Chief Education Officer.

Education Department,
Leeds 1.

UNITED NATIONS require ECONOMIST experienced in overall and sectoral planning and project evaluation for GOVERNMENT OF UGANDA. Economist will be attached to Economic Planning Branch of the Ministry of Economic Development. Under direction of Head of Branch he will be required to assist in preparation of economic development plan, assess merits of development proposals of spending departments, evaluate availability of resources, advise government on priorities of public development expenditure and on means of developing new sources of funds. Previous experience of government or suitable experience in industry, or research institution preferable, experience of planning and project evaluation in an under-developed economy desirable.

DURATION 2 YEARS, DUTY STATION ENTEBBE. Estimated salary £250/£350 per month, plus generous allowances. All emoluments tax-free. Similar opportunities are likely to occur elsewhere.—Write to Department of Technical Co-operation (U.K.G.), Sanctuary Buildings, Great Smith Street, London, S.W.1, quoting E9/UGA/J/1942/BIA.

ORDERS for advertisements in *The Economist* are accepted on condition that they are liable to rejection at the discretion of the Editor; that while every effort will be made to publish an advertisement on a specified date, no guarantee is given; and that white on black, reverse blocks or large sizes of black-faced type may be stippled or lined at the Editor's discretion.

. . . then you would have **ANSAFONE—Britain's foremost telephone answering and recording system.** Think what this would mean. You need never miss a telephone call—day or night! Your customers, for example, can telephone their orders after office hours for prompt attention and routing the following morning. Long and involved reports from your representatives can be sent without distracting staff from more urgent work *and* during cheap rate periods. Calls may be received and recorded without disturbing an important conference. It will enable you and your staff to send messages and instructions with no need to wait for a personal reply; in other words use the telephone as a long distance recording machine!

From these few examples alone it will be obvious how ANSAFONE can increase the efficiency and capacity of your business—but the possibilities are immense. That is why ANSAFONE is fast becoming accepted telephonic practice all over the world. Why wait? You can help yourself, your customers and put your business ahead of your competitors by installing an ANSAFONE system now. ANSAFONE is compact, easy-to-use, and can be rented *for as little as 2d. an hour*, maintenance free.

DO YOU KNOW

that this little ball could run you out of business?

VULCAN KNOW The most simple things can cause a disaster to all kinds of industrial machinery. But, simple or complex, every potential danger spot needs an expert eye to find and correct it. The expert who knows where to look, and what to look for, is the Vulcan Engineer Surveyor. Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection and protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

May we send you FREE 'Vulcan'—a journal for all users of plant and machinery with reports of accidents and safety hints. Write to us.

An extra specialist Vulcan Service!
We were the first insurance company to offer industry Non-Destructive Flaw Detection by Ultrasonics, Radiography, or Magnetics. This extra specialist service is now available to *all* industry—whether Vulcan insured or not. Write to us for complete details.

That's the gain of the NEW A60

FASTER Some drivers live in Lilliput-land. They settle for under-power. Maybe you feel you don't belong to that class. Try the new A60. The simple data is: 1622 cc, 61 bhp, well over 80 mph. That gives you enough extra to shrug off most sane competition on a safe straight road. To go clean ahead from the lights. *Why settle for less?*

FASTER Make a simple test. Drive four guests off in a new A60. Add up the compliments as they come (they should reach double figures). In the A60 *everyone* is able to stretch his legs. Sit back in comfort. Breathe. Talk. Enjoy the journey. The duotone trim strikes a restful modern note. The engine's a gentle hum. Safety Point: fittings for seat belts have been provided. *Why settle for less?*

FASTER The new A60 is a very advanced car. It looks very stylish in the showroom. But there's only one way to get to know it—get out and drive it. Phone up your Austin dealer and ask him to put you on his booking list for a free trial run. The A60 costs £585 plus £269.7.3 P.T. and Surcharge.

BIG EXTRA For the first time ever Austin offer *fully automatic transmission* in a car of this class. With the new Borg Warner 35 system you simply relax and steer. No gear shift; no clutch pedal. The price of this ultimate piece of self-indulgence is very modest.

SECOND CLASS POSTAGE FOR *THE ECONOMIST* PAID AT NEW YORK, N.Y.
Published weekly every Saturday, printed three times a year in London, England.

In The Economist this Week — December 9, 1961

HOME

Having it Good

Aspirations and apprehensions for the British economy—one up for the apprehensions (p. 997).

The leaks in the wage pause may have become a steady inflationary flow by February (p. 1004).

Retail trade slipped in October: *even the English will not begin* their Christmas shopping that early (p. 1052).

Agonising Reappraisals

Hire Purchase: it is time to overhaul the system of extending credit to consumers—and to replace some of the parts that are giving trouble (p. 1047).

Immigration: the controversy over the Bill now before Parliament could make and break some political reputations (p. 1005).

Juries: an honourable and ancient institution that badly needs to be modernised (p. 1009).

Feet on the Ground

The logic behind this week's big merger of flour companies is that a shared loaf is better than fighting for bread (p. 1055).

Gas stored underground could be a bonanza for some landowners if the law is not changed (p. 1056).

A lot of speculation has surrounded steel company results this year—the results speak for themselves (p. 1075).

Facts of Life

Gypsies, in 1961, should surely be treated as full British subjects (p. 1009).

A good—but perhaps overrated—African musical has foundered in the desert of Birmingham (p. 1034).

The number of independent airlines able to compete with British European Airways is dwindling (p. 1059).

What about the Workers?

Oxford and Cambridge still rule the waves in Whitehall (p. 1003).

The problem of London's latest immigrants is housing, not race (p. 1033).

But the role of the Rent Act has been to change the kind of people becoming homeless in the capital, not to make them more numerous (p. 1013).

INTERNATIONAL

Atlantic Community

President Kennedy's bold plan for increasing the powers of the United States to bargain with the common market faces influential opposition (p. 1025). If it is to lead to a truly fruitful unity among free nations it must not be narrowed down into just an anti-communist crusade (p. 1000).

Canada has wisely begun to realise that the new plan offers a solution of its own common market problems (p. 1042).

Peace Force

Some of the mud thrown at Britain by Dr Conor O'Brien may stick; at home the English are not used to armed policemen, but the **United Nations** must have power behind it, and the candid support of its ostensible supporters, if it is to be able to keep the peace (p. 999). The defensive battle the UN is now fighting in Katanga will be decisive for its future (p. 1037).

Chinese Chequers

Just as in Russia, two factions—diehard and moderate—are manoeuvring for supremacy in **China** (p. 1001).

Russia's defence budget has been increased (p. 1010).

Berlin and the Powers

West Berlin seems bound to wither, unless an improvement in the East-West climate provides it with a future and some means of maintaining the size of its population (p. 1038).

Yet the French government continues to oppose any negotiations, and the German Bundestag any concessions (p. 1004).

Beauty and the Beast: At home General de Gaulle's measures against the Secret Army have been outdone by Miss Bardot's bold stand against it (p. 1006).

The powers have almost reached agreement on **Laos,** but the three princes still procrastinate (p. 1006).

Awkward Islands

Latin American states are to discuss communist activity in their midst, but there is no enthusiasm for a crusade against **Castro** (p. 1010).

Holland's recent offer to make **New Guinea** independent has not persuaded Indonesia to moderate its strident claims (p. 1006).

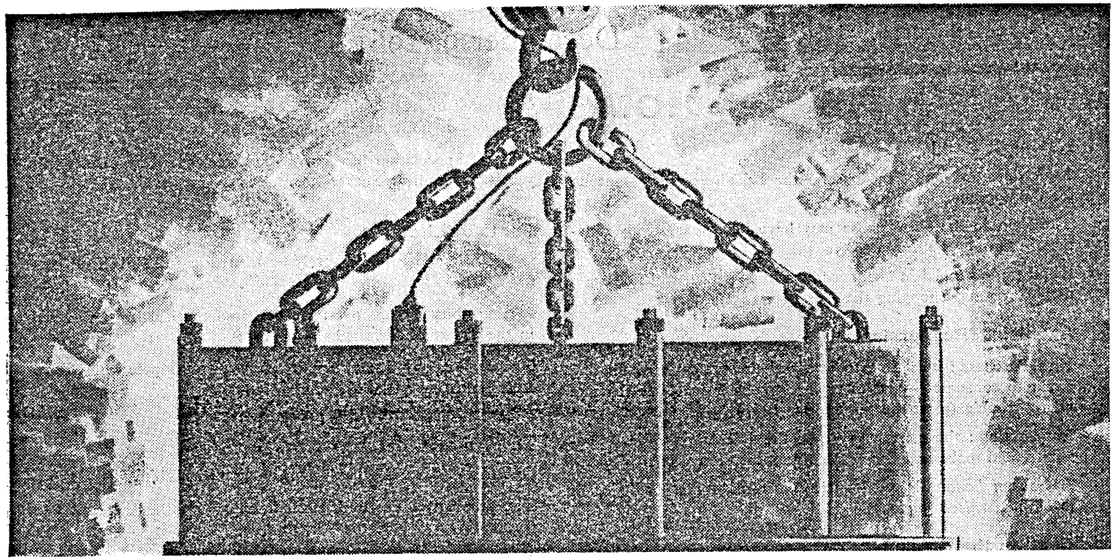
More trouble is blowing up in **Goa,** the Portuguese enclave in India (p. 1010).

African Sweat and Fears

Hard sledding is ahead for **Tanganyika,** for all its high promise (p. 1041).

Southern Rhodesia's earnest campaign against the colour bar has come too late; African nationalists see it now as an attempt to divert them from political objectives (p. 1044).

The American Scene



Higher interest rates in the United States are to discourage the outflow of "hot money" (p. 1026).

Even now the American Communist party has not exhausted its legal defences against registration (p. 1026).

The American trade union movement is in danger of splitting apart over the question of how to increase its membership (p. 1029).

The lot of the American reservist called up this autumn is not a happy one (p. 1030).

Detailed contents on page 997

IN THE FIELD OF

INDUSTRIAL EXPANSION

MALTA is magnetic

Malta offers so many incentives to industrialists who seek expansion

* LOW COST FACTORIES ON SERVICED SITES
* LOANS OF UP TO 33⅓% AND GRANTS OF UP TO 33⅓% (AND IN SPECIAL CASES UP TO 50%) OF FIXED CAPITAL ASSETS
* 100% ON TRANSFER OF EXISTING PLANT
* TEN YEAR EXEMPTION FROM INCOME TAX
* EXEMPTION FROM CUSTOMS DUTY ON CAPITAL EQUIPMENT
* CUSTOMS DRAWBACK ON RAW MATERIALS AND COMPONENTS USED IN PRODUCTS FOR RE-EXPORT

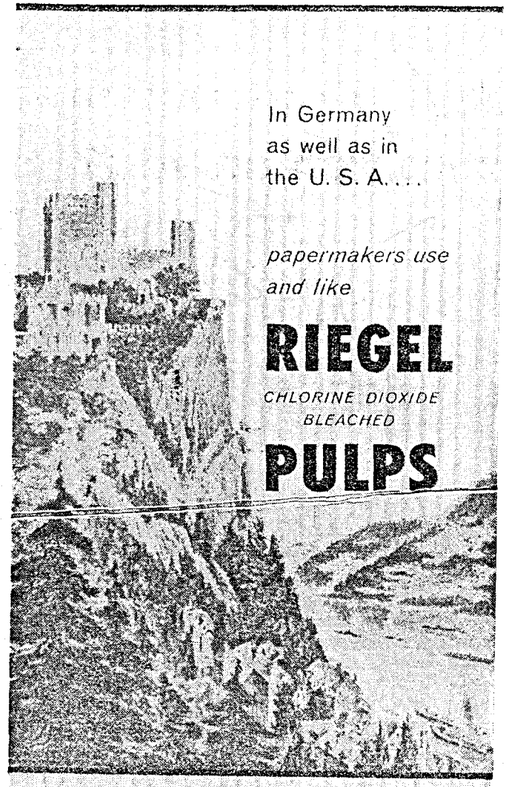
Malta's tremendous attraction lies in its perfect location—the very heart of the rich markets of Europe and the Middle East, so easily accessible from the island's modern airport, new deep-water quay. Other benefits include a new power station and large labour force.
Over twenty organisations have already taken advantage of this generous scheme. Why not you?

For full details of business opportunities in Malta, send for the Official Brochure:

MALTA *means business*

The London Manager MALTA AIDS TO INDUSTRIES BOARD

(Room 9) Malta House, Haymarket, London, S.W.1. Trafalgar 4017



Is this why some of your competitors are stealing an export march on you?

To many of Britain's leading manufacturers, BEA air freight is not an "emergency only" affair—it's a normal, routine move in the business of getting firmly entrenched in European markets.
To the bread-and-butter advantages of incomparable speed, savings in packing cost, lower insurance rates and great reduction in pilferage and damage troubles, BEA air freight adds the jam of extra prestige and good salesmanship.
Seeing that you can get all this at a cost which—in terms of overall despatch costs—is sometimes little if any higher than you are paying now, would it not be wise to study the facts and figures of BEA air freight with a new and imaginative eye? Ring your local BEA Office, or your usual shipping agent.

BEA's new 300 m.p.h. Armstrong Whitworth Argosy freighters, with Rolls-Royce Dart engines, are starting regular scheduled cargo services to Paris, Milan, Dusseldorf, Frankfurt, Copenhagen & between London, Manchester & Glasgow. The Argosy's large nose and tail doors allow quick loading and unloading of heavy and bulky freight.

THE Budd COMPANY

One of the world's great names in engineering . . . metallurgy . . . tooling . . . welding . . . research . . . testing . . . production and progressive development for the automotive industry

Ever since Budd developed the first all-steel automobile body in 1912, major manufacturers have counted on Budd to tool and produce car and truck body components . . . chassis frames . . . wheels . . . hubs and brake drums . . . of highest quality. And, in that time, Budd's specialized engineering, metallurgical and fabricating skills have contributed many ideas, techniques and tools that help the automotive industry perform its miracles of mass production. Today, Budd ranks high among the 200 largest industrial concerns in the world, with sales in 1959 of nearly $322,000,000. The Budd Company, Philadelphia 32, U.S.A.

INTERNATIONAL Budd DIVISION

. . . the *new* and *better* galvanized steel sheets

Do you have a job that requires top quality galvanized steel sheets? If so, our LEONITE sheets are just what you need. Our fully integrated and modernized strip mills and Sendzimir continuous galvanizing line are working at full capacity to produce superior corrosion-resistant LEONITE galvanized steel sheets. There is ever-increasing overseas demand for LEONITE because it has a special-processed non-flakable zinc coating which makes it ideal for deep drawing. It is widely used for building material, ducts, furnaces, automobiles, refrigerators and numerous other household appliances.

This is just one integral part of NKK's mammoth enterprises. As the Orient's largest steel producer engaged in both steelmaking and shipbuilding, NKK's 30,000 engineers, specialists and workers are producing high-quality steel products.

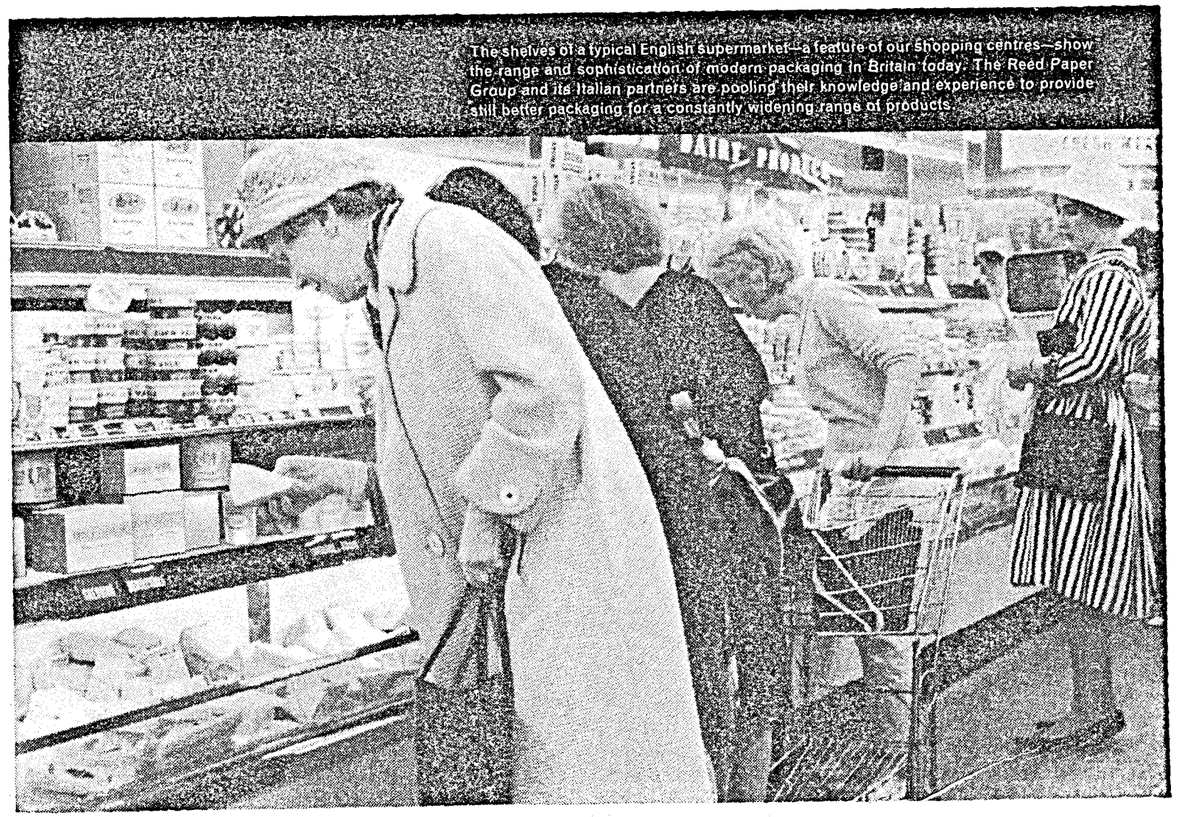
Now a Roman piazza is next door

An Italian street market—picturesque, but fast disappearing as the most rapidly developing member of the Common Market turns to modern marketing methods. The new supermarkets demand modern packaging, which the Reed Paper Group is supplying in ever-increasing volume through its new Italian partners.

A VITAL FOOTHOLD FOR THE REED PAPER GROUP IN THE COMMON MARKET

—that is the outcome of the Group's new partnership with La Centrale Finanziaria Generale S.p.A. of Milan, with whom it has set up a holding company, SICAR S.p.A. Already SICAR has acquired a controlling interest in a major packaging business, now renamed Rexim-Bugnone S.p.A., and is building a carton board mill in Southern Italy.

The challenge of the Common Market's 170 million people has sent Italian industrial output soaring. Production has increased faster than any other member of the Six. In line with this exciting trend, the Italian paper and board industry is growing at the rate of 12% a year.



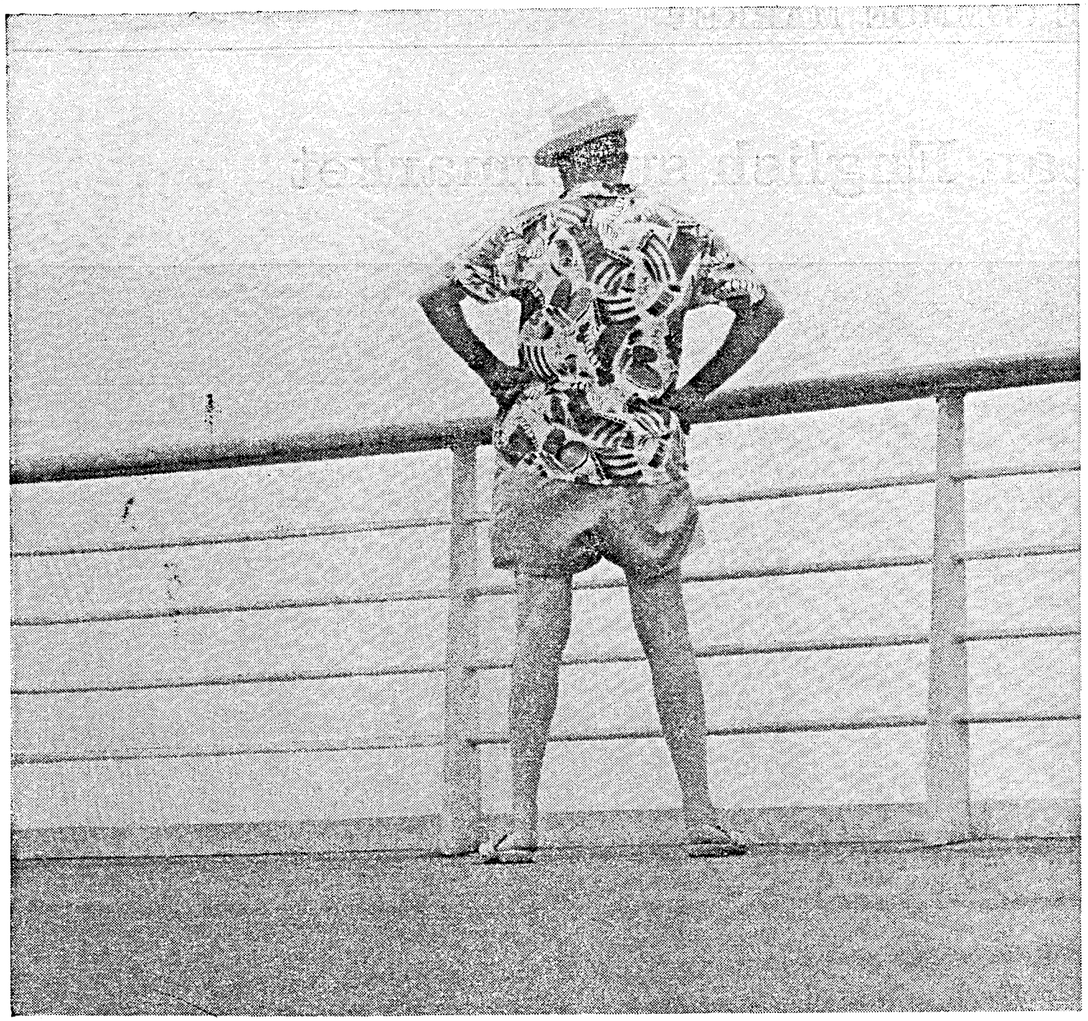
The Italian today uses on average only 60 lbs. of paper and paper products compared with the 140 lbs. of his cousins in the rest of the Common Market, and the 224 lbs. in the United Kingdom. Thus the growth potential is enormous; indeed, demand may well double in ten years.

This new partnership in Italy is typical of the global pattern of expansion of the Reed Paper Group. A £37 million transaction last year brought three Canadian companies—Anglo-Canadian Pulp and Paper Mills Ltd., the Dryden Paper Co. Ltd., and the Gulf Pulp and Paper Co.—into the Group. Other developments include a £2½ million pulp and paper mill under construction in Norway and a £2 million packaging organisation operating throughout Australia.

To each of these partnerships, the Reed Paper Group brings its vast technical, research and production experience. Each member company, for its part, makes full use of its knowledge of local conditions and markets.

The Reed Paper Group is now firmly established in the four main trading areas of the free world—the Dollar Market, the Commonwealth, the European Free Trade Area and the Common Market. The next few years will see new enterprises started and existing projects developed further as part of the Group's efforts to expand and diversify its activities in this country and all over the world.

to an English supermarket



The shelves of a typical English supermarket—a feature of our shopping centres—show the range and sophistication of modern packaging in Britain today. The Reed Paper Group and its Italian partners are pooling their knowledge and experience to provide still better packaging for a constantly widening range of products.

THE BEST-DRESSED MAN IN THREADNEEDLE STREET

You'd know him anywhere by the cut of his pinstripe. There isn't a better dressed man in Threadneedle Street. But for four weeks his sartorial standards have been enough to make Savile Row swoon and his boardroom blench.

And the odd thing is he's not losing any sleep over it. When in Rome has always been his motto. And just at present Rome is a sunny, happy-go-lucky ship packed with good living and some of the nicest people he's ever met. Formality went overboard the day the ship left San Francisco for Sydney, Colombo, Bombay and Home.

He was pretty tired after the long American Tour. He knew he needed time to relax and refresh himself before he met his directors again in Threadneedle Street. His report could wait—but his health couldn't. So he's sailing home, the roundabout way . . . pottering round the ports of call if the fancy takes him, clinking the ice in a tall glass on deck if it doesn't. And when he gets back into that knife-edge pinstripe he'll be a different man from the worn, grey person who went away. Can *you* think of a nicer way to rest on your laurels?

A Plan for 1962

THERE need be no apology for leading off this week's issue with exhortation to the Chancellor again. He has an excruciatingly difficult task ahead of him in the next few weeks, and it is liable to be made even more difficult by the nebulousness of the terms in which it is being discussed. Let us, therefore, proffer to him an aspiration and an apprehension for 1962 in the fashionable language of quantitative planning.

The *aspiration* for 1962 should be to hold average wage and salary increases down to between 2 and 3 per cent, but to try to push production up by between 4 and 5 per cent.

Our *apprehension* for 1962 is that wage rates between now and the end of next year may rise by somewhere around 5 per cent, but that production may rise by only 1 or 2 per cent, if indeed production rises at all.

Nobody would go to the stake in defence of the absolute appositeness of either of these sets of figures, but they represent a measured starting point for discussion: a reasonable definition of the difference between what would be a fairly considerable success and what would be a resounding (but at present all too commonly expected) failure. From them, certain important—but little-discussed—conclusions for policy flow. The aspiration of a growth rate of 4 or 5 per cent would imply that Britain's real domestic product should be some £900 to £1,100 million higher in 1962 than 1961. If exports increase by 6 or 7 per cent next year (which seems to be the best extrapolation one can make of recent hopes expressed by various unofficial forecasters), the export drive would absorb £200 to £250 million of fresh resources. So increases in domestic investment and consumption would need to total about £700-£850 million. Contrary to some of the sternest demand deflationists, we do not believe that increases on this scale would obviously overload the economy; but we also do not believe that internal demand will rise by as much as even the lower of these figures in 1962 unless there can be a restimulatory budget. The Chancellor of the Exchequer is certainly not thinking about a restimulatory budget at the moment; but—if he really believes in expansion in 1962—he ought to start thinking about how he could possibly get into a position to introduce one.

The assumption that wage rates should go up by only between 2 and 3 per cent, even if production could be made to rise by between 4 and 5 per cent, is not based on Gradgrindism, but on hard calculation about earnings: if production rose, earnings rates would obviously rise by more than wage rates (because of overtime, piece work bonuses, etc.). So the country had better understand frankly that if trade-union-generated wage increases average more than about 2 or 3 per cent this winter, both the internal economy and the export drive are likely to run into difficulties of cost inflation, and the Chancellor is bound to feel obliged to introduce a budget that will hold down production.

At the moment—this is where the arithmetic of the aspiration merges into the arithmetic of the apprehension—it looks as if wage rates are likely to rise by more than this in early 1962. There are mounting and disturbing indications that the pause is being regarded in Government circles as only a temporary delaying action: that it may end with the unions securing in about March the sorts of wage increases that they might otherwise have secured in about October. The Government would doubtless then claim that "at least it had won five months of delay," as if the mere fact of making everything (including production) stand

still for nearly half a year were an act of great financial usefulness. But, in fact, these five months of pause would be useful only if the economy were in a better state in March than it was in October to absorb big wage increases, without cost inflation and a consequent need to stunt growth; and there is no indication at all that this is likely to be true. Indeed, one's guess—on present trends—is that the foreign exchange markets will be just as apt (if not even more apt) to run away from the pound sterling on news of any new wage inflation in three months' time as they would have been two months ago.

EVERYTHING therefore depends, not on how long the pause lasts, but on whether it can be succeeded by the famous "guiding light": on whether, when the pause ends, the Chancellor can persuade the trade unions to accept wage increases that can be contained within the maximum possible growth in productivity. How can this be done? In an ideal world it might be done simply by the Chancellor persuading the unions to sit on a planning council with him, in congenial bonds of harmony and common endeavour. But everybody knows that this harmony is unattainable at present, although the reason popularly given on the left about why it cannot be achieved is moonshine. The reason is not, as some people say, that the unions think that Tory policies bear "unfairly" heavily upon wages as distinct from upon profits; in point of fact, on the latest official count in the national income figures at mid-year, wages and salaries were 9 per cent higher than a year before and profits 8 per cent lower than a year before (so that, on this basis of estimation, about the only way that Mr Lloyd could promise the unions that profits would go on falling further in future would be by promising them a large-scale business and employment slump).

It is perfectly possible to find some other basis of estimation to show a different picture compared with some other date in the past, but this always would be possible under any economic circumstances. In view of this, it is silly to pretend that the unions' resistance to the pause arises out of any real and deep-seated feeling of politically-motivated unfairness; instead it arises out of a quite understandable feeling of power. By threats of strikes they are at present managing to keep the momentum of money wages increases moving forward at an inflationary pace; as trade union leaders they do not see how their aim can be anything else.

The answer to the question when and how the Chancellor might persuade the trade unions to agree to a system of planned wage increases is therefore: when the unions' efforts to drive forward into inflationary wage increases at last meet resolute resistance. Very probably, although not quite certainly, such resistance in a major nationalised industry this winter might lead to a major strike. It might even take on the appearance of a near-general strike, in the sense that other unions would presumably give more help to the strikers than they did to Mr Cousins's busmen in 1958, and that the Trades Union Congress itself might become the eventual bargaining agent with the Government, rather than just leaving the affair to be settled by the railwaymen's union or whoever is the big union directly concerned. But a saving grace of this grim situation, if it ever did arise, would be that this autumn's long talking about planning mechanisms could then provide a reasonable ladder for both sides to climb down.

The ladder into conciliation could take the form of at last issuing the famous guiding light: the Government should publish an estimate of what increase in the national income it thinks that it can plan for in the year ahead, and relate an offer of wage increases to the strikers (or at least to some of them) specifically to that. Provided that more shocks have not been administered to sterling by more wage surrenders in the meanwhile, the planned policy for production and demand in 1962-63 could and should be an expansionary one; and it would be reasonable this year for the views of the TUC to be taken fully into account in deciding what forms the tax reductions required for restimulating expansion should take. Presumably the TUC's preference would be for concessions that would reduce the cost of living; and there would in fact be a very good case for reversing the 10 per cent July surcharge on indirect taxes early next year. There is less objection to giving the TUC a voice in suggesting which tax rates should be put down than to giving it a prescriptive right to counsel the Chancellor about which new taxes (such as capital gains) should be put on or put up.

THERE would be many difficulties in the way of such a programme. It would be important to get the timing of the package offer right, because it should be made at a time when the trade union leaders were looking for a reasonable ladder to climb down rather than still thinking that they had a spiral staircase of wage inflation that they could keep on thrusting up. It would be important that the tying of wage increases to a national guiding light should be seen to be a deliberate act of policy, and one to be repeated in future years. If the Chancellor wants his proposed planning council to be associated with it, his best course would be to set up the "office" of technocrats for the National Economic Development Council straightaway, but to hold constant briefing sessions with the TUC, telling them who is to be on the staff of this office and what projects they will have on hand. There is the difficulty that this whole programme might have to go into effect against a background when sterling was weak on the international exchanges; the only way to cure that is to maintain investment support for sterling by keeping interest rates high, and to make budget reliefs rather than cheaper money the weapon for securing economic re-expansion.

But the biggest difficulty of all is that there are no signs that the present Government has yet understood that any of these things could or should be a sensible basis for its policy. There are no indications that the Government understands that it should set about re-expanding the economy by tax reliefs next year; it seems clear that Mr Lloyd is at present thinking in terms of a tough budget instead, in a confused belief that it is demand inflation, rather than cost inflation, which at present threatens the economy. There are no indications that the Government is going to be really serious about resisting cost and wage inflation directly and for long; the main point to which it seems to attach importance is that the starting dates for any wage increases should be pushed back as far as possible—although this question of "which starting dates?" is a thousand times less important than the question of "which amounts?" That is why, as a matter of measured judgment, one's apprehensions for the British economy in 1962 at present weigh grievously more heavily than one's hopes.

Pecksniff and Gradgrind?

If the UN fails in the Congo, now the crisis has come in Katanga, Britain will be charged with wrecking its mission there

CHARGED with a superhuman task in the Congo, the United Nations, which is a concourse of men, has proved human, and made mistakes. Human—and, perhaps, mortal. If the UN dies of failure in the Congo, the blame will lie partly with the men who serve it as administrators, but, in greater part, with the member governments who manage it. One member, Britain, will rightly or wrongly face a particularly serious indictment. The kind of thing that might be said was melodramatised at the weekend by Dr Conor O'Brien, the UN's former civil chief in Katanga; he was supported on Tuesday by General Sean McKeown, who says he will relinquish his post as military commander-in-chief in the Congo at the end of the year. Britain, said Dr O'Brien, presents the face of Pecksniff (Dickens's hypocrite in "Martin Chuzzlewit") at New York, and Gradgrind (the ruthless businessman in "Hard Times") in Katanga.

Is there anything fair about this? The fighting that broke out again in Elizabethville on Tuesday may very well seem to the British Government to prove its own attitude correct; the UN is now in fact at war with Katanga. All along, Britain has said that conciliation, not force, must be used to bring Katanga back into the Congo fold. (It has officially opposed Katanga's secession, and told Mr Tshombe that it does.) Force, the British Government says, should be used only in self-defence, or to prevent civil war—and then only in the very last resort. When the shooting started in Elizabethville on September 13th it looked very much as if the UN had declared war on Katanga with the object of bringing Mr Tshombe and his provincial government to its knees. Indeed, Dr O'Brien said things that seemed to confirm this suspicion.

The action was, therefore, labelled "outrageous" in Whitehall. Lord Lansdowne, who was sent out to investigate, reported a month later that many of the "apparently more outrageous aspects of the UN action as we had seen them from London were inaccurate or exaggerated." But he added that ineptitude and bad judgment had led to a "gross miscalculation" of the effect of the action. In Britain generally, where the police have never been armed (except in Northern Ireland), the sight of an international police force apparently using arms against one side in a dispute did, and does, seem outrageous.

But Tuesday's quarrel was brewing for weeks before it began. According to the United Nations, the cease-fire agreement between Katanga and its own forces, concluded on September 20th, had been "repeatedly violated in nearly every article." Some UN soldiers were kidnapped, others were beaten, all were threatened by Mr Tshombe's fiery speeches. The immediate cause of battle was a road block set up by Katangese forces, led by mercenaries, on the route from Elizabethville to the airport. The provincial government promised to remove the block; it did not, and the UN went in fighting. The mandate under which the United Nations could justify this action lies in the Security Council resolution of November 24th, which authorised the UN force to use the "requisite measure of force, if necessary" to arrest or deport Mr Tshombe's white mercenaries. Immediately before the fighting began, Mr Brian Urquhart, who replaced Dr O'Brien, said he had found a "battle plan" drawn up by the mercenaries.

No doubt, if its intention and effort were limited to getting rid of the mercenaries, the action taken on Tuesday could be shown by UN officials to be legal in terms of their mandate. But has not the UN force rather been forced into battle to defend itself, its positions and the future of its mission? Is this a possible position for the peace-keeping force to find itself in? That is the kernel of the UN dilemma; and the cause of much moral disquiet among many friends of the UN. The UN went into the Congo primarily to keep the world peace, by getting foreign interferers out; the purpose was to prevent the disorder from spreading, or being spread. This task has been narrowed to the crucial need to remove the band of white foreigners who lead Mr Tshombe's troops. These men cannot be "conciliated" into custody any more than the mutinous Congolese who murdered thirteen Italian airmen at Kindu in mid-November could be conciliated into behaving peacefully. Thus the UN is in a situation where it cannot keep the peace without breaking it; the lesson indeed that the UN is learning, and its member governments ought to be learning, is that peace, too, depends on having power on its side, not against it.

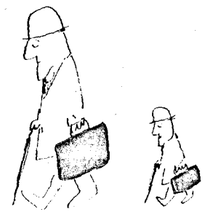
AND so far, as the previously unsuccessful operations in Katanga and the rampages of the soldiery in Kivu and Albertville have shown, the UN has lacked either the capacity itself to use force for peace, or the support of key member governments in trying to do so. The charges that Dr O'Brien has hurled against Britain will go on reverberating. In its public statements, the British Government has always been more careful to caution the UN than to point to the obvious difficulties facing it and to help it in overcoming them. Dr O'Brien says that Britain put pressure on the Secretariat in New York to have him removed. And in the Security Council, on November 21st, the British delegate implied that if the UN did not confine itself to conciliation in the Congo, support—presumably financial support — would be withdrawn. Several correspondents have

Chinese Communist party hierarchy. On one side were the fanatics such as Liu Shao-chi, the chairman of the republic, and Teng Hsiao-ping, the party's secretary-general, who argued either that the switch to the communes should be pursued rigorously, or that the *de facto* retreat from the communes should not be publicly acknowledged as a change of policy. On the other side were those who had questioned the "correctness" of the commune policy from the start, and who favoured economic development on the Soviet model, as modified under Stalin's successors.

Leading these "moderates" was the then defence minister, Marshal Peng Teh-huai, who commanded the Chinese "volunteers" during the Korean war. The factional fight was fought out at the plenary meeting of the politburo at Lushan in August, 1959. A month later, Marshal Peng was dismissed, together with the chief of the army staff, General Huang Keh-cheng, and many other moderates, including Teng Tzu-hui, the party's leading agrarian expert, and a former ambassador to Moscow, Chang Wen-tien.

The real issue at Lushan was whether or not the Chinese communist leadership was to collaborate with the Russians. This implies accepting advice as well as aid from Moscow. In effect, the victorious leftists, led by Liu Shao-chi, tried to have it both ways. They adopted the rightists' policies for a more realistic view of the communes, but went on proclaiming the "correctness" of their own policies (much as Mr Khrushchev had taken over some of Mr Malenkov's ideas after dismissing him) and competing with Moscow for the ideological leadership of the communist world. The Russians, for their part, showed themselves not amused, and in the second half of 1960 the thousands of technicians who had been employed on Chinese development projects were withdrawn and brought home.

IT would be surprising if the ideological differences revealed at the Soviet party congress in October, in combination with the failure of China's domestic policies, were not reflected in further strife within the Chinese Communist party. The domestic failure has been given less publicity than the Sino-Soviet differences (or those between the "party" and "anti-party" Russians), and its extent, though obviously considerable, is hard to assess. Natural calamities have played their part, and so has the soaring birth-rate, but mismanagement and misbegotten policies must be given their due. Behind the refugee's tales of dwindling rations and spreading deficiency diseases lies this year's news of drought in Honan, locusts in Shantung and torrential rain in the southern provinces. For the second year running, China is expending its depleted foreign exchange reserves to buy wheat from western countries. Deprived of an exportable grain surplus, it has run up a debt of $320 million on current account with the Soviet Union and drastically reduced its capital investment programme (while maintaining, for reasons of prestige, and in competition with Russia, its economic aid to Mongolia, North Vietnam and Albania). Raw materials are scarce, and the Chinese press has been full of complaints about the shoddiness of indigenous manufactures. In the communes, the original concept of massed work by the entire commune has been abandoned in favour of mobilising production teams and, within these, work squads. Piece-work, abandoned in the euphoric spring of 1958, has been reintroduced.



That these circumstances carry within them the seeds of political change, or even upheaval, seems evident. But the direction of any pending change cannot, as things stand, be determined with any accuracy. China's long history—its imperial past as well as its nineteenth-century humiliations—and the Chinese national character are factors sometimes ignored by students of communism, just as the Sinologists sometimes overlook the communist element. Mao Tse-tung is a peasant emperor as well as "the supreme genius of Marxism-Leninism." The public confession and the purge, like the political somersault, are established communist practices; but owning up and climbing down go against the Chinese grain. The influence of Confucius, as the praise of Yen Hui's poverty shows, is still alive in China; though this particular example may not enchant hungry Chinese.

THE built-in resistances to an open change of course are strong. They are not necessarily invincible. The advocates of collaboration with Russia could return to favour and influence; being alive, as far as is known, they have the advantage over say, the late Kao Kang, the boss of Manchuria who was driven to suicide in 1954. Mao's present remoteness from day-to-day affairs and his position as a national idol probably guarantee his survival, at least as a figurehead. The presence of Mao, Liu, Chu Teh and Teng Hsiao-ping at the airport to greet Chou En-lai, the prime minister, on his precipitate return from the Moscow conference suggests an inclination to hang together. Mr Chou, never himself a rebel, but a popular figure who always comes out on top, may find this solidarity embarrassing should the wind change.

An obscure but powerful factor in the equation is the army. A peasant body, the "People's Army" cannot be indifferent to the sufferings of undernourished relatives in the villages. The publication of new army regulations last summer suggests incipient indiscipline. The regulations emphasised the need for improving relations between officers and men, and between the army and the people; ideological shortcoming were disclosed. It must be assumed, moreover, that Marshal Peng Teh-huai, the dismissed defence minister and Korean war hero, has his followers in the army.

The dilemma before Mr Liu and his supporters is that China, like India, lacks the means to develop its economy fast enough to feed its increasing population without external aid. The neutralist Indians are getting it from all sides. The committed Chinese are, at present, getting none, if one excepts the arrangement made last April, under which repayment of the deficit on Soviet loans is to be spread over the next five years without interest. Persistence in the present course seems to point the way to military adventures in the rice-bowls of south-east Asia.

A victory of the "rightists" could mean, on the other hand, a return to fruitful collaboration with the Russians. Over the long haul, it is hard to say which alternative would be more acceptable to the West. The attractions of the split between Peking and Moscow are only superficial. The return of the pro-Soviet faction, or the emergence of new men supporting collaboration with Mr Khrushchev would probably be, in practice, less threatening to western interests. It does not, however, lie within the power of western statesmen to hasten it.

The Same Ruling Classes

The road to Whitehall is not paved with Redbrick

HOW does the Establishment recruit itself? By guess (or by God) when the preferment list comes up at Admiralty House; by post-prandial plumping (so say the querulous) at All Souls. But for the administrative class of the Civil Service, the inner circle that keeps vestal watch over the homogeneity of the ruling classes and their policies, the answer is straightforward enough: by competitive examinations. Year by year the hopeful young talents, with a first or a good second class honours degree in the offing, address themselves to Whitehall (10,000 of them since 1948). Year by year they are pared down to the 50 or 60 that really do make their mark with the selectors and for whom thenceforward the full fig of the assistant secretary or above becomes a legitimate expectation.

And year by year, too, the Civil Service commissioners discover that, despite their beating of the provincial coverts, their hobnobbing with obscure and wind-swept dons from Redbrick universities, their free trips for lads o' pairts round the departments, and their occasional blind eye to the intellectual blemish in a candlestickmaker's likely son, the people they end up with are pretty much of a type. It has not changed all that remarkably since the Northcote-Trevelyan days; certainly it has not changed since before the war. Between 1925 and 1937 Oxford and Cambridge produced 78 per cent of the successes in the administrative class examinations. Between 1948 and 1960 they have now produced 80 per cent. A similar proportion of the successes—the trend is actually increasing—come from upper-middle or comfortably middle class homes, the kind of people that the census-takers instinctively put into occupation grades I and II. While the working class is keeping up its small entry into top Whitehall, the lower-middle class is actually being squeezed out.

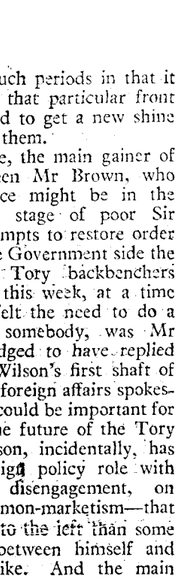
Perhaps inevitably, most of the successful candidates prove to have read history or classics: even the economists and PPE men, who might be thought to have acquired some vocational training, are a dwindling race. The Foreign Service intake is, if anything, an even more homogeneous social group than those recruited to the Treasury or the Ministries of Lab. and Ed. All in all, it is the kind of result that drives the commissioners into annual introspection, to clutching at stray straws of hope ("The tide could be turning: after all, 15 per cent of the method II successes were non-Oxbridge this year"), and to fresh resolves to get the ear of every actual or possible faculty head at the end of the farthest tramlines.

There are two methods of graduate recruitment into the home administrative class. Method I is the traditional one: a full academic written examination, and both a preliminary (carrying no marks) and final interview. Method II, introduced since the war, follows a process of systematic elimination. First, a short written examination: about half the candidates fall at this hurdle. Second, a series of tests and interviews, occupying two and a half days, before the Civil Service Selection Board, designed to reveal personality and practical intellect. Third, an interview by a final selection board. Candidates up to the age of 28 can try either or both methods twice, if they wish.

Few, however, persevere so long, and a disturbing number, either because they settle for other jobs or feel themselves badly out of their depth, do not even run the full course. (Some, of course, drop out for quite admirable reasons. To the stock essay question: "What is truth?" one cherished answer ran: "Gentlemen, after reading this question the truth is that I no longer wish to pursue my candidacy.") An initial survey (Cmnd 232) published in 1957 showed that method II selection—based on the two and a half days of interviews—might have its rigours, but it produced far fewer failures in subsequent probationary service. The Foreign Office swears by its method II intake. Method I, based mainly on the written examination—the resort of the brilliant examinee, the shy and the women—has now become noticeably less popular among the aspirants themselves. Even so, in the last few years, Oxbridge has both retained its stranglehold on method II and improved its showing (78 per cent of successes) by method I.

This is not a matter of visible social barriers. Last year a general labourer's son and a colliery fitter's son got in under method I and rejoiced the commissioners' hearts, and not so long ago the son of a sheet-metal worker topped method II. But these are exceptions. One reason for the continuing class ratio may be that many of the relatively clever families have already attained middle class status. The way to the top by academic scholarships has been well trodden by previous generations, and research would probably show that a good many of today's middle class candidates had working class grandfathers. There is a limit to arguing against genetics.

BUT is either method of entry hopelessly biased against Redbrick aspirants? The frequent claims that both of them are seem difficult to substantiate. Method I candidates are only numbers to the examiners of their written papers, but the Oxbridge papers invariably end up at the top of the lists. Method II obviously has fewer qualms for the more rounded and self-confident Oxbridge personality, and the ending of national service may have prevented some provincials from developing demonstrably officer-like qualities by the time they reach the Civil Service Selection Board; but the CSSB tests are not for bumptiousness or social skill, but for administrative potentiality. The failures may occasionally suffer from an inferiority complex (possibly after fluffing an Oxbridge entrance exam in the past), but more often they really seem inferior. If there were a cluster of dialect-speaking provincials just below the method II pass mark it might have been an



main importance of such periods in that it is often during them that particular front bench reputations tend to get a new shine rubbed on to or off them.

On the Labour side, the main gainer of kudos so far has been Mr Brown, who spotted that the mace might be in the wrong place at one stage of poor Sir Gordon Touche's attempts to restore order on Wednesday. On the Government side the one Minister whom Tory backbenchers have found to cheer this week, at a time when they urgently felt the need to do a bit of cheering of somebody, was Mr Heath; he was adjudged to have replied notably well to Mr Wilson's first shaft of questions as Labour's foreign affairs spokesman, and this success could be important for him—and even for the future of the Tory leadership. Mr Wilson, incidentally, has opened his new foreign policy role with some remarks—on disengagement, on Katanga and anti-common-marketism—that were pitched further to the left than some advocates of peace between himself and Gaitskellism would like. And the main features of Mr Gaitskell's second batch of shadow cabinet switches—the movement of the railwayman Mr Gunter to be shadow Minister of Labour, of the now pro-European Mr Strachey to look over the less pro-European Mr Healey's shoulder in Commonwealth affairs—seem nearer to indecisiveness than to bold originality.

FRANCE

BB v. OAS

GENERAL DE GAULLE may be more popular than Mlle Bardot (anything is possible); he is certainly not so valuable a dollar-earner, and none of his recent, most welcome, moves against the Organisation de l'Armée Secrète has had so marked an effect on public opinion as the film star's energetic repudiation of the attempts by right-wing terrorists to blackmail her. On November 30th *L'Express*, the left-wing weekly, announced that earlier in the month Mlle Bardot had received a letter from the OAS ordering her to send it 50,000 new francs (about £3,500), and saying that if she failed to do so the "special sections" of the OAS would be brought into action. Undeterred by this hint, Mlle Bardot immediately laid a charge against X ("person or persons unknown") for attempted blackmail, appealed for police protection, and sent a letter to *L'Express* telling the whole story, saying "I won't play because I have no wish to live in a nazi country."

Political animal

On December 5th, the OAS denied having sent the letter. But its not entirely convincing denial came too late to undo the effects of Mlle Bardot's demonstration. The revulsion against the OAS may have had something to do with the stiff sentences imposed on Wednesday on several *plastiqueurs*, although the judge seems to have leaned over backwards to "understand" the motives of men who admit the theft of explosives, the throwing of a hand-grenade and the attempt to blow up a power transformer. It remains to be seen whether the government can carry out its intention of catching General Salan and his principal fellow-conspirators of the OAS in Algeria.

One gleam of light in Algeria, at least, is reliably reported. Secret talks between the Moslem nationalists and the French are said to have begun again, and agreement on a cease-fire is hoped for in the New Year. The only outstanding points of difference involve the status of the Europeans in Algeria and the length of a hand-over period. Neither may prove insurmountable. The chief fear is that the OAS may attempt another *coup d'état* if and when the news of an agreement is made public.

LAOS

Slower than Thou

BUT for one fact, the Laotian princes would win their last-man-home race against the sixteen delegations conferring at Geneva on the future of their country. The art of going slow has never been more exquisitely demonstrated than in the past half-year of manœuvres between Princes Souvanna Phouma, Souphannouvong and Boun Oum, the horizontal, left and right sides of a hypothetical triangle that may, everybody hopes, one day rule a neutral Laos. If the winning post means agreement, the Geneva negotiators now seem closer to it than the princes. But the princes cannot possibly get there last, for final agreement at Geneva awaits the formation of the government of national unity which all three endorsed in principle at Zürich in June.

Over the weekend, notes went out from the British and Soviet co-chairmen of the conference urging the princes to compose their remaining differences. There are hopeful signs. Prince Boun Oum—who had gone to his estates in southern Laos, by the slowest possible route, to attend his mother's funeral (she died six months ago)—has now said that he will go to the Plain of Jars, Prince Souvanna's stronghold, without an escort, if only Prince Souvanna will agree to come to Vientiane, Boun Oum's stronghold, later under similar conditions.

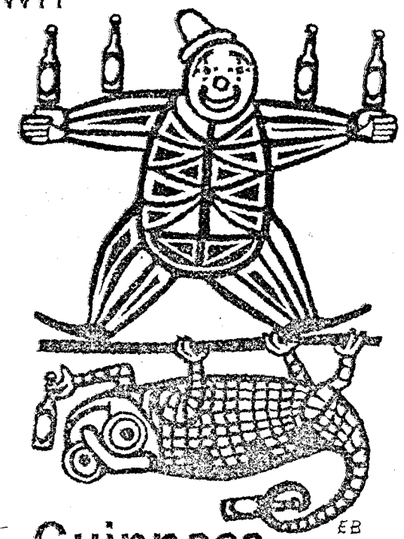
At Geneva, meanwhile, important progress was announced this week. The conference has agreed to a watered down form of Russia's "troika" proposal. The three-nation control commission for Laos, consisting of Poles and Canadians under Indian chairmanship, is empowered to investigate reports of alleged breaches of the proposed agreement on Laotian neutrality on the recommendation of a majority of its members—not, as the Russians wished, by a unanimous vote. On the other hand, unanimity will be required for action to be taken. The commission originally set up in Laos under the Geneva agreements of 1954 was not similarly hampered. This week's compromise thus favours the communist side. An important concession to the West, however, is an agreed pledge that Laotian territory is not to be used for intervention in other countries. If this can ever be implemented, it will cripple north Vietnamese communist operations in Mr Ngo Dinh Diem's south Vietnam.

NEW GUINEA

Divided Counsels

ALTHOUGH the Indonesian republic partly owes its independence to United Nations intervention, its president has always found it hard to take the UN's reluctance to support his claim to Dutch New Guinea. In 1957, when the General Assembly failed to give a two-thirds majority to an Indonesian resolution, Dr Sukarno, for spite, expelled the Dutch from his country. Last weekend, following another inconclusive debate in the General Assembly, he made a bellicose speech saying that he would soon order his forces to liberate the Dutch part of the island. In so doing, he disavowed his own foreign minister, Dr Subandrio, who had told the Assembly on November 16th that he and the president stood by their pledges of not using violence to further the Indonesian claim.

Divided counsels probably prevail in Jakarta. Indonesia's soaring deficit in its balance of payments can hardly be met unless some of the massive armament orders placed abroad are cancelled. Perhaps General Nasution had this in mind, three weeks ago, when he promised that West Irian would be liberated, but not until 1963.



In the meantime, the Dutch go their serene way, apparently untroubled by threats of action in the near or distant future. Having belatedly regained the initiative by offering to surrender sovereignty to the Papuans and administration to a UN authority, they have now renamed their last Far Eastern colony "West Papua." This is an independent-sounding title, free of colonial taint. But it is not enough, apparently, to placate the Indonesian government, which continues to attach greater importance to gaining control over an inhospitable half-island than to putting its finances in order.

AESOP-TO-DATE

The Chameleon and the Clown

"You're very clever," said the Clown.
"At doing what you do.
But though I'm no chameleon
I'm quite a mimic too.
If someone stole my Guinness, say,
Then I'd change colour right away.
I'd go quite green with envy if
They took my favourite drink—
A fellow needs one every day
To keep him in the pink,
So if you're ever feeling blue
Then always go and have a few."
"I'm feeling like a Guinness now,"
The saurian replied.
"And if you watch me very close
I'll look like one, beside."
But though he turned a darker hue
He bore no likeness to the brew.
The poor Chameleon blushed at this.
He went a fiery red.
"That's nothing like a Guinness, no!"
The Clown abruptly said.
"But nothing is—you're not to blame—
Except another of the same."
And that's the MORAL of this fable
Guinness is quite in-im-it-able.

Guinness
is good for you—and me

JURIES

Good Men and True?

THREE recent cases have highlighted the shortcomings of one of England's most venerable institutions—the jury. In the first, a coloured juryman in a murder trial, described by counsel as stupid and completely unable to follow the proceedings, was fined by Mr Justice Elwes for chatting with the witnesses. In the second, Judge Maude discharged a man from jury service when he asked for help in reading the oath. In the third, a foreman was alleged to have provided his fellow jurors with a list of the accused's previous convictions.

Sir Richard Elwes was sufficiently horrified by the first of these cases to suggest that the law governing trial by jury needs amending; and the Home Office is now understood to be "considering" the matter. Nowadays, jury trial is mainly confined to serious criminal offences; there is a right to demand it where a penalty of three or more months is involved. In civil cases there are only a minority of actions where it must nominally be ordered: fraud, defamation, malicious prosecution, false imprisonment, seduction and breach of promise of marriage. In other civil cases its use has declined, partly because trial by a judge alone is swifter and cheaper. In admiralty and chancery cases, juries are not used at all.

Qualifications for jury service are curious. One must be a £10 freeholder, a £20 long leaseholder, a householder in the £30 valuation list in London or Middlesex (or £20 elsewhere), or else occupy a house with not less than fifteen windows. Peers, members of Parliament, ministers of religion, practising barristers and lunatics are exempt from jury service. The property qualification means that most juries are predominantly male (usually 9 or 10 out of 12), since more men than women occupy property. In the past the property qualification also meant that most jurors came from the upper and middle classes, but with the upvaluing of property most occupiers of houses or flats are likely to be potential jurors in future. Jury service is compulsory, and non-attendance is punished by fine. Under statutes of 1949 and 1954 travelling and subsistence allowances may be paid to jurors and up to 40s. per day for loss of earnings.

Total abolition of juries has been advocated by some, but the case for this is certainly not proven; in deciding straightforward issues of guilt or innocence, and in assessing the credibility of witnesses, jurymen are probably as good as the average judge, and possibly better. A more reasonable reform would be to make liability for jury service co-extensive with the electoral roll (thus abolishing the property qualification), and to couple this with a simple literacy or intelligence test taken at the court. The efficiency of juries would be increased if in complicated cases they were given copies of the principal documents and allowed to take notes. Juries have no special qualifications for assessing damages; often the best solution for these might be a joint consultation of judge and jury after the verdict has been brought in.

GYPSIES

What Care I . . .?

THE deplorable treatment of gypsies in England and Wales was the subject of a private member's motion in the House of Commons last week: what emerged from two lengthy speeches, by Mr Norman Dodds and Mr John Wells, was an easy indifference to their plight (masquerading as romantic tolerance) on the Government's

part and an unreasoned hostility to them on the part of most local authorities. Thanks to successive Town and Country Planning Acts, which give local authorities draconian powers to close down so many of their caravan sites as eyesores, Britain's persecution of its gypsies is now mortifyingly worse than the treatment of them in most totalitarian countries. Mr Dodds's motion asked the Government to devise and implement "a national plan" to overcome these people's disabilities in the fields of education, health and employment, and in particular to prevent recurrences of such heartless evictions as that at Colney Heath, in Hertfordshire, some months ago.

The loss of nearly all their traditional camping sites and the failure of their traditional crafts in modern England have practically destroyed the George Borrow type of gypsy life to which Augustus John became so attached. There is no sense in trying to remake that life artificially: but neither is there any excuse for hounding a minority tribe of vagrant people out of their traditional ways and occupations (and, in the end, out of existence). The need now is, first, to make a social survey to remedy the present appalling lack of information about the gypsies and their problems (the Ministry of Housing and Local Government depends on mentions in the press); and, second, to bring pressure on local authorities on the gypsy circuits who object to casually-pitched caravans to make some alternative provision for gypsies' camping and welfare. In England and Wales, the county of Kent is the only authority to have made any attempt to find out what the problem is, and Ashford in that county is the only local authority to have made any sort of reasonable, permanent camping amenity available to gypsies (against strong local opposition), although other authorities have managed to persuade a few away from scrap-dealing and caravans into settled employment and council houses.

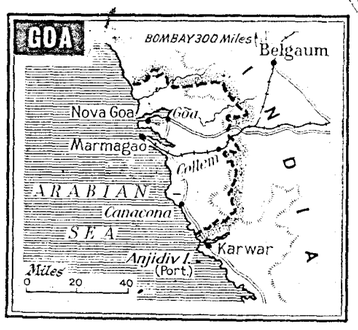
As far as education is concerned, however, there is little even the most devoted local council could do about a small minority constantly on the move and often out of their jurisdiction: if it is agreed that the illiteracy of any segment of the population is a bad thing, there is a good case for some special provision by the Ministry of Education for gypsies and travellers. There is also a need to see that these people are as well treated as other Britons under the national health service.

MOTOR INDUSTRY

The Courteous Summit

WHENEVER managers and trade unionists sit down together to discuss matters other than wages, it is a good thing: both sides of British industry need to understand each other's problems far better than they do. But the danger about talks of this kind is that the talkers may feel themselves obliged to reach some form of outward agreement that merely glosses over underlying and perfectly justifiable causes of conflict. This trap is precisely what has caught the bosses and union leaders from the motor industry, who last week held the latest of their conferences under the chairmanship of the Minister of Labour.

At these talks, held in the public eye and under such august auspices, neither side could afford to strip off its coat and risk showing an ungainly pair of braces. Last Tuesday a team of distinguished spokesmen from both sides appear to have spent an afternoon at the Ministry congratulating each other for having stood firm in the face of the grievous series of unofficial strikes held since their last meeting—at Pressed Steel, of Swindon, and at Smiths Motor Accessories and a Rootes Group subsidiary outside London. It is splendid that people in industry should appear determined to keep their agreements; the trouble is that the union leaders in all three cases showed themselves unable to do so. Polite talks are unlikely to change this.



Less formal meetings, however, may be more useful, perhaps precisely because they are not committed to produce a result: a group of managers and trade unionists who first got together at the Duke of Edinburgh's study conference at Oxford in 1956 show how in two booklets published this week. "Work and Leisure" is an impressionistic

approach to people's attitudes to working hours and overtime payments, which entertainingly rams home the fact that increases in earnings and increases in basic, nationally negotiated wages are not at all the same thing. The other booklet, after some polite generalities about how job opportunities change with economic and technological changes, goes on to make some constructive and thoughtful suggestions about redundancy policy. Fears of ham-handed treatment in the event of redundancy have often caused labour troubles in the unstable motor industry: the Minister's gathering might have spent a more profitable afternoon reading this.

"Work and Leisure" and "Changes in Employment Opportunity." Central Committee of Study Groups. 2s. 6d. each.

INDIA AND PORTUGAL

Goaded

IN the fourteen years since India became independent, Mr Nehru, as befits the heir of Gandhi, has secured for his country a high place in the ranks of peace-loving nations. How urgently he feels the duty of avoiding war was once again made clear in the lower house of the Indian parliament on Tuesday, when, in a discussion of the Chinese threat to send troops into north-east India if the Indians did not withdraw their patrols from the disputed border territory, he said that the training of a long life had led his whole soul to react against the thought of war. But, as he sadly recognised, the point may yet come when Chinese pressure will compel a resort to arms. "I do not rule out war," said Mr Nehru. "Our desire is to avoid it, but not to submit to any evil to avoid it."

These words may be noted in another quarter. Little, as yet, is known, and still less is clear, about the resurrection of the Goa dispute. The Portuguese government alleges that, as a preparation for a large-scale attack on Anjidiv Island on November 25th, an Indian merchant ship passed through Portuguese territorial waters, and refused to identify herself when requested. She was therefore fired on; an Indian attack on the island (which is inhabited only by Portuguese forces) was repulsed.

By contrast, the Indians claim that there have been two unprovoked attacks by the Portuguese on Indian vessels, in one of which a seaman was killed. The movement of troops south from Poona towards the border of Goa, like the protests in the Indian parliament, is therefore in Indian eyes merely the spontaneous reaction of an injured nation to a challenge like that presented by the Chinese. But it is convenient for the Indians that the incidents should have occurred immediately before the second convention of exiled Goans, which opened in Bombay on November 25th. Things may, or may not, have reached explosion point. Mr Nehru can be trusted to proceed as reasonably as possible, even though the capture of Goa would make a wonderful rose in his buttonhole for next year's general election. Dr Salazar, however, does not seem to be counting on Indian restraint; there are reports of Portuguese reinforcements in Goa, and of the evacuation of border villages.

SOVIET UNION

Bill for Berlin

THE Supreme Soviet, or Russia's parliament, opened its traditional budgetary session on Wednesday. Mr Garbuzov, the minister of finance, estimated the budgetary revenue in 1962 at nearly 82 billion roubles and expenditure at just over 80 billion roubles. Thus, again in keeping with tradition, the budget should show a surplus, with both sides of the balance-sheet considerably expanded. By far the biggest increase, however, and one that goes against the previous trend, is in defence. The original defence estimates for 1961 amounted to 9,300 million roubles; for 1962, they are now put at 13,400 million roubles. Although budgetary expenditure may well not be an accurate yardstick of the Soviet defence effort, a rise of 44 per cent in a year is striking.

The announcement, however, is not unexpected. In fact, Mr Khrushchev foreshadowed a change of policy at the height of the Berlin crisis, on July 8th. Stalin's successors, although vigilant about defence had realised that there were other things which needed more money. In the post-Stalinist period the share of defence in the budget regularly declined. Developments in rocketry made it easier to release manpower from the armed forces; in January 1960, Mr Khrushchev announced that the Soviet forces would be reduced from 3,623,000 to about 2,400,000. But the Berlin crisis altered these plans. Eighteen months later, the Soviet leader announced that demobilisation was suspended and the military budget raised by a third. Mr Garbuzov has now merely translated this shift in terms of a full financial year.

When he announced the change of policy in July, Mr Khrushchev expressed the hope that it would prove provisional. A statement on foreign policy which, according to the established pattern, should crown this December session of the Supreme Soviet, may reveal whether Russian hopes of a Berlin settlement have soared or dwindled. Mr Khrushchev must know that if, in keeping with the French saying, the provisional tends to last, the defence burden will hinder him in other directions; in particular, it will handicap Russia in its economic race with the West.

CARIBBEAN

Future Spectres

DIRECT action against Dr Castro having proved, in April, a flop, the United States is back at the hard job of shepherding the Latin American governments towards some kind of collective rebuke. Diplomatic persistence has won a minor victory. C

DECEMBER 7, 1861

AN AMERICAN WAR?

Beyond all question it is something very like insanity for the Federalists to bring upon themselves a war with England, when they have enough and more than enough on their hands already. *But they do not think so.* They—that is the voting, electioneering, spouting, rowdying public—do not think either that their hands are full, or that a war with England is a thing to be dreaded or deprecated. The depth of their ignorance is unfathomable. The height of their frenzy is inconceivable. Their talk is not mere conscious bombast and rhodomontade. They actually *believe* that they can easily conquer the South, and lick Great Britain into the bargain. They are already growing wild with the prospect of crowning their victories by adding Canada to Texas. Of course Mr Seward knows better than this, and so do Mr Lincoln and Mr Chase. So does Mr *Adams over here. So do the hundreds of* well-informed and travelled gentlemen in Boston. So do the trembling and victimised merchants of New York. But what of that? These are not the men—these are not the classes—who habitually decide the policy of the United States, who elect the Congress, and enthrone the President. *Only in the rarest* crises are their voices heard; and even then they are too commonly drowned in the fierce and tumultuous roar of a passionate, misled, and ungovernable populace,—accustomed to make their own law, to avenge their own wrongs, to trample on all obstacles, moral, legal, and *material,—sincerely fancying (for they have* been always taught so) that nobody *ought* to oppose them, and that nobody *can* resist them.

Electrical Aids in Industry — Data Sheet **21**

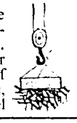
Materials Handling-1

Materials handling may well be defined as the technology covering the movement and storage of everything in and about industrial or commercial premises. The term covers the handling of raw materials as well as tools; the movement of components between operations and in stores, of finished products, and of the scrap, cutting oils and process machinery; and the movement of workpeople in relation to the handling of material.

The object of a materials-handling survey is to eliminate handling as far as possible and to study the remaining operations to ascertain if they can be economically and efficiently mechanised.

Improved materials handling raises productivity, for it gives, among other benefits: greater output from a given floor space, reduction of bottlenecks, reduction in damage to products, increased speed of handling and a consistent production level.

Process integration (the combining of two or more processes in one situation or machine with no manual inter-process handling, or the mechanical linking together of two or more processes for automatic operation) is one of the preliminary steps in the development of automation.

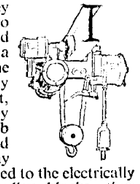


MECHANICAL HANDLING

Many kinds of mechanical-handling equipment are in use today, each with its own attributes and uses, but in most cases there is only one type which offers the best solution to any one handling problem. Most mechanical-handling equipment is electrically operated, and the judicious use of electricity in this way can substantially increase productivity.

Main Categories of Mechanical Handling Equipment
LIFTING EQUIPMENT; OVERHEAD RUNWAYS; CRANES; CONVEYORS AND ELEVATORS; INDUSTRIAL TRUCKS.

LIFTING EQUIPMENT



Electric pulley blocks are used for loading and unloading purposes, warehousing and in process work. When used with a trolley they have great flexibility. No manual effort is required, hence lifting does not cause any fatigue. They may use either chain or wire rope, and the speed of lift of both types is slower as the lifting capacity increases. An inching motor may be fitted to give very slow speed for accurately positioning the load, for example in a jig.

Lifting magnets are used for the handling of iron and steel in conjunction with a crane or hoist. They do away with the necessity for slings and give increased speed of movement. They can lift castings, ingots and swarf, scrap, rolled steel sections, and can be used in loading bays, foundries and steelworks.

OVERHEAD RUNWAYS

Overhead runways have many uses where lifting and/or transport are required, when frequency of flow does not warrant a conveyor, e.g., for loading and unloading lorries, in core ovens, for feeding machines, for storage, for maintenance purposes, for textile drying and interconnecting two or more buildings. A runway consists of a steel girder along which a load trolley runs. It consists of two main items: the electrified drive of the trolley (i.e., a power trolley) along the runway and an electrically operated lifting unit, usually an electric pulley block. A telpher has a cab for the operator suspended from trolleys on the runway and mechanically connected to the electrically driven trolley of the pulley blocks, thus travelling with them. Telphers are employed for handling individual loads which may be outside the range of normal electric blocks.

For further information, get in touch with your Electricity Board or write direct to the Electrical Development Association, 2 Savoy Hill, London, W.C.2. Telephone: TEMple Bar 9434.

Excellent reference books are available on electricity and productivity (8/6 each, or 9/- post free) —'Materials Handling in Industry' is an example.

E.D.A. also have available on free loan in the United Kingdom a series of films on the industrial uses of electricity including one on materials handling. Ask for a catalogue.

7923/3

*Another LIFE OFFICE ORDERS I·C·T COMPUTER

1301 FOR UNITED FRIENDLY INSURANCE COMPANY

Second major life office within a fortnight to place an order for I·C·T's latest computer, United Friendly Insurance will put the 1301 to work under a comprehensive plan to reduce costs and increase efficiency. Calculating speeds measured in millionths of a second will revolutionise statistical and valuation routines for some 4 million Industrial Branch policies, as well as the preparation of all new policies in this field—now running at 500,000 a year. At the same time, the basic versatility of the 1301 will enable it to be expanded on site to meet the future requirements of all the company's Ordinary as well as Industrial Branch business, together with those of its rapidly expanding General Branch.

Why do other customers go for the 1301?

Why is the 1301 so much in demand? Why have firms in places as far apart as Sheffield and Stockholm, Melbourne and Mainz chosen it? Why is it used on such diverse applications as stores control, market research, and payroll work? Why do firms so different as banks and shipbuilders, chocolate and footwear manufacturers, invest in a 1301?

FIRST, because the 1301 is the 'pocket battleship' of computers. What it can do is out of all proportion to its cost and size.

SECOND, it has been developed for the money-saving, money-making requirements of the world's market places.

It has the right computing power and speed to tackle business problems of any size and complexity. It is flexible enough to deal with routine accounting or contribute to operational research and management. It can be applied to fit your business, NOW. And, what is most important, it can expand to meet any conceivable business development for many years to come.

* *Only two weeks ago we announced that the Liverpool Victoria Friendly Society had ordered a 1301 Computer to work for its Ordinary Branch business, an accounting and valuation operation for 350,000 policies.*

CLOUCESTER HOUSE, 149 PARK LANE, LONDON, W1. TEL: HYDE PARK 7080
OFFICES THROUGHOUT THE U.K. AND IN 31 COUNTRIES THE WORLD OVER

Monday, the Organisation of American States agreed to the Colombian proposal that the hemisphere's foreign ministers should meet on January 10th to discuss the red peril in their midst. Neither Cuba nor communism were mentioned in the OAS resolutions; the foreign ministers are to consider the threat to peace and political independence that would arise from the intervention of extra-continental powers. But the disguise of jargon did not make the resolution any more acceptable to the major Latin republics: Mexico joined Cuba in *voting against it*; Argentina (despite Mr Stevenson's meeting with Dr Frondizi last week), Brazil, Chile, Bolivia and Ecuador abstained.

The reluctance of the larger republics even to discuss the Cuban situation in public makes it improbable that the foreign ministers' debate will produce any fresh line of action for the ostracization campaign. Most of the governments that want to break off diplomatic relations with Cuba (and believe that this can be done without domestic risk) have already done so; and it is only the United States that can, and has, hurt Cuba economically. At the San José conference in August, 1960, the United States succeeded in lifting the Cuban issue from the level of a private dispute to the status of a threat to hemispheric security. This danger can be aired again, but it is hard to see—short of direct military action—what can be done about it.

Dr Castro showed his contempt of the whole proceedings by making a long and defiant television speech on the eve of the OAS meeting. In it he put into words what had, in fact, already become clear from his actions. He labelled himself a Marxist-Leninist and described how he was forming the United Party of the Cuban Socialist Revolution to lead the country on the road to communism. In contradiction of Cuba's activities at the meeting of non-committed countries in September, Dr Castro said that he recognised no half-way position between socialism and imperialism. This was frank speaking. But there may still be room for argument at the foreign ministers' conference whether Dr Castro's description of himself as a Marxist, and his assertion that lessons can be learnt from the Soviet Union, can be equated with the existence of "extra-continental intervention."

Past Ogres

Purified from Trujillos, politics in the Dominican Republic could still be a lot cleaner. The opposition, loosely brought together by Dr Viriato Fiallo, the leader of the National Civil Union, has refused to work under President Balaguer, claiming that a Trujillo man, even under another name, still smells too strongly of the past. Last week, a general strike was called in protest against the persistence of the old order. The honourable reputation that President Balaguer managed to preserve while working with Trujillo, father and son, is disappearing fast. When his plans for a coalition government began to collapse, he suggested a seven-man junta, led by himself and including the head of the armed forces, General Rodríguez Echaverría. Two weeks ago, this air force officer was greeted as a hero for his part in getting rid of the Trujillos; now it looks as if his ambitions are a far cry from democratic government. The police, under his command, have been handing out rough treatment to the strikers in Santo Domingo (now no longer Ciudad Trujillo). But the strike, and the political tussle, go on.

HOMELESS

About Aunt Sally

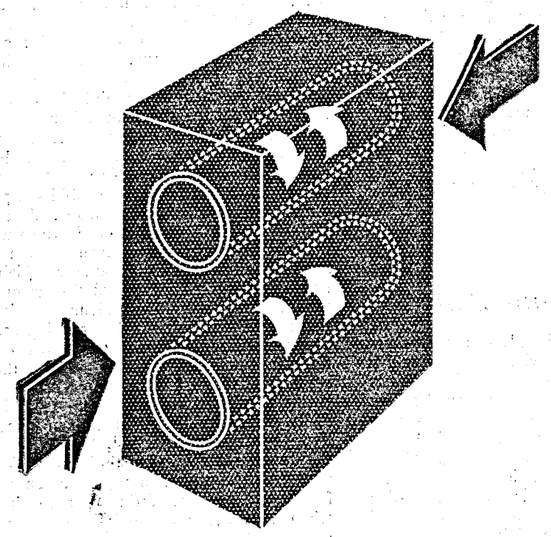
One has got used to Labour politicians, on the LCC and elsewhere, saying that the problem of homelessness in London has been in some way "created" by the Rent Act. But it is a flabbergasting commentary on the state of economic ignorance in Britain when bishops and others appear to join in. In view of some of the slogans that are apparently due to be carried in an increasing number of demonstrations between now and Christmas, can an appeal be made to some of the intending demonstrators to put on their reasoning caps for one moment?

There is a rising population in London; there is a slightly varying amount of accommodation offered for rent. Any piece of legislation—the Rent Act or anything else—can increase net homelessness in London only if it reduces the amount of accommodation newly offered for rent. Obviously, the 1957 Rent Act has not reduced these offerings on the market. It has increased them, even though not by enough; and therefore—this is a hard, simple, deducible arithmetical fact—the total number of homeless would quite certainly have been larger without the Act than it is now.

What the demonstrators therefore presumably really mean is that the Act has changed the *composition* of the small tragic cohort of the homeless, making ability to pay a more important rationing factor and sheer luck in finding a new flat or (in the small number of cases where security of tenure has been affected) existing squatters' rights less important. They regard this as most unfair. But it is awfully difficult to believe that the effect of recontrol in changing back the composition of the thereby increased number of homeless would be the effect they seem to envisage. All experience showed that under a controlled system landlords really grant their decreased number of new lettings to those who are able to get round the unenforceable part of the controls (e.g. who have the capital to pay bogus charges for furnishings and fittings) or to those whom they prefer on grounds of convenience (e.g. who do not have more children than the landlords or landladies like); under recontrol landlords would elevate these criteria to being an even more important part of their rationing mechanism than they do under the half-controlled system now. Is this really what London's Labour councillors—and dignitaries like the Bishop of Southwark—want?

BOOKS

Happy at Your Desk?



Morale in the Civil Service

By Nigel Walker.

Edinburgh University Press. 311 pages. 30s.

The Civil Service is a large institution and morale is a much studied question; it is therefore a surprise to find that Dr Walker is treading new ground. He appears to be the first person to have applied quantitative methods to the subject. The result, as one might expect, is interesting rather than revolutionary: much that one would have guessed from the start is confirmed, but there are one or two surprises. Dr Walker started by making a number of studies on the morale of one of the rare factory-style offices, which in due course will doubtless be superseded by machines: 1,600 clerical officers, divided into 100 identical sections, do identical work on the records of national insurance. Then, after a pilot test, he distributed a long questionnaire to the civil servants, from clerical assistant to assistant secretary (typists curiously and unfortunately omitted), in two Whitehall ministries, and to the corresponding employees of two London firms, both subsidiaries of the same company: the latter are used solely as controls.

It is imposible to summarise Dr Walker's book, and it would be wrong to try. Entering a new field, his purpose is not to prove a case, but to amass facts and to show the presence or absence of correlations over a wide field. As he himself points out, far more work is needed before many lessons can be drawn. The main one is that morale, in this context, is not a clearly defined concept and (as any civil servant would guess) that efficiency and job-satisfaction by no means always march hand in hand. One suspects that the word morale, with all that it implies, is misapplied to ministries. It is borrowed from the fighting services, where men not only work but also live together, with a highly (and intentionally) developed

drums and rollers

When a criminal speaks of a 'drum', he means premises. Often, premises he is studying very closely because he would like to enter them. Premises he is likely to avoid if the lock bears the name of Chubb.

The rollers pictured above are one reason for his reluctance. They are fitted to the dead bolts of the 'Castle' and other new Chubb Security Range locks. Made of hardened steel, they rotate under pressure from the hacksaw and give the blade no purchase.

The hacksaw is only one weapon of many. But a Chubb lock is equally well defended against the rest—like the jemmy (for forcing) and the mica strip (for slipping back the bolt). And its new mechanism means that subtler methods are just as unlikely to succeed.

The 'Castle' costs 47/6. Fit it to the front door of a home or shop, add other suitable Chubb fittings to doors and windows, and you can double your defences for under £10. We all have an interest in defeating crime: Chubb make it simple for all to play their part.

Chubb counter the crime wave

IHI CRANES LIFT HEAVIER LOADS EASILY, ECONOMICALLY

Economical load-handling is basic to the success of practically every modern industry. IHI has many years' experience in making various types of cranes—level luffing cranes, tower cranes, floating cranes, industrial cranes, unloaders and bridge transporters—to perform the numerous kinds of load-handling called for. No matter what the job or type of crane involved, IHI cranes are built to place loads with fingertip accuracy and to provide years of efficient, reliable, and economical service.

IHI is Japan's leading heavy-industry company. It has been designing and manufacturing all kinds of heavy equipment for over 100 years—from ships, engines, and boilers to heavy machinery for use in the chemical, construction, iron and steel, power generating, and mining industries. Brochures outlining IHI's capabilities and informative quarterly "IHI Letter" will be sent on request.

sense of group loyalty, either living in or preparing for circumstances in which each man's life depends on the co-operation of his fellows. Civil servants live peacefully at home, and many of Dr Walker's statistics show how little their social and emotional life depends on their office relations. They come during office hours to do work of which much is fairly monotonous; any attempt to arouse group enthusiasm for it would be self-defeating. But they adapt themselves to it, enjoy it more or less but usually rather passively, and do it honestly.

One or two points deserve special notice. A very good piece of analysis appears to destroy the myth, widely believed by civil servants and others, that many of them use their generous sick leave allowance as an extra holiday. All that can be detected is that the unenthusiastic and dissatisfied take a day or so longer to recover from minor illnesses. A surprisingly large percentage of civil servants would not recommend a friend to follow their career; this does not necessarily mean much, since the fruit in the orchard next door is always sweeter. Far more civil servants think that discipline is too lax than the contrary—and this is true even at the receiving end, in the lower ranks. There is some evidence that the civil service would tolerate more dismissal of the inefficient, though this is not wholly convincing, since people react differently to a general principle and to particular cases.

There is only one point where the questionnaire seems deficient: on the all-important subject of promotion. There was a question on the fairness of the system at large; but one missed the questions that would have drawn one of the most weighty distinctions: "What rank, if justice were done, do you think you should hold now; and what rank do you think you (a) ought to reach and (b) will in fact reach by the end of your career?"

The book is exceptionally well written, and is excellent reading to anyone who can bear with the subject at all.

Party Man

Chief Whip: *The Political Life and Times of Aretas Akers-Douglas, First Viscount Chilston.*

By Viscount Chilston.

Routledge. 383 pages. 45s.

CHIEF WHIPS tend to figure somewhat obscurely in political histories, but their involvement in that diverse, straggling organisation loosely called "the party machine" gives their papers a significance that is often greater than their contemporary influence. The importance of the papers of Herbert Gladstone, for example, is more considerable than might be suspected because of his intimate knowledge of the workings of the Liberal party machine and in his implication in the secret negotiations with the Unionist Free Traders—notably Winston Churchill and Lord Hugh Cecil—in 1903-04. Much is suspected, although little positive evidence has yet emerged, about the activities of Tom Ellis, Liberal Chief Whip in the 1894-95 Rosebery Government, particularly in relation to the distribution of honours.

It is because Aretas Akers-Douglas occupied an exceptionally important and influential position in the inner councils of the Conservative party from 1886 to 1911—and particularly from 1886 to 1895, when he was Chief Whip—that his grandson's biography is something of a disappointment. "Most of his Whip's business," he writes,

> was obviously transacted by word of mouth, partly because it was in keeping with his discreet and reticent nature to commit as little as possible to paper about the party's domestic affairs, and partly because he simply had not the time to write.

As a result, the reader is often led into accounts of important events with mounting interest and even excitement, only to discover that Akers-Douglas's papers do not materially affect, or even illuminate, the conventional accounts. The resignation of Lord Randolph Churchill, the Ministerial Crisis of 1903, and the accession of Bonar Law are three conspicuous examples of this. The fault is not the author's, but the sense of disappointment is nonetheless very real.

This is not to imply that Lord Chilston has wasted his time, or that his book is not of profound interest. Akers-Douglas's relations with Salisbury, W. H. Smith and Richard Middleton—the Chief Party Agent from 1883 to 1903—are particularly important, and much light is thrown upon the difficult and prolonged negotiations that resulted in the absorption of the Chamberlain-Hartington Liberal Unionists into the Conservative fold. It was characteristic that it was Lord Randolph Churchill—for whom Douglas had a great affection and admiration—who coined the phrase "the Unionist Party," and that it was Akers-Douglas and Middleton who had to undertake the delicate task of turning a bold vision into a political reality. Perhaps Akers-Douglas worked too diligently, since the alliance which he did so much to cement was the direct cause of the 1903 Tariff Reform crisis, which plunged the party into an unexpected controversy of mortal ferocity.

Akers-Douglas was almost the embodiment of the perfect Chief Whip, discreet, loyal, realistic, and not devoid of a certain ruthlessness. Lord Chilston's book is not a biography so much as a political study (one of the publishers' admirable *Studies in Political History*), but he tells us enough about Akers-Douglas to realise the force of Sandars's judgment that "he had an *esprit positif*, and the philosophy of politics was of no interest to him." He was, as Lord Chilston makes plain, "first and foremost a 'party man'," which probably explains his subsequent failure as First Commissioner of Works and Home Secretary. Indeed, his only memorable ministerial performance in the Commons was a disastrously ill-timed appeal to party loyalty at the height of the Tariff Reform storm, which contributed to the famous Division in February, 1904, when the Unionists split irretrievably.

rather than a biography, Lord Chilston's book has the outstanding merits of careful scholarship and a vivacious style. Indeed, he is so successful in these respects that it would be unfair not to be candid about the few defects of his book. He gives the impression—at least to this reviewer—of a political bias that is sometimes irritating, and there are several statements which hint that his knowledge of the period is something less than profound. It is a questionable generalisation to say of English politics that in the 1880s "Party allegiance seemed to come even before patriotism: MPs were selected more for their obedience to the party line than for their disinterested devotion to the public interest." Apart from the sententiousness of this statement, it would be interesting to know what exactly was "the party line" in 1880, or, indeed, in 1885, when Chamberlain was enunciating the "unauthorised programme." It is true that after 1886 Home Rule was the dividing mark, but the Liberals of Rossendale still returned Hartington, although they supported Home Rule. The statement that Chamberlain's attitude to the Irish Question "was quite clearly the result of earnest reflection and deep conviction" is not one to which many students of the subject would subscribe.

But in spite of some minor qualifications, Lord Chilston's book is an important addition to the literature of English politics no less than of the fascinating political epoch which he so engagingly describes.

IN recent years the management consultant has come to occupy an important place in industrial, commercial, and public administration. Hitherto very little information has been available because of the confidential nature of the consultant's practice and no attempt has been made to analyse the character of his work or to assess its significance. Here, in the first objective study to be published, Dr. Hyman seeks to remedy this. **"... clear, smoothly written book"**

The Fabian Society

The Story of Fabian Socialism

By Margaret Cole.

Heinemann. 381 pages. 30s.

ALTHOUGH both the title page and Mrs. Cole herself claim that this is a history of Fabian socialism, it is not. It is a history of the Fabian Society, or even of the successive inner groups within it, with little attempt to analyse either the distinctive features of the socialism developed by this curious institution or why it came to be adopted by the Labour party. That is not to say that the book was not worth writing, but simply that no one should be misled by its title. For the Fabian Society *is* a curious institution, and has changed surprisingly little from its early days to now: the inner group, which provides the drive and inspiration for a time and then becomes a dead hand; the second rank, who contribute a pamphlet or two but have no determining role; the hangers-on, who attend meetings and summer schools and who range from the earnest to the frivolous; and the recurrent rebels, who think something ought to be done about it all but seldom get their way.

The first forty years are, of course, the story of Shaw and the Webbs, culminating in the acceptance of "Labour and the New Social Order" in 1918. In the following years, with Shaw partly detached and Webb declining in Parliament, the society declined too (Mrs Cole is unfair here to F. W. Galton, who was less the cause than a symptom of the general *malaise*) and split until, on the eve of war, it was reunited by the brilliant group of young men that included Hugh Gaitskell and Evan Durbin. But the efflorescence that followed barely survived the war, and in spite of a great deal of hard work by a number of people, the society today is but a shadow of what it was fifteen years ago.

Why? Mrs Cole does not tell us, and her chapters on this latest age are the least satisfactory part of the book. From quite early times, the Fabian Society has never been quite sure whether its main purpose is thought and research or propaganda (disguised as "participation") among the more intellectual Labour supporters. It has thus fallen between two stools; too much energy has gone into organising schools and meetings, which become rather frivolous social gatherings and make no contribution to thinking. A consequence of the search for wide membership is that control (thoroughly democratic, of course) passes into the hands of people well enough known for other reasons to get elected to office, without having the time to do their job properly. Meanwhile the rump of the wartime leadership has reached its own dead hand stage, just as happened with earlier inner groups. Mrs Cole's own view of the work done by some of her later contemporaries is at least selective and at times distinctly odd. For proof, look at the index of persons to see how many of the active Fabians of these later years rate more than a passing mention—or even a mention at all.

Unequal Giving

The Charities of Rural England, 1480-1660

By W. K. Jordan.

Allen and Unwin. 484 pages. 50s.

THIS is the third volume in the trilogy written by Professor Jordan on the scale and purposes of charitable giving in the early modern period. After a volume of general conclusions there followed one on London, and now a third on three selected rural areas, Buckinghamshire, Norfolk and Yorkshire. As reviewers of the earlier volumes have already pointed out, despite the erudition that lies behind it, and the enormous interest and importance of its conclusions, the work nevertheless has one serious weakness. This is a major statistical error—the complete ignoring of the secular rise in prices—which is sufficient to nullify most of the hypothetical increase in giving in the early seventeenth century, the postulated result of the spread of puritanism. Indeed when account is taken of the rise in population and the increase of real wealth per head, the rise disappears altogether, and with it some of the basic conclusions of the whole work.

This study of rural charity is mainly composed of a dense array of facts about some 13,000 individual benefactions; it will provide an invaluable quarry for subsequent historians in almost every field of inquiry. The most revolutionary of Professor Jordan's discoveries is the extreme inequality in the distribution of charitable resources from one parish to another, an equality that created "areas of opportunity" cheek by jowl with "blighted areas." The prospects of obtaining education, apprenticeship training, a capital loan to start up a business, poor relief in hard times, and an almshouse in old age depended entirely on the accident of place of birth. Geographical inequality of opportunity was thus built into the English social system by the random distribution of private charitable endowment. Lastly, Professor Jordan has some very interesting things to say about Yorkshire. He shows the stubborn adherence of the northern gentry to Roman Catholic beliefs and masses for the dead right through the 1530s and 1540s, evidence that fits in well with the armed resistance to the Henrician Reformation. Even more remarkable was the explosion of school building: in 1480 Yorkshire possessed only six functioning grammar schools; in 1660 it had 106 schools with adequate endowments, and another 38 that lived from hand to mouth. Here is a revolution whose consequences, as Professor Jordan rightly says, it is impossible to overestimate. The whole quality of life in the north was transformed by this sudden proliferation of educational facilities.

Does LONDON'S most powerful advertising medium cost more?

Surprisingly enough, it costs less to dominate the London market with advertising in The Evening News. Read by 4,745,000* potential buyers every day, The Evening News cost per thousand to advertisers is by far the lowest. Bearing in mind the additional fact that printed advertising can be seen for hours on end, is there any medium to match **The Evening News** for sales impact in one of the world's richest markets?

**I.P.A. readership figures—Jan.-June, 1961*

Enquiries to: THE ADVERTISEMENT MANAGER
THE EVENING NEWS, NORTHCLIFFE HOUSE, LONDON, E.C.4
FLEet Street 6000

Despite its somewhat intemperate language and its one statistical flaw, this is a great work of scholarship, in which massive research and a shrewd eye for the significant questions have thrown a flood of new light upon almost every facet of English society and government under the Tudors and early Stuarts.

Missionary Sociology

An Introduction to Religious Sociology

By F. Boulard. Translated by M. J. Jackson. *Darton, Longman and Todd.* 194 pages. 21s.

"MODERN capitalism," said Keynes, "is utterly irreligious." The aim of Canon Boulard and other Roman Catholic sociologists is to harness the techniques of social research for a missionary policy that will prove this statement false.

This should be an interesting experiment in France, where traditional peasant life still flourishes within the framework of a highly industrialised country. The intermixture is more complex than often supposed. One of Canon Boulard's themes is "dechristianisation" and with the aid of religious maps of France (based on church attendance) he shows that this has been going on for centuries, in some cases before true industrialism began. In the eighteenth century the lead in anti-clericalism was taken by the bourgeoisie; today it is concentrated among the urban industrial workers of the large towns. While the picture is not quite regular—for example the rural area around Paris is by no means the most "dechristianised"—Canon Boulard comes to the conclusion that today social influences are coming to be dominant. "When a factory is built in a region of strong religious practice," he says, "it introduces a tendency to religious indifference."

The main argument of the book is that the church must genuinely recognise industrial society as a "new civilisation" where men must live in many separate groups, at their work and in their leisure, each with its own social and cultural values. The task of the church, the author suggests, evidently with an eye on such things as the sense of class solidarity of the organised workers, is "to take over that which is authentic in these values . . . and to baptise it." In effect the author urges the church in France to move away from the traditional life of the past and to accept that of the present.

It is significant to see a Roman Catholic writer argue that the clergy should conduct social surveys in their own parishes. However, while Canon Boulard highlights in this book the problem of re-creating a religious framework in a fast changing industrial society, he is more vague about the actual steps to be taken to achieve this. The problem may indeed prove large, even for Mother Church.

The Stream of Events

A History of England

By John Thorn, Roger Lockyer and David Smith.

Benn. 600 pages. 25s.

IF the teaching of history in England has never been flagrantly biased, it has not always been free of ideological slant, from the jingoism of Arthur Mee to the more subtle idea of inevitable progress towards political liberty and responsibility—a steady advance from Magna Carta to universal suffrage, via the Glorious Revolution and the Reform Bill. Now that increasing numbers of children are staying longer at school and reaching grammar school standard, both what is taught as history, and how it is taught, is of great importance.

The three authors of this new history of England have high qualifications, and have produced a brilliant comprehensive survey from pre-history to 1945. It is directed at fifth and sixth forms ("O" and "A" level), but could be used as a reference book by anyone. It is divided into three sections, each with a different author, and thus avoids the weakness of one man trying to master the details of four thousand years. It also becomes in a sense more detached, because one point of view cannot dominate the whole. Its chief virtue is, however, that it embodies the results of the extensive research which in the last thirty years has revolutionised many of the accepted theories of English development. If used in schools, this book will go a long way towards killing the rather archaic theories that linger in some of the best of them. It has an excellent bibliography for further reading.

The more adult reader and university entrant will find it necessary to supplement the text with wider reading. In their desire to present the essential stream of events with accuracy and brevity, the authors have avoided discussion of the really interesting issues. Some questions, such as the restoration of royal authority after the Wars of the Roses, are answered by implication, in this instance by beginning a new chapter with the return of Edward IV in 1471; others, such as the real nature of the opposition to the Stuarts, are submerged beneath the speed of the narrative. It is in the last section that the immense difficulties of the task become apparent. Although the narrative is carried through to the end of the second world war, the forces and pressure groups behind contemporary society are not described. The communist revolution in Russia is only briefly mentioned, and the theories lying behind it not at all. Reading the book, excellent as it is, makes one feel that, without a discussion of the ideas and theories behind modern politics, the facts will tend to become meaningless; and that the only valid history of contemporary events is world history.

Unsympathetic Portrait

Fathers of the Victorians

By Ford K. Brown.

Cambridge University Press. 569 pages. 55s.

OLD Tom Mozley once wrote a book of reminiscences about his youth at Oxford, gossipy, veracious, inconsequent, with so much to say that he was tedious and with so low a view of human nature that he was unattractive. His critics knew him as Poor Tom.

The author of "Fathers of the Victorians" does not delight in the anecdote of the common room, but something of the same sensation affects the reader. The book is about the Evangelicals in the age of William Wilberforce; and Mr Brown claims that they were responsible for changing the moral face of England, from the age of George IV to the age of Queen Victoria. Though he assents to the view that they were selfless and dedicated, he likes neither them nor their methods. Something is lacking in this portrait of the age of Wilberforce—a sympathy without which there is little understanding. Mrs Hannah More, that godly and decisive lady, is presented as though she were the field commander of an evangelical force, planning and scheming, flattering and directing; and even those who would shrink from Mrs More's company will probably not recognise the lady in this portrait and will not comprehend her if they believe it. When some of the judgments in the book are examined critically, they are more abuse than history, an expression of emotion and not the cool verdict of the serious enquirer.

Wilberforce was not only an enthusiast for a great religious and social cause—the abolition of slavery. He was a lovable, delightful, amusing and sympathetic man, as everyone who knew him intimately is agreed. He was respected not only by the like-minded, but also by a critic like Sydney Smith, who thought the Society for the

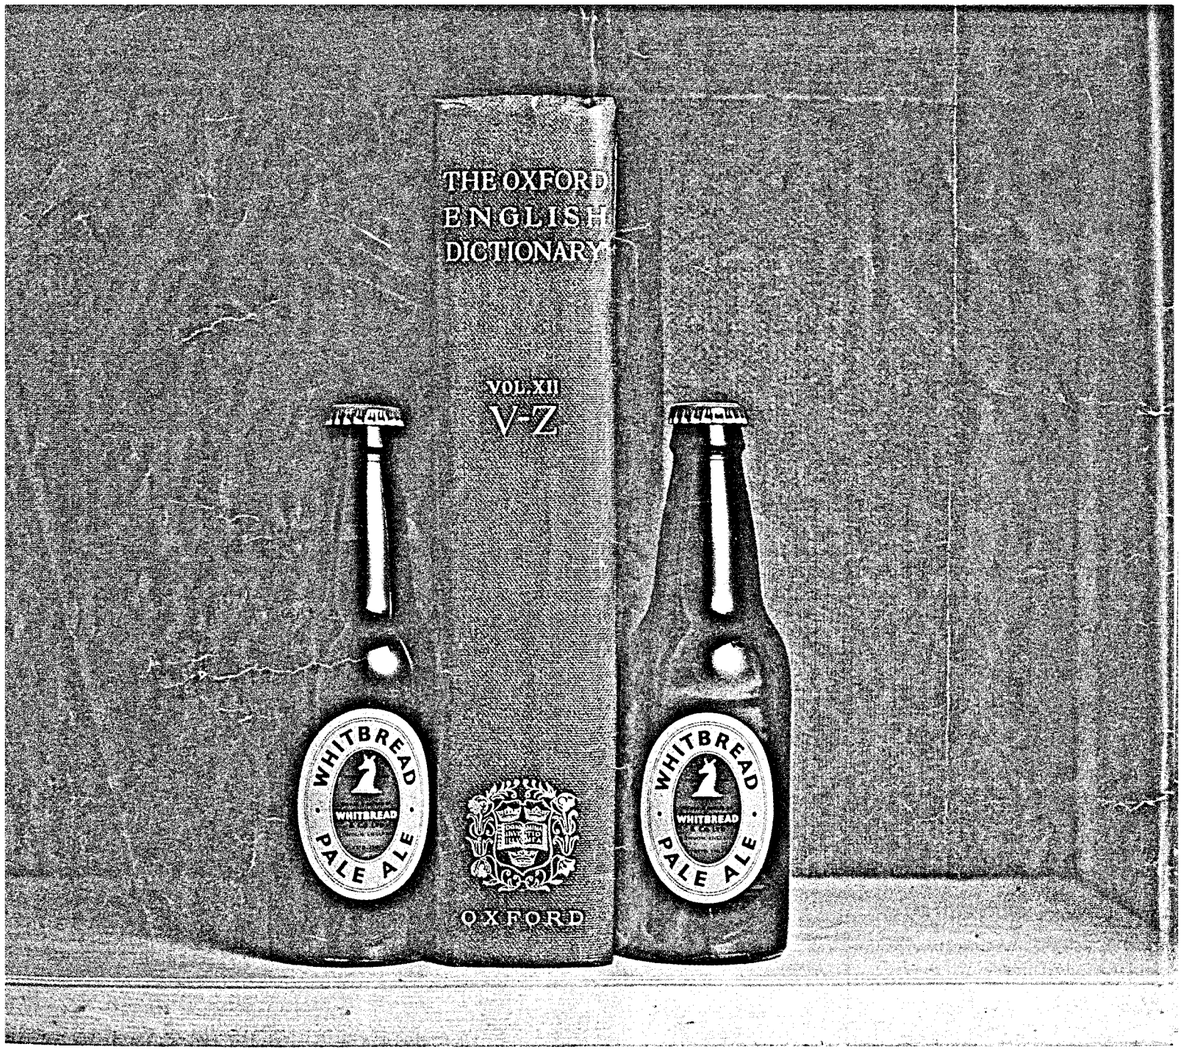
THE IBM "EXECUTIVE" ELECTRIC, WITH PROPORTIONAL LETTERING, TRACES ITS LINEAGE TO THIS FAMOUS INSCRIPTION AT THE BASE OF ROME'S TRAJAN COLUMN.

Some advice on letter writi from the Emperor Trajan

The Emperor Trajan (A.D. 53-117) was, as any early Roman schoolboy knew, a man of taste. It showed in everything he did, winning the respect of a people not unfamiliar with perfection. For those of us who have followed, his greatest legacy perhaps lies in a few lines of lettering neatly chiselled in a simple stone tablet.



Trajan was well aware that the only reason for writing anything was to have it read. His deceptively simple idea was to design each letter in all due proportion, providing as much space as it needed to look beautiful and inviting as well as legible. He succeeded so well that the Trajan inscription is given ample credit for the triumph of the Latin alphabet as the medium of written communication for so much of the world.

For our artists at IBM, Trajan's counsel serves as the model—just as it has for serious designers of typography for most of 2,000 years. The IBM "Executive" Electric was, in fact, the first typewriter to feature proportional lettering.

We like to think the IBM "Executive" lives up to Trajan's classic precepts. If the many honours which have come to it are an indication, it does. Even more important for us, it has been the preferred choice of many of the world's leading letter writers. They would probably agree with Trajan's gentle reminder that what is written is not necessarily read.

Open letter to the Delegates, the Clarendon Press, publishers of the Oxford English Dictionary.

DEAR SIRS,
We find the Oxford English Dictionary an invaluable work of reference in the compilation of our advertisements, and we make frequent use of it. We trust, therefore, that you will excuse us if we draw your attention to a serious omission in Vol. XII V-Z, Section Wh, page 70. We notice that on that page your editors include a reference—WHITBRE(A) D: see WHITE BREAD. On looking up WHITE BREAD we find this definition—"Bread of a light colour, made from fine wheaten flour, as distinguished from BROWN BREAD." No reference at all is made to the common, indeed the universal, meaning that attaches to the word Whitbread today, viz: the truly excellent drink that bears the name. To assist your editors in their task of revision, here is a suitable definition:—

WHITBREAD: a pale-ale—with a long-standing and nation-wide reputation. It is not pasteurised, for which reason its ingredients retain their full flavour. It is brewed entirely from home produced barley, yeast and hops, and the whole production is through Whitbread's own breweries. These and many other factors contribute to the outstanding flavour and quality of this delicious drink, and account for the wide popularity it enjoys, both among men who know their beer and among ladies and young people generally.

We do not suggest that you should immediately withdraw and reprint the whole of Vol. XII. A small addendum slip is all that is required, at least for the time being.

We remain,
Yours faithfully,
WHITBREAD & CO.

Suppression of Vice to be absurd. Concentrating upon questions that crossed the lines of party, he was able to stand aside from the roughness and the compromise of political controversy and retain the ability to deliver moral judgments without pretentiousness and without insincerity. The triumphant second reading of the abolition bill in 1807, when the House of Commons gave him such an ovation as it had given to no other living man, showed how his moral stature symbolised the reviving respect of the nation for integrity and nobility of character. His religion had the exclusive note of its kind—the sometimes repellent language, the lofty platitudes, the sectarian sound. Simeon's religious language could be equally repellent to the taste of a later age. His endeavours for what he saw to be Christian truth might sometimes be unfortunate. But if the sounds, the apparent pomposity, the callow earnestness are taken to be the chief evidence for understanding their persons, their achievements and their religion, we shall find ourselves in the paradox, towards which Mr Brown leads us, of supposing that they succeeded in an astonishing work of reforming the manners of the nation by being unscrupulous, petty, intriguing or pharisaical.

The Victorians were too full-blooded to be begotten by the tail-coated puppets dangling stiffly in these pages.

Lawlessness

The Bootleggers
By Kenneth Allsop.
Hutchinson. 379 pages. 30s.

Kidnap: *The Story of the Lindbergh Case*
By George Waller.
Hamish Hamilton. 594 pages. 30s.

"MULTIPLY the laws; you will multiply lawyers and criminals," said the ancient Roman jurist. Prohibition in the United States was perhaps the best example of lawlessness stimulated by laws. The level of taxes in Britain—and a few other countries—since the war is proving that human nature is everywhere much the same: if the state tries to make it too "good" too quickly and dearly, it breaks the state's laws. No story tells that tale better than that of the Chicagoan bootleggers, and Mr Allsop on the whole does it skilfully and fully. Indeed, European readers will be confused by the number of different names and personalities involved before they are halfway through.

But the book has two faults. The author has nothing to add to knowledge of what produced these fantastic gangsters and their dominions, private armies, and so on. A generation ago all that he adduces about the first and second generation "Americans" was available. Secondly, he makes Chicago of that era sound as if every citizen were every day aware of what was going on around, about and below him. In fact (unless he maintained private relations with a bootlegger for his liquor, as very few did) the ordinary Chicagoan, going into a speakeasy and saying "I'm a friend of Joe's," had no knowledge of gangs and their methods whatever. For 99.9 per cent of the citizens' life was regular and peaceful: births, marriages, jobs and homes, hobbies and vacations, filled that life in peace. No one heard a pistol shot. No one knew of the St Valentine's Day massacre till the papers came out. Life was as peaceful as life in the coshing, car-getaway, cash-grabbing streets of London today—indeed, more peaceful. That no more excuses the citizenry and city fathers of Chicago then than it does those of London now. They can read their papers, and can presumably do something about lawlessness. But they did not do so in Chicago then; and they do not in London now. It just does not seem to be the citizen's business. Why, the author does not adequately explore.

He makes a minor error in emphasising the cut in new immigrants into America after the second world war; by far the bigger cut came after 1926-29, and throughout the thirties up to the war's outbreak; and, proportionately, for special reasons and by special quotas, immigration was bigger after that war than before it.

The book about the notorious kidnapping of the Lindbergh baby is also a tale fully told. Unhappily Mr Waller does not tell his tale so stylishly as Mr Allsop tells his. Lack of style palls quicker, the longer the book; and this is long. But both these books repay careful study by Europeans—and others than North and South Americans—at this time. Only Russians, Chinese and other so-called Communists seem rigorous in enforcing the rule of (their variety of) law these days. Do they value the bonds and cemented foundations of their society more than we value ours? Both these books gain by looking back at a "rule of lawlessness" that was a shadow of what was to come throughout the western world.

LETTERS

West Indies and Europe

SIR—It must surely be gratifying to the African states to note the interest you take in their problems in relation to the European Economic Community. Could you, I wonder, spare a thought for the West Indian territories, who may no longer be important to anyone but themselves, but who nevertheless have genuine problems to face and, as yet, are not in a position to speak for themselves?

In your article "Eurafrica and Their Africa" (November 25th), you state, quite rightly, "The African Commonwealth countries cannot afford to leave it to the British, the European commission and the United States to fight their battles." Can the West Indies afford to? Ought Trinidad and Tobago, for example, to rest secure in the hope that others will ensure that its oil products will continue to have unrestricted access to the markets of Europe? That its exports of citrus, sugar, cocoa, bananas and coffee, however insignificant they may now appear in terms of total European trade, will be safeguarded? That the difficulties which, even now, it experiences in selling the products of its small manufacturing industries will not be aggravated?

You urge the Nigerians to establish diplomatic representation in Brussels so that they could be quickly drawn into the Euro-African discussions. This is, no doubt, a course which other underdeveloped countries could usefully adopt; but it would not normally be available to those that are not yet independent. Could not the community dispense with the niceties of protocol and diplomatic custom and permit all those underdeveloped countries that wished to do so to appear before its appropriate institutions in order to present and discuss their particular problems? Trinidad and Tobago would gladly avail itself of the opportunity.
—Yours faithfully, J. O'NEIL LEWIS
Special Representative of the Government of Trinidad and Tobago
Geneva

Dr Salazar

SIR—It was with deep regret that I read in your issue of November 18th your condemnation of the Prime Minister of Portugal.

In an endeavour to redress the injustice I cannot do better than quote a passage in which he discloses his thoughts and principles. In a speech delivered on April 14, 1937, he declared:—

> Without losing sight of activities which may provide for all a greater amount of goods, and with them greater material comfort, the ideal is to escape from the materialism of today; to make the fields more fertile, without silencing therein the merry song of the girls; to weave cotton or wool in the most modern looms, without interlacing with the thread class-hatred and without banishing from the factory or the workshop our old patriarchal spirit. . . . From a civilisation which is returning to the jungle, we are separated by spirituality. We shun feeding the poor with illusions, but we want at all costs to preserve from the wave that is rising in the world the simplicity of life, the purity of customs, the sweetness of feelings, the equilibrium of social reactions, this familiar air, humble but dignified, of Portuguese life, and, through these conquests or re-conquests of our traditions, to preserve social peace.

—Yours faithfully, PAUL DE HEVESY
Former Hungarian Minister to Portugal
Hove, Sussex

The Most Acute Case

SIR—Your article on the "Report on the Scottish Economy" makes fascinating reading. Insofar as they refer to obsolescent, dying industries, its findings and your comments are almost certainly right. But there are some non-growth industries whose survival must surely be important. The "large quantity standard" industries themselves depend heavily on some of them—on the larger ones for their power houses and machines; on the smaller ones for their general engineering jobbing work, tooling etc.

Our experience is that the dynamic new industries effectively damage the "small quantity specialised" industries in their area, by draining them of their labour. What will happen if only the "assembly-line mass producers" are left? Will they learn how to make their own machines and how to do their own jobbing work economically? Who will build the ships and bridges that they and the rest of us need?

One can only hope that somehow a balance will be struck while these essential non-growth firms retain some of their skilled, loyal and comparatively much-underpaid workers—Yours faithfully,
Birmingham, 17 A. I. POTTINGER

Vietnam

SIR—As you say (November 18th) the floods in the Mekong valley have caused much suffering, and help from outside, especially nearby Asian countries, is desirable. Why then have the south Vietnam authorities refused the offer of the government in north Vietnam of 10,000 tons of rice, 1 million metres of cloth and 5 tons of medicines, when these could have been delivered quicker than from anywhere?

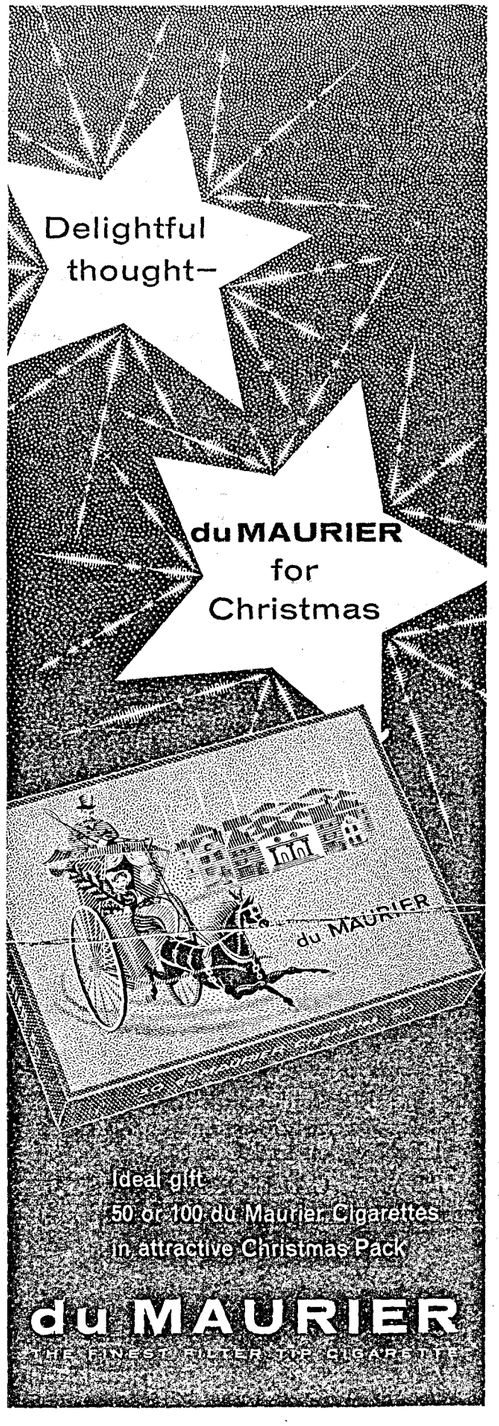
Secondly, does not the arrival in south Vietnam of a further 600 US military instructors, bombers, reconnaissance jets, etc., which you report, constitute a breach of the 1954 Geneva Agreement which forbids such foreign military intervention and supplies?

This last is the sort of incident which le to the recent protests from the Governmen of the Democratic Republic of Vietnam t the British Foreign Secretary (as co-chair man of the Geneva Conference) whicl though circulated have not been noted i the British press.—Yours faithfully,
HILDA VERNO
British-Vietnam Committe
London, NW8

Export Incentives

SIR—Under the above heading you say tha there is a case for allowing manufacturer themselves to write off assets at the rate the choose. It is to be supposed that in on direction at least the authorities hav already recognised this fact. I refer to th developing practice of leasing plant an equipment, a practice which has so fa largely escaped the attention of the Revenue A manufacturer who obtains the use of plan by renting it effectively writes it off ove the period that he rents it. If he buys it h can only write it off at the rate agreed b the tax authorities. Admittedly the manu facturer has to pay for the cost of the mone needed to finance the hiring but the quicke write off period often makes this a worth while expense. The Revenue is a net lose on such transactions because rent payment are a legitimate business expense an deductible for tax purposes. For the tim being at least it would seem that th authorities are prepared to accept this.— Yours faithfully, A. P. PRINGL
London, SW10

Socialist Unity



SIR—I am writing to call your attention t an incorrect statement in the article "Pin Clydeside" in your issue of November 25th The Socialist Party of Great Britain di not take part in discussions with the organisations named in the article and ha never done so, as the constitution of the SPGB precludes collaboration with othe political organisations in the country, to al of which the SPGB is opposed.—Yours faithfully, ROSE WEAVER
General Secretary SPG

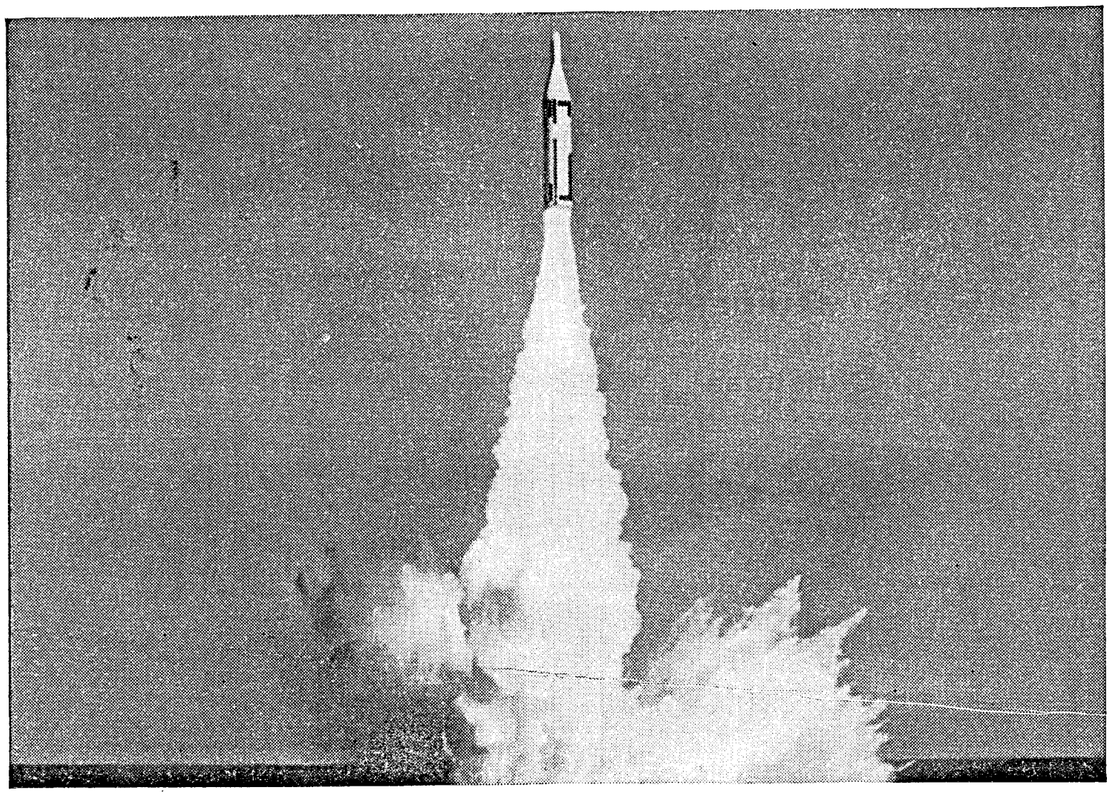
Brandy this good
has no stars on its label



No brandy of lesser quality than Fine Champagne V.S.O.P. Cognac is permitted to bear the Remy Martin label. Hence no grading by stars. The question does not arise. All you need remember is to ask for Remy Martin. In return you enjoy a superior cognac of liqueur quality. For Remy Martin *make nothing less good*. In a word, Remy Martin cater for the one man in a hundred who refuses to offend his palate—or his guests—with any brandy less good than Fine Champagne V.S.O.P. Just ask for Remy Martin.

PRIDE OF COGNAC

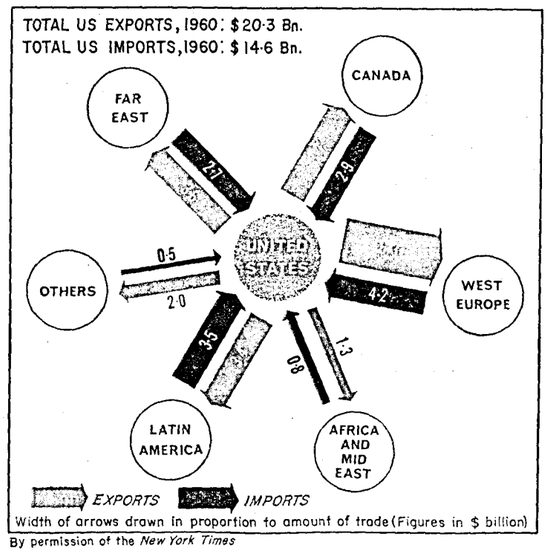
AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Trading Hopes and Fears



WASHINGTON, DC

THIS week President Kennedy stepped up the American export drive. Firms which have contributed significantly to expanded exports will be entitled to fly a flag with a blue E on a white field. This is the flag which once flew over factories that made records in war production; then the E stood for Excellence. Firms awarded an E will be permitted to advertise the fact and to give their workers E pins to wear. Mr Kennedy calls an increase in exports "the next great frontier we must cross." In a speech that reflected American hopes and fears he told the National Association of Manufacturers in New York on Wednesday that America's favourable trade balance had to be enlarged further to help to finance America's responsibilities abroad, mainly troops and military bases. Like his predecessors, President Kennedy regards trade primarily as an instrument of foreign policy. He wishes to replace the Reciprocal Trade Agreements Act with an improved instrument to prise open for the United States and other countries what he called the vast new market rising across the Atlantic which, if Britain joins it, will have more people in it than either the United States or Russia. America's export drive is somehow to be made to coincide with the political and economic strengthening of a western Europe into which Germany will be inextricably tied, and with a general liberalisation of trade in the free world.

The United States views the European Economic Community with mingled pride and apprehension, like the character in the novel of H. G. Wells who reared a giant offspring on the food of the gods. Pride predominates. Most Americans rejoice in Europe's new-found unity and strength, for which they as a nation can take much of the credit. Some, like Mr Walter Lippmann, come close to advocating a complete pooling of resources by the United States and Europe, the better to carry out their joint task of raising living standards in backward parts of the world. Others see in a strong united Europe an essential counterweight to Russia. But there are warnings that a trade war may divide the West and fears that bargaining for lower tariffs between the United States and the European common market may rob Americans of jobs.

The President said that America was urging its allies to free their private capital for investment in the United States but that he wanted Congress to remove, for American firms in those foreign countries which have no shortage of capital, the "artificial" tax preference allowed for investment abroad, as well as the "unjustifiable" tax loopholes available to Americans in foreign "tax havens"—preferences and loopholes that the head of the trade union movement has condemned as "outrageous." But Mr Kennedy also told the NAM that he was proposing neither that America should join the common market nor that the "traditional safeguards and institutions" should be done away with altogether. The latter probably include continued protection for the American textile industry. The President said that tariffs could be used to cushion adjustments by American industries to increased imports and promised other forms of help from the federal government for those afflicted. But he assured his hearers that under his new trade policy imports would not increase as much as exports. One of his associates said this week that the adjustments which domestic industries would have to make to increased imports would be "rather marginal" and anyhow not nearly as great as industries have to make because of changes in consumers' tastes, technological advances and so forth. One cheery estimate, submitted to a Senate commitee last June, is that less than one per cent of the labour force would lose jobs if America suspended all tariffs for three years. Whether such arguments will carry conviction among sceptics about freer trade remains to be seen.

President Kennedy has said that those who recognise the benefits of freer trade should speak as loudly as those who fear that freer trade will hurt them. This would call for a considerable number of decibels, for the protectionists in the United States can howl very loudly indeed. The Reciprocal Trade Agreements Act, which gives the executive the authority to bargain with foreign countries for lower tariffs, has been renewed eleven times since it was passed in 1934. In those twenty-seven years periodic legislative battles over its renewal have become an American ritual. But, though the Act has brought down the general level of American tariffs by about 60 per cent, of late the tussles in Congress have tended towards stalement, with the President's authority to lower tariffs being renewed grudgingly but limited by "peril points" and "escape clauses." For the past ten years tariff negotiations have brought no really major changes.

By permission of the *New York Times*

If the Trade Agreements Act expires next June without being either renewed or replaced, the tariff reductions negotiated since 1934 will not be nullified thereby, but the President will have no authority to negotiate any further reductions. The peril points and the escape clause would remain and legally the escape clause

could be used to cancel any past trade concession deemed by the Tariff Commission to have increased imports to an extent injurious to American producers. A current proposal of the protectionists would deprive the President of his power to veto recommendations by the Tariff Commission.

As renewed in 1958 the Act authorised the President to reduce tariffs only by as much as five per cent a year, for four years, and compelled him to negotiate separately for each item. The President's personal assistant on trade policy, Mr Howard Petersen, who is a Philadelphian banker and a Republican, wants tariff negotiations with Europe to be on an across-the-board basis. He recommended "substantial, gradual and general" reduction of tariffs and other trade barriers by all the economically advanced countries of the non-communist world, with the benefits of the reductions being made available to the under-developed countries. But the cool expectation in Washington is that 1962 will see only the beginning of the necessary task of educating the public in the need for a bolder and broader trade policy, not the real beginning of the policy itself.

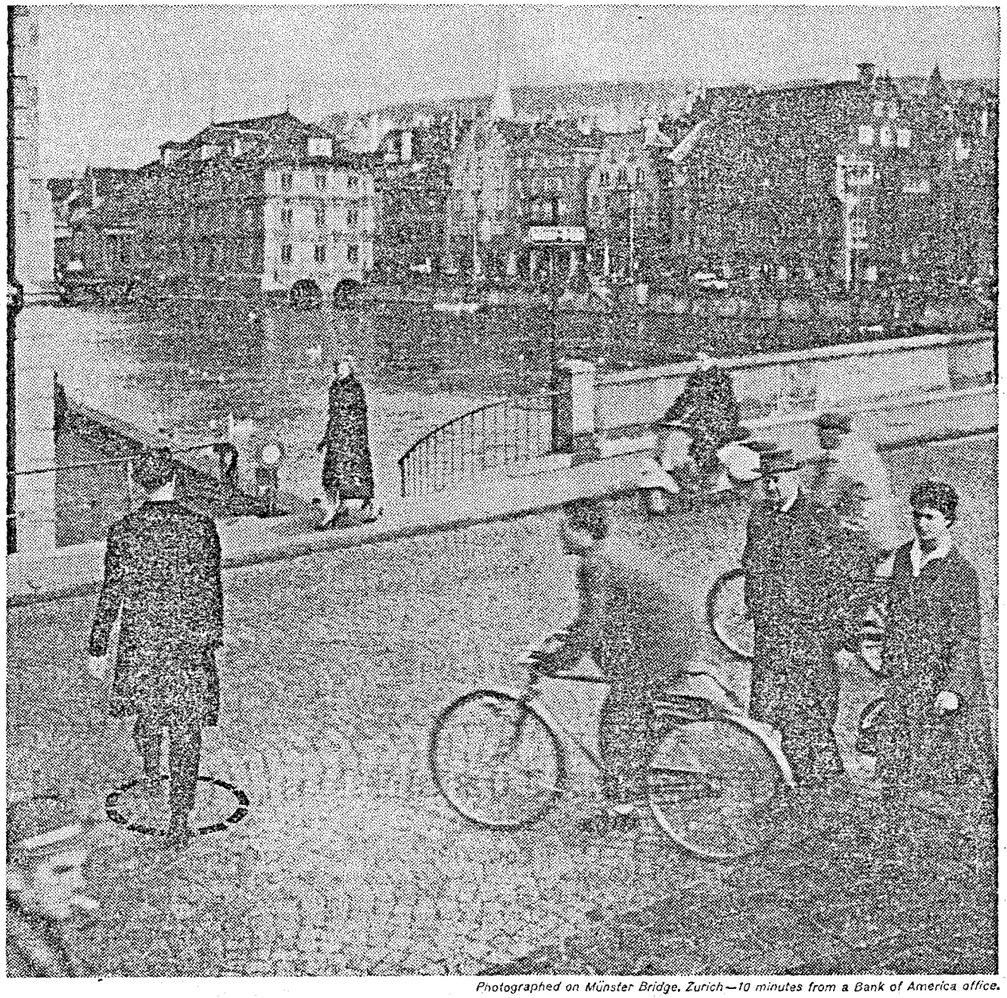
This does not mean that history will necessarily be repeated and that the proposed across-the-board method of tariff reduction will have to be abandoned in the face of hard domestic realities, as happened in 1945 when another Democratic Administration endeavoured to do away with imperial preference and to open up the British Empire to United States commerce in return for just such a change in American methods of tariff bargaining. But a very hard fight seems likely in Congress, complicated by the fact that 1962 is a congressional election year; moreover, Mr Kennedy will not have the strong arm of the late Mr Rayburn, the Speaker of the House, to lean on in winning over the southern Democrats, who are nowadays as solicitous for domestic textile manufacturers as they are for American cotton growers.

Businessmen are divided on the subject of tariff reductions and accordingly have two committees which espouse opposing views. The Committee for a National Trade Policy advocates freer trade and has already called for new legislation in 1962, to enable the President to remove some tariffs altogether and to cut others by at least 50 per cent; this committee wants elimination of the protectionists' cherished peril point provision and assistance for industries hurt by imports, to help them to adjust to the new situation, perhaps by shifting into other lines of business. The Trade Agreements Act never envisaged a need for domestic industries to adjust themselves to imports by switching to new enterprises and the protectionists, who include makers of fabricated metal products, industrial chemicals, glass, pottery, bicycles, cord and twine, electronic equipment, toys and sports goods, are declaring that what they want is not new-fangled financial help to enable them to commit suicide with the least discomfort, but old-fashioned protection to enable them to survive.

The other committee is the nation-wide Committee on Import-Export Trade whose chairman, Mr Strackbein, last week told a congressional sub-committee that "the export dollar runs a poor second to the import dollar in terms of employment." This is an argument which the Administration may find hard to counter—harder certainly than to dispose of Senator Goldwater's allegation that President Kennedy is planning the entry of the United States into the European common market and that this will bring an influx of European workers who will snatch jobs from Americans already damaged by a flight of American capital to Europe.

Freer trade has the support of Mr Meany, the president of the trade union federation—but at a stiff price. He wants workers who are displaced from their jobs by imports to receive two-thirds of their normal wage for a year while being retrained for new work at government expense and to have the right to retire at sixty with full social security benefits. It is amid such cross-currents of conflicting views and interests that Mr Kennedy's battle for a new trade policy will be fought.

Red Letter Days



LAST week the restless ghost of Senator McCarran put the Communist party in the dock, for failing to register as a "communist-action" organisation. It is required to do so under his Internal Security Act of 1950, whose constitutionality was upheld by the Supreme Court, in a 5 to 4 decision, last June. The purpose of the Act, which was passed during the Korean war and the McCarthyite hysteria, was to drag the party and its "front" organisations into the light of day by making them list their members, officers, contributors and printers, reveal their financial operations and stamp everything they sent through the post as communist-originated. Many individuals and organisations are required to register in the United States, but this is the kind of registration that is designed to kill, like that required of Negro organisations in some southern states.

It has taken eleven years to bring this steamroller into position. First the Subversive Activities Control Board which the Act created had to find, to the satisfaction of the courts, that the party was a foreign-controlled "communist-action" organisation; then the Act itself had to survive a challenge in the courts. Meanwhile membership in the party, which was put at 75,000 during the second world war, has dwindled to about 3,000 or less. The deadline fixed for the registration of the party was November 20th. When it formally notified the government by letter that it refused to obey, its officers became liable to register by November 30th; if they, in turn, continue to refuse to comply, on December 20th the responsibility devolves upon individual members. So far only the party itself is being prosecuted; further action by the Department of Justice is complicated because the party has cut the number of its officers to three; one of these, the chairman, Miss Flynn, now 71, has just returned to the United States to face the music. If the party is convicted it may be fined $10,000 for each day of non-registration. Its officers and members face the same penalty, as well as five years in prison for each day of non-compliance.

But the Communist party is not necessarily at the end of the road. The Supreme Court has not yet dealt with the chief objection to the Act: that to identify one's self as a communist amounts to self-incrimination. This is because another law, the Smith Act, makes membership in the party a crime if the member is aware of its subversive character. The party also argues with some force that the Constitution forbids "cruel and unusual" punishments such as the fines and prison sentences prescribed by the Act. Certain of its other provisions are also of doubtful constitutionality, such as the denial of passports to every member of the party. The Department of Justice, under the fierce glare of the fanatically anti-communist groups that flourish at present, has moved with all speed to enforce the Act. But constitutional questions affecting the civil liberties of all cannot be decided in a hurry.

Bait for Hot Money

FROM January 1st commercial banks will be able to raise from 3 per cent to 3½ per cent the interest they pay on all savings accounts and on time deposits left with them for from six months to a year and they will be able to pay up to 4 per cent on longer-term deposits. The government's decision to raise the ceiling and permit a special premium for long-term deposits was prompted primarily by a desire to discourage an outflow of "hot money" and to avoid the damage that this would inflict on the balance of international payments. At the same time the government hopes, by keeping credit readily available, to avoid any check to economic growth at home. The New York banks—the ones most likely to hold foreign deposits—welcome the move. The Chase Manhattan

Choose from 2 models... 3 transmissions... 15 colours!

With the new 6-cylinder models for 1962, Vauxhall gives you the CHOICEST big-car motoring. More comfortable, more exhilarating, safer than ever before, these beautiful cars are now offered with a very wide choice of alternative equipment.

TWO-MODELS – Cresta and Velox! Both luxury cars in every detail except price. Optional for 1962 are power-assisted brakes (disc type on front wheels) and individual front seats.

THREE TRANSMISSIONS –

HYDRA-MATIC, the simplest, smoothest and safest automatic transmission ever devised.

OVERDRIVE, which gives you the benefit of two extra gears.

ALL-SYNCHRO (fitted as standard), the easiest non-automatic gear changing – women drivers particularly like "synchro" in first gear.

Have a look at some of the other fine quality features shown here. Then check them for yourself at the nearest Vauxhall showroom. A trial run will prove everything in the pleasantest possible way.

Power '62

'Motorway age' 2.6 litre, 6-cylinder engine. High average speeds. Jubilant performance. Welcome economy. Long, long life.

Safety '62

New zone-toughened safety glass windscreen. New wide-sweep wipers. For high-speed drivers, disc front brakes with power assistance (optional extras).

Comfort '62

Ample room for six adults, loads of luggage. Choice of a full-width front seat, or individual front seats. Many detail refinements and extra quality features.

Hydra-matic '62

Simplest, smoothest, safest automatic transmission. Takes the tension out of traffic driving. Velox and Cresta are the only British cars below £3,000 to offer it.

Colour '62

Fifteen colours – plus, for Cresta, nine special two-tone combinations – to which Vauxhall's new long-life, high-lustre paint imparts an impeccable finish.

Prices '62

Velox £655
plus £301.8.11 P.T. £956.8.11
Cresta £715
plus £328.18.11 P.T. £1,043.18.11
Vauxhall-Friary Estate Cars from £1,258.6.5 inc. P.T. *Laycock de Normanville Overdrive £65.12.6 extra inc. P.T.*
Hydra-matic transmission £175 extra inc. P.T.

Vauxhall Velox & Cresta

Vauxhall Motors Ltd., Luton, Beds.

● **More than a thousand Vauxhall dealers offer top quality service with factory-trained mechanics and charges based on standard times.**

Bank, the second largest in the country, has already announced that it will raise its interest rate on savings to 3½ per cent on January 1st; for state-chartered banks such as Chase any action on time deposits must await a rise in the ceiling set by the state authorities. Banks in New York have long been chafing under the 3 per cent rule which has made it difficult for them to compete with the money market for funds when rates rise there. Recently, these banks have been suffering a drain on their certificates of deposit, negotiable interest-bearing evidences of time deposits which they issue as a means of attracting the idle funds of corporations.

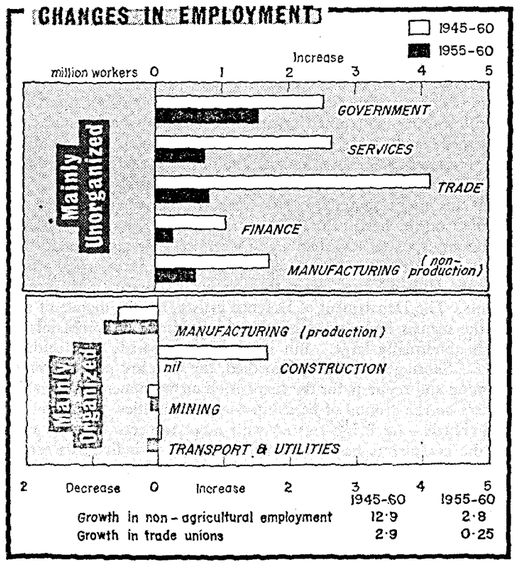
Interest rates in the money market are already stiffening; although the central bank, out of consideration for the Treasury, exempted short-term deposits (less than six months) from its new rule, the return on Treasury bills has edged higher. The lending rates of the banks, both on mortgages and loans to business, are bound to rise gradually because of the pressure of the new interest rates on their profits. And the fact that the banks are in a position to attract fresh corporate funds with their certificates of deposit means that the supply of money in the open market will be reduced, leading to higher rates there when the demand for loans rises.

The banks which are not enthusiastic about the new higher rates of interest that they may pay are those with heavy savings deposits, such as the Bank of America. The squeeze on their profits will be particularly painful. And although one of the domestic considerations which led the central bank to authorise the higher rates was that it would enable the banks to compete with the higher rates offered by the savings and loan associations (America's building societies) this argument has not carried conviction because there is nothing to prevent the asociations from lifting their rates still higher. But as interest rates in general are rising the Treasury and the central bank are confident that their move will attract foreign funds and encourage the domestic saving needed to finance economic progress in the years ahead.

Disorganised Labour

FROM A SPECIAL CORRESPONDENT

ONE of the most burning, and potentially divisive, arguments at the biennial convention of the American Federation of Labour and Congress of Industrial Organisations, which begins in Florida this week, will be over the question of organising workers into trade unions. The question has two facets: how can more members be obtained and which union should they join? According to one expert, "the cessation of the trade union movement's expansion into new areas and its decline in numerical strength" constitutes a crisis, while others have declared that the movement cannot grow until it settles the internal bickering between the craft unions, which belonged to the old AFL, and the industrial unions, which were the backbone of the CIO, about their respective jurisdictions over different types of worker.



While in 1960, from the official figures just published, trade union membership, at 17,049,000, was slightly larger than in 1955, the year in which the AFL and CIO, the two main union groups, were merged, membership has in fact fallen by over 400,000 since 1956 during a period when the labour force has been rising steadily. With just under 40 per cent of non-farm, non-supervisory workers belonging to trade unions there is clearly room for improvement. While restrictive legislation—state right-to-work laws and the federal Taft-Hartley Act—puts obstacles in the way of expansion, the main difficulty is the changing structure of the American economy and its effect on the pattern of the labour force.

Between 1955 and 1960 total employment in manufacturing in the United States declined by approximately 225,000 jobs while in non-manufacturing there was a rise of 2,840,000, accounted for mainly by large increases in employment in government, retail trade and service industries. Even the figure for manufacturing disguises a much more serious situation—from the union point of view—for the numbers working on production lines declined in the period by 796,000 while those in white-collar occupations in the factories increased by 571,000; historically, production workers in manufacturing have been the ones to be organised most successfully into unions. The increase in white-collar employment presents the unions with many new problems which cannot be solved by using methods that are fast becoming out of date.

Most unionists agree that a fresh and concerted effort is needed in the white-collar field but they disagree as to who should make it. Some say that in those plants where the production workers are well organised it is the logical procedure for the industrial union to which they belong to try to bring the professional, technical and clerical workers into its fold. On the other hand, the established white-collar unions maintain that the organisation of such workers is their prerogative. But jurisdictional squabbles are by no means limited to arguments over white-collar workers; a public controversy has also developed over the question of what is the correct affiliation for the maintenance workers in factories.

Mr Walter Reuther, head of the automobile workers and of the Industrial Union Department of the AFL-CIO, to which most of the original CIO unions are affiliated, has prefaced the Florida convention with a scathing attack on the building unions which formed the nucleus of the old AFL. At a meeting at which was drafted a series of resolutions directed against the craft unions, Mr Reuther told the delegates that there must be agreement this year on effective machinery to solve internal disputes. He made the point that, although the trade unions were merged in 1955, they were not united at the same time and that continued disunity "would jeopardise the very existence of the American labour movement."

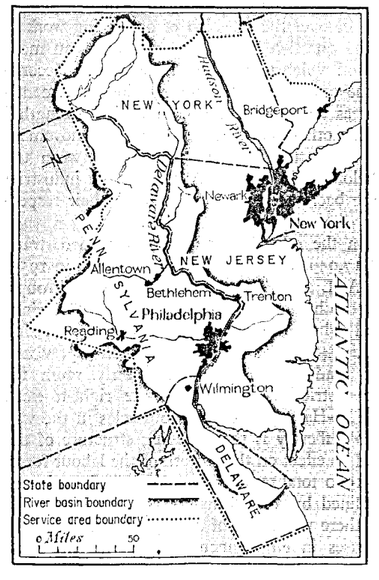
This long-standing jurisdictional conflict means that AFL-CIO unions boycott the products of other AFL-CIO unions and try to steal each other's members. The particular case which prompted Mr Reuther to speak for 97 minutes on the need for unity is that in the recent past there have been many occasions on which the unions in the building trades—where, incidentally, employment

has not fallen off as it has in the other organised industries—have encroached upon jurisdictional territory that the industrial unions consider sacred to themselves. Local building unions have been joining with groups of employers to try to secure jurisdictional rights over maintenance work. For example, an independent contractor will offer to perform all the maintenance duties in a factory; the company will then dismiss its regular maintenance staff, who probably belong to an industrial union if the plant is organised; the independent contractor then hires workers (electricians, carpenters, plumbers, etc.) who owe affiliation to building trades unions. The net result is a loss in membership for one union and a gain for others. The building unions accuse the industrial unions of using similar tactics, particularly at missile bases, to increase their membership.

The whole question was supposed to have been settled some time ago, but this arrangement has not worked in practice. Now Mr Reuther's answer is the adoption of a constitutional amendment that would provide effective machinery for settling disputes by binding arbitration. But the building unions have made it clear that there will be a bitter struggle if such an amendment is pressed at this year's convention.

How Ready a Reserve?

LAST summer, when the Administration decided that the Berlin crisis required a rapid enlargement of America's non-nuclear forces, about 154,000 members of the reserves were called up, including two whole divisions of the National Guard, one from Texas, one from Wisconsin. Hardly had these men reported for duty in October than the air was filled with grumbles which were seized upon by some newspapers and exploited by Mr O'Konski, a Republican Congressman from Wisconsin. There was even talk of a congressional investigation of the methods of the Army, to which most of the reservists—119,000—were being sent. The men complained that when they reached the camps there was nothing for them to do and a great shortage of uniforms, sheets, cutlery—and even of weapons for training. Over 25,000 of the men had seen two or three years of active duty and felt it unfair that so many young men who had done none, or only six months, were going scot-free. It rubs salt in this wound that the number of untrained conscripts being called up, which was raised in the autumn, is being reduced this month. With the easing of the Berlin crisis many of the men began to feel that their sacrifices—the interrupted careers, the businesses and houses that had to be sold—were pointless. Finally a rumour got round that the reservists might be kept in uniform more than the twelve months which is all that the law now allows.



At his press conference last week the President knocked this rumour on the head; the Administration hopes, he said, to release the reservists after less than a year's service. He also assured them that their sacrifices were appreciated and were necessary as a proof that the United States means to carry out its international commitments. The Department of Defence insists that the morale of most of the men is high and denies that the volume of complaints has been abnormally large. But it is trying to satisfy the legitimate ones. Shortages are being remedied, the men are now on combat training and requests for the suspension or postponement of call-up orders on the ground of hardship—to communities, businesses and individuals—are being treated with more respect. A good many of the complaints have come from "fillers"—individuals sent to fill out reserve units with which they had had no connection.

The fact remains, however, that if the country is to rely on its reserves in an emergency, it is the experienced men who will have to go; fairness comes second. But it looks as though the Department of Defence is turning to the view that it is not wise to place too much reliance even on the "ready reserves." Men sent home when one crisis is over cannot be brought back a few months later when another blows up without putting an intolerable strain on the system. Instead the department is expected to ask in its next budget for two new regular divisions to add to the army's present fourteen. And the whole costly system of reserves and National Guards is once more under scrutiny. President Eisenhower tried to whittle them down, but was defeated by political pressures from the states which, for reasons of prestige, cherish their powers over the National Guard. The present Administration, after its experience this autumn, seems likely to renew the assault.

Basin in Commission

THE Delaware River Basin Commission holds its first meeting this month, having been approved by the Legislatures of the four states concerned—New York, New Jersey, Pennsylvania and Delaware—and by the United States Congress with almost unheard-of speed, although not without argument, in only eight months. The scheme had, of course, been on the planning tables for many years and once it was agreed it went through quickly, partly because this is a region used to governmental co-operation and intervention and partly because the legislators remembered that, when a previous scheme was turned down, disastrous floods followed promptly; their political lives could not have survived a repetition of this sequence of events. This time, too, the State Governors concerned were all able and enthusiastic, determined that there should be no more delay; they were backed up in Washington by an equally enthusiastic and determined group of Senators and Congressmen, notably the liberal Senator Clark and the conservative Representative Walter, both from Pennsylvania. Help came also from legislators from the Pacific Northwest who expect soon to put a similar project for their Columbia River Basin before Congress.

Certain industrialists in the area, led by the huge United States Steel Corporation, were afraid that their freedom would be circumscribed and in particular that they might have to pay for their water. There was also opposition from officials in the Department of the Interior who would have preferred an independent agency on the traditional Democratic pattern of the Tennessee Valley Authority. Moreover there was justifiable concern about the very broad powers conferred on the commission and about the position of the federal government; its representative participates on equal terms with the four state representatives and could be outvoted by them, even if federal activities were at issue. It can be argued that this is unconstitutional and it may eventually be so argued in the courts. Meanwhile,

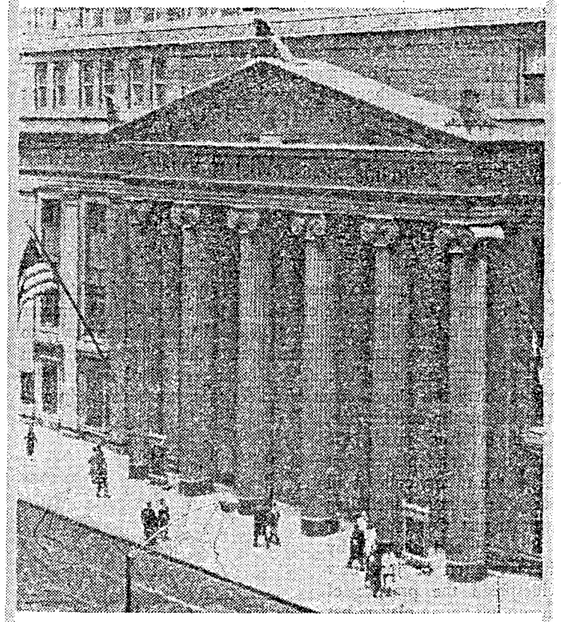
SHERATON HOTELS

IMMEDIATE CONFIRMATION

EXCELLENT accommodations reasonable rates

From New York to San Francisco, from Montreal to Dallas, there's a Sheraton Hotel waiting to welcome you. Each is located in the heart of the city, near business districts, theatres and shops. In addition to fine food and superb service, Sheraton Hotels offer many extra values such as the Family Plan (children under 14 FREE when they share your room), air-conditioning, free TV and radio. If your ship or plane is delayed, Sheraton will hold your reservations. To get reservations at any Sheraton Hotel, see your travel agent or Sheraton's General Agent:



FRAMES TOURS LTD.,
25-31 Tavistock Place, London W. C. 1,
Telephone: Euston 3488.

the federal government exercises very substantial control through its financial contributions; Congress also retains authority to withdraw from the compact setting up the commission, or to revise its terms, and must approve all its projects unless they require only state funds.

After this "minimum protection of federal interests" had been provided, the Secretary of the Interior was prepared to accept what he still does not regard as a satisfactory scheme because the need for flood control and for planning recreational and industrial development in the area was so urgent. This had been pointed out by the Army Corps of Engineers in a comprehensive survey, completed at the end of 1960, of the whole river basin covering 12,757 square miles. It is one of the most highly industrialised regions in the country, with 21 million inhabitants and twice that number expected by 2010. Demands on the river, on which the region depends for its water, may double by 1980 and quadruple by 2010; so far there is no general shortage of water but there soon could be and both flooding and pollution need to be controlled. The growing population wants more and more lakes and parks for swimming, sailing and hiking and the growing industry wants more and more power—although hydro-electricity is not an important source of power in this area. To provide all this requires comprehensive planning for the immediate and long-range development of the water resources of the region and this is what the new commission has been set up to do.

Base Basketball

As a result of an investigation launched by the District Attorney of New York it became clear during the spring and summer that college basketball was still over-staffed with players ready to accept bribes from gamblers to manipulate the scores of their own teams in particular matches. The similar scandal of 1951, inculpating thirty-two players from seven colleges, has been easily outstripped by the current one, which involves much the same number of players but more than twenty colleges all over the country, including even august Columbia.

Shocked and alarmed by the revelation of just how widespread the practice of corrupting young players has become, the National Collegiate Athletic Association, which regulates all forms of college sport, issued in October sixteen far-reaching recommendations for fighting a real menace to the interest and decency of amateur games. Among the NCAA's proposals were recommendations that players caught accepting bribes or failing to report attempts to bribe them should be expelled automatically from their university, that games should be played as far as possible on the colleges' own courts and not in public arenas such as Madison Square Garden, where players are exposed to corruption, and that Congress should outlaw such bribery. (Some states do so already.) But the most significant recommendation was that an attempt should be made to reduce the number of young men who go to college simply in order to play games by setting up a minimum standard of academic ability.

This last proposal, mild though it is, puts the blame for the whole sorry story where it belongs. Gamblers who try to fix the odds can be dealt with by the law. Young men who can say, like the player given $1,300 for game-fixing, "I did it for my bride and my baby," are just as easy to punish, once they are discovered. What cannot be eliminated so easily is the readiness of fund-hunting universities, hungry for prestige, to offer so-called "athletic scholarships" to entice good players into their teams. By means of these awards young players can get a well-paid and highly-publicised introduction to careers as professionals; and college presidents (often chosen simply for their ability to entice dollars into the university chests) can dazzle the graduates and other suppliers of money with tales of famous victories. Candidates for these "scholarships" all too often qualify simply by having the speed, the eye, and the height ("glandular freaks," snorts one commentator) to play well; their brains and their integrity are ignored. In effect this means, as the press has pointed out, that the colleges are the first bribers.

No Senator Stevenson

The Democrats may need outstanding candidates for next year's elections but Mr Adlai Stevenson's decision not to stand for the Senate in Illinois in 1962 is surely the right one, even if there is truth in the stories that he and Mr Kennedy are not exactly compatible. The announcement that Mr Stevenson was even considering giving up his job as Ambassador to the United Nations and the suspicion that at first the President made no great efforts to dissuade him from such a course have given currency to a rumour that the Illinois Democrats had stepped forward to relieve the President of an uncongenial colleague. But Mr Stevenson's departure for politics would have been a double blow to the Administration: first, because his presence at the United Nations is an impressive symbol of American concern with international opinion and the under-developed countries; secondly, because, coming so soon after the demotion of Mr Chester Bowles, the Administration would have seemed to be dropping all its liberals.

It is not hard to see that Mr Stevenson, whose *amour-propre* is easily touched, may have found it "confining" to act so largely as a mouth-piece for policies—on Cuba and China—with which he has little sympathy. The President's warm, if vague, promise of an "expanding role" in foreign policy for Mr Stevenson may have helped to persuade him to stay. So may the realisation that there was no guarantee that he could defeat Senator Dirksen, the present Republican majority leader who will be standing in Illinois for his third term next year. Mr Dirksen is a real mid-westerner in spirit and a silver-tongued—if rather old-fashioned—orator. He is also, since the death of Senator Bridges, the most influential Republican in the Senate.

Senator Bridges's immediate successor, who is appointed by the Governor of New Hampshire, is likely to be Mrs Bridges, but next year the Governor himself is strongly tempted to stand for the remaining four years of the term. A much more enthralling race is shaping up in nearby Massachusetts, where Mr George Cabot Lodge, the son of the Republican vice-presidential candidate last year, has just announced that he will stand for the Republican nomination to President Kennedy's old Senate seat. It is filled at present by Mr Benjamin Smith, on the appointment of the Governor. Mr. Smith may seek the Democratic nomination himself, but the real interest attaches to two other possible Democratic candidates, the President's 29-year-old brother, Mr Edward Kennedy, and Mr Edward McCormack, the nephew of the man who is likely to be the next Speaker of the House of Representatives—Mr John McCormack. The Kennedy and McCormack families are old political rivals in the state; but in Washington the President will need the co-operation of the elder McCormack. One or the other of the two families must give way if there is not to be a collision.

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

Full House in Notting Hill

FROM OUR SPECIAL CORRESPONDENT

In the riot year of 1958 the residents at the summit of Notting Hill used to proclaim, with injured pride: "It's not the Hill, it's the Dale." Just across the Bayswater Road, after all, lie the select acres of Holland Park and the tiny, affluent houses of Campden Hill. But even the shiny Tube labyrinth with which London Transport has endowed the new flats and shops at Notting Hill Gate bears marks of the tension that bubbles greasily in the tenements half a mile to the north again. Grubby *graffiti*, zigzags or crosses within a circle, and terse admonitions to "Keep Britain White" appear on the new concrete, behind the backs of immaculately uniformed negro ticket-collectors. The locals agree, however, that crude race prejudice on this level has mercifully sunk since the hot and violent summer three years ago. "They are getting used to each other" is a common reaction among both black and white. The tension, now, is from a different direction.

For a century—ever since the Irish navvies arrived to build the railways from Paddington—this corner of the otherwise prosperous Royal Borough of Kensington has been a reception centre for migrant workers from overseas, or from other parts of Britain. The arrivals have packed unmercifully into such housing as they could find, until they have saved up enough to move out to a better district. Now there is simply no more room: but, drawn by the true promise of plentiful jobs in London, the immigrants keep arriving to join their relatives and friends. Anybody who has visited the tenements must be familiar with the double question—"Why don't they do something about the housing? Why don't they send the blacks home?"

The typical North-Kensington street consists of stolid 100-year-old mansions built for middle-class families—who never materialised. From the beginning the houses were let out by the room. During the long years of rent control few landlords could afford proper upkeep: those who succeeded in making their profit by getting rid of sitting tenants, moving in a table and chair and letting the room "furnished" at uncontrolled rents did not smarten up the façade for fear of attracting the attention of income-tax men, health officers and other snoopers. The combination of an acute housing shortage and half-effective controls could have been designed to breed racketeers. Rent tribunals still have powers to keep down the rents of furnished rooms, but these restrictions are contemptuously dodged by some landlords.

The characteristic local landlord has always lived on the premises and been eager to make as much as possible on his one piece of property: after 1957, some big companies decided to sell out at the new higher values, and this tendency increased. Many houses were then bought by recent immigrants—but with loans at fantastic rates of interest, which can in turn only be paid off by charging tenants fantastic rents. The first to suffer from—and to exploit—this situation are the West Indians themselves

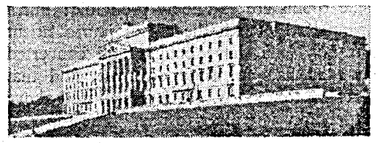
Stolid 100-year-old mansions . . .

(although landlords of other nationalities are criticised, too). Young and respectable coloured people, having been turned away by a couple of dozen white landladies, may be glad to mess together, four to a room, at £3 a week each.

The social consequences of such an arrangement can be disastrous. Those making money from high rents often find themselves drawn by a natural affinity into other, allied, rackets, such as prostitution (for the successful pursuit of which, under the Street Offences Act, mobility and thus available houses are more than ever needed). Established householders—many of whom are in any case the less successful citizens who have been unable to move out into a nice suburb—resent the new arrivals, both because they are foreign and because they are forcing up rents.

Those concerned with local welfare do not dare to look too deeply at the facts of overcrowding, for this might simply lead to the expulsion of families who have nowhere else to go. Landlords may be only too pleased that this should be so: but more serious is the fact that they have simply no incentive to improve things. Lettings of single rooms are extremely profitable: but a group of middle-class people who, with the aid of improvement grants and a building society loan, have bought and converted one house into self-contained flats for their own use, find that the charges on each flat come to £5 14s. 6d. a week—well above what the average working family is willing to pay. The top rent of a new 3-room council flat is rising towards £3 a week, which is, however, only paid by a tiny minority of council tenants—under the local scheme for differential rents, a weekly income of £24 for husband and wife is necessary before payment on this scale becomes obligatory, and most families as prosperous as this prefer to move elsewhere.

It is a waste of breath to tell families subjected to the pressure of rising rents and lack of choice in local housing that without the immigrants even fewer houses would be built. It is just as useless to tell immigrants (of all colours) to London that opportunities are better elsewhere, while jobs and pay are still booming in the capital. Every new office block in London requires more workers to build it, to work in it, to service it and to provide transport to and from it. In London's less salubrious inner ring this, not the colour of a man's skin, is the problem now.



Voting for Europe?

FROM A CORRESPONDENT IN BELFAST

ULSTER'S last general election for Stormont was in March, 1958, only three-and-a-half years ago, but already Lord Brookeborough, the Prime Minister, and Mr Isaac Hawthorne, the government chief whip, have warned the Unionist Party to prepare for an election next year. Most betting is on September, but it may be earlier, possibly next spring. The date could depend on how Britain's negotiations for membership of the common market go. Lord Brookeborough may well want to establish his party in power for another term before membership of the common market is finalised.

The Prime Minister, his entire Cabinet, and all the Unionist MPs, if not also the Labour and Nationalist oppositions, share Ulster's farmers' fears about what joining EEC could do to the £25 million a year which Ulster draws from the general agricultural subsidies of the United Kingdom. But the common market will also give the Unionists a new platform from which to reiterate their traditional attitude to Ulster's membership of the United Kingdom and to the partition of Ireland.

For forty years partition has been the main issue in all Ulster elections, so much so that it is beginning to lose its effect. In 1958 the Northern Ireland Labour Party won four seats in industrial Belfast by ignoring the border and concentrating on unemployment. But the undisguised enthusiasm with which the Nationalists, Republicans and others have been saying that membership of EEC could end partition has undoubtedly given the Unionists an opportunity to revive partition, almost as a fresh issue, this time. Lord Brookeborough will argue that a strong Unionist government will be needed more than ever if Ulster is to resist Dublin's encroachments.

Stormont: resisting encroachments

THE second major issue in the election will be unemployment, unless, of course, the Ministry of Commerce can find several thousand new jobs for industrial workers in the next twelve months. The Government's financial encouragement to industrial development has been substantial, totalling £50 million since 1945 and resulting in 40,000 new jobs. Unfortunately the full benefit has been lost through a greater decline in the older industries: some 10,000 Belfast men have lost their jobs in shipbuilding and in ancillary trades this year.

Mr Terence O'Neill, the Minister of Finance, has said that the Labour party could double the number of its MPs at the next general election; but the Labour leaders, knowing that their present four (out of 52) Stormont seats are held by very narrow margins, are not so hopeful. In three by-elections since 1958 and in the Imperial general election in 1959 Labour candidates did not do so well as some had expected (although, by present English standards, Labour did have reason for encouragement: it picked up 7 per cent swings in three Belfast constituencies in the Imperial elections).

The Northern Ireland Parliament consists of two main groups, the three dozen Unionists who stand for the constitutional *status quo* and the dozen anti-partitionists. The Labour party has tried to cut across this grouping by accepting the constitution, like the Unionists, but at the same time criticising, though perhaps never very severely, the Government's economic policies. This has not been enough to break up the existing stratification which makes the Unionists so comfortable. But the Unionists took a bad by-election knock last month when Miss Sheila Murnaghan became the first Liberal to reach Stormont since 1924. The seat, admittedly, was for Queen's University and her majority was 250 in a total poll of only 5,000, but the result looks like a sizeable straw in the wind of Unionist uncertainty.

Death of a King

THE South African, all-African musical, *King Kong*, has come to a sad end in Birmingham, and most of its cast are facing without joy a return to that other long-running drama produced by Dr Verwoerd in their home country. Mr Jack Hylton (who brought the show to Britain) also has a joyless facing-up to do —to his balance-sheet, incarnadined to the tune of £5,000, plus the cast's fare back to South Africa and the forfeiture of several hundred-pound deposits for those who stay behind.

Despite its six-month London run at the Princes Theatre and its royal patronage, *King Kong* has been only a partial success. Its critical reception was lukewarm, hardboiled connoisseurs of such curiosities as the *Ballets Africains* having proved less susceptible to native charm than white audiences in South Africa, where at least part of the show's impact was that of women preachers on Dr Johnson.

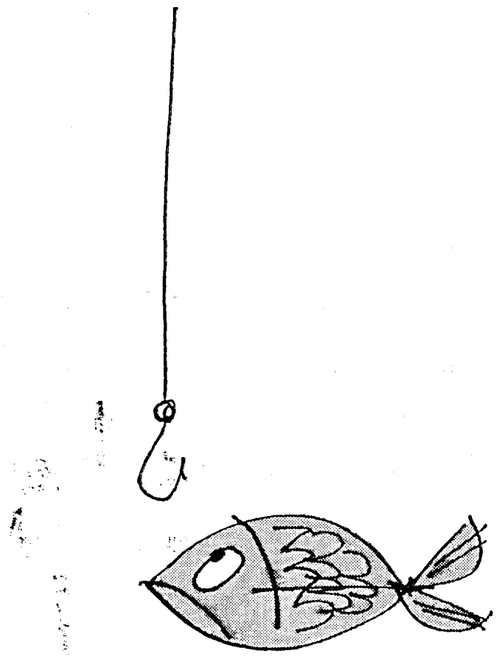
Unfortunately, exoticism is not enough to keep London sophisticates queueing at the box-office; neither can the other ingredient of the show's partial success, its implicit (and in London debilitatingly explicit) crack at *apartheid*, last for ever. Again, London once lost, the assault on the provinces was perhaps ill-considered. Audiences there are hard enough to come by at the best of times: they are inclined to go by Mr Tynan's book and Mr Hobson's choice (and these are strict mentors); and some provincials who wanted to attend for reasons of political solidarity made the pilgrimage to London anyway. It is not altogether surprising that it should have folded in Birmingham, where the prevalence of black immigrants may well have removed some of the interest, as well as some of the sympathy, from an all-black show.

The rigours of producing *King Kong* in Johannesburg involved the repressive vagaries of police action and the propensity of the cast to disappear wholly or in part on rehearsal nights; in London it was hospitality and a sometimes extreme use of an unaccustomed freedom which caused worries. Troubles, of course, seldom come singly in provincial tours.

The prospect of opening in New York and Israel might have injected a new vigour into everybody; but those arrangements fell through—a disappointment hard to bear at the best of times and in the least sanguine of casts, harder still in people who had been led to believe, by often irrelevant reactions to their show, that they were the greatest thing since *Porgy and Bess*. Without denigration of a good musical and a welcome sign of South African life, they weren't. And the people who persuaded them that they were ought to have known better.

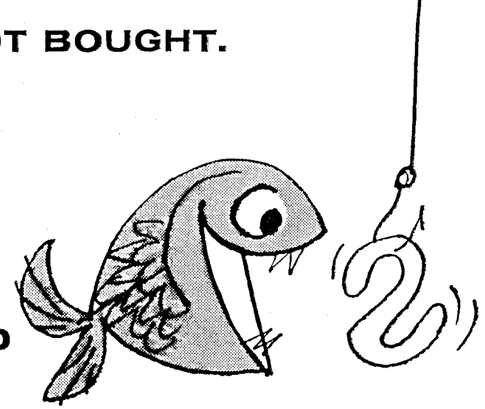
English colours for the Caribbean

PRISM



From Trinidad to Jamaica, the West Indian scene vibrates with natural colour: scarlet hibiscus and mauve bougainvillea, many-coloured humming-birds, strangely spotted orchids and — never out of sight — the ultramarine sea. Now something new has been added. In a factory near Port-of-Spain, finely ground pigments are being blended with carefully formulated synthetic resins to form colours that not only rival Nature's, but also do a sober job of protecting the houses, hotels, airports and industrial installations of the West Indies from blistering sun and tropical storm.

This I.C.I. paints factory in Trinidad is the latest link in a chain that stretches round the world. I.C.I. paints are as well known to car manufacturers in Argentina and Mexico as to builders in Malaya. In Britain I.C.I. sells more decorative paint than any other company, and I.C.I. finishes are used on some 50% of all British-made cars. Glittering white enamel for Italian refrigerators, long-lasting paint for German ships, ultra-smooth finishes for aircraft of many nations all come from I.C.I. — the largest maker of paints and finishes in Europe.



The influence of I.C.I. research and production is felt today in every corner of the globe

THE WORLD OVERSEAS

United Nations Fights for its Life

FROM OUR SPECIAL CORRESPONDENT IN NEW YORK

LATE on Wednesday, as the tape machines at the United Nations headquarters tick out Katanga's tale of battle, it is hard to recall that the acting secretary-general, U Thant, made headlines as recently as last Friday merely by a remark that Mr Tshombe was "very unstable." A week ago the prospect of a United Nations force being engaged in full-scale fighting seemed sufficiently remote even to those here who viewed it with either particular enthusiasm or particular alarm. Nobody for instance reacted to the news of the assault on November 28th on the chief UN officials in Katanga, Mr Ivan Smith and Mr Urquhart, with any suggestion that this would instantly provoke a shooting conflict. U Thant's statement on December 1st that he would take another week to prepare his plans for carrying out the Security Council's resolution of November 24th, and would then have to consult with his eighteen-nation advisory committee, was in itself enough to make most people here, of whatever persuasion, count on a certain breathing space. The weekend was available for a leisurely dissection of the case of Dr Conor Cruise O'Brien, for Mr Stevenson's farflung negotiation with the Organisation of American States (and with his own President) and for the counting and recounting of noses involved in the complex arithmetic of the debate on the China seat.

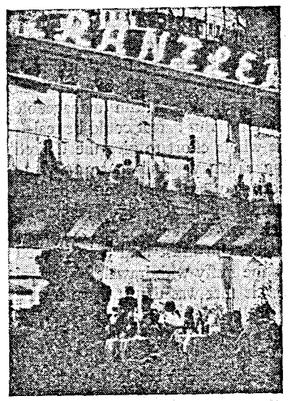
For many here, what others today call the "war" is still in a broad sense unreal. The Assembly's business is as usual, with the usual vistas of unhurried debate not only on China but also on Palestine refugees and—this stretches the imagination—outer space. The procession of cocktail parties and formal dinners has not been disarrayed by the arrival of the first casualty lists. There must be fully as many people in the United Nations building, most of them absorbed in their habitual chores or rolling their habitual logs, and all of them insulated within the glass walls in their private world of carpeted silence and cosy air conditioning, as there are UN soldiers under fire in Katanga.

In New York last night President Kennedy warned the Americans that they had become a "nation of spectators" and must toughen up by using their muscles if they were to survive in a hard world. In the UN building, only a few streets from where the President spoke, these words have a doubly stinging echo today. Some 6,000 young men, mainly from India, Ireland and Sweden, are under fire in Africa in a battle upon which hangs the fate of the whole United Nations experiment : others are headed for the same battle. It is not certain how many of the equally numerous and more comfortably cushioned spectators in the New York grandstand realise that the biggest issue behind the battle smoke is whether the United Nations will ever flex its muscles again.

Tonight that issue is real and lively. The jet fighters supplied by Ethiopia, India and Sweden have now given the United Nations force the command of the air in Katanga that it dismally lacked in September—so dismally that Mr Hammarskjöld's ill-fated flight had to be made by a circuitous route and in darkness. But the UN force is greatly outnumbered by Mr Tshombe's troops—if they can still be called Mr Tshombe's—not to mention the many armed and organised European civilians in Katanga, some of whom have already been identified as playing a formidable role in the new battle. Tonight in this building one cannot help being painfully interested in the possibilities of defeat. For the United Nations the battle can bring no clear victory, only at best a qualified success that would bring political problems within manageable proportions, without disposing of them. But defeat could be real—and final. Defeat could bring the whole effort to give the United Nations an effective peace-keeping capacity grinding to a savage stop among the fumes of bitter recrimination, and leave the organisation the toothless, querulously mumbling thing that various parties would like to see it become. Much rests on the shoulders of those 6,000 men ; and of the commanders who must lead a variegated and run-down force, weakened by the huffy withdrawals of several national contingents, through a battle that was thrust upon it at a time not of its own choosing.

THE last point is important to get clear. The battle that erupted on Tuesday was not planned by the United Nations. It was not the action to clear out Katanga's mercenaries and militant Europeans that the Security Council authorised on November 24th, if such action proved necessary to effect the council's resolution. Nor was it a simple UN reaction to the brutal provocations of recent days. It seems completely clear in New York that the UN force was ordered into action only in the face of obvious preparations for a full-scale attack on it, including the stealthy blocking of its most vital lines of communication under cover of a fog of assurances, generously but mistily emitted by Mr Tshombe's representatives during the protracted negotiations that were counterpointed by the whipping up of local hatred against the United Nations.

Although making the military problem worse, these circumstances look like easing the political one. Up to the time of writing there has been no indication of any withdrawal of British support for the UN operation. In Delhi Mr Nehru has been firmly defending India's role—a major one—in the United Nations force against the sharp criticism arising from the recent murders of Indian soldiers by Katanga troops. Swedish qualms about involvement in an outright struggle seem to have been overcome by the fact that this conflict was forced upon the United Nations by its antagonists. And American backing for the latest UN actions has been swift, explicit and of crucial value. From Washington came not only an immediate declaration of support but also authorisation for the use of Globemaster aircraft, hitherto used to bring in UN troops and supplies from abroad, in direct support of the present fighting by ferrying reinforcements from Leopoldville to Katanga.



The fact that U Thant's task has been eased in certain respects has not lessened the general appreciation of the way in which the events of these critical days have been handled from the 38th floor of the secretariat tower. Many—not all, but including some who might have known better—have been surprised by U Thant's coolly decisive responses to the demands of these urgent hours: surprised and heartened, or shaken, according to their conceptions of the proper role of the United Nations executive. U Thant can scarcely yet have had time to master the intricacies of the secretariat end of the Congo operation, and has doubtless been glad of the

presence beside him of such veterans of the long haul as Dr Bunche. But he has so acquitted himself in these first hours of a new ordeal that it seemed a very apt slip when a New York broadcaster today unintentionally referred to him as the United Nations acting general.

Berlin in the Void

FROM OUR BONN CORRESPONDENT

Berlin

At the end of their talks in distant Washington, President Kennedy and Dr Adenauer declared that they were "determined to ensure the continuance of a free and vigorous life for the population of Berlin." Here on the spot, the senior German officials, responsible for organising the creature conditions in which the two and a half million west Berliners might hope to live freely and vigorously, say that the dividing wall has precipitated two extremely urgent requirements. First, a prompt and satisfactory east-west agreement on Berlin, in consequence of which the west Berliners might get on with their lives in reasonable security. Second, the provision of from 10,000 to 20,000 settlers in west Berlin every year in order to maintain its vigour. The two requirements are closely related.

So long as he kept out of sight of the wall, an unknowing visitor would see nothing at first to tell him how completely Berlin has been cut in two. And to all but the most hardened old stagers it is astonishing to reflect that this part-city, west Berlin, with its 2,200,000 inhabitants, is not now transacting any commercial business with or importing anything, even fresh food, from any other place nearer than 110 miles. To all appearances, west Berlin is again warming up for Christmas just as comfortably as any normal German city; and the flow of smooth cars, the busy restaurants, the garlanded and sparkling shops, and the press of customers, testify how big-heartedly the Federal Republic, in spite of much hindrance, is sharing its prosperity with its relations in reduced circumstances on the Spree. But the anomalies of partition and the uneasiness of the citizens are soon and everywhere encountered.

The civic state of Berlin has deteriorated appreciably since August 13th. Workaday contacts between the eastern and the western sectors, exiguous as they have always been since the blockade, have been further reduced to an incredible minimum. There being no more daily commuters, public transport between the sectors has ceased, save for a few electric trains between west Berlin and the Friedrichstrasse station in east Berlin, which has become a full-blown frontier control point. Buses and coaches have been brought in from as far as Hamburg, Munich, and Stuttgart to cope with the additional passengers who travel by bus in consequence of the west Berliners' boycott of the east-Berlin-owned Stadtbahn. A few west German visitors obtain permits to enter east Berlin. But for want of permission from the communist authorities neither east nor west Berliners are free any longer to see each other when they want to, or to visit each other's theatres and museums; and *Neues Deutschland* has announced that there will be no easing of the restrictions over Christmas.

It is not only individuals who are being put out in one way or another. In company with several east German enterprises, the east Berlin underground and tramway systems, for instance, are already in difficulties because they can no longer send their mechanics into west Berlin to buy useful spare parts. Yet it is still possible for Berliners to send letters and parcels across the border. (The telephone lines were cut in 1948.) Two west German post office delivery vans and six railway parcels vans are admitted daily into east Berlin. For the rest, the two halves of the city are tacitly agreeing to continue to dispose of each other's sewage where such an arrangement is convenient; and the respective criminal police forces talk to each other from time to time by teleprinter about their wanted felons. The fire brigades and the gas, water, and electricity companies have long been going their own unco-operative ways.

The wall's sharp cleavage, and its national significance, are affecting the west Berliners variously. There are the buoyantly cynical ones, for whom the political cabaret *Die Stachelschweine* ("The Hedgehogs") is a glad spokesman. The star of the current show, Robert T. Odeman, swipes contemptuously at politicians of all breeds—rhyming *politisch* with *parasitisch*, and dealing his knock-out blow with the remark that the old feeding troughs remain while "the pigs change; they are new." There are the impotently angry ones, scattering crude leaflets in Kurfürstendamm—an unheeding thoroughfare if ever there was one—calling on German youth to fight for freedom:

> Don't tolerate the criminal Ulbricht's concentration camp wall. June 17th and Hungary were a warning. They were bickering about cabinet posts while human beings were dying at the wall. Sixteen years of division are shameful. So fight together with the German Freedom Front against communism.

And there are the more reflective, who anticipate that west Berlin must sooner or later adapt itself to playing a new and subtler part now that it has lost its dual role of sanctuary and showpiece. Their prayer is that the enveloping Democratic Republic will meet them part of the way by evolving a regime at least as liberal as Poland's; and many of them are engrossed at the moment in a new Rowohlt paperback—"The Wall—or the 13th of August," edited by Hans Werner Richter—in which the conflicting views of east and west German writers are usefully reproduced. (If only Herr Ulbricht were big enough to let the east Germans read it.)

THERE are also those who, seeing no satisfactory future for themselves in Berlin, are making arrangements to leave. It is not yet possible to find out exactly how many, and who, are going. According to the senate, some 1,500 persons—three times more than usual—left Berlin for good in the month of October. The total loss of population through emigration between August 13th and the end of November is estimated to be roughly 9,000, of whom some half are described as refugees, 30 per cent as old-age pensioners, and 20 per cent as able-bodied native citizens. Shortly after arriving in Berlin the other day, this writer made for a favourite shop, just off Kurfürstendamm, that has sold artists' materials for many years. It was there no longer: or, rather, it is now a shop of a different kind; the previous owner, who had been doing business as usual at the end of August, had, it was explained, moved in the meantime to Kassel.

Yet, being what they are, the majority of Berliners cannot be fitted into neat categories. Perhaps many would like to go who cannot, and are holding their tongues. But most of them, it seems, are ready to ride out the storm if it comes. There is so much confusion and restlessness that the administrative authorities are becoming increasingly impatient for the long contemplated east-west negotiations to begin. Morale is bound to deteriorate further they say, unless a settlement is soon reached guaranteeing west Berlin as independent a future as is practicable in the circumstances.

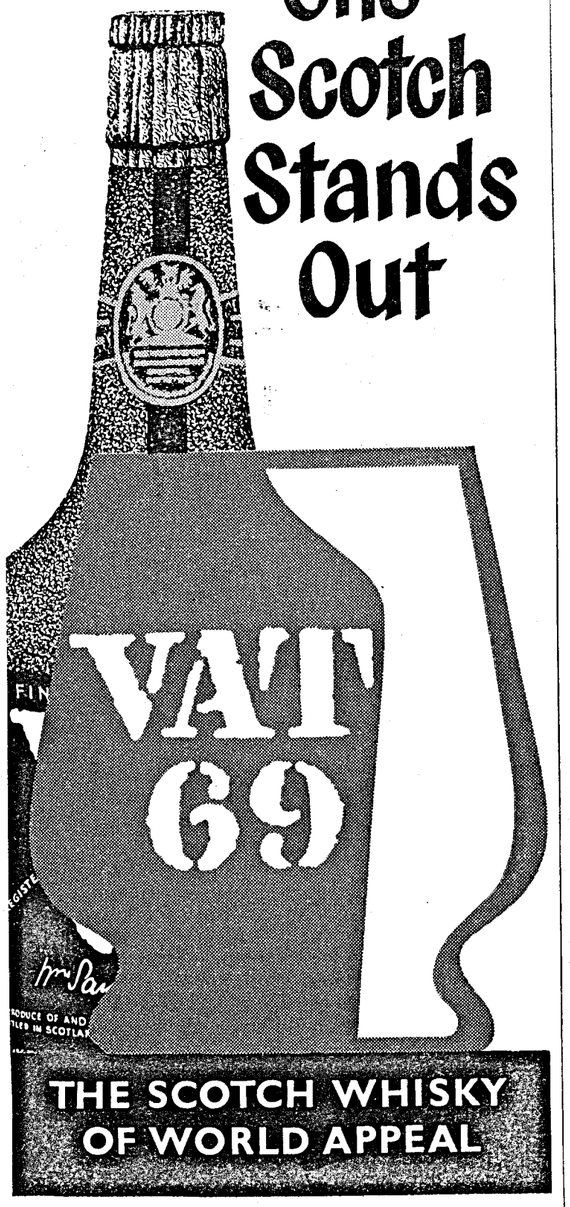
FAY BATEMAN SAYS:

Here's how to cope with dash-and-grab husbands

Cans even make you nicer to live with

Why does *he* find it so difficult to get up when *you* don't? Well, he has a hard life. It's no use nagging. He'll only nag back. Remember the road to early-morning harmony is paved with sweet words and cups of coffee.

Cans to make him happy



Quick cups of coffee, that is. The more instant the better. For the thing that makes a man bad-tempered first thing in the morning is shortage of blood sugar. And one sure way to cure that is with a hot sweet drink. So quick! On with the kettle, out with the can, and make him fit to live with again.

Cans to keep you going

Your problems as a working wife have barely started for the day. But at least you live in the day and age of the can. So you can get in most of your stores at the weekend and simplify your household chores, too, by using the new aerosols. So that when your husband returns home he finds you sitting like the dedicated wife you are, cool, calm and competent, while a canned steak pie browns in the oven and canned fruit and cream wait on the sideboard.

WHAT NEXT? Christmas. You can't have failed to have noticed. If the Christmas spirit begins to flag, revive it by buying one of the new aerosols which spray artificial snow upon the Christmas tree. They'll make even the most staid of adults a trigger-happy child again.

NEW YORK EVERY FRIDAY, SATURDAY AND SUNDAY

Nor will continuing uncertainty attract the new settlers the city will require in future.

These are wanted to replace, not the westward emigrants, but the eastern immigrants who have ceased to arrive since August 13th. (For hundreds of years Berlin's vitality has been fed by newcomers from the east, particularly Silesia). Few will come from the west unless they are assured that at least one of Berlin's lines of communication is not controlled by the east Germans. It is not at all clear yet where so many west German volunteers are going to be found for patriotic duty in Berlin. But if they are not, the city's present administrators say, the Federal Republic's massive subsidies for west Berlin will go to waste for want of a sufficiently vigorous population.

Tanganyika's Torch

FROM OUR SPECIAL CORRESPONDENT

ADMINISTRATORS in London and New York, often oppressed by the perversities and ingratitudes of Africa, have a habit of changing their tone of voice when they speak of the latest country to reach independence. They brighten in the manner of those gravy-sniffing twins of years ago and murmur "Ah, Tanganyika!" This gives the world the impression that this land of nine million people was created as near to perfection as this earth can manage, and that problems here are unknown.

This does much less than credit to the prime minister, Mr Julius Nyerere, and his cabinet who, in only twenty months in office, have worked singlemindedly to build a national unity throughout a land as large as France and Germany put together. It also offers no hint of the size of the obstacles ahead. The leaders have given frequent warnings through the slogans they have coined: "Uhuru na Kazi" (Freedom and Work) is now supplemented by the Churchillian "Uhuru na Jasho" (Freedom and Sweat). But there is also some understandable wishful thinking among the independence banners. The Aga Khan's Ismailis do best with their "Welcome to the peaceful dynamic and miraculous motherland."

Peaceful as Tanganyika has been, its hundred thousand Asians have their anxieties this weekend. A wave of racialism followed in the wake of the visit of Mr Jomo Kenyatta and Mr Paul Ngei from Kenya and broke over the national assembly during the citizenship bill debate. Mr Nyerere threatened to resign if his members refused to give citizenship to those non-Africans who pledged sole loyalty to Tanganyika. It was also thought necessary for Mr Rashidi Kawawa, the party's vice-president, to tour the southern highlands and assure the European farmers that there would be no discrimination against them. They will probably be left in peace and there has been no question of their having to press for a guarantee for their land titles, a problem that has worried their Kenya cousins for years. But the outlook for Asians is less secure.

The Asians have spread themselves thinly through Tanganyika as traders and as middlemen buying up peasant crops, and envy at their success often approaches racial resentment. Perhaps there will be few cases of open intimidation—the government is on guard against this—but it seems certain that the small Asian business man will be squeezed out. Already in the northern province this has happened: the Chagga tribe, grown comparatively rich on the coffee planted under Mount Kilimanjaro, has produced its own successful trading co-operatives and the Asians have retreated to bigger business—or poverty. Only a few seem equipped to face this change. Also, Asian civil servants cannot hope for much promotion, at least until the Africanisation process has provided a fairer proportional balance in government. It is not a one-sided matter and Mr Amir Jamal, the minister of works and communications, who as the only Asian member of the cabinet has worked to bring his people halfway to integration, warned them of their responsibilities last month:

> It would be a matter of great pity if all we felt we needed was a piece of paper to make us citizens, something we could wave and display as an identity card. Instead of asking what am I going to get out of it, the question they should be asking is what am I going to put into it.

The failure of the privileged few to identify themselves completely with Tanganyika's efforts to raise the general standard of living was, Mr Jamal suggested, perhaps as great a danger as any irresponsible behaviour on the part of the uninitiated masses.

Another major problem that may soon be facing the independent government is the united opposition from the trade unions. In well-argued speeches and articles, Mr Nyerere has contended that the idea of trade unions automatically opposing the government is illogical. There have been attempts to associate union leaders with employers and with the government in a committee whose task is to anticipate points of difference. Nevertheless, some of the unions, led by the railway labour leader, Mr Kasanga Tumbo, are beginning to fight the government. Grievances over the government's refusal to raise wages, and Mr Nyerere's threat that government employees who strike may be sacked, provide enough fuel for the moment. This small fire may spread if Mr Tumbo can get together with the agricultural co-operatives and identify himself with the "have nots."

THE government has two answers to Tumboism. The first is to refer consistently to unionists not as "the workers," but as "wage earners" as a reminder that the vast majority of Tanganyikans are peasants living at subsistence level and sharing little common ground with urban employees. The second, and positive, course is to devote most of the £24 million in the three-year development programme to increasing agricultural production. Britain, after a senseless period of meanness, promised £14 million towards this programme, and the rest should not be hard to find in such countries as Germany, which already has sent a development adviser to the ministry of commerce and industry. There is a growing feeling that the government, trading on its excellent political reputation, could be bolder in its borrowing plans; indeed, it will have to be bolder if it is to raise the average income above the miserable figure of £19 a year. But the world bank mission advised the government that a smaller figure still was the safe borrowing limit, and the word of the finance minister, Sir Ernest Vasey, is accepted that Tanganyika should not burden itself with larger loan repayments.

On the eve of independence the Tanganyika ministers are showing a confidence that is well founded on realistic preparations. They explain that the Tanganyika African National Union, which

won 70 out of 71 seats in last year's elections, has an organisation that spreads from the villages upwards, and should inform the government of grievances and anticipate any challenge from the opposition. They have come through a crisis of confidence in the Commonwealth, which ended happily with the withdrawal of South Africa in March. The Duke of Edinburgh's presence is a cheerful reminder that with independence Tanganyika's relationship with the Queen becomes closer than when she was merely the head of the administering authority. In foreign policy Mr Nyerere's government is likely to follow the Nigerian pattern. The government representatives conspicuously absent from the celebrations this weekend are those ideologically unwelcome neighbours from Rhodesia, South Africa and Portugal. The Chinese and the Russians are here, and the Chinese and the Jugoslavs intend to establish news agencies in Dar es Salaam. But the Tanganyika government will certainly prove one of the most fervent supporters of the United Nations—which is the best commentary on 15 years as a trust territory. Independence, said Mr Nyerere recently, is "a gift of great price and a burden of great magnitude." It is cold and tough going on the summit of Kilimanjaro where the prime minister has planned to set his torch of example.

Canada Sees the Sun

FROM OUR OTTAWA CORRESPONDENT

THROUGH the mist of ministerial statements and the dazzling glare of opposition drivers, who rush into the fog with their headlights blazing as though the visibility were perfect, Canada is at last feeling its way into the clear. The pattern of a Canadian policy towards Britain and the common market is gradually emerging. Mr Fleming, who understands the complexities of the European Economic Community better than any of his colleagues, and Mr Pearson, who understands them far better than any other opposition politician, both appeared in filmed interviews on two ambitious television programmes of the Canadian Broadcasting Corporation designed to explain what the common market is all about.

On December 3rd, in the second of these programmes, they both gave their views about the course Canada should follow. Also in the programme were Mr T. C. Douglas, the leader of the New Democratic party, and Mr Robert Thompson, the newly chosen leader of the Social Credit party. Mr Douglas was specific. He proposed the organisation of a concerted movement by all Commonwealth countries to join the European common market. If he could not get support—which he thought most unlikely—then he wanted to lead Canada alone into membership. Mr Thompson appeared to be moving rather more vaguely along the same lines. In contrast to these two, Mr Fleming and Mr Pearson, with their fuller understanding of the problems, expressed policies which, though starting from opposing premises, seemed to promise much the same end result.

Mr Fleming, as in duty bound, maintained that British entry into the common market would hurt Canadian interests, but he expounded more clearly than any previous government spokesman the hope that President Kennedy's initiative would give Canada the means of picking up the pieces. He pointed out that the cancellation of British preferences would give Canada a useful bargaining card which—as he implied—would be particularly valuable in the sort of world-wide linear tariff negotiations envisaged in the Kennedy plan, as outlined by Mr George Ball. In answer to a leading question, Mr Fleming clearly showed that he regards the Ball-Kennedy proposals as a chance of sparing Canada from the harsh choice of continental integration. Mr Pearson, also as in duty bound, started from the view that British entry into the common market should be welcomed but that Canada should be trying to broaden the European community into a North Atlantic community. A North Atlantic free trade area has been the declared goal of the Liberal party. But in the last couple of weeks Mr Pearson has deftly redeemed this impracticable proposal by adding that the area cannot, of course, be in any way exclusive. This addition brings Mr Pearson into line with Mr Ball and Mr Kennedy, and therefore with Mr Fleming—though this cannot be admitted by either party. It has so far passed entirely unnoticed in Canadian newspapers, but clearly it is of the first importance.

Mr Pearson stated even more clearly than Mr Fleming, though Mr Fleming is certainly of the same view, that the initiative of the American Administration is "tremendously exciting." If the President does not get the wide powers that he wants from Congress it now looks as though Canada—whether its government this time next year be Conservative or Liberal—will be even more downcast than the United States Administration. The two main political parties are thus getting into line with the viewpoint of progressive business men. This is a cause that neither of them dared to espouse until now, and which carries implications that both parties are still reluctant to admit. The interaction of politics and business is at much the same stage as it was in Britain about two years ago.

This is the time of year at which bank presidents deliver their annual addresses. So far, only two of the ten presidents have spoken—Mr Hart of the Bank of Montreal and Mr Lambert of the Toronto Dominion Bank. They have probably set the key which the rest will follow, though in varying pitch. Mr Hart said that British entry into the European community might in the long run provide a stimulus to economic expansion and a "greater demand for Canadian raw materials to offset the other disadvantages." Mr Lambert advocated "the more positive approach of exploiting the opportunities for enlarged and more prosperous markets." What bankers and politicians are too cautious to say except in veiled terms is being said with increasing frankness by manufacturers and, unofficially, by government officials. This is that Canadian producers, not only of raw materials but also of manufactured goods, have simply got to become competitive instead of relying on protected markets. Those very industrialists, who were horrified four years ago at the prospect of free trade with Britain, are now talking about how they can become competitive not only in Britain but also in Europe and the United States.

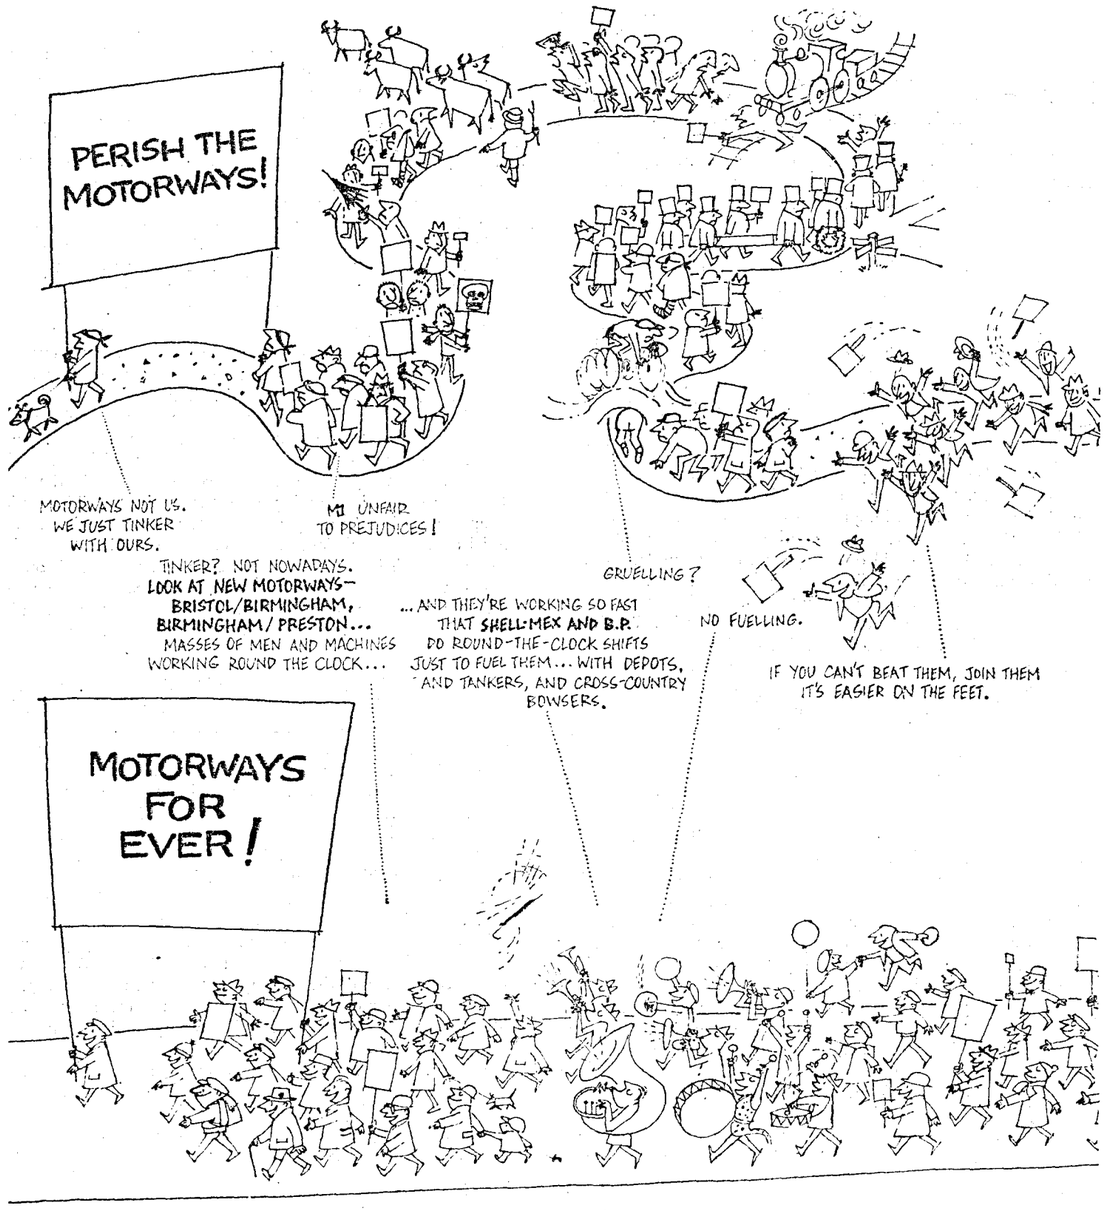
Some of them have been converted by the removal of import restrictions in Britain and Europe, others by the successes of a few Canadian manufacturers in the United States. An example of the first group are the makers of domestic appliances who saw nothing but ruin four years ago if British competitors had free entry to the Canadian market. They have now discovered that, given distinctive quality and design, they can sell Canadian appliances on the other side of the Atlantic even at premium prices. Canada is selling umbrellas, men's suits and fishing rods in Britain,

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

Out next week:

THE UNITED KINGDOM



Now that the July measures have been in force for several months, their effects and efficiency are examined in some detail. The review considers the possibility of a recession next year. It also looks at the outlook for wages and prices and at the external position. Finally it considers the theory of the pay pause and of what might follow it in the framework of a national plan for the economy.

Further details from:

THE ECONOMIST INTELLIGENCE UNIT LTD.,

60 East 42nd St., New York 17 Tel: Murray Hill 7-6850

Facts worth remembering:—(1) Shell-Mex and B.P. Ltd are major fuel suppliers on Britain's new Motorways, as they were on M1. (2) They have the most experience in supplying fuels to road-building machinery on the site, day or night.

SHELL-MEX AND B.P. LTD – WORKING ROUND-THE-CLOCK ON BRITAIN'S MOTORWAYS

toys in Japan, certain kinds of textiles in Hongkong and diesel locomotives in Latin America. In the American market, a Canadian manufacturer, in business for less than three years, is selling millions of dollars worth of hi-fi sets and others are beating big American manufacturers in tenders for specialised kinds of electronic equipment. Beyond all expectation, including that of the maker, Canadian chocolates are being featured in New York stores. Whatever becomes of Britain's negotiations with the European community, and in spite of all the wailing that Canada has put up, the final result may yet be as stimulating and healthy for Canada as the common market is for Britain.

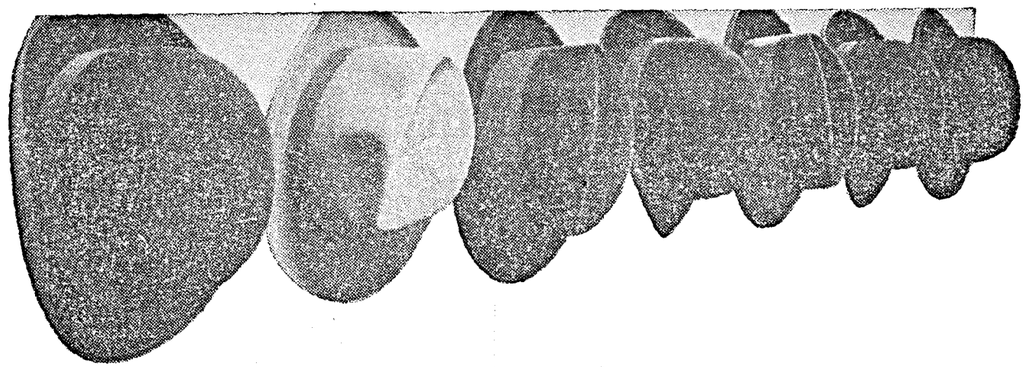
Rhodesian Cold War

FROM A CORRESPONDENT

SOUTHERN RHODESIA is losing its social colour bar; but this is not preventing the races from drifting even farther apart. Things are getting so bad that there may well be violence next year. The white United Federal party, the party in power, has boldly announced that it intends to do away with racial discrimination in public places; and it has persuaded most white Rhodesians to accept a new constitution under which 15 Africans will sit in a previously all-white house of assembly. The house itself will be enlarged to 65, to take the extra members. These measures are not, however, winning widespread African support. The African National Democratic party wants political power, and a redistribution of land. It has decided to boycott elections under the new constitution, and to use strikes as a political weapon.

The UFP, led by Sir Edgar Whitehead, decided at its annual congress in October to make all racial discrimination illegal, and to repeal the Land Apportionment Act (which reserves just over half the country for whites) if it wins the elections next year. Laws preventing Africans from entering cinemas, drinking hard liquor, having sexual relations with white women, and holding freehold titles in African townships near white towns, have already been repealed. Liberal councillors in the major towns are pressing for African participation in local government, previously a "whites only" domain. Multi-racial sports clubs are planned; there has been a successful season of multi-racial football games. On October 13th, the chief justice, Sir Hugh Beadle, ruled that the Salisbury city council had no power in law to discriminate against Asians and Africans who wanted to use its three public swimming baths. This was the climax of the anti-colour bar campaign led by Dr Ranger and Mr Lovemore Chimonyo. The decision clearly implied that other public amenities can no longer be reserved for Europeans only. By Rhodesian standards these are all spectacularly liberal measures.

Unfortunately but understandably, Africans are now so suspicious of European intentions that they are no longer prepared to accept these gestures. They see them as an attempt to win world, and British, support for continued white political authority. As Mr Joshua Nkomo, the president of the National Democratic party, has said, "We want to swim together in parliament, not in swimming pools." This is a revolution in African thought compared with ten years ago, when it was believed that by joining multi-racial clubs, Africans could acquire political influence, if not power itself. At that time, Europeans feared that social integration would corrode their political power. Strong arguments were advanced among Africans for "working within." Mr Nkomo, himself, stood in the federal elections in 1953, and Mr George Nyandoro, now detained for three years, was a member of the Inter-racial Association. But, after eight years, African federal members of parliament have been unable to change basic government policy, and "working within" is a discredited doctrine. Multi-racial groups are regarded by most Africans as "cooling chambers." In contrast, Africans have seen Dr Banda's toughness succeed in Nyasaland.



Even so, it was argued at the National Democratic party congress (which followed the United Federal party meeting) that the elections should be fought. This, it was suggested, would give the party a chance to "work within" the assembly at the same time as it exerted normal nationalist pressure in the country; it would also make the NDP politically respectable and thus give it some protection against the harsh security laws enacted by the UFP government. But the NDP congress rejected this argument. Its reasons were pressure from Accra and Cairo; dissatisfaction with UFP land policy; and its belief that the new constitution diminishes African parliamentary influence in one important respect. The old constitution put about 3,000 African voters in a position to influence the election of about ten European members—a third of the house. Now these voters will be on the roll that elects 15 African members; their influence, while more direct, will be restricted to the black quarter of the new assembly.

So the National Democratic party will not only boycott the elections; it will also urge the 15,000 to 25,000 newly enfranchised Africans not to register as voters. The 4,000 already on the roll are being asked to return their cards. This is a blow to the white liberals, whose New African party, led by Mr Garfield Todd, a former prime minister, intends to put up candidates supporting NDP. But the NDP organisation may not be efficient enough to make such a campaign succeed, particularly outside the towns. The government is spending £250,000 on its "Build-a-Nation" campaign, designed mostly to persuade voters to register. Influential district commissioners, and some conservative African landowners, may help the government campaigners to reach qualified voters in remote areas. If the registered number of African voters is less than 7,000 by next June, the NDP campaign will have been a success; if it is much more, the UFP will have won.

BUT the NDP has other plans besides the boycott. It is determined to disrupt industry in the hope of frightening off the foreign investment on which the country relies. This the party thinks might bleed the economy to a point where the Europeans would have to choose between coming to terms with African nationalism or leaving the country. This campaign has a greater chance of success; it cannot be ignored by hard-headed settlers. People are leaving the country already; the high wages paid to white workers have fallen; the building industry is hard hit, and unemployment is reaching alarming proportions.

The National Democratic party faces some hurdles in this campaign. Mr Abrahamson, the minister of labour and perhaps the brightest member of the government, has personally pressed employers to raise minimum wages. He has talked the African trades union congress and the employers association into accepting a wide investigation of the wage structure. The trades union leader Mr Reuben Jamela, has bound his twenty affiliated unions and their 38,000 members to the agreement arranged by Mr Abrahamson. And while there is so much unemployment, strikes cannot easily succeed. But the unemployment itself suits the NDP. If Africans, particularly school-leavers, are out of work, they have a genuine grievance against the white government and are easily persuaded to join the struggle to remove it. Lightning strikes—like the one that brought out 500 workers at the Dunlop tyre factory in Bulawayo last month—are part of the plan. In quick response, the government has increased the size of the police force to deter these activities.

National Democratic party tactics work in colonial territories under direct British control; they may not succeed in a virtually independent country, where 250,000 governing whites rule two and three quarter million Africans. When baton-waving white policemen (including young, inexperienced, police reservists) face members of the youth council of the NDP, it is difficult to see how violence can be avoided.

Merchant and Investment Bankers

We have a century-and-a-half of experience behind us in the City of London, and amongst our clients are some of the largest and most progressive companies in the country. Besides providing acceptance credit and other specialised banking facilities, we can also offer our services in the following fields:

Company Finance

Loan and Share Capital Issues, mergers, acquisitions, capital reorganisations, the conversion of private into public companies—these are some of the operations we undertake. In all such matters an important factor for success can be the skill and standing of the "House" behind you.

International Banking

Successive generations of our partners and principals have built up close personal friendships with bankers and industrialists in many countries abroad. In New York we have unique advantages through our affiliation with the J. Henry Schroder Banking Corporation. We have too our own offices in Europe and in Rio de Janeiro and Buenos Aires and associated companies in Australia and Canada.

Investment Management

We are well placed to assess developing trends in industry and commerce. We also keep in daily contact with the main Stock Exchanges and with leading institutional investors. Our organisation is thus a clearing house of information and opinion on which we can draw to aid us in the management of our many investment portfolios, which include Investment Trusts, Pension and Endowment Funds. These can be managed either under a specific arrangement or at our discretion.

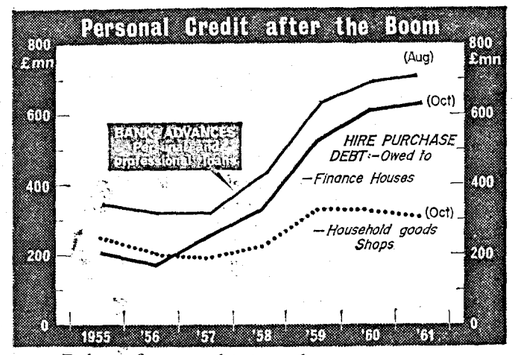
THE BUSINESS WORLD

Reforming Hire Purchase

As if they had not troubles enough, the hire purchase finance companies in the past few weeks have been ruffled by the short, simple private member's bill introduced by Mr W. T. Williams, Labour MP for Warrington, with some influential support from both sides of the House. It is up for second reading this Friday, just after this issue of *The Economist* has appeared. The aim of the bill is to strengthen the hand of the hirer—that is the consumer—in his dealings with the finance companies. The companies say that it would load the odds against them so seriously that they would be forced to apply far stiffer terms all round, which would push car buying, for example, out of the reach of lower scale wage earners. There is no doubt that its effects would be far-reaching.



This is not the definitive reform bill for hire purchase—a private member could not be expected to produce that. What the bill does is virtually to make a nonsense of the law and practice of hire purchase. Since the hire purchase companies themselves have been doing a good deal in this direction in the past year or two, they ought to be taking the long view on legislative reform. The Finance Houses Association has told MPs that the rate of defaulting is now "five times higher" than before 1958; it says that losses now average 2 per cent of turnover, compared with ½ per cent before the war. Mr Williams's bill, despite its incidental disadvantages, would in fact help to push instalment lending in the direction that thoughtful people inside and outside the finance companies have favoured for some time: that is, away from complete dependence on the dealer and towards a more direct, banking relationship with the customer—the putative hirer. The best outcome would be if Mr Williams's bill prodded the Government into producing its own comprehensive measure of reform, at latest within a short period of receiving the Moloney report on consumer protection, which is expected in the spring. If the Government refuses such a commitment, then MPs would do well to get Mr Williams's bill, amended at one or two points, into law; once this happened the Government would be virtually forced to act.

The bill as it stands has four substantive clauses. The first extends the statutory protection of the 1938 Act to cover goods up to a total hire purchase price of £1,000; the present limit is £300, having been raised in 1954 from the £100 in Ellen Wilkinson's pioneering Act before the war. The second clause introduces a waiting period of "at least two clear days" in which the hirer or buyer must be given, in writing, a notification of proposed terms, in the standard form set out in the schedule to the bill ("The cash price of the goods is —. The credit charges are —. The difference between the cash price of goods and the total amount you will have to pay is therefore —. . . . "). The third clause makes the finance house, as the legal owner of the goods, responsible for dealers' misrepresentations. The fourth requires that any document required by this or the 1938 Act shall be printed in type not smaller than ten-point Times, in which these lines are printed.

IMMEDIATELY, the biggest jolt to the finance companies would arise from the extension of statutory protection to cover virtually all their business in cars (most of them within £1,000), rather than only the bottom end of it. This bill would limit the rights of finance companies in two main ways. First, once the hirer had paid one-third of the total hire purchase price (cash price plus credit charges together not exceeding £1,000) the finance company could secure repossession of the car, or other product, only after obtaining a county court order—whereas goods involving more than £1,000 could still be repossessed without formality when the hirer fell down on his instalments. Secondly, if the hirer himself exercised his right to terminate the contract and return the goods to the finance company, he could not be made to pay more than was needed to bring the amount he had paid through his deposit and instalments to more than one-half the hire purchase price, up to £500. This means in effect that once the hirer had paid sufficient instalments to bring him beyond this half way mark he could return the car to the company with no penalty. He already enjoys all these rights under the 1938 and 1954 Acts on contracts up to £300; by extending the limit to £1,000, the bill brings the legislation squarely into the finance houses' range. They would face a loss on a repossessed car if the proceeds of its sale (and repossessed cars are not popular in the motor trade) were less than the amount still owing on the hire purchase price.

The Finance Houses Association has therefore intimated that if Mr Williams's bill is enacted, its members would have to take a much sterner stand against hirers who fell behind in their early payments, as the companies would be reluctant to lose the opportunity of repossession without a court order. Secondly, finance companies would be obliged to make "drastic revisions" in their terms of business. These will aim to ensure that the car's value does not depreciate below half the hire purchase price at any stage of the agreement, and to achieve this the FHA says the companies would need a deposit of at least one-third and repayment over at most two years. On this basis, the critical amount of half the HP price would in fact have been paid when the car is only seven months old. The finance companies would therefore be dis-

playing unusual caution, even allowing for delays in getting court orders and the rest; and with a one-third deposit they could never in fact repossess without a court order. But one can agree that the slant of the present legislation is too far towards allowing the hirer to escape from his contractual obligations, and by encouraging the finance companies to gear their whole practice to this contingency, would in the end penalise the great number of people who carry out their hire purchase obligations in the agreed way. The finance companies' present rules on termination for goods not covered by the 1954 Act, on the other hand, are often rapacious. The

End-year figures, or latest month

sensible solution would be that in the event of premature termination the hirer's obligation should be the amount still owed to the company, *less* the amount the company received for re-sale of the car, *plus* a modest but not insignificant penalty—say £25. The finance company is entitled to fair compensation for the broken contract.

THE two day "think period" proposed in Mr Williams's bill aims mainly at curbing the persuading power of the door-to-door salesmen, and the big finance companies, which do not normally employ door-to-door salesmen, are content to see such dubious trading curtailed. They are worried, however, about the effects of the two-day pause on their car business. It is said to be "unacceptable" in the motor trade. Is this really so? By what alternative means would traders sell their cars? The pause should in fact strengthen the finance companies' position in relation to the motor trade; they ought surely to welcome a breathing space to discover something about the man to whom their agent has advanced hundreds of pounds. This part of the bill should therefore be welcomed unreservedly.

So, too, should the third clause, which gives the hirer the same right against the finance company to rescind the agreement or return the goods in the event of misrepresentation by the dealer as if the dealer were the owner's agent. In fact, much of this protection to the consumer already exists under Section 8 of the 1938 Act, which requires an implied condition in the contract that the goods are reasonably fit for the hirer's particular purpose. Even for transactions too big for protection under the 1954 Act, where the finance companies have sought to relieve themselves of implied conditions and warranties by means of exception clauses, interpretation of the common law in recent years has veered towards a rejection of such clauses. But judges would dearly like to see these interpretations codified in new statute law.

The finance companies hotly oppose this reading of the law—and in doing so they build up a formidable and interesting indictment. Giving evidence earlier this year to the Moloney committee, the Finance Houses Association protested that if a man buys a defective car on hire purchase, then because he has no contractual relationship with the dealer, he

> cannot sue the party morally responsible, i.e. the dealer. His remedy under the present law is against the finance company only, so that in effect he is suing his bankers.

In this situation, the FHA goes on,

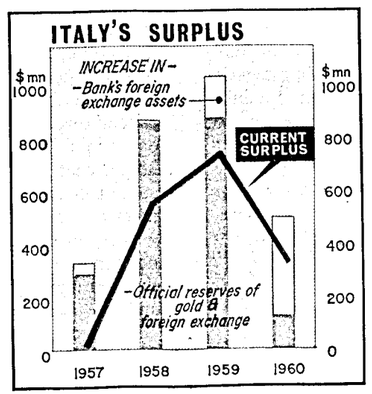
> it is scarcely surprising that the finance houses have experienced many instances in which dealers have been able to dispose of defective goods to the public knowing they have no legal obligation to the hirer.

And then, as a rather remarkable conclusion to the syllogism:

> The present state of the law may thus be said to encourage conduct of this kind.

What the law has recognised, hesitatingly and fumblingly, is the form in which the hire purchase companies have themselves chosen to conduct their operations. It is the finance companies that have dressed up their lending operations by "hiring" goods of which they are the owners until the last agreed instalment, has been paid; they can hardly blame the law if it takes them at their word.

The anomalies to which the finance companies are pointing are therefore in their own ways of doing business. Their bad experience with dealers is one sign of this; their concern about penalty clauses in the event of early termination of contracts is another—if hire purchase is working as it should the security lies in the goods, and repossession is sufficient remedy against loss. When the companies stress that at present the amount they are owed often exceeds the market value of this security they are admitting that the first principle of hire purchase has been broken. And when they complain that people are getting increasingly careless about respecting the terms of their contracts and are being encouraged to assume that when they are tired of paying instalments they can simply return the car, they should recognise that it was the principle of "hire—then purchase" that originally suggested this view. Now, belatedly, the finance companies are beginning to recognise openly that they are in fact in the lending business, and they see that they have to lay greater weight on the personal creditworthiness of the borrower.



The law can encourage them. It can, in the first place, give the strictest interpretation of the companies' obligations as owners while they retain the hire purchase contract. But it must at the same time open the way to the finance companies doing business by the direct route, through personal loans, which requires at least administrative relaxation of the provisions of the Moneylenders Acts, and also recognition of car registration books as documents of title. The finance companies will not be able to change the style of their business overnight; but they could put much more effort into the building up of a reasonable system of national credit rating. Meanwhile, the companies need to straighten out their relations with dealers; it is wholly to the good if the law gives them the effective choice of confining themselves to honest dealers or doing a straight loan transaction with the individual customer.

If the Government washes its hands of these important matters, it will deserve much criticism. It should be harried also to produce its long promised bill to regulate the acceptance of deposits by hire purchase companies and others. This bill has been held up for years, above all by the reluctance of both the Board of Trade and the Bank of England to undertake the invidious task of choosing between institutions that may and may not accept deposits. The authorities have long shied from the awful task of defining a bank; and they know how much the banks proper would resent having to go through the same hoop as any other deposit taking institution. But this is what credit regulation entails. Is it symptomatic that, recognising the importance and indeed the urgency of this task, the financial authorities have in effect admitted that they dare not tackle it for fear of hurting people's feelings?

Italy's Unfinished Task

LAST week-end's scramble into the Italian lira, which played an important part in the sharp drop in sterling, did not exactly come out of the blue. In recent years, the lira has established itself as one of the world's strongest currencies, and after the revaluation of the mark and guilder last March the lira was immediately put on the speculator's short list of possible followers. An observer standing aside from the technicalities of foreign exchange may indeed be entitled to feel that, like the corresponding talk about the weakness of the United States dollar, this is finance gone wild. Why should a country that has been trying hard to develop its own underdeveloped areas, and has encountered some formidable difficulties in doing so, deliberately blunt the competitive power of its industry and, in the German wake, deliberately slow down the pace of its economic growth.

Revaluation would be an astounding act for Italy. BETWEEN 1959 and 1960 Italy's gross national product rose, despite the poor harvest of 1960, by an estimated 7 per cent in real terms, and its gross investment by 18 per cent. The annual index of industrial production increased by 14 per cent. Exports rose, in value terms, by 25 per cent. This year's increases are likely to fall considerably short of these record achievements, but they will still be high. The increase in industrial output will probably be nearly 9 per cent, and that in exports above 10 per cent. By the summer of 1961 the figure for registered unemployment had fallen to 1,350,000, a considerable step down from the two million of the mid-1950s. Some observers are, moreover, inclined to believe that the number of registrations at Employment Offices overstate the true dimensions of the phenomenon. They are prepared to place more reliance on the much lower figure obtained by the Central Institute of Statistics from sample investigations. In July, 1961, this figure was below 600,000. Indeed, the more optimistic commentators predict that the proportion of unemployed in the labour force will soon reach the 2-3 per cent which is generally regarded as the irreducible minimum.

Italy has certainly made striking progress recently towards solving a problem which is of many decades' standing. It does not detract from this achievement to emphasise how much still remains to be done. Unemployment figures taken alone are misleading in this connection. Quantitatively speaking, underemployment is at present the more important phenomenon. Many millions of Italians are still working at levels of productivity and remuneration far below those of the rest of their compatriots. This is mainly, but not exclusively, a problem of southern Italy, and mainly, but again not exclusively, a problem of an overcrowded agriculture. Even among those workers who have left the land in recent years there are many whose present activities give them incomes little if any higher than the minimal ones which farming gave them previously. The borderline between employment and unemployment is in these and many other cases a very thin one. The process of fully integrating the large numbers of underemployed workers into the productive system requires a further big expansion of Italian industry and industrial exports. Italy can and should achieve, for some years to come, rates of expansion higher than those of countries where no such reserves of labour exist.

At the same time, the progress achieved in recent years has altered Italy's economic relations with neighbouring countries at many points. In finance, Italy is now playing an active part as a lender of short-term capital. In trade, northern Italy's "industrial triangle" is now established as perhaps the most sharply competitive centre of European industry. The pace of activity here has now perceptibly slowed down the net movement of Italian workers abroad, a movement which has been of major importance to industrial expansion in other European countries, notably Germany. Indeed, Italian employers are now sending their own labour-seeking missions into the Ruhr, on the look-out for any Italian workers who can be induced to come back home—which may well be less expensive for Italian industrialists than the training of unskilled labour from the Italian south. In this article, a correspondent surveys Italy's achievement in the perspective of the tasks that still lie ahead.

For many years after the war the view prevailed that a capital shortage was the factor which limited the pace at which this process of absorbing labour reserves could take place. More recently this view has had to be revised in the light of changed circumstances. Italy now has access to the international capital market on a much larger scale and on better terms than were available previously. But paradoxically, Italy has on balance recently been lending abroad, or adding to its gold and foreign exchange reserves at a time when its international liquidity was already among the highest in the world. Encouraged by the boom on the Italian Stock Exchange, private foreign investments (net of disinvestments) in

IMF PLAN

En Principe Again?

THE plan to supplement the resources of the International Monetary Fund which was officially agreed in principle in Vienna two and a half months ago is having a difficult birth. Dr Jacobsson's hope that the detailed formulation of the plan could be left to the executive directors in Washington has not been fulfilled ; the reservations felt by Continental countries have been significant enough to necessitate continuous reference back to governments. Effective progress has in fact been confined to the international gatherings in which finance ministers and central bankers have found themselves together. The meeting of OECD last month, which brought Dr Jacobsson to Paris, provided the first such occasion ; last week's meeting of finance ministers and central bankers of the common market countries provided another ; and this is to be followed next week by the monthly meeting of the Bank for International Settlements in Basle and a meeting of the finance ministers of Nato countries in Paris. United States officials hope that by this Paris meeting the finance ministers might be able to initial the heads of agreement of the scheme—which would bring it just within Dr Jacobsson's target date of December 15th. But it is virtually certain that agreement on the final form will take a good deal longer. Meanwhile the Fund's holdings of common market currencies at end-October was no more than $775 million. The United States quota is $4,125 million.

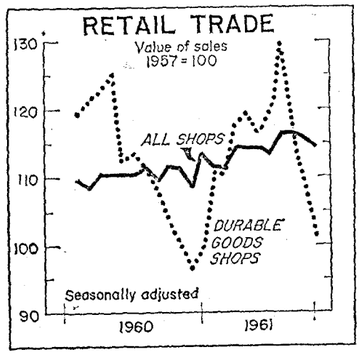
The main argument since Vienna has been on the degree to which the countries that take up new commitments to give stand-by credits to the Fund should retain formal and separate control over the activation and use of those credits. The Continental countries, and in particular the French and the Dutch, have throughout been reluctant to integrate these new facilities fully into the Fund. Dr Jacobsson and the United States—Britain seems to have made no effective contribution in this argument at any point—have urged strongly that while the creditors should have every reasonable safeguard, this should be given through the normal machinery of the Fund. It is still not clear who has won this battle on where the power should lie.

IN THE MARKETS

Another Jolt

ON Wednesday, equities fell more in a single day than at any time since the beginning of August. The rally in the week before had been a timid affair and failed to survive the weekend. Prices began to falter under the steady pressure of selling and on Wednesday after the shock of no interim dividend from Consett Iron they dropped sharply ; the *Financial Times* index lost 5.1 points to 289.9, its lowest point since the end of October, and over the week to Wednesday's close *The Economist* indicator lost 9.6 points to 347.3, which is less than 5 points above the year's low recorded in the middle of October. This new attack of nerves was caused by the steel companies' results. Investors were well prepared for lower profits and, indeed, only a week earlier had begun to wonder whether some of the earlier prognostications had not been just a little too gloomy. But the Consett decision and the reduction in South Durham's dividend dispelled such illusions.

The fall in profits, in steel and in other sectors of British industry, is a factor with which the stock market has had to live for months. But, however much share prices discount company results ahead, their actual publication can sometimes come as another blow to confidence, especially when the market is worried, as it now is, about the future of the economy and of sterling. The electricity wage award and now, this week, the wage increase granted by British Oxygen have pushed the prospect of relaxation of the official restrictions further ahead into the distance. Already the market is beginning to wonder how tough a budget it will be in the spring.



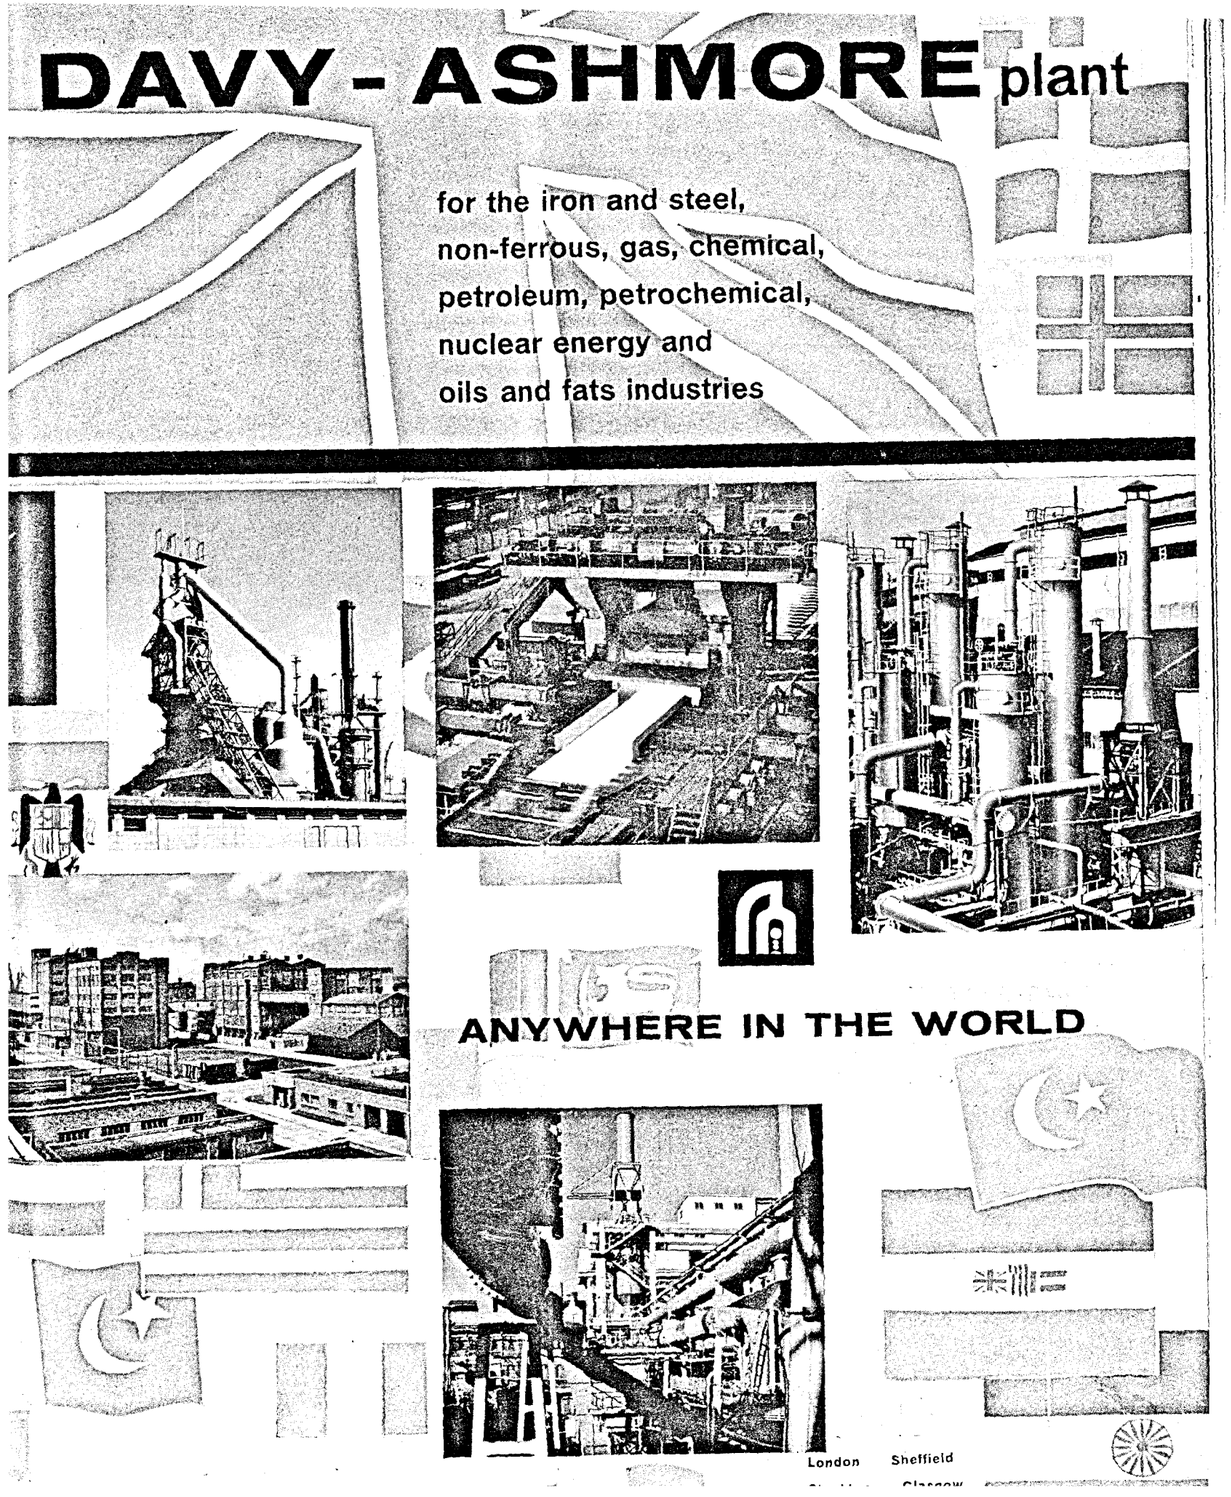
This has had its effect on gilt-edged stocks as well as equities. No one this week seemed to be prepared to buy gilt-edged—not even the very short dated bonds—and the prices of all maturities drifted down. This came as something of a blow to the authorities' attempts to groom the short end of the market in preparation for a conversion issue. As a whole the new issue market, in comparison with its activity in the autumn, has been quiet ; the fact is that there is not much money available for investment and lenders call the tune. The Industrial and Commercial Finance Corporation was able, it is true, to place this week £4 million of a 6¼ per cent debenture, 1981-84, but the stock was issued at 94, which was a sufficient discount to attract net funds. The issue offers a flat yield of nearly £6 13s. per cent and a redemption yield of nearly 6¾ per cent.

CONSUMER SPENDING

Levelling Off

SPENDING in the shops continued to decline in October but prices fell also. According to the Board of Trade's final estimates of seasonally adjusted sales (1957 =100), the value fell from 116 in September to 115 in October but the volume rose from 110 to 111. Rounding off to whole numbers, however, has exaggerated the movements ; more accurately, turnover fell by half a point and volume rose half a point. Purchasing was brought back, not to the record level of July, but to the average level of the third quarter. Compared with a year earlier, people were buying 4 per cent more food but only about the same amount of clothing, durables and other shop goods.

Durable goods shops expect their business to go up in October but this year the rise was less than usual and the seasonally adjusted index of this kind of business fell a further five points ; this was, however, a smaller decline than in the two previous months. Credit sales of household goods shops were even further below their July peak than the total business of these shops, although they were one per cent higher in value than a year before, the same as the margin in total sales. Outside ordinary



retail trade, credit business recovered a little in October but nevertheless total instalment debt fell by £11 million over the month. Figures collected by Hire Purchase Information show that hire purchase sales of new cars rose in November by 226 to 9,469. This was a larger number of contracts than were made last year ; but credit sales of used cars were some 8,000 short of the November, 1960, figure. The effect of the credit squeeze on spending may well by now have come to an end. But there seems no indication that food retailers are losing any of their extra custom.

PROFITS AND DIVIDENDS

Sideslip or Tailspin?

PROFITS of 236 companies reporting in November were dominated by the experience of the motor industry and its suppliers in the financial year to the end of last July. This motor group included BMC, Rootes, Rover, S. Smith and Joseph Lucas, and its trading profits fell by over 37 per cent ; it is not surprising, therefore, that the trading profits of all the companies fell by nearly 10 per cent. Of the other industrial groups with a weighty influence on the November profit figures, iron and steel and electrical manufacturing showed a slight improvement, thanks respectively to the good results of Tube Investments and EMI. Brewing profits were also higher, reflecting the rise in beer consumption and increased beer prices. But the profits of the

widely spread engineering group were a little lower and so were the profits of the chemical group, in which Fisons reported smaller earnings and Glaxo bigger ones.

These results, for a single month and dominated by the particular experience of the car industry, afford only limited ground for comparison between the fall of 10 per cent and the rise reported in October and in the quarter that ended on September 30th. But, as the stock exchange is well aware, profits of British industry as a whole are sliding down. It is particularly disturbing for investors that heavy depreciation provisions, reflecting the installation of new

PROFITS AND DIVIDENDS
(£ million)

236 Companies reporting in November	Previous year	Latest year
Trading profit	224·3	202·7
Gross profit*	171·5	145·5
Net equity earnings*	79·9	65·8
Net ordinary dividends	33·9	35·0

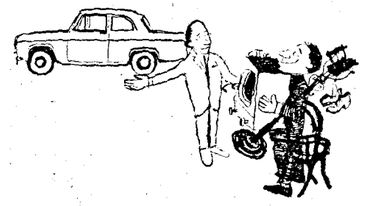
Net earnings/net assets	9·9%	7·4%



* After deducting non-recurring credits.

equipment in earlier years, and the continuing high rate of tax, affected in the latest year by the increase in profits tax, are whittling down the amounts available for distribution. Thus in November a fall of 10 per cent in trading profits works its way through to a fall of 15 per cent in gross profits before tax and then to a fall of nearly 18 per cent in net equity earnings. Ordinary dividends, paid on more capital, were slightly up and, as a result, the earnings cover came down with quite a bump. Restraint, even without the Chancellor's request, has to be the order of the day, especially for companies with investment plans still to complete. For the longer term, no less worrying is the further evidence that the rates of return on capitail employed continue to fall. Because of the under-utilisation of capacity in the motor industry, the decline in these returns in November is probably sharper than the average for British industry; but no investor can look at these industrial averages without concern.

MOTORS

Low Sales, Higher Prices

FORD'S decision to increase the price of its cars by from £6 to £17 is oddly timed. Sales on the home market have now been depressed for three months running. November seems likely to show the same sales as October, about 43,000, while December is traditionally the worst month of the year. And Ford has seen its share of the market fall since the summer, when it was getting over 30 per cent of sales. The growing popularity of the BMC baby cars has eaten deep into the sales of the Popular and is eroding those of the Anglia. In September the Minis accounted for nearly a fifth of all the cars sold in Britain and about half of BMC's sales; their sales had risen by more than a fifth since September, 1960, while those of the Popular seem to have fallen by nearly two-thirds. And if one takes the Anglia and its BMC counterparts, the Austin A40 and Morris Minor 1000, their sales together fell by nearly 40 per cent over this year. The Classic has saved Ford from a serious fall in sales. Some 2,000 were sold in September, more than an eighth of the medium-sized car market.

These changes in the car market explain why one Ford dealer, Zenith Motors, is offering to take anything in part exchange for a Popular—the sort of indirect price cutting that most British dealers abhor, though makers welcome. It also explains why BMC was so anxious to make its baby cars more profitable, whether by straight price increases or by introducing its more expensive versions; and why the workers making the Minor 1000 body are now on short time. But the situation makes the Ford price increases all the harder to understand. What they mean as a measure of the pressure of costs on car manufacturers this year has also been seen in the BMC results. This makes the arguments for higher margins strong enough to override fears of losing more sales.

ADVERTISING

Expenditure Falters

ANXIOUS enquiries from advertisers, it appears, have brought reassurances from the commercial television companies that any proved reduction in audiences as a result of the current actors' strike will be matched by a reduction in "spot" rates. The Television Audience Measurement figures (which appear with a timelag of about a fortnight) at present show a downward shift in the popularity of a number of ITV programmes, but this is so far held to be due to other factors, such as changes in timing of programmes, rather than to any state of emergency in Ward 10.

Compensation for fluctuations in the size of audiences is a principle already recognised by some television companies, who offer rates "per million homes reached"—calculated according to the subsequent TAM-rating for the period of the commercial concerned. TAM has the advantage of exactitude within its known limits—it records the times when a small but "typical" sample of sets are switched on and off, but of course offers no guarantee that all members of these households have actually looked at any particular commercial. And advertisers are beginning to become more conscious generally of the snags involved in reaching any given section of the public. More thorough techniques of audience research are slowly being evolved—the very word "audience" may be an over-statement of the degree of advertisement awareness of some TV-owning households.

This more sceptical attitude may partly explain why the still increasing sums spent on television advertising have begun to level off. In the third quarter of this year, according to the *Statistical Review of Independent Television Advertising*, 24.7 per cent more money (a total of £20,239,000) was spent by TV advertisers compared with the same three months of last year, but nearly half this increase was accounted for by the tax on the revenue of the programme contractors—which has been passed on in its entirety to advertisers. Setting aside the tax, the increase was 12.7 per cent—whereas the increase of this period in 1960 over the previous year was 34.1 per cent. With ITA's coverage now not far from complete, on the present network at least, further increases in TV advertising expenditure will soon depend almost entirely on increases in rates charged. With TV-ownership nearing saturation point, these are not likely to go up with the steep steps of earlier years.

The slackening in the rate of increase on the television side is coupled with an actual decline in press advertising, which has been in progress since the second quarter of the year (comparing each quarter with 1960). Advertising in the press in July, August and September cost £27,983,000, a 3 per cent drop below the same months of 1960. If these tendencies continue it is doubtful whether the total spent on all kinds of advertising will reach the record £500 million forecast for 1961.

FLOUR MILLING

Getting Together

OLIGOPOLY is a fair description of the present state of the flour milling and baking industry, which since the scramble by the millers to tie up distributive outlets under their own control has become increasingly dominated by the big groups, which include the Co-operative movement as well as Ranks, Associated British Foods and Spillers. It is not surprising, therefore, that the biggest miller, Ranks, is to merge with the fifth biggest, Hovis-McDougall. The two undertakings are complementary in the sense that Ranks is an unspecialised miller with a large number of retail outlets under its control while Hovis-McDougall is a specialised miller whose branded products sell throughout the baking and grocery trades and which possesses few retail outlets of its own. The two groups obviously sense the possibility of economies in dis-

tribution and production and hopes for more rapid growth in combination.

The fact that the merger has been prompted by trading reasons is reflected in the terms. Ranks offers three ordinary shares for every five Hovis-McDougall ordinary shares and one 6 per cent preference share for one Hovis-McDougall 5½ per cent preference share. As Ranks ordinaries stand at 28s. 9d., the value imputed to Hovis-McDougall of 17s. 3d. which offers little advance on the pre-bid price of 16s. 6d. But, as the directors expect to be able to pay 14 per cent on the enlarged capital, ordinary shareholders in Hovis-McDougall gain a third in income. They will own about 35 per cent of the combined equity though Hovis-McDougall will contribute initially no more than about 27 per cent of the combined equity earnings. But this may not be an unreasonable price for a big miller to pay in order to get bigger.

GAS

A Simpler Way

If the British gas industry wants to store gas underground it needs, as was mentioned in these columns last week, a private bill to do it. This means, simply, that after a long time the law of capture has come home to English soil. This law, which in passing has done huge and enduring harm to the efficiency of the development of oil production in the United States, derives from rulings in British common law that whatever flees to and is found on—or under—the property of any landowner belongs to him. These rulings, adopted since 1889 in the United States, have been interpreted to mean that petroleum belongs to the landowner under whose property it happens to be found, regardless of where it may have come from. Oil is fugacious (which means it flees) like game; it crosses the frontiers of ownership without noticing. So, for that matter, does gas.

What this implies is that if the Gas Council finds an aquifer—which the late James Thurber would probably have called a dome-shaped thing underground with water coming in the bottom—empty enough to store a lot of gas, it has to be careful that storing it will not mean giving the gas away. As the state of the law stands, it might have to purchase all the land above this aquifer in order to acquire legal right to all the gas that it pumps underground. As the law stands, too, anyone who owns land above this storage who is ornery and perspicacious enough to drill his own well down can have the gas underneath his land free; indeed, he would own it, even if the gas board only pumped it down yesterday. Landowners in the area have been informed of the gas industry's proposals; they may not have been informed of the rights they will be expected to give away, even if these rights are worth nothing as yet.

Because the oil under your neighbour's property is your own oil if you can tap it under your property, hundreds of thousands of unnecessary oilwells have been drilled in the United States during the last seventy years. This offset drilling has wasted much of the production that might economically have been achieved from many American oilfields. The property rights that brought this about eventually made necessary an elaborate system of state control of oil production in the United States, which nowadays has to be backed by an equally elaborate system of import restriction in order to keep America's oil industry viable (indeed pretty profitable). It has moreover given employment these many years (which should be enough justification for any law) to General Ernest O. Thompson of Amarillo and the Texas Railroad Commission. Against this colourful background of history, the approach of a British nationalised industry to this legal situation can only be described as insensitive, if not brutal. It finds the British common law of capture inconvenient. So it simply plans to change it.

EXPORT FINANCE

More Kites

Further pointers to a new move on export finance have been discernible in the past ten days. In the House of Lords debate on the routine Export Guarantees Bill on Thursday of last week, Earl Waldegrave, the Government spokesman, referred pointedly to "the most active review" that is proceeding within the Government:

> I am advised that the matter of an Export-Import Bank, of a financial institution, of financial credit and of varying rates for export finance, are very much under review at this moment and in the light of what other countries are doing.

The second pointer was to be seen at the conference of exporters at Eastbourne, where Mr Macartney-Filgate of Lazards mooted the possibility of a fixed rate on bank finance for exporters, to help them quote fixed terms to their customers. This question is now being considered by the clearing banks, as well as by the merchant banks, and it seems that it is not necessarily dependent on concomitant fixed rate facilities for the banks themselves at the Bank of England—though the project will of course be discussed with the Bank. If the clearing banks did decide to give exporters this facility the level of the fixed rate seems likely to be between 5 and 6 per cent. This would be rather above the average of the past few years, but in present circumstances many people would think it helpful for the exporter.

The third indication of moves afoot may be seen in a change at the Export Credits Guarantee Department, where Mr L. J. Menzies has been replaced as secretary by Mr A. E. Percival, hitherto an under-secretary in the department. Mr Menzies, who was seconded from the Bank of England in 1958 for a temporary period while the new administrative status of ECGD was being run in, is now returning to the Bank as an adviser—with special responsibility for export finance. Mr Menzies is personally believed to favour a new export finance corporation, though no doubt his inclination would be for a body set up and financed by the existing City institutions themselves. The danger in this course, as the experience of ICFC, CDFC and the rest shows, is that the shareholders will quickly neglect their charge. The Government should not close its mind to an independent institution able to borrow in the market with gilt-edged status or if need be direct from the Government. The important thing is not the ideological colour of the financing channel but to get the money into it.

SOUTHERN AFRICA

Insiders' Confidence

This week Dr Verwoerd and Sir Roy Welensky collected more than just rain in their caps. South Africa has received two ten-year loans equivalent to £9½ million for railway and electric power developments from the World Bank, and a loan of £3½ million for a period of two years, with the possibility of one year's extension, from the Deutsche Bank. On Thursday the South African Reserve Bank felt able to cut its Bank rate from 5 to 4½ per cent, reversing the move of last May. The Federation of Rhodesia and Nyasaland, in turn, is to receive a loan of £5.1 million from the Anglo American Corporation and another of £4 million from the British South Africa Company.

Sir Roy has described his loans as demonstrations of "confidence in the Federation," as in a sense they are. The demonstration would have been still more impressive if the money was coming from outside the Federation. Sir Roy is, in fact, funding the Federation's debts. The loans made by both companies for the Kariba dam project will soon start maturing and the BSA loan is deliberately designed to cover its maturing bonds. The Anglo American loan of £5.1 million, while not tied directly to the maturing £10 million lent for the Kariba project, will nonetheless help to meet it, spread as it is over thirteen years.

South Africa's reserves, which this week reached £124 million, have already benefited from a current account surplus that is expected to reach £85 million this year against £11 million in 1960. The loans will give them another boost. However, the Deutsche Bank loan is basically a medium term credit, roughly parallel to a £3½ million loan made by a group of Italian bankers in October, and the World Bank loan is decidedly on the short side. The republic's financial headache is unlikely to be solved by these short-term palliatives. But like Sir Roy the South Africans are successfully keeping the wolf at bay: Dr De Kock,

overnor of the Reserve Bank, has said that substantial portion of the £50 million of xternal debts maturing in 1962 "will be overed by renewals or new loans."

ISCOUNT AIRLINER

Red China Chooses

T is possible to read too much into the decision of Red China to buy six iscount airliners from the British Aircraft orporation for perhaps £4 million; even o, it ranks as one of the most surprising evelopments of the year in civil aviation. legotiations began in August, with the hinese showing a marked interest in the anguard airliner which had by then gone ut of production. BAC salesmen managed steer them away from this and back to e Viscount, which had the great advantage om the Chinese point of view of being a lly proved and still reasonably modern esign. Talks ranged from as few as five to s many as 50 aircraft, and BAC is still nsure whether the order now signed repre- ents a trial batch or if it is all that the hinese have decided they can afford.

Throughout the talks, no indication was iven of where the Chinese intend to fly the ircraft or what kind of performance they ished of them. The only airport the hinese serve outside the Soviet block is angoon, and the development of internal ir services takes precedence over inter- ational links with Moscow and Korea. The ackbone of the present Chinese fleet is the oviet-built, piston-engined Ilyushin 14 olding a maximum of 30 passengers; this resumably is the aircraft that the bigger, aster Viscounts are intended to replace. he Chinese also have a fair number of oviet-built equivalents of the DC 3, and few of the new turbo-prop Ilyushin 18s. hese aircraft are roughly equivalent both n looks and performance to the big Lock- eed Electra and like that aircraft seem to e having considerable teething troubles. hese teething troubles might have rompted the Chinese to look outside ussia for new aircraft. But it seems nore likely that they have not so much penly snubbed the Soviet aircraft industry s gone abroad for a particular type of air- raft for which there is no Soviet-built quivalent. China is not the first communist ountry to have shown interest in the iscount, but sales have usually foundered n the question of payment. But whatever he motive, Pekin man seems to be behaving emarkably like Economic Man.

ILVER

Off Stage

As expected, much of the excitement surrounding the cessation of sales of ilver by the United States Treasury has already evaporated. Producers who were withholding silver from the market have released some of it, but most of the many speculative purchases made in the busy months before silver won its freedom have obviously not yet been undone. Business in London is said to be less than over- whelming, though many people are evidently keen to be kept informed about prices. On the whole, prices have increased only fractionally since last week: spot silver in London strengthened to 85⅛d. a fine ounce (well below the peak prices paid last week); in New York the price was raised on Wednesday from 100⅜ to 101⅛ cents an ounce.

Until the existing tax on transfers of silver is repealed, speculative transactions in the United States are inhibited. It is now known that on the night that official sales of silver were suspended the US Treasury's "free stock" comprised 29 mil- lion ounces. It was thought that it would take about nine days to meet the Treasury's remaining commitments to sell silver which will reduce this stock to 22 million ounces. According to the US Treasury the world is "currently consuming" more than 300 mil- lion ounces of silver a year for industrial, artistic and coinage purposes. Production is said to be 235 million ounces and the "gap" judged to be about 65 million ounces, which will now be narrowed by sus- pension by the US Treasury of the minting of newly mined silver.

INDEPENDENT AIRLINES

Winter's Chill

BRITISH EUROPEAN AIRWAYS has made it known that the corporation intends to appeal against at least some of the new routes awarded last week by the Air Trans- port Licensing Board to three of the bigger independent airlines. This spells several extra months of uncertainty for their managements before it becomes clear how much competition the Government intends to permit in the air. The number of air- lines in a position to provide that competi- tion is rapidly dwindling. The alarming feature about recent failures among the smaller airlines is that those which have gone out of business this winter were operators of regular scheduled services, and might have been expected to have a broader basis than those depending exclusively on what they could pick up by way of holiday and charter business. Last week another small scheduled airline, BKS Air Trans- port, asked for the appointment of two managing receivers.

There is a good chance at the moment that the biggest creditors of BKS, namely the banks and the oil companies, will be prepared to help the company over its present bad patch until next summer when traffic can be expected to pick up. A feeling persists that the troubles of BKS and other small airlines already out of business might be non-recurring, because they arose partly from sharp price-cutting last summer by airlines that are now dead, and partly from delays in getting licences for next year's holiday traffic while the licensing board in- vestigates in once-and-for-all detail each applicant's resources. It remains to be seen whether all the creditors also see matters in the same light. It may be possible to solve BKS's short-term difficulties; but in the long term neither this nor any other airline of similar size can acquire stability without resources bigger than they are likely to earn from day-to-day profits. Either these small airlines will have to find backers, though on a less ambitious scale than the backing given by the shipping companies to Cunard-Eagle or British United Airways; or they will have to merge among them- selves and achieve greater efficiency by doubling up their operations.

UNIT TRUSTS

Attracting the Trustees

IN his statement to the second annual meeting of the Association of Unit Trust Managers this week, Mr Kenneth Cole, who has succeeded the late Sir Oscar Hobson as chairman, pointed to the increas- ing interest being taken in unit trusts by trustees. This follows the inclusion of unit trusts among the wider range of investments as defined in the Trustee Investment Act, 1961. It may well be part of the reason for the notably good performance by the unit trust movement in recent months with sales of units regularly exceeding repurchases in the face of a decline in share prices. But clearly the surface has so far only been scratched for trustees are in no hurry to enter the equity markets at the moment.

Now following the example of the M & G group, Unicorn Securities has launched another trust fund specifically designed for trustees. A feature of the new Intrust Fund is the close link between the managers and the trustees, Royal Exchange Assurance. The latter has a long experience in trust administration and it will be brought in as a consultant on the fund's investment policy. Initially about 25 per cent of the portfolio will be in preference shares and the rest in equities, with about 18 per cent in overseas companies in which direct investment is not permitted by the Trustee Act. The port- folio is designed to provide potential income growth for life tenants while providing stability and long-term capital growth pro- spects for the remaindermen. At the initial price of 20s. the estimated gross yield is 5 per cent. Not surprisingly the initial in- vestment of £500 is much larger than is usual in a unit trust. It seems clear that one of the early purchasers of the units will be the Royal Exchange Assurance, as it regards them as suitable investments for some of the trusts it manages.

CHEMICALS

Poison on the Farm

THE report* of the special committee set up to investigate the repercussions of using toxic farm chemicals is disturbing. It is not frightening in the sense that it uncovered any major threat to health that was not already known and guarded against. What is disconcerting is to read laconic accounts of chemicals used for a year or so and then passing out of favour because they were too dangerous to handle (i.e. inconvenient to use) or killed too many other things besides the pest they were intended to combat. Surely these drawbacks could have been discovered before the chemical was put on the market and not after?

Lack of evidence on the side-effects or the long-term results of the new and ever growing list of chemicals used on the farm against diseases, weeds, insects and animal pests is another disturbing aspect of the report. It also happens to be the most difficult aspect of these chemicals to investigate. Much sympathy will go to the authors' suggestion that it is the lazy farmer who gets the chemist to do his dirty work for him; good husbandry, proper cultivation and crop rotation, and careful selection control pests better than any dressing or spray can do, and they never grow immune to these measures. As an alternative, the committee suggests a long list of investigations required into the side effects of lavishly blanketing soil and plants with chemicals that must be powerfully lethal if they are to destroy organisms that are exceedingly difficult to kill. But this research will be slow and expensive; and there seems in the meantime no alternative to the old trial and error process that has at least pushed into limbo some of the most objectionable of the chemicals introduced in the fifties.

Lessons from Eastbourne

THE main conclusion that emerged from the gathering of industrial top brass assembled by the Export Council for Europe at Eastbourne last week was that there are opportunities for expanding British exports in almost every country of western Europe. In the third quarter of this year exports were 20 per cent higher than a year before; from the talk at Eastbourne there seemed little doubt that similar growth is possible next year. Whether in the virgin markets of southern France, where British goods are virtually unknown because of past quota restrictions, or in the fiercely competitive Swiss market, or in western Germany where British goods are already making great headway, the chances are there for those who seek them. And with the possibility that tariffs between Britain and the Continent will fall by 50 per cent at the end of next year, the time to get a foothold is now.

Two other themes were also a constant accompaniment to this *leitmotiv*. Agents are not enough; the way to get and keep markets is for top management to go there regularly. Markets and products must be selected, too. For the small firm in particular—the message came again and again—an intensive effort on a first-class product in a single market can be more rewarding than a weaker effort on a broader front.

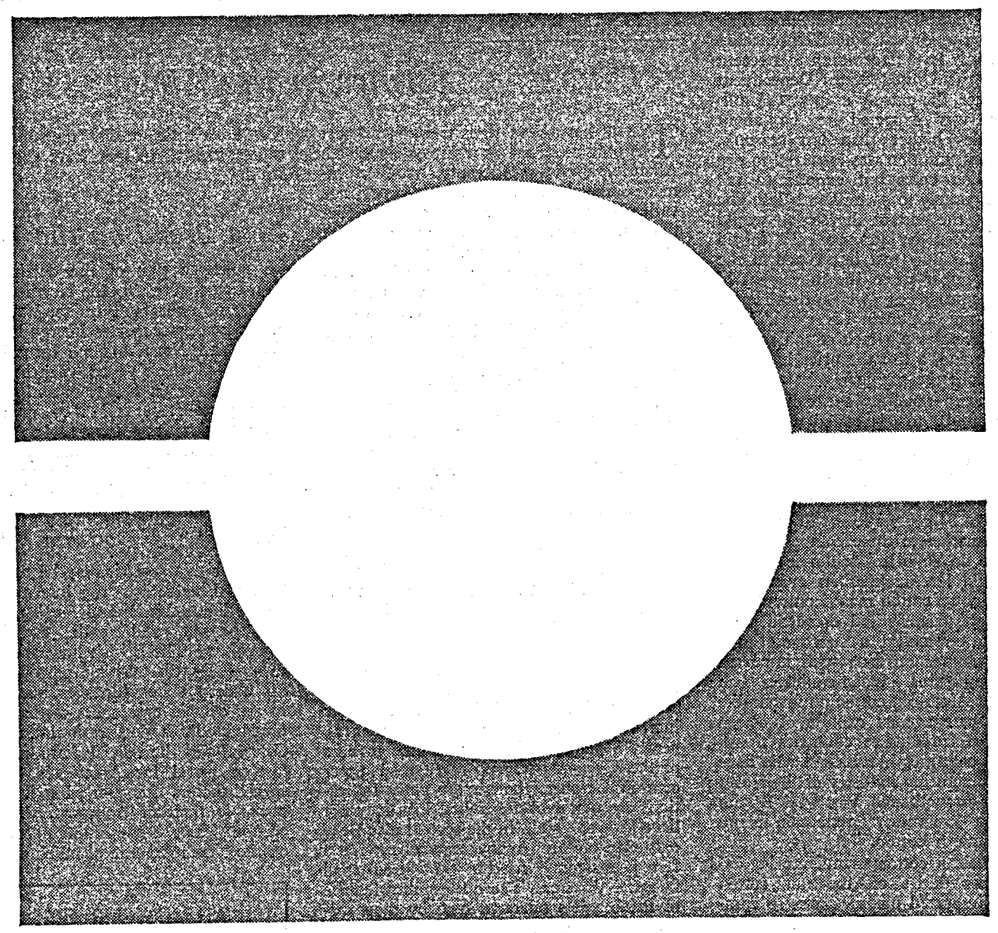
Not all the messages of the Eastbourne gathering were as clear as this. The irrepressible Mr Stanley, chairman of Pye Radio, appointed himself a kind of censor of other people's export subsidies. He was particularly pungent on the subject of Italian and Irish ones (Mr Stanley has factories in both countries, so he knows). Wisely it was agreed that the remedy was not to ask for more export subsidies here, but to get the Government to attack other people's. But even this is not so easy in the case of west Germany's rebate on turnover tax, the cause of much debate. In general this is equivalent to the exemption from purchase tax which British exports enjoy; but in certain cases more turnover tax may be refunded than has been paid, and then rebate becomes subsidy. The only final solution to this kind of problem appeared to be a harmonisation of indirect taxation—a remote prospect.

Industry, however, is also concerned with another kind of national difference—the appalling problem of varying standards which arose in the discussion of almost every industry at Eastbourne. British television sets have made small headway—despite being first on the scene—because the Continent uses 625 lines instead of 405. Trade in household electrical appliances is cramped by the fact that every single Scandinavian country has different safety regulations. Regulations for heavy electrical plant and transmission equipment are different, too. Trade in food is restricted by varying health regulations on colouring. The low British rail gauge limits the entire export trade. All this is quite apart from language and the vast problem of metres *v* feet and inches which touches every industry.

Most revealing of all the discussions at Eastbourne was that on transport. Road transport and aircraft came out relatively well. But there were ferocious attacks by traders and industrialists on the older organisations—the railways, the ports and the customs authorities. One importer from Hamburg delivered a formidable attack on the Port of London bottle-neck, pointing out that the delivery of orders often took 24 days compared to ten in his grandfather's time. The shortage of rail trucks suitable for carrying exports to the Continent—a handicap known since 1947—was the subject of another bitter attack. And it became clear that one important factor in the congestion at British ports is the fact that goods often have to wait—perhaps for days—until documents arrive to be cleared by customs. No Continental customs authority inflicts the same disability on its exporters.

CANALS

Closing Them Down



THE latest round of canal closures has now come before Parliament for approval, at the same time as it is considering the Transport Bill. The bill does not end the legal obligation to maintain canals in navigable condition, which now rests on the British Transport Commission and will under the bill descend on the Inland Waterways Authority. It will still need parliamentary approval for any closures it may wish to make. But the authority will be given a breathing space in which to consider the canals it wishes to close; until 1967 it will be spared judicial proceedings—to which its legal obligations now make it liable—requiring it to make navigable any canal which is now unnavigable but has not been closed. In the next five years it will have to work out a policy for closures which will stop the losses on canals—now £600,000 a year—for it, like the railways, is supposed to be turning itself into a profitable undertaking by 1967.

This might seem a relatively simple proposition for canals; on the face of it, all that needs to be done is to close the five-sixths of the canals that now lose money, and retain the sixth that show a profit—one of £164,000 in 1960. But the profit from these canals has been falling steadily; it was £375,000 in 1955. And there is no more redoubtable lobby than the Inland Waterways Association, which will fight to the death any proposals that would deprive its members of their right to sail over otherwise deserted canals. Canals are physically more difficult to shut down than railways; often they serve as drains or water supplies for farmers, so a closed canal has to be kept water-tight—even if locks can be replaced by weirs and bridges by culverts. But water can be sold, or canals themselves sold for use as reservoirs; the Inland Waterways Authority will have the power to do its best to exploit such new uses for them.

COTTON

Under Review

PRICES of raw cotton have not changed much in the past few months, but buyers' attitudes to them recently under-

status symbol

A year ago a new symbol made its appearance on the industrial scene—the emblem of Engineering Finance Limited. It heralded a new method of financing major items of industrial equipment over a period related to their useful working life.
Since then EFL has helped many companies to improve their competitive status—some by comparatively modest re-tooling exercises, others by big-scale development projects running into six figures. For all of them, this new method of machine life finance has meant that they are better able to meet the challenge of competition, at home and abroad, now and in the future.
If you have a re-equipment problem perhaps Engineering Finance can help you too. We will be pleased to send you a booklet giving fuller details.

ENGINEERING FINANCE LIMITED
29 PALL MALL, LONDON, S.W.1
A MEMBER OF THE UDT GROUP OF COMPANIES

went a significant revision. Succeeding estimates of the United States' cotton crop raised its likely level; according to a recent forecast by the United States Department of Agriculture, the current crop at 14½ million bales was expected to be about 200,000 bales higher than last season's. American consumption was expected to rise to 8.8 million bales but exports to fall rather precipitately to 5½ million bales. The carryover at the end of the season would therefore increase by 400,000 bales to 7.6 million bales. But frost intervened at the end of November when the movement of the crop was progressing well and enlivened dealings in raw cotton in Liverpool. Spot supplies of American 1-inch cotton rose 10 points to 24.20d. a lb; the price had been unaltered since the spring.

American exports of raw cotton have been losing ground to so-called "outside growths"—exports from Middle Eastern, African and Latin American countries. One extreme view is that if the United States continues to subsidise its raw cotton exports to the tune of 8½ cents a lb it will gradually lose all its market to these competitors; if it does not do so prices will rise sharply and it would lose its markets even more rapidly. Its own cotton manufacturers who pay the high unsubsidised domestic price for raw cotton are at a substantial disadvantage when competing with imported cotton manufactures. When countries such as Spain get American cotton on favourable terms, the case against exports of cotton manufactures from those countries to industrialised countries like Britain who have a sick manufacturing industry of their own to protect is strengthened. Last week Britain negotiated a "voluntary" reduction in imports of Spanish cotton.

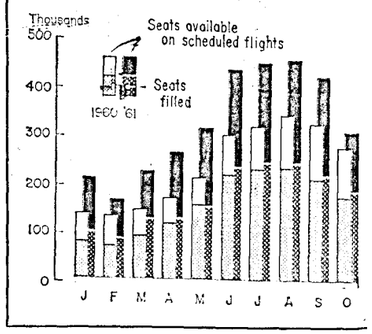
The American cotton manufacturing industry wants duties on the raw cotton content of imported manufactures to compensate for the higher domestic price. Japan and Hongkong naturally object to this proposal. Since the price support programme for cotton growers in the 1962-63 season has not yet been settled, and it has been suggested that supports and export subsidies might be lowered, or cotton left to find its own level, the present American policy can fairly be accused of causing considerable dislocation and confusion. But thanks to a fall in production outside the United States, particularly in India, Mexico and Egypt, America's hold on the export market might be strengthened this season, despite a possible reduction in demand by consumers. Egypt's crop of long-staple cotton has been so severely nibbled by leaf worm that new supplies will be reduced by about one third and fears of a large surplus of long-staple cotton have been dispelled. Prices have not risen far, but are strengthening. The irony of the present situation is that Egypt which has been attempting to export more of its cotton direct to western buyers to lessen its dependence on the communist block has now arranged to import a large quantity of American medium and short-staple cotton.

NORTH ATLANTIC TRAVEL

Straws in the Air

There have been signs during the past two months that air traffic on the North Atlantic picked up noticeably once the summer holiday season was over, but experience varies too much between airlines to predict that business is back to the buoyancy that airlines consider "normal." Pan-American aroused optimism by announcing last week that during October its North Atlantic business jumped 30 per cent compared with the year before; Trans-World Airways showed a more modest increase of 8 per cent, and BOAC one of 14 per cent. The alarming feature of what would otherwise be a commendable performance by BOAC is the fact that the whole of its increase is accounted for by traffic between this country and Canada. The passengers carried between here and the United States were actually 1½ per cent fewer than the year before, and BOAC's traffic on this specific route shows a 13 per cent drop this summer and autumn compared with last. This is significantly worse than the out-turn for air traffic on this route as a whole, and a rocket is likely to be placed under BOAC's salesmen as a result.

The so-called "North Atlantic slump" cannot be taken on its face value. In the first place, it is not strictly a slump. Traffic increased by roughly 120,000 passengers, nearly 8 per cent, in the first nine months of the year, and was up more than 3 per cent in October, though the early indications are that November bookings may not have been so good. In the second place, the existence of "too many seats chasing too few passengers" need not of itself spell financial disaster. The outstanding feature of the big jets operated now by most airlines on this route is that they can fly half-empty and still show a profit. The airlines, when they put on so many extra flights this year, gambled on this aspect of jet operation; and if traffic had increased as they expected (it rose 25 per cent last year, so that 15 or 20 per cent this year would have been regarded as "normal") they would have shown considerable profit in spite of the empty seats. Excluding flights to Canada, where traffic has been good throughout the year, it looks as if seven airlines, Pan American, TWA, SAS, Alitalia, Lufthansa and the Irish and Israeli airlines may have been consistently carrying the kind of loads that should show them a profit—the two last airlines having done best of all. This is partly borne out by the good financial results reported by Pan American for the first nine months of the year; but not every airline runs a Cape Canaveral or owns chains of hotels so the comparison is not, perhaps, a fair one. Six other airlines, Air France, BOAC, Air India, Iberia of Spain, Sabena and Swissair seem to have carried too little traffic to break even; the Dutch airline KLM appears to have balanced on a knife edge. Unfortunately, many airlines rely on North Atlantic profits to support other routes, so their budgets have gone with the wind.



Less Bread on the Waters

A further sign of the decline in passengers crossing the North Atlantic by sea is the offer by Furness, Withy & Co. of the two passenger and cargo liners *Nova Scotia* and *Newfoundland* for sale. Built in 1947-48, these vessels each have accommodation for 62 first-class and 92 tourist-class passengers, and they give sailings every 17 days from Liverpool to St. John's, Halifax and Boston. Already their passenger accommodation has been very heavily cut, permitting a similar reduction in catering staff; but the eventual plan is to replace them with cargo ships that will offer a sailing every 14 days.

Earlier this year, it may be recalled, the Cunard Line sold its two intermediate passenger liners *Media* and *Parthia*, also built in 1947-48 and each carrying 251 passengers. The British lines are not alone in noticing diminishing passenger traffic for United States Lines estimate a fall of 10 per cent in passengers carried this year. Undoubtedly a decline in immigration to Canada, and the official discouragement of foreign travel for Americans, have been special factors this year; but it still seems probable that air transport, with its low economy fares, is continuing to rob shipping on the North Atlantic of much of its traffic.

ATLANTIC AIR CROSSING

Bigger aeroplanes carrying proportionally fewer passengers have been operating on the North Atlantic route this year. In the first ten months there were about 10 per cent more scheduled passenger flights than in the same period last year whereas the seating capacity rose by 38 per cent to over 3 million. Although there were 7 per cent more passengers the proportion of seats sold fell from 67 per cent to 52 per cent.

The new *France* is due to enter service next February and Home Lines have ordered a new liner from Italy; but otherwise there are no plans for new passenger tonnage. The *Q3* plan has been shelved, as have plans for the replacement of the 21-years-old *America* and the 43-years-old *Stavangerfjord*.

Meanwhile, the North Atlantic westbound liner conferences have announced a further increase in freight rates. They state that the 2½ per cent surcharge introduced on November 1 has proved inadequate to meet further rises in operating costs and that it will have to be succeeded by an upward revision of the tariff rates with effect from March 1 next. There has been a substantial increase in crew costs this year, and port charges continue to creep up with monotonous regularity; most liner conferences have increased their tariff rates this winter.

CENTRAL HEATING

The Cost of Warmth

All one can learn about the running costs of central heating systems is, for most would-be installers, what their friends are paying or what the Coal Board and the oil companies claim in their advertisements—though the oil companies have sensibly removed mention of running cost figures from their current advertising. A questionnaire answered by 588 readers of *Which?*, the Consumers Association paper, now provides an independent, if slightly indeterminate, answer to the problem. It confirms what even the oil companies had admitted, that coal is the cheapest fuel; but it does not substantiate all the claims that have been made. During the winter of 1960-61, Consumers Association members using oil central heating spent 13 per cent per square foot more than those using central heating by solid fuel, and gas cost 23 per cent more than oil. The cost per square foot of a house's floor area during "the heating season" was 8.5d. for solid fuel, 9.6d. for oil and 11.8d. for gas. There is no breakdown between anthracite and coke among the solid fuels, though the former is generally said to be significantly cheaper—about half the members replying used it. Neither are vaporising and atomising burners amongst the oil boilers differentiated, though the latter are more efficient. And no such survey can forecast exactly what anyone will spend, for this depends largely on the temperature he wants to maintain, and the value he places on fresh air.

The *Which?* survey throws up some of the troubles that no salesman mentions. Only eight per cent of those with solid fuel or gas installations complained of faults, but 26 per cent of the oil installations had given mechanical trouble. And the maintenance cost reported for oil was much the highest—an average of £6 5s. a year, compared with 17s. 6d. for gas and 12s. for solid fuel. Noise was a problem with 67 per cent of warm-air heating systems, and with 33 per cent of hot water systems. When the warm air circulates, it carries noises with it. Their most common source with both systems was oil boilers, followed by circulating pumps for hot water and fans for warm air. Complaints about the difficulty of getting supplies came mostly from users of solid fuel, and most of these related to anthracite.

Which? found that there was so much variation between different figures for the cost of installations that it was impossible for it to publish any figures on this most interesting item of costs. The range of the different charges reported by members was from £15 to £63 per square foot of floor space heated. One member quoted figures of from £500 to £1,000 for similar installations in his house. Installing central heating is something of a mushroom business; some people in it may be out for a quick profit. Clearly it pays to get plenty of estimates.

CONSTRUCTION

Up Today

Contractors did two per cent more building work in the third quarter of this year than they had done in the second, and eight per cent more than they had done a year before. But new commissions received by private architects in the same quarter, though roughly the same as those of the previous quarter, remained nine per cent lower in value than those obtained a year before. So a fall in building activity next year remains a possibility. Commissions for private house building showed the most significant fall, suggesting that tight credit and costly land have ended the boom here. The biggest rise came in commissions from local authorities, especially those for non-residential building. The amount of such work completed also rose; despite high interest charges, local authorities obviously feel they can afford to build more.

SHORTER NOTES

Several changes have been made in the top management of British Railways. Mr David McKenna, now assistant general manager of the Southern Region, is to become chief commercial officer at the British Transport Commission. Mr David Blee, general manager of the Midland Region, will retire and be replaced by Mr H. C. Johnson, general manager of the Eastern Region. Mr J. R. Hammond, general manager of the Western Region, succeeds Mr Johnson, and Mr S. E. Raymond, traffic adviser at headquarters, replaces Mr Hammond on the Western Region. Eight part-time members of the Area Boards will retire at the same time.

★

O. W. Roskill, the publishers of "Who owns Whom," the guide to subsidiary and associated companies in the United Kingdom, has now produced a continental edition which covers 1,070 parent companies and their subsidiaries in France, Germany and Italy; it is intended later to cover the rest of Western Europe. The price is £4 4s.

★

It has been pointed out to *The Economist* on behalf of the syndicate of financial institutions who will be financing the £10 million involved in the building of two methane tankers to carry gas to England for the Gas Council that the effective rate of interest over the whole, unstated, period of this financing will be less than the figure of 8 per cent that was suggested in our note late week. Part of the money will be advanced by the banks at a lower rate of interest over a shorter term than the 8 per cent on the preference shares issued by the ship owning companies to the other financial institutions; and the preferences will be redeemable over a period. The effective rate over the period of the financing, therefore, will be somewhat less than 8 per cent, though the institutions concerned are not prepared to say how much less. There remains little doubt, however, that the effective rate will be higher than the rate which the Gas Council, as principal, would have had to pay to raise this through Exchequer advances.

★

Mr R. T. Monier Williams, governor of the New River Company, has told shareholders that he does not consider the offer from Alliance Property, worth 55s. 6d. per share, to be high enough since it undervalues the estates of New River at current break-up values.

COMPANY MEETINGS

W. & H. M. GOULDING, LIMITED

The Annual General Meeting of W. & H. M. Goulding Limited was held on November 29th in Dublin. The following are extracts from **Sir Basil Goulding's** speech:

Once again I address Stockholders during a phase of exceptional movement within the Company's affairs: in recent years, indeed, the exceptional has become the normal. I am glad to add that the movement is still one of forward thrust, and that it is intended thus to continue over immediately coming years.

W. & H. M. Goulding Ltd. is now a Holding Company: the Cork fertiliser works is completed and paid for: so is the sulphuric acid plant of Sulphac Ltd. at Cork; both have finished a full season of operation: the Sulphac acid plant at East Wall, Dublin is constructed, mainly paid for and has entered production: the new Belfast factory, under construction in association with I.C.I., is on schedule for completion in mid-1962. These are the salient facts of action to report this year. These are actions of the kind which will be found essential to health in the international world soon to engulf Ireland.

PROFIT AND LOSS ACCOUNT

The Profit and Loss Account shows at its first legend the change in status of the Company, from Trading to Holding. Thereby the comparison of figures with those of the previous year cannot be made too precisely.

The Income figure of £166,000 (if I may speak now in round thousands of pounds) is moreover of a composition affected by the changed structure. It includes a last residual profit balance drawn from the Company which became Sulphac Limited, and also the first, but only interim, dividend from the Company's investment in Northern Ireland manufacture. On the other hand, dividends from fertiliser trading subsidiaries in the Republic, hitherto taken annually into the year of account already closed, have not been so taken this year, in order that for the future they will be available to the next succeeding period. In this matter, as in dividend sequence to which I refer below, we shall, therefore, have made a changeover to more usual and more flexible practice.

This brings me to the most pronounced financial effect of the Company's change in status, namely the release, as "Trade provisions no longer required" of an amount of £148,000.

The major part of the sum had been a Phosphate and Pyrites Suspense Account which had provided, while the Company was trading, a very necessary shock-absorber, as it were, against changes either in price or freight upon those raw materials whereof the imported tonnages are so great that variances are thus so significant.

The need for such reserves remains, but inasmuch as the general revenue reserves shown by the Consolidated Balance Sheet stand in total at a high figure the Directors have felt that the provisions now freed need not be retained in the Parent Company.

After this meeting shareholders will thus be attending the Extraordinary General Meeting at which will be proposed a resolution that £119,070 from General Reserve be capitalised and distributed to Ordinary stockholders upon the footing of one new Ordinary share for every £10 Ordinary Stock held at October 31, 1961. I do not here quote the resolution in full detail for it is already in your hands.

Lastly, on the subject of the Profit and Loss Account, stockholders will have read the Directors' Recommendation as to dividends for the year. I hope the short explanation as to the changes in practice which we are making will be found explicit; but would just reiterate, in case of any possible misunderstanding, that the total amount of 10 per cent paid from this year's accounts in three dividends is not a twelve-month rate of dividend, for it covers the additional interim period which had to be spanned in order to exchange for the future the payment dates of Interim and Final Dividends.

BALANCE SHEET

The Balance Sheet of the Holding Company is annotated so as to explain, as I hope, most points of substance. Of these the main changes are, first, that in place of Stocks the Company now holds, as its main Current Assets, Shares in and Loans to Subsidiary Companies: second, that the increase in the value of Investments and, contra, of Capital Reserves, derives from the increase (of £220,000) in the capitalisation of Sulphac Limited when it became the new acid-producing company; in the case of Capital Reserves there was also a contrary reduction (of £340,200) in respect of the share issue of July 28, 1960; third, that main Current Liabilities are now Loans from Subsidiary Companies in counter to the similar but opposite Loans referred to above.

The Consolidated Balance Sheet of the Goulding group of Companies displays one very marked feature, namely a change, as compared with last year, between Bank Balances and Fixed Assets.

A note to last year's Balance Sheet showed that commitments at June 30, 1960, for capital expenditure were approximately £360,000. This year a similar note shows the figure of £80,000.

As well as this big investment in Fixed Assets, Stocks were greatly higher at June 30th because of wet months April and May, so that the reduction in Bank Balances of some £350,000 may be judged satisfactory.

SULPHAC LIMITED

The Consolidated Balance Sheet includes the Debenture Loans and also the Company's majority investment in Sulphac Limited, and I would now report briefly that the 70,000 tons/yr. plant at Marina Cork operated, over 10 months to June 30th, both excellently and profitably. It has on test proven its flexibility of operation from low loading to above rated capacity.

The new Dublin acid plant was but little behind schedule when it came to production: nor was the delay significant, for we must suppose that its full capacity will not at once be needed in order to supply, with the Cork plant, all present National requirements of concentrated sulphuric acid.

FERTILISER MANUFACTURING SUBSIDIARIES

Considering the sum profit derived from these Companies' fertiliser manufacture and trading, I feel I should, on behalf of Stockholders and in face of any opponents, observe that the total gross profit before tax represents a very small percentage of turnover. As I said to Stockholders in 1959. . . . "You may fairly observe that we rest our fortunes upon the policy of obtaining a moderate return upon a steadily growing business."

I must emphasise, accordingly, that it can only be by means of advanced mechanisation—whereby to machine-handle tons as though they were ounces—that the fertiliser manufacturer may make profit whilst holding down price.

It is according to this prescription, as well as to one other, that a development scheme for the fertiliser plant at East Wall upon the new site and alongside the new acid plant, has now reached an advanced stage. The other aspect which this development serves is the acceptance as a main assumption of an accelerating trend to concentrated compound fertilisers—those which carry far more plant food per ton for the same freight and handling charges per ton.

Given the facts that present day transport and labour costs are high and unlikelihood of reduction (to say the least of it) it can only be a matter of time, short as we think, before farmers grasp the plain logic of this trend.

TRADING CONDITIONS

The sales of superphosphate increased slightly during the year under review but sales of compounds showed marked increases.

The general level of phosphate usage is still far from satisfactory. According to the Department of Agriculture's advisory booklet "Lime and Manures," we should use over one million tons of superphosphate per annum, which is equivalent to 2½ times our present usage of phosphorus. The poor quality and low feeding standards of winter fodder on most Irish farms are grave obstacles to progress in animal husbandry generally.

The probability of our entry into the E.C.M. is a compelling reason for the immediate development of Irish grasslands, for an early increase in livestock population and for more attention to the economics of current farming practices. High milking averages on our dairy farms and satisfactory live-weight gains in the case of beef cattle will be attained only when silage production and the growing of kale and rape for adequate winter feeding become standard procedure.

AGRICULTURAL ADVISORY SERVICE

The Advisory Service which we maintain for the benefit of farmer customers and for wholesale buyers was extended in the year under review. Additional agricultural graduates were recruited so that a service can now be offered from Limerick and Waterford, thus completing a country-wide coverage.

NEW RANGE OF PRODUCT

For some considerable time we have had the question of fertiliser analysis under review. This year, as a result of our investigations, we introduced a change in the analysis of many compounds to bring the range into conformity with modern research and with practical economics. We have thus initiated a policy of concentrating plant food units through our "Hi-Unit" range so that the farmer has less to carry from store, to spread on field, and to pay in transport and storage charges per unit of N, P and K. The introduction of the "Hi-Unit" range has been backed by increased advertising in the national and local press and agricultural journals. The range consists of concentrated or double-strength fertilisers in granular form, packed in labour-saving 1-cwt. paper bags. A system which we call the "Hi-Unit" plan is also designed to help farmers in knowing which fertiliser to use under his own local conditions. The method we employ is one which strengthens our links with the farmer through the co-operation of our wholesale buyers.

The report and accounts were adopted.

MINI MINI (NYASALAND) TEA SYNDICATE

MR MEAKIN'S STATEMENT

The thirty-eighth annual general meeting of Mini Mini (Nyasaland) Tea Syndicate Limited was held on November 30th in London, **Mr C. A. Meakin** (the chairman) presiding.

The following is an extract from his circulated statement:

The Trading Profit for the year again shows an increase over the previous season and amounted to £18,752. The Directors recommend a final dividend of 15 per cent, making a total distribution of 20 per cent for 1960/61.

Our cash position continues to improve and the Bank overdraft has been eliminated and I hope that it will not be long before we have accumulated sufficient Funds to provide for the Company's cash requirements during the non-cropping months.

The season under review has been satisfactory from the cropping point of view and a substantial increase in intake was recorded over previous seasons. The Board is still not satisfied with the standard of prices which have been obtained and this continues to receive the close attention of all concerned. In other respects the reports that we have received of the property confirm that the agricultural condition of the estate continues to improve.

In so far as the new season is concerned, prospects at the moment are reasonably satisfactory. This position has been safeguarded to an extent by selling forward approximately 40 per cent of the anticipated crop at 2s. 11d. per lb. F.O.B. Beira. This compares with an estimated cost of production of about 1s. 8½d. The above cost of production does not include Depreciation, Insurances and Head Office Expenditure.

The report was adopted.

UNITED WINE TRADERS

ANOTHER RECORD YEAR

The ninth Annual General Meeting of United Wine Traders, Ltd., was held on December 5th in London, **Sir Kenneth Murray**, the chairman, presiding.

The following is an extract from his circulated statement for the year ended June 30, 1961:

The Company has had another record year, the combined profits of the Group, after deduction of administrative expenses but before taxation, amounting to £674,701, as compared with £405,681 in the previous year. Unfortunately these increased profits result in provision for taxation being increased from £197,700 to £353,225, which latter sum reduces the Group surplus for the year to £321,476.

Once more these increased profits are largely accounted for by the continued success of Justerini & Brooks' "J. & B. Rare" Scotch Whisky overseas. With the present Government emphasis on exports it is of more than passing interest that, in the year under review, our subsidiary Justerini & Brooks Ltd. increased their export of "J. & B. Rare" to the United States of America by nearly 50 per cent., when compared with the previous year.

Our exports to markets other than the United States of America have increased by nearly 30 per cent. in the year under review.

Though the fortunes of our export business with Hennessy Brandy handled by our subsidiary Twiss & Brownings & Hallowes Ltd. continue to fluctuate with the political tide in each market, nevertheless the overall sales have shown a marked upward trend, thanks mainly to the very strong position of the Brand in South East Asia.

MARKED IMPROVEMENT AT HOME

Our operating companies have achieved all this overseas without interference or neglect of their home trade, which has again shown a marked improvement on the previous year. Furthermore, "J. & B. Rare" is now being made available on the Home market and has made a promising start there. Our shareholders and other members of the public will, therefore, now have the opportunity of forming their own opinion of this whisky which is characterised by its lightness both in colour and in style and is now enjoying world-wide acclaim.

Once again the current financial year so far gives every expectation of yet further expansion both at Home and Overseas.

In addition to the Preference dividend for the year and an interim dividend of 15 per cent paid on the then existing Ordinary shares, your directors recommend payment of a final dividend of 50 per cent on the Ordinary Share Capital as increased to £385,000. This compares with the figure of 40 per cent envisaged in my circular letter of May 3rd.

It has always been my intention to retire from the Chair and Board of this Company on reaching the age of 70, which I did in August last. Accordingly I do not seek re-election, but at the request of all my colleagues, I propose continuing for the time being as Chairman of Justerini & Brooks, a position which I have held since 1931.

Mr H. C. B. Berens has accepted the invitation of the Board to succeed me as Chairman and I feel confident that under his able guidance the affairs of your Company will continue to prosper.

The report was adopted.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY

(Incorporated in the Republic of South Africa)

EXTRACTS FROM MR D. A. B. WATSON'S SPEECH

The annual general meeting of Johannesburg Consolidated Investment Company, Limited was held on December 5th in Johannesburg.

Mr D. A. B. Watson presided and, in the course of his speech, said: For the year ended June 30, 1961, the profit, before tax, of your company and its wholly-owned subsidiaries, Barnato Brothers Limited and Barnato Holdings Limited, amounted to the record figure of R5,275,150 (£2,637,575), an increase of R138,830 (£69,415) over the comparable figure for the previous year.

There was an improvement of R734,990 (£367,495) in our dividend income, which at R5,776,644 (£2,888,322) was also a record for the company. However, this improvement was accompanied by a reduced profit from the realisation of investments, which at R332,866 (£166,433) was only about one-half of the average annual profit earned by this side of our business during the preceding five years.

There was a substantial net depreciation of R3,084,454 (£1,542,227) in the book value of our portfolio. The total market value of our investments at June 30, 1961, was R54,125,776 (£27,062,888) as compared with R58,136,032 (£29,068,016) at June 30, 1960, a decrease of approximately R4M (£2M).

The decline during recent years in the London share prices of our investments in various companies operating in Africa stems not from a general diminution in their current intrinsic earning capacity which, on the contrary, has on the whole been more than maintained. It results from the continuing anxiety of investors or potential investors in enterprises in Africa as to the effects of Government policies and political changes upon future industrial activity in various parts of that continent, upon the flow of profits arising from that activity, and upon the rate of tax levied on such profits. The political changes have been widespread and rapid. They are not at an end but will continue in various forms for many years.

Having commented on the possible short-term effect on the company's interests of African political development, Mr Watson continued: We remain of the opinion expressed at our meeting last year, namely that production and business in the various territories in which our interests lie will continue, possibly with some interruptions, but nevertheless on a satisfactory scale. I do not envisage any abrupt or wholesale decline in the earning power of our investments in these territories, nor any such sudden changes in fiscal policies as would significantly affect the quantum of profits available for distribution by the companies concerned.

We estimate that our profit for the current year will be more or less maintained at last year's level. Our present estimate is that last year's rate of dividend should be maintained for the current year. This forecast depends naturally not only upon the maintenance of our presently anticipated dividend income, but also upon there being no further fall in share prices of such magnitude as to necessitate substantial provisions to meet the resultant depreciation in the book value of our investments.

THE FAIRFIELD SHIPBUILDING and ENGINEERING COMPANY, LIMITED

STATEMENT BY THE CHAIRMAN SIR JOHN MAXWELL ERSKINE, BT, GBE, DL, JP

The following Statement has been circulated to the Shareholders of the Company, whose Annual General Meeting will be held in Glasgow on December 28, 1961.

The Company is now engaged in the third and last phase—estimated to involve an expenditure of something of the order of £1,000,000—of the shipyard re-construction programme commenced some years ago. It has been the policy of the Board to charge the greater part of this special expenditure to the "Reserve for Development and Contingencies." As the Balance Sheet shows, this Reserve has been increased this year by the sum of £468,828, and after deducting the year's special expenditure of £118,828 the reserve is £1,900,000. In view of this, and having regard to the fact that as a result of the steady writing-down over the years of the value of Fixed Assets—these stand in the Balance Sheet at little over £1,000,000, which is demonstrably a small portion of their actual value—it has not been considered necessary to make any charge this year for Depreciation.

Contracts completed at both the Company's Works at Govan and Chepstow provide an interesting cross-section of work, and proof of the versatility of the Company's resources. The deliveries included:

From Govan

H.M.S. Lincoln ...	Frigate	
H.M.S. Blake ...	Cruiser	
H.M.T.S. Alert ...	Cable Layer	6413 GRT
M.V. Yorkshire ...	Cargo Liner	12040 DWT
S.S. Shell Naiguata	Oil Tanker	33000 DWT
S.S. Leecliffe Hall	Great Lakes Bulk Carrier	27300 DWT

T.S.S. Passenger Ferries—A total of 9, each carrying 2,100 persons, for service in the Bosphorus and the Sea of Marmara.

From Chepstow

Fabricated Steelwork for—
- Railway Bridges of modern design for British Railways and new road projects.
- Buildings.
- Factories.
- Gantries for travelling cranes.

The Company has acquired a substantial holding of the equity of David Rowan & Co. Ltd., Marine Engineers, Glasgow, established 1865, and the balance is being acquired. The merging of the two Companies is now in process with a view to complete integration of the engineering activities of the two Companies, to ensure the greatest efficiency in production of marine engines of all types and to allow for expansion of participation in a wider range of engineering products.

In the course of the year a licence and technical assistance agreement was made with Westinghouse Electric International Company of New York. This grants the Company exclusive manufacturing rights within the United Kingdom for Marine Turbines incorporating Westinghouse techniques, also it will make available the developments arising from the extensive research programmes conducted in the research centres of Westinghouse.

The Trading Profit for the year at £578,833 is substantially lower than the previous year when a record figure of £1,043,781 appeared; but in a business such as ours there are bound to be fluctuations in the incidence of emergent profit or loss. After bringing back a provision for Taxation no longer required, and making provision for the dividend of 6% on the Cumulative Preference Shares, requiring, less tax £9,188, a proposed Dividend of 20% on the Ordinary Shares, requiring, less tax £30,625, and the allocation of £468,828 to the Reserve for Development and Contingencies already referred to, the amount carried forward in the accounts is increased from £193,770 to £235,285.

During the year, the Board, in pursuance of their policy of recognising and rewarding merit, were happy to invite Mr Derek B. Kimber, OBE, MSc, Shipbuilding Manager, to a seat on the Board and the Shareholders will be invited to confirm his appointment.

There can be no doubt that the Shipbuilding and Marine Engineering industry in the United Kingdom has been and is facing many difficulties. It is equally true that in recent times there have been many broad generalisations as to the competence and attitude of those engaged in the industry, whether in management or as operatives, which have served to denigrate the status of of British Shipbuilding in the eyes of the World. These generalisations are sometimes grossly unfair and serve to make even more difficult the ability of the Industry to compete abroad, for, believe me, full use is made of such comment to our disadvantage.

Notwithstanding the difficulties to which I have referred, the Board has exerted every effort to obtain new contacts at home and abroad with a considerable measure of success. A number of important contracts for both the Govan and Chepstow Works have been obtained, including one from HM Government for a Guided Missile Destroyer, and a Cargo Liner for an old and highly respected client—Bibby Line of Liverpool. These valuable contracts will ensure continuity of employment for our personnel, who have a lifetime's experience of such highly specialised work.

Tenders were submitted for two important contracts during the past year—(1) the Construction and installation of machinery for a Nuclear propelled 65,000 ton Oil Tanker and (2) the Construction of a fast Trans-Atlantic Passenger Liner. Both tenders included proposals embracing interesting features for main machinery installations conducive to economy and reliability.

From what I have stated it will be appreciated that the Company is making every endeavour to be fully equipped, materially, technically, commercially and with manpower to meet the challenge of the times, including possible entry to the Common Market which does not alarm us.

There is a tradition behind the Company of a hundred years of producing ships and marine engines, including vessels built nearly seventy years ago which held the "Blue Riband" by Atlantic Crossings of under 5½ days. That is an inspiration and a challenge which is being accepted by the present generation and I look forward confidently to the future of the Company.

I extend cordial appreciation to Mr James Lenaghan, our Managing Director, and his team of executives and employees for their valued services.

Lloyds & Scottish Ltd

Reduced earnings in a difficult period, but future growth seems assured

TWO FORMER OPERATING COMPANIES NOW MERGED IN LLOYDS & SCOTTISH FINANCE LTD

Statement by the Chairman, Mr. Ian W. Macdonald

In his statement accompanying the Report and Accounts for the year ended 30th September 1961, the Chairman analysed the severe difficulties, mainly in the motor vehicle field, which had caused a reduction in group earnings, and reviewed progress and prospects in other divisions. He explained the reorganization by which Lloyds & Scottish Finance Ltd. has become the operating company, while the parent company has changed its name to Lloyds & Scottish Ltd. His statement follows:

It is appropriate that I should first make reference to a scheme of domestic reorganization which was recently completed.

Since the formation of Lloyds & Scottish Finance in 1958 your directors have always had in mind the fusion of the two main operating groups—Olds Discount and Scottish Midland Guarantee Trust. It was, however, thought unwise to rush this merger until the two groups—and particularly the senior officers—had been given time to get to know each other. The end of this phase was reached on 30th September 1961 and since that date one operating company, Lloyds & Scottish Finance, has been underwriting all new business. The board members of the new operating company are shown in the Report, but I would particularly make reference to the appointment of Mr. John McQuesten as Managing Director. He has had long experience in the hire purchase field and has been managing Scottish Midland Guarantee Trust since 1939.

As a consequence of the merger the name of this—the parent—company has been changed to Lloyds & Scottish Limited. Its function, as formerly, is confined to the holding of subsidiary and associated company investments and funds.

We recently welcomed to this parent Board The Rt. Hon. Viscount Runciman of Doxford and Mr. George T. Chiene. Lord Runciman is a Vice-Chairman of Lloyds Bank, and Mr. Chiene a director of National Commercial Bank of Scotland.

A most difficult year

The past year has proved to be one of the most difficult ever experienced by hire purchase finance companies in the United Kingdom. The main source of trouble can be ascribed to motor and vehicle financing, where as the months passed the losses from bad debts and repossessions mounted. These set-backs were particularly severe in one section of our group business which tended to concentrate on the underwriting of contracts covering second-hand cars and motor cycles.

A combination of circumstances gave rise to this situation: (1) inadequate down-payments, (2) excessively long periods for repayment, (3) a collapse in second-hand vehicle prices. As a result, the market value of the vehicle frequently fell far below the aggregate of future instalments, and many hirers defaulted on their contracts, leaving the finance company to take a heavy loss on repossession, which may or may not be recoverable depending on the financial status of the hirer. This combination of events had not previously happened in the post-war period, and managers who lacked such experience did not anticipate the violence of the consequences. It is not yet possible to say with confidence that further losses will not emerge from 1958/59 contracts as a serious unbalance between market value and future instalments remains, but the situation is protected by the taxed contingency reserves of £300,000, shown in the Consolidated Balance Sheet.

A basis for future growth

In any event, the unbalance is a diminishing factor, as contracts placed on the books since the statutory restrictions were reimposed in 1960 contain a much weaker mixture of the dangerous ingredients. More recently the members of the Finance Houses Association have collectively recognized the need for realistic terms in the motor vehicle field, not only for their own safety, but also to protect hirers from the embarrassments which frequently emerge from contracts with low deposits and long repayment periods.

I would venture the opinion that while the price has been high, the lessons learned have had a salutary effect, and that future growth—which seems assured—will have stronger roots and fewer mushroom characteristics.

The other main divisions of our Home business have functioned satisfactorily and shown reasonable profits. Retail sales of domestic durables were slow to recover from the relatively severe hire purchase restrictions imposed in April 1960, following a control-free period when sales were unusually high. There was, however, a measure of relaxation in the controls in January 1961, and a more normal level of retail sales has been achieved in recent months.

Developments overseas

During the past year there has been some moderate increase in our overseas interests. In the Caribbean area we acquired from Lombank Limited companies in Jamaica and Bahamas. These are being combined with our existing interests and should strengthen our competitive position in these islands.

In South Africa we are associated with the Netherlands Bank of South Africa and British & Commonwealth Shipping and, as a consortium, we recently acquired the balance of the ordinary shares of the Credit Corporation of South Africa. On the completion of this transaction the Credit Corporation became, in terms of British company law, a subsidiary of Lloyds & Scottish. As the Credit Corporation's most recent annual accounts were prepared to a date prior to this acquisition, these have not been incorporated in our consolidated figures.

Our participation in Eurocredit is proving satisfactory. Controlling interests in companies in France, Italy and Switzerland have been acquired, and, although no dividend has yet been paid by Eurocredit, its subsidiaries are earning reasonable profits. We consider that, given good management, our investment in Western Europe should prosper, particularly as the stage of growth of instalment finance is some years behind that reached in this country.

Generally speaking, our other overseas companies have had a difficult year. Local management problems have arisen simultaneously in several widely separated areas, and it is not easy to find immediate and effective solutions. There is also inevitably a price to be paid in profit set-back during such occurrences. Another factor, which is rarely favourable, is government financial policy. Restrictions and cramping regulations imposed on the providers of credit are nowadays all too frequent in many parts of the world. As in this country, it is not so much the restrictions as their frequent variation which creates the problems.

Effects on profits

The accounts show that the trading profit of the group has fallen heavily as compared with the previous year, from £3,000,574 to £739,004. As I have already stated, serious trouble was experienced in one of our motor divisions where large provisions have been made for bad and doubtful debts. We also incurred a considerable loss in an overseas subsidiary. Another adverse factor was the high average cost of money—not compensated by any increase in hire purchase rates until almost the end of the financial year.

The volume of our group business has been well maintained, and the Consolidated Balance Sheet shows that Hire Purchase and other Debtors now exceed £100 million.

Lloyds & Scottish Ltd

(OWNED BY LLOYDS BANK LTD AND NATIONAL COMMERCIAL BANK OF SCOTLAND LTD)

CARRERAS LIMITED

A NOTABLE YEAR IN COMPANY'S HISTORY

TRADING RESULTS SHOW A MARKED IMPROVEMENT

PROGRESS IN HOME AND OVERSEAS MARKETS

An Extraordinary General Meeting of Carreras Limited was held on December 5th at Basildon, Essex, **Mr John H. Hansard** (the Chairman) presiding.

The following is his statement which had been circulated with the report and accounts:

The year under review has been an important one in the history of your Company. A number of changes have taken place which have been the subject of separate advices to shareholders and I will comment on these matters later in this statement.

In May of this year Dr Anthony E. Rupert expressed the wish to retire from the Chairmanship following the satisfactory completion of the scheme for the integration of the interests of your Company with those of Rothmans Limited in the United Kingdom and certain other territories. This was in accordance with Dr Rupert's usual policy not to hold the Chairmanship of any of the overseas companies in the Rembrandt Group.

I considered it a great honour when Dr Rupert and my colleagues asked me to assume the Chairmanship of the Board.

NEW BOARD APPOINTMENTS

Since our last Annual General Meeting two Directors have been appointed to the Board: Mr D. S. A. Carroll, the Chairman and Managing Director of P. J. Carroll and Company Limited in the Republic of Ireland, and Mr D. C. Owers, the Managing Director of Rothmans of Pall Mall Limited. Both these gentlemen have considerable experience of our industry and I am sure that their services to your Company will prove to be of great value.

ACCOUNTS

As forecast, the trading result for the year ended June 30, 1961, showed a marked improvement in your Company's affairs: this is commented upon in the Report of the Directors. The Group Profit before taxation amounted to £2,607,752, an increase of 47 per cent over the previous year.

Your Directors have recommended a final dividend on the Ordinary and "B" Ordinary shares of 6½ per cent less income tax, which with the interim dividend paid on June 30, 1961, will make a total of 9 per cent less income tax for the year. This compares with a total of 8 per cent less income tax for the previous year and an annual rate for the preceding three years of 6 per cent less income tax.

In recommending this dividend your Board has borne in mind the request of the Chancellor of the Exchequer for dividend restraint. At the time of his request, the Interim Dividend had already been increased from 2 per cent to 2½ per cent and we felt that, in fairness to Shareholders, the minimum Final Dividend we could pay was 6½ per cent. But for the Chancellor's request, the Directors would have been fully justified in recommending a higher rate of Final Dividend.

THE YEAR'S TRADING

The sales of Carreras' leading brands, Piccadilly No. 1 and Guards Filter cigarettes, have achieved a further steady increase in the United Kingdom market.

Our export trade has had a most successful year.

The improvement in the parent Company's affairs is in part attributable to the benefits arising from the Company's first full year of manufacture in the new plant at Basildon. The machinery and equipment installed during 1959 and the early part of 1960 is proving its value in relation to higher output and economy in operation, whilst the labour force, over half of which was recruited locally following the removal of manufacture from London to the New Town, has settled down to its task with increasing efficiency.

An important share of the increase in profits is also attributable to the inclusion this year of the profits earned by Rothmans of Pall Mall Limited, the entire share capital of which was acquired by Carreras Limited under the recent integration scheme. The rapid expansion during the past few years in the sales of Rothmans brands in the United Kingdom market was maintained during the year under review and amply justified the confidence of your Board in the value of your Company's new investment. The vigorous policy of sales promotion adopted by the Rothmans Board, which secured for Rothmans of Pall Mall Limited the position of market leaders in King Size Filter cigarettes, has been continued.

The sales of Peter Stuyvesant King Size Filter cigarettes, marketed by the American Cigarette Company (Overseas) Limited, have also shown a considerable increase.

The arrangements made with Rothmans of Pall Mall Export Limited for the manufacture of its brands for overseas markets have resulted in a further useful contribution to the improvement in your Company's affairs.

During the year Murray Sons and Company Limited celebrated the 150th anniversary of its business in the pipe tobacco industry. Sales of the Company's products, notably of Erinmore pipe tobaccos, were well maintained and earned for the Company an encouraging increase in profits.

Useful links have been forged with our new associate, P. J. Carroll and Company Limited in the Republic of Ireland. That Company has had a very good year and has increased its share of the Irish cigarette market. It also commenced to develop Group brands in that market.

CANADA

The rise in Group Profits was offset by adverse trading conditions experienced by your subsidiary, Rock City Tobacco Company Limited. The profits earned by Rock City Tobacco Company Limited to the date of its liquidation were sharply reduced in relation to the previous year's level. As members were informed earlier this year, your Company's investment in this subsidiary company was realised at the end of 1960 by the liquidation of that company. With part of the proceeds your Company took up Debentures in a new Canadian associated company and accordingly in future your Company's income from Canada will be represented by the interest receivable on these Debentures. It should be noted, however, that your Company has the opportunity of taking up a reasonable stake in the Canadian associate companies on favourable terms. Whilst it is too early at this stage to judge the results of the reorganisation, your Board considers that the chances of success of these companies in the highly competitive Canadian cigarette market should be materially improved by the pooling of the resources and by the economies to be gained in manufacturing and overhead expenses. I reiterate the Board's hope that these Canadian companies will achieve increasingly satisfactory results and in that event the arrangements made for an equity participation by your Company should be of substantial benefit for the future.

DEVELOPMENT PROGRAMME

The major part of the Board's initial plan for the reorganisation of your Company's affairs has been accomplished and satisfactory benefits have been obtained. Modernisation is to us a continuous process and further expenditure is, therefore, being undertaken to ensure maximum production efficiency.

ORGANISATION

In order to provide improved administration which has become necessary with the increasing size of your Group, certain internal reorganisation has been carried out and separate companies have been formed to deal with both your Company's home trade and overseas affairs. It is felt that this approach will enable greater concentration upon the various aspects of the business and there is included later in this report a summary of principal Group companies at the present time.

FUTURE PROSPECTS

Your Company is consolidating the progress made and is continuing its policy of going forward carefully and objectively.

Since the end of the financial year, the United Kingdom market has been adversely affected by the Chancellor of the Exchequer's "Little Budget" which increased the rate of duty on tobacco by 10 per cent. The rate of duty on unmanufactured tobacco already stood at 64s. 6d. per lb and accounted for approximately three quarters of the price of cigarettes to the smoking public. Whilst being most aware of the need for the Government to take action to control the economy of the country, it seems somewhat unrealistic to increase the duty so severely on products already carrying such an enormous rate of tax. It is too early to judge the effect of the surcharge on the industry, but it is bound to reduce consumption at least for a period. In our case we produce for the United Kingdom market and for the Export Trade from the same plant, and obviously any reduction in the Home Trade turnover must affect our Export costs. We hope that the situation will settle down and we believe that by skilful management we can continue to improve the Company's position.

I would again like to record on your behalf our appreciation and thanks to our Bankers, Legal Advisers and Auditors for their valuable services to the Company.

It is customary to thank, on your behalf, the Directors, Management and Staff of the Company for their hard work during the year under review. On this occasion, however, I would like to pay a special tribute to the Management, Supervisory Staff and all employed for a most splendid effort during the year; much of the improved results before us must be attributed to the loyal support and the extremely hard work which has been so readily forthcoming from them.

The report and accounts were adopted.

INDUSTRIAL FINANCE AND INVESTMENT CORPORATION

REVENUE AGAIN LARGER

MR J. N. BUCHANAN'S STATEMENT

The Thirty-sixth Annual General Meeting of The Industrial Finance and Investment Corporation, Ltd., will be held on December 28th at Winchester House, Old Broad Street, London, E.C.

The following is the statement by the chairman, **Mr J. N. Buchanan, DSO, MC,** which has been circulated with the report and accounts:

It will be seen from the Accounts for the year ending June 30, 1961, that the gross revenue arising from Investment income and profit from Finance business and on realisation of investments has again progressed satisfactorily.

HIRE-PURCHASE OPERATIONS

On the other hand, these results have been impaired by the unsatisfactory operation of our Hire-Purchase Group.

Shareholders will remember that the Hire Purchase Group was first embarked upon in the spring of 1959—in retrospect a singularly unfavourable moment. In the intervening period, there have been the "free for all," the credit squeeze and high Bank Rate, none of which have been conducive to a satisfactory outcome of contracts entered into over much of the past two years. In addition, it must be admitted that, with exceptions, the management of the Hire-Purchase Group has left much to be desired, both from the angle of able assessment of risks and organising ability. Although the loss incurred is unpleasant, the resilience of the Company's traditional business enables payment of the same dividend as for the previous year without drawing on the Company's substantial reserves.

Radical steps have been and are still being taken to surmount the difficulties of the Hire-Purchase Group, but time will be needed to produce profits commensurate with the funds involved.

ENGINEERING INTEREST

Towards the latter part of the year under review, our engineering subsidiary was amalgamated on a satisfactory basis with a similar engineering group, and we received in exchange Shares with a Stock Exchange quotation.

Both the economic and political situations currently make investment on the short term somewhat hazardous; but, despite a number of disappointing reports from industry generally—probably with more to come—the revenue from our portfolio has so far stood the test quite satisfactorily.

Private treatment in Illness

B U P A

SHIELD IN YOUR ILLNESS

President:
The Rt. Hon. VISCOUNT NUFFIELD,
G.B.E., C.H., F.R.S.

BUPA's PROGRESS

The 14th annual report of the British United Provident Association, presented by Sir Andrew H. Rowell, F.I.A., Chairman of the Board of Governors, is convincing evidence of the great and growing demand for private treatment in illness . . .

At the close of the financial year about 975,000 people were covered by BUPA. There were 42,085 new registrations during the year. More than 100,000 subscribers claimed benefit.

The report is also striking testimony to the efficient and economical way in which BUPA is run . . .

From a subscription income of £4,026,981 no less than £3,396,830 (nearly 85%) was paid out in claims.

Nevertheless BUPA was able to continue its policy of sponsoring new and improved facilities for private treatment . . .

Once again out of investment income, BUPA paid £40,000 to the Nuffield Nursing Homes Trust.

If you would like to have a copy of the Annual Report and Statement of Accounts for the year ended 30th June, 1961, please write to:

THE BRITISH UNITED PROVIDENT ASSOCIATION
Essex Street, London, W.C.2.

BIRMID INDUSTRIES

The annual general meeting of Birmid Industries, Ltd., was held on December 5th at Birmingham, **The Most Honourable The Marquess of Exeter, KCMG,** chairman, presiding.

The following is an extract from his circulated Statement for the year to July 31, 1961:

Group profits have declined as compared with the previous financial year. A number of factors have contributed to this situation. Whilst the level of Group sales has been substantially maintained, profit margins have narrowed considerably.

Your Directors feel, however, fully justified in recommending a final dividend at the rate of 15 per cent. This maintains the total dividend for the year at 20 per cent.

Taxation at £1,655,906 against Net Profits of £1,360,434 is again adversely affected by the increase in Profits Tax and this year's charge means that the Exchequer will take nearly 11s. 0d. from every £1 of our earnings.

PRODUCTION & SALES: During the year demand from the motor trade in particular was fairly well maintained; as a result, total Group Sales were about the same as in the last financial year. Production costs, however were considerably higher due to a variety of causes beyond our control and, in consequence, profit margins were measurably reduced.

The aircraft industry maintained a reasonable level of activity and your light alloy foundries and rolling mills secured their fair share of the business. There is an increasing demand for high precision castings in light alloys and our department dealing with this type of product is being expanded.

At the rolling mills the Sendzimir strip mill has fully justified our expectations and plans are under review for expanding the scope of manufacture from the unit.

EXPORTS: Direct exports are limited almost entirely to wrought light alloys and in the main go to Northern Europe. Competition is even more severe than it was last year, but we are holding our own though, currently, not increasing our share of the market.

Your Directors have given much thought to the implications of Great Britain joining the Common Market. It will certainly mean that we, in common with other British Manufacturers, will be faced with even keener competition in the Home Market. If such a contingency is recognised as inevitable, it should be a stimulus to greater efficiency in our manufacturing and marketing organisation. On the credit side, it does though seem that there may be a certain market in Europe for some of our specialised wrought and cast products. Full membership of the Common Market could well mean that our chief customers could increase their exports to Europe to a degree which would more than compensate for any loss in the Home Market to European competition. This, indirectly could entail increased business for our foundries.

PROSPECTS: At the present time there has been a very distinct falling off in demand from the motor and other consumer industries and it seems unlikely that this will improve before the New Year. Competition for available business is keener than ever, so much so, that in order to secure contracts it would seem that profit margins would have to be drastically reduced or, in some cases, entirely disappear.

The report and accounts were adopted.

AUSTIN & PICKERSGILL LIMITED

RECORD TRADING RESULTS

MR J. H. KING ON SATISFACTORY CURRENT ORDER BOOK

The sixty-second annual general meeting of Austin & Pickersgill Limited was held on November 30th in London.

Mr J. H. King, the chairman, presided.

The following is his circulated statement:

The profit for the year before taxation amounts to £591,687, against £462,666 for the year to June, 1960. This is a record figure for this Company, but it carries with it a record taxation charge of £309,197.

Your directors have transferred to capital reserve £450,000 from general reserve and £233,837 from unappropriated profits, thereby raising the capital reserves to £1,212,500.

The dividend recommended on the ordinary shares is unchanged at 15 per cent less income tax.

THE YEAR'S OPERATIONS

The highly satisfactory result is due largely to the continued efficiency of our modern shipyard at Southwick. We delivered six new ships during the year, including two of over 18,000 tons deadweight, our biggest ships to date.

The Ship Repair Department has made an important contribution to the profit, with the reconstituted graving dock at the Wear Dockyard in operation during most of the year. In addition, we have carried out special surveys and repairs afloat to several vessels of 10,000 tons deadweight and over, going well beyond the old small ship range of the dockyard.

This year's figures include profits on ships which were contracted for up to four years ago, before the present recession got into its stride, when it was still possible to obtain orders with reasonable profit margins. We have now worked through these old orders, and our present contracts have been obtained at very keen prices indeed. I must warn you, therefore, that the result for the year to June 30, 1962, will inevitably show a very large reduction in profits in comparison with 1961.

Our order book is satisfactory inasmuch as it will keep both the Southwick Yard and the Wear Dockyard building berths going for 12 months, and of course the management are constantly on the watch to secure further orders.

INADEQUACY OF LONG-TERM CREDIT FACILITIES

We have a modern, well equipped and efficient shipyard, which is building ships as quickly and as cheaply as any in Europe, if not in the whole world. We can offer quick and prompt deliveries, and are sure that our prices compare very favourably with those of our competitors. Our biggest difficulty at the present time is the lack of adequate long-term credit facilities, available readily and at interest rates comparable with those obtainable abroad. Many foreign owners insist on substantial credit for long periods, and some British owners have placed orders abroad because of extended credit terms. I feel that the lack of suitable long-term credit facilities presents the biggest obstacle to British shipbuilding at the present time.

Nevertheless, I remain confident that with our up-to-date plant and methods and our determination to keep abreast of the latest technical developments, we shall continue to be competitive through these difficult times.

Lastly, it is my pleasant duty to thank, on your behalf, every employee of the Company. They have all worked with keenness and zest through another year.

It is also pleasant to place on record that during the period under review no labour troubles whatever have raised their heads and that throughout the organisation, under the leadership of our managing director, there is an atmosphere of team spirit which is both notable and admirable.

The report and accounts were adopted.

NORTHGATE GROUP LIMITED

The following points are summarised from the Statement by the Chairman, **Mr F. S. Bassett,** accompanying the Report and Accounts for the year ended 30th June, 1961:

- ★ The Trading Profit of the Group again showed an increase. The net amount of £280,605 before taxation is approximately 14% in excess of the previous year's figure.
- ★ The Directors recommend the payment of a final dividend of 17½%, less tax, making, with the interim of 10%, less tax, paid in June last, a total distribution for the year of 27½%, less tax, the same as for 1959-60.
- ★ Capital Reserves have increased to £531,467 from £264,808 in the preceding year, and in addition there are Revenue Reserves amounting to £112,678. It is proposed that a sum of £104,612 be capitalised from the Capital Reserves and distributed as a free share bonus in the ratio of one new Ordinary share of 2s. for every four Ordinary shares held.
- ★ Our largest interest, the Jacobs Group of Companies, continued its progress during the year and production and sales reached a level well in excess of the previous 12 months, which in its turn was a high record.
- ★ The Nyla Knitting Company Limited and the Undie Fabric Company Limited have already proved valuable complementary businesses to the Jacobs Group. Their earnings for the past year exceeded the forecast made at the time of our acquisition and the combined sales and profits were a record for the sixth year in succession.
- ★ It is our intention to acquire further businesses as and when appropriate opportunities occur.

A copy of the brochure containing the Annual Report and Accounts and Chairman's Statement can be obtained from the Company's Registrars at 17 St. Helen's Place, London, E.C.3.

BANK OF MONTREAL

REALISTIC APPROACH TO NEW CHALLENGES URGED

The one hundred and forty-fourth annual general meeting of the Bank of Montreal was held on December 4th in Montreal.

Mr G. Arnold Hart, the President, in the course of his speech, said:

The last twelve months have been eventful ones, bringing many changes both in Canada and abroad. On the Canadian economic scene, business on the whole has shown signs of increased activity in contrast to the recession that characterised most of the previous year. But in spite of the higher levels that have been achieved in output, income and employment, all sectors of the economy have not shared to the same extent in the advance that has taken place. While we can derive satisfaction from the extent of the recovery thus far, it remains a fact that the present pace of business recovery in Canada still falls short of the rate of growth we would wish to see.

Commenting on the United Kingdom's possible entry into the European Common Market, Mr Hart said: I would urge that we not be too hasty in our judgment, nor adopt a defeatist attitude. I would suggest that instead of merely opposing changes from existing arrangements we take a positive approach to the problem of the United Kingdom, the Commonwealth and the Common Market and that we consider the wider implications rather than just the possible short-term effects on Canada. If it seems apparent that there are economic advantages in Britain joining the Common Market, I am sure we would all rather see a stronger Britain in the Common Market than a weaker Britain outside it.

In a wider context it seems to me that we shall reap nothing but disappointment from taking a negative attitude in our international dealings. Faced as we are with an increasingly competitive world we should be active in meeting the competition, and in adapting ourselves to the changing world environment.

GENERAL MANAGER'S ADDRESS

In the course of his address, Mr R. D. Mulholland, Vice-President and General Manager, said: Noteworthy progress has been made in all departments of our business and I trust that the results may be regarded as satisfactory.

After providing for depreciation of premises and equipment, transfers to inner reserves and income taxes, our net profits amounted to $14,578,817 A sum of $12,453,750 has been provided therefrom for regular and extra dividends, amounting in total to $2.05 per share compared with $2.00 for the preceding year.

At the end of the fiscal year, total assets of the Bank amounted to $3,950,000,000, an increase for the year of $464,000,000 or 13.3 per cent. The increase in our assets represented the largest increase ever experienced in a year by any Canadian bank.

Total deposits at $3,647,000,000 showed a very satisfactory increase of $446,000,000 during the year, and constituted a year-end record for the Bank. During the year the number of deposit accounts on our books increased by 134,000, of which over 100,000 were savings accounts, and we are now bankers for more than 3 million Canadians.

NETHERLANDS BANK OF SOUTH AFRICA LIMITED

DIVIDEND 10 PER CENT

The Eleventh Ordinary General Meeting of Shareholders of the Netherlands Bank of South Africa Limited was held on December 5, 1961.

The following is an extract from the circulated statement by the Chairman, Dr. F. J. C. Cronjé:

INTRODUCTION

Before dealing with developments that took place during the 1960-61 financial year, which ended on September 30th, I think it would be appropriate to mention certain important proposals which were recently made in regard to the capital structure and share holdings of our institution.

More specifically I refer to our circular to shareholders and to statements issued to the press towards the end of October when the public was informed that the Netherlands Bank of South Africa Limited is in the process of becoming a South African controlled institution and, moreover, is planning to strengthen its banking participation in Western Europe by means of a two-way share transaction with its Netherlands affiliate, the Nederlandse Overzee Bank N.V. with its Head Office in Amsterdam.

Briefly these changes involve, first, an increase in our total issued capital to R6,000,000 through a local issue of 500,000 shares of R2 each; second, a reduction in the shareholdings of our Netherlands affiliate, the Nederlandse Overzee Bank N.V., from a majority interest of 75 per cent (before the new issue) to a minority share of about 49 per cent (after the new issue) by virtue of an offer of 775,000 shares in our Bank to South African institutional and other investors; and, third and finally, a 12 per cent participation by our Bank in the share capital of the Nederlandse Overzee Bank N.V. with representation on its Board of Directors.

Considered from both a national and international point of view it will be clear that these changes in our operational basis offer many advantages and considerable scope for further progress.

POSITION OF THE BANK

Accounts.—Last year we were in doubt to which extent the adverse influences on the balance of payments would affect our position. As imports continued on at least the same level as last year, and our activities in the export field remained quite satisfactory, the effect on our international business did not confirm our uneasiness as expressed in our last report. Locally the ensuing scarcity of money resulted in an increased demand for facilities and the higher interest income contributed to a large extent to the favourable results of this financial year. We are also pleased to report a continued considerable increase in the revenue from commission which is indicative of a larger volume of business. Other sources of income remained at a satisfactory level. Expenditure again showed an upward trend and special measures are taken to keep this unfavourable development within reasonable limits.

During the last few months the liquidity of the bank improved considerably when the restrictive measures in regard to imports and capital movements became effective. Notwithstanding increased competition from other sources for credit moneys we are pleased to state that last year's levels could be increased. As a result of the recent general developments in this country combined commitments by our customers under advances and bills decreased.

Building operations in various centres and especially in Johannesburg, where we expect to occupy the first completed portion of our new premises towards the end of the year, caused a further moderate increase under the heading Bank Premises.

As is customary, all additions to furniture, office equipment and stationery were written off and adequate provision has been made for taxation, possible bad and doubtful debts, depreciation of bank buildings and for the usual strengthening of the Staff Pension Fund.

Business outside this continent showed a further satisfactory development to which our London Office and our Representative in New York contributed their valuable share. The co-operation with our affiliate, the Nederlandse Overzee Bank N.V., with their various offices on the European Continent and in the Western Hemisphere, continued to be a great asset.

Directors' Report.—In the Directors' Report it is proposed to increase the Reserves by R200,000 to R3,200,000. In view of the higher demands which will be made upon our Staff Pension Fund as a result of the conversion of the cost of living allowance into pensionable salary, your directors consider it advisable to make an additional contribution to the Fund of R100,000.

The favourable results obtained during this financial year enabled your Directors to declare interim dividends of 5 per cent in August and October making a total of 10 per cent in comparison to last year's 8½ per cent. No further dividend is recommended to be paid from the profits for the 1960-61 financial year.

The report and accounts were adopted.

NEEPSEND STEEL & TOOL CORPORATION LIMITED

FULL PRODUCTION MAINTAINED

The forty-first annual general meeting of Neepsend Steel & Tool Corporation Limited was held on December 5th at Sheffield, **Sir Stuart C. Goodwin, DL, JP, LLD,** the President, in the chair.

The following is an extract from his circulated statement:

Our report shows that we have again had a satisfactory year, and, whilst there will be regret that there is no increase in the dividend, I am confident that our Stockholders will recognise that in conforming with the wishes of the Chancellor of the Exchequer, we are acting in the best interests of the country, and, of the several industries in which we have our sphere of activities.

It is of particular satisfaction to report that despite the many difficulties encountered in the year's trading, we have maintained full working production throughout the period.

This state of affairs has continued up to recent days, but there is now a slight falling off in the activities of certain of our smaller companies. Nevertheless, this is not expected to have any really serious effect, and we are hopeful that unless unforeseen conditions intervene, we shall be able to present a satisfactory profit position next year and to maintain the present dividend.

Our export trade has improved considerably during the past year.

The trading profits for the year before taxation have amounted to £1,473,348, as against a figure of £1,210,920 in the previous year.

The report was adopted.

EMI **Electric & Musical Industries Limited**

Progress during the year ended 30th June, 1961

Year to June 30	1960 £	1961 £
Group sales	68,700,000	82,440,000
Trading profit	6,931,000	7,836,000
Depreciation	1,422,000	1,932,000
Interest	288,000	456,000
Pre-tax profits	5,221,000	5,448,000
Tax	2,714,000	2,834,000
Net profit	2,413,000	2,443,000

RECORDS Total sales of our record company in the United Kingdom rose considerably, despite a fall in exports, which was more than offset by a very large increase of sales in the home market.

TRANSMITTING EQUIPMENT We have been particularly successful with our export business in these products. For example, all the transmitting and studio equipment, for television and sound, of the broadcasting service in Northern Nigeria is to be supplied and installed by E.M.I.

As a result of outstanding technical merit, the E.M.I. aerial systems are regarded as the best in the country. We are now undertaking most of the main aerial projects here.

TELEVISION E.M.I. community television systems are being installed in many places. It seems likely that wired television will be essential in many areas for colour television.

Closed circuit television is an expanding market in which we are increasing our share.

COMPUTERS We were the first company to instal a fully transistorised computer in a business house.

Late in the financial year, we delivered to the Ministry of Pensions the first part of the EMIDEC 2400 computer, which ultimately will be carrying out the whole of the clerical work for the new State Graduated Pension Scheme.

ELECTRICAL HOUSEHOLD APPLIANCES Although our sales of small appliances—irons, toasters, fires, shavers—were higher than in the preceding financial year, our sales of refrigerators and spin dryers were upset by the hire purchase restrictions imposed by the Government in April, 1960.

MAGNETIC TAPES There was a steep rise in the sales of both video and instrumentation tapes during the latter half of the financial year. There was a substantial rise in exports.

THE FUTURE The prospects of the Group's sales seem good, and in the year to June, 1962 they may well reach a total of the order of £90 millions, assuming no political crises.

HIGHLIGHTS FROM NATIONAL BANK CHAIRMAN'S 1961 ADDRESS

Mr. J. A. Forrest, Melbourne, 29/11/61.

EXPORT INCOME MUST RISE. To achieve steady national progress, we must concentrate upon lifting our export income. This is fundamental to any lasting solution of our recurring balance of payments problem. Export income has not kept pace with national development. Last year, exports would need to have been about £100m. higher to equal the pre-war ratio to national production of 15%.

MORE EXPORTS ARE PART OF DEVELOPMENT. As individual citizens, we must grasp the idea that expansion of exports is a part of national development just as surely as is the new dam, the new railway line, the new factory. To raise it by anything like the £250m. a year suggested by the Export Development Council is a gigantic task, and its magnitude and importance must be brought home to the nation. There must be a nation-wide urge to produce for export.

RESPONSIBILITY OF GOVERNMENTS. Creation of the appropriate climate within Australia to aid production for export is a responsibility of governments. This would be a valuable complement to the help in various other ways being given by government to private enterprise to build up export income.

ENCOURAGEMENT OF IMPORT REPLACEMENT. Full encouragement must be given production that will replace imports. In appropriate cases, greater and perhaps wider use should be made of the tariff to aid efficient local manufacturers. If costs are to be reduced production facilities must be fully employed. Testing production of tropical and sub-tropical agricultural products in northern areas, and searching for oil, are examples of possible import replacement.

OUR EFFORTS MUST COMPLEMENT CAPITAL INFLOW. Our young and developing country, with excellent long-term business prospects, merits the full attention of overseas friends, whether their interest be productive enterprise or portfolio investment. But we should not be content to rely upon them for maintenance of our international financial stability. If necessary, we must accept whatever sacrifices may be needed to enlarge our contribution as an international trading partner, because economic isolation is an impossibility for Australia.

ACCOUNTS. Assets increased by nearly £4m. to £368m., an all-time record. Net profit rose by £94,000 to £1,074,000, also a record. Increase in expenses was £177,000, and higher profits were achieved mainly because of more realistic charges for certain services, and additional income from increased business in some sections of the Bank's operations.

STAFF THANKED. The Bank's staff in Australia and London were thanked for the high standards maintained, and the service given over the year.

THE NATIONAL BANK OF AUSTRALASIA LIMITED

(Inc. in Victoria)

Registered Office: 271-279 Collins Street, Melbourne
Chief London Office: 6-8 Tokenhouse Yard, E.C.2

890 Offices throughout Australia. Total Assets: £368 million.

The Board has decided to recommend a free bonus issue of one new stock unit of 5s. in respect of every two stock units held. Subject to profits being maintained at a satisfactory level, and in the absence of any adverse circumstances not at present foreseen, it is the intention to recommend dividends on the capital as increased by the proposed bonus issue at the rate of 30% for the year ending 30th June, 1962, which is the equivalent of 45% on the present capital.

STAVELEY INDUSTRIES LIMITED

FACTORS AFFECTING PROFITS

The ninety-eighth annual general meeting of Staveley Industries Limited was held on December 6th in London, **Mr John P. Hunt, TD,** the chairman, presiding.

The following are extracts from his circulated statement:

Last year I said that it would be reasonable to look forward to a further increase in profits but as indicated in March of this year they have fallen from £1,657,843 to £1,385,404.

This reduction in profits in the main is attributable to three factors. Firstly, the expected improvement in Canada did not materialise as in fact trading conditions in that country rapidly deteriorated, particularly in the West. As a result, not only was general profitability of the Standard-Modern Tool Company Limited reduced but in addition serious losses were incurred in the form of bad debts and repossessions of equipment sold on hire purchase terms. There are now some indications of improvement in the Canadian economy, nevertheless certain steps have been taken to reduce and also to concentrate our operations. Your directors considered it prudent to write down the investment in this company by £250,000 out of capital reserves. Secondly, the difficulties of the machine tool subsidiaries proved more prolonged than anticipated—difficulties which have been accentuated by labour shortages and a large programme of machine tool redesign. Thirdly, during the past year our research and development costs in relation to those subsidiaries interested in machine tools have been in excess of £220,000—more than twice the previous year's figure—nevertheless a most necessary expenditure for the future success of the Group.

Your directors recommend a final dividend of 8 per cent, less income tax, which makes a total of 11 per cent for the year.

The authorised share capital of the company was increased to £10,000,000 at the annual general meeting held on December 7, 1960. Your directors have no present plans for the issue of the additional shares.

Your board has decided to prepare future accounts to September 30th. The next account will be for a period of fifteen months to September 30, 1962. Alterations will be necessary in the dates of payment of dividends and for this initial period your board will consider the payment of interim dividends on March 31 and June 30, 1962, and a final dividend in March 1963. Thereafter it is anticipated that an interim dividend will be paid in June and a final dividend in March of each year.

The Staveley Research Department was the first integrated industrial machine tool research unit in the country and considerable technological advances have been made which have contributed to our improved machine tool order book.

Operations throughout have been hampered by the acute shortage of skilled labour, especially in the machine tool companies. Apprentice training schemes have been extended in an attempt to ease the position. The Group has satisfactory order books and given reasonable trading conditions I look forward to the future.

The report was adopted.

HALEYBRIDGE INVESTMENT TRUST LTD.

COMPANY'S STRONG POSITION

The fourteenth Annual General Meeting of Haleybridge Investment Trust Limited was held on November 30th in London, **Sir Aynsley Bridgland, CBE** (the Chairman), presiding.

The following is an extract from his circulated statement:

The consolidated Accounts before you show a net profit after tax of £138,674, which is an increase of £11,632 over that of the previous year. Your Board recommend a final dividend of 7½ per cent making a total for the year of 12 per cent, and after payment of this dividend the balance carried forward on Revenue Account will be £179,036, an increase of £12,379.

During the year the market value of the quoted investments has increased by £782,073. They now appear in our Balance Sheet at a figure which is £2,497,769 below their Stock Exchange value.

I should perhaps say something more about these quoted investments which predominantly represent our shareholding in the Regis Property Co. Limited, a company which we, as a group, started and have built up through the years, and whose business is confined to investment in revenue producing properties.

The book value of the Regis company's assets, as its shareholders have been told, is considerably below the present market value and its income is shown in the statement issued by the Company to be steadily increasing. It is an exceedingly valuable investment and our holding, together with that of our Associates, gives us effective control, and provides us with a steadily increasing income. Even if we realised these investments it is in the opinion of your Board difficult indeed to reinvest our moneys in as satisfactory a manner. We are, therefore, very content to hold them.

In view of what I have said I think it would be the shareholders' opinion that our Company's position is a strong one.

The operations of our group are conducted by several subsidiaries, all of whom perform some part in the various transactions in which we are engaged.

These subsidiaries provide us with the machinery to raise money on a temporary basis, to carry through to completion our plans for extensions of our portfolio whether in flats or offices, to earn fees for services rendered to our clients and to enable us to preserve our investment income while our negotiations are pending by absorbing charges that are properly levied on the cost of the buildings or other projects we are striving to complete.

Our work each year, therefore, is through these subsidiaries to carry projects that are in various stages of negotiation until such time as they can be incorporated finally in our portfolio of investments, or otherwise disposed of.

By this means we are able to initiate, investigate and do all that is necessary to produce a result that in the end increases our revenue, without, in the meantime, having affected our investment income.

The dividend of 12 per cent which is recommended for the year largely comes out of a stable income, which gradually but surely is increasing and I am optimistic enough to say that this increase should go on for some years to come unless some unforeseen contingency arises. It must not be forgotten that our income from other sources can add considerably from time to time to our revenue.

The report and accounts were adopted.

ALSTONS LIMITED

PRÉCIS OF PRESIDENT'S REVIEW

At the annual general meeting held on November 16, 1961, the Directors' Report and Annual Audited Accounts for the fiscal year ended June 30, 1961, were adopted.

The Profits of the Company after taxation, write-offs and transfer to reserves totalled $813,374. Preference and Ordinary Dividends absorbed $475,537, leaving $337,837 to be carried forward.

A resolution was passed for the payment of final dividend of 10 per cent (less tax) in addition to interim dividend of 6 per cent (less tax) paid in April.

The Consolidated Group Accounts revealed profit (after taxation and write-offs) of $1,339,256, of which profits attributable to shareholders of Alstons Limited (after adjustments and transfers to reserves) totalled $781,310. Capital and Revenue Reserves totalled $4,651,817 by comparison with $3,992,932 at June 30, 1960.

Resulting from the take-over bid in July, 1961, by Caroni Limited for share capital of Woodford Lodge Estates Limited, a capital gain of $379,551 on disposal of the Company's shareholding was realised, and will be reflected in next financial year's accounts.

Two subsidiaries. Carib Glassworks Ltd., and Styrotex Ltd., incurred losses, but all other subsidiaries returned satisfactory results. Expansion programme of C.D.C. Ltd. started 1958-59 nears completion with total expenditure to date $2,994,453. C.D.C.'s subsidiary island breweries in St. Kitts and Grenada commenced brewing in September-October, 1961.

FURTHER ACQUISITIONS

The Company has acquired further shares of $250,000 in Tugs & Lighters Ltd., which Company's business continues to increase. By purchasing minority shares previously held by other shareholders, the Company acquired the entire shareholding in Spencer J. Kirton Ltd., whose trading results were satisfactory. A controlling interest in Metal Products Ltd., which manufactures Steel Windows, Doors, etc., under pioneer status, was acquired in July, 1961.

The President referred to the retirement on medical grounds of Sir Gerald Wight from the Board and the office of President, effective September 30, 1961, and paid tribute to Sir Gerald who had been responsible in large measure for the success of the Group. Regret was also expressed at the resignation of Major Alan Storey from the Board, effective June 30, 1961, and Mr Rupert Alexis as Consultant to the Produce Department.

It was resolved that the Articles be amended to enable the Directors to grant a pension on retirement to any Director who had previously held a salaried office with the Company.

A quotation for the Ordinary Shares on the London Stock Exchange had been obtained by successfully placing 50,231 $5.00 shares at $9.60.

SOCIETE ANONYME METALLURGIQUE

D'ESPERANCE-LONGDOZ

LIÈGE, BELGIUM

AGREEMENT WITH THE ALLEGHENY LUDLUM STEEL CORPORATION

The Annual General Meeting of the Societe Metallurgique d'Espérance-Longdoz was held on October 24th, and the following is a summary of the report presented by the Board of Directors.

REVIEW

During the year under review, the scope of the Company was broadened considerably by acquisition of the coal mine of *Winterslag*, and two agreements with the *Allegheny Ludlum Steel Corporation* of Pittsburgh and with two neighbouring firms in Belgium. The first agreement sets up a new Company called *Allegheny-Longdoz* which will manufacture stainless and special steels so that for the first time the Company will make other than mild steels. Under the second agreement with two Belgian firms in the same neighbourhood, the three Companies will together operate an electrolytic tinning and galvanising plant belonging to one of them.

The most important development during the year was the complete remodelling of the investment programme. A site has been chosen at Chertal in the lower valley of the Meuse near Liège for a new works which will operate in conjunction with those already existing at Seraing, Jemappe and Flémalle.

The new plant will include an LD works which was originally planned for Seraing and which will include two convertors each of 120 tons. The slabbing mill will take ingots up to 25 tons each. The most significant part of the plant, however, will be the two metre wide strip mill.

The capital needed for investments during the period 1959 to 1964 will be Bfrs. 7,500 million of which Bfrs. 400 million have been received by an increase in the capital in January, 1960. Credits from the *C.G.E.R.* and the *S.N.C.I.* total Bfrs. 2,650 million (half from each). A loan of $7 million has been made by the High Authority and Bfrs. 2,800 million will be ploughed back from profits.

During the last two years, there has been a true investment race in the Iron and Steel Community and especially in the flat plate section, and it is certainly necessary that investment policies of companies in the Community should be co-ordinated, as has been suggested in some circles in France and Germany.

IRON AND STEEL

The equipment programme for the three existing works was continued in addition to new expenditure at Chertal. The production of coke, pig iron and steel was affected by strikes but three blast furnaces were relined in order to allow for an increasing use of sinter. The operation of the rolling mills was improved still further so that the total annual output of cold rolled products reached 439,236 tons.

COAL

Due to increased mechanisation the production at *Winterslag* was raised by 19 per cent although the labour force fell by 452. 60 per cent of the coal sold was taken up by Espérance-Longdoz itself, 33 per cent by outside customers,

the remainder at the pithead and in the homes of the employees of the mines.

PROFIT AND DIVIDEND

The capital was raised on October 25, 1960, to Bfrs. 2,400 million. Net profit of the year after deduction of Bfrs. 499,860,375 in respect of amortisation amounted to Bfrs. 413,108,769. After various charges and the transfer to the Reserve Fund of Bfrs. 130 million, the profit available for distribution was Bfrs. 176,958,526. It is accordingly proposed to distribute a net dividend of Bfrs. 300.

BOARD OF DIRECTORS

(Conseil d'Administration)

Philippe Le Hodey (Président); Jean-Marie Roelandts (Vice-Président); Baron de Posson (Administrateur-Délégué); Pierre de M. d'Annevoie; Paul van den Corput; Pierre Ranscelot; Edouard de Coune; Charles Liagre; Vic. Philippe le Hardy de Beaulieu; Baron Coppée; Paul Heurard.

CORONATION SYNDICATE, LIMITED

(Incorporated in the Republic of South Africa)

The fifty-sixth annual general meeting of Coronation Syndicate, Limited will be held on December 22nd in Johannesburg.

The following are extracts from the circulated review by the chairman, **Mr S. F. Dench, FCIS:**

The net profit for the year earned by the Group, after charging R70,037 for depreciation and after transferring R9,068 to Output Equalisation Reserve and R4,550 to Cost Equalisation Reserve, was R369,459 as compared with R385,542 for the previous year.

Muriel Mine: The Ore Reserves are computed at 201,960 tons having a value of 10.4 dwt. per ton over a stoping width of 53 inches. Compared with last year, the tonnage is practically unchanged; the width has increased by 3 inches while the average value is lower by 0.1 dwt. per ton.

The working profit at the mine was R233,580, a decrease of R9,262 on the previous year. Working costs per ton milled were R6.39 against last year's figure of R6.26.

Arcturus Mine: The Ore Reserves are computed at 321,600 tons having a value of 7.4 dwt. per ton over a stoping width of 59 inches. Compared with last year there is a decrease of 25,850 tons; the average width is higher by one inch and the value by 0.1 dwt.

The working profit at R224,078 before charging depreciation, reflects an increase of R5,554 on that for last year. Working costs per ton milled were R5.43 as compared with R4.99 for the previous year.

Tebekwe Mine: Tribute royalty received during the year amounted to R1,894 as compared with R2,030 for the financial year ended June 30, 1960.

CROMPTON PARKINSON LIMITED

RECORD TURNOVER AND PROFITS
INCREASED EXPORTS

MR ALBERT PARKINSON'S REVIEW

The forty-eighth Annual General Meeting of Crompton Parkinson Limited, was held on December 7th in London, **Mr Albert Parkinson, MBE,** the chairman, presiding.

The following is an extract from his statement which had been circulated with the report and accounts for the year ended June 30, 1961:

The consistency of your Company's output in almost all its activities enables it now to look back at a year of both record turnover and record profits. The trading surplus, including investment income, has increased this year by £225,000 to £2,960,000—an increase of 8 per cent compared with the previous year. After Taxes, the consolidated net income is £1,306,000, of which it is proposed to distribute £582,000 and retain £724,000 in the Group. The Final Dividend of 7½ per cent on the Ordinary Stock which is recommended by the Directors makes an unchanged dividend of 12½ per cent for the year subject to income tax. The Directors propose to allot a limited number of ordinary shares year by year and to simplify the means by which persons in the Company's service can purchase ordinary shares in Crompton Parkinson Limited.

OVERSEAS

Since early 1959 the value of world exports has shown a remarkable increase and has sent levels of production to record heights.

In Australia business conditions have been difficult but our factories repeated the good results of last year. In India our jointly owned companies improved still further on the success of last year. In both South and Central Africa, despite disturbing conditions, there was an improvement in the performance of our companies. During the year our earnings from associated Lamp and Cable factories throughout the world, have shown a substantial increase. Direct exports have increased by 15 per cent on last year.

UK ACTIVITIES

In general terms our heavier products have faced difficulties during the year, while other products such as cables and lamps have shown encouraging evidence of recovery. Derby Cables Ltd. has had a busy year and there is some improvement from the drastically uneconomic prices from which the Cable industry suffered so seriously in the recent past. In the medium range of industrial motors, the output has been considerably increased and the demand has been buoyant. Fractional Horse Power Motor production has felt the effects of the situation existing in the domestic appliance field although, the industrial demand has remained good. Just as the appliance market has felt the curbs of Government fiscal measures, so has Traction business been affected by decisions relating to railway modernisation. The Company's Lamp business continues to make steady progress. In the last year new types of lamp have been produced which have met with a good response on the market. During the year our Lighting Fittings Works at Doncaster and our Battery Works at Newport have maintained their position most satisfactorily. Our Stud Welding business similarly enjoyed good trading.

THE OUTLOOK

Whilst the Company's outstanding orders are good, it is likely that because of rising costs most of these will have to be executed at profit rates which must be below those which we have experienced in this last and preceding years. Furthermore the consistency of demand will not, we believe, manifest itself to the same degree in the coming year and this is especially applicable to fields of Traction and Transformers. Every year the generation of electricity in almost every country in the world shows a striking increase. I believe that there can be no doubt about the inspiring prospects which confront our own industry and we must and will play our full part in the future.

APPOINTMENTS

GOVERNMENT OF THE FEDERATION OF RHODESIA & NYASALAND

DEPARTMENT OF TAXES
VACANCIES FOR TAX OFFICERS AND ASSESSORS

Tax Officer applicants must have one or more of the following qualifications: B.Com., Final C.I.S., or C.C.S., C.A., A.S.A.A., or A.C.C.A. Commencing salary depending on qualifications and experience, £795–10s. to £1,182 10s. p.a. There are good promotion prospects because a Tax Officer after serving for one year on a salary of £967 10s. p.a. gains automatic promotion to Assessor Grade II at a commencing salary of £1,343 15s. p.a. rising on a scale to £1,666 5s. per annum.

Three-year contract appointments may be offered to Tax Assessor applicants who are Chartered, Incorporated or Certified Accountants with at least one year of post-qualification experience, and to holders of B.Com. degrees or Final C.I.S., or C.C.S., with three or more years of post-qualification accounting experience.

Family passages, pensions, medical aid, generous sick and occasional leave; low income tax, good schools (free tuition), opportunities for sport and recreation in excellent climate.

Application forms and further details from the Secretary (R6), Rhodesia House, 429, Strand, London, W.C.2.

Closing date December 29, 1961.

UNIVERSITY OF SYDNEY

LECTURESHIP/SENIOR LECTURESHIP IN ECONOMICS

Applications are invited for the above mentioned position.

The salary for a Senior Lecturer is within the range £A2,550 x 95-£A3,000 per annum; for a Lecturer within the range £A1,730 x 105-£A2,435 per annum. In each case cost of living adjustments will be allowed (at present £A47 p.a.). The salary is subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Under the Staff Members' Housing Scheme in cases approved by the University and its Bankers, married men may be assisted by loans to purchase a house.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Australia and London on *February 9, 1962.*

For further appointments and other classified advertisements see pages 1082 and 1083

STAFFORDSHIRE COUNTY COUNCIL

EDUCATION DEPARTMENT

Applications are invited from suitably qualified persons for the newly-established appointment of STATISTICS OFFICER in this Department. Salary: A.P.T. Grade III (£960-£1,140 p.a.). Application forms and further particulars may be obtained from the Director of Education (Admin.), Education Offices, Earl Street, Stafford, to whom completed applications should be returned by December 22, 1961.

T. H. EVANS,
Clerk of the County Council.

OVERSEAS DEVELOPMENT INSTITUTE

RESEARCH OFFICERS

The Overseas Development Institute requires two research officers to work on problems of world development and aid of all kinds. One should be a professional economist; the other should be of similar standing but have specialist training in another subject (preferably a social science). Candidates must have good academic qualifications and considerable research experience.

Salary: Within the range of £1,500-£2,500 p.a. Appointment for 3 years in the first instance. Applications should be sent by 16th December, 1961, to the Director, Overseas Development Institute, 160, Piccadilly, London, W.1, from whom further information can be obtained.

APPLIED STATISTICS

C. & J. CLARK LIMITED, Shoemakers of Street, Somerset, who have increased their production fourfold in the last twelve years, wish to appoint someone experienced in statistics to join their research and development department.

WE are looking for a mathematics graduate who will preferably have specialised in statistics elsewhere in industry, who wishes to extend his experience and wants to apply statistical techniques to the solution of problems in a wide field. These will range from the design of industrial experiments to the design and analysis of population surveys. He should be aged up to 28 and his salary dependent on his qualifications and experience will be in the range £1,000-£1,300.

Please apply in writing to the Staff Recruitment and Development Officer, C. & J. Clark Ltd., Street, Somerset, quoting reference number TW/E.

COMPANY AFFAIRS

Poor Showing from Steels

THE steel dividend season opened later than usual with the first of the eleven major steel companies (including the government-owned Richard Thomas and Baldwins) to report being Thomas Firth and John Brown. The stock market was not deceived by this company's relatively good showing; but neither was it fully prepared for the shock of no interim from Consett Iron. After that it was at least ready for the sharp drop in profits reported by the biggest and most broadly based of the steel companies, United Steel. Gloomy forecasts have proved all too correct and these results, it still has to be remembered, include the first half of the "steel year" (which for all companies except Consett ends on September 30th) in which most of the companies were not faring too badly even though margins were being squeezed.

United Steel's interim statement, for example, reported higher sales for the six months to end-March but a fall in trading profits from £10½ million to £9¼ million. Since then, however, output has progressively declined as merchants and consumers have reduced their stocks. If this destocking process, which is discussed in an earlier note, continues the 1961-62 results could prove as disappointing as those which investors are now digesting.

They undoubtedly are wondering whether any of the companies still to report can possibly match the performance of **Thomas Firth and John Brown.** This company is not, however, typical, for it produces alloy and stainless steels and together with English Steel Corporation owns Firth Vickers Stainless Steel. The market for its heavy forgings has weakened but this has been offset by the substantial improvement in demand for its special steels. Thus, as the table shows, gross profits have actually risen, even though the chairman had said earlier that higher costs would reduce profit margins by £500,000. It is noteworthy that the maintained dividend of 12½ per cent is now more than covered by investment income alone. This could make a higher payment feasible in the future, as the company is well-endowed with liquid resources.

United Steel's results were much in line with expectations. The interim statement in June suggested that an earlier forecast that profits would be down by between 10 to 15 per cent would prove too optimistic. Output for the year fell by only 3 per cent and the directors say that the main reason for the sharply lower profits was increased costs of which only a small part was covered by the one per cent increase in steel prices. In the second half of the year United Steel's profits before all charges fell by as much as 30 per cent but this compares with a boom period in 1960. Despite the sharp decline in profits the group's cash flow has remained high, and, as £10 million of new money was raised in January, United Steel should have no difficulty in financing its expansion plans, now scaled down.

The interim results from **Consett Iron** for the six months to end September cover a period of relative depression for the industry as a whole. The fall in demand for Consett's products occurred when its new £14 million plate mill was coming into operation and hence when much heavier charges for depreciation and loan interest had to be borne. On these figures it is not surprising that the interim dividend has been passed and prospects for a final dividend look none too bright. The company is now awkwardly placed: it will want to keep its cash flow as high as possible but it must be reluctant to pass the dividend completely for it may well have to come to the market for fresh capital within the next two to three years. At the end of March its capital commitments amounted to £11 million; Consett has borrowed £9 million from FCI, of which at least £8 million is repayable by 1965, and it has overdraft facilities of up to £9 million, also repayable in 1965. At the end of March the overdraft amounted to £1.8 million while the cash flow was running at £2.8 million—a level which will clearly not be reached in the year to March 31st.

The delay in the announcement of the final results from **South Durham Steel and Iron** seemed ominous. So it has proved, for the total dividend has been cut from 12 to 10 per cent. But the market had marked down the shares sharply before the preliminary announcement and its publication produced no further fall in the price. As the table shows gross profits have fallen by £1 million, or 12½ per cent, but a higher depreciation charge and a doubled interest charge have halved net profits so that, after allowing for the benefit of initial allowances, earnings cover the reduced dividend only 1½ times. The company has completed a large part of its expansion programme and its new South Works at Hartlepools came into full production in June but like Consett it had added to its plate capacity at a time when demand had fallen. But even at less than capacity working the new mill should reduce production costs. The company has also in recent years developed capacity for the maufacture of large-diameter pipes, particularly for the oil industry; here too demand was slack early in the year; the improvement in business later in the year was probably too late to have much effect on results.

With its business largely tied up with the motor car and consumer durable industries, **John Summers,** primarily a producer of sheet, had been expected to produce less favourable results than most other steel companies. Thus a fall of only 8 per cent in the group's profit surprised the market, where it had been suggested that the final dividend might have to be cut. It was, however, maintained at 9 per cent making an unchanged total of 15 per cent and the shares gained 1s. 6d. to 43s. 6d. The better than expected results reflect the completion of major alterations at Shotton, where since 1948 development had absorbed as much as £60 million. Now development is concentrated upon the other works at Shelton; this programme will cost £18½ million and total capital expenditure over the next three or four years is estimated at £25 million. The company's intention is to finance this expenditure largely from internal resources and even though the cash flow has been kept at a high level without any reduction in dividend the company will be hard put to it to live up to this intention.

Brewery Mergers

THERE are still a fair number of independent local breweries, primarily in the north of England, and the process of concentration within the brewing industry into regional and national groups still has a little way to go. After the spectacular bout of mergers in the spring, there was something of a lull in the summer but this week brewing shares, already enlivened by the prospects of higher profits, were stirred into speculative activity again by the news of more mergers. Many brewing shares were marked up, perhaps rather heedlessly, and later profit taking clipped the gains.

Of the latest offers, the most significant is the bid by **Whitbread** of seven "A" ordinary shares for every ten ordinary shares in **Tennant Brothers** of Sheffield. Tennant has lived under the Whitbread umbrella since 1953; since Whitbread owns a 15 per cent stake in the company and the Tennant directors and their associates another 25 per cent or so, a counter offer from any other brewery seems improbable. Whit-

bread "A" shares at 35s. 6d. impute about 24s. 10½d. for Tennant shares, which represents a good gain on the pre-bid price of 19s. 6d., Tennant shareholders gain substantially in income and receive slightly more of the combined equity that the company contributes to joint earnings.

The Whitbread directors say that the merger will make possible an increased use of production capacity, both for bottling and brewing, in Sheffield for Whitbread's beers and some rationalisation of distribution. As Whitbread's sales are expanding in the north, but still need to be expanded further, complete ownership of a brewing and bottling plant in Sheffield makes good tactical sense. But the bid has a strategic significance as well. In the past Whitbread has secured outlets for its branded beers by taking up minority interests in a number of breweries (eighteen, including Tennant, at this moment). These breweries continue to brew their own beers and they gain technical and managerial strength from their association with Whitbread; it also affords them some protection from being taken over. Recently Whitbread has been adding to its minority stake in these associates and the Tennant bid suggests that Whitbread is prepared to protect its own interests and those of its associates with a full scale merger if this seems desirable. To make this precedent clear to other brewers, it cannot afford not to gain control of Tennant. Such an oddity as a sword-umbrella has been made in the past and this is what Colonel Whitbread now seems to be brandishing.

The fastest growing brewery group in the last two years has been **United Breweries,** propelled by the ambition of the Canadian brewer, Mr E. P. Taylor. Having been defeated in the struggle for Bristol Georges, its empire has been confined largely to the north and it is no surprise that its latest bid is for another northern brewery, **Hewitt Brothers** of Grimsby. The series of take-overs has left United Breweries short of funds and it was inevitable that the latest bid should be all in scrip. For every Hewitt ordinary share, United Breweries is offering three of its ordinaries plus £3 of a new 6¾ per cent convertible loan stock (1974-76), on which the conversion prices into United Breweries ordinaries are equivalent to 14s. 6d. in 1964-65 and 15s. 6d. in 1966-67. Philip Hill Higginson Erlangers is willing to acquire each £100 of the loan stock for £99, so that with United Breweries at 13s. 3d. the value imputed to Hewitt is just under £5. Before the bid they had moved up to an all-time peak of 85s. Hewitt shareholders gain in income and the loan stock element ensures that United Breweries' equity is not immediately diluted. Wood Hall Trust, owning 39 per cent of the Hewitt equity, has accepted the offer, which appears to ensure its success.

Yet another northern brewer, **John Smith's Tadcaster,** seeks to merge with a neighbour, **Warwicks and Richardsons** of Newark-on-Trent. John Smith's is offering two of its ordinaries plus 5s. in cash for every five shares in Warwicks and Richardsons, so that the latter, with John Smith's standing at 68s. 6d., are valued at 28s. 6d. This compares with a price of 22s. 6d. at the beginning of November when the possibility of the merger was first mooted and 28s. 3d. on the eve of the announcement of the terms. Warwicks and Richardsons shareholders will gain handsomely in income.

Brewing Results

BEER consumption in the brewing year to September 30th was of the order of 28 million bulk barrels, compared with 27 million barrels in 1959-60 and 25½ million barrels in 1958-59. Prices were increased slightly at the beginning of the heavy summer trade this year and though costs have been rising the big regional and national brewers have begun to see some tangible benefits from the rationalisation of production and distribution after the mergers. In all, therefore, an increase in brewing profits was inevitable.

Equally certain was the expectation that **Watney Mann,** which has established itself as a national brewer, would be among the breweries to chalk up a satisfactory increase in profits. Watney Mann has grown by acquiring other breweries, to secure brewing plants, bottling stores and tied outlets in each important region, and by entering into reciprocal trading agreements (of which perhaps the most important provides outlets for its container draught, "Red Barrel," in the public houses of Ind Coope and United Breweries in return for outlets for their lagers). In the preliminary statement, the Watney Mann directors have adjusted the comparative figures for 1959-60 to allow for the consolidation of the profits of Wilson and Walker. Moreover, they have rightly excluded from the latest profits the windfall gain on stocks of £273,000 arising from the Chancellor's surcharge on excise duties. On the adjusted basis, gross profits after depreciation in the full year have risen by nearly 13 per cent, from £6,984,000 to £7,872,000. As much of the profit sharing bonus and much of the increase in depreciation falls on the accounts in the second half of the financial year, it would be wrong to assume that the rise in profits in the summer months was smaller proportionately than the rise in the winter ones. Indeed, sales have remained high throughout the whole of the year and they remain high now—particularly, it may be surmised, for the top quality draught beers and the bottled beers on which profit margins are usually higher than on the cheaper draught bitters and milds.

The group's net equity earnings have risen by 10 per cent, from £3,324,000 to £3,650,000 and the directors say that in normal circumstances these results and the present high level of sales would have justified an increase in the dividend. Shareholders must therefore blame the Chancellor for the fact that the dividend has been left unchanged at 18 per cent. They will certainly look for a higher dividend in 1961-62 and, in the meantime, they will welcome the proposal to split the £1 units into 5s. shares, so as to make the market price less heavy. At the moment, it is as much as 104s. and the yield, nearly 2¼ times covered by earnings, is 3½ per cent.

The directors of **Arthur Guinness** have already indicated that the 1960-61 dividend would be 22 per cent and it is duly declared so that at 53s. 6d. the shares yield 4.1 per cent. Guinness is the odd man out in British brewing, for it concentrates on a single product, stout, and it possesses no tied outlets. About two thirds of its production comes from Dublin and the other third from Park Royal. It is probably the most efficient brewer of beer in the country—it has to be because in order to secure access to the tied trade it has to promote the sales of stout over the heads of the other brewers and has to give them handsome margins on bottling. The trend in beer consumption has been running against the naturally conditioned high gravity, bottled beers, of which Guinness is a prime example, and though the company was able to sell more than ever before in 1960-61 it did so at the expense of lower profit margins. Costs, the directors say, were rising; but, clearly, Guinness was not able to pass the increase on, and its gross profits fell by nearly three per cent, from £8,207,000 to £7,989,000 and its net profits by eight per cent, from £4,610,000 to £4,240,000. The directors of Guinness, in which family traditions and professional management are admirably blended, have long recognised the new problems posed in the industry by mergers and trade agreements. They have sought diversification in confectionery and pharmaceuticals and they are the principal backers of the venture in "Harp" lager, which, contrary to the Guinness tradition, is based on tied outlets. As profits on this venture lie some years ahead and as Guinness has to invest heavily in it now, shareholders must expect a lower rate of return on the capital employed in the next few years.

Distillers

As the industrial division of Distillers, which embraces chemicals, plastics and pharmaceuticals, experienced "a sharp reduction in profits" in the six months to September 30th, the whole of the admittedly slight increase in the group's income before tax from £15,931,000 to £16,359,000 must be attributed to the potable spirits division, which usually contributes about four fifths of the group's total profit. The directors say that home and export sales of Scotch whisky and gin were "satisfactory" despite the unsettled conditions in the home market arising from the Chancellor's imposition of increased duty." The group must also have gained slightly from the small increase in the price of whisky and gin in this period. The industrial division was able to maintain its volume of sales reasonably well but, in the face of "excep-

tional competition from overseas" only at the expense of lower profit margins. These conditions are likely to prevail throughout the rest of Distillers' financial year, but the directors expect that the trend of sales of whisky and gin will remain "favourable." All this suggests that there will be little change in Distillers' gross and net profits for the year to March 31st and it is not surprising that the directors have simply conformed to an earlier forecast by declaring an interim of 6 per cent on the capital increased by the one-for-ten rights issue. The Distillers shares weakened ahead of the announcement and now stand at 58s. 7½d. They yield 3¾ per cent on the assumption that the final will be 8½ per cent.

Great Universal Stores

THE possibilities of the alliance to handle GUS properties between Messrs Cotton and Clore and Mr Wolfson have masked to some extent the better-than-expected half yearly results from Great Universal Stores. In the six months to September 30th, GUS's trading profits rose from £13.2 million to £13.8 million; but the figures understate the improvement, for in 1960 the provision for unearned hire purchase profits had been reduced by £545,000 whereas in the latest period this provision has been increased by £50,000. After taking these adjustments into account, the true increase in profit is just over 9 per cent, from £12.7 million to £13.8 million. But a higher tax charge, reflecting the increased rate of profits tax, absorbs most of the increase in gross profits so that equity earnings are only slightly higher at £5.3 million. Since GUS was the very first company to respond to the Chancellor's appeal for dividend restraint by keeping the 1960-61 total at 37½ per cent it is no surprise that the interim dividend for the current year is unchanged at 12½ per cent; the 5s. "A" shares at 51s. 1½d. now yield 3.7 per cent.

In the previous year the effects of hire purchase controls had been more marked than expected since only 1·5 to 20 per cent of total sales came from HP contracts. But the current results suggest that the group has successfully adapted itself to a changed pattern of buying and the shift in emphasis from hard goods to soft goods and from expensive articles to cheaper ones. The group's furniture business is also probably trading more profitably now and the Board of Trade's estimates of deliveries of domestic furniture to retailers suggest that prospects for this side of the business are brighter than for some time past. The group's short term prospects rest on the fact that two and three year-old hire purchase contracts are now coming to an end and on the extent to which purchasers enter into new commitments. If customers cut down their HP commitments, the trend towards short term credit sales is likely to be reinforced. GUS would not lose from this shift, for it has always offered short term credit and its mail order division is the biggest in Europe.

The implications of the property link up between GUS and City Centre are clearly for the long term and only generalities of policy have been disclosed. The joint property development company will re-develop "suitable GUS and other properties located mainly in the high streets of the principal towns in the United Kingdom." The range is wide, for GUS owns over 2,500 shops and stores.

Granada

MR B. L. BERNSTEIN'S forecast that profits for the year to September 30th would be 2½ times greater than in the previous year has proved accurate. Trading profits rose from £2,679,000 to £6,883,000, after the ending of the networking agreement with Associated Rediffusion in July 1960. Even now Granada's results understate the benefit of the end of this agreement which protected it at first from very heavy losses; the point is that since the TV subsidiary's financial year ends on April 30th, the group's profits include only 9 months ex the networking agreement. Not surprisingly, the directors say that profits so far in the current year compare favourably with those for the corresponding period in 1960-61.

But it remains to be seen what the effects of the Equity strike will be. The 90 per cent dividend for 1960-61 compares with the equivalent of 36¾ per cent. It would have been more but for the Chancellor's plea for restraint; earlier guesses of a total payment of 100 per cent were not wide of the mark, for earnings rose from 78½ to 221 per cent. Whether Granada will continue to enjoy such rich earnings depends on the course of television advertising and also on the terms of renewal of the licensing agreements which expire in 1964. The longer term uncertainty is reflected in the current yield of 7.6 per cent offered by the 5s. "A" shares at 58s. 10½d., but this is below the returns offered by the shares of other television contractors, apart from Associated British Picture.

Trust Houses—Lockhart

THE directors of Trust Houses, which runs about 230 hotels, have offered seven ordinary shares for every eight ordinary shares of the Lockhart Group, and one 6 per cent cumulative preference share plus 1s. 6d. cash for every 6½ per cent Lockhart cumulative preference share. The bid seems sure to succeed since the Lockhart directors are recommending it and they control over 60 per cent of the equity. The Lockhart Group runs about 800 canteens, mainly in factories. In addition it has an 84 per cent holding in the Associated Automatic Machine Corporation, which controls the British Automatic Company, thus giving Lockhart a major stake in machine vending. Since the offer Trust Houses ordinary shares have fallen 2s. 9d. to 69s. 6d. This puts a value of 60s. 9d. on Lockhart shares, against a pre-bid price of 43s. 9d. On last year's figures, Lockhart would contribute 20½ per cent of joint earnings and its shareholders will own just under 20 per cent of the combined equity.

The nature of Lockhart's business differs in many respects from that of Trust Houses, though some of its catering and kitchen equipment interests provide common ground. As Lockhart is primarily concerned with contract catering it contri-

butes only 5½ per cent of combined net assets and, because of the nature of its business, the rate it earns on the physical capital employed is high. On the other hand Trust Houses hotel interests and its policy of building new ones and modernising its old ones keep the return on its capital employed fairly low.

Longmans, Green

FOR the third successive year, trading profits of the publishing house of Longmans, Green have risen by about a quarter. The rise in the year to May 31st is from £674,000 to £844,000; this is more than the stock market had expected. The rapid expansion of Longmans' business in recent years has added to its overhead costs and the old London warehouse has had to be replaced by a new and bigger warehouse at Harlow. Turnover was higher in the latter part of the year than the directors had expected and margins were better than at one time had seemed likely. The ordinary dividend has been raised from 25 to 27½ per cent and it would have been higher but for the Chancellor's request; it is covered over 2½ times by earnings and Mr William Longman looks forward, the Chancellor and the economy permitting, to a higher distribution in the current year. Indeed he hopes to bring the interim dividend, due in May, closer to the final payment.

The balance sheet shows the strains of recent expansion. The group has deliberately built up stocks to counter an anticipated rise in production costs, and so the value of stocks has risen from £1,400,000 to £1,800,000 while cash balances have been reduced from £328,000 to £35,000. As yet the directors are not certain whether fresh capital will be required to sustain the expansion in business. But the increase in stocks is a strategic move and they may well be a good investment since the prices of some books will be raised. The directors however hope that economies will keep down the prices of the "more competitive lines." A continued demand for the group's books seems assured, for a high proportion of Longmans' sales is in educational, scientific and technical books. The 5s. "B" shares of 59s. stand close to their peak for the year. They yield only 2.3 per cent, partly because the market expects a bigger dividend and partly because of take-over rumours.

Coventry Gauge

THE machine tool industry has done well this year and demand has remained high; this was reflected in a rise in imports in the early part of this year. The preliminary results of Coventry Gauge and Tool suggest that this company has shared fully in the recovery and they bear out the chairman's statement last January that the rise in profits in 1959-60 did not reflect the full benefit of the high rate of orders. Trading profits in the year to August 31st rose by as much as 87 per cent, from £477,000 to £896,000, and net profits after tax and depreciation rose by 82 per cent, from £220,000 to £402,000.

The ordinary dividend was raised from 6¼ to 7½ per cent tax free in 1959-60 and it has now been raised again to 8¼ per cent tax free on the capital as increased by the one for four rights issue in January. The cover has been boosted by the increase in earnings from 2.2 to about 2.8 times. The 10s. ordinary shares at 31s. 7½d. yield 4½ per cent.

Wood Hall Trust

THE results of Wood Hall Trust follow hard upon United Breweries' bid for Hewitt Brothers, in which Wood Hall has a 39 per cent stake. The offer is worth about £2¼ million for Wood Hall but it is not known whether Wood Hall intends to keep the United Breweries' shares or loan stock, or both. Speculation first on a possible bid for Hewitt and now on what Wood Hall directors intend to do with the receipts explains the recent rise in the 5s. shares from a low of 17s. late in October to 22s. 6d. But they have fallen back to 20s. 6d., to yield 3.9 per cent on the maintained tax-free dividend of 10 per cent.

Such a return hardly seems justified on Wood Hall's current results alone. These include the familiar story of a loss on hire purchase. It amounts to £135,000. This follows last year's writing off of the whole of Wood Hall's investment in the Peter Long subsidiary amounting to £175,000. The group's hire purchase interests are now concentrated in Traders Acceptances into which Wood Hall put an additional £100,000 of share capital; shareholders will hope that the chairman, Mr Michael Richards, will have some reassuring news of this side of the group's interests. Profits from the group's other activities, which include wines and spirits, building, property, timber and saw milling and an importing and exporting business, rose in the year to June 30th from £752,000 to £803,000. Investment income was little changed at £121,000; but in the previous year there was also a special dividend of £163,000 from Hart Son and Co. which was sold to Samuel Montagu in March last year when the latter acquired a stake in Wood Hall.

In his statement last year Mr Richards told shareholders that it was expected that the "major part if not the whole" of the income lost through the sale of Hart would be replaced by two new acquisitions, Osborne Stevens, the timber merchants, and Moussec. It would appear, however, that this has not yet happened. Indeed as the pre-tax profits of Wood Hall's principal subsidiary, Davis Estates, rose by £125,000 to £522,000, it would seem that the contribution of these new subsidiaries was small. The wine merchants, David Sandeman, for which a difficult year's trading had been forecast, would appear to have suffered a fall in profits.

FIRST DEALINGS:	Nov. 13	Nov. 27	Dec. 11
LAST DEALINGS:	Nov. 24	Dec. 8	Dec. 28
ACCOUNT DAY:	Dec. 5	Dec. 19	Jan. 19

THE rise in equity prices which began the first half of last week was halted Thursday; a pessimistic review from t National Institute contributed to t market's uncertainty. After the weeke the fall in prices continued though in so sectors, notably breweries, prices we boosted by take over bids and rumour On Wednesday the passing of Consett interim dividend and the poor results fr United Steel disappointed an alread apprensive market; many equity prices f back sharply and *The Economist* indicat lost 9.6 points to 347.3 over the week.

The gilt-edged market has be extremely quiet. Exchequer 5½ per ce lost the gains of the previous week and f back by ⅝ to 98⅝. Long dated a irredeemable stocks were also lowe Treasury 5½ per cent 2008-12 lost ¼ 83⅝ and 3½ per cent War Loan lost to 51¼. Dominion and Corporation stoc also lost ground.

Bank shares, like gilt-edged, have be quiet this week, and most of the leade showed small losses; Midland were 1s. 6 lower at 89s. Hire purchase houses we generally lower; Mercantile Credit lost 3 to 13s. 10½d. Most insurance shares show losses over the week despite some selecti buying on Monday. General Accident l 9d. to 83s. 9d. Interest in brewery shar increased after the bids for Hewitt an Tennant Brothers but there was some sel ing on Wednesday. Chemical shares declin quite sharply, with ICI losing 3s. 7½d. t 56s. Store shares were dull and Marks an Spencer lost 1s. 7½d. to 103s. 1½d. Ele trical shares, too, met continued sma selling; English Electric lost 2s. 9d. to 2 and Plessey's recent gains were lost aft the full report, with the shares losing 6d. t 44s. 9d. but the convertible debentur gained 2½ points to 109¼.

Steel shares were depressed after the fi results from the industry were publishe Consett lost 3s. 6d. to 17s. 10½d. an United Steel 2s. 6d. to 38s. 9d. and Sout Durham eased ahead of the results by 2 to 23s. 1½d. But the market was pleas with the Firth Brown results and the share gained 3s. 9d. to 42s. 3d. Many leadi shares followed the general downwar movement of the week and Glaxo we 2s. 3d. lower at 51s. 6d. but investme buying of ICT put them up 1s. to 97s. 9 Property shares were in demand around t weekend but small falls followed in th middle of the week; City Centre gain 3d. to 58s. 9d. helped by the new link wi GUS. Kaffirs held their prices even thou gains on the weakness of sterling before i weekend were largely offset by Continen selling on Monday.

EXCHEQUER RETURNS

For the week ended December 2, 1961, there was an "above-the-line" deficit (after allowing for sinking funds) of £31,586,000 compared with a deficit of £38,261,000 in the previous week and a deficit of £33,608,000 in the corresponding period of last year. There was a net expenditure "below-line" of £31,240,000 leaving a total cumulative deficit to date of £795,676,000 compared with £811,245,000 in 1960-61.

Money and Exchanges

THE MONEY MARKET

THE syndicate of discount houses raised its agreed bid for the 91-day bills on offer at last Friday's Treasury bill tender by 2d. to £98 13s. 3d. The average rate of discount fell by 8.32d. to £5 7s. 1.08d. per cent. The market's quota of 91-day bills rose slightly to 44 per cent from 42 per cent in the previous week. But its allotment of 63-day bills fell to 71 per cent against 90 per cent a week earlier. Total applications fell by £11 million to £461 million.

Events in Lombard Street this week have kept close to the pattern established after the last Bank rate cut on November 2nd. The bill rate has again fallen only slightly, credit has been generally adequate before the weekend but difficult in the early part of the week, and on Tuesday and Wednesday the authorities forced part of the market to borrow small amounts from the Bank at the penal rate—continuing to apply mild restraining pressure on the bill rate.

In New York the three months bill rate rose for the fifth week in succession last week from 2.606 per cent to 2.625 per cent, and the interest differential between London and New York, allowing for forward exchange cover, has now virtually disappeared.

APPOINTMENTS

CANADIAN BROADCASTING CORPORATION

wishes to appoint

TOP-FLIGHT EXECUTIVE IN SOCIAL SURVEY RESEARCH

to take charge of its Research & Statistics unit in Toronto. He will be responsible to the Director of Research & Statistics, in Ottawa, for the technical and administrative supervision of all C.B.C. research and related activities carried out through the Toronto office, for maintaining close working relations with C.B.C. programming, production, sales and other staff at the English-language Network centre in Toronto, and for contributing as required to C.B.C. research operations carried out elsewhere.

The Corporation's research and statistical services, centred in Ottawa, Toronto and Montreal, cover a wide range of activities in such fields as audience measurement, media content analysis, public opinion and attitude research, broadcast coverage, programme evaluation, statistical analysis, market and consumer studies, corporate and station image research, panel operations. The successful candidate, aside from having the necessary professional qualifications, will have had practical experience of working successfully in at least some of these areas. He will also be expected to have a sufficient understanding of the basic principles and practical problems involved in communications research work generally to be able competently to direct and supervise the work of others. While not absolutely essential, experience of working on broadcasting problems will be regarded as a special asset.

This is a senior post carrying considerable responsibility and the Corporation is prepared to offer an attractive salary to the successful candidate.

Full details to Assistant director of Research & Statistics,
Canadian Broadcasting Corporation,
Post Office Box 806.
Ottawa, Ontario,
CANADA.

AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES

RESEARCH FELLOWSHIP IN ECONOMICS

Applications are invited for appointment as Research Fellow in the Department of Economics, Research School of Pacific Studies, to undertake a study of Indigenous Cash Cropping in the Territories of Papua and New Guinea. The appointment will be for a period of up to three years, and will involve considerable field research in New Guinea. This special Research Fellowship has been made possible by a grant from the Reserve Bank's Rural Credits Development Fund. Provision has also been made for the employment of local Research Assistants to assist in the field work.

The initial salary will be fixed in the range £A1,925-£A2,450 in accordance with the qualifications and experience of the successful applicant.

Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid and assistance with housing is provided.

Further information should be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close on *January 31, 1962.*

ASSOCIATION OF MUNICIPAL CORPORATIONS.

APPOINTMENT OF SECRETARY.

Applications are invited for this appointment.

The Association is a voluntary organisation having in membership 430 city and borough councils in England and Wales, the City of London, and many of the metropolitan boroughs, together with some Northern Irish boroughs. Its work is of two main kinds—making the voice of the cities and boroughs heard in Parliament and in Government departments, giving help and advice to members on problems arising in the field of local government.

The Secretary is responsible for the organisation of the association in accordance with its constitution; carrying out the decisions of the council and committees; day-to-day contact with Government departments and Members of Parliament; and maintaining contact with the members of the association. He is also responsible for the publication of the journal The Municipal Review and the organisation and control of the Association's staff.

The salary on appointment will be £5,500 per annum. The person appointed will be required to join the local government superannuation scheme subject to satisfactory medical examination. Previous experience in local government is very desirable.

Canvassing will be a disqualification.

Particulars obtainable from the Secretary, Association of Municipal Corporations, Victoria Station House, Victoria Street, London, S.W.1.

FOR GENEVA

Internationally known American company requires qualified accountant, preferably with some knowledge of French (but this is not essential), aged 25-35, starting salary from 2,000 to £3,000 per annum depending on experience and ability. Would be required to take up position in Geneva as soon as possible.

Please send full particulars, including present salary, to Box 1573.

FINANCIAL NOTICES

RAND LEASES (VOGELSTRUISFONTEIN) GOLD MINING COMPANY LIMITED

(Incorporated in the Republic of South Africa)

NOTICE TO MEMBERS

Repayment of Capital No. 6

NOTICE IS HEREBY GIVEN that Capital Repayment No. 6 of five cents (6d.) per share will be made in Republic of South Africa currency to members registered in the Books of the Company at the close of business on the 29th December, 1961.

Payments to members on the London Register will be made from the London office in United Kingdom currency at the rate of £1 United Kingdom sterling for R2 South African currency unless there is a difference regarded by the Board as material in the rate of exchange between the United Kingdom and South African currencies. Should there be such a difference the London office will pay in United Kingdom currency calculated at the rate of exchange ruling on the 2nd January, 1962, for conversion of South African currency into United Kingdom currency.

Cheques in payment will be posted from the Head and London offices on or about the 8th February, 1962, to members at their registered addresses or in accordance with their existing instructions, unless instructions to the contrary are received in writing on or before the Books close, and the necessary Exchange Control authority is obtained.

Members with registered addresses in the Continent of Africa south of the Equator, will be paid from the Head Office, Johannesburg, and members whose registered addresses are elsewhere will be paid from the London Office. Any requests by members with addresses within the Republic for Capital Repayments to be made to addresses outside the Republic will require the approval of the Exchange Control authorities.

The Transfer Books and Registers of Members will be closed from 30th December, 1961 to 7th January, 1962 (both days inclusive).

By Order of the Board,

ANGLO-TRANSVAAL CONSOLIDATED INVESTMENT COMPANY, LIMITED.

Secretaries.

56, Main Street,
JOHANNESBURG.

London Office:
Bilbao House,
36 New Broad Street,
LONDON, E.C.2.

6th December, 1961.

Anglo-Transvaal Group of Companies

DECLARATION OF DIVIDENDS

NOTICE IS HEREBY GIVEN that dividends have been declared in the amount of Republic of South Africa currency set out below and payable to holders of Preference and Ordinary (and Participating Preference) shares registered in the books of the undermentioned Companies at the close of business on the 29th December, 1961, and the 29th December, 1961, respectively. Preference dividends are in respect of the half-year ending 31st December, 1961.

In the case of those Companies which have a London Office, dividends will be paid to members on the London Register from the London Office in United Kingdom currency at the rate of £1 United Kingdom Sterling for R2 South African currency unless there is a difference regarded by the Boards as material in the rate of exchange between the United Kingdom and South African currencies. Should there be such a difference the London Office will pay in United Kingdom currency calculated at the rate of exchange ruling on the 29th December, 1961, in respect of Preference shares and on the 2nd January, 1962, in respect of Ordinary and Participating Preference shares, for conversion of South African currency into United Kingdom currency.

Warrants in payment of the Preference dividends will be posted on or about the 29th December, 1961 (unless a material difference in exchange rates occurs rendering a postponement necessary) and warrants for Ordinary and Participating Preference dividends will be posted on or about the 8th February, 1962, to members at their registered addresses or in accordance with their existing instructions, unless instructions to the contrary are received in writing on or before the respective books close, and the necessary Exchange Control authority is obtained.

Members with registered addresses in the continent of Africa south of the Equator, will be paid from the Head Office, Johannesburg, and members whose registered addresses are elsewhere will be paid from the London Office (in the case of those Companies which have a London Office). Any requests by members with addresses within the Republic for dividends to be paid to addresses outside the Republic will require the approval of the Exchange Control Authorities. South African non-resident shareholders' tax and United Kingdom income tax will be deducted from dividends where applicable.

The transfer books and registers of members will be closed as follows:
Preference Shares—from 21st to 31st December, 1961 (both days inclusive).
Ordinary and Participating Preference Shares—from 30th December, 1961, to 7th January, 1962 (both days inclusive).

seeing

is knowing for sure

One after another, go-ahead managements are turning to a completely modern—yet already fully proven—technique to increase productivity. These managements have discovered that the ability to observe by remote control cuts costs and speeds manufacture. The tool that makes this possible is closed circuit television for industry, pioneered by Pye.

Pye Closed Circuit Television sees where the human eye cannot, is invaluable for many flow-line process systems, and enables the work of different departments to be more closely dovetailed. Almost every industry can benefit from it. The most experienced group of people in the country concerned with closed circuit television is to be found in the Industrial Division of the Pye organisation. Their experience could be placed fully and freely at your disposal.

INTERNATIONAL

HEART OF DARKNESS

Mr Macmillan's call for a cease-fire is one that the United Nations can hardly accept; things have gone too far in Katanga for that (p. 1101).

U Thant says the UN will not cease firing until its freedom of movement is permanently assured, law and order are restored, and it is able to carry out its mandate (p. 1102).

In Leopoldville, it seems as if Mr Tshombe will be forced to negotiate. But will Mr Gizenga? (pp. 1129 and 1130).

Differences of Opinion:

Belgium may seem like one big "Katanga lobby"; even so it is doing much to help the whole Congo (p. 1133).

Ireland is usually ready to believe the worst of Britain (p. 1134).

The United States is more charitable, but its government's views on the Congo, communist China, and Nato's military needs differ from the British Government's (p. 1103).

AN OUTCAST OF THE ISLANDS

1. Mr Kadar is probably the best prime minister the Hungarians can expect to get (p. 1106).

2. Russian relations with **Albania** could hardly be worse (p. 1109).

3. **India is no longer speaking up for China's admission to the United Nations (p. 1109).**

4. For **Goa,** the Indians would do better to wait (p. 1109).

UNDER WESTERN EYES

In Paris, the foreign ministers of the three principal western powers have concentrated on **Berlin über Alles (p. 1127).**

Dr Nkrumah has become an embarrassment to Africa (p. 1113).

Africans in Southern Rhodesia have become an embarrassment to Sir Edgar Whitehead (p. 1110).

The Australian election results may prove embarrassing to Mr Menzies (p. 1110).

Three neutrals—Austria, Sweden and Switzerland—have, to some people's embarrassment, applied for association with the common market (p. 1114).

THE RESCUE

President Kennedy's visit to Latin America starts, hopefully, the Alliance for Progress on its ten-year course (p. 1136).

The reports of the Civil Rights Commission show how racial discrimination in the United States can be dealt with outside Congress (p. 1141).

It looks more and more as if the United States will soon be testing atomic weapons in the atmosphere (p. 1142).

The President is trying to prevent his new tariff policy being drowned in imported oil (p. 1146).

The Administration is trying to improve its social welfare system (p. 1146). The Federal Communications Commission is doing the same thing for television programmes (p. 1145).

The latest economic statistics provide Christmas cheer for Americans but do not necessarily promise a happy New Year (p. 1142).

HOME

REWARDS OF LEARNING

Developments in television open the way to a major revolution in adult education in Britain—to its inestimable advantage (p. 1104).

Direct-grant grammar schools, "brain factories" for the universities, are mulling over their problems (p. 1119).

Basic research is increasing in scope and distribution in British industry (p. 1160).

WAGES OF FEAR

The Conservative party faced a serious revolt over its Katanga policy: the Prime Minister dealt with it cunningly—but at the price of wrecking British prestige abroad (p. 1108).

Less serious was the revolt over the Immigration Bill, which should get through substantially unchanged (p. 1108).

Anti-nuclear demonstrations are likely to become less sedentary after last week-end's fiasco (p. 1113).

Proposals for a British Ombudsman may founder on the Lord Chancellor's prejudices (p. 1114).

RETURNS WITH INTEREST

Hook New Town has gone to the limbo of abandoned projects: it is to be mourned, with some reservations (p. 1117).

When the Government began its manœuvres against immigrants, popular opinion seemed to approve: but many people have been angered by the results (p. 1108).

Not even sentiment has been strong enough to override the good reasons for the closure of the Forth and Clyde canal (p. 1118).

PAYMENTS IN KIND

More money could be earned from gold mining in South Africa: but investors should carefully weigh the political risks (p. 1151).

A new European lenders' club has increased the International Monetary Fund's power to curb currency speculators: but the lenders hold the strings (p. 1153).

There have been important mergers in the British fishing industry (p. 1164) and in the Rhodesian copper industry (p. 1159).

The Government seems indifferent to hire purchase reform (p. 1165).

Cut-price retailing is spreading to the whole range of branded goods (p. 1156).

DEPARTURE: *Smokers and skindivers agree: Pleasure starts with the products of AMF!*

There's a new departure in the leisure habits of sportsmen all over the world — water sports fostered by AMF! Skindivers from the Red Sea to the Straits of Magellan, water skiers from Manila Bay to the Gulf of Bothnia all enjoy superior AMF Recreation Products. There's no new departure, however, on the smoking front! For more than sixty years, smokers in many lands have been enjoying fine, economical smoking products turned out on AMF tobacco machinery. Complete cigarette factories, covering every step from leaf processing to final cartoning, have been set up in countries as far from the United States as Pakistan, Iran and Thailand. In many fields, in many lands, in many product lines, new departures take place every day — thanks to AMF International.

Clark Model TCV 2-Cycle Gas-Engine Driven Compressor. *Available with 16 and 12 power cylinders, 5500 and 4000 bhp. Turbocharged, V-engine, horizontally opposed compressor cylinders. Designed for maximum through-put, minimum plant.*

Liquefaction...for Overseas Delivery of Methane Fuels

"Packaging" of methane-rich natural gases in liquid form for easy delivery has been a major industrial goal for some 47 years.

Now the last technological stumbling blocks are being overcome. Soon regular tanker deliveries of these high-energy, low-cost fuels to England will start, based on the success of seven experimental voyages. Deliveries to France and Japan are expected to follow rapidly. The *next step*, to tank-car and tank-truck transport, is a short one.

World-Wide Significance

This development puts ample supplies of high energy fuel within easy economic reach of *any* country. It goes a long way, too, toward making the fuel-consuming markets independent of any particular fuel-producing country or region.

Areas presently supplied with natural gas by pipeline also stand to benefit. Now that the gas can be liquefied and safely stored at low cost, peak demand can be met with supplies built up during off-peak periods. Both pipeline operators and consumers save.

Liquefaction economics call for versatile and big compressors

It would take well over 600 tankers to carry in gaseous form the methane which *one* tanker carries in liquid form. This fact pictorializes the enormous volumes of methane that must be compressed and fed into a liquefaction system. Then the temperature of this gas must be shoved down into the –300°F region. To do this, enormous additional volumes of both refrigerant and fuel gases must also be compressed.

In one plant, now being designed, nearly 50,000 compressor horsepower is required. What's more, each compressor must be capable of handling any of five duties...methane, ethane, propane, feed natural gas, and fuel gas.

Only Clark can fulfill both requirements with as few as nine machines

Nine Clark 5500 bhp TCV-16's can provide the needed bhp with 7+% to spare. These 2-cycle gas-engine-driven compressors also provide a total availability of 72 compression cylinders. Hence the plant designer has full freedom to arrange for 1/3, 2/3 or 3/3 capacity operation with all duties twice duplicated for maximum reliability.

Note, too, that these huge blocks of Clark bhp occupy smaller space per hp than any other comparable machine

Fewer compressors and smaller space per machine cut *every* installation cost; total machine cost, total foundation cost, total shelter cost, total control cost, over-all maintenance cost, many more. Savings up to 40% and more can be realized along with improved performance and reliability.

Expert engineering assistance anywhere in the world

If you are considering gas liquefaction for liquid methane shipments, for missile fuel supplies, for other purposes, call on Clark for help with the compression engineering. No compressor manufacturer has more experience with liquefaction engineering than Clark Bros. Co., one of the Dresser Industries.

For such help or for comprehensive catalogs on any Clark centrifugal and reciprocating compressors and gas turbines, contact the nearest Clark office.

BOWATERS set the pace n EUROPE

Count the flags... each one marks an achievement of Bowater enterprise. They show how the competitive spirit of the Bowater Organisation is setting the pace in Europe today. Bowater interests are Continent-wide . . . long established pulp mills in Norway and Sweden . . . thriving Bowater-Scott tissue factories in Belgium, Denmark and Italy . . . and the last two years have seen the creation of a chain of seven Bowater pulp, paper and packaging plants (including a joint venture with the famous Philips of Eindhoven) to serve the member nations of The Six.

In just two years Bowaters have become established in strength in the Common Market —a vital growing factor in the economic future of 170 million Europeans.

One step ahead, Bowater enterprise is creating its own common market . . . expanding the potential of the Bowater organisation . . . rolling back Britain's traditional boundaries.

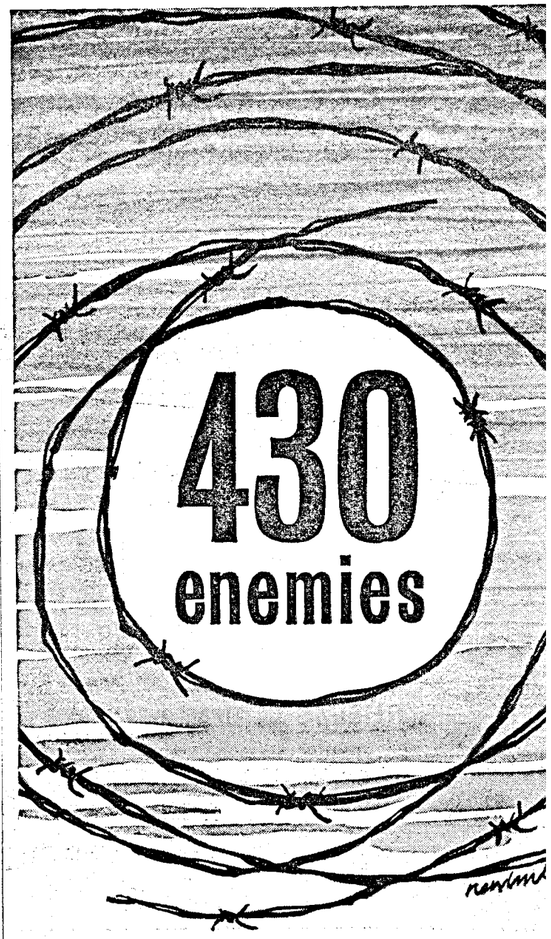
Carp — sign of Tufnol



Those people born under the sign of the Carp distinguish themselves from the rest in the swim by rising to the top of their professions. Carp men become chief purchasing officers, chief engineers, chief draughtsmen and chief designers. Carp men are perfectionists who never stop carping until they find a material that combines the properties of many materials—a material that is light yet strong and hardwearing, resistant to corrosion and a good electrical insulator. They also expect this ideal material to resist deterioration in storage, machine easily with ordinary tools, and to be available in sheets, tubes, rods, angles, and channels. Many Carp men have already discovered this ideal material—"CARP" brand Tufnol. They have also discovered that Tufnol is available in eleven other brands, each with predetermined properties.

All brands of Tufnol are laminated plastics; *each* formulated to satisfy specific requirements—*your* requirements. If your birthday falls between January 1st and December 31st, this could be your lucky week—the week you discovered Tufnol.

'Phone or write to your local Tufnol Branch Office and we predict you'll thank your lucky stars.

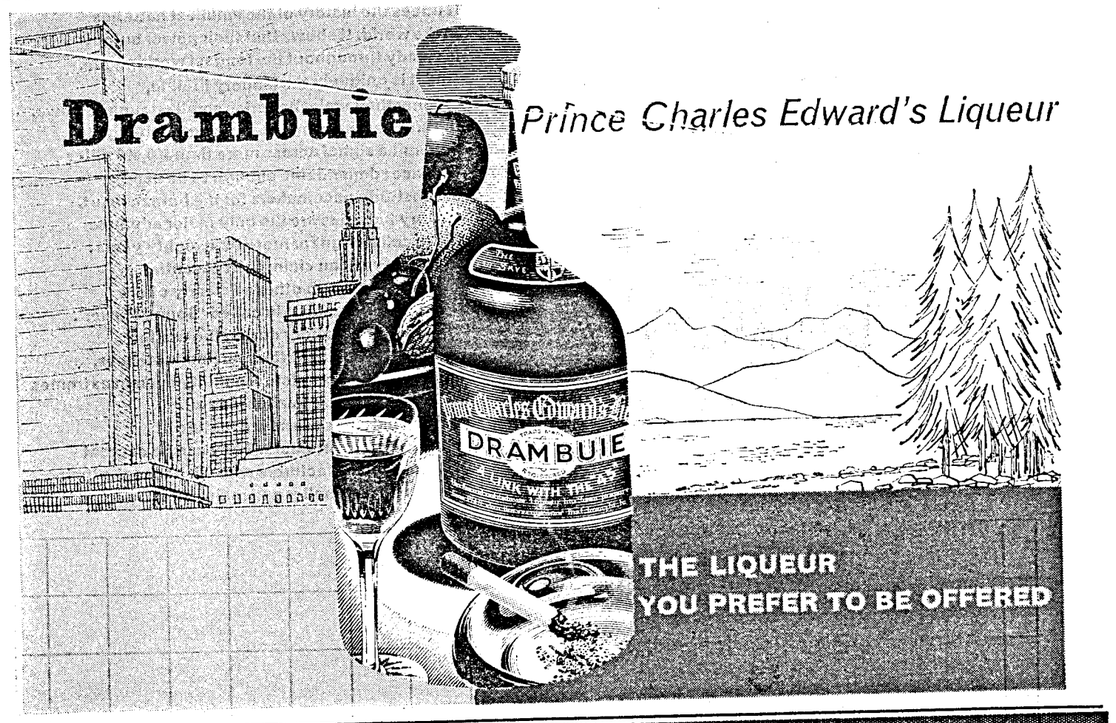
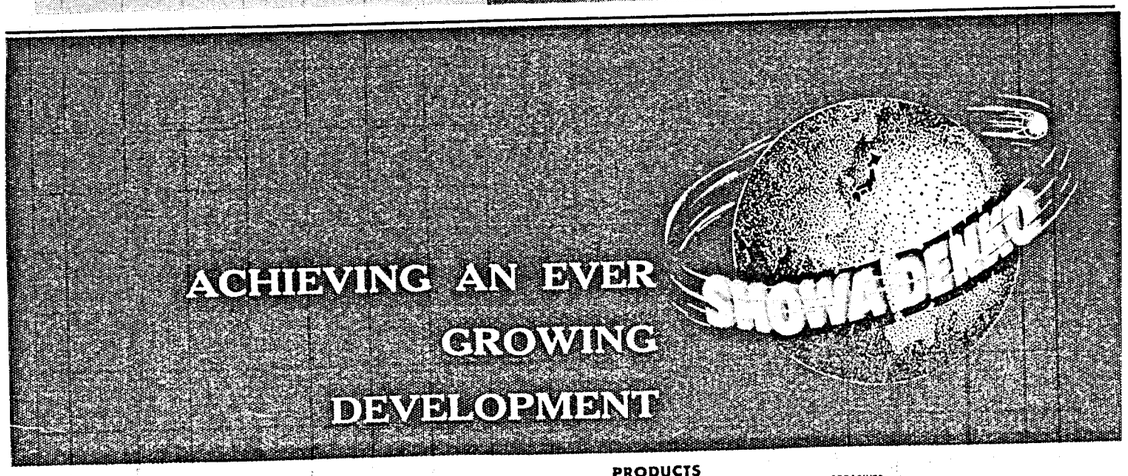
but many thousands of friend

The problem the printer sets the papermaker is the turning of a substance, which at the start of the papermaking process is about 98% water, into a sheet of paper with certain well defined characteristics.



The proper blend has to be made, but the mixing and beating is of equal importance, for the same recipe, beaten differently, can produce both blotting and greaseproof papers.



This beating is not easy and it cannot be fully controlled by instrumentation in spite of modern scientific advances. So the beaterman has to be a craftsman, for without the aid of instruments he must control 430 variables which are enemies to a good paper.

All J. A. Weir's Beatermen are craftsmen. All beat the 430 enemies and produce a consistently good paper welcomed by modern printers.

this lifeline is Mallory's business

It traces the history of the smallest batteries in the world. It shows that their power output is steady throughout the longest working life. And it is uniquely the Mallory lifeline, for only they make batteries small enough to power the smallest hearing aids; powerful enough to transmit a signal across more than 400,000 miles of space; dependable enough to be used in substitute pacemakers for the human heart. Mallory batteries are the only major advance in dry cell design for more than eighty years: no other type can claim their essential characteristics: no other so clearly offers the concept graphically called 'Sound Power'. Pioneered by Mallory during the war for walkie-talkie transmitters, their minuteness, longevity and complete reliability even in extremes of temperature are available to all. Mallory batteries are now a feature of many different products. They can be of great help to all manufacturers who wish to make their own products smaller and maintain full power.

Birthe couldn't hear a note

Birthe lives in Denmark. She is ten years old and studying music as an extra subject at her school. In fact, she hopes to graduate at the Royal Academy of Music in Copenhagen when she has finished her general education.
Music has always meant a lot to Birthe. But when she was only three years old it seemed she might never hear it again. After a severe case of measles, she developed chronic inflammation of the middle ear. As a result she became almost completely deaf. Only after a long course of penicillin injections was she cured. Birthe was lucky. Only 10 years earlier, before Sir Alexander Fleming's great discovery, her hearing might easily have been affected for life. Nowadays the synthesis and mass production of antibiotics is carried out by chemists all over the world. At Leo Pharmaceutical Products in Copenhagen, one of the largest chemical works in Europe, sterile oil-free air for the cultivation of penicillin and streptomycin is provided by Atlas Copco compressed air equipment. And this is only one of the great enterprises in which Atlas Copco & Sandvik Coromant equipment plays a part. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

CONGO

A Message to U Than.

"WE felt it right," Mr Macmillan told the Commons on Tuesday, "to raise the whole question again"—meaning, in the immediate sense, the question whether the United Nations force in the Congo really needed a supply of bombs from Britain, and what it needed them for. But the word soon went round that the Government was revising more than its attitude to this particular request; a Government motion tabled the same evening revealed that a formal request was going to the acting Secretary General of the United Nations to secure an immediate cease-fire in Katanga,

> in order to bring to an end the destruction of life and property resulting from the present fighting, and thus create conditions in which in a united Congo a peaceful and just basis for co-operation may be negotiated.

It is this motion that was being debated on Thursday as this issue of *The Economist* went to press. The motion is, as it was intended to be, a form of words that will enable the troubled Tories to unite. But what is the cost, and where does it leave Britain's relationship with the United Nations?

For a beginning it is necessary to concede that the body of opinion in this country that disliked the September fighting in Katanga, and felt a weary revulsion when, on December 5th, the fighting started again, is much wider than the Katanga lobby or than the champions of a white redoubt in Africa. Few people have been altogether clear what the fighting was for; still fewer, that anything good can come of it. The disclosure on December 7th that the United Nations had asked the British Government for a supply of 1,000-pound bombs, to arm the Canberras lent by India for service with the UN force, brought a good deal of genuine uneasiness to a head.

Such bombs are instruments of mass destruction. People who had put their trust in the United Nations as an instrument of peace began to feel themselves, in a negative way, on the same side as people who would never put any trust in the United Nations at all. On December 8th the Government agreed to supply the bombs, but on the stringent condition that they should be used only against airstrips and aircraft on the ground, not against human or miscellaneous targets. By December 11th it changed its mind and decided to hold up the deal, having evidently become aware that the coalition of dissent was growing bigger than it had bargained for. The "formal" request for a cease-fire followed.

Unfortunately it is hard not to feel as much doubt about the value of requesting a cease-fire at this moment as one had felt earlier about the idea of the United Nations resorting to the use of 1,000-pound bombs. The first thing one notices about the Government motion, quoted above, is the apparent innuendo that it lies in the hands of the United Nations to open the way to "a peaceful and just basis for co-operation" simply by ceasing to fight. If this is really the suggestion, the United Nations is most unlikely to accept it. Has it been forgotten that we have had a cease-fire in Katanga before, and that the Katanga forces did not at all meticulously observe it? The United Nations force went into action on December 5th, not because of the many previous infringements of the cease-fire, and certainly not frivolously, but because the Katanga forces were putting up road-blocks and attempting to control its movements: in particular, road-blocks had been put up between the UN headquarters, the airport, and the encampments of the UN troops, so that the UN force was threatened with paralysis through the cutting of its communications between

its own component units, and with the outside world.

Whether one liked or disliked the abortive earlier action of September 13th, and whichever version of that affair one found it easier to believe then, seem to have nothing to do with the facts of the present case. The international force has been put into the Congo and has been forced to fight, in effect, for the power to do what it was sent to do. The United Nations can hardly now accept that its force should give way and submit to Katangan control. This, it must be suspected, the British Government knows. It looks as though the purpose of Tuesday's message to U Thant was not, in fact, to bring about a change in policy at the United Nations, but to secure a domestic breather at Westminster. It is a regrettable stratagem for a British Government to resort to.

This is not to say that the British Government has been wrong to insist, as it has done all along, that the solution for the Congo's troubles should be sought, not by military

action, but by political means. The point will become relevant again as soon as the UN force in Katanga has won enough of its present tactical objectives to be able to call the fighting off. By that time, one supposes, the Tshombe regime will be in poor shape, if it has not gone under altogether; and the UN will be under pressure to hand over to a governor from Leopoldville, and wash its hands of Katanga for good. What would happen after that can only be guessed. It would be small comfort that Mr Tshombe, and the interests that support him, could then be said to have brought it all on themselves.

One source of hesitation about ambitious actions by the United Nations is that nobody can say what the UN will decide to do, or will be permitted to do, in the situation after next. Some of the honest doubt that is felt about the Congo operation arises from this fact. The Katanga regime was not good, but it worked in a way; if the UN is to pull it down, as it seems now to be forced to do, then the UN will have a responsibility for seeing that an orderly and equitable form of government, observing lawful principles of action, is put in the place of what will have been destroyed. Katanga will have to return to the Congo, but not as a booty of war.

To talk in this way now, when the fighting is not in sight of its end, is hypothetical and may seem premature. Success for the United Nations depends, however, on acceptance of what it does and what it is trying to do, both by the community of national governments to which it is responsible, and by the people on the spot. A coherent intention is an operational aid not to be dispensed with; and it is partly the lack of such a visible, intelligible intention that has caused the UN to run into so many road-blocks. A certain inscrutability is in the nature of international bodies. But if this could be attended to, even the Europeans of Katanga might be brought to feel that an interval of United Nations guardianship would now be the best thing for them.

What the UN Wants

Some things said—and unsaid—on Katanga

MR HEATH, Lord Privy Seal, told the House of Commons on Monday that there was "genuine cause for the gravest alarm" about reported statements made over the weekend about United Nations aims in Katanga; and that, although the UN Secretary-General had issued an "important statement" on Sunday repudiating these press reports, "these matters must be clarified before the bombs are released, and we must be assured that the undertakings given by the Secretary-General can be carried out."

Mr Heath cited only two reported statements:

(a) "*One from the commanding general of the UN (General McKeown) saying that peace overtures from Mr Tshombe would be rejected.*"

General McKeown's press conference on Sunday was reported at length in several newspapers. The alleged remark cited by Mr Heath did not appear in the published reports attributed to Reuter, Agence France Presse or the Associated Press. A version attributed to United Press International and used by *Figaro* among others reported the general as saying that the UN had learnt indirectly of peace overtures by Mr Tshombe, and that "*we shall ignore them, because Tshombe cannot now halt the fighting,*" which was now being led by white *ultras*. At the time of writing, other agency correspondents in Leopoldville were still unsuccessfully trying to trace the origin of this UPI report.

On Tuesday the UN in Leopoldville formally denied that General McKeown had made any "statement concerning any unwillingness on the part of the UN to negotiate with Mr Tshombe." News agency offices in London were given this denial on Tuesday at midday, but it did not appear in any of Wednesday's London newspapers.

(b) Mr Heath quoted Dr Sture Linner, the Officer in Charge of the UN Operation in the Congo, as having told the Stockholm *Expressen* that the UN aim was "*to force a political solution on the Katangans by smashing the military strength of the present political leadership.*"

Expressen published its interview with Dr Linner on Friday, December 8th. A verbatim translation of the interview as published in *Expressen,* given in *The Times* of Tuesday, had Dr Linner saying that "*By destroying the political leaders' military strength we are not trying to force a political solution on the people of Katanga.*"

Dr Linner himself repudiated the *Expressen* version of his words in a statement broadcast by the Swedish radio on Saturday and reproduced in Sunday's Swedish newspapers. On Tuesday *Expressen* printed an apology and a detailed account of how his words had been thoroughly garbled in transmission over a teleprinter from Leopoldville. The paper said that in reality, when asked what was the aim of the UN military action, Dr Linner had said: "*It is not to force a political change.*" On Wednesday Dr Linner made public not only a further categorical denial and a statement that the words attributed to him had been "utterly absurd" and in obvious contradiction to UN policy, but also the text of a full apology given him by *Expressen's* correspondent, who said he was quite unable to understand how the Leopoldville teleprinter could have garbled his report so "unrecognisably."

THE UN Secretary-General's statement issued last Sunday had "categorically" described as "false" the original *Expressen* garbled version of UN aims:

> "The military action was forced on the UN by a series of deliberate attacks on UN officials, soldiers and military officers in Katanga, and particularly Elisabethville, involving wanton and brutal assault, cold-blooded murder, and seizure of such personnel; the setting up of road blocks impeding the freedom of movement in Elisabethville; and attacks in strength on positions held by the UN elsewhere in Katanga, all of which were clearly part of a plan. The UN military action was undertaken with the greatest reluctance, and only when it became obvious that there was no use in continued negotiations, which were marked by repeated instances of bad faith and failure to implement agreed measures on the part of the political leaders of Katanga, who indulged in a violent and inflammatory campaign against the UN over the press and radio even while they were engaged in negotiation with our representatives.
>
> "The purpose of the present military operation is to regain and to assure our freedom of movement, to restore law and order, and to ensure that UN forces and officials in Katanga are not subjected to such attacks. . . .
>
> "These military operations will be pursued up to such time, and only up to such time, that these objectives are achieved, either by military or by other means, and we have satisfactory guarantees in this regard for the future. . . . We shall also need to be satisfied that we shall be able to go ahead with the implementation of the Security Council and Assembly resolutions, and especially the latest Council resolution of November 24th, without let or hindrance from any source. . . .
>
> "I shall welcome any initiative which would enable us to achieve our aims as peacefully and as speedily as possible. In this connection I am fully aware of the need for reconciliation and pacification. . . ."

The Secretary-General's last point was interpreted by Mr Heath, in his Commons speech on Monday, as meaning that "the Secretary-General is inviting mediation from outside. Therefore, we ourselves are pursuing the matter to see which is the best form of mediation to bring the fighting to an end."

THE Security Council resolution of November 24th, after recalling and reaffirming UN purposes as set out in previous resolutions on the Congo—specifically, to maintain the Congo's territorial integrity and independence, to help its government restore law and order, to prevent civil war, and to secure the immediate removal of mercenaries and all foreign military and advisory personnel not under the UN Command—went on to stress "the imperative necessity of speedy and effective action to implement fully the policies and purposes of the UN in the Congo to end the unfortunate plight of the Congolese people, necessary both in the interests of world peace and international co-operation, and stability and progress of Africa as a whole."

The resolution "authorises the Secretary-General to take vigorous action, including the use of requisite measure of force, if necessary, for the immediate apprehension, detention pending legal action and/or deportation of all foreign military and para-military personnel and political advisers not under the UN Command, and mercenaries as laid down in the *Council resolution of February 21st.*"

It asks the Secretary-General "to take all necessary measures to prevent the entry or return of such elements under whatever guise and also of arms, equipment or other material in support of . . . the secessionist activities illegally carried out by the provincial administration of Katanga, with the aid of external resources and manned by foreign mercenaries."

The resolution also "calls upon all member states to refrain from promoting, condoning, or giving support by acts of omission or commission, directly or indirectly, to activities against the United Nations often resulting in armed hostilities against the UN forces and personnel."

Transatlantic Swell

The US is not amused with us

"WE were not very happy," said Mr Dean Rusk on December 8th, in a tone Queen Victoria would have appreciated. He was referring to the sale by Britain of six Viscount airliners to communist China; but he might equally well have been talking about several other things Britain is doing just now, or looks like doing, that are calculated to make eyebrows rise in the United States. Bad luck has brought several differences between British and American policy to a head at the same time.

Most conspicuous is the difference over the degree of support to be given to the United Nations in Katanga. But there is at least as much irritation in Washington about Britain's reluctance to contribute what the Americans consider its proper share to the reinforcement of the allied armies in

Germany. If the British add to these causes of displeasure by voting for the seating of communist China at the United Nations at the end of the current debate in New York—and Lord Home's past statements suggest that they probably will—the "special relationship" is liable to be specially acrimonious for the next few months.

So far the differences have been kept decently muted. On December 6th, the day after fighting broke out in Katanga, the State Department and the British embassy in Washington both disclaimed any disagreement about the fundamentals of Congo policy. But, for all that, disagreement on a fairly profound level became apparent the same day. The State Department made it clear that it thought the United Nations force had the right to take action not only to defend itself, but also to carry on the job for which it went into Katanga; Mr Adlai Stevenson expressed his government's approval of U Thant's plans to "bring Katanga under control." These plans, Mr Rusk said on December 8th, did not involve an attempt "to, as it were, conquer Katanga." There remains, however, a very wide gap between the Americans' apparently whole-hearted support of military action for objectives short of the conquest of Katanga, and the call by the British Government at the mid-week for an immediate cease-fire. This divergence was emphasised in the lucid statement by Mr Ball, the acting Secretary of State, on Wednesday, who insisted that the UN must achieve some minimum objectives before a cease-fire.

THE gap between British and American attitudes towards the military requirements of Nato seems to have been left equally wide by last weekend's discussions between the two countries' defence ministers, Mr Watkinson and Mr McNamara. The British Government is still apparently arguing that General Norstad has enough troops at his disposal (including British troops) for his purposes; and that to add many more might weaken the credibility of the allies' threat to use strategic nuclear weapons against a major Russian attack. To this argument the British have recently been adding the special plea that, if Britain is to keep even as many troops in Germany as it has now, it will have to be given help for its balance of payments; which means that the west Germans will either have to place more arms orders in Britain, or at least pay the civilians employed by the British Army of the Rhine. It is doubtful whether the United States has been impressed. Even if Britain gets some help for its balance of payments, the American demand for more troops and less quibbling is likely to persist.

If, on top of all this, the present debate in New York leads to a direct vote for or against the admission of communist China to the United Nations (and not, as in previous years, simply to a vote putting the matter off), and if Britain votes for admission, the consequences may well be spectacular. There may or may not be a pattern behind the current divergences; but it is easy to guess what pattern many Americans will claim to detect.

They will claim that Britain is paying too much attention to preserving the remnants of its imperial position—by protecting Mr Tshombe at the request of Sir Roy Welensky and Sir Roy's friends in London, and by keeping in colonial outposts troops that ought to be in Germany—at the cost of paying too little attention to the communist danger. No doubt this would be a gross over-simplification of the truth; but it might stick. So long as the main argument between the western allies has been whether or not to negotiate about Berlin, General de Gaulle has been the odd man out. Britain may have to look again at some of its present policies if it is not to find itself in that cold and exposed position.

Televarsities?

Could the Pilkington Commission on television services give impetus to a major experiment in British adult education?

THE Pilkington Commission has been long in parturition, and what is likely to emerge when its labour is over next spring will set the pattern of British television and broadcasting—and therefore of the most potent current influence on British life—for the best part of a generation. It is now time to discuss one potentially very exciting aspect of its deliberations in some detail. Can scope be carved out in British television for a major experiment in adult education, which might just conceivably do more than anything else to transform Britain's position in the world?

The broad framework of the Pilkington Commission's recommendations is almost certain to be dictated by rather complicated technical considerations. At present Britain's television is broadcast on a system that breaks the picture up into 405 horizontal components. This is the result—and the disadvantage—of our having begun much earlier in this field than other countries, and having therefore been unable to take advantage of later developments that allowed the system of 525 lines in America and 625 lines in Europe. The two television networks, the British Broadcasting Corporation and the Independent Television Authority, use the whole of one, and half of another, of the four wavelength bands allotted to this country. These are Band I, used by the BBC, and Band III, used partly by the ITA: both of them are in the very high frequency (VHF) range. The other two bands, IV and V, are in the ultra high frequency range, inferior in some respects to VHF, and so far uncommitted.

British viewers are almost certain to want to turn to the 625-line standard eventually. It permits much bigger screens to be used. But during the period of change, although all new sets coming off the production lines will be made on the new 625-line standard, it seems very likely that owners of the existing 10½ million 405-line sets will demand that programmes be broadcast in both standards simultaneously (so far an ITA scheme for avoiding this duplication has met with scepticism). This duplication would also have to apply to any new network recommended by the Pilkington commission, whether awarded to the BBC or the ITA. All the signs are that the commission will recommend only one such new general network along the lines of the existing two. It could be accommodated in Band III on the 405-line standard; the duplicate 625-line programmes of all three networks would then go into the UHF Bands IV and V, where there is, on present indications, room for four national networks. Colour television requires no separate bandspace. There would therefore then still be space enough for one extra network in UHF. (Or, alternatively, if the new network went into UHF, there would be space in Band III immediately.)

SOME people have suggested that much of this "spare" space should be allotted to the BBC to extend its coverage of the country—that is to say, to send out its existing pictures to the tiny (about 0.6 per cent) proportion of the population who are at present deprived of any television at all, in the highlands and islands of Scotland, and so forth. But this would be terribly uneconomic; to reach the extra odd hundred thousand viewers would require the erection of 50 new transmitting stations. If there is to be an experiment with pay-as-you-view television, it might be done either on closed circuit (that is, wire-carried) systems or else might reasonably be incorporated into some programmes in the new general third network. Further extensions can come later, about 1970, when 405-line sets wear out; when the need for duplication ends; and when the disappearance of three 405-line programmes will leave room for two new 625-line networks.

In the meantime, what use is to be made of the small extra bandspace that is likely to become almost immediately available? The ITA has suggested in a recent booklet* that it should be given over to a purely educational "Fourth Network." This is an idea that now needs some widespread discussion; in the course of it, some suggested amendments to the ITA's scheme should be offered. Some work has been published on the application of this possibility to Britain, notably by John Wellens† earlier this year (and his conclusions were remarkably close to those of the ITA). In *The Economist's* view, the main value of the idea would not lie in the schools, where existing ITA and BBC broadcasts in the daytime can better meet the case—although there is certainly no reason why a new educational network should not devote some of its daytime services to extending televised school lessons, especially in mathematics and science. But the real and exciting objective should be to try to establish on this network some sort of British Television University (or universities), which could revolutionise spare-time adult education in this country.

A great deal of hard and visionary thought now needs to be given to this idea. The aim would be to send out lectures and demonstrations and demonstration films, both early in the morning (for the real eggheads) and in the evening (when ordinary working people could watch them at home), which could lead up at the summit to extra-mural university degrees and to diplomas (perhaps particularly on technical subjects) lower down. There would never be a really mass audience for any one of these lectures, because only an absurd swot would try to take all the courses at the same time. But each course, involving say four or five lectures or demonstrations a week, coming into people's own firesides, would be very likely to attract several times the number of people who can at present take similar courses in all the existing colleges and other places of advanced education in this country; in addition, many students at these existing colleges would no doubt watch the available lectures on their own subjects as well. If it caught on, this could be a device for trebling or quadrupling the number of reasonably well-educated people in Britain within a relatively short span of years.

Of course, there would be immense difficulties. Just listening to lectures and watching demonstrations is nothing like a substitute for real education, unless there is some provision for tutorials and criticisms of the individual students' work. No doubt correspondence colleges (commercial and otherwise) would fill some gaps here, but it is true that the resulting education for students of the air would still fall very far short of the education that real colleges and universities can provide. Nevertheless, it would bring some sort of further education to people who would otherwise get no sort of further education, and it is precisely this sort of second-best education that Britain has got to learn not to despise. The important thing is that every curious person seeking information across the band of the "two cultures" should be given it; and, specifically, students of the air who did particularly well at extra-mural exams could and should obviously be granted generous scholarships at full-time centres of education.

The daytime hours on this network, when the voluntary "televarsity" students would be at their ordinary everyday work, could be devoted largely to purely technical education for industry. Less than half of those who should receive some further education in their trades and professions at present manage to do so; experience in America suggests that many of the remainder could profit by direct televised instruction with very little supervision. Many employers might well find that releasing their young workers to study these programmes in the firm's own television rooms suited them better than day-release to often distant training colleges. That, indeed, would be one danger of the system. Great care would have to be taken to see that the existence of this television service was not used as an excuse by the Government to slow down conventional educational advances.

Financing such an enterprise (let us call it ETV) should not present great difficulties. An exchequer grant would be a prerequisite, but much of the system's income ought to come from endowments, grants from industry and commerce, outright gifts, and contributions from charitable foundations. The cost would be tiny, in relation to the potential audiences: even allowing for the great differences between the American and British conditions, on present showing the running costs of an individual ETV station need not necessarily be much more than about £50,000 a year, and the capital cost should be under £1 million for one central and four regional stations. From the existing broadcasting bodies might come technical facilities and aid, including the services of "loaned" technicians. Even the prospect of some advertising, of the type which offers information (such as careers advertisements),

* Educational Television: Some Suggestions for a Fourth Service.
† Educational Television: A Survey and a Plan. (Wellens, 1961.)

should certainly not be howled down without thought.

If an ETV network ever does get set up, its worst enemy might well be the conservatism of educationists themselves. Many of them are likely to be outraged by the prospect of standardised mechanical or electronic teaching. In this respect one can only hope that the newly-founded Institute for Educational Television becomes a really liberal and visionary body. So far its statement of aims appears somewhat narrow, although it rightly includes references to much-needed research into educational techniques over the air and some ambition to be a central collecting-point for information and material. But the institute should also seek to expand its functions well beyond these bounds, to include the preparation of the auxiliaries (guide books, bibliographies, etc.) that would be as important to any ETV scheme as the televised lectures themselves.

Probably the real fight would come over the organisation and control of any such ETV network: it is difficult to think of any remotely interested organisation which would not fight hard for its right to representation on the governing body. Among those who would certainly have good claims to be represented are the universities, the local education authorities, the Institute of Adult Education, the Workers' Education Association and several others. But there should also be some other hand to restrain their combined enthusiasms (or to stimulate their lack of them). Perhaps the most sensible idea would be the establishment by charter of an Educational Television Authority which would control the means of broadcasting and the permission to broadcast, and which would perform its ultimate function through a single central service and several regional stations; each of the latter could then contribute material to the networked programmes or, as independent stations do now, break off at times to conduct its own purely local service.

It will be said that all this is visionary and could be fraught with dangers. So, indeed, it is. But Britain has a unique opportunity and need to outpace the world in this. Compared with America, we have many more people who have the capacity to benefit from advanced education but do not at present get it, because so many fewer people have the chance to go to college here. An ambitious ETV scheme could provide one very big way of bridging part of the gap.

Hungary and Its Past

Our visiting correspondent looks at Mr Kadar's efforts to get on better terms with the Hungarian people without compromising his communist aims

Mr Kadar

IN Hungary the communists talk about the "counter-revolution." Those who do not agree with their interpretation of what happened in 1956 (and that means virtually everyone who is not a party member) tend to talk simply about "fifty-six." But for the communists and the rest alike, the revolt against communist rule five years ago still looms large in their thinking about the present; and for both it represents a warning. For the communists it is a warning against repressive, short-sighted policies that might again build up intolerable pressures; for the others it is a warning that so long as the Soviet Union believes that it cannot afford to allow any repudiation of communism in eastern Europe, they are stuck with the present system. Within this narrow, rather rigid framework, the two sides are trying to come to terms.

For ordinary Hungarians this experimental manœuvring is made more tolerable by their sense of humour; a barrage of sophisticated mockery protects them against, and consoles them for, a system that they know they cannot fundamentally change. (At the moment, Stalin's reburial and Albania's defiance are causing much amusement, from which even the communists, being also Hungarians, are not altogether immune.) The communists, on the other hand, are hampered in their relations with the people they rule by their own shibboleths; it is not so easy to grapple with the fact of one's own unpopularity, while simultaneously embroidering the compulsory fantasy that one is thoroughly acceptable. Nor is it easy to allow wider contacts with the West if one's basic long-term aim is to carry out among the people as a whole the radical transformation of their way of thinking that the communist minority has already undergone.

Thus the situation in Hungary today is not straightforward or clear-cut. It presents a confused, contradictory picture of concessions here and clinging to the bad old ways there. A good many political prisoners seem to have been released, an the secretiveness of the regime on this score may make th situation appear worse than it in fact is. Most of the write are writing again, though circumspectly, with the neck hel well in. Although Cardinal Mindszenty remains in th American Legation, and last summer some clergy were trie and sentenced for alleged subversive activities, the governmer seems to be feeling its way towards a sort of *modus vivend* under which the Church would enjoy religious freedom i return for collaborating, to a certain minimum extent, wit the State. This may shock western Catholics, but to man Hungarian Catholics it may simply seem realistic.

What has done most to mar the image which the Kad regime would like to present has been the helter-skelt scramble to complete the collectivisation of agriculture. Th decision to press on fast with collectivisation in the wint and spring of 1959-60 (so that today 96 per cent of the arab land belongs to the "socialist sector") was the subject much argument within the party; today the decision publicly upheld as necessary to avoid a prolonged period uncertainty, and privately deplored because of the resentme and dislocation that it has caused. It remains to be see whether the regime can—as it hopes—compensate the peasant for his loss of independence by giving him better living standards. Most industrial workers, on the other hand, can already thank Mr Kadar for some improvement in their lot. However hard they may have to work, however tiresome the periodic shortages, however expensive the goods in the shop windows, they are at any rate better off than they were before the 1956 revolt.

They are also less isolated from the outside world, although here the regime treads gingerly. People now listen openly to western broadcasts, most of which are no longer jammed; but they cannot buy western newspapers on the news stands. In Budapest one can see the best western plays and films. People flock to an exhibition of Henry Moore put on by the British. But their contacts with foreigners are still liable to irritating and ridiculous restrictions. Restrictions on foreign travel are less than they used to be but still pretty severe—although it is reasonable to accept the shortage of foreign currency as at any rate part of the explanation. The men who now rule Hungary, in short, realise that to limit contacts with the West to the barest minimum, as Rakosi did, builds up a dangerous and explosive sense of frustration; but in constructing a safety valve in the shape of freer contacts with the West, they are inhibited both by their own training and outlook and by their fear of undermining their proselytising mission among the Hungarians.

A SIMILAR, tricky balancing act has to be performed by Mr Kadar when tackling every aspect of the problem of coming to terms with the Hungarian people. He must also tread warily within his own party; as he said the other day, the party's forward march is accompanied by horse-flies "stinging us from both the right and the left." He may find that his situation has been made easier by the 22nd Soviet party congress; at any rate he is reported to have returned from Moscow much heartened by the way things went. Since 1956 he has always enjoyed Mr Khrushchev's support and it was naturally important to him that Mr Khrushchev should himself enjoy his own party's support. The disgrace of Stalin is not likely to go to any Hungarian heads, although Mr Kadar did point out, at the Csepel iron and steel works on December 1st, that those Hungarians who pulled down Stalin's statue five years ago would never be rehabilitated, since they had acted not from dislike of Stalin's mistakes, but from dislike of communism. But within the context of their actual political situation, most Hungarians, like Mr Kadar, were relieved at the outcome of the Soviet congress. They hope that Mr Kadar's hand will now be strengthened against the "dogmatists" who think him too soft, and that the improvement in their lot, such as it is, will now at any rate be maintained.

This is what matters to the Hungarians today: things are better than they were before 1956. It can be argued that the rule of law is no more firmly established under Kadar than it was under Rakosi; that human rights and liberties are no more firmly guaranteed, and the people no more free to choose how they should be governed. This is all quite true. But the Hungarians do not see their situation in such black and white; they are concerned with nuances, with comparisons with what used to be—and what might be again. Judged in this way, they know themselves to be better off, not only materially, but above all in greater freedom from the intolerable pressure to conform to the communist creed. It is no longer necessary to be a communist if you want a job with any responsibility; there is no longer the same compulsion to attend communist classes. There is, of course, no guarantee that this trend will continue; it could be changed very quickly by some upheaval inside the Hunagarian—or Soviet—communist parties. But it is reasonable to hope that the longer the present trends continue, and perhaps develop, the more difficult will it be to reverse them.

There is some evidence that the Hungarian government would like to get on better terms with the outside world. This should surely be encouraged. It is tempting to stand pat, as Sir Leslie Munro does in his latest report to the United Nations, on the incontrovertible fact that the basic freedoms of the Hungarian people have not been restored. But indignation does not help. Mr Kadar is probably the best prime minister the Hungarians can expect to get. If most of them recognise this, should not the outside world do so also?

Mr Kadar has begun to open his western windows: whatever his motives, this is welcome and is bound to benefit the Hungarians. Whether he opens them wider, or slams them shut, will be at least partly influenced by the outside world's attitude towards him. It is good news that he has invited the UN acting secretary general to Hungary, and that U Thant has accepted. One hopes the visit will not be too long delayed; it will encourage the Hungarians, and it may even induce Mr Kadar to open his prison doors still wider as well as his western windows.

DECEMBER 14, 1861

THE INCIDENT AND THE FUTURE

(From Our Special American Correspondent)

Nothing is yet talked of but the capture of the Confederate agents, Messrs Mason and Slidell. The topic will outlast the ordinary nine days, for its interest will be rekindled as we approach the time when the reply of the English Government may be expected. . . . The only newspaper which shows any regard for the future in its treatment of the question is the New York *Tribune*. That journal suggests that to obtain the recognition of the American doctrine that "free ships make free goods"—that is, that the neutral flag protects the cargo—it would be worth while even to release the arch-conspirators. On the other hand, our Government may find it a good opportunity to obtain the definite adhesion of that of the United States to the accepted European doctrines upon the whole question. The point should now be settled one way or the other; and if the American Government in their present arrogant temper persist in acting upon one principle while they adhere theoretically to its converse, it is high time for the Western European Powers to adopt a set of rules of law upon the question, and see that they are carried into effect. And should the particular act in question be pronounced illegal and unjustifiable, some adequate punishment ought certainly to be inflicted upon Captain Wilkes, who is primarily responsible for so much trouble, and for the imperilling of the vast interests involved in a preservation of peace between this country and Great Britain. Otherwise, we may have a renewal of angry diplomatic discussion any day, as the extravagant laudations lavished upon Captain Wilkes by the whole of this nation will be an indication to all enterprising officers of the navy that they have only to be sufficiently bold and reckless, and to make their mark for insult a British ship, to be canonised, or at least to have a chance of the Presidency. Wilkes has already been suggested by one of the most respectable of the New York journals as a candidate for that high office at the next election, and at Boston, the capital of conservative Massachusetts, a great ovation is being prepared for him. While the primary satisfaction in this case was of course the capture of the rebel agents, it has been transparent from the first that the choicest spice with which the dish was seasoned was the boldness of the act of boarding an *English mail* packet. The national vanity is vastly flattered. This success almost atones for Bull's Run!

NOTES OF THE WEEK

KATANGA

Running from Parliament's Storm

THE Government has been manœuvring desperately all this week to extricate itself from a potentially extremely serious situation on its back benches over Katanga. When last weekend's announcement that Britain would supply the United Nations with bombs was made, there was already a fairly innocuous pro-Katanga motion on the order paper. It was immediately transformed into a censure motion by the tabling of a fierce amendment by Lord Hinchingbrooke. Twenty-seven members signed the original motion, and eighteen promptly signed Lord Hinchingbrooke's amendment, deploring the Government's decision to supply United Nations aircraft with bombs. From the names on the order paper, and the clamour of those who supported the amendment's sentiments but were too cautious or too timorous to sign, it was plain that the Government was faced with a substantial revolt of anything up to eighty Tory members. They came from all sections of the party, but mostly from the right and centre of it. These are the members who may have found it convenient to have forgotten Suez but who certainly have not forgiven the United Nations for the part it then played. The Prime Minister, who never likes to be too far ahead of the centre of his party, turned around smartly, put an embargo on the bombs (which the UN authorities have now said they do not want anyway) and tabled his very cunning motion for debate on Thursday, which called for a cease fire in Katanga and the creation of conditions for the achievement of a peaceful "united Congo." This was carefully worded to command the widest possible support in the party. At one extreme, Mr Macmillan judged that if the far right wing continued to threaten to vote against the Government on a censure motion, it would find itself isolated, and limited again to the tiny handful of Suez diehards plus the Katanga lobby. At the other extreme, the wording was also deemed to satisfy the small team of younger Conservatives who had put down a mildly worded motion supporting the United Nations action in the Congo.

As Thursday's debate started (and as *The Economist* went to press) everybody was therefore assuming that the Government had got out of its immediate parliamentary difficulty. But it has done this only at a price. Prestige has been lost abroad and, at home, hostages have been given to fortune. The right wing has been exhilarated by its first major success, and could thereby be encouraged to put up a stronger battle on other impending matters than they otherwise might have done; the rebel groups' immediate reaction to the Prime Minister's retreat was to put down an addendum saying that Britain's monetary contribution to the UN in the Congo should be withdrawn unless Britain's wish for an armistice is fulfilled. As for the electorate, they may not be able to unravel the complexities of the Congo, but they know indecision and vacillation when they see it, and what is more, they like it almost less than anything else. Since returning to Westminster the Government seems to have lost its nerve and its touch, a situation for which a large number of individual ministers share responsibility. But the heaviest burden of blame for recent ineptness must rest squarely on the Prime Minister. Is Lord Lambton to prove, in part, a true prophet after all?

IMMIGRATION BILL

The Other Revolt

ON its other current headache in the Commons—the Immigration Bill—the Government has had another bad week, although it could no doubt have been worse. By refusing to attempt the impossible and apply the bill's unenforceable provisions to the Southern Irish, Mr Butler managed to steer it one clause further on its difficult course. The only error of judgment made was to insist on a premature closure of the debate; this infuriated a small group of Conservative insurgents. Eight Tories voted against the closure, but they then supported the Government in rejecting a Labour amendment to exclude the Irish from the bill. More Tory revolts are expected later; doubtless, it was the whips' intention to prevent any declarations of future action being made which caused the debate to be curtailed. There was however no sign of the prophesied guillotine.

It seems pretty clear that this bill is going to get through in substantially the form that the Government wants. It is interesting to speculate why Tory backbench revolts over it are so far having no visible effect, while the Tory backbench revolt over Katanga most certainly has done. One answer—which could be of some cheer to the Government in view of coming struggles over the common market—is that the centre section of the party is loth to join insurrections when there is any danger of members thereby finding themselves in bed with the Opposition. The result is that such revolts now rarely have any great effect. This, be it noted, is the exact opposite of the theory on which parliamentary democracy was supposed to be founded; it used to be supposed that the one sort of backbench revolt that could bring most pressure on government policy would be the sort that an Opposition might support, thus threatening defeat of a government on a vote of censure. But nowadays these sorts of revolt, which would *ipso facto* give expression to the views of the majority of MPs, never seem to get going; while the other and minority sort of revolt can apparently flourish like the green bay tree.

PUBLIC OPINION

What Sways Whom?

PERHAPS the most interesting political news about the Immigration Bill this week, however, has come, not from Parliament, but from first indications of its effect upon the electorate. At the beginning of the battle over the bill, most MPs, on both sides, believed that Labour and the Liberals would lose votes in the country by "siding with the blacks"; they pointed to an early public opinion poll which showed that an overwhelming majority of people agreed, in abstract principle, with imposing some controls over immigration. Those who argued that it would be the Tories who would lose electoral support through the bill were derided. But they now seem to have the statistical evidence on their side. The *Sunday Telegraph* last week published a Gallup poll which had been taken just after the second reading debate on the bill. With fine British perversity, 3½ per cent of those questioned said that they intended to switch their votes away from the Conservatives because they disliked the Government's introduction of the bill, and 1 per cent said that they intended to switch away from Labour because they disapproved of Mr Gaitskell's opposition to it; the ostensible gainers were the Liberals (by 3½ per cent) and "others" (by 1 per cent).

No doubt these figures should be taken with a pinch of salt; the *Sunday Telegraph* itself commented that "previous experience has shown that few people decide their vote on a single issue." But the broad implication of the poll very probably is right. Although the majority of the electorate is not particularly liberal-minded (with either a small or a big L), the largest number of floating voters like to think that they themselves are. The main way in which any party can lose support among these floating voters is by appearing to be anti-liberal in any matter which the great advertisement hoarding of parliamentary debate has brought sharply into public attention. This is an inference and a conclusion that is fraught with large implications, of which all parties have long failed to take sufficient cognisance. It has very great relevance, for example, to the electoral asininity of

Labour's present trend towards becoming the party that is apparently going to oppose Britain's entry into the common market. It should have some interesting implications for the Tories' Katanga lobby, too.

ALBANIA

Russians Go Home

SOME angry mud-slinging by both sides has followed Russia's decision to break off diplomatic relations with Albania. It was announced in Tirana last Sunday that on November 25th and on December 3rd the Russians had told the Albanians that they were going to withdraw all their diplomats from Tirana, because they were hopelessly hindered from carrying on their normal activities; they demanded in return that all Albanian diplomats be withdrawn from Moscow. The Russians also complained of the hostile activities of Albanians living in the Soviet Union and of an "unprecedented" Albanian demand that the staff of the Russian embassy in Tirana should be cut by nearly two-thirds. In diplomatic notes, and at great length in their party newspaper, the Albanians have rebutted all the allegations "with the greatest amazement and indignation" and have weighed in with a heavy barrage of counter-allegations.

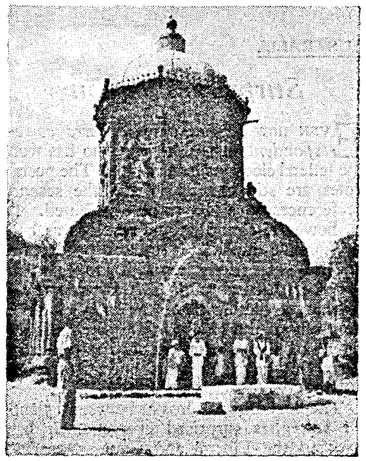
The Russians apparently do not consider that their action amounts to a formal rupture of diplomatic relations. All the same it is, as the Albanians indignantly point out, "unprecedented in the history of the relations between socialist states"; even at the height of the Russian quarrel with Marshal Tito in 1948 diplomatic contacts were never completely severed. Moscow's gesture, however, can hardly make its relations with Tirana any worse than they already are. And if the Council for Mutual Economic Aid (Comecon), which has been meeting this week in Warsaw without the assistance of any Albanian delegate, decides to expel Albania this can hardly make Albania's economic isolation from eastern Europe any more complete; all the members of the Soviet block have withdrawn their economic aid in recent months. If the Albanians stick to their present stout resolve never to accept help from the "imperialists" they will remain completely dependent on Chinese aid.

It is, of course, Peking's increasingly close relations with Tirana that make the fate of Albania important. The Albanians will not be the only ones to suspect "ulterior motives" in Mr Khrushchev's latest attack on them. According to *Zeri i Popullit*, "he wants to threaten and forewarn any other party that might dare contradict his views. . . ." This may well be so. Some of the criticisms of Mr Hoxha set forth at length in the latest issue of *Kommunist*, such as his attitude towards peaceful co-existence and his disapproval of Russian aid to underdeveloped countries, are among the favourite bones of contention between Moscow and Peking. This latest, somewhat distant, Russian trumpeting outside the walls of Peking seems unlikely to suffice to bring them down; it is more likely to widen the split in the communist world.

CHINA AND UN

Taciturn and Tactical

INDIA is notably absent from the list of 58 countries whose delegates have asked to speak in this year's Assembly debate on China's UN seat. At previous Assembly sessions, India had proved a more effective champion of the Peking government's claims than Russia. But the present debate, now near the end of its second week, has taken place against a background of virulent attacks on Mr Nehru in the Peking press, and of Indian charges of new aggressive moves by Chinese forces on the Himalayan frontiers. Meanwhile Russia has pressed communist China's case at the UN despite the quarrel between the two powers that has come into the open in regard to Albania. In the UN corridors, however, there has been some serious speculation about the real motive behind the framing of a Soviet resolution so strongly worded as to alienate some states that might have voted for a more temperate version of Peking's claims.



American tactics on the issue have been as strikingly new as India's taciturnity. Uncertain whether the Assembly would any longer accept the ritual motion of previous years postponing consideration of the substantive question, the Americans this year agreed to a full debate—which is being held in plenary session, not in committee. They have tabled, jointly with Australia, Colombia, Italy and Japan, a resolution which would define the China seat question as one important enough to require a two-thirds majority vote. It is generally accepted that this definition will be adopted (by a simple majority), and that the consequently needed two-thirds majority in favour of transferring the seat to Peking's representatives will not be mustered this year. As to the future, opinions among delegates differ, some holding that a two-thirds majority may well appear as early as next year, others that the new definition could debar Peking from the seat almost indefinitely.

In the babel of debate, only a few voices—notably that of Nigeria—have been raised to point to the obvious fact that two Chinese states actually exist and that neither can be wished out of existence. Any such reference to "two Chinas" is denounced by the communist powers as "imperialist collusion." Nor is it overtly acceptable to the Chinese Nationalists in Formosa or their American protectors. Yet the most telling part of Mr Adlai Stevenson's speech on the first day of the debate was his reminder that the Taipeh government actually rules an area larger than that of eight UN member states, and a population—11 million—greater than that of 65 UN members.

GOA

Anschluss?

INDIA'S patience is exhausted, said Mr Nehru, on Monday; the remark evokes memories not calculated to gain him sympathy in the West. It is hard to say just what the Portuguese in Goa have done recently, apart from loosing off two panicky bursts of gunfire, to provoke New Delhi intolerably. Portugal's colonialism is little more enlightened in its "state of

Portugal in India

India" than it is in Africa, but it is no worse today than it has been for the past fourteen years. Dr Salazar cannot hold on to his remote Asian outposts for ever, and it is likely that the increasing financial and military strain of the war in Angola will slacken his hold on his empire fairly rapidly, just as it will undermine the regime in Portugal itself. Geography, history and racial similarity make it certain that India will inherit Goa (and the two tiny enclaves of Diu and Daman).

The Indians need only wait. Indian reports that the Portuguese have carried out raids across the border are difficult to believe. Why should Dr Salazar provoke his enemies to attack his already precarious position? The Portuguese proposal that international observers be sent to the Indian-Goan frontier "for the purpose of examining the attitudes of the forces present there and of determining the nature and responsibility for any incidents that may take place" is not only sensible but suggests that Lisbon has, on this matter at least, a clear conscience.

Mr Nehru, in spite of this, has expressed his renewed determination to get Portugal out of Goa as soon as possible, and, while denouncing violence and appealing for negotiations, has ordered a concentration of troops. One of his motives is presumably to divert the domestic clamour for action on India's disputed border with China. The quarrel with Portugal gives him an opportunity to challenge the opposition's "more

anti-colonialist than thou" attitude. It also affords a welcome chance to prove to the uncommitted nations, who have sometimes girded at India's moderation, that in the year of Angola, Bizerta and Katanga he is a paid-up member of the anti-imperialist club. Mr Nehru, it is to be hoped, does not want, and Goa is not worth, a fight; but the activities of the extremist Indians and Goans, which his pronouncements have stimulated, may yet bring one about. There is already talk of 5,000 volunteers marching in to liberate the colony.

AUSTRALIA

Surprise Election

EVEN NOW (*writes our Canberra correspondent*) it is not clear who has won the federal elections in Australia. The postal votes are still coming in and the second preferences have still to be distributed. It is, however, clear that the result is as bad as possible in that it cannot produce a government strong enough to govern. Whether Liberal and Country party, or Labour, it cannot have a majority of more than one in the House of Representatives; while in the Senate the Liberal-Country party certainly, and a Labour government possibly, would lack a majority.

The government's loss of between 15 and 17 seats has surprised everyone. It has shocked the Liberal and Country parties,

You are surprised; I am astounded

whose over-confidence (as in retrospect it seems) was perhaps a factor in the government's defeat; it has surprised the Labour leaders, who had promised all, as only politicians can who are safely in opposition; it has amazed the business men who, nursing personal grudges for reduced profits or stock exchange losses, registered a protest vote without any idea that it would be so effective. It has confounded the pollsters, whose figures even on the eve of the election showed a definite lead for Mr Menzies; and it has embarrassed the commentators and psephologists, who declared with absolute certainty for a full day after counting started that Mr Menzies was home and dry.

The change since polling day is dramatic. Every news bulletin has brought fresh tidings of disaster for the government parties. Two ministers have gone—the minister for supply, Mr Hulme, and the minister for health, Dr Cameron, both in Queensland, where the government has lost either ten or eleven seats. The minister for repatriation, Mr Osborne, and the minister for the army, Mr Cramer (who fought the Lord Mayor of Sydney, Alderman Jensen) may also lose their seats. Such is the penalty for supporting an economic policy which the voters never understood and which they do not realise is put into reverse.

If it is the Labour party that emerges with a majority of one, its leader, Mr Arthur Calwell, will no doubt go to the country again at once. His party would first seek a proper mandate from the electors to carry out its electoral promises, and then, no doubt, set about talking its way out of the more awkward of them. If, on the other hand, the Liberal-Country party coalition is found to have been elected, it will struggle on with its majority of one doing as little as possible. The new senators do not take their seats until June 30th; and till then the Liberal-Country party coalition controls the upper house. By that time the reflationary measures already introduced may make themselves felt. Time, aided by masterly inaction, may yet be on Mr Menzies' side.

AGRICULTURAL ESTIMATES

Prodigal Calves

BROILER chickens do not usually come home to roost; but they now seem to have gone to roost on the Government instead. The housewife's preference for this new, expanded and unsubsidised form of agricultural production has helped to leave the Minister of Agriculture with an embarrassingly increased subsidy bill for livestock. The total extra bill for British agriculture in the supplementary estimate announced on Thursday amounts to £78 million, of which £67 million concerns livestock price guarantees. The Chancellor will certainly want to know why. The butchers, wholesale and retail, are bound to come under heavy fire again, if not directly from Mr Soames, then from the farmers themselves, who have been scowling darkly at shop prices all summer. Although the public's disinclination to buy meat has been evident for months, most butchers have deliberately persisted with their policy of stable prices for the consumer—even while the prices they have paid for fatstock at the auctions have fallen. This has increased their profit margins, but kept down their trade; and this in turn has reduced farmers' auction prices (and thus increased the Government's subsidy bill) again.

But the real culprit for the discrepancy in the Ministry's estimates is the Ministry itself—and political pressures at the annual price review. In desperation to pick a winner for the farmers a year ago the

Ministry raised the guaranteed price for beef by 10s. a live cwt. at the price review. This was, as it turned out, quite unnecessary even to maintain the existing level of supplies, for the good winter and spring brought droves of cattle and sheep on to the market. It was also, despite the general tendency of meat consumption to rise with affluence, a gross miscalculation of the British housewife's preferences. The butchers' refusal to cut selling prices sufficiently as auction prices fell has no doubt aggravated the Ministry's difficulties; but it may not be entirely a coincidence that revolutions in efficiency in retail outlets rarely take place in trades that are too rigidly dependent on raw subsidised commodities. The modern housewife has apparently been finding her modern grocer's (with its broiler fowls, processed meat and refrigerated sales—as well as more flexible prices) a far more attractive place to do her extra, impulse buying than the family butcher's.

SOUTHERN RHODESIA

Black Tories?

THIS is how the argument about whether Africans will one day govern Southern Rhodesia is being conducted. The Europeans, led by Sir Edgar Whitehead, the prime minister, seem—to their credit—to be willing to meet nearly every African demand except the two most important—the demands for more land and for universal

Whitehead is willing

suffrage. They are even willing to contemplate a slow absorption of "moderate" Africans—as distinct from African nationalists—into the government, leading, perhaps to a black majority in the far distant future. They hope to train these black men to think and act like today's white men, just as the establishment in Britain has maintained its position by absorbing some of the best men from the ranks.

But this is as far as Sir Edgar's government will go. Any real challenge from the impatient ranks of the nationalists will be sharply put down. That is why Sir Edgar

MAXIMUM PROTECTION...

for a man's family in the form of capital and income.

MINIMUM COST...

by combining two different contracts in one composite policy.

For as little as £2.8.0d. per month a man at age 30 can secure for his dependants a capital sum of £1,000 and, in addition, a maximum income benefit at the outset to the value of £9,000 payable in quarterly instalments amounting to £300 per annum. A MERCHANT BANK AT WORK

New Issues

When a private company decides to apply for a quotation of its shares it is taking a major step, the importance of which can hardly be overrated. The reputation and ability of those sponsoring and handling the issue are therefore important elements in the success of the operation. Each business has its own problems and it needs much skill to analyse its requirements and decide which course of action it is best to adopt. In acting as an issuing house, a merchant bank is exercising one of its main functions; and because we have the skill and expert knowledge which come from wide experience in such matters, we have been able to achieve success for new issues of companies of every size, engaged in a variety of industries.

banned the African National Democratic party on December 9th. His talk of intimidation, and of the NDP's supposed lack of support from African moderates, shows he has not learned the lesson of Nyasaland. None of this is likely to make Africans more partial to federation.

For their part the African nationalists have shown through the NDP an understandable, but unfortunate, degree of truculence. They have been unwilling to play the slow, gentlemanly kind of political cricket called for by Sir Edgar: they are unsure of their ability to win under such circumstances. Rather like the British working classes of an earlier generation, they prefer to strike and demonstrate and boycott to gain their ends. Sir Edgar has little chance of creating black Tories fast enough to keep men who think his way in power; banning the Africans' political party has been proved in other countries to be the best way of strengthening the ideas it stands for.

GHANA

Off-White Paper

DR NKRUMAH'S ideal is to serve all Africans; sadly, he has become an embarrassment to many of them. The white paper published by the Ghana government on Monday expresses the hope that it will prove of value to all emergent countries "as illustrating the type of internal subversion against which any progressive government based on mass support should guard." But, because they are inevitably judged by Ghana's conduct, other young countries in Africa have been done a disservice by Dr Nkrumah's republic.

The white paper says that five main untruths have been spread: that Ghana was on the verge of revolution; that it was nearly bankrupt; that it was corrupt; that it was a dictatorship; and that it had made a deal with the communists. But if Ghana was not on the verge of revolution, why were the government's opponents arrested and detained without trial? People may indeed have plotted against the president; but forty pages of allegations against prominent Ghanaians and foreigners, including the president of the Togo republic, "neo-colonialists," expatriate firms, and *The Times*, do not carry as much conviction as would a single demonstration in open court.

Ghana is not bankrupt yet; Dr Nkrumah is quoted as saying that its sterling assets, at £100 million, are 2½ times its currency circulation and enough to pay for a year's imports. It is also true that corruption "is a disease which affects all nations," though it is an oversimplification to say that it is caused in emergent countries by foreign firms wishing to buy privileges for themselves. Answering the charge that Ghana is a dictatorship, the government bravely affirms its belief that people who are oppressed may have to overthrow a tyrannical government by force; but it distinguishes between this kind of revolution and a conspiracy by a small group to stage a *coup d'état* against the people's wish. Finally, the government may be given the benefit of the doubt when it defends its policy of non-alignment.

All this said, the white paper's weakest, and blackest, point remains its attitude to bringing the facts out in open court. It offers two explanations of this: that it is usually impossible to prove the guilt of the leaders of conspiracies, and the subordinates therefore suffer; and that it is better to detain conspirators until the day of reconciliation than to find them guilty of treason and, perhaps, hang them. This argument is casuistry worthy of the most devious neo-colonialist.

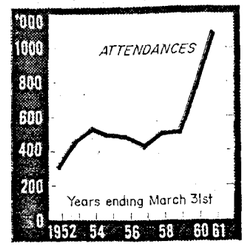
NUCLEAR DISARMERS

Damp Squib

IF some sympathy may be felt for Lord Russell's nuclear disarmers because they were let down last week-end by (at a guess) 90 per cent of their following, little has been spared for the conduct of their self-appointed crusade against law and order. The public has begun to shy away from this militant group to which it may have been, in the grand days of September, a little attracted by its evident underdogginess. In this sense the biggest mistake of the Committee of One Hundred has been to behave as if Britain were a police state, and to represent the Government, the Americans posted here under Nato agreements and the police as aggressors and oppressors.

But military bases have to be protected against trespassers (and trespassers from the dangers they are liable to meet on military bases). The authorities were therefore unable to treat last weekend's law-breaking with indifference, and responded by employing the Official Secrets Act (with liability for two years' imprisonment), raiding the committee's offices, and massing upwards of 10,000 policemen and airmen against the prospective intrusion into the Nato bases. Perhaps the biggest blow was the cancellation of bus bookings made by the demonstrators for the journey from Braintree to the Wethersfield base.

In the event rain and apathy kept away from the seven chosen targets all but 6,000 campaigners, where 50,000 had been expected. At Wethersfield only 200 faced the 5,000 airmen, 1,000 assorted police, 12 dogs, two helicopters and six miles of barbed



Not quite so underdoggy

wire; Ruislip was better attended, Brize Norton worse. There were 850 arrests, many small fines, some short imprisonments and some longer ones of two months.

It would be a mistake to think that this fiasco has dealt the committee a death-blow, or marks the beginning of its decline into dotage. But it is likely that many moderates will go back to the non-disobedient branch, the Campaign for Nuclear Disarmament, and that Lord Russell's committee will become increasingly less civil in its disturbances and less passive in its resistance as the angries take over.

Topping The Tate

LAST year's record number of visitors to the Tate Gallery was swollen by the 459,000 attracted to the Picasso exhibition. Nevertheless, each year more people make the special journey to this out-of-the-way gallery, some 100 works are added to the collection and the pressure on space gets greater and greater.

The Ministry of Works' decision to start work on an extension at the rear of the existing gallery has fallen a victim of Mr Lloyd's pause policy. It is to be hoped the plans will not get too dusty. The trustees have enterprising ideas about what is needed, envisaging three or more floors of galleries, better accommodation for the reserve collection, a lecture and film-showing room, and a new restaurant. Rightly, they are against matching the roman-temple style of the old; but it will be an architectural challenge to conceive a modern design which will rise above the existing cornice line and yet look dignified against the towering neighbourliness of the new thirty-odd storey Vickers building.

OMAN

Arabia's Brandenburg Gate

SINCE the Suez crisis in 1956, when Saudi Arabia broke off diplomatic relations with Britain, the two countries have been out of touch. London's gradual repair of its diplomatic rift with Cairo brought nothing parallel with Riyadh. For the Saudis insisted that a number of frontier disputes, the chief of them that of Buraimi, should be settled in advance of resuming normal relations. There was thus a deadlock, from which its originators would now like to extricate themselves.

Abdul Rahman Azzam Pasha, the Saudi Arabian government's political adviser, came to London last week for talks with Lord Home and others at the Foreign Office. These talks, as may well be imagined of the Arab League's persuasive former secretary-general, were friendly and free. Though Azzam Pasha could offer no digression from his government's original standpoint, the desire to resume diplomatic relations was evident. It would seem that some preliminary activity in tackling the Buraimi question might suffice now to bring this resumption about.

The immediate problem is that of the return to Buraimi of the Saudi-indoctrinated tribesmen who fled to Saudi Arabia when the Saudis were evicted from Buraimi in

1955 by the Trucial Oman Levies. The oasis then reverted smoothly to its traditional owners, the Sheikh of Abu Dhabi and the Sultan of Muscat and Oman. These two rulers naturally fear the return of a native fifth column. Buraimi to the sheikh and the sultan is as Berlin to the western powers; and in practical terms it means more. Whoever controls Buraimi has his hand on the whole flow of traffic in this part of Arabia. Not for its oil potential—which to all appearances is nil—but because of its importance as a junction and a gateway to inlying Oman is the oasis so coveted.

The return of the refugees in small batches would not necessarily be overwhelming. According to Mr de Ribbing, the Swedish ambassador to Spain, who has been examining their claims on behalf of the United Nations and at Riyadh's and London's request, only 1,400 out of 4,000 claimants, so far, have been able to prove that Buraimi is genuinely their home. Meanwhile the rupture in British-Saudi relations is of no advantage to Riyadh since it merely makes Abu Dhabi and Muscat and Oman less ready to be accommodating. When they see their British protectors on bad terms with the Saudis, they do not see why they should stir themselves. The rupture in fact suits their book.

Tales of Ghalib

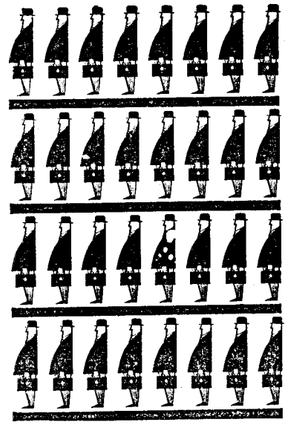
THE Omani rebels against the Sultan of Muscat and Oman are equally suited by the rift between Britain and Saudi Arabia. It brought them powerful Saudi support for their case at the United Nations, although the Saudis, in truth, are not so ardent in championing them as once they were. By a simple majority—African, Asian and communist—in the special political committee of the Assembly on December 4th the rebels won their way to a hearing in plenary session. But they did not get the two-thirds backing that would assure them the Assembly's adoption of the political committee's recommendation that their "right to self-determination and independence" should be recognised.

"Self-determination" in this context is a tricky word. Their leader, the Imam Ghalib, can no more claim to have been democratically elected than any other Arabian potentate. Democratic choice is simply not the Omani custom, and that many Omanis have supported him through his somewhat ineffectual exile is a matter of the gravest doubt. His attempt in 1954 to carry Oman out of the Sultanate of Muscat and Oman was inspired by a wish to monopolise the benefits from the oil that was thought, at the time, to be present in his parish. (None, in the event, has yet been found.) He was virtually "doing a Tshombe" and whatever the local allegiances—they are admittedly mixed up—little good can come of breakaway tribal movements in a region that can never progress if its people will not pull together. That the Arab League should be espousing such retrograde forces in its drive against "British imperialism" is one of the many absurdities to which Britain's outmoded involvement with the Persian Gulf rulers gives rise.

OMBUDSMAN

Lord Kilmuir Objects

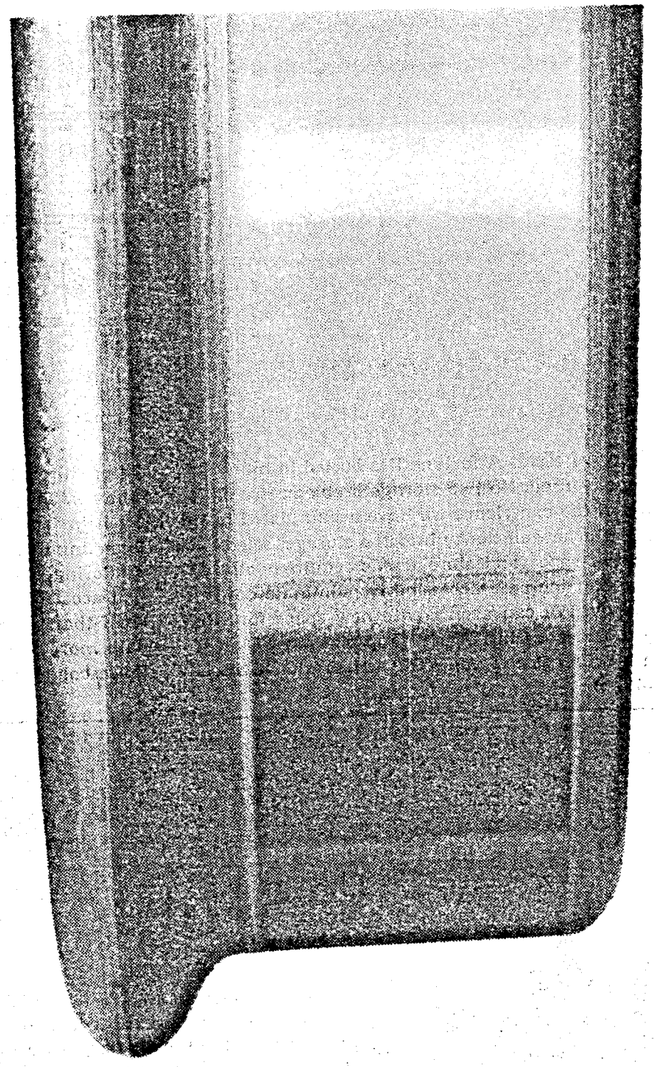
WHEN the Lord Chancellor means "No," he generally says that he is "still considering" a matter. But the influence and energy of this redoubtable man have often been an important element in government decision-making; and last week he appeared to make it fairly clear that the Whyatt recommendations on Ombudsmanship for Britain would go through only over his dead (or perhaps eventually retired) body. There were two main recommendations in the Whyatt report. One was that private citizens should be given much wider opportunities to appeal to some particular or general tribunal whenever they disagree with some discretionary decision made by an official against them. Lord Kilmuir questioned whether Britain would get good administrators "if there is not to be responsibility, if there is always to be an appeal." He also plainly did not think much of the idea that there was need for a general authority to grant new avenues for appeals in matters where no tribunals exist at present, because "the whole tendency in our Parliamentary lifetime has been for Parliament to insert provision for a tribunal in an Act when it thought right."



The second main Whyatt recommendation was for the establishment of a Parliamentary Commissioner (or Ombudsman) with special powers to investigate complaints against acts of maladministration and official misconduct. Here Lord Kilmuir said that a "Minister himself must discipline his staff when they err," and that "criticising the Minister's policy is a matter for Parliament" (not, by implication, for an Ombudsman). Moreover he reported that "many are troubled" at the thought that an MP, instead of "preserving his personal relationship with his constituents," might pass to the Ombudsman the task of investigating complaints which MPs had hitherto thought were their own duty. In saying all this, Lord Kilmuir claimed—and indeed twice reiterated—that he "was trying to raise the points which your Lordships should consider, rather than prejudge them in any way." But of course he was prejudging them, and in a way that was peculiarly reactionary, myopic and depressing.

EUROPE

Yorkist Manœuvres



ONE by one the six men whom Britain marched up the hill into the European Free Trade Association are marching down again towards the common market. Denmark is already negotiating for membership. The Norwegian government is quietly preparing its public for a similar move. This week the three neutrals—Austria, Sweden and Switzerland—were on the point of applying for association.

Unfortunately the way back may prove stonier for the neutral rearguard than for the committed in the van. Indeed, given the deep reluctance of the neutrals to go all the way to integration, there is a real danger that they will be left uncomfortably on the slope, neither up nor down. The Six, for their part, have their hands full with the accommodation of new members and feel no enthusiasm for new associates who would not add to the political strength of the Communities. The United States takes an even stuffier view. It is prepared to stomach discrimination against its own exports for the sake of a politically integrated western Europe, but not for the sake of Switzerland's export trade. "Why

We apply science to the storage of clients A fortune lies buried in many industrial premises, in the form of storage space wasted or inadequately used. No two storage problems are alike, but the flexibility of the Gascoigne Kee Klamp Storage System, and the experience we have accumulated in installing it in factories of every type and size, enable us to introduce a new efficiency into the storage, selection and handling of virtually any materials. By the scientific analysis of space and store traffic requirements, and by tailoring a Gascoigne Kee Klamp System to meet them we can increase accessibility, eliminate congestion and accelerate flow, thereby saving time, frustration and money. We can even create new space for storage—half the size of a football pitch in one case!—by erecting a free-standing Kee Klamp platform. May we explain more fully how the Gascoigne Kee Klamp System can be of service to you? GEO. H. GASCOIGNE LTD 615 Gascoigne House, Reading Berks. Telephone: Reading 54417.

not present the neutrals with the choice of full membership or staying out?" they ask cheerily in Washington. "That might make them plump for the West wholeheartedly."

The trouble is that this stark choice might have exactly the opposite effect. This week Russia protested to Austria that association would be a breach of the neutrality enshrined in Austria's state treaty. The Austrians have gone courageously ahead just the same; but they fully admit that an application for full membership would be a breach of their pledge to Russia—a demonstration of bad faith which could rebound on any east-west talks and perhaps even jeopardise Austria's independence. Finland's case is even more difficult. Russia has the power to make life difficult for the Finns at any time. Sweden's movements are restricted by what happens to the Finns. Sweden originally stayed out of Nato in the reasonable belief that such a move to join might precipitate a Russian countermove to occupy Finland. A move to join the common market (which many Swedes would like to make) might not have quite such dire effects, but it could still provoke trouble. The West does not want a new communist wall along the Baltic coast.

Finland's case might perhaps be met by the simple means of removing the common market tariff on the few vital Finnish export commodities—*pulp, paper and timber*. And though Switzerland has every right to cherish its traditional concept of neutrality, no one can argue that exclusion from the common market would push it into the communist grasp or indeed that its neutrality—devised in the age of Franco-German rivalry—is particularly relevant to the world today. But so long as the cold war persists, the neutrals strung out along the iron curtain have a special claim on western consideration. Their problem existed long before Britain's rash pledge to wait at the door of the common market until all its little men are home.

INDO-CHINA

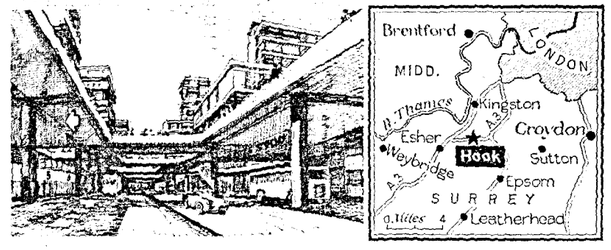
Chers Princes

POSSIBLY, the three Laotian princes will meet on Monday in Vientiane; and then again, possibly they will not. They are still arguing about the place and about security arrangements. Last week Prince Boun Oum, prime minister of the government recognised by the western countries, said he was prepared to go to the Plain of Jars, the communist and neutralist stronghold, without an escort. This week Prince Souvanna Phouma, premier of the neutralist government recognised by the communist countries and certain neutrals, has wired Boun Oum ("Dear Prince . . .") to say he believes the plan for a meeting in the Plain of Jars will be impossible. Instead, he has proposed to go to Vientiane himself next Monday, and to send military officers two days earlier to ensure his personal safety.

At Geneva, meanwhile, the fourteen-power conference on Laos is maintaining its impressive late burst of speed. It is now agreed that foreign troops and "paramilitary personnel" are to be withdrawn within seventy-five days of the signing of the proposed settlement. The French, who retain military installations in Laos under the Geneva agreements of 1954, are to be allowed to keep them a little longer, though how much longer has not yet been worked out. There was a burst of self-congratulatory speeches at Monday's session of the conference. Clearly, the ball is once again in the princely court.

The incipient peace in Laos is unfortunately not matched on the Vietnamese side of the border. On Friday, December 8th, the American State Department published an account of communist actions in south Vietnam and took the unusual step of distributing it to all members of the United Nations—which has not formally been seized of the Vietnamese situation. The American document is in two parts. The first describes the pattern of communist infiltrations from north Vietnam and of murders and terrorist outrages in recent months; the second reproduces the confessions of captured communists and instructions to them, seized by the south Vietnamese security forces. The American publication draws attention to a situation (further discussed in a message from Saigon on page 1128) that threatens peace in south-east Asia, and which any international agreement on Laos will ease, but will not solve.

HOME REPORT



Members of the editorial staff and local correspondents report on life and happenings in and around Britain

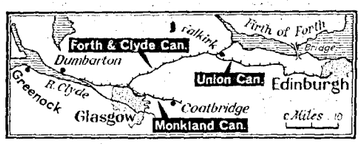
Life on the Hook

FROM OUR SPECIAL CORRESPONDENT

IT is 1975, and the driver on the Devon motorway who has left Camberley behind him sees a strange town on his right. Entering, he finds that the main street is a kind of open traffic drain, spanned by footbridges and flanked with a gridiron system of roofed car parks. Parking, he ascends by escalator to a large platform, where he finds a substantial but compact town centre of elongated shape. All buildings are serviced from below, with the aid of communal hoists and storage facilities on an intervening floor, and only walkers traverse the centre. The routes away from the centre are also paths, flanked by play areas, clubs, pubs and churches, whence lesser paths lead off to flats and the garden entrances of terraced housing. From a front door the visitor could drive back to the centre by a circuitous route; but following his original path, he passes beneath the main ring road after only ten minutes' walk from the centre and is soon admiring the finely landscaped fringe of the town.

This would have been Hook if the London County Council (or its successor) had been allowed to build it. The design for this unborn city of 100,000 people, now wryly published by the LCC,* has some excellent ideas. It would be a motorised city with a garage for every dwelling and ample parking in the centre; yet also a town in which children, housewives and others could walk about everywhere in safety. Its visual scale would be intimate, yet the town would have a splendid natural background. The housing would be intended for a more varied population than in earlier new towns, and its lively centre would directly serve the "inner town" of 60,000 people, thus partially superseding the older orthodoxy of a string of separated neighbourhoods.

Town that might-have-been



* "The Planning of a New Town," obtainable from LCC Information Bureau, 52s. 3d., with postage.

All the same, the Hook design is just a shade inhuman, mechanical and ant-like. It is easy to trace this town's pedigree, from Urbanity out of Agriculture. Urban compression is fashionable among architects and placates rural gentry; it also genuinely enlivens a town and reduces distances, but compression when combined (as it must be) with some attempt to satisfy popular tastes easily becomes monotonous and perhaps self-defeating. In the Hook design the inner town would be built partly at 100 and mainly at 70 persons per residential acre; given the ample provision of garages, this would involve a much tighter squeeze than in the existing new towns.

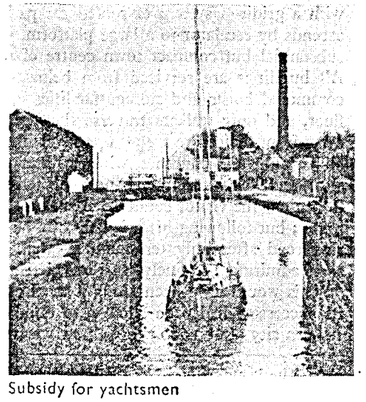
By ingenious arrangements, the planners have placed almost 70 per cent of dwellings (in the town as a whole) "on the ground" with individual gardens; and the housing pattern is expected to match demand, so long as older people move promptly to smaller dwellings as their families contract. But many "gardens" would be miniscule affairs; and planners surely cannot expect to move families about like nimepins. Tall flats near the centre may increase a town's "urbanity," but to little purpose if they are not genuinely wanted. The use of rather lower densities in fact has facilitated greater variety of lay-outs and designs, and a less cellular and repetitive pattern; this would probably please more people and would certainly not increase the costs of development. As things are, the curiously Chinese flavour of the Hook illustrations seem to mirror the sociological precision with which a neatly balanced consortium of families would be packed in a series of rectangular "super-blocks," so designed that they would encounter each other "casually" as often as possible. At least that is the theory; in practice things might be rather different.

The Hook design remains, although only on paper, an interesting and significant achievement. It is doubly a pity that Hook is not being built, both because it is clearly needed and also because a start must be made with building towns for the motor age, on however experimental a basis. It will equally be a pity if the next lot of new towns simply ape Cumbernauld (Hook's Scottish parent) and the stillborn Hook design, without trying other and possibly homelier patterns of town development. The keynote of the new towns should be variety and experiment, and styles which improve on the unhappily disorderly level of popular taste without running to the other extreme of planned uniformity.

Antonine's Canal

FROM OUR SPECIAL CORRESPONDENT

In its way, the Forth and Clyde canal provides a nice little parable: that is, for anyone who wants to live in a mildly efficient country. The canal still runs slap through the middle of Scotland as it has done since 1790—and ought to have been stopped from doing so a good many years ago. It is, in fact, an historical monument: it follows the wall of Antoninus Pius, a possible route was surveyed for it by James Watt in person in 1766, and William Symington's first experimental steamship, the *Charlotte Dundas*, was prevented from plying along it (an early restrictive practice) a full decade before Henry Bell dreamed up his *Comet*. The full importance of these remarkable occurrences must be appreciated from the outset; no possible discussion of the canal's fate can be attempted anywhere between the two estuaries it joins without one or all of these claims to fame being ponderously examined.



The partisans of the Forth and Clyde have defended it stoutly for nearly two centuries as the legions of the Antonine Wall would have expected of them; indeed for appreciably longer than Rome ever demanded of the legions. Even their last rearguard action this month has had a faintly classical ring. Over three years ago the Bowes committee recommended closure, a belated resolution which even the Glasgow city council (a doughty champion of the tramcar but not the canal boat) had reached some æons beforehand.

Now the Secretary of State for Scotland, apologising for his hectic turn of speed, considers it "highly desirable" that navigation rights should cease on January 1, 1963, and has brought in a bill to that effect. While such importunate navigators as Mr Grant-Ferris (Nantwich—Con.) have reluctantly acceded to Mr Maclay's decision, it goes without saying that the second reading in the Commons was not accomplished without Mr William Baxter (West Stirlingshire—Lab.) rising to denounce so ill-considered a project when "with a little ingenuity" the Forth and Clyde "could be made to work effectively for the general good of Scotland."

It would need more ingenuity than Mr Baxter and his friends seem to appreciate. The motorist cannot dodge the canal unless he goes by train over the Forth Bridge or by ferry over the Clyde or at Queensferry (where the Forth road bridge is still building). There are 40 bridges over the canal's waters, and five roads go under it. Those bridges that swing open, jamming north-south traffic to accommodate something possibly as small as a holidaymaker's launch, have naturally to be maintained and manned. Three of them cost Glasgow over £10,000 a year; now a lot of them are in real danger of falling down in decay. Two new ones near Denny and Falkirk will cost £320,000 if they have to open for canal traffic, but only £20,000 if not. To replace the lot with modern opening bridges the taxpayer would have to stump up £2½ million.

At present the canal runs at a deficit of £37,000 a year. This is, in effect, a concealed subsidy to the fishing industry and private yachtsmen (the only classes of mariner that use it): the one appreciable source of revenue is from supplying industrial water. The fishing-yachting lobby, although divided in its specific demands, is sufficiently strong for there to be serious local doubts over whether the Government would be trying to close the canal even now if it were not for the extra cost to its road programme. The supply of industrial water will, in any event, go on. Possibly some dinghy and rowing enthusiasts will continue to use part of the canal, as they do the now sealed-off Union canal which once linked the Forth and Clyde with Edinburgh; almost certainly children will go on being drowned, as they regularly are in the disused Monkland spur, unless some extensive filling-in (for a motorway) is done near Glasgow.

But the champions of the industrial past will fight on: the figures are as irrelevant to

Subsidy for yachtsmen

their minds as they are to the defenders of branch railways, dirty British coasters and dying coal pits. For them there is still the great strategic vision of a wider, more majestic waterway on which grand fleets (presumably Nato ones, for the Admiralty would not wear the idea even a century ago) will transfer from sea to sea; in fact a pocket submarine managed to do this on the Forth and Clyde some years back and set hopeful hearts a-pounding for twenty miles round. There is, too, the dream eternal of a bargees' paradise which, under properly nationalised management, will finally expose the uneconomic folly of the internal combustion engine. There is even a consuming and expressive nostalgia for the little steamers that carried Sabbath-school outings at the turn of the century when faiths (secular and spiritual) were still uncompromised.

Closing the canal to shipping will not, of course, end this romanticising: the navigators are already well off the ground, like the hovercraft, which has not come in time to save a heritage of waterways. But perhaps there is something to be said for the Forth and Clyde itself in the year of the Immigration Bill: it was, after all, the one great transport system of the industrial revolution that was actually built without Irish labour. As a monument it thereby possesses a native quality that the Euston Arch (for example) could never claim, and if it is indeed filled in and erased from the map we shall certainly need plenty of immigrants to do it.

Grammar School Grumbles

FROM A CORRESPONDENT

In examination results, numbers of university entrants and the degrees that their pupils eventually achieve, the direct-grant grammar schools have a place of their own in English education: so much so that they are sometimes known as "brain factories" among Oxbridge dons. The 178 direct-grant grammar schools in England and Wales (there are 48 in Scotland) are financed partly by *per caput* grants from the state and partly from fees. Although the schools are governed independently of the local education authorities, LEA pupils who have passed their 11-plus examination like between 25 and 50 per cent of their places. This puts the schools in an anomalous position, for they are in neither the private nor the state sectors of education. Some, like Manchester Grammar School, the Perse and Haberdashers' Aske's, are household names, but all are acutely aware of the problems facing the grammar schools as a body.

The direct-grant schools invariably welcome their quota of 11-plus pupils. These "free-placers" are sometimes brighter than the fee-payers who have, nonetheless, passed the school's own entrance examination, and where competition for places is stiff the fee-payers may have had to pass their 11-plus at grammar school level. Yet there remains a small but cruel waste of talent among bright free-placers who leave before reaching the sixth form. Formerly the reason was the narrow outlook of some parents, particularly in the old industrial areas. Now high wages intensify the dislike of the school cap.

Again, the results of many free-placers are disappointing in comparison with those of the fee-payers. Whether this is because the parents of fee-payers keep their children hard at the examination grindstone or whether it is because such homes provide a better atmosphere for learning is not certain. But a little polish in manner always makes up for a slight lack of academic prowess when a job is at stake.

Many members of staff at direct-grant schools do not believe that the public schools proper, with their fees of over £400, can possibly be incorporated in the state system, and some think that such schools are a blot on democracy. Yet there is a feeling that an extension of limited fee-paying would create a far greater parental interest in education. Fees at direct-grant schools are already assessed on a sliding scale depending on income, and as little as £5 a term is paid by some parents.

The abolition of the direct-grant schools, threatened by the Labour party, is now a major issue. The schools do leave an avenue of education open to children who may fail the 11-plus but whose parents, unable to afford public schools fees, do not want them to languish in secondary moderns. The best social argument for the schools is the number of these children who do manage to reach the university.

It has been a fundamental tenet of educational thought in England that secondary education should be according to the "age, aptitude and ability" of the pupil. The 11-plus is used to group children into the grammar, technical and modern schools. For long the *bête noire* of anxious parents, this method of selection no longer has the confidence of many secondary teachers. The 11-plus certainly measures potential ability in terms of intelligence quotients, but IQs give little or no indication of aptitudes. Thus the lower streams of grammar schools contain boys of high ability who are little suited to academic courses. Even the largest grammar schools have few facilities for teaching the more technical subjects such as engineering and technical drawing, which require as much intelligence as Latin or German. In theory pupils in LEA schools can transfer from one type of school to another; in practice few transfers occur. Direct-grant schools have no facilities for transfer at all. Close and flexible co-operation between different schools is obviously needed.

Even without this problem, there have been many voices raised in criticism of the curriculum. Broadening it to avoid premature specialisation, which usually occurs when a boy is thirteen or fourteen, is certainly desirable. The Crowther Report advocated an intensive use of "minority time" to produce "numeracy" among sixth formers doing arts subjects and "literacy" in science sixths. Crowther seems to have made a considerable impact. A few schools are experimenting with the proposals of Mr A. D. C. Peterson of the Oxford Department of Education, who believes that sixth formers ought to be obliged to take at least one subject at "A" level across the barrier between arts and science. He suggests that four subjects be taken, one of which must be a language and another a science subject.

While the Peterson Plan attempts to counteract too much specialisation, the "Agreement to Broaden the Curriculum" initiated by the headmaster of Charterhouse supports study "in depth" but tries to make a reality of minority time. The ABC plan pledges schools to avoid premature specialisation and restricts the study of specialist subjects in the sixth form to no more than two-thirds of the timetable. About six hundred schools responded to this proposal. Fewer have signed the agreement, and a vocal resistance group claims that such a firm agreement inhibits the freedom of the headmaster to run his school as he thinks best. Other conservative voices cry "timetable difficulty" and feel that such experiments may lead to academic suicide as far as university entrance is concerned.

It is university entrance requirements and selection methods that hobble teaching in the sixth form and cause such over-intensive specialisation. The impact of Oxbridge, with its enormous prestige, is most important, but provincial universities echo this effect. Few efforts are made to steer the most promising sixth formers to Redbrick until they have been rejected by three or four Oxbridge colleges. The only exception to this is where Oxbridge does not offer an honours course in some specialised subject and candidates must look elsewhere. The hard fact remains that in this most competitive corner of English education university scholarships are as much a status symbol for the school as the television aerial and the family car for the parents.

LETTERS

Commonwealth Service

SIR—The article in your issue of November 25th, entitled "No Colonials Wanted," rightly draws attention to an important question which calls for searching public inquiry.

I was Governor of Western Nigeria for the six years immediately preceeding independence. One of my saddest tasks was witnessing the break-up and dispersal of the Colonial Service, the members of which had done so much to bring that great country so successfully to nationhood. It was of them that at Nigeria's Independence celebrations the Prime Minister said: "We are grateful to the British officers whom we have known first as masters and then as leaders and finally as partners, but always as friends."

The Nigerian governments still needed many of them and wished to retain them, but on their own terms, that is provided some means could be devised whereby they were not held on the permanent establishment and did not compete with Africans for promotion posts; whereby they could be made available for just as long as they were required and could then be replaced by an African without all the trouble of compensation for loss of career. The obvious solution was a Commonwealth Service, a pool of trained and experienced staff, from which our own overseas missions could be staffed, from which staff could be lent to the countries which needed them, from which our aid to undeveloped countries in the form of expert staff could be given. But for reasons which were singularly unconvincing this idea did not commend itself to the powers that be.

Many of the best of these officers sought a transfer to the Commonwealth Relations Service. But it is made almost as difficult for them to enter as the camel through the eye of the needle. An invidious distinction is drawn between Colonial Service officers and others from home-based services such as the Colonial Office. The former have first to pass a written examination, even though they may be of middle age and have spent many years in Africa. If successful they are then interviewed and placed in an order of merit. Finally, out of many candidates, a handful may be taken. For the Colonial Office candidates the process is a simple one of direct transfer. All concerned have been in HM's service for years and can be judged on their record. Reports on all aspects of their work and qualifications are available. Further reports can be called for if necessary. The examination is regarded by the officers not as an opportunity to qualify, but as a means of disqualifying them.

The reasons given officially for making so little use of the Colonial Service are that they are "tainted" with colonialism and that people who have been engaged in government are unsuitable for diplomatic or representative work. But few, if any, of the colonial candidates can have had any say or influence in the determination of British colonial policy. They were merely agents carrying it out. How is it that those from Whitehall, particularly the Colonial Office, who are far more likely to have some responsibility for colonial policy, are unsullied? Again, if ex-colonial officials are unsuitable because they have been engaged in government why are Whitehall officials more suitable? Some of those recently appointed to senior posts have even held high office in the Government!

There is clearly something fundamentally wrong with our system of recruitment and management in the public service if at a time when we are admittedly short of staff for senior posts overseas we make so little use of staff who have served with distinction overseas. Britain not only loses the services of many potentially valuable officers but into the bargain does them a grave injustice.—Yours faithfully, J. D. RANKINE

the 1961 competitions our ratio of successes to entries was just as high as that of Oxford and Cambridge. This was the first time we have achieved this, but we are not really frightened of the bogies of social snobbery or inferior academic standards, and we should be able to hold the position thus gained.

The trouble is that, try as we may, we are never likely to produce more than a small group of competitors. There are two reasons. The first is that Oxford, and to a slightly lesser degree Cambridge, still have the big battalions in the arts subjects from which competitors are largely drawn. Manchester and London, and also other civic universities, are predominantly scientific and professional, with a growing emphasis on the social sciences. Our honours schools in pure arts subjects are good but relatively small; it is not easy to sort the position out from UGC statistics, but probably the vast majority of English male graduates in such subjects as philosophy, classics, history, English and modern languages still come from Oxford and Cambridge. (There is a rather different problem about women arts graduates.)

The other difficulty is that it is hard to persuade our best people that they really *want* to be civil servants. Why should they bury themselves in London, in a career which has for them little glamour or excitement, when it is open to them to move into industry, large or small, if their interest lies that way, or to make their way as researchers and teachers if they are more academically inclined? It is very hard to break through this attitude; and this will become quite an important matter if, as the Committee on Scientific Manpower foresee, there is impending an overspill of able scientists, some of whom ought to be drawn into the administrative side of the Civil Service.

Incidentally, my impression is that for the Home Civil Service, as distinct from the Foreign Service, the grammar schools have in recent years gained enormously at the expense of the public boarding schools; perhaps once an able grammar school boy has been to Oxbridge he is more effectively detached from his roots and feels that he is already half-way to Whitehall.—Yours faithfully, W. J. M. MACKENZIE

Department of Government, Manchester University

The Ruling Classes

SIR—May I, as an "obscure and windswept don from Redbrick" (or rather, "blackstone"), put my nose into the southern controversy about the social composition of the Administrative Class, which reappears in your number of December 9th.

Manchester can now comment without any suspicion of "sour grapes," because in

Fabian Socialism

SIR—May I correct a misstatement in your review of "The story of Fabian Socialism" (December 9th). The Fabians did not "split," after Webb was elected to Parliament or at any other time. The New Fabian Research Bureau, to which I presume your reviewer is alluding, was founded in 1931 with the full goodwill of the Webbs, Henderson, Galton, and others of the Fabian Society's executive committee, as a quite small body of research workers. As it grew

and it became clear that it was in fact doing all the Fabian work that was being done, it amalgamated with the older society to the satisfaction of the members of both—many of whom were in fact the same persons. This is one of the reasons for the choice of title; the book is *not*, as anyone can see for himself, a history of the Fabian Society alone.—Yours faithfully,

London, NW11 MARGARET COLE

Egypt

SIR—You mentioned in your article "Pyramid in the Fog" on November 11th that President Nasser's recent purges were initiated by his fear that the remnants of the old order in Egypt may copy their Syrian friends. But the Egyptian old order, who incidentally were very seldom the friends of their "Syrian friends," are as good as dead politically. I would suggest, rather, that President Nasser's recent moves were directed against the growing isolationist trend inside Egypt, which has gained momentum after the Syrian revolt and the failure of the UAR experiment. The desire for isolation from future political ties within the Asian Arab world is shared by many intellectuals, small business men and army officers in Egypt.

These elements belong to the post-revolution middle-class which emerged with the blessing of President Nasser; yet he is now finding it necessary, or, rather, essential for his continuance as the head of state in Egypt to purge some of the more active elements in that middle class. Any pre-revolutionary politicians held in the recent series of arrests were, in my opinion, arrested as show cases for local propaganda consumption. President Nasser has committed himself to the Pan-Arab cause to such an extent that he is compelled to curb the faintest voice of dissension.—Yours faithfully, AHMAD CHALABI

Cambridge, Massachusetts

Capital Gains Tax

SIR—The studiously objective representations of Lord Ritchie as Chairman of the London Stock Exchange have caused me to re-read your recent article, "Trouble with Capital Gains." (November 11th.)

I suspect there is widespread agreement that adventitious income ought to be properly taxed. My doubt is whether the clanking machinery of a capital gains tax is the answer. On the advent of the season of goodwill, I present to the Chancellor and the Board of Inland Revenue the alternative of sumptuary legislation. Especially in the current context it is surely the outflow rather than the origin that matters. It had not occurred to me before that I should find myself in agreement with Mr Kaldor.—Yours faithfully, JOHN SENTER

The Temple, EC4

BOOKS

Comprehensive Colleges?

The Democratic Intellect
By George Elder Davie.
Nelson for *Edinburgh University*. 372 pages. 50s.

Scotland's Scientific Heritage
By A. G. Clement and R. H. S. Robertson.
Oliver & Boyd. 151 pages. 18s.

IN these winter evenings, when the drone of donnish expostulation has died away, the Robbins committee ought to be sitting down to Dr Davie. He is provoking, opinionated and occasionally obscure, but he has something splendidly different to say about higher education. There is a point at which anyone seeking to resolve or modify the problems thrown up by the current British educational pattern must feel the implacable urge to break the mould altogether, only to reflect despairingly that no other traditional shape for the university career has come within the experience of English society. But there is (or, rather, has been) another tradition north of the border; it was not unfashionable in its day and it is not irrelevant now to the war of the Oxbridge succession.

Dr Davie's study of the prolonged, if unsuccessful, resistance to anglicisation offered by the Scottish universities in the last century is, in one sense, about a dim and distant world: the struggles of Hamilton, the Cairds, Forbes and Ferrier, the royal commissions and professorial elections that were their battlegrounds, are long dead. But this, too, happens to be a study in such modern issues as premature specialisation, the foundation year, the general versus the honours degree, lecturing and tutorial methods and, above all, social relevance. The educationalist who does not find Dr Davie illuminating and exciting has despaired of reform altogether. The picture that is sometimes drawn of the Scottish past can, of course, be almost impossibly idyllic. Here, for example, is King's College, Aberdeen, before the segregation of the specialists in 1892:

> One entered and, allowing for wear and tear, one left college with the same body of students. But that united body included students of all degrees of excellence and variety of capacity, from the candidates for honours in all subjects in which honours could be taken—classic, mathematics, philosophy and the sciences—to the humblest aspirant to a pass degree. The fact that one was a candidate for honours did not separate him from the class. The work for honours was something additional, done entirely by private reading. . . .

Idyllic? One hears, and fears, the horrified protests: surely this is not the cultured academic life but the mere continuation of the schoolroom? It may be so, although Dr Davie would answer that the extension of the school was, or could be, "under new conditions of ever-increasing freedom, self-determination and responsibility." The real point of the Scottish argument is that under the old system the student was compelled to broaden his approach not merely by the syllabus (with its philosophic content) but also by actual contact and emulation in the class. At the same time, the demand in sheer teaching capacity required of the individual professor confronted by this mixed audience was immeasurably greater, and to those who could respond to it essentially stimulating. It did not always work, and it worked less and less successfully as the Scottish philosophic tradition broke down. Even so, the nub of the modern problem can be glimpsed. In educational terms, this kind of broad, democratic experience is lacking in the life of the 9 to 5 university specialist and while Oxbridge may profess to give opportunity for informal contact between specialisations, such an exchange does not take place, in practice, there either.

If one wishes to bring about even a single "democratic year" at the university, and then go on to provide specialisation for those who can benefit from it, it naturally requires radical changes in the established educational pattern. It means a different sixth form syllabus, not just a tinkering with minority time but the continuation of general education as such. It means a different examination structure, designed to uncover (in a modern cliché) new excellences: after all, the Scots were only disillusioned with their system when it meant bad results in the Civil Service and other competitive examinations from the mid-nineteenth century onwards—bad results, that is, in the peculiar Oxbridge sense of excellence. It could mean, as the Scottish system did (and does), that students enter college a year sooner, or even earlier, than under the present English practice; but is not the current social and psychological trend towards precisely such an earlier assumption of adult freedom and status? To compensate the specialists, the four-year university career would then have to become standard for the first degree.

This is the kind of speculation that a reading of Dr Davie induces. One's guess is that the existing pressure for university reform in this direction must become increasingly compelling as the expansion of higher education reveals the inadequacy of the Oxbridge mould for a swelling university population whose interests and needs will be general as much as particular. Meanwhile, Messrs Clement and Robertson offer us a little parable. Their concern is with the demonstrable decline of Scottish inventiveness since its palmy days up to 1870 and

just after. They have some fear of racial decline (caused by emigration), but they also make a telling point about the old educational system that, by then, was beginning to pass away. The Scottish resistance to over-specialisation, and the emphasis on comprehension, are two good clues to the national success that led Barrie to exclaim: "There is no more impressive sight than a young Scotsman on the make." The idea is no longer genteel, but are the qualities so undesirable for the unacademic? German technologists, for example, have more than a smattering of general education.

No Hitler

Tojo and the Coming of the War

By Robert J. C. Butow.

Princeton University Press. London: *Oxford University Press.* 584 pages. 80s.

GENERAL TOJO, in the cartoonists' table of equivalents, was the Japanese Hitler. In fact he was nothing of the kind. He emerges from the pages of Professor Butow's new book as tough, humourless and decisive to be sure, but conventional and unimaginative, a model of assiduous sobriety. He had no grandiose visions, no charisma, no mass appeal; only an untroubled sense of purpose, a conviction of Japan's right—and his duty—to extend its civilising influence throughout Asia, a willingness to precipitate, if not to take, the big decisions. It was his combination of firmness and predictability that qualified him for his place in history—as the spokesman and executive agent of the military staff group that effectively made Japanese policy in the crucial days of 1940 and 1941.

There is not much material here for an exciting biography, and after a brief summary of Tojo's early career Professor Butow soon changes gear into the second half of his title. His account of the gradual crystallisation of the decision to go to war is as lucid and readable as one would expect from the author of "Japan's Decision to Surrender," and he has been at great pains to check the evidence gathered for the war crimes tribunal with more recent Japanese work and with the results of personal interviews and correspondence conducted on an impressive scale. (He has also used the Japanese versions of the tribunal's transcripts and shown how often difficulties of translation kept the prosecution and the defendants unwittingly talking at cross-purposes.) Previous accounts are amplified and corrected in many details, but there is no new thesis and we are presented with no new villains or heroes. The truth seems to be that there were none. No crucial clash of wills occurred, no firm stands were taken on fundamental policy aims; disagreements concerned methods or questions of timing; they were expressed in circumlocutions and usually patched up in the end. It is Professor Butow's skill that he conveys to the reader the participants' sense of the irreversibility of the train of events that led to war. What is lacking is enough of the atmosphere of contemporary Tokyo to make it seem plausible that Japanese leaders could have seen their evolving policy as not only inevitable but also justified and also likely to succeed. From the other side of the Pacific that shift in values and perspective was perhaps too difficult to make.

In the last chapters we come back to Tojo again, now principal defendant at the Tokyo trials. Here he begins to come alive, and the author gives him fair credit for his composure and his straightforward readiness to accept responsibility—qualities that did something to retrieve his lost reputation among the Japanese people. His was not a death which anyone will much regret. On the other hand, it is difficult to see just what was gained by hanging him.

A British Legacy

The Indian Middle Classes

By B. B. Misra.

Oxford University Press for *Royal Institute of International Affairs.* 447 pages. 45s.

THE Indian middle class is a creation of the British Raj. The previous regimes, and especially the Mughal Government, were admirably calculated to make the emergence of a middle class impossible. This is Professor Misra's fundamental theme, though he never states it blatantly but allows it to be inferred by the reader from the mass of facts and instances he presents so clearly.

Under the Mughals, property was unsafe, position always at the whim of the ruler. A noble was no sooner dead than his possessions were seized for the king. A merchant was always at the mercy of some local official's decision to create a monopoly for himself or a favourite. Some traces of a middle class grew up; there were the Persian-knowing revenue clerks, and a fairly prosperous mercantile community in Gujerat, but they were only traces; and much of what little there was disappeared in the anarchy of the eighteenth century.

The East India Company, by contrast, had an insatiable need for middle class people. Its factors needed local business men to act as agents; its offices required clerks; its armies needed contractors. Since it did not confiscate property at death, and even unofficial trade monopolies were quite temporary, a middle class soon grew up. Raja Ram Mohun Roy and the Tagores both founded their fortunes in the company's service. By the 1820s there were Indians in banking and the agency houses. The landlords created by the Permanent Settlement may have been useless to agriculture, but their children grew up accustomed to a middle-class standard of life and endlessly ready to enter middle-class occupations in order to be able to keep it up.

The next stage came with the spread of English education; first there was Raja Ram Mohun Roy's campaign; then Macaulay's famous minute (valid in the circumstances of the time, for all its offensiveness); then, in the 1850s, the foundation of the universities.

From then on India's course was set. Power would go to those who acquired the modern skills through English; the pace at which power passed would be governed by the pace at which the skills were acquired. The pace was not at first very fast. In the 1880s, as Professor Misra's figures show, most of India's lawyers of any importance were still British, and virtually all the engineers and railway officials. Professional education, even in law, developed slowly; in medicine and engineering it was not adequate in quantity until the last few years. The Government often found it easier to recruit an Englishman ready trained for some new job than to provide training facilities for Indians; and some jobs it deliberately preferred to keep in British hands: there were very few Indians in the Indian Civil Service or among army officers before the 1920s.

Nevertheless, as the universities grew, as more and more Indians learned to be at home with modern techniques and knowledge, the middle class grew with them. By the early 1900s law had largely passed into Indian hands; it was the primacy of law that explained the dominance of lawyers among Congress politicians. But the other professions followed quickly enough, even to the atomic physicists who were the prestige group of the 1950s. There are two hundred and fifty times as many students in college today as there were a century ago, fifty times as many engineering graduates as only thirty years ago.

Parallel with the growth of a professional middle class has gone the growth of an Indian business class. It was already considerable in western India by 1900; the first world war gave it a great fillip; then came tariffs in the twenties; now, finally, there is economic planning. At first the entrepreneurial houses were few, and largely in cotton textiles. Now there are many, and they are spreading into everything; more and more they are using professional managers, and not just members of the family.

In the professions, in business, in government, India has now achieved its middle class and it is that middle class which runs the country and provides the ideas. Nobody has ever told the story of how this has happened as well as Professor Misra.

Far from Stagnant

Feudal Society

By Marc Bloch. Translated by L. A. Manyon.

Routledge. 519 pages. 50s.

THE appearance of an English translation gives the opportunity for a revaluation of a book which, on its first appearance in 1940, was praised as an outstanding work. As Professor Postan points out in his introduction, it must be seen both in conjunction with Bloch's earlier work on economic history and with the work on medieval intellectual ideas which his tragic death pre-

THE BREAK-UP OF THE HABSBURG EMPIRE 1914-1918
A STUDY IN NATIONAL AND SOCIAL REVOLUTION
Z. A. B. ZEMAN
'Mr Zeman is the first to tell the story of political events within Austria-Hungary during the war, and to relate this with Allied policy. He has used the administrative records in Vienna and derived much information from the writings of Czech historians between the wars. His book is a valuable addition to our knowledge.'

OXFORD
UNIVERSITY PRESS

DISTRIBUTION IN GREAT BRITAIN AND NORTH AMERICA
MARGARET HALL, CHRISTOPHER WINSTEN and **JOHN KNAPP**
The censuses for Britain, the United States, and Canada are used to make detailed international comparisons of the wholesale and retail trades of these countries. The book also deals with competitive conditions between chain and independent stores. The methods of approach used should make it a valuable case-study in applied economics. 63s *net*

THE INDIAN MIDDLE CLASSES
THEIR GROWTH IN MODERN TIMES
B. B. MISRA
In this very thorough study extending from Mughal times to the present day the author has drawn on hitherto unused research material. He traces the development of the Indian middle classes in the spheres of land and the professions, trade and industry, and examines their character and historical roles against the background of British Rule in India. CHATHAM HOUSE 45s *net*

A HISTORY OF THE SOUTHERN SUDAN 1839-1889
RICHARD GRAY
An account of the intrusion of the outside world into the vast, pagan hinterland of Khartoum. Based on a great deal of unpublished material, it analyses the early contact between traders, missionaries and officials and the peoples of the South, and describes the Khedive Ismail's attempt to establish an Egyptian empire at the source of the Nile. The author also challenges the traditional interpretation of the role of the slave trade. 35s *net*

THE UNION OF BURMA
A STUDY OF THE FIRST YEARS OF INDEPENDENCE
HUGH TINKER
'...remains...the "scholarly and exhaustive work" which *The Economist* found the first edition to be—a standard work for students of south-east Asia.'
THE ECONOMIST
Third edition 42s *net*

THE STRUCTURE OF AMERICAN FEDERALISM
M. J. C. VILE
Dr Vile discusses such topics as American federalism today; the fundamentals of American federalism; judicial review and politics; the constitutional basis and political boundaries of American federalism; administrative and economic problems of American federalism; and the difficulties involved in trying to co-ordinate various levels and branches of government in the federal system.
'...a notable contribution to an understanding of how American government actually operates.' THE ECONOMIST 25s *net*

UNITED STATES FISCAL POLICY 1945-1959
ITS CONTRIBUTION TO ECONOMIC STABILITY
A. E. HOLMANS
A study of the economic politics of the United States as well as a study in applied economics. The method is chronological, analysing the changing economic situation and the fiscal measures taken in response. 40s *net*

THE ECONOMY OF BRITISH CENTRAL AFRICA
A CASE STUDY OF ECONOMIC DEVELOPMENT IN A DUALISTIC SOCIETY
WILLIAM J. BARBER
This study deals with the economic system which has emerged in Southern Rhodesia, Northern Rhodesia and Nyasaland. There are two forms of economic activity—the conventional Westernized money economy, and the quite different type of economic organization based on agriculture with the family as the unit of production. 35s *net*

JAPAN SUBDUED
THE ATOMIC BOMB AND THE END OF THE WAR IN THE PACIFIC
HERBERT FEIS
The author examines all available documents relevant to the events following the collapse of Hitler's armies in the spring of 1945. He reconstructs the events leading to the decision to drop the Bomb on Japan, and in particular he recounts the events following the blast at Hiroshima which led to Japan's surrender. 25s *net*
(Princeton University Press)

THE KENYATTA ELECTION
KENYA 1960-1961
GEORGE BENNETT and **CARL G. ROSBERG**
'...have analysed fully and clearly the election in Kenya, its prelude and its aftermath. More important, they show it in its true perspective as the crucial event in Kenya's contemporary history....Their description of the split within Kanu at the time of the election ....helps to explain why Kanu has not emerged as the party to lead Kenya to democratic independence.' vented him from writing—and, it might be added, with the work Bloch was planning on the great silent revolution in the European landscape between 1050 and 1250.

At first sight this is not an easy book for the English reader. The plan is difficult to grasp at first—it has nothing of the schematic rigidity of Ganshof's "Feudalism." There are no precise date limits: the author ranges freely between 800 and 1200 but concentrates mainly on the years 900-1100. It is only near the end of the book that he defines the sense in which he is using the much abused term "feudalism."

This is, however, significant: it is only after meticulously building up his picture of the mental climate of the period, of the changes in economic and class structure, of the fragmentation of authority and yet the survival within this society of the older forms of association—the family and the state—that he reveals the framework of the whole. Throughout the approach is dynamic: it is the picture of a changing society which should kill once and for all in anyone's mind the idea of feudal Europe as a stagnant period.

Coming back to this book one is struck by the sheer technical skill displayed. Every page contains generalisations to provoke thought, from the deceptively simple "the knight found in war yet another attraction: it offered a remedy for boredom" to the bold: "the fief . . . was—let us make no mistake about this—basically an economic concept." (One could wish most historians writing today would be prepared to be so courageously positive.) Then there is Bloch's honesty in admitting technical difficulties in handling sources and taking the reader into his confidence. Especially there is his use of little known detailed facts to illuminate the argument and stimulate the reader's imagination: the lofty remark of a German lord in a law-suit "any pen will do to recount anything whatsoever"; or the gloriously sick-type picture of home life conjured up by the thirty-one co-parceners who jointly owned and occupied the castle Gevaudan in 1251.

It is no criticism of Mr Manyon's painstaking and accurate translation to say that those who can will continue to use the French version. For Marc Bloch was not only an outstanding scholar, he was also a master of French prose. Probably only Sir Maurice Powicke could do justice to the quality of Bloch's style. Mr Manyon's decision to confine revision to a useful supplementary bibliography must also be approved; any other course would have marred what is above all a superb work of historical literature.

In a posthumous, unfinished essay Bloch wrote: "it is men that history seeks to grasp. Failing that it will be but an exercise in erudition." When the German occupying forces murdered Marc Bloch in 1944 they did not just kill the greatest historical writer since Ranke: there died also a great humanist scholar. This book is the perfect embodiment of Bloch's methods and of his ideals.

What is a Radical?

English Radicalism: *The End?*

By S. Maccoby.

Allen & Unwin. 640 pages. 70s.

CURRENT political commentators need to study the radicals who are often noisily prominent in the history of Great Britain; for collecting their beliefs and careers may illuminate the interesting question of what a radical is. Can he any longer fairly be called, like Lilburne, a Leveller? Does he like John Wilkes believe in free love, or like Charles Fox in free speech, or like John Bright in free trade, or like Bernard Shaw in free intellect, or like George Lansbury in universal peace? How have his opinions been affected by the industrial and nuclear revolutions? Is "radical socialist" as much a contradiction in terms as "tory democrat"; or does it signify a genuine political reality? Can there be radical communists?

British history in the twenty-five years or so after the Liberal triumph in the general election of 1906 is of particular interest on this subject. In these years two great radical aims were achieved at last: universal suffrage was enacted, for men in 1918 and for women ten years later, and the hereditary House of Lords had its legislative wings decisively clipped. For the first time, an advanced radical was Chancellor of the Exchequer, and able to cram some radical legislation through the Treasury machine. For the first time for centuries England was engaged in total war, with all the opportunities that brings for radical re-appraisals and reforms. During that war, the radical Chancellor of the Exchequer became Prime Minister, with greater powers than even that office had ever commanded before, and chose as his closest assistant the most radical and incisive character among the Tory peers. After the war, for the first time the cabinet was formed from a party dedicated to the proposition that the country's entire social and economic system was ill-founded and in need of drastic revision. Again, for the first time a fully organised trade union movement engaged in the pitched industrial battle of a national general strike.

The last, or apparently the last, of Dr Maccoby's books on English radicalism looks at just this period; it sheds "no light, but rather darkness visible" on the questions just outlined, and has little important and nothing new to say on any of the radical triumphs and disasters of these years. Fourteen pages of "select bibliography" and a mass of footnotes suggest that this is a work of scholarship. But many of the notes are of negligible value—*Whitaker's Almanack* is not much of a source for the events of the Russian revolution—and the book list omits several studies of importance to the theme.

Two pages are devoted to the general strike, and the author seems to think radicalism may now be dead. He might try a visit to a CND meeting, where he will hear the heirs of Wilkes and Bright, Lansbury and Bevan, still in full voice.

The Union's Economy

South Africa

By Monica M. Cole.

Methuen. 726 pages. 84s.

THIS is a sober and unemotional survey of a complex and troubled country. After a proper and adequate introduction to the physical background of South African geography, the major portion of this massive book is devoted to the economy, and the closing section to regional description. Here set out in great detail we have the new economic pattern of South Africa, where the last twenty years have seen the parallel emergence of a new industrial structure and an explosive proletariat of urbanised Africans. The detail and length of treatment may even be excessive. At around 700 pages the point is surely approached beyond which a single writer cannot hope to put a personal stamp of unity and synthesis on a mass of rather disparate material. If a book is to be encyclopaedic, perhaps one might as well accept the fact and have the various sections written by individual specialists.

However, compiled as this book clearly is with a most obvious regard for comprehensiveness and accuracy, it is a most useful source of basic information on the South African economy. There is one huge and, no doubt, deliberate gap. In South Africa, the race situation dominates everything. It would be wrong to say that Dr Cole exactly ignores the racial situation; she most faithfully deals with the interactions between the racial divisions and the developments in land policy, industry and towns. But, perhaps inevitably in a book that will be used by people of all opinions as a quarry for facts, she avoids any distinct treatment of the racial problems as such. The word 'race' does not even appear in the index, while the Tomlinson Report ranks one sentence only. For an understanding of South Africa, Dr Cole's book is an essential point of departure, but of departure only.

The Unlikely Rebellion

Rebels in Paradise: *Indonesia's Civil War*

By James Mossman.

Cape. 257 pages. 18s.

NO insurrection in recent times has been launched with such inconsequential optimism as this one. A small group of army colonels and politicians met in a Sumatran town in February, 1958, and proclaimed a revolutionary government of Indonesia. One of them was Dr Sjafruddin, who until then had been Governor of the Bank of Indonesia. He had brought with him his numerous family and several suitcases full of banknotes from the vaults of the bank. He was proclaimed premier of the revolutionary government.

Those of the military rebels who had considered the possibility of retaliatory action by President Sukarno airily assumed that the invaders would be repulsed. In the event, when Sukarno sent his men, by sea and air, the operation was efficient and successful. The rebels offered no resistance and those who were not captured melted into jungle or mountain. In Celebes, in contrast, resistance was fierce, but there, too, the rebels lost their set battles and took to the bush, where they waged guerrilla warfare.

No attempt had been made to gain the support of the population in Java, the key to power in the Indonesian islands, where President Sukarno, a magentic orator, easily retained his hold on the people. The initial failure of the rebellion was therefore not surprising. There followed a more protracted attempt to bring President Sukarno down by economic pressure. Dr Sumitro, Indonesia's best, and best-known, economist, took charge of the rebels' finances. Even before the proclamation of a revolutionary government, there had been smuggling on a large scale from Sumatra and Celebes into Singapore and other likely outlets. In some measure, this smuggling was an assertion of regional autonomy. Dr Sumitro, as the rebels' minister of commerce, organised this smuggling in the service of the revolutionary government.

In the early days, the American Central Intelligence Agency, impressed by the anti-communist professions of the rebels, had sent—or at least, facilitated the delivery of—aircraft and other military supplies. Failure, however, begat failure, and the assistance soon stopped. Driven desperate, the rebels formed an alliance with the terrorists of the fanatical Darul Islam movement, whose aim—the creation of an Islamic theocratic state—was offensive to most of these westernised and well-intentioned men. This summer, the rebel leaders, civil and military, started coming out of the jungle and surrendering, just in time for the publishers to distribute an epilogue of two paragraphs for insertion in the book.

James Mossman, who covered this unlikely civil war from both sides, has written a lively and informative account of it. He makes no pretence of scholarship, and indeed quotes only one source (a good one) throughout his book; but his standard of accuracy is high, and he is fair to both sides. This is important, for the rebels, though their actions were ill conceived, had genuine grievances. The spelling of Indonesian names has been westernised, on the whole sensibly, though with some inconsistencies.

OTHER BOOKS

STATISTICAL MEASURES OF CORPORATE BOND FINANCING SINCE 1900. By W. B. Hickman with E. T. Simpson. *Princeton University Press.* London: *Oxford University Press.* 612 pages. 72s.

POLITICS AND VISION. By Sheldon S. Wolin. *Allen & Unwin.* 539 pages. 36s.

A survey of political philosophy from the Greeks to the "organisation man."

The Economist Diary

Specially designed to create an atmosphere of peaceful co-existence between the busy man, his secretary, and the world at large.

A week's appointments at an opening; a book that lies open flat on the desk

*

A diary lay-out specially designed to meet the needs of the busy man

*

72 pages of facts and figures covering the world; 32 pages of maps

*

All information easily found by means of handy thumb-indexes

*

A memorandum book, an appointments register, and a complete reference book

Superb cushioning

Cushioning is something we all need for our daily comfort—to lie on, sit on, rest our weary heads (and jump on if we feel like it). Today, the blows of life are increasingly softened by polyurethane foam, the newest material to inspire the industrial designer with its lightness, flexibility and versatility. Polyurethanes are made from polyether polyols, on which Shell have done a great deal of successful research and gained a mass of practical knowledge. This information—with a range of polyether polyols of the highest consistency—is now at the service of all foam manufacturers. To carry this a stage further—write to the Information Officer, Industrial Chemicals Division, Shell Chemical Company Limited, 170 Piccadilly, London W.1

Shell Chemicals (SHELL)

THE WORLD OVERSEAS

Too Many Hamlets

FROM OUR PARIS CORRESPONDENT

PARIS has provided spring weather in December for this week's diplomatic festival, one of the occasions when it can claim to be the diplomatic capital of the western world. The foreign ministers of the three principal western powers, joined by Herr Schröder, their new German colleague, started work on Monday. Two days later the discussions were enlarged to take in the representatives of the other eleven members of Nato's ministerial council. During that time, elsewhere in Paris, the Western European Union was holding its assembly. And the foreign ministers of the common market countries chose the end of the week to elaborate their plans for political union. But the German question dominated all the others.

Berlin über Alles was the main tune of this December festival. It was certainly not performed harmoniously. A judgment on the whole performance, however, must depend on what one believes the purpose of the Paris meeting to have been. Was it designed to elaborate—on the basis of previous work by the experts—a concrete platform for negotiations with the Russians in the near future? Was its purpose to obtain General de Gaulle's blessing for further probing in Moscow? Or was it all merely staged to preserve a semblance of allied unity, while the real decisions are taken in a smaller circle—at Bermuda, or in Washington itself—on the basis of the ambassadors' reports from Moscow?

In recent years western meetings in Paris have been described as attempts to see whether the allies could keep in step with General de Gaulle. Yet this image of fourteen eager negotiators foiled by a solitary stubborn Frenchman is much too simple. The German Chancellor's visit to Paris, on December 9th, with the object of persuading the general that he ought to appear in the east-west conference room, was a proper prelude to this week's exchanges. Dr Adenauer has never been suspected of particular fondness for talks with the Russians. The ambivalent attitude of the two continental partners illustrates the complexity of the problem.

Dr Adenauer knows where the real power lies within the alliance and, while trying to influence the policy of Washington, he has never questioned American leadership. General de Gaulle's vision of *grandeur* allows for no other leadership than his own; France, moreover, is less directly dependent on the United States than Germany is, and it can, therefore, obstruct more openly. The French distaste for negotiations with the Russians is, officially, justified by the fear that the inevitable concessions would cause disillusion in Germany and prepare the way for a German shift towards the Soviet orbit. A less charitable view is that the crisis suits the French President. It enables him to exhort his reluctant officers to address themselves to other duties than the Algerian war. It renders Germany more co-operative than Germany might otherwise be. But once the problem is shifted from procedure to substance, it is Germany that has more to fear in the actual negotiation. Dr Adenauer came to Paris last Saturday to persuade General de Gaulle of the truth of the French saying that the absent are always wrong, and to plead with him to attend an east-west conference, if only so that he could veto any deal distasteful to Bonn.

The argument apparently carried weight. But to judge by the further course of events, it proved insufficient to alter the French position. The ministerial meetings were shrouded in

Thinking too precisely: Lord Home, Mr Rusk, Dr Schröder, M. de Murville.

secrecy, but the differences in the moods of the various delegations could be easily perceived. The French press greeted Mr Khrushchev's speech before the World Federation of Trade Unions, Mr Menshikov's press conference in Washington and the Soviet demand for General Heusinger's extradition as heaven-sent proofs of the impossibility of negotiating with the Russians, proofs striking enough to open even Anglo-Saxon eyes. By Americans, these events were greeted much less dramatically as manœuvres quite consistent with the present state of play when each side is jockeying for position. Naturally, it would have been preferable if the Russians simply accepted the western terms. There would then be no need for negotiation, since there would be no crisis over Berlin.

As if to emphasise French bad humour, on Tuesday M. Debré seized the opportunity of an oral question in the Senate to deliver an indictment of allied hesitation and incomprehension. He justified the need for an independent French deterrent, citing American conduct in the Suez crisis and in the Congo and contrasting, in general, French determination with allied softness. In the evening of the same day the four foreign ministers had to hold an extra session in order to produce fairly innocuous directives authorising "further exploratory talks." The French immediately claimed that there was nothing new in the mandate that allows the American ambassador in Moscow, helped by his British colleague, to go on probing Soviet intentions. In any case, the French would keep out of it. The British argued that the talks would now become more substantial; it all depends on what "substantial" means. And should the "explorers" succeed in finding a basis for negotiation, this week's unanswered question—whether France would join the conference—will be revived with a vengeance. The issue is the more disquieting since, once again, the four foreign ministers have apparently spent most of their time discussing whether to negotiate, not what is negotiable.

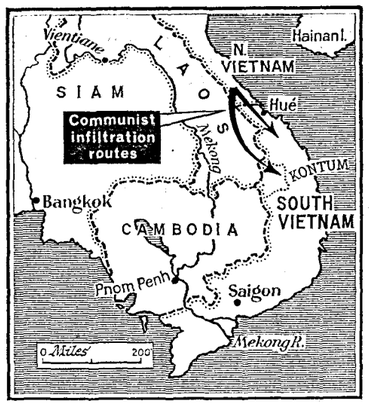
Having produced what looked like a compromise, the four ministers handed the matter over to the Nato council. Not that anybody expected that the additional pressure by, say, the Canadians or the Belgians would alter the French position. But in the Nato building, where military matters are often discussed, inter-allied controversy could be reduced to more real proportions. True, military questions were, on this occasion, pushed into the background by the Berlin debate. The problem of Nato's nuclear strike force (which many prefer to define as the question of how to turn Germany into a nuclear power) is not yet ripe. Experts are still arguing about the respective merits of a force based on land or on sea, and the time for decision will not come before the spring. But in a place where it is the custom to talk in nuclear

terms, it is easier to grasp that the most unyielding members are not necessarily, or not yet, those whose finger is on the important trigger. In the Soviet block the fiery Albanians have accused the Russians of cowardice and a weak deference to Western power. Each block, *mutatis mutandis*, has its own Albanians, whose intransigence is not quite matched by their might.

This week's meetings have not been all about Berlin. The Congo cast its shadow from the very start. The first, and probably crucial, meeting of the three foreign ministers, without their German colleague, was mainly devoted to Katanga. Then as London began its hesitation waltz and the lines got busy between Paris and the White House, rumours gained ground that the open Franco-Belgian hostility towards UN intervention, coupled with the British dislike of it, had proved stronger than the American backing. There was some rejoicing in many French quarters at the prospect of a new rebuff for that *Machin*, the "so-called" United Nations. But there were also more serious comments that foreshadowed the bankruptcy of the international organisation and deplored the new vistas opened up for Soviet influence in Africa.

"It would not be the first time"—was *Le Monde's* melancholy conclusion—"that big business has worked in favour of communism." It is at moments like this that the question is being asked whether western policy is doomed to be always reduced to its lowest common denominator. It is usually coupled with the warning that a Holy Alliance has less chance of lasting in the changing world of the twentieth century than it had in the past. So far, even when odd man out, General de Gaulle has shown great skill in reducing his allies to his own chosen pace. In 1959 he went on asking for proofs of Russian goodwill for so long that when he was finally convinced, the whole summit collapsed together with the U-2 plane. Mr Macmillan's meeting with Mr Kennedy at Bermuda next week might show whether Washington is still resigned to advancing at the gaullist pace, even if it involves the risk of Mr Khrushchev changing his mind by choice or under pressure. Until recently, suggestions that Mr Khrushchev was being accused of procrastination about Berlin by his communist critics had to be based largely on guesswork. Now the Albanians have publicly confirmed that the guess was right. Judgment on this diplomatic week in Paris must be suspended until it is clear what conclusions Washington has drawn from it. But Mr Khrushchev's willingness to postpone the Berlin crisis may vanish overnight, like the spring weather in Paris in December.

Threat to Diem



FROM OUR CORRESPONDENT LATELY IN SAIGON

WITHOUT doubt, the threat to the Diem government continues to deepen and darken as the communist guerrillas and regular North Vietnam army units, still firmly holding the initiative, pass confidently down the central highlands and fan out to the coast. On war maps, shaded areas of guerrilla "influence" indicate more than twenty zones of anti-Diem "liberation." One says "anti-Diem" because only a proportion of the inhabitants of these so-called "militarily insecure" areas are pro-communist ideologically; most, indifferent to either side, wish merely to avoid having their throats cut.

Approximately a thousand are killed on both sides in an average of 250 skirmishes or clashes every month. A large and swelling penetration bulge in the wild jungles of Kontum, halfway between Saigon and the artificial northern frontier, with unhindered access to Laos, could well become the territorial area for an "independent state" inside South Vietnam. Conservative American estimates agree that the build-up of the phantom invasion has doubled since the Laotian cease-fire. Significantly, the spearhead of communist aggression has shifted from the southern delta area to the north.

In Saigon, the pavement cafés in the tree-lined streets buzz with defeatist talk and gossip about the latest speculations and investments of the Diem family. However scurrilous and exaggerated this gossip, it is perhaps injudicious of His Grace the Archbishop, who is one of the president's brothers, to persist so doggedly in investments in Saigon real estate on behalf of his diocese. The once popular Saigon trek to the fashionable beaches at Cap St Jacques has trickled away because of the hazards of the journey. Seaside villas are deserted. The parents of children in the exclusive convent at the sacrosanct resort of Dalat are receiving kidnap warnings.

No one knows how much pressure has been exerted by the Americans on the president to secure army, administrative and economic reforms as the price of increased American aid. The curious recent spurts of anti-American propaganda in Saigon's controlled press probably reflected angry quirks of resentment against this pressure by the president's most powerful brother, Ngo Dinh Nhu. Nor is there any hard evidence that the Americans have pressed, even delicately, for the removal of any of President Diem's ubiquitous and unpopular relatives. Certainly this would seem, in any event, to be a futile and doomed aspiration at the moment. The visiting reporter must testify also that, in the face of the general deterioration, some objective diplomats in Saigon, who were hot for parliamentary reform and a democratic opposition a year ago, now argue that these changes should take a lower priority than more energetic military action and more active aid and comfort for the villages.

The nearer the loyalist troops are to the guerrillas and the busier they are in flushing them out, the higher morale tends to be. But there still seems to be a wasteful and useless concentration on digging-in, and on consolidating howitzer emplacements on mountain peaks, around which the guerrillas now gratefully slip. The evacuation of vulnerable villagers—especially the primitive, G-string dressed *montagnards*—to safer settlement areas is being speeded up, and belatedly tough groups of American-trained Rangers are being sent into the jungle to live off the country and meet the enemy on level terms. But the operational period of these aggressive patrols in still limited to less than one week; it should be increased to a month or more.

The American military advisers are bracing themselves for the pending delivery of the vital rice harvest. Normally the rice deliveries from the delta area in the south are spread evenly over the March-September period; the current harvest, it has been ordered, must be rushed to Saigon by the end of March. On all the evidence, the Viet Cong (communist) forces are preparing to harass and sabotage this emergency harvest movement and to take full advantage of the transfer of the thinly-spread troops from villages to convoy duty.

The basic tasks in South Vietnam, as they were in Malaya, are to protect the people and to convince them that their interests and welfare lie with the anti-communist forces. The second task, of course, is economic and political, rather than military. The conviction is still receding in South Vietnam.

Commonwealth Approaches

FROM OUR BRUSSELS CORRESPONDENT

WHAT was planned as a two-day meeting last weekend between Mr Heath and the ministers of the Six finished, in fact, at the end of the first day. Within that time the ministers managed to find mutually acceptable solutions to the difficulties of principle their deputies had encountered, and so were able to instruct the latter, and the working parties, to continue the marshalling of facts on certain agreed new lines: by common consent, the inevitable protracted ministerial debate is not to begin until the total statistical picture has been clarified and made more complete.

One difficulty had been that in the meetings of deputies the British delegation had felt unable to authorise a study of the effects on Commonwealth imports of a gradual British adoption of the common external tariff: on Friday Mr Heath announced that he had no objection to a hypothetical study of this subject, provided it was understood to be purely exploratory and not to imply any pre-judgment of the outcome of negotiations between the ministers.

The second difficulty had arisen because Britain wished to study Commonwealth problems on a regional basis, trying out the possibility of association with the common market before discussing individual products, while the Six had wished to do exactly the reverse. In fact, both approaches in some degree involve each other, as both negotiating teams had found, and there was general relief among them, at the deputies' meeting earlier in the week, when M. Jean François Deniau, leader of the commission delegation, suggested a middle way.

His proposal was discussed and approved both by the Six and by the British delegation, and was put up to the ministers on December 8th. It would divide Commonwealth problems into four categories, classified according to the principal export products of the countries concerned: 1. Those countries whose exports might be harmed by the application of the common external tariff. 2. Those producing goods similar to the exports of the states (mainly African) at present associated with the community. 3. Those (like Australia and New Zealand) whose exports will be affected by the community's common agricultural policy. 4. Those that do not fall into any of the previous categories—for example, those whose economies depend on their being free ports, or transit areas, or military bases.

THE shortcomings of this kind of classification were acknowledged by all, including the commission's speaker, when the proposal was set before the ministers. It was recognised, for instance, that the categories might need to be re-defined or increased in number as work proceeds: that they would not indicate the fact that some products might be more essential to an area than their modest output might imply. Countries depending on entrepot trade might find such dependence insufficiently brought out; nor could possibilities of expansion be reflected in figures of existing trade. By concentrating purely on trade figures as it does, this method leaves out of account all political or other non-economic factors, and tends to emphasise problems rather than possible advantages either to the Six or to the Commonwealth.

Despite its recognised limitations, the Deniau proposal was agreed on all sides to represent a useful synthesis of the "by country" and "by product" approaches. It should enable ministers to see some shape in the mass of statistics that is diligently being accumulated, and which might otherwise begin to seem dauntingly impenetrable (it is easier to find one's way about in a timber-yard than in a forest, even if the log-piles overlap, one minister remarked). So at the end of the day the working parties were sent back to their statistics. The ministers' deputies are to meet again on December 19th and 20th as well as on January 9th and 10th, when they will draw up a report for the next ministerial meeting, tentatively arranged for January 18th.

On the morning after the meeting Mr Heath saw representatives of the European Free Trade Association and later completed his visit by a long session with Commonwealth diplomats in Brussels—a meeting that, in spite of a press report to the contrary, they themselves later described as harmonious and satisfactory.

CONGO COMPLEXITIES

Report from an Uncountry

FROM OUR SPECIAL CORRESPONDENT

LEOPOLDVILLE

THE events around Elizabethville seem less dramatic here than they did a week ago in Europe. The Katanga question has provoked a minor student demonstration against Mr Macmillan, General de Gaulle and Dr Salazar (the Congolese government is paying for the British broken windows, windscreens and slashed tyres). But Mr Tshombe, in the eyes of Mr Adoula and General Mobutu, is really no more of a "secessionist" than Mr Gizenga. Everyone knows that the Republic of the Congo, far from being unifiable in any current constitutional sense, can develop harmoniously only if it is first subdivided into twelve or fourteen compartments, instead of the present ex-Belgian six—already there are two *de facto* Katangas, two Kasais and a serious split in the Equatorial province. The intelligible African fact is that King Leopold II's former estate is the scene of an experiment in, usually gentle, anarchy which would have delighted Bakunin. Africa will "jell" in its own good time. Just now it is liquid.

The Congo has now definitely replaced Ethiopia as the world's leading surrealist country. It is the place where the American ambassador found an alligator in his garage, where two more (alligators, not ambassadors) swam into the Congo-flooded generating plant at Stanleyville, where yet a fourth is believed to have eaten the west German ambassador in November (he was wading near the bank with a tow-rope; nothing of him was seen again but his panama hat). It is the country with no budget, which has lost between 50 and 75 per cent of its exports but has had only a 30 per cent inflation. It is the territory where 80 per cent of government expenditure is on the large salaries of civil and military officials, and where the Leopoldville working class, or rather the 60 per cent of it that still has employment, is earning what it did when the Congo was Africa's richest colony.

The essence of this low-tension equatorial anarchy is the mutual toleration of most of the politicians. The two odd men out have been the late Mr Lumumba, and to a lesser degree Mr Gizenga. The first wished to galvanise the *jeunesse* and use it to smash the Congolese notables. General Mobutu, who looks like nothing so much as an African Hamlet, broke Mr Lumumba, and the *jeunesse* of Leo has never recovered from the hammering it received from General Mobutu's troops. Mr Gizenga, now titular vice-premier, is by no means done with. His is an evasive genius and he is patient enough to await his moment. His power is the more remarkable because as an orator he is negligible. His speech of November 25th on Stanleyville radio was, perhaps, a landmark: in it he denounced prime minister Adoula and all his works, invoked the ghost of Lumumba, and called on all Congolese soldiers to follow him in an attack against Mr Tshombe. Mr Gizenga's main grudge is that Mr Adoula has not given the ministry of defence to a Lumumbist. In revenge, Mr Gizenga's General Lundula has withdrawn his agreement to serve under Mobutu. Mr Gizenga also demanded a new constitution, a new capital, and the removal of

the UN from the Congo. Nobody is known to have rushed to his colours yet.

Most European analysts here, who have "thought themselves in" after a year's practice, agree that Mr Tshombe's Katanga needs to be, in some sense, reduced. This is symbolically necessary even if it is objectively impossible, for the loss of Katanga has become an alibi for the Leopoldville establishment. So long as Mr Tshombe insists on his present type of separatism, Leopoldville will maintain that no constructive effort in any other sphere is worth while. This does not mean, of course, that Leopoldville is squarely behind the UN. The UN is a convenience which may, or may not, sire a favourable turn to Congolese events. Somehow it may bring back the lost revenues of Katanga. At the same time the UN is criticised harshly. Mr Justin Bomboko, the foreign minister, has signed an agreement with U Thant whereby all UN personnel receive diplomatic status; "18,000 diplomats more !" is the headline of this week's *Présence Congolaise*.

The trouble is that the Congo Republic is being administered, if that is the word, by three distinct semi-entities: the Central Government (situated on the territory's extreme north-western tip), the United Nations, which is a kind of roving interference-machine, and the Belgian auxiliaries. The latter, who when they are paid at all receive about a quarter of the UN remuneration, have never recovered from the abrupt independence scuttle. Now the Belgians lack the necessary moral impact on the Congolese, which would enable them to mould events. An exception is the railway, for which some 300 new Belgians have been recruited in Brussels by Mr Tamba, the Congolese director, against the advice of the UN. The other exception is, of course, Lovanium university. It is now widely argued that the time has come when the Belgian administrators can take their place in the UN civilian services.

The Congo seems to hold lessons for Kenya and other places in Africa where disorders will certainly happen. One lesson is not to become involved in military operations in pursuit of juridical unity on behalf of an African government. This sort of action can hardly have lasting results, for it remains for public opinion an alien manoeuvre. Secondly, it violates African feelings of propriety which presumably require African antagonists to face each other unattended by outside umpires. If there were cruel tyrants to be crushed, the matter might be otherwise. But neither Tshombe nor Gizenga seem to be such. The real tyrant in the Congo is the armed undisciplined soldier who has nothing to do with politics.

Digesting Mr Tshombe

FROM OUR SPECIAL CORRESPONDENT

By Wednesday Leopoldville knew that the UN had captured the highest building in Elisabethville; an Ethiopian battalion had been flown in; and Ghanaian and Tunisian troops were on their way. This suggests that within the next week Mr Tshombe will be forced to negotiate. The United Nations says that the command of the Katangan gendarmerie has passed out of Mr Tshombe's political control and into the hands of the mercenaries. This seems unlikely. It is much more likely, now that the UN has defended its position in Katanga, that there will be direct negotiation between Mr Tshombe and the central government. Mr Justin Bomboko, the Congolese foreign minister, left Brussels on Monday after saying that his government was, as always, ready to talk to Mr Tshombe.

Angry remarks have been made here about Mr Tshombe's character and associations, but one has the impression that ever since the conference at Coquilhatville the moderates now to be found in Mr Adoula's coalition government have not wanted to destroy Mr Tshombe as a political figure. This would be normal in Africa, where politicians do not take their mutual detestations as seriously as elsewhere. Mr Lumumba's downfall was the result of his dictatorial spirit. Neither the central government nor the main newspaper, *Le Courier d'Afrique*, has been violent about Katanga during the past week. Mr Adoula has been silent, apart from the formal communiqué he has issued jointly with the UN explaining that their common objective is the removal of foreign mercenaries.

Street scene in Elisabethville

Mr Gizenga in Stanleyville has made all the running. The town has been without light or electricity, because the Congo river has been in flood. Mr Gizenga has conferred by candlelight with his Jugoslav adviser, Mr Pavlovic. Mr Gizenga represents the Congolese revolutionaries. He knows that if Mr Adoula can win credit for getting Katanga back, he himself will lose face.

The Leopoldville ministers, especially Mr Gbenye, the minister of the interior, are shrewd enough to realise that they cannot dislodge Mr Tshombe. They are not certain that the UN can, either. They hope it can, but they are not anxious to be too closely associated with the UN's military campaign. This is seen by the Congolese as an engagement between two groups of non-African mercenaries.

The whole concept of the unity of the Congo raises but a faint cheer among regional politicians. It is still a matter of discussion in the Leopoldville press. One recent headline in a weekly newspaper was "Confederation does not mean Secession." The slogan seems to be, "Back to Tananarive," where a confederation was agreed with Mr Tshombe. If only Mr Tshombe can be quickly brought in, it is argued, the *loi fondamentale* can be changed, a new constitution introduced, and the provincial boundaries redrawn. The six Belgian boundaries correspond to no ethnic or other communities in an Africanised Congo.

Both Mr Adoula and Dr Linner fear that the economy will collapse before unity is restored. It was set on the downward slope by the 480 per cent increase in soldiers' pay, and the 380 per cent, 115 per cent and 93 per cent increases secured by members of parliament, state workers and civil servants respectively. Now workers in private industry are belatedly joining in the scramble. The loss of Katanga meant the loss of half the Congo's foreign exchange earnings. The economies of Mr Gizenga's Orientale province and of Kivu province have virtually seceded from the rest of the economy. The Orientale administration has been debiting the central treasury (as it has the right to do) with all of its astronomical public expenditure. On the other hand, it has not credited it with the province's tax receipts. Now Stanleyville has run out of bank notes, with the result that Mr Gizenga's army is displeased.

Only Katanga and the Leopoldville province have maintained production at something like the pre-independence level. The important plantations, notably the producers of palm oil, are run-

The Christmas gift that's traditionally right

Embassy Cigars

Inexpensive because they're rolled in Britain

NOTHING is more completely right for business gifts at Christmas than a box of Embassy cigars. Embassy are made from the finest cigar leaf in the world including top quality Havana tobaccos from Cuba. They are rolled with exquisite care. Inspected and inspected again to ensure they are flawless. But although Embassy cigars suit expensive tastes they are not expensive. Wills roll them here in Britain, so you save substantially. A cabinet box of 25 Embassy President corona-size cigars costs only 68/9d for example. There are many other splendid packs to choose from. See your tobacconist.

4 Embassy Emperor large corona-size cigars in leather style case 12/8d.

Embassy CIGARS *Rich in Havana tobacco*

advertising?

Hepworths Hand Cut Tailoring we mean. You must have seen it. It must have made some kind of impact on you, even if you have never regarded yourself as a potential customer.

Do you think we might do a similar job for you? Do you feel—as we do—that advertising is still an exciting mixture of flair and experience—with science helping but never dictating? As Managing Director of your company, do you still think of yourself as a salesman? Would you like to meet an advertising agency that thinks of itself that way?

We believe that just around the corner there is an advertiser who would like to meet us. He is probably spending—or is ready to spend—between £50,000 and £200,000 a year. He will have to answer a lot of questions—some of them may surprise him. He will want to deal with us personally on major issues. He will have to like us—all 35 of us—for we work more like a family than a firm.

Think about it. This may be you. In 5 year's time your product may be wearing a Hepworth suit—so to speak. It's worth taking a step further anyway. It's worth a 'phone call.

ning at a loss, because of the departure of the managements, the loss of labourers and intimidation by the local army. There can be no central control of the economy, even assuming that non-Congolese administrators can be found, until the Katanga question is decided; nor can there be any question of foreign aid except in the form of direct budgetary subventions or gifts.

The Congolese are much more literate than, say, the Tanganyikans and they have received much more technical training. What is lacking is any conception of the state, or of the objects of politics. At present this administrative void shows no sign of being filled. In a sense the Republic of the Congo, having been a kind of Belgian alter-ego, is strongly connected to Europe. The simultaneous departure of the government and the administration, an event unique in Africa outside Guinea, has made it look like a European country evacuated by the bourgeoisie under threat of fire, sword or pestilence. It will be some time before the Belgians —40 per cent of the pre-independence population—who remained or have returned find their place in the new Congo. The government is half-anxious to re-engage Belgians, but politically it is too soon to take many. It seems that the United States, which has not only paid for nearly all of the UN operation, but also kept the economy afloat, will have to carry the Congo for some time. President Kennedy's Congo policy has been consistently distinguished by its unobtrusive efficacy. Britain's can hardly have appeared as anything but petty interference.

Seen from Brussels

FROM OUR BRUSSELS CORRESPONDENT

OPENING almost any Belgian newspaper these days, one gets a first impression that the whole country is one big Katanga lobby. Condemnation of the present United Nations action is practically universal: even the Socialists—who, like the British Labour party, habitually back the United Nations—have become so embarrassed about the Katanga "war" that to avoid discussing it their press has been driven to such desperate devices as exclusive interviews with a reluctant prime minister on the future of space travel.

Perhaps the most dismayed Socialist of all has been the foreign minister, who is also in charge of African affairs, M. Paul-Henri Spaak. For months M. Spaak has been fighting in defence of his Congo policy against open and strongly expressed hostility from his Catholic and Liberal critics, and with not over-warm support from the Socialist benches. Some of the objection to M. Spaak, including that from his own party, rests on personal grounds. As first president of the United Nations assembly, drafter of the common market's Rome treaty and former secretary-general of Nato, he is the leading Belgian statesman of established international reputation; this has caused some resentment among parliamentarians, who too often limit their sights to the Flemish-Walloon frontier. Ironically, now that M. Spaak's Congo policy seems to be in ashes, the country has belatedly approved it; on Tuesday he was applauded by all parties in the Chamber when he described what line he had taken in recent months. Now, retrospectively, M. Spaak's critics seem to see virtue in the policy of moderation on which they have been pouring scorn for months, if only because M. Spaak's clearly expressed, though unpopular, loyalty to the UN has established his right to speak sharply to it now. As one anti-Socialist Belgian put it, the public realises that in M. Spaak it has had a leader.

Briefly, the attempt that M. Spaak has made since he took office at the beginning of May has been quietly to heal the breach between Belgium and the UN, and especially to aid the UN effort to reconcile Katanga with the central government in Leopoldville. The quietness of his methods has been criticised; but as he no doubt explained to his friend, the late Mr Hammarskjöld, when the two last met in Geneva on July 12th, the government could not carry the nation with it in any abrupt *volte face*. The public at home was convinced that Mr Hammarskjöld was the nearest thing to the devil that they had seen since Patrice Lumumba. And as for Katanga, most of the Belgians there were infected with an extremism like that of the Europeans in Algeria: a high proportion of them are openly anti-UN and anti-Brussels, and have no intention of obeying unwelcome directives from the home government. Their defiance of Belgium has been encouraged by Mr Tshombe, who expelled M. Spaak's envoy, M. Muller, after he arrived in Elisabethville on July 7th to explain the new policy to the Belgians there.

The removal of military and political advisers required by the Security Council was bound to be difficult: but at M. Spaak's request Mr Hammarskjöld supplied a full list of these advisers. They were eventually removed, as M. Spaak told the Security Council on November 15th. But in fact only the less extremist among them appear to have come home: the rest found their way back to Katanga, where Mr Tshombe was happy to use their services. The loss of their passports decreed by the Belgian government has not so far seemed to make an appreciable difference to them.

Mr Justin Bomboko, foreign minister of the Leopoldville government, told the UN in November that all the Katanga whites were accomplices in Katanga's secession; but as M. Spaak observed, this statement was completely unprovable and risked provoking a *chasse aux blancs*, the kind of man-hunt that might lead to innumerable tragedies like that of the thirteen Italian airmen who were murdered at Kindu. The only sane way to meet the problem, according to M. Spaak, was to seek by every possible means to reconcile Messrs Tshombe and Adoula. He had done all in his power to foster the UN attempts at conciliation, and until about ten days ago was still optimistic; but the latest UN action was, he told Parliament, "completely inadmissible." There was, he added, no juridical or moral basis for war operations, which far exceeded the rights of legitimate defence against provocation.

M. Spaak repeated to the Chamber on Tuesday that as between Elisabethville and Leopoldville he would back Leopoldville. The first time he had made this open statement, in New York, there was uproar in Belgium; but this week it was received quietly, and it is expected that diplomatic relations will soon be re-established between Brussels and Leopoldville. Obviously Belgium will be better able to look after its citizens there (and less dependent on UN protection for them) if it is once more able to open its embassy and consulates. This step may also smooth out another anomaly that the Belgian government finds difficult to explain to the home taxpayer: Belgium continues, in accordance with the unratified

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

Out this week:

MEXICO

The government has taken measures to improve the terms of trade by encouraging Mexican manufacturers to export. These measures are detailed, and their chances of success—particularly in the context of the Latin American Free Trade area—are assessed in some detail. The policy which assigns a minority role to foreign capital in joint enterprises is likely to be continued: the review notes developments in both industry and infrastructure against a background of continuing monetary stability.

treaty of friendship and assistance, to pay a third of the salaries of all Belgian nationals working in the service of the nominally unified Congolese state. On October 1st this year there were 2,117 of these, including more than 1,000 teachers, 92 doctors and a number of administrators, engineers and agricultural experts. They also receive $400 a month in Belgian francs as "danger money"; their family allowances, their future pensions, and the pensions of all retired Congolese state servants are paid by the Belgian treasury, which also backs the Congolese national debt to the extent of $17 million. This year 1,085 Congolese students are studying at universities and colleges in Belgium. All this "technical assistance" has cost Belgium some $2 million this year and will cost $1 million more in 1962—a sizeable expenditure for a small country that is itself grappling with austerity problems.

Why does Belgium continue to do this? "A little bit from habit," an official of the former African affairs ministry told your correspondent—and also because Belgian private savings in the Congo still exceed $3 billion. It is a sign that Belgium still hopes to retain friendly links with the Congo when the present nightmare is over. After all, the Belgians were proud of their work there and regarded it as a world showpiece of benevolent, if admittedly paternalist, government. That is why Belgians feel deeply about the present shambles, quite apart from their frustrated despair at being everybody's scapegoat, and, latterly, their astonishment at the United States, whose attitude, they feel, threatens to break the western alliance. Knowing the Congo as they do, the Belgians are convinced the UN "war" cannot possibly give quick success: guerrilla fighting could continue in the bush for years, with a UN victory always just round the corner like Governor Lacoste's "final quarter of an hour" in Algeria. In the meantime they see life becoming again as primitive for the Congolese as it was before Livingstone and Stanley ever arrived, with the installations of the Union Minière, the Otraco, and the other companies in ruins. In the Belgian view, it makes no sense at all from any point of view for the UN to destroy the goose that lays the copper eggs.

Ireland and the Congo

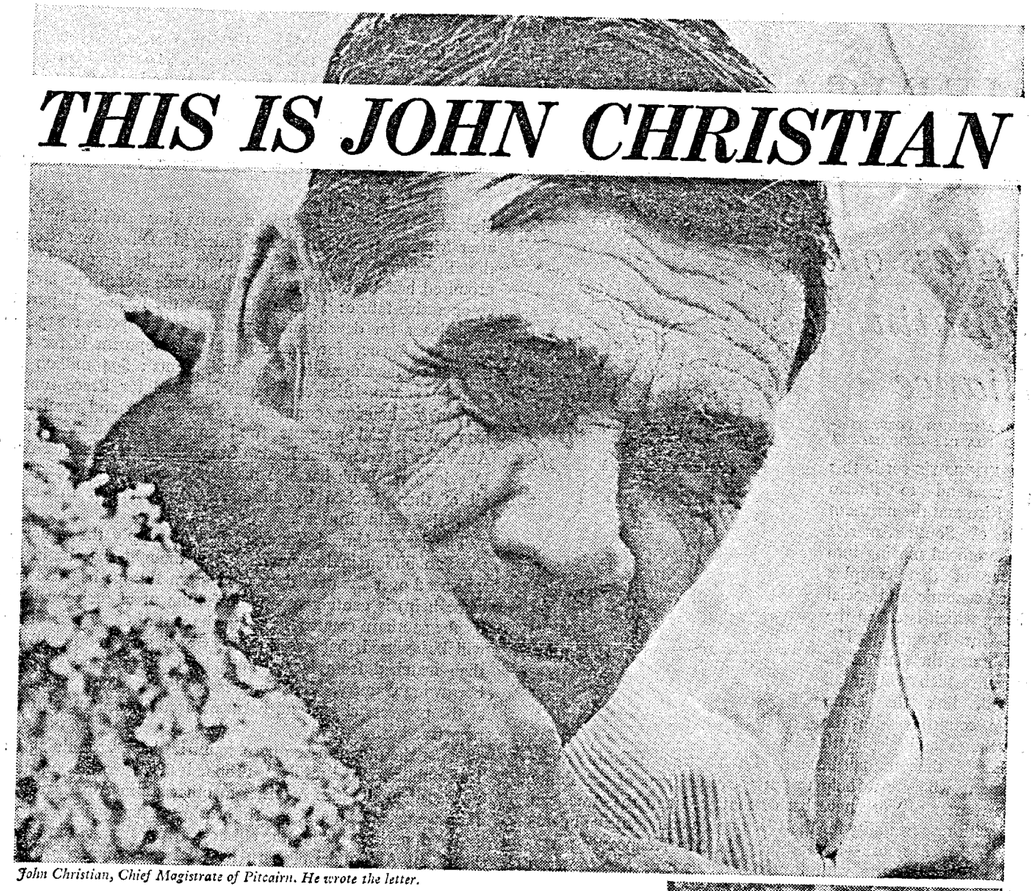
BY OUR SPECIAL CORRESPONDENT

DR CONOR CRUISE O'BRIEN has given Dublin its best talking point for a generation, and its not exactly reticent citizens are making the most of it. International affairs fascinate the Irish, whose own tiny stage is insufficient to absorb their attention and their insatiable capacity for speculation. Dr O'Brien played a major part in shaping the new, outward-looking foreign policy that Ireland has pursued since its admission to the United Nations in 1955. In the United Nations its status as a small nation, which had hitherto limited its international role, became an actual advantage. Ireland has consistently followed a policy of non-alignment. As recently as December 4th the Irish scored a fresh triumph when their motion, calling on the nuclear powers to limit the spread of atomic weapons and on the non-nuclear ones to refrain from developing them, was passed unanimously by the General Assembly.

Apart from his share in creating Ireland's new look, Dr O'Brien is a man of unusual depth and complexity whose different talents and careers make him difficult to classify. The Anglo-Saxon may be puzzled and therefore irritated by a polymath, but the Celt is not. In Ireland, where talent is hardly thick upon the ground, to be good at more than one thing is a positive recommendation. Free thinking, liberal, with left-wing tendencies, Dr O'Brien may seem a curious hero for Catholic Ireland, but most Irish heroes have been unorthodox.

By resigning, Dr O'Brien was able to make his attack on the British Government in an especially personal and dramatic form. Had he remained an Irish diplomat it can be surmised that the same points would have been made in an infinitely more discreet and muffled way by his chief, Mr Aiken, with whom he enjoys a very close and friendly relationship. As it is, the violence of his attacks has not only dismayed the Irish foreign ministry by its lack of diplomatic form, but seriously embarrassed the government. Mr Lemass may be genuinely concerned about the Congo, but he is also intent on fostering good relations with Britain and France and so facilitating the entry of Ireland into the European common market. He has endeavoured to extricate himself by insisting that everything Dr O'Brien has said or done has been either in the service of the United Nations or as a private individual.

Irish policy is unlikely to be changed as a result of Dr O'Brien's utterances, at any rate for the moment. Backing up the United Nations has the approval of all parties, and the UN policy in the Congo is also generally supported. Most people accept Dr O'Brien's



At New York: U Thant, Gen. McKeown, Dr O'Brien

accusations against the Union Minière, and suspect that he is probably right about the British Government, too. The Irish government does, however, have its critics. Two members of the Dail, Dr Noel Browne (champion of the Irish health service and alleged martyr of the Irish bishops) and Mr McQuillan, have declared their opposition to any Irish role in the Congo. Ironically, they have also been—by dint of an aggressive exploitation of the procedures of debate—the champions of Dr O'Brien in the Dail.

Yet if they had their way all, and not only part of, what Dr O'Brien stands for would be destroyed. Another source of criticism is from those who regard Katanga as a model Christian state being crushed on behalf of the communist rest of the Congo, aided by the pinks in the United Nations and at Iveagh House. In the state, Senator Quillan of Cork, and in the Church, Dr Brown, Bishop of Galway, have been the principal exponents of this view. Neither is exactly representative. Where this motley assortment of eccentrics could acquire influence is if things began to go really badly for the Irish troops in the Congo. What happened at Jadotville in September is already felt as something of a national humiliation, and if there were a massacre of Irish troops, then the cry of "bring back the boys" might be raised. Dr O'Brien's accusations could then be brought in as evidence of the "dirty" nature of the whole business, from which Ireland would be better off disengaged.

Any anti-British cause has built-in support in Ireland. Dr O'Brien is also helped by the Irish sporting instinct. People see him as a brave, comparatively young David taking on the two old ogres, Macmillan and de Gaulle. Whether Ireland will be able to find a place for him when all the shouting has died down is another matter. The personal tragedy lies precisely in that. With the foreign service ruled out, it is difficult to see what future Ireland can offer this militant and brilliant public servant.

THIS IS JOHN CHRISTIAN

John Christian, Chief Magistrate of Pitcairn. He wrote the letter.

THIS IS JOHN CHRISTIAN. Direct descendant of Fletcher Christian. Fletcher Christian, acting mate of His Majesty's Armed Vessel 'Bounty,' the most famous mutineer in the world. Christian of Pitcairn.

And this man is Christian of Pitcairn, too, Chief Magistrate of the Pitcairn Islands, that remote mutiny-inspired settlement lost in the mid-immensity of the vast Pacific Ocean.

Today, Pitcairn is a peaceful place. A place of sun and sea and easy living. But still a place not without its problems.

CHRISTIAN WRITES A LETTER

Which is why, on Sunday, 20th November, 1960, John Christian sits down to write a letter. A letter on behalf of each of Pitcairn's 126 inhabitants.

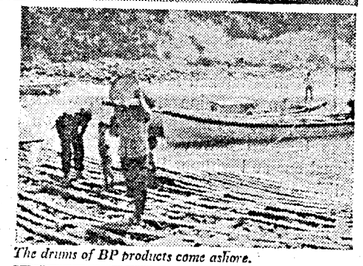
A letter to British Petroleum in London.

'Fuel supplies on the Island are far from satisfactory,' he says.

'Will your company give consideration to this problem? Could your ships bring our year's supply?'

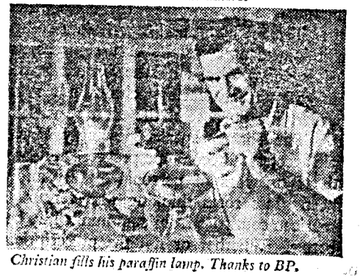
It's not a large supply. About £300 worth in fact.

But British Petroleum believes that people, and their problems, matter.



ATTENTION BRITISH CURLEW

So, the 15,000 ton BP Tanker *British Curlew* is diverted from the regular New Zealand run. She anchors off Bounty Bay. And through heavy surf, whale boats ferry ashore the 10 and 12½ gallon drums of Pitcairn's fuel supplies. Paraffin for lighting; Diesel for the Island's generating plant; petrol; Energol lubricating oils.



Thanks to BP the Island is re-fuelled again.

BP

BRITISH PETROLEUM

The drums of BP products come ashore.

Christian fills his paraffin lamp. Thanks to BP.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Progress on the Latin Alliance

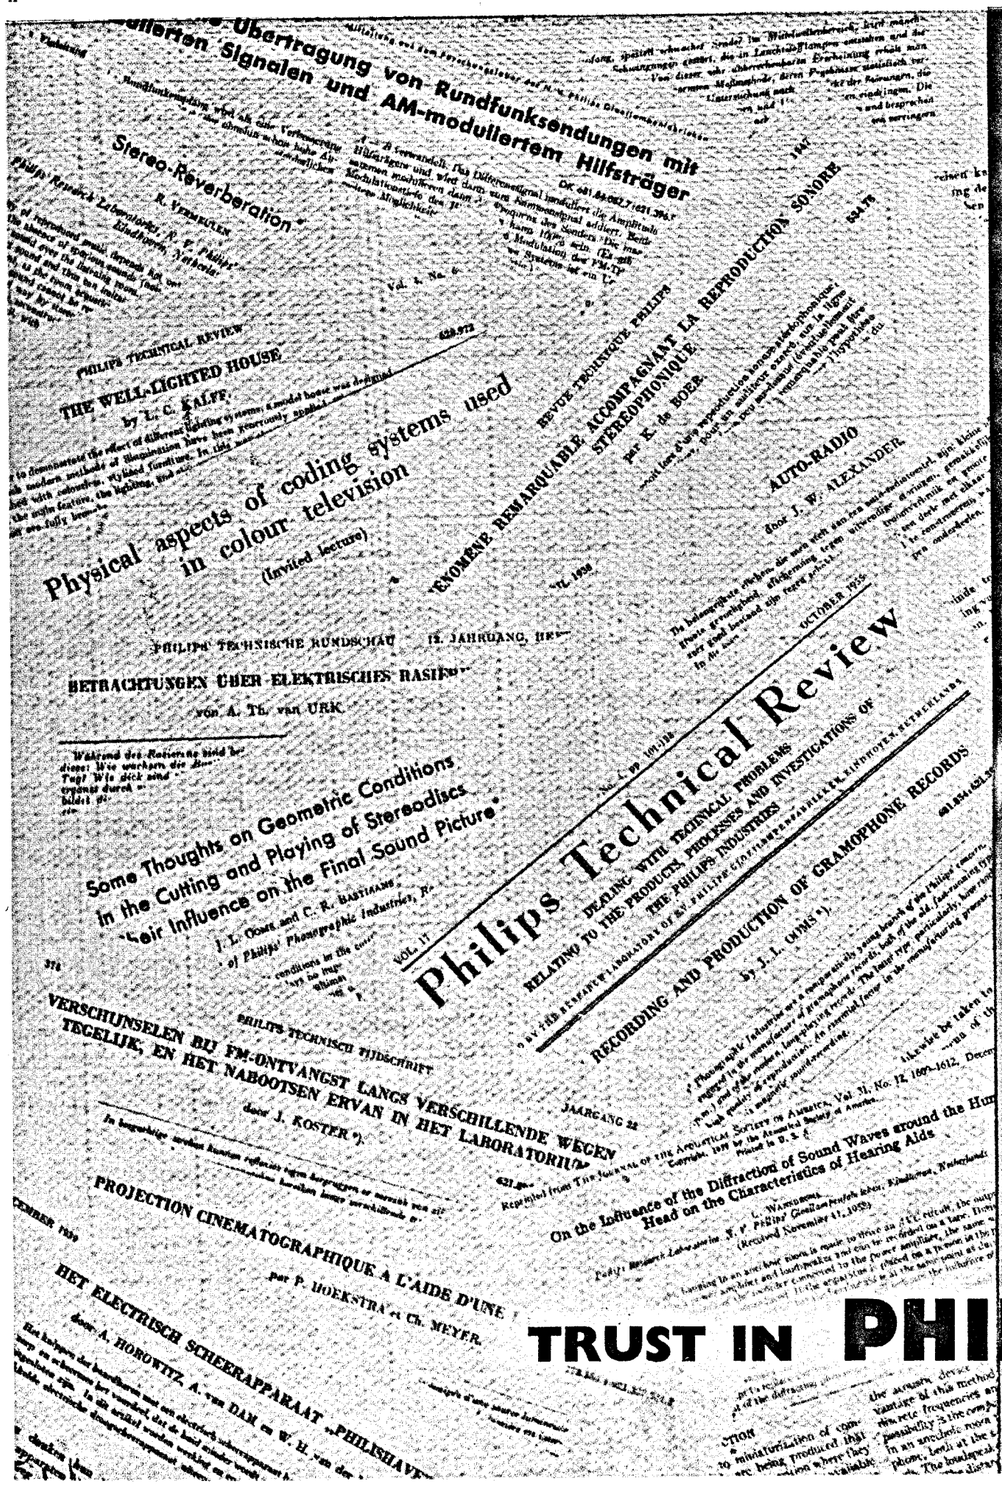
FROM AN AMERICAN CORRESPONDENT RECENTLY IN SOUTH AMERICA

MR KENNEDY'S sortie this weekend to Puerto Rico and the northern shoulder of South America marks the official moving into high gear of that complex effort at economic and social face-lifting which is called the Alliance for Progress. His trip celebrates the start of an experiment which will, if all goes well, link the Latin American countries with the United States and also with each other for their mutual benefit. The names of the nine high-level experts who are to help to put the provisions of the Punta del Este charter to work have been announced and the American charged with responsibility for the Washington end of the co-operative web—Mr Moscoso—is travelling in Mr Kennedy's party. That the journey starts with Puerto Rico, where Mr Moscoso gained his experience in putting a country on its economic and social feet, and continues to Venezuela, where he has served as American Ambassador, suggests that the chosen prototype of the Alliance is not the Marshall Plan with its European overtones, but the Puerto Rican Operation Bootstrap, which is entirely of the western hemisphere. That was successful on a small scale. It remains to be seen how well its lessons are applicable on an international one and without Puerto Rico's special advantages.

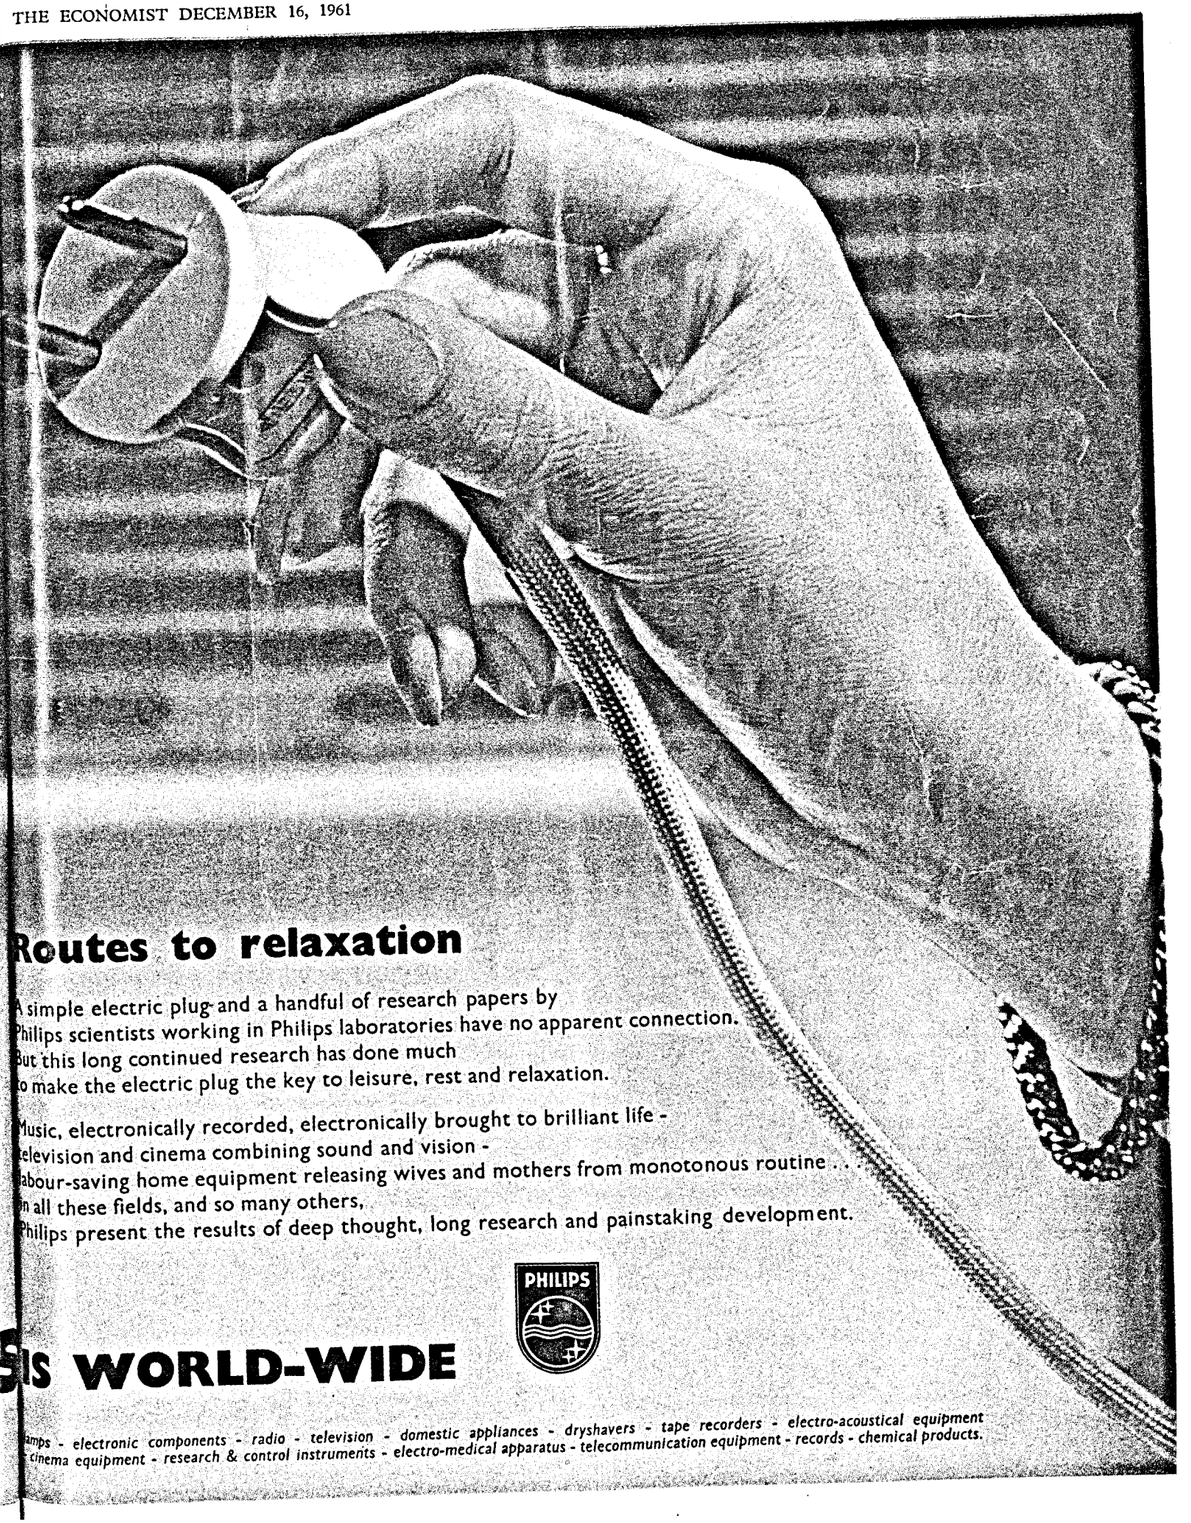
The differences are important. Operation Bootstrap, which raised the average annual income a head on the island from $121 to $600 in a decade, was undertaken within the governmental structure of the United States, which was able not only to pour money in but also to "forgive" the taxes which would normally come out. The Alliance for Progress is a co-operative agreement between independent countries of various economic and political shapes, sizes and grades, with the United States able to act only as a friend and partner offering technical advice and lending money.

The underlying purpose of the exercise varies with the interests involved. The charter speaks glowingly of a desire to "bring our people accelerated economic progress and broader social justice within the framework of personal dignity and political liberty." In northern grass roots thinking, the venture is meant to save Latin American countries from communism by helping their people to live better. Whether or not the prescription is the right one may be arguable. But the heads of nineteen states—all but Cuba—have approved the diagnosis and agreed to try the cure. The United States is already at work on its share; within nine months after Mr Kennedy launched the idea Mr Dillon, the Secretary of the Treasury, announced that most of the first billion dollars promised had been allocated. The details sketch one layer of the co-operative fabric: $390 million took the form of Export-Import Bank loans for development and related purposes; $250 million from the Agency for International Development is for technical assistance, development loans and grants; $94 million in agricultural commodities comes out of Food for Peace funds; $78 million for housing, community development and rural credits is from the social progress fund administered under the Inter-American Development Bank. Since February the Inter-American Development Bank has also made 58 loans totalling $221 million, all of them backed by an equal amount from the borrowing countries or institutions.

The larger United States pledge to supply the major part of the $20 billion in loans which it is thought that Latin America will need over the next decade (western Europe has also promised some help) is contingent on the fulfilment of reciprocal promises by the southern countries and on the will of Congress. That body will be assured that every dollar which goes south will be more than matched from local funds, land, labour and so on in the borrowing country. But Congress will take a hard look every year at the progress charts and balance sheets before appropriating the next fraction.



What the nineteen southern countries have been doing has been less publicised. President Frondizi of Argentina undertook an unprecedented series of visits to other Latin American countries, then went travelling about the world, perhaps with shopping lists in hand, perhaps testing the efficacy of American aid in other lands. President Alessandri of Peru has had that country's uninhabited eastern slopes surveyed by an American firm to find out whether Peru's expanding Indian population might not be guided that way instead of being allowed to continue seeping down into Lima's crowded slums. President Betáncourt of Venezuela began planning for his country's improvement while he was a political exile. The agrarian reform and self-help projects which he is showing President Kennedy this weekend are only a fraction of the work now under way. The same thing is true of the new self-help primary school near the Bogotá airport, where Mr Kennedy is to lay a cornerstone under the proud eye of President Camargo of Colombia.



ATTEMPTS to get behind the oratory, to find out what kind of a flamingo the Alliance is and what the chances are that it can be turned into a useful mallet, collide at the moment with operational uncertainties. As an organisation, the Alliance sounds like a co-operative nightmare filled with man-traps and at least as amorphous as the British Commonwealth. It has no central headquarters yet, apart from the Organisation of American States whose economic and social council gave it birth. Nine wise men the "high-level experts" who have just been appointed, will advise on projects submitted and requests for loans; three of them, representing respectively the OAS, the United Nations Economic and Social Council and the Inter-American Development Bank, will apparently be fitted into an executive troika. Within the United

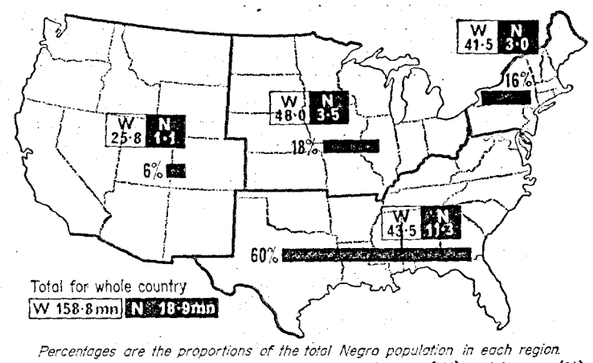
States the alliance will operate the Latin American division of the new foreign assistance organisation, AID, with Mr Moscoso as regional administrator for Latin American affairs.

The American press has tended to present the Alliance as newly sprung full-armed from the brows of Mr Kennedy's Harvard frontiersmen but its heritage is older. It has behind it not only the good neighbour policy of the nineteen-thirties, but also the sporadic efforts of the Organisation of American States, the Operation Pan America proposed by a Brazilian President in 1958, the Act of Bogotá of October, 1960, the country analyses of the World Bank and the studies and training programmes of the Economic Commission for Latin America. Without the pre-natal work of Sr Raúl Prebisch of Argentina, now named co-ordinator of the nine wise men, there might have been no ambitious new effort. As Secretary General of ECLA, with crowded quarters and a devoted staff in smoky Santiago de Chile, he has for years gathered data and made it dependable, lectured South American statesmen on the economic needs of their own countries and trained a generation of young economists to develop the skill and enthusiasm needed to attempt so complex a programme. It is rumoured that he may move to head a new institute for Latin American economic development, to be supported, at least in part, by United Nations funds. His appointment to the expert panel of the Alliance, like the appointment of Mr Moscoso at the American end, is a bright gleam in a still murky picture.

The strength of the Alliance will lie in its backing by experienced and determined men in positions of command over governmental, business and international bodies which have the needed skills and funds. Its weaknesses are political and historic, not only within the countries being urged into action, but also within their representative body, the OAS, which has won no fame as a tower of strength or decision. Critics of the Alliance, pointing also to local prides and political ambitions, to various degrees of inbred inertia, to entrenched interests unconvinced that their time is up, insist that the only cure for the rising tide of population and of popular agitation for change is active revolution. Enthusiasts, on the other hand, argue that the needed degree of social and economic change is possible through the "controlled revolution" implicit in the charter. Not the least of the key questions is whether the Latin countries and the United States Congress can be held to the main lines of the programme for the prescribed ten years.

Blue-print for Civil Rights

FROM A SPECIAL CORRESPONDENT



TERRELL County, in rural Georgia, is typical of the Black Belt—the name given to a swath of old plantation land that swings across the southern states. It is cotton country, rich soil that has been worked by slaves and their descendants. Negroes predominate in numbers but the whites, fearful of being submerged in a black majority, keep all the power by a combination of politics, economics and physical terror. Two-thirds of Terrell County's citizens are Negroes but until recently fewer than one per cent of them were registered to vote; six Negro university graduates seeking to register were excluded on the ground, among others, that in a reading test they assertedly mispronounced the word "equity" as "eequity."

In 1957 James Brazier, a Terrell County Negro in his thirties, was arrested on a charge of speeding in his new car. According to Negro witnesses whose accounts appear in a report issued recently by the Civil Rights Commission, Brazier was beaten and kicked by a white policeman (there are no Negro police in the Black Belt) who said:

> You smart son-of-a-bitch, I been wanting to get my hands on you for a long time. You is a nigger who is buying new cars and we can't hardly live. I'll get you yet.

A year later Brazier was sent to prison again, this time for protesting against the arrest of his father, and beaten with a blackjack. He died five days later of brain injury. The federal government convened a grand jury and requested indictments of three of Terrell County's policemen under a statute dating from 1866 (the only federal law applicable) which makes it a crime for any official "wilfully" to deprive a citizen of his constitutional rights. The grand jury, made up of Georgians, refused to indict.

This story, as told by the Civil Rights Commission, illustrates several important aspects of the race problem. It shows how interconnected are the various forms of discrimination against the Negro. The police could be brutal because Negroes in Terrell County had no political or economic power; any of them attempting to exercise their political rights might have had to fear reprisal. Under the American federal system, the government in Washington may be powerless to overcome local prejudice. And, finally, there is significance in the very fact that the story of Terrell County and James Brazier has been brought to the attention of the public by the Civil Rights Commission.

Percentages are the proportions of the total Negro population in each region. Figures in blocks are of actual numbers in millions of whites (W) and Negroes (N)

The commission is one of the real surprises of the Kennedy Administration. By law it is a non-partisan body but its recent achievements are nevertheless attributable in good measure to Mr Kennedy and his advisers. Created in 1957 in the first civil rights legislation of the modern era, the commission stumbled along during the Eisenhower Administration with three southern and three northern members. President Kennedy filled two vacancies with deans of law schools—Dr Erwin Griswold of Harvard, a libertarian Republican, and Dr Spottswood W. Robinson 3d of Howard, a militant Negro Democrat. Together with the remaining members and a new, resourceful staff director, Mr Bernhard, they have made a real weapon of the commission's power to investigate and expose the state of civil rights in the United States.

In the last three months the commission has turned out five substantial volumes of reports, covering the fields of voting, schools, employment, housing and the administration of justice. The reports supply detailed facts to support the generalisations already familiar to thoughtful Americans: that Negroes cannot vote in parts of the South, that they are relegated to inferior schools homes and jobs and that they are more likely to be the victims o police brutality than are white men. Perhaps the most importan contribution of the commission has been to focus attention on th gravity of the Negro's situation in the North. There the vas post-war housing boom, nurtured by federal funds and federa mortgage insurance, has made this the land of the suburb—an

kept the Negro out. Families with dark skins have been confined in the deteriorating central cities and financial institutions have been unwilling to provide the money to stop the slide to slums. Young Negroes in such areas attend inferior schools and have little chance of obtaining anything but menial jobs after they leave. This causes fierce psychological pressures and it is no wonder that delinquency is increasing. Dr Conant, the former president of Harvard University, warned the country, in a recent study of major significance, that the failure to provide Negroes with the expectation of decent homes and jobs could lead to a terrifying social explosion in the urban North.

In a way it is easier for the federal government to move against racial discrimination in the South because there it is so flagrant and there it is usually imposed by state law. The private estate agent or house-owner who discriminates against Negroes is much harder to control and may indeed be beyond the federal government's reach. For example, the Supreme Court has outlawed the enforcement of formal covenants against the sale of property to "non-Caucasians." But a firm in Washington which excludes Negroes and Jews from its luxury estates has neatly frustrated that ruling by making all buyers promise in their contracts to let the developer know before concluding the sale of a house and give him a chance to buy it back first. A handful of states have laws against racial discrimination in the sale or rental of houses. The Civil Rights Commission recommended unanimously that a federal Executive Order should make a promise of no discrimination a condition of receiving federal housing funds or mortgage insurance and President Kennedy is reported to have such an order on his desk awaiting his signature. But one would have to be an optimist indeed to imagine that the social pressures to exclude Negroes from white suburbs will be overcome so easily.

THE degree of unanimity achieved by the Civil Rights Commission in its proposals for action has been astonishing. The six members, including the two remaining white Southerners, were united in recommending that Congress make six years of school an automatic proof of literacy in the hope of eliminating the unfair tests imposed by southern election officials. Even more surprisingly the commission's members were unanimous in suggesting that Congress require every school district that segregates children by race to come forward within six months with a plan for desegregation. They all urged Congress to ban racial discrimination by trade unions; their exclusion of Negroes from apprentice training is a major source of economic inequality. There was no dissent from recommendations that federal funds be supplied to improve the calibre of local police forces and that federal law be tightened to make easier the prosecution of brutal police officers.

The fate of the commission's proposals remains uncertain. No legislation of this kind can get through Congress without the strongest backing from the White House and the White House is clearly not spoiling for a civil rights fight at the Capitol when it needs every vote it can get for a new trade programme and other legislation. The Administration points, with justification, to the great progress it has made without any new laws. More court suits to break down voting barriers have been brought in 1961 than in the previous three years; even in Terrell County a long-standing case was won and some Negroes were registered to vote. The schools opened without violence this autumn for the first time in some years and several big school districts began to desegregate the races. A massive assault has been launched on segregation on railways and buses, and a new presidential committee is making real progress against job discrimination practised by companies with government contracts. Nevertheless, the momentum of history and the growing political power of the Negro suggest that Congress may be debating the Civil Rights Commission's proposals at its next session.

Christmas Cheer

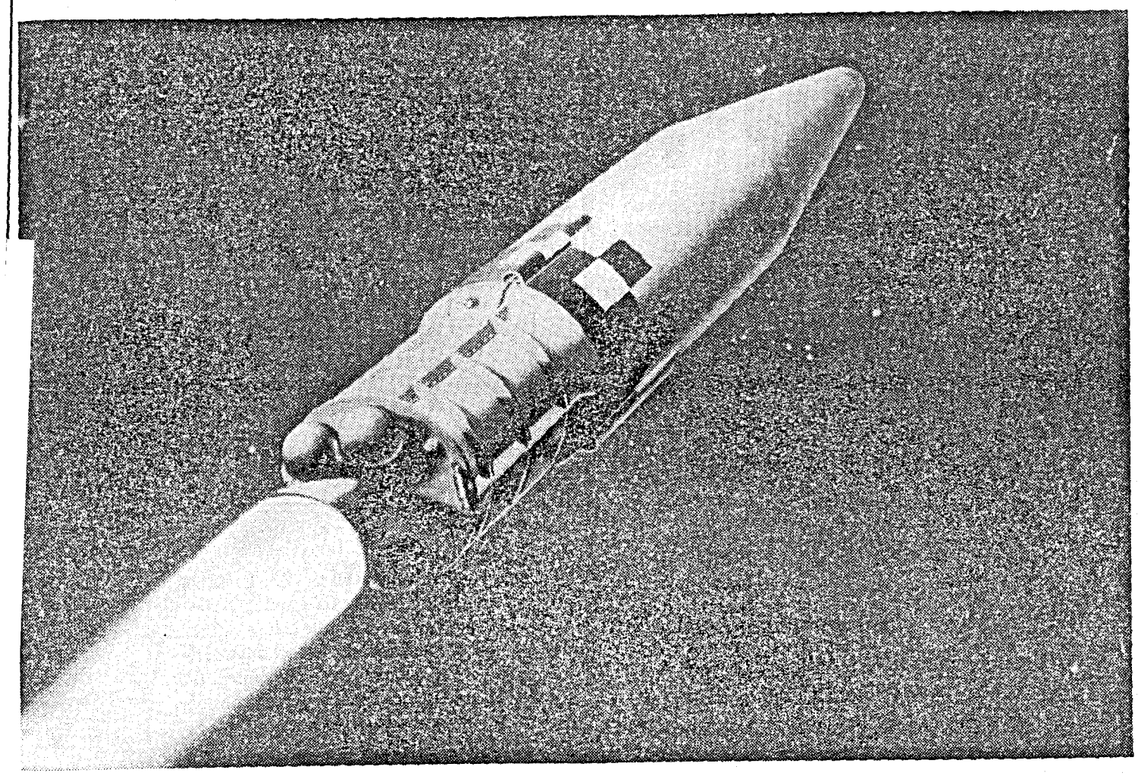
IT would have been surprising if share prices on Wall Street had not reached a new peak this week. The normal trend on the stock exchange is upward at this time of year and in the past few days this has been backed by a whole series of record-breaking statistics. Capital spending, which has fallen in 1961 even further below 1960 than was forecast, is expected to be higher than at any time since late 1957 in the first quarter of the new year. This will help spending on construction to reach the new record that is prophesied for 1962; this year's disappointing figures for industrial building, coupled with lagging outlays for new highways, explains why construction did not quite come up to expectations.

There is nothing disappointing about Christmas sales. These are running 8 per cent ahead of last year, instead of the 4 or 5 per cent that had been forecast. Shoppers, who began at last to dip into their full pockets in October, dug even deeper in November when they spent $19.3 billion, an increase of 3 per cent for the second month running, breaking a record set in April, 1960.

Cars sold particularly well in November and the optimism of motor manufacturers has much to do with the fact that steel production has finally begun to go up satisfactorily. Much of this output is to fill orders for current consumption although it is thought that manufacturers are beginning to lay in stocks as a hedge against the steel strike that is possible next summer.

UNEMPLOYMENT

as % of civilian labour force, seasonally adjusted.



A strike then looks more likely since this week's trade union convention. The President and his Secretary of Labour urged the unions to limit wage increases to amounts justified by improvements in productivity or by the need to eliminate inequities between industries. The plea was reinforced by the announcement that in November the average factory worker's pay went up to a new record of $95.82 a week. But even the Administration was forced to admit that its other cheerful announcement on labour was not as encouraging as it seemed at first hearing. Unemployment is still too high, even though in November it went up much less than usual in that month. The Administration expects this improvement to continue but labour leaders argue that it is merely temporary. The only permanent remedy for unemployment, in their view, is a constantly expanding economy stimulated by increases in purchasing power resulting from wage advances. If individual unions abide by the convention's resolution this will be the objective of all collective bargaining in 1962, inflation or no inflation.

Atmosphere on Tests

ALTHOUGH preparations are being made in the United States for a resumption of nuclear tests in the atmosphere, all tests of weapons are now being done in restricted conditions underground and Mr Kennedy has given no public indication of what his decision will be. A vital consideration at present is how much progress the Russians have been making, as shown by the fifty tests in the atmosphere which they completed early in November. At the end of last week the Atomic Energy Commission, on the basis of investigations carried out by scientists under the direction of Dr Bethe, of Cornell University, stated firmly that the Russian tests have not altered the balance of nuclear power in favour of the Soviet Union, although it detracted somewhat from this firm-

LOCKHEED TODAY

Lockheed has successfully orbited more satellites than any other builder in the world. Now Lockheed offers the versatile Agena, a production-line satellite suited to many missions. Only the Agena can have its engines stopped and restarted in space by radio signals from earth. This capability enables the Agena satellite to reach a precise position on orbit, to maintain it for long periods, and to carry a heavier payload.

The Twin Pioneer 3

2 ALVIS LEONIDES ENGINES

From Jungle Airstrips in the Far East, oil sites in the Middle East and Africa or narrow mountain valleys in Austria and Switzerland. In fact anywhere where space *outside* is limited, the versatile twin pioneer is giving constant, economic service.

FROM A TAKE-OFF RUN OF 420 feet
The Twin Pioneer 3 will carry
16 PASSENGERS
OR 4000 POUNDS FREIGHT
OR 2 LARGE SURVEY CAMERAS OR
9 STRETCHER CASES OR
12 PARATROOPERS OR
4 × 500 POUND BOMBS OR
MANY OTHER CIVIL AND MILITARY LOADS

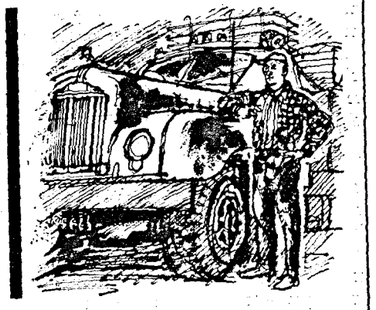
Designed & Manufactured by
SCOTTISH AVIATION LIMITED
Prestwick Airport, Scotland

ess by adding that the balance of power depended not only on chnology, but also on the numbers of weapons available and on ffective systems of delivery.

The AEC conceded, however, that the tests showed that the Russians had made advances in technology, especially in improving he yield-to-weight ratios of weapons; up to now this "efficiency" as been thought of as particularly American. It opens the way o more destructive big weapons and to smaller mobile ones for use n the battlefield. The commission was also struck by the low fall-ut from the Russian tests. For the whole series this is now put at 5 megatons although on the basis of previous Russian, American nd British experience it might have been expected to reach 60 megatons. This "cleanliness" is welcome to those concerned bout immediate fall-out but less comforting to those concerned bout the refinement of Soviet nuclear technology. According to he account in one newspaper, some officials declare that it is no onger possible to say that the United States has a decided nuclear lead and even Dr Bethe, who has long opposed the resumption of ny tests, is now reserving judgment on the advisability of testing n the atmosphere. This restraint is not shared by those who have always wanted more testing and, even if Mr Kennedy wishes to hold back, it may be impossible for him to do so.

Meanwhile other scientists are busy evaluating the results of a very different test—the explosion, for purely peaceful purposes, of a 5-kiloton atomic bomb in the salt-beds of New Mexico. Project Gnome, as it is called, is intended to discover whether the heat generated 1,200 feet under the desert can be used to run an electric generator, whether useful radio-isotopes can be mass-produced and cheaply recovered, and how the effects of an explosion in salt-beds differ from those in volcanic rock. All that is known so far is that the explosion was unexpectedly powerful. Observers were jarred and there was a small escape of radioactivity from the shaft sunk in the desert.

Television Talks Back



It is six months since Mr Minow, the new chairman of the Federal Communications Commission, threw down his gauntlet to the television industry with the charge that most of its programmes constituted a "vast wasteland." Yet it was only last week that the heads of two of the three networks—Dr Stanton of the Columbia Broadcasting System and Mr Sarnoff of the National Broadcasting Company—took up the challenge with simultaneous speeches deprecating any government interference with programmes on the grounds that this would stifle creativity and might lead to censorship. No doubt the broadcasters thought that if they lay low Mr Minow might begin to wield his new broom less energetically. If so, they have been disappointed. The FCC is still calling for power to regulate the networks, over which it has no direct authority, although they provide half of all television programmes and more than three-quarters of those shown during the peak viewing hours. Early next month the FCC is to hold hearings on the subject, just as Congress comes back to Washington. A counter-offensive was plainly indicated.

The industry is also alarmed by the seriousness with which the FCC is taking its responsibilities concerning television and radio licences. These must be renewed every three years, but until last year—when the FCC revoked two licences, one in Miami and one in Boston, on the grounds of improper attempts to influence the original grants—it had never used this ultimate sanction in the television field and had not done so for fifteen years where a radio station was involved. Now, however, the FCC, heartened by many letters supporting its stand against violence, vulgarity and mediocrity, is moving toward ordering licensees off the air on the grounds of poor programming.

A licence in Indianapolis was revoked recently and this week an

Daylight on Moonlighting

When about 4 million people are out of work "moonlighters"—that is, workers who hold more than one job—are bound to attract indignant attention, particularly from the trade unions. Three million men and women, 4.6 per cent of the labour force, are moonlighters. They include the notoriously underpaid policemen, firemen, teachers and postmen, as well as students and farmers; in all these occupations the hours or seasons of work make a second job feasible. Some white-collar workers also do part-time work which requires special skills.

Many widely-held views about these busy bees are, however, false. A study of moonlighting in a week in December, 1960, which has just been published by the Department of Labour, shows that, contrary to popular impression, their numbers are not increasing and that the name itself is a misnomer. Only about a third are on the job at night, while a quarter perform their secondary tasks at the weekend and nearly half do so during ordinary daylight working hours. Only 180,000 (8 per cent) held down two full-time jobs. Nearly two-thirds worked full-time—35 hours or more a week—on one job and part-time on the other; the remainder were employed part-time in both cases. The average moonlighter worked 50 hours a week, 11 of these on outside tasks.

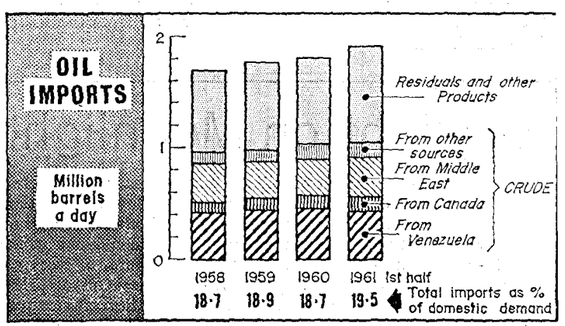
Several attempts have been made to ban moonlighting on the ground that it robs the unemployed of jobs. But the Secretary of Labour doubts the value of such a ban. The secondary jobs of 850,000 of the moonlighters consisted of running their own farms or businesses, careers not open to the unemployed. Those of another half million of the moonlighters lay in professional and managerial fields and required skills and experience possessed by few of the men and women out of work. It would not even be easy to fit unemployed people into the 1.6 million less demanding jobs now held by moonlighters; some need special qualifications, others are traditionally reserved for men or for women, some are in places where there is no unemployment. Finally, earnings from the second job were usually small and most of the jobs were of a temporary nature.

Generally a person with more than one job does not follow the same occupation in both of them. Professional and technical workers stick closest to their speciality, but if they branch out are likely to be salesmen in their off-hours; farmers tend to be factory operatives or craftsmen in their spare time; salesmen often turn to farming or become clerks. Professional and technical workers and farmers lead in their rate of multiple job-holding, closely followed by teachers and government employees. Men are much more likely to be moonlighters than women and most of these men are in the 25-54 age group, with families to support. Negroes and whites are about equally likely to have more than one job.

FCC examiner recommended that a station in South Carolina should not have its licence renewed partly because it allowed a disc jockey to broadcast "bucolic *double entendres*," but also because it had fallen down in providing adequate programmes on public affairs and educational subjects and for children. Applicants for licences have to say how they will use the time at their disposal; at last the commission is checking up on how these promises are kept. In the past year 135 of 500 applications for renewal of licences have been held up on account of questions about programmes. In fifteen cases formal hearings are to be held and 28 other stations have been granted only short-term renewals. The industry will use all its influence with Congress to persuade it to clip the commission's wings; if this fails, it will turn to the courts to fight what it is sure to allege is an infringement of free speech, although the FCC insists that it abhors the idea of censorship. Unluckily for the broadcasters, most of this winter's programmes were fixed before they realised that they were to be put in the dock.

New Horizons for Welfare

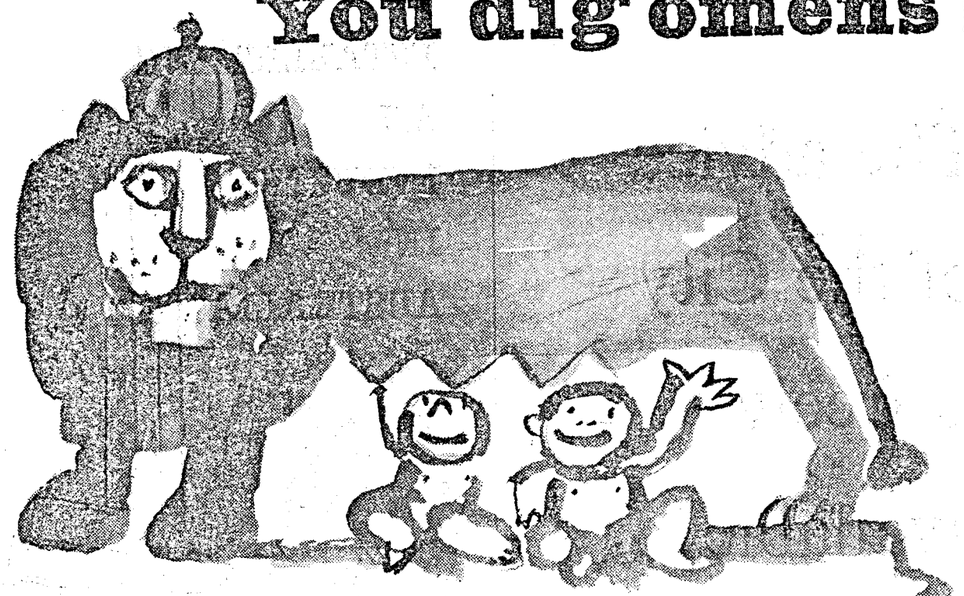
Most of the growing public hostility to the present system of public welfare centres around two programmes: that for aid to dependent children, which absorbs over a quarter of the $4 billion spent every year for relief by the federal government, the states and local communities, and that for local assistance (where available) to the able-bodied unemployed. Programmes for the blind, the disabled and the aged arouse little criticism from the tax-payer. But—as events showed last year in Louisiana and this year in Newburgh, New York, and in the District of Columbia—the public is coming to suspect that the joint federal-state programme for aid to dependent children too often subsidises loose women. To revive public confidence is one reason for changing the system; the first instalment was announced this week by Mr Ribicoff, the Secretary of Health, Education and Welfare. But one of these changes—the renaming of the Bureau of Public Assistance, which is now to be the Bureau of Family Services—is a symbol of the Administration's deeper determination to reshape public assistance in order to help needy families, some of whom are second or third generation problems, to surmount their difficulties and to become self-sustaining as far as possible.



One reform this week was the permission granted to states to disregard the earnings of teenagers in assessing the resources of a family which applies for assistance, though only if the earnings are to be used for further education or job training. Mr Ribicoff also announced that the states must make more efforts to trace fathers who desert their families and to eliminate fraud. But his main point was that welfare workers must pay more visits—at least four a year—to families receiving aid for their children. More social workers will be needed and the states are asked to improve their training and recruitment. The federal government now pays half of all administrative costs but this proportion may be increased.

Other changes which Mr Ribicoff has in mind require congressional assent. He wants to extend the present temporary permission to help families whose bread-winner is out of work (under the permanent legislation families are broken up because they are not eligible for help if the father is living with his wife and children). Federal funds are also to be sought for day-care centres which would look after children, so that the mother can go out to work, and for work relief projects chosen by the local communities; here the emphasis would be on preserving and adding to the skills of the unemployed, not just on making them "pay" for their relief cheques by shovelling snow. Finally, for families which have shown themselves incapable of handling money, vouchers for the rent and groceries may be substituted for cash payments. All this might cost another $400 million a year but it would be money well invested.

Oil Pressures



It seems unlikely that President Kennedy is going to prese his Venezuelan hosts this weekend with a removal of the restri tions on imports into the United States of residual fuel oil, near all of which come from Venezuela. This might have been done counteract the unneighbourly impression of the cuts which had bee confidently expected this month in the quotas limiting imports crude oil. But these quotas are now to remain unchanged unt at least the middle of next year, while the oil situation is reappraise by the new Office of Emergency Planning. This postponement in itself enough of a gift for the Venezuelans to satisfy even th State Department, their main defender in Washington's argumen over oil imports.

The Department of the Interior is the main defender of th domestic oil producers, who are furious that they are not no getting the additional protection against imports of crude oil whic they thought that they had been promised, and of the coal industr which claims that its markets have been ruined by imports residual fuel oil. The coal interests are backed by the railway which transport the coal and attacked by the principal users residual, the factory owners, who claim that their costs have gon up because of the restrictions; these protests are especially we organised in New England, President Kennedy's homeland. Th oil producers make common cause with the coal miners in order t strengthen the pressure for protection, even though they arrang their refining operations so as to produce little or none of th unprofitable residual product and so do not themselves object t this particular competition from abroad.

It is easy to sympathise with the domestic oil companies who have seen imports go up and their own profits and output go down in spite of the quotas—voluntary since 1957 and mandatory since 1959—which were supposed to build up the American industry so that it could be relied on to meet all demands in time of war. But even an official of the Department of the Interior has told the oil producers that the fault lies mainly with their own miscalculations and that they should reduce their costs and develop new uses for their products instead of appealing to the government for more protection. It is significant that the OEP is to take into account the need to promote economic growth as well as the welfare of the domestic petroleum industry in framing its alternative means of "achieving our security objectives." But whether its recommendations are for a complete change of policy or not, it seems likely that the main reason for the reappraisal is to take some of the pressure off the President while he is trying to get his new tariff policy through Congress. To have increased the protection given to what is already one of the most protected of American industries would have made his advocacy of freer trade look hollow. To have refused to do anything would have added strength to what is already a powerful and bitter opposition.

THE BUSINESS WORLD

Capacity and Steel Profits

'N a recent study of American steel prices, the United States Steel Corporation produced figures which, it argued, showed a direct linear relation between the operating e in steel production as a percentage of capacity and the ofits of American steel companies. For every ten percentage ints that the operating rate went down, it reckoned, there s a fall of 4 per cent in the rate of profits, after depreciation t before tax, as a percentage of capital employed. During e year to September 30th last, in Britain, output as a per-ntage of steel capacity fell to about 82 per cent; but the erage for these twelve months was about 88 per cent, against per cent in the industry's preceding financial year. Do e sum on the ratio that the American companies have worked it, and six percentage points down in capacity would imply fall of just on two and a half per cent in net profits before x as a percentage of capital employed. In 1959-60 the itish steel companies were making, say, 15 per cent on their pital employed: if that came down to, say, 12½ per cent, would mean an average fall of about one-sixth in the profits lown. Is that the average that one should expect for British eel companies in 1960-61?

Until the full reports for British steel companies begin to ppear, we have no figures for capital employed to reckon ie percentage rate of profit earned. Up to the time that *The Economist* went to press this week, seven large steel ompanies had reported their preliminary results for 1960-61, mong them six of the industry's biggest companies. The rofits of these seven were down by an average of about 27 per ent below 1959-60, which is a good deal more than the merican ratio would have implied. It will be interesting to ee whether any clear ratio of this kind will emerge from the British results. The American companies seem able to break ven much farther below capacity than ours do (the correla-ions quoted above suggested that profits would not reach zero ntil the operating rate was down to 40 per cent of capacity). But these differently-sized industries are at least of a kind. And certainly the fall in capacity working offers the most plausible eason for the sorry crop of British steel results this year.

It was not so much a fall in production: this was only about 1½ per cent below that of the previous twelve months. But throughout the year the industry's productive capacity was creeping up: the average for the year to September, 1960, 26.39 million tons was 1.10 million tons more than in 1959-60. And one practical link between output and capacity—the reality behind the correlations—comes in the level of produc-tivity when plant is or is not busy. Measured as labour productivity, this appears to have fallen significantly in the last financial year; the industry's index of output per man-year went down by 5 per cent. This is really, however, a matter of capital productivity and the cost of it: the assets employed in the steel industry are now growing considerably in value as well as capacity every year, and no industry can afford to produce less from this more efficient but also more expensive park of equipment.

The fall in productivity may have had more than a pro-portionate effect on costs. When prices of coal and later of fuel oil rose during 1960-61, the Iron and Steel Board delayed increasing prices, and finally increased them less than it would otherwise have done, because it was counting on a continued upsurge in productivity from the newer plant steadily coming into operation. That did not happen. It is not clear to the outside observer why a fall of only 1.6 per cent *in output* should have wholly offset the effect of perhaps 5 per cent of new capacity, since it would ordinarily be the old plant that a company keeps idle when demand is slack. But some of the extra plant has consisted of mills of the same kind coming in simultaneously, such as plate mills. These are costly, offer significant but not dramatic improvements in productivity, and hence probably need to operate very close to full capacity to gain such potential savings as they do embody. Since prices were not put up as much as costs might have justified and moreover, productivity actually fell, margins in steel have been drastically squeezed at home. Abroad, premiums on anything except occasionally tinplate are a thing of the past: export prices softened further in 1960-61 and during the year were generally lower than British home prices.

As was noted in these columns last week, stocks of finished steel in the hands of merchants and consumers at the end of September were still about 234,000 tons more than those a year before; but stocks in the hands of producers were down by about 100,000 tons. The highest figure ever shown by the consumers' and merchants' stock census was in March this year, 4,658,000 tons of finished steel; the 1961 peak of producers' stocks came in February, 2,783,000 tons. Between that quarter and the end of September there was a reduction of about a quarter of a million tons in each of these sets of stocks, and 336,000 tons of this total fell in the third quarter. That represents 460,000 tons in crude steel equiva-lent, a reduction at the rate of more than *a million and a half* tons a year.

Steel consumption has dipped rather than grown this year, and there seems little reason why it should turn upwards until, say, the middle of 1962. Private investment now appears likely to slacken considerably in terms of steel demand,

and even though public investment is likely to rise, this may not be enough to keep total investment, and its demand for steel, from sinking slightly. Exports of engineering products should rise ; and for home sales, too, there may be some growth of demand from the motor industry. This might indeed need to turn to re-stocking earlier than other consumer industries, since consumers' stocks of sheet have been cut more drastically this year than those of most other steel products. The motor industry, moreover, always makes do with a somewhat lower level of stocks relative to production than various other major users, so it might be less likely to go in for any once-for-all reduction in consumers' stocks to a more economic level— possibility now haunting forecasters in the steel industr

If this does not happen, and the cyclical turn upward th one would otherwise expect does occur in stocks, then at so point in 1962 the industry's fortunes could shift significant for the better. But whether this will come in time to mak much difference to the companies' 1961-62 results is mo doubtful. One lesson of the last few years in steel is that higher level of capacity, of output, of consumption—and confidence in reasonably early deliveries—seems at prese to be making for larger fluctuations in the industry's operatin

The Companies Report

Almost all steel companies report on the same financial year, which makes comparisons between their results and those for the whole industry more meaningful than in most kinds of manufacture. Every steel company, however, lives within its own unique business situation, as this week's results indicate :

STEEL shares have proved to be very sensitive to the varying fortunes of the steel companies as reflected in their 1960-61 results. Their prices have first been tugged one way and then another. After the John Summers results were published before the weekend, prices, for instance, improved a little but their average gain of two per cent, as measured by the *Financial Times* index, was soon wiped out by news of prospective redundancy at Dorman Long's Cleveland works and more particularly by the trading results of **Colvilles.** These were broadly in line with the estimate given at the time of the rights issue in July when the directors said that profits after tax and depreciation, but before any transfer to capital reserve, would not be very different from those of 1959-60. In fact, on this basis profits in the year to September 30th fell by 4.6 per cent. But this paints too bright a picture of the group's trading results in 1960-61, for the tax charge has been reduced by over £2 million through the incidence of investment allowances and trading profits before all charges fell by 15 per cent from £16,169,000 to £13,742,000. The whole of the fall in profits occurred in the second half of the financial year, when trading profits fell from £8,226,000 to £5,516,000.

In the six months to the end of September the directors say that demand fell noticeably and this is reflected in the fall in the half-yearly output of steel ingots and castings from 1,155,000 tons to 887,000 tons. Margins were squeezed as increased costs were only partially met by the rise in steel prices. The directors add that "present indications are that the current level of operations is being maintained and although lower than last year it is still profitable." There are as yet "no signs of a revival." Earnings in 1960-61 covered the maintained dividend of 16 per cent four times but profits seem likely to fall further in the current year.

Except in spun iron pipe and castings, production at the British works of **Stewarts and Lloyds** fell in the year to September 30th ; but the value of the group's sales, including those of its overseas subsidiaries, rose by 13½ per cent, from £139.4 million to £158.4 million. But gross profits before tax and after a higher depreciation charge fell by over 23 per cent and the gross profit margin declined from 13 per cent to just under 9 per cent. The reasons the directors give for the fall in profits are: "first and foremost the absorption, without compensating home trade price increases, of significant additions to costs, mainly fuel, wages and salaries ; secondly, a reduction in exports of tubes to the oil and natural gas industries ; thirdly, a fall in export prices for general purpose tubes as a result of competition from overseas tubemakers." One point they do not mention in an otherwise comprehensive preliminary report is how much the inclusion for the first time of a full year's earnings from Staveley Iron and Chemical has added to the group's profits in 1960-61. In 1959-60, Staveley earned £1¼ million; hence, the fall in the group's gross profits ex Staveley must be more than 23 per cent. The consolidated net income has fallen by 27 per cent but, as forecast, the total dividend is left unchanged at 15 per cent ; the shares arising from the rights issue in May rank for the final of 10 per cent.

This issue produced nearly £13 million and the directors say that "a further approach to the market is not expected to be required in the near future" and that they have received "an assurance of adequate assistance" from their bankers. At some time, that assistance will be needed for, having spent £10.2 million on capital account in 1960-61, Stewarts and Lloyds has the balance of its development programme, amounting to nearly £48 million to finance.

The big shock in the preliminary state ment of the **Steel Company of Wales** is th cut in its dividend from 12½ to 10 per cen even though net earnings, reduced thoug they are, cover the payment about 2¼ times Clearly, the directors wish to retain a much of the cash flow as possible in vie of the development commitments, althoug these have been scaled down. Net incom has fallen by about 30 per cent, despit the reduction of the appropriation to fixed assets replacement reserve from £3 million to £2 million. Trading profits, before al charges, *including* interest, depreciation and replacement reserve appropriations have fallen by nearly 24 per cent. The valu of sales and other income, on the othe hand, fell by only 7 per cent, from £143 million to £133 million, so that the gross profit margin before depreciation has declined from 21.3 per cent to 17.5 per cent. Steel of Wales produced a lower tonnage than in 1959-60 and the directors comment that: "The recession in demand for sheets and tinplate continued during the second half-year. The export market became much more competitive and prices were reduced. Increased costs were not recouped adequately in the home market."

The chairman's optimistic comments in February about the outlook for **Whitehead Iron and Steel** looked rather out of keeping with the 24 per cent fall in profits in the half year to March 31st that was reported in July. And now the preliminary results for the full year show a fall of 37½ per cent in profits before tax. As expected the dividend has been maintained at 15 per cent but it is now covered just twice by earnings. It is unfortunate that after the encouraging tone of the chairman's statement neither the interim nor the preliminary statement give any explanation why Whitehead, which is primarily a steel re-rolling firm as distinct from a steel producer, has fared so badly. But Whitehead, like other steel companies, must have been operating on smaller profit margins.

This was implicit, indeed, in its decisions to aim at spare capacity in its current steel plan. The capacity ned for 1965 is 32 million ingot tons, against an expected ut of just over 28 million. That means an expected rate 5 per cent of crude steel capacity by the mid-sixties, but margin of spare capacity for certain finished products ld be significantly larger. The capacity is already begin- to build up, and though production is not yet significantly he trend forecast, its swings are tending to leave larger ortions of capacity idle.

rices of British steel are at present set by the Iron and Steel Board to give what it considers a reasonable rate of return at a reasonable rate of capacity: it last carried through a major price review in 1959. Next time it does the exercise, the question of the operating rate upon which prices should be based will obviously be at the centre of the argument. But the current state of the market for steel—and the likelihood of a quite rapid dismantling of protection when Britain enters the common market—may not make 1962 a healthy time to put up steel prices. By the end of 1962, indeed, the question may be arising of just which body, if any, should be controlling those prices.

Background to Gold Shares

INCE gold was first discovered on the Langlaagte farm seventy five years ago, South African gold mining shares have carried the risks inherent in all mining operations the burdens of periodical political crises. The Rand mines just been brought into production when the Boer war ke out ; sixty years later, the tensions created by the policy apartheid rose to crisis point just as the Orange Free State nes had firmly established themselves. South African gold res have offered risk-bearing plenty of opportunities and y have attracted at least as many speculators as investors. day, the risks are as high as ever but the chance of gambling fit still beckons. Slightly more than half of South Africa's nings from exports come from gold and it generates much the wealth for the development of South Africa's industries. e gold mining industry is stronger and in better shape an at any time in its past: monthly output is only fraction- below, and will soon reach, two million ounces ; many pro- ction and profit records are being broken ; and two mines, est Driefontein and Western Holdings earn a working profit more than £1 million per month. It was not this back- round, but fears about the political future, that scared inves- rs about Kaffirs. Measured by the *Financial Times* index of ld shares, (September, 1955 = 100) Kaffir prices fell to their west point of 52.4 in July this year. They have since risen as much as 20 per cent, but the yields, as the table shows, e remarkably high for a booming industry with good pros- cts of expansion. By normal mining criteria—ore reserves, yability and development results—many Kaffir share prices e ridiculously low. But, as the chart shows, they have in- easingly reflected the possible consequences of the policies ursued by the Nationalist government. Two events early in 960 drove these home to investors: Mr Macmillan's "wind f change" speech and the Sharpeville shootings.

The flight of capital from South Africa gathered even more pace after the vote for a republic in October, 1960, and again fter South Africa left the Commonwealth last May. South frica's gold and foreign exchange reserves fell rapidly ; and xchange and import controls were belatedly imposed. These ontrols needed several months to bite and by June, when the eserves had fallen to about £70 million (more than halved ince Sharpeville) the Finance Minister, Dr Dönges, had to lam the door on the capital outflow by blocking the proceeds of sales of South African securities by non-residents and by forbidding South African residents to buy any securities in overseas markets. By then, Johannesburg was already the world's biggest market in gold shares, having been able to absorb heavy sales from London, Paris and other overseas markets which were taken up by such domestic institutions as S.A. Mutual and Sanlam. Thereafter, Johannesburg was completely isolated ; arbitrage between it and other stock markets has been almost impossible and prices in London sank well below Johannesburg prices, with business at an abysmal level.

More recently, however, British investors, feeling less certain about the future of their own economy, have been taking a second look at Kaffir shares. Indeed, they have been one of the few relatively firm sections of the London stock market and buyers from both the Continent and America have also been attracted to the London market by the sizeable discounts compared with Johannesburg prices. Buying has been encouraged by the rapid recovery in South Africa's reserves which since June have risen from £70 million to £125 million. Recent estimates suggest that South Africa will earn a current account surplus of £85 million this year, compared with only £11 million in 1960. The reserves have been strengthened also by overseas loans, amounting to £35 million so far this year. Of these, perhaps the most significant came in September when a big group of American institutions lent $30 million (or £10½ million) at 7 per cent to Rand Selection, which had been strengthened earlier in the year in the hope that it would provide a suitable vehicle for attracting new funds, particularly from overseas. Its quick success owes much to the standing of the Anglo American Corporation. This loan more than covered Rand Selection's immediate development commitments and gave grounds for more confidence in South Africa's economic future. But, as Mr Harry Oppenheimer, the chairman of both Rand Selection and Anglo American, said at the time: "This kind of borrowing can only be done once. It is no substitute for a return of investment confidence in South Africa."

Helped by loans such as this, the reserves are now well past the safety mark of £100 million indicated by the Minister of Economic Affairs, Dr N. Diedrichs, when he was in London in September on the eve of the South African election. He then talked glowingly—as politicians do with an election in the offing—about the possibilities of an early relaxation of exchange controls. The dismantling of all these could well take a year or more, for non-residents might take any immediate opportunity to pull out and South Africa is due to repay

£50 million of its external debts next year. But last week when the South African bank rate was reduced from 5 to 4½ per cent, the Governor of the Reserve Bank, Dr De Kock, did say that part at least of the 1962 maturities would be covered by renewals or new loans. The South African government have, indeed, taken the first steps towards relaxation, primarily by easing import controls but also by making the first real concessions on exchange controls—the most important being the abolition of the time limit of 90 days during which non-resident holdings of blocked rands could remain uninvested. The next logical step would be to make blocked rands transferable between non-residents. Such a move would establish two exchange rates, one for "blocked" and the other for "free" rands, and the South African authorities would be free to intervene to support the "blocked" or "security" rands. Investors have begun to weigh such possibilities and, as a result, the differentials in Kaffir prices on London and Johannesburg have narrowed.

While the possibility of exchange decontrol explains in part the narrowing of the discount on gold share prices in Johannesburg compared with other markets, it does not itself explain why gold shares have risen on all markets. This has primarily been due to renewed discussion about the prospect

* Ex dividend. † Adjusted for "rights" issue.

for a higher dollar price for gold. Behind this discussion lies the belief that, whatever is done to augment world liquidity through the IMF or by other means, gold will not, in the short term at least, be supplanted as an ultimate means of settling international accounts. Ultimately, the foundation that gold now provides for the present gold exchange standard might cease to be needed—say, if it were supplanted by IMF deposits. But that is looking far ahead. At the moment, the prospects for the raising of the gold price are expressed in doubts about the parities of sterling and the dollar. American gold reserves have fallen to their lowest level since 1939 and since the flare-up in the gold market a year ago the authorities have not found it easy to keep the price of gold significantly below $35.20 per fine ounce, least of all in the last month or two. If, therefore, the argument runs, the dollar (and with it other currencies) comes under extra forms of pressure, escape may be sought through raising price of gold. In recent months speculation based on su arguments has focused on gold shares rather than gold itse There has been no repetition of last year's gust of speculat buying which carried gold up to $40 an ounce. Some who w paying dear in the bullion market now see some better se in speculating in Kaffir shares, perhaps for a smaller ultim capital gain but at least with the benefit of interest meanwh

The odds against a profit on such a speculation a lengthened by other factors. First, a seemingly adequate d count for the political risks has on past occasions prov totally inadequate. Because the Nationalists scored anoth victory at the polls this autumn, is it certain that the politi risks are adequately discounted now? Secondly, consid able doubts remain whether the finance houses and the new mines will be able to push their dividends up. They ne rely more than ever before on self-generated finance to be the cost of further development. Some of it may be he up, and the rise in dividend payments and hence in the mark value of the shares that could normally be expected as mine approaches peak production could easily be retarde Thirdly, for British investors, there must be some uncertain about the future of the double tax relief agreement when t one-year act that kept it going runs out in May. Fourthl labour costs in the gold mines are likely to rise and thous the newer, richer, mines may be able to improve the pr ductivity of African labour by further mechanisation, le grade mines, with less scope for mechanisation, may ha difficulty in absorbing all the increase in working costs.

Such considerations make the choice of individual stock far from clear cut. A gamble conceived simply in terms o an appreciation in the price of gold would favour some of th older, low grade mines. A venture designed to limit th political risks would bring in those finance houses that hav interests outside Southern Africa. The finance houses hav always been more attractive to long term investors tha individual mines because they provide a better spread o mining risks and their shares have attracted most of the recent buying. In terms simply of their economic worth finance house shares are undervalued—and some of the newer mine shares even more so. But to go further to the actual purchase of shares must assume that the political risk is fully discounted. On this, no one can be sure; and, recently, some speculators have tried to minimise the risk of a capital loss by taking out options on the London market rather than buying the shares outright. Yet for a well-spread portfolio, a small stake in Kaffirs bought in London at the present time might not be an unreasonable proposition. Quite apart from any increase in the price of gold this could be justified in terms of the mining potential of the South African goldfields. But in the last two years or so, investment confidence in South Africa has been largely destroyed and even if exchange controls are lifted, its restoration will take many years—and will require a change in thinking in South Africa itself.

"FT" INDEX OF GOLD MINES (1955=100)

BUSINESS NOTES

IMF

The Lender's Club

On Wednesday Dr Per Jacobsson, the managing director of the International Monetary Fund, made his deadline of December 15th with 48 hours to spare. Ten Western finance ministers meeting in Paris then agreed in broad outline to the plan to supplement the IMF's resources by some $6,000 million on which some of them had indulged in remarkably plain speaking in Vienna last September. There has been only slight unbending of attitudes on the mobilisation and use of this addition to the Fund's resources. These matters will be governed by an agreement which the ministers considered this week and which will operate as an annexe to Article 7 of the Fund's charter. Once the governments of the respective countries have given their agreement, formal approval by the executive directors of the Fund should follow by the end of the year or soon after. M. Baumgartner, as host in Paris, has sent a formal letter to each of the finance ministers setting out the proposed methods and the conditions of operation of the "lender's club," the terms of which may be published in about a fortnight. It is believed to refer to the use of existing organs (including OECD) in the procedure of consultation and also to go into the details of voting procedures and the question of weighted majorities.

Dr Jacobsson has managed to keep the routing of the new money through the Fund rather than by direct bridge between lender and borrower. But the new facilities, as the Vienna debate had suggested only too plainly, are to be separate from the ordinary resources of the Fund, and will be subject to a degree of separate national control. Some authority has been lost by the IMF and a good deal gained by the new European group. How this new balance of forces will work out must depend on relations between the Fund and the lending countries. If the atmosphere in Paris this week was plainly better than that in Vienna three months ago, it was also clear that M. Baumgartner had made his point.

Individual contributions from the members of the new lending club have not yet been published, but reliable figures from Paris put the United States down for $2,000 million, the United Kingdom $900 million, Germany $900 million, France and Italy $500 million each and the remaining five countries, Belgium, Canada, Holland, Japan and Sweden, for the final $1,200 million. It may also be that Switzerland, which is not a member of the IMF, will support the scheme up to as much as $500 million. Countries borrowing under this new arrangement will obseve the normal IMF rules controlling the length of the credit and interest charges. The club's credits will match these terms, normally for periods of 3 to 5 years, but they will include a clear "*reversibility* clause" to safeguard any creditor if he finds himself later in difficulties.

M. Baumgartner has made it abundantly clear that the new facilities will not be granted to cover ordinary balance of payments deficits, but are intended strictly to neutralise massive short-term capital movements. The plan is expected to be ready for operation in four or five months; its worth will depend on the readiness and speed with which the new club can put it into action if key currencies are threatened.

THE EXCHANGES

End-Year Influences

This week the foreign exchange markets changed down to low-gear as the financial world began to prepare for the end of the year and the balancing of its books. Dealers are keeping their chins in, and the main influence in the market is commercial demand. At the end of last week spot sterling closed at $2.81¼ and it remained at this level throughout Monday and Tuesday. But after the London market had closed on Tuesday fairly heavy commercial selling in New York, and some early selling from Paris and Frankfurt on Wednesday morning, took the spot rate down to 2.80\frac{29}{32}$—a fall of $\frac{3}{32}$ and the lowest point for three months. At that level the authorities gave a small amount of support. On Thursday the spot rate improved to $2.8095 following continental buying, but the market was apparently unaffected by the news from Paris of agreement on new funds for the IMF.

The Canadian dollar tended to drift down this week and the discount against the United States dollar is now just over 4 per cent. During October the discount of 3 per cent was held only after the Government had put $186 million into the exchange market. In November the situation was reversed and the Government's foreign exchange reserves fell by $32 million following sales of US dollars designed to moderate the decline in the discount. There is no indication that this 4 per cent exactly fits Mr Fleming's "significant discount," but in January the International Monetary Fund will hold its annual consultations with the Canadian government and it is likely, once again, to suggest the re-establishment of a fixed rate of exchange.

One result of the United Kingdom's repayment of £50 million to the IMF in the last week of November, was to boost Germany's foreign exchange reserves by some DM 340 million (about £30 million). The repayment was made in D-marks, French francs, and dollars, but to get the D-marks the United Kingdom exchange control was forced to swap dollars for D-marks with Deutsche Bundesbank. In total Germany's reserves rose by DM 426 million in that week, the first increase since September.

IN THE MARKETS

Pleasing Conversion

The immediate point in the government's conversion plan that the stock market seized upon was that it reduces the nominal amount of the national debt by £278 million. There is £758 million of the maturing 4½ per cent 1962 stock but the conversion stock to be issued is limited to £300 million, carrying 6 per cent and repayable in 1972, and up to £200 million by another tranche of 5½ per cent Funding stock, 1982-84. Exchange into the 1972 stock will be at par plus £2 10s. cash for £100 nominal of the 1962 stock; exchange into the 1982-84 stock will give £110 nominal for £100 nominal of the 1962 stocks. The gap in the conversion gave a psychological fillip since it is the first occasion for many years when the nominal supply of government stock in the market has been reduced; this accords with the budget promise that the government would not be coming to the market for new money in the current fiscal year.

In itself, however, the short-fall in the conversion does not release £278 million in cash to the market. The real effect of the conversion on the forces in the gilt-edged market and, consequently, on the banks' liquidity does not turn on the nominal amount of stock offered but, first, on the size of the authorities' holdings of the maturing stock and, secondly, on the determination with which sales of stock in official hands are pushed through the tap. On the first score, the authorities are known to have taken in a substantial lump of the maturing stock and the amount of cash coming into the market on the conversion dates will simply depend, as it has with other conversions in the past, upon the number of holders who decide to hold the stock to maturity and take the cash. There

will be some of these, including some of the banks.

On the second score, the conversion stocks enhance the authorities' control over the gilt-edged market at the key points. No new "short" has been issued; but the discount market, having sold its holdings of the maturing stock has plenty of other bonds at the moment and the authorities have the 5½ Exchequer 1966 on tap while the 2½ per cent Savings, 1964-67, will rank as a "short" in May. The 1972 stock's 6 per cent coupon will attract investors looking for a good running yield—though it is just a bit too long for the banks except in small amounts. When the authorities exchange into the 1982-84 stock, they will replenish their exhausted tap in a stock which is tax free to non-residents. Its appearance, moreover, gave fresh currency to the view that the tap for the 5½ Treasury stock, 2008-12, was running dry and its rise since the conversion was announced suggests that this is near the mark.

Healthier Tone

In all, the terms of the conversion offer gave the gilt-edged market a healthier look than it has worn since the shock of the electricity wage award. Prices rose sharply, particularly at the long end of the market; this was a reflection more of switching into longer dated stocks than of new buying. The authorities were still taking in the maturing stock and some investors took the opportunity to switch profitably into the 3 per cent Exchequer stock 1962-63. There were some buyers for the new 1972 stock, through the medium of assented stocks, and on Wednesday its tap price was raised from 98$\frac{13}{16}$ to 98$\frac{15}{16}$. At the long end of the market, the tap price for the 2008-12 stock was raised twice on Tuesday and three times on Wednesday, to close at 83$\frac{5}{8}$ net on that day. Earlier funding sales had kept its price relatively depressed and the conversion made it an attractive switch.

	Dec. 7	Dec. 11	Dec. 13	Gross Redemption Yield %

Prices quoted net of interest.
* Flat yield.

The conversion has brought a little more life back to the gilt-edged market. But it alone will not restore confidence in fixed interest stocks, as expressed in the substantial buying before the electricity wage award was announced. The full restoration of confidence will depend upon the government's economic and general policies in the coming weeks.

The brighter tone in the gilt-edged market did, however, spill over into the industrial market on Wednesday. Until then, equities had been rather ragged and were still being pulled one way and another by the steel companies' results. On Wednesday, however, many of the leading issues were marked up, and over the week *The Economist* indicator, which includes Unilever and Shell, rose by 8.3 points to 355.5. In part this rise was encouraged by hopes that the United States might reduce its tariffs and by the fresh advance in equity prices on Wall Street. These dealings in Unilever Limited made a flying start and the further rise in its price on American buying was reflected in Wednesday's gain of 6s. 7½d. to a new peak of 53s. in London, but it fell back to 51s. 3d. on Thursday.

TRADE AND PAYMENTS

Disappointing—More or Less

By accepting the Board of Trade's basis for comparing the trade returns for the three months to November, one can come to only one conclusion about them. Seasonally adjusted exports in those months were 1½ per cent lower than in the period from May to August; imports were 1 per cent higher. Over the first eleven months of the year, exports were 4 per cent higher than the average for 1960 and imports were 3 per cent lower. The run of higher exports and lower imports would therefore seem to have been interrupted before the

* Provisional.

true gap between exports and imports could be firmly closed.

But August was an exceptionally favourable month in which the crude trade gap was cut to £22 million. October was an exceptionally poor one in which a sudden rise in imports widened the gap to £55 million. The favourable returns in August have as much right to be included with the past three months as the three that went before, and that could alter the picture. Seasonally adjusted imports in November were £360 million cif, £9 million lower than the average for the first eleven months of the year. Exports, however, contracted to £305 million, £3 million lower than the eleven month average.

In November, the crude "gap" was reduced to £41 million, compared with an average of £48 million so far this year. The

third quarter in which the crude gap narrowed to £34 million a month will therefore be, allowing for seasonal influences, the nearest Britain came to earning an actual surplus on its merchandise trade this ye

The Payments Figures

The balance of payments estimates which do not contain the major distortions that exist in the monthly trade figures, put the actual current account deficit in the third quarter of this year at £ million. This is, in fact, a slight increase on the second quarter, but allowing for adverse seasonal factors in both the visible and invisible parts of the account it seems that the underlying position probably improved. But despite the Chancellor's mini trations, government expenditure abroad again up on the previous quarter, wh net receipts from other invisible item

have fallen. The current deficit in the first nine months of the year now amounts to £108 million. Compared with the third quarter of 1960, exports are up by £5 million, while imports have fallen by £5 million—an overall improvement of £11 million.

The outflow on capital account is somewhat lower at £60 million and this is mainly due to a drop in private overseas investment of £14 million. This is probably the effect of closer scrutiny by the Treasury, but it is still nearly double the figure for the corre

ng quarter of 1960. The monetary ents largely reflect the aftermath of sle credits and the drawing of £536 from the International Monetary Repayment of the Basle balances to reduced the sterling holdings of rling countries by £208 million and F drawing increased the sterling held non-territorial organisations. On e the gold and convertible currency s rose by £279 million. The balanc- m in the accounts is £125 million and gh figure gives a partial guide to the of hot money following the increase k rate to 7 per cent.

Action in Iraq

had generally been guessed that the gislation promised by the Iraq nment after its talks with the oil com- s operating there broke down in er would restrict the Iraq, Basrah, and l companies to the areas where they t present operating. But few people uessed that the line would be drawn htly round them as it has by the law shed this week. During the discus- the companies had always argued their producing areas covered between nd two per cent of the original con- ns, and that the areas in which they broven reserves made this up to close our per cent. This week's decree ars to restrict them to areas represent- o more than 0.44 per cent of the con- n areas, though there is provision for to be allocated up to as much again. would still mean that Iraq would be g more than 99 per cent. (The figur- s fairly approximate until the schedules maps appended to this decree are ed; in any case even the total area e original concessions, like that of Iraq h they largely cover, is itself disputable.) he southern area where the Basrah oleum Company operates, in particular, first details of the area left to it, lack- the schedules and maps to follow, ared to cut very close to wells actually roduction.

nderstandably, the companies have nally reserved all their rights to the le of their concessions, which would y the possibility of lawsuits against entrepreneur obtaining a new conces- in the area that the government plans ake over. The precedents here, as has pointed out this week, do not all run same way; but the likelihood of litiga- may in any case be a deterrent. It ht be argued, too, that a deep and de- ping world surplus of capacity to duce oil would hardly leave many people ious to explore for more: but that ument may not take sufficient account of economic and psychological drives that ear to motivate oil companies. Huge ns continue to be spent on exploration in far less promising areas than Iraq, and companies continue to look avidly for opportunities to look for oil. On the other hand, anyone inclined to bid regardless of the possibility of litigation with IPC or its associates would still have to consider pretty carefully the Iraq government's demonstrated respect for oil concession agreements.

Understandably, again, the companies operating in Iraq are for the moment not saying whether they will or will not cut the present level of production. They hardly know the details of this legislation yet.

THE ECONOMY

Industry's Investment

The expected slackening in the growth of private fixed investment did not seem to have materialised by the third quarter of this year. Provisional estimates by the Board of Trade show that, after taking seasonal factors into account, the volume of capital expenditure by the manufacturing, distributive and service trades rose by 5½ per cent to a new peak; this followed a rise of 3 per cent in the second quarter and a fractional decline in the first quarter. Admittedly, the increase for manufacturing industry alone, of 5 per cent, was slightly less than in the previous three months, but the decline earlier this year in spending by the other industries covered by the Board of Trade's inquiry was reversed.

(All figures in £ million at 1954 prices and seasonally adjusted)

		Fixed Capital Expenditure		Changes in Stocks	
Quarterly		Manufacturing	Distributive and Service Trades	Manufacturing	Distributors
1959	I	175	144	− 38	+ 7
	II	175	172	− 26	+36
	III	175	162	+ 35	− 4
	IV	182	189	+ 86	+18
1960	I	195	182	+ 58	+22
	II	200	184	+114	+49
	III	223	182	+149	− 5
	IV	217	194	+154	+ 1
1961	I	231	178	+ 8	+55
	II	246	176	+ 29	+32
	III	259	186	+ 59	−58

On the other hand, stockbuilding came to a standstill. Again eliminating seasonal movements, it seems that the volume of stocks held by manufacturers rose by a little over 1 per cent; but this was balanced by a fall of some 3 per cent in the stocks held by distributors, the largest quarterly fall recorded in this series of statistics which goes back to the beginning of 1957. Both wholesalers and retailers ran down their stocks a little, while the rise in manufacturers' stocks was spread more or less evenly over materials, work in progress and finished goods.

ATOMIC POWER

Sir Christopher Takes Stock

Sir Christopher Hinton, chairman of the Central Electricity Generating Board and one-time member of the Atomic Energy Authority, has a special and continuing influence on the development of atomic power not only inside this country but far outside the British Isles. He must rank as the world's largest single customer for nuclear power stations and there is little that the Atomic Energy Authority can do to make him buy new designs if he does not like the look of them. This gives special weight to an article written by Sir Christopher in the current issue of the *Three Banks Review* which may raise the damp spirits of the industrial consortiums even if it does not exactly induce them to stand up and cheer.

Sir Christopher's argument is, briefly, that the massive nuclear power programme of the fifties was a mistake but a human one. For various reasons, some of them technical but some of them also financial, like dearer money, early calculations about the cost of nuclear power proved over-optimistic. He now says that electricity from the first commercial power stations is likely to cost not far off 1d. a unit, or about twice the cost of that from the CEBG's new thermal plants and the highest estimate yet given. The nuclear power programme might still have been justified if the expected shortage of conventional fuels had developed. But this did not—which means that uranium has to compete as an alternative fuel with coal or oil, and this it cannot yet do.

Sir Christopher believes that it may become competitive in the 1970s and he bases his argument on two grounds. First, he argues that electricity demands might take too much of the coal likely then to be available. As to oil he is surprisingly specific and cautious, reckoning that electricity ought not to rely on more than the products of British refineries, and that net imports of fuel oil might simply invite a higher excise duty. He believes that technical advances will in time bring the cost of nuclear power down to competitive levels, but he is cautious here about quoting chapter and verse. It would appear that Sir Christopher does not share the AEA's optimism about prospects for the second generation of advanced gas cooled reactors; their technical weaknesses are spelt out with uncompromising simplicity and—here industry will prick up its ears—he says flatly that the CEGB will go on ordering the old Calder Hall type of nuclear power station "interspersed" with orders for these newer, souped-up reactors. The rate at which he intends to order new nuclear power stations during the period when they are still obviously uncompetitive is not clear, but "one cannot expect to create a large industry by establishing a programme, to destroy that industry by slashing the programme and then to re-create it at one's convenience six or seven years later."

Pirates or Pioneers?

Of all the customs acquired from the Americans, perhaps the most intrusive and at the same time most accepted is the use of nationally advertised brand names for nearly all the goods we buy. This brings with it the recognition of specific, well publicised prices for these named goods—and hence the attraction of the price-cutter who can offer a "guaranteed bargain" in the form of a well-known product at a price lower than the published one. It was therefore inevitable that having succumbed to the power of branded goods we should now be copying the Americans again in seeking the advantages of "discount" shopping.

In spite of the legal rights of individual manufacturers to enforce the sale of their products at fixed prices, price-cutting in groceries has now become common—largely on the initiative of the big store groups and supermarkets. Few food manufacturers (Cadbury is one) still insist on maintaining prices. The sufferer in price cutting is not so much the manufacturer himself as the small independent retailer—with whom some manufacturers would rather deal than with powerful store groups. But independent grocers are now finding their own way of meeting the supermarket's pricing advantages by means, for instance, of buying co-operatives, and so they in turn are less inclined to urge their suppliers to maintain listed prices.

Only in the past fifteen months has a handful of retailers in this country begun to follow another American lead in pursuing this policy consistently in relation to branded clothing, toys, hardware and appliances. The American; label "discount store" is used to underline the price-cutting intentions of these shops. They number only six so far—and the score would be even lower if a discount store is strictly defined as something more than a supermarket with a clothing and hardware section. But these stores are well in the public eye largely owing to the excellent news value of their brushes with price-maintaining manufacturers.

The usual retailers' margin on the selling price of, say, an electric iron or a man's shirt is about 30 per cent. On big electric appliances it is often more. There is therefore much more scope for price-cutting than in groceries, which carry about half this margin. The first full-blown discount store in Britain, Grandways of Leeds, in fact operates on a 17½-20 per cent margin on non-edible items. The discounters cut costs by applying supermarket techniques to all goods; self-service, minimum staffing and no service or free delivery of big appliances. Plentiful parking space is an essential adjunct to discount retailing, in order to encourage the bulk buying which turns the key to success in this type of selling—an exceptionally high rate of turnover. Premises are usually cheap: Grandways is housed in a converted warehouse in the suburbs with an annual rent of only £5,000, a tenth of what it would cost to be in the city centre. Victor Value, London Grocers' supermarket chain, have a discount store in a disused cinema on the bleakest edge of Romford; Buyright in Northampton was once a factory. On the other hand, Tesco, the supermarketeers who were in the van of grocery price-cutting, have this week opened their first discount store in Leicester in an entirely new building, near the shopping centre, complete with multi-storey car park, filling station and restaurant. In the United States, connoisseurs are said to be able to distinguish twelve different types of discount store—Tesco appear to be taking as their model Korvette, the discount chain which, while offering rather more amenities than usual to the customer, tripled its volume of business to $157 million a year between 1955 and 1960.

Sales by American discount houses in 1960 reached $2.9 billion compared with a turnover of $13.8 billion for department stores and $3.9 billion for "variety stores" (Woolworth type). It is far too early to say how soon, if ever, the present handful of discount stores in this country will lead to an equally high proportion of retail trade in the discount business. Factors such as the extent and effectiveness of independent co-operatives are still imponderables. But it is certain that, in the short term, more breaches will be made in price maintenance in all kinds of non-grocery goods, leading quite possibly within the next couple of years to a breakdown if not an abolition of the system, and hence to much more widespread undercutting.

How far are manufacturers really bent on sticking by their legal rights and the conventional retailer? Grandways, in its first seven months, cut prices on about a hundred branded items other than groceries. It had court injunctions from the makers of only five of them, and about fifty letters of objection, from mild to vehement. Some manufacturers may have shrunk from the bad publicity of an injunction. Many who objected said they were doing so in response to protests from retailers (one hardware firm known for its stern view of price-cutting maintains that 90 per cent of its retailers are behind it). Some threatened to cut off supplies—a sanction hard to enforce on the discounters who often buy through agents goods that are supposedly obtainable only direct from the manufacturer.

Other reasons given for opposing discounters are that lack of retailer's servicing of an appliance can give the make a bad name; that price maintenance keeps a "clear-cut" market (it might be expected that the more elaborate a marketing policy

a firm has, the keener it is likely to k
keep price-cutting in its own hands);
that anyway the public likes to know be
hand the prices of the goods it is bu
In defence of this last point it mu
remembered that the survey publishe
the October issue of *Which?* sugg
that, by a small majority, the general p
was in favour of maintained prices for
consumer durables, but not for more
quently bought goods like food and clot

In a sticky appliance market the
group of discount stores has formed o
minute part of the real price-cutting w
has been going on of late—sometimes u
such guises as prematurely "old" m
at cut prices or exaggerated trade-in te
If this is allowed to lead to any ma
degree of price-lowering all round, the l
term success of the discount stores
depend on their being able to remain ap
ciably lower still. In the United State
has been estimated that in 1954—four y
after discount stores first appeared—t
were getting 55 to 70 per cent of all
trade in more expensive appliances.
success of the discount stores here
almost certain to depend on their gainin
substantial share of this market, especi
as clothing, the other main basis of
discount business in America, already
many good cheap outlets in Britain.

In the context of discount retail
resale price maintenance is in fact a
herring, for more than one reason. F
it has distracted attention from the t
function of the discount store—which is
to wage war with manufacturers but sim
to sell standard products as cheaply as p
sible (in the United States discount shopp
are sometimes invited to strike their
bargains). Secondly, it at present helps
lure in the customer in the hope of a sin
unexpected bargain, whereas the discoun
really depends on encouraging the habit
weekly round of cheap shopping for
necessities, as one might use an
fashioned street market. Evidence of "
shopping" is reported from the disco
stores, but at present it seems to take pl
above all on Saturday, when the car is ava
able. Until the British housewife is as fu
"motorised" as the American one, disco
retailing here cannot hope to reach t
American level—though it has plenty
room for growth.

THREE DOORS IN LONDON

OPENING ON THE East

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business with the East and the Middle East.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

Head Office: Hong Kong
London Office: 9 Gracechurch Street, London EC3

MERCANTILE BANK LIMITED

Head Office: 15 Gracechurch Street, London EC3
West End Branch: 123 Pall Mall, London SW1

THE BRITISH BANK OF THE MIDDLE EAST

Head Office: 7 King William Street, London EC4

Group total assets exceed £445 million

The Hawera Star!

WHERE IN HEAVEN'S THAT?

We can tell you in a twinkling. For it's not in the heavens at all, oddly enough, but in New Zealand. And it is, in fact, a newspaper. We know because it just happens to be something to do with our country. And so far as *that* is concerned, there is very little we don't know. For as a Bank operating in New Zealand, we are constantly being called upon to provide reliable, comprehensive information on subjects relating to our national life. This we can do without the slightest difficulty, since we have more than 160 branches and agencies throughout the North and South Islands. So whenever your question involves points of national interest about New Zealand, ask us—

The National Bank
OF NEW ZEALAND LIMITED

Head Office:
8 Moorgate, London, E.C.2 (MONarch 8311)
West End Branch: 14 Charles II Street, London, S.W.1. (TRAfalgar 6791)

ARCHITECTS : Harry W. Weedon, F.R.I.B.A., & Partners.

One of the fastest construction projects ever carried out on Merseyside, this new £3¼ million Fisher & Ludlow factory was built by Cubitts on a 50-acre site at Kirkby. Just 15 months from initial planning to completion—with sections of the factory being made available for machinery installation as they were finished! This allowed Fisher & Ludlow to start production of domestic appliances two months before completion.

Speedy construction was made possible only by precise planning and exact timing of every building operation: and 100% co-operation between the client, Industrial Estates Management Corporation for England, the architect, Cubitts and their 40 sub-contractors. At regular meetings they devised methods of streamlining operations using the most modern equipment, thus keeping construction time to a minimum and ironing out problems as they arose. This close collaboration resulted in the 17 bays of the main production building being erected in 17 weeks—half the normal time!

Mr. Philip Wyatt, Managing Director of Holland & Hannen and Cubitts (North West) Limited, says: "One of the most important industrial projects on Merseyside, the Fisher & Ludlow factory required a construction team able to build at speed with close attention to economy and quality. Detailed planning and co-operation at all stages between client, architect and contractor has lead to early completion of this project. It demonstrates the advantages of working closely together with an efficient construction team."

Mr. J. R. Stanfield, Works Director of Fisher & Ludlow Ltd., Birmingham, says: "Teamwork has been the essential factor that has ensured the completion of this vast undertaking within the time scheduled. Large areas of the factory are devoted to specialized process plants involving complicated foundation work and numerous underfloor services. Only the closest of co-operation throughout between architects, contractors and our own planning and engineering departments has enabled construction to proceed without interruption."

COPPER MERGER

Cash and Copper

In market parlance, Roan Antelope, one of the older Rhodesian copper companies is "in the Rhodesian Selection Trust stable." But the link is through management, and not by a large direct shareholding: what these two companies do have in common is American Metal Climax as their largest shareholder. Apart from that, they are in important respects dissimilar. RST controls developing copper mines, hungry for capital but starved of it by the political upheavals in Africa that have temporarily scared off capital from outside. Roan's reserves must be nearing the point when their prospective exhaustion becomes a market factor and it holds £10 million in liquid assets. The advantages of marriage between the two parties are obvious. The proper terms on which such a merger should take place are not quite as clear.

But in consultation with N. M. Rothschild and Philip Hill, Higginson, Erlangers, the two boards have reached agreement on how the merger should be accomplished:

RST will consolidate its 5s. units into £1 shares.

RST will make a one-for-ten scrip issue.

Roan will be liquidated. Its shareholders will receive one new RST £1 share for every eight Roan 5s. units.

RST will raise its gross ordinary dividend from a prospective 1s. 3d. to the equivalent of 1s. 7.8d. a share on the old capital.

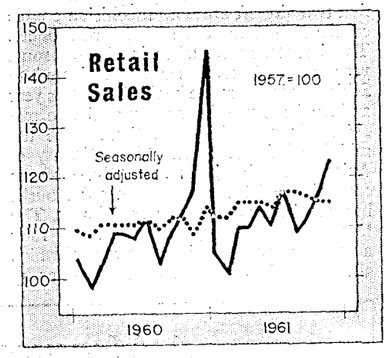
Considering the size of the bride's dowry, and the bridegroom's ability to make use of it, the settlement does not give an immediate impression of generosity. Moreover, RST in its desire to gain 100 per cent acceptance of its offer has, because of a quirk in Northern Rhodesian company law, decided to proceed by winding up Roan Antelope. For this, assenting votes from 75 per cent of Roan's shareholders present and voting, either in person or by proxy, at an extraordinary meeting to be held in Rhodesia, are required.

After the announcement, RST's units jumped 10½d. to 9s. placing a value of about 4s. 1½d. on Roan shares which previously stood at 4s. 7½d. Roan's assets at balance sheet values appear to be worth around 7s. a share. Its liquid assets alone amount to 3s. a share. It is true that Roan's net profits in the year to June 30th are expected to fall by some £750,000 to £2 million, while RST's profits should be virtually unchanged at about £3.4 million. On the strength of current profits, Roan shareholders would have received a gross dividend of 9d. a share compared with 1s. for 1960-61. If the merger goes through they will apparently receive nothing more. The only attraction of the merger to Roan shareholders is RST's prospective growth. Some of them might be rather more interested in being paid out on asset values—or at least in a further explanation of why this is not being pursued.

EUROPEAN ENERGY

Patterns of Protection

Protection of domestic fuel industries against imports of low-cost energy is something that west European governments generally deplore and as generally do; across the Atlantic the practice is the same but less lipservice is paid to liberalism. In Essen this week the Europa Union organised a conference of experts from coal, oil, and other fuel industries to discuss whether and how we should go on doing it. Mr J. A. van den Heuvel, who heads the energy division of the OECD secretariat, was the only one of the three main speakers to maintain the traditional stance of the liberal reluctantly agreeing to a certain amount of temporary protection for weak fuel industries inside Europe. He pointed to the artificialities and distortions in the European energy economy that have resulted from past protective measures, and argued that "all interested parties are under an obligation to eliminate these distortions within the shortest possible time, and to do away with all merely transitional measures." Mr E. F. Schumacher of the National Coal Board, and Dr Paul Frankel, speaking as an oil consultant, were readier, in one case not surprisingly, to reckon with protection of the fuel industries inside Europe as a considerably less temporary recourse.



Mr Schumacher always unites with his professional interest in coal a gently sceptical attitude towards fuel forecasting, copybook economics, and the materialist aspirations of the western world—though this week he was content to take some fairly optimistic forecasts of Europe's consuming need for energy to back his view that all the fuel capacity that the region can reasonably keep in being may be required. Dr Frankel began from the point that western Europe would in fact go on protecting its domestic energy industries, and addressed himself to the least economically harmful ways of doing it. He is against fuel customs or excise duties, arguing that these might simply tempt foreign producers to jack up their prices. Subsidies to high-cost industries, on the other hand, he reckoned as economically neutral, and offering some possibility of actually improving efficiency. The solution he would choose is import quotas, though he admitted that these could involve a complicated and cumbersome system of controls. He would advocate these as part of "an active European policy," using them not only to protect home production against low-cost imports but also, if necessary, to defend this consuming area against concerted action by the oil producing countries. This would certainly discard any pretence of liberalism.

CHRISTMAS SPENDING

Another Record?

Every December, storekeepers grumble that Christmas sales are dragging: after Christmas they are surprised to discover that they reached new records. This year seems likely to be no exception to the ritual. Last month retail trade showed no slackening; this month, once Christmas spending got under way it seems to have been as hectic as ever.

A partial guide to Christmas spending is provided by fluctuations in the note issue, although as more people pay their bills by cheque or use credit accounts this guide becomes less useful. Each year since 1950 the demand for notes at Christmas has pushed the issue to a new record. The

general upward movement over the years has taken the note issue from £1,358 million in the Christmas week of 1950 to £2,438 million by December 13th of this year. While this is a record level the increase since the middle of November of £121 million is somewhat smaller than in the previous two years when rises of £127 million and £124 million were recorded. However, the peak increase in the note issue has moved nearer to Christmas, which bears out the reported change in shopping habits, and this week the issue rose by £50 million.

Christmas also means that people dig into their savings. The only firm figures are those of the National Savings Movement and the savings banks take the full force of the repayments before Christmas. Net repayments by these institutions in the week ending December 2nd were £7.4 million, compared with £3.5 million in the same week of 1960. Total new savings in that week of 1960, however, fell by only £154,000 compared to this year's £5,800,000.

AIR TRAFFIC CONTROL

Which is the Right Way?

There is nothing automatic about the way that air traffic is monitored at present through the skies and in and out of crowded airports; it is done by shirt-sleeved men at the centre of a web of radar screens, telephones and teleprinters, where the last major technical advance was the replacement of the pencil stub by the ball-point. Some controllers, like some jugglers are capable of manipulating a larger num

ber of aircraft than others; but the finite limits of the system are set by the ability of each controller to let his colleagues know what he is doing so that their aircraft do not risk collision with his. The number of controllers working side by side cannot be multiplied indefinitely because at some point communications between them will break down.

Unless the growth of air traffic is to succumb to congestion, electronic computers will have to be introduced into the control towers, where they can take a great deal of the mathematical drudgery of calculating that two aircraft are not on collision course off the shoulders of the human controllers. The first steps were taken in Holland some years ago. A computer was delivered to Schiphol airport at the beginning of this year and has been working as part of the normal air traffic control system there since the middle of the summer. The Ministry of Aviation here has just taken delivery of one computer and has a second on order but it has bought these only for experiment. The Dutch are building up towards a fully automatic system of air traffic control which all but eliminates the human controller by three clearly defined steps, running in each one before moving on to the next. But the Ministry appears to be planning for a series of experimental lash-ups before deciding the ideal lay-out for a fully-automatic air traffic control system for this country.

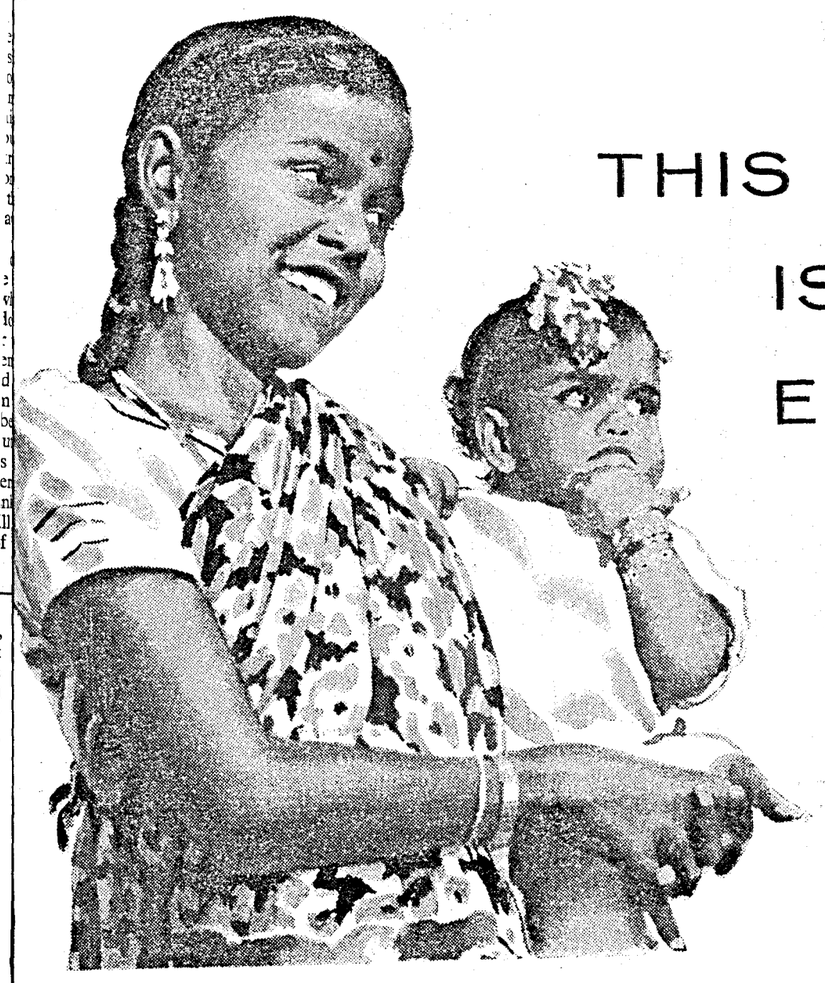
The Schiphol Experiment

IT is difficult to tell which is the tortoise and which the hare. The Dutch believe that an air traffic control system centred on computers must be designed and bought as a single package. They do not believe that it is possible to buy a computer as the Ministry has done and then decide what apparatus needs to be built up around it. The Schiphol installation is, rightly or wrongly, highly specialised and inflexible by computer standards. An air traffic controller has to work out (in his head and on his fingers) where an aircraft is going to be at any given time if it flies according to the plan filed by the captain, whether that course will bring it into collision with any other aircraft, and what to do if the answer is "yes." Logic plays a sizeable part in ing the answer. The Schiphol comput therefore more than the normal bu computer's capacity for making l deductions; it operates on a fairly co cated system of algebra and at speeds h than those of ordinary business comp (as do the two ordered by the Minist Aviation—automatic air traffic cc could not be introduced until "second-generation" machines were able).

At present, the Schiphol installation nothing more exacting than calculat flight paths of aircraft—something v the controllers thought they could c well in their heads until the computer shut down for a week to teach th lesson. This incident also demonstrate desirability of introducing the syster stages. The next stage, which should l full operation in 1963, will leave comp to calculate whether these flight path safe or dangerous, and to suggest alt tives. By 1965, computers will be li with radar in such a way that they wi able to handle the whole business o traffic control.

A Measure of Research

SERIOUS literature on industrial research is growing rather more slowly than are pious exhortations to do more of it. The latest addition to the former comes from the Federation of British Industries,* which questioned a large sample of its members on their research spending and practices in the summer of 1960. It does not change the impression of the total outlay of industry on research that the studies of the Department of Industrial and Scientific Research have provided—about £250 million a year in 1958-59. And it inevitably retraces some of the same ground; in its talk of a shortage of scientists, it exposes the delay in its publication. But it does provide more detail about the different practices of the various industries, and the nature of the work done—even though it is hard to take very seriously the information that nine per cent of the research done outside the aircraft industry is "basic" research. Ideas about what constitutes basic research can vary so much that this is a question that was hardly worth asking. The aircraft industry, on this showing, is among the industries that show least interest in basic research, along with such other heavy spenders on research as the instrument makers.



That some of those industries now being castigated for doing too little research had already begun to try to improve their status during the 1950s is shown by the rate of growth of research staffs between 1950 and 1960. Apart from tobacco, which had special reasons for becoming interested in research in this period, the fastest expansion was in the building materials and shipbuilding industries—more than six-fold for all three, when industry as a whole doubled its staffs, and in the case of shipbuilding, a rise of from only 37 people to 261. In terms of expenditure on research in relation to total employment, shipbuilding still comes at the bottom of the list of any engineering industry that might be called based on technology. Machine tools, on the other hand, showed the slowest rate of growth in research staff—38 per cent—but still was near the average for engineering in its expenditure related to employment, and better than the average for all industries, if aircraft are excluded. The vehicle industry was another that increased its research staffs more than most, though it still spends rather less than the average.

THE really big spenders on research, the chemical and electrical engineering industries, expanded their research staffs less than the average. The tendency for research to become more widely spread amongst the different industries, which seems to be what is wanted by most of those who exhort industry to do more research, therefore seems to have established itself. But it is intriguing to learn that two chemical companies which employ more than 2,000 people did not found their research departments until after 1946.

The FBI and its helpers, the National Institute of Economic and Social Research, do not make the mistake of assuming that there are anything like similar prospects for getting results from research in all industries. But they do remind industry that where little research is being done the firm that starts doing some may be well rewarded—as was Tootal Broadhurst Lee. Looking at the figures the FBI has collected, one is left wondering what there can be in common between the research of the machine tool industry, where 14 per cent of the research staff are qualified scientists or engineers, and no basic research is done; and research in the chemical industry, with 28 per cent of its staff qualified and 12 per cent of its research basic.

Innovation can as well be achieved by buying ideas or new products as by trying to create them—though, *pace* the nine per cent of basic research, little that is done in most industrial research laboratories seems to deserve to be called creative. The FBI found that there seems to be no rule that companies that do much research do not buy ideas from others. Though some big companies did not reply to this question, those which did in the electrical industry paid out £865,000 in royalties and in the chemical industry £651,000. These sums are insignificant in relation to the total research spending of these industries; where little is spent on research—as in shipbuilding—though royalties amounted to only £204,000, they were equal to over 40 per cent of research expenditure. Here they do seem to have replaced research; but those who think that an industry must develop all its own products must prove that this will be more profitable.

* Industrial Research in Manufacturing Industry, 1959-60.

THIS IS THE EAST...

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-five territories extending from the Eastern Mediterranean to the Pacific Ocean.

THE CHARTERED BANK

"The formula is quite frightening"

said the sub-atomic chemist when we passed
our new symbol across his geiger counter.
"The structure, in which
a disassociated atom of sulphur
appears to have gone into free orbit
around a strange new element,
makes my dexterity with litmus paper
look like an insignificant parlour trick."
But according to our analysis,
and we hope yours too, it is a short way
of saying Simon Engineering Ltd,
the nucleus of a cluster of international
designers, engineers and contractors
to the mining, power, chemical, metallurgical,
food and many other industries.

A reason for the apparently greater sense urgency in Europe, where the system lered for Schiphol is being considered for ler application, is the nerve-racking esence of large numbers of military jets ying cats' cradles among the airliners. his is also an American pre-occupation. computer large enough to keep tabs on the aircraft in its zone all the time omises to provide the best method yet of oiding collisions, and of ending at the ne time the irritating system of air lanes at crowds airliners together in narrow segents of air and prevents them from flying om A to B by the shortest possible route, any airline route map will show. Autoatic installations of this kind are likely to st airports in the future from £500,000 £1 million to install, according to their mplexity.

SUGAR

Beet Generation?

THE struggle to preserve some semblance of an international sugar agreement as unresolved when this issue of *The Economist* went to press. After an adjournment since October 23rd, delegates returned to the sugar conference in Geneva with unchanged minds. Cuba asked for an export quota of about 7 million tons and appears to have stuck to its original demand. "The rest" seem to have been unwilling to compromise further. It is not clear whether the communist countries supported Cuba, but some East European exporters appear to be more dependent upon the free market than most producers in the west who can usually fall back on a guaranteed market somewhere for part of their production.

With no export quotas fixed for the coming year, supporters of the international agreement appear to be defeated, but they are clinging determinedly to any vestige of the international agreement that can be retained and are currently exploring how co-operation in sugar matters can be continued. In the free market, sugar at £21½ a ton was already at its lowest point since the war before the sugar agreement foundered. This market provides the sweet chaos of Cuba shipping cane sugar to Poland and Poland agreeing to ship beet sugar back across the world to Chile. Current exports under the international scheme have a fortnight to run for those who have not already exceeded them. After that anything may happen, and in sugar it often does.

In 1880, when world production of sugar was about four million tons, it was derived in almost equal parts from sugar beet and sugar cane. By the end of the century, world production reached eight million tons and sugar beet was responsible for 65 per cent of it. When output grew to 22 million tons in the 'twenties, cane sugar accounted for 60 per cent of the total, but before the outbreak of war in 1939, protected farmers in the northern hemisphere had cut cane's proportion to 57 per cent. Since the war, both beet and cane have advanced rapidly, but cane sugar has expanded the faster. In 1960, a leap in sugar beet production restored the loss and it seemed that the prevailing blend of politics and dubious economics might strengthen sugar beet's challenge. But after weighing the technical and other factors, the German firm, F. O. Licht, believes that the battle between cane and beet, like the struggle for a workable international marketing agreement, is still far from decided.

GRAIN

The Surplus Cereal

ANYONE who solves the problem of surplus grain production will tower above Solomon in the annals of history. Distortion of trade in temperate foodstuffs has been possibly the most damaging of modern malpractices. The restricted market for grain exports is one cause of the relative stagnation of Commonwealth trade and, consequently, of Britain's poor export performance. It has also embittered trade relations between primary producers and industrialised countries. Some of the utterances of Mr McEwen, the Australian trade minister, on the subject have been far from temperate. If wheat does not now stymie the common market, Britain's entry into it and the all-round reduction in tariffs proposed at Gatt, it will be a close thing.

It is unkind to the International Wheat Council to recall that before it was set up in 1949 to regulate trade in wheat, no surplus existed. The council was preaching moderation in protection for farmers long before trade ministers rediscovered the principle at the recent meeting of Gatt. But its teaching fell on stony soil: since its inception, the international wheat agreement has been unable to prevent the trade from gradually atrophying into a disposal programme instead of a commercial proposition. If, as it ought to be, much of the wheat production in most industrialised countries were classified, together with bilateral trading arrangements, as non-commercial, the "liberalisation quotient" of wheat would be so low that ministers would be ashamed to discuss it at Gatt.

Their discomfiture will not be lessened by the French minister's suggestion that exporters of wheat to wealthy and highly developed countries should receive a standard price equivalent to the production price in those countries. But the majority accepted a proposal that a group should begin in February a study of possible methods of introducing an "orderly" system for the marketing of cereals. Mr McEwen for Australia was the first to express wholehearted approval and threw grain surpluses into the discussion for good measure. The suggestion did not apparently appeal so strongly to Mr Erroll for the Board of Trade who paid the International Wheat Council the compliment of mentioning this "tested" (but not, it seems, fully trusted) device and the risk of abandoning existing techniques before practical alternatives have been worked out.

By coincidence this tested device—and the common market's agricultural negotiators—were in session at about the same time. The IWC in accordance with its articles made its third review of the world wheat situation and apparently encountered a little more difficulty in framing its report to member governments than had been expected. The current agreement expires at the end of June and a new agreement is to be drawn up in Geneva at the end of January. By that time a simple guide to what is going on in wheat will be of use both to officials and bystanders.

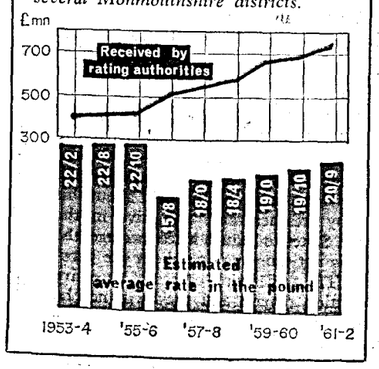
One matter not in doubt is that world production of all the major grains will probably be lower this season than last. International trade in most of them should be greater, so that existing surpluses should be considerably lightened before the start of next season. Prices have already responded; barley, for example, has risen well above the £20 a ton minimum import price fixed recently by the Board of Trade. The price of Canadian wheat in London has reached its highest level since 1957, though current European prices partly reflect an increase of about 10s. a ton in freight rates. Canadian No. 2 Northern Manitoba wheat has improved to £29½ a ton and has been held below replacement cost by sales from stocks acquired earlier by dealers at lower prices. But forward sales increased, which suggests that many buyers thought that prices might edge still higher. There are grounds for establishing a higher maximum price under the new international agreement.

After the halving of Canada's wheat crop this year, the moisture level on the prairies is still abnormally low, and unless spring rains are abundant, next year's crop will be in jeopardy. The only consolation for Canada in this year's near disaster was the exceptional quality of the smaller harvest, but price differentials between grades are not large. Despite the "alleviation in the world wheat situation" brought about this year by weather, and the drive in the United States to reduce wheat acreage, the IWC is not too sanguine about the prospect. The underlying causes of excessive production remain and they will not be removed without large adjustments to production incentives and trade policies.

COTTON TEXTILES

No Supplementaries

THE President of the Board of Trade said last week that the Government does not intend to restrict all imports of cotton goods into this country. Import ceilings have already been fixed for Asian members of the Commonwealth, which on the Board's own reckoning are entitled to supply 85 per cent of imports of grey cloth that are retained in this country. Within the past month, Formosa's exports to this country, which were running at the exceptionally high rate of 30 million square yards a year, have been cut by agreement to an annual rate of 12½ million yards until the end of 1962. Spanish exports had risen to about 60 million yards in 1960, but have now been cut back to 70 per cent of that level. The arrangements with the Spanish exporting organisation also cover exports of cotton yarn.



Japan's quotas have been extended pending the conclusion of trade discussions, and imports from China and other communist countries are also subject to licensing arrangements. Most of the remaining suppliers are members either of EFTA or of the common market. If the Government does not, in fact, intend to place limits on all imports of cotton manufactures, its arrangements will evidently not fall far short. As a result of the Government's intervention in the negotiations with the Hongkong cotton industry, the ceiling for exports of cottons from India, Pakistan and Hongkong was raised from 377 million to 423 million square yards a year. Supplementary quotas were to be granted if retained imports from other sources reduced the exports of Asian members of the Commonwealth below the 85 per cent "target."

Import figures are examined every three months. The first review has just been completed: imports during the third quarter of this year fell sharply, the Commonwealth countries' basic quotas were greater than the "target" and there will therefore be no supplementary quotas for them in the first three months of 1962. Britain has now accepted, subject to unspecified "understandings," the temporary Gatt scheme for controlling international trade in cotton textiles. Its signature also binds Hongkong, which has bowed grudgingly to pressure to limit its exports, particularly to the United States.

This week, a committee began work in Geneva on a long-term international agreement on cotton goods to succeed the temporary arrangements that lapse at the end of September next. With so much restricted, and the cotton industry here suffering one of its periodic bouts of indigestion, there seems no great chance of any supplementary quotas for Commonwealth producers just yet. Should imports recover, Lancashire has a useful longstop in the clause in the Commonwealth agreement that rules out any supplementaries unless the British weaving industry has at least 15 weeks' work on its books. Supplementaries are allowed in full only when order books are stretched to 20 weeks. But in the present circumstances, Commonwealth producers are probably quite satisfied with their enlarged basic quotas.

RISING RATES

Rates went up in 1961-62 in all but 283 of the 1,466 areas of England and Wales; by 5 per cent or more in half of them. The estimated amount of rates collected per head of population is £15 18s.; 21 shillings more than in 1960-61. Bournemouth's rate, now 14s. 6d., is again the lowest for county boroughs and Merthyr Tydfil's 28s. 6d. the highest. The lowest rate for urban districts is 16s. 6d. in Tickhill, West Riding, the highest is about 30s. in several Monmouthshire districts.

THE BILL MARKET

Surprise for the Syndicate

LAST Friday the syndicate of discount houses discovered how easily the walls of a traditional preserve can be trampled down by rough outsiders. For the first time ever the syndicate received no 63-day bills at the allotment following the Treasury bill tender. These bills, introduced in 1955, are designed to ease liquidity in the new year tax-paying season and the market's allotment is usually above 70 per cent and very often in the 90 per cent range. As a result the market has come to view the 63-day bill with a proprietorial eye and apart from the Bank of England bidding on behalf of its own customers, other outside interest in the bills has never been great.

Last week's upset occurred because of a combination of circumstance. First, the Treasury reduced the number of bills on offer from £50 million to £30 million; secondly, the discount syndicate, in chasing the 91-day bills, had allowed the respective yields of the two usances to drift dangerously apart; and thirdly, outside bidders, mainly business concerns with spare cash, have become increasingly sophisticated about their short-term investments. It seems that one or more of these outsiders decided to switch to 63-day bills and take the extra yield of nearly ⅛ per cent for two months rather than stick to the lower yield on the 91-day bills for three months, and the market's unchanged tender price of £99 1s. 2d. for the 63-day bills was undercut by the outside applicants.

FISHING

Hands across the Humber

MERGING Associated Fisheries' fleet based on Grimsby with that of Hellyer Brothers, whose home port is Hull, Sir Hugh Fraser has done for wet fish something akin to what he had previously accomplished for department stores. He has created the largest fishing fleet in Britain—or for that matter in the free world—with 115 vessels. Associated is offering 2,065,583 of its 5s. ordinary shares for all the capital of Hellyer Brothers, a private company which, apart from its own fleet, controls that of Kingston Steam Trawling Company through a 52½ per cent holding in its equity. Following an abortive bid the Ross Group, Associated's major rival, now owns 26 per cent of the Kingston equity. Ross and the other minority holders are being offered eleven 5s. Associated shares for every four £1 Kingston ordinary shares they hold. In all, the operation might involve the issue of three million new shares worth £4½ million at the current price of 29s. 9d. for Associated's units.

Ross made its bid for Kingston eighteen months ago. Then it made an offer for Associated in January and this bid seems to have misfired badly. Sir Hugh Fraser subsequently joined the board of Associated Fisheries and the result has been an expansion by Associated that has tweaked Ross's nose. Currently, most fish is auctioned from a common pool on landing, with only a small proportion bypassing the auctions. Working within the pricing and auction arrangements, the links between Associated's trawlers and its thriving subsidiary, Eskimo Frozen Foods, could be strengthened. This side of the business has expanded rapidly and Eskimo now holds 10 per cent of the British market for frozen foods. It can now look Findus and even Unilever's "Bird's Eye" in the eye. More fish could undoubtedly be handled in this way.

One reason for the merger may lie in the high cost of the new methods that are being introduced into the industry. Ross's "Fairtry" processing ships and Associated's big trawler "Lord Nelson," which is equipped with freezing facilities, are costly investments. A large group should be better placed to develop these new techniques. The intention of the Government's subsidy proposals is that the fishing industry should eventually be self-supporting. Hellyer and Kingston earned gross profits of £431,000 in 1960-61 and those of Associated amounted to £590,000. In the current year, Associated expects to earn £885,000, excluding the Hellyer interests, and to maintain a dividend of 25 per cent.

IPBUILDING

The Hard Sell in Ships

EXT to selling sand in the Sahara, one of the most difficult things to do is sell a ship to a Swede. The Swedish pbuilding industry is one of the best ganised and most efficient in the world, d millions of pounds are being spent on mpletely revolutionary methods of build- ships. This expenditure of capital, in present state of the international ship- lding market, may or may not pay off, it has a certain amount of built-in insur- ce in the sense that the Swedish ship- lding industry is largely under the ntrol of Swedish shipowners. This does t mean that the country's shipbuilding tivities are confined to the building of ips for Swedish account. On the contrary, redish yards have enviable order books th many contracts for foreign and inter- tional account, particularly for large kers and bulk dry-cargo carriers.

It is therefore of more than passing terest that a Swedish concern Granges- erg-Oxelosund Trafik A/B should have ced an order with a British shipbuilding m, worth over £500,000, for three 600-shp shiphandling and salvage tugs. he firm concerned, Seawork Ltd., has ntrol over two small shipyards in Apple- re, Devon, and Gateshead-on-Tyne. king a comparative newcomer in the dustry, it is not a member of the hipbuilding Conference; but it seems to ve been able to produce the goods. From e two small shipbuilding yards at its dis- sal it is now producing small ships, such s tugs and trawlers, worth something like 3 million per annum, of which at least o-thirds is for export, to countries like weden, Poland, Canada, Australia, Ghana, elgium and Pakistan. To do this it has uilt up a high-powered force of tech- icians and salesmen, the cost of which is rmidable judged by normal standards; ut this is offset to some extent by a lower eneral level of overheads in the two ship- ards. There are two points to be noted n this context. One is that expenditure n technical ability and salesmanship, oupled with plain good workmanship and rganisation, will win contracts for Britain rom overseas in the face of intense com- etition. The other is that there was no uestion of this purchaser asking for excep- tionally favourable credit facilities.

HIRE PURCHASE

A Shabby Affair

THE law of hire purchase is a muddle and out-dated. Last Friday a private member's bill, discussed in detail in *The Economist* last week, was talked-out of Parliament and so failed to get a second reading. The bill was not put forward as a comprehensive measure but it suggested some logical first steps towards reform and at least gave the Government an opportunity to give a firm commitment on comprehensive legislation once the Moloney committee had reported. Mr W. T. Williams, whose bill it was, must feel acutely disappointed at this treatment of a bill whose limitations he recognised and was anxious to amend.

In this matter, the Government must be criticised on two counts. First, it recommended that Mr Williams's bill should be rejected without holding out any clear hope that the report of the Moloney committee on consumer protection would be immediately followed by legislation. Mr Niall Macpherson, Parliamentary Secretary to the Board of Trade, had the effrontery to "commend to the House the virtue of patience," and offer the conjecture that the delay between the Moloney report and legislation would not be as long as the one that has followed the Hodgson report on weights and measures—which has reached its scandalous eleventh year. And it may be added that the Government's failure to produce the promised legislation to regulate the acceptance of deposits by hire purchase companies and others is hardly less scandalous.

Secondly, the amount of thought that the Board of Trade has bestowed on hire purchase seems to have been lamentably small. The Finance Houses Association, as an interested party, prepared a brief for MPs setting out its objections to Mr Williams's bill: the association did not perhaps expect that its brief would form the substance of Mr Macpherson's speech. But it seemed wise of him to stick so closely to it, for on one occasion when he left it he plunged into fatuity:

> If hire purchase were not generally satisfactory to customers now, we would not have at the present time a hire purchase debt of no less than £942 million.

By the time the Moloney committee reports, the total of HP debt will in all probability have grown further. And will that prove how increasingly satisfactory things are in hire purchase?

SHORTER NOTES

The Chancellor of the Exchequer is likely to make his long awaited statement on decimal coinage on Tuesday, in answer to a Parliamentary question. This week a private member's bill to provide for the switch to decimals received its formal first reading. It is to be read a second time on Friday, May 4, 1962.

★

We apologise to readers who may have wondered, after reading the business note on central heating last week, how it could cost £100,000 to instal it in their home. For a cost of "from £15 to £63 per square foot of floor area heated," read cost per 100 square feet.

★

Lord Ritchie, the chairman of the Stock Exchange, has expressed his anxieties to the Chancellor about the effects of a capital gains tax on the marketability of securities in London with particular reference to the raising of capital for industry and the position of London as an international market.

★

Trading profits of Radio Rentals rose sharply in the year to August 31st from £5¼ million to £6½ million while the ordinary dividend has been raised from 20 to 22½ per cent. Its expanding business is reflected in the increase in depreciation from £3.4 million to £4.2 million so that with a higher tax charge net profits have fallen slightly, reducing the dividend cover to 2¼ times.

★

For the seventh successive month net sales of unit trusts exceeded re-purchases in November. Total sales amounted to £2,760,000 and repurchases were only £812,000; sales were helped by five offers including a block offer from Crosby Income.

★

New orders placed with contractors during the third quarter of this year showed little change from the high level of the past year. A fall of £9 million since the second quarter in orders for new houses from private developers is attributed to seasonal factors. The reduction in new commissions received by architects would not be expected to affect figures of new contracts until around the end of the year.

★

The trading profits of Associated Engineering fell by 13 per cent in the year to September 30th from £4,517,000 to £3,934,000 and the total dividend of 13½ per cent is the same as that for 1959-60 after allowing for a one-for-two scrip issue.

COMPANY MEETINGS

Glaxo Laboratories report increase in Group's world-wide trading

PRICE REDUCTION BENEFITS TO N.H.S.

Sir Harry Jephcott's Review

The twenty-seventh annual general meeting of Glaxo Laboratories Limited was held on December 11th in London, **Sir Harry Jephcott, DSc., FRIC., FFS.,** *presiding. The following is an extract from his Statement circulated to members with the Report and Accounts for the year to June 30, 1961:*

The present Company structure is such that Glaxo Laboratories Limited is not only the largest trading unit in the Group but is also responsible for the operations of the Group generally. As a result of the growth of the Company's operations overseas, and the addition of Allen & Hanburys Ltd., Evans Medical Ltd., and The Murphy Chemical Company Ltd., the Group now comprises more than sixty subsidiary and sub-subsidiary companies.

Your Board has come to the conclusion that a stage has been reached at which a defined Group structure is essential in order that the Company's business may be conducted more effectively and with greater expedition. To that end it is proposed that the Company change its name to Glaxo Group Limited, and that a new subsidiary company, Glaxo Laboratories Limited, be formed to carry on the manufacturing and trading activities which have always been conducted under that name. The same Directors who have been concerned with these activities in the past will so continue except that Mr H. W. Palmer will in future, as General Manager of Glaxo Group Limited, be exclusively concerned with Group responsibilities. Dr F. J. Wilkins will become Chairman and Managing Director of the new subsidiary company, Glaxo Laboratories Limited, with Mr O. F. Morgan and Mr W. J. Hurran as joint Deputy Managing Directors.

At the same time, research and development directed towards future products and new processes of manufacture will be the responsibility of another new subsidiary, Glaxo Research Limited.

The Stock Exchange, London, has been consulted and I am able to inform stockholders that stock certificates issued by the Company under its present name remain valid and will not need to be exchanged.

TRADING CONDITIONS

It is pleasing once again to be able to report expansion in the Group turnover. Excluding sales made by Evans Medical Ltd. (which only joined the Group during the year), Group turnover increased by 7 per cent, the larger part of this increase being in the second half of the year. There is some slight evidence of seasonality in the Group sales, in spite of the world-wide trading.

The competition that we have experienced, particularly in export markets, is clearly demonstrated by the fact that, in spite of this increase in turnover, trading profits before tax, and excluding Evans Medical Ltd., showed a decrease of 4 per cent which, by reason of the increase in profits tax, leads to a reduction of 8 per cent in profits after tax.

During the year the Group has expended £1,800,000 on the improvement and extension of manufacturing facilities. Two-thirds of this expenditure was overseas.

THE HOME MARKET

Glaxo Laboratories Limited. In conformity with the Company's long-established policy the prices of Glaxo pharmaceutical products have been reduced as process improvements and consequent reduced production costs have made this possible. Other reductions have been made in accord with the Voluntary Price Regulation Scheme which was agreed to between the industry and the Ministry of Health in 1957 and renewed with modifications in December last for a further period of 3½ years. The price reductions we have announced during the calendar year 1961 will be of substantial benefit to the Ministry of Health—we estimate not less than £500,000 in a full year.

Allen & Hanburys Ltd. This company is to be congratulated on achieving pharmaceutical and surgical sales in excess of those of any previous year; in spite of substantially higher operating expenses the overall profit was appreciably higher than last year.

Exports have continued to increase and the merging of Glaxo and Allenburys activities in certain overseas markets has proved advantageous.

Evans Medical Ltd. There was little change during the year in the relative proportions of the main divisions of the business—ethical pharmaceuticals, standard drugs, veterinary products and wholesaling operations. Overall, sales and net profits increased. Approximately one-half of production was again sold overseas and further licences were granted to foreign manufacturers to manufacture under royalty.

The Murphy Chemical Company Ltd. This company continues to maintain its dominant position with commercial fruit growers at home, but the potentialities of the agricultural market have not been neglected. A new weed-killer for use in the cultivation of sugar beet shows considerable promise.

OVERSEAS

Progress continues in the development of our subsidiary companies overseas, which are an increasing source of Group strength and income.

THE NATIONAL HEALTH SERVICE

Of recent months there have been many references in the press to the cost of drugs for the National Health Service. In order to acquire certain drugs on more favourable terms for the Hospital Service, the Minister of Health has invoked the provisions of Sec. 46 of the Patents Act that permits, for the service of the Crown, the avoidance of the monopoly granted by the issue of a patent.

One cannot but regret the nature of the action he has taken. Within it are the seeds of serious difficulties: what may be a short-term advantage for the Health Service may, in the long te become a disaster for the industry.

If the drug manufacturing industry of country is to maintain its competitive posi in export trade, it must be assured of the b demand for its products which the requireme of the home market represent, otherwise it not be able to spread the high overhead co an essential feature of the industry, over a la enough output to ensure a competitive manu turing cost. Its future is hazardous indeed it is to be denied the important use of products in the hospitals of this country purchases overseas in an avoidance of the pat protection which has been granted by law. T Ministry of Health may save money by acquisition of drugs from abroad at margi prices, but the country's economy will lose m than the Ministry gains.

The protection which the patents system pr vides is essential if the drug industry is to co tinue in a healthy condition, not only today in the future. The monopoly which the pate system grants must be of adequate duration encourage research and to enable research to continued upon a scale adequate for the indust to maintain its competitive position in wor markets. Further, when the cost of research h been met, the industry must still make sufficie profit for its well-being and further developme

The duration of monopoly appropriate for th purpose will vary; for a product of wide applic tion it might be a period substantially less tha the present 16 years.

For others, when the cost of research migh be high but the application of the produc although important, is a restricted one, a longe period would be necessary to encourage an adequately to reward research. This does n appear to me to present an insuperable difficult Under Sec. 35 of the Patents Act a patentee ma apply for his patent to be endorsed "Licence of Right", and a would-be user is entitled t a licence under a patent so endorsed upo royalty terms that, if not agreed, are determine by the Comptroller of Patents. It would not b unreasonable to impose the condition that patents for drugs be endorsed "Licences o Right" after a period of years appropriate t any particular drug. By this device the patentee would secure the full benefit of his patent monopoly for a restricted period but would con tinue to receive a royalty income for the full life of the patent. A stage would thus be reached in the life of a commercially important monopoly at which freer entry into the market would result in competition and a "fair and reasonable" price would be determined in the open market.

In the conviction that the foregoing is the proper course to follow, each UK patent held by our Group is reviewed from time to time and is usually endorsed "Licences of Right" within ten years from its date of grant.

THE FUTURE

As Stockholders it is your understandable desire that I should indicate what the future may hold for us.

The most I can say at this time is that no matic change in our circumstances—favour- or the reverse—can clearly be predicted. ere is the prospect of keen competition and r profit margins. It will be our endeavour meet these adverse indications with increased nover and I am hopeful that we shall succeed. all events, during the first three months of this year we have maintained the rate of increase in turnover secured last year.

The report and accounts were adopted.

At a subsequent extraordinary general meeting resolutions to change the name of the Company to "GLAXO GROUP LIMITED" and to effect certain amendments to the memorandum and Articles of Association were duly passed.

CONTACTOR SWITCHGEAR LIMITED

SUBSTANTIALLY HIGHER OUTPUT

The twenty-fifth annual general meeting of ntactor Switchgear Limited was held on cember 11th at the Victoria Hotel, Wolver- mpton, **Mr H. Rayner** (the Chairman) siding.

The following is his circulated statement:

It is a pleasure to present the Accounts for the st financial year, and to report an improved ding result. Your Directors recommend a al dividend of 10 per cent, making 14 per cent the year. They are mindful of the Chancel- 's desire to combat inflation.

The premium on the acquisition of the Shares the Electronics Company has been written and the General Reserve is increased by 0,000.

It will be noticed that there is a large increase Debtors; this is mostly due to retentions on ge contracts but the bulk of these have now en received and the situation is again normal.

The output has risen by 27 per cent since last ar, and this has helped the improved results, t more important still is the enthusiasm of the members of the Company, management, ff and workpeople to provide a high quality oduct at an economical figure.

The order book is in good shape, but competi- n is becoming even more intense, and it seems if this trend is likely to continue. If, however, e economy of the country does not deteriorate, is reasonable to expect that the results for the rrent financial year will not be drastically fferent from last year.

It is with great regret that I announce the tirement at October 31, 1961, at his own quest, of Mr J. F. Liwski, who has been a olleague of mine from the start of this Com- pany, and both my colleagues and I wish him long and happy retirement. He has, however, am pleased to say, agreed to act as a Con- ultant to the Board, and I have no doubt that ey will be glad to take advantage of this from me to time, when his long experience will be lpful.

Mr A. V. Lawry, who has been on our Board r 12 years, and acted as Joint Managing Director since 1957, is now Managing Director, nd I am sure you will all wish him success his new sphere.

PROGRAMME OF EXPANSION

The Electronics Company has moved most of its activities to Wolverhampton and there is no doubt that they have been a great help to the Parent Company in obtaining orders for specialised equipment incorporating their designs, thus widening the field for the application of our equipment. They are not yet on a profit earning basis owing to the removal of their organisation, and the necessity of recruiting and training new labour at Wolverhampton. These difficulties are being overcome and an improved trend is already noticeable. We have a programme for a wide extension of their activities, and the reserves mentioned above are partly earmarked for the financing of this expansion.

As you are aware, we operated a licence agreement with La Telemecanique Electrique, Paris, but the value of this agreement has diminished, and for many years, we have manufactured our own designs, and have built up an efficient research and development department.

With the advent of the Common Market, and the expiry of the licence period, they gave notice of their decision to terminate the agreement, and we are grateful for the great assistance they gave to us in the early days of struggle, and I am pleased to say that we maintain cordial relations with them.

Our thanks are due to the efforts of all the employees of this Company, for the way they are meeting and overcoming the difficulties of this competitive age.

The report and accounts were adopted.

LAKE VIEW AND STAR

The Fifty-first Annual General Meeting of Lake View and Star Limited was held on December 7, 1961, in London.

Mr R. H. A. Neuschild (the Chairman), in the course of his speech, said:

The results of the Company's operations for the year ended June 30, 1961, are not unsatisfactory, and we are again able to recommend a final dividend of 1s. 6d., making a total of 2s. 6d. for the year.

Costs have increased by 6d. to 43s. 10d. per ton. Production of gold from mining operations at 166,122 ounces was slightly up on the previous year's figure. The results of development work during the year were good. Ore reserves at June 30, 1961, were 3,688,000 tons. Metallurgical extraction has again been good and in fact shows an improvement over the previous year.

In the power house a major innovation was introduced by the decision to use a heavier grade of oil fuel in place of the more expensive lighter oil, previously used. The profit from mining operations amounted to £400,672 which is fractionally higher than last year, and after the provision for depreciation, UK taxation liability and dividends the balance of profit on the year's operations amounted to £12,254. We have not much margin to play with in maintaining the rate of dividend. Our problem is whether we can effect savings to balance increases in costs, because with the fixed price for gold this is virtually the only way we can maintain the level of profits. Therein lies the implication for the future.

The report and accounts were adopted.

SAMUEL OSBORN & COMPANY, LIMITED

MR FRANK A. HURST'S STATEMENT

The fifty-sixth annual general meeting of Samuel Osborn & Company Limited was held on December 11th at Sheffield, **Mr Frank A. Hurst** (chairman and managing director) presiding. The following is an extract from his circulated statement:

During the year ended July 31, 1961, the majority of the companies of the Group worked to capacity, consistent with the labour available, and, consequently we have surpassed the sales figure of the previous year which I then reported as a record for us. We have now, therefore, a still higher target to beat.

Not only have we beaten our previous sales record by a substantial margin but, I am also pleased to be able to say, we have record profits for the year of £2,025,858 before tax and £976,900 after tax. Tax in the United Kingdom takes £972,001 and overseas £65,773; thus these first charges on profits reduce the total by approximately 51 per cent. From these figures the exceedingly heavy burden we have to carry will be appreciated.

I am still disappointed that those in authority continue to criticise British management and at the same time fail to do anything to curb the extravagant national expenditure, which could do much to help us meet increasing world competition by a reduction in taxation.

During the year under review our direct exports have improved but we continue to strive for further achievement. This must, however, be considered together with the fact that a large percentage of our products sold in the home market goes towards the making of other British products which are ultimately exported.

The purchasing side of our business has made a considerable contribution towards our success in that careful contracting has been exercised—a very important feature when purchases are so heavy.

THE EUROPEAN COMMON MARKET

I am sure that I am expected to say something about the European Common Market and I regret my inability at this stage to be categorical upon the matter. I have been surprised at the ready way many have expressed themselves as being positively for or against, because none of us really has grounds upon which we can decide, and when we do so it must be not from any selfish point of view—connected with one industry—but in the over-all national interest. All I can say is that I hope our negotiators will competently be able to appraise the advantages and disadvantages so as to enable them to make such arrangements as will be compatible with the interests of the United Kingdom and the British Commonwealth.

I am amongst the foremost in my desire that the Commonwealth should be protected in any arrangements which we may reach with the countries of the Common Market, but I feel I must say to some of the Commonwealth Governments that they must not look on the Commonwealth as a "one-way street." If they wish to continue exporting their goods to us on Imperial Preference terms, they should not impose harsh restrictions on our attempts to export goods to them, whether by restrictions of imports, the imposition of high duties or the narrowing of Preference tariff margins in favour of outside competitors.

On previous occasions I have mentioned the *question* of dumping and have advocated quick measures for the implementation of the provisions of the Customs Duties (Dumping and Subsidies) Act, 1957, when the necessity occurs. I make no excuse whatsoever for returning to this matter which I have been hammering for some years. Our Government is ready to criticise the efforts of manufacturers but, when faced with this simple problem of protection against dumping, continues to turn a deaf ear and professes to know better than those it criticises. At the same time it deplores the gap in our balance of payments which is widened by dumping.

Other Governments are apparently more ready to aid their manufacturers; an example being that in the Canadian publication *The Financial Post* of October 7th the first paragraph on the editorial page reads—'The Justice Department stands ready to advise Canadian companies whether their plans to join forces to meet foreign competition in the domestic market would contravene the Combines Act'—and goes on to hint at the desire to cut imports.

To forecast the future is a most difficult and uncertain matter which is made still more complicated by complexity of world politics, but I can report that we continue to be very active in those departments which have been busy throughout the financial year under review. At the same time I have to say that the volume of orders received is slightly less than a few months ago. However, it is too early to tell what the future has in store, but we do know that we have remained very busy at a time when it wou seem that some of our competitors had suffer a certain amount of recession. During t period covered by the Accounts we have ad new plant and made a number of extensions we hope that by these means and by the fo tunate position we occupy due to the diversifi tion of our manufactures our prosperity will maintained.

I conclude by expressing my thanks to eve one in the Osborn organisation from Directo to juniors, and to our subsidiaries and agen alike; all have helped by giving unfailing su port I have had co-operation in every directi and our success is due largely to a spirit happy working together, mutual respect a loyalty. The report was adopted.

O.K. BAZAARS (1929) LIMITED

(Incorporated in the Republic of South Africa)

A GOOD TRADING YEAR

STEADY INCREASE IN TURNOVER MAINTAINED

The thirty-second annual general meeting of shareholders of O.K. Bazaars (1929) Limited will be held on December 22nd at Johannesburg.

The following are extracts from the Report of the Directors for the year ended June 30, 1961, to be submitted to the shareholders at the meeting:

The figures given below are in decimal currency—the Rand being equivalent to ten shillings—and have been taken from the consolidated accounts of the Company and its subsidiaries.

CAPITAL AND RESERVES

During the year under review, the authorised share capital of the Company was increased from R5,472,000 to R7,724,000. The sum of R2,254,936 out of R6,254,046 standing to the credit of the Company's share premium account at June 30, 1960, was capitalised and issued as fully paid-up shares to the holders of equity share capital in the ratio of one new share in the respective classes for each share held, increasing the issued share capital from R4,934,936 to R7,189,872. R1,000,000 has been transferred to Capital Reserve in the Holding Company and R138,170 has been transferred to General Reserve in two subsidiary companies to provide for the redemption of debenture stock.

PROFIT AND APPROPRIATION

The consolidated net profit for the year, attributable to shareholders of O.K. Bazaars (1929) Limited is R3,912,307, compared with R3,264,900 for the previous year, from which appropriations have been made as shown below:

			1961	1960
Consolidated net profit for the year attributable to shareholders			R3,912,307	R3,264,900*
Dividends of Holding Company:				
On Preference Shares		150,800		
On Ordinary Shares:				
Interim of 10 per cent paid on July 31, 1961	450,987			
Proposed final dividend of 25 per cent	1,127,468			
		1,578,455	1,729,255	1,672,882
Retained in the business:				
Amount appropriated to reserves		1,138,170		931,880
Amount transferred to profit and loss appropriation account		1,044,882		660,138
		2,183,052		1,592,018
			R3,912,307	R3,264,900

*The 1960 net profit of R3,436,900 has, for purposes of comparison with 1961, been reduced by R172,000, being the balance of expenditure on premises on long lease shown in the 1960 accounts as an appropriation of profits.

DIVIDENDS

The directors recommend the payment of a final dividend of 25 per cent (12½ cents per share) to holders of ordinary, "A" ordinary and "B" ordinary Shares, which with the interim dividend of 10 per cent (5 cents per share) makes 35 per cent (17½ cents per share) for the year. This is an increase on last year when the Company paid 67½ per cent (33¾ cents per share) on the equity share capital which was doubled by a Capitalisation issue during the year.

The following statistics are given for the information of shareholders:

	1957	1958	1959	1960	1961
Preference capital	R2,680,000	R2,680,000	R2,680,000	R2,680,000	R2,680,000
Ordinary capital	1,688,000	1,688,000	2,254,000	2,254,000	4,510,000
Reserves and unappropriated profits	18,694,000	19,900,000	25,000,000	26,592,000	26,523,000
	R23,062,000	R24,268,000	R29,934,000	R31,526,000	R33,713,000
*Profits after tax	R2,508,000	R2,342,000	R2,824,000	R3,264,000	R3,744,000
Earnings yield	10·88%	9·65%	9·43%	10·35%	11·11%
Preference dividends paid	R150,000	R150,000	R150,000	R150,000	R150,000
Profits attributable to ordinary shareholders	R2,358,000	R2,192,000	R2,674,000	R3,114,000	R3,594,000
Dividends to ordinary shareholders:					
Amount	R1,056,000	R1,056,000	R1,410,000	R1,522,000	R1,578,000
Per share	31¼ cents	31¼ cents	31¼ cents	33¾ cents	†17½ cents
Profits retained	R1,302,000	R1,136,000	R1,264,000	R1,592,000	R2,016,000

*These figures do not include the surplus or the loss on the sale of properties. † Refer paragraph under heading of "Dividends" re Capitalisation issue.

GENERAL

The Company has had a good trading ye and maintained a steady increase in turnove *both in the Republic of South Africa and i* the Rhodesias. A surplus of R167,444 realise on the sale of two properties has been credite to profits.

MERCHANDISE

Although most of the Company's purchase are from South African manufacturers, it must not be construed that the small balance which is imported is unnecessary. Imported merchandise encourages South African manufacturers to keep abreast of what is produced in worldwide markets, sets a standard for local manufacturers and in no minor way has contributed to the improvement in manufacturing techniques which must surely help towards the building up of South Africa's export trade. The policy of quality and price has been and will always be the mainstay of this organisation and in fact, is the fountainhead of its growth.

STAFF

Once again we acknowledge the staff's loyalty and good service and the important part played by them in our satisfactory progress. Improved amenities and "awareness" training have encouraged the staff to greater efficiency, more Company consciousness and increased enthusiasm. Recognition in a practical way has been made by the Board again declaring a cash bonus to be paid to the staff.

AUSTRALIA AND NEW ZEALAND BANK

The Eleventh Annual General Meeting of ustralia and New Zealand Bank Limited will held on January 10, 1962, in London.

The following are extracts from the circulated tement by the chairman, **The Hon Sir offrey C. Gibbs, KCMG,** for the year ended ptember 30, 1961:

AUSTRALIA CONCENTRATES ATTENTION ON EXPORTS

An official policy of deflation, aimed at restorg balance in oversea trading and checking the te of increase in domestic costs and prices, arply reduced the level of business activity in ustralia during the first half of 1961. Following e attainment of external stability the restricre policy measures were relaxed, and official ttention has been directed in more recent onths towards increasing domestic activity and mployment without recreating an excessive mand for imported goods. The removal of e boom conditions, which were such a notable ature of the economy in the second half of 960, also meant a substantial reduction in transtions of a speculative nature which had caused ry large increases in stock exchange and real tate prices.

It should be explained, however, that the hanges which have occurred in recent months e considered to be essentially short run alterations, and from the longer term aspect, the ustralian economy can be expected to maintain rapid rate of development.

It is now more generally recognised that the te of growth of the internal economy is clearly nked to the nation's ability to pay for increasg imports and to service foreign investment. he importance of foreign exchange earnings s recognised in the search for new export arkets—a quest which has been given new gency by the United Kingdom's application to in the Common Market.

The effect of monetary and fiscal restraints pplied during 1960, had begun to show in he level of imports by February 1961, and there as a progressive decline in imports over the emaining months of the financial year. Although mports in the full June year were £A137 million greater than in 1959-60, the total for the alf year ended June, 1961, was only £A30 million more than in the corresponding period of 1960.

Despite worthwhile increases in exports of manufactured goods, the great bulk of Australia's export income continues to be derived from the sale of rural products and minerals. The value of exports (excluding gold) in 1960-61 —£A937 million—remained the same as in the previous year.

Recent action by the Government in granting taxation incentives to exporters is most welcome. Indeed, one of the most favourable interpretations of recent events is that they have concentrated attention on the balance of payments problems. Development of a more diverse range of export activities has assumed increasing importance in view of the persistent adverse movements in Australia's terms of trade, following the tendency in recent years for export prices to fall while the prices of imported manufactured goods rose slightly. This adverse movement in prices has offset increases in the volume of goods exported.

But probably the most important requirement for success in the export field is to ensure that the increase in Australian costs and prices is kept to a minimum, so that the competitive advantages, which have been a feature of the pastoral industries in particular, will not be dissipated.

Australia's overseas reserves increased by £A39 million over the year ended June 1961, to a total of £A550.8 million. This improvement contrasted directly with earlier estimates which predicted a substantial fall in reserves following the expansion of imports. Receipts of long term and portfolio funds indicate the continued confidence of the overseas investor in Australia's potential and a favourable assessment of its undoubted prospects for further growth. However, this increasing level of investment places added emphasis on the need to pay adequate attention to promoting export industries.

FORMIDABLE PROBLEMS FACING NEW ZEALAND

The past year in New Zealand has been characterised by a severe balance of payments crisis, a marked growth of expenditure in both the private and government sectors, and the implementation of official policies to restrain spending. The high level of internal demand resulted in an expanded volume of imports which coincided with a reduction in overseas income following a series of adverse movements in prices received for the major primary exports. It is unfortunate that all these staple exports should have suffered simultaneously and this, combined with an expansion of imports, has reduced overseas reserves to extremely low levels. Indeed, the problems which New Zealand has to overcome are, in my view, more formidable now than at any time in the last decade.

This year's external position is in marked contrast to that of last year, when there was a favourable balance of payments and the level of reserves was sufficient to meet carefully restrained levels of spending. The deterioration which occurred was, to a large extent, the result of the adoption of inadequate fiscal and import licensing measures. To curb the drain on external reserves, the Government eventually adopted the traditional short term palliatives of severely restricting import allocations, including an extension of the current import licences to cover more than the calendar year 1961, and of arranging to borrow overseas.

The trading banks are working in an environment of detailed regulation and it is disappointing that the new Government has not yet been able to restore the traditional freedoms to the banks which would enable them to play a more positive part in New Zealand's progress.

New Zealand's admittance to membership of the International Monetary Fund, and World Bank is particularly welcome. In my view the Government showed great wisdom in obtaining Parliamentary approval for this action. Admittance to the Fund will mean ready access to short-term assistance and stand-by facilities should such be necessary in future pending more basic domestic adjustments, whilst admittance to the Bank will provide opportunity to apply for medium and long term capital for development. It is to be hoped that these developments portend a more realistic approach to long-term investment from abroad.

The Government has been particularly concerned to foster selective development of industry. The stimulation of this industrialisation, however, often adds pressure in the short term to the balance of payments and the overstretched labour market.

With regard to farm production, excellent seasonal conditions have been experienced and output has continued to rise, although at a markedly slower rate than in some earlier years. New Zealand has a vital interest in the United Kingdom's relationship with the Common Market and the Government has been active in stressing the likely adverse effects on the marketing of New Zealand's major exports.

Consumer prices continue to advance slowly, and over the year ended September 1961 rose by 2 per cent; the major increase was in the housing category of the Index. It is certain that the increased volume of imported goods has added to price stability over the year, but the likely reduction in the supply of imports in 1962, despite cushioning by the improved level of stocks, will add to the pressure on prices unless the level of demand can be reduced.

Internally the Government's basic objective is to restrain inflationary tendencies and curtail domestic expenditure. To this end, the Reserve Bank is following a severely restrictive monetary policy.

ACCOUNTS

When note is taken of the restrictions and controls from which we still suffer, we think we have good reason to be encouraged by the results shown in the year's accounts.

The Trading Bank Balance Sheet shows a considerably improved liquidity position and the increase in the fixed asset Bank Premises and Sites underlines the steady expansion in our branch representation.

We are always seeking to relate the increasing costs of carrying on our business to the charges we make to our customers and it is satisfactory to report that there were moderate increases in these charges during the year.

It is gratifying that the Trading Bank's profit at £A1,105,982 not only shows an increase of 7 per cent on last year's figures but is a little more than anything we have achieved so far. Your Directors recommend a final dividend for the year of 8 per cent less tax, which, together with the interim dividend already paid, would maintain the distribution at 12 per cent less tax.

The Directors propose a re-organisation of the Bank's share capital. The purposes of the proposals are the elimination of the reserve liability on the Bank's partly paid shares, the consolidation of all shares into one class followed by the increase of the Bank's paid-up capital to £Eng.11,000,000 by means of a bonus issue to shareholders. These proposals require the sanction of the shareholders (which will be sought at meetings to be held immediately after the Annual General Meeting) and the confirmation of the High Court.

COMPAGNIE D'OUTREMER POUR L'INDUSTRIE ET LA FINANCE

The annual general meeting of the COMPAGNIE D'OUTREMER POUR L'INDUSTRIE ET LA FINANCE was held in Brussels on November 23rd, **Mr Gutt** presiding.

The introductory statement of the Board's report is devoted, this year, to a topical problem, which is of considerable importance to Belgium: the *tax reform* that the Government proposes to introduce.

The fiscal system must be simplified, says the report. It must be adapted to the necessity of promoting investments, and, to this end, must contain provisions as advantageous as those in force in other Common Market countries. Compagnie d'Outremer stresses that this reform should not interfere with the rule "non bis in idem," which is the basis of Article 52 of the co-ordinated laws. The investment policy encouraged by successive Belgian governments in recent years, which had its practical application in the floating of subsidiary companies and in the taking up of investments in common, is built up to a large extent on the clauses of this article. The introduction of a double imposition or a multiple taxation, which would result from an amendment of this article, might tend to check investments in Belgian economy.

Compagnie d'Outremer also stresses the necessity of simplifying the method of assessing turnover, either by substituting regulations inspired from the French system of a tax on the "valeur ajoutée" (a tax on the difference between cost and selling price at each production stage of different concerns), or a generalisation of the "taxe forfaitaire" or "outright tax" (a lump sum paid on an assessment made by the authorities themselves), at a determined stage in the production or distribution circuit.

Since the end of the preceding financial year, the Company's share of investments in continental Europe has risen from 55.1 per cent to 56.9 per cent; American assets have recorded a growth at 27.8 per cent against 24.2 per cent, whilst those in Africa show a sharp fall at 9.5 per cent against 17.4 per cent. The item "Sundries" is taken up for 4.9 per cent against 3.3 per cent.

The evolution per activity sector is as follows:

	Sept. 30, 1960	Sept. 30, 1961
	%	%
Fixed assets	1·3	2·9
Banks, insurance and financial companies	31·3	36·4
Public utilities and electrical companies	26·4	25·2
Oil and natural gas industry	16·7	17·3
Mines and metals	8·7	6·3
Distributive trades, food and agriculture	5·3	5·7
Sundries	4·5	3·7
Net current assets	5·8	2·5
	100·0	100·0

The Board's aim is to make the Company a proper investment bank. It has already departed from the generally accepted notions of a holding company inasmuch as its interests, apart from those in the banking field, which are a corollary to its activities in the financial field, are not controlling interests.

The Compagnie d'Outremer is determined to develop further its contacts with foreign banking and financial concerns, with the object of establishing a closer collaboration with them in line with the needs which have arisen with the ever-increasing internationalisation of economies and more especially the progress made in European integration. The Company's most important interest is in the BANQUE LAMBERT, whose development is progressing: deposits of customers and of other banks rose from BF 3,697 million to BF 4,616 million in 1960, whilst credits to the private sector climbed to BF 3,350 million from BF 2,949 million. Between 1953 and 1960 the volume of deposits grew by 178 per cent and that of credits to the private sector by 315 per cent; among the latter, acceptance credits augmented more than tenfold. This progress has continued into 1961, there being a distinct advance in the results of the first nine months of the current year over those for the corresponding period in 1960.

At the beginning of this year the Banque Lambert took over the banking activities of the BANQUE INDUSTRIELLE BELGE in Brussels. It took part in floating the BANQUE EUROPEENNE DU LUXEMBOURG, whose operations for the opening months are most satisfactory. Three main and 22 branch offices in Brussels, with one main branch office in Antwerp, make up the Banque Lambert's present facilities.

Through its fiduciary subsidiaries, whose operations are centralised in SOGES, the Banque Lambert was mainly responsible for the admission of foreign stocks on the Brussels stock exchange. The assets of the unit trusts in whose management it is interested, viz Fonds International de Placement "*F.I.P.*," "*Eurunion*" and "*Patrimonial*," amount to BF 2.7 thousand million, against BF 2.3 thousand million a year ago.

Almost all the shares of SOCIETE CONGOLAISE DE BANQUE, BANQUE AFRICAINE INTERNATIONALE and BANQUE DU RUANDA-URUNDI were brought in to a new company, SOCIETE FINANCIERE POUR LES PAYS D'OUTREMER, floated in Geneva, in May, 1961. Business of the African affiliates of the new company suffered from the political chaos in the Congo in 1960, but a marked improvement has been registered since the beginning of 1961.

Compagnie d'Outremer has also interests, through the Banque Lambert, in BANCO DI ROMA (BELGIQUE), BERLINER HANDELS-GESELLSCHAFT, CREDIT COMMERCIAL DE FRANCE, UNION FINANCIERE DE PARIS, BANQUE NATIONALE POUR LE DEVELOPPEMENT ECONOMIQUE (Morocco), FIVE ARROWS SECURITIES (Canada), DEVELOPMENT FINANCE CORPORATION (Australia). In the course of the last year it also acquired part of the capital of SOCIETE FINANCIERE BELGO-CANADIENNE, whose assets are mainly made up of securities, the majority of which are American.

In the public utilities and electricity sec the main interests of Compagnie d'Outremer concentrated in its participations in SOFI ELECTRORAIL and ACEC. Sofina's as can be estimated as having recorded a fur gain in 1961, due notably to the price ris the majority of American public utility serv shares in its portfolio.

The oil industry is represented in the p folio chiefly by the PETROFINA group. A from a large interest in the parent comp Compagnie d'Outremer has holdings in CA DIAN PETROFINA and AMERIC PETROFINA. For the first half of 1961 Pe fina's profits are up by 5.5 per cent over t of the corresponding period in the previous y Canadian Petrofina's profits for the first r months of 1961 are booked at $Can. 4.4 mil as against $Can. 1.03 million for the whole 1960. American Petrofina's results also show a improvement; profit for the first half of 1 reaches $US 820,000, whilst for the sa period in 1960 a loss of $US 385,000 registered.

The holdings of Compagnie d'Outremer South African gold mines have been realis On the other hand, the Company strengthe its holdings in copper by the acquisition RHODESIAN ANGLO AMERICAN sha Other participations in the mining sector represented by holdings in TANGANYI CONCESSIONS LTD., RHODESIAN N LECTION TRUST LTD., DE BEERS CO SOLIDATED MINES LTD., RIO ALG MINES LTD., ST JOHN D'EL R MINING CO.

In the food and distribution fields it ho an interest in GRANDS MAGASINS L'INNOVATION," whose expansion in B gium is progressing steadily, whilst that France and the Netherlands is assured by subsidiaries. The Company also holds intere in the following companies operating the Congo: BRALIMA, ELAKAT a BELGIKA.

The consolidated profits of Compag d'Outremer—that is to say, its own profits p its share in the profits of wholly-owned su sidiaries—amounted to BF 154 million for period from October 1, 1960, to September 1961, against BF 135 million for the preced twelve months.

The Company's net profits amount to 73,711,974, which permits a dividend dist bution of BF 40 per ordinary share; payme will be made on January 9, 1962. It must recalled that the net profits of the previous y were set aside for the depreciation of the po folio and the constitution of a reserve of BF million for the same purpose.

In his speech Mr Gutt announced that extraordinary general meeting will be held bef the end of the year to examine certain proje of a merger. In view of the importance of Company's holdings in the Banque Lambe whose financial year closes on December 31 the above general meeting will also be call upon to decide on the change over of the closi of its own financial year from September 30 to December 31st.

VITAMINS LIMITED

"DUMPED DRUGS FOR N.H.S."

The Annual General Meeting of Vitamins Limited was held in London recently.

Net profit for Vitamins, Ltd., to year ending March 31, 1961, was £151,953 (£129,280). *Ordinary dividend* was maintained at 12½ per cent.

In his Report, the Chairman, **Mr H. C. H. Graves,** said that the British fine chemical and pharmaceutical industries, of which they were proud to form part, were second to none. They had been built up as a far-sighted and long-term act of national policy since the time of the first world war. It had fallen to the present Minister of Health to reverse the policy, by encouraging dumping of other countries' surplus outputs.

So far from encouraging and helping British inventiveness, he had taken the unprecedented step of offering to purchase the nation's requirement of certain essential products, protected by patent in this and other countries, from pirates. This policy could extend to those who, by industrial espionage or otherwise, sought to cash in on the patented knowledge of inventors without having contributed either cash or inventiveness to the invention or development of the product itself or the clinical research needed before it could be safely marketed.

It was axiomatic that the successful development of export trade needed a firmly based home market.

The Minister had said, "I am willing to pay a royalty to the true owner of the patent." You could not run a factory on royalties—you needed physical throughput. The Minister "has a duty to purchase drugs for the N.H.S. at the lowest possible cost," even if to do so he *had to encourage dumping of goods surplus to the pirates' home market. Had he no responsibility to* Parliament and people for the protection of a key industry: or *had he forgotten this country's* lamentable position at the time of the first world war?

The Minister's position, as one of the chief customers of the pharmaceutical and fine chemical industries was incompatible with his national responsibility for the guardianship of those industries as their sponsoring Minister. So long as he was going to have his pound of flesh as the hard faced buyer—concerned only with the short-term advantage—so long should responsibility for sponsorship of these industries be transferred to an unbiased Minister capable of weighing credits against debits and taking up the cudgels for the industry he was protecting.

Of course, it was politically convenient to have a whipping boy for the cost of the N.H.S., in spite of the fact that the drugs themselves offered the best hope of reducing the cost of the N.H.S., by reducing hospital costs. How much longer was the Minister going to ignore the recommendation of the Guillebaud Committee that he should consider ways and means of publicising the facts of the industry's great achievements in a telling manner? Its export record—a fourteen-fold increase since 1938—exports now totalled nearly as much as the value of the N.H.S. drug purchases. Its contribution to national health and long life—millions were alive today who would never have survived on the drugs of 25 years ago! The tremendous reduction in the cost of illness due to the reduction of the length of treatment.

How much longer was he going to ignore the same Committee's recommendation that "the conditions which favoured profits for research, such as patent rights, publicising of proprietary names and the price agreement with the Ministry of Health be accepted?"

The Report and Accounts were adopted.

LEETHEMS (TWILFIT)

The 33rd annual general meeting of Leethems (Twilfit) Limited was held on December 7th at Portsmouth, **Mr A. E. Downing, FCA** (the chairman) presiding.

The following is an extract from his circulated review:

After an encouraging start to the year's trading, we experienced a short period of depression, followed by steadily improving conditions which, however, were not of sufficient duration prior to the close of the year to compensate for the earlier setback.

Sales of certain of our new styles, notably Twilfit "Joycet" belts and Twilfit "Cupid" brassieres, are most encouraging, and we are satisfied that demands for them will continue to increase. Export sales showed a small improvement as compared *with the* previous year in spite of difficulties over quotas and credits.

Costs of materials, labour and overhead expenses continue to rise and, almost invariably, there is a time lag before such increases can be recovered by revision of selling prices. Buildings, Plant and Machinery have all been maintained at our usual high level of efficiency.

An increased rate of Profits Tax has to be borne this year and, after appropriating £4,000 to General and Contingencies Reserve and £2,500 to Staff Retirement Account, the Directors are pleased to recommend the payment of a Final Dividend of 9½ per cent on the Ordinary Shares making, with the 3 per cent Interim Dividend already paid, a total of 12½ per cent (less tax) for the year. The balance of unappropriated profit to be carried forward to next year amounts to £14,367 against £14,337 brought in from last year.

The report was adopted.

NORTH ATLANTIC SECURITIES CORPORATION

The seventh annual general meeting of North Atlantic Securities Corporation Limited was held on December 11th in London, **The Right Honourable Lord Latymer** (the chairman) presiding. The following is an extract from his circulated statement:

I mentioned in my previous statement that we had acquired the entire issued share capital of Commercial & Industrial Investment Trust Limited. The combined adjusted gross revenue for the two companies for 1960 amounted to £177,698 and the net revenue, after taxation, amounted to £91,949, which compare with this year's figures of £183,728 and £93,698 respectively.

An interim dividend of 1½ per cent was paid in May last. Your Directors now recommend the payment of a final dividend of 4 per cent. This amounts to the same rate of distribution for the year as that for the previous year.

No overall revenue increase is anticipated in the *current year from our United Kingdom* securities due to lower profit margins coupled with the Chancellor's request for dividend restraint. *However, some increase* may be forthcoming from our American securities provided that the recovery in the US economy *continues.*

The value of the net assets of the corporation at September 30, 1961, was £4,249,662, equivalent to 8s. 9d. per share, as compared with £2,281,902, equivalent to 7s. 7½d. per share at September 30, 1960.

The report was adopted.

BARCLAYS BANK D.C.O.

1961—A HARVEST OF CHANGE

MR J. S. CROSSLEY'S STATEMENT

The thirty-sixth Ordinary General Meeting of Barclays Bank D.C.O. will be held on January 2, 1962, in London.

The following are extracts from the circulated statement of the chairman, **Mr J. S. Crossley,** for the year ended September 30, 1961:

If 1960 was a vintage year for political developments in British territories overseas, 1961, also has produced an abundant harvest of change. This year has seen the first parliamentary general elections in Kenya, Uganda and Nyasaland. Sierra Leone has already reached the goal of independence and Tanganyika will achieve that status in December. A referendum in Southern Rhodesia has endorsed by a majority of two to one the framework of a new constitution under which, for the first time, direct parliamentary representation has been given to Africans. Yet another constitutional conference held in London has at last succeeded in reaching agreement concerning the lines of future political development for Uganda. The former British-administered territory of the Southern Cameroons has been merged in the Republic of Cameroun, while in the Caribbean a blow has been struck at the principle of federation as a result of the referendum held in Jamaica.

The most outstanding political development has been the establishment of the South African Republic outside the Commonwealth.

RIGHTS ISSUE AND THE BALANCE SHEET

The event of the year most directly affecting stockholders was the rights issue which was made during the spring. The result of this offer to subscribe for fresh capital, the first since 1947, may be of interest. Out of 10,879 stockholders, no less than 10,269 exercised their rights. In addition, applications totalling 1,288,465 shares were received for the 188,075 shares which were offered to round off the capital to £17 million. This mark of confidence in the future of our bank, coming at a time of increasing political and business uncertainty, has been a great encouragement. Whatever the immediate future may hold I believe that in the long run this confidence will be justified. The urge for higher living standards in the under-developed countries, particularly in those which have newly found their independence, is a dynamic influence and the need for services of the kind that this bank can offer is likely to grow in the years to come.

The results for the year show an increase in profits, after tax, of £128,653, or 8.8 per cent. The increase would have been considerably larger had it not been for the higher rate of profits tax, which is beginning to bear heavily upon us.

The sudden, sharp increases in bank rate which we have experienced from time to time in recent years are indicative of the disorders in our economic body.

Dislocations in the money market and violent fluctuations in security values are the consequences that might be expected to bear most directly on the accounts of the bank. It is, however, the effect on conditions in our overseas territories and the strains which these sudden changes impose on the whole sterling area to which I should particularly draw attention. We have, perhaps, been too much absorbed in our own problem to pay sufficient attention to the difficulties that this has caused, and is causing, to others.

It is not enough for us to be able to say that the exchange value of sterling has been maintained by the higher bank rate. The price has been much dislocation of business and additional cost to borrowers throughout most, if not all, of the territories with which we as a bank are concerned. High interest rates in the United Kingdom have not only increased the burden of servicing the internal debt and raised the cost of financing exports, but, by stepping up the bill for interest on overseas balances held in London, they further aggravate the payments problem. The depreciation in Government securities, also, has inflicted embarrassing losses on overseas holders.

Perhaps the worst aspect of all this, however, from the standpoint of our overseas territories is the extra difficulty and expense involved in raising fresh capital. Even when this can be obtained the cost is likely to compare unfavourably with rates quoted elsewhere. In other words, London, as the financial centre of and banker to the sterling area, may become uncompetitive. The consequences could be serious both for London and for the Borrower, who might be driven to accept aid with political "strings" attached.

It is hardly necessary to stress here the immense value of the smoothly working mechanism of the sterling area to our trade and, indeed, to world trade as a whole, as well as to the commodity and other international markets, so many of which are concentrated in London. If, however, the centre is to be perpetually subjected to shocks of the kind we have been experiencing the whole structure must inevitably be weakened.

NEED TO FACE THE TRUTH

The truth is that monetary measures are not in themselves a cure for our troubles, which stem from the fact that we are living beyond our means. We are told that there is danger in over-simplification, and this is true. But it is more dangerous still to complicate an issue to such an extent that the simple truth is obscured.

Mr Micawber's famous dictum: "Annual income twenty pounds, annual expenditure nineteen nineteen six—result, happiness. Annual income twenty pounds, annual expenditure twenty pounds, ought and six—result misery," has its message for us today.

Our only sound course today is to reduce our problem to its simplest terms. Since when have the British people been unable to face the plain truth without a gloss on it? The problems of living with prosperity may prove as testing for Britain as the years of austerity through which she has so recently passed. Her people then gave convincing proof of their steadfastness when they knew that what was at stake was nothing less than survival.

THE CITY OF LONDON BUILDING SOCIETY

YEAR OF GROWTH

The ninety-ninth Annual General Meeting The City of London Building Society was h on December 12th in London.

Mr G. R. Appleyard, FCA, chairman, in course of his speech, said:

The pressure of withdrawals of funds c tinued for the whole of the first quarter of financial year under review, but it is fair to that things improved in the last three quart although the flow of money was erratic a followed no particular trend—this in spite of fact that we increased the dividend rate at Mar of 1961.

When you see, therefore, that the total amou due to shareholders has risen by just o £315,096 you will realise that the manageme has done very well indeed in a very competiti period.

Mortgages.—We have advanced approximate £300,000 more on mortgages this year compar with last year and the number of mortgages de with was 654 as against 637.

Management Expenses.—These have increase by £2,635, most of which can be found in tw items, salaries and printing, stationery an telephone.

The Society can afford to pay a dividend the increased rate of 4¼ per cent (Income Ta paid by the Society) for the period of nin months, January to September, 1962 (bot months inclusive). This will take us to the en of the Society's Hundredth Financial Year.

The report and accounts were adopted.

NATIONAL MORTGAGE AND AGENCY CO. OF NEW ZEALAND

The eighty-fifth annual general meeting of th Company was held on December 12th in Lon don, **The Right Honourable Lord Glenconne** (the Chairman) presiding. In the course of hi circulated Review, the Chairman said: You Company has again enjoyed a successful year' trading. The wool market was stable throughou the year with a tendency to harden as the seaso progressed.

In the past season the Company, including ou subsidiary Messrs. J. G. Ward & Co. Ltd handled a record number of 177,124 bales, an increase of 7,732 bales over the previous year.

At the time of writing this Review there hav been some encouraging signs of improvements i markets. Prices ruling at the opening wool sale of the present series show that the firmness note towards the end of last season has been main tained. The British Government has now intro duced measures to deal with supplies of sub sidised and dumped butter which could provid a valuable stimulus to New Zealand's dair industry.

Although we must expect some curtailment i certain of our merchandising activities becaus of import licensing regulations, I do feel that ou Group can look to the future with confidence.

Group trading profit for the year is £813,32 This is a most satisfactory result, as althoug the figures for last year covered only a perio from October to June, this includes the mai revenue-producing months.

The report was adopted and the total distri bution of 10 per cent, tax free, was approved.

SECOND INDUSTRIAL TRUST LIMITED

DVANTAGES OF BROADLY BASED PORTFOLIO

he fiftieth annual general meeting of Second ustrial Trust Limited was held on December in London.

Ir Haydon Ockford, FCIS (Deputy Chair-), presided in the absence abroad of the irman, Sir Edwin Herbert, KBE, LLD, and d the Chairman's Speech, from which the owing are extracts:

ou will remember that I suggested last year t it was possible that the tempo of the ional economy might well be slowing down. is suggestion has proved to be correct. We e made some progress, our income from estments being greater by £25,000, but reas last year our income from investments wed an increase of about 13½ per cent, this the increase is only 6½ per cent. Tax re-eries this year arising from double taxation ef were £9,000 less so that our total revenue m all sources showed an increase of £10,500 3 per cent more than the previous year. We ommend that a final dividend of 10 per cent paid making 19 per cent for the year.

In the light of the difficult conditions, which m the investment point of view, prevailed the year under review, particularly in the ter part of this year, the results can be re-ded as satisfactory. They go to show, in my inion, one of the advantages of holding a adly based portfolio in carefully selected urities.

The valuation of investments at September th showed an appreciation, over the cost at hich they were held in the books, of about 51½ ints. This appreciation compares with a ure of 45½ points a year ago and with a ure of about 67½ points six months ago. These ures tend to confirm the basic strength of your ompany.

Earlier this year the country entered upon one those periodic economic crises to which we ve become so accustomed since the war, no atter what Government was in power. The esent Chancellor of the Exchequer has taken ergetic steps to hold our position and, it would em with some degree of success. He is trying, ith his "pay pause" and dividend limitation mong other things, to hold a balance between dustry and labour in an endeavour to achieve is aims but, as others have found before him a similar circumstances, criticism of his olicies from both sides is the result. abour feels that it is being deprived of he just reward of its work, while industry omplains that it is forced to cut back at the ame time as it is being asked to expand and evelop exports. Nevertheless economic policies ust be given time to mature and cannot fairly e judged over a short period. We must sus-end judgment for the time being and hope that he Chancellor's avowed intention of creating onditions which will eradicate these crises in the uture will be achieved.

As to the proposed scheme of arrangement and amalgamation between the Company, the holders of the Debenture Stocks and Shares and The Industrial and General Trust, Limited, your Directors recommend it as being in your best interests. In a fortnight's time a separate meeting is being held of each class of Debenture Stockholders and of Shares and there will be every opportunity for Stock and Shareholders to ask any questions if they wish to do so.

The report was adopted.

NORTH KALGURLI (1912) LIMITED

MR H. A. KEMLO'S STATEMENT

The Annual General Meeting of North Kalgurli (1912) Limited was held on December 13th in London, **Mr H. A. Kemlo,** the chairman, presiding.

The following is an extract from his circulated statement:

During the year 1960-61 we treated 372,717 tons of normal run of ore to produce 88,508 ounces of gold against 367,511 tons of ore for 87,030 ounces in the previous year. Treatment of stored concentrates produced 1,094 ounces against 3,141. Gross mining income, after allowing for reduction of concentrates stocks, was £1,105,706 against £1,102,780. Mining and treatment costs were contained at approximately the same level per ton of ore treated as in the previous year and we came out with a net profit of £160,880 against £169,215. It is proposed to pay a final dividend of 6d. a share, making 10½d. for the year. Our liquid resources increased from £247,110 to £314,826.

The overall development scope on the Mine appears to be quite sound, both for immediate and long-term prospects. During the year 15,231 feet of development work was carried out over a large number of ore bodies on the Main, Kalgurli, and Croesus workings.

Early this year we decided that we must go ahead with the installation of our own Power Plant. The Plant ought to be in operation well before the end of 1962, and the total cost is likely to be in the neighbourhood of £275,000.

The report was adopted.

GASCOIGNES (READING)

(Milking Machine Refrigeration and Agricultural Engineers)

RECORD PROFIT IN JUBILEE YEAR

The annual general meeting of Gascoignes (Reading) Limited was held on December 12th at Reading, **Mr Geo. H. Gascoigne, MIStructE** (chairman and managing director), presiding.

The following is an extract from his circulated statement:

It is with considerable pleasure that on the occasion of our Silver Jubilee as a Public Company I am able to report a record profit in the history of our undertaking.

The growth of your Company since its incorporation in 1936, both in the United Kingdom and overseas, has been one of steady progression over the years and although margins have declined the ever-increasing turnover has enabled us to show a continuing upward trend of profits.

Although your Board were hopeful of a larger net profit for the year under review, the figure achieved of £165,781 still compares favourably with £147,883 for the preceding year.

Our Parlour Milkers of all types, the Milkveyor System; the portable Miracle Milker and Wheelway Records; the Bulk Collection system, the Rotafreeze, the In-Churn Coolers, our Grain Dryers and Kee Klamps, to mention but a few of our larger range of products, will stand us in good stead for many years to come; and we are continuously experimenting and developing new ideas.

The report was adopted and a dividend of 12½ per cent and Silver Jubilee Bonus of 2½ per cent were approved.

SUBSCRIPTIONS

COMPANY AFFAIRS

Brewing Results

THE consolidation and development of the brewing industry has left some companies in need of fresh capital funds. United Breweries' series of take-overs has, for instance, made the injection of new capital imperative; the company raised about £5 million on a 6¼ per cent debenture almost a year ago and it is now placing £2 million of a 6¾ per cent debenture at 98½. Report has it that Watney Mann may also be coming to the market with a prior charge stock very soon. Here, the new money would seem to be needed for the consolidation of Watney Mann's brewing interests—and not for property development, for Mr Simon Combe, the chairman of the subsidiary, **Watney Mann Property,** has said that its immediate capital needs can be met and that more permanent finance can wait. At the end of September the property subsidiary, in which the parent owns about 51 per cent of the equity, had capital commitments of £394,000 but other projects will entail an outlay of at least £2,500,000 in the next few years. The initial increase in the property company's income has been rapid; but this has come largely from letting licensed premises as they stand. Now the company is entering upon development proper, where sites will have to be acquired and new buildings erected. This has an immediate financial cost and Mr Combe thinks of the next two years as a stage of consolidation. Income may increase less rapidly for a time; but the conviction that development will be handsomely rewarding is reflected in the yield of 1 per cent offered by the 5s. shares at 14s. 9d.

One of the rumours that bloomed in the spring was that **Bass, Ratcliff and Gretton** might merge with Watney Mann. In fact, Bass merged with the Midlands and South Wales brewers, **Mitchells and Butlers.** This has always been one of the strongest of the regional breweries; Bass has for many years been a national brewer, not because it has public houses scattered up and down the country outside the cluster it owns in the Midlands but because its naturally conditioned bottled beers, "Bass" and "Worthington," have commanded a wide market in the free trade and through the brewers' tied outlets. To preserve profits in the trade outside its own tied outlets has become increasingly difficult and Bass to meet the competition from other beers has been switching more towards pasteurised bottled beers. Its merger with Mitchells and Butlers, moreover, gives it a stronger base from which to bargain with other brewers; presumably this link will give it some interest in the "Harp" lager venture.

But the merger could not have had any tangible effect on trading results for the year to September 30th. The rise in gross profits by 16.8 per cent, from £7,425,000 to £8,670,000, and in net profits by 18.5 per cent, from £3,726,000 to £4,417,000, must therefore reflect higher sales and higher prices for the summer trade. It is a remarkably good performance; this, however, is not reflected in the final dividend which in deference to the Chancellor's request is kept at the 7 per cent forecast at the time of the merger. The indicated yield on the 5s. shares at 15s. 1½d. is 3.6 per cent, covered over twice. One important point for the future of Bass, Mitchells and Butlers is whether the increase in sales and profits has been more marked in the tied trade or in the external trade, where Bass is doing a great deal to promote the sales of container draught beers.

Another company with an important stake in the growing market for container draught is **Flowers** of Luton, with its "Keg" bitter. This is one of the biggest breweries under the Whitbread umbrella and its latest trading results are rather disappointing. Gross profits before tax have risen by no more than 5½ per cent, from £1,337,000 to £1,411,000; net profits actually fell, from £721,000 to £660,000, but the dividend has been raised to 12 per cent, against 11 per cent in 1959-60 when a non-recurring 1 per cent was added from capital profits. The stock market was disappointed and marked the 5s. shares down by 1s. 6d. to 16s. 9d. xd., to yield 3½ per cent. Exceptional capital charges may explain the lack of buoyancy; but it must be wondered whether Flowers is meeting increasing difficulty outside the comparatively small base of its own tied outlets against the competition of other and bigger breweries.

ICT

ONE lesson to be drawn from the dividend of International Computers and Tabulators is that shareholders should pay more attention to the shillings and pence than to percentages. The rounding up of the interim dividend from 9.6d. to 10d. encouraged hopes of a higher total dividend, but now the final has been rounded down from 1s. 5.4d. to 1s. 5d., to leave the total payment unchanged at 2s. 3d. This is in line with the forecast made at the time of the rights issue last January. Trading profits for the year to end-September rose by just over 20 per cent, from £7,925,000 to £9,506,000, but this does not fully reflect the increase in business, for just over 73 per cent of the group's deliveries in 1960-61 were rentals rather than outright sales. The continued development of the rental business is reflected in the substantial increase from £3,494,000 to £4,391,000 in the sums

written off machines on rental. Inter charges are higher as a result of the iss of £5 million of 6¼ per cent debentures a of higher interest rates on the bank overdr (which was reduced over the year). Hen profits before tax rose by 12 per cent, fr £2,961,000 to £3,330,000.

Net earnings have benefited fr £800,000 of investment allowances, whi ICT is transferring to a developme account. After allowing for the tax rel on investment allowances the maintain dividend is still covered 2¾ times, but if t relief were taken the cover would fall 1.8 times Cash flow last year totalled £ million but capital expenditure was betwe £11 million and £12 million and it w clearly be necessary to raise further fun but the directors have no present intenti of doing so. At 102s., close to their 19 peak, the £1 ordinary shares yield only 2 per cent—a return which perhaps discoun fully the growth prospects of the electron and accounting machine industry. But tw "bull" points are ICT's agreement wi Radio Corporation of America (which pr vides for an exchange of technical inform tion and patents in the field of electron data processing and for purchases of equip ment) and the growing interest that is bein taken in the shares by American investors

Tube Investments

IT was no surprise that this week's annua meeting of Tube Investments brough a forecast from Sir Ivan Stedeford, th chairman, of lower profits for the curren year. His statement with the accounts ha shown that the group was facing many dif ficulties in the cycle and aluminium divi sions, while there seems little chance o early recovery in profits from its steel in terests. Unless a marked upturn in trad occurs shortly, Sir Ivan thinks it unlikely that Tubes could "make nearly good th reverse we shall have already suffered." Though he does expect net profits to com out near those for 1959-60—say about £ million, against £9.3 million for 1960-61. This would mean equity earnings about 5 points lower at 37 per cent but would leave adequate cover for a maintained 14 per cent dividend. The market's immediate reaction was to mark the shares down by 2s., but on further consideration of Sir Ivan's assessment, the £1 shares regained most of the earlier fall and at 62s. 4½d. yield 4½ per cent.

Tanganyika Concessions

THE publication of the full report of Tanganyika Concessions for the year to July 31st, in which the chairman, Captain Charles Waterhouse, said "it would be idle to attempt any prophecy on future events," coincided with the announcement that all the mines and plants of Union Minière in Katanga were "practically idle." Tanks' investment in Union Minière is its principal earning asset, the other being the Benguela Railway, which runs from the Congo

gh Angola to Lobito. They provided y 95 per cent of Tanks' income in -61; the yield of 19 per cent on the shares at 17s. 3d. measures the uncerties about hard cash dividends in the e. In 1960-61, Tanks' return on its tments in the Benguela Railway was or less maintained, but Union Minière he dividend, so reducing Tanks' gross me from £4,452,000 to £3,296,000 and pelling a cut in its own dividend from d. to 3s. 3d. per share. Recently Union ère declared an unchanged interim; there must be doubts about the conued earning of money in the Congo and nga and getting it out.

ACV

THE preliminary results of Associated Commercial Vehicles, which gave some ation of the prospects for the current ; more than satisfied the expectations he stock market and the £1 ordinary es rose by 2s. to 74s. 4½d. (to yield 4.3 cent) after they had been announced. he year to September 30th ACV's gross fits rose by 27 per cent, from £1,513,000 £1,921,000 and net profits by the same portion from £783,000 to £968,000. But 1960-61 figures exclude the results of nsport Equipment (Thornycroft) which group acquired on March 1st and which inued to make a loss in the subsequent n months. The directors say that the was non-recurring since it arose from ing down stocks and the cost of integrat-Thornycroft into the group and it will written off in the balance sheet.

s forecast, a final dividend of 11 per is being paid, making a total of 16 per for the year. The capital was inued in January by a one-for-one rights e and the dividend now costs £424,000, pared with £288,000 needed to pay the per cent dividend on the original capital 959-60, and the earnings cover has fallen 2.4 to 2.1 times. The directors say that order book is higher than it was a year and that a marked increase in export ers has more than offset the decline in e orders.

Barclays DCO

WHILE the political tempo has quickened in many of the 41 different ntries where Barclays DCO operates its 79 branches, economic activity slackened several of the territories, particularly in th Africa and the Rhodesian Federation, commodity prices generally fell. Yet the k's deposits rose by £20 million to a new k of £637 million by September 30th. e balance sheet also reflects the three ten rights issue in April and the total of ital and disclosed reserves has risen from 4.2 million to £30.8 million. Advances w a much smaller increase than in recent rs—up at the balance sheet date from 01.2 million to £305.8 million but well down from an earlier peak of £337 million, and so bringing a marked increase in the bank's liquid resources.

The high level of advances helps to explain why disclosed profits have risen from £1,469,000 to £1,597,000 after the normal transfers to inner reserves, which again include a further provision against investments. As forecast at the time of the rights issue, the dividend has been maintained at 10 per cent, of which the final of 5 per cent is paid on the increased capital. Can the bank maintain this rate of progress? Mr J. S. Crossley says that the full effect of the running down of economic activity may not yet be fully reflected in the bank's figures, and he adds that in most of the territories where the bank operates confidence will be the major factor in the next few years. It may be an encouraging sign that despite the political uncertainty in so many parts of Africa the £1 shares of Barclays DCO are now higher than a year ago despite the intervening rights issue; at 38s. 3d. they yield 5¼ per cent.

Mercantile Credit

ON Wednesday the 5s. shares of **Mercantile Credit,** one of the largest hire purchase finance houses, put on 7½d. ahead of the results but this gain was more than lost on Thursday following the news of the cut in the dividend from 12½ to 7½ per cent and the drop in trading profits from £1,634,000 to £678,000 in the year to September 30th. With the interim dividend of 5 per cent last April came a warning that during the early months of the financial year profitability had been markedly less than in the corresponding period in the previous year but that the easing of restrictions had brought a considerable expansion both in volume and profit. It was clear that the company was still being hit by bad debts although a year ago Sir Mark Turner, the chairman, said that he thought sufficient provision had been made to cover all known doubtful items.

Now in the preliminary statement the directors say that the lower profit has been struck after making exceptional provision for bad and doubtful debts. No indication is given of the size of this provision except that £175,000 of it was charged not against revenue but against tax provisions no longer required. For shareholders (who include Westminster and Martins Banks which together hold 40 per cent of the equity) left with a reduced dividend which is only partially covered by earnings there is but one consolation. Despite the depressing figures there has been a further expansion in the volume of business, reflected in the increase in outstanding hire purchase and other instalment debts from £72.4 million to £80.3 million and at the end of September unearned finance charges amounted to £7.7 million, against £6.7 million a year earlier. On the lower dividend the shares at 13s. 3d. yield only 2.8 per cent.

London Stock Exchange

FIRST DEALINGS:	Nov. 27	Dec. 11	Dec. 29
LAST DEALINGS:	Dec. 8	Dec. 28	Jan. 12
ACCOUNT DAY:	Dec. 19	Jan. 9	Jan. 23

THE stock market was quiet at the opening of the long Christmas account this week. Towards the end of last week, before the new account, there was less selling of equities, and with the *Financial Times* index down to about 290 a number of buyers appeared in search of bargains. Further news of lower earnings among the steel companies held back the rise in equity prices on Monday, but it was resumed with quiet selective buying on Tuesday. Institutional buyers appeared on Wednesday encouraged by the approach of the New Year and the tone of the market benefited from a firm Wall Street; there was indeed some buying on US account. Over the week to Wednesday *The Economist* indicator rose by 8.2 points to 355.5, reflecting the rise in oil share prices and the strong demand for Unilever.

Before the weekend the gilt-edged market was quiet and the news of the conversion operation came after hours on Friday. On Monday there was a good deal of switching, although the short-dated stocks failed to hold their early gains, and by Wednesday there was also some investment buying. Treasury 5½ per cent. 2008-12 rose 1⅛ to 84¾ and the undated stocks moved up in sympathy, 3½ per cent War Loan rising by ⅞ to 52⅛.

Among hire purchase shares Mercantile Credit gained 7½d. ahead of the results, but after the lower dividend was announced the shares were marked down on Thursday morning to 12s. 9d.—a net fall of 1s. 1½d. Insurance shares were irregular under the influence of selective buying; Commercial Union lost 1s. 6d. to 65s. 9d. but Legal and General gained 1⅝ to 38⅞. Breweries were a quiet market after the rash of take-over talk in the previous week and Bass, Mitchells and Butlers gained 4½d. to 15s. 3d. after its results. Among chemical shares ICI reversed the downward trend of recent weeks and gained 2s. 3d. to 58s. 3d. There was also an improvement in store shares and GUS "A" gained 1s. 6d. to 52s. 6d.

Electrical shares were depressed by small selling and AEI lost 9d. to 28s. 3d., but Decca Record recovered from the losses made following the denial of take-over rumours to gain 2s. over the week to 73s. American and Continental buyers helped to raise the price of Elliott Automation by 3s. 4½d. to 43s. 1½d. Gains in steel shares on Wednesday helped to offset part of earlier losses but they were generally lower over the week; Whitehead lost 3s. 3d. to 42s. 9d. Unilever were the bright spot of the industrials after their introduction on the New York Stock Exchange; they gained 9s. 10½d. to a new high of 53s. Oil shares rose strongly under the lead of Shell Transport which gained 8s. 3d. to 121s. 6d.

THE MONEY MARKET

THE discount market had a very difficult time this week. Credit was tight; rates for day-to-day money have never fallen much below 5⅛ per cent and in consequence profit margins have been squeezed; the market failed to get any 63-day bills at the tender, for the first time ever; and it was forced to borrow from the Bank of England at Bank rate on five of the six working days to last Wednesday. The Bank's return for Wednesday showed discounts and advances, which partly reflect this penal borrowing, at £95 million, an increase of £35 million.

This pressure on the market followed last Friday's Treasury bill tender when the syndicate of discount houses raised its bid for the 91-day bills on offer by 2d. to £98 13s. 5d., and the average rate of discount fell by 7·74d. to £5 6s. 5·34d. per cent. Although the fall of just over ⅛ per cent in the bill rate over the past five weeks seems gradual enough, the authorities have obviously decided that in present circumstances it is too rapid. The discount market is now in a difficult position. It is short of bills but the authorities have virtually vetoed its chasing the bills by pushing the rate down.

(1) Current statistics of employment by industry, based on the 1958 Standard Industrial Classification, go back only to May, 1959. Manufacturing employment for earlier dates is shown on the old basis (1948 SIC). (2) Engineering and electrical goods, shipbuilding and marine engineering, vehicles, metal goods. (3) Textiles, leather goods, clothing, food, drink and tobacco, timber, furniture, paper, printing and publishing. (4) Number registered as unemployed expressed as a percentage of the estimated number of employees. (5) Dorset (excluding Poole) was transferred from the Southern to the South Western Region on May 12, 1958. (6) Deliveries. (7) Great Britain. (8) Excluding all screening losses normally amounting to around 5,000 tons a week. (9) Average for third quarter. (10) England and Wales. (11) Generation for public supply. (12) Average for fourth quarter.

APPOINTMENTS

Cossor Radar & Electronics Limited

(A member of the Group controlled by the Raytheon Company, U.S.A.)

require staff for work on

BUDGETARY CONTROL

and

ORGANISATION & METHODS

These are challenging and demanding appointments in a progressive company. They call for considerable initiative and drive. The successful applicants should:

(i) Be in the age range 27-35.

(ii) Have had practical industrial experience either in operating a system of budgetary control, or in O. & M. work on administrative or production procedures.

(iii) Preferably hold an accounting, costing or engineering qualification.

The salaries, depending upon age and experience, will be approximately £1,500 per annum. Applications, which will be treated in strict confidence, should be made to:

The Personnel Manager,
Cossor Radar & Electronics Limited,
Pinnacles,
Harlow, Essex.

COSSOR

D.S.I.R. Headquarters, London, W.C.1, invites applications for a post in Economics Section. DUTIES: To take part in planning and executing studies of the research and development needs of industries or sectors of the national economy. QUALIFICATIONS: 1st or 2nd Class Hons. degree in Economics with at least 3 years' post-graduate experience either in industry or in research in industrial economics. A lively interest in technological development is desirable. SALARY RANGE: £1,402-£1,710. Application forms from Manager (PE 33240), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4. Closing date 29th January, 1962.

A YOUNG QUALIFIED ACCOUNTANT OR FINALIST is required by an expanding group of technical journal publishers to develop budgetary control throughout the group. His duties will include assistance with the preparation of monthly figures and he will be required to use initiative and drive in investigating and pursuing cost variances. He will report direct to the Company Secretary. Age not over 30. Salary £800-£900. Luncheon Vouchers. Contributory Pension Scheme.—Box 1574.

C. H. BAILEY LIMITED

LONDON

We have a VACANCY for:

GRADUATE with some commercial experience to undertake market research in the light engineering field.

The successful applicant will also be required to assist the Sales Engineers in the home market.

Application is to be made to the Personnel Department, C. H. BAILEY LTD., Sackville House, Sackville Street, London, W.1. All applications will be treated in the strictest confidence.

FOR GENEVA

Internationally known American company requires qualified accountant, preferably with some knowledge of French (but this is not essential), aged 25-35, starting salary from £2,000 to £3,000 per annum depending on experience and ability. Would be required to take up position in Geneva as soon as possible.

Please send full particulars, including present salary, to Box 1573.

HUMAN RESOURCE DEVELOPMENT FELLOWSHIPS

THE ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT, PARIS, proposes to grant a number of Fellowships to young economists, statisticians and other qualified nationals of Member countries for training in one of the Mediterranean countries in forecasting manpower and education needs in relation to economic development and formulation of educational programmes in consequence. Fellows will work in one of the Mediterranean countries where this type of work is being carried out by Governments in co-operation with O.E.C.D. under the Mediterranean Regional Project. Monthly remuneration will be in line with normal salaries of equivalent professional groups in the countries concerned, plus lodging allowances. Particularly well-qualified applicants would receive special consideration.

Duties:

The Fellowship will be for a period of twelve months and will include both practical and theoretical training.

Qualifications:

Recent degree in economics, economic statistics, operational research or other appropriate disciplines and, if possible, professional experience.

Candidates should be willing, and give some proof of being able, to accept professional responsibility in teams dealing with educational planning, particularly in developing countries.

Knowledge of either English or French; knowledge of one other language of the Mediterranean countries would be an advantage.

Application to the Directorate for Scientific Affairs, O.E.C.D., 3 rue André Pascal, Paris XVIe, before 15th January, 1962.

ADMINISTRATIVE COUNTY OF LEICESTER

WORK STUDY OFFICER required to introduce and maintain work study techniques in the Council's service. Candidates should hold a University degree or a professional qualification and have had formal training in work study followed by at least two years' experience in large organisations.

This is a new post suitable for a man of personality, who is prepared to work on his own initiative.

Salary within the scale £1,560-£1,825 according to qualifications and experience.

Full particulars obtainable from the County Clerk, County Offices, Grey Friars, Leicester.

UNIVERSITY OF AUCKLAND

NEW ZEALAND

Applications are invited for the following appointments:

SENIOR LECTURESHIP IN COMMERCIAL LAW

The person appointed must be prepared to deliver Lectures in the subjects Commercial Law I and II and Trustee Law to the standard required for the B.Com. degree and for the Professional Accountancy examination. The present arrangement of staff in the Department makes it desirable that he should lecture in Company Law, Trustee Law and Negotiable Instruments. Applicants will be expected to have the degree of LL.M. or its equivalent and to have had some years of practical experience in a legal office. Overseas applicants are informed that the law of New Zealand is substantially the same as the law of England, subject, in the case of some of the subjects for the degree, to statutory modifications. Intending applicants need not be deterred by the fact that their training has been wholly in the law of England.

LECTURESHIPS IN ECONOMICS AND ECONOMIC HISTORY

The Lecturer in Economics will be expected to teach and examine courses primarily in banking and public finance, and to undertake research in this field, but he may also be required to do some teaching and examining in elementary economic theory.

The Lecturer in Economic History will be expected to teach and examine courses primarily in economic history and to undertake research in this field, but he may also be required to do some teaching and examining in the more elementary stages of economic theory.

The salary ranges are:

Senior Lecturer: £1,750 p.a., rising to £2,000 p.a. by three annual increments of £100 and one of £50.

Lecturer: £1,250 p.a., rising to £1,700 p.a. by annual increments of £75 each.

Commencing salary within the respective ranges will be determined according to qualifications and experience. Travel and removal expenses are allowed within certain limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in New Zealand and London on 29th January, 1962.

LANCASHIRE COUNTY COUNCIL

RESEARCH ASSISTANT required in Planning Department at PRESTON. Commencing and maximum salary according to qualifications and experience within £645-£1,310 per annum.

Applicants should possess a good honours degree in economics, geography, sociology or related subjects and should be interested in problems of industry, population and land use.

Applications, giving age, qualifications, present appointment, experience and salary required, to the County Planning Officer, East Cliff County Offices, Preston, by 15th January, 1962.

KWAME NKRUMAH UNIVERSITY OF SCIENCE & TECHNOLOGY, KUMASI, GHANA

Applications are invited from suitably qualified honours graduates for two posts of LECTURER IN GEOGRAPHY in the Faculty of Arts and Social Studies Department of the University.

Applicants must have specialised knowledge in any two of the following fields: Meteorology and Climatology, Geomorphology, Political Geography, Economic and Industrial Geography, History of Geographical Discovery. Experience in field work is desirable.

The lecturers appointed will work mainly with students reading Geography as a General Arts subject, but they may be asked to contribute to the development of a broad scheme of Land Use Studies to be offered to technological students.

This scheme will put stress on the study of African history, institutions, cultures, etc., and applicants should state any particular interest and experience they may have in this field. Opportunity can be provided for research.

Appointments are normally for five years but may be renewed; three months' notice of termination of an appointment is required on either side.

Contract Salary Scales are:

Ghanaian	£1,156 5s.—£2,031 4s.
Expatriate	£1,386 —£2,508

Children's allowances are paid in respect of Expatriates up to a maximum of five children at a rate of £50 per annum per child resident in Ghana and £100 per annum per each dependent child in full time education overseas up to a maximum of 21 years of age.

The University is fully residential and members of staff are normally housed in pleasant modern bungalows on the spacious campus. The climate and living conditions are good.

Annual leave with three free return passages in four years is granted to members of staff and their families.

Application forms may be obtained from the Assistant Registrar, Kwame Nkrumah University of Science and Technology, 29 Tavistock Square, London, W.C.1, who will also be pleased to answer any questions about living conditions in Ghana. Completed application forms in triplicate together with two recent testimonials should reach him not later than 20th January, 1961.

The Wellcome Foundation require for their Biological Control Laboratories a Statistician to take charge of their Statistical Unit at Dartford.

Applicants should possess a degree in statistics or mathematics, or an equivalent professional qualification. The work entails the design and analysis of routine biological assays and research projects. Previous experience in this field would be an advantage. Salary according to qualifications and experience. Applications should be made in writing to the Personnel Manager, Wellcome Chemical Works, Dartford, Kent.

THE ECONOMIST INTELLIGENCE UNIT invites applications from economists to fill a vacancy on the research staff of their Export Research Department. Applicants should have a good honours degree in economics, preferably with some business or research experience in the field of transport. Applications, with details of qualifications and experience, should be sent to the Managing Editor, The Economist Intelligence Unit Limited, 5 Bury Street, St. James's, S.W.1.

J. & J. COLMAN LTD., ARE LOOKING FOR A

JUNIOR MARKET RESEARCH EXECUTIVE

Candidates should preferably be in their mid-20's and have some experience in market research. (Associate Membership M.R.S. an advantage.) A degree would be useful though not essential. This will be a permanent position in Norwich giving scope for experience over a wide field in food products. Please write in confidence, giving details of age, education, career to date and some indication of salary required, to the Personnel Officer, Carrow Works, Norwich.

UNIVERSITY OF DURHAM

KING'S COLLEGE, NEWCASTLE UPON TYNE, 1.

The Council of King's College invite applications for THREE LECTURESHIPS in ECONOMICS from 1st October, 1962, or such other dates as may be arranged.

Salary scale £1,050 by annual increments of £75 to £1,400 and then by increments of £75 to £1,850 (efficiency bar at £1,550) with initial placing according to qualifications and experience. Family Allowance and F.S.S.U. benefits.

Applications (two copies) which should include the names and addresses of three referees, should be sent not later than 20th January, 1962, to the Registrar and Secretary (from whom further particulars can be obtained.

MAJOR BRITISH ADVERTISING AGENCY

with branches in all Common Market countries needs an Information Officer to handle desk research in the U.K., co-ordinate it on the Continent and control operation of its library.

The position has considerable development possibilities for the right person who should have as wide experience as possible, preferably both in consumer and industrial products.

Desirable qualifications:

Degree in Economics, age 27-38. Salary upwards or downwards from £1,500 depending on qualifications.

Please write to Staff Manager, Colman, Prentis & Varley Ltd., 34, Grosvenor Street, W.1.

Central Electricity Generating Board

MATHEMATICIANS

required in the System Planning Branch of the Planning Department at Headquarters, London, S.E.1.

The successful applicants will join a group of mathematicians carrying out statistical and analytical investigations into problems associated with the growth of electricity demand and the related requirements for new generating and transmission plant for the optimum expansion of the system as a whole. Excellent computing facilities are available to the group.

● ***Salaries on scales within the range £970 - £1,890 according to duties and responsibilities.***

Applicants should possess a University Honours degree in statistics or mathematics with subsequent experience in industry for the higher scales.

Applications, stating age, qualifications, experience and present position and salary, to the Appointments Officer, 24-30, Holborn, London, E.C.1, by 2nd January. Quote Ref. EC/542.

THE UNIVERSITY OF MANCHESTER

SIMON FELLOWSHIPS

The University offers a number of Simon Fellowships for advanced study or research in the social sciences. This term is used in a wide sense to include not only Economics, Government, Sociology, Economic and Social Statistics, etc., but also such equally fields such as the Organisation of Business, Education, Jurisprudence and Social Medicine. Values within the range of £1,150-£2,050 per annum (Simon Research Fellowships) or within the range of £2,150-£2,550 per annum (Simon Senior Research Fellowships), according to qualifications and experience. They are open to members of the public services as well as to persons with academic experience. Applications should be sent, by January 15, 1962, to the Registrar, the University, Manchester 13, from whom further particulars may be obtained, and who will be pleased to answer any enquiries regarding the scope of the Fellowships.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF HISTORY

Applications are invited for appointment as Lecturer or Assistant Lecturer in Modern History at a salary on the scale £1,050 x £50—£1,400 x £75—£1,850 (efficiency bar at £1,550) a year for a Lecturer, or within the range £800-£950 a year for an Assistant Lecturer, according to age, qualifications and experience. Preference will be given to candidates having qualifications in Modern European History.—Applications (three copies) stating date of birth, qualifications and experience, together with the names of three referees, should reach The Registrar, The University, Leeds, 2 (from whom further particulars may be obtained), not later than 20th January, 1962.

UNIVERSITY OF HONG KONG

SENIOR LECTURESHIP IN ECONOMICS

Applications are invited for the above-mentioned post. Applicants should have experience in teaching and research, and those with an interest in the economic problems of the Far East will be preferred.

Annual salary (superannuable) is: £2,700 x £75—£3,000 (man), or £2,025 x £60—£2,265 (woman). The equivalent of income tax in the Colony is comparatively low.

Air passages (or first class sea passages of equivalent cost to tourist air passages) are provided for expatriate staff on first appointment and leaves. Accommodation at reasonable rental is provided.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth (Branch Office), Marlborough House, Pall Mall, London, S.W.1.

Applications close in Hong Kong and London on 15th January, 1962.

Invest in The West Indies

How Federation benefits new investors

Economic and foreign trade policies are co-ordinated, the aim being to establish a fully diversified economy. Transport, communications and power facilities are being expanded—new harbours and roads, larger airports, all these are creating new opportunities for new secondary industries.

THE RESOURCES ARE THERE:
Oil, bauxite, water power and many minerals. Fruit, cocoa, cotton, coffee, sugar, spices, crops of all kinds. And 3½ million people.

THE SKILLS ARE THERE:
Considerable progress in education has been made in recent years and much more is planned. Research programmes of The Agriculture Faculty of the University College of The West Indies (formerly the Imperial College of Tropical Agriculture) and its other Faculties benefit the whole region.

THE MARKETS ARE THERE:
Both Americas are prosperous near-neighbours. The tourist possibilities of The West Indies are far from fully realised.

Customs Duty and income tax concessions are available

D.B.A.

ucellier - Bendix - Lockheed - Air Equipement

recent merger of the D.B.A. Company with the French Lockheed Hydraulic Brake Company provides an occasion to review the growth of this important French firm.

- D.B.A.'S HISTORICAL BACKGROUND

ablished in 1830, Ducellier merged with the former R.B. & T.E.M. anies to become the foremost French manufacturer of

AUTOMOTIVE ELECTRICAL EQUIPMENT

% of French cars are equipped with units manufactured by D.B.A.'s llier division in its seven factories employing 4,200 people, mainly in the e of France (Auvergne).

rmed in 1920, Bendix has become the most important French and European facturer of

AUTOMOTIVE BRAKES
(for private and commercial vehicles)

% of French cars are fitted with brakes made by D.B.A.'s Bendix division two Paris factories, employing 2,500 people.

kheed, formed in 1930, is now one of the major French and European cers of

HYDRAULIC BRAKE CONTROLS

% of French cars are equipped with master cylinders, wheel cylinders, g and liquids manufactured by D.B.A.'s Lockheed division in the three ries at Saint-Cloud, Beauvais (Seine & Oise), and Montrond (Loire), oying 2,000 people.

r Equipement, established in 1934, has become one of the leading French facturers of

AERONAUTICAL EQUIPMENT

special interest in this field are the servodynes used in the controls of the velles. Air Equipement will shortly deliver the superservodyne to equip Caravelles intended for the U.S. market.

special test and research centre is to undertake the further development e products now manufactured by the Air Equipement division at its two ts, one at Asnieres (near Paris), and the other at Blois (Loic-et-Cher), h together employ 2,300 people. Altogether D.B.A. employs 11,000 ple in 14 factories, located in different parts of France, with a turnover 00,000,000 N.F.

addition, the Roto-Diesel Company, founded by D.B.A. and Lucas ted, has begun mass-production of

DIESEL INJECTION PUMPS

s works at Blois, where there are 600 employees.

II. - FINANCIAL ASPECT OF D.B.A.

following a careful policy of strict self-finance, D.B.A. has been able to y out successfully its development and modernisation without recourse to assistance of its shareholders or to capital loans from outside sources.

he Company is in a position to meet any partial market recession.

lthough this policy of financial independence may have limited dividends he shareholders, this has been offset by the issue of bonus shares as a result the incorporation of sundry reserves into the Company's Registered pital.

he wisdom of this policy has shown itself noticeably on the Stock Exchange rket, where, during the last ten years, the quoted prices of the Company's res has increased forty-fold.

III. - TECHNICAL ASPECT OF D.B.A.

During the last three years D.B.A. has made great efforts to bring its mass-duction methods into line with those of the largest manufacturing anisations:

The extensive growth of the research and engineering departments, following the recent mergers (and particularly that with Lockheed) has permitted centralisation of engineers, who are now able to specialise where hitherto they were duplicating their functions in competing concerns.

— The pooling of patents.

— The creation of laboratories and modern testing plant with all the appropriate equipment, in which are tried the new techniques which are the basis of future development of:—

alternators	automation
disc brakes	nuclear energy
electronics	

— The building construction and expansion of existing premises.
The original total surface area of 150,000 square metres has been increased in the last three years by 50,000 square metres of plant and laboratories of the most up-to-date design, providing the very best working conditions. This new area is distributed as follows:

12,000 square metres around Paris	16,000 square metres at Beauvais
20,000 square metres at Auvergne	2,000 square metres at Blois

A new three year scheme is under consideration to continue this building expansion.

— The renovation and rationalisation of machinery and tools on a substantial scale.
During the last three years 40,000,000 N.F. have been spent on the improvement of production methods, and on the installation of modern specialised and automated mass-production machinery, developed by D.B.A. technicians.

— Market research has been undertaken to ensure sales development, both inside France and abroad, and also to ensure sufficient raw material supplies at advantageous prices.

— The establishment of a Personnel Training Department to help the staff make the best of their opportunities for promotion within the firm.

IV. - THE ECONOMIC ASPECT OF D.B.A.

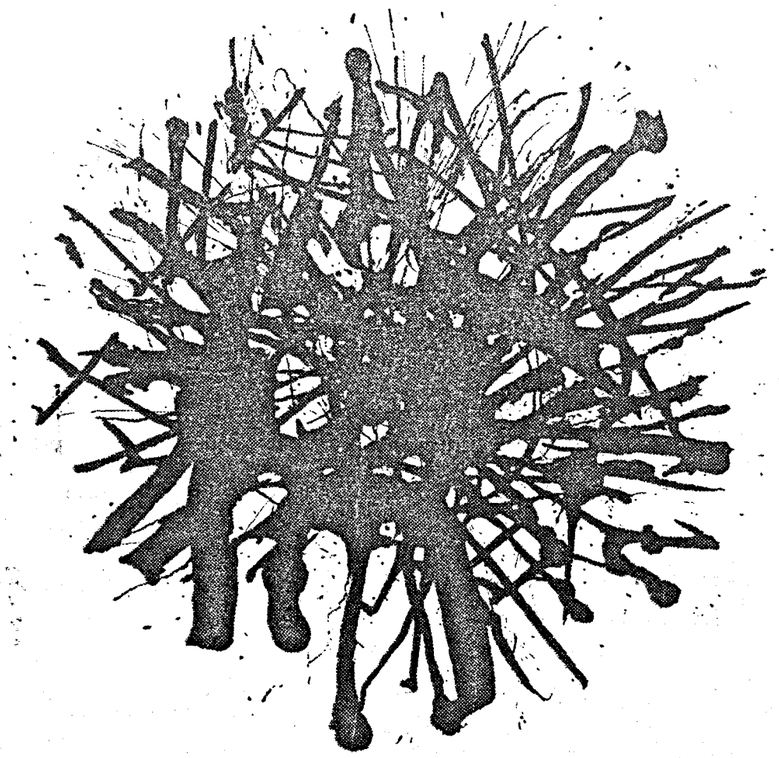
Under the influence of the Common Market, the market in Europe has shown a strong tendency for firms of medium size to amalgamate and form powerful units with the financial backing of international companies of high standing.

D.B.A. is one of the most striking examples of such amalgamations to have taken place in France during the last three years.

In 1959 D.B.A. was already a powerful group of French automotive and aeronautical producers.

The Lockheed merger is a marriage of convenience which, by linking the production of the mechanical (Bendix) and hydraulic (Lockheed) brake components, gives D.B.A. control of the French brake market, and puts them in a very strong position to compete in German and Italian markets.

Their technical and financial resources and their industrial potential permit D.B.A. to guarantee the supply of high quality brake equipment at low prices to European vehicle manufacturers, factors which should induce those manufacturing brakes themselves to follow the lead of French vehicle manufacturers, and avail themselves of D.B.A. facilities.



In the remaining sectors of D.B.A.'s activities the Company has studied the adaptation of its products to every type of vehicle manufactured in Europe. Italian and German vehicle manufacturers who have been contacted, have been impressed by the industrial potential and the facilities offered by the D.B.A. organisation, a fact which assures the project an interested reception.

The world distribution of French cars has encouraged D.B.A. to build up a large international commercial network and to grant manufacturing licences to a number of countries, including South America and Spain.

The increased potential of D.B.A. after these amalgamations, especially that with Lockheed, enables it to begin a further significant stage in its commercial development.

How much does this cost to become ... **THIS?**

The cost of turning raw materials into a finished product depends on many factors. The most important of these is the efficiency of handling materials throughout. Lansing Bagnall are the largest and most experienced manufacturers of materials-handling machinery in Europe; machinery that offers the ultimate solution for any handling problem. Each Lansing Bagnall fork lift truck is custom built, with knowledge and craftsmanship that is unchallenged in the industry. One Lansing Bagnall fork lift truck, for example, can increase the capacity of existing buildings; reduce loading costs; improve utilisation of existing production plant; simplify inventory control; and reduce time and labour at dispatch and receiving points. And Lansing Bagnall offer the most efficient and comprehensive after-sales service in the industry — available for the whole life of any truck purchased.

Recognise your need for improved handling—and Lansing Bagnall will show you how it can be done, promoting greater efficiency and economy for you. Write, or if urgent telephone, for advice on any problem of handling and storage. Lansing Bagnall will recommend, without prejudice or commitment, the most suitable solution.

INTERNATIONAL

LIGHT IN DARKNESS

The only light in the gloomy world landscape scanned by President Kennedy and the Prime Minister at Bermuda was their determination to press ahead with talks with Russia on Berlin (p. 1265).

So long as there is hope of serious East-West discussions on central Europe, the West should not make matters worse by adopting plans for a **European** or **Nato deterrent.** The military need is not yet urgent; there is time to talk (p. 1266).

Papal Summit? A reader's New Year plea for Pope John to act for peace (p. 1277).

THOUGHTS FOR FOOD

Britain's application to join the common market suggests a fresh look at **world trade in food.** The developed countries are becoming major food exporters; the undeveloped countries need markets for their manufactures (p. 1268).

The movement to unite Europe will stop in its tracks, if **the Six** cannot agree about **agriculture** (p. 1274).

WOLF AND BENDING REED

The mobilisation, over Christmas, of British forces to meet—it seems—a threat to **Kuwait,** remains unexplained. It may have been made harder to cry "wolf" again (p. 1271).

Details of Kuwait's overseas investments have been revealed—for the first time—to *The Economist* (p. 1304).

No Arabs have rushed to defend President Nasser against King Hussein's shrill attacks. Arab judgment on **Egypt** is suspended (p. 1272). At home President Nasser is trying to compensate for lost glory by moves to tap popular support (p. 1272).

RELICS OF EMPIRE

China tolerates the Portuguese presence in **Macao.** It is economically convenient (p. 1293).

The Dutch have realised that it is time to get out of **New Guinea** (p. 1297). But negotiations with Indonesia will not get off the ground unless preconceived positions are abandoned (p. 1274).

FIRE AND WATER

Predictably unpredictable, Mr Tshombe has gone back on his undertaking to work with the **Congolese** central government. U Thant has been blaming the Union Minière for arming the Katanga forces. Rhodesia has been accusing the United Nations of atrocities. Once more the danger is growing that the flickering Congo conflict will flare up into a wider conflagration (p. 1276).

Three key African countries, **Tanganyika, Nigeria** and **Ghana,** are to get more American aid (p. 1297).

TRANSATLANTIC NEW YEAR

The Democratic party, in its present disjointed state, will be of little help to its President in the coming session of Congress or to its candidates in next autumn's elections (p. 1288).

Optimism is tempered quite rightly with caution in the American economic forecasts for 1962 (p. 1289).

Mr Zeckendorf will have to keep at least one foot on the ground as the price of having his business life underwritten by the British (p. 1290).

As usual American farmers have been producing too much (p. 1289).

To amalgamate and to put up fares are the means by which the American airlines hope to turn losses into profits (p. 1292).

College students are turning towards politics in a very right-wing way (p. 1290).

HOME

COUNTRY MATTERS

The New Year looks like being highly uncomfortable for the Government: the Tories can brace themselves for reverses at the polls, revolts from backbenchers, a crisis over Europe. Mr Macmillan must put his best feet forward—and not rely on the history of 1958-59 fortuitously repeating itself (p. 1267).

Working men's clubs are no longer the dingy pockets of underdoggery they once were thought to be: rich and numerous, they are a power in the land (p. 1270).

Britain's mass slaughter on Christmas roads may stem from Britons' mass pleasures at Christmas parties (p. 1273).

SOMETHING IN THE CITY

The moneylender is the ordinary man's traditional succour in desperation: and the sucker still seems willing to pay through the nose for his services (p. 1301).

Birmingham's overspill problems cast doubt on the soundness of some "sound planning"—and on the determination and ability of the Government and local authorities to plan soundly (p. 1287).

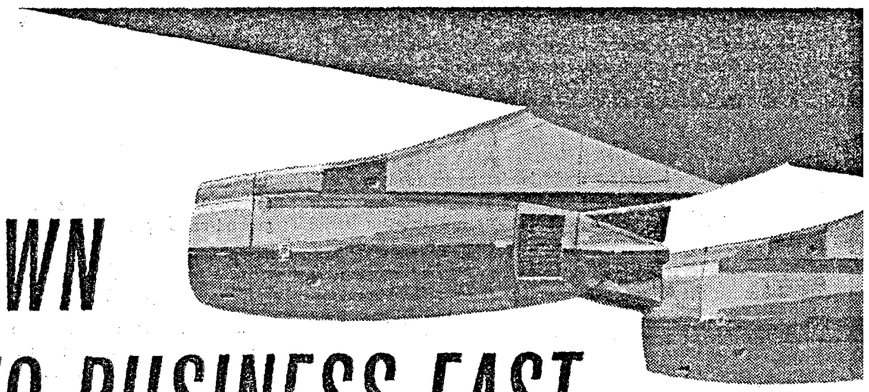
The Government's plan for Greater London has inherent weaknesses, which ought to be isolated and corrected (p. 1276).

BIRDS IN THE WILDERNESS

Government-aided aircraft builders are crying plaintively but vainly for sustenance the Government cannot provide: they are reluctant to thin their flocks and resentful of successful unaided builders—to whom the Government appears to be behaving badly (p. 1299).

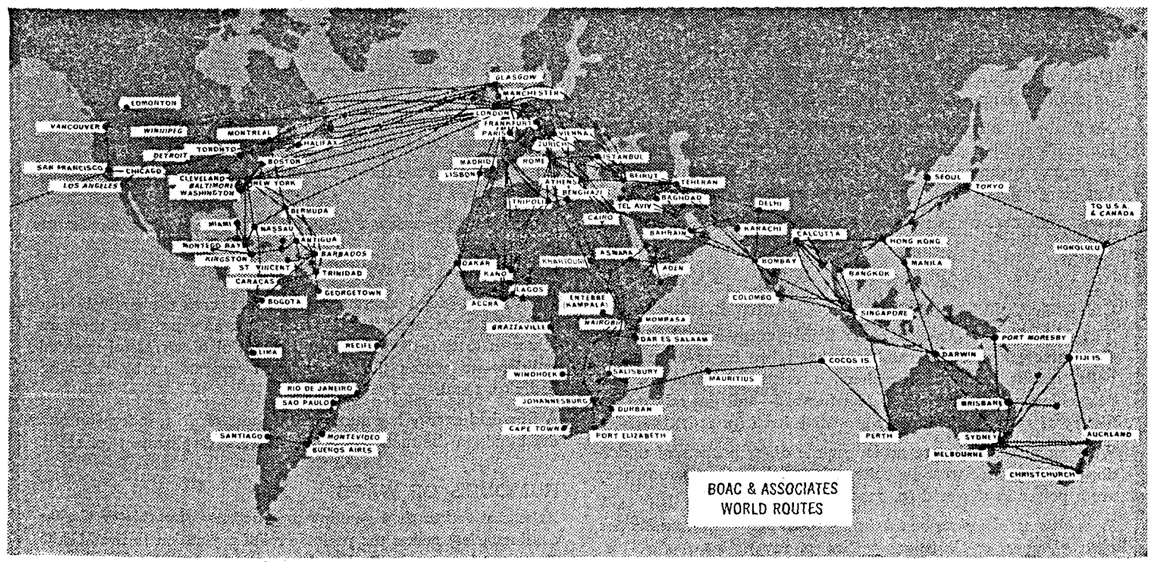
A Sheffield survey has uncovered a mess of drift, indecision and dead ends in the matter of school-leavers' employment (p. 1286).

RUMOURS OF WARS



Rehearsal rather than genuine preparedness (for this or similar contingencies) makes the periodic relief expedition to the Middle East read better than it plays (p. 1272).

Attacks are being mounted on the pause by post office workers and electricians: in another part of the forest, ITA and Equity continue to wage their war of attrition (p. 1273).



Davids with "hot" camshafts are denting the amour propre *of six-cylinder Goliaths* (p. 1306).

PUBLIC DEPARTMENT

Chill Winds

STATESMEN cannot and should not deck truth with tinsel to match the public mood at holiday times. Mr Kennedy and Mr Macmillan must have foreseen that the reference to preparations for a resumption of nuclear tests above ground would be the thing most likely to make headlines in their communiqué from Bermuda; and that these headlines would carry a chilling message into homes where festive warmth was in demand over the long Christmas weekend. The prevailing fashion of meeting to discuss the world's bleaker problems just at this season makes this kind of comfortless incongruity unavoidable.

The Bermuda communiqué presented the agreement on nuclear testing (for which, with sad significance, Christmas Island may be the site) as no more than a precautionary one. In spite of the ominous findings of the American inquiry into the implications of Russia's recent "massive series of atmospheric tests," no definite decision that the United States will now carry out tests above ground has been announced. The President and the Prime Minister merely agreed that preparations should be made, "as a matter of prudent planning for the future." It is clearly the intention to hold off the "final decision" long enough to give a chance of success to the imminent exploratory talks on Berlin and related questions with the Russians. And everything indicates that the Bermuda meeting has helped to clear the way for these talks, with the American ambassador in Moscow assigned the task of making the first contacts, while his British colleague stands politely in the wings in deference to French susceptibilities.

The prospect of movement on the Moscow front, however cautious, is at least more heartening than most of the other visible elements in the western world's cold New Year outlook. Admittedly, there may have been some exaggeration about the depth of the gloom that India's occupation of Goa has cast over the viability of the United Nations and the evolution of codes of moral behaviour between states in general; and the precautionary British moves in the Middle East during Christmas week now seem to have rested as much on a simple assumption that a fresh threat to Kuwait might logically follow the Indian move into Goa, as on the evidence, not very substantial, of an imminent Iraqi attack. But the UN is still deeply enmeshed in the Congo, where Mr Tshombe has, almost predictably, backtracked from the commitments he was supposed to have undertaken at his meeting with Mr Adoula, making it more doubtful than ever whether he is really in charge in Katanga; while his more intransigent partisans seem bent on holding out for independence, and the danger of a civil war backed by outside powers looks no further distant than it did in the July before last.

Among themselves, the western allies have once again proved unable to resolve satisfactorily the problem of shaping a common deterrent system that would scare off Soviet threats without striking equal fear into western hearts: the article that follows is devoted to this continuing problem. The sunny side of the Bermuda meeting—the firm decision to keep probing in Moscow—has not disposed of the ultimate difficulty of securing allied agreement on terms for a Berlin settlement; nor has the personal cordiality between Mr Kennedy and Mr Macmillan closed the gap between their two countries' attitudes to African affairs, attitudes of which their conspicuous disagreements over the Katanga conflict were merely an example.

The New Year both marks a challenging deadline for the six nations of the

European Economic Community, and ushers in a climactic period of stress for Britain in relation to the Six as well as for other countries whose trading perspectives depend on the eventual form of the enlarged European unity. Western Europe faces another danger apart from that of failing to unite : that it may be manoeuvred, or may manoeuvre itself, into a well-heeled but barren and ineffectual isolation.

These are all chill winds, but not killing ones. Passing from the coldest Christmas for many years into what promises to be a hard New Year, this country and its neighbours should not be resigned to letting international relations rest in a deep freeze through the winter. A frosty tingle in the toes can stimulate thought ; and the thinking that is now needed is of the type that may be called painfully clear.

Europe's Deterrent

Is Nato really in need of a strategic missile force of its own?

HERR STRAUSS, the west German minister of defence, is a purposeful man who generally gets what he wants. What he wants just now, it seems, is a Nato deterrent; to be more precise, a force of medium-range nuclear missiles in western Europe under the joint command of the Nato powers. On December 14th he persuaded the meeting of the allied foreign ministers in Paris that the permanent council of Nato should look into the question " at an early date." President Kennedy said in May that he was willing to consider the idea of a multilaterally controlled missile force (though he added an important qualification that went largely unnoticed), and the immediate response of many people is likely to be that, Nato and the deterrent both being Good Things, a combination of the two must be even better. It may not be so ; the allies ought to look twice at some of the difficulties involved before they leap at Herr Strauss's proposal.

There is no need to argue with Herr Strauss's premises, which are shared by a number of people who have put forward similar ideas. They point out, quite rightly, that the promise of the United States to send the Strategic Air Command into action if the Russians make a major attack on Europe is gradually becoming less convincing as the Americans realise (and the Russians realise they realise) that they would suffer hideously in return. Ever since the Russians acquired a significant number of long-range rockets it has been obvious that, sooner or later, the credibility of this promise would decline to the point where western Europe would have to take part of the burden of deterrence on its own shoulders ; and there are overwhelming arguments against each country in western Europe trying to do this individually—as Britain has done, and France is beginning to do. The question is whether the decline in the credibility of the purely American deterrent has yet reached danger point, and whether the military advantages of a jointly controlled force outweigh the political disadvantages.

These political disadvantages spring from the extraordinary difficulty of defining " joint control "—that is, who gives the order to fire the missiles. The simplest scheme, as suggested by Mr Alastair Buchan, would put the missiles under a Nato commander responsible to an inter-allied council (perhaps the existing permanent council in Paris) containing political representatives of all 15 nations. But this would not only be cumbrous—one can imagine the multilateral arm-twisting as these fifteen argued whether to fire or not—it would also leave the main question unanswered. So long as the United States possessed a veto, the European members of the alliance would have no guarantee that it would press the button when they wanted action, or refrain when they did not. All they would have gained would be the ability to plead their case on the inter-allied council.

Several ingenious ideas have been put forward to get round this difficulty. Dr Stikker, the secretary-general of Nato, wants a veto-less system of weighted voting under which any given country, perhaps even the United States, might be overruled by a majority of the rest. Mr Glenn Snyder, an American who has just written a sensible book on the whole problem of the deterrent,* suggests a semi-automatic system in which the missile commander would be given prior authority to begin the count-down in certain defined contingencies—and perhaps even to fire—unless the political authority actually told him to stop. But the root of the problem remains. It is hard to foresee any legislature, particularly the United States Congress, agreeing in advance to a mechanism that might subsequently land it in a nuclear war against its will. The blunt fact is that the two parts of the alliance cannot guarantee that their interests will always coincide in any future crisis.

The problem might be solved if it were possible to create not a Nato deterrent, but a joint west European one. In the sort of crisis that would call for the use of strategic nuclear weapons (the threat of a major Russian onslaught on western Europe) the interests of the main European allies would presumably coincide enough to make their decision quick and unanimous. The more supranational the deterrent was—the closer it got to being a nuclear European Defence Community —the more convincing it would look to the Russians. Among others, Mr Ben Moore in " Nato and the Future of Europe " has proposed a strictly European force. The trouble is that such a force would draw attention to the geographical cleft in the western alliance, and would also superimpose a second command structure in Europe on top of the Nato one. In any case, it is doubtful whether Britain and France are anywhere near to becoming ready to put their private nuclear forces into a common European pool. For all these reasons, this particular scheme seems to have been left to gather dust in the pigeon-hole of brave ideas.

ONE other, slightly different, solution has been offered for the problem of " fifteen fingers on the trigger "—which is a problem both of fingers that freeze and of ones that itch. It seems to be Herr Strauss's own preference, though he has not set out his proposals in detail, and indeed said on December 20th that the allies ought to keep their discussions private. This solution would preserve the idea of a deterrent controlled from both sides of the Atlantic, but it would sharply reduce the number of countries taking part in the decision whether or not to press the button. One participant would always be the United States (Herr Strauss has emphasised that in any particular case the President would have to give his consent to firing) ; the other chief one would be " the country threatened or directly concerned," to quote Herr Strauss.

If this were the way a Nato deterrent turned out, in many cases west Germany's would be the second finger in a two-fingers-only arrangement. Indeed, if German officers rose to high positions in a Nato missile command, Bonn's share in the control of nuclear weapons would grow spectacularly.

Doubtless this prospect makes scalps tingle from Liverpool to Leningrad, but that is not the important point. The main point is that, unless and until military necessity dictates otherwise, any marked rise in west Germany's nuclear status ought to take second place to a renewed attempt to reach an agreement with the communist powers about the future of central Europe. The future relationship between the Federal Republic and nuclear arms might yet be a subject of east-west discussion ; if it is settled in advance, the division along the Elbe may freeze for years ahead.

Does military necessity require the sort of deterrent Herr Strauss wants ? Not quite yet, so far as the layman can tell. Herr Strauss himself, presenting his ideas to the allied foreign ministers in Paris, spoke as if the problems caused by the Russo-American balance of power would come to a head not now, but in the next two or three years. Mr Glenn Snyder, in the book quoted, argues that Europe may be able to rely on the American deterrent longer than some people think:

> It can stand repeating that what counts in deterrence is not what we are willing to do, but what the enemy *thinks* we may do. . . . Even a very small chance, in Soviet estimations, that the United States might retaliate strategically to a massive ground attack in Europe might deter such an attack.

Fortunately, there are signs that President Kennedy agrees. When he spoke at Ottawa in May about the Nato deterrent, the President's only firm offer was to put five or more Polaris-carrying submarines in " the Nato command area." In fact, most or all of the Americans' existing force of Polaris submarines presumably spend much of their time cruising in North Atlantic and Arctic waters within reach of European Russia. Probably the most Mr Kennedy's offer means is that the order to fire their missiles would come to them via the Supreme Allied Commander, Europe, in Paris rather than the US naval Commander-in-Chief, Atlantic, in Norfolk, Virginia; it would come to either from the White House.

When President Kennedy turned to the possibility (he put it no more strongly than that) of establishing a Nato missile force " truly multilateral in ownership and control," he added two important reservations. First, it must prove feasible; second, this multilateral force must wait until Nato's non-nuclear requirements had been satisfied. The implication seems clear: the creation of a joint allied nuclear force can wait a little longer ; conventional rearmament is the more urgent.

To put a number of submarines under General Norstad's command (and perhaps to station an allied officer in each of them) would for the time being help to allay the fears of Europeans who think they are being left naked to a Russian attack. In the end, it may be necessary to go on to establish the " truly multilateral " missile force Mr Kennedy spoke of. But before Nato undergoes a sea change into the world's fifth nuclear power—and west Germany thus acquires a substantial nuclear authority—diplomacy should be given another chance to disentangle the problems of central Europe. Diplomacy and defence are not substitutes for one another, as Mr Kennedy pointed out in Seattle on November 16th. The pursuit of nuclear strength in Europe, if carried beyond the precise needs of the moment, may put both East and West in a posture where conciliation becomes impossible.

New Year Irresolutions

A look at the British political prospect for 1962

THE economic prospect before Britain in 1962 will be discussed at length in *The Economist* next week ; it does not seem particularly bright. Nor does the probable political prospect before the Government, so far as it can be predicted.

The most probable prediction for the early part of 1962 must be that the Government is likely to suffer some serious reverses in by-elections. It may even lose some Torrington-like seat or seats to the Liberals ; probably it will lose some seats to Labour, too, but mainly because its own voters are staying away from the polls or voting Liberal, rather than because they are rushing to embrace Mr Gaitskell. This, in other words, looks suspiciously like being early 1958 all over again. Between early 1958 and the general election in the autumn of 1959, the Government enjoyed a remarkable recovery in public favour. It seems to be supposed that the Government should be able to make a similar recovery between early 1962 and the autumn of 1963 (when most pundits expect the next general election). But why ?

Last time the Government secured its recovery by getting into an industrial boom at just the right moment ; it did this after temporarily beating cost inflation through standing up to a strike—Mr Cousins's London bus strike in the spring of 1958 —and then proceeding to reflate demand and production within the economy. It seems only too probable that it will miss that trick in 1962 ; the odds are that it will run away from a strike (and thus from imposing effective wage restraint), and then proceed to introduce a deflationary budget. Of course, it might still escape ; last time it stumbled on the right policy by a last-minute revolt of the Cabinet which brought resignation from a Chancellor who was committed to deflate demand, and by the ham-handed tactlessness of a big trade union leader in Mr Cousins. The second of these *dei ex machina*, at least, could still come to its rescue this time. But, on the present balance of probabilities, one's assumption must be that 1962 is likely to be a year of continued trade union pressure, continued lack of buoyancy in production and therefore general dissatisfaction with the Government.

This could have a major bearing on the biggest decision due in the year: namely, the decision whether or not to integrate Britain into Europe. Here again the most probable pattern can be predicted. It is no good pretending that Britain is likely to get into Europe on terms that will seem satisfactory to every Commonwealth producer of glutted temperate

agricultural products, and to every conceivable domestic and EFTA interest. The concessions that Mr Heath will eventually have to make will almost certainly be somewhat larger than saying that perhaps our tariffs will have to be raised against some marginal Commonwealth manufactured goods and that perhaps we will not be able to go to the stake in order to satisfy the last ounce of East Anglian or Portuguese pressure about safeguards for tomato purée. Some time during the coming year there is therefore likely to be a domestic political crisis over Europe. Either Britain will ride over it into the realisation that it must still go into Europe, even though Commonwealth governments will be saying some very rude things about our decision; or the negotiations with Europe will fail. One's guess is still on the side of supposing that they will not fail; but this is where the likely political background against which the decision will be taken becomes so important.

A very possible background, to repeat, is one where the Government may be losing ground severely in the country, where Tory morale may temporarily be very low indeed, and where there may be a general supposition in the press that the *next* government could be a Labour one. Of course, one can never forecast that the present British Labour party will not throw its best chances away; when and if any general supposition about an impending Labour victory in 1963 or 1964 catches hold, it may be as right to discount it as it was right to discount glib talk two years ago about the supposed certainty of "Tory government for at least ten years." But any such new supposition about Labour's brightening chances could create an awkward atmosphere of its own within the Tory party.

This would be a situation that could be very ripe for Tory backbench revolts; backbenchers are much more likely to revolt against party leaderships that seem to be directing their party towards a period of Opposition, than against leaders who are assumed to be likely to be in charge of ministerial patronage for another five years. Until recently, the Tory right wing had not been driven neurotic by the sort of bitter internal strife stirred up at the time of Suez. But now have come Katanga and Goa, and although the Right has not had to taste Suez's humiliation and gall, it has experienced two other sensations that could be almost equally dangerous: it has acquired a supercilious feeling of superiority towards lesser breeds like Mr Nehru and the United Nations in Katanga, and a knowledge that backbench revolts can sometimes succeed in swaying government policy.

This, then, is the political tightrope which Mr Macmillan might have to balance himself across in 1962. It will be a year that may require a very cool sense of balance indeed. He should not allow himself to be impeded by anything that may hamper that surefootedness. Not by that languorous unwillingness to look at possible dangers ahead which some people miscall his imperturbability. Nor by short-sighted eagerness to avoid temporary domestic inconveniences or rows. Not even by loyalty to any ministers in his Government who are plainly misplaced in their jobs.

Boxing the Trade Compass

Developed countries are now the biggest agricultural exporters; the developing countries need new markets for their industries

POPULAR mythology sees foreign trade as the swapping of machinery and industrial products made by clever Europeans and Americans for food and raw materials produced by Hottentots. Ancient Britons (Mr Harold Wilson's phrase) can still be heard asking why the Europeans should take in each other's washing by trading in a common market, when Britain ought to be exporting to Commonwealth countries to pay for food. In practice the great expanding markets for British exports in the postwar years have been, not the deserts and jungles of the undeveloped nations, but the maturing industrial economies of Europe and North America; and it is in those economies that mass markets for durable consumer goods and capital equipment will continue to be found in the next ten years. This fact lies behind the formation of the common market, Britain's application to join, and the new American interest in a still bigger partnership.

Even sophisticates, however, have not all taken in a second remarkable inversion of the popular image; the rich industrial countries have become not only the main markets for each other's industrial products but also the main exporters of food. The world's largest agricultural exporter is also the biggest industrial power, the United States. The common market countries at present satisfy 90 per cent of their food needs, and may soon be self-sufficient and indeed exporters of some products, like coarse grain. The main Commonwealth exporters of food—Canada, New Zealand, Australia—are, though only partly industrialised, countries with higher living standards than Europe.

All this is in a sense a creditable result of high productivity and investment. As labour has moved from the land into industry, modern agriculture has become a capital-intensive industry. The New Zealand farmer, scattering his fertiliser by light aircraft, even the British farmer with his tractor and machinery, produces more and invests more per unit of labour than many British industries.

But while production methods on western farms have advanced by leaps and bounds, methods of marketing have not. High production is sometimes the result not of high productivity, but of high protection. Subsidies and high protection in one country produce surpluses and dumping in the next. More protection follows. The net effect has been a damping down of the growth of international trade in food, which encourages everyone but the efficient exporter.

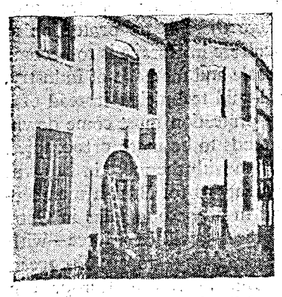
All this has been bewailed by agricultural exporters for years—with no effect whatever. Britain's application to join the common market has brought it to a head. Though protection by subsidy in Britain is as high as by tariff on the Continent, the British market is still the biggest outlet for agricultural exports from Canada, Australia and the United States. If Britain is to participate in a common European agricultural policy, the interests of these agricultural exporters will have somehow to be satisfied by Europe as a whole. The decision by the General Agreement on Tariffs and Trade earlier this month to embark on a series of world-wide commodity conferences is the consequence of the upheaval.

One bright idea for solving the problem of the West's bulging barns and dairies without tears is to make better use of surpluses. Instead of dumping them on other people's markets, it is suggested, surpluses should be put into a common pool (financed jointly) and given systematically to the governments of the two-thirds of mankind who still go hungry. Food production is after all one of the West's great economic successes. It seems absurd that abundance should be a burden when the constant failure of collective farming to produce enough hangs like an albatross round Mr Khrushchev's neck.

Detailed ways of giving food as aid are not hard to find. There have been times in India and Pakistan when American surplus wheat has staved off famine; the existence of a common western pool might save lives in any future emergency—another Congo or Angola. Food aid can also play a systematic part in development. As economic growth takes off, demand for food often rises sharply, placing a strain on a country's balance of payments which could usefully be relieved from surplus stock abroad. Care has to be taken that surpluses do not spoil existing exporters' markets. But the New Zealanders themselves have pioneered a scheme for giving powdered milk to Bombay's school-children (who would get none otherwise) which could be the forerunner of others. The British Egg Marketing Board is working on another scheme in collaboration with the United Nations Children's Fund.

A formidable consensus indeed—the head of the Food and Agriculture Organisation, the National Farmers' Union, the Australian minister for trade, the foreign affairs committee of the French Assembly—backs this idea of a more systematic use of surpluses. But one interest is conspicuous by its absence: the tax-paying consumer in the western countries. It is true that the French approach is generous. To help solve Britain's common market problem, the French government appears to be willing to make a financial contribution to a surplus pool. But there must be doubts about a plan that would make life so very comfortable for producers. What inefficient industry would not like its products to be bought by a common fund and given away?

Plainly a new world-wide farm deal must not only dole out surpluses but also keep them in check, and encourage low-cost output that makes use of the formidable array of new methods that are open to the farmer. Wisely, the French sponsors of the new Gatt discussions have proposed that subsidies should be removed and an attempt made to set "normal," realistic prices in the different countries as a step towards freer trade. But the French have not yet fully taken in the big differences in prices between those countries where the agricultural revolution is far advanced and those, generally highly protected, where it is not.



Wheat is grown in Canada and Australia at half the French cost, not because of subsidies but because of vast scale. The contrasts within Europe itself—between Holland and, say, Bavaria—are familiar enough. The one sector of British farming where intensive research and mass production methods have brought prices tumbling down—the broiler fowl industry—is the one sector where there is no protection at all. If, in the next decade, agriculture in Europe is to become "agribusiness," employing the scale and methods of industry, and with the farm worker a well-paid technician instead of a drudge on the ancestral holding, protection must come down.

In all this the United States tends to be more preoccupied with the beam in Europe's eye than with the mote in its own. And indeed in the Brussels negotiations for British membership of the common market, and in new world talks in Gatt, America, with its great export interests, will be a force—with the Commonwealth pulling the same way—to get European prices and protection down. But in return Europe can properly demand a dismantling of American protection. The French are perfectly right to point out that American wheat—unlike Canadian—is sold (dumped?) abroad at well below the home price. If American grain is to get assured outlets in Europe, there is a case for ensuring that New Zealand or Danish cheese gets better outlets in America. A gradual downward alignment of support prices in the main farming countries and a reduction of trade barriers must apply the method of the common market on a wider canvas.

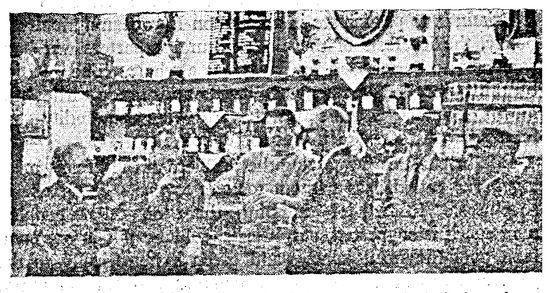
As agriculture expands in developed countries as a great capital-intensive industry, more has also to be done to give undeveloped countries outlets for labour-intensive manufactures. For apart from tropical products not grown in Europe and America, there is not much else they can export. This—the problem of Indian textiles and Hongkong toys—is the second major problem precipitated by the British application to join the Six. It will become more urgent than ever if a new Atlantic grouping is formed.

Here again, there is little chance that the problem will be solved by retaining the present preferences and free entry for Indian or Hongkong products in the British market. The likely answer will be a joint effort by all the western countries to import more; a start has already been made in the textile deal sponsored by Mr George Ball in Gatt. But here, too, there is still a great gulf between the dawning realisation in Europe that something must be done and the need itself. Britain imports 30 per cent of its consumption of cotton textiles from developing countries, the Six import 5 per cent of theirs. It is true that a small effort by all the major western countries to import more from the new countries would be less painful than a big effort by a few. But few western countries have yet taken in the idea that they are not going to be able to export to the new countries, if they do not import at least some manufactures in return.

There are many ways of developing a liberal Atlantic trading policy. But whichever way is chosen, one main objective should be to make the new import opportunities as flexible as possible so that the new industries of Asia, Africa and Latin America have not only access to western markets, but the chance to compete among themselves and to switch from one product, say, textiles, to another, say, ships. A low tariff would be a better form of protection than quotas; and where quotas still exist, as they do at present, the sooner they are made multilateral, so that several exporting countries compete together, the better. The pattern of world trade has shifted incredibly in the past decade; any new trade system must leave room for equally dramatic changes in the next.

Very Clubable Men

A survey of working men's clubs



THERE is a classic dichotomy in the desires of mankind between gregariousness and exclusiveness, to one of which, *in countries unafflicted with the English genius* for compromise, the non-schizoid will must bow; but in England a middle course is struck which avoids the grosser discomforts of both worlds, while not quite achieving the best of them. England has some 24,000 clubs.

Some, the euphoric palladia of Pall Mall, are havens from the intolerable pressures of a life of wealth. Others are not at all like the Athenæum: perhaps a third of all English clubs are privately owned for gain, including some which are skaters on the thin ice of the licensing or gambling laws. Many more promote the well-being of the games-conscious; and what are left are the constituents of the British Legion, the Association of Conservative Clubs, and the Working Men's Club and Institute Union. The latter, with 3,500 member-clubs and 2¼ million members, is by far the most important of these.

The Working Men's Club and Institute Union achieves its centenary next year, and will celebrate it with the opening of a splendiferous, if not indeed grandiose, new headquarters at Islington. At £250,000, this will be a long way from the *tile-and-lino longueurs* of the Clerkenwell Road, where the union now holds its not inconsiderable court: and a long way, too, from the patently paternal contrivance of the Rev. Henry Solly, who, in 1862, raised the clubs from scattered pockets of penurious resentment against the grinding frustrations of Victorian working-class homes (and marriages), from "desperate oddfellow societies," to togetherness—and the approval of such diverse luminaries as Lord Rosebery and Sir Herbert Praed.

In Solly's day there were fewer than 400 clubs. Horizons have widened as numbers have grown. The union was conceived as a temperance body, dedicated to the sober fulfilment of what Solly considered to be the working man's destiny—something far removed from the ideas of other Victorians, but just as far from the militant egalitarianism of today. It was on Rosebery's initiative that the shackles of teetotalism were cast off; and today the union's clubs turn over £51 million a year in excisable goods, and collect nearly £1 million in rebates from the five breweries which they jointly own (limits of investment: £50 for a man, £1,000 for a club). And the weight of £33.5 million in assets backs its pressures (mainly in matters of drink) on Parliament, where 145 Members are members.

But the union is not selfish of its makings and takings: £100,000 goes annually to charities; and it provides for the benefit of its sick members four convalescent homes in Kent, Yorkshire and South Wales, where they may recuperate in disciplined comfort (bed at 10 p.m., meal attendance com-

pulsory) for something under half the cost of their being there. Over 5,000 convalescents a year stay in these homes for a week or more; and the union's boast that no hotel in England could do better for them is not entirely vainglorious. Certainly no hotel could do better, or as well, on £3 10s. a week.

A common image of the *working man's* club is of a barn-sized room, cold, perhaps dirty and certainly dingy, with drinking in one corner, billiards in another, a Worker's Educational Association lecture and a political meeting filling the other two. Since premises are, in the main, still left over from the last century, the barn-like rooms remain; but all else is changed—the bar grown to giant dimensions, the spittoons and sawdust thrown out as the lectures have been (in all but 517 cases), and relaxation rather than self-improvement the keynote of the decorations. And if, in some, the distinctive odour of disinfectant does not always mask other odours no less distinctive, if the décor does not always achieve the eradication of bleakness, there are other clubs in which tremendous improvements have been made; and these latter are in the majority.

The educational function of the clubs is much narrowed since the days of patronage and betterment: they have abandoned the utopian trudge towards culture and confine themselves to matters close to themselves—club management, club *law, club accountancy* and a few general subjects. They have become ends in themselves, and to these ends weekly day-schools, week-long spring and summer schools are conducted at Ruskin College, Oxford, and Leicester University. "Your Glass of Beer," "My Club," "Financial Depression in Clubs and Suggested Remedial Methods" are typical lectures, many of them under the aegis of the WEA. In addition a "club management diploma" *is available to the diligent* and the more senior of the union's officers wear with pride the letters CMD after their names.

NOT all the clubs' educational efforts are so introspective. Every year a clubman is sent, fully financed even down to his laundry fees, to Ruskin College, generally to ponder political science and economics; and if he is good enough, he will continue there for a second year. Some of these diplomatists go on to the University. There is, too, a travelling scholarship, which annually liberates one member from the sodden industrial gloom of the English winter and transplants him to the Antipodes. Again, not a penny need come from his own pocket. Does the Junior Carlton do as much?

The pattern of recreation in the clubs has changed, too, and from billiards and pigeon-racing (though these are not forgotten) they have spread to such anti-plebeian pursuits as shooting and fishing and golf. Gambling is not admired, and bingo is advised against: the let-out provided by the Small Lotteries and Gaming Act of 1956, requiring as it does the annual registration of the small gamer with his local authority, is considered too ignominious a course to be seriously contemplated by the clubs, who are nothing if not deadly prideful.

In protest, for example, against those provisions of the Licensing Act of 1960 in which regulations are made for the control of clubs, the union complained of "the indignity of crawling to the Bench" to register themselves annually, when anyone could protest against their registration. They added a gratuitous attack upon teetotallers; swore that only a fool could compare them with public-houses; accused the justices of probable political or temperance bias; and prophesied the advent of a police state if the police, in the course of their duties, were to be permitted to enter clubs without warrant. This intolerable deal of protest, it may be thought, goes ill with a ha'p'orth of virtue. The record of the union's clubs is a good one; but there are instances of raids, disqualifications and convictions. And that the offenders are sacked from the union does not mean that they do not offend.

The union itself is politically and religiously neutral, but its members range from Radical Clubs through all shades of pink and mauve to Conservative Clubs outside the pale of their Association; and there are Catholic and Jewish, ex-service and variety artists' clubs. Class is not emphasised, but a motion to delete the "working men's" from the union's title was heavily defeated by members a year ago. Some segregation by sex exists, however, and even in the 1,900 clubs in which women are permitted as members they do not seem to be over-popular, for only a seventh of the total membership is female. Yet the union confidently bases the popularity of the clubs on their "family" attractions.

The distribution of these clubs over the country seems to bear out their Englishness: where industry is thick, so are these pockets of class solidarity (but no one could explain why Leicester is their Mecca); in South Wales, where anglicisation *has gone furthest, there are many*—but few in rural areas of Wales; Scotland is poor in the clubs, and Ireland has only three. The story that most of them are merely devices for slipping drinks to the thirsty when the pubs are shut is refuted by some of the peculiarities of this geographical distribution, by the intensity with which some other club activities are carried on and by the sternly puritanical tone of some club rules (although this may stem from the fact that rules must be approved, in most cases, by the Registrar of Friendly Societies). Many clubs have large and frequently used concert halls in which, unless their camouflage is excellent, the rumoured strip-tease shows do not take place; on the contrary, the tenor of entertainment is markedly old-fashioned.

The clubs, perhaps, would amount to very little without their union, which advises them, fights their battles, produces a monthly paper for them and about them, lobbies for them and settles their internecine squabbles. But neither, perhaps, without their union, would they have assumed their apparent present purposes: to be as exclusive of strangers as any Pall Mall mausoleum, to be privileged above and beyond the common run of mortals (who must suffer the pressures and regulations of the state as best they may), and to be not the channel for effort but the focus of it. Whether these purposes are wholesome is at least arguable. But they flourish under the union. And the importance of its clubs cannot be ignored. After all, 4 per cent of the nation belongs to them.

NOTES OF THE WEEK

MIDDLE EAST

Anybody Order Wolves?

TENSION in the Middle East, explained a spokesman from the British Ministry of Defence, rose sufficiently over the Christmas period to justify the sudden strengthening of British forces there. On Wednesday, an aircraft carrier, with a small attendant fleet, sailed from Mombasa in the general direction, *it was allowed to be assumed, of Aden* and the Persian Gulf; the same day, the 200 servicemen whose missed Christmas dinners had caused some publicity were flown from Britain to the Middle East.

These minor, yet noisy movements had, again according to the Defence Ministry, prepared the British Middle East Command for any emergency; since the need for precautions seems to have been the ministry's exclusive discovery, only the same ministry can say when the tension is over. The whole baffling affair was generally interpreted as a defensive move taken because somebody somewhere suspected General Qasim of immediate aggressive designs on Kuwait.

If there were substantial grounds for this suspicion, nobody has so far been let into the secret. The evidence so far all seems rather circumstantial, not to say far-fetched. True, General Qasim had reiterated his country's claim to Kuwait on Christmas Eve, and in a rather more bellicose fashion than usual; on the other hand, his experience last time should have taught him not to announce his intentions beforehand, if he really had any. Otherwise, the British detective work seems to have been based largely on ponderings about the repercussions of India's action against Goa, possibly reinforced by a report of troop movements at Basra, which may or many not have had anything to do with Kuwait.

The publicity given to the British defence moves, and the uncommon tactlessness of an official explanation that said too little but implied far too much, are both unfortunate. The dexterity with which, a few months ago, Britain handed over the defence of Kuwait to the Arabs themselves is in danger of being wasted. But even if the incident had been less bungled, no discretion could have disguised the painful awkwardness of the British position in having undertaken to protect the ruler of Kuwait and yet, for political reasons, not being able to keep any troops in the sheikhdom itself. For, if General Qasim at any time decided to take the risk of dispatching an Iraqi army into Kuwait, he would probably not be decisively checked by the untried Arab army of 2,000 Jordanians, Saudi Arabians, Sudanese and Kuwaitis.

The strength of this Arab force has always been described as moral and political rather than military. But it is doubtful whether the Iraqis, once in Kuwait, and within an ace of becoming the richest country in the Middle East, would be dislodged by the moral condemnation of the Arab world. Egypt's decision to remove its tiny contingent (which finally left on December 22nd) has weakened the political unity of the force that is left. The precautionary moves that the British took this week may have been unnecessary and were certainly *mishandled for want of better* public relations; above all, they have underlined how difficult it will be to cry "wolf" yet again.

DEFENCE

Thin Blue Line

THE relief of Kuwait is the Ministry of Defence's favourite and best-rehearsed exercise. It is easiest to carry out, and looks more credible to outsiders, when the Admiralty has the prescience (as it had last summer) to keep a commando carrier in or near the Persian Gulf. Even so, there were serious doubts last time about the adequacy of air support for the troops ashore had the Iraqi armour really rolled forward in the early days: an aircraft carrier passing through the Suez canal is not the most dependable of reinforcements. This time the carrier *Centaur* was at least at Mombasa at the outset of the emergency. (Where will it be when Mr Kenyatta is head of an independent state?) But the new assault ship, forecast in the last naval estimates and urgently needed for the brushfire type of operation, is still only a contract in the hands of its Belfast builders. The concept of an effective aero-naval and marine commando force to deal with emergencies east of Suez remains a long way from reality.

For the present it is possible (subject to the capabilities of Transport Command) to move small packets of troops by air from East Africa to the Gulf and even, with Turkish and Persian permission, to by-pass Arab air space from Cyprus. But the fact remains that if Britain intends to keep up most of its present obligations east of Suez it will have to develop forces that bear some modest comparison with the American multi-purpose fleets in the Mediterranean and Far East. Political changes in East Africa and Malaya-Singapore are likely to mean that the days of ground force garrisons are numbered, even if it were not desirable for other reasons to station a larger proportion of the army in Europe. At the same time the argument for getting troops out of quiet bases like Gibraltar and putting them (or more marines) in boats has been strongly reinforced. The signs are that the next defence white paper, due in a matter of weeks, will mark the beginning of such a redeployment. But the only way to make even limited savings in manpower outside Europe without cutting commitments is to provide ships and aircraft, of the right kind and in the right numbers, to fill the gaps. They are not on the spot now.

EGYPT

Some are Chosen . . .

AFTER two weeks of public deliberations, the committee appointed by President Nasser to define the "popular forces" in the United Arab Republic came up with a set of statistics. It decided on December 19th that the National Congress of Popular Forces, which is to form the base of the president's new democratic experiment, will have 1,500 members. A quarter will be peasants and small farmers, 20 per cent industrial workers, 15 per cent trade unionists, 10 per cent business men, 9 per cent civil servants and 7 per cent each teachers, students and women.

President Nasser's earlier efforts to garnish his authoritarian regime with the trimmings of democracy came to nothing; this was partly because the men selected for the various assemblies were almost always local bosses who, while saying what was expected in public, were primarily concerned with keeping things as they were. Now these men, and many others, may find themselves ruled out by the committee's decision that any person who has worked against the government or even tried to make himself rich at other people's expense will be disenfranchised and "isolated."

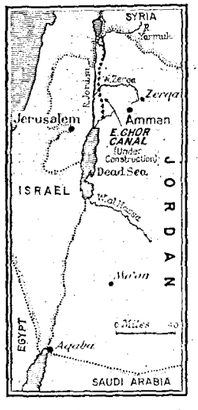
The committee's debate, which has been broadcast, televised and generously reported, revealed a sincere if muddled attempt to evolve some new compromise between totalitarianism and democracy. It did also demonstrate that President Nasser has a masterly grasp over the details of his one-man show. But above all, it shows the regime on the defensive. With middle class support slipping away, the Egyptian leaders are staging an all-out effort to give some responsibility to the majority who, having nothing to lose, may yet be convinced that they have something to gain from the new socialist revolution.

But it becomes more and more problematical whether President Nasser will be able to pursue his ideas in peace. Few Egyptians regretted Syria's break-away; many hoped it would persuade the president to go slow. Instead, he accentuated the pace of socialisation, including the sequestration of private property. The immediate result has been a sharp economic contraction, retail trading has fallen off and unemployment has increased. In Egypt, where one man may support several families, the pinch of unemployment is felt all along the line. President Nasser speaks challengingly of a revolutionary upsurge, but a visitor to Cairo finds few Egyptians who are fired with either enthusiasm or confidence in the government. The social changes towards which the president is whipping the country are exciting; it would be sad if too much haste, and ruthlessness, were to kill this new revolution in its infancy.

. . . Others Dropped

DISMAY was the reaction in Cairo when the feudal Imam of Yemen was the sole Arab leader to respond to the challenge of the newly created United Arab Republic. But in March, 1958, the false dawn of Arab unity was shining bright. Thus, five weeks after the union of Egypt and Syria, a charter established the Union of Arab States, under which the UAR and Yemen formally unified their foreign policies and their armies. The Imam, seeking backing for his claim to Aden, was given support that was more dutiful than dynamic. Yemen received technical,

financial and military aid from Cairo, but the Egyptians, even in 1958, were wryly repeating the fable that when God revisited the earth, Yemen, unchanged since the creation, was the one place He was able joyfully to recognise.



Now, with Syria gone and the Egyptian revolution turned resolutely towards socialism, the connection with Yemen has become a dispensable embarrassment. In a speech last Saturday, President Nasser labelled both the Imam and King Saud as reactionaries, and denounced conditions in their countries as an offence against God and man. This attack prepared the way for the announcement on Tuesday that the UAR had decided to dissolve the Union of Arab States on the ground that the Yemenis had not benefited from the experiment.

JORDAN

Angry Young Men

SYMPTOMATIC of President Nasser's present isolation is the lack of emotion aroused in the Arab world by King Hussein's recent attack on him—a bitter tirade from Amman, broadcast on December 15th from a recording of the king's own voice. Discounting the Beirut press, with its morbid appetite for controversies, few cries have been heard either in praise or condemnation of King Hussein's performance as challenger to Cairo's social revolution. This silence has its significance. It does not mean consent, but it does mean doubt. Few of the Arab counter-revolutionaries outside Jordan see King Hussein as a leader; but he has his value to their cause as an advocate of free economy. And a reasoned case for free enterprise can be argued from Jordan now.

This formerly impoverished country is today looking much more prosperous—thanks to a blending of government planning with private enterprise. By the building of the East Ghor canal (now 27 kilometres long) the diverted waters of the Yarmuk are opening new areas of agriculture. Afforestation thrives. Light industries, transport companies and ordinary householders are getting cheaper fuel through Zerqa's new oil refinery. Goods move at lower cost through Aqaba port by way of the fine new Amman-Aqaba highway, as also—a great relief—through the raising of Syria's economic blockade. The tourist traffic, now at its Christmas peak, is this year larger than ever. While hundreds of little capitalists are getting a reward from

what once seemed reckless investment on building and "tourism" on the west bank of the Jordan, the country's bigger concerns—cement manufacture, phosphates and oil refining—are a sample of what can be done by government participation in companies rather than outright nationalisation. There is grist for propaganda here.

But prosperity is not synonymous with stability (as Iraq learned in 1958). Jordan still spends most of its foreign grants on its army, and so long as it has to do so it cannot offer itself as an example of real strength through economic joy.

BANK GUARDS

Private Gunmen

TWO points are raised by the recent incident when an armed guard on a bank bullion van fired on his attackers and so prevented a major robbery. Comment was withheld here last week because a number of questions were down for Parliamentary answer; unfortunately, they were not reached during oral question time. The first question concerns the guard's legal position. The guard—with whom much sympathy will be felt—was said to have opened fire "under instructions." But this of itself, of course, would be no defence to a charge of using violence. It would merely involve the directors of the bank as aiders and abettors.

As long ago as 1879 the Criminal Code Commissioners, in a report, stated that the common law right to use force to

Raid that failed: bullion van hemmed in

prevent crimes was "subject to the restriction that the force used is necessary; that is, that the mischief sought to be prevented could not be prevented by less violent means; and that the mischief done by, or which might reasonably be anticipated from, the force used, is not disproportionate to the injury or mischief which it is intended to prevent." Does this give an individual the right to take another's life with a firearm if, say, his assailant is merely carrying a cosh? Blackstone would have thought that it did; he laid it down that life might be taken in the course of arresting a felon or preventing a crime of a "forcible or atrocious" character (which the Stepney

raid clearly was). Certainly the old cases support the use of a high degree of force in self defence. But these were decided when most felonious attacks were capital offences. Criminals were therefore inclined to be more violent, and so were their victims. Today the burden of proof on a man pleading justifiable or excusable homicide would be heavier. He would have to show that taking life was the only way of repelling the attack. An armed bank guard's lot, like an unarmed policeman's, is not an enviable one.

The second question, therefore, is whether a firearms licence should be granted to privately employed guards when the police themselves are not armed. Such licences for "protective" purposes are granted only after stringent scrutiny. Apparently only 33 guards, belonging to 4 firms, have got them in London. These figures—and the fact that shooting incidents are so rare—suggest that nobody need suppose that there are large armies of potentially trigger-happy privately employed gunmen roaming the streets. But even in extreme cases, like these guards behind the bullion van's battered doors, has enough attention been paid to the possibility of using "near-guns," weapons that might be more efficient in incapacitating and less likely to kill than guns themselves? It is a commonsense, not a namby-pamby, suggestion that the technological possibilities of such weapons should be more extensively explored. There is a real danger that the publicity given to the recent incident could encourage more criminals themselves to be armed with guns that shoot to kill.

ROAD DEATHS

Post Mortem

PRELIMINARY figures for this year's round in the annual Christmas killing match between motor cars and people are not heartening. True, they do not exceed last year's figures, and are a long way short of the tragic peak of 1959. But, as some of the injured will still die, the full score of killings will not be known for about a month. The table compares 1959's final figures with 1960's preliminary and final figures and this year's preliminary figures.

	1959 (final)	1960 (prel.)	1960 (final)	1961 (prel.)
Wed.	43			
Thur.	71			
Fri.	38*	(40)	61	(40)
Sat.	37	(27)	27	(29)
Sun.	26	(20)*	23*	(22)
Mon.		(22)	23	(22)*
Tues.		(18)	19	(14)
	215	127	153	127

* Indicates Christmas Day.

It is clear that people's killing habits are dictated as much by the day of the week as by anything else. In all three years the peaks fall on the last day at work before the holidays. Ally this with the fact that around 50 per cent of road corpses have proved in the past to have come to their ends with drink inside them; and it becomes obvious that a main culprit in this annual slaughter is the office party which, enjoyable as it often is, throws people fuddled into the cold, where road and traffic conditions are at their worst. This conventional rout, in which people who would often much rather have an extra pound or two to take home belt down too much of the boss's booze, can surely no longer be afforded.

Three things should be done next Christmas. First, there should be an intensive campaign to urge employers not to kill people by giving Christmas parties. Secondly, as some intra-office conviviality will still go on, whatever employers do, there should be extra public transport on that night (including allowing private coach firms to run and advertise private bus or minibus schedules on that one day if they choose, as a supplement to the usual statutory monopoly). Thirdly—as year after year appeals to reason, sentiment and self-interest have failed to make any impression on driving drinkers—the police should make it clear that on the peak night next Christmas they will stop and subject to drunkenness tests any drivers of whom they harbour suspicions. The aim should be to convince every driver in the country that night that he will take two double whiskies before driving at peril not only of life but of liberty and livelihood as well.

WAGES

Going Slowly

EVEN new wage claims stopped for Christmas, more or less. The only major new development of the past week has been a claim by the Electrical Trades Union for an increase under the famous "escalator" agreement it reached a year ago with the electrical contracting industry. Under this agreement the union, in return for a large pay increase, agreed not to ask for more within 2½ years unless the cost of living went up by five points. Now, the union says, it has done so. This is the first new claim in private industry since the wage pause began that has been based on an element of "prior commitment" similar to that which has already been rejected for some public employees. It will be fought out by the ETU's new executive.

Meanwhile, the post office workers' union is to start the New Year with its promised go-slow, but seems itself to be going somewhat slow about it. Its action will take the now-fashionable form of slavish adherence to the interminable list of post office regulations: but the union has warned members against getting into undignified quarrels with supervisors. Similarly, the gloom of Christmas television was rendered only fractionally darker by Equity's dispute with the independent television companies. Last week's meeting between the two sides ended in a deadlock, although the companies seem to have conceded the basic principle that fees for television performances should be adjusted according to the number of companies transmitting a programme. It

appears that Equity does not like the employers' way of implementing this principle because it would not automatically increase the fees of performers receiving more than the minimum. The employers did not, however, help their cause when they gave the impression at a press conference of either failing to understand, or wilfully misrepresenting, their opponents' demands. The latest battleground is for the support of the various other unions involved in television: the companies have tried to win them over, and now Equity is following suit. But as yet the actors' stand has had no effect beyond some marginal rises in the BBC's audience figures as ITV's range of live programmes is reduced.

EUROPE

Blocked in Brussels

THE six members of the common market have a habit of taking their big decisions just before some spectacular deadline, like New Year's Eve. But this year they have cut things althogether too fine. When *The Economist* went to press agreement on a common agricultural policy, on which the further progress of the whole community depends, was still out of reach. The Council of Ministers was expected to meet again on December 29th, but even with the help of the customary all night sessions, it will be hard put to it to agree in time for the community to move, according to plan, into its "second phase" on January 1st.

The disagreement covers a number of subjects. How are export subsidies and price support arrangements to be financed? The Germans want to retain bilateral trade arrangements with, say, Argentina; the Dutch and French are anxious for the common external policy, provided for in the treaty, to be put into effect. Understanding seems to have been reached on some matters—like the rough level of grain prices in the future common market. But no one item can be regarded as settled until the other parts of the package are settled as well.

All this does not mean that an agricultural agreement will not be reached soon. The French, who are adamantly blocking the way forward for the common market as a whole, until the Germans accept the substance of a common agricultural policy, suggested last week that the move into the "second phase" be postponed for a month until February 1st. Others are less pessimistic and hope for agreement in a few days. The hope in Brussels is that the imminence of the deadline will at last cause technicalities to be set aside and the necessary political decisions to be taken.

If they are not, much damage will be done. Further tariff reductions within the common market, further alignments of the common tariff round it, and a good many other internal changes will be blocked. The agricultural side of negotiations with Britain—and with the United States—cannot make much headway. And opinion in these two countries, which has after all been persuaded to take a greater interest in Europe through the common market's success, will hardly be impressed. It may be asked why the French should jeopardise so much for the sake of a bushel of wheat. The answer is that after four years of procrastination by the Germans they feel, probably rightly, that unless they make a stand now, there may be no common market in agriculture at all. That would damage not only French farmers but the whole conception of an integrated Europe.

The Economist

DECEMBER 28, 1861

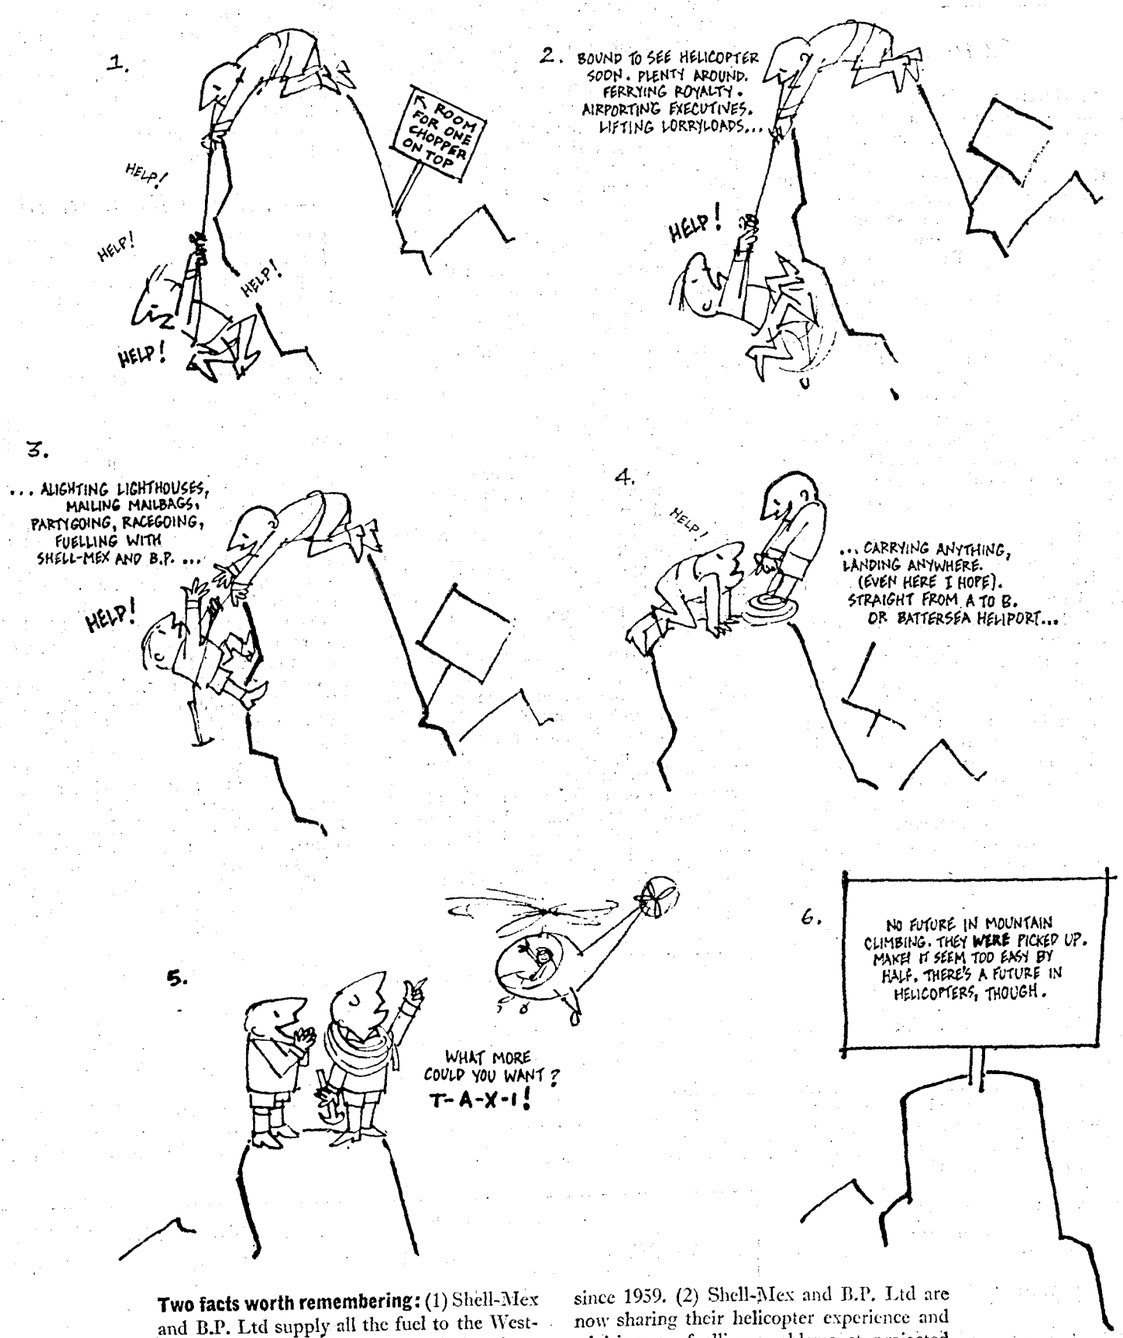
EDUCATION OF YOUNG GENTLEMEN

¶ At Hambly House Academy, Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. Trousdale, L.C.P., aided by highly qualified assistant masters. The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German, Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge . . . . All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education.

The Royal Continental Collegiate Institute (limited to 20 young gentlemen), on Bushey heath, three miles from Harrow station and two from Watford. Principal, Dr Vellère, late of the Harrow Preparatory School. This school is highly recommended for three reasons—first, for very excellent board, liberal supply, judicious treatment, great success in education, and, above all, as preferable to going abroad with regard to acquiring the French language perfectly; secondly, for very moderate and strictly inclusive terms, within the reach of nearly every one; and, thirdly, that no case of illness has ever occurred since the school has been established in 1857. . . . Terms from 30 guineas upwards. *Advt.*

NEW GUINEA

Time for Reflection



PRESIDENT SUKARNO'S frustration over west New Guinea must be even greater than Mr Nehru's was over Goa. Mr Nehru always knew that he could take Goa whenever his frustration got the better of his love for peace; Dr Sukarno, who has actually advocated force for some years, is aware that the wanted half of a forbidding island, which even the Dutch have never fully controlled, can hardly be digested in one military meal. This awareness, if nothing else, may cause him to hesitate still further before actually issuing the "command" to liberate the Dutch half of New Guinea, which he said on December 19th he would soon issue. Should he hesitate still longer, he may even take sensible notice of the decision which the Dutch cabinet is reported to have taken after his speech, to offer negotiations without strings on the future of Holland's last remaining colony. (The Dutch attitude is further discussed by an Amsterdam correspondent on page 1297.)

In this context, "negotiation without strings" has a precise meaning. It can only mean that the Dutch would not insist on making their self-determination plan for West Papua (as they recently renamed Dutch New Guinea) the basis of any talks with Indonesia; correspondingly, the Indonesians would have to withdraw their insistence on limiting any negotiations to a discussion of the transfer of authority from Holland to Indonesia.

The launching of military operations against West Papua by a country with an empty treasury, a powerful communist party and half-quelled rebellions on its own soil, would surely bring incalculable consequences in its train. It is greatly to be hoped that President Sukarno's immoderate speech did not mark the point of no return. If the Dutch are indeed ready to re-examine their advocacy of self-determination for the Papuans, the Indonesians ought to be prepared to put their claim to West Papua in abeyance as a step towards negotiations.

President Sukarno spoke last week in a mood of disillusionment with the United Nations, under whose auspices the Dutch self-determination plan would be carried out—if it were ever implemented. The danger, now that the UN has failed to act over Goa, is that Dr Sukarno will infer that he can act as Mr Nehru acted, secure in the support of the communists and Afro-Asians. If so, he should reflect again on the disparity between Goa and West Papua and the consequences for the United Nations itself.

Two facts worth remembering: (1) Shell-Mex and B.P. Ltd supply all the fuel to the Westland Heliport at Battersea, which has been pioneering quick air routes out of London since 1959. (2) Shell-Mex and B.P. Ltd are now sharing their helicopter experience and advising on fuelling problems at projected heliports in other towns and cities.

SHELL-MEX AND B.P. LTD — HELP GET HELICOPTERS IN THE AIR

LONDON BOROUGHS

52 to 34

THE Government is plainly in earnest in its wish to create much larger boroughs as part of its coming reorganisation of London local government. Where the Herbert Commission wanted merely to halve the number of boroughs in Greater London, from nearly 100 to 52, through the medium of such shot-gun weddings as Hampstead and St. Pancras, the Government has now proposed a further reduction to only 34 boroughs. Curiously, it would achieve this mainly through much more drastic amalgamations in the outer suburbs. For example, a new unit of 291,000 people would run from Chiswick to Staines and another of 329,000 from Hornsey to Enfield. Even Croydon would be very substantially enlarged. The only unchanged units in the whole area would be Lewisham, Harrow, and (surely too anachronistically in this context of much enlarged powers) the City of London.

The boroughs have now been asked for their opinions, and many are sure to protest strongly. Some people who have been living under Tory councils may find themselves more liable to be decanted under Labour councils, and *vice versa*. The Government, however, has emphasised that if the boroughs want greater powers they must swallow the pill of amalgamation. This is quite right in principle; but why has the Government departed from the Herbert Commission's view that large units are more acceptable in inner London, where population is dense, than in outer parts? Some of the new suburban boroughs would be so extensive in area that they can hardly hope to have the kind of cohesion which ordinary boroughs are expected to possess. It looks as if the Government is feeling for a much broader type of local government unit, but has pulled up short of actually reaching it.

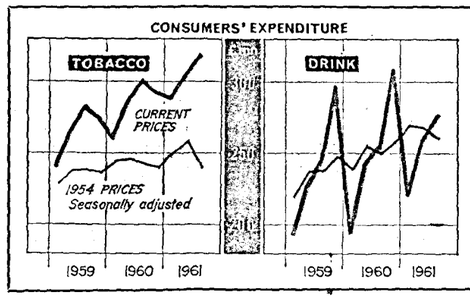
The real danger is that the Government may suppose that its proposed new boroughs can handle almost all local services. The Greater London Council, which it also intends to create, would then become a sort of ghostly middleman between omnipurpose boroughs and omnicompetent Government departments. This should not be. If the Government's new framework for London is to be worth having, the first essential is that the Greater London Council should be an effective body, with more powers and more freedom from Government control than are at present proposed.

CENTRAL AFRICA

Front Line at Kipushi—

NO sooner had Mr Tshombe signed his agreement to re-integrate Katanga with the Congo than he began to go back on it. Having signed at Kitona, near Leopoldville, on December 21st he flew on that day to Ndola, in Northern Rhodesia, from where he went by car the indirect way to Elisabethville. The route took him to Kipushi, on the Rhodesia-Katanga border, where Katanga's *ultras* and the diehards in its government have gathered—prepared, by all accounts, for another stand for Katangan secession. The following day the Katanga government announced that Mr Tshombe had no mandate to conclude the Kitona agreement, in terms that raised again the old question, is Mr Tshombe really in control of Katangan affairs?

Many answers can be given; there are many conflicting interests at work in Katanga. The acting secretary-general of the United Nations, U Thant, has pointed the accusing finger at the Union Minière company, and says that aerial bombs and heavy armoured cars have been made in company workshops, that mercenaries have been recruited through company representatives outside Katanga, that expelled mercenaries have returned on the company payroll, and that Mr Tshombe's entire military force was financed by Union Minière and other foreign firms in Katanga. These allegations have been denied by Mr Spaak, the Belgian foreign minister. More dangerous is the conflict between black nationalist Africa and white-governed Africa (including South Africa, the Rhodesian federation, Angola, and Mozambique). The flashpoint, once Elisabethville, has become Kipushi. Viewing affairs from Salisbury, Sir Roy Welensky may well, as his cabinet statement on Wednesday implied, fear the advance of black nationalism through Katanga to the very borders of the federation. If, as is not unlikely, he fears a further advance through a black-governed northern Rhodesia in the near future, then his apparent determination to hold the bridge at Kipushi can more easily be understood.



In this situation, the British Government is walking on eggs. It seems as unsafe as ever to say anything about the constitution of Northern Rhodesia, even though the protracted negotiations about the constitution have lasted more than a year; to say anything could make trouble either with the Africans or with the Europeans. At the same time, the British Government is responsible for the foreign policy of the federation—a federation whose own government is in physical control of the Katanga-Northern Rhodesia border. When the United Nations alleges that arms and men for Mr Tshombe are crossing this border it is the British Government that gets blamed. Yet the actions, at a time when his white followers see Kipushi as a possible flood-gate for "communists and cannibals," will be Sir Roy's.

—and at Elisabethville

TO the United Nations in Elisabethville the picture must look slightly less dark. In spite of its words of repudiation, the Katanga government allowed its deputies to go to Leopoldville on Wednesday to talk about the constitution. A thousand soldiers from the central government army are to come under UN command; this seems to herald the long-needed retraining of some of these wild and mutinous troops. For its own sake, the UN should ensure that any Congolese soldiers entering southern Katanga from Leopoldville can be relied upon to behave themselves. Another hopeful sign is the resumption on Wednesday of diplomatic relations between Belgium and the central Congolese government. The rump of the Katanga army, at Kipushi and elsewhere, has so far not moved.

On Wednesday, however, the Rhodesian government let forth a fusillade of words upon the UN at Elisabethville, calling for an impartial inquiry into allegations that the UN has been guilty of war atrocities. At the end of a year of extremely ingenious anti-UN propaganda, this is the unkindest cut of all. The war of words will, in all probability, continue; the Rhodesians, as a counter to being accused of arming Mr Tshombe, said that the UN had asked for offensive weapons to use against him.

U Thant replied vigorously to some of the "atrocities" charges in his letter to Mr Spaak, dated December 15th and since published. He said that one hospital the UN was accused of attacking was new, had never been used as a hospital ("there are no doctors, nurses, or patients"), and had been used as a "mercenary stronghold." A second hospital, the Prince Leopold, was 200 metres from the main Katanga camp; it was damaged by Swedish mortar fire and two persons were wounded. Many vehicles bearing the Red Cross insignia had been used as a cover for Katangan fire, U Thant said, and this was often protested against by Mr Olivet, the International Red Cross representative in Elisabethville, whose body was found on the outskirts of the city last week.

SMOKING AND DRINKING

The Chancellor's July surcharge made smoking 9 per cent dearer and drinking 4 per cent dearer. As a result, after allowing for seasonal factors, tobacco consumption declined by 7 per cent between the second and third quarters of the year and drinking by 3 per cent.

FRANCE

Ominous New Year

GENERAL DE GAULLE'S broadcast this Friday (December 29th) was not expected to be very specific about France's prospects for 1962, for the prospects are not very bright. France is still at odds with its various associates over such matters as Berlin and the common market's agricultural policy. President Nasser still has four French diplomats in prison on charges of spying and subversion. At home, the government is the object of bitter attacks from left and right, and there are suggestions that disaffection is spreading among the armed forces in Germany and in France itself. Above all, there is still no peace in Algeria.

Some fugitive gleams brighten the outlook. On December 27th French and Tunisian representatives met in Rome to discuss, informally, the Bizerta problem: if all goes well they are to meet next week to continue preparations for full dress negotiations later on. Tunisian statements about the talks are, as usual, optimistic. There has been great activity among the ministers and envoys of the provisional Algerian government: Mr Ben Khedda, the prime minister, has been to Egypt, Libya and Morocco; Mr Ben Yahia (a veteran of the talks at Melun, Evian and Lugrin) has been permitted to visit Mr Ben Bella in prison. Mr Yazid, the minister of information, flew to New York to urge moderation (successfully) on his supporters in the United Nations Assembly debate on Algeria, which concluded on December 20th. All this to-ing and fro-ing has led to speculation that the Franco-Algerian negotiations will soon be resumed, and with a chance of success. In fact it seems that the differences between the positions of the French and the nationalists have almost been narrowed down to the timing and method of the cease-fire and transfer of authority.

This difference, however, is crucial. The Algerian rebels will not lay down their arms until they are sure that the French government can and will honour its undertakings. The will is scarcely in doubt any longer, but the power to prevent the Organisation de l'Armée Secrète, the right-wing terrorist underground, from seizing Algiers and Oran has yet to be demonstrated. The OAS continues to wound and murder at will (it and the Algerian terrorists together killed some thirty persons during the Christmas holiday in Algeria) and the government seems still to find it easier to speak against the Right and act against the Left—as it did during the demonstrations in Paris on December 19th—than to restore order.

UNITED NATIONS

Windows Rattling

ON January 15th the United Nations Assembly will resume its sixteenth session. The normal three months' session has once more proved too short to allow the delegations (now 104, against 99 in September) to work through an agenda of nearly a hundred items. However, night sittings and other forms of pressure were applied at an early stage this year, and only a few items, Angola and Ruanda-Urundi among them, were held over when the assembly went into recess for Christmas in the early hours of December 21st.

In those last crowded hours, several resolutions were carried and swept virtually into limbo as public attention turned to the approaching holiday. The Assembly voted, 60 to 11, for a continued UN concern with the reunification of Korea; 56 to 11, for restoration of basic human rights in Tibet; 49 to 17, deploring Soviet disregard of earlier resolutions on Hungary. Although about 30 members abstained in each vote, significantly few were willing to join the Soviet block in opposition. France alone joined the block in opposing a request to the International Court for an opinion on the question whether allocations of dues for the Congo operation are binding on member governments. The assembly overrode Soviet, French and Belgian objections by allotting $10 million a month to cover a further eight months' expenditure in the Congo; and it approved the acting secretary-general's plan to sell up to $200 million worth of 25-year bonds, paying 2 per cent interest, to enable the UN to avoid bankruptcy in the face of widespread defaulting on dues for its present costly peace-keeping ventures.

Although the Congo appeared on the assembly agenda only as a financial item, it pervaded a session that opened with the shock of Mr Hammarskjöld's death at Ndola and ended with two weeks of fighting in Katanga. Even now, with the world's windows rattling after the Goa squall, the Congo evidently remains the most fateful signpost to the UN's future. Gloom over Goa ought not to foster a belief that the Afro-Asian members' occupation of nearly half the assembly's seats has led them to cast all political sense aside. The moderation of this year's resolution on Algeria was matched by the failure of an immoderate one on Oman, which mustered only 33 votes. Even more striking was the adoption by 97 votes to none (Britain, France, South Africa and Spain abstaining) of a restrained formulation on colonialism in general; the Afro-Asians turned their backs so coldly on a Soviet demand for the ending of all colonial rule in 1962 that it was not even pressed to a vote.

LETTERS

Peace on Earth

SIR—Beneath the almost universal longing for "peace on earth" which finds such widespread expression at this time of the year, the sharp contrasts between the unconsciousness of a largely a-political population and the awareness of a politically active intelligentsia, between idealists and realists, between the notion of "peace from strength" and "peace from good will," are nowadays fast disappearing. The essence of all the messages of good will and hope which mark the beginning of a new year is a longing for peace, on both the material and the spiritual plane.

More is needed, however, than mere expressions of hope and good will. There must be the will to peace evidenced, expressed and followed by the leaders of mankind. Men themselves, being what they are and relying on the "powers that be," have been deeply disappointed by the failure of last year's summit meeting, which in any case represented only half the human family. Is it possible, I wonder, that the addition of the heads of governments from those parts of the world not represented at last year's summit, and whose potential contribution in this field is underlined by the recent award of a Nobel peace prize to Chief Luthuli, might offer hope of real progress in mankind's pursuit of "peace on earth"?

But a new initiative also is needed; an initiative that would transcend the purely political. In this connection an idea suggests itself. Is it possible that His Holiness Pope John XXIII, who is also the head of a sovereign state and whose concern for peace has already aroused such universal respect, might convene such a meeting? One is encouraged in the hope that such an initiative might meet with a ready response by the recent report that a message of good will sent to His Holiness on the occasion of his birthday by Mr Khrushchev.—Yours faithfully,

LEON ZEITLIN

London, NW6

Doctors and Advertising

SIR—While relieved to read in your issue of December 2nd of the acquittal of the seven plastic surgeons, I am far from convinced that doctors' advertising and similar ethical offences are dealt with on sound, consistent principles based on natural justice.

Adjudicating bodies clearly have a duty to recognise that *intention* is of paramount importance in such cases. The Judicial

Committee of the Privy Council clearly recognised this principle in the judgment of Felix v. General Dental Council (May 11th, 1960), with the dictum that "an honestly held opinion even if wrong clearly cannot in their Lordships' view amount to infamous conduct," and they also held that infamous conduct must have an element of moral turpitude. In defending some of the seven surgeons Mr Norman Brodrick clearly relied on the first dictum, and Mr Stanley Price put the point relating to moral turpitude. These submissions would appear to have influenced the GMC in arriving at an acquittal.

Eighteen months previously, however, Mr Leslie Gardiner was ordered to be struck off, two weeks after the Felix judgment, without regard to these principles. Accused of advertising by writing a book on cosmetic surgery and acquiescing in its serialisation in a magazine, he pleaded three ethical reasons for writing his book. He produced documentary evidence from other medical authors writing for the lay public, his exhibits including many British Medical Association publications and two books serialised in the same magazine as his own in 1957 and 1958.

An innocent article appeared in the *Daily Mail* of June 10th, 1960, over a fortnight after Mr Gardiner had been found guilty of infamous conduct, giving a write-up of the plastic surgeons at East Grinstead Hospital in terms which were potentially dangerous to them. As none of these admirable men would desire to commit professional suicide after Mr Gardiner's misfortune, this showed in the most striking way the genuine uncertainty and doubt in the profession as to what constituted advertising. The General Medical Council had made no attempt to provide the profession with an informative definition of advertising, or to link it with literary work. The real position is that a doctor is advertising if the GMC chooses to interpret what he has done as advertising.

I think that the GMC has a public duty to clarify its position on these important matters, for otherwise justice has not been seen to be done, and there must be serious doubt as to whether injustice has not been done.—Yours faithfully,

Beaconsfield, Bucks H. W. PALMER

EIU Quarterly Economic Reviews

covering 57 countries or groups of countries

Out this week:

SWITZERLAND

Examining the state of business in Switzerland at the close of 1961, the review discusses:

The new hesitation in the rate of economic growth, and the severe labour shortage behind this development—How growing internal demand is bringing pressure on the trade account—Trends in the stock and money markets—The intractable problems facing Swiss agriculture.

Televarsities

SIR—In your article on December 16th you welcome the projected Institute for Educational Television with the hope that it will become "a really liberal and visionary body." There can be no quarrel with the desire to realise the full potentialities for further education of this powerful medium; but it is worth mentioning that there are already bodies in existence, the British Film Institute, the Educational Foundation for Visual Aids and the National Foundation for Educational Research, capable in their various ways of guiding television development in the sphere of education.

The announcement of the Institute for Educational TV has already caused controversy, and its proposed activities have been criticised in a letter to *The Times* as "misguided and extremely wasteful." The new institute also appears to be closely associated with, if not initiated by, certain commercial television interests, and in so far as this shows on their part a disinterested desire to create a truly independent body which will foster the best (and discourage the worst) in television, it is an encouraging sign. But this is already one of the objects of the British Film Institute, and there is a danger that the new institute will in function (as well as in name) lead to some duplication and cause division of resources and dispersal of effort. It is in the common interest that work in this field should be rationally co-ordinated and genuinely disinterested, and the available resources applied with the greatest efficiency. Granada TV and the BBC, by putting up the money for the BFI's new television magazine, have shown their readiness to use existing organisations as a basis for expansion; but so far their lead has not been followed by the rest of the television industry. It is to be hoped that, whether other companies support the new institute or not, they will not ignore bodies already in the field which would benefit inestimably from their support and enlightened sponsorship.—Yours faithfully,

R. STEVENSON

London, W1 British Film Institute

China's Population

SIR—The article on China in your issue of December 9th states, about China's present economic difficulties, that "Natural calamities have played their part, and so has the soaring birth-rate. . . ."

Is it really suggested that in spite of all the measures taken by the Chinese authorities to *reduce* the birth-rate (summarised in Alfred Sauvy's "Fertility and Survival," English translation 1961, pages 189-194) the birth-rate is actually "soaring"? Surely it is the rapid increase in the population rather than a rise in the birth-rate that is playing so serious a part in China's difficulties. In 1957 the Chinese demographer Mr Ta Chen is stated to have proposed as an aim for the country a reduction in the birth-rate of 50 per cent over a period of ten years. While this has not been adopted as a definite target by the Chinese authorities, it appears that they are pursuing an extensive campaign of birth control relying mainly on widespread propaganda and distribution of contraceptives. They have also raised the marriageable age both for men and women.

Sauvy concludes that the 50 per cent reduction may not be reached in ten years but even if it were it "would still leave the birth-rate at a level just above 20 per 1,000 whereas the death rate would no doubt go down fairly rapidly to 8 or 10 per 1,000. The residual increase [of population] of more than 1 per cent per annum (instead of the present 2.5 per cent) would still be considerably higher than that of western population." This surely would be serious enough in relation to China's present economic difficulties. A much faster rise in population *could* take place even if the birth-rate were falling.—Yours faithfully,

London, NW11 RALPH ENFIELD

[Sir Ralph Enfield's distinction between birth rate and population is, of course, valid. On the other hand, the Chinese government has not consistently followed a policy of limiting births. The birth-control campaign has been punctuated by frequent assertions that a large and growing population is an asset in a socialist society. In March, 1960, Professor Ma Yin-ch'u was removed from his post of President of Peking University for persistent attacks on the party's alleged abandonment of the policy of population control.]

The Ruling Classes

SIR—I feel that one possible reason for the failure of Redbrick candidates before the Civil Service Selection Board has been overlooked by you. You stress that the "greatest slaughter" is in the anonymously marked written examinations; and that it these the most successful are Oxbridge history and classics men "perhaps inevitably." Why inevitably? Could it not be that this is the training the examiners have themselves had, and therefore this is the training for which, knowingly or not, they are looking.—Yours faithfully,

Manchester JULIAN HOOD PHILLIPS

Lessons from Eastbourne

SIR—Your article refers to my "formidable attack" on the congestion in the port of London, and I became aware that it might have offended members of the Export Convention. There is a saying: The friend who tells you your faults and shortcomings is your friend! I sincerely hope that my comments are judged in this spirit.

Transport means cost and delivery. British exporters and transport should be aware that many a time a short delivery is not only of first importance but it makes good profits possible. Furthermore in all exports it is a must to tell how long delivery ex works will take. We who receive British goods every day pray that the expected report of the Rochdale Committee on the docks will be acted upon by Britain as a whole.—Yours faithfully,

Hamburg WILHELM RUMI

BOOKS FOR TOKENS

Hindu and Muslim

Divide and Quit

By Penderel Moon.

Chatto & Windus. 302 pages. 30s.

MR MOON'S book begins with an account of the events leading up to the partition of India and birth of Pakistan as seen from the Punjab; he goes on to a personal account of what happened in the border state of Bahawalpur during the period immediately after August 15, 1947.

The politics of partition are described with brilliant intelligence and an acid detachment tempered by a strong sense of the practical. No one comes out of it very well. The British were slow and complacent until 1942; almost everyone except Lord Linlithgow could have brought the 1935 Act into force before the war; a bold imagination could have prevented the Congress resignations in 1939. The Mahatma was unrealistic and hypocritical; the Qaid-i-Azam cold, uncompromising, proud. Their mistakes are ruthlessly exposed; this, of course, is hindsight but constructive and clarifying hindsight and there are few points at which any informed person will question Mr Moon's judgment. He appears at one stage to put the fatal breach in Hindu-Muslim relations as late as 1937, when the Congress refused to share office with the Muslim League in the UP; but in his last chapter he recognises that the critical worsening of relations—some would say the inevitability of partition—came when Gandhi decided on a mass appeal to the peasantry that was bound to have a religious flavour. Mr Moon does not seem to have met the strange delusion, widespread among the less sophisticated Muslims, that, once the British had gone, the two arms of Pakistan could be brought together to crush the Hindus between them, and he says little of the indifference with which the leaders of both great communities sometimes discussed the losses in human life that they might have to face to get their ends. But it is an account that can hardly be bettered.

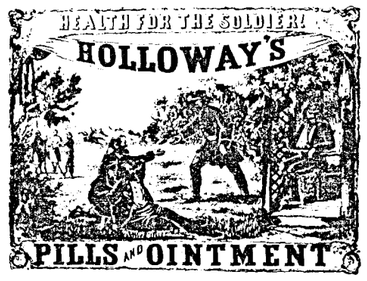
Events in Bahawalpur were less sensational than in the Punjab proper, but they were bad enough. Here the story has a telling quality of precise prosaic detail within which the horror is embedded; Mr Moon goes quietly about the business of stopping the killing, feeding refugees, sending train-loads of Hindus to India; we are counting rifles or bags of grain when we suddenly trip over a corpse. One passage compresses much:

> To kill a Sikh had become almost a duty; to kill a Hindu was hardly a crime. To rob them was an innocent pleasure, carrying no moral stigma; to refrain was a mark not of virtue but of lack of enterprise. On the other hand to try to stop these things was at best folly, at worst a crime. Mild remonstrance, though disliked and despised, could be tolerated, like the babblings in England against betting or blood sports; but effective action was liable to be viewed as a capital offence.

The story will be read with fascination by all who had any knowledge of these events and personalities; of those who had not, some may regard the book as a trifle specialised, but others will be fascinated by the skill with which events are related to each other and the elements of personal decision and pure chance woven into the narrative—perhaps also by the personality of the narrator, cold in his intellectual appraisal but genial in his personal relations with all but the pompous and hypocritical. He is in the main stream of one great tradition of English men (perhaps even more English women) abroad, moving fearless and unarmed among horrors like a prefect among fags; finding, for instance, a pair of soldiers rifling a still warm corpse, probably their victim, he kicks one of them "hard up the bottom," and one expects to hear that he has given the other one fifty lines.

In the latter part there is only one point at which to cavil; Mr Moon speaks as though in the Punjab proper the troops of the Indian Army generally proved unreliable about controlling their own community, as the state troops in Bahawalpur usually did. His knowledge is at firsthand about the state forces, at secondhand of the Indian Army, of which most reports are that it stood the test with remarkable fidelity. And surely the overwhelming difficulty with which the boundary force was faced was that there were none of the focal points—the mosque, the temple, the main street dividing the town—familiar to commanders dealing with internal security problems. Troops were needed in every village. But this is the only point in a crowded book on which one can seriously differ. Mr Moon writes always with clarity, sometimes with a seasoning of Churchillian magniloquence that gives his neologisms the more punch.

The Medicine Men



The Toadstool Millionaires

By James Harvey Young.

Princeton University Press. London: *Oxford University Press.* 282 pages. 48s.

A HUNDRED years ago an advertisement appearing regularly in the back pages of *The Economist* would exhort readers to buy "Holloway's Pills," "the only reliable medicine upon which implicit faith may be reposed," with curative powers "for all internal complaints to which mankind are subject." The proprietors were, of course, careful to change their copy according to the alarms of the day, and in the American civil war, so Mr Young tells us, they issued a poster showing an officer hurrying with a box to a sergeant ministering to a private, suffering, presumably, from "the brackish, muddy water and damp night air" of the South.

Mr Young traces the history of patent medicines in the United States from the eighteenth century, when they were imported from England, through the emergence of home-made products after independence, to their heyday in the late nineteenth century and ends with the first federal legislation designed to regulate them. The patent medicine maker, he points out, blazed a trail: he was

> the first American manufacturer to seek out a national market . . . He was the first promoter to test out a multitude of psychological lures. . . . While other advertising in the press was drab, his was vivid; while other appeals were straightforward, his were devilishly clever. The patent medicine promoter was a pioneer, marching at the head of a long procession of other men with ships and shoes and sealing wax to sell.

In the days when orthodox medicine relied on heroic remedies like bloodletting, the patent medicine man could claim that his nostrum was simple and painless, and he did not have to disclose how much opium or alcohol it contained—if indeed it contained anything potent at all. Later, when Pasteur or Koch had demonstrated the role of bacteria in certain diseases, the medicine men turned the discoveries to their own account. In the meantime, the opposition to the trade was mounting; journalists, doctors and politicians were all in their different ways trying to get a law passed to restrict the trade's excesses. But the turning point, according to Mr Young, came

with the publication of a book by Upton Sinclair describing how America's meat was processed, "how employees now and then slipped into steamy vats and next went forth into the world as Durham's Pure Leaf Lard."

Mr Young ends his story with the subsequent passing of the Wiley law (the Pure Food and Drugs Act of 1906, called after the Government chemist who had spent so much time and energy exposing abuses). But he has an epilogue showing how far this and subsequent legislation are from keeping quackery down. Drugs now have to be safe; nor can their labels bear misleading therapeutic claims. But the enforcement of the law takes a long time, and the new medicine men are still skilled at making money out of each publicised advance in medical science and each new fashion in treatment, for instance, through peddling vitamin capsules or weight reducing drugs. Quackery persists, Mr Young points out, not simply because the law is inadequate and slow to act, but because of the nature of man. He cannot accept the inevitability of death or that a cure must be protracted and painful—and the more striking the advance of medical science in one direction, the less willing is he to accept its limitations in another. Mr Young's conclusion is, of course, in many respects as valid for Britain as for America. The advertisements appearing in *The Economist* in the 1860s, calling attention to, for instance, the relief given by Dr Locock's pulmonic wafers, have their counterpart behind the vast amount of self-medication that goes on even in the health service era of the 1960s.

Project Mohole

A Hole in the Bottom of the Sea

By Willard Bascom.
Weidenfeld and Nicolson. 352 pages. 25s.

AMERICAN scientists often take considerable pains when they are spending public money to explain to the public what they are attempting to do and why—hence this book. Willard Bascom is the director of Project Mohole, a scheme to drill through five or six miles of the earth's crust to discover the composition of the so-called rock "mantle" thought to lie beneath it. He has written what amounts to a long and leisurely preface to the actual work of drilling which got under way this year, setting out how much geologists have learnt and surmised about the composition of the earth to date, what they hope to learn from the sample cores Mohole is expected to retrieve for them, and the sheer physical difficulty of gouging these out of the ocean bed.

This kind of writing has nothing whatsoever in common with the "Boy's Own" school of popular science; it is, moreover, a useful antidote to those bored comatose by space and its cosmonauts. Readers should not allow themselves to be put off by the horrible jocularity of the first two pages; Mr Bascom does not do it again.

For the Would-be Numerate

The Inspiration of Science

By George Thomson.
Oxford University Press. 160 pages. 18s.

Foresight and Understanding

By Stephen Toulmin.
Hutchinson. 115 pages. 18s.

The Boundaries of Science

By Magnus Pyke.
Harrap. 224 pages. 15s.

Understanding Chemistry

By Lawrence P. Lessing.
Harrap. 182 pages. 15s.

Physics for the Inquiring Mind

By Eric M. Rogers.
Princeton University Press, London; Oxford University Press. 789 pages. 48s.

THESE five books reflect in varying degrees the growing rapport between scientists and the vast innumerate majority of the population. Sir George Thomson, for example, breaks new ground when he sets out to explain not merely the workings of science, but also the workings of the scientist's mind—how the exception that will not fit accepted rules acts on it like grit in an oyster (theories, says Sir George, exist to be disproved); how big a part luck plays, ("a physicist must not merely have an insight of a semi-intuitive kind, but he must be able to assess experimental evidence which must not always be taken at its face value") ; and how in a few rare cases patient slogging along apparently well-worn paths will still unearth something new as Lord Rayleigh, possibly the last of the great scientific amateurs, discovered neon gas when he was attempting nothing more ambitious than the weighing of nitrogen.

The idea is a good one. Scientists become sympathetic when they are shown bumbling round, and sometimes tripping headlong over the germ of an idea that is to become a corner-stone of human knowledge. The overwhelming impression of intellectual honesty provides an antithesis (surely not an unpremeditated one) to the currently popular portrait of a quarrelling, politicking, petty-minded boffin that started as a caricature drawn by Sir Charles Snow but has acquired a horrid life of its own independent of its creator. If the idea does not quite succeed, this could be because Sir George has chosen to point his case with some quite extraordinarily difficult examples chosen from achievements in nineteenth and twentieth century physics. He has made a magnificent attempt at converting wave mechanics ("if nature really knows her own mind, there are certain things she has no intention of letting us know in advance") and Einstein's general theory into something intelligible to the general reader, but not even so distinguished a scientist as Sir George can make them bed-time reading, and books on science for the general reader stand or fall on whether they can be followed without undue strain. But it is a noble failure worth a dozen more facile successes. Whether the same can be said for Mr Toulmin's lectures on "Foresight and Understanding," part of the Nuffield Foundation's History of Ideas, is strictly a matter of taste. Mr Toulmin analyses the objects of science in terms of logic, and one might argue that science is hard enough to follow without this extra complication. Others, however, may find that it clears the air.

"The Boundaries of Science" sets its sights lower and scores a bulls-eye. Dr Pyke sees research as a panorama in which each specialised scientific discipline fits into the composite picture like stitches in a tapestry, none of them making sense without the other. Biologists must know physics, physicists must know chemistry, chemists must know biology and they are all straining on tip-toe towards discoveries that dangle just out of reach. Dr Pyke's special gift, after a slowish start, is to make the facts of science more exciting, more mind-boggling and more tantalising than the wildest science fiction. His chapters end as cliff-hangers whose next instalment may not appear for a decade. Mr Lessing's special contribution is to make science elegant. In "Understanding Chemistry," he achieves this effect with the minimum of effort; with concise and beautiful writing he can make even a great wibbly-wobbly "big molecule" a pleasure to read about and those who do will end with a good grasp of modern chemistry. Mr Lessing is less superficial than Dr Pyke, but the word is not used in any pejorative sense for Dr Pyke's canvas is larger and his brush strokes bigger and bolder.

"Physics for the Inquiring Mind," on the other hand, could be described irreverently as an exercise in one-upmanship. This extraordinary book first appeared in 1939 and was reprinted in the United States last year with the help of grants from the Rockefeller, Alfred P. Sloan and Whitney Darrow foundations and funds. It is now distributed in this country by the Oxford University Press. The inquiring mind of the title is assumed to know little about mathematics and care less; out therefore go all sums and formulae. It is also assumed to be interested only in the visible manifestations of physics; out therefore go all theories. Having thus disposed of the two main barriers to communication between scientist and non-scientist, Mr Rogers goes about explaining physics in simple terms with disarmingly funny illustrations; test questions at the end of each chapter provide a running check on how much has been absorbed. It is a book that can either be taken as a serious one-year physics course—it forms the basis for such courses provided for arts graduates at Princeton University; as a quick crib for businessmen suspicious that their advisers may blind them with science; as a gob-stopper for offspring with awkward questions; or as a doorstop of formidable weight. In any role it is splendid value.

THE FIRST CENTURY OF ENGLISH FEUDALISM 1066-1166

BEING THE FORD LECTURES DELIVERED IN THE UNIVERSITY OF OXFORD IN HILARY TERM 1929

SIR FRANK STENTON

The original purpose of these lectures was to get behind the abstract conceptions suggested by the word feudalism to the documents recording the actual dealings of knights and barons with one another, with their lords and with the king. For this second edition the text has been revised and use made of materials which throw new light on individual problems.

THE OXFORD HISTORY OF ENGLAND

General Editor: Sir George Clark

VOLUME VI:

THE 15th CENTURY

1399-1485

ERNEST F. JACOB

This volume completes a great series, as originally planned. 'The aim of the Oxford History has always been to devote chapters to social, economic and cultural as well as to political history, and this volume achieves a brilliant synthesis of all these aspects . . .' THE TIMES 38s *net*

THE NORTHERNERS

A STUDY IN THE REIGN OF KING JOHN

J. C. HOLT

'. . . one of the most fundamental studies of the period yet to be written . . . . Mr Holt treats the Northerners as the point of departure for a penetrating analysis of the entire structure of Angevin government in both its general aspect and as it developed under John . . . .' THE GUARDIAN 42s *net*

THE MAKING OF DOMESDAY BOOK

V. H. GALBRAITH

This is a fresh examination of the procedure followed in the Great Inquest of 1086, and the steps by which its findings were recorded in Domesday Book. It is a study in administrative history that assesses the motives behind this vast enterprise. 35s *net*

OXFORD
UNIVERSITY PRESS

A STUDY OF HISTORY

VOLUME XII

RECONSIDERATIONS

ARNOLD J. TOYNBEE

Dr Toynbee has taken as full account of the work of critics and archaeologists since the publication of *A Study of History* as he has found possible; and in the light of this has reconsidered his own views on a number of questions. 'Dr Toynbee's achievement is to have created a rational system by which men may view their history as a whole.' THE TIMES EDUCATIONAL SUPPLEMENT 45s *net*

BRITISH HONDURAS

AN HISTORICAL AND CONTEMPORARY SURVEY

D. A. G. WADDELL

A survey of the social, economic and political problems facing this small Central American colony with its precarious economy and uncertain political outlook. 'His excellent short study gives a refreshing glimpse of a corner of the world which seldom comes much into the news.' SCOTSMAN (*Chatham House*) 18s *net*

VENEZUELA

EDWIN LIEUWEN

This account of Venezuela since the Second World War describes in detail the social revolution which has been sweeping the country and has resulted in alteration of class structure, redistribution of wealth, transformation of economy, and drastic changes in traditional political processes. Descriptions of the land and the people, international relationships and an up-to-date survey of the economy are also included. (*Chatham House*) 25s *net*

THE DISCOVERY OF NEW ZEALAND

J. C. BEAGLEHOLE

Gives a clear account in a small compass of the process by which the coastline and extent of New Zealand became generally known. The text has been thoroughly revised and added to where this is appropriate.
'. . . remains a New Zealand classic—and a notably readable one too.' NEW COMMONWEALTH *Second edition* 21s *net*

THE ECONOMIC DEVELOPMENT OF COMMUNIST CHINA 1949-1960

T. J. HUGHES and D. E. T. LUARD

A short factual account of the economic development of China since the foundation of the People's Republic. The book has been thoroughly revised in 1961 to take account of developments up to the end of 1960. It contains two maps, a short bibliography, statistical appendixes and an index. *Second edition* (*Chatham House*) 25s *net*

POLITICAL HANDBOOK OF THE WORLD

PARLIAMENTS, PARTIES AND PRESS AS OF JANUARY 1 1961

WALTER H. MALLORY

Each year this important handbook gives up-to-date essential political information about every country in the world, and includes important data about the United Nations and affiliated international agencies. (*Council on Foreign Relations*) 44s *net*

LIMURIA

The Lesser Dependencies of Mauritius

ROBERT SCOTT

'For the fortunate few, and they are indeed very few and very fortunate, who have visited these islets Sir Robert Scott's book, *Limuria*, provides a wealth of information, historical, administrative and geographical, regarding the self-sufficient isolated communities which inhabit these vestigial slivers of land hidden in the wastes of the Indian Ocean.' BRITISH ECONOMIC HISTORY FROM 1820 TO 1880

J. D. CHAMBERS

'. . . a most readable book based on the latest monographs as well as the author's own deep knowledge of the subject. For the plain man, or for the professional but non-economic historian, it can be highly recommended as an admirable summary of present knowledge.' THE SUNDAY TIMES 8s 6d *net*

Other People's Justice

The Faces of Justice

By Sybille Bedford.
Collins. 255 pages. 21s.

MRS BEDFORD is first of all a novelist, but she is also a highly skilled reporter who has achieved international fame for her brilliant coverage of the Dr Adams and Lady Chatterley trials. In her latest book she combines the insight of the novelist with the technique of the journalist to give a fascinating picture of how justice is administered in England, France, Germany, Austria and Switzerland, a choice of countries which seems to have been dictated by her competence in the relevant languages. On closing her book one's dominant thought is of the truth of Pascal's dictum that a few degrees of latitude overturn all jurisprudence.

The differences in the administration of justice, especially of the criminal law, are etched out sharply in Mrs Bedford's book. There is first the "unbridgeable gulf between the English accusatorial and the continental inquisitorial procedures. In England the judge is grand, detached, and aloof from the struggle, which is carried on far beneath him by the advocates. The English trial never gets very far from the boxing ring, with the judge as referee to see fair play. The continental trial is quite different. Its purpose is not to balance probabilities by assessing strictly limited evidence but to get at the truth. The judge far from being silent (or nearly so) is at the heart of the matter, questioning, probing, trying to get the right answer. The advocates have very minor functions. Often the jury will sit on the bench with the judge and retire with him and apparently do not feel ill at ease or dominated.

The English vice is to consider their institutions the best and to despise other people's. Mrs Bedford's book gives some painful prods to this comfortable assumption. She shows clearly that although continental trials take much longer, they are much more thorough, and although delays are scandalous between committal and trial, the chances of an innocent man being convicted (or of a guilty one getting away) are much smaller than in England. Judges take cases at fixed hours, which means fewer cases but is a blessing to advocates and their clients. We pride ourselves on the impartiality of our judges, but what does the person chiefly involved—the criminal—feel? Surely at the end of the trial, when impartiality is cast aside and the judge delivers a series of stinging rebukes and moral condemnations, he must feel that the whole thing is an elaborate fraud, that he was trapped from the start and that "they" never intended to give him a fair trial. We revel in the pomp and circumstance of our courts and in this are as silly as the French; Mrs Bedford sneakily establishes her point that perhaps there is something to be said for the despised bourgeois Swiss, with their matter of fact courts and judges in lounge suits, the product of a society that believes in rather than professes equality. Not that reliance can always be placed in the people as the Germans found to their cost. The Weimar Republic had to abolish the British-type jury because they brought in too many convictions; however, the Germans are a notoriously difficult race.

A comforting feature of Mrs Bedford's book is to show that other nations have their shortcomings too. She gives a horrific picture of Austrian *Schlamperei* in a provincial court, and anyone who has criticised the British magistracy should read her bloodcurdling account of how the French dispense summary justice. Mrs Bedford has written a fascinating and also a valuable book, but it is also a sad one. The individual caught in the meshes of the law, whether it be English or German or Swiss, is a depressing sight. Irritating, disgusting, pitiful by turns, he is hardly ever dignified or even human. Not even Mrs Bedford can give us an Aristotelian vision of justice at work. St Augustine was right. The law is a necessary evil. One can say no more than that.

Kindest Cut

The English Inside Out

By Pearl Binder.
Weidenfeld and Nicolson. 264 pages. 25s.

MISS BINDER is a prober, a cutter-up of unconsidered trifles and a connoisseur of class-distinctions. In this, her latest book, she has spared the Scots, Welsh and other un-English Britons the attentions of her scalpel eye, and has in the pleasantest way possible dismembered the English alone; thence she has spread out on her bench our poor bits and pieces—our Englishness; our class prides; our home, sex, and love lives; our youth, work and play, humour and art; our clothes; our H-bomb; and our God—and affectionately dissected each one. What she finds is a catalogue of aberration from the human norm enough to transport a student of morbid psychology: but she has the true detachment of the anatomist, and what may well mortify her reader fills her only with interest and even admiration. The English are, so to speak, spotty with the efflorescences of inner conflicts: such things as paragraphs from *The Times* and snatches of pub conversation are the symptoms of stress.

We are, she discovers (and proves it) children, Peter Pan figures engaged in a life-long, fool game of social snakes-and-ladders. But we are not, for this reason, negligible: on the contrary, it makes us all the more important in the world, more valuable to civilisation, better able to survive the terrors of the age. Nonsense? Perhaps; but nonsense so engagingly written, that, when she asks on her last page: "Is this of any value?", we can only agree with her and answer: "We believe it is."

Stay at the First Glass

The Enemy in the Mouth

By Joseph Kessel.

Hart-Davis. 187 pages. 15s.

IF anyone wants to read about the methods of Alcoholics Anonymous which for the last twenty-five years has been reclaiming alcoholics in the United States he will find this account, by a French journalist, readable and graphic. It is also sensational and at times almost unbearably embarrassing but, after all, so is the subject. AA began as an offshoot of the Oxford Group, and some of its methods have a distinctly groupy tinge about them: public confession ("My name is John N., and I am an alcoholic"), sharing experiences, prayer to some form of "Superior Power." It is little wonder that many alcoholics just cannot stomach joining such a body.

Yet there can be no doubt of the help it can give to those who are prepared to accept its rules. And the movement has spread. Started by one alcoholic helping another in Akron, Ohio, it now has 300,000 members (two-thirds of them in the United States) and branches in eighty countries. In the larger American towns, through its "intergroups" it provides immediate help —which means sending along a member of AA—for any alcoholic who is at the end of his tether—or whose family is. Further, in the twenty-five years of its existence, the members of AA have accumulated a number of facts and beliefs about the disease of alcoholism, some of which are accepted and applied by doctors and others trying to treat it.

One of these is that the alcoholic must stop thinking about a lifelong pledge and concentrate on not drinking in the next twenty-four hours. Coupled with this is the recognition that for him there can never be "only one glass," that, if he wants to remain cured, he must always refuse the first glass. This rule derives from AA's belief that alcoholic craving is an allergic reaction to which some people are born predisposed, and that this is what distinguishes alcoholism from heavy drinking. This theory is not, however, generally accepted outside the movement. For one thing, in England alcoholism is rarely found in the young, and when it does occur—in middle age—there is usually a history of years of heavy drinking. This suggests that an alcoholic has been gradually conditioned rather than born to the disease; and that alcoholism is more frequent among the young in America than in England may be explained by their greater tendency to drink spirits rather than beer.

Theories apart, the practical treatment and support evolved by AA have proved themselves over and over again. Reading Mr Kessel's book, one cannot help wishing that someone would start a movement, providing group support but without being groupy, for the millions of alcoholics untouched by AA. Probably it could not be done.

A New Assessment

The Art of George Eliot

By W. J. Harvey.
Chatto & Windus. 254 pages. 21s.

CRITICISM of George Eliot that assumes major flaws in her art's mastery is obviously absurd, and it is one of the merits of Mr Harvey's useful and interesting book that in many important ways he arrests a current that has been flowing in a somewhat derogatory direction for many years. Critics, while admitting George Eliot's substantial power—why else, indeed, should they bother to write about her?—have niggled at her means of deploying it and, most importantly, at her narrative methods. It has long been taken for granted that the "omniscient author convention" is a poor tool, used only in default of later and better methods and, in any case, used clumsily by George Eliot. Undoubtedly the most useful and enlightening gift of "The Art of George Eliot" is Mr Harvey's re-examination of this assumption and of the convention as George Eliot uses it.

His decision is that she uses the convention efficiently in the fulfilment of a necessary and specific function: the linking of "the fictional microcosm of the characters and the macrocosm of George Eliot and the real world." George Eliot's is not a romantic vision in the sense in which John Bayley made the distinction in "The Characters of Love," not a self-contained world but one which, as Mr Harvey puts it, is "coterminous with the 'real' world, with the factual microcosm." To bridge these two worlds, the omniscient author convention can be the most appropriate tool, and in showing that George Eliot uses this tool properly and often brilliantly, Mr Harvey has redressed a long-standing injustice.

Mr Harvey is modestly helpful on the subject of imagery. He points out, as is needed but seldom done, that consistent use of imagery may be unconscious on the writer's part and unconsciously assimilated by the reader, but that the writer's choice of even apparently dead metaphor "may allow us to feel reverberations of greater significance in an apparently neutral and innocent phrase." On the subject of imagery the reader who is not a professional critic is too often made by professional critics to feel stupid and unperceptive, and it is usefully stated that the general reader's full enjoyment need not necessarily involve the verbalised awareness which is the professional's business.

Another useful redress of balance is Mr Harvey's attempt to show that George Eliot was less dotingly involved with her Maggie and her Dorothea than earlier critics have supposed. His is not all praise, but his carpings are the more willingly received for the perceptive admiration that underlies his whole approach.

But perhaps the most significant sentence in his book is one he proffers almost as a throwaway—"without the primary enjoyment we should hardly bother to rationalise." About that primary enjoyment he, like other critics, says nothing, and one may suggest that so long as "story-teller" can be adversely contrasted with "novelist" they never will. Perhaps the sole dissservice that Mr E. M. Forster has rendered to English literature was his denigration of the story-teller; and English criticism has never recovered from it.

"Don't stay I said so, but I have it on excellent authority that that fellow Tshombe's been whitebalked for Blacks!" 10.viii.60

In his foreword to the latest selection of his pocket cartoons ("Signs of the Times 1939-1961." *Murray.* 144 pages. 21s.) Mr Osbert Lancaster tells us that, in going through a thousand or more drawings, he was appalled by the number of times his own response was a total blank—the point of the joke gone, the incident, once apparently of historical significance, become trivial. This will not, however, be the reaction of his readers, at least those of them old enough to remember the war, to the selection he eventually made. It represents his coming of age as a cartoonist, and it includes plenty of drawings of Maudie Littlehampton making her devastating remarks down the years.

The Turn of the Tide

The Yorkist Age

By Paul Murray Kendall.
Allen & Unwin. 526 pages. 35s.

THE idea that modern history began with the Tudors has been attacked on two sides. On the one, the rise of the layman Thomas Cromwell under Henry VIII and his use of the flexible office of secretary have been seen as the beginning of a new type of bureaucratic administration; on the other the assertion that the Tudors created a strong central government and restored the fortunes of a country rent by civil war has been challenged by the very real claims of the Yorkist kings to have done precisely the same thing. Mr Kendall's book has thus a special interest, and although he settles no issues, he does provide a general picture from which conclusions can be drawn.

Mr Kendall clearly admires the Yorkists, but he does not in fact prove that they succeeded in restoring order. The extant evidence is all too clearly the other way; both the Shillingford and Paston letters show that private war and local violence were endemic. Nevertheless Edward IV did manage to restore the dignity and prestige of the monarchy, and in contrast to the shabby and mad Henry VI, he was an able and energetic ruler.

The most illuminating section is on trade, for it is here that the turn of the tide under the Yorkists can be seen. The country was becoming increasingly prosperous, and Edward actively encouraged trade, engaged in it himself and pioneered the building of a merchant fleet. At the close of the reign of his brother Richard III, England's exports of broad cloth alone were worth £100,000. Bristol merchants were sailing to Iceland and had attempted to open up the Mediterranean; clothiers inland were building gig-mills and starting an embryonic industrial revolution; the newly incorporated Merchant Adventurers were expanding on the continent under the direct patronage of Edward IV.

In one sense Mr Kendall's book is yet another readable social economic study drawn from contemporary sources. What makes it particularly rewarding for the reader is that the sources are both rich and varied. He uses the Stonor and other papers, the Shillingford and Plumpton and Paston letters, and the autobiography of that travelled and hysterical woman Margery Kempe; with these behind him he can hardly go wrong. Mr Kendall has nothing startlingly original to say, but his writing is lively and entertaining. Anyone wanting to know how the marriage market was worked, or children educated, or what people ate, read and did in late fifteenth century England, can find it all in this book.

Only twice does Mr Kendall enter the controversial ground of *real-politik* with something new. He has a lively and hostile description of Elizabeth Woodville, the wife of Edward IV; and an equally interesting description of the enigmatic Margaret

Beaufort, the mother of Henry VII, whose intrigues in London may well have helped her son to the throne.

What is abundantly clear from the book is that the revival of England as a mercantile power and of the monarchy as the symbolic head of an emergent nation was the work of the Yorkists. The forces of change that made England a modern state may well have been those of the Reformation, but the materials were ready to hand, and the Tudors built on foundations already in existence.

Russia Between Covers

Everyman's Concise Encyclopædia of Russia

By S. V. Utechin and others.

Dent. 649 pages. 30s.

ALL the Russias in one Everyman? Dr Utechin, with the help of his wife and a team of specialists on cultural subjects, has made a gallant bid to compress between two covers the vast four-dimensional sprawl of the modern Soviet Union and the Russias that preceded it. Inevitably, it is easier to see what has been left out than to suggest what might have been omitted instead. The encyclopaedia keeps a very fair balance between past and present, between public affairs, the arts and social phenomena (the last including some significant data on class structure in modern Russia). It is useful to have explanations of some of the favourite Soviet portmanteau terms, such as *partorg*, *politruk* and *sovnarkhoz*, and of such current slang words as *blat*, *shturmovshchina* and *stilyagi*. And there is, of course, much material here that cannot be found in Soviet publications, including references to such "unpersons" as Lavrenti Beria.

However, one scans the entry on Trotsky, for instance, in vain for any clear indication of the main issues between him and Stalin. Anastas Mikoyan's long and agile career is dismissed rather summarily, in only half the space allotted to, say, Kuybyshev. Otto Kuusinen gets no entry at all; nor is it easy to collect more than scattered scraps of information about the 1939 invasion of Finland, during which he was installed as head of a puppet Soviet-Finnish government.

It is not only in the modern political field that curious omissions are to be found. There is no entry, for example, for Borodino; and neither in the paragraphs on the history of Moscow nor elsewhere is there any account of the Napoleonic invasion of 1812. Alexander Popov's priority over Marconi in the invention of radio-telegraphy is claimed with surprising baldness. Among the writers of the Soviet period, there is an entry for Evgeni Zamyatin but none for Isaac Babel; among painters, Kandinsky has his paragraph, but there is none for his fellow émigré, Chagall. It seems only fair to the reader that he should be warned that this volume contains rather a number of gaps of this kind. In fairness to the authors, however, it should also be said that the omissions betray no identifiable bias, but would seem to arise purely from the need for compression; and that in all other respects this is a uniquely compact and handy work of reference for the huge, and hugely important, field it covers.

Dickens in Pictures

Charles Dickens: *A Pictorial Biography*

By J. B. Priestley.

Thames and Hudson. 144 pages. 25s.

SLIGHTLY petulant, slightly arrogant, touchingly young, Maclise's portrait of Dickens at the height of his fame is a useful counterpoise to our habitual English belief that great men are venerable and youth to be mistrusted and reviled. Pictorial biography may often provide a stimulating and revealing supplement to more academic critical studies, and Dickens, pre-eminently among writers, proves a proper subject for this more popular approach. It was extremely sensible of the publishers to invite Mr J. B. Priestley to provide the text for "Charles Dickens," the first in what is to be a series of pictorial biographies, for Mr Priestley brings to it the sympathy and understanding of a writer working in this same perennially interesting, essentially English, tradition.

In these times of widening culture, critical studies of this kind seem likely to meet a growing need. Those artists in all fields whose work is widely popular, who can transcend the usually too restricted cultural compartments of our time, need interpretation at all levels, and not least at the level of this book on Dickens. Mr Priestley gives a fair and full account of the life; speculates, within proper limits, on motivations; and offers judgments of the work with which most will agree, though it is, perhaps, a little surprising to find him saying that only "a few Marxist and socialist critics" think well of "Hard Times." The pictures—of people, of places, of illustrations from the books—are fascinating, and evoke an almost claustrophobic feeling of the period. Whether for these alone, or for picture and text together, this pictorial biography is a safe present for all people of all ages who enjoy Dickens's work.

Valete

The Concise Dictionary of National Biography. *Part II, 1901-1950.*

Oxford University Press. 528 pages. 42s.

BY and large they do look a Whiggish crowd and no mistake. Ramsay Mac and Baldwin ("a genius for waiting upon events") weigh them down from the top, of course, but here they are, the lot of them, the Robert Hornes and Hicks Beaches and the greater exemplars, the Goschens and Milners. Well, perhaps *they* were sound enough, but just as dull. And everyone, it seems, wrote for dear life in the middle of everything else. Even that surprising mid-Victorian relict Miss Nightingale put pen to paper in her day. The only ones who didn't (barring Montagu Norman) were those bit-players, the English cricketers (this was up to 1950, remember) and Scotch judges.

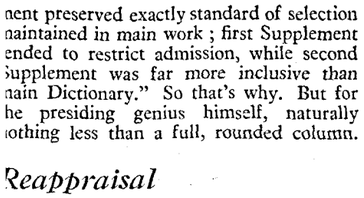
Scribble, scribble, scribble: it is impossible to open this DNB half-century without finding an editor or valued contributor staring bleakly up. Not all were bleak. Harmsworth, Scott, Pearson, Leng, Newnes, Chesterton, Morley, Stead: this was the great generation of journalism, reaching into every recess of life. Acton? Why he's the EHR man. And even Eyre Crowe's memorandum counted for a whole raft of diplomats (*qv*). It is hard to believe that any other age will be so commemorated, even by the DNB, again.

But to business. How is justice measured out spacewise? The national *valete* is a serious matter, and if Ll.G. has a line or two more than Asquith (he has, too) it is incontrovertibly an historical judgment. So Baldwin is disposed of in a column, and Balfour from a more expansive age gets two. George V, who actually did something for the monarchy, gets three columns, but Edward VII ("eminently satisfied contemporary conditions of kingship") runs to over eight. Ah, but Edward was Sidney Lee's particular pigeon; there must be no tampering with the master's work. And Lee himself? Well, there is a carping criticism, after all, and of the latter-day DNB too: "neither first nor second Supplement preserved exactly standard of selection maintained in main work; first Supplement ended to restrict admission, while second Supplement was far more inclusive than main Dictionary." So that's why. But for he presiding genius himself, naturally nothing less than a full, rounded column.

Reappraisal

Thomas Wentworth, First Earl of Strafford

By C. V. Wedgwood.



Cape. 415 pages. 30s.

Many disordered lives I saw
And foul records which thaw
My kinde eyes still, but in
A fair, white page of thin
And ev'n, smooth lines, like the Suns rays,
Thy name was writ, and all they days.

THESE lines by Vaughan might apply to Miss Wedgwood, whose kind eyes first turned to the saturnine figure of Strafford in 1935. The portrait she then drew had the smooth texture of velvet, and Strafford, unlucky in his life, had a posthumous reward in so sympathetic a biography. But in the intervening years the velvet wore thin. On the one hand, the Wentworth Woodhouse papers deposited in Sheffield provided a mass of new material; on the other, historians laid a new emphasis on the private ambitions which can distort ideals, and on the ambivalence and disingenuousness so often concealed behind the façade of public service. "Disordered lives" and "foul records" have not thawed the eyes of the younger historians but have given them added sparkle. Mr Kearney has exposed the workings of Strafford's administration in Ireland; Mr Cooper has revealed his disturbingly massive gains from office; and Mr Ranger has given us a brilliant revaluation of Strafford's political significance. The "fair, white page" was extensively blotted, and Miss Wedgwood decided that a "drastic reappraisal" was necessary.

The result is a greatly expanded book with entire chapters, notably those on Strafford's administration in the north and in Ireland, rewritten. The ambivalence which scarred Strafford's career becomes apparent. The attractions of the Lord Deputyship were "the personal profit to be gained from the place" and "the opportunity and means to supply the King's wants." Although he told the Earl of Arundel in 1633 that "landless I came and landless will I come back," he showed a voracious appetite for Irish estates, investing in them the proceeds of monopolies and customs farms. While he was acquisitive and ruthless, he was also violent and authoritarian, prepared both to manipulate and to beat down opposition.

The indictment can be piled up high against Strafford, but Miss Wedgwood is scrupulously fair in paying tribute to his services to the Crown. No historian can be ignorant of the end of the story he is writing, and the shadow of the scaffold to which an ungrateful king sent Strafford lies across his earlier career. Miss Wedgwood tells the final tragic episodes superbly, but her sensitivity to these perhaps accounts for the fact that where others have seen "double-think" in Strafford, she prefers to hold that "he merely had lapses, as though there were certain areas of conduct where his theories of integrity were simply not relevant." A less kind biographer would have pointed to Strafford's sales of land just before his "great apostasy," and would have considered more fully the reasons for his change of side. Miss Wedgwood's mellifluous style charms the reader: the flowing lines and rich ornamentation of baroque portraiture are here, but also some *trompe-l'œil*, while there is not enough black, the favourite colour of the artists of this genre.

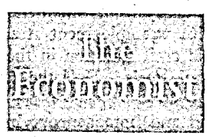
An illustration from "A Memoir of Thomas Bewick written by himself." Edited and introduced by Montague Weekley. *Cresset.* 239 pages. 18s.

Bewick 1753-1828, one of the last artist tradesmen, lived and worked on rural Tyneside when Newcastle only had 20,000 people. His wood engraving raised the standards of craftsmanship throughout the publishing world and his influence was strongly and increasingly felt until the process camera killed the whole trade in the nineties. His work is now used, copyright free, as a stimulating filler in advertisements, book jackets (why not on this one?), magazines and menus. The Memoir shows Bewick as an insular rural puritan, but his writing is fascinatingly emotional and a social documentation of his life and times.

The Pirate Wind

Captains Outrageous

By Neville Williams.



Barrie and Rockliff. 255 pages. 25s.

THE number of members of Parliament for such places as Rye or Dartmouth who began their careers as pirates is really surprising. It is even more remarkable to find Lord High Admirals taking their whack out of piratical cruises in the Channel. Not until that redoubtable judge, Sir Julius Caesar, conquered the west country by his reorganisation of the Vice-Admiralty courts, and not until Cromwell founded an efficient naval service, did the reign of the pirates over the British seas come to an end.

Those who had a taste for such a life then took to the tropics. The classical age of piracy, when the image of the sea robber in full-bottomed wig sailing under the Jolly Roger was stamped upon the public mind, was the beginning of the eighteenth century, the age of Avery, Blackbeard and Captain Kidd (to whom Mr Williams is much too kind). But in the middle ages piracy was the principal occupation of English seamen. It is significant that Eustace the Monk, the first pirate of whom we have real knowledge, was for part of his career in the king's service. Historically, the breeding of that paragon of virtue, the naval officer, is out of piracy by privateering. In those days a man-of-war was a pirate vessel, not a queen's ship. Mr Williams wisely excludes the larger and more important question of privateering. Even so, it is often hard to say at what point men like Frobisher or Drake were pirates, privateers or naval officers.

Such is the story Mr Williams tells from the days of Chaucer's shipman to those of the suppression of pirates in the China seas. This is the most reliable history of British piracy and its suppression yet written. Hitherto, the late Dr Gosse's book was the best available. But Gosse, the owner of a fine pirate library, relied on literary sources such as hanging pamphlets, ballads and the ever-popular "General History of the Most Notorious Pyrates" by Captain Johnson. Mr Williams is hardly concerned with the pirate in literature; he does not even consider the interesting possibility that Johnson was really Daniel Defoe. He has gone back to the primary sources such as the records of the High Court of Admiralty. The result is a book in which the scholarship does not obscure the colour of this fascinating subject.

Execution Dock, where the pirate of old was sentenced "to be hanged by the neck until you are dead, dead, dead," no longer exists; but the bank robber of today carries on the tradition of daring raids amid shocked journalistic acclaim. For what is piracy but interference with the free movement of commerce, by sea or by land?

Subscription and Gift Orders

If you would like to receive The Economist regularly please fill in your name and address and hand this order to your newsagent—or send it direct to the publisher at the address below. If you would like to give The Economist to a friend, we will gladly arrange for a gift card to be sent with the first copy.

HOME REPORT

Members of the editorial staff and local correspondents report on life and happenings in and around Britain

Early Days in Sheffield

FROM OUR SPECIAL CORRESPONDENT

THE new year sees the first of the big bulge of school-leavers: in 1962 603,000 boys and girls between 15 and 17 will be settling down to earn their first week's wages. For the boys this has previously been a moment of aimless suspension between childhood and military service: the end of national service and the beginning of the bulge make it particularly appropriate just now to take a hard look at the school-leavers' problems. A report* from the official pundits last week gave some grounds for thinking that, after all, they are not too bad.

In the first nine months of 1961 industry was able to find jobs for all but a tiny proportion of those leaving school between the ages of 15 and 17 (except in the perennial problem areas of Scotland, Wales and the north-east). Best of all, 38.4 per cent of the increasing number of school-leavers were apprenticed to skilled crafts, compared with 36 per cent in 1960. There is a steady trend towards later school-leaving: but 60 per cent of children still start work at 15.

This figure gives point to another, smaller, infinitely more detailed (but as yet unpublished) study undertaken in 1959 and 1960 in Sheffield. Financed by a grant from the Department of Scientific and Industrial Research, Mr M. P. Carter of Sheffield University selected at random twenty boys and twenty girls from each of five secondary modern schools in the city. All of them left school at 15: Mr Carter interviewed them, their parents, their teachers and their employers, to see how they fared during their first, and possibly formative, year.

The schools were situated in contrasting areas (new school in middle-class district, old building in a slum area due for clearance, etc.), but only 15 per cent of the 200 children had middle-class parents. The community from which they come is hard-working and prosperous, with unemployment steadily under 1 per cent: it also has a notable craft tradition in the many firms, large and small, making special steels. Half the fathers were working in the steel industry.

Despite this solid and homogeneous background, very few of these 15-year-olds had much idea of what they wanted to do. Of the 200 children, 36 boys and 36 girls had changed jobs within the first year, 11 boys and 8 girls having had at least two jobs in that time. Very few indeed were sacked: only four moved because they wanted more pay. Even in steel and engineering, entered by 40 boys, 20 had changed jobs in the year and 15 of these had gone into outside occupations (while two others transferred into steel or engineering within the year).

Forty-eight boys got apprenticeships on leaving school—27 of them with the help of relatives or friends, and 13 through the Youth Employment Service—but 15 of the 48 had given up their apprenticeships in the first year. (Eleven of these 15 had low intelligence test scores and should probably never have become apprentices in the first place.) In short, the way in which jobs or apprenticeships were found was hopelessly vague. Mr Carter's two most depressing comments are: "The jobs obtained generally had little relation to the jobs aimed at"; and, even worse: "The majority were far from clear about what work was entailed in different occupations."

WHO is to blame for this? Perhaps first the parents—although the rational discussion of alternatives is not a common practice in most English families, let alone among manual workers. Careers masters in schools may or may not have the time or the inclination to go into the details of their dumber pupils' preferences. The youth employment officers found jobs for 31 per cent of the boys and 23 per cent of the girls, which seems highly creditable: but there were only 9 officers for some 5,000 Sheffield school-leavers, and it seems as though both children and prospective employers were inclined to regard the Youth Employment Service as a last resort.

Ultimately the culprit may simply be full employment. Employers need labour, whatever its quality: many jobs, even some apprenticeships, were given to lads calling in on the off-chance (18 boys and 16 girls got work this way and 6 boys got apprenticeships). In a climate of full employment school-leavers may not be particularly concerned about job security, or even about acquiring a skill. And a knowledgeable local remarked that many of the jobs open to school-leavers can be done by anyone who is not actually a moron. Here lies the danger that may be concealed by the Youth Employment Council's apparently gratifying figures. The young people who stay on at school until they are 16 or 17 do so because they—or their parents—are brighter or more pushful: most of the better apprenticeships start at age 16, and the lads who are going to take them up have no incentive to leave school before then.

But at present nobody seems particularly interested in those who will always leave school at the earliest possible age—the problem will not be abolished, merely postponed, by raising the leaving age to 16. Even the trade unions, who both nationally and locally in the Sheffield trades council have been among the first to concern themselves with the problems of the bulge, fell down on the job with the subjects of the survey. Only one-eighth of them had joined a union by the end of the first year of work. Many unions, indeed, will not admit members under sixteen: but most of those who were union members had no idea at all of the function of a union—and some of them did not even know the name of the one they belonged to.

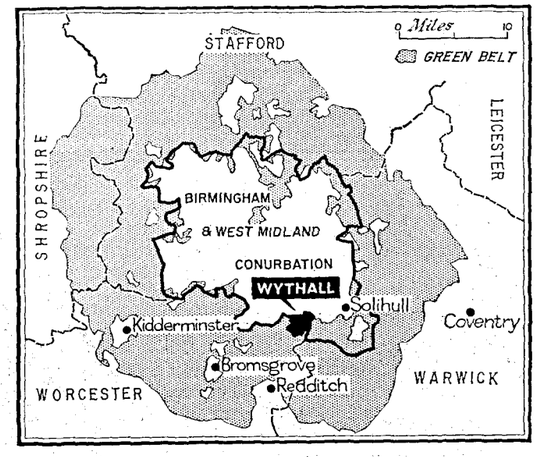
Remember Wythall

BIRMINGHAM'S last major essay in imperialism, to take in 2,400 acres at Wythall on its southern boundary, was defeated by the counties of Warwick and Worcester after a planning inquiry in July, 1959. The city thereby lost the chance to rehouse 40,000 of its population, together with some factories, on a site wholly under its own control. The ring had been closed round the west Midlands conurbation, the most rapidly expanding region of its kind, in the name of good planning.

Some of this has been pure gain. For the first time the city was forced to take seriously such planning projects as the new town at Dawley—which still awaits the Ministry's approval. Many of the most vocal Midlands planners believe that the real answer to Birmingham's problems is to disperse new economic life and populations among the dead areas of its surrounding counties and up into the foothills of mid-Wales. But the progress of these schemes has been desperately slow: and with each year that has passed Birmingham's office population has continued to grow, and the demands on space in rehousing slum dwellers have become increasingly serious.



Last summer the Ministry relented slightly, allowing Birmingham 600 acres at Wythall (6,000 houses) to relieve the pressure. But it proposed to deal with the west Midlands overspill by large-scale developments at Worcester, Redditch and Daventry. The Redditch suggestion (to take 50,000 people) has, in particular, raised eyebrows all round. Birmingham cannot see why it should not be allowed to do the job on its side of the green belt: the new town enthusiasts are aghast at the idea of so many people merely commuting into Birmingham instead of starting new industrial and office complexes further afield.

This saga is now likely to become a classic, both because Birmingham is a test case of how far planning should be allowed to impinge on natural economic growth and because someone has actually taken the trouble (virtually for the first time in Britain) to analyse the Wythall inquiry* and reveal the welter of official inadequacies, local politicking, good intentions and sheer ignorance that the exercise displayed. The comments by the chairman of the executive of the Town and Country Planning Association and the secretary of the Midlands New Towns Society are recommended reading for bemused local authorities.

Three main points emerge. The first is the need to think of green belts as something other than constricting girdles which do not stop urban sprawl on the farther side but merely limit the enclosed local authority's ability to take the easiest way out of its problems. At Wythall the chief strategy of Warwickshire and Worcestershire was to shelter behind the green belt in order to stop Birmingham's encroachment on their territory, not to further the interests of good regional planning. The counties' attitude, and the Ministry's resort to the Redditch palliative, leave an uncomfortable impression that Birmingham got the worst of each possible world.

The second point is the frightening absence of facts on which determined arguments (reflecting strong local pride, if nothing else) were regularly developed. Birmingham's own officials were frequently muzzy, or differed radically between themselves, on the size of the rehousing problems confronting them. Much more serious local research inside the major conurbations (possibly by social scientists in the universities) is needed.

Thirdly, and particularly in the absence of effective regional authorities in this country, the Government must take a large share of the blame for the inertia and muddle. The return to the new town idea in dealing with Liverpool's overspill at Skelmersdale is an indication of official repentance. Local prejudices played a major part in the failure of the Town Development Act to achieve its potentialities, but the push from the top was certainly lacking. If the natural resistance of small firms to move out of the normal ambience of the motor or any other industry, or to take on the financial burden of occupying new premises at higher immediate rents (but with more scope for expansion), is ever to be dispelled, it will need much more thought and action on a national level.

Who Leaves Home?

THE parliamentary furore over the control of immigration into Britain has left little room for discussion about the other side of the coin. Yet emigration from Britain is now at the lowest postwar level. The Oversea Migration Board, battling in its latest annual report with the usual array of inadequate and confusing statistics, estimates that the five year period 1957-1961 began with an almost record year (the year after Suez) when some 230,000 emigrated from the country; by 1960 the number was down to 124,000 and the 1961 figure might be just slightly below this level. The downward trend in emigration has combined with the upward one in immigration to change the balance from a net outward flow of some 72,000 in 1957 to a net inward flow of 82,000 in 1960 and of a still larger number in 1961.

It is, however, only the population of England and Wales that is being so increased. The numbers leaving Scotland and Northern Ireland continue to exceed new entrants. In 1960 there was a net outward movement from Scotland of about 8,500 overseas and 23,500 to other parts of Britain. The board records the Scottish concern about this drift, but is itself only required to consider the movement of 124,000 men, women and children overseas, representing a loss of manpower of about 63,000 or less than 0.3 per cent of the working population. The board knows nothing about the one-quarter of emigrants who go by air, but of those taking long sea routes, nearly four out of ten of males aged 15 and over were in professional, managerial, clerical or distributive occupations, as were most of the women other than housewives and students. These were much the same proportions as in the previous year. But the net loss (balance of outs and ins) in respect of teachers, doctors and trained nurses declined from 1,888 to 846, while that in professional engineers and scientists stayed around 350 in both years. Allowing for air emigration, the cumulative loss in some skills may be significant. This leads the board to conclude that, while in terms of numbers, the country can sustain emigration at its present level, the attention of the four main receiving countries of the Commonwealth (Canada, Australia, New Zealand and Rhodesia) "should be drawn to the present limited manpower resources of this country in certain skilled and professional categories."

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Disjointed Democrats

WASHINGTON, DC

THE Democratic party, a coalition of ill-assorted elements that usually manages to achieve a semblance of unity during presidential election campaigns but begins to disintegrate soon after, seems poorly equipped for the two formidable tasks facing it in the new year; both require a unity and vigour which the party now lacks. Without these it will be difficult for the Democrats either to promote President Kennedy's programme successfully in the new session of Congress which begins on January 10th or to make their best impact in the elections next November, when all 435 seats in the House of Representatives, over a third of the Senate's 100 seats and many State Governorships will be at stake.

As far as the next congressional session is concerned, President Kennedy will be hampered by considerable opposition from within his own party to the two major proposals to be pushed by the White House: greater tariff-cutting powers so that the government can meet the challenge of the European common market, and medical insurance for the aged financed through the social security system. There is no sign of any diminution in the tendency shown by conservative southern Democrats during the last half of this year's congressional session to join with Republicans in scuttling the President's measures. In fact, matters may be far worse next year in the House, where Mr John McCormack, who will be elected Speaker to succeed the late Mr Rayburn, is a leader of mediocre parliamentary skill and questionable loyalty to Mr Kennedy. Nor will the party organisation go into next year's election campaign in a state of health approaching the sleek and muscular condition in which just over a year ago it performed admirably on behalf of Mr Kennedy's drive for the Presidency. It has grown flabby since those days, plagued nationally by major arguments between its component parts and locally by petty quarrels over the distribution of judgships and other federal patronage. Party workers who stood shoulder to shoulder momentarily in the 1960 campaign have resumed their old feuds.

Yet as the new year approaches Democrats are not noticeably gloomy and Republican optimism is tempered. Both parties realise that the Democrats possess a spectacular asset in the ever-growing, undisputed and generally unexplainable personal popularity of Mr Kennedy. The Gallup poll shows, and reports by Congressmen returning from the recess confirm, that this popularity is spread throughout the country, even in such Baptist-dominated states as Tennessee and Oklahoma which voted overwhelmingly against the first Roman Catholic President a year ago. Whether this means that people are pleased about the general economic prosperity and the absence of a shooting war or merely (as Republicans claim) that Mr Kennedy personally is not associated in the public mind with the Administration's policies, the President's popularity carries important political implications for 1962.

It could prove the salvation of his legislative programme: an indecisive, fence-sitting Democratic Congressman is more apt to vote for measures advocated by his President if that President's rating in the polls back home is soaring. This popularity could count for still more if for the first time Mr Kennedy decides to appeal over the heads of Congress directly to the voters on beha of a vital issue such as freer trade. Democratic victories in co gressional elections during most of the Eisenhower period demo strate that the ability of even a popular President to influence suc contests is limited. But politicians in both parties expect M Kennedy's popularity to hold down the almost inevitable Republ can gains next November.

NEVERTHELESS, the President's popularity can only ease, nc really erase, the organic ailments of his party. In fact, som Democrats complain that Mr Kennedy has done nothing to reforr and revitalise that party into an instrument of liberal policy. Wha these critics fail to explain is where he would find the time fo this task or just how he would go about it if he had the time For example, no amount of pressure from the White House seem likely to reverse the protectionist sentiments of Democratic repre sentatives from districts where a textile mill, a pottery plant o some other industry claims to have been injured by foreign imports The spread of protectionism among southern Democrats, formerl the staunchest advocates of free trade, has been particularly rapid

On other issues Mr Kennedy suffers still more deeply from th party's deep north-south cleavage that finds a majority of southern Democrats in Congress totally out of sympathy with the libera proposals of his new frontiersmen on social welfare. It is primarily because of this southern conservatism that the Administration's medical care plan faces no better than a fifty-fifty chance of passage and broad-based tax reform and far-reaching legislation on educa tion, agriculture or civil rights seem out of the question next year.

But the internal dilemma of the Democratic party cannot be explained exclusively in terms of votes in Congress or of the split between North and South. Although northern Democrats in Congress are generally united in support of the President's programme, the party's northern wing contains antagonistic elements that will find it difficult to band together for an efficient campaign next autumn. The Democrats lack the cultural and social homogeneity of the Republicans, who remain for the most part a minority party of business executives, professional men, merchants and farmers, primarily of native or early immigrant stock. Apart from the nearly autonomous southern wing, the Democratic party consists of reformers and other political amateurs, big city machines led by professional politicians, ethnic and racial groups, liberal intellectuals, trade union leaders and organisations of left-wing farmers—a conglomeration almost certain to generate internal friction.

The most potentially disruptive friction pits the bosses of the big city machines, who dominate party affairs along the eastern seaboard, against the amateur reform politicians, most powerful in the middle and far West. The reformers complain that Mr Kennedy has bestowed too much party power on the professionals; in particular they denounce the performance as national party chairman of Mr John Bailey, a no-nonsense professional who is the unchallenged boss of the Democrats in Connecticut. These reformers contend that Mr Bailey and his eastern associates not only provide the party with a shoddy national image, but also think solely in terms of patronage and local organisation, failing to understand that to pin-point issues is the best way to enlist support in mid-western and far-western campaigns.

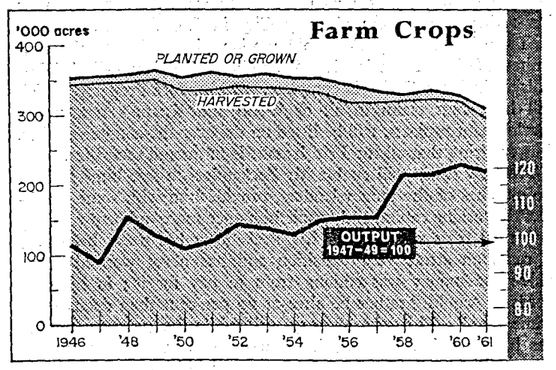
Although most of the big machines were effective in getting out the votes for Mr Kennedy's paper-thin triumph last year, the party's

reform element believes that the urban bosses could do the Democrats more harm than good in the long run and possibly even in the 1962 elections. Surprisingly narrow Democratic victories in Philadelphia two months ago indicated growing public resentment against the supposedly invincible Philadelphia city machine of Mr William Green, who lives a dual life as Congressman and big city boss. Mr Robert Wagner broke with the New York machine, but even so only just managed to win an absolute majority of the vote in capturing a third term as Mayor of the city. Ruptures within the party have been appearing in other states. In California constant struggling between professional Democratic politicians and a crusading liberal group known as the California Democratic Council encourages the Republicans to hope that Mr Nixon will win the Governorship. Quarrelling in Michigan between trade union leaders and the regular party organisation contributed to unexpected Republican victories there this year and could, if it continues, give the state its first Republican Governor in fourteen years. In Wisconsin Democrats have been pouring their energies into involved disputes about federal patronage. Senator Clark of Pennsylvania, a liberal reformer, will be going into a difficult campaign for re-election facing the thinly disguised hostility of the Green organisation.

Moreover, important elements within the party are less than enchanted with the performance of the Kennedy Administration so far and may find it difficult to regain their campaigning spirit of a year ago. Trade union leaders are irritated by the President's talk of restraints on wages and of a balanced Budget; they want the government to act more vigorously against unemployment. Many liberal intellectuals would prefer less emphasis by the Administration on a military build-up and more stress on disarmament and more initiative in international negotiations. Western liberals complain that Mr Kennedy has not reversed Mr Eisenhower's conservative policies on the development of hydro-electric power and natural resources swiftly enough. Advocates of Negro rights are not entirely satisfied with Mr Kennedy's efforts against racial discrimination and are particularly disappointed over his failure either to recommend new legislation or to issue an executive order banning segregation in government-assisted housing projects.

To place the picture of disjointed Democrats in proper perspective, it must be remembered that the Republican party is suffering both from the lack of a nationally recognised party leader and from an increasingly intransigent right wing which threatens to withdraw financial support from Republican candidates unless they adhere to reactionary policies. Thus, when compared to their opponents, the Democratic party may not seem to be in such bad shape after all. Nevertheless, it is not, and seems unlikely soon to become, an effective instrument for Mr Kennedy to use in promoting the fulfilment of his Administration's goals.

Soaring 1962?



REMEMBERING how 1960 brought their inflated optimism down with a bump, this new year the economic prophets are tempering their confidence with caution. As a result their forecasts are less stimulating than the statistics on which they are based, for 1961, after bouncing along rather doubtfully for most of its life, ended in an upsurge of business activity, and particularly of spending by consumers, which makes it practically certain that the economic indicators will be pointing upward at least until the summer. At that point, however, the uncertainties begin. Not only is there the possibility of a steel strike but at mid-year also government spending, rising fairly steadily all through 1961, is due to level off, leaving private business to keep the recovery going. The summer is also the point at which unemployment is likely to stop falling; if it sticks, as it may well do, at above 4 per cent of the labour force, then those who insist that unemployment is now a chronic condition which cannot be cured simply by general prosperity will argue that their case is proven.

In these circumstances and with an election coming along, it would be practically impossible for the President to resist the demand for increased government spending to create more jobs. If the recovery slackens in the summer, then the government's income will drop below present estimates based on the prosperity which pushes up receipts from taxation. Thus both sides of Mr Kennedy's carefully-balanced Budget calculations may be upset just as the fiscal year with which they are concerned begins on July 1st. The balancing act itself introduces another doubt into the economic outlook. Many experts lay the blame for the speed with which recession followed recovery in 1960 on the huge swing in the federal Budget from a deficit of $12.4 billion in 1959 to a surplus of $1.2 billion in 1960—nearly $14 billion. The swing will be only about half that between June, 1962, and June, 1963, according to present estimates, but even $7 billion is quite a substantial change.

Some of the President's advisers have been pointing all this out to him. But others have been reminding him of the much more immediate problem of America's international accounts and of the lack of confidence which would be encouraged in bankers abroad by any sign of a willingness to add to debts at home. This argument reinforces President Kennedy's own inbred conservatism in financial matters and the latest reports from Florida are that the Budget to be presented to Congress next month will be balanced at about $92 billion.

Abundance Again

WHILE the international situation presents the main threat to the President's plans for a balanced Budget in 1962-63—over $48 billion is already allotted to defence and this could easily go up—the American agricultural situation is almost as great and just as intractable a threat. Of the increase between July and October of $1.3 billion in the estimated deficit for the current fiscal year, nearly $1 billion was accounted for by unexpected payments

to farmers, partly because they were producing more than had been allowed for and partly because of the new Act under which they are paid for taking land out of production. The legislation is achieving its purpose: the acreage planted was the least for fifty years and the acreage harvested was the least since records were first kept in 1909. But as usual yields went up, by 4 per cent, to 147 per cent of the 1947 average; as a result in the end this year's total output of crops is only slightly below last year's record. The special incentives given to farmers to encourage them to reduce

their output of feed grains did bring a fall of 10 per cent in that category. Output of wheat was down by a similar amount, largely because of drought in the northern plains; present forecasts suggest that wheat production may fall even more next year when a scheme similar to that applied to feed grains this year is being brought in for wheat.

Prices for this year's crops were also above last year's, so that the smaller quantity was valued at $600 million more; total net income on farms in 1961 is expected to reach $12.7 billion, more than in any year since 1953 and $1.5 billion above 1960. But $900 million of this increase comes from the government which is paying the farmers $4.7 billion altogether this year. So it is not surprising that the Administration is said to be about to unveil a long-term plan for controlling agriculture drastically. But it will be surprising if Congress treats this plan much more kindly than it did the similar scheme for "managing abundance" which the Administration offered so confidently last year, only to be turned down almost completely.

Anglo-Zeckendorf

THE long-awaited reorganisation of Webb and Knapp, Inc., brings British capital to the aid of the most daring and gifted (and most entangled) property developer in the United States, Mr William Zeckendorf. Of the $43 million in new money which is being brought in, two North American banks are providing $25 million in five-year loans, but they might have been less helpful if it had not been for the $18.7 million being invested by the Philip Hill Group of London and the related Second Covent Garden Property Company, Ltd, which is also guaranteeing repayment of the bank loans. Philip Hill is paying $6.2 million for 4.5 million shares of Webb and Knapp itself, as well as for an option to buy shares in one of its subsidiaries, while Second Covent Garden is paying $12.5 million for a half share in a new firm, the Zeckendorf Property Corporation, and for two notes for $2.5 million. Earlier joint ventures in Canada probably brought the two sides together. The new scheme gives the British investors a direct interest in thirteen of Webb and Knapp's biggest urban redevelopment projects which are being transferred to the new firm; they range from Century City in Los Angeles, on part of Twentieth-Century Fox's old motion picture lot, to the new United Nations Plaza in New York City. Only one—Park West Village, in New York—is complete. Zeckendorf Property, which will have first claim to all of Webb and Knapp's new urban development projects, will be listed on the over-the-counter market, thus ensuring that all the British stake is in quoted securities.

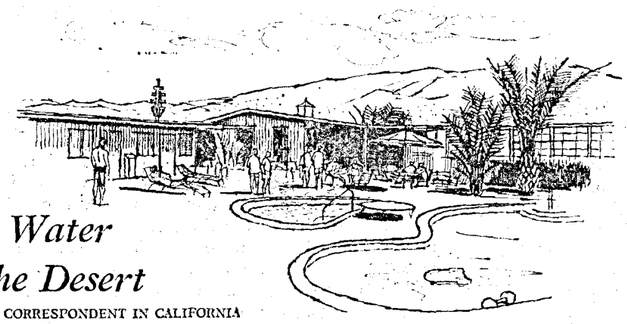
The new funds will enable Mr Zeckendorf to free himself from the clutches of the money-lenders, provide him with some much-needed working capital and enable him once more to borrow money at normal rates of interest. Mr Zeckendorf has never been able to resist an attractive proposition and has never worried about where the money was coming from to pay for it; in his own words he would "rather be alive at 20 per cent than dead at the prime rate." This was all very well while the property market was booming, but by 1960 his short-term debt was put at over $100 million, 40 per cent of his total liabilities, some of it at exorbitant rates of interest; the most complicated financial juggling and even the premature sale of some properties have not reduced it very much. He was not able to carry through his plans for a Zeckendorf Hotel in New York and to find the money for Century City he had to go into partnership with the Aluminum Corporation of America.

The price of settling his most acute difficulties seems certain to be some curtailment of the freedom and exuberance which has always been the hall-mark of Zeckendorf operations. To satisfy the Bank of England, which would not give permission for the export of British capital without some assurance of a return, dividends of 60 cents a share will have to be paid for the next three years on Second Covent Garden's shares in Zeckendorf Property. The Zeckendorf family, which once owned 52 per cent of the ordinary shares of Webb and Knapp, will be down to 39 per cent, compared with about 15 per cent for the Hill interests. And the British, who will sit on the boards of both firms as part of the deal, will try to keep Mr Zeckendorf's feet on the ground.

Students Turn Right

FROM A SPECIAL CORRESPONDENT

THE average American college student of today probably differs little from his predecessors in his almost studied indifference to the greater world around him and in his apathy toward political causes. But the tiny minority of students who are attracted toward political activity has been growing during the past two or three years and, what is most important, they are more dedicated and dynamic than politically-minded students have been at any time since America's entry into the war in 1941 ended the left-wing college movement of the nineteen-thirties. The sullen detachment and cynicism that dominated college life during most of the past decade is fading away. The most fascinating aspect of this modest political revival is the fact that the activity is not exclusively the property of the left but includes, for the first time, an aggressive right-wing movement.



Conservative politicians exaggerate outrageously when they speak of a mass movement of militant conservatives in the colleges. But right-wing students are, in fact, the most vigorous and the best organised in college circles today. This cannot be explained away simply as a product of the financial support of businessmen, helpful though this is, nor is it the classic rebellion of young people against their elders—in this case the generation of the New Deal. Rather it is, to a large extent, the articulation and refinement, for the first time, of the conservative views that have always dominated student thinking. College administrators generally agree that in the past the American student tended to be a conservative, a wishy-washy and silent one, to be sure, but potentially prone to the right-wing radicalism that now attracts him. The mistaken image of the student as a liberal has been perpetuated because up to now what political agitation went on in the colleges has been liberal and because liberalism has dominated the political thought of students at the most politically-conscious colleges.

At the same time the liberals are awakening from their long sleep, perhaps because they have been stirred by the activity of the right wing. Unlike the conservatives, who turn out propaganda on a wide variety of issues, the left-wing students (including an infinitesimal fraction of communists and fellow-travellers) spend most of their energies in demonstrating against racial discrimination and nuclear warfare. Both Negro rights and pacifism are somewhat suspect socially in all but the most liberal colleges and consequently the left-wing groups are not as successful as their right-wing counterparts in recruiting new members. But the quality, if not the quantity, of liberal activity is rising.

This political revival, on both the left and the right, differs from similar movements in the past in its relative independence of adult political trends. It is true that the student who stands out in right-wing politics comes almost invariably from a conservative home, but his conservatism has a distinctive quality. He is by no means the fawning admirer of his right-wing elders. As an implacable foe of domestic welfare measures and as a champion of a sabre-rattling foreign policy, he is contemptuous of businessmen as uncertain warriors against liberalism at home and communism abroad; he sneers at the members of the reactionary John Birch Society as uncultured louts who imagine that there is a vast communist conspiracy within the federal government; and he dismisses the conservative Republican leaders in Congress as congenital compromisers seeking merely to halt the expansion of social welfare programmes rather than trying to root them out.

The most sophisticated variety of student conservative considers himself to be guided by a consistent philosophy of "libertarianism" which in practice would end all but the most elementary government activities, including even government aids to business such as the protective tariff and federal subsidies. No practising politician can hope to meet the rigid standards set by these young doctrinaires, but Senator Goldwater of Arizona comes the closest to doing so. The real patron saint of the right-wing students is not Mr Goldwater, but someone closer to their own age: Mr William Buckley, a relatively obscure 36-year-old who edits the right-wing *National Review* and spends much of his time working with students.

The gulf between the left-wing student and his elders is even wider. Even those who call themselves socialists have little interest in the economic issues, such as the problem of unemployment and medical aid to the aged, that are of vital importance to trade union leaders and to most liberal politicians. Conversely, the student

Hot Water in the Desert

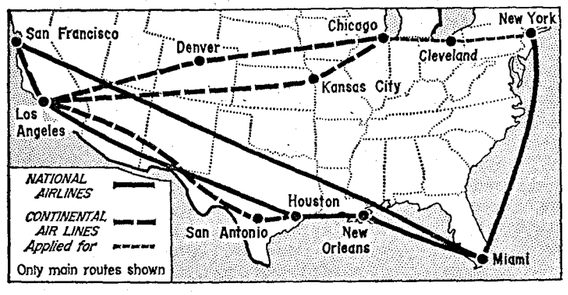
FROM A CORRESPONDENT IN CALIFORNIA

PALM SPRINGS, near Los Angeles, has been a winter resort for several decades but only recently has it attained the status of a watering place. In March, 1959, the Palm Springs Spa opened its doors on land leased from a local Indian tribe, until then the custodians of the hot springs in the centre of the town. Today, the spa is doing a thriving hydrotherapeutic business. Its architecture is ultra-modern, contrasting strongly with the Edwardian plush of spas in Europe and the eastern United States—Vichy, France, or White Sulphur Springs, Virginia, for example. The fittings are elegant, the service urbane, the amenities include an infra-red inhalation room (for the relief of sinus congestion and to relax tension) and contour "Roman" baths into which mineral water is injected by swirling jets.

Palm Springs is making a bid for recognition as an international resort. But as a place to "take the waters" in Southern California, this is a Johnny-come-lately; others, such as Warner Springs, Rincon Springs, Murietta Hot Springs, Gilman Springs, Glen Ivy Springs, scattered about the desert behind Los Angeles and San Diego—are much older; Desert Hot Springs, adjoining Palm Springs, has a decade-long reputation as a haven for sufferers from respiratory, circulatory and other ailments. Southern California's watering places are little known and little patronised outside the state but locally they are extremely and increasingly popular. Along the San Andreas earthquake fault, between 50 and 100 miles inland from the coast, hot springs bubble up in many spots from great depths. The waters contain calcium, sulphates, carbonates and other minerals considered to be beneficial when they are either drunk or bathed in. The Indian tribes which originally inhabited the area were convinced of their therapeutic value and, more recently, the white man has exploited the springs commercially.

IN Europe, taking the waters has been traditionally an indulgence of the rich and ailing but in Southern California the practice has a less conventional appeal. It is true that Palm Springs conforms fairly closely to a latter day Baden-Baden, with its clientele of movie stars, Los Angeles socialites, sports celebrities and businessmen and their wives from all over the United States who come to winter in the bright, warm desert. The price of a mineral bath and massage is $8.50 and patrons are concerned as much with glamour and physical fitness as with the curing of ills. But other spas are set up as regular family holiday resorts.

Warner Springs centres round two large pools, into which water is channelled from nearby springs, used originally by the Indians but now reserved for white families who can afford the minimum rate of about $30 a day for two persons. The hot pool is maintained at the natural temperature of over 100 degrees; the "cool" pool is kept at 80-90 degrees for regular swimming. Some guests come to Warner's for their health but the majority are family groups on holiday. They stay in cottages, eat in a communal dining hall, patronise the bar, lounge, games room and dance hall, and take part in such sports as golf, tennis, badminton and riding. For those on a low budget, Glen Ivy Springs supplies the answer. It is a short drive from Los Angeles and serves a Sunday dinner which is highly rated in the area; most patrons, ranging from grandparents to teenage children, come out for the day. The former may spend their time packed into one of the two hot pools while the latter splash and dive around the thronged cool pool; they pay between $1 and $2, according to age.



An expert, who is said to have analysed the waters of all the leading spas in both the Old and New Worlds, pronounced those at Desert Hot Springs to be the most beneficial of all. The first commercial bath house there opened in 1941, but it was not until about ten years ago that the area really developed into the nearest thing to a traditional watering place in Southern California. Today, new and more luxurious bath houses are built every year and sleeping accommodation for some 3,000 visitors is available in motor courts and cabins, which charge anywhere from $5 to $10 a day for two people. Those who stay at the smaller places patronise the public bath houses but the larger ones have a hot pool and some of them a cool pool also, fed from their own private wells. Quite a few of the places to stay are owned by people from other parts of the United States who have themselves moved to the Southern Californian desert for their health; the dry, pure air is said to be good for asthma, hay fever, sinus congestion and similar complaints.

liberal can count on little support from adults for his own pet causes: something approaching unilateral disarmament, the abolition of the House Committee on Un-American Activities, and radical steps to hasten the breaking down of racial barriers. He feels isolated from the practical world of liberal politicians and regards President Kennedy as an incurable compromiser who broke faith with his student admirers when he sanctioned the invasion of Cuba.

The fascinating question is whether this mild outbreak of interest in politics at the colleges will have any real impact on politics in general. The left-wing students admit that there will be little place for them in adult political life unless they remodel their views drastically. But the right-wing students, with only a slight softening of their more extreme stands, could find a place on the extreme right of the Republican party. If some of the young conservative leaders carry out their present plans of seeking political power instead of financial gain after they leave college, the Republicans may soon be receiving a steady infusion of zealots who will push the party further and further to the right in the next few years.

Dearer by Air?

BETWEEN them the Civil Aeronautics Board and three of the transcontinental airlines managed to give a good many travellers a miserable Christmas. People who had bought transcontinental tickets at the experimental cheap excursion rate introduced in August found at the last minute—often only when they arrived at the airport—that the CAB had refused to extend this concession past December 15th; some of the airlines had failed to warn their patrons that they might have to find an additional $84 or so for a return trip between New York and Los Angeles. Such a cruel muddle is not likely to be repeated, but all the signs are that most of the domestic airlines have abandoned hopes of solving their problems by tempting more people to fly by making

this cheaper. The 50 per cent discount on "youth" fares has now passed into history, commemorated by a host of anecdotes of mutton dressed as lamb, and the CAB has just turned down a request from one line to introduce a third-class service which would be cheaper than any now offered. Most of the airlines have filed requests with the CAB for higher coach fares which would bring them nearer to those for first-class.

Their justification is the $30 million which the Air Transport Association estimates was lost by the eleven trunk lines in 1961—the largest collective loss in their history. In 1960 they made only $1.2 million. Passenger traffic has risen hardly at all this year, compared with an increase of 4 per cent in 1960 and 15 per cent in 1959, while 57 per cent of all travellers fly coach, compared with 49 per cent last year. Costs, moreover, are rising faster than revenues. In particular, the lines had to pay $63 million in interest on new jet aircraft and other equipment—the sum was only $10 million in 1955—and they charged off $200 million in depreciation. But air traffic took a sudden turn for the better in November and early December, suggesting that the temporary troubles of the industry may be over.

For the deeper-seated ones of over-capacity and excessive competition, mergers are the cure prescribed by the CAB and early this month two of the smaller trunk lines—National Airlines (which lost $7 million in its most recent financial year) and Continental Air Lines—announced that they have agreed to join forces, subject to the consent of the CAB and of their shareholders. Their seasonal peaks in traffic complement each other and a more efficient management would almost certainly be able to make an even better thing of National's new southern transcontinental route. Not many of the expected savings would, however, come from eliminating competition; the two lines overlap only between Houston and Los Angeles. Nevertheless, the announcement has set off new hints of other consolidations: two of the biggest airlines—American and Eastern—are publicly looking each other over and Mr Howard Hughes would love to merge Northeast Airlines with Trans World Airlines, if only he could regain control of the latter. In the long run, some such consolidation of the industry may make possible more efficient service at lower prices.

Good-bye to Blow-by

BY the end of 1962 a brighter New Year will really be in sight, for all new motor cars will be fitted with a device to eliminate much of the blow-by, the fumes of unburned petrol coming from the crankcase. These constitute about 40 per cent of the hydrocarbons emitted by automobiles which pollute the air and help to cause smog. Since the end of 1960 all new cars sold in California—the capital of smog—have carried the new device, which sends blow-by fumes back into the engine to be burned. (A simpler version is also incorporated in most new British cars.) But it was only early this month that the board of directors of the Automobile Manufacturers' Association recommended that its members should install it in all their new cars and lorries. The recommendation is tantamount to acceptance by all the leading producers.

This is a victory for two Secretaries of Health, Mr Ribicoff and his predecessor Mr Flemming, and for the members of Congress who have agitated for purer air. At first the manufacturers insisted that the device was really needed only in California but this year it has been optional on all new cars, at a cost of about $5. Four months ago Mr Ribicoff told the producers that he would press for compulsory legislation if they did not promise, by January 1st, to install blow-by control on all cars and lorries, starting late in 1963 with the 1964 models. Faced with this ultimatum the manufacturers decided to do the thing handsomely and comply a year earlier. How much the device will add to the cost of a car when it is mass-produced is uncertain, but it is likely to be less than $5. In California the device will probably have to be installed on all cars in use within three years. So far, unfortunately, the industry has found no cheap way of eliminating fumes that do not come from the crankcase but are emitted in the exhaust; this means that even when all cars are fitted with blow-by control only 25 per cent of the nuisance will be overcome.

* * *

Corrections: The President of Peru is Senor Prado, not Senor Alessandri as stated on page 1136 of *The Economist* of December 16th.

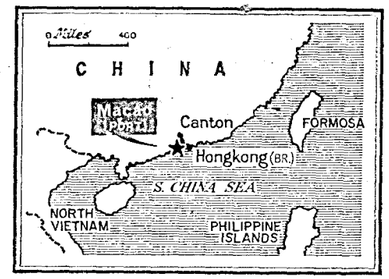
In the article on page 907 of *The Economist* of December 2nd the price of natural gas in Southern California should have been given as 38 cents a *thousand* cubic feet.

THE WORLD OVERSEAS

Co-existence on the China Coast

FROM OUR CORRESPONDENT LATELY IN MACAO

MACAO, placid survival of Portuguese colonialism on the south China coast, bore up bravely under the shock of Mr Nehru's exhausted patience in distant Goa. Plainly no one in the tiny colony's curious, tough-minded Establishment gave a moment's serious thought to the possibility that Indian anti-colonial aggression might infect Communist China.

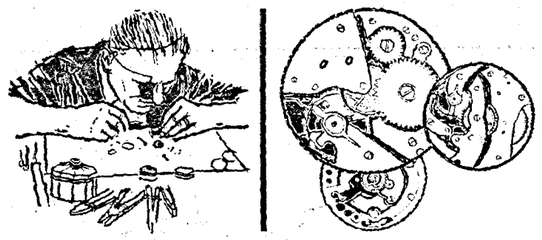


There was genuine regret in the sad spaniel eyes of the Macao gendarmes when, under orders from Lisbon, they knocked gently at five in the afternoon—not morning—on small tidy Macao homes to pick up and intern, with deep bowing apologies, fifty-odd bewildered, respected Indian residents. The unpleasant duty was performed with urbanity on both sides. Two of the internees, after all, were active members of the gendarmerie themselves. The Indians were angry only with Mr Nehru. One incensed prisoner recalled that he had previously and similarly been interned by

Portugal in China

reluctant Pakistanis some years ago because he had had the misfortune to be in Karachi during the first dispute with his motherland over Kashmir.

A nice Portuguese touch was the frank explanation by the handsome governor (Lt. Colonel Jaime Silverio Marques), beloved alike by Macao's Chinese, its Portuguese, and its Eurasians, when he begged the local press to forgive him for not allowing interviews with the huddle of internees. "They are," he pointed out with a straight face, "in a proscribed secret military area." The pressmen nodded gravely, well aware that the internees were being comfortably housed in a Catholic priests' summer holiday sanctuary, under special orders from the governor for the utmost latitude, unlimited food supplies and regular daily camp-to-school bus services for the children.



Macao reactions pointed up Peking's realistic indifference to the existence of a Portuguese enclave so near to Canton. There is a colonial garrison of a thousand Portuguese blackamoor troops—no longer drafted from Angola, but from Mozambique. The Portuguese navy's solitary sloop had departed the day before to show the flag at Timor. The communist army guards at the yellow stone gate on the narrow border yawned as usual in the shade and perused decadent coloured comics bootlegged from Macao.

The main topic of conversation among Macao's government and banking officials was the sudden death that same week of the durable Ting Hai syndicate, headed by the once all-powerful Fu family, which had monopolised Macao gambling for 24 years. A tough new Hongkong syndicate, bent on breaking also into Macao's sacrosanct gold-smuggling racket, with its world-wide connections, had outbid the Fu family for renewal of the gambling franchise for the next eight years, and had thus become a new and unpredictable influence in Macao economic and political life. It was noted that Comrade Ho Yin, ruling Gold Bar King of Macao for the past 14 years, former partner in the overthrown Fu gambling syndicate, chairman of the Macao Chamber of Commerce and party fellow-traveller in all Macao dealings with the Chinese communists, was accompanied by three bodyguards on his routine business calls. Nobody seriously supposed that this prudence was related to any fears of communist aggression.

PEKING, of course, could take Macao by merely turning off the water supply which comes from Chinese sources, or by withholding food deliveries to the 300,000 inhabitants. But the existing set-up in Macao—as in Hongkong—clearly suits the Chinese. Foreign exchange flows in through Macao banks from overseas Chinese to relatives on the other side of the border. German and Swiss business men often prefer to negotiate trade in Macao rather than in Hongkong. Faithful running dogs like Comrade Ho Yin ensure pliable obedience to party orders—as, for instance, when Peking sternly forbade the celebration of the fourth centenary of Portuguese settlement in the colony.

Macao, further, is at present bulging with more than two thousand "useless-mouth" refugees, whom the communists have allowed to cross legally into the little colony. Most are bent on finding their way illegally into crowded Hongkong (40 miles distant). These fugitives carry word not only of acute hardships and extreme malnutrition in Canton and Kwangtung province, but also of the planned decision of the communists to send no fewer than 100,000 more "useless mouths" into Macao in the next three months—presumably to lighten the pressure of food rationing in Kwangtung, and also to embarrass the sorely strained "refugee economy" of Hongkong, to which Macao remains a useful Portuguese back door.

For Whom the Clock Ticks

FROM OUR SPECIAL CORRESPONDENT

LA CHAUX-DE-FONDS

"HAVE you," Picasso once asked, "ever seen a saint wearing a watch?" Fortunately for Switzerland, saints come few and far between, and most timebound sinners the world over prize a Swiss watch above any other. Ministering to human bondage, Switzerland exports every year between 40 and 45 million watches and clocks, altogether worth well over 1,100 million francs (roughly £100 million). That is 97 per cent of the industry's total output. Even much of what stays on the home market is bought eventually by foreign tourists, who will have paid for their francs with dollars or sterling, many of them reckoning that the lifelong possession of such a duty-free bargain will amply compensate for the twinge of uneasiness when the customs officer back home looks them in the eye.

The currency derived from selling clocks and watches (mostly watches) to foreigners contributes substantially to the Swiss Federation's comfortable ways. To the 75,000 men and women engaged in one way or another in making timepieces can be credited 16 per cent of the total value of the country's various exports —a trifle more than that of the 68,000 textile workers, though less than that of the 32,000 chemical workers, who account for nearly 20 per cent. Since it has to spend relatively little on importing its raw materials, the watch industry likes to claim that in the long run it is Switzerland's chief currency earner. In fact the industry's relative contribution to the value of Swiss exports has declined since 1951 (when it was 21.5 per cent), and the expansion of Swiss watch production has been outdistanced by the increase in foreign manufactures. In consequence, the Swiss share of the world market has fallen from 70 to 50 per cent. Expecting even brisker foreign competition, the industry is now bracing itself for a new effort to maintain its traditional ascendancy. On January 1st the statute that has strictly regimented the manufacture and sale of watches and parts since 1951 is to be replaced by a new one, designed to encourage the industry to march with the times as efficiently as it marks time.

In order to avoid helping the growth of competitive industries abroad, the export of movements and parts was virtually prohibited under the old statute, and the export of watch-making machinery severely limited. Foreign competition has grown relentlessly, all the same. Protected by stiff tariffs, the clockmakers and watchmakers of west Germany, the United States, France, Japan and Britain (in that order of output) have long enjoyed the lion's share of their national markets. And now other countries are establishing their own industries, or developing existing ones. India has as good as stopped importing Swiss watches, has lately begun to turn out alarm clocks, and is fostering plans to make timepieces of several other kinds. But it is perhaps in the Soviet Union that the Swiss watch industry sees at present the most ominous development.

At the outbreak of the last world war the Soviet Union was producing merely 700,000 watches a year. Its annual production is now running at 15 million, and much of it is being exported, some to England. In Europe the Swiss watch industry believes itself threatened with a substantial loss of business through its exclusion from the common market; the new common tariff will require west Germany and Italy, two of the leading four foreign customers for Swiss watches, to raise their tariffs. Elsewhere in the world, war and political upheaval are also severely interrupting trade. In consequence of the Suez conflict, the value of Swiss watch consignments to Egypt fell from 8.8 million francs in 1956 to 1.4 million in 1957, and has stayed at roughly that figure ever since. Cuba has cut its buying of Swiss watches since 1957 from 11 million francs annually to 1.1 million. So the ghosts of 1921 sometimes still walk the gentle Jura valleys where most of the Swiss watchmakers are congregated, working either in factories or at home. That was a year when exports fell by 48 per cent to 169 million francs, and some 30,000 persons were out of work.

By a federal referendum in November the Swiss electorate—for this is an issue affecting the well-being of the whole republic—approved by 443,173 votes to 221,634 the new Watch Statute. This replaces the Statute of 1951, which restricted both entry into the industry and the expansion of existing factories. The restrictive system is to be dismantled by stages over four years, beginning on January 1, 1962. The new policy of stimulating the industry by liberalisation is to have a safety device attached to it: a system of official technical control, insisting upon a minimum standard of quality, of all timepieces and parts destined for the foreign market. Thus, through strict supervision of the quality of exports, the industry hopes to maintain the singular advantage of its established reputation for making the finest watches in the world—even when it is turning out many more than before. A second innovation with the same long-term object is the obligation imposed upon manufacturers to make "solidarity contributions" to a fund for scientific and technical research. There is still much important work to be done here, particularly in the field of electronics.

The competition which the new dispensation invites within the Swiss industry itself will spur many manufacturers into reorganising and rationalising their methods, and some of the smaller fry, perhaps, into merging with other strugglers. But although it is anticipated that the co-operative buying of materials will increase, there is no visible trend at present towards financial concentration. The price cartels will continue to operate as before.

And smuggling—that untiring tribute to the excellence of the Swiss watch? It will go on—ambitiously and modestly, ingeniously and clumsily—wherever governments inordinately discourage Swiss watches from entering their domain. The American customs reckon that anything from one million to three million Swiss watches enter the United States illegally every year. Near Loisin in Upper Savoy this month the French police discovered 10,000 undeclared Swiss watches in a car that has just crossed over from Veigy. All very reprehensible. But here in the Bernese Jura they are neither surprised nor unduly pained.

Ill-Starred Ceylon

FROM OUR CORRESPONDENT IN COLOMBO

THE state of emergency declared last April to deal with Tamil agitation in the north and east continues and is extended with routine monotony each month, although normal conditions have been restored. Although Jaffna, the northern capital, is still ruled by a military commandant and the Federal party is still proscribed, Tamil Federalist leaders now attend parliament freely and castigate the government with renewed venom. One reason for their rancour may lie in the charge recently levelled in parliament that the ruling Freedom party did not honour a gentlemen's agreement reached in March, 1960. According to the Federalist version, which the government has pooh-poohed, the Federal party helped the Freedom party on two important occasions on the understanding that the latter, once in power, would temper the present language policy by giving a "reasonable place" to Tamil, and generally assuage minority feelings. Last year the Federalists held the balance in parliament, cast their votes against the minority government of the United National party, and forced a dissolution. They claim that in the general elections that followed, Tamil votes in mainly Sinhalese areas helped the Freedom party to win nearly twenty seats from the United National party, which went to the hustings on communal slogans. The Tamil leaders plainly feel let down.

If the government lost its footing on the language issue, it appears to have recovered its balance only to be attacked on all sides by enraged trade unions. In December the monsoon rains are normally followed by a deluge of strikes; but there is more than the customary bonus fever in the present tension. Last month, when the opposition parties jointly demanded an end to the nine-months-old emergency rule, the charge was made that the real reason for the continued extension of the emergency was anxiety over growing economic unrest. If this claim was true, then discontent has proved stronger than fear of punishment under the stringent emergency laws. The island-wide bus strike was settled a fortnight ago; but, having tasted blood, the unions are now presenting a multitude of demands, described with picturesque ambiguity by one harassed civil servant as being as "thick" as autumn leaves in Vallombrosa. Dockers, railwaymen, bank clerks, oil workers, engineers, public servants and even apothecaries have all made demands. Some, like the dockers, are already on strike, others threaten strike action, and some come and go. The picture is so confusing that one enterprising newspaper has published something like a score card. But at the moment the contest seems as depressingly destined for stalemate as the test matches in India. The government has moved troops into Colombo port and is watching to see whether the unions will actually make a big push towards a general strike. Although most of the strikers' demands are parochial, some common demands are emerging. More significantly, they are assuming a political character. Demands for withdrawal of emergency rule, of the army from the port, and of the national development tax of four per cent are cases in point.

The member for Dompe

One interesting feature of the present strike situation is the degree of independence shown by the union leaders. With a show of militancy and unity which must have both impressed and disconcerted their political gurus, the workers have now resisted restraints imposed on them by the Trotskyist and Communist parties, which are still committed to a policy of "responsive co-operation" with the Freedom party. Their long term strategy of pushing Ceylon leftward, and their immediate desire to prevent any political gains by the rightist United National party, led the Marxist parties to pull their punches during the past year. The logic of events, however, has forced at least the Trotskyists into a position of increasing hostility to the government.

Conscious of emerging differences, the Trotskyists are now concentrating their fire on the finance minister, Mr Felix Dias Bandaranaike, whom they seem to suspect of being an impediment to closer liaison between the government and the Marxist Left. Their leader, Dr Perera, has even charged that Mr Bandaranaike planned the arrest of the left-wing leaders during the bus strike as a first step to a coup d'etat. The Ceylonese mind is secretly titillated at the prospect of a coup, and it is not strange now to hear epithets like "Felix Castro" and "Sawdust Ayub Khan" flung at the portly and impressive figure of Mr Bandaranaike in parliament. The finance minister himself has dismissed these accusations as figments of the imagination.

The Communists are even more perturbed by present trends. They have, admittedly, every reason to be happy with a government which follows a neutralist foreign policy and has strengthened Ceylon's relations with the Soviet block through many trade pacts. But they are disturbed by the new theory of "Dompe socialism" advanced by Mr Bandaranaike, who is the theoretician, spokesman and outstanding personality of the government. Dompe is his constituency, and his thesis is based on the assumption that the Freedom party draws its strength from the rural peasantry and should therefore be responsive primarily to peasant needs. This was certainly the informing principle of the last budget, which placed all its burdens on the middle, lower middle and urban working classes. These classes, of course, form the social base of the left-wing parties; hence the strained relations within the former triple alliance. Meanwhile Mr Dudley Senanayake, leader of the United National party, boldly sticks to his prediction that the government will collapse by February. This prophecy seems to be based as much on expectation of sharpening economic crisis as on the widely accepted astrological forecast of disasters and cataclysms at home and abroad early next year.

Though there is something decidedly ill starred about Ceylon's present state, the root cause of current tensions is the aggravation of the island's economic problems. With worsening terms of trade, successive governments have been forced to indulge in deficit financing to a point which the central bank now regards as alarming. Unable, for political reasons, to reduce the huge social service expenditure, or to curtail heavy subsidies on food, governments have kept on pumping money into the economy. This money, exhausted in extravagant consumption, has become a steady drain on Ceylon's external assets, which have now slumped to the lowest point since independence. Further, the tripod on which the island's economy rests—tea, rubber and coconut—is now shaky. The release of American stockpiles has affected rubber prices, while the soya bean has hit Ceylon's coconut industry. Prices of tea have also slumped in Middle East markets.

Opinion in the country is agreed that rapid economic development is the only way out of the impasse. This requires not only new sources of capital for investment, but other conditions as well. National unity, readiness for a long period of sacrifices, and strong administration are among the country's urgent needs. The coming year may not produce all of them, but it is likely to resolve some of the present political conflicts.

France After the Pause

FROM OUR PARIS CORRESPONDENT

SOME, though not all, of the interest displayed in French planning methods has been inspired as much by France's wages freeze of 1958-59, which contributed to the rehabilitation of the franc, as by the planning successes themselves. In fact the pay pause had nothing to do with the planning and, by the time it began to be quoted as an example abroad, it had gone with the boom. In the last two years, French wage rates have been increasing, on an average, by something over 1.8 per cent a quarter. Wages and prices stand high among the French government's preoccupations for the coming year, and the French economic authorities are now less confident that they can combine rapid expansion with price stability.

The imaginary link between the French pay pause and planning can be dismissed easily. The planning institutions, *Commissariat* and all, have been at work throughout the whole postwar period and this did not prevent France from being among the leaders in the inflationary race. Other factors which caused the pay pause of 1958-59 were due to other influences. An economic recession coincided with a change of political regime; the spring of 1958 marked the end of a boom as well as of the Fourth Republic. A recession does not usually encourage aggressiveness in the trade unions. On top of this, the trade unions were divided; and their inability to prevent a change of regime, together with a feeling of apprehension about the Fifth Republic's attitude towards trade unionism, gave them a sense of defeat. They were on the defensive. They did little to resist the cut in real wages produced by, first, the after-effects of inflation, and then the austerity measures that accompanied the devaluation of December, 1958. The main burden of the austerity which played a part in the spectacular recovery of the franc was borne by the industrial workers.

Gradually, as production picked up, the laws of the labour market started to work the opposite way. The trade union mood changed. Political apprehensions waned. The impulse to give General de Gaulle a chance to make peace in Algeria began to wear thin as time passed. As labour, and particularly skilled labour, grew scarce again, employers in the expanding sectors of private industry led the way in concessions; their profits were rising, and it suited them better to pass on a share of the increment to the workers than to accept paralysis from strikes. Managerial salaries rose even faster than wages, the wages of skilled workers rose faster than those of the unskilled, and men's wages rose faster than women's. Generally speaking, the pay pause did not survive the last quarter of 1959.

HOURLY WAGE RATES IN PRIVATE INDUSTRY

	1960				1961			
	Jan. 1,	Apr. 1,	July 1,	Oct. 1,	Jan. 1,	Apr. 1,	July 1,	Oct. 1,
Index (January 1, 1956=100) ...	137·2	139·3	141·8	144·3	147·0	149·6	152·9	155·3
Per cent increase over prev. qtr.	2·3	1·5	1·8	1·8	1·9	1·8	2·2	1·5

The impact of the pay pause, while it lasted, was considerable. The official statistics themselves (which the unions dispute) show the real weekly wages of a bachelor working in Paris as having recovered the 1957 peak only in mid-1960. Since family allowances, which are important in France, lagged behind prices, the income of a worker with four children is only now reaching its previous (admittedly, record) level. The pause was important, but it is over. Wages rose faster in 1961 than the government experts had hoped.

M. Debré, the prime minister, told industry, in a controversial letter at the beginning of 1961, that nominal wage increases must not exceed an annual rate of 4 per cent. He complained at his press conference on December 4th that the employers had not played the game. The government can directly determine the wage bill only for its own employees in the civil service (including teachers) and in the nationalised industries, particularly the public utilities. It is not new for wages in the public sector of the economy to lag behind wages in the private sector. Successive governments, under threat of strikes, have promised to close the gap. But the unions concerned complain that, far from narrowing, the gap has actually widened in the last two years. The mood in the nationalised industries is such that communist, socialist and catholic unions are acting together, a rare thing in France. French citizens, deprived of public transport and eating cold food by candlelight, are reminded from time to time of skirmishes between the state and its employees.

The last such warning strike took place on November 28th. Another was barely avoided before Christmas, the government conceding a bonus in addition to a wage increase of 2.25 per cent. But the unions are far from satisfied, and the trial of strength has been merely postponed into the new year. Wages in nationalised industries are a factor in the state budget, and there are economists who suggest that the state of public finance is sufficiently healthy to allow bigger concessions. But the ministry of finance is worried about the psychological repercussions, and about the general problem of cost inflation.

The index of wholesale prices has risen by 4.7 per cent in the last six months, and the official index of retail prices by 4.1 per cent in five months. Watching this progress, French officials seek consolation in the fact that labour costs in west Germany have been rising even faster than in France. But they see no real solution to the problem until the "baby boom" makes its impact on the labour market (which will not be before three or four years), or, alternatively, the war in Algeria is brought to an end and releases manpower for industry. The situation is not as dramatic as in 1957. The franc is strong; the gold reserves are approaching the 3,000 million dollar mark; the balance of trade remains favourable. But the French economy, less protected than in the past, can no longer afford an inflationary flight away from its problems. The French, like others, have still to find the formula to give them rapid growth with steady prices.

On the Razor's Edge

FROM OUR CORRESPONDENT IN AUSTRALIA

To seem to have a change of heart, without admitting to having been previously wrong, was the task of the Australian prime minister, Mr Menzies, last week. The election of December 9th had returned him to power with his majority in the House of Representatives reduced from 32 to two and his control of the Senate lasting only until July, when the new senators assemble. Only two out of five voters had given the government candidates their first preferences. "We are quite prepared," said Mr Menzies,

> to face the facts of the election. It is clear that we have been opposed by many people normally our supporters. They appear to have felt that our economic measures of last year were too severe; that we acted in too much detachment from those actually engaged in industry and commerce; that full weight was not given to human considerations, and that we were not sufficiently conscious of unemployment. We pleaded, and we plead, not guilty to these charges, but the verdict of the jury almost went against us. . . . We do not propose to ignore the currents of public opinion. This does not mean that we will abandon our twin policies of stability and national development. . . . But in the application of those policies modifications of method and approach should clearly be made.

Nothing is more unlike Mr Menzies than to bow, or to seem to bow, to public opinion. He is noted for the courage—his opponents call it arrogance—with which he is prepared to flout it. The government's present aim, however, is to survive the next few months. It may be true, as the federal Treasurer, Mr Harold Holt, has said, that many voted against the government's policies without wanting a change of government. But to offset them there are others who now suddenly see the Labour leader, Mr Arthur Calwell, as a near prime minister instead of as a likeable but ineffectual politician, and who will feel the well-known Australian desire to "give him a go."

Mr Calwell, once in power, would get the credit for the optimism that flows with oil and from the rise in economic activity that is due to take place anyway because of "modifications of method and approach" that have already been made under Mr Menzies.

What further modifications does the prime minister have in mind? No return of the credit squeeze is in sight. If the balance-of-payments gap were to reappear in the life of this Parliament (which it will hardly have time to do) resort would probably be had to import restrictions. More will be done for Queensland, where the government's electoral losses were particularly heavy. But there is no talk of modifying policies to the extent of adopting Mr Calwell's proposal for a supplementary budget and heavy deficit spending.

Will there be a change in tariff policy? The prime minister says he will call a conference early in the new year at which the government will hear the views of leaders of industry and commerce. Anything that reduces the distance between Canberra and the centres of industry is to be welcomed; but if these consultations are to be of real value, the business men and industrialists must lobby less blatantly for their separate interests than is their wont. (The manufacturers' lobby calls for higher tariffs and renewed import licensing—to relieve unemployment—while that of the chambers of commerce praises the benefits of import competition—in order to keep costs down.) If the proposed conference gives the government new insight into the problems of industry, it must be hoped that it will also give business men a keener realisation that high-cost production of a lot of things that can be better produced elsewhere is not necessarily in Australia's best interest.

One hopeful portent is the inclusion of Mr Leslie Bury among the three new ministers appointed to replace three who lost their seats. In parliamentary debates on economic matters Mr Bury's contribution has always been outstanding. He is to be minister for air, but is also to assist the treasurer, Mr Holt. As for Mr Holt himself, his chances of eventually succeeding Mr Menzies as prime minister are not improved by the election results. Eyes are again turning towards Sir Garfield Barwick, the able QC from New South Wales, who, besides the portfolio of attorney-general which he has held for three years, is now to take over from the prime minister that of external affairs. In parliament Sir Garfield's reputation has fluctuated—high with his uniform divorce law, low with his Crimes Act. On his desk now lies the very thorny problem of Indonesia and West New Guinea. If he can deal with that without loss of reputation either for himself or his precarious government he will have done well.

Three Coins in the Fountain

Nigeria, Ghana, and Tanganyika, three key African countries, have each been promised American aid in amounts that will affect their economies significantly. Tanganyika, whose primary need is to keep from going hungry, has been offered $10 million towards its three-year plan. The givers of aid, including Britain, should not, however, wait that long to see whether Tanganyika can usefully absorb more: it is a country well worth building up.

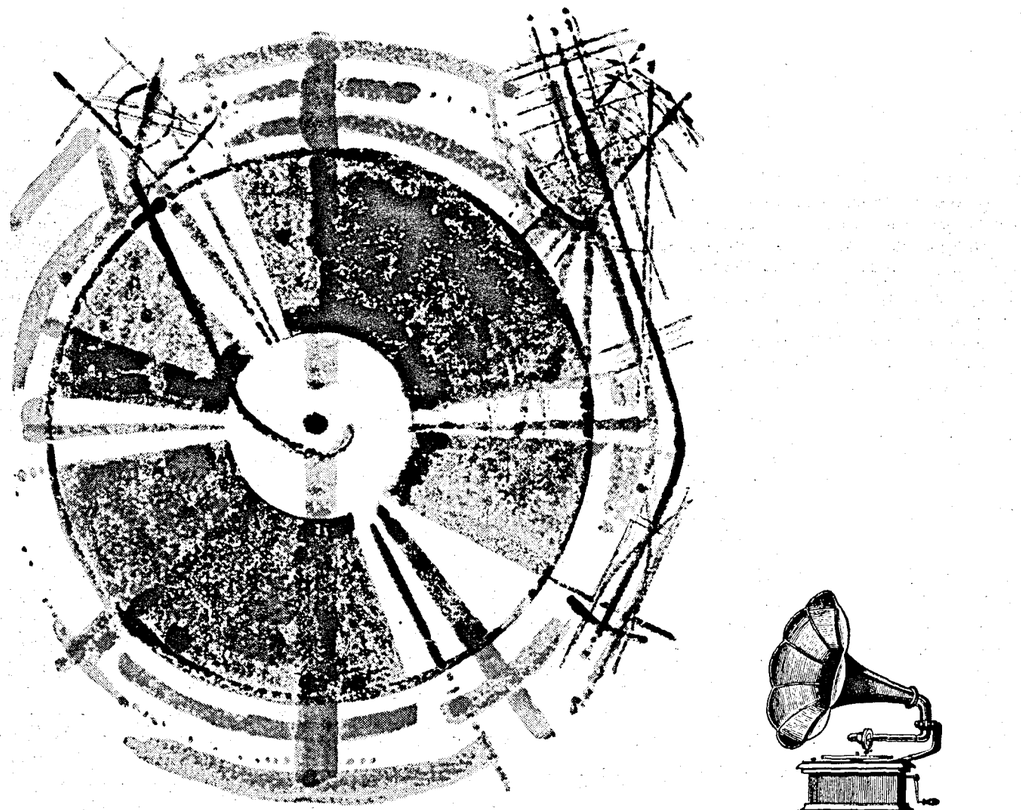
The richest black African country, Ghana, has been set on the path towards becoming considerably richer by the promise of $37 million, in five annual instalments, to cover one-fifth of the cost of the dam at Akosombo on the Volta river. The group of American companies building the aluminium smelter that will take electricity from the dam (and thus ensure the loan's repayment) has borrowed from the American government three-quarters of the $128 million it will need to spend. Before the decade is out, Ghana will be producing twenty times as much electricity as it does now (and perhaps selling some of it across its borders); it will possess the world's largest man-made lake; it will be in a position to export iron, grow rice, and, perhaps, produce 10,000 tons of fish a year. With luck, the abundant electricity could attract other industries to Ghana. It is the most significant event in Ghana's—and perhaps West Africa's—history.

This is said in spite of the much larger amount—$230 million—that has been earmarked for Nigeria. With six times as many people as Ghana, with far less wealth relatively to its size, Nigeria's 1962-67 plan (full details are expected in the new year and we hope to make a special survey of them in *The Economist* later on) is likely to deal mainly with infrastructure. The federal government and the three regional governments probably hope to invest as much as £500 million over the five years; at least half of this will have to come from outside sources. The largest dollop will be American; other smaller amounts have also been offered.

About £70 million will be spent in ten years on education—this will mean an increase in recurrent spending from about £28 million next year to £60 million in 1969-70. The projected Niger dam will cost £68 million in its first stage; Lagos harbour, roads, railways and agricultural extension services will take up much of the rest. If this money is to be useful, Nigeria will have to learn to stop importing luxuries, to cut down on corruption in high places and (a federal disease) to stop buying everything in fours. The four governments will soon have four television services—probably four too many for Nigeria—and threaten to outbid one another in other forms of prestige spending. Here it is time for the Nigerian prime minister, Sir Abubakar Tafawa Balewa, to take a lead. The American offer has given him the chance.

Holland's Road to Canossa

FROM A CORRESPONDENT IN AMSTERDAM



Few Dutchmen, a year ago, would have been heard to suggest handing over the Netherlands New Guinea to Indonesia, or even negotiating with President Sukarno at all. Today these suggestions can be, and are, made frequently in newspapers and periodicals as well as in ordinary private conversation. And it has begun to look practically certain that before long the Dutch government, and in particular the foreign minister, Mr Josef Luns, will abandon their resistance to the (conditional) handing over of New Guinea to Indonesia.

The Dutch sense of reality has caused this transformation. The fact has begun to come home that if, before long, New Guinea is made to stand on its own feet it will become an easy prey to Indonesian aspirations; after all, some 98 per cent of its small population still lives in the Stone Age. New Guinea is a financial handicap to Holland. The prospects of economic development there are far from bright, at any rate in the immediate future. Finally, the Dutch now fully realise that if it came to a fight with Indonesia they would stand hopelessly alone.

For the past two years, the Dutch have been prepared for this situation by, among others, the so-called Rijkens group. This is a group of mostly influential men headed by Dr Paul Rijkens, former chairman of Unilever NV. It has been able to get in touch with a number of leading Indonesians, including President Sukarno. At first the Dutch government silently approved the group's activities, but recently it has disavowed them. The group has nevertheless made an impression on Dutch public opinion. Professor Duynstee, of Nijmegen University, who is indirectly connected with it, maintains that prestige and sentiment ought now to be disregarded, and that there is still a last chance of entering into free and open negotiations with the Indonesians. (This would imply setting aside, at least for the time being, the right of self-determination that had been promised to the Papuans.)

There is now every reason to believe that the views of the Rijkens group and of Professor Duynstee will at long last prevail, and will guide the Dutch government along its road to Canossa. If the New Guinea problem can be got rid of, even in this rather unhandsome way and at the cost of losing some face, the news will be greeted with sighs of relief by everyone in Holland except a few diehards.

in a changing world

You cranked the handle—and a familiar tune wheezed through the horn of the early gramophone. Today stereophonic equipment fills the room with living sound, adding a new dimension to your enjoyment. Mullard contributes much to the continuing development of sound reproduction, providing essential valves and components of advanced design.
The Mullard combination of research facilities, know-how and large scale manufacturing capacity, is linked in progressive partnership with leading equipment manufacturers all over the world.
Is there a problem we can help you to solve?

Mullard products used in sound reproducing equipment include:
AUDIO VALVES · TRANSISTORS
LOUDSPEAKER MAGNETS

THE BUSINESS WORLD

The Aircraft Industry Complains

WHAT, precisely, was the aircraft industry complaining about in its pre-Christmas visits to the Minister of Aviation? Mainly, it appears, about lack of work. On the face of it, this seems incredible. The aircraft factories are now employing more than 300,000 people. It is an astonishing figure—twice as many as in 1950—and new staff has been taken on this year at the rate of approximately 1,000 a month. These figures count in some workers makings goods other than aircraft, but if they can be taken as reasonable indicators of a trend, they point to an industry that is expanding, not contracting.

The aircraft industry has substantial orders in hand, enough to keep its main factories adequately employed even if some less efficient units have to be closed, as Hawker Siddeley and the British Aircraft Corporation have recently been doing. But orders for new projects are not sufficient to keep its design offices working at the rate which they thought normal during the nineteen fifties. This is the nub of the companies' argument with Mr Thorneycroft. It is not more work for existing production lines they are seeking from him but bids for new projects, aircraft, missiles and engines, involving tough technical problems for their designers. And the Minister is refusing to oblige.

The aircraft industry's attitude pays little attention to the reasons why the Government encouraged its consolidation into five main production groups two years ago. The Government promised a measure of aid if the mergers went through. But there was no suggestion that this would be sufficient to maintain the industry at the size it was then—which was 20,000 fewer in manpower than today. The industry, however, appears to think that there was some such commitment. Since the mergers took place, some rationalising of management has been effected inside the new groups, but there has been no inclination to reduce their size, although this was the purpose of the Government's plan. Consolidation was intended to produce a smaller, more compact, technically strong aircraft industry out of a number of separate companies that the country could no longer afford. The object of adding two and two was to make three, not four.

The new groups have, indeed, been demanding a flow of work that the Government cannot possibly provide. In the foreseeable future, perhaps one in every four men that they employ will become redundant, with severe effects in the design offices. The Ministry of Aviation has repeatedly said that too many separate design teams are being maintained within the new groups. It has done so for two reasons. One is that the Government itself, which takes three-quarters of the industry's output, will order fewer different types of aircraft and missiles in the future than in the past. Secondly, "interdependence" among Nato countries ought to mean that a proportion of the arms that the Government does order are likely to have been designed outside Britain. If, for example, the Government becomes a partner with France in the vertical take-off fighter designed by the French Dassault company, parts of the aircraft would be built in British factories, but little, if any, of the design would have been prepared in British drawing offices.

THIS will be a new situation for the industry. Companies have known unemployment in the past, but mainly in terms of idle production lines. Now they are being warned by the Government to reduce total capacity by perhaps as much as 25 per cent, and also to reduce the ratio of designers they employ. This is the unkindest cut. Traditions and loyalties in the aviation business place the designer at its nerve centre; to get rid of an entire design team (which is the prospect in store) is to submit to a kind of industrial leucotomy. Individual managers of aviation groups will have the distasteful task of dismissing old friends and working partners. The aircraft industry deserves much of the criticism it gets; there are times, however, when it also deserves understanding and a measure of compassion.

There is also, as the Ministry of Aviation is aware, the risk of discouraging this industry to the point where it begins to lose heart. There may not be enough work to sustain its present size, but there are some rich plums in the offing. Two technical developments promise a steady volume of work; one is vertical-take-off and the other is supersonic flight for civil transports. After marking time for about two years, the Government is likely to place new orders for military VTO aircraft, both fighters and transports, using both types of vertical-take-off engines developed in this country. This decision should help the prospects of Rolls-Royce, since the only firm order for vertical-take-off aircraft at present is for Hawker Siddeley's fighter powered by Bristol Siddeley's special engine. Rolls-Royce had been left for several uncomfortable months, while the Government pondered, without orders for its own competing system. Now interest on the continent seems firm enough to justify the Government in supporting the

apparent indulgence of two alternative engines for vertical-take-off based on somewhat different systems. Both Rolls-Royce and Bristol Siddeley, as engine builders, will have reason to be grateful for the policy of Nato "interdependence" which is giving them Government support at home and orders from the continent.

Aircraft manufacturers may view the prospects of "interdependence" with less enthusiasm, for it is uncertain that their aircraft would be adopted by Nato forces in open competition with designs submitted by manufacturers on the continent, and especially in France. The Dassault design teams have a way with small military aircraft (fighters and bombers) flying at two and three times the speed of sound that British designers might envy, and the nationalised Sud company has made a deep impression on the usually unimpressionable Ministry of Aviation with its supersonic Caravelle. A joint Anglo-French attack on that most difficult project, a saleable, flyable supersonic airliner, seems increasingly probable.

It is a proposition that needs the closest examination, and Mr Thorneycroft would be doing a service if he spelled out the commitment that is in prospect before any agreement is signed. It is not an undertaking of a commercial kind that could safely be left to agreement behind closed doors. It will require five to ten times the kind of public money earmarked for the Cunard's unlamented Q3. The taxpayer may be so relieved to discover that this cost is going to be shared with the French that he might forget to ask whether what the French are doing and what the British now propose to support is sensible and worth the investment.

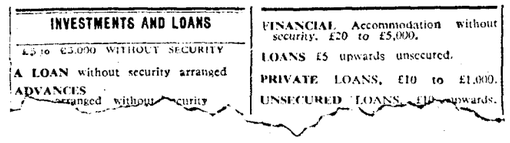
Apart from these technical ventures, the *volte face* that has taken place in the services' attitude to air supply has produced a minor flood of orders for transport aircraft, from helicopters to the capacious whale-like Belfast able to fly half across the world. A smaller army and fewer overseas bases have made Transport Command the fastest growing branch of the services. These transport orders are specially useful

EMPLOYMENT IN THE AIRCRAFT INDUSTRY

*1950 mid-year	149,400
*1955 "	243,400
1959 "	283,600
1960 "	284,300
December	292,500
1961, June	298,800
September	303,100

* Old classification.

since they usually, though not invariably, require aircraft that are relatively cheap and uncomplicated to develop by comparison, say, with a complex military aircraft such as the British Aircraft Corporation's TRS 2 light bomber; this latter project now seems more likely to be cancelled than completed.



If the TRS 2 were cancelled, the British Aircraft Corporation would be conspicuously short of work for the future. Its factories are busy enough now, but its drawing offices have little to engage them beyond the BAC 111 jet. The company is competing hard for new military transport orders, and would benefit from any supersonic airliner project undertaken in this country. But it is also assiduously searching for other kinds of work by signing agreements with French and American companies to build their aircraft, or parts of them, in Britain should these foreign designs be ordered by the RAF. Hawker Siddeley is rather better placed than BAC, since its work is spread more widely over a longer term, from Blue Streak to vertical take-off and from freighters to the Trident airliner (expected to make its first flight any day). The Westland company, specialising in helicopters, is almost wholly dependent on military orders but can rely on these coming in fairly steadily. Yet it must have been a blow to the company's civil prospects when British European Airways chose (though it has not so far been allowed to buy) an American-designed helicopter for civil operations.

THE process of convincing the aircraft groups that they must reduce their capacity is slow and hard, and periodically the Ministry takes a step that suggests to the new groups in the industry that they are its favourite sons. Its treatment of that individualist and pioneer, Sir Frederick Handley Page, is having just such an effect. Sir Frederick stayed outside the mergers because neither Hawker Siddeley nor BAC would offer a price that he deemed fair to his shareholders. It was never the Government's intention to prevent companies outside the new groups from building aircraft, provided that they did not ask for Government aid, and Handley Page has built the Herald, a small, rugged airliner in the DC 3 class, out of its own resources. The RAF wants to buy 45 Heralds to fill a requirement of Transport Command for this type of machine.

The Ministry of Aviation has, so far, held up this order because it does not want an outsider expanding when the Government is insisting that the big groups should cut down. It would surely be officious to attempt to deprive an independent company of work simply because its success would put the department's own protégés in a pet. Naturally Hawker Siddeley and BAC would be provoked if Handley Page were to get a Government order while they went empty handed (the RAF's second choice would be the smaller Caribou built in Canada by Hawker Siddeley's subsidiary, de Havilland, Canada). But it is notable that neither of them values the order so highly as to buy out Handley Page.

Sir Frederick might argue bitterly that if he had asked for Government aid to develop the Herald in the first place, he would probably have got his order weeks ago. But this should not be regarded as an isolated incident. What, again, happens if in the future the RAF were to decide that Transport Command needs some small, cheap executive aircraft like those built by Mr Peter Masefield's Beagle company? Will it be prevented from ordering these too because Mr Masefield has developed them without Government aid? It is Mr Thorneycroft's misfortune to give the appearance of conducting a vendetta against private enterprise in the air, to eliminate competition wherever it appears, whether on the North Atlantic by Cunard Eagle or among the aircraft factories in the Handley Page group. It is hardly surprising that the big groups, the establishment of the aircraft industry, believe that by pressing long enough and hard enough they will get all the work and the Government support that they want. And so believing, refuse to rationalise.

£5 to £5,000 without Security

PERCHED precariously on the edge of Britain's capital market today remains the poor man's traditional lender of last resort—the no nonsense moneylender. Unlike the pawnbroker, he has managed to survive national prosperity and the welfare state. His business is small in relation to that of the City proper or the banks, but for many individuals he is still the only source of quick credit. There are something like six hundred registered moneylending offices in Britain, nearly all of them run by exempt private companies or partnerships not obliged to publish accounts. The only guide to the magnitude of the business is provided by three of London's largest moneylenders, which are public companies. At the end of 1960 they had advances outstanding in the region of £270,000 and their issued capital totalled £120,000. The issued capital of most other London moneylending companies rarely exceeds £5,000 and is often no more than £100—operations being financed from the directors' pockets, mortgages, and occasionally from bank loans. On the assumption that on average each office may have advances of £10,000 outstanding, which is probably a generous guess, the total loans outstanding from all Britain's six hundred moneylenders would be around £6 million. But the true figure could be half, or double that: to set it in perspective, one may compare advances to personal and professional borrowers by members of the British Bankers' Association, which totalled £664 million in November.

Moneylenders themselves like to think that their business is increasing as the habit of taking credit extends. In fact, the introduction of personal loans by the banks and the growth in hire purchase must have cut into moneylenders' outlets, while full employment and the welfare state since the war have removed some of the contingencies that once provided the moneylender's bread and butter—the incidence of income tax before the days of pay-as-you-earn, sickness before the National Health Service, and holidays before people generally had holidays with pay. The few indicators that are available suggest that the volume of this kind of lending may have stayed at about the same level over the past ten years. There were 294 registered moneylenders in London in 1950 and 269 in 1954. There are now 262. In 1950 outstanding advances of the three public London companies were only £10,000 lower than their present £270,000.

MONEYLENDERS are controlled by the Moneylenders Acts of 1900 and 1927. These acts were designed to end abuses like the moneylender's tout and the practice of lending a shilling for a penny interest a week—that is, around 400 per cent a year. The back-street Shylock, who functions outside the acts, still exists: and of the 262 registered moneylenders in London only about 60 appear to have regular business premises. But if the abuses that produced the acts have become much less prominent, that is attributable more to the rise in incomes and the welfare state than to the acts themselves. Unknowing people suddenly hard pressed for cash can still be persuaded to pay through the nose.

The first major obligation under these acts is that every moneylender must have an annually renewed excise licence, price £15, for each address at which he carries on business, and he must satisfy the court of petty sessions that he is of good character and has not previously committed any offence under the acts. Once open for licensed business the moneylender is obliged to be very careful how he goes about attracting custom. He must not send out circulars inviting business. He may not employ agents to seek out likely borrowers. Any printed advertising that he uses may state no more than his name, address and telephone number, whether he lends money with or without security, and the highest and lowest sums he is prepared to lend. Hence the cryptic advertisement: "£5 to £5,000 without security."

The acts set no direct limit on the rate of interest that a moneylender may charge, but they do specify that if the interest charge is greater than 48 per cent, the moneylender must show, in any proceedings in respect of money lent, why the court should not consider the rate "excessive" and the contract "harsh and unconscionable." A good many moneylenders charge rates well in excess of 48 per cent; it is this, rather than any fear of "throwing good money after bad," that probably explains why many of them are reluctant to take defaulters before the county court—for a judge, if he thinks fit, may re-open all previous contracts with that defaulter and re-adjust the rate of interest in the light of the evidence. Unhappily, few of the moneylender's clients are aware of these provisions in the act of 1927 and moneylenders are not obliged to draw their attention to them. The moneylender is however obliged to state his interest charge as a percentage of the diminishing balance and not merely as the much smaller percentage of the initial balance. Thus the true rate of 48 per cent on £100 borrowed for one year implies an actual interest repayment not of £48 but of around £29. It is small wonder that moneylenders prefer to relegate this "true" rate to a discreet footnote, quoting their charges as specific amounts in pounds, shillings and pence.

Moneylending may be a lucrative occupation, but it is a lonely one; for most of the moneylenders rarely meet their own kind socially. Professionally, however, it is possible to distinguish two groups: those who charge all borrowers the same rate, and those who, in theory at least, vary their rates according to the risk involved. In London, moneylenders in and around the City of London generally adhere to a fixed rate, which is mostly in the region of 33 to 45 per cent. Moneylenders in the West End and around St. James's range their charges considerably higher. In a recent court case a Mayfair moneylender was charging a man of "considerable substance" rates of 60 and 64 per cent, and in one instance, where the loan had been repaid before the due date, 185 per cent. The printed memorandum of contract obtained from another West End moneylender offered a loan of £100 for a

year at an effective 77 per cent. These are onerous terms and, unlike the interest on the banks' personal loans, they are not softened by income tax relief.

Moneylenders are quick to argue that their rates are not exorbitant : as they see it, the moneylender retails money and is therefore entitled to a retailer's mark-up on his stock. His real burden, however, is the heavy incidence of bad debts. Plainly a substantial part of the interest taken by a moneylender goes to wiping out the debts of his defaulters. Among the "City" firms, bad debts seem to vary from about 8 to 12 per cent, while those of the West End companies often go as high as 30 per cent, but are more usually in the range of 15 to 25 per cent.

THIS difference in bad debt experience is a reflection of the different ways that these two groups do business. The "City" moneylender likes to limit his operations to salaried staff. His lower rates tend to attract the better business—and they allow pursuit of defaulters into the county court. He will often take security in the form of bills of sale, sureties, life policies, or second mortgages (on an unmortgaged property finance can normally be raised at much less onerous terms from building societies or through solicitors). The City lender will place particular importance on assessing the client's character at the loan interview. Behind the scenes the moneylender is likely to call E. W. Perry, business agents who keep a record of moneylenders' customers, to confirm that his applicant is not in default to another moneylender ; he may also get on to one of the City credit agencies for a credit assessment of the applicant from his local community. The West End moneylender, on the other hand, is often precluded from effective court action against a defaulter by the height of his interest charges ; and to keep his funds fully employed he must lend to a wide range of customers, from the wage-earner to the destitute bookmaker, and make a high proportion of always risky postal loans (where there can be no question of a loan interview).

Logically the only possible reason for paying the rates that a moneylender charges is financial desperation—a debt that must be paid, expenditure that cannot be delayed and nowhere else to get the money from. Yet it is clear that borrowing from moneylenders is not limited to these circumstances. A large part of moneylending business comes from old customers —one "City" company puts its own figure as high as 80 to 90 per cent—many of whom turn up regularly to consolidate their debts without ever realising that they are reducing the ultimate purchasing power of this money by anything from 20 to 50 per cent or more. There are in fact a surprising number of people who, in terms of spending, are willing to discount the future well into the double figures of the interest rate.

Moneylenders in Britain would naturally like their business to develop on the American pattern in which advertising has a free rein, and companies are nation-wide and have stock exchange quotations, but at the moment there are two large obstacles. In Britain advertising is strictly controlled and, just as important, is the fact that in Britain, when a borrower climbs the moneylender's stairs, he abandons middle-class respectability.

BUSINESS NOTES

ICI-COURTAULDS

Waiting Period

BEYOND saying that they are consulting their financial advisers, Baring Brothers, the directors of Courtaulds have not, so far, made their views known about ICI's bid of three of its ordinary shares for every four in Courtaulds. Because of the time needed to prepare the documents, the formal offer by ICI is some weeks away but presumably the Courtaulds directors, though they may well feel that they are being bustled into a decision, will have to say whether they recommend acceptance or not before then. But after months of discussion, they could hardly reject the offer and the stock market, having chased an improbable counter-bid from Du Pont for a few hours, is now appraising the two shares on the assumption that the bid will go through as it stands. Indeed, Courtaulds was being bought after Christmas as a cheap way into ICI and prices were adjusted accordingly, so that at the close on Thursday, Courtaulds stood at 39s. 7½d., compared with 39s. 9d. immediately before Christmas, and ICI at 55s. 9d., compared with 56s. 10½d. These dealings took place in a thin industrial market, where prices were kept firm by the stimulus provided by American purchases of Unilever and where speculators were coursing another hare in the shape of a revived rumour that Cunard would become linked with another shipping group.

Naturally the Opposition last week put down questions about monopolistic tendencies in British industry arising from the proposed ICI-Courtaulds link-up. Answering them, Mr Erroll, the President of the Board of Trade, again made it clear that the Monopolies Commission had no power to investigate a monopoly in prospect but only one in being:

> Should the merger, if it takes place, give rise to conditions in which I considered that there were grounds for referring to the Commission the supply of any of the goods affected, I would, of course, do so.

But, in general, Mr Erroll treated the possibilities of monopoly arising from this merger with apparent equanimity.

OVERSEAS TRADE

Exports Pause

EUROPEAN countries took most of the increase in Britain's exports this year. The first eleven months should give a fair impression of the whole year ; they show an increase of 15 per cent in exports to Western Europe and a jump of a third in exports to Russia and Eastern Europe. Exports as a whole rose by 4 per cent ; their relatively disappointing growth reflected a standstill in trade with the rest of the sterling area and a drop of 8 per cent in exports to North America. Between May-August and September-November, however, exports to western Europe grew by only 1½ per cent, most of the improvement being in exports to EFTA countries. A sharp recovery in exports to the United States was virtually wiped out by a fall in shipments to Canada. Exports to the sterling area fell, but if exports of ships are excluded, it seems that the decline in exports to sterling countries other than New Zealand has been checked. Nevertheless, between the two periods, seasonally adjusted, exports declined by 1½ per cent.

Imports in September-November were 1½ per cent higher than in the five months April-August. By taking a comparison with the previous five months rather than May-August (to eliminate the effects of the dock strike earlier this year) the rise looks slightly more ominous than that suggested by the preliminary trade figures for November. Over the year, imports are 3 per cent lower than in 1960, mostly explained by lower imports of industrial materials. These were still falling, but only slightly, in September-November, though food, beverages and tobacco rose. Imports of finished manufactures also rose by 3 per cent in this period, but the rise was due mainly to ships worth £6 million from west Germany and the Netherlands. Over the year, imports of finished manufactures rose by 8 per cent.

Planned Expansion

WITHIN the self-imposed limits of the Board of Trade—that trade between Britain and Japan should balance and not "disrupt" the business of manufacturers in this country—the agreement signed at the end of last week was fairly ambitious. Trade should reach about £40 million in each direction this year ; the new agreement might lift it to £50 million in 1962—approximately one per cent of Britain's total imports. It took four months to negotiate this liberalisation. An earlier agreement expired in March, was extended until September and was then succeeded by an "interim" arrangement to the same effect while discussions continued. The new agreement picks up the loose ends since it runs for the year to September next.

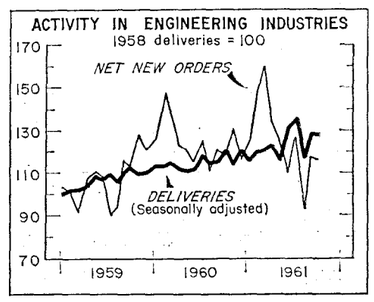
This "annual" negotiation of Anglo-Japanese trade is unlikely to be repeated. A full commercial treaty will probably be signed before, or soon after, the expiry of the current agreement. This would give Japan the coveted "most favoured nation" status and remove the stigma of having its exports to this country restricted under article 35 of Gatt. It seems that Britain is ready to extend its trade with the "quota" countries—Asian and iron curtain —at the same time as it lowers tariff barriers to other exporters. Quotas for imports from Czechoslovakia next year have been raised by a sixth. Apart from an increase in imports of chemicals, machine tools and shoes, licences to import £180,000 worth of cameras and photographic equipment will be granted, compared with permitted imports of £55,000 this year. Following the sale of Viscounts to China, it is also rumoured that an expansion in trade quotas with China is likely.

Both the Czech and Japanese agreements reveal liberalisation of photographic equipment and stringent limitation of imports of rubber footwear, reduced in Czechoslovakia's case from £100,000 to £35,000. Small quotas have been granted to Japan for the first time for cigarette lighters, cutlery, glassware, and cheap watches. A token import of £150,000 of wool yarns and piece goods, unrequited by assurances that allegedly unfair practices by Japanese exporters will stop, has upset the wool textile industry here. But wool textiles are Britain's largest export to Japan, and import controls on these goods into Japan have been eased or removed. The largest category of Japanese manufactures entering this country is cotton textiles. The quotas for cottons and goods made from man-made fibres retained in this country have been increased, and permitted imports of cotton and rayon cloth for further processing in this country before re-export have been raised from £3 million to £4½ million. Among imports that Japan has freed from control are tooth paste and boot polish, an apparently small concession which manufacturers of these products in this country whose exports have stagnated this year might nevertheless be able to turn to account. Larger quotas are to be granted for motors, tractors and bicycles ; the global quota for imports of motors for private buyers has been trebled to £2 million.

More Competition from Japan

THE changes in the Anglo-Japanese trade agreement that will affect British manufacturers most are the freeing of imports of cameras, vehicles and plastics ; bigger quotas for that modern Japanese speciality, the transistor radio ; and the new quotas introduced for transistor television sets. Japanese cameras are likely to be the import most noticeable to the middle-class consumer ; the old quota of £375,000 a year was fully sold, and freedom may allow imports to be trebled. This would give the Japanese roughly a quarter of camera imports—and most of the new sales would be taken from the Germans, though the Americans might lose some sales of cine-cameras. The Japanese cameras are not significantly cheaper than others, but especially in cine cameras they have certain features not found on other cameras of the same price. Most of the increase in sales is likely to be in the middle price bracket, around £45 for still cameras ; few selling for under £25 are expected.

So far as vehicles are concerned, the main Japanese export effort lies in scooters and mopeds ; Honda is the only maker to have tried selling in Britain on any scale. The depressed state of the British market is unlikely to encourage ambitious efforts, though British makers are apprehensive of anything that might add to their difficulties—and therefore ready to protest vehemently. Cars are something in which the Japanese are as yet less well equipped to compete with western countries, though they are improving fast ; in a few years more this industry may be a significant export competitor.



Free imports of plastics may put more pressure on prices in the British market. Japan is able to make polyvinyl chloride more cheaply than most countries, for chlorine—one of its most important raw materials—is cheap there. Despite import duty and freight costs, it might well be sold in Britain at a competitive price. And the rapid expansion of the Japanese plastics and petro-chemical industry, which has already outstripped the limits of discretion in some instances—a new SBR synthetic rubber plant has had to be closed for lack of sales—may well make Japan an aggressive marketer. One must hope that the British industry will be able to restrain its inclination to howl about dumping if a foreign maker sells at the same price as they do—which seems to be the gravamen of its complaint about American imports.

THE ECONOMY

Slow Decline

IN October the slow decline in industrial production continued, though strikes at Rootes and the Steel Company of Wales may have contributed to making the index of industrial production two points lower for the month instead of one. Output at other steelworks was low, and there appears to have been some slight decline from the high rate of engineering output achieved in September.

Recent figures on private capital investment suggest that this expenditure, perhaps the largest single element of demand upon engineering, was holding up relatively well. Engineering exports fell more between the second and third quarters this year than in 1960, though the booking of orders for

abroad remained brisk. Demand for the consumer durable industries was further depressed—intentionally. In the third quarter, however, motor vehicle output, which makes big calls upon intermediate engineering, compared better with 1960 output than it had in the previous quarter.

Order books in engineering, in total, are coming down gradually, though orders in hand for export were up slightly at the end of October. Deliveries of engineering products have risen since the peak level of orders in hand was reached in May this year ; and net new orders have recently come down. Delivery dates, however, remain a problem for certain of the makers of specialised capital goods—though Britain is now no worse off in this regard than certain of its Continental competitors.

MOTORS

More Cars, More Bricks

CAR output in November was nearly 2,000 a week higher than it had been in October, reaching a rate of 20,783 a

Kuwait's Holdings Abroad

Iraqi threats towards Kuwait, which this week caused British forces in the Middle East again to be alerted, arise from coveting the land of one of the richest neighbours in the world. Kuwait's oil wealth is fabulous. Fables are current, too, about its foreign investments.

GUESSES have often been aired internationally, in the past, about the amount of the overseas investment holdings of the state of Kuwait. It has seemed clear that this tiny, oil-rich state at the head of the Arabian Gulf, where government revenues from oil have mounted from a beginning of £3 million in 1948 to £170 million for 1960, was not spending all these foreign exchange earnings. How large its accumulated balances are, where they are held and whether they could suddenly be switched, are obviously questions of importance for sterling, the currency in which Kuwait's earnings primarily accrue. Last week, at the same time that it was officially announced that the country was setting up a Kuwait Fund for the Economic Development of the Arab Countries, an official of the Kuwait government told *The Economist* more about these overseas investments than has ever been published—though not quite all.

Kuwait's overseas holdings today total about £240 million, which is about a third less than has often been guessed for its sterling balances alone. They are held in Britain, the United States, Japan, Norway, Switzerland, Germany, Egypt, the Lebanon, and Jordan. The Kuwait government is not prepared to disclose exactly how much is in sterling, but it is "a big part." These foreign holdings range widely between loans, gilt-edged and equities.

An investment committee of the Kuwait Ministry of Finance controls the disposition of these overseas holdings; the London advisory committee which deals with Kuwait's holdings in sterling handles the details of policies laid down in Kuwait, and all holdings outside Britain are controlled directly. This year, about 10 per cent of Kuwait's foreign exchange earnings will be invested. The amounts thus put aside were low in the early years, when oil revenues were lower and Kuwait was creating the infrastructure of a modern state out of what had been an insignificant port of the Arabian Gulf. In the middle fifties they were larger; oil revenues grew more rapidly than expenditure, which for a time was deliberately curtailed.

In the last few years, again, expenditure swollen by certain major projects has come closer to catching up income, and the state had smaller amounts over to invest abroad; but from this year onward the amounts saved may be mounting again. Kuwait's overseas holdings are often misleadingly referred to as the personal foreign investments of the Ruler of Kuwait, H.H. Shaikh Abdullah al Salim al Sabah; in fact, they are foreign assets of the state.

DURING the last few years, as could have been surmised, the investment committee in Kuwait has been placing growing proportions of its accruing balances of annual income over expenditure of foreign exchange in countries other than Britain. This, rather than large-scale switching of balances already held in sterling, is *gradually shifting* the spread of the holdings. Switching there has been; but *mainly switching to Kuwait*, as the state has been establishing new internal companies in the fields of oil, banking, other finance, and petrochemicals.

Kuwait regards itself as "associated with" the sterling area, rather than within it. It has never had the least question raised over its spending for current imports: the Bank of England has always made the foreign exchange required available. For the switching of actual blocks of balances into investments elsewhere, it has to follow the rules applicable to members of the sterling area—but it assumes that consent would not be unreasonably withheld. In circumstances where the standing of sterling might be in jeopardy—and Kuwait's sterling holdings along with it—it assumes that the British authorities would not object to its protecting its own interests, unless Britain cared to give it a gold guarantee. It maintains large holdings in sterling, the official insisted, in Kuwait's interests, as a matter of commercial comparison; not in Britain's. One sub-committee of the Economic and Industrial Committee recently set up in the finance ministry will be studying the question of membership of the sterling area—the advantages, disadvantages, and whether it seems worth Kuwait's while.

These overseas investments are at present bringing the state an income of about £12 million a year: the government looks on this overseas income, and income from development of secondary industries in Kuwait, as perhaps more dependable for the long run than revenue from oil. But in spreading its investments, it gives priority to investment in the Arab countries. It is already a magnet of employment for Arabs of other nationalities—the £4-6 million a year sent home by Jordanians working in Kuwait, for example, must be a large element in Jordan's national income—and it did offer £5 million for a "Finance Fund for the Economic Development of the Arab Countries," which was organised by the Arab League but has not come into being.

ITS *own new fund for development* seems to be of a quite different order to that earlier fund, or to the long-mooted "Bustani Plan" for devoting 5 per cent of Middle East oil revenues to development in the Arab countries. The Kuwait fund will be allocated sums from the national budget to cover its own budgeting over five-year periods. A mission from Kuwait has already visited seven Arab countries (not including Iraq) and gathered summaries of 60 possible development projects. It will have a staff of experts of its own, drawing upon the experience of the World Bank. It will make loans, giving preference to projects in which international institutions offer a recommendation or guarantee, or which the governments concerned can guarantee; its criteria will be commercial.

This fund will be set up mainly with *government money; but it may* seek to attract private Kuwaiti capital either by issuing its own loans or recommending loans for specific projects to its local investors. These dispose of substantial investment funds; apart from participations, usually on a 50-50 basis with the State, in local Kuwaiti companies, private capitalists in the country are said to have invested in Arab countries up to £100 million in real estate, plus a small assortment of other investments outside. The new fund, to be financed with public and private money, seems likely to work on a fairly large scale, and has some promising projects already lined up for expert scrutiny. Its lending budget over five years might reach up to £50 million. Many grandiose ideas for co-operative development within the Arab countries have been put up in the past; but none has got this far. Kuwait is one of the most modest and practically philanthropic of the Arab countries; it also has a habit of doing what it says.

Continued from page 1303

week; but the year's production is likely to be under a million for the first time since 1957. Perhaps half the increase in output during November came from Rootes's resumed production as its long strike drew to an end. An increase in BMC's output to around 13,000 vehicles a week when it was able to settle down to making its new models accounted for rather more than half of the remaining rise, with Ford making up the rest. Vauxhall made as many cars as it had done in October, having reached the limit of what it can make on a single shift—it starts a night shift in January—and Standard-Triumph continued at much the same rate as in October too. December seems likely to show little change on November; Rootes has been working up its output, reaching normal again in the week before Christmas, and this should balance the cuts that other makers have made—BMC's on the Morris Minor, for example.

The most cheering feature of November was that home sales were the same as they had been in October, though one expects them to fall between these two months. In December sales may, however, be more than 10 per cent lower than they were last year. If they rise sharply in the new year—as they did in 1961—the optimists in the trade will find their high stocks justified; if they do not, and stay on the level trend, unaffected by seasonal factors, that they adopted in September, further cuts in production may be necessary. Makers have shown an unexpected ability to avoid short-time working so far this winter, despite lower sales at home than last year; fewer workers is one reason, strikes another—which gave some of Rootes's business to other makers—and some increases in exports a third.

November was disappointing in this respect; despite higher shipments to most European markets and the United States, the total was lower than it had been a year ago—Canada took 6,000 fewer cars. The efforts that some British companies are making to raise their sales in Europe by charging the sort of price that would be economic if Britain had entered the common market—Fords in France, for example—explains why Mr Edelman's suggestion that Renault had been dumping cars in Britain has passed in a stony silence from the industry. Just about every car that is exported is dumped in the sense of being sold for less than its home market price; British firms are selling cars in France for over £100 below the home price. Mr Edelman could hardly have chosen a more embarrassing brick to drop.

CHRISTMAS SPENDING

Not Much Cheer

ONE cannot easily recall a postwar Christmas which the shops and stores have not proclaimed as their best ever; their omission to do so this year, and to fall back instead on modest comments such as "satisfactory" or "not as bad as we'd feared" suggests that the check to personal spending has not been broken by the Christmas spirit. This is suggested also by another tentative indicator, the note circulation. The issue of notes by the Bank of England rose by only £158 million between its end-October low point and its Christmas peak last Wednesday; the rise in the comparative period of 1960 was £170 million.

Withdrawals from "National" savings, it is true, have been notably higher than they were a year ago, but this has been true for many months, and is almost certainly a reflection of the switch to other more rewarding forms of savings rather than a fall in personal savings as a whole. Between the beginning of the fiscal year on April 1st and mid-December, net savings through savings certificates, defence bonds, premium bonds and the savings banks rose by only £28 million. This compares with £152 million in the same period of 1960 and £208 million in 1959, when savings certificates and defence bonds were yielding as much as they do now while rival media were yielding notably less. It is significant that the only sectors of National savings to show an improvement on the year are the post office and trustee savings banks, which are less affected by interest rate considerations.

THE EXCHANGES

Sterling Recovers

END-YEAR window dressing has continued to be the predominant influence in the exchange markets, but in the past week it has no longer worked against sterling: the earlier international shortage of dollars has given way to a temporary shortage of sterling. The tide changed at the end of last week and on Wednesday after the holiday sterling was in considerable demand. The rate rose by $\frac{3}{8}$ to $2.80\frac{1}{8}$, and the rise was apparently checked by the intake of a good quantity of dollars by the exchange control. No doubt it is glad to strengthen the December gold showing, which bears the burden of the end-year loan repayments to the United States and Canada. On Thursday sterling came on offer from New York, but business was small.

Money has been tight in all centres as banks and corporations dress up their balance sheets. Up to 7 per cent has been paid in Continental centres for loans in sterling over the turn of the year; this market in "Euro-sterling" is far smaller than that in Euro-dollars, and caters mainly for overseas concerns that lack the requisite "name" for direct borrowing in London, and also for straight overdrafts to non-residents, which are still forbidden in London. The United States dollar has been fairly steady over the past week. The Canadian dollar has remained at a discount of just over 4 cents, unaffected so far by rumours of the impending dismissal of the finance minister, Mr Fleming. Belgian francs eased slightly on Wednesday following the cut in Bank rate from $4\frac{1}{2}$ to $4\frac{1}{2}$ per cent—although this was smaller than had been expected.

The outflow of funds from Germany, which reached nearly 4 billion marks (one billion dollars) between mid-July and mid-November, now seems to have gone into reverse. For the week to December 15th the Bundesbank reported the third successive weekly rise in its reserves, to a total of DM 700 million. One special reinforcement for Germany's reserves in recent weeks has come from Britain's repayment of marks to the International Monetary Fund. But it now seems clear that market transactions have also turned in Germany's favour: United States investors, for example, are again buying German securities.

AIRPORTS

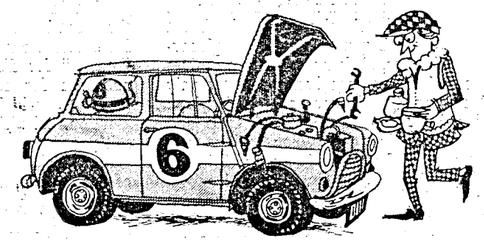
London Out of the Red

LONDON AIRPORT came within a whisker of breaking even last year, which would have seemed impossible a short while ago. It had a turnover in 1960-61 of £6 million which left it after payment of interest with a net loss of £80,401. This is tiny in comparison with a net loss of more than £1 million in the previous year. International airlines are immediately going to ask why, with results as good as these, it was necessary for the Ministry of Aviation to increase landing charges by a third in April, making London one of the most expensive airports in the world. The Ministry's reply will almost certainly be to point to the continuing deficits at the two other international airports, Gatwick and Prestwick. These three must be considered together, and when it hands them over to the control of the promised new airport authority, the Ministry intends to hand them over as going concerns without a subsidy.

Gatwick, which is properly an extension of London's Heathrow, is losing a steady £1 million a year. Such a relatively small volume of traffic goes through it that the airport's revenue of £422,000 is not even sufficient to meet its day-to-day running expenses of about £1 million, and the refusal of BEA and Air France to operate any more flights to the Continent from Gatwick illustrates the difficulty of attracting airlines down to Sussex, in spite of the rail link with Victoria. But the airlines would be the first to complain if they were not provided with an airport close to London for bad weather diversions, and Gatwick sagging under four jet-loads of passengers is said to be a sight worth seeing.

Prestwick's accounts are in a healthier

state ; its deficit last year was halved from £435,000 to £232,000, with income in rough balance with operating expenses, but inadequate to meet capital charges. Taking the three international airports together, they showed a net loss of £1.4 million at the old rate of landing charges (£181 for a big jet, less for smaller aircraft). Had the new scale of charges (£240 for a big jet) been in force during 1960-61, instead of coming into operation in April, the three international airports would still have shown a loss, but it would have been one of about £150,000. With more flights in and out of the country during the current year, these three airports as a group are probably paying their way now.



Losing Money in the Provinces

AIRPORTS in the provinces lost between them more than London, Gatwick and Prestwick together. They had a deficit of nearly £2 million last year, very little less than in the previous year despite the fact that the Ministry sold or closed four airports that had lost £700,000 in 1959-60. The day-to-day running expenses of 13 airports from Belfast to Land's End were 2¼ times greater than their receipts and the Ministry intends either to sell these to local authorities or, with one or two exceptions, to close them. By now it has either closed or sold Blackbushe, Croydon, Birmingham, Liverpool and Blackpool. The sale of Blackpool, on which the Ministry lost £124,000 last year, has just been completed after protracted negotiations ; and as some of the smallest remaining airports are losing nearly three times as much as Blackpool, local authorities are understandably hesitant to become responsible for them. Southend and Luton show that local airports can be run either at a profit or at a modest charge to the rates, but some other municipalities are finding it as hard to break even as the Ministry.

If it succeeds in disposing of ten of the remaining 12 provincial airports that it still owns, the Ministry of Aviation will then retain only the so-called "social service" airports, two serving the Scilly Isles and eight in the Scottish Islands. Between them these ten tiny airports lose £636,000 a year ; they will continue to be subsidised by the Treasury but will be managed in the future by an agent employed by the Ministry of Aviation. But the Ministry will still remain responsible, under the new arrangements, for air traffic control across the country which is costing £3 million a year and could in time and with new developments run as high as £7 million a year. The Ministry has announced that it intends to levy its own charges on the airlines to cover these *en route* services that it provides for them. This is likely to provoke protests compared with which this year's outcry over the higher landing charges will sound like a whisper.

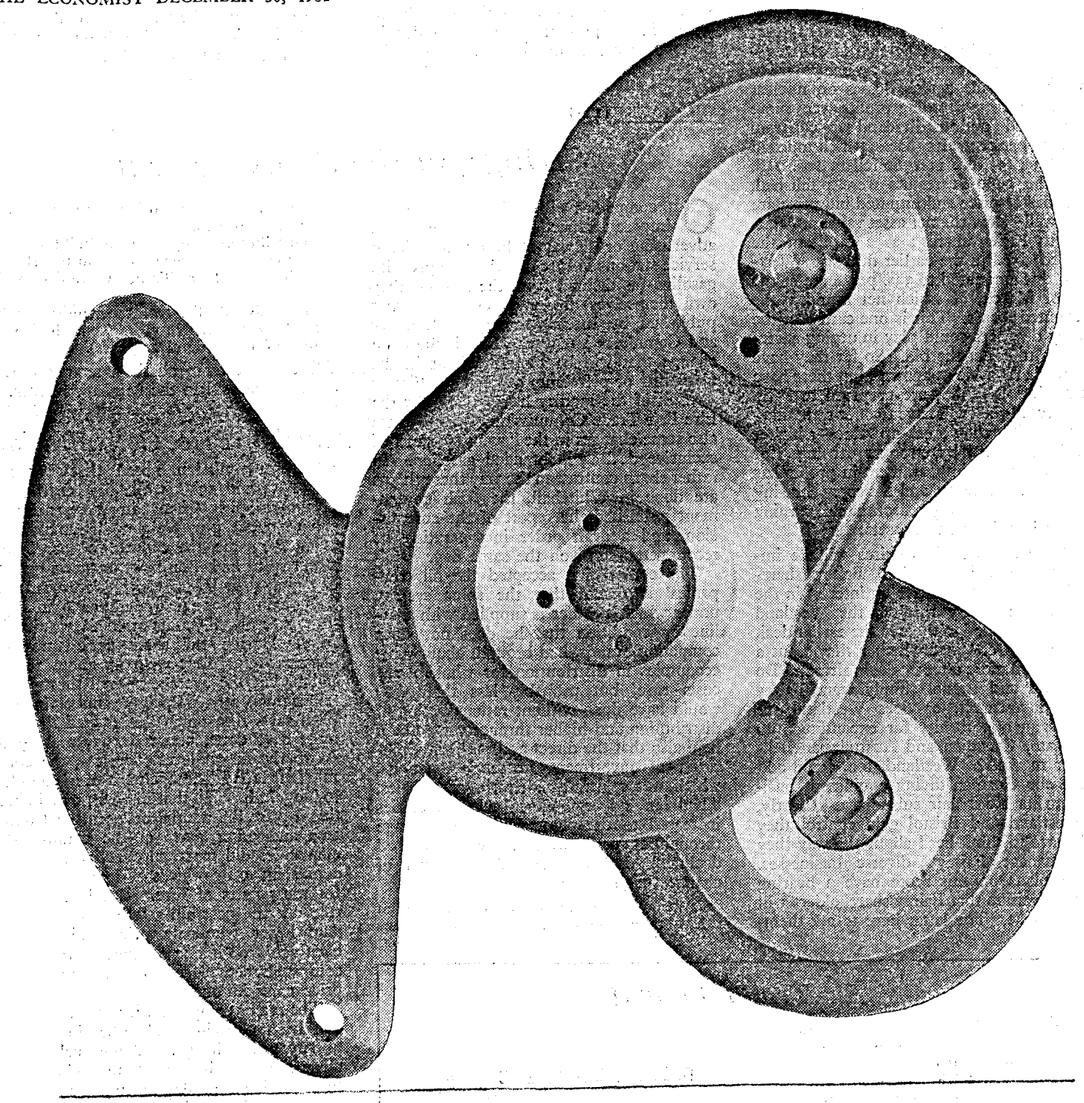
TUNING CARS

Keeping Ahead

MAKING popular cars go faster is a growing business today ; the International Racing Car Show, which opens in London on Saturday is largely devoted to this activity. Owning a Mini-Minor that can out-accelerate a Super Snipe seems to offer a special attraction to enthusiastic drivers. Enough of them want to enjoy this experience for the larger firms in this line of business, such as Alexander, Downton and Speedwell, to be selling several thousand "tuning kits" each a year. These kits typically comprise a modified cylinder head—which is exchanged for the standard unit—new inlet and exhaust manifolds, usually with two carburettors instead of one, and stronger valve springs so far as the engine is concerned, with fade-resisting brake linings and perhaps stiffer spring dampers or anti-roll bars for the chassis. Buying and fitting a kit like this for a small car will cost around £60, and it will give about a 50 per cent increase in power ; more ambitious conversions, which may double the power of the standard engine, will cost up to £200.

The Austin and Morris Coopers are one sign that manufacturers think that this is a big enough market to be worth their exploiting ; and the demand for these cars, which seems to have left the British Motor Corporation rather overwhelmed, shows how many more people want them than it thought. Ford and Standard-Triumph International are catering for this market, too, by offering their own tuning kits for the Anglia and Herald 1200. Ford provides only the carburettor, inlet manifold and camshaft for the Classic, for £23 this kit will give an extra 5 bhp ; S-TI's kit is the traditional type, with two carburettors, and costs £39 10s.—plus the fitting charge of perhaps £15—for 17 bhp more.

All this rival activity from the manufacturers might, one would expect, mean that the tuning specialists would find their business declining. But the reverse seems to be the case. By making special cylinder heads, of the kind that Speedwell has just introduced, they can offer more power. Many buyers of the Cooper twins want to make them even faster, which the tuning specialists are happy to do: one of their latest creations is the 100 mph Mini. Downton's version, recently tested by *The Autocar*, did 103 mph and showed acceleration comparable to that of a 3.4 litre Jaguar up to 70 mph. Demand for cars like this is as embarrassing as that for the standard version ; Alexander has had to stop taking orders for its kit on the Coopers. The appeal of the tuning kit seems to be in part that of the custom-built—or rather modified—car, as well as that of extra performance.



Two problems could check the growth of the tuning business: buyers might get worried about invalidating the maker's guarantee, and insurance companies might get fussier about the effects of making a car go faster on its liability to have accidents. So far the insurers seem unworried by this possibility, which may mean that statistics show no increase in the accident rate. But some insurance companies are, rather inconsistently, demanding higher premiums for the BMC Cooper twins—a penalty, perhaps, of using a racing car's name. The guarantee problem may hold back some buyers ; but Rootes and S-TI both approve of the Alexander conversions to their cars, so the guarantee is not invalidated. And Alexander, with some other firms, guarantees to replace any part that the maker will not.

FAIREY

Preparing to Fight?

AFTER Westland Aircraft bought Fairey's aircraft interests in this country for about £3 million in shares and cash in April, 1960, Fairey retained some interest in the aircraft industries in Australia, Canada and Belgium. But its principal efforts were directed towards the building-up of an engineering group in this country, and it must seem a little odd to the shareholders in all the companies concerned that Westland Aircraft and Bristol Aeroplane (which has a 10 per cent interest in Westland) should now make a bid for Fairey. In their joint bid, Westland and Bristol each offer two of their ordinaries for every three Fairey ordniary shares ; with Westland at 16s. 3d. and Bristol at 15s. 6d. the imputed value is 21s. 3d. for each Fairey ordinary share, compared with 17s. 9d. immediately before the bid and 14s. 9d. two days previously.

The gain in market values is obvious. So, too, is the prospective gain in income, for Fairey shareholders are effectively offered 13 per cent, compared with a 7½ per cent

crankshaft for a marine diesel engine — Krupp builds diesels up to 25000 hp

KRUPP

dividend for the year to March 31, 1961. This was not a happy year for Fairey: losses were incurred by the Belgian aircraft subsidiary and by Aeroplastics; a big provision had to be made against losses on nuclear power contracts; trading profits were more than halved; and the dividend was cut from 20 to 7½ per cent. Its shares, which touched a peak of 40s. 6d. in 1960 fell to 10s. 7½d. after the 1960-61 results were published. The market price and imputed bid price are both well below the net asset value attributable to Fairey shares; as a result of the cash received in the earlier deal with Westland, this amounted to 33s. per share at the end of March, of which net liquid assets accounted for 6s. This is one card that the Fairey directors could play in urging shareholders to reject the bid. So far they have not made their views known; but there have been hints that they are prepared to fight. To succeed they will have to offer something more tangible than break-up value—a higher dividend backed by stronger earnings, for example. Some improvement in profits has already been forecast and the sorry showing in 1960-61 can hardly reflect the full earning potential of the group's assets.

The arithmetic of promises will be important; but, in addition, Fairey shareholders, who already have an interest in the helicopter industry through the Westland shares distributed to them in the earlier deal, will have to consider whether they want a broader and more direct stake in aircraft. Do Westland and Bristol simply want Fairey as an investment, or does Westland see this as an opportunity for expanding into the Nato, Canadian and Australasian helicopter markets? Westland, too, could add the Siebe Gorman diving equipment business to its Normalair subsidiary. Clearly, if Westland and Bristol gain control they will have to think hard about the way they will manage Fairey's diverse businesses. Their plans on this score have a bearing on the decision that Fairey shareholders will have to take. The latter have to ask themselves whether they are satisfied with the group in its present form and under its present management or whether their interests would be better served by the piecemeal sale of its assets rather than the outright sale of the whole undertaking.

OIL MARKETING

Strings on the Solus System

Oil companies will no longer be able to impose restrictions upon the sale, advertising or display of lubricating oils at service stations in Eire that they supply with gasoline (as distinct from the stations they own themselves) under a new draft order published by Eire's Ministry of Industry and Commerce last week. This is the main change that will be brought about in the marketing of petroleum products in Eire as a result of the inquiry held in 1959 by the Eire Fair Trade Commission; but there are also some changes in the "solus system" of exclusive dealing in branded gasoline. In rather sharp contrast to the way these things are done in Whitehall, the Irish government published the report of the commission, and a draft order incorporating its recommendations, on the same day.

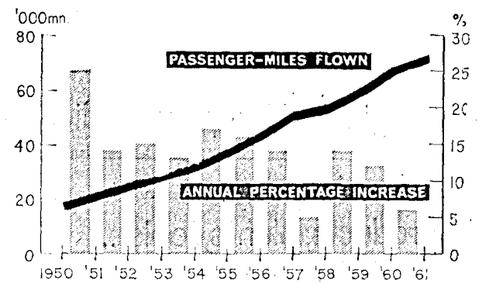
The commission accepted the oil companies' argument that the solus system, under which a dealer is supplied with gasoline on condition that he does not stock competing brands, had brought about some economies in distribution for wholesalers: costs rose, but probably less than they would have done without rationalisation of distribution and higher throughput. But it held also that the direct and indirect stimulation of investment in service stations, which was reintroduced during the fifties, "had an adverse effect when facilities increased to the point where the average throughput per outlet showed a marked decline." It recommended a number of changes in the system:

Advance payments of rebates or loans at less than commercial rates to stations newly accepting exclusive contracts should be discontinued.

Distributors proposing to build or buy stations or garage forecourts should notify the Fair Trade Commission in advance.

Exclusive dealing contracts must not be for longer than five years (some had been made for as long as 20 years).

All these recommendations among others are incorporated in the Ministry's order.



Curb on Price Consultation

The commission noted that between 1951 and 1958, while the landed cost of motor spirit (based on Western hemisphere prices plus freights) had remained about the same, the companies' margin on motor spirit had risen by twopence a gallon, changing their Irish financial fortunes from "a loss on motor spirit operations" in 1951 to "exceptionally favourable" results in 1958. During the same period dealers' margins on gasoline went up about 1½d. a gallon, but the average annual throughput fell significantly. Dealers' annual income from sales rose much less than their costs must have done, between 1951 and 1958. As to the actual level of prices, the commission found these almost too complex to judge. It noted that in 1960, by eliminating a price differential between the Dublin area and other parts of the country the companies did make an effective reduction equivalent to two-thirds of a penny a gallon for most parts of Eire. But it could not rule out the possibility "that at an earlier date lower wholesale prices might have been achieved if one or more of the major companies had placed greater emphasis on price competition."

The major companies, it reported, had in fact been notifying each other in advance of any price change, and not making the change until all agreed to follow suit. In tendering for sales to large commercial consumers they had used a common list of standard rebates and hence quoted identical prices. The commission noted the companies' arguments that competition in gasoline does "naturally" tend to bring about common prices between established suppliers, but did not offer a view on these. It simply concluded that "the present system of price competition between the petrol companies on price changes is a form of price regulation and a restraint on free competition in pricing"; that the use of a common schedule of rebates "unreasonably limits free and fair competition"; and that both should be prohibited. The order—which will have to be confirmed by the Dail—would so prohibit them.

Air Traffic in 1961

The idea of a slump in air traffic this year is scotched by estimates prepared by the International Civil Aviation Organisation of scheduled flights in all countries outside Russia and China. The volume of work, best measured by combining the number of passengers with the distance they flew, showed a steady rise, but—and here the airlines miscalculated—not so steep a one as in the past two years. Since the end of the war they have become geared to an annual rate of growth that has only twice before fallen below 12 per cent a year, once in the late 1940s and again three years ago. Sir William Hildred, director-general of the International Air Transport Association, reports that "the tempo of growth is picking up again" and passenger traffic should, in his view, grow by 9 or 10 per cent in 1962.

BANK PROFITS

Hire Purchase Impact

The approach of the bank dividend season has been marred by more bad news from the banks' hire purchase affiliates, which they bought so confidently in 1958. Mercantile Credit's reduced profits and dividend must have disappointed both the Westminster and Martins. Perhaps the worst news of all comes from Forward Trust, whose parent, the Midland, has had to dig into its pocket for £1.3 million to make good the deficiency in its subsidiary's accounts. The table shows the hire purchase interests of each bank.

In 1960, in terms of dividends received, Lloyds had the biggest stake in hire purchase, which provided 17 per cent of its disclosed profits. This year Lloyds' hire purchase income has been halved. All the banks except Barclays and the National Provincial have taken a cut in hire purchase income in 1961; North Central Finance, the wholly owned subsidiary of the National Provincial, has been in fact the only big hire purchase company to show increased profits this year. United Dominions Trust, in which Barclays has a 25 per cent interest, maintained its rate of dividend but paid it on a larger capital; its net profits fell by £500,000 to £1,116,000 in the year to June 30th. Martins and Westminster will be spared the effect of Mercantile Credit's setback in their 1961 accounts, since the lower dividend is not paid until January. The chairman of Mercantile, Sir Mark Turner, discloses that the company's troubles are not at an end. Even assuming that Mercantile manages to maintain its interim dividend next year, these two banks will each suffer a drop in hire purchase income from £93,000 to £56,000 in 1962.

The worst hit, however, seems to be the Midland Bank. In August, 1958, the bank decided to buy the then small Forward Trust and to develop it, rather than take a shareholding interest in a larger nation-wide company. Growth in the company's business has been spectacular—in the two years to October 31st, 1961, hire purchase balances outstanding have increased from £13 million to £49 million. But net profits have moved sharply the other way. After the first eighteen months they were £357,000, last year there was a loss of £30,000, and this year the Midland has had to contribute £1.3 million towards bad and doubtful debts. Finance for the hire purchase company's operations now comes entirely from public deposits, which in the last year increased by £24 million to £47 million. The Midland seems to have withdrawn its ordinary banking support, since Forward Trust's bank advances have fallen from £5 million to nothing.

HIRE PURCHASE PROFIT AND LOSS

Bank	Hire purchase interest: Company	Holding %	Banks' HP dividends 1960 £'000	Banks' HP dividends 1961 £'000	Banks' disclosed profits 1960 £'000
Barclays	United Dominions Trust	25	175	244	5,452
Lloyds	Bowmaker	25	187	132	4,606
	Lloyds and Scottish	50	597	183	
Midland	Forward Trust	100	Nil	Dr1,300*	4,501

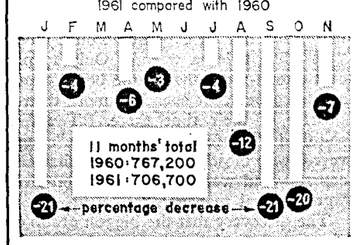
MACHINE TOOLS

The Age of the Population

Properly to comprehend a census which declares that 59 per cent of the machine tools in use in Britain are over ten years old, one would have to start with some rationally-derived notion of what proportion of them reasonably ought to be: and it is doubtful whether anyone in the country could put up a defensible figure. This is in no sense to write down the census that has been carried out over the past twelve months and is published this week by *Metalworking Production*, McGraw Hill's machine tool and engineering weekly, as a result of one of the recommendations of the Mitchell Committee on the machine tool industry in 1960; but merely to note that its findings, in total, are not easy to interpret. In detail, the figures have obvious usefulness. A company in any of 19 metalworking industrial groups that finds its assemblage of machine tools in general or in particular cases more senile than those of the average that this census shows for its group would be well advised to find out why, and soon; and it gives them figures broken down into 169 different types of machine.

One can do little more with the undifferentiated national totals than compare them with the size and age pattern of the machine tool "populations" of other countries. In 1958 the United States had about 2,900,000 machine tools in its factories, of which 62 per cent were at least ten years old, though a much smaller proportion of these than of Britain's 1,234,000 machines were over 20 years old. In Western Germany, which has probably slightly more machine tools in use than Britain has, about 55 per cent are 10 years old or older; in France and Italy, too, the proportion of old machines is probably slightly lower than in Britain. In Russia—which is said to have nearly 2½ million machine tools in use, coming second to the United States—it has been suggested that less than half of the metal-cutting machines may be "over-age" by this criterion and the Russians have officially declared an intention of making 60 per cent of them "under ten" by 1965. Its metal-forming machines, however, are old by comparison with the West.



One can think of dozens of reasons why the age pattern of machinery in use in different countries might reasonably vary. On the other hand, these are engineering nations with which Britain does need, currently, to compete in exporting. And the relative obsolescence of the machinery in operation in different countries—admitting that the degree of obsolescence involved in being ten years old will vary widely as between different kinds of machine—must be a factor of significance in competitive capacity.

How Industries Compare

Machine tool manufacturers will be able to draw heavily upon the many factual aspects of this census in selling their wares and even, no doubt, in arguing with the government for giving business further incentives to modernise its equipment. They will however have to become resigned to a *tu quoque*: for the metalworking machine tool industry itself does not rank particularly well in the "order of modernity" of different industries' equipment.

In this machining order, the makers of industrial engines, a little surprisingly, come first; only 41 per cent of their machines are over ten years old and only 11 per cent more than 20 years old. Aircraft manufacturing, which gets pretty considerable government assistance in the purchase of tools for

NEW CAR REGISTRATIONS

Registrations of new cars have remained virtually static throughout the autumn—47,000 in September and 43,000 in October and November—though they usually rise between September and October, and fall again in November. Last year they went on falling throughout the year until December as the backlog of orders disappeared under the effects of the hire purchase restrictions; this year there was little backlog, so the effects of the government's restrictive measures was felt sooner—but they do not seem to be cumulative.

extremes of up-to-date precision, comes high, as one would expect. So do "other electric goods," "domestic electrical appliances" and "scientific and surgical instruments" which resemble one another at least in having had a rapid increase in capacity of recent years. Motor vehicle manufacturing has 57 per cent of its machines ten years old or more, which is not much better than the average; and the machine tool industry itself has 63 per cent of its machines 10 years old or more and indeed nearly 30 per cent of them 20 years old or more.

Here again the comparisons are hard to judge, since they may arise from the rate of expansion in recent years, and the original size of the industry, more than from anything else. Throughout the survey, again, one is dealing with numbers of machine tools, regardless of capacity. In that any more modern machine, even of a given size, tends to be more productive, and that in many industries the proportion of big machines of high capacities is increasing, the proportion of any factory's productive capacity that is relatively modern will tend to be greater than the proportion of its total number of machines would suggest. However, it would be unsafe to assume that these factors favour Britain, or any given industry, much more than other countries or industries. The full McGraw Hill survey offers a huge assembly of data upon which more detailed analysis—and continuing surveys—need to be built; it has been a prerequisite of the broader market survey for machine tools upon which the organisation is now embarked. But its main immediate service should be to promote disquiet—not panic—about Britain's competitive circumstances in engineering, and discussion of what more can be done to improve this.

DIRECTORSHIPS

Pegging the Board

A SLIGHTLY overweight, middle-aged man, hardworking and with a tendency to be routine-bound; such is the unglamorous portrait of the average director. The Institute of Directors, which has published the results of a sample survey* of its members, stresses that the expense-account tycoon whose life is made up of business lunches and board meetings is a relative rarity. Typically, a director holds only one directorship (like 54 per cent of those who answered the questionnaire) and has an expense account lunch "less than twice a week." Only 17 per cent attend more than three boardrooms, a mere 9 per cent spending more than a quarter of their time there. The few so-called "professional directors" surveyed were mostly chairmen and financial experts—and were far less common than "professional managers."

The discovery that the biggest group of directors were between 45 and 54 years old and that 26 per cent of the men were under 35 is not perhaps as surprising as the report seems to think, especially as younger directors were more prominent in the small and medium sized firms (defined as those with an issued capital of under £1 million). It would have been far more interesting to know, in total and by size of firm, what parts family connections, individual enterprise, and promotion from the ranks played respectively in the attainment of boardroom status. The institute did ask such questions in the separate survey that it carried out among a small group of women members, mostly working directors. The results showed for instance that in medium-sized companies women directors owe their positions about equally to family connections and promotion; in smaller businesses, both marriage and association with the start of an enterprise play more important parts. Perhaps the institute considers a woman on the board a rare phenomenon whose presence needs explaining: but similar questions put to male members might have yielded answers of even greater social and economic interest. One also wishes it had been possible to find out something about directors' salaries and individual stakes in their companies.

Academic qualifications are of small relevance in the boardroom at present. Only 14 per cent of male directors—and still only 16 per cent of those under forty-four—had university degrees, engineering being far and away the most common subject. The postwar arts graduate has yet to make his mark in business leadership. The report rightly finds the "most disconcerting" revelation to be the lack of time spent by these key men on their own, thinking things out. Often a reluctance to delegate routine matters appears to shield a deeper reluctance to face broader issues. Too many chores, too short holidays, too little relaxation; the average director, poor man, is an average hack like the rest of us.

* Who's On the Board. 42 pp. Published by the Institute of Directors, price 3s.

SHORTER NOTES

Some changes have been made in the duties of the Leyland board. Mr F. B. Dixon, the only survivor of the old Standard-Triumph board, resigns as deputy managing director of that subsidiary, becoming chairman of Standard-Triumph (Liverpool). Mr Stanley Monkland, managing director of S-TI, will now devote almost all his time to this company; and his duties as works director of Leyland will be taken over by Sir Henry Spurrier.

★

The World Bank has made a loan equivalent to $19.5 million to the Indian Iron and Steel Company to assist in financing plans to increase coal production. The loan is for twelve years at 5¾ per cent per annum and it brings the bank's loans to India to a total of $799 million.

★

Of the placing of £5 million of the Watney Mann 6½ per cent redeemable debenture 1987-90 £1 million of the stock will be made available to the market at 97 to yield £6 14s. 9d. to the final redemption date. Dealings are expected to start next Wednesday.

★

The interim dividend of Fine Spinners and Doublers has been maintained at 5 per cent. The directors say this payment was fully earned in the half year's trading to end September but that present conditions and prospects are less satisfactory. They point particularly to the deterioration in trade in this country as a result of imports of a large volume of yarn and cloth from the Asian Commonwealth countries.

ARTHUR GUINNESS Son & Co. Ltd

Lord Iveagh on a notable trading achievement

The Annual General Meeting of Arthur Guinness Son & Company Ltd. will be held on January 16th, 1962 at Park Royal Brewery, London, N.W.10.

The following are the salient features of the circulated Review of the Chairman, The Earl of Iveagh, K.G., C.B., C.M.G.

Total Sales of Guinness have this year been the greatest in our history, but owing to considerable increases in our costs our profits this year are slightly lower.

Dividend: The Directors recommend a final dividend on the Ordinary capital of 14%, making a total distribution of 22% for the year ended 30th September 1961.

Capital Expenditure: Altogether in 1961 we have spent just short of £6 millions, mostly on modernisation and re-equipment of the Breweries. With our existing and anticipated commitments we may well spend as much on capital account in the current year as in 1961.

Exports: Our export sales have been nearly doubled in the past five years and have now reached an annual value of over £5 millions free of duty.

Harp Lager: Three major brewing groups (Courage Barclay & Simonds, Scottish & Newcastle Breweries, and Bass, Mitchells & Butlers) are our partners in the Harp Lager venture in Great Britain, and Harp is now available over the whole of the United Kingdom as well as the Republic of Ireland. It is being brewed under centralised technical control in three lager breweries and work is proceeding on the new brewery at Alton which will come into production in 1963. That Brewery will be owned by Guinness, Courage Barclay & Simonds, and Bass, Mitchells & Butlers. Harp is a true lager with a fine flavour and the welcome it has received justifies the high hopes we have formed.

Joint Activities in Ireland: Irish Ale Breweries, in which we have a two-thirds interest and Ind Coope one-third, is now producing and marketing a number of ales in Ireland, including 'Double Diamond' and 'Phoenix'. In conjunction with Showerings of Shepton Mallet, Irish Ale Breweries has purchased Bulmers of Clonmel and arrangements have been made to continue the manufacture and marketing in the Republic of the Bulmer range of ciders and perry and to manufacture 'Babycham'.

Nuttall Group: Sales and profits show a satisfactory increase over last year. In June we bought from J. Lyons & Company the main part of the Rolls Confectionery business: sales to date are encouraging.

Exports of the Group, which includes William Nuttall, Callard & Bowser, Riley's and Lavells, are expanding, particularly in the United States and Canada. Since we acquired the Group it has grown considerably both on the manufacturing and retail sides and turnover has increased in both sides by well over 500%.

Crookes Laboratories: Last year I referred to our entry into the field of manufacture of pharmaceutical and veterinary products by our acquisition of The Crookes Laboratories jointly with Messrs. Philips of Eindhoven. Since we acquired the Company, Crookes have devoted much attention to future plans including exports and I am sure that our 60% holding in this Company will be a profitable investment.

After reviewing other activities of the Group Lord Iveagh concluded: This year, as I have said, we have achieved a record in selling more Guinness than ever before. Though much of my statement has been concerned with reports of new ventures, the Board will never forget that the mainstay of our great company is the production and sale of Guinness Stout.

HANDLEY PAGE LTD.

The annual general meeting of Handley Page Ltd., was held on December 21st in London. The following are extracts from the circulated review by **Sir Frederick Handley Page.**

Our company has been successful in maintaining a high level of utilisation of its facilities. It has also diversified its interests in commercial activities within the scope of its design and constructional skills.

It has continued with its production of Victor bombers for the RAF. Still the world's largest military aircraft to have exceeded the speed of sound, they comprise an important part of Bomber Command's deterrent power.

We are fortunate in having an outstanding civil aeroplane, the Herald, when military demand has greatly slackened. There can be no doubt of this aircraft's fine quality. In a series of six see-it-in-action tours, two demonstrator Heralds have flown over 225,000 miles to more than 60 countries and have carried 15,850 passengers. Never, in tempest or flood, have they failed to prove themselves to be the most suitable aeroplanes for operation on the world's smart inter-city or rugged back-of-beyond air routes.

The HP 115 research aircraft—with the world's slenderest delta wing—made its successful maiden flight recently. This is the planform which is expected to be the most likely for future supersonic airliners. Research has been concerned also with cheap-to-operate laminar flow transports which can bring air travel within the orbit of the multitude.

Our trading surplus increased from £572,782 in 1959 to £1,051,369 in the year under review and the net profit before tax has increased to £253,363 from £159,917 in 1959.

J. BROCKHOUSE & CO.

The sixty-fourth annual general meeting of J. Brockhouse & Company Limited was held on December 21st at West Bromwich, **Mr J. L. Brockhouse, MA** (Chairman and Managing Director), presiding.

The following is an extract from the circulated statement:

On the occasion of the Seventy-fifth Anniversary of the Company I am able to report a record trading profit.

In 1936, fifty years after the establishment of the Company, the paid up capital and reserve funds amounted to £641,750, and the profit before taxation of £7,103 was £79,402. The comparable figures today are—Capital and Reserves £7,622,296, Profit before Taxation £1,297,390, Taxation being £641,225.

The Company is now in a stronger position than at any time during its history, and we can reasonably expect further improvements in its profitability and steady expansion during the next few years.

At the present time we do a certain amount of export of semi-finished goods, particularly on the Continent of Europe, and I am quite sure we can do more. We would therefore welcome the opportunity offered by membership of the Common Market.

We are still continuing to spend substantial sums on capital equipment, but we are able to finance these commitments out of our own resources, and we are now beginning to enjoy the benefits of this policy in an increasing measure.

The Report and Accounts were adopted.

THE PLESSEY COMPANY LIMITED

The 37th Annual General Meeting of The Plessey Company Limited was held on 28th December at Winchester House, Old Broad Street, London, E.C.2. The following is the statement of the Chairman, **Sir Allen Clark.**

CONTINUED EXPANSION • RECORD EXPORT YEAR STRONG FORWARD POSITION

Since the end of the financial year the merger with Automatic Telephone & Electric Co. Ltd. and Ericssons Telephones Ltd. has been effected, so that there has been a material change in our position since the date to which the Accounts were taken. However, I think it will be helpful to you if I begin my Review by dealing first with the year to 30th June, 1961, and then proceed to consider the merger and our prospects in future years.

The Consolidated Profit of the Company for the year was £4,049,794 in comparison with £4,300,884 for the year to 30th June, 1960. The fall in Profit was due to the effect of the credit squeeze which resulted in considerable dislocation of the Domestic Appliance and Television industries. Had it not been for this dislocation we would have made a Profit during the year considerably in excess of that for the preceding year. However, we must expect recessions from time to time, in one or other of the Industries in which we are concerned, and it is our endeavour whenever possible to balance our interests in these industries so that any recession in one of them is likely to be counter-balanced by increased activity in another.

During the year under review the Garrard Engineering & Manufacturing Co. Ltd. was acquired and is now a wholly owned subsidiary of our Company. Garrard should prove a profitable addition to our Group in future years, and it may interest you to know that since the acquisition, orders have been secured from the United States for over $2,000,000 worth of gramophone equipment —this apart from substantial Export orders secured from other parts of the world. The integration of Garrard into our Company structure has been accomplished speedily and smoothly and I am well satisfied with the progress which is being made.

Record Year in Export Field

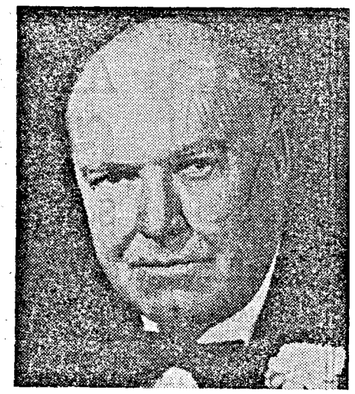
Mention must be made of Plessey International Limited whose turnover was the highest in that Company's history.

We commenced the year by holding an overseas agents' convention to which we invited some fifty of our agents and overseas representatives. All our factories were visited and details of new products and developments were explained by our technicians.

We have greatly expanded our design development and tooling activity aimed specifically at the export market, and we can confidently look forward to valuable export orders down the years as a direct result of this policy.

In the European Common Market area we have been particularly active, and during the year our office in the Netherlands has been moved to The Hague and trebled in size. This is now staffed by a team of specialist engineers who can give advice and assistance to our customers in their own factories anywhere in Europe, at short notice.

Substantial Increase in Productive Capacity



In our efforts to improve efficiency we often need to extend or to make considerable structural alterations to our factories, and in order to gain greater freedom in this direction we acquired the freehold of factories which we previously rented at Havant and Towcester. We also acquired the Romford factory of Regentone Products Ltd., which is now being completely re-equipped for the production of aircraft electrical equipment.

We have built an engineering laboratory at Eastern Avenue, Romford, which has been equipped for the testing and development of aircraft electrical generating systems. The facilities provided are adequate not only for the testing of systems now in production, but will also be adequate for dealing with any equipment in this field likely to be developed during the next decade.

In addition to the extensions to which I have referred above we have purchased a 67-acre site at Titchfield in Hampshire which was formerly occupied by the R.A.F. and the production of electronic components there has already commenced. As a result of all these moves the Company's productive floor space was substantially increased during the year.

Contribution to Computer Development

The part the Company is playing in the development of computers is an interesting example of the breadth of activity that has been achieved and the manner in which we like to operate. Materials and components which we have developed in one part of the organisation are being incorporated into a highly efficient range of memory systems—the very heart of a computer—developed in another part of the organisation and we anticipate that these memory systems together with many other of our products will be used by a large cross section of computer manufacturers. One of our systems is believed to be the fastest operating memory system of its size in the world.

Thus, although we do not ourselves make a complete computer, and because in consequence we do not compete with our own customers, we are still able to obtain an important share of the work involved in the overall building of computers in this country and overseas.

In these days of credit restriction, and bearing in mind our determination to expand our business aggressively, but only of course on sound foundations and in well reasoned directions, it is satisfactory to be able to report to you that the financial position of the Company is in good shape. At 30th June we held approximately £15,700,000 in cash and readily realisable investments, so that we are possessed of funds adequate to carry through the developments and extensions which we have envisaged.

Largest Unit in the Communications Industry

Since our last Annual General Meeting the most important change has undoubtedly been the merger between The Plessey Company, Automatic Telephone and Electric Company and Ericssons Telephones. Exploratory conversations and lengthy discussions having convinced all three companies of the benefits of amalgamating their businesses, agreement on terms was reached in August last. As you all know the merger has now been completed successfully. As a consequence, I am indeed pleased to say that Sir Harold Wernher, the Chairman of Ericssons and Mr. Alastair Roger, the Chairman of Automatic Telephone have joined the Plessey Board, and we look forward to many years of fruitful and successful co-operation. This merger is not reflected in the accounts now submitted to you since it was completed after the close of our financial year.

As a result of this merger the amalgamated companies are now the largest single unit in the communications industry in this country, and although size is not in itself everything, it is of very great advantage indeed in an organisation which must necessarily engage in a great deal of overseas business, and must necessarily operate on a fairly large scale if it is to be efficient.

It seemed to us all that as separate companies we were duplicating and sometimes triplicating effort and expense that could be co-ordinated and turned to better advantage if our businesses were combined. Although time and a great deal of hard work will be required before co-ordination results in the full benefits we anticipate, we are satisfied that ultimately profitability will be considerably enhanced, and will prove to be worth the substantial and sustained effort that will be necessary.

Another very important aspect of the merger is concerned with overseas production. You will have noted in recent years that The Plessey Company has been gradually building up its production capacity beyond these shores. This is a costly and difficult business and there can be no doubt that the enlarged Group is now in a much improved position to develop rapidly this trend. Your Company's great strength in the past has been its ability to produce efficiently and it is quite clear that in the years ahead we want to be as capable of doing this overseas as we are in Britain.

I would like to take this opportunity of mentioning that it has been the practice of Plessey in the past to charge against the Profits of each year the whole of the expenditure on Research and Development incurred during that year, whereas the practice of Automatic Telephone has been to strike a Profit before charging certain Research expenditure and to deal with such items "below the line" as an allocation of profit, by way of a transfer to a Reserve against which expenditure incurred was charged. During the last three years expenditure greatly exceeded the amount transferred to Reserve. I think it as well to mention this point now, since in future we shall be charging Research expenditure incurred by Automatic Telephone directly against the Profits of the year in which it is incurred, and it will be necessary to remember this in comparing the Profits shown in our later Consolidated Accounts with the separate results of the respective Companies before the merger.

Substantial Order Book

Turning to the current year all three Companies are busy, and hold substantial orders for future delivery, so that in the absence of any major change in the national situation I expect this desirable situation to continue at least for the rest of the year.

In certain directions, particularly in relation to the Television Industry, conditions show little improvement on those prevailing last year and it is hard to foretell when a change for the better will take place. However, Credit restriction has not had any material effect on many other parts of our now broadly based business and I see no reason to expect deterioration in such directions. Taking an overall view of our prospects for the year ahead I therefore believe that we are justified in viewing the future with reasoned confidence, while we are undoubtedly well placed to take full advantage of any improvement in the situation which may occur.

Finally, I would like to record our thanks for the hard work and enthusiasm on the part of our staff which has contributed so much towards the results achieved, and which has become so much part of the philosophy and tradition of our Group.

AGAR, CROSS & COMPANY, LIMITED

YEAR OF VARYING FORTUNES

The Fifty-fifth Annual General Meeting of Agar, Cross & Company, Limited was held on December 21st in London, **Mr Val C. Fisher, CA** (Chairman and Managing Director), presiding.

The following is a summary of his circulated statement:

The highlight of the year under review was the issue of £900,000 7½ per cent Convertible Loan Stock, 1975/85, at £100 per cent. The proceeds enabled us to finance the outstanding UK taxation liability, provide a modicum of working capital for our subsidiaries and effect a substantial remittance to our Argentine Organisation.

Parent Company's Profit and Loss Account: The year to June 30, 1961, was one of varying fortunes.

During the six months to the end of December, 1960, the trading outlook was bright and the prospects for the year appeared such as to justify a forecast which might match the results of the year to June 30, 1960.

At the end of December, however, Argentine credit restrictions, which had been in force for some time, were severely tightened and these, coupled with the almost complete failure of the wheat harvest, made it virtually impossible to sell except on increasingly long terms. Competition at the same time became much keener and in certain lines profit margins had to be drastically cut to effect sales.

In spite of these difficulties total sales for the year to June 30, 1961, were 22 per cent up on the previous year's record figure, but the gross profit on this substantially increased turnover was insufficient to compensate for the overall narrower profit margins, and the gross profit for the year was some 10 per cent lower than last year.

The trading profit of £800,177 is £368,151 down on last year's figure of £1,168,328.

The Argentine exchange rate remained steady during the year and, in fact, showed a small improvement at June 30, 1961, which resulted in an exchange credit of £13,277 (£25,562).

Smaller profits, a change in the mode of assessment and the elimination of the Emergency Tax, 1960, have reduced Argentine taxation by £303,080 from last year's £569,821 to this year's £266,741.

The amounts charged for United Kingdom Income Tax and Profits Tax are greater than last year since that year had the benefit of the carrying forward of earlier years' losses. Unilateral Relief is down since the Argentine taxation is down. The provision for UK Taxation is therefore £160,000 (£1,297).

The total of Argentine and UK taxation is £426,741 or £144,377 down.

Interest on the new issue of 7½ per cent Convertible Loan Stock, 1975/85, has been provided at £27,492 (nil).

Our partly-owned subsidiary in Argentina, Compania General de Asfaltos S.A. continued to make profits and paid the Parent Company a dividend of £9,595 (£11,360).

The subsidiary companies overall have produced a substantial loss and it has been decided to provide in the Parent Company's Accounts £45,000 in respect of this.

Profits, after taxation and the above provisions, are £314,221 compared with last year's £622,772, or a drop of £308,551.

Whilst I keenly regret this fall against our forecast, nevertheless, in spite of all our unpredictable difficulties, I think it is fair for me to remind you that the trading profit compares very favourably with the figure of £460,891 for the year to June, 1959, and £236,760 for the year before that.

Prospects: We estimate that in spite of increasingly keener competition we shall be able to maintain, if not better, last year's record sales but profit margins may again be lower.

Sales to the end of November, 1961, are higher than last year.

The report and accounts were adopted and a dividend of 12½ per cent was approved.

PONTIN'S LIMITED

The twenty-first annual general meeting of Pontin's Limited was held on December 21st in London, **Mr F. W. Pontin** (Chairman and Managing Director), presiding.

Mr Pontin said that he was pleased to report that the Group Profits before Tax amounted to £251,829 as compared with £170,582, an increase of 48 per cent.

Reviewing events, the Chairman referred to the acquisition of Middleton Tower Holiday Camp Limited, the Little Canada Holiday Village in the Isle of Wight, Jersey Jubilee Campers Limited, Squires Gate Blackpool Holiday Camp Limited and the Dolphin Holiday Camps (Devon) Limited.

Commenting on the Issue of 1,626,250 Ordinary Shares of 2s. each at a price of 6s. in February last, Mr Pontin said that the net proceeds had been used to finance considerable expansions of, and improvements to the Company's freehold properties.

Mr Pontin added: As a result of increased accommodation, your Company catered for more guests during the season recently ended than hitherto and your Board are confident that the trading results of the current year will again show an appreciable advance.

Your Board have a further programme of expansion to existing properties in hand, and at all times are seeking to expand the Company's activities by the acquisition of suitably established camps. As a result, your Board will shortly be seeking new Capital to further finance the development of the Company's business.

The report was adopted and the total dividend of 35 per cent was approved.

At a subsequent extraordinary general meeting the proposed increase in the authorised capital from £1,000,000 to £1,500,000 by the creation of 5,000,000 Ordinary shares of 2s. each was sanctioned.

Copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:

COMPANY AFFAIRS

Arthur Guinness

In the mid-fifties, Arthur Guinness's gross return on assets employed ran consistently around 26 per cent. In 1958-59 the rate came down to 23 per cent; it remained at this level in 1959-60, but it was again reduced to 21 per cent in 1960-61. For a brewery whose capital is locked up in productive capacity and not in tied outlets, such a trend is not alluring. With the coagulation of the brewing industry into massive trading rings, Arthur Guinness has had to fight harder to hold its share of the market. In 1960-61, when most of the other big brewers earned bigger profits, Guinness earned smaller profits because costs were rising. It was either unable or unwilling to pass on the cost increases and impose smaller margins on the brewers who bottle and stock Guinness stout. Depreciation was higher, as a result of heavy capital expenditure on metal casks and new plant; the promotion of "Harp" lager was expensive; additions were made to the sales force for "Harp" and draught container stout; wages went up; and advertising expenses rose. So gross profits fell from £8,207,000 to £7,989,000; net profits fell from £4,610,000 to £4,240,000; and the directors merely kept their earlier promise of a 22 per cent dividend.

Capital expenditure was heavy in 1960-61 at nearly £6 million, and Lord Iveagh says it will be as big in 1961-62. But as Guinness has liquid assets of £7 million and a retained cash flow of about £3 million, it need not come to the market for new money. Until the "Harp" lager venture makes money, however, the rate of return is likely to remain depressed. Much current capital expenditure is on lager, particularly at the Alton and Dundalk breweries.

There are several ways by which the directors hope to reverse the trend in returns. The company has modernised its casks; it has improved its plant; it is well versed in the research and development of continuous brewing; and it has made a big effort to secure a niche in the free trade for its container stout, served under pressure. Moreover, it is making increasing efforts to add to exports; it is already the biggest exporter of beer from the British Isles and in partnership with the United Africa Group it is building a brewery in Nigeria. In addition, it has sought to diversify its interests, notably into confectionery (where both sales and profits made a "satisfactory increase" in 1960-61) and more recently into pharmaceuticals. In time, some of the new ideas and new investments of this ably-managed company must pay off; but investors who can currently buy the stock at 50s. 6d. to yield 4½ per cent cannot expect a quick increase in the rate of return on capital employed.

Lancashire Steel

The disappointing 1961 steel profit and dividend season ended on a slightly brighter note, for the results for Lancashire Steel were better than expected. The group primarily makes wire rods for which demand has declined; it has also had to face the suspension of import duties on these products which has continued even after the shortage ended. Yet the fall of 11½ per cent in trading profits in the year to September 30th from £5,926,000 to £5,237,000 compares favourably with the results from other steel companies. Despite the installation of the new rod and bar mill at Irlam the depreciation charge has been raised by only £50,000 to £1,125,000. Investment allowances, however, have more than doubled from £205,000 to £475,000 and with their help earnings are only some 3.3 points lower at 40.3 per cent and cover the maintained 11 per cent dividend just over 3½ times.

These results may give a too favourable impression of the group's present trading experience for a year ago the chairman reported a reasonably good order book and continued full time working and it may be that the group was not so happily placed in the second half of the year. For the longer term, the group's current development plan is designed in part to increase the capacity for concrete reinforcement rods and light sections and thus make it less vulnerable to fluctuations in demand from its wire manufacturing customers. At 32s. 3d. the £1 shares are a little above their 1961 low and yield 6.8 per cent.

Lancashire Cotton

Lancashire Cotton publishes half-yearly figures and it is now clear that its profits fell away in the second half of the year to end-October. In recent months numerous warnings have come from Lancashire of the return to more difficult trading conditions in the cotton industry. In the half-year to end-April, profits before tax and depreciation rose to £2,122,000 compared with £1,947,000 in the corresponding period in 1959-60; in the full year, profits fell by 10 per cent from £4,188,000 to £3,775,000. After a slightly higher depreciation charge and a lower tax charge, net profits fell from £1,886,000 to £1,691,000, which covers the maintained 25 per cent dividend 1.3 times.

If profits in the current year do not rise above the level of the last six months, the present dividend might not be fully covered by earnings. This none too bright prospect is reflected in the yield of 10.7 per cent on the £1 shares which have fallen by 4s. 3d. to 46s. 9d. since the results.

London Stock Exchange

FIRST DEALINGS:	Nov. 27	Dec. 11	Dec. 29
LAST DEALINGS:	Dec. 8	Dec. 28	Jan. 12
ACCOUNT DAY:	Dec. 19	Jan. 9	Jan. 23

On both sides of the Christmas holiday there has been a firm undertone to stock markets although business has been extremely quiet as is usual at this time of the year. Sentiment was barely affected before the weekend by "the hammering" of a firm of stockbrokers but a large volume of business in both Courtaulds and Imperial Chemical Industries and continued selling of Unilever to American investors has brought in its turn a reinvestment demand for other equities. After the holiday the sustained rally on Wall Street has assisted markets to keep their firm tone. Over the week to Wednesday *The Economist* indicator rose by 2.5 points to 359.2. The gilt-edged market has remained very quiet and the few changes in prices have been limited to ⅛ either way.

With the usual falling away in company news attention has been focused on a further bout of take-over bids and mergers or rumours of them. In the latter category Cunard was prominent with a gain of 1s. 9d. to 17s. Rumours linked Cunard with Mr Clore—the Furness Shipbuilding Company is in the Sears Holdings group—British and Commonwealth Shipping and Peninsular and Oriental Steam Navigation and B and C shares gained 1s. to 29s. 6d. while P and O gained 1s. 3d. to 29s. 4½d. Second Covent Garden's deal with Zeckendorf Property had little effect on the shares which closed unchanged at 35s. 3d. Handley Page lost 1s. to 11s. 10½d. following the statement at the annual meeting that no satisfactory offer had been received.

Elsewhere bank shares have been steady in front of the dividend season which starts next week, while after the better than expected results from Lancashire Steel most steel shares showed small gains with United Steel 1s. 1½d. up at 39s. 9d., and Lancashire Steel up 7½d. to 31s. 10½d. The latest results from the cotton industry sent leading shares lower with Lancashire Cotton losing 3s. to 48s. following its results, and Fine Spinners 4½d. to 22s. 4½d. on its disappointing interim statement. Among store shares Woolworth gained 1s. 7½d. to 52s. 6d.; its results are due in about three weeks. Montague Burton came in for some profit taking and the ordinary shares lost 2s. 9d. to 104s. 3d., and the "A" shares 3s. 1½d. to 94s. 1½d.

Oil shares provided some interest on Wednesday with British Petroleum losing ground on the uncertain news from Kuwait and over the week the shares lost 1s. 3d. to 33s. 3d. Lobitos closed at a new low of 14s., a fall of 1s. 9d. on the news of increased Peruvian taxes. Shell Transport was a firm market ahead of the split into 5s. units and over the week was unchanged at 120s. 6d. Castrol gained 1s. 3d. to 41s. 3d. reflecting the increase in motor oil prices.

Money and Exchanges

EXCHEQUER RETURNS

For the week ended December 16, 1961, there was an "above-line" deficit (after allowing for sinking funds) of £62,872,000 compared with a deficit of £2,072,000 in the previous week and a deficit of £39,174,000 in the corresponding period of last year. There was a net expenditure "below-line" of £7,845,000 leaving a total cumulative deficit to date of £883,995,000 compared with £908,524,000 in 1960-61.

THE MONEY MARKET

After the fairly rough handling the discount market has recently received from the authorities, it was little surprise when, at the Treasury bill tender on the Friday before Christmas, the syndicate of discount houses lowered its bid for the £210 million of 91-day bills on offer by 3d. to £98 13s. 2d. The move was well timed. Total applications were sharply down by £55 million to £314 million and the market actually increased its allotment to 52 per cent compared to 37 per cent on its higher bid in the previous week. The average rate of discount rose by 10.35d. to £5 7s. 3.18d. per cent. The market's allotment of 63-day bills was 73 per cent.

Credit became progressively easier on the three working days before Christmas. On Friday the authorities sold a small number of bills to absorb the surplus credit and on Saturday the rate for day-to-day loans opened at the clearing banks' minimum of 4½ per cent. When the market reopened on Wednesday, with four working days to the end of the year, credit was very short. Five or six houses were forced to borrow a fairly large amount from the Bank at the penal rate despite the authorities' large special purchase of bills.

(1) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (4) In general, males under 21 and females under 18 years of age. (5) Surveys made twice a year; annual figures relate to October survey. (6) Index revised and rebased on 1958=100 (see *The Economist*, January 7, 1961, page 59). (7) Revised series. (8) Revised series: 1958 and 1959 figures on the old basis of 1952=100 have been linked to 1960=100 by multiplying by 1·348. (9) April.

APPOINTMENTS

MARKET STATISTICS

A vacancy has arisen for a Statistical Officer in the Market Research department of a leading company concerned with the production of Castings, Forgings, Rolled and Extruded Products in aluminium.

The successful candidate will be a graduate in either economics or commerce or have equivalent qualifications, and will be between 27 and 32 years of age. He will have a specialised knowledge of statistical analysis, and some years' experience in the market research field. Above all he must have initiative, and the ability to provide statistical information in logical and understandable patterns.

The position will be based in South Bucks and will carry a starting salary of around £1,200 per year. The prospects for advancement are very good indeed for a man of the right calibre.

Applications, which should give full details of qualifications and experience, will be treated in the strictest confidence, and should be sent to Box 1576.

OPENING for intelligent and eager young man with good knowledge of economics in small old-established international business concern (City), engaged in commodities, as assistant to Managing Director. Starting salary £900 to £1,000 with good prospects for improvement.—Some commercial experience of advantage.—Detailed applications to Box 1578.

Esso

CO-ORDINATION AND ECONOMICS DEPARTMENT

Is looking for a young assistant—an economics graduate not more than 25 with a 1st or upper 2nd. He is to help in work on general business trends, energy studies and petroleum economics. For the right man this would be an excellent starting point in our business and there would be early opportunities to branch out into other fields of activity in a range of company departments. Write giving brief initial details to: Head of Recruitment, (Reference 394), Esso Petroleum Company, Limited, 16 Charles II Street, London, S.W.1

UNIVERSITY OF ABERDEEN

DEPARTMENT OF POLITICAL ECONOMY

Applications are invited for the post of LECTURER (in ECONOMICS).

Salary on scale £1,050 — £1,850 with F.S.S.U. child allowance and removal allowance. Placing according to qualifications and experience.

Further particulars may be obtained from The Secretary, The University, Aberdeen, with whom applications (eight copies) should be lodged not later than January 19, 1962.

FOURAH BAY COLLEGE

THE UNIVERSITY COLLEGE OF SIERRA LEONE

Applications are invited for the posts of (A) Senior Lecturer and (B) Lecturer in Economics. Salary scales: (A) £1,700 x £75 — £2,150 p.a.; (B) £965 x £50 — £1,415 x £75 — £1,790 p.a. Negotiations in progress for salary revision. F.S.S.U. Outfit and family allowances (maximum £300). Passages for appointee and family on appointment, annual leave and normal termination. Part-furnished accommodation at reasonable rent.—Detailed applications (six copies), naming three referees, by January 31, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars can be obtained. The Dean of the Faculty of Economic Studies, Professor J. H. Davies, will also answer direct enquiries.

UNIVERSITY COLLEGE IBADAN, NIGERIA

Applications are invited for following posts in Department of Extra-Mural Studies for work in Western Nigeria: (a) Tutor or Assistant Tutor in Social Anthropology *and* (b) Tutor or Assistant Tutor in English, History, Economics or Political Science. Appointments to commence as soon as possible. Salary scales: Tutor £1,200 x £75 — £1,650 (1st); £1,725 x £75 — £2,175 p.a. Assistant Tutor £950 x £50 — £1,100 p.a. (or if over 28 or holding a higher degree £1,050 x £50 — £1,150 p.a.). Passages paid for appointee, wife and up to five children under 11 years on appointment, overseas leave and termination. Part-furnished accommodation at rent not exceeding 7.7 per cent. of salary. Children's car and outfit allowances. Basic tour 15-18 months. F.S.S.U.—Detailed applications (six copies), naming three referees, by January 20, 1962, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

At A.D.L., INDUSTRIAL OPERATIONS RESEARCH began in 1949

Arthur D. Little, Inc., has pioneered in research areas of interest to industry since 1886. Today, ADL has a staff of 1,400 and is one of the world's oldest, most versatile consulting research organisations.

Within this framework, the work of all staff members—including that of the O.R. group—is oriented toward exceptionally high professional standards with an optimum of independence.

The O.R. activities at ADL allow uncommon freedom for the professional to pursue his own interests and to establish his own success through his own efforts.

ADL is now developing a British Operations Research Staff. If you have advanced training in the physical sciences, mathematics, mathematically-oriented engineering or peripheral areas; are versatile, able to assume increasing responsibilities and have an interest in working with the top level managements of large corporations, send a brief description of your education and experience to

Donald E. Sweet,
Manager Staff Employment.

Successful applicants will spend approximately a year in Cambridge, Massachusetts, before returning to a permanent assignment in England.

ARTHUR D. LITTLE, INC.
35 Acorn Park, Cambridge, Massachusetts.

'An Equal Opportunity Employer'

UNIVERSITY OF BIRMINGHAM

FACULTY OF COMMERCE AND SOCIAL SCIENCE

RESEARCH ASSISTANT. Applications are invited from graduates for work in the fields of economics and commerce. Some knowledge of statistics or mathematics desirable. The appointment may be full-time or part-time and the salary will be according to qualifications and experience within the range £425 to £675.

Applications, with the names of not more than two referees, to the Clerk to the Faculty of Commerce and Social Science, the University, Birmingham 15, from whom further particulars may be obtained.

BBC REQUIRES two Current Affairs Talks Producers (Sound). Post (a) will be a member of "Ten O'Clock" Editorial Group and will share responsibility for initiating and producing commentaries, interviews, discussions, etc., for "Ten O'Clock" and for the weekly Current Affairs series in Home Service, also for "Tonight's Topic" in Light Programme. Good education essential and journalistic experience a great advantage since the work is associated with the news of the day and successful candidate will often work with BBC News Departments. Special knowledge of a relevant subject an asset and successful candidate will be expected to handle technical programme making facilities at high speed. Late evening work not more than twice a week. Post (b) will have regular responsibility for providing "Woman's Hour" and "Today" with items of current affairs interest, talks, interviews and discussions. Will also have the opportunity to put forward ideas and produce programmes in the current affairs field for other outlets. Good education and wide interest in events and their background essential and some journalistic experience desirable. Salary (both posts) £1,380 (possibly higher if qualifications exceptional) rising by five annual increments to £1,780 max. p.a.—Requests for application forms (enclosing addressed envelope and quoting reference 61.G.574 Ect.) should reach Appointments Officer, Broadcasting House, London, W.1, within five days. Please indicate post applied for.

THE UNIVERSITY OF MANCHESTER

SIMON FELLOWSHIPS

The University offers a number of Simon Fellowships for advanced study or research in the social sciences. This term is used in a wide sense to include not only Economics, Government, Sociology, Economic and Social Statistics, etc., but equally fields such as the Organisation of Business, Education, Jurisprudence and Social Medicine. Values within the range of £1,150-£2,050 per annum (Simon Research Fellowships) or within the range of £2,150-£2,550 per annum (Simon Senior Research Fellowships), according to qualifications and experience. They are open to members of the public services as well as to persons with academic experience. Applications should be sent, by January 15, 1962, to the Registrar, the University, Manchester 13, from whom further particulars may be obtained, and who will be pleased to answer any enquiries regarding the scope of the Fellowships.

GROWTH OF A NATION IN A SERIES ... No. 10

EVEN THE "SHACHO" CAN RELAX...

In the gay tempo engendered by a booming prosperity, the Japanese "Shacho" has no difficulty in finding pleasure. We're proud of him, and of his achievements—though we must claim some of the credit for his success, too! For the Nippon Kangyo Bank plays an important part in his life. He wanted suggestions for improving his business, information on advanced equipment and on current export regulations, and how to improve foreign trade. Naturally, since he is fully aware of the implications behind the word "Kangyo"—which literally means "industrial and commercial promotion" he turned to the Nippon Kangyo Bank for his needs. Yes, the "Shacho" fully deserves his day off...and our hats are off to him!
