can be riveted into the public mind—instead of its attention being diverted to a different and irrelevant figure which some Mr Guillebaud has advocated as being necessary to avoid a strike. It is no good supposing that even moderate trade union leaders will willingly accept this new sort of anti-inflationary policy, towards which the Government is now trying to fumble its way. On each occasion the unions will determine their actions, quite naturally, by whether they think that they can get more than the nationally "safe increase" by threatening or calling a strike. In the public sector, the outcome will depend mainly on whether the Government makes it steadfastly clear that it is no good any arbitration tribunal fixing up any compromise beyond the year's safe increase, because the Government simply will not pay out taxpayers' money to finance it. In the much larger private sector, it will depend on whether public opinion stands resolutely behind the policy against inflation—or whether, when each official strike threat flares into the headlines, the public will always slide away into the convenient assumption that an unsafe increase should be given in this "very special case."

It is not entirely inappropriate that the first test should come in the case of the teachers. During these last few weeks *The Economist*, in rather lonely isolation, has been urging the Government to do almost exactly what it has now done. This has not been a popular stand to be taken by a newspaper which is proud to count many teachers among its readers, and which believes that the largest extension of education is a first national need. But the facts in this dispute are really pretty plain to any unprejudiced observer who bothers to sit down and study them. Everybody who cares about education agrees that there is an actual or threatened shortage of special sorts of teacher with particular qualifications or responsibilities, who have devoted (or intend to devote) a lifetime's service to the profession; there is a strong case for higher differentials for graduates and for those who have already been in teaching for more than five years. But it is just not possible to argue that there is a similar shortage of young women queueing up at the ordinary training colleges, many of whom will spend only a year or two in the schools on the basic Burnham scale before they get married.

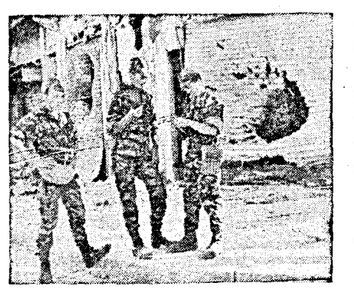
The heavy and expensive overemphasis in the rejected Burnham recommendation on increases for this mass of teachers at the bottom of the basic scale, and its underemphasis on differentials, stems from the fact that these young (and mainly women) teachers hold the balance of power in the National Union of Teachers. This is a classic case where trade unionisation has threatened to distort a pay award in a way contrary to the needs both of the market and of a profession's efficiency. No muttered truisms about the great worthiness of British teachers can alter the conviction that Sir David Eccles's decision (see page 439) looks abundantly right. Educationists will have cause to complain about unfairness only if other ministers who have control over wage and salary levels fail to follow his lead.

Not Exactly Plowden

THE other sections of Tuesday's statement that referred to longer-term policy were the Chancellor's expressed determination to encourage more competition and his expected promises about cutting Government expenditure. The references to competition and to attacking restrictive practices were disappointingly imprecise, and those to Government expenditure seemed more than a little muddled. It is altogether welcome that Mr Lloyd has accepted the main Plowden recommendations: that this year "it would be a waste of resources to delay work in progress or to postpone necessary maintenance," but that Government expenditure needs to be planned for the long term. His promise about current Government expenditure in 1962-63—that he will do his "utmost to keep its increase [above 1961-62] at a level not more than 2½ per cent in real terms"—also fits in well with what he had said about long-term aims and plans. But having announced this, he seems suddenly to have remembered that the "safe figure" he is likely to want to enunciate for other people's real incomes in the year ahead is not 2½ per cent but nought. If he felt under an obligation to do the same for Government expenditure in 1962-63, the right course would have been to bring forward various plans for reshaping the social services which will almost certainly be necessary later in the 1960s. But despite some heartening promises that expensive aid for lame dog industries will soon be tapering off and that "we will have to look critically at the level of agricultural support during the 1962 review," he has not really done this; indeed, he seems later to have cancelled the good impression made by his remark about the farmers by assuring a private meeting of Tory back-benchers that no really big cuts to them need be expected.

Instead he is going to seek to offset the increase in supply expenditure by planning downwards some of the items of below-the-line and other expenditure which are least easily plannable. He hopes to make a sizeable cut next year in Government military expenditure overseas, although nobody can possibly tell in advance the number of Berlins and Kuwaits there may be. He intends to restrain the rise in assistance to under-developed countries, an item that it is perfectly reasonable to watch but quite lunatic to rigidify; Mr Nyerere's unfortunately timed appearance and consequent snub in London in the middle of crisis week is an illustration of the dangers here. Other economies are to be sought by suspending Government loans to building societies, ensuring that "authorisations and loan sanctions to local authorities will be considerably reduced" and asking for several "desirable proposals to be postponed or abandoned." Most of these measures, decided upon at a moment of presumed demand inflation, will take effect next year at a time when Mr Lloyd's general demand deflation may already have bitten deep. Mr Lloyd said on Tuesday that the word planning did not frighten him, but sometimes his conception of it may legitimately frighten us.

Which Prognosis?



BUT it would be wrong to end on this note of acidity. The worst possible result of Tuesday's deflationary measures would be if they issued in a period of unnecessary unemployment and loss of production, but then failed to stop a rise in wage costs at the end of the year, so that economy measures and stagnation or deflation still had to be continued throughout next year. The second worst result (which on past form might be the most likely danger) would be if Britain now repeated the story played out after Mr Thorneycroft's somewhat milder measures in 1957; these measures saved the pound from its immediate plight; they helped temporarily to stem wage inflation after the defeat of Mr Cousins's bus strike in early 1958; they paved the way for Britain's best eighteen months of industrial expansion from the summer of 1958 onwards; but then the lessons failed to stick as Britain ran away from the threatened railway strike of February, 1960 (and in so doing plunged itself into these last seventeen months of continuing inflationary crisis and economic stagnation).

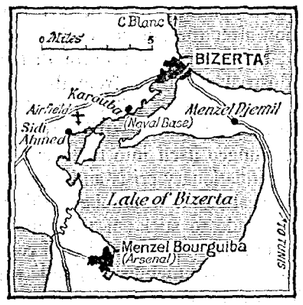
The best result would be if this year the lessons could at last be made to stick; if the country emerged from 1961's wages and salaries battles without cost inflation, and also with a new formula for mobilising public support against inflationary settlements in future; if by about the beginning of next year, expansion could be allowed to go forward again (when the first step should be to cut back the new indirect taxes); and if the new techniques of Government planning and publicity kept the country's eyes both on the almost boundless things it can achieve and on the obvious traps it must avoid. Although nobody should underestimate the short-term shock of deflation that probably lies ahead, the hope of real regeneration can reasonably be pitched just a little higher than seemed likely before the Chancellor spoke on Tuesday.

The Bill for Bizerta

While the damage of the flare-up at Bizerta will not soon be mended, its causes deserve study

BIZERTA is not worth the destruction of the remaining hopes of a peaceful Maghreb friendly to the West. On this occasion, there is no real doubt, it was President Bourguiba, leader of the weaker and innocent party to the dispute, whose miscalculations were the immediate cause of the battle that started on July 19th. Four days' fighting took the lives of a handful of French soldiers and more than 600 Tunisians. It has added refugees from Bizerta to the Algerians already crowding the camps in Tunisia; a mass departure of French citizens can be expected as soon as the Tunisian government allows them exit permits; and there is all too

much reason to fear further bloodshed. Such is the price—paid, as usual, by third parties—for the burial of President Bourguiba's reputation as a man of common sense.



Mr Bourguiba's conduct of the business is, indeed, its most disconcerting aspect. The Bizerta question has been pending ever since Tunisia gained its independence in 1956, sometimes in cold storage, sometimes near boiling point; and Mr. Bourguiba had reasons for turning on the heat just now. His understanding with General de Gaulle, reached at Rambouillet

in February, had brought him no results, either in the form of a swift peace in Algeria, or of the evacuation of Bizerta. He needed to re-establish his position as an Arab nationalist leader, somewhat undermined by a good name for moderation. Like others, he could see no advantage in allowing foreign bases to remain on his soil when such states as Mali and Morocco had got rid of them, at little cost to themselves.

The issue, to his mind, grew urgent as the time approached for the resumption of talks between the French and the Algerians, which, in fact, began at the chateau of Lugrin on Lake Geneva on July 20th. He feared that, should these talks prove abortive, General de Gaulle might at once set about his last-ditch "regroupment" project, by which the French civilians in Algeria would be gathered into enclaves supported from Algerian military bases; and he feared that a continuing French base at Bizerta might be made part and parcel of this system. It therefore seemed imperative to show his repugnance for such a conception by pressing hard for a firm promise that Bizerta would eventually be dismantled.

But the diplomatic campaign had hardly started, and there was no sufficient reason to assume that it must have been unsuccessful. The Tunisians had many good cards to play. Their scrupulous request for agreement on "the principle of evacuation"; the sympathy of the West and the uncommitted nations; the help of the Algerian nationalists; and President Bourguiba's own relations with Paris and President de Gaulle —none of these assets could be said to be exhausted. At the least their failure would have made the use of force appear as a very last resort. But by firing on the French, in spite of warnings, President Bourguiba put himself in the wrong and invited the bloody and excessive French retaliation. The gulf he has opened between himself and his own past, between himself and the French, and between himself and the West, is still widening; the outcome cannot be foretold.

Base of Bizerta

BIZERTA was established as a base by the French in 1882, when they cut a channel linking the lake of Bizerta with the sea. Its defences were directed towards the sea, on the assumption that the hinterland would be friendly. But the base left in French hands when Tunisia became independent is limited to four points, surrounded by Tunisian territory: (1) the naval and air bases proper (at Karouba and Sidi Ahmed); (2) the telecommunications and radar installations to the north (cap Blanc); (3) air defences on the other side of the channel (Menzel Djemil); (4) the arsenal (at Menzel Bourguiba).

Thus the Tunisians were able to block French communications without leaving their own ground. Secondly, the French needed reinforcements to defend their positions, and it was after the French decision to send troops on July 19th that the Tunisians started shooting. Thirdly, once the French had sufficient strength they had to enter Tunisian territory to protect their communications. This question is of significance in the interpretation of the Security Council's recommendation. The Tunisians claim that the French must simply return to their dispersed bases. The French argue that they must first have a Tunisian guarantee that the roads will not be blocked again.

Bizerta is described as one of the four main French naval bases, the others being Brest, Toulon and Mers-el-Kebir, near Oran. It owes its importance largely to its situation on the Sicilian narrows. But how important is the base, really, whether for France or for its Nato partners? Experts say that its chief use is as a control (and listening) point for air traffic and, even more, submarines. If Bizerta were evacuated its anti-submarine functions would have to be transferred elsewhere, perhaps to Sicily. The French are particularly worried because the evacuation of Bizerta would be treated by the Algerians as a precedent for Mers-el-Kebir. M. Jean Planchais has reminded them that "a base like Bizerta cannot be kept in the long run in a resolutely hostile country."

THE Tunisian reaction to what is now called "the massacre of Bizerta" is as dangerous as the original mistake. Mixed with horror at the dead and wounded is an emotional revulsion from all that is western and "colonialist," and a total incomprehension of the dilemma in which Britain and the United States now find themselves. There is no trace of recognition that the calamity, though of French doing, was, in an immediate sense, of Tunisian making. If only for this reason, the English-speaking powers cannot immediately put pressure on the French to withdraw their troops from the town of Bizerta —as the Security Council on July 22nd called on them to do as part of its cease-fire resolution—let alone to begin the evacuation of the base. General de Gaulle would be unlikely to listen to them if they made the attempt. He would not wish to damage his own position in France by appearing to give way. The western powers, bracing themselves for a bigger conflict over Berlin, cannot afford to quarrel among themselves about Bizerta. Unavoidably, the United States and Britain incur odium in Tunis for their failure to help. But they have not forgotten (and General de Gaulle certainly has not) that it was the Anglo-American attempt to exercise "good offices" after the bombing of Sakiet in 1958 that started the chain of events which brought down the Fourth Republic. This is a powerful deterrent for them; but it is not a reason that the Tunisians in their emotion can be expected to understand.

Disappointed in the limited scope of the Security Council's resolution which stopped the fighting for the moment but offered no remedy for the future, they still hugged the hope this week that a further appeal to the Council might win Anglo-American support for a more explicit directive. Whether Mr Hammarskjöld, in their midst, can conjure up a painless formula that could lead in the very long run to negotiations on evacuation remains deeply problematical. The French are not yet willing to withdraw to their starting positions, as the Security Council required and as their representative in New York was believed to have promised. They have made matters worse by unmannerly treatment of Mr Hammarskjöld, whose offer to come on from Tunis to Paris they have turned down.

While the Tunisians put themselves in the wrong on July 20th, the French errors that drove them to it go back a long way. Whether from cynicism, or to compensate

or their other North African reverses, or from a mistaken stimate of the strength of Tunisian feelings on the subject, he French appear always to have assumed that they must and night hang on to Bizerta. The customary theory that the lace was essential to Nato defence was called in aid. More ecently President de Gaulle may have feared that, by giving t up, he would produce the same bitterness in his navy hat, in the army and air force, led to the attempted coup f April 22nd. Hence the stiff refusal to negotiate that was he final reply to President Bourguiba's earnest letter of uly 6th.

But the theory that a base has any value when the country here it is situated is hostile is well-nigh discredited nowadays; and when an issue is evaded for domestic convenience t another country's expense, there is always a bill to be footed n the end. The persistent deafness of successive French overnments about Bizerta made trouble, sooner or later, ertain. To refuse to negotiate with Tunis under threat of iolence was characteristic of General de Gaulle; but it as pointless when he was preparing to do precisely that at he chateau of Lugrin, on Lake Geneva, with the Algerians. The French did not want the crisis they got; but their conduct made a crisis of some sort inevitable.

The other French mistakes arose from the first. It now seems certain that Paris was given every warning that trouble was brewing, and paid no attention. When, at last, firing broke out, orders were given, to the stupefaction of those on the spot, for a retaliation which, in scale and kind, could only wreck the cautious friendship which the French and Tunisian leaders had managed, against odds, to construct. Can Paris really have calculated that the only way to ensure the safety of Bizerta in the future was to frighten the Tunisians into good behaviour?

Unfortunately such a mistake fits far too well into the recent pattern of French affairs. General de Gaulle's responses to events and problems in Europe are often sagacious and alert; but further afield he is often inclined firmly to refuse to take into account the existence of new forces in world politics. In the United Nations, in Africa and Asia, France continues to speak a political language that is no longer understood. At Bizerta the refusal to consider unfamiliar ideas has involved the whole western alliance in a misfortune it cannot afford.

Atlantic Union Next

Mr Macmillan's imminent statement on the Common Market could be the signpost to a bigger, more distant objective

FOR twenty years the basis of national survival for half Europe, the Atlantic alliance has always lacked institutions, political coherence, and any sense of permanence. In their economic life and in their politics the western countries have been interdependent in fact. But only in defence have they as yet devised formal institutions—first in the wartime alliance, then in Nato. For all the great common interests that lie beneath it, the Atlantic partnership has been a creaking, improvised affair, a series of hasty defensive huddles in the face of danger. Little has been done to cement the common interests together into a structure.

That, at least, was the position in the postwar period when he European countries circled like satellites round the American giant. But in the last three years, three new factors have hanged the outlook. First, the new weakness of the dollar, ased for the moment but still latent, and the new pressure of Communist economic competition, have given the United tates a new interest in economic partnership. With Europe ecovered and groping towards unity, America is beginning to eed Europe as much as Europe needs America.

This new feeling has coincided with the advent of a new American administration more open to ideas of economic coperation and indeed integration. The plans for a new joint id effort by the West as a whole beneath the umbrella of the Organisation for Economic Co-operation and Development are well known. In trade policy, new ideas are in the Washington air. There is President Kennedy's plan for a joint effort by the developed western countries to share the burden of increasing imports of textiles from the young industrial ones. There is Mr Dillon's current offer to cut tariffs in the General Agreement on Tariffs and Trade. In Africa, America is pressing the European Six and Britain to sweep away tariff preferences for tropical products and offering a new deal in American policy in return—cuts in American tariffs on products like oil-seeds, participation in a joint aid programme for Africa, and new efforts to stabilise world commodity prices.

Behind all these projects lies a crude American interest—to load some of the burden of the trade and aid effort on to European shoulders. But that does not make the projects any less valuable. What is encouraging is that the new Administration seems to have realised that its own pressing problems can be solved only through a joint western effort. In the postwar years America helped Europe, and did what it could to egg the Europeans on to work together. Now the age of benevolent patronage is over, and a need for partnership is beginning to be felt.

The third and most important force for Atlantic integration is still hypothetical; it is the possible British move to join the common market. Though most of the new ideas in Washington are excellent, few have yet got off the ground. Europe is still preoccupied with its own divisions. America is not yet persuaded that it has in Europe a partner to be reckoned with. The Congressional debates on the ratification of the Organisation for Economic Co-operation and Development this spring were coloured by an intense dislike of pooling sovereignty, whose tone seemed to echo British discussions of integration before the common market reared its head. But just as the emergence of the common market has forced Britain to reconsider its position in the world, so British membership of the community, creating in Europe a partner comparable in wealth and stature to the United States, would accelerate America's reappraisal. Those in Washington who are for an Atlantic union make no secret of the fact that their task will be easier if Britain joins the Six. British membership of the European community would provide the political impetus, in terms of power, to bring an Atlantic partnership within reach.

In detailed economic terms, the American Administration's new deal for African aid and trade would be the more easily

realised if British membership of the community were first to set the process going by merging the French and British preference systems; this would create a factor of unity in Africa as well as in Europe. Inside the community, Britain would be bound to press, like America outside, for a common European policy liberal enough to satisfy the new industries of India and Japan. Nor would the catalytic effect of British membership stop short there. In Gatt, the European governments and the United States are already working out a first 20 per cent cut in their tariffs against one another. The addition of Britain to the weight and bargaining power of Europe could open the way to a further drive to cut tariffs between the Atlantic countries. Their high tariffs on cars, chemicals, machinery and durable consumer goods are an obsolete relic of the nineteen-thirties. Tariffs on these goods, which are still made almost exclusively by the developed countries, could be slashed *easily, without touching* on the more delicate problem of industrial imports from low-wage Asia.

AGRICULTURE presents another field where British membership could be the catalyst of a wider western effort. The problems raised for American exporters (as well as for Commonwealth ones) would increase American pressure for liberal farm policies by the European community. Europe, on the other hand, would be in a stronger position than ever before to urge the Americans to practise what they preach. The time would be ripe for an effort to free trade in farm products between all the developed western countries, and for a more determined search for ways of using farm surpluses to feed the hungry undeveloped world.

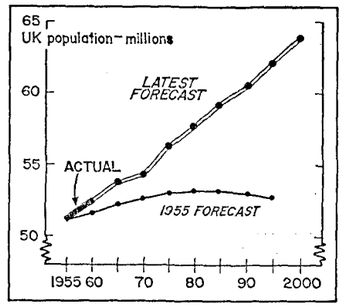
Most radical of all, a British move into Europe might precipitate more serious attempts to meet the twin needs to fill out the cushion of reserves (international liquidity) which backs the world's foreign trade and to integrate western economic policies much more effectively than in the past. A start may be made this autumn with proposals for reforming the International Monetary Fund. But these are palliatives, not cures, and on the Continent (and in Paris in particular) the IMF is not considered the right place to solve the problem. The Continental governments are far more willing to be radical about joint currency arrangements—with their far-reaching political implications—in the context of tight western groups that have political guts. If Britain joins the community, bringing the sterling system, with all its problems, with it, the need to reshape the international monetary system will be brought to a head while a new opportunity to do so will be at hand.

What of political institutions on an Atlantic level? These will no doubt grow slowest of all. But if OECD does become a centre where Atlantic policies are formed, the formation of an Atlantic assembly to criticise and ginger it up would seem a logical next step. *Ad hoc* meetings between the European Parliament and Congress, like those organised in the early 'fifties by the Council of Europe, might provide a starting point. How far the road led in politics would depend on how far economic integration developed.

BRITAIN'S decision, when it is made, could thus have creative effects far beyond Europe, which would in themselves put many of the Commonwealth difficulties of the moment *in a different light. The value to the Commonwealth of a joint* western approach to the problem of temperate agriculture or of a common policy to increase imports of manufactures from low-wage Asia, needs no emphasis. In Africa, the American pressure to reduce preferences, and the American offer to come in on commodity stabilisation plans, are helping to persuade the French—and the former French territories—to be ready for change. Canada's current worry about exports of manufactures to Britain would dwindle to insignificance if something approaching an Atlantic free trade area were to follow on British membership, as Mr Lester Pearson, leader of the Canadian opposition, has suggested. Problems that loom ominously large in isolation dwindle in the context of a *dynamic, swiftly integrating western world.*

This is the prospect we need to keep our eyes on during what may be a period of distracting tactical manœuvre. The new western partnership needs two strong pillars—western Europe and America—to support it. It cannot be built on one only. Growing unity in Europe remains an essential of the Atlantic edifice. And to the next stage in this unity, Britain holds the key. But at the same time, those in Britain who are still reluctant to turn the key can gain reassurance from the wider Atlantic prospect that is opening up. What is already on the cards in Washington—and in Brussels, where thinking about Atlantic integration has gone far—is more than an extension of free trade; it is the beginning of a joint attempt *to manage the economy of the West on Keynesian lines,* as national economies are managed today.

The Atlantic prospect also provides a weighty argument for speed in making a British move in Europe. If the negotiations about British membership drag on interminably, the broader process of integration is likely to go slowly too. Obviously Britain cannot jettison specific Commonwealth export interests for the sake of uncertain hopes. But there is a strong case for satisfying Commonwealth interests by simple general guarantees rather than complicated detailed ones. If difficult tariffs are popped into a British "List G," to be negotiated later, a general western effort to cut tariffs may have reduced the critical items before they come up in the community at all. If *general institutional devices—like the* opportunity for a veto on further progress after a first phase of British membership—are used to safeguard Commonwealth export interests, broader western plans to satisfy them may have matured before the devices have to be used.



Some people in Britain are still worried by the feeling that the plunge into Europe will be an act of abdication from Britain's world-wide role. The Atlantic prospect should allay their fears. For when Britain joins the community, if it does join, it will take its world-wide interests with it. What follows then ought to be a new phase for the whole Atlantic world

Into Europe?

Britain's Baby Boom

At a time when long-term official forecasting is in the news, it is surprising there has been very little public discussion of one field where such forecasting has already gone quite wildly wrong: the size of the population of these islands

LESS than five years ago nearly all official demographers thought that Britain was entering a period when its population would mark time; they guessed that there would be a gradual addition to the number of Britons of up to two million until about the mid-1980s, and then a gentle turn of the tide. Everything then seemed to suggest that it would be surprising if this century saw much change in the size of the population in Britain. Everything now seems to suggest that it will be surprising if it does not.

The forecast of the population of the United Kingdom in 1995 has shot up from 52.8 million to 62.2 million. The growth that is now predicted for the second half of this century is slightly larger than the actual increase in the first half. This drastic revision of ideas spotlights the hazards of these predictions; perhaps it argues that forecasting forty or fifty years ahead should be looked upon as no more than a diversion for demographers. But the changed outlook much nearer to the present certainly cannot be ignored. Five years ago, the population forecast for 1965 was 52.2 million; as it has turned out, this figure had already been exceeded by the middle of last year. And the increase of 2 million over the 1955 level, previously foreseen by 1979, can now pretty confidently be expected as soon as 1964.

TABLE I.—HOW THE POPULATION IS EXPECTED TO CHANGE
(Millions: United Kingdom)

	Ages 0–14	Ages 15–64	Ages 65 and over	Total Population
1960	12·2	34·2	6·1	52·5
1965	12·2	34·9	6·5	53·7
1970	12·8	34·9	7·2	54·9
1975	13·4	35·1	7·8	56·3
1980	13·8	35·6	8·3	57·7
1990	14·7	37·3	8·6	60·6
2000	15·6	40·0	8·3	63·8

No miraculous lengthening of life has occurred to put the demographers out: they have stuck to the same view about the likely improvement in mortality rates. Nor have they done more than pare down fractionally the anticipated annual loss on the turnover of people moving in and out of the country.

Where they have gone wrong, and quite badly wrong, is over the birth rate: each year many more babies have been born than they had expected. In 1955, the experts forecast a decline in births; instead they suddenly shot up in 1956 and have gone up and up, increasing by about 25,000 each year.

Last year 916,000 babies were born in the United Kingdom, more than in any year since 1947 (which was the year after most fathers came home from the war). From the first six months' experience in 1961, it looks as if this year's total is going to be still higher. The latest population forecasts are already out of date—for the immediate future anyway. Stemming from the middle of last year, these projections assumed that births would average 880,000 in the first five years. It seems as if births go on growing in defiance of all reasonable assumptions—not only in Britain but in many other western countries, including the United States where demographers also failed to anticipate the population growth of recent years.

Two factors largely account for this boom in babies. First, people are marrying younger. Secondly, they are having their families earlier in married life. The effects are rather complicated. A sudden reduction in the average age at marriage of, say, one year means that during the year of change there are roughly twice as many marriages as usual. At first thought, it might seem that the resulting extra crop of babies would be offset by a deficit later on, provided the ultimate size of family stays the same. This is not so. In effect, the whole childbearing cycle of all cohorts subsequently coming into the marriageable ages is brought forward a year; and during the twenty-five years following the change in age at marriage there will be extra births equal to the total offspring of one cohort. This extra batch of babies, and their offspring, are a permanent, not a temporary, addition to the population. Much the same happens when the timing of births is brought forward earlier in married life. But, since there is a limit to earlier marriage and faster childbearing, these factors cannot go on accelerating population growth for ever; eventually births will once more settle down to a normal level—provided there is no increase in family size as distinct from faster completion.

But will the completed size of the family remain the same? There are some reasons to suppose that women who marry earlier may have larger families. For one thing, fertility is comparatively high at the younger ages. For another, whether or not early marriage is associated with a desire to have more children, it certainly lengthens the time of risk to childbearing. Some sociologists say that families in the future might be expected to be smaller because of the development and spread of knowledge about contraceptives. On the other hand, there may well be a desire to have more children as income rises. Admittedly, this last point is largely guesswork. Although short-term economic fluctuations seem to have a pretty definite effect (the depression in the 1930s, for instance, soon dragged the birth-rate down), little is known about how continued prosperity or continued depression is likely to affect fertility. The statistician is hampered here by the fact that women married since the war have not yet completed their reproductive history; the available evidence can there-

fore be only of the fragmentary kind set out in Table II below. Though this shows that in the first five or ten years of marriage, British women are now having more children than in the 1930s, it does no more than suggest that the prewar downward trend in family size has been reversed.

TABLE II.—AVERAGE FAMILY SIZE*

Year of marriage	Marriage duration in years :— 5	10	15	20	25	30
1920	1·38	2·02	2·34	2·49	2·53	2·53
1923	1·27	1·84	2·12	2·25	2·29	2·30
1928	1·17	1·69	1·95	2·10	2·14	2·14
1933	1·12	1·63	1·98	2·10	2·12	...
1938	1·05	1·72	1·99	2·07	...	...
1948	1·25	1·84	...	...	...	...
1953	1·25	...	...	...	...	...

* Of women in Great Britain in 1958 who had been married once only at all ages under 45.

Demographers are reluctant to accept the view that the British family is going to become noticeably bigger. But even if the current baby boom eventually exhausts itself with a return to a more normal level of birth rates, as the latest forecasts imply, the number of babies will still go on growing although at a slower rate. By the end of this century, on this reckoning, births will number about 1,100,000, or as many babies will be born at the close of the twentieth century as at its start.

If the population is going to grow as fast as this, or perhaps even faster, the implications are far-reaching. The postwar bulge in the school population will not disappear: there will be more schoolchildren even by 1970 than in 1960. And although high fertility means high levels of employment, some very crude calculations in Table III below suggest that, except in the years immediately ahead, those at work will form a declining proportion of the total population.

TABLE III.—HOW MANY WORKING IN GREAT BRITAIN? (Millions)

	Labour Force*	Non-Working Population
1960 numbers.....	24·44	26·68
Increase over 1960 :—		
By 1965	+0·61	+0·52
By 1970	+0·77	+1·55
By 1975	+1·03	+2·64
By 1980	+1·45	+3·57

* Assuming the same working habits as today (i.e., that any tendency towards later retirement is offset by a fall in the proportion of teenagers at work as further education is increased).

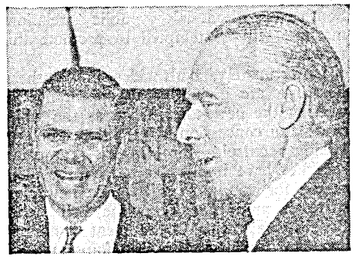
This discussion is not intended to re-fuel gloomy fears that population is about to outstrip resources. Malthusianism is pretty well dead in a country like Britain today; its extreme form, which was based on the assumption that agricultural production is inelastic, hardly stands up in a period when technological advances (e.g., broiler houses for chickens) or even tiny increases in short-term subsidies can send production of many foods soaring by embarrassing amounts. Nevertheless nobody concerned with planning for the future can afford to ignore the speculation that for every five people in Britain today there may, before the end of the twentieth century, be six.

NOTES OF THE WEEK

REARMAMENT

Reassurance or Warning?

MR KENNEDY, when he announced his new rearmament measures to the American nation on Tuesday night, called the Berlin crisis a "manufactured crisis"; and he showed himself aware that the Russians have it in their power to manufacture a crisis somewhere else whenever it seems expedient. Thus, in one way, he was resisting pressure for a premature military demonstration which not only might make the Berlin question harder to regulate by agreement than it is already, but might cause the United States, with its guard up in Germany, to be caught off guard in some other sensitive spot.



His speech (discussed in detail on page 451) contained many elements, as it had to. There was the now inevitable warning, addressed both to Moscow and to the American grassroots, that the Berlin conflict may lead to war: "An attack upon that city will be regarded as an attack upon us all." There was the necessary offer of negotiation to meet specific Communist grievances: "We do not intend to abandon our duty to mankind to seek a peaceful solution." Hardly less necessary was the refusal "to call up or send abroad excessive numbers of these troops before they are needed." While the Russians had to be warned and reassured, the North Atlantic allies had to be reassured and, at the same time, warned that a bigger defence effort would be expected from them, too. This last warning will fall on preoccupied ears—in west Germany, already deep in its election campaign; in Paris, where the maintenance of dignity at Bizerta is the first concern; and in London, where Mr Selwyn Lloyd's intentions towards the Rhine Army, expressed in another Tuesday speech (and discussed in the Note that follows this one), are formed by Britain's domestic inadequacies and, for all the talk at the Foreign Office of "special preparations," by little else.

In the end, it was perhaps the determination to find a third course between retreat and nuclear war that came out most strongly among the various notes Mr Kennedy had to strike. The costly new American defence measures are preponderantly aimed at a strengthening of conventional fighting power, designed to produce some military freedom of action without recourse to the ultimate weapons. To draw easy reassurance from this idea would be foolish; since both sides possess nuclear weapons, it is unlikely that either will permit itself to be defeated—above all, in Germany—without using them. But east and west are now engaged in an arms race, arising, as Mr Kennedy made clear, not from the Berlin dispute alone but from a world-wide conflict. Any doctrine would be false that made such a contest look foolproof.

Who's in Step?

JUST how tough was Monday evening's table-talk between Mr McNamara, the American Secretary of Defence, and Mr Watkinson on contingency planning for the Berlin crisis is a nice question. There was no communiqué on Mr McNamara's departure, which may have meant that none was necessary. Mr Watkinson's line was understood to have been that it was essential not to build up a prolonged period of tension; that such British reinforcements as are immediately available (the two brigade groups of the strategic reserve) could be sent to BAOR very quickly if needed; and that this was certainly not the time for such emergency measures. Into this hiatus there stepped on Wednesday afternoon a Foreign Office spokesman who, displaying some anxiety to keep in step with President Kennedy, contrived to encourage the impression that a call-up of British reservists was now imminent.

There is a good military case for bringing BAOR to establishment, particularly in technicians and tradesmen, in order to ensure the efficiency and mobility of the seven brigade groups there long before there could be any question of the balloon going up in Berlin. This would probably involve sending some 5,000 men to the Continent. There is equally a diplomatic case for keeping quiet about any troop

Messrs McNamara and Watkinson: how tough?

movements that may be envisaged. The perplexing aspect this week has been that the Ministries apparently insist on doing each other's job. It would be the reverse of surprising if the reserve machinery were now, in fact, receiving a hard looking-over. But if the army were to be given a massive influx of rusty soldiery, its energies this autumn would have to be directed to training them, not facing up to the Russians.

Just how tough the Chancellor intended his threat to be to cut military spending (now £65 million a year) in Germany next year is another puzzle. The North Atlantic Council has been asked to review the financial conditions under which British forces are maintained on the Continent. It is conceivable that the Americans may have similar ideas; if so, something may come of it. But it is idle to bank on a state of tension in central Europe being somehow safely over in time for the next accounting.

EUROPE

On the Eve

THE council meeting of the European Free Trade Association in Geneva this Friday, July 28th, might suggest that the British Government has decided to seek membership of the European common market. The possibility that such a meeting might follow the Commonwealth tours of the three British ministers was aired last month when Efta met in London. The decision to hold it is strong evidence that the objections the pilgrims brought back have not deterred the Government. Three days later, on Monday, Mr Macmillan will make a statement to the House of Commons—followed, on Wednesday and Thursday, by a two-day debate. In the meantime, on Tuesday, the Council of Western European Union will have met in Paris. There the Six will be able to tell Britain about their Bonn meeting, while Britain will be able to lay its common market cards on the table if it wants to. It could be an eventful week.

On Wednesday Mr Spaak, who has been playing a vigorous part in the life of the communities since his return to the Belgian government, flew to London for talks with Lord Home and Mr Heath—another harbinger, perhaps? Light should come at last from the Prime Minister on Monday. But, even then, the speed with which negotiations can be got going will depend on the precise terms of his offer, if he makes it.

The Efta meeting is bound to have some bearing on this. When they met in London, most of the members seemed to have taken in that sooner or later Britain would seek to join the common market, but many uncertainties were left about the degree of help the smaller countries could expect from Britain in negotiations, and about the form these would take. In general terms the British Government went a long way to satisfy its partners, with the undertaking to "remain united" in negotiations and to maintain Efta until the "legitimate interests" of all members were satisfied. Which interests are legitimate, and in what way each national negotiation is to be linked to the others, was not, however, defined. The smaller countries, and the neutrals particularly, are entitled to British support. The question is whether Britain can help them best by moving at their pace in the negotiations, or by getting in quickly and helping to open the door from the inside.

TEACHERS' PAY

Burnham Rewritten

IN the weeks when the Chancellor was publicly whetting his axe the teaching profession in England did little else but ensure that its neck was hopelessly stretched on the chopping block. When the blow did fall on Tuesday, English teachers can probably thank their stars that teachers in Scotland already had a rise of 14 per cent (decided on by the Secretary of State but not by their own negotiating committee); by then the National Union of Teachers in England, having rejected the Burnham award of £47.5 million, had got precisely nothing. The Government could not go back on the Scottish decision, but it also felt obliged to offer English teachers approximately what the Scots had got. The outcome now is that the Minister of Education has told the Burnham committee that no more than £42 million a year can go into the kitty (with another £11 million for teachers in technical colleges), which is probably the sum that the Government was prepared to accept from Burnham in the first place. This means a rise of 14.6 per cent, roughly in line with comparable professional salary increases over the full period of the last Burnham award, but £5.5 million a year less than Burnham had recommended. The Burnham committee has been told that this saving of £5.5 million a year must come off its recommended basic scale of £600-£1,200: there must be no reduction in the differential payments for special qualifications and responsibilities, some of which indeed should be increased.

This is undoubtedly the right way in which to make the cut. There is no shortage of entrants to the profession on the basic scale, but severe shortages exist higher up (particularly among graduate teachers of science and mathematics); and the normal professional expectation of good salaries in the top jobs has steadily been eroded by the NUT's own policy. The country now gets increasingly little return for training and reimbursing young women teachers, 15,000 of whom left to get married last year, most of them with less than three years' service. It is patently more desirable to give substantial inducements both to graduates (thus raising the status of the profession) and to those following a career who stay in the schools for five years or more. This also helps the young man who is by then taking on the responsibilities of marriage and a family.

Since the Government's stand was signalled well in advance from Scotland there should be no surprise in the profession now. (In some sections there will certainly be relief, even if it is not expressed aloud.) If the NUT decides to strike (it got round to a belated acceptance of the original award on Thursday) it will be on a very sticky wicket. In future, the Minister is to enter the Burnham negotiations at their start to indicate the magnitude and (to some extent) the nature of the award that he is willing to consider—although he apparently will not assume the full authority that the Secretary of State for Scotland already possesses to write the salary award himself. The idea is that considerable discretion can still be left to the teachers' panel and the local authorities on the Burnham committee, provided that the economic realities are injected at the outset. This new pattern will be in line with what seems likely to be the Government's policy for wages in the public service as a whole.

CONSERVATIVES

No Real Revolts

THE press has attached great significance to the subdued reception given to the Chancellor and his measures by Tory backbenchers, first in the Commons and then—

reputedly—at a private party meeting. But what else could be expected? Restrictive measures, however necessary, can hardly be an occasion for scenes of wild Conservative enthusiasm. What has been largely ignored is the enormous qualitative gap between restraint and hostility. Mr Lloyd certainly had every disadvantage to contend with when he finally got to the despatch box on Tuesday. His statement had been so long delayed, every possibility had been so thoroughly canvassed, so many remedies had been suggested and so many hints of drastic novel remedies dropped, that an initial element of anti-climax was unavoidable. When, three-quarters of the way through his statement, his actual proposals began to emerge, they came so thick and fast that Tory members did not seem to realise how very tough the Chancellor was being; it is not clear that they realise it yet. But if the Government really does stick firmly to its policy—and finds itself, for example, faced with the threat of widespread strikes—it will have a united party behind it preferring a fight to a surrender.

The economic crisis may have weakened the Government's bargaining position *vis-à-vis* the Six, but it has probably strengthened its hand on Europe with its own backbenchers. Mr Turton's warning motion on Britain's entry into EEC had attracted more than 30 signatories by Thursday morning, and will attract some more; but ultimately it is likely to be as ineffective as his similiar manoeuvres over Rhodesia. Economic adversity has brought home to the party the opportunities the common market offers, and its existence on Britain's doorstep is beginning to be viewed more as a godsend than a curse. In private, Tory members are freely admitting that much blame for present difficulties lies with inefficient managements and that tariff cuts would do more to revive British industry in the long term than any other measure. Conveniently enough, entry into the common market would provide precisely this. If the Prime Minister announces on Monday that negotiations (which may, or may not, be described as "soundings") are to be opened with the Six he is likely to find the majority of the party giving him fairly solid if unenthusiastic support—with probably no more than twenty carrying their convictions into the division lobby and voting against the Government, when some opportunity for a vote is ultimately given.

KUWAIT

Eleventh Member

If in the past the Arab League has been doddery and indecisive, its decision on July 20th to underwrite Kuwait's independence was splendidly out of character. After a series of characteristic adjournments, the league approved a resolution that welcomed Kuwait as a new member and undertook to offer "effective aid" to preserve the sheikhdom's independence. The Iraqi delegate, who walked out of the meeting, has said that his government considers the resolution null and void. But the mere fact that the league has brought itself to act firmly calls forth the same kind of rather startled respect as when, say, the Commonwealth made up its mind about South Africa.

A mission from the league secretariat is now in Kuwait to discuss with the ruler the composition of an Arab force to take over guard duty from the British. Since Iraq has not in any way modified its claim to the sheikhdom, Kuwait's admission to the Arab League is not by itself thought to be security enough. Some sort of Arab force is believed to be necessary. The question is whether it should be a token group of a few men who would act as a political tripwire, or whether, between them, the Arab countries should try to raise a force that could stand up to armed attack. In other words, is the need for a political or for a military deterrent?

Despite Iraq's repeated assurance that it will only pursue its claims by unspecified peaceful means, the British Government is disinclined, at present, to withdraw its troops if no more than a token substitute can be found. The suggestion, first put forward by the United Arab Republic, that any Arab force should exclude troops from countries bordering on Israel seems to have been dropped. But the negotiations about where the soldiers should come from, who should command them and how they should be paid are still very much in the air. By the middle of this week, about 2,500 British soldiers were still in Kuwait, and the Government was apparently hoping for a substitute Arab force of around brigade strength. Even this, according to the present way of thinking, would only be an intermediary stage; the long term aim would be for Kuwait to have an effective defence force of its own, composed, presumably, mainly of mercenaries.

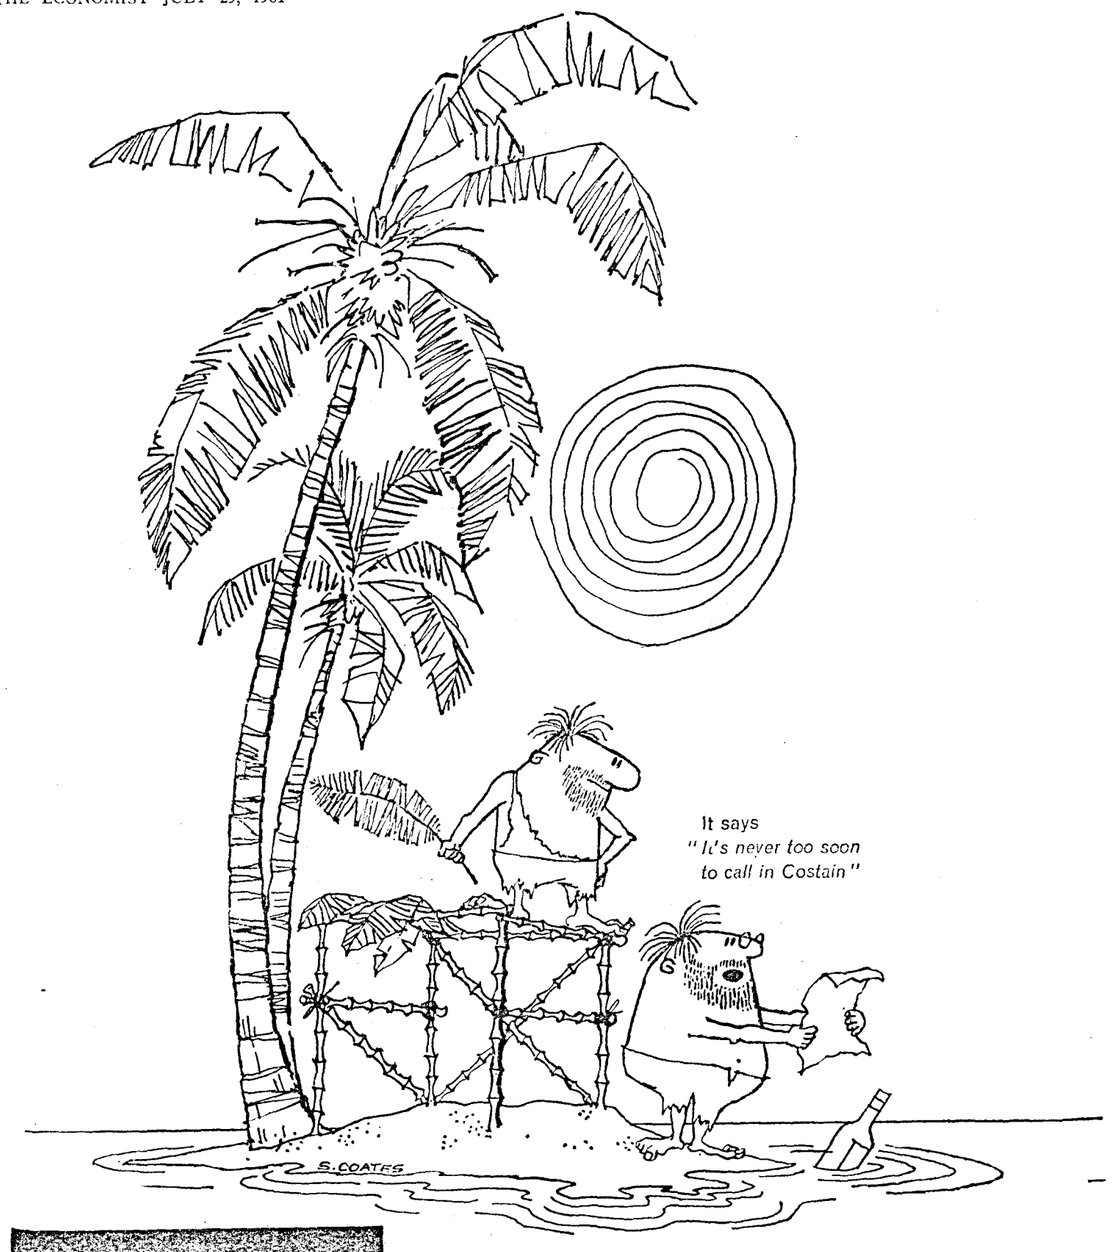
This foresees an uneasy future for the sheikhdom. The Persian Gulf territories can hardly hope to preserve their independence by turning themselves into garrisons. The more they are drawn into the Arab world the better, and the Arab League's decision was a long step in the right direction. It would be a pity if the flexibility shown by all the Arabs, except Iraq, were to come to grief against a too defensive British attitude.

SOUTHERN RHODESIA

Mess of Votage

Whenever Britain has urged Southern Rhodesia to lift away another boulder of apartheid, Sir Edgar Whitehead has reached for his sugar-tongs. This has worked before. The method is to sweeten the white electorate by talking like Dr Verwoerd, while, whenever it becomes unavoidable, putting through another progressive measure. In an attempt to save the federation, Britain has lately put more pressure on Southern Rhodesia than ever before. Sir Edgar Whitehead, the prime minister, has used his sugar-tongs with fair success. In Wednesday's referendum (the campaign for which is discussed on page 446) he persuaded three-quarters of his 80,000 voters (of whom all but 6,500 are white) to choose, by a two to one majority, a constitution that puts Africans into Southern Rhodesia's parliament for the first time. It does little else: there will be 15 Africans in a house of 65, and a Bill of Rights that is by no means watertight.

Nevertheless, the decision is welcome, even if only as a sign that the voters of Southern Rhodesia can be talked into moving forward, however slowly. Ideally, the decision could be regarded as a first step towards real racial co-operation. Southern Rhodesia's public relations machine will be tempted to promote this view.

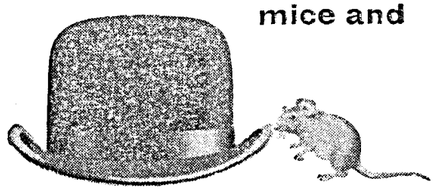


Unfortunately, both sides in Southern Rhodesia are giving every appearance of viewing the new constitution as the white man's last concession in the interests of retaining control. Sir Edgar's campaign speeches have implied as much: the main reason for voting "yes" to the new constitution may have been the belief that Britain was willing in the event of acceptance to withdraw its remaining reserve powers over the colony's constitution. Africans, in their way, have said the same thing: the National Democratic Party view is that their birthright of British protection from settler excesses has been given up in return for a mess of votage. That is why, in their unofficial referendum on Sunday, the leaders of the NDP persuaded 300,000 disfranchised Africans to come to little grass huts and register a "no" vote.

The NDP was not so successful, however, in its attempt to frighten whites into a negative referendum vote by calling Africans out on strike. The strike flopped; Sir Edgar was able to call out his troops, to the apparent satisfaction of the white voters. What the new constitution means is that the era of rule by sugar-tongs is over: now the struggle for power in Southern Rhodesia begins in earnest. At least there is 15/65th of a chance that some of it will be fought out in parliament.

ETU

Talking Tough



Never in its history has the general council of the TUC spoken so roughly to a constituent body as it did this week to the Electrical Trades Union. True, no major British union has ever been enmeshed in such a web of intrigue as the ETU: no has public opinion ever so bitterly condemned a union—and by implication the whole trade union movement—for allowing such a state of affairs to arise. But the general council's ultimatum, which orders the ETU on pain of suspension to ban five communists from union jobs for five years;

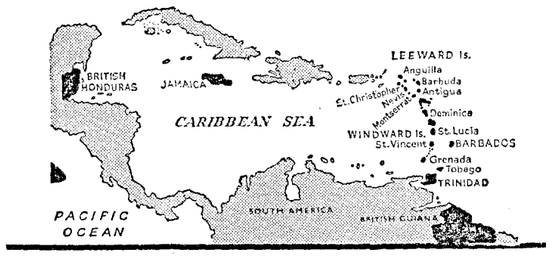
Of mice and management

'The best laid plans of mice and men . . .'
For '*men*' read '*management*'—and consider how often even the most minutely planned commercial or industrial operation can go astray—not because of any fault or failure on the part of management, but because of the sheer complexity of commercial and industrial organization today. Making the very most of resources in labour, money, time, plant and materials is an essential part of management's job—but with so many interacting variables the human mind is sometimes baffled. Can such problems be solved? The answer is: They can, quickly and relatively cheaply, by the technique of *Linear Programming* aided by a high-speed electronic computer. How does the system work?



At its simplest, Linear Programming is a system which helps management to achieve the maximum results from any given organization, with the minimum wastage in time, labour, and materials. More than that: while the system shows how best to use present facilities, it indicates with no less precision *what* needs to be done, and *when* it needs to be done, to achieve even better results with a minimum of re-arrangement and expenditure.

Linear Programming is only one of the many scientific management techniques offered by C-E-I-R, the largest computer services organization in the world. At the London C-E-I-R Centre, with its advanced on-the-spot computer facilities, C-E-I-R are handling on behalf of clients a wide variety of operations ranging from routine Data Processing on a regular contract basis to the solution of the most complex industrial and commercial problems. If you have any problem, large or small, which can be solved by logical or mathematical means—then send for C-E-I-R.

Invest in The West Indies

How Federation benefits new investors

Economic and foreign trade policies are co-ordinated, the aim being to establish a fully diversified economy. Transport, communications and power facilities are being expanded—new harbours and roads, larger airports, all these are creating new opportunities for new secondary industries.

THE RESOURCES ARE THERE:

Oil, bauxite, water power and many minerals. Fruit, cocoa, cotton, coffee, sugar, spices, crops of all kinds. And 3½ million people.

THE SKILLS ARE THERE:

Considerable progress in education has been made in recent years and much more is planned. Research programmes of The Agriculture Faculty of the University College of The West Indies (formerly the Imperial College of Tropical Agriculture) and its other Faculties benefit the whole region.

THE MARKETS ARE THERE:

Both Americas are prosperous near-neighbours. The tourist possibilities of The West Indies are far from fully realised.

Customs Duty and income tax concessions are available

to secure the resignation of Mr Foulkes and hold a new election for president, and to restore authority to the new non-communist general secretary, is very tough talking indeed. At the meeting on Wednesday the president of the TUC, Mr Ted Hill, was persuaded publicly to swallow the words of a speech in which he had appeared not to worry about ballot-rigging in the unions: for a moment it looked as though the old cart-horse was actually galloping at the head of a charge of knights in shining armour.

The importance of this is that it may enable Mr George Woodcock, who took over the job of the TUC general secretary last year, to rally behind him those who share his strong views on the unions' need to regain public esteem and support. Many people believe that a step towards this recovery could be taken by transforming the TUC from a talking shop into an effective general staff for the movement; and once a trend towards centralisation of power in the TUC set in for this almost accidental reason, the long-term consequences, in all sorts of fields, could be both intriguing and immense. Whether the TUC has the necessary weapons to begin to exert such leadership is now under trial. Its main weapon is, quite simply, publicity. The threat of suspension of the union from TUC membership might do something to make its electrician members realise the undignified and unworthy position into which their association has been manœuvred: Mr Woodcock's aims can best be fulfilled if they vote the right men on to the union executive at the elections in September.

LAND PRICES

Death of a Plan

LAST week's debate in the Commons on land prices made it clear that the authors of Labour's plan for a public land commission to buy the freehold of all building land will have quietly to let it drop. Mr Brooke and two or three surveyors among Tory backbenchers had the debate all their own way, and have set some Labour MPs visibly blanching. The only real remedy for high land prices, said Mr Brooke, is to bring more building land on to the market, and to run an economy in which more and more existing sites are redeveloped to allow the land to be used more efficiently. Labour's plan would do precisely the opposite. As its land commission would pay the owner less than the market value for any land that he frees for building operations, obviously less land would be offered for sale; and any owner who started to redevelop his own site more efficiently would know that at that precise moment he would lose his freehold to the public land commission.

Still, suppose that one ignores this. Suppose that the commission tracks down, say, some farmer who admits that he is going to sell his land to a builder, and swipes it from that protesting yokel at the below-market price that it is to be ordered to pay. Does the commission then itself lease the land to the builder or developer at the new full market value, as affected by the new shortage of building land it has created? In that case the net effect of this plan that was supposed to bring down building costs is to put them up. Or does the commission lease it at less than full market value? Labour speakers indicated the latter. Then how does it stop its favoured lessee from promptly sub-letting at the new full market value and pocketing the profit himself? Presumably Labour is not thinking that it can ban or control all sub-letting in England.

Labour front bench speakers suggested that under their scheme occupiers of new or redeveloped houses would not own a freehold, but would have a lease from the land commission that would last as long as they or their heirs occupied their house or until their house was demolished. This would mean that occupiers of a rotting house would have an incentive to patch it up for ever, never to pull it down and rebuild it—because the moment they started rebuilding they would lose their interest in the land under a compulsory purchase order. Moreover, it would be impossible for anyone to obtain a mortgage on a leasehold property where the term was indeterminate as to its length, so that it would seem that eventually nobody would be able to buy on mortgage any house that had been built or rebuilt after Labour's law came into effect. And. . . .

But really there is no point in going on flogging this dead horse.

LABOUR

Blackpool Rest Cure?

THE 419 resolutions submitted for Labour's Blackpool conference (October 2nd to 6th) are not a very significant list; they will be composited down to two or three resolutions on each main subject at Blackpool itself. Just over a hundred of the resolutions set the stage for fighting again the Scarborough battle about unilateralism, which the Gaitskellites are now triumphantly going to win right along the line. Probably Mr Gaitskell will not even have to worry about any embarrassingly specific vote being carried against Polaris bases. In any case, the main foreign policy issue by Blackpool-time will almost certainly be the Berlin crisis, which most authors of these resolutions apparently did not realise exists. On home policy Mr Gaitskell looks like having a relatively easy passage. The delegates are going to enjoy themselves supporting his land purchase scheme (which he will then quietly have to ditch); and attacking the Tories about housing, about health charges and, above all, of course, about last Tuesday's measures. But once again these resolutions were tabled before their authors realised that Mr Lloyd would be swinging his axe.

Possibly the most interesting debate at Blackpool will be the one about the common market, which the left wing of the party is now going all out to oppose. In time this could conceivably succeed unilateralism in being the bitter issue that splits Labour's Bourbons from its progressives—which would be an extraordinarily perverse achievement for the party since the issue has seemed to be tailor-made to split the Conservatives instead. There will also be an attempt at Blackpool by four constituency parties to secure reforms in the present absurd system of voting at the Labour conference, but the national executive seems unlikely to do much about this. The great gain for Labour and British democracy in the past few months is that the importance of this annual conference's decisions has been devalued; and, until he runs into his next crisis, Mr Gaitskell's policy can be one of letting sleeping hornets lie.

ITALY

Another Pilgrim

SIGNOR FANFANI and his foreign minister, Signor Segni, are to visit Moscow next week from August 2nd to 5th. This official announcement, made on Monday, confirmed rumours of a Russian invitation that had been circulating in Rome for some days. The invitation was given early this month by the Soviet ambassador in Rome, who is reported to have appeared anxious that the visit should take place as soon as possible. Signor Fanfani, for his part, made it clear that if he went, he wanted his visit to include talks on the troubled international scene and not to be a mere courtesy affair.

For once the Russians may have had little difficulty in falling in with the wishes of a western leader; their invitation to Signor Fanfani at this particular juncture probably has some special object, although what exactly it is remains unclear. Italy is not directly concerned in the Berlin question, although as a member of Nato it has a lively indirect interest. Mr Khrushchev must know that if he chooses to divulge his thoughts on the Berlin problem to his Italian guests, they will pass them on to the British, American and French foreign ministers who are meeting in Paris next week. He could find this a useful exercise. But Mr Khrushchev may merely be counting on Italy as a weak link in the western chain, to be weakened still further by judicious tugging, and by anti-German propaganda, for which the trouble in South Tyrol comes in handy. Some evidence for this miscalculation was to be found in the Italian communist press this week.

But whatever the motives behind the Soviet invitation, Signor Fanfani's decision to accept it has been officially welcomed by

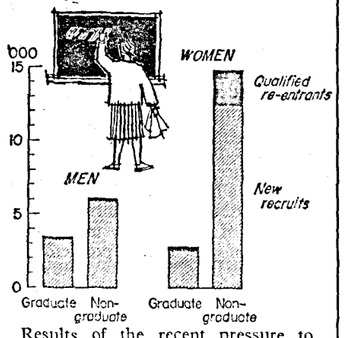
all the parties supporting his government, whatever their private misgivings; it looks like causing less controversy in Rome than did President Gronchi's visit to Moscow eighteen months ago. Signor Fanfani himself is no doubt willing to treat the journey as an opportunity for Italy to play a more important—and conceivably very useful—part in the western alliance. The risks of being subjected to Mr Khrushchev's threats and wiles, or that the visit may cause domestic political difficulties, are occupational hazards that must be accepted.

EAST AFRICA

Poor Little Poor Boy

In Africa, the wages of sin is a benevolent British Treasury. Tanganyika, whose prime minister everybody approves of, has received £3 million in loans and £4½ million in grants from Britain in the last three financial years. Across the border Kenya, whose politicians are approved of by few, has received £12 million in loans and £5 million in grants in the same period. Tanganyika has nine million people and no political troubles; its assistance amounted to £7½ million in the same three years as Kenya, with under seven million people, was given £17 million worth of assistance. All that is done. The question now is how far the balance could, or should, be redressed.

Mr. Nyerere: Too reliable?



As commitments stand at present, Kenya is due for grants of up to £13 million and loans of £5½ million, plus further assistance towards land settlement schemes. Tanganyika is due for grants of about £5 million; a loan of £2 million was issued in June; and further assistance is being haggled over. The amount Tanganyika wants is small; and the Colonial Secretary promised in March that the British Government would not be ungenerous. Over the next three years what is asked for, according to the Tanganyika government's report on its own development plan, is under £12 million—less than £4 million a year. The total cost of the three-year plan is estimated at £24 million, £6 million more than the World Bank thinks Tanganyika can afford to plan for. But Mr Nyerere confesses to optimism and, on the threshold of independence, who can blame him? Of the £24 million, £5 million is to be raised locally, £4 million is already available from the British Government; and £3 million is expected from "other sources"—like the Rockefeller and Ford Foundations.

To judge from Mr Nyerere's bitterness when he left London a week ago the £12 million cannot be extracted from the British Government; the inference to be drawn from Mr Macleod's statements in Parliament on Tuesday is that it cannot, at any rate, be had for a year or two. Instead, East Africa's good boy has had to turn to America and Germany to see if his *pourboire* from the West can be made up to the amount he needs.

According to Mr Nyerere one argument put forward by the British Government was that Tanganyika is politically stable and therefore does not qualify for extensive aid. It is precisely because Tanganyika's stability is such a vital asset in Africa that it should be granted the means to develop its economy. The only practical argument is the Chancellor's new and necessary restraint on overseas expenditure. Is this particular cut really worth while—or fair?

NEW TEACHERS

(Entering service in maintained primary and secondary schools in England and Wales in the year ended March, 1961.)

Results of the recent pressure to persuade married women to return to teaching would scarcely be evident in the statistics for the year ended last March. Now that the campaign has been bolstered by the promise of surtax reliefs that will exempt many joint incomes, the authorities hope that the number of women re-entrants may increase substantially this year and, particularly, that they will emerge in the home counties.

ANGOLA

Rope of Sand

According to the Rev. Michael Scott, just back from a refugee camp, about 128,000 Angolans have now crossed the Congo border. Mr Roberto Holden has put the Portuguese casualties at 2,000. *The Observer* correspondent estimates that

50,000 Africans are dead or missing as a result of Portuguese reprisals. All sources agree that the military campaign against the rebels has so far proved ineffective, that the settlers and the secret police have gone much too far in their panic reactions to the bloody revolt, and that the Portuguese-Angolan economy is suffering severely from the strain, especially as the greater proportion of the coffee-producing areas is in rebel hands. There is a legend to the effect that a mediæval Michael Scott once set the devil to making a rope out of sand. Dr Salazar and his subjects seem to have found a similarly endless occupation—a full-scale colonial war.

Official Portuguese reaction to this has been negative for too long. Communist agitators are still blamed for launching and sustaining the rebellion, and the foreign press for presenting a distorted picture of it. Allegations of indiscriminate slaughter, however carefully based on eye-witness reports, are still dismissed as slanders. The Protestant missions and their pupils, where rebellion is thought to be bred, are harried. The secret police are active everywhere except in the north, where the army, the one relatively moderate force in Angola today, exercises some degree of restraint, at least in those places where it is genuinely in control.

It is still possible to hope, nevertheless, for some modification of policy in the direction of common sense. The unconvincing denials of forced labour in Angola, the rumour of trouble in Portuguese Guinea and Mozambique, even, perhaps, the growth of knowledge among the Portuguese at large of just what is going on in Angola, suggest, in their various ways, that circumstances could still force a change of heart. It is impossible, as yet, to foresee what the terms of a final settlement could be. But it seems clear that the term of Dr Salazar's policy of total repression is approaching; it has next to be seen if it is too late for an attempt at reform.

COLOURED IMMIGRANTS

Prejudice Street

No harm at all has been done by the deluge of publicity that the tenants of Price Street, Smethwick, have brought down on themselves this week. The rent strike which they have called because they *dislike having a Pakistani family as their* neighbours in a slum clearance scheme is a small matter in itself: eviction notices will ensure that it collapses in a matter of weeks, if not sooner. The essential point about the drubbing that Price Street has received throughout the press and on television is that it should help to convince any racial dimwits and small-town bully-boys who may be watching that there is no ready mileage to be got from such behaviour. As it happens, the Smethwick councillors have shown up particularly well in handling the business. The restraint of Mr Sardar Mohammed and his family has

helped to discredit still further the prejudice surrounding them. The national reaction has been healthy, but it is important that in Smethwick (or anywhere else) the sense of outside support and sympathy for those bearing the brunt of racial discrimination should continue after the initial row has dropped out of the headlines.

This particular Pakistani family happens to be the only one to be included in Smethwick's present rehousing scheme: when the programme reaches the other end of the town many more Pakistanis will be affected. Although the Pakistanis have generally made their way successfully in industry in the Midlands (and are now said to restrict entry to some jobs in the foundries to their fellow-countrymen) housing is a more difficult problem that needs to be faced openly. There is a language and cultural barrier between the Midlander and the Pakistani that West Indians do not encounter to the same extent: practices like slaughtering hens in back gardens, and even the prevalent smell of curry on the stove, are matters which the ordinary Midlands housewife needs time to get used to. Sensitivity is all the more natural when people have just moved from slum dwellings and are determinedly displaying a new gentility of their own. The need is to instill a willingness to discover and understand other ways of life next door. This can never be induced by hysteria (which in Smethwick appears to have been deliberately stirred up) or by local authorities taking the easy way out and imposing unofficial segregation. The Smethwick authority cannot do better than stick to its guns.

CHINA

Unhappy Customers

Making more than 18 million tons of steel, as the Chinese communists say they did last year, is one thing; competing for export markets with advanced industrial countries is quite another. One of China's main difficulties in the export field is that its potential customers in south-east Asia have standards of quality formed by their long trading association with the West. They will not readily be satisfied with inferior machinery, for instance, even if the interests of political neutralism are served by purchasing at least part of their requirements in China. During the past few weeks, there have been rumblings of discontent from two of China's smaller but politically valuable customers, Burma and Cambodia.

Burma's dilemma is that the growing imbalance of its trade with China forces it to buy more from the Chinese, whereas they have little to supply at competitive prices. The imbalance has grown worse since the current trade pact was signed in January, and Burma is now exporting about twice as much (in value) to China as it is importing in return. At the end of June, the ministry of trade development understandably instructed trade organisations to give preference to purchases from China whenever possible. There is, however, little enthusiasm for this course among the people who have to use Chinese equipment. Broken bolts, electric motors dripping oil, and shortages of spare parts have led to breakdowns in one of the two main spinning and weaving factories in Rangoon. The machinery for this factory had been supplied by China, which has still not delivered spares ordered more than a year ago. The other spinning and weaving factory, using Japanese and American plant, is in full production.

In Cambodia, a plywood factory built by the Chinese ceased production in April because the Cambodians preferred to buy imported plywood of higher quality, selling at lower prices than the home-produced stuff. A textile factory also built under the Chinese aid programme is losing money for the same reason. All these are symptoms of industrial growing pains, which may be protracted.

MEDICAL RESEARCH

Cold War Victory?

For nearly fifteen years a steady stream of volunteers has been given a fortnight's holiday, at the expense of the Medical Research Council, in an isolated hospital on the Wiltshire Downs. In return they have presented their upper respiratory tracts for experiments in the council's efforts to isolate the virus causing the common cold. Now there are some hopes that this exchange of board and lodging for drops in the nose may come to a triumphant end. In its latest report (Cmnd 1422. 15s. 6d.) the council reveals that a major advance occurred in 1959-60. Quite by accident it was discovered that, in order to be cultivated consistently, cold viruses needed a more acid culture tissue and a lower temperature than are usual in similar experiments with other viruses.

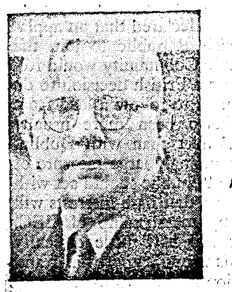
Aided by this discovery, the Common Cold Research Unit of the council has isolated six distinct types of virus that can cause the common cold. These have been named the rhinoviruses, and they are believed to cause somewhere between a quarter and a half of all the upper respiratory infections which the layman simply calls a cold. The important question now is whether a vaccine can be produced from the six types of rhinovirus, or from groupings of them, which will give effective protection. The Medical Research Council is collaborating with Glaxo, Burroughs Wellcome and Pfizer in an attempt to produce an effective vaccine; but the council's report points out that if many more distinct types of rhinovirus are found to exist, the prospects of successful vaccination are not very good.

IRELAND AND EUROPE

Following the British?

Our Dublin correspondent writes:—

Returning from his talks in London, Mr Lemass has declared that an application by the Irish Republic to join the European Economic Community would follow immediately on a British decision to do so. Such willingness to follow a lead from London has hitherto been more usually associated with Belfast than with Dublin. But there is a surprisingly large measure of agreement that the Republic should act with Great Britain; more, that Irish interests will best be served by membership of EEC. The government will have little difficulty in obtaining parliamentary approval if and when an application is made to join.



No doubt the opposition parties will have more to say as the general election, expected in the autumn, comes nearer. In fact the issues involved were very fully discussed in 1957 over the original free trade area plan. It was apparent then, as now, that entry into a wider association would mean reduction of the very high tariffs which, in the early thirties, Mr Lemass imposed to promote industrialisation. It was also widely felt that free entry to the continental market would benefit agriculture.

British policy, however, remains a major factor. Slightly less than three-quarters of Irish exports go to the United Kingdom. Under existing trade agreements each country grants preferential treatment to goods coming in from the other. The preferences received by Irish goods are by no means as valuable as they were, granted the trend of British agricultural policy. Nevertheless, there is little disposition to risk their loss by joining EEC if Britain stays out. On the other hand, they will gradually lose their remaining value as Britain grants further privileges to its associates in EFTA. Irish membership of EFTA would bring no great gain as trade with these associates is almost negligible.

There are some doubts in Dublin on the amount of freedom that will be granted by EEC to trade in agricultural products; and more doubts as to the present ability of agriculture to use it fully. There will be hard bargaining over the length of time allowed for the reduction of tariffs. But Irish exports are expanding rapidly. Their value in 1960 was 14 per cent greater than in 1959; and in the first half of this year there was an increase of 20 per cent over the corresponding period in 1960. It is hoped that the British statement of policy will be both positive and definite.

THE WORLD OVERSEAS

The winner

Sir Edgar's Referendum

FROM OUR SPECIAL CORRESPONDENT IN SALISBURY

Mr. Nkomo: the loser—temporarily?

A REFERENDUM campaign does not bring out the best in the Rhodesian character. The campaign which ended in Southern Rhodesia on Wednesday with a vote by about 60,000 Europeans and 6,500 Asians, Coloureds and Africans on the new constitutional proposals was by local admission the most acrimonious of them all. What is worse, the campaign has almost certainly done permanent damage to race relations, since Sir Edgar Whitehead's United Federal party has found itself fighting for votes on its right wing and has spent virtually no time assuring Africans that they will have a larger share in a brighter future.

The Southern Rhodesian government had a good case to put to its European electorate; and Sir Edgar, with his pipe and his two pairs of thick glasses as professorial props, has put it well. He has silenced his critics by offering them an enlightening lecture rather than controversial oratory; he has pleased his audience with gentle scorn of the British Government's ignorance of their country.

With the referendum won (the result is discussed on page 440), the party should give credit to him rather than to Sir Roy Welensky, who has been packing into his argument more emotional bulk than brain. Sir Edgar has been claiming that the proposals give Southern Rhodesia, a self-governing colony since 1923, virtual independence—that is, as much as is enjoyed by the states of Australia. He has wiped away clauses requiring any laws that technically discriminate against Africans to be submitted to the British Government, which has also surrendered its power to veto any legislation within its first year of enactment. After an extra three-month tussle with Mr Duncan Sandys, he extracted a written convention that the British Government would never legislate on its own initiative for Southern Rhodesia unless the country was in palpable chaos.

Sir Edgar has presented the enlargement of the 50-strong assembly to 65, to include Africans elected on a lower roll, as common sense rather than as the concession his right-wing Dominion party opponents would term it. The African MPs, he has explained blandly, will be good at constituency work. He has left it to his lieutenants to suggest, in language better understood by the fearful white Rhodesian, that "even if some extremists do get in, it is better to have them saying their piece where they can be shot down than in the back alleys of some township."

The Dominion party, led by Mr William Harper, has attacked from all quarters, realising that it is the party's last chance to gain the power which only the transferable vote system deprived it of three years ago. It has claimed that the reserved powers could have been removed without conceding any seats to Africans. On Mr Sandys's prompt denial, the party began scaring the electorate with tales that a left-wing party with only one-sixth of the upper roll votes could win the next election and that Africans would swamp the polls within ten years. "Vote No or he will get no vote," shrieked a poster portraying a young white boy, hostage to this appalling fortune.

This made the UFP present its right side. Lord Malvern, veteran among prime ministers, was brought from retirement to rumble "rubbish" at ideas of being swamped, or of compulsory social integration, and to point out that "Southern Rhodesia will in spite of the changes still be the most difficult country in the Commonwealth in which to become a registered voter." It was spread about that the government could and would eliminate the 15 lower roll seats if Africans "proved unco-operative." A clever series of newspaper advertisements urged that voting "No" would create a "no-man's land" where economic depression would leave ghost towns of abandoned playgrounds and deserted villas. The Federation itself would probably break up.

Another three European-led groups, disturbed by all this alarmism, have taken separate paths. The liberal Central Africa party eventually stuck to its support of the proposals because the alternative of a Dominion party government was too disastrous for it to contemplate. Several of these liberals, after many disappointments, cling to the belief that the government can be reformed "from alongside if not from inside." They are strengthened in this hope by the remarkable success of Mr Victor Tarica, a university lecturer turned bookseller, who in two years of organisation round the wards has turned the Salisbury city council from reactionary ridicule into a progressive body. Slightly further left, the New Opportunity Group, linked with the former premier, Mr Garfield Todd, has urged a "no" vote, denying that this would bring in the Dominion party and relying on tattered hopes that Britain will acknowledge its moral responsibility to three million subjects and institute democracy here through a second constitutional conference. The United Group, a collection of paternalists, much heartened by alliance with the ex-federal chief justice, Sir Robert Tredgold, has campaigned for racial harmony and hopes in a rather old-fashioned way to gain it on the strength of their leaders' honoured names and a gift of ten seats to Africans.

These last three groups have one thing in common: they all acknowledge that which side wins is of no account unless any new constitution is accepted by a significant part of the 93 per cent of the population who are African. Sir Edgar claims that his proposals have considerable support already among Africans and will gain more when their benefits are tasted. To many Africans this sounds suspiciously like what was said of federation eight years ago. The National Democratic party, hampered by the strictest of security laws, did all it could to publicise African alarm that Britain should be handing over nearly all remaining power to the settlers.

The struggle between Sir Edgar and the NDP president, Mr Joshua Nkomo, seems temporarily to have been won by the prime minister. A three-day general strike largely failed because the NDP leaders decided only on the last day to defy the laws openly, and by then their supporters had been dispirited by two disorganised days during which clandestine orders caused only confusion. Worse still, from the point of view of world consumption, the charge of intimidation so often levelled by the government at the NDP was made to stick on some party members during pathetic fights between strikers and workers.

Less convincing was Sir Edgar's mockery of the NDP's own referendum for not being made foolproof against multiple voting or incomplete secrecy. More than 300,000 Africans walked miles last Sunday to express their deep discontent with the government by means of their first ballot tin. As they queued patiently they did not offer lucid criticisms of the White Paper: they complained of unemployment, bad housing and of having to exchange, under the Land Husbandry Act, some well-prepared acres for "land where the beetles bore."

Sir Edgar proved himself a clever tactician in reaching referendum day without having to arrest the NDP leaders. But any praise for his political strategy should be reserved for a few months. He forced the NDP leaders into open defiance of the law and both sides have now to face the unpleasant consequences of that collision. The toll of four Africans killed and hundreds arrested is hardly a good advertisement, and the deploying of 24,000 troops and police round the townships and country suggests that the government doubted its own claim to be opposed by only "a small band of agitators." The United Nations has fewer troops in the Congo. A general strike for a large minimum wage increase, to be organised by the African trade union congress next month, will be a tougher test of the government's strength. Sir Edgar has won the referendum and his virtual independence from Britain, but his problems are still ahead of him; and their number has been increased by the way his party has fought the campaign.

Two Moroccan Worlds

FROM OUR SPECIAL CORRESPONDENT

AMERICANS, as they consider what they are giving up in Morocco and what it is costing them, in hard cash, to give it up gracefully, may be forgiven a touch of impatience at the sight of France sitting tight at Bizerta, cost what it may in political goodwill or diplomatic convenience. Neither for its position on the Strait of Gibraltar, nor for its long Atlantic coastline opposite their own, could the Americans very well contemplate a Morocco in hostile hands.

Their air bases in Morocco, built in the early nineteen-fifties under agreements with the French, were designed (like Bizerta) not to hold the country but to make strategic use of it. Since then Morocco has become independent, and the United States has made alternative air and naval arrangements in Spain. Still, the installations in Morocco remain a valuable part of the American strategic chain, and the United States Navy and Air Force would have liked to hold on to them. But Moroccan feelings had hardened against it, and the Americans decided that the political drawbacks outweighed the military advantages. President Eisenhower, when he visited the late King in December, 1959, agreed that all the American installations should be evacuated by the end of 1963; and this withdrawal is now going on by stages.

No doubt the American military presence had something to do with the fact that Morocco, up to last year, was getting as much American aid as the rest of Africa put together. Neither this, nor the flow of foreign exchange and of desperately needed employment which the bases brought, inclined the Moroccan government to ask the American forces to stay. Both sides, however, are fairly clear that the loss of their bases will not enable the Americans to treat Morocco with indifference. When the Moroccans found themselves this spring facing an agricultural crisis, it was to the Americans that they turned, and the United States has responded with wheat and animal feeding stuffs to the value of $23 million.

Maghreb men: Mr Bourguiba, King Hassan II, Mr. Ferhat Abbas

Behind this gift are crop failures for 1961 that are variously estimated between two-thirds and three-quarters; and the grain is being used to relieve acute distress among the peasants. The talent of Moroccan politicians for presenting a hastily-improvised relief scheme as a far-sighted programme of public improvement makes it hard to tell precisely what happens. It appears that some of the grain is simply handed out as a dole. But public works and agricultural improvement schemes are being hurriedly set in motion in the worst-hit areas; workless peasants are enrolled in the schemes, and are paid partly in kind.

Freakish weather, such as has damaged this year's crops in parts of Europe and of the Mediterranean basin—drought at growing-time, unseasonable storms during the ripening period—is the immediate cause of Morocco's present agricultural distress. Among the impressive paper reforms announced since the new government took office on June 2nd is the abolition of the *tertib*, a tax on agricultural output which it is customary to blame on the French occupation, though in fact it was introduced by the last independent Sultan, Moulay Abd-al-Aziz, in 1901. As the government pointed out when it decided to do away with this tax, the *tertib* has been retrograde in its effects and tends actually to discourage higher yields. Further (to quote the minister of information, Mr Ahmed Alaoui, on June 20th), the whole policy of concentrating on industrial and urban development has tended to leave the rural population, some 79 per cent of the whole, outside the "modern" sector of the economy. For this, he suggested, French policy during the protectorate was to blame. What was wanted, he said, was an agricultural community advancing at the same pace as the modern sector, and able to provide the broadly-based mass of purchasing power without which the industrial sector could hardly flourish.

Nothing (apart from the jibe at the French, which convention dictates) could be more enlightened or more true. All that has really happened, however, is that the agricultural economy has come as close to collapse as an agricultural economy can come, and it has become quite impossible, in large areas, to go on collecting the *tertib* at all. Mr Reda Guedira, the minister of the interior and of agriculture and possibly the key man in the new King's new government, complained on June 29th that, during the years 1955-1960, the first five years after independence, while the area under cultivation had been extended, agricultural output was no higher than it had been twenty years before; and in many regions, yields were actually going down. All this was before the agricultural collapse of 1961. Thus Moroccan agriculture was completely failing to meet the requirements forced upon it by the country's dynamic increase in population, now running at about 300,000 a year in a country of 11,650,000 people. And the average peasant was unemployed on 200 days a year.

Again as convention prescribes, Mr Reda Guedira announced in

the same speech a vast new scheme to deal with the problem—nothing less than the mobilisation of all men between 18 and 30 for compulsory labour service, so that a huge programme of necessary agricultural improvements (water and soil conservation, irrigation works, tree-planting, pest control), big enough, he said, to occupy a million and a half labourers for thirty years, could be put in hand at once. Philosophically speaking, everything Mr Guedira said was just as true as everything Mr Alaoui had said ten days earlier. In sordid fact, however, what has happened is simply that the state of agriculture has become too pressing a matter to be passed by in silence, and has forced the government to make a gesture of concern. How much action will follow, or how little, nobody knows.

It is, of course, "traditional" agriculture that is in such a mess, and to which Mr Guedira's appalling statistics apply. Relatively small areas of land, in large parcels, continue to be profitably cultivated by the modern agricultural enterprises, established mostly with French capital and expertise; these provide high yields and, in such sectors as citrus fruit, buoyant exports. These enterprises even provide steady employment and, since the withdrawal of French authority left them exposed to the full force of union pressure, relatively high wages. In the traditional sector, by contrast, the peasant community turns in upon itself and survives by cultivating for subsistence, until a major crop disaster leaves no recourse but to look for outside aid.

Thus the peasant community, the majority of the people of Morocco, reproduces in itself the strange division of an ancient and a modern economy living side by side which makes a journey through the country such a remarkable experience for the European tourist. Outside the walls of the old Moorish towns, the *nouvelle ville* is forbiddingly new, planned and prosperous. Within the walls, children spin wool in dark back rooms, jellabas are woven and stitched, copper is hammered, leather stamped, cedar-wood planed and carved, iron wrought, slowly, patiently, and by hand. What is traditional and admired in Arab taste and craftsmanship survives with more vitality and in greater perfection, by far, than anywhere else in the Arab world. Unlike most Arab peoples, the Moroccans are actively attached to the traditional things and the old ways of making them; yet, like the others, they desire to be a modern community possessing the outward marks, as well as enjoying the benefits, of technical progress. The sudden withdrawal of French authority six years ago did not resolve the dilemma which any tourist can see implicit in the rich Moroccan scene. It was not to be expected that it would. But the Moroccan leaders have employed these six years in discovering that their country's economic and social progress had not, as they thought, been artificially held back by foreign rule, and would, therefore, not automatically leap forward. The way forward is something they still have to find for themselves.

Epitaph on Bourguibism

FROM OUR PARIS CORRESPONDENT

BOURGUIBISM may well prove one of the casualties of the battle of Bizerta. The name of the Tunisian president—who can combine fiery Arab oratory with the bargaining skill of a Mediterranean merchant—had become a symbol. Bourguibism stood not only for skilful diplomacy and the art of compromise; it also stood for moderation and collaboration with the West. Habib Bourguiba used to be opposed to Abdul Nasser as the other pole of the Arab world. He never concealed that his great ambition was to sponsor a North African federation and keep the Arab West, the Maghreb, within the western world through association with France.

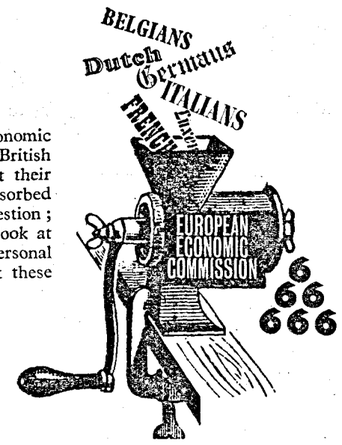
The Algerian war stood in the way of such a policy; so did a strange French reluctance to use President Bourguiba's services. Undismayed, the Tunisian leader made a supreme bid, five months ago, to achieve his aim. On February 27th he was General de Gaulle's guest at Rambouillet. It was obvious then that he was playing a risky game for high stakes. The nationalist tide was running against him. The Congo crisis had widened the gap between the moderate and the militant nations of Africa. Mr Bourguiba had to contend not merely with President Nasser. His two potential Maghreb partners—the Moroccans and the Algerian insurgents—joined the militant Casablanca group. Tunisia, which had stuck faithfully by Mr Hammarskjöld, was left in the moderate camp together with those ex-French colonies of black Africa that were still in the French orbit. It was falling increasingly under the suspicion of "collusion with neo-colonialism."

In spite of this, or rather because of it, President Bourguiba intensified his efforts. At Rambouillet he pleaded with his host to bring the Algerian war to an end rapidly. He argued that France's reward for a wise and generous policy would be the preservation of a privileged economic—and probably military—position throughout North Africa. Thanks to this association, France should also be able to keep a hold on the remaining African members of its community. Mr Bourguiba must have been satisfied with the general's response to this Mediterranean vision, since he afterwards paid public tribute to General de Gaulle's "spirit of decolonisation" and urged his Algerian "brothers" to show similar understanding. What has happened, within less than five months, to lead from the euphoria of Rambouillet to the slaughter of Bizerta?

The reasons are complex and the answer must still be tentative. The Franco-Algerian negotiations, started at Evian and resumed last week at Lugrin, did not proceed as fast or as well as Mr Bourguiba had expected. On their own behalf, too, the Tunisians felt disappointed. A farcical dispute about the French embassy's wall in Tunis prevented an exchange of ambassadors. The Tunisians concluded that unless one banged on the table one could not get a hearing in Paris; and they badly needed some concessions to restore Tunisia's anti-colonial reputation. The base of Bizerta was the obvious one. This does not mean that by the middle of this month the Tunisian leader had written off his gaullist gamble and admitted the bankruptcy of bourguibism. If he had decided on such a reversal of policy he would not have simultaneously staked claims to the Sahara that were bound to put him at odds with the Algerian insurgents. He seems to have been moved to action by a mixture of reasons that included disillusion with the French, nationalist pressure and a miscalculation about French reactions. Once the Tunisians decided to press for the evacuation of Bizerta and the French turned a deaf ear to their demands the situation was clearly explosive. But it seems certain that when President Bourguiba triggered off the conflict on July 19th he did not foresee how violent the French reaction would be.

A provisional list puts the number of Tunisian casualties at 670 dead and 1,155 wounded. French losses are estimated at 30 killed and 50 wounded. But the loss to France is incomparably greater. It cannot be measured by the threat now hanging over the 60,000 Frenchmen who have remained in Tunisia and over the still important French interests in the country (one of the first Tunisian reprisals was to seize the Edjele-La Skirrah pipeline which was carrying Saharan oil at an annual rate of 9 million tons). All Franco-African co-operation is at stake. The bourguibist doctrine that there is a third way between colonial subservience and intransigent nationalism has been undermined. And this may rapidly have repercussions throughout French-speaking Africa.

M. Bechir Ben Yahmed, the influential editor of the lively Tunisian weekly *Afrique-Action*, which has recently been preaching peace in Algeria and Franco-African collaboration, now draws a bitter lesson from the events at Bizerta:



> Any co-operation with the West—*a fortiori* any form of association or alliance—cannot but be tainted with neo-colonialism. As such, it is humiliating for the whole of the under-developed countries, sterile and harmful for the country which accepts it. . . .

This almost sounds like a funeral oration on bourguibism and, indeed, there are signs that the doctrine is being buried. M. Masmoudi is negotiating an imminent resumption of diplomatic relations with Egypt. The Arab League has welcomed its prodigal son, returning after three years of absence, and has promised Tunisia the help of its volunteers.

President Bourguiba is still trying to salvage something of his previous position. The cease-fire, sponsored by the Security Council, has given him a respite. He is using it to find a diplomatic solution and has called Mr Hammarskjöld to the rescue. He is appealing to his Anglo-American friends to use their good offices to persuade the French to open negotiations for the evacuation of the base at Bizerta. His son, the Tunisian ambassador in Washington, urges "the free world to act before another world intervenes. . . ." The Russians, while backing the Tunisian case, show no zeal in assisting a man whom yesterday they treated as a lackey

The Eurocrats

FROM OUR BRUSSELS CORRESPONDENT

THE new civil servants of the European Economic Community in Brussels receive more British callers nowadays than they used to do. But their visitors are for the most part journalists absorbed in some particular economic or political question; few have had time to take a comprehensive look at the new bureaucracy scattered in four impersonal white office blocks throughout the city. Yet these new 'Eurocrats' are worth taking a look at.

Many visitors have been struck by two obvious qualities in the best of them; their 'European' spirit, and their dynamism. Although the internal structure of their organisation in any case prevents them from ganging up into national cliques, it seems true that they really do largely forget questions of nationality while on the job. Very often one can't tell what country they come from until one hears their accents. But by now the game of guessing national stereotypes is over in Brussels, and the general impression is one of offices filled with multilingual tough-minded Europeans mostly aged around 35-40. No doubt they include a certain amount of dead wood and they may have been 'Angries' in their adolescence, but now they are convinced they are doing something worth while: Europe's Sanguine Young Men.

At the beginning of 1961 the Commission was 1,846 strong; it does not expect to grow much bigger unless it acquires other member countries. France, Germany and Italy provide a quarter each, the other quarter being drawn from Benelux, which shares out its 25 per cent by separate internal agreement (in fact Belgium gets more than its proportion, as a good deal of local labour is naturally recruited for the minor jobs). Heading the Community are the nine Commissioners; although some of them were formerly ministers in their own governments, and all are appointed by the member governments, they are entirely independent once the appointment is made. According to the Treaty of Rome no more than two of them may have the same nationality, and each of them heads one of the nine divisions of the Community: external relations, finance, internal market, competition, labour, agriculture, transport, overseas development and administration. Working under each commissioner is a director-general of a different nationality and so on down the scale of the three administrative grades; a complex system of balances ensures that the work is fairly divided. The Community is aware that this structure does not make for flexibility, and it is not inevitable for an Italian, for example, to replace an Italian in any particular sector; but if he is followed by, say, a Dutchman, then fairly soon in some other sector one Dutchman less and one Italian more will be given precedence.

When the Community was set up in January, 1958, several of the six governments supplied lists of men from their own national bureaucracies, thus providing a large proportion of the total initial staff. Other candidates proposed themselves by personal application to the Commission, and this is the only method of recruitment now used.

There is as yet no entrance examination, but according to the personnel statute due to come into force by January 1, 1962, an examination similar to that required by the Coal and Steel Community in Luxemburg will be instituted. The Commission prefers candidates who are university graduates with a few years' experience in jobs, not necessarily in the civil service. The present staff includes former university teachers, bankers, industrialists and others. (The transport division, for example, includes an ex-manager of a Rhine shipping firm, and the labour division an ex-official of the International Confederation of Free Trade Unions.) They are almost all technocrats; recruits with a background of the humanities or classical studies alone are very few. Though the Community contains many federalists, neither the political affiliation nor the religion of recruits is inquired into. But unlike most Protestants or Jews in the Community, the Catholics tend to be practising rather than nominal. In Luxemburg the Catholics belonging to the Coal and Steel Community even have their own chapel; some have felt that this increases the sense of community, whereas sceptics have been heard to murmur that it is a way of keeping tabs on the *non-bien-pensants* who fail to turn up to Mass.

All men in the top 'A' grade must be proficient in a second language. French and German are most used, though all four official languages (Dutch, French, German and Italian) have equal status. The corps of translators number 140, and includes several British and other non-Community nationals. Apart from them, the 'A' men in Brussels belong exclusively to the Six, except for one lone Englishman who has been in the Community from the start. Women of 'A' rank are exceedingly rare, possibly because they are not tough enough to stand the pace or the long office hours (8.30-6.30), which are, however, considered fairly normal on this side of the Channel.

If Britain joins, its nationals will, of course, have something to say about all these arrangements and will have the right to ask for modifications. Some here feel that the organisation is already complex and unwieldy enough without the added complication of the British; delighted at the way in which the new Community is striding forward in the economic field, they are impatient at its painful inching along on the political front and they fear that if Britain joins, bringing with it not only the Commonwealth but most of the European Free Trade Association, the whole undertaking may become unmanageable. Even the dynamic Eurocrats have come to have something of a vested interest in the existing framework for their dynamism. Yet the entry of Britain could put this Little Europe into a better perspective; and with a combination of the best brains of the Six and of Great Britain, the organisation could be a determining factor in the history of our century.

of imperialism. And President Bourguiba shows no haste for Algerian or other foreign volunteers to fight a new battle.

But there is another side to the story. The cease-fire is precarious. The other recommendation of the Security Council—that both sides should return to their previous positions—is interpreted in diametrically opposite ways by the two protagonists. The French have no intention of evacuating the base and official Paris shudders at the very suggestion of Anglo-American good offices (which remind them of the fall of the Fourth Republic), or any other. Washington has no wish to quarrel with a Nato partner when a Berlin crisis seems imminent. Where, then, can President Bourguiba look for western support? Few observers in Paris believe that the Franco-Algerian talks at Lugrin can now provide a by-pass to reconciliation. Yet, if the western powers do not help the Tunisian leader to stage some spectacular recovery, the bullets of Bizerta will have written an epitaph on bourguibism that western statesmen may not enjoy reading.

Beyond the Berlin Gate

FROM OUR BONN CORRESPONDENT

BONN, as everybody knows, is a four-letter word—to some people a very dirty one indeed. It has the chief qualities of a good expletive, loadable at will with anger, derision, or contempt. More: unlike most imprecatory monosyllables it can be used in the headlines without shocking aunty or corrupting the kids. To the harassed journalist, juggling with space, it is, like the word "Krupp," a veritable godsend. A single recent issue of the leading east German communist daily, *Neues Deutschland,* spits out the amazing revelations that "Bonn pays head-money for traffic in humans; Bonn demands unconditional surrender to common market; Bonn pays terrorists in Alto Adige; Bonn spies in Jugoslavia." That so circumscribed and somnolent a town can be up to so much mischief is intriguing.

Arrivals at Marienfelde

But the communists' rage against Bonn is understandable. Just at the moment when their combined voices are loud in demand for world-wide recognition of the fact that there are two German states, the one they are rooting for, the Democratic Republic, is looking wretchedly unconvincing. *Die Welt's* cartoonist drew this week a column of refugees pouring endlessly from a distant line of barbed wire, behind which Mr Khrushchev ruefully contemplates the deserted scene, and asks: "Whom am I supposed to be making a peace treaty with?" Herr Ulbricht's natural reaction to the latest exposures of his weakness has been to intensify the barrage of hate against the capital of the other German state, which, for all its shortcomings, is on a much sounder political and economic footing. How humiliating at this moment to be offered five thousand tons of butter by, of all people, Dr Adenauer.

Striking examples of the main sources of the discontent that impels so many citizens of the Democratic Republic westward are continually cropping up. West German opinion is much exercised at present by the kidnapping of Heinz Brandt, a west German trades union journalist. Herr Brandt, a former Communist who spent ten years in Nazi prisons and concentration camps, lived in east Berlin after the war until he quarrelled with the party and went west in 1958. Early in June he travelled by air to west Berlin to report a union conference. Naturally, he had every intention of avoiding east Berlin. No more was heard of him until June 16th, when the east German news agency announced that "the spy Brandt" had been arrested while working for "a western intelligence agency" in the neighbourhood of Potsdam. The west German metalworkers' union, who are as convinced of Brandt's innocence as they are of his punitive abduction, are doing what the east German public would so often like to be able to do—namely, asking why the man was arrested and on what evidence, and where he is.

The east German regime's oppressive jealousy of all inspiration and organisation other than its own was conspicuously demonstrated during the Evangelical Church congress held last week in west Berlin. The affiliated meetings that were to have taken place in east Berlin were banned, and hundreds, if not thousands, of east German Protestants on their way to the Berlin gathering were turned back at the border. *Neues Deutschland* accused the chairman of the German Evangelical Church Council, Dr Scharf (a pacific man who lives in east Berlin) of being "an apostle of the 'front-line-city' policy," and of "acting on behalf of a militaristic church that advocates the Nato solution for Berlin." A catalogue of the possessive state's interference in public and private life would never end. The portentous propaganda with which the pushing about is excused makes it all the more irksome to the adult citizen. Over the past seven years 16,000 teachers have left east Germany, 15,536 engineers and technicians, 11,705 students, 3,110 physicians and surgeons, 1,224 dentists, 901 dispensing chemists, and 658 solicitors. This month alone, another 24,000 of both sexes and all trades have arrived at the west Berlin reception centre. They are being flown to the Federal Republic at the rate of 1,000 a day. About three-quarters of the arrivals are under 45. Happily, 570,000 jobs are still going begging in the golden west.

The motives for flight are naturally often mixed. The spiritual malaise caused by the all-pervading oppressiveness of the political atmosphere is aggravated by the unabating irritations of a dreary diet, sudden shortages of simple things like needles, and travel restrictions. It has been a bad summer in east Germany. The farms have not yet recovered from their precipitate collectivisation, partly because too many land workers have quit, partly because many of the dispossessed become obstinate and decide to work industrial hours themselves. There are the usual queues for fresh fruit and vegetables. Supplies of margarine have run short; the butter allocation has been fixed at 200 grammes a head a week. Even bread and potatoes have been rationed in some places. Last year's proud promise of abundance and surplus round the corner has died away.

Many of these are standing grievances. This summer's increase in the flow of refugees must be attributed mainly to what the Germans call *Torschlusspanik,* the anxiety, or hysteria, engendered by the prospect of being too late to get through a gate that appears about to close. Believing, as they have believed before, that the west Berlin gate may soon shut for ever, thousands of east Germans are surreptitiously on the move. But there is no evidence of any recrudescence in east Germany of the desperate, militant mood that exploded in the rising of June, 1953. At least, not now. But who can be sure what might happen should the gate in fact close, and should conditions in the Democratic Republic worsen?

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Berlin and Beyond

WASHINGTON, DC

PRESIDENT KENNEDY has faced this week the familiar problem of leadership in a democracy: how to arouse the public without alarming it and how to stir Congress to action without manufacturing a false crisis. The calm, sober tone of his address to the nation and the limited, though costly, scope of his military recommendations to Congress reflected Mr Kennedy's fundamental conviction that the Berlin problem is not an isolated crisis likely to lead to a single dramatic climax but is only part of the worldwide confrontation between the two power blocks and is not likely to be resolved soon.

The President's proposals for increasing airlift capacity, for raising the army's strength from 870,000 to a million men and for modernising its non-nuclear weapons are measures which he and his military advisers would favour even if there were no immediate crisis over Berlin. These are desirable for their own sake to build up the country's strength in conventional arms; they have been taken secondarily for their impact on Russian opinion and least of all for their effect on American opinion. Each of them, it may be noted, also serves to implement the Administration's determination to strengthen the North Atlantic Alliance, an aim of Mr Kennedy's policy from the first. Calling up the reserves, which had been considered, found little favour in the final round of decision-making because the masses of men in the National Guard would be of no use at this juncture and because the proclamation of a state of national emergency, which would have been required before they could be called up, was thought to be needlessly inflammatory. The increase in conscription for the regular army, combined with the ordering to active duty of reserve air transport and tactical air squadrons, was thought to be a less cumbersome solution for the manpower needs of the forces. However, the President asked Congress to give him authority to call up 250,000 members of the reserve forces if he feels that this is necessary during the coming year.

In marshalling public opinion Mr Kennedy was helped by the fact that to most Americans Berlin is comparatively familiar ground. Unlike Laos or the Congo, where the geography and the personalities are unfamiliar, and unlike the nuclear test ban treaty, with its baffling technical complexities, west Berlin seems to the man in the street a comprehensible and straightforward question. Only a small faction on the extreme right still worries the bone of why the United States and its allies permitted themselves at the end of the war to be tied down in a city surrounded by Russian-controlled territory. The anomaly of west Berlin's isolation is accepted as an inevitable trick of fate, and most people assume that if the Russians were not making difficulties over Berlin they would be making them over something else. The President expressed this view when he said "The source of world trouble and tension is Moscow not Berlin. And if war begins it will have begun in Moscow, not in Berlin." It is a short step from this generalised view to the conviction that a military threat to Berlin is the same as a menace to Paris, London or New York and must be resisted with equal firmness.

In the United States there is very little of the anti-German attitude and war-bred resentment that colours feeling in western Europe about the problem of Berlin. Except for a relatively small segment of pacifist and liberal opinion, west Germany is accepted fully as a military ally and the commitment to defend west Berlin is unquestioned. The basic reason for the extraordinary uniformity of opinion on this question is that the American people learned well, perhaps too well, the lessons of Munich; rarely in history can a spectator have taken so much to heart the wisdom to be derived from the errors of others. Now that the United States plays one of the two principal parts on the world stage, Americans are determined not to repeat the mistakes of the Chamberlain era in their dealings with another dictator. There are no harsher words in the American political lexicon than "Munich" and "appeasement." The people have been told so many times that dictators respect only force in being and that preparedness and a firm policy would have stopped Hitler and prevented the war that they respond instinctively in these terms to any menacing gesture by Mr Khrushchev. President Kennedy's speech was in this central tradition, which dates back to Roosevelt's speeches on the eve of the war and the "Truman Doctrine" of 1949.

It is difficult to estimate how deep and how steady is the willingness to risk nuclear war over Berlin, since the very logic of the analogy with Munich persuades most people that military strength combined with a policy of firmness will make war unnecessary. However, since most Americans have never known the devastation of war at first-hand and the character of nuclear warfare seems unreal, their national optimism and self-confidence would probably enable them to follow the President without panic to the brink of war, should that ever prove necessary. Only time can tell whether the construction of fall-out shelters in public buildings, which the President suggested should be initiated on a modest scale, will alter the popular mood. The President and his advisers think that an accelerated programme of civil defence will make it clear to the Russians that the American government takes seriously the possibility of war, but it is also conceivable that this same programme, by shocking many people into an awareness of what a nuclear war might mean, may soften public opinion.

MR KENNEDY took care on Tuesday night, as he had done in his press conference the previous week, to stress the importance of working in co-operation with America's allies. Here he was helped by the fact that Americans are much more alliance-minded on European issues than they are on questions arising elsewhere in the world, particularly in Asia. British criticisms of American policy toward Communist China only arouse resentment, but the man in the street is more open to British and other allied arguments on Berlin. In spite of the prevailing desire to talk tough and call Mr Khrushchev's bluff, Mr Kennedy was not speaking to deaf ears when he counselled patient moderation as well as firmness and expressed renewed willingness to seek political solutions. Although basically the President said nothing that had not been said before by his predecessors, he went further than had been expected at this time in trying to calm any legitimate Russian fears when he said:

> We recognise the Soviet Union's historical concerns about their security in central and eastern Europe, after a series of ravaging invasions—and we believe arrangements can be worked out which will help to meet those concerns.

Most observers are of the view that the President chose just about the right time to speak out on Berlin. On Laos, where it was contemplating possible military intervention last winter, the Administration was far ahead of public opinion, which was apathetic and confused. On Cuba, on the other hand, public opinion ran far ahead of the Administration in its eagerness to smash Dr Castro by military force. That is why Mr Kennedy followed his half-hearted initiative of April with a speech of dazzling but empty bombast and then with a deep and, he hoped, calming silence on all things Cuban. On Berlin, opinion has neither lagged behind nor outrun the President. The people have been waiting for a lead and Mr Kennedy, within broad limits, could have turned them in any direction he chose.

The President has been remarkably free of congressional harassment in making up his mind on Berlin. At one time Senator Dirksen and Representative Halleck, the leaders of the Republican minority, were under some pressure from within their own ranks to produce a party manifesto sternly pointing out the dangers of appeasement and warning the President of dire retribution if he did not stand firm against the blandishments of the Russians. But neither of these party stalwarts has his heart in issues of foreign policy, and former President Eisenhower had no great difficulty in persuading them, during a conference at his Gettysburg farm earlier this month, that they would serve their party and their country best by simply keeping quiet about Berlin.

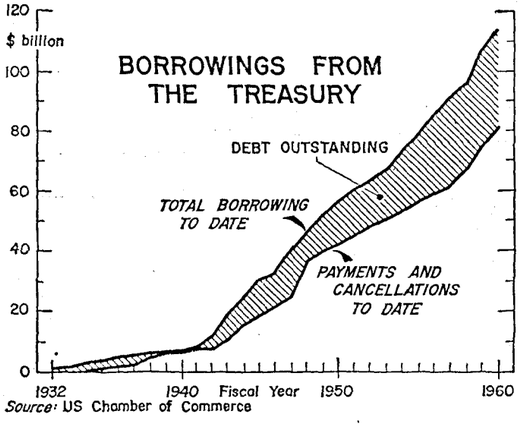
Senator Cooper of Kentucky, Mr Kennedy's closest friend in the opposition party, soon afterward made a thoughtful speech noting that an attitude of firmness, while all very well, is not in itself a policy. Senator Kuchel of California, the assistant minority leader, has struck the useful if familiar note of bipartisanship in a time of crisis. Mr Nixon, in his new series of newspaper articles, has been more hectoring in tone but, lacking any specifics, his admonitions to the President boil down to the stock phrase: stand firm.

The Democrats, for their part, have naturally deferred to the President. When the Soviet ambassador, Mr Menshikov, was reported to have said at a party that the American people would not fight for Berlin, the members of the House of Representatives took his remarks so seriously that they rushed in with a resolution assuring him that the contrary is true. But otherwise the House and, to an almost equal extent, the Senate have abdicated to the President their policy-making role on major foreign issues such as Berlin. Congressional reaction to the President's speech indicated that approval of his request for an increase of $3.5 billion in military funds was virtually certain.

The British response and reaction to the President's lead are discussed on page 438.

Critical Days for Aid

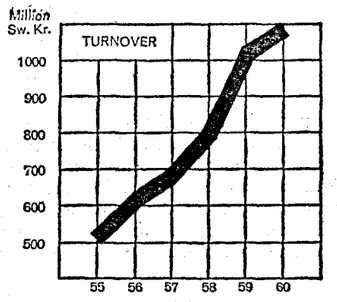
ALTHOUGH the President did not fail to include an appeal for his foreign aid programme—and for his stranded Bill to aid education—in his speech on Berlin, it would be optimistic to conclude that the Soviet Union has once more saved the foreign aid programme. Some members of Congress who will not hesitate to vote for more money for defence feel that other spending should be cut accordingly. This is particularly true in the House, where opposition was already strong to the President's request that Congress should give up its year-by-year control over development loans for foreign countries. The Administration feels that it is hardly reasonable to ask undeveloped areas to initiate far-reaching social and economic reforms if the loans on which they count may dry up overnight. It is asking permission to spend $8.8 billion over the next five years. Normally the authorisation Bill for foreign aid, which Congress is now considering, merely sets a ceiling and the actual amounts which may be spent are fixed by the appropriations which are granted at a later stage. This year it is the authorisation Bill which may have the last word over much of the spending.



No one will be able to accuse President Kennedy of not fighting for the principle of long-term financing. He has been pulling out every stop in a series of meetings with members of Congress; he has been on the telephone to others late into the night; and he has encouraged the formation of a Citizens Committee for International Development to bring pressure to bear on the legislators. Behind the scenes the State Department has been organising meetings all over the country with leaders of local opinion. Last week the President tasted the first fruits of these efforts when, by a vote of 10 to 7, the Senate Foreign Relations Committee accepted, without any material change, the President's proposal that he should be allowed to borrow $7.3 billion directly from the Treasury for development loans and use another $1.5 billion in repayments of earlier loans which are expected before 1966.

The next hurdles will be higher. Voting in the House Foreign Affairs Committee—which has been held up to allow pressure for

"Backdoor" Spending



THE financing of government activities, chiefly lending programmes, by direct withdrawals of funds from the Treasury is of long standing. Its great virtue in the eyes of its advocates is that once permission for this has been obtained from Congress there is no need to submit every year to the penny-pinching of the appropriation committees. Borrowing from the Treasury—usually through an "authorisation to expend from public debt receipts" which permits the Treasury, in its turn, to borrow the money from the public—began in 1932 when the Reconstruction Finance Corporation was trying to keep hard-pressed business firms afloat with loans. As the loans were expected to be repaid congressional appropriations seemed inappropriate.

Since then "backdoor spending," as the conservatives like to call it, has been used to finance houses for both servicemen and ex-servicemen, for agricultural price supports and for the Export-Import Bank's loans to foreign traders. Recently it was incorporated in the legislation to aid depressed areas. In all, $140 billion in such authorisations have been placed upon the books of the Treasury; $114 billion of this has been used; and $65 billion has been paid back. Another $16 billion has been forgiven by Congress. Conservatives regard the evasion of the appropriation process as iniquitous, even when applied only to domestic programmes, and they have tried unsuccessfully to outlaw it.

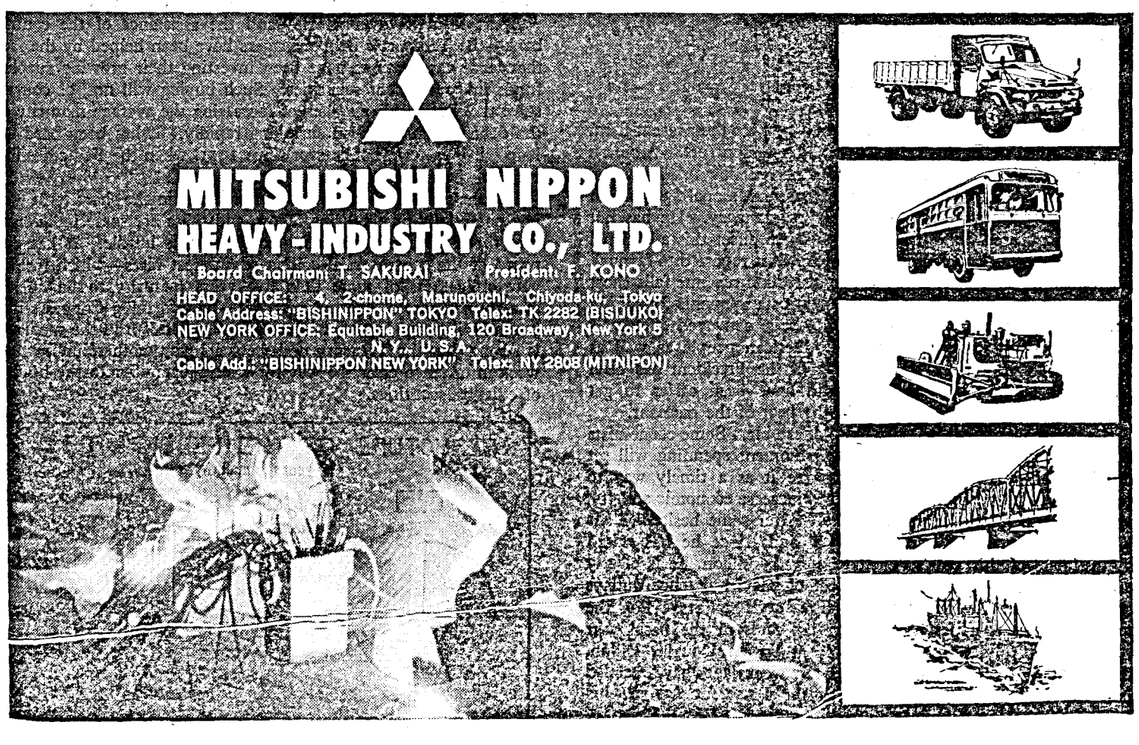
VOLVO
diagrams

Volvo Group turnover during 1955—1960



Volvo Group exports during 1955—1960

The total value of the Volvo Group exports during 1960 was Sw.kr. 548,500,000 (£38,100,000), i.e. 4.7 % of all exports from Sweden. A total of 48,452 vehicles was exported.

Volvo products were sold on 102 markets through 15 subsidiary companies and 323 distributors.

The Volvo Group has become the second largest industrial corporation in Sweden and Scandinavia within slightly more than 3 decades. About 1.5 % of the total Swedish population earn their living directly or indirectly through the Volvo Companies. The rapid expansion of the Volvo Group and its exports can be explained by one single word: quality.

long-term financing to have its effect—may begin late this week. The chairman must do his best to secure approval of the full five-year authority since on the floor determined attempts will be made to reduce this to three or even two years. Even in the Senate debate which begins next week, Republican votes will be needed to offset the expected defection of almost all the conservative Democrats from the South. One possible compromise, which has been put forward by Senator Dirksen, the Republican leader, and accepted tentatively by Senator Mansfield, the Democratic one, involves the creation of a congressional watch-dog committee for the development programme; this might reassure Republicans who fear that they are being asked to give up all control over it. Some such compromise should not be beyond the wit of Americans when so many of their leaders—including former President Eisenhower and Mr Nixon—are convinced that a longer-range foreign aid programme is essential.

Budget under Pressure

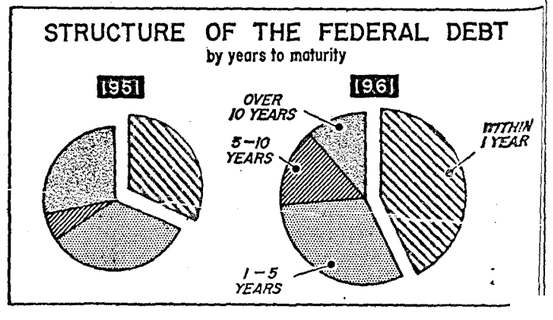
THE proposals in Mr Kennedy's report to the nation last Tuesday piled additional troubles on an already troubled budget. When the Treasury made up its books for the fiscal year which has just ended the deficit turned out to be a good deal larger than had been expected three months ago ($3.9 billion instead of $2.2 billion). And this was a year which originally looked like producing a surplus of $4.2 billion and which, as recently as last January, seemed to promise a balanced budget. In the final accounting total revenue was fractionally below that of fiscal 1960, while expenditure had climbed by $5 billion.

	1959/60	1960/61			
	Actual	Jan. 1960 estimate	Jan. 1961 estimate	Mar. 1961 estimate	actual
			$billion		
Receipts	77·8	84·0	79·0	78·5	77·6
Expenditure	76·5	79·8	78·9	80·7	81·5
Balance	+1·2	+4·2	+0·1	−2·2	−3·9

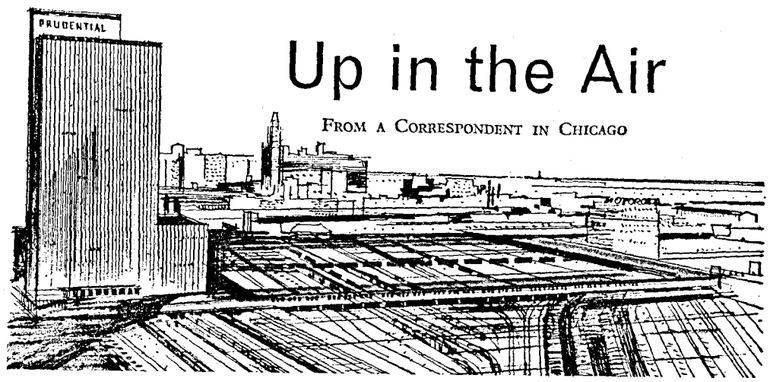
Even before this week's changes the budget for the present fiscal year contained an estimated deficit of $3.7 billion (or $4.4 billion if the proposal to raise postal rates is turned down). Now the President has asked Congress to authorise an additional $3.5 billion for defence—the third such increase since January. He has not proposed any immediate increase in taxes to offset this additional outlay (a course of action that the Treasury was reported to favour), but he will do so next year if the rise in federal revenue falls short of current hopes. There were strong political arguments for raising taxes now rather than later: this would have conveyed effectively the desired sense of urgency to the American people as well as giving substance to the "sacrifices" that the President has been calling for for months; and it would have been easier to get Congress to agree to higher taxes in the heat of the moment.

But the economic merits were more debatable. Some economists claim that any additional excess in government spending will set the inflationary ball rolling. Others see it as a timely way to get the unemployed back to work and to increase economic activity, profits and therefore federal revenues. After some hesitation Mr Kennedy has accepted the latter view and, since he has raised the estimate of this year's deficit to only $5 billion, he is clearly taking an optimistic view of the effect of heavier defence outlays on the flow of revenue into the Treasury's coffers. For the moment at least, hopes of lowering tax rates in the fiscal year starting next July, which were hinted at by Mr Douglas Dillon, the Secretary of the Treasury, only a few weeks ago, have receded into the background, particularly as the President has set his heart on a balanced budget in 1962-63.

Success at the Treasury



FROM A CORRESPONDENT IN NEW YORK



WHILE the Treasury is experiencing difficulties in gaining control over the federal budget, it is demonstrating both boldness and skill in its management of the public debt. This is clear from the success of last week's financing, which involved raising $3.5 billion in cash and refunding $12.5 billion of maturing obligations—one of the biggest operations of this kind on record. The Treasury deliberately increased the size of this refunding by including all issues maturing between August and October, evidently reasoning that as the amount was so large already a little more would not matter, and that one big package was preferable to repeated trips to the market. It offered a choice of three issues with maturities ranging from 15 months to six and three-quarter years at yields (from 3¾ per cent to nearly 4 per cent) that the market found attractive. With the Federal Reserve System maintaining a policy of easy credit, the refunding went smoothly: the Treasury announced that it will have to redeem only $732 million of the maturing securities, and it managed to attract $745 million into the longest-term issue.

By sweeping up all the near-term debt, the Treasury has put itself in a much better position to consider the best means of financing the deficit which is expected during the present fiscal year. At the same time it has avoided any marked impact on interest rates or on the psychology of investors who had feared unsettled conditions and a sharp rise in rates. Its success is due partly to a willingness to experiment, partly to a professional "feel" for the market (provided mainly by Mr Roosa, who came from the New York Federal Reserve Bank to handle the Treasury's monetary affairs) and partly to the central bank's decision to abandon its "bills only" policy in favour of the more flexible technique of dealing in the entire range of government securities.

Apart from its own efforts—and the assistance of the central bank—the Treasury's debt managers have been helped by the fact that large corporations have been investing their growing surplus funds in government securities. Such buying will not, of course, solve the Treasury's problem of increasing the average maturity of the debt, which has been shrinking rapidly. It has been hard for it to sell long-term bonds ever since 1951, when the Fed ceased to support the market for them.

But the increasing concentration of issues in the short-term area is a potentially unstabilising factor, and there are some indications that the Treasury is preparing to tackle this hurdle. It has disposed of the controversial ceiling on interest rates—which forbids new obligations of more than five years maturity to be offered at a coupon rate of over 4¼ per cent—by informing Congress that it would, if necessary, offer issues at a discount. And the suspicion is strong that the Treasury undertook its mammoth refunding last week in order to clear the way for a long-term offer to the holders of existing securities.

Up in the Air

FROM A CORRESPONDENT IN CHICAGO

WHEN Queen Elizabeth first saw Chicago from Lake Michigan two summers ago, the shimmering aluminium, glass and stone façade of the Prudential Plaza must have been one of the first things to catch her eye. It represents the beginning of a building boom in the second largest of American cities. More particularly, it was the first concrete evidence of renewed interest in a largely untapped source of space for new buildings in Chicago—the rights owned by the railways over the space above their permanent way.

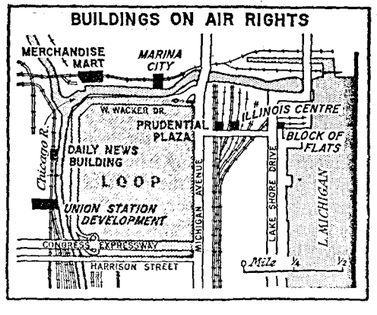
The Prudential Plaza rises 41 storeys above a tangle of lines which are part of the passenger and goods yard of the Illinois Central Railroad; these lie along the lake front. The Prudential Insurance Company of America purchased the air rights and completed this office building in 1955. Now five other similar projects are planned, including one which, as the sketch shows, is to go up next to the Prudential Plaza; this is the proposed Illinois Centre, a 60-storey office and hotel complex, on which work is due to start in eighteen months.

The latest and biggest of these projects, which was announced just last week, has an international flavour. City Centre Properties Ltd. of London and a group of New York investors headed by Mr Erwin Wolfson, which together are putting up the Pan-American Building over Grand Central Station in New York City, are to co-operate equally in erecting a complex of office buildings costing close to $200 million. The concerns have bought a 70-year lease of the air rights over the permanent way and covered passenger platforms on the north and south sides of Chicago's big Union Station. Work on part of the project will begin before the end of the year.

Construction began last winter on the Marina City project. It will combine office space and luxury flats in a pair of unusual towers on the north bank of the Chicago River at Dearborn Street, over the lines of the Chicago and Northwestern Railway. Coming soon is a 750-room hotel over the main right of way of the Illinois Central near the lake front just south of the Loop (the heart of the business district). It will serve the new exhibition hall completed last year. And negotiations are under way for the air rights for a block of flats on the far edge of the same railway yards, nearer the lake. Private investors are financing the ventures.

The scarcity of land in the centre of the city is the principal reason for this rush to acquire air rights. While smaller cities such as Cleveland are still dotted with car parks and even with vacant plots close to the centre of things, the down-town area in Chicago is crammed with skyscrapers and frequently even the car parks are multi-storey buildings. Inside the Loop, which is less than a mile square, there are a number of relatively small old structures. But it is far from easy to buy out all the owners on a site large enough for a major building. Recently an insurance company had to design its new office around a tiny dingy bar whose owner was persuaded to sell only at the last minute.

But scarcity of land is not the only important reason why air rights are being developed in Chicago. The city is the country's railway capital; it has more than half a dozen big passenger stations, not to mention goods yards. Many of the desirable sites for new buildings are occupied by railway lines. The Illinois Central switch yard, by itself, probably gives Chicago greater possibilities for the development of air rights than any other city. The yard, which contains only low warehouses in addition to the permanent way, occupies 80 choice acres along the lake next to the central business district. The second-biggest of the five air rights structures, the $150 million Illinois Centre, will cover 18 acres near the Prudential Plaza. Even with the block of flats planned for this area the Illinois Central estimates that there will be 27 acres left within a 10 to 20 minute walk of LaSalle Street, the Wall Street of the mid-west.



It costs more, naturally, to build on air rights even though there is usually less demolition of old structures to do than on an ordinary site. The railway lines make it difficult to move heavy construction machinery about and the concrete supports for the buildings must be arranged so that they will not obstruct the trains. But the price paid for the purchase or lease of air rights is lower than that paid for other desirable sites so that the costs, as a whole, work out about the same.

The use of air rights is not completely new. Other cities, notably New York, have buildings over railway lines. And even in Chicago builders tapped this source of space as early as the nineteen twenties though only for two structures: the massive Merchandise Mart north of the Chicago River and the Daily News Building around the bend of the river just west of the Loop. But the depression of the nineteen-thirties discouraged further pioneering and this has revived only with a new boom in office building.

This boom has been a long time in coming to Chicago, primarily because so much office space was provided after the war by the remodelling of old structures, mostly department stores and warehouses. Now, however, the steel and concrete skeletons of new buildings promise about 3 million square feet of extra office space. This is more than has been added through new construction in the decade and a half since the war.

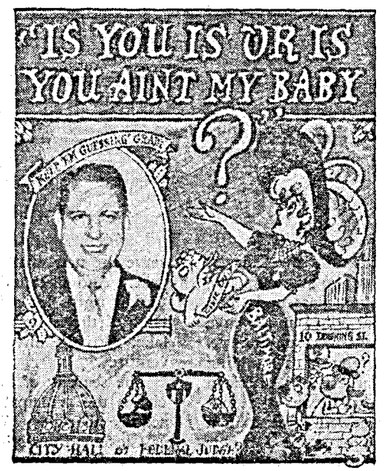
Such growth is in step with the demand for desirable office space. This is going up steadily, basically because the rising standard of living of Chicagoans means that more services are required—from the government, banks, insurance and communications companies and advertising agencies. The growth of industry since the war has also increased the need for office space. There has been a substantial rise in the proportion of white-collar jobs in manufacturing; in the steel industry, one of Chicago's biggest businesses, it has grown from 12 per cent of the total twenty years ago to 23 per cent today.

New buildings in themselves have great attractions for big corporations. The Inland Steel Company, for example, first planned to rent new quarters when it outgrew its old ones a few years ago. In the end it chose to build and now it has a luxurious structure bearing its name which also is, incidentally, a monument to the material it produces. New buildings not only publicise a company's name and catch the eye of workers who are scarce—such as secretaries—but they also make it possible to provide for future growth. Space can be let to other firms until it is needed. The present boom also reflects at least a partial reversal of the flight to the suburbs by big business.

Warfare Over Welfare

THE little town of Newburgh, New York, 60 miles up the Hudson from New York City, has declared war against the welfare state and has attracted the sympathetic interest of many taxpayers and of local governments all over the country which are struggling to fit the heavy costs of public assistance into their thin budgets. Newburgh, a city of 31,000 people, has had about 1,380 of them on its relief rolls; out of its total budget of $3 million, $1 million goes on various welfare schemes, although over half of this is contributed by the federal and state governments. What makes matters seem worse is that few of the recipients are natives. Many are Negroes or Puerto Ricans who were brought in to harvest fruit on nearby farms and who decided not to go home, although there is little year-round demand for so much unskilled, uneducated labour. There was hardly anywhere for these people to live, either; they had to crowd themselves, three or four families to a house, into the oldest part of town. Violence and immorality followed; property values sank and white people began to move out.

The city itself turned a blind eye while this was going on but, when it became a matter of raising the rates 30 per cent to meet the cost of assistance, the city manager drew up a 13-point code to trim the relief rolls. It provides, among other things, that able-bodied men receiving help must work for the city or lose their assistance; that payments will not be made for more than three months of any year; that no one giving up a job voluntarily or refusing work of any kind may receive assistance; and that unmarried mothers who continue to give birth to illegitimate children shall cease to receive help.



This code went into effect two weeks ago, to the plaudits of Senator Goldwater and other extreme conservatives, although the city's Welfare Commissioner resigned rather than administer it, although Negro organisations condemn it as racially discriminatory and although the state welfare authorities declare that it contravenes both federal and state laws. For example, Congress has passed legislation denying federal aid, under the scheme to help dependent children, to states where there is discrimination against illegitimate ones. This means that New York State as a whole may lose up to $200 million a year in federal grants. Moreover, Newburgh's claim that it is particularly hard done-by is disputed and so far it has been able to find only one man on assistance who can be put to work. The legal merits of Newburgh's protest will be decided in the courts but it draws attention to a real problem. America can well afford to look after its poor and afflicted, but towns and cities which are confined almost entirely to a property tax can be swamped financially by tides of unskilled and needy people flowing into them.

Room on the Bench

FROM A CORRESPONDENT IN BALTIMORE

WITH an unprecedented number of seats to be filled on the federal bench—93—as the result of deaths and resignations and the recent creation of 73 new judgeships by Congress, there is turmoil in the interlocked worlds of law and politics. Few of the appointments are expected before Congress rises, since to have such patronage in hand can win many valuable votes for the Administration. In any case, it takes time to choose "the best men available" from the point of view not only of legal qualifications, but also of race, religion, political affiliations and acceptability to the Senators who must confirm the nominations. Something which is almost a caricature of what the President has to cope with in making these appointments can be seen in Maryland, where local politics are old-fashioned, rough and wide open.

The central figure here is Mr Harold Grady, a large, amiable man of forty-four, a Democrat elected two years ago as Mayor of Baltimore on a platform of reform and now aspiring to a place on the federal bench with half his term as Mayor still to run. Mr Grady defeated his predecessor, an able machine politician, in the contest for the Democratic nomination and a popular Republican in the election itself. As Mayor of a city which returned Mr Kennedy by a handsome margin last autumn and thus ensured that he carried the whole State of Maryland, Mr Grady has claims to consideration by the White House, although locally it is doubted whether he had much to do with the votes gained by the President in this heavily Democratic and Roman Catholic area. Mr Grady's former supporters are largely disillusioned by his blandly ineffectual performance in office and he is having trouble with his reforming partners in the city government. Mr Goodman, President of the Council, seems to be helping Mr Grady to a judgeship because he wants to be Mayor himself. Mr Grady's other running mate is the Comptroller, Dr Graham, a multi-millionaire who seems to be opposing a judgeship for the Mayor partly from cantankerousness and partly because he likes Mr Goodman even less than he likes Mr Grady.

Yardley in the *Baltimore Sun.*

Also involved are several more would-be Mayors, the Governor of Maryland, Mr Tawes, who would prefer to have Mr Grady out of City Hall before he himself runs for a second term, and the leaders of the various bar associations, whose recommendations are supposed to have a decisive effect on judicial appointments. The city and state bar associations pointedly omitted Mr Grady's name from their lists of potential judges, although he has been endorsed by three minor local groups of lawyers. One most influential voice still to be heard is that of the American Bar Association which, it is reported, is unlikely to approve Mr Grady, if only because he has never appeared in a federal court and is unfamiliar with federal procedure and civil law. On the other hand, he had a distinguished record at law school and was an agent of the Federal Bureau of Investigation before becoming State's Attorney for Baltimore.

Throughout the spring Mr Grady denied that he had judicial aspirations, though he was known to have interceded with members of Congress and others whose advice will be taken when the judges are appointed. "No comment" greeted the suggestion that he had visited the patronage advisers in the White House. But Dr Graham, the guardian of the city's purse, remarked that on the day in question the Mayor's official car had travelled 123 miles though he had no official engagements; after that it was confirmed that Mr Grady had crept into 1600 Pennsylvania Avenue by the back door. Since then the presidential doormat has been worn thin by the feet of Maryland Democrats of all groups and factions, all anxious for pressing reasons of their own that Mr Grady should or should not become a judge.

HOME REPORT

In HOME REPORT members of the editorial staff and local correspondents report on life and happenings in and around Britain.

Christmas In July

FROM OUR CORRESPONDENTS

THIRTY hours before the Chancellor's hatchet-work began the papers were loud with the news that he would be carving chips out of so much dead wood: it was said that the prescience of the British public had led it into a luxury spending spree of tremendous proportions and millions of pounds had been gobbled up in exchange for such necessities of life as new cars, old cars, television sets, whisky and cigarettes, washing machines and refrigerators. But this was not everyone's impression. The largest London stores stoutly maintained that there had been little extraordinary trading done in the previous week. The Retail Distributors' Association merely allowed that there might well have been an increase over the month, but even if this was not due solely to the summer sales just ended, the extent of tax-beating buying had undoubtedly been exaggerated.

Among those said to have been overwhelmed by a panicking citizenry were the secondhand car dealers, one of whom "had not had so much business for months." But wider inquiry tended to elicit not-too-polite suggestions that someone had been having someone on, that business was as bad as it had been for a year or more and likely to continue that way. Nor was the sanctuary hush of the wine merchants' shops noticeably disturbed by frenzied whisky-drinkers unable to bear the thought of another half-crown a bottle. London, at any rate, did not seem unduly anxious; possibly because Londoners are neither thrifty nor impoverished. The retail trade figures alone will settle the matter.

Elsewhere, however, reactions were more lively. At this time of year the Scottish cities take their fortnight's industrial holiday, and the expectations of the retail trade are not over-ambitious. But from Glasgow a brisk trade was reported in such household goods as vacuum cleaners, refrigerators and washing machines; so much so that one big store expected to be reduced to wrappings and sawdust by Wednesday. In Aberdeen the reputed canniness of the inhabitants was confirmed by news of "fantastic sales, like a Christmas rush" in the middle of what should have been the worst retail period of the year. Only the car dealers were without comfort: people had, indeed, been asking about cars—but no one was driving away in a panic. Whisky and gin were being bought by the case, but, as in London, there was no clamour for cigarettes, the ineluctibly rising price of which seems to be accepted with resignation by British smokers.

By Tuesday nature had begun to imitate art even in London, and a spree of sorts was more readily admitted. Stores reported brisker trading, and a large electronics dealer had "had no peace since Monday" as his stocks of hi-fi equipment and transistor radios (the Chancellor may have a lot to answer for this summer) disappeared. Refrigerators and washing machines were going, but less swiftly, and the market in television sets was dull—perhaps because it has been in a low state for so long. There was some whisky buying, but smokers had not generally thought to lay in supplies of thousands, in spite of the warning that their price would probably be up by fourpence to 4s. 6d. for twenty that afternoon. The car dealers were still glum.

Such rush as there was may have been the result of a popular misapprehension about the likely effect of the new regulators. Promised a 10 per cent rise in purchase tax and excise duties, many people naturally deduced that a tax of 50 per cent would be increased to 60 per cent, and one of 5 to 15. Only the more sophisticated grasped that the 10 per cent was of the tax itself, so that 5 per cent became 5½ per cent.

AT seventeen minutes to four on Tuesday the Chancellor struck—but nothing was to come into effect until midnight, and most increases not until Thursday or Friday. If the rising sales of the day were an indication of true hysteria, the afternoon shops should have been jammed with people and the car dealers should have been telephoning for immediate deliveries. But the spree had shot its bolt. Nothing happened.

The retailers who did see the crowds believe that spending which would normally have been done over the next three or four months was advanced, where it was possible, to take advantage of the lower tax; and many stores expect a gloomy quarter, when stagnation may be broken only by the approach of Christmas. By that time smokers will ungrudgingly be paying 4s. 6d. for their daily twenty, motorists will be uncomplainingly filling up at 4s. 10½d. a gallon, whisky-drinkers will be suffering mild euphoria at 40s. a bottle and barflies will be unaware that beer was ever less than 1s. 7d. a pint. But very few people give cars for Christmas, and the motor dealers could still be gloomy.

Theatre All Round

FROM OUR SPECIAL CORRESPONDENT

THE lugubrious plight of the English provincial theatre, detailed and documented by an Arts Council report* this week, is familiar enough to the determined theatregoers who still patronise (with a fierce but hopeless loyalty) its dim and quaking premises. But the majority of the provincial public does not, and probably will not ever, care: it will not be ruffled now even by denunciations of "artistic slums" or of the provincial barbarism that earns the Arts Council's conclusion that the intelligent foreigner can discover "little of significance and interest outside London." As any intelligent foreigner has discovered for himself, Bruddersford's theatre is probably as run-down as its football stadium; the state of mind that bleakly puts up with either tends to be beyond self-help.

The capital and instructive point, however, about the spreading tundra of telly-land is just how little money is in fact needed to set the theatre, that increasingly minority art, back on its shaky provincial feet. The message of the Arts Council's report should not merely be addressed to the Treasury and the local aldermen. Just 2d. or 3d. on Bruddersford's rates could do wonders, of course, but if that is unthinkable to subsidised householders it is high time the point were driven home to other potential patrons. Development councils, regional planners and industry-begging municipalities have still to be persuaded that if they are to get, or retain, the intelligent young people or the executives that

* Housing the Arts in Great Britain: Part II.

they and their areas have grumblingly lost to London for two generations they will have to have something to offer besides advance factories. If the chance is not taken while a struggling nucleus remains it will not recur.

The Arts Council's committee of inquiry has set out the minimum requirements both for touring and repertory theatre. For touring companies in opera, ballet, and West End stage productions a circuit of between 12 and 18 "No. 1" theatres, each capable of seating an audience of 2,000, is essential. A number of suitable, if antiquated, provincial theatres exist, although often devoted to variety, but there is nowhere outside Manchester and Liverpool that can cope with the Covent Garden Opera. Again, as Mr Stephen Arlen, administrative director of Sadler's Wells, has pointed out this month, provincial closures have also driven his company out of wide sections of the country.

He referred particularly to the area between Leeds and Newcastle, to which other blank zones are regularly being added: the sale of the Theatre Royal, Hanley, to Mecca Ltd. at the end of June has now shut out the Potteries. (There is a case for making it harder to change a theatre's function—at least to give the local authority time to act if it wants to.) As an imaginative but desperate resort Sadler's Wells is seriously considering the continental idea of a "balloon" theatre (capacity 1,800) which would be inflated on vacant provincial sites. Performers may find it less of an insult (and inconvenience) to appear in a Big Top than in some of the dingy barns they now have to use.

For repertory the committee aims at providing first-class theatres (capacity 800-900) in the main cities or "catchment areas" in the next ten years. Eight of these centres have built, or have serious plans to build, good premises (although capital expenditure promises to be appreciably above Nottingham's estimate of £380,000 which the committee seems to accept). This leaves another six or seven to be started in the badlands. The development of an existing theatre at Newcastle-on-Tyne is recommended, and Hull probably ought to have a repertory theatre of its own. Other towns, however, could conceivably work in pairs if that is the best they can do, particularly Leeds and Bradford, Stoke-on-Trent and Newcastle-under-Lyme, and Portsmouth and Southampton. (None of these cities, with populations ranging up to Leeds's half-million, currently sustains a professional repertory company.) The ideal would be to provide a circuit which the better companies could use, improving both their performances and receipts by longer runs. Postwar repertory has proved a sturdier growth than most of its critics allow: with more encouraging premises and amenities its worries could be halved overnight.

Further to shame the Aldermen Bugginses, the committee lists fourteen other towns (in the 180,000-80,000 population range) which do not even have suitable accommodation for orchestral performances. Some of these places—Oxford, Cambridge, Bath—are not without cultural pretensions: what they do to sustain them is a very different story. Sunday afternoon concerts in the local picture palace is not the most rewarding musical experience, whatever the dons may believe. The northern choral societies have a little more pride in themselves.

How can change be brought about? The committee looks for financial help from the Chancellor to the extent of £150,000 a year, two-thirds of which would be to provide capital for new theatres and concert halls, and one-third for refurbishing and renovating existing buildings. This sum could be administered either by the Arts Council itself or a national theatre trust. It is not an amount that could normally be thought beyond the Treasury's resources; in fact, it looks to be something of the order that Mr Lloyd promised to the provincial theatres earlier this year.

But any help from the centre must be meaningless unless it serves to prime the local pumps. The committee recalls the statutory power of local councils to allocate up to a 6d. rate (4⅝d. in Scotland) for sustaining the arts. How little is actually done is revealed by the following sample figures of local expenditure on all artistic ventures, including dubious museums, river carnivals, bandstands and the rest:

	Product of 6d. rate	Annual expenditure on the arts
	£	£
Leeds	166,650	18,313
Newcastle-upon-Tyne	117,600	4,830
Leicester	115,500	319
Coventry	113,898	5,150
Nottingham	112,050	15,098
Portsmouth	99,990	1,601
Southampton	90,810	1,020
Stoke-on-Trent	69,426	3,862

Precisely how small the margin of help need be to allow a repertory company to struggle on has been shown in Dundee (the Scottish towns are outside the present report), where the local council has made a grant this year of £1,500 together with a further guarantee to make up losses to another £1,500. This will cost the town less than ½d. on the rates. The arrangement (for one year only) came in the nick of time: if the council could bring itself to offer twice as much over a specific period it would go a long way towards putting the theatre on its feet permanently. When so little can sustain a company that has not only produced its quota of famous names but given Dundee a life and status it would not otherwise possess, the moral ought to be observed more widely—and purposefully.

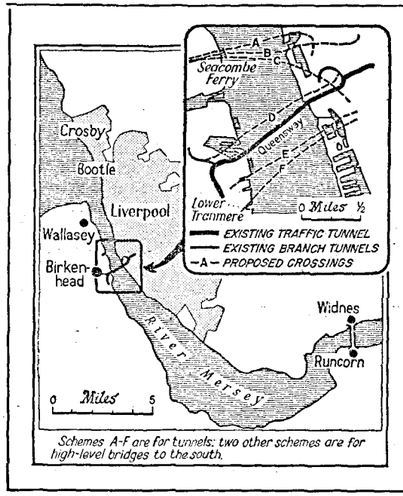
The Mersey Molehole

FROM OUR SPECIAL CORRESPONDENT

In the last few miles of its course into the Irish Sea the River Mersey spreads itself into an estuary, over a mile wide, dividing Lancashire on its right bank from Cheshire and the Wirral peninsula on its left. Facing each other across this divide lie Liverpool and Birkenhead, each with its attendant minor boroughs. Linking them in commercial symbiosis are a network of ferries and the single umbilical cord of the Mersey Tunnel.

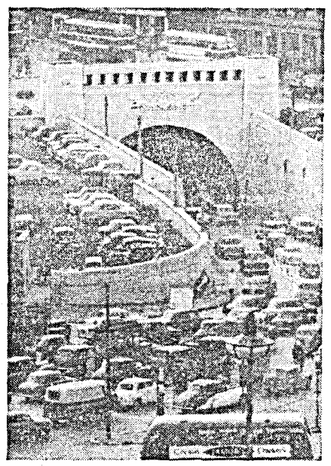
Until 1885 there was no direct crossing. But the squalid blooming of Liverpool as a great port and the rise in popularity of the Wirral as a place to live in had made some sort of swift link essential, and in that year the Mersey railway tunnel was completed, taking most of the passenger traffic from the overworked ferries. Tradespeople, however, had still to cope with the cycle of delays and haste which characterises even the best of ferries; and by the early years of this century there was a general and sustained clamour for better communications between the two towns. By 1920 the despotism of the internal combustion engine had aggravated the situation: ferries were crammed with vehicles and loads and streets were choked with waiting traffic.

The administrative machinery for the building of a crossing was started in 1922 with the formation of a joint Merseyside committee to decide on its form and to inquire into the possibility of a federation of Mersey authorities (which last was defeated by staunch parochialism). Consultant engineers were employed, and on their recommendation a tunnel was decided upon, the idea of a bridge having been rejected on the grounds of its vulnerability in wartime and the expense of its upkeep and building. The first hole was bored in 1925, the beginning, so it was imagined, of a cure for all the ills of Merseyside.



Much, however, was unforeseen. The costs of construction rose regularly, the government was unhelpful until late in the decade and only Liverpool and Birkenhead collaborated in its building. Eventually opened in 1934, it had cost £7.72 million, of which the government's share was £2.5 million, Birkenhead's £55,500 and Liverpool's £5 million. And no sooner was it opened than estimates of its useful life were being revised for, instead of being timelessly adequate for the traffic between the towns, it attracted more traffic, and was soon taking more in tolls than had ever been planned. By 1958 the toll revenue was three times what had been estimated, over £1 million a year, and traffic was passing through it at the rate of 44,000 vehicles a day.

Every year the traffic through the tunnel increases by 10 per cent, and during rush hours, a sixth of the day, over a third of the daily traffic is carried. The ultimate capacity of its four carriageways is rapidly being reached. The necessity for each vehicle to stop, pay its toll and start up again imposes delays. The sale of contracts at a rate which, taken at two trips a day, is cheaper than the payment of individual tolls has made matters worse. There are 6,000 contract users who, to make their contracts worth the money, must use the tunnel twice a day—and some of them use it six to ten times a day. This adds 15,000 journeys a day to the total flow, perhaps half of which are unnecessary.



A new crossing is urgently needed, and the Merseyside authorities, overcoming their veiled repugnance for each other, met in 1958 to decide what form it should take, asking the consulting engineers who had been responsible for the planning of the original tunnel to report on the possibilities. Their conclusion, presented last year, details eight schemes, each a compromise between what is desirable and what can be afforded.

The first three plans, all twin four-lane tunnels (marked A, B, C, on the map) leave the Cheshire bank at the same point, Seacombe Ferry, and emerge at points in Liverpool all of which are open to criticism on the ground of congestion; and they would, in addition, be completed just in time for the additional facilities they offer to be inadequate for the conditions they are designed to alleviate in 1967 (when traffic flow will be nearly twice as heavy as it is now). They are also expensive, the cheapest of them (including extensive access road works) estimated at £20.4 million.

The fourth, scheme D (the one most favoured by the Merseyside authorities), would be a two-lane link between the branch tunnels which at present take traffic from the main existing tunnel to the dock areas on either side of the river. This has the advantage of cheapness (about £9 million) and swiftness of execution: it could be completed by 1966—also just at the time when its capacity would be too small.

Schemes A-F are for tunnels: two other schemes are for high-level bridges to the south.

The fifth and sixth schemes (E and F) are new twin tunnels. Scheme E is expensive, offers very small relief to present problems, and would be out of date on completion. Scheme F is even more expensive, though it does offer greater reliefs, and again could not be built in time to be useful for more than a year or two.

The seventh and eighth schemes, in the southern area, are both bridges, of six lanes each; they would be the most expensive undertakings, but would offer at least the consolation of being adequate to the demands made on them for five or six years after their completion—or so it is thought (and that the thought may not be an accurate one is suggested by the overwhelming flow of traffic on the brand new Runcorn-Widnes bridge 10 miles upstream).

Very boldly, the consultants have outrun their brief and suggested that, in the light of their findings, none of the plans examined would be adequate by itself. Their conclusion has been that their own favourite, scheme G (not shown on the map), a high-level bridge between Tranmere and a point about a mile to the south of the present tunnel entrance, should be combined with the palliative of Scheme D, the linking of the two existing branch tunnels, giving an increased capacity of something like 9,000 vehicles an hour, fitting in admirably with the road improvements planned on both sides of the river and retaining their usefulness as far ahead as 1979. There is, however, the matter of financing such a combination: the bridge alone would cost £27 million, and the combined scheme no less than £36 million. There is also opposition to a bridge of such a size and construction from the Mersey Dock and Harbour Board (which believes that silting and consequent damage to its installations would follow) and an oil company, across whose tank farm the bridge would pass.

The prospect of the Government paying for a crossing or even of aiding its construction to any great extent is, in present circumstances, remote. In the queue for crossing grants the Severn, Forth, Tay, Tyne, Clyde and Thames have all got ahead of Merseyside; and the squabbling and disagreement between the nine authorities concerned with Merseyside have not been helpful. Indeed, it has been hinted that the Government might be persuaded to grant aid to the project only if some firm collaboration between the authorities can be arranged. So far, Wallasey will only support one of the northern schemes; Liverpool and Birkenhead are prepared to co-operate on this as they did on the previous tunnel; the two county councils concerned are not interested enough; and the smaller authorities, who will benefit least, are willing to leave it in the hands of their big brothers. On the grounds of cheapness, expedition and the unwillingness of others to contribute, Liverpool and Birkenhead are likely to plump for Scheme D, by itself the least satisfactory of the proposals. Such an error could be avoided only by a really far-sighted decision.

When *The Economist* went to press this week representatives of all the authorities concerned were meeting in Liverpool in the hope of setting up a joint council to decide the future crossing's form. It is hinted that such a co-operative effort would attract the favourable attention of the Ministry; and that the favours might extend to a 75 per cent grant. In it, too, may lie the seeds of that far-sighted decision: the eventual amalgamation of Merseyside into one local authority.

LETTERS

Leasehold in Wales

SIR—As a member of the Welsh League for the Taxation of Land Values, I should like to reply to your article "Wales on the Lease," of July 22nd. The various "leasehold reform" organisations in Wales are vaguely aware that an injustice exists, but none (especially the MPs who have been recently jousting on the issue) has come up with any satisfactory solution. The reason is that they fail to get the problem of leasehold into its proper national perspective of soaring land-values, and so their solution of "reasonable redemption" is at best unconvincing and at worst an attempt to replace one injustice with another.

The only equitable solution is an indirect one: the taxation of land, whether freehold or leasehold, nationally. This will not prevent land values rising, since land prices depend on supply and demand; but it will return to the community community-created land values and leave landlord and tenant with no pickings to argue over. This would lead to a decay of the leasehold system altogether, and it would be replaced by a just and logical system in which the state appropriated all land values but left the individual the absolute right (as opposed to the present restrictionism of both leasehold and freehold schemes) to develop land in the most economic way possible.

Thus it will be seen that the real problem underlying the leasehold system in Wales is by no means a local one; it is even more pressing around London than around Cardiff, except that it is not recognised as such.—Yours faithfully, FREDERIC J. JONES
Cardiff

The Economist's *New Home*

SIR—The consumer durables boom of the late fifties could reasonably be encouraged because many of its products could be exported; the present building boom is not quite so desirable, because very few of its products will be exported.

The higher Bank rate that you recommend will cut down on building. Still, let us be clear about this; the income-producing buildings, such as offices, will not be checked as much as bond-financed buildings, such as schools. This is a pity, because while a three-year delay in putting up *The Economist's* offices will cause a relatively short-term inconvenience, the products of cheap and nasty education will be walking round in forty or fifty years' time—Yours faithfully, TREVOR LLOYD
Northwood, Middlesex

The Economist
JULY 27, 1861

PAUCITY OF POLITICAL TALENT

The retirement of Lord John Russell from the scene of action in which he has so long been so distinguished, from the scene which he so much loves,—the retirement of Lord Herbert from an assembly which always listened to him with pleasure, though he never rose to address it without reluctance,—cannot but raise a very serious question in the minds of thinking men:—Why have we so few statesmen of eminence in the House of Commons? Great man after great man passes into the still calm of the superior assembly or into the tomb, but no adequate successor to them springs up. Their constituencies elect in their places fair men, but they do not elect their equals or their similars. . . . It is useless to attempt to evade the existing difficulty by alleging that there are still great men in the House of Lords,—that when they migrate from one assembly to the other, they remain the same men that they were before,—that the country can as much have their services in the place where they are, as it could in the place which they have left. The truth is not so. These men are the same men, perhaps, but we have not the same use of them. One of the principal duties of a Parliamentary administrator in the present day is to answer Parliamentary questions. We boast that for better or for worse our administration lives in the face of day; that it has no indefensible secrets—no hidden defalcations; that it is searched into during half the year by the incessant inquiry of 658 inquisitors, and especially by certain of them who are stimulated by public spirit, by personal vanity, by the wish to be thought active by their constituents, by the wish to become great men with the public. As this is so, it is advisable that such questions should be answered well, and experience shows that a subordinate official, as a rule, does not answer questions well. Except under circumstances exceptionally advantageous, he cannot feel sufficiently at home to state the past actions of his chief as if they were his own actions—the past motives of his chief as if they were his own motives—the future policy of his chief as if it were his own policy. . . . And in consequence the public service will suffer. If false impressions are given by incomplete, hesitating, or inaccurate replies in Parliament, an erroneous opinion is formed in the country and perhaps in other countries; and the characteristic usefulness of "question-and-answer" administration is wholly sacrificed, even if such mistaken impressions should chance by good fortune to cause no absolute evil.

Department of Technical Co-operation

SIR—In commenting on Mr Vosper's new department you make some wise suggestions on what it should do, but you pass rather lightly over its duty to "provide experts, advice and technical assistance." To do this effectively requires finding or building up for each specific assignment a team with the expert knowledge and appreciation of local conditions—no easy task when such a great range of engineering and technical advice has to be covered. However, over a great part of the field there are in existence organisations with teams already versed in these types of work with wide knowledge of local conditions. They are the staffs of the firms of British consulting engineers, who are used to working in almost every country in the world, and who are at the present time engaged in projects abroad having a total value of over £700 million. It would seem directly in the country's interest to make use of their knowhow, knowledge and experience in providing advice and technical assistance overseas.

There would be other advantages. The British consulting engineer is well known to be entirely independent and able to give unbiased advice to his clients, who would be the undeveloped countries concerned. This impartiality would also go a long way to avoid the suspicions of interference and difficulties of pride which you mention as arising in newly independent countries where a British government department, in spite of the care with which its name has been chosen, is directly involved.—Yours faithfully, R. L. PITT
Chairman, The Association of Consulting Engineers
London, SW1

Infant Mortality in Angola

SIR—In your article "Our Job in Angola" (issue of July 8th) you state that the infant mortality rate in that unfortunate country is sixty per cent. To anyone with the smallest knowledge of demography, such a statement appears ridiculous. What, one is tempted to ask, is the source of this absurd figure? And how, when and where were the statistics of births and deaths compiled?

Six years ago the United Nations published a series of model life tables for use in under-developed countries where mortality statistics are incomplete; these models have proved invaluable tools for students of African demography. The highest mortality envisaged in the series is represented by a life table for which the expectation of life at birth is just under 19 years and which starts with an infant mortality rate of 33 per cent. This rate the authors of the United Nations study regard as "catastrophic." They write: "This last mortality experience . . . represents an extremely heavy toll, requiring a fertility of about seven live births per woman in the

reproductive ages, if the population is to survive and maintain its numbers. It is rather doubtful that such extreme mortality experience can be found today in any sufficiently large population, except for short periods of time when major epidemics or famines are prevailing."

Are your readers therefore to believe that in Angola an infant mortality rate almost twice that regarded by the United Nations experts as the maximum is—as you imply—the normal course of events? The political arguments you advance would be more convincing if the statistics you cite to support them could at least have the semblance of plausibility.—Yours faithfully,
Nairobi, Kenya J. G. C. BLACKER

New Zealand Progress

SIR—I read with great interest your article of July 8th. Should the United Kingdom decide to join the common market, Commonwealth relations will be seriously prejudiced and there is a danger that the Commonwealth might disintegrate. I am sure that you will agree that the Commonwealth is one of the greatest conceptions of history bringing together, as it does, people of all races from all parts of the world and it should not be abandoned for economic reasons.

It seems clear to me that the United Kingdom is being forced to seek membership of the common market because it is unable to balance its trade with the rest of the world and hopes to rectify the position by membership. I believe that a major factor in this lack of balance is that many United Kingdom manufacturers are no longer particularly interested in exports because they can sell their products in bulk

quantities easily on the home market, and this is proved by the booming company balance sheets appearing in your pages. In many instances, deliveries quoted for export are so long that buyers are forced to make their purchases elsewhere, despite the high preferential rates of tariff which exist in New Zealand.

Immediately after the war, manufacturers in the United Kingdom were keenly interested in exports because prices were controlled in the home market while there was no control on prices for export and, in fact, they were encouraged to make an extra profit. A major contribution to restoring the balance of trade would, therefore, be some form of tax remission to manufacturers who engage substantially in the export business.

The reaction of New Zealand to the common market appears to have been greatly misunderstood in the United Kingdom. New Zealanders are a friendly people and they do not like to make a fuss. Further than that, they wished to make Mr Sandys welcome on what was obviously a difficult and painful mission. Nevertheless, most New Zealanders feel intensely on the subject as they consider they may be abandoned by the country which they have always regarded as home, and they realise that they cannot support any reasonable standard of living without freedom of access to the United Kingdom market. They remember that it is not so long since the United Kingdom depended almost entirely for its supplies of meat and butter on New Zealand, and New Zealanders rationed themselves to make the supplies available.

The terms of trade today are heavily weighted against the agricultural countries of the world by high tariffs and restrictive quotas imposed by the developed countries. The last world depression was started by a disastrous fall in the world prices of agricultural products and the cycle will probably be repeated unless more freedom of access to world markets is granted to producers of primary products.—Yours faithfully, JACK HARRIS
Wellington, NZ

Northern Rhodesia

SIR—In your issue of July 22nd it is stated, in a message from Northern Rhodesia, that the United Federal Party "has long been under the loving care" of Colman, Prentis and Varley Limited. Perhaps you will give equal publicity to the fact: neither Colman, Prentis and Varley Limited nor its public relations associate, Voice and Vision Limited, has at any time been employed by the United Federal Party.—Yours faithfully,
S. E. R. WYNNE
Managing Director, Voice and Vision Ltd.
London, W1

[Voice and Vision Limited is in fact employed by the government of the Federation of Rhodesia and Nyasaland. The government is headed by Sir Roy Welensky, leader of the United Federal Party.]

ABCD of Disarmament

SIR—We ought to get to U (Unilateral) in your disarmament alphabet. This is the U-policy for the UK and the most realistic approach to the problem of power politics in the nuclear age. U will be U one day I hope!—Yours faithfully,
Bordon, Hants STEPHEN KING-HALL

BOOKS

Case History of a Limited War

The Diplomacy of the Winter War

By Max Jakobson.
Harvard University Press. London: *Oxford University Press.* 281 pages. 46s.

LIKE the Spanish Civil War, the Russo-Finnish conflict of 1939-40 produced many a hot-tempered pamphlet, a number of suspect military judgments and journalistic war cries. The war, though it had many a chronicle, lacked its reckoning. Although the memoirs of Marshal Mannerheim and Väinö Tanner have been translated into English, not until the advent of Mr Jakobson's study has there been a sober, unsentimental and comprehensive balance sheet of the Finnish effort to resist "satellisation." If nothing else, this book would stand as an interesting and relevant account of what principles and political necessities are compounded into the formulation of a small nation's foreign policy, facts which are by no means understood even now. It is also a commentary on the political reality of the "Nordic bloc." The contortion and necessities of Soviet policy similarly occupy a large part of this study. The real mysteries of the Winter War concern the manner of its coming and why, when it had burst over Finn and Russian alike, it stopped short of complete Russian mastery over Finland. This was a "limited war," and those who propound the formula as an article of faith would do well to look into this case-history, where the dangers and miscalculations are so clearly examined.

Mr Jakobson renders a service in assembling all the available information on the mysterious mission of the Soviet diplomat Yartsev to Helsinki in 1938. On whose authority Yartsev was acting has never been fully explained. The Finnish position was by no means simple. In answer to Soviet overtures for strategic concessions, Tanner could offer only neutrality, while pressing for closer association between Sweden and Finland. Yet the Soviet notion of "neutrality," as it applied to Finland, ruled out any closing of the Scandinavian ranks. The author exploits all the available material on the "Yartsev mission," though the cloud of secrecy still obscures much of importance from the Finnish side. What he makes abundantly clear, however, is that any surrender to Russian overtures would have smashed up Finnish policy completely. In March, 1939, with yet another devious diplomatic play, Moscow sent Stein to Helsinki to talk once more about military concessions. This time Marshal Mannerheim was informed of what was afoot. His discarded advice was to accept these minimum Soviet requests. Mr Jakobson admits that the contention of the Finnish political leaders—that public opinion would never tolerate territorial concessions—was never

put to the test. The Finnish parliament remained in blissful ignorance. March, 1939, was Finland's "last chance" to bargain. But the author's interpretation of the tense talks in Moscow in October-November, 1939, is that they reveal above all the basic motivation of Finnish policy: it was the realisation that acquiescence in today's "reasonable and modest" proposals would ruin Finland's power to resist the exorbitant demands which must surely follow. Moreover, the context of the Anglo-French-Soviet negotiations in 1939 confirmed that, for the Soviet Union, Finland was a "Baltic state," delineated on the map as it had been in the days of Imperial Russia. Over the question of a "guarantee," however benevolent it might appear, Finland struggled to be distinguished from "Rumania, Poland and all that."

In presenting the Soviet aspect, Mr Jakobson has carefully mobilised all his scruples. If anything, at this crucial juncture the benefit of the doubt goes to the Russians. But this does not prevent the author from disposing of a number of damaging myths which have gathered over Finnish policy. The agonies and misunderstandings of the Moscow negotiations are set out carefully and clearly. These were an open challenge to Finland's national independence. In view of what had happened to the Baltic states, the inference was plain. The war itself, which was precipitated by the still unexplained Mainila shooting, Mr Jakobson sees as a miscalculation from both sides. Erkko's optimism was as fatal as Zhdanov's rashness and ill-conceived promptings to Stalin. The brunt of the responsibility, however, rests with the Soviet Union, whose divisions had been massing since October. And not only the Finns erred in estimating the final Russian reaction.

There can be no dispute with Mr Jakobson's contention that in the war, which had burst so disastrously on Finn and Russian, the Finns gained enormously by a resistance that forced the Russians to abandon the political fiction of the Red Army marching under Kuusinen's Communist standard. Even though a policy of resistance may at times have appeared politically unrealistic, and may have stemmed from misunderstanding the situation, in the event it proved to be instinctively right. The analysis of the involved diplomacy of the war after January, 1940, is excellent and fully supports the contention of "victory in defeat," which is no mere turn of phrase here. As for the "Continuation War" and Finland's going to war in 1941, Mr Jakobson is right to leave the judgment on that until further research has lighted up many dark corners. While many points of the Winter War wait on fuller evidence, especially from the Finnish side, this survey admirably sets out from a wide variety of materials questions which had hitherto been cast in terms much too simple or even ignored. New information may modify some of the judgments on Finnish political leaders. But the reckoning over the issue of survival remains exact.

Stomach Upsets

The French Radical Party. *From Herriot to Mendès-France.*

By Francis de Tarr.
Oxford University Press. 285 pages. 35s.

In his foreword to this excellent book, M. Pierre Mendès-France offers an apologia for his attempt, between 1954 and 1957, to refashion and revitalise the French Radical party. "The mass of the party's members," he writes, "had remained sincerely and deeply attached to an ideal of progress and of democracy of which radicalism, in other times, had been the interpreter and the instrument . . . it was not . . . a *coup d'état* which took place in the heart of the party. It was a revolt of the rank and file." "The Fourth Republic did not take long to die. One might dream about what might have happened if the republican politicians, if the ministers of the Left, Radicals and others, instead of giving way had had the strength of will to keep their promises . . ." instead of indulging their taste for office. Mr de Tarr's study explains sufficiently why they did not; why the *mendèsiste* movement failed; and consequently why the Fourth Republic fell. It is a tragic story, and in it the radicals played a central part.

Essentially, the radical party had always *regarded itself as a party of government.* It tried to reconcile and mobilise, within its ranks, all good Frenchmen, in the cause of liberty and the public interest. "The main task of a great political party is the same as that of a good stomach, not to reject but to assimilate." As the history of the American parties shows, this is a perfectly viable theory; and the radical genius for compromise and skill at the parliamentary game meant that, again and again after 1945, it was able, as an honest broker, to patch up coalitions and resolve governmental crises. Such a radical as M. Queuille, who regarded himself as "a premier who raises himself above doctrines in order to deal with reality and prevent disaster," and did prevent disaster on several occasions, deserved well of the state. Unfortunately for this traditional radicalism the history of the Fourth Republic mercilessly required more of a party than a willingness to govern pragmatically, without party doctrine. All in their turn, radicals of the left, gaullist radicals, neo-radicals and *radicaux mendèsistes* propounded stiff recipes and regimens for the ailing French political system; all in their turn were rejected by the radical instinct for *immobilisme,* of which M. Queuille was the father. In the end the venerable party began to look less like a stomach than an artichoke stripped of its leaves. The events of 1958 proved, among other things, that in such a condition, deprived of their most vital elements (deprived, by an irony, even of M. Queuille), the radicals had outlived their usefulness. Today their function of making government acceptable to parliament is performed, albeit under vastly changed conditions, by the gaullist *omnium gatherum,* the Union de la Nouvelle République.

Mr de Tarr tells this story with a wealth and command of telling detail that has to be directly savoured to be appreciated. He is, perhaps, a little too austere in his exclusion of all matter that is not immediately relevant to the evolution of the party; one would have welcomed a fuller account of M. Mendès-France's premiership, which inspired the last, crucial attempt (forming the book's climax) to rescue the radical party and, through it, the Fourth Republic. The great reforming wave that carried the *radicaux mendèsistes* forward cannot be properly appreciated without such an account. The chapter on the gaullist radicals similarly suffers from too allusive an approach to the Rassemblement du Peuple Français. But these are quibbles. Mr de Tarr succeeds brilliantly in conveying the feelings and preoccupations of politics under the Fourth Republic, above all that sensation of time wasting, which provoked M. Mendès-France, in 1955, to announce "We are in 1788!", but which failed to stimulate the French into averting 1789.

From James to George

The Century of Revolution, 1603-1714

By Christopher Hill.
Nelson. 352 pages. 25s.

This is the second volume to appear of a series designed to survey English history from 55 BC to 1955 in eight volumes. It is intended that each volume should combine a political narrative with an analysis of economic, social and cultural developments and, while incorporating the results of modern research, should be "a stimulus to further reading rather than a substitute for it." Mr Hill's volume admirably fulfils these ambitious aims. His narrative chapters are brief, and he has concentrated on analysis and explanation. In attempting to do so much in so short a space it is easy to produce desiccated history, to rattle the bones without ever reminding us that they once belonged to a living body. But Mr Hill's book is both condensed and lively, realistic and revealing. He makes his own points briefly and pungently, and there is hardly a paragraph in which he does not enforce his points by quotations from the sources, all of which are apt and many of which will be new even to professional historians. The quotation from T. S. Eliot at the head of the introductory chapter shows Mr Hill's preoccupation and anxiety:

> But how can I explain, how can I explain to *you*? You will understand less after I have explained it.

Mr Hill is too modest: he has explained, and the more convincingly because he has allowed us to see how men and women of the seventeenth century expressed themselves and explained events at the time. He is no Pangloss, for he is as much concerned with the failures as with the achievements. It is this twofold concern that makes his book so stimulating, searching and humane.

As Mr Hill sees it there were two revolutions in this period. The political revolution succeeded when Charles I was executed, marking the end of any attempt at absolute monarchy. But the same year saw the defeat of the social revolution. Mr Hill puts it neatly. After crushing the Leveller revolt at Burford, Cromwell and Fairfax "were awarded honorary degrees by the grateful Royalist university of Oxford." The franchise was not extended and radical legal reform was stopped. In 1660 a state church was re-established and dissenters driven from political life for a century and a half. The society that emerged was divided into "the ruling classes and the masses," and "British freedom by 1714 meant among other things the unimpeded right of the Justice to regulate in minutest detail the lives of his social subordinates." The qualification "among other things" is a pointer to Mr Hill's fairness, for he also shows the gains that were made in liberalising the treason laws and in the field of commercial law.

A particular strength of his book lies in his appreciation of the intellectual and scientific history of the period. He pays a just tribute to Bacon, who saw the new empiricism leading to the "relief of man's estate." Before 1640 Bacon's was a voice in the wilderness: after 1660 his was "the dominant intellectual influence." Mr Hill has a nice contrast between Donne, safely ensconced as Dean of St. Paul's, fearing the individualism of the new philosophy, and Sir John Eliot in prison, embracing its optimism. Sometimes brevity leads Mr Hill into making statements that are too sweeping. He describes the shift in Leveller thought from the assertion of Anglo-Saxon liberties to the demand for the inalienable rights of man, and comments "Bogus history was abandoned for political theory based on natural rights." He cannot think that bogus history ceased to serve political ends after 1660.

Mr Hill writes so well and trenchantly and knows the period so thoroughly that the occasional infelicities and slips stand out the more prominently. He has no need to descend to such colloquialisms as "the fun of the thing," or "who was the boss." He repeats the textbook error that Elizabeth left a debt of £400,000 and, perhaps partly for this reason, seems needlessly charitable to James I. It is curious to find Robert Cecil described as "frugal and reforming." The latter epithet is fashionable but debatable: the former seems inapposite both for the builder of Hatfield and the Lord Treasurer of James I. Mr Hill regards Cromwell's foreign policy as fitting into a trend that saw foreign policy increasingly dominated by commercial interests. But this was not the opinion of one of the most perceptive observers of the century, who saw Cromwell "for a separate interest of his own" shaping foreign policy to other and more ideological ends. But it would be ungracious to emphasise flaws or register disagreements when Mr Hill has placed us so heavily in his debt. The general editors of this series will be fortunate indeed if the volumes still to come can approach the standard he has set.

In Search of Information

Information and Investment.

By G. B. Richardson.
Oxford University Press (1960). 226 pages. 21s.

Mr Richardson has discovered an omission in the accepted theory of the determination of prices and output in competitive markets. Perfect competition, as posited in this theory, implies conditions where entrepreneurs would not be able to obtain information which they need in order to plan investment. If, for instance, there is a permanent rise in the demand for a product, each of its producers will be reluctant to expand his capacity unless he has some assurance that all his competitors, taken together, are not planning excessive increases in their total capacity. In the same way, information is needed about the planned capacity of raw materials or of customer industries. Yet where, ex hypothesi, all that the entrepreneur knows is the prices currently paid for the product and for the factors of production used in making it, the necessary information is lacking. Thus Mr Richardson regards the theory as a mechanical account of equilibrium that fails to explain how equilibrium is brought about and therefore "cannot serve as a model of the working of actual competitive economies."

As a criticism of the theory this rather misses the mark. Theory deliberately abstracts from some aspects of reality in order to concentrate on others, so that it should not be judged by its descriptive realism but by its results. In the present case the results consist of an extremely useful taxonomy of the factors that may explain changes in prices and output.

Nevertheless, although it is a different one, Mr Richardson's problem is certainly interesting. How do entrepreneurs get the information they need in order to plan investment? He suggests that friction and market imperfections may serve to provide it, so that some divergences from the competitive ideal may promote rather than impede the efficiency with which the economic system adjusts itself to changes in circumstances. Since the available information will never be sufficient to abolish uncertainty, however, the problem of adapting economic behaviour to cope with it remains, and Mr Richardson devotes the last third of his book to a discussion of its influence.

Throughout the book Mr Richardson remains on a theoretical plane. Since he is an intelligent man, the result is interesting. Yet if he had clambered down from his ivory tower and gone into the world (as other Oxford economists have done) he could have written an even more interesting book. Trade journals, market research, public announcements and judicious applications of alcohol all enable some businessmen to obtain some useful information, but

The Age War

Nowadays age is probably as important as class in determining how people talk, how they dress and how they look at life. Of course there has always been a certain amount of friction between young and old, and both enjoy the martyrdom of being slightly misunderstood. But we are now approaching a complete breakdown in communication between age-groups.

A very refreshing thing about The Observer is that it frequently gives the points of view of both sides in the Age War. Bridget Colgan, for example, when she writes about avoiding frustrations in babies never forgets that parents get frustrated too. And a recent correspondence following the series "Miserable Married Women" included a tart lecture from a 7-year-old girl who thought that women should look after their children properly and try to love them, and if they are bored why did they have them in the first place?

Fads Exposed

Somehow or other, The Observer seems to have posted spies in most of the age-cliques, and as soon as anything new happens, whether it's a major trend or a minor fad, back come intelligence reports that are informative, unselfconscious and equally free from the stuffiness that plagues some ageing writers and the private intolerance that walls in some young ones.

Why did teenagers flock to buy music that sounds like a needle-scratchy dance record of the late twenties? What makes the staid and middle-aged rush lemming-like to Sunday afternoon tombola sessions? Both of these questions have recently been answered in The Observer.

Fogeys Defended

New waves and old guard meet hostilely but on reasonably equal terms in the review pages.

The Observer is generally among the first to notice new movements in writing, art and music. Yet recently Harold Nicolson published a spirited and witty defence of literary old-fogeyism.

More important, the atmosphere of the paper makes it possible for the different ages to talk freely and frankly about touchy subjects. They've just concluded a discussion on "Teens and Sex" that was thoughtful, unsensational and very helpful as a basis for discussion.

Just for the way in which it helps you keep up with how the other age-half lives, The Observer is worth every penny of the sixpence it costs. But this isn't the only reason for taking it. J.B.L.

ADVT.

Mr Richardson never mentions them. Again, he suggests that, in the absence of co-ordination, agriculture is an industry where "there would be every reason to expect" inefficient supply adjustments, but the thought of examining the facts to demonstrate this does not occur to him. Economics should not, after all, consist solely of pure ratiocination, seasoned with quotations from Alfred Marshall.

Bricks and Mortar

A History of Building Materials

By Norman Davey.
Phoenix House. 260 pages and 48 pages of plates. 65s.

THE author is a scientist, a civil engineer and an archaeologist, and much of his working life has been spent at the Government's Building Research Station. It is hard to imagine more promising circumstances for a good history of building materials and the result is indeed very successful.

Mr Davey writes economically. Virtually the whole gamut of materials has been encompassed (one curious omission is vitreous enamel, and plastics are only briefly mentioned). There are many necessary excursions into techniques of construction, and there is a short account of building tools, all in 237 pages. Yet we are taken back to the earliest known uses of each material, the critical stages in its development are identified, and many interesting buildings and events are described. It is really rather remarkable.

Although the writing is restrained in character, this restraint never gets in the way of interest and information, and it is warmed by two happy attributes. The first is the lucidity of the introductory passage to each new group of materials, which gives us at once a brief but clear view of their essential nature, their origins, and their place in the scheme of things; and the second is the feeling it reveals in the author for qualities other than the functional and the technical which are valued in materials.

The pattern of discussion follows a free and pleasant logic. Gypsum takes in its stride gesso, scagliola and graffito. Their relatives, the limes and cements, come on the scene and we learn how they were and are made, and of what raw materials. This is followed by stucco, and, after considering it all over the Middle East and Italy, we find ourselves in Roman Britain and Henry VIII's Nonsuch Palace, Mortar and concrete follow naturally, but asphaltic bitumens less obviously until we realise they, too, were often used as mortar in antiquity. Their use for paving is only about 100 years old. And so the story of each material unfolds from place to place, through one use to another until today's familiar picture is before us.

The production of the book unfortunately lets the author down a little, for the typography is rather insensitive and the chapter headings, in particular, are a bit brutal. The binding, too, does not seem quite tough enough for its job, and it seems reasonable to ask if it is necessary to take six pages at the outset to index illustrations. The text is virtually fault-free, except for a few needless reiterations.

Architects and archaeologists will naturally be readers of the book, but builders and materials producers will find it useful, and so will travellers and others who like to contemplate their environment perceptively. Its relevance to Britain gives it only the slightest of biases, not strong enough to reduce its value to readers elsewhere.

There are 48 pages of photographs and 134 drawings, apparently by the author.

Songs of Protest

The Outlaws of Medieval Legend.

By Maurice Keen.
Routledge. 235 pages. 28s.

WHAT did all the outlaw ballads of medieval England, those that were sung of well-known figures like Hereward and Fulk Fitzwarin and those that recorded the deeds of the elusive Robin Hood, have in common? It was, Mr Keen contends in his sensitive and engaging study of them, their protest against social injustice, oppressive laws and the men who enforced and used them for their own ends: royal justices, sheriffs and greedy prelates. We hear in these tales the authentic voice of the poor, especially the peasantry, of later medieval England fighting for freedom from villein-status and against the intolerable vexations of the forest customs. Mr Keen describes the behaviour of royal officials from the Norman Conquest to the sixteenth century in harrowing and sombre tones. Against their endless depredations the writers of the poems created a world of wishful fantasy, where the outlaw king of the forest stood for true justice and avenged the wrongs of those who resorted to him and, of course, his own with even greater cruelty and violence than the forces of law and order commanded. There had to be plenty of bloodshed in these tales and the outlaws' enemies were also those of the poor.

Historians of social and economic change have perhaps not been catholic enough in the choice of their sources. Manorial records and court-rolls reveal next to nothing of what those who had to render services or pay routine mulcts felt about their situation. To use the ballads and legends for this purpose is at once an inviting and dangerous expedient. The penumbra of the real past is to be lit up with the darkness that surrounds the origins and literary history of, for instance, the Robin Hood poems, the values and interests of the men who sang them and above all their audience. Mr Keen excels in drawing the moral from his refractory materials, but he is also in danger of forgetting quite a lot of old history as he discovers new in the outlaw legends. For their traditional villains, the sheriffs, had, by the fourteenth and fifteenth centuries, long lost their once frightening powers for good or ill in the shires. They packed juries for their friends among the nobility and gentry but in litigation which for the most part did not concern the underdog at all. Conversely it is rather hard to believe that substantial freeholders and their like were unable to look after their own as if they could not avail themselves of good-lordship just like their betters. Lastly the royal forests of the later middle ages were not all they had been in the twelfth century in the way of oppression and exploitation. Perhaps the ballads were after all enjoyed by their public—whether gentle or rustic—mainly as stories. Yet these doubts detract from neither the interest nor the enjoyment of Mr Keen's book.

Concrete and Fastidious

Somerset Maugham

By Richard Cordell.
Heinemann. 250 pages. 25s.

THE odd contrast between Mr Maugham's evident talent and enormous popularity, and their neglect by most critics, is beginning to be resolved by time. Most writers go out of fashion as they grow old, and still more after their death; and the fortunate are reborn into fame at their centenary. Fortunately Mr Maugham has consented to defer his death, and we may hope that he will still be alive and active at his centenary. By that time the well-known English love for aged authors will have worked on his side; a half-century of critical neglect will seem strangely old-fashioned; and we may hope that he will be the idol of the young. But not yet: though long usage and some change of fashion make it difficult nowadays to ignore him, he remains out of mode, however attractive to the ordinary reader who is eclectic in time and fashion.

Mr Cordell's useful, if rather dull, book helps to provide the material for a reassessment; not so much by what he says, which is not strikingly original, as by the care with which he describes, and briefly annotates, pretty well everything which Mr Maugham has written. A great deal is, and doubtless deserves to be, forgotten—much of it suppressed by its author so far as he can. But there remain a few novels that give lasting pleasure; plays which are right out of fashion now and may or may not bear revival; a few pararga of great merit, but not heavyweights; and, above all, the short stories. Having read through the catalogue and remembered all that one has read and re-read with immense pleasure, one asks again, why this neglect?

Mr Cordell hints at the answer without ever coming right out with it. He defends Mr Maugham against the charge of cynicism, but never once uses the obvious word—scepticism. Mr Maugham observes people as they are, describes them, and sets his own values. He is an ecologist; and the discipline which is most fashionable in science is right out of mode in literature. Think of a few contemporary words: commitment, dignity, integrity; and then think of the characters in Mr Maugham's stories.

It all depends on what you want of an author. Mr Maugham does not fit into the requirements of today; but with immense skill he describes the people of one generation in a mode that is not committed—there it goes again—to the ideas of any particular time. He may not be one of the world's greatest writers, but in the long run he is as little likely to date as Defoe.

Study of Man

Human Behaviour: *A New Approach*

By Claire Russell and W. M. S. Russell.
André Deutsch. 532 pages. 42s.

THE Eichmann trial and Gagarin's achievement, in their different ways, lead one to agree with Pope that "The proper study of mankind is man," who cannot yet "describe or fix one movement of his mind." But how is he to be studied? The authors of this book have attempted a synthetic approach, drawing from the inspiration obtained by artists, dramatists, sociologists, psychologists, neurologists and a host of others. To do this they have had to read widely, think comprehensively and to select. Whether or not we agree with their conclusions or are daunted by the many approximations and generalisations which the integration of such an amorphous mass of knowledge must involve, we must feel the greatest admiration for anyone prepared to undertake such a task.

Much of the early part of the book consists of an account of the instinctive mechanisms of lower vertebrates, with detailed discussions of the mating of the clawed toad, Diebschlag's choice experiments with pigeons, and so on. Much of this material has an intrinsic interest of its own, but in addition it is used here to throw light on the instinctive mechanisms of man. These are contrasted with man's intelligence, which gives him his power to escape from automatism. Intelligence, however, is thwarted by rationalisation; constructive social communication is held in check by competition, exploitation and deception. These conflicts can be understood only by tracing the development of the individual through its different phases to maturity. The Russells devote much of the book to trying to disentangle the mechanisms by which personality is forged by early social relationships. Their approach owes much to Freud, though its details are original. They make great use of literary allusions—some of which are more pertinent than others.

This is a book liable to irritate experts in any one of the many fields into which the authors stray. The psychologist will be worried when "intelligence" is equated with "the capacity to enjoy life"; the psychiatrist by the slick parallel between change of mood in toads and "dissociation" in man; and most of us when the observations of Tolstoy are written off as "made and recorded through a moralistic fog, condensing here and there into puddles of mysticism." However, such lapses are almost inevitable in a book so ambitious in its scope. Many of the authors' conclusions ring true, and one cannot help being stimulated even when one disagrees. As a gallant attempt on a mammoth task the book deserves both respect and admiration.

The Economists' Bookshop General Catalogue of the Social Sciences 1961-62

To celebrate our move across the road this autumn into new and enlarged premises we are producing our best catalogue yet: send us your name and address, and a copy of this 36-page, 1,500-title, classified catalogue will be posted to you on publication without charge.
(If you are on our mailing list you will receive a copy automatically.)

THIS IS THE EAST...

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-five territories extending from the Eastern Mediterranean to the Pacific Ocean.

THE BUSINESS WORLD

Mr Lloyd's Measures

MR SELWYN LLOYD related his crisis measures to the two familiar facets of economic overstrain, the domestic and the external. Domestically, his diagnosis is far from proven. The Chancellor's assertion that in the three months since the budget home demand "has continued to increase and is likely to increase even more than was then foreseen" may appear as a logical justification for administering this record dose of disinflation on the eve of the August holidays rather than in the budget itself; but the assertion is a difficult one for outside observers to square with the latest generally available economic indicators. There can be no quarrel, however, with the Chancellor's diagnosis of the "critical" external situation; and because the fundamental weakness is in Britain's current overseas earnings, a knock to home consumption may have rather more relevance than if the weakness of sterling reflected an outflow of short-term capital alone. Britain's trade balance improved a shade in the first half of 1961, but Government spending abroad increased further, and the current account was still in deficit. Thus it seems certain that for the third successive year Britain's overseas earnings will fall short of its external payments and capital commitments. This is the critical situation which has to be put right.

The sustained external deficit, inevitably, has to be financed by short-term borrowing, whether through the market or by official credits. Mr Lloyd's measures, besides attempting to eliminate the basic deficit itself, provide short-term relief on both fronts. The increase from 5 to 7 per cent in Bank rate is a powerful instrument for reversing the outflow of private funds from London. While this increase naturally has had nothing like the psychological shock effect as the same movement in September, 1957, its impact in the foreign exchange market has been immediate, though still limited. A rally in sterling started as soon as the Chancellor sat down on Tuesday afternoon, and by Wednesday afternoon a general demand had lifted the spot rate to $2.79\frac{7}{8}$, compared with $2.78\frac{1}{2}$ before the announcement. Observers abroad, as at home, are generally withholding judgment about the efficacy of the long-term part of the package. But in financial markets which are notably more sensitive to interest rates than they were four years ago, seven per cent talks—even if not yet loud enough to persuade operators to dispense with exchange cover in the forward market. An essential part of the Government's short-term task was to produce a quick recovery in sterling, and Bank rate has again shown its effectiveness for that purpose.

The Chancellor is also fortifying the reserves by resort to the International Monetary Fund. A drawing from the Fund was to be expected, if only to help pay off at least a good part of the temporary credits that have been made available by Continental central banks. The amount and form of the IMF credit will be announced shortly, when discussions are concluded. Britain already holds the record for an IMF operation in its Suez drawing of $\$561\frac{1}{2}$ million and additional stand-by credit of $\$738\frac{1}{2}$ million, covering the whole quota of $1,300 million. Since then, IMF quotas have been raised by 50 per cent, and Britain has repaid its Suez drawing and further increased its credit line at the Fund by voluntary repurchases of sterling for dollars. As a result, Britain's "gold tranche" in the Fund, which is available virtually automatically, now amounts to $531 million; addition of the first 25 per cent of Britain's quota would provide over $1 billion with little formality. The whole quota plus the gold tranche is a shade short of $\$2\frac{1}{2}$ billion. It seems pretty certain that a "substantial" drawing by Britain will have to include a fair portion of United States dollars, as the Fund's existing holdings of marks, French francs, guilders and lire together total only about $\$1\frac{1}{4}$ billion. It remains to be seen whether the Continental creditor countries develop any new expedients to take the strain off the United States in advance of the rather slow moving project for establishing new borrowing powers for IMF itself. For sterling, the IMF credit and the pull of Bank rate should provide adequate special relief in the months ahead.

Crisis Bank Rate

SEVEN per cent Bank rate, the Chancellor said, was directed not only to the "unsettled international situation" (a phrase which covers Mr Khrushchev and Berlin as well as Swiss bankers and the pound), but also to "the need to restrain credit internally." To this end, the authorities have added a further call of special deposits, and a request to both the banks and the insurance companies to be "particularly severe" on proposals to finance personal consumption, including hire purchase, and speculative property development. Together, these restrictions could produce severe stringency in the capital market. It was evident that some sporting buyers who came into the market on Wednesday had underestimated the implications of market interest rates of over 7 per cent for the best borrowers and a tightening of credit from all the main institutional lenders—all at a time when the business

outlook is almost certain to be clouded. As in 1957, cash is at a premium.

The banks themselves now need little exhortation from the authorities. Their own balance sheets were enforcing a tighter scrutiny of lending before the new imposts. Now the call of special deposits, payable in two instalments by the August and September make-up dates, siphons off a further 1 per cent of deposits from the London clearing banks, bringing their total to 3 per cent, and ½ per cent from the Scottish banks, bringing them to 1½ per cent. The latest bank statements for mid-July, discussed in detail on a later page, show a slight easing in liquidity; this is not surprising in a period when the gilt-edged market had virtually dried up. But even if the Government raises no new money in the gilt-edged market this year the banks cannot count on expanding their holdings of Treasury bills and other liquid assets. The Chancellor's surcharge on revenue duties will turn his small overall Exchequer deficit into a surplus—a phenomenon unseen since the days of Sir Stafford Cripps, when personal savings were almost non-existent. Now the banks may find themselves faced with increased outside competition for Treasury bills, which will presumably yield around 6½ per cent; while if the public were to resume its buying of gilt-edged, the supply of liquid assets remaining in the hands of the banks could be painfully reduced. In that case, no doubt, the authorities might contemplate a release of special deposits. The banks will remember that when liquidity became uncomfortably tight this spring the Bank of England came to the rescue indirectly, by helping to absorb the banks' sales of bonds on special terms. It is a debatable point whether special deposits, as used so far, have helped or hindered official attempts to curb advances.

Certainly advances showed remarkably little response to the restraints of 1960. In the past year total advances by the clearing banks have risen by a further £313 million, around 10 per cent; and while at first there was a notable switch in the direction of lending towards industry, the three months to mid-May showed some switch back to the personal and professional and the financial categories. Most banks have already put on the brakes here; and with the average advances ratio at 48.8 per cent and the ratio of gilt-edged at 12.4 per cent, the indication by the Governor that the impact of the call to special deposits "should fall on advances" reinforces the views of bankers themselves.

The bankers are likely to turn their attention first to the borrowers singled out for tough treatment by the Chancellor. In addition, many of them hope for a quick reduction in overdrafts to local authorities, which have risen unusually sharply in recent months as conditions have tightened in the mortgage market. Now foreign money may return to that market, and while the quotation for seven-day money has risen to 7⅜-7½ per cent, local treasurers no longer find bank money any cheaper.

The hire purchase houses, too, are likely to find themselves under pressure to get their finance in the market, and they have been obliged to raise their deposit rates—in some cases by the full 2 per cent, in others by less. The tightening of money is sure to be yet another influence encouraging the finance companies to draw in their horns. They had already planned to raise their charges to the public, and seem likely to keep to the new scales they had in mind—a rise from 7½ to 9 per cent a year on the initial amount advanced on new cars, and from 11 to 12 per cent on cars over three years old.

THE NEW MONEY RATES

	From per cent.	To per cent.

Cars over 3 years old and motor cycles	11*	12*

Building Society rates, no further change.
*Rate on initial amount outstanding—around one half the true rate.

One Regulator

AFTER reminding the House of Commons that he now had "two new powers, the regulators" on indirect taxes and payrolls, the Chancellor used one to the full and never mentioned the other. Applying a surcharge to the revenue duties, including purchase tax, to the full 10 per cent that he had gained power to impose in the Finance Act, he made an effective cut of £17½ million a month in home purchasing power (£210 million in a full year, £130 million to the end of 1961-62), which would be the equivalent of, say, 1¼ per cent of the current rate of total consumer expenditure. Not quite all of this extra duty will come from private consumers, in fact; the wide range of duties involved include those on motor fuels of which business pays a sizeable proportion and the new one on the black oils of which business—suppliers and consumers—has to bear almost all. This incidental effect was inevitable in the drafting of the clause that provided this new regulator, which gave the Chancellor power to make by order only a uniform change in all of the duties concerned up or down, not to discriminate in parts of the field; it adds one more straw to industrial costs. The only other business duties affected are those imposed on television advertising in this year's budget and the bookmakers' licence duty.

What 10 per cent on the duty means to any given form of consumption depends on the basic rate of duty concerned; and the biggest impact on prices, through the biggest proportionate rates, falls upon "soft" rather than "hard" consumption. Fourpence on a packet of 20 cigarettes, half-a-crown on a bottle of whisky, and threepence a gallon on petrol are a good deal more significant than about 19s. on a £65 refrigerator or even £15-£20 on a cheap car, though expenditure on smoking and drink may well be less elastic to higher prices. For some durable goods, the surcharge will not be passed on. Sales of new cars are likely to be affected also, by higher charges on hire purchase, directly and indirectly via the second-hand market (discussed in a later note). And the fact that this surcharge is temporary may strengthen the actual disincentive to buy that could arise from an increase of say 6 per cent in the price of a car.*

The surcharge is expected to raise the cost of living index by 1½ points. Its incidence on the index is irregular: for example, the only car prices in the index are those of second-hand cars, and the possible softening in their values as a result of the measures and repercussions would have a downward rather than an upward influence on it. But the surcharge will raise prices (and/or cut profit margins) on a wide selection of purchases ranging from a packet of tea to a diamond engagement ring.

The Chancellor spoke of the excess pressure of total home demand, citing "strongly rising" investment and an overload on building and some engineering work "in the three months since the budget." Personal incomes and consumer credit, he said, had risen more than he had expected at budget time; and the recent fall in stockbuilding could not be expected to go on. Official glosses from the Treasury later emphasised that indicators of consumption for March and April were much higher than for February, on which budget estimates had to be made, but chose to disregard indications that in May and June retail trade, at any rate, appeared to have levelled off—though the Chancellor, telegraphing his punch so long, may have provoked some minor "spend before the duties go up" spree during July. It could be that these latest figures regarding the consumption of goods will be confounded later; or that this may have been more than offset by the continued rise in the consumption of services. But for what they are worth these indicators of consumer demand do not fit the Chancellor's premise that the internal economy is over-burdened by demand. Nor do the figures of engineering output and orders released the day he spoke, which together with the latest records of machine tool orders and of factory building approvals suggest that there may already be some easing of demand in train for the plant and machinery industries. In the economic debate, however, Mr Lloyd added that he now "had later forecasts about our situation for the first half of 1962"—prophesying a greater demand on resources, likely to affect exports and the balance of payments."

The Public Sector

ONE conventional measure missing from this familiar if formidable array—an omission much to the Chancellor's credit—was the usual selection of cuts in public investment, which have in the past been so damaging in minor detail and so delayed in broad effect. "We must see," he said, "that priority is given to what directly affects national efficiency, and that we do not wastefully disrupt programmes under way. We shall, therefore, not interfere with the investment that the nationalised industries require for attaining their financial targets and providing essential supplies and services." This autumn, he said, the government would be agreeing with the public industries the new financial targets they are to aim for over the next five years. The whole of public expenditure, indeed, he added, needed "a long-term redeployment of the public services over a period of several years," slowing down the rate of increase in the total and changing priorities.

The cuts that Mr Lloyd proposed in capital items of public expenditure (for 1962-63 as against this financial year) will come mainly from not lending as much to steel companies and to private industry in general, and from not offering governmental assistance to private purchase of cheap, older houses. "We shall apply very strict criteria to any new proposals as well as looking critically at farm subsidies," he added. (The Cunarder loan, committed but still to be made, remains as one of the few vestiges of industry's never having had it so good.)

Not repeating much of this year's capital assistance to the private sector will offer an actual reduction of £125 million below the line next year, as against this year. Mr Lloyd reserved his bigger economies in next year's public expenditure for Government supply expenditure (basically, current spending) and for loan sanctions to local authorities, mainly for minor works and miscellaneous local investment. But here he could not hope for actual reductions—only to keep increases below what they would otherwise have been. Together expenditure under these two categories should thus be £175 million less than it would have become.

Supply expenditure itself will be held back to an increase of £125 million: this increase can be justified as "a level not more than 2½ per cent in real terms, which should be within our expanding capacity to carry." This financial year is too far committed for significant economies to be achieved; but there will be "a stringent re-examination to see what savings can be made in administration and in other respects."

Spending Overseas

As he had foreshadowed in June, Mr Lloyd extended his knife to Government spending overseas; and here too, it deserves to be said, he has avoided any panic or irrelevant slashing. Total Government expenditure on overseas aid, defence and administration has risen from £330 million in 1958-59 to a rate of £450 million in the current year, and it was threatening to rise to £500 million in 1962-63. Mr Lloyd aims to hold it down to £400 million. The Minister of Defence is making "another review" of the whole defence programme. More specifically, Mr Lloyd has concluded that the £65 million drain of foreign exchange for maintenance of forces in Germany "cannot be allowed to continue" in the next financial year, and the Government has "invited" the NATO council to review the financial conditions. Britain invoked this clause in the Treaty before, in 1957, and after months of acrimonious discussion the Germans agreed to an annual contribution of £12 million for three years.

On aid, the Government is happily proposing no cuts in its contribution, but proposes to see that it "does not rise much above the present level." This is about £180 million, compared with £150 million in 1960 and £80 million in 1957-58. The diplomats, however, are to be asked to save 10 per cent in overseas administrative expenditure in 1962-63—about £2½ million.

* Purchase tax surcharge adds effectively about 3 per cent to the price including tax; and an increase of 1½ per cent in charges for two years on 80 per cent of the value would add another 2½ per cent.

Dividends and Remittances

EVERY board of directors is now faced with the problem of framing its dividend recommendations to conform with the Chancellor's broad comment that a general increase in dividends in the coming year would not be justified. It is not a stop on dividend increases, and where growth or a fair reward for shareholders justifies an increase, some boards will no doubt feel morally justified in making themselves an exception to the new rule. The Chancellor said that gross dividends in 1960-61 rose by £161 million, or 20 per cent. They had increased "substantially," even though they represented less than 7 per cent of the net total of wages and salaries. For the record, the gross dividends of companies whose accounts were analysed in this office in the first half of this year rose by about 12 per cent and a good part of that increase represented the remuneration of £100 million more of hard cash subscribed in ordinary shares.

This is an easy time at which to appeal for voluntary dividend restraint, for, on the Chancellor's showing company profits earned in 1960-61 fell by £13 million—which implies a sharp fall in January-March last. Profit margins, reckoned either by sales or by capital employed, are falling in most sectors of industry (it would be interesting to know what industries in the Chancellor's opinion are earning "too high" a margin). Most companies, and especially those still busy with investment programmes,, simply will not be able to afford to pay higher dividends. Moreover, they will be forced by the severity of the credit squeeze to go to the capital market for new money at high rates and that is bound to keep dividends down. Indeed, investors are already thinking about the industries and companies that might have to cut their dividends. What dividend, for example, will a company like Hoover, whose profits have fallen sharply and whose goods have attracted additional purchase tax, be able to pay this year ? And some of the favourite growth stocks may have to wait longer for already discounted increases in dividend—Great Universal Stores shares were one of the first victims, on Thursday's announcement of a merely maintained dividend.

While asking companies to pay no more to shareholders, the Chancellor "requests" all companies operating overseas to examine their policies in order to ensure that a higher proportion of earnings is remitted home. For companies in the sterling area, this can be nothing more than a request; for subsidiaries outside the sterling area, the Chancellor intends to make use of exchange control and to reinstitute "on a selective basis" the examination of company accounts to ensure that a policy of higher remittances is followed. These proposals are not easy to reconcile with the Government's earlier policies as incorporated in the tax legislation on overseas trade corporations, which encouraged companies to invest their retained earnings abroad instead of remitting them back to this country. They may involve difficulties for companies which have been encouraged by the British tax system to retain profits abroad, which are under local pressure to invest as much as possible on the spot and are now asked to bring more profits home.

Proposals for new investment outside the sterling area will be submitted to the test that it will produce "clear and commensurate benefits to United Kingdom export earnings and to the balance of payments."

PROFITS AND DIVIDENDS

Tax-free Profits

IN April, the Chancellor said that he was looking again at some means of taxing capital gains—not, he insisted, a capital gains tax as generally understood, which would produce too little to justify the complications of administering it. He has now given notice that his next budget will include measures "designed to impose a clear liability to tax over a wider field than at present." The activities that Mr Lloyd wants to see taxed are of two main kinds: first, those seeking short term profits "which are more in the nature of speculation than investment, for example, short term transactions in shares and securities"; secondly, trading activities (often, he said, in real estate) that are cloaked in such a form as to escape liability under the present tax law.

It is evident nowadays that the British polity has some form of capital gains taxation that it must get out of its system. But Mr Lloyd's determination to bring it to birth will, it must be hoped, be accompanied by close pre-natal study of the fifteen pages and thirty-seven complicated but subtle paragraphs that the Royal Commission on Taxation devoted to the subject. This is a deceptively simple field in its aim of social justice; it is, however, a desperately difficult field in which to square the two principles, often conflicting, of convenience of administration with equity to the tax payer. What will short-term mean ? What property will be brought in, apart from the apparently easy (but in practice not all that easy) field of security transactions ? Is a flat rate tax to be imposed, treating these tax-free accruals as a new class of incomes, or will they be taxed on the top band of incomes and so be submitted to the full weight of the progressive incidence of income tax and surtax ?

Property and Housing

ONE sector of the economy is singled out for particularly stern treatment—property and housing. Authorisations and loan sanctions to local authorities are to be "considerably reduced" and this, together with the pressure on interest rates exerted through the market, must incidentally affect their new housing developments as well as their other (and nowadays bigger) items of capital expenditure. The private developer is caught in the same vice. The banks have been asked to be particularly severe when reviewing existing commitments or in considering new advances for "speculative building" and "property development" and the first victims of the squeeze are likely to be the private builders who have always looked to the banks for development finance. New development schemes which have been planned but for which finance is not assured will in most cases have to be put in cold storage. Most builders have more than enough work on hand

d the first result of this restriction could be to speed up completions so that the builders can release some of their cash. his could add to the supply of houses just at the point when e purchaser finds it most difficult to raise a mortgage and so eck the rise in house prices and even lead eventually to a fall. The Governor has asked the insurance companies, through e British Insurance Association, to pursue the same policies the banks on development finance for property. With this quest before them, the insurance companies which already ve a big stake in property development will not contemplate y new commitments. Some of them may have been wonderg if they could extend their property commitments much rther in any case. The stand-still, presumably, will not predice engagements into which they entered before the Chanllor's request, though these are sometimes in the nature broad commitments to lend up to a given limit in a given riod and fall short of formal contracts. Further arrangents of this kind may have reached some stage of mutual bligation, but still awaited completion and public announcent when the Chancellor spoke. It will now be up to the surance companies and property companies to see how far y part of such schemes can be trimmed or postponed. Higher terest rates in themselves may in some cases reduce the calls their funds under these commitments. Some of the proerty companies may be able to make some use of the links ey have recently forged with pension funds (which, formally any rate, fall outside the scope of the official request) ut for almost all of them, big and small alike, the purport of e Chancellor's measures and requests is: no finance until rther notice for new projects. For the big ones which have ready arranged finance, this may not be a crippling blow; ut it will lead to a pause in their growth, which may become pparent as developments now under way near completion. maller concerns which lack a financial tie with the institutions which may have hoped for re-finance from their bigger others, may suffer more directly from the stand-still. Unless ey are prepared to pay extremely high rates in the capital market, they will have to limit their ambitions to what they ready have on hand—and hope that they will quickly secure full letting or a buyer with cash.

Potential owner-occupiers as well as builders and developers re caught in the squeeze. The building societies have decided or the time being to try to weather the storm, standing pat n the recommendation made by the Building Societies Assoiation in June that the mortgage rate should be increased rom 6 to 6½ per cent and the share rate from 3½ to 3¾ per ent, net. The inflow of money into the societies has already llen to a low level and their decision not to go to 7 per cent n mortgages and 4 per cent, net, on shares when interest tes elsewhere have been jerked up to a higher level must ean that they will have only the normal flow of capital payments and the minimum of new money for lending out n mortgage. And with money tight everywhere withdrawals ay well increase. Quotas on mortgages will be harsher than ver and, clearly, if the squeeze lasts for any length of time he societies will have seriously to re-consider their policy n interest rates. Many people contemplating buying a house will now have to think again.

In addition, the Chancellor has said that in consultation with the association he will suspend the house purchase cheme, under which money from the Government is hannelled through the building societies to mortgages on pre-1919 property. Up to the end of June the societies had lent £78 million in this way and the Chancellor has to give the societies' three months notice of suspension. Without immediately reducing the drain on the Exchequer the suspension adds to the building societies' problems and may well depress the prices of old houses.

Long-Term Objectives

MOST of the elements in Mr Lloyd's statement that were relevant specifically to the long-term problems of the British economy were the things he had not done but said he might do later—though his check to public sector wages and his refusal to tamper directly with productive investment in either the private or the public sector was in line with putting "the long-term growth of the economy" as his first objective. The Chancellor called for his "pause" in increases in distributed incomes—dividends, wages and salaries—to mark the beginning of a new long-term policy: during it "methods of securing a sensible long-term relationship between increases in incomes of all sorts and increases in productivity" would have to be worked out. He did not elaborate much, though junior economic ministers—immediately after his speech, and more vociferously the morning after a generally sour press reaction to it—were at pains to emphasise how comprehensive and important these intentions might in fact become in practice.

In the economic debate, admittedly, the Chancellor himself elaborated on his feeling "that the time has come for a better co-ordination" of the activities of the Economic Planning Board, the National Production Advisory Council on Industry, and "various other advisory councils" (Three Wise Men and all ?) He said that five-year planning in public expenditure might be supplemented by "something more purposeful" than these bodies for the whole economy. This he envisaged as a joint "examination" by the Government and both sides of industry looking five or more years ahead, considering the prospects for output and the different sectors of demand, the supply of labour and capital, balance of payments prospects and the growth of incomes. "Above all it will try to establish what are the essential conditions for realising potential growth."

After his first statement, the idea that the Government might feel able, in a wage policy for the public sector, to say early on in all negotiations what kind of percentage increase might be acceptable "in the national interest" was also put about. Yet another interpretation of what the Chancellor meant, indeed, brought in an element that he simply had not mentioned: "action" (undefined) on resale price maintenance.

These supplementary glosses about policy for the long term, that is to say, were not merely more detailed but went much farther than the Chancellor's own bald statements; it seems impossible to assess them before they are put, firmly, on the record. So far Mr Lloyd has administered one of the sharpest short-term checks to total demand from any Chancellor since the war, at a time when, quite apart from the state of the internal economy, sterling needed such a stiffening draught. He has set reasonable objectives for long-term policy. The policies themselves, however far they may or may not have taken shape in his own mind, have still to be set out—or worked out—in public.

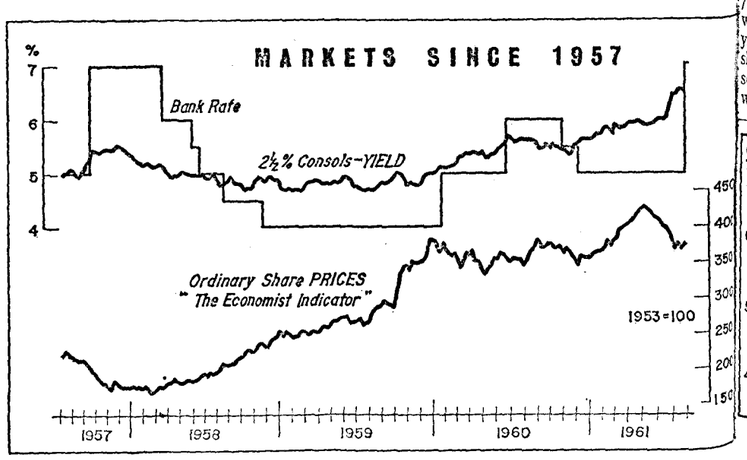
BUSINESS NOTES

THE EXCHANGES

First Hurdle

STERLING responded immediately and sharply to the Chancellor's measures, and demand from all over the Continent lifted the spot rate against the dollar from $2.78½ on Tuesday midday to $2.79⅞ at one time on Wednesday afternoon. At this point the recovery was checked, partly as a result of some sales from New York, though the undertone remained favourable. The volume of turnover has not been large—it has probably been smaller than last week, when the first tentative signs of a recovery appeared. Not unexpectedly, exchange operators are biding their time. In 1957, it may be recalled, the rise in Bank rate was followed by two days of vacillation in the exchange market, and it was only after the week-end that the weight of opinion decisively interpreted the move as an act of determination rather than desperation.

This time there are few doubts about the short-term efficacy of the measures, and operators have seen no reason to delay the covering of short positions. At the same time, there are few signs yet of a return of investment funds to London. The London money market itself has not yet fully settled down to the new pattern of rates—the Treasury bill rate was not seriously tested in advance of Friday's tender and the sterling picture will not be completed until announcement of the size and form of the credit from IMF. Few operators therefore have felt ready to put money into London without covering themselves in the forward market; and as the forward discount works out at an annual rate of 3¾-4 per cent on New York (and more on Frankfurt and Zurich) this virtually wipes out the interest differential. A sharp rise in the interest differential is naturally associated with a widening in the forward margin, and this movement on Wednesday could not therefore be attributed to a worsening of confidence. On Thursday forward rates were a little stronger, though dealings were not large.



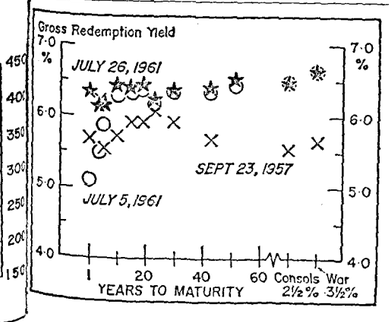
Partly because the recovery in sterling has so far been limited there have been few sharp repercussions on other currencies, including the dollar. The whole currency scene is overlaid by the alarums and excursions over Berlin, though whether these portend pressure on the pound, the dollar or the mark no one seems quite sure—which has not stopped the British Treasury from invoking them as one reason for 7 per cent Bank rate in London. The one clear effect of the political troubles of the past few weeks—not only Berlin but also Bizerta and Kuwait—has been to revive private buying of gold, on a moderate if not spectacular scale. Since the coincidence a month ago of M. Rueff's fulminations on the gold exchange standard and General Qasim's claim to Kuwait, the dollar price of gold in London has been creeping up slowly but steadily, from $35.06 to $35.13-15.

MEASURES IN THE MARKETS

Second Thoughts

DISINFLATION is the Chancellor's policy; but equity prices at first went slightly ahead, while even long-dated gilt-edged fell. This might be attributed to a sense of confusion in the minds of dealers and investors on Wednesday, for when the jobbers immediately marked prices down, they discovered to their surprise that there were buyers at these levels. As a result, the *Financial Times* ordinary index gained 0.8 points to 316.0 on Wednesday. As prices had been reasonably firm ahead of the Chancellor's statement *The Economist* indicator gained 5.7 points to 376.1 over the week to Wednesday's close. Hire purchase issues and some domestic appliance stocks were slightly lower; but stores, tobacco, bank, building material and property shares made a number of gains, though it was notable that the rise in property shares was confined to those companies which had already made their arrangements for finance. Not too much could be made of this immedia response, and on Thursday the market wa definitely weaker: the *Financial Time* index fell very sharply by 8.7 points 307. Investors will need some time to measu the implications of the Chancellor measures and exhortations. But, at firs there was some relief that he had asked fo voluntary dividend restraint instead of pr posing a freeze by compulsion; and th stock market may not be wrong in assumi that the real proof of disinflationary polici lies ahead—with Berlin and the possibili of industrial disputes to cloud the issue.

In its "might have been worse" attitud the industrial market initially underes mated some of the tougher implications the Chancellor's policies. First, he has bee able to ask for voluntary dividend restrai in the knowledge that profits will be mo difficult to earn and that margins will rema low. Long before his request, it was cle that there would be no marked increase dividends in the coming months. Second if the pressure on credit is kept up f some time, building and property develo ment will be checked; hence to buy pr perty shares now is to assume that befo present development schemes are complet the restrictions will have been relaxed a new schemes put in hand. But ma builders and developers will be effectiv prevented from embarking on new projec thus for the moment there is no new grow in shares whose prices have been tied the prospect of continuing expansi Thirdly, the result of the credit squeeze w be to force many companies into the mark either to fund their temporary borrowi or to raise money for new investment. Th will have to pay high rates in a lende market. There are still major imponde ables—the pound, industrial disputes,



common market, the behaviour of trustees when they get their new powers—and for the time being investors are likely to stay on the side lines. They can get up to 7½ per cent from short-term deposits with local authorities. The fall on Thursday indicated that the stock market had begun to have second and more pessimistic thoughts and to take notice of the real purport of the Chancellor's measures.

No Foundation for Gilt-edged

IN the gilt-edged market prices fell by up to 1½ points in the short bond market and up to one point in the irredeemables. In relation to Mr Lloyd's actual measures this reaction is by no means large: in 1957, with the same increase in Bank rate and far less severe auxiliary measures, War Loan dropped by over four points on the news. This time, however, the measures had long been awaited, and while the short bond market was surprisingly ill prepared for a sharp increase in Bank rate, yields on long-dated and irredeemable securities were already, at around 6½ per cent, a full point higher than in 1957. So dealers had some reason for disappointment that there should be any further fall at all. At this level of yields, the fall can only reflect fears that the Chancellor's measures may not be strong enough. In fact the City has already modified some of its early scepticism—witness the sharp fall in equities on Thursday. But before they commit themselves at the long end of the gilt-edged market, investors, not unreasonably, are waiting for clearer indications of how much weight the government means to put behind the Chancellor's stand against wage inflation. This is the key factor that will almost certainly determine the fate of sterling, and while the higher Bank rate and the IMF credit will surely give adequate support for the next few months, the stock market investor needs to look further ahead.

The sober view taken by investors is illustrated by the contrast in the yield curve now and as it was after the first move to 7 per cent Bank rate. In 1957, the downward slope of this curve—towards lower yields on long-dated securities than on the short—indicated a view that rates would soon come down, and that investors were willing to sacrifice a little in order to make

sure of existing yields over a long period. Today, although yields on short bonds are notably higher than in 1957, yields at the long end are higher still. The curve is almost a straight line. Since shorter dated securities will normally yield less than long, on account of their greater liquidity, this shape of curve still indicates a feeling that short-term rates are unusually high. But the market is still guarded in its view of the future of long-term rates.

POST OFFICE CHARGES

A Commercial Bite

"THE tariff increases I am proposing," Mr Bevins informed the House of Commons on Monday, "apply either to services running at a loss, or to services which produce an inadequate return on capital and where there is a high investment demand." The second of these criteria is plainly the more significant. It marks a decided shift in Post Office policy. Gone for the time being at least is all talk of "a telephone in every home." This would require an astronomical sum in capital investment to implement, which unless the Post Office were to succeed in persuading Britons to use the telephone more would be rewarded by a hopelessly insufficient return.

The initial connection charge for new telephone subscribers is to be doubled to £10 and the annual rental fee is to be raised by £2—to, for instance, £14 a year for a non-party residential line. In addition new subscribers living more than three miles away from an exchange are to pay an initial "excess mileage" charge of £40 a mile (after the first three miles) instead of the existing annual excess mileage levy of £16 a mile—though this will mean that after two and a half years new subscribers will pay less. These and other increases are designed to deter the marginal telephone user and free more of the Post Office's capital resources for investment providing a better use of the existing network—in subscriber trunk dialling for instance. "STD" has boosted trunk call business, one of the best money makers in the agglomeration of Post Office services, at every place it has so far been introduced, though it has not yet brought a comparable extra increase in revenue from local calls. These are only just about paying their way, mainly because the majority of these calls now last less than three minutes.

All told, the Post Office is faced with a £25 million increase in working costs this year, mostly from higher wages. Mr Bevins expects to absorb about £10 million of this £25 million in higher efficiency and to raise £16½ million a year from the increased telephone charges. As in 1957, the last time a round of increased charges took place, the Post Office is taking a bigger bite than it immediately needs. Mr Bevins proposes to raise another £8½ million a year by increasing the inland postage rates on printed papers, samples, and newspapers and on parcels. All of these services are presently losing money. But there are a number of other loss-makers whose charges he has not changed—such as registered post, overseas mails other than airmail, money orders, and calls made at telephone kiosks. Inland telegrams, which lose proportionately more money than any other Post Office service, have been written off as a deficit service beyond redemption at any scale of charges. But Mr Bevins might have been a little bolder by raising charges for more of his department's services that do not show a profit.

RESTRICTIVE PRACTICES

A Clear Warning

THE Restrictive Practices Court has bared its teeth. After giving judgment against the scheme operated by the National Federation of Retail Newsagents which restricted the number of places where morning dailies published in London could be sold, the Court, under Mr Justice Diplock, warned the Federation and its members that any "deliberate attempt to evade orders of the Court" would incur the severest penalties, including imprisonment. This was after the Registrar of Restrictive Trade Practices had told the Court that the Federation had already decided, in anticipation of the Court's decision, to compile a list of "recognised points of sale" to be sent to anyone asking for it but not, the Federation claimed, to imply "any kind of recommendation."

The Federation's intention, Mr Justice

Diplock commented, was "plainly not to frame the list and hang it up in the Federation's offices." Clearly it was "a preliminary step to restrict entry" to the trade in another way. And, since the Federation argued that any such list was not registrable under the 1956 Act, Mr Justice Diplock added that the Court would not consider it mitigating circumstances in any action for contempt for a breach of the Court's injunction that the manœuvre had been made on the advice of a trade association's lawyers.

OVERSEAS TRADE

Switch in Exports

UNITED KINGDOM exports in the second quarter of 1961 were at best no better that in the first quarter and, if no allowance is made for the disruption of shipments caused by the dock strike at the end of last year, they were one per cent lower. But "bogged down" is not quite a fair description of the present state of the export drive. Apart from the United States, exports to industrialised countries continued to grow; exports to western Europe expanded by 5 per cent (seasonally adjusted) in the second quarter, and over the year the expansion was evenly spread between members of EFTA and the common market. In the second quarter, exports to western Europe were a sixth higher than in the corresponding period of 1960, but exports to the United States fell by 27 per cent and there is as yet little sign of recovery.

Exports to Canada were rising in the second quarter and the economic revival in America must have improved prospects for exporters to this market in the second half of the year. Exports to countries where trade is partly subject to trade quotas (the communist countries and Japan) advanced strongly, but shipments to the sterling area fell 8 per cent in the second quarter and were 2 per cent lower than a year earlier. Following the decline in commodity prices, exports to the remaining countries, which are also mainly producers of primary products, were reduced in the second quarter, although there was little change in exports to Latin America.

Even if it is accepted that the 4 per cent rise in exports in the first half of the year over the average for the whole of 1960, is a reasonably encouraging effort in the circumstances, imports hold the key to an immediate contraction in the trade gap. They have been tracing an unmistakably downward course since the third quarter of 1960. At first the decline was chiefly in imports of food, beverages and tobacco. But between the first and second quarters of 1961, the principal fall has occurred in imports of industrial materials, which dropped by 8 per cent. Imports of finished manufactures levelled off; more capital goods were imported, but imports of clothing and other consumer goods appear to be declining.

COTTON TEXTILES

Restrictions First

IN the five days at its disposal, the Gatt conference of major importers and exporters of cotton textiles hammered out a fixed procedure for restricting "excessive *imports*" that can be put into effect in October, obtained agreement that quotas for imports would be liberalised in January and set up a committee to produce a lasting solution to the whole problem by next April. Restriction of imports can be imposed when the cotton industry of an importing country is threatened with "disruption." However, no producer can be asked to cut exports below the level achieved in the twelve months to the end of June, and importers have undertaken to prevent non-participants disrupting the new scheme.

A considerable expansion of imports by members of the Common Market is in prospect next year, but presumably because governments have not yet had an opportunity of approving the arrangements, no details of actual concessions have been released. Britain will not be expected to make any substantial new concessions because its imports are already high. The question of admitting Japanese textiles to the British market will be settled when a full Anglo-Japanese trade agreement is negotiated. The cotton textile committee formed to deal with the long-term problem of cheap imports will meet in October, and will obviously have its work cut out to construct within six months a scheme that combines with the worthy objectives set out in the preamble to the new agreement an effective and acceptable solution.

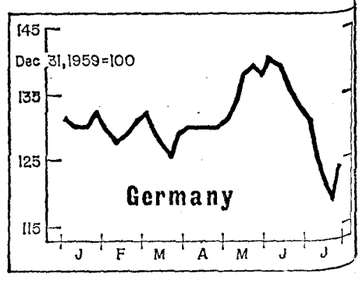
Hongkong and Japan appear to be sceptical about the advantages of the agreement. The United States, for instance, now has a moral right to restrict imports from Hongkong. In effect, it can achieve the 30 per cent reduction in these imports below their level in 1960 that it has been seeking. Japan had hoped that such a move would redound to its advantage, but the immediate prospects seem a little less hopeful now. Special provisions have been made which will allow Canada to restrict imports unilaterally, although its government lacks the powers to bring about a decrease in the prescribed manner. The new provisions do not exclude other restrictive arrangements agreed between producers and importers. Producers will possibly get better than basic terms when actual restrictions are discussed. The Hongkong industry now appears ready to strike a bargain with Lancashire on the lines of the more favourable terms that have already been suggested by the British government.

WALL STREET

Equities Move Up

A correspondent cables:

INVESTORS in New York responded to the news of a fresh increase in defence spending by vigorously bidding for equities carrying the Dow Jones average to 695 on Wednesday, compared with 682 a week earlie Wall Street talked in terms of a new leg the Kennedy bull market. Interest was co centrated on issues that might bene directly from military spending, particular aircraft shares; but demand was in eviden on a broad front for the first time since t bullish fever of early spring, covering t cyclical groups—steel and motors—and ra material stocks. Brokers reported that good deal of the buying was by individua rather than institutions, which have becom increasingly selective in their purchases. fact some institutions have adopted cautious attitude, taking the view that t government's new programme is supe ficially bullish but fundamentally beari because it may be followed by restrictio on either prices or profits. But Wall Stre as a whole now feels that a new boom definitely in prospect, and while nervou ness about the Berlin situation still exis the concensus of opinion is that equit remain the best hedge against anythi except nuclear war.



While President Kennedy's message ga the market a decided stimulus, investo were also cheered by second quarter repor from the leading corporations, which for t most part revealed a decided improveme over the first quarter both in profits a profit margins. Corporate earnings still l behind those of a year ago, but the peak 1960 was reached in the first quarter, wh this year the expectation is for a steady r in profits from the first quarter low. Equ prices, especially of growth stocks, alrea discount a substantial improvement in ear ings and cyclical issues appear to offer re tively better value for the investor's mon Partly because they seem less of a risk w business activity assured of a sustained r they are now coming back into favour. T real danger is a new wave of speculati enthusiasm that could carry equity pric too far too fast.

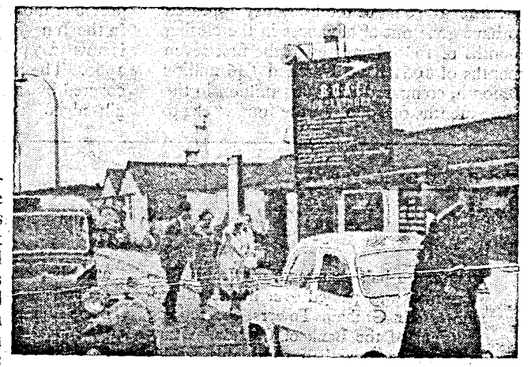
chips as Daimler-Benz have fallen from 2,900 to 2,520, Bayer from 820 to 714 and the sturdy newcomer, Volkswagen, from 1,100 to 895. Only steel and textile shares have remained fairly steady. At the same time—German memories being what they are—the price of a pre-1914 gold twenty mark piece has risen from DM 60 to over DM 65.

One might almost suppose, as one German commentator has noted, that an economic catastrophe had occurred in the Federal Republic. In fact, there has been no visible deterioration in the economic situation. The economy may not be booming quite as spectacularly as it was but it is still ticking over very comfortably and good profits look assured for some time to come. The fall in share prices is due to nerves about the Berlin crisis reflected, in particular, in sales by non-resident investors withdrawing their money from Germany. Prices recovered a little early this week, and then weakened after President Kennedy's statement about Berlin. Erratic movements in the market are expected to continue until the clouds over Berlin lift.

MOTORS

Will Car Buyers Wait?



THE Chancellor has done no more than was expected in increasing the rate of purchase tax on cars from 50 per cent to 55 per cent. Though this puts the cash price of a car up by only three per cent, hardly a big enough rise to have, by itself, a substantial effect on demand, some owners might postpone replacing their cars if they felt that this margin might come off again fairly soon. This is why the industry hoped that Mr Lloyd would say that the increase was a long-term one; instead he said that it could be reduced or removed at any time. There is therefore a risk that sales may fall off much more than they usually do at the end of the summer, and the effect of more difficult hire purchase on used car prices will also help to depress sales; some guesses, put the extra fall at from 15 to 25 per cent, but they cannot be more than guesses until the public's reactions become apparent. If the guesses prove correct, however, the industry will be on short-time again this winter, and the smaller firms will be weakened again. New models such as the Singer Vogue may, however, help to keep output above last winter's level. The industry is even less likely to release labour than it was last winter, with the rapid recovery of this spring to confirm its ideas of fluctuation in demand and the difficulty it is still encountering in getting all the skilled labour it wants.

Seven per cent bank rate is bound to increase hire purchase charges, which the finance houses had intended to raise in any case. What is more, credit may be difficult to obtain for hire purchase, so that the restrictions that the finance houses were intending to impose on the type of car they finance may well become more stringent. Combined with the higher interest charges, this could depress the market for second-hand cars further; prices have already fallen by nearly ten per cent from the spring peak.

This threat of another check in home sales has come after a month in which the output of the industry was 23,192 a week, little more than two-thirds of its capacity. Strikes were partly to blame; at Dagenham one cost Ford about a week's output, while the stop in deliveries of Smiths' instruments slowed down production for other manufacturers, notably the British Motor Corporation. The combined effect may have been a drop of over 3,000 a week in the month's rate of output. But strikes seem to have had little effect on the three smaller makers, whose output still averaged only about 50 per cent of capacity, compared with nearly 90 per cent at BMC and rather under 70 per cent at Ford, despite their strike losses. Standard-Triumph International did raise its output somewhat, but that of Rootes may

AIRPORTS

Commercial Management

AFTER six months' investigation of the way the Government runs London's three civil airports, the Select Committee on Estimates had no hesitation in swinging its august weight firmly behind the airlines' proposal that an independent authority should be set up to run these airports rather in the way that the Port of London Authority manages London's docks. The committee disposed of the principal possible objection—that such a change would mean less Parliamentary control—by claiming that Parliament would agree if it were shown that more efficient and economic management would result. Of that, the committee had no doubts itself: an autonomous body "would be able to take decisions more quickly, would provide a more satisfactory career structure for its own specialised staff, and in general would be able to react in a commercial manner to what is essentially a commercial situation." It quotes the deputy-secretary at the Ministry of Aviation as saying that there were difficulties in "running a commercial concern by civil service machinery." The ministry's general manager for London airports told it that "with a civil service machine answerable to Parliament one has sometimes to take steps which in commerce one would forget."

The long-drawn out processes of Government planning by committee and working party are particularly inappropriate for a fast-growing and supposedly commercial operation like major civil airports. The new long-haul terminal at Heathrow was held up for two years while the Millbourn Committee deliberated in 1955-57, then delayed for another six months "to test public opinion," and is now not expected to be ready until early next year. A multi-storey car park has been held up by similar bouts of official hesitation and, the select committee argues, by a failure to appreciate its full potential as a source of revenue. A more commercially-minded airport organisation would not have been so slow as the Government has been in practice to extract more income from rents and concessions. In particular it would not have entered into thirty-five year leases with the two oil companies supplying fuel at Heathrow under which the rents were based upon land values instead of throughput. A rent of halfpenny a gallon, the select committee calculates, would have provided Heathrow with an income of over £250,000 last year and probably over £500,000 by 1970. Above all, a commercial management would have provided itself much sooner than last April with current information about the costs and revenue earned by its various services.

Successive sharp increases in airport charges, culminating in the one-third increase in landing fees last April, have put London's airports in sight of breaking even. Provided "costs are controlled," the Ministry now reckons that Heathrow, Gatwick and (on a care and maintenance basis) Stansted will together just about cover all costs, including depreciation and interest on capital and their share of the cost of the Ministry's air traffic control by 1963-64. An independent authority should thus be able to start with a clean slate.

have been reduced by the production changes caused by introducing the Singer Vogue. Exports showed little sign of recovery; at 31,000 they were 2,000 more than in May but the same as those of April.

BANK CREDIT

Final Fling?

THE bankers now know what they have to face in the months ahead, and will surely tighten their grip on new lending. The Chancellor's measures may not hurt their profits. A 7 per cent Bank rate for the next six months, even if advances are held at their present level, would mean a considerable increase in earnings, and it would be surprising if this were fully offset by the likely switch to deposit accounts (now offering 5 per cent) and by losses on short bonds.

Although some of the buoyancy appeared to have gone out of advances in the closing months of 1960, increases in the first seven months of 1961 have averaged £46 million a month, compared with £64 million in the same months of 1960. In the four weeks to July 19th, advances increased by £52 million, of which £10 million was to state boards, following a similar rise in the previous month. Liquidity, however, rose in the June-July period by 0.7 per cent and is now 32.9 per cent—1.7 points above July, 1960. The increase in advances was largely covered by sales of a further £36 million of gilt-edged, and gross deposits rose little more than the increase of £77 million in liquid assets. Bank liquidity continues to benefit from the weakness of the gilt-edged market, which has checked Government funding, and from the re-finance facilities for export credits. "Other bills and re financeable credits" have risen by £91 million since the scheme was introduced in February, to a total of £255 million.

The latest increase in advances is due partly to the debiting of half-yearly interest. The increase for the two months to mid July, at £102 million, is almost the same as a year before. The increases, however, are unevenly spread: the Midland's advances rose by £19 million; the National Provincial's by £11 million; and the Westminster's by £24 million. With another 1 per cent to be paid in special deposits by September, the Midland appears the most vulnerable of the big banks with a July liquidity ratio of 31.3 per cent. However, its investment ratio at 14.1 per cent is above the average, and compares with 11.5 per cent at the District and the National Provincial—whose liquidity is a shade more comfortable.

BANK OF CANADA

The New Governor

SIX and a half years ago, Mr Louis Rasminsky was passed over in the succession to Mr Graham Towers, the retiring governor of the Bank of Canada. Whatever the reasons then were, this week's news of Mr Rasminsky's appointment to succeed Mr James Coyne will be widely welcomed, not least because he is the "insider" who could do most to restore the prestige of the Bank after the painful business between Mr Coyne and Mr Fleming. The wounds sustained by the Bank, and indeed by the government, will take time to heal. Mr Coyne's success in his "You can't sack me, I resign" campaign was adroit to the point of brilliance but it was bound to inflict further damage on the prestige of the Bank already marred by Mr Coyne's altruistic but misguided speechmaking in the past two years. The respect for Mr Rasminsky outside Canada will doubtless help him in his urgent task of fence mending at the Bank.

Wider problems, however, remain to be solved before the relations between the Canadian government and the Bank are wholly satisfactory. In the end, a government must be master. Its wise course is to give a central bank independence of operation within a framework of economic and monetary policy for which government alone in these days can be responsible. The wisdom of central banking is to combine authority of view with discretion in its public expression, to conduct its technical business with high efficiency, and to earn the respect of the financial and business community and of the general public. These principles have been admirably set out in a recent review by the well-known firm of bond dealers in Toronto, Saunders Cameron Ltd. The extracts below are printed with their permission:

> The forthcoming Royal Commission on Finance will have broad terms of reference, but we think the structure, legislation and relationship with government of the Bank of Canada ought to be one of their earliest concerns.
>
> As Mr Coyne suggests, government should be legally responsible for the Bank's monetary policy, leaving the details to the Bank's discretion. Government should not be able to accept plaudits for popular actions, leaving the Bank to take the brickbats for unpleasant acts.
>
> Legislation defining the status and responsibility of the Governor, directors and the Minister of Finance merits scrutiny. We would think that directors ought to enjoy more responsibility in the management of the Bank, meeting more often than the customary four or five times a year, even if this means having a few full-time executive directors living in Ottawa. The fetish of regional representation and diversity of occupation might be abandoned, with an eye to securing persons of broad financial experience, even if this means weighting the board with banking, trust and investment types from major financial centres. The more expertly the directors comprehend what the Bank (or Governor) is doing, and why, the better they will be able to advise.
>
> Legal powers of Bank of Canada over other financial institutions are rather few. The Bank may vary the cash reserve ratios of the banks, and it may set Bank Rate—although it has rejected this latter responsibility. . . . We hope the old system of fixed Bank Rate returns.
>
> Probably the powers of the Bank ought to be enlarged, not only as concerns chartered banks, but also as regards non-banking financial institutions (now beyond its control), whose independence may frustrate monetary policy. . . . We think the Bank's powers in this regard should be most carefully spelled out.
>
> In recent years, the Bank . . . has been making suggestions, beyond its legal powers, and has had mixed success in having these adopted. . . . Collectively the suggestions created resentments which might have been absent had the Bank been merely the executor of Parliament's legislation. . . . Some of the Bank's suggestions, in recent years, are thoroughly worthy, such as the secondary reserve ratios, although there are differences of opinion as to the level thereof. The "notional segregation of savings deposits" provoked a public uproar, yet may not be too far removed from the actual practices of some banks. . . .
>
> Surely there is a case for Parliament giving Bank of Canada every specific power which Parliament is convinced the Bank should have, and not one bit more, after hearings involving all interested parties. . . . Emergencies might be met by orders-in-council, valid until the next session of Parliament, which must be given a chance to replace them with legislation, or let them lapse.
>
> The Bank's voice on the subject of monetary policy should always be heard with respect and attention. Its views on other matters ought to be welcomed (when expressed privately) by the appropriate Minister in the government. But when the Bank, or its officials (even when they may try to assume a private capacity) publicly propagate views on general taxation policy, tariffs, nationalistic or socialistic schemes, or foreign investment, there is grave danger.

These are matters on which the Canadian government and the Bank ought to be ready to agree after their recent public miseries.

BRITISH DRUG HOUSES

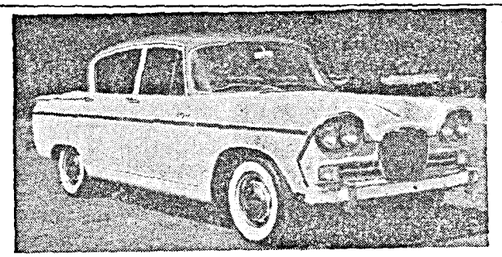
No Real Alternative

SHAREHOLDERS in British Drug Houses have been deluged with more circulars this week, but their situation remains much as it was before the intervention of William R. Warner, which led to the postponement of the meeting to consider the proposed link up with Mead Johnson for a fortnight. When shareholders meet next Monday the only concrete proposals before them will be the proposed deal with Mead Johnson, in which the latter proposes to lend £5 million in cash to BDH in exchange for a 35 per cent stake in the equity.

The proposals from William R. Warner, the British subsidiary of the American company, Warner-Lambert Pharmaceutical, boil down to the suggestion that BDH should make a reverse bid for Warner on terms to be worked out by the accountants of the two companies. The fact that these proposals are so imprecise is attributed by Samuel Montagu, Warners' advisers, to "the continued refusal of the BDH management, in spite of repeated requests, to interchange information and financial data which we and Warners consider to be essential to the formulation of a specific proposal fair to all concerned."

In a spirited reply to this criticism Mr Geoffrey Eley says that no accountants could evaluate the growth potential created by BDH's developments, either in progress or contemplated. In addition he says that the proposal that BDH should exchange information "upon all practical and business matters . . . and prepare detailed information as to the very substantial capital and development expenditure (estimated by BDH at over £5,000,000) incurred and contemplated by BDH" would mean that if the merger came to nothing valuable information would have been given to a keen competitor. Mr Eley says that the Mead Johnson link-up has many advantages over the Warner proposals; perhaps his strongest argument with Bank rate at 7 per cent is that Mead Johnson is offering £5 million at 5 per cent for 7½ years while Warners propose "to procure that loan facilities at current interest rates . . . will be made available in such amounts to as are agreed to be necessary and profitable." It seems clear that while the Mead Johnson plan is well short of ideal, it is in fact the only runner and in view of the earlier tally of proxies it now seems likely to be approved.

UNIT TRUSTS



Secession and Disunity

AT the first annual meeting of the Association of Unit Trust Managers the late Sir Oscar Hobson, the first chairman of the association, said that he was impressed with the spirit among the members of the association; he also assured the meeting that there had been plenty of argument. Events have now taken on a different complexion with the resignation of the National group from the association.

Formally, the split is over the National group's refusal to supply for the individual trusts within its group the value of their funds and the number and value of units sold and repurchased in each. This rule of the association was made six months ago and other unit trusts have complied with it. They supplied the association with the necessary information "in confidence" and the association only published a total figure for the movement. Mr T. D. Mullins, the managing director of the National group at last week's meeting put forward an amendment to this rule (with which it has never complied for it has always submitted "global" figures for all its trusts) and as this did not receive the necessary majority he resigned on behalf of his group.

That the dispute between the association and the National group went deeper than just a divergence of views on this particular issue is evident from the latter's statement that the cost of the association was "inordinately high and out of all proportion to the benefits which the managers receive." Yet Mr Mullins was on the general purposes committee that drew up the association's constitution and presumably approved the fees and contributions which were laid down. The National group has now resurrected the Unit Trust Association, originally formed in 1936, and it has invited other unit trusts to join it. Thus two major groups are now outside the association—the National group and the Municipal and General group which has never been a member. The latter's relations with the association have, however, remained good and M and G has supplied it with its monthly figures. M and G has been critical of the association in the past, initially because the association did not have any rules and later because the rules it laid down were not strict enough. But the association's firm attitude in the present dispute has not gone unnoticed by Municipal and General and it has welcomed the appointment of Mr Kenneth Cole as the new chairman of the association. He has not an easy task ahead of him, for the movement is far from united in its attitude to managerial practices and to block offers and the association has now been weakened by the secession of the National group. The split, in fact, lessens the strength of the argument put by the association to the Jenkins Committee last

In the Rootes Vogue

THE new Singer Vogue is very much the style of car that Rootes has specialised in for the past decade: a reasonably compact four-seater saloon, which makes some concession to current styling trends but in so restrained a manner that, with revised trimmings, the basic body shell should be able to survive for many years. In mechanical design Rootes has stuck strictly to conventional answers with this car, which differs from the Gazelle chiefly in having an engine of 1,600 cc instead of 1,500 cc—it is in fact the unit used in the Sunbeam Rapier, but fitted with one carburettor instead of two—which develops 62 bhp, compared with 56 bhp from the old engine; while the wheelbase is five inches longer, and the front track 2½ inches wider. The latter, which is combined with stiffer front springs, should help to provide better cornering; the extra wheelbase has been used mainly to bring the passenger compartment clear of the wheel arches, with the front seat set further back and the rear seat further forward, than to increase body space. The length of the car is increased by only 1¼ inches, but the weight is 1 cwt more. There are only four points that need greasing; nylon and rubber bushes have replaced metal bearings on the suspension and steering.

Selling for £956 at the new rate of purchase tax, the Vogue is competing with the Ford Zephyr and Vauxhall Velox; the Gazelle used to be nearer to the price of the Consul and A55, but its basic price has now been cut by £23, with the heater thrown in free, so that it will undercut these models. That Rootes has found it necessary to charge effectively £40 more for the Vogue than it used to ask for the Gazelle suggests that it finds an increase in its margins necessary; the new car should not cost much more to make than the Gazelle. The low rate of output that Rootes has experienced over the past year will have raised its costs, but so have increases in the costs of raw materials. The rather unexpectedly high price of the Ford Classic shows that other makers are suffering from this and it is likely that other new models that appear this year will also cost more than the models that they replace.

year that "the many details of the operation of unit trusts which the board now attempt to regulate should in future be dealt with by the association acting in collaboration with the individual managers and trustees."

SUGAR

A Stir in Sugar

World production of sugar grew from about 5 million tons in 1880 to 58 million tons in 1960*. Since the war, growth in consumption has been more rapid than in any previous period and greater than that of any other major food. In general, sugar producers have not prospered to the degree that might have been expected; the "real" price of sugar in the free market (which covers only a third of all exports) in the five years to 1958 was only half the average for the first five years of the century. Despite the efforts of the International Sugar Council to match exports with the requirements of the free market, the price of sugar has dropped about £5 to just over £25 a ton since May. Apart from a brief period in 1959, it is now cheaper than at any time since the five-year international price support agreement came into force at the beginning of that year.

A prospective sugar beet crop in Europe of above average proportions was a major factor in the latest slide. For some time forward supplies of sugar have been offered at sizeable discounts; with deliveries from beet crops available in October, spot prices have now fallen, but forward discounts have narrowed. After alternating periods of ascendancy, beet sugar production again appears to be squeezing cane sugar in some of its markets. West Germany had a three-year trade agreement with Cuba under which it was obliged to take sugar. Because of its large domestic beet crops, 30,000 tons of Cuban sugar that should have been absorbed at the beginning of last year are now on offer in London. On a larger scale, the import needs of the whole of western Europe have been reduced by the largely unexpected increase in sugar beet production.

The influence of the maturing beet crop on prices is not a factor that the International Sugar Council can easily control. It set export quotas for suppliers as close to the minimum allowed under the agreement as practicable this year to produce an apparent balance between supply and demand. There is therefore little scope for shortening the lead still further next year, but after an exceptional season, European sugar beet production may be several millions of tons lower in 1961-62. Though the problem of finding alternative markets for Cuban sugar has been solved the world market has been knocked severely and there appears to be almost no bottom to prices for large tenders.

* *The World Sugar Economy*, 1880-1959, by The UN Food and Agriculture Organisation.

FOREIGN BONDS

Activity in Amsterdam

A correspondent writes:

The Amsterdam bourse was closed to foreign bond issues in 1955. In May it was reopened with a quota of Fls. 365 million, equivalent to £36.5 million, and this week the final balance of the quota was absorbed by a proposed Fls. 12.5 million 5½ per cent bond loan of the Norwegian Shipping Mortgage Bank. Ten loans have squeezed into this narrow allotment and most of them were heavily oversubscribed. The Dutch stags worked hard, submitting multiple application forms, and dealings in the bonds have begun at a premium. A queue of new borrowers waits for the Nederlandsche Bank to extend the quota, and some Dutch observers feel that in view of the continued liquidity of the capital market they will not have long to wait.

Foreign loans were originally barred from Amsterdam because of the heavy capital

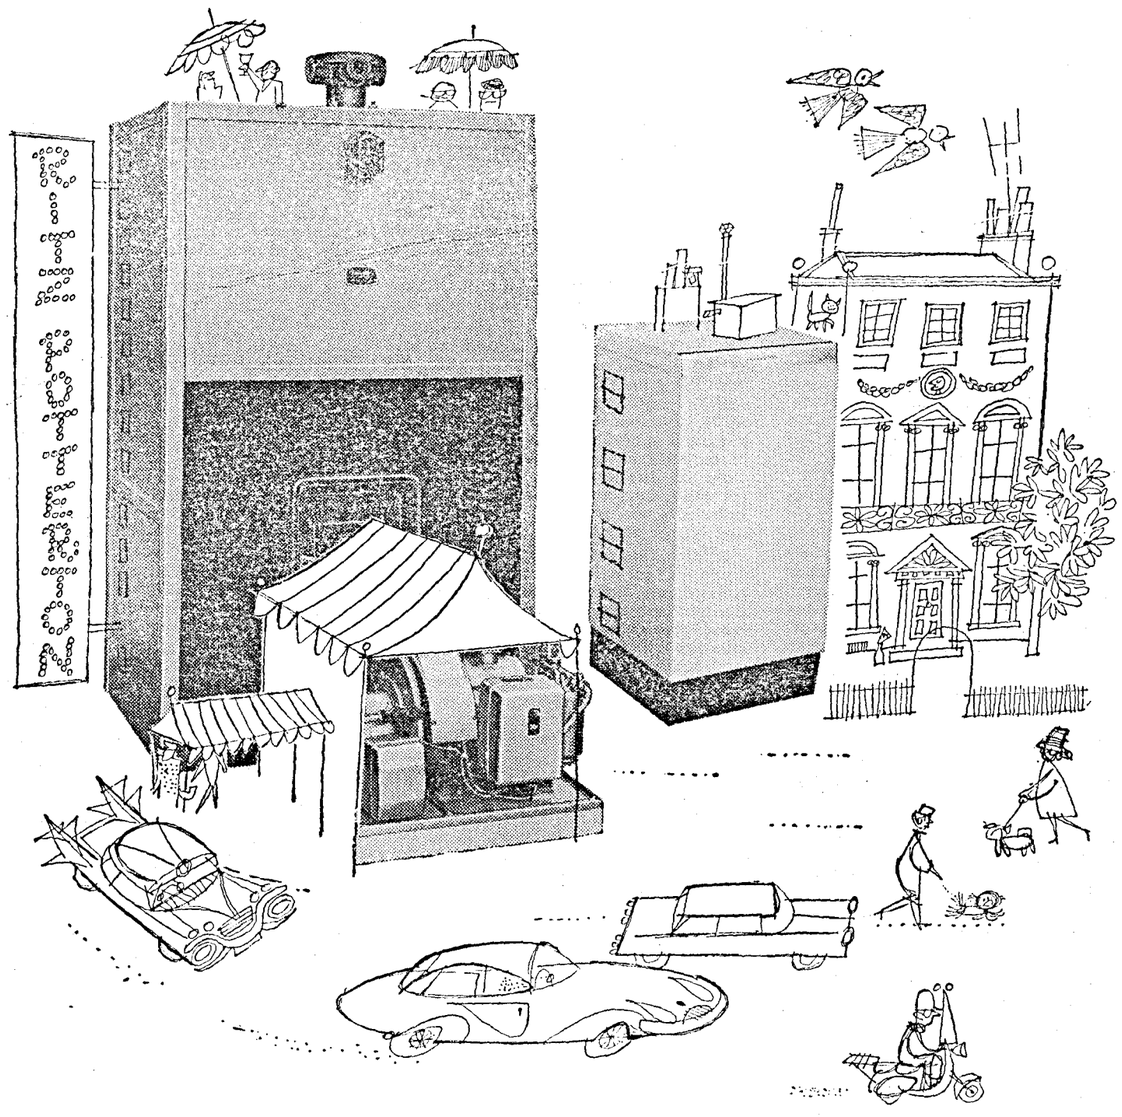
demands of the Dutch local authorities. But in the past six years these demands have been largely satisfied and the Netherlands has acquired, in common with some other continental countries, the problem of a large balance of payments surplus. Its gold and foreign exchange reserves rose from £477 million at the beginning of 1960 to £592 million immediately before the guilder revaluation in March. The government's success in restraining Holland's internal boom had the effect of maintaining the payments surplus, which produced two policy decisions: first to follow the revaluation of the deutschmark by a similar revaluation of the guilder; and secondly to open the Dutch capital market to a limited extent to foreign loans. Such loans are seen as an important influence in controlling domestic liquidity and reducing the balance of payments surplus.

COFFEE

More Agreement

Nor a month passes without coffee producers meeting somewhere to discuss ways of supporting prices, but July's crop of conferences has probably been more significant than any earlier discussions this year. There are now several bodies concerned with coffee in Africa and Latin America, but this fact has not diminished the support of producers generally for a stronger International Coffee Agreement. Though some African exporters have been in ICA for only one season and they now have an Inter-African Coffee Organisation of their own, they have sensibly used it as a stepping stone towards greater co-operation with the more powerful Latin American producers. A "declaration"—a favoured form of agreement among coffee producers—was made this month in Rio de Janeiro binding Brazil and African countries to early discussions of their joint problems. Imports of green African coffee into the United States accounted for less than 2 per cent of that country's total imports in 1949. In 1955, Africa held 11 per cent of the market; in 1960 its share rose to 17 per cent, and in the first four months of this year it rose to 21 per cent. African producers already enjoy protected markets in Europe, and Brazil's concern at what Africans might do to the biggest exporter in its largest market is easy to imagine.

After the "declaration," coffee producers moved to Washington to look at suggestions for strengthening the present international agreement, and found the United States prepared to lend its powerful support. It is putting forward its own scheme for supporting coffee prices at a meeting of American states called for August 5th, and has been advised by its domestic trade association to join the ICA.



According to the United States Department of Agriculture, 62 million bags of coffee will be available for export next season, compared with 55 million bags (of 60 kilos) in 1960-61. It is estimated that importers took about 42 million bags in 1960, and the ICA fixed export quotas to controlled markets at 36 million bags for the quota year to September. Despite the massive surplus, which Brazil is to alleviate by consigning 6 million bags of poor quality coffee to the fire and effectively discouraging its production by adjusting growers' receipts, like eager beavers the coffee producers have already thrown up such a strong dam between surplus output and calamity that one American broker claims that confidence in coffee—in contrast to the current level of prices—has never been higher.

COMPANY MEETINGS

THE DISTILLERS COMPANY LIMITED

CHAIRMAN'S STATEMENT

In view of the current Rights Issue the Board of The Distillers Company Limited has deemed it desirable to publish the Chairman's Statement in advance of the publication of the accounts. The accounts are now being printed and will be posted to shareholders on the 23rd August.

GENERAL OBSERVATIONS ON TRADING

The trading results for the year were again a new record in earnings, which when considered in relation to the exceptional profit last year, and taking into account the rather unsettled conditions in industry generally, can justifiably be regarded as very satisfactory.

The total value of the Group's turnover was £263 million, which was an increase of 13 per cent over the previous year. Scotch Whisky and Gin Companies on this occasion entirely accounted for the increased profit, and their proportion of the total is at present 82 per cent, the Industrial Group accounting for the balance of 18 per cent. More detailed reference to these Groups will be made later in this report.

Turning now to the Accounts, the profit for the year to March 31, 1961, was £32,079,568 compared with £30,419,758 last year. Income from trade investments was practically the same at £2,378,592 and interest on Loan Stocks was some £60,000 lower at £590,432 as a result of the repayment last September of the last £2 million of the 3½ per cent Unsecured Loan. The profits attributable to outside shareholders in subsidiary companies were £377,122 against £533,715 last year, and the profit of the Group before taxation was thus £33,490,606 compared with £31,610,124.

With the increase in profits tax to 12½ per cent, taxation required £16,266,382 against £14,743,700 and therefore the Net Profit after tax was not much higher than last year at £17,224,224 (£16,866,424). Of this, £3,493,637 has been retained by subsidiary companies and, after charging the cost of the recent capitalisation of reserves, £109,780, and adjusting taxation for the previous year, the sum of £13,656,219 remains to be dealt with by the Company.

Your Board recommend that a final dividend be paid on the Ordinary capital at the rate of 8½ per cent, which, with the interim dividend at 6 per cent paid prior to the two issues of capital mentioned later, is equivalent to 13½ per cent for the year on the capital as augmented by the capitalisation of reserves. For the purpose of comparison, the rate last year corresponding to 13½ per cent this year would be 12½ per cent on the capital as increased by the scrip issue.

The Board have reviewed the prospects for the current year, and, having regard to the further increase in profits tax levied in this year's Finance Act, intend to declare an interim dividend in December at the same rate as last year, namely 6 per cent, but on the higher capital created by the capitalisation of reserves and the current Rights issue.

At March 31, 1960, the issued Ordinary capital of the Company was 157,516,931 shares of 10s. each. By the capitalisation of reserves, the capital was increased by 31,503,386 shares and, in connection with the offer to the ordinary stockholders of The British Xylonite Company Ltd., 7,443,437 Ordinary shares had been issued at March 31, 1961, making the total Ordinary capital at that date 196,463,754 shares of 10s. each fully paid.

In the Consolidated Balance Sheet, we have on this occasion incorporated the assets and liabilities of the British Xylonite Group as at that Company's former date of balance, December 31, 1960, as in view of the date of acquisition of the capital of the Xylonite Company, it was impracticable to arrange for a change in its accounting date to coincide with ours. If, on examining the position in detail, there is no serious objection from a taxation viewpoint, we shall arrange accordingly.

However, the consolidation of the Xylonite figures with our own make comparison with the previous year somewhat less easy than usual. Our own investment in buildings and plant increased by approximately £7½ million. The main items were the construction of additional warehousing facilities for our Scotch Whisky business, and part of the cost of our new acetic acid plant at Hull, and of the latest extension to our polyvinyl chloride plant at Barry. Our stocks again increased, owing mainly to the larger quantity of Scotch Whisky held in warehouse.

The reserves of the Group have diminished by the amount applied in payment of our recent scrip issue, £15,751,693, and increased by the retention of profits for investment in the business, amounting to £9,060,436. They have also been augmented by the premium attributable to the issue to the stockholders of The British Xylonite Company Ltd., computed at £3,117,909 on the basis of net assets acquired. The total reserves of the Group now stand at £27,687,135.

In my Statement three years ago, I foreshadowed the possibility of fresh capital being required. The increased volume of trading since then and projected capital investment programme over the next few years make it clear that it is now desirable to provide additional funds by way of new capital. The Board therefore decided to make a Rights issue in the proportion of one new Ordinary share for every ten held at June 1, 1961, at a price of 32s. 6d. per share. Shareholders have already received full information on this in the circular letter dated July 7th, which accompanied the provisional allotment letters.

Before dealing with the year's operations in detail, I would refer to the increase from July 1st in the retail prices of Group standard brands of Scotch Whisky and Gin in the home market of 1s. 6d. per bottle to 39s. for Scotch Whisky and 37s. 3d. for Gin.

This increase was necessary because of rising costs, particularly in the distributive sectors of the industry.

SCOTCH WHISKY

Distilling operations by our Malt and Grain Distilleries have been maintained at a high level of output and efficiency throughout the season.

A new technical control establishment has been erected in Elgin, Morayshire, to provide closer and more effective control of the operations of our forty-one Malt Whisky Distilleries, the majority of which are located within easy reach of Elgin, and beneficial results have already been achieved through this arrangement.

Cardow Distillery, Morayshire, has been completely reconstructed and re-equipped. Distilling was resumed last May with a substantial increase in production. A large part of Talisker Distillery, Isle of Skye, is also in course of construction following upon the destruction of the still-house by fire.

I referred last year to the new blending and bottling plant and offices of John Dewar & Sons Ltd., near Perth. Good progress is being made and the plant will be in operation by the end of this year.

Additional Scotch Whisky bonded warehouses are now being constructed at Menstrie, Clackmannanshire, to accommodate our increased stocks.

Scotch Whisky stocks held by the entire industry at March 31st last once again showed an increase, and amounted to 296.9 million proof gallons, as compared with 267 million proof gallons the previous year.

The constantly rising levels of stocks reflect the current optimism of the industry in general regarding the future trend of sales. As I have stated previously, our own production policy is based on our best forward estimate of market conditions, taking into account the rising consumption of recent years and the evidence that Scotch Whisky has a wider appeal and acceptance than ever before in all parts of the world.

The total sales of the industry during the year under review have shown a substantial increase in both home and export markets.

A marked increase of approximately 14 per cent has taken place in home trade sales, and it is a special point of interest that this is the first time that home sales have reached the pre-war level.

I am glad to say that our brands have shared in these increased sales, and they enjoy a very satisfactory proportion of the home market. Having regard to the growth in population and the higher standard of living in recent years, there should be opportunities for still further expansion.

It is also not without significance that while home and export sales prior to the war were approximately equal, viz., 7 million proof gallons each, exports of Scotch Whisky have more than trebled since that date.

The Scotch Whisky Association again made strong representations to the Chancellor for a reduction in the present exorbitant rate of spirit duty. It should be noted that duties on alcoholic beverages other than spirits have been materially reduced in recent years.

So far as exports are concerned, the U.S.A. continues to be the largest single market, although competition has become more intense. Last year I referred to the USA tax regulations under which imports of Scotch Whisky in bottle at the normal marketing strength of 86° American proof are taxed on an assumed basis of 100° proof, whereas American Whiskies incur duty only on the actual alcohol content. We consider this to be an unfair handicap to our industry and the assistance of the Board of Trade has been sought in an endeavour to have this discrimination removed.

In Canada the present state of the economy has militated against any substantial increase in sales. The main problem, however, is the basis of assessing duty and the method adopted by the Provincial Liquor Commissioners for determining selling prices, which operate unreasonably to the disadvantage of Scotch Whisky.

Last year I referred to the substantial increase in our sales to Australia as a result of the removal of import restrictions, and I am glad to say that our position in that market has been fully maintained.

In New Zealand, too, we are in a strong position, but unfortunately, after a period of progressive relaxation of controls the New Zealand government has again found it necessary to take steps to reduce the volume of imports of Scotch Whisky and other spirits.

Perhaps one of the most significant and encouraging features in the last few years has been the very substantial increase in the Industry's sales to Europe.

So far as the Common Market is concerned our investigations to date indicate that our position should not be materially affected if and when HM Government decides that the United Kingdom should join the Common Market.

In Cuba, also, business has been severely curtailed and exports to that market are at present negligible.

I am glad to report that there has been a distinct revival of business in the Argentine which, for the period under review, has taken a leading place in the list of Central and South American markets. This is a position which the Argentine held before the war but it has not done so for many years past.

In surveying the export position generally the outlook is reasonably promising, but we are, as always, affected by local import restrictions. Competition too is becoming much more severe, but the strength of our brands in most world markets gives us every reason to hope for continued progress in those countries where import business can be carried on under more or less normal conditions.

GIN

I am glad to report that home sales of our brands—in particular Gordon's and Booth's—continue to increase and, during the year under review, reached a record level. This is particularly gratifying because, as I have indicated previously, our London Gin Companies are meeting growing competition, but there is evidence that the public's preference for our leading brands is based on our high and unvarying standards of quality.

The new bottling plant for Booth's Distilleries Limited at Brentford, Middlesex, was completed during the year, and is now operating well.

Once again, our total export shipments showed a substantial increase. As a Group we are the largest exporters of Gin in the United Kingdom.

With regard to overseas, the sales of our brands of Gin produced in the United States again showed a marked increase.

Our Gordon's Gin Distillery in South Africa continues in full production and sales show an

COMPANY MEETING REPORTS

encouraging increase. Our Brazilian unit, Destilaria Gordon Ltda., has now been in operation for two years, but sales have not yet reached a satisfactory level. We have now also commenced local manufacture of Gordon's Gin in Venezuela.

In France, local production of Booth's Gin has recently commenced, and sales are satisfactory.

VODKA

The potential market for Vodka in the United Kingdom has been under consideration for some time. It is now proposed to produce a brand for the home market under the trade name "COSSACK," which will be available for sale very shortly.

AUSTRALIA

Our subsidiary, United Distillers Pty. Ltd., has established a prominent position in Australasia in the production of Australian Whisky and Gin.

As was recently announced in the Press, your Company has acquired the entire capital of an old-established Brandy business in Australia, Tolley Scott & Tolley Limited, Adelaide. This acquisition will broaden the base of our present operations in Australia.

INDUSTRIAL GROUP

There was a satisfactory increase in volume of turnover of the Group, particularly in chemicals and plastics, but in the latter part of the year this was largely offset by lower selling prices which led to reduced profit margins. Competition was keen and was aggravated by the large increase in dumping. This applies, of course, not only to the chemical and plastics industries but over a large range of manufactures. In view of the deterioration in the national balance of payments, it is noteworthy that the criticisms which have been directed at the competitive ability of British industry have largely failed to emphasize this extremely important factor, which adversely affects not only our home market but also our ability to export.

However, while it is clear that strong competitive influences will continue to prevail, at least for some time, there is a substantial growth potential in the chemical and plastics industries and we expect to share in the expansion of demand which may be foreseen with reasonable confidence.

CHEMICAL DIVISION

During the past year, new plants were commissioned at Hull and Carshalton which have increased both the range and volume of our production of intermediates and speciality chemicals, for which there is a steadily growing demand.

The erection of the large acetic acid plant to which I referred last year, is proceeding well. The continuous phthalate plasticiser plant has proved entirely satisfactory but, unfortunately, had to be operated below capacity for much of the year owing to the world shortage of phthalic anhydride. Our associate company, Grange Chemicals Limited, has recently announced its intention to construct a plant with a capacity of 15,000 tons per annum for the manufacture of phthalic anhydride.

Our calcium carbide factory at Kenfig worked to capacity and all production was sold.

Carbon dioxide capacity was substantially increased and sales reached a new record level.

Much attention has been given to improving the efficiency of existing plants, and there has been steady progress in instrumentation and automation.

There have been increased sales by the associated companies of the Chemical Division. Orobis Limited, which produces lubricating oil additives, had its most successful year. Extensions to the Hedon Chemicals Limited vinyl acetate plant have been successfully commissioned on schedule and further expansion is now under consideration.

BRITISH HYDROCARBON CHEMICALS LIMITED

This Company, in which we have a 50 per cent interest, and its subsidiaries, Forth Chemicals Limited and Grange Chemicals Limited, have all had satisfactory trading results during the year under review.

Last October, plans were announced in the Press covering the establishment of a new petroleum chemical centre at Baglan Bay, South Wales, and work is now proceeding.

This new development at Baglan Bay is, of course, a progressive one, and it will afford the Company adequate facilities in the years ahead for increasing its scale and range of petroleum chemicals.

PLASTICS DIVISION

The increased capacity for Geon polyvinyl chloride authorised last year is nearing completion, and in view of the prospective growth in demand, consideration is now being given to a further extension.

Sales of styron polystyrene, produced by Distrene Limited were good and our plant is operating at full capacity. This result has been achieved by marketing additional grades to supply new outlets in the packaging and industrial fields.

British Resin Products have also had increased sales, and polyester resins in particular have been well received for reinforced plastics applications. New water soluble resins, developed in our Research Laboratories at Barry, have created widespread interest.

The amalgamation of the operations of the British Xylonite Company Ltd. with our present activities in the chemical and plastics fields should produce economies and also benefit both companies in the pooling of research and engineering facilities.

BIOCHEMICALS DIVISION

This Division had a more successful year in spite of further deterioration in export prices of basic antibiotics. This improvement in trading results was achieved by reorganisation of production and research facilities, and by increasing diversification of the Company's range of products.

Overseas, our two subsidiary companies in Australia and New Zealand continue to make progress.

Sales of our unique sedative "DISTAVAL" have expanded considerably both at home and overseas. A number of new products incorporating this substance are being established.

There is constant need to develop new products in the highly competitive conditions which exist in the pharmaceutical industry. To this end, a new Pharmacological Laboratory has been established at Speke, thereby increasing the facilities available for screening of substances

which may have therapeutic value. Additionally, improved plants for processing antibiotics have been commissioned which incorporate new techniques evolved from our development work.

FOOD DIVISION

Home sales of yeast have remained steady at last year's levels, but our exports have continued to expand and additional capacity is now being installed for the production of dried yeast.

The Peerless Refining Company (Liverpool) Limited has successfully maintained its position as one of the principal suppliers of oils and fats to the Flour and Sugar Confectionery industries.

The Division as a whole had a very satisfactory year's trading.

AUSTRALIA

Our associated company, C.S.R. Chemicals Pty. Ltd., has had a difficult and disappointing year due to two main causes: decreased demand from many industries resulting from the credit restrictions imposed by the Australian Government, and severe import competition following the virtual abolition of import licensing. Unsettled conditions have resulted. It is to be hoped that the Australian Government will take steps to assist the young and necessarily high-cost Australian industries in these adverse circumstances. At the same time, every possible step will have to be taken by the industries concerned to improve their competitive position.

SOUTH AFRICA

In spite of the disturbed political situation in the Union, our associated company, National Chemical Products Limited, has made good progress with increased turnover and profits.

TECHNICAL DEVELOPMENT

Our Research and Engineering staffs, who play an important part in our diverse operations, have again been fully extended during the year.

In view of the increasing technical complexity of our activities, additional laboratory and library facilities are being installed at the central Research Department, Epsom. The total budget for research for the year under review was nearly £2.5 million.

PERSONNEL

We have had a successful year under increasingly competitive conditions, and the achievement of this success has been greatly assisted by the loyalty and keenness of all our employees, both at home and overseas. On behalf of the Board, I should like to record our grateful thanks to them for their untiring efforts in the service of the Company.

FUTURE PROSPECTS

As will be clear from the earlier part of this Statement concerning the raising of fresh capital, the Company is planning for expansion.

Scotch Whisky and Gin sales continue to be good and while we have to take into account a greater degree of competition in all markets, your Directors are of the opinion that over a periods of years the demand may well rise to appreciably higher levels. On that assumption, your Company will be well-equipped to take advantage of expanding and new markets.

The outlook for the Industrial Group is

generally favourable, subject, of course, to a return to more normal conditions in a number of industries which the Group supplies. In order to counteract the trend of world prices to lower levels, we are pursuing a policy of broadening the range of our products and increasing the production of certain existing materials. By this means your Company hopes to be in a position substantially to increase the present volume of trading and to achieve further improvement in earnings.

ALLIED IRONFOUNDERS LIMITED

GROUP SALES INCREASED:

PROFIT MARGINS REDUCED

MR G. S. STEVEN'S REVIEW

The thirty-second annual general meeting of Allied Ironfounders Limited was held on July 20th at Caxton Hall, Westminster, S.W., Mr G. S. Steven (Chairman and Managing Director) presiding.

The following is an extract from his circulated statement:

The trading profit of the Group for the 52 weeks ended April 1, 1961, is £2,829,425 compared with £3,005,081 last year the decline being attributable to increased costs of both manufacture and distribution which were absorbed in sales without corresponding increases in selling prices.

The profit available for disposal after retentions is £993,068, which, with the balance of £289,423 brought forward from last year, gives a total of £1,282,491 available for distribution and transfers to reserve.

The Directors recommend that £249,330 should be transferred to General Reserve to bring the total to £3,750,000, which, together with the balance of Unappropriated Profit of £676,569, makes up total Revenue Reserves of £4,426,569. The Directors also recommend that a final Ordinary Dividend should be paid, making 20 per cent for the year.

We have spent in total over £1,300,000 on modernisation and development in the year to April 1, 1961.

SOUTH AFRICA: Our plants at Durban and Newcastle were kept fully employed during the year, although there has been some reduction in sales during the last two months. We are excellently placed to take full advantage of any improvement in local conditions. There is no doubt that the standard of living of the native population is rising and that they are demanding increasingly more expensive appliances including electric cookers of which we are the largest makers in the Union.

After referring to the acquisition of Bilston Foundries Ltd. and J. S. & F. Folkard Ltd., the Chairman continued:

FUTURE PROSPECTS

The Building Industry, which absorbs the greater part of our production, remains prosperous and, provided there are no serious international complications or internal economic crises, the year ahead appears to offer an opportunity for the continued expansion of business.

Virtually none of our products attra Purchase Tax and we are therefore less likely suffer directly from the Chancellor's "econor regulator"—should he decide to use it—th many other companies.

The sales of the Group showed a signific increase during 1960/61, without taking i account the turnover of recently acquired Co panies, but the increased costs of selling a manufacture, which we absorbed to keep pri stable, have reduced profit margins. Recent however, we have been compelled to ease t burden by increasing prices for certain produc

In my statement last year I mentioned t growing interest in central heating boilers a our awareness of the potential of this market our acquisition of Frederick Kay (Engineerin Ltd. and Watts Metal Industries Ltd. Th market continues to develop, and we have ne formed a new Sales Division to exploit it to t best advantage. The new Division is known the Aga Heating Division. The solid fu appliance industry as a whole has benefited fro the new marketing policy of the National C Board, and our sales of Aga solid fuel boile in particular show an encouraging increase.

We have installed plant and equipment f the production of plastic goods during the ye and many of the Group's requirements are bei met from our own resources. Rainwater a soil pipes and fittings are now available on t market in plastic as an alternative to cast ir and our own new plant for the manufacture plastic pipes and fittings is now in producti and the output is undergoing user trials. It our intention to enter the market during the c rent year, and the results of the advanced te niques which we are employing are m encouraging. As the largest producers of pip and fittings in cast iron for the building indus we shall be in a position to supply them in b the new and the traditional materials.

The report and accounts were adopted.

G.R.A. TRUST

POINTS FROM MR F. S. GENTLE'S STATEMENT

The 33rd Annual General Meeting was he on July 26th.

In the Chairman's Statement, previously c culated, Mr Francis S. Gentle, CBE, a referring to the improved results, reported t the £200,000 Olympic Enclosure at the Wh City had been widely acclaimed and wo strengthen the Company's competitive positi

PRINTING · PLASTICS · HEATING · DATA PROCESSING

THE DE LA RUE COMPANY LIMITED

De La Rue

The value of diversification & international expansion

MAIN POINTS FROM MR. B. C. WESTALL'S REVIEW 1961

HIGHER CONTRIBUTION TO PROFITS BY BANKNOTE AND HEATING SUBSIDIARIES

Although the results of the Formica Group are lower this year, those of the Thomas De La Rue Group and the Potterton subsidiary are substantially better. Group profits before tax are fractionally above last year. Net profit after tax is slightly lower, because Thomas De La Rue and Potterton are wholly owned subsidiaries (American Cyanamid own 40 per cent of the equity in Formica International Limited), the net profit attributable to The De La Rue Company is some £30,000 better for 52 weeks, as compared with 53 weeks last year.

PROFITS OF MAIN SUBSIDIARIES

	1960/61 £	1959/60 £
Thomas De La Rue & Co. Ltd.	587,899	321,186
Formica International Ltd.	1,506,548	1,786,819
Thomas Potterton Ltd.	351,570	257,124

FURTHER INCREASE OF EXPORTS AND OVERSEAS BUSINESS

Our exports rose from £4,592,000 to £5,243,000. Output of our overseas companies rose from £4,337,000 to £5,217,000. Of the total turnover of £18¼ million, exports and overseas business accounted for £10½ million this year, compared with £9 million out of £17 million last year. Of the total capital of the Group, 35 per cent is now invested outside the U.K.

INCREASED TURNOVER EXPECTED TO OFF-SET CONTRACTION IN MARGINS

Profits before tax as percentage of turnover fell from 13.4 per cent to 12.3 per cent, but it is likely that this contraction will be more than off-set in future by the Group's expanding turnover.

BALANCE SHEET

Due to heavy investment in plant and machinery, the surplus of current assets over current liabilities is now £3,338,343 compared with £4,202,199. Consideration is being given to the best course to adopt when the Company will need further finance.

PROGRESS OF SUBSIDIARY AND ASSOCIATED COMPANIES

The Thomas De La Rue Group

Orders for banknotes have increased and additional business in banknotes and stamps has been taken over from Waterlows. Thomas De La Rue's banknote factories are working to capacity and the order book is fuller than last year. A contract has been obtained from the Japanese Government for banknote printing machines. The new financial printing business is expected to develop steadily in the next two to three years; the subsidiary in New York has turned the corner and it is hoped will obtain a bigger share of bond and share certificate business in America. Our Mexican and Colombian companies have only just been incorporated—Latin America has good prospects for expansion. De La Rue Instruments have made remarkable strides with 80 per cent export business in banknote counting machines and there has been a rapid expansion in the Security Express transport services for cash and valuables now extending to cities outside London.

Formica International Limited

This has been a mixed year. The French and Australian subsidiaries show a substantial improvement, and in its first year the New Zealand company has done surprisingly well, with an initial loss of only £6,000. The German company has been slower to develop due to technical and plant construction difficulties. The results of Formica Limited in the United Kingdom have been a little disappointing because of credit restriction on the furniture industry but this was partly off-set by expansion of industrial laminates. Since the close of the year, sales of FORMICA BEAUTYBOARD and decorative laminates have been improving, and a new grade of Formica laminate for exterior use has been produced.

Thomas Potterton Limited

Turnover has increased substantially in spite of credit restrictions and the number of boilers sold has increased even more. Increased profit has come partly from turnover, but mainly from reduced costs of production. The range of gas boilers has been re-modelled and the range of oil boilers extended and a new gas-fired, warm air circulator introduced. A new Works has been bought at Leamington Spa to handle increased production and a new subsidiary has been formed in Australia.

De La Rue Bull Machines Limited

Progress has been as expected and a number of important contracts obtained. Energetic efforts are being made to train more personnel for this highly technical business. As previously stated, this is a long term project which cannot be productive of profit for several years.

OUTLOOK

This must depend on the general conditions of trade throughout the world. Subject to this reservation, and bearing in mind our investments abroad, the prospects for the current year appear satisfactory, and in years to come we shall reap the reward of our investments in the last year or two.

Copies of the full Report and Accounts can be obtained from De La Rue House, 84-86, Regent Street, London, W.1.

SALIENT FEATURES

	1961	1960
Group Turnover:	£	£
Home Sales	8,082,000	8,127,000
Export Sales	5,243,000	4,592,000
Sales by Overseas Companies	5,217,000	4,337,000
	18,542,000	17,056,000
Group Profit before Tax	2,287,000	2,282,000

New penicillins in production

Testing a new penicillin fermentation in sterile conditions at Beecham Research Laboratories

MR. H. G. LAZELL, Chairman of Beecham Group Limited, presided over the 33rd Annual General Meeting of the Group held in London on July 26th. The following are the salient points from his statement.

Trading Results

Record world-wide sales of £56,344,000 were achieved by increases of 7% in the home market and 25% in markets overseas. Trading profit increased by 7% to a record total of £8,364,000. Results of the year's operations are summarised below with comparative figures for the previous year.

	1960/61 £	1959/60 £
Home sales	37,092,000	34,510,000
Overseas sales	19,252,000	15,449,000
Total sales	56,344,000	49,959,000
Trading profit	8,364,000	7,843,000
Ordinary dividends	2,014,000	1,812,000
Profit retention	2,004,000	1,866,000
Ordinary dividend rate	30%	27%

Research and Drug Prices

The second of the new Beecham penicillins, Celbenin, was introduced to the medical profession in September 1960. Celbenin is effective in grave infections caused by virulent staphylococci which are resistant to the traditional penicillins and other antibiotics. Broxil and Celbenin will be followed shortly by several new penicillins which are at present undergoing the final stages of evaluation.

In view of these achievements it is disturbing to note the growing attacks on the whole pharmaceutical industry and particularly on that section of it which serves the National Health Service. The main accusation is that the industry is making excessive profit which materially increases the cost of the Health Service. The cost of the whole National Health Service is £740 million. Out of this total, only £55 million, or 7·4%, was paid to the pharmaceutical industry in respect of all drugs.

The primary factor governing drug pricing policy is the need to make adequate provision for research. The industry's progress depends on research which is becoming increasingly costly and increasingly speculative. For one successful product, hundreds are tested and rejected. If the industry is to have a sound financial basis, it must be allowed to recover its research expenditure from the very few marketable products which emerge.

We increased our expenditure on research last year to £750,000, of which half was devoted to basic pharmaceutical research. In addition, a sum in excess of £2¼ million is being spent on our Worthing plant. These figures will, I hope, demonstrate confidence in our ability to hold our own in this highly competitive field provided the British pharmaceutical industry is not subjected to ill-informed attacks and ill-considered restrictions.

Selling Overseas

During the past ten years our overseas sales have increased from £7¼ million to £19¼ million and, last year, overseas profit exceeded £2 million for the first time. Our important business in the United States continues to expand. Brylcreem is increasing its lead in the hairdressing market there and Silvikrin shampoo was launched in the autumn of 1960, supported by a national television campaign.

In my view marketing techniques have to be developed in a competitive home market before they can be used overseas. There is, indeed, good reason to believe that lack of competitive environment at home is, in many industries, a serious impediment to the expansion of overseas trade. Beechams have been fortunate in that they have had to operate in highly competitive markets in this country and consequently great pressure has been exerted on our research laboratories to produce better products, and on our marketing divisions to evolve better selling techniques. When, therefore, we venture overseas we can compete with the best that is there. In particular, the experience of television advertising gained in the home market enables us to use this medium with some degree of confidence in every overseas territory in which it becomes available.

Advertising

Serious attacks have been made recently on advertising in general and on television advertising in particular. Your company is the second largest advertiser in the country and I would like to emphasise what our experience of marketing consumer goods has taught us. It is this—that advertising alone is incapable of establishing a large and continuing sale for a product which does not possess some advantages recognizable by the public at large.

In general, heavy advertising is evidence of fierce competition and this usually arises when a few efficient companies are battling for supremacy. The result of such competition is, inevitably, that the nondescript products fall out of public favour and eventually disappear. In due course there remains a small number of heavily advertised products competing one with another, each perhaps with a marginal appeal to a particular segment of the population but none with a clear advantage. Critics contend that this exemplifies wasteful advertising. They overlook the fact that the public has been provided with products infinitely superior to those which would have been available in the absence of competition and which give better value than would otherwise have been possible. I must emphasise also that advertising is essential to a competitive economy and that unjustified interference with it in this country will certainly have a serious effect on our ability to develop competitive selling techniques and thus our ability to sell goods overseas. I can say with confidence that your company has been successful only because it has recognized certain principles:

It is unprofitable to advertise a product which does not present a distinct advantage to a substantial section of the public:

This advantage cannot always be pre-determined, however much is spent on scientific research and however carefully the evidence of consumer requirements is studied:

Much advertising is dramatised and some is exaggerated but it does not pay to exceed reasonable bounds because a product claim unfulfilled creates a reaction from the consumer who refuses to purchase a second time:

The consumer is always right: if a manufacturer indulges in the fallacy that the consumer has neither judgment nor sense—views which many critics of advertising appear to hold—he will make some very expensive mistakes:

The ultimate consumer panel is the mass of the British public, and very largely the housewife.

The final verdict on a product is passed when sales rise steadily to a figure which covers advertising costs and produces a profit.

THE GENERAL ELECTRIC COMPANY LIMITED

EXTRACT FROM DIRECTORS' REPORT

The Sixty-first Annual General Meeting of The General Electric Company Limited will be held on September 7 in London.

The following is an extract from the report of the directors for the year ended March 31, 1961:—

Of the consolidated profit of the Group the following amount has been dealt with in the accounts of the Holding Company:—

Profit for the year	£950,885
Net loss relating to previous years	48,702
	902,183
to which is added the profit brought forward from the previous year	2,342,006
	£3,244,189

The directors have made the following appropriations therefrom:—

Preference dividends for the year to March 31, 1961, less income tax	206,413
First interim dividend of 3 per cent on the ordinary stock, less income tax, paid April 7, 1961 ...	330,750
Second interim dividend of 7 per cent on the ordinary stock, less income tax, paid June 1, 1961 ...	771,750
leaving balance carried forward to the next account	1,935,276
	£3,244,189

TRADING EXPERIENCE

The sales for the year amounted to £118,595,000, or an increase of 1.4 per cent over last year. The direct exports of the G.E.C. Group from the United Kingdom amounted to £18,405,000 in 1960-61 against £19,813,000 last year. An increase in sales by overseas subsidiaries to £31.5 million from £28.6 million in the preceding year was achieved from locally manufactured products rather than by exports to them from the Company's factories in the United Kingdom.

The gross trading profit, before charges listed in Note 1 to the accounts amounted to £9,519,000 as against £11,074,000 for the previous year. After higher charges for depreciation, a further substantial provision for liabilities the amounts of which are estimated, and a provision of £266,000 against trade investments, the profit before taxation was £3,259,000 reflecting a reduction of £1,554,000 by comparison with the previous year.

Two factors are mainly responsible for this reduction in profits. In the first place, margins in the heavy engineering industry are meagre and this part of the Company's activities has contributed little to the earnings for the year, and secondly, the extremely unsatisfactory state of trade during the year in the radio, television, and domestic equipment industries has resulted in substantal losses.

When the announcements of the interim dividends were made the full extent of the losses in the Radio and Television and Domestic Equipment Groups was not apparent nor was the need at that time appreciated for substantial provisions in connection with traction activities. The unsatisfactory position which is now revealed in the accounts for the full year has confirmed your directors in the strong support which they gave to drastic decisions made by the management early in 1961. Your directors wish to say again that it will be some time before the full benefit of these decisions is felt.

The considerable increase in stocks of raw materials, work in progress, and manufactured goods which is largely associated with atomic and other heavy engineering contracts has caused the Company to draw heavily upon its overdraft facilities.

NUCLEAR POWER

A major issue still under discussion at the close of the year was the financial settlement with regard to the Hunterston atomic power contract. Your directors have the position constantly under review and believe that the provisions already made are adequate. It will be recalled that an amount of £500,000 was added to the provision against this contract in the previous year.

RADIO & ALLIED (HOLDINGS) LTD.

As part of the negotiations for the acquisition of Radio & Allied (Holdings) Ltd. which was successfully completed in April of this year, your directors declared a second interim dividend of 7 per cent on the ordinary stock of the Company in lieu of a final dividend. After taking account of the first interim dividend of 3 per cent, the total distribution for the year is 10 per cent, which is the same as last year.

CONTRACT CONTINGENCIES

The scale of the Company's contract operations generally is continuously increasing and your directors now feel it wise to nominate part of the general reserves of the Company as an insurance against contingencies which may occur in the future in any part of the contract field whether it be power, heavy mechanical equipment, traction, or communications. The amount of £3,000,000 has, therefore, been transferred from the reserve against future stock depreciation as a first step in the creation of a reserve against contract contingencies, pending a complete re-organisation of the reserves which is under consideration for adoption next year.

BOARD CHANGES

The Board extends its thanks to Sir Leslie Gamage, MC, who retired from the Chairmanship of the Company on December 31, 1960. Sir Leslie has served your Company with distinction for 42 years. He has been a Director for 36 years and Chairman for 3 years. His efforts and encouragement in stimulating exports, both within the Company and nationally as President of the Institute of Export, have contributed to the present high level of overseas trade in the electrical and allied industries.

The Board has elected Mr A. L. G. Lindley Chairman and Managing Director.

Mr Harold Hobson, a leading figure in the electricity supply industry, and a Director of your Company since 1950, has decided to retire from the Board. As mentioned in last year's Report, Mr A. S. Black, and Mr J. J. Gracie, CBE, retired during the year. You will certainly wish to endorse the Board's expression of appreciation for their service.

Sir Toby Low, PC, KCMG, CBE, DSO, MP, has been appointed Vice-Chairman, and Mr T. B. O. Kerr has been appointed Deputy Managing Director. Lord Coleraine, PC, and Mr E. H. Davison, as Director of Finance, have joined the Board, as well as Mr M. Sobell and Mr A. Weinstock, who have joined the Board following the acquisition of Radio & Allied (Holdings).

To strengthen the Company's management, a Management Committee of executive directors has been formed; its members are Mr A. L. G. Lindley, Mr T. B. O. Kerr, Mr E. H. Davison, Mr O. W. Humphreys, Mr R. N. Millar and Mr A. Weinstock.

CORPORATE DEVELOPMENTS

During the year your Company made an offer to the stockholders of Radio & Allied (Holdings) for the acquisition of their shares in that company in exchange for shares of your Company and a cash addition. This offer was successful and your Company has consequently secured a profitable business with high earnings and first-class management.

To increase their share in home and export markets in capital equipment, the G.E.C and Richardsons, Westgarth & Co. have decided to collaborate in the design, development, manufacture and sale of heavy electrical generating and power plant.

The G.E.C. is entering the field of industrial process control computer systems in conjunction with Thompson Ramo Wooldridge Inc. of Los Angeles, California. A joint company—International Systems Control—has been formed to market this equipment in the United Kingdom, in the European Free Trade Area and in the Commonwealth.

In co-operation with Associated Electrical Industries two joint companies are being formed for the manufacture and sale of glass and metal products respectively used in the electric lamp and valve industries.

The Company's close association with International Computers and Tabulators continues. A new company has been formed, I.C.T. (Engineering) in which the G.E.C. has a minority holding, to carry out research and development previously handled separately by the two parent companies.

During the year discussions took place with the English Electric Company to explore the possibilities of a merger of the two Groups by means of a holding company; it was not possible, however, to reach agreement and the negotiations were discontinued.

The Chairman, at the forthcoming annual general meeting, will inform the stockholders regarding the progress of the Company in the current year and will also give up-to-date information regarding matters of importance. The Chairman's statement will be circulated to stockholders after the general meeting.

WOODHEADS BREWERY LIMITED

The twenty-fifth annual general meeting of Woodheads Brewery, Ltd., was held on July 20th in London, Mr Richard P. Beamish, chairman and managing director, presiding.

The following is an extract from his circulated statement for the year ended January 31, 1961:

The trading profit of the Group amounts to £113,744, as compared with £123,894 for the previous year. The decrease of £10,150 is wholly accounted for by a drop in trade of our Mineral Waters subsidiary.

The year has been a rather difficult one in that we have had to meet an intensification of what can only be called a price war in the brewing and its ancillary industries. This price cutting is, of course, almost entirely confined to the free trade, which constitutes a very large number of the outlets we serve.

For some time past, shrinking margins have been absorbed by the brewing industry, but at long last there is a move for increased prices which, if its effect is not neutralised by the continuance of this practice, should maintain and perhaps increase the profits of the group.

Depreciation and other charges, less credits, amount to £48,286, leaving a balance of £65,458. Taxation based on the profits of the Group absorbed £38,266, or no less than 58 per cent of the profits. There remains £22,244 available to the holding company for appropriation.

The report was adopted and the proposed dividend of 15 per cent, and bonus of 2½ per cent, on the Ordinary shares were approved.

BILLERUDS AKTIEBOLAG

(Pulp and Paper Manufacturers)

Säffle — Sweden

Founded in 1883

HIGH PRODUCTION AT RISING COSTS

Share Capital: Kr. 140,000,000

Board of Directors: Landshövding Bo Hammarskjöld (Chairman), Godsägare Gösta Liedberg, Direktör K. I. Hising, Riksdagsman Leif Cassel, Direktör L.-E. Thunholm, Direktör Anders Smith, Disponent F. Hartmann and Brukdisponent Ake Pihlgren.

Registered Office of the Company: Säffle.

Managing Director: Åke Pihlgren.

SUMMARY OF 1960 RESULT

	Million £ 1959	1960
Net invoiced value	19·3	20·9
Gross profit from industrial operations	3·9	4·0
Earnings from forestry	1·1	0·9
Depreciation and appropriations	3·0	3·3
Taxes	1·1	1·0
Net profit	1·0	1·0
Dividend	0·7	0·7

PROPERTY AND PERSONNEL

Land: productive woodland	706,000 acres
Buildings and Plant: insured value	£56·7 million
Employees: total	8,400

1960 IN SHORT

Sold quantities:	Sulphite pulp	154,000 metric tons
	Paper	132,000 metric tons
	Timber	42,000 standards

Acquired companies:

Ohs Bruk AB	6,000 tons of bleached sulphite pulp per annum 12,600 acres of productive woodland
Sörstafors Pappersbruks AB	12,500 tons of unbleached sulphite pulp per annum 3,500 tons of unbleached MG sulphite paper

Investments: A new MG paper machine started production at the Gruvön mill.

Total investments at the eight pulp and paper mills, six sawmills and about 60 water power stations belonging to the Company exceeded £2 million.

Research: The work carried out by the Company in developing pulping and paper-making processes was further accelerated by more than 120 employees at the Research Laboratory.

COX AND WYMAN LIMITED

SUBSTANTIALLY INCREASED TURNOVER

The second annual general meeting of Cox and Wyman Limited was held on July 25th in London, Sir Christopher Bullock, KCB, CBE, (the chairman), presiding.

The following is an extract from his circulated statement:

In my Statement of last June I informed you that both our main Works had healthy Order Books which should keep them fully occupied until the autumn; and that, if this state of affairs continued, I saw no reason why we should not be able to produce satisfactory results for the year ended April 1st last. In the event we found that there was a substantial overlap into 1960-61 of the accumulation of orders which resulted from the printing stoppage of 1959; and in consequence conditions during the year were to some extent abnormal. The Company's turnover was not only maintained but substantially increased, and all three of our Works produced a larger Operating Profit. As a result, I am glad to be able to report a successful financial out-turn for 1960-61.

The Group Trading Profit for the period before Debenture Interest and Taxation is £112,084, as compared with £75,750 in 1959-60, an increase of £36,334. The Net Profit comes out at £50,525 as compared with £33,644 last year. We recommend a final dividend of 6 per cent making a total of 9 per cent for the year, as compared with the 8 per cent mentioned in the original Advertisement of December, 1959.

Competition remains very keen; and we are experiencing to the full the pressure on profit margins that seems to be almost universal, whilst the regrettable upward trend in costs under all heads continues.

We have made a good start to the current year. For the first two months our Sales were ahead of those for the corresponding period of 1960-61; and our Order Books remain in good shape and should ensure that our main Works are kept busy for some months to come. Accordingly, if only costs do not run away, and in the absence of adverse developments at home or overseas, I see no reason why we should not have another satisfactory year in 1961-62.

CAPITAL PROPOSALS

Your Directors have reached the conclusion that additional finance is desirable. A Resolution will be put before you for the increase of the Company's Authorised Capital from £280,000 to £350,000 by the creation of an additional 280,000 Ordinary Shares of 5s. each. If conditions are suitable, we intend at an early date to make a Rights issue of one share for every four shares at present held at a price still to be fixed. Whilst it is too early in the current year to make a firm forecast, provided sales are maintained we would expect to recommend for 1961-62 not less than the same rate of dividend, viz., 9 per cent, on the capital as increased by this issue. Its main purpose is to enable us to acquire new plant and machinery with a view to increasing the capacity of our Works to deal with the large volume of business at present offering and at the same time yet further improving efficiency. It will also provide some additional Working Capital, which will assist to finance our expanding Sales.

The report was adopted and the increase of capital approved.

THE ASSOCIATED PORTLAND CEMENT MANUFACTURERS LIMITED

THE PARENT COMPANY OF THE BLUE CIRCLE GROUP

CONTINUING POLICY OF EXPANSION AT HOME AND OVERSEAS

REVALUATION OF INVESTMENTS : SCRIP ISSUE PROPOSED

ISSUED EQUITY CAPITAL INCREASED TENFOLD SINCE 1952

MR J. A. E. REISS REVIEWS OPERATIONS OF THE LARGEST CEMENT ORGANISATION IN THE WORLD

The Annual General Meeting of The Associated Portland Cement Manufacturers Limited was held on 25th July in London.

The following is an extract from the statement by Mr J. A. E. Reiss, BEM (Chairman and Managing Director) which accompanied the Report and Accounts sent to Stockholders:

ACCOUNTS

The Working Capital of the Group has decreased by £4,489,503 to £20,299,996 at 31st December, 1960; the fall in the Company's Working Capital (during the year 1960) was £4,302,251. The reduction is attributable to our expansion both at home and overseas. Fixed Assets include capital expenditure by the Group during the year which amounted to £11,558,878 as compared with £5,921,857 in 1959, an increase of £5,637,021. During the fifteen years since the last war we have expended on capital account £65,828,953, an average of £4,388,597 a year; during the same fifteen years we have provided out of profits £34,995,163 for depreciation and transferred £13,213,366 to Fixed Assets Replacement Reserve, which together cover nearly three-quarters of the outlay. The whole of the expenditure on Fixed Assets and Trade Investments has been financed so far without your Company having to invite fresh capital subscription.

The Associated Portland Cement Manufacturers Limited holds 100 per cent of the equities of The British Portland Cement Manufacturers Limited and Alpha Cement Limited, so a clearer picture of our past year's working in the United Kingdom is produced by combining the results of these three companies than is shown in the Consolidated Accounts, which include our overseas interests. The figures to the nearest thousand pounds are as follows:

The Excess of Trading Income over expenditure after deducting Directors' and Trustees' Emoluments, Subvention payments to Subsidiaries, provision for amount payable to Workmen's Pension Fund (1959) and Share Issue Expenses (1959) decreased by £123,000 to £9,724,000. We set aside for depreciation £2,860,000 which was £422,000 more than a year ago and the allocation for replacement of fixed assets of £400,000 was £325,000 less; the total provision under these headings was £3,260,000. Investment Income and Interest amounting to £2,150,000 was £46,000 more than in 1959; Debenture Service at £166,000 showed a reduction of £93,000 as compared with the previous year. The net Surplus, before providing for Taxation, was £8,448,000, a decrease of £81,000. Provision for Taxation decreased by £169,000 to £4,085,000 leaving available for appropriation and payment of dividends £4,363,000, which was £88,000 more than in 1959. The amount of £2,117,000 has been transferred to Unappropriated Profit (£153,000 less than in 1959) leaving for distribution as dividends £2,246,000 or £241,000 more than in 1959, after eliminating the special interim dividends of that year.

REVALUATION OF INVESTMENTS

The Capital Reserves in the Balance Sheets have increased very considerably as compared with a year ago and now include a new item—Investment Revaluation Reserve £24,522,924. In December 1960, in accordance with Schemes of Arrangement under Section 206 of the Companies Act, 1948, the Preference Stocks of our wholly owned subsidiaries, The British Portland Cement Manufacturers Limited and Alpha Cement Limited, were cancelled together with the outstanding Debenture Stock of Alpha Cement Limited. Following upon this we decided to revalue the equities of those Companies; the revaluation was carried out on the basis of the Balance Sheet values of the net tangible assets of the Companies as at 31st December, 1959, after adjustment to give effect to the revaluation of their fixed assets on 1st January, 1960, and the Schemes of Arrangement. The excess arising on this revaluation, which we are satisfied is conservative, was the amount of £24,522,924 transferred to Investment Revaluation Reserve.

Following upon this revaluation, it is proposed that the authorised share capital of the Company should be increased to £47,500,000 and that £13,559,900 of the amount transferred to Investment Revaluation Reserve should be capitalised and applied in payment of one new £1 share for every £2 of Ordinary Stock. It is of interest to record that in 1952 the issued equity capital of the Company was £4,000,000. After you have approved of the proposals the issued ordinary capital will amount to £40,679,701. The holder of £100 stock in 1952, when the price was much in line with recent prices, who has retained his holding, will have received additional stock as a result of capitalisations to increase his holding to £937.

PAST YEAR

Demand at home continued to increase last year and our deliveries were 5.2 per cent higher. Our programme of converting the first four of our works to oil firing was completed in the early Spring and resulted in marked fuel economies. Unfortunately, the price reduction which was made in February and the absorption of wages and coal increases later on rather more than cancelled out these savings.

Our export trade showed a further moderate reduction in tonnage but profit margins improved somewhat and our sales of special cements showed a gratifying increase.

THIS YEAR

Deliveries in the early months of this year showed a heavier increase than we have ever experienced and were 9.8 per cent up for the first twenty weeks. The output of the Building Industry has shown a marked rise this year which, coupled with the increasing use of concrete building materials for all purposes, points to the need for a rather faster expansion of capacity than was expected twelve months ago. At that time I announced a three-year plan to add nearly 1,000,000 tons per annum to our production and the first fruits of this programme are already coming to hand in that the second kiln at Cauldon went into full production in January and the new kiln at Plymouth is expected to be in operation by the middle of this year. We are shortly commencing the building of a 400,000-ton works near Dunbar in Scotland and building work has already begun on our site at Westbury. Your Board has recently reached a decision in principle to increase this programme to the extent of about 500,000 tons per annum, part of which will be by increasing capacity at existing works. Expansion can be carried out more quickly in this way than by starting on a new site.

OVERSEAS WORKS

Once again the Companies in which we are interested overseas played an important part in our overall activities. Sales of 2,489,500 tons surpassed previous figures and, notwithstanding the political influences which affect trade in some areas, we look forward with confidence to continued progress.

Our Australian subsidiary, The Commonwealth Portland Cement Company Limited, made record deliveries. It has now acquired the complete ownership of Metropolitan Portland Cement Limited and the measures introduced at that Company's works have resulted in increased output. The operations of the two companies have produced results in excess of the previous record.

During the year we acquired an extensive limestone deposit in Victoria, near Geelong, and have formed a new company, The Victoria Portland Cement Company Pty. Limited, with the object of erecting a new works to produce 300,000 tons per annum. Work on site is proceeding.

Our subsidiary, Malayan Cement Limited, again achieved record results and plans for further expansion of capacity are in hand.

In Mexico the Mixcoac and Tolteca Companies experienced a satisfactory year's working.

The new works at Atotonilco has recently come into production and we look forward to continued satisfactory trading during the ensuing year.

The Golden Bay Cement Company Limited in New Zealand surpassed its previous record results. Since the end of the year this Company has acquired over 90 per cent of the share capital of The Waitomo Portland Cement Company Limited which operates a 60,000-ton plant at Te Kuiti in the North Island. Measures are in hand to acquire the remaining share interests and plans are being put into operation to modernise and expand production at Te Kuiti.

In South Africa the picture has been influenced by political developments. The creation of the Republic and withdrawal from the Commonwealth have affected trade generally and, while on balance the results of our subsidiary, White's South African Portland Cement Company Limited, showed little change last year, the course of trade this year must be viewed with some uncertainty.

Much the same position obtains in Southern Rhodesia. The Salisbury Portland Cement Company Limited made record deliveries and showed satisfactorily increased trading results last year but there has since been a marked reduction in construction work and, until the political situation has been clarified and confidence restored, trade will inevitably be at a lower ebb.

In Canada our interests in British Columbia have been affected by the low level of building activity. Cement production capacity is in excess of the present demand and there appears little prospect of improvement in the position this year. Steps have been taken however to increase efficiency and to reduce costs. The company in which we are interested, Ocean Cement and Supplies Limited, is well placed to take advantage of improved trading conditions when these materialise. During the year we decided to secure an interest in Eastern Canada by acquiring a minority share holding in Canada Cement Company Limited, the largest producer, which operates nine plants throughout the Dominion. We are satisfied that this will prove a profitable investment.

In Kenya the East African Portland Cement Company Limited, in which we have a substantial interest, had a very successful year's trading. Here again, however, political developments in recent months have had an adverse effect on trade and lower profits this year are inevitable.

The new works which we have constructed in Nigeria, with a capacity of 200,000 tons a year, came into production towards the end of 1960, the official opening taking place in December. The company finds a ready market for its output and prospects are regarded as good.

CONCLUSION

Our investigations as to the possibility of expansion in areas where we are already represented and elsewhere continue. The building of a modern cement works takes both time and capital and, with an expansion policy such as ours, it is inevitable that a period must elapse before part of the capital employed earns its due return. Our policy of expansion however, which has stood us in such good stead in the past and which has preserved our position as the largest cement makers in the world, will I am satisfied, continue amply to justify itself.

The report and accounts were adopted and the proposed increase of capital and scrip issue were approved.

DERBYSHIRE STONE LIMITED

25 YEARS OF ACHIEVEMENT

The Twenty-fifth Annual General Meeting of Derbyshire Stone Limited was held on July 20th in London, Mr John Hadfield, the Executive Chairman, presiding.

The following is an extract from his circulated statement for the year ended March 31, 1961:

Your Company has been in existence 25 years and from comparatively small beginnings it has become a large and progressive organisation. It is in the real sense a "growth" company and its expansion is in its early stages. Although I am proud of the Company's achievements, I am sure that its greatest days are to come and I look with confidence for a considerably accelerated rate of growth and prosperity.

The Group Accounts show a trading profit for the year of £793,018, an increase of £55,319 over the previous year. The Group net profit before taxation was £498,934 compared with £459,646 for the previous year. The Quarrying Group contributed 71.6 per cent of the net profit before taxation, 25.5 per cent was contributed by the Baird & Tatlock Group and 2.9 per cent is the net income from trade and other investments of the Holding Company. The charge for taxation of £251,106 is substantially higher than the comparable figure of £205,117 in the previous year. It is recommended that a dividend of 22½ per cent be paid on the issued Ordinary stock as against 21 per cent last year.

Last year I referred to the Directors' policy of expanding your Company's activities. In this connection I think it appropriate to say that it is not the intention to dilute the strength of the profit earning capacity of the main core of the business, that is quarrying and the production of road materials, by bringing in companies which have a doubtful expansionist potential.

The acquisition of the Baird & Tatlock Group of Companies was in line with the policy set out above. The activities of that Group, scientific instrumentation and the manufacture of highly pure and specialist chemicals, offer great opportunities of expansion.

I am confident that higher profits will be earned in the year 1961/62 by the Baird & Tatlock Group than the very useful profits which were forthcoming in 1960/61, and I anticipate that in the Quarrying Group larger profits will be forthcoming, provided that there are no untoward national developments.

At some of your larger quarries, the plants are capable of giving outputs considerably in excess of present demand and this excess capacity should be useful when the construction of new motorways is carried out in areas which we serve. In this connection it may be interesting for our shareholders to note that it is predicted that as against 8½ million vehicles on the roads of Great Britain today there will be 15 million in 1975. New roads must come and existing roads must be widened and improved if transport strangulation is to be avoided and if we are efficiently to gear our national economy with the rest of Europe's Common Market.

With your Company's interests in the blast furnace slag industry and those in natural stone, which are essentials of the roadmaking industry, one can look forward, I believe, to a satisfactory and busy future.

The report was adopted.

ÖSTERREICHISCHE LÄNDERBANK

VIENNA, AUSTRIA

The Annual General Meeting of ÖSTERREICHISCHE LÄNDERBANK was held in Vienna recently, and the following are details of the report presented by the Board of Directors:

REVIEW

The year under review was marked by the continued economic upturn which is also clearly reflected in the Bank's annual report for 1960.

The Bank's earning power is clearly shown by the size of the interest and commission surplus earned, which exceeded the comparable 1959 figure by S 20m. This surplus income contrasts, however, with a rise of S 8m. in personnel and social security costs, and with an increase of S 4.7m. in depreciation as a result of intensified building activities on the part of the Bank.

For the business year 1960 ÖSTERREICHISCHE LÄNDERBANK showed a net profit after tax of some S 91m. This result can be considered very satisfactory even though it does not equal the figure achieved in the previous year, since the Bank felt a conservative valuation was more important than increased appropriations to reserves.

The balance sheet total rose by S 440m. to S 7,588m. Credit balances, which advanced by altogether S 349m. to S 6,551m., showed the following development: whilst savings deposits rose by S 240m. to S 1,778m. and sundry creditors increased by S 596m. to S 4,020m., the remaining liabilities showed a drop of S 487m. The rate of increase of savings deposits amounted to 15.4 per cent and was thus again 1½ per cent above the average realised by Austrian joint stock banks.

Cash reserves on December 31, 1960, amounted to app. S 776m. and thus maintained the level reached in the previous year. The sound growth of business on the assets side led to a rise of S 121m. to S 1,663m. in the total of bills of exchange held, and to an expansion of S 238m. to S 3,204m. in cash credits supplied to industry and trade. Security holdings rose by S 51m. to S 529.8m.

The number of clients served by ÖSTERREICHISCHE LÄNDERBANK passed the 200,000 mark during the year under review. The number of cheques handled rose appreciably by 19.1 per cent, and the number of cash transactions increased by 4.8 per cent.

The share capital (S 250m.) and the reserves of altogether S 582m. produced a total of S 832m. The total of the Bank's capital resources bearing full liability in accordance with the law on credit institutions—excluding special reserves—amounted to S 600m. on December 31, 1960.

The net profit of S 91m. shown above was used for appropriations to reserves totalling S 69m. as follows: to the reconstruction reserve S 25m.; to the free reserve S 30m.; to the superannuation reserve S 9m.; and to the pension reserve S 5m. As a result the Bank's capital resources of S 832m. reached 12.7 per cent of liabilities (compared with 12.3 per cent in 1959). The balance of the net profit of S 23.6m. (1959: 21.5m.), which remained after the appropriations to reserves, will be used for the distribution of an increased dividend of 9 per cent (1959: 8 per cent).

The report, the accounts, and the proposals put forward by the Board were adopted.

THE BRITISH & COMMONWEALTH SHIPPING COMPANY

SIR W. NICHOLAS CAYZER'S REVIEW OF GROUP'S PROGRESS AND DEVELOPMENTS

The sixth annual general meeting of The British & Commonwealth Shipping Company Limited was held on July 19th in London.

Sir W. Nicholas Cayzer, Bt. (the chairman) presided and, in the course of his speech, said:

1960 was the fifth full year of the operation of this Group and I think there is no doubt that time is proving that the concept of a merger between Union-Castle and Clan Line was fundamentally sound. Of course, there are many difficulties to face, for we are living in a period of great change and wherever there is change there is often a degree of uncertainty, and uncertainty is bad for trade.

We have been helped by some events and hindered by others. For instance, we carried a record quantity of fruit from South Africa. On the other hand, a strike at the London Docks paralysed shipping in the Port, and what did it achieve? So far as I can see nothing other than to endanger the economy of the country at a time when we can least afford it. And all the time costs continue to rise.

By greater efficiency we can limit to some extent the burden of these costs, but there comes a time when only increased rates of freight and passage money will serve to redress the balance, and even these measures are only effective when the cargo is there to be carried or the passengers travel.

SENSELESS COMPETITION

I have talked before of the emergence of new or enlarged merchant fleets, flying the flags of countries who previously took little or no interest in such activities. I have suggested that not always will money invested in such enterprises prove as profitable nationally as it would if applied in other directions. At the same time I have tried to understand the situation and there is one thing which is abundantly clear to me. Neither this country nor any other country will profit by senseless competition which only ensures that no ships sail full. Today, as never before, we must make the best possible use of every available asset, for in a world short of capital for essential development every penny wasted is retarding progress in some other direction.

We are progressively securing a more modern fleet. During the year WINDSOR CASTLE came into service and good progress has been made with TRANSVAAL CASTLE. This latter ship is particularly interesting as it represents a departure from the traditional Mail Ship in that we are attempting to create the impression of a floating hotel.

It may be that the Mail Ships steal the limelight, but it will not have escaped your notice that we have been and are proceeding energetically with a policy of scrapping our older cargo ships and replacing them with new and more economic units.

Naturally, expenditure of the magnitude which we have undertaken in recent years has tended to run down our cash resources, but expenditure at such a level is largely cyclical and, happily, as a result of the taxation allowances granted to the industry our cash flow has been well maintained.

Fortunately or unfortunately, a business can never stand still. It must go forward or go back, and it will go forward only if, while dealing in detail with the affairs of today, much thought is given to the future.

RESEARCH

Research in the minds of some means the development of a new product or machine and, obviously, this is a very important aspect of the subject. It is that saving of an additional ton or two of oil per ship per day or an alteration in design which facilitates and thereby cheapens the loading and discharging of cargo, which can make a reasonable result good or a poor one passable. This, however, is only one aspect of research. The future pattern of trade is fundamental when considering any building programme. The likely consequences of the introduction of supersonic aircraft or the comparable economics of the large transport plane pose other questions. Again, there is the day to day research into the most economic means of propelling the ship or evolving a method of steering a course which eliminates those fractional deviations which over a long journey can lengthen the voyage by many miles and increase the fuel consumption. We in the Group undertake a very considerable amount of this fundamental and detailed research, but I believe that there is still more that could be done by the industry as a whole, and I am pleased to say that Her Majesty's Government is very alive to this problem and, in conjunction with the industry, will be examining it.

AIR INTERESTS

I suppose that in recent years more research has been concentrated in the development of the aircraft than in any other transport vehicle. There is no doubt in my mind that there is room for the two means of transportation, sea and air, for the sea offers quite different facilities both to the passenger and to the shipper of cargo. Nevertheless, I think it right that we should have air interests, and I am satisfied that the merging of Hunting-Clan with Airwork to create BUA has given us a share in a live, versatile and enthusiastic organisation where there is a determination to succeed and where service to the customer and the profit element are more important than the hours flown.

Another matter of importance which is somewhat outside the range of our general shipping activities and to which I should refer is the acquisition of control of Hector Whaling Limited. The main business of this Company is that of shipowning, and I am satisfied that the translation of the price paid for the shares into the cost of the underlying assets represents the acquisition of control of these assets at a reasonable price.

As I survey the world scene, and in particular those continents and countries with which we trade, I realise the challenge which confronts all responsible people, and I am troubled when I see scare-mongering headlines or hear misleading statements made by people, sometimes unfortunately by those who should know better. No great country was built in a day, and man's greatest achievements, whatever they may be, were only evolved by long and patient effort.

SOUTH AFRICA

We cannot but feel sad that since last we met South Africa has left the Commonwealth. What has happened has happened and whatever our views regarding any particular aspect of policy we must never forget that those who live 6,000 miles away are likely to think very differently from those who are living with a problem in their midst.

We are living in a period of constant change, and at the moment the South African Authorities have found it necessary to impose import restrictions and other safeguards to protect their foreign exchange position. In the short run, all measures such as these are bound to reduce the movement of goods and passengers between our countries.

As South Africa plays a considerable part in our fortunes it follows that it will be a hard struggle to match the 1960 results in 1961. It is too early to be dogmatic, but present indications are that profits will be lower than 1960 and will lie somewhere between the results achieved for that year and 1959.

The main thought which I should like to leave with you today is my confidence that with our modern fleet we are in a position to take advantage of any upturn in trade and that we can hold our own even when trading conditions are not altogether satisfactory.

We are in good heart. We will spare no effort to shape the future to our benefit.

The report and accounts were adopted.

MACOWARDS LIMITED

The twenty-third annual general meeting of Macowards Limited was held on July 19th in Cardiff, Mr Arran Lermon (chairman and joint managing director) presiding.

The following is an extract from his circulated statement:

The Group profit before taxation for the year ended January 31, 1961, of £276,409 compares with £196,512 earned in the previous year.

The effective total dividend rate for the year on the increased capital is 16⅔rds compared with an equivalent rate of 12½th.

In reviewing the Board's policy of expansion, the chairman referred to the acquisition of properties at Derby, Brighton and Wilmslow and also the extension of the company's store at Sidcup, and continued:

In view of the Company's expanding interests and activity in the development of its store properties, I am pleased to announce that negotiations have been successfully completed for the formation of a company, in which The Murrayfield Real Estate Company Limited and Macowards Limited will participate jointly for promoting the development of properties of mutual interest.

Our policy of expansion and development continues and subject to unforeseen circumstances, we are again looking forward to a busying and profitable year.

The report was adopted.

Copies of the Report and Accounts can be obtained from the Secretary, 6-9 Hayes Bridge Road, Cardiff.

HUMPHREYS LIMITED

(Building and Civil Engineering Contractors)

SUBSTANTIALLY INCREASED VOLUME OF BUSINESS

SIR AYNSLEY BRIDGLAND ON THE ENCOURAGING OUTLOOK

The 69th annual general meeting of Humphreys Limited will be held on August 14th at Winchester House, Old Broad Street, London, EC2.

The following is the statement by the chairman, Sir Aynsley Bridgland, CBE, which has been circulated with the report and accounts:

As I told you last year, our order book, which had suffered from cancellations due to the credit squeeze, was rapidly mounting and I am happy to say that this rise has continued throughout the year under review. In consequence the value of our work in progress has increased from £602,506 to £1,366,630 whilst the trading profit has risen from £52,484 to £103,049, an increase of £50,565. On the other hand our bank charges have gone up by £27,888 from £6,609 to £34,497.

These bank charges are, of course, a reflection of the rapidly increasing turnover that has been attained during the year although the company has not yet felt the full benefit of the profit from that increase.

The rise in our order book continues and there are indications from our various customers that additional large contracts are in view.

Whilst the net profit, after tax, this year has risen by only £5,916, it has to be remembered that the profit in the early stages of new work does not fully reflect the ultimate result.

The accounts of our subsidiary, R. H. Morris (Pty.) Limited as at November 30, 1960, show a deficit on Profit and Loss Account of £106,242 and a note on the accounts warns us that in arriving at this figure further substantial provision will have to be made in respect of one particular large contract. These losses are subject to substantial claims which our subsidiary has yet to establish and may be offset to an unknown extent by these claims.

In order to provide for this position in our Balance Sheet we have written down the value of our investment in R. H. Morris (Pty.) Limited by £150,000.

If there is a satisfactory outcome from the claims which our subsidiary hopes to establish, it will enable us to restore some of this write-off in subsequent accounts. This sum of £150,000 has been debited to our Reserves.

Having established this write-off and bearing in mind the substantial increase in the volume of our own business your Board feels justified in recommending that a final dividend of 9 per cent be paid.

It is satisfactory to note that our second mortgage on the London Clinic is steadily decreasing and today is £65,000 as against the original figure of £75,000. Moreover as from January 9, 1961 your Company no longer guarantees the repayment of Bankers' Loans to Trustees of the London Clinic Limited.

OVERSEAS

Speaking more explicitly of our South African interests than we could last year, we can now set out the position, bearing in mind the provision to which reference has already been made.

The affairs of our subsidiary companies in South Africa were dealt with by local Boards under a full-time Chairman.

Some weeks after the year ended November 30, 1959, reports coming from South Africa indicated that serious losses were being made by the contracting subsidiary, R. H. Morris (Pty.) Limited, which was quite contrary to the information we had received up to that date. These had to be investigated and it was clear to our officials who were sent out early in 1960 that it would take at least 18 months to clarify the position. In August, 1960, the Chairman and General Manager of R. H. Morris (Pty.) Limited resigned.

The Chairman was replaced by Mr C. M. Goldsbury, who was already a Director of the company, and Mr B. A. Lansdown was seconded from our Head Office to act as Managing Director. In order to strengthen further the managerial direction of the company Mr E. W. Gibson was seconded also from Head Office to act as Assistant General Manager.

In the meantime R. H. Morris (Pty.) Limited have sold the manufacturing side of their business to R. H. Morris Industries (Pty.) Limited, who are concerned with making school furniture, motor car seats and similar products, and we have retained a half interest in this business. Large orders for their goods are in hand and, whilst the anticipated profit on the first year which ended on May 31, 1961 is likely to be modest, the prospects for the succeeding year are good.

National Quarries (Pty.) Limited have had a good year despite profits being affected by a fair amount of development costs. It is evident that this business with its competitors will be very hard put to meet the present and future demand for stone and steps are being taken to open another favourable site to cope with the increased needs of Cape Town and its vicinity.

Overhanging the whole of South Africa, as you know, is the vexed question of apartheid but, nevertheless, there is no denying that this wealthy part of Africa has a great future. We hope by the time we present our accounts next year to have a much clearer picture to put before you, and as I said in my supplementary statement sent to you in October last year, we see no reason to be pessimistic about the long-term prospects in South Africa.

BURDEN OF CLAIMS

Shareholders will, no doubt, have read in the newspapers that during the past year other contracting firms have experienced sharp losses which have been ascribed generally to the evil of price cutting and also to the atrocious weather conditions which maintained throughout the year. In these conditions it is more than ever essential that the work is preplanned to the last detail by the client and the architect. If this is not done, and it rarely is, an abundance of variations occur.

These variations give rise to claims to recover the extra costs incurred in carrying out the work involved. Such claims result in long and protracted negotiations between architect, quantity surveyors and contractors, sometimes taking up to two years or even longer before they are settled.

It has always appeared to us that the cost in loss of interest on the money in dispute and the work of the staff in preparing the claims reaches a very high figure and unless the methods of reaching a mutually agreeable solution are speeded up, this burden will continue to arise out of this present system of tendering. There is no doubt that the question of claims and the method of their settlement are matters for which contractors as a body will, in the near future, have to enforce some kind of protection in their tenders.

On large contracts it is becoming increasingly evident that with the growth of technical services incorporated in buildings it is of prime importance to building owners to know that their contractors have at their disposal the means to deal with all the aspects of the proposed building and the technical skill to overcome the problems. Time in building is saved through these arrangements and this is a very important factor, for not only do undue delays cost interest on the money invested, but they also result in additional loss of revenue from rents and services. In large contracts these delays can run into many thousands of pounds.

SHORTAGE OF LABOUR

Another matter that causes concern to contractors is the shortage of labour and skilled operatives. The large amount of work offering causes each contractor to endeavour to outbid his rival for such men.

Coupled with this is a steady fall in output per man as against pre-war days. It is a tragedy that the men cannot see that with these conditions the cost of building must rise and with it rents and services. The inevitable result of all this will be eventually a curb on new business because of these and other costs.

Whether in building or other spheres these conditions arise. Every day one sees the call to cut costs to meet overseas competition and it is idle for each and everyone of us to deny that the very life of this country and its standard of living depends on all of us to see that output per man is increased. Increases of salaries and wages without increase of output is the main cause of our country's financial difficulties with which we are being faced from time to time.

THE CURRENT YEAR

We have received large contracts in recent months, as already mentioned, and other substantial contracts are in view. So far, then, as this country is concerned, more profitable work is in sight and we are getting our share of building and civil engineering contracts on a profitable basis. Overseas we have contracts in Gibraltar,

Cyprus and Jordan, with prospects of further work to come.

We are, of course, very dependent on the weather and other unforeseen contingencies which can unfortunately upset our plans, but all precautions are taken to minimise the effect of these and to ensure that each contract produces its proper profit. Our future, therefore, is encouraging.

Once again I take this opportunity of expressing the Board's appreciation of the work of all our staff and employees both at home and overseas during the past year.

CHARRINGTON, GARDNER, LOCKET & CO.

RECORD TRADING RESULTS

The fifty-eighth annual general meeting of Charrington, Gardner, Locket & Co. Limited was held on July 21st in London, Sir John Charrington, the chairman, presiding.

The following is an extract from his circulated statement:

What could have been a remarkable year for your Company was adversely affected by the mild weather in February and almost summer temperatures in March. The winter was never severe, but the weather was sufficiently unpleasant to maintain a good demand for domestic coal and coke until the end of January. Sales of oil for heating were not as large as they might have been, though they were in total at an appreciably higher level than during the previous year.

I am, however, pleased to be able to report a trading profit for the year which reached a record level at £695,177. The profit after taxation is £363,323, which compares with £216,841 a year ago. Your Directors recommend a Final Dividend of 8 per cent on the Ordinary Stock as increased by the rights issue made a year ago. With the Interim Dividend of 4 per cent, the total Ordinary Dividend is 12 per cent, which compares with a total distribution of 11 per cent on the Ordinary Capital before the rights issue.

Oil sales have continued to expand satisfactorily, and this applies to the Eastern Counties and the areas covered by the Birmingham and Manchester offices as well as to London.

The Lighterage Department has been kept well employed during the year. Imports of timber to the Port of London have been at a high level and, with the expansion in sales of fuel oils, greater tonnages have had to be moved by river from Mobil Oil Company's Coryton Refinery to our Poplar and Isleworth terminals.

Our subsidiary, Charrold Limited, has had a successful year, and an increasing number of orders is being placed for the vehicles in which they specialise.

Another of our subsidiaries, Groves and Company, of Braintree, Builders' Merchants operating in Essex and its surrounding counties, is becoming increasingly involved in the supply of equipment to heating engineers in the domestic market.

Since the end of the financial year we have, in agreement with Mobil Oil Company, concluded negotiations with our old friends, Hargreaves (Leeds) Ltd., for the formation of a jointly-owned Company to market Mobil fuel oils in the North of England.

The report was adopted.

FRANCIS SHAW & COMPANY LIMITED

The fifty-second Annual General Meeting of Francis Shaw & Co. Ltd. was held in Manchester on July 20th, the Chairman, Dr J. G. Mackay, C.B.E., presiding. The following are extracts from his statement as circulated with the report and accounts for the year ended December 31, 1960:

The final balance of group trading of £217,757 is considerably less than the Directors' forecast of £374,160 which was given to the shareholders in May, 1960. The anticipated increase in production to meet the heavy volume of orders on hand was not achieved and is a major reason for the fall in profit.

During 1958 and 1959 a substantial part of production of Shaw-McNeil Bag-o-Matic presses was supported by one major sub-contractor whose factory closed down during the first quarter of 1960. New sub-contracting arrangements did not operate smoothly until the last quarter of the year and output from our increased production facilities was restricted by delays in delivery of components, which also resulted in a very considerable increase in the stock in hand and work in progress. A further reason for lower profits is that certain export contracts taken at keen prices in face of severe competition from abroad proved unremunerative, partly on account of unforeseen difficulties in design and manufacture.

The introduction of the shorter working week in March 1960 caused an immediate increase in our wage bill and in prices for most materials, supplies and services. Certain contracts then in hand were at fixed prices.

PROGRESS BY SUBSIDIARIES

Our new subsidiary—Joseph Robinson & Co. (Holdings) Ltd., made a useful contribution to the profits of the group and has a good order book.

During 1960 our Canadian subsidiary increased its profit. The additional manufacturing facilities mentioned in last year's report are now in operation and permit us to offer a wider range of machinery.

During 1960 we exported 73 per cent of our output to 31 countries and last year I reported that we were establishing subsidiary selling companies in Australia, in the Netherlands and in Italy, each having a manufacturing association with a local engineering company.

In Italy in association with Maina S.p.A. of Asti, a well-established general engineering company and our former agent Mr V. A. Leone we have formed Francis Shaw-Maina S.p.A. Turin to sell Shaw and McNeil machines.

In partnership with our Dutch agents, Messrs Vaillant and Sluyterman, we have set up Francis Shaw & Co. (Nederland) N.V. The Hague, to promote the sale in Benelux and Western Germany of Shaw-McNeil and other Shaw products, manufactured by N.V. Machinefabriek A. Fontijne of Schiedam.

To promote sales in Australia and New Zealand a company is being set up in Melbourne, under the title of Francis Shaw Pty. Ltd. Our partners in this venture will be our agents Harrisons Ramsay Pty. Ltd. Melbourne and the old-established engineering firm of John Welsh Pty. Ltd. of Melbourne.

DEVELOPMENT PLANS

During 1960 progress was made in developing additions to the company's range of machines and it is our policy to apply still more effort in this field.

The introduction of the shorter working week and the national engineering wage award during 1960 resulted in further increases in our costs for wages, salaries, materials and supplies and in face of the keen competition both at home and overseas, it is not always possible fully to recover these costs by increases in selling prices. Nevertheless it is the view of the Directors that a good level of profits can be achieved.

Steps to increase productivity and to reduce expenses have already been taken during the current year. We have a good order book, our works are modern and well equipped and our international standing in the rubber and plastics industries produces a constant flow of enquiries from all parts of the world. We are expanding our programme of research and development.

The report and accounts were adopted.

UGINE

(Manufacturers of Electro-chemical, Electro-metallurgical and Electric Steel Products)

PARIS

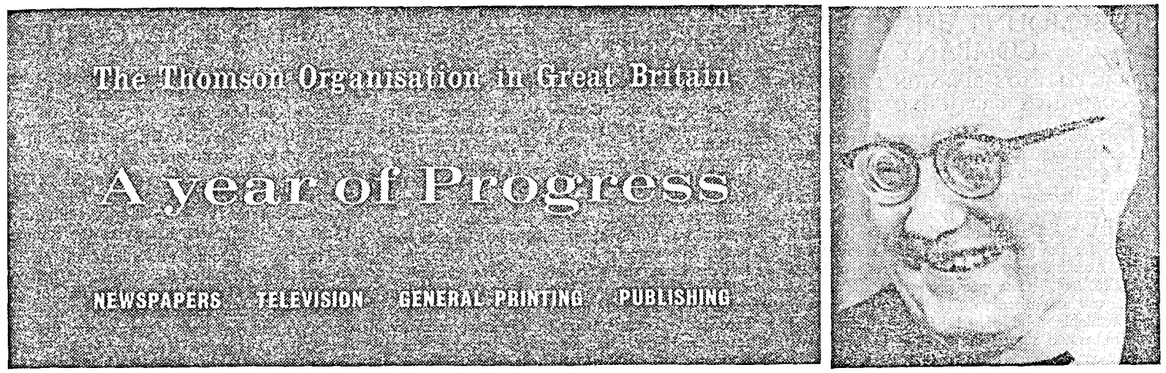
The Annual General Meeting of UGINE was held in Paris on June 27th with Monsieur Rene Perrin in the Chair. The following are details of the report presented by the Board of Directors:—

As a result of increased output and extended production facilities, turnover rose to NF. 943m., and net sales of NF. 831.7m showed an increase of 31.5 per cent over the 1959 figure.

Sales of special steel by UGINE and its subsidiaries rose to 154,000 tons as against some 128,000 tons in 1959, largely as a result of increased deliveries of stainless steel and special steels for roller bearings.

Following the entry into production of the Lannemezan plant, aluminium output rose from 33,500 tons in 1959 to 49,600 tons in 1960 and UGINE output now accounts for 20 per cent of French production as a whole.

Output of chloride, sodium, and sodium cyanide as well as most other chemicals also increased satisfactorily.



In the field of ferro-alloys, too, the commissioning of new plants helped to increase output of refined and over-refined ferro-chrome and ferro-manganese alloys.

UGINE subsidiaries and affiliated companies active in many sectors of the chemical and metallurgical industries also continued to make satisfactory progress.

New investments made during 1960 amounted to NF. 90m.

Net profit for the year amounted to NF. 28,093,673.27, and it is accordingly proposed to distribute NF. 25,682,914.00 in the form of a net dividend of NF. 5 in respect of each of the 4,060,000 shares, as against NF. 4.2 in respect of 2,920,320 shares last year.

The report, the accounts, and the proposals put forward by the Board were adopted.

Extracts from the Statement of the Chairman, Mr Roy Thomson, circulated with the Report and Accounts for the year ended December 31, 1960, to be submitted to the Annual General Meeting of Thomson Newspapers Limited on July 28, 1961.

This is the first Annual Report which I have had the honour to place before you incorporating a full year's operation of this Company under my Chairmanship. I am pleased to be able to tell you that the result of the Company's operations for 1960 was eminently satisfactory. In my last review I advised you that 1960 would be largely a year of consolidation and reorganisation. That has certainly been the case but, nevertheless, it has also resulted in a substantially improved profit position.

During the year, much reorganisation and planning took place and is still going on. The horizon of business for the Company has materially widened. We envisage that our expansion will take place not only in our present operations in newspapers and printing but also in trade and technical papers, educational books, and, indeed, other fields as well. We are investigating other prospects which could be allied with our present operations on an efficient and profitable basis.

The Group profit for the year, after providing for depreciation and debenture and loan interest was £4,107,834—an increase of 32 per cent over 1959. Income Tax and Profits Tax charges absorbed £1,979,811 and, after deducting £5,041 for minority interests, the balance of the year's profit available for reserves and dividends was £2,122,982.

Dealing first of all with reserves, it is proposed to augment the Capital Reserve by the surplus of £64,060 arising from the sale of properties and to make a further appropriation to General Reserve of £790,000. As regards dividends, the servicing of the two Preference Stocks takes £312,375, whilst on the Preferred Ordinary Stock an interim of 17 per cent has already been paid and a final of 18 per cent is proposed requiring a further £535,938. The proposed dividend on the Deferred Ordinary Stock amounts to £413,438.

After these appropriations there remains £7,171 of the year's profit which, added to the balance of £683,424 from last year, makes £690,595 of unappropriated profit to be carried forward to next year. In all, the Group's capital and revenue reserves have now reached the impressive figure of £6,953,908.

At the Extraordinary General Meeting, which will immediately follow the Annual General Meeting, proposals will be placed before you to alter materially the capital structure of the Company as well as to change the name of the Company to The Thomson Organisation Limited. My remarks to the Extraordinary General Meeting will completely cover those important developments in the company's affairs and I will only say here that in my opinion they will open the way for further great advancement of the Company.

Expenditure on modernising and enlarging the plant and buildings throughout the Group during 1960 was £2,446,250 whilst the outstanding commitments at the end of the year were £3,215,000.

THE SUNDAY TIMES

Printing of a portion of *The Sunday Times* productions started at Thomson House, 200 Gray's Inn Road, London, in December and by the end of January of this year we were handling the entire Southern print. We had only a year in which to transfer the entire production from the *Daily Telegraph* office in Fleet Street to Thomson House and by impressive organisation we achieved what many people said could not be done in under two years.

Apart from the installation of several new presses an entirely new composing room was created while the full output of the publishing department was mechanised for the first time by any newspaper group.

The future of *The Sunday Times* holds exciting possibilities. We have reached the million figure, symbolic of remarkable achievement in the field of quality newspapers. We have introduced 48-page issues, indicative of the natural growth of a newspaper which strives to meet the needs of the ever widening intelligent public.

The demand by advertisers for space in *The Sunday Times* is now greater than ever. In particular there has been a considerable increase in consumer product advertising during the year and it is quite clear that this advertising has achieved most effective results. There is no more powerful selling medium than *The Sunday Times* for advertisers who wish to reach the quality market.

As our new plant at Gray's Inn Road has abundant production capacity we are making arrangements to print the London and southern editions of *The Guardian* from this autumn. We have facilities for further developments which we are exploring.

ALL ROUND EXPANSION

Our regional newspapers show increasing strength in the great industrial areas and cities of England, Scotland and Wales where they reflect the infinite variety, character and vitality of the British people. These newspapers are members of a family, not identical links in a chain.

New targets for sales and advertisement revenues have been set. There is confidence that growth is possible everywhere. As is the case with business anywhere in the world, expansion is largely a question of executive talent.

The advertisement and circulation revenues of our papers for the year 1960 were substantially higher than those for 1959 and the advertising revenue was the largest in our history. You will be pleased to know that these revenues have continued to increase during the present year and I am able to tell you that results to date are substantially improved over the corresponding period of last year.

The range and output of our general printing business continues to expand. Our broad strategy is to build up at each centre where we operate, a unit which, while carrying out the all round services of the general printer, has a particular speciality in which it excels.

SCOTTISH TELEVISION

You will be anxious to know about the progress being made by Scottish Television. In round figures, we are approaching a three million audience able to view STV programmes in the Central Scotland area, which has a population of four million and eighty thousand. The most recent survey by T.A.M. Ltd. for the week ended February 19, 1961, indicates that 71 per cent of the population in private houses receive STV programmes.

The figure of 2,895,000 viewers at the week ended February 19th represents a total of 823,000 homes, an increase of 636,000 homes over the opening night audience—August 31, 1957. For every STV home, there is an average of 3.52 people, a larger number than that for any other independent television area except Ulster.

THE FUTURE

Looking to the future for the company as a whole, I see not only challenge but opportunity in abundance. Newspaper publication and television appeal to me as the most fascinating forms of business enterprise. I do not regard them as instruments for securing or wielding personal power. They are designed to serve the people and it is only by winning the appropriate measure of public approval that they are and will continue to be successful

I know I am speaking for all, the Board and Shareholders alike, when I express our gratitude to all staffs for their loyal services, and for the team spirit throughout the Thomson Group, which not only have earned success in the past year but will ensure further expansion and new triumphs in the years ahead

THE MOUNTAIN COPPER COMPANY

MR R. ELLERTON BINNS ON CHEMICAL COMPANY'S GRATIFYING RESULTS

The Fifty-ninth annual general meeting of The Mountain Copper Company Limited was held on July 26th in London.

In his statement circulated with the Report and Accounts, Mr R. Ellerton Binns, BSc, MIMM, the Chairman, reviewed the financial results for the year and said that the Profit and Loss Account showed a Group Profit on sales of £167,044. The net profit for the Parent Company amounted to £14,750 and there was an available total of £103,064. The Board recommended a total dividend of 1s. per share, less income tax.

Mr Binns then commented on the operations at Shasta, where the year had proved to be a difficult one. Referring to the current year he said that results to May 31st were not up to those for the same period last year. In the early months, January and February, pyrites sales were disappointingly low. Since then they had recovered fairly well, although still fluctuating and running rather below normal for the time of year. However, there were, he thought, definite signs of continued improvement and it need not be such a very marked or strong one to enable them to catch up in the end with the 1960 results.

The year 1960 was a disappointing one for Martinez, but for the current year Mr Binns said he was able to report improved prospects. To date, orders in hand and sales of Copper Sulphate were practically up to those for the corresponding period of last year, while sales of copper chemicals were higher than last year's. *In short, the current year should be a better* one than was 1960.

SAN FRANCISCO CHEMICAL COMPANY

Reviewing the Company's operations, Mr Binns said: The year 1960 has been a very satisfactory one for San Francisco Chemical Company from practically every point of view. Not only have production and sales of Phosphate rock advanced sharply during the year, but the important expansion scheme at Vernal proceeded even more rapidly than anticipated, so that the plant was actually in operation by December last. Since then operations have continued without interruption with most gratifying results. In fact results from the new plant have exceeded expectations, with capacity, recovery ratios and grade of concentrates better than estimated. In short, the results supply the most practical possible proof of the tremendous possibilities and value of the huge Vernal deposit.

The Company on May 1st last exercised its option on the remainder of the Vernal property and accordingly now holds, under a deferred payment agreement, the freehold totalling 14,800 acres which embrace the entire deposit. Besides this it maintains its valuable leaseholds in Utah, Wyoming and Idaho with its major production still coming from the Cherokee Mine in the Crawford Mountains, and from Leefe in Wyoming. In the light of all these facts it may be well to point out that valuable as are the assets and business of the Parent Company and its Subsidiary in California together with the prospects thereof, they are hardly to be compared with the 50 per cent holding in the San Francisco Chemical Company.

The report and accounts were adopted.

RELIANCE CLIFTON CABLES
& Industrial Products Limited

SUMMARY OF RESULTS FOR 1960

		£
PROFITS BEFORE TAX		475,892
	£	
Taxation	49·9%	237,430
Preference dividend	1·2%	5,671
*Ordinary dividend (20%)	14·4%	68,600
Retained	34·5%	164,191
* *and a capital distribution (not subject to tax)* 7½%.		
Retained profits and depreciation		201,158
Capital expenditure		228,695
ISSUED CAPITAL: Ordinary		560,000
Preference		185,190
RESERVES (excluding future tax)		1,607,621
NET CURRENT ASSETS		1,845,856

THE REGISTRARS, 33, KING WILLIAM STREET, E.C.4.

SMITH'S POTATO CRISPS

The Thirty-second Ordinary General Meeting of Smith's Potato Crisps Limited was held on July 25th in London.

Mr F. Le Neve-Foster, chairman, in the course of his speech, said:

The Net Profit after taxation is £876,158 compared with £1,010,831. The results achieved for the year are the second best, by a large margin, in the history of the company.

The Board recommends a final dividend of 30 per cent, plus a cash bonus of 10 per cent, which makes a total distribution for the year of 55 per cent on the one class of issued share capital as enlarged by the one for five free scrip issue made last year. The distribution for the year, therefore, represents an effective increase of 9.94 per cent.

The last eight months of the year were an exceptionally difficult period for Production owing to the very poor quality of potatoes which were available from the 1960 crop. From July onwards for the rest of 1960 continual wet weather was experienced, which seriously affected what originally looked to be a promising crop and the conditions under which it was lifted. As a result although prices per ton looked cheap, the potatoes came to us full of excessive water and in bad condition, which not only led to high processing costs but gave a low yield per ton of the quality of crisps we look to produce.

We believe that with the increased productive capacity now available from the extensions made during the year we are now in a position to supply all requirements of the trade.

Up to the end of June last year the Parent Company's sales showed a nice increase on the figures for the similar period of the previous year. The prolonged spell of bad weather which followed and continued through most of the holiday period, however, seriously affected demand in our peak period of sales. Nevertheless, over the whole year and exclusive of sales of Tudor Crisps we exceeded the sales for the previous year by a small margin.

QUALITY THE KEYNOTE

Looking into the future, we are sure that the demand for our product will continue to grow. Quality is the keynote of our policy and we pay the greatest attention to all matters which are necessary to maintain it, using the finest ingredients available and methods of processing to impart just that difference in flavour and keeping qualities for which Smith's are famous. I make no apologies for repeating our slogan, "There are no Crisps to equal Smith's." To the Public, Crisps still mean Smith's Crisps.

For the first three months of the current year, sales of the Parent Company show an appreciable improvement. On the other hand, our profit margins have continued to be seriously affected by the poor quality of potatoes from the last part of the 1960 crop and high prices for suitable new potatoes. On a longer view, we have good reason for confidence that, with the dominating position we have established in the Crisp trade and our experience and widespread interests in it, your Company will continue to give a good account of itself and add to the fame of our product, Smith's Potato Crisps, with satisfaction to our customers and shareholders alike.

The report was adopted.

CSF-COMPAGNIE GÉNÉRALE DE TÉLÉGRAPHIE SANS FIL

PARIS

The Annual General Meeting of CSF-Compagnie générale de télégraphie Sans Fil was held in Paris on June 16 with Monsieur Maurice Ponte in the Chair, and the following are details of the Chairman's statement and of the report presented by the Board of Directors:

In his statement, Monsieur Ponte mentioned that the policy of diversification maintained during the past ten years had borne fruit, and had played a major part in the progress of the Company during that period.

The Chairman went on to underline the value of the work carried out by the laboratories and research centres, which also made an important contribution to the expansion of CSF. In view of the new possibilities now facing the Company as regards the numerous industrial applications of electronic equipment, and in spite of certain factors giving some cause for concern, such as the difficulties encountered in the engagement of qualified technicians and the unplanned setting-up of electronic companies of foreign origin in the Common Market, the Chairman concluded his statement by expressing his confidence in the Company's future.

Replying to a shareholder's question, Monsieur Ponte mentioned that a bonus share issue was under consideration and that, whilst the principle had been accepted, the details were still to be announced.

The following are details of the report:

Turnover rose again to reach NF. 394.721.000 as against NF. 331.206.000 for 1959, although the 1960 figure does not include the results of the semi-conductors division which had been operated by a subsidiary—Compagnie Générale des Semi-Conducteurs (COSEM)—as from January 1, 1960.

Exports rose once again and the value reached NF. 105.816.000 representing some 27 per cent. of total sales. CSF subsidiaries also expanded their operations, particularly in the field of consumer goods. The consolidated turnover of the Group's French companies totalled NF 608.249.000 as against NF. 468.890.000 in 1959.

Profit for 1960 amounted to NF. 13.869.000 as against NF. 7.480.000 in 1959. After deduction of NF. 11,4m. in respect of an appropriation to the Stock Reserve, it was resolved to distribute dividends of NF. 1,25m. in respect of shares participating in profits as from January 1, 1960, and of NF. 0,62m. in respect of shares participating as from July 1, 1960.

It was also resolved to raise the limit of bonds or debentures which the Board of Directors are authorised to issue from NF. 30m. to NF. 50m.

At an Extraordinary General Meeting held immediately after the Annual General Meeting, the Board of Directors was authorised to increase the capital to NF. 140m. in several stages, by cash issues or by the capitalisation of profits, reserves, bonuses or provisions, or by both methods simultaneously.

The meeting also resolved to change the Company's title by adding the prefix CSF.

W.G.I. LTD.

(West's Group of Industries)

comprising
West's Gas Improvement Co. Ltd.
West's (Manchester) Ltd.
West's Piling and Construction Co. Ltd.
West's Works Ltd.
Tully Engineering Co. Ltd.

The eighty-eighth annual general meeting of W.G.I. Limited was held in Manchester on July 25th. The chairman, Mr Ernest West, M.I.Mech.E., M.Inst.Gas.E., presided. The following is an extract from his circulated statement for the year ended March 31, 1961:

This has been an outstanding year for the Group in that it has achieved an increase in the profit available for distribution on last year's figure of £128,680, which was itself a record. A considerable contribution to this total has been achieved by West's Piling & Construction Co. Ltd., who have had a year of remarkable activity. Their work during the year included a large contract at Newport for the new Steelworks of Richard Thomas & Baldwins, where some 49,000 piles were driven, but in addition to this order the company had a very busy year on many other contracts.

We do not anticipate that they will repeat this remarkable turnover during the current year as large contracts like Newport only occur occasionally, but they have quite good prospects and I am confident that they will continue to do well.

As I indicated last year, the Gas Industry has required little new conventional carbonising plant.

Following the policy of looking to other fields of activity which I indicated last year, we have been successful in finding work in the Atomic Energy and Chemical worlds in addition to the Gas Industry, and we have just completed our first Lime Kiln which has now gone to work, using the Catagas oil-burning process.

STABLE TURNOVER

These projects have allowed a stable turnover for West's Gas Improvement Co. Ltd. and also for West's Works Limited, who have had in addition a considerable amount of work from West's (Manchester) Limited in the coal and mineral fields, and from West's Piling & Construction Co. Ltd.

I am glad to be able to report that West's (Manchester) Limited has now achieved considerable status in the Coal Preparation field and the Sand and Gravel Industry and their future order book is more encouraging.

Tully Engineering Co. Ltd. has been successful in reorientating its activities and has maintained its turnover by obtaining orders in different spheres, notably the automation of valve operation in various industries and also in agricultural buildings.

West's-Loyne Limited, the newly formed Associate Company, to whose formation I referred last year, has commenced trading and has had a very satisfactory beginning; we are confident that this promise will be fulfilled during the current year.

DIVIDEND POLICY

You may perhaps feel that in recommending a dividend of no more than 22½ per cent out of the total available for distribution, the Directors are not being sufficiently generous to the Shareholders but there are two reasons—in our opinion good ones—for this restraint. First, we feel that the profit for this year is an exceptional one in that a fair part of it is due to the very large turnover of West's Piling & Construction Co. Ltd. and although we are confident that the current year's results will be good, we cannot rely on maintaining this year's peak. We prefer to maintain a steady dividend rather than a fluctuating one and we feel that you will agree with us on this point.

Secondly, we are anxious at the moment to conserve our available cash to the greatest possible extent; I have referred to the urgent necessity of spending a large sum in plant re-equipment for West's Piling & Construction Co. Ltd., and in addition there is an urgent need for further office accommodation here in Manchester which cannot be ignored. Further, if we are to provide adequate pensions for our staff on retirement, we have to supplement our existing Pension Scheme to meet the problem of inflation. All these things have to be paid for in cash and we are of the opinion therefore that our recommendations are sound on a longer term basis.

The Report and Accounts were adopted.

EAST RAND CONSOLIDATED

NEW SHARE ISSUE

The thirty-fifth annual general meeting of East Rand Consolidated, Ltd., was held on July 20th at the Chartered Insurance Institute, London, E.C.

Mr C. J. Burns, Chairman, presided.

The Chairman said: It is usual, in view of the length of notice imposed upon us by conditions attaching to a Johannesburg share quotation, for me to address a few remarks to Members to bring them up to date and this year I intend to deal also with our proposal to increase the Issued Capital of the Company in view of its importance to Members.

It is my opinion that we have at the present time reached a stage in the Company's existence when it may not be inopportune to review the considerable change which has taken place in the Company's financial and profit-earning structure during the past few years, and especially since the majority of the present Directors were elected to office.

INCREASING REVENUE

In 1957 our Income from dividends was £30,759 and sundry revenue was £1,703, while our quoted investments had a book value of £536,904. By 1960 our dividend income had increased to £55,547 while our income from royalties and sundry revenue was £13,110. The book value of our investments at the present time has advanced to £665,636; that is to say, an increase of £130,000 in four years. During this period dividends paid to Members have increased from a maiden dividend of 6¼ per cent to 10 per cent together with increased cover therefor, and, in spite of the sound asset backing together with two secure and increasing sources of revenue, our shares, owing to the economic uncertainties in this country and the political situation in South Africa, are priced at little more than their par value. This is a situation over which the Company itself has little control. Incidentally, it is a provoking thought that, whereas in 1950 when the Company's investment and other income totalled as little as £10,000 and when a loss of £17,000 was

made on the year's operations and with a poor asset backing, our shares were priced at twice what they are today. At that date, 75 per cent of the Company's investments were in gold mining shares as against 30 per cent in 1961. Included in the 1950 total were substantial holdings in Eastern Rand gold shares which represented 60 per cent of the Company's total portfolio. Today they form only 5 per cent of the total.

FUTURE OUTLOOK

It is the considered view of your Directors that the Company has now recovered successfully from the difficulties of its inheritance and is in the process of establishing itself with the investment public as a Company giving a secure and above-average return for its shares, coupled with the promise of better dividends to come in the future.

This future can be enhanced by ensuring that the Company has adequate working capital to take full advantage of its special tax position, which enables it to earn for its members returns higher than those available to others. It is clearly desirable to press this advantage for current benefit.

While current political and economic conditions have resulted in lower share prices generally, such conditions also render more opportune the investment of the new monies resulting from the issue. It is interesting in this connection that, in spite of present lower share quotations, our portfolio other than South African holdings has an appreciation of some £57,000 at the present time over book cost which, however, is almost entirely cancelled by the major decline in South African gold shares which has occurred. While we anticipate that a large part of this fall in South African share prices will be made good when the present South African Exchange Control Regulations are relaxed, the appreciation in the remainder of our portfolio is evidence of the Board's financial judgment.

The present Board's financial policy has been amply justified by the growth in secure sources of income and a more solid asset backing together with an increasing dividend distribution since 1956. The only limiting factor has been the inadequacy of working capital, and the proposed issue will enable the Board to accelerate the programme which has so fundamentally improved the Company's fortunes. It is in this way that the Company's status in the market will be based not on past remembrances but on present performance and expectations.

Letters for the provisional allotments, together with a formal circular to Members dealing with the share issue and a copy of these remarks are to be posted to all Members on July 26th. The right to take up and pay for these shares will remain open for three weeks, after which time the receipted allotment letters in respect of acceptances will remain in currency for a further three weeks. The new shares allotted as a result of this issue will be entitled to any dividend declared in respect of the year to December 31, 1961, and income from investments, together with our increasing revenue from royalties, should ensure the maintenance of the present dividend of 10 per cent on the new capital. My Review mentioned that Vanadium Royalties should again show a material increase. For the first five months of this year they total £16,377 as against £10,583 for the whole of 1960.

The very large number of proxies received supporting the proposals for this issue not only augurs well for its success but can be read as a mark of confidence by the general body of shareholders in the Directors' ability to provide for them a rewarding investment.

The report and accounts were adopted; the dividend was approved and a Resolution was passed authorising the issue of 3,000,000 shares of 2s. each to members at par in the proportion of one such share for every two shares held.

ISTITUTO MOBILIARE ITALIANO IMI

(Italian Finance Corporation)

121 Via delle Quattro Fontane, ROME, ITALY

The twenty-ninth Annual General Meeting of Istituto Mobiliare Italiano (IMI) was held in Rome on June 7, 1961, under the Chairmanship of Mr Stefano Siglienti, to examine and approve the balance sheet for the fiscal year ending March 31, 1961.

In the first part of its Report, the Board of Directors reviews, as usual, the general activities of IMI during the period, against the background of the Italian economic situation as a whole and examines some problems of industrial credit.

After noting that at the end of 1960 more than 40 per cent of total lending by special credit institutions to industry and public works was accounted for by IMI, the Report stresses the necessity for bringing the structure of the financial market into line with the constantly increasing degree of internationalisation of the Italian economy and the growing needs of the productive apparatus by perfecting already existing institutions and techniques and, possibly, setting up new ones. This process the report states must be carried forward with great care in order to avoid disturbing the existing system, which has made no mean contribution to the reconstruction and development of Italy's productive apparatus.

As regards the IMI's activity during the period under review, this may be summed up in the following data: a 20.2 per cent rise in applications for financing and a 19.2 per cent rise in credit operations concluded.

New applications received totalled more than 280,400 million lire, 76.2 per cent of which came from manufacturing industries. As regards the geographical distribution of applications, those from southern Italy rose fourfold on 1959-1960 and accounted for 19.3 per cent of total applications during the 29th fiscal year.

During the same period, credit operations effected amounted to 192,437 million lire, of which 181,341 million lire came out of IMI funds and 11,096 million lire out of "special loans funds." In the latter category, the report underlines the recovery in the IMI's financing activities in its capacity as Italian agent of the European Coal and Steel Community, which has attained a total of 5,750 million lire, representing Italy's quota out of the 35 million dollar loan launched by the Community in the United States in October 1960.

Out of the 181,341 million lire operations made with funds taken up by IMI on the capital market, *157,957 million lire was absorbed by* industrial investment financing in Italy and 23,384 million lire by export credit operations.

Financial assistance given to Italian exporters was 20.6 per cent higher than in the preceding period, and once more the highest precentage of such export financing (about 50 per cent of the total) referred to exports to Latin America. Operations in respect of exports to Europe, India and some African countries also gained in importance.

The report points out that in January 1961 IMI signed a new financial co-operation agreement—the fifth to be entered into with credit institutions in importing countries—namely, with the Bank Handlowy in Warsaw within the framework of the Italian-Polish agreement for the delivery of equipment goods. Moreover, in order to promote Italian activities abroad, new participations have been taken up in financial companies in Morocco and Mexico as well as in an Italian committee set up to study new opportunities for Italian ventures in Canada.

As far as investment finance is concerned, the report underlines the growing share of loans received by manufacturers, particularly those producing investment goods in the mechanical, steel and chemical industries. Lending activity on behalf of southern Italy increased to 24 per cent of the aggregate of IMI's credit operations during the period.

As a consequence of this greater activity loans outstanding at March 31, 1961, showed a further record rise of 14.8 per cent over the preceding year, with a total of 896,760 million lire.

IMI's activity was facilitated by the remarkable liquidity of the financial market, which permitted the placing of an increased amount of bonds. New bonds issued during the period under review totalled more than 142,500 million lire, a 40 per cent increase over the preceding period. Consequently bonds outstanding at March 31, 1961 reached a total of 543,746 million lire showing a net increase of 101,922 million lire. All new issues carried interest at 5 per cent, which permitted a further slight reduction in the interest rates charged on borrowers from IMI.

Funds taken up abroad totalled 13,400 million lire and were practically fully accounted for by the funds made available by the Export-Import Bank of Washington. Yet a new bond issue on the Swiss market and a further borrowing operation from Export-Import Bank worth 34 million dollars, to finance a large nuclear plant in Italy, are announced.

The assets situation of IMI was also very satisfactory. Reserve funds once again increased from 43,197 million lire to more than 50,559 million lire and net profits rose to 1,947 million lire as against 1,847 million lire in the preceding year. Net profits were confirmed by the statement of income and expenditure, which showed an amount of 35,757 million lire, under the item "income" and of 33,810 million lire for "expenditure."

It was consequently proposed to distribute, as usual, a dividend of 8 per cent on the paid-up capital and to appropriate some 1,468 million lire to the reserve funds, which thus reached a total of more than 52,000 million lire. The report, the accounts and the proposals put forward by the Board of Directors were adopted unanimously.

THE MIDLAND TAR DISTILLERS LIMITED

BOARD'S DEVELOPMENT POLICY

MR R. B. ROBINSON ON NEW PRODUCTION METHODS

The thirty-ninth annual meeting of The Midland Tar Distillers Limited was held on July 21st at the registered office, Springfield Chemical Works, Oldbury, Mr R. B. Robinson, BA (the chairman), presiding.

The following is an extract from the statement by the chairman which had been circulated with the report and accounts for the year ended March 31, 1961:

In my statement accompanying the Accounts for the year ending March 31, 1960, I referred to our future policy, as follows:

"Our policy, thus, is to extend our chemical manufacture by isolation and development of the constituents of our tar, by the manufacture and development of chemical derivatives of the finished products so obtained, and by the adoption of other processes of chemical manufacture, which either use one or more of our existing products, or may depend on quite other raw materials. Obviously this policy raises the question of the fair allocation of proceeds between the tar producers as such and the Company. We have already faced this problem and there is no insurmountable difficulty here."

This policy has had an important bearing on the Accounts for the year ending March 31, 1961.

We have quite extensive Research and Development Departments, the work in which, up till last year, was devoted to matters strictly connected with our business as distillers and refiners of tar. The costs of the Departments were a proper charge, therefore, in the Accounts drawn up in conformity with the provisions of the Tar Agreement to arrive at the price payable for our Crude Tar. We have now begun, however, to study and develop projects which are wholly or partly for the benefit of the Company rather than for the benefit of the Crude Tar Producers. It follows that in these cases the costs of the preliminary Research and Development expenses must also be borne in whole or in part by the Company and this change of allocation has been mainly responsible for the reduction in trading profit for last year.

This should cause no despondency but rather encouragement because expenditure of this class is made today so as to earn profits tomorrow and we should begin to feel the benefit of it in 1962-63, though the projects in hand which have already committed us to Capital Expenditure of £500,000 are not likely to yield a full year's benefit until 1963-64.

Our supplies of Crude Tar have fallen only slightly. We paid to our Tar Producers the highest price we have ever paid, and you might well suppose that this also implies a higher revenue for the Company. So it does, but the lion's share goes to the Producers under the provisions of the Crude Tar Agreement.

Despite the somewhat lower profit, the Directors, as you will see, propose a repetition of last year's distribution of 12½ per cent on Ordinary Capital. This absorbs just over 50 per cent of the net profit.

TRADING ACTIVITIES AND DEVELOPMENTS

At home our Phenol sales have been very good: indeed Tar Acid sales as a whole are limited only by our ability to produce, which we have carried as far as efficiency permits.

The picture presented by White Products sales, however, is by no means so attractive. We are up against the ability of the Oil Companies to produce solvents by the use of modern techniques. When one bears in mind, in addition, the doubt about the continuation of the present preferential excise duty of 1s. 3d. per gallon after 1964, it will be seen that the outlook for our White Products is not good. Needless to say, the whole problem is receiving our very close attention.

As you know, we are developing the production and exploitation of Pyridine and Pyridine Bases and their derivatives and you may have seen in the Press the announcement of our plans to increase considerably our production of Pyridine. The Pyridine Bases are only found in Crude Tar in very small proportion and even so, few Distillers practise full extraction. In the 1920s blends of Pyridine Bases meeting either of two international specifications were used at home, in Europe and the United States for the denaturing of industrial alcohol. These markets have dwindled over the years and they could not in any case be said to involve chemical exploitation. However, during the last 15-20 years Pyridine itself has found its place as a versatile organic chemical. We ourselves use relatively large quantities of Alpha Picoline for the production of 2-Vinylpyridine. Beta Picoline is used in the production of Nicotinic Acid and Nicotinamide, components of the Vitamin B complex, and Gamma Picoline is the starting point for the anti-TB drug, Isoniazid.

You may have noticed in the Press references to the production and development of "Promintic." This product consists of a Pyridine-base derivative which was one of a number of research-scale chemicals which we produced and offered to industry for examination. ICI Limited found that this particular chemical had great value as a veterinary anthelmintic and after very extensive trials are marketing it for that purpose. We have an agreement with ICI with regard to the supply of the chemical

This is far from being the whole story, but obviously chemical exploitation would always be subject to limitation if availablity were confined to the quantities extractable from Crude Tar. This is why we decided to increase our production by new methods

During the year a new continuous Naphthalene crystallising plant was put to work at Four Ashes and after the inevitable teething troubles, has settled down well and is a credit to our Technical Staff. It has enabled us to reduce costs and increase output.

Road tar continues to be a large and important market for us and our good position here has been well maintained. On the other hand, the Tar Fuels market, which on the whole has been a successful feature in our sales, has been considerably disturbed by the Hydrocarbon Oils duty in the Budget and has not yet settled down.

The exploitation of Pitch and Creosote constitutes a field that has been exhaustively worked over already for very many years past, a fact which the Coal Tar Research Association discovered when it began life in 1918. We have developed and are continuing to develop and explore outlets for special qualities of Pitch and Creosote, but these are not likely at best to yield anything massive. The ancient export markets for these materials have virtually disappeared as far as we are concerned.

BUILD-UP OF EXPORT ORGANISATION

Quite apart from these, however, we are not at present able to allocate very large quantities of our other products for export. Nonetheless, and particularly having in mind future expansion in new directions, we are building up our export organisation so as to be able to handle business in every country. We already have, as you know, an American Company selling, in the main, Tar Acids, and a subsidiary thereof which handles the import arrangements for the Tar Acids and sells bulk liquid storage facilities as well.

During the year, as you may have seen from the Press, we have formed a Company known as Schenectady-Midland Limited, in conjunction with Schenectady Varnish Inc. of America, to manufacture and sell the special resins, adhesives, varnishes, etc., for which Schenectady have earned a great reputation in the States. This step is responsible for the increase in Trade Investments as shown on the Balance Sheet. The new Company was incorporated in the Autumn and so far we have been exploring outlets and developing sales by way of importation from Schenectady. Prospects, however, are sufficiently encouraging to support a case for the erection of manufacturing plant and with this in view we have already cleared and serviced a portion of our 60 acre site across the canal from our existing Works at Four Ashes. The building up of an enterprise like this, although it is not spectacular in size, takes time and patience, but we can see the prospect of useful business which we intend to expand by every means possible. This development is one in which the Tar Producers, as such, are not concerned.

The new Market Development Department to which I referred last year is proving most valuable. The relationship between Sales, Market Development, Research and Development and Production can always present something of a problem; in our case the Departmental Heads meet together quite frequently and so ensure that each point of view is given its full weight. The optimism I expressed in referring to all this in general terms last year is proving to be justified.

Despite what I have just said about particular Departments nothing must cause us to forget our gratitude to our Staff in general and to our workpeople whose united efforts are vital to our progress.

The report and accounts were adopted and the dividend of 12½ per cent on the Ordinary Shares was approved.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:

THE TRUSTEES CORPORATION LIMITED

SIR EDWIN HERBERT'S REVIEW

The Seventy-third Annual General Meeting was held on July 26th at Winchester House, EC2. Sir Edwin Herbert, KBE, LLD, the Chairman, in the course of his speech said:

Once again I am able to present to you Accounts which I am sure you will consider satisfactory.

The Gross Revenue from Interest and Dividends shows an increase of £105,169. We received £75,873 from Double Taxation Relief as against £73,431 last year. Underwriting Commission at £6,559 compares favourably with the previous year's receipts. The net receipts from our Safe Deposit, at £3,059, are slightly down when compared with the previous year. Trustee and other fees remain practically unchanged at £11,068.

Expenses show only a slight increase over the year. Net Revenue for the year, after charging £368,080 for *Taxation*, is £506,469. This shows an increase of £54,110 for the year. We recommend a final dividend of 17 per cent on the Ordinary Stock (making 25 per cent for the year). We have transferred £130,000 to the General Reserve—bringing it up to £1,000,000—and increased our carry-forward by £7,821.

The value of our investments at £21,052,997 constitutes a record in the history of this Corporation.

In order that we may be in a position to take advantage of any favourable investment opportunities and to meet the frequent calls upon our treasury to take up our "rights" in new issues we have since the end of our financial year placed £1,000,000 6½ per cent Debenture Stock 1987-92 at 98½ per cent.

In addition, as we have already announced, it is our intention to offer to Ordinary Stockholders the right to apply for New Shares in the proportion of one new share for every ten stock units held. We have now fixed the issue price at 25s. per Share which shows a good bonus for our Stockholders. It is not intended that these new shares will rank for the *interim* dividend payable in January, 1962, but in all other respects will rank *pari passu* with the existing Ordinary stock. This issue will raise approximately a net sum of £1,122,500 which will be used for the general purposes of our business.

I do not think that we can look for a continuance of the rapid growth of our income which has taken place in the last few years. Nearly all the annual accounts which we are now receiving show that profit margins are being squeezed. It is clear that the increase in productivity is not keeping pace with the wages demands and in these circumstances I feel that we are going to see another bout of inflation. In fact perhaps it is already with us.

It is to be hoped that the corrective measures announced by the Chancellor of the Exchequer yesterday will provide a solution to this problem. If in fact this does happen it must in the longer term have a beneficial effect upon our economy and therefore upon the fortunes of this Trust.

In the normal course the income from the new monies being raised will augment our earnings for this year, but beyond that we do not look for a greatly increased revenue from our existing investments. We intend to pay an interim dividend of 8 per cent on the existing Ordinary Stock and subject to any unforeseen circumstances we would hope to be able to recommend a final dividend of not less than 17 per cent on the capital as increased.

The report and accounts were adopted.

BOARDMAN, MARDEN LTD.

The statement presented by Mr K. O. Boardman, chairman and managing director, to the annual general meeting of Boardman, Marden Ltd. in Manchester on July 26th said the result for the year, 1960-61 had exceeded the previous year's record by £199,341 with a net profit of £621,086.

After providing for taxation and the Ordinary dividend of 31½ per cent, a revenue surplus of £159,903 remained, making a total carry-forward of £472,083. All the principal subsidiaries made considerable progress and returned record profits with only one exception. The group's increased turnover was derived mainly from the garment trade.

COMPETITIVE CONDITIONS

Mr Boardman said that the cloth and garment shortages of last year had now mainly disappeared, leaving ample reserve stock and in consequence more competitive conditions were ruling. Current order books in the cloth manufacturing trade were at a reduced level compared with the same time last year due, to a great extent, to loss of confidence within the industry created by the still unresolved position of future Commonwealth imports. The prospect of Britain's early entry in the Common Market was a situation he welcomed as he did not believe the challenge of this vast European market with its enormous potentials should be resisted.

Turnover for the first three months of the current year was slightly below that of last year, but conditions for the remainder of the year should improve as bookings for the autumn season were good.

The report and accounts were adopted.

EDUCATION; BUSINESS AND PERSONAL

SECRETARIAL TRAINING, especially for university graduates and older students, six-month and intensive 14-week courses.—Write *Organising Secretary*, Davies's, 158 Holland Park Avenue, W.11. PARK 4654.

THE POLYTECHNIC
309 REGENT STREET, W.1.

A four-year sandwich course—DIPLOMA IN COMMERCIAL ADMINISTRATION WITH ENGINEERING—will commence in January, 1962.

The course is industry based, and firms considering training members of staff in the field of commercial engineering are invited to apply for further information. Careers masters would be furnished also with names of firms offering careers under this scheme.

SUCCESSFUL TUITION FOR THE B.Sc. ECON. DEGREE

Wolsey Hall (Est 1894) provides Postal Courses in a wide range of subjects for the two examinations for London Univ. B.Sc.Econ. (three if entrance is included) at moderate fees. 1,431 Wolsey Hall students passed London Univ. B.Sc.Econ. exams., 1950-60. Tuition also for G.C.E., Law, Statistical, other exams.—Prospectus (mention examination) from E. W. Shaw Fletcher, C.B.E., LL.B., Director of Studies, Dept. P16, WOLSEY HALL, OXFORD.

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write to-day for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

METROPOLITAN COLLEGE, ST. ALBANS
or call at 30 Queen Victoria Street, London, E.C.4. Established 1910.

MISTAKES MADE GOOD. The Complaints Service will help you rectify a bad buy. It's available to all subscribers to SHOPPER'S GUIDE (15s. per annum).—Write Consumer Council, Orchard House, Orchard Street, W.1.

SAVILE ROW CLOTHES. We specialise in, and have in our showrooms, a wide selection of the finest hand made town and country clothes for the discriminating gentleman. Lounge and Sports Suits. Dress clothes, Overcoats, Hunting and Riding Kit are purchased direct from leading Savile Row Tailors—Huntsman, Sandon, etc. Our prices range from 10 gns. Alterations carried out. Banker's orders and orders by post accepted.—REGENT DRESS COMPANY, 14 Dover Street, 2nd floor (lift), Piccadilly, W.1. HYD 7180. Established 1922. Open 9 a.m.-5 p.m.; Sats., 1 p.m.

ALMOST any learned and scientific journals, transactions, proceedings, etc., wanted. Items such as Nature (before 1945), Royal Statistical Soc. Journal, Royal Society Philosophical Trans. and Procs. A and B, as well as Bibliography Incl. Palmer's/Official Index To The Times, cumulative volumes of "The English Catalogue of Books," etc., constantly sought.—H. Fordes, 138 New Cavendish Street, London, W.1. MUSeum 5250.

YOUR DAUGHTER would enjoy finding her *job through STELLA FISHER BUREAU* in the STRAND.

BRITISH ASSOCIATION OF ACCOUNTANTS AND AUDITORS LTD. (Incorporated 1923). The next examinations will be held from November 21 to 24, 1961. Membership can only be obtained by those who have passed the prescribed examinations. Copies of the Syllabus are obtainable from the Secretary, Stamford House, 2/4 High Road, London, W.4.

THE COMMITTEE OF LONDON CLEARING BANKERS.

Notice is hereby given that the MAXIMUM RATE of INTEREST allowed by the undermentioned London Clearing Banks on deposits, which must be lodged for a minimum period of seven days and be subject to a minimum notice of withdrawal of seven days, will be FIVE per cent per annum until further notice.

APPOINTMENTS

THE IMPERIAL TOBACCO COMPANY

have a vacancy for a young woman graduate with a good degree in Economics. Some knowledge of statistical methods is an advantage. The post is a specialised one dealing with the interpretation of the effects of economic trends on the Company's business.

Applications, giving details of academic background, should be addressed to:
THE STAFF SECRETARY,
THE IMPERIAL TOBACCO CO. LTD.,
BRISTOL, 3.

MASSEY AGRICULTURAL COLLEGE
(University of New Zealand)
PALMERSTON NORTH
NEW ZEALAND.

Senior Lecturer/Lecturer in Agricultural Economics
Assistant Lecturer in Economics

Applications are invited for the above positions.
Salaries:
Snr. Lecturer £1,750—£2,000 p.a.
Lecturer ... £1,250—£1,700 p.a.
Asst. Lecturer £900—£1,000 p.a.
Fares paid.

For further details and conditions of appointment, please apply to the undersigned, with whom applications close on 18th September, 1961.
A. J. WEIR,
18th July, 1961. *Registrar.*

UNIVERSITY OF TASMANIA
LECTURESHIP IN POLITICAL SCIENCE

The University invites applications for a Lectureship in the Department of Political Science. Candidates should have competence in one of the following fields: Political theory, institutions, international relations, and public administration.

The salary scales for Lecturers are Grade II £A1,650-£70-£1,860, and Grade I £A1,860-£70-£2,350. Appointment will be offered within either of these grades according to qualifications and experience.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, Marlborough House, Pall Mall, London, S.W.1.

Applications close, in Australia and London, on *September 11, 1961.*

For other appointments see page 508

MARKET RESEARCH

Within our marketing team we propose to appoint a Research Officer (male or female) who will be required to interpret published recurring information and recommend action; also suggest and commence research and interpret results in relation to marketing problems affecting this developing Food Company within Unilever.

Candidates should have an Economics degree and an interest in statistical methods. A success story of a few years' experience in this stimulating work will, however, be more important.

Salary range is wide, and starting salary will depend upon experience and qualifications.

Apply, giving brief personal details, to Company Personnel Adviser, T. Wall & Sons (Meat & Handy Foods) Ltd., Atlas Road, Willesden, N.W.10, quoting reference No. 100.

COMPANY AFFAIRS

Great Universal Stores

SCHOOLTEACHERS have been joined by the ordinary shareholders of Great Universal Stores as early victims of the Chancellor's measures. In maintaining the ordinary dividend for the year at 37½ per cent the directors say that this decision is a direct result of the Chancellor's exhortations. Before Tuesday it had been their intention to declare a bigger dividend. The interim dividend was raised last November from 7½ to 12½ per cent but with the usual disclaimer; even so the stock market was confidently looking for a maintained final payment of 30 per cent, to bring the total dividend to 42½ per cent, and after the announcement of an unchanged dividend the 5s. "A" shares were marked down by 4s. 3d. to 46s. 9d. to yield 4 per cent. The market was also hoping for a further scrip issue—and not without justification for reserves now stand at over £73 million, against an ordinary capital of £23 million.

In fact the results for the year do not really justify an increase in dividend for profits in the second half of the year to March 31st have shown nothing like the buoyancy of those for the first six months of the group's trading year. In that period trading profits rose from £12,110,000 to £13,194,000 but in the second half the increase was only about 2 per cent, from £15,058,000 to £15,388,000. Thus over the year trading profits are up by only 5½ per cent, from £27,168,000 to £28,583,000; this increase is more than matched by a rise of £1,601,000 in the tax charge, of which £645,000 is due to the increased rate of profits tax. Higher investment income and lower depreciation, interest charges and minority payments enable the group to show a 3½ per cent increase in net profits from £11,419,000 to £11,827,000. This represents earnings of 82½ per cent, against 79½ per cent, so that the cover for the unchanged dividend has risen only slightly to 2.2 times.

In comparing these results it must be noted that unlike last year when a provision of £5,666,000 was made for unearned hire purchase profits the total provision this year has been reduced by £1,169,000 and stands in the balance sheet at £19,413,000. As expected with the reimposition of hire purchase controls last year the swing has been towards cash and short term credit sales and at March 31st other instalment debts were shown in the balance sheet at £33,771,000, against £29,457,000. It seems clear from the figures that the decline in trade in furniture and other household goods largely brought about by hire purchase controls has been greater than expected and that this has been barely offset by the still buoyant demand for clothing and footwear.

General Electric

SHAREHOLDERS in General Electric who have just sustained the shock of another sharp fall in profits in the year to March 31st last will find little of comfort in the full report and accounts. They will have to wait until the annual meeting in six weeks' time for a report from their new chairman, Mr A. L. G. Lindley, on the company's progress in the current year. Then he has also promised them "up-to-date information regarding matters of importance."

The reasons for the fall in profits before tax from £4.8 million to £3.3 million are all too apparent—very low margins in the heavy electrical division and heavy losses in the domestic equipment and radio and television business. The directors admit frankly that when the two dividends for 1960-61 were declared in January and April of this year so as to maintain the payment at 10 per cent the full extent of the losses in the radio, television and domestic equipment divisions was not apparent. Nor was the need for substantial provisions in the electric traction division then clear. The implication of these statements is that the dividend, which is not fully covered by earnings of 8 per cent, might well have been cut if General Electric had not brought forward its dividend payments at the time of its offer for Radio and Allied Holdings.

SALES AND PROFITS
(£ million)

	1955	1959	1960	1961
Home sales	60·4	80·3	88·3	87·1
Overseas sales	18·9	27·7	28·6	31·5
Total sales	79·3	108·0	116·9	118·6
Profit before tax	7·5	4·2	4·8	3·3
Profit before tax/sales %	9·5	3·9	4·1	2·7
Orders outstanding	81·3	132·8	137·8	149·0

What are the prospects that this payment will be maintained in the current year as the directors forecast it would be last March? The directors emphasise that the benefits from the reorganisation scheme will not be apparent for some time. There is little likelihood of much improvement from the heavy engineering division for while a number of orders have been received margins remain low. Development projects not only in nuclear but also in the field of heavy electrical plant remain an additional and heavy burden, though the directors believe that provisions already made to cover the Hunterston atomic power contract should be sufficient.

Prospects for domestic equipment and radio and television sets depend to a large extent on the effects of the Chancellor's measures, in the form of higher purchase tax and also higher hire purchase interest charges. The radio and television division has been strengthened by the Radio and Allied acquisition and the group is now making substantial economies through the pooling of common services. Both the lamps and telecommunications divisions earned higher profits last year and orders are good. At March 31st the group's total orders amounted to £149 million, £11 million more than at the end of March, 1960.

Not the least difficult problem facing the new chairman and his fellow directors is the present net overdraft of £11 million which largely reflects an increase of £10 million in stocks. Clearly every effort must be made to restore the group to a more normal basis of profitability for as the table shows, gross profit margins in the last few years have been extraordinarily low. At 29s. 9d. the £1 shares yield 6.7 per cent which is below the 8.1 per cent offered by Associated Electrical at 36s. 9d. but above the 6.3 per cent offered by English Electric at 31s. 6d. In the present credit squeeze, shareholders could hardly blame the GEC directors if they went back on their earlier forecast and reduced the dividend.

Arusha Industries

IN recommending shareholders of Arusha Industries to accept the revised terms of Federated Mortgagee Corporation's loan of £1½ million to the company Sir Harold Gillett and his fellow directors seem in fact to have admitted their inability to put forward other proposals to resolve the company's financial difficulties. The revised terms negotiated by Mr Lindsay Carstairs, who if the proposals are approved by Arusha, will again become chairman of the company, are certainly far less onerous than those originally proposed.

Now it is proposed that only half the £1½ million should be advanced by way of debenture, the remaining £750,000 coming from a straightforward purchase of 1,875,000 shares in Arusha at 8s. each. This will give the corporation a 33 per cent stake in Arusha; this is virtually a controlling interest which it could presumably sell if it so desired. Against this, however, the repayment of the £750,000 debenture will not start until eighteen months after the completion of the loan agreement and will be repayable in quarterly instalments of about £73,000 each spread over three years. This compares with the £585,000 which the company would have had to find in the first year for repayment under the original proposals; the size of this and subsequent repayments was one of the features most strongly criticised by Sir Harold Gillett and his fellow directors in recommending shareholders to reject the original proposals. He and some of the other directors will resign if shareholders accept the new proposals. If these are rejected Mr Carstairs will resign while Sir Harold and the other directors will endeavour to resolve the company's difficulties by finding other means of finance. But it now seems unlikely that they will have to do so.

164 810

United Dominions Trust

WITH a fall in profits from £3.78 million to £2.35 million, and in earnings from 64½ to 20½ per cent, which leaves the unchanged dividend of 26½ per cent short-earned, United Dominions Trust, Britain's biggest hire-purchase finance house, provides another shock from an industry that in the past ten months has recorded many setbacks. This sharp fall in profits in the year to June 30th partly reflects an exceptional provision of £500,000 towards estimated bad and doubtful debts. The usual explanations for the setback are given—higher interest charges, heavy non-recurring expenditure, and greater losses—but most disturbing is the chairman's remark that "in order to maintain our connections we had to take transactions which were almost certain one day to result in losses." Shareholders might be excused for thinking such connections expensive.

Total assets at June 30th amounted to £215 million, an increase of £40 million on the year, while hire purchase and other advances rose from £151 million to £188 million. Deferred income, comprising earnings on transactions that have not yet run their full course, rose by only £1.6 million, a modest increase reflecting the shortening of the credit periods offered. To finance this increase in business UDT, in contrast to the previous year, relied more heavily on bank borrowing (which increased from £33 million to £58 million) while deposits rose by only £8 million to £110 million. The group's liquid resources still remain high at £15.7 million.

Following the one-for-two rights issue, capital funds have risen from £20.3 million to £26.3 million. The £1 shares, which may soon be subdivided, have fallen to 137s. 6d. xd., yield 3.9 per cent.

Brewers Three

LAST weekend brought goods news for shareholders in three brewery companies. Earlier this month the directors of **Courage, Barclay and Simonds**, the London brewers, had announced that profits of £4,027,000 in the year to March 31st compared with a total of £2,587,000 in 1959-60 before the acquisition of H. and G. Simonds. The chairman, Mr R. H. Courage, has now revealed that, including Simonds, profits in 1959-60 would have been about £3,535,000. Thus the profits of CBS have risen by 14 per cent and the total dividend at 14 per cent compares with 13½ per cent forecast at the time of the Simonds merger.

CBS formally acquired Bristol Brewery Georges on April 1st at what to some observers outside the industry seemed to be a high price. This acquisition involved not only a share issue but also a cash payment of £7.3 million. As CBS held only £2½ million in liquid assets on March 31st, it is clear that CBS must have secured substantial loans from its bankers and Mr Courage says that the directors are now considering what will be the appropriate time to fund the loans, though he does not make clear quite how the permanent finance required will be raised.

The properties of the group, including those of BBG and Simonds, have recently been revalued, and net assets attributable to the ordinary capital are now estimated at £43.6 million, which imputes a break-up value of 63s. to each ordinary share, compared with a market price of 61s. 6d. The group has set up the Horselydown Property Investment Company which will advise on the development of "specialised properties" and it will provide a link with specialist property developers in making the fullest use of the group's assets. How much CBS will be able to realise on its properties remains to be seen but in the meantime Mr Courage has said that trading results in the first three months were satisfactory and he looks forward to a "very busy year" though he warns shareholders that the full benefits of recent acquisitions must take some time to appear. At 61s. 6d. the £1 ordinary shares yield 4½ per cent, covered 1¾ times by earnings.

Sharing the same financial year with Courage and brewing in Burton as well as London, **Truman Hanbury Buxton** raised its sales by 4¾ per cent in 1960-61, compared with the national rise in beer consumption of 3¾ per cent. Its trading profit rose by 17 per cent from £1,462,000 to £1,715,000; but after heavier charges for tax and depreciation its net profits rose by 6 per cent from £583,000 to £618,000, to leave the cover on the dividend as raised from 17 to 18 per cent, practically unchanged at 1¾ times.

	Gross profit (£'000s)		Ordinary dividend (per cent,)	
	Previous year	Latest year	Previous year	Latest year
Courage Barclay	3,525*	4,027	13	14
Truman Hanbury	1,122	1,328	17	18
Vaux	1,087	1,292	20†	30

* Adjusted to take account of Simonds' profits.
† Adjusted for scrip issue.

Courage and Truman have different views about the future of lager sales in this country. The chairman of Truman, Mr G. Bent, shares the view of Whitbread, with which it has certain links, that the traditional quality beers will hold their own against lager, which at the moment accounts for about 3 per cent of total consumption, and he says that Truman will rely on established foreign brewed lager in its houses. CBS, on the other hand, has long brewed Barclay's Pilsner Lager and it has now joined Guinness and Mitchells and Butlers in the development of a new lager brewery at Alton. CBS's own lager brewery at Southwark will eventually be closed. Mr Courage admits that the heavy initial expenses of launching "Harp" lager will mean that it will be some time before this venture is profitable but he believes that this development is "in keeping with the trend of the beer market." Mr Bent is guarded in his comments about the more immediate prospect, saying simply that sales so far in the current year have been maintained but that it will not be easy to keep pace with rising costs and taxes. At 80s. 6d. the £1 ordinary shares of Truman yield 4½ per cent, covered 1.8 times by earnings.

Vaux and Associated brews in Sunderland, Kendal and Edinburgh. It falls into a different category in the market in brewing shares for even after a sharp dividend increase its £1 ordinary shares at 165s. yield only 3.6 per cent. This can be attributed largely to earlier take-over rumours. The group has a good record of profits. In the year to April 30, 1960, its gross profits rose by 40 per cent but this reflected the acquisition of Thomas Usher, the Edinburgh brewer, and the rise of 19 per cent from £1,087,000 to £1,292,000 in 1960-61 must be judged to be satisfactory. Its dividend has been raised from the equivalent of 20 to 30 per cent, covered over twice by earnings, and there is to be a one-for-one scrip issue. Clearly, any bidder for Vaux will have to pay a good price.

Television Results

THIS week two leading independent television companies have announced higher profits and dividends for the year to April 30th. The preliminary report from **Associated Television** is as cryptic as usual, revealing only the gross profit figure and the dividends; but the news it contained was good enough to push the price of the 5s. "A" shares up by 5s. 9d. They now stand at 32s. 9d. and yield 9.1 per cent. Gross profits rose by little more than one per cent in 1959-60 but last year they rose by 19 per cent from £5,388,000 to £6,412,000. What surprised the market was the increase in the dividend from 50 to 60 per cent, which on a normal tax charge should be covered about 1½ times. Last September the chairman, Mr Prince Littler, said that the group was more diversified than ever, with its interests in television in this country, North America and Australia, in British Relay and Wireless, in Muzak background music and Pye gramophone records.

The gross profits of **Associated Rediffusion** rose by 7½ per cent from £7,849,000 to £8,431,000 but the £500,000 charged for obsolescence in 1959-60 has not been repeated. The tax charge of £4½ million is heavy but net profits also rose by 7½ per cent from £3,659,000 to £3,932,000. The total tax free dividend has been raised from 25 to 30 per cent. Most of this will accrue to British Electric Traction, which holds a 50 per cent interest, and Rediffusion, which holds a 37½ per cent interest. These results bear out the chairman's forecast last year that the loss of the receipts from the ending of the networking agreement with Granada last July would be more than made good from other sources.

Montecatini

THE newcomer in the growing list of European companies with a London Stock Exchange quotation is Montecatini, the largest chemical and mining group in Italy and one of the largest in Europe.

A large part of the company's capacity was destroyed in the last war and there has been an intensive programme of reorganisation and reconstruction since then. The group has added to its interests in the agricultural field, including insecticides, while its power stations now produce 85 per cent of its power requirements in Italy. Like other chemical companies Montecatini has devoted a good deal of its research effort to plastics and it recently developed isotactic polypropylene, which shows a greater resistance than ordinary plastics to heat and mechanical wear.

Montecatini now produces about half of Italy's total output of agricultural chemicals, synthetic fibres, dyes and plastic materials and in the metallurgical field it accounted in 1960 for about 62 per cent of the country's aluminium output, 35 per cent of its lead production and 25 per cent of its zinc output. Sales last year amounted to £136 million, of which about 18 per cent represented exports; in the first four months of the current year sales were 11 per cent higher than in the corresponding period in 1960. The company's profit record over the last five years is uneven but this largely reflects the sharp increase in depreciation provisions arising from the group's programme of capital expenditure. The group is continuing to spend heavily on capital account and commitments for the next two years amount to £75 million, of which a substantial part is earmarked for new petrochemical facilities at Brindisi.

The lire 1,000 shares are being introduced through Hambros Bank, which will issue deposit certificates in London representing shares deposited in its name with Credit Italiano of Milan. At a London price of 53s. 7½d. the shares yield about 2½ per cent, more than one point less than the current return on the £1 shares of Imperial Chemical Industries.

Ruston and Hornsby

THE hopes of a brighter future for Ruston and Hornsby expressed nearly a year ago by the chairman, Mr W. J. Ruston, were not realised in the year to March 31st, for profits fell for the eighth consecutive year. The chairman cites three main reasons for this further setback: the improvement in general trading conditions did not come early enough to have much influence on the year's results; a heavier wage burden cut into profit margins and there was a shortage of suitable labour; and technical problems arose which hindered deliveries. As a result, trading profits fell by 12 per cent from £1,367,000 to £1,205,000, even though there was some improvement in the group's sales.

Output of the Davey, Paxman subsidiary, which makes diesel engines and boilers, fell last year, and it was left with some idle capacity in its factories. This company added to its profits but this was due mainly to the inclusion of non-recurrent items. In contrast the record of the associate company, Ruston-Bucyrus, is one of full employment and overtime working; but even then demand was unsatisfied and the order book for the company's earth-moving products lengthened. The group benefited from the higher dividends paid by this subsidiary; these were reflected in the increase in investment income from £366,000 to £406,000.

A sharp increase of £2 million in working capital left the group at the end of March with a net overdraft of £192,000. Capital commitments then amounted to £248,000, so that with the maintained 9 per cent dividend covered little more than 1¼ times, it appears that the company will have to conserve resources this year. Mr Ruston indicates that the group should hold its own in the current year as orders have risen and as the effects of the managerial reorganisation begin to make themselves felt. By 1962-3, he hopes that there will be an improvement in profits. The £1 shares now stand at their lowest point for the year at 23s. 6d. to yield 7.6 per cent.

International Tea

THE disappointing results from Allied Suppliers had already made an impact upon food shares and in particular on the 5s. shares of International Tea, and when that company announced its results this week its shares were marked down again, so that at 14s., compared with this year's peak of 19s. 3d., the yield is 4½ per cent on the maintained dividend of 12½ per cent.

The group's trading profits in the year to April 30th fell slightly, from £2,645,000 to £2,563,000, and its net profits declined from £1,021,000 to £947,000. It seems clear that benefits arising from the group's modernisation scheme involving the conversions to date of about 300 branches into self service stores, have been more than offset by competitive price cutting. *International* Tea's sales may have again been higher, but its margins must have been lower.

The group is still going ahead with its development programme and capital commitments of £765,000 at the end of April were very little different from those outstanding in April, 1960. Development has been largely financed by the sale and leaseback of freehold properties and the surplus on properties sold last year (as distinct from the actual sum of money raised) was £421,000. Sales under existing agreements with the Legal and General are expected to produce a further surplus of £100,000. Freehold properties of the group a year ago were shown at cost at £6.3 million, so that International Tea, whose annual cash flow is not much less than £950,000, could presumably continue to finance further development by lease-backs.

London Stock Exchange

FIRST DEALINGS	July 10	July 24	Aug. 4
LAST DEALINGS	July 21	Aug. 3	Aug 18
ACCOUNT DAY	Aug. 1	Aug 15	Aug. 29

THE improvement in prices which took place in the London stock market in the middle of last week was not maintained at the end of the Account on Friday although gilt-edged stocks finished the week on a firm note. Anticipation of the Chancellor's speech after the week end was once again having its effect. Small buying and selling and the decrease in recent small investment buying led to sensitive and irregular price movements from Thursday onwards. The tendency to mark time continued on Monday and Tuesday (the Chancellor's statement came after official hours) but although the business remained small prices were a little better. On Wednesday however the market reacted strongly to the previous day's announcements. At first there were widespread losses but later a number of equities rallied and some wiped out earlier falls to close with moderate gains, but on Thursday shares fell sharply. Over the week to Wednesday *The Economist* indicator showed a net gain of 5.7 points at 376.1.

Short dated gilt-edged stocks improved before the week-end on a little bear covering and investment buying. At the same time War Loan and other undated stocks rose on the assumption that gilt-edged might benefit from stringent long term government measures. But the 2 per cent rise in Bank rate caused some sharp falls of up to 1⅛ on Wednesday. War Loan 3½ per cent fell one point but over the week to Wednesday still showed a net gain of 1/16 to 53¼, but all short dated stocks showed net falls with Exchequer 3 per cent 1962-63 down 1¼ to 94⅛.

On balance bank and insurance shares showed moderate gains, notably Lloyds Bank rose by 3s. 9d. to 65s. 6d. and General Accident by 9s. 3d. to 155s. 6d. Hire purchase shares showed sharp falls especially United Dominions Trust which following its disappointing results lost 25s. to 140s. Stores shares recovered slightly, Marks and Spencer "A" gained 1s. 4½d. to 110s. Steel shares dropped, Summers losing 3s. to 48s. 4½d. but Dorman Long went against the trend and gained 2s. to 31s. 10½d. There was a fair turnover in Colvilles new rights which closed on Wednesday at 6d. premium. Property shares showed no decided trend but City Centre gained 3s. 1½d. to 55s. 6d. xr. Electrical shares were generally lower especially General Electric which lost 1s. 9d. to 30s. 9d. folowing its sharp fall in profits. Engineering shares rose moderately in some cases, Guest Keen and Nettlefolds gaining 1s. 4½d. to 90s. 6d. Food shares showed a few gains particularly Bovril which improved by 7s. 9d. to 63s. Steady demand led to an uninterrupted rise in gold mining shares, Western Holding gained 8s. 9d. to 117s. 6d. and among the finance houses Union Corporation gained 4s. 6d. to 50s.

THE MONEY MARKET

THE rise of 2 per cent in Bank rate to 7 per cent on Tuesday left a longer than usual gap before the next Treasury bill tender. The market referred back to September, 1957, for a rough guide in fixing rates. On that occasion the 7 per cent Bank rate was followed by a rise from 4½ to 6⅞ per cent in the Treasury bill rate. On Wednesday three month trade bills rose to 7⅛-8 per cent, an increase of 2 per cent, and bank bills of a similar maturity rose to 6¼-6½ per cent.

At the Treasury bill tender on the Friday before the change in Bank rate the discount market again made no real attempt to anticipate a possible change in Bank rate, although the syndicate did lower its bid by 3d. to £98 16s. 11d., and the average rate of discount rose by just under 1/16 per cent to 4⅝ per cent. Outside bidders kept out of the tender, and total applications fell by £45 million to £333 million. In these circumstances the market allotment rose from 47 per cent to 66 per cent. Credit was tight on the Monday and Tuesday before the Bank rate change and on Wednesday one or two houses borrowed small amounts from the Bank at 7 per cent.

(1) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (4) In general males under 21 and females under 18 years of age. (5) Surveys made twice a year; annual figures relate to October survey. (6) Index revised and rebased on 1958=100 (see *The Economist*, January 7, 1961, page 59). (7) Revised series. (8) The series has been revised by the Chamber of Shipping to reflect a more up-to-date pattern of tramp shipping movements and uses the average freights in 1960 as the basis of comparison; 1958 and 1959 figures on the old basis of 1952=100 have been linked to 1960=100 by multiplying by 1·348, freights in 1960 being considerably lower than they were in 1952.

APPOINTMENTS

Senior Commercial Executive

Turbine Gears Limited, a company specialising in the design and sale of gears and gear units of all kinds, wish to recruit a first-class Commercial Executive who will be directly responsible to the Managing Director.

Applicants, aged 30-40, should have had experience in the sale of capital goods including dealing with customers and staff, estimating, budgetary and cost control, and the co-ordination of production problems. A sound engineering background would be an advantage.

This is an important post offering every opportunity for advancement with a member company of the progressive and fast-growing Simon Engineering Limited at their Cheadle Heath headquarters. A first-class salary will be offered to the right man. Excellent conditions and pension scheme.

Please write, giving full career details and quoting reference HS.51/C, to: The Chief Personnel Officer, HENRY SIMON (HOLDINGS) LTD., Cheadle Heath, Stockport, Cheshire.

Turbine Gears LTD

SE MEMBER COMPANY SIMON ENGINEERING LTD

UNESTABLISHED DISTRICT COMMISSIONERS

NATIONAL SAVINGS COMMITTEE

Several vacancies, mainly in the Provinces, for men or women with knowledge of economics, organising ability, preferably with experience of public speaking and voluntary organisations. University education desirable. National salary £775 (age 25 and over) to £1,430. Possible establishment later. Application forms from Manager (PE 1847), Ministry of Labour, Professional & Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Closing date for completed application forms, Friday, August 18, 1961.

ROAD RESEARCH LABORATORY (D.S.I.R.), Harmondsworth, Middlesex, requires Civil Engineers, Physicists, Mathematicians, Statisticians in the Senior Scientific and Scientific Officer grades for work in the Tropical Section. Duties concern problems of road building and road transport in tropical and sub-tropical areas, involving soil mechanics, traffic engineering, and economics studies. Section is based at Harmondsworth and work involves regular visits overseas with, in some instances, postings for periods of one or two years on specific projects: usual Foreign Service Allowances apply. Qualifications: 1st or 2nd Class Hons. degree. For S.S.O. some years of appropriate post-graduate research is required. Salary—within range—S.O. £773-£1,267; S.S.O. £1,392-£1,714. Prospects of promotion to Principal Scientific Officer (range up to £2,478) with possibility of higher posts. Laboratory is expected to move to Crowthorne, Near Bracknell, Berkshire, in 1963-64.—Application Form and further information from Director of Road Research (address above) quoting ROAD 8YXW.

BP has a vacancy for a male SENIOR MARKET RESEARCH ASSISTANT aged 35-40 to work in London Head Office. A graduate in Economics, Statistics or Mathematics is required. He must have at least five years' experience in the supervision of Market Surveys and the interpretation of results with an Advertising Agency, Market Research Agency or Commercial Organisation. A knowledge of French and German would be useful. Some travel abroad is involved. Part of the duties will be the co-ordination of market research activities throughout the BP Group. Salary according to qualifications and experience. Non-contributory Pension Scheme.—Write giving full particulars, quoting reference H.5568, to Box 6760 c/o Hanway House, Clark's Place, E.C.2.

For further appointments and other classified advertisements see page 500

BBC requires Trainees for posts in News and Current Affairs covering Sound and Television News and Sound Current Affairs departments. Candidates must have writing ability and be able to show keen interest in current affairs. After a training period trainees will be able to compete for posts as sub-editors, script-writers, reporters, or producers, in London or the Regions. Candidates with a strong preference for Regional work should say so. Progress is possible, in competition, to senior editorial/production posts. Training salary, according to qualifications, not less than £1,060 p.a. Requests for application forms (enclosing addressed envelope and quoting reference 61.G.329) should reach Appointments Officer, Broadcasting House, London, W.1, within five days.

HEINZ 57 MARKET ANALYST

An Economist, aged 24-28, is required to study sales, market research, test market results and other data and to provide an efficient market intelligence service to senior executives of the Company.

A graduate in Economics or Statistics would be preferred but the really essential qualifications are an enquiring mind and at least two years' practical experience in the consumer goods field.

This appointment carries excellent conditions of employment and a good commencing salary which will be progressive on a personal merit basis.

Applications detailing qualifications and briefly outlining experience to date should be addressed

The Personnel Officer,
H. J. Heinz Company Limited,
Waxlow Road, Harlesden,
London, N.W.10.

MARKETING RESEARCH

B Nylon S

What do people think of a product? How and why do people's preferences and buying habits change? How much should be spent on consumer advertising, and how much on retail promotion? Is direct mail a useful promotion method, or is it wasteful?

The Marketing Research Section of British Nylon Spinners (located in modern offices in Knightsbridge) is trying to answer these questions and others like them. The Company makes yarn only, not cloth or clothes, and problems arise at every stage in the clothing production and distribution industries. A large continuous programme of research is already in operation (much of it pioneering in nature). This is now being expanded, and the central planning unit of the Section needs strengthening.

We are looking for graduates (preferably Economists, Sociologists or Psychologists) to take part in this interesting work. Applications from men or women, aged not more than thirty, should be addressed to The Personnel Manager,

British Nylon Spinners Limited,
PONTYPOOL, MONMOUTHSHIRE,
and should quote ref. M/12.

ECONOMIST/STATISTICIAN

Applications are invited from Honours Graduates for the appointment of Economist/Statistician with the Committee for Scotland and Northern Ireland of the White Fish Authority.

Generally the duties are to undertake economic surveys and research covering the various sections of the fishing industry and to maintain and analyse fishery statistics.

Applications should be made on the prescribed form. Intending applicants may obtain further particulars regarding duties and conditions of service and the form of application from the Secretary/Solicitor, Committee for Scotland and Northern Ireland, 5 Forres Street, Edinburgh.

CIVIL SERVICE COMMISSION

POSTS AS INSPECTOR OF TAXES IN THE INLAND REVENUE

Pensionable vacancies in all parts of the United Kingdom for men and women aged at least 20½ and under 28 on August 1, 1961 (with extension for those with regular service in H.M. Forces or H.M. Overseas Civil Service). Candidates must have (or obtain in 1961) a first or second class honours degree, or be Chartered or Certified Accountants with at least 2 years' practical experience since qualifying.

Selection by group tests and interviews to be held at intervals throughout 1961.

Inspectors of Taxes are in close contact with the full range of industrial and commercial life of the country, and their work affords them considerable responsibility and independence of decision. Your Local Tax Inspector will gladly tell you anything you want to know about the job.

Salary scale (Inner London) £783 — £1,490; starting salary may be above minimum. Prospects of promotion to nearly 1,500 posts with maxima ranging from £2,132 to £5,015.

Write for full details and application form to the Secretary, Civil Service Commission, 6 Burlington Gardens, London, W.1, quoting 309/61/50. Early application advised.

QUEEN ELIZABETH COLLEGE

(UNIVERSITY OF LONDON)

CAMPDEN HILL ROAD, LONDON, W.

RESEARCH SOCIOLOGIST required in the DEPARTMENT OF NUTRITION for investigation of social factors affecting nutrition. The duties may include some teaching for B.Sc. (Nutrition) Course. Salary in the range £1,110 — £1,460. Applications to the Secretary by August 18th.

WRITER INTERESTED IN FINANCE

Excellent salary for writing and editing prospectuses, bi-annual reports, leaflets, etc., within a company responsible for large investments. You must be able to write clearly, concisely and persuasively.—Box 1534.

UNIVERSITY OF DURHAM

CHAIR OF STATISTICS

Applications are invited for the Chair of Statistics tenable in the Newcastle Division of the University. This is a newly established post and the candidate selected will be expected to take up the appointment on January 1, 1962, or such other date as may be arranged. Salary in accordance with the Professorial scale (£2,600-£3,000 a year) with family allowance and membership of F.S.S.U.—Further particulars may be obtained from the undersigned with whom applications (12 copies) must be lodged not later than September 25, 1961. (Candidates outside the British Isles may submit one copy only.)

Registrar, Durham University Office, 1 Kensington Terrace, Newcastle upon Tyne. 2

July 12, 1961.

UNIVERSITY OF CANTERBURY

CHRISTCHURCH, NEW ZEALAND

LECTURER IN ACCOUNTANCY

Applications are invited for the above-mentioned position in the Department of Accountancy. University training, teaching experience and practical experience in at least one major field of accounting are desirable qualifications. The salary range is £1,250 to £1,700 per annum. The annual increment within the range is £75 and the initial salary will depend on qualifications and experience.

Approved fares to Christchurch will be allowed for an appointee, his wife and children. In addition, actual removal expenses will be allowed within certain limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, Marlborough House, Pall Mall, London, S.W.1.

Applications close in New Zealand and London on August 31, 1961.

NATIONAL Council of Social Service has interesting senior headquarters administrative vacancy with National Old People's Welfare Council. Knowledge of social services and experience in organising publications essential; degree or diploma desirable. Starting salary £750 to £800 p.a.; superannuation scheme.—Details and application forms from 26 Bedford Square, W.C.1; closing date September 1st.

CHIEF ACCOUNTANT—BRAZIL

A Qualified Accountant of wide experience, age 35-45, is required in Sao Paulo for the Brazilian Subsidiary of Reckitt & Colman Holdings Limited—a large British Group with world-wide interests.

Recent experience in Brazil, a thorough knowledge of the Portuguese language and of local legal and tax requirements, are essential. The emphasis will be on finance and management accounting.

This is a senior position, which carries excellent salary, home leave, car, pension fund and other benefits.

Replies to The Secretary, 160 Dansom Lane, Hull, E. Yorks.

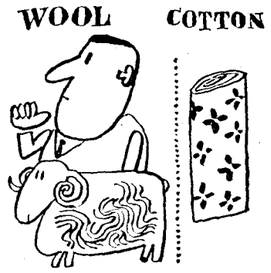
TOW FOR YACHT IN TROUBLE IN SURF

TENBY, PEMBROKESHIRE. At 1.10 on the afternoon of the 10th July, 1960, the coastguard informed the honorary secretary that a yacht was apparently in trouble and was drifting towards Pendine. Someone on board was waving a shirt. The life-boat Henry Comber Brown was launched five minutes later in a moderate south-westerly breeze. The sea was rough, and it was one hour before low-water. When the life-boat reached the area indicated she found two yachts on the beach, one of them labouring violently in the surf. A line was passed to this yacht, and the life-boat towed her to Saundersfoot. The other yacht was not in trouble. The life-boat then returned to her station, which she reached at 3.15.

A Welsh Coxswain

This is another true story of the Life-Boat Service—typical of the work that is going on day and night, year in, year out.



The Royal National Life-Boat Institution is supported wholly by voluntary contributions.

BRAVE MUSIC

The British entry, *andante*, into the European symphony is less a solo incursion than the working out of a larger theme, and is at least in part—too negatively in fact—a counterpoint to the rude blare of Soviet brass. The score is not going to be easy to follow, and close attention will have to be paid in the discordant passages ahead if accord is to be reached (p. 523).

• The trumpets have sounded on the other side—less muted in Germany than in France (p. 553).

• At home, Mr Macmillan's *piano* introduction has developed into a display of instrumental virtuosity (p. 529).

DISCORD

Sharp notes are being heard in the teachers' quarrel with the Exchequer : it is right that more money should be paid over, but the recipients ought to be the better-qualified and "career" teachers rather than those *débutantes* whom the NUT—and the Burnham Committee—are now championing (p. 526).

The Trades Union Congress has been joined by the Labour party in its efforts to stop the ETU playing its own tune: but if attempts to drown its noise fail, the government may feel it has to rewrite the rules of harmony for all the unions (p. 532).

CONDUCTOR'S CHORES

Mr Gaitskell is wielding his baton with renewed vigour and skill, and the loud playing on his left has been toned down (p. 533).

The stopping of Mr Wedgwood Benn's pipe was to be expected —but not the elevation of the second fiddle to his seat (p. 532).

The Irish Congress of Trade Unions has hopes of reducing its instruments to a smaller and more harmonious combination (p. 547).

ON THE DOWNBEAT

The critics have been at work on Mr Lloyd's stately measures (p. 566), shortly to become *fortissimo* with the loan from the IMF (p. 565): a note of confidence in sterling has offset the hollowness of the gold reserves (p. 565): borrowers may have to pay for having their tune called for them (p. 568).

Many manufacturers' guarantees have been blowing false notes on consumers' common law rights: a movement is under way to put them into tune (p. 570).

HARMONY

After 15 years of rehearsal, Stevenage New Town is settling down into something like a well-conducted community (p. 545).

INTERNATIONAL

THE FUTURE AND . . .

. . . Russia

Mr Khrushchev's manifesto plotting the course of the Soviet Union's economic and political development during the next twenty years is spelt on p. 552. The vistas of plenty it opens are, on the whole, not unrealistic, and it recognises that war would interfere with their attainment (p. 524).

Berlin remains the most pressing danger to the peaceful hopes of East and West alike ; there may be more negotiation soon (p. 530).

In **Antarctica**, twelve nations, including Russia, Britain, and the United States, have agreed to collaborate rather than squabble (p. 554).

It is now possible that the **Pope** may receive Mr Khrushchev if he visits Rome (p. 536).

Relations between Russia and **Persia** have gone through a sharp drop of temperature (p. 557).

. . . America

The Two Continents : now that the United States has accepted the burden of Latin America's economic problems, it remains to be seen whether the southern republics will be prepared to do their bit by working and planning together (p. 528).

Propaganda Food : The billions of dollars worth of free food which the United States sends abroad each year for the needy could be used more effectively and receive the recognition that generosity deserves, if it were not for congressional short-sightedness (p. 539).

Arms and the Men : Mr Kennedy's call for more of both for the conventional forces has been answered without delay, but his proposal for a modest new beginning on civil defence has a more doubtful future (p. 540).

Detroit : The big motor car companies are alarmed by the proposal of one of the small ones to give their employees a share of the profits (p. 542).

Children : At this time of year United States parents pack their children off to summer camp with a sigh of relief (p. 541).

. . . Africa

The freeing of **Mr Kenyatta**, symbol of African nationalism, is not the green light for Mau Mau terrorism (p. 527). Nor are **Dr Nkrumah's** anti-colonialist allusions to the past proof that he has a communist future (p. 533).

Libyan oil comes on the world market next month: it may well provoke some readjustment of the politically explosive posted prices of oil (p. 561).

Both the old **Portuguese** empire (p. 536) and the new **Cameroun** confederation (p. 534) are under a cloud just now. The collapse of the Evian talks has plunged the prospects of **Algeria** back into obscurity (p. 530).

. . . Asia

Malaya: the difficulties that impede the realisation of the Malayan prime minister's plan for a confederation of Singapore, Borneo and Malaya are serious but not, perhaps, insuperable (p. 557).

Vietnam: President Diem's government is having an unaccustomed run of success against the communist terrorists (p. 536).

Machinery Enthusiasts

There isn't much they don't know about that machine of theirs. But when it comes to industrial machinery, Wards are the people to consult. New or secondhand, Wards offer a range of plant and equipment so wide that the task of the machinery buyer is considerably eased.

In the field of new machinery, Wards is a shop window for well-known makers. In the reconditioned field, they have an enviable reputation for skilled and knowledgeable workmanship which gives a new lease of serviceable and trustworthy life to secondhand plant. The machinery user who deals with Wards seldom has to look further for his needs.

The supplying of industrial machinery is just one activity of the Ward Group of Companies whose products and services cover almost every branch of industry.

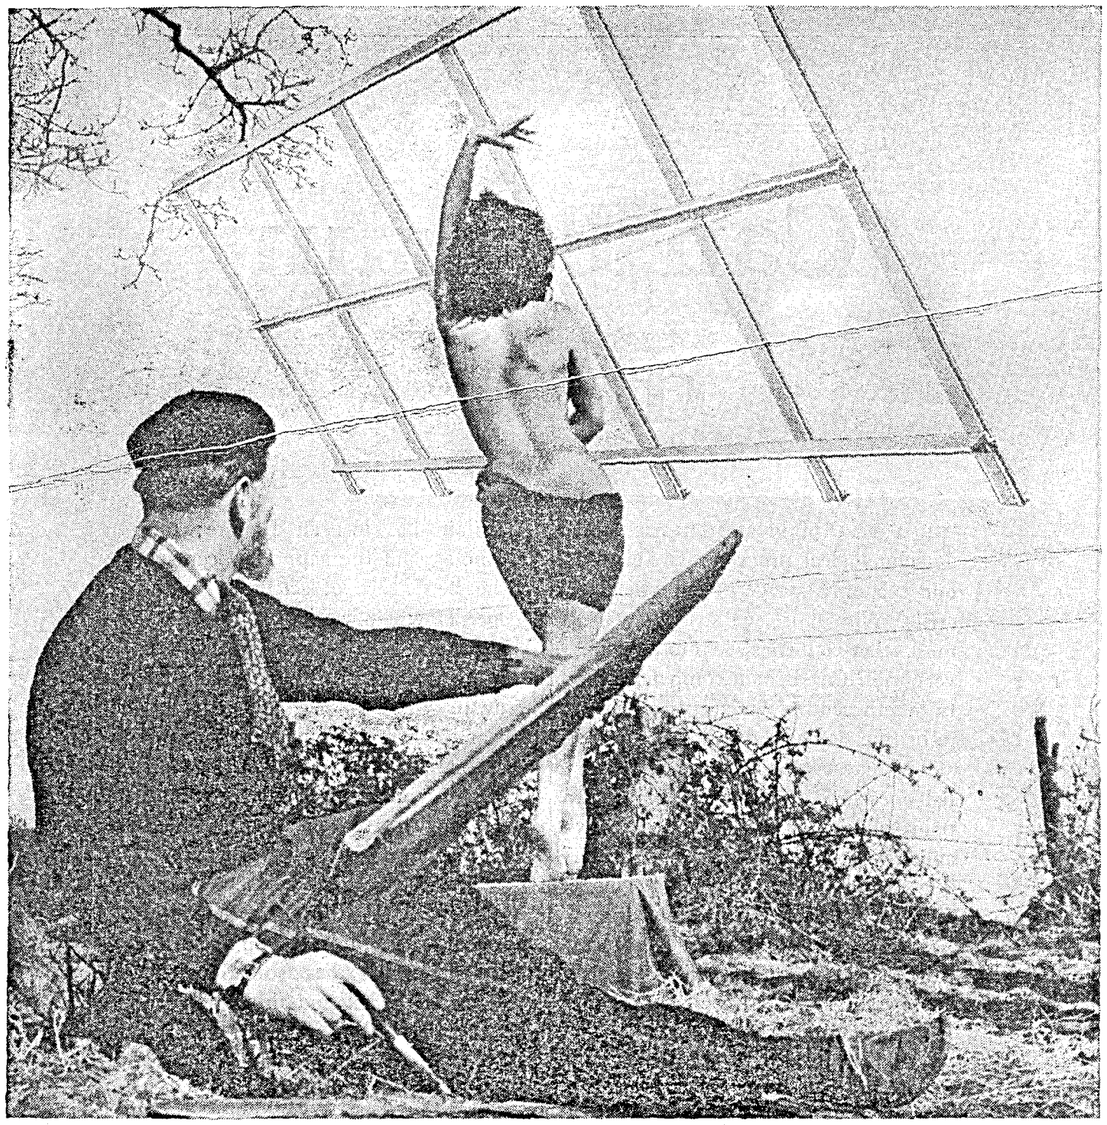
Can Britain do it?

In a time of great industrial and technological progress, why should our economy stagger from crisis to crisis? Why must we struggle when most other countries seem to be doing very well? Can Britain compete in the twentieth century, or are we doomed to be 'the sick man of Europe'?

The latest economic measures (or half-measures, depending on your point of view) have provoked many angry questions about Britain's future. This Sunday The Observer begins a far-looking series of articles on 'Britain Tomorrow', examining our long-term prospects, dealing not with pennies on cigarettes and percentages on the bank rate, but with the challenge set by world changes over the last fifteen to twenty years.



Britain has lost an Empire; can technology fill the gap? How can we make better use of scientific knowledge? How can we increase production faster? What is more important—the pound sterling or economic growth?

Can we learn anything from Europe? Are their new techniques of planning relevant to our economy? What will be the effect if we join the Common Market?

These questions are not new to you, but they have still not been fully answered. We promise you that this Observer series has something to add, in both fact and thinking. You will find it helpful to begin reading this Sunday, and make a point of following it week by week.

The European Venture

WITH the Prime Minister's statement on Monday, a twelve months' reappraisal of Britain's European policy reached, and passed, the point of decision: formal application is to be made, he told the House of Commons, to join the Treaty of Rome. Of the various possible solutions to the problem of this country's European relations, this is not only the best; it is also the one that (against the long-held and sometimes lonely opinion of this newspaper) has most often been authoritatively declared to be out of the question. What happened?

In fact, the turn-about has not been as abrupt, and by most of the country will not be found as shocking, as this fact would suggest. July and August a year ago saw the wind of change blowing first through the debates at Westminster, and next through Mr Macmillan's talks with Dr Adenauer at Bonn. This was the time when east-west diplomacy was drifting, dismasted, after the shipwreck of the Paris summit conference. Mr Khrushchev may have driven the statesmen back to the topic of a wider European unity by imposing on them a sense of common danger. Or, in more prosaic terms, he may have removed a source of suspicion between London and Bonn, and of rivalry between London and Paris, by making the pursuit of better east-west relations temporarily pointless.

Whichever it was, it is worth while to remind ourselves of the part that this negative force of Soviet hostility has played and continues to play in bringing European union about. Mr Macmillan showed himself aware of it on Monday when he justified his decision by "*the enormous monolithic strength of Soviet* power." Quite right: but the reminder carries a clear warning with it. To rely on this negative force as the unifying factor would not only put the European negotiation at the mercy of Mr Khrushchev's power to blow hot or cold at will; it would also tend to stamp the end-product itself as a negative and defensive-minded thing. British opinion, by and large, has come round to perceiving the dangers of having western Europe divided and the disadvantages to this country of steering a course, in hazardous times, relatively alone. If only for these reasons, the Government's decision to negotiate with the common market powers will have wide support and fairly general acquiescence in this country. What remains to be established in the public mind is the positive purpose that might make the enlarged European Community not merely a defence-mechanism, but also a system better, and more useful to the world, than modern Europe has yet known.

Basically, it is this that gave importance on Monday to the bower of "ifs" and "buts" in which Mr Macmillan found it necessary to wreathe his momentous statement. Everybody knew that, to carry his own party with him, he had to state conditions. These were in effect that the interests of the Commonwealth, the European Free Trade Association partners, and the British farmers were going to be respected; and it follows that he cannot promise to sign the Treaty of Rome until negotiations have shown what protection for those interests can be obtained. He had to accept the real risk that his reservations would give ammunition to those Europeans already in the common market who do not want Britain in. First reactions from the Continental capitals suggest that this risk was not excessive. Mr Macmillan's assurance that "we shall spare no efforts to reach a satisfactory agreement" has been given more weight than his "ifs" and "buts." For this confidence the pertinacity of his European course over the *past twelve months deserves the credit.*

Nobody ought to conclude from the good first reaction that the negotiations are going to be anything but hard; it can, however, be hoped that they will not be dominated, as past negotiations have been, by the suspicion that the British are bent on sharing the benefits of European union without sharing the obligations. At last, Mr Macmillan has managed to get British relations with western Europe out of the rut of stale resentments in which they had been allowed, for too long, to run. This has required, and will go on requiring, an effort of goodwill from the Europeans. What has now to be most anxiously watched is that the Prime Minister's tactical emphasis on the safeguards and the reservations does not overimpress the British public itself. European union is not a *pis aller,* to be followed with reluctance and backward glances; it is a great and hopeful pooling of interests to produce something new in world society—and in the progress of Britain.

Such an idea would, of course, be meaningless to the British unless the rediscovery that they are, after all, a European nation can somehow be kept clear and central among the distractions of economic pessimism, colonial deadlocks, cold-war alarms, and diplomatic setbacks which will not obligingly cease while the negotiations with the Six are going on. At whatever point in time these negotiations had been attempted, these distractions would have been there. This winter, more than likely, will see the endemic great-power crisis about the German question come to a head yet again, providing the usual fertile soil for differences and resentments among the western nations. We shall be fortunate if it does not also see France, now openly and rather unnecessarily at loggerheads with the United Nations, plunged in a still more acute phase of its North African troubles.

British diplomacy will find itself in a perhaps uneasy intermediate position, having given up the eccentric isolation of the last few years without yet having fully entered the European consensus. This will be no time for shrewd initiatives at Dr Adenauer's or General de Gaulle's expense. The compulsion to tread delicately will be new and uncomfortable, hardly to be borne unless the British collectively realise where it is they want to go. Whether it will do any actual harm is another matter. If the French cannot get their own interests clear in North Africa, their allies can hardly do it for them; and France, without doubt the toughest of Mr Macmillan's negotiating partners this coming winter, remains an ally, and more than an ally, warts and all.

Sometimes Mr Macmillan looks larger than life, sometimes he is thought on all sides to be wearily losing his grip. These last ten days he has achieved both these illusions at once. His European decision has shown him in the combined role of political tactician and man of imagination—Euromac in fact: producing the rabbit from the hat at perhaps the first moment that was safe in party politics, but not very far from the last moment when the chance of success with the Europeans was at all good. The dimness of presentation that masked, on Monday, the boldness of the decision he had taken seemed to fall away in Wednesday's full debate.

Two and a half years ago, when the Free Trade Area project had collapsed, it would have been bold to say that Parliament and the public would have come round to this move by now—and even bolder to say that, by now, the chance would still be open. But during this time another vista, then blurred and vague, has come into focus: to suppose that the enlarged European union may lead in turn to an Atlantic union no longer smacks of fantasy. It may be this, and the new perspectives it could open up for the Commonwealth, that will enable the British nation to make its entry into Europe without looking back.

The Khrushchev Manifesto

The spectre of 1848 has been clothed with solid but bureaucratic flesh

MAN'S political imagination is normally timid: Communism, which believes only in the earthly paradise, has always derived part of its pull from its capacity to draw visions of the future. Moscow has shown this again, on July 30th, in publishing a new draft programme for the Communist Party of the Soviet Union. The preceding programme had been drafted by the bolsheviks back in 1919, when they had a precarious hold on a barefooted, isolated country, in the throes of a civil war. They had, therefore, to reconcile their ambitious goals with the harsh realities of backward Russia.

Nowadays Mr Khrushchev is at the head of a vast block and in command of a powerful, planned economy. Hence, his manifesto can map out a twenty years' road which, in his contention, should lead the Soviet people to the threshold of the communist society of plenty. Though it may cause some raised eyebrows in Peking, this programme will be received by most communists throughout the world as a charter to be studied, interpreted and applied. Outsiders must seek in the nine pages published by *Pravda* the answer to two kinds of questions: is the programme fairly realistic? And even if only partly so, what challenge does it contain for the outside world, what impact will it have on international relations?

A major communist document, like a papal encyclical, is international by definition, not only because of the present spread of the Soviet block, but also because the communists see the whole area of discourse (and action) in world-wide terms. Yet, the manifesto (if such a muddily-written, jargon-ridden document can be so called) is least original in the part dealing with foreign affairs. It provides a restatement of the Khrushchev doctrine of peaceful co-existence, elaborated in 1956 and amended, after a Sino-Soviet compromise, at the Moscow gathering of the 81 communist parties last November. The diagnosis of western ills is similarly gloomy. Led by the "international gendarme," the United States, the "capitalist" world is ridden by contradictions and rivalries and unable to harness modern forces of production. It may still be ahead in productivity, it may show resilience in some branches and countries, but it is, "historically" as the communists say, on the decline and doomed. What form the demise will take depends on circumstances in each case. The possibility of a peaceful and parliamentary way to communism is repeated, but the illusions of Soviet mellowing or revisionism, raised in some western quarters when this suggestion was first made, are pricked: all roads, parliamentary or not, must pass through the "dictatorship of the proletariat."

A REVERSION to stricter orthodoxy can also be discerned in the passages dealing with the undeveloped countries. The programme claims that neither revolutions nor counter-revolutions are exportable commodities. In plainer terms this is an echo of Mr Khrushchev's Viennese warning to President Kennedy that direct American military interference in Asia, Africa or Latin America might precipitate Russian interference and, hence, a world conflict. Generally, the position and prospects in uncommitted countries are analysed with less smugness and complacence than was Mr Khrushchev's fashion before he had the Chinese strictures to meet. It is now admitted that most of the newly independent states are still, economically, within the western orbit; and that, as the "class war" grows in these countries, their "nationalist bourgeoisie" may turn westward for support. Communists are thus being warned not to trust a neutral until he has moved to the Soviet side of the fence.

Yet, for all its militant language, the programme preserves the essence of Mr Khrushchev's co-existentialist doctrine. *Pace* Peking, wars are not inevitable. They can and must be avoided. Not only does the programme dwell on the horror of nuclear war. It recognises, more plainly than usual, that Soviet economic plans can be slowed down by international crises and arms races, or speeded up if these are avoided. And it is on the relentless rhythm of its economic expansion that Moscow has pinned its main hope of ultimate communist victory.

A conviction of the coming benefits of economic progress provides the intellectual foundation of the programme. But, strangely enough, the vision as it is set out seems to owe more to chartered accountancy than to a revolutionary imagination. The few indicators for 1980 that are offered—such as the planned sixfold increase in gross industrial output or the crude steel capacity of 250 million tons—are almost exact projections of rates of growth in recent years. When the future is presented as a projection of the past, it has to be judged by past performance, with certain qualifications. It has often been suggested that the Soviet pace of growth will inevitably slacken once Russia has lost its relative "advantages of backwardness." This is a debatable point. A more pertinent argument is the strain on Soviet resources, should Moscow keep its promise to guide the other economies of its block towards the communist goal, if not simultaneously, then all roughly concurrently with the vast domestic effort. The strain will be particularly heavy if the promise is to cover China or any other backward country that might still join the communist block. Subject to these reservations, there is no reason why Soviet industrial output should not forge ahead towards its planned targets. Heavy industry is the traditional best performer; light industry will require more flexibility and imagination than it has been getting.

In agriculture, by contrast, past performance is a poor guide to future success. To increase farm output by 150 per cent within a decade, to raise farming productivity sixfold within twenty years (and the promised rise in farm incomes depends on such an achievement) will require a revolutionary break with precedent. On the score of such a revolution, however, Mr Khrushchev's programme is less than limpid. It revives the old communist dream of bridging the gap between town and countryside. Probably intentionally, it does not specify clearly how the collective farms will be turned into state farms or even how the small private plots will be eliminated. There is nothing unattainable in themselves about the targets set for Soviet agriculture. Even if they are reached, Soviet farm productivity in 1980 will merely be about the present American standard. Yet this achievement implies that the planners can, finally, overcome passive peasant resistance, and that communism has cracked its hardest nut—the peasantry's property instinct.

If this agricultural question mark is kept in mind, and if it is assumed that the industrial objectives will at least be approached, even the more spectacular and headline-attracting promises in the manifesto do not look fanciful. A country with an industrial output of, say, twice the present American level ought not to find it impossible to provide its citizens with free communal transport, free housing, or other free public utilities if it chooses. (The reported promise of free bread is not in the programme at all.) The pledges are not quixotic, but a projection of current trends. Already rents are not calculated economically in communist countries (or in a number of others, for that matter); public transport is heavily subsidised. The extension of social services is a favourite path of income redistribution for planners of more than one political colour; this is one of the fields in which the new draftsmen have proved more timid than the 1919 bolsheviks, who placed among their long-term aims equality of wages and the abolition of money.

SOME of the benefits now promised to the Russians—three weeks' holiday, free medicines—are not unknown in the West. It is the cumulative effect of all the new pledges that gives them their political impact. The promised cuts in the working week to 35 hours at the end of this decade, and less afterwards; matriculation for all—these are some of the slogans likely to catch. Herein lies the first challenge to western leaders. The advanced countries of the West still have an advantage in living standards and need not match Soviet output ton for ton. Should they, however, give the impression of relative stagnation, facing a Soviet Union boasting of greater leisure and better living, the psychological effect would do its work. When the comparison was dramatically to its disadvantage, the Soviet block was kept isolated from the outside world. Should it work to their advantage, the Russians will know how to turn their successes into international political capital.

This is one side of the picture. To the millions in the backward countries, the Soviet success story of poverty to riches within the span of a man's life, if it comes true, will certainly look dazzling. The privileged citizens of the western world, if it can keep up a steady growth, can afford the luxury of free choice and need not be impressed. Above all, they will be willing to pay a certain price for the supreme luxury of free political choice.

In communist theory, the age of plenty coincides with the withering away of the state. Mr Khrushchev's manifesto is more concerned with goods and services than with the dis-

mantling of dictatorship, which is carefully kept within the traditional Soviet world of make-believe. Trade unions and local authorities are offered a more active part in running the country. A device is proposed to enable some millions more to learn the trade of government: a given proportion of newcomers should be introduced into all elected offices every term. Conversely, nobody will be permitted to keep his office beyond a given number of terms. Or hardly anybody. It is not necessary to worry about Mr Khrushchev's own tenure, since a saving clause provides that outstanding servants can be re-elected by a qualified majority in a secret ballot.

All this is fine. But, on paper, the Soviet constitution is already splendidly democratic. The snag is that, in practice, all decisions, even electoral decisions, come down from the apex to the bottom of the pyramid of power. But materia conditions even approaching those promised to the Russian for the nineteen-eighties may not easily be kept compatibl with even a softened version of Orwell's political world o 1984. The young men with their matriculation certificate their greater leisure, their lesser material cares and their grow ing itch for wider horizons, may yet fill in, to Mr Khrushchev surprise, the unwritten political section of his communis manifesto. This is the grain of hope contained within th Soviet challenge, and another reason for wishing that the east west contest may yet be waged more in economic and socia than in military and power-political terms.

The rate of growth in eleven industrial countries, recently an during the past hundred years, is reviewed on page 564. Mr Khrush chev's programme is further analysed on page 552.

Sir David in the Pillory

When it comes to investing in education, substantially more money should go to the better qualified, and scarcest, teachers—which is not at all what the Burnham award recommended

THE staggering and unforgivable crime of the Minister of Education, by all accounts, is that he has offered the teachers of England and Wales a pay rise of 14.5 per cent, not one of 16 per cent. This is what has set off all the hullabaloo. Sir David Eccles wants the £5.5 million in dispute to come off the basic scale of £600-£1,200 which the Burnham committee recommended: that is to say, the change will not affect the majority of teachers who are above the basic scale already, some of whom stand to get more (and rightly so) under the Minister's ideas than they do from Burnham. It should not even affect any teachers on the basic scale who have five or more years' service behind them. It is really high time that those people who have spent the past ten days clucking over investment in education and the undeniable need to attract more teachers into the schools learned something about the educational system they are so anxious to improve. (And those, like Mr George Brown, who try to draw comparisons with secretarial and clerical wages should find out what the national rates are before they speak.) It may even be possible to get people worrying about the kind of investment that is likely to be for the greatest benefit of the children, the teaching profession and the country at large.

There is no doubt that there is a serious shortage of teachers. By 1970 England and Wales will need up to 80,000 more of them (roughly 27,500 in primary and 52,500 in secondary schools) to cope with the rising birthrate and to reduce oversize classes (that is, classes of over 40 pupils in primary and over 30 in secondary schools). Even this estimate may be too low, because the behaviour of the birthrate is hard to forecast (the educational planners were taken unawares by the latest surge) and the number of pupils staying on after the age of 15 is liable, very desirably, to increase over the decade. The Ministry of Education's latest report shows that the new bulge has now entered the infant schools, which last year had their first rise in numbers (16,000) since 1953: they will go on growing until 1970 at least. The need for more primary teachers is evident, and the training colleges have already bee told to turn four-fifths of their output of qualified teache into the primaries.

At the same time, 50,000 more pupils of 15 and over staye on in the secondary schools last year. There is now an eve greater need to reduce class sizes in these senior schoo (where 63 per cent of pupils are in oversize classes) than i junior ones (22 per cent). It would be splendid, and a relie to everyone, if an extra £100 or so at the bottom of the basi salary scale could be relied on to bring in droves of qualifie people to absorb the approaching primary bulge, raise th general educational standard of the secondary moderns, an teach mathematics and science to "A" level in the gramma schools. But this is not how the system works at all.

Two factors govern the intake into the teaching profession The first, applying to the majority of non-graduates who hav to take a two-year (henceforward three-year) training cours is the number of training college places actually in existence Until the late 1950s (and here the Ministry of Education i vulnerable) there were 23,000 training places in England an Wales. This number is now being doubled: 12,000 mor places were authorised in 1958, 4,000 in 1959 and 8,000 las year. The last batch of places will be open by September 1966. More may still be required. But the fact of the matte is that at present there are more suitably qualified applicant than the colleges can accept. For the first time in year selectivity has been increasing and young women with goo "O" levels who would have been snapped up in the past ar being turned away. This does not suggest that the teachers starting pay is a *serious disincentive* now; it remains to b seen what happens in three or four years when the extra place are there to be filled.

The second factor, affecting the graduate entry, is mor immediately bound up with financial rewards. The need fo more graduates entering the education service is threefold. First, although recruitment is improving slowly, the grammar schools are still short of necessary specialists (particularly science and mathematics teachers) who are capable of becom ing heads of departments—precisely the people to whom industry is offering its biggest inducements. As more children stay on after fifteen, these shortages are likely to become even more serious. Secondly, the most encouraging trend at the top of the secondary moderns is that a growing number of late-developing pupils who failed their 11-plus examinations are now managing to take their general certificates of education: if facilities could be improved and qualified teachers were available more successes of this kind could be expected. At the same time, the institution of a lower leaving certificate (the Beloe examination) is likely to stimulate further interest in "academic" studies among children whose minds are not sufficiently exercised by the demands at present made on them. Thirdly, the necessary and rapid expansion of further education in the technical colleges means that many more highly qualified teachers will be needed there, and their salaries are tied to the Burnham system: the shortage of mechanical and electrical specialists is already causing concern.

HOW do the Burnham recommendations and the policy of the National Union of Teachers shape up to this challenge? The facts, when they are understood, are pretty discreditable. England and Wales do not adhere to the Scottish rule that all male teachers in secondary schools should be graduates: this is not necessarily an ultimate good, because non-graduates can do a very useful job in a number of subjects at this level, but a substantial body of highly qualified graduate teachers is the necessary backbone to any system of secondary education. Under the Secretary of State's award a good honours graduate in Scotland now receives a starting salary of £840, rising to £1,600 in 10 years. The Burnham parallel is damning: in England and Wales he (or she) would get £835-£1,460 in 16 years. A hullabaloo over this would make altogether better sense, and it is precisely what the Minister of Education is now eagerly inviting. But has anyone heard a murmur from the indignant defenders of English education? Before anyone outside the National Union of Teachers starts wringing their hands over interference with free wage bargaining they should grasp that the Minister has always had power to reject a bad award.

The case against the Burnham recommendations and the NUT does not stop there by any means. The additional £42 million a year that is now in the kitty ought, on any standard of values, moral or educational, to go to those members of the profession who are seriously making it their career and who have taken the pains to have an extra qualification behind them. These are the people who should be able to aim at a good middle-class salary of £3,000 a year or more when they reach a headship or a post of special responsibility. This is the normal ambition attached to professional status everywhere but in teaching. Instead, as *The Economist* has constantly had to reiterate, the bias in Burnham has been towards the young woman who joins for a few years and then promptly leaves to get married: 15,000 of them did so last year, and thereby helped to keep the net increase in the profession to no more than 5,000. What possible investment can it be to shell out an extra £100 annually to these estimable but preoccupied young females for the three to four years of their career? Yet this is what the row about the £5.5 million is all about.

It goes without saying that after a qualified woman teacher has had her family there should be a real inducement to her to return to the profession. If she does not the public investment in her training is lost and the national shortage of teachers cannot be made up. There are several ways of making it worth her while: better pension prospects would be one, and surtax relief in 1963 is another. The sizeable salary "step" after five years' service, now accepted by Burnham, is intended to be an encouragement to the returning woman, as it ought to be to the one making a continuous career and to the man who is by then taking on family responsibilities. There are sound reasons for making this step even higher in a revised award.

It is thoroughly good news that public concern over the educational system and teachers' salaries is being expressed so determinedly. May the campaign to keep the Minister up to the mark swell in fervour and vigour. But let it, above all, be directed to the right causes, the relevant needs and a raising of the teacher's status that has meaning and purpose. A teachers' strike for anything else would be nonsense.

Speech for Jomo Kenyatta

(He begins with the long-drawn-out "eeeeeee" which prefaces all his speeches.)

I WANT you to know the purpose of the Kenya African Union, a child that has been born again from new *parents*—from Kanu and Kadu. I have been free for one day, and "I want you to know the purpose of KAU. It is the biggest purpose the African has. It involves every African in Kenya, and it is *their mouthpiece* which asks for freedom. KAU is you and you are the KAU. If we unite now, each and every one of us, and each tribe to another, we will cause the implementation in this country of that which the European calls democracy. True democracy has no colour distinction. It does not choose between black and white. . . . We are not worried that other races are here with us in our country, but we insist that we are the leaders here, and what we want we insist we get. . . . He who calls us the Mau Mau is not truthful. We do not know this thing Mau Mau. . . . KAU is not a fighting union that uses fists and weapons . . . remember the old saying that he who is hit with a *rungu* returns, but he who is hit with justice never comes back."

Between the quotation marks the words are those that Jomo Kenyatta did speak almost exactly nine years ago*. Many lines were also spoken which reflect less favourably on Mr Kenyatta. There are people who are convinced that other, bestial

*At a meeting in Nyeri, as reported in the Corfield Report on Mau Mau, Cmnd. 1030, 1960.

words were uttered by this same man under cover of the dark. Because of this belief, Mr Kenyatta stands in many men's eyes as the equivocal symbol of atavistic Africa. That is why the British Raj has so long affirmed that he could never be allowed back into society; it is because he is after all to be set free that he is becoming, to all Africans, the supreme symbol of their victory over colonialism.

The British Government has not allowed the victory to be seen as a glorious one. Wisely, it seems in retrospect, Mr Kenyatta has been fed to his enemies in slow doses, so that many of them have come to see why it is better for him to be free and mortal than in restriction and seemingly supernatural. Although he has been allowed a progressively longer lead, the collar around his neck has yet to be cut, and, no doubt, the argument will be allowed to continue until enough people see the necessity for the final release—the amendment of the order that prevents him, as an ex-convict, from standing for the Kenya legislature.

The arguments for allowing this are, of course, the same as the arguments for his release: that there is more danger in frustrating legitimate African demands than in allowing them; that only Kenyatta can unite the tribes of Kenya; that since he already wields power, he must bear responsibility; above all, that if he uses his power in the right direction (as the indications so far have been that he will), he can lead Kenya into a grand east African federation.

When he is set free, in a week or two, Mr Kenyatta could do worse than repeat those words of his in 1952, quoted above. Perhaps he will in fact be able to fuse the rival Kenyan parties. He has the means, because his following is so devoted, to do more. He could lead Kenya Africans—and with them many others in other parts of the continent—into a greater victory than they have already won by his release. He could use his freedom to affirm the Africans' own victory over the shadow of the past. In the words quoted he has already spoken against tribalism, racialism and violence. Let him now continue on these lines:

"This thing called Mau Mau. People say I have never condemned it. Very well then, let me condemn it, now. We are not robbers and animals. We of the KAU reject any such thing as Mau Mau. Nine years ago I said that he who has ears should now hear that KAU claims this land as its own gift from God, and I wish those who are black, white or brown at this meeting to know this. I said that we want our cattle to get fat on our land so that our children grow up in prosperity; we do not want that fat removed to feed others. Let me say today that all people of Kenya, black, white or brown, are Kenyans. Let me say that if Europeans and Asians who have their homes here want to stay and to become Africans with us, then they have nothing to fear. This land is a gift from God to us, but those people who are part of us may share this land with us. We do not want them to have more than they are entitled to just because they are white. But we do not want them to have less. What is theirs is theirs and we shall not take it away without good reason and without paying money for it. This is the foundation of justice."

And, if Mr Kenyatta wanted to add another long "eeeeeeee" after that, it would indeed not be grudged.

Hemispheric Planners

Latin America's urge for economic improvement makes demands on its political imagination as well

For the first time since the end of the war, economic surgeons from north and south America are preparing to plunge their knives into the ailing economic anatomy of Latin America, in welcome change from flashing them sourly at one another. The Organisation of American States opens its special economic and social conference today, Saturday, at Punta del Este in Uruguay. The discussion, which is to range over the broad sweep of Latin America's economic troubles, might in less urgent days have meandered into familiar generalisations and oratory on the desirability, rather than the feasibility, of social and economic development, economic integration and life-saving operations on exports. But if the items on the agenda are familiar, the expectations are new and rising. The surgeons are at last feeling their way towards a common and unclichéd language.

A glance back to the last full-dress discussion on economic co-operation, four years ago at Buenos Aires, illustrates this remarkable change in mood. Then, the leader of the American delegation slipped back to Washington on the second day of the conference after taking all the wind out of Latin hopes in the first day with a bracing speech about the tonic effects of private investment; a disconsolate moan about Yankee obtuseness and meanness trailed in the air as he left. Today, this would all be inconceivable. Mr Dillon, the Secretary of the United States Treasury, is confidently expected to produce audacious ideas, not to puncture them. And bit by bit over the last years, months and finally days, the complaints against Washington are losing body and soul.

The United States now strongly backs schemes for long-term economic planning and aid programmes, favours the growth of some form of Latin American common market, and, more recently, has made it plain that it is prepared to support projects for stabilising the price of some of Latin America's export commodities, including coffee and non-ferrous metals. The policy of excluding nationalised oil and metal industries from its aid programmes is crumbling. Most recent of all, Washington seems to have abandoned the hope of extracting, overtly, a political *quid* for an economic *quo*. The wreck of America's policy towards Cuba lies, at least for the time being, in silence, and if the ruins are dug over in Uruguay, it is unlikely to be at Washington's bidding. And Brazil, which announced last week its intention to resume the diplomatic relations with the Soviet Union that were cut off in 1947, is leading the way to a less circumscribed and less haunted political relationship between north and south America.

By themselves these remarkable changes ensure that the conference is a joint effort rather than a headmaster's desultory reproof to delinquent pupils. They do not ensure success. The high expectations could come tumbling down

in two possible ways: first, if the American administration fails to raise the kind of money that is needed to build from the economic blueprints; and, second, if the Latin Americans, while blandly accepting what the United States has to offer, resist any proposals that involve deep-cutting change for themselves.

Eventually, the Latin American republics will have to meet the challenge presented by the pressure for fundamental social change that underlies President Kennedy's *alianza para progreso*. At Punta del Este, this challenge can probably still be submerged under a fuzzy padding of good sentiment. Only later will the earnestness—or the frivolity—of these sentiments be tested, and the political future of Latin America be decided. But one challenge that ineluctably confronts the Latin Americans today is whether, in the interest of economic co-operation, they are prepared to pool some of the power of action. It would be ironic for a British newspaper now to expect any easy or quick acceptance of this idea.

At previous inter-American conferences, delegates individually presented their papers on the various items of the agenda. At Punta del Este the homework has been done more thoroughly than usual, and by international, rather than national, groups. The programme has been drafted by the secretariats of the Inter-American Development Bank, the United Nations Economic Commission for Latin America and the Organisation of American States; the working papers have been sweated out by economists and civil servants drawn from all quarters of the hemisphere. One of the chief aims of the conference is to keep this international machinery going by creating an inter-American council, probably of seven members, to supervise each country's individual development plan.

The study group that has been working on development projects has calculated that over the next ten years Latin America's rate of growth a head needs to average 2½ per cent a year. Since the population increases at least as fast as this, the total rate of growth should be more than 5 per cent. This target has already been incorporated in the individual development plans of several countries, including Chile and Colombia, and, more positively, has been the goal of Brazilian development. Except in Brazil, Mexico and Colombia, they are still entirely theoretical targets; production a head has either been static or sagging over the last three years. But quite apart from the overwhelming problem of how these massive development plans can be devised, paid for and put into practice, there is the pin-pricking question whether any Latin American republic would agree to submit its plan to a higher inter-American authority.

From a slightly different angle, another conference, also in Uruguay, has been squeezing some of the southern republics to look at their development plans from a hemispheric rather than a purely national point of view. Last week, the seven members of the Latin American Free Trade Association began a series of meetings expected to continue until late September. The seven members of the association, Brazil, Argentina, Chile, Uruguay, Mexico, Peru and Paraguay (with observers from Colombia and Ecuador, still hovering on the brink) are trying to work out the stages by which in twelve years' time they are supposed to remove all tariffs within the association.

The free trade treaty was signed in February, 1960; as Dr Raul Prebisch has complained, the members have so far proceeded with parsimony. At present the trade between Latin American countries is insignificant and almost entirely confined to primary products; members of the association are, on the whole, more concerned to find loopholes for their own monopolies than to pursue the bolder possibilities of free trade and the international division of labour, and, beyond that, a customs union. But, in the long run, the advantages of the republics developing on a complementary basis rather than in blinkered competition seem too self-evident to be lost in the bog of fear and national jealousy.

At Punta del Este, the publicity will be splashed on whatever sum of money Mr Dillon is able to commit himself to. All the plans and hopes for economic and social improvement will come to nothing if the United States does not fulfil the expectations of immediate and continuing financial help. The exciting change is the nimbleness with which President Kennedy and his advisers have adapted their policy to Latin America's needs. But from some point in the future, looking back, it will be the Latin Americans' acceptance, or failure to accept, the need to end their own isolation that will matter most.

NOTES OF THE WEEK

INTO EUROPE

Perking Up

So it came to pass. The Prime Minister's first statement of intent to join the Six, on Monday afternoon, fell prosaically on the Commons' ear: it sounded sufficiently below form to start up murmurs that he was physically exhausted. Portentous changes of policy are none the worse, however, for being underplayed, and prime ministers concerned to keep the political thermometer at normal are apt to contrive that they are. When Mr Fell rose in premeditated wrath from the Tory benches to bellow that Mr Macmillan was a national disaster (he said later that there was nothing personal in this) it struck even the glum imperial band as an incredible blunder and did as much as anything to rally the waverers to the Prime Minister's side. By the time he came to open the two-day debate on Wednesday Mr Macmillan had perked up visibly. He could be entirely confident that any Tory revolt would be puny and ineffective and he had been further encouraged by commendatory nods from the Continent (although no one, even among the enthusiastic Europeans, actually claimed to have seen General de Gaulle nodding). The House was attentive, and even the ITV companies plucked up courage and allowed that they could fit a full recording of the Prime Minister's broadcast to the country on Friday into their programme schedules.

Mr Macmillan's expositions of the political merits of European Union have amounted so far to little more than an anglicised Gaullism (which may, or may not, help in a *tête-à-tête* at Rambouillet). But even his emphases on the guarantees that he would seek for the Commonwealth, the farmers and the Efta partners have seemed to be approaching positive statesmanship beside Mr Gaitskell's tactical doubts and hesitations. Labour has made up its mind not to be left holding the European baby at all costs, but in its determination not to speak as an alternative government it has come dangerously close to concealing the fact that a majority of the parliamentary party is actually in favour of going in.

The debate has brought few surprises. Once Lord Hinchingbrooke had enunciated his " small ship " philosophy (" the one that defeated Napoleon and defeated the King of Spain ") a familiar gaggle of brigantines and barques, flying conflicting colours, hove into line to spray the offending Continent with such random shot as they could muster: the national sovereignty Tories, the Labour Commonwealth group, Miss Lee on socialist planning. It is from the failure of these congeries to find any common counter-image to the European movement that Mr Macmillan plainly possesses a stronger political hand than he cares to make out.

BERLIN

Back to Negotiation?

WHILE the stage has been occupied by the drama of the British move into Europe, diplomats from France, west Germany, Britain and the United States have been at work in the wings towards a common position on the Berlin question. The efforts of a working party which has been meeting in Washington and Paris are being carried a stage further this weekend, when the four foreign ministers meet in Paris.

Allies sceptical of British firmness may be reassured by the inclusion in the British delegation of Field-Marshal Festing, the Chief of the Imperial General Staff. But military men can be the last to urge military solutions ; and there are other signs of a western, including an American, trend towards seeking a negotiated political solution to the Berlin problems in preference to a military one.

The meeting this weekend will not complete the common western position. France, for one, still feels that since Mr Khrushchev has no wish for a nuclear war over Berlin in any case, a negotiation would bring the West more loss than gain. The working party will have to go on working after the weekend and might have to be punctuated by a further foreign ministers' meeting in September. In the Commons on Tuesday Mr Macmillan even mentioned the possibility of a meeting of western heads of government.

To have a useful effect, a western offer to negotiate would have to reach Mr Khrushchev before the communist party Congress on October 17th. If his diplomatic efforts have not by then produced some positive result in the form of a western gesture, he seems likely to produce a new display of truculence instead. On the other hand Dr Adenauer will be reluctant to be anything but firm, in public, before the Bundestag elections on September 17th. If there are to be negotiations, it is the western interest to make them as broad as possible, getting away from the narrow Berlin issue where the West is vulnerable to the broader German framework in which alone the Berlin question can be solved ; but this, too, is treacherous electoral ground in west Germany.

NORTH AFRICA

Chagrin at Lugrin

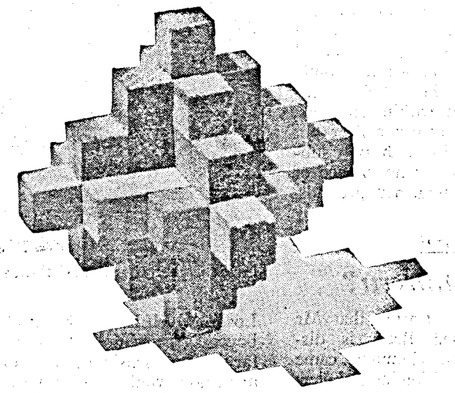
PREDICTABLY, but regrettably, the Algerian truce talks have broken down again. They were resumed at the Chateau de Lugrin, near Evian, on July 20th, and at one stage seemed not to be going badly; but on July 28th, at the request of the Algerians, they were adjourned without any prospect of a resumption. Even the private contacts that were maintained after the breakdown in June appear to have been discontinued.

As always in such cases, it is necessary to distinguish between pretext and substance in accounting for the event. The French declare that the Algerians broke their undertaking to discuss the various subjects concurrently in different committees ; the Algerians say that as the French were plainly determined not to admit Algerian sovereignty over the Sahara, there was no point in going on. They readily admit that the Algerian war may now become a " war for oil " ; but they blame the French for that. Unspoken on both sides, but probably potent, is the thought of Bizerta, a crisis which, by exacerbating French relations with Tunisia, has made it difficult for the Algerians to continue negotiations without appearing indifferent to Maghreb solidarity.

It is difficult to see where the French can go from here. Partition of Algeria is still a solution that would solve nothing. Military operations against the Algerian rebels on Tunisian soil would lead to nothing but an internationalisation of the war which it would be folly, on the French side, to invite. Yet the government can hardly do nothing, either ; already rumours have begun to circulate predicting another military coup, like that of April, and General de Gaulle, the nation's peacemaker, can barely afford to admit that he cannot succeed in his appointed task. The only way forward for him, in fact, is to concede the nationalist Saharan demands, which are, at least, no less reasonable than anyone else's. But the difficulty here is the President's famous obstinacy, already much in display over Bizerta, and which, as has been repeatedly demonstrated, only time can erode. How much time has he got ?

FISHING INDUSTRY

No Pensioners



THE white paper on the fishing industry (Cmnd 1453), published on Tuesday, has not been greeted with open arms by the

The Economist

AUGUST 3, 1861

ENGLAND TO OPEN TRADE TALKS?

It is certainly a curious fact that the prepossessions of Belgian Ministers, in commercial matters at least, seem to be in favour of France rather than England. . . . Our export trade is subject to the conditions of the General Tariff of Belgium, while several other nations, France especially, have had special privileges accorded which put English merchants at a great disadvantage. . . . We cannot wonder that our English merchants are taking alarm. We observe that they have just addressed a memorial to Lord Palmerston, in which they request that a special embassy shall be sent to Brussels and Berlin to demand that England shall be placed upon the footing of the most favoured nation both in Belgium and in the Zollverein. It is understood that the memorialists wish for the appointment of Mr Cobden, hoping that he will be as successful with the constitutional Governments of Belgium and the united German States as he has been with the virtually absolutist Government of France. This or some equivalent step is well worthy of the consideration of our Government. . . . There is no Power whose hearty good will is more necessary to Belgium than England. It may be, and it is, to her advantage to conciliate France. But she can never depend upon the aid of France to maintain her independence. If once isolated from England, the affection of France would be more likely to be shown by actual annexation than by any international aid. England, on the other hand, has not only guaranteed to Belgium its independence, but it is the avowed purpose of all our statesmen to watch jealously and ward off all that endangers Belgium. Under such circumstances, if we ask commercial equality with France in Belgium, pertinaciously enough, and in the right way, it cannot be long refused,—and it is both our right and our duty to do so. Whether a special messenger be sent for this purpose to Brussels or not,—we are sure that our Government ought to take the highest ground in demanding from Belgium what not only in common justice, but in both ordinary gratitude and gratitude of that prospective kind which has been defined to be " a vivid sense of favours to come," Belgium is bound to concede.

Profits a puzzle?

In seeking a solution to the profit puzzle, more and more businessmen are turning to Japan. Many are becoming aware of how profitable it is to trade in this country that offers a growing variety of quality products finding ready markets.

Many of these products are manufactured by companies in light and heavy industry that carry the Three Diamonds mark. These are Mitsubishi companies, all represented in foreign trade by their big general-trading partner, Mitsubishi Shoji.

For 90 years Mitsubishi Shoji has been showing overseas buyers the profitable way to trade in Japan. Its branches and affiliates are in all of the world's trading centres.

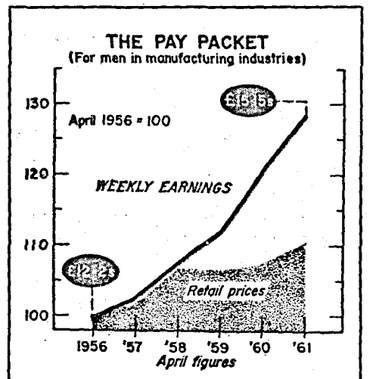
There is more in banking with the National Provincial than the mere possession of a bank account. The first class service, prompt decisions and the ability to obtain friendly and helpful advice and information when required have attracted many firms and companies from all branches of Industry, including some of the largest in the country. The wide experience of the bank is at the disposal of all its customers whether their accounts be large or small. National Provincial Bank could be of assistance to you in your business and its problems.



BANK WITH THE National Provincial AS SO MANY BUSINESSES DO

NATIONAL PROVINCIAL BANK LIMITED

fishermen, and it is very doubtful whether the taxpayer should do so either. As the Fleck committee recommended, the white paper extends an operating subsidy, for the first time, to the distant-water trawler fleet. It also offers a limited, and unspecified, amount of financial aid for building vessels suitable for the new conditions caused by the extension of fishery limits off Iceland, Norway and elsewhere. This is intended to make the distant-water section of the industry viable within ten years and, to their credit, ten years is all that the trawler owners have asked for. They do not like the details of the Minister's proposals (particularly the annual review of subsidies that Mr Soames wants) but many of these are still not specific and seem open to negotiation. An initial two-year subsidy platform, for example, might soothe a number of troubled breasts. The point of public policy that needs to be taken up is whether there is a real prospect that this once-for-all aid will do the trick, or whether it merely opens the door to yet another body of permanent fishing pensioners.

One contingency could be very much in the trawlermen's favour: a merger between the Six and Seven would allow the efficient vessels of the distant-water fleet to pay their way without much trouble, since Scandinavian fish now being diverted to this country would return to its normal Continental markets. But there is also the ominous prospect that as limit lines are extended off the Faroes, in the White Sea and (probably) off Iceland again the future of the distant and middle-water vessels will become very murky indeed. It is not yet established that entirely new and remote grounds can be efficiently exploited from British ports.

Since the big settlements at the end of last year, wage-rates have been rising quite slowly. But earnings have been going up faster than rates. By April, men in manufacturing industries were receiving, on average, 7 per cent more than a year before, bringing the total rise over five years to 29 per cent. With a reduction of nearly an hour in the working week, down to 47.3 hours, hourly earning rose even more over the five years—by over 31 per cent.

The political changes that have robbed them of their existing grounds are not the trawlermen's fault. And when, as in the last fishery debate, so many blatant constituency speeches can be made in the Commons (apparently with success) for the even more uneconomic near and inshore vessels, they have a case for believing that they should get their chance to become viable. This is, however, a claim that has been made by successive sections of the industry already without satisfactory results. While the Government should cushion the immediate effects of the recent limit-line changes to prevent a total breakdown and also encourage new, experimental vessels for an initial and limited period, not a penny should go to keep ancient and wildly uneconomic craft of any kind at sea. The whole operation ought to end strictly within ten years, not merely for the distant-water fleet but for the smaller trawlers, already heavily subsidised, which have little or no chance of developing, or even reaching, new grounds.

WEDGWOOD BENN CASE

Bristol to Chiltern?

THE electoral court's decision that Mr Anthony Wedgwood Benn is disqualified from sitting in the Commons came as no very great surprise. The judges' view was that disqualification from the Commons arises not on receipt of a writ of summons to the upper house (which by convention is only issued with the consent of the succeeding peer), but on actual succession to a peerage—which occurs with the death of the previous holder. The court, however, seemed to take an unnecessarily narrow view of its function when it maintained that a judge can only declare and not shape the law. When it has suited them judges have frequently shaped the law, not by open declaration but by the device of distinguishing one case from another.

What had not been generally expected was the court's ruling that Mr Malcolm St Clair was the rightful member for Bristol South-East. The court held that if the disqualification of a parliamentary candidate pertains to status and the facts of that status have been made known to the electors, then once the candidate is subsequently found to be legally disqualified all votes cast for him must be considered thrown away. This is a curious doctrine to apply when, simply because Mr Benn's was a test case, a genuine doubt as to the legal disqualification existed.

However inconvenient Mr St Clair's success may be for the Bristol electors, it has plainly been a relief to the Government. Had the seat been declared vacant Mr Benn would, in all probability, have presented himself once more with the support of the local Labour party, and would almost certainly have been re-elected. The farce could have continued indefinitely. As it is, the Government has been given a chance to think again. The one condition on which Mr St Clair is thought to be prepared to apply for the Chiltern Hundreds is that Mr

Benn should agree not to stand at Bristol unless, or until, the law is amended. The Government's hypothetical committee to examine the future constitution of the

Mr St Clair : the judges' choice

Lords, which Labour has declared it would boycott, seems unlikely to be set up. By far the most sensible course for the Government now would be to sponsor a simple bill allowing Mr Benn and those in a similar position to opt for eligibility for either house. The Tories cannot afford to be known as Colonel Luttrell's party.

ETU AND TUC

Talking Back

ALTHOUGH they had not said so officially before *The Economist* went to press this week, Mr Foulkes and the executive of the Electrical Trades Union had given every indication that they meant to reject all, or most, of the demands in the TUC's ultimatum. If the ETU does refuse to bring about Mr Foulkes's resignation as president, restore authority to Mr Byrne, the general secretary, and ban five communists from union jobs, it will repeat, much more gravely, its truculence of 1958 and 1959 in spurning successive requests from the TUC to put its house in order. It is perfectly clear this time that Mr George Woodcock and his colleagues cannot take even a qualified rejection lying down: for one thing, the TUC is plainly relying on the threat of expulsion to encourage the non-communist majority in the union to show its teeth in the elections to the ETU executive next month. The very tough line adopted last week is likely to be repeated for the benefit of anyone who has woken up at the TUC's annual conference just before the ETU votes are counted.

Pressure to keep the TUC up to scratch has been visibly growing inside the Labour party which (after years of consent to the

policy of giving the ETU a loose rein) has grown wide awake to the political consequences of the appalling publicity that the ETU has provided for the trade union movement as a whole. A stiff warning has now been sent to the union by the party. Patently there are hopes that the ETU membership will take matters into its own hands, but the prospect of suspending or expelling the union from the TUC and the party must be faced. Action

Mr Woodcock : tough line

under rule 13 of the TUC's rules and standing orders was invoked in 1954 against the Stevedores and Dockers Union and in 1956 against the National Engineers' Association. It has not always been successful when those cast out felt that they had a legitimate (and non-political) case for running their affairs as they wanted to. The ETU has a membership of 230,000, which has hitherto seemed fully satisfied with Mr Foulkes's conduct of its wages policy. If it were to be expelled its funds would be taken over into communist hands outright (and the TUC would lose £8,000 a year in affiliation fees). Should matters come to this point and the TUC is shown to be powerless to influence the union's behaviour, it will reinforce the case for Government action to institute legislation tightening up union election procedure.

GHANA

Bearer of Tales

IT is not so much what Dr Nkrumah said as where he said it. By now it is reasonable to assume that most people in the West—including British diplomats—know that Dr Nkrumah is against imperialism. In his own way, he said little more than that in Moscow, Warsaw, Prague and Budapest—and he is likely to say little more when he visits Jugoslavia, Rumania, Bulgaria, Albania and China. To judge by the record of his words to these communist audiences so far, Dr Nkrumah has only one

speech, a speech written in Accra years ago and since spoken many times.

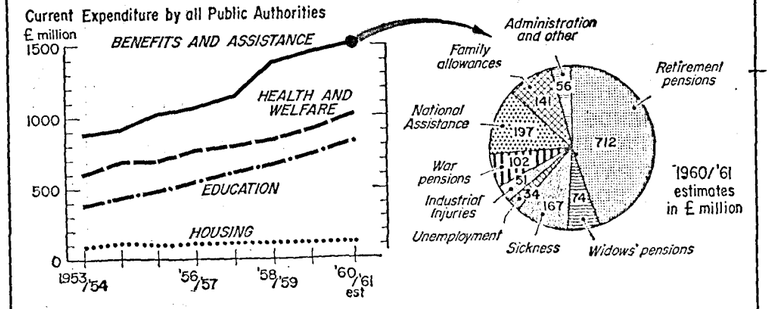
He is a socialist ; Ghana's freedom will not be real until every inch of African soil is free ; his people (that is, all the African people) suffered "for centuries" under colonialist oppression ; Africans want peace and disarmament ; they had to struggle for independence ; they aim at pan-African unity ; they intend to fight "neo-colonialism" as hard as they fought colonialism. It seems, too, that communist China should be admitted to the United Nations ; and, in a carefully phrased Warsaw declaration, "for the effective functioning of the UN, it is indispensable that the secretariat and other organs of this organisation reflect in their composition the real relationship of forces in the world"—which is by no means an endorsement of Mr Khrushchev's *troika* plan.

It is far too soon to conclude that Ghana has joined the communist camp—much as Dr Nkrumah may be tempted to seek in the East the support he has found he cannot command in Africa. His choice of platform for his speech is, however, deplorable. If he denounces past western colonialism at receptions in Prague and Budapest he has a duty—to himself and to African independence—to denounce present communist colonialism too. It is hard enough as it is for him to speak of freedom without being apologetic about his domestic policies ; he is unwise to do so in the strongholds of anti-freedom without acknowledging where he is.

Even so, it may not be altogether in Britain's real interests for its diplomats to walk out of receptions when such statements are made—as happened in Prague and Budapest a week ago. Such walk-outs, outside eastern Europe, may be interpreted as colonialist pique at being told off. Dr Nkrumah has yet to learn the lessons of objectivity and politeness—as his failure to

achieve leadership in Africa is bringing home to him. But it is in Britain's interests to disavow the past too, by refusing to take umbrage at reminders of it. The accusers of Prague, Budapest—and Accra—are best answered by holding up a mirror.

LABOUR PARTY



Under Orders

MR GAITSKELL'S personal prestige inside the Labour party is mounting skyward like a Russian rocket, although this has not yet been reflected in the public opinion polls. His ascendancy within the party was confirmed, rather than challenged, when only seven Labour members disobeyed instructions last month and voted against the Government order authorising German troops to be administered under German military law while training in Wales. As a result of this rebellion, however, the standing orders of the parliamentary party, which were suspended in November, 1959, are to be reintroduced in the next session. This new sense of discipline was apparent in Monday's debate on foreign affairs when hardly a left wing peep was heard and not a single dissident vote sighted.

Almost as a display of self-confidence the leadership has let the seven rebels off with a carpeting. This was probably the best course in the circumstances. The difficulty about expelling a group of members who have defied the party on a particular and emotive issue is that inevitably one throws out a mixed bag. Of the present seven, Mr Fenner Brockway and Mr Victor Yates are pacifists ; Mr Weitzman has racial memories to justify his protest ; Mr Abse is an eccentric ; and Mr Leslie Hale rather too ruggedly independent. The best way to get rid of malcontents is to wait until they have

THE RISING COST OF SOCIAL SERVICES

Nearly half of last year's current expenditure of £3,481 million on social services went on direct grants to people—that is, on payments that redistribute purchasing power. These payments will take an even larger slice of the total this year following the increase in benefit and assistance rates in April. The largest rise will be in the cost of retirement pensions, expected to go up from £667 million in 1959-60 to £776 million in 1961-62.

built up such an impressive dossier against themselves that action can come as the natural retribution for determined rebellion. In essence, this is what happened to Mr Zilliacus, who is now endeavouring to make his way back into the fold but who is likely to receive a dusty answer. Unless his suspension is rescinded he will not be able to attend the Blackpool conference in October. Whether the other five independent Labour members (the Foot brigade), who lost the whip some months ago, are entitled to attend is now being debated. On a strict interpretation of party rules they could not turn up as members of the parliamentary party, but it is open to their constituencies to elect them as delegates.

HOUSING

The Unfilled Need

IT is a sign of the appalling statistical ignorance on which British housing policy is based that an interim report from the Rowntree Trust Housing Study*, based on interviews with some 3,137 households in England, can justly call itself "the most comprehensive study of housing made in this country since the war." Not everybody will agree with all its conclusions, but all should be grateful for its research. Of the 13.4 million households in England in 1958, the report estimates that about 5 million were let by private landlords; many of these rented dwellings are in an appalling state (56 per cent of those in the survey had no fixed bath), renovations are going forward at only a snail's pace, and virtually no new private dwellings for rent are being built. The reasons are obvious. Although new lettings have been freed from rent control since 1957, most existing tenancies have remained controlled for over four decades; and landlords are not going to risk capital on new building as they think that control even of new lettings might return.

Tories like to think that the obvious course for young workers' families is to swell the ranks of England's 5.3 million owner occupiers straightaway. But this survey reports that in 1958 many of those moving into owner-occupied houses for the first time were larger adult households. "Manual workers who wish to buy their own home may too often be forced to delay this step until their children become self-supporting." Hitherto the problem of young workers' families—and thus of Britain's children—has been mitigated by the allocation of most new council houses to them. Today three out of five council houses have children under sixteen. But this means that soon council houses "will be full of young earners," a stage of life when these families will be very well off. "Then, in twenty years' time whole [council] estates of two and three bedroom houses will be peopled with small, elderly householders," who will have no incentive to move out of them. Where, then, will the next generation of new young families go to, now that council building for general need is being reduced?

Obviously, one need is that British builders and local authorities imitate experiments in Western Germany and elsewhere, where houses have been built in a fashion that permits them to be combined or subdivided "with a minimum of alteration" as the needs of occupants change. Secondly, to provide rented housing for new young families, the authors of this survey call for some new (and apparently semi-public) institution to build houses for renting on a system under which "down payments should be modest, but subsequent payments may well be higher than council rents. Security of tenure should be assured. The occupier should be given responsibility and incentives for maintaining his own house, but should be insured against the costs of major repairs." There is food for thought here—even though the authors have probably overdiscounted the extent to which much of the problem might well be solved automatically, and eventually without any public subsidy, if only the market for all private rented housing could be permanently set free.

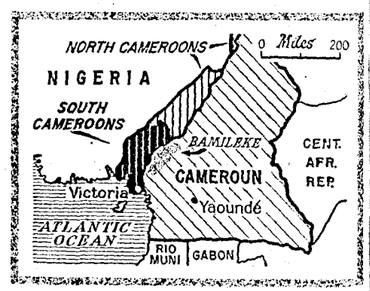
CAMEROONS

Leaky Banana Boat



LIKE an orphan leaving a guardian for a husband, the British protectorate of the Southern Cameroons will exchange, on October 1st, one dependent status for another. It is to merge with the former French protectorate, the Republic of Cameroun. But the rejoicings usually attendant on weddings are somewhat muted in this case, for it is by no means clear that the shotgun will be left behind with the baked meats. Rather the contrary—the sporadic terrorism among the Bamileke in the southern part of the republic of Cameroun may well spread, it is feared, to the new territory the moment the protection of the Brigade of Guards is withdrawn. Nor is the constitutional structure to be adopted in the enlarged republic crystal clear. Basically, Mr Foncha, the prime minister of the Southern Cameroons, does not want to lose his independent authority, and Mr Ahidjo, president of the Cameroun republic, does not want to undertake expensive extra responsibilities.

The two views are not incompatible, and some sort of federal structure has been

Mr Foncha : orphan prime minister

agreed on in talks between the two leaders. But much remains to be settled if both are not to regret this first experiment in the fusion of French-speaking with English-speaking pieces of Africa. (Mr Foncha and Mr Ahidjo communicate in pidgin English.) The security question is the predominating one. British troops cannot stay beyond the term of the United Kingdom's mandate, and Cameroun has not been able to spare more than a battalion of police to replace them. It is hoped to raise a local police force in due course, and to train it with Nigerian assistance. But in the meantime the wives and children of the British community are returning to Britain by banana boat, and its male members have been provided with guns. It is even feared that there will be a trek into Nigeria by large numbers of

anxious Africans. The tripartite conference now opening at Youndé, at which representatives from the Colonial Office will form the third team, has much to discuss.

All our clients are six feet tall
-especially the smaller ones

Now don't run away with the idea that just because we're a big company, we're only interested in bunkering the big ships. We look after small ones just as well. Ships like small tramps and coasters, ferries and motor barges. We would have fuelled Masefield's tin tray carrying tramp, had it sailed later and burnt oil.

We also look after motor launches and yachts. Such very smart yachts sometimes, that we take off our boots to tread their polished decks.

And of course, we do cater for the big ships. For liners and world-tour ships. For navies. For cargo ships and whaling fleets. We offer bunker facilities at over 300 ports. The Shell sign at the bunker berths is as welcome a sight to Chief Engineers of big liners, as to the husband-and-wife team pottering into a Riviera harbour.

YOU CAN BE SURE OF SHELL

THE VATICAN

Cardinal Secretary

THE death of Cardinal Tardini, Secretary of State to Pope John XXIII, severs an important link with the reign of his predecessor, Pius XII. Although the cardinal's appointment was one of the first acts of this pontificate, it was really a rationalisation of an existing situation. Pius XII had done without a secretary of state since 1944, but in 1952 he appointed Mgr Tardini and Mgr Montini as pro-secretaries of state, the former having charge of foreign and the latter of Italian affairs. Mgr Montini became Archbishop of Milan in 1954—a promotion and an exile at the

Montini

Tardini

same time—and both men received the red hat in the December consistory of 1958. By Cardinal Tardini's death the Vatican has lost one of its ablest officials and the Pope is now faced with the urgent task of finding a successor.

The most popular appointment in Italy—although not in the curia itself—would be that of Cardinal Montini. A man of liberal views, thought by many to be a future Pope, his appointment would advance the progressive policies initiated by Pope John. To bring him back from Milan is the sort of bold stroke of which the present Pope has shown himself capable. Much more welcome to the curial officials would be the appointment of Cardinal Marella, whose views are moderate and who at 66 is still young by Vatican standards. If one of the two present under-secretaries is promoted, the more likely choice is Archbishop Samorè, who has specialised in foreign affairs and is a good linguist; during Dr Fisher's visit to Rome he interpreted between the Archbishop and the Pope. Archbishop Dell'Acqua speaks French but no English, and is in charge of Italian affairs.

Cardinal Tardini's death has removed a major obstacle to a possible meeting between the Pope and Mr Khrushchev, which is once again being mooted because of Signor Fanfani's visit to Moscow this week. The traditionalist and strongly anti-communist cardinal would not have taken kindly to the apparition of the arch-enemy in the Pope's private library. As Mr Khrushchev is not (except when he wishes to be) a head of state, protocol would not demand a Vatican visit, and the Pope would hardly grant him an official one since it would be so widely misinterpreted. Catholics in communist countries might feel that the Pope was abandoning them. But a private meeting would be another matter. The Pope, who is not unduly impressed by protocol, would probably receive the Soviet prime minister if he thought that he could thereby relieve the lot of Catholics behind the iron curtain.

PORTUGUESE AFRICA

End of Term?

DR SALAZAR'S harsh schooling in the facts of contemporary life in African empires continues. From Angola, unrest is spreading to the other Portuguese possessions. A fortnight ago a small force of guerrillas crossed the Senegalese frontier into Portuguese Guinea and did some damage there; and on July 25th Senegal duly broke off diplomatic relations with Lisbon, alleging that there had been violations of its air-space. On the same day the president of Dahomey gave Portugal a week to evacuate the fort (so-called) of John the Baptist, consisting of a house, garage, and flag, an ancient enclave which Portugal had hung on to so far for reasons of prestige. On August 1st the "fort" was duly taken over by the Dahomeans. Meanwhile, military reinforcements have been sent to Guinea, to Mozambique, and to Angola, where there has been renewed terrorist activity and renewed demands for effective government action.

There are some signs that Dr Salazar realises that, if he is to hold the Portuguese imperial school together a little while longer, concessions to the turbulent pupils will have to be made. It is unforunate that he has not been a quicker learner himself. If the Lisbon rumours reported in last week's *New York Times* are correct, he intends to introduce legislation to extend to all his ten million African subjects the political privileges of his European ones: but in the *Estado Novo* these are, of course, somewhat limited advantages. Nor is it clear how, in the prevailing state of uncertainty, the new policy can be carried out, in Angola at any rate. More promising is the reported intention of building more schools and stamping out forced labour (which has never been officially admitted to exist). But it remains to be seen how seriously any of these reforms is intended, or if the government has the means to carry them out. Settler resistance is likely, in Angola at least, to be strong, and Portuguese finances are already strained by the huge operation of repression to which the Portuguese army is committed. Nor are the rumoured reforms likely to satisfy Africans, whose demands do not stop at personal and economic liberty, but extend to national separateness.

VIETNAM

Rough and Smooth

PERENNIALLY bad, the news from Indo-China sometimes offers a grain of encouragement. It makes unhappy reading to record that more than 2,500 Vietnamese have been killed in battle in south Vietnam since the beginning of the year; but it is heartening to find signs that President Diem's army may now be gaining the upper hand over the well-organised communist guerrillas who have brought terror to large areas in recent months.

The latest, and one of the most spectacular, of the communist exploits was the murder, made known last week in Saigon, of two members of the south Vietnamese National Assembly. The two men, who had been ambushed, were the first deputies elected by the minority tribes in the central plateau; their murder may well, therefore, turn out to have been a psychological blunder on the part of the communists. In other respects, too, the communists may be overstepping the line beyond which popular revulsion causes terrorism to yield a diminishing return. For instance, there have been a number of attacks, some murderous, on unarmed anti-malaria workers in the remoter villages. Tactics like these alienated the population during an earlier phase of communist terrorism in south Vietnam, from 1946 onward; incidentally, they violate the principles of revolutionary warfare laid down by no less an authority than Mao Tse-tung.

The recent successes of the south Vietnamese army could well reflect the growing unpopularity of communist methods, for an army operating against guerrilla forces in jungle territory is heavily dependent on information from the local people, as the British found in Malaya. In a battle lasting two days in mid-July, the Vietnamese army defeated a strong communist force, killing 167. There has been a continuous run of less spectacular successes since then. Some of the credit seems due to the strengthening of Vietnamese morale by the firm promises of increased American aid made by Vice-President Johnson in May, at a time when western setbacks in Laos were spreading gloom among Asian allies of the United States.

OBJECTOR REPLIES TO THE MINISTER

Right Hon. Henry Brooke, P.C., M.P.,
House of Commons,
Westminster,
London, S.W.1.

17th July, 1961.

Dear Mr. Brooke,

It was with regret that I read the letter signed by yourself of July 12th, in which it is stated once again "I shall not be persuaded to revoke the planning permission which I gave in 1959". The Ministry has adopted this intractable attitude before, the first time in 1959, and you would surely agree that it is the negation of the spirit of "openness, fairness and impartiality", which is the declared policy of the Government. This latest letter was posted at the very moment when peer after peer was expressing grave concern about the case in the House of Lords—in spite of it having been dealt with there twice already. Lord Chorley regarded it as "the acid test of the sincerity of the Government", and the mildest view was expressed by Lord Birkett who pointed out "how strange an anomaly it was".

The ordinary citizen is no match for the deft drafting of Ministry letters but it really is beyond a joke to say that the points brought up in our memorandum "have been dealt with in detail, either in the Lord Chancellor's statements or my own". How could statements "deal" with a memorandum which had not yet been written? The Ministry well understands that the memorandum deals with the statements: it has been circulated to all M.P.s and remains unanswered.

I attach an appendix to the memorandum on the basic point of new factual evidence. There seems no room left for doubt that your Ministry obtained new factual evidence on production need from the Ministry of Agriculture, unless conceivably you confirm that "production need" means "commercial opportunity for the benefit of a private contractor", as the Lord Chancellor had to affirm unequivocably when we met—in which case the Ministry of Housing is surely right out of court in concerning itself with such a factor in a matter of planning.

The part of this letter which now creates an entirely new situation is the startling admission on policy that "it is in the national interest to allow the minerals to be worked, unless the objections on agricultural or amenity grounds are in the particular instance so strong as to justify refusal". Since the objections on all grounds in this case, made by the County Council, the County Planning Officer, the Rural District Council, the Parish Council, qualified authorities and the four objectors were overwhelming, the second part of the sentence quoted has hardly any significance. If this is the Ministry's policy and it can outweigh such a mass of objections, why have a public inquiry at all after which an inspector advises: "The production of chalk from this site is likely to result in dust being blown on to adjoining land with serious detriment to agricultural interests and also to the occupants of property in the vicinity of the site"?

Why has this policy never been made public, so that all the local authorities, experts and people involved in the inquiry did not waste two days arguing without knowledge of it? And why was it not part of the Lord Chancellor's brief in the House of Lords, where it was made clear that there was no question of national or departmental policy involved? He referred only to the merits of the case and made no mention in Parliament of it being "in the national interest" for the chalk to be worked, and he certainly appeared to have no knowledge of it during our meeting.

More remarkable still is the fact that even a former Minister of Housing knows nothing about this policy—Lord Silkin stated in the Lords on May 8th "In a case of this kind, where no serious questions of policy arise, he should accept the advice of his Inspector unless he has overwhelming reasons for rejecting it".

Furthermore the Ministry cannot just ignore the fact that it was proved beyond doubt and to the satisfaction of your Inspector that it was not in either the local or the national interest to allow the working; but if there was such a Ministry policy surely the Inspector would have known of it and would have taken it into account in making his recommendation?

This tardy disclosure presents a new, and much more unsatisfactory stage in the affair.

The letter states once again that you must "scrupulously adhere to the rules", and that this was done. With great respect the rules serve little purpose unless they are adhered to in the spirit of the Government's policy. May I recall very briefly the sequence of events.

1. In the face of the most straightforward case, and the most workmanlike Inspector's report, the decision was delayed for ten months and then popped out in what seemed a calculated manner in the middle of the General Election. Can this be explained?

2. In this letter of July 12th you discuss your powers of revocation in Section 100 of the Town and Country Planning Act and say that you only use them occasionally. On two occasions after the decision in 1959 you told me that you had no such powers. On September 30th, 1959, you wrote "I am bound to say that there is no way by which I could re-open the case, now that my decision has been given", and on October 6th, 1959, "I am bound to say that the position under the law is that, having given my decision, I have no jurisdiction or power to re-open the matter". I am embarrassed to know how to comment on this, but will await the explanation.

3. In spite of the routine exchange of documents, sworn evidence and so on during the months preceding our High Court action, your Ministry let the proceedings drag on for two days and waited until defeat was staring them in the face before stabbing four bona fide citizens in the back with a new technical issue. It was only when it became clear from the Judge's observations that the game was up that the Ministry shamelessly used this escape hatch. Surely the Ministry itself could not claim that this was openness and fairness?

The Lord Chancellor has now been left to make a valiant defence of the Ministry's conduct on two occasions in the House of Lords, without the substance of a case to convince anybody. He had the considerable courtesy to see me for two and a half hours, and it was certainly to my embarrassment as well that he was unable to give a satisfactory answer to any single point.

The Lord Chancellor stated in the House of Lords that "it is of the utmost importance that public confidence in the way in which these planning procedures are carried out should not be undermined and that people should feel that the procedure which is followed should be fair to all". To our knowledge, only two people of standing in the whole country have suggested that the decision or the procedure was fair, the Lord Chancellor and yourself—and the Lord Chancellor was at pains to impress on me at our meeting that he was only concerned with procedure, and could not comment on the decision. The case has now been dealt with in the House of Lords on three occasions, with damaging consequences. It has not yet been properly dealt with in the Commons; a brief adjournment debate in the small hours did nothing to prevent public confidence being undermined.

May I add how sorry I am to have to address this letter to you personally? Frankly we have been driven to it by the official replies. We have been severely handicapped by our desire not to involve and embarrass our M.P., since he is also a Minister, but he was reported to "agree with the leaders in The Times and the view expressed in The Times," which Lord Lucas of Chilworth obviously had in mind when he said last week "Press criticism, by responsible journals of public opinion, has been devastating over the procedure adopted in the chalk pit case."

In the face of all this, I find it hard to believe that you will not wish to win universal respect by reviewing at once this departmental error of judgment, which, if the Ministry forces a continuance of the case, will not only severely damage our homes but certainly official prestige in equal or greater degree.

AUBREY BUXTON

P.S. We have never suggested that the Ministry should automatically endorse the Inspector's verdict. This would be quite absurd.

for your stay in the

USA

HILTON HOTELS provide an extra measure of pleasure

A good hotel—a Hilton Hotel—will certainly enhance the enjoyment of your visit to the States. Our people are naturally friendly, trained to appreciate the fine points of courtesy, and quite sensitive to the needs of guests from wherever they may hail. This is our reputation the world over.

Hilton Hotels and Hilton Inns form a network of comfort and hospitality across the nation. Nearly every major city has its Hilton Hotel, accommodations are moderate in price and reservations can be made *in seconds* for each one of them, through any Hilton Hotel in the world. For information, communicate with any Hilton Hotel or the London Office, 36 Hertford St., tel. HYDe Park 8888, or the Amsterdam Office, Apollaan, Amsterdam-Z, tel. 73-06-22.

This is what unlosable money looks like

American Express Travellers Cheques—Sterling or Dollar

Travel—with the security and confidence that your own bank gives you. Travel with American Express Travellers Cheques, the unlosable money that's as safe in your pocket as it is in your bank account. In Britain or abroad, *never carry more cash than you can afford to lose.* Take the rest in American Express Travellers Cheques—if you lose them your money is promptly refunded through any of nearly 400 American Express offices throughout the world. It's the safest way to carry money *anywhere.*

American Express Travellers Cheques, first introduced 70 years ago, are available in sterling and dollar denominations. They're spendable everywhere and they're valid forever.

Buy American Express Travellers Cheques at your bank or at any American Express office. The cost is only 1%.

Money that's unlosable—spendable anywhere

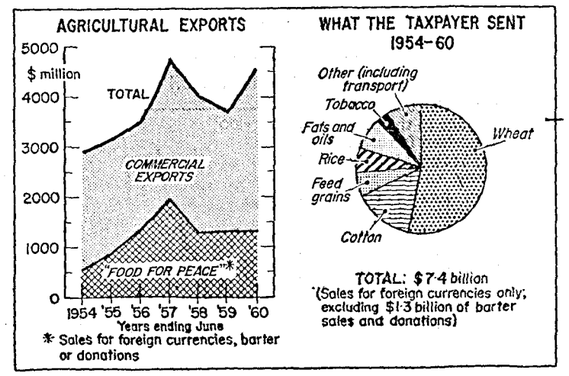
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in United States carry an indication to that effect; all others are the work of the editorial staff in London.

Food for Propaganda

WASHINGTON, DC

GRUDGINGLY, grumbling about waste and ingratitude, Congress every year passes a multi-billion-dollar programme of foreign aid—though never as much as the President asks, which this year was over $4.8 billion. At the same time, with the warm approval of Congress, the United States spends up to $2 billion a year on sending food abroad for the needy. The taxpayer foots both bills, one glumly, one with relative gladness. He believes fervently (or at least most Congressmen do) that the two processes are as different as chalk from cheese. Foreign aid is felt to be a heavy burden (even the President called it that) while "food for peace" is just the opposite—the lightening of the back-breaking burden of the surplus foodstuffs produced by high price supports, modern science and capitalist enterprise which have piled up in the custody of the Commodity Credit Corporation to the total value of $9 billion. One reason for the difference is that although many industries have come to have a vested interest in foreign aid (since the machinery and other goods sent abroad generate employment and incomes in America) no business pressure group fights for it. On the other hand, "food for peace" is backed vigorously by the Farm Bureau, an organisation representing the large agricultural producers.



A clear indication that the two types of transaction have a totally different political impact was found in the Administration's attempt to sweeten the pill of the unpopular farm Bill by tacking on to it provisions for funds to extend and increase the purchase of "food for peace" after December 31st, when current appropriations will be nearly exhausted. It knows that Public Law 480 (which lays down the "food for peace" programme) is generally popular, and that Congress would be appalled if the Department of Agriculture and the several other agencies involved were to run out of money for making agreements with hungry lands to reduce the mountain of surpluses. Congress is even ready to allow the Administration some freedom to make flexible forward commitments to supply food, although when a similar freedom is proposed in connection with foreign aid it is immediately attacked as "back-door financing."

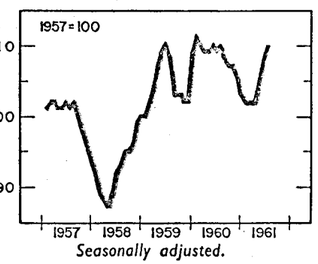
One of the creative ideas of President Kennedy's Administration was to switch the emphasis of the "food for peace" operations from the dumping of agricultural overproduction to the positive employment of American agricultural prowess to speed up development as part of the whole foreign aid policy, using the agricultural surplus overtly as a tool in the war of ideologies instead of simply as a waste-pipe of the American price support system for maintaining farm incomes. As the programme stands it provides ingenious ways whereby the surplus, overwhelmingly grain, can be acquired by foreign countries—once they have spent all they can afford on normal imports. Over three-quarters of the food exported under PL 480 is "sold" for blocked local currencies under long-term "soft" loan agreements. The Treasury issues a purchase authorisation to an exporter, who buys and ships through commercial channels. His debit notes are duly redeemed by the Commodity Credit Corporation and the CCC, as the final link in the chain, is reimbursed by the Department of Agriculture out of its appropriations under PL 480. Most of the remainder of the food is bartered for various strategic raw materials; about $1 billion worth of these has been obtained. A small additional amount is given as an outright gift or grant, mainly through voluntary distributing bodies.

The blocked currencies so acquired amount to $4 billion (with billions more resulting from foreign aid). Most of them are unspendable and sterilised, but many elaborate devices have been thought out to give Congress the impression that they are "used" and that there are no unduly debilitating eleemosynary effects. These funds are spent, for example, to pay the salaries of local American officials, for educational purposes and to develop markets for American exports. Most important of all, in countries where the monetary and credit system is still rudimentary, the counterpart funds are used as a source of credit and finance capital—a procedure often preferred to burdening local budgets. But in general, these vast sums cannot be used *without causing local inflation*, and most "food for peace" is a gift from the American taxpayer.

Since 1954 the United States has sent abroad food (under PL 480 and some other minor programmes) worth nearly $9 billion, representing about a third of its total exports of food including 70 per cent of its exports of wheat. But such figures do not bring the realities home. In terms of calories, the basic unit which measures the intake of human energy (2,500 a day are necessary to human efficiency—Americans take in 3,200), the wheat, flour, maize, rice, other grains, fats and dairy produce sent abroad under PL 480 in the financial year 1960 were enough wholly to feed over 31 million adult human beings throughout that twelvemonth. This food was, of course, spread more thinly over many more millions who were already being locally but inadequately fed: thus, the food sent to India now represents, on the average, 90 to 100 calories a day for every Indian, against a deficiency estimated at 250 calories in 1958. The diet of 54 million children has been eked out by "food for peace." But it does not constitute a balanced diet, which requires proteins and vitamins as well as calories.

The Administration plans to increase both the quantity of this food and its protein content. Unfortunately, in extending PL 480 in the new farm Bill which was passed last week, neither the

House nor the Senate granted the full 5-year authorisation which the Administration sought and the Senate refused to increase the amount of money which may be spent. Whether the amount of food sent abroad will rise by 15-20 per cent, as the Administration hoped, depends on the outcome of the conference between the Senate and the House. But the volume of shipments is in any case limited by the severe bottlenecks in transport, storage, distribution and administrative arrangements at the receiving ends. It is hoped to tie more and more foreign aid projects directly to the food programme by supplying grain to areas where wages are generated by the employment of much local labour on construction of, for example, dams or irrigation systems. Hitherto such sudden increases in incomes have inflated local food prices disastrously. "Food for peace" can operate as a brake on this inflation, which is normal in rapid phases of development.



To provide more protein for foreign diets the Administration is raising price supports for soya beans, cottonseed and peanuts in relation to those for wheat. A more ambitious plan is to work with the foreign aid agency to persuade the recipients to convert grain into protein by raising hogs and cattle. This is still confined to a few pilot projects. Yet another idea is to purchase more American processed foods with PL 480 funds (baby food is an obvious example). This would stimulate the food industry even more. But all these plans are, in varying degrees, dearer than the simple device of shovelling out surplus wheat as the basic human fuel.

Many words have been spun—by the President, by Mr McGovern, who directs the programme, and by Mr Freeman, the Secretary of Agriculture—about making American agricultural prowess a great prestige talking-point among the underdeveloped countries, an argument to which the communists, whose people are hungry, starving or even dying of famine, have no reply. But the President did not dare to point up this devastating contrast by offering famine relief to China, which has used up its exchange reserves to buy from Canada and Australia; American public opinion would not have stood for such a move. Popular as PL 480 is, it is so in a hole-and-corner way.

The legislators lack any vision about the use which might be made of it in a world where the food deficit has reached 36 million tons a year for wheat alone. The dollar sign, the cry of "extravagance" and the fears of commercial exporters, both in America and other countries, that their markets will suffer hang sullenly over any such initiative, shrilly as the President's critics call for successful anti-communist propaganda. The same mental straitjacket stands in the way of rationalising the counterpart funds. This means that America fails to get full credit for what is in every sense a remarkable work of mercy and of generosity, as well as a demonstration of capitalist efficiency. Once again, the President and his idea-men may have to be satisfied with doing just a little more good, still very largely by stealth.

INDUSTRIAL PRODUCTION

The sharp rise between April and June in the output of American factories and mines brought it back very nearly to its pre-recession peak; this may be matched in July since the rise is continuing. Production of consumer goods actually reached a new high point in June and the gross national product broke all records in the second quarter of the year.

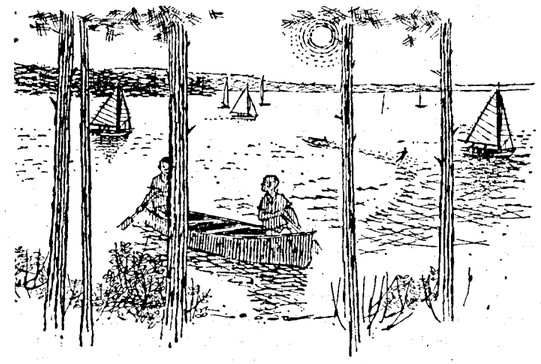
Seasonally adjusted.

Arms and the Men

FROM A SPECIAL CORRESPONDENT

CONGRESS has lost no time in putting its stamp of approval upon the President's programme to give the United States greater and more flexible military strength to meet any calls—in Berlin or elsewhere—that may be made upon it. The President has already signed the Bill giving him the authority to call up 250,000 of the reserves without having first to proclaim a national emergency; this was passed unanimously in the Senate and with only two dissentients in the House. The new money which he requested (and perhaps some more for bombers which he did not) is likely to be in his hands by next week: it brings this year's total for defence to at least $47.5 billion, the largest defence budget ever demanded in peace-time. Many members of Congress wish that they could rely on America's allies to respond as unhesitatingly.

The most notable thing about the new programme is its rebuilding of the army, the neglected step-child of the Eisenhower Administration, which preferred to put its main reliance on nuclear weapons. Now, partly no doubt at the urging of General Taylor, the President's new personal military adviser, the aim is to have "a wider choice than that between humiliation and all-out nuclear action." Of the proposed increase of 225,000 men for the forces, 138,000 are destined for the army—more than twice as many as the army itself vainly requested "as a minimum" only a few weeks ago. The money now allotted to the army for new weapons and equipment is also slightly more than the army sought and 40 per cent more than President Eisenhower recommended in January. Moreover, much of the new money that is going to the navy and the air force is to be spent on increasing their ability to move soldiers and their equipment to any threatened point.



The army will now be able to afford a far greater degree of readiness for combat—something it has long desired. Even the best of its fourteen divisions (the five in west Germany and three in the mobile Strategic Army Corps at home) are seriously deficient in combat-support elements without which no infantry or tank division can function in battle. The first step will be to "flesh out" these ordnance, engineering, signalling and medical units. The three other divisions in the United States (there are two under strength ones in Korea and one in Hawaii) will be relieved of the training of recruits with which they have been occupied. They will be built up into combat divisions ready for duty overseas, although it is not expected that any more divisions will be sent to Europe before the late autumn. The army's new manpower will be drawn from three sources. The monthly intake of conscripts is being increased; men who would have completed their normal tours of duty before July may be retained, thereby keeping in service each month 15,000 prime troops who would otherwise have been lost; and some reservists will be recalled to active duty, though only when they are clearly needed. The Army will then have the million men under arms which General Taylor has long insisted that it needs to carry out its responsibilities.

Unsheltered Americans

ONE of the smallest items in the President's programme is the $204 million which he is asking Congress to provide for a fresh start on civil defence. This may or may not convince Mr Khrushchev that Americans are in deadly earnest about risking a nuclear war to defend Berlin, but it triples this year's money for shelter against radioactive fall-out. During the past ten years Congress has given successive Administrations only about a quarter of what they have asked for civil defence—a miserly total of $619

Camp Fire Days

FROM A SPECIAL CORRESPONDENT

ALTHOUGH few Americans go to boarding school, millions between the ages of about 9 and 16 leave home every summer to go away to camp—an annual migration which began in New England precisely a hundred years ago. What to do with their children during the long summer holidays is an increasingly serious problem for most Americans, two-thirds of whom now live in urban surroundings. There, three months of freedom for the young to roam the streets or watch television is neither a safe nor a happy prospect, especially as in most of the country the temperature in July rises on an average day to 80 or 90 degrees. Older children might profit from having a job but employers are reluctant to pay high wages to temporary and inexperienced help. As a result, during the last ten years between three and four million children have been sent off each year to camp for periods of from one to eight weeks. Many more would go and stay for longer if their families could afford the expense.

Altogether there are probably 7,500 resident camps scattered all over the United States which fall into three principal categories: private camps run for profit, which attract only 8 per cent of the campers, church camps, which number about 3,000, and, by far the largest group, camps operated by about twenty youth-serving organisations such as the Young Men's and Women's Christian Associations, and the Boy and Girl Scouts. Such non-profit institutions provide their members with a holiday at camp, usually within easy distance from their homes, at a cost of from $15 to $35 a week. Children stay at them, on the average, for only one or two weeks which, though probably better than nothing, is often barely long enough for them to settle down. A month for each child is the ideal. But many parents cannot afford this and the camps themselves have trouble accommodating, even for a brief stay, all the children who want to come during the ten-week season.

The original camps were founded for boys but camps for girls have also existed for many years (though there are not as many of them) and recently co-educational camps have gained in popularity. Their primary purpose is to provide an opportunity for city children to have fun in the country, to learn to be self-sufficient in the woods and in and on the water, to fish, to ride and to study nature. Their secondary purpose is to give the child greater emotional independence through the experience of living away from home.

Camps are usually situated in woods close to a body of water, though some have swimming pools; the use of 2 acres for each camper is desirable. The number of children ranges from 12 to 300 (the average is 134) depending on the type of camp, the age group it caters for, and the emphasis of its programme. The children, who usually come by special train or bus, are sorted out by ages and interests into small groups and assigned to tents or cabins where they sleep in the charge of counsellors who will be their teachers and guardians in everything from bed-making to mountain-climbing. In some private camps there may be as few as three campers to a counsellor and no one recommends more than eight. The whole camp generally meets together only at meals, team sports, prayers or for the traditional ceremonies such as flag-raising and camp fire singing.

The small handful of directors of eastern camps who fifty years ago represented the industry has grown into the American Camping Association, a national organisation which recommends minimum standards for the management of camps, operates a system of inspection (a service not always pleasing to the well-established camps), and publishes a magazine called *Camping*. Bewildered parents can turn to its directory of camps, though they would do well also to consult a camp bureau in one of the larger cities or to get advice from a school whose teaching staff has camp connections (90 per cent of the counsellors at the private ones are either college students or graduates).

Although private camps prefer to take a child for eight weeks, many of them divide the season into two four-week (occasionally five-week) periods for each of which they charge from $200 to $400, plus extras. For families who have three or four children this is no small financial outlay. But there are so many kinds of private camps that even parents with means may still find it difficult to choose.

If climate is a factor they will want to investigate those in the dry mountains of the West or those on the cool and misty coast of Maine, which is still one of the most popular areas. There are hundreds of these camps—many with unpronounceable Indian names—which, in addition to the more usual activities, offer special attractions (to the parents at least) such as tutoring, or instruction in French, or in the arts and sciences. Some appeal to the adventuresome by offering elaborate pack trips by horse or canoe into the wilderness.

Families well supplied with labour-saving gadgets at home must also decide whether a few austerities, in the form of plain food, no television or comics, rustic plumbing and perhaps a few tiresome chores is likely to benefit their child or whether more hot water, a fancier menu, the latest thing in athletic equipment and instruction, plus the greater protection made possible where the ratio of counsellors is high, will make the better use of the child's vacation. At one extreme are the summer work camps run by the American Friends Service Committee which cost $150; at the other are the plush establishments costing nearly $1,000 that cater especially to wealthy Jewish children from New York.

THE operation of all types of camps is now a large and, in the case of the ones run for profit, a highly competitive business with an estimated capital investment of $500 million. Private camps without a connection with schools have to advertise extensively and some resort to high pressure salesmanship. Costs are a great problem. They have tripled since the war, though fees have only about doubled, and the difficulty of finding suitable young counsellors (who must be able to cope with homesickness, poison ivy and bites, as well as being skilled in such things as water skiing or archery) has increased. Some camps have their own training programme for those who are interested in making this a part-time career.

One trend which the operators welcome is that of sending children to camp at an earlier age (some 13,000 who were eight years old or even younger went in a recent year). This is due in part to the scarcity of competent baby sitters at home as well as to the greatly improved methods of safeguarding the children's health at camp. But this good omen is offset by other trends. Children stay for shorter periods; teenagers tend to get bored with camp at an earlier age; and often parents want to make the most of the comparatively low cost of foreign travel by taking or sending their children abroad.

Another, and perhaps the most discouraging development for the operators of resident camps, is the fast growing popularity of day camps. Already there are about 5,000 of these in and around large cities which collect children five days a week after breakfast, teach them a number of the outdoor skills and return them to their parents in time for the evening meal. The fees are around $30 or less a week with no extras for uniform or travel and there are no problems of distance in cases of illness or simple homesickness.

million with which very little has been done. Such penny-pinching has been made possible by public apathy; civil defence provoked only a yawn. The crisis over Berlin may change this. And the President's decision to transfer most matters concerning civil defence from the Office of Civil and Defence Mobilisation to the Department of Defence should make the money flow more freely. Mr Ellis, the energetic new director of the OCDM, fought hard to retain his control of civil defence and he was backed up by many Governors and Mayors who dislike the thought of having to work under the military. But Mr McNamara, the Secretary of Defence, insisted quite properly that if civil defence is to be included in the military budget he must have effective control over it. This control is, however, to be exercised by civilians.

The new start is a modest one compared with the grandiose plans—with a price-tag of $20 billion or more—recommended in the past by the Gaither committee and backed by Mr Ellis. About a third of the $300 million or so which Mr McNamara hopes to have will be spent on identifying existing shelter spaces in the basements, corridors and inner rooms of large buildings. He expects to find about 50 million of these although, as he pointed out chillingly this week, such shelters could be expected to save no more than 10 or 15 million lives if the United States is attacked; nothing can protect people against direct hits by an atomic bomb or near misses. The rest of the money is to be spent on research, putting shelters in new government buildings, increasing the capacity of make-shift shelters by installing better ventilation, supplying them with emergency rations of food and developing a more efficient alarm system.

The House Government Operations Committee, which is holding hearings on the proposal, is probably sympathetic to a bigger effort, but the members of the Appropriations Committee, which holds the purse-strings, are not. The Administration was probably wise to start slowly; it can ask for more money next year when it has a firmer idea of what it wants to do. Even the identification of existing shelter space probably will not be complete until late next year. Meanwhile there is nothing to prevent individual Americans from providing themselves with shelters; any householder can obtain a loan for this purpose from the housing authorities.

Profit-Sharing in Detroit?

LABOUR negotiations in the automobile industry, after dragging on for a month with little outward sign of progress, took a turn last week that shocked both sides of the bargaining table into temporary silence. The American Motors Corporation, the only small company to co-exist profitably with the three big producers, seized the initiative from its larger colleagues (it had refused earlier to join them in "parallel" negotiations) and made a formal offer to Mr Reuther's United Automobile Workers. The proposed contract contains two provisions that the union has been trying unsuccessfully to extract from the companies for years: a profit-sharing scheme and a continuing management-labour committee to consider mutual problems. In return, the company wants to replace the annual productivity increase (now at 2.5 per cent a year) with a flat 7 cents an hour rise in each of the next three years; to cease adjusting wages to the cost of living (while incorporating the gains that have accrued so far into the basic wage); and a number of other changes designed to strengthen the hand of management.

The proposed "progress-sharing" plan is not as generous as the schemes suggested in earlier years by the union, but it is by no means negligible. The company would set aside a reserve equal to 10 per cent of shareholders' equity and would then allocate 10 per cent of the remaining profits before tax to a fund which would be distributed according to the decisions of a joint company-union committee. If the plan had been in operation last year, workers at American Motors would have received a bonus of $360 in cash or in benefits. The big companies are dismayed by the proposal since any concession by American Motors would be used by the union to extract a similar concession from them. On the other hand, Mr Reuther is not altogether elated. He has committed himself repeatedly in public to retain both the cost of living and productivity provisions of the present contract (which expires at the end of August) and it would be hard for him to bargain these away in exchange for a share of profits.

Sales of motor cars in the middle weeks of July soared unexpectedly to a 6-year high for the time of year, stimulated no doubt by the possibility of a strike, and stocks in the hands of dealers are shrinking nicely as the arrival of the new models nears. In the meantime, the smallest member of the "big three"—the Chrysler Corporation—has enacted yet another scene in its long drawn-out internal drama. Last week Mr Colbert gave up his determined struggle to ride the "conflict-of-interest" storm and resigned his positions as chairman, president, director and chief executive officer of the company in exchange for a comparatively minor role as chairman of its Canadian subsidiary. He has been replaced, not by an outsider as had been generally expected, but by a protégé of his from within the company, Mr Townsend—a change that does not appear to be sufficiently radical to satisfy critical shareholders.

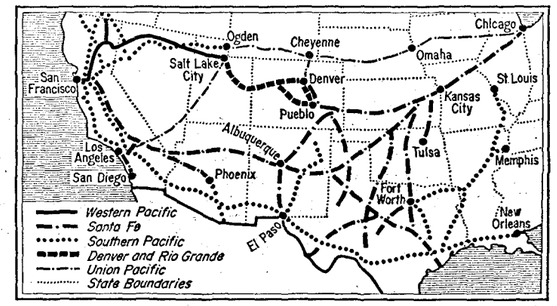
Prosperity at a Discount

NEW YORK

IN the United States discount houses—stores that sell products at prices well below those prevailing in regular retail shops—are invading the field of general merchandising in much the same way as the supermarket has overwhelmed the food-selling business. Already in 1960 sales by discount houses were estimated at $5 billion, equal to about a third of all department store sales, and any remaining doubts about the respectability of this type of shop will surely be removed when a large eight-storey building on New York's Fifth Avenue opens its doors for discount selling.

As they grow in popularity, discount stores are changing in character. Originally they were hole-in-the-wall operations where goods were sold below the retail prices set by manufacturers. But with the gradual erosion of retail price maintenance laws in most of the states (the courts have tended to find that they violate the anti-trust laws) discount houses have come out into the open. They rely on a large turnover and a minimum of "frills" to enable them to cut the retail mark-up on their products to perhaps one half that of the department stores. In pre-war days discount selling was confined to relatively few consumer products, with household appliances a top favourite, and individual stores usually concentrated on a single line of goods. Today practically everything, from patent medicines to life insurance and from shoes to automobiles, can be bought at a discount house, and many of the latest stores offer a full range of products under one roof.

Today's discount stores still keep their retail mark-up relatively low, but price is by no means their only selling point. Indeed, one department store recently converted part of its business to so-called "discount" selling, importing all the trappings (open shelves, customer pushcarts and a line of cashiers instead of sales-girls) but kept its price unchanged; the customers flocked in with the responsiveness of Pavlov dogs. There is no doubt that the very words "discount store" produce a flutter in the American shopper's breast. And whatever the joys of personal service, many customers seem to prefer to rummage at leisure through open shelves and racks without an eager assistant at their elbow. (They also tend to buy more when they do not have to contemplate a bill until they reach the cashier at the exit). Even more appealingly, discount stores, which are operated by very small staffs, keep their doors open for long hours, particularly at weekends when families get a chance to shop together.



The question of what is and what is not a discount store is increasingly unclear. For one thing, discount houses are getting more like department stores every day. One of the main sources of saving for the discount operator has been that he has supplied relatively little in the way of services—no wrapping, no delivery, no credit and (often) no returned articles. Now one chain of discount stores has announced its intention of introducing most of these services and others are looking in this direction. In the past, discount stores have chalked up further economies on advertising; now many of them are contemplating heavy expenditures on promotion. For their part, the regular department stores are getting involved increasingly in discount selling. Shops such as Ohrbach's in New York have been undercutting their competitors for years without ever calling themselves discount houses. Others are establishing or expanding bargain basements to cater to discount fanciers, or cutting many of their prices to compete directly with the discount houses. Still others are setting up their own discount stores, usually under a different name. As discount houses take on more of the characteristics of a department store, room may even be created for the re-emergence of the old hole-in-the-wall operator to discount the discounters.

The great boom in discount stores (there are now 3,000 of them operating in the United States) has come in the last ten years or so. The E. J. Korvette Company, which with a present tally of 14 stores in four states has the largest discounting empire, has pushed up its sales from $2 million in 1951 to an expected $175 million this year. This spring and summer one after another of the big names in retailing have announced their plans to go into the discount field. The F. W. Woolworth Company will open a chain of Woolco discount houses (their traditional "Five and Ten" stores will not be affected); the May Department Stores Company, which now runs 50 shops in eleven cities, plans to convert a part of each store to supermarket-type operations; and many of the other large chains are eyeing the discount field. In addition, several of the large companies operating food supermarkets are buying their way into the non-food discount business. Some observers are already wondering whether the market will be able to digest so many new recruits.

Duel on Rails

LAST month two major American railways—the Southern Pacific Company and the Atchison, Topeka and Santa Fe Railway Company (commonly known as the Santa Fe)—began putting before the Interstate Commerce Commission their rival claims for control of the Western Pacific Railway Company. The latter is a relatively small concern, as American railways go, whose passenger and goods trains ply along the 1,100 miles between Salt Lake City and San Francisco and up into northern California. But the question of a possible change of ownership has touched off a lively battle among the nine railways with direct or indirect interests in the region.

The Southern Pacific and the Santa Fe have a long history of bitter competition, since both operate systems that start in the mid-west, curve southward to avoid the worst of the Rocky Mountains, and end up on the west coast; neither is prepared to let the other acquire control of a valuable stretch of line. The Southern Pacific is basing its claim on grounds of economic efficiency. It hopes to persuade the ICC that, since it already operates a route parallel to that of the Western Pacific, a co-ordination of the two systems would substantially lower its operating costs. The Santa Fe, on the other hand, is putting forward the opposite argument that, if it controlled the Western Pacific, it would be able to compete more directly with the Southern Pacific—with a possibility of lower tariffs all round.

The other giant railway companies, after carefully viewing the disposition of pawns on the western chessboard, are lining up behind one contender or the other, and the object of the dispute itself is by no means impartial as between its two suitors. The line was, after all, built originally (under armed cover) to break the monopoly of the Southern Pacific and the present directors of the Western Pacific, true to this tradition, hastily accepted the advances of the Santa Fe in order to frustrate the designs of their old enemy. The line's future is now in the hands of the ICC. The Justice Department has asked the commission to throw out both applications because the companies concerned bought up large blocks of stock in the Western Pacific before putting their case to the ICC.

This skirmish has aroused a good deal of speculation over the future of an adjoining line, the Denver and Rio Grande Western, which funnels off traffic from the major routes at Denver and Pueblo, carries it along a short cut through the heart of the Rockies, and empties it into the Western Pacific system at Salt Lake City to continue the journey westward. This railway was conceived soon after the Civil War in the fertile brain of General Palmer, the founder of Colorado Springs. Thinking that the narrow crooked canyons and the two mile high passes of the central Rockies would bar broad-gauge tracks for ever, he planned a vast narrow-gauge system to extend ultimately from Mexico to Seattle, which would take freight and passengers from the broad-gauge lines through the forbidding mountains. The Denver and Rio Grande still has the reputation of being a "romantic" line but it is today a modern broad-gauge system which has performed such practical feats as carrying the whole traffic of the mighty Union Pacific in the great blizzards of 1949 when the latter was unable to keep clear its routes through lower passes. If the Santa Fe were to succeed in getting control over the Western Pacific, only the Denver and Rio Grande would stand in the way of its operating a second transcontinental route between Chicago and the west coast. As a result, the price of Denver and Rio Grande shares has been rising sharply; the Union Pacific is believed to have been the principal purchaser.

SHORTER NOTE

The Bill reducing from $500 to $100 the value of the goods which American tourists returning home can bring in duty-free has been passed by both the Senate and the House. It is estimated that it may cut the outflow of dollars by as much as $140 million a year.

ANYWHERE IN THE WORLD YOU'LL FIND THE PRODUCTS OF YALE & TOWNE

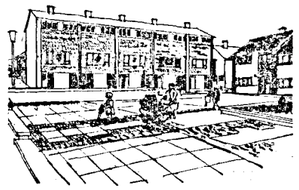
TURIN, Italy.—Lifting heavy container of auto body sections is easy for this speedy, versatile Yale petrol truck. On rough cobblestones or smooth factory floors, Yale industrial lift trucks lift, stack and move loads up to 200,000 pounds. By producing the most complete range of materials handling equipment, Yale ensures the right lift truck for each job.

DETROIT, U.S.A. - Successful operation in an automobile plant is measured in terms of high speed production, split-second timing and swift traffic flow. Yale fork lift trucks measure up to this exacting standard by delivering goods with greater speed, less downtime, and higher efficiency.

YALE
INDUSTRIAL LIFT TRUCKS
TRACTOR SHOVELS
YALE & TOWNE

● Yale makes the world's most complete range of petrol, LP-gas, electric, diesel and hand lift trucks.

● All Yale industrial lift trucks are uniformly high in quality, wherever they are manufactured.



● All Yale materials handling equipment is available in all the currencies of the free world.

● For further information contact your Yale sales and service representative, located in principal cities of the world.

HOME REPORT

In HOME REPORT members of the editorial staff and local correspondents report on life and happenings in and around Britain.

Stevenage Growing Up

FROM OUR SPECIAL CORRESPONDENT

To build a self-contained community of 60,000 souls in 20 years, and to keep them happy while you are doing it, is a herculean task. The new towns do not need Mr Henry Brooke to tell them of the artificiality that pervades a controlled sociological experiment, and the rootlessness that inevitably accompanies immigration. But Stevenage, fifteen years after it was designated under the New Towns Act (its original inhabitants, then a small north Hertfordshire community of 6,000, fought tooth and nail against this ungodly imposition) has achieved a hearty measure of success. The planners can now see their man-made beehive buzzing smoothly, and the inhabitants, after many initial frustrations, are discovering not that "there is nothing to do, and nowhere to go"—as the papers are apt to proclaim—but that there is a growing number of diversions whose only shortcoming is their strangeness to big city immigrants.

Stevenage, like Britain's fourteen other new towns, still requires a mentor. This is the Stevenage Development Corporation (a non-elected body responsible to the Ministry of Housing and Local Government) which, from its Daneshill House headquarters, overlooks both the drawing boards and the bustling town itself. The corporation controls the town's expansion by balancing the number of jobs it attracts with the number of dwellings it constructs. Firms moving to Stevenage are allotted houses, which the corporation finances with money borrowed directly from the Treasury, for the workers they bring and for further employees as they are hired. (Priority is given to qualified applicants from the London area.) The present demand for housing far exceeds supply, for the corporation, which is having labour trouble and finding it hard to secure building materials, is finishing only twenty houses a month. It needs roughly four times this number to provide for existing firms, new ones (such as Bowaters, which will need some 500 homes in a year), public servants and teachers.

One disconcerting element is the high concentration of employment in the electronics and armaments industries. About a quarter of the working force is employed by English Electric, and a further sizeable proportion by de Havilland, International Computers and Tabulators, and Kodak. The danger is not that the town's economy is vulnerable to change in defence policy—although that is always possible—but that the choice of occupation for school leavers wanting to stay in Stevenage is limited. The corporation is trying to diversify employment by inducing more commercial firms, rather than industrial ones, to move in. Yet in spite of the fact that rents are appreciably lower than in London, only two major organisations—Lloyd's Bank and British Railways—have taken office space in Stevenage.

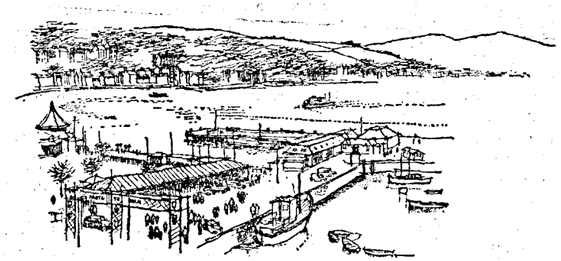
The corporation's goal, when the population reaches 80,000 in 1985 (20,000 more than the original plan), is to have no more than 45-55 per cent of the estimated 40,000 jobs in manufacturing. Since 15,000 have already been allocated to manufacturing firms, it is going to take a lot of hard talking to attract the service and commercial jobs needed to achieve the balance.

The presence of a paternalistic corporation, however benevolent, creates an impression of dualism about Stevenage: inside Daneshill House, architects and sociologists work with master plans and population statistics; outside there is the reality of 43,000 people, each leading an individual life of his own. Neither side, of course, stands unaffected by the other. Few townspeople are more concerned about the running of their community than Stevenage's inhabitants: Stevenage is on their tongues even more often than the weather. In the earlier days, when there was more to grumble about, residents' associations were formed to get grievances heard. On at least two occasions—the decisions to make the town centre an all-pedestrian one, and to begin work on the projected by-pass for the Great North Road—public opinion probably changed the minds of both the corporation and the Minister of Transport.

At the beginning, employment and housing claimed priority. The early settlers lacked many amenities, and even necessities. Shopping was still a major expedition, and buses were then non-existent (taxis still are). People demanded more entertainment and transport. It was too easy to place the onus for all personal ills on the town itself: if one disagreed with one's husband, if one's child was uncooperative (or had urges to rip cinema seats) it was all Stevenage's fault.

Now the days of hardship are ended. The components of a balanced community are almost, although not yet, in equilibrium. Just coming up are the completion in the town centre of a large dance hall, an indoor swimming pool, and (a bit further into the future) a youth centre and a 26-lane American-style bowling alley. With these visible advances the immigrants have become less negative; they have stopped judging Stevenage by London standards. Although many have retained a romantic remembrance of the congested and congenial streets, the myriad of pubs and haunts enjoyed by closely-knit family groups and lifelong friends, they are accepting the new life of raising children in open-air surroundings, comparing neighbourly horticultural prowess, and participating occasionally in some planned festivities at a community centre or a church. At first it was just the more adventurous ones, seeking new friends to replace the old, who went out and joined a dramatics club, or attended a dance at the town square. The Broadhall community centre, one of Stevenage's two such institutions (another is contemplated) now runs the entire gamut of "activities" from keep-fit sessions for housewives to bingo. Except for the warden's salary, the centre is in no way subsidised: the 2,500 enthusiasts of one thing or another who use it each week enable it to pay its way.

Yet there are not a few more retiring persons who are still unhappy. Many find it hard to break away from the lonesome security of the television set; frequently they miss that hereditary sense of belonging which the distance from their families greatly



aggravates. Sometimes friction develops between a non-working wife, kept at home all day by her children, and the husband, who himself is able to establish a circle of friends at the factory. Other sufferers of "new town neuroses" are those who are simply unable to cope with the financial challenge of making ends meet in an environment where the pressure to keep up with the Joneses is tantalisingly strong. To deal with these problems of adjustment, a family centre has just been opened with the aid of a four-year grant from the Nuffield Foundation.

The real fruition of Stevenage as a community now depends on its second generation, who will not be the rootless immigrants their parents once were. Stevenage is brimming with adults of child-bearing age and, not surprisingly, their children. The fresh air, the three-bedroom houses, the new and well-staffed schools that the parents never had, and the mere proximity of other people's families are all boosting the birthrate. For the moment, prams outnumber cars; and, once in school, Stevenage's children seem to thrive on education (half of the fifteen-year-olds choose to stay on, against a national average of 30 per cent).

The great challenge will come when the prams are discarded for motor-bikes, and the proportion of teenagers, now unusually low, jumps into predominance. The corporation has been fortunate that the irregular age distribution has allowed it to put off major youth developments until now, and to suffer only the slings and arrows of a few disgruntled hoodlums (many of them from outside Stevenage). The problem is, of course, inextricably tied to the expansion and diversification of employment opportunities; but leisure hours may be an even more formidable nut to crack. The first moves are a full-time youth officer and a trust fund (target £100,000, to date £45,000). This will be the crucial test of Stevenage's coming of age.

Tartan Towns

FROM A CORRESPONDENT IN ROTHESAY

THE Clyde Coast, which last month entertained the conference of the National Union of Mineworkers at Rothesay (some Rothesay entrepreneurs would not have been averse to entertaining the Holy Loch base either) is by way of being Scotland's chief holiday resort, in volume of traffic at least. The Clyde now earns almost *£20 million a year, nearly one-third* of Scotland's total income from tourism, which has soared spectacularly since the war to become worth more than *£60 million annually* and is still rising.

But in spite of this the coast has its problems. Most of its clients (they probably number, day excursionists apart, nearly 1 million a year) continue to flock in from Glasgow and industrial Clydeside, the region which has nourished the resorts since the family holiday trek first got under way in the 1840s. The trouble now, however, is that an increasing number of the citizens of Glasgow, Paisley, Greenock, and Motherwell have acquired the postwar taste for English and European pleasures, so that while the pattern of the Clyde tourist trade is changing it is not conspicuously expanding.

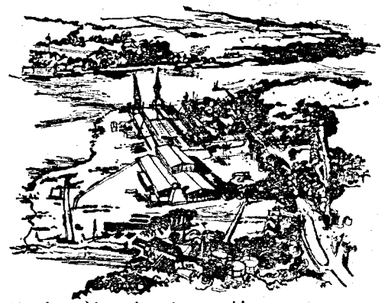
At best, the Clyde appears to be holding its own by attracting ever-greater numbers of English tourists, who base themselves almost exclusively on the leading resorts of Rothesay and Dunoon. The English traffic is now estimated in these towns to be anything up to 40 per cent of the seasonal total.

The Scottish Tourist Board, which mostly gets along without government finance, spends some £35,000 each year on Scottish tourist publicity within the United Kingdom and overseas. Ten Clyde resorts, in conjunction with British Railways, find £1,600 annually to promote themselves in England, especially in the North and Midlands. Some extra individual effort also exists (Rothesay has commissioned a colour film for commercial exhibition), but more extensive co-operation is needed to fill hotels and boarding houses which still tend to stand half-empty from April to June and again in September and October.

Scotland generally suffers from a short tourist season, but the Clyde is one of the regions beginning to profit from off-peak English holiday-making. This is especially so in Rothesay, capital of the sheltered and prosperous Isle of Bute, and in Dunoon, the more austere principal town of the mainland of Cowal. The affection of English tourists is chiefly captured by the peace and quiet of the resorts (even the bustling ones), the estuary's scenic attraction, and the cruises run by British Railways' 18 pleasure steamers in 1,200 square miles of inland sea, studded by islands and ending in lochs that run up into the Highland hills.

TOURISTS, however, look for gaiety as well, and even the busiest Clyde resorts cannot compete with their English or European rivals in entertainments. This explains why many Scots now head south, and why English traffic to the Clyde remains relatively light. January, the peak month for accommodation inquiries, produced in Rothesay a total of 4,500 inquiries, of which 3,700 were from England (the Scots, knowing the ground much better, usually by-pass the burgh tourist department). Even Rothesay and Dunoon boast only modest man-made attractions. They have nightly dancing and tartan-flavoured revue, but little else. It is hard to find the suave comfort of heated bathing lidos, and beaches are in the main undeveloped. The local town councils can be complacent about what they lay on for tourists, but many hoteliers feel that more ought to be tried, although even they consider that big dippers and jazzy attractions would merely remove the major attraction they have to offer: scenery.

Rothesay demonstrates how capital investment is urgently needed. It requires a new pier to replace the picturesque but aged structure which local legend claims is held together only by innumerable coats of paint. Complete reconstruction would cost about £100,000, and, since Bute is not one of the crofting counties where government grants might be had, the onus is on the town itself to find the cash. There are plans for a pier which would include café and orchestral facilities, besides the main function of serving the steamer links with the mainland. But even if this money were found there are the equally archaic Winter Gardens, where present box-office economics makes a modern theatre impracticable.



ROTHESAY has a tourist association which spends about £8,000 a year and contributes to tourist development by a legal lottery (the first in Britain) which last year put £1,400 in the kitty. It has now turned to bingo to finance the construction of an illuminated fountain. Most of the Clyde resort associations do a good job of sales promotion by straightening out accommodation problems and reassuring distraught inquirers, including one woman who wanted to know how severe the quarantine regulations on Bute were.

All the estuary towns have long-term anxieties over the future of the British Railways steamer fleet, recently modernised at a cost of £2 million but now cut to half its prewar strength. Last year the Clyde steamers carried over 4 million passengers and also 97,000 vehicles on the four new car ferries which have helped revolutionise the type of tourist coming to the region. But the fleet operates at a loss, largely because the seven big cruise ships are expensive to run. Some resorts fear that British Railways will try to use smaller and less comfortable ships in future (the replacement of the bigger steamers at current prices would cost up to about £450,000).

The resorts have accepted the Scottish Tourist Board's recent pronouncement that they lie outside the triangle bounded by Edinburgh, Perth, and Ayr in which most cosmopolitan visitors to Scotland still circulate. But they feel that they cannot afford to lose a single potential customer because of inadequate publicity or insufficient amenity. The Clyde towns and British Railways will need to combine if they are going to work out the answers.

Irish Unions Unite?

FROM A CORRESPONDENT IN IRELAND

Verolme shipyard: union trouble.

THE Irish Congress of Trade Unions, which held its annual conference in Cork last week, has taken a step ahead of the British TUC in reconciling its internal problems. The congress (which covers the whole of Ireland) has set up a permanent tribunal to study the structure of the trade union movement in Northern Ireland and in the Republic. The tribunal will also be a disputes court for the settlement, presumably, of demarcation and perhaps also poaching disputes.

The object of the new tribunal is to try to reduce the number of trade unions in Ireland to round about 14—one union for each main industry. This is understood to have impressed Mr Frank Cousins, who attended the Cork conference as a fraternal delegate. Ireland has a number of directly competing unions, all in fierce rivalry for members, in the engineering industry, transport, building and agriculture. Not only are there the normal differences between crafts and occupations. There is the additional complication of some unions being Irish-based (that is: with head offices in Ireland) while others are British-based.

The conflict between Irish and British unions has been aptly illustrated by the two months' strike at the new Verolme shipyard at Cork. Several British shipbuilding unions have objected to a unilateral negotiating agreement between the company and the Irish Engineering and Electrical Trades Union. The British unions want to retain the old, familiar system of multilateral negotiations.

This strike has led to bitter inter-union exchanges in Cork and it has had unpleasant repercussions in Belfast, where the firm of Harland and Wolff, under union pressure, has now had to cancel a £250,000 order for electrical switch gear for the Verolme yard. Belfast, with its high unemployment among shipyard workers, can ill afford to lose such orders. It is one good reason why hopes are being placed in the new union tribunal.

BOOKS

1914-18 in Retrospect

The Donkeys
By Alan Clark.
Hutchinson. 216 pages. 25s.

Brass Hat
By Basil Collier.
Secker and Warburg. 362 pages. 30s.

THE Great War has been demoted and now takes precedence only in time; but quite suddenly it has begun to attract the attention of younger historians. It may simply be that, sensing that there is a ready market for military history and that momentarily the vein of the second world war has been thoroughly mined, they find an obvious commodity in the war that their fathers fought but which to them, the first generation for which this is so, is now history. And it may also be that they sense that the problems of 1914-18 are more pertinent to military thought today than those of 1939-45. Military thinking in the first world war was trapped in a cul de sac, hedged by barbed wire and swept by machine gun and shell fire. The way out—the tank and infiltration tactics by the infantry—was discerned but not fully exploited until the second world war. The price paid was the terrible list of casualties and for the next twenty years it haunted British and French politics. Today, military thinking appears to have run into another impasse, created by the development of nuclear weapons and offering an even more terrible butcher's bill. It may therefore seem worth going back to discover what went wrong and why.

Enough time, it may be thought, has elapsed for analysis to take the place of temper and certainly no harm is done if young historians who claim no direct experience of war sharpen their bayonets of criticism. But it is up to them to prove that they have sympathy and understanding for the trials and achievements of an earlier generation and that their re-assessments are not prejudiced from the start. One trap is to assume that the Allied generals were necessarily stupid and insensible men—the donkeys of Mr Clark's title. The other is to assume that they were lions, as Mr Collier's biography of Sir Henry Wilson gets perilously near suggesting—at least for the subject of his portrait. A strong case for the prosecution can be drawn up; but there is also something to be said for the defence and neither case is strengthened by displays of rhetorical brilliance.

It is easy, however, to preach objectivity from the outside and it has to be admitted that even today writing about the first world war cannot but help being coloured by past emotions. One of these is common to many survivors of the war, who in some way seem to sense that criticism, say, of Haig is an attack on their own hardihood. This gallant feeling pervaded Professor Cyril Falls's account of the war; and it appears to inform Mr John Terraine's book on the Mons campaign. The other is a feeling of distasteful repulsion, based emotionally on the poems and memoirs of protest and intellectually on the writings of such men as Major General Fuller and Captain Liddell Hart, who in the 1920s and 1930s were trying to drag military thinking out of the morass of the trenches.

Today the military historian has to be sensitive to these echoes, but he will fail in his task if he simply seeks to reproduce them. To aid him in his search for dispassionate judgment he has, fortunately, two excellent models: Sir Philip Magnus's "Kitchener" and Mr Alan Moorehead's "Gallipoli." These certainly destroyed any lingering ideas that this was a war fought by titans; but equally they did not suggest that these were battles among pygmies. They were both scholarly and fair and, par-

ticularly in Mr Moorehead's book, enlivened by a brilliant and sympathetic pen. Unfortunately, neither Mr Clark nor Mr Collier seems to have learnt much from these models. Charitably it has to be assumed that Mr Clark was so seized with the horrors of the 1915 campaigns that his pen ran away with him, for his use of the evidence is both biased and slipshod. This is the more to be regretted because his descriptions of the battles are vivid and they demonstrate that he is quite capable of handling the detailed intricacies of military history. This is a shell burst of a book, scattering its fragments powerfully but indiscriminately.

Mr Collier's biography, though more sober in tone, is hardly less startling, for it seeks to defend what to many may seem indefensible. Mr Collier has had access to all Sir Henry's diaries ; yet it is surprising how little he quotes directly from them. As with Lord Alanbrooke's memoirs, the reader is left wondering whether this is what Sir Henry Wilson said or thought or the gloss that the author has chosen to put upon it. Closed politics were the oxygen of Sir Henry's life and, try hard though he does, Mr Collier does not quite wipe out the impression that Sir Henry often played the game of political intrigue for its own sake and was somewhat reckless of its consequences. This, of course, is an opinion that Mr Collier does not share, but his enthusiastic defence of Sir Henry may damage the arguments for rehabilitation. It could be that Sir Henry Wilson was no better and no worse than some other brasshats. That may not say much for them. But if that is to be said it should be said soberly and fairly, with all the evidence weighed. There are too many cenotaphs for this generation to want to build new memorials, as Mr Collier appears to have sought to do; but equally greater care than Mr Clark displays is wanted before they are all blown up.

Picture of Tomorrow?

Children of the Ashes

By Robert Jungk.
Heinemann. 317 pages. 25s.

AMONG the few who were not surprised when radiation sickness began stalking the survivors of Hiroshima was Dr Masao Tsuzuki: he had once done research into the effects of Roentgen rays on rabbits. Most of the survivors were kept too busy trying to stay alive to give thought to possible delayed after-effects—though there was an early Japanese theory that the bomb, as well as being a super-explosive, had contained some new form of poison gas.

Hiroshima in August, 1945, was a vast, flattened, scorched, blackened rubble, with grotesquely clad human beings grubbing about in it. All the living, including children and pregnant women, wore brand new army uniforms, "liberated" from military stores. But a year later the atomic desert had become more like a huge market garden, as people grew food among the ruins and life reasserted itself. Once rebuilding began, some actually made speculators' fortunes. True, there were 6,000 orphaned boys and girls, most of whom took to black marketing and other forms of crime. One was Kazuo, who finally committed a squalid murder, more from nihilist despair than for gain. His father begged the authorities to sentence him to honourable execution rather than life imprisonment, and gave the boy, as a parting gift, a pair of straw sandals with black and white straps, which only the dead wear.

Such tragedies could be, and were, forgotten. Hiroshima became a "boom" town, with higher living standards for more people than lived there in 1945. The "boom" came partly because Hiroshima emerged as a leading Japanese manufacturer of military weapons of the sort that, since 1945, have been downgraded as "conventional." Only comparatively recently has there also emerged a chilly awareness of a creeping death still at work among the survivors, including some who were children at the time. Sixteen years after the bomb was dropped about one person a week dies in Hiroshima, probably of radiation sickness. People are also still dying of it in Nagasaki. Some betray no symptoms until the morning they wake up feeling "languid." Loss of weight, vomiting, bleeding and death may follow, but death is sometimes the least that the survivors have to fear. To admit that one is an atomic bomb survivor is to risk being refused a job in case one goes sick, and being refused in marriage in case one's children turn out to be genetic freaks. Some survivors wish they had died sixteen years ago, and a few commit suicide each year, without waiting to find out if they are secretly dying.

Mr Jungk tells this grim tale for the most part in a competent grey style, but not without indignation and occasional heavy-handed sentiment. Sometimes his pathos becomes bathos: "Father and mother have been sickly ever since the atom bomb. They rely on what I earn. Sister has set her heart on an aluminium breakfast tin. No hope of it now." But his moral about future Hiroshimas is surely worth underlining:

> What would be left after such a war would not be totally dead desert without human inhabitants, but rather a single huge hospital, a world in which everyone was sick and wounded.

Young Spaak

Mr Europe: *A Political Biography of Paul Henri Spaak*

By J. H. Huizinga.
Weidenfeld and Nicolson. 248 pages. 25s.

IT is disappointing that a book on M. Spaak with the title "Mr Europe" should contain so little of what it seems to promise. The biography that Mr Huizinga has chosen to write centres on M. Spaak's Belgian career and in particular on his long drawn out quarrel with King Leopold III; only the last chapter concerns M. Spaak's activities as one of the chief builders of united Europe. The balance of the book may seem misplaced to those who are more interested in the new Europe than in the old "royal question" that so bitterly divided postwar Belgium.

Yet Mr Huizinga handles his chosen subject-matter extremely well, and obviously tries, with great success, to be fair to his two protagonists. They, ironically, have long felt a personal liking for each other, despite the fact that the early Spaak for some fifteen years made himself the mouthpiece of the extreme socialists, who thought and spoke in terms of the class struggle however much that image was at variance with their reformist achievements. The break between the two men came in 1940, when M. Spaak and other ministers opposed the king's decision to remain in occupied Belgium, although after the fall of France they themselves wished to return home and went unwillingly to exile in England.

When after the war the socialists repudiated King Leopold, M. Spaak was absent in San Francisco, at the founding of the United Nations organisation, but he soon realised that if he wished to remain in public life he had no choice but to adopt his party's line on the royal question. Hence the march by the portly, 51-year-old exminister at the head of a crowd of demonstrators to the Palace of Laeken—an episode hopelessly inappropriate, as Mr Huizinga emphasises, to a man who was by then of some international stature, yet featured as the dominant theme of the book.

Although Mr Huizinga acknowledges generous help from M. Spaak in the preparation of this biography, it is a portrait that certainly shows him warts and all ; far from flattering his subject, Mr Huizinga seems almost to delight in emphasising M. Spaak's mistakes and errors of judgment. As a political biography it perhaps insufficiently describes the rival groups and factions within Belgian domestic politics, among whose shifting currents ministers find it difficult to tread water successfully and almost impossible to bear any fixed course. It is silent on M. Spaak's formative years in London, when he arrived a Belgian and left a European (it is an interesting point, although Mr Huizinga does not mention it, that M. Spaak first became a foreign minister very unwillingly, having as a good socialist wanted the ministry of labour) ; also, in spite of Mr Huizinga's superb mastery of English, he has occasionally melodramatised his narrative: "the vengeful King's welcome took the form of an imperious demand that they grovel in the dust at his royal feet."

What emerges from the book, however, is an extremely attractive picture of a man who indeed, as many have said, shares the Churchillian characteristics of intelligence, eloquence, warmth and spontaneity, capacity for work as well as talent for relaxation and enjoyment of food and drink: a man of vision as well as of mistakes. Perhaps Mr Huizinga will add a second volume to his work, next time genuinely telling the story of one of the half-dozen makers of Europe.

Psephology Criticised

Floating Voters and the Floating Vote

By H. Daudt.
H. E. Stenfert Kroese, Leyden. 171 pages. 10 guilders.

IN the last twenty years social surveys have thrown much light on electoral behaviour. Solid statistics have been supplied to confirm or contradict what had previously only been known by politician's hunch or *a priori* reasoning. As in so many branches of social service, America has led the way and many ingenious and perceptive studies have appeared, measuring how each ethnic and religious sub-group of the population divides its political allegiance ; how many people change their minds during campaigns or between elections ; and how the results correlate with the influences to which the various voters were exposed.

Now a Dutch scholar has examined the material so far assembled and subjected it to a thorough and humourless scrutiny. Anyone wishing to find evidence of the absence of scientific rigour among self-proclaimed social scientists will rejoice in the ammunition offered by this slim volume. Anyone planning a sample survey, electoral or otherwise, will profit by its awful warnings. But working politicians and party agents will find it of little service, for it is a highly technical work.

The psephologist, too, may challenge Mr Daudt's assumptions. He is emphatically a social *scientist* himself and he writes as one disappointed in his colleagues for their imprecise language, logic and arithmetic, and their failure to use identical technical terms. But can political phenomena, in their infinite complexity, ever be explained "scientifically"? The realistic observer has to content himself with an arbitrary selection of the variables that seem significant.

The layman, struggling through this book, might well get the impression that all evidence from sample surveys is to be disregarded. All such evidence is undoubtedly to some extent suspect—and Mr Daudt's warnings are very healthy—but it remains better evidence on voting than is available from any other source. We are a long way from understanding electoral behaviour and we may never reach conclusions that are valid for more than one country at one particular period. But we are a lot more knowledgeable than we were twenty years ago.

An Imperial Myth?

A Modern History of the Sudan

By P. M. Holt.
Weidenfeld and Nicolson. 254 pages. 27s. 6d.

THE Sudan holds a high place in British imperial mythology. First it was a realm of darkness—a nest of slave-traders, of Mahdist fanatics pouring up the steps to murder Gordon, and of European prisoners mouldering in chains at the mercy of the Khalifa. Then it underwent a romantic change and became a scene of light and glory—the site of the last classic cavalry charge of the British army at Omdurman, of the worsting of French poachers at Fashoda, and the breeding ground for a flower of British overseas administration, the Sudan Civil Service. As a byword for selfless devotion, this handpicked body set standards for a whole generation.

The bulk of books in English about the Sudan are by its ex-servants and see the place through their loving eyes. Mr Holt's book, without ceasing to be loving, is different, and different in a most spirited and readable way. He is a historian as well as a good Arabic scholar, and, during employment by the Department of Education, used his spare time to dig into the archives of the pre-Condominium period, which had been captured by Kitchener but had remained untouched ever since. These cover the period of Egyptian rule, the Mahdist revolution and the reign of the Khalifa. They reveal that, when Africans ran Africans, administration was far from inefficient. They also show that the legend that the Mahdist revolt was directed against Egyptian misrule is "unwarranted and unhistorical" and that the Khalifa, though he was wayward (for instance, in his alternations between consulting Slatin Pasha and throwing him into chains), was "much less a malevolent despot and much more the prisoner of his circumstances than contemporary European writers were willing to perceive." The Queen, wringing her hands over Gordon at Balmoral, had much of the misjudgment to answer for.

When Mr Holt's fresh eye lights on the reign of the British he is equally invigorating. He sees their merits but also their shortcomings ; these include their tendency (which they will be surprised to learn they share with the Khalifa) to cosset and advance the tribes in order to keep sway over the towns. His analysis of why fifty years of education for democracy produced only four years (1954-58) of parliamentary government is as lucid and informative as the rest of his short and excellent book.

It inaugurates a new series, and much though your reviewer dislikes series, with their propensity to be uniform for uniformity's sake, this one will be useful if it goes on as it has begun.

Comparative Politics

Government and Politics in the Twentieth Century

By Gwendolen M. Carter and John H. Herz.
Thames and Hudson. 218 pages. 18s.

THE main interest of political scientists has been shifting from the study of well-established systems of government to the problems of those newly emancipated nations now making their own experiments in self-rule, to the accompaniment of much exhortation and not a little intervention from more or less interested parties outside. Professors Carter and Herz in their new little book on comparative politics take this fact into account by using material from a wider variety of countries than has been usual in such introductory accounts, by accepting the evidence of countries' international relationships and by squarely tackling the democracy versus totalitarianism debate and making it the centre of the argument. In the hands of a good teacher this might be a useful introductory text at a not very advanced level ; the difficulty is that for prospective students at that level the amount of contemporary knowledge assumed is perhaps too high.

It may seem churlish to cavil at a book in which British government gets such high marks from two American authors—the number of alphas is rather too high perhaps —but there are some points which one is bound to call into question. It is, for instance, misleading in practice (though not of course in theory) to talk of the British second chamber resting on hereditary succession—try eliminating from any debate all those not there by virtue of being their fathers' sons. It is very misleading to say that "a postwar British statute goes so far as to provide that Security Council decisions with binding force on member states shall be directly binding on British subjects." The impression is given (wrongly) that the idea of a neutral civil service is peculiar to Britain and the Commonwealth, and that countries with nationalised industries normally limit the rights of workers in them on the analogy of civil servants. And if one had to find reasons for believing that the political systems of Western Germany and France today are not fully parliamentary, one would hardly find those reasons in limitations on the use of votes of no confidence.

Nevertheless, the book is both an intelligent and a useful one, not least for its insistence that democracy can be of many kinds ; the only thing is that in politics it is hard to be at once accurate, penetrating and brief.

Nigeria's Brainpower

The New Nigerian Elite

By Hugh H. Smythe and Mabel M. Smythe.
Stanford University Press. London: *Oxford University Press.* 208 pages. 40s.

AMONG the unknowns attendant on the road to independence perhaps the biggest are the supply of, and demand for, the elite required to fill the critical posts where experience and intellectual capacity are most needed. There have always been misgivings on this score, particularly in Nigeria where the government machine has so often been redesigned to allow for the political requirements of racial diversity and the rapid evolution of the country's economy.

This study is largely descriptive and does not explicitly attempt to solve the crucial equation. Yet a solution is in part the

answer to the western world's anxiety whether the new states so rapidly emerging in Africa can possibly evolve peaceably, or must relapse, at worst, to a Congolese chaos. It could also answer the frequently voiced question whether Nigeria will become the stable nucleus around which sound African regimes will crystallise. The nearest the authors come to an explicit solution is their statement that "the moderates are in control." This conclusion is supported indirectly by their picture of the westernised part of the Nigerian elite, which is a reasonably accurate "still" of the fast-changing society now emerging in the major centres of Nigeria. There are some inaccuracies of detail and of perspective; in particular, the Muslim half of the elite society is inadequately pictured, and the authors tend to lose sight of the vast rural background in dealing with an essentially urban foreground.

The authors have necessarily devoted a large part of their book to the historical events leading up to independence, and their description of the present rather stilted social relations between the "moderates" and Europeans on social occasions is basically correct, even if at times it makes uncomfortable reading. It may be captious to detect faint traces of diehard American anti-colonialism when, for example, they wonder what feelings of "guilt for the past . . . lie behind the conventional smile and handshake" of Britons meeting the Nigerian elite.

The authors have, however, put their fingers accurately upon some little publicised legacies of the British past that may trouble Nigerian governments for a long while to come. For example, the relatively high standards of pay and conditions that have had to be offered, with doubtful success, to attract adequately qualified expatriate staff have tended to set the standards for indigenous staff. One consequence has been that housing for officials at grossly uneconomic rents has absorbed many millions of badly needed capital in recent years, and the readjustment of standards is bound to be painful.

It may seem curious that the standards of living of government employees should require such emphasis, but the importance of the civil service element is one of the peculiar characteristics of the Nigerian elite brought out in this study. It will undoubtedly be required reading in any effort to appraise the chances of social stability in black Africa.

Blossoming Desert?

The Awakening Sahara

By Nicolas Bodington.
André Deutsch. 175 pages. 18s.

In the Sahara Major Bodington has chosen a subject of considerable actuality, though he seems to exaggerate in saying that France's achievement in causing the Sahara to "blossom" will "call for a re-appraisal of global economic, political and strategic factors in the close years to come." In reality his subject, as this quotation indicates, is the development of that portion of the Sahara which is at present under French control. The only reference to the Spanish Sahara and to Tarfaya is the statement that Villa Cisneros is the first port down the Atlantic coast after Agadir. In the opening pages Libya is mentioned as including parts of the Sahara, but the only subsequent mention seems to be the statement that a "gesture to Libya" offering to bring it into OCRS (*Organisation Commune des Régions Sahariennes*) might "tone down French bitterness over the Fezzan and allay fears of competition between Libyan and Saharan oilfields." This is the only indication which we are given that oil has been found in Libya and that the Libyan desert may blossom also. In any case, it would surely not be the offer but Libyan willingness to accept it that might bring the change about; this is hardly conceivable until there is a settlement of the Algerian issue, a subject on which the author confines himself to two pages. On the other hand, he is no doubt correct in supposing that an independent Algeria (including the Sahara) would be willing to come to terms with France over the exploitation of the minerals.

The book opens with a rather sketchy and not always correct account of early exploration; the main portion is concerned with the extraction of oil in a desert area and the problems of adaptation which it poses for both foreign workers and native Saharans. This contains a great deal of information, clearly expressed and easy to read. Major Bodington expresses the enlightened view which is now customary in such matters, but there is nothing in the text to suggest that he has the intimate knowledge of the Saharan tribes which his publishers claim for him. His outlook is rather that of the French intelligence service with which he was connected during the war. There is no comparison with the problems of the extraction of oil in other desert areas and one would almost suppose from this account that the French undertaking was the first of its kind.

But in spite of these limitations, the book can be recommended as a good popular account of the financial, climatic, geographic and labour problems involved in the French exploitation of that very large portion of the Sahara which they control.

OTHER BOOKS

Middle Eastern Affairs, No. 2. St. Antony's Papers No. 11. Edited by Albert Hourani. *Chatto & Windus* 167 pages. 18s.

This admirable collection of essays plunges into Middle Eastern history at a variety of points and dates. Professor William Polk analyses contemporary American policy and shows that its anti-communist inspiration has been too limited in conception to produce constructive results. Mr Allan Cunningham writes of the ups and downs of those nimble witted people, the Levantine dragomans (interpreters) who, during the nineteenth century, served the British Embassy in Turkey. And, still in the nineteenth century, Professor André Raymond describes how Lord Salisbury "traded" Tunisia to France as a *quid pro quo* for Britain's acquisition of Cyprus. From Professor Elie Kedourie comes a study of Sa'ad Zaghlul, the redoubtable Egyptian nationalist, and his tortuous relations with the British; from Mr Emile Marmorstein an ingenious explanation of that famously debatable phrase in Sir Henry MacMahon's note to the Sharif Husain (October, 1915); ". . . portions of Syria lying to the West of the districts of Damascus, Homs, Hama, and Aleppo, cannot be said to be purely Arab. . . ." Mr Marmorstein traces the terminology to Gibbon's eighteenth century description of the ethnic position at the time of the twelfth century Crusader kingdom and suggests that Sir Mark Sykes, with his fervour for historical analogies, may have wafted the phrase—romantically—into the MacMahon draft.

The leading essay in this series comes from Miss Elizabeth Monroe. Writing on "Mr Bevin's 'Arab Policy'" she places it in its perspective of British perplexities at the time. She shows that, at a period of near war with Russia and bread rationing in Britain, Palestine was one of the lesser of British problems and decisions on it subordinated to matters of greater moment. Mr Bevin emerges as pro-British rather than pro-Arab. This study would call for fuller discussion were it not for the fact that for many years its author wrote on precisely these Middle Eastern affairs for this paper.

Demographic and Economic Change in Developed Countries: *A Conference of the Universities.* National Bureau of Economic Research. *Princeton University Press.* London: *Oxford University Press.* 547 pages. 96s.

These papers by demographers and economists on the causes and effects of variations in fertility and mortality in industrially advanced countries were presented at a conference held in Princeton towards the end of 1958. The experts are still working in the dark to some extent, as is evident from the inability of demographers to predict western birth rates. But these proceedings bring together some interesting views on the sensitivity of marriages and births to changes in economic prosperity and the effect of population changes on the demand for consumer goods and services.

The Design of Research Laboratories. Nuffield Foundation Division for Architectural Studies. *Oxford University Press.* 231 pages. 45s.

If all architects studied this book before they began to design a laboratory they would have less difficulty in understanding what it is that scientists want and why they want it. Laboratories cannot be mass-produced from standard blue prints like so many bijou residences, but architects and contractors are often taken by surprise at the elaborate and complex services that research workers do now expect to be provided on tap. Directors of research centres might also pick up some useful tips

A History of South Carolina 1865-1960. By Ernest McPherson Lander, Jr. *North Carolina University Press.* London: *Oxford University Press.* 260 pages. 40s.

This is the straightforward history of one of the great slave states, which still does not permit a single Negro to enter its white schools and which was a centre of the Dixiecrat rebellion against the Democratic party. Although Professor Lander teaches at Clemson College in South Carolina, he is a racial realist; his views on the quality of higher education in the state are also remarkably outspoken.

Gold and International Liquidity. By W. J. Busschau. *South African Institute of International Affairs.* 102 pages. 1 rand. (10s.)

Dr Busschau expounds his familiar argument for a rise in the price of gold. There are some useful tables.

LETTERS

Immigrant Workers

Sir—It is now generally agreed that the main bottleneck to an increased production is the shortage of qualified labour in this country. One should have thought that in these circumstances the government would consider it politic to liberalise the immigration laws. On the contrary, there have been indications that Mr Butler proposes to tighten up the immigration law, as far as the influx of coloured labour from the Commonwealth is concerned. It is true that the majority of coloured labour falls into the unskilled category. But even an addition of unskilled labour is useful, as it allows for the grading up of unskilled English workers.

It has been one of the secrets of the German economic miracle that west Germany had an influx of about ten million people from east Germany and other parts of Central Europe after the end of the war. Could we not learn from the German experience?

The English immigration laws were framed after the first world war when there were millions of unemployed in this country. The time has come for a change now that there are more vacancies than unemployed. It is not to be expected that the unions would strenuously resist a liberal immigration policy provided there is a provision against undercutting union rates.

It would be essential for the implementation of a more liberalised immigration policy that the Foreign Labour Division at the Ministry of Labour should be strengthened with a view to speeding up and simplifying the procedure for the grant of labour permits to foreign nationals.—Yours faithfully,

A. M. Kraft

New Barnet, Herts

Northern Rhodesia

Sir—In your issue of July 22nd the article "Lusaka's Marshmallow World" seems to have been written from the standpoint of one of the African political parties only (the African National Congress is written off just as KADU was before the Kenya elections). It presents as fact, or as assumptions which can be taken for granted, what can only be described as highly biased and most disputable opinions. It can only exacerbate a difficult situation.

Your correspondent says: "Now when a collision between nationalism and the government seems both inevitable and immediate . . ." Apparently this collision does not seem so imminent to Mr Macleod, who said in the Commons on July 25th: "With all the difficulties that there are at present, I remain optimistic, quite frankly, about Northern Rhodesia."

Your correspondent's statement that "the Europeans were busy adjusting their views to the prospect of an African government" is presented as fact, not opinion. It is difficult to reconcile with the following paragraph, where the February white paper is described as aiming at 15 exclusive seats for each race and a reasonably equal share in a third group of 15 seats. Your correspondent deplorably attempts to imply that officials ultimately responsible to Mr. Macleod are, in effect, calling him a liar. The declared objective of the February white paper is to secure "substantially increased African representation in the council, while maintaining the principle of non-racial political approach in which political parties are obliged to seek support from both races."

This is, to my mind, the key to the whole situation and one which your correspondent, seemingly writing from an exclusively UNIP standpoint, seeks to obscure. Even on the basis of the February white paper, if UNIP stood on an African nationalist platform and gained no substantial European support it could never have gained a single "national" seat. Similarly the UFP without African support could never have hoped to gain a single one of these seats. The whole object of the wording quoted above was to produce political groupings which did gain support from "both races." Under the revised arrangement, a successful candidate will have to gain support from both races. If the February white paper had remained unaltered candidates could have secured election with support from one race only, as was made clear in the dispatch from the Governor.

Your correspondent, in his picture of gloom and impending tragedy, states that UNIP, ANC and the Liberal Party would support the proposals if the 2,000 Asian voters were returned to the National roll, and the 400 minimum vote alternative was dropped. Is this really all the difference between having millions of happy smiling Africans and a country verging on revolution? It would be a sad state of affairs if the Northern Rhodesian government were unable to resolve the present fears of Mr Kaunda and others on this point.

First, the Asians. The point is whether the return of the 2,000 Asian voters to the national roll would affect the chances of what might be termed the white and the black political parties. The electorate is about 100,000. There are 2,000 Asian voters spread over a number of constituencies; one assumes that the actual poll would be perhaps 70-80 per cent—and that these voters would be spread over more than one party. Can it really be said that they would make any appreciable difference to the result?

Second, the 400 minimum votes. Your correspondent says: "The UNIP claim (and it seems accurately) that the UFP will almost certainly win all the 14 remaining national seats." While the UNIP is entitled to claim this, your correspondent is most certainly not entitled to add the words in parenthesis. It was pointed out by a Conservative MP by no means friendly to the UFP in the Commons that an African would have to get the support of considerably less than 400 Europeans (he suggested between 250-280); on the other hand the UFP candidate would have to get 400 African voters in each constituency in order to qualify. The UFP now has to get as many African votes in each constituency as it got in the whole of Northern Rhodesia in 1959.

Your correspondent's article will be widely read in many countries and it will be assumed that his very positive statements reflect accurately the position in Northern Rhodesia. This, I submit, is not true and consequently is highly to be regretted—Yours faithfully,

House of Lords, SW1 Colyton

Oman

Sir—The article "A Quiver of Sheikhs," which appeared in your issue of July 15th, in suggesting that the seafaring population of the coast has practically nothing in common with the pastoral tribes of the interior, exaggerates the diversity within Persian Gulf states. In fact, not only do a common language and religion obtain, but some tribes participate in both pastoral and seafaring pursuits.

Nor is it correct to suggest that political loyalties in Oman follow a division of coast versus interior. Certain tribes of central Oman—who in any case are as much agricultural as pastoral—have in recent years consistently adhered to the Sultan's cause. None of the four major Omani tribes who can be described as pastoral came out in support of the Imam; but the Duru' (the most widespread of them) at the height of the 1957 revolt reaffirmed their allegiance to the Sultan.—Yours faithfully,

Umm Said, Qatar M. O. Watterson

Car Exports

Sir—On a recent visit to Vienna I was shocked to find British cars virtually invisible. Even Italian ones, though a poor third to the Germans and the French, greatly outnumbered the British, in spite of the fact that Austria is one of the Seven.

A friend gave me an explanation. Pointing to a line of parked Volkswagens, he said: "Not many of us would buy one of those, if we could get a Morris for the same money."

Can you tell me how putting 3d. on petrol, 4d. on cigarettes, and raising the home price of cars at the fag end of the season is going to help Morris to compete with VW? I should have thought it would have the opposite result.—Yours faithfully,

Wheatley, Oxford Balfour Barwise

THE WORLD OVERSEAS

Nineteen Eighty-four, New Style

NINE full pages in all Soviet papers, special supplements in foreign communist ones, the full text in the *New York Times*, and long extracts in the western press generally—Mr Khrushchev's programme for the next twenty years, with its few catchy slogans, has certainly not passed unnoticed. But since this lengthy document is written in dreary jargon, few outsiders will have the courage to go far beyond the headlines. The purpose of the following notes is to sum up some of the more interesting aspects of this challenging, though pedestrian, document.

Goodbye to Stalin : Since the new programme replaces one written in 1919, it must review the past as well as look to the future. But as Moscow apparently does not know what to do with Stalin, his name is not mentioned once throughout the document. There is a curious gap between Lenin's death and Khrushchev's accession, as a result of which Lenin is given the "credit" for some of Stalin's performances. The theory of socialism in a single state is attributed to him, while collectivisation is described both as "voluntary" and as carried out in accordance with Lenin's directives. The cult of Stalin has vanished, but his habit of rewriting history has, so far, survived.

Twenty Years After : The economic plan for the next twenty years (1960-80) forms the backbone of the programme for the future. But its details are withheld, probably so that Mr Khrushchev can reveal them at the party congress. The programme contains only the broad lines of the plan, and these show little change from current trends.

Soviet gross industrial output is scheduled to increase by 150 per cent by 1970 and six times by 1980 (all comparisons are with 1959). The figure seems startling because it covers such a long period. In fact, the targets would be slightly exceeded if the current annual rate of growth by about 10 per cent were to be kept up throughout the whole period. (It can be argued that the Soviet calculation of industrial output is not valid for international comparisons ; but this need not affect comparisons of the Soviet performance itself year by year.) Other figures confirm the same pattern. Soviet output of crude steel, now running at an annual rate of 71 million tons, will top the 250 million tons mark in 1980, if the present rate of progress is maintained ; the expansion of electricity generation will have to increase very slightly to reach the appointed targets of 900 to 1,000 billion kWh in 1970 and 2,700 to 3,000 billion kWh in 1980.

If the Russians can go on advancing at their present fast pace this will be a feat in itself. They hope to achieve this mainly through the increased productivity that automation and the spread of education should make possible. Productivity is to be doubled in the first decade and more than quadrupled by 1980. By then, the Russians claim, it will be twice the present American level. The United States is often used as a yardstick. The programme states that Soviet output will exceed current American production in 1970 and "leave it far behind" ten years later. Mr Khrushchev has made even bolder claims before. But when the yardstick itself is growing, accurate measurement becomes difficult.

Farming Hopes : Soviet national income is to grow almost as fast as industrial production. This assumption is explained by sanguine hopes of an expansion of farm output. The grain harvest, which last year was estimated at 131 million tons, is "only" to be doubled within twenty years, but the output of meat and dairy produce is to grow faster, so that total farm production should increase by three and a half times. Since immigration from the countryside is to go on, here, even more than in industry, the increment is to come through higher productivity: by 1980 productivity in farming is expected to be five or six times higher than it is at present.

As a reward for such an effort farmers are promised a faster rise in living standards than the town dwellers are to get. The real incomes of farmers are to be quadrupled within twenty years, while town incomes are only to increase by something more than three times. The programme seems to suggest that this enrichment of the farming community will pave the way for the communist transformation of the countryside. Collective farmers earning high incomes, it is hoped, will no longer care about their small private plots and will also agree to be turned into employees of the state. All this sounds very much like wishful thinking. The staggering agricultural programme may well prove, once again, to be the weakest link in communist planning.

Welfare State : The improvement in living standards is not to come only from higher wages and lower prices. During the present decade the working week of Soviet citizens is to be reduced to 34-36 hours and, with some exceptions that will be gradually eliminated, full secondary education for all is to become the rule. In the next decade the working week is to be cut still further. During the seventies the Russians should get free public transport and free lunches in factories and offices, schools and collective farms. By 1980 they are promised a free flat for each family, with no payment either for water, gas or heating. Finally, at an unspecified period, holidays with pay will be increased from two to three and then to four weeks ; they will be extended to collective farmers ; free medicines will be added to existing free medical treatment ; and kindergartens or boarding schools will be provided for parents wishing to send their children there.

Altogether, according to the official calculation, the social services should account, by 1980, for roughly half the real income of the Soviet people.

The Party and the Unwithering State : The state will not "wither away" until a classless society has been established at home and communism has won its "contest with capitalism in the international arena." In the meantime, the state remains, with its defence forces, and the party is its guide and keeper.

In theory, many measures are to be taken to get the "masses" to play a real part in running the country. In order to bring in new blood, at each election to Soviets (or councils) at least one-third of those elected must be new members. To prevent "abuses of power," no holder of an elected office is to be permitted to keep it for more than three successive terms. Similar rules are to be applied to the party. The leading bodies in primary organisations will have to change half their membership every term, the regional and republican central committees will have to change a third, while the All-Union central committee and its presidium must fill a quarter of the available seats with newcomers. The limit of three successive terms is also to be the rule at all levels. It is tempered, however, by a significant exception. Outstanding members can be re-elected for a further period by a majority of three-quarters, in a secret ballot.

It is all more impressive than real. Yet one probably cannot involve millions in the forms of representative institutions without, finally, having to reckon with the consequences, particularly when one is no longer dealing with backward *muzhiks*. One day the Russians will begin to take the forms seriously, and the joke will be on the author of the new manifesto.

A German Welcome for Britain

FROM OUR BONN CORRESPONDENT

WHATEVER misgivings the small minority of Germany's "Little Europeans" may have at the prospect of Britain joining the common market, they have not been humoured this week by the German press. The Prime Minister's statement in the House of Commons has everywhere been considered to be the news of the day and has been very graciously welcomed. With so much past strife on their conscience, the Germans are now proud of the part they believe themselves to be playing in bringing western Europe together, and particularly of their role as mediator between the two leading western European powers, each of which is touchily trying to adjust itself to reduced circumstances.

Herr Erhard, the federal minister of economics, has been advocating all along that Britain and its partners in the European Free Trade Association should not be excluded from the economic arrangements of the Six. So has the influential Federation of German Industries, and so have the leading trade unionists and party politicians. The bankers see interesting possibilities for all concerned. It is Germany, in company with Holland, that has been tactfully applying the brake at recent common market planning conferences, chiefly in order to give Britain time to think. The amount of impatience that has been shown at British hesitations is surprisingly small. The cruder manifestations of isolationism expressed in the House of Commons and the British press have been politely ignored. Indeed, German commentators have explained with a good deal of imaginative sympathy how peculiarly revolutionary and painful to most Britons the idea of diminished sovereignty is. Herr von Brentano, the foreign minister, was unquestionably sincere when he said that Germany would do as much as possible to ease Britain's thorny approach—and pricking conscience.

Naturally, self-interest is a substantial factor in these considerations. Britain is a major customer of Germany, just as Germany is of Britain. In recent years the Federal Republic has been exporting more to Britain and to the countries of the European Free Trade Association than it has to its common market partners. Germany has much to gain from preventing the rise of Efta's tariff walls, and most German business men reckon that in the long run they will profit from a general loosening of the Commonwealth's present economic ties. The farmers like to think that Britain would be a capacious new absorber of the common market's agricultural produce.

Material considerations apart, most Germans see in the prospect of British collaboration a steadying and an enrichment of western European political life. Because of their unhappy political past, and because their own country is divided by the border beyond which the communist system orders society all the way to the Pacific, they are convinced that west Europeans must concert much of their activities if they want to preserve a relatively unregimented way of living.

It would be unnatural if in all this there were no misgivings. The farmers, already disturbed by French, Italian and Dutch competition, see an additional danger in the Commonwealth countries looking for new markets. The German chemical industry, except for the fertiliser branch, sees in Britain a formidable rival. But it is on the political sector that doubts are strongest. Many of the "Little Europeans," and even some others, suspect that a Britain apparently so reluctant to part with accustomed sovereign rights might try to obstruct the process of the political integration which is the ultimate goal.

How to be European

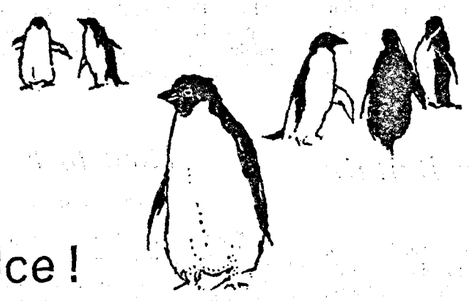
FROM A SPECIAL CORRESPONDENT

MR MACMILLAN'S proposal to join the Six, said *Le Monde* on Tuesday, was proof that tenacity pays. It was referring to the tenacity of the Six, not to Mr Macmillan's own. Whether "tenacity" will be the dominating French attitude in the forthcoming negotiations for British membership of the common market remains to be seen. The French government's attitude has moved a long way from the time when it felt that the central British purpose was to sow discord in Europe ; French addiction to logic does not always make Frenchmen unreasonable. But the French know their partners will back them in resisting British requests for "special arrangements" that would destroy a principle, or an obligation, of the treaty of Rome.

The Six, and not only France, will start with a position that again has been well expressed by *Le Monde*:

> It is a question simply of making sure that the big Europe of tomorrow is no less European than the Little Europe of today.

To be "European," in the eyes of the Six, is to make changes and almost inevitably to make sacrifices. It is to find a method of agreement rather than to stonewall. It is to thrust constantly, annoyingly, from a common European centre into all sorts of dark corners of national life. The Six do not know themselves whether they can become as "European" as their treaty says they should. The devilish problem of agriculture strikes dismay into the hardiest of them. But the last thing they are likely to do is to try to escape from the various obligations of the treaty by using the British application as an excuse.



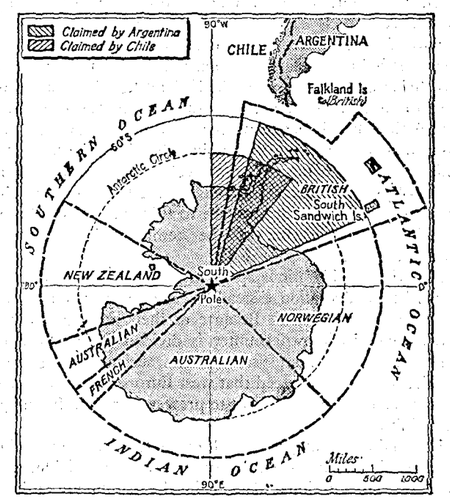
All of this was an unstated background to the undoubtedly friendly atmosphere of Tuesday's meeting of the Western European Union foreign ministers here. The British were pleased both by the warmth of the welcome Mr Heath's statement received and by the acknowledgement by most of the ministers of the value of the Commonwealth. Not only was it agreed that negotiations should be conducted in a spirit of "reciprocal good will." There was a widespread wish for speed.

For the French, M. Couve de Murville emphasised that his welcome to Britain was as warm as anyone else's. But the problem in the negotiations, he explained, would be to preserve the delicate balance of interests achieved by the Six while fitting Britain, the major newcomer, into the system.

That, Mr Heath agreed, was indeed the central difficulty. The formal British application to the common market was not actually presented at the WEU meeting. That will be done next week, when Parliament has approved the Government's resolution. But Mr Heath did reaffirm his Government's willingness to join the two sister communities, Euratom and the Coal and Steel Community, and this, too, the Six welcomed.

The meeting confirmed M. Spaak's prediction last week to Lord Home and Mr Heath, that Britain could expect a good reception from the Six. But they remain deeply anxious that the islanders shall come in, if at all, wholeheartedly. Perhaps most credit for persuading the more devoted "Europeans" to set aside their doubts about the British should go to Mr Khrushchev.

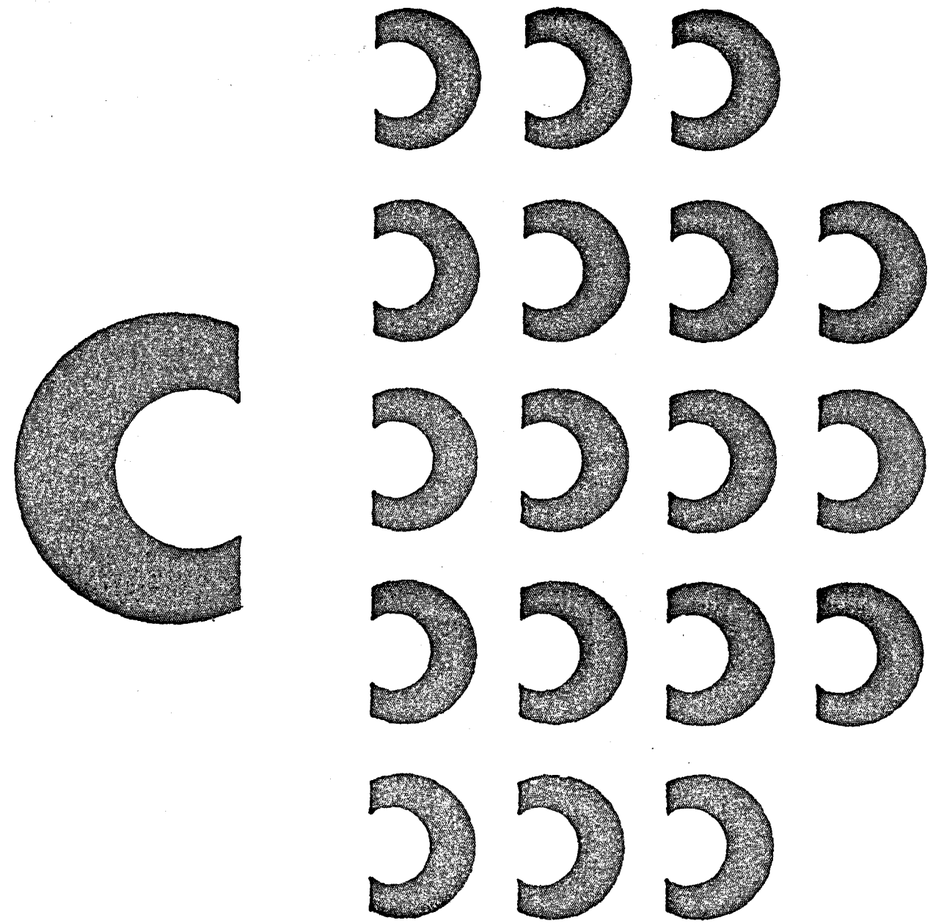
Keep off the Ice!



A CONTINENT wholly demilitarised and open to unlimited inspection: this is not Utopia, but Antarctica as proposed by the Antarctic Treaty, to which twelve governments have subscribed. There, at the bottom of the world, an ice-locked, blizzard-wracked region, bigger by a half than Europe, has been marked as a peace reserve. Peace for scientists and explorers, peace for penguins, the only permanent residents; no military bases or stores, no rocket launching sites and no nuclear explosions are to sully its unplumbed whiteness. The treaty is impressive not so much for what it says (after all, if there have got to be explosions, why should penguins be better protected than fishermen in the Pacific, or bedouin in the Sahara?) but for what it is: the first truly self-denying ordinance to be signed by, among others, all the nuclear powers.

This peace in a solitude was not made in a day. It grew from the teamwork of the International Geophysical Year (1957, 1958), when the seven countries with claims to Antarctic territory—Australia, Britain, France, New Zealand, Norway, Argentina, Chile—welcomed five others—the United States, Russia, Belgium, Japan, South Africa—in a joint scientific adventure. From their well-concerted efforts two political conclusions emerged. The first was that when man fights the elements international co-operation is something well worth preserving; the second, that Russia's debut into the Antarctic circle had made the time ripe for deciding just what Antarctica is for. So the twelve governments got together and agreed that, though some have their quarrels about territorial claims, Antarctica is not for war. This quite remarkable agreement was enshrined in the Antarctic Treaty signed in 1959.

Under its terms the twelve nations not only themselves forswear warmongery but will try to stop other countries from warlike acts. Their peace club is open to all. Their system for inspection seems simple. Any one of them may name its observers who are then free to pry, wherever they like, into base buildings, aircraft or ships. The treaty lasts thirty years. During that period scientific exploration is to be as co-operative as possible, and claims to territory will be frozen. This freezing of claims was the slipperiest slope that the treaty powers had to negotiate and the last is not heard of it yet.



The claims to Antarctica might be likened to those in Jerusalem's Holy Places. Some overlap. There is no concordat of view. Nor does the action of freezing them altogether simplify the problem. As everyone knows in Jerusalem, it is a ticklish business to administer a *status quo*.

IN Antarctica the straightforward claims of Australia, Britain, France, New Zealand and Norway have been partly connected with discovery and partly with the whaling industry. They are marked out like slices of cake and are more or less mutually respected. Argentina and Chile, on the other hand, make claims across the British ration that are based on the doctrine of "continuity." They see the Graham Land peninsula and wide areas beneath it as a natural physical extension of their South American mainland. Since this tip of Antarctica is separated from South America's toe by only 700 miles of ocean, the South American claimants are naturally more sensitive about what goes on just below them than are nations farther away. Whilst the British Government has always rejected their claims, those of Britain itself and the four other stake-in countries are recognised neither by the United States nor by Russia. Both powers reserve the right to range freely over Antarctica, and regard these little essays in sovereignty as being now out of place. Nor is this unreasonable reasoning, since for all scientific purposes the IGY share-out prevails. Argentina still cheerfully runs its station in the area disputed with Britain; the Russians keep up theirs in Australia's hospitable sector; and the United States remains the king-pin, bestriding the South Pole.

In Canberra last month the treaty powers met in conference—the first to be held since all had ratified their treaty, Argentina and Chile, the laggards, having acquiesced finally in June. Nearly all the sessions were secret, and a short final communiqué issued on July 24th referred mainly to scientific collaboration. This appears to advance very favourably. The more controversial questions of how to administer the treaty will need more prolonged discussion and must crop up again at the next consultative meeting—to be held in Buenos Aires.

There are several schools of thought among the governments. These range from the British fancy for firm administrative machinery—with a bias towards internationalisation—to the Latin American preference for easy-come, easy-go methods that could prejudice nobody's claims. There is much to be said for not knotting red tape in a hurry round the "gentlemen's agreements" that have so far worked so amicably. Yet nobody can be quite sure what future pitfalls need to be guarded against. Could the unexplored continent uncover mineral deposits that might later be a cause of friction? Or could the Antarctic treaty ever be held as a precedent for controlling—or failing to control—the military use of outer space? These questions seem rather remote. But one can never be perfectly sure about empty spaces.

Cape Communicative Cape have plenty to say about insulation, friction and fire protection materials—and they are ready to say it to anyone who will listen. Many of the country's largest industrial undertakings have listened critically—and acted. The result is that Cape asbestos and rock wool products are—equally at home in a nuclear power station or in a new office block, in the brake drum of a bus or in a ship's engine room, in a refrigerating plant or in an oil refinery. And every new day of experience and progress provides Cape with even more to communicate.

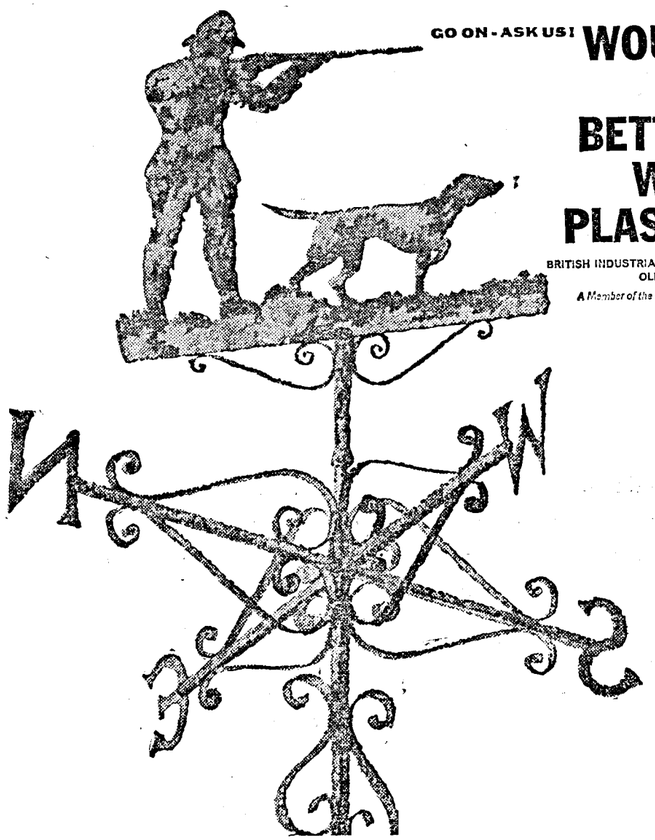
BRITISH INDUSTRIAL PLASTICS LIMITED



Would it have been better in plastics?

Squeaky old thing. Gets stuck at SSW. Now with the latest plastics it wouldn't have gone rusty, would have shifted with the breeze, and you couldn't have told the difference. But who cares about old weathervanes?

What you *do* care about is your product. No manufacturer can sit back and say: "Couldn't be bettered, dear boy." And one way to better your product may be to turn to plastics.

At BIP we are all set to tell you about plastics. We've been in the industry from the beginning, so we have plenty of ideas for using plastics to make new products and improve existing ones. Plastics on their own, or moulded with metal inserts; and plastic resins giving strength to wood, wet-strength to paper, waterproofing textiles—even insect-proofing snake-pits! Almost anything can be improved with plastics.

Yours is the first step—ask us what BIP can do for *your* product. British Industrial Plastics offers a confidential Advisory Service which will tackle any new idea. And because we know what plastics can be expected to do (we process the raw material, we build press and tool plant and make our own range of moulded products) we also give a technical Product Design Service, working on our own (without fee) or in conjunction with your designers.

GO ON - ASK US!

WOULD IT BE BETTER WITH PLASTICS?

Check for Neutralists

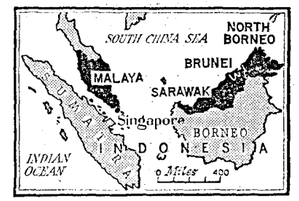
FROM A CORRESPONDENT IN TEHERAN

PERSIA'S relations with Russia are never easy, but few people expected them to reach their present low level so soon after Dr Ali Amini became the Shah's chief minister. Because he came to office as an avowed reformer, there were some who hoped, and some who feared, that he would prove to be a neutralist as well. In fact he has rejected neutralism more firmly than many of his predecessors and, three months after he formed his government, *Russo-Persian relations have reached their lowest pitch* since the Americans squashed the Persian attempt to negotiate a non-aggression pact with Moscow in the spring of 1959.

The immediate occasion for the present ill-feeling has been the increased virulence of communist broadcasts to Persia in the last few weeks. In the days before the abortive demonstration called by the opposition National Front on July 21st to commemorate Dr Mossadeq's return to power in 1952, these broadcasts were urging the Persians not merely to support the National Front, but to strike, and even to revolt, against the government. And the appeals were coming from Moscow Radio itself as well as from the clandestine "free Persian" stations in the Caucasus and in east Germany. Dr Amini had good grounds for instructing his foreign minister, Dr Hussein Ghods Nakhaie, to protest strongly to the Russian ambassador about Soviet meddling in Persian internal affairs. The Persian ambassador in Moscow came home "for consultations" shortly before July 21st, announcing that he was in no hurry to return.

This sharp drop in the temperature between Teheran and Moscow has frightened a few normally imperturbable Persians and surprised a number more. The tradition of neutrality between East and West—or rather, in Persia, between north and south—dies hard. It is only since the second world war that Persia has been totally committed to one side. Russian is still widely spoken as a second language in the north, and the Anglo-Russian convention of 1907, dividing Persia into southern and northern spheres of influence, merely formalised a historical balance of power. There are still many Persians who hanker after its restoration, and accuse the United States—who now takes Britain's place—of forcing Persia into unnecessary military spending. To them, Persia's membership of the Central Treaty Organisation is a threat to, rather than a safeguard of, its security.

These ideas are mostly entertained by members of the National Front. They make a fertile seedbed for Russian propaganda, ably helped by the outlawed, but active, Tudeh party. But the front is far from solidly neutral—or, indeed, solidly anything, except discontented, being largely a conglomeration of the outs against the ins. Its presumptive leader, Dr Aliyah Saleh, who was in hospital throughout the fuss over the July 21st affair, would probably try to keep Persia in Cento if he ever secured office. Only the Tudeh would go the whole hog for a pro-Russian policy; and before their ideas prevailed the Persian army might have threatened, or staged, a right-wing coup; and then Dr Saleh and half the rest of the front would break openly with the Tudeh as, eventually, even Dr Mossadeq had to do in 1953.



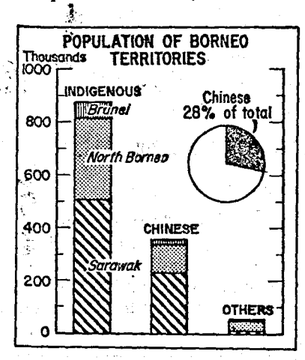
Aware of these divisions in the National Front, the Russians might have been wise to be more careful in their recent efforts to get Dr Amini overthrown. Instead, by openly intervening in what are supposed to be domestic Persian politics, they gave Dr Amini the chance to crack down on his opponents on grounds that only a few of them could contest with conviction. The result must have been reassuring to the prime minister. Surprisingly little outcry attended the arrest of several of the National Front leaders before the demonstrations, and the protest to the Russians has been fairly widely approved. At the same time, by using the army to help him to suppress "communist-inspired" manifestations, Dr Amini has improved his personal standing with the senior officers, who are now ready to forgive him for some tactless pursuit of corruption in the army a few weeks ago.

Above all, Dr Amini has strengthened his appearance of decisiveness. By acting in the face of opposition, he has given both the Russians and the National Front a sharp knock. Now, however, if he is to maintain his authority, he must act quickly on the urgent domestic reforms he has promised, or risk the early rejuvenation of his opponents, while being written off himself as yet another American man of straw. This will be more difficult, not only because of the intrinsic awkwardness of domestic reform, but also because the more successful he is, the more likely he is to annoy the Russians and the worse his relations with Moscow may become. Few things irritate the Soviet Union more than the sight of reform without revolution; and as it is in precisely this role of the non-revolutionary reformer that Dr Amini has chosen to appear he must expect from now on short shrift from Moscow.

Towards a Greater Malaysia

FROM A CORRESPONDENT

IT was announced last week that Singapore had agreed to take part in discussions on the proposal for an eventual political association between Malaya, Singapore and the three territories of North Borneo, Brunei and Sarawak that the Malayan prime minister, Tunku Abdul Rahman, had proposed on May 27th. Before the Tunku's speech the Malayan Federation had taken the line that it could not consider union with Singapore because the large Chinese population of Singapore would upset the Federation's racial balance. It had also been felt that the loyalty of many Singapore Chinese was to China rather than to the Federation, although there are signs, including a steady and substantial decrease in money remittances to China, that this may be changing.



Early last month the Tunku visited the Borneo territories, where he found mixed reactions to his "Greater Malaysia" plan. In the Federation itself, the reaction of the Malays will largely depend on whether the Borneo populations can hold the balance between Singapore and the Federation. In the Federation there are 3.5 million Malaysians (50 per cent), 2.6 million Chinese (37 per cent) and 900,000 others (13 per cent). In Singapore there are 1.3 million Chinese (75 per cent), 230,000 Malaysians (14 per cent) and 180,000 others (11 per cent). In the two territories combined the Chinese outnumber the Malaysians by rather over 100,000. In the three Borneo territories there is a clear majority of indigenous peoples, but only about one-sixth of the total population are Malays (that is to say people who speak the Malay language and profess the Muslim religion). The rest of the indigenous peoples are of differing ethnic and linguistic groups—Christian, pagan and Muslim. They have the same economic interests as the Malays of the Federation. But, unlike the Malays, those who are not Muslim intermarry widely with the Chinese.

Of the indigenous population of 876,000, about one quarter are Malays in the sense used in the Federation of Malaya, and well under half are Muslims. In a union of the five territories the Chinese would comprise the biggest group, 42 per cent of the total; the Malays would be in a weaker position than they are now in Malaya, unless they could rely on the votes of the non-Muslim

indigenous peoples of Borneo. For this reason, apart from other equally compelling considerations, a union with a common voting roll would be politically unacceptable.

In Malaya the central government is tending to absorb more power from the eleven states, and that process of centralisation is certain to continue. For reasons of distance and circumstance, as well as of sentiment, it would be impossible for Kuala Lumpur departments to control events in North Borneo, a thousand miles away. Thus from every viewpoint one must reject as impracticable a single federation of Malaysia that would absorb Singapore, Sarawak, Brunei and North Borneo as the twelfth, thirteenth, fourteenth and fifteenth states of the present Federation.

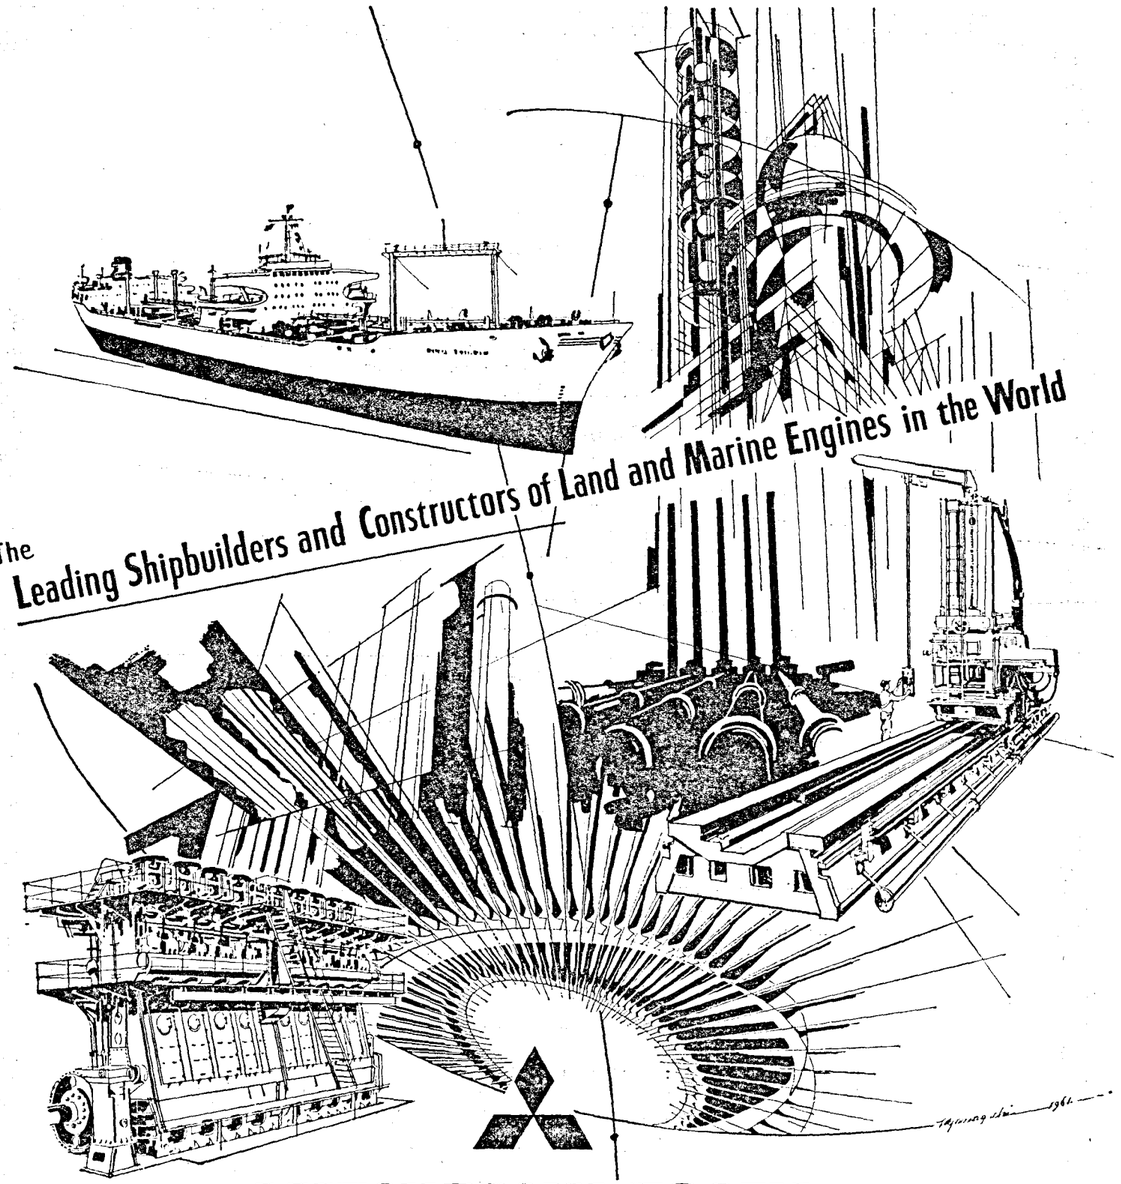
A confederation of three states does, however, have attractions and possibilities. If (as discussed in *The Economist* of April 1, 1961) there could be formed in the near future a single state of Borneo, it would be well placed to hold a balance between Singapore and Malaya. Malaya and Borneo between them would have the final say on foreign affairs, including immigration policy, which is what matters most to them. Singapore would have a currency and trading area of sufficient potentiality to ensure economic growth and full employment, and could continue to pursue the different internal policies that are suited to its cosmopolitan urban structure.

The Tunku's initiative would also reduce by three the number of small dependent Commonwealth territories whose future has been exercising the minds of Commonwealth prime ministers as well as of their own people. The fact that Sarawak and North Borneo still have a crown colony form of government need not prevent the early establishment of permanent consultative machinery, the steady whittling away of unnecessary barriers, and a clear declaration of objectives before the next Singapore constitutional review in 1963. And if the Tunku's proposal is seriously taken up, a more urgent Commonwealth effort to help the Dyaks and others of Borneo to catch up with their future partners would clearly become as important to Malaya and Singapore as it is to the peoples of Borneo themselves.

Uganda's Economic Challenge

FROM OUR CORRESPONDENT IN KAMPALA

UGANDA faces difficult economic, as well as political problems. When the bowlers send up as many political googlies as they do in Uganda, it is hard for government batsmen to keep their eyes steadily on the economic ball. But the report of the World Bank's economic survey mission, now in draft and due for publication in about two months' time, deserves as serious attention as the constitutional conference which is also arranged for September.



On July 6th the country's financial difficulties were underlined by the announcement that Britain would lend Uganda £3 million to finance the 1961-62 capital budget. World commodity prices for the country's two major exports—cotton and coffee—have declined from the record levels of 1945-55. Adverse terms of trade have almost wiped out the effects of increased production: the gross domestic product increased by only one per cent in 1960. The national income of the country depends essentially on its two big cash crops and on government investment. Prospects are not bright in either of these directions, and the national income will not rise unless a sound development plan is adopted soon.

The most helpful thing that the World Bank experts can do is to classify the priorities for economic development. It is becoming increasingly plain that the great need is for more attention to be paid to agriculture. In the past there has been a tendency to allow much precious capital to go elsewhere, and in the future independent Uganda the government will no doubt be strongly tempted to find capital first for showy industrial investment. A member of the legislative council recently pointed out that over the past fifteen years about £15 million has gone into agriculture, whereas £32 million has been put into the Uganda Electricity Board, and about £2 million into the Nyanza textile industry (which employs 1,500 workers as against around 5 million in agriculture).

The Owen Falls hydro-electric scheme was planned on a much too ambitious scale because of fanciful plans for founding large-scale industries nearby. Clustered round the dam at Jinja are a textile mill, a copper smelter and a brewery; and a scrap-iron plant is being built. This hardly amounts to the lesser Chicago on the Nile that was once envisaged, and in this its seventh year of operation, the productive capacity of the Owen Falls dam is considerably greater than the demand for electricity—even without the installation of more generating equipment for which room has been allowed. The demand for electric power from industries close by the dam has proved so disappointing that the electricity board is having to take electric power to the more remote parts of Uganda; in May it borrowed £3 million from the World Bank and £2.5 million from the British Government in order to extend its distribution network.

MEANWHILE, the chairman of the Uganda Development Corporation estimates that for every cultivated acre in Uganda there are six acres untouched. This gives some idea of the potential for investment in agriculture. Of course, there are many difficulties to be overcome, ranging from physical factors, such as tsetse fly infestation and soil erosion, to the barriers to progress presented by customary land tenure and the slow adaptation of the African peasantry to a cash economy. Nevertheless, ways must be found to improve the productive capacity of agriculture, since this is Uganda's real wealth. Crops could be diversified and the land put to better use. Improved rural credit schemes would help. To some extent other things, like investment in transport and processing, would follow from any attempt to increase agricultural production; but the development of agriculture itself is basic.

The government's budgetary position, as well as the country's general prosperity, depends directly on increasing agricultural production. Export taxes are a main source of revenue; they are estimated to bring in £2.4 million out of a total recurrent revenue of £16.6 million in 1961-62. They are especially important because in Uganda there is no African income tax, and the African poll tax, paid to the central government, produces under £500,000, compared with rather more than the £3.5 million produced by direct taxes on non-Africans. Unless there is a radical change in the tax system, which seems unlikely before independence, export taxes on cotton and coffee will continue to be a vital source of revenue. The budget may be reckoned, on present indications, to amount to roughly £20 million in the next few years. Yet demands for government spending seem to increase daily. To take only one example, Mr J. C. Kiwanuka, minister of education, would like £6 million for building schools in the next two years: "Put us in touch with those who have kind hearts and deep pockets," he said at the Unesco conference on education in Africa at Addis Ababa in May. Similarly, the chief minister, Mr Benedicto Kiwanuka, declared on May 23rd, "My education programme alone calls for overseas help. . . . Unless we get it, it appears to us that there is very little hope for the future of Uganda." But even if generous overseas aid were to be forthcoming, Uganda would still be faced with a formidable economic challenge.

Merchant and Investment Bankers

We have a century-and-a-half of experience behind us in the City of London, and amongst our clients are some of the largest and most progressive companies in the country. Besides providing acceptance credit and other specialised banking facilities, we can also offer our services in the following fields:

Company Finance

Loan and Share Capital Issues, mergers, acquisitions, capital reorganisations, the conversion of private into public companies — these are some of the operations we undertake. In all such matters an important factor for success can be the skill and standing of the "House" behind you.

International Banking

Successive generations of our partners and principals have built up close personal friendships with bankers and industrialists in many countries abroad. In New York we have unique advantages through our affiliation with the J. Henry Schroder Banking Corporation. We have too our own offices in Europe and in Rio de Janeiro and Buenos Aires and associated companies in Australia and Canada.

Investment Management

We are well placed to assess developing trends in industry and commerce. We also keep in daily contact with the main Stock Exchanges and with leading institutional investors. Our organisation is thus a clearing house of information and opinion on which we can draw to aid us in the management of our many investment portfolios, which include Investment Trusts, Pension and Endowment Funds. These can be managed either under a specific arrangement or at our discretion.

J. HENRY SCHRODER & CO. LTD.

Telephone: AVEnue 4600

and

HELBERT, WAGG & CO. LTD.
41 Threadneedle Street, London E.C.2
Telephone: LONdon Wall 1722

A complete financial, banking and investment service both at home and abroad.

THE BUSINESS WORLD

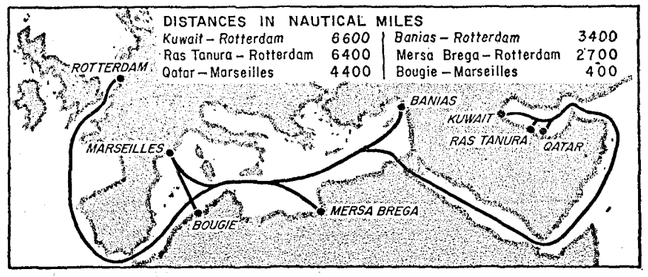
What Price Libyan Oil?

FEW prices in world commerce excite as much curiosity—indeed, as much political controversy—as the posted prices of crude oil in the world oil business. These are the prices "posted", i.e. published, mainly by producing or trading affiliates of the major international oil companies, for sales in cargo lots to all comers at the tanker terminals all round the world from which they are prepared to sell crude oil. They are also—generally—the prices at which these producing affiliates transfer crude oil to other affiliates in later stages of the business. Third, but not least important, they are the prices according to which, in the Middle East, the profits are calculated, of which host governments in producing countries draw 50 per cent in taxes, whether all the crude oil is sold at these prices or not.

In times of surplus such as the present, practically all of the oil actually sold in "arm's length" deals to independent buyers is in fact sold at discounts, varying according to the bargaining power of buyer and seller. But any move to cut posted prices towards those actually realised in such bargains automatically cuts the host government's share of profits based on postings; and comparatively small cuts made last year in the Middle East provoked the formation of the Organisation of Petroleum Exporting Countries.

How, in practice, are these politically emotive prices set—and how should those in one part of the world be related to those in another? Logically, the price of any crude oil should bear some relation to the price at which its dominant customer could secure alternative supplies from other sources; and it ought to bear some relation to the value of the saleable oil products that he proposes to refine out of the crude. But refined products can be traded around the world too; so there remains some relation between the prices of different petroleum products throughout the world.

Some of these contrary factors, and the effects they can have on posting a price for a given crude, will be observable shortly in the price posted for oil from Libya, the next major source of oil supply to enter the world oil business. For once, the outside observer can consider the factors just before the price is set; and consider, perhaps, "What should J. do?"



DURING this month crude oil from the Zelten oilfield in Libya will begin to flow into the 100-mile pipeline to Mersa el Brega on the Gulf of Sirte, and by September, with the pipeline and terminal facilities there fully "charged up," Esso International, trading affiliate of Standard Oil of New Jersey, will begin to sell Libyan oil to Jersey's refining affiliates around Europe. This will be the first direct commercial reward of oil searches in Libya that began in 1955 and first struck it rich with Jersey's famous "Zelten Number One" in 1959; an exploration effort that began five years after the French recommenced exploration in the Sahara after the war, and will be coming to fruition within two years of the first shipments of Hassi Messaoud oil from Bône in Algeria. Libyan oil, moreover, has a special significance for the world oil market which the developers of Saharan oil were able initially to avoid. It will be the first crude oil from North Africa to compete on wholly commercial terms in what is currently a very soft world market for oil.

The first price for North African crude oil was posted by the French in 1958; it has since been revised. But since the French government is in a position to compel all refiners in France to take oil from its partly-nationalised Saharan industry, the price it quotes for this oil need bear no real relation to the amount that its main customers have to take. It required *force majeure* of this kind to get prices for North African oil that are not far out of line with what European customers have to pay for the crude oil which they actually choose to buy from other areas. For this African oil, geographically so well-placed that in logic it must penetrate the markets of Europe, is physically unsuited to the needs of those markets.

Libyan and Saharan crudes differ somewhat in composition: but in general it can be said that refining yields from these North African crudes would be almost perfectly suited to the product demand of the North-East United States, and by the same token quite unsuited to the product demand of Western Europe. In Table I the straight distillation yields from Libyan and Saharan crudes are compared first, with the present patterns of demand for the United States and Western Europe and second, with the demand patterns that some experts expect in Europe by the time that these crude oils will be coming in much larger quantities. The French were exporting about 350,000 barrels a day of Saharan crude before Tunisia turned the tap off roughly half of it, and say they will be able to export 500,000-600,000 barrels a day by 1965. Jersey and Oasis, the other group prepared to export Libyan oil next year, expect to move 165,000 b/d during 1962, and twice

that in 1963; they reckon to export some 850,000 b/d by 1967. (The pipeline already completed from Zelten has had a capacity of 160,000 b/d on gravity flow; pumping power might treble that.)

The high yields of gasoline and low yields of fuel oil available from North African oil would make it hard for any European refinery to consider taking say Zelten crude as its single feedstock. Technically, refinery engineers are accustomed to make more gasoline and better gasoline from any given crude oil than it yields by straight distillation; but they do not normally try to make more residual fuel oil out of a given crude because this product is low in value. One way to take part of a European refinery's feedstock in such light crude would be to balance it with an offsetting amount of heavier crude than the plant used before, providing this were available. But this basic incompatibility with what the market wants is not the only problem for the refiner in Libyan crude, in particular. It is a very waxy crude oil, with twice as much wax in it as Arabian crude; and as few refiners are interested in producing wax, this simply means difficulty in "pour point" (i.e., the temperature below which its heavier fractions will fail to flow through pipes). It would add something to costs to reduce this viscosity. The crude would give a good yield of "middle distillates" such as diesel oil, which are at present in strong demand in Europe; and it would also be a good one for making lubricating oil, though the capital equipment for this is costly and demand for it is not rising very strongly. Libyan and Saharan oils are very low in sulphur content, which is a desirable property: but since neither is likely to be used as the total feedstock for any refinery, and all refineries in Europe are from now on certain to be equipped with plant to de-sulphurise the relatively sour Middle East crudes, the refiner is unlikely to be able to take maximum advantage of this virtue.

Deals and Discounts

IT is when one comes to translate geographical advantages and physical disadvantages into a price for Libyan oil that one collides with the traditional price structures of the international oil market. The prices published for petroleum products all around the world—mainly by affiliates of the major international oil companies—still generally tend to relate prices of the different products much on the lines of those posted at export refineries in the Caribbean; and these in turn still to some degree reflect the pattern of product demand reigning in the largest single market (and producing area) of the world, the United States. In particular, oil marketers the world over publish much higher prices for gasoline than for other products from the barrel of crude, and gasoline is expected to supply a disproportionate share of the "refiner's margin." And this higher value for gasoline throughout the world is reflected in a premium for those lighter crudes that yield larger proportions of gasoline—usually though not invariably all around the world where crude prices are posted, of two cents a barrel for every extra degree API*.

TABLE I.—SAHARAN AND LIBYAN OIL YIELDS, COMPARED WITH FORECAST EUROPEAN PRODUCT DEMAND

	Distillation Yields		Forecast Pattern of European Demand
	Hassi Messaoud	Zelten	1967
	Per cent. of Refining Output		
Motor gasolines.....	36	25	17
Distillate	42	39	28
Fuel Oil	22	37	44
Lube oil and other...	...	...	11

The value of geographical advantage to any crude oil producing area depends considerably on the freight rates one applies in making comparisons of transport cost and posted price with more distant sources of supply. In setting a price for Saharan oil, the French semi-nationalised companies used a complex formula that took full credit for the high gasoline yield of their crude according to this tradition. At present, they have posted a price of $2.65 a barrel for crude of "40 degrees API and above" fob Bougie in Algeria. The facts that the elements involved in building up such a price—Middle East posted price, gravity differential, or averaged freight rates—were all somewhat unrealistic did not worry the French unduly (though it might worry them later if they ever have to pay this posted price, or half the profits on it, to any government of "independent Algeria"). It is fair to note that they give these involuntary customers, the owners of refineries in France, a discount of 15 cents a barrel off the posted price of $2.65. But they probably have to give fully independent buyers far larger discounts than that to induce them to take Saharan crude.

Companies bringing Libyan oil into production for sale on commercial terms will not be able to afford to ignore realism in setting their prices. Nor will they be able to ignore the crudest comparisons with nearby "arm's length" deals—those of prospective customers in Italy who can land Russian crude *at around $1.50 a barrel.* So far, no prospective Libyan producer has posted a price, or indeed publicly said anything about one. Ohio Oil Company, one of the three partner companies in Oasis, which has discovered oil somewhat to the south of Jersey's Zelten field, has made a complex deal with Spanish governmental companies that involves the building of a local refinery to process some Libyan crude, as well as other unpublished clauses. It has not said what price it reckons this deal will imply for its Libyan oil: some of its rivals reckon that as closely as they can figure it the deal would "net back" to an fob price, when the crude begins to move next year, of roughly $1.80 a barrel. Continental Oil, another Oasis partner, is also rumoured to have made deals with Deutsch Erdöl for the eventual supply of Libyan crude, but the prices have not been disclosed.

* Gravity, in American Petroleum Institute degrees = 141.5 divided by the specific gravity, minus 131.5.

Such prices, arising in particular deals by companies short of market outlets in this hemisphere, are much lower than an established marketer such as Jersey, or perhaps even the Oasis partners themselves, might care to post for sales to all comers. Nor would such prices bring much joy to the Libyan government. But the facts remain. Discounts of, say, 15 cents a barrel on heavy and 30 cents a barrel on light crude are now regularly available to most independent buyers in the Middle East (largely, indeed, wiping out the traditional gravity differentials) and at today's prices there would appear to be some discounting of Middle East crude prices to refining affiliates of the certain international groups in parts of Western Europe. Spot freights are well below the "averaged freight rated assessments" of one kind and another that major groups employ for pricing purposes. And the differential for high gasoline yield still current in posted prices for crude everywhere puts a premium on just the qualities that prospective customers for North African crude do not want. Jersey Standard's general hankering for "realism" in international oil prices over the last twelve months has not been popular with the rest of the industry or with oil-producing governments. When it comes to post the first price for crude from this new source, will it lean towards realism, at the expense of tradition—and if so, with what repercussions?

Realistic Prices and Profits

THE range between posting a price for Libyan crude according, within the tradition, with the posted prices of Middle East crudes or going for utter realism is a pretty wide one. The Jersey group may well be chary, in "building up" its Libyan price from comparisons with oil prices elsewhere, of beginning with anything lower than posted prices in the Persian Gulf, even though discounts are granted on these in virtually all "arm's length deals" nowadays. On the other hand there would not be the same political delicacy in being more realistic about tanker freights than is usual. And Esso may well, for Libyan oil, be prepared to post a price for "crude as crude," ignoring gravity differences. It did so once before, in the Eastern Mediterranean, with Arabian oil, but later withdrew this posting. The group certainly seems doubtful whether there is any sense in this case in the traditional "two cents extra per degree API higher"—though Continental Oil, another supplier from Libya, would argue that, in terms of sulphur and gravity, Libyan oil "might have as much as 15-30 cents a barrel of advantage over Kuwait."

What kind of price comparisons would these approaches imply? If one were to take the price of some "reference crude," say Arabian or Kuwait in the Persian Gulf or in the Eastern Mediterranean; to ignore any credit for gravity at all; and for one's freight rates to take a current ruling rate for a term charter, say Scale No 3 minus 50 per cent, one would come somewhere in between the Saharan price and the sharply discounted prices that have been reported for particular deals with Libyan oil. Table II sets out some approximate figuring on this basis. It will be seen that ignoring gravity differentials, one might arrive at fob prices for Libya in the range of, say, $2 to $2.20 a barrel. If one should take Continental's line and expect to get 15-30 cents over a price related to Kuwait, this would push the price range up 10 cents—to $2.30 a barrel. It may be noted that Jersey is the largest oil group in the world, which will be moving its oil for sale mainly to affiliates and partly in its own tankers: Continental is a large American company but a relative newcomer to the international market, now edging its way into European marketing, particularly into the service station market. Jersey thus has considerable flexibility to play with between its prices fob Libya and its cif prices delivered in Europe, or its ex-refinery prices for products; but it is unlikely to want to set any fob price in Libya that it might later have to discount to affiliates. Continental, on the other hand, in its own marketing, might be relatively more interested in gasoline and less in the whole spread of products: and it may in any case have to envisage selling much more of its Libyan crude initially at discounts to independents.

ONE element that affects the discounting of posted prices in the Middle East is absent in this new area. Libya (like Venezuela) is "on realisations," which means that its 50 per cent share of profits is based on what companies actually get for their oil, not on whatever profits would be shown at posted price regardless of what is actually paid. Libya has been unusual, too, in that it originally gave the earliest bidders for oil concessions tax allowances for depletion of the oil that they take out, before computing their liability for income tax. Depletion allowances—a kind of depreciation

TABLE II.—POSSIBLE "BUILD UP" OF PRICES FOR NORTH AFRICAN CRUDE AS COMPARED WITH PERSIAN GULF CRUDES, 1960 AND 1961

($ per barrel)

At Posted Price in Gulf, Term charter freight rate (Scale No. 3–50%), ignoring gravity differential:*

Arabian crude ex Ras Tanura		Freight, Persian Gulf—Rotterdam		Cif Price Rotterdam		Freight Rotterdam from Mersa el Brega		Libyan crude fob Mersa el Brega
$1·80	plus	$0·57	=	$2·37	less	$0·23		$2·14
ex Sidon		Sidon-Rotterdam						
$2·17	plus	$0·26	=	$2·43	less	$0·23		$2·20
Kuwait crude ex Mina al Ahmadi		Ahmadi—Rotterdam						
$1·59	plus	$0·59	=	$2·18	less	$0·23		$1·95

(*N.B.—Discounts 15–30 cents a barrel, generally available Persian Gulf, left out of above calculations.)

allowance for the exhaustion of oil reserves in a company's workings—are unfamiliar in Britain, though an important fact of life in any oil company owned by Americans. Their significance in this Libyan context would be to make the Libyan half-share in profits amount to less than 50 per cent of profits calculated on the basis before depletion that is used for Middle East oil taxes. But the Libyan government did not grant this allowance to more recent concessionnaires and has abolished it in the revised petroleum law that it recently published. In considering the government's share as one factor in setting the price of Libyan oil, it might be politic to consider this both with and without depletion. Libya began as an eager and hospitable host to the Western oil companies, as it was wise to be in trying to attract risk capital for oil exploration over the last few years. Now that the oil is found, the companies will probably be anxious that its moderation should not bring it rewards markedly and obviously below those of any other Arab government. And it is also worth noting that while Jersey has not promised the Libyan government prior consultation in setting its prices—no major

oil company is willing to promise any host government "consultation," an actual say, in setting prices—the group does seem likely to offer Libya a full explanation of its pricing decisions before these are published.

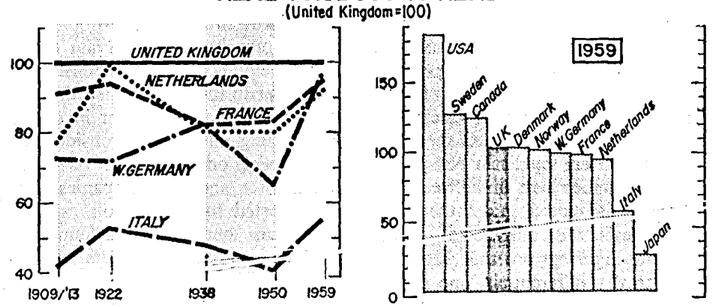
Middle East governments are conventionally reckoned to get about 70-80 cents of profit on each barrel of oil from their soil that companies sell, which at prices of $1.59 to $1.80 a barrel implies average costs per barrel of the order of 20 cents a barrel (though costs in different areas range widely). Libyan oil, in Zelten at least, exists in what one of Jersey's competitors described last week as "conditions approximating more to those of an oil tank rather than those of a normally permeable oil structure," though it is farther from the coast than some of the most prolific Middle East fields: it is said to be markedly cheaper to produce than, for example, the Hassi Messaoud oil of the Algerian Sahara. There will be a considerable initial investment to be amortised out of the proceeds once oil comes into production; but if for the sake of argument one reckoned its costs as being of the same order as the average in the Middle East, about 20 cents a barrel, there might well be quite $1.50-$2.00 of profit in prices ranging from $2.00-$2.30 a barrel. All one could hazard from such shaky calculations is that the price of Libyan oil could probably be brought down well below Saharan postings, to a basis more realistically reflecting the demand of the refiners to which most of it will probably need to be sold, before the Libyan government need do worse, in cents per barrel of shared profit, than most Middle East governments do.

These are some of the considerations that must be exercising anyone who has to decide what price should be posted for Libyan oil. It can be argued, on the other side, that Jersey will be selling this oil primarily to its own affiliated refineries around Europe, and that this will not be a price on which discounts will matter much politically; why not price this oil according to tradition, and give these affiliates discounts? One might alternatively argue that producers should exchange Libyan oil for Middle East oil that might otherwise be moving to the United States: in terms of refinery yield and relative demand for different products in the two markets, a swap might make sense but it would give away Libya's freight advantage. But Libyan offtake seems destined to grow much faster than import quotas on oil are increased for the United States: and it is always unwise for any outsider to assume that he can guess what market strategy is best for any internationally integrated company in terms of its net return after taxes in various countries.

What the outsider can perhaps conclude is that the price that Jersey chooses to post for Libyan oil could accelerate changes that are already under the surface evident in world oil prices. This would be important. Western Europe is not the only market in which posted prices that reflect at two removes the pattern of American product demand no longer make much sense, and in which discounted, necessarily realistic prices show different though still shifting patterns. When, and just how, a distinct European pattern of product prices will emerge remains to be seen. But the first posting for crude to recognise that "Europe is different" may well accelerate this overdue acceptance of change.

A Century of Growth

"I stated some time ago, in February, that I thought that an annual increase of 3 per cent in the gross national product was feasible, but only if we have a 6 per cent annual expansion of exports."



Mr Selwyn Lloyd, House of Commons, July 25, 1961.

At the bottom of a list of eleven industrial countries, Britain's national product increased in the 1950s at an average rate "per man-year" of little more than 1½ per cent. Looking back over a hundred years, a study published this week in the National Institute *Economic Review* finds that really sustained rapid growth has never occurred in Britain. "At one time or another, every country except two [out of the eleven] has grown for eight years or more at a rate faster than 3 per cent a year; one of the exceptions—Britain—reached 2.7 per cent for the eight years before 1875, and 3 per cent for six of them."

Last week, Mr Selwyn Lloyd spoke of a 3 per cent annual growth in national product as being feasible. In the years immediately ahead, because of the help expected from a growing labour force, this rate might be achieved by a rise of about 2 per cent in productivity. Even so, it looks optimistic in the light of past experience; moreover, after 1965, the labour force can be expected to grow more slowly. On the other hand, there are no obvious rules about economic growth; the main lesson from this study is that the past is not necessarily a guide to the future.

It is clear, however, that since 1950 it is the richest countries that have had the slowest growth. As a result, the levelling-up in standards of living has been considerable. The *Economic Review*, leaning on an earlier OEEC investigation, attempts the elusive comparison of the level of real product a head in different countries. The charts show that, in 1959, among the continental countries studied, only Sweden was well ahead of Britain; but only Italy was way behind.

BUSINESS NOTES

IMF

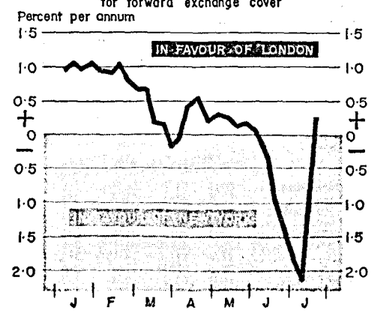
Massive Support

Details of Britain's credit from IMF were expected to be made known by the weekend, but anticipatory reports from Washington indicated that the total will be $2,000 million—split roughly 50-50 in a drawing and standby credit. These amounts are decidedly higher than many people expected: such a credit has no parallel in the Fund's previous operations. It represents 81½ per cent of the total reserves at the end of July, as disclosed on Wednesday. Part of the drawing will be used to repay a major part, though not necessarily the whole, of the credits granted by Continental central banks since the beginning of March.

The figuring here is uncertain, because the size of the credits has never been disclosed. Assuming that these approach £200 million (higher figures have been mentioned this week, but they seem open to doubt) the loss of reserves plus central bank support since the beginning of March to the end of July may have reached a total of £465 million. To calculate what the net accession of support will be from the IMF arrangements involves making assumptions about the flow of hot money and its responsiveness to interest rates. There have been signs this week of money returning in response to 7 per cent.

The credit has effectively stifled any remaining talk of immediate danger for the pound. Once again, Mr Jacobsson has recognised that the only credit operation worth mounting is a demonstrably decisive one, and he has not been deterred by the considerable complications of an operation on this scale at this time. It will be particularly interesting to see how the Fund has tackled the limitations imposed by its own shortage of Continental currencies and by the undesirability of imposing any new strains on the United States, such as would result if drawings of dollars under the credit were converted into gold.

One way of mitigating this would be for Britain to hold on to the dollars it receives and finance any running deficit by sales of gold from its reserve. Any such course would involve a breach in the traditional practice of the Exchange Account of keeping all but a small portion of the reserves in gold metal; but the credit operations of this year through which sterling has been supported themselves involved not inconsiderable departures from traditional practice, and it would not be unreasonable to ask the British financial authorities to make a departure of this kind. This mammoth IMF operation shows what impressive things the present machinery of international credit can do; but it points equally sharply to its limitations.



EXCHANGES AND RESERVES

Technically Sound

The disclosure of a fall of £114 million in Britain's gold and convertible currency reserves last month was preceded by a steady improvement in sterling from $2.78½ immediately before the Chancellor's statement, to $2.80 and parity with the dollar at one stage on Wednesday. Even the announcement itself brought only a slight easing in the rate to 2.79⅞—a marginal setback marking the effect on world opinion of 7 per cent Bank rate, the imminent IMF drawing, and the formal application to join the common market. Thursday's quiet market brought a further improvement in the spot rate to 2.79 15/16.

The reasons given for the fall, the largest for nearly ten years, were the pressure on sterling and the outflow of hot money before the Chancellor's measures were announced, and the continuing balance of payments deficit. There were also some repayments to the European Central Banks that have since March been holding sterling under the Basle agreement. Although their co-operation continued in July, no new operations to increase sterling holdings were undertaken. Possibly the Government had already decided that the effect of publishing a "true" fall in the gold reserves would be outweighed by the new economic measures and the proposed IMF drawing and that further increases in the sterling held by the central banks were unnecessary. It is possible that the United Kingdom was close to the maximum aid that the central banks felt able to provide. In any case the IMF drawing comes none too early.

"CONFIDENCE"— BACK TO NEUTRAL
The yield differential on Treasury bills between London and New York, allowing for forward exchange cover
Percent per annum

In spite of all the talk and the sharp rise in the spot rate, confidence in sterling, as the chart shows, is still no better than back to neutral. Forward rates are still high and all but wipe out the interest differential between London and New York on a covered transaction. Once these rates start to fall appreciably, confidence in sterling will really have returned and operators will be willing to leave their sterling purchases uncovered. So far, many of them remain cautiously short of pounds.

This said, however, there are signs of returning confidence and fears of devaluation have gone. On Wednesday there was a significant increase in the demand for sterling, with buying orders from the Continent and from London itself and suggestions that even the most pessimistic were beginning to cover short positions. A good deal of the demand, and the turnover has been very high, was on commercial account and it is felt the leads and lags of international trade may not now be quite so hard against the United Kingdom. The only large seller of sterling has been the Bank of England which has been replenishing dollar stocks previously dispensed in support of sterling. But this did not stop the climb in the spot rate and the Bank was probably out to sting the bears.

IN THE MARKETS

New Perspectives

In looking at both sides of the stock market in the light of the Chancellor's measures and the credit squeeze, investors have to keep one fact firmly in mind: the volume of trading is likely to remain low for some time and hence price movements, swayed by the vaguest hopes and fears, are likely to be exaggerated. The market tended to lose sight of this fact this week and allowed itself to be rather more depressed by the fall in gilt-edged prices and more impressed by the rise in equities than was perhaps justified.

The gilt-edged market's adjustment to 7 per cent Bank rate produced further falls but, as yields were already high, these were not startlingly big. Immediately after the weekend the gilt-edged market had a steadier appearance but it soon became disturbed by the possibility of sales on the passing of the trustee bill and after antici-

patory selling on Wednesday and Thursday War Loan fell to a new low of 51. The heavy fall in the reserves did nothing to help but the principal influence was a misconceived report on the attitude of the authorities if trustees sold large blocks of gilt-edged stocks. The authorities do not support the market in the sense of pegging prices at a particular level, but they are concerned to see that orderly dealings can continue at a price. The market has to find its own level. Hence heavy sales of gilt-edged stocks by trustees would be reflected in the prices at which the government broker would be prepared to buy. This does not mean, as the first reports suggested, that the market has no support; it means that it has no automatic support and that if selling develops prices may fall. Whether trustees should rush into the market to sell is a different question and one which they must decide themselves; if they are headstrong, they could depress market prices to their own disadvantage.

The Trustee Act, the strong advance in prices on Wall Street and Britain's application to join the common market have all been cited to explain the rise in equities this week. The *Financial Times* index, which dropped sharply from 316.0 to 306.5 in two days' trading before the week-end, had recovered to 314.9 by the close on Wednesday, while *The Economist* indicator, spanning the fall and subsequent recovery, lost only 4.7 points to 371.4 to give an average yield of a shade under 5 per cent. On Thursday equity prices continued to rise, so that 323.4 the *Financial Times* index was higher than it had been on the eve of the Chancellor's statement. The recovery looks to impressive, for the volume of trading was thin and the jobbers were not willing to go short of any sizeable amount of stock. They slashed prices sharply at the end of last week and marked them up almost as sharply this week. Once again, a resistance point has occurred around the 300 mark for the *Financial Times* index. On the other hand, with the credit squeeze pressing on industry and the stock market, there is no strong reason, even with the Trustee Act, for expecting the market to continue to rise at this week's pace. Many dealers would expect prices to move within fairly narrow limits for the rest of the year.

Wall Street's New Peak

A correspondent cables:

THE Dow Jones industrial average rose to a new peak of close to 715 this week before falling back slightly on Wednesday, and the expectation is for still higher prices. Wall Street, which is pleased with both the higher prices and the increase in trading volume, was also impressed with the nature of the advance, as it was led by the standard industrial issues, such as Dupont, General Motors, Dow Chemical and Union Carbide which have been comparatively neglected in recent months. A report that the Department of Justice was considering anti-trust action against American Telephone over foreign communications systems was mainly responsible for checking the rise, but it is not believed that this will damp the new enthusiasm for long. Indeed, brokers think that demand will spread from the blue chips to second-rank issues, particularly in industries which are likely to benefit from higher defence spending and the general business recovery. Thus, there has been a good demand for aircraft, motors, steels and chemicals, while some of the more ostentatious market performers—in, for example, publishing, electronics, recreation—were being snubbed.

Since President Kennedy's speech on the Berlin crisis, the market can be said to have launched its summer rally, with the Dow Jones average rising by almost five per cent in a week and many individual issues by over ten per cent. Followers of the Dow theory are not entirely convinced, however, because the railroad industry is plagued with drought in the west and a combination of severe competition and financial burdens in the east, which have already put the New Haven into bankruptcy. As a result, the investors' interest in cyclical stocks does not extend to the railroads, and the validity of the Dow theory, which is subject to various interpretations, appears questionable. Those who follow other technical guides are predicting that the rally will continue, punctuated from time to time by profit taking.

It may be significant that some institutional investors, which have in the past been adding to their holdings of foreign issues, are now buying American stocks once again. European equities are still considered attractive, but the feeling is growing that over the short run at least there may be better opportunities in Wall Street. Similarly, the prospect of increased deficit financing at a time when business is raising its sights is leading to a switch out of bonds into equities. While Washington is not showing any signs of shifting away from its easy money policy, Wall Street is taking a boom for granted and it regards the tightening of the credit brakes as inevitable. In the meantime, equities are in vogue again.

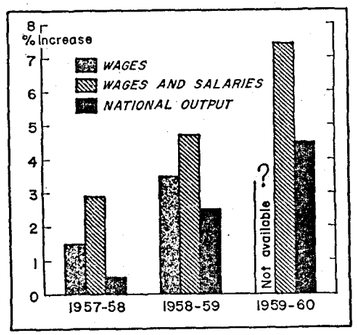
PUNDITS, BEFORE AND AFTER

Wisdom and the Chancellor

BEFORE the Chancellor announced his measures to restrain demand in the economy last week, the Council on Prices, Productivity and Incomes had recorded their views that doing some of the things he decided to do would be unwise; within a day or so of his statement the National Institute of Economic and Social Research, jerking into an unwonted and journalistic rapidity of assessment, had decided to give him a kind of "Beta-plus" mark for them. The Council (no longer Cohen's but Heyworth's) had argued that both an increase in indirect taxes (the "regulator" that the Chancellor did use) and the pay-roll tax (the one he did not) "give the economy a push in just the opposite direction to the one needed at the time"; and that "stop and go" policies (on which he is mainly relying) "have cut investment back sharply at times, particularly in the public sector, and exerted a disturbing and discouraging influence more widely." Mr Lloyd has moderated the effect of his "stop" so far as productive public investment is concerned, but hardly his general discouragements.



The National Institute tended, in its latest bulletin, to agree with the Chancellor more than some of his critics have done that home consumption was still building up very strongly: it thinks that his measures will moderate this rise and could possibly lead to a sharp cut in stock accumulation, which would level output off. It also believes the measures will increase the margin of idle capacity in the economy: reduce the current account deficit more than this would have come down anyway: and through their effects on government spending and private investment overseas reduce the overall payments deficit next year. It thinks the drawing on the IMF should "stem the speculative flight from the pound." But it believes the measures "unlikely to solve the underlying foreign payments problem," holding that "it would be quite inadequate merely to achieve overall balance in the favourable years, particularly if they were also years when domestic activity was stagnating."

Pull and Push

ONE significant change in the flavour of the latest report from these three wise men is its acceptance and detailed discussion of the concept of "cost-push" inflation. In earlier days an earlier council adhered fairly firmly to the school that reckoned (or reckon) that inflation, and wage increases, are mainly a result of excessive demand, as against those who put much of the responsibility down to the monopoly or countervailing power of trade unions in wage bargaining.

There is now a wide measure of agreement (says the Council) that both "demand pull" and "cost push" have been achieved, that they have reinforced one another, and that policy has to tackle both.

The agreement is perhaps not universal. Lord Robbins and some of his supporters, econometricians and others, at the London

School of Economics may still feel that the pressure of demand for labour offers an adequate explanation for the long-run rise in the cost of it. The comment that domestic servants, quite unorganised, are the kind of labour for which wages have risen most, which probably originated from Sir Arnold Plant, is still an effective one. And over the last few years national income statistics, as shown in the chart, indicate a significantly sharper rise in the wages and salaries bill than in the wage bill alone. This means that the national salary bill is rising faster than the wage bill. At one time this simply meant that the number of earners drawing salaries was rising faster than the number of wage earners, but of late average salaries have been rising more than average wages. This does not preclude the effect of institutional factors in the inflation of incomes—"relativities," for example, are a potent factor in formal or informal negotiations over salaries. But even though the strength of white-collar unions is becoming steadily greater, the fact remains that trade union bargaining affects a far smaller proportion of salaries than of wages.

AIRPORTS

Under New Management

THE government, said Mr Thorneycroft in explaining his new scheme for airport management this week, does not regard airports as part of the welfare state, although he might have added that the airlines have tried hard to convince him that they should be. The loss on all 26 government-owned airports has probably halved since the last published accounts for 1959-60 and may be running at around £3 million a year. These costs the Ministry intends to be met in future by (a) airlines and (b) local ratepayers. This is the implication behind the proposals contained in Wednesday's white paper, some of which can be put into effect immediately and some of which will need legislation.

The difficulty of devising an equitable scheme was that the airports closest to breaking even were the big international ones, while those with the least chance of doing so were the small provincial ones. To put them all under the same authority would mean that international airlines would be subsidising airports in Land's End and the Outer Hebrides that they themselves could not use. What the Ministry therefore proposes is to set up a commercial airport authority for the international airports only, that is the London group consisting of Heath Row itself, Gatwick and Stansted, together with Prestwick in Scotland. This group should be paying its way by the time that the necessary legislation setting up the authority has reached the statute book.

The Ministry intends to wash its hands of seven provincial airports in England, Ulster and Scotland which have no visible prospect of breaking even: if local authorities will not take responsibility for these they will, presumably, close. In the last published accounts, losses at these airports amounted to more than their total revenue, £1.5 million compared with receipts of £1.3 million. Matters have since improved, but ratepayers will have to dig deep into their pockets if they want to keep these airports open and should not place much hope in the Ministry's soft words about making a contribution to those which serve a "national" as well as a local need. The eight little landing strips serving the Scottish islands are being treated by the Ministry as a separate case; these cost the Exchequer somewhere between £300,000 and £400,000 a year and are regarded as a social service. What the Ministry hopes is to find an agent to run these and the equally small airfields in the Scilly Islands.

The handing over of provincial airports to local authorities can go ahead without legislation, which should bring an immediate relief to the Treasury. Mr Thorneycroft had, however, another card up his sleeve which will not please the airlines at all. The privately-run airports will charge them for the cost of landing; the Ministry now intends to charge them for the cost of the navigation services it provides to guide them en route across the country. The cost of these has been roughly assessed as £3 million a year. These services are usually provided free: attempts made by other countries to charge for them have had receptions ranging from anguished howls to downright defiance.

RESTRICTIVE PRACTICES

Straight and Narrow

LAST week the Restrictive Practices Court began exploring its own special kind of limbo, a region of the law where trade agreements may be found to be not void

but not necessarily in the public interest. The Registrar of Restrictive Trading Agreements had asked the Court to declare that a new price agreement made by the Black Bolt and Nut Association was "to the like effect" of restrictions the Court had condemned in July, 1960. Then, as a pendant to the notable judgment which held that fixed prices for black nuts and bolts conferred a "specific and substantial benefit" upon small buyers as it saved them from having to go shopping from one manufacturer to another, the Court found contrary to the public interest the association's arrangement for sales to large buyers whereby its secretary circularised the lowest tender among member firms as their minimum price for each contract.

The association, like every other unsuccessful respondent, had undertaken not to make any new agreement "to the like effect." Under its new scheme large buyers were to be charged on the basis of the association's price list for small buyers, less any discount that member firms individually thought justified by any savings arising from the size or circumstances of each order. This, the Court decided, was not "to the like effect." The comparison was with the "characteristics" of the restrictions previously condemned. Would the reasoning in the previous judgment, based upon those characteristics, Mr Justice Diplock asked, "necessarily lead to the conclusion that the new agreement was contrary to the public interest"? Since the old restrictions did not save large users from having to shop around, they had not been upheld. But "the same might not be true of the restrictions in the new agreement." This did not mean however that, on full consideration, the new scheme would or would not pass the test of public interest. That would be decided when the scheme had been registered and referred to the Court for a full hearing. The registrar's application last week was made before the new scheme was due to come into force; it was perhaps in the manner of a ranging shot that might have scored a hit.

On first glance the case opens up a vista of protracted rearguard actions by unsuccessful trade associations. But not many associations are likely to be in as favourable a position as the black bolt and nut manufacturers, with certain of their practices already approved by the Court. It may not be easy, either, to put together a new scheme that is not "to the like effect" and which can also be shown to be not contrary to the public interest in a full hearing. The Court's sharply worded warning in the newspaper case last week that any "deliberate attempt to evade orders of the Court" could lead to imprisonment, even if offenders had acted on legal advice, was made before the Court heard the two applications for contempt put in by the Registrar. The first was against the Black Bolt and Nut Association itself. Before the association's new scheme was due to take effect, the Registrar had learnt of an instance of identical tendering to the National Coal Board. But the

Registrar decided not to proceed with this application after the Court's judgment on the association's new scheme. The second was against the National Federated Electrical Association, and its director personally, for sending out a copy of its recommended schedule of charges for electrical jobbing work the very day after the association had given the Court an undertaking to abandon its price agreement. This, it was found, was the result of sloppy office management, not wilful defiance, and the contempt was purged by apology. Mr Justice Diplock once again declared, however, that any attempt to get round the Act would be "playing with fire." The Registrar's two applications for contempt were clearly meant to put trade associations on notice that a keen watch was being kept for any signs of smoke.

THE MONEY MARKET

Squeeze on the Discount Houses

THE syndicate of discount houses followed the 2 per cent increase in Bank rate with a rise of 2⅛ per cent to £6 14s. 8d. per cent in its bid at last Friday's Treasury bill tender. The market had hoped that, as in the past, outside bidders would allow it to set the new rate before they returned to the tender. In fact the outsiders decided not to wait, and total applications rose by £93 million to £427 million. They raised their bids less sharply than the syndicate and the average rate of discount rose by 2⅛ per cent to £6 13s. 9d. per cent. As a result outside bidders took the bulk of the bills and left the market with only 28 per cent of its application.

The discount market is unlikely to have pleasant memories of the last two or three weeks. Before the change in Bank rate, outside bidders anticipated the move by keeping out of the Treasury bill tenders, and when the change came the market was left with unusually large bill portfolios at low rates. By entering the tender in force on Friday the outsiders prevented the syndicate from enjoying the large margin on the finance of new bills and so recouping part of the running loss on existing bill portfolios. In 1957 the market secured an allotment of 60 per cent at the tender following the increase in Bank rate to 7 per cent.

The profits of discount houses will suffer as a result of this increase in rates. For the next six or seven weeks they will make a running loss on the bills taken up before Bank rate changed, to say nothing of a book loss on their short bonds, and in the weeks ahead their task will be to secure high bill quotas without pushing their bid too low and incurring the displeasure of the authorities (which could be reflected ultimately in borrowing from the Bank of England at 7 per cent). The bill rate at 6 11/16 per cent will give the syndicate room to manœuvre but this rate is bound to come under pressure. Some foreign money was noticed at last Friday's tender and once confidence returns and buyers of sterling are willing to leave their purchases uncovered the competition for bills will be heavy since the interest differential over the New York bill rate is approaching 4⅜ per cent.

Local Authority Loans

TURNOVER in the mortgage market has been very large since the Bank rate increase, although this activity has been concentrated in the short end of the market. Money on two and seven days call, which commanded 5¼-5⅜ per cent, is now quoted at 7¼-7½ per cent and local authority treasurers are quite sensibly turning to temporary finance in the belief that a 7 per cent Bank rate is itself no more than a temporary measure. The short-term borrowing of some authorities is now very high and pressure to go still shorter has come at an inopportune moment. In spite of the high rates a number of twenty-year mortgages have been arranged at 7 per cent.

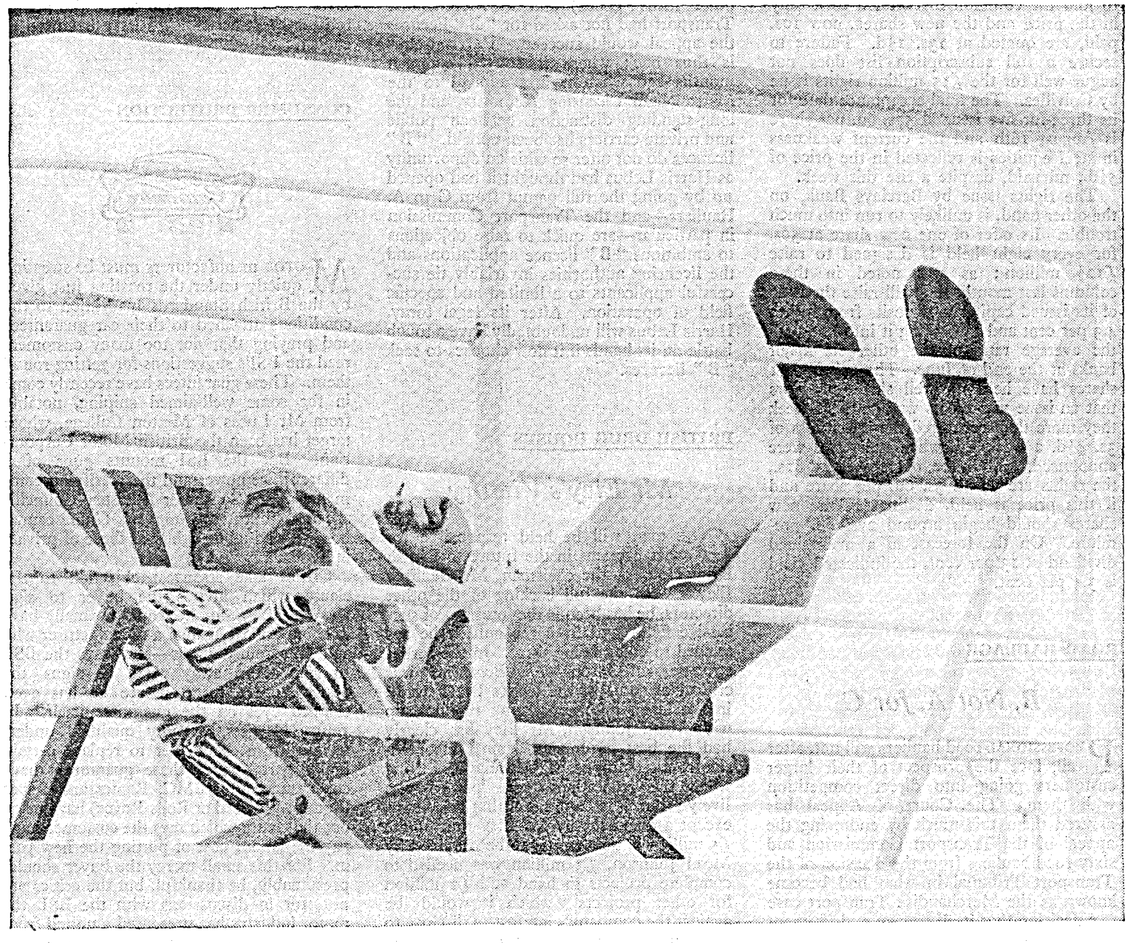
Up to Wednesday the market reported little interest from foreign lenders. Such money that was coming in was on a covered basis and going to hire purchase companies, some of which are paying over 8 per cent for three months' money. On Wednesday, however, substantial enquiries on foreign account were reported and one part of the market confirmed receiving moderate sums from abroad that afternoon. The suggestion was that the money that had so far gone to the hire purchase companies and into Treasury bills was spilling over into the local authority market. Local authority advertising in the national press is still offering pre-7 per cent rates—a sign that their appeal is directed at local support rather than sophisticated investment.

On Thursday the Public Works Loan Board followed the movement in market rates in announcing its own rate increases. Loans for periods up to fifteen years will cost 7½ per cent in future, and loans over fifteen years 7 per cent. Before the Bank rate increase the Board was charging 6¼ per cent for medium range money.

INDUSTRIAL PRIOR CHARGES

What Sort of Rates?

WELL before Bank rate was raised to 7 per cent, the yields on gilt-edged securities and on industrial prior charges were well above what once would have been thought "normal" with Bank rate at 5 per cent. The long end of the market was prepared in advance for higher interest rates and the adjustments it has had to make this week to the Chancellor's measures have been comparatively small, though they have been significant. Until the market in industrial prior charges has been fully tested, the establishing of firm rates will have to wait—conceivably for a month or two.



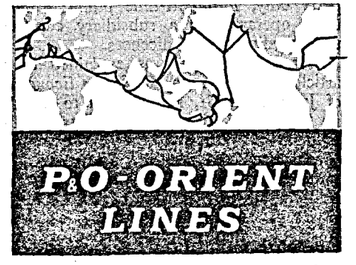
Broadly, however, yields on redeemable debentures have risen from about 6⅝-6¾ per cent at the end of June to around 7 per cent; on irredeemable debentures from 6¾-6⅞ per cent to 7⅛-7¼ per cent; and on preference shares from 6⅞-7 per cent to 7-7¼ per cent (in the view of some dealers this still leaves them rather overvalued). The Chancellor's measures will thrust more borrowers on a lenders' market and if they opt for a prior charge rather than a rights issue of ordinary shares they will have to pay a steep price. Borrowers will wish to secure as low a coupon as possible for the shortest period of time, but the lenders will dictate the terms. There may be some attempt to shorten the life of new redeemable prior charges and the convertible debenture may reappear in a few cases. But the institutions like long-dated stocks are not overfond of hybrids. This week, about half of the stock offered directly to the public by City Centre Properties (this is convertible up to 1964 and finally redeemable in 1970) was left with the underwriters.

Other borrowers may find themselves having to offer a 7 per cent stock at 99 (whose high running yield would have an obvious appeal to gross funds and to trustees concerned with the income of the life tenant) or a 6¾ per cent stock at a sufficient discount to produce a gross redemption yield of a touch over 7 per cent. Some funds may already be holding money on short-term deposit in preparation for prior charges issues at such rates and for rights issues (which would have to be on attractive terms) in the autumn. At the moment they are prepared to wait, not least because they want to see whether the Trustee Act will promote any further selling of gilt-edged.

RIGHTS ISSUES

Finding the Money

THE alternative to issuing a debenture or loan stock is a rights issue of ordinary shares and this presents the difficulty of fixing terms that are attractive to shareholders without being over-generous. A sudden movement in stock exchange values can easily upset calculations and this, indeed, happened with the £30 million issue of Distillers. Of the 19,600,000 shares offered at 32s. 6d., one for ten, 2,300,000 shares (or 11.7 per cent of the issue) were left with the underwriters. The original intention was to sell any rights not taken up and to distribute the proceeds to the appropriate shareholders; but when the offer closed last week this was nugatory as the rights then had no value. This week, however, the news of Britain's application



MR. SMITH ACHIEVES A THREE MINUTE MILE

Nobody's taking much notice of it. There are no crowds to go mad, no flashbulbs to go pop and the only reporter on board is away on the starboard side throwing a nifty quoit.

Normally Mr. Smith's not the athletic type. The only thing he runs is his own business—and very successfully, too. That's why he's got to be on the top of his form when he gets to Australia. Relaxed. Assured. Confident. That's why he's going by P & O-Orient Lines—the laziest, liveliest, most soothing way ever devised of doing a mile in three minutes flat.

Mr. Smith closes his eyes again. All this activity can make a man sleepy . . .

The world's largest passenger line

SEE YOUR TRAVEL AGENT OR P & O—ORIENT LINES
16 Cockspur St. S.W.1. 130 Leadenhall St. E.C.3.

to join the common market led to a rally in the price and the new shares, now 10s. paid, are quoted at 13s. 1½d. Failure to secure a full subscription list does not augur well for the £15 million rights issue by Colvilles. The final acceptance date for its three-for-five issue at 57s. 6d. per share is August 16th and the current weakness in steel equities is reflected in the price of 5½d., nil paid, despite a rise this week.

The rights issue by Barclays Bank, on the other hand, is unlikely to run into much trouble. Its offer of one new share at 50s. for every eight held is designed to raise £12½ million; as was noted in these columns last month, this will raise the ratio of its issued capital to deposits from 3.6 to 4.3 per cent and thus bring it into line with the average ratio of the other six major banks at the end of June. The existing £1 shares have held up well since the news that an issue was on its way and this week they more than recovered the initial loss of 3s. 4½d. a week ago when the terms were announced. With the old shares at 81s., the rights are worth 3s. 6d. per share and if this price is held, dealings in the new shares should begin around 27s. 6d. premium. On the forecast of a maintained dividend of 13 per cent, the indicated yield is 3.4 per cent.

ROAD HAULAGE

B, Not A, for C

PROFESSIONAL road hauliers will not, after all, face the prospect of their larger customers going into direct competition with them. The Court of Appeal has assured them this much by endorsing the appeal of the Transport Commission and sixty road hauliers from the decision of the Transport Tribunal in what had become known as the Merchandise Transport case—a decision that itself was an endorsement of an appeal from the Metropolitan Licensing Authority. Last January the tribunal uncovered a possible hole in the haulage licensing system whereby industrial firms could convert their private transport fleets, run under "C" licences which authorise the movement of the firm's own property only, into part-time public haulage units operated by a subsidiary company under ordinary "A" licences.

Harris Lebus, as was explained in an article on pages 1247-48 of *The Economist* of June 17, 1961, had applied to transfer its large "C" licence fleet to its wholly-owned transport subsidiary, Merchandise Transport, who would run the vehicles under "A" licences. The company gave an undertaking to the tribunal that its lorries would look for outside work only on return journeys when normally most of them would be running empty. The Court of Appeal decided that this is not what "A" licences are for: the appropriate licence would have been a "B" licence (which sanctions the carriage of a firm's own and other firms' goods) and as Merchandise Transport had not asked for "B" licences the appeal would succeed. Harris Lebus is thus back where it started eighteen months ago when it first applied to the Metropolitan Licensing Authority, and the long-standing distinction between public and private carriers has been upheld. "B" licences do not offer so wide an opportunity as Harris Lebus had thought it had opened up by going the full gamut from C to A. Hauliers—and the Transport Commission in particular—are quick to raise objections to ambitious "B" licence applications and the licensing authorities invariably tie successful applicants to a limited and specific field of operation. After its legal foray, Harris Lebus will undoubtedly have a tough battle on its hands if it now chooses to seek "B" licences.

BRITISH DRUG HOUSES

Mr Eley's Victory

ONE man will be held responsible for what happens in the future to British Drug Houses—the chairman, Mr Geoffrey Eley. With the full backing of the other directors, he has been in the forefront of successive fights and from the outside he has seemed to enjoy being there. In the earlier struggle with Fisons, *The Economist* was critical of some of the tactics BDH used; in the latest one, concerning the link up with Mead Johnson, Mr Eley has clearly had the best arguments against inconclusive counter-proposals. Monday's meeting when the resolutions were passed was lively; but it added little that was new, except a comment by Mr Eley that of the £5 million in new money to be provided by Mead Johnson, £3 million was needed to complete projects in hand and £2 million for other projects "which it would be against the company's interest to disclose to competitors." The opposition to the plan was vocal rather than effective and on a poll the resolutions received more than the necessary 75 per cent majority.

Throughout Mr Eley has argued that the Mead Johnson plan is in the best interests of BDH and its shareholders. Events may prove him to be right. But criticism of the scheme on two points is still valid. First, while it provides BDH with new money cheaply, Mead Johnson immediately gains 35 per cent of the equity votes and ultimately 35 per cent of the issued ordinary capital, so that after 1966 present shareholders will have only 65 per cent of the equity in the company's growth. Secondly, while it introduces new blood to the board and management, it preserves the present directors and management. In passing the resolutions, the shareholders have in effect given a vote of confidence in the present direction of the company. Perhaps their interests would have been better served if BDH had been taken over lock, stock and barrel. It rests with Mr Eley and his team, new and old, to produce the higher returns that shareholders have been led to expect.

CONSUMER PROTECTION

MOTOR manufacturers must be sweating quietly under the roasting just given by the British Standards Institution to the conditions attached to their car guarantees and praying that not too many customers read the BSI's suggestions for getting round them. These guarantees have recently come in for some well-aimed sniping, notably from Mr Lucas of Merton College, whose target has been the British Motor Corporation. But the BSI mounts guns of a different fire power and the scarifying comments of its Consumer Advisory Council's special publication *Shopper's Guide* cannot be shrugged off as lightly as those of private individuals.

Critics take strongest objection to the clause which invites the buyer to sign away all the rights he would normally have in common law against a manufacturer who sold him faulty goods—and, says the BSI, to sign these away when he signs the dealer's order form, before he has even clapped eyes on the guarantee itself. In return he gets carefully qualified undertakings from the maker to replace certain faulty parts—since these guarantees have come under fire, BMC, Rootes and Rover (but not yet Ford or Rolls-Royce) have taken out the clause which says the customer must pay the labour cost of putting the new part in. For this small mercy the buyer should, presumably, be thankful, but the critics are not, for in discussions with the BSI, the motor industry has presented a united front and refused to amend the guarantee in a way that would preserve the customer's common law rights. The Sale of Goods Act, says the motor industry, is both out of date and unsuitable for such complex things as cars. Why?

The BSI suggests that potential customers try amending the guarantee forms themselves. The current issue of *Shopper's Guide* suggests a simple form of words which would protect the buyer's legal rights if the car makers would accept it—which, the BSI sadly admits, they are unlikely to do. This type of guarantee is widely used by manufacturers of consumer durables to protect themselves, one can only assume, from heavy claims for damages, but it is under fire from every side. Some manufacturers are ceasing to use it and only the motor industry makes the acceptance of such a guarantee something closely approximating to a condition of sale. Indeed the motor industry takes such pains to protect itself that some lawyers think certain companies have defeated their own ends and produced a warranty form that might not stand up in the courts. A test case is badly needed; unfortunately this is expensive and the law prevents any interested body, such as the BSI, from helping towards the costs.

COMMODITY PRICES

Fair or Phoney?

PEOPLE—and not only primary producers—are showing increasing concern at the level of commodity prices. Depressed prices last year have slowed the growth in exports of manufactured products, and it is a tenable view that danger, though not disaster, lies ahead. So far, 1961 can hardly be called a year of revival. The year began encouragingly; prices of metals, fibres and foodstuffs rose simultaneously—a fairly rare occurrence—and by the beginning of May they were collectively 5 per cent higher, an improvement that, if maintained, might have put something like $1000 million into producers' pockets this year. But prices have declined since. May: metals are still 3¼ per cent higher than in January; fibres have gained 4½ per cent; but foodstuffs have risen only 0.2 per cent. Given its proper weight this small rise in food prices and a fall in the price of rubber have eliminated nearly all the earlier improvement in prices. *The Economist* commodity price indicator stood at 93.3 on January 4th and rose to 98.0 in May but this week it dipped once more to 93.8.

The Australian minister for trade complained this week about phoney prices for commodities. His thesis that "world" prices were rigged by subsidies to producers in importing countries was aimed at industrialised countries, but to some extent it also seems true of primary producers. Price "rigging" by commodity stabilisation schemes, though often aided and abetted by consumers, has been largely ineffectual this year. "Free" sugar is thoroughly depressed despite attempts to rub out the surplus. Cocoa has not responded much to the construction of a commodity scheme, and the coffee agreement is currently keeping its end up rather than forcing a recovery. The price of lead has not been lifted by the agreement to cut production; the strength of tin owes little to the efforts of the Tin Council; and the weakness of zinc follows naturally from the decision not to limit output this year.

In part, the early recovery this year was suspect, if not phoney. Speculation about strikes, political troubles, incipient price fixing agreements and over-optimism about the extent and pace of industrial recovery in the United States played an important role. But after their relapse, prices are on firmer ground. Political uncertainties have not diminished, and a rise in defence spending is planned in the United States. Industrial expansion is continuing and the threat of strikes by copper miners persists. Some producers are already predicting a turn for the better in wheat and other grains, after years of surplus that naturally brought a degree of disregard in consuming countries for the welfare of these important staples. Moisture levels in the soil have been falling for several years in Canada. With China in the market, a bigger demand will coincide with poor harvests this year.

SHIPPING

Higher Freight Costs

THE Atlantic westbound freight conferences have announced that a surcharge of 2½ per cent on freight tariffs will be imposed from the beginning of November, owing to recent rises in costs that the companies are unable to absorb. This follows a general increase of 10 per cent dating from the beginning of February, since when seafarers' wages have been stepped up substantially. Since this wage claim was agreed (some shipowners have suggested that their wages bill has increased by 20 per cent), several liner conferences have increased their tariffs by amounts generally in the region of 10 per cent, including conferences serving the Mediterranean, West Africa, South America, the Indian Ocean and the Far East.

The increase in seamen's wages affects tramps and tankers just as much as cargo liners, but the rates they can charge for their services depend more on the balance between supply and demand. In recent weeks demand for the major bulk commodities, grain, coal, ore and fertilisers, has been well maintained, so much so that the volume of laid-up dry-cargo tonnage was reduced to 662,169 tons gross by the beginning of July. Most of the ships still laid up are either war-built standard ships or were built in 1935 or earlier, and are no longer acting as a brake on freight rates. Laid-up tankers, on the other hand, do have a restraining effect on freight rates for dry cargo, since they can be and are being used to carry grain. If it had not been for the incursion of large tankers into the grain trades, there can be little doubt that dry-cargo freight rates would be at much higher levels today.

As it is, the Chamber of Shipping voyage charter index reached 111.3 in May, an improvement of 11.3 points on last year's average rate. The figure for June fell back to 108.7, but recent fixtures at higher rates indicate that the July figure will show a recovery again. A feature of the present pattern of trading is the predominance of Japan and China as importers of grain and fertilisers, coal, ore and scrap. The procession of ships steaming to the Far East has caused a shortfall of ships available on this side of the world, so that transatlantic grain charterers have been forced to concede higher rates, even for tankers. Ships discharging in the Far East (there has been some congestion in Japanese ports) will have to ballast long distances to find follow-on cargo, and shippers may have to offer higher rates to induce them to return for more outward cargoes.

CARS

More Minx For Less

THE cuts the Rootes Group has made in the prices of the Hillman Minx saloon, convertible and station wagon are not simply a stock clearing device. A year ago Vauxhall released its dealers from their commitment to charge list prices a few weeks before a new model was introduced. But the new Hillman car Rootes intends to put on the market in October will not replace the Minx. Although the new Hillman will have roughly the same engine capacity as the re-vamped Minx, the group intends to keep the new Minx in production and specifically calls it the 1962 model. In appearance the new Minx shows little change but it has a more powerful engine—1,592 cc against 1,494 cc, or basically the same cylinder block as in the new Singer Vogue and the Sunbeam Rapier. The rear axle ratio has also been increased to give a higher cruising speed and more economic consumption.

The group has lopped £41 off the basic price of the Minx saloon. With tax included, this has brought the showroom price down by almost £60 to £727—or by £37 from the old price of £764 before the increase in purchase tax last week. The reductions for the convertible and station wagon are much smaller, £8 and £10 respectively. But the significance lies in the fact, rather than the amount of the price cuts. The costs of all car manufacturers have been going up as the result both of raw material price increases and of low rates of output. Obviously the cuts are intended to stimulate sales; but the full meaning of these price changes may not become apparent until the new Hillman model appears.

SPAIN

Convertible Peseta

CONVERTIBILITY "in principle" for the Spanish peseta marks a formal acknowledgment of the success of the financial stabilisation inaugurated just two years ago through exchange reform, large external credits and Spain's entry into OEEC. Earlier this year the Spanish government was able to pay off virtually all its credit drawings and to cancel credit lines granted under stand-by arrangements. External reserves have been built up from virtually nothing to around $700 million, and a good start has been made in liberalising imports—though even after the latest relaxations it seems that restrictive quotas are still to be maintained on many manufactured goods. The wider benefits of stabilisation, admittedly, have been rather

slow to appear. There have been signs that industrial production in Spain has at last turned upward in the first months of this year. But the paucity of Spanish statistics makes it difficult to say whether this marks the beginning of a sustained recovery or simply a temporary replenishing of stocks.

External convertibility for the peseta is still subject to qualifications, and the exact details of the new regulations are not yet entirely clear. Broadly, non-residents' holdings of pesetas are divided into two forms of account. Pesetas acquired from exports to Spain or from the sale of convertible currencies on the Spanish market will be credited to convertible peseta accounts. These may be used to buy other convertible currencies, to finance imports from Spain, or to purchase Spanish property or securities. But the use of peseta holdings derived from transactions within Spain, such as the sale of Spanish property or earnings by non-residents working in Spain, will remain restricted.

It is not yet clear how far this relaxation will broaden the international market in the peseta. The Spanish banks are being authorised to deal abroad in spot transactions, but for the time being selling rates for the peseta will continue to be fixed daily by the Madrid exchange control, so that there will be no effective scope for market fluctuation. This limitation may, however, be temporary, and some observers believe that once the new system is run in the Spanish peseta may be put on broadly the same basis in the foreign exchange market as other west European currencies.

TRUSTEE INVESTMENT

Unit Trust for Trustees

Just before the Trustee bill received the Royal Assent this week, the Municipal and General Group of unit trusts announced that it was forming a new trust specially designed for trustees. Units in any unit trust authorised by the Board of Trade rank as "wider range" investments under the Trustee Act; but M and G, which has pioneered a similar trust for charities, was quick to see the advantages of offering a trust which deliberately caters for the need of trustees. For trustees who have no extensive knowledge of equity investment a well-managed unit trust offers great convenience and enables them to have a stake in certain securities—as, for example, in new companies, small companies and overseas companies—which however desirable in themselves are not eligible as direct investments under the terms of the act.

In addition, the new M and G trust claims two special advantages. First, its management charges will be levied on a reducing scale, the initial charge being lower for big purchases and the annual running charge being reduced as the unit trust grows in size. Secondly, the income arising from the underlying investments will be distributed as far as possible in accordance with the requirements of trust law. The intention here is that in following the law the unit trust managers will try to strike a just balance between the claims of the life tenant and the remainderman. Thus, in addition to normal trading dividends, tax free capital distributions other than those arising from a reduction in capital will be passed on to the life tenants while any capital profit arising, for example, from a successful takeover bid will be retained by the fund. The new trust will be open to all investors and on the basis of current prices the initial yield is likely to be about 5 per cent. Trustees themselves must decide whether they wish to invest in a unit trust and if so, whether in a specially designed trust or a general trust; in either case they ought to be looking for expert management.

AIRLINE RESULTS

All Catching the Same Cold?

The British Overseas Airways Corporation, which published its accounts last week, claims to rank second only to Pan American World Airways among international airlines in the west (both are dwarfed by the internal American giants). Last year, Pan American made a £2½ million profit and BOAC, a £2½ million loss. It is a distressing fact that the corporation seems to take one step forward towards solvency only to slip two paces back the next year: its 1960-61 deficit is twice the size of that recorded the previous year. The accumulated loss now stands at £17 million on a capital of £154 million, with revenue running at £88 million last year.

The chairman has no doubt where the responsibility lies, in the small associated airlines in which BOAC has a substantial shareholding. These cost it, in some cases, more than £600,000 a year. Yet he makes it plain that in common with many other big operators, BOAC finds it expedient to maintain links with these airlines to protect its traffic rights. And this usually implies subsidising the small airline, since the latter would not seek partnership if it were able to stand financially on its own feet. So although the amounts some of them succeed in extracting from the corporation are obviously excessive, BOAC must, if it considers these overseas traffic rights worth having, budget for sufficient surplus on its own operations to be able to meet their losses. And the small profit that it had been making on its own operations turned into a loss of nearly £500,000 last year.

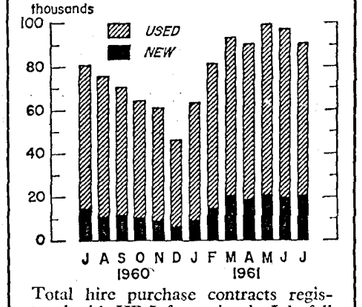
This loss is an ominous pointer to the outturn for all airlines in 1961. There are inefficiencies inside BOAC, any one of which could explain why it should have made losses over a period when most other airlines were making profits. But the most important single fact about the current returns is that they include the first three months of 1961; other airlines' results do not. And it was during this period that airlines first caught the draught that has kept them snuffling all the summer and might easily develop into pneumonia in the autumn. During 1960 most airlines this side of the Iron Curtain were, if not exactly in the pink, still well out of the red. The International Civil Aviation Organisation calculates that airlines this side of the Iron Curtain made a combined profit on internal and international services of $57 million on a revenue of $5,500 million. These preliminary estimates frequently need correcting, but they suggest that the rate of profit, as well as the actual profit, was halved between 1959 and 1960. BOAC's returns suggest that it may vanish in 1961.

The North Atlantic was hit first, but airlines inside the United States are now reported to have made losses totalling $20 million during the first half of the year. Repercussions on this side of the Atlantic may have been less severe, British European Airways has made a profit of £1½ million during the same period covered by the BOAC accounts, and the troubles of medium-sized airlines like Sabena and SAS (KLM, Aer Lingus and Swissair are among those showing profits) seem due more to internal cost levels than to falling traffic.

The tendency to blame the jets for the air transport industry's snuffles is a bit unfair on the most efficient flying machine yet developed. BOAC's accounts show that the cost of carrying a ton of payload one mile in a Boeing 707 is 1s. 3d. against 1s. 8d. in a Britannia and 1s. 9d. in a Comet, a 25 per cent advantage. But the airlines bought jets expecting the same yearly traffic increase of 13 to 15 per cent to which they have become accustomed, and the passengers went on strike. There was no increase in traffic and falls on some routes. Since then, prospects have brightened considerably; July and August bookings appear heavy and the aircraft are filling up again.

EGYPTIAN COTTON

The New Firm



Once Egypt decided to slip the communist countries' hold on its cotton exports, a reversal of its previous selling policy was inevitable. When a delegation of western cotton experts was invited to Egypt earlier this year to advise on how to restore trade with the West they took as their text that if the price was right the trade would follow. Egypt seems to have been misled by the nominal values attributed to its cotton in barter deals with communist countries and by its success in disposing of cotton last season into demanding too much for its cotton from western purchasers. Official minimum export prices —though subject to reduction for desirable currencies—kept prices too high to attract business, and unofficial discounts and seepages of re-exported Egyptian cotton from communist countries in contravention of agreements undermined confidence.

Egypt apparently wishes to split its trade between East and West in the proportions of 60-40 per cent. Though the projected division might look unflattering politically, it is limited by Egypt's commitments to the communist bloc, particularly as a result of the building of the Aswan dam. However, it also reflects the need to finance imports of spare parts for installed western machinery and possibly the realisation that suitable capital goods are more readily available in the West. In the first nine months of the current season, communist countries took two-thirds of Egypt's cotton. The overhaul of prices has been drastic. The old price structure and its discounts have gone, but the Egyptian authorities have also swept up the cotton futures market and the formerly controlled but independent export houses. The futures market has been eliminated and exporters are to be Egyptianised; Egypt evidently wants big deals with the West to balance those with communist countries and is not very interested in reviving the free market in Alexandria. A rash of barters similar to the £2½ million deal recently arranged by an adventurous British merchanting syndicate seems likely.

A further deal is under discussion and the market expects others to follow. Under the first, Egypt will take £5 million of British capital goods. The merchant can hope to make his profit either on the cotton or the capital goods, but in this case the sale of the 25,000 bales of cotton is proving unexpectedly difficult. Spinners are currently not feeling too venturesome. Since the Suez crisis they have used Sudanese cotton and are reluctant to change again. Stocks of long-staple cotton have built up and certain technical changes—the resin finish in drip-dry shirts is one example—favour shorter fibres. Egyptian cotton is said to be offered at 3d. a lb. below the new level of official Egyptian prices and the Sudan has cut its prices by 2d. a lb. Sudanese representatives arrived in Britain to discuss cotton sales this week. One view is that these two suppliers will concert their selling policies. Before spinners are attracted by lower prices they will want to see whether co-operation or competition will result.

CARS SOLD ON HIRE PURCHASE

Contracts registered with H P Information

Total hire purchase contracts registered with HP Information in July fell to 157,746, compared with 160,962 in June. This fall occurred in spite of buying in anticipation of the Chancellor's measures and the threatened increase in interest charges by the Finance Houses Association. August will feel the full force of these changes and sales will probably suffer.

SHORTER NOTES

Export orders for machine tools have been rising since April, but the decline in home orders, since last year's peak, still continues. All told, home orders in the first five months of this year were a fifth less than last year, but orders from overseas buyers have in total just about kept level. Despite increased output, however, the machine tool industry's total order book is still growing.

★

Spot checks of vehicles on the roads, the companion scheme to the annual testing of older cars and lorries, will start early in September.

★

The plastics market never stays quiet for long. ICI has started another round of competitive price reductions in polythene by lopping 3d. to 4d. a pound—roughly a seventh—off every grade of Alkathene, only eight months after a similar cut of 3d. a pound. Monsanto Chemical quickly followed this new lead. In three years the price of polythene has been cut by almost half under the pressure of surplus capacity. In addition, ICI and Metal Box have both taken steps to strengthen their positions in plastic packaging materials. ICI has formed a joint company with E. S. & A. Robinson to "develop the use of plastic packaging Films." Metal Box has joined with Shell Chemical and the National Distillers and Chemical Corporation of New York in their plans, announced last November, to run a joint factory to make packaging film here, particularly polypropylene.

★

After considering last week's request by the Chancellor of the Exchequer to hold dividends down, the directors of Powell Duffryn have decided to leave the ordinary dividend unchanged at 16 per cent for the sixth successive year. The group's gross profits in the year to March 31st rose from £2,157,000 to £2,537,000, which the directors say would have justified a dividend of 18 per cent.

Courtaulds has teamed up with United Merchants and Manufacturers Inc. of New York to manufacture and sell glass fibres and fabrics in Britain. This market has been growing in the last few years and is at present supplied by Fibreglass (a subsidiary of Pilkington Brothers), Turner and Newall, and Deeglass. Courtaulds has not so far given any details about its plans for this new venture.

★

Hambros Bank, in conjunction with Credito Italiano of Milan, is seeking a London quotation for the whole of the ordinary and privileged shares of Snia Viscosa, a limited number of whose ordinary shares have been quoted in London for 35 years. Snia Viscosa is the biggest producer of artificial fibres in Italy and it has close links with Courtaulds, which is one of its shareholders.

★

Spillers is to subscribe at par for £500,000 of an 8 per cent unsecured loan stock issued by Buxted Chicken, and also for 250,000 5s. ordinary shares at 22s. 6d. each in this company. The agreement, which is subject to the approval of the Buxted shareholders, will also give Spillers an option to buy 150,000 Buxted shares at 27s. 6d. each between January 1, 1962, and June 30, 1964. The shares are currently quoted at 28s. 3d.

COMPANY MEETINGS

HOVIS-McDOUGALL LIMITED

YEAR OF PROGRESS AND EXPANSION

MR KENNETH MOORE ON TAKE-OVER BIDS

The 28th annual general meeting of Hovis-McDougall Limited was held on July 27 at the Connaught Rooms, Great Queen Street, London, W.C.2, Mr Kenneth Moore (the chairman) presiding.

The following is an extract from his Statement which had been circulated with the Report and Accounts for the year ended March 31, 1961:

Our trading experience during the past year was very much as expected in that keen and sometimes over-keen competition within the Flour Milling Industry tended to reduce profit margins. Sales, however, were well maintained particularly in the case of our main proprietary brands—Hovis Bread Flour and McDougalls Self-Raising and Plain Flours.

The results of E. Marriage and Son Limited and its subsidiaries were well up to expectations and this acquisiton early in April, 1960, has not only strengthened our position in the Flour Milling Industry but has brought opportunities for development in other branches of the food industry—for example, in the field of a variety of cooked-foods including potato crisps, etc.

Our non-milling subsidiaries had a good year and made a substantial contribution to the over-all Group results which, for purposes of record, are set out at the foot of this report in comparative form for the four full years which have elapsed since the merger of the Hovis and McDougall businesses.

It will be seen that in spite of the factors I have mentioned the Group has made further progress during the year. For this our warmest thanks are due to those responsible for the management of the various businesses within the Group and to all who work in them, and in this I am sure our shareholders will wish to join.

Capital expenditure during the past year amounted to more than two million pounds. Much of this sum was for additions and improvements to plant, buildings and equipment and the remainder was for the acquisition of controlling interests and investments in various businesses complementary to our existing activities.

TAKE-OVER BIDS

To our regret the company has recently been the subject of various rumours of take-over bids which led, for a time, to some speculative activity in its ordinary stock. The Press, as is their duty, duly reported not only the rumours but also the fact that we informed them that, to the best of our knowledge, the rumours were entirely without foundation.

That remains the position to-day but I think it right to mention the matter because of an aspect which is often overlooked, namely the disturbing effect which such rumours have on those who work in the businesses concerned. I hope that what I have said and what I say hereafter will reassure them.

Having dealt with the particular it is perhaps appropriate to add some general comments which may help to keep such matters in perspective. There is nothing new or inherently wrong in amalgamations, mergers and take-over bids. On the contrary, they have been going on throughout the growth of industrial and commercial activity. Almost every large business one can think of is a product of these processes—the great banks, the insurance companies, the major engineering, ship-building and chemical companies, the breweries and so on all bear witness to the advantages, indeed the necessity in modern conditions, of large-scale organisation—advantages, generally speaking, for customers, stockholders and employees alike and, indeed, for the national economy.

GROUP'S GROWING STRENGTH

In its modest way the Hovis-McDougall Group is a case in point. It has been built up by the amalgamation of complementary businesses after friendly and private negotiations and is stronger technically, financially and in terms of human resources than the constituent parts would be on their own. Moreover, the growing strength of the Group has enabled us to look after our employees even better than was the case in years gone by.

The trouble is that, particularly in the tax-distorted economy of the post-war years, there have been cases which have given the process a bad name. I have in mind those which savoured not of the marriage of complementary businesses but rather of rape. It is to this aspect of the matter that those concerned should direct their attention.

To return to our domestic affairs, you will be glad to know that our trading experience for the first three months of the current year has been satisfactory; it is too early to hazard a forecast for the remaining nine months but we shall be disappointed if we cannot, once again, present results reflecting the growth and broadening of the businesses within the Group.

RIGHTS ISSUE

In addressing the meeting Mr Moore announced that, for the reasons and purposes indicated in his Statement circulated with the Report and Accounts, the Directors have now decided to proceed with the Issue to Ordinary Stockholders by way of "rights" 3,295,190 new Ordinary Shares of 5s. each for subscription at the price of 12s. 6d. per Share in the proportion of one new share for each ten existing Ordinary Stock Units of 5s. each. This will provide some two million pounds additional development and working capital. Provisional allotment letters in respect of such "rights" issue will be posted on August 18, 1961, to Ordinary Stockholders on the Register at the close of business on July 10, 1961.

The report and accounts were adopted and the other formal business duly transacted.

Comparative Table of Principal Figures

	Year ended March 31, 1958 £	1959 £	1960 £	1961 £
Group Profit before Taxation (after deducting Pre-acquisition Profits of newly acquired Subsidiaries)	1,825,536	2,050,362	2,472,114	2,734,832
Taxation and various adjustments	982,608	986,043	1,253,073	1,412,241
Group Surplus	842,928	1,064,319	1,219,041	1,322,591
Dividends (net)	359,805	427,396	558,460	678,093
Ploughed-in by way of additions to Reserves	£483,123	£636,923	£660,581	£644,498

HOUSE OF FRASER LIMITED

RECORD LEVEL OF GROUP TURNOVER

SIR HUGH FRASER ON BOARD'S CAPITAL PROPOSALS

The twentieth annual general meeting of House of Fraser Limited was held on July 28th in Glasgow, Sir Hugh Fraser, BT, DL (Chairman and managing director), presiding.

The following is an extract from his circulated statement:

The Net Profits of the Group as shown in the Consolidated Profit and Loss Account amount to £2,663,466 (£2,351,605) after providing £2,742,613 (£2,073,341) for Taxation. Of this amount the Profit for the year applicable to Members is £2,432,963 (£2,196,741).

The Dividends, less Income Tax, paid and recommended for payment are shown in detail in the Profit and Loss Account, and amount to £1,887,322 as against a distribution last year of £1,541,971. The balances of Unappropriated Profits to be carried forward in the Accounts of the Company and its Subsidiaries amount to £2,377,500 (£1,809,891).

The Consolidated Balance Sheet shows the Net Assets of the Group at £30,997,208 (£26,851,299), an improvement of £4,145,909, represented by an increase of £324,401 in Ordinary Stock and £3,821,508 in Reserves.

The surplus of Current Assets over Current Liabilities at the end of the year exceeded £13,000,000 without taking into account the appreciation in market value of Quoted Investments held by the Group as noted in the Balance Sheet. The liquid position of the Group is sufficient to meet any financial commitments already incurred, or contemplated.

Turnover of the Group during the past year reached a record level and by achieving this we were able to contain the rising trend of operating expenses. I might mention here that no Profit has been brought into the Accounts from William Henderson & Sons, Limited, whose premises in Liverpool were destroyed by fire in June 1960. The Board feel that pending agreement on the Fire and Consequential Loss Claims with the Insurance Companies concerned, the full financial consequences of the fire cannot be determined, and the Net Profit is meantime held in a Suspense Account.

Apart from the completion of the purchase for cash of the Share Capital of J. W. Mackie & Sons, Limited, the Edinburgh Caterers, to which I referred in my previous Statement, the year has been one of consolidation and internal reconstruction.

BUILDING PROGRAMME

As I indicated last year, we are engaged in an extensive building and reconstruction programme, the full benefits of which will not be apparent for some time. The new Store operated by Rackhams Limited in Birmingham, and acknowledged to be one of the finest in Europe, was officially opened by the Lord Mayor of Birmingham on November 29, 1960. An arcade of twenty-five shops, all of which have been satisfactorily let, is situated on the same site adjacent to the Store. The Office block, also forming part of this development and containing extensive premises available for letting, is nearing completion.

The first phase in the re-building of Arnott Simpsons in Glasgow was completed in April 1961, and the premises opened for trading. It is hoped that the building of the remaining part of the premises, work on which is proceeding satisfactorily, will be completed in the spring of 1963.

The construction of new premises in Fawcett Street, Sunderland, opposite the main store of Binns Limited, is well advanced, and the building should be available for trading in the early part of 1962. Re-building of the Liverpool Store occupied by William Henderson & Sons, Limited, has been commenced, and should be completed by the latter part of 1962. Work is also in progress at Hourstons of Ayr, which will double the present capacity, and at McDonalds Ltd. in Harrogate.

At the Annual General Meeting, Stockholders will be asked to approve an allotment to Ordinary Stockholders of one Ordinary Share of 5s., credited as fully paid, for every two Ordinary Stock units registered in their names on June 9, 1961, and to this end the Share Premium Account will be capitalised to the extent of £3,406,213 15s. The new Shares, when converted into Ordinary Stock, will be identical in all respects to the existing Ordinary Stock, except as regards participation in the Final Dividend recommended for the year to January 31, 1961.

An increase in the Authorised Capital of the Company is necessary for this purpose, and the Board feel that the suggested new figure of £12,000,000 will leave an adequate margin of unissued Capital. The Board are not at present considering the issuing of any of the remaining Ordinary Shares.

Applications for permission to deal in and for quotations for the new Ordinary Stock will be made in due course to the Stock Exchanges in London, Glasgow, Edinburgh and Newcastle.

FUTURE PROSPECTS

So far as the current year is concerned, I am pleased to say that the upward trend in turnover has continued. This is satisfactory and is, indeed, necessary to combat constantly rising expenses. These can be further offset by improved efficiency and service, and everything possible will be done in this direction. We cannot, of course, anticipate National and Local Government policies, which by the imposition of increased taxation can aggravate an already heavy burden on industry and business generally. Subject to these observations and given reasonably stable economic conditions, I view the outcome of the current year's trading and the future of the Company with confidence.

It must be appreciated that much of the success of the Company is due to the efforts of the Executives and other employees throughout the country, and I take this opportunity of thanking them once again for the great contribution which they have made to what I regard as a very successful year.

The report and accounts were adopted and the proposed increase of capital and scrip issue were approved.

'COALITE'

AND CHEMICAL PRODUCTS LIMITED

CHESTERFIELD

The following points were taken from the statement made by the Chairman, Commander Buist, to the 44th Annual General Meeting of the Company.

★ For the year ended March 31, 1961, the Profit after Depreciation and before Taxation totalled £852,133 compared with £935,913 for the previous year. Net Profits were £449,083. The total dividend absorbs £194,921 compared with £194,925 in 1960. £247,471 has been transferred to General Reserve.

★ Problems arising from the introduction of the 42-hour week combined with other increases in the costs of Coal and Wages have raised our production costs and in consequence the price of "Coalite."

★ "Coalite" remains the pre-eminent domestic solid smokeless fuel. It still retains its competitive position and demand continues to exceed supply.

★ "Coalite" burns in all types of open fires and closed stoves. Our policy is to make a fuel to fit the grate, not to expect our customers to buy a grate to fit the fuel.

★ The strong demand for our Oil and Chemical Products continued throughout, although competition intensified.

★ Subject to planning permission it has been decided to build 6 new Batteries of Retorts at Askern. This will be a major scheme and will increase the output of the Askern Works by at least two-thirds.

★ Sales to date are satisfactory and the order books look promising for both "Coalite" and Chemicals. The year has started well.

TRUST HOUSES LIMITED

AN EVENTFUL YEAR

The fifty-eighth annual general meeting of Trust Houses Limited was held on July 28th in London, Sir Geoffrey Crowther (the chairman) presiding.

The following is an extract from his circulated statement:

The year whose results are now reported to you was an eventful one for the company. The most important thing that happened was our acquisition of The Shelbourne Hotel, Dublin, by an exchange of shares. We have every confidence in its future profit-earning capacity, since a new block of 48 additional bedrooms with private bathrooms is now in course of construction.

In January we made a one-for-five rights issue to the Ordinary and Trust shareholders at 46.6d. a share, which brought in £1,092,401.

As a result of these two operations, the margin of authorised but unissued capital has been reduced to £380,900 and though we have no projects in mind at the moment that would result in the issue of more than a few shares, we think it prudent to restore an ample margin of unissued capital. A resolution will accordingly be submitted to increase the authorised capital by £1 million to £5 million. No substantial issue of capital will be made without the shareholders being informed.

The turnover of our business showed another increase. If the figures for the Shelbourne (for twelve months) and for the Surrey Trust are added to those of Trust Houses, the total comes to £11,182,000. Trading profits also show an increase. The final dividend recommended is 1s. 6d. per share, making a total for the year of 2s. 6d., which is the same as the total rate paid for the previous year. However, the final dividend is being paid on a larger capital.

As for the current year, I can only, at this moment, when the bulk of our summer trading still lies ahead of us, say that it has begun well so far as the volume of business done is concerned. We shall hope also to be able to maintain the ratio of profit, but I must add that it is very disheartening to be faced with a Budget, many of the items in which might have been specially designed to hurt the hotel industry. A duty on fuel oil, the threat of a payroll tax, the possibility of still further increases in Purchase Tax (which, unlike other industries, we have to pay on the tools of our trade)—all these bear on us with particular severity. I hope we shall be forgiven if we return a cynical, and possibly rude, answer next time we are officially exhorted to do our duty to the nation.

The report was adopted.

JAMES HOWELL & COMPANY LTD. CARDIFF

(Departmental Stores and Motor Vehicle Distributors)

1960 A YEAR OF DEVELOPMENT

NEW TRADING RECORDS

A TOTAL DIVIDEND OF 17½%

The Annual General Meeting of James Howell & Company Ltd., was held on July 31st at the Park Hotel, Cardiff.

The following is an extract from the statement by the chairman, Mr A. A. Thorpe:

DEVELOPMENT AND EXPANSION

The year 1960 has seen a further stage of development throughout the whole of our group of Companies, we have concentrated on the consolidation of these Companies and arrangements for their further extensions as well as for the expansion of the Main Store.

The developments in the Main Store and Subsidiaries have involved very considerable Capital Expenditure which in turn has increased the charges for interest, etc., but turnover has increased and the management feels that this is a direct reflection of our expansion plans which have brought a steady increase in the number of customers, and I am happy to say that this trend is being maintained to date.

Rising Wages, Loan Interest, Publicity and Renovations have resulted in substantial increases in expenses which although adversely affecting this year's profits should be viewed in relation to our policy of expansion and planning for the future.

MAIN STORE—NEW TRADING RECORDS

Trading has created new records as far as turnover is concerned in spite of a recession in trade in Radio and Television and similar departments due to the Hire Purchase restrictions for several months of the year.

The new premises on the corner of Wharton Street and Trinity Street have been completed. We have now considerably extended the showroom area for Carpets, Furniture, China and Glass. In addition we have introduced the following new departments: Photography, Handyman's, Flowers and Horticulture, including the agency for Suttons Seeds Ltd. All these new departments are making considerable progress.

These large scale developments and renewals within the Main Store have not only consolidated the existing business and show some immediate benefit, but have provided a very firm base for the future. However, the full benefit of the Capital outlay will show in our future trading.

Since the end of the year the extension to the Grocery Department has commenced and when completed will enable full use to be made of the bridge over Wharton Street. There will then be free access under cover between both sides of the Company's premises.

REYNOLDS AND COMPANY LIMITED

Trade continues to show good progress. This business is maintaining its position as the leading store in Newport and considerable sums are being spent in re-equipping the premises. Plans are now in hand for further extensions and for better access to the premises from the busy side street.

MOTOR DIVISION

It will be remembered that the Hire Purchase restrictions imposed by the Government affected very seriously all garage businesses so that trading in the latter half of the year became almost impossible throughout the country and belatedly the Government eased the restrictions. The effect was that in common with all other distributors and retailers we were called upon to stock a large number of cars and vehicles in order to safeguard our future trading. This has always proved a correct policy in the beneficial effect shown in trading for the first half of the current year.

ROLLS-ROYCE AND BENTLEY

A new development of the Company's Motor activities is the Special Retailership for Rolls-Royce and Bentley cars for South Wales. This additional representation does, in some way account for the extra expansion now necessary.

CARDIFF. LARGE EXTENSIONS

The land leased in Newport Road from the Cardiff City Corporation was adequate to enable us to provide facilities for increased business and to proceed with further large extensions for workshops, showrooms for second-hand cars and additional space for stores of spare parts.

As I mentioned in last year's report we have a fine showroom on the ground floor of new premises at Central Square, Cardiff, adjoining the main railway and bus station. This is already proving successful.

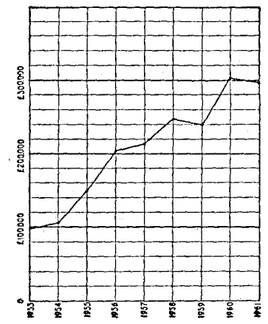
NEWPORT. FURTHER EXPANSION

Arthur Alsop Limited, after becoming main distributors for Austin vehicles for Monmouthshire, have outgrown the existing premises. Arrangements are now being made for the building of a first-class Service Station in Corporation Road with sufficient land which will be available for further expansion. In this connection satisfactory long-term financial arrangements are nearing completion which will avoid interference with the Company's own finances.

SWANSEA. NEW PREMISES

Fletchers (Swansea) Limited are now main Distributors of Austin vehicles for West Glamorganshire and East Carmarthenshire. First class premises are being erected in Dillwyn Street, Swansea, giving a fine frontage to the main shopping thoroughfare and here again satisfactory arrangements have been made for financing the project without interference with the Company's own finances. A further Service Station has been planned for erection at Fforestfach on the outskirts of Swansea. It is hoped that building of these premises will commence in the near future.

OTHER MOTOR BUSINESSES



Alfred Chaston Limited and Central Garages (Llandeilo) Limited are both making satisfactory progress.

THE RESULTS

The consolidated Trading Profit for the year amounts to £295,626. After charging the various items specified in the Profit and Loss Account, the net profit for the year, after providing for taxation amounts to £84,910. After paying the dividend on the 8 per cent Cumulative Preference shares for the year and an interim dividend on the Ordinary and 6 per cent

Cumulative Participating Preferred Ordinary shares, the Directors recommend the payment of a final dividend on the Ordinary and 6 per cent Cumulative Participating Preferred Ordinary Shares of 12½ per cent less Income Tax, making a total of 17½ per cent for the year.

Group Trading Profit covering period of Nine Years to January 31, 1961.

THE BESTWOOD COMPANY LIMITED

CHAIRMAN'S RESTRAINED CONFIDENCE IN BETTER FUTURE

The Annual General Meeting of the Bestwood Company Ltd. was held on July 27th in London.

Colonel C. G. Lancaster, MP, chairman and managing director, in the course of his speech, said:

I had purposely delayed today's meeting for three months beyond our normal date as I felt it essential to be able to speak with firmness on the position today.

The very considerable reorganisation of which I have made mention has begun to have its effect. We found that in the first quarter of this year we had turned the corner, however slightly, and in the second quarter this trend has continued. Our order book for this year is almost full and 1962, despite the ever increasing keenness of competition, is filling up reasonably well.

I make no attempt to hide the fact that our incursion into two new fields involved buying our experience in a highly competitive market. I am, however, of the opinion that that phase of development is now complete and that these two new activities undertaken at Chesterfield are playing their part alongside the traditional work of colliery engineering. I do not pretend to you that conditions are easy but, with the very considerable economies I have introduced, I look forward to the second half of the year with restrained confidence.

It is a source of considerable regret to me that 1960 should have turned out so unsatisfactorily, but I hope the review I have today given you will satisfy you that the right steps have been taken and that the position has been retrieved. I have considerable faith in the young management I have recruited.

During the past year we have submitted plans and the design for an important Colliery installation in Yugoslavia. We were up against other firms in this country as well as in Italy, France and Germany. Quite recently we have heard that in final competition with Krupps in Germany we have been passed this contract, not on the basis of lower prices but on the excellence of the design and planning. If we can maintain this standard, the future, I think, is not unhopeful for us.

The report was adopted.

THE ATTOCK OIL COMPANY

HIGHER PRODUCTION AND SALES

The forty-ninth annual general meeting of The Attock Oil Company Limited was held on July 27th in London, Mr A. McGilvray (the chairman) presiding.

The following is an extract from his circulated statement: The Profit and Loss Account shows that the profits earned in Pakistan amounted to £1,223,933 compared with £1,248,144 in 1959, a decrease of £24,211.

Although production of crude oil increased by 16.5 per cent on the previous year and sales of refined products were in step, profits have not shown any benefit from this expansion due in the main to the lower nett returns on sales consequent on the drop in world prices of petroleum products. Further contributory causes are a substantial increase in the rate of royalty now payable in terms of the renewed Mining Lease over the Dhulian Field and an increase in the cost of exploration over that already commented on in last year's Statement.

Current assets totalled £2,973,156 against current liabilities exclusive of the year's dividends of £1,324,088 leaving a surplus of £1,649,068, a decrease of £64,208 over the comparative figure at December 31, 1959. We have provided for Depreciation on Field and Refinery Plant, Motor Vehicles and Chattels £228,512 compared with £196,100 in 1959. Capital Expenditure at £279,837 in 1960 includes the completion of the Wah Gas Line commenced in 1959.

Ex the profit in 1960 amounting to £1,204,721 we have set aside for taxation and depreciation £710,674 and there remains £494,047.

Your Board have appropriated £100,000 to General Reserve and recommend a Final Dividend, free of United Kingdom Income Tax, of 1s. 8d. per £1 unit, making a total distribution of 2s. 8d. for the year. This dividend, if approved, coupled with the Interim Dividend of 1s., will absorb £386,667 and leave a balance unappropriated of £7,380 which, added to last year's carry forward of £43,208, results in £50,588 being carried forward to 1961. Crude Oil production for the year amounted to 1,859,867 barrels compared with 1,597,522 barrels in 1959.

It has been a busy year with all available resources employed on development and deeper testing at Dhulian and also on exploratory work, including geophysical surveys and the drilling of test wells on concessions granted to our Subsidiary, Pakistan Oilfields Ltd.

During the year extensive exploration work was carried out on behalf of Pakistan Oilfields Ltd., again I regret to say, without finding any new oilfields. Our competitors fared no better.

Since 1947 a number of the leading International Oil Companies have been actively engaged in prospecting work in West Pakistan but, with the notable exception of Sui Gas, there has been so far no recompense for the expenditure incurred. Some have given up the quest but the Government of Pakistan have decided to enter the field of active exploration with Russian aid in finance and equipment.

After reviewing the activities at the various fields, the chairman continued:

Forecasting the future is doubly difficult at a time when world oil prices continue to be unsettled and costs are rising, but the Company production position is being well maintained and in the absence of unforeseen developments I look forward to results not greatly different from those of the past year.

The report was adopted.

HUDSONS BAY OIL AND GAS COMPANY LIMITED

Hudsons Bay Oil & Gas Company Limited achieved new records in most phases of its business during the first half of 1961. Net income was higher than comparable earnings in any previous half year and new highs were also established in rates of production for crude Oil, natural gas liquids and natural gas. The company and its subsidiaries had net income of DLRS3,090,000 or 17 cents per share for the first half of 1961 that compares with net income of DLRS614,000 or three cents per share for the same period of last year. G. T. Pearson, President, said the company's net production of crude oil and natural gas liquids averaged 26,144 barrels per day for the first half of 1961 an increase of 3,684 barrels per day or 16.4 per cent over the first half of 1960. In comparison total Canadian production of crude oil and natural gas liquids increased nine per cent to 613,000 barrels per day for the first half of this year. Although this represents substantial improvement over the rate of growth in Canadian production experienced during the past few years, further expansion of market outlets will be required if domestic production for the full year 1961 is to reach an average of 640,000 barrels per day, the objective under the national oil policy said Mr Pearson. The company's sales of natural gas averaged 60.4 million cubic feet per day an increase of 15.7 million cubic feet per day or 35.2 per cent; about 80 per cent of this increase was attributable to greater deliveries from the Cessford Field during the first half of 1961. Hudsons Bay Oil and Gas participated in the drilling of 13 gross or 5.2 net exploratory wells of which three gross or 1.0 net wells were successfully completed as discoveries or extensions of natural gas reservoirs. The company participated in 24 gross or 18.1 net development wells. Successful development completions totalled 17.0 net oil wells. Capital and operating expenditures for finding and developing reserves of crude oil and natural gas totalled DLRS11,644,000 for the first half of this year, down DLRS366,000 from a year ago. During the period under review DLRS4,331,000 was expended in the West Whitecourt area where facilities are being installed for the production of the company's large reserves of natural gas and related products in the Windfall Pine Creek and Beaver Creek fields. These facilities estimated to cost a total of DLRS11,256,000 are expected to be completed on or about year end. Exclusive of outlays on the West Whitecourt project Hudsons Bay Oil and Gas spent DLRS7,313,000 in the first half of 1961 for finding and developing reserves, a decrease of DLRS4,697,000 compared with the first half of 1960. The company plans a considerably higher level of expenditures for the second half of this year.

PORT DICKSON-LUKUT RUBBER ESTATES LIMITED

COMPANY'S JUBILEE YEAR

MR K. M. G. ANDERSON REVIEWS "LONG HISTORY OF SUCCESS"

The fiftieth annual general meeting of Port Dickson-Lukut Rubber Estates Limited was held on August 3rd in London, Mr K. M. G. Anderson (the chairman) presiding.

The following is an extract from his statement which had been circulated with the report and accounts:

HISTORY

Historical facts, unless woven into a tale by a skilled hand, are usually dull, but the occasion of a Company's Jubilee seems to call for some comment on how that Company has grown and survived. I hope that Stockholders will find the following notes of some interest.

The Company, which was incorporated on April 20, 1911, as Port Dickson-Lukut (F.M.S.) Rubber Estates Limited, was formed to acquire two small proprietary estates owned by two planters, John Alister McGregor and Charles Malcolm Cumming, a small rubber company (Port Dickson Rubber Company Limited) and an area of about 265 acres, the property of Linggi Plantations Limited, together with some reserve land contiguous—in all a total area of 3,665 acres. In 1920 another estate, Perhentian Siput, of 1,205 acres, was acquired, and in 1959 the Sendayan Company, comprising 7,941 acres, was bought.

The acreage planted with rubber on the formation of the Company was 1,244 (of which only 106 acres were "mature"—five years in those days). During the intervening 50 years it has grown nine-fold to 11,078 acres, of which 7,740 acres are mature.

The first issue of capital was 700,000 shares of 2s. each, gradually increasing, as the original properties were developed, to 1,741,000 shares. The original Directors were Sir William Hood-Treacher, KCMG, Chairman (first Governor of North Borneo and a director of many other rubber companies), Charles Malcolm Cumming, John Alister McGregor and Robert Frederick McNair Scott (a doctor who had large interests in a number of rubber companies).

In common with most rubber producers, the Company has passed through many vicissitudes and, in our case, they started early. Although a dividend of 5 per cent was paid in respect of the second year of operations, the slump in the price of rubber in the following year caused some of the more faint-hearted of the shareholders to urge amalgamation with some dividend-paying concern.

Negotiations to effect that fell through, however, and despite the difficulties caused by the war, dividends were resumed in 1916. The ill-fated Stevenson scheme in 1922, the International Rubber Regulation Scheme in the 1930's, the Second World War—with our properties occupied by the Japanese and allowed to deteriorate—and the Emergency in Malaya from 1948 to 1960, all had considerable impact on the Company's operations And, of course, the ups and downs of prices, which a volatile commodity such as rubber has experienced during the last five decades, have not eased the task of planning the Company's progress.

It is perhaps remarkable that, despite all these difficulties, in only two years of its existence has the Company failed to make a profit—1920/21 and 1945/46. Dividends paid out have averaged 13.1 per cent on the capital in issue from time to time.

Throughout this long history of success, our Company has been served by a loyal and efficient staff and, on the whole, a contented labour force. While the Annual General Meeting is being held today celebrations of the Jubilee will be taking place on the estates.

METAL INDUSTRIES LIMITED

Summary of results for the year ended 31st March 1961

Consolidated profit before tax	£2,436,043
Taxation	£1,039,794
	£1,396,249
Profit before tax is 17% on net tangible assets	
Preference dividends *(net)*	£72,949
Ordinary dividends *(net)*	£688,431
Retained in business	£634,869
Cash flow (retained profits plus depreciation)	£1,313,291
Earnings per £1 ordinary stock (after tax)	3/6½d
Dividends per £1 ordinary stock (after tax)	1/10d
Cash flow per £1 ordinary stock	3/6d
Number of stockholders	11,722
Number of employees	12,638

Copies of the Accounts and of the Statement by the Chairman, Sir Charles Westlake, may be obtained from the Secretary, Metal Industries Limited, Brook House, Park Lane, London W.1.

DARNALL INDUSTRIES LIMITED

ACCOUNTS YEAR TO 31st MARCH, 1961

		£

MAIN ABBREVIATED POINTS FROM CHAIRMAN'S SPEECH.

The Chairman applauds the determined bid by the National Coal Board to meet competition of oil and adds that the Company, by its new developments; improvements in standard products, and its use of coal for heating its Works, has made its contribution.

Recent developments resulting in increased strength of conveyor belting, provided challenge to Research and Development Department to provide adequate fasteners. The Field and Scientific trials of their findings are most encouraging.

Sales of specialised valves and springs are most satisfactory and the new extensions to the buildings and foundry of these Subsidiaries are now complete.

Export sales are running at a high level and generally the prospects for the coming year are bright.

ACQUISITION

George E. Tupholme and Company, Limited acquired during year. This medium-sized firm, engaged in sheet metal work, specialises in air ducting. Plans already prepared for expansion.

FUTURE ACQUISITIONS

Directors wish to continue their policy of further diversifying the Company's interests by acquisition of other businesses from existing resources.

F. H. LLOYD & CO. LIMITED

(Steelfounders and Engineers)

FURTHER IMPROVEMENT IN TRADING AND PROFITS

A "RIGHTS" ISSUE

MR F. N. LLOYD'S STATEMENT

The seventy-fourth annual general meeting of F. H. Lloyd & Co. Limited was held on July 28th at the registered office, James Bridge Steel Works, Near Wednesbury, Mr F. N. Lloyd (Chairman and Joint Managing Director) presiding.

The following is the statement by the chairman circulated with the report and accounts for the 52 weeks ended April 1, 1961:

Ladies and Gentlemen, I am glad to be able to report a further improvement in last year's trading. The profit before tax has increased by £291,490 to £975,236 and available profits after deducting taxation and profits attributable to outside shareholders are £452,244.

ADDITIONAL CAPITAL FOR DEVELOPMENT

Your Directors accordingly recommend a Final Dividend of 12½ per cent on the Ordinary Share Capital, making 15 per cent for the year. They have also decided to make a "rights" issue of 450,000 Ordinary Shares of £1 each, in the proportion of one new share for every four held. Full particulars are given in separate documents enclosed. It was in 1953 that we last raised additional finance by the issue of 150,000 Ordinary Shares and since then the ordinary capital has been increased from £750,000 to £1,800,000 by two bonus issues. The proceeds of this issue, about one million pounds, will be required for development expenditure over the next few years.

During the year, Mr A. C. Corbett, Director of N. Hingley & Sons, Limited, and Chairman and Managing Director of Wright's Forge & Engineering Co. Limited, became a Director of this Company. At the same time, Mr M. C. Lloyd became a Director of N. Hingley & Sons, Limited. This continues the policy of interchange of Directors between the two companies which began when Mr C. E. Lloyd became a Director of this Company in 1940 and I myself became a Director of N. Hingley & Sons, Limited in 1949. Mr M. C. Lloyd has also been appointed a Joint Managing Director of F. H. Lloyd & Co. Limited with myself.

TRADING CONDITIONS

Trading conditions last year have been rather more active and we have been able to keep our plants economically employed. Competition has been quite severe, particularly from Continental steel founders and we must expect this condition to continue. Our output is limited not only by plant capacity but also by the number of technicians and skilled operatives, although we now have the assistance of those who graduated from our training centre which was established some twelve years ago. Our ability to recruit and train skilled operatives and technicians will be an important factor in our future progress.

In November, 1960, we acquired the whole of the Share Capital of E. C. & J. Keay, Limited of James Bridge, Darlaston, the old-established structural engineering company whose premises adjoin our own. For the past twenty years the offices have been at Henley-in-Arden, but it is intended to accommodate all staff at Darlaston, thereby effecting economies. It is apparent that expenditure on plant and buildings is unavoidable, as existing assets have not been fully maintained. At the same time, it will be necessary to increase output and reduce costs to maintain a satisfactory position in a very competitive market.

INCREASE IN SCALE OF OPERATIONS

The improvement in this year's profits comes mainly from F. H. Lloyd & Co. Limited and Lloyds (Burton) Limited. This has come about both from an increase in the scale of operations and improvements in operating efficiency. At F. H. Lloyd there has been a further increase in machining operations and the sale of engineering products. A Products Department has been established for the purpose of designing and manufacturing engineering machinery for our customers, which can consist of fabricating work, steel castings, machining, fitting and assembly work. Facilities for steel casting manufacture are being constantly enlarged and improved.

The recovery at Lloyds (Burton) Limited, reported last year, has continued and there has been a further substantial increase in turnover. The chief improvement was made in sales of Thermalloy products, one of the lines manufactured in conjunction with the American Brake Shoe Company. The market for these goods appears favourable and we are hoping to increase sales even more during the present year.

PARKER FOUNDRY'S IMPROVEMENT

The trading results of Parker Foundry (1929) Limited show an improvement on those of last year, which was a record since its acquisition by us. This result is particularly gratifying, as it has been achieved at the same time as several major capital projects have been in progress. A new amenities block has been built which provides modern accommodation for medical facilities, lockers and drying rooms, new canteen and dining rooms and several offices. A complete re-organisation of the light machine moulding section has also been carried out and individual machines have been replaced by an almost fully automatic installation. The full benefits of this change are not yet reflected in these accounts and it is hoped that, provided sufficient suitable work can be secured, this plant will make an important contribution to future profits.

The Mechanical & Electrical Engineering Co. (Walsall) Limited and Emco, Limited had another good year. The new premises at Rollingmill Street, Walsall, were completed and occupied in July, 1960. The turnover has been increased and profit margins maintained.

PROGRESS OF INDIAN CONTRACT

The work for which we are responsible under our contract for the Steel Foundry at Chittaranjan is now gathering momentum. We have been able to assemble a competent technical team for this task, partly from our own organisation and partly from recruitment outside, and they are now busily engaged on the work of preparing plans and specifications and assessing tenders. The first party of Indian trainees arrived in January, 1961, and are now undergoing training in all departments of our Works. We understand that the size of this project is to be increased and in this event the scope of our own responsibilities will also be enlarged.

All our companies have made a good start in the current year and profits to date show an improvement. The size of the market for steel castings has always been difficult—if not impossible—to predict and the most that can be said at the present time is that we have a reasonable prospect of being able to maintain the share of it that we now possess. Our prospects will improve or diminish in line with those of the industries which we supply.

THANKS TO EMPLOYEES

Our employees are an enthusiastic and hard-working lot and our thanks are once more due to them for the way in which they have supported the Company in its efforts during the past year. In this connection, I would like to say a special word of thanks to those who have assisted us by imparting their experience to the younger generation, upon whom everything will depend in the future.

The report and accounts were adopted and the dividend, as recommended, was approved.

ST. MARTIN'S LE GRAND PROPERTY CO., LTD.

The following is a summary of Mr. J. B. Andrews' Statement circulated with the Accounts to March 31, 1961:—

Profit & Dividends.—Net profit, after amortisation, taxation and all outgoings increased by £38,938 over 1960. Dividends totalling 14 per cent. already paid.

Future Finance.—Finance arrangements have been made on permanent basis sufficient to repay Bank advance and to provide for all present and forseeable commitments.

Development Programme.—Developments in hand include new office blocks at Euston Road/Tottenham Court Road; Winchester House, Old Broad Street; Site at corner of Foster Lane, Cheapside; Offices, flats and shops at Southport, Lancs.; modernisation of 15-23 Carter Lane, E.C.4.

Industrial Properties.—Joint venture with Union Corporation, Ltd., through subsidiary company in which Group holds 60 per cent., to purchase industrial properties or develop suitable sites; about £700,000 invested to date.

Prospects.—Group engaged in expansion by investment in properties already built, coupled with development of important sites. Ample scope exists for continued growth. Chairman expresses optimism in future of company.

	1961	1960
	£	£
Share Capital	2,503,009	2,503,009

Loan Capital	6,772,221	4,657,101
Group Profit (before tax)	434,053	362,404
Net Profit (after tax)	242,393	208,611

THE LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES

AN ACTIVE AND PROGRESSIVE YEAR

The fifty-first annual general meeting of The London County Freehold & Leasehold Properties Limited was held on July 31st in London.

Mr Thomas J. Cullen (Chairman and Managing Director) presided and, in the course of his speech, said:

The consolidated revenue balance for the year to March 31st last was £1,731,000, that is £330,000 more than the previous year. After income tax, profits tax and interest, the increase is £79,000. Adding £350,000 brought forward from the previous year and £2,871 taxation provisions for past years no longer required there is an available revenue balance of £1,017,200 compared with £936,400 last year. The proposed final dividend of 8d. per 10s. ordinary stock unit will make a total dividend of 1s. 2½d. against 1s. 1d. last year.

The gross value of the property assets at March 31st last shows an increase of £3,452,500. In addition we have entered into contracts for, or are negotiating, further substantial investments that will materially benefit stockholders in the current and the following years.

During the past year we have continued the policy adopted for the last few years of increasing our investments in industrial and commercial premises. We are satisfied we have been able to obtain reliable investments in this field.

PROFITS TAX "BAD AND INEQUITABLE"

All costs continue to rise and in particular profits tax at 15 per cent will cost £40,000 more in the current year. This tax is bad and inequitable and falls only on the ordinary shareholders in a Limited Company.

I must draw attention to the heavy burden of taxation now imposed on property companies and destined to be increased as from April 1, 1961. This taxation falls under two heads: Income Tax (Mainly Schedule A—Property Tax and Schedule D—Excess Rents) and Profits Tax. The amounts payable for the year under review were respectively £558,459 and £179,564, a total of £738,023. Truly a substantial contribution to the National Exchequer! In all, this represents just over 10s. 6d. of every pound earned by the Company and over 11s. 0d. from April 1st last.

A company such as ours, when acquiring a building, must obtain a return with sufficient margin to cover the actual cost of depreciation or amortisation. The annual actuarial sum to cover that depreciation or amortisation being taken out of taxed income costs more than double that amount so long as income tax and profits exceed 10s. 0d. in the £.

This tax is an important contributory reason for our inability to expand in the purchase of flats, until rents are even higher. Every tenant in the country should appreciate this and should help us to fight against this discriminating tax.

Mr Cullen then reviewed the progress of the Company's overseas interests in Canada, Australia and Rhodesia, and concluded:

The year under review has been a very active one and we have every reason to believe that, coupled with our continuing activities, our future prospects are good.

The report and accounts were adopted.

CHAMBERS WHARF & COLD STORES LTD.

HIGHER REVENUE OFFSET BY ADDITIONAL COSTS

SIR DALLAS G. M. BERNARD ON EFFECTS OF STRIKES IN THE PORT OF LONDON

The thirty-fourth annual general meeting of Chambers Wharf & Cold Stores Limited was held on July 28th at 3, Lombard Street, London, E.C.3, Sir Dallas G. M. Bernard, Bart. (the vice-chairman), presiding.

The following is his statement which had been circulated with the report and accounts:

It is with the deepest regret that I have to record the great loss we have suffered since our last Annual General Meeting—through the death of our Chairman and Managing Director, Mr Charles Goldrei on April 24th last, after a short illness. He had been Chairman and Managing Director for the last thirty-four years and the efficient organisation built up during that period has been due to his vision and energy. His colleagues and all members of the Staff will sadly miss his sympathetic help and advice.

I am sorry to report that Mr J. F. Owen decided to retire on December 31st last, and I am sure we will all wish him health and happiness in his well-earned retirement.

Mr G. N. Bezer was appointed an Executive Director early this year. His knowledge and experience of the riverside industry will be valuable to the Company.

TRADING CONDITIONS

Despite the energetic efforts of all concerned during a very difficult period, the Trading results for the fifty-three weeks ended March 31, 1961, were disappointing. The continuance of troubles in the Port of London interrupted the Company's riverside business The unofficial Tally Clerks' strike affected us severely and unofficial local dock labour stoppages, coupled with a shortage of Registered Dock Workers during the summer months of last year disrupted the service we normally give to our customers. These factors all increased the cost of our operations. Moreover, dock labour wages were increased on August 29, 1960, and increases in Clerical and Supervisory salaries followed, but the consequential increase in our charges was not obtained until November 21st. The result of all this was that, although our Gross Revenue was greater than the previous year, this was offset by additional costs.

Conditions in the Port obviously cannot be allowed to continue with the constant threat of disruption and the concern shown by Port Users, Employers and the Trade Unions, indicates that a constructive attempt is being made to deal with this problem. Unless this is solved the reputation of the Port of London will suffer and the livelihood of all those concerned be jeopardised.

THE ACCOUNTS

After charging Interest on Bank Loan of £23,353 (last year £3,611), the Net Profit before Taxation was £232,017, against £272,988. The provision for taxation of £108,507, against £120,460, incorporates provision for Profits Tax at the rate of 12½ per cent, compared with 10 per cent for the previous year. Investment Allowances, Initial Allowances, Excess Provisions for previous periods, less the transfer to Tax Equalisation Reserve, produce a net relief in taxation of £22,412 (£23,129 last year).

The balance of Net Profit after tax was £123,510, against £152,528 for the previous year. Your Directors have transferred £25,000 to General Reserve and recommend a Final Ordinary Share Dividend of 11½ per cent, as last year, making 17½ per cent for the year. This will leave £21,331 to carry forward to next year.

DEVELOPMENTS

The Walthamstow Cold Store became fully operational as an Inland Palletised Cold Store in July, 1960, and has proved a valuable addition to the Company's services

The new Riverside Warehouse referred to in last year's report was completed in September last, and the alterations to Sterling Wharf were completed in May this year. Additional cranes have been added to our Jetty and the delivery services at our main Wharf have been considerably improved.

The commencement of the current year has shown that the dry goods storage has been somewhat affected by the diversion of goods to other ports, due to the labour troubles in London; on the other hand there has been an improvement in cold store tonnages.

In conclusion, may I take this opportunity to express the Company's appreciation of the hard work and earnest endeavour of the Executives and Staff who have so loyally supported the Company during a most difficult year.

CHAIRMAN'S ADDITIONAL REMARKS

Addressing the meeting, the Chairman said: Ladies and gentlemen, I am sure that it must be a great disappointment to you all not to see our late Chairman and Managing Director, Mr Charles Goldrei, presiding at this meeting as he has done since the incorporation of the company nearly thirty years ago. We have suffered a grave loss through his death on April 24th.

This company has really sprung from a small cold chamber which Mr Goldrei built in the late twenties in Albany Road to provide cold space for his own imports of frozen goods. He subsequently enlarged it so as to be able to take in frozen goods from other importers and turned it into a limited company known as South London Cold Storage Ltd. He saw that there was a great future for cold stores and decided to enter the business in a larger way. So in 1934 Chambers Wharf was acquired and the company's name changed to Chambers Wharf & Cold Stores Ltd.

He developed the new premises into their present successful and efficient organisation. Some time ago, he felt that we could not stand alone and thought was given to some sort of working arrangement with our friends, Hay's Wharf. It became clear, however, that a fusion of the two companies was the only practical arrangement and negotiations were entered into to see if a basis could be found to effect a merger. Messrs Baring Bros. acted for us and Messrs Morgan Grenfell & Co. for Hay's Wharf. After very careful consideration they suggested that rather than establishing a new holding company, it would be administratively more convenient for Hay's Wharf to offer to acquire the whole of the issued capital of Chambers Wharf. The full terms were announced to the Press on July 18th. Your Board felt that the proposal was very fair to both companies, and if Mr Goldrei were alive today I feel sure he would be happy with the terms proposed.

I am satisfied, and so are all the members of your Board, that a merger on the terms proposed is in the best interests of our shareholders.

Detailed information regarding the merger and forms of acceptance will be posted to shareholders in the middle of August and I trust that all our shareholders will accept the offer.

May I add that your Board have appointed me Chairman in succession to Mr Goldrei, and I am glad to say that they have appointed Mr Jaeger Managing Director. As you may know, Mr Jaeger was associated with Mr Goldrei from the very beginning of his entry into the cold store business and it is fitting that he should now succeed him as Managing Director.

We, of course, informed Hay's Wharf of the appointments and it has been agreed that they are to be continuing appointments if the merger is effected. This follows the declared policy that Chambers Wharf will operate as a separate entity but full advantage will be taken of combined working in every sphere possible.

The report and accounts were adopted.

CONSETT IRON CO. LTD.

LORD RIDLEY'S STATEMENT TO THE ANNUAL GENERAL MEETING HELD IN NEWCASTLE ON AUGUST 1, 1961

"For 10 months of the year to the end of March 1961 we were able to sell as much steel as we could make and roll, and for the last two months we did very nearly as well, consequently the profit was quite satisfactory and your directors felt justified in recommending a small increase in the dividend in respect of that year. I do not think that this recommendation should be affected by the statement made by the Chancellor of the Exchequer last week, when he asked that there should not be a further general increase in dividends for the coming year.

We made last year a little more steel than we did in 1957, the last financial year in which there was a consistently high demand for steel. Nevertheless, as I have said in my circulated statement, the profit was less in spite of improvements in works technique. This was due to increases in costs outside our own control, and to reduced prices imposed by the Iron and Steel Board.

Early this year the steel industry, as a result of increases in costs of coal, oil, transport and wages, felt obliged to ask the Iron and Steel Board for an increase in prices so as to maintain a reasonable margin of profit from which to accumulate resources for plant replacement. As a result, the Board in June approved an increase of 1 per cent in selling prices, a purely arbitrary decision which represents about one-third of the increases of costs which have occurred since the last price determination.

This company has long had a reputation for supplying plates for the shipbuilding and heavy engineering industries of the North East, and we value many of these firms among our best customers. At the same time, as our output has increased, we have over the years become much less dependent on sales to heavy industry, having obtained many customers in other industries not only for plates but other products also.

Of our ingot output, some 25 per cent is rolled in our Jarrow plant to light sections, flats, bar and strip which is sold to customers in many industries at home and abroad.

A further 20 per cent is rolled into billets which are sold to re-rollers and other steelmakers who roll light products from it, such as wire, sections and strip.

We also sell semi-finished steel to other steelmakers for conversion into sheet, and last year in particular we sold quite a high tonnage for this purpose.

Plate production has taken up to now some 30 per cent of our make of ingots, and of this shipbuilders and ship repairers have been taking less than 20 per cent during the last two years. The remainder has been sold to stockholders and to a wide variety of other customers.

While it is very difficult to make an accurate analysis of the ultimate use of our products, it appears that only about 40 per cent of our steel is now used by heavy industry.

I hope that shareholders have found that the 10 year statistics included in the report are informative and interesting. They show that over this time we have spent £32,000,000 on new plant, of which £19,000,000 has come from our own resources. We have of course considerable sums yet to spend on our present development programme.

The next phase of capital expenditure throughout the industry will probably be aimed at increasing economy and reducing costs, rather than at increased outputs, though often expenditure on increased economy of manufacture leads to some increase of capacity.

When my circulated statement was written we were working a little below capacity and the outlook was uncertain. Since then, the demand for steel throughout the industry has fallen rather rapidly, and in common with other firms we have had to reduce our level of output. I am sorry that this means that we have had to reduce the number of men employed. I hope that this will only last for a short time.

Though the engineering and allied industries at home seem to be fairly busy, it is probable that they are largely drawing on the very high tonnage of stocks held by stockholders and consumers. If that is so it may be some months before the industry can expect to get back to full production.

I myself think that the economic measures recently introduced by the government are likely to have an unfavourable effect on the steel industry and on industry generally in this country. The reduction in demand which will be caused both by higher indirect taxation and by shortage of credit may in the short term reduce inflationary pressure, but it will also increase costs and is unaccompanied by any long term proposals to enable industry to reduce costs and to make the substantial increase in our export trade which is necessary.

I am convinced that the greatest need of this country now is to reduce manufacturing costs, so that we can be more competitive both at home and abroad, yet every action taken by the government in respect of industry seems up to now to work directly or indirectly in the opposite direction."

GROSVENOR HOUSE (PARK LANE)

RESULTS AGAIN A RECORD

The 33rd annual general meeting of Grosvenor House (Park Lane) Limited was held on July 27th in London, Sir Charles Taylor, T.D., D.L., M.P., the chairman, presiding.

The following is an extract from his circulated statement:

I am very pleased to report that we have once again achieved record results. The trading profit for the year, before tax, was £652,352, which is the highest in the history of the Company. Your Directors recommend a final dividend of 10½d. making a total for the year of 1s. 3d. on each 5s. ordinary stock unit compared with 1s. 1½d. paid last year.

Referring to the modernisation programme, the chairman said: During the past year a new canopy has been built at the entrance in our courtyard off Park Street, and at the same time a canopy has been built over the pavement which is alongside the shops in the courtyard.

Two new cloakrooms have also been completely re-designed and re-furnished, both in accordance with the most up-to-date ideas.

The shops in the courtyard which were previously used as offices have now been entirely restyled and rebuilt and will soon be available for letting as shops.

The new flower shop on the corner of the courtyard and which is known as Elizabeth Gardener is, I think you will agree, a very great improvement on the previous shop. It will, we are sure, be a service to our clients and an asset to the business.

The Grill Room which has remained unchanged for more than 30 years is being completely redecorated in a delightful way, and we are installing in it the most modern air-conditioning plant. This should be completed this year. It will be known as the Burghley Room and should provide one of the most charming luncheon and dining rooms in the whole of London.

Grosvenor House is justly famous for the Great Room, where a large number of banquets take place throughout the year. During the coming year we have made plans to modernise this room also and the scheme will include eight modern and magnificent chandeliers which have been specially designed for us.

Those of you who have seen the modernisation that has been done so far, and who will, in due course, see the modernisation which is now planned, will, I am sure, be as proud of the hotel as your Directors are and regard the money as being well spent.

Towards the end of the Financial Year, the Company purchased all the Share Capital of the company owning the Polygon Hotel in Southampton. The Polygon has a fine reputation and is much used by transatlantic and other travellers as well as having a substantial business in Southampton and Hampshire.

I am happy to be able to tell you that there is every indication that we shall have a good year as far as turnover is concerned this year. But I am afraid that expenses will be higher and I should be a very brave man indeed if I prophesied other than a consequent reduction in our net profits for the year ending next March.

The report and accounts were adopted.

COMPANY AFFAIRS

John Brown

SHIPBUILDING and boilermaking are ailing and shareholders in John Brown must be relieved that in the year to last March, as in the previous year, satisfactory results from the group's machine tool interests have made the group's earnings as a whole so buoyant. John Brown's consolidated gross profits rose by almost 24 per cent, from £3,645,000 to £4,491,000, and net profits by 11 per cent, from £1,962,000 to £2,178,900, as the higher profits of the two wholly-owned subsidiaries producing machine tools more than made good the fall in profits elsewhere. Net profits of Firth Brown rose by 35 per cent, from £255,000 to £344,000, after a lower depreciation charge but after bigger provisions for fixed assets replacement and "exceptional expenditure." Net profits of the other machine tool maker, Wickman, rose by 32½ per cent from £516,000 to £683,000. Since the rise in combined net profits of Firth Brown and Wickman exceeds that of the group as a whole by £40,000, it seems likely that even after allowing for a reduction in the dividend income from Westland Aircraft there must have been some fall in profits from shipbuilding and boilermaking.

Equity earnings have risen from 28 to 31 per cent, but the chairman, Lord Aberconway, says that though the directors originally intended to raise the final payment the ordinary dividend has been left unchanged at 11 per cent in complying with the Chancellor's request for dividend restraint. As Lord Aberconway points out, an unchanged dividend represents a smaller rate of return on the funds attributable to the ordinary capital, amounting to 2.8 per cent in 1960-61 compared with 3 per cent in 1959-60. At 39s. 6d. the £1 ordinary shares yield 5.7 per cent, whereas shipbuilding shares as a whole yield rather more.

Harper Engineering

IN 1959 and 1960 when Harper Engineering and Electronics was busily acquiring new subsidiaries, the price of its shares rose rapidly, to touch a peak of 13s. last year. Many of the newly acquired companies were family concerns, usually acquired against an issue of Harper shares, taking the price apparently in relation to the current value of the shares. The fall in the value of Harper Engineering shares since the middle of last year is not likely therefore to strengthen the relations between the parent holding company and the subsidiaries.

The company now has a new chairman, Sir Stanley Rawson, and a new managing director, Mr A. Neate. Mr Weaver has left the board but Mr Harper, the former managing director who is believed to be a substantial shareholder, has remained on it. Relations between Mr Harper and the new directors started well at the beginning of the year, with Sir Stanley referring publicly to Mr Harper's "imaginative thinking." Sir Stanley now describes the operations of most of the subsidiaries as "essentially sound and capable of earning profits substantially higher than are being earned at present," but last year's ambitious extensions in one or two directions are leading to difficulty. There are questions whether the group can provide enough work to keep the Spembly research and design centre busy and whether the attempt to re-equip the Harper Engineering works has been successful.

In an interim statement, Sir Stanley Rawson says that profits of the principal subsidiaries have been maintained but the directors consider it wise to make provision for losses, possibly amounting to more than £250,000, that may arise from certain commitments entered into before this year. These losses are described as of "an exceptional character"; but in addition "certain over-valuations of stocks and work-in-progress" have to be dealt with and as a result the group's profits will be lower. The completion of a number of capital schemes has placed a "severe strain" upon cash resources and the directors are still considering plans to raise additional finance. In a letter to the share and loan department of the London Stock Exchange Mr Harper dissents from Sir Stanley's statement, and says that "steps are being taken by me in conjunction with other substantial shareholders to deal with the situation created by the chairman's latest statement." In reply, Sir Stanley says that the exceptional losses of about £250,000 arise "from ventures initiated by Mr Harper himself while he still held the office of managing director."

He adds that much has been achieved in the past few months "in creating a new understanding" between the parent company and its subsidiaries but it comes as no surprise that no interim dividend is proposed for the year to June 30th last. The shares now stand at 4s. 4½d.

Wellman Smith Owen

THE Wellman Smith Owen Engineering Corporation has the steel industry as its principal customer. Its shares and those of the leading steel producers are at their lowest levels for the year, but while steel shares are yielding 6 per cent and more, the 5s. ordinary shares of Wellman yield only 3¾ per cent. In part this reflects the reasonable assumption that Wellman will continue to do well while the latest phase of the development of the steel industry lasts and in part it reflects Wellman's progressive record of profits over the last eight years. This record was unmarred in the year to March 31st when gross profits rose

by 18 per cent from £1,635,000 to £1,923,000. This includes some of the profits of the Incandescent Heat Company, for which an offer was made by Wellman in February and whose accounts have been made up for a fifteen month period.

As forecast, the ordinary dividend has been maintained at 25 per cent, but as a result of an increase in minority payments and the increase in issued capital the cover has fallen slightly to 2¼ times. The announcement of a one-for-seven scrip issue, suggests that in a year's time shareholders can expect an effectively higher payment, if by that time dividends should be out of the Chancellor's deep freeze.

The group's strength can be attributed partly to the variety of its interests, which include agreements with the Austrian firm which evolved the LD Oxygen process for steel-making and with the German company, Schloemann A.G., to collaborate in the construction of rolling mills in the United Kingdom and the Commonwealth. The Incandescent Heat Company added a wide range of businesses complementary to those of Wellman. This lessens Wellman's dependence upon the steel industry but orders from that industry in the immediate future will largely determine the group's profits.

Metal Industries

THE acquisition of Lancashire Dynamo by Metal Industries early last year clearly put the emphasis of the group's interest on electrical engineering and industrial automation. Now the latest report makes it clear that the name, Metal Industries, is a misnomer, for it shows that even before the Lancashire Dynamo acquisition 55 per cent of its profits came from electrical engineering and in the year to March 31st last, when Lancashire Dynamo's profits were consolidated, 73 per cent of profits came from that side of the business while the metals and shipbreaking side contributed less than 10 per cent.

A full breakdown of profits section by section and company by company clearly reveals weaknesses in the group's structure, especially on the metals side. The profits of the two companies concerned with metals and scrap recovery fell from £317,000 to £83,000, and while the hydraulic companies generally had a satisfactory year Fawcett Preston incurred a loss and so did the marine salvage company. The latter has been making losses for some years and it has now been closed down. On the electrical side by far the biggest subsidiary is Brookhirst Igranic and following an increase of 9 per cent in its profits to £882,000 contributed 37¾ per cent of the group's total earnings.

Companies in the Lancashire Dynamo group have not made too auspicious a start under the management of Metal Industries, and their profits for the 15 months to March 31st at £872,000 were only £9,000 above those for the previous twelve months. Sir Charles Westlake, the chairman of Metal Industries, says that the integration of these

companies is a slow and complex process but he is satisfied that the acquisition is proving its worth. The acquisition was not made cheaply, for competing against Electrical and Musical Industries Lancashire Dynamo paid in share and cash the equivalent of £12 million.

With the company's financial year ending on March 31st the £3.9 million rights issue made some 15 months ago is only now reflected in the latest balance sheet, which shows a reduction in the net overdraft from £2,820,000 to £113,000. Bank interest charges, which rose from £35,000 to £103,000 in 1960-61, should therefore fall in the current year. But as margins in the engineering industry are still under pressure the chairman is cautious about the future, saying no more than that he expects profits at least to be maintained. On the current dividend of 15 per cent, covered about 1½ times, the £1 shares at 56s. 3d. yield 5⅓ per cent.

Profits from Food

THE dynamic policies of the wholesale and retail provision merchants, **Fitch Lovell,** based on an expansion of sales through existing outlets and the acquisition of further outlets, has made it one of the biggest food groups in the country. In the face of more difficult trading conditions in the year to April 29th, trading profits rose by 18 per cent from £1,814,000 to £2,145,000 and net profits by 24 per cent from £635,000 to £790,000, though some part of this increase must reflect the inclusion of profits from R. Gunner which Fitch Lovell acquired in September, 1960. The ordinary dividend of 15 per cent has been maintained on the capital as increased by last year's one-for-four rights issue and the customary tax-free bonus of one per cent is also paid.

Fitch Lovell presumably has interests diverse enough to offset the vagaries of prices in dairy products (earlier in the year, it may be recalled, Allied Suppliers reported that the fall in butter and cheese prices had resulted in stock losses). The group is in cheese processing, meat and bacon, baking, ships' stores, and plywood and timber. It has done well in adding to its sales through a retail system which is still based largely on service shops rather than supermarkets (of which there were only 46 out of a total of over 400 outlets last September). But further shops are no doubt being converted to self-service.

The 2s. 6d. ordinary shares at 10s. 7½d. yield just under 4 per cent on the combined dividend and tax-free bonus, which is more than twice that of Associated British Foods, and higher than the earnings yield of London Grocers.

Associated British Foods, under the chairmanship of Mr Garfield Weston, is a much bigger undertaking, with interests in bakeries, biscuits, wholesale and retail groceries, ice cream and frozen foods. In the year to April 1st it too reported higher trading profits—up 11 per cent, from

£11,471,000 to £12,775,000—and net profits—up 10 per cent, from £3,942,000 to £4,340,000.

The ordinary dividend has been raised from 21 to 22½ per cent and the cover is fractionally higher at 2½ times. At 12s. 4½d. the 1s. ordinary shares yield only 1.8 per cent. This puts them firmly in the growth stock category, though in the past year ABF's profit record has not been so dynamic as that of the smaller Tesco, London Grocers and Fitch Lovell groups.

Thorn and Ultra

SHAREHOLDERS in Thorn Electrical probably expected that in the year to March 31st its profits would fall but, in fact, the preliminary announcement reveals a 5 per cent rise in consolidated trading profits. The rise in trading profits from £3,917,000 to £4,114,000 is however more than absorbed by a rise of £206,000 in depreciation so that after a lower tax charge, reflecting the benefit of investment allowances; the rise in net profit is limited to 1½ per cent, from £1,526,000 to £1,549,000.

The directors have left the dividend on the ordinary and the "A" shares unchanged at 25 per cent and the cover is fractionally higher at 4½ times. As the total output of television sets fell by about 50 per cent in the year to March 31st it seems probable that Thorn was faced with narrower margins and lower profits on this side of the business and that the advance in earnings came from its other interests, including lighting, radios and cookers. After the results were announced the 5s. ordinary shares gained 3s. and now stand at 49s. 6d. to yield 2.6 per cent.

Thorn purchased Ultra's radio and television subsidiary in May and Ultra also sold a 40 per cent interest in its electronics subsidiary after its financial year ended on March 31st. Then Ultra's gross profits rose from £432,000 to £452,000, but these profits relate only to the holding and electronic company. The radio and television division, which made a net loss of £196,000, was excluded from the accounts. The chairman, Mr E. E. Rosen, says that the prospects for Ultra Electronics are promising and he appears to be reasonably confident that partly as a result of the know-how agreement with the American group, Electronics International, which bought a 40 per cent interest in Ultra Electronics in April, the electronics company will ultimately return as high a profit to its parent as it did when it was wholly-owned. The sale of the radio and television division to Thorn will eventually add £2.4 million to Ultra's cash balances, which can be used to reduce its bank overdrafts and to provide finance for the future development of the electronics division. The dividend has been maintained at 25 per cent but it remains to be seen whether profits from a 60 per cent interest in Ultra Electronics will be sufficient to keep the payment at that level in the immediate future. The 5s. ordinary shares at 25s. 3d. yield 4.9 per cent.

London Stock Exchange

FIRST DEALINGS	July 10	July 24	Aug. 4
LAST DEALINGS	July 21	Aug. 3	Aug. 18
ACCOUNT DAY	Aug. 1	Aug. 15	Aug. 29

OVER the week to Wednesday the London stock market was subject to the influence of several diverse factors. On Thursday of last week equities suffered one of the worst days on record and the *Financial Times* index dropped 8.7 points. This was mainly delayed reaction to the Chancellor's measures of the previous Tuesday, but the Berlin situation and in particular President Kennedy's speech was a contributing factor to the sharp setback. This downward movement continued both before and after the weekend but there was no repetition of Thursday's slide. After the announcement of Britain's intention to negotiate for membership of the Common Market there was a general improvement in prices particularly among the leaders likely to fare best if such a link was made. But business generally was very small and on Tuesday bargains marked totalled under 9,000. The improvement widened later on anticipation of the passing of the trustee bill.

Gilt-edged stocks have had another bad week; further reaction to 7 per cent Bank rate, the sharpness in the rise of the Treasury bill rate and the trustee act (having a reverse effect to that on equities) have left most stocks sharply lower and War Loan 3½ per cent fell to a new low of 51. The only exceptions were among short dated stocks and Exchequer 3 per cent 1962-63 showed a net gain of ¼ to 94⅜.

After some sharp falls, bank shares rallied after the weekend but generally showed net losses over the week. Exceptionally, Westminster "B" gained 3s. 6d. to 79s. 6d. Steel shares showed further falls and John Summers lost a further 2s. 6d. to a new low this year of 45s. 10½d. In the engineering section John Brown's higher profit figures led to a net rise of 3d. at 36s. 9d. and Guest Keen and Nettlefolds gained 1s. 1½d. to 91s. 7½d. Property shares continued weak as a result of fears of the impact of the credit squeeze and City of London Real Property lost 3s. 6d. to 68s. 9d. Following the dividend standstill, Great Universal Stores "A" lost 1s. 3d. to 49s. 9d. while Unigate lost 1s. 4½d. to 16s. 10½d. on a disappointing dividend. Motor shares generally benefited from common market hopes and Jaguar "A" gained 4s. 9d. to 75s. 9d. after publication of its peak output figures. Among other leaders Imperial Chemical Industries gained 1s. to 69s. 9d.

Oil shares continued weak and British Petroleum lost 2s. 6d. to a 1961 low of 45s. 6d. The recent upward trend in gold shares was halted before the weekend, but they remained fairly firm later. Tins fluctuated widely and Tronoh lost 2s. 6d. to 73s. 6d.

THE MONEY MARKET

THE syndicate of discount houses came out of last Friday's Treasury bill tender with an allotment of only 28 per cent. Outside bidders expected that the syndicate would push its bid as high as possible to leave room for reductions in the weeks ahead. It raised its bid by 2⅛ per cent, but the rise in the average rate of discount of £2 1s. 4d. to £6 13s. 9d. per cent was slightly smaller, and the bulk of the bills went to outside bidders. This outside interest was reflected in a rise of £93 million to £427 million in total applications.

Although one or two houses were forced to borrow a small amount from the Bank of England at 7 per cent on the day after the Bank rate change, credit was very comfortable for the remainder of last week. On each of the three days to the weekend the authorities bought bills to absorb the surplus credit and some balances were obtained from the outside banks at 4 per cent. After the weekend credit was tighter and the rate for overnight money hardened to 6⅛ per cent in some cases. The authorities helped the market by the purchase of bills on each day to Wednesday and on Tuesday the help was fairly large.

APPOINTMENTS

Petfoods LIMITED

ADMINISTRATION OFFICER

PETFOODS LIMITED wish to appoint an Administration Officer in their Market Research Department. Applications are invited from proven administrators (men) below the age of 40 years. Previous Market Research experience is not essential but some knowledge of machine tabulation would be an advantage.

The successful applicant will have overall control of the field force and clerical personnel of the Market Research Department (approximately 70 women) and the co-operation of fieldwork and office work with particular reference to the scheduling and timing of all surveys.

The job will be centred at Melton but a considerable amount of travelling is envisaged.

The starting salary will not be less than £1,700 per annum and the Company operates a comprehensive Social Security Plan covering life assurance, non-contributory pension and sickness benefit.

Applications giving details of qualifications and experience to date, to :—

The Chief Personnel Officer,
PETFOODS LIMITED,
Melton Mowbray, Leicestershire.

THE MANCHESTER COLLEGE OF SCIENCE AND TECHNOLOGY
(Faculty of Technology in the University of Manchester)

Applications are invited from honours graduates for appointment as RESEARCH ASSISTANT in the Department of INDUSTRIAL ADMINISTRATION to work in one of the following fields :—

Data Processing, Managerial Economics, Industrial Psychology, Work Study, Operational Research.

Salary, £675 per annum. F.S.S.U. and Family Allowances.

Application forms may be obtained from the Registrar of the College, Sackville Street, Manchester, 1, to whom applications should be forwarded by August 13, 1961.

London County Council

ARCHITECT'S DEPARTMENT.

TOWN PLANNING RESEARCH ASSISTANTS wanted in the Town Planning Division for research on location of industry, population, employment and land use statistics and open space requirements, etc.

Applications are invited from persons holding an Honours degree (2nd class or above) in Geography, Economics or the Social Sciences. Applicants should intend to make a career in planning and to qualify as Associate Members of the Town Planning Institute by evening study.

Commencing salary in the range £680 — £960 or £830 — £1,250 according to age and experience. Particulars and form returnable by 19th AUGUST, from Hubert Bennett, F.R.I.B.A., Architect to the Council (EK/E/223/36), County Hall, S.E.1.

MALAYAN INDUSTRIAL DEVELOPMENT FINANCE LIMITED

ECONOMICS RESEARCH EXECUTIVE

This public company seeks the services of an economics research executive. He would be responsible to the General Manager for the work of the new research department. His functions would be the study and analysis of imports and exports, the discernment of economic trends and their influence on the manufacture of selected industrial products in Malaya. The work will call for ability to analyse and interpret statistical and economic information.

Candidates should be between 25 and 35 and possess an Honours Degree in Economics or Commerce. Previous experience in planning, market research and the assessment of development problems is desirable. Salary will be in the region of £2,500 per annum including allowances for car and housing. Free passages for successful candidate, wife and family. Outfit allowance. Gratuity on satisfactory completion of service. The appointment will be for two tours not exceeding five years, with liberal fully paid leave between tours. Interviews will take place in London during September.

Applications, setting out full details of age, qualifications and experience, together with names and addresses of referees, should be addressed to The General Manager, Malayan Industrial Development Finance Limited, 13-15 Ampang Street, Kuala Lumpur, Malaya.

ICI

WOMAN GRADUATE

Heavy Organic Chemicals Division requires a woman graduate for work in the Economic Study Section. This Section is responsible for the collection and analysis of economic and statistical information in the heavy organic chemicals field and long term trends have to be identified so that forecasts can be made.

Applications are invited from women who have recently graduated in Commerce, Economics, or Geography, as principal subjects. Mathematics up to subsidiary level is desirable ; some knowledge of chemistry and an ability to read German or French, would be valuable additional qualifications.

Please write to:—

Personnel Manager,
Imperial Chemical Industries Limited,
Heavy Organic Chemicals Division,
Organic House,
Billingham,
Co Durham.

Quoting reference no. WG/JM/6.

LANCASHIRE COUNTY COUNCIL

ORGANISATION AND METHODS TEAM LEADER required. Grade A.P.T. V (£1,310-£1,480). Experience and training in O. & M. techniques essential. Knowledge of Work Study Procedures an advantage. Applications stating age, qualifications, education, experience, present appointment, etc., together with the names and addresses of two referees, to the Clerk of the County Council (B), County Hall, Preston, by August 9, 1961.

GRANGE CHEMICALS LIMITED
a subsidiary of
BRITISH HYDROCARBON CHEMICALS LIMITED
(Manufacturers of Petroleum Chemicals)
requires for its London Office

A TECHNICAL SALES ASSISTANT

Applicants should be approximately 28-30 with a science degree and preferably some experience in the paint, plastics or detergents industries as duties will include sales of raw materials in these fields in the U.K.

This post carries an attractive starting salary, is pensionable (non-contributory), and has prospects of increasing responsibility.

Apply, quoting Serial No. SA/74, in strict confidence, with full details to: Personnel Dept., British Hydrocarbon Chemicals Limited, Devonshire House, Mayfair Place, London, W.1.

NATIONAL EMPLOYERS' ASSOCIATION

in Westminster requires man aged 25-30 as Economics Secretary. Not less than £1,000 p.a. Applicants must be graduates, preferably with a degree in economics.—Apply to Box 1535.

Assistant Statistician

Kodak Limited seek an ASSISTANT STATISTICIAN for the Statistics and Market Research Department who will specialise in the analysis of markets for photographic equipment. He will also assist in forecasting and survey planning.

Applicants should be in the 20-25 age group and graduates with a degree in one of the social sciences including statistics. Some experience in the application of statistics in marketing would be useful but not essential. An interest in photography is desirable.

The Company offers a range of benefits including a generous bonus scheme, and a starting salary of not less than £750 p.a. for a man qualifying this year. Candidates for this post should write to the Personnel Manager, Kodak Ltd., Kingsway, W.C.2.

MARKET INFORMATION AND STATISTICS

Pritchard Wood & Partners require an Executive, preferably with an Economics and Market Research background, to develop an existing Market Information and Statistics Department. Advertising experience would be an advantage, but is not essential.

Please write giving personal details and salary required to : Personnel Manager, Pritchard Wood & Partners, 197 Knightsbridge, S.W.7.

THE NATIONAL FEDERATION OF HOUSING SOCIETIES

APPOINTMENT OF DIRECTOR

The National Federation of Housing Societies (recognised under the Housing Act, 1957, as the central organisation for non-profit housing) is expanding its organisation to launch and direct a national campaign for providing both family housing and housing suitable for old people through Housing Associations and Co-partnerships.

Applications are invited for the newly created post of Director at the Federation's office in central London. Appointment initially for three years. Age 40-55. Salary of the order of £3,000 according to qualifications. Experience of housing association work an advantage but not essential. Application to be made by 21st AUGUST on forms to be obtained from the Secretary to the Federation, 12 Suffolk Street, S.W.1.

ADMINISTRATION MANAGER responsible for Accounting and Administrative functions of factory employing 6,000 people and engaged in precision engineering of aircraft accessories. The position calls for the ability to provide a complete and virile management accounting service to an expanding Company situated in North West London.

A standard cost system is in operation.

The Company is a member of an old-established Group of Companies and the position carries an attractive starting salary ; Pension and life Assurance benefits.

Apply in confidence to Box No. 1538.

UNIVERSITY OF BRISTOL

Applications are invited from graduates for the post of Research Assistant in the Department of Economics, to work on an econometric study of company dividend policies. The appointment will be for one year in the first instance, renewable annually, and will carry a salary within the range £700 to £800 p.a. Applicants should have at least a second class honours degree in economics and preference will be given to those with some knowledge of mathematical statistics. Applications should be sent not later than August 18th to the Registrar, the University, Bristol 8, from whom further particulars may be obtained.

MARKET RESEARCH. Part-time interviewers (male or female) under 45 required anywhere in the U.K. Experience in interviewing or related fields essential. Hard work and good pay. Full details of experience and availability to Box No. 1537.

UNIVERSITY OF NIGERIA, NSUKKA

Applications are invited for the posts of (a) 1 SENIOR LECTURER, (b) 1 LECTURER in the College of Business Administration and (c) 1 SENIOR LECTURER in the College of Finance at the University of Nigeria, Nsukka. Qualifications for posts (a) and (c) : A good honours degree with professional qualifications, at least five years of teaching experience in an institution of University standing, ability to initiate and develop research projects, some recognised publications, experience in directing group discussions, preferably some experience in inter cultural education. For post (b) : A good honours degree with some teaching experience and research experience is desirable.

Salary scales for posts (a) and (c) £2,275 by £75 to £2,575 per annum. For post (b) £1,200 by £75 to £1,650 bar ; £1,725 by £75 to £2,175. Point of entry depending on qualifications and experience.

Passages paid for appointee, wife and five children under 21 years, on appointment, leave after 21 months' tour and termination. Children's allowances and car allowances, superannuation scheme. Accommodation with hard standard furniture. Detailed type-written application in sextuplicate naming 3 referees by August 20, 1961, to London Representative, University of Nigeria, 33 Craven Terrace, W.2. from whom further details may be obtained.

PRICE WATERHOUSE & Co.

EXPERIENCED CHARTERED ACCOUNTANT FOR FAR EAST

Price Waterhouse & Co. (Malayan Firm) requires experienced chartered accountant for managerial position in MALAYA or SINGAPORE. Terms according to age and experience but are attractive and adequate to provide comfortable standard of living and margin for saving. Passages for successful applicant and his family paid both ways: provident fund. Applicants for this post should have had at least five years' experience in professional firm since date of qualifying.

Normal initial contract three years with six months' leave on full pay at conclusion (three months if not returning to firm). Excellent prospects for further advancement for suitable candidate. A partner of the Malayan firm will shortly be in London to interview applicants.

Replies with full particulars to Price Waterhouse & Co., 3 Frederick's Place, Old Jewry, London, E.C.2.

NATIONAL FARMERS' UNION require economist (male aged 25-35) to assist primarily on International trade matters. Salary according to age and experience. Contributory superannuation scheme. Graduates, with good degree in Economics or allied subjects, should send details of qualifications and experience to the General Secretary, National Farmers' Union, Agriculture House, Knightsbridge, S.W.1, marking envelope "Personnel."

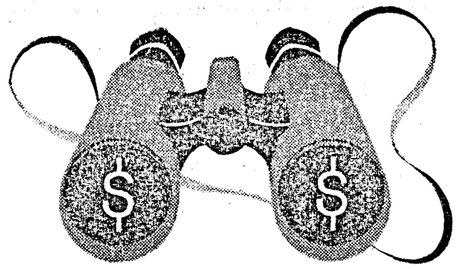
Investment Opportunities in Japan!

In 1959 Japan attained the highest economic expansion of all the industrial countries of the world. Its gross national products that year increased by 16 per cent over the previous year and has seen a yearly increase ever since. This upward trend has increasingly induced overseas investments in Japanese securities.



Daiwa Securities, as one of the four largest securities companies in Japan ... capitalized at £8 million sterling and having 4,000 employees ... is engaged in a wide range of business, acting as broker, dealer and underwriter of securities and distributor of investment trusts. The "pioneering spirit" which has been the motivating power behind its 60 years of expansion is still very predominant today.

Make your money work for you in Japan's booming industries by investing through expert and experienced hands. For literature on Japanese stocks, bonds, debentures, investment trusts, etc., write

ANNOUNCING THE NEW

LAVRADIO FERTILIZER FACTORY

NEW SYMBOL OF ANGLO-PORTUGUESE FRIENDSHIP

Portuguese and British are collaborating in a vast new project for the enrichment of Portugal's agricultural economy—the realization of a large chemical processing complex to produce the fertilizers essential to agricultural development.

The complex, known as the Lavradio Fertilizer Factory, will be the largest of its type in Portugal and will be operated by the Portuguese firm of Uniao Fabril do Azoto. British engineers of the Kellogg organization will play a prime role in the execution of the project. It will consist of a 180 tons per day ammonia plant, a 123 tons per day urea plant, and plants for the production of nitric acid, ammonium nitrate, nitrolimestone, and sulphonitrate.

The project, which will produce thousands of tons of urea, nitrolimestone, and sulphonitrate fertilizers each year, will be erected at Lavradio on the Tagus River, opposite Lisbon. Much of the engineering and procurement of materials will be carried out by Kellogg International Corporation. The Kellogg organization will also carry out construction of all major process facilities.

Scheduled for completion in 1962, this complex will be of vital importance to the Portuguese economy, and the part played by British engineering will add another page to the long history of Anglo-Portuguese friendship. If you are planning to build new processing units at home or abroad, Kellogg International Corporation would be glad to show you how its services could work to your company's advantage in realizing the operating plant.

HOME

SOFT CENTRE

The mammoth handout from the IMF has put a respectable foreign currency balance into the Bank of England: but the hole this makes in the IMF's resources re-emphasises that the fund needs strengthening if it is to be a really effective central bankers' bank (p. 645).

IRON HAND

The white-collar unions which set out to shoot Mr Lloyd's trucial flag—and its bearer—to tatters may feel less confident now that he has unmasked his heavy batteries (p. 606).

The pruning of the Foreign Office's spending (for the third time in ten years) could impair both the value and efficiency of Britain's representation abroad (p. 607).

SOLID SUPPORT

The growing solidarity of Labour and Mr Gaitskell's control of it have somewhat unnerved the weaker Tory vessels: but the Government ended the session with a final flourish—and with some achievements to show (p. 610): one of them is the Mental Health Act, the penological implications of which are still somewhat unclear (p. 611).

STRONG-ARMERS

The troubles among Smethwick's council tenants over their new Pakistani neighbours should be seen in a context wider than pure racism, which is only one element in a general problem being exploited by real racists (p. 627).

Plaid Cymru has been on the warpath: but if the significance of home-rulers and nationalists is fading, their xenophobic antics serve to shame jingoes in the European debate (p. 612).

Violence by malice and carelessness is increasing, and its perpetrators are disturbingly younger (p. 611).

VELVET GLOVE

The Inland Revenue has explained its treatment of top people's tax allowances: and on most points it is prepared to be reasonable (p. 648).

Industrial policies for easing the lot of redundant workers are confused where they exist at all: some guidance from the Ministry of Labour would be helpful (p. 612).

The Chancellor's measures dealt kindly with hire-purchase businesses, who have responded by biting their customers (p. 650).

INTERNATIONAL

DOWN TO EARTH

Berlin: The time is coming for the diplomats, still orbiting in the outer space of grand phrases and military posturings, to come to earth and negotiate (p. 603). The western foreign ministers last weekend spent too little time preparing for re-entry to a calmer atmosphere (p. 637).

Heads of Neutral Nations *are to meet in* Belgrade in September; the leverage of the uncommitted peoples can only be used effectively if they bury faction amongst themselves (p. 604).

Major Titov's prolonged flight and controlled descent are military as well as scientific portents (p. 611). They have been taken calmly in the United States, where Congress has been getting on with providing the money for the President's new answer to the Russian challenge (p. 620). Wall Street, unlike the President, believes that this answer will prove inflationary (p. 620). Far more excitement has been caused by the outbreak of piracy in the high skies (p. 622).

UP TO AMERICA

Cuban criticism of Mr Dillon's massive aid offer to the inter-American social and economic conference has missed the mark. But while **Latin Americans** procrastinate over domestic reform and continental integration, the United States still hesitates on trade policy (p. 615).

This autumn's fight for the New York mayoralty has political implications far beyond the city itself (p. 619).

The increase in long-term unemployment is causing concern (p. 622). Californian farmers have won no more than a respite from trade union interference (p. 623). What that interference can do is shown by the abandonment of New York's opera season (p. 624).

Getting into college is as complex a procedure in America as in Britain (p. 623).

PIECES OF CHINA

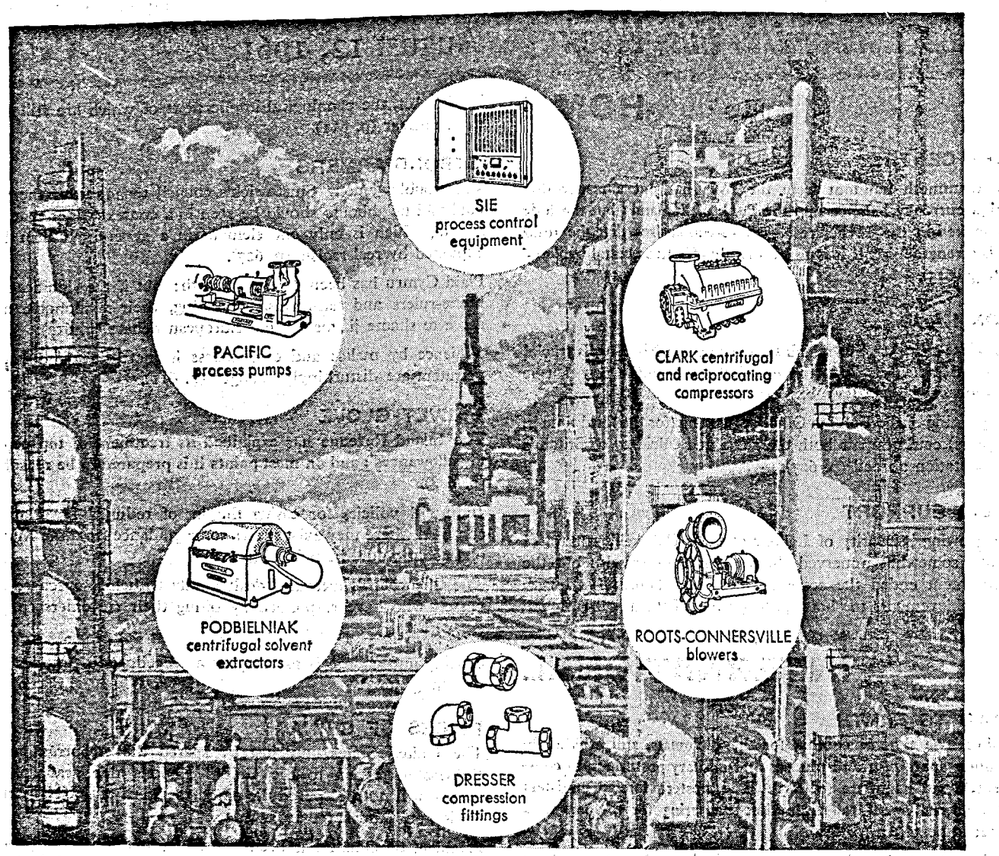
The United States may just be spared the embarrassment of **Chinese** admission to the United Nations this year (p. 611). France will not be spared the embarrassment of a UN assembly session on **Tunisia** (p. 610).

President de Gaulle has been grumbling at the rumblings of his critics, but his own fumbling may be partly responsible for the intractability of Algerians, Tunisians and French farmers (p. 615).

The lull in **Algerian** diplomacy is being filled by threats and rumours of right-wing violence (p. 612).

Bombs in the **South Tyrol** may not blow up the Austrian coalition, but their blast has shaken Austria's bargaining position (p. 642).

The outbreak of violence in **Northern Rhodesia** is directed as much against Mr Kaunda's policy of non-violence as against the new Constitution (p. 616).



UNITING NATIONS

The formation of a new **Congolese** government, which is beginning to draw support from all regions of the divided country, is a notable success for the United Nations' patient effort to put Congo Humpty together again (p. 608).

There is no easy economic answer for **Nyasaland,** but it has leaders and potentialities which could together provide a viable alternative to Federation (p. 638).

South Africa's general election will merely endorse the policy of **apartheid.** The white opposition to Dr Verwoerd is divided and dissents only marginally from his well-known principles (p. 640).

Dresser is everywhere in the WORLD of CHEMICALS

Is pressure involved? Dresser provides it ... with centrifugal and reciprocating compressors and centrifugal pumps. Dresser confines it ... with compression fittings of many types.

Must materials, liquid or solid, be handled or moved? Dresser equipment pumps them, or blows them. Do complicated processes require monitoring or cycling? Dresser electronic instrumentation may be the answer.

And ... Dresser makes highly efficient, multipurpose centrifugal solvent extractors that have earned a global reputation for separating and removing many elements from liquids.

Refineries, constructors, food processors, manufacturers of pharmaceuticals, plastics, paper textiles ... these and many more are faithful Dresser customers speaking many languages ... located on every continent.

The world of chemicals is a Dresser world. One that Dresser understands and supplies through a world-wide group of integrated companies and licensees. Call on the men of Dresser ... rely on the products and technical services of Dresser ... anywhere in the world.

MODERN INDUSTRY REQUIRES MODERN STEEL MATERIALS

Nippon Kokan (Japan Steel & Tube Corp.) has the advantage of over 50 years' experience as Japan's leading steel maker and shipbuilder. A major supplier of standard and speciality steel, the most exacting requirements are applied to NKK's tubular products for the oil and gas industries and for plate and sections for ships and industrial structures–from blast furnace to the finishing mill.

NKK is also proud of having in operation this year the largest and newest galvanizing sheet plant in the whole of Asia–capable of producing with the latest Sendzimir Process every kind of superior galvanized product.

NKK **NIPPON KOKAN K.K.**

430 enemies

but many thousands of friends

There are up to 430 enemies of good paper production—430 variables which can spoil the consistency of a paper.
At J. A Weir we have some of the best and most modern plant in the country but this alone is not enough.
Only craftsmanship, wedded to science, can ensure the perfect paper which is part of our tradition and our job is not to mass-produce thousands of tons but to meet the exacting needs of modern printing in more modest quantity.
An important man in the constant battle against these variables is the Beaterman, for on his skill and not on the machines alone depends the final properties of the sheet.
We may have 430 enemies but, thanks to our craftsmen, we have many thousands of friends.

Just for interest you might well enjoy reading 'Talking to Papermakers'. Please let us know if you would like a free copy.

Diplomatic Circles

LIKE Major Titov, the statesmen in charge of the Berlin crisis, both communist and non-communist, are going round and round the subject in circles. Unlike Major Titov, the diplomatic orbiters can be congratulated neither on their spirit of adventure nor on their contribution to progress. The western foreign ministers, meeting in Paris last weekend, talked vaguely of the need to negotiate about Berlin but studiously avoided what a layman might consider the logical next step: a proposal for some kind of conference. As a result, they left the impression of having been more precise in discussing the military and economic measures they might have to take if things went wrong over Berlin, with perhaps apocalyptic consequences, than in considering how to stop things going wrong. Similarly, Mr Khrushchev, speaking to the Russians on television on Monday night, said once again that he was determined to sign a peace treaty with east Germany (which, in his view, would make the allies' present rights of access to Berlin "null and void") without specifying how this was to be reconciled with the promise, which he also made, not to infringe the lawful interests of the western powers. It is time somebody threw the re-entry switch and brought the circling statesmen to a soft landing on the conference table.

Mr Khrushchev, for his part, has now done at least some of the things that are necessary to make a conference possible. The communiqué issued in Moscow last Saturday after the meeting of the Warsaw Treaty powers said that the communist countries had no intention of trying to change the existing social system in Berlin; Mr Khrushchev added on Monday that there was no question of a blockade of the city. Of course, it is necessary to provide some sure guarantees that these promises will be kept, and the guarantees will have to include arrangements for an effective western guardianship of Berlin (the chief point on which Mr Khrushchev remains most ominously obscure). But this is just the sort of thing that conferences are for. The West's failure to take up the matter from here, and say that it is ready to talk, cannot be explained solely on the grounds offered by the foreign ministers—that the Russians are imposing unreasonable conditions by saying that the conference must aim at producing a peace treaty. It would be easy enough to counter this by issuing an invitation to a general discussion of the problems of central Europe without specifying what its end-product ought to be. Plainly there is still a body of opinion in the West, led by General de Gaulle but including some influential men in Washington and Bonn, which prefers not to negotiate at all. It is worth considering what would happen if their advice were followed.

It is no longer plausible for the advocates of golden silence to argue that a policy of refusing to talk, coupled with a flexing of military muscles, might deter Mr Khrushchev from doing anything at all: that is, even from signing a unilateral peace treaty with the east Germans. He has sworn to do this (if no other agreement is forthcoming) so often and so solemnly that a man of his temper cannot be expected to say meekly that it was all his little joke. The most that might be hoped for, if the West continues to keep its mouth shut and its jaw out, is that the east Germans—who would take over control of the routes to Berlin under the separate treaty—might wave the allied traffic along the autobahns, the railways and the air corridors without trying to assert their newly acquired powers. But the western position in Berlin would then float

upon a juridical vacuum. It would rest neither upon the post-war occupation agreement, which would have been denounced by the Russians, nor on a new agreement, which might be negotiated now, spelling out the Russians' and the east Germans' joint assent to the allies' presence in the city. How long do those whose job is to keep the supply routes open feel that it would be comfortable to persevere with this demonstration of walking to Berlin on the waters ?

There are thus marked limitations to the usefulness of the " policy of firmness " which—until and unless the allies come up with an offer to negotiate on Berlin and related matters—*must be taken as the West's response to the Russian challenge.* The expansion of the alliance's conventional armies set in progress by President Kennedy is desirable in itself (and has long been advocated by this paper) as an attempt to create a balance of strength that does not depend on nuclear weapons. (Some implications of Major Titov's flight for the nuclear balance are discussed on page 611.) It is unfortunate that conventional rearmament had to coincide with a seasonal crisis. No doubt the crisis makes it easier for President Kennedy to get Congress's approval for spending more money and calling up more men ; but it also means that the effect of the increases is liable to be nullified by tit-for-tat expansions of the Russian forces. Mr Khrushchev, whose legislators are not accustomed to orate about balancing the budget, announced one such addition on July 8th ; on Monday, while cautiously doubting whether another general increase was needed, he said he might transfer a number of divisions westward.

Some reinforcement of the allied troops available for European service is plainly necessary, even if it were to be matched (perhaps over-matched) by the Russians. It is necessary as a token of the West's determination to fight rather than to give up the one thing in Berlin it cannot compromise on—the securely guaranteed right of the Berliners to live under the kind of system they want. But Mr Kennedy might bear two things in mind before he lets rearmament go, for the time being, past this quasi-symbolic point. One is that Mr Khrushchev can create new divisions faster than the United States can, because he has large reserves of recently demobilised troops to call on. The other is that a large and sudden expansion of the Nato forces in central Europe, if balanced by similar Russian reinforcements, would not decisively improve the relative military position of the West, while it would sharply reduce the chances that the argument can be settled by calm discussion in a rational atmosphere.

BOTH halves of the allies' current position—to rearm, but not to propose negotiations—are therefore entangled in difficulties. It is hard to see any way out of the difficulties except by sending an invitation to Mr Khrushchev to sit down and discuss a new statute safeguarding the freedom of Berlin within the context of a fresh look at the whole problem of central Europe. It is just possible to argue that the invitation need not be issued until after the west German elections on September 17th, in order to avoid tossing an explosive subject into the heat of the German party conflict. Perhaps this is what M. Couve de Murville, who is said to have told his fellow foreign ministers last weekend that the West should not be " rushed " into negotiations, had at the back of his mind. But the decision to make such an invitation, as distinct from the actual mailing of it to Moscow, cannot be delayed much longer. Mr Khrushchev rises to address his party congress on October 17th, and he has said that, if nothing else happens, he will sign a treaty within ten weeks after that.

If the West makes up its mind to negotiate, it should have its arguments ready for presentation rather early in those ten weeks. Not much time is left for the radical decisions that will have to be taken before then. If the allies hope to persuade Mr Khrushchev to sign a new agreement on Berlin without his insisting on adding the east Germans as co-signatories (which is what some reports say the Americans want) they will have to decide what inducements they can offer him to do so. If, on the other hand, it turns out that east Germany is unavoidable as a co-signatory, this would yet be better for the West than no agreement at all, or than being obliged to make terms with the east Germans separately. In either case, the West must peer down into the foundations of its post-war policy on Germany. If it wants to avoid being thrust into half-meditated and perilous acts by the pressure of an exploding crisis, the necessary decisions will not wait much longer.

Can Neutrals Help?

If the "non-aligned" governments are to make their Belgrade conference a success, they must reconcile their own varied alignments

UP to a point, Mr Khrushchev is quite right to doubt whether anybody can be strictly " neutral " in today's world. Most of the heads of government who have been invited to Belgrade on September 1st for the first summit conference of " uncommitted " or " non-aligned " states are in truth heavily committed and aligned on one issue or another. Some are visibly inclined to favour one of the two super powers ; others are involved in cold wars of their own—the Arabs against Israel, India and Afghanistan against Pakistan, Ghana against Togo and Ivory Coast, Iraq against Kuwait and Saudi Arabia, and so on.

Often their particular local involvements shape—or seem to shape—their postures toward the wider world. Morocco's frustrated claims on Mauritania have turned it to the " Casablanca " group in Africa instead of to the " Monrovia " group that values western friendships (and, since the fighting at

Bizerta, Tunisia has moved in the same direction). Indian and Egyptian bitterness about western alliances dates largely from Pakistani and Iraqi entry into western pacts. Jugoslavia's local feud with Albania may be deeper rooted than its doctrinal hostility to distant China, whose present patronage of Tirana emerged only after the Albanians had long been at loggerheads with Belgrade over minority problems as well as ideological ones.

Who, then, are the true " neutrals " ? The skirmishing before the Belgrade conference has been enlightening on this point. During the preliminary wrangle about who should be invited to the September " summit," some attempt has been made to find an objective definition. Direct allies of either America or Russia have been ruled out without difficulty. But the declared intention of disqualifying any state that had foreign bases on its soil was promptly robbed of meaning by the inclusion of Morocco and Saudi Arabia (which still have American bases) in the preliminary talks. And there has been little clarity in the further attempt to classify countries according to their " pursuit of an active policy of non-alignment " and their " support for liberation movements." If one takes, say, the Congo dispute as a yardstick, Jugoslavia, Morocco, Indonesia and Guinea have condemned and withdrawn from the United Nations operations there, while India, Ethiopia, and Ghana have continued to sustain it with troops as well as votes. Both those groups have been bidden to Belgrade ; but Malaya, Ireland and Sweden, although aligned with India on this as on other African issues, have not.

MR NEHRU's long hesitation about accepting an invitation to the " neutral summit " arose from his justifiable doubts about the value of an arbitrarily restricted gathering. His own decision to attend has been a crucial one. Without India, without Nigeria, Malaya, the European neutrals and most of the ex-French republics of Africa, the Belgrade conference, whether or not others among the thirty governments invited were to follow an Indian lead in staying away, would have been reduced to a factional rally. The African " Casablancans "—notably the United Arab Republic, Guinea and Ghana—and Cuba would have had their way ; but the greater part of the non-western world would have been either absent or uncomfortably involved in a display of sad disunity. And it is disunity, above all, that these countries must now seek to avoid if they want their voices to be effective in the world.

Their potential effectiveness is great. It is by now almost trite to say that in the world of two great power blocks, with their bombs held (so far) in a mutual deadlock, the casting vote is held by Asia, Africa and Latin America. They have neither nuclear arms nor great riches ; but they have only to swing their weight one way or the other to decide the outcome of the struggle—at least so long as the cold war stays cold. They are no longer mere passive objects upon which the older powers can direct their influence at will. They have discovered their value and their power. What they have now to discover is how to use their new power in ways that will reduce the general danger of our time, and help to convert the hostility between communist and western blocks into a genuinely peaceful competition. From such a competition, the underdeveloped countries have everything to gain.

In the light of this fundamental interest, the present varied alignments among the " non-aligned " and their neighbours are surely of only secondary importance. It is the accidents of geography and history that have, for the most part, determined that some underdeveloped countries are now allied with or cosily associated with the West, while others have come to look to Moscow as a new Mecca. At bottom, the needs of, say, Pakistan and Egypt, the Philippines and Indonesia, Cuba and Chile, Guinea and Nigeria are the same. They must get all the external help they can to enable them to advance economically; they must preserve the domestic order without which they cannot advance, while meeting the growing demand for individual liberty that comes with education and prosperity; they must help to create an international order in which weak states can be sure of survival among their stronger neighbours. Regardless of tactical and doubtless temporary alignments, their true community is that of the underdeveloped world as a whole; and they want to be able to draw upon the more advanced countries for whatever seems relevant to their needs, without necessarily accepting either western or communist institutions as a model.

Awareness that the Belgrade meeting itself may endanger this broader community is not confined to Mr Nehru. President Sukarno of Indonesia, one of the original sponsors of the conference, felt it necessary to answer similar criticism in a speech at Medan, in Sumatra, on July 30th:

> Some people have already started to think whether the Belgrade conference will affect the existing Asian-African solidarity. My answer is no, not at all. . . .

But the proof of this pudding will be in the eating. To make the conference succeed, the participants will have to take full account of the viewpoints of those who have not been invited, or who have declined to come because they feared involvement in too narrowly partisan an affair. Only if they succeed in doing that will they be able to speak for the underdeveloped world as a whole. If they fail, their utterances will be easily brushed aside as unrepresentative.

AT the same time, they will have to try to produce something more substantial than benevolent generalities. On disarmament, for example, the non-aligned countries have in the past been too easily content to declare themselves in effect against sin, and to urge the more heavily armed powers to compromise their differences. They will have a lot of homework to do on this and other problems. If Belgrade were to produce—or to initiate—a serious analysis of the disarmament problem that takes account of the real obstacles to agreement, it could provide a very useful spur to progress. If it were to yield some constructive suggestions (with offers of practical assistance) toward a solution of the Berlin problem, it could improve the prospects of disarmament in another way—and thus improve the prospects of massive economic aid for the underdeveloped world.

Neither the western nor the Sino-Soviet governments have viewed the approach of the Belgrade meeting with enthusiasm. (Both in Russia and China the press has, in fact, suppressed all news of it.) The West can expect it to fire many anti-colonial salvoes. The communist powers are fast losing their earlier rapture about neutrality; the neutrals whom they once regarded almost as protégés have shown an unpleasing ability to oppose Moscow's ukases, in particular over the Congo; and Mr Khrushchev's new " troika " doctrine is essentially a device

to prevent such independent-minded people getting a grip on the machinery of the United Nations, on the control of disarmament measures, or on the surveillance of troubled places like Laos. But both blocks must face the need to co-exist not only with each other, but also with the under-developed and mainly uncommitted world. A third of mankind cannot b ignored. All that outsiders are entitled to do is to urge th non-aligned countries to look hard at the facts of life befor shaping a course that will affect the future of all other nation as well as of their own.

In the Freezer

Mr Lloyd has shown how tough he is prepared to be with the white-collar unions. He now has to follow through elsewhere

THE Chancellor's five-year plan is still very much on the stocks. The employers and unions have been asked round before the launching: this is meant as more than a courtesy, but it is not at all clear what influence their blueprints can have on the design of the craft that eventually takes the water. Before Mr Lloyd saw the civil service unions on Thursday afternoon very little had been forthcoming (except to the teachers) on how the wages "pause" in the public sector might be intended to work. But the figures that ministers have been muttering to themselves, and have been most impressed by, are last year's comparison between the rise of £1,450 million in personal incomes and £650 million in production. The initial outcome of this calculation that wages are at the nub of the economic tangle has been the discovery, through the need for drastic intervention in the Burnham and Whitley machinery, that the tangle involves a quantity of much-hallowed and jealously protected negotiating procedure besides.

Both the current balance-of-payments crisis, and the more profoundly structural problem of how to get the economy into the right gear for tackling the sharp incline up to Europe, depend in considerable part for their solution on staunching the cost-inflation gush. If Mr Lloyd's wages pause proves to be no more than a lop-sided touch on the brakes, the lack of confidence in sterling will prove sadly well-founded, and British manufacturers on the brink of the common market will find that their prices are flatly uncompetitive. No one expected much of Mr Lloyd's original exhortation to the unions to ask for no more because they would not get it. In fact two arbitration tribunals which have announced awards since the Chancellor spoke have paid no attention to the pause. One case concerned 10,000 clerical and administrative workers in air transport; the other, a handful of craftsmen at the Victoria and Albert Museum whose employer happens to be the (by now hard-faced) Ministry of Education. All previously agreed awards to the civil service are now, apparently, to be honoured—although this does not include the teachers, whose rejection of the Burnham recommendations until after the pause was announced has been a costly tactical blunder by their militants.

WHETHER the Government willed it or not, the first crunch has come with the white-collar organisations, which only in the last year or two have really begun to realise that they are trade unions too. The teachers are claiming not only that they are badly done by (which need not necessarily be accepted) but that, after all, they are, as indeed they are, among the most important people in the country: a similar reaction has come from the eminently respectable Society o Civil Servants. A good part of the trouble is that thes people's pay claims go in as a matter of course after worker in industry have got their rises: the councils and tribunal which, on the shifting soil of "comparability of remunera tion" for public servants with private employees, struggle t ascertain how much they are entitled to, only swing into actio after one year's crop of industrial rises have been granted The white-collar men thus feel themselves thwarted just whe the national bonanza seemed on the point of overflowing int their own bank balances. Among those also hit in this way ar the blue-collar men who work in Government factories ordnance depots and the rest.

The whole question of public servants' wages is complicate by the system on which they are reckoned. The basic patter is that of the teachers' Burnham committee and the civ servants' Whitley council: on these bodies the employee representatives meet representatives of the Treasury or of th local authorities (previously thought to be susceptible to ministerial whisper). The award is arrived at by negotiatio (based, in the case of the civil service, on the report of a pa research unit charged with finding out just how salaries i comparable outside jobs have moved). It is then passed t the appropriate minister for simple confirmation or rejectio In the particular case of the Scottish teachers, the Secretar of State has always been able to put aside the recommendatio of the negotiating body, write his own award and put it int the teachers' pay packets. The Minister of Education i England has only had power to accept or reject outright. No that he has rejected an award for the first time, his onl effective tactic is to state just what he would be prepared t agree to, and trust that the committee will eventually decid that this is better than nothing at all.

The present shock and horror of the teachers, and of som of the local authorities, is only partly simulated. Burnha and Whitley have come to be regarded as sacred—perha largely because they provide a "dignified" way in whic dignified professional people can get more money. Th negotiators of both sides genuinely believe that the preceden must not be broken—even if the nation is spending so muc more than it earns. But this ought not to bamboozle anyo else into believing that it is necessarily good that the Minister sole function in the Burnham machinery should be to stum up the cash without the right to say at the beginning ju how much is likely to be in the kitty. Nor should there b anything sacrosanct about the Whitley council system if means that jobs for which there is no shortage of applican merely get a permanent ride on the general escalator. Th Government seems to hope that it may get by without breakir

up the machinery altogether. Comparability will still be the principle for civil servants, but arbitration tribunal awards on new claims are to be frozen—at least until the Chancellor reviews the situation early next year. This is the broadest possible hint to all other employers. In the past the white-collar organisations have been those most open to persuasion, and, given the social attitudes of their members, strikes by their unions are likely to be brief and ineffective. What is more, if the Chancellor's plans do pay off—that is to say, if inflation is halted—the middle-income professional people are likely to be the first and main beneficiaries.

SINCE the teachers are now on holiday their dickering with Sir David Eccles may well settle down into a leisurely process until the opening of the autumn term, when they will actually have the opportunity to withdraw their labour if they see fit. But by then the Government will have had the chance to show whether (as is now being shouted from the most respectable housetops) the white-collar people have been picked on or not. The railwaymen and the miners are the first two large industrial unions whose claims will come forward in the next few months. These declining industries which the taxpayer is already underwriting are not in a particularly strong strategic position, unless the Government itself first buckles at the knees. In high circles the Guillebaud report, which sold the pass in March, 1960, is now a most unpopular document; but the right-wing union leaderships, which have spent the last six months reasserting their authority against unilateralists and unofficial strikers, are not in the best tactical order themselves to go slow now on wage claims.

The TUC's short answer to the Chancellor has been to growl away against coming surtax relief. The Confederation of Shipbuilding and Engineering Unions has used precisely these grounds for rejecting any restraint this week. There will be much more along these lines from the Portsmouth conference. But the unions have wisely decided to meet the Chancellor about his long-term planning, and they are perfectly well aware that surtax and the rest is an inadequate answer to plans that set out to tackle inflation, exports and the balance of payments. They will be foolish if they jump the gun.

The Chancellor's broad intention seems to be to inject into all wage negotiations, from the outset, an indication of the magnitude of the sum that the Government is prepared to accept in proportion to the general rise in production. But this is very far from being enough in itself. A general freeze, irrespective of economic (and in the public services, social) priorities is not an inducement at all to get labour out of the decaying and somnolent industries into the active and expanding ones. The right principle is the one already adopted with the police: to put up the rewards substantially and deliberately to attract men where they are most wanted. Equally, no service union is going to accept a wage policy in direct ratio to productivity increases and nothing else. The first thing to be looked for in Mr Lloyd's programme when it finally emerges is the flexibility it allows within the broad figure of the permissible national increase.

This ability to discriminate will take as much political courage to insist upon as will the act of standing firm against wage inflation as a whole. The teachers' present insistence on the bottom of the basic scale to the virtual disregard of the need to encourage entrants to the scarcest and most responsible jobs is one that is sure to be repeated elsewhere this autumn. If the logic of the present test with the teachers sinks in now, the Chancellor's hand will be greatly strengthened with the public at large when any greater confrontation with the unions develops.

What Price Diplomacy?

For the third time in a decade the Treasury pruning shears are being brandished at the proliferating Foreign Service

MR SELWYN LLOYD'S call for a 10 per cent cut in the overseas budget of the Foreign Service may sound nothing out of the way when a national bout of retrenchment is on. Yet the Foreign Service growth, on inspection, turns out to be far from luxuriant. To cut, for the mere sake of cutting, may not be good husbandry.

Since the second world war the Foreign Service has certainly branched out tremendously. But its increase is not in diplomatic manpower; it is in the missions that are manned. New embassies have had to be opened in countries becoming independent—Burma, Indonesia, the Philippines, Israel, Jordan, some Central American countries, Laos, Cambodia, Vietnam. There is also the staffing of the Commissioner General's office in S.E. Asia and political representation—a legacy of the old India Office—to Afghanistan and Nepal, and throughout the Persian Gulf. Again, with hardly a pause for breath, come more and more calls from Africa. Excluding the embassy in Cairo, there are now no fewer than fifteen ambassadors accredited to twenty-three African territories. Then there are all the international commitments—two permanent delegations to the United Nations Headquarters in Geneva and New York; seven permanent delegations to such international bodies as NATO, OECD and the European communities.

Simultaneously the burden of capturing and holding new markets is borne on the much broadened shoulders of the service's commercial branch. Information offices spring up alongside. Yet, when all this is said and done, what is called "the UK-based manpower" of the service (which means all its members recruited here in Britain) has merely returned, after being twice cut down, to roughly its 1946 strength of just over 4,000.

If making so few go so far is not actually done by mirrors, it requires an administrative finesse that verges on sleight of hand. Any drastic reduction in numbers might lead England to expect every man in the Foreign Service to do one and a half times his duty. This might make good bookkeeping; but, as far as results are concerned, our man in Havana,

Baghdad, Tokyo or anywhere else in the world would be just that much less alert and well-informed. Could the country afford it?

RECOLLECTIONS of the earlier slashings—in 1951 and 1956—serve only to increase present doubts. Every Government service carries its dead wood, and would not be human if it did not. But much that was alive and irreplaceable was sacrificed in those years. Experienced men were axed—to be replaced by greenhorns when the national finances were mysteriously held to have recovered. Among the sorriest stories was the closing in 1956 of 25 consulates—a throwing of little victims to the monster of centralisation, whom accountancy loves but diplomacy ought to abhor. Many provincial consulates are run on a shoestring. But, with sometimes generations of local friendship behind them, they are invaluable listening posts. The visiting embassy official can often glean much in their snuggeries about what goes on in the host country that could never have come his way in the marble halls of the capital. With every closure a source of information dries up, usually permanently.

No doubt there are missions where some trimming would do no harm. Advances in Africa might be offset by curtailments in places where British interests no longer need intensive diplomatic cultivation. In a number of communist capitals, abstention from actual diplomatic work is practically *de rigueur*; if this is to be accepted, as it seems to be, then the well-paid, accomplished diplomatists who are maintained there might conceivably step aside in favour of the simpler research workers who can tunnel through the mazes of communist printed matter for clues to political trends. No doubt there are some minor extravagances in the diplomatic manner of living. But although the British diplomatists live, if not exactly in comfort, then at least in style, their *train de vie* is often less striking than that of their *chers collègues*. Nor can they quite detach themselves from keeping up with the Joneses; and in foreign relations the Joneses, whether allies like the French (who would not dream of allowing domestic vicissitudes to interfere with diplomacy), or communist countries that stint themselves at home in order to impress abroad, do set a formidable pace.

The Chancellor's requirement of a 10 per cent cut next year applies to all the civil administrative services overseas, whose total upkeep now runs at £26 million. (This excludes £15 million for pensions to overseas residents and £7 million for international subscriptions—fixed items that cannot be changed.) Of this the Foreign Service spends the lion's share and its manner of spending is a paramount national concern. That is all the more reason why economy campaigns should not—in the long run—be wasteful through jettisoning assets in a panic that will later cost much to recover or never be recovered at all.

The question might indeed be debated whether representation abroad should too faithfully reflect a country's economic reverses. Diplomacy is certainly handicapped in being too rigidly governed by financial ups and downs. By all means let there be thrift, and plenty of economy measures, wherever they can be afforded. But such economies should be part of steady long-term planning, not hastily devised retrenchments for short-term expediency.

Humpty Congo

The Congolese—and everyone else—may have learned something from the past year's jigsaw operation

Sture Linner, Cyrille Adoula, Joseph Ileo

ALL the world's horses and all the world's men may yet succeed in putting the Congo together again. The prime task of the United Nations in the past year has been to guard against ambitious countries pulling the infant state apart in attempts to acquire bits of it for themselves. This task has now been carried out, except, perhaps, in parts of the province of Katanga. But the threat to international peace thus averted must not be allowed to arise again. Thus the UN's job is now more subtly difficult than ever. While still treating the Congo as a sovereign state, it has to help the Congolese people to establish a government able to maintain the country's independence on its own.

If the Congolese freely decided to pull their country apart and divide the bits among themselves, that would be their affair—however much Dr Nkrumah may dislike it. But it becomes the world's affair when each section of a country calls on different allies abroad for help, or when a recognised central government is threatened with revolt by a province that draws military support from outside. This is why the UN has patiently guided the Congolese back from the looking-glass world of battles by press conference and private armies. Now, at last, there is hope of achieving a modest degree of stability. On August 2nd the Congolese parliament, for what it is yet worth in the conduct of the Congo's affairs, voted overwhelmingly in favour of a new prime minister, Mr Cyrille Adoula. Mr Adoula founded the Congolese National Movement with Mr Patrice Lumumba, but the two men parted political company in 1959. Though a moderate man, Mr Adoula is a socialist and a supporter of the Lumumba vision of a strong unitary form of government for the Congo. Despite this, President Kasavubu, a federalist and no socialist, has welcomed the new prime minister. More important, the followers of Mr Lumumba—now led by Mr Gizenga, who succeeded to the leadership of his movement and has led the separate regime at Stanleyville—have apparently recognised the new central government and are joining it. Mr Gizenga himself has been offered the first deputy premiership, and his right-hand man, Mr Christophe Gbenye, is minister of the interior. The resultant government of national unity has the support of a parliament which deputies from every part of the Congo have attended; even Mr Tshombe's deputies, from Katanga, began to trickle through to Leopoldville this week.

That this parliament is able to sit at all is a triumph for the persistent work of Dr Sture Linner and his United Nations staff in the Congo. This group of men has been represented, in parts of the world's press, as no more than a band of clumsy do-gooders. It would indeed be surprising if an international administration drawn at short notice from 29 countries, and presented with such a chaos, did not commit blunders. But it is to the credit of Dr Linner's men that they have managed to gather the far-flung deputies at Leopoldville in an orderly assembly.

There is very much more work ahead. It is urgently necessary that the soldiers of the Congo be disciplined. They are still very highly paid (privates get $100 a month plus board), and they still have the means of holding their politicians up to ransom for more money. The UN General Assembly has charged its administration in the Congo with the job of re-organising the Congolese army. Now that a central government has been formed, Dr Linner should do his utmost to persuade it to bring the army under control.

Then there is Katanga. The UN certainly cannot invade Katanga on behalf of the central government, though it could legally stand aside while central government forces carried out an invasion. But, in any case, Mr Tshombe is becoming increasingly isolated. At the elections in May, 1960, Mr Tshombe's Conakat party won less than half of Katanga province to itself; most of the rest went to Mr Jason Sendwe's Balubakat party. Mr Sendwe has been named second vice-premier in the new central government. His Baluba fellow-tribesmen have not been as thoroughly pacified as Mr Tshombe's generals claim; only UN supervision is keeping the northern part of Katanga from civil war. But Mr Sendwe has followers in Elizabethville as well; and, recognising the weakness of their position, Mr Tshombe's supporters have begun to waver.

Some of them want to seek continued political and military support from the white governments to the south. There have even been kite-flying suggestions from Elizabethville of an interest in seeking support from communist countries—advances that were roundly snubbed by Moscow radio. But others among Mr Tshombe's followers, it appears, are urging him to come to terms with the central government in an attempt to save a degree of autonomy for Katanga. The Belgians, too, are showing signs of acknowledging that Katanga's position is weakening. The new Belgian government is not pro-Tshombe, and Belgians in Elisabethville are beginning to sense the way the wind is blowing. Some of Mr Tshombe's mercenaries have left him and there is a chance that some of his advisers, asked by the UN to leave, will do so.

NONE of this means that Katanga separatism is finished. Mr Adoula apparently feels secure enough to be able to snub Mr Tshombe, but he would do well to defeat his enemy politically before proclaiming him liquidated. The more determined advocates of Katangan autonomy may yet force a battle, and there is still no predicting who, in that case, would win. Mr Tshombe has expressed willingness to share some of Katanga's wealth with the rest of the country; if he were also to relinquish his claim to some of his provincial power, Mr Adoula would have achieved much. In this situation General Mobutu, who knows about *coups d'états*, and who once formed a firm friendship with Mr Tshombe, remains a question-mark.

The politicians of the Congo may have learned some lessons. But perhaps the outside world has learned some as well. By now the West ought to realise that it is a mistake to jump to quick conclusions about African politicians. Many Americans, hasty to find an enemy in Mr Gizenga, still speak of "Lumumbists" as so many black Khrushchevs. In fact, Mr Gizenga's followers attended the session at Leopoldville against the advice and predictions of Moscow radio. The sensible view of a "Lumumbist" is to see him as no more than a militant African nationalist—as capable as anyone else of being driven into the communist camp, but not eager to go.

MR KHRUSHCHEV, for his part, may have revised his assessment of the feasibility of capturing African allegiances. (The capitalists at *Union Minière du Haut Katanga* share the same experience.) The Afro-Asians as a whole have taken some time to realise that only by uniting behind the UN can they help it to save the Congo from dismemberment by cold-war antagonists. But they deserve much credit for sensible voting in New York since they became aware of the need to make their weight felt on this issue. The African members, in particular, have sensed that chaos in the Congo is, in some eyes, a continuing affront to the black man's dignity. They are still divided about the kind of Congo they want, but they have been able to overcome some of their passions. Two of Dr Linner's most successful negotiators come from Nigeria and Ghana; they have been able to work well together inside the Congo, for all their countries' differences.

The Americans may not like to see so many posts in the infant central government go to "Lumumbists"; the Russians may think there are too few. That neither country has got its way is the result of Dr Linner's work and of the new power of the Afro-Asians in the General Assembly. In the first 14 months of the Congo's independence the UN has kept foreign powers out of the Congo; it has provided a skeleton administration; given technical and economic aid; and ended civil war and reconvened parliament. It has much more to do. The world can only wish it luck. Further Humpty Dumpties are sure to fall (perhaps some near the Congo borders) and the horses and men will be needed once again.

THE MOTOR INDUSTRY

The current issue of the quarterly research bulletin, "Motor Business", contains articles on:

- OPTIONAL EXTRAS AND THE UNITED KINGDOM PASSENGER CAR INDUSTRY
- THE NIGERIAN MARKET FOR MOTOR VEHICLES
- THE OWNERSHIP OF THE WORLD MOTOR INDUSTRY—Part III

NOTES OF THE WEEK

PARLIAMENT

Closing Rally

It has been the Tories who, not unnaturally, have been most anxious to escape from Westminster for the recess until October 24th. At the end of last week they went on their ways mildly rejoicing that the Prime Minister's tactical touch had seen the party safe and sound through the first skirmish over Europe. This last fillip to morale came chiefly through Labour's default. If Mr Lloyd's presentation of his little budget had failed quite painfully to hit the apt key for the Tories' own mood, let alone the electorate's, Mr Gaitskell's humming and hawing in the European debate appeared a lamentable misreading of the initial public reaction to joining the common market. (Lord Attlee, who had advised this course, was not infallible even when at the helm.) The return of Mr MacWonder to the television screen was thus allowed to be both avuncular and buoyant: this performance should have brought Labour up with a start, and set it pondering about just how substantial the gains of the last nine months may seem in two years' time.

Even so, the reversal of party fortunes since last autumn has been cumulative and, in the eyes of the younger Tory members in marginal seats, remorseless. As the conference season advances, not a few Tories will look wistfully back at the two Scarborough carnivals a year ago when the Prime Minister enjoyed his Roman triumph and the Leader of the Opposition was almost thrown to the lions. There is no longer any Tory talk of the duty to provide an opposition as well as a government. The party has grown both nervous and nagging, and there were outspoken complaints that Mr Lloyd had failed to take anyone into his confidence about how the wages "pause" would actually operate. There have been no splits (over both Rhodesia and the common market the Right revealed its inherent impotence) but, despite Mr Lloyd's signs of toughness with the unions, restlessness at the humiliation of a return to restrictions and 7 per cent after ten years of Conservative rule is likely to get worse until the Chancellor shows signs of getting down to the business of long-term growth—which is all the talk now.

Mr Gaitskell's hold on the parliamentary Labour party is now secure: the flamboyant abstention of the 50 defence rebels now seems not nine months but nine aeons ago. The turning point for the leadership came with the expulsion of the seven left-wing troublemakers from Labour's comprehensive fold. As the election draws gradually nearer there will be a natural strengthening of Mr Gaitskell's authority, and feeling will harden even more against any attempt at disruption. The Asquithian approach to the common market may have made sense in terms of party unity last week; the TUC, although divided, has managed to look more enterprising. If Mr Macmillan achieves any kind of progress with the Six, Labour's abstention could make the party appear more monumentally irrelevant to the twentieth century than ever.

Squeezing Home

Throughout the session, with enforced pauses, particularly when Labour took exception to Mr Powell's health charges, the Government's legislative programme has been lumbering on: some 40 bills have been squeezed into the statute book. Mr Butler was, however, a trifle optimistic in his timetable and the Government has in fact lost two major measures, the Weights and Measures Bill (mark 1) and the Road Traffic Bill. Many backbench Tories would have been happy to swap for these the bills providing for the reorganisation of Covent Garden and the subsidy for the new Cunarder, which are now through. Mr Brooke's Housing Bill has got jammed in the machinery, but the Lords' amendments will be taken on October 24th, the day the Commons resumes after the recess. The new session will be opened on October 31st.

Mr Butler's own department has done rather well this term. Its three major measures, the Criminal Justice Bill, the Licensing Bill and the Betting Levy Bill have all received the royal assent, as well as two minor ones, the Suicide Bill and the Human Tissue Bill. The session has also seen the passing of measures to put the Post Office on a better business basis, make more economic use of crofting land, increase pensions and improve land drainage. The Rating and Valuation Bill (England and Wales) has now reached the statute book and stock exchange prices were given a sudden boost by the Trustee Investment Bill which also received the royal assent just before the House rose. Private members bills have not been particularly exciting, but a number of modest little measures have passed into law. These include a bill penalising mock auctions, a printers' imprint bill, and one encouraging greater safety in the home.

UNITED NATIONS

Wheels in Treacle

Support has been slow to gather for the demand by a group of Asian and African governments for a special United Nations Assembly session to discuss the Bizerta dispute. True, until a few days ago the Tunisians themselves were ready to hold back in hopes that the United States' very active diplomacy would make possible direct negotiation with France. But the bid to convene the assembly had, in any case, run into difficulties.

Special sessions may be held under either of two assembly procedures. If the 1950 "uniting for peace" resolution is invoked, after the Security Council has failed to cope with a dangerous situation "because of lack of unanimity of the permanent members," the assembly must meet within 24 hours of a request for an emergency session made either by seven members of the council or by a majority of the 99 member states. If it is not, either the council or a majority of member states may still request a special session within 15 days.

Soviet opposition forced the Afro-Asians to abandon the "uniting for peace" procedure almost as soon as they had announced their wish to use it. Russia has, at times—as in the 1956 Suez crisis—gone along with this procedure, but more often it denounces it as an illegal transfer to the assembly of powers that should stay with the council. Then came the problem of mustering fifty signatures for the request. On Tuesday, the count had reached the irritating figure of forty-nine—35 out of the 45 Asian and African members (the missing ten being ex-French African republics), four Latin Americans, Jugoslavia, and the nine of the Soviet group. (The Russians, intent on their vendetta against Mr Hammarskjöld, had insisted on putting in a separate letter, addressed to the secretariat, not the secretary-general; but this did not affect the substance of the request.) But now that the request has at last been formalised and circulated to all members, it is gathering enough additional backers to carry it past the mark. A last-minute modification of France's unyielding position can hardly be expected, with the Ides of August evidently ringed red for danger on General de Gaulle's calendar. The fact that the UN's wheels have seemed to be slowly rotating through procedural treacle for the past two weeks should not now mislead anybody into hope of still avoiding a special assembly, with al its awkward implications for France's allies

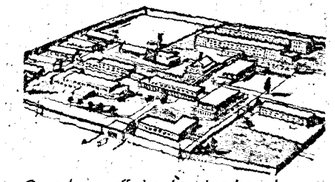
Close Thing for Peking

The annual lobbying on China's representation at the United Nations has got off to a brisk start this year; it promises to be a close-run thing, and more confused than usual. President Kennedy has placed his bet already, committing himself publicly to continued opposition to the seating of communist China.

This pledge appeared in the joint statement issued after Mr Kennedy's talks last week in Washington with vice-president Chen Cheng of the "Republic of China" (Formosa). Although the Chinese Nationalist leader, who left the United States this week, had reason to be pleased, the statement did not really dispose of persistent reports that the President had stratagems up his sleeve that may, in the end, disappoint the Nationalists. Mr Kennedy renewed American support for "continued representation of the Republic of China in the United Nations," but said nothing about reserving Formosa's great power seat on the Security Council. Should the voting go against the United States and its Nationlist ally, the President has thus left himself a loophole for keeping Formosa in the General Assembly, even if communist China gets in and claims China's permanent seat on the Council.

In fact, however, all indications are that President Kennedy will fight tooth and nail to keep the Chinese communists out altogether, and he could well succeed for another year. True, the coming session could easily bring a simple majority in favour of discussing the subject. But even if it is discussed, it may be difficult for Peking's supporters to muster the necessary two-thirds majority for actually getting communist China in.

A complicating factor is the candidacy of Outer Mongolia, which the Americans have consistently opposed in the past. This year, with diplomatic relations between the United States and Mongolia in the air, they are unlikely to do so, but the Chinese Nationalists have announced that they will use their veto. The Russians have said that if they do, Russia will veto the admission of Mauretania. This is cunning, for Mauretania's admission is supported by eleven other former French colonies in Africa, whose votes the Nationalists badly need against Peking. All things considered, it will be surprising if China, or Mauretania, or Mongolia gets in this year.



PRISONS AND HOSPITALS

Where is the Dividing Line?

The Mental Health Act, whose main provisions came into force last November, had three main effects in the penal sphere. First, it enabled the higher courts to commit a convicted offender to hospital instead of to prison. Secondly, dangerous or violent patients can now be admitted to Broadmoor hospital without being charged before a court, as was always the case with the two other special hospitals—Rampton and Moss Side. Thirdly, the Home Secretary can now transfer prisoners suffering from psychopathic disorder from prison to a mental hospital or to a special hospital; previously, prisoners had to be certifiably insane or mentally defective.

The working party on the special hospitals, whose report was published in April, recommended that admission to one of those hospitals should be regarded as a last resort and that regional boards should provide secure units within their hospital services, which could deal with patients not needing the particularly strict precautions of the special hospitals. The working party also suggested that some diagnostic and treatment centres, with facilities for research, should be set up for patients who are especially difficult because of their aggressive, anti-social or criminal tendencies, whether diagnosed as psychopaths or not. These centres would receive some of their patients from prison; and they would, it was hoped, be closely linked with the remand and observation centres to be established within the penal system.

Where, in all this, will the new psychiatric prison at Grendon Underwood stand? In conception it dates from 1939, in a recommendation in the report by Dr East and Dr Hubert on the psychological treatment of crime. Although the building is well advanced, the plans for using it still

Grendon: off the drawing board

seem vague and Mr Fletcher-Cooke gave little indication in the Commons debate last week. The psychiatric work now carried out at Wormwood Scrubs, Wakefield and Holloway prisons is to be transferred there, which means that many of the 350 inmates (300 men and boys and 50 women and girls) will be those needing psychiatric treatment but not ill enough to be transferred to hospital under the Mental Health Act; some sexual offenders will presumably be among them. But exactly what criterion will determine whether a prisoner will be sent to Grendon Underwood for treatment and observation or to one of the working party's proposed units or centres will presumably be settled empirically.

CRIME STATISTICS

The Dark Side

Three disturbing trends emerge in the crime statistics for England and Wales last year (Cmnd. 1437). The increase in cases of malicious wounding follows the pattern of recent years, but in 1960 it mounted alarmingly. In the 1930s the annual average was around 1,600 cases; the late 1950s saw averages of 9,600. Last year's total was 14,142. Cases of causing death through careless driving are equally disturbing. From 1955 to 1959, the annual average was 231: last year's total was 470. Part of this increase can be attributed to the greater number of vehicles on the roads, but there is equally an implication of growing carelessness, despite accident prevention publicity.

The third and most disturbing trend of all is that teenagers account for an increasingly high proportion of crime. Under the category of offences against the person, the total for those between the ages of 14 and 21 was more than double the total for those between 30 and 40. Teenagers were responsible for 61 out of 147 cases of rape, and for 309 out of 841 cases of malicious wounding.

The sharp decrease in the number of prostitution offences in the country (from 19,000 in 1958 to 2,800 last year) is clearly the result of the Street Offences Act in driving the trade underground. This legislation was necessary to clean up London's streets, but respect for the law depends far more on the attitudes and habits of the greater part of the population than on new laws or the police. It is doubtful how much use the amnesty on firearms will be in taking weapons effectively out of circulation. At a time when speeches in the Commons (whether on education or economics) are apparently incomplete without reflections on declining morality, the crime statistics mirror the health and condition of society: at present, the reflections in the mirror are hardly pleasant even if the number of young delinquents is only a tiny fraction of the teenage population as a whole. The behaviour of the "pressured" young delinquent tends to ape the image of adult society that is widely presented through the mass media: this is the dark side of affluence.

SPACE TRAVEL

Vistas of Gadgetry

Major Titov's 25 hours in orbit are a great human achievement, without doubt. But the statesmen of the West, whose weekend meeting in Paris was pushed into the shadows last Sunday and Monday by this latest piece of Russian spacemanship, have its military implications to ponder as well. Certainly the Russians' addiction to space travel is a genuine passion; this is their escape from drabness and from claustrophobia. Sentiment apart, however, the Russian defence planners can hardly be neglecting to think about the military uses of this new technology.

It is far from clear yet what forms the

military use of space will take; American experiments with reconnaissance and early warning satellites have barely skimmed the possibilities. What Major Titov's outstandingly successful flight has made painfully obvious is that when the military men do find tasks for men in space, Russian engineers will be able to translate these into hardware straight away. They are mastering the technical and human details of space engineering with terrifying speed. The idea of a space platform, or bomber-in-orbit, has been toyed with in the West in only a dilettante fashion; to the Russians, it can hardly now seem beyond reach. A bomb-laden space ship in orbit would pose a twin threat. The shape of its orbit should enable it to despatch its bombs to any part of the globe. The difficulty of distinguishing such a vessel from an innocent, unarmed scientific space ship increases the danger from surprise attack and thus complicates the problem of retaliation.

This menace, it can be argued, has been visible ever since the night, as it seems so long ago, when the first sputnik wobbled across the horizon. But it is by flying into space and staying there that the possibility is made practical. The human brain is still the most flexible and reliable computing machine there is; and a manned space ship might conceivably be entrusted with the kind of bombing patrol that it would be madness to entrust to a robot in orbit. A power to retaliate will still remain in western hands, and with it some sort of a balance of terror. But not since the Russians exploded their first hydrogen bomb can western military complacency have been given such a nasty jolt.

NATIONALISTS

Mirror for Prejudice

PLAID CYMRU, the Welsh nationalist party, ran entirely true to form at its annual conference last weekend. (Has the west German 84th tank battalion been fully briefed about this aspect of the Principality's puzzling and xenophobic peculiarities?) The real occupying army, seen from Llangollen, came not from across the Rhine but from beyond Offa's Dyke. The call for "direct action," which the executive eventually managed to quash, was directed not against any military installations as much as against the rumoured intention of Birmingham corporation (a familiar juggernaut) to lay waste the Llywedog valley in Montgomeryshire. In the course of heated exchanges Welshmen were exhorted not to sell houses or land to Englishmen (apparently some zealots have been backsliding in this respect recently), not to take jobs in England and not to welcome English children into Welsh schools, where they may challenge the accepted superiority of the native tongue. These sentiments are not entirely disingenuous. They come from within a party which received 77,000 votes in 20 Welsh constituencies at the last election: in two seats, Caernarvon and Merioneth, Plaid Cymru took over 20 per cent of the poll.

The chief result of the sustained public campaigning by the Welsh (and Scottish) nationalist movements has been to reveal not only the political and economic absurdity of many of their arguments and attitudes, but also the signal lack of popular support that they receive in general elections. Their nuisance value to the big parties tends to be exaggerated in occasional by-elections (one example was the intervention of a Home Ruler at Glasgow Kelvingrove in 1958), but their importance as a reforming influence in social policy, or even in securing further administrative devolution, is now very much on the decline. The Plaid Cymru conference conveniently provides most of the explanations why this has come about. It all looks very silly from a distance. But it would be an experience for a good many Little Englanders, both left and right wing, who have taken immediate umbrage at the idea of going into Europe to hold the Llangollen mirror up to some of their notions and prejudices.

REDUNDANCY

Bridging the Gap

THE Ministry of Labour pamphlet *Security and Change—Progress in Provision for Redundancy**—does little to solve the problem first seriously acknowledged in the automation scare of a few years ago. Largely a summary of existing policies, in private and nationalised industries, for easing the blow to workers declared "surplus to requirements," it does not seek to lay down any pattern to be followed by industry as a whole and may be thought, therefore, to fail in a clear duty. But if it does not guide, it is highly informative.

Redundancy is caused by slackening demand, automation or the closing of uneconomic or inconvenient units or sections; and it can be partly avoided by restrictions on recruiting, the cutting of overtime and short-time working. Nearly all of the 236 firms questioned in the preparation of the pamphlet say they would use these means to keep dismissals to a minimum. They would also follow some scheme (generally "last in, first out") in selecting workers for the axe, would generally offer priority of re-engagement to redundant men and quite often would allow time off for impending redundancies to look for other work. But far too few of them make special provisions for alleviating inevitable individual hardship.

More than half the firms canvassed would not go as far as to offer what seems the obvious means of softening the dismissal—some form of financial compensation or severance pay; many would not take the trouble to give advance warning of probable redundancy. Some firms give a flat-rate severance pay without regard to length of service or other factors, and only 41 would give both extra warning and graduated compensatory payments.

In these confused circumstances, some thought might beneficially be given by the Ministry, industry and the unions to the creation of compensation funds. Severance pay at present is drawn by most firms from general revenue, not from special funds: there seems scope for legislation requiring the establishment of such buffer funds, perhaps by contribution from both management and workers, with employers bearing the main burden. Its use in redundancy might then be by the payment of an agreed lump sum to cover, say, three weeks of work-seeking, after which, failing a worker's re-engagement or entry into another firm, weekly assistance might be given up to a maximum governed by length of service.

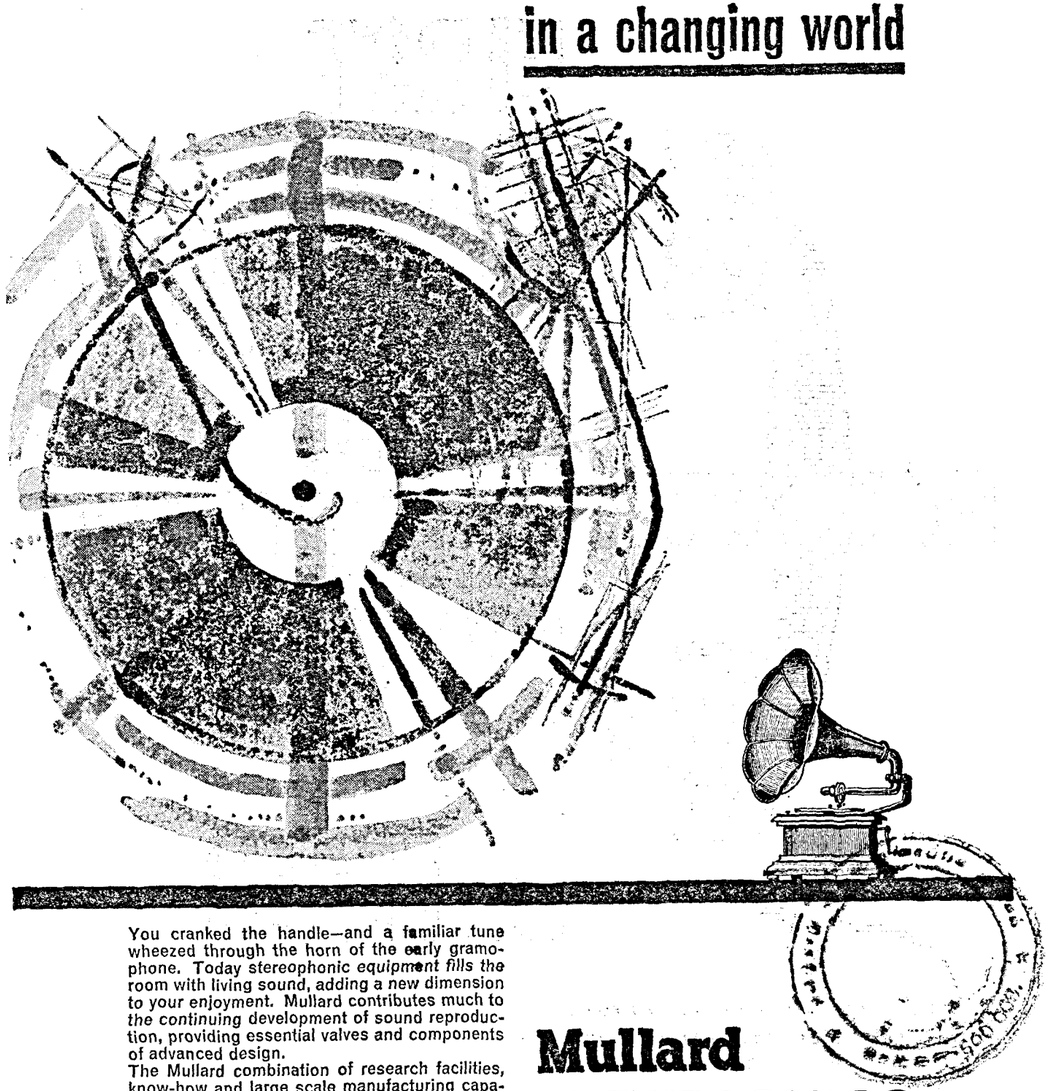
ALGERIA



Noisy Lull

REGULAR explosions in Paris and Algeria make it impossible to describe the situation as quiet; but it is certainly less dramatic than it was when the talks were in process by Lake Geneva, or than it will be when the next step is taken towards an Algerian settlement. At present both the French and the Algerians are casting about to decide what the next step shall be. The Algerian revolutionary national council has arranged to meet at Tripoli instead of in Tunis—evidently a mark of disapproval of President Bourguiba's designs on some of the Sahara. M. Joxe, negotiator-in-chief at Evian and minister for Algeria, has been visiting Algiers for consultations, it is thought in Paris with a view to the "regroupment" of the Algerian populations—or in other words, to the partition of Algeria between the nationalists and loyalists, with the French settlers, naturally, getting the best of the bargain.

During this diplomatic lull life has been enlivened only by the activities of the underground Organisation of the Secret Army, the right-wing conspiracy in the interests of French Algeria. Its most spectacular exploit has been the temporary silencing of Radio Algiers last Saturday, and the transmission of a brief broadcast of its own on the same wavelength from a secret transmitter. It has also threatened to murder Signor Mattei, the head of the Italian state hydrocarbon concern, because, it is said, he had agreed to undertake the exploitation of Saharan oil for Mr Ferhat Abbas after Algerian independence.

This organisation is partly responsible for the continuing stream of leaflets, pamphlets and manifestos now urging, now predicting, the violent overthrow of the Fifth

in a changing world

You cranked the handle—and a familiar tune wheezed through the horn of the early gramophone. Today stereophonic equipment fills the room with living sound, adding a new dimension to your enjoyment. Mullard contributes much to the continuing development of sound reproduction, providing essential valves and components of advanced design.
The Mullard combination of research facilities, know-how and large scale manufacturing capacity, is linked in progressive partnership with leading equipment manufacturers all over the world.

Republic. Recipients complain that the mere volume of this supply of literature suggests a lack of vigilance on the part of the post office, or the police, or both. What nobody is certain of is how wide the sedition spreads, or what substance there is in its threats of action. The date of August 15th has been freely mentioned as the date for the next attempt at a coup d'etat; so freely, indeed, that it can probably be ignored. But French political life remains explosive, and will stay so while the Algerian war is unfinished.

FRANCE

Fumble?

WHEN President de Gaulle, addressing the French on television a month ago, dismissed critics of his policy as mere exponents of *la hargne, la grogne et la rogne,* he can scarcely have foreseen how quickly each of the "équipes diverses" would retaliate. But now negotiations have been broken off by the Algerian nationalists, cannot be begun with the Tunisians, and have failed to satisfy the French peasants. Negotiation must be a hateful word in the Elysée. Rumble, grumble and mumble, as they may be rendered in English, are having it too much their own way.

The President must look on the farmers as ingrates. After four "round-table" meetings between their representatives and those of the government, presided over by the prime minister, M. Debré, himself, a new and generous agricultural programme was announced. Next year's budget will allocate the equivalent of £129 million in aid to agriculture, which is twice as much as any government has given before. The agricultural marketing organisation has been reorganised and allotted increased funds, the better to fit it to deal with sudden emergencies like the collapse in the price of potatoes to the producer, which was what first brought the peasants out on their tractors in June. Young farmers setting out in life will find it easier to get loans from the government to set them up in business. Regional associations of producers are to be created to bargain on equal terms with the middlemen who carry the food to the housewife at enormous profit to themselves. Finally, as a solid token that it means business, the government has raised the selling prices of cereals, and hence of bread to the consumer.

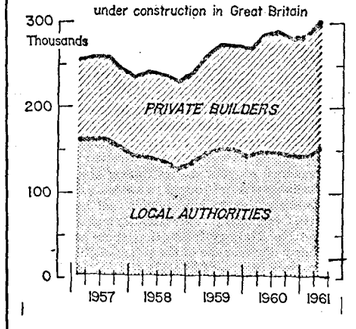
This programme is by no means contemptible, but the farmers want more. For instance, they want to see the facilities for training in modern agricultural methods expanded; reforms in the distribution of vegetables and fruit; the improvement of rural housing and services. Rural living standards lie at the heart of the matter, and until they have been raised trouble can be expected to continue. The farmers have decided to turn to parliamentary pressure for the next stage of their campaign. This, however, expresses no radical change of heart, but a sense of the inexpediency of blocking the roads and railways with their tractors just now, at holiday-time.

INTER-AMERICAN AFFAIRS

Traps for Aid...

MAJOR ("Che" to his friends) Guevara is popularly supposed to have become the architect of Cuba's economy because he misheard Dr Castro's call for an *economista* as a call for a *comunista*. Certainly, as leader of the Cuban delegation attending the inter-American economic and social conference at Punta del Este, his punch has, so far, been more political than economic. His two-hour speech on Tuesday ranged widely over United States misdemeanours, at the same time warning his fellow Latin Americans against allowing the alliance for progress (for which, after all, the Cuban revolution can claim some responsibility) to degenerate into an alliance for exploitation. If he had chosen to aim more precisely and more constructively he might, as the exponent of a swifter, if not better, way of doing things, have pinpointed obstacles that may yet prevent Latin America's rising expectations from becoming, in Mr Dillon's phrase, rising satisfactions.

President Kennedy's pledge to allocate more than one billion dollars (about £350 million) towards economic development in the first year of the economic alliance comes up to Latin American expectations. The sum includes about half of the $500 million that was pledged during the final months of the last American Administration. Mr Dillon suggested that Latin America should set out to find $20 billion in public and private investments, including United States aid, in the next ten years; at least this gives the hemispheric development programme a firmer outline than it has had. He impressed on the conference that the success of the economic alliance turns on Latin America's readiness to face social change; he spoke of tax reform, land reform, and better housing, education and health. Mildly, he even proposed that some of the Latin governments might divert some of their money from defence to development. This touches a sensitive spot; local reformers have long, and unsuccessfully, been urging the same change. Several of the republics still believe reform to be best for others. More immediately, the Latin Americans have balked at the idea of submitting their development plans to the scrutiny of an inter-American committee. The draft charter, embodying the principles of the alliance, leaves it to them whether they co-ordinate their plans or not.



...and for Trade

PROGRESS at Punta del Este is jerky: while the Latin Americans procrastinate over economic reform and integration, the United States hesitates to commit itself about trade policy. Mr Dillon has reaffirmed that the United States is willing to join a new, and broader, coffee agreement that embraces consumers as well as producers; more vaguely, he has said that it is ready to discuss terms for joining the international tin agreement. The proposal for an export stabilisation fund of $900 million has been diplomatically put on one side as "worthy of careful study."

Most of the Latin American republics depend on a single commodity for at least half of their export earnings. Several of them are even more vulnerable; since Colombia, for instance, gets more than three-quarters of its foreign currency from coffee, a drop in price could wipe out its development plans. American membership of the international coffee agreement would help to make the export quota system more effective by discouraging the under-cover shipments that now go on all the time; it would not, in itself, support the price.

The over-supply and sliding price of coffee vitally affect the economies of six Latin American republics. But it is far from being the only commodity where Latin and United States interests clash. Bolivia, leaning heavily on its tin exports, is urgently concerned by reports that the United States is thinking of releasing some of its colossal buffer stock. American quotas on oil and metal imports have cut into the export earnings of Venezuela and Mexico. Argentina sourly traces the droop in its meat exports to the United States. And so the story goes on. If Venezuela is excluded, Latin America's total exports have risen only 4 per cent in the last ten years. There are many reasons for this; the United States, as chief customer, gets most of the blame.

HOUSES AND FLATS

The Minister of Housing and Local Government said on Wednesday that the number of council dwellings authorised or under construction amounted to eighteen months' work. As the construction industry was overloaded it was taking longer to complete buildings. A go-slow would operate on new schemes for council houses, but slum clearance would not be held up.

NORTHERN RHODESIA

Warning Explosions

FIVE explosions — and five African deaths—in Northern Rhodesia during the past seven days must be seen as a warning of the extreme danger facing the colony in the coming months. On Saturday night two Africans were found dead after skirmishes with police reservists, and many were arrested; reports of arson, kidnapping, and the setting up of road-blocks poured in in profusion. On Wednesday three more Africans were killed when the police fired on a crowd armed with spears and bows near Chingali.

The Northern Rhodesia government has declared the United National Independence Party unlawful in the Copperbelt; emergency amendments are being made to the penal code, and federal troops have been sent from Salisbury to replace the King's African Rifles flown into the Northern Province of Northern Rhodesia. The leader of UNIP, Mr Kenneth Kaunda, has condemned violence and called for peace and calm. His appeal may have some effect, but a curious malaise has come over UNIP since its conference rejected the new constitution for Northern Rhodesia last month.

That conference also rejected violence and charged Mr Kaunda with the conduct of a non-violent campaign. Mr Kaunda's more radical lieutenants have since left Northern Rhodesia; one is in London, one in Cairo, two in Dar-es-Salaam. Mr Kaunda has now also left for Tanganyika, after postponing his call for a non-violent passive resistance campaign in Northern Rhodesia. The result of this dispersal of the Northern Rhodesia nationalist leaders has, according to some reports, been a loss of confidence in the non-violent policy of UNIP: the present outbreak of violence is as much directed against Mr Kaunda's moderate methods as it is against the new constitution imposed by the British Government. Only a change in that constitution—which would make Mr Kaunda's methods be seen to pay—could guarantee peace in Northern Rhodesia now.

EUROPE

Warning Shot

WHILE the members of the British cabinet disperse to their shooting coverts and spas, Mr Menzies is still busying himself with the common market. Australia, he said in a speech on Tuesday, will not give up the preferential system of Commonwealth trade without a powerful struggle. The fight for Australian markets would be his most important task when he left Australia to express opposition to British membership of the common market.

This hint of an early trip abroad by Mr Menzies also looks like a pretty forthright declaration of war against the British Government's plan to join the Six. But a second look suggests that Mr Menzies' view is not altogether intransigent. Though Australia cannot expect to preserve what is left of the Ottawa system, its fight for export markets is natural. And when Mr Menzies talked politics, he was by no means purely negative. A united Europe would give a balance to the world that it did not possess today, he said. True, he went on to say that if Britain were in that Europe, the Commonwealth would change. But on this occasion at any rate he did not say that the change would necessarily be for the worse. As a senior Commonwealth prime minister, Mr Menzies evidently feels he has a task, not only of opposition, but of education to perform.

ITALY

Signor Fanfani's Journey

SIGNOR FANFANI went to Moscow last week in the hope that his visit might be of some use in resolving the east-west crisis over Germany and Berlin, subjects on which Italy is often insufficiently consulted. Whether or not his firm exposition of the western case made some impact on Mr Khrushchev remains to be seen. But the Italian prime minister has at any rate the satisfaction of knowing that, by his pilgrimage to Moscow, he has asserted an Italian claim to join in the counsels of the great within the western alliance. Mr Dean Rusk's flying visit to Rome to see Signor Fanfani on Wednesday, at the end of the foreign ministers' meetings in Paris, was a more than polite acknowledgment of this claim.

Signor Fanfani's visit may have served another purpose, to bring home to the Italian people that the present international crisis concerns them closely, perhaps dangerously. Leaks of some of the more bellicose utterances that Mr Khrushchev is alleged to have made to his Italian guests prompted alarming headlines in the Italian press; these may not have done any harm.

If Signor Fanfani did in fact find Mr Khrushchev in a tough and uncompromising mood, he did not comment on it when he returned to Rome. He called the situation "delicate," but indicated that he did not think it beyond redemption. At least he seems to have been spared any display of hectoring bad temper by the Soviet leader, and had parted from him on friendly terms. Mr Khrushchev, in fact, did Signor Fanfani the unusual honour of taking him in his own car to the airport—which, perhaps significantly, gave the two men an opportunity for a final, entirely private chat. Perhaps in the present climate it may be considered a gain that what seems to have been a frank and, even at times brutal, confrontation between Mr Khrushchev and a western statesman should have ended politely and in agreement on the need for calm.

HOW TO JOIN A COMMON MARKET
page 618

The Economist

AUGUST 10, 1861

THE QUEEN'S SPEECH

PARLIAMENT was prorogued by commission on Tuesday last. The Royal Speech was as follows:—

MY LORDS AND GENTLEMEN,

We are commanded by Her Majesty to release you from further attendance in Parliament, and at the same time to convey to you Her Majesty's acknowledgments for the zeal and assiduity with which you have applied yourselves to the performance of your duties during the Session of Parliament now brought to a close. Her Majesty commands us to inform you that her relations with foreign Powers are friendly and satisfactory, and Her Majesty trusts that there is no danger of any disturbance of the peace of Europe. The progress of events in Italy has led to the union of the greater part of that peninsula in one monarchy under King Victor Emanuel. Her Majesty has throughout abstained from any active interference in the transactions which have led to this result, and her earnest wish as to these affairs is that it may be settled in the manner best suited to the welfare and happiness of the Italian people. The dissensions which arose some months ago in the United States of North America have, unfortunately, assumed the character of open war. Her Majesty, deeply lamenting this calamitous result, has determined, in common with the other Powers of Europe, to preserve a strict neutrality between the contending parties. Her Majesty commands us to inform you that the measures adopted for the restoration of order and tranquillity in Syria, in virtue of Conventions between Her Majesty, the Emperor of Austria, the Emperor of the French, the King of Prussia, the Emperor of Russia, and the Sultan, having accomplished their purpose, the European troops which, in pursuance of those Conventions, were for a time stationed in Syria to co-operate with the troops and authorities of the Sultan have been withdrawn; . . .

GENTLEMEN OF THE HOUSE OF COMMONS,

Her Majesty commands us to convey to you her warm acknowledgments for the liberal supplies which you have granted for the service of the present year; and Her Majesty has seen with satisfaction that, after amply providing for the wants of the public service, you have been able to make a sensible diminution in the taxes levied upon her people.

MY LORDS AND GENTLEMEN,

Her Majesty commands us to express to you the deep gratification with which she has witnessed the spirit of devoted patriotism which continues to animate her volunteer forces; and the admiration with which she has observed their rapid progress in discipline and military efficiency. . . . Her Majesty has observed, with heartfelt satisfaction, the spirit of loyalty, of order, and of obedience to law, which prevails throughout all her dominions, and she trusts that by wise legislation, and a just administration of the law, the continuance of this happy state of things will be secured.

How to Join a Common Market

Heath, Thorneycroft: Which Mr Europe?

AFTER decision, negotiation: the British Government on Thursday followed up Mr Macmillan's statement of July 31st to the House of Commons with a formal application to the European Economic Community. This took the form of a letter, signed by the Prime Minister, to the chairman of the community's Council of Ministers, who happens at the moment to be Dr Erhard. The council is likely to pass the letter to the European Commission for an opinion, which it will give, presumably, at its next meeting on September 5th. The council can then consider the commission's views at its own meeting on September 26th and draft a reply.

If this is encouraging, and there seems no reason to doubt that it will be, negotiations between Britain and the Six might start early in October. All seven governments involved are anxious for speed. But the Six may need time to prepare their negotiating position, and this could cause delay. They also have to decide what kind of negotiating team they will employ. One widely canvassed idea is that of a joint team of officials, from both the commission and the governments, led by a prominent figure such as M. Spaak, now the Belgian foreign minister. Other ministers will obviously have to be brought into the negotiations at critical moments. Both Mr Heath and Mr Thorneycroft—who would presumably give up his duties as Minister of Aviation—have been suggested as leaders of the British team.

Commonwealth exports will provide the main topic of negotiation between Britain and the Six. The British African territories have to decide how many of them want to be associated with the community under Part IV of the Treaty of Rome. All have an economic interest in association on the same terms as the French territories, but Ghana evidently has strong political doubts. On their side the Six—and their associated territories—have to decide whether to admit new associates of this kind. So far the signs are that they will, provided that Britain is prepared to take part in joint aid and commodity stabilisation plans. Here the new American offer to back world-wide commodity stabilisation arrangements, if preferential tariffs are removed, is a helpful factor. And the fact that the community's African association is now being renegotiated from scratch means that British territories would have a chance to give the association the flavour they prefer.

Other Commonwealth countries, notably New Zealand and Australia, also have to decide whether to seek association under Article 238—a solution not ruled out, in the case of New Zealand at any rate, by the founding fathers on the Continent. If these countries decide not to seek association, Britain will presumably seek to protect their principal farm exports—grain, butter and meat—in other ways. Tariff-free quotas (for which provision is made under Article 25) provide one way of doing this, but large-scale use of these, except as a transitional measure, arouses little enthusiasm in the community, since it would jeopardise a common agricultural policy. Quantitative contracts or ceilings on European prices provide alternative means of guaranteeing Commonwealth exports.

ONE decision to be made early in the negotiations will be whether to try to work out detailed solutions for all Commonwealth commodities before Britain signs, or to make use of general safeguards and leave the details to be worked out later. A factor in favour of the second course is that the community has not yet worked out its own agricultural policy. It might be easier to work the Commonwealth interests into the new fabric as it is being woven than to negotiate about hypothetical plans in advance.

In non-tropical agriculture, as in tropical products, world-wide arrangements, such as new plans in the Food and Agriculture Organisation for the disposal of farm surpluses in the undeveloped countries, will have relevance to the negotiations. So, in manufactures, will the October conference of the General Agreement on Tariffs and Trade about the import of Asian textiles.

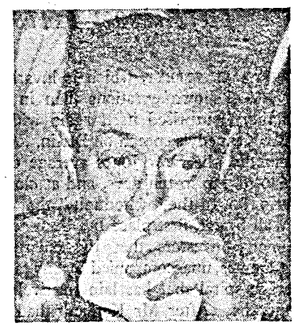
Britain's application to join seems likely to be followed at once by a similar application from Denmark. The Norwegian government is expected to put a proposal for joining before the Storting in October. Eire has already formally applied for membership. Whether, when, and in what form Austria, Switzerland, Sweden and Portugal, the other members of the European Free Trade Association (not to mention Finland and Cyprus), apply for association remains to be seen. On some matters there will have to be separate negotiations with each of these countries; on others negotiations will have to be collective.

One such subject will be the level of the future common tariff. The thought that it may have to be renegotiated from scratch—an interminable task—sends shivers down the backs of those who made the Treaty of Rome. How would Britain's tariff (higher towards third countries than the common market tariff, lower towards the Commonwealth) be weighted in the final averaging? What weight would the new small members or associates carry in the new tariff? Perhaps the simplest solution would be to take as starting-point the original common market tariff minus 20 per cent, and to negotiate any changes. Britain would certainly wish to renegotiate certain tariffs on raw materials in the interest of the Commonwealth. A second matter for collective negotiation would be timing. Should the tariffs between the Six and the new members be cut in one fell swoop by 50 per cent or in, say, two cuts of 25 per cent? What would be the timing of the difficult agricultural merger between Britain and the continent?

Finally, the institutions will have to be adjusted to fit in new members—a problem simple in principle but technically complex. The size of contributions to the various common funds—the Social Fund, the Investment Bank, the Fund for Africa—will have to be worked out. New members will have to be appointed to the European Commission and voting weights worked out for the new entrants in the council of ministers. At present the three large powers get four votes each, Belgium and Holland two, and Luxembourg one. Would Britain simply be given four votes and Norway and Denmark two each, or would a complete new weighting system have to be worked out? How many votes would make up a qualified majority (13 out of 17 at present)?

All these matters could be negotiated within a few months, given the will to agree. But quite apart from the many potential sticking points, consultation, especially between Britain on one side and the Commonwealth and the Seven on the other, could consume an immense amount of time. The time taken may turn as much on the way this consultation is organised as on the substance of the bargaining.

AMERICAN SURVEY



AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Fall-Out in New York

FROM A SPECIAL CORRESPONDENT

THE Democrats of New York, whose conduct has often baffled and frustrated their party's Presidents in the past, may well give Mr Kennedy his first major political setback since he took office. The mayoral election in New York City, which will be decided in a primary (intra-party) contest on September 7th and a final election on November 7th, has produced a complete and open rupture between the party organisation and those who want to reform it, making it wholly possible for the first time in this century that the Republican party may capture the city government. This would be an immense, if indirect, personal triumph for the Republican Governor, Mr Rockefeller, in his long-term drive to win his party's presidential nomination and stand against Mr Kennedy in 1964. Even if the Democrats avert such a defeat for their party, the election of either of the candidates of the two Democratic factions will still leave hatreds and rivalries which will severely tax Mr Kennedy's political skill.

The President's choice for Mayor is the incumbent, Mr Wagner, a dull, procrastinating, often ineffectual and yet impressively durable man. Mr Wagner's two greatest strengths are his personal honesty and his good intentions. These may seem pretty meagre credentials for what is usually and accurately described as the nation's second most demanding executive post but, in a city repeatedly disgraced by corruption and cynicism in high places, these personal virtues carry more than ordinary weight. For several months after the serious manœuvrings got under way at the beginning of the year, it appeared as if Mr Wagner might bring off a strategic coup and obtain the support of both the reform and machine factions, even though neither of them really wanted him to run again.

Mayor on a Hot Seat

The leaders of the party machine, a coterie of dreary, hard-bitten narrow-minded old-timers for whom politics is a year-round operation profitably interlocked with their law and insurance businesses, had been instrumental in electing Mr Wagner to his first term in 1953 and re-electing him four years later. But this year they wanted to dispense with him because they knew that his popularity had waned. Moreover, the Mayor, who had never been wholly docile in following their advice, had become increasingly stubborn in disputes over patronage as he strove to offset his loss of popularity by building a fresh image of independence. With Mr De Sapio, the Democratic leader in Manhattan and the most prominent of these bosses, Mr Wagner had broken relations publicly last winter. The reformers, who include many energetic, younger people but whose best-known leaders are those venerable stalwarts from the party's liberal past, Mrs Eleanor Roosevelt and Mr Herbert Lehman, the octogenarian ex-Governor and ex-Senator, were equally dissatisfied with Mr Wagner because of his lack of initiative in rooting out corruption and his refusal to break cleanly and on principle with the party bosses.

Mr Wagner's strength was that he was the only figure upon whom both groups could conceivably agree. His strategy throughout the spring was to make enough of a show of independence to become acceptable to the reformers without severing all his remaining ties to the party organisation. The manœuvring turned upon his choice of new candidates for the two subordinate offices which are also filled at the city-wide election—the President of the Council and the Controller. The former is an empty office comparable to the Vice Presidency in the federal government, but its occupant succeeds to the Mayoralty if a vacancy occurs. For the past eight years, the incumbent has been an amiable retired businessman from Brooklyn. When Mr Wagner ran unsuccessfully for the Senate in 1956, he found this circumstance a serious handicap because many otherwise sympathetic voters were reluctant to turn the city government over to his putative successor. Since Mr Wagner might again decide to escape the rigours of life in City Hall by standing for the Senate or accepting a high appointment from the Kennedy Administration, he insisted upon a new man for President of the Council.

The bargaining over these not very important offices gradually took on a symbolic importance. Mr Wagner, departing from past practice, finally proposed two career civil servants. This was acceptable not only to Mr Lehman and the reform Democrats but also to the Liberals, an independent third party existing only in New York, which promptly gave Mr Wagner its endorsement. But the leaders of the party organisation, who detest the reform Democrats and the maverick Liberals, insisted that the Mayor accord them their traditional prerogative of naming the other members of his team. This would have been an act of fealty to the organisation and to the old values. When he proved unexpectedly adamant, they decided, with varying degrees of reluctance, to force the issue by entering a candidate of their own against him. President Kennedy intervened behind the scenes belatedly but vigorously in a futile effort to persuade the party leaders to paper over their differences with Mr Wagner.

The candidates who have emerged from this scramble are a uniformly undistinguished lot. Mr Arthur Levitt, the machine candidate, is, like Mr Wagner, a colourless and respectable lawyer but he is more conservative. Mr Lefkowitz, whom the Republican party nominated when Senator Javits proved unwilling to leave his seat in Washington, is the State Attorney General and an agreeable professional politician but by no stretch of the imagination or desire is he a crusading reformer or a gifted administrator. Mr Gerosa, the incumbent Controller whom both Mayor Wagner and the party leaders were content to drop but who insists upon making a hopeless bid as an independent candidate for Mayor, is the most negligible of all.

It is often asked why a metropolis the size of New York, with great men active in almost every field of endeavour, cannot produce a great man, or at least an outstanding man, to serve as Mayor. It should be remembered that when most people think of New York they think only of Manhattan, which is the city's

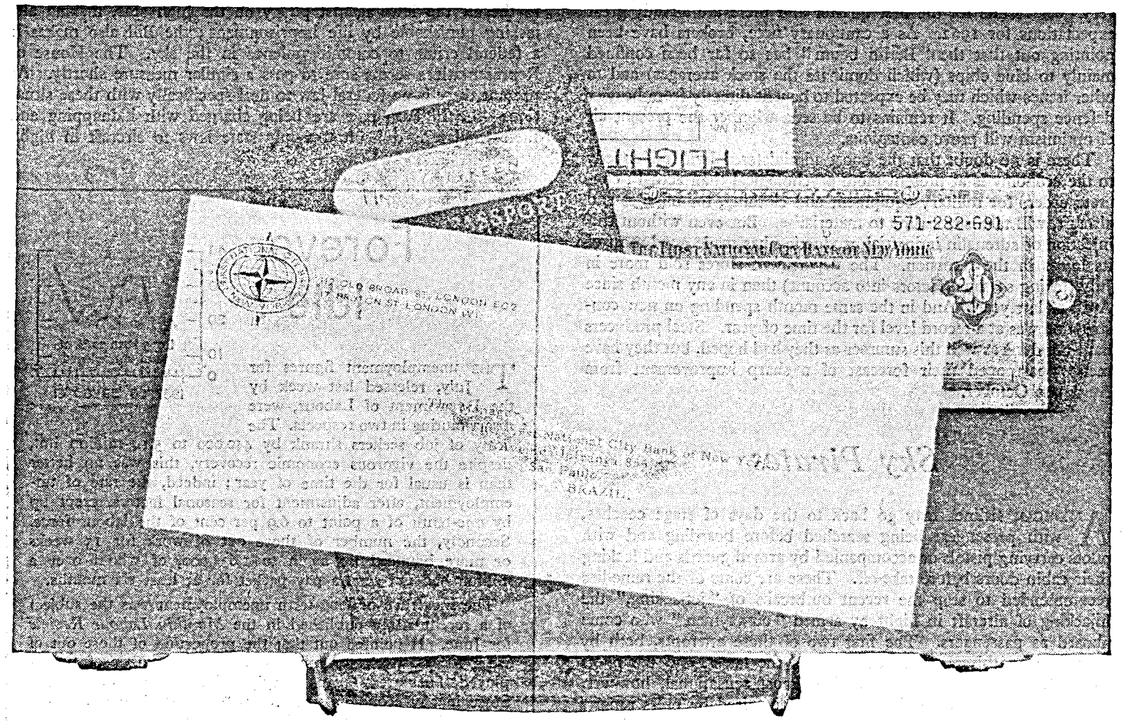
glittering facade but casts less than one-quarter of the vote. The outlying boroughs, Brooklyn, Queens, the Bronx and Richmond (Staten Island) are made up of middle-class and working-class voters, whose interests are no different from those of most Americans. There is no reason, for example, why the Bronx or Queens should produce political leaders more interesting or more impressive than other American communities of medium size such as Topeka, Kansas, or Akron, Ohio. It is significant that the reform Democrats have substantial strength only in Manhattan.

If Mayor Wagner overcomes Mr Levitt in the Democratic primary, he will be unbeatable in an overwhelmingly Democratic city. However, the odds are at least even that the party machine will be strong enough to wrest the nomination from the Mayor. In that event, Mr Wagner would continue in the contest as the candidate of the Liberals and also of a newly-organised Freedom Party. The latter is being put together by trade union leaders whose ambition is to emulate the success of Mr Reuther and the United Automobile Workers in Detroit by taking over effective control of the city's politics. In such a three-cornered race, with Mr Wagner and Mr Levitt splitting the Democratic vote, Mr Lefkowitz, the Republican, would have an excellent chance of slipping into first place as a minority victor. Besides strengthening Mr Rockefeller, a victory for Mr Lefkowitz would give the Republicans an unparalleled opportunity to rebuild their strength in the country's largest urban centre, where they have never had outright control. The late Fiorello LaGuardia, who was Mayor from 1933 to 1945, was nominally a Republican but actually he was a free-wheeling independent who disdained the Republican party organisation and held power through a complex set of personal alliances.

A victory for Mayor Wagner would end the career of one or two of the party bosses, notably Mr De Sapio, but there would eventually be a reconciliation, in practice, with the party organisation. The reformers are just not strong enough in the boroughs outside Manhattan to supplant completely the present leaders of the organisation. But should Mr Levitt and the bosses emerge triumphant it would not be equally easy to re-establish party unity. Reformers do not come so readily to terms with defeat and the practical necessities of politics. Their bitterness and disillusionment would have unpredictable consequences. This prospect does not worry the local party bosses, whose concerns are exclusively parochial, but it must give Mr Kennedy and Mr Bailey, the Democratic National Chairman, serious pause for they know that they cannot hold New York in 1964 without the active support of the reformers as well as of the party machine. That is why the White House, in the coming weeks, can be expected to make some significant gestures in favour of Mayor Wagner, though they will stop short of an outright presidential endorsement.

Challenge in Congress

UNLIKE Major Gagarin, Major Titov will not impose any new burden on the American taxpayer—at least not immediately. For this cosmonaut's repeated circlings of the globe, admired and envied as they are in the United States, are recognised as being merely an expected extension of the Gagarin feat. To this Russian success the United States had already reacted with its determination that the first men on the moon must be Americans—the only way, it is felt, of offsetting the effect on world opinion of having fallen so far behind in the race to put men in space. As Major Titov was being welcomed back Congress was finally giving the President the extra money which he had requested after Major Gagarin's return for accelerating the American drive for the moon. The total appropriation just voted for the National Aeronautics and Space Agency for the current fiscal year is $1.7 billion ; this is $77 million less than the President asked but officials do not appear concerned.



The general feeling is that America's space programme is now being pushed as hard as it can be—although some people think that NASA could be organised more effectively—and that there is no point at present in providing it with more money. The Air Force, however, does not agree ; it does not like the present policy of keeping the military out of all manned space activities and in particular it wants development of its Dynasoar project to be speeded up. This, still in its early stages, is a manned and manœuvrable glider which would be shot into space by a rocket and which might have military uses. Congress, already more interested in this scheme than is the Department of Defence, will probably become even more so as a result of Major Titov's achievement since to many members—although not, apparently, to the department—this has obvious military potentialities.

Final approval of the appropriations for ordinary defence this year is being held up by the reluctance of the House of Representatives, always unenthusiastic about civil defence, to give the President the extra funds which he requested for bomb shelters. Otherwise all of his additions to the defence budget seem to have been agreed by the conferees from the two houses who are also insisting on giving him $525,000,000 for long-range bombers which he does not want. The third and only controversial part of this year's answer to the Soviet challenge, the foreign aid programme, has also been held up this week by Senator Proxmire's one-man, twenty-five-hour, protest against the nomination of a representative of the oil and gas industry to be a member of the Federal Power Commission which regulates that industry.

Inflation Hits Wall Street

WALL STREET, which is invariably less skilled in anticipating its own gyrations than in forecasting swings in business activity, surprised itself again with the vigour of its response to Mr Kennedy's speech on Berlin. After fluctuating aimlessly for 2½ months, the Dow Jones average of industrial shares soared from 680 to 720 in ten days, and at closing time this Wednesday stood at 718. In the "whodunit" that follows any change of mood on Wall Street, first place has been accorded to the widespread belief among investors that the enlarged government spending programmes, unaccompanied by any tax increases, will revive the price-wage spiral that has lain relatively dormant for the last eighteen months. After Mr Kennedy had made his request for an extra $3.5 billion for defence this year, the pundits on Wall Street did their own sums and came to the conclusion that the deficit for the financial year that has just begun, which Mr Kennedy put at $5 billion, was more likely to approach $10 billion. Investors therefore turned their backs on the government bond market (where interest rates rose to their highest level in a year) and bought equities as a hedge against inflation.

At the same time the market is confirming its faith in the business recovery which it anticipated with such singleness of mind throughout the winter. Indeed, with additional government spending for housing, roads, public works and social welfare, as well as for defence, the recovery is now being rechristened a full-scale boom. Company profits for the second quarter of the year were still below those of the like period of 1960, but they looked well beside the

Your extra passport to local trading conditions

First National City's world-wide network means that there are no important industrial or commercial centres overseas where there isn't a First National City branch or correspondent.

But more is involved in this than merely a first-class global banking service. For instance, every client of First National City can claim what is virtually a passport to local business and local trading conditions anywhere in the world—a letter of introduction to the manager of any overseas branch or correspondent.

These men are valuable allies. They know local customs, local laws, and local commercial practices thoroughly. And they are experts in helping businessmen to increase their export potential.

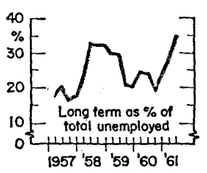
COMPREHENSIVE SERVICE This is only one of the ways in which First National City can help a businessman. Travelers' checks, up-to-date credit information on many thousands of foreign companies, a monthly survey of the world's economic and business trends with special reference to the United States—all these are invaluable to the exporter.

Why not call in and find out more about the ways in which First National City can help you? First National City offices are at 117 Old Broad Street, E.C.2 (London Wall 1221), and 17 Bruton Street, W.1 (Mayfair 6600).

THE FIRST NATIONAL CITY BANK
OF NEW YORK
INCORPORATED WITH LIMITED LIABILITY UNDER THE NATIONAL BANK ACT OF THE U.S.A.

very poor results for the first quarter and there are already great expectations for 1962. As a cautionary note, brokers have been pointing out that the "Berlin boom" has so far been confined mainly to blue chips (which dominate the stock averages) and to other issues which may be expected to benefit directly from heavier defence spending. It remains to be seen whether the present air of optimism will prove contagious.

There is no doubt that the boost administered by Mr Kennedy to the economy is at present more psychological than actual; concrete orders for military equipment and clothing, for missiles and aircraft, will take some time to materialise. But even without this injection of adrenalin industrial production has made good most of its losses in the recession. The department stores sold more in July (taking seasonal factors into account) than in any month since April of last year. And in the same month spending on new construction was at a record level for the time of year. Steel producers have not done as well this summer as they had hoped, but they have merely postponed their forecast of a sharp improvement from August to October.



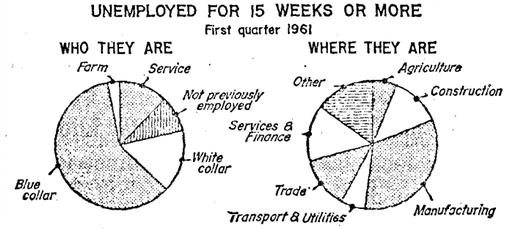
Sky Pirates

AMERICAN airlines may go back to the days of stage coaches, with passengers being searched before boarding and with pilots carrying pistols or accompanied by armed guards and locking their cabin doors before take-off. These are some of the remedies recommended to stop the recent outbreaks of "jetjacking," the hijacking of aircraft in flight by armed "airwaymen" who come aboard as passengers. The first two of these attempts, both by Cuban sympathisers, succeeded, as has the latest, and the pilots were forced to fly to Havana. The most sensational, however, which came last week and was probably inspired by press reports of the others, was a failure: a father and his young son tried to get themselves to Cuba in a Boeing 707 carrying 67 passengers, only to be frustrated after holding the crew and four hostages at pistol point for nine gruelling hours, mostly on the ground at El Paso, Texas. It turned out that the two men had had no communication with Dr Castro, but merely wanted to move to Cuba—the father had a criminal record—without having money for fares and hoped to be welcome there if they arrived with the present of a jet aircraft.

Meanwhile, however, the whole of the United States, including the President, followed the nine-hour drama and several members of Congress were guilty of intemperate threats against Dr Castro, who was presumed to be responsible for this act of piracy in the air. They repeated these threats this week when the pilot of a Pan American DC-8 carrying 81 people was ordered by a pistol-waving passenger to fly it to Havana. There were even demands that the Marines should be sent to fetch the aircraft but Dr Castro released it at once, as he had the one flown to Cuba in May, even though he had said that he would hold on to any more he could get—there were rumours of plans to skyjack at least five—to compensate for the ten Cuban aircraft which have been impounded and sold in the United States to pay off some of Cuba's debtors there. Dr Castro still has an Electra which arrived in July but he has indicated that it will be returned if the United States frees a Cuban patrol boat which brought refugees to America.

Now both Congress and the Administration are concentrating on discouraging would-be jetjackers by increasing the penalties against such piracy. Pilots contend that the use of pistols in pressurised cabins would be a cure much more dangerous than the disease, while the airlines abhor the delays—and maybe legal complications—which would arise from searching passengers. But this week the Senate is rushing through a Bill which would take to the air the laws against piracy on the high seas, making air-jacking punishable by life imprisonment; the Bill also makes it a federal crime to commit violence in the sky. The House of Representatives seems sure to pass a similar measure shortly. At present there is no federal law to deal specifically with these situations—the El Paso pair are being charged with kidnapping and theft—and it is difficult to apply state laws to aircraft in flight.

Forever Idle?



THE unemployment figures for July, released last week by the Department of Labour, were disappointing in two respects. The army of job seekers shrank by 440,000 to 5.14 million but, despite the vigorous economic recovery, this was no better than is usual for the time of year; indeed, the rate of unemployment, after adjustment for seasonal factors, crept up by one-tenth of a point to 6.9 per cent of the labour force. Secondly, the number of those out of work for 15 weeks or more bounced up again to 1,634,000, of whom over a million had not seen a pay packet for at least six months.

The incidence of long-term unemployment was the subject of a recent study published in the *Monthly Labour Review* for June. It pointed out that the proportion of those out of work for 15 weeks or more to the total number of unemployed fluctuates fairly sharply with the business cycle. Since in any economic upturn employers tend to rehire first the people who were fired last the ranks of those who have been out of work a long time continue to expand for several months after business has started to pick up. What is particularly worrying to the authorities is that, in boom as in recession, the proportion of prolonged unemployment to the total is creeping steadily upward.

Apart from the unknown number of people who make little effort to find a job, long-term joblessness is more likely to affect some groups of workers than others. Partly it is a matter of geography and partly a matter of age. Prolonged unemployment is very common in those industrial centres which have a chronic surplus of a particular kind of labour, while a middle-aged man who loses his job is less likely to find another than a younger man; 36 per cent of those of 45 and over who are now out of work have been unemployed for 15 weeks or more against 28 per cent in the 18 to 24 years group. The white-collar worker is less likely to face prolonged idleness than the manual labourer, and a white-skinned worker has better prospects than a dark-skinned one, though the difference (28 per cent of the white unemployed have been out of work for 15 weeks or more against 32 per cent of the non-white) is not perhaps as wide as might be expected.

UNEMPLOYED FOR 15 WEEKS OR MORE
First quarter 1961

Trade Unions' Bitter Harvest

FROM A CORRESPONDENT IN CALIFORNIA

IT took less than a minute for the executive board of the American Federation of Labour and Congress of Industrial Organisations to decide at its last meeting to end the federation's year-old attempt to bring California's farm workers into a trade union. In another few weeks the union offices in the northern and southern parts of the state will close and, on the surface at least, another victory will have been achieved by the growers. But the drive left its mark on California. The union forced the farmers to pay higher wages and provide better working conditions, even if it did not force them to sign many contracts. The union was also able to cut down, to some extent, the use of *braceros*—the Mexicans imported into the United States for farm work.

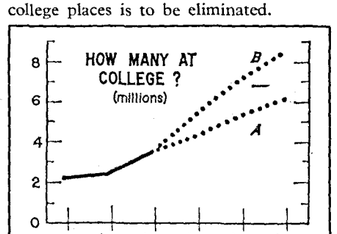
In California attempts to organise the farm workers, who rank among the lowest paid in the country, have been made for many years with little success. Many of them are ill-educated migrants, who work at one place for only a few weeks before they leave to follow the harvest. There is no tradition of organisation among them and little chance of developing one in the depressed parts of the South where the great majority of them eke out an existence when they are not moving around looking for farm work. In California itself farms are so large—some cover thousands of acres—that workers are separated by great distances. The size of the farms, which are owned in many cases by corporations rather than by individual farmers, has made mechanisation feasible on a large scale; this means that the number of potential trade union members is reduced. In the San Joaquin Valley, for example, more and more of the huge cotton crop is being harvested by "Big Red," the mechanical picker which moves down the rows of cotton methodically swallowing the bolls and disgorging the cotton.

The use of Mexican workers puts further obstacles in the way of recruiting for a trade union. As aliens *braceros* are legally permitted to remain in the country only during the growing season and so are not likely to be interested in joining a union. The wages they earn, no matter how low, are generally higher than those paid in the rural parts of Mexico from which they come and, since they speak hardly any English, it is often difficult to communicate with them. This year the union adopted the technique of quick hit-and-run strikes in the hope that, with sympathetic Democratic administrations in power in Washington and at the state capital,

Ivy League Crush

FROM A SPECIAL CORRESPONDENT

THE United States now sends 40 per cent of its young people to college as against 5 per cent for the United Kingdom and 8 per cent for the Soviet Union. Of the 3½ million American students currently enrolled, 2 million are at publicly-supported institutions. For these students the choice of college was decided primarily by geography, and the institution in most cases required of those admitted nothing more complicated than a creditable graduation from their secondary school. But the 1½ million now at the 666 private colleges and universities had to endure a more rigorous procedure, requiring detailed records of their performance at high school, the results of national scholastic tests and of national scholarship competitions, numerous personal interviews with college officials and so on.



The business of choosing, and being admitted by, a private college has increasingly taken on the characteristics of a national lottery. The crux of the problem is that some colleges are much more desirable in the eyes of applicants than others, so that the demand for admission to the relatively small group of "prestige" colleges far exceeds the number of places available. And the more these institutions can confine themselves to taking only the best students, the greater their reputation and desirability. This year the eight "Ivy League" colleges (Columbia, Harvard, Yale, Princeton, Dartmouth, Brown, Pennsylvania, Cornell) received some 35,000 applications for the 8,700 places they had to offer in next autumn's freshman class.

Since so many students will be rejected by the college of their choice, they normally apply for admission to several colleges simultaneously. Each college is assured that it is indeed the candidate's first choice and each discounts the truth of the candidate's vow and proceeds to admit substantially more students than it can take in the sure knowledge that a proportion of those admitted will accept places elsewhere. This system of "multiple" applications puts a heavy burden on those concerned with admissions and wastes a great deal of time and effort all round. Moreover, college officials are well aware that the situation is going to get markedly worse as the postwar "baby bulge" moves into the colleges.

THERE will always be a disproportionate demand for entrance to prestige colleges, but some fundamental revisions in admissions procedures could ease the situation considerably. In the first place, more objective information (in a standardised form) should be supplied both by the candidates and the colleges. At present the colleges get a good deal of data on prospective students but they supply shamefully little about themselves. Their catalogues and brochures are filled with pious utterances about their founders, details of their new building programmes and an endless listing of courses of study but they provide the prospective students with little guidance on the nature of a particular college or on the standards that are expected of entrants.

In the second place, many teachers and admissions officials are convinced that only rapid joint action will help to bring the situation under control. A logical first step would be to require students to file their applications with a central clearing house—a step that would cut out much of the multiplication of applications and interviews. (*It is interesting to note that* the Harvard Business School has abandoned the traditional personal interview, at a saving of $35,000 a year, believing it to be of relatively little value in the consideration of an applicant.) In the past American colleges and universities have not distinguished themselves in co-operative action, but a College Admissions Centre, sponsored by the Association of College Admissions Counsellors, has enjoyed great success in its short history.

So far the centre has sought to match only those students who have been rejected by the colleges of their choice with institutions still having vacancies—thus assuring students of finding a place somewhere. But the scheme has worked so smoothly that some would like the centre to take on the whole complex task of fitting students into the available college places; in this connection there has been a good deal of interest in a similar British scheme being pressed by the "red-brick" universities. Any progress in this direction, however, will depend on the prestige universities whose leadership is necessary if the disappointment and waste of effort that now characterise the search for college places is to be eliminated.

(A) Assumes that the proportion of young people going to college remains at the current level of 40 per cent.

(B) Assumes that the proportion increases to 50 per cent by 1975.

the *braceros* would be treated as strike-breakers and their employment forbidden. But the union's pickets were few and this hope was disappointed.

The victory of the growers over the AFL-CIO gives them only a respite. Mr Hoffa's teamsters—originally a lorry-drivers' union which now accepts all comers—have announced that they are going to organise the farm workers and there is no doubt that Mr Hoffa can bring extremely heavy pressure on the growers through his union's control over the canneries. The teamsters not only control the lorries that bring perishable goods to the plants, but they also represent the workers inside them. Indeed, Californian farmers fear that the teamsters' fire may turn out to be a great deal hotter for them than the AFL-CIO frying pan in which they thought they were sizzling.

No Sound of Music?

BARRING an eleventh-hour change of heart all round, New York's heavily Victorian Metropolitan Opera House will keep its doors closed throughout the coming season. On two previous occasions New Yorkers have been threatened with an opera-less winter (in 1948 and in 1956), but in each case the dispute was settled almost immediately. But this week spokesmen for the "Met" announced that the difference of opinion between themselves and Local 802 (the New York chapter of the American Federation of Musicians) on the appropriate pay for members of the orchestra was too wide to be bridged, even with President Kennedy's intervention. The union is now asking for basic salaries of $248 a week for six performances, while the Met is offering to continue last season's rate of $170 for seven; it claims that the union's demands would add $750,000 to an operating deficit that reached $840,000 last year.

Local 802 (together with about a dozen other unions) is also unpopular in the adjacent theatre district. Broadway has had one of its most unprofitable seasons ever; while "My Fair Lady" continues to enrich its sponsors and has played to more audiences than any other musical, only a half-dozen or so of the 46 shows that opened last season are likely to pay their way. Occasionally producers blame a public that is increasingly indifferent to the live theatre and that concentrates its patronage on a few "hit" shows. They also blame the city, which has failed so far to reconsider the 5 per cent tax it levies on tickets, and the federal government which adds on another 10 per cent. But much of the criticism is levelled at loyal union members who shift props, rig up lighting and sit in the orchestra pits. The major bone of contention is the mass of restrictive practices which prevent a producer from, say, asking an idle electrician to bang in a nail and force him to pay for services not rendered. For instance, Local 802 insists that, for any show in which music occurs, four musicians must be paid, whether or not they can be used.

The unions, of course, feel that they are blamed unjustly, and they point to examples in which they have gone out of their way to ease the path of individual producers. There is also no doubt that the producers themselves could do a lot to cut Broadway's losses—by watching costs more closely, by curbing aesthetic fancies that make heavy demands on labour behind the scenes, and by taking a firmer line with the unions. They might even, in time, be able to persuade the unions to drop some of the restrictive practices for a *quid pro quo*; last week seven unions in the picture-making industry in New York agreed to do just this in exchange for 16½ per cent of the gross profit of each of five low-budget films, in order to keep them from being made in lower cost studios abroad. Already the Dramatists' Guild has agreed to smaller royalties in the early stages of a run and in the case of plays by new authors.

SHORTER NOTES

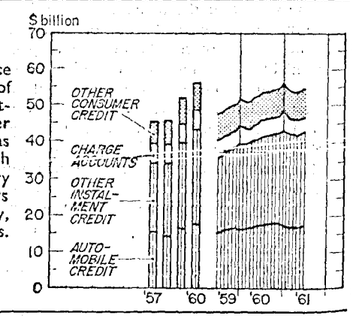
The last unsettled return of the 1960 election has now been decided. An investigating committee has ruled that a Democrat, Mr Roush, won the closely-fought right to represent Indiana's Fifth District in the House of Representatives. The House, now with its full complement, totals 263 Democrats and 174 Republicans. Two special elections have been held to fill seats vacated by death, but in both cases a Republican follows a Republican.

* * *

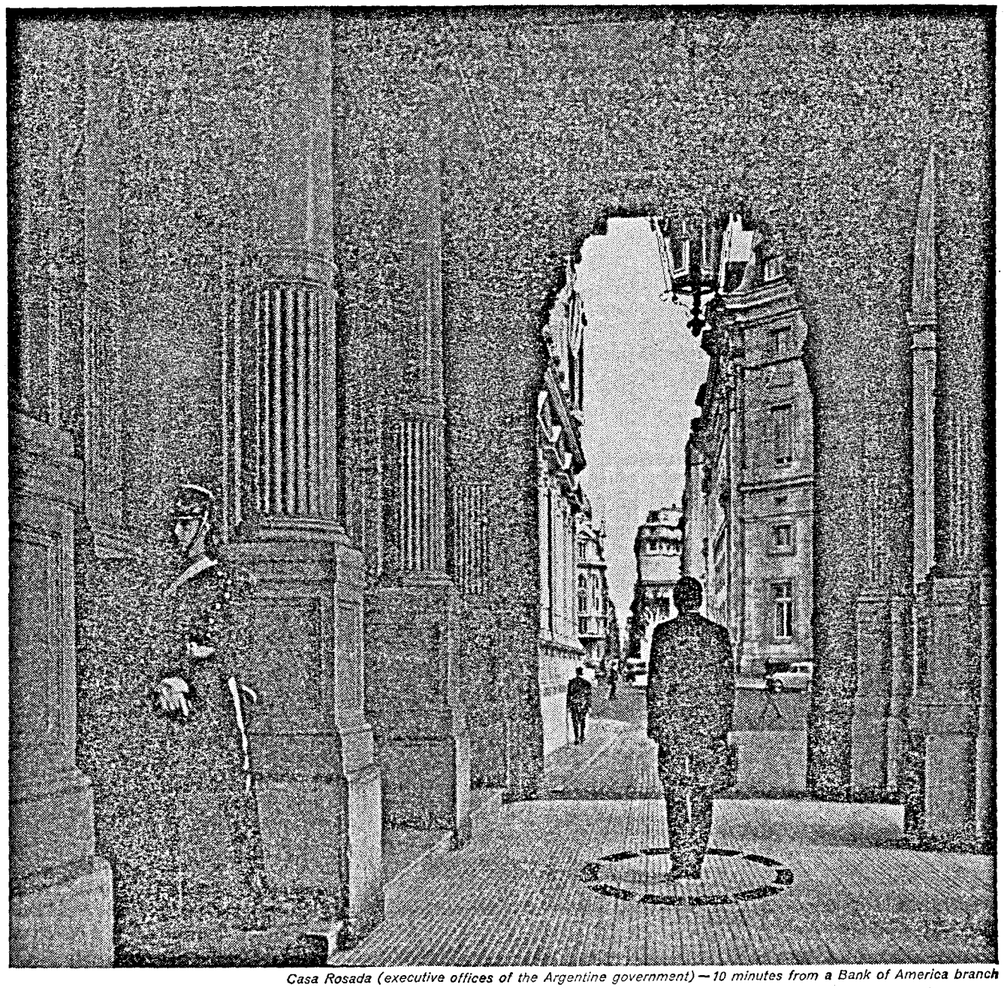
President Kennedy has chosen Mr George Mitchell, a vice president and chief economist of the Federal Reserve Bank of Chicago, to succeed Mr Szymczak, who is retiring from the Board of Governors of the Federal Reserve System. This cautious selection ends the speculation that the President might appoint a critic of the board's present policies, with a view to having him succeed Mr Martin when the latter's term as chairman ends in 1963.

* * *

With the severance of its exclusive link with the Department of Commerce and its new status as an independent instead of an official body, the Business Advisory Council has dropped the second word of its name. But this group of prominent industrialists, financiers and businessmen is in fact now prepared to give more advice than before—to any government agency instead of to one department only—provided it is asked to do so. It is unlikely that any request will come from its old sponsor, the Department of Commerce, since the council's change of status is largely the result of friction between its chairman and the Secretary of Commerce.



* * *



The first full-length study of Nevada's gambling industry has been made by a University of Colorado group for the Nevada State Legislature—for economic, not moral, reasons. It finds that the 12 million tourists who visit Nevada each year—40 times its own population—are attracted by the prospect of gambling; half of them come from neighbouring California. They leave $163 million yearly with the proprietors of 1,010 gambling places, which in turn pay about $15.5 million in taxes to state and local governments. One-third of Nevada's 280,000 inhabitants depend directly or indirectly upon gambling for a livelihood, and one-fifth of the public revenue comes from it. There are about 16,000 slot machines in the state, and 1,188 tables for gambling games; blackjack, "craps" and roulette, in that order, are the most popular. The tables take in twice as much revenue as the "slots," and the 300 "big operators," the hotels and casinos, provide 97 per cent of all revenue. It is no good other western states trying to tap this pot of gold, because they lack Nevada's proximity to the huge and growing population of Southern California.

CONSUMER CREDIT

The substantial increase in June in the amount of hire purchase credit outstanding and in consumer credit as a whole was another sign that, with signs of economic recovery multiplying, consumers were again ready to buy, especially durable goods.

Outstanding at end of period.

Parable of Price Street

FROM A CORRESPONDENT IN BIRMINGHAM

THAT quiet Pakistini moulder Mr Sardar Mohammed (his workmates call him Sam) and the council tenants of Price Street, Smethwick, have still got to settle down as neighbours. Price Street's attempted rent strike revealed, almost for the first time, the true extent of the colour problem in the Midlands, as well as exposing some of the rawer nerves of local racial hatred. In one sense, there could have been no better test case than Mr Mohammed's ; in other ways, it must be admitted, it has been far from typical.

The point of the Price Street affair is that over a period of years Mr Mohammed and his family have proved themselves to be exemplary neighbours in their own district. The opposition to this family's rehousing was therefore (even to the alarm of people in Price Street itself) interpreted as being simply on the ground of colour, and accordingly condemned universally. But others among the coloured population of Smethwick might not have evoked popular sympathy, still less have deserved it.

Colour is only one factor in the general problem among the Smethwicks of this world of too few houses, too many people, and too-ready acceptance of low standards ; isolating the racial difficulty is easy but dangerous. There has, in fact, been a significant change in the general attitude of the West Midlands towns, especially Birmingham, towards coloured immigrants in the last few years. Unlike ports such as Cardiff or Liverpool, Birmingham and the Black Country had, until quite recently, little experience of coloured people other than the Indian carpet-hawker or the Nigerian student, neither of whom was exactly representative.

So the influx of the 1950s released waves of lower middle-class apprehension. West Indian immigrants flocked into the lucrative car factories where even the unskilled could earn enough to exist in Britain and send home princely sums each week. Inevitably, they concentrated in the depressed areas ; there was, and is, overcrowding, though West Indian standards of living are rising steadily. As their numbers grew so did public alarm ; news that " the blacks " had taken over a vacant house in a decaying street was enough to send sitting tenants on a search for other accommodation.

Assimilation has begun, but only gradually. Prompted by firm leadership by civic and church heads, Birmingham has started to tolerate the West Indians. The simple fact is that without them the city transport would stop tomorrow and most hospitals would have to close several wards. In the factories, they have fitted into many heavy unskilled and semi-skilled production jobs. Car workers will tell of the way one West Indian is introduced to a track and within months has formed a complete crew from his friends and acquaintances.

In Birmingham, where they number about 30,000, the West Indians are probably better off than in other parts of the country (this is the assessment of their own leaders and of visiting Caribbean journalists). They are constantly exhorted from platform and pulpit to regard themselves as individual ambassadors, and many have responded well, rehousing themselves out of the " twilight areas " once they discovered that buying a house could be cheaper than exploitation by landlords. West Indian children are, indeed, furthest on the way to full integration. Relationships established at primary school level are being continued into higher age groups.

But with Indians and Pakistanis the story is different. In Birmingham alone it is estimated there are 10,000 Indians, many of whom came in on illegal passports, and plans to regularise these so that families can be brought over could mean an increase of up to 70,000. They have crowded into one or two problem areas, so that a visit to Birmingham's Belgrave Road in Balsall Heath is commonly known as " going down the Burma Road." The houses are usually overcrowded, often insanitary, and the population baffles health visitors by its constant fluctuations. Indians (the term covers Pakistanis to the man in the street), far from wanting to conform, are apt to congregate clannishly with those who speak their own language and share their customs.

And the customs worry the Midlander. Not all the immigration control agitation comes from the lunatic fringe. Many who could never be accused of racial prejudice, including social workers, are genuinely concerned about the problem of integrating the worker who refuses to see a doctor for tuberculosis or venereal disease, and who accepts as normal the " pit bed " rota for sharing sleeping accommodation. This is the core of the problem. Industrially, the Indian or Pakistani is generally accepted (there are workers' associations to look after the interests of both groups) ; he works hard in the foundry or press shop, often doing jobs the white worker is glad to leave to him, but he goes home in self imposed isolation.

This apparent indifference provides fuel for the flames fanned so assiduously by such bodies as the British Immigration Control Association, which since its foundation last year in Birmingham has sprouted branches in Smethwick and Wolverhampton, and plans others in Manchester and Liverpool. Its success at the polls—in May its chairman secured 24 per cent of the vote in one Birmingham ward—shows it does not lack popular support.

NEVERTHELESS, a great deal of quiet work is being carried on by churches, social organisations and local authorities. Birmingham has for years had a coloured peoples' liaison officer, and several denominations have their own full-time workers. Long before the Price Street affair Smethwick was running classes for overseas workers and advertising them in leaflets printed in several scripts (including Gurmukhi ; for some reason there is in the town a sizeable Sikh community which a fortnight ago opened its own temple, just as last Sunday Birmingham's 1,000 Arabs from Aden opened their own mosque).

It must be said that pressure for immigration control is likely to increase rather than diminish from several Midland MPs. The subject has been ventilated along fairly orthodox lines, and restraint urged, but for members hard pressed by their constituents (one had 500 letters in six weeks on this topic) Government action probably cannot come too quickly when the House reassembles.

Morley's Thrift

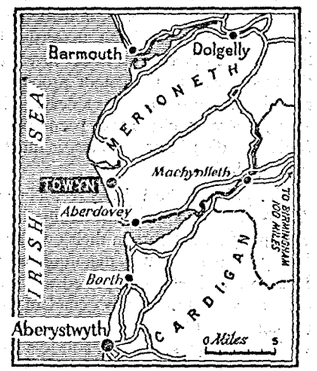
FROM OUR SPECIAL CORRESPONDENT

ONE by one, the more percipient of the northern industrial towns are beginning to look about them and at the gaunt factories and unsavoury slums which still crowd in upon the town centres, ripe for demolition. The majority of small boroughs, however, cannot hope to finance the redevelopment of their central areas without imposing an intolerable burden on the ratepayers. The cost of development is high, that of borrowing much higher. A town can promote a capital fund, but the maximum rate which can be levied for this purpose is 4d. In a place of, say, 40,000 inhabitants this could produce little more than £6,000 a year, and even the beginning of a redevelopment scheme would have to wait 10 to 12 years while money accumulated.

There are, however, other sources than the rates. Many boroughs were the owners of gas and electricity undertakings before nationalisation. Some have squandered the compensation, others have generally used it for short-term development.

But Morley, a little mill borough five miles from the dark centre of Leeds, is an exception. The borough treasurer there has husbanded the gas undertaking compensation (£44,000), added to it an accumulated income tax surplus (£40,000) and refused to be parted from the £20,000 paid over for the amalgamation of its water undertaking into the Wakefield and District Water Board. Now the resulting £106,000 is to be turned into a capital fund for the razing and reconstruction of Morley's town centre. About 10 acres are to be bought around the splendid town hall and, if present ideas are followed, rebuilt as a traffic-free precinct derived from those in Coventry and the new towns.

Morley believes that shopping and living away from city centres is the coming thing: on the doorstep of Leeds it hopes to become, much more than it is, a dormitory town, and to collect within its sparsely-inhabited 15 square miles the sizeable and affluent community necessary to support traders taking long leases in its new centre.



The development will eliminate about ten acres of mill and slum. Financing of the first stage will be by interest-free loans to the departments concerned. After the initial development, land will be leased to private contractors willing to build to a master plan prepared by the borough.

Two mills, suitably dark if not satanic and standing solidly cheek by jowl with the town hall, have come into the market at the same time. One is in liquidation, the other vacant as a result of its owners' centralisation of their activities: the cloth trade is not what it was. The price asked is high (£26,000 and £28,000 respectively), in sum exceeding by £24,000 the limit for any two transactions laid down by the Ministry of Housing and Local Government. No difficulty is expected, however, in obtaining approval for the excess spending, and it will bring the fund comfortably below the £80,000 which is the Ministry's top limit for the capital fund's net balance.

This purchase of about 4¼ acres (and a vast quantity of superbly-dressed local stone) constitutes the first phase of the projected 10-year development. The razing and improvement of the site will take about five years, after which income to the fund is expected from the leasing of land and repayments from loans to other accounts. At that stage, the demolition and preparation of a further six acres of slum to the south-east of the town hall will be begun. The whole scheme is expected to cost upwards of £300,000, of which half will go in the provision of public services. Apart from rents and repayments Morley expects to be able to add to the capital fund from the sale of property and other undefined sources: a flat assurance has been given that the permitted imposition of a rate will not be used in the foreseeable future. There is a lesson in all this for towns of greater name.

Cambrian Capri?

FROM A CORRESPONDENT IN MID-WALES

THE coast of mid-Wales has never quite seized its share of holiday traffic from the English. Apart from a holiday camp at Pwllheli—which is in North Wales anyway—the small towns which cling to the narrow coastal plain around Cardigan Bay have rarely adapted themselves to modern trends. And where they have, the result has usually been a rash of caravan sites of almost unrelieved ugliness.

As in Wales generally, hotel accommodation is notoriously short. Along the coastline of Merionethshire and Cardiganshire the Automobile Association lists nothing higher than a three-star hotel, and there are only eight of these in more than 100 miles of some of the finest scenery in Britain.

There have been attempts to develop the potential of the region. In the 1890s an enterprising Midlander, John Corbett of Droitwich, began a development scheme in Towyn aimed at creating a middle-class town there. It petered out after he had laid down roads and services and built a promenade and a dozen or so houses. The area has lain more or less fallow since then, cut off from the rest of Towyn by the Cambrian Coast railway, oddly deserted except in the season.

Now a new life is promised for Towyn. On about 40 acres of this site a Bromsgrove company has now announced "a multi-million pound project to build a completely new concept of a seaside resort." It has been designed by Mr John Madin, a 37-year-old architect who is replanning Birmingham's uppercrust Calthorpe Estate and is responsible for most of that city's better new buildings.

It has been named Bron-y-Mor—Sea Brink—and Mr Madin's team intends to create "a place for relaxation and the carefree life, free from the frustrations that spoil most seaside holidays such as traffic and the continual anxiety of parents for the safety of their young children."

Mr Madin talks in terms of Cornish fishing villages blended with the casual splendour of the main piazza in Capri; his scheme is based on precincts and paved squares linked by pedestrian ways, rich with willows and fountains, with balconied houses of varying heights, and pubs and restaurants sporting outdoor tables under coloured sunshades and awnings. Bron-y-Mor will have about 1,000 houses and flats for permanent and seasonal use, and about 3,000 people (Towyn urban district has only 4,360). It will have 30 shops, a motel, a 12-storey hotel with between 300 and 350 bedrooms (150 rooms make a large hotel by Welsh standards), a conference hall, a craft centre to display native skills in weaving or pottery, an entertainments centre and parking for 2,000 cars.

EVERYONE seems to love the developers and Mr Madin—the Ministry of Housing and Local Government (Lord Brecon, Minister of State for Welsh Affairs, gave his official blessing on the very day that the Chancellor announced his austerity programme), the Welsh Tourist and Holidays Board, the local authority, even the Mid-Wales Industrial Development Association, which has already talked of attracting industry of the right kind.

The first stage of the plan should be completed in four to six years. With Birmingham only just over 100 miles away along roads which have consistently improved over the past few years, Bron-y-Mor should have very fair prospects.

BOOKS

One Choice and Another

Decision, Order and Time in Human Affairs

By G. L. S. Shackle.
Cambridge University Press. 316 pages. 35s.

FOR twenty-three years Professor Shackle has been thinking and writing about the theory of choice under conditions of uncertainty. In this, his latest book, he restates his theory in more general terms than before, taking account of what his critics have said about his ideas. The result is impeccably elegant; in lucid prose, with only a minimum of elementary mathematical apparatus, the exposition follows a logical and satisfying scheme. Philosophers and psychologists as well as economists have enjoyed arguing about this theory, and if economists have predominated that is because Professor Shackle is himself an economist and economists spend a lot of time taking in one another's washing. In this latest version, however, what little economics there is serves to illustrate the argument rather than constituting its end product.

According to the argument, a decision is a creative act that cannot be fully explained or predicted. If this were not the case, the world would be completely deterministic. As it is, however, uncertainty is ubiquitous, so the idea that human behaviour can be regarded as a rational and unique calculated response to a specifiable set of objective circumstances is rejected. What people do depends upon what, in their imagination, can happen in the future, and the possibilities they visualise cannot be objectively ascertained and evalued by other people.

Recognition of the importance of uncertainty is not new in economics. Many theorists have developed models of decision-making by entrepreneurs and by investors in which some concept of probability is used. Professor Shackle's objections to this approach, which are restated in this book, are well known, and intuitively convincing. Each of the various possible outcomes of a possible course of action will not, in his view, be taken into account proportionately to its probability in the selecting or rejecting of that action. One reason is that in once-and-for-all choices probability has no *meaning*. Another reason is that prospects are epitomised by focusing upon only two of the possible outcomes (one favourable and one unfavourable), which attract more attention than any of the others.

The exposition of this approach occupies much of the book. It amounts to a formalised description of decision-taking. It is formalised in the sense not merely that it is propounded in a generalised form but also in that it does not seek to isolate any factors which explain why one actual person will choose differently from another; thus the role of the unconscious is scarcely mentioned. The analysis is, furthermore, a description in that it is justified by appeal to introspection.

This raises the question of the epistemological status of the theory. Professor Shackle seems to take the position that pure logic and arguments designed to show the intuitive reasonableness of his assumptions suffice to establish his analysis. He denies that "any scheme of thought which purports to give understanding of how things happen . . . must therefore make possible prediction of what will happen." He is not therefore worried about the fact that his theory does not yield predictions that can be tested in order to see whether the theory holds or not. Others will not share this lack of concern, however, even if they share the author's intellectual delight in his construction. Granted the basic argument about the nature of choice, complete prediction is clearly impossible. Yet science is possible even though omniscience is not; theories can and do yield limited predictions. Theories of human behaviour that do so can be useful; theories that do not, at least in economics, are merely good, clean intellectual fun.

Straight Record?

The Genesis of the British National Health Service

By John and Sylvia Jewkes.
Blackwell. 78 pages. 6s. 6d.

"THERE is something to be said for getting the record straight." With these words, Professor and Mrs Jewkes conclude the first of a proposed series of essays on "the economic and administrative aspects of medical systems." The record which they are claiming to put straight is that of Britain's national health service—in particular, how it came into being, what it has achieved and whether it was necessary at all.

The authors' thesis is that the prewar health services in Britain were not nearly so bad as they were generally made out to be; that the natural way of developing them would have been through an extension of the health insurance scheme; that the national health service, as an organisation, has not achieved all that is claimed for it; and that it may have positively hindered the growth of British medical services. There is some truth in this thesis. A great deal of mystique has grown up around the health service, and until it has been blown away, politicians are bound to run into trouble whenever they try to make any changes—as Mr Powell recently found. As prickers of bubbles of complacency and dispellers of myths, the Jewkeses have performed a service.

But a lot of what they say just does not stand up, and in one or two respects at least the statistics they use to prove their points are faulty. Thus, one might concede their claim that the general level of prewar hospitals was not so bad in fact as in some imaginations—or, rather, one would be prepared to put it another way round and admit that some health service hospitals are just as slummy. But one cannot agree that the distribution of consultants in the hospital service, as between London and the provinces, is no better than it was before the war. In citing figures to prove this, the Jewkeses compare prewar figures for London (with 37 per cent of all consultants) with recent figures (42 per cent) for the whole of the metropolitan regions, an area stretching as far as Dover in the south-east and beyond Winchester in the south-west, whose population is about a third of England's total. In any case, the essence of the prewar criticism was the heavy concentration of consultants in Harley Street and in the teaching hospitals. The health service has achieved a better distribution of consultants within each region, between the teaching hospitals and the general hospitals. Could the local authorities, faced as they were after the war with the need to reorganise and develop their schools and to build houses, have built up a consultant service to the same extent? Moreover, the pattern for the health service hospitals was set during the war by the "emergency hospital scheme"; Professor and Mrs Jewkes have the barest of mentions to this scheme and, that in a quite different context.

In fact, their essay is highly selective, and so loses much of its force. It quotes the increase in hospital waiting lists as an instance of failure on the part of the health service (though it could be regarded as an indication of success); but it does not point out that, between 1949 and 1960, the number of in-patients treated rose by 44 per cent. Early on, the essay says that the health service "created conditions inimical to voluntary insurance." Later, it cites the large increase in voluntary insurance for private hospital and consultant services as evidence of how dissatisfied people are with the health service—though it does not point out that the amount of voluntary insurance is inflated by the large number of people insured by their employers through the works schemes of provident associations. The essay even seizes on the British people's indulgence in self-medication with aspirins, tonics and laxatives as an indication of the health service's inadequacy.

For all the dissatisfaction they may express from time to time—and with good cause—the British people as a whole would rather have the health service, in its present form, than not have it. This essay is not therefore likely to carry much weight in this country, except in the area of pressure group politics. But it may be taken up by such bodies as the American Medical Association and presented to the American people to show that Britain's health service is not an article of export. So there is something to be said for attempting to get the Jewkeses' record straight.

Military Gleanings

Men in Uniform

By M. R. D. Foot.
Weidenfeld and Nicolson. 173 pages. 21s.

THE national debate on the institution of some form of selective military service has not (*pace* Sir Fitzroy Maclean and Mr George Wigg) been joined as yet. It is still possible to hope, as the Government fervently does, that it will not materialise. But if and when it does Mr Foot's researches on behalf of the Institute of Strategic Studies are going to inform and illuminate a good many speeches and articles. Not all his inquiries are entirely relevant: it is difficult to suppose that the Soviet and Swiss systems, for example, have much bearing on British needs and circumstances. But there is a good deal to be gleaned from some surprising quarters. The military value of the Danish system of short-term conscription may be highly questionable, but there is everything to be said for the care with which men are posted into arms and units for which they are particularly adapted and where they are likely to do themselves and the country most good. The Canadian and Australian experiences emphasise the limitations of even wastefully high rates of pay when it comes to securing technicians and tradesmen from private life.

If Britain has to resort to a mixed system (regular volunteers chiefly on overseas service and in a mobile reserve, conscripts stationed either at home or in west Germany) the two pertinent examples are the American and German ones. The comparative flexibility of the American draft in providing substantially more men in any emergency has just been demonstrated by Mr Kennedy's latest measures. But the immediate need for Britain, as for everyone else, is to get the specialists required for an increasingly specialised army, and to get them for a reasonable period of service. The only answer is to make it worthwhile for the intelligent young man to spend three to five years improving himself as well as serving his country.

The German system of graduated entitlement, after various periods with the colours, to training at a forces' technical school to fit the soldier for a civil trade is a case in point. The Belgians, too, have their "Nato technicians," who also get the more interesting jobs while in the forces. This kind of inducement is by no means unknown to the British services, although Mr Profumo's bounty to the last national servicemen with technical training was woefully inadequate to encourage them to stay on. Much more can be done in this field if the country is prepared to pay for it. If employers and unions can be persuaded, or compelled, to accept a national apprenticeship scheme the door might then be opened to the brighter young men to continue their training at public expense for another three years inside the forces—possibly with a technical college place waiting at the end of it. This dual economic and military investment in the 18-23 age group would be cheap at the price for the taxpayer.

The Anti-Jacobins

The Girondins

By M. J. Sydenham.
Athlone Press. 252 pages. 35s.

FEW re-worked PhD theses deserve the title of history so honourably as this one. Dr Sydenham has written a lucid, convincing and exciting account of the unfortunate Brissot and his friends, known as the Girondins, during the period of their greatest influence and notoriety—the period, that is, when they helped to push France into war with Austria, thus disastrously affecting the course of the French Revolution, and led the opposition to Robespierre and the Mountain's rise to power. The book is warmly to be welcomed both in itself and as further evidence that British historians are at last overcoming their characteristic parochialism. In the future we may, perhaps, hear less of Namier, or at least of George III, and more of Professor Lefebvre and the men of '89.

Dr Sydenham has, moreover, made a truly original contribution to our understanding of the great revolution. He has taken to pieces the legend, more current in England than in France, of a "Girondin party," with a coherent membership, ideology and programme of action, and shown that it does not work. Even the name, "Girondin," as used to describe all the victims of Robespierre's purge of the Convention in June, 1793, rather than just the deputies from the Gironde who were among them, is shown to have been primarily a nineteenth-century coinage. A party, as it is usually understood, was totally unacceptable in theory and practice to the eighteenth century French, who could only distinguish, whether Robespierrist or Brissotin, between the "friends" and "enemies" of the people. There was no class or geographical distinction setting the Girondins apart from the rest of the Convention, including the Montagnards. They had no coherent war or economic policy, and the philosophical beliefs, and hostility to the power of Paris, that cut them off from Robespierre united them to the majority in both the Legislative Assembly and the Convention. Dr Sydenham speaks, indeed, at one stage, of the first Brissotins having "merged" with the Conventional majority, and throughout makes it plain that it was the revolutionary Mountain that made the running, dominated events, provoked reaction and most resembled a genuine political party.

Instead of the old stereotype Dr Syden-

Horse sense in dog days

WHEN this advertisement appears, it may well start to rain and wash my pretty headline away. However, let's risk it.

For, temperatures apart, the 'silly season' is no more: it has gone, gone, gone with the giant gooseberry and the sea serpent (now scientificated in Loch Ness). As you and your neighbours head for Cornwall and the Costa Brava, the international pot will start to hiss and steam. Somewhere else, if you're lucky

. . . but many a jolly family holiday has been spoilt by tear-gas and the pyongg of ricochetting bullets.

No news is bad news

We are talking of grave matters, of course, but let me just go bravely on and leave the tears to you. News is always being made, at all times of the year. Should you ignore it? Only gaunt philosophers and little fluffy demi-mondaines succeed in this, and I can't believe you belong to either class. Once you have locked your front door and cancelled your daily papers, once you are launched on an uncertain sea of strange food and suntan lotion, you will *need* the news . . . not the BBC time-signal overheard through the window of a bungalow, not a crime passionel in Nice, but the *news*.

Keep your hooks on realities. There is a newspaper called The Observer which publishes on Sundays and can be read with profit and enjoyment then and thereafter. It posts brilliant correspondents to all corners of the globe, sends special envoys scuttling up and down the sidelines, catches news with strange prescience the second it happens, gives you the background, gives you moreover (a masterstroke) the pith and pertinence of everything that has taken place in the *previous* six days, while you were paddling and bullfighting.

A lifeboat for the holiday maker. Let me add that it wraps chips, absorbs beer, saves shoulders from sunburn, swats hornets, and is worth every peseta, lira or zloty or whatever is the equivalent of the tanner it costs you in Britain. Order it, and see that your orders are obeyed. **J.B.L.**

ADVT.

ham suggests that the leading "Girondins" were merely men of outstanding ability and character who formed a loose "connection" with Brissot in 1791 and were guillotined with him in 1793. He calls them *arrivistes*, "avid and irresponsible in their pursuit of place and power," "irresolute in everything but their endeavour to retain" these things, but "not themselves serious enemies of society." They resisted Robespierre at first out of fear and jealousy, but at the end because they saw that his ruthless invocation of the general will and national necessity threatened the rule of law and individual freedom. For these ideals, in the end, they suffered their martyrdom; and, concludes Dr Sydenham, they did not die in vain. Since the rejection of the Jacobins at Thermidor, French politics have been Girondin—dedicated to the freedom of the private conscience, and irredeemably individualistic.

Attitude to Change

Blossoms in the Dust

By Kusum Nair.
Duckworth. 201 pages. 21s.

MRS NAIR spent two years wandering round India. Most of the time she spent just talking to villagers about everything from land reform to change, from community development to the modern world. This admirable work is the result.

Mrs Nair is a journalist. She writes well; she has an eye for a scene and an ear for a conversation; she knows how to report without constantly obtruding herself. But that is not why her book is so good. Its real quality is the way in which she has succeeded in conveying the confusion and contradictions of the villager's attitude to change.

The reaction to the plans, to change, even to something as simple as an irrigation-water, varies enormously. The Punjabis in the Ganga Canal area of Rajasthan grow cash crops, use tractors, and build themselves brick houses with electric light, radios and sofas. The local Bagdis next door, on exactly the same land, live in mud huts, buy tractors only for prestige, and spend their money more on jewellery for their women; the main sign of the prosperity water has brought them is that they eat wheat instead of millet. On the Bhakra-Nangal dam an untouchable can become a fitter who has tea with his engineer. In Tanjore the untouchables are still so humble that they do not even have an active desire for land reform. In one Bihar village the widow of the zemindar keeps the village council running efficiently because every faction does as she wishes; in another, the council is letting the local irrigation works go to pieces because they expect the Government to maintain them for them. In Kaira men with a few acres build tube wells for themselves; in Raichur much bigger men do not even bother to use the water the Tungabhadra provides. The Bhil villager in Rajasthan did not know whether Congress was a man or a woman; an equally aboriginal woman in Surat had picketed under Gandhi and gone to gaol.

A few generalisations are nevertheless possible. Some parts of the country, like the Punjab and Kaira, are developing quite quickly; in most something is happening, even if it is only a change over to better ploughs. Everywhere education is spreading rapidly, though often it leads only to a disdain for farming and a desire for bush-coats and bicycles. There is still little demand for land reform among the landless, and some of the reform that has taken place has been frustrated by evasion. In the Ganges valley, especially in Bengal, the villages are still run by the upper castes. Everywhere there is much lack of enterprise, much acceptance of things as they are. One may, with Mrs Nair, refuse to be defeatist; but the task is herculean.

Economists in Debate

The Theory of Capital

Edited by F. A. Lutz and D. C. Hague.
Macmillan. 428 pages. 50s.

NOBODY has ever put all the economists in the world end to end in order to see whether they would reach a conclusion. The International Economic Association, however, has tried a more modest experiment. In 1958 it put thirty economists on an island for a week and got them to discuss capital theory. This volume contains the papers that were presented, together with a summary of their discussion—evidence that they did not reach a conclusion.

Since the thirty included some exceptionally able people, the book is first class. Most readers will find the papers of greater interest than the summary of the discussion, despite its able reporting. A debate set out in print lacks the nuances of expression that gave it continuity and meaningfulness at the time, while the papers were designed to be read. Since there were thirteen of them, the book really requires thirteen reviews. Ten of them can be skipped here, however, as they are pieces of highbrow theorising written by specialists for specialists. Professors Lutz, Hicks, Samuelson and Fellner, a most distinguished quadrumvirate, lead off by examining the theory of the measurement of capital and income and the classification of inventions. After an empirical interlude a Frenchman and a Norwegian then present micro-economic analyses of capital intensity and the interest-elasticity of investment. These are followed by three papers on the pure theory of growth, all of them littered with algebra and none of them required reading for either the Chancellor of the Exchequer or Mr Harold Wilson, so remote are they from immediate problems. Lastly, there is a paper on the theory of income distribution.

In the discussions the statisticians frequently complained that they were getting little help from the theorists. The latter, on the other hand, were ready to admit that there was little hope of ever measuring some of the concepts they dealt with. It is to be hoped, however, that the statisticians will not be deterred from continuing to measure what can be measured, since the results reported here are extremely interesting. These results are described in the three papers on measurements of capital and of capital-output ratios in the United Kingdom, Germany and the United States. The British paper is the most general of the three, since the author, Dr Barna, not only presents data but also discusses some of the practical problems of measurement. As is well known, his own estimates of the capital stock in United Kingdom manufacturing (using a sample survey method) and Mr Redfern's (using a perpetual inventory method) gave wildly different results, so there is plenty to discuss, and Dr Barna does not hesitate to explain why Mr Redfern's estimate was out of step.

Curiously enough, one of the issues on which the thirty economists failed to agree related to the empirical material concerning Germany and the United States. Some of them thought that the recorded changes in capital-output ratios were large changes, while others considered that they were sufficiently small for the aggregate capital-output ratio to be regarded as fairly stable. But on this, as on other issues, the interchange of ideas was clearly stimulating, so the experiment was a success even though no conclusions were produced.

High and Low Finance

Kreuger: *Genius and Swindler*

By Robert Shaplen.
André Deutsch. 277 pages. 21s.

IVAR KREUGER, the Swedish match king, was probably the world's greatest swindler: he took $650 million from its pocket in return for a share in his eventual ruin. The moneys he raised, shuffled around the world, and disposed of as he thought fit were so enormous that any study of Kreuger must first establish his credibility. Secondly, the web of financial transactions and intrigues that were the essentials of his life must be unravelled and made clear.

Mr Shaplen tackles both tasks expertly and successfully. Out of extensive research he presents the amoral Kreuger with a predilection for adding zeros to figures; the actor who won the confidence of bankers, corporations, governments, and, above all, of his own employees; the genius who carried in his head the ramifications of his vast enterprises and who was able to counter the chain reaction of his falsehoods before they betrayed the original lie, but who had not the imagination to restrain himself and withdraw when circumstances demanded that he should do so.

The depression was the chief cause of Kreuger's downfall; in the end he was unable to find the cash. Had there been no depression he might possibly have survived, since there was a considerable industrial empire beneath the froth of his financial adventures. But survival would have entailed his adopting the rules of honest conduct, and it is doubtful if he ever knew that such rules existed.

LETTERS

Wages Pause

SIR—How sound is your weekly call for no restraint on wages in the "growth" industries? Would it be correct to group the nation's industries into one (smallish) section of growth industries; one (largish) section of "not so growth" industries; one (smallish) section of contracting industries? Do you imagine that increased rewards in the growth section will pull workers direct from the contracting section? Is it not more probable that, as with a pair of trousers, a hitch up at the waist will be reflected all the way down the legs? Unfortunately, geography has not arranged that the growth section is side by side the contracting section, with the "not so growth" miles away.

Certainly there must be movement and change; we all know that a static society is impossible. But if, as you never tire of telling us, it is increasing wage demands (and wage grants) that is the basic malady, it might be that the policy of free for all in the growth industries that you advocate is just about as unsound a policy as could be suggested. It might indeed be that it is just in this section that the "pause" could be most effective.—Yours faithfully,
Kendal, Westmorland GEOFFREY ACLAND

Soviet Manifesto

SIR—Mr Khrushchev now invites criticism. Here goes:

It is difficult to believe that even the Russians can take him seriously when he tells them that in a few years' time they will receive "free" meals, housing and this-that-and-t'other. Is it not obvious that, in the absence of outright slavery, these things must be produced by the paid efforts of the Russian people—just as they are at present; and that, if not distributed by commercial exchange for the pieces of paper and stamped metal discs which are called money, they must be exchanged for some kind of official tokens, e.g., the detested ration cards. Is this what Mr K has in mind? Or scrambles at dumps by the roadside?

In any case, let him think again and, in the ever-memorable words of a former British Minister, "Come orf it!" For no government can provide anything *free*—as is being currently impressed on this country.—Yours faithfully,
London, N2 C. E. G. NYE

Southern Rhodesia

SIR—One would expect responsible opinion in the United Kingdom to have welcomed with enthusiasm the result of the Southern Rhodesian referendum. A predominantly white electorate registered an overwhelming vote in favour of a new constitution which ensures that at least 15 Africans will sit in the Southern Rhodesian parliament for the first time; provides for an extension of the franchise to enable a greater number of Africans to qualify; enshrines in a Declaration of Rights the fundamental rights and freedoms of every citizen without distinction of race, colour or creed, and prevents the enactment of discriminatory legislation.

Yet reports in *The Economist* of July 29th from both Salisbury and London seek to denigrate this tremendously encouraging victory for liberalism and multi-racial co-operation by giving only a grudging welcome to the electorate's decision "as a sign that the voters of Southern Rhodesia can be talked into moving forward, however slowly." You state blandly that the new constitution "does little else" but put Africans into Southern Rhodesia's parliament for the first time.

But the new constitution does a great deal more than this. It encourages non-racial politics by making members of Parliament responsible to both races; it guarantees the rights and liberties of the individual instead of those of one race (the Africans) only, and ensures the beginning of the end of racial discrimination. In so doing, it represents a vote of confidence for the great experiment in race relations which is being pursued in the Federation.

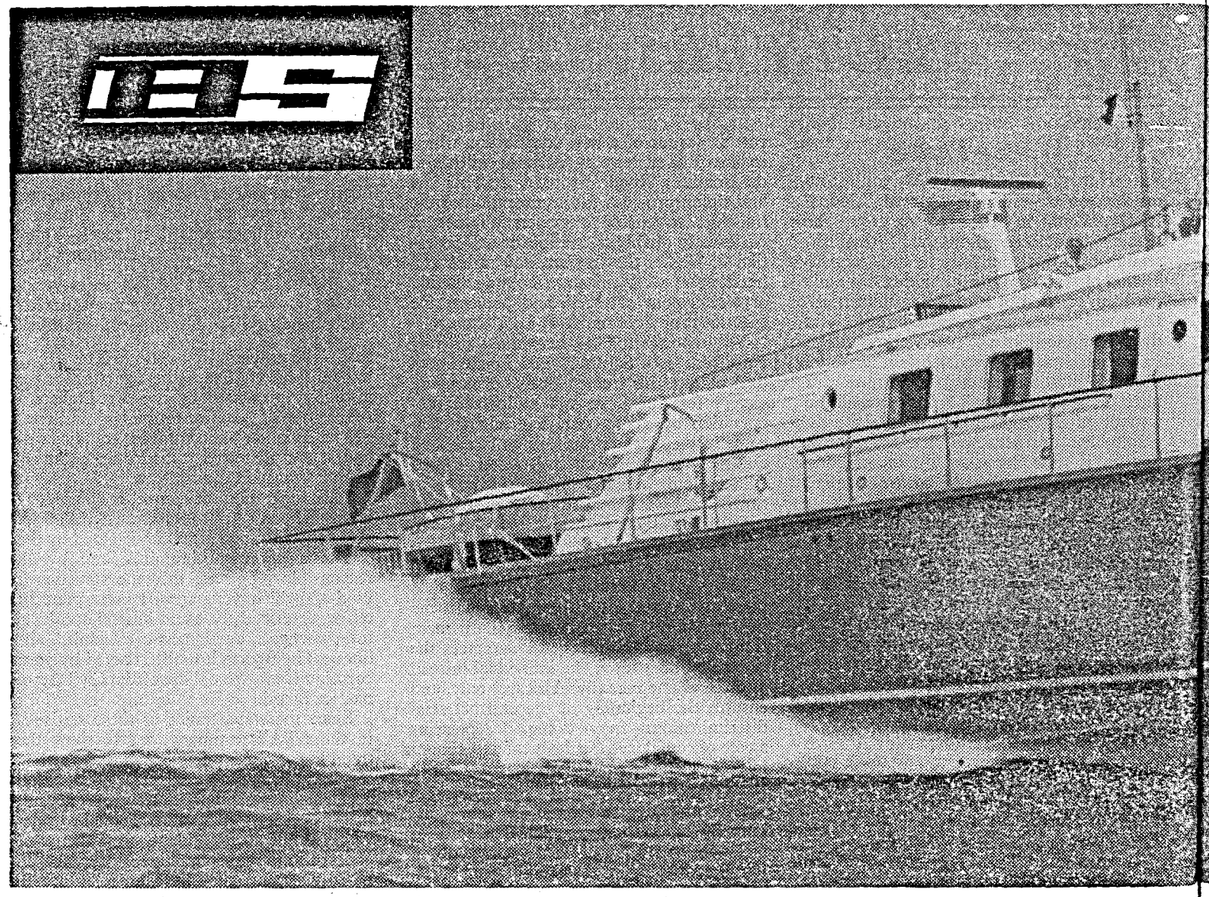
Even more deplorable still was your Salisbury correspondent's complete disregard for fact. He stated it had been "spread about that the government could and would eliminate the 15 lower roll seats if Africans 'proved unco-operative'." Quite apart from a strong official denial of this rumour a week previously, an intelligent study of the new constitution shows such action to be constitutionally impossible without a two-thirds majority of Parliament, and in addition the agreement of each of the four principal racial communities voting separately in a referendum (or, alternatively, by seeking the approval of the United Kingdom Government) to alter the franchise qualifications which in effect determine the composition of the Legislature.

You also reported as fact that four Africans were killed prior to the referendum. The truth is that one African was killed in disturbances designed to thwart the orderly conduct of the referendum. Your correspondent's statement that 300,000 Africans voted in the National Democratic Party's mock referendum "to express their deep discontent with the government" contrasts strangely with the estimate of official observers that approximately 90,000 people participated in this so-called "referendum" which paid no regard to the secrecy of the ballot box, did not preclude multiple voting and was "supervised" not by an independent authority but by a political party.

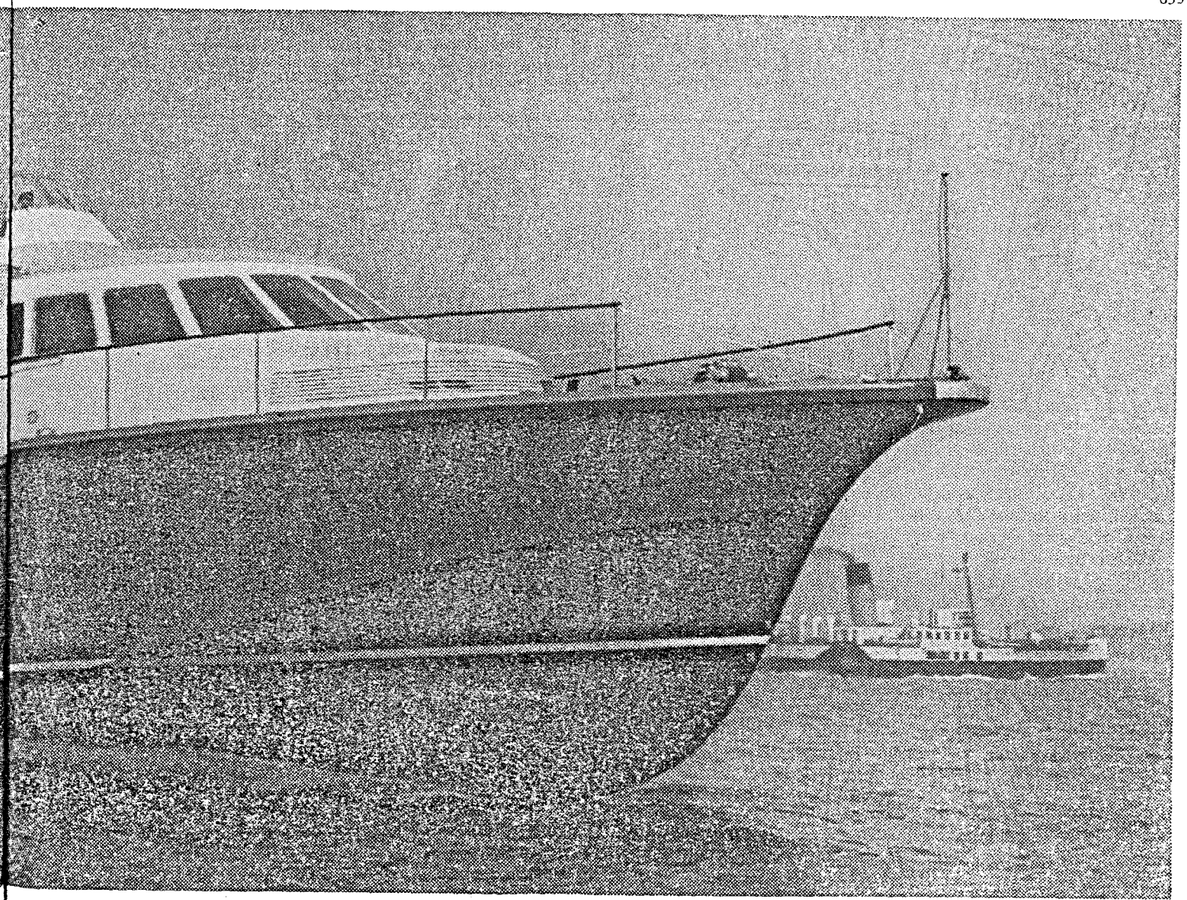
A fantastic example of distortion of the facts is the unqualified statement that Sir Edgar Whitehead has "wiped away" reserved clauses covering laws which technically discriminate against Africans. What has happened, under the new constitution, is that these clauses have been replaced by a Declaration of Rights safeguarding the liberties of, and preventing discrimination against, every inhabitant of Southern Rhodesia without regard to race.—Yours faithfully, PATRICK WALL
House of Commons, SW1

Air Safety

SIR—The article "How Safe In The Air?" in your issue of June 24th, suggests that the testimony presented by the Air Transport Association of America to the United States Senate Aviation Subcommittee contains dishonest and distorted statistics on commercial air transportation safety.



This suggestion, of course, is completely false. The ATA, in its testimony, made it perfectly clear, and it was understood by the Senate aviation subcommittee and by all responsible reporters, that the statistics it used to which your special correspondent refers, described the trend in fatal accidents for passengers on domestic scheduled airlines. The figures it used, as noted by your correspondent, were those of the Civil Aeronautics Board.



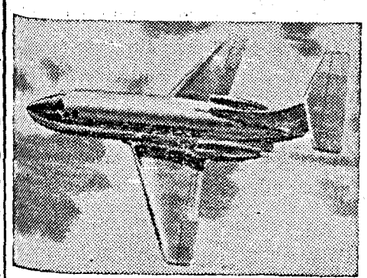
Since the stated point of these statistics in the ATA's testimony was to show the trend in passenger safety in scheduled airline service, obviously training accidents and accidents in general aviation were irrelevant, just as accidents in elevators would be irrelevant. While such accidents are a matter of concern to the subcommittee, as they should be to everyone, they have no relevance to whether or not scheduled airline passenger travel is getting more or less safe.

Scheduled airline travel is getting more safe, of course, as the long term trend indicates. The airlines, nevertheless, are not satisfied with their safety record, despite its improvement. This was stated explicitly by Mr Stuart G. Tipton, president of the ATA, who told the subcommittee: "We do not intend to rest on the record for 1950 or 1960. There is no satisfaction in saying that it is three times as safe to go by air as to drive. Our industry does not live by a standard that compares our safety rate with someone else's. We have our own standards and goals, and they are quite simple. They are to eliminate accidents and to achieve a rate of zero."—Yours faithfully,

THOMAS F. MCGARRY,
Director of Public Relations
Air Transport Association of America
Washington, DC

[Our correspondent's particular complaint against the Air Transport Association concerned its use of 5-year averages in a chart; these concealed the fact that the number of deaths for each 100 million passenger miles flown by the scheduled airlines increased in 1958, 1959 and 1960.]

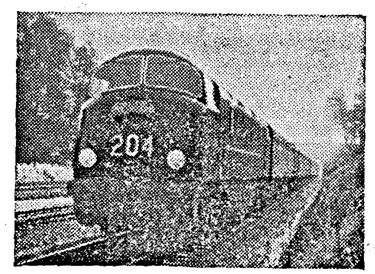
New express yacht speeds at over 50 knots...



...AND BRISTOL SIDDELEY SUPPLY THE POWER

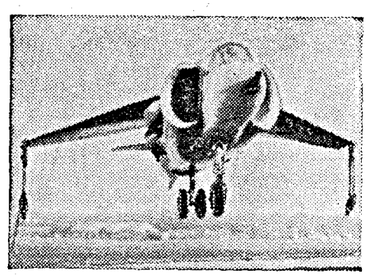
Specially designed and built by Vosper Ltd, Portsmouth, for Mr Stavros Niarchos, the 100-ft express yacht "Mercury" has a top speed of over 50 knots. With spacious accommodation for the owner, guests and a crew of up to 11, "Mercury" has a range of approximately 400 miles, cruising at 46 knots. Believed to be the world's fastest yacht, "Mercury" is powered by three Bristol Siddeley Marine Proteus gas turbine engines, running on diesel fuel and delivering a total of 10,500 hp.

The Bristol Siddeley Proteus has proved itself to be one of the most versatile and dependable gas turbines ever built. As the powerplant of the Britannia airliner, the Proteus has accumulated nearly two million engine flying hours in service with 12 international airlines and RAF Transport Command.



The first marine application of the Proteus was in the "Brave" class fast patrol boats, designed and built by Vosper Ltd. in collaboration with the Admiralty. These vessels went into service with the Royal Navy in 1959, after the engines had carried out 1,600 hours rigorous testing to Admiralty schedules.

Industrial versions of the Proteus gas turbine engine are now in service with the South Western Electricity Board, as prime movers of 3,000-kilowatt generating sets.

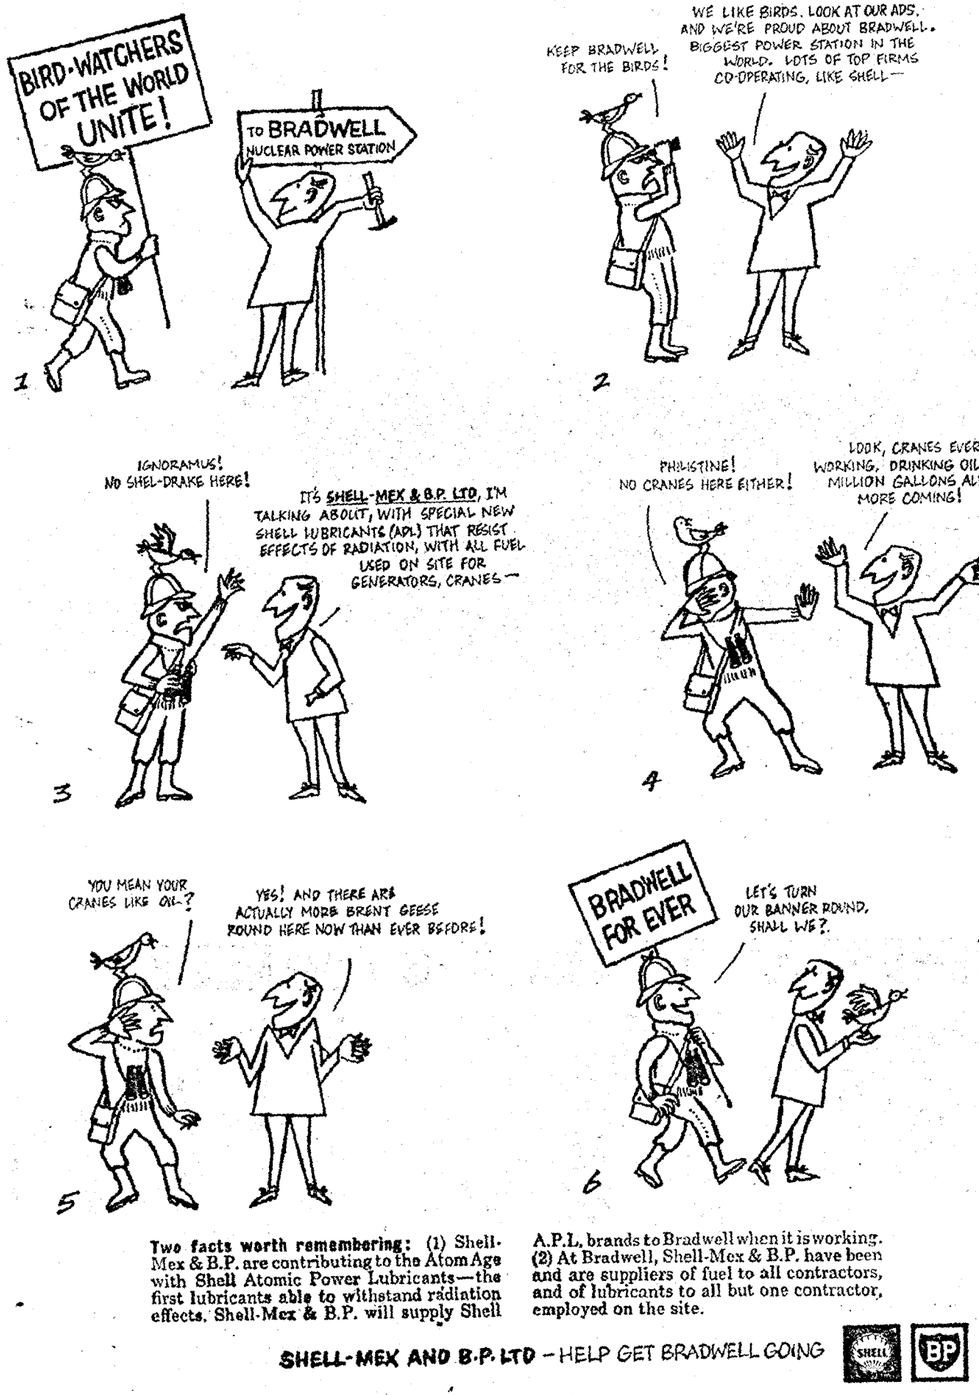


POWER FOR THIS

The Bristol Siddeley Viper turbojet will power De Havilland's new executive transport—the Jet Dragon. Two Viper 20's, each delivering 3,000-lb thrust, will give the new aircraft a cruising speed of 500 mph and a range of 1,000 miles. The Jet Dragon will carry up to 9 passengers and a crew of 2 in great comfort.

...AND THIS

Bristol Siddeley Maybach diesel engines power Britain's crack express train—the British Railways "Bristolian". Two Type MD 650 engines, developing a total 2,200 hp, give the "Bristolian" a top speed of 90 mph. 286 Bristol Siddeley Maybach diesels have been ordered by British Railways alone.



...AND THIS

The Bristol Siddeley Pegasus lift/thrust turbofan powers the Hawker P1127 strike aircraft—the world's first VTOL jet aircraft designed for operational service. Thrust is applied through four movable nozzles evenly disposed around the centre of gravity, providing a single power source for all conditions of flight.

BRISTOL SIDDELEY ENGINES LIMITED CENTRAL OFFICE: MERCURY HOUSE, 195 KNIGHTSBRIDGE, LONDON SW7.

THE WORLD OVERSEAS

Lost Weekend?

AND ROUND AND ROUND AND ROUND BERLIN

FROM OUR PARIS CORRESPONDENT

Two men facing one another in threatening attitudes, with red faces and muscles tense, turn now and then to the audience with the plea, "Hold me back or I shall do something terrible." This classical scene of burlesque is part of the folklore of southern France. Such irreverent associations sprang to mind as the western foreign ministers spent the whole of last weekend in Paris making known their firm, unyielding stand over Berlin, while the eastern echo brought similarly resolute noises. Moscow, indeed, furnished them with plenty of material for ministerial reflection. First came the four Soviet notes to the western powers (August 3rd). These were followed by a joint statement on August 5th by the heads of the communist parties of the Warsaw Pact countries, who, after a secret session, endorsed the Soviet view that the Berlin question must be settled by the end of the year. Finally, on Monday, came Mr Khrushchev's own broadcast, described as a reply to President Kennedy, to which the President will in turn reply in this strange sequence of television diplomacy.

Yet nobody here really believed that the world's statesmen were preparing to drift into nuclear war without exploring the chances of negotiation. In fact, Mr Khrushchev ended his series of warnings with an invitation to a conference table, while the western ministers, too, expressed their preference for a negotiation, provided it could be held on "a reasonable basis" and not under duress. But it was in the nature of the Paris exercise that more emphasis should be put on determination than on diplomacy. The western ministers having decided, in Lord Home's words, that they, too, could play poker, they were determined not to show their cards. Not only did they keep their minimum position secret; they gave no clue to whether a western summit meeting is to be summoned to prepare a conference with Mr Khrushchev.

So Mr Dean Rusk, Lord Home and M. Couve de Murville, joined in the afternoon by Herr von Brentano, spent all Saturday, if not longer, discussing preparations for the worst. Military precautions are not, as a rule, public property, and outsiders have to pick them up through rumour. This time the leakages were particularly alarming: the crisis, they suggested, was to be faced with an airlift of American divisions to Europe, the strengthening of the British Army of the Rhine, a call-up of French reservists, the acceleration of the west German build-up and parallel moves by other Nato members. (A quieter version said that it had been merely decided progressively to speed up Nato's existing plans, embodied in the staff paper MC 70.) The echo from Moscow brought Mr Khrushchev's warning that he, too, could call up reservists and move divisions westward. Some excited correspondents started calculating how much nuclear damage each side could inflict on the other.

With the diplomatic possibilities of initiative carefully hidden, like poker cards, the possible military measures were naturally kept secret. Nobody takes the idea of economic sanctions seriously. Thus the Paris meeting could not produce anything spectacular. Its purpose was to show determination and unanimity, and that much was achieved. The impression was left, nevertheless, that if this unanimity were put to the test, it might prove, at least in tactics, superficial. The French have made it plain from the very start that, since the Berlin crisis was of Mr Khrushchev's choosing, the western powers had merely to stand firm and call his bluff. When M. Couve de Murville (excellent though his English is) spoke with this strong Bonn accent, there was not much need for Herr von Brentano to intervene. The British, according to most accounts, are taking great pains not to appear as "appeasers"; it is even supposed that this may have something to do with the approaching common market negotiations. At all events, it was left to the Americans to make constructive proposals for a negotiating position. Some thought that Mr Dean Rusk made them during the Sunday session, but this has been denied. What is known is that he came to Paris with an open mind, ready to sketch out a flexible position which might even, if necessary, infringe such German taboos as the Oder-Neisse line and the non-recognition of the German Democratic Republic.

Which view prevails will soon be seen. For all the tight-lipped discretion of the western spokesmen, it is generally held here that the next few weeks will be taken up with diplomatic reconnaissance of Moscow's position, and that the announcement of some kind of meeting with the Russians should come somewhere between mid-September and mid-October—that is, between the German elections and the Soviet party congress, an assembly which Mr Khrushchev may be reluctant to face with empty hands. The test of western unity cannot be delayed for long.

After Herr von Brentano's departure the three western ministers spent Monday morning in a vast *tour d'horizon* ranging from Latin America, through Bizerta and Laos, to China and the United Nations. This rapid review by the three western powers of world questions other than the German one could be taken as a practical implementation of one of General de Gaulle's well-known demands. As if to spare other susceptibilities, Mr Rusk not only addressed the Nato permanent council on Tuesday; on Wednesday he went to Rome to consult the Italian government, and then to Lake Como where Dr Adenauer is on holiday.

It is perfectly natural, in a diplomatic game, not to reveal your concessions until the shape of the bargain is clear. It is also

understandable to prepare, militarily, for the worst, while taking diplomatic initiatives to avert it. What is absurd is to appear as if one were dragged into the conference room, and then to face

the negotiation unprepared. A sneaking suspicion lingers in Paris that the western ministers partly wasted their long weekend, and that the secrecy that now surrounds the subject of western diplomatic initiatives is a cloak enfolding a void.

Nyasaland's Choice

FROM OUR SPECIAL CORRESPONDENT

SIR ROY WELENSKY, on his brief electioneering tour of Nyasaland last week, several times claimed that he had an open mind. In proof of this, he went on, he had been asking people for a long time what alternative there was for Nyasaland except to stay in the Central African Federation. Never, he concluded, had he received a satisfactory answer. Nor indeed did he receive one last week, for his well-screened audiences consisted either of his own supporters, or of civil servants who do not see it as part of their job to challenge the federal prime minister publicly.

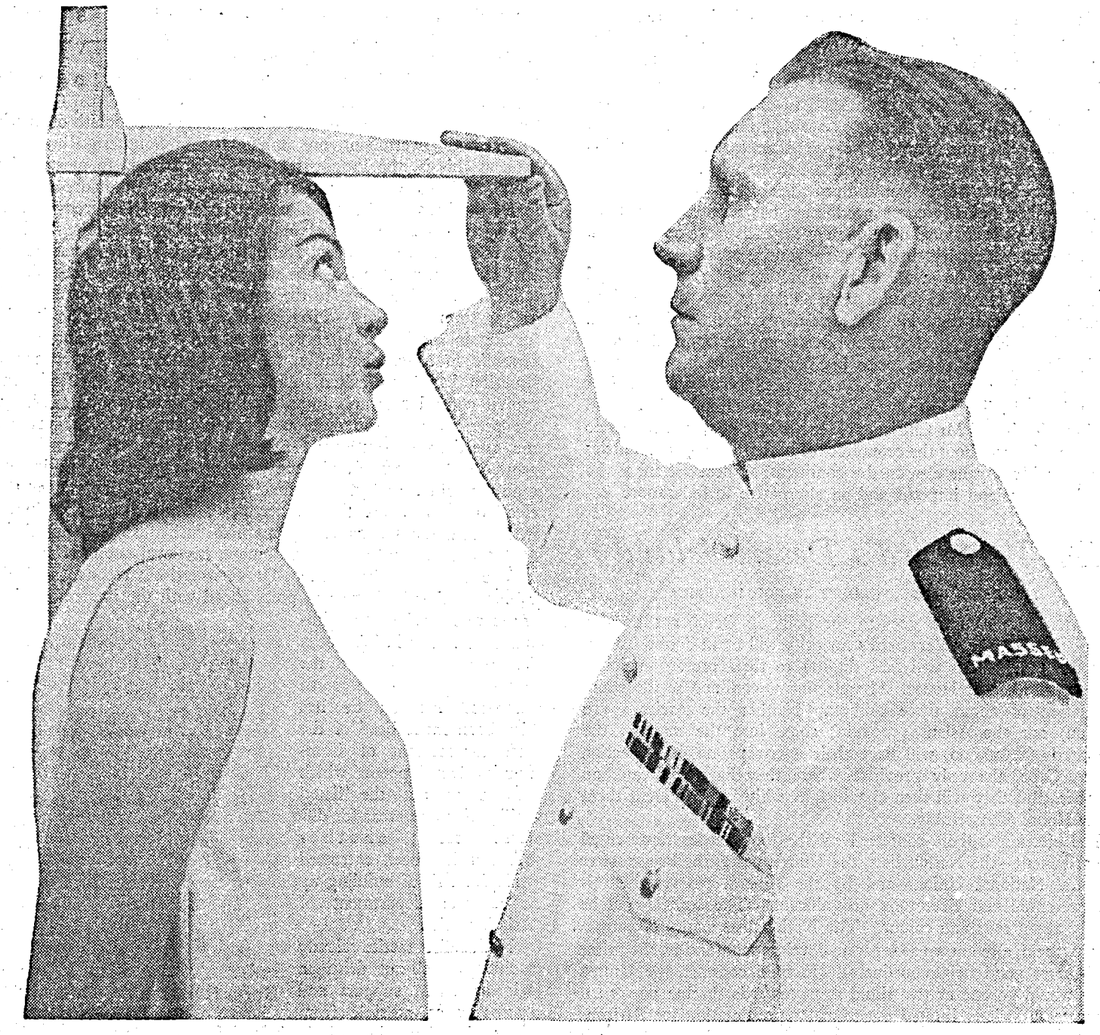
All the same, the elections next Tuesday are being fought on the issue of continued federation or secession; and it requires little skill at clairvoyance to predict that the secessionists, led by Dr Banda's Malawi Congress party, will defeat the federalists of Sir Roy's United Federal party. Under the last constitution of 1956 there were only five elected Africans in a legislative council of 23 and none at all in the executive council. Under the new constitution Nyasaland has leapt forward to a clear African legislative majority and Dr Banda has considerable hopes of controlling half the seats in the executive council as well.

The twenty seats on the lower roll are by general acknowledgment almost a gift to the Malawi party. This will give Dr Banda a majority in the legislative council of 33 members, which is completed by five officials and eight elected on the higher roll. But to achieve parity with these five officials in the executive council he needs to win not only the twenty lower roll seats (which give him three ministries) but at least two of the eight upper roll seats (which provide the other two ministers). The chances of winning some of these eight, with the help of European independents who dislike the UFP and the federation it stands for as much as he does, seem good. But even if he does not manage to take all five ministries this month, the constitution provides for the handing over of two official ministries "at any time in the light of the working of the new arrangements." Almost certainly, then, by the beginning of next year Malawi will control both councils.

Sir Roy's question—"What alternative is there to federation?"—will then need to be answered. The first part of Malawi's answer consists in repudiating arguments that federation has benefited Nyasaland. Last week Sir Roy offered these figures to support his case: in seven years, he said, Nyasaland had received £39 million in the redistribution of federal income tax and had contributed only £5.5 million. Expenditure on health, non-African education and public works (the main federal responsibilities) had multiplied by from three to seven times. If Nyasaland seceded, he claimed, it would either sink into deepest poverty or become a permanent pensioner of Britain or else be helped for a time by an "inimical power" plotting to establish a communist foothold in central Africa.

Neither Malawi politicians nor those quiet civil servants think much of Sir Roy's calculations. He had, for instance, ignored all the customs and excise duties—probably about £20 million—which Nyasaland has poured into the federal coffers without any return or any trace, since these statistics are "scrambled" federally. He had not explained that, while enormous loan funds have been available for the government-owned Rhodesia railways and Kariba dam which provides hydro-electric power only for the Rhodesias, Nyasaland's modest Nkula Falls power scheme is still shelved and its chances of attracting much industry are blighted by an inadequate communications system for which discouragingly high freight rates have to be charged by the privately owned Nyasaland railways. The federal argument is damaged further by the number of investors who have recently been showing interest in the prospect of an independent and separate Nyasaland. Blanket and clothing and cigarette manufacturers, who have been supplying Nyasaland from factories in Southern Rhodesia, see this market of three million people disappearing behind a tariff wall; and they have journeyed to the presidential palace outside Blantyre for cordial conferences with Dr Banda about setting up factories in Nyasaland.

Nor while the present Malawi leaders are in power does there seem much possibility of the country offering any welcome to communism. Probably no other country in Africa, except Liberia, sets so much store by American goodwill. When with Homeric phrases Dr Banda tells the Nyasa crowds of his latest journey, the climax of his Odyssey is always the visit to the White House. There is good hope that the American universities, which gave him such an impressive education, will now give his country a liberal arts college (and ultimately a university) to be set up at Livingstonia. On his living-room wall, Mr Dunduzu Chisiza, the Malawi party secretary-general, has hung a framed copy of President Kennedy's inaugural address. Mr Mennen Williams, however harassed elsewhere, can count on a relaxed and friendly reception when he reaches Blantyre later this month.



And yet no one is pretending that Nyasaland, when quit of federation, will thrive effortlessly. Although a diamond survey is in progress, the easy dream of great mineral wealth deliberately concealed by the federalists has been sternly dismissed by Dr Banda. The Malawi election manifesto is sensible and downright and offers no Utopia. Universal primary education is set down honestly as only an "ultimate aim." The first necessity for economic development is "the commercialisation of agriculture on a massive scale."

No Utopian: Dr Banda

Dr Banda himself has a favourite phrase about "creating a central African Denmark." With good soil and better rainfall than elsewhere in Central Africa, Nyasaland might succeed in achieving the great increase in cash crop production which is necessary to prime any development. At present the population pressures, especially in the southern province, are, according to Mr Dick Kettlewell, the secretary for natural resources, making the subsistence mentality more deeply ingrained than ever. Concentration on mono-cropping with maize is ruining much good soil. Nor have political preoccupations these last few years contributed to good husbandry: instead, as in Ghana and Kenya, it became a point of nationalist honour to break agricultural rules as a symbol of anti-government feeling. Mr Kettlewell now frankly says: "I hope Dr Banda and company will succeed where they caused us to fail. I think they will succeed before it is too late."

Tea production, which last year at £4 million in value provided more than half Nyasaland's export earnings, is limited to large European estates. Dr Banda has assured the London heads of the Nyasaland tea association that he will cherish this golden goose; what slightly alarms them is the probability that he will want to rear another gosling. Kenya has proved that African smallholders can produce excellent tea and there is room for Nyasas to follow this prosperous path. But European planters need to be shown

How she's grown since her last voyage!

Caroline's first Union-Castle trip—she was on the 'Nursery and 6 o'clock supper' list. Next time she was 12, and could swim in the pool with the grown-ups, and a good deal better than a lot of them. But it was still 'early to bed and not too many ice-creams!' Now, this voyage, her social life extends into the small hours, she watches her own calories with those superb Union-Castle meals, and the only way her elderly admirers can get a dance with her is to be lucky in the Paul Joneses. She's fortunate to have a father who has big business in South Africa, and likes having Caroline along as a companion—at least, he knows she's in the ship *somewhere*.....

UNION-CASTLE

THE BIG SHIP WAY TO AFRICA

that quality and reputation will not suffer when Africans are among the sellers. There are several other crops where great expansion seems feasible. Cotton, a peasant crop with a record value last year of £928,000, is foremost among these; but Turkish tobacco could also be more widely established in the northern province, fishing on Lake Nyasa can become a sizeable industry, and increased groundnut production would give the African diet the proteins that maize lacks. A £5 million scheme to empolder the elephant marsh on the lower Shire river and provide at least 50,000 acres for sugar, rice and possibly cocoa production has reached the experimental stage; but national development depends more on a general increase of productivity than on a showpiece area.

The possibilities, however, are there waiting to be explored, and Dr Banda has picked as good a team as nearly any other African country could boast to go into the legislative council. His personal choice of candidates shocked many Europeans accustomed to local nomination. But his move seems justified. Among his candidates are three graduate teachers, a lawyer, an archdeacon and the chief of the Angoni tribe. Fifteen of them went to Church of Scotland mission schools and Mr Chisiza, at Her Majesty's expense in Gwelo prison, read more about the economics of under-developed countries than probably anyone else on the continent. These are men who can give Nyasaland impetus and an alternative to federation.

Dr Verwoerd's Desert Island

FROM OUR CORRESPONDENT IN SOUTH AFRICA

WHEN South Africa goes to the polls on October 18th only the size of Dr Verwoerd's majority will be in doubt. Probably the Nationalists will add slightly to their present majority of 44 in the Lower House. The election is confined to the white population of about three million. Neither the Africans (10 million) nor the Asians (500,000) come into the matter; the Coloureds (1,500,000) will have their own separate little election in the Cape, the only province where they have the vote, on October 4th; they will then choose four whites to represent them in the House of Assembly.

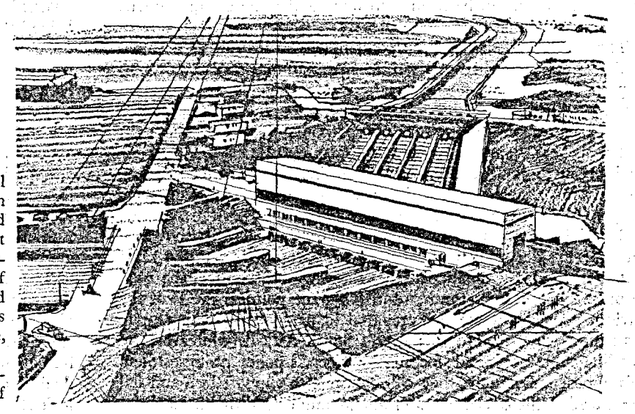
The election will be contested by the four parties represented in Parliament—the Nationalists, the United party, the Progressives and the National Union—and by the Liberal party, which is unrepresented and electorally insignificant. The contest will be wholly about race and colour. The Nationalists stand, of course, for apartheid, also known as separate development (and by the prime minister as good neighbourliness). In mild contrast, the United party would go one or two timid steps towards sharing power; it advocates a strictly limited communal representation for Africans (eight seats out of a total of 168) and common roll representation for the Coloureds; its attitude to the Asians is so far still only nebulously defined. The party stands for "White leadership with justice" and an "ordered advance" in colour policy; this is almost as unacceptable to articulate non-whites as is the Nationalists' government without consent.

The United party has come to an electoral agreement with the recently established and very tiny pro-republican National Union party founded by a former Nationalist MP, Mr Japie Basson, and now led by him and ex-Chief Justice H. A. Fagan, a former moderate Nationalist. An astute politician with an indeterminate following, Mr Basson has apparently convinced the United party that he can win some dissident Nationalist votes for the new combine in marginal and even Nationalist constituencies. On the strength of this, he has been promised relatively safe seats for himself and Mr Fagan, who will, however, enter Parliament very reluctantly and only because he has been persuaded that his influence might help to halt the Nationalists' progress.

The United party will have no truck whatever with the liberal Progressives, who have never been forgiven for breaking away from the United party twenty months ago; there is thus likely to be a number of three-cornered contests from which only the Nationalists can benefit. Just now the Progressives have eleven representatives in Parliament; they are unlikely to have any in the new House, the election having come a year or two too soon for them. They stand for a cautious policy of franchise on merit and shared government, not unlike that in Southern Rhodesia; little as this is, the Progressive party is anathema to most white South Africans, whose political thinking is only gradually advancing beyond that of the late nineteenth century. The irony is that the party makes an appeal only to the more moderate African leaders like ex-Chief Albert Luthuli, a Christian democrat whose very name gives otherwise sane whites hallucinations of red ruin.

Dr Verwoerd is going to the country two years before he need go for several reasons. First, the tide of public opinion is still flowing in his favour after the "peaceful" establishment of the republic in May. Secondly, the deterioration in the economic situation has been halted, albeit temporarily, by the stringent capital control measures introduced some months ago. Thirdly, the pressure of world opinion, through the United Nations, on the questions of south-west Africa and of apartheid itself may grow in the years ahead, and may make political life in the republic a little prickly. And finally, Dr Verwoerd wants to get the elections over before the intellectuals and Afrikaner churchmen in his own ranks become any more disenchanted with apartheid and start spreading disaffection among his loyal supporters.

As a prelude to the election, Dr Verwoerd has reconstituted his cabinet so that he is able to press ahead with the implementation of separate development without delay. Mr P. W. Botha has been appointed to the new post of Minister of Coloured Affairs; he has also been made head of the new Department of Community Development which will carry out the hated policy of group areas for different races; another minister has been entrusted with the task of building up a separate department of Asiatic affairs.



Mr Apartheid: P. W. Botha

Nationalist tactics clearly include an all-out drive to win as much support and sympathy as possible from non-whites themselves within the apartheid framework, largely by a technique of "soft-sell" and concessions on various fronts. The police, for instance, are under strict orders to "go slow" in their dealings with the black people, particularly with regard to illicit liquor and pass raids, and already there is some improvement in relations between them and the Africans. "European liquor" is soon to become available to Africans, to the deep distress of the powerful Dutch Reformed Church. And a start has been made with the establishment of urban councils for Africans in some selected areas. This is the Nationalists' response to the growing demand of black people for some say in their own affairs. Local councils are to be created very gradually and on ethnic lines where possible, half the members being elected and half nominated by the government. Potentially the councils will have some elementary powers of self-government, but for many years their function will be almost wholly advisory and of so primary a nature that they will do nothing to meet the demand for real civic self-government. In addition "Bantu courts" are to be set up with circumscribed powers to hear certain civil and criminal matters. African com-

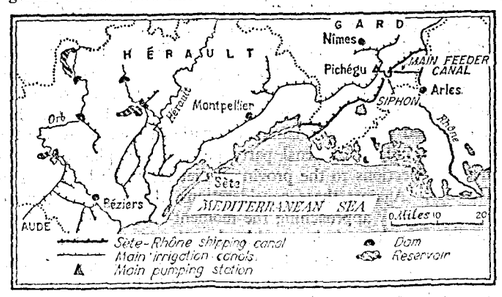
A Mediterranean TVA

FROM OUR CORRESPONDENT IN SOUTH-WEST FRANCE



THE long handsome building straddling the canal at Pichégu excited Mr Khrushchev's admiration when he toured France last year and has been visited since by several busloads of Soviet engineers. At first sight it looks like a hydro-electric power station. Turbines hum, and there is the usual convergence of powerlines and transformer gear. Only fishermen and small boys will notice that the water in the canal is flowing backwards—toward the building, and thence, presumably, up into the dam behind it.

This is, in fact, Europe's—probably the world's—biggest irrigation pumping station, and the heart of an ambitious development project. The project's birth certificate was signed by M. Pierre Mendès-France (then prime minister) in February, 1955; by the time work is completed in 1971 it will have brought water to 360,000 acres of coastal Languedoc and transformed the economy of an area nearly half the size of Wales.

The Pichégu station's fifteen electric turbine pumps are designed to handle a flow of water equal to that of the Seine through Paris. Their normal task will be to pump 62 cubic metres (that is, 62 tons) of water every second to another canal 60 feet above the level of the lower one, and to raise a further 13 cubic metres (13 tons) of water per second to a smaller canal, nearly half a mile away, 200 feet above the level of the first.

The water flows to the pumping station from the Rhône along a canal, 8 miles long and 60 yards wide, which a gigantic siphon carries under the Sète-Rhône shipping channel. From Pichégu it will be distributed by a main canal 305 miles long and 5,600 miles of secondary canals and pipes. (Final delivery, on the farm, will be by pipe and sprinkler.) In the western half of the region more water will be channelled into the network from reservoirs (total capacity 280 million cubic metres) created by damming the Orb and a tributary of the Hérault; and hydro-electric plant on the same rivers will generate about two-thirds of the current used by the eleven pumping stations of the whole irrigation complex.

For almost a century, the economy of eastern Languedoc (the departments of Gard, Hérault and Aude) has been perilously dependent on a near-monoculture of the vine. The strong, vigorous wines of the region are drinkable enough, but they rarely rise above the level of *vins ordinaires*. In the past they have suffered from Algerian competition; in future, as the European Economic Community gets into its stride, they will have to do battle with imports from Italy, Greece and possibly Spain. However deeply attached the farmers of Languedoc may feel to their traditional way of life, they are bitterly aware that in the booming, affluent France of 1961 their annual income is less than half the national average; and they would be foolish to try to ignore the implications of the common market. As an official connected with the Languedoc development scheme told a meeting of farmers' representatives recently: "The basic lesson European integration has already taught us is: 'If in doubt, reconvert; produce something the other fellow can't match.'" French agricultural planners have their eyes fixed on the rich west German market, in which (they say) France's share has hitherto been slight compared with the shares of, say Holland, Denmark and Italy.

In Languedoc a vigorous campaign has been launched to persuade farmers to switch to exportable crops. Generous loans and subsidies are available to those who uproot their vines, bring neglected *garrigue* into cultivation, and plant fruit trees, vegetables and industrial crops. Teams of chemists, agronomists and demonstrators move from village to village, analysing the soil of every irrigable plot, advising on crops and equipment, and persuading teachers, priests and pastors to act as voluntary propagandists for the cause. Coachloads of villagers are taken to visit farms where yields of 20 tons of tomatoes an acre, 15 tons of potatoes and 25 tons of dessert apples are already being obtained on irrigated land that was arid vineyard five years ago. They are shown an equipment-testing centre at Nimes, where agricultural gadgets from many countries are carefully compared and classified on their merits—with rude comments, in some cases, on their makers' advertised claims. Marketing circuits in the region are being revised with export needs in mind. An important *marché-gare* is nearing completion on the outskirts of Nimes.

The Languedoc scheme is one of six provincial development projects called for by the second and third modernisation plans. (The others are under way in, or scheduled for, Gascony, Provence, Corsica, Vendée and the Limagne.) The instrument favoured by French planners for carrying out projects of this type is the autonomous *société d'économie mixte*, a partnership of public and private enterprise. Eighty per cent of the shares of the Languedoc company are owned by the state and local authorities, and twenty per cent by private investors; the public element predominates more weightily than usual here only because local authorities were quicker on the uptake than private investors. Its operations are financed by a government subsidy, now running at 80 million new francs a year, and by long-term loans at low interest rates from development funds. Within eight or nine years, when the majority of farmers in the region are using its water and equipment and paying between £20 and £40 a year for the privilege, it will be self-supporting.

Continued from page 640

munity guards are to be formed to work under the urban councils as a police auxiliary.

The whole system has been condemned by liberals as a sham. It denies to the urban African any real administrative powers; it perpetuates in the financial sphere the principle of separation between African and other town-dwellers; it confers judicial powers on unqualified persons; it perpetuates ethnic grouping; and it makes no provision for the direct representation of urban Africans in the local authorities, which are the only effective local government agencies. Dr Verwoerd may, however, win some support for this move from the less sophisticated Africans, as well as from the most cynical, who welcome the spoils system which must be a side product of what is now proposed. At the same time he will also win support from those whites who feel the need to make some gesture towards satisfying the political needs of the African people, but are not prepared to part with anything more than the merest shadow of power. South Africa's whites believe in white supremacy, and since Dr Verwoerd's policy promises them this almost indefinitely, they will continue to support him and tell the world, United Nations and all, to mind its own business.

There are two other reasons why Dr Verwoerd will win in October: the inability of the opposition forces to agree even on a common *modus operandi* in fighting him; and the part that the government-controlled South African Broadcasting Corporation is likely to play now that it has all but shed its objectivity and makes little or no distinction between national and Nationalist.

Thus, while whites squabble and non-whites remain uninterested, sullen or bitter on the periphery, Afrikaner Nationalism and its English-speaking allies will once again make off with the loot of parliamentary power. The dice, moreover, will be loaded in favour of the conservative rural folk who are unaccustomed to deal with any non-white people except the most primitive and unsophisticated, and who in addition are totally unaware of the nature and meaning of the revolution that has been taking place in Africa in the postwar years. Confined within the laager mentality, they are as determined as ever to fight for "survival" in a "black sea."

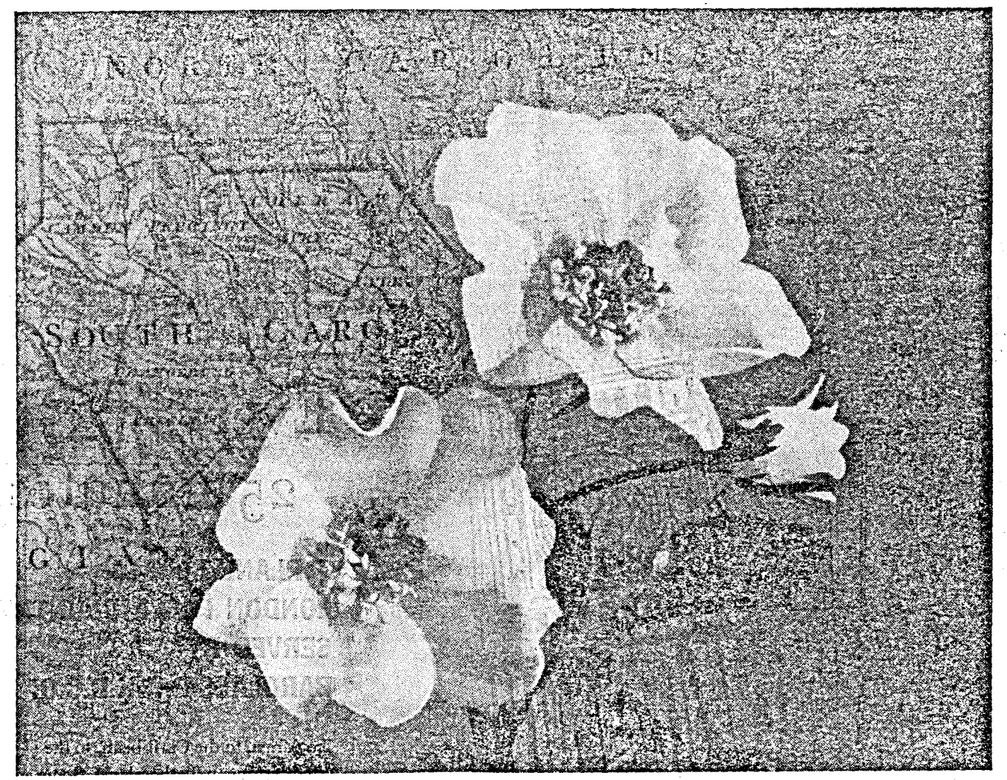
Ballhausplatz Ballistics

FROM OUR VIENNA CORRESPONDENT

THE disarray into which the South Tyrol conflict has brought Austria's foreign relations has been reported to be destroying the cohesion of the coalition; and indeed one might expect this to be so. In fact, however, the Austrian coalition system is too tough a thing to be easily disrupted, and the signs are that the recriminations and apologetics about tactics in the South Tyrol are not going to bring on a government crisis. After all, the issue is not a party one. Even when it comes to reproaches about fostering or tolerating extremism, men of both parties are compromised: who is going to throw the fatal stone? Over all, and perhaps decisively, hang the grim clouds of the gathering world crisis, and Austria's own nagging fear of political and economic isolation. Bipartisanship is not going to be abandoned at such a time.

It is none the less hard to understand why the Austrians should have got their external relations into such a mess, and none the less lamentable that their foreign policy should be so flawed with their characteristic domestic weaknesses: a love of playing the poor man's Machiavelli; a weakness for dazzling the domestic voter with acrobatics abroad; and a fatal habit of extending to the international field the foot-dragging techniques that belong to coalition government. All in all, Vienna was not well placed to withstand the broadside that came on July 22nd from so unexpected a quarter as Zurich.

The Vienna correspondent of the *Neue Zürcher Zeitung* then charged a varied selection of Austrian politicians with having helped the building up of a South Tyrol partisan (that is, terrorist) organisation, at various stages, "partly by direct participation, partly by active assistance, partly as passive accessories." The men named were Herr Oberhammer, leader of the Tyrol People's party, and Herr Gschnitzer, former secretary of state in the foreign ministry, both Tyrolese; Herr Graf, the former minister of defence; and the present minister of the interior, Herr Afritsch, and foreign minister, Dr Kreisky. As it happens, when Dr Gorbach formed his new government this year he got rid of Herr Graf and Herr Gschnitzer; so that, of the men accused by the *Neue Zürcher Zeitung*, only the two Socialists, Herr Afritsch and Dr Kreisky, are still members of the government.



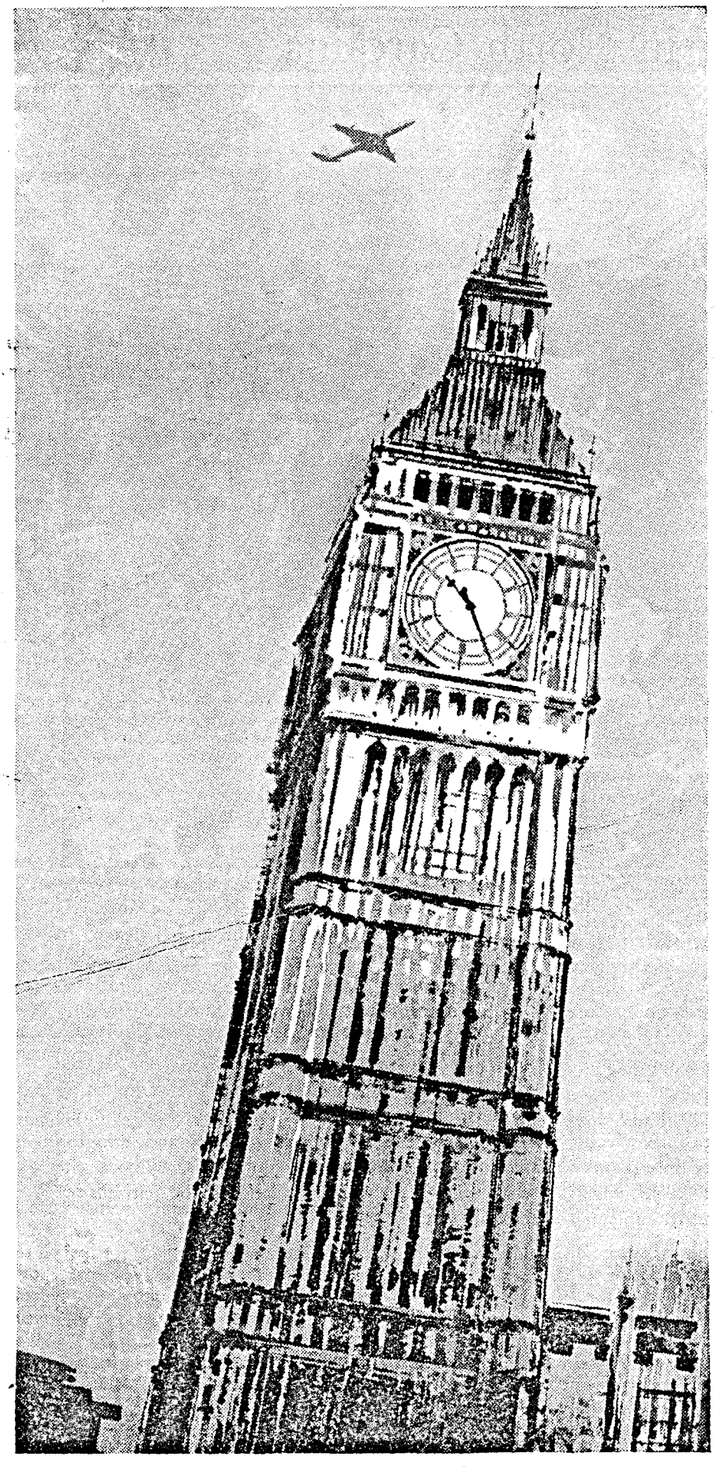
The chancellor himself, Dr Gorbach, was not among those named; and he is in fact well enough known to have no taste for violence or extremism in the pursuit of political aims, internal or external. (He is also known to be on bad terms with his Socialist foreign minister.) Dr Gorbach did, however, join in the flood of denials that followed the broadside from Zurich; and he added to it the statement that he could not restrict the freedom of action of the South Tyrolese—thus depriving his repudiation of much of its force. In extenuation it has to be said that any statement by an Austrian Chancellor is a coalition matter; and this particular statement was the work of no fewer than four hands.

HERR KREISKY fell into the error of making his denial the subject of a press conference on July 26th, during which he let fall the admission that he had known of the burgeoning terrorist activity as long as two years ago. It seemed to follow that he knew that Austrian subjects were engaged in the passage of arms and explosives between north and south Tyrol, and that terrorist activity was being organised, to some extent, from Austrian soil. This by no means implies that the foreign minister, or anyone else in the government, was in the vanguard of any of this activity. In so far as there was active leadership in Vienna, it was in a quarter outside the government, and it ceased about twelve months ago, after official orders to pipe down. Herr Kreisky is not the only politician who has turned a blind eye on events which he did not instigate, hoping that they would not get out of hand, that they might serve some purpose, and that responsibility might be disclaimed if the worst came to the worst. One of the obstacles to the Austrian case was the almost world-wide indifference to the South Tyrol issue; a few bombs might step up South Tyrol's news value. At the same time, the extremists helped the government to appear reasonable. Their cry for self-determination enabled Herr Kreisky to open his bargaining at a high price while keeping well to the rear of demands which he could denounce as absurd.

To the extent that Herr Kreisky, or others in the Austrian government, indulged in such a train of thought they may now be likened to the sorcerer's apprentice, who miscalculated the violence of the forces that were being played with. Austria's moral position in the South Tyrol dispute has been heavily compromised; Austrian bargaining power can only have suffered.

Abstract reason might now suggest drawing back. But Herr Kreisky, for one, does not seem to have lost hope that he may yet succeed with this inflammatory national issue on which Gruber and Figl failed. Internal party politics, too, play a part in the matter; elections to the provincial diet are to be held in Tyrol in October. Against these considerations, the Austrian government is now rapidly approaching the moment when it will have to seek to regulate its relations with the European common market, presumably by a form of association, which Italy, if it chooses, will be able to veto. For Austria, the term for achieving anything in the South Tyrol dispute is shortening.

Yorkshire accent in North Carolina



PR170H

In a field in North Carolina where cotton once grew, a £20,000,000 chemical plant has now arisen. Here Fiber Industries Incorporated is producing a new synthetic fibre known as 'Fortrel', whose silk-like threads, cascading out of spinnerets, are going to textile mills throughout America. But among the voices to be heard above the whirr of machinery are some that are unmistakably English; for this is a joint venture by Britain's leading chemical company, I.C.I., and Celanese Corporation of America, in which experts from I.C.I.'s 'Terylene' polyester fibre plants in Yorkshire are supplying the scientific skills.

This is yet another milestone in the triumphant progress of I.C.I.'s remarkable synthetic fibre. As 'Terylene', it's made in Britain and Canada. In France, Germany, Italy, Holland, Poland, Czechoslovakia, Spain and Japan, similar polyester fibres with different trade names but the same outstanding properties are being produced under licence from I.C.I. And now, too, in the U.S.A., one of the world's most sophisticated and discriminating markets, 'Fortrel' will be contributing its unique qualities to exacting jobs in industry and bringing to clothes for the citizens of Paris, Illinois, the same crisp elegance that delights the citizens of Paris, France.

The influence of I.C.I. research and production is felt today in every corner of the globe

A PLANE LEAVES LONDON FOR A COUNTRY SERVED BY . BARCLAYS BANK D.C.O.

To Africa, to the Caribbean, to the Mediterranean fly the planes. Some go direct, some connect with other smaller air lines which carry businessmen, tourists or government officials on to little-known and far-off places.
It will be a small township indeed which does not contain a branch of our bank.
From the mines of the Rand to the cocoa trees of Ghana, from the coffee plantations of Kenya to the oil wells of Trinidad the name of 'The D.C.O.' means modern banking service at its best.
All in all we have over 1,250 branches in 41 territories extending over half the width of the world.

BARCLAYS BANK D.C.O.

54 Lombard Street, London EC3

BRITAIN'S LARGEST OVERSEAS BANK

THE BUSINESS WORLD

Exchanges after the Storm

THE biggest speculative drain that sterling, or any other currency, has ever experienced has been followed by the biggest stabilisation credit that the International Monetary Fund, or any other international institution, has ever made available. A deep breath is needed to consider the wide ranging implications for the Fund, the pound and exchange arrangements at large. First there are the vital but sometimes shrouded points of fact—details of the Fund credits, calculations of the drain from London, assessment of the sterling balance-sheet now (*ex* the private capital that has flown and *ex* the money that will have to be repaid to Continental central bankers but *cum* the money that is now to be drawn from IMF). Then there are the points of principle that thrust themselves forward. Did these "Basle" bankers' credits, in retrospect, serve a useful purpose? Should these or similar arrangements have a place in the improvements in the credit machinery that will be considered at the annual meetings of the Fund and the World Bank in Vienna next month? Finally, does this latest upheaval bring any lessons in exchange management to the national authorities?

Britain's credit from IMF comprises an immediate drawing of nine currencies to the equivalent of $1,500 million (£535 million) and a stand-by arrangement for an additional $500 million during the next twelve months. The total of $2,000 million is roughly equal to Britain's gold tranche plus three-quarters of its quota. The large drawing has involved the Fund in a complicated exercise. Less than one-third of the total, $450 million, is being advanced in United States dollars, though this is still the largest single contribution. In the first seven months of 1961, for the first time, drawings from IMF in D-marks exceeded drawings in dollars; the Fund had only some $300 million in D-marks left. The only way in which the Fund can at present increase its stock of currencies on its own initiative is by buying them for gold. It has now released $500 million of its gold stock of some $2,500 million in this way, and although the Fund's specific shortage is of marks, it has thought it diplomatic to spread its gold sales among all the countries participating—so that they will each recoup one-third of their credit to the Fund in gold.

Even after these purchases, the Fund has been able to make no more than $270 million available in D-marks. This has been fully matched in French francs, which have been much less widely used in Fund drawings in the past. In addition, Italy and the Netherlands are each providing the equivalent of $120 million; Belgium $90 million; Canada and Japan each $75 million—the Japanese yen being made convertible into dollars for this purpose—and Sweden $30 million. The operation thus brings some unaccustomed currencies into Britain's official reserves. It is understood that the Exchange Account will generally retain them, except where the lack of an organised money market in the countries concerned makes this impracticable.

THIS mammoth credit, by biting deep into Britain's quota, requires under Fund procedure "substantial justification"; and there has been no attempt to hide its connection with Britain's own domestic measures. The request was put in on the day of the Chancellor's announcement, and the statement by the Fund announcing the credit ten days later is direct and carefully worded:

> The United Kingdom has adopted a series of fiscal and monetary measures and certain other policies which together are designed to restore a strong balance of payments position at the existing exchange rate and without imposing restrictions on trade and current payments. The drawing on the Fund will place at the disposal of the United Kingdom substantial amounts of foreign exchange while the new policies are taking effect. The stand-by arrangement will give a specific guarantee of further support for the United Kingdom's efforts to maintain the strength of sterling and thus promote exchange stability generally.

This "condition," some people have already complained, will oblige the Chancellor to stand by his tough measures, including the proposed pause in wages, until the balance of payments improves decisively; and the critics also point out that Britain can hardly now respectably devalue or impose import controls before the credit is repaid. But that, after all, was the object of the exercise.

Why has as much as three-quarters of this very large credit been drawn by Britain in cash? The credit to Britain in the Suez crisis, which was the Fund's previous record operation, comprised a drawing of $561½ million backed by a stand-by facility of $738½ million—which was twice renewed but never drawn. A stand-by facility incurs a charge of only one-quarter of one per cent a year, whereas a drawing beyond the gold tranche—i.e., some $1,000 million of Britain's present drawing—incurs interest at an effective rate of between 2 and 3 per cent a year, depending on how long it is outstanding. Fund credits are normally repayable in three to five years; the Suez credit was repaid in just under four; and the present drawing is repayable "within an outside limit" of three to five years. Apart from scraping the barrel at the Fund, Britain's large cash drawing will thus entail a sizeable interest

cost, perhaps $75 million over three years—much less, of course, than would be paid for these sums in the market, but not negligible.

Arithmetic of the Drain

THE rationale of this operation becomes clearer against the background of the past months of strain. The drawing of £535 million augments Britain's central reserves by no less than three-fifths from their end-July total to £1,411 million, a new postwar peak. This seems lavish enough. But some £200 million of the drawing will be used " over the next month or two to meet short-term liabilities to central banks under the Basle arrangements " ; and—a more sobering comparison—at £1,211 million the reserves would be less than £60 million above those of last December. Any lesser drawing, in other words, would have left the reserves below their level on the eve of the crisis, and unfavourable comparisons might well have been drawn.

It is now possible to make some sort of estimate of the size of the outflow from London, as in the accompanying table. The published loss of gold in the first seven months of 1961 is £278 million—all but £13 million occurring since the revaluation of the mark and guilder at the beginning of March. Since then the reserves have been greatly cushioned by the short-term help from Continental central banks agreed at the Bank for International Settlements in Basle. The United Kingdom announcement now puts a lower limit of £200 million on that support. It is known that the operation is not being unwound completely—London interest rates, after all, are attractive enough—and total help from Basle since March may be put at £250-300 million. In addition, the reserves have benefited since the beginning of the year by purchases of sterling by Germany for advance repayments of debts to Britain, and by Australia's deposit in London of part of its IMF drawing. In all, total special aid might be put at around £350 million. This would bring the true drain to £600-650 million—equivalent to around $1,750 million, or over one-half of Britain's end-1960 reserves.

The figure is a shattering one. The only parallel on record is the loss of over $2¼ billion in the reserves in the aftermath of the Korean boom—which reflected the collapse of the incomes and sterling balances of the overseas sterling countries. Yet an outflow of the order of £600 million in half a year is by no means incredible. This, after all, is the figure that has been put forward by the Bank of England for the inflow of " mainly short-term " capital in 1960, excluding the Ford purchase. Another gloomy yardstick is the estimate, admittedly not very reliable, of the deficit in Britain's payments after allowing for net long-term capital outflows: *minus* £545 million in 1960 and *minus* possibly another £200 million in the first half of 1961. These deficits have to be financed. Last year they were financed with embarrassing success through the market. In 1961, in effect, these temporary borrowings of private money have been funded—in the first instance by the Continental central banks, and now by IMF. Holdings of sterling by private operators in non-sterling countries—these are the most volatile portion of the sterling balances and the few hundred million held by Kuwait may perhaps come in the same category—must certainly be far below their end-March figure of £708 million, and may quite possibly be below their end-1959 figure of £478 million ; in September, 1957, they were run down to £229 million.

	(£ million)	
THE DRAIN :		
UK reserves, end-1960	1,154	
end-July, 1961	876	
Gold loss		278
Special help from :		
Basle credits, say	250–300	
German debt prepayment, say	35	
Australia's IMF credit, say	35	
Total special help		320–370
True drain		600–650
THE REINFORCEMENT :		
Reserves at end-July	876	
IMF drawing	535	
	1,411	(with stand-by, 1,589)
Less Basle repayments	200	
	1,211	

On present indications, however, there may be a quick turnround. Sterling has been almost consistently in demand since the Chancellor's statement two and a half weeks ago, and the return of funds has been gathering strength—though the buying of sterling is still steady rather than massive. By mid-week the spot rate had risen by a full two cents to $2.80½, more than half-way back to its upper limit of $2.82, and at the same time the official exchange account had recouped dollars for the reserves. On Thursday the spot rate slipped back a little in response to small selling from Paris on a quiet market. Recent purchases of sterling have been partly to cover short positions, but funds are also beginning to come back for short-term investment. Most of these transfers at present are covered against the exchange risk, so that the forward discount on sterling stands near its interest parity at around 4 per cent.

This suits the authorities quite well. They have no desire to see a large margin on covered arbitrage—and they are not inclined to take even short-term confidence for granted until the wages issue reaches its crunch and satisfactorily passes it. Foreign operators will look not only at London interest rates and at London's quick reserves, but also to indications of Britain's competitiveness and, more deeply than usual, to Britain's underlying balance of payments. It was weakness here that, in the perspective of 1960-61 as a whole, necessitated the large call on the IMF. The existence of the sterling bank simply affected the timing, providing a few months' respite.

Was Basle Worth It?

THIS, too, was the effect of the central banking assistance, which acted as a bridge between the withdrawal of private credits and the mobilisation of what may be thought of as inter-governmental credits through the IMF. The Basle experiment has been much misunderstood. Misgivings have been expressed about its sudden curtailment in July, which caused the full impact of the withdrawals from London to be shown in a loss of £114 million in the reserves—this was indeed a little swollen by some net repayments to Continental central banks. But the scheme was never intended to be permanent. It was drummed up at the end of a chaotic week in March, and it was then designed as an official counter to the ill-informed speculator. It succeeded in its first object of quieting the speculative fever, but the success was

ephemeral. As speculation against the pound revived and gathered strength, it became clear that the Basle credits would have to be consolidated as soon as possible by a drawing from the Fund. Once this was in train there was no longer any need to disguise the true outflow from London. Indeed the British government may have seen some virtue in demonstrating to its own public that before the Chancellor acted money was leaving London at a rate that would have left precious little of the reserves at all by the end of the year.

What, then, did the Basle agreement achieve ? It has been criticised from two opposite sides. One familiar school raises the classic objection to all credits, that they are obtained only at the price of putting the country in pawn to foreign bankers, who have restrictionist and harmful ideas about economic policy. In fact the influence of the foreign bankers this year has been preponderantly in favour of a break-through by Britain to new long-term correctives ; and it happens that the one economic prejudice that is most common to bankers, the prejudice against public expenditure, was not particularly respected by the Chancellor. A more reasoned complaint is that the Basle operations in the end made no difference—that they only postponed the reckoning and in the process gave false comfort. This argument too is in essence applicable to any credit operation.

Basle did make a difference. On the most limited view, it averted a real panic in the second half of March, following the shift of $500 million around Europe in a single week. The alternative to the central bankers getting together in this way to help was the more ancient expedient, which has acquired some surprising adherents lately, of letting nature take its course. In practice that could have meant one or a number of things—floating exchange rates, import quotas, exchange controls, sharp increases in Bank rates. One may approve or disapprove of one or other of these particular expedients and still consider it a great misfortune if they have to be imposed blindly at the instance of speculators. The four months of time that the Basle arrangements lent the British government should have been very valuable for the working out of a constructive programme ; and if Whitehall only began to wake up to the facts when the reprieve was nearing its end, that points to a defect in the machinery of British government rather than in the principle of short-term central banking credits. Looking back through this haze, one might hazard the guess that at the annual meeting of the Bank for International Settlements at Basle in mid-June the Continental central bankers agreed to continue their assistance after an indication from Dr Jacobsson that he aimed to get these credits repaid shortly by a credit from the Fund ; and at the same time Dr Jacobsson is likely to have told the British government that the large Fund credit that it needed would be favourably considered on the presentation of a convincing British programme for external recovery.

There seems little doubt that this first essay in central banking co-operation on a big scale served a constructive purpose and acted as a useful precedent. Perhaps inevitably the scheme worked clumsily at some points. The markets at times were allowed to get the impression that some central banks had little genuine enthusiasm for the scheme, and this naturally vitiated much of its psychological effect. Central banking operations can be mounted swiftly and can be worked very smoothly and informally: that is their particular merit. But in practice they are limited in scope. This is not necessarily true in Britain, where central bank and Treasury work closely together and the only limiting statutes are those of historic interest. In many Continental countries, however, and in the United States, the activities of the central bank are strictly limited by legislation ; this, paradoxically, is one facet of a greater degree of formal independence. In the context of international credit, this means that while central banking arrangements of the Basle type can be a useful supplement to (and precursor of) the medium-term operations of governments themselves, and of the international agencies that are financed by governments, they cannot in modern days be an alternative. The Basle initiative has shown that co-operation on the lines developed by Montagu Norman and Benjamin Strong in the twenties has an important place in managing the exchanges today. It has also shown that this place is essentially a subsidiary one.

Tasks for Vienna

A STRENGTHENING of the International Monetary Fund, in other words, is still more urgent than before. Britain's drawing has openly exposed the Fund's two main existing weaknesses—the pitifully small holdings of the creditor currencies, and the creaky administrative machine. It is now clear beyond a doubt that even a medium-sized drawing by the United States is impossible before the Fund's resources are expanded. It has been known for some months that Dr Jacobsson will propose at Vienna a variant of the Bernstein plan, to replenish the Fund's resources by supplementing the paid-up quotas with stand-by commitments by the main industrial countries to provide medium-term credit to the Fund to an agreed limit, when requested. It has also been known that, while the United States administration is wholly in favour, and might indeed support a more radical proposal, some Continental opinion, particularly in France, is critical.

It is a nice question whether Britain's drawing will strengthen or weaken the forces of reform. On the one hand it clearly exposes the Fund's need ; on the other the French may see this as another confirmation that the Fund is a show run by, and for, the Anglo-Saxons. On one point there is a real need to meet French hesitations: it is only reasonable that if the Continental countries are likely to be leading contributors under the new stand-by credits to the Fund, they should have larger voting rights than they enjoy by dint of the quotas alone. There are some tricky practical difficulties here, but they should not be insuperable.

This adjustment could also be made the occasion for making the direction of the Fund less unwieldy ; is it really impossible to establish a kind of inner directorate, recognising the reality that the health of world exchanges in practice is determined very largely by a small group of countries—the United States, Britain and the Six ? Any discrimination among individual countries is bound to cause great diplomatic resistance and ill will, and it may be that a close body of this kind is best left without formal recognition. Dr Jacobsson is a tremendous one-man band, and the success of the Fund is in large measure his personal achievement. Yet although the Fund is admirably but discreetly served by its officials and its executive directors, some compact creative and decision-making group, keeping touch with the informed public, seems desirable.

Here is a task for Dr Jacobsson in the two and a half years of his now extended term. These administrative questions must be treated as urgently as the various proposals for the extension of the Fund's powers, for the degree to which its members are willing to trust the Fund depends pretty directly on their confidence in the way it is run.

The other issues that should be given quiet but high-level consideration at Vienna are gold and exchange rates. The United States still tends to make the grave psychological error of treating its formal commitment to sell gold to central banks at $35.08¾ an ounce as a special and burdensome obligation that true friends do not ask it to fulfil. Instead, it should make it abundantly clear that it is only too happy to sell gold above the official parity. There may, indeed, be a case for raising the margin between its buying and selling price, perhaps to the 1 per cent permitted by the IMF. A spread of $34.65-$35.35 would offer the United States a better margin of profit for being the only country to operate an external gold standard, and provided the change was properly timed and presented it could be a great deterrent to private hoarding and speculation.

The time may also have come for some calm re-thinking about margins in the exchange markets. It has long been clear that, within the principle of broadly stable rates, a wider margin of fluctuation would help the authorities against the speculators, and discourage transient movements of funds. The twin difficulty has always been to make the change quite clearly a definitive one, and to avoid choking off the movement of private funds altogether. The authorities should now seriously consider taking the next opportunity when the exchanges are calm to widen the margins to give a swing of, say, 10 per cent, compared with the present 1½ per cent.

In the unnatural calm of the City of London that has followed the raging storm, it is easy to feel that the exchange upheavals, at least, are now over. But the situation remains delicate. Within less than a year both the world's key currencies have come under major attack. That is no surprise to either Professor Triffin or M. Rueff, but those who flinch from both the extreme courses that these two advocate cannot close their eyes to the stresses around them. The IMF's huge credit to Britain is, in one sense, a great victory for the gradualists. But it has left their cupboard bare, and it has emphasised the scale on which effective measures nowadays have to be mounted. The Jacobsson-Bernstein proposals provide a useful start; they should be backed by administrative reforms in the IMF, perhaps by technical changes in exchange rate margins. Within Britain a sustained effort is needed to vindicate the confidence shown by the international creditors; and on the Continent the monetary conservatives should ask themselves what logic is left in the sanctity of gold metal, as opposed to gold guaranteed and interest-bearing paper, in an age of the common market and common nuclear risk.

Expenses and Taxation

I have been exercised in my mind about the tax treatment of expense allowances and benefits in kind received by directors and other senior executives. The question of business entertaining is closely linked. . . . The Inland Revenue propose for the first time to issue a leaflet setting out the rules they follow in dealing with expense claims. . . . I intend that the special form which employers are required to return to the Revenue . . . should be revised so as to provide the Revenue with more precise information initially.

Mr Selwyn Lloyd: Budget Statement, April 17, 1961.

THE Inland Revenue has now issued 100,000 copies of the notes promised by the Chancellor. In them it sets out the practices (it does not describe them as rules) which it has built up to deal with the legislation, first introduced in 1948, which treats as remuneration (subject to specific claims for allowances) all expense payments and the cost of all benefits and facilities provided for a limited class of senior businessmen.

The notes serve a useful purpose, not because they add much to what was already known by informed taxpayers and their advisers, but because they bring clarity to the complexity of the Finance Acts and act as a corrective to exaggerated talk about what some people are allowed to get away with—claims made by smoking-room braggarts and by politicians who ought to know better. Somerset House should be encouraged to issue more explanatory pamphlets of this kind—those on capital allowances and double tax relief are invaluable—and an annual one, setting out in comprehensible terms the meaning of the Finance Bill, would enable it to be debated intelligently.

One possible objection to the issue of practice notes is that they may be regarded too rigidly by individual tax inspectors and fetter the exercise of wise discretion—which is particularly needed when dealing with expenses. What a responsible taxpayer lays out on an intensive business trip may correspond in form with the expenses incurred by a less conscientious business man in a leisurely tour of inspection of unimportant subsidiaries situated in agreeable places overseas; but they are different in essence and merit different treatment.

The notes record two changes in practice promised by the Chancellor. The first is the abolition of the restriction of allowable expenses by reference to so-called "home savings." These are usually unimportant, but their clawing back has caused immense irritation. The Revenue will probably be as relieved as anyone and will no longer be plagued with counter claims for the cost of a nurse to look after a delicate wife or the expense of boarding out a dog during the taxpayer's absence.

The second is the increase from 9 per cent to 12½ per cent of the cost of a car, which is to be taken as the annual value of its use by a director or employee. This is not unreasonable—few cars have lives exceeding eight years and the annual allowances given by the Revenue are based on 25 per cent of the diminishing value. But the general tone of the notes shows that the provision of cars is regarded as one of the most important forms of benefit that ought to be restrained, and they emphasise repeatedly that travel between home and the ordinary place of work does not count as business travel. There is ample case law to support this principle and it was endorsed by the Royal Commission. Any weakening of it—as indeed occurs in practice—gives those who have the use of business cars privileges denied to those who travel to work by other forms of transport. But to enforce the rule rigidly would bring out the hard fact that few offices could garage the cars used by their staff; they often find it convenient that the cars should be kept at the homes of their employees. Some employees may also complain that 12½ per cent may be all very well for the type of car that they would choose for themselves but unduly heavy when applied to the kind of prestige car provided for them. Conversely, employers may find it unfair that while their capital allowances are now limited to £2,000, even though the car may cost more, their employees are charged for private use at the full cost with no such limit. It is clear, too, that the Inland Revenue is concerned to control the expenses of wives accompanying their husbands on business trips. It is difficult to fault their approach—where there is a genuine business need the expense will be allowed but purely personal choice or the desire for a tax-free holiday will not be countenanced.

It is this inherently reasonable approach which will make these notes acceptable: they have already been given a cautious welcome by the Institute of Directors. Let the expense be genuine and supported by adequate records and the taxpayer will have little to fear. Only those who go too far like the managing director who demanded his mother's funeral expenses on the ground that, without her, his company would not have had its managing director, need worry.

Difficulties with expenses and benefits are endemic. In some measure they stem from the justified feeling that the narrow class affected by the 1948 legislation is being discriminated against. If the legislation was extended to cover incomes under £2,000 and employees of non-trading organisations, including trade union organisers and members of parliament, there would be fewer complaints. The exploiting of expenses and benefits by the under £2,000 class has become impressive in recent years. The fact that the tax inspector does not turn his quizzing glass on these expenses does not make them any more acceptable fiscally than similar exploitation by earners of more than £2,000. The main hope must be that the improvements in recent years in earned income and surtax allowances will increase the taxpayer's propensity to look for his reward in cash rather than in kind.

The Revenue Notes

Since 1948 the Taxing Acts have contained special provisions the effect of which, with some exceptions, is to treat all expense s payments made to certain persons and the cost of all benefits and facilities provided for them as taxable remuneration

Directors and Employees affected: These special provisions apply to directors, and to those employees whose remuneration, together with the expense payments and benefits, amounts to £2,000 a year or more, of trading companies, bodies and societies. They do not apply to directors or employees of charities, non trading bodies such as trade unions, trade associations, local authorities or schools.

Dispensations: If the employer explains to the Inspector his arrangements and satisfies him that they would be covered by an expense deduction a dispensation may be given and the special provisions will not apply. Such dispensations are often given for the expenses of business journeys in the United Kingdom.

Taxable Expenses: Unless there is a dispensation, all reimbursements of expenses incurred, allowances for specific expenses such as car mileage, round sum allowances and advances on account of expenses are taxable. These items are dealt with as follows:

Travelling: Fares and incidental travelling expenses of a business journey are allowed in full. Travel between home and ordinary place of work does not count as business travel.

Subsistence: Strictly it is only the extra cost of living away from home that qualifies as a deduction but since April 17, 1961, the whole cost is, by concession, allowed in full if there are continuing financial commitments at home. This concession is not made if the director or employee has no permanent residence, for example a bachelor who lives in a hotel or club and who gives up his accommodation when he is travelling.

Travelling and subsistence expenses of wives: If the employer pays the expenses of a wife who travels with her husband, expenses may be admissible where she has some practical qualification directly associated with her husband's mission which she uses to assist him regularly during the tour, or where her presence is necessary to act as hostess at a series of business entertaining occasions which are an essential part of the mission. Her expenses may also be allowed where the husband's health is so poor that it would be unreasonable to expect him to travel alone. Where, however, the part played by the wife is relatively unimportant, or the main reason for her journey is personal (for example to avoid the separation from her husband or to visit relatives abroad) her expenses are not allowed.

Taxable benefits and facilities: Subject to limited exceptions, the special provisions apply to all benefits and facilities provided by the employer including the provision of living accommodation, the use of any asset, travelling in the company's car, gifts of assets or their sale at less than market price including clothing, wines or groceries, the discharge of liabilities incurred by the employer and all other benefits including the provision of holidays, shooting, fishing and other sporting facilities, and medical treatment except where incurred abroad on a business visit.

Cars: Where the employer provides a car the value of its use and the expenses incurred rank as remuneration subject to a deduction for expenses for business use which satisfy the ordinary expenses rule. If the car is owned by the employer the amount on which tax is payable is the proportion attributable to private use of the annual value of the use of the car, which is now 12½ per cent of the original cost of the car (compared with 9 per cent formerly) and the running costs including licence, insurance, oil and repairs.

Entertainment: The allowance of entertaining expenses must be related to genuine business occasions. Reciprocal entertaining between business acquaintances may be really for social and not business reasons. The expense of entertaining colleagues in the same organisation is not normally allowed and will be admissible only in exceptional circumstances.

Records: In all cases where a claim for the deduction of expenses is likely to be made it is emphasised that it is desirable that the employee should maintain reasonable records, covering costs, mileages, itineraries and meetings.

Procedure: At the end of each year the employer is required to give particulars on the form P.11.D.

BUSINESS NOTES

IN THE MARKETS

Facts, not Fantasies

HAVING run recklessly wild before the holiday weekend, the market has now collected itself and begun to see facts as facts and not as fantasies. Equities have come off the boil and gilt-edged stocks have begun to simmer. The reverse side of the sudden spurt in equity prices before the week-end was a fall in gilt-edged prices to new low points. At this stage shrewder investors, including some of the institutions, began to buy gilt-edged—and also to sell some high-priced equities—on yield considerations. Yields ranging up to 7 per cent flat on the irredeemables were high and attractive, not least because with Bank rate also at 7 per cent it is pretty clear that the next move, however much it has to be delayed, will be downwards. Sterling's strength this week contributed to the heightening of morale of the gilt-edged market and buying broadened, carrying prices at the long end of the market up by nearly a full point on Wednesday and again on Thursday.

The logic of this rise is that if the credit squeeze and the Chancellor's other measures succeed in stabilising retail prices this must, for a short space of time at least, be good for gilt-edged stocks; while equities will be restrained by the pressure on profit margins and the Chancellor's exhortation on dividends. How far this will overcome the dislike of fixed interest securities that has been built up in the past few years remains an open question. Much is still uncertain and investors, for example, cannot be sure at this moment how firm an attitude the Government will take to wage claims in the autumn. Disinflationary policies—and gilt-edged prices—are still on test; but it would be churlish not to hope that this week's rally may be the first faint flush of health coming back into the cheeks of the gilt-edged market.

Sobering Down

WHILE it is possible to see some rational thought underlying the behaviour of the gilt-edged market, the movement in equity prices has to be characterised as extraordinary. That there were some sums of money waiting to move into equities as soon as the Trustee bill received the Royal Assent was always obvious; nor can it be disputed that speculators exaggerated the weight of this money and that some of them assumed that trustees would buy in complete disregard of prices. Their actions in a market where the jobbers have consistently protected themselves by keeping their books balanced from day to day and by marking prices sharply up or down led last week to a rise of 22.1 points to 328.6 in the *Financial Times* ordinary share index. The long weekend provided time for more sober reflection and for the digestion of reports that some institutions were selling small quantities of equity stocks. Inevitably, this led investors to consider the implications of the credit squeeze, the dividend freeze, the depressing prospect for profits and the heavy further calls for new capital in the coming months. These factors were not new, but they had been overlooked in the excitement about the Trustee Act.

Ultimately, this Act must lead to some switching into equities, not least by the local authorities whose own vehicle for mutual investment, LAMIT, was formally incorporated the day after the Trustee bill received the Royal Assent. But just as it is hazardous to guess at the amount of money that will be switched, so is it rash to exaggerate the pace at which the switch will be made. At the moment of freedom trustees are confronted with high fixed interest yields; many of them still need time to review their portfolios and policies; and they could charge themselves with imprudence if they rushed to buy before the market sobered down. Reflections such as these were recognised in the fall in equity prices this week, which brought the *Financial Times* index down to 313.3 on Thursday. Having experienced the pleasures and pains of a few days of excitement the equity market should now be better able to appreciate the virtues of restraint in the next few months.

MONEY AND THE BANKS

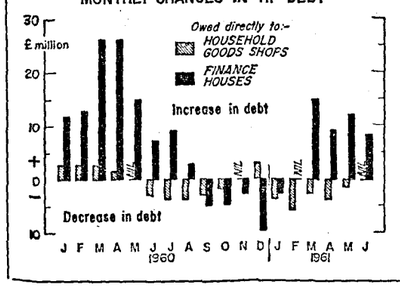
Pulling Both Ways

THE London money market is now seeing clear evidence of the return of foreign funds, though the amounts involved are not yet large. At the same time there is a widespread tendency among home investors, and notably trustees, to "go liquid" for the time being; and together these influences may bring short money rates down a shade from the very high levels established immediately after Bank rate was raised to 7 per cent. In the local authority mortgage market the quotation for short term deposits is still 7¼-7½ per cent, but these rates are only just being held. August is a relatively comfortable month for local authority treasurers, and the response from the general public to the advertised rates of 6¼-6½ per cent for medium term deposits has been sufficient to allow some repayment of seven day deposits in the mortgage market. At the same time, the local authorities need to fund their bank overdrafts, which were temporarily increased during the months when the withdrawal of foreign money made the mortgage market very tight.

The banks are now tightening up all round in an attempt to hold down their total advances and still make room for "exports and productive industry" that were singled out by the Chancellor for special consideration. Hire purchase, property development and personal borrowing were singled out at the other end for special scrutiny. The instructions sent out by bank head offices to their branch managers are said to be among the toughest ever, and this is not surprising. Advances are almost 50 per cent of deposits, the cushion of surplus investments has almost gone, liquidity is tight and the banks' prospect of increasing their holdings of liquid assets in coming months is by no means assured. The banks would therefore like to see an actual downturn in advances. High overdraft rates and possibly, at last, the lower rate of stockbuilding in the economy might in fact curtail the demand for advances. The circulars have told branch managers that they must in any case restrict the supply.

HIRE PURCHASE

Public Requests and Private Restrictions



THE Chancellor dispensed with any stiffening of hire purchase terms in his July measures. But, as he knew, the finance houses were about to do the job for him; and in addition, official requests were made to the banks to curtail advances for hire purchase. It has now emerged that the Bank of England has flanked these by a request to the finance houses too. A letter to the Finance Houses Association, which has duly been passed on to its members, asks the finance houses not to circumvent the squeeze on their bank facilities by means of deposits from the public. It seems that the Bank is not expecting the finance houses to refrain from taking deposits in place of bank money in order to meet existing commitments. The official aim is to stop the volume of hire purchase debt from rising, and the request from the Bank is designed to prevent a competitive bidding for deposits to finance an expansion of HP business. This is the first time the Bank has approached the hire purchase houses in this way, and it will be interesting to see the response. On the one hand the companies themselves are drawing in their horns, concentrating on rebuilding their profit margins and reserves rather than chasing new business—which in any case is far from buoyant. On the other hand the finance houses' deposit rates, at around 8 per cent, are highly attractive—and are already beginning to draw in foreign money again in a small way.

The finance houses announced their intention of increasing their charges and stiffening their terms two weeks before Bank rate went to 7 per cent. No figure was given for the proposed increase in charges. When Bank rate was raised, members of the Finance Houses Association increased their charges from 7½ to 9 per cent flat on new cars and to 12 per cent on cars over three years old and on all motorcycles—which brought rates up to the Association's agreed maximum. This week it announced an increase in these formal maximum rates, of one per cent all round, but at the moment the finance houses are not contemplating an immediate increase to these levels.

As foreshadowed before the Chancellor's statement, the increases in minimum deposits are from 20 to 25 per cent for both new and used vehicles under three years old and from 25 to 33⅓ per cent for older vehicles. Maximum repayment periods remain the same, 36 and 30 months respectively. The FHA terms are now considerably stiffer than the statutory minimum of 20 per cent down and three years to pay. The new terms come into operation on September 1st, and it is possible therefore that hire purchase sales in August may receive a boost.

One company that appears to have gone further than others to limit the type of new business it takes is United Dominions Trust. Three weeks ago it decided not to finance cars over five years old without a dealer's guarantee; this week it has announced that it will not continue to finance credit purchases of air tickets after September when its current agreement with BOAC expires. Lombard Banking, the only other group that does this type of business extensively, is quite satisfied with its own experience and would be willing, on the right terms, to increase its turnover in this field.

MONTHLY CHANGES IN HP DEBT

The increase in hire purchase debt in June of £8 million pushed total debt to £957 million, that is within £4 million of the peak of July 1960. Debt owed to finance houses accounted for the whole of this rise; that owed to the household goods shops remaining unchanged at £306 million. The index of new hire purchase business extended by the finance houses fell from 220 to 204, but this is in line with the seasonal trend.

UNILEVER

Slightly Better Margins

MOST sections of the Unilever business deal in widely advertised products for the housewife and the implication of its trading results for the first half of this year suggests that the diarchy has recently gained slightly more from its promotional efforts than it did in the second half of 1960 and that, temporarily at least, the decline in margins has been checked. But though sales have continued to rise, profits and margins are still below what they were in the first half of 1960. The profits of Unilever NV in 1960 were adversely affected by a loss on the Planta margarine venture and by particularly fierce competitive promotional activities in France and Italy while the profits of Unilever Limited (in which the results of the United Africa Group are consolidated) were slightly affected by the loss arising from operations in the Congo. The influence of these factors in the latest results will have been less, and, in addition, the effect of the revaluation of the German and Dutch currencies early in March has been to add three quarters of one per cent to the sterling value of the group's combined turnover and 1½ per cent to the sterling value of its combined profits. Limited's gross profits at £29 million are, indeed, higher than the £27.3 million in the second half of last year and not far short of the £30.6 million earned in the first half. This suggests that margins in the British market have been maintained and that UAG has continued to prosper. NV's gross profits at £22.9 million, on the other hand, are slightly lower than the £23 million earned in the second half of last year and well down on the £25.2 million earned in the first half (to say nothing of the £29 million NV earned in each half of 1959). This does not suggest that competition on the Continent has become any less fierce. The group as a whole may be said to be marking time on profits; but it is still adding to its sales and the stabilisation of profit margins is no mean achievement.

OIL

A Price for Libyan Oil

ESSO INTERNATIONAL, trading affiliate of Standard Oil of New Jersey, this week posted a price of $2.21 per barrel for crude oil with a gravity of 39.0-39.9 degrees API fob Marsa el Brega in Libya. The company said that this price for Libyan oil, now flowing into the 30-inch pipeline to this terminal from Jersey's Zelten oilfield

> reflects its proximity to the major refining centres in Europe and is competitive with crude oil from the Middle East when quality and transportation factors are taken into account.

But Esso's judgment of these market factors—as was anticipated in these columns last week—has turned out to be a more realistic one than simply following the traditional pattern of crude oil pricing. It is perhaps significant that it mentions "quality" and not "gravity." The price posted appears to be based upon market tanker rates, rather than the various "long-term fleet costs" formulæ often applied by the major companies in setting posted prices; and on that basis to be in line with the price of Arabian crudes with a gravity about five degrees lower.

One may rationalise this either as ignoring the traditional "gravity differential" of two cents per degree—in "building up" the price, at any rate—or as taking account of the fact that discounts on Middle East crude prices to independent buyers nowadays just about wash out the gravity differential anyway. For this price is over 40 cents a barrel cheaper than the French posting of $2.65 per barrel for Saharan crude only one degree higher in gravity from Algeria, which is not much closer to Europe. Nobody else will have Libyan crude to sell before next spring at the earliest; Esso will presumably begin moving test cargoes in September to Fawley and other refineries in North-West Europe.

Back to Baghdad

MR MOHAMMED SALMAN, petroleum minister of Iraq, this week finally asked the negotiating team of the Iraq Petroleum Company, that has been waiting in London for some time to meet him in Baghdad on August 24th; this presumably means that the negotiators, Mr Fisher of Standard Oil of New Jersey, Mr Stephens of Royal Dutch/Shell, and Mr Herridge of IPC, will see General Qasim very soon after. The general, who has been giving his mind lately more to the "liberation" or "annexation" of Kuwait (his newspapers were asking this week whether an Arab League "token force" might not soon be

despatched to Aden to defend it against the Yemen), was two weeks ago promising his people a "victory" in the forthcoming negotiations. But whether he is likely to gain any more than he has been promised already is anyone's guess.

One new move in the steady creep of concession formulae between companies and governments in the Middle East came last week when the American Independent Oil Company, which has a concession in the Kuwait-Saudi Arabia Neutral Zone, announced a revision of its profit-sharing deal with the ruler of Kuwait to 50 per cent of profits reckoned at posted prices, or to 57 per cent of profits reckoned on "realisations"—i.e. the prices at which oil may actually be sold to independent buyers making use of their bargaining power to exact discounts below the artificially high posted prices. The 57:43 sharing formula is not unknown in the Middle East: the Japanese Arabian Oil Company has one concession in the Neutral Zone offshore at 57:43 and another at 56:44. But those refer to profits at posted prices: the Japanese company, which is now having to concede a discount of 12 cents a barrel on its oil, all of which goes to Japan, is indeed having its margin squeezed at both ends. Aminoil may have avoided this: but how its new deal will work out is not clear.

GHANA

Volta Flows at Last

Reports from Accra indicate that the Volta river scheme, first recommended in 1953, has at last reached the point where talking ends and work begins. External loans for the dam arranged last year were made dependent on Ghana finding aluminium companies willing to build an alumina smelter that would use the bulk of the dam's power on the basis of a long-term contract. This week the United States government agreed to lend Valco (the Volta Aluminium Company) £34.6 million towards the construction of a smelter; with Valco ready to go ahead the loan condition was thus satisfied, and it was announced that Ghana would receive a loan of £35 million (an increase of £5 million over the original agreement) jointly from the World Bank, the United States, and Britain. Ghana will provide the remaining finance for the £70 million dam, taking a £35 million equity interest in the Volta River Authority; the July budget set aside £16 million for the project during the 1961-62 financial year. In May Impresit of Italy, head contractor at Kariba and now rescuing the Nubian temples, was awarded the contract for the initial stages of construction with a tender of £15.7 million.

The cost of the smelter is reckoned at about £60 million, but political and economic trends, not surprisingly, have made the aluminium companies reluctant to commit themselves on this scale. Both British Aluminium and Aluminium Limited of Canada sniffed and withdrew. Then the Henry J. Kaiser company "reassessed" the project; it moved the proposed site of the dam 1½ miles downstream and declared the whole project financially viable on a steady demand by the smelter for 300,000 kilowatts of power (that is, on full year running 2,628 million units).

By September, 1959, Kaiser Aluminium had formed the Valco consortium, which now includes Reynolds Metals, the Aluminum Company of America, and Olin Mathieson; and in December of the same year a letter of intent was signed. In November, 1960, the master agreement with Ghana was signed. The stumbling block over the period appears to have been Valco's inability to find the finance for the smelter. With the US government loan and a thirteen year power contract between Valco and the River Authority the final obstacles seem to have been removed. Valco will pay 0.225d. a unit for its power, which means that the Authority's assured revenue by the sixth year, when the smelter will have worked up to its agreed demand, will be £2½ million—a sum that will be paid in foreign exchange.

STEEL

Stocks Down

The turnround in steel stocks is now an accomplished fact. As against an average quarterly increase of about 250,000 tons in users' and merchants' holdings of steel in 1960 and a sharply reduced increase of about 92,000 tons in the first three months of this year, there was a fall of about 80,000 tons—or two per cent—in the second quarter, the Iron and Steel Board estimates from returns it has received so far from its latest stock census which cover about half of all stockholdings. Stocks of all main steel products, apart from plate, are reported to be down; stocks of sheet steel fell substantially.

This change in the stocks of the industry's customers has directly affected output, as actual consumption of steel appears to have levelled off for the time being at about two to three per cent below the peak of last summer and autumn. Consumption

STEEL CONSUMPTION
('000 tons)

	Actual	Seasonally corrected	Per cent change over previous year
1960—I	3,799	3,660	+21·6
II	3,878	3,770	+14·9
III	3,435	3,780	+15·2
IV	3,729	3,630	+ 7·7
1961—I	3,846	3,710	+ 1·4
II	3,790	3,690	− 2·1

recovered slightly at the end of last year, after car output had hit bottom; but while it has not fallen back since then it has not shown any sign of improving either. Production is now about six per cent lower than last autumn and some of the industry's older and smaller works have been shut down. Consett has closed down a plate mill and restricted output at other plants, involving all told the dismissal of about 600 men. Earlier Dorman Long closed three of its smaller steel furnaces and Steel Company of Wales a melting shop. This latter plant has been permanently closed. The others may be only temporary measures to match the fall in demand, but many of the industry's older plants are due to go out some time in the next few years as new plants come in and the industry moves into the novel situation of having capacity to spare. Surplus steel capacity may also have the effect of inclining the industry's customers to be content with smaller stocks—as the American steel industry has already found out. If such a once-and-for-all rundown of stock levels were to coincide with a more normal, cyclical type of stock liquidation, steel producers could be hit heavily. But it may be some time yet before this more radical kind of change in policy towards stocks occurs.

"No" to American Coal

As could have been expected, the Board of Trade last week announced that in consultation with the Ministry of Power, it had decided to refuse the application of the Steel Company of Wales to import American coking coal to use in the blast furnaces at its Port Talbot works. Steel of Wales first put in the application in November after an increase in the price of coal that discriminated against the iron and steel industry in particular. It was turned down then, but after the imposition of a tax of nearly £2 a ton in this year's budget on the fuel oil that it uses in its openhearth steel furnaces, the company revived the application in May. Mr Maudling, announcing the decision, said in the Commons last week that private coal imports, for which licences have not been granted since nationalisation would be a new departure to which the government could not agree while the chairman of the National Coal Board was reconsidering its capital investment programme. But he added that his refusal dealt with on particular application: he was not establishing a principle.

In practice, a licence to import granted to one coastal steelworks would immediately have brought in applications from several others: this made approval harder and may also have precluded any gesture by Lord Robens towards this aggrieved customer. Any revision of prices to remove

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-five territories extending from the Eastern Mediterranean to the Pacific Ocean.

THE CHARTERED BANK
(Incorporated by Royal Charter, 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

West End, London branch: 2 Regent Street, London, S.W.1 · Branches in the United Kingdom also at Manchester and Liverpool · Agencies at New York and Hamburg.

The Eastern Bank Limited HEAD OFFICE: 2 & 3 CROSBY SQUARE, LONDON, E.C.3

Associated Banks: Allahabad Bank Ltd. (Incorporated in India) · The Irano British Bank (Incorporated in Iran)

last autumn's discrimination would either have meant shifting more of the increase on to domestic consumers—which is believed to be what the Coal Board intended then, but the government prevented; or cutting total coal revenue, which the board probably cannot afford. Lord Robens, too, is probably now under pressure to consider the return that his industry ought to commit itself to earn on investment over the next five years, in preparation for the exercise he will have to undertake with the Treasury this autumn under the new policy for nationalised industries, and has also a national wage claim to face. This is not the easiest time to think of tempering prices, even though he is not anxious to be on bad terms with any significant group of customers.

The fact remains that this customer's fortunes and British coal's have traditionally been closely linked: and that it is now obliged by fiat rather than the market to accept fuel costs significantly higher than those of its competitors on the Continent of Europe. British steel is still cheaper than many of its competitors in Europe, as British coal is. But how long will its coastal works be able to keep this margin under similar works in Germany and now Italy, built to operate not only on imported ore but also on cheap imported coal?

PLESSEY MERGER

Suitable Marriage

THREE of the consortium of seven manufacturers which last year unsuccessfully opposed Pye's bid for Telephone Manufacturing are to merge. They are Plessey, Automatic Telephone and Electric and Ericsson Telephones. With the Post Office bulking so large as a buyer of telephones and telecommunication equipment, some degree of rationalisation within the industry has to be accepted as inevitable. The directors of the three companies concerned believe it will avoid considerable over-lapping of effort and lead to a more intensive and efficient use of research and productive facilities. The merger must, indeed, do so if it is to make sense; and it must be hoped that it will provide some answer to the strictures on design and exports that Mr C. O. Stanley bandied about quite freely last year. The merger, however, is concerned with more than telephones, for Plessey emerges as the kingpin of the trio and Plessey's reputation for growth rests upon its business as a supplier of electronic equipment to many industries. The merger makes Plessey's interests more widely spread and gives shareholders in ATE and Ericsson a considerable interest in the domestic electronics industry.

In framing the terms of the merger, the financial advisers had to reconcile the strength of Plessey and the prospects for its further growth with the income that shareholders in ATE and Ericsson are already receiving. They have hit upon an ingenious solution, involving the issue of a convertible loan stock. The first step is Plessey's one-for-three scrip issue to its shareholders and the promise of a dividend of not less than 15 per cent on the new capital for 1961-62; this will add to the income of Plessey shareholders. Then, for every 20 5s. ordinary shares in ATE Plessey is offering four of its new 10s. shares plus 10s. in cash plus £10 of a 5 per cent loan stock (convertible into ordinary shares between 1962 and 1964); thus, excluding any return on the cash part of the consideration, ATE shareholders are offered an income of 16 per cent, which is no more than the ATE directors were prepared to pay this year. For every 20 5s. ordinary shares in Ericsson Plessey is offering 15 of its new ordinary shares plus £1 in cash; thus, again ignoring the cash consideration, the income of Ericsson shareholders goes up slightly from 21¼ to 22½ per cent.

On the full conversion of the loan stock, Plessey shareholders would hold 61.7 per cent of the equity, ATE shareholders 21.1 per cent and Ericsson shareholders 17.2 per cent. This is not far out of line with contributions to earnings as revealed by the last published figures. But such a calculation takes no account of the current difficulties of ATE and it seems likely that after the conversion of the loan stock Plessey shareholders may have to accept some dilution in the dividend cover. This was recognised in the fall in Plessey shares by 5s. 6d. to 50s. on Thursday. On this price, the bid imputes a value of 29s 1½d. to Ericcson (against Wednesday's price of 27s. 3d.) and, on the assumption of an immediate conversion of the loan stock, a value of 16s. 4½d. to ATE (against Wednesday's price of 14s. 9d.).

Ceylon and Foreign Business

BY OUR CORRESPONDENT IN COLOMBO

THOUGH unexpected, the nationalisation of the Ceylon Bank announced by the Finance Minister recently is the culmination of many years of political agitation against the Ceylon banking system. The main criticism is that the banks in Ceylon have not responded to the new needs of industrial development. Naturally this stricture, frequently made in budget debates, has been severest against the Ceylon Bank, which was established in the late thirties under Government patronage. The Ceylon Bank flourished as a financial institution assisting Ceylonese traders to break through the foreign domination of the island's large and lucrative import and export business. But in recent years the charge has been levelled against it that it thrived as the instrument of external trade and was utterly insensitive to the economic development plans of successive Governments. These had to establish state-sponsored credit institutions such as the Agricultural and Industrial Credit Corporation, the Development Finance Corporation, the State Mortgage Bank and now the People's Bank.

This is the Government's chief argument—apart from a popular ideological one—for the take over of the Bank of Ceylon. Previously the Government with one-third of the shares had two directors and could exercise control over the bank's business through the bank rate. Now the bank is to become the central instrument of the Government's economic development plans, which assign a strictly defined place to the private sector, and list industrial projects that require private capital.

Business circles are dismayed by the nationalisation of the bank, fearing that bureaucratic control may result in the kind of inefficiency that is evident in other state-sponsored institutions, and alarmed also at the prospect that nationalisation of Ceylon's leading bank plus the new law prohibiting deposits in foreign banks, may create an unhealthy government monopoly that could be abused.

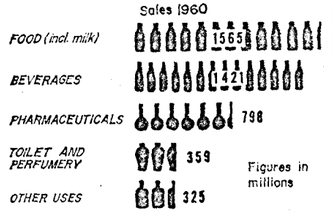
It is possible that the Government will use the bank to curb the active competition of local importers with the Government's co-operative wholesale establishment. In the past few months the Trade Minister, Mr Ilangaratne, who has been responsible for many radical measures such as the Petroleum Corporation and the People's Bank, has tried to make this the main importer of essential articles. But private trade has frustrated this, and there are fears that credit facilities may be controlled to curtail private trade.

The new directive to curtail loan and overdraft facilities to non-Ceylonese enterprises marks an attempt to marshall all local resources of capital. Though the private investor has an assigned place, the Government has undertaken an enormous degree of direct responsibility for industrial development, towards which the 4 per cent tax on incomes over three hundred rupees per month, and the regulation prohibiting fresh accounts in foreign banks will contribute.

Repatriation of foreign capital, and the running of many foreign-owned businesses on overdrafts have worried a government desperately in need of money. It hopes that such companies may bring in their own money for their business. In fact, however, the government has done everything to curtail foreign business in Ceylon and stopped just short of nationalising the foreign banks. Problems of compensation and fears of reactions abroad must have restrained the government from such a drastic step, especially as it relies heavily on foreign aid and bankers after foreign investment.

In the preparatory stage, the State Petroleum Corporation has taken over certain properties including eight storage tanks belonging to Shell. But the State Corporation is anxious that oil in these tanks and other properties shall continue to be used by Shell in order to prevent any break in supplies, and negotiations are under way to cover the interim period.

FILM INDUSTRY



Lion not so Mangy

THE second "reconstruction" of British Lion, the film producing and distributing company that Sir Alexander Korda ran and which eventually lost £3 million of the money the Government had put up for loans to British film production, is showing definite signs of attaining some success. The new company, British Lion Films Ltd, formed after the original one had been put in the hands of the receiver, lost almost £500,000 in 1957 and 1958. But three and a half years ago the novel experiment—for this industry—was tried of putting film producers, instead of film salesmen, in charge: the Boulting brothers, Mr Sidney Gilliat and Mr Frank Lauder were appointed to its board of directors. Since then the company has moved smartly out of the red. In the year to last March it made a handsome profit of £635,000. Over half of this was an exceptional realisation on its "library" of films: the company received £317,000 from the Film Industry Defence Organisation for agreeing not to let 76 of its films be shown on television and a further £52,000 was earned by old films taken over from the original company (making almost £500,000 earned in this way since the British Lion Film Corporation was wound up six years ago). But the £266,000 net profit the company made from its current operations as a film producer and distributor and as owner of Shepperton studios, against £16,000 in the previous year, 1959-60, is nonetheless a marked improvement.

British Lion, through its film producer board members, makes about six films a year and another nine or ten through its associated companies, such as Bryanston, Britannia, and Independent Film Distributors, which it provided with starting capital but whose films it does not finance. Film making is British Lion's only genuine hope of making large profits. So far it has had considerable success with a limited number of its films (*I'm All Right, Jack* was one) and at the same time it has avoided any big disasters. But Shepperton, with its overheads of some £300,000 a year to cover, and the British Lion film distribution organisation, costing some £250,000 a year to keep going in this country alone, have to be kept profitable even though they are useful adjuncts to the film production core of the company's business. Shepperton has been re-equipped and has also gained from the closing down of many other British film studios. The distribution organisation has been amalgamated with Columbia Pictures Corporation's selling organisation in this country—a suitable manoeuvre in face of the continued decline of the number of cinemas still open. But neither studio nor sales force are much use without films that make money. And, though British Lion has shown that some films can, production is still basically a gamble. The company will have to keep out of the red for a number of years before the Government's ultimate intention of selling it to private shareholders is likely to be realised.

BOTTLES AND JARS

Sales 1960

Glass, though lighter and stronger than it used to be, is struggling against disposable and unbreakable materials in the packaging market. However, it holds 10 per cent of this flourishing £500 million market and 4,468 million glass containers were sold in 1960. Bottles are cheap when they are returnable: canned beer has not overcome its handicap but more milk is being sold in cartons.

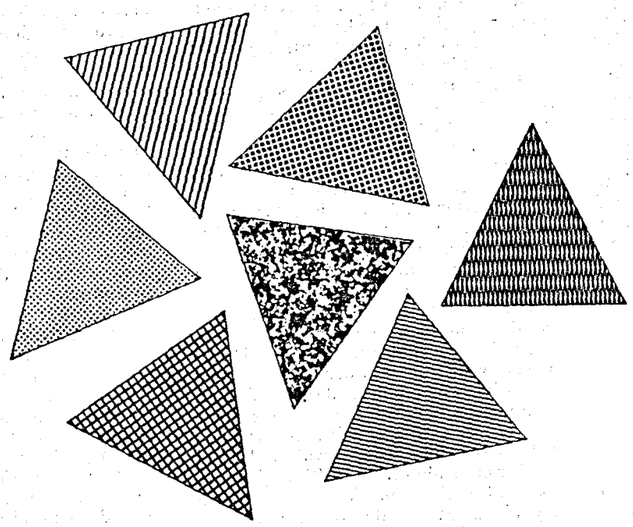
LEAD AND ZINC

The Dullest Metals



SOME metals have had the rub of the green this year, but not lead and zinc. Despite several false glimmers of hope, nothing has yet come along to shake these metals out of their fit of depression. When output of lead was restricted earlier this year, zinc was in balance outside the United States and producers were therefore left free to exploit the prospective expansion in demand. After last year's impressive rise, the growth in consumption of zinc in Europe was expected to moderate, but American consumption might have been expected to take up the running at that stage. Unfortunately, the changeover seems to have been fumbled. The extra output of zinc with which some companies have tried to replace part of their lost production of lead, has helped to weigh down the zinc price. Spot zinc has fallen £10 a ton from its peak in March, and at £78 a ton is about £5 cheaper than at the start of the year. The attempt to curtail lead production by two per cent below the expected level of consumption this year has produced an insignificant rise of £1 to £64½ a ton in its price.

The barter deals under which the United States would absorb in its stockpile last year's surplus lead production have therefore achieved little. In fact, the conclusion of deals has been delayed almost to the point of annoyance, but the risk that this huge clearance sale will not be consummated is negligible, and cannot therefore be expected to influence prices in future. The American government's plan to sell foodstuffs abroad to finance the stockpiling of American-produced lead and zinc, which strongly echoed the barter deals arranged with foreign producers, has been dropped. Instead, small subsidies for very small producers for an extremely limited period were offered. This flirtation with the devil of subsidies may be no more than venial, but it is a measure of the failure of other more constructive proposals to right the prices of lead and zinc.

PORTS

Self-help for Shippers

NOT every port user who complains about the state of working at the docks recognises that some of the responsibility rests upon his own shoulders. So it is refreshing to find that the London Chamber of Commerce in its evidence to the Rochdale Committee on Britain's major docks and harbours—speaking for the users of London's docks—readily accepts that responsibility.(Much of the congestion on the quays and access roads of London and other British docks would be eased if shippers were to spread deliveries more evenly over the receiving periods for ships loading up. The extreme view of some shippers is that as they are the port's customers the service should be available on terms most convenient to them and so they should be able to send their goods when it suits them. But a third of a ship's cargo arriving on the last day for loading, which is common experience at the port of London, is not conducive to dock efficiency. The chamber suggests to the committee that if voluntary action to change these habits fails, then "more drastic measures, such as a surcharge on late deliveries or even some form of overall regulation, may become necessary." But the means by which exports are sent to the docks, as well as timings, have grown out of balance. With the growing preference for road transport, port access roads have become heavily congested while railway facilities are under-used. While the cham-

ber would like to see these access roads given higher priority in the roads programme, it also thinks more should be done to encourage greater use of rail. In a recent survey it found that over 90 per cent of the users of the railways' export express service were wholly satisfied with its reliability, packing conditions, and timings.

But labour troubles are the main cause of the lamentable record of London's docks and the prime reason why the port has lost trade to other British ports and entrepot traffic to the continent. The chamber again comes forward with its argument that the dock labour scheme is the real source of all the trouble and suggests that it be replaced with the more traditional employer-employee type of management-labour relationship, and that far more dockers should be permanently employed by the various firms in the port. This argument fails to appreciate the reality of dock working, with its constant and unpredictable fluctuations in traffic and the daily variation in the firms requiring labour and the number of men they need. The dock labour scheme has ended the "casualisation" of labour and is not likely to be relinquished peacefully by the unions. At heart an improvement in labour relations and a readier acceptance of mechanisation will be best promoted by a commensurate improvement in the attitudes of the employers. A number of the disputes that have plagued the efficient working of London and other British ports can be traced back to some fault or omission on the part of management.

ROADS

More Works Ahead

Not for the first time road investment has passed unscathed through a tightening up of Government spending. Even more, as the Chancellor announced in the economic debate two weeks ago, "the Government has decided upon a firm five-year programme, which will involve a considerable increase above the present rate of expenditure." Just how much of an increase was indicated by Mr Marples last week. Investment from central funds on roads in England and Wales is expected to grow annually from £90½ million in 1962-63 to reach a total of about £540 million over the five years ending 1966-67. Adding commensurately for Government spending on Scottish roads and for local authorities' expenditure from rate funds, it would seem from this that total investment in new roads will be averaging about £150 million a year in the middle sixties. This would be almost half as much again as the projected rate of investment for this year.

ROAD EXPENDITURE
(£ million)

Years ending Mar. 31	Investment: Government Voted	Investment: Government Spent	Investment: Local Auths. Spent	Investment: Total Spent	Maint. and Other Expn. Total	All Expn. Total
1956–57	16	15	7	22	100	122
1957–58	27	22	8	30	107	137
1958–59	53	47	10	57	109	166
1959–60	64	60	13	73	115	188
1960–61	79	(75)	(15)	(90)	(120)	(210)
1961–62	89	(88)	(17)	(105)	(125)	(230)
1962–63	103	(100)	(20)	(120)	(130)	(250)

Figures in brackets are estimates.

When the first post-war roads programme was launched by Mr Lennox Boyd eight years ago investment in British roads was running at only £8 million a year. The big increase came three years ago when the first of the motorways was constructed. And most of the spending in the coming few years will still be going into the five major trunk routes that form the core of the Government roads programme. Despite all Mr Marple's talk of doubling grants to local authorities in urban areas, total investment in new or reconstructed roads in the places where congestion is worst will still be only about a third (that is, £50 million a year) of the country's whole outlay on new roads even in five years' time. By itself this is a considerable sum of money, and it could be argued that ideas about how to relieve urban congestion are still far from clear. But the Government does not appear to have arrived even now at a reasonable balance between urban and cross-country road schemes.

SUBSCRIPTIONS TO THE ECONOMIST

Annual Postal Subscription by ordinary mail, UK and Canada £4 . 10 ; elsewhere overseas £5

By air see below

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

SHORTER NOTES

Britain has now improved considerably on its original offer of assistance to Tanganyika. Grants of £8.75 million will be supplemented by a Commonwealth assistance loan of up to £4 million, an interest-free loan of £6 million towards the compensation scheme, and a loan of £3 million towards commutation of pensions.

★

The annual bonus to employees in Imperial Chemical Industries in respect of 1960 amounts to £8,555,000 gross, compared with £7,306,000 for the previous year. After deduction of tax this represents an average of £68 17s. 6d. for each of the 92,000 employees qualified for the bonus. The net bonus will be used to buy £1,883,000 of ICI ordinary stock. Stock is registered in the name of an employee either every second year or as soon as he is entitled to 40 units. Thus in October 63,000 employees will have certificates for a total of £2,615,000 stock. Of the £1,247,000 stock issued to employees last year more than half has been retained.

★

The latest circular to shareholders in London and Manchester Assurance comes from Lord Tenby and Mr Douglas Kay, an accountant, who are seeking support for the formation of a shareholders committee. They believe that the possibilities of a merger with Eagle Star should be explored to the full and say that they "have no reason to suppose that Sir Brian Mountain (the chairman of Eagle Star) would be unwilling to co-operate."

As with Great Universal Stores Mr Isaac Wolfson, the chairman of Drages, is leaving the dividend unchanged at 2s. 6d. per 1s. share, in view of the Chancellor's recent request for restraint. Profits available for the ordinary dividend rose by 32 per cent in 1960. The company's principal asset is a holding of shares in Great Universal Stores.

★

Profits of Cable and Wireless for the year to March 31st rose by just over £1 million from £3.43 million to £4.44 million. The dividend of this state-owned company has been raised from 4 to 5½ per cent.

★

Representatives from Hongkong are to discuss with British officials next week the proposed extension of quotas on exports of cotton textiles from the colony to the United Kingdom up to the end of 1962.

JOHN BROWN AND COMPANY LIMITED

Engineers and Shipbuilders

IMPROVED RESULTS IN DIFFICULT TRADING CONDITIONS

Dividend Restraint Exercised

LORD ABERCONWAY'S REVIEW

THE Ninety-seventh Annual General Meeting of John Brown and Company Limited will be held on September 1st in London.

The following is an extract from Lord Aberconway's statement circulated with the Report and Accounts for the year ended March 31, 1961:

The Consolidated Profit before tax (to the nearest £1,000) is £4,491,000, an increase of £846,000 over the corresponding figure of the previous year. Taxation absorbs no less than £2,314,000 of this profit.

The profit is struck, after providing for any known and foreseeable losses on contracts by reason of circumstances already apparent; the provisions made this year should, as usual, suffice to meet such losses, but are greater than usual.

Several of the Company's subsidiaries are operating in difficult fields, where capacity exceeds demand, and where in consequence orders are few, and can be obtained only after intense competition and at a disappointing margin of profit. It is noteworthy that in years when some subsidiaries have found the going difficult, others have experienced more favourable conditions; last year has been no exception.

It is not easy to foretell the effect, on the business of your Company's subsidiaries, of the economic difficulties which beset the country, and of the measures for dealing with these recently announced by the Chancellor. But if there are reasonable trading conditions at home and overseas, the prospects for the current year appear, in the light of current demand and orders on hand, to be reasonable.

Dividend Restraint

Consolidated Profit after taxation and after deducting the interest of other shareholders is £2,056,000, compared with £1,864,000 last year and in the circumstances outlined above, your Directors are unanimous that, but for the Chancellor's appeal, they would have recommended to Stockholders a higher final Ordinary dividend. They strongly support the Chancellor's stand, and regard, in the interests of their stockholders and employees alike, the maintenance of a sound and stable currency as of paramount importance. Therefore they recommend to Stockholders the payment of the same final dividend of 7 per cent., less tax, making the same total dividend as last year of 11 per cent., less tax. This total dividend for the year would absorb some £707,000, which is some 36 per cent. of the Consolidated Profit, after tax, available to the Ordinary Stockholders. In making this recommendation the Directors fully recognise that, because of the sums, applicable to the Ordinary Stockholders, that are retained each year in the business, the same rate and amount of dividend for the year under review as for the previous year represents a smaller rate of return to Stockholders upon their funds: a dividend of 11 per cent. this year represents a return, after tax, of 2.8 per cent., upon their funds, compared with a return of 3.0 per cent. for the previous year from the same rate of dividend. They feel confident that Stockholders will accept the desirability of this sacrifice on their part, if it contributes to a stable economy, and if others equally exercise restraint.

The Shipyard and the Q3

Her Royal Highness The Princess Margaret honoured Clydebank on March 16th last by naming and launching H.M.S. *Hampshire*, a Guided Missile Destroyer. S.S. *Transvaal Castle* was launched in January, 1961, and work on her continues with a view to handing over next December. The fitting out of these two ships, each requiring a special standard of finish, demonstrates Clydebank's resources in skilled and experienced personnel for this kind of work.

Prospects of orders for ships are poor and therefore, unless we win the contract for the new "Queen" it will be impossible to maintain continuity of employment, and to hold together Clydebank's skilled labour force; the yard will be severely underemployed, and basic overhead expenditure will not be covered. We have accordingly, after much earnest consideration, quoted a price which we hope will secure the contract in the face of what we are certain will be the most intense competition for an order yet known by the industry. The contract, if Clydebank secures it, will not be profitable; all that can be said is that viewing the interests of employees and stockholders alike, we shall be better off with than without it.

Land Boiler Consortium

John Brown Land Boilers Ltd. commissioned in the United Kingdom during the year a total steam generating capacity of some 480 megawatts. As in previous years the delivery date was maintained in each case and satisfactory operation was achieved. During the year a consortium was formed with Foster Wheeler Ltd., on the basis of equal partnership, for the design and construction of central station boilers for generating authorities in the United Kingdom and Eire. John Brown Land Boilers will continue to deal with inquiries and orders for industrial boilers and for boilers overseas, and will themselves execute contracts on their books at the date of the formation of the consortium. The Foster Wheeler-John Brown consortium has been entrusted by the Central Electricity Generating Board with a contract for four 350 megawatt boilers for the new Tilbury station, for commissioning successively from 1965 to 1966. It will be tendering for other boilers, including some of 500 megawatts. The great increase in the size of individual units means that relatively few boilers are being ordered, and competition is consequently keen, and price margins are quite inadequate in relation to the skill, the technical risk, and the capital involved in such large and complex engineering structures. Indeed this observation applies with equal force to many other products made by the Company's subsidiaries, ranging from ships to water turbines, from rolling stock to chemical plants.

The Tilbury order, whilst by no means absorbing the capacity of Whitecrook Works, will bring a substantial and welcome volume of work. Meanwhile regretfully the labour force has had to be greatly reduced by lack of work. In face of this prospect, and despite an outlook far from assured, plans were boldly made, and have been carried out, to reorganise and re-equip the works to manufacture, in addition to steam generating plant, a diversity of engineering products and thereby help to maintain employment.

Machine Tools and Engineers' Tools

Wickman Ltd. experienced a continuance of the high level of demand for machine tools generally and multi-spindle automatics in particular, that had arisen towards the end of the previous year. Orders for automatics from overseas were satisfactory. The Factored Machine Division was kept busy distributing the machines made by its many excellent principals. Wickman's current year has in fact started with an order book greater than ever before.

The Wimet Division which manufactures and sells tungsten carbide cutting tools, has benefited from the high level of activity in the metal-working industries.

Wickman acquired for cash during the year the shares of the Coventry Machine Tool Works Ltd. of Halifax. This company and its wholly-owned subsidiary, John Stirk & Sons Ltd., manufacture Covmac horizontal forging machines and Stirk planing machines. To cover broadly the cost of this acquisition, John Brown & Co. has subscribed £700,000 for Ordinary shares in Wickman at par.

Firth Brown Tools Ltd. has had a very busy year in both its home and export trade. Far-reaching schemes of reorganisation are in hand to increase capacity and improve efficiency; a new shop is nearing completion in Sheffield, and the former Royal Ordnance Factory at Maltby has been acquired, comprising over 300,000 square feet of manufacturing area with ample land, into which Hack Saws Ltd., a subsidiary of Firth Brown Tools, is being moved. To meet some of this expenditure, and to provide further working capital, John Brown & Co. will subscribe £400,000 for Ordinary shares in Firth Brown Tools at par.

Webster & Bennett Ltd., as forecast last year, was forced to make a moderate reduction in output; but in fact loss of skilled labour was the cause. Skilled labour is still difficult to obtain, but the position now is somewhat better. Incoming orders have improved steadily, but it is still possible to quote attractive deliveries.

Other U.K. Engineering Subsidiaries

Markham & Co. has experienced a steady demand for its medium and heavy engineering products. Orders were booked for three large colliery winders, while orders for stowing machines have steadily increased. Despite international competition, orders were obtained from Boving's for three Francis turbines and one Pelton turbine for New Zealand. Under the arrangement made with Demag A.G. of Duisburg, Markham's are manufacturing part of the new beam rolling mill for the South Durham Steel & Iron Co.

S. N. Bridges & Co. has maintained its turnover of portable electric tools, despite intense competition. Sales have increased in the industrial field, for which pneumatic tools are also being made. Domestic appliances under the name of "Luxury Life" have been introduced to the market and have been well received.

Cravens Ltd. started delivery against its order for 464 light alloy cars for London Transport Executive. In adapting and reorganising the works and the labour force for this large contract considerable difficulties have had to be surmounted, but production is now running smoothly at a high level and in line with the delivery programme. Delays however have been costly, and the contract will at best show a substantial loss.

The future prospects of the rolling stock industry give rise to considerable anxiety, and are bound up with the policy of British Railways as to the manufacture of their rolling stock in their own works. Unless the industry has a stable home market, it cannot survive and continue to earn foreign exchange by its exports as it has done to good effect in the past. No pains have been spared to ensure that Her Majesty's Government appreciate the position: it is up to them whether or not this industry survives.

In view of the uncertain outlook, Cravens has for some years past been developing other fields of engineering activity, notably the manufacture of injection moulding machines for plastics and of diecasting machines. A separate company, **Cravens (Machines) Ltd.,** has been formed to carry on this business. John Brown and Co. has acquired all the shares in a complementary business, **Bone Brothers Ltd.,** of Wembley, designers and manufacturers of paper making and converting machinery and plastic extrusion machines.

Constructors John Brown Ltd.

Constructors John Brown Ltd. has had a difficult year in Persia, and anxiety must continue as to the eventual financial outcome of contracts especially as some have extended credit terms, not wholly covered by E.C.G.D. guarantee. Although the Kharg Island project, in which C.J.B. played a leading part, was concluded profitably, two of C.J.B.'s major contracts now in course of execution in Persia, in association with other concerns, are taking longer, and proving costlier to complete, than was expected. Negotiations regarding these matters are proceeding with the clients.

In this country, business in C.J.B.'s wide field of activity has for some time been both scarce and highly competitive. C.J.B. continues to complete its contracts on time, and it has a good forward order book for the current year and next year, though further work is needed for which capacity exists.

Overseas Companies

The many overseas businesses in which the Company has interests have, in the main, operated satisfactorily but exchange restrictions, competition and other factors have made trading more difficult.

Westland Aircraft Ltd.

The Directors continue to be very well pleased with their large investment in Westland Aircraft Ltd. Following the acquisition by Westland in the previous year of the other three helicopter businesses in this country, complete and happy integration into one organisation has been achieved.

Conclusion

From the foregoing survey of the development and progress, and the difficulties and problems, of the Company and its subsidiaries, Stockholders will appreciate how fortunate they and the Directors are to have in each company at home and overseas first-class management and staff. To their loyal and strenuous efforts the successful results of the year are largely due. To them and to our workpeople we offer our thanks.

THE GRÄNGESBERG COMPANY

SWEDEN

RECORD MINING YEAR; NEW STEEL MILL IN PRODUCTION

The sixty-fifth Annual General Meeting of the Grängesberg Company was held on May 19th at the Company's offices in Stockholm. The following is an extract of the report submitted by the Managing Director E. Waldenström and the Board of Directors.

Mining Operations and Steel Works.—The marked improvement noted during the latter half of 1959 continued throughout 1960 when most of the steel industry in Western Europe worked at capacity. As a consequence of the brisk business the output of the Company's mines increased to 2.24 million tons, of which 1.72 million tons were exported, as against total shipments of 1.62 million tons the previous year. However, since ore was in adequate supply prices remained stable. The revenue from the mining operations rose to Kr. 47.2M, from Kr. 35.3M in 1959.

At Strassa, the plant is now working at full capacity producing low-phosphorus concentrates.

At the new Oxelösund steel works a number of mill units were taken into service during 1960. The plate mill began working in April and the open hearth furnace in July, followed by the blooming mill in November. Plate deliveries began during the second half of the year.

A sintering plant and the new coking stoves were put into production in March this year, and the new 300,000-ton blast furnace in April. The first Kaldo furnace and the oxygen plant followed in May. The second Kaldo unit is expected to be put into service later this year, as well as the limestone and dolomite kilns.

A by-products plant for the recovery of coal tar, benzene and toluol, and for the production of ammonium sulphate was also put into service last year.

The output of the existing blast furnace rose to 143,000 tons, the sponge iron works turned out 33,000 tons and the glass works 400,000 cases of plate glass.

Early in 1961 a contract was signed for the delivery of 135,000 tons of welded steel pipe to USSR during 1962-63. The plate will be delivered by the Oxelösund works and fabricated in the pipe mill of a new subsidiary company, which also produces structural steel, etc.

Shipping.—The Company's fleet was kept fully employed during the year. Gross earnings of the shipping business increased from Kr. 29.4M in the previous year to Kr. 42.2M. The improvement in revenue is principally due to the increased size of the fleet and the size of the individual ships.

At the end of 1960 the Company's fleet included 32 vessels, totalling 546,000 dwt. During the year deliveries were made of the combination ore/oil carrier "Mertainen" of 34,250 dwt., as mentioned in last year's report, followed by the sister ship "Matarengi" in November. Early in 1961, the Götaverken yard delivered the "A" vessel "Aurivaara" of 14,120 dwt. Outstanding orders now include four ships totalling 100,000 dwt., for delivery 1962-63.

Liberian American-Swedish Minerals Co. (Lamco).—A Joint Venture Agreement has been reached with the Bethlehem Steel Corporation whereby this company enters as a partner for the development of the Nimba range in Liberia. The original concession has been revised to the effect that Lamco now holds 75 per cent and Bethlehem Steel 25 per cent. Under the agreement the American partner has contracted for certain annual shipments of Nimba ore. The Company is to serve as Manager of the Lamco project.

On behalf of Lamco the Company has negotiated with a number of German steel companies for deliveries of Nimba ores totalling 2.5 million tons per year for a duration of 17 years after commencement of the mining operations, with buyers' option to extend the contract. A 5-year contract for annual deliveries of about 500,000 tons has been concluded with a French group.

Through the participation of Bethlehem Steel and with contracted annual deliveries totalling about 5 million tons, the financing of the project has been secured. Of the Lamco share in the financing, the Swedish partners have guaranteed $50 million, while the balance has been raised by loans, including $50 million from the Kreditanstalt für Wiederaufbau in Frankfurt, $30 million from the Export-Import Bank in Washington and $5.7 million from the First National City Bank of New York.

The construction work in Liberia is proceeding according to plan. As contractor for the railway and harbour construction has been chosen the American firm Raymond International Incorporated. Machines and other equipment were purchased in 1960 at firm estimated prices. The first ore deliveries from the Nimba range are expected to take place as scheduled, in the first half of 1963.

The new operating subsidiary, the Lamco Joint Venture Operating Company, began business early in 1961. It had at the start 1,740 employees, of whom 1,620 were Liberians, 70 Swedish and 50 other nationals.

Personnel and Results.—Total number of employees of the Grängesberg Group, excluding the Liberian operations, averaged 7,307 (6,706).

Total turnover of the Company for 1960 was Kr. 363.2M (238.0) and for the Group Kr. 415.5 million (329.4). Depreciations were carried at Kr. 89.5M, of which Kr. 27.8M for ships in service.

Profits of the Parent Company for the year were Kr. 38,787,251 (Kr. 29.1M) which together with the balance brought forward from 1959 made available for appropriation the total sum of Kr. 165,943,499 (Kr. 162.9M). The Board proposes that the sum be allocated as follows:

	In Kr.
To Dividends of Kr. 12 per share	35,700,000
To Free Reserves	3,217,000
Carried Forward to new account	127,026,499
Total	165,943,499

The Board also proposed an increase of the share capital from Kr. 298M to Kr. 496M by the issue of two new shares for three old. Of the remainder of "Free Reserve II," which at the end of the year amounted to Kr. 790M Kr. 200M will be used for plant depreciation and Kr. 40M transferred to Legal Reserve.

The report and accounts were adopted.

GRÄNGESBERGSBOLAGET

AER LINGUS

IRISH INTERNATIONAL AIRLINES

ANNUAL REPORT AND ACCOUNTS, 1960/61

Following the General Meetings of the Shareholders on July 28, 1961, at which the Accounts and Balance Sheets were adopted, the Irish Air Companies announced record results for the year ended March 31, 1961.

In his introduction to the printed Report and Accounts just published the Chairman, Mr Patrick Lynch, said: "In legal structure, Aer Lingus and Aerlinte are separate companies; they present separate accounts as the reports that follow indicate, their finances are separate and where services are rendered by one to the other the charges are made in the normal way. Both companies, however, have a common management and a joint organisation; operationally, they are fully integrated and known as Aer Lingus—Irish International Airlines."

Taking the two operating airlines as one, their combined revenues for 1960/61 amounted to £7,298,000, and of this the transatlantic route contributed 33⅓ per cent although the passengers on that route were only 5 per cent of the total. The surplus, i.e. the excess of the combined revenue over combined expenditure, after payment of loan interest was £103,000. These excellent results coincide with the 25th anniversary of commencement of operations.

Aer Lingus made an operating surplus of £277,000. A charge of £81,000 for loan interest and an incoming credit balance of £6,800 reduced that figure to £203,000, out of which was written down the cost of training and development (£30,000) and £50,000 transferred to fleet replacement reserve. These adjustments left over £122,748 on Profit and Loss Account carried forward into the current financial year. Revenue at £4,919,000 was nearly £1,000,000 higher than the previous year. Total passenger figure at 690,964 was 25 per cent up on 1959/60; between Ireland and Great Britain 587,505 passengers were carried. 70,394 passengers—32 per cent over the previous year—were carried on continental routes.

The passenger load factor (i.e. relationship of seats sold to seats provided) was 71 per cent—the highest of any European airline. Total cargo carried on both scheduled services and cargo charters was 11,952 tons, compared with 8,617 tons for the year 1959-60. Total expenditure at £4,642,000 (excluding interest on capital) was 20 per cent higher than the previous year. Commenting on the increase of 32 per cent in landing fees and handling charges the Company's General Manager, Mr. J. F. Dempsey, said "We have the unique distinction and disadvantage of operating an international airline system with the lowest average fare and with the major section of the system (cross-Channel) operating between airports with the highest landing charges in the world." Achievement of the Company's primary aim, which is to reduce costs to bring its services within the range of the greatest possible number of people, is consistently hampered by such high costs.

Provision has been made for £454,400 for depreciation and in addition £50,000 has been transferred to fleet replacement reserve. This is the first step in preparation for development and replacement of the existing aircraft fleet of Viscounts and Friendships.

Aerlinte, the associate company, operating on the North Atlantic route, carried 35,176 passengers or 51 per cent more than in 1959/60 and about 250 per cent more cargo. The introduction on the route, in December, 1960, by the company, of its Boeing jet aircraft, was the most important event of the year and these, coupled with a concentrated sales drive and the introduction in October, 1960, of a special 17-day excursion fare, were largely responsible for the satisfactory increase in traffic.

Revenue at £2,379,000 was £733,959, or 45 per cent higher. While operating expenditure exceeded revenue by £93,000 the excess in the previous year was £589,000 and in the year 1958/59 £788,000. Having only commenced operating in April, 1958, with leased aircraft, it was inevitable that the company had heavy costs of development expenditure to establish itself on the transatlantic route and on March 31, 1961, this had accumulated to £1,681,000 and will be written off against future profits.

In his introduction to the Report, the Chairman, Mr Patrick Lynch, emphasised that the return of the Nation's investment in the Air Companies (£10m. approximately) should not be measured by cash dividends though he said it was reasonable that the Companies should be expected to pay some interest on their capital. He pointed out the Companies value to the Irish community derives from the contribution made to the economy as a whole in the provision of an essential air service "that is safe, efficient and economically priced; by the transport of tourists; by the generation of tourist traffic through its advertising abroad; by facilitating Irish economic development in establishing services to countries with which Ireland has increasing commercial relations and sometimes to countries where, until the advent of the aeroplane, Ireland had little direct trading; by providing good employment with security of tenure and satisfactory conditions for Irish men and women in Ireland and overseas; and by stimulating productive employment throughout the country in other industries."

Aer Rianta, which is the parent company and the shares of which are held by the State, has over £10 million invested in the two operating airlines, Aer Lingus and Aerlinte (including £42,000 invested in Irish and Intercontinental Hotels for development of hotels in Dublin, Cork and Limerick, for the benefit of those travellers to Ireland who seek first-class hotel accommodation). Aer Rianta's total revenue, mainly from landing fees at Dublin Airport, was £291,694, an increase of some £64,000 on the previous year. With the net profit on catering (£30,770) added, and allowing for certain expenses, that company had a net surplus of £91,375, which will be transferred to the State as a contribution towards the expense of airport State services and interest on capital not provided for in the company's accounts. Dublin Airport has had to be extended again and again to meet ever growing traffic and in 1960/61 854,582 passengers were handled compared with 657,820 in the previous year. Long-term development planning is continuing and more building projects are under way to meet the growing requirements of the travelling public and cargo traffic.

WILLIAM HANCOCK AND COMPANY LIMITED

SUBSTANTIALLY IMPROVED RESULTS

In his circulated statement, Mr Joseph G. Gaskell, TD, chairman and managing director, reported that all Departments, with the exception of the Mineral Water Department, had contributed to the substantially improved group profit of £503,113. Sales of the Company's own beers as well as those supplied by other brewers had shown a satisfactory increase. The introduction of their keg beer, Barleybrite, had been most successful. The total distribution recommended on the Ordinary Stock was 17½ per cent compared with 14 per cent forecast on the increased Capital.

The purchase of David Roberts had proved to be worthwhile. In order, however, to obtain the full benefit considerable reorganisation had been carried out.

Capital expenditure during the year had been heavy amounting to approximately £430,000 as a result of which the current position had been adversely affected, current assets only just exceeding liabilities. That situation would not improve because capital commitments at March 31, 1961 amounted to £319,000. The Board were of the opinion that if the Company was to continue to go ahead, it could not be done without such expenditure. Mr Gaskell considered that the policy had been fully justified by the results of recent years.

It was always a most difficult matter to forecast the future but the chairman saw no reason why the Company should not continue to make progress provided conditions did not change so as to have an adverse effect on trade generally.

The report was adopted.

SOCIETE METALLURGIQUE DE NORMANDIE

(Paris)

The Annual General Meeting of SOCIETE METALLURGIQUE DE NORMANDIE was held in Paris on June 27, and the following are details of the report presented by the Board of Directors:

As a result of the completion of the re-equipment programme last year, the Company was able to make full use of its additional capacity throughout 1960. The target of 600,000 tons of steel a year was exceeded by nearly 9,000 tons, and output rose by 15.2 per cent over 1959. A new investment programme was launched in 1960, with a view to expanding capacity by 20 per cent within the next three years.

Gross operating profit amounted to NF. 64,874,169.04 as against NF. 48m. in 1959, representing an increase of 33 per cent.

The report, the accounts, and the proposals put forward by the Board of Directors were adopted.

NCHANGA CONSOLIDATED COPPER MINES LIMITED

(Incorporated in Northern Rhodesia)

REMARKABLE EXPANSION OVER 20 YEARS

FLEXIBILITY OF MINING OPERATIONS

The following are extracts from the statement by the chairman, Mr H. F. Oppenheimer, which has been circulated with the annual report and accounts.

The mine, which is at present the second largest single copper producer in the world, has been developed in such a way that its operations are, perhaps, uniquely flexible. Its ore reserves are extensive and of high grade. In spite of mining more than five million tons during the year, the ore reserves of 184,166,000 short tons at 4.6 per cent grade have increased by four million tons. As the mine is opened up and future geological work is undertaken, there is every likelihood of substantial additions being made to the reserves.

Nchanga, with its flexibility and large reserves, and the extensions to the plant now being made, is very well placed to take advantage of any increased demand for copper. In 1960, world consumption increased by as much as 21 per cent over 1959 in spite of a decline in consumption in the United States. Nevertheless, at present, world productive capacity appears to be still slightly in excess of consumption. In view of this Nchanga, in common with many other producers, took steps last October to reduce by approximately 10 per cent the amount of copper it made available to the market. We decided to reduce sales rather than to cut production, as this would enable us to build up a buffer stock. In this way we hope to be able to take much prompter action to help prevent a shortage of copper and an unduly high metal price than we could by restoring cuts in production. The policy also has the great advantage of ensuring stable operations at the mine.

FEDERAL TAXATION

While production at Nchanga during the year ended March 31, 1961, reached 184,000 tons, only 172,670 tons were sold and the balance withheld. Our net profit was £12.4 million, which is £1.2 million less than last year when the average prices realised were about £4 a ton higher. The net profit was also affected by the increased taxation on *public companies* announced by the Federal Minister of Finance in his budget in June, which in the case of Nchanga has meant additional tax amounting to about £490,000. We have appropriated £1.5 million for capital expenditure and a further £1 million to general reserve, partly to take care of our final subscription for Federal Development Bonds. We have nevertheless been able to recommend a net final dividend of 5s. 6d. per stock unit which, together with the interim dividend of 1s. 6d. makes a total of 7s. net for the year, the same dividend as was paid last year.

I referred a year ago to proposals being examined by the consulting engineers which were designed to improve extraction at the mine. Work has begun on the first stage of these extensions: a low grade oxide leach plant is being constructed to increase the recovery of copper by the reduction of residue losses. The second stage, which will follow shortly, involves the erection of a roasting plant to deal with low grade sulphides. The roasting plant should not only increase production by some 300 short tons a month by improved extraction, without increasing the mining rate, but also recover more economically about 600 short tons of copper a month from concentrates which are currently smelted at Nkana. These extensions will cost about £3.7 millions and we are satisfied that this outlay will be recovered within a few years from increased profitability. Every effort is also being made by the general manager and his staff to improve efficiencies underground and in the surface plant, and great progress has been made during the last year.

The process of African advancement which was started in 1955 as a result of the agreement between the Northern Rhodesia Mine Workers' Union and the copper companies was carried forward in November, 1960, when, after many months of painstaking negotiations, a further scheme was formulated. The gap between the present advancement jobs and those previously performed only by European employees has been effectively bridged by the excision of some categories from higher levels and the creation of a number of new jobs. Thus we have established an integrated wage scale and it will be possible for any employee to progress in accordance with his ability, qualifications and experience.

TECHNICAL TRAINING

A training scheme for young learners which is already in operation will give further practical effect to the agreement in the near future. Young men of both races are being accepted for training over a two-year period after which they will be placed in jobs according to merit. While this agreement effectively removes the problem of African advancement as such from the field of major negotiations with the Mine Workers' Union, it would be ambitious to claim that the plan provides the complete answer to the problem of advancement in the industry.

Apart from providing openings for youths

through the learner scheme, the agreement enables us to advance existing African employees of proved ability and experience to higher posts. At the time of writing a number of suitably qualified Africans have been selected for promotion. There have been delays in negotiations on implementing the new agreement with the Mines' African Staff Association and the Northern Rhodesia African Mineworkers' Trade Union but we hope that the discussions which are now under way with these organisations will shortly reach a satisfactory conclusion.

The companies have transferred all Africans from their present gratuity schemes to the group pension and life assurance schemes. This change will not affect the pension and other rights of existing members of the scheme, but the majority of African employees now joining the schemes will receive increased benefits. It will also remove one further racial distinction from conditions of employment on the mines.

AFRICAN EDUCATION

In the field of education, I am happy to say that striking progress has been made, through the Northern Rhodesia Educational Trust established by the copper companies in the provision of primary and secondary school facilities for Africans in addition to the Northern Rhodesia Government's expansion programme. The work of the trust, which has been extended to include Broken Hill, has been widely welcomed and there seems little doubt that the objective of providing at least a six year primary schooling on the Copperbelt and at Broken Hill for every African child will be achieved. I feel sure that members will be pleased at the contribution which our company has been able to make to the expansion of education in Northern Rhodesia.

The consulting engineers, the general manager and all employees of the mine have this year earned our thanks in many ways. At a time when costs generally are rising they have kept production costs steady and its efficiency and its appearance are a great credit to all our employees. With their continued co-operation and given political stability, I have every hope that the next 20 years will see progress at Nchanga comparable to the achievements of the last twenty years.

Copies of the annual report and accounts may be obtained from the London office of the company, 40 Holborn Viaduct, London, EC1.

EDGAR ALLEN & CO. LIMITED

(Steel Makers and Engineers)

LARGER SALES TURNOVER

MR W. H. HIGGINBOTHAM'S REVIEW

The 62nd Annual General Meeting of Edgar Allen & Co. Limited, was held on August 3rd at Sheffield, Mr W. H. Higginbotham, FCA, JSS, chairman, presiding.

The following are extracts from his statement on the accounts:—

The conditions which have attended the operations of the Company and its subsidiary companies during the year ended on April 1st last appear in retrospect as those of a trade recession, gradually diminishing in severity, but in some ways even more unequal in its impact than in the preceding year. They are reflected in an increase of 3.4 per cent in the aggregate value of the sales turnover of the Group coupled with an overall reduction of 11.4 per cent in its total untaxed profits; but this apparently disappointing result derives mainly from the operations of certain subsidiary companies, and conceals much that is otherwise satisfactory, and even encouraging.

PARENT COMPANY

The parent company's sales, which amounted to 65 per cent of the aggregate sales value of the Group, were 3.24 per cent greater than those of the preceding year and represent 81 per cent of those of the year 1957/58, immediately preceding the onset of the recession; its net untaxed profits, after provision for depreciation, were £20,518 (or 4.6 per cent) higher than those of 1959/60, though still only 70 per cent of their record high level of 1957/58.

SUBSIDIARY COMPANIES

Although the sales turnover of the eight subsidiary companies whose accounts are included in the consolidated accounts increased by some 4 per cent in value over that of the previous year, the total of their untaxed profits shows a severe decline. This is attributable, in the main, to the loss incurred by Buell Limited and to the very small profit made by Acieries d'Hirson, S.A. as against the very significant contribution to the total subsidiary company profits made by those two companies in previous years. From information now available it is believed that both companies will show considerably improved results for the current year.

Of the remaining three United Kingdom subsidiary companies, J. H. Humphreys & Sons Limited, with a considerable increase in sales turnover, showed a commensurate increase in profit; the British "Rema" Manufacturing Company Limited also showed improvement in both turnover and profit; the profit of Park View Steel Works Limited was roughly equal to that of the previous year, although the value of its sales turnover increased.

Turning to the other three overseas subsidiary companies; the South African company, through a considerably increased sales turnover, was able to show a small profit as against the losses sustained in the previous two years; the Rhodesian company also showed a small increase in profit; but the Canadian company showed a large reduction in turnover and a loss in excess of that for the last year. Reference was made in my last year's statement to the fact that its future was being given special consideration; and it has since been decided to close down its trading activities before the end of August, 1961.

On December 21, 1960, the parent company acquired full control of Edgar Allen Noyes Pty. Limited of Melbourne, Australia, a company in which it had previously held only a 50 per cent interest; and the name of the company was changed to Edgar Allen & Co. (Australia) Pty. Limited. Whilst this new subsidiary company is now responsible for the sale of all the Group's products in Australia and continues to carry on its former business of specialist heat treatment of steels, it is hoped that in due course it will develop the Australian manufacture of many of such products, including those of engineering character, in what is believed to be a sound and expanding market.

CAPITAL NEEDS AND FUTURE PROSPECTS

Your directors have been giving consideration to the consolidation of reserves into share capital and, at the same time, to the problem of providing for the Company's prospective capital needs.

If, as we hope, the effect of re-organisation now in progress is to increase and expand the business and the earning capacity of the Group, it is clear that not only will further capital investment in plant and equipment be required, but also that such expansion will involve the provision of additional working capital in current asset forms. The policy of development which underlies that re-organisation includes not only development of products and processes, but also the forming of associations which will supplement and make good deficiencies in manufacturing equipment and services which, in the past, have hampered the Company's operations very considerably.

If these purposes are to be carried into effect it is clear that they cannot be dependent only on availability of taxed profits, or the making of reserves therefrom; opportunities must be seized as they appear. The Company must be put into a position whereby when the time is opportune it can obtain further capital from the investing public; and to that end its authorised share capital should be increased and re-constituted. It is hoped therefore before the end of the current financial year to submit proposals to the members of the Company with that object in view.

At no time in recent years have future prospects and trading conditions been more difficult to forecast, but if history should repeat itself, we may still look forward to a prosperity in the fashioning and the sharing of which we may all participate.

The report was adopted.

"The popularity of our products outstripped our production"

REPORTING TO SHAREHOLDERS OF DANSETTE PRODUCTS LTD.
MR L. MARGOLIN SAID

In March I forecast a net profit in excess of £250,000 for the year to 31st March, 1961. This has turned out to be a conservative estimate as the accounts show the net profit for the year to be £316,497. Taking into account the costs of the capital issue, the trading profit has been maintained at the same level as 1960. Your directors have considered it reasonable to recommend a dividend of 30 per cent as against 25 per cent forecast in March.

I should like to take this opportunity of mentioning our major products. We make a wide range of record reproducers, radiograms and transistorised portable radios under the trade names Dansette and Plusagram. Since these were introduced their sales have increased considerably. We have been undertaking research into fully transistorised miniature radios and during the current year we hope to increase our range.

Addressing the meeting the chairman said:

At the time our Report was issued we were still engaged in concluding negotiations for the date of entry into our new factory accommodation. Although we have had what is in the main a newly built factory, the popularity of our products has outstripped our production capacity and we have been annoying our best customers in not being able to satisfy their orders promptly. We needed additional space—I am happy to say we have now got it, and we shall be taking possession in ten days' time.

I now come to our range of DANSETTE record reproducers, radiograms and portable radios and accessories. These go from strength to strength. At the Radio Exhibition to be held later this month in London we shall introduce our new transistorised pocket radio sets. In the year just past our turnover increased by over one-third over a previous record figure. It cannot necessarily be expected that we will maintain this rate of progress, but I can assure you that our sales for the first four months of the current year are substantially in excess of corresponding months in previous years.

Dansette

DANSETTE PRODUCTS LTD., 112/116, OLD ST., LONDON, E.C.1.

Copies of the report and accounts can be obtained from the above address.

CLIFFORD MOTOR COMPONENTS

WIDENING FIELD OF OPERATIONS

The thirty-second ordinary general meeting of Clifford Motor Components Limited will be held on August 31 in Birmingham. The following is an extract from the circulated statement of the chairman, Mr S. C. Joseph:

The Trading Profits of the Group after all charges, but before Taxation, together with Income from Trade Investments and Miscellaneous items amount to £851,779, an increase of £42,723 over the previous year.

The charge for Taxation (including Profits Tax at 12½ per cent compared with 10 per cent previously) amounts to £412,655, an increase of £19,880. This figure has been reduced by £26,206 being over provisions in previous years, leaving a charge against the profits of £386,449. After deducting this amount the Group Net Profit is £465,330, an increase of £40,928.

Having regard to the trading results your Directors recommend a Final Dividend of 20 per cent on the Issued Ordinary Capital. After the transfer of £225,000 to General Revenue Reserve and the proposed Dividend there remains a balance to be carried forward to next year of £160,526 compared with £151,437 brought in.

The General Capital Reserve now stands at £628,613. Out of this Reserve your Directors recommend the payment of a dividend of 2½ per cent amounting to £29,150 (not subject to Income Tax) on the issued Ordinary Stock which would leave the General Capital Reserve at £599,463.

AUTOMOBILE TRADE: During the second half of our financial year, those of our operating Companies which rely on the Automobile trade for the sale of their products suffered from the recession in that industry, but during the current year there has been some recovery.

AIRCRAFT AND GENERAL ENGINEERING: During the year under review this division has expanded satisfactorily.

RISE IN COSTS

We have had to absorb in considerable measure the increased cost of raw material and labour, but improved methods of production and widening our field of operation help to maintain our overall results.

In April, 1960, we acquired the whole of the Share Capital of North Bridge Engineering Company Limited of Leicester. Eleven months' profits from this Company are included in Group results. We are extending these Works to cope with increased demands.

Trading conditions in Canada have been difficult and N. C. Joseph (Canada) Limited is not yet profit earning. There has been some reorganisation and the situation is now more promising.

During the year under review, we have spent throughout the Group £385,000 on Plant and Factory extensions. At the close of the year there were commitments of £328,922 outstanding.

It is difficult to foresee the effects of a possible closer tie with European markets, but I believe that the future prospects of your Company are good.

STEEL BROTHERS AND COMPANY LIMITED

IMPROVED TRADING RESULTS

The seventieth annual general meeting of Steel Brothers and Company Limited will be held on August 24th, in London. The following are extracts from the circulated statement of the chairman and managing director, Mr P. G. G. Salkeld, CBE:

A year ago I stated that I was hopeful that better times were ahead of us and I am glad to be able to report that our profits for the year at least substantiate this hope.

Profits are £544,079 as against £423,906 for 1959. Provision for taxation less adjustments in respect of previous years is £295,000, leaving a net profit for the year of £249,079 against £158,906 for 1959. It is satisfactory to be able to record that after meeting the Preference and Preferred Ordinary Dividends the distribution to the Deferred Ordinary Shareholders for the year totalled 25 per cent, of which 20 per cent was paid out of Capital Profits.

I now comment on our operations under various headings.

UNITED KINGDOM.—Profits have been maintained at about the same level as for 1959.

Sondes Place Research Laboratories, Ltd.—There was again a moderate profit on the operations. Plans are in hand further to extend the premises to meet the need for greater space in which to handle certain new business.

Steel Brothers (Insurance) Limited.—This Company has continued to expand and as from 1st January, 1961, has joined forces with the old-established Lloyd's broking firm of S. E. Higgins & Co. and is now operating as Steel Brothers & Higgins (Insurance) Ltd.—a wholly-owned subsidiary in the Group.

BURMA.—Though our trading opportunities continue to be restricted a reasonable profit was earned.

The Burma Cement Company, Limited.—I am indeed pleased to be able to advise that just recently we have received the remittance of the final distribution due to Shareholders and liquidation is therefore almost complete.

INDIA.—The Agency on behalf of the Indian Tea Association has continued to work smoothly.

Our other business in India has been on a profitable basis.

The Indo-Burma Petroleum Co. Ltd.—Had another good year in that they again maintained fully their share of the expanding trade in petroleum products, but due to reduced margins the increase in trading profit was moderate only.

The dividend however is raised from 25 per cent to 30 per cent by means of a special distribution of 5 per cent.

PAKISTAN.—Results continue to improve and we have had another satisfactory year.

CEYLON.—Both E. B. Creasy & Co. Ltd. and Darley, Butler & Co. Ltd. had a poor year and profits were small.

MIDDLE EAST.—I am glad to report that both our Subsidiary Companies, Rafidain Developments Ltd. and W. J. Coker & Co. Ltd. turned their previous heavy losses into small profits and given settled conditions prospects this year are good. Our Associated Company, Spinney's (1948) Ltd., had another satisfactory year.

EAST AFRICA.—The trading climate ha has not been a happy one in these Territories i recent months, but our Associate Company Messrs. A. Baumann & Co. Ltd., has had reasonably satisfactory year.

CANADA.—*It is well known* that there wa a general recession in Canadian business durin the year and in particular one of the industrie *most affected* was the building industry in whic we are primarily involved through our Canadia Subsidiaries.

PROSPECTS.—*I will confine* myself t reporting that results obtained to date this yea confirm that the improvement in our affairs a *indicated in the Accounts* before you is bein maintained.

HICK, HARGREAVES & COMPANY LIMITED

STRONG FINANCIAL POSITION

MR W. D'ARCY MADDEN'S SPEECH

The Seventieth Annual Ordinary Genera Meeting of Hick, Hargreaves & Company Limited, was held on August 2, 1961, at Bolton

Mr W. D'Arcy Madden, CBE, JP, the Chairman and Managing Director, presided, and in the course of his speech said:

You will have seen from the Accounts tha the Final Group Profit of £397,503 is practically the same as the previous year and my forecast a year ago has proved correct—actually a 3 per cent increase in the profit before tax has compensated for the higher rate of Profits Tax. In view of the difficulties Heavy Engineering has experienced during the past year, these results are certainly satisfactory and with the large revenue reserves and the strong financial position, your Directors feel that the distribution of 20 per cent for the year is well justified, the dividends being covered two-and-a-half times. You will also have noticed that the capital employed by the Group is £3,842,876 and the profit before taxation, viz. £794,381, represents 20.5 per cent of the capital employed.

SATISFACTORY INCREASE IN PRODUCTION

HICK, HARGREAVES have again been responsible for nearly 80 per cent of the Group results. Notwithstanding lower margins the profits have been maintained through a satisfactory increase in production which has been assisted by a 6 per cent increase in the labour force over the year and with the acute shortage this in itself is an achievement.

The pioneer work carried out by Hick, Hargreaves some time ago in connection with vacuum degassing of steel has resulted in several orders being placed totalling £120,000. Sales of rotary vacuum and compressor units have continued to expand, showing a 30 per cent increase over the previous year. The sales for this type of plant will be further enhanced by the recent acquisition of a liquid ring pump of proved and tried design which will appreciably widen the field of application.

Work is proceeding satisfactorily on our Central Power Station contracts at Northfleet, Rugeley, Drakelow 'C,' Blyth 'B,' Thorpe Marsh and the Atomic Power Station at Hunterston. Future contracts in this field will

inevitably be less than in the past due to the smaller number of the very large units now planned. This will in part be offset by the development of ancillary plant for these units, notable amongst these being the hydraulic air pump I mentioned in my last Address. Since its development some two and a-half years ago, orders have been received for 48 units totalling over £360,000.

ORDER BOOK AT OVER £5 MILLION

The order book today still stands at over £5 million but trading may well become more difficult in the coming months owing to the continued adverse national trading balance.

The FOSTER, YATES & THOM results have been disappointing. The turnover has been rather more than last year and is, in itself, satisfactory, but the profit margins continue to remain too low. It has been in many respects a difficult year at Blackburn but the potential is there and this Company will ultimately carry its proper share of the Group results.

FINCH, WATSON have again had a most successful year with increased production and higher profits. The new Works are now completed and will shortly be in operation and this will enable the Company to substantially increase its present satisfactory if small contribution to the Group results.

CHANGES ON THE BOARD

Last January Mr Harold B. Finch, Chairman and Managing Director of Finch, Watson Limited, was appointed a Director to fill the vacancy caused by the death of Group Captain E. C. Lewis and you will be invited this afternoon to confirm his appointment.

Mr John Aspinall, for health reasons, wishes to retire at the end of next month. Mr Aspinall joined Hick, Hargreaves as an apprentice 50 years ago and he has been responsible for the Works and for Production since his appointment in 1929 as Works Manager. He was elected a Director of the Company in 1935 and appointed Deputy Managing Director in 1956. Mr Aspinall will continue to be a Director and will also accept an appointment in an advisory capacity whereby his unrivalled knowledge and experience will continue to be available to the Company.

The relations between the Management and the Employees of the Company continue to be happy and satisfactory and the Directors wish to express appreciation of their work and co-operation during the past year.

The report and accounts were adopted.

COMPANY AFFAIRS

Triplex

THE preliminary statement from Triplex Holdings contains two surprises: profits for the year to June 30th are not as bad as had been feared but, against this, the ordinary dividend, which the stock market had expected to be maintained, has been reduced from 15 per cent to 12½ per cent. At the half way stage pre-tax profits of this leading supplier of safety glass to the motor industry had slumped from £870,000 to £348,000 but they made a better showing in the last six months. Reflecting some recovery in production in the motor industry the fall in profits has been limited to £215,000 at £659,000. But net profits for the year as a whole have fallen by some 42 per cent from £798,000 to £460,000.

The cut in dividend upset the market and the 10s. shares were marked down by 4s. to 33s. 7½d. so that they now yield 3.7 per cent on the 12½ per cent dividend, covered almost twice by earnings. A maintained 15 per cent dividend would have been covered 1.6 times. The directors, now headed by Mr Lincoln Steel, give no reason in the preliminary statement for the reduction. Have they been influenced by the Chancellor's plea for restraint or are they concerned about the course of profits in a period when credit will be tight?

William Hollins

EARLIER this year, William Hollins acquired Gainsborough Cornard and with it entry into the promising field of knitted man-made fibres. The group's principal branded products, "Viyella" and "Clydella," are well established and recently its range of newer brands have been extensively advertised and much in evidence in the shops. A £1 million rights issue was proposed, from which the cash outlay of about £850,000 involved in the Cornard acquisition was to be funded and the remainder applied in expanding the group's manufacturing capacity that was unable to satisfy demand for its products.

Instead, however, of expansion, the group appears to be taking consolidating steps this year. The chairman's report for the year to December 31st said that "if no worse things happen in the world than occurred in 1960" profits would be satisfactory this year. It now seems likely that profits will be lower this year, though the directors hope to maintain the dividend at 10 per cent. Sales have not deteriorated but production has had to be slowed down to reduce stocks of finished products to an "adequate" level and the merger with Cornard will set in train a "substantial" reorganisation. The rights issue is off: more use will be made of bank overdrafts, which amounted to £174,000 net at December 31st, and by rationalising production and reducing stocks the group hopes to generate its own finance.

The reshuffling of the board of directors that goes hand-in-hand with the reorganisation of the group under a holding company, to be known as Viyella International, and the reconstitution of William Hollins to hold the trading assets are moves of evident significance. It is also proposed that the directors and the executives be given the right to subscribe for 200,000 of the group's £1 ordinary shares at prices ranging from 30s. a share this year to 37s. 6d. in 1966. Currently, William Hollins' shares stand at 27s. 1½d., to yield 7.4 per cent.

Thorn

THE full report of Thorn Electrical Industries came hard on the heels of the preliminary statement, which revealed a rather unexpected rise of 5 per cent in trading profits from £3,917,000 to £4,114,000. In it, the chairman, Mr Jules Thorn, says that new records in turnover and profit have been achieved by the lighting division. The group has added to its sales of electric cookers, and Mr Thorn says that the new furniture-styled refrigerator has been "well received." The total sales of the radio and television division declined, as was to be expected, but Thorn has added to its share of the market. It is now the biggest producer of radio and television sets in this country, having under its wing Ferguson, Philco, Ultra and Pilot, as well as interests in HMV and Marconiphone. The sheer size of Thorn's interests as well as the dividend cover of 4½ times is recognised in the yield of 2.6 per cent offered by the 5s. shares at 48s. 9d. on a dividend of 25 per cent.

The yield looks a long way ahead and does not perhaps take enough account of the immediate difficulties. First, the credit squeeze darkens the prospects for a market which, in television sets at least, is close to saturation point. Secondly the Thorn group, partly as a result of this purchase, is short of liquid resources. Last year its stocks rose from £13¼ million to £18 million and even after the £3 million loan stock issue in December the group had a net bank overdraft of £1,432,000 at the end of March. As the group has to pay £2.4 million in cash for Ultra Electric before next April and is committed to spend at least another £500,000 on capital account and as its cash flow amounts to little more than £2 million the directors will have to do some hard thinking about the sources of new finance.

Nchanga

THE current yield of 15 per cent on the £1 shares of the Rhodesian copper producer, Nchanga, has to be seen against a spotty background—a fairly optimistic long term outlook for the mine, as the chairman, Mr Harry Oppenheimer shows, but present unrest in the Copperbelt. High yields on copper shares have been brought about more by political and racial tensions in Central Africa than by over-production, which led to a 10 per cent cut in sales last October following a slide in copper prices.

Nchanga's accounting year ends on March 31st so the latest results reflect the relatively high price of copper in the second quarter of 1960 before it began to slide. Restrictions on sales have not yet been lifted but copper has recovered by about £15 to £230 a ton since the beginning of this year. Clearly lower prices and the voluntary reduction in sales were the main reasons for the fall of £1,346,000 to £20,078,000 in Nchanga's operating profits in the year to March 31st. The report shows that while Nchanga's output went up from 178,045 tons to 184,000 tons its sales fell from 177,886 tons to 172,670 tons and the average price it received fell from £240 to £237 per ton. But the building up of stocks—at the end of March they amounted to £6.9 million, against £5.5 million—suggests that Nchanga is well placed to satisfy any improvement in demand.

Ore reserves were estimated at 184 million tons at the end of March, with an average grade of 4.63 per cent, and work is now going ahead on plans to increase the recovery of copper from the ore bodies. These developments will cost about £3¾ million but Mr Oppenheimer is satisfied that this outlay will be recovered from higher profits within a few years. Given political stability the chairman has every hope that the next 20 years will see progress at Nchanga comparable with that made in the past twenty years since the mine was first operated. If Nchanga, however, does no more in the current year than to maintain the dividend at 35 per cent, which in 1960-61 absorbed £9,800,000 from net profits of £12,450,000 shareholders should have no cause for complaint.

Property Results

TWO leading property companies have announced higher earnings but leave their dividends unchanged. In neither case is this surprising: **Capital and Counties Property** had already forecast no change a few weeks before and the ranking ordinary capital of **Central and District Properties** almost doubled over the year to March 31st from £1,672,000 to £3,172,000. But it now appears that the directors of Capital and Counties were in fact intending to raise the total payment from 16 to 17½ per cent before the Chancellor's call for dividend restraint. The directors of Central and District have made no reference to the dividend freeze but the preliminary statement shows that earnings had risen sufficiently to justify a higher dividend than the unchanged 13½ per cent.

Central and District's profits before tax rose from £464,000 to £644,000 and net profits from £268,000 to £371,000 so that earnings on the much bigger capital amounted to almost 16 per cent. The increase in the pre-tax profits of Capital and Counties whose financial year ends in April was less marked, its profits amounting to £477,000 against £450,000. But after a slightly lower tax charge and the addition of £33,000 for ground rent and interest in respect of properties being developed its net profits rose from £243,000 to £306,000, to produce earnings of 18½ per cent.

The squeeze on finance for property development makes those companies which are already adequately endowed with funds more attractive to investors than those without links with insurance companies. In his statement last year, for example, the chairman of Central and District said that the company could face the credit squeeze with "some degree of equanimity" following an agreement with the Prudential which undertook to lend £6¾ million, and at 41s. 9d. the 10s. shares yield just over 3 per cent. Capital and Counties recently negotiated an £18.3 million debenture from the Prudential and Norwich Union (which already had a 7½ per cent stake in the equity of the company). The details of this loan have yet to be announced but it seems likely that it will provide for a further interest in the equity by the two insurance offices. In the past financial year Capital and Counties also raised £1 million from a rights issue and just over £2 million from an issue of debentures. A large part of these funds is required for the Knightsbridge Estate which has been described as "probably the most valuable development area in the United Kingdom." At 38s. 4½d. the 5s. shares yield 2.1 per cent. This looks well ahead to the benefits to come when this development is completed. On a 17½ per cent dividend the yield would be 2.3 per cent.

Scottish and Newcastle Breweries

FOR the year to April 30th last shareholders of Scottish and Newcastle Breweries are to receive a total dividend of 16 per cent. This compares with a forecast of 14 per cent made at the time of the merger with Newcastle Breweries and the 13 per cent paid to shareholders in Scottish Brewers in the previous year. Since the latter payment had been increased from the equivalent of 8½ per cent, dividends have in fact almost doubled in two years and in four years they have more than trebled. In an addendum to his statement the chairman, Mr W. McEwan Younger, says that the company's policy of expansion is based on large-scale capital investment to give a good return on capital invested and that it has always sought to offset rising costs wherever possible by modernisation and increased efficiency rather than by raising prices. If these methods continue to produce higher profits, Mr Younger says, "any suggestion that stockholders are not entitled to look for a reasonable increase in dividends . . . appears to me not only inequitable but also directly contrary to the policies which we, in this country, must pursue if we are to survive and prosper in a highly competitive world."

With the bigger dividend has come the announcement of a one-for-one scrip issue and though no firm dividend forecast is made the chairman's comments on the 12 per cent rise in profits from £4,480,000 to £5,032,000 of the group as constituted at April 30th last point clearly to a further rise in earnings. He says that much of the benefits of recent acquisitions, particularly those expected to arise from the Newcastle merger, have yet to accrue. The substantial expansion of capacity at the Fountain Brewery together with the closing of a number of small breweries has involved large non-recurrent expenditure which has been charged to the 1960-61 accounts, while the marked economies in working costs arising from this policy of rationalisation were not reflected in those accounts.

That there is still much work to be done in extending and modernising the group is reflected in the capital commitments of £4.1 million outstanding at the end of April. At that date the balance sheet shows a net overdraft of £1.9 million, but since then Scottish and Newcastle, whose cash flow is about £2¼ million, has raised £4¼ million by a debenture issue. The confident tone of the chairman's statement made no impact on the price of the £1 shares which at 96s. 3d. yield 3½ per cent.

H. S. Whiteside

THE directors of H. S. Whiteside, the food manufacturing group, are well in the fashion in announcing a rights issue to raise £945,000 "in view of the necessity for a reduction in the bank overdraft." The group has expanded steadily since its early postwar days, adding several subsidiaries—including Maconochie Foods in 1958 and British Fish Canners in 1959—to its original "Sun Pat" range of products. A full year's profits from three companies acquired in 1959 contributed to the 20 per cent rise in its consolidated trading profit from £439,000 to £526,000 in 1960, but after heavier interest charges the rise in net profits was limited to 9 per cent, from £208,000 to £227,000, and the ordinary dividend was left unchanged at 40 per cent.

Expansion has been reflected in a steep rise in bank overdrafts. They rose from £592,000 to £1,043,000 in 1959 and the acquisition of yet another company last December may also have added to its short-term indebtedness. The need for new money is plain, but the benefits arising from the rights issue for shareholders are less obvious. They are offered three 1s. ordinary shares at 3s. each for every four shares already held, but a total dividend of not less than 30 per cent, compared with the 40 per cent paid on the smaller capital, is forecast for 1961. On 30 per cent, the new shares ex rights at 5s. 3d. would yield 5.7 per cent, which is no more than the old shares were offering on the 1960 dividend.

London Stock Exchange

FIRST DEALINGS:	July 23	Aug. 4	Aug. 22
LAST DEALINGS:	Aug. 3	Aug. 18	Sept. 1
ACCOUNT DAY:	Aug. 15	Aug. 29	Sept. 11

THE stock market remained under the influence of the Trustee Investments Bill before the bank holiday; there was some switching into equities both before and after the bill became law on Thursday evening so that the *Financial Times* index of ordinary share prices showed a rise of 22.1 points over last week as a whole, the biggest rise since the week after the Conservative election victory in October, 1959. Gilt-edged stocks were depressed under the combined influences of trustee selling and seven per cent Bank rate. But late on Friday and after the holiday it became clear that trustees had, for the time being at least, finished switching out of gilts into equities. The prices of leading equities, which had recently been favoured by trustees, fell back and sales by profit takers added to this pressure. Over the week to Wednesday *The Economist* indicator gained 5.8 points to 377.2. In contrast, gilts rose on Tuesday and had their best day for some months on Wednesday. The improvement in sterling and more particularly the high yields which resulted from last week's price falls attracted some institutional buying. Before the weekend many stocks fell to new low levels but short-dated stocks were comparatively steady. After touching a new low of 36¼ on Friday, 2½ per cent Consols showed a net gain of ⅜ to 37¾ over the week to Wednesday; the other irredeemables and long-dated stocks followed a similar pattern.

The demand for equities last week centred upon the leading shares. Insurance shares were early targets for trustees, but they later fell back; Legal and General lost ¾ to 31¼. Bank shares generally showed net falls over the week, but Westminster "B" made a net gain of 2s. 3d. to 81s. 9d.; among hire purchase shares, UDT rose by 7s. 6d. to 145s. Brewery shares held their early gains, and Watney Mann were 3s. higher over the week at 90s. 6d.

Among the leading stocks to benefit from trustee demand were ICI, which gained 1s. 6d. to 71s. 3d. after touching 73s. 6d. on Friday and Unilever which gained 3s. 9d. to 146s. 3d. Store shares lost small amounts over the week, and Woolworths were 6d. lower at 52s. 7½d. Steel shares made mixed movements over the week, but conformed to the general pattern of early rises and late falls.

Motor shares were influenced by the news of stiffer hire purchase terms and the lower dividend from Triplex; Rootes and Jaguar each made small gains, but BMC fell back 3d. to 14s. 4½d. The news of higher freight rates gave a fillip to shipping shares and trustee demand pushed up the prices of oil shares, with Shell Transport gaining 2s. 9d. to 124s. 9d. Tin shares improved, and Kaffirs continued to rise; Free State Geduld gained 7s. 6d. to 83s. 9d. on American buying.

THE MONEY MARKET

THE discount houses, which would like to recoup at least part of the loss caused by the increase in Bank rate, are naturally anxious to keep the margins on the new bills they take up as wide as possible. They therefore left their common bid unchanged at £98 6s. 4d. at last Friday's Treasury bill tender. The outside bidders, who took the bulk of the bills in the previous week's tender, reduced their bid, and the average rate of discount rose by 6.11d. to £6 14s. 3.33d. per cent, while total applications fell substantially by £41 million to £386 million. As a result the market was very satisfied to receive 44 per cent of its application compared with 28 per cent in the previous week.

Credit has become somewhat tighter for the discount market in the second week after the Bank rate change and the rate for overnight money has hardened to 6-6⅛ per cent. The authorities provided fairly large amounts of help through the special purchase of bills on either side of the Bank holiday, but on Wednesday conditions improved slightly. Turnover of bills has been moderate, with the banks taking late October bills at 6⅜ per cent.

APPOINTMENTS

EXPERIENCED CHARTERED ACCOUNTANT FOR FAR EAST

Price Waterhouse & Co. (Malayan Firm) requires experienced chartered accountant for managerial position in MALAYA or SINGAPORE. Terms according to age and experience but are attractive and adequate to provide comfortable standard of living and margin for saving. Passages for successful applicant and his family paid both ways: provident fund. Applicants for this post should have had at least five years' experience in professional firm since date of qualifying.

Normal initial contract three years with six months' leave on full pay at conclusion (three months if not returning to firm). Excellent prospects for further advancement for suitable candidate. A partner of the Malayan firm will shortly be in London to interview applicants.

Replies with full particulars to Price Waterhouse & Co., 3 Frederick's Place, Old Jewry, London, E.C.2.

MINISTRY OF TRANSPORT

CHAIRMAN OF TRAFFIC COMMISSIONERS FOR PUBLIC SERVICE VEHICLES (SOUTH WALES TRAFFIC AREA)

Applications for this pensionable post, with headquarters in Cardiff, are invited from men and women at least 40 on December 1, 1960. The Chairman of Traffic Commissioners also acts as Licensing Authority for goods vehicles; his duties include presiding over public sittings and hearings, determining applications for licences to operate road passenger and goods services, and licensing drivers and conductors of public service vehicles. Candidates must have had responsible administrative or other experience qualifying them for these duties. The salary of the post is £3,400. The successful candidate will be asked to take up appointment as soon as possible.

Write to Civil Service Commission, 6 Burlington Gardens, London, W.1, for application form, quoting S.660/61. Closing date September 1, 1961.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER in SOCIAL ADMINISTRATION. The person appointed will be required to undertake research in Social Administration and to assist in the supervision of practical work, as well as in the ordinary teaching duties of the Department. Duties to commence on October 1, 1961. Salary on a scale £1,050 to £1,850 per annum with membership of the F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than August 31, 1961, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

AN international food manufacturing and distributing group requires an assistant in the Marketing Adviser's department of its Head Office in London. The person appointed will be required to help in the compilation and interpretation of statistical data. A Degree and a knowledge of languages would be an advantage. Salary will depend on age and qualifications; the prospects are good.—Applications to The Personnel Officer, Liebig's Extract of Meat Company Limited, Thames House, Queen Street Place, London, E.C.4.

UNIVERSITY OF AUCKLAND
NEW ZEALAND

ASSOCIATE-PROFESSORSHIP IN ECONOMICS

The Council invites applications for the above-mentioned post. Applicants should be qualified to teach in the fields of economic theory (including the history of economic thought) and mathematical economics.

The salary is £2,250 per annum, and an allowance is made towards travel and removal expenses.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in New Zealand and London, on September 15, 1961.

MARKETING DEVELOPMENT MANAGER

We are looking for a really good marketing man to fill the newly created post of Marketing Development Manager. As one of the leading companies in the telecommunications and electronics field we manufacture an unusually wide range of products, from semi-conductors to comprehensive communication systems. We plan to expand considerably and for this reason are strengthening our Management team.

The Marketing Development Manager will be responsible for organising the assembly of that information which will be necessary to enable him to assist the Director of Marketing in the formulation of the Company's marketing policies. He will also be required to advise the Company's sales organisations on their marketing techniques and procedures.

The ideal candidate would have had practical sales experience—preferably in the electronics or allied industry—and be fully conversant with modern marketing methods and planning procedures. We are prepared to pay a good salary for the right man. Minimum age 30.

If you think you might have the qualities we are looking for, send a description of your history (in strict confidence), quoting Ref. E/16, to

A. G. P. Elliott, Personnel Director,

Standard Telephones and Cables Limited
Connaught House, 63 Aldwych, London, W.C.2.

FEDERAL GOVERNMENT OF RHODESIA AND NYASALAND

VACANCIES: SENIOR STATISTICIANS

The Federal Department of Census and Statistics offers to suitably qualified graduates three-year contract posts as Senior Statisticians, fixed salary £2,000 per annum (men) £1,600 per annum (women).

Outward family passages provided and return passages for officers on contract if not appointed permanent establishment. Pensions, permanent establishment, medical aid, generous leave, low income tax, good schools, free tuition, highly developed social and sporting amenities, in excellent climate.

Application forms and further details from the Secretary (R), Rhodesia House, 429 Strand, London, W.C.2.

Closing date: August 21, 1961.

ORGANISATION & METHODS INVESTIGATORS

REQUIRED BY

KODAK LIMITED

The continuous expansion of our manufacturing departments make it necessary for us to increase our Organisation and Methods staff at the Harrow Factory.

We are inviting applications from:

INVESTIGATORS
in the 25 to 35 age group with considerable practical experience in the Organisation and Methods field.

YOUNG MEN
who would like to enter the Organisation and Methods field. They should have had experience of Works Accounting and be between 20 and 25 years of age. Full training will be given.

Advantages of joining Kodak Limited include excellent pay and working conditions, a generous Pension plan, a voluntary part contributory Life Insurance Scheme, together with a profit sharing plan. We have a five-day week of 38½ hours.

Please apply Men's Personnel Department, Kodak Limited (Factories), Harrow, Middlesex,

quoting JAW/4.

UNIVERSITY OF AUCKLAND
NEW ZEALAND

CHAIR OF POLITICAL STUDIES

The Council invites applications for the above-mentioned Chair. At present Political Science is taught only as a Stage I unit and is limited to the history of political thought. The intention is to develop a Department of Political Studies teaching all stages of the B.A. and M.A. degrees, including in its scope both the study of political philosophy and its history and the study of political institutions and activity connected with them. Additional staff will be recruited as need arises.

The salary attaching to the position is £2,800 per annum and an allowance is made towards travel and removal expenses.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close, in New Zealand and London, on September 15, 1961.

EXPORT

Good salary and incentive offered. Contributory Pension Scheme. All expenses paid. Applicants must be willing to travel extensively. Apply in writing in confidence to:

The Administrative Controller of Sales,
Ozalid Company Limited,
Langston Road,
Loughton, Essex.

APPLICATIONS are invited for a Senior research Officer to direct a long-term study of technical education and apprentices. This study, which is supported by a grant from the Department of Scientific and Industrial research is part of the National Survey of Ec Health and Development.

The appointment will be for an initial pe of three years on a scale £1,400 x £100 £1,600 plus F.S.S.U.

Applicants should be University gradu with research experience in education or app psychology; experience in the training dep ment of an industrial organisation would an advantage.

Applications should be sent before Septem 20, 1961, to:

Dr. J. W. B. Douglas,
Usher Institute,
Warrender Park Road,
Edinburgh 9,

enclosing the names of two referees.

The successful applicant will work in first place in Edinburgh and after January 1 at the London School of Economics.

FERODO LIMITED

Invite applications from qualified STATISTICIANS or MATHEMATICIANS to join an active group in the Research Division. The selected candidate, who should have an honours degree and good qualifications in statistics, will work on operational problems requiring fundamental investigations which offer great scope for original and constructive thought.

The Main Works Research Division and Head Office of the Company are situated in Derbyshire on the edge of the Peak District National Park. The salary will be dependent on qualifications and experience.

Written applications, giving full details of age, education, qualifications and experience should be sent to the **Personnel Manager, Ferodo Limited, Chapel-en-le-Frith, Via Stockport.**

FERRANTI

announce vacancies for

SENIOR SYSTEMS STAFF

in their

COMPUTER SALES DEPARTMENT

to conduct studies in the following fields:

(i) Industrial Data-Processing;
(ii) Local administrative organisations and other branches of the public service.

These studies will be conducted at a senior level and will provide ample scope for the exercise of individual initiative. The successful candidates will be based in Manchester. They should have a good knowledge of automatic data-processing and/or O. & M. experience.

Applications will also be considered from ACCOUNTANTS, STATISTICIANS, PRODUCTION ENGINEERS, etc., without computer experience but with a suitable background in industry or local government.

Application forms may be obtained from T. J. Lunt, Staff Manager, Ferranti Ltd., Hollinwood, Lancs.

Please quote reference BBS/3.

Statistics and Biometrics

Pfizer Ltd., a young Company with diverse interests in medicine, chemicals and agriculture, wishes to appoint a qualified Statistician who will be responsible to the Company's Statistician. A person with one or two years' experience in the application of statistics will be preferred. The person appointed will be involved in the application of statistics to various fields, such as clinical trials of new ethical pharmaceuticals, animal nutrition, statistical quality control, market research and operational research. The diversity of the Company's interests throws up a wide range of possibilities and calls for a wide utilisation of statistical devices, and for the provision of advice to people in a variety of professions.

Employment conditions at Pfizer are first-class, and the situation of the plant in East Kent offers a variety of attractive places in which to live.

Please will those who are interested apply to the

Personnel Officer (Research), Pfizer Ltd., Sandwich, Kent.

THE Pfizer GROUP
CHEMICALS · PHARMACEUTICALS · VACCINES
AGRICULTURAL & VETERINARY PRODUCTS

Successful candidates, who will receive training in building society work, will be required to carry out research in office organisation and must be capable of compiling reports and procedures manuals. Salary at age 28 will be not less than £1,000 per annum. Salary scales are progressive, and there are excellent opportunities for advancement. The Society has its own Superannuation and Sickness Funds. Applications, with details of age, experience and qualifications, to the **Personnel Controller, Co-operative Permanent Building Society, New Oxford House, Bloomsbury Way, London, W.C.1.**

Marketing Department of the Thomson Organisation

We have two important new opportunities in this freshly established department of the Thomson Organisation, a company with world-wide and all-embracing interests in all forms of media.

Market Research Executive

A young man or woman with active experience in the execution and control of market research studies. Experience in media studies would be of particular value.

Economist

A young man or woman who has the ability and experience to study and report on market trends. Must have commercial acumen and be able to write clearly and to the point.

The persons filling these positions will have opportunities to develop substantial responsibilities and to make important contributions to the planning and profitability of this company. Prospects are immensely exciting for those whose abilities measure up to the work. **PLEASE NOTE:** We will interview only those who pay us the compliment of writing a lengthy and lucid letter, setting out in full the details of their educational background, business experience, salary record, interests and ambitions.

Reply to: The Manager, Research & Promotion Department, Thomson Newspapers Ltd., 200, Gray's Inn Road, London, W.C.1.

H. & R. JOHNSON LIMITED

ACCOUNTANT

required by large firm of ceramic glazed tile manufacturers to be responsible for the development and production of cost accounts and for the control of statistics. Age 25-30 years. Previous practical costing experience essential. Salary according to experience; non-contributory pension scheme.

Please apply in writing, stating age, qualifications and experience, to the Secretary, H. & R. Johnson Ltd., Highgate Tile Works, Tunstall, Stoke-on-Trent.

ADMINISTRATION MANAGER responsible for Accounting and Administrative functions of factory employing 600 people and engaged in precision engineering of aircraft accessories. The position calls for the ability to provide a complete and virile management accounting service to an expanding Company situated in North West London.

A standard cost system is in operation.

The Company is a member of an old-established Group of Companies and the position carries an attractive starting salary; Pension and life Assurance benefits.

Apply in confidence to Box 1538.

LANCASHIRE COUNTY COUNCIL

RESEARCH ASSISTANT required in the Planning Department at PRESTON. Commencing and maximum salary according to qualifications and experience within range £645-£1,310 per annum.

Applicants should possess a good honours degree in economics, geography, sociology or related subjects and should be interested in problems of industry, population and housing.

Applications, giving age, qualifications, present appointment, experience and two referees, to the County Planning Officer (S), East Cliff County Offices, Preston, by August 29, 1961.

EDUCATION; BUSINESS AND PERSONAL

EXPERT POSTAL TUITION

for Examinations—B.Sc.(Econ.), Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical non-examination courses in business subjects.—Write to-day for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2).

THAT Computer is now available *here!*

From today you can choose a computer that is already in use by many businesses similar to your own.
After its dramatic success in America, where it is now at work for *leading computer users in academic,* commercial and industrial fields, the H-800 is now available in Europe from Honeywell Controls Limited.

The H-800 can be delivered within 15 months; sooner in certain circumstances.

AUTOMATIC ERROR CORRECTION

Honeywell's exclusive data-protection principle, called Orthotronic Control, makes it possible to reconstruct lost, damaged or garbled data instantly and automatically. This feature is standard.

PARALLEL PROCESSING . . . FOR I.D.P.

The H-800 has been specifically designed to allow the complete integration of all an organisation's data processing functions. Up to eight different jobs may be handled at the same time. For example the H-800 will answer a random enquiry, bring an inventory up-to-date, process a payroll, make a complex engineering calculation, make a special analysis, and handle *three* other jobs—*at the same time.* It uses a programming language made up from simple words . . . detects and corrects its own errors without human intervention . . . expands with the user's needs and can never be outgrown.

'ONE OF THE BEST EXAMPLES OBSERVED'

A Honeywell scheme for Integrated Data Processing was singled out in the report made by last year's O.E.E.C. mission to America as 'one of the best examples' of a plan for the integrated flow of data through a manufacturing organisation.

ENQUIRIES

Honeywell Controls Limited have established in London an Electronic Data Processing Division, and a Computer Service Bureau is being established, at which you will be able to see and use the Honeywell system. Enquiries should be addressed to: Electronic Data Processing Division, Honeywell Controls Limited, Greenford, Middlesex. Waxlow 2333. *Branch Offices in principal towns and cities in the United Kingdom and throughout the world.*

INTERNATIONAL

Drang nach Westen

The West cannot avoid dealing with east Germany. Its boycott policy is not fruitful; instead the West should use its (severely limited) influence against the intransigent hostility that now prevails and work for a more temperate east German regime (p. 687).

For Herr Ulbricht last Sunday's systematic closure of all doors between east and west Berlin had a defensive character; to Berliners *it looked like an attack* (p. 711).
Sturm und Drang—p. 693.

Zollverein

France has many answers to Britain's many questions about joining the common market (p. 714).

United States: The European common market is expected to stimulate both American exports and American investments abroad (p. 706).

African countries are talking about forming their own *Zollvereine* (p. 699).

Untergang des Abendlandes

Cairo: President Nasser's revolutionary energy has been recharged and redirected to the problems of social change in his own country. This should not upset the West as much as it has upset the Communists (p. 690).

New York: Britain and America should say at the United Nations on Monday that France ought to discuss the eventual evacuation of the Bizerta base (p. 694).

Salisbury: Black men and white women will soon be legally allowed to get together. Dr Banda still wants to part company with the federation (p. 695).

Dr Banda's victory—p. 713.

Nairobi: The men near the top in Kenya are fighting for position around the newly-free man right at the top, Mr Jomo Kenyatta (p. 712).

Wo die Zitronen blueh'n

- The United States answer to Castroism, as revealed at Punta del Este during the past fortnight, is "*controlled revolution*" *in* Latin America (p. 705).
- The pocket-sized revolution that failed in Argentina on August 12th is a reminder of the tender youth of parliamentary government in many of the countries represented at Punta del Este (p. 699).
- President Kennedy's foreign aid programme has been attacked by a *Blitzkrieg,* but may survive (p. 707).

Tochter aus Elysium

- The eastern seaboard of the United States has a new, much-needed national park (p. 710).
- American students are studying abroad in ever-increasing numbers, under the auspices of their own colleges (p. 708).

WORLD OIL pages 723 to 729

HOME

JOINING UP

Gas: the case for a national board to develop new processes (p. 731).

Housing Associations: the prospect of government loans could be a boon for the middle classes (p. 691).

Churches: Roman Catholics in Britain extend a hand of friendship to other denominations (p. 696).

Europe: resistance movements are mobilising inside the Tory and Labour parties (p. 694).

Consumer Goods: soap, shoes, shops and take-overs (p. 740).

Dr Beeching's talent hunt has unearthed three well-paid recruits for British Railways (p. 734).

CUTTING DOWN

The trade unions are lining up for an attack on the Chancellor's wage pause (p. 693).

The Treasury's ban on some foreign investments makes little sense (p. 733).

The collapse of Overseas Aviation Ltd. has made other small airlines watch their credit rating (p. 736).

A profitless contract for a profitless ship could be Cunard's contribution to North Atlantic prestige (p. 738).

BREAKING THROUGH

Overseas trade is back in the black—July's figures produce a true *balance on the right side* (p. 735).

Retail trade reacted gaily to the Chancellor's threats of financial stringency (p. 738).

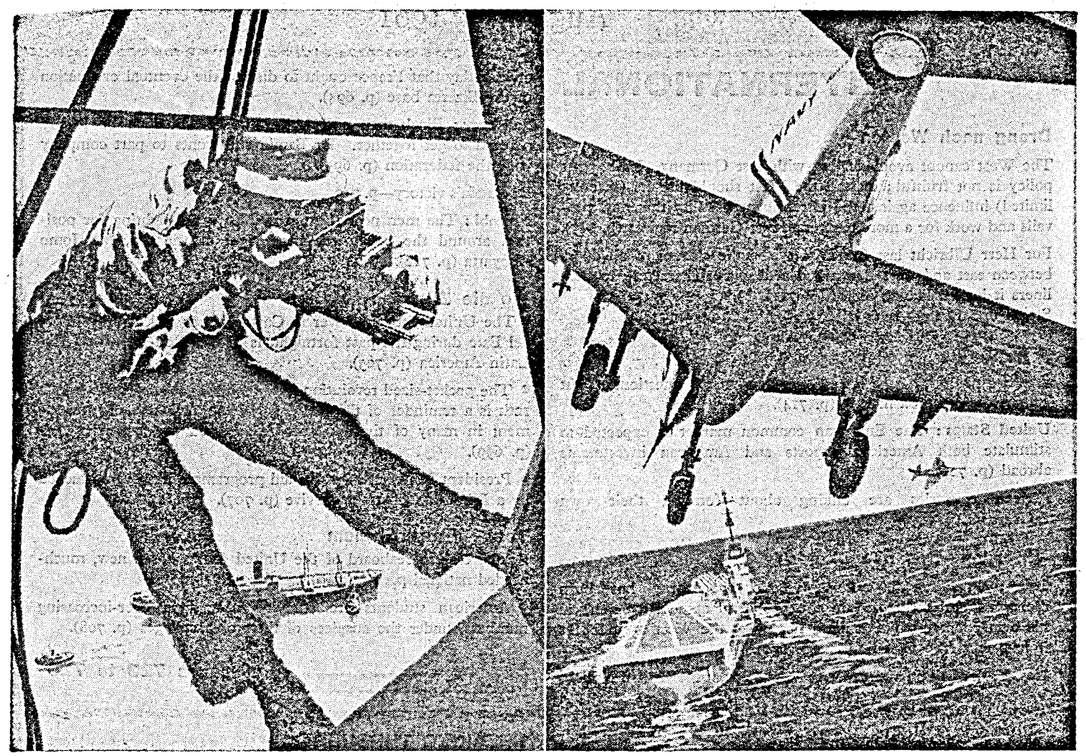
Prisoners are to pass their time in jail more profitably, for themselves and for the economy (p. 698).

Industrial output—an increase observed (p. 734).

WORKING OUT

Rating valuation: Scottish experience gives some hints for the English operation in two years' time (p. 689).

Problem children: the rise in dilinquency is matched by a fall in those in official care, as the value of the family becomes more fully recognised (p. 698).



Where to save: the rise in Bank rate gives new opportunities to *savers of all sizes* (p. 735).

PULLING APART

Stepney's slums are ripe for demolition: a turbulent priest has done a noble job of exposure (p. 720).

Roads in London (p. 698) and at Exeter (p. 721) are proving grossly inadequate for traffic.

Detailed contents on page 687

One of the world's great names in the design and manufacture of non-destructive testing equipment

Two Budd advances, PhotoStress and MetalFilm strain gages, give many and diverse industries valuable previews of how their products—ranging from bridges to jets—will stand up to stress, fatigue and hostile environments. PhotoStress shows live stresses and strains in meaningful color patterns that sharply define stress distribution patterns in a wide variety of parts and structures. MetalFilm strain gages translate stresses and strains into electrical impulses for accurate stress analysis recording and study. These are but two of many Budd-developed milestones in non-destructive testing and research. Budd's work in industrial quality control is a natural outgrowth of its pioneering skills in engineering . . . metallurgy . . . tooling . . . welding . . . research . . . testing . . . production and development for international industry. These skills place Budd high among the world's 250 largest industrial concerns. Write for our Annual Report. The Budd Company, Phila. 32, Pa., U.S.A.

We make it strong and simple

A great deal of thought and research go into the design of Ellison Switchgear in order to obtain that simplicity and robustness so necessary to ensure reliable service and ease of maintenance. Like the circuit breaker contact illustrated, every part benefits from careful thinking plus the traditional craftsmanship for which we have been noted for over half a century.

Trouble-free service without the need for frequent maintenance—these are the reasons why so many of our orders are from customers of long standing. They know that Ellison Switchgear depreciates only in the balance sheet.

We manufacture high and low tension switchboards, heavy duty fuse-switchgear, oil- and air-break circuit breakers and motor control gear. We provide a comprehensive consultancy, after-sales and spares service and are the owners of an A.S.T.A. authorised testing station.

ELLISON SWITCHGEAR

New leadership in the world of aluminum

What you see is a cluster of screens. But behind the shop window is a thriving business with the accounting of eleven branches looked after by Burroughs.

TABS ON THE TELLIES

VERNON COOPER LTD., radio and TV dealer, has eleven shops in and around Nantwich.

PROBLEM — how to keep tabs on all the sets being bought on HP (something like 60% of all TV sets!)

SOLVED — with eleven *Burroughs Cash Registers* and one *Burroughs Sensimatic* accounting machine.

METHOD — copies of receipts for HP and Rental payments are sent every day from branches to main office, where details are posted on the *Sensimatic*. An accurate record of HP accounts is immediately available and letters are forwarded regularly to customers in arrear.

RESULT — Mr. Cooper bought more Burroughs machines for other operations — rental accounts, stock control etc. — and now has complete up-to-the-minute information on every branch of a highly efficient business.

SIMILAR PROBLEMS ARE BEING SOLVED EVERY DAY WITH BURROUGHS MACHINES

DECIMAL CURRENCY! All Burroughs machines can be converted to decimal currency

Birthe couldn't hear a note

Birthe lives in Denmark. She is ten years old and studying music as an extra subject at her school. In fact, she hopes to graduate at the Royal Academy of Music in Copenhagen when she has finished her general education.
Music has always meant a lot to Birthe. But when she was only three years old it seemed she might never hear it again. After a severe case of measles, she developed chronic inflammation of the middle ear. As a result she became almost completely deaf. Only after a long course of penicillin injections was she cured. Birthe was lucky.

Only 10 years earlier, before Sir Alexander Fleming's great discovery, her hearing might easily have been affected for life. Nowadays the synthesis and mass production of antibiotics is carried out by chemists all over the world. At Leo Pharmaceutical Products in Copenhagen, one of the largest chemical works in Europe, sterile oil-free air for the cultivation of penicillin and streptomycin is provided by Atlas Copco compressed air equipment. And this is only one of the great enterprises in which Atlas Copco & Sandvik Coromant equipment plays a part. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

Berlin

Herr Ulbricht's Deserted Village

SUPPOSE (purely for the sake of argument ; this is not a new western plot) that each of the now communist countries of central and eastern Europe was divided into an eastern portion, run by the communists, and a western portion with a society conducted on western lines ; and that their capitals were divided similarly. In all the People's Republics there would be families packing their modest bags and sneaking off to the capital, while families in the capital would be calling for taxis to take them to the western suburbs, leaving their furniture to be auctioned off by the authorities.

Strong young men, graduating from the free technical colleges, would do a quick calculation and slip off to their national equivalent of Düsseldorf to look for a well-paid job and their coveted make of motor-scooter. Middle-aged indispensable men in specialist positions, blackguarded by party workers to do whatever they did on more orthodox lines, would give them an old-fashioned look that would convey to the party officer that he should take care, or there would be another key post to fill in a hurry. The general tone of the communist societies would be insecure, ordinary non-political man would be insubordinate, the political élite uneasy and aggrieved.

In short, what has caused the east Germans to flee to the West in such huge numbers (the gross total since the beginning of 1949 is 2,600,000) is not anything particularly hard about east German life, or peculiarly malignant about the east German regime, by the standards of the communist world ; the other eastern European peoples would do the same if they had the same chance. The east Germans have been leaving because, unlike the other Europeans under communist rule, they have had somewhere to go and an open manifold, Berlin, through which to get there.

Herr Ulbricht's government cannot deprive discontented east Germans of the fact that, unlike the eastern Europeans, when they do get away to the West they have a refuge waiting for them, where they are received as full nationals, with the rights of citizenship, residence, and labour. What it could do was to close the Berlin manifold, so that in future only the brave, the cunning, and the specially lucky will be able to leave. The unaccountable thing had seemed to be that the east Germans had not closed this outlet long ago, since they have long had the physical power to close it. As it appears, the communist powers must have understood that to scrap a major vestigial feature of four-power Berlin, by stopping free movement within the city, would be a grave step, with international consequences that might involve them all.

When Herr Ulbricht's government at last deliberately took the step on Sunday morning, August 13th, it gave as its authority a statement by the Warsaw Pact governments, drafted, presumably, seven or eight days earlier when the oligarchs of the communist alliance met in Moscow, though it was not disclosed at the time. According to Sunday's announcement from east Berlin, the Warsaw Pact governments addressed to the German Democratic Republic

> a proposal to establish such an order on the borders of west Berlin as would securely block the way to subversive activity against the countries of the socialist camp, and would establish reliable supervision and effective control around the whole of west Berlin, including its frontier with Democratic Berlin.

How much enthusiasm the eastern European governments put into their approval of this Moscow statement is a matter of speculation. On the one hand the West,

by refusing to recognise the Oder-Neisse line and weakly condoning west German agitation about East Prussia, western Poland, and the Sudetenland, leaves them no choice but to subscribe to the central argument that the security of the east German state, and their own security, are one and the same thing. On the other, they are not anxious to draw the attention of their own peoples to the use the east Germans have been making of their privilege of easy escape; and some of them share the world's alarm lest heavy-footed behaviour in Berlin may lead to war. Thus the passage just quoted is followed by a disclaimer of any idea of interfering with western traffic to and from Berlin. Even so, *Le Monde's* correspondent in Warsaw has remarked that the Poles did not publish the Moscow statement till Monday, and that when they did they attributed it to a Berlin source, as if hinting that responsibility lay there.

HERR ULBRICHT, by contrast, has been meticulous in pinning the higher responsibility on his allies collectively. His own government's statement of last Sunday is profuse both in reminders to its eastern neighbours that if the German Federal Republic managed to extend its frontier to the Oder, they would be next for the chopping-block; and in assurances to the West that its traffic with west Berlin is not being interfered with. The arrangements for strangers (other than "revanchist politicians and agents of west German militarism") crossing from one part of Berlin to another remain as they were. It is for the people of Berlin, and for citizens of the east German state, that the position is brutally changed. First, the theory: east Berlin is the capital of the German Democratic Republic, and

> such control is to be introduced on the borders of the German Democratic Republic, including the border with the western sectors of Greater Berlin, as is usual on the frontiers of any sovereign state.

Next, the detail: while west Berliners may enter east Berlin on showing their identity cards, east Berliners and east Germans may not cross into west Berlin without a special permit. "Reliable safeguards and effective controls" are to be established on the west Berlin borders; and, before the announcement was made, a massive operation was mounted in the small hours of Sunday to put this into effect, with all the apparatus of fencing, wire, trenches, and *chevaux de frise*, and with a show of police and military force directed more, one supposes, against the regime's own subjects than against the indignant west Berliners.

Much of the preparatory work for this had been done in past years. It was a quick operation this week to reduce the number of crossing-points to a dozen or so, all effectively controllable. If it was done with an unnecessary display and fuss, this was probably deliberate, to impress all concerned with the finality of the division of Berlin. An explanation is provided for the unusual rise in the refugee figures in the last week or two: government security cannot have been good enough to stop some east Germans getting wind of what was afoot, and deciding to get away while they could. Although registrations at the west Berlin refugee centres stayed high this week, this does not mean that the new controls are not effective; our special correspondent's depatch on page 711 suggests that the flow of new refugees has indeed been cut off.

All this may play a part in the round of east-west exchanges about Germany that still looks inevitable before the year is out. If this week's work is to be final, the West has to face the fact that west Berlin's role in the world has been brutally cut down. As an escape hatch west Berlin has been put out of action. West Berlin as a show-window of western lights amid socialised greyness will not serve much purpose if the people who live under communism are not allowed to tread there. The professors from Greifswald and Jana will no longer be able to exchange ideas with their old western colleagues in the Kurfürstendamm cafés of a Sunday afternoon. Many things will have passed. The idea that west Berlin is a political asset which the West must not negotiate about, because negotiation could bring no gain but only loss, looks less plausible than it did. True, west Berlin remains a source of trouble, annoyance and expense to the communists; does this automatically make it a western political asset? What the western governments are in fact left with in Berlin is their responsibility for the lives, the freedom and the interests of the 2,200,000 west Berliners. This is the reality, and they cannot escape or evade it. How can they best discharge it?

ONE thing that is obvious is that the interests of west Berlin are not going to be served by the kind of hasty countermeasures thought up this week in the heat of the moment: to make difficulties for west Germans who work in east Berlin; to extend to west Berlin the west German prohibition of the communist party (which would cause the Social Democrat outpost in east Berlin to be suppressed); to retaliate against inter-zonal trade; or to stop east Germans from visiting western countries. That the west Berliners should be impatient for action is understandable, but if all the ideas are bad ones, their impatience will be better contained. These ideas will all tend to cut off east Germany, and east Berlin, more thoroughly than ever from the western world. This has usually been Herr Ulbricht's personal policy. It is the course best calculated to make the east German regime more extreme and intransigent than it is already, and the most likely to lead in the end to west Berlin, too, being cut off.

The western interest is opposite, and has not been changed by last week's events. East Germany, for all that it is governed by barren and on occasion brutal doctrinaires, is not an automaton but a country whose attitudes are determined by a complex of internal and external forces. The treatment it receives from the western governments is only one of these many forces; however, to the severely limited extent that the West can influence east Germany's evolution, it should use its influence against the head-on intransigent hostility that now prevails there, and in favour of a more temperate regime, less introspective, more open to the world—which would also mean, in its peculiar circumstances, more German.

East Germans do exist, some of them communists, some of them potentially influential, who would favour such an evolution. They have a latent national force to call on, since any real movement towards German unity, which alone can restore Berlin to its proper status as a great city, can lie only along that road. Willy-nilly, the West cannot avoid dealing with east Germany. The boycott kept up for the past twelve years is one form of dealing; it is not a form fruitful in political or diplomatic success.

Ratepayers' Reckoning

The result of the Scottish revaluation, and Mr Brooke's lively fears in England, raise some awkward problems for the Government and local authority finance alike

HOUSEHOLDERS in England and Wales have not woken up yet to the fact that in two years' time their affairs (and conversation) are going to be dominated by the next revaluation of property, now assessed at 1939 rental levels, and the effect this will have on the local rates they pay. Scotland has had the experience this year: since the last major shake-up in rating north of the border (apart from the simple abolition of owners' rates) goes back to the first world war, and the last complete revaluation for rating purposes to 1856, the present manifestations of alarm and despondency are neither unexpected nor entirely unreasonable. Glasgow alone has produced 30,000 appeals and the county of Renfrew, just outside the city, 50,000. These are all nominally due to be settled by October 31st, but it has been obvious that some will drag on until the end of the year and the Secretary of State may even have to grant extensions until March: he has sternly and rightly resisted the suggestion by a number of local authorities that the revaluation should not take effect until next year anyway.

By bringing themselves up to date in one swoop, instead of pausing at 1939 values, the Scots have not only run into problems of their own but have thrown up issues that are going to affect the rest of the country as well. There is plenty of trouble looming ahead despite (and even because of) Mr Brooke's new Rating and Valuation Act. All this should swell the support for those who want to reopen the whole thorny and hoary question of how best to finance local government services, including such means as local income tax, site values rating and the rest. Ministers who are plainly reluctant to impose revaluation equitably upon all ratepayers under the present system ought now to be seriously canvassing the alternatives.

MR BROOKE'S chief worry has been that the 1963 revaluation will hit the householder hardest of all. That is why he has taken temporary powers under the new act to deduct whatever percentage he thinks fit from the rateable values of private dwellings when the revised valuation lists appear. These deductions will be made to suit the particular circumstances of every county and county borough in the country. In short, the minister himself can write the valuations for the ensuing five years. This precaution has been inspired by calculations which have (unofficially) put the likely rise in the rateable values of private dwellings in parts of England at up to 300 per cent. Since the revaluations of 1963 and 1968 are liable to coincide with general electoral seasons it is not beyond credibility that the wind will be tempered to supposedly shorn lambs of one kind or another for the foreseeable future. Rating and valuation bills, as Mr Brooke knows as well as anyone, have tended to become increasingly frequent: by 1968 anything could happen.

In fact, Scottish householders have done rather well this year. Their valuation has risen on the average by only 33 per cent (council houses by 37 per cent). The biggest outcry has come from industry, which has been presented with an increase of 163 per cent. This seems by no means unreasonable: it reflects many of the anomalies which have persisted up to now. It is certainly high time that firms which incurred new valuations (for example, by moving into new towns like Glenrothes) should now see their competitors brought roughly into line. But Scotland does possess more than its share of weak and decaying industries, whose eventual replacement is thoroughly desirable but whose immediate closure would merely add to the country's hard core of unemployed. The most obvious difficulties concern the shipyards—and whatever is done on Clydeside this year is clearly going to be seized upon by Tyneside and Merseyside afterwards.

The shipyards raise two problems. Valuation itself is difficult: no technical system for dealing with them is really satisfactory, and the grounds for appeal against individual valuations probably leave room for some hope of adjustment. But the yards also believe themselves badly done by in having to accept the full abolition of industrial derating when their tenders for new work are already calculated less for profit than to maintain employment. It happens that the Secretary of State for Scotland has left himself a ready loophole on this point. Mr Maclay's declared position is that industrial re-rating will apply in Scotland in 1963—or soon thereafter. If this is not an assurance to the shipyards, in particular, that something will be done for them, it is hard to see what else it can be. But if Mr Maclay is kind-hearted no one need suppose that Dame Irene Ward and the shipyard lobby will ask for anything less from Mr Brooke, and the queue of supplicants is unlikely to stop there. Once the door is half-open for special cases of this kind it takes good ministerial muscle to slam it shut again.

The Scottish revaluation also raises serious doubts about the present method of distributing Exchequer equalisation grants to local authorities. In particular, Glasgow's valuation has risen by only 42 per cent and Aberdeen's by 37 per cent. This seems to reflect the large proportion of poorer property that they possess. They are now liable to claim Treasury aid to the tune of £528,000 (previously nil) and £474,000 (previously £2,789) respectively. Equalisation grants go to curious places, including large cities, in England as well: Glasgow's saving of 6d. on the rates is not unjust as the system stands. It is highly questionable, however, whether a city of a million people, with considerable resources and capable of finding some of this extra half a million pounds with little difficulty were it to introduce an element of rationality into its housing account, should properly become such a heavy charge on the country as a whole. Even a fraction of the hand-out to Glasgow would make all the difference in small country burghs of limited means that are now liable to lose the grant altogether. A thorough investigation is required on both sides of the border before the system is due for renewal in 1963.

One of the primary objects of any grant system should be to concentrate wonderfully the minds of those local authorities whose policies, particularly on council rents, have veered

wholly out of line with economic realities. Glasgow now takes 41 per cent of its housing expenditure from the rates and 29 per cent from grants. There are already signs inside some Scottish local authorities that they intend to do as little as possible about rents and allow rate poundages to remain unnecessarily high under the new valuations. The soaring cost of all local government services (including teachers' pay) suggests that even if rate poundages come down this year they will be very close to their old levels next time. This is certainly not the object of the revaluation exercise, and Mr Maclay will have to bring more of his recalcitrant councils to heel if the situation is not to get wholly out of hand. The Labour-controlled authorities' preference in Scotland for heaping the local services on the private householders' shoulders is beyond all limits of what would be tolerated in comparable towns in England and Wales. The Committee of Public Accounts recommended at the beginning of the month that consideration should be given to excluding from equalisation grant calculations all housing deficits caused by unreasonably low council house rents. There are arguments against tinkering with rating deficiency payments if it is at all possible to avoid it. But if the rating system is to continue to work, and be accepted by industry and householders alike, it is essential now to iron out the anomalies that have persisted for years—and prevent unnecessary ones creeping in by the operation of the revaluation process.

Nasser's Socialist Heresy

The Egyptian attempt to mark out an Arab road to socialism has angered the communists more than the capitalists

On its ninth anniversary, Egypt's revolutionary government took a series of steps which, if pursued, will make good its long abused claim to be socialist. A list of presidential decrees, announced on July 19th, gave the state control, in whole or in part, over most of the major industrial and financial concerns in the United Arab Republic, and, furthermore, made it improbable that anybody in either region can continue to be really rich. It would be beyond nature to expect any well-to-do Egyptian or Syrian to be happy about any of this. But, so far, the most open, if not the most anguished, criticism has come from the communist press in Beirut. Through the medium of the Lebanese communist party, the wrath of the orthodox against the heretic has come down on President Nasser's head.

A spatter of return fire from Cairo prepared the way for the big guns: on August 4th, the editor of *Al Ahram*, Mr Hassanayn Haykal, published a massive and cogent comparison between communism and Arab (more accurately, Egyptian) socialism. He proclaimed no intention of attacking communism, and went on to point out Arab-communist differences. By the time the seventh difference had been reached, communism had been damned for its violence, its ideological rigidity (with specific reference to President Tito) and its lack of respect for the individual. Mr Haykal presented the theory behind the socialist decrees as a blend of liberal aspirations:

> Arab socialism regards individual ownership as a right, which must be promoted and expanded . . . the individual is the foundation of the social structure and the state is an apparatus of the people set up to achieve and guarantee justice . . . sacrifice, Arab socialism says, should not exceed the limit . . . we call for work but we refuse conscription.

Moscow has not yet publicly responded. But, eventually, all President Nasser's sins in the eyes of the Soviet Union may be absorbed into this major and capital crime of setting himself up as the exponent of an alternative way to socialism, one that needs no political guidance from Russia.

The United Arab Republic is now unmistakably on this path. The move towards state ownership, which started with British and French concerns in 1956, has been accelerated over the past year; the new decrees carry it a significant stage further. The nationalisation of banks and insurance companies has been extended to Syria and completed in Egypt; several large textile and mining companies have been taken over completely; some 300 industrial concerns have been compelled to sell a half-share of their capital to the government. Compensation is in the form of 15-year bonds, paying 4 per cent interest. No man may hold more than two directorships at once, and his shareholding is limited to £10,000. A steeply graded surtax system allows a top net income from all sources of £5,000 a year. The maximum permitted landholding, formerly 200 acres, has been halved; about 3,000 farmers will lose a chunk of their land. Working hours have been reduced so that jobs can be found for more people. A quarter of all company profits is to be distributed to employees, either directly or by way of social services.

This is what has been decided. The administrative problems now facing the government are self-evident. Wednesday's move to strengthen the central cabinet and demote the regional cabinets to executive councils makes a *de facto* situation *de jure*; the decision to move the headquarters of the Syrian council from Damascus to Cairo is in the interests of centralisation but not necessarily of efficiency. The country's economy, already in a bad way, could collapse about the ears of an inefficient bureaucracy. Cairo's hope is that as many as possible of the private business men will agree to stay on in their old firms under new conditions. The efficacy of the tax laws is open to sceptical doubt; the share of profits handed out to the workers will depend on whether or not any such profit is declared. Some redistribution of incomes may be a necessary and meaningful step, but it is far more important that Egypt's national income should increase at least to keep step with the growth of population. Its economic growth could be paralysed if the Soviet Union decided to go slow in meeting its commitments under the development programmes.

But these and other hazards should not cloud the blazing fact that the United Arab Republic's revolutionary momentum has been restored. President Nasser's revolutionary energy, which ran badly off course during the late nineteen-fifties, has now been redirected to the problems of social change in his own country. If the West, resenting the nationalisation measures, sits back to enjoy a coming economic muddle, it may find itself sharing its smirk with the communist world. The reaction of the Arab communist parties, together with earlier warning grumbles from Moscow, indicates that the communists, at least, have recognised President Nasser's brand of socialism as one of the more formidable barriers to the Soviet Union's political penetration of the Arab world, and possibly of the African world too.

Room in the Middle

Cooperative flats at Regent's Park

Are Mr Brooke's new measures to encourage non-profit-making housing associations likely to work?

"There is an undoubted need for more houses to rent among people who would be able and willing to pay a full cost rent. Today, this need is largely unmet." Thus Mr Henry Brooke during the Commons debate on his new Housing Bill: a chorus of agreement should go up from a nation where the average household's combined income is now approaching £20 a week. Although a new, massive group of people could now afford to rent even brand new houses on commercial terms at somewhere around £5 a week, and although this would then widen out the market for renting secondhand houses as well, Government policy has hitherto succeeded in blocking up the supply of them. Between the postwar subsidised council house at perhaps £2 10s. a week for those who are able to wait in a long queue, and the grander dwelling for rent at £10 a week and upwards for those who are able to pay, there is a yawning gap. Ever since Britain slipped into rent control over working class housing by what was at first called a "Wartime Restrictions Act" in 1915, it has been assumed that for commercial landlords to build new houses for rent to ordinary people would be a mug's game. And as landlords get vacant possession even of existing houses, they tend to sell them off and put their money into more lucrative investments. A recent survey by the Rowntree Housing Trust suggests that such sales may now be reducing the stock of houses for rent by over 2 per cent—or 100,000—a year, and that the Rent Act of 1957 has been quite insufficient to stop this trend.

The shortage of houses for rent makes for congestion at all levels, social and economic. It prevents families that cannot raise the down-payment for a mortgage on a new house from enjoying a standard of decent housing that they could afford to rent if only such accommodation were available. It lengthens the queues for council houses, whose occupiers stay put despite a rise in their effective incomes as their families grow up and start earning—although many of them would then be delighted to pay up to £5 or so a week for something better than a council house if only they could find it. It deters middle class and skilled working class people from moving around the country, since they know that it will be almost impossible to rent a house or flat in a new area from which they might wish to move again in a few years: this is a major factor in the national lack of labour mobility, and quite possibly aggravates labour relations by denying the possibility of a change of job to skilled workers. The shortage also deters retired people, who often cannot get a mortgage even if they can afford the initial down-payment, from moving out of accommodation in industrial areas which would be occupied to better advantage by young families who now have to commute vast distances to get to work.

Since encouragement of profit-making landlordship is still regarded as politically beyond the pale, the Minister's chosen instrument for promoting building for rent is to be the non-profit-making housing association. The new bill provides for loans of up to £25 million, on Public Works Loan Board conditions, to cover part or the total cost of new houses built by these organisations. The Minister is rumoured to be fostering a shake-up in their central body, the National Federation of Housing Societies, and to be planning an increase in its annual Treasury grant of £2,500 (the federation also gets around £5,500 a year mainly from affiliation fees). This federation could now conceivably become an important social body, and it is time that the public got to know more about it.

Set up in 1935 at the instance of the then Minister of Health, to take over the housing interests of the Garden Cities and Town Planning Association, the federation descends in a direct line from the nineteenth-century trusts for providing "decent" working-class housing—the bastions of "philanthropy at 2½ per cent" whose structures (named after Peabody, Guinness, Cadbury, Fry, Rowntree and other Quakers) still stand like fortresses in the working-class centres of many

British cities. The spirit of philanthropy has remained with the federation, as the representatives of the trusts remain high in its councils: its activities in recent years have largely been in the provision of housing for groups with "special needs"—old people, coloured workers (rather unproductively), or Hungarian refugees.

The exception to this philanthropic bias has been in the case of industrial housing associations, set up by firms to house their own key workers. By setting up an association, firms were able in the years after the war to qualify for Government loans and subsidies in the same way as local authorities, and to get building licences even when other types of building were restricted. High interest rates on public loans, the abolition of building licences in 1954, and of direct subsidies since 1956, substantially put an end to this.

While the associations can still borrow up to 90 per cent of the cost of new building from public funds, and even qualify for certain subsidies, these concessions are made through the local authority as intermediary, and subject to Ministry approval—which means that they are in practice made available mainly to solve some special local need, such as housing for the old. Since the war, therefore, housing associations have so far produced only 46,715 new dwellings (of which 30,000 were built by the industrial associations); local authorities have built 2,431,000 new dwellings for rent, and private builders 1,249,000 for sale.

The non-profit-making associations have not begun to scratch the surface of the demand for ordinary accommodation for rent: an important building taken over by a tenants' co-operative here, a new block of flats built there with capital raised through a cheap loan from the local authority, are the movement's exemplary, and tiny, contributions to general middle-class rented housing. "Self-build" associations, in which a group of devoted people come together to do the actual work of building with materials purchased with a loan from a local authority or a building society, are dear to the federation's heart: but, however socially admirable, it is obvious that only a tiny proportion of people are willing to take part in them.

THE Minister's aim is far more ambitious. Under the new bill he is to by-pass the local authorities (which will, however, still be able to make loans and pass on the subsidy for houses for special purposes), and lend his £25 million directly to associations building for rent or for cooperative occupation. Some of the money, he hopes, will be put up by the members of the associations, or borrowed privately through building societies or otherwise: his aim is to prime a pump. Scandinavia provides him with a precedent. Nearly half the new housebuilding in Denmark, and nearly as much in Sweden, is done by non-profit-making private bodies, largely by (non-political) cooperatives. The British (political) cooperative movement having, incredibly, never gone into this line of business, the field here is wide open for pioneers. But where are they to come from under the new bill?

The first, and main, difficulty is going to be to find enough people with the right managerial talents and training to run such associations. It is doubtful whether non-profit-making bodies will, at first, realise just how much they must pay to secure a manager qualified to assemble sites, to find architects and contractors, and to ensure that the houses and flats, once built, are properly run—whether by tenants' committees or by the association itself. But the new proposals do at least provide a means whereby groups of like-minded people can raise the money to build in their own areas, under the harsh incentive of not being able to find anywhere decent to live. Those most likely to be helped by the offer of a cheap loan are residents in London, where high site values at present effectively prevent non-millionaires from buying land for building. These cooperative houses, however, will not be for rent to the general public: the general principle of a cooperative is that its members borrow money with which to build room which they then let to themselves.

If the bill is also to promote the building of housing for general letting, something must be done to bring in existing large bodies and private capitalists as financiers. But here the ban against the associations themselves making profits is going to be a barrier; it is hard to see why insurance companies, for example—who might well finance truly commercial landlordship in a big way—should put their money or their executives' skill into a non-profit-making activity in return for normal fixed interest rates that they can draw from industrial debentures with rather less risk and much less trouble. The building societies, too, have other uses for their capital, although they might well be willing to lend a proportion of the cost if the rest is to be made up by cheaper Government loans. In Scandinavia the trade unions find in housing an acceptably non-capitalist field for investment; but it is hard to imagine that the British unions will go as far as the Swedish building union, whose general secretary is also president of one of the country's major construction companies deeply involved in the cooperative housing movement.

One main hope is that certain large building firms are investigating the chances of sponsoring the establishment of housing associations: presumably their idea would be to provide the necessary technical and managerial services to the non-profit-making association, their reward coming in the form of a contract from the association to do the building and perhaps to provide the land. But it is doubtful whether many large firms—most of which are heavily occupied in building for private developers or local authorities—could at present spare the skilled staff for such experimental ventures.

Nevertheless, the market for new rented housing ought, logically, to be so wide that—some way or other—enterprise in Britain must soon break through and start providing it. Perhaps this new bill's encouragement for "non-profit-making housing associations" will provide the leaven, in rather the same way as the Betting Act's legalisation of "non-profit-making" bingo has started off the bingo boom, because dance halls and cinemas and clubs have found that they can cover overheads out of it. Once a boom in rented housing did begin, under the safeguards for tenants that housing associations provide, it would almost certainly become so popular that even a Labour government would not dare to keep on threatening to stop it—by measures that would make participation in these ventures actually loss-making, as private landlordship became under the old Rent Acts. In any case, the Housing Bill is to be the first item on Parliament's plate when it reassembles: the best possible result of Mr Brooke's pump-priming operation would be if, by at last providing some political security, it began to bring private builders—and the incentive of profit for them—back into the business from which so many years of rent control has driven them.

NOTES OF THE WEEK

WAGE PAUSE

White Collars, Black Looks

TRADE union opposition to Mr Lloyd's wage pause is rapidly taking shape: union representatives on the staff side of the civil service negotiating body have authorised the "taking of whatever steps considered appropriate to influence public opinion"—short of striking. Some of the civil service unions (although not those affiliated with the TUC) will be attending the conference which the National Union of Teachers is organising at the end of the month, in the hope of setting up a united white-collar front; but anything more than a few sporadic and brief strikes seems highly unlikely. The chief complaint voiced by Mr Richard Hayward for the government employees continues to be that the Chancellor has cracked down on the time-honoured system of arbitration: the Chancellor's new principle that he will fix the dates on which arbitration awards come into effect has now been extended by the Minister of Labour to wages council awards, affecting 3,500,000 employees in the private sector.

The civil service unions, like the teachers, argue that if the results produced by their wage negotiating machinery have been inflationary this has been because workers in outside jobs were getting inflationary rises ahead of them. But a rise anywhere along the line now would be interpreted as a sign that exceptions can always be made to the general rule—and almost all the unions about to slam in their wage claims regard themselves as exceptional. The railwaymen are certain to ask for a rise to restore their position vis-à-vis other industrial workers, as established by Guillebaud. Although they have not yet made their claim, it is likely to be in the region of ten per cent—which is what the drivers' and firemen's union has already asked for—and much is being made of the salaries of Dr Beeching's new assistants. The engineering unions are to ask for £1 a week, as well as a reduction of hours from 42 to 40 a week. The miners will be naming a sum early next month, probably a big one as they were not particularly pleased with the 8s. 6d. a week which they got in January.

Hayward: civil service protest

Jenkins: militant Asset

The first test of how far the manual workers' unions are prepared to go in industrial action will be provided by the unions representing the 340,000 manual workers in government industrial plants. At their meeting on Wednesday, these unions spoke up strongly about the freeze: but each union executive will take its own decision on whether or not to strike. Even the General and Municipal Workers—perhaps the most sobersided of the manual unions—have joined militant smaller outfits like the supervisory staffs (Asset) in hinting that it may come to a strike for them too. There is a danger that as Mr Lloyd's plans come out piecemeal (and with no indication that priorities will be given to the right people when the temperature grows less chilly) the positive side of his policy is being lost from sight. This makes the effective presentation, to unions, employers and public, of his ideas on future planning and policy all the more critical for the success of the pause itself.

EAST-WEST

Into Line

ONE effect of the dust kicked up by Herr Ulbricht's closing of the boundary in Berlin has been to obscure another development, just as important and much more welcome. Negotiations with the Russians about Berlin and the related problems have now graduated from a mere probability to—if both sides stay cool—a near certainty. It is not yet clear whether the western foreign ministers came to a private understanding, when they met in Paris a fortnight ago, that an east-west conference was desirable. (Their public position was that the Russians would have to change their attitude first.) What is clear, however, is that the foreign ministers agreed to get the public opinions of their respective countries into line with each other: the line being defined as a cautious acceptance of the likelihood of negotiations. This has led to the kind of shuffling that soldiers perform on being given the order to dress by the centre. The British, perhaps the readiest to talk, have been told by Lord Home that the word "negotiation" is no magic formula. The west Germans, in general the most suspicious, have been told by Dr Adenauer that he is convinced there will be talks. Mr Dean Rusk has said the same.

Of the major figures involved, only General de Gaulle remains silent. But reports from Paris suggest that the French are now putting more emphasis on the need to wait for the right moment to propose a conference than on the general undesirability of negotiations. Whether or not these readjustments eventually lead to an east-west conference depends largely on how the West reacts to this week's developments in Berlin. The British and American governments are clearly reluctant to authorise counter-measures. Their argument, which is a solid one, is that counter-measures, by raising tension still further, would make reasonable negotiations even more difficult; and that, if talks do take place, the whole matter of movement between the two halves of Berlin can be discussed then.

Paris and Bonn, by contrast, obviously dislike letting Herr Ulbricht's challenge go by without a response. The danger (quite apart from the difficulty of finding a response that does anything useful) is that France and Germany, if disappointed in their desire to do something now, might go back on their recent acceptance of the idea of negotiating about the whole problem. But, if the West now resorted to "action," the result might be a sequence of retaliation and counter-retaliation leading to an act (for instance, interference with the supply routes to Berlin) that carried matters past the point of no return.

GREECE

Balkan War of Nerves

MR KHRUSHCHEV'S war of nerves over Berlin is not only directed at the three western powers directly responsible for the city. At a Kremlin reception on August 11th he revealed that he had threatened both Signor Fanfani, the Italian prime minister, and the Greek ambassador with the indiscriminate bombing of their countries if war broke out between Russia and Nato, on the ground that both countries have Nato bases and bombs "do not differentiate" between bases, orange groves and the Acropolis. Italy does have Nato missile bases on its soil; Greece has none. What might be considered a legitimate, if

brutal, warning to one country was barefaced bullying of the other.

It is not only from Moscow that the Greeks are being fired on. They and their communist neighbour, Bulgaria, are never on very tranquil terms, because the Bulgarians refuse to discuss a settlement of their reparations obligations to the Greeks under the 1947 peace treaty, and the Greeks resist all efforts to sidetrack them from this issue. At the moment, however, the two countries are going through a particularly stormy patch. After several more or less minor pinpricks by the Bulgarians, on July 22nd at a diplomatic reception in Sofia Mr Yugov, the Bulgarian premier, unloosed an intemperate attack on the Greek government and its policies. As a consequence, the Greek chargé d'affaires in Sofia has been withdrawn, and the verbal warfare between the two countries, in diplomatic exchanges and in the press, has grown hotter.

The Bulgarians never need much excuse to attack the Greek government, especially when elections in Greece may possibly not be far off. But any manœuvres designed to unsettle and rattle the Greeks are no doubt welcome to Mr Khrushchev at a time when he is clearly trying to persuade the Greek government that it had far better not get involved in the Berlin business. A Moscow broadcast in Greek on August 14th advised the Greeks plainly to this effect; it also suggested that what it called the "anti-Bulgarian campaign in Greece" was a "sort of feint by Nato" and that the policy of the Greek leaders was "digging an atomic grave" for their country.

FRANCE

Talk about Tunisia

MONDAY should not, after all, be a too difficult and unpleasant day for the British and American delegates at the General Assembly of the United Nations, which meets for "consideration of the grave situation in Tunisia." Indeed, as M. Couve de Murville remarked on August 10th, the French boycott of the debate will serve to prevent the sort of violent exchange that does nothing to clear the air. In the calm that ought to prevail, Britain and America should find it easy to associate themselves with the general view that there should be compliance with the Security Council resolution—which demanded that Tunisia and France retire to their starting positions, and that they reconcile their difference peaceably. The British and Americans should also say that France ought to be prepared to discuss the eventual evacuation of the Bizerta base.

The West can take this line with added confidence because there is reason to believe that the French will, in the not very long run, fall in with it. President Bourguiba, of course, has advocated it from the start, and has repeatedly offered to call off his campaign for the UN debate if France would agree to start bilateral discussion on these terms. President de Gaulle was at first inclined to resist all suggestions that included the word evacuation, and to demand a Tunisian guarantee not to renew the blockade of Bizerta before he would pull his troops back to the starting-line. But it now seems to have begun to be understood in Paris that this attitude can only irritate France's allies (not that the President has ever stuck at that), anger Tunisia still further, and overload the already anxious loyalties of France's African associates. It must also have been made clear to the French by Mr Rusk and Mr Stevenson that, in their eyes, Bizerta is simply not worth the permanent alienation of Tunisia.

In fact, it seems probable that were not President de Gaulle so cussedly suspicious of the United Nations, and so anxious to save face by not appearing to concede President Bourguiba's demands under threat of the debate, talks might by now have started (there have already been private contacts). Whether they will get anywhere, when they do start, depends, as so often before, on the extent to which President de Gaulle is ready to modify his original position.

Settlers Unsettled

IN spite of the gloomy forebodings expressed when the Bizerta crisis exploded, the stream of French citizens from Tunisia seeking refuge in France is still no more than a trickle, and the greater number of those forming it are the dependents of members of the armed forces at Bizerta. But the French government is using the affair as an opportunity to prepare measures for the much larger immigration that is expected to follow Algerian independence, or, indeed, may yet result from the Tunisian quarrel. Estimates vary widely of how many Europeans in Algeria, Tunisia and Morocco might make the journey to a country many of them have never seen; but it is obviously wise to prepare for the worst, which means that the government is working out ways and means of looking after as many as half a million repatriates.

The problem, as seen from Paris, resolves itself into three parts. First, the repatriates themselves must be found lodging and employment. The question of compensation has been largely subordinated to this; the idea is to provide for the future, rather than to make up for the past. With the exception of shopkeepers (France has too many already) the repatriates will be given financial assistance, if they need it and want it, to set them up in their old avocations. Special aid will be given to help them find housing. But (the second of the government's preoccupations) the country cannot afford to let the refugees drift into uneconomic activities; nor would it be politically desirable, for them to settle an extremist, embittered multitude all in one place. Hence the power that its control of the purse-strings gives it will be used by the government to encourage the repatriates to go to the jobs and places that it thinks best.

But the third, financial, preoccupation is perhaps the most serious. A common estimate is that taxes will have to be raised by ten per cent to pay for the repatriation programme; the government is already committed to a heavy additional outlay. The French economy, it is true, continues to thrive, and the country's financial position is sounder than at any time since 1939; but no finance minister could be happy about presenting such an expensive programme to parliament.

INTO EUROPE

Resistance Groups

SIGNS of strain within both the major political parties caused by Mr Macmillan's overture to the common market are coming to the surface. Those opposed to Britain's entry are trying to mobilise and their activities are likely to increase in the months of uncertainty and negotiation ahead. On the Tory side, Mr Peter Walker, who carries considerable influence among Young Conservatives, has organised a research team to investigate the potential for expansion offered by Commonwealth markets. He hopes to publish the findings next month before the meeting of the Commonwealth finance ministers. This could be the occasion that the anti-European elements in the party have been waiting for.

A group of Labour members have also joined together to provide an information service which will publicise the disadvantages of entering Europe. This is intended as a direct riposte to Lord Gladwyn's pro-Europe campaign committee. Labour front benchers likely to be associated with the group include Mr Douglas Jay and Mr Patrick Gordon Walker, but their participation will have to be limited so as not to conflict with the official party policy of non-alignment. Mr Roy Jenkins is deputy chairman of the Gladwyn committee (an all-party body), but he thought it necessary to resign as a front bench spokesman in order not to be inhibited in his campaign.

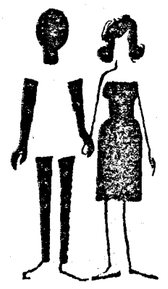
Labour disunity on the common market, which so far has been damped down by Mr Gaitskell's temporising policy, is likely to be increased by this new grouping, and it could be brought glaringly into the public eye if Mr Richard Briginshaw, general secretary of Natsopa, were adopted as Labour candidate in the Moss Side by-election. Mr Briginshaw is the founder of the Forward Britain movement—a small group chiefly made up of trade unionists—whose object is to fight against Britain's entry. This runs directly counter to the official policy of the TUC. Forward Britain plans to hold an all-party meeting next month, when Lord Hinchingbrooke has been invited to be a principal speaker. Mr Briginshaw's prospect of adoption at Moss Side is uncertain: the local Labour association has only just applied to Transport House for a list of suitable names.

ULSTER AND THE EEC

Sir Douglas to the Rescue

A correspondent in Belfast reports:

FACED with the prospect that it, too, may find itself inside the common market, the Northern Ireland government has taken the unprecedented step of appointing Sir Douglas Harkness as its adviser on economic affairs. This is a newly-created post: Sir Douglas has, up to now, been permanent secretary to the Ministry of Finance and head of the Northern Ireland civil service. Hitherto, the Northern Ireland government has not been too keen to seek expert economic advice, or even to accept such advice when it has been offered gratuitously. This seems to have been because most economists have made recommendations which the government has thought it politically unwise to accept. The Ulster Unionists have always set their faces against cutting their financial or fiscal ties with Britain, reducing taxation by bringing in an inferior system of social services or starting a state shipping service to compete with companies already operating in the Irish Sea—the kind of advice that tends to be given them.



Sir Douglas Harkness: new remedies?

Ulster possesses an economy that has always had to be carefully nurtured to keep serious unemployment at bay—a policy analogous to the way the Netherlands holds back the sea. It now has probably more reservations about joining the EEC than any other part of the United Kingdom. Thus, Northern Ireland's farmers get some £30 million a year from existing price supports. The Safeguarding of Employment Act, which the Northern Ireland government passed in 1946 to reduce competition for jobs, strictly controls the entry of alien labour. There is also the problem of the government's policy of providing generous inducements to potential employers. These inducements have amounted to something near £50 million in the past fifteen years; but without them unemployment would be far worse than it is.

The duties of the new economic adviser are expected to range beyond the EEC and could take in some of the tasks now undertaken voluntarily by the Northern Ireland Development Council, or even some of the work of the Ministry of Commerce. The new department will satisfy those people in Ulster who have wanted a special committee to examine the problems involved in entering the common market, similar to the committee of industrial organisation which the government of the Irish Republic appointed a few weeks ago.

RHODESIA AND NYASALAND

Sleeping Partners

PARTNERSHIPS between African men and European women are to be made legal in Southern Rhodesia. Until now the law has forbidden them, but has allowed love affairs between white men and black women. This removal of perhaps the most glaring example of social discrimination in Southern Rhodesia is the only really hopeful news to come out of central Africa in the past few weeks. Northern Rhodesia is still in trouble as a result of the liaison between Sir Roy Welensky and the British Government, and the new constitution which is its offspring.

At the weekend, when it became apparent that the wave of arson, stoning, and road-blocking in Northern Rhodesia was more serious than at first supposed, Mr Kenneth Kaunda, leader of the United National Independence Party, flew to London to appeal to "the British people" and Commonwealth High Commissioners to put pressure on the British Government to alter the new Northern Rhodesian constitution. Small changes that would give the Africans a better chance of winning a majority would make it acceptable to UNIP (if not to Sir Roy Welensky), and might make all the difference between peace and revolt in the colony. On Wednesday, UNIP headquarters in Lusaka announced that Mr Kaunda's non-violent "master plan" was being put into action; this may keep UNIP's more excited members from violence for a while, but probably not for long if the constitution is kept weighted in the federalists' favour.

In Nyasaland, too, the stability of the federation was shaken this week. Dr Banda's Malawi Congress Party won all twenty lower roll seats and three of the upper roll seats in the territory's first elections under the new constitution. Five of Sir Roy's men and five officials will also sit in the new legislative council, but Dr Banda will, even so, command an absolute majority. He will also be able to demand the three ministerial posts accorded to lower roll seats, and may well get one or both of the posts reserved for upper roll members. A sympathetic governor (and Dr Banda is on good terms with Sir Glyn Jones) could ensure that the officials making up the balance of the executive would work with Malawi. They might not vote with Dr Banda's men on the executive on a motion to secede from the federation. The motion is certain to be put, and carried, in the legislature. As for its effect, Dr Banda's first words on Wednesday after his victory were that, if the Europeans wanted to keep the federation intact, "they had better declare an emergency and send me to prison."

TUNISIA

Survival after Death

WHEN President Bourguiba heard of the brutal murder on August 12th of Mr Salah ben Youssef, his exiled Tunisian adversary, he must have recalled a brief encounter in Switzerland only five months ago. The two men then met for the first time since January, 1956, when Mr ben Youssef fled to Cairo after quarrelling with his erstwhile colleague about Tunisian policy towards France. Bourguiba stood for moderation, gradualism; ben Youssef for a clean and final break with the French. When in March, 1956, Tunisia obtained independence, Mr ben Youssef found encouragement in Cairo and soon became its instrument in attempting to overthrow the Tunisian president. In March, 1958, he was convicted and condemned to death *in absentia* for plotting the president's murder. The bitterness that built up around him caused Tunisia's estrangement from Cairo and withdrawal from the Arab League.

In March this year, when Mr Bourguiba was staying in Switzerland, Mr ben Youssef turned up—incognito—in rather changed circumstances. The United Arab Republic had revised its policy of trying to overthrow governments in non-conforming Arab countries and was seeking strength through friendship. Under this new dispensation Tunisia had returned to the Arab League in February and Mr ben Youssef, though still a well-liked guest in Cairo, was no longer President Nasser's political instrument. So Mr Bourguiba took the occasion to offer him the hand of friendship. But the gulf between Bourguibism and Youssefism was, apparently, still too wide to be bridged. The interview broke up in acrimony. It may, though, have warned the president that Mr ben Youssef was still on the warpath, and served to stiffen his hand in dealing with the French at Bizerta.

Nevertheless, Mr Bourguiba has nothing to gain from his rival's assassination. It could damage his rapprochement with Cairo; nor does it kill Youssefism, which is more an attitude of mind in Tunisia than loyalty to a single man. This attitude of "out with the French at all costs" has waxed and waned according to political events. It waxed for a short time after the bombing of Sakiet, and has done so again

in the wake of the Bizerta reverse. Indeed, the survival of Bourguibism after Bourguiba (or even with him) is much more debatable than that of Youssefism after ben Youssef.

EPISCOPAL APPOINTMENTS

Protest in St Paul's

CANON COLLINS of St Paul's with his preternatural gift for attracting publicity has done it again, and succeeded in making episcopal appointments in the Church of England the centre of public interest to a degree which neither the Archbishop of Canterbury nor even the Guildford deanery affair achieved. He launched his protest from behind the appropriately pink coloured curtain in St Paul's which shaded the chapter meeting from profane eyes last weekend, daring to vote against Dr Stopford, the royal nominee for London, and so laying himself open to all the disagreeable penalties of praemunire, which include outlawry and confiscation of goods. These, however, are not likely to be enforced.

The method of Anglican episcopal appointments was discussed in *The Economist* of July 15th, when it was argued that the system of state appointments needed reform, not demolition. The classic defence of the existing system is that it works, and it has certainly provided the Church of England with a succession of effective if not always notably spiritual leaders. "In general we observe," said Walter Bagehot, "that those become most eminent in the sheepfold, who

Dr Stopford : by a majority

partake most eminently of the qualities of the wolf."

The prayer offered by the chapter asking for the guidance of the Holy Spirit to elect the person named in the *congé d'élire* has justly been branded as blasphemous by Mr Peter Kirk MP, but there is no obligation to use this impertinent invocation. The Dean of St Paul's in fact declined to do so, and his example could profitably be followed by other deans without waiting for any legislative reform. Such reform would be expedited if the Church Assembly at its autumn session appoints a commission to investigate the whole relationship between church and state.

Dr Ramsey, much less erastian than his predecessor, is known to favour greater liberty for the church, and has already promised to cooperate in appointing such a commission, whose effective terms of reference will probably be limited. Complete autonomy could be purchased only at the price of disestablishment, which very few within the church are willing to pay, nor is there any strong desire to hand over the election of bishops to the cathedral chapters. Canon Collins's intemperate denunciation of Dr Stopford on political grounds is a timely reminder of the dangers of such a course. "Birmingham people," Cardinal Newman once remarked, "have souls," and the Precentor of St Paul's might recall that bishops as well as canons have consciences. What is urgently required is some form of consultative machinery in each diocese by which—when the see is vacant—clerical and lay opinion on suitable appointments can be conveyed officially to Her Majesty's advisers.

CHURCH UNITY

Roman Catholic Bid

THE announcement by the Archbishop of Liverpool, Dr Heenan, that a committee of Roman Catholics in England has been set up to foster unity among Christians of *different* denominations represents a notable advance for the ecumenical cause. The Secretariat for promoting Christian Unity which was set up by Pope John XXIII (and of which Dr Heenan is a prominent member) is situated in Rome. While this is central from one point of view it is comfortably far away from another. The creation of a local English committee to act in cooperation with the parent body should appreciably accelerate and facilitate its work.

One immediate effect should be to check the widespread feeling among ecumenicists, referred to by Dr Heenan in his speech, that the English Catholic hierarchy is much less enthusiastic about Christian unity than the Pope. Papal initiatives, it is believed, have not been followed up by the English bishops because they are convinced that the Pope does not really understand the religious situation in England or the doctrinal complexity of the Church of England. This conviction has prompted ecumenically-minded Anglicans and others to by-pass the English Roman Catholic bishops for fear of being rebuffed, and to resort to French or Belgian prelates who could be guaranteed to give them a warmer welcome. These suspicions have certainly been justified in the past, but such action by Protestants has done nothing to lessen them, since the English Roman Catholic hierarchy naturally resents being ignored.

A great deal will now depend on the energy with which the committee pursues its task and the projects which it initiates. In the Roman Catholic Church initiative must come from the bishops and the new body is a committee of the hierarchy entirely

Dr Heenan : under his eye

composed of bishops. The actual composition, however, is not entirely reassuring since most of the members are scarcely zealots for cooperation. It will be interesting to see if the committee is expanded at a later stage to include members of the religious orders who have been in the van of the ecumenical movement, and also to include lay members. Dr Heenan himself, with the committee's headquarters actually under his eye in Liverpool, is unlikely to allow it to sink into somnolence.

ISRAEL

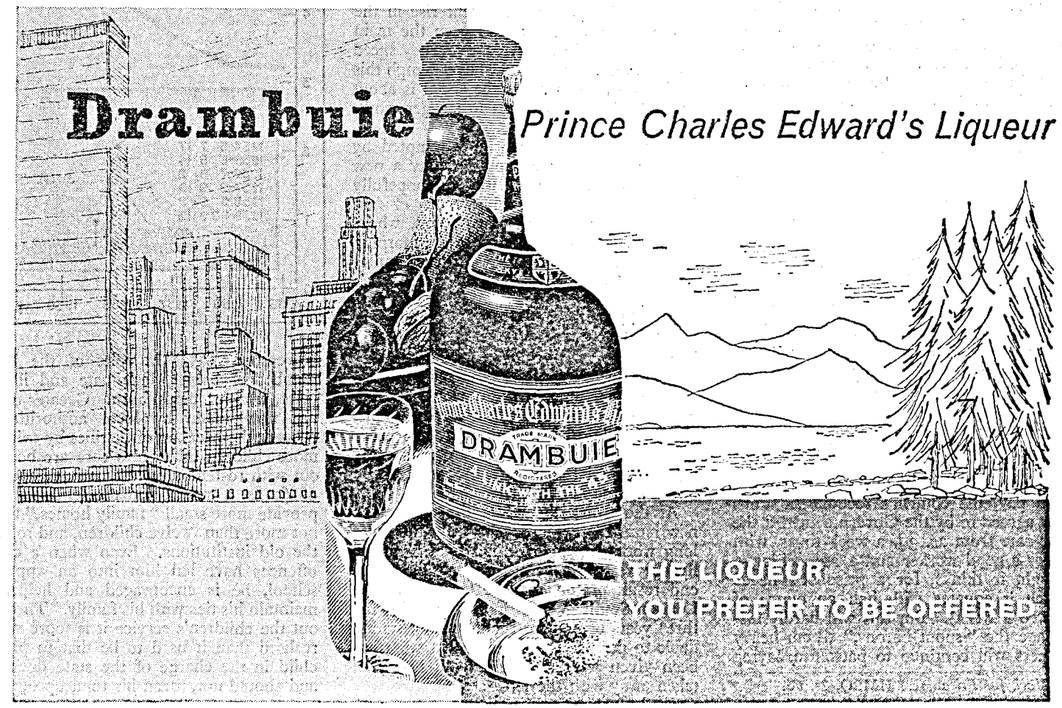
Vote of Acquiescence

MR BEN-GURION has won a tepid vote of confidence from an Israeli electorate resigned to the tedium of holding elections, two years before time, in the holiday season and the mid-August heat. The results of Tuesday's election show that the prime minister's party, Mapai, is still way ahead of the crowd. Mapai is now expected to have 42 seats in a Knesset of 120 members, instead of the 47 it won in 1959. Herut, the militant right-wing party which came second in 1959, now has 17 seats and ties in second place with the Liberals, the new coalition of the right-of-centre parties. The prime minister's description of the results as a "national disaster" implies that he had hoped to avoid the irritations of coalition government by gaining a straight majority for his party. But this was never likely.

The elections were held prematurely because Mr Ben-Gurion decided to make his handling of the Lavon affair earlier this year a matter of national confidence. But few political speakers have had the heart to scratch over the squalid causes of Mr Lavon's decline and fall. Instead, the basic issue boiled down to whether or not the electorate still wanted the prime minister and his party to play a dominant and constant part in the country's management.

TRUSTEE INVESTMENTS ACT, 1961

Trustees for settlements
and others responsible for managing investment portfolios
are invited to communicate with



N. M. Rothschild & Sons

who are prepared to act as investment advisers

ROTHSCHILD EXECUTOR & TRUSTEE COMPANY

is available for all executor and trustee services

NEW COURT, ST. SWITHIN'S LANE, LONDON, E.C.4. MANSION HOUSE 4356

Two years ago, Israelis paid respect to Mapai as housekeeper and guardian of their interests ; this time, although their support has been less enthusiastic, it was faithful enough to make plain that no reasonable alternative has yet slid on to the horizon.

Foreign policy began to be seriously debated only with the advent of Dr Nahum Goldmann, the president of the World Zionist Organisation, in the last week of the election campaign. Dr Goldmann is not an Israeli citizen, but he spoke for the Liberals. For several years, there have been few significant differences in party lines on practical foreign politics. But Dr Goldmann brought new ideas. Israel's diplomacy, he claimed, required dynamic rethinking ; the country had been marking time for too long (an unfair dismissal of Israel's strenuous and successful efforts to make friends with the new African countries). He laid down some broad principles : Israel should seek non-commitment between East and West, encourage an arms embargo in the Middle East and, above all, struggle towards the goal of a neutral confederation of Middle Eastern states. Just how it was all to be done, he did not say.

WORK IN PRISONS

Too Little for Lags

THE advisory council on the employment of prisoners has just published its first report,* after a year's investigation, on the work of men prisoners in prison workshops. Predictably, it rejects " hard labour " : the therapeutic value of work is not disputed, but it should be a means of utilising a considerable labour force (20,000 men) as well as of fitting prisoners, by inuring them to industrial conditions, for a usefully honest life on discharge. It is felt that prisoners should be made to work a full (40 hour) industrial week and to raise their productive standards to those of outside industry. It is not foreseen that prisoners, 0.1 per cent of the working population, could ever compete " unfairly."

There are, in fact, many obstacles to efficiency. The turnover of prison labour is above 300 per cent a year : overcrowding, staff shortages, lack of training and the demands of routine reduce the working week to 16 hours. The council hopes for an eventual improvement to the point where the workshops will be efficient contractors to government departments (and even private employers). The mental hospitals are showing the way towards this. It means turning a factory into an institution rather than the other way about.

On pay, the council's recommendations (now agreed to by the Government) lift the basic rate from 2s. 3d. a week to 3s. with 8s. for a good worker and a 10s. ceiling—enough, it thinks, for a prisoner's needs (which it equates with half an ounce of tobacco a week). But this will hardly discourage the " snout barons," whom heavy smokers will continue to patronise, laying up for themselves dangerous debts which must be paid in cash (or slash) on release. The quickest way out of the barons' clutches is not a semi-skilled job. It is disappointing that the council could not bring itself to recommend a higher return (in Denmark it is up to 50s. a week) out of which maintenance for the prisoner and his family, and possibly some help for his victim, could be deducted. (In fact, employers of extramural workers from open prisons pay full wages—to the Prison Commissioners.) There is still a great deal to be done to relate prison work and payment to the whole problem of after-care, which, it is now recognised, should properly begin on committal.

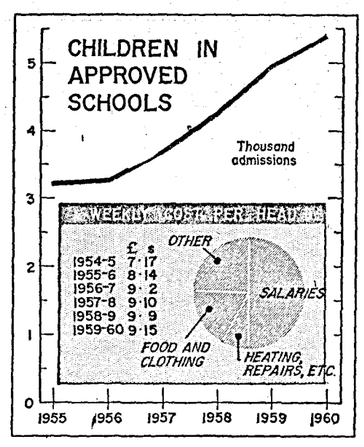
*Work for Prisoners. HMSO, 2s. 6d.

LONDON'S TRAFFIC

Hardening Arteries

LONDON Transport confirmed on Monday that the Underground is getting intolerably crowded but is popularly preferred to the buses. Nearly three million people make the journey to and from the City and West End every day, more than a third of them by tube, which has increased its patronage by 4 per cent over the past year. Bus passengers fell by 7,000 a day to 215,000. British Railways suburban services showed a gain of 15,000 a day and now carry 452,000 passengers in the morning peak hours. The remaining million or so travellers packed on to the roads in cars, taxis and on motor cycles. Road traffic in the central area has come closer to total seizure. The yearly 6 per cent rise in the number of private cars has been the main cause of a fall in the average journey speed from 12 mph in 1948 to just over 9 mph this year. In the rush hours the speed is about 7½ mph, despite attempts to stagger working hours.

Some alleviation is being attempted by one-way schemes ; and on Monday a new " peak-hour clearway " will be hopefully introduced (for a trial period of six months) on the Great West Road, where no stopping will be allowed in the morning and evening peak hours for the 5½ miles between Knightsbridge and the Chiswick flyover. There is no clear idea of how much relief will be obtained: but other parts of London have benefited by a 3 mph rise in journey speeds after setting up "no waiting" signs. Concessions have been made on the clearway, not only in the obvious cases of buses and ambulances, but also to taxis, although minicabs will not enjoy this privilege. If further exceptions are made (say for commercial vehicles) the whole idea might just as well be dropped.



At the Chiswick end of the clearway a new hazard is being developed in the mile-long works for an overhead road from the flyover westwards. Entirely desirable as the end result of this may be (as part of the London-South Wales motorway), in the three years of its construction motorists are liable to persuade themselves that what has been given with the right hand has been taken away with the left.

CHILDREN'S DEPARTMENT

In Care and In Crime

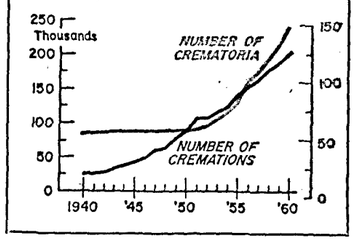
WHEN the seventh report of the children's department of the Home Office was published (in November 1955), the amount of juvenile crime had been falling from its postwar peak, and places in approved schools were being reduced. It was the number of children in care that was then rising, children, that is, who might or might not have broken the law but whose home circumstances (parental neglect or parental mishaps or illness) or lack of a home had led them into the care of the local authority.

Since then, as the eighth report shows (HMSO 7s.), the trend has been the other way round. The number of juvenile delinquents has risen year by year, and the increase is reflected in the number of admissions to approved schools. On the other hand, an increasing awareness of the harm done to children by removing them from their own homes, and of the high cost of maintaining them in children's " homes " (the weekly average is only £1 3s. less than in an approved school), had brought the total of children in care down to 61,729 by March, 1960 (compared with 65,309 in

November, 1953) in spite of the larger number of babies, legitimate and illegitimate, who are being born. Greater efforts are now made by local authorities to prevent the breakup of families by eviction; more children taken into care are boarded out with foster parents (at an average cost of £2 2s. a week); and the tendency is to provide more small " family homes," taking not more than twelve children, and to close the old institutions. Even when a child's offences have led him into an approved school, he is encouraged and helped to maintain his ties with his family. Throughout the children's service it is more widely realised than it used to be that to place a child in the charge of the state does not, and should not, mean his total uprooting.

ARGENTINA

The Dog It Was



ABOUT a year ago, President Frondizi defeated a group of army revolutionaries by beating them to the radio transmitters. During the pocket-sized revolt that mildly disturbed Buenos Aires in the early hours of last Saturday, August 12th, a tiny group of air force officers seized control of the city's radio station and telephone exchange, but gained nothing from it. For an hour or so, their call to revolution thundered over the air to the sleeping Argentinians ; then, quietly before breakfast, the rebels gave themselves up to the police. Their performance was an absurd shadow dance of revolution ; even so, subsequent events show how vulnerable the government still is to military pressure. The minister for air ordered the house arrest of the air force commander-in-chief for not punishing the rebels severely enough ; but it is the minister, not the commander, who has now resigned.

Most Argentinians have no time and less sympathy for turbulent military officers ; *golpismo*, the habit of *coups d'état*, is out of the mode. But President Frondizi's own position has always been the more hazardous because of his debt to the Peronistas, who, on a misconception, helped to elect him president in 1958. For a long time afterwards, the disillusioned Peronistas monotonously returned blank votes. It has been an encouraging sign of a new forward look in Argentina that the blank votes have diminished in recent provincial elections. Moreover, with congressional elections coming up next March, President Frondizi's party has been gaining ground.

But the government's outlook is marred by its economic perplexities. President Frondizi and Dr Alemann, the new minister of economics, have started to try to cut away some of the dead wood that has choked Argentina's economic growth for many years. First on the list for trimming and modernisation are the calamitous state railways, which, after years of neglect and procrastination, are run on an immense yearly deficit. For industry, foreign private investment comes in steadily, and massive international loans may provide for Argentina's two most pressing needs, housing and roads. But exports are doing badly ; a poor harvest may halve grain sales this season, and the meat trade is in persistent trouble. Prices, which have been fairly well under control for the last year or so, have begun to rise smartly, and, although the railway unions called off their threatened strike, other trade unions are twitching into angry life. More skilful revolutionaries than last Friday night's radio amateurs might yet be able to crystallise the separate factions of economic and political discontent.

DUST OR ASHES?

Cremation was pronounced legal in 1885 and since then there have been over two million cremations in Great Britain, three quarters of them in the last ten years. The percentage of cremations to total deaths has risen from 3.8 per cent in 1940 to 34.7 per cent in 1960. The tremendous increase in the number of crematoria since 1950 has reduced the expense which was incurred in travelling considerable distances to a crematorium; cremation is now slightly cheaper than burial.

PAN-AFRICA

Solid Black

AFRICA is developing an impetus towards unity unexpectedly quickly. Except for South Africa, the Sudan, and the Congo, virtually all the independent African states are now committed to schemes of close co-operation, though not all to the same scheme. There are even signs that the ideological division between the " Casablanca " and " Monrovia " groups of countries may yet be bridged. The Casablanca group (Ghana, Guinea, Morocco, Mali, the United Arab Republic and the Algerian government-in-exile) has decided to form a common market, an economic development bank, a council of economic unity, a joint air and shipping line, and, eventually, a political union.

The Monrovia group has twenty members drawn from most of French-speaking Africa, plus Nigeria, Sierra Leone, Tunisia, Libya, Somalia, Ethiopia and Liberia. It has rejected the idea of political links, but is in the midst of a series of businesslike discussions about almost every form of co-operation. The most recent meeting, held at Dakar, produced a list of intentions similar to the Casablanca group's list—including the formation of a common market and an economic development bank. Eleven of the member states already own a joint airline, *Air Afrique*, and are urging the others to take part.

It is becoming fashionable to deprecate this division into two camps, and talk of uniting everybody. Ghana has concluded a customs pact with its neighbour, Upper Volta, even though it belongs to the other group. The Nigerian prime minister calls for co-operation between all African states ; his new foreign minister, Mr Jaja Wachuku, believes that political unity is, in the long run, inevitable. Gambia, approaching independence, may form a small link between francophonic and anglophonic Africa by joining Senegal. Mr Nyerere of Tanganyika, a pan-African himself, refuses to commit himself to one existing group or the other. Mr Modibo Keita, of Mali, is said to be looking for a way of attending meetings of the Monrovia group while remaining a member of the Casablanca group. Dr Nkrumah's hope of continental unity may one day turn out to be more than a flash in pan-Africa.

The Economist

AUGUST 17, 1861

TESTING TIME FOR AMERICA

The fact is, the Americans are *a wholly untried people* ;—and till people have been tried, no one can pretend to say what they are, or what under any given circumstances they will do. They have never been *tested* by any great difficulty, any great danger, any great calamity : they have never been called upon for any sustained effort, any serious sacrifices, any prolonged endurance. They do not know, therefore,—nor do we—the possible reach of their virtues and their powers, nor the possible range of their vices and their weaknesses. They have never yet faced a really formidable foe. It will astonish and disgust them to be told this ; but it is the simple truth. . . . We are in equal uncertainty as to American Statesmen and American Institutions. They have never been tried in a storm before, and no one can tell how they will stand the strain. The leaders in Washington's time were gentlemen and men of education. The institutions in Washington's time were free, but not democratic. Since that time the country has gone through a course of *unexampled and uninterrupted prosperity*—demoralising assuredly, though not enervating. Laws and manners have changed to a degree which few persons have yet fully realised. The constitution has become an almost unmitigated *ochlocracy*. The masses are everywhere omnipotent ; and the masses in most parts are only half educated, and in many parts are as ignorant as those of Europe and far more ruffianly. The men of thoughtful minds and lofty purpose, the men of noble sentiments and stainless honour, have retired from public life ; and, naturally enough, as the work of politics became dirtier and rougher, have left it to dirtier and rougher men. The consequence . . . has been that the Rulers and Legislators of the United States are, almost without exception, either the vulgarer and shallower men of the nation who share the popular faults and passions, or cleverer minds who flatter and obey them without sharing them. . . . Now, how can such men be expected to meet a crisis like the present—a crisis which might try the ablest and the noblest spirits that ever directed the fortunes of a great country? . . . Moral courage is more needed at Washington now than any other *political virtue—the moral courage* to speak unpopular truths, to face popular rage, and to resist popular delusions.

LETTERS

European Venture

SIR—All sensible Germans were pleased by the Prime Minister's announcement of Britain's formal application to join the Treaty of Rome. My conviction of the monumental importance of this British decision is reinforced by what I learnt, in the years before the last war, of the character of the British Commonwealth. I feel confident the various hurdles will be taken. The older generation that still clings to national ideas of greatness will pass and give place to a younger generation eager, like my own sons, to live in a European commonwealth. British influence in the affairs of the European Community will in the long run become paramount. It will also prove wholesome: Britain has long experience in leading an unwieldy community, while Germans and French alike are inclined to pay pedantic attention to verbal accuracy and mathematical equality. The French have a good expression for it: *rage de perfection*. It will be nonsensical to fix beforehand every detail, every pound of cocoa, of butter, of meat, etc. Put the European commonwealth in the saddle, and it will soon learn to ride.—Yours faithfully,

W. R. G. VON TIRPITZ

Irschenhausen bei München, Bavaria

★

SIR—In your issue of July 22nd you repeat your frequently expressed arguments that any adverse effects on Hongkong and India could be adequately offset (and, no doubt, your conscience eased) if the United Kingdom could persuade western European countries to "share the burden" by relaxing their restrictions on imports from these countries.

I cannot speak for India but, leaving aside the curious economic implications of the phrase "share the burden," let us look at Hongkong. It is a fact that you are either unaware of, or choose to ignore, that the colony, as a dependent territory of the United Kingdom, has shared fully in OEEC liberalisations in recent years and, except for a few items in the case of France, now trades as freely with western Europe as does the United Kingdom itself. There is no further significant scope for relaxation that might partially offset the effects of intra-common market preferences or the even more serious effects of loss of preference in the United Kingdom even if it were legitimate to argue that the loss of existing rights in the United Kingdom could properly be compensated by the belated grant by others of rights at present improperly withheld. Perhaps Hongkong is over-privileged already, but that is beside the point.

You should also know that the European market is not such a glittering prize as you suggest, even before internal preferences take effect. You should not judge by the United Kingdom market. After four years and more liberalisation Hongkong's textiles exports to western Europe in the boom of 1960 were 1½ million yards of piece goods and £6 million of garments. India does not export garments to any significant extent and cannot in general compete with Hongkong, not to mention Japan, in piece-goods. What then are the prospects you hold out?

You may properly argue that joining the common market is so important to the United Kingdom that it is justified in sacrificing the existing trade interests of Hongkong and India, if that is the price. But it would be hypocritical to claim that the sacrifice can in any way be compensated by relaxation of import restrictions in Europe.—Yours faithfully, J. B. KITE

Secretary, General Chamber

Hongkong of Commerce

In the Freezer

SIR—In your article you explain to your readers the way in which civil service pay is settled. The facts as set out by you are incorrect; it would perhaps be as well if I put them right.

You say "The award is arrived at by negotiation (based, in the case of the civil service, on the report of a pay research unit charged with finding out just how salaries in comparable outside jobs have moved). It is then passed to the appropriate minister for simple confirmation or rejection." An "award" is not arrived at by negotiation. An award comes from the Civil Service Arbitration Tribunal after the parties have failed to reach agreement. Awards have always been honoured by the Government and the issue of "simple confirmation or rejection" does not therefore arise.

If we take "awards" out of your statement it appears that you are suggesting negotiated settlements are "passed to the appropriate minister for simple confirmation or rejection." There is no doubt that in all the important pay settlements which have arisen in recent years Ministers have been consulted *before* firm offers have been made and have not been left as rubber stampers or purveyors of rejection slips.—Yours faithfully, RICHARD HAYWARD

Civil Service National Whitley Council

London, SW1

["Award" was the wrong word: it should have been "recommended settlement."]

Teachers' Pay

SIR—The facts about the Burnham Committee and the policy of the National Union of Teachers are, you declare, "pretty discreditable" when understood. Before the facts can be understood, however, they have to be presented and the least creditable aspect of your recent comment on these matters has been your failure to do this.

At no point, for example, have you accurately stated the salary policy of the NUT or examined fairly the case presented by the teachers' panel in the Burnham negotiations, doubtless because this would have made it impossible for you to persist with your attempts to picture the NUT as a collection of flat-earth egalitarians. And, while it is flattering of you to apportion to the NUT the bulk of the blame for all that you consider wrong, it would be more accurate to record that the rejection of the Minister's demands was unanimous on both sides of the Burnham Committee.

To take another example, do you really believe that the row over the £5½ million is all about "shelling out an extra £100 annually to estimable but preoccupied young females for three to four years of their career"? Incidentally, remembering that the Treaty of Rome insists on equal pay, one cannot help being surprised that such a strong supporter of the treaty as yourself can be so violent where the pay of women is concerned.

Again, you compare the position of the honours graduate under the new Scottish scales and those proposed by the Burnham Committee without mentioning the factors which render such comparison of little value, but subsequently ignore the comparison which does make sense, that made by the Burnham Committee to show the Minister that he had not in fact offered English teachers approximately what the Scots had got.

In so far as salary policy is concerned, while you concede that the largest extension of education is a first national need and declare that teachers are "among the most important people in the country," and make reference to the size of the teacher shortage, your preference is strongly for selective increases in differentials. We take the view, however, that there must be a radical improvement in the status and rewards of the profession as a whole, and that because the basic scale is the main element in the salary of the great majority of teachers, this must be made an adequate basis for any superstructure.

The immediate point at issue, however, is the Government's interference in normal salary negotiations and the ramifications of what, it is suggested, are attempts to formulate some form of national salary policy. Your leading article, "In the Freezer," indicates some of the problems which confront the Government in this field; it also shows that teachers, civil servants, and others in public employment, are not the cause of cost inflation. But you do not explain why those who traditionally lag well behind in the movements of salaries and wages should be the Chancellor's chief victims. For them the freeze; for the private sector, exhortation. Surely an attempt at a national policy should be comprehensive if it is to be acceptable to those directly affected?

Bearing in mind that the Government has to try to implement its ideas in a democracy, it (and I think you) seems to have paid scant attention to the need to gain the co-operation of those concerned. The success of any departure from its own philosophy and practice so radical as the evolution of a national wages policy, must surely depend on the co-operation of employees and their organisations and the integration of existing negotiating machinery. But can anyone seriously pretend that the way the Government has handled developments in the past month gives any ground for confidence in this respect? You say that the Government hopes it may get by without breaking up existing negotiating machinery altogether. What hope can it have, at least so far as the education service is concerned, if it seems intent on relegating the role of the Burnham Committee to one of signing on the dotted line the edicts of the Minister?—Yours faithfully, FRED JARVIS

National Union of Teachers

London, WC1

★

SIR—It is incorrect to suggest, as you do in the article "Sir David in the Pillory" in your issue of August 5th, that a cut of £5½ million in the proposed basic scale of £600-£1,200 "will not affect the majority of teachers who are above the basic scale already." You may have overlooked the fact that the basic scale figures are an integral part of the salaries of all teachers.

In a written answer, published in Hansard for August 4th, the Minister of Education has given examples of the salaries that could be paid within the overall increase of £42 million, instead of the £47½ million proposed by the Burnham Committee. One example is that of a good honours graduate who spent four years in full-time study and training, and who, at age 35 years, is the head of a department. Sir David's "possible salary" for him is £1,550, whereas the Burnham Committee's provisional agreement would give him £1,590. Another example given in the parliamentary answer is that of a graduate who spent three years in full-time study and who, at age 37 years, holds a post of special responsibility. Sir David's figure for him is £1,435 compared with £1,495 recommended by the Burnham Committee.

Thus, though the Minister has proposed cuts only in the recommendations of the Burnham Committee relating to the basic scale, leaving the recommendations on differentials untouched, these teachers would receive respectively £40 and £60 per annum less than under the Burnham Committee's provisional agreement, though both of them are in your words "above the basic scale already."—Yours faithfully,

A. W. S. HUTCHINGS

London, WC1 Assistant Masters

BOOKS

Europe in Disintegration

L'Europe du XIXe et du XXe Siècle (1815-1870): *Interprétations Historiques Vol. I (Parts 1 and 2)*

Marzorati, Milan. British Distributors: *Parkers*, Oxford. 1,165 pages. £8 8s.

A CENTURY ago Europe was moving towards the high age of nationalism, which was to culminate in the three catastrophic wars that have since crippled it as a force on the world stage and swung the poles of power away from Europe. True, the idea that there was such a thing as a single European civilisation and culture was by no means dead. The Vienna settlement provided a framework whose structure lasted for half a century: the Holy Alliance, for all its reactionary elements, was based on the idea of a European family. Even the forces of change themselves—the liberal nationalism sparked off by the French Revolution—owed European allegiances beyond national bounds. And the more iconoclastic actors on the stage—Napoleon III and Bismarck—combined a desire to alter the European balance with a basic belief that some balance must exist. But though the concert of Europe played on, it was increasingly out of tune. On the fringe of Europe Britain wavered ambivalently, turning at times to help the progressive forces on the Continent that looked to it for leadership, at times rebuffing them and turning to serve its own narrower balance of power considerations or its broadening interests overseas.

All this contrasts strikingly with our own age, when great economic forces are pulling the European states together. Just as, at the apogee of European power, the European states were tempted to quarrel among themselves over the spoils, so eclipse has forced them to look to what they have in common. A hundred years ago Britain preoccupied itself with building up a strong and friendly Belgium against France or Germany; it now has as its first interest the consolidation of a strong and friendly France and Germany against the threat from Russia. The day when Europe would be eclipsed by the rising giants, Russia and America, which only prophets like de Toqueville then foresaw, has arrived.

The present period of European integration is therefore not a bad one to look back on the epoch of disintegration, and try to evolve a fair historical picture of it, free from the nationalism that has been a potent ingredient of historical writing about the period. "Interprétations Historiques" is an attempt to do this. The first two volumes, now published, cover the period 1815-1870; the next two, now in course of preparation, will describe the years 1870-1914; and two more 1914 to the present day. The publishers are Italian, but the team that has executed the work is European. Four distinguished scholars, Professor Beloff of Oxford, Professor Pierre Renouvin of the Sorbonne, Professor Franz Schnabel of Munich and Professor Franco Valsecchi of Milan are the joint editors, while the contributors come from a wide range of European universities.

One function of the work is historiographical. It is to try to summarise the national historical writing that has been done, analyse its evolution and point to the lacunae and elements of bias. The work is in itself a formidable bibliography. But it also goes on to write history, looking beneath the surface at the social and economic features that the European nations had in common and placing the political history of the powers in a European setting. Collective history of this kind inevitably has its strong patches (like Professor Valsecchi's masterly political analysis) and its weak ones; it obviously cannot have the power or unity of individual works of genius. The search for common European features can end up in vagueness. In the chapter on geography, for instance, Jean Gottman rightly and inevitably finds it impossible to define what Europe is. Europe is a conception, but it is one whose cartographic meaning is constantly in flux.

Yet this enterprise is an illuminating contribution to the historical reappraisal that is going on all over Europe. And the first volumes throw up revealing lessons in both comparative history and historiography. For instance, the difference in the political history of Britain and the Continent owed much to a major fact of social history: that Britain, unlike the Continent, had no class of peasant proprietors. In historiography, Professor Asa Briggs's short essay on British writing, for example, points out some inviting avenues for British historians and some vast gaps to fill. There was the long tendency to concentrate on political history—with its Whig and later Namierite interpretations. In economic history there has been little between Sir John Clapham's all-embracing factual picture and the crusading of the Hammonds. The gulf between historians and economists has encouraged economists—when they have got to grips with the British nineteenth century—in a damaging preoccupation with short-term trends. The limitations of a conventional national viewpoint have encouraged complacency and made analysis incomplete.

One looks forward with curiosity to see how the team find common ground in the far more controversial arena of the last ninety years. How will they deal with the responsibility for the last world war? How

will the historiographers deal with rogue elephants like Mr A. J. P. Taylor? The task is an exciting one, which will become progressively more difficult and also more rewarding.

Fardells to Bear

Administrators in Action

By F. M. G. Willson.
Allen & Unwin. 350 pages. 35s.

THIS pioneering and stimulating, if rather prolix, book by Professor Willson is the first of a series coming from the Royal Institute of Public Administration. The scope for such a collection of case histories, particularly when drawn from local government, the nationalised industries and welfare services, is virtually limitless. Not only has very little research been published (or even done) in this country; the type of problem that invariably comes to the public attention through newspapers, adjournment debates and the occasional *cause célèbre* is an unreliable guide to day-to-day administrative decisions. Political attitudes, not least towards the social services, can become highly coloured through popular ignorance of administrative working. Professor Willson's five studies do not necessarily show the departments and officials in the best, or most successful, light, but they do demonstrate what they may have to contend with. The weaknesses of the system itself, rather than human failings, are the more readily apparent for correction.

Only one of the present studies, concerning the institution of clearing arrangements with Spain in 1935-36, is directly located in the higher reaches of Whitehall. It tends to raise rather more questions of interdepartmental procedure than the recorded evidence gives answers to (it would, for example, have been more valuable had it offered precise details on the relations between the Treasury and the Bank of England). The other four are in much less fashionable offices: precisely the places where the ordinary citizen, or local government officer, could find himself. Here the lessons are valuable and, occasionally, striking.

Coventry's prolonged skirmish with the ministerial and commercial interests involved in moving the borough's wholesale vegetable market (1949-55) illustrates some fairly familiar problems of town planning and exchanges with the central authorities. Professor Willson regrets (rightly) that the details of local political influence in the decision-taking are lacking. But the study shows up very well the primacy of the town clerk's office and the appalling gap between the aspirations of the experts (who were allowed to run unchecked for too long) and the financial realities embodied in the finance committee. It also throws some very suggestive light on political tactics within Private Bill procedure that deserves to be followed up in future research.

The one case in which Professor Willson is unduly sparing with his narrative is on the human side of the South-Western Electricity Board's introduction of machine accounting (1948-57). The influence of changes in staff morale is fully evident: the problem almost halted the process of rationalisation at one stage. More information on the working-out of this struggle between the "revolution from above" and the human resistance would have been useful. But very little could be spared from the saga of "Jim and Vera Fardell" and their brood, which is likely to become a classic of its kind. The astonishing cost (in man-hours as well as in money), strain and perplexity incurred by welfare officials in "Templeton" by one unruly and feckless family would be almost unbelievable, were it not (in some, if not all of its aspects) a sufficiently frequent occurrence.

The family's marital and financial troubles lasted seven years (1948-56). The point about the "Fardells" is not that they were entirely indigent, or that the multitude of officials with whom they had dealings were unsympathetic. They were a couple who, while giving every impression of mental and moral deficiency, demonstrated an instinctive ability to get the most out of the local officials, social services and private charities, and of knowing how close to the wind they could sail in doing so. At the end the wife, divorced, evicted and her six youngest children in public care, has "recovered her *sang froid* (if, indeed, she had ever lost it more than momentarily)" and goes off to get married again. A plethora of welfare workers has done its best with bluff, genuine care and a little bullying, to no avail whatever. It is a relief to find small-town administration so patient and humane. But is there not a case for putting this category of impossible families into the hands of a small team of special social counsellors, and thereby saving the time of housing committees, assistance boards, rent collectors, children's officers, health visitors, school attendance officers *et al*—who are not only otherwise overworked but liable to act at cross purposes?

Church of Charity

The Charity Organisation Society, 1869-1913

By Charles Loch Mowat.
Methuen. 200 pages. 25s.

IN one of his more lyrical passages Charles Stewart Loch, the grandfather of the author of the present book, described the Charity Organisation Society as a church rather than an organisation. It was founded upon a religion; it gave a purpose to life; it recruited a vast army of helpers; and though much of its work was "invisible" to the public, its corporate organisation, visible enough, was "peacemaking" and "unifying."

Loch himself would certainly merit a place as the St Paul of the "church of charity." He was secretary of the COS from 1875 to 1913. This was not only an exceptionally long tenure of office; in addition, the years which it spanned were years of profound economic and social transformation. By 1903 when Loch set out the ideals and practical tasks of the COS in this lyrical way he was at least as controversial a figure as St Paul ever was, and his "church of charity" was both strongly attacked from outside and undermined from within. The views with which it was popularly identified—theories of poverty as well as conceptions of charity—had been challenged by both empirical sociologists and practical politicians. The COS had clearly passed the peak of its influence, and the doctrines that had once seemed so new had become archaic and irrelevant. Today many of them seem repugnant. Instead of thinking in terms of a "church of charity" we think in terms of a "welfare state."

It says much for Professor Mowat's quiet and unobtrusive skill as a social commentator that his brief account of the COS never jars. He has generous sympathies, but when occasion demands it he can be shrewdly critical. He shows how the staunch individualism of the COS produced at one and the same time exaggerations of doctrine and a genuinely pioneer attitude to social casework. He does not shirk the moral (and social) issues arising out of the COS's concentration of attention on the "deserving" poor, nor does he overlook the many charges made at the time and since that it was patronising in its approach. He might have been more vivid on the London background and more penetrating in his probing of the "new Liberalism," but everything that he says is neat, economical and accurate. His book is a useful contribution to the history of welfare, and should be of interest to social workers and historians alike.

Republished Economics

Essays in Economics

By Ely Devons.
Allen & Unwin. 203 pages. 25s.

QUITE a few economists have recently assembled some of their articles and lectures and reprinted them in book form. This has the advantage of making useful work readily accessible to those who lack good libraries. From the point of view of the author it also has the advantage that he can add an extra book to his list of publications without much effort. The trouble is that this can be a bit too easy if the author does not bother to revise his work.

In the present case Professor Devons has made no effort to bring his essays up to date. Where, in the original, simple illustrative statistics went up to 1955, he has left them there. The first two essays contain a good deal of repetition. To add insult to injury he has added a postscript to one of them on "the points I would try to cover if I were rewriting the paper". Why didn't he rewrite it? None of these papers is so fundamental that the text needs to be preserved inviolate in order to facilitate its critical exegesis by future historians of economic thought.

This is the only complaint, however. Some of the essays are rather slight, but they are all excellent. Most of them are aimed at the general reader rather than at the professional economist. The first two offer a splendid account of the nature of applied economics and the contribution which the economist can make to policy formation. Two essays on the use and abuse of economic statistics are written in a similar vein of healthy scepticism. Although Professor Devons does not put it this way, he would probably agree that much of useful economics is merely negative knowledge: the economist may assert few truths, but at least he avoids many fallacies. Thus one long paper explains why the necessity of economic planning in wartime does not demonstrate its desirability in peacetime.

One paper is a report on a major research effort—the construction of indices of wage-rates by industry. There are two other empirical papers of great value: one on various measures of the terms of trade; and one on the wage-price spiral, which shows that movements in the retail price level and its constituents in the early fifties cannot be explained in terms of a simple wage-price mechanism, since other factors have had significant effects. Both these papers would have been still more useful, however, if the analysis had been brought as up to date as the statistics allowed when this book was planned.

Local Government Overseas

Development from Below

By Ursula K. Hicks.
Oxford University Press. 564 pages. 35s.

IT is easy enough in Britain to take for granted an established system of representative local government that continues to function effectively in spite of changes at the centre. It is easier still to ignore the importance and potentialities of local government in countries that have come recently or are coming now to independence, where attention is focused on the dramatic transfer of power in the central government and on the national policies for development.

Local government is (or can be) very much more than an administrative extension of the central government for the provision of certain services that are more efficiently handled locally. If local government has any degree of autonomy in choice of activity and means and extent of taxation, it can give unique opportunities for widespread experience of the workings of representative government and training in financial responsibility, on scales that are not incomprehensibly or frighteningly large. Local government may also contribute directly to the country's development. By carrying out small-scale quick-yielding projects designed to meet local needs (such as the construction of local roads, markets, drains, water supplies), local authorities can give communities a sense of purpose and participation in national development, which may be as important as the physical contribution of the projects themselves. This is of course one of the principal ideas behind the growing community development movement in India. This movement is largely separate from local government proper; the relations between them and the questions of how far they should and can be integrated are among the important and urgent topics discussed by Mrs Hicks.

She has made a stimulating study of local government in British, and formerly British, territories: India and Ceylon, the West Indies and West and East Africa. Although it is perhaps a pity that there is no comparison with developments in territories outside the Commonwealth, it is hardly justifiable to complain on this score about a book of 540 pages that already suffers from too much detailed material. Mrs Hicks emphasises the importance of first-hand investigation; she has confined her attention to areas which she has been able to visit.

The first third of the book is given to description, country by country, of the growth and present state of local government, with background information about conditions and general history. These succeed in stimulating the reader but not in giving him any adequately clear picture. It would, however, have been an amazing work of summary to press into this space a satisfactory account of even the present structure, let alone the history, of local government in a dozen territories (for instance, India is given 26 pages). It would certainly have required more introductory analysis and classification than are used here.

In the last two-thirds of the book Mrs Hicks examines and compares the activities of local governments as they are revealed by the financial records. She also considers many questions of finance itself—local taxes, grants from central governments and problems of accounting. To use the records of local finance to show what local governments are actually doing (as opposed to what they are empowered to do) and to insist, as she does, on dealing with specific local authorities rather than with averages or aggregates are both excellent ideas. But the financial information is used in surprisingly limited ways. For example, in the chapter on current expenditures the figures that are mainly used for comparisons between local authorities are the percentages of their total outlays spent on various classes of expenditure (e.g. on education: 19 per cent in Montserrat (W. Indies), 14-15 per cent in Poona and Bombay, 15 per cent on the average in Tanganyika, 43 per cent in Madi (Uganda), etc.). There is a point in comparing these figures, but for many purposes comparisons of amounts (in £s) spent per head would be much more useful. Moreover there is no comparison between the amounts spent per head or in total by local authorities and the amounts spent by central governments for various purposes. Could not comparisons of this kind have been made even approximately, to indicate the relative importance of local government? This is something which the author has not, perhaps could not, put in. What she has given in this book, both in information and discussion of problems and methods, will be of great interest and practical use to administrators and others working in this field. She has whetted appetites: could she, please, add a bibliography?

Above the Law

International Immunities

By C. Wilfred Jenks.
Stevens. 216 pages. 35s.

THE recently negotiated "Vienna Convention on Diplomatic Relations" has dealt with the important problems that arise in fixing the nature and scope of the privileges and immunities of the diplomatic staff of one state in the territory of another. Although this branch of international law has its roots in the regulated diplomatic intercourse of the ancient world, it has in quite recent times acquired a new significance, if only by reason of the great increase in the number of sovereign states. Dr Jenks, who as Assistant-Director-General of the International Labour Office is in an exceptionally favoured position to pursue the inquiry, has courageously undertaken the analogous but by no means

identical, and in many ways much more difficult, task of describing the privileges and immunities that have emerged to protect international organisations in the carrying out of their functions.

Although there is no dearth of articles and a mass of material buried in the "United Nations Legislative Series, Legislative texts and Treaty Provisions concerning the Legal Status, Privileges and Immunities of International Organisations," Dr Jenks's work, in its scope and completeness, is in many ways a pioneer study. Furthermore, as he emphasises, it is not possible simply to apply the pattern of privileges and immunities that are accorded to diplomats. There are three major differences. First, the servants of an international organisation may be nationals of the very state in which they work, and against which they may most need protection. The problem hardly arises with diplomats, who can only be nationals of the receiving state with the latter's consent. Secondly, the servants of international organisations have no sending state, to the ultimate control of which they are subject. Thirdly, reciprocity, which is the ultimate sanction for the observants of diplomatic privileges and immunities, is of little assistance to international organisations. A relatively new branch of international law has, therefore, had to be worked out.

A "General Convention on the Privileges and Immunities of the United Nations," approved by the General Assembly in 1946, and a similar "Convention on the Specialised Agencies," approved in 1947, provide the basic pattern. Dr Jenks proceeds to examine in detail these and many other later agreements, dealing in turn with such topics as the reference of disputes over privileges and immunities to international judicial settlement; immunity of the international organisation itself from local jurisdiction; the status of its premises and archives; the degree of its exemption from the currency and fiscal law of the host state; the peculiar problems raised by international armed forces; and, in two important chapters, with a topic which Dr Jenks recognises as giving rise to "a certain dislike and mistrust"—the position of international officials. In the latter field exemption from taxation raises the greatest difficulties and lies at the core of much of the criticism. Dr Jenks describes the effort so far made to establish a system of taxation imposed on their staffs by the international organisations themselves; apart from a voluntary wartime contribution scheme of the International Labour Office staff, this dates from the Staff Assessment Plan applicable to United Nations personnel as a result of the General Assembly resolution of 1948. It would be interesting to know what these schemes mean in actual figures.

Within the limits of a highly technical subject, necessarily requiring examination of a bewildering number of agreements, Dr Jenks writes clearly and convincingly. If he shows (as perhaps in his treatment of the problem of judicial redress against international decisions) a slight bias in favour of the international administrator, this is an understandable reaction against concealed national prejudices hiding behind the forms of international law.

Cruiser Warfare

Command the Far Seas

By Keith Middlemas.
Hutchinson. 255 pages. 25s.

THIS account of the campaign against the German warship raiders during the early months of the 1914-18 war is by a newcomer to the field of naval history; and as Mr Middlemas has the gift of style, and shows himself able to construct a clear and vivid narrative, his accession to the none too numerous ranks of writers with an understanding of naval strategy and operations should be warmly welcomed.

To those who lived through the second German conflict the consternation, bordering on panic, aroused by the depredations of the *Emden*, *Königsberg*, *Karlsruhe* and, above all, by von Spee's China Squadron, may seem surprising. For the actual losses they inflicted were small in relation to the total of Allied tonnage, and were soon to be vastly exceeded by the U-boats. Yet they did cause great dislocation to mercantile and military traffic, and they forced on the Allies a wide dispersal of strength at a time when the margin of superiority at home was slender. It is those ships, and especially von Spee's squadron, which occupy the greater part of this book; but Mr Middlemas also introduces an account of the escape of the *Goeben* and *Breslau* to Constantinople—which can hardly be considered to come within his chosen subject of the first phase of cruiser warfare. Moreover, although the author's exoneration of Admiral Milne, the Commander-in-Chief, Mediterranean, is reasonable, he should have laid more stress on the consequences of the series of ambiguous and sometimes contradictory orders sent from Whitehall (doubtless on Churchill's initiative) during those critical days.

The author seems in general to accept that the strategy "to seek out and destroy" the enemy raiders was the correct one, in spite of the fact that it contributed to Coronel. But the truth is that the traditional strategy of putting as much shipping as possible into convoy, and striking at the raiders' supply system, would have been more effective and more economical—as earlier history strongly suggested, and later experience confirmed. Nevertheless, the difficult dilemma that faced Admiral Cradock, and the misunderstanding of his intentions that arose in London, are here handled skilfully and fairly; and the actual fight off Coronel is brilliantly described. Then came the planning of the retaliatory steps in London, and the author is correct in attributing the credit for the timely despatch of Sturdee's two battle cruisers to the Falkland Islands to Churchill rather than to Fisher. The climax of his book comes with the battle of December 8th, 1914, when all but one of von Spee's ships were sunk; the only criticism here is that Mr Middlemas does not discuss why the greatly superior British squadron expended an enormous amount of ammunition before its purpose was accomplished.

Although Mr Middlemas's work is in general scholarly and careful, he should beware of the type of minor blemish which the expert reader will readily detect. Thus he several times confuses the First Lord of the Admiralty and the First Sea Lord; cordite is a propellant and not a high explosive shell filling; the points of the compass are sometimes reversed in his narrative; and as the *Hood's* turrets were of a modified type introduced to prevent a repetition of the disasters at Jutland her loss cannot be attributed to the cause stated in an ill-advised footnote. Nevertheless, we may look forward to another book from so promising a writer.

OTHER BOOKS

FACES IN SHEM. By D. van der Meulen. *Murray.* 206 pages. 21s.

Mr van der Meulen recalls people and incidents in the land of Shem—Arabia before the oil age—when, as Dutch consul (later minister) in Jedda, he looked after Indonesian pilgrims on their way to Mecca. The characters he portrays include diplomatic colleagues, local bigwigs and littlewigs, King Yahya of Yemen, who was murdered in his old age, and the crown prince, the present King Ahmad, who succeeded him. Although of lighter weight than the author's earlier books, this one is distinguished, like the others, for its good descriptions, off-the-track information and telling detail.

KUNIYOSHI. By B. W. Robinson. Victoria and Albert Museum. *Her Majesty's Stationery Office.* 85 pages and 98 plates. 27s. 6d.

The greatest Japanese colour-print designers in the nineteenth century were undoubtedly Hokusai and Hiroshige. But they excelled in landscape subjects and neither could equal their contemporary Kuniyoshi in the realm of dramatic imagination. Among the hundred black-and-white illustrations in this book, it is in heroic scenes of combats, sieges, disasters and triumphs that Kuniyoshi's art shows at its best.

Marking the centenary of the artist's death, this book has been prepared by a member of the staff of the Victoria and Albert Museum, and many of the illustrations are of works in the museum's large collection. A study of his life is followed by some interesting notes on how to identify and date the extensive output of this vigorous designer.

PERSONAL DEDUCTIONS IN THE FEDERAL INCOME TAX. By C. Harry Kahn. *Princeton University Press.* London: *Oxford University Press* (1960). 266 pages. 40s.

This book is part of a broad study of the personal income tax in the United States being sponsored by the National Bureau of Economic Research. The question of deductions from taxable income is far from being purely technical; indeed, it is basic to tax reform. Although the income tax is the largest single source of tax revenue in the United States, only about half of all income is subject to federal tax because of the liberal view taken of deductions.

AN INTRODUCTION TO THE THEORY OF INTEREST. By Joseph W. Conard. *University of California Press.* London: *Cambridge University Press.* 395 pages. 60s.

An exhaustive review and assessment of the various modern theories of the rate of interest written by an academic economist with first-hand experience of the money market.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Last Chance in Latin America

WASHINGTON, DC

FOR the past fortnight a delegation, forty experts strong, from the United States has been working with its opposite numbers from twenty Latin American countries to write for the western hemisphere a Magna Carta of freedom and prosperity—especially of freedom from the fear of communism. Perhaps appropriately, the conference has been held in a converted gambling hall at Punta del Este, near Montevideo, Uruguay. From this sober gathering of finance ministers the American press has made the issue personal by highlighting the contrast between the sauve, flexible but resourceful Mr Douglas Dillon, Secretary of the United States Treasury, dressed in his neat business suit, and the picturesque Major Ernesto Che Guevara, the Cuban guerrilla "hero" who wears his jungle-green uniform and admits contemptuously that as minister of industry he knows no economics, only politics. Mr Dillon has staked dollars; Major Guevara, Cuba's revolutionary prestige with the masses.

But, though Mr Dillon has a private system for winning at roulette, it is doubtful if he has won much off Major Guevara. The resounding and comprehensive declaration has taken the shape outlined in the drafts in spite of 65 Cuban amendments. Yet it looks as if the Major has also succeeded in his object which is, against a background of growing internal difficulties in Cuba itself, to keep Cuba nominally in "the American family," from which he claimed it was being ejected by the alliance which was originally to include a reference to free elections in the text of its declaration.

The Alliance for Progress is the most finished programme of foreign policy devised by President Kennedy's gang of new frontiersmen from Harvard. It springs from the Eisenhower reaction to Castroism: for the previous Administration, guided by Mr Milton Eisenhower and Mr Dillon himself, organised the Bogotá conference last year and there pledged the $500 million for social uplift which Congress hastily appropriated for President Kennedy to spend after the failure of the Cuban expedition had revealed even to Congressmen that Castroism would continue to challenge the United States in Latin America. But Mr Kennedy's men believe that they have fashioned quite a new instrument, able to engineer a highly delicate process—"controlled revolution." This is a form of social change that will outbid Castroism by pumping enough capital into the region to raise its growth rate from under 2.5 per cent a year (and in many areas complete stagnation) to the 5 per cent needed to overtake the explosion of population and to lift visibly the living and social standards of impoverished workers, peasants and tenant farmers; Puerto Rico, the United States commonwealth where income a head has risen from $121 to $600 in 10 years, is a model of what can be done.

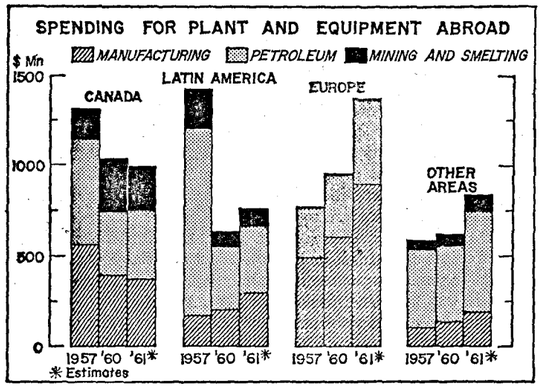
The North Americans insist that this programme is no "Cuban bonus," stemming solely from the threat of communism to the soft underbelly of the United States, but a new relationship, requiring new attitudes on both sides. On the American side there is cash: $20 billion over ten years to be provided in long-term loans rather than grants, but otherwise not incomparable, in purely economic terms, to the Marshall Plan for Europe. Of this total, $1.1 billion a year is supposed to come from public funds in the United States; this would represent 20-25 per cent of total civilian and military foreign aid this year and can only mean that Congress is to be asked for more in the years ahead. The other $900 million a year is to come in equal thirds from the World Bank and the Inter-American Bank, from American private investment and from Europe and Japan. These are only "guesstimates" and in the first year only $1 billion is to be spent ($394 million of which is from the money already voted by Congress). But Mr Dillon has said firmly that more than $20 billion could be provided if the recipients would get themselves into such a condition that they could absorb it (thus torpedoing Major Guevara, who said that $30 billion was the minimum).

But the Americans are offering more than hard cash. They have smothered their capitalist scruples about enterprises financed and operated by governments, for one thing. More important, they have undertaken to work for commodity stabilisation schemes which would underpin the prices of the tropical products and raw materials, on the export of which most Latin American economies depend. Specifically the United States, the largest consumer of coffee, intends to enter the International Coffee Agreement under which exports are limited by the Latin American and African producers of coffee. There are plans to set up a coffee fund, to which producers and consumers would contribute, to aid the countries which suffer the most from falling prices; more ambitiously, there are also plans to set up an exchange equalisation fund covering fluctuations in earnings from all Latin American exports of primary products; more cautiously, the United States is considering import quotas as a means of policing restrictions on exports. It has also promised to try to open the European common market to Latin coffee and other produce.

THE reciprocal ingredient on the Latin side is the pushing of belated reforms without which—North Americans now agree with Cubans—aid may actually worsen the situation instead of improving it. These reforms cannot be bought with money. True, money is to be provided for a drive to ensure that by 1970 all children are getting at least four years of education, to eradicate adult illiteracy and to supply low-cost housing by a combination of ingenious technical gimmicks and new credit institutions. Pressure for reform will also be stimulated as new industries create new jobs and agriculture is (if it can be) "diversified," to use the hallowed word of all developers of the underdeveloped. But basically reforms turn on the willingness of the Latin American ruling classes to do two crucial things: first, to accept progressive taxation well enforced; secondly, to submit to the break-up of the vast landed estates so that the peasantry can be provided with economic holdings. And such reforms further depend on the creation of incorruptible administrative machines to translate paper plans into grassroots action.

The North Americans hoped to achieve this by making the amount of aid dependent in some way on the progress of reform: no reform, less aid. Owing to Latin sensitivity to "intervention" (especially after Cuba) the idea was to set up an impartial commission of seven men to review plans each time a loan was applied for from the Inter-American Bank. It was, significantly, at this control point that the alliance-makers ran into trouble, which Major Guevara fostered very ably to Mr Dillon's discomfort. The large states (Argentina, Brazil, Mexico) declared that such a governing inquisition would infringe their sovereignty; the small states (notably Uruguay, Ecuador and Bolivia) complained that without it the big states would hog all the money by backstairs intrigues. The Americans wryly recall the same arguments over Britain's bitter opposition in 1947 to a strong Organisation for European Economic Co-operation. A compromise has been hammered out: a permanent panel of nine men, under the *aegis* of the Inter-American Development Bank, from which may be drawn teams of three men for advising on particular development plans, working with another three-man team drawn from a list of outside experts acceptable to the country concerned. Such screening is not to be compulsory and will only be advisory in any case, but the idea is that countries submitting plans which have been approved by six such wise men will enjoy the highest priority in their requests for loans to the IADB.

The White House is satisfied with this dubious compromise. However, while those which can submit good plans will get aid, notably the large states which might hope to reach the point of "take off" into self-sustaining growth, it looks as though those which cannot submit plans will also get aid just the same—to keep them away from Castroism. Thus there may be little discrimination.



EVEN SO, the question remains whether either side can deliver its undertakings. President Kennedy has been fighting manfully, back in Washington, for his foreign aid Bill on which the $20 billion depends. But, even if he gets his way, the prospects for commodity price-stabilisation, which is nearly as important, look uncertain. For example, if Britain enters the common market, will not British tropical countries be preferred to Latin American ones there?

In Washington there is frank scepticism, too, on whether the luxurious Latin American ruling classes can be induced so easily to emulate the abdication of the British landed aristocracy after 1880. Not only do they hold 80 per cent of the land, but also they often control the Congresses of their countries and their degree of patriotism—and of faith in the future—is indicated by their deposits of up to $10 billion in European and United States banks. They have blocked most reforms in most states for decades and it is doubtful if Harvard economists can induce them to change their ways. These Latin Americans may even retort that the North Americans are preaching many things that they do not practise wholeheartedly in the United States—control of interest rates, for example, a move from large-scale to small-scale farming, an end to tax dodging by the propertied classes and economic planning itself.

This is the gamble at Punta del Este. The United States Administration can claim that some reform has started in Latin America (for example, in left-leaning Brazil) and that even the English Magna Carta took time to become a reality. Moreover, Washington still hopes to strengthen the alliance by inducing Canada to join—and later the West Indian Federation and even an independent Guiana (to keep it away from Castroism). Experts from every country and international organisations as well as from the United States are to be on tap to create the development plans. Latin American liberals and professional people may be convinced by all this but who is going to evangelise the landowners? And what will happen if Cuba signs the watered-down text of the declaration, argues that all American revolutions, whether controlled or Castroist, are equal, joins the Inter-American Bank and asks for loans? In the longer run the Americans admit that Dr Castro has still plenty of cards to play.

Business Looks Abroad

AMERICAN businessmen are spending $4.5 billion this year—20 per cent more than in 1960—on plant and equipment in other countries; according to the Department of Commerce they expect to spend about the same in 1962. This is nearly as much as in 1957, a record year because of the heavy foreign outlays of the oil industry after the Suez affair. But this year manufacturers are responsible for the rise, with their capital expenditures abroad far higher than ever before. Over half of these outlays are to be in Europe—unless plans are changed as a result of the trouble over Berlin—and the increase is most marked in the countries belonging to the European Economic Community, although total capital outlays in Britain by American

firms are still running above those in any other European country. Once Britain joins the common market, however, and brings its industry within that market's tariff barriers, then American manufacturers are likely to look as favourably as they used to do on the United Kingdom as a factory site.

In the long run Britain's membership in EEC is also expected to stimulate American exports, by stimulating demand in Europe generally, though to begin with it will involve some difficult readjustments and a substantial increase in competition. Moreover, United States exporters hope to benefit from the probable loosening of Britain's economic ties with the Commonwealth. Exports have been doing very well this year, running at an annual rate of $19.8 billion, 4 per cent ahead of 1960, for the first six months as a whole; this explains in part why at the moment there is little concern over the effect on the balance of payments of the increase in investment abroad. But in fact much of the $4.5 billion will come from retained earnings or local financing and will not enter into the international accounts of the United States.

These accounts still need to be watched, however, as the April-June statement shows, quite apart from any possible flight from the dollar which might be inspired should inflation reappear. In the second quarter of this year exports were lower than in the January-March quarter, while imports were higher—although the total for the first half of the year, at an annual rate of $13.6 billion, was 10 per cent below the similar period of 1960. Moreover, the new

defence build-up itself, and also the extra push which it will give to the current economic recovery, are bound to increase the demand for foreign manufactures as well as for imported raw materials. Official efforts to promote exports are therefore being watched with particular interest.

The Export-Import Bank, which exists mainly for this purpose, has just reported very satisfactory progress for the year which ended last June. It did over twice as much business as during the preceding year, authorising 832 loans and guarantees amounting to $1.4 billion to 85 countries. Of this total $1 billion was for 75 long-term loans—project credits—to finance purchases of American capital equipment. The bank is still working on a scheme, with which it has had some difficulty, for making guarantees against commercial as well as political risks abroad available at business centres all over the country for short- and medium-term export credits.

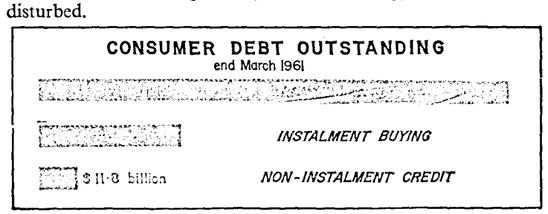
Aid Cut to the Heart?

THE Administration and its supporters were full of confidence at the beginning of this week, the crucial one for the foreign aid programme since during it final votes are expected in both houses of Congress. Last week had ended with a splendid victory in the Senate which had rejected, by 56 votes to 39, the deadly amendment offered by Senator Byrd of Virginia; this would have required the President to apply to Congress each year for funds for development loans instead of allowing him to finance them over a period of five years by drawing directly on the Treasury. This is the heart of the Administration's programme, since the suspiciousness and stinginess of the congressional appropriations committees where foreign aid is concerned make it impossible to promise the long-term loans on which satisfactory development plans depend if Congress has to be asked for the money each year.

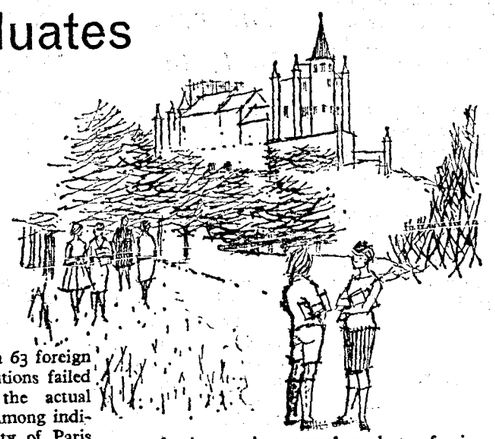
But to achieve this striking vote Mr Fulbright, in charge of the Bill in the Senate, had to buy Republican support by promising to accept an amendment which would give Congress some control over the way in which these long-term funds were used. The early part of this week was spent in trying to find a formula for this amendment which both the Republicans and the Administration could accept. The latter is far from enthusiastic about the outcome, the Dirksen amendment which was approved on Tuesday, but with luck, and if it is not used too vigorously, it may not do much damage. Reflecting both Congress's dislike of giving the Administration a free hand in money matters and its dissatisfaction with the way in which foreign aid has been handled in recent years, the amendment requires all loans of more than $5 million to be submitted for approval to the foreign aid and appropriations committees of both houses; these would have thirty days in which to recommend that the Administration's authority to make such a loan should be cancelled by Congress.

Senator Fulbright had worked for an overwhelming defeat for the Byrd amendment in order to impress the House of Representatives, always more distrustful of foreign aid than the Senate and particularly reluctant to give up its power over the purse by granting authority to draw on the Treasury. But the strategy did not work: on Wednesday the House broke away from the managers of the Bill, who had already offered to reduce to three years the period for which this authority would be granted, and denied it altogether—on the motion of Representative Saund, a naturalised member who was born in India. There is still a chance that this vote may be reversed; the President is presumably once again on the telephone to doubtful members as he is said to have been every day since the debate started. Meanwhile, however, the Senate has also got out of hand and has voted a cut of $800 million in the $8.8 billion authority for long-term borrowing and one of $250 million in this year's $1.8 billion for military assistance.

Interest in Debt



"Throw that away, girl—it will oddle your mind"



MORE than a year ago, Senator Paul Douglas and twenty-one senatorial colleagues introduced a Bill which would force those who offer hire-purchase agreements, or who make personal loans, to put to the customer in black and white the exact financial charges involved in the transaction. In a country which has never given the money lender the benefit of the doubt, the measure got a good deal of support; indeed, even its staunchest critics felt bound to applaud its intentions before proceeding to tear it to pieces. The Bill was approved by the appropriate Senate sub-committee but, since it lacked the backing of the Eisenhower Administration, it never got further than the in-tray of the full Banking Committee. This session the Senator, who has re-introduced his Bill, is batting on a firmer wicket; in a second round of public hearings the various arms of the new Administration have, with varying degrees of enthusiasm, pronounced themselves in favour of "truth in lending."

The sponsors of the Bill feel that the American public might be less abandoned in incurring additional indebtedness if it was aware of the cost involved. Since instalment debt outstanding (excluding house mortgages but including personal loans repaid on an instalment basis) has risen from $2.5 billion in 1945 to $42 billion today, these Senators believe that a little restraint would be a good thing. The Bill might also encourage consumers to purchase capital goods during a recession, when interest rates are lower, and to hold off during boom periods. But mainly the Senators are concerned for the simple consumer who is unaware (he never was much good at maths) of the very high cost of not paying cash and who might in any case get a better deal if he were in a position to look around for the most favourable credit terms.

The opponents of the Bill—the banks, the United States Chamber of Commerce, the finance companies and the retail shops—claim, firstly, that it is unworkable because of the endless time it would take to express a complex credit arrangement in terms of simple annual interest, as the Bill insists should be done. Secondly, they feel that a bald statement of the effective interest rate being charged would give no indication to the customer of the heavy expenses involved in hire-purchase transactions—checking a client's credit worthiness, collecting payments, covering bad debts and endless book-keeping. They are perfectly aware that a man who receives 3 per cent on his savings account may well baulk at paying an effective rate of 15 or 20 per cent a year on his purchases but they feel that "buying now and paying later" has served the American public (and the economy) too well to be disturbed.

Undergraduates at Large

NEW YORK

THE annual migration of American students to colleges and universities abroad is large and growing. During the academic year 1959-60 the Institute of International Education—a voluntary organisation that administers several student programmes—found over 15,000 American students in 63 foreign countries but, since many institutions failed to return the questionnaire, the actual number was certainly greater. Among individual institutions, the University of Paris took pride of place with 1,500 Americans enrolled, followed by Mexico City College (1,000) and the University of London (500).

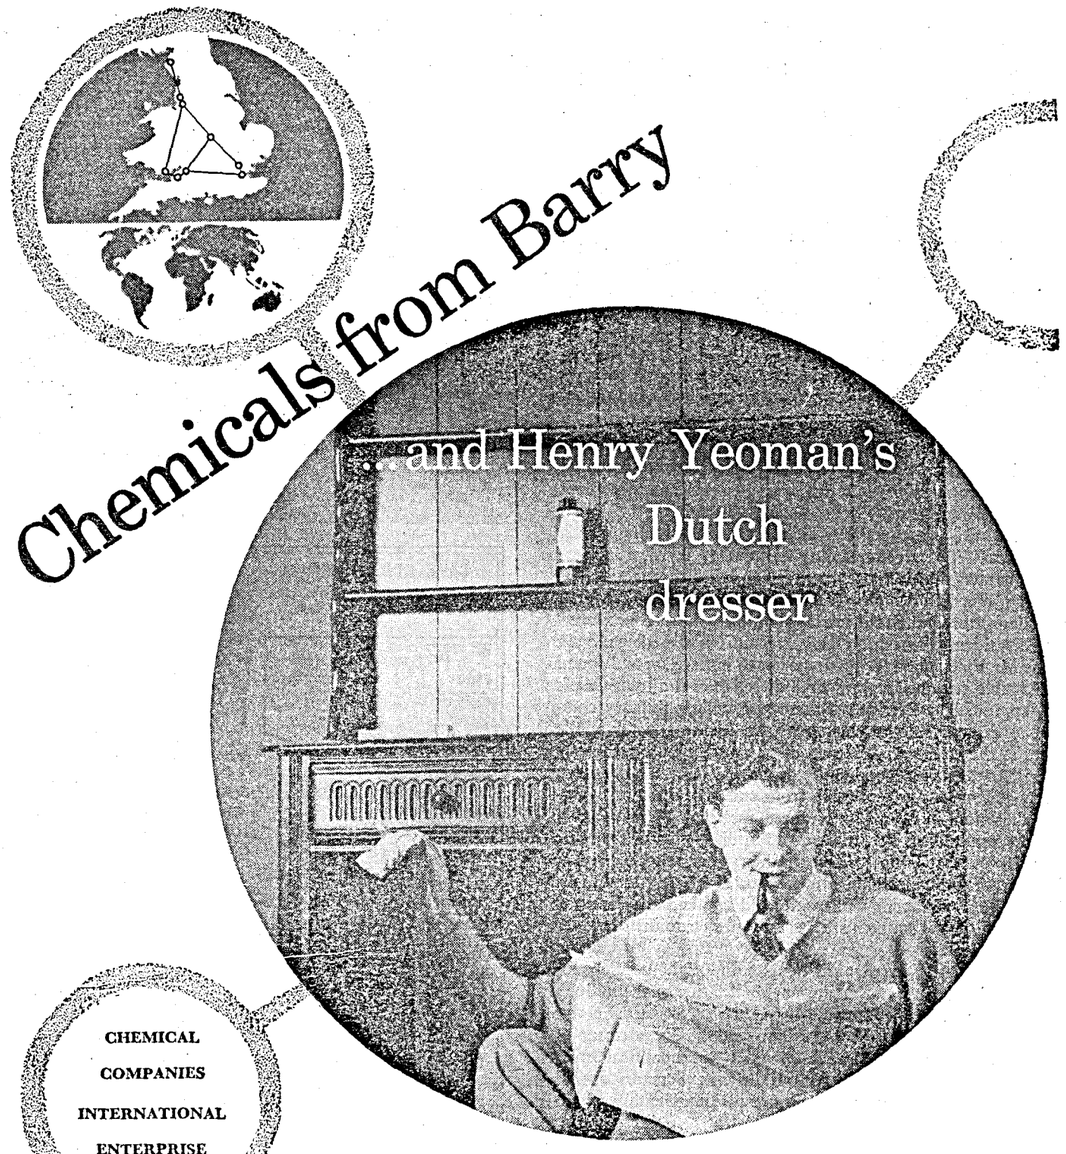
The majority of these students make their own arrangements and pay their own way but the number of organised schemes, offering either financial help or special facilities, has boomed since the war. Under the Fulbright programme the federal government has sent between 600 and 800 graduate students abroad in each of the last 14 years; private foundations have been expanding their provision for itinerant scholars; and the University of Maryland has set up facilities in a number of countries for American government employees, servicemen and their respective dependants. But at the moment the drive to send more and more students abroad is coming from a different quarter. Increasingly, American colleges and universities, particularly those for girls, are making provision for their students to spend a year abroad (or alternatively a term) as part of the regular course for a bachelor's degree.

The idea is not a new one—Smith College, a patrician institution in New England, has been sending its girls abroad since 1925—but in the last few years these isolated programmes have been joined by a host of others. By 1960 over 70 colleges had arrangements for foreign study, and many more are considering the idea. By 1962 Stanford University (in California) expects to have no less than a third of its 5,500 students abroad.

Different colleges have different ideas about the form that this period of foreign study should take. At present the most popular variety is the Junior Year Abroad, a twelve-month programme in the third year of the usual four-year degree course; among the most notable *alumnae* of this year abroad is the present First Lady. At this point in his college career the American student is thought to be on a par with his foreign counterpart (who has usually had a longer and more intensive pre-college schooling) and is presumed to be sufficiently mature to withstand being let loose in a strange society. Again, the programmes differ widely in the extent to which the student is "exposed" to foreigners in general and to foreign educational methods in particular. At one extreme, Stanford has established what amount to branches—in Stuttgart, Florence, Tours and Tokyo—where the American students live together and are taught (with the exception of languages) by an all-American staff. At the other extreme are the programmes of Wayne State University and Fordham which probably come closest to the traditional pattern of studying abroad.

In general the schemes offer some sort of compromise between an American education on foreign soil and a foreign education. They usually arrange for the students to live with local families (an arrangement that often does more to reassure parents at home than to provide much in the way of actual family care and protection). The academic diet consists of a mixture of special courses given as a rule by locally-recruited teachers and regular courses at the local university. And the programmes usually have a resident American director responsible for the academic and moral welfare of his flock. Paris is the most popular centre but students are now being dispatched annually to most of the countries of western Europe and, more recently, to countries in South America. Because their facilities are overcrowded British colleges and universities have so far resisted this type of infiltration.

THE whole idea of allowing (or encouraging) students to go abroad during their undergraduate training is arousing a good deal of discussion in academic and other circles. Many people feel that the Junior Year Abroad cannot be justified on scholastic grounds. The disruptions of being transplanted to foreign soil (and the almost equal disruptions of readjusting afterwards to American college life) usually outweigh any academic advantages. Moreover, the courses available to American students in foreign universities do not as a rule fit well into an American curriculum and (though this varies widely from one programme to another) the quality of the special courses provided is often well below those obtainable at home.



A serious problem arises because an American degree depends less on final examinations and more on credits for attendance and on marks given throughout the four years. Hence, the work done at a foreign college must somehow be converted into American academic currency; in most cases this can only be done in a very rough and ready fashion. Many of the students who go overseas in their third year say they have to work exceedingly hard in their fourth in order to catch up; others stay abroad and abandon their American degree.

The usual justification for the Junior Year Abroad is that the benefits of living in a foreign country outweigh any resultant loss in scholastic input. People in the academic world are divided on this. Most of them would much rather see students go abroad after they have graduated. But this overlooks the fact that relatively few of them will in practice be able to persuade their parents to support yet another year of schooling or to secure a fellowship. Even so some teachers would prefer to keep students on home ground and would encourage instead both travel in the summer and the provision of more grants for post-graduate study in foreign parts. Others approve of the year abroad for girls, who are likely to marry at an early date and are less likely to do post-graduate work, but not for men, who must depend more on their academic record.

But whatever the professor may think, the Junior Year Abroad is certain to grow in popularity. Students are strongly in favour of it and, since it costs little more than a year spent at an American college, so are many parents. There is today a certain compulsion for colleges to make provision for students to go abroad if they are to remain in the swim. Some small colleges have instituted foreign programmes with an eye to attracting a higher calibre of student than they could otherwise do.

There is some anxiety that the growing flood of young Americans abroad may in time overwhelm some of the receiving countries. Partly this is a matter of the quality of the students. Some programmes select students carefully, restrict participation to those of high academic calibre and require considerable language ability. But others include in their numbers students who do little credit to the educational system of the United States and who spend more time grumbling about the plumbing than absorbing the local culture. In some countries, there may in time be a problem over sheer numbers. American students are often using educational facilities that are already overcrowded and are government-subsidised.

It is generally agreed by those with an interest in the question that more should be done to make colleges aware of their responsibilities in sending undergraduates abroad and of the pitfalls in doing so. At the same time, parents should be given a better basis for judging the quality of the programmes that are being offered. This is a task that the Institute of International Education would like to have a hand in (if it can get the necessary financial backing).

Takes a pride in his home—Henry Yeoman. Even helps with the housework! The Dutch dresser, for example, always looks the better for a spot of polish. And that's where chemicals from Barry come in.

Midland Silicones Ltd.—one of the companies of the Albright & Wilson Group—produces silicones at Barry. Silicones used in the manufacture of a wide variety of products—from paint to paper, traction motors to textiles, steam irons to polishes. Polishes like the one that Henry Yeoman's using here to make the Dutch dresser a shining example of his handiwork!

This is only one of the ways in which A & W chemicals play a part in the life of Mr. Yeoman. As one of the biggest organisations in the British chemical industry, the Albright & Wilson Group contributes—but we could go on like this . . .

THE ALBRIGHT & WILSON GROUP

L3/61

Looking Right Back

THE House Rules Committee decided recently that the John Birch Society was not worth investigating—the suggestion that it was came from two of its members who are also Congressmen—and the Attorney General of California, one of its main strongholds, has ruled that, while the society is "authoritarian, paranoic and often ridiculous," it is not illegal. He describes it as a group

> of wealthy businessmen, retired military officers and little old ladies in tennis shoes . . . bound together by an obsessive fear of "communism," a word which they define to include any ideas differing from their own.

The society's recent offer of $2,300 in prizes for the best essay on the "grounds for the impeachment of the Chief Justice of the United States" will not make people take it any more seriously. But there is incipient danger in its request to its members—it claims 60,000—to help to draw up complete and accurate files on the leading Comsymps (communist sympathisers), socialists and liberals in America. And these hints of reviving McCarthyism are accompanied by hints of reviving MacArthurism. Senator Fulbright and his staff have recently established that there is active sympathy in some military circles for the reactionary trends exemplified by the John Birch Society and a number of less publicised but perhaps more influential right-wing organisations.

Evidence of this sympathy first hit the headlines in June when Major General Walker, commanding an infantry division in Germany, was admonished officially for "taking injudicious action"—distributing John Birch literature, according to the charges—and making "derogatory public statements about prominent Americans"—calling President Truman "definitely pink," it was alleged. At this point Mr Fulbright and others began to investigate and found that the trouble stemmed from a 1958 directive of the Joint Chiefs of Staff, approved by President Eisenhower, telling military commanders to explain both to their men and to the general public the issues in the cold war. This led to seminars, sponsored jointly by the military and local community groups, all over the country; frequently the main speakers came from one of the radical right-wing organisations. At many of these meetings discussions of world-wide communism were submerged in discussion of domestic politics; this gave openings to those military men who, like other reactionaries, equate communism with socialism, and the social policies of the government with both, and contend that internal subversion and official softness are a greater danger to their country than is external attack.
