7 HARE STREET, CALCUTTA 1
Also at BOMBAY · DELHI · MADRAS

United Kingdom was practically inactive due to the intervention of Whitsun holidays. Only stray business in grey calendared sheetings was done with that destination. Singapore accounted for a small quantum of popular varieties. West Africa focussed its attention on turkish towels and bleached longcloth. Indonesia showed some interest in sheetings.

France exhibited some interest in cotton prints. Yugoslavia inquired for grey cotton cloth, cotton velveteen, sateen and poplin for coats and shirts. Saudi Arabia showed some fancy in different types of cotton textiles.

* Accumulation of Sugar

THE biggest problem for the sugar mills this season is the accumulation of stocks, which are reported to have gone up to about 2,200,000 tons. This is a record figure representing about 70 per cent of this season's production. Although margin restrictions on scheduled banks' advances against sugar have been withdrawn, the banks have been reluctant to lend more money to the sugar trade and industry. The removal of margin restrictions has, thus, not helped sugar interests.

Again, the export outlook for the commodity continues to be uncertain. The industry is anxious to sell sugar abroad; but is not prepared to bear all the losses. Reports from Delhi indicate that many mills are anxious sellers of their production and some of them may resort to sales below the fixed rates in the event of liberal releases.

According to certain circles, the accumulation of sugar, which has placed the industry in an embarrassing position during the current season, will not only continue to exist in the next five years; but actually increase in size. Consumption of sugar and gur, which is estimated at 7,200,000 tons, is likely to go up to 9,800,000 tons by 1965-66. On a rough estimate, the consumption requirements of sugar and gur in the last year of the Third Plan may be placed around 2,765,000 tons and 6,835,000 tons respectively.

The target for sugar and gur production, at the end of the Third Plan has been fixed at 3,500,000 million tons and 6,500,000 tons respectively. Thus, consumption of sugar will lag behind production by about 735,000 tons, while that of gur will exceed its production by about 335,000 tons. Even if this anomaly of surplus sugar and shortage of gur is avoided by a large shift in favour of sugar among consumers of gur, there will still be a surplus of about 400,000 tons of sugar over and above the internal consumption requirements. In addition to this, there will be a huge stock of surplus carry-forward during each year of the Third Plan. The current season is expected to end with an unmanageable stock of nearly 1,500,000 tons of sugar.

For obvious reasons, conditions in the sugar markets have continued to remain quiet. In the Muzaffarnagar market, the rate is quoted at Rs 100 to Rs 102 per bag.

CHEMICALS & DYES

After being dull for a month, the Bombay market for Chemicals and Dyes showed signs of activity. With the monsoon not far off, there was anxiety on the part of consumers and the upcountry dealers to replenish their stocks. With the result, turnover was slightly better and prices were generally steady to firm.

Among Chemicals, ronalite was in the limelight. The German quality advanced to Rs 3.4 and others to Rs 2.15. The sharp rise was attributed to the paucity of stocks and the bleak prospects of any appreciable improvement in supplies in the near future. While there was good demand from the textile mills, stockists were not keen on selling.

Dyes generally lacked support with the exception of a few popular items. Vat dyes attracted attention due to the paucity of stocks. In scarlet RC, the German quality was on offer at Rs 10.12 and the Japanese around Rs 10.

* YARN

The Yarn market in Bombay presented a firm front as a result of renewed enquiries from uncountry centres. The fixation of prices of Staple-Fibre yarn by the Indian Cotton Mills' Federation did not ease the situation. On the other hand, prices looked up. Reports were current that many mills were even reluctant to sell their production of 2/40 at fixed rates.

Many weavers were trying to switch over from imported costly rayon yarns to Nylon yarns. Consequently, prices of Nylon yarns, particularly of Amilon, went up by a rupee per pound.

Imported Rayon yarns of 60s, 25s and 40s, however, presented easy conditions due to poor demand and ample stocks. The 40 JP ready dropped further from Rs 13.19 to Rs 12.91 and 60 Cupressa from Rs 11.95 to Rs 11.34.

Listless conditions prevailed in the Cotton Yarn section and price movements were restricted. The normal activity is expected to be resumed in about a week.

* RUBBER

Rubber prices in Ceylon have increased by about 15 cents per pound during the last two months. The best sheet was marked at Rs 1.15 at last week's auction. A spokesman of the rubber trade has given the reason for this increase as increased tension in two world trouble spots—Laos and Cuba. American purchase of rubber against a possible inflation is believed to be another factor for the upward trend of rubber prices.

At the beginning of March, the price of RSS 1, the best sheet rubber, stood around 97 cents per pound. Throughout March, fighting in Laos led to a tense situation among the big powers of the world and rubber, one of the strategic raw materials, started gradually rising in price. By the end of the month, the price was around Rs 1.07.

April saw trouble in Cuba and then the "invasion", which maintained the higher demand and daily increased the prices to the present level.

CASHEW

According to the figures released by Cashew Export Promotion Council, India's exports of cashew kernels went up by over 2,000,000 pounds during 1960 as compared to the previous year. Exports from India amounted to 86,940,500 pounds as against 84,154,450 pounds in 1959. The total value earned by these exports also increased correspondingly from Rs 15.18 crores to Rs 18.47 crores.

The USA, the USSR, UK, West Germany, East Germany, Australia, Canada, Japan, Netherlands, New Zealand, Belgium, Sweden and Singapore are some of the countries which imported Indian cashew kernels in large quantities.

* NON-FERROUS METALS

Mixed conditions were noted in the Bombay Non-Ferrous Metal market. Copper conductors, after being marked down to Rs 298 in the absence of any interest, moved up to Rs 302. On the other hand, Brass sheets, ruled weak with Kamanis offered at Rs 570. Zinc was nominally quoted at Rs 301 though small lots changed hands around Rs 305. The Lead section continued to remain steady with the rate quoted around Rs 144. Tin was once again in the limelight due to dearth of supplies, while the steady tone at Singapore also aided sentiment. The rate was marked up to Rs 148.

On the London Metal Exchange, the price of Copper is moving around £240 a ton. The demand for the metal is improving as some producers appear to be altering their ideas about what is a reasonable price for the metal. Copper producers, who are currently working about 10 per cent below capacity, have come in for criticism, because of their failure to step up their output. Some people have suggested that they are deliberately trying to force the price upward.

Tin has remained around £870 a ton—£90 dearer than earlier this year. The International Tin Council has been meeting in London to consider whether to take in view of the severe shortage of the metal.

* BANGALORE SILK

The Bangalore Silk market maintained a steady trend in the prices of flature and cottage basin raw silk during the week ended 26 May. The prices for flature raw silk 20/22dr continued to be quoted between Rs 80.43 and Rs 83.23 per kgm and those of cottage basin raw silk ruled between Rs 72.75 and Rs 77.16 per kgm as in the last week. No change was noticed in the prices of charka raw silk either and the rates were quoted between Rs 52.91 and Rs 71.10 per kgm. There was moderate demand for all qualities of raw silk.

Rates of reeling cocoons maintained steady levels, being quoted between Rs 3.45 and Rs 4.60 in Mugur area, between Rs 3.80 and Rs 5.00 in Channapatna area and between Rs 4.95 and Rs 5.50 per kgm in Siddlaghatta area.

Rates of Mysore race seed cocoons gained by about Rs 6.00 and ruled between Rs 13.00 and Rs 18.00 per

1000, while Foreign race seed cocoons showed a downward trend and the rates were quoted between Rs 5.00 and Rs 14.00 as against Rs 8.00 and Rs 20.00 per 1000 quoted last week.

* GOLD & SILVER

Prices on the Bombay Bullion Exchange showed mixed trend. While the Gold section presented a steady front, prices in the Silver section moved down slightly due to poor demand. A prominent bear operator covered 50 kgs in the maturing contract in gold. This imparted steadiness to the market. Spot houses were sellers due to lower advices. The backwardation charge declined from Rs 1.25 to 90 nP owing to increased selling by ready interests. Nevertheless, sentiment remained at the close. Gold receipts totalled 7,000 tolas as compared to an offtake of only 3,000 tolas. Ready rates moved between Rs 118.45 and Rs 118.65, while sovereign ruled quiet at Rs 94.25.

Silver had nothing to report. There was some buying against "cut" at Indore. In the ready section, arrivals were good; but demand also improved from Madras, which arrested a decline in prices. Arrivals amounted to 30 bars against an offtake of 13 bars. Silver (below .996) changed hands at Rs 198.65 to Rs 198.75.

* OILS & OILSEEDS

Conditions on the Bombay Oilseeds Exchange remained generally quiet. Castor was further depressed and the decline in prices was attributed to general apathy to buy and scattered realising by bulls. Lack of activity in the Oil section also accentuated the decline in prices. In the Oil section, the rate for the Commercial quality moved down further lower by 10 nP. While UK bids in commercial and BSS qualities were reported around £126 and £133 per ton net, sellers generally quoted £127 and £135 respectively. Reports emanating from the UK, however, indicated that stocks of castor oil there were very low. Continent was reported hardly having 1,500 tons of oil. The outlook for the near position was, therefore, considered to be encouraging. Ready castor was quoted at Rs 35.62 and Castor Oil, commercial quality, at Rs 14.85.

Although millers as well as paint manufacturers kept quiet, Linseed attracted support from Calcutta operators. The general improvement in prices was also attributed to the absence of sizable tenders against the maturing contract. Linseed ready was quoted at Rs 37 and Linseed Oil at Rs 15.90. The rate for Linseed Oilcake advanced to Rs 315 per metric ton, presumably on buying by the Communist countries.

In the Groundnut section, trading was rather quiet due to lack of fresh support. Ready Bold was quoted at Rs 53.75 and Groundnut Oil at Rs 21.95.

In the Calcutta market, the price of Linseed has hardened further to Rs 26.75 a maund for ready delivery on reports of a decline in arrivals. The price of oil has also increased; but business is limited. Crushers are not interested in doing much forward business as supplies of oilseeds have become uncertain.

Company Reports

Dharamsi to Pay Bonus

THE Dharamsi Morarji Chemical Company, Limited has proposed to issue bonus shares in the ratio of four equity shares for every 10 shares held, subject to the sanction of the Government, by capitalising Rs 9,09,500 out of the General Reserve No. 1. The company's expansion plans have created a need for large financial resources. The directors are of the opinion that the profits of the company should be ploughed back to meet the demand for additional finance, at least to some extent. Hence, the dividend has been passed over for 1960.

Meanwhile, the company's gross profit has gone up by Rs 5.24 lakhs to Rs 38.15 lakhs. Sales have increased from Rs 1.27 crores to Rs 1.64 crores. After providing Rs 3.06 lakhs for managing agents' remuneration (Rs 2.91 lakhs) Rs 6.27 lakhs for Depreciation (Rs 3.71 lakhs); Rs 12 lakhs for Taxation (Rs 8.40 lakhs) and Rs 79,000 for Development Rebate Reserve (Rs 4.93 lakhs), the net profit amounts to Rs 16.03 lakhs against Rs 12.96 lakhs.

The company has been granted two licences—one for the setting up of a 300-ton per day contract sulphuric acid plant and the other for a 100-ton per day alumina sulphate plant, both in the main factory at Ambarnath. Arrangements have been made to obtain a loan equivalent to \$400,000 in foreign currencies from a private party in the USA. Steps are now being taken to start work on both these projects as early as possible. The estimated capital outlay on these two projects is Rs 65 lakhs.

* Alembic Chemical Reports Higher Profits

The working of the Alembic Chemical Works Company Limited for 1960 has resulted in a profit of Rs 13.74 lakhs as against Rs 12.83 lakhs in the preceding year, after providing Rs 7.15 lakhs for Development Rebate (Rs 5.80 lakhs); Rs 3.12 lakhs for managing agents' Commission (Rs 3.23 lakhs) and Rs 10.20 lakhs for Taxation (Rs 10.50 lakhs). The directors have proposed a dividend of Rs 14 per share, subject to tax, on 85,000 equity shares. The company declared a dividend of Rs 16 per share (taxable) in respect of 65,000 old ordinary shares and Rs 2 per share (taxable) in respect of 20,000 new ordinary shares for the previous year.

Sales have gone up from Rs 2.48 crores to Rs 2.61 crores. The directors state that the results of the expansion carried out during 1960 are expected to be fully reflected in the working during the current year. The expansion programme for the current year includes further ex-

pansion of the penicillin, yeast and superphosphate plants. Orders for capital goods will be placed after necessary foreign exchange is available.

* Expansion Plans of Amar Dye-Chem

Amar Dye-Chem Limited has fresh expansion plans on hand. The required foreign exchange has been obtained for purchasing a TPM plant. A licence for manufacturing 250 tons of reactive dyes and 260 tons of pigments has also been received. Besides, it is proposed to produce intermediates. The company will, after the completion of its new scheme, be independent of imported raw materials. This project will cost Rs 2.5 crores.

On account of increasing competition from imported products and the difficulty in securing raw materials, it was not possible for the company to report a large rise in sales for 1960. Nevertheless, production is maintained at a satisfactory level and the turnover is also slightly better at Rs 1.76 crores against Rs 1.72 crores. The net profit, before providing for Depreciation and Taxation, is higher at Rs 62.10 lakhs as against Rs 58.80 lakhs for 1959.

The charge on account of Depreciation is Rs 7.87 lakhs (Rs 6.67 lakhs) and Taxation Rs 21 lakhs (Rs 11 lakhs). The Special Reserve gets Rs 13.56 lakhs (nil); Capital Redemption Reserve Rs 5 lakhs (nil) and General Reserve Rs 14.99 lakhs (Rs 7.5 lakhs). The transfer to Development Rebate Reserve is Rs 1.59 lakhs (Rs 1.04 lakhs) and Development Reserve Rs 53,185 (Rs 12.33 lakhs). A dividend of Rs 12 per share on the old equity shares and Rs 7.50 per share on the new equity shares are to be paid out of the Special Reserve to which has been credited profits, which are exempt from tax under Section 15-C.

* Alembic Glass Pays More

The Alembic Glass Industries Limited has reported encouraging results for 1960. The gross profit is Rs 80.60 lakhs as compared with Rs 58.44 lakhs. Sales have risen by Rs 28.06 lakhs to Rs 1.73 crores. The dividend has been stepped up from 25 to 30 per cent, subject to tax.

After providing Rs 5.12 lakhs for managing agents' remuneration (Rs 4.6 lakhs); Rs 9.78 lakhs for Depreciation (Rs 8.31 lakhs) and Rs 28.30 lakhs for Taxation (Rs 17.80 lakhs) the net profit has gone up from Rs 27.72 lakhs to Rs 37.40 lakhs. The directors have provided Rs 4.50 lakhs for Development Rebate Reserve (Rs 2.58 lakhs); Rs 22.08 lakhs for General Reserve (Rs 12 lakhs); Rs 1 lakhs for Gratuity Reserve (same)

and Rs 1.40 lakhs for tax liability on the bonus issue made last year.

* Improved Results of Ambika Silk

The Ambika Silk Mills Limited has reported improved results for 1960. The gross profit has risen from Rs 6.38 lakhs to Rs 10.27 lakhs. The dividend on the ordinary shares is raised by Rs 3 to Rs 15 per share, subject to tax. Sales have gone up from Rs 84.48 lakhs to Rs 1.16 crores.

After providing Rs 74,476 for managing agents' remuneration (Rs 33,042); Rs 2.83 lakhs for Depreciation (Rs 3.08 lakhs) and Rs 3.20 lakhs for Taxation (Rs 1.49 lakhs), the net profit is more than doubled from Rs 1.48 lakhs to Rs 3.50 lakhs. The provision for Development Rebate Reserve is Rs 31,890 (Rs 34,146). In fact, the dividend has been increased after making a provision for development rebate reserve and Rs 44,391 for General Reserve (nil) and Rs 15,000 towards Goodwill. This is in contrast to Rs 1.19 lakhs drawn from General Reserve in the previous year to make up for the distribution.

The directors have decided to renovate and modernise the machinery. Work has already started. The directors have decided to raise the authorised capital of the company from Rs 20 lakhs to Rs 30 lakhs by the issue of 2,675 equity shares of Rs 100 each, at par, to the existing shareholders in the ratio of one for seven shares held. The balance of 200 shares will be allocated to those who apply for additional shares. The additional money thus raised is to meet the company's expansion programme.

* TRAYONS Repeat

The net profit of the Travancore Rayons Limited, before providing for Depreciation and Taxation, is higher at Rs 115.28 lakhs for 1960 as against Rs 107.47 lakhs for the previous year. The amount set aside to Depreciation is reduced to Rs 36.47 lakhs from Rs 40.36 lakhs, while the provision for Development Rebate Reserve is higher at Rs 15.70 lakhs against Rs 5.05 lakhs. The sum provided for Gratuity Reserve is maintained at Rs 1.50 lakhs. Taxation claims Rs 27.30 lakhs against Rs 37.75 lakhs. A sum of Rs 10 lakhs is set apart for General Reserve against nil. The dividend on the Ordinary shares is maintained at 20 per cent, subject to deduction of tax.

* Andhra Cement Fares Well

The Andhra Cement Company Limited has reported improved results for 1960. The gross profit has gone up from Rs 17.91 lakhs to Rs

22.84 lakhs, while sales have risen from Rs 91.34 lakhs to Rs 129.03 lakhs. The ordinary dividend has been maintained at 10 per cent, subject to tax.

After providing Rs 75,449 for managing agents' remuneration (Rs 95,467) and Rs 10.86 lakhs for Depreciation (Rs 8.39 lakhs), the net profit works out to Rs 11.23 lakhs as against Rs 8.57 lakhs. Allocations are:—Rs 2.30 lakhs for Taxation; Rs 1.00 lakh for Deferred Taxation Reserve; Rs 1.20 lakhs for Development Rebate Reserve; Rs 79,387 for Rehabilitation Fund and Rs 24,750 for ex-gratia payment to labour.

* Excellent Results of Dunbar Mills

The Dunbar Mills Limited has produced excellent working results, reflecting the favourable trading conditions that prevailed in 1960. Sales have risen to Rs 2.42 crores from Rs 1.93 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 24.72 lakhs as against Rs 9.75 lakhs for the preceding year.

In respect of allocations, the Depreciation amount is lower at Rs 9.93 lakhs against Rs 10.06 lakhs. After transferring Rs 2.83 lakhs from Development Rebate Reserve, the directors have provided Rs 1.60 lakhs (nil) for Taxation; Rs 8.00 (nil) for depreciation for earlier years; Rs 10 lakhs (Rs 1.00 lakh) for General Reserve and Rs 4.10 lakhs (Rs 2.00 lakhs) for Development Rebate Reserve. The dividend is doubled to Rs 2 per share, subject to deduction of tax.

The directors state that the capacity of the mill is being utilised to the fullest possible extent and the production pattern has been so diversified as to produce more of processed goods. In order to provide additional working capital with the company, they have decided to issue a further capital of Rs 9.50 lakhs, divided into 95,000 Ordinary shares of Rs 10 each, at par, in the ratio of one new ordinary for every three ordinary shares held.

* Lower Profits for Peermade Tea

The net profit of the Peermade Tea Company Limited is slightly lower at Rs 10.77 lakhs for 1960 as against Rs 12.71 lakhs. The earnings for the previous year included Rs 1.02 lakhs, being profit on sale of investments. The small decline in profit is due to the lower outturn of tea of 1,005,161 kgs against 1,040,238 kgs. It is stated that the crop was affected by adverse weather conditions.

The amount set aside to Depreciation is Rs 1.57 lakhs (Rs 1.42 lakhs) and Taxation Rs 4.32 lakhs (Rs 5.45 lakhs). The transfer to Development Rebate Reserve is Rs 15.212 (Rs 1,725); General Reserve Rs 1.00 lakhs (same) and Capital Reserve Rs 822 (Rs 80,958). The Dividend Equalisation Reserve gets besides Rs 75,000 on the last occasion. The directors have proposed a final dividend of 15 per cent, making a total of 22½ per cent, taxable, for the year, same as in the previous year.

THE INDIAN STANDARD WAGON COMPANY LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting (being the fortysecond Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Monday the 26th June, 1961, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March 1961, and the Directors' and Auditors' Reports thereon.
2. To declare dividends (including additional dividend on preference shares).
3. To appoint Directors in place of the Hon'ble Sushil K. Sinha and Mr. T. C. Hornby who retire by rotation.

In this connection notice is hereby given that a special notice has been received of the following resolution:

"That the Hon'ble Sushil K. Sinha who has attained the age of 65 years be and is hereby re-appointed a Director of the Company and that it is hereby specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass the following resolutions as Special Resolutions.

5. Special Resolution No. 1.

That pursuant to the provisions of Section 314 of the Companies Act, 1956, the consent of the Company be and the same is hereby accorded to Mr. A. Adhikari, who is a relative of Sir Biren Mookerjee, a Director of the Company, holding and continuing to hold an office or place of profit under the Company, namely, as an Assistant of the Company on the terms and conditions specified in the copy of the Agreement submitted to this meeting and signed by the Chairman for the purpose of identification.

6. Special Resolution No. 2.

That subject to the approval of the Central Government pursuant to Section 360 of the Companies Act, 1956 the Company do hereby approve of the contract embodied in the Agreement referred to in Special Resolution No. 1 entered into between the Company of the one part and Mr. A. Adhikari, an associate of Martin Burn Limited, the Managing Agents of the Company, within the meaning of the Companies Act, 1956, of the other part the material terms of which are:

(a) Mr. Adhikari, who is the Works Manager in the Company's Santa Works, shall continue to be such Works

Manager for a period of five years with effect from the 1st December 1960; during this period he shall enjoy the same privileges, amenities and perquisites and be subject to the same liabilities and obligations as are applicable to other Assistants of the Company in the same grade of employment and with the same status.

- (b) Mr. Adhikari's basic salary will be on the scale Rs. 2500 - 2600 - 2700 - 2800 - 3000, during the first and successive years of service, plus dearness allowance at the rate allowable under the Company's rules from time to time, free unfurnished accommodation, medical expenses and, at the discretion of the Company, an annual bonus.

He will be entitled to two months leave on full pay and will be paid return air-conditioned railway fares for himself and his wife after completing the second and fourth years of his contract of service.

7. Special Resolution No. 3. That pursuant to Section 309(4) and (7) of the Companies Act, 1956 and subject to Article 114 of the Articles of Association of the Company, each of the Directors be and he is hereby authorised to continue to receive every year, a share in a commission of 1% of the net annual profits of the company for a further period of five years up to and including the financial year ending on 31st March 1966.

The Registers of Members and the Transfer Books of the Company for both Ordinary and Preference Shares will be closed from the 17th June 1961 to the 26th June 1961, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Managing Director,
Managing Agents,
Calcutta, 31st May, 1961.

NOTE: The Dividends if sanctioned, will be paid on or after 26th June, 1961, to those shareholders so entitled whose names appear in the Company's Registers of Members on that date, or to their mandatories.

An Explanatory Statement as required under the Company's Act, 1956, has been forwarded to the members of the Company.

Limited, Bombay. The proceeds of the issue together with equity capital of Rs 80 lakhs, raised under the authority of consent order dated the 22nd October, 1960, will be utilized for setting up a sugar factory of 1,250 tons cane crushing capacity per day. The Debentures will carry a rate of interest not exceeding 6½ per cent. The consent is valid for twelve months.

T. I. Miller

Consent has been granted to the issue of capital by Messrs T. I. Miller Private Limited, Madras (under formation) of Rs 25 lakhs of which Rs 22.50 lakhs will be subscribed for cash by Messrs. Tube Investments of India Limited, Madras and Rs 2.50 lakhs will be offered to M/s H. Miller & Co. Ltd., Birmingham, in respect of technical know-how. The proceeds of the issue will be utilized for the manufacture of automobile lamps and dynamo lamps. The consent is valid for 12 months.

Thamarapally Rubber

The Thamarapally Rubber Company Limited has proposed to issue 37,500 equity shares of Rs 10 each, at par, payable in full on application, to the existing shareholders at three shares for every two shares held. The company has also decided to issue 850—9.3 per cent taxable first mortgage debentures of Rs 500 each, payable in full on application, to acquire the budded rubber area in the Cailcut Estate for a consideration of Rs 7.80 lakhs.

Blue Mountain Estates

With regard to the issue of 10,50,000 equity shares of Rs 2 each, it is announced that the last date for the receipt of applications and renunciations has been extended from 30 May to 12 June 1961.

INVESTMENT NOTES

Bajaj Auto

The Bajaj Auto Limited has applied for a licence for trebling its output of Vepsa scooters from 6,000 to 18,000 units a year. The target of 18,000 units is to be achieved over a period under a phased programme of manufacture. As the company had already fresh capital to the tune of Rs 70 lakhs, there is no question of raising fresh capital for two or three years to come.

Triveni Engineering

The Triveni Engineering Works Limited, a new company, proposes to build a factory at Naini near Allahabad to produce sugar machinery, industrial process turbines and other engineering products. The initial capital may be Rs 60 lakhs, while foreign collaboration has been arranged with Booker Brothers, McConnell & Company Limited, London.

IN BRIEFS

The shares of Seshasayee Paper and Bharat Nidhi have been admitted to dealings in the cash list of the Bombay Stock Exchange. Churulla Coal has reduced the dividend from 5 to 3 per cent, taxable, for 1960.

Bridge & Roof Company (India) Limited has maintained the dividend at 30 per cent, taxable, for 1960.

Balmer Lawrie & Company Limited has proposed a final dividend of 18 per cent, making a total of 25 per cent, subject to deduction of tax, for 1960, same as in the previous year.

Rajnagar Tea has again skipped the dividend for 1960.

Orient Engineering & Commercial Company Limited has proposed a taxable dividend of 12½ per cent for 1960 as against nil for the preceding year.

Rajagiri Rubber has declared a taxable interim dividend of 10 per cent for the year ended 30 June 1961.

Coimbatore Kamala Mills Limited has proposed a taxable dividend of 10 per cent for 1960 as against nil for 1959.

Radio & Electricals have skipped the dividend for 1960.

BALANCE-SHEET BRIEF

The Kamani Engineering Corporation Limited has reported an increase in the gross profit from Rs 19.49 lakhs to Rs 20.89 lakhs for the year ended 30 September 1960. The directors have recommended a taxable dividend of 8 per cent against 7½ per cent.

The Baroda Spinning & Weaving Company Limited has earned a profit of Rs 8.51 lakhs for 1960 as against only Rs 88,058. A taxable dividend of Rs 16 per share is proposed against nil.

The Universal Fire & General Insurance Company Limited has made a net profit of Rs 3.13 lakhs against Rs 2.84 lakhs for 1959. The dividend is maintained at Rs 2 per share, subject to tax.

The National Rubber Manufacturers has earned a profit of Rs 2.62 lakhs for 1960 against Rs 7.47 lakhs. The dividend on the ordinary shares is passed over as against 8½ per cent, taxable, paid previously.

The Highland Produce Company Limited has shown a profit of Rs 8.54 lakhs as against Rs 7.68 lakhs. The dividend of 15 per cent, subject to tax, is proposed to be maintained.

Despite a setback in earnings from 48.09 lakhs to Rs 43.94 lakhs, the Shree Digvijay Cement Company Limited has maintained the dividend at 9 per cent, taxable, for 1960.

The net profit of the Travancore Rubber & Tea Company Limited has increased from Rs 10.47 lakhs to Rs 12.65 lakhs for 1960. The total dividend paid for the year is higher at 9 per cent, taxable, as against 7½ per cent, taxable, paid previously.

3 June 1961

STOCK EXCHANGES Selected Equities Forge Ahead

Watch-Dog Writes:

THE pattern of the week's trading has indicated a progressive improvement in sentiment. Although this is mainly influenced by firmer advices from Bombay, the flow of encouraging corporate results and the rumours of the LIC having made good purchases of Hindustan Motor and Indian Cable have reinforced the confidence in the market. But, support to the market has been discriminating due to the fact that some industries are still facing difficulties in respect of the shortage of power and raw materials.

The Calcutta Stock Exchange has displayed a firmer undertone and, in fairly active dealings, selected shares changed hands at improving levels.

Price movements on the Bombay Stock Exchange were confined to narrow limits, reflecting operators' reluctance to extend commitments in front of the settlement on Friday.

Activity was moderate on the Madras Stock Exchange where most of the business was confined to Planting issues.

CALCUTTA

Friday Evening.

THE local stock market gave, on the whole, an encouraging performance during the week when selected shares showed spectacular gains over last levels. At one time, it looked as if the market was in no mood to look back. While the bulls remained active due to the continued flow of encouraging corporate news, the nervous covering by bears following the tight hold of bull manipulators, accelerated the upward trend in prices.

Although the sudden turn in sentiment was mainly influenced by firmer advices from Bombay, indications of giving more favourable treatment to steel companies with regard to the retention prices and the rumours of the LIC having made fair purchases of Indian Cable and Hindustan Motor at Bombay reinforced the confidence in the market. Also, foreign assistance was expected to be received in abundant measure, as negotiations for securing the badly-needed foreign aid were proceeding on a rather realistic basis.

But, support to the market was mainly speculative in character and the turnover was also limited. This was mainly due to the reluctance on the part of certain operators to extend commitments until some of the prevailing uncertainties were cleared up. Apart from the reports that some industries were still facing difficulties due to power and raw material shortages, there were rumours that the Government might soon take measures to check the growing speculative activity. It was also thought that it would take another month or so for the return of funds on account of unallotted shares to the applicants in respect of the recent new issues. Sentiment, however, continued to remain bullish as was evident from the absence of selling pressure.

Save for the continued demand for the short-dated issues, the Gilt-edged

market was dull and listless. 3 per cent 1986 Conversion Loan moved narrowly between Rs 72.90 and Rs 72.10, to finish at the last quoted level.

Bank shares were a steady feature in anticipation of good working results for the half-year just ended. Jute shares continued to remain depressed in view of the obscure outlook for the industry. Fears were also entertained that the mills would be working on a loss in view of the high prices ruling for raw jute in relation to those of gunnies. Birlas changed hands at Rs 27.31 to Rs 27.87; Gangas at Rs 10.62 to Rs 11.06; Howrah at Rs 20.62 to Rs 20.75 and New Central at Rs 20 to Rs 20.25. Anglo-India were a steady feature at Rs 188 with Chitavalasah on offer at Rs 11 against Rs 11.19.

Coal shares came in for selective support on prospects of getting foreign financial assistance for expansion. Amalgamated were taken up to Rs 25.25 from Rs 24.75; Bengal up to Rs 400 from Rs 380; East Indian up to Rs 36.87 from Rs 35.50; New Beerboom up to Rs 24.44 from Rs 23.25 and Equitable up to Rs 31.25 from Rs 30. Central India and Western Bengal, however, hovered narrowly around Rs 13.06 and Rs 9.50 respectively.

With the announcement of satisfactory dividends by a number of companies and the prospect of certain companies issuing bonus shares, Tea shares were well maintained around previous levels. Activity was, however, confined to the shares of a few selected gardens. Brooke Bond met with business at Rs 16.37 to Rs 16.56; Bishnauth at Rs 25.50 to Rs 25.75; Hasimara at Rs 27.75 to Rs 28; Hantapara at Rs 136 to Rs 142; Jay Shree at Rs 21.87 to Rs 22 and Tezpor at Rs 16.62 to Rs 16.69.

Sugar shares were a neglected counter. It was apprehended that the accumulated stocks with the factories might strain the financial resources of the companies. Raza/ Buland were on offer at Rs 11.62 to Rs 11.69; Ramnugger Cane at Rs 29.37 to Rs 29.87; SKG at Rs 11.25 to Rs 11.62 and Dyer Meakin at Rs 31.62 to Rs 32.25. Carew were, however, maintained at Rs 12.56.

Hopes of an increase in production as well as in cloth sales induced sustained support for Textile shares, although higher levels attracted some profit-taking towards the close. Cawnpore were at one time taken up to Rs 8.87 from Rs 8.50 (Rs 8.69); Dunbar up to Rs 31.62 from Rs 30.50 (Rs 31.37) Kesoaram up to Rs 34.37 from Rs 34 (Rs 34.12) and J. K. Rayon up to Rs 20.12 from Rs 19.87 (Rs 19.94). Figures shown within brackets were the week's closing rates.

The following table shows the trend of production at the Works of the Indian Iron & Steel Company Limited for the last two months (figures in metric tonnes):—

	May	April
1961	1961	1961
Pig Iron	100,815	99,381
Steel Ingots	70,912	69,710
Semi-Finished Steel	11,065	10,898
Finished Steel	31,100	40,246
Despatches	39,812	53,283

Being influenced by higher Bombay advices coupled with the hopes of an early announcement with regard to steel retention prices, Indian Irons crossed the Rs 28 mark and touched a new peak level of Rs 28.30 on Thursday from the previous week-end closing level of Rs 27.86. The closing rate was, however, slightly lower at Rs 28.09 due to profit-taking. In sympathy, TEXMACO moved up to Rs 22.65 from Rs 19.95; J. K. Steel up to Rs 29.25 from Rs 25.44; Jessop up to Rs 21.50 from Rs 21.12 and Braithwaite up to Rs 33.37 from Rs 32.25, to close finally at Rs 20.55; Rs 29.25; Rs 21.44 and Rs 33.37 respectively. Guest, Keen, Williams moved narrowly between Rs 41.94 and Rs 42.12 on lack of support and so also Marshalls between Rs 4.87 and Rs 4.94. Britannia came in for offer at Rs 12.50 against Rs

13.81 following the company's decision to make a right issue. Thanks to the flow of good company reports and the resultant replacement buying, most of the shares in the Miscellaneous section emerged with handsome gains on balance. Following were the price trends of a few selected shares:

	As on 27 May	High-est	As on 2 June
Orient Paper	36.20	36.50	36.30

THE CHAMPDANY JUTE COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting (being the Seventy-first Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 2, Netaji Subhas Road, Calcutta, on 16th June, 1961, at 12 noon to transact the following business:—

- (1) To receive and consider the Audited Accounts for the year ended 31st March, 1961, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- (2) To declare a Dividend.
- (3) To appoint a Director in the place of the Director retiring.
- (4) To consider, and if thought fit, to pass the following Special Resolution for which special notice as required under Section 261(2) of the Companies Act, 1956, has been received by the Company.

AS A SPECIAL RESOLUTION "That Mr. N. S. Coldwell be and is hereby appointed a Director of the Company".

- (5) To appoint Auditors for the current year and to fix their remuneration.

The Share Register of the Company will be closed from 5th June to 16th June, 1961, both days inclusive.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons holding shares on blank transfers are advised to effect registration of scrip in their names before 5th June, 1961.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, Netaji Subhas Road, Calcutta, 23rd May, 1961.

NOTES:—

- (1) A member entitled to attend and vote at the meeting is

entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

- (2) The dividend, if declared, will be paid on or after the 16th June, 1961, to those shareholders so entitled, whose names appear in the Company's books on 16th June, 1961, or to their mandatories.

- (3) Explanatory statement regarding Item (4).

Mr. J. H. H. Ross who was appointed a Director of the Company by Special Resolution of the shareholders passed at the Extraordinary General Meeting of the Company held on 24th January, 1961, has resigned from the Board with effect from 19th April, 1961 on his proceeding on leave outwith India. Special notice dated 15th May, 1961, of the intention to propose the above resolution as a Special Resolution has been received by the Company. Special notice has been given in order to comply with the provisions of Sections 190 and 261 of the Companies Act, 1956, as Mr. N. S. Coldwell is an officer in the employment of the Managing Agents.

INTEREST OF DIRECTORS & MANAGING AGENTS

The Directors and Managing Agents of the Company are interested to the extent of their shareholdings in the Company as set out below:—

KALINGA TUBES

*Announce the
opening of their*
NEW TUBE MILL

Our new mill goes into immediate production of 4", 5" and 6" nominal bore tubes to Indian Standard specifications. With the commissioning of this new mill the production target of one hundred thousand tons of tubes per annum is now attainable.

First to manufacture steel tubes and pipes in India, we were also the first to export, earning valuable foreign exchange.

CUTTACK,

ORISSA

INVESTOR'S SUPPLEMENT

Late Spurt in Values in May

THE Calcutta Stock Exchange was generally inactive most of the time during May, though toward the close of the month equity prices gained moderate ground on a wide front due to renewed buying interest. The commencement too was on a hopeful note. The initial enthusiasm was evidently due to the belief that the final decision on the retention price of steel would be quite favourable to the private sector companies. The basis of such optimism was the statement of the Minister of Steel, Mines and Fuel, Sardar Swaran Singh, made in the Lok Sabha. The gist of the minister's announcement was that the question of the retention price of steel for the period 1960-62 had been referred to the Tariff Commission and that the Commission had been asked to take into consideration particularly the interest and loan repayment obligations of the two steel companies. The fact that due consideration was to be given to loan obligations of the steel companies. The fact that due consideration was to be given to loan obligations of the steel companies was interpreted by market men to mean that the retention price that would be fixed would be much higher than the provisional increase that had been given a few months ago.

Although renewed hopes of a higher retention price kept sentiment somewhat cheerful for some time, general conditions were far from conducive to a broadening of activity. In the first place, bulls were very much discouraged by IISCO's production figures for April. Production during April had markedly declined in all departments and the expectation was that there would not be a change for the better in the succeeding month also. While the speculative Indian Iron was thus rendered somewhat unattractive, cash shares too found little support from the investors. New buying of the existing list had evidently been seriously affected by the spate of new issues, which, although they did not command as much respect as two or three months ago, continued to receive selective support. The preoccupation with new issues was expected to continue for some time longer as indications at the earlier part of the month were that more new issues were in the offing.

The extreme dullness of the Calcutta stock market during the second and third weeks of the month under review was the result of the cumulative influence of a number of factors. Investors were neither prepared to sell nor were they anxious to make fresh purchases. The absence of buying support could be traced to the fact that funds in the hands of investors were far from adequate

even to meet earlier commitments. During the earlier two months, subscription to new issues had absorbed a good deal of the investible funds and the outgo had been quite considerable in respect of the Goodyear issue. The demand is not only from new issues but there were obligations to be met in regard to calls from some

so, speculation based on the loan programme was rife. The general expectation was that till the loans were out of the way, the stock market would be bereft of the support from institutional investors. For instance, the LIC could not be expected to show interest in the stock market since it would be called upon to make

of the month in Dalal Street that Government was not very happy with the prevailing situation there and consequently it was thinking in terms of taking more drastic measures which would effectively curb unbridled speculation. The apprehension that industrial production would be adversely affected on account of the widespread power shortage in the country was another deterrent to bullish enthusiasm.

Toward the end of the month, however, the dominance of bears came to an abrupt end. The reversal in the trend seemed to have been touched off by the almost sudden realisation on the part of operators that Government was not for curbing genuine bullish enthusiasm. Earlier fears about interference with the stock brokers' freedom of business was discounted and it was reported that Government was really anxious that new issues should all be successful. Bulls had also derived encouragement from the fact that the Ahmedabad Stock Exchange authorities had abolished special margins deposit regulation.

Bullish fervour was not a little strengthened by the indications that were available at the end of the month about the outlook for equities. Although the previous meeting of the Aid India Club was rather disappointing, the fact that the United Kingdom had given a long-term loan to India was taken as a good augury for the next meeting of the Club. The reported offer of the US of a loan of one billion dollars for the first two years of the Third Plan provided the other members of the Club made a matching loan filled operators with optimism as to the outcome of the next meeting of the Club. With the country getting the needed foreign aid to implement the Third Plan, operators and investors found the investment situation freed of a major uncertainty.

Sectionwise, jute shares found little support and most of the time during the month sellers outnumbered buyers. The reactionary tendency in the section was mainly due to apprehensions of continued unsatisfactory results due to the acute shortage of raw jute and the consequent indications of a block closure of mills to meet the crisis. Coal shares were selectively wanted toward the close of the month on prospects of expansion following indications of foreign aid for the purpose. Earlier however sentiment was rather subdued on reports that some of the collieries had reduced their production due to heavy accumulation of stocks. Textiles were in keen request on indications that the industry would be allowed to increase production during the Third Plan period.

PRICE TRENDS DURING MAY, 1961.

of the recent issues. Moreover, investors were awaiting some important right issues.

The proximity of the launching of the Government's loan programme was one of the inhibiting influences in the market from the middle of the month. Although details would not then have been available for another ten days or

a very large contribution to the loans.

It would seem that operators in Dalal Street were rather reluctant to extend commitments especially in the speculatives for the simple reason that the re-emergence of strong bullish fervour would not be to the liking of Authority. Rumour had it about the middle

(a) After transferring Rs 6,26,601 from Depreciation, Renewal and Extension Fund and Rs 80,000 from Reserve Fund.
(b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.
(c) After transferring Rs 250,000 from Machinery Reserve and Rs 300,000 from Dividend Equalisation Reserve.
(d) After transferring Rs 50,000 from General Reserve.
(e) After transferring Rs 70,000 from Development and Rehabilitation Reserve.
(f) After transferring Rs 234,696 from General Reserve.
(g) After transferring Rs 2,656,622 from General Reserve.
(h) After writing back Rs 380,718 being excess depreciation provided in 1958.
(i) After transferring Rs 1,086,546 from General Reserve No. 1.
(j) After transferring Rs 1,092,174 from General Reserve.
(k) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.
(l) After transferring Rs 297,425 from excess depreciation.

(m) After transferring Rs 119,825 from Development Rebate Reserve.
(n) After transferring Rs 120,000 from Dividend Reserve.
(o) After transferring Rs 2,975,000 from General Reserve and Rs 1,000,000 from Dividend Equalisation Reserve.
(p) After transferring Rs 5,27,512 from General Reserve.
(q) After transferring Rs 400,000 from General Reserve.
(r) Includes Rs 100,230 being provisions made in previous years written back.
(s) After transferring Rs 3,22,599 from General Reserve and Rs 75,000 from Depreciation Reserve.
(t) After transferring Rs 9,50,000 from General Reserve.
(u) After transferring Rs 200,000 from General Reserve.
(v) After transferring Rs 80,000 from Dividend Equalisation Reserve.
(w) After writing back Rs 86,747 being excess sales tax and Rs 14,000 being excess Development Rebate.

(x) After transferring Rs 390,580 from General Reserve.
(y) After transferring Rs 258,000 from General Reserve.
(z) After transferring Rs 825,000 from General Reserve.
(a1) After transferring Rs 1,075,000 from General Reserve No. 1.
(a2) After transferring Rs 9,00,000 from Reserve for taxation.
(a3) After transferring Rs 881,429 from General Reserve.
(a4) After transferring Rs 350,000 from General Reserve and Rs 168,000 from Machinery Rehabilitation Reserve.
(a5) After transferring Rs 4 lakhs from Reserve for fall in price.
(a6) After transferring Rs 109,848 from General Reserve.
(a7) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.
(a8) After transferring Rs 271,942 from General Reserve.

A Magnificent Gesture

THE decision of the Aid-India consortium to make firm commitments (subject to appropriate legislative consent) of assistance to India is the fruition of continuous efforts by dedicated friends of India. It would be invidious to make special mention of any particular person or authority, but the good offices of the World Bank in securing this happy result should be acknowledged. Like many other momentous things, the Aid-India Club came into being without any particular premeditation. It was originally an emergency get-together of India's friends at the instance of the World Bank when, during the middle of the Second Plan, India was in the grip of a payments crisis. But subsequently, the machinery was kept alive to rationalise the entire scheme of aid to India for its subsequent efforts at development. More particularly, India's needs of foreign exchange for its Third Plan (which was then in the process of crystallisation) were specifically held over for examination early in this financial year when the Plan was to commence. Meantime, some basic re-thinking—some of it was induced by India's own difficulties in effective use of foreign aid—about the quantum and pattern of foreign aid to developing countries was yielding some interesting conclusions. The more important of these have been comprehensively formulated by the US administration and spelt out in detail by President Kennedy in his message to the Congress soon after he assumed office. These principles have now found general acceptance.

At the first meeting of the consortium on 1 April this year, the US—despite interested fouling of the atmosphere about Indian stand on Cuba—came out with the proposal that the other original members of the club should match the one billion dollars that the US itself was going to commit for the first two years. The proposal obviously took the others by surprise and so they wanted to take further counsel and the meeting was postponed to end of May. At the renewed meeting, many of the countries have increased their commitments from the original figures they were prepared for. As finally committed, the total aid promised for the first two years would come to \$2,225 million. In addition, West Germany has committed itself to further aid for the extension of the Rourkela project of \$61 million in the period beyond the first two years. The amount now promised by West Germany for the first two years is more by \$100 million than what it was originally. Likewise, The UK has increased its share by an additional \$46 million dollars and Canada its share by \$20 million. Japan could not increase its share but proposed to make available \$51 million for the first year. France, which had been only an "observer", has committed itself to an aid of \$30 million dollars and thus has formally become a full-fledged member of the consortium. Austria, Denmark, Norway and Sweden who were present at the meeting as observers are expected to give more tangible shape to their interest in Indian development.

The total aid now available for the first two years, will make it possible for India to go ahead with its schemes of the Third Plan

with the broad assurance that foreign exchange need not be the racking source of worry it was. In actual reckoning, however, there is a shortfall of about \$150 million between our estimate of needs for the first two years and the promised aid. However, this need not be a serious cause of anxiety. For one thing, as at present split up, the contribution of members of the club other than the US fails to match the US contribution by about \$220 million and this may be made good by them should our pace of need warrant it. Secondly, and arising out of this proviso, our pace of utilisation of committed aid in the last decade has not been such as to make us worry unduly on this score.

Details of the mode of utilisation of assistance have yet to be worked out. Similarly the actual terms of the loans, their duration, interest and place of utilisation have also to be settled. But the broad principles of making the loans as "soft" as possible, with the rider of an initial moratorium, if necessary, and the necessity for having the loans as "untied" as possible are sure to be applied in the case of these loans. For these loans are the first major commitments since these principles were enunciated.

Some indication of the probable mode of utilisation of the American assistance is already available from certain observations of Mr Douglas Dillon, the US. Treasury Secretary. It would appear from them that the loans are likely to be long-term and with minimal interest; they are likely to be tied up with utilisation in the US, but would be united in the sense that they will not be related to particular projects. The main advantage in this is that this makes possible the utilisation of loans for maintenance imports and the consequential keeping of industrial production on an even keel. On the other hand, the comparative expensiveness of American goods is a factor that makes these terms of the loans somewhat unattractive. But considering America's own balance of payment difficulties and the comparative stagnancy of the American economy in the last year or so, it can hardly be called a needlessly stringent condition.

More than even the actual commitments, the broad premises on which the commitments were made must be matter for particular gratification in India. As the communiqué issued by the World Bank at the end of the deliberation shows, the consortium was "encouraged by the economic progress made by India during the Second Plan and recognised the importance of maintaining the momentum of India's development." Secondly, it considered that "in relation to India's needs, the broad objectives of the Third Five-Year Plan were reasonable, that the Plan itself was well conceived and India has demonstrated a capacity to make effective use of foreign aid." Linked up with this very authoritative and influential endorsement of Indian Planning is the need for mobilising internal resources and maximising exports. It needs hardly to be pointed out that it would ill-behave us, as a self-respecting nation, not to match by our efforts the very magnificent gesture made by the members of the consortium.

INDIA AND THE EEC

Lengthening Shadow

INDIA's export prospects have now come under the lengthening shadow of the European Common Market. While the Planning Commission has stepped up the Third Plan target for exports, the programme for its achievement will have to be worked out in relation to the changes in the European Common Market and their impact on the trade of countries of the ECAFE region. Representatives of many of these countries gave expression to their apprehensions in this regard at the last ECAFE session in New Delhi. Speaking on behalf of the EEC, the representative of France said that the member States considered it their duty to ensure maximum economic expansion and that the Rome Treaty was an insurance against recession. While it is recognised that so far the operation of the Common Market has not resulted in a reduction of exports from this region, it is not yet clear how long this will continue to be the case. At least as far as India and other members of the Commonwealth like Ceylon and Pakistan are concerned, Britain's entry into the Common Market, which is now considered imminent, can make a substantial difference to the volume and pattern of exports.

For the last five years the Government of the UK has been postponing a decision on this complicated question. But last week's debate in the House of Commons and comments thereon in the British press are read here as signs that the United Kingdom will quietly move into the EEC as soon as President Kennedy has cleared the lines at his forthcoming meeting with President de Gaulle.

The question of the UK joining the Common Market is understood to have been discussed at the conference of Commonwealth Finance Ministers held in London in September 1960. And for over the past six months, officials of the Union Ministry of Commerce and Industry have been working out the implications for India or Britain joining the Common Market. But the officials have been handicapped in analysing the consequences by lack of precise information of the terms and conditions under which the UK will find it possible to join the EEC. The position still remains obscure, and will continue to be so until more is known about the results of the British Government's efforts to safeguard its relations with the countries of the Commonwealth and the EFTA.

It is explained that there are at least four different ways in which the United Kingdom may be associated with the European Common Market: (1) By becoming a signatory of the Rome Treaty as it stands. (2) By bringing about a suitable amendment of Treaty itself to meet the UK's special requirements. (3) By making certain rules so that the Treaty will remain intact in so far as the six original members are concerned, but shall apply with certain modifications and limitations to the UK and other new entrants. (4) The EEC and the United Kingdom may come to an agreement under which only certain rights and privileges would be exchanged. But, at the same time, it is noted that the range of choice has been considerably circumscribed by US initiative. The United States is more interested in European integration than in an arrangement exclusively concerned with trade and tariffs.

The effects of the association of the UK with the EEC will obviously differ according to the manner in which it is effected. But whatever the form of association that is decided upon, it is clear that Commonwealth preference arrangements will not continue in the old form. And India's exports to UK will, in consequence, be affected in two ways, especially if the UK becomes a full member of EEC. India will not only lose the preferred position vis a vis supplies from non-Commonwealth sources, but duty at a higher rate will be levied on Indian products affecting their competitive position in respect of products from EEC countries, and, to a lesser extent, UK products.

But the possibility of an overall improvement in India's total exports to the EEC cannot also be ruled out. The Common Tariff is usually fixed as the arithmetical average of the existing tariffs of member countries. Since the UK is by and large a low tariff country, its inclusion in the Common Market may result in a downward revision of the common tariffs. This will stimulate Indian exports, but the question is: since the UK is by far India's best customer will the resulting increase be large enough to balance the loss resulting from abolition of preference in the UK market?

At present exports from India to the UK get either free entry or preferential tariff treatment. Abolition of this preference would affect the entire trade, though all commodities would not be adversely affected to the same extent. There would be no change in respect of commodities, mostly raw materials, which are allowed free entry into the Common Market, such as raw wool, raw cotton, hides and skins, manganese and iron ore. But materials which are allowed free entry into the UK on which tariff is levied by EEC will face difficulties. The duty differential would be particularly high in regard to manufactures. Exports of cotton manufactures and jute fabrics, it is feared, will be seriously affected.

The greatest anxiety is felt about India's principal earner of foreign exchange—tea. The UK levies a standard duty of 2 d per lb.; the preferential duty is nil. The present ECM tariff on tea is 18 per cent on loose tea and 23 per cent on packed teas. If the standard duty is taken into account in working out the arithmetic average, the new common tariff will be about 15 per cent. But if the preferential rate is taken, and weightage given to the volume of imports, the common tariff may be as low as 1.5 per cent. That will mean a substantial reduction in the tariff on tea at present levied by the members of the EEC. This may possibly stimulate export of tea to these countries; but as they constitute only a small market for tea, the increase is hardly likely to compensate for the effect of the higher level of duty in the UK. Indian tea is already losing ground in the British market. The percentage of Indian tea to total tea imports into the UK has come down from 59 per cent in 1957 to 49 per cent in 1960. The fall is attributed to competition from Ceylon and Indonesia and growing competition from Kenya and Nyasaland. As a result of the Common Tariff, Indian tea will cost more for consumers in the UK, will lose its competitive advantage vis a vis tea from China and Indonesia, and will also have to pay a higher rate of duty than imports from 'overseas territories' of the member countries. A tariff on tea may not induce many Britons to give up tea drinking. But it can bring about a change in the pattern of consumption in favour of low-priced common teas. It may, therefore, become necessary to take steps in time to

Indian Finance

reduce the export price of tea to enable Indian tea to maintain its position in the British market. It is also considered possible to make arrangements with the British Government for a tariff-free quota of at least the average offtake of recent years. Some member countries of the EEC have given such quotas for free entry in respect of particular products, for instance, bananas into West Germany and unroasted coffee into Italy and Benelux countries.

The position of Indian exports to the UK in general will not be so seriously affected if the proposed association takes the form of a free trade association with the EEC. Though Indian products under this arrangement will lose preference vis a vis products from EEC countries, they will continue to get preference as against imports from other countries. A third possibility has also been suggested, under which the common tariff would remain the same, but in regard to imports from third countries, the UK would continue to levy existing duties, and when an item is re-exported to the Common Market, a counter-vailing duty would be levied to bring the total duty paid up to the level of the Common Tariff. Under such an arrangement, India's exports to the UK will not be adversely affected, but there is the possibility that exports from EEC countries may come to India through the UK taking advantage of the preferential treatment given to imports from the UK.

Whatever the arrangements that are ultimately worked out, one consequence of Britain's entry into the EEC will be that the Government of India will have to give serious thought to the establishment of a preferential trading system comprising countries which are similarly situated. In this context mention may also be made of the scope for increased Indo-Japanese trade.

Sardar Swaran Singh, Minister for Steel, Mines and Fuel, has returned from his recent visit to Japan deeply impressed by that country's programme for rapid economic development. He told a press conference last week that Japan has decided to double the national income in the next ten years. The output of steel is to be stepped up to 50 million tons, roughly doubling the production in ten years. The Japanese steel industry is built up entirely on the basis of imported ore and coal. Iron ore is now being imported from India, Malaya, South America and Goa. The industry is now engaged in locating additional sources of supplies to meet its vastly increased requirements. It is estimated that requirements of iron ore will be of the order of 120 million tons per year. India can get a substantial share of this trade, if adequate transport and port facilities are provided. It is relevant to mention in this context that in order to reduce transport costs, the Japanese propose to employ large vessels and are deepening their harbours to receive them. Apart from the export of iron ore, the general expansion of the Japanese economy and the prospects of collaboration in the fields of manufacture of machinery, special steels etc. to which the Minister referred, underline the encouraging prospects of Indo-Japanese trade.

NATIONAL INCOME

Regional Trends

A STUDY of the regional growths of income between 1955-56 and 1960-61 made by the Indian Institute of Public Opinion and published in its latest "Quarterly Economic Report" points to some interesting inferences. During the Second Plan period, the total

10 June 1961

national income of the country increased by nearly 24 per cent. Taking into account the recent census estimates of rise in population of the country which is at 11 per cent for the last five years, the per capita income works out to 12.5 per cent in five years or 2.5 per cent for every year of the Second Plan. The

study deals with the changes in income both as between the different States and as between the major sectors such as agriculture, industry and tertiary sectors. The following table presents the figures for sector-wise and State-wise changes in income during the period 1955-56 and 1960-61.

REGIONAL TRENDS IN NATIONAL INCOME, 1955-56 to 1960-61

The total increase in income at current prices during the Second Plan period is shown to be of the order of 51.42 per cent. For a comparison at constant prices which would reflect the real order of the increase, the figures have to be deflated for the amount of distortion caused by price changes. In the price index and 29 per cent rise in the all-India cost of living index, the increase in income attributable to price rise is placed at 27 per cent. By elimination, the absolute increase in national income in real terms is shown to be 24 per cent during the Second Plan period.

A comparison of the State-wise distribution of the total income for 1960-61, reveals vast disparities which cannot be attributed to differences of size or population and which, therefore, can be taken as reflecting the relative levels of economic development in the States. Accordingly, West Bengal, Maharashtra, Gujarat and to a lesser extent Madras figure as relatively better developed than others. Andhra Pradesh which is more than twice the size of Madras has a total income which is well below that of Madras. Similarly the economic backwardness of such large States as Madhya Pradesh and Rajasthan stand out clearly against the relatively large share in total income of smaller States like West Bengal and Maharashtra.

In a comparison between different States and between the two years a factor that has to be borne in mind is the distortion that would have been caused not only by absolute changes in price levels, but also the degree to which differences in prices of various articles and particularly of agricultural commodities have affected the sectoral and total income. This is necessary for two reasons. In the first place, for most States, it is agricultural income which accounts for a comparatively large share of total income than either of the

other two. Secondly, agricultural prices are by their very nature liable to greater fluctuations than prices in the industrial sector. Subject to this limitation, the changes in total income for the different States between 1955-56 and 1960-61 yield significant conclusions regarding Second Plan performance. Taking figures for comparable States, it is evident that the rise in income in West Bengal has been of a larger order than for Maharashtra. Kerala, tiniest State in the Indian Union, has done better than Rajasthan. Similarly Punjab has outdone Gujarat in the increase in total income during the Second Plan period. Changes in Bihar and MP which have comparable figures for income at the end of the First Plan are of similar magnitude. Two backward States, namely Kerala and Orissa have made significant additions to their income. But whereas in Orissa, it was industry which made the larger contribution, in Kerala, increase in agricultural income was more prominent. Punjab tops the list for percentage increase (74.97 per cent) followed by Orissa, West Bengal and Kerala. In absolute terms, West Bengal, UP and Maharashtra occupy top positions with increase of Rs 600 crores, Rs 600 crores and Rs 500 respectively.

The pattern of income distribution for the different States between the three sectors serves to bring out the distinction between industrially developed and undeveloped States. On this basis, there is a striking similarity in the pattern of income distribution for West Bengal, Maharashtra and Gujarat. For these States, there is a balanced distribution between the three sectors, while for the other States, it is agriculture which figures as the largest source of income. It is also noteworthy that Gujarat though occupying a lower order in total income as compared with West Bengal and Maharashtra has a better distribution as between agriculture and industry than the other two States. However, in the case of Madras which has a relatively high place

in total income accounted, the imbalance is marked.

The inter-sector comparison of distribution of income for the States also reveals a significant similarity for West Bengal, Maharashtra and Gujarat for the contribution from the tertiary sector. It is notable that for these States, the total income derived from the tertiary sector is larger than income from either of the other two sources namely agriculture and industry. It is also remarkable that inter-State disparity in income from tertiary sector is of a lesser order both in absolute terms and percentage changes during the Second Plan period. This fact may be attributed to the relative remoteness of the tertiary sector as the target for investment during the Second Plan.

The study of inter-State figures for agricultural incomes also shows disparate performance for States with comparable figures at the end of the First Plan. Punjab, traditionally progressive in agriculture, accounts for the largest increase in percentage terms (102.94 per cent.) West Bengal has done better than Bihar. The increase in Madras is of a larger order than in Maharashtra. Similarly Mysore trails behind Kerala. The percentage changes however are not strictly comparable for the reason that they have to be studied against the background of the relative backwardness of agriculture in the different States. Moreover, the relative importance of cereals and commercial crops and of the relative changes in their prices should also be relevant points for contrast in inter-State comparison.

The figures for income from industry for the different States point to the conclusion that the Second Plan has made hardly any difference to the marked inter-State disparity. West Bengal, Maharashtra and Gujarat figure as the more industrially advanced States at the end of the First Plan. This position has not been altered in any marked manner at the end of the Second Plan. These States have increased their income from industry by 98.46 per cent, 62.48 per cent and 60.94 per cent which is larger than for the other States with the exception of Orissa and Bihar. Though Orissa accounts for the largest percentage increase namely 139.53 per cent, the relatively lower proportion constituted by industrial income to total income should not be overlooked. Progress in industrialisation has been extremely slow in UP and Rajasthan which show an increase in industrial income during the Second Plan period of the order of 14.14 per cent and 9.60 per cent respectively.

Finally, there has not been any significant change in the percentage composition of income between the two years. In 1955-56, agriculture accounted for nearly 44 per cent of the total income. This has increased slightly to 47 in 1960-61. Further, though economic development involves and implies an almost inevitable enlargement of the tertiary sector, the experience of the Second Plan as indicated in the figures for relative proportion of tertiary income to total income reveals a slight decline in 1960-61 as compared with 1955-56. The fact that tertiary income constitutes only 37 per cent of the total income is evidence of the continuing backwardness of the economy, considering that a dominant tertiary sector is an invariable hall-mark of a developed economy. Lastly, the relative stagnancy of the proportion of industrial income to total income at 16 per cent points to the conclusion that in spite of the Second Plan's accent on industries, the break-through in industrialisation is yet to be achieved.

West Bengal and the Finance Commission

By A Special Correspondent

THE memorandum submitted by the Government of West Bengal to the Finance Commission appears to have received wider publicity than that of any other State Government. The Chambers of Commerce in Calcutta have also strongly supported the stand taken by the State Government. West Bengal's position in the economy of India is rather different from that of other States not only because it is a border State but because it is faced with problems of a complicated nature caused mainly by the partition of the country. The State's population has recorded an increase of about 33 per cent in the last ten years, the density now standing at 1,031 persons per square mile which is the second highest in India.

The State Government has pointed out to the Finance Commission that although West Bengal is a highly industrialised State, it does not derive the full benefit from the expanding industrial activity because of the present method of division adopted for sharing the revenues between the Centre and the States. As the State Government has

observed, West Bengal is required to depend on land or property taxes. While its agricultural sector is decadent it has to shoulder the liabilities of a booming industrial sector which it cannot tax. Above all, there is Calcutta, which with its severe congestion and acute unemployment, has been posing a challenge not merely to West Bengal but to the country as a whole.

It is also important to note that West Bengal's tax effort during the Second Five Year Plan has been commendable. Whereas the Planning Commission expected the State to raise Rs 15 crores by way of additional taxation, it has obtained Rs 42 crores by new taxation measures and Rs 23 crores by tightening up administration of the existing taxes, giving a total yield of Rs 65 crores during the Second Plan period. The per capita taxation in West Bengal is the highest in India being Rs 16.4 as compared to Rs 11.9 in Andhra, Rs 14.6 in Assam, Rs 7.3 in Bihar, Rs 15.4 in Maharashtra and Rs 8 in Uttar Pradesh. (The figures are for 1960-61.)

We shall now consider the stand taken by the Government of West Bengal in regard to the specific issues which are being considered by the Finance Commission. So far as income tax is concerned, under the existing procedure, 60 per cent of the divisible net proceeds (other than Corporation tax) is assigned to the States and distributed among them on the basis of population (90 per cent) and collection (10 per cent). The West Bengal Government says that it receives the

least on the basis of the present system of distribution. The following table shows the amount of income-tax collected in States during 1958-59 and the share received by them:

States	(In lakhs of Rupees)			
	Amount of income-tax collected in 1958-59	Share of income-tax by States in 1958-59	Percentage of receipts to collections	
Andhra	4.65	6.15	132.3	
Assam	1.39	1.85	133.1	
Bihar	4.12	7.53	182.8	
Bombay	62.28	12.11	19.4	
Kerala	3.12	2.76	88.5	
MP	2.71	5.09	187.8	
Madras	12.84	6.37	49.6	
Mysore	4.49	3.90	86.9	
Orissa	72	2.83	393.1	
Punjab	3.09	3.21	103.9	
Rajasthan	1.61	3.10	192.5	
UP	5.73	12.40	216.4	
W. Bengal	47.22	7.64	16.2	
J & K	23	86	373.9	
Total	1,54.20	73.80		

*Excluding Central Surcharge

The figures reveal that for every Rs 100 collected in the States, Andhra received Rs 132.3, Bihar Rs 182.8, Orissa Rs 393.1 but West Bengal only Rs 16.2. The Government of West Bengal has, therefore, recommended that the allocation of income-tax should be

Indian Finance

10 June 1961

made on the basis of collection figures. While the inequity of the present basis of division is appreciated, it cannot be argued that collection should be the sole criterion. Other factors like population, the value of industrial production and the value of industrial raw materials available in a State should also be given due consideration. The West Bengal Government is, however, on stronger ground when it claims a share in the corporation tax. As a result of the changes introduced in the Finance Act of 1959 in respect of taxation of dividends, the quantum of "corporation-tax" (allotted by convention to the non-divisible pool) has increased at the expense of the divisible pool. The revenue from corporation tax has recorded a sharp increase from Rs 54.7 crores in 1958-59 to Rs 116.1 crores in 1959-60 and Rs 135.50 crores in 1960-61. While the yield from income-tax, other than super-tax and Central surcharge, has declined from Rs 137 crores in 1958-59 to Rs 93.5 crores in 1959-60 and Rs 74.4 crores in 1960-61. Since the State Governments have to spend their resources for providing various services to the corporate sector, it is only reasonable to suggest that they should get a fair share of the revenue from corporation tax also. This is all the more important in view of the rapid economic expansion which will stimulate the growth of a large number of new companies in the coming years.

So far as excise is concerned, at present 25 per cent of the net proceeds of the Union excise duties on certain commodities is distributed among the States on the basis of population (90 per cent), the remaining 10 per cent being used for adjustments. These eight commodities are tea, vegetable products, matches, paper, coffee, sugar, tobacco and non-vegetable oils. The total revenue from basic excise duties is estimated at Rs 365 crores in 1961-62 of which the net proceeds of the divisible duties from these eight commodities are about Rs 145 crores. West Bengal says that the selection of the eight commodities is "quite arbitrary" and the duties from all excisable commodities should be shared among the States. It seems that in view of the steadily increasing revenue from excise to the Union Exchequer and the growing needs of the States, it will be advisable to include more, if not all, the commodities now subjected to excise in the divisible pool. As regards the basis for division, it may be suggested that less emphasis should be given to population and more to the factor of collection or consumption of the commodities concerned.

As regards grants-in-aid, it may be pointed out that these are given to the States under Articles 275 and 282 of the Constitution. Grants under Article 275 are made by the Central Government on the advice of the Finance Commission while the grants under Article 282 are made for any public purpose at the discretion of the Union Government. The amount transferred to the States under statutory devolution has increased from Rs 55.41 crores in 1951-52 to Rs 159.44 crores and the grants made at discretion from Rs 29.11 crores to Rs 192.20 crores. It will be seen that the discretionary grants exceeded the statutory grants by nearly Rs 34 crores in 1961-62. West Bengal has suggested that the only grants-in-aid to be made to the States should be those under Article 275 of the Constitution. While it would certainly be desirable to offer, as far as possible, to the States more grants under the statutory than under discretionary powers, it may not be advisable, as suggested by West Bengal, to discontinue the grants under Article 282. What is important to ensure is that the Centre should satisfy itself, before grants are given, that the State concerned has made

every effort to bridge the gap between its revenue and expenditure by taxation, by measures of economy and by other means.

Two other matters referred to the Finance Commission are estate duty and the tax on railway fares. As regards estate duty the present practice is that the net proceeds are distributed between the States in proportion to their population. But the amounts collected in respect of immovable property are distributed on the basis of location of these properties. While the latter procedure may be continued, as suggested by West Bengal, more importance may be given to collection than to population. The tax on railway passengers has been merged with the passenger fares from 1 April, this year and it has been decided to assign to the States a fixed grant-in-aid of Rs 12.5 crores every year, this being the average of the proceeds from this tax between 1958-59 and 1959-60. However, provision may be made to enable the States to derive a proportion of the increased revenue, in view of the likelihood of the proceeds of this tax rising steadily owing to the growth of traffic.

Although the suggestion made by the West Bengal Government may not be acceptable in their entirety, there is no doubt that there is a good deal of logic in its arguments in regard to the various matters now being considered by the Finance Commission. The Commission, of course, will have to be guided by the needs and resources of all State Governments and of the country as a whole. Even so, the points made by the Government of West Bengal deserve the most careful and sympathetic consideration.

The Railways' Case

THE inadequacies of the country's transport system, which came to a head last year culminating in a countrywide coal shortage, have made the Railways the easy and obvious target of public criticism. From the Railways' own point of view, the criticisms have not gone in vain. For they have strengthened the hands of the Railway Administration in presenting their claim for higher allocations under the Third Plan. The claim has been partially conceded and the allocation for the Railways' Third Plan has been increased by Rs 25 crores. The additional allocation, unless it is earmarked for particular projects, should enable the Railways to deal with some exceptionally troublesome bottlenecks.

The criticism of the Railways' performance hitherto was mainly concerned with shortage of wagons, especially for the transport of coal. This was a criticism which it was particularly difficult for the Railways to refute, involving, as it did, conflicting statistics of wagon offerings, allocations and loadings, for which the responsibility belonged respectively to the Railways, the Coal Controller and the collieries themselves. Now that the Railways have apparently caught up with this criticism, and showed that they have provided more than the number of wagons they had undertaken to provide, the critics also appear to have changed their ground. We hear now less about Railways' failure to provide the stipulated number of wagons, and more about accumulation of stocks at pit-heads, which now amount to over 4 million tons.

The accumulation of stocks at pit-heads, according to the Railway authorities, is no new phenomenon. For years it has been a feature of the operations of collieries, and follows a seasonal pattern. The impact of the busy season is felt not only by the Banks, but also by the Railways and the Coal industry. During this season the pressure on Railway transport is at its peak. According to

a Railway spokesman, the accumulation of 4 million tons at pit-heads cannot be described as an unusual phenomenon. While in the last two or three years the stocks have varied round about 3.5 million tons, stocks were as high as 4.13 million tons in June 1955. The figures quoted below of pit-head stocks (Bengal-Bihar collieries) in recent years will enable the problem to be viewed in perspective.

		million tons
1955	April	.. 4.067
	May	.. 4.098
	June	.. 4.129
1956	March	.. 3.833
1957	May	.. 3.247
1958	May	.. 3.463
1959	May	.. 3.496
1960	May	.. 3.511
	June	.. 3.522

It has also been emphasised that the magnitude of pit-head stocks should be viewed in relation to the total output, which has increased from 38.22 million tons in 1955 to 54 million tons last year. The improvement actually effected by Railways in clearing coal stocks can also be gauged from the figure of wagon loadings which has increased from 3,262 per day in 1955 to 4,800 per day in April 1961.

Without minimising the achievements of the Railways it may be asked if a greater effort is not necessary to move the traffic offering during the Third Plan, and whether the wagon offerings should not be raised from the present level of about 5,000 per day, which Railways contend is the maximum possible, to about 6,000 per day. But that again raises the question whether the Third Plan allocation is sufficient to enable the Railways to deliver the goods, and in time.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

UBP-10-3-61

FOREIGN AID

\$ 2,225 Million For The First Two Years

The following is the text of a Press release by the IBRD on the Aid India Club meeting that concluded its deliberations on 2 June:— The Consortium of Governments and Institutions interested in development assistance to India resumed its discussions in Washington on 31 May and the meeting was concluded on 2 June.

At this fourth meeting the members of the Consortium undertook commitments of aid to India totalling over \$2,000 million. These large commitments should enable India to launch her Third Five-Year Plan of economic development with confidence in the ultimate achievement of its objectives.

The meeting was attended by representatives of the Governments of Canada, the Federal Republic of Germany, Japan, the United Kingdom and the United States and by representatives of the International Bank for Reconstruction and Development and the International Development Association. France joined the Consortium as a member during the meeting. The Governments of Austria, Denmark, Norway and Sweden and the International Monetary Fund sent observers.

The Consortium was encouraged by the economic progress made by India during the Second Five-Year Plan and recognized the importance of maintaining the momentum of India's development. It considered that, in relation to India's needs, the broad objectives of the Third Five-Year Plan (1961-1966) were reasonable, that the Plan itself was well conceived and that India had demonstrated a capacity to make effective use of foreign aid.

The Consortium recognized that, in order to carry out the Plan, the very considerable resources which India herself is able and prepared to devote to its financing, together with vigorous efforts to increase India's export earnings, will have to be supplemented by a

substantial inflow of foreign capital, both private and public.

The Consortium reviewed India's external financial requirements for the period of the Third Plan and considered what additional aid should be committed by its members during the first two years of the Plan in order both to provide immediate support for India's balance of payments and to enable

	Canada	France	Germany	Japan	United Kingdom	United States	I.B.R.D. & I.D.A.	Total
1961/62	28	15	225	50	182	545	250	1,295
1962/63	28	15	139	30	68	500	150	930
Two-Year Total	56	30	364	80	250	1,045	400	2,225
Indian fiscal years 1963/64	56	30	61	425	80	250	400	61
Total Com.	56	30	61	425	80	250	400	2,286

In addition to the above commitments, the United States has already undertaken to assist India's Third Plan by making available surplus commodities in the amount of about \$1,300 million. India is also receiving grants of wheat from Canada.

Estimated disbursements of aid under the commitments indicated at the meeting, together with other funds likely to be available to India (including a substantial carry-over of aid committed by members of the Consortium during the Second Plan), should approximately cover the prospective balance of payments deficit for 1961/62 and go a long way towards covering the deficit in the following year.

Stress was laid at the meeting on the need for aid to be extended in a form which would add as little as possible to India's foreign exchange repayment obligations, and the members of the Consortium undertook to give due consideration to this point in deciding the terms on which aid would be made available.

India to proceed in an orderly manner with the placing of new overseas orders for the Third Plan.

With the object of meeting both these needs and thereby furthering the implementation of the Plan, the following commitments were indicated at the meeting, subject as appropriate to legislative action or other necessary authorization:

Year of commitment	\$ million		Indian fiscal years	Total Com.
	1961/62	1962/63		
1961/62	28	15	1963/64	56
1962/63	28	15	1965/66	30
	225	139		364
	50	30		80
	182	68		250
	545	500		1,045
	250	150		400
	1,295	930		2,225
				61
				2,286

It was understood that the commitment indicated for the United States in 1962/63 was related to the prospects for additional aid commitments by other countries which are already members—or might subsequently become members—of the Consortium, in amounts which would raise the total contributions of these countries in that year to a level comparable with the proposed United States contribution. Accordingly, it was agreed that the member Governments and Institutions, together with such other Governments as might be prepared to participate, should meet again in the fall of 1961 to review the position and to consider what further resources might be made available.

The Consortium reaffirmed the continuing interest of its members in India's economic development and agreed that, in addition to another meeting this year, a further meeting would be necessary at a later date to review the progress of the Third Plan and to consider India's financial requirements during the last three years of the Plan.

Notes

STC

An Independent Assessment

Thanks to the enterprise of the Council for Economic Education, Bombay, we have now an objective assessment of the working of the State Trading Corporation mainly from the point of view of the overseas buyers of Indian goods and commodities. This assessment which has been made by the Economist Intelligence Unit, London, on behalf of the Council is refreshingly free from familiar controversial odours like STC's usurping the legitimate functions of private enterprise. One of the reasons why much of the Indian criticism of the STC lacks conviction is that it is flogging dead ideological horses instead of empirically showing up the STC's weaknesses in actual performance. This is precisely what the Economist Intelligence Unit has done.

The study confines itself to the export performance of the STC and ignores the various other tasks that the STC has undertaken. Thus bulk imports and distributory functions of the STC are outside the scope of the present study. The broad findings of the study accord with independent general impressions inside the country. That is

to say, the STC has done fairly satisfactorily in regard to iron ore export and in the directions of fostering of trade with the communist countries. But with regard to manganese, its record has been dismal. One will not, however, be justified if one puts the blame for the declining trend of exports solely on the STC. Even without its meddling, the manganese trade would most probably have still shown a declining trend. As the Economist Intelligence Unit has pointed out, new and cheaper sources of manganese supply have developed during the past few years nearer the main consuming countries. For instance, the US market is now getting its requirements from Brazil whose product is favoured not only because it is cheap but also because Brazilian manganese interests are financially linked with US interests. Similarly, Japan has found a new supplier in Australia, and Western Europe and Russia, in Africa. Even so, there is no excuse for the STC messing up things with all sorts of fancy schemes which have only resulted in scaring away customers.

The STC and Government will do well to study the report of the Economist Intelligence Unit carefully and set in train remedial measures calculated to make the STC more of a business organisation than it is at present. Exporting is not like running a ration shop where the buyer is obliged to take whatever may be the quality of the products you give. In the export field, one has to be constantly seeking customers and having secured them, keep them. Such things as shipping goods on agreed dates and ensuring that the quality of goods is according to specifications are considered more important by discriminating buyers than even the price. The Economist Intelligence Unit's report shows that the STC is yet to learn this elementary lesson in export business.

The sensible thing to do is not to liquidate the STC but to make it a model organisation especially charged with the task of export promotion. Its record so far has shown that even the tasks it has already undertaken are too much for it. It will be folly to place on it more onerous responsibilities and, anyway the present is not at all the time to go on experimenting in an important field as exports. In the two directions of iron ore export and trade with communist countries the STC has, according to independent assessment, done well. This shows that

the STC can be assigned responsibilities in crucial tasks. But if it is to succeed in a greater measure than before and what is more important, in a measure necessary for the success of the Third Plan, it should be more business-like and less tied, in its every-day activities, to the apron-strings of the Government.

OIL

Accord

The signing of the agreement between the Government of India and the Burmah Oil Company, covering the grant of an area of approximately 1,800 square miles to Oil India Limited for further oil prospecting in North-East Assam, climaxes the protracted and at times tortuous negotiations between the two parties. The agreement which will supersede the existing promotion agreement governing the formation of Oil India Limited, provides for raising the proportion of the Government's share of the capital in the Oil India Limited from 33 1/3 per cent to 50 per cent ensuring equal capital participation between the Government and the Burmah Oil Company. Foreign exchange required for the development of any oil found in the new exploration will be provided by the BOC, while the Government will make available the rupee finance. The new company will have an eight-member board of directors four from each side. The managing director will be selected from a panel of names submitted by the BOC, while the financial director will be selected from a panel of names submitted by the Government.

Mr Malaviya will be justified in hailing the agreement as a triumph for the Government's oil policy. For in the wake of the breakdown of the talks between the Government and the ESSO of US, scepticism was strong whether any mutually acceptable scheme would materialise out of the Government's negotiations with intending foreign collaborators, in view of what some considered to be the rigid and doctrinaire attitude of the Government relating to important matters such as capital participation, pricing and refining and marketing rights. That, therefore an agreement should be reached with the BOC speaks volumes for the spirit of accommodation shown by both the parties. In the present agreement, Mr Malaviya has been able to separate the question of refining and distribution from the issue of exploration. But on questions of capital participation and pricing, a more reasonable policy than was originally associated with the Government has been followed. The pricing formula provides for a minimum of 9 per cent and a maximum of 13 per cent on equity capital. The actual price, the agreement says, will be equal to

the cif price Calcutta minus a discount which will be variable depending on the surplus or scarcity of the oil situation. The Government has also departed from present policy in respect of capitalisation of the expenses relating to development and exploration for taxation. Under the new agreement, the Government has agreed that Oil India's expenditure on development and exploration both in the past and in the future will be deducted from profits for the purpose.

The agreement with the BOC may well be the precursor to similar agreements with other foreign collaborators who have expressed interest in oil exploration and have taken up negotiations with the Government. Two notable names are the State-owned ENI of Italy and the Petroleum Institute of France. Though the stage of the current negotiations with these parties is not known, there is implicit in the present situation in the oil industry the need for intensifying oil exploration and for associating foreign firms in the exploration work. The present situation in the oil industry is characterised by a marked imbalance between production and requirements of crude oil. Even at the end of the Third Plan when oil from the Naharkatiya and Moran fields in Assam and the Cambay and Ankleshwar fields in Gujarat becomes available, total production of crude would amount to no more than 5 million tons while the estimated requirements are of the order of 10 million tons. An estimated 40,000 square miles spread in different parts of the country are oil bearing areas a large part of which remain to be explored. The allocation for the oil industry during the Third Plan

is of the order of Rs 115 crores which bears no relations to costs involved in successful exploration for oil. Nothing, in the circumstances, could be wiser than that foreign companies should be associated in exploration work which would ensure not only the foreign exchange required for exploration but also the technical know-how which the country does not possess in a measure adequate to its requirements.

LICENSING

Diversification

Among industrial licences issued this year, those for the manufacture of automobile parts calls for special notice. In addition to gaskets, fuel injection equipment is to be manufactured in greater quantity and additional output of vehicles by Telco and Mahindra has been licensed. Among new undertakings sanctioned is the project of Duncan Bros. for manufacturing in the Bombay area valves for trucks and cars. The manufacture of switches, head lamps and tail lamps at Faridabad by another concern is also contemplated. Some surprise will be occasioned by the licence given to a co-operative society for the manufacture of abrasives. This might be on the score that industry is protected. A substantial increase in the output of typewriters is envisaged and Halda portable typewriters numbering 6,000 will probably come on the market. This should afford relief to consumers who have found typewriters both scarce and dear. The progress of refrigeration is perhaps necessary for future industrial growth and welfare too and a large increase in the production of water coolers is expected from Blue Star Industries. In view of the need for precision instruments, the Government factory at Lucknow is undertaking the manufacture of tachographs. The increased output of titanium dioxide, owing to the larger export demand, is authorised by a licence given to Travancore Titanium Products. Increased output of pesticides figures in the expansion programme of some companies. The pharmaceutical industries are also authorised to expand along with the paper industry. The Sri Gopal Paper Mills has received a licence to start newsprint and pulp manufacture in Kangra district but of more interest for the market is the permission given to the National Rayon Corporation to start pulp manufacture in Mysore with a plant producing 30,000 tons per annum. The Gwalior Rayon Silk Manufacturing Company is also authorised to produce pulp at a new plant in Kerala. Many sugar companies are entering the field of power alcohol manufacture. The East Asiatic Company is licensed to produce more vanaspathi at its Madras factory

and Godrej Soaps at Vikhroli is licensed to increase substantially the output of cosmetics including glycerine. A licence to increase the output of refractories has been obtained by Orissa Cement which has already undertaken to increase its capital. A substantial increase in the production of deadburnt magnesite from Salem is being undertaken by Dalmia Magnesite Corporation.

Some more instances of industrial diversification can be found in the association of a group of

sugar companies in the Uttar Pradesh with Booker Bros. and McConnell whose interests now range from the West Indies to Upper India. In the more recent development of the sugar industry, machinery manufacture is already a feature and the KCP in Madras is now undertaking manufacture of plants for new co-operative factories. The UP venture will also be on the same lines. In spite of the idea that the established concerns should not embark on strange lines and

should confine themselves to their chosen field, the licensing policy does not appear to be uniform and cotton mills have been found entering the field of pipe manufacture along with companies like Kalinga Tubes and Indian Iron & Steel which is apparently setting up a new plant at Jabalpur. The manufacture of tin containers by a vanaspathi manufacturing company in Ahmedabad might appear logical, like the manufacture of collapsible tubes by the Metal Box Company.

AIR-INDIA

IN ASSOCIATION WITH B.O.A.C. AND QANTAS

FOREIGN AID

Impact on Imports

The anxiety of Pakistan to follow India in getting foreign aid may not provoke anxiety, since the main decision has been reached at Washington last week. The use of the term, consortium in reference to the programme of aid may indicate that loans rather than grants will be the medium of aid. But the liability of contributors may not be reduced by the entry of new members into the consortium. The entry of Italy may be due to the eagerness of semi-private monopolies to secure a bigger share in India's trade and Holland's willingness to give aid may be due to the revival of Amsterdam as a world financial centre. Holland may help to build ships for India on long term credit or sell second-hand ships like the Scandinavian countries. Some competition in Europe or Africa for US aid available may emerge, if the Vienna conference leads to

a general review of present needs and problems.

But the point that requires more notice is that the International Development Agency will supplement the World Bank and soft loans are likely to be secured. In the recent book of Mr Andrew Shonfield about the attack on world poverty, stress was laid on soft loans, with repayment spread over a long term and the argument was that development inevitably meant an immediate increase in imports while exports would not increase as expected. The plea made was, the interest rate even on untied loans should not be a burden and advanced countries should let in imports by lowering tariffs and relaxing quota restrictions. The consortium then must influence fiscal policy on its own initiative and, to that extent, Indian exports to Europe may pick up gradually, if countries like Switzerland or Holland were to recognise that India has no external balances

left to draw upon during the Third Plan period.

The increase envisaged under imports may lead to a considerable departure in import policy from October, if all goes well according to plan. The present trade control machinery may have to be dismantled and the aid programme, therefore, will have a great effect on trade. The progress of US recovery may lead to enlarged imports from India also, and it is quite possible that a long period of stability in exchange rates will soon be imposed. That too may help to improve the position of the falling rupee at home even more than any assurance about the limit set to future deficit financing. But internal monetary discipline will be probably harsh and taxation may be eased often to control any rise in prices or even a rise in consumption. The aid offered to India imposes certain obligations, over and above repayment with interest, particularly if repayment of loans in rupees is arranged under

Indian Finance

pacts negotiated. But the problem of maintenance imports to help industry function up to installed capacity is virtually solved already.

FOURTH PLAN

Germinal Ideas

Even as the details of the Third Plan are being filled in for the ceremonial submission of the final text at the next session of the Parliament, germinal ideas seem to be forming in respect of the general scope and aims of the Fourth Plan that is yet five years away. Reports trickling from quarters close to the Planning Commission suggest that in pursuance of the idea of perspective planning, the Planning Commission has already formed its views in respect of what should constitute the core of the Fourth Plan. It is now understood, that in the Fourth Plan, the accent would fall on metal and fuel based industries marking a shift from steel which loomed large in the Second and Third Plans. Hints about specific aims suggest a target of 17 to 18 million tons for steel, 20 million Kw for power, 17 million tons for coal and Rs 70 to 71 crores worth of machinery production by the end of the Fourth Plan. It has been clear that the Planning Commission attaches crucial significance to investment in the Fourth Plan for laying the industrial base for a radical break-through in industrialisation, so that subsequent to the Fourth Plan, industrialisation could proceed in a process of automatic self-propulsion. A massive build-up of the essential metals and power and machinery is considered essential for achieving this dynamism in industrial growth. In this light, the Third Plan will mark a process of preparation for the final leap that will be taken in the Fourth Plan.

One objection against any such disproportionate diversion of investment outlay in the Fourth Plan toward a restricted base of metals and fuel etc. would be the continuance of the present imbalance between investment and the rate of income generation. Against this, however, has to be balanced the benefit of the creation of further potential for rapid industrialisation of the country.

It has to be pointed out that present ideas about the general aims and goals of the Fourth Plan can be taken only as tentative, and they can be recognised as feasible only after they are fitted in with factors relating to the availability of the physical and financial resources. While the outlook in terms of resources will have to be carefully assessed, it is important to recognise that the successful implementation of the Third Plan will be a material factor that would influence the shape of the Fourth Plan.

10 June 1961

EXPORT

To Neighbours

Recent discussions on the Third Plan and the prospects for its successful implementation have served to draw attention to the tremendous magnitude of the task constituted by the export target of Rs 3,700 crores fixed by the Planning Commission. While in the context of an export target of this order, export promotion schemes will have to be put through with greater vigour and energy, it should also be clear that the basis of the strategy for export promotion will have to be carefully laid by a proper study of the scope for increasing exports both country-wise and region-wise. The importance of such study is that it will help in the consummation of export promotion schemes by indicating lines for effective and efficient direction of exports. In view of the present orientation of India's trade, it is natural that the developed countries should figure as the important targets for export promotion. At the same time, the scope for expansion of exports to neighbouring developing countries should not be overlooked. A study of the prospects for India's trade with some representative countries of this region, contained in the April issue of the Journal of Industry and Trade should serve as a basis for generalisation of the export prospects for India with the under-developed countries.

The countries whose trade with India has been analysed by the journal with reference to the prospects for increasing Indian exports are Ceylon, Malaya, Iran, Pakistan, Thailand, Aden and Ethiopia. The divergent levels of India's exports to these countries are an indication of the scope for increasing exports. For example, while India ranks as the second largest supplier of goods to Ceylon, with Ethiopia the percentage of Indian exports is only 7.0 per cent of Ethiopia's total imports. In a different way, the problem of export promotion will be that of recapturing falling markets of countries in this region. Iran and Aden are instance of countries where the Indian exports have witnessed decline. Indian exports to Iran during 1959-60 was 25 per cent less than those in 1958-59. Pakistan is another country, with whom trade has slumped though the factors are more political than economic. Promotional programmes for expanding trade with these countries have to take into account the trend in current trade in traditional goods and also the scope offered for non-traditional items. In respect of some traditional items a displacement of Indian goods is noticeable in respect of textiles in Malaya because of competition from Japan and in Ethiopia because of the growth of the indigenous cotton textile in-

dustry in that country. Pakistani and Japanese competition in textiles in the market in Aden is also a factor to reckon with. Pakistan has emerged as a powerful competitor in some of the industrial items of Indian exports to Asian markets.

The key to increase India's exports to these countries lies in diversification. Presently it is primary commodities and consumer goods that bulk large in India's exports to these countries. Textile goods, chillies etc. are the commodities that figure prominently in Indian exports to Ceylon. With Malaya, it is jaggery, fish and fish products, unmanufactured tobacco, cotton textiles and jute goods. However the successful attempt already made by India in introducing manufactured goods particularly of the engineering industry indicates the scope for further expansion of exports on the basis of more diversified programme. Prospects are considered good for Indian exports to Ceylon of electric motors, diesel engines, agricultural implements and a host of light engineering products. Proximity to Ceylon is an advantage that should be turned to good account for increasing Indian exports to that country. Demand for such goods of the light engineering industry is also strong in Malaya and the foot-hold already gained in respect of electric fans, sewing machines, cast iron, galvanised iron pipes and fittings, as also some light electrical goods, could be utilised for enlarging the volume of Indian exports in other non-traditional items. It is the engineering goods that seem to have the best prospects for exports in these countries. But avenues should also be explored for exports of other industrial goods. Mention may be made of the scope for exports of steel and steel billets to Pakistan while Malaya is also credited with import potential for products of steel and heavy electrical industries.

SUNFED

New Beneficiaries

The Governing Council of the United Nations Special Fund which met during the latter half of last month has made known its decision to extend financial assistance to India to the tune of over \$1.4 million for the establishment of a Central Instructor Training Centre at Madras and the Petroleum Exploration Institute (Training and Research Wing in the Oil and Natural Gas Commission) in Dehra Dun. With the sanctioning of this amount India has emerged as the largest recipient country since the inception of the Special Fund in October 1958, the total amount granted so far amounting to \$13.8 million covering 15 projects.

Financial assistance from the Fund for the Central Instructor Centre amounts to \$612,000 for

a duration of three years with the International Labour Organisation officiating as the executive agency. The setting up of this institution is in accordance with the Government of India's decision to develop vocational and technical skills for the fuller utilisation of human resources for the speedy development of industrial resources in the country. The centre will start functioning in July next year with 150 trainees. The Special Fund has also undertaken the task of equipping the institution with a team of experts and adequate equipments.

The amount allocated for the purpose of starting the Institute for Petroleum Exploration is \$790,300. The immediate objective of the establishment of this institute is to draw adequate specialised personnel to carry out the Government of India's oil exploration programme during the next quinquennium. For conducting the activities pertaining to the training and research in the field of oil exploration the Fund will provide experts and equipments. The experts deputed by the Fund will initiate training and research activities under the project with the cooperation of Indian counterparts. The Fund has also agreed to offer 15 fellowships for providing higher technical training for Indian engineers.

LAC

Fluctuating Fortunes

Though lac is a commodity of economic importance, the conditions of the industry and trade in this field have been such as to cause concern particularly in respect of the fluctuations in the earnings of foreign exchange from exports of this commodity. The depression in exports that set in in the early years of the fifties was corrected by the Government by taking measures to impose a ban on speculation at the instance of the Indian Lac Cess Committee and the Bihar Shellac Enquiry Committee. In consequence, exports of lac rose to a flattering level of 710,000 maunds valued at Rs 11 crores in 1955-56. Since then a heavy fall in prices for finished products accompanied by reduction in the quantum of exports due to competition from synthetic products have reduced export earnings considerably. In 1958-59 exports were to the extent of 750,000 maunds valued at Rs 5 crores only, while in 1959-60 they were of the order of 365,000 maunds valued at Rs 6 crores. Such fluctuations in the quantum of exports and earnings have necessarily underlined the need for steps to put the industry back into the path of healthy and progressive growth.

Mr Pritam Singh, Secretary Indian Lac Cess Committee has suggested various measures for raising the level of production and for stabilising and increasing export trade in lac. He laid particular stress on the pilot plant being set up for the manufacture of bleached lac which is in extensive use in foreign countries and demonstration centres being organised for the benefit of cultivators and manufacturers. While these measures should be found useful as an effective wedge for making further headway in export promotion, there is an equally urgent need for directing attention to exploring new uses for lac and for improving the quality. Improvement of quality is a particularly important consideration as this is a point which would to a great extent determine the success of the country in meeting the competition from Thailand which has considerably increased its production of lac.

A rather peculiar problem that has posed difficulties to the industry and trade is the disparity in the export and internal prices for lac. Such disparity was brought about by the Indian Lac Exporters' Association trying to fix minimum export prices for seedlac and shellac from June 1958. This has worked against the interest of the manufacturer and cultivator whose share in the total internal price for lac compares very unfavourably with that of the speculative middleman. Since the lives of nearly 5 million people mainly adivasis in Madhya Pradesh, Bihar and West Bengal (for whom lac cultivation provides an assured source of subsidiary income) are bound up with the fortunes of lac cultivation, measures for establishing a reasonably stable relationship between export and internal prices are necessary and urgent.

HEAVY ENGINEERING

A New Venture

With the signing of an agreement between Heavy Engineering Corporation and Messrs Techno Expert of Prague, the setting up of another heavy machine tool project near Ranchi has become a certainty. The projected plant will be the third of its kind to be set up in the vicinity of Heavy Machine Building Plant and Foundry Forge Plant under the Heavy Engineering Corporation. The detailed project report will be finalised by the end of this year by the Czechoslovakian company and Indian engineers are expected to proceed to Prague to take part in the preparation of the report.

The capacity of the plant in the initial stages will be of the order of 10,000 tons of diverse types of heavy machine tools which will be entirely different from those that are now being manufactured in the country. Another feature of the plant lies in the fact that for the first time in India machine tools of larger sizes and capacities will be produced by this plant. The plant is expected to

70,00,000 FIRESTONE TYRES!

The Firestone factory in Bombay has now passed another landmark in its 21-year existence. The production of Firestone tyres in India has topped the figure of 70 lakhs. From a small beginning, through successive expansions, production has now reached around 2,000 tyres daily, covering a vast array of different sizes, ranging from 3.50-10 for Motor Scooters to 21.00-25 28 Ply Rating for Heavy Earthmoving Vehicles.

But the overall demand for tyres of all types is still so far in excess of output in India that, in spite of equitable distribution arrangements, there is a severe shortage which is felt throughout the country. Expansion schemes are afoot, but it will be some time before supply catches up with demand.

WE BELIEVE that the ill-effects of this prolonged scarcity can be kept within limits if every truck tyre user does what he can to extend the life of his tyres. Follow the 3-Point Programme —

INSPECT

REPAIR

AND WATCH OUT FOR FURTHER TYRE-SAVING INFORMATION FROM

Firestone

BEST TODAY — STILL BETTER TOMORROW

7.11

be commissioned by the end of 1966. The total capital outlay of the proposed project, according to the present estimates, will be around Rs 15 crores. The value of its annual output, according to the present calculations, is likely to exceed Rs 8 crores.

As is evident from the preliminary report, the project, when in full production, will manufacture 278 machines per annum, the average weight of each machine will be in the neighbourhood of 25 to 30 tons. The maximum weight of individual machine is estimated at 180 tons. The plant's requirements of basic castings and forgings will be met entirely from indigenous sources. When in full production, the plant will provide employment opportunities for nearly 2,000 workers.

PAKISTAN

Some Trade Trends

Some recent trends in Pakistan's external earnings, visible and invisible, have points of interest for us. One of them is Pakistan's proposal to produce films with Italian aid. Four major Italian producers will help Pakistani producers, and import of Italian films is also contemplated. This may help raise local standards of production and taste. Of course, this implies a threat to Hollywood films, even that area placed for exhibition through local distributors and by regulating the remittance of proceeds to the US film companies. Pakistani producers are protected to an extent. The Italian film that is rare in India will be common in Pakistan, but US films made in Italy like *Quo Vadis* or *War and Peace* have met with a gratifying reception in India. Some arrangement like that made by Pakistan may suit India also especially since India can ask for an export quota of Indian films to Italy. As for Pakistan, it is quite likely that Iran may provide an outlet for films made in Lahore.

A recent trade pact implies the creation of a market in Iran for paper as well as hides and skins. The export of cummin seeds as well as linseed to Pakistan by Iran will trench on Indian trade with Iran which will however be a major supplier of oil to both countries. A major reform in social life is contemplated, too. Pakistan wants to replace bids by cigarettes, especially in East Pakistan, and to avoid the import of both bids and the leaf needed for making bids from local tobacco. Two new cigarette factories equipped with German machinery are to be set up in East Pakistan and arrangements for the free import of cigarette paper has also been made. The opening of an investment burden has led to an influx of foreign capital and it is known that some money from East Africa has come lately into Karachi.

There will perhaps be more interest in the intelligence that the controlled price of cement in East Pakistan is Rs 125 per ton and the excise duty is only Rs 15 per ton, while dealers can earn Rs 1.50 as commission per ton sold.

USA

Renewed Energy

President Kennedy's special message to Congress last week is a stirring assessment of US national and international objectives. Its concepts and proposals will occupy the attention of the American people and the US Congress for some time to come.

Yet for one interested most directly in US economic developments, the most immediate impact of the President's message lies in its official acceptance of the fact that the brief and mild recession of 1960-61 is over, and a recovery is under way. "Our economy," the President observes, "is now enjoying renewed confidence and energy."

This being the case, it is important to note that in his message the President sees the end of the recession not a terminal point, but rather as a starting point for long-range and fundamental programmes. These programmes would enhance the economic and social progress of the United States and would enable the nation to meet urgent needs at home and abroad.

Without going into details, the President has outlined several specific steps he would like to see taken in the effort, in his words, "to make full use of our resources—human, scientific and material."

This entails principally measures to accelerate US economic growth and, in the process, to curb unemployment. For instance, the President promises for future submission to Congress proposals to improve existing government aids for the unemployed and to find useful employment opportunities for the nation's youth.

Also involved is a new and important manpower development programme to train or retrain workers in new occupational skills over a four-year period. Such a programme would supplement public and private training and education endeavours already in progress, and would help meet one of the ever-present challenges of a vigorous and expanding economy. This is the challenge of technological development and industrial change, with its related obsolescence of old skills and demand for new ones.

Accelerated growth and rising employment opportunities also require expanded investment in productive facilities. And this, in turn, requires the kind of favourable monetary and credit conditions that will sustain the desired investment increase.

To this end, the President notes in his message, the financial influence of the government should be exerted at this time in the direction of general credit ease, including appropriate downward adjustments in interest rates, and further growth in the money supply.

Along these lines, the President calls for enactment of the tax credit incentive for business investment in plant and equipment which he submitted to Congress earlier.

In addition, he calls for an increase in the lending capacity of the small business administration. This US Government Agency helps make funds available for worthwhile undertakings by the nation's smaller enterprises, which make up the bulk of the more than 4.5 million businesses now operating in the United States.

There is one question that inevitably arises in all this. It concerns the possible inflationary impact of expansionary measures proposed by the President.

It is Mr. Kennedy's contention that enactment of his proposals would not be inflationary, even though it would take place during a period of rising economic activity. In support of this view, he cites several basic facts: price levels are stable; there is still a good deal of unused industrial capacity; unemployment, while declining, still is higher than the administration, along with the public at large, would like to see it.

At the same time, the President lays great stress on prudent budgeting. In sum, the recommendations in his message—embracing increased outlays for space, defence, and foreign and as well as for domestic economic and social progress—bid fair to add nearly \$1,000 million to federal expenditures next year, and even more in the years after that.

This could add somewhat to the moderate budget deficit already envisaged for next year. Hence, the President's emphasis on restraint in unnecessary government spending, and on such steps as closing tax loopholes and increasing postal rates as ways of increasing the government's revenues.

With it all, the President is asking for no additional taxes to finance the urgent requests he is making. It is his belief—one that experience tends to substantiate—that the nation's present tax structure and resources are more than sufficient to support them without a long-term budget deficit if the economy moves ahead rapidly enough.

In other words, over the long-run an expanding economy, with its rising levels of personal and corporate income, can generate sufficient tax revenue to make up for the expenditures the President is proposing—expenditures designed to enhance the vitality and quality of the US socio-economic

system, and to enlarge and make more meaningful its contributions to international security and well-being.

SOUTH AFRICA

The Ox-Wagon Republic

The conversion of South Africa into a Republic is an accomplished fact and discontent within the country has been curbed effectively. What the future holds for South Africa will probably change, from the reports about strikes in the last week of May and police measures to deal with local discontent. The attitude of the Central African Federation to South Africa will probably change and Sir Roy Welensky may be induced to accept some formula to meet African claims. A period of economic strain is foreseen for South Africa, and it is significant that recently a report about the impending devaluation of the new currency, the Rand (worth 10sh) appeared. While this helped to increase interest in gold-mining shares quoted in London, it was decidedly suggestive of South Africa's willingness to follow Australia and New Zealand in cheapening her currency in relation to the £ sterling. Devaluation would restrict imports and probably enlarge exports, to Europe particularly. However, the principal export is gold and devaluation would be a means of securing an enhanced price for gold, to which extent, the mining industry would probably benefit, along with copper, uranium and other mineral products exported by South Africa. It is quite likely that the cheapening of South African manganese would affect India's export trade, reviving slowly since 1960.

But devaluation should be regarded as a sign of defeat, because South Africa, owing to the political situation developing in recent years, has been unable to attract foreign capital as before and has not been able to break the process of disinvestment. But in African countries, sales of South African sugar or steel might not increase because of the general preference for a boycott on South African goods, though it is quite possible that East Africa would rely to some extent on imports from South Africa, for instance, of clothing. It must be understood that a depression would hit African workers as well as White employers, and if an economic crisis in South Africa develops, the main sufferers would be investors abroad and local labour. It is scarcely likely that the Nationalist farmers who have been able to avenge themselves on Britain for the latter's imperialist policy, would suffer to any extent, if unemployment increases and the external assets decline.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

LICNEL FIELDEN, the first Director-General of All India Radio, has sent it a conventional enough message of congratulation on its Silver Jubilee. But in his autobiography, "The Natural Bent" published some time ago, he considers it, at least his part in it, the "biggest flop of all times." Before Dr Keskar takes offence. I had better explain that in its context, this piece of extravagance has a certain validity and may even be said to be very flattering to him. Fielden's complaint was that "four years of hard labour had produced fourteen transmitters and a competent staff. And in four years, the 400 million people of India had bought exactly 85,000 wireless sets. It was enough to make a cat laugh." Dr Keskar who can boast of 60 transmitters and over a million and a half of licences issued can perhaps feel that he has done better. But in terms of the original hopes roused, Fielden's despondency does seem justified. AIR was conceived in one of those moments of fuddled fervour (arising probably from a guilt-feeling of the White man's burden being lightly borne) that used to bother our former rulers from time to time. The natives were entitled to good, if not self, government. And broadcasting in the thirties was a new toy that intellectuals liked to play with. Men like H. G. Wells went starry-eyed about its possibilities and some people had got on to the bright idea that in a country with mass illiteracy, the scope for broadcasting as an instrument of progress was practically endless. It was one of those ideas that apparently managed to get past the cynicism of the old hands at governing the country. Even so, there was an incredible amount of opposition in the early days, not least from Indians, who were disposed to consider it, understandably, as a new and powerful instrument of oppression and, less understandably, as waste of money.

Fielden showed both courage and cunning in getting broadcasting accepted, his cunning consisting in "seducing" nationalist leaders at least to an acquiescence in it. His most interesting conquest was Gandhiji, whom he once asked to broadcast over the AIR. Gandhiji's reply was characteristic. He said in effect, that if he was sure that Fielden would continue, he would do it for his sake. But since Fielden had already got himself into trouble with the government

and was sure to leave AIR, Gandhiji had no intention of giving AIR respectability and probably the highest listener-rating of all times.

As a revolutionary instrument of mass education, the AIR was certainly a failure. But the AIR has every right to a more modest sense of fulfilment on the occasion of its twenty-fifth anniversary. Apart from the increase in the number of transmitters and wireless licences, the scope of its task has increased enormously. Its fare is more variegated and its efforts at educating the public in better standards of taste have, over the years, met with a gratifying amount of success. Any one who consciously promotes culture has to appear in the somewhat unflattering role of a prig. I think the AIR should not mind that. The complaint is not that the AIR is too serious, but that it is too solemn. It is a valid complaint and AIR should do something about that.

Those who keep looking for signs of "normalisation" of life in the Soviet Union find their hopes fulfilled in disconcerting ways sometimes. What could be more normal from the "democratic point of view" than predatory news-gathering and sensational copy? Yuri Gagarin, the Cosmonaut, has just complained of both in the Soviet Union. A Pravda writer quotes him as saying that some Russian journalists have "sensationalised and distorted" the details of his space flight. What is even more serious, his flat has been "invaded by an overzealous journalist of a respected newspaper" who pinched his photograph in the bargain! Other journalists have "flagrantly published, without the consent of the family, extracts from his personal letters."

As a purveyor of vicarious thrills, the Soviet Press is rather a late and reluctant arrival. Indeed, there is an element of irony that it should be Major Gagarin who should have raised his voice of protest against its sensationalism. For it was his own achievement that signalled the new style in Soviet journalism in which the "human angle" was played up. Indeed, there were

privacy against the more blatant curiosity of the press. The ethics and even common decency of some of the familiar modes of news gathering are highly dubious. But the press, as the editor of the Economist told, in a moment of candour, the International Press Institute in Tel Aviv last week, is critical of everything except itself. From time to time when a particularly outrageous invasion of privacy takes place, the press discusses it inconclusively. But on the whole, it is inclined to give itself the benefit of the doubt and freedom of action. In any case, Yuri Gagarin's grouse about some of the occupational hazards of being a VIP deserves sympathetic understanding. To judge from photographs, he is a rather shy young man and except when he is mouthing obviously tutored sneers about alleged American attempts to claim for him a noble lineage, a likable person. The news hounds should leave him alone.

Final Allocations

THE National Development Council which approved the final draft of the Third Plan last week, after recording the suggestions of the participants, has not attempted to close the gap between the financial and physical targets, though from the trend of discussions it is clear that a majority of the members were convinced of the feasibility of a larger Plan. The dour insistence of the Finance Minister, who has the thankless task of preaching caution to Plan-drunk enthusiasts, has ensured that, at least for the present, the financial limit remains at the figure of Rs 7,500. On the other hand, it is also learnt, that the NDC has not been able to arrive at any positive decision on the question of stepping up the pace of Prohibition. Dr B. C. Roy, is said to have told the puritans point-blank: "I cannot do it in my life-time".

As regards the Plan outlay, the Finance Minister is reported to have stated in so many words that even the outlay of Rs 7,500 crores should be considered optimistic. Though he has done far more than his counterparts in the States to strengthen and extend the tax base of Plan resources, he preferred to take a conservative view of the overall outlook. He is also reported to have pointed out that the suggestion for diverting resources of commercial banks to the public sector was based on a misconception of the resources at the disposal of banks in the private sector or the manner in which they are deployed. The other suggestions made during the course of the discussion only serve to emphasise the points mentioned in the Draft Outline, and their incorporation in the final text of the Plan are not therefore, likely to necessitate any substantial revision of the draft considered by the NDC.

While the financial limit of Rs 7,500 crores has not been altered, it has been made clear that, for the purpose of implementation of the Plan, the preparatory work in regard to the various projects, enquiries, reports etc., will proceed on the basis

of the Plan of Rs 8,000 crores. The completion of the projects during the Plan period will depend on adequate resources becoming available. The position in this respect will be reviewed from year to year, and the priorities and pace of implementation adjusted accordingly. If the estimates of the Savings Committee prove unduly optimistic there will be spillover of the projects into the next Plan period. The stretching out of the projects, if it becomes unavoidable, may involve some loss but the Prime Minister has pointed out that the loss of a few crores on this account is preferable to the loss of one or two years in getting started on the projects, if preliminary works are started only after the full quota of resources has been assured.

The requirements, under different heads of development, for the Plan of Rs 8,000 crores are given in the table. The distribution of the outlay of Rs 7,500 crores over these heads is also shown alongside.

From the Table it is clear that the major portion of difference between the physical and financial plans pertains to the plans of the Central Ministries. The differences in respect of the States' Plans are not very large and except in the case of Industries and Transport, the additional expenditures involved should not add to the requirements of foreign exchange. If the expectations of increased internal resources materialise, there should be no difficulty in implementing the States' Plans in full, at least in those States whose Chief Ministers are particularly confident of raising larger resources.

As regards the Central Plan, the shortfall of resources amounts to Rs 378 crores of which Rs 175 crores is in respect of Social Services and Rs 200 crores in respect of Industries and Transport. The full implementation of all the projects for expansion and development of social services will be mainly determined by the availability of internal resources. On the other hand, the availability of foreign exchange for particular projects will determine the extent of the shortfall in implementation of the programmes for Industry and Transport.

Soil Mechanics

A three-man Team of Indian Engineers headed by Dr K. I. Rao, Member, Central Water and Power Commission, will be attending the 7th Plenary Session of the International Commission on Large Dams to be held at Rome from 26 June, to 1 July, and the 5th Conference of the International Society on Soil Mechanics and Foundation Engineering meeting in Paris from 17 July to 22 July. The other members of the delegation are Mr V. Ranganathan, Chief Engineer, State Electricity Board, Kerala and Mr R. S. Gill, Chief Engineer, Beas Dam Project. It is learnt that the Indian Council of Agricultural Research has sponsored a scheme to make use of

the services of prominent scientists in the field of agriculture and animal husbandry, who have retired from service or are due to retire soon. Under the scheme such scientists who are still active in research will be enabled to continue to work with suitable financial assistance from the Council. For this purpose they should try to secure a sponsoring institution acceptable to the Council, which could provide them facilities for the continuation of their work. An annual grant of Rs 6,000 for the scientist and a grant ordinarily not exceeding Rs 4,000 for expenses will be provided. The grant may be raised in exceptional cases. The allowances and grants are tenable for a period of three years, but can be extended on application.

Markets

JUTE Sharp Decline in Prices

Conditions in the jute and gunny markets have been easy the past week and the decline in prices has been particularly heavy on Wednesday. Earlier in the week, sentiment seemed to rally immediately after the West Bengal Government's announcement allowing the block closure of mills for a total period of two weeks spread over the current month and July. The optimism however proved short-lived as it was presumably based on the mistaken impression that a block closure of mills would result in a scarcity of goods and consequent increased foreign inquiries. Such a calculation is wrong because total pro-

wait because they can obtain their immediate requirements at a much cheaper rate from Pakistan which is said to be following again its familiar tactics of underquoting Indian jute goods in world markets. With overseas buying almost absent, mills have presumably deemed it prudent to sell at prevailing prices. This decision seems to have been helped by the sizable decline in raw jute prices in the meantime. The singular lack of foreign interest in the Calcutta market despite a big decline in prices seems to indicate that the general expectation among overseas consumers is that the supply position in goods

will show marked improvement what with reports of bumper crops both in India and Pakistan.

It is not surprising that holders of raw jute have interpreted the closure news bearishly. The fact that mills would suspend work for two weeks in a period of two months means that mills requirements during the current jute season will be reduced by half a month's consumption, or roughly 2.5 lakh bales, of jute. In this section too the decline in prices seems to have made little effect on the mills who continue to ignore the fact that jute is available often at below quoted rates. Now that it has been at long last decided that mills have to close down for a total period of two weeks, there is no reason why mills should not go about the business of buying raw jute at their leisure. Further, it seems to be quite a profitable proposition not to be in a hurry. For within a week, prices have fallen quite sharply and indications are

that the bottom is yet to be touched. Holders of raw jute have been brought to an unenviable position. On the one hand they are troubled by the indifference of mills and on the other, reports of the new crop are of a kind that tend to make them nervous. There does not seem to be any doubt whatsoever in the minds of many that the new crop both in India and Pakistan will be considerably larger than last year. It may be recalled that a Pakistani Government spokesman had already referred to that country's determination to harvest a jute crop of 7.4 million bales and that climatic conditions have been so favourable that such an expectation will be amply fulfilled despite some damage caused by two successive cyclones in the Chittagong area. As regards the Indian crop, trade circles estimate it around 7 million bales and the general belief is that new crop jute will become available quite early in the new season.

UNION CARBIDE INDIA now offers from its Trombay plant

These four synthetic organic chemicals now being produced at Union Carbide India's Trombay Plant serve as raw materials and intermediates in the processing and manufacture of a whole host of products for industry and the home—from dyes, textiles and drugs to automobiles, leather cloth, foodstuffs and photographic films.

For your requirements of these organic chemicals write to your nearest Union Carbide India Office.

JUTUC 2264

The fact that the futures market is to be reopened on 15 June has further unsettled the market. There is the apprehension that with the futures in operation, bear pressure will tend to increase as with each good report from the growing areas, there will be a tendency to mark down the price levels. It is therefore pointed out that the proximity of the reopening of the futures market has further accelerated the down trend.

*

TEA Outlook

AT present, the overall statistical position indicates that there is little, if any, surplus of Tea in the world. In all probability, there may be a slight shortage. In India itself, the consumption of tea is expanding more rapidly than in any other country and is possibly increasing at a rate of 7 to 9 million kilos per year.

India's imperative need is, therefore, to increase her production as rapidly as possible. Otherwise, with internal consumption forging ahead and prices tending to rise, not only will this country's tea being priced out of world markets; but there will be less and less tea to export. The tea industry has been set a target, in the Third Five-Year Plan, of 408 million kilos. If this is to be achieved, heavy expenditure will naturally have to be incurred;

but the industry faces the difficult problem of finding the necessary finance.

In the above connection, the annual report, released by Messrs J. Thomas & Company (which will be discussed in greater detail next week), states:

"While the need for revenue in the context of the present economic development programme which India is pursuing is fully understandable, it is mainly the taxation policy, followed by the Centre as well as the State Governments, which has clearly served as a disincentive to the Indian tea industry. In this connection, the new Budget proposals are an additional burden on producers, which will make it more difficult for them to achieve their target. If the long-term future is to be made secure, it is of the greatest importance that replanting of old areas and replacement of worn-out machinery are made economic and profitable, so that Indian production rises during the Third Five-Year Plan, both in quality as well as in quantity, to ensure India's competitive position in the export markets and to satisfy the requirements of the Indian consumers.

The future of the Indian tea industry, in general and of exports in particular is clearly in the balance and the danger of a further decline in Indian shipments to overseas markets cannot be over-emphasised.

To sum up, the long-term prospects for the industry appear to be uncertain; but, in the coming season, the outlook can be considered favourable. If the North Indian crop are to show an increase and if, as a consequence of this larger output a lower level of prices are to result, as is likely, this should have its compensations by way of a lowest cost of production for producers and increased exports of Indian teas."

No Export Sale was held this week. In the Internal Sale, offerings were 23,052 packages of Dusts. There was a good general demand. Medium CTCs were irregular with the clean leaf teas being readily absorbed around last rates. Fibrous descriptions met with better support than of recent weeks. Good CTCs were generally sold at a discount. Orthodox dusts were extremely irregular. The fibrous kinds declined in value; but the clean leaf descriptions were often firm and sometimes dearer. Legg-cuts, though well supported, were generally lower. Following rates were quoted (per kilo):—Plain Orthodox Dust Rs 3.80 to Rs 4.20 (nominal); Medium Assam Dust Rs 4.05 to Rs 4.50 (nominal); Legg-cut Dust Rs 4.10 to Rs 4.80 (nominal). Medium Assam CTC Dust Rs 5.40 to Rs 5.90 (nominal) and Good Assam CTC Dust Rs 6.20 to Rs 6.80 (nominal). There was a fair

demand for the 55 chests of leaf grades offered.

The export performance of North East Indian Tea, during the period 1 July 1960 to 30 April 1961, has not been encouraging. The largest buyer of Indian tea, the UK, took only 219 million pounds as against 223 million pounds in the corresponding period of the previous season. The UAR was the next larger, having taken 23 million pounds. That, too, was 3 million pounds lower when compared to its previous offtake.

Russia took 16 million pounds as against 15 million pounds. The USA also reduced its offtake from 15 to 12 million pounds. Total exports were thus down by 20 million pounds at 334 million pounds. This was partly due to a fall in the region's output last year. There is another factor, which should engage the attention of the authorities. Even in our traditional markets, India is losing ground. Competition from Ceylon and British East Africa is becoming formidable.

According to the official figures released from Colombo, Ceylon produced 54.9 million pounds in April, making the total production, for the first four months of this year, of 160.3 million pounds as against 157.9 million pounds in the corresponding period of last year.

After the customary Whitsun break, tea sales have started in London with a strong and general demand in evidence for the North Indian and other miscellaneous teas. Invoices possessing improved quality were often dearer. In this connection, African teas were a good feature, particularly Fannings grades. The demand quietened somewhat in the latter stages of the sale, although prices were little changed.

The Ceylon growths submitted encountered more selective buying and overall there was less demand. With the result, prices were irregular and often one penny to two pence a pound easier. The price indication for quality teas was 5sh 1d to 7sh 1d per pound as compared with 5sh 1d to 6sh 5d prior to Whitsun holidays. The rates for medium and plain teas were unchanged from pre-Whitsun levels.

The increased quantity of tea, that was offered, suggested that the effects of the recent strike in London docks was returning to normal. But, the downward trend in UK warehouse and about to be landed stocks is still in evidence for the week ended 26 May when the total was 149.8 million pounds as compared with 154.7 million pounds in the previous week.

COTTON Recovery in Futures

After a long spell of hesitancy the cotton futures market in

Bombay exhibited signs of improvement toward the close of the past week; recovery being attributed to heavy upcountry buying by mills. Rumours of additional export quota for Gujarat cotton also fanned the enthusiasm. In the futures section the Jarilla August Contract moved within narrow ranges of Rs 567 and Rs 572 and closed on Tuesday last at Rs 579.50 after reaching a high of Rs 582.75.

Reports that emanated from the upcountry centres were, on the contrary, harrowing. The accumulation of unsold cotton with the farmers and cooperative societies is mounting up. Mysore and Andhra Pradesh also raised complaints of the like nature and it has been reported that buyers were absent for a pretty long time. The position of stocks of cotton with the farmers are as follows: Vidarbha 0.1 million bales; Rajas-

BRIDGE & ROOF CO. (INDIA) LIMITED.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the seventy-seventh Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 29th June, 1961 at noon, to consider the Accounts of the Company for the year ended 31st December, 1960, to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS.

NOTICE is also hereby given of the following Resolution which will be proposed as an Ordinary Resolution:—

"That pursuant to the provisions of Section 342 of the Companies Act, 1956, the resignation of Balmer Lawrie & Co. Ltd. of its office of Managing Agents of the Company with effect from 31st December, 1960, be and is hereby accepted."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 15th June, 1961 to 29th June, 1961, both days inclusive.

By Order of the Board,

Indian Finance

10 June 1961

than and Uttar Pradesh 50,000 bales; South India 0.4 million bales; Gujarat 0.3 million bales; Madhya Bharat 40,000 bales; Moglail area 30,000 bales and the rest 50,000 bales.

Thanks to the regular and timely supply of canal water the sowing operations in the State of Punjab were in full swing. The farmers are showing a preference for Desi-cotton to any other variety. In UP sowings of 216F were reported to be about 25 per cent higher than that in the previous season.

The present arrangement made by the Government of India for the distribution of cotton did not meet with satisfactory response from the growers. A district farmers' convention held in Baroda the other day requested the Government to revise the import policy now being adopted with a view to allowing the textile mills to cover their requirements of indigenous cotton at scheduled rates. The convention also recorded its protest against the decision of the authorities to import short staple cotton from the USA on a liberal scale.

The shipment period for the import of 0.2 million bales of cotton stapling 1-1/16" and above has been extended from 31 May to 30 June 1961. This has been announced by the Joint Controller of Imports during the last week. It may be recalled that on 23 November last year the Government of India had allowed the import of the above said quantum of cotton from any area and import licences issued in that connection were made valid for shipments upto the end of last month.

Exports of cotton textiles from India, which has already received a setback due to the development of textile industry in Asia and Africa will be adversely affected by the latest move of the manufacturers to oppose the imports of cheap styles from Asian countries. Other countries which will be threatened with similar crisis are Pakistan, Formosa and United Arab Republic.

The prospects for the export of cotton piecegoods from India to Sudan has become dim owing to a variety of fresh developments that are taking shape in that country. The restrictions imposed on the import of Japanese cotton textiles has recently been lifted on the assurance that Japan will, in the future, make purchases of cotton and other products from Sudan. Besides, the authorities have finalised an ambitious programme for establishing a textile mill industry in that country and licences have already been granted to five textile mills. One of the textile mills is being set up with American aid and it is expected to go into production within a short period. Another mill sponsored by the local industrialists is also nearing completion. The capacity of these two mills are estimated at 75 million yards and

12 million yards respectively. Apart from these, it has been reported that Sudan Government has entered into an agreement with the Soviet Russia for doubling the volume of trade exchange. Under this arrangement Sudan will be importing, inter alia, cotton piecegoods from the USSR.

PIECEGOODS

Trading conditions in the Bombay piecegoods market was at a low ebb. Demand for piecegoods was pronouncedly meagre and the

offtake slipped down to an insignificant trickle. Business in the market was cabined and confined to seasonal goods like flannels and coatings. As the business transacted was largely for forward delivery, the offtake was insignificant and prices of most of the goods exhibited a downward trend. There was a further decline in the unofficial premia on most of the styles.

Demand on the export front was on a moderate scale and many of the ports were satisfied with

small quantum of goods. UK accounted for moderate quantity of goods. Rumours are afloat in the market that the licensing for exports to that destination is likely to be transferred to this country. This matter will be taken up by the Textile Export Promotion Council when it meets during the middle of this month.

The offtake by East Africa was only on a moderate scale presumably due to the imposition of import duty. That destination accounted for small quantities of

historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India.

The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

No subscriptions are invited on the basis of this announcement. Intending subscribers should obtain from the Registered Office or any one of the Bankers or Brokers referred to hereunder, copies of the PROSPECTUS, and the Forms of Application.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this new industrial undertaking at Kotah (Rajasthan) of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the Prospectus, having attached to it, the documents required by Section 60 of the Companies Act, 1956, specified hereafter, has been delivered for registration to the Registrar of Companies, Uttar Pradesh, Kanpur.

Application has been made to the Calcutta Stock Exchange for permission to deal in and for official quotations of the shares of the Company.

The Subscription List will open at the commencement of banking hours on 12th June, 1961 and will close at the close of banking hours on 17th June, 1961 unless closed earlier at the discretion of the Directors but not before the 14th June, 1961.

BRIEF HISTORY AND DEVELOPMENT

The Company was incorporated in the year 1943 under the name of J. K. Investment Trust Limited and functioned primarily as an Investment Company. In the year 1957, the Directors of the Company decided to undertake industrial activities and accordingly the objects clause in the Memorandum of Association was altered with the approval of the Court. A licence under the Industries (Development and Regulation) Act, 1951, for establishing a new industrial undertaking at Kotah (Rajasthan) for the manufacture of synthetic yarn like Nylon/Perlon Filament Yarn was also obtained from the Central Government.

The name of the Company was changed to its present name, i.e. "J. K. Synthetics, Limited," with a view to make the name representative of the industrial activities now being undertaken by the Company.

OBJECT OF ISSUE

The object of the issue of these shares is to raise finance required for the purpose of the new Synthetic Yarn undertaking.

SCOPE & PROSPECTS OF SYNTHETIC YARN INDUSTRY IN INDIA

This is the first factory of its kind in India which will manufacture synthetic yarn like Nylon/Perlon. The use of Synthetic Yarn has become popular in this country and it is being used for various purposes viz., in the making of socks and other items of Ladies' and Gents wear, Fishing cord and also for diverse items required by or connected with the Defence Services. The total requirements of the country for the said material are at present met by imports. All these factors ensure that there is good possibility for profitable return to the investors in the Synthetic Yarn Industry of the country.

TECHNICAL COLABORATION

The Company is getting technical 'Know-how' from Messrs. Ing. A. Maurer, S. A. Dammweg 3, Berne/Switzerland under the agreement dated 2nd June, 1958. This firm is of international repute in the man-made fibre industry and has wide experience in designing such plants satisfactorily in different parts of the world.

LOCATION

The plant is located at Kotah (Western Railway) in the State of Rajasthan.

POWER

The Power for the plant will be available from Chambal Grid through Rajasthan State Electricity Board.

WATER

Adequate supplies of water are available from Kotah Barrage on River Chambal and Municipal water would also be supplied to the Company.

TRANSPORT FACILITIES

The factory is located at Kotah which is an important junction on the main Broad-gauge line of the Western Railways (Delhi-Bombay Sector). The place is also accessible by roads and as such provides adequate transport facilities.

LAND AND BUILDINGS

A plot of land measuring about 70 acres has been taken on lease from the Government of Rajasthan. The buildings are now fast under construction and some of them have been completed in all respects.

PLANT AND MACHINERY

The Plant and Machinery required for the project (both local and imported) have been ordered out and shipments will start shortly. Some of the machines will come duly assembled and a team of foreign erectors and Engineers will be arriving to take up the erection work simultaneously. It is expected that plant will be commissioned for trial operations some time in October/November, 1961.

RAW MATERIALS

The important raw materials for the manufacture of Synthetic Filament Yarn are caprolactum and some chemicals etc., which shall have to be imported for some time. There should, however, be no difficulty in getting import licence for raw materials as the entire requirements of the filament yarn at present are being covered to imports and the installation of indigenous capacity will give the country much of its valuable foreign exchange.

PROFIT AND DIVIDENDS

The Directors have issued the invitation for subscription to the public when they have constructed a major part of the buildings, taken up the erection of the plant and machinery so that the subscribers may not have to wait for long to get full advantage of their investments. Further, the Company's present investments are likely to give much better yield than in the past.

INCOME TAX BENEFITS

The special benefits provided under the Indian Income Tax Act, 1922 with respect to Development Rebate and exemption from tax for the first five years of operations under Section 15C will be available to the Company in respect of the new undertaking.

CAPITAL OUTLAY AND FINANCIAL RESOURCES.

(a) The Capital requirements for the new undertakings are estimated as under:—

New issue of Capital	Rs. 52,37,500
Other sources	Rs. 16,22,500
Total	Rs. 1,78,60,000

FINANCIAL INFORMATION

The report of the Company's Auditors as required under Clause 24 of Part II of Schedule II to the Companies Act, 1956, is attached to and forms part of the Prospectus.

MINIMUM SUBSCRIPTION

In the opinion of the Directors it is not necessary to fix any minimum amount of subscription.

UNDERWRITING COMMISSION

Underwriting commission @ 2% of the nominal value of Equity Shares is payable to the Underwriters.

BROKERAGE

Brokerage will be paid by the Company to members of recognised Stock Exchanges and to Banks @ 1% on the nominal value of Shares allotted in respect of applications bearing their stamp.

EXPENSES OF THE ISSUE

The expenses of the issue including brokerage and underwriting commission are estimated not to exceed Rs. 3,00,000/- and are payable by the Company.

INSPECTION OF DOCUMENTS

Original and/or Copies of the Memorandum and Articles of Association of the Company, Balance Sheets and Profit & Loss Accounts, Auditors' Report appended to the Prospectus, Consent order of the Controller of Capital Issues, Licences issued by the Government of India for establishing a new industrial undertaking for the manufacture of nylon Synthetic Yarn like Nylon/Perlon at Kotah (Rajasthan) and contracts and other agreements referred to in the Prospectus can be inspected at any time during Office hours at the Registered Office of the Company for a period of Fourteen days from the date of publication of the Prospectus or until the subscription list closes, whichever is earlier.

APPLICATION FOR AND ALLOTMENT OF SHARES

Application must be in lots of 50 shares or multiples thereof.

Applications should be made on the prescribed form accompanying the Prospectus and delivered before the date of closing of the subscription list. The application forms together with a remittance for the full amount payable should be sent to the Registered Office of the Company at Kamla Tower, Kanpur or to the Branches of the Company's Bankers indicated therein. Out-station drafts or cheques must include Bank charges @ 1% with a minimum of 75 p.p. Cheques or drafts should be made payable to "J. K. Synthetics, Ltd., Share Application A/C" and for the protection of the applicants should be crossed, "ACCOUNT PAYEE ONLY". A separate cheque or draft must accompany each application.

BANKERS' NAMES

STATE BANK OF INDIA—Kanpur, Bombay, Calcutta, Madras, Delhi, New Delhi, Bangalore, Indore, Nagpur & Jaipur.

HINDUSTAN COMMERCIAL BANK LTD.—Kanpur, Bombay, Calcutta, Ahmedabad, Amritsar, Delhi, New Delhi & Jaipur.

BANK OF RAJASTHAN LTD.—Kotah and Jaipur.

Copies of the Prospectus and Application Forms may be obtained from the Company's Registered Office and the Bankers and Brokers named hereinabove.

Allotment will be notified by despatch of Allotment Letter. The Directors reserve the full and uncontrolled right of accepting or rejecting any application in full or in part without assigning any reason. Where no allotment is made the amount payable with the application will be returned in full, and where a partial allotment is made the unutilised balance will be returned within sixty days of the receipt thereof by the Company. In all cases the Bank Commission, if any, will be payable by the applicant.

Shares when issued will be subject to the terms of the Prospectus and the Memorandum and Articles of Association of the Company. The share certificates will be available for issue in exchange for Letters of Allotment within six months of allotment.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

For the Investor

INVESTMENT GOSSIP Steady Trend in Equities

Though price movements this week have been rather irregular, the undertone in the stock markets has been very steady. The factors that influence the investors and operators now are more or less the same as last week, except for the addition of one or two fresh incentives. The major bullish influence is undoubtedly the decision of the Aid India Club to give loan assistance to the tune of \$2,225 million to cover the first two years of the Third Plan. This offer has eliminated the uncertainty prevailing so far and will enable India to launch the Third Plan with confidence. While announcing the present instalment of aid, the Aid India Club has not only expressed satisfaction at the pace and manner in which India is going about its task of bringing about the economic betterment of its population but has also made it amply clear that the foreign exchange requirements of the Third Plan as a whole will be forthcoming in due course. The prospects of foreign aid have been rendered brighter still by the indication that assistance from nations who are not members of the Club may also become available.

The other bullish factors are easier money conditions, good corporate news, hopes of higher dividends for the two prominent steel shares and optimism about prospects for textiles. With money supply easy, buying activity is facilitated while encouraging company news discourages liquidation. This week's upsurge of speculative activity was mainly bolstered up by favourable rumours about the steel shares. It is believed that the announcement of the steel retention prices will not be delayed and some say it is imminent. This stems from the report that this year Government is anxious to announce the new retention price in time for the companies to draw up their annual accounts without un-

BALMER LAWRIE & CO. LTD.

The Board of Directors of the above Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Dividend of 18 per cent for the year ended 31st December, 1960.

BALMER LAWRIE & CO. LTD.
D. MANSON
Secretary,

21, Netaji Subhas Road,
Calcutta.
30th May, 1961.

due delay. It is also confidently expected that the steel companies will increase their distribution to the shareholders. The revival of the hope of a higher dividend has once again put the steel shares in the forefront and with their leadership restored, the market as a whole has been able to sustain the upturn. Textile shares have also been meeting with good support following indications of a greater measure of responsibility for the organised sector of the cotton textile industry in meeting the cloth demand during the Third Plan.

INVESTMENT SPECIAL J. K. Synthetics

J. K. Synthetics, a J. K. enterprise, having its factory at Kotah, Rajasthan, is the first of its kind in India to manufacture synthetic yarn like Nylon and Parlon. It has a capacity of 600 kg of yarn per day. The company started as an investment company in the year 1943 under the name of J. K. Investment Trust Limited. The objects of the company were recently changed to make it an industrial concern and, accordingly, the name of the company was changed from J. K. Investment Trust Limited to J. K. Synthetics Limited.

The company has now entered the market for raising capital. The present subscribed and paid-up capital of the company stands at Rs 72,62,500, divided into 7,26,250 equity shares of Rs 10 each. The directors propose to offer to the public 5,23,750 equity shares of Rs 10 each, at par. It is important to note that this company has not issued any preference share and, as such, does not carry any liability for preferential dividend. The ordinary shareholders will, therefore, get the first opportunity to participate in the profits of the company.

The factory is under construction. The plant and machinery is likely to arrive shortly. It is expected that the plant will come in operation by the end of the year. The company has entered into technical collaboration with Messrs Ing. A. Maurer, S. A. Dammweg, Switzerland, an organisation of international repute in the man-made fabric industry.

The capital outlay required for the new undertaking is estimated at Rs 178.60 lakhs and the same will be met as follows:—Loan from Rajasthan Government Rs 30 lakhs; Deferred payment facilities from suppliers of machinery Rs 80 lakhs; new issue of capital of Rs 52.37 lakhs and other sources Rs 16.23 lakhs.

The subscription list will open on 12 June and close on 17 June 1961 unless closed earlier at the discretion of the directors but not before

14 June, 1961. Application must be made in lots of 50 shares or multiples thereof. Remittance for the full amount should be sent.

NEW ISSUE NOTES

Acme Pig Iron

The Acme Pig Iron and Centrifugal Pipe Works Limited, Bombay, will shortly enter the market with a public issue of Rs 10 lakhs, divided into 10,000 equity shares of Rs 100 each. The authorised capital is Rs 50 lakhs divided into 30,000 equity shares of Rs 100 each and 20,000 shares of unspecified class of Rs 100 each. The issued capital is Rs 20 lakhs in equity shares. Of this, 7,500 equity shares have been taken up by the directors and their friends, while 2,500 equity shares have been taken up by their associates. The balance of Rs 10 lakhs is now being offered for public subscription. The subscription list will open on 19 June and will close on 24 June. The company will undertake the manufacture of special and refined grades of low phosphorus and low sulphur pig iron for the production of high-grade castings in the automobile, machine tool industries, railways and other industries producing quality engineering goods.

Afsons

Afsons Industrial Corporation Limited proposes to enter the market shortly for raising fresh capital. The issued capital is Rs 25 lakhs. The subscribed capital amounts to Rs 3,40,500. The directors and their friends have agreed to subscribe for 9,345 shares of Rs 100 each. The company proposes to offer for public subscription 12,250 shares. The company was incorporated as a private limited company in September 1959 to carry on, in particular, the business of manufacturing pulp, paper, boards and allied products. It was converted into a public limited company in February 1961.

Phoenix Tubes

A new company under the name of Phoenix Tubes Limited, has been formed as a subsidiary of Khandan Ferro Alloys Limited. An application has been made to the Controller of Capital Issues for the issue of necessary capital.

Colour-Chem

Colour-Chem Limited proposes to increase its share capital by issuing Rs 25,000 new equity shares of Rs 100 each, at par. It proposes to offer 5,500 shares to Farbenfabriken Bayer AG and 5,500 shares to Farbwerke Hoechst AG, West Germany, for subscription in Deutsche Mark. The balance of 14,000 shares is to be issued to the shareholders in India in the ratio of one share for every five shares held. The new capital will be utilised for implementing the company's scheme to manufacture 100 tons of Phthalocyanine blue a year. Transfer Books of the company will remain closed from 17 June to 3 July 1961.

Indian Finance

Saru Engineering

A new company known as Saru Engineering Corporation Limited has been formed to undertake the manufacture of spun cast iron pipes in Uttar Pradesh. A plant with an installed capacity of 24,000 tons a year will be set up at Meerut. The authorised capital of the new company is Rs 50 lakhs. The company is expected to enter the market to raise almost the entire capital in six to eight months' time.

INVESTMENT NOTES

Alloy Project

It is learnt that the Government of India has allowed Messrs K. T. Steel Industries Private Limited, Bombay, to set up a tool and alloy steel plant. The production capacity licensed is 12,000 tons per year. The total capital outlay on the project is estimated at about Rs 2 crores. The promoters are shortly expected to form a public limited company to undertake the project. The proposed name of the company is K. T. Engineering Corporation Limited.

Polychem

Polychem Limited, Bombay, has received a revised certificate from the Income-tax Officer, stating that, under Section 15C(4) of the Income-tax Act 1922, instead of 14.18 per cent of the dividends declared for the year ended 31 March 1960, 84.16 per cent will be exempt from income-tax and super-tax in the hands of the shareholders. It is observed that this exemption will be available to the company's shareholders for 1960-61 and 1961-62 also.

Saurashtra Cement

The Saurashtra Cement and Chemical Industries Limited has plans to raise its production capacity in respect of cement from 200,000 tons to 400,000 tons. The company has already obtained the necessary permission in this connection from the Government. The company will shortly place orders for machinery and equipment with the indigenous manufacturers. It is hoped that the programme will be completed by the end of 1962 or in early 1963.

BRIDGE & ROOF CO. (INDIA) LIMITED.

The Board of Directors of the above Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Dividend of 30 per cent for the year ended 31st December, 1960.

IN BRIEFS

Fuel Injections Limited has recommended a dividend of Rs 4 per share, without deduction of tax, on 14,998 old ordinary shares for 1960 under Second 15C of the Income-tax Act, subject to confirmation of the income-tax authorities.

Bharat Nidhi Limited has passed over the dividend on the ordinary shares for 1960.

Seshasayee Paper has made the final call of Rs 2.50 per share.

Karikode Rubber has maintained the dividend at 4 per cent, taxable, for 1960.

South India Viscose Limited has passed over the dividend for 1960.

The net profit of the Edward Textiles Limited has gone up from Rs 4.59 lakhs to Rs 15.57 lakhs. The dividend is maintained at Rs 18 per share, subject to tax.

STOCK EXCHANGES Irregular Price Movements

Watch-Dog Writes:

ALTHOUGH price movements in equities are rather irregular due to profit-taking at bulges, the bullish fervour in stock markets has been well maintained. Encouraged by the news of six nations and the World Bank having agreed to give India substantial aid for launching the Third Plan and the continued flow of encouraging corporate news, operators have tightened their grip. But, the hectic advance in values has created a cautious feeling among the operators, who are inclined to book profits at the higher levels.

Equities on the Calcutta Stock Exchange responded to selective support.

On the Bombay Stock Exchange, price movements were irregular due to alternate bouts of buying and selling.

A mixed pattern of trading was noticed on the Madras Stock Exchange.

Wall Street closed with an irregularly lower tendency, ranging mostly to one point or so.

CALCUTTA

DESPITE intermittent profit-taking, the local stock market made a further headway during the week with textile, engineering and miscellaneous issues displaying considerable buoyancy. The news of six nations and the

World Bank having agreed to give India more than \$2,000 million for launching its Third Five Year Plan, the continued flow of encouraging corporate results, easy money conditions and enquiry for selected shares from investors were the main reasons for a fresh rise in prices.

But, support to the market was mainly speculative in character. Apart from the fact that some of the operators apprehended official intervention if the market continued the upward tendency at the present rate, there was reluctance on the part of others to extend commitments until some of the prevailing uncertainties were cleared up. With the result, activity at times showed signs of flagging although sentiment remained bullish as was evident from the absence of selling pressure.

Conditions in the Gilt-edged market remained dull with business at a reduced level. Buying interest was confined to short-dated issues, medium and long-dated loans being out of favour. 3 per cent 1986 Conversion Loan were depressed further to Rs 72.40 from Rs 73.10 quoted in the previous week.

The Banking section remained steady in anticipation of better results for the current half-year. Punjab National moved narrowly between Rs 21.87 and Rs 21.94, while United Commercial hardened to Rs 91 from Rs 89.50.

In the week's dealings, it was Indian Irons which were again in the limelight of trading. It was felt that, with a substantial rise in 1960-61 output and consequently in earning, the Indian Iron & Steel Company might be in a position to raise its dividend still higher than was paid for 1959-60. Based on this hope, support was abundantly available for Indian Irons, which touched a new high of Rs 28.54 from the previous week-end closing of Rs 28.36, to close the week at Rs 28.44. TEXMACO touched a high of Rs 20.75 and a low of Rs 20.30, to finish at Rs 20.40. J. K. Steel forged ahead to Rs 30.12 from Rs 29.44, while Britannia changed hands at Rs 12.87 to Rs 13.25; Jessop at Rs 21.06 to Rs 21.31 and Dalmia Iron at Rs 10.12 to Rs 10.29.

Coal shares remained practically unchanged on lack of fresh support. Equitable were, however, a bright feature and had support up to Rs 31.23 following the news of the dividend being doubled for last year. Bengal had buyers at Rs 388 to Rs 391; Amalgamated at Rs 24.75 to Rs 24.87; New Beerbloom at Rs 20.50 to Rs 20.75 and Western Bengal at Rs 9.31 to Rs 9.44. Burrakur fluctuated irregularly between Rs 20.50 and Rs 20.75, to close finally at Rs 20.56.

Although trading in the Tea section continued to be restricted, a few shares were taken up to fresh higher levels on the declara-

tion of better dividends or in expectation of such distribution. Brooke Bond hardened to Rs 16.69 from Rs 16.50; Bishnauth to Rs 25.87 from Rs 25.69; Jay Shree to Rs 22.69 from Rs 21.94 and Tez-pore to Rs 17.37 from Rs 16.75.

Buying interest in Sugar shares continued to remain subdued and the news of the Indo-Pak sugar pact seemed to have no effect on sentiment. Raza/Buland were on offer at Rs 11.62 to Rs 11.73; Balrampur at Rs 2.56 to Rs 2.81 and SKG at Rs 11.56 to Rs 11.75. Ramnugger Cane were, however, supported up to Rs 29.87 from Rs 29.37 on rumours of the possibility of a bonus issue at an early date.

Textile shares received good support at enhanced levels on prospects of higher production and an increase in sales. Kesoram were a special feature this week, having spurred to Rs 35.50 from Rs 34 on reports of the ordinary dividend being raised to 12 per cent for the year ended 31 March 1961 from only 5 per cent paid for the preceding year. J. K. Rayon were taken up to Rs 20.62 from Rs 20 and Jay Shree up to Rs 16 from Rs 15.56. Cawnpore were nearly maintained at Rs 8.82.

The only section, that failed to evoke any interest, was Jute. Fears were entertained that the working results of the mills might be affected still further by the block closure move. Howrah met with sustained speculative support up to Rs 21 from Rs 20.75, while Birlas were wanted up to Rs 28.75 from Rs 27.37 due to diversification of the company's activities. Anglo-India were, however, on offer at Rs 179; Nuddea at Rs 43.25 and New Central at Rs 19.62. Kelvin were nearly maintained at Rs 139.

Miscellaneous issues were barely steady, as will be evident from the following price trends of a few selected shares:

	Week's High	Week's Low	Week's Closing
	Rs	Rs	Rs

BALANCE-SHEET BRIEFS

The working of Shree Gopal Paper Mills Limited has resulted in a profit of Rs 56.21 lakhs for 1960 as against as much as Rs 89.33 lakhs for the preceding year. The dividend on the ordinary shares is maintained.

The Swadeshi Cotton Mills Company Limited has made a net profit of Rs 76.20 lakhs as against Rs 27.40 lakhs. The directors have proposed a final dividend of 5.51 per cent, on the preferred ordinary shares, making a total of 10.71 per cent, taxable, for the year as against 5.71 per cent, taxable, previously. A gross dividend of 5 per cent is proposed on the ordinary shares against nil in the previous year.

The Navsari Cotton & Silk Mills Limited has reported a net profit of Rs 4.73 lakhs against Rs 3.96 lakhs. The dividend is maintained at Rs 12 per share, subject to deduction of tax.

The British India General Insurance Company Limited has made a net profit of as much as Rs 3.13 lakhs against Rs 2.79 lakhs. The dividend is maintained at Rs 1.40 per share, taxable.

The gross profit of the New Standard Engineering Company Limited has gone up from Rs 11.66 lakhs to Rs 18.04 lakhs. The directors have recommended a taxable dividend of 9 per cent, taxable, on the fully paid equity shares against 12 per cent, taxable. A proportionate dividend is proposed in respect of new equity shares.

The Raymond Woollen Mills Limited has reported a gross profit of Rs 50.94 lakhs against Rs 42.20 lakhs. The dividend is raised from Rs 11.50 to Rs 12.00 per share, subject to deduction of tax.

Fertilizers & Chemicals (Trawancore) Limited has made a net profit of Rs 75.95 lakhs against Rs 61.44 lakhs. The dividend on the ordinary shares is maintained at 6 per cent, taxable.

The working of the Twyford Tea Company has resulted in a net profit of Rs 4.23 lakhs against Rs 2.56 lakhs. The dividend is maintained at 10 per cent, taxable.

The net profit of the Podar Mills Limited has risen from Rs 5.18 lakhs to Rs 16.47 lakhs. The directors have proposed a dividend of Rs 10 a share plus a bonus of Rs 2 a share, subject to tax.

You're
in
the most
experienced
jet hands
when you fly Pan Am!

The hands at the controls of your Pan American Jet Clipper make a world of difference — and that difference is experience.

Think of this: Pan American jet pilots have flown more overseas passengers than any other airline — more than a million and a quarter people!

You can recognize this superior flying experience on every single Pan American jet flight. It shows in the smoothness, the quietness of the flight itself... the care that goes into Pan Am's famous cuisine... the way Pan Am stewardesses make you feel completely at home.

Pan American offers you more jet service — to more places — than any other airline — still another reason for making the world's most experienced airline your airline.

For reservation and information on Jet Clipper service to 73 cities on 6 continents, call your Travel Agent or Pan American in

THE MARVEL OF THE MULTI-PURPOSE POLICY

**HE PAID Rs. 288 ONCE
TO LEAVE
FOR HIS FAMILY Rs. 1,01,880**

When a breadwinner dies, so does the family income. But when a breadwinner with a Multi-Purpose Policy dies, a new income STARTS for his family. Here is a true-life example of this amazing Policy:

◆ A young chemist took a Multi-Purpose Policy for Rs. 20,000 with Double Accident Benefit. Shortly afterwards his family lost him in an accident. From his Policy they receive:

- A lump sum of Rs. 20,000 (Double Accident Benefit)
- Plus Rs. 2,000 to meet the funeral, legal and other expenses
- Plus Rs. 400 a month for 2 years
- Plus Rs. 200 a month for over 21 years
- Plus bonuses due
- Plus Rs. 18,000 at the end of the Policy term.

The young man had paid just Rs. 288 in premiums. In return, his family receive a total of Rs. 1,01,880 wisely spaced out as an income for over 23 years! Had he lived he would of course have received Rs. 20,000 plus bonuses at the end of the Policy period.

Take a Multi-Purpose Policy without delay. It means unmatched security for your family.

ALTHOUGH affected by drought the 1960-61 tea season, judged by almost every criterion, has been a satisfactory one. Production fell in North India, by very nearly 13 million kilos, but this was partly offset by an improvement, over 1959, of 9 per cent to 77 million kilos in the South Indian crop. Exports were lower, and the sales ended earlier, but prices were consistently better. Most important of all, the rate of growth of internal consumption has been sustained, and the impact of this factor upon prices is one of imparting stability. These facts, and abundant statistics, have as usual been furnished by the yearly review of the tea industry by J. Thomas & Co Private Limited.

But the premier broking house in Indian tea is not altogether happy about long-term prospects. India's grip on out-markets is weakening, and its share of total world exports perceptibly shrinking. There is the fear that, if internal consumption continues to increase at the current rate, the surplus available for export will, unless measures are taken to encourage a higher volume of production, gradually diminish. There is the apprehension that the very stability that a higher level of internal consumption gives to prices in the tea market may result in our teas being priced out of out-markets. And there is the chagrin that tax policy is effectively stifling incentive for augmenting tea production.

How far is this note of pessimism—it may be termed guarded caution or conservatism instead—justified? Undoubtedly, complacency there is no room for; and unfortunately, trends in recent years do conjure up the prospect of a future—and not too long-term a one, at that—in which Indian teas will cease to be the rich foreign exchange earner that they are today. That, therefore, attention has been drawn to such prospect is all to the good, especially if it means that the necessary corrective measures will be taken. At the same time, however, it needs to be remarked that the situation is not altogether bleak.

For example, it has always been greatly desirable that the course of prices in tea (as much as in jute goods) should not be predominantly determined by what the foreign customer was prepared to pay. In world trade, the primary commodities, of which the under-developed countries have been a considerable exporter, and on which they have mainly depended for their foreign exchange earnings, have far too long remained depressed despite, as has often happened, a sound statistical position. Indeed, the J. Thomas review notes that "at present the overall statistical position indicates that there is little, if any, surplus of tea in the world and in all probability there may be a slight shortage." But, except when induced by a short crop, higher prices are almost invariably met by what is termed consumer resistance. Ceylonese tea tends to be cheaper, not particularly because costs of production are low, but mainly because there is no appreciable internal market for lending stability to prices. In India, on the other hand, "the strong demand of buyers" ensured that there were "very few

teas available below Rs 4.40 nP per kilo throughout the season."

Hence we welcome a state of affairs where—in a key industry is being rendered less and less at the mercy of considerations over which we can have no say. True, we are being priced out in common and plain teas; but then, in any case, the surplus that we have of these types is diminishing, owing to the rise in internal consumption. Thus, if East Africa has recorded a phenomenal increase in both production and exports (of plain teas), the fact need not cause us undue concern: if East African tea had been unavailable, the shortfall between world demand and supplies from India would have pushed up prices to unconscionable levels—and that bete noire, consumer resistance, would have made his presence felt.

The situation, in the immediate past and the near future, has therefore little reason to arouse current anxiety or concern. But the trends in internal consumption point to the need for a substantial increase in production targets: as it stands at present, the Third Plan calls for an output of 408 million kilos, and this would probably suffice both for maintaining exports (and even perhaps somewhat enlarging them) and for catering to the rise in indigenous consumption. The difficulty is going to be finance. The hopeful factor is, as in sugarcane, scope for increased yields is great. For, extension of acreage is a much more costly business than would be an increase in output from improved yields. In the decade ending 1959, yield per hectare has gone up only by 6.4 per cent in North India, though satisfactorily by 51.0 per cent in South India. But, as compared with other producing countries, North India (saving Pakistan) shows the least improvement. It is true, of course, that the yield per hectare is highest in the world in North India, at 1,003 kgs. Nevertheless, it seems reasonable to expect that, with the use of fertilisers on a larger scale, further improvement in yields can be recorded. Whether it is greater recourse to fertilisers or replacement of worn out machinery, the stumbling block is finance.

In the long-term, consequently, we feel it is necessary for the authorities to take several timely steps. In the first place, some degree of abstention, particularly by State Governments, would encourage production, and in due course no loss in revenue would be involved. Secondly, a smooth flow and assured availability of fertilisers would undoubtedly help to improve yields. Thirdly, we would suggest that the National Industrial Development Corporation should, as it did in the case of the cotton textile industry, help the tea industry to rehabilitate and modernise machinery in the factories. Fourthly, more effective propaganda needs to be conducted, and emphasising Indian tea, in new and potential markets. Lastly, the possibilities of arranging more bilateral agreements (as for example the one existing with Russia) need to be explored, for, they promise to be an invaluable marker. If action is taken on such lines, there would be no room left for the J. Thomas review to aver that "the long-term prospects for the Industry would appear to be uncertain."

Trends in Taxes

THE income tax statistics for 1959-60 released by the Central Board of Revenue reveal some important and interesting trends. The figures disclose an increase in the number of assessees and the income assessed in 1959-60 as compared to preceding year but the tax yield shows a decline. Thus the number of assessees increased from 840,137 in 1958-59 to 890,887 in 1959-60 and the income assessed from Rs 117.4 crores to Rs 1,192.1 crores but the tax raised fell from Rs 254.1 crores to Rs 230.1 crores. The decline in tax has occurred mainly under "companies". The assessees in this category numbered 10,778 in 1958-59, their income was Rs 265.9 crores and the tax Rs 137.4 crores. But in 1959-60 the number of assessees declined to 9,791, the income assessed to Rs 213.0 crores and the tax to Rs 109.5 crores. This is attributed to the non-assessment of certain big business companies during 1959-60. It is pointed out that while there were six assessments on oil companies involving a total income of over Rs 20 crores and tax demand of Rs 14 crores in 1958-59, there was no assessment at all even on one company in 1959-60. A statement showing the number of assessees, income tax assessed and the tax raised is given in a separate table.

An interesting aspect revealed by the figures is that out of the total number of income tax assessees for 1959-60, individuals constitute 86 per cent and they account for 62 per cent of the total assessed income. The tax demand from them, however, works out to only 42 per cent of the total income tax levy. On the other hand, companies which account for only 18 per cent of the total income assessed yield as much as 48 per cent of the total tax levy.

Analysis by source of income shows that "business and profession" is the most important source of income. This accounts for a total assessed income of Rs 677 crores and Rs 188 crores towards the tax demand as compared to Rs 680 crores income and Rs 203 crores tax demand for 1958-59. The major group is "Commerce, Transport and Communications", accounting for an income of Rs 362 crores and tax of Rs 49 crores. The next important group is "Processing and Manufacture—Metals and Chemicals and Products thereof", the income assessed and tax being Rs 64 crores and Rs 40 crores respectively. The third important group is "Finance", that is, banking, insurance, money-lending etc. accounting for an income of Rs 63 crores and a tax of Rs 21 crores. Last comes the "Professions" like education, journalism, health services, film production, legal services etc. The income assessed in this category was Rs 33 crores and the tax amounted to Rs 5 crores.

The statistics show that the number of salary earners assessed to tax increased from 332,033 in 1958-59 to 356,602 in the next year. The total income from salary assessed was Rs 272.8 crores and the tax raised Rs 27.4 crores as compared to Rs 255.3 crores and Rs 25 crores in the preceding year. Government salaries account for Rs 84.3 crores of the total income assessed, the tax thereon being Rs 4.8 crores. Income from dividends assessed to tax is Rs 60.6 crores, the tax being Rs 28.5 crores. Companies account for Rs 18 crores (30 per cent) and individuals for Rs 36.5 crores (60 per cent) of the total dividend income assessed.

Analysis according to the range of income reveals the following facts: while there are 798,139 assessees in the income ranges below Rs 20,000, the tax yield from them is only

	Number of assessees	1958-59		1959-60	
		Income assessed (IT+ST+SC)	Tax (Rs crores)	Income assessed (IT+ST+SC)	Tax (Rs crores)
Individuals	7,17,340	693.7	94.6	7,68,063	742.2
Hindu Undivided Families	67,426	86.3	12.0	69,069	88.9
Unregistered Firms and Associations of Persons	33,221	37.9	7.4	29,488	34.9
Registered Firms	11,372	90.2	2.7	14,179	112.5
Companies*	10,778	265.9	137.4	9,791	213.0
Others	...	...	...	297	0.6
Total	8,40,137	1,174.0	254.1	8,90,887	1,192.1

*Companies include others in 1958-59.

Rs 24.8 crores. Assessee with income below Rs 10,000 are 642,975 but their contribution of tax is only Rs 8.8 crores. Assessee with income between Rs 20,000 to Rs 50,000 and Rs 50,000 to Rs 100,000 account for a tax of Rs 38.2 crores and Rs 29.4 crores respectively. There are only 7,116 assessee with an income over Rs 1 lakh but the tax demanded from them is Rs 137.7 crores as compared to 7,136 assessee and Rs 166.7 crores in the preceding year. Assessee with income over Rs 5 lakhs (930) account for a total tax of Rs 95.3 crores (41 per cent), the share of the companies (734) alone being Rs 85.5 crores (37 per cent). Individual assessee having an income over Rs 5 lakhs number 79 with an income of Rs 6.8 crores before payment of tax but the number and the income after payment of tax decline to 8 and Rs 1.2 crores respectively. Another important fact brought out by the statistics is the negligible yield from capital gains tax. The income from capital gains assessed to tax is Rs 2.7 crores and the tax thereon amounts to Rs 0.6 crore, the corresponding figures for 1958-59 being Rs 1.7 crores and Rs 0.4 crore respectively.

Income-tax statistics compiled by the Central Board of Revenue are not comprehensive and are subject to certain limitations. Nevertheless they throw considerable light on the pattern of income distribution in the country. We find that out of a total population of nearly 438 million, hardly one million come in the category of income-tax payers. It is to be hoped that with the tightening of the machinery of collection and the increase in living standards, more and more people will be made to contribute to the Exchequer by way of income-tax.

MARKETING

The True End of Production

AFTER the exposition of what sound marketing implies for industry by Mr P. L. Tandon at the last annual meeting of Hindustan Lever, the public will be aware that method is needed to push goods into consumption. The study of marketing and distribution made by a team of the National Productivity Council after a tour of the UK, the USA and West Germany merely confirms the need in India to adopt the best practice obtaining abroad. The Indian market is a sheltered one, and the industrialist has no competition to face. His indifference to skill in marketing is rooted in the present economic and fiscal policy. There is also the wide disparity among firms engaged in the same line of manufacture. The majority are disinclined to go ahead or care for the consumer's requirements or tastes. The take-it-or-leave-it attitude is born of the size of the market, scarcity caused by import control and the normal desire to safeguard profit margins by avoiding expenditure on marketing though the latter ensures rapid

turnover and produces positive financial gains. Scientific management has always emphasised the need to offer better products, always up to specification or sample and prompt delivery. The average age of consumers and their spending habits are also of some consequence. Teenagers like new styles in knit-wear: they are interested in jazz music and dancing but unwilling to bet on horses. These points are known to expert observers and used to advantage by skilled market research men already in the UK. Indian goods, even artistic wares, are not backed by proper display or advertising; hence exports are limited. What the Beechams Group does to ascertain the needs of the market, the stimulation of latent demand or the retailers' methods has a bearing on the volume of sales. The changes in advertising style and methods are not due merely to Madison Avenue's craze for change. The world has changed, and the old is not good enough for the new generation of consumers. How money is used to create jobs or produce more goods is often the theme of modern advertising though ICI last year concentrated on the record of the Royal Society and tried to push science in front of organised industry. New skills of advertising may rely on hidden persuaders, but it is not yet realised that advertising is not enough: the depots to stock and move goods quickly must be ready and the maintenance or price stability must be undertaken by the producer in his own interest, in looking for a large volume of sales and limited profits so as to cultivate and retain consumer goodwill.

How retail outlets can be improved by trained salesmen, how forecasting can aid sales and how consumer credit can boost demand are ascertained by long experience. It is clear that a change in hire purchase law may lead to bigger sales of radios or fans and the middle class here may learn to live on the instalment system. America's lead in ideas and technique is appreciated by one and all but the reliance on television or radio for encouraging sales may be disregarded in Indian conditions today. Economic growth after the war in the USA is a fact and the big investment in research and development is a consequence as well as a cause of economic change in the USA.

The rise of the supermarket and the sudden decline of the chain store are also symptoms of a great change following others described so well by Mr F. L. Allen. The opportunities for high grade products may be secured only by attention to the foreign customers' likings. It is to the credit of the team that it sees the big, emerging market. At the advertising convention in March at Delhi the full implications of advertising for export were examined because of the current anxiety over the results of export promotion. The willingness of business in the US to talk about both its achievements and problems is one aid to public appreciation. Silence is not always a sign of strength and the best firms take their workers also into their confidence. The US official too has acquired an interest in what

sells and why. The information helps the US exporter who is able to get apt assistance when it is wanted. The fact that the USA is trying to sell more and to import more, to attract foreign visitors too deserves attention as a part of the sales approach. In contrast, there is the tradition of conservatism in Germany and the steady rise in income and exports has not led to any change in outlook or methods. The two wars and revolutions have changed morals and manners and the rise in consumption has been restrained by a fear born of the past, particularly of what follows inflation.

The most interesting example of up-to-date marketing is that of the German branch of Nestle, the biggest Swiss firm and one of the biggest in the world. The retailer is assisted regularly to dispose of goods easily. The advertising agency helps; one point made clear is that Nestle sells coffee easily in Germany while tea does not find a market at all owing to consumer resistance. The Indian exporter may be impressed by that: anyway, India has to sell both abroad and at home and the stress on quality may help Indian coffee against African blends. The thoroughness of German marketing is its merit: library service too is maintained by big agencies for big clients. The German way of examining markets by analysis of the conditions in developing countries may stimulate investment and German goods are made not to sell on price alone but on the soundness built in.

The productivity team has ascertained at first hand that marketing is the true end of production and reaching the consumer is vital for commercial success. The cost of marketing is really small and modern methods yield results. Consumption must be static: newspapers are always trying to promote circulation and a regular budget provision for promotion is a part of current expenditure. That has its value for those who sell consumer goods and the goodwill built up by brand names is an important asset when it comes to selling either cycles or soaps.

The rise in the standard of living is an aim of planning in spite of appeals for austerity and higher taxes, the level of consumption is rising and the Indian businessman is now enjoined to expand at home so that production costs can be reduced and competitive capacity achieved. Even the USA with its enormous and rich home market means to sell abroad and take appropriate steps by investment on overseas branches as well as passing on surplus for local currencies which can be used for buying other goods of US origin.

The lesson is plain enough for India today. Trade exhibitions and sample centres can reinforce the export drive but much must be done at home to emphasise that many new items from tractors to screws, are being made in India and the home market must be stirred up to active co-operation. That is the conclusion to which the survey leads and the part that even the passive consumer can play is not overlooked. The confidence can come from experience and there are some admirable examples at hand to prove that the right methods yield substantial results in India as elsewhere.

Cooperative Movement—I

THE Statistical Statements relating to the Co-operative Movement in India 1959-60 just published by the Reserve Bank raise the hope that the Movement will soon come into its own. In 1959-60 for which year complete figures are available, significant progress

*Data relate to primary societies.

in particular directions has been made. The number of co-operative societies of all types functioning in the country rose from 2,83,971 at the beginning of the year to 3,13,499 at the end of June 1960. Their owned funds increased during the year from Rs 220.16 crores to Rs 267.32 crores and their working capital registered a rise from Rs 879.59 crores to Rs 1,083.47 crores. The membership of all types of primary societies increased by 22.2 per cent from 248 lakhs to 303 lakhs during the year.

A rough estimate based on the assumption that an average family comprises five members shows that about 1515 lakhs or about 33 per cent of the population was served by co-operatives during the year under review as compared with 1240 lakhs or 30 per cent of the population at the commencement of the year. The fact that the population served was roughly about 880 lakhs in 1955-56 gives an indication of the headway that has been made by the movement during the past few years. It is evident that the new drive and fresh energy that have been put into the movement during the past few years and especially since the Rural Credit Survey Committee made a thorough enquiry into its working are beginning to pay dividends. That the development is on right lines is indicated by the fact that the increase in membership of all societies has been largely contributed by agricultural credit societies the number of which at the end of 1959-60 were 2,03,172 forming about 65 per cent of all the total number of societies, with a membership of 144.23 lakhs compared to 1,82,905 societies with a membership of 119.01 lakhs at the beginning of the year.

In a country like India where the large majority of the population is dependent on agriculture for its livelihood, co-operation can succeed only if it adequately serves the interests of the tiller of the soil and the village artisan. These rural workers' fortunes bear a direct relation to agricultural production. Crop failures due to drought or excessive rains grievously affect the farmer. For generations, caught between the vagaries of the weather and unscrupulous money-lenders, he has been reduced to a state of irredeemable poverty with borrowing as second nature to him. His sole preoccupation from season to season has generally been the raising of a fresh loan to pay off an old debt. Although the co-operative movement is now well over half a century old, it is only in recent years that the farmer seems to have realised its great potentialities.

This stirring into life from a long stupor has not come without outside promptings and some pushing forward. Co-operation in India from its inception has had some sort of official assistance. Perhaps too much of regimentation or too little consideration for

the human element is behind the movement's failure to make much headway for an unconscionably long time. One of the pivotal findings of the Rural Credit Survey Committee was that co-operative credit, if it is to achieve its objective should necessarily have State help. A cardinal principle of co-operation is no doubt self help in the sense of a fairly large number of people engaged in particular occupations to join together and pool their resources for their collective good. There are communities in the world for whom the spirit of co-operation comes quite naturally; for instance Japan, and some European countries. In some of these countries, the co-operative movement is a dominant influence in the national economy. In India, unfortunately, it is not spontaneous and even generous outside help has not made it as popular as it should be. As Mr H. V. R. Iengar, Governor of the Reserve Bank, pointed out recently, one of the reasons for the slow progress of the movement till recently has been the sub-standard living conditions of the farmer whose eternal struggle has been to provide himself and his family with adequate food and clothing. The farmer's extremely inelastic income pattern leaves little room for saving and with saving almost nil, co-operation fails to find a place. But with improvements in irrigation and the larger use of fertilizers, the farmer is now much better off than he ever was in the past. Thus, conditions conducive to the growth of co-operation may be said to be in the process of being created.

Although Mr Nehru himself has strongly deprecated official interference in the co-operative movement, it is generally accepted by co-operators that the time is not yet ripe for withdrawing the helping hand of the State. It is however necessary that direct official assistance to the movement should be limited to the formative period and once the spirit of co-operation seeps into popular thinking, it will be time for the Government to withdraw from the scene. Too long a period of Government assistance will, far from fostering co-operation, destroy it.

The progress of the co-operative movement in the country during the past few years is very good indeed if not impressive. It has been anticipated that by the end of the Second Plan, there would be about 200,000 primary agricultural societies with a total membership of about 17 million serving about 33 per cent of the agricultural population and about 25 per cent of the total rural population. The target for the number of societies had been reached in the fourth year itself though that for membership was, at the end of 1959-60 some distance away. There is reason to believe that the target in this regard has been reached in the last year of the Second Plan just ended. In the matter

**offers
complete
banking service**

ALTHOUGH industrial production in India has recorded a spectacular increase in recent years, the fact that many industries continue to work much below their installed capacity does not appear to have received adequate attention. In view of the imperative need to increase production, step up exports and

In any event, unless the three-tier bank Rate is done away with, we do not see that market loans will fetch the budgeted figure of Rs 235 crores. Conversions, including at the time of the second tranche, may barely exceed Rs 100 crores. New cash is hardly likely to amount to Rs 75 crores. There is one

Heavy Impact of Month-early Demand

According to the returns of the Reserve Bank for 9 June, there has been a substantial rise of Rs 20.78 crores to Rs 1,983.30 crores in Active Note Circulation. Outflow of Rupee Coin is in the considerable amount of Rs 1.33 crores. A sum of Rs 5 crores has been transferred from Foreign Securities to bolster the dwindling Balances Held Abroad, as shown in the return for the Banking Department. Cur-

Despite higher Deposits, and negligible rise in Advances, banks have had to borrow more from the Reserve Bank; indebtedness has gone up by Rs 5.07 crores to Rs 29.27 crores. This is of course because some banks chose to replace the costlier call money by central banking credit. Money at Call and Short Notice has fallen steeply by Rs 10.05 crores to Rs 42.49 crores. Further declines are in-

Weakness of Sterling

WHILE until a few days ago the pressure on sterling was largely due to the adverse balance of payments and to withdrawal of "hot money", there are now indications of the development of speculative selling, in anticipation of an autumn crisis. The pessimism is attributable to the following causes:— (1) Confidence in the dollar has become re-established, so that the attention of speculators is focused once more on sterling. (2) The balance of payments is persistently adverse. (3) The cost of living is creeping up. (4) The extent of overfull-employment is on the increase. (5) Wage demands are stepped up, and resistance to them is becoming progressively weaker. (6) The Government shows no inclination to resist the increase of

It is to the interests of the Governments of the Sterling Area countries to bring pressure to bear on the British authorities to induce them to emerge from the fool's paradise in which they are living. They hope to defer the day on which realities have to be faced, by playing about with the new "gadgets" of surcharge and payroll tax, even though their application is liable to aggravate the situation rather than improve it. But it will take some time before the failure of the new policy will become evident, and meanwhile the basic situation will deteriorate further. And external aid will successfully camouflage the effect of the adverse balance of payments and of the withdrawal of foreign funds, so that there will be no inducement for British public opinion to bring pressure to bear on the authorities to take effective measures. But the voice of the Sterling Area Governments is likely to be listened to in Whitehall.

Notes

CAPACITY Rationed

The decision of the Commerce and Industries Ministry not to license additional units in 7 major industries including cotton textiles, jute, cement, sugar, paper, viscose rayon and staple fibre and caustic soda, will not come as a surprise to people who have been following the trends in respect of production in some of these industries with some amount of dismay. As has been evidenced by the difficulties experienced by the sugar mills in clearing their surplus stocks and of the jute mills which have been obliged to work below capacity, even the existing level of production in these industries has been proved to be rather excessive in relation to demand. In respect of cement, though there has been signs of shortage of late in supplies, the capacity licensed up to the end of 1960 suggests overlicensing of a considerable order. In the paper industry also, the Second Plan target of production at 320,000 tons, has been exceeded by 30,000 tons, while the capacity installed has reached a level of 400,000 tons. As has now been recognised by the Government, the licences granted for these industries have already exceeded the

limit that can be considered necessary to meet the domestic and export demands for their products. In these circumstances to license additional capacity would have been clearly indefensible.

While Government's decision is to be commended as most welcome and necessary, that a situation should have come to pass in which there was need to apply the brake, though only temporarily, is a reflection on past planning with reference to these industries. For it is clear that the present over-licensed capacity in most of these industries has been brought about by indiscriminate licensing in the early years of the Second Plan. Ideological preoccupations as in the case of sugar industry, in which a number of co-operative mills have been licensed, account for part of this error. There is also clear evidence of failure to make correct and realistic projections of production requirements. The sugar industry again provides the most blatant instance of a case where the estimates of export and consumption possibilities have been grossly belied. The cement industry has suffered for an entirely different reason—unco-ordinated phasing of development projects. Though there is considerable excess capacity in these industries, it should be recognised that production in some of these industries has alternated between shortage and surplus so frequently that it is unlikely that a simple brake on licensing alone will ensure stable conditions. In particular, there can be no guarantee against idle capacity unless steps are taken to ensure adequate raw materials. It is unlikely that the axe on licensing will result in any considerable amount of foreign exchange saving, since in most of these industries the country has developed reasonable capacity for internal fabrication of machinery. But the efforts at severe screening of application applied to all industries should help proper utilisation of resources. For the industries to which the brake on licensing has now been applied, the gain in terms of consolidation of progress should be invaluable and should provide the basis for more efficient performance in the future.

SHIPPING

The Elusive Target

Recent discussions on the role of shipping have been rightly concerned with the need for en-

suring a greater measure of progress of the shipping industry than is envisaged in the Draft Outline of the Third Plan. At the governmental level also, there have been some signs of rethinking on the targets for shipping under the Third Plan and the scope for additional funds for the industry. It now appears from the speech of Mr Raj Bahadur, Minister for Shipping, that the outlay for shipping has been raised from Rs 55 crores in the Draft Outline to Rs 62.5 crores. Even though the revised figure comes nowhere near the outlay of Rs 104 crores recommended by the National Shipping Board, an assurance has been given by Mr Raj Bahadur that the question of further allocation will be considered after the present outlay has been utilised.

The shipping industry's case for liberal allocations rests mainly on two considerations, viz., the inherent advantages of a self-sufficient shipping industry and the relative slow progress made by the industry in the course of the first two Plans. Even after the completion of a decade of planned endeavours, the country is far away from the targets recommended by the National Shipping Conference in 1947 namely 100 per cent for coastal trade and 50 per cent for overseas trade to be handled by Indian shipping. Against this, during 1960 Indian flags accounted for only 9 per cent of the total import trade and 11 per cent of the export trade. The resulting dependence on foreign vessels for overseas traffic has meant an annual drain of Rs 130 crores as invisibles.

The composition of the overseas trade shows the greatest shortage to be in respect of tramp vessels and considering that it is bulk commodities such as foodgrains, mineral ores and oil that constitute the major portion of the cargo that moves on Government account, the acquisition of more tramp and tanker vessels should help a greater volume of overseas trade to be diverted to Indian vessels. Uneconomic freight rates offered by the Government has been a discouraging factor for vessels in the private sector operating in the overseas trade. Apart from fairer rates, the question is also bound up with lower costs of ship-building and better terms in respect of interest on Government loans and also the period of repayment. Ship-building costs at Vizag are far higher than those in England, Japan, and Germany mainly on account of heavy overheads and lack of ancillary industry and trained personnel. There are also other adverse factors constituted by the low level of production, dependence on imports for special types of steel required in ship-building, and absence of docking facilities. While special attention will have to be bestowed on the removal of these difficulties with a view to bringing ship-building costs at Vizag on a par with inter-

national costs, private enterprise should be offered specific encouragement for greater participation in overseas trade. The conditional grant of rebate of 40 per cent to Indian ships which requires setting up of 75 per cent of the amount from the profits of the shipping companies has been felt as a deterrent to modernisation and expansion of Indian owned vessels. A longer period for amortisation of the loans granted by the Government would also be a positive inducement for acquisition of more vessels. There has been in recent times evidence of a pick-up in freight rates for tramp vessels which had touched a rock bottom after the Korean War boom. This should offer the most opportune time for the Government and the private shipping interests to put into effect measures to secure a fair portion of the overseas trade for Indian shipping.

MIXED ECONOMY

Implications not Evaded

It was a Gilbertian situation the other day at Mettur when the Madras Industries Minister, Mr Venkataraman complained in a manner usually considered characteristic of a disgruntled industrialist. For once, it was refreshing to hear a person in authority speak out against factors that inhibit the entrepreneurial spirit. Mr Venkataraman spoke, in particular, about the provisions of the Industries Development and Regulation Act. He pointed out how some of the provisions of this Act were needlessly restrictive in their scope

S. T. SADASYAN

and how entrepreneurs had to put up with uncalled for difficulties in obtaining licences thereunder. Even the State Governments, he said, have to face difficulties in consequence of some of the provisions of the Act. As one realistically grappling with the problems of industrialisation without any doctrinaire affiliations, Mr Venkataraman's suggestions deserve serious notice. And, as he is a prominent and effective member of the party in power, we may expect that he will be able to do something tangible in removing these difficulties. One practical suggestion that he made deserves the most urgent consideration of the Central Government. It is to the effect that at least those industries which do not require foreign exchange for import of machinery or raw materials should be taken out of the Schedule to this Act.

Mr Venkataraman promised all help to industrialists for establishing new ventures in Madras. His earnestness in wanting Madras industrialised rapidly is evident from, among other things, the list prepared and circularised widely by the Government of industries for which there is scope in Madras. It is a matter of satisfaction that at least in Madras the implications of a mixed economy are squarely faced by the Government without evasion or equivocation.

SHAREHOLDERS Effective in Madras

Satisfaction over an useful year's work was in evidence at the annual meeting of the Madras Shareholders Association held on 3 June. The Association recalled that the Government of India is in favour of Shareholders' Associations and considers that active and constant interest on the part of shareholders in the management of the company is a guarantee against abuses. This is required also to ensure the healthy growth of jointstock enterprise in the country. An increase in membership, together with a rise in the income for the last year, proves that the shareholders' association is making headway gradually. Reference was made to the success of representations addressed in respect of preference dividends but it has been pointed out that in the case of taxable preference shares, a deduction of 20 per cent is being made from dividends paid and the shareholders are unable to get a refund although in respect of the other 30 per cent, they are able to obtain it. The Government has again been asked to appreciate the hardship of investors and, if necessary, sacrifice some revenue in order to ensure a fair deal to investors. Irregularities in company administration, mentioned in reports to shareholders, do not appear to receive attention and it has been urged that the

Company Law Administration should take some steps without waiting for formal complaints from aggrieved shareholders.

The Madras Shareholders' Association last year succeeded in the suit filed by some shareholders of a Company to prevent the sale of one of its factories to a private party after getting a resolution adopted by the annual meeting. The Association supported the plaintiff and the directors were asked to pay the cost of the suit. Two contempt petitions, filed against the Association and the Secretary, were dismissed by the High Court without the association being called upon to enter a defence. In the previous year, the Association intervened successfully to prevent the sale of a large block of shares at par to the managing agents and compelled the interested parties to pay the market price for shares acquired.

The Association's memorandum of association has been altered to suit the wishes of the Company Law Administration. To that extent the Shareholders' Association has given satisfaction to others besides members, and it is evident that, like the associations functioning in Bombay and Calcutta, the Madras Shareholders' Association is able to defend the interests of investors as against managements. It is quite possible that in any scheme of reorganisation of capital of a Company known to be in a bad way a shareholders' association will be called upon to give advice and prevent undue sacrifice of the interests of genuine investors.

LOK KSHETRAS Effective, But

The report of the Programme Evaluation Organisation on the working of the Lok Karya Kshetras of the Bharat Sevak Samaj, points to vital defects in the working of the Lok Kshetras which were set up as an agency to harness people's enthusiasm for the execution of the developmental schemes on a voluntary basis in the rural areas. Though the objectives of the Lok Kshetras included participation in physical resources mobilisation, it was on the rather intangible aspect of education of the people in the need for voluntary cooperation that the accent was largely laid. While the report has refrained from a definite verdict on the effectiveness of the Lok Kshetras in view of the short period of their working, it is inclined to take the view that the Kshetras have not been as effective as they were expected to be. It is observed that while there is a broad understanding of the objectives of the programme, appreciation of the importance of the various purposes does not correspond to the priorities fixed by the planners. Thus, while at the national level stress is laid on

family production plans, resource development and food production, the workers are stated to put the emphasis on construction, health, education and local institutions. The relative under-emphasis put by the Kshetras on the promotion of irrigation facilities is also in divergence from the canons of national planning. Inadequate training of workers, and the weakness of the intermediate link between the Central Bharat Sevak Samaj and the Kshetras at the rural level are admitted to be handicaps to improved working of the Kshetras. Lack of coordination and consultation between the Lok Karya Kshetras and the CID workers has also tended to blunt the effectiveness of the Kshetras. Improper accounts and in some instances lack of such account maintenance by Karya Kshetras have also been reported. Against these, the report gives some instances of signal success scored by the Kshetras in certain areas in initiating, with the voluntary help of the villagers, constructive activities. And applying the test of the change in the attitude of the people to participate in national development plans which the Lok Kshetras are designed to bring about, the report strikes an optimistic note. The report refers to evidence of high degree of social cohesion in selected villages, and the willingness of the people to participate in joint efforts to satisfy community needs. This coupled with the increasing popularity of the Kshetras would seem to presage a better future for success of schemes of voluntary cooperation that may be taken up by the Kshetras.

DOCK STRIKE Called Off

Thanks to mutual goodwill displayed by the Government spokesmen and the representatives of the dock workers, the negotiations for averting the threatened port strike have been crowned with success. The decision to call off the strike will certainly be welcomed with relief by all. For, had the strike been allowed to materialise, it would have done incalculable harm to the economy of the country, not to speak of the paralysing effects on import and export trade. Such damage was a thing which the country could least afford at present when the economy has to be keyed up to the Third Plans tasks. Both the parties are to be congratulated for the sober manner in which they have dealt with the delicate issues involved. The most important point involved in the dispute was the port workers' claim to higher wages which appeared just in view of the rise in the cost of living which has pushed down living standards. The Jeejeeboy Committee report which has provided the basis for mutual agreement promises permanent benefits to a large number of workers. The

report has categorised the jobs and rationalised the pay structure. In view of the existing higher rates for some category of workers in Bombay, the recommendations will benefit a larger number of workers in Madras, Calcutta, and Vizag than in Bombay. Most employees will benefit by the recommendation regarding the grant of an increase in pay not less than the increment drawn last. The retrospective effect being given to the recommendations from October 1957 will provide a lump sum accrual to the workers.

It was only three years ago that a dock strike was precipitated in the major ports for similar reason of low wages and the spectacle of a threatened strike that very nearly came off should provide the occasion for devising permanent ways and means of averting such strikes in the future. In the light of the settlement that has now been arrived at, it is clear that had the Government shown more promptitude in giving effect to the recommendations of the Second Pay Commission, the country would have been spared the agony of a strike threat by the port workers. For the Report of the Second Pay Commission would have met some of the demands of the workers, though not all. Even now when a peaceful settlement has been agreed upon on the basis of the Jeejeeboy Committee report, there is need for sympathetic implementation of the recommendations in respect of categorising the pay structure. This would particularly apply to the category of workers whose scales of pay are higher than those recommended by the Jeejeeboy Committee. There are also other matters not dealt with by the Jeejeeboy Committee which would require thoughtful consideration in the interest of sound labour relations in the ports. It is to be hoped that these will not be allowed to develop into new factors of friction between port authorities and the dock workers.

SCIENTIFIC RESEARCH

Challenge to Young Brains

Increased importance has been accorded to the strengthening of the country's scientific base of economy by expanding the existing research facilities and initiating new programmes of pure and applied research, by the planners during the Third Plan and an allocation of Rs 130 crores has been made for that purpose as against Rs 72 crores in the previous Plan. The larger allocation for scientific development speaks of the considerable progress India has to make in this sphere and it seems planners have realised the folly in neglecting this branch of development. Even the amount earmarked for the Third Plan

appears to be far below the requirements taking into account the size of the country and the comparative backwardness in industrial and other fields. Nevertheless one can naturally anticipate that wider fields will be covered during the next five years.

During the British rule scientific research work lacked real incentives. After the attainment of independence, scientific research was given an important place. The first real incentive was provided in 1958 when the Government of India announced a definite scientific policy with a view to fostering, promoting, and sustaining the cultivation of scientific research in all aspects and the Council of Scientific and Industrial Research was set up. At present there are 25 national laboratories under the supervision of this Council which are engaged in research in diverse fields like chemical, fuel, glass and ceramic, food, drug, electrochemical, electronic, industrial and agricultural science. The execution of research by itself will not bring any material advantage. Translation of research findings into practical use is the need of the hour. The wide gap between the actual utilisation of a process and its laboratory success is attributed to the combination of a variety of factors like the lack of pilot plant facilities, inadequate liaison between industry and research scholars, and insufficient design and fabrication facilities. The National Research Development Corporation has failed to make any appreciable headway in bridging the gap and the establishment of a Central Designs Institute is being contemplated. Meanwhile some of the research centres will be provided with small design cells of their own.

It is gratifying that a good deal of research will be oriented toward the utilisation of by-products and waste-products like bagasse, molasses and press cake and the discovery of new uses for the established products like coir and jute. Besides, there is a proposal to revise the patent law for the purpose of promoting inventions and facilitating their application for industrial uses.

Among the various research programmes what have been included in the Third Plan those requiring special mention are noted below. Two new atomic reactors will be developed during this Plan period. They include an organically-cooled, heavy water moderated power reactor and a fast reactor assembly for thorium and plutonium technology. In addition to this research and development, work will be undertaken on the chemical processing of irradiated fuel, waste disposal, and the fabrication of new types of fuel elements. Programmes have been finalised for producing more than 15,000 electronic instruments valued at Rs 1 crore at the Electronic Division of the Trom-

bay establishment. It is expected that the products of the Electronic Division will be sufficient for the entire requirements of the country. Considerable expansion in the production of radio-isotopes from the Canada-India Reactor has been envisaged. With a view to developing and promoting the use of radio-isotopes in medical research, a medical research centre will be instituted. For stimulating research in nuclear science four inter-university centres will be started.

It has also been decided to open a new institute of petroleum, a national biological laboratory and a fire station, an institute of fertiliser technology, an institute of forage and grassland research, livestock research stations, a Central sheep and wool research station, a Central piggery research station, four sea fishing stations at Mangalore, Kakinada, Paradip and Port Blair, permanent research stations on cholera and tuberculosis, and a trachoma research centre in virus diseases in association with Muslim University, Aligarh. The vastly increased scope for scientific endeavour is a challenge and opportunity for young men and women with brains.

INDUSTRIAL TRAINING An Urgent Problem

At a conference of industrialists and engineers held in Madras recently, a decision was made to set up a committee to draw up a basic programme of practical training to be given to graduate trainees in engineering. The committee will assess the number and capacity of the industrial establishments in the State to provide training facilities to such student-trainees.

In a short time a second committee to deal with facilities for training for diploma holders will be established. A third committee would formulate a programme for industrial research.

Shortage of trained personnel and lack of training facilities had been acutely felt by the industrialists themselves in this State. They have now realised that it would be better to help themselves by instituting training facilities and apprenticeship in their own factories. But even this could not be taken up unilaterally but with coordinated efforts of the industrialists who want trained experts.

Some interesting suggestions were made at the Conference. Mr C. Subramaniam, who inaugurated it, suggested that engineering lecturers should be taken into industrial workshops during the Summer vacations. Though the bigger industrial units in the country had training facilities for their men, the smaller and medium industries cannot have such facilities for their engineers who, the Minister pointed out, had to learn things through their own mistakes. The Finance Minister also wanted that Indian engineer's technicians and

other personnel should no longer borrow ideas and work on them, but become inventors and make original contribution to the industrial world.

Mr J. C. Abraham, Director of Technical Education told the gathering that the training facilities as contemplated by the scheme would yield maximum results only when industries in both private and public sectors cooperated.

Mr A. M. M. Murugappa Chettiar suggested that engineering institutions should be provided with well equipped workshops and that the service conditions of the teachers in these institutions should be bettered to make the teachers stay rather than take up teaching jobs as stop-gaps.

That managements be persuaded to devote some time to the trainees was another suggestion advanced by Mr T. S. Krishna. He also endorsed Mr Subramaniam's suggestion that faculty members should be allowed to work in industrial establishments for some time in order that they may get out of the academic rut.

ORISSA A Clear Verdict

The elections in Orissa have resulted in an unequivocal victory for the Congress which by getting 82 seats in the new Assembly has vindicated its action. One result is that Mr B. Patnaik has emerged as the leader, for Dr Mahatab is out of action. The eclipse followed the end of the coalition Ministry and it is possible that the interlude of Presidential rule has affected his political future. The fate of the Swatantra party in Orissa is fairly obvious. Its alliance with the Ganatantra Parishad did not help it in the least. That too may be a warning to the party which hopes to test its future shortly. The Congress President may play a greater part in ministry-making than the Home Minister for it is obvious that the directions of Mr Sanjeeva Reddi really influenced events this year. The triumph of the Congress in industrial areas may restore confidence in the industrial growth for Orissa. Big enterprises like Orient Paper or Titagarh Paper with its new unit Chowdwar had a real interest in the outcome of electoral contests. The Ganatantra Parishad is in opposition, but it cannot hope to brake the Ministry's policy. And it cannot prevent co-operation with the Congress Ministry in Bengal or Andhra Pradesh. Inter-State differences will be fewer in future and the flow of capital for developing forest or mineral resources may be accelerated. No impartial observer will deny that the Orissa election result will influence US views about India's merits or needs. The US Congress decision to allot funds for aid may be swayed by the support given in a backward region to the Congress Party against its rivals. There will be no argument over the possibilities of investment or the need to accept more mineral ore from India to help India's export trade. The

fall of the PSP now lacking a leader will not be regretted and it is clear that the Socialist platform of the Congress today is enough to win votes. But in the hot summer, the poll in Orissa was lighter than expected, and too much should not be read into the recent failure of the Ganatantra Parishad. In one respect, Orissa is peculiar. There is no minority, Muslim or Christian, to complicate existing political differences as in Kerala. The Jharkhand party is erased to that extent there is a measure of political advance in Orissa through the elections.

MADRAS ALUMINIUM Well and Truly Laid

The laying of the foundation stone of the Rs 10 crore aluminium plant at Mettur in the Madras State by Mr Lal Bahadur Shastri, the Union Home Minister, constitutes another landmark in the industrialisation of the State. The new factory will be set up with the collaboration of Messrs Montecatini, an Italian firm of great repute, and it is expected to go into full production by the end of next year. The installation of the new aluminium factory is unique in more ways than one. It is, undoubtedly, the biggest project that took concrete shape under the private sector in the State. Secondly it has manifested the investment-consciousness of the people of the State who subscribed more than Rs 1 crore for the formation of the Company. Apart from these, it is significant that for the first time in India a foreign collaborator has backed the issue of debentures in his country for financing foreign commitments of Rs 3.40 crores in this venture. Above all it heralds the beginning of large scale development of Salem, which gives every promise of becoming the Ruhr of Madras.

The production capacity of the plant in the initial stages will be of the order of 10,000 tons. When fully commissioned this rate of production will help save the country foreign exchange to the tune of Rs 2 crores. Special arrangements have been incorporated to increase the capacity to 20,000 tons at a later stage.

The factory will be using bauxite from the Shery hills which is considered to be the best for processing and development of aluminium. The Italian firm is confident that the factory will be able to produce aluminium according to international standards and at international prices.

The schedule of production will be in two stages. The first stage will last over one year when alumina will be produced. But by the end of the second stage the factory will manufacture aluminium ingots and other rolled aluminium products like sheets, cable

Indian Finance

17 June 1961

and bars. The Italian firm has also consented to purchase the surplus produce from the factory at international rates.

AUTO RESEARCH A Beginning is Made

An Automobile Research Institution on the most modern lines is now in the blue print stage and will take shape in the course of the next 12 months. This was disclosed to our correspondent by Mr K. V. Srinivasan, Director of the Standard Motors early last week.

At the instance of the Government of India, the Automobile Manufacturers' Association of India has taken up the question for earnest consideration. Such a research station is, without doubt, a very desirable thing, but there are very many obstacles in the way of its coming into being. Finance is obviously the first amongst such considerations. It is understood that the Central Government is keen enough over the project to be willing to make financial contribution towards its establishment. The Association may not hesitate to make its contribution. But foreign exchange may offer some difficulties especially since machinery and other ancillary equipment needed for the Research Station in its initial stage may have to be imported. Expert knowledge is also a desideratum. Again there is likely to be some hitch over the place at which the station is to be established. As in the case of many other things, regional pulls may offer considerable difficulty in the choice of a site. The problem may be solved, if finance permitted, by making two stations—one in the South and another in the North. The obvious choice of the site of the Southern region will be Madras where there is already a vigorous automobile industry.

INDO-SWISS TRADE Performance And Possibilities

Adverse balance of trade with other countries is nothing new to India and our trade with Switzerland is no exception to this. As far as the trade between these two countries is concerned the balance of trade is highly in favour of Switzerland and this state of affairs is likely to continue so long as we continue to import capital goods and heavy machinery for the successful completion of the various development schemes. The list of imports from that country consists mainly of machinery, instruments, chemicals and pharmaceuticals. Our exports to and from Switzerland are the traditional items like coffee, tea, mica, essential oils etc. The accompanying table

will show the main trend of trade between the two countries during the past three years:

	(In million S.Franks)		
	1958.	1959.	1960.
Imports from Switzerland ...	102.9	83.1	104.7
Exports to Switzerland ...	19.3	24.0	25.3
Balance of Trade against India ...	-83.6	-59.1	-79.4

The pattern of trade as is quite evident from the table, was always in favour of Switzerland. It can be noted that our exports in 1960 were a shade higher than in 1959, but on account of the increase in imports, the balance of trade slipped down further against us. The bridging of this yawning gap cannot be wrought overnight but at best what we can do at present is to stimulate our exports to that country and try to shorten the gap. The scope for boosting our exports appears to be bright considering the popularity of Indian goods in that country. But a number of stumbling blocs will have to be eliminated for the realisation of this aim. Fluctuating prices, irregularity of supply and the distance between the two countries are some of them. For instance, the value of coffee exported in 1959 totalled 1,108,000 S.Franks whereas the corresponding figure for 1960 stood at a disappointingly low of 408,000 S.Franks. Another factor that precipitated the decline in coffee exports was the sale of coffee at London auctions which prompted the Swiss importers to cover their requirements from London instead of directly dealing with this country. There was also a decrease in our exports of coir, carpets and tobacco in 1960. Though the decrease was insignificant, such a turn cannot be allowed to drift unchecked. The periodical variations in Swiss requirements may be cited as a major cause for this none too happy position. The favouritism shown by Swiss consumers for Persian and Afghan carpets is a reminder for us of our own skills in this direction. A study of the tastes and requirements of the market can make us capture the market for such articles of luxury and aesthetic excellence. Prompt execution of orders can help in Switzerland, as elsewhere to promote our earnings.

FOREIGN EXCHANGE Quietly Efficient

Under the Foreign Exchange Regulation Act 1947 an Enforcement Directorate is invested with the authority of investigating and adjudicating cases of violation of its provisions. This Directorate which was set up on 1-5-1958, was formerly under the administrative control of the Ministry of Finance, Department of Economic Affairs. From December, 1960 it is under the administrative control of the Department of Revenue.

During the year 1960, the Directorate has been unostentatiously active. As many as 1,695 fresh cases, or over 145 cases per month, were registered for investigation. Most of these related to unauthorised purchase, borrowing, lending of foreign ex-

change, maintaining and operating accounts in foreign countries, making payments to or on behalf of non-residents, non-surrender of foreign exchange to authorised dealers and non-realisation of the full value of the goods exported abroad. The Director of Enforcement can neither adjudicate a case under the Foreign Exchange Regulation Act himself or advise criminal prosecution. During 1960 he adjudicated 289 cases and imposed a total penalty of Rs 216,583 for breaches of regulations. The total number of cases adjudicated since March 1958 (when the work of adjudication was started by the Director) upto 30-4-61 is 765 and heavy fines were imposed in some cases. In addition, foreign exchange worth Rs 164,000 was confiscated. During the few months of 1961, the maximum amounts of penalty have been imposed in two cases of the Calcutta Branch of the Directorate.

An Appellate Board has been constituted to hear appeals against the orders of the Director of Enforcement. Out of 65 appeals decided by the Appellate Board upto 30-4-61, 55 appeals have been dismissed—34 in toto and 21 with the modification of a reduced penalty. The Appellate Board has allowed only 10 appeals so far.

SIKKIM Planned Development

The team of experts appointed by the Planning Commission towards

the end of last March, for formulating the Second Five Year Plan for Sikkim, has submitted its recommendations envisaging a total outlay of Rs 8.13 lakhs. Before preparing the report, the Team spent a fortnight visiting various projects in Sikkim and holding discussions with the Sikkim Durbar. The team consisted of experts in different fields of development like programme administration, agriculture, development of livestock, forestry, and soil conservation, roads and power.

The important features of the Second Plan as formulated by the Team are expansion of agriculture, development of power, exploitation of forests, improvement of communications and transport and establishment of village and small-scale industries. In its report, the Team has expressed the view that the economic and social development of Sikkim should concentrate, in the beginning, on development of resources in directions in which Sikkim has a special advantage, so that by the end of the Second Plan period, the economy would be better placed in maintaining the development schemes implemented and achieve a good measure of self-reliance.

On 31-3-1961, Sikkim completed its first Seven Year Plan which involved a total expenditure of Rs 3.40 lakhs. The Second Five Year Plan now formulated by the Indian Team lays stress on utilisation of assets already created. The Team's recom-

mentations in respect of education, emphasise the need to utilise the capacity already created during the Seven Year Plan period. Stress has also been laid on the improvement of standards and expansion of facilities in directions determined by a careful assessment of needs of the people and different areas. Liberal provision has also been made for scholarships and hostel accommodation and establishment of a craftsmen training institute. An important recommendation of the Team relates to the reorganisation of the development departments and audits and accounts machinery for gearing them up to the tasks envisaged in the Second Five Year Plan as well as organisation of public cooperation through such institutions as panchayats cooperatives and national extension.

*

ZANZIBAR

The Arab's other Island

The riots in Zanzibar will certainly raise the price of cloves. The increase in tariff values has already done so, and the limited imports allowed at present into India will make cloves both scarcer and dearer. The reasons for the riots are obscure, but the death of the old Sultan has probably created new tensions in the island which is, in some respects, a projection of Arabia rather than of Africa. This important point is apt to be ignored in comments on the situation. Zanzibar differs also in being far more prosperous, and distinctly friendly to Britain. The stoppage of copra exports will probably help Ceylon to some extent. But the real issue now is

STATE BANK OF INDIA

NOTICE

In pursuance of Regulation 40(1) of the State Bank of India General Regulations, 1955, it is hereby notified that Shri Krishna Kumar Birla of 17, Gurusaday Road, Ballygunge, Calcutta 19, being the only person validly nominated for election shall be deemed to be elected as a Member of the Calcutta Local Board of the State Bank of India on the 21st June 1961, with effect on and from the 1st July 1961, and that the Local Meeting of Shareholders which was to be held on Wednesday, the 21st June 1961, in terms of the Bank's Notice of the 26th April 1961, solely for the purpose of the aforesaid election, stands cancelled.

B. K. KACKER
Secretary,
Calcutta Local Board.
Calcutta, 7th June 1961.

whether the trouble in Zanzibar will soon have echoes in East Africa. The two Islands of Zanzibar and Pemba are on the threshold of diarchy but the prelude is hardly promising and it is fairly clear that African leaders, after the indecisive elections, are trying to work off old grievances against the well-to-do Asian minority in Zanzibar. Military precautions taken by the Colonial Office are not to the taste of East African leaders, but other countries like India or Pakistan will certainly expect that protection would be locally afforded by British arms. The withdrawal of Indian capital may be one of the immediate consequences of the riots. And it is not improbable that a good deal of money will go back to Aden where political changes have made for a degree of economic stability in recent years particularly, as the quarrel with the ruler of Yemen over the frontiers of the Protectorate has disappeared into the background. But what happens in Zanzibar is a sign that Africa is not reconciled to alien capital and enterprise and the latter are exposed to risks unknown in the past.

*

USA

A Hard Look at the Reasons

Now that the much publicized recession of 1960-61 is safely over, and an economic upturn has been in progress for some three months, it is possible to take a reasonably hard look at the influences that were brought to bear to keep the business dip so brief and so mild and to encourage so early and so marked a recovery.

To set the stage for this discussion, it is in order to note, in retrospect, that the recession began in the late spring of 1960, with May the month usually mentioned, and ended before winter had run its course in 1961, with March usually named as the "turnaround" month. In all those nine months or so of business decline, the total economy—measured in terms of the total output of goods and services, or the gross national product (GNP)—slipped little more than one per cent. Now, indications are that this slippage already has been more than made up, and the GNP is at an all new all-time high and still rising.

The chief influences helping to bring this about reflect activity in the three principal segments of US economic life—consumers, businessmen and the government—with the last named playing a key role that too often is not well enough understood, even at home.

First of all, consumer spending has held up remarkably well throughout the past year. This has been the direct result of stability in the nation's total personal

income, which was higher when the recession ended this March than it had been when the recession began in May 1960—annual rate of \$409,800 million as against a rate of \$404,700 million.

Businessmen, on the other hand, cut their total spending, including investment in construction, equipment and inventories, rather substantially. This is an understandable course during periods of business contraction.

Even so, business outlays for new plant and equipment—key element in overall economic activity—dipped at a relatively slight annual rate, from \$36,300 million in the second quarter of 1960 to \$34,400 million in the first quarter of 1961. And businessmen actually increased their total investment in research and development—the stuff of which industrial and technological progress is made, and the "seed" money for continuing economic gains.

Basic to these developments was the important role of the federal government. The "built-in" stabilizers worked remarkably well. These consist largely of those elements which work automatically to counter a downturn in personal income.

Thus, federal payments in the form of social security benefits and unemployment insurance rose substantially and helped sustain the purchasing power of those people most immediately affected by the recession.

At the same time, the nation's graduated income tax structure meant substantial tax reductions for those whose incomes may have fallen. And this, too, was an important income-propping and economic stabilizing instrument. On a more deliberate level, and in line with the historic flexibility of federal economic policy, steps were taken to reduce interest rates and pump money into the banking system. This had the effect of stimulating consumer demand and business expansion and modernization projects.

One of the most important of the government contributions to stability was a step-up in spending. A speed-up in outlays for defence and highways, for instance, was begun last year under the Eisenhower administration, even before it was publicly admitted that anything was wrong with the economy. This spending policy has been accelerated and broadened into many other fields by the Kennedy administration since coming into office this past January. Its purpose has been not merely to boost business activity, but to meet long-term national needs deemed basic to socio-economic progress.

In addition, the Kennedy administration has poured large sums into extended unemployment benefits, accelerated income tax refunds, insurance dividend payments to veterans of the armed

forces, and special relief and reconstruction programmes for areas hardest hit by the economic dip. In these ways, government policies have been directed toward easing restrictions on economic activity and toward channelling money into those economic sectors where it has been most needed.

*

IRAN

Opportunities

The recent trade agreement made with Iran continues the arrangements under the treaty of 1954 and if it were not for stricter import control in Persia applied owing to political and economic difficulties, the present outlook for trade may be called good. A substantial excess of imports from Iran is due mainly to India's dependence on imported oil. To correct the imbalance in trade, steps are promised by providing for larger imports of cotton and woollen goods as well as jute manufactures from India. However, Pakistan has also made a trade treaty with Iran this year and competition may limit India's opportunity. On the other hand, in the list of commodities available for export from India, a large number of engineering items find a place and India may be able to sell even automobile parts and small tools in Iran, because it may be convenient for Iran to keep up trade connections with India. As a source of dry fruits and nuts, Iran may be able to compete successfully with Afghanistan and to the extent, India buys more, the changes of exporting electrical goods and builders' hardware to Iran are distinctly better. Shipping connections with Iran are not difficult to maintain and it is quite possible that an Indian bank will find it opportune to start a branch in Iran which has allowed re-entry of British banking into Iran.

The import of Persian books and periodicals into India is contemplated under the new trade treaty and this may be satisfactory to Muslims whose cultural interests are sometimes alleged to have been neglected. The import of carpets and rugs may be regarded as a luxury, but India would certainly welcome supplies of cotton from Persia and pearls from the Gulf, promising the restoration of an ancient trade meant to help skilled Indian craftsmen saving the export trade. Since both countries are maintaining strict exchange control and import control, the new arrangement may not lead to a sharp upturn in Indian exports but Iran appears a new outlet for sugar, jaggery and confectionery which India is now in a position to provide. Last year, there was a decline under exports of tea because Ceylon has emerged as a powerful rival to India in the Middle East in recent years.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

Dr B. C. ROY'S long and closely-argued case for multilingualism at the State level is less likely to hold the attention of politicians than his support for the Shastri formula for solving the dispute in Assam. The reasons for this are not dissimilar to those that killed his somewhat forlorn attempt at merging Bihar and W. Bengal some years ago. In both cases the danger of acceptance was that politicians, at least some of them, would be cheated of their raison d'être, if not livelihood. A suggestion that a language spoken even by a bare 5 per cent of the population should qualify as official language bespeaks a tolerance and breadth of outlook that must seem quixotic to some of them. Even the States Reorganisation Commission did not go so far, its prescription being that a State can consider itself officially unilingual if seventy per cent of its population spoke one language. Strictly speaking, the implications of adoption as an official language are superficial, for it means nothing more than that the Government conducts its business in that language also. This entails also the rather dreary task of translating all the codes and enactments in that language and a whole lot of subsidiary drudgery. But it would be naive to think that the quarrel and the killing are over anything so unimportant. The language problem operates at two levels: one is fairly deep, that of the collective unconscious, where the clashes are at their uncivilised worst. The other, that of bread and butter, is relatively easy to spot and here the clashes are at their civilised worst. Dr Roy's prescription promises no cure: it is at best an analgesic or a tranquilliser. And unless other forces, at both conscious and unconscious levels, succeed in presurising a sense of cohesion, Dr Roy's first aid would be in vain. Again questions of definitions will arise. Should—to choose a safe and unlikely example—Konkani desire the status of an official language, it cannot be denied it. The absence of a script is no obstacle for the operative word is "spoken."

*

I read the other day a reviewer blithely suggesting that the new Hesketh Pearson biography of Shaw priced at 50 sh. was a good buy and even those who had invested in the earlier edition should not mind spending "a little more money" on acquiring it. There is a Tamil saying (no longer, alas,

true) about the brahmin not knowing the price of ghee. Reviewers, who don't have to buy the books they enthuse over, are likewise given to being pretty free with other people's money. But as a compulsive book-buyer of sorts, I find the present prices of books greatly discouraging. I know all the arguments about mounting costs and the speculative risks in backing new authors and the need to subsidise learned books and so on. But at current prices, ambitions of even a modest library of one's own become less and less realistic. I don't, of course, hope for the return of the golden age when the World's Classics and Everyman's Library cost 2 sh. apiece, but when a reasonably well-bound book costs a minor fortune, it is perhaps time to give up. The learned paperback, whose sudden eruption is throwing into disarray the review pages of the weeklies, is supposed to be a solution. But it is only partially that. Apart from obvious disadvantages in handling—some of them are not even stitched and come off in bits within a month even with the most careful use—they have anything but paperback prices. When Sir Allen Lane launched the Penguins in 1935, his idea was "to produce a book which would sell at the price of ten cigarettes, which would give no excuse for anybody not being able to buy it." Smoking has since become expensive but not so expensive as to justify the price of some paperbacks. Sir Allen once described the Penguins as "a University Press in paperbacks." Now that the University Presses themselves have broken into paperbacks, it is legitimate to inquire how far they measure up to Sir Allen's ideals. In a recent advertisement of six Cambridge paperbacks, the least-priced costs 10sh. 6d. and the most expensive costs 15 sh. I am ready to concede that the books themselves are among the best in their genre—one of them, for example, is Maitland's Constitutional history of England—but a paperback at 15 sh. is a little dismaying. I still have with me the three-volume Pelican Halevy's History of the English People in the Nineteenth Century on which I invested exactly the rupee equivalent of 1sh. 6d. (I find the same book advertised as a Benn paperback in six volumes at 12sh. 6d. each.) Some of the early Pelicans—like Shaw's Intelligent Woman—are as good as those now being put out

by the many new entrants and many of us, at least in India, are, like Richard Hoggart, Penguin-educated. However, there is one consolation. A book-seller friend of mine tells me that since the better kind of the new paperbacks are printed on good paper and the forms are stitched, an extra two rupees spent on binding in hard board would make the new paperbacks as good as the old books. My own solution would be for book sellers and publishers in India to enter into arrangements of collaboration with foreign publishers for Indian editions of their books. Indian book production has improved tremendously in quality in recent years and the cost of production can be cut, as my friend averred when I put it to him, by nearly half. Indeed, something like this is being done in paperbacks. The UNESCO has taken the initiative in respect of learned books and negotiations are going on to make standard textbooks easily and inexpensively available in India. I think books for the general reader should be similarly taken care of.

*

Dr K. S. Krishnan's sudden death has come as a profound shock to me. The first time I saw him was an extra-mural academic occasion. The Indian Academy of Sciences was on a busman's holiday and I was among those privileged to host it. The contrast between the eager incandescence of Dr C. V. Raman and the lambent, almost lazy glow of Dr Krishnan was unmistakable. Science, I thought, was no exacting mistress for him, but a companionable, well-loved old wife. He was, of course, no dilettante, having done some extremely important work in the physics of solids, molecular scattering of light and crystallography. I am no judge of these esotericisms, but those who can speak with authority reckon him among the world's best physicists. But Dr Krishnan was a fellow of the Royal Society in fact as well as spirit. Unlike the latter-day Red-Brick scientist whose pursuit of science is a tense and humourless obsession, Dr Krishnan shared the relaxed omnivorous curiosity of the founder and early members of the Royal Society who interested Charles the Second in "founding a college for the promoting of Physico-Mathematicall experimentall learning." Dr Krishnan's interests were wide, ranging from literature and philosophy to physics and mathematics. He was a brilliant conversationalist, witty and vivid, and Mr Nehru is once reported to have said that he never met Dr Krishnan without his telling him at least one new story. He was deeply read in Tamil classics, especially the

Vaishnavite hymns untrapped in lyrical rhapsody. In literature Dr Krishnan's interest was not only that of a connoisseur but of a practising technician. One of his constant preoccupations was the forging of a "limpid, naked and natural prose style" that would make his first love, Tamil, a true vehicle of modern thought and feeling. Even here his affiliation with the early Fellows of the Royal Society was evident, for, as is probably not so well-known, the role of the Royal Society in the creation of such a prose style was crucial. I recall a brilliant article by Dr Krishnan in which he discussed at length this very theme, and it was a delight to see a man so naturally at home in a subject that is usually considered remote from a physicist's preoccupations. This is perhaps only another way of saying that I cannot think of a better example than Dr Krishnan of C. P. Snow's much discussed ideal of a modern intellectual as a man who has broken down the artificial but thick walls that divide Science from the Humanities. The whole man is a phrase that comes up often enough in discussion, but he is rarely to be met with in reality. Dr Krishnan was a rare being by any manner of reckoning and we are all poorer for his passing away.

*

It was half an hour ago that I was handed "Kalki" Sadasivam's telegram giving me the news of Khasa Subba Rao's death this (Friday) morning. The news was wholly unexpected and I am finding it difficult to gather my faculties sufficiently to be able to write about him. At any time, I would have found it difficult to write formally about Khasa, and at the moment when I am weighed down with a poignant sense of personal bereavement, it is almost impossible. For Khasa was an old Indian Finance hand and as a boy I have come under the vivid spell of his presence. Behind the gentle and soft-spoken figure was a mind astonishingly endowed and an integrity firm as a rock. I have known few men so absolutely fearless and unmindful of consequences when their convictions pointed to any particular course of action. Authority was his natural enemy and lame ducks were his special pets. People who have basked in Khasa's approval when out of office, have often been disconcerted by the vehemence of his denunciation of some act of theirs after they had assumed office. He was a flawless stylist and the Side-lights that he has been writing in the journals he edited or worked on was an exhilarating personal column. In many ways it was characteristic of the man. Often he dispensed therein judicious praise but oftener it was some piece of chicanery that he exposed there. Behind it all shone a fearless and untrammelled spirit. Many besides me will feel desolate at its sudden extinguishment.

EAVESDROPPER

Olympus

Education Tuned to TV

BRAVING the heat of Delhi Summer, four TV experts have come out from the United States to help the All India Radio and the Education Department of Delhi to launch a unique experiment in School Television in August 1961. They are Dr Kenneth Christiansen, Director of Educational Television, University of Florida, Dr William Brish, Dr Robert Hall and Mr Paul Gupta, all pioneers in the field and members of the Ford Foundation Team of TV Experts. Dr Christiansen was in India eighteen months ago with his colleagues for discussions on the feasibility of introducing a programme of television for schools. This was followed by the visits of Indian TV engineers to the USA to learn the know-how. Dr Christiansen spoke highly of the competence and devotion to work of the Indian engineers. Following the exchange of visits a scheme has now been drawn up under which, for the first time in the world, as Dr Keskar pointed out, the educational system of an entire city would be tuned to TV.

The preparatory work has started with a "TV Classroom Teachers Workshop" which was inaugurated by Dr Keskar last Tuesday. The members of the Ford Foundation Team were present at the inauguration of the "Workshop" at Vigyan Bhavan. (A word of explanation is necessary. The "Workshop" is not really a workshop. It is just a vogue word which has apparently displaced "Seminar", as the latter displaced Conference).

Dr Keskar referred to the 'tremendous impact which TV has made on the lives of the people in countries where it has been introduced. He felt that the impact would pos-

sibly be greater in India as the masses of the people cannot be reached by the written word. But the high cost of TV equipment is an insuperable obstacle to its establishment in this country as a medium of mass entertainment. The cost of even a centre of modest size would be over Rs 50 lakhs, most of it in foreign exchange. The prospects for the spread of TV in this country, said Mr Keskar, would depend on indigenous manufacture of the necessary equipment. It is on that basis that Japan has been able to establish a nationwide TV network.

Limited resources have, therefore, obliged the Government to devise a programme for using this powerful medium for dissemination of information for socially useful purposes rather than for entertainment. As Mr J. C. Mathur, Director-General of the AIR, said in his welcome address, Government's TV programme is being developed to serve two purposes. Firstly, as a medium for training of TV technicians; and secondly as a powerful aid to education.

The Experimental TV Centre set up two years ago, with equipment borrowed from the Industrial Exhibition, serves the first purpose. The programme is now to be expanded to reach the schools in Delhi with the help of the Ford Foundation. The Foundation's assistance, Dr Christiansen explained, will be available for the provision of sets, additional centres and for consultant services.

Three hundred sets arrived in this country last week. Of these, nearly 150 are being installed at present in the Higher Secondary Schools of Delhi. To begin with, Physics and Chemistry will be taught to the students through the medium of television. The TV lectures will be given three times a week in each subject according to the schedule drawn up in consultation with the education

and school authorities who are extending their enthusiastic co-operation.

The project does not envisage to offer total instruction in the subjects. Under this scheme, the television teacher and the classroom teacher together form a team supplementing each other's work to complete the prescribed syllabus. The TV teacher imparts basic knowledge, the classroom teacher develops the subject and elucidates points not well understood by the students. Thus the classroom teacher would remain an integral part of the scheme. The scheme would offer the advantage of the best equipment and of selected teachers to all students alike. A panel of suitable science teachers has already been formed. Besides the science programmes, a weekly series of telecasts in English and Hindi would also be put on the screen. This would be a supplementary programme dealing chiefly with "speech training".

Depending on the results of the experiment and availability of resources, the scheme would be extended to other centres. It is hoped that the AIR's scheme of Instructional Television, when fully developed, would not only serve the whole of India, but also neighbouring countries of South East Asia.

The Hindustan Shipyard, Ltd., Vishakhapatnam, will be busy for the next two years building more ships and according to new designs. Its order books are now full and it is learnt that HSL has obtained designs of Mitsui Bushi type of vessels from Japan. (Hitherto HSL was building ships to designs obtained from France and W. Germany). The Mitsui Bushi Heavy Industries (Reorganised) Ltd, who will be giving the designs, will also, it is learnt, train Indian technicians at their Kobe shipyard, especially in making modifications in the basic design if they are found necessary. The Scindias, it is understood, have placed orders for three vessels of this type.

The HSL has now on its books orders for 10 ships—one for the Navy, three for Scindias and six for the two State Shipping Corporations. These orders, it is expected, will keep the yard occupied till the third year of the Third Plan.

Apart from obtaining new designs for the ships to be built at the yard,

HSL has also made progress in preparing its own designs. The Design and Estimating Section set up in March, 1959, has completed a preliminary design and estimate for a tanker of 13,800 DWT. The Section is now engaged in preparing trial designs for types of vessels for which there is likely to be demand in future.

The need for building up an adequate and fully trained organisation to prepare designs and estimates has been emphasised in the last annual report of the Hindustan Shipyard. Since India is now designing its own jet planes and locomotives, the Shipbuilding industry should also be able to do the same instead of depending on foreign yards for designs. But in order to do so, the design section will have to be strengthened. It is proposed to augment the existing staff with graduates in Naval Architecture from appropriate institutions, including the Indian Institute of Technology, Kharagpur. These recruits will be put through a course of intensive practical training and will, after some years of experience, be suitable for independent work in ship design and estimating.

★

The proposal for setting up a Tropical Meteorological Institute was announced on the occasion of the World Meteorological Day last April. The need for a special Institute for the purpose arises from the fact that meteorological phenomena of tropical and sub-tropical regions present many new problems requiring detailed research and study. And weather forecasting in tropics involved different considerations from those used in higher latitudes. The Indian Meteorological Department, it is understood, is studying the set-up and equipment of similar institutions in other countries and is working out details of the equipment and cost involved.

Mr P. R. Krishna Rao, Director-General of Observatories, who is now in Geneva, will discuss with the Secretary-General of the World Meteorological Organisation, the question of obtaining assistance from the UN Special Fund for the Institute which is proposed to be established at Poona early in the Third Plan.

Mr Krishna Rao has gone to Geneva to attend the meetings of the Working Group on "Meteorological Aspects of Area Forecasting System" of the Commission for Aeronautical Meteorology of the World Meteorological Organisation, which started on 13 June, and will continue for two weeks. The Geneva meeting is expected to examine a system of designating some important forecast centres with adequate data and technical staff as "Area Forecast Centres". The Centres will issue area meteorological forecasts for long distance jet aircraft operations to smaller meteorological offices in and near the assigned area as well as to aircraft operators.

Delhi is one of the five Northern Hemisphere Exchange Centres in the World for the collection of data, while the other four are Moscow, Frankfurt, New York and Tokyo. Exclusive radio teleprinter circuits now connect the meteorological office at New Delhi with the offices at Moscow and Tokyo.

Markets

JUTE

Futures Reopened

THE forward market in jute and goods has reopened for business this week in certain forward deliveries after remaining virtually closed for over 8 months. The wisdom of reopening futures trading at a time when prices around are declining inspired by reports of a bumper new jute crop is still questioned in certain quarters. It may be recalled that the move to resume business in this market last month was originally turned down by the Forward Markets Commission, which however indicated at the same time that the futures may be reopened after 12 June. It is evident that in the opinion of the Commission the risk of unbridled speculation would be considerably reduced by them.

But according to Mr A.I. Murison, Chairman of the East India Jute and Hessian Exchange, "it is not the function of this Exchange to control or fix prices." Speaking at the annual general meeting of the Exchange last week, he has pointed out that the functions and responsibilities of the Exchange do not seem to have been correctly understood not only by the general public but by Government as well as members of the Exchange itself. There are certain important lessons to be learnt from the experience of the working of the Exchange during the past three years. They are, according to Mr Murison as follows: "First, the Mr Murison cannot control prices and Exchange cannot control prices and any attempt to do so will always fail—the remedy here is to control the sources of supply and demand. Secondly, a parity must always be retained between the primary markets and the hedge markets—to fail here is to invite disaster. Thirdly, the Board, and of course, the Forward Markets Commission must have power to take immediate and effective steps to control individual price manipulators, bear raids and the like. . . . And lastly, members and particularly those who have the privilege to be elected or appointed to the Board, must remember that the Exchange is a market as a whole, serving several interests." In his view, if the management of the Exchange is to be effective, it must be placed in the hands of a smaller Board of Directors.

Following the permission granted to the Futures market to reopen business with effect from 15 June, the Forward Markets Commission has, with effect from 13 June, withdrawn its orders issued in November 1960 imposing special margins on purchases of raw jute and on Transferable Specific Delivery Contracts, such as hessian 40"×10 oz. and 40"×7½ oz, B Twills, Australian corn-

sacks and Heavy Cess. The Commission has also withdrawn the restrictions imposed in November 1960 on the number of transfers of Pucca delivery orders issued against Transferable Specific Delivery Contracts in hessian 40"×10 oz and 40"×7½ oz, B Twills, Australian cornsacks and Heavy Cess. The Commission has, however, directed the East India Jute and Hessian Exchange to continue in force the procedure of registration of Transferable Specific Delivery Contracts and the submission of trading returns in these contracts by members of the Exchange.

In the meantime the gunny market seems to be stabilising around the lower levels touched soon after the announcement of the decision to allow the block closure of mills for a total period of a fortnight during the months of June and July. This seems to have been aided by the figures pertaining to May-end stocks and production during the month of jute goods. Total stocks at the end of May have increased to 92,100 tons from 80,900 tons at the end of previous month. The rise is accounted for by hessian stocks which have gone up from 27,900 tons to 34,500 tons. Sacking stocks have declined to 44,400 tons from 48,800 tons as also other varieties to 13,200 tons from 14,200 tons. The sharp rise in hessian stocks may be partly due to the fact that production of this category of goods during the month has increased by 1000 tons to 28,500 tons. Similarly the decline in sacking stocks may be due partly to the lower production, for the output of this category of goods during May amounted to 38,200 tons as compared with 40,400 tons in April. The production of other goods is 300 tons higher at 11,600 tons. The decline in total production during May is to be reckoned as much more than what is recorded because mills have worked 8.5 hours more than in the previous month when total production was placed at 79,200. It is evident that the power shortage has adversely affected production. It would appear from the two sets of figures (stock and production) that sacking goods had fared fairly well during last month. Apart from the continued interest from the Government of India, indications are that a few important buyers like Cuba, Australia and West Africa will evince keen interest in this category of goods in the near future. With stocks not much more than a month's production and with mills continuing to place the emphasis on the production of hessian, it would appear that sacking prices may not lose much ground atleast during the next two or three months. As for hessian the only favourable point seems to be the low stock position in the US. This may result in renewed enquiries. Otherwise, the prospects for hessian do not appear to be very bright.

TEA

Rise in Output

TEA production has again shown an increase in May. The crop has amounted to 30.69 million pounds as against 20.95 million pounds in the corresponding month of last year. Total production, till the end of May 1961, amounts to 49.77 million pounds as against 37.52 million pounds in the corresponding period of last year.

The present rise in output is to be welcomed, especially when output was heavily affected by drought in 1960. In view of the favourable weather, it is generally expected that the North Indian crop will be much bigger this year than in 1960. Production in other countries such as Ceylon, Africa and Pakistan has increased steadily. The possibility of excessive supplies cannot, therefore, be ruled out. It is necessary that Indian producers should concentrate on improving the quality, as the demand for superior grades is expected to be well maintained.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 28,673 packages. There was good demand except for Darjeelings, which were the weakest feature of the sale. The quality of teas from Darjeeling was generally rather poor and only the few invoices with flavour sold well. For the remainder, interest was very limited and there were a larger number of withdrawals without a bid.

Orthodox descriptions were sold well, particularly the better sorts. Medium and plainer sorts were in demand at about last rates with more interest being shown in Fannings. CTC descriptions met with a good enquiry, while the better liquoring kinds were sold well. Medium sorts were, however, a little irregular; but the poorer and lower-priced teas were usually sold at dearer rates.

Whole Leaf grades met with support; but prices were a little irregular and often easier. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 5.05; Plain Pekoe Rs 4.70 to Rs 4.75 and Plain Fannings Rs 4.55 to Rs 4.60.

In the Internal Sale, offerings were 25,079 packages of Dusts of which 12,277 packages were of new season's manufacture. There was a good general demand for the new season's teas except for non-wither leg-cut types, which opened far below brokers' expectations and there were some withdrawals. Medium CTC types were irregular and generally lower by up to 30 nP; but the smaller types met with better support. The few brighter lines on offer were sold well. Orthodox descriptions were readily absorbed at lower rates.

Darjeeling dusts were keenly competed for and were taken up at much enhanced prices. The old season's dusts met with a fairly good support. Both the orthodox and CTC types were irregular and generally easier. As only few quotable teas were on offer, no rates were given. Also 126 packages of Leaf grades were offered and these were sold at irregular rates.

In the London market, offerings were 19,680 packages of Ceylon tea. Buying was selective. Low mediums were generally one penny per pound easier. Most mediums and high-grown were again lower following quality and often showed falls of one penny to three pence, particularly for broken orange pekoe fannings. A few colour and best quality teas were sold well. The 9,286 packages of South Indian growths, on offer, met with only fair competition at a decline of about one penny to two pence per pound.

According to the tea policy announced by the Pakistan Government, Pakistan will export 5,000,000 pounds of tea during 1961-62. Total production during the period is expected to be 57,000,000 pounds out of which 45,000,000 pounds have been earmarked for supply to the local market.

COTTON

Futures Buoyant

The Bombay cotton futures market staged a further recovery during the past week thanks mainly to the renewed support following the announcement of additional quotas to the indigenous mills to the extent of 20 per cent of their previous season's consumption. The improvement in the futures section was marked and the *Jarilla August* contract shot up to Rs 586.50 from Rs 572 due largely to the revival of speculative buying and short-covering and after mildly reacting to Rs 582 near the week end on profit-taking recovered smartly to a new high of Rs 586.75 and at the close on Tuesday last was quoted at Rs 583.50.

Reports of heavy accumulation of unsold stocks of cotton in many up-country centres especially in Gujarat have caused grave concern to the Government of India and the authorities are to provide some relief. It is reported, that mill and trade are being induced to lift as much cotton as possible before the commencement of the monsoon. The Textile Commissioner's decision to give a direct quota to the mills and his request to them to take advantage of the situation by "entering the market in a big way to effect purchases" can be considered a step in the right direction. While announcing the issue of quota the Commissioner has in fact stated that the reluctance of the trade and mills to purchase more of unsold cotton will only land the growers in jeopardy for the prices of cotton have

gone to such an extent which do not provide any incentive for them to commence the next season's sowing operations on a confident note. The general feeling was that if the mills failed to co-operate with the authorities on a satisfactory scale in lifting the accumulated stock they would not hesitate to follow up with further measures like the release of substantial quantity for export. But from the circumstances that prevailed in the market, the undertone was quite steady, the chance of prices declining further appears bleak.

Activity in the spot market at Sewri broadened considerably and mill demand centred mainly on Surti, Vijay, Digvijay, Kalyan, Laxmi and L/147 cottons. Brisk buying by the mills to replenish their stocks on the eve of the monsoon and the possibility of issuing additional export quota climaxed in boosting the morale of the market which finished on a buoyant note. The week's trading has underlined the fact that the outlook for cotton has undergone a perceptible change.

The demand for foreign cotton during the period under review was fairly good. In the initial stages mills evinced keen interest in East African cotton since the price was fairly attractive. However, as the week progressed the price spurted up by about Rs 30 per candy. Demand for Sudan cotton was also better, though prices were not attractive. There was only moderate activity in US cotton.

The Indian Cotton Mills' Federation stayed away from the market during the week presumably due to the fact that it has already finished its first quota of 10,000 bales. It is doubtful whether the Federation will enter the market for a couple of weeks. A section of the trade fears that the Textile Commissioner will press the traders to lift more cotton to give some relief to the farmers and co-operative societies.

Imports of cotton into India from 1 September to 27 May amounted to

807,892 bales as against 542,102 bales in the previous season.

Description	1959-60	1960-61
American	136,512	567,493
Sudan	71,440	48,790
Egyptian	187,411	58,998
East African	115,621	99,539
Pakistan	23,923	2,624
Others	16,195	30,448
Total	542,102	807,892

Exports of Indian cotton to the foreign countries during the same period totalled 185,030 bales. The corresponding figure in the previous season was 159,773 bales.

Countries	1959-60	1960-61
UK	1,818	2,076
Continent	10,699	13,279
Hongkong	5,281	11,879
Japan	133,094	153,077
USA	7,564	4,426
Other Countries	1,317	302
Total	159,773	185,030

Piecegoods:

Steady conditions prevailed in the Bombay piecegoods market. Turnover in the market continued to be restricted during the past week also. Offtake in the domestic sector was at a very low ebb, on account of the absence of demand from upcountry centres. Trade circles do not appear to be disturbed at this for such developments at this time of year are nothing new to them.

Prices of the varieties on the whole remained unaltered. However, the premia on quality goods slipped down to a low level. This decline in prices is likely to continue at least during the next few weeks.

Activities during the week under review were mainly confined to seasonal goods like shirtings, coatings and drill. The main consuming centres were Madras, Ludhiana, Kanpur, Calcutta and Hyderabad.

Conditions on the export front were listless. A prominent feature of this week's trading was the sizable busi-

ness transacted with Indonesia. That destination accounted for large quantum of bleached longcloth, gadlapat and superfine voiles. East Africa purchased a small quantity of grey sheetings, coating and kungru. Only moderate business was transacted with the United Kingdom and that too in the usual qualities. Sudan remained inactive during this week. France was interested in many varieties but no appreciable business was done with that destination.

Export Outlook for Coffee

THE export outlook for Indian Coffee is considered to be bright in trade circles. During the first five months of the current year, total shipments have amounted to about 15,000 tons as against 9,000 tons in the corresponding period of last year. It may be mentioned, in this connection, that during the 1959-60 season, India was able to export only 18,500 tons. There is a general feeling that the Coffee Board will release, during the current season, a total quantity of about 30,000 tons for shipment.

Various factors have contributed to this optimistic outlook. First, Indian coffee is gaining steady ground in overseas markets. Apart from traditional markets of West Germany, Russia and East European countries, the USA has also begun to import Indian coffee. Secondly, the current f.o.b. prices of the commodity are also a helping factor for larger exports. The average price of Rs 180 to Rs 190 per 50 kilos of Plantation is about Rs 20 lower than that at the beginning of the current year. This fall in prices has helped the Indian coffee to be placed in parity with the world prices. Trade circles believe that, if the prices are maintained at the present level there will be little difficulty in finding overseas markets for the entire quantity of 30,000 tons.

Meanwhile, the Chairman of the India Coffee Board has told the members to adopt the suggestion of General Schluter, one of the leading coffee magnates in London, to have open auctions without waiting for a cup taster. The Board has already agreed to the system of open auctions in exports, but only qualified it with the availability of the cup taster and the results of his tasting. He adds that, if auctions are started as early as possible, the country will be able to line up with other countries and this will be an improvement over the present closed tender system.

Private estimates of the Indian coffee crop for 1960-61 are around 70,000 tonnes, while exports are expected to reach 34,000 tonnes this year. Last year, the crop forecasts made by the Board were 53,000 tonnes and the actual was about 15,000 tonnes higher. Planters believe that the next crop may be lower than official estimates. Robusta growers have contributed some 28,000 tonnes to the Pools. The largest crop ever to be produced of this variety in India; but the proportion of rob-

usta to the total crop is not unduly high.

In the export auction held at Mysore towards the end of last week, offerings totalled 2,244 tonnes and the entire quantity was taken up by bidders. Following were the range of prices (per 50 kilos):—Plantation 'A' Rs 167.05 to Rs 181.15; Plantation 'B' Rs 158.05 to Rs 165.05; Plantation Triage Rs 145 to Rs 148.55; Arabic Cherry Flats Rs 128 to Rs 143.65; Arabic Cherry Peaberry Rs 131 to Rs 132.10; Robusta Parchment Peaberry Rs 82.30; Robusta Parchment Flats Rs 85.10 to Rs 86.30 and Robusta Cherry Flats Rs 165.10.

SUGAR

The efforts of the Union Food and Agriculture Minister in the United States have aroused considerable satisfaction as the sugar industry feels that ultimately India will be able to make arrangements for export of 500,000 tons of sugar to the United States annually on permanent basis. The USA has already granted India an interim quota of 225,000 tons of sugar for the current year ending 31 December. There are also prospects of sugar exports to the Middle East countries and Pakistan. For obvious reasons, a slightly upward trend in prices is noticed in the sugar markets. In the Meerut market, the rate is quoted at Rs 108 per bag.

In the London market, prices have lost a further £1 to £28 10sh a ton following the news that a Pakistan tender for 50,000 tons of sugar had received offers from a host of producing countries at below official price levels. There is a general feeling that, although Cuba is likely to remain the only major supplier of raw sugar to the free market over the next few months, it will have to become more accommodating in its pricing policies if it is to clear much of the unsold balance of its current crop before sugar from the European beet harvest being to reach the world markets in October.

TIN

Tin has once again held the field among commodities this week. Following reports of heavy buying in the US, the price of cash metal bounded ahead, to reach the ceiling of Rs 880 a ton at which the manager of the International Tin Council's Buffer Stock is compelled to sell the metal in an effort to stabilise prices. The strength of Tin continues to be based on the anticipated excess of demand over supply this year and the relatively small buffer stock.

But, the firmness of tin has failed to arouse any sympathetic response from other metals. Both Zinc and Copper have lost ground. Zinc prices have been showing a steady decline due to the continued pressure of the US metal on the UK market. Copper, on the other hand, rallied slightly for a time following the news that another strike was threatened in Chile.

In the Bombay market, hopes that heavier margins on purchases would arrest the boom in Tin futures have been belied with the June contract surpassing the level of Rs 170. This has brought into operation the

revised margin in respect of outstanding purchases. Buyers will have to deposit Rs 2,500 per 10 slabs, the free limit being 20 slabs. The metal has been, no doubt, in short supply; but the recent advance in prices is considered to be speculative in character. Whether the authorities will take further steps to bring about normalcy in the market or not remains to be seen.

WOOL

Despite the absence of good demand from foreign countries, wool prices have been fully maintained in

the Indian market during the last fortnight. The Indian indigenous industry is showing a keen interest in superior qualities of wool and even ready to buy at higher rates. The manufacturers are using more of Indian wool to meet the demand for woollen goods in the country. Following rates (per pound) are quoted in the Delhi market:—1st white Rs 2.81 to Rs 2.94; Tinged white Rs 2.62 to Rs 2.75; Pale Yellow Rs 2.44 to Rs 2.62 and Grey Rs 115 to Rs 130 (per maund).

Reports from Japan that she is further to increase her wool imports

during the fiscal year beginning last April are already having traceable effect in other wool-consuming countries. Importers of Commonwealth wool in several countries have been waiting to see if Japanese buying was modified as the selling season reached its final stages. Her domination of the Australian market remains, however, pronounced.

Seaborne imports of raw wool recovered somewhat in the fourth quarter to 442,000 lb. This brought the total for the year 1960 to 3.5 million lb or 37 per cent more than

MAKE MONEY FASTER: EXPORT BY PAN AM JET

Jet Clipper Cargo delivery to Europe, the Far East and the U.S.A. lets you reinvest your money faster—and you save on insurance, crating, handling.

Businessmen who need a quick return on their investment—manufacturers of wearing apparel, leather goods, livestock and mica, for example—find Pan Am Jet Clipper Cargo the ideal way to ship to the U.S.A., the Far East and Europe.

In addition to savings on insurance, crating, and handling all along the line, you get the most impor-

tant saving of all—time. Your goods can be in your customers' hands less than 72 hours after they leave your establishment. Prompt payment means that your money is back working for you weeks sooner than it would be, had you shipped by surface transportation.

For a free estimate on what this advantage can mean to you, call your local Pan Am Jet Clipper Cargo Expert:

in 1959, receipts from Australia rising by 28 per cent to 2.2 million lb.

Imports of wool fell by 22 per cent between the two latest quarters to 3.2 million lb. bringing the total for 1960 to 14.9 million lb or 2 per cent less than in 1959. Imports from the UK were 11 per cent lower at 8.0 million lb, but those from Australia rose by 11 per cent to 5.0 million lb.

Yarn imports more than doubled during the fourth quarter, although they were well below the level of a year ago. The total for the year came to only 210,000 lb or 68 per cent less than in 1959. Imports of wool fabrics during the year under review rose by 20 per cent to 183,000 lb.

SHELLAC

According to the Indian Lac Cess Committee's revised estimates of the Baisakhi crop, a total quantity of 605,000 maunds of Lac is expected to have been produced this year as compared to the preliminary estimate of 578,000 maunds and an estimated production of 895,000 maunds last year; 650,000 maunds in 1959 and a normal production of 736,000 maunds based on the average of 10 years preceding 1960.

This year's crop is below average as there were no rains in April and May, while the crop suffered due to extreme summer heat. Arrivals are also poor as the prices of sticklac are low. Total production of 605,000 maunds is made up as follows:—Bihar 300,000 maunds; West Bengal 88,000 maunds; Madhya Pradesh 162,000 maunds and other States 55,000 maunds.

Meanwhile, shellac market in Calcutta has been ruling quiet with Pure TN quality quoting around Rs 112 per package of 74.49 kilos. Shipments during the current month till 6, were 4,236 packages comprising 2,502 packages of shellac; 1,635 packages of seedlac; 29 packages of buttonlac and 70 packages of other varieties.

BANGALORE SILK

The Bangalore Silk market maintained a steady trend in the prices of filature and cottage basin raw silk during the week under review. The prices for filature raw silk 20/22 Dr continued to be quoted between Rs 80.43 and Rs 83.25 per kgm; those of cottage basin raw silk ruled between Rs 72.75 and Rs 77.16 per kgm as in the last week. A rise was noticed in the prices of charka raw silk and they were quoted between Rs 54.56 and Rs 72.20 per kgm against the last week quotations of Rs 52.91 and Rs 71.10. The demand for filature silk was dull, while it was moderate in respect of other qualities.

There was no change in the rates of reeling cocoons which were quoted between Rs 3.25 and Rs 4.15 in Mugur area, between Rs 4.40 and Rs 5.50 in Channapatna area and between Rs 4.50 and Rs 5.75 per kgm in Sidlaghatta area.

Rates of Mysore race seed cocoons showed a slight decline by about Re 1.00 and ruled between Rs 8.00 and Rs 13.00 per 1000. Foreign race seed cocoons remained steady and the rates were quoted between Rs 5 and Rs 12 per 1000.

INVESTORS' GUIDE

The 1961 Edition of the Calcutta Stock Exchange Official Year Book is just now out. It is India's most up-to-date and comprehensive work of reference on investments. Contains detailed information relating to the securities of all companies quoted on the Calcutta and Bombay Stock Exchanges. Also contains information on economic matters, tax rules and rates, names and addresses of Liquidators of Companies wound up since 1944, preference dividends in arrears. Special features of this Edition: (1) Information relating to all Bombay Companies and (2) List of Companies which accept vernacular signatures on transfer deed.

Copies available from the Stock Exchange, 7, Lyons Range, Calcutta, at a price of Rs. 12.50 nP per copy. Postage Rs. 2/- extra.

Air

Rapid Expansion

Air-India International completed 13 crowded years of international operations on June 8, 1961.

Since nationalisation, Air-India International has maintained a steady rate of growth. Expansion has been fairly rapid. For Air-India the years 1958 and 1959, particularly, were a period of expansion and consolidation. The capacity operated and revenue loads carried have doubled during the Second Plan period.

During the same period, Air-India built up the strength of their operational, technical crews and personnel, saw the rationalisation of their fleet and prepared the ground for the additional capacity which the Boeing 707s provided from 1960.

During 1959-60, Air-India operated 59,518 million capacity ton miles and 34,618 million revenue ton miles, carried 89,385 passengers, 1,951 million pounds of mail and 6,153 million pounds of cargo.

During 1961, Air-India scheduled six Boeing flights a week to London, five services a week to New York from London, two flights a week to Tokyo and one to Nairobi.

Rs 17 crores have been allocated under the Third Five-Year Plan for Air-India's projects. Construction of a new jet engine overhaul base at Bombay has already been taken up and will be completed during the Third Plan period.

At the beginning of the Third Five-Year Plan, the operating fleet of Air-India consisted of four Boeing 707

International Jets and nine Super-Constellations.

Air-India has plans to acquire two more Boeing 707 Inter-continental Jets, for delivery by April 1962. Air-India will then have a fleet of six giant jets and expects to operate daily flights to London and New York, two flights a week each to Nairobi and Tokyo and one flight a week each to Moscow and Sydney.

COMMONWEALTH OIL

40m. tons in 1960

Commonwealth countries, including India, produced a total of more than 40,000,000 tons of oil in 1960—nearly 10 times more than in the immediate post-war period—according to the Petroleum Information Bureau in London.

In a survey of the oil industry in the Commonwealth, a publication of the bureau points out that though the Commonwealth does not rank among the world's leading suppliers, production in the area is steadily rising year by year.

The publication says that one country which is of particular interest is India, "where developments associated with the Nahorkatiya field will shortly lead to a very considerable expansion of output. Before the end of this year, the pipeline from this field to a refinery at Nummati should have been completed, and a second stage of the line to connect with another refinery being built at Barauni is due for completion in 1962.

"India is also actively concerned with the search for new oilfields. . . . So far, however, production is only being achieved by British and associated interests, which are likewise responsible for operations in neighbouring Pakistan".

PRODUCTION IN INDIA

During 1960, oil production in India totalled 440,000 tons, the same as in 1959, but considerably more than the 300,000-ton total of pre-partition India. Pakistan production last year and in 1959 was steady at 320,000 tons.

The publication says that only one country, Canada, has at present attained a position among the major producers. The Canadian output of nearly 27,000,000 tons last year was the eighth highest in the world. Trinidad, the next largest Commonwealth producer, with about 6,000,000 tons, ranked 16th in the world order.

Canada's resources of both oil and natural gas are described as "very considerable", but the survey points out that "she is constrained by marketing difficulties to limit her production severely". In an endeavour to encourage higher output, the Canadian Government has recently decided to set production targets—that for 1963 being of the order of 40,000,000 tons.

Company Reports

Dividend Doubled by Equitable Coal

Thanks to the more realistic quantum of assistance received for standstowing operations as a result of the ceiling limit for assistance being enhanced from Rs 2.00 to Rs 2.50 per ton with effect from 1 February 1960, and the additional production attained the Equitable Coal Company Limited has produced excellent working results for 1960.

While sales have risen to Rs 3.93 crores from Rs 3.83 crores, the net profit, after providing for Depreciation and Taxation, is higher at Rs 11.53 lakhs against Rs 7.59 lakhs for the previous year. Apart from providing Rs 83,558 for Taxation and Rs 2.45 lakhs for Development Reserve and maintaining Debenture Sinking Fund at Rs 1 lakh, the Depreciation amount is raised to Rs 16.81 lakhs from Rs 12.42 lakhs and Development Rebate Reserve to Rs 3.35 lakhs from Rs 3.30 lakhs. The dividend on the ordinary shares is doubled to 15 per cent, subject to deduction of tax. Raisings are higher at 1.89 million tonnes against 1.84 million tonnes, while despatches are lower at 1.84 million tonnes against 1.86 million tonnes.

The company's plans for production during the Third Five-Year Plan were submitted to the Working Group, appointed by the Government, and were duly included in the Working Group's report, which subsequently received the general approval of Government.

United Collieries show Better Results

The United Collieries Limited has shown better results for 1960, the net profit having risen to Rs 6.53 lakhs from Rs 6.20 lakhs. Sales are higher at Rs 55.61 lakhs against Rs 53.35 lakhs.

In respect of allocations, Depreciation is increased to Rs 3.47 lakhs from Rs 2.67 lakhs and General Reserve to Rs 75,000 from Rs 50,000. Taxation provision is, however, lower at Rs 4.70 lakhs against Rs 4.80 lakhs and Development Rebate Reserve at Rs 70,000 against Rs 80,000. The dividend on the ordinary shares is maintained at 14 2/7 per cent, subject to deduction of tax.

Excellent Results of Swadeshi Cotton

Despite an extremely difficult cotton supply position, the working results of the Swadeshi Cotton Mills Company Limited, Kanpur, for 1960, are very encouraging, thanks to the substantial rise in sales from Rs 10.54 crores to Rs 10.86 crores. The net profit, after providing for De-

preciation and Taxation, amounts to as much as Rs 33.30 lakhs as against Rs 28.01 lakhs for the preceding year.

Except for the fact that the provision for Development Rebate Reserve is reduced to Rs 9.55 lakhs from Rs 19 lakhs, allocations to all other funds have been substantial, Depreciation being provided at Rs 33.64 lakhs (nil); Depreciation relating to previous years at Rs 16.50 lakhs (nil); Taxation at Rs 25 lakhs (nil) and General Reserve at Rs 12 lakhs (nil). The directors have recommended a final dividend of 5.51 per cent on the Preferred Ordinary shares, making a total of 10.71 per cent, taxable, for the year against only 5.71 per cent, taxable, previously. They have also proposed a gross dividend of 5 per cent, taxable, on the Ordinary shares against nil.

The directors state that the working results for the current year will also be satisfactory. The construction of the Spinning Mill at Udaipur has nearly been completed and the mill is likely to go into production at an early date.

Substantial Rise in Profits of Indore Malwa

The improved demand in cloth and yarn is reflected in the working results of the Indore Malwa United Mills Limited. Sales have risen to Rs 3.21 crores from Rs 2.88 crores, while the net profit, after providing for Depreciation, is substantially higher at Rs 17.33 lakhs as against only Rs 67,674 for the previous year. After setting aside Rs 18.33 lakhs for Depreciation, the provision for Development Rebate Reserve is lowered to Rs 39,000 from Rs 41,000. The directors have proposed a taxable dividend of Rs 8.50 per share against a taxable dividend of Rs 7.00 per share previously. In view of the lower profits for 1959, the directors had to transfer Rs 3.23 lakhs from General Reserve for paying the dividend.

Kesoram Cotton Pays More

According to a preliminary report issued by the Kesoram Cotton Mills Limited, the accounts for the year ended 31 March, 1961, reveal a surplus of as much as Rs 81.81 lakhs as against a deficit of Rs 9,157 for the previous year. These figures are arrived at after providing Rs 71.51 lakhs for Depreciation against Rs 2.17 lakhs; Rs 3.47 lakhs for Development Rebate Reserve against Rs 47.20 lakhs; Rs 8.92 lakhs for managing agents' remuneration against Rs 50,000 and Rs 11.37 lakhs for Contingency Reserve against nil. After adding Rs 67,607 brought forward from previous year, there is an available balance of Rs 82.49 lakhs. Out of

this, the directors have, after paying the dividends on the Preference shares, recommended a taxable dividend of 12 per cent on the Ordinary shares as against 5 per cent, taxable, paid for the preceding year.

Higher Profits for Dalmia Cement

Dalmia Cement (Bharat), Limited has produced excellent working results for 1960, reflecting the first year of operation for the third kiln of 500 tons daily capacity. Despite higher production and despatches of cement, the profit from the cement business has remained more or less the same as in the previous year; but significant contribution to the increase in profits was made by some of the business other than cement. Sales have risen to Rs 3.91 crores from Rs 2.62 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 33.14 lakhs as against Rs 22.79 lakhs for the previous year. The former figure excludes a transfer of Rs 2.26 lakhs from Rehabilitation and Expansion Reserve being amount withdrawn against expenditure incurred.

In respect of allocations, Depreciation is raised to Rs 26.06 lakhs from Rs 10.34 lakhs; Taxation to Rs 19.50 lakhs from Rs 10.85 lakhs and Gratuity Reserve to Rs 1.59 lakhs from Rs 1.08 lakhs. A sum of Rs 2.00 lakhs is provided for General Reserve, while the provision for Development Rebate Reserve is lowered to Rs 3.90 lakhs from as much as Rs 22.22 lakhs. In the preceding year, a sum of Rs 12.25 lakhs was transferred from various reserves to make the necessary allocations. The dividends, both on the Ordinary and Deferred shares, are maintained at 12 per cent, subject to deduction of tax.

The directors state that the Government of India have declined to allow an increase in the ex-works price of "Dalmia Cement" in regard to which a further representation has been submitted by the company. They add that progress is continued to be made in developing the mining and export of high grade iron ore from the company's mines in the Bellary-Hospet area.

Shree Gopal Paper Repeats

The Shree Gopal Paper Mills Limited has not been able to prevent a decline in earnings for the year 1960, even with an increase in output of paper of various kinds. Apart from the lower prices which became effective from the beginning of the year, there was an increase in the cost of raw materials. Also, the out-

put of paper could have been higher, but for the difficulty in getting the required power supply. The vanaspati factory could not also operate in the latter half of the year, as prices of oil were out of parity with the then prevailing rates for vanaspati. Total sales are slightly lower at Rs 4.69 crores against Rs 4.77 crores.

For obvious reasons, the net profit, after providing for Depreciation and Taxation, works out to only Rs 57.19 lakhs as against Rs 89.33 lakhs for the preceding year. The Depreciation is raised to Rs 34.63 lakhs from Rs 12.54 lakhs and Development Rebate Reserve to Rs 49.50 lakhs from Rs 24.75 lakhs. A sum of Rs 43,005 is provided for Capital Reserve, while Taxation provision is reduced substantially to Rs 2.58 lakhs from Rs 25.20 lakhs. No provision is made for General Reserve against Rs 8.00 lakhs previously. The dividend on the ordinary shares is, however, maintained at 17-6/7 per cent, taxable.

Balmer Lawrie Fares Well

Balmer Lawrie & Company, Limited has reported higher profits of Rs 28.03 lakhs for 1960 as against Rs 25.54 lakhs despite a decline in sales from Rs 11.68 crores to Rs 10.21 crores, thanks to the cut in manufacturing expenses. A sum of Rs 1.85 lakhs (Rs 3.08 lakhs) is set apart for Depreciation; Rs 13.04 lakhs (Rs 16.12 lakhs) for Taxation; Rs 7.00 lakhs (Rs 5.00 lakhs) for General Reserve and Rs 42,335 (Rs 41,883) for Development Rebate Reserve. The directors have recommended a final dividend of 18 per cent, making a total of 25 per cent, taxable, same as in the previous year.

The directors state that there has been some further delay in the establishment of a pulp-manufacturing mill in Assam. Negotiations for the finalisation of the project are continuing. The Indian Galvanizing Company (1926), Limited is being wound up by a members' voluntary liquidation with effect from 30 December, 1960.

Dividend Halved by Texmaco

The Textile Machinery Corporation Limited has produced disappointing results for 1960. In this connection, the directors state that this was mainly due to constant labour trouble, overall increase in cost of production and a marked deterioration in efficiency. They add that, had it not been for the go-slow policy adopted by the labour and the shortage of raw materials, production would have been substantially higher and the working results would have been better. They, however, hope that, if no further unforeseen difficulties crop up, the company will be able to show better results for the current year.

Meanwhile, sales for the year are shown at only Rs 5.37 crores against Rs 5.77 crores, while the net profit, after providing for Depreciation, works out to Rs 36.87 lakhs as against as much as Rs 61.85 lakhs for the previous year. After provid-

ing Rs 50,000 for Contingency Reserve, Depreciation is reduced to Rs 21.84 lakhs from Rs 25.05 lakhs. After transferring Rs 2.50 lakhs from General Reserve, Taxation is allocated Rs 9.35 lakhs against Rs 25.25 lakhs and Development Rebate Reserve Rs 3.75 lakhs against Rs 3.50 lakhs. For reasons best known, the dividend on the Ordinary shares is halved to Re 1.00 per share, subject to tax.

Larger Turnover by Walford Transport

In spite of the fact that automobile dealerships had to contend with diminishing margins due to Government controls and increasing overheads, it was possible for Walford Transport Limited to show better results, mainly due to the larger turnover. Sale proceeds are shown substantially higher at Rs 2.78 crores against Rs 1.93 crores.

The net profit for the year amounts to Rs 5.38 lakhs as against Rs 3.81 lakhs. Taxation provision is raised to Rs 7.23 lakhs from Rs 5.20 lakhs, while Depreciation is reduced to Rs 48,932 from Rs 51,652 and Development Rebate Reserve to Rs 242 from Rs 5,477. The dividends, both the Preferred Ordinary and Ordinary shares, are raised from 15 per cent and 20 per cent, taxable, to 20 per cent and 30 per cent, taxable, respectively.

Dividend Maintained by Karanpura Development

The Karanpura Development Company, Limited has reported a net profit of Rs 2.44 lakhs for 1960 as against Rs 1.97 lakhs for the previous year despite a decline in sales from Rs 3.01 lakhs to Rs 2.52 lakhs.

Apart from maintaining General Reserve at Rs 1.00 lakh and increasing the Depreciation amount to Rs 7,403 from Rs 7,243, Taxation provision is reduced to Rs 1.46 lakhs from Rs 1.65 lakhs. The dividends, both on the Ordinary and Founders shares, are maintained at 5 per cent and 15 per cent, respectively, subject to deduction of tax.

With regard to the Chordhara area, the suit between the National Coal Development Corporation and Rajendra Collieries Limited is still pending before the Calcutta High Court.

Kumardhubi Fireclay's Expansion Scheme

The Kumardhubi Fireclay & Silica Works Limited is considering a scheme for the modernisation and expansion of the old Fireclay Works. After discussions with the consultant in the UK, it has been decided to proceed with the installation of a new Tunnel Kiln. The scheme is expected to be completed by the end of 1962. The output of firebricks is expected to increase by about 25 per cent by 1963 during which the Plant will be capable manufacturing a range of special bricks.

Meanwhile, the company's sales for 1960 are maintained at Rs 1.74 crores,

while the net profit is slightly higher at Rs 11.42 lakhs against Rs 9.77 lakhs for 1959. The directors have set apart Rs 6.72 lakhs (Rs 5.45 lakhs) for Depreciation; Rs 8.96 lakhs (Rs 8.45 lakhs) for Taxation; Rs 1.25 lakhs (nil) for General Reserve; Rs 2.50 lakhs (Rs 2.50 lakhs) for Plant Renovation Reserve; Rs 1.00 (same) for Debenture Redemption Reserve and Rs 1.15 lakhs (Rs 55,000) for Statutory Development Rebate Reserve. A taxable dividend of Rs 1.80 is recommended on the Ordinary shares, same as in the previous year.

Higher Distribution by India Sugars

Despite a lower net profit of Rs 12.89 lakhs against Rs 14.90 lakhs, India Sugars & Refineries Limited has proposed to raise the dividend on the Ordinary shares from 12½ per cent, taxable, to 14 per cent, taxable, for the year ended 30 September, 1960. Sales are, however, higher at Rs 2.05 crores against Rs 1.96 crores. In respect of allocations, a sum of Rs 5.70 lakhs is provided for Depreciation against Rs 4.65 lakhs; Rs 2.92 lakhs for Taxation against Rs 50,000; Rs 42,000 for Development Rebate Reserve against Rs 70,000 and Rs 5.00 lakhs for General Reserve against nil.

During the year, 153,133 tons of cane were crushed and 16,006 tons of sugar were produced as against 185,172 tons of cane and 17,647 tons of sugar during the previous year. The Distillery produced 86,740 gallons, showing an improvement over the previous year's production of 57,038 gallons. The sale of spirit was also better.

The total crushing of cane and the total production of sugar, during the current season, are expected to be more than last year. The crush will continue till the middle of June 1961 and it is expected that a total crush of about 200,000 tons of cane will be achieved.

Impressive Results of TRAYONS

The balance-sheet of the Travancore Rayons Limited shows impressive results for 1960. Sales have risen to Rs 3.77 crores from Rs 3.39 crores. The net profit, after providing for Depreciation and Taxation, is substantially higher at Rs 50.02 lakhs as against only Rs 29.36 lakhs for the preceding year.

In respect of allocations, Depreciation is reduced to Rs 36.47 lakhs from Rs 40.35 lakhs and Taxation to Rs 27.30 lakhs from Rs 37.75 lakhs. A sum of Rs 10 lakhs is set apart for General Reserve, while the provision for Development Rebate Reserve is raised to Rs 15.70 lakhs from Rs 5.05 lakhs. In view of the large expansion scheme envisaged and the steep excise duty on the company's products, the directors thought it prudent to recommend maintenance of the equity dividend at the same level as last year, i.e. at 20 per cent.

Total reserves stand at Rs 100.25 lakhs, which is nearly two-thirds of

the company's paid-up capital. The liabilities under Debentures and Loans have been completely paid off. The gross block at Rs 542 lakhs is depreciated by Rs 306 lakhs, leaving a net block of Rs 235 lakhs.

The directors state, when the ambitious expansion plans materialise, the total production of rayon will be 13.6 tons per day and that of cellulose film 12 tons per day—the aggregate production being more than quadrupled from the initial 6½ tons per day. A noteworthy feature is that the company will soon have its own pulp also in regard to which all the rayon yarn manufacturing units in the country are now dependent upon imports only. The company is reported to be trying to build up an export market as well.

TEA RESULTS Dividends Raised in Most Cases

Tea companies, in general, have presented encouraging working results for 1960. In most cases, dividends have been raised; and this has been possible due to the increased profits made by the companies concerned. The following tables show the profits earned (after providing for Depreciation and Taxation) and the dividends proposed by the companies whose balance-sheets have been received so far:

Right Issue by Duncan Brothers

The improved trading conditions in the tea industry and a further expansion of the company's other interests, Duncan Brothers & Company

Limited has reported increased earnings despite a decline in sales from Rs 1.80 crores to Rs 1.70 crores. The net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 24.97 lakhs as against Rs 17.92 lakhs for the previous year.

Apart from providing Rs 3.00 lakhs for Investment Reserve, the following allocations have been increased: Taxation to Rs 17.50 lakhs from Rs 15.50 lakhs; General Reserve to Rs 4.00 lakhs from Rs 3.50 lakhs and Development Rebate Reserve to Rs 10,000 from Rs 5,000. The Depreciation amount is lower at Rs 64,815 lakhs against Rs 1.19 lakhs. The dividend on the ordinary shares is, however, maintained at Rs 14 per share, subject to tax.

It would be recalled that the company had already entered into collaboration with Phillips Petroleum Company in the promotion of Phillips Carbon Black Limited with the object of setting up the first carbon black plant to be established in India. In this respect considerable progress is reported to have been made on the design and the construction of the new plant at Durgapur, planned for a capacity of 30 million pounds per annum. It is expected that production will commence towards the middle of 1962.

With regard to the promotion of Isaad Holdens (India), Limited in order to set up the first commission woolcombing plant in India, the directors state that part of this plant was brought into operation in January this year. The next phase of the installation is expected to be ready this autumn.

With the continued expansion of the company's business the directors have considered it desirable to increase the equity capital. It is proposed to make a right issue of 10,000 ordinary shares later this year, to be offered to equity shareholders registered in the company's books at that time in the ratio of one share for every nine shares held by them.

National Screw Shows Improved Results

The National Screw & Wire Products Limited has reported improved working results for 1960. Sales are higher at Rs 58.15 lakhs against Rs 57.80 lakhs while the net profit has risen to Rs 3.60 lakhs from Rs 3.15 lakhs.

Apart from providing Rs 1.50 lakhs for General Reserve and Rs 1.50 lakhs for Dividend Equalisation Reserve, the Depreciation is raised to Rs 60,626 from Rs 49,532 and Development Rebate Reserve to Rs 48,900 from Rs 2,244. Taxation provision is, however, lower at Rs 1.23 lakhs against Rs 2.54 lakhs. The dividend is maintained at 15 per cent, taxable.

According to the directors' report, the plant for the manufacture of ACSR Conductors has been completely installed during the current year and production is expected to start immediately on receipt of raw materials. The directors hope that the working results of this plant will be reflected in the next account.

For the Investor

INVESTMENT GOSSIP

Hesitant Tone

Renewed fears about Government intervention have been the main if not the only deterrent to aggressive bullish activity in the stock markets this past week. In a sense, this reported fresh focussing of Government attention on the goings-on in the stock markets is of the making of the operators on Dalal street where consequent on a persistent demand for the abolition of the margin system, the matter has been entrusted for examination to a sub-committee of the stock exchange. The recommendations of this body is reported to be now ready but Government is the final arbiter. And on Tuesday this week a rumour went round the market place that far from agreeing to the abolition of the margin, Government is contemplating the imposition directly or indirectly of further restrictions: in its opinion the stock markets are tending to become more and more speculative. This is the fear that seems to have discouraged the bulls who have been off and on engaged in profit taking during the past few days. But considering the fact that the quantum of floating stocks is quite small probably because of the sustained interest of institutional investors, it is unlikely that there will be any substantial fall in equity prices even if more restrictions are imposed. And perhaps that is also what the Government wants; for, it is to be expected that Authority will be anxious to curb unbridled speculation which often exaggerates a bad or a good point out of all proportions and is not against prices finding their level in relation to the prevailing and prospective investment situation in the country.

Although it cannot be said that the impressive rise in equity prices noticeable in recent months has in every instance been based on the generally accepted criteria for taking an extremely optimistic outlook there has been ample reason for investors to be attracted to the stock market. Industrial expansion is going on apace in the country under a planned programme and although there has been upsets now and then, some of them of quite serious nature like the coal and power crisis that are still with us—the overall outlook for industry is very good indeed. There is again the prospect of industrial expansion taking giant strides in the next five years now that massive foreign aid has been obtained, thanks to the goodwill of friendly foreign nations. All this means expansion and diversifica-

tion of existing industries and the establishment of new industrial enterprises a good number of which have already been floated. A recent significant development is the emergence of a new class of investors. This is the small investor whose participation in new ventures has been partly facilitated by the fact that small applications to new issues get a sizable allotment. This class of investor is generally not in a hurry to get rid of his holdings either way. The growing interest of the small investor in existing shares is also noticeable and so the speculator often finds himself severely left alone. It would, therefore, appear that the general outlook for equities will continue to be good in the sense of there being steady price levels.

NEW ISSUE NOTES

J. K. Synthetics

The directors of J. K. Synthetics Limited have announced that the new equity issue of Rs 52,37,500, offered to the public for subscription, has been heavily over-subscribed. The subscription list has already been closed.

Indian Rubber

Regenerating Company

The Indian Rubber Regenerating Company Limited has an issued capital of Rs 35 lakhs divided into 35,000 ordinary shares of Rs 100 each. The directors and their friends have already subscribed for 17,850 shares. The remaining 17,150 shares are being offered for public subscription. at par. The subscription list will open on 28 June, 1961. The company will set up a factory at Thana in Greater Bombay for producing various grades of reclaimed rubber. The cost of the project is estimated at Rs 52 lakhs. The Industrial Credit and Investment Corporation will contribute a foreign exchange loan of Rs 17 lakhs.

Star Paper

The Star Paper Mills Limited has proposed to offer 5,00,000 equity shares of Rs 10 each, at par, to the existing equity and preference shareholders whose names are registered as on 28 June, 1961, in the proportion to the capital paid-up on the shares held by them. Irrespective of class, on that date.

Kesoram Cotton

In addition to raising its dividend from 5 to 12 per cent, the Kesoram Cotton Mills Limited has decided to offer right shares, which will be offered in the ratio of one for every four equity shares held. The right shares will be offered at par.

Madras Rubber

Details about the allotment of shares in respect of the recent issue of Madras Rubber Factory Limited are now available. Lots are to be drawn for allotting shares to those who have applied for 60 and 100 shares. 10 shares will be allotted to the successful applicants for 50 shares and the successful applicants for 100 shares will be given 20 shares each. 20 shares are to be allotted to those who have applied for shares ranging from 101 to 200 and 30 shares to applicants for shares ranging from 201 to 500. Applicants for shares ranging from 501 to 1,000 will get 60 shares each and those from 1,001 to 2,000 120 shares each. 260 shares will be allotted to those applying for 2,001/5,000 shares and 640 shares each for applicants for shares ranging from 5,000 to 10,000. 760 shares are to be allotted for applicants for shares exceeding 10,000. Allotment letters with refund cheques are expected to be despatched by the company from 20 June.

Universal Cables

Universal Cables Limited has proposed to offer, for public subscription, shares of the value of Rs 35 lakhs. The list is expected to open on 3 July and close on 8 July, 1961. The company proposes to raise its capital by Rs 70 lakhs; but 50 per cent of the additional capital will be offered to the existing shareholders. The company has plans to manufacture paper-insulated lead-covered power cables at Satna (Madhya Pradesh) and has been assured of technical assistance and know-how by the British Insulated Callender's Cables Limited.

Uttar Pradesh Pulp

A new company, known as Uttar Pradesh Pulp & Paper Mills Limited, is being formed to set up an integrated pulp and paper mill at Mansapur in Muzaffarnagar district, Uttar Pradesh. The promoters, Messrs Swarup Brothers, have entered into a collaboration agreement with Parsons and Whittemore, who will not only supply the requisite machinery, equipment and technical know-how for the mill, but will also participate in the capital of the company. Messrs Swarup Brothers and Parsons & Whittemore propose to take up equity shares worth Rs 50 lakhs each.

For Service and Security

PANDYAN BANK

LIMITED

Central Office: MADURAI

BANK WITH

PANDYAN BANK LTD.

THE BANK THAT SERVICE BUILT

83 Offices serve the Public

S. N. K. SUNDARAM,
Managing Director

The public is to be offered equity shares worth Rs 1.25 crores towards the end of the year. The Uttar Pradesh Government and institutional investors are likely to invest in preference capital to the extent of Rs 50 lakhs out of the preference capital of Rs 1 crore. Negotiations for a DLF loan for \$7.56 million (Rs 3.60 crores) are under way.

Indian Veneer Company

Indian Veneer Company Limited has obtained a licence for the manufacture of sheet veneers in Kerala out of teakwood, rosewood and laurel. The investment outlay on this project is estimated at Rs 2.40 crores. The company has entered into a technical collaboration arrangement with a Japanese firm. The project is to be financed partly by way of an issue of equity capital to the tune of Rs 135 lakhs and partly by an issue of Debentures to the extent of Rs 105 lakhs. Of the proposed equity issue, the Kerala State Government is expected to take up Rs 33.75 lakhs, the Japanese collaborators Rs 27 lakhs; the managing agents and promoters Rs 20.25 lakhs and Rs 13.50 lakhs by finance institutions.

INVESTMENT NOTES

Hindustan Aluminium

The alumina plant of the Hindustan Aluminium Corporation Limited will be ready for operations by April 1962, while the aluminium reduction plant will be started in January/February, 1962. The present capacity of the plant may soon be raised further and an application to increase it from the present 20,000 tons to 50,000 tons is being processed. The Rihand dam power will be ready in two months time, while the first of the three turbines will be commissioned by August.

Synthetics & Chemicals

In the first report, issued by Synthetics & Chemicals Limited, it is stated that the overall progress of the company's project is satisfactory. Orders for the principal plant and machinery have been placed. Some of the machinery valued about Rs 1 crore have been received at site and other machinery is being shipped.

Ceat Tyres

The company's expansion programme is expected to be completed towards the end of 1962. The working of the company so far during the current year is reported to be satisfactory.

Fit Tight Nuts

The shares of Fit Tight Nuts and Bolts Company Limited have been admitted to dealings in the cash section of the Bombay Stock Exchange.

Premier Tyres

Premier Tyres Limited has made a second and final call of Rs 25 per share in respect of equity and preference shares of the company. The call money is to be paid on or before 15 July, 1961.

Southern Structural

Southern Structural Limited, which has a factory near Madras, for the manufacture of railway wagons and various types of structural, is having an ambitious programme of expansion. The company has been successful in entering into a collaboration agreement with Metropolitan Cammell Carriage and Wagon Company Limited of Birmingham. The British interest will be participating in the issued capital of Southern Structural, which has now a paid-up capital of Rs 38 lakhs, all in equity shares.

IN BRIEFS

Larsen & Toubro Limited has proposed to maintain the dividend at Rs 1.80 per share, subject to tax, for the year ended 31 March 1961.

United Provinces Sugar Company Limited has maintained the dividend at 15 per cent, taxable, for the year ended 30 September 1960.

Metal Box Company of India Limited has declared a final dividend of Rs 1.60 per share, making a total of Rs 2.50 per share, taxable on the increased capital for the year ended 31 March 1961, as against Rs 2.50 per share, taxable, on the original capital.

Janardhana Mills Limited, Coimbatore, has proposed a taxable dividend of 9 per cent for 1960 as against nil in the previous year.

Jeevanlal (1929) Limited has proposed a taxable interim dividend of 5 per cent for 1961.

STOCK EXCHANGES

Consolidation of Recent Gains

Watch-Dog Writes:

STOCKS markets appear to have taken a pause. It looks as if the gains of the past two weeks are being consolidated.

Following a steady start, equities declined sharply on heavy long liquidation, prompted by fears that fresh measures might be taken by the Government to check speculative activity. Lower levels, however, attracted some support, resulting in a mild recovery in prices towards the close.

Apart from a slight recovery in the speculative issues, price movements on the Calcutta Stock Exchange were narrowly irregular in a restricted turnover.

Although lack of follow-up support and scattered bull liquidation depressed the general price level on the Bombay Stock Exchange, there was a partial recovery at the close.

Fairly active conditions prevailed on the Madras Stock Exchange.

Wall Street closed irregular with fractional price changes either way.

CALCUTTA

Friday Evening.

ALTHOUGH the local stock market started the week on a steady note, prices developed a reactionary tendency from the middle of the week due to selling pressure, influenced by weaker advices from Bombay on fears that the present margin system would be made stricter. Moreover, some of the operators preferred to have second thoughts on the future of the trend of movements, while others entertained fears that the working of the various industries in and around Calcutta might be affected by the power-cut following the failure of a boiler at the DVC's Thermal plant. Above all, the market, being already in an over-bought position, responded to selling orders. But, the subsidence of offerings towards the close of the week enabled equities to stage a mild recovery.

The Giltedged section was quiet with very little business passing in long-lated issues. Whatever business there was, consisted mainly of offers. State Loans were also quiet. 3 per cent 1988 Conversion Loan moved narrowly between Rs 72.10 and Rs 72.40, to finish the week at the former level.

Bank shares were a steady feature in anticipation of better working results for the current half-year. Punjab National changed hands up to Rs 21.87 and United Commercial up to Rs 91 from Rs 21.81 and Rs 90.50 respectively.

Thanks to sustained hope that the steel companies might enhance the rate of distribution just as a gesture of goodwill to investors, attention was mostly concentrated on Indian Irons although some selling pressure on Bombay account caused a sharp setback in mid-week, to recover partially towards the close. Indian Irons opened at Rs 28.52 and, after advancing to Rs 28.58, receded at one time to Rs 28.12, finishing the week better at Rs 28.42. In sympathy, TEXMACO moved down to Rs 20.05 from a high of Rs 20.50; Jay Engineering to Rs 28.69 from Rs 28.81 and Guest, Keen, Williams to Rs 42.12 from Rs 42.56; to close finally at Rs 20.30; Rs 28.81 and Rs 42.19 respectively. Braithwaite were however, better at Rs 34.81 against Rs 34.62 with Kumardhubi and Marshalls nearly maintained at Rs 6.56 and Rs 4.87 respectively. J. K. Steel receded to Rs 28 from Rs 29.37 on lack of fresh support.

Coal shares continued to receive selective support on the view that good coal-producing companies were likely to benefit from expansion. Equitable forged ahead to Rs 33.75 from Rs 32.00 following the dividend being doubled to 15 per cent for last year, while East India were well supported up to Rs 36; Central India up to Rs 13.12 and Western Bengal up to Rs 9.50. Bengal turned rather quiet at Rs 387 against Rs 392 on lack of fresh enquiry with Burrakur

moving irregularly between Rs 20.31 and Rs 20.56 on alternate buying and selling.

There was a further improvement in selected Tea shares due to optimism concerning the near-term outlook for the industry, the declaration of higher dividends by some companies and in expectation of such distribution in the case of the remaining companies. Jay Shree were taken further up to Rs 23.25 from Rs 22.69 and Tezpur up to Rs 17.87 from Rs 16.75. Bishnauth changed hands at Rs 25.87 to Rs 26.12 and Dhelakhat at Rs 22.06 to Rs 22.25.

Except Ramunger which were consistently supported up to Rs 29.87 from Rs 29.37 rumours of the possibility of a bonus issue, Sugar shares were generally neglected. The news of the failure of the Union Finance Minister's mission to the USA in respect of the sale of sugar, had also an adverse effect on sentiment. Raza/Buland, Carew and SKG moved narrowly around Rs 11.87; Rs 12.56 and Rs 11.69 respectively.

Jute shares continued to remain depressed in view of the obscure outlook for the industry. Howrah were offered further lower at Rs 20.58 against Rs 20.87; Budge-Budge at Rs 118.00 against Rs 126.00; New Central at Rs 19.44 against Rs 19.53 and Union at Rs 149 against Rs 155. Birlas were the only exception to the general trend, having steady support up to Rs 28.50. Ganges turned quiet at Rs 10.37 against Rs 10.50 with India barely maintained at Rs 15.75.

If there was any section, which showed only a minor reaction, it was Textiles, thanks to the prospects of higher production and greater modernisation of the industry. Kesoram changed hands at Rs 34.44 to Rs 35.62; J. K. Rayon at Rs 19.25 to Rs 19.81; Dunbar at Rs 31.12 to Rs 31.25 and Cawnpore at Rs 8.56 to Rs 8.62. Jay Shree were, however, slightly lower at Rs 16.19 against Rs 16.69 and so also Elgins at Rs 10.69 against Rs 20.37.

After initial weakness, Miscellaneous issues displayed a slightly steadier tendency towards the close due to some replacement buying. Following were the price trends of a few selected shares.

Steam...

Industry's greatest power

SINCE 1782, when the first Rotative Steam Engine enabled the use of steam power to motivate machinery, steam has played an ever increasing part in industry throughout the world.

Not only is steam today's most important source of power for the civilised world, but it must remain so for many years to come. Even atomic power is yet in its infancy and can only be applied as an alternative source of heat. Steam is indeed the real power of industry.

While this is but an outline of the extensive and continually growing part that steam plays in power generation and industry throughout the world, it indicates quite clearly the unparalleled importance of steam power in the industrial growth of India... and, therefore, the urgent need to manufacture vital steam-raising plant in this country to meet the demands of expanding industry.

This is one of the needs which has led to the formation of a new and powerful industrial group, ACC-Vickers-Babcock Limited (AVB). The vast technical knowledge and extensive practical experience available to it will enable the new company to make an important contribution to Indian industry—and help Indian engineers overcome some of the difficulties which have faced them for so long.

The new AVB plant is nearing completion on a 700-acre site at Durgapur. The workshops, designed on modern lines, will have built into the structure electric overhead travelling cranes with 70 tons lifting capacity. All workshops have been designed to allow for progressive expansion so that it will be possible to lift 200 tons without making structural alterations. Up-to-date machine tools are being installed. When completed, they will include a 3000 ton hydraulic press capable of bending steel plates up to 5" thick for use in the manufacture of high pressure boiler drums, and pressure vessels required for the fertiliser, chemicals and oil refining industries. The new plant will make it possible to manufacture steam-raising equipment in the high pressure range—for the first time in India.

ACC-VICKERS-BABCOCK LTD. offers the industrialist his best chance to ensure a fully integrated installation comprising the boiler plant itself and a wide range of equipment from the fuel handling and preparation plant to the ash plant and dust disposal installation.

Besides, the industrialist has the confidence that he will get after-sales service of the highest quality from AVB!

...a Powerful Partnership for Progress

THAT 1960 was an eventful year for Indian banking, one would of course have expected the Reserve Bank to conclude; and it is with a sentence to such effect that the latest issue of Trend and Progress of Banking in India begins its assessment of developments in banking during the last year. The pressure that banks were called upon to bear was tremendous; the 1959-60 busy season showed hardly any signs of tapering off into slackness, and the next busy season has produced a record expansion in bank credit. The pressure under which banks were quietly carrying out their allotted task was awesome: confidence was disrupted with the closure of two scheduled banks, and for this as for other reasons, growth in Deposits failed utterly to match the rise in Advances. The pressure that banks were subjected to, from the central banking institution, was no doubt necessary but served at the same time to aggravate some of the problems which banking faced in 1960: in the face of an unhealthy consistent tendency for prices to rise, the Reserve Bank deemed it desirable to reduce bank liquidity and for this purpose immobilised initially 25 per cent of the rise in Deposits and later a full half. The banks have emerged relatively unscathed; in fact, with the Reserve Bank properly initiating measures intended to strengthen banking, it is not wrong to suggest that after a difficult year banks are better placed to deal with the problems that crop up than they ever were before.

But what was the cause of the monetary pressure that banks were subjected to? The reasons have been advanced from time to time in the columns of this journal, but they bear repetition. On the one hand, the rate of growth of Deposits, which during the bulk of the Second Plan period was of satisfactory proportions, suddenly slowed down. On the other, the expansion in Advances was sustained and, if anything, gathered further momentum. The little that banks had by way of free resources was quickly used up, and therefore the additional calls for financing had to be met either from greater recourse to central banking credit or from disinvestment in gilt-edged; and banks used both avenues of replenishing their resources.

The publication enumerates the reasons for the slackening in the rate of growth of Deposits: reduced use of created money, larger import surplus, disruption of confidence and the inducement of high interest rates to certain depositors which caused them to resort to direct financing. As for Advances, it suffices to mention that the substantial rise in the rate of growth of industrial production, with its concomitant call upon finance for trade and commerce, was responsible for a sustained demand for funds. Moreover, though seasonal funds did return in the 1960 slack season, when contraction in credit against commodities was placed at Rs 101.4 crores, this was largely offset by a sharp increase of Rs 79.6 crores in Advances against non-seasonal commodities. As a result reliance upon central banking credit was much greater, the weekly average of banks' borrowings being placed at Rs 38.4 crores in 1960 as compared with the relative figure of Rs 18.5 crores in 1959. Also, while

banks found it possible to add to holdings of Government securities to the tune of Rs 150 crores in 1959, there was disinvestment in the amount of Rs 150 crores in 1960.

In this background, the Reserve Bank, we may presume, found itself on the horns of a dilemma. The price situation was such that we were being repeatedly advised, by some foreign friends, that the bank Rate should be raised; industrial production had to be financed; Government's borrowing programme had to be put through; and banks had to be strengthened. With a view to reducing bank liquidity, the Reserve Bank in March, and again in May, for the first time used the power it had secured for itself in 1956, of varying reserve requirements. Banks were troubled, but their embarrassment would have been greater if bank Rate had been raised. For ensuring that sufficient funds were available for industrial production, the Reserve Bank was liberal in its Advances to the banking system and enlightened in its policy to purchase securities that were offered. The decision not to raise bank Rate was not in itself enough to ensure a successful borrowing programme for Government, but it at least prevented the market loan from being an outright failure. Most important of all, the Banking Companies (Amendment) Act, 1960 was initiated and passed, to protect the secrecy of inner reserves of banks, "which is essential from the point of view of maintenance of a cushion of safety to banks"; and, in September, the Reserve Bank directed banks to raise their lending rates to a minimum of 5 per cent and in any case by 0.5 per cent, while simultaneously prescribing maxima on rates of interest that banks could pay on certain kinds of Deposits. Though, as part of the package deal at the time, a three-tier bank Rate was also effectively introduced, which had the effect of raising the costs of borrowing for banks beyond specified quotas, on balance the gain to the banking system has been immense; while higher interest paid on borrowings has been temporary, the higher level of income assured by the Reserve Bank's directive on Advances is permanent.

The Reserve Bank recognises that the banking system "has made a notable contribution to the economic development of the country." And the final sentence in the publication is one of hope, that "the banking system can confidently look forward successfully to meet the challenges thrown up by the Third Plan." But that challenge in the future is going to be essentially one of mobilising new Deposits. The scheme of Deposit insurance, soon to be introduced, can be relied upon to foster both confidence and the banking habit. But branch expansion has to be more brisk; and new services have to be offered, so that even more people will acquire the banking habit. That is the real challenge before Indian banking. Assured now of a margin between earnings on Advances and the cost of money, with public confidence aided by Deposit insurance, it is now up to the banks to scour the countryside for new banking constituents, whether they are small businessmen who want loans or small depositors who are willing to bank their money—instead of hoarding it six feet underneath.

The Ashoka Hotel AT NEW DELHI

LIGHTING BY PHILIPS

Occupying an area of 20 acres, the Ashoka Hotel—the largest project of its kind in India—stands out as another shining example of Philips specialised lighting.

The lighting is so essentially a part of the whole conception that it presents an architectural masterpiece which belies the fact that it is achieved by artificial means.

Philips exclusive lighting consisting of lamps, fittings and accessories

ensures ultimate economy through maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible plus of Philips' international experience and know-how.

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.

PHILIPS INDIA LIMITED

PHILIPS quality lighting for ultimate economy

Cooperative Movement—II

AN encouraging development in recent years in the Cooperative Movement in India is the steady growth of agricultural marketing societies. Since the Rural Credit Survey, the importance of linking agricultural credit with processing, warehousing and marketing in order to make credit more effective has been fully recognised. The number of primary marketing societies stood at the end of 1959-60 at 2501 compared with 2380 at the end of the previous year. Membership increased from 9,68,239 to 11,83,907. While purchases almost doubled to Rs 30.27 crores, sales as owners and as agents increased substantially to Rs 21.32 crores and Rs 25.52 crores respectively. Sugar cane supply societies which, however, are mostly concentrated in Bihar and Uttar Pradesh constitute an important section of agricultural societies and continued to make further headway during the period under review. Their number and membership increased to 8774 and 23.44 lakhs from 8382 and 22.59 lakhs. These societies sold cane of the value of Rs 16.37 crores and advanced loans amounting to Rs 6.21 crores. Milk supply unions and societies which have been quite popular even during the First Five Year Plan period have continued their uptrend with their number and membership at 2810 and 233250 respectively. The value of milk and milk products sold increased from Rs 8.30 crores to Rs 9.10 crores. The encouragement given by Government to the formation of co-operative sugar factories is reflected in the steady increase in their number. There were in 1959-60, 57 co-operative sugar factories as against 50 at the end of the previous year. Their installed capacity for crushing sugar cane aggregated 24,650 tons per day and they produced sugar weighing 2.84 lakh tons compared to 1.75 lakh tons during the previous year. Among other agricultural processing societies, cotton Ginning and Processing societies made good progress increasing to 120 from 88 societies in the previous year. Raw cotton ginned showed a marked increase to 45.82 lakh cwts from 13.17 lakh cwts. Cotton pressed also was higher at 2.92 lakh bales against 2.02 lakh bales.

The working of farming societies gains special significance in the present context of official interest in cooperative farming. But if Government expects to buttress its arguments in favour of cooperative farming from the operational results of joint, collective, and tenant farming societies, all of which involve some sort of arrangement for cultivating individual holdings on a common basis, it will be disappointed. Of course, it may be argued that when once conditions favourable to the growth of cooperative farming are created and cultivators adequately realise the great advantages that will accrue to them from this type of farming, there will be much greater enthusiasm for cooperative farming. But when one goes by the results so far noticeable, there does not appear to be much enthusiasm for this way of farming yet. Of the four types of farming societies, only better farming societies which do not involve the merger of individual holdings show fairly satisfactory results. The number of farming societies increased from 4193 to 5631 comprising 968 Better Farming societies, 1758 Joint Farming societies, 893 Collective Farming societies and 2012 Tenant Farming societies. The number of societies reporting profit increased to 2253 from 1152 as did that reporting loss from 1352 to 2099. The number of societies without profit or loss increased sharply from 948 to

Total ...	1,63,887	15.97	60,738	5.82	1,85,857	20.13	71,532	5.21

279 indicating a favourable trend in working. Groupwise, however, only the Better Farming societies show a satisfactory record, with the number of societies showing profit at 420 that reporting loss at 214 and that reporting no loss or profit at 310. In the case of Joint Farming societies, out of a total of 1758, 861 show profit, 622 loss and 251 no loss or profit. Of the 893 collective farming societies, 243 worked at a profit, 285 incurred loss and 221 showed no loss or profit. While 677 out of a total of 2012 tenant farming societies had profit, 890 incurred loss and 419 had no profit or loss.

In the Industrial Cooperatives Group, Weavers' Societies continue to show encouraging results. The number of these societies increased to 11,086 from 10,352 with the number of looms included rising to 1.2 million from 0.96 million. It was expected that the number of looms included would rise to 1.45 million by the end of the Second Plan. Of the primary societies numbering 11,086, the number reporting profit was 5,289, the number reporting loss stood at 3247 while 2550 made neither profit nor loss. In the previous year, of the total of 10,352 primary societies, 4,360 made profit, 3316 worked at loss while 2686 made neither profit nor loss. In view of the abiding interest of Government in the lot of the handloom weavers, special subsidies are given to these cooperatives. Government Subsidies are available to them for construction of godowns, housing colonies, and toward meeting cost of Management and rebate to consumers. The last item is the most important in point of the quantum of aid. But the quantum had been reduced during 1959-60 to Rs 1.54 crores from Rs 2.12 crores in the previous year. Both production and sales have declined to Rs 31.69 crores and Rs 36.08 crores respectively from Rs 35.67 crores and 38.21 crores respectively in the previous year. It is now generally accepted that the working of the weavers cooperatives will considerably improve if adequate finance is made available in time for the members of the cooperatives. It is with this view of making cooperative credit effective that the Reserve Bank has started a pilot scheme for financing handloom cooperative in eight States. It would appear that even after the Reserve Bank's advent in the field the handloom cooperatives continue to find that much needed funds are as difficult to come as before.

A comparison of the results of the working of consumers' cooperatives during the two years 1958-59 and 1959-60 will show that during the latter year, there has been around improvement. The number of stores increased from 6857 to 7168 with sales sizably higher at Rs 39.00 crores as compared with Rs 27.09 crores in the previous year. The number of stores working with profit is higher at 2815, while stores recording loss and showing no profit or loss declined in number to 2042 and 2300 respectively. It will be noted however

that consumer stores were much more numerous at the beginning of the Second Plan than they were at the end of 1959-60. It is therefore evident that consumer cooperation is rather stagnant if not actually taking a downward course. There are decided advantages in buying from consumer cooperatives, like equitable price and quality. The second is very important for, in these days one is not quite sure that what he buys in the bazar is not adulterated. The development of consumer cooperation especially in the rural areas will go a long way toward making other types of cooperation much more effective than they are now in so far as the villager will be able to satisfy his needs without having to pay exorbitant prices. This vast field of consumers cooperation is very meagrely covered even at the threshold of the Third Plan. The continued stagnation in this regard shows that conditions conducive to a rapid growth of consumer cooperation are yet to be brought about.

Trends in Foreign Investment

THE May issue of the Monthly Bulletin of the Reserve Bank of India carries a review of the foreign investments in the country which throws an interesting and useful light on recent trends in the flow of foreign capital particularly into the private sector and the size of the foreign capital participation in various sectors of the country's industry. As an indicator of the interest of foreign business enterprises in India's industrialisation and of the effectiveness of the Government's own policies, the subject is of obvious importance and should bear examination in some detail.

The Reserve Bank study which is mainly confined to the flow of long term foreign capital in the private sector defines these investments as the aggregate of (a) net foreign liabilities of branches of foreign companies operating in India, (b) foreign-held shares including proportionate free reserves and foreign-held debentures of rupee companies and (c) long-term loans obtained by these companies from official institutions abroad. On this basis, it is shown that during 1959 the gross capital inflow into the private sector amounted to Rs 52.9 crores against Rs 52.1 crores during the previous year. But in view of the fact that capital repatriation during 1959 was of a lower order as compared to 1958, there was an improvement in net investments of capital in the private sector during 1959 as compared with 1958, the respective figures being Rs 38.1 crores and Rs 27.7 crores. The relevant figures for capital repatriation are Rs 14.8 crores and Rs 24.4 crores. The net investment of Rs 38.1 crores during 1959 was made up of Rs 27.3

crores from official sources and Rs 10.8 crores of private capital. The respective figures for 1958 were Rs 25.3 crores and Rs 2.4 crores. It may be seen that while the inflow of official capital continued to exceed the private capital inflow, there was a notable increase in the inflow of private capital during 1959. The higher rate of official capital receipts in 1959 was due to the loans received from the US Export-Import Bank and the Development Loan Fund and the IBRD.

The composition of the private capital investment shows significant changes during 1959 from the pattern which obtained during 1958. During 1959, there was a pronounced rise in retained earnings which stood at Rs 15.1 crores against Rs 9.8 crores in 1958. This was offset to some extent by the lower order of fresh capital receipts during 1959 at Rs 10.5 crores against Rs 17.1 crores during 1958. The Reserve Bank study traces the sharp rise in retained earnings to the improvement in the general earnings of the plantation companies and the fall in capital repatriation of the petroleum companies. The plantation companies increased their earnings during 1959 to Rs 5.7 crores from Rs 4.9 crores in 1958, while the earnings retained by the petroleum companies were higher at Rs 6.1 crores against Rs 5.6 crores in 1958. The performance of the manufacturing group was an important factor in the net investment of private foreign capital during 1959. Regarding this the Reserve Bank study shows that during 1959 the total earnings of the manufacturing group increased to Rs 16.1 crores from Rs 12.9 crores. The total amount retained was also higher at Rs 7.1 crores against Rs 5.1 crores during 1958.

Study of the foreign investments by groups of industries shows the manufacturing group to have figured as the major field for investment accounting for Rs 33.0 crores in gross terms and Rs 32.1 crores in net terms. In the manufacturing group, metals and metal products accounted for Rs 8.5 crores of the total

net inflow, while transport equipment came second with an amount of Rs 6.6 crores. Chemicals and chemical products figured with a share of Rs 4.9 crores. The total net inflow into the manufacturing group at Rs 32.1 crores marks a decline of Rs 2.5 crores from 1958. The other groups including the plantations, mining and services also recorded a net decline of Rs 5.1 crores the relevant figures of net investment for 1958 and 1959 being Rs 8.8 crores and Rs 3.7 crores respectively. However, the pronounced changes in the petroleum group in which there was a net inflow of Rs 2.3 crores as compared with a net disinvestment of Rs 15.7 crores during 1953 turned the scale in favour of an improvement in the total net foreign investment during 1959.

Countrywise flow of foreign capital shows the US to have been the principal source. During 1959, the US participated to the extent of Rs 22 crores in the net capital inflow of Rs 38.1 crores. The greater part of the US capital came from official sources the amount credited as official capital being Rs 14.4 crores. The UK figures with a poor share of Rs 1.2 crores which however represents an improvement as compared with 1958 in which year there was net disinvestment of Rs 2 crores. The important thing about the position of UK vis-a-vis foreign capital flow into India is the continuing repatriation of capital in sizable amounts. During 1959 capital repatriation to UK amounted to Rs 15 crores the major part of which was constituted by petroleum capital.

The total foreign business investments in the country as at the end of 1959 is shown to be of the order of Rs 610 crores, of which the United Kingdom accounted for Rs 400 crores, Rs 359 crores as direct investment and Rs 41 crores as portfolio investment. Excepting the US, the share of other countries was inconsiderable. The US share of the total foreign business investment was Rs 82 crores of which 64.3 crores represented direct investment. Of the total foreign investments at Rs 610.7 crores, Rs 250.7 crores were in the manufacturing sector. Within the manufacturing sector, the metal and metal products group accounted for the largest share at Rs 84.7 crores, while chemicals and chemical products had a total of Rs 31.4 crores. The bulk of the balance of foreign investment was in the group represented by services and petroleum, the respective figures being Rs 131.2 crores and Rs 120.7 crores.

Apart from the inflow of foreign capital into the private sector, the Reserve Bank review also deals with the movements of short-term capital in the banking sector and the inflow of capital into the official sector. In respect of the inflow of short-term funds into the banking sector, it is shown that during 1960, there was an increase in the net inflow to the extent of Rs 8 crores, ascribable mainly to higher borrowings from abroad. It is notable that the foreign liabilities of the banking system during 1960 increased to Rs 66.2 crores from Rs 59.5 crores in 1959

while the total foreign assets registered a slight decline from Rs 58.5 crores in 1959 to 57.2 crores.

In the official sector, the most notable feature was the trend toward an increase in the liabilities alongside of a decline in foreign assets. While the total liabilities increased from Rs 944.6 crores in 1959 to Rs 1,193.4 crores in 1960, the total foreign assets recorded a decline from Rs 645.3 crores in 1959 to Rs 584.5 crores in 1960.

The over-all effect of the movements of foreign capital into the country was a worsening of the net debtor position of the country to Rs 1,273 crores at the end of 1960. Considering that at the end of the 1955, the country enjoyed a net creditor position of Rs 512 crores, the deterioration in the investment position of the country over the five year period, which synchronises with the Second Plan period, is of the order of Rs 1,800 crores.

A Buoyant Corporate Sector

THE recent trends in company formations with their size pattern and regional distribution have provided a rewarding study of the general effects of the enactment of the new Companies Act in 1956 on the growth of business enterprise in the country. When the new Act was passed there were grave apprehensions about its objectives and aims and it was particularly feared that the enforcement of the new Act will have unfavourable effects on formation of new companies. But the evidence that has been available about the effects of the working of the Companies Act has gone to belie these fears. The latest information broad-sheet of the Company Law Administration records the most gratifying results with reference to new company floatations, their State-wise distribution and size patterns.

When the Companies Act was passed in 1956, it was followed by a falling off in new floatations. During 1956-57, 1957-58 and 1958-59 the number of new companies registered were 848, 961 and 1,095 respectively while in the three years preceding the enactment of the new Act, new registrations were of the order of 1,193, 1,203 and 1,443. By 1959-60 however, new registrations had passed the peak attained during the three years preceding the new enactment. A further rise in new company formations has been recorded during 1960-61 with a total which is of the order of 1,683. As compared with 1959-60, the increase in new registrations in 1960-61 was of the order of 231. It is also notable that the total authorised capital of the new companies registered during 1960-61 at Rs 287.05 crores exceeded the average authorised capital of the new companies registered during the previous four years by Rs 97.5 crores.

The State-wise and region-wise distribution has revealed a tendency toward more uniform pattern during 1959-60 and 1960-61. During 1960-61 the Eastern region recorded a total of 477 new registrations which compares with 452 for the Southern region, 431 for the Western region and 323 for the Northern region. A notable feature of the trend in the pattern of distribution in recent years has been the pronounced increase in new company formations accounted for by the Southern region. In this connection, the information available indicates that the total new registrations in the Southern region during 1959-60 were about three times that in 1956-57,

when the new Companies Act came in force. The increases in the Eastern region, Western region and Northern region in the corresponding period were of the order 34 per cent, 146 per cent and 70 per cent respectively.

The size-pattern discloses a tendency toward increase in number of companies with higher authorised capital. While the largest concentration continues to be in the category of companies with less than Rs 10 lakhs as authorised capital, it is notable that their percentage share in total registrations reveals a decline from 88 per cent in 1959-60 to 78 per cent in 1960-61. In contrast, the number of companies with higher authorised capital has tended to increase. Thus, the number of companies floated with an authorised capital of Rs 10 lakhs and under Rs 25 lakhs increased to 177 in 1960-61 from 122 in the previous year, accounting for 10 per cent of the new registrations against 8 per cent in the previous year. The companies with an authorised capital of Rs 50 lakhs and above have also improved their position from 4.5 per cent in 1959-60 to 8.4 per cent in 1960-61. The tendency toward increased capitalisation is also reflected in the higher average national authorised capital of the new registrations during 1960-61 as compared with 1959-60. Thus, the average national authorised capital per newly formed public company in 1960-61 was Rs 1.03 lakhs against Rs 77 lakhs in 1959-60 while the national average authorised capital per private company registered during the year works out to Rs 8 lakhs against Rs 7 lakhs in 1959-60.

During 1960-61 there was also a marked increase in the number of giant floatations having an authorised capital of Rs 1 crore and above. While during 1959-60 such giant registrations were 53, their number has gone up to 89 during 1960-61. These 89 giant companies accounted for 68 per cent of the total authorised capital of new companies registered in 1960-61, of which the authorised capital of the 7 giant-sized Government companies alone worked to 10 per cent.

The information broad-sheet shows that at the end of March 1961, there were 26,108 companies working in the country with a total paid up capital of Rs 1,725 crores. It is further shown that during the last six years, the total number of companies at work in the country recorded a net decline of 3,776 companies. This decline in the total number of companies working during the last six years may be seen to be the result of the efforts of the Company Law Administration to weed out unsound and moribund companies. Far from being a sign of failure of corporate activity this may be taken as providing a vindication of the principles embodied in the new Companies Act.

Sales Potential Analysis

By SRIPATI RANGANADHA

SALES potential is an estimated, rather than an established sales target of a given market area covering a specific accounting period whose length depends upon the nature of the commodity and financial set-up of the concern. It is a percentage which indicates what per cent of the company's total sales should be secured from a given geographical unit. It can be determined by dividing the total weighted percentage values of the entire distributive area served by a company into the total weights assigned. The percentage (sales potential) can even be adjusted by the manipulation of the sales analyst. It depends upon

his sound judgement, experience and knowledge of business and the company.

By and large, the statistical data of sales potential in general are the percentage of population which caters to the need and necessity of the intended product, past performance of sales of the company, number of persons gainfully employed, purchasing power index and general level of retail sales. The first two factors obviously indicate the necessary demand for the product and how it has been responded to in the past. It must, however, be indicated that the past success of sales need not be an index to the future prospects for the nature of market is unpredictable. The other factors in general concern the ability and aptitude of the buying public.

These factors may be computed by applying the specific indexes which are compiled by Government, trade associations and research bureaus.

The level of living in a particular geographical area, for example, may be computed by applying the indexes individually or collectively such as home-owning population, telephone installations, radio and automobile registration, school enrolment, magazine circulation, Life Insurance sales, business enterprises and so on. Similarly, the indexes of purchasing power may include bank deposits, cheque transactions, income and excise taxes, value of movable and immovable property per capita.

Recently, a new consumer index of Indian Markets was published by the Market Research Department of J. Walter Thompson Company. This consumer index was based on the study of "market factors" in 504 cities and towns in which the population was over 20,000. The urban area has been analysed carefully town by town with regard to 12 major economic factors such as the size of total population and factory labour, the rate of growth in population, the level of literacy, the number of radio sets and private cars in use, the number of banks, doctors, chemists, druggists, cinemas, number of cinema seats and domestic consumption of electricity. The index could be utilised by the manufacturers and distributors for sales target and sales promotion in urban markets as a dependable indicator.

There are certain factors such as seasonal variations, governmental controls, legal checks, modern innovations, strength of competition, extent of market development and such other economic conditions which are beyond the scope of statistical computation. These fluctuating factors may usually be taken care of by professional business forecasters and yet one cannot consider their forecasts as the last word in prediction as we are aware that long-term projections are of questionable accuracy. Since these variable factors are incapable of measurement, the market analysts often find it difficult to estimate the sales quota. Therefore, they arbitrarily establish targets by means of "guesstimates" which are based on guesses, hunch and judgement for market potential. Effective determination of targets often depend largely on personal opinion rather than statistics. So it is needless to mention the amount of business acumen, robust common sense and courage required for the entrepreneur to figure out the right target for the potential market.

Establishment of quota demands two varieties of volume targets. They are the "dead line" quota and the inspirational quota. The former is merely a necessity and a "must" quota. It is a minimum sales estimate for a firm to survive. This conservative and cautious estimate should cover at least all the instruments of production. The "must" quota should not only cover the cost of factors of production, but also secure a minimum volume of sales to meet the

expenses of distributing agencies. If a company, for example, incurs an overall expenditure of Rs 3,000 a year on a salesman and its established sales quota is 10 per cent of net sales in a particular market area, the salesman is expected to sell a minimum net annual volume of Rs 30,000 in his jurisdiction. This explains why the cost of selling is included in every establishment of sales volume target. If the past sales performance and market potential do not succeed in getting the minimum volume of sales, it is up to the management to increase either the size of the sales territory or cut the cost of sales forces. The inspirational quota as the name suggests, on the contrary, inspires the sales forces to achieve the management's established targets. It is the management's optimistic maximum estimate of sales which stimulates salesmen and steers production. In fact, effective utilisation of inspirational quota lends meaning to the concept of sales potential.

Comparisons of sales volume of two different market areas do not give us a true picture of possible sales performance. Suppose, a particular market area 'X' is able to achieve Rs 50,000 worth of sales, compared to another market area 'Y' which records Rs 30,000 sales for the same product. On this score, one need not pitch high the hopes for market area 'X' and offer secondary importance to the area 'Y'. In fact, the effectiveness of market penetration can be studied not by comparing sales volume of the two areas, but by their sales potentials. If the sales potential of 'X' is Rs 1,25,000 and that of 'Y' Rs 50,000 and the degree of market penetration of 'X' will be (Rs 50,000/Rs 1,25,000), 40 per cent and that of 'Y' will be (Rs 30,000/Rs 50,000), 60 per cent. The foregoing numerical illustration shows that the market area 'Y' has a better scope for sales than the former.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

5-YEAR PLANS

Bank Advances to Industrial Sector

OF the 1956 slack season—which was a misnomer in the sense that it did not witness any net decline in Advances—we had at the time suggested that the slack season's obliteration was due to an increase in short-term bank accommodation to industry (which the borrower put to medium-term use for purchase of plant and machinery) having the effect of offsetting the return of seasonal Advances. In other words, with the progress of Indian industrialisation, bank financing of industry became gradually to assume greater importance. Trend and Progress of Banking in India for 1960, published by the Reserve Bank last week, has emphasised and underlined "the growing importance of bank credit in industrial finance . . . in the last decade." In the five years to 1955, roughly covering the First Plan period, Advances of Scheduled Banks expanded by Rs 169 crores, of which Rs 69 crores or 41 per cent were accounted for by credit extended to industries. In the next quinquennium, bank credit swelled by Rs 451 crores; and of this the increase in Advances to industry was placed at Rs 342 crores, or 75 per cent of the total. Taking the decade to 1960, industries got Rs 410 crores more by way of bank accommodation, and their share of total increase in bank credit worked out to two-thirds. In the process, while industries' share of total Advances was placed at 32 per cent in 1951, the relative ratio had risen to 51 per cent in 1960.

The trend toward greater bank financing of industry is better brought out in an assessment of 1960. The publication remarks that "the contraction in bank credit against seasonal commodities (Rs 101.4 crores) was largely offset by a sharp increase in credit against non-seasonal commodities (Rs 79.6 crores) reflecting the higher rate of industrial output."

Growth of industrial activity led to rise in industrial borrowings from banks. In 1960, industrial textiles increased their indebtedness to cotton textiles increased their indebtedness to banks by Rs 14 crores, against which, in the previous year, they had reduced their reliance on bank loans by Rs 17 crores. While sugar mills borrowed only Rs 1 crore more in 1959, indebtedness in 1960 rose by Rs 24 crores. Advances against iron and steel and engineering products went up by the striking figure of Rs 50 crores as compared with Rs 17 crores in 1959. As production rose, so did stocks and the need for financing them. Borrowings against raw cotton rose by Rs 23 crores, while against raw jute the relative rise was Rs 6 crores. In brief, as the Reserve Bank publication has it,

"A purpose-wise analysis of advances of scheduled banks showed that industrial credit rose by Rs 144 crores in the year ended October 1960 as compared with Rs 20 crores and Rs 14 crores in the corresponding period of 1959 and 1958 respectively."

So also, the demand from trade and commerce for banking finance increased. Credit to commerce rose by Rs 21 crores to Rs 395 crores.

In the 1960 "slack season", bank Advances against food articles (that is, credit of a seasonal variety) were placed at a peak of Rs 119 crores in May 1960 and reached their low (before the next season's financing began) of Rs 58 crores in November. Advances against industrial raw materials, during the same period, showed a drop of Rs 36 crores. Bank credit to plantation products was more or less unchanged. But Advances against manufactures and minerals went up sharply by Rs 64 crores, while bank credit against all other types of security rose by Rs 17 crores. In the event, in the period between May and November 1960, the total of secured Advances dropped only by Rs 27 crores.

The conclusion, therefore, is not that seasonal funds have ceased to return between May and October; rather that the sustained increase in industrial Advances throughout the year exaggerates the expansion in Advances during the busy season and obliterates the contraction when that seasonal finance returns.

BANK RETURNS

Advances Lower, Deposits Rise

AFTER the interruption caused by month-early disbursements, the slack season has, according to the returns of the Reserve Bank for 16 June, resumed its measured pace. Active Note Circulation has declined by Rs 14.31 crores to Rs 1,968.99 crores, and there has been inflow of Rupee Coin in an amount of Rs 1.25 crores. Both Foreign Securities and Rupee Securities, in the Issue Department, are unchanged. As a result, the Reserve Bank's cash in the till has improved by Rs 15.56 crores to Rs 28.63 crores.

In the return for the Banking Department, there is no evidence of deficit financing, since the rise of Rs 10.81 crores to Rs 214.66 crores in Investments can be traced to State Bank sales of gilt-edged during the week. But the Centre's balances have risen steeply by Rs 30.64 crores to a level of Rs 80.73 crores; it is true, the State Governments have obviously made over some payments to the Centre. But the amount involved cannot be anywhere near Rs 30 crores. In fact, States' balances are lower by Rs 5.63 crores at Rs 5.44 crores, and their indebtedness to the Reserve Bank, for ways and means borrowings, has gone up by Rs 6.01 crores to Rs 83.02 crores. The balance of Rs 18 crores of improvement in the Centre's cash position has therefore to be explained still. It seems to us possible that the Centre has received some payment from the US Embassy, in respect of agreements on the utilisation of counterpart funds; the only other possibility, as we see it, is deficit financing which has somehow been concealed. In

PAR VALUES

Canadian Dollar To Be Devalued

World money markets have been surprised by the announcement of the Canadian Finance Minister, in presenting his Budget, that the Canadian dollar is to be devalued. Although Mr Fleming has not stated what the increase in terms of gold the Canadian dollar will be valued at, he has made clear his intention to drive down the currency to a "significant discount" vis-a-vis the American dollar. The surprise arises from the fact that, for some many years, the Canadian dollar ruled at a premium compared with the US dollar, and it is only lately that it has declined to a par with it.

The objective of course is to discourage imports and encourage exports. With the near certainty of Britain joining the European Common Market, he obviously felt that a currency devaluation was necessary in order for Canadian goods to compete effectively in export markets. It is significant that Mr Fleming decided to devalue the dollar in the face of proposals by the Governor of the Bank of Canada that instead steps should be taken to achieve self-sufficiency; and he has also as emphatically rejected suggestions that, following upon the American dictum—"if you can't lick 'em, then join 'em"—Canada should consider an association with the European Common Market.

The significance of this action, so far as India is concerned, is still vague and surely not immediate. But there is no knowing what might happen if Britain were to devalue the pound sterling. However, that possibility is remote, especially with Mr Per Jacobsson's emphatic assertion that the pound would be maintained at its present par value.

this latter regard, it may be that, during the week, something like Rs 10 crores worth of Treasury Bills purchased and discounted by the Reserve Bank matured; and it may be that the State Bank's disinvestment relates to discounting of Treasury Bills. In that event, the rise of Rs 10 crores in the Investment portfolio could be evidence of deficit financing in that amount. Again, the State Governments' liability for payments to the Centre may have warranted their disposal of some securities, since their balances were so low as to preclude the meeting of this liability in full. There is a measure of clarification that we can expect in the next week, when the magnitude of created money resorted to will become known.

Not much relief has apparently been experienced, consequent upon month-early demand already met, by the banking system. The reserve balance of member banks appear to have improved by Rs 2.92 crores to Rs 86.25 crores, but in the same week the State Bank experienced a rise of around Rs 74 crores in cash in hand and with Reserve Bank. So it would appear that other Scheduled Banks had to draw down their balances by something like Rs 5 crores. Nor has, appa-

rently indebtedness to the Reserve Bank been reduced, since the latter's Other Loans and Advances are practically unchanged at Rs 118.24 crores against Rs 118.50 crores. However, advances against usance bills are down by Rs 0.25 crores at Rs 13.78 crores.

Other Deposits are up by Rs 2.31 crores; Bills payable at Rs 32.98 crores; and Other Liabilities, under which head has accrued the profit of the Reserve Bank for 1960-61, at Rs 62.76 crores. This suggests that the Reserve Bank profit, which will be transferred from Other Liabilities to Other Deposits pending completion in August of the audit before being made over to the Central Government, is going to be slightly larger than it was in 1959-60. But, in the first week in July, the transfers to the National Agricultural Credit (long-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund will be recorded.

It remains to add that, again, Balances Held Abroad have declined. The latest week's gap between imports and the aggregate of export earnings and foreign aid utilised amounts to Rs 1.69 crores. Foreign Exchange Reserves, in both Departments, are now placed below the Rs 125 crore mark at Rs 123.79 crores. We repeat, unless untied foreign loans come our way, we are in sight of foreign exchange reserves falling to a level that would not cover the cost of one month's imports. Recourse may have to be had to the International Monetary Fund, for perhaps purchase of \$100 million of currencies.

The return of the State Bank for 16 June shows that the last instalment of Rs 12 crores of counterpart funds—at least, arrangements in respect of which have, so far as is known, been made—has been transferred to the Reserve Bank. This has involved a fall of Rs 11.77 crores to Rs 520.17 crores in Deposits and also disinvestment in giltedged for about Rs 10 crores, reducing that portfolio to Rs 202.62 crores. It is to be presumed that counterpart funds amounting to Rs 150 crores now remain with the State Bank, and that they will continue to be lodged with that institution for some time. Now that no more of a drain on Deposits is expected, it is possible that the State Bank will emerge as a buyer of securities through the Reserve Bank tap. Accruals of Deposits during the rest of the 1961 slack season, and the resources released by contraction in Advances during the same period, may both be used by the State Bank to add to the giltedged portfolio. In the latest week, there has been a fall of Rs 3.54 crores to Rs 267.15 crores in the total of Advances, and Other Assets have also shrunk by Rs 0.03 crores. Both these have resulted in cash in hand and with Reserve Bank being marked up by Rs 7.47 crores to Rs 29.29 crores. It is possible that the next week will witness the first of the new tranche of State

Bank purchases of giltedged from the Reserve Bank.

Net Deposits of Scheduled Banks have once again risen in the week ended 9 June. Net Demand Deposits are lower by Rs 3.82 crores at Rs 797.05 crores, but net Time Deposits have been marked up by Rs 8.10 crores at Rs 1,113.16 crores. With the State Bank disclosing a fall of Rs 0.73 crores in Deposits in the week under review, it is clear that other Scheduled Banks experienced a rise in theirs of the order of Rs 5 crores. Meantime, Monthly disbursements have not caused a rise in Advances, the portfolio being actually lower fractionally at Rs 1,288.49 crores against Rs 1,288.56 crores; indeed, since the State Bank in that week reported a rise of Rs 3.03 crores, contraction in the credit extended by other Scheduled Banks is seen to have been fairly considerable. Reserve Balances have been drawn down (by around Rs 7.69 crores, since to the actual decline of Rs 2.20 crores we have to add the increase recorded by the State Bank) in order to reduce borrowings from the central banking institution, which are lower by almost exactly the same figure in falling by Rs 7.92 crores to Rs 21.35 crores. The State Bank's sale of Rs 14 crores worth of giltedged is mirrored in the fall of Rs 13.34 crores to Rs 527.11 crores in Investments of Scheduled Banks as at 9 June.

No Changes of Parities

By Paul Einzig

THE statement made by the head of the International Monetary Fund Mr Per Jacobson denying that any Government associated with the Fund intends to change its parities, produced a salutary effect in that it checked the speculative drive against sterling which was gathering momentum during the second week of June. Devaluation denials by Governments are usually looked upon with mistrust after recent experience, but in this case the disclaimer comes from a "neutral" source. It is quite an understood thing that Finance Ministers and even Prime Ministers consider it their duty to deny any intention to devalue or revalue, right to the moment when they are in a position to announce the change. But there is no reason why the head of the International Monetary Fund should take it on himself to tell a deliberate lie to help any Government. There is no doubt that Mr Per Jacobson meant what he said and that none of the Governments belonging to the Fund has approached him in connection with any devaluation or revaluation scheme.

The trouble about such denials is that they only cover the position as it is at the moment when the statement is made. There is nothing to prevent any Government soon after the denial was made to inform the Fund that it intended to change its parities. For this reason it would be unduly optimistic to expect the good effect of his denial to continue for very long. In order to prevent the revival of speculation on changes of parities it would be necessary for Mr Per Jacobson to repeat this denial in very frequent intervals. That again would entail grave disadvantages. For sooner or later one or the other of the Governments is bound to decide in favour of changing its parities. When that happens there is bound to be an interval between communicating its intention to the International Monetary Fund and announcing it to the public. During that interval Mr Per Jacobson would not be in a position to repeat his disclaimer, and his silence would give rise to strong rumours that would be liable to affect not only the currency whose parities are about to be changed but also a number of other currencies.

Having regard to the above consideration, a frequent repetition of denial by the International Monetary Fund must be ruled out. That weapon can only be used very occasionally, so that the absence of a denial should not be looked upon as an indication that changes of parities are on the way. Mr Per Jacobson chose with commendable care this particular moment for making his denial. Although a speculative movement against sterling was developing, it was still at its initial stages. Possibly if he had waited until a landslide had developed his denial might have been quite ineffective. As it is, it has succeeded in deferring, if not preventing, the development of large-scale speculation against sterling. In order to be able to prevent it from developing between now and the Annual Meeting of the International Monetary Fund in September, it would be necessary for the British Government itself to indicate some concrete evidence to show that the facilities available for the defence of sterling against speculative attacks are adequate. Nor would that be sufficient. It would be necessary for the British Government itself to show its determination to defend sterling not only by words but also by action.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 20 June 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.335 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.650 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday 26 June 1961. Successful tenderers should make payment on Thursday, 29 June 1961. Other conditions are as usual.

During the week ended 16 June 1961 Government of India Treasury Bills for Rs 116,31,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 14 June to 17 June 1961 amounted to Rs 30,00,000.

Notes

TEA CONVENTION

Not A Day Too Soon

The Tea Board deserves to be congratulated on its proposal to hold a Tea Convention in Calcutta during November 1961. The Convention is expected to be a "significant international gathering dramatising the world wide impact of Tea". Twentyseven countries have been invited to participate. There will be a general session to discuss major issues, study groups to take up the threads of the major discussion for further exchange of views and a concluding session to record its final findings.

Thirteen items have been selected for discussion. These are: world prospects for tea; challenge of instant tea, tea research, tea broking, tea packaging, tea consumption in the United Kingdom, outlook for tea in the United States, tea industry in the USSR, tea in the European Common Market, future of tea in West Asia, tea production in India, role of tea trade in India and role of the State in fostering the tea industry in India.

The Convention will commence on 17 November and will last for a fortnight. The Tea Board will be host of the Convention.

though Municipalities are known to borrow occasionally through the capital market and quotations for Municipal loans find a place in the list of securities. The Reserve Bank Bulletin for May notes that investments of local authorities including Port Trust are below the level of outstanding debt and their budgetary position accounts for regular resort to borrowing. That electricity boards and financial corporations are now competing with local authorities for what money is now available from institutional investors is a point to which attention must be invited. Access to the capital market for local authorities is strictly limited and Indian Municipalities do not have the same opportunities or advantages as the Home Corporations in dealing with the London money markets. The increase in the debt of Port Trust in recent years is mainly due to the programme of improvement involving latterly recourse to the World Bank for financial assistance.

Conclusions regarding the proportion of debt to revenue, the level of indebtedness to net valuable value and the proportion of interest charges to annual expenditure cannot be offered easily but it is plain that receipts from remunerative enterprises are comparatively small and the municipalities, including City Corporations, have been forced to rely on Government for loans. Their own administrative charges have risen, although it is known that Municipalities are not generous employers and the scale of wages, especially, for the lowest class is depressing enough.

In spite of a rise in revenue, the budgetary position of local authorities is unsatisfactory, and this will probably hamper future borrowing. On the other hand, Governments might raise loans and make advances to local authorities and independent borrowing may be strictly limited. In any case, the Corporations have become regular and eager borrowers. The Port Trusts are in a better financial position and the rise in foreign trade has contributed to a measure of prosperity permitting them to reinforce reserves and provide for gradual reduction of debt. But the Port Trusts also face labour problems and wage awards may impair their financial strength in the future. But it may be noted here that the four Port Trusts held larger investments than the City Corporations and the increase in the reserves guaranteed financial health.

EXPORTS

Ups and Downs

A large increase in the American purchases of manganese ore from Brazil last year conveyed the impression that India had not been able to enlarge her exports and, in fact, it was the UK that provided better support for the

export trade. But this trade is now in danger, because of a threat of take-over of the British-controlled mines in Madhya Pradesh by the Government of India. Among the supplies to USA, Ghana is now as firmly established as South Africa and it is noteworthy that the Congo republic maintained exports of manganese even in 1960. For certain grades of ore India is still the major supplier and export trade in ferro-manganese particularly with the USA has not suffered to any extent. On the other hand, Brazil has now become a major supplier of block mica to the United States but in regard to film or splittings, the lead is still held by India.

Competition from Thailand in shellac is fairly pronounced and it is evident that the depression in America affected Indian exports to a greater extent than competition from alternative sources. It is evident from the latest official analysis that the American demand for pepper alone is satisfactory and even at higher prices American buying is kept up as in the case of cashew kernels. On the other hand, the consumption of jute manufactures has been going down but much depends on the course of recovery which may lead to larger buying from India if Indian prices are reasonable. The increase in the price of castor oil probably limited the US buyers' usual interests in the Indian export surplus and Brazil has been gaining ground in the US market. In regard to goat skins, Pakistan is now a major rival of India and countries like Nigeria and Brazil have started to supply goat skins. But one advantage is held by India, namely, that she can provide bark tanned

semi-finished skins for being dressed in the United States. Among export items from India hides and skins showed an increase because prices in India were held down in spite of an inevitable increase in the price of raw hides and skins. That may, however, be due to the system of trading, with prices in India influenced absolutely by the quotations under the London system of auctions.

JOINT SECTOR Good News

Comparatively sophisticated States have generally shown a tendency not to shirk the implications of a mixed economy. The Maharashtra Government, for instance, is reported to be thinking seriously of entering into partnership arrangements with private entrepreneurs in industrial ventures during the Third Plan period. It is reported that the Government

has set apart Rs 4 crores for investment in enterprises of this sort. Among the projects mentioned as likely to be jointly operated by the Government and private sector interests are a coke oven plant in Kalyan, a pig iron plant in Chanda district and steel alloy plant, in Ratnagiri district. It is also reported that a State mineral corporation will be set up for taking over manganese mines in the Vidarbha region.

This is a development greatly to be welcomed. The emergence of what has been rightly called the "joint sector" will act as a counter-vailing influence in the present situation in which the claims of the public and private sectors are urged with a mutually exclusive vehemence. The exact shape that this collaboration will take, will naturally depend upon particular circumstances and will have to be worked out carefully in each case. Probably, the most suitable form will be a joint stock com-

pany with or without majority shareholding for the Government. It was reported, sometime ago, that the Government of India had abandoned its tentative thinking along these lines for reasons that have never appeared very satisfactory to us. The Bombay experiment in joint sector undertakings will be watched with interest by the rest of the country.

RURAL CREDIT Bad News

Hard on the heels of an optimistic assessment by the Reserve Bank of the record of the Co-operative Movement during the year 1959-60, comes another Reserve Bank study of the most important section in the entire Movement. Only its findings are quite disheartening. In drawing conclusions on the basis of this Survey, however, one will do well to bear in mind that this is a

sample study pertaining to 12 districts in 12 States and that it refers to the position that obtained two years prior to the latest Reserve Bank Statistical Statements relating to the Co-operative Movement in India. It is true that the picture revealed by the Rural Credit Follow-up Survey 1957-58 which is second in the series by the Reserve Bank of India is not altogether bleak. There are bright spots such as the finding that in the year under review cooperatives accounted for an estimated 12 per cent of the total borrowings by cultivators as against 2 per cent in 1951-52. But, in so far as a sample Survey can truly reflect the working of the whole, the Survey shows that co-operative credit is yet to make a marked impression on the life of the rural population, especially, the small cultivators. The 12 per cent represents only the average and it may not appear quite a satisfactory record if it is noted that the percentage of borrowing from the cooperatives ranged from 1 to 39 per cent. Only in three of the 12 districts studied, the percentage ranged from 19 to 38. In the rest, it ranged from 1 to 7 per cent. Wide regional disparities in co-operative agricultural credit development thus continue to persist.

The Survey reveals that the main draw-back of co-operative credit continues to be the weakness of the primary credit societies. A finding of the present survey is that broadly speaking the financial position and the quality of performance of the large societies are generally superior to those of small societies. The original Rural Credit Survey had recommended that in order to be efficient, primary credit societies should be large sized. Government accepted the recommendation but after a time it shifted the emphasis to service cooperatives, with the result the formation of large sized cooperatives has received a setback. It has been proved once again that small-sized societies are a waste of resources.

It is small consolation that co-operative credit is making steady headway because the principal objectives of reorganisation of rural credit are still as elusive as ever. The grip of the moneylender on the small cultivators who constitute the bulk of the rural population does not seem to have relaxed to any appreciable extent. A major part of the borrowings, in nine districts, we are now told by the latest follow-up Survey, was financed by moneylenders the proportion so financed exceeding 70 per cent in six of them. The Survey further reveals that in five districts borrowings to the extent of more than 45 per cent of the total were obtained at rates of interest more than 18 per cent per annum. The pattern of rural spending and indebtedness would appear to have altered little in the past few years. Cultivators still

use most of their borrowings for family expenditure and repayments are small. The benefits of increased co-operative credit have largely accrued to large cultivators who account for more than half the total capital formation. The inevitable conclusion that flows from the findings of the Survey is that agricultural co-operative credit has left the small cultivator as weak as ever, if not weaker. Efforts so far made for fostering the co-operative spirit, though sincere, have perhaps become too mechanical with little regard for the human element.

BSFC Free Flow of Funds

Patterns of private sector financing have been changing fast in recent years. The high level of taxation leaves little savings with the community from which private enterprise can draw funds for its expansion. The need for new institutional ingenuity in ensuring free flow of funds into the channels of private enterprise has been felt by Government itself and partially provided for. Financial institutions at various levels catering to the needs of large scale, medium and small industries have been set up and one has only to glance through the working of these institutions over the past few years to realise that financial assistance for private enterprise is being made available in increasing measure from year to year.

The working of the Bombay State Financial Corporation during the year ended March 1961 is an instance in point. The activities of this Corporation have been restricted since 1 May, 1960 to the new State of Maharashtra as a new financial corporation has been established for the State Gujarat consequent on the bifurcation of the former Bombay State into Maharashtra and Gujarat. The Bombay State Financial Corporation will be reconstituted as a Financial Corporation for the State of Maharashtra to be styled as the Maharashtra State Financial Corporation.

The Corporation renders financial assistance to small and medium scale industries from Rs 10,000 to Rs 10,00,000. The number of applications for assistance sanctioned during the year under review totalled 126, of which 28 related to new projects by existing units, 37 to new concerns and 61 related to programmes of expansion and for manufacturing new products. Total number of applications taken for consideration was 169. An interesting feature of the disposal of the applications is that there has been no rejections. This is because of a wholesome practice that is being followed. It is explained in the Directors' Report that in the first instance the applicants themselves submit only good schemes and secondly detailed discussions are held by the applicants with the officers of the Corporation prior to the submission of the applications.

This is a practice worth emulation by other States. This practice ensures that entrepreneurs are spared an uncertain period of waiting after they submit their applications. That the Corporation is holding the scales even, between the small scale and medium scale industries is borne out by the fact that since its inception it has sanctioned loans to 172 small scale concerns and 173 medium scale concerns. Of the 126 applications sanctioned during the period under review 27 were for manufacture of chemical and chemical products. The next in order of the number of applications sanctioned comes miscellaneous manufacturing industries, 18 applications pertain to manufacture of metal products except machinery and transport equipment while 11 are for manufacture of machinery except electrical machinery, 9 applications have been sanctioned for the manufacture of textiles. The remaining 61 are accounted for by a variety of industries.

That the operations of the Corporation are running on satisfactory lines will be seen from the fact that

it has now started relending from funds realised by way of repayment of instalments by the borrowers. This also shows that the industrial units that availed themselves of the loans from the Corporation are now financially able to stand on their feet. Total disbursements of the Corporation so far amounted to over Rs 3 crores of which more than one crore of rupees have been recovered by way of repayment. Another indication of the efficiency of the Corporation is that out of the 114 industrial concerns which have availed of accommodation from it, all except 16 have fulfilled their obligations on time in respect of interest and loan instalment.

IDA Loan to Sudan

The World Bank and the International Development Association (IDA) have joined in making available to the Republic of the Sudan the equivalent of \$32.5

million to help in financing construction of the Roseires Dam on the Blue Nile. The Bank is making a loan of \$19.5 million and the IDA is extending a development credit of \$13 million.

The Federal German Government also intends to contribute toward the foreign exchange cost of the Roseires Dam through a long-term loan, equivalent to \$19 million, by the Kreditanstalt fuer Wiederaufbau. It is expected that this loan will be signed shortly.

The water stored by the Roseires Dam will more than double the supplies available for irrigation in the Sudan during periods of seasonal shortage. It will make it possible to bring nearly 900,000 acres under irrigation for the first time, and also to greatly increase yields and diversify crop production in other areas where water supplies are at present inadequate. New production in the areas affected will make an important con-

Where on earth is Mogadiscio?

Frankly, till somebody in Mogadiscio ordered BINNY's cloth, we too didn't know that it was the capital of Somalia in East Africa.

Today BINNY's cloth is imported by 50 countries—superb fabrics made from cotton of the best quality and dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved.

Rigid Quality Control* ensures maximum durability and perfect finish.

Quality Control:
Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

***Testing cloth for defects**
Every yard of cloth from the looms is examined thoroughly for defects before it is passed for dyeing or bleaching and finishing.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings . Khaki Drills . Bleached & Dyed Drills . Towels . Anticrease Suitings . Tussore Union Fabrics . Silk Sarees etc. etc.

BINNY—a great name in textiles

The Buckingham & Carnatic Company Limited
The Bangalore Woollen, Cotton & Silk Mills Company Limited

third force. Their ability to render economic aid is doubtful but they can fix a limit to military aid given to Laos. Since Vietnam and China are not involved in the arrangements there is an important issue—of making them respect the arrangements concluded among the princes. This is the more important task facing Russia for the Pathet Lao forces can be disarmed only if Ho Chi Minh wants peace to be restored to Laos.

★

PAKISTAN

Beggar-My-Neighbour

Japan's interest in Pakistan is conditioned by the recent increase in imports from Japan. A timber delegation from Japan surveyed the resources of the Chittagong Hill tracts and means to buy East Pakistan timber for cheap furniture. There is also a plan to start with the help of the Pakistan Industrial Development Corporation a new steel works, using scrap and pig iron imported from India and South Africa. The proposal to provide 49 per cent of the capital equal to nine billion yen means that East Pakistan will have its own assured steel supply from a Chittagong unit producing 100,000 tons of bars, wires and sheets. This will probably jeopardise prospects of exports from Calcutta, more so as Pakistan means to start a steel plant of 250,000 tons capacity in the West, probably in the Thal Project area. There is an inflow of foreign capital, provided already by the success of the Unilever plant in Rahim Yar Khan to ensure economic supply of soap and vanaspati for both the Punjab and Sind. The local manufacture of carpets will be supplemented by manufacture of cosmetics too, according to an official report which also notes that French films will be regularly imported for showing in the Cinemas of Pakistan.

Whether Russia gives economic aid or not, the Pakistan Government seems to count on foreign enterprise starting many new factories. There is also a plan to start an oil refinery in East Pakistan and this may mean that surplus oil from the Assam refineries would find it difficult to market its products in East Pakistan. The policy may savour of the usual beggar-my-neighbour attitude, but the worsening of political relations with India over the last few months provides an explanation for Pakistan trying to buy tanning materials as well as dyes from France in addition to cars. This may mean that Pakistan will get its Renault cars before India starts making them in a State-owned plant.

★

USA

Evaluating the Aid

AS they have not done for a long time, perhaps not since the days of the Marshall Plan more than a decade ago, the American people today are discussing and evaluating

the concept of assistance to other lands.

The administration's views on this have been taking concrete shape over the last several weeks. They are being revealed in congressional testimony and in public statements as officials attempt to win understanding and support for President Kennedy's new Foreign Aid Programme.

Here, in essence, is what they are saying:

Foreign aid is necessary to help developing nations preserve their freedom, meet the needs and hopes of their peoples for a better life, resist internal and external Communist pressures aimed at exploiting and subverting them.

In these endeavours, a degree of outside help is required. That help, realistically, must come in good part from the free industrial nations with whom the people of developing lands share common aspirations of human dignity and well-being. There is in this a certain measure of responsibility for the United States, which is the world's strongest single counterforce to totalitarianism.

In addition, it is to be expected that Americans, who enjoy so much of the earth's bounty, should feel impelled by history and tradition to help others along the road to social and economic progress.

The American people well remember that they, too, were helped in their own early struggles by substantial loans and capital infusions from abroad.

Thus, the United States and other industrial lands have the opportunity to help put the developing nations safely on the path to self-sustaining growth. And in time, as this progress accelerates, the developing nations will no longer need such large amounts of outside government aid.

Implicit in this is the opportunity, also, to help create a community of strong and free nations in which international tensions can be reduced and true peace can flourish.

For the 1962 fiscal year 1 July, President Kennedy is asking Congress for a total foreign aid budget of close to \$4,500 million, compared with the \$4,000 million originally requested by the preceding Eisenhower administration. Of the total, \$2,600 million would go for economic aid, \$1,900 million for military aid.

While this admittedly is a large sum, it is held to be well within the capability of the United States, with its large and expanding \$5,00,000 million economy.

For those who may still fail to see in these significant if somewhat esoteric elements the urgency and importance of the Kennedy aid programme, attention can be and is being called to considerations of more tangible consequence.

In his aid message to Congress, for instance, President Kennedy estimated about \$2,000 million of the \$2,600 million of next year's economic aid will be spent in the

United States to purchase US goods and services. Much of the US aid today is required to be spent in the United States by regulation, largely as a result of the lingering deficit in the US balance of inter-national payments.

But it is noteworthy that in past years, too, when US aid funds could be spent by recipients almost anywhere in the world, some two-thirds of it still wound up in the United States. This meant more jobs for American workers, more activity for American industry.

Furthermore, US foreign aid programmes, by stimulating economic development and making possible progress under free governments abroad, have helped assure a continuing supply of products needed by the US industrial complex.

Foreign aid, of course, is not a responsibility of the United States alone. It is one to be shared with the United Nations and with the other industrialized countries which have been aided generously by the United States in the past and which now have the means to offer substantial development assistance of their own.

As these other donor countries expand their assistance programmes, they, too, are becoming increasingly aware of the benefits to be gained therefrom—to the developing lands, to the entire fabric of a secure, prosperous and peaceful free world.

★

CANADA

The New Dilemma

The report that the Canadian dollar has now sunk to parity with the US dollar (instead of being at a premium: as in the last ten years) may not help Canada to export more to the USA. But a revival of US investment may take place, partly because US shares are high and Toronto may offer better bargains than New York for big investors. The depreciation of the Canadian dollar in terms of the US dollar is small and not unexpected. The economic recession in Canada cannot be got over by sale of surplus wheat to China. The argument going on between the Finance Minister, Mr Fleming and Mr Coyne, the Governor of the Bank of Canada, about economic and fiscal policy may even encourage the hasty withdrawal of outside funds. But Canada has an adverse balance of trade and heavy remittances on account of foreign capital mean a big, regular drain. But that is the price paid for rapid economic development. To curtail foreign investment means unemployment and reduced farm income. Mr Diefenbaker does not like the idea of excessive dependence on the USA, but if Great Britain enters the European Common Market as it may, the Canadian economy must be oriented to that of the USA. This is the new Canadian dilemma, not the assimilation of the French Canadian in Quebec or the disparity between the Maritime Provinces and Newfoundland. The cheapening of

Canadian goods for India is problematic. It is also doubtful whether US capital will seek Canadian outlets hereafter, since Europe presents more valuable opportunities. The opposition party cannot offer any remedy like tariff reduction, because Canada has a surplus of both farm products, metals, and most manufactured goods. A lowering of wages would be an unpalatable solution. But the rate of saving will have to go down, since under-consumption will be generally deemed the cause of unemployment. As Canada has weathered economic depression, the symptom of a new depression will not touch off undue anxiety. And it may be remembered that Canada produces gold, and the balance of payments problem cannot be acute, as it is in India.

Since the above was written Canada has decided to devalue the Canadian dollar.

★

ASHOK LEYLAND

Memorable Year

1960 has proved to be a memorable year for Ashok Leyland. On the production side, the Company recorded an increase of 43 per cent in the output of comet chassis. Alongside of this increase in production, the Company also maintained progress in the manufacturing programme and registered an appreciable increase in sales. The Company added a new item viz, industrial engines to its list of marketable products. With anticipated increase in demand, industrial engines are credited with considerable sales potentials, though during 1960, the total sale of industrial engines was only 162. Another notable development was the entry made by Ashok Leyland in the export business.

Considerable significance attaches to the expansion plans now under way of the Company and in respect of which concrete steps were taken during 1960. With a view to raising funds for the expansion plans, the Company issued an additional capital of Rs 172.25 lakhs of which Rs 139.10 lakhs was offered to Leyland Motors to bring their shareholding to 60 per cent of the total issued capital of Rs 497.25 lakhs. The Company has a proposal for increasing the production of comet chassis to 5,000 and another one to add 20 per cent extra capacity to provide for the manufacture of spare parts. In accordance with these plans, the Company has commenced planning in respect of design and layout of the buildings and machine tools. The main objective of the present expansion plans is to eliminate imported components in a gradual process. In view of the time lag for the expansion plans to take effect, 1961 is expected to be only a transitional year. But Ashok Leyland has set its sights high and bids fair to be an important land-mark in India's industrial map.

Indian Finance

24 June 1961

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It

INCOME TAX STATISTICS relating to the professions have provided me with an amusing and instructive half hour. The figures relate to 1959-60 but may perhaps be taken as representative. It would appear that the general impression of law being the most crowded profession is not correct. For there are more doctors than lawyers in the country, or if you prefer it that way, more doctors than lawyers pay their taxes. (The relative figures are 17,375 and 11,060. Taxes paid are Rs 99 lakhs and Rs 97 lakhs respectively.)

Accountancy—or again, the tax paying part of it—is unaccountably among the least-crowded professions. With a bare 803 votaries, it ranks seventh in a classification that lists nine kinds of professional men, and pays a total of Rs 15 lakhs in taxes. One explanation can be that less number of accountants are self-employed or self-unemployed than lawyers. Averages are dangerous weapons, but since the average income tax and supertax paid comes to nearly Rs 2,000 per accountant against less than Rs 900 per lawyer, it is probable that there are more lawyers with fewer briefs than accountants without assignments. (In all these calculations, I am leaving out the submerged eleventh that does not pay taxes, both due and not due.) The general prosperity among accountants and the absence of it among lawyers is underlined by another inference available from the figures: the few rich lawyers are infinitely richer than the few rich accountants, since the average supertax paid by the legal profession at about Rs 2,700 is more than the average supertax paid by the accountancy profession at about Rs 375. Overcrowding in the legal and medical professions is also borne out by the sharp difference in the amount of income tax and supertax paid by them. Lawyers as a class paid in 1959-60 twice as much income tax as supertax (Rs 60 and Rs 30 lakhs respectively). The medical and allied professions paid in income tax more than three times the amount they paid as supertax. (The relative figures are Rs 70 and Rs 23 lakhs respectively.) Film stars, not unexpectedly, are doing very well, or I should perhaps say, doing very well by their country. They are a distant third in num-

bers—a mere 1,829—but they pay the largest amount of tax at Rs 1,63.65 lakhs. Musicians, surprisingly are apparently not acquainted with big money, though I rather suspect most of it goes to film crooners. But the strolling player is still probably the poor bum he was in the bad old days. (This is an inference I draw from other evidence and not from income tax statistics, for they don't give separate figures for drama.) As for the school master—it perhaps needed no CBR to tell us that—he is still passing rich with forty pounds a year. But there is some difficulty in interpreting the figures here. Most teachers, even such of them as have income to pay tax on, are salaried employees and are listed under another head. So "Education and teaching services" must relate to a miscellaneous crowd of tutorial institutes—some of them do make big money—and their ilk. Any way, they are 1,148 in number, have the least income (a measly Rs 75 lakhs out of a total of Rs 33 crores) and pay the least amount of tax (nearly Rs 8 lakhs in a total of nearly Rs 5.50 lakhs.) Literature, art and journalism are hardly better off. With 999 assesses (who is the odd tax-dodger?) and a total income of Rs 85 lakhs, this class pays a total tax of Rs 19 lakhs. Curiously, this class shares with the film people and architects the distinction of paying more supertax than income tax. This, though not surprising in the case of film stars, is rather intriguing in the case of literary folk (at least in India). It probably implies relative prosperity at the top. Finally, unidentified professions account for 318 people (what could they possibly be up to?) earning an income of about Rs 65 lakhs and paying about Rs 11 lakhs in taxes.

Apropos of my comments on the current prices of books in these columns last week, a friend has put into my hands a Press Information Bureau handout giving details of an interesting experiment in book production in Kerala. I had heard about this enterprise before, but I had no idea that it has done so remarkably well. On the strength of its performance, one can rate the chances of success of well-directed

efforts at cooperative endeavour in the country very high indeed. For book production is probably the last one would consider as ideally suited for trying out cooperative ideas. Authors are reputedly a prickly lot and the fact that they have cooperated to their obvious advantage has lessons both for cooperation and for book production. Starting with a dozen members and a capital of Rs 120 in 1945, the authors' cooperative has today a total membership of 393 and a working capital of Rs 4.5 lakhs. Its annual sales have increased from Rs 3.6 lakhs in 1955-56 to Rs 6.8 lakhs in 1959-60, and it has so far published 1,200 titles. For some years now it has been paying a dividend of 7½ per cent and what is even more astounding, it has paid royalty at the rate of 30 per cent. By any manner of reckoning, this is impressive record. The handout gives details of the timely help and assistance offered by the society to its members and it has recently expanded its activity and enlarged its marketing by having its own bookshops all over the State. Suspicions, rendered somewhat plausible by the situs of the society, that it may be a "front" for communists are vigorously and convincingly scouted by my friend who is acquainted with the books produced by the society. The range and variety of the books published are stated to rule out any kind of ulterior design of the sort associated with this kind of endeavour.

Congressmen are, not unnaturally, inclined to see in the results of the mid-term elections in Orissa the shape of things to come. Others may be less ready to share this optimism, but for a party which has had to do a lot of explaining in the recent past of its poor showing in bye-elections, the tidings from Orissa must be most welcome. People whose interest in the results is less urgently omen-seeking, will however be more impressed by the possible evidence they provide of the emergence of a new trend in leadership in the country. "Bijoo" Patnaik to whom the credit for the Congress victory is given by general

consent, is still in his mid-forties. Though he was incarcerated during the war years, it was not for his overt participation in the Quit-India movement. His political spurs were really won after independence and his claims to leadership stem less from martyrdom than from purely political qualifications. Is the doleful question "After Nehru, What?" at long last getting its tentative answers? I don't, of course, mean that Bijoo Patnaik or Yashwant Chavan will be our next Prime Minister. But I do mean that a cadre of new and youthful leaders is emerging. Curiously, earlier attempts at consciously training a second line of leadership by making younger men understudies of their elders have been less successful than they should have been. There are, of course, exceptions. Manubhai Shah and Keshav Dev Malaviya have been in strenuous training for future leadership and ought, by all present indications, find a place in any future cabinet. Even so, Patil's reported comment about Nehru being a banyan tree under which lesser vegetation merely languishes has a certain mordant truth in it. It seems that the arena for the really ambitious politician is the State. C. Subramaniam and R. Venkataraman in Madras, for example, have, paradoxically, laid more firmly the foundation for all-India leadership than many who have gone to New Delhi too quickly. Yet, it probably remains true that leadership cannot be manufactured to order. It is thrown up and the dictum that the hour finds the man is still the most essential truth about leadership. Chavan was thrown up by the travail over linguistic division of Bombay. Similarly, Orissa's chronic instability which drove the Congress to all kinds of devious and unsavoury compromises could have been ended only by someone like Patnaik. Of course, Patnaik is still an untamed horse in many ways. He has brought off a gamble that many had thought dubious. He has amazing energy and an acute political sense, especially of timing. His flamboyancy and showmanship have their uses but I don't think that he himself sets a great store by them. This is evidenced by the fact that he is probably the only Oriya who has carved, almost from scratch, a modest industrial empire in Orissa for himself. Deriving-do alone couldn't have made it possible.

EDUCATION Third Plan Programmes

THE problems of implementation of the programmes of education under the Third Plan were reviewed at a conference of officials of the Central and State Ministries of Education which was inaugurated in New Delhi last week by the Union Education Minister, Dr K. L. Shrimali. The total provision for general education approved at the last NDC meeting

	Second Plan	%age of total	Third Plan	%age of total
	Rs. crores		Rs. crores	
Elementary Education	97.51	43.0	290.71	51.1
Secondary Education	52.32	23.1	88.62	21.6
University Education	46.30	20.4	78.05	19.0
Other Schemes	30.69	13.5	33.99	8.3
Total	226.82	100	410.37	100

The provision for elementary education, it may be noted, has been more than doubled and represents over half the total provision for general education. Another notable feature is the increase in the area of responsibility of State Governments. The provision of Rs 338.37 crores for the States sector shows an increase of nearly 87 per cent over the Second Plan provision, and is distributed over the main heads as shown below:

	Outlay (Rs crores)	Percentage of total
Elementary Education	204.61	60.5
Secondary Education	77.74	23.0
University Education	37.90	11.2
Other Schemes	18.12	5.3

Referring to the redistribution of emphasis, which is reflected in the formulation of the plans of the States and the Central Ministry, Mr P. N. Kirpal, Educational Adviser and

S. N. K. SUNDARAM,
Managing Director.

amounts to Rs 410.37 crores against the outlay of Rs 365 crores envisaged in the Draft Outline. In addition, as Mr A. N. Khosla, Member, Planning Commission, told the conference, there is a programme allocation of Rs 140 crores for engineering education; for craftsmen training, agriculture and allied subjects and medicine and health, there is a further programme provision of Rs 136 crores.

The provision for general education, which represents an increase of about 81 per cent over the total outlay in the Second Plan, is distributed over the main groups as shown in the table given below:

	Second Plan	%age of total	Third Plan	%age of total
	Rs. crores		Rs. crores	
Elementary Education	97.51	43.0	290.71	51.1
Secondary Education	52.32	23.1	88.62	21.6
University Education	46.30	20.4	78.05	19.0
Other Schemes	30.69	13.5	33.99	8.3
Total	226.82	100	410.37	100

Secretary to Government of India, has pointed out that all schemes which are to be executed by the States have been provided in the States Sector of the Plan and the Central Ministry's schemes "have been designed to supplement the programmes in those particular areas which are of all-India significance or where experimental experience has to be built up or special training facilities are to be organised". This has probably resulted in a sharp reduction in the scope of "Centrally-sponsored" schemes which have been received with disappointment, and even anger, in some quarters. The Government of India, however, has not yet taken a final decision on the "Centrally-sponsored" schemes, and the pattern of financial assistance is still under the consideration of the Planning Commission.

More than half the total provision under elementary education is for expansion of educational facilities for children in the age group 6-11, which accounts for Rs 113 crores of the total outlay. A sum of Rs 20.70 crores has been provided for expansion of educational facilities for children in the age group 11-14; Rs 20.61 crores for teachers' training programmes; Rs 13.39 crores for improvement of salaries and service conditions of teacher; Rs 11.76 crores for school buildings and equipment; and Rs 6.95 crores for special programmes for education of girls.

The implementation of the scheme will involve the starting of 78,000 new primary schools and provision of educational facilities to 146 lakhs additional children in the age group 6-11. The enrolment in this age group will increase from 343 lakhs in 1960-61 to 489 lakhs in 1965-66, and the corresponding percentage of

children in schools will rise from 61.1 to 75.7. Still, the percentage of school going children in this age group in India will be lower than in the Congo and many other African countries. The percentage of trained teachers is expected to increase from 65 to 75 per cent during the Plan period. Orientation of all schools to the basic pattern is also among the main objectives of the Third Plan programme.

At the secondary stage, enrolment is expected to be stepped up by 40 lakhs (from 63 to 103 lakhs) in the Middle Schools and by 22 lakhs (from 30 to 52 lakhs) in High Schools. About 30.6 per cent of children in age group 11-14 are expected to be enrolled in Middle Schools and 17.6 per cent of the age group 14-17 in high schools, as against 22.7 and 17.6 respectively at the beginning of the Plan. It is proposed to raise the number of Higher Secondary Schools by 3,000 to 6,400, and to open 300 Multi-purpose schools. There will be provision for Elective Science in 9,600 schools as against 6,000 in 1960-61. Nearly 1.30 lakhs of additional teachers will be required at the middle schools stage and 61,000 additional teachers at the Higher Secondary stage. The percentage of trained teachers is expected to be raised from 65 to 75 per cent in Middle Schools and 68 to 75 per cent in Higher Secondary Schools.

As regards university education, Dr Shrimali has stressed the importance of maintaining and raising the standards. Nevertheless, a measure of expansion is considered inevitable. The Plan envisages the establishment of 12 new universities, and starting of nearly 350 new colleges. Total enrolment at the University stage is expected to increase from 9 lakhs to 13 lakhs and enrolment in science classes from 2.9 to 5.2 lakhs, increasing the percentage of science students from 32 to 40. All universities are expected to introduce the Three Year Degree Course during the Third Plan. The total provision under various heads for scholarships for promising and needy students amounts to Rs 37 crores. It is estimated that nearly 25 per cent of the students at the Secondary and University stage would receive assistance under one or the other scheme.

The scale of outlay and the magnitude of the programme call for a tremendous administrative and organisational effort. Though implementation is considered fairly satisfactory, there was a shortfall of nearly Rs 14 crores in the utilisation of the financial allocation, which amounted to Rs 226 crores. As Dr Shrimali has reminded the Conference of educational officers, complaints of inadequate financial allocation, which are heard from time to time, sound thin in the context of inadequate utilisation.

Examination of the problem of implementation of educational programmes has highlighted the need for strengthening the personnel trained in educational administration. There is also need, as Mr Kirpal has pointed out, to have a second look at procedures and methods of programming for work. Procedural delays can be cut down to a substantial extent by delegation of power and responsibility

at different levels; but the success with which this can be accomplished will depend on the quality of the personnel and the training given to them. Assistance from the UNESCO is, however, available for making a start in providing a background of sound theoretical training for educational administrators. A Training Centre is shortly to be set up in Delhi by the Union Ministry of Education in collaboration with the UNESCO to serve the countries of South East Asia. The facilities provided by the Centre will have to be supplemented by each State according to its requirements. The Conference has decided that periodic meetings at the zonal level should be held to enable the specific problems of each area to be discussed. A programme has also been formulated for periodic progress and assessment reports on the Plan Schemes.

Two of the important topics discussed at the Conference related to expansion of facilities for science education and provision of textbooks at the different stages. The nature of the problem varies from stage to stage, but the principal difficulty is that of supply of paper. The total quantity of paper available for textbooks is estimated to fall short of requirements by about 25 per cent. The discussions at the Conference are reported to have revealed that the States which had nationalised the production and distribution of textbooks had, on the whole, got better results both in the form of better textbooks and reduction in costs than the areas where textbook production was not similarly regulated. It will be helpful if the factual data supporting this conclusion are also made available to the public, in view of frequent complaints of non-availability of nationalised textbooks, for long periods after commencement of school sessions. In several of the States where Governments have entered the field of book publication, all States except two have nationalised the production of textbooks for elementary schools, and in all States, Governments have assumed control over selection and prescription of textbooks. The administrative organisation is thus already in existence to deal with the problem. It has been decided that each State should undertake immediately a detailed study of the problems connected with the supply, production and distribution of textbooks, and the results reviewed at a conference to be convened by the Ministry of Education after the preliminary studies have been made.

Ashok Leyland Limited, Madras

Increase in the Output of Comet Chassis

Chairman Sir A. Ramaswami Mudaliar, on Expansion Programme

The following is the text of the speech delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, Ashok Leyland Limited, to the Shareholders at the Twelfth Annual General Meeting of the Company held on 15th June, 1961 at Ennore, Madras.

Gentlemen,

I have great pleasure in extending to you a cordial welcome to the 12th Annual General Meeting of your Company.

The Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960 have been circulated to you, and with your permission, I shall take them as read.

As the Balance Sheet and Profit and Loss Account have disclosed to you, 1960 may be considered to have been a reasonably satisfactory year. The output of Comet chassis for the year was 43 per cent in excess of that for 1959 and it has, therefore, been possible for your Directors to recommend the same dividend as previously. That is, the increased capital has been as profitably employed as has been the case for some years.

IN RETROSPECT.

It is probable that in retrospect 1960 will have proved to be a memorable year. Not only has the Factory maintained progress with the Manufacturing Programme while increasing production and sales by an appreciable percentage, but also the foundations have been laid for the expansion of output to which I referred in speeches at the last Annual General Meeting and at subsequent Extraordinary General Meetings. It will be appropriate for me to give a brief history of the steps which have been taken during the year to ensure that our output will keep pace with the sales demand. In February, Messrs. S. Markland and D. G. Stokes, Directors of Leyland Motors Ltd., visited the Factory and had discussions with your Directors regarding the proposed expansion programme; and arising from these discussions, decisions were taken in the same month to ask your approval to an increase in the Authorised Capital to Rs. Ten Crores. In February also, following representations made at an earlier date to it, the Government of India approved Leyland Motors' share of the Company's capital being increased to 60%. In April, you approved at an Extraordinary General Meeting the proposal to increase

the Company's Authorised Capital to Rs. Ten Crores as a preliminary step towards the ultimate financing of the proposed expansion programme. In this month, your Directors also decided to apply to the Government of India for their approval of a programme to increase the production of Comet chassis to 5,000 per annum and in addition to tool up for an annual production of 1000 '600' type engines which are used in chassis heavier than the Comet. It was also proposed to add 20% extra productive capacity to provide for the manufacture of spare parts required for the maintenance of vehicles in service. In July, an application was made to the Controller of Capital Issues for consent to the issue of Rs. 172.25 Lakhs capital for the provision of buildings and plant and equipment to cover the first phase of the expansion scheme. Following a resolution taken at a Board Meeting held in October and the receipt of a Consent Order regarding the proposed new capital issue early in November, you approved at an Extraordinary General Meeting held at the end of November, the issue of Rs. 172.25 Lakhs capital of which Rs. 139.10 Lakhs was offered to Leyland Motors to bring their shareholding to 60% of the total issued capital of Rs. 497.25 Lakhs. Messrs. Leyland Motors took up this offer and this decision will provide the necessary foreign exchange for the purchase of plant and equipment.

Coincident with the successive steps taken to provide the necessary capital for your Company's expansion, planning commenced in regard to the design and layout of buildings and of machine tools and other equipment to be accommodated in them. A contract was let in April for the steel work for the main building extension which will add 125,000 sq. ft. floor area for additional machine shops, assembly shops, etc. This addition with other building works, including the extension to the Canteen, a new Training Centre and improvements to office accommodation will bring the total covered area to 12.65 acres. A contract for the builder's work for all these new buildings was let in August. The precaution of placing early orders for steel work and other building construction resulted in erection of the new buildings commencing before the year end. I am pleased to be able to report to you today that such good progress has been made that it will be possible for the installation of plant and machinery in the new

shops to commence in the second half of 1961. This fits in with the promised deliveries for machine tools and other equipment which will be shipped progressively from July 1961 onwards.

NEW FOUNDRY

At your last Annual General Meeting, I reported to you that the establishment of a Foundry in collaboration with Messrs. Leyland Motors Ltd., in which this Company would have 25% of the capital and Leyland Motors 75%, had been approved by Government and at that time I anticipated full scale production of castings might commence in the first half of 1961. Certain unavoidable delays occurred and actual delivery dates of major items of equipment have been later than was originally promised. I am pleased to be able to inform you, however, that by the end of this year, Ennore Foundries Ltd. will be in a position to meet all your Company's requirements of iron castings; and progressively from that time onwards, surplus capacity will become available which will be utilised for the production of castings for other manufacturers. Mr. West, Vice-Chairman of Leyland Motors and Chairman of West Yorkshire Foundries Ltd., accompanied by Mr. F. Grimshaw, Leyland Motors Ltd.'s General Works Engineer, visited your Factory in November, the principal object of their visit being to acquaint themselves at first hand with the progress being made with the erection of the Foundry. I am sure you will agree with me that we are fortunate to be able to depend on the advice of Mr. West who is acknowledged to be one of the leading authorities on Foundry Practice.

In my speech at the last Annual General Meeting, I referred to a levy of excise duties which occurred on the 1st March 1960; and I expressed the hope that the incidence of such duties on the development of road transport would be carefully studied and that such a study might lead to the abolition or at least the lowering of those duties. It can only, therefore, be considered most unfortunate that far from lowering excise duties, they have since been increased. The 1961 Finance Bill provided for additional import duties and excise duties which will still further increase the price of materials used in the manufacture of motor vehicles; and will probably necessitate a corresponding increase in the retail price of the Comet

chassis. The Finance Minister met a deputation from the Association of Indian Automobile Manufacturers when the latter represented to the Minister the seriousness from the point of view of the Industry's welfare of the latest levies. The Minister could not give hope of any reduction in duties.

INDUSTRIAL ENGINES

During 1960, the Company commenced the marketing of industrial engines. To enter the market for industrial engines entails producing Comet engines additional to those required for use in the Comet chassis. With tooling available, it was not practicable to achieve a very high output and the total sales of industrial engines amounted to 162. Our incursion into this market, however, has demonstrated that there is a good demand for industrial engines with the performance characteristics of the Comet; and that there will be a similar demand for the heavier engines which are about to come into production. It is possible, therefore, to anticipate that as soon as it is practicable to increase the output of engines additional to those required for the Company's own chassis, there will be considerable revenue from the sale of industrial engines.

EXPORT

For some time now, your Directors have had in mind the importance of export and attempts have been made to secure an entry into overseas markets. These efforts have been to some degree successful and your Company's export business commenced with the sale of 24 Comet chassis to the Ceylon Transport Board during the 1960 year. Efforts to secure export business will be continued because it is not only advantageous from the country's point of view but also from the Company's as the Government of India provides additional foreign exchange to manufacturers who secure overseas business which can be utilised for the import of materials which are not available from indigenous sources.

FUTURE

It is my custom at your Annual General Meetings to attempt to give some idea of what the future holds as well as to review the results of the previous year. I do not think that apart from one particular issue to which I will refer a little later, 1961 will be very different to previous years.

It will undoubtedly be a difficult year because there will be a high level of expenditure on new buildings and new plant which will not immediately give rise to a corresponding increase in output. Nevertheless, it is hoped that production will again show a substantial increase on the previous year. In addition, I can anticipate with confidence that further progress will be made in the deletion of of imported components and materials and, as I have already stated earlier in this speech, castings will be eliminated from materials to be imported. Towards the end of the year, new machine tools and equipment will be received in increasing volume and buildings being ready for its immediate installation, it will come into use without delay. Production, therefore, will be on a rising curve as the 1961 year approaches its end, but the new plant and machinery will not have any really appreciable impact on the output of chassis until 1962. 1961, therefore, is likely to be a period of transition from low level production with the exclusive use of standard machine tools to higher volume production with an increasing use of special purpose machine tools; and the installation of the latter will commence during the current year.

I have referred to one difference which will distinguish 1961 from other years. This is the change in the financial year end from 31st December to 30th September. This decision was made by your Directors in order that the Company might fall in line with your Associates, Messrs. Leyland Motors Ltd., whose financial year is from 1st October to 30th September. The current year, therefore, will be of nine months duration from 1st January to 30th September when a Balance Sheet and Profit & Loss Account will be prepared for the year ended 30th September 1961. Thereafter, the financial years will run from 1st October to 30th September inclusive.

I have already referred to visits from Directors of Leyland Motors and I must once again place on record the invaluable advice both with regard to the work of the Factory and its expansion which we receive from them. I am sure you will desire me to convey to them and above all to Sir Henry Spurrier our thanks for all the help and guidance received.

I must also take this opportunity to recognise the enthusiastic help and co-operation that has been extended to your Directors by the Officers, staff and workpeople both on the factory side and on the administrative office side. I should like to convey our thanks to all of them.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Markets

JUTE Steady Trend

Prices in the jute and gunny markets have been displaying a steady tendency during the past few days following indication of improved inquiries. While goods prices are well maintained thanks to some buying support, the raw jute section is deriving strength from mill interest. It is however generally expected that before long, prices will begin to take a downward course. In a Press Note issued on 17 June, the Indian Jute Mills Association has expressed the view that it is quite probable that prices may be forced to uneconomic levels "once the weight of new crop supplies is felt on the market." Such an expectation is based firstly on the fact that prices have fallen sharply in recent weeks and secondly prospects for the new jute crop are good. It is certain that if prices are allowed to find their level in a situation where there is an excess of supply over demand, the cultivator will be the sufferer. Very low return for the cultivator in a season will invariably be followed by a decline in the area sown to jute in the next season. The result will be an uncertain season for the jute industry with all its consequences that may not be quite welcome. The IJMA Press Note points out "that in order to avoid a repetition of the price depression which occurred in 1958-59 and which adversely affected sowings for the ensuing season, the Association in consultation with the Government of India is working out a jute price support scheme which can be brought into use if required."

It is gratifying to note that unlike in previous years when there were bumper jute crops, there is now the awareness of the basic problems both on the part of the Government and the industry. Failure to take timely action to ensure that the cultivator gets an equitable return for his labour was largely responsible for the troubles in the ensuing year in the past. Apart from the price support scheme that it is now considering, the IJMA has also a proposal for building up a buffer stock of raw jute with a view to ensuring regular supply of the raw material to the industry irrespective of whether the crop in a particular season is adequate or not.

It would appear that lately optimism over a bumper jute crop in Pakistan is tempered with growing apprehensions about ad-

verse developments as regards the condition of the crop. The recent heavy rains are said to have affected both the quality and size of the jute plants in certain regions. Floods are reported to be interfering with the movement of jute so far harvested. The earlier indication that the crop will be available quite early in the season does not seem to be valid now and it is believed that it will not be before the beginning of July when the new crop jute will become available in any appreciable quantity. In the event of the Pakistani crop turning out to be smaller than anticipated and if new crop jute becomes available only in July, these developments are bound to have some repercussions on the Indian market even if the Indian jute crop does not suffer any setback before it reaches the consumers.

The jute goods market ruled steady during the past week aided by bear covering and moderate support from overseas buyers. It would appear that the apprehension that the reopening of the futures market would further depress prices has been belied. For since the reopening of futures on Thursday last the trend has been steady with prices all along the line making useful gains. B Twills June delivery which was quoted last Thursday at Rs 149.50 closed on Wednesday at Rs 156 with Hessian 40"x10 oz also higher at Rs 48.50. Throughout the past week prices have been steadily gaining ground even though the quantum of foreign enquiries has not been such as to lead to the conclusion that a squeeze is in the offing. It is not to be denied however that in the event of a sizable expansion of foreign enquiry, supply will not be enough to meet the demand in full especial-

Indian Finance

ly since the first instalment of the block closure of mills is shortly to commence. It would also appear that bull operators have been encouraged by the implications of the reported setback to the Pakistani crop. The belief seems to be gaining ground that the period of scarcity in raw jute may turn out to be longer than earlier expected, in view of the several adverse factors that have been already encountered by the jute grower in Pakistan like excessive rains, dislocation of transport etc. With Pakistani mills themselves finding it difficult to get raw jute supplies, it may not perhaps be wrong to conclude that jute imports from that country in any sizable quantity will not be possible early in the next season.

TEA Exports

According to the figures released this week, exports of Tea from North-East India have fallen to 6.21 million pounds in May from 6.41 million pounds in the corresponding month of last year. In the first five months of the current, however, exports are higher at 89.85 million pounds as compared to 84.73 million pounds in the similar 1960 period. During the past week, there has been a steady improvement in the bookings of export liner space for tea, particularly for the United Kingdom. This business should now continue to increase as the season progresses.

According to the Board of Trade, London, total tea imports in the first four months of the current year are higher at 205.38 million pounds as against 190.91 million pounds in the corresponding period of last year. India accounted for the bulk of the increase in tea imports into the UK with her supplies rising from 92.43 million pounds in January-April 1960 to 109.97 million pounds during the period under review. Imports from Ceylon also increased from 49.3 million pounds to 51.92 million pounds as did those from Indonesia from 3.62 million to 4.53 million pounds. Supplies from Kenya, too, improved from 4.27 million pounds to 4.78 million pounds.

A recent survey of the United Nations Food and Agricultural Organisation states that the gap between world tea production and consumption is not likely to be closed over the next few years. London market sources say that, although consumption is expected to increase in the less developed countries, the rate of development in the more advanced countries is tending to slow down and this can well mean that future price competition will be strongest amongst the cheaper grades.

The survey adds that Asian tea production is likely to expand by about two per cent annually over the next four years, bringing the total output close the 800,000 tons level by 1965. In Africa, there is a marked potential for further production increases and total output from this continent can add a further 55,000 metric tons to world output by 1965.

The survey concludes by stating that, in the Asian countries, where most of the world's tea is grown, the

24 June 1961

rise is not expected to be so marked. While the outlook for tea is not discouraging, it is not encouraging either, especially for Common teas. The gap between consumption and production may also be increased should China step up her exports at a greater rate than expected.

In the Colombo market, offerings were 7,800,961 pounds. There was less demand for Dimbula/Dickowa BOPs at generally lower rates except for a small selection of the best types. Useful coloury medium BOPs were in strong demand at dearer rates, while other sorts were slightly dearer. All high-grown and medium BOP Fan-nings, except best, were in less demand at appreciably lower rates. Bright liquoring Ova BOPs were slightly dearer; but plainer sorts were barely steady. Low-grown teas found good demand; but prices were slightly lower.

In London auction, offerings were 27,246 packages of Ceylon teas. The quality continued to decline and prices were again easier. Low-grown were generally 1d per pound lower while the bulk of the offerings fell by 1d to 3d per pound at which level there was rather more demand. Offerings of South Indian tea consisted of 8,082 packages, which met with a fair demand; but prices generally declined by 1d to 1d per pound and sometimes more in the case of the higher-priced teas except for the best quality descriptions.

Stocks of tea in Calcutta warehouses rose to 222,807 chests at the end of May 1961 from 184,235 chests at the close of May 1960. Tea stocks at the close of May 1961, 1,071 in public warehouses rose from 1,071 chests at the end of May 1960 to 122,816 chests at the close of last month as did those in private warehouses from 73,164 chests to 99,991 chests.

COTTON New floor price Steady up Sentiment

THE cotton futures market depicted a steadier tendency during the past week and closed with small gains over the previous levels. The Government of India's decision to enhance the floor price of cotton to Rs 168.57 from Rs 139 per three quintals for the 1961-62 season has caused welcome surprise to the trade circles. Both the growers and consumers widely acclaimed the announcement as the most timely step coming just around the commencement of sowing operations. The Government's firmness not to make any upward revision in the ceiling price indicates its anxiety to hold the price level under control. However a section of the trade feels that considering the comparatively high cost of production the price for cotton should have been raised by about Rs 100 per candy. Thanks to the active buying of cotton by spinners and investors, the cotton market exhibited marked improvement in prices especially during the last few days. The Jarilla August contract shot up to Rs 589 per three quintals from the previous week's

level. The turnover in the market was, however, restricted.

The spot market reported all round improvement in mill demand. Demand was mostly confined to Gujarat varieties like Vijay, Digvijay, Surti and lower Laxmi equivalent to 1.147. Sentiment was fanned to a great extent by the series of discussions which the Textile Commissioner had with the various cotton and textile interests. The turnover in the spot market improved considerably. Encouraging reports that emanated from the piecegoods market also aided the bullish sentiment. If the buying spree continues for another fortnight the anxiety of those who had accumulated stock would be allayed to a great extent and there would not be much difficulty in marketing their cotton.

In the export section some improvement was noted in the shippers demand for lower quality in Vijay and Kalyan while stray activity was reported in Bengal Deshi.

The demand for foreign growths was far from encouraging. Mill en-

quiries were confined to East African and Sudanese varieties. The prices for East African varieties were fairly steady. American and Egyptian cotton failed to attract purchasers.

The Textile Commissioner's talks with various associations highlighted the anxiety of the Government to find effective solution to the problem of accumulation of cotton. The Government has agreed to constitute a representative committee of sellers, buyers and the authorities to determine fair prices for cotton held by co-operative societies. The Indian Cotton Mills Federation has requested all its members to lift as much Gujarat cotton as they could. It is reported that during the past few days nearly 25,000 bales of cotton grown in Gujarat have been sold out. It is also rumoured that the Textile Commissioner will approach the big textile mills to find out how much of the surplus cotton they can purchase at present.

According to a survey conducted by the International Cotton Advisory

Committee, cotton accounted for nearly 65 per cent of the world fibre consumption in 1960. Consumption of cotton during the year under review rose to a new high of 31.1 million bales. The corresponding figure for the previous year was 30.01 million bales. This encouraging trend in world consumption was achieved by the advancement made in research.

NEW YORK

Prices in the New York futures market fluctuated within narrow ranges. Fresh incentives to buying were totally absent. The tone of the market was also subdued. The weather is reported to be quite congenial for the planting operations.

The demand for actual cotton was not satisfactory. Sellers were also reluctant to dispose of their stocks so much so that in many cases the prices asked and those bid varied widely. Only limited business was transacted on the export front.

Export registrations upto 2 June totalled 6,323, 866 bales under 1960-

1961 and 983,536 under 1961-62 programmes. Export during the season upto the end of May aggregated approximately 6,389,851 bales as against 6,028,156 bales in the previous year.

ALEXANDRIA

The Alexandria cotton market appeared to be inactive and the undertone remained dull. Export sales during the latter half of May amounted to 69,013 bales as against 25,052 bales in the corresponding period last year. The total sales upto the end of last month is estimated at 945,169 bales.

EAST AFRICA

At the auction held on 8 June the Lint and Seed Marketing Board disposed of 15,000 bales of new crop AR Mwanza cotton for shipment. The next auction is scheduled to take place this week when an equal number of bales will be offered.

SUDAN

The Sudan Gezira Board received a set back during the past week when it failed to dispose of a good quantum of cotton. The total sales of both 'S' and 'L' quantities aggregated 44,206 bales. India appeared to be interested in XG4S and G3L but the offtake was not upto the expectations.

PIECEGOODS

The Bombay piecegoods market during the past week depicted quietly easy conditions. In the domestic market the prices exhibited a tendency to slip down further and the turnover too was restricted. Up-country demand was negligible and no business was reported in the forward section. The stock of piecegoods in Amritsar is reported to be piling up. Stockists appeared to be anxious to sell their goods fearing a further decline in prices.

Quality goods, on the other hand, met with buyers for prompt delivery. Business for forward delivery was transacted in coarse of medium goods.

Up-country buyers focussed their attention on longcloth and coatings.

The export section remained quiet and business transacted was meagre. The traditional markets like the UK and Sudan remained inactive and the flow of overseas enquiries was limited. Singapore, concentrated its attention on printed goods. Italy made some enquiries for grey sheetings. South Africa, Australia and Canada, who were faced with monetary difficulties, failed to do business on any appreciable level.

★

Sugar Output and Exports

DURING the current season, sugar production is expected to be about 3,000,000 tons, while consumption is estimated at 2,200,000 tons. There will, therefore, a surplus of about 800,000 tons. Out of this, exports are expected to be nearly 500,000 tons. Adding 550,000 tons brought forward from the previous season, the carry-forward at the end of the season will be nearly 900,000 tons.

If the industry is to carry such a big stock, it is likely to face financial embarrassments, especially when production is expected to increase further during the next season in view of the bright prospects for cane.

It cannot be denied that efforts are being taken to increase the sales of sugar in foreign markets. The Government of India is making arrangements to provide facilities to the Indian Sugar Mills Association to ship to the United States the export quota allotted to India by that country. Shipments are likely to begin from early next month through the Ports of Bombay, Calcutta, Madras, Kandla and Vishakhapatnam. Exports from Bombay will, however, be limited due to the onset of the monsoon. The possibility of using ships bringing wheat from America to carry Indian sugar is also being examined by the Government.

It is, however, learnt that the conclusion of the proposed agreement between India and Iran for the sale of 50,000 tons of Indian sugar to that country has been delayed due to certain unforeseen difficulties. One of the difficulties, it is understood, is that Iran wants some more time to arrange for sterling to pay for Indian sugar. The projected bigger Indian imports of Iranian dry fruits should be sufficient to pay for only a part of the 15,000-ton sugar deal.

The second difficulty is that the time limit under the Indo-Iranian agreement relating to the sale of sugar expired on 31 May last. The Iranian Government has requested the Government of India to give a further extension of time. Pending this and the Iranian efforts to arrange for sterling, further talks between the two sides have been suspended.

There is a general feeling that India cannot sell the commodity in foreign markets except at substantial losses, especially when the commodity is already in surplus in world markets and there is keen competition. Unless, Indian sugar is made more competitive in comparison with foreign products, export sales will be difficult to promote. It is clear that the domestic consumption must be raised to a substantial extent in order to relieve excessive accumulation of stocks at the factories.

In the Muzaffarnagar market, the rate for sugar is quoted at Rs 107.50 a bag as against the controlled price of Rs 107.69. Some ex-mill delivery transactions are also reported done at the controlled rate.

★

FOODGRAINS

Quiet conditions prevailed in the Hapur Foodgrains market where prices displayed a slightly easier tendency in the absence of consumer demand. Average wheat was quoted at Rs 14.50 to Rs 15 a maund. Peas, however, ruled steady, thanks to easy loading facilities. The market for Arhar remained depressed, while the prices of Moong showed a fractional improvement over last levels.

NON-FERROUS METALS

Prices on the London Metal Exchange showed a mixed trend. While Tin remained in good demand, Copper, Lead and Zinc lost further ground.

In the tin section, cash metal stuck at the Tin Council's ceiling level of £2880 a ton and the Council's buffer stock had apparently been called upon to supply a substantial quantity of tin to stabilise the market at this level. The current surplus of world demand continues to run about 10 per cent

ahead of production or until enough new supplies are drawn out of locked-in stocks to ease the shortage. Stocks available from the International Tin Agreement Buffer Pool—now steadily being lowered under compulsive sales by the Buffer Stock Manager—together with Canadian supplies already promised provide a potential 12,000 tons. These supplies are, however, unlikely to meet the potential surplus demand over the remainder of the year.

The Copper market was unsettled at the beginning of the week by an announcement that the strike, which

TURNING AWAY A PROSPECTIVE CLIENT?

once a week,
every week

THE ATLANTIS (INDIA) LIMITED (Incorporated in England)

had been threatened at the US Kennecott mines when labour contracts there expired at the end of June, would be postponed for at least a month. Anticipation of this strike had helped to boost copper prices earlier this year, so that the market inevitably reacted downwards on the news. Subsequently, the fall in prices slackened for a time; but the publication of figures revealing a further fall in world copper stocks in May failed to halt the decline.

The price of Zinc fell below £78 a ton for the first time since January. Paucity of buying interest and the pressure or impending pressure of foreign metal on the UK market seem to be the factors behind the continued fall in prices of both lead and zinc.

★

CHEMICALS & DYES

The market for Chemicals was fairly active, while the Dyes section was subdued. Occasional enquiries and the consequent offtake on the part of upcountry dealers accounted for the activity. There was, however, no change in the prices despite the reports that the tariff values of most of the items would be increased from 1 September, 1961.

A sudden improvement in the prices of sulphur was the main feature of trading in the Chemicals section. The most influencing factor was the revival of demand from the sugar mills for rolls and from agricultural departments for powder. Rolls moved up to Rs 370 from Rs 320 and powder to Rs 380 from Rs 310 per ton.

Camphor continued to meet with good demand, being placed around Rs 23 at the end of last week. Even at this level, sellers reported to be very few. Menthol, after showing a sharp decline early in the week, improved to Rs 130 at the end of the week.

In the Dyes section, listless conditions prevailed due to the absence of demand in the face of a comfortable supply position. Among vat dyes, FFB green German lost about Rs 4 at Rs 140 on account of the arrival of unauthorised goods from across the border. In base dyes, red RC crystal was quoted lower around Rs 12 and red KB German around Rs 13.50.

★

OILS & OLSEEDS

After a spell of hectic rise last week, prices on the Bombay Oilseeds Exchange suffered a sizable decline. The setback was attributed mainly to nervous bull unloading, induced by the beginning of monsoon in some of the major oilseed-growing tracts in Western India. Whether the bearish turn will extend further or not will, however, depend on the progress of monsoon in the country. On the other hand, favourable weather conditions will tend to discourage buyers from making aggressive purchases regardless of the price.

So far as the production outlook is concerned, the trade is optimistic about a substantial increase in the output of groundnut in view of the fact that the commodity maintained relatively high levels throughout the

past year. The current prices are, indeed, the highest for the past several years. Groundnut Bold ready is quoted at Rs 55.25; Groundnut Oil at Rs 23.50; Linseed ready at Rs 40.50; Linseed Oil at Rs 17.30; Castor ready at Rs 35.50 and Castor Oil, commercial, at Rs 15.

★

GOLD & SILVER

Irregular movements with an easy trend marked trading on the Bombay Bullion Exchange. After a subdued start, both gold and silver tended to rally; but eventually quietened on

profit-taking. Turnover was small.

In the Gold section, business was mostly of a jobbing nature as un-enquiry advices were rather quiet. The premium of spot metal declined from 85 nP to 70 nP over the current contract. Arrivals and offtake were estimated at 7,000 and 4,000 tolas respectively. Ready rates moved narrowly around Rs 120.85, while Sovereign was quoted at Rs 94.50.

The initial easiness in silver was attributed to lower Calcutta advices. Prices, thereafter, recovered slightly on local bear-covering and upcountry

support. Arrivals and offtake were estimated at 80 and 5 tolas respectively. Silver (below .995) moved between Rs 202.85 and Rs 203.00.

★

YARN

The Yarn market in Bombay recorded a fresh rise in prices, thanks to the scarcity of ready goods, fears of further restrictions on the import of yarn and a good upcountry demand. Turnover was, however, limited. Traders were not willing to part with their stocks on expectation of a further rise in prices.

Company Reports

Mettur Industries Repeat

DESPITE a rise in sales from Rs 1.64 crores to Rs 1.76 crores, the Mettur Industries Limited has reported a net profit, after providing for Depreciation and Taxation, of only Rs 17.98 lakhs for the year ended 31 March, 1961 as against Rs 19.66 lakhs for the preceding year, mainly due to an increase in "salaries and wages" item from Rs 34.15 lakhs to Rs 38.89 lakhs.

In respect of allocations, the Depreciation amount is slightly higher at Rs 2.04 lakhs against Rs 2.03 lakhs, while Taxation provision is lower at Rs 13.47 lakhs against Rs 16.30 lakhs and Development Rebate Reserve at Rs 2,175 against Rs 21,000. The dividend is, however, maintained at 30 per cent, subject to deduction of tax.

The directors state that, since the first week of May of this year, power-cuts have been imposed and have reached as much as 50 per cent. The company's own generator has been put into operation and no loss of production is anticipated unless the power-cuts are prolonged or increased.

Excellent Working Results of Edward Textiles

The Edward Textiles Limited has produced excellent working results for 1960. While sales have risen to Rs 2.33 crores from Rs 2.17 crores, the net profit is substantially higher at Rs 17.90 lakhs as against only Rs 4.89 lakhs for the preceding year.

Apart from providing Rs 90,000 for Taxation, the Depreciation amount is raised to Rs 3.58 lakhs from Rs 1.94 lakhs and Development Rebate Reserve to Rs 2.33 lakhs from Rs 29,254. The dividend is, however, maintained at Rs 18 per share, subject to tax.

The directors have decided upon implementation of a scheme of modernisation and rehabilitation of the mills. Accordingly, they have placed orders for the purchase of machinery. Such orders, as are remaining to be executed on 31 December, 1960, are to the extent of about Rs 28.51 lakhs. Further orders, as have been placed during the period from 1 January, 1961, till the date of this report, are to the extent of about Rs 10.07 lakhs. The aforesaid scheme will be financed, partly by the company's own resources and partly by a loan of Rs 40 lakhs proposed to be secured by the company from the National Industrial Development Corporation Limited.

Outlook for Selected Satgram Collieries

It would be recalled that the managing agents of Selected Satgram Collieries Limited had recently offered for sale 3,000 ordinary shares of the company at a premium of Rs 12 per share and these were over-subscribed by about 7 times. An offer of 6,500 ordinary shares of Rs 100 each as right shares was also made to the members of the company on 12 August, 1960 and the same was also over-subscribed. In this connection, the directors state that, in the absence of unforeseen events, the future prospects of the company are bright and they expect to maintain the dividend on the increased capital.

Meanwhile, the net profit for 1960, after providing for Depreciation and Taxation, is higher at Rs 3.29 lakhs as against Rs 2.63 lakhs for 1959. A sum of Rs 2.12 lakhs (Rs 1.03 lakhs) is set apart for Depreciation; Rs 1.89 lakhs (Rs 1.92 lakhs) for Taxation; Rs 98,000 (Rs 44,582) for Development Rebate Reserve and Rs 5,000 (Rs 15,000) for Land and Mining Reserve. No

provision is made for General Reserve against Rs 50,000.

An interim dividend of Rs 8 per share, subject to tax, was declared on 11 July, 1960 and paid to the shareholders in September 1960. The directors have now recommended a final dividend of Rs 8 per share on 13,000 old ordinary shares and pro rata of Rs 2.62 per share on 6,500 newly-issued ordinary shares, subject to deduction of tax. This will bring the total dividend for the year to Rs 16 per share which will absorb Rs 2.25 lakhs as compared to 16 per cent and Rs 1.56 lakhs for the preceding year.

Raisings have risen to 283,851 tons from 230,831 tons and also despatches to 263,931 tons from 220,770 tons.

Lower Profits for Seebpore Coal

Despite a rise in sales from Rs 18.37 lakhs to Rs 21.35 lakhs, the Seebpore Coal Company has reported a lower net profit of Rs 2.19 lakhs for 1960 as against Rs 2.41 lakhs, mainly due to the rise in colliery expenditure.

A sum of Rs 51,479 (Rs 49,000) is set apart for Depreciation; Rs 1.83 lakhs (Rs 2.18 lakhs) for Taxation; Rs 50,000 (Rs 75,000) for General Reserve; Rs 200 (nil) for Capital Reserve and Rs 10,691 (Rs 15,087) for Development Rebate Reserve. The directors have recommended a final dividend of Rs 2.00, making a total of Rs 3.00 per share, taxable, same as in the previous year.

Borrea Coal Pays More

Thanks to the rise in the net profit from Rs 1.59 lakhs to Rs 3.10 lakhs, the Borrea Coal Company Limited has raised the dividend on the ordinary

shares from Rs 1.00 to Rs 1.50 per share, subject to deduction of tax. Sales are substantially higher at Rs 46.71 lakhs against Rs 36.45 lakhs. All provisions have been raised:—Depreciation from Rs 80,381 to Rs 89,058; Taxation from Rs 78,000 to Rs 1.93 lakhs; General Reserve from Rs 58,129 to Rs 1.00 lakh and Statutory Development Rebate Reserve from Rs 12,725 to Rs 44,610.

Bridge and Roof Fares Well

The Bridge and Roof Company (India), Limited has reported satisfactory working results for 1960, while sales are higher at Rs 2.29 crores against Rs 1.95 crores, the net profit has risen to Rs 7.36 lakhs from Rs 6.89 lakhs.

The amount allotted to Depreciation is raised to Rs 9.91 lakhs from Rs 8.72 lakhs; Taxation to Rs 9.97 lakhs from Rs 8.75 lakhs; General Reserve to Rs 3.00 lakhs from Rs 2.50 lakhs and Development Rebate Reserve to Rs 60,651 from Rs 55,210. The dividend is maintained at 30 per cent, subject to deduction of tax.

Balmer Lawrie & Company, Limited resigned its office of managing agents of the company with effect from 31 December, 1960 and, with effect from 1 January, 1961, was appointed as Secretaries of the company.

Oriental Coal Pays 30 nP

The Oriental Coal Company Limited, in Karam-chand Thapar group, has made a net profit of Rs 1.98 lakhs for 1960 as against a loss of Rs 61,929 incurred in the previous year, thanks to the rise in sales from Rs 48.77 lakhs to Rs 50.30 lakhs.

Apart from providing Rs 40,000 for Taxation, the Depreciation amount is raised to Rs 3.13 lakhs from Rs 2.86 lakhs and Development Rebate Reserve to Rs 84,000 from Rs 75,000. After transferring a sum of Rs 25,000 from Development Rebate Reserve and Rs 1.01 lakhs from taxation provision, the directors have set apart Rs 1.00 lakh for General Reserve. A taxable dividend of 30 nP per share is recommended as against nil.

Both raisings and despatches have risen to 233,467 tonnes and 230,890 tonnes from 214,143 tonnes and 203,405 tonnes respectively.

For the Investor

INVESTMENT GOSSIP Renewed Apprehensions

Trading in the stock markets has again been on an irregular pattern for perhaps much the same reason as influenced sentiment last week. In earlier dealings Dalal street showed some improvement following the report that the Stock Exchange Association has accepted its subcommittee's recommendation for a status quo on the question of margins. This has naturally afforded relief as the general expectation had been that in view of the reported insistence on the part of the Stock Exchange Division a stiffer attitude to the margin was most likely to be adopted. The enthusiasm however proved short-lived as in later dealings operators were found to be in an uncertain frame of mind once again. While the uncertainty as regards margins may be said to have been removed at least temporarily in Dalal Street, it now seems to be the turn of Lyons Range to assume the role of an uncertain influence. So far this exchange has not been found to require as much attention as did Dalal Street from the authorities responsible for the control of speculation in the stock markets. This is because transactions in Lyons Range are largely not as wild as the are elsewhere. Referring to the pattern of trading in this market during the eight month period ended 31 May 1961, "A survey of activities 1960-61", a brochure just published by the Calcutta Stock Exchange Association has this to say: "... and the traders on the Calcutta Exchange have that faith and confidence in no small measure than those on other Indian exchanges. But they preferred to do trading within sober bounds. That is why the index number of security prices on the Calcutta Exchange did not reveal the same aggressive march as the index number of security prices on the other Indian exchanges."

This is perhaps the reason why the Stock Exchange Division of the Finance Ministry has not been in a hurry to set up an office in Calcutta. Latest indication is that an office will be opened in this centre also soon with a view to ensuring an on-the-spot supervision of the working of the stock exchange. The market's uncertain mood this week is presumably due to a belief that with the opening of an office of the Stock

Exchange Division in Calcutta there will be a general tendency on the part of operators to be cautious in extending commitments.

NEW ISSUE NOTES Southern Cables

THE Southern Cables Corporation Limited has received permission from the Government to raise capital for Rs 120 lakhs in 10,00,000 equity shares of Rs 10 each and 20,000 Cumulative Redeemable Preference shares of Rs 100 each carrying interest at 9 per cent, taxable. The company has entered into an agreement with a West German firm for securing the required technical assistance. The foreign collaborators will also participate to the extent of Rs 20 lakhs in the equity capital. The International Finance Corporation will, besides, invest Rs 20 lakhs in the equity capital and advance Rs 45 lakhs as loan.

Reichhold Chemicals

Another new venture is to be started in Madras by the Simpson group. Reichhold Chemicals (India) Private Limited has been formed for the manufacture of synthetic resins. The company has been permitted to issue capital for Rs 20 lakhs. Out of this issue, shares not exceeding Rs 9 lakhs will be offered to the American collaborators, Reichhold Chemicals, while the balance will be subscribed by Simpsons.

Titagur Paper

The Titagur Paper Mills Limited has secured the consent of the Controller of Capital issues for offering, at par, Debentures for Rs 60 lakhs. The Debentures will carry interest at 5½ per cent and will be repayable in 1970 with the option of redemption at a premium of one per cent after 1966. The capital is required for financing the expansion of the capacity of the company's third mill in Orissa to 10,000 tons of paper per month.

West Bengal Coalfields

The West Bengal Coalfields Limited has proposed to raise loan capital for Rs 30 lakhs bearing interest at a rate not exceeding 7 per cent, taxable, and redeemable after 10 years from the date of issue. The proceeds are required for developing the existing collieries, sinking a new pit etc.

Shree Vallabh Glass

Shree Vallabh Glass Works Private Limited, which was recently converted into a public limited com-

pany to set up a Rs 1.15 crores sheet glass and wired manufacturing plant, has been sanctioned a foreign exchange loan equivalent to Rs 37.19 lakhs by the Industrial Credit and Investment Corporation of India. The plant will be the first of its kind, manufacturing sheet glass and wired glass simultaneously in the country. Arrangements for technical collaboration with a well-known West German firm have been finalised. The plant will be set up near Anand in Gujarat. The company will shortly enter the market for raising the necessary capital.

Dr Paul Lohmann

The recent public issue of equity shares by Dr Paul Lohmann (India) Limited has been over subscribed by about 3½ times. The directors have allotted shares to each and every

THE METAL BOX COMPANY OF INDIA LTD.

NOTICE OF ANNUAL GENERAL MEETING

Notice is hereby given that the Twentyeighth Annual General Meeting of the Company will be held at the Registered Office, 59C Chowringhee Road, Calcutta, on Wednesday, the 19th day of July 1961 at 12.30 p.m. for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March 1961 and the Reports of the Directors and Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint and fix the remuneration of the Auditors.
5. To transact any other ordinary business of the Company.

SPECIAL BUSINESS

The approval of the appointment by the Board of Sole Selling Agents in Burma.

EXPLANATORY STATEMENT AND NOTE

The approval of the Company is necessary to the Board's appointment of a Sole Selling Agent.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby given that the Ordinary Share Register of the Company will be closed from 1st to 19th July 1961 both days inclusive.

By Order of the Board,

F. P. GILBERT
Secretary.

59C Chowringhee Road, Calcutta.
20th June 1961.

Indian Finance

24 June 1961

applicant and there was no ballot. Applicants for 100 shares will get 35 shares per application; for 200 shares 50 shares; for 300 shares 75 shares; for 400 shares 100 shares; for 500 to 800 shares 150 shares; for 1000 to 1,200 shares 250 shares; for 1,300 shares 270 shares; for 1,400 to 1,500 shares 300 shares; for 1,600 shares 325 shares; for 2,000 to 2,500 shares 500 shares; for 3,000 shares 800 shares; for 5,000 shares 1,250 shares and for 20,000 shares 5,000 shares. Allotment letters and refund pay orders will be despatched from 15 July 1961.

Mandya National Paper

Mandya National Paper Mills Limited is proposing to raise additional capital for Rs 80 lakhs in equity shares, at par, from the existing shareholders in order to finance the expansion programmes which is expected to cost about Rs 2 crores. The company will be getting from the Industrial Finance Corporation a loan of Rs 1.2 crores. The factory is expected to commence production in October this year. After expansion, the installed capacity will be 80 tons per day.

Lynx Machinery

The directors of Lynx Machinery Limited have announced that they will issue share certificates straightway instead of posting allotment letters. The posting of refunding orders along with share certificates to those applicants who are unsuccessful or partly successful and of certificates to the successful applicants will be completed soon.

INVESTMENT NOTES

Sayaji Mills

Sayaji Mills, No 2, Bombay, of the Sayaji Mills Limited, Kathwada, is proposed to be taken over by a new company, proposed to be registered under the name of Rajesh Textile Mills Limited. An extraordinary general meeting is to be held on 12 July 1961 for seeking the approval of the shareholders of the company to the draft sale agreement. Sayaji Mills Limited has now three units: (1) Sayaji Mills No 1, Baroda; (2) Sayaji Mills No 2, Bombay and (3) Maize Products, Kathwada, Ahmedabad.

National Rayon

The Chairman of the National Rayon Corporation Limited has stated that the company has obtained an industrial licence for raising the capacity of the tyre chord plant from 4 million pounds to 15 million pounds year. The company has also received the sanction for installing 12 more spinning frames. With the addition of the new frames, the capacity for the production of rayon yarn will move up to 21.6 million pounds a year. The tyre chord plant is expected to go into production in October or November this year. About 70 per cent of the machinery has already been installed.

Atul Products

It is understood that the Atul Products Limited has dropped the pro-

posal of issuing right shares in the near future. It is likely that the company will have to face shortages of raw materials and fuel in the next few years. But, the current level of dividend is expected to be maintained for the next two or three years.

IN BRIEFS

The Bengal Paper Mills Limited has proposed to maintain dividend at 32 per cent, taxable, for 1960.

The Alco Insurance Company Limited has raised the dividend from 3 to 6 per cent, subject to tax, for 1960.

Mysore Electrical Industries have recommended a dividend of 20 per cent, taxable, on the old shares and 10 per cent, taxable, on the new 3,450 shares.

The Bagalkot Cement Company Limited has skipped the dividend for 1960 as against a taxable 8 per cent paid for the previous year.

STOCK EXCHANGES A Fresh Retreat

Watch-Dog Writes:

FEARS relating to margin requirements once again depressed sentiment in stock markets. Renewed offerings in the speculative issues, therefore, resulted in a marked decline in equity values though some short-covering has rendered the rats to finish above the lowest levels for the week.

Subdued conditions prevailed on the Calcutta Stock Exchange where prices recorded a steady decline due to sustained selling pressure.

Irregular tendency in prices characterised trading on the Bombay Stock Exchange.

With a fall in turnover, the Madras Stock Exchange wore a quiet look.

Wall Street closed irregularly lower.

CALCUTTA

Friday Evening.

The pendulum swung back during the week under report. The local stock market staged a hasty retreat due to sustained bull liquidation on certain adverse rumours and some of the shares, which were so long in speculative fervour, fell back erasing a substantial part of the previous gains.

Although the corporate news was encouraging, operators seemed to be worried about the growing shortage of power and coal which, they felt, was bound to affect industrial production by the end of the year. It was also feared that Stock Exchange Division of the Finance Ministry might soon start its own office in Calcutta to have greater controls on speculative transactions. Lower advice from Bombay were also a contributory factor to the depressed sentiment in the market. Although attempts at a mild rally were made, the undertone at the close remained hesitant.

The Gilt-edged market was quiet. Although enquiry for the short-dated issues continued to persist, sellers

were reserved and transactions were few. Medium and long-dated issues were devoid of support. Consequently, the volume of business remained at a small scale. 3 per cent 1966 Conversion Loan, after opening at Rs 72.13, eased off at the close to Rs 71.95.

Bank shares continued to display a firmer tendency on the view that credit demands would increase further with expansion in economic development. It was also thought that the banks might consider the possibility of increasing their resources by issuing fresh shares. Both Punjab National and United Commercial remained very firm at Rs 22.62 and Rs 91 respectively.

In the week's dealings, speculative shares were the worst affected due to sustained selling pressure both on local and Bombay accounts. Against the previous week-end closing of Rs 28.50, Indian Irons started lower at Rs 28.38 and receded further to Rs 27.80, to finish the week at Rs 27.90. TEXMACO, after recording a new low of Rs 19.90 from Rs 20.30 on rumours of strike at the company's works, improved towards the close to Rs 20.45 due to lack of confirmation of the rumours. Jay Engineering, however, met with good support up to Rs 29.06 from Rs 28.87; J. K. Steel up to Rs 30.81 from Rs 28 and Jessop up to Rs 20.61 from Rs 20.19 although the closing levels were slightly lower due to some profit-taking. Guest Keen, Williams were on offer at Rs 41.87 against Rs 42.19 and so also Britannia at Rs 12.94 against Rs 13.19.

Although Textile shares continued to meet with good support on the view that production would improve due to more abundant supplies of raw cotton, higher levels could not be retained till the close on account of a general desire to book profits. Kesoram were taken up to Rs 35.12 from Rs 34.37 and J. K. Rayon up to Rs 19.50 from Rs 19.31, to close finally at Rs 35 and Rs 19.12 respectively. Cawnpore were, however, enquired up to Rs 9.12 from Rs 8.69; Dunbar up to Rs 25.50 from Rs 25 and Elgins up to Rs 20.25 from Rs 19.69.

Coal shares were fairly maintained around last levels on the view that the production of good collieries might rise when foreign loans became available. Bengal changed hands at Rs 385 to Rs 387; Burrakur at Rs 20.19 to Rs 20.31; Central India at Rs 13.12 to Rs 13.37 and Western Bengal at Rs 9.37 to Rs 9.50. Equitable turned quiet at Rs 33 against Rs 33.25 on lack of fresh support.

Tea shares came in for selective buying on the hope that the marketing outlook for the commodity would be good, at least in the coming months in view of the demand from domestic and foreign buyers being on the increase. Brooke Bond met with business at Rs 16.25 to Rs 16.50; Bishnauth at Rs 26.19 to Rs 27.00; and Dauracherra at Rs 8.37 to Rs 8.50. Jay Shree were a special feature, being absorbed upto Rs 23.62 from Rs 23.06 following the news of the company's decision to capitalise reserves and issue bonus shares in the ratio of one for every equity shares held.

Sugar shares were selectively enquired. Ramnugger Cane were wanted up to Rs 30 from Rs 29.87 on expectation of a bonus issue, while Carew were quiet at Rs 13.25 against Rs 13.50 and SKG at Rs 11.69 against Rs 11.75.

Jute shares continued to remain depressed, as operators were reluctant to enter into any commitments. pending favourable developments in the industry. Howrah moved narrowly between Rs 20.37 and Rs 20.94; Ganges between Rs 10.44 and Rs 10.81 and New Central between Rs 19.62 and Rs 20. Anglo-India were a shade better at Rs 185 against Rs 179 with Birlas marked back to Rs 27.27 from the recent high of Rs 28.19 due to profit-taking.

Miscellaneous issues followed the general trend of the market. Following were the price trends of a few selected shares:—

	Week's Week's Week's Opening Low Closing

BALANCE-SHEET BRIEFS

Murphulani (Assam) Tea Company Limited has incurred a net loss of Rs 45,761 for 1960 as against a net profit of Rs 2.24 lakhs for the previous year. After transferring Rs 45,000 from General Reserve, the directors have recommended a taxable dividend of 50 nP per share on the Ordinary Shares and Rs 1.063 per share on the Preferred Ordinary shares. In addition, a dividend of Rs 0.063 nP per share is proposed on the Preferred Ordinary shares in respect of 1959.

National Machinery Manufacturers Limited has reported a substantial rise in the profit from Rs 1.41 lakhs to Rs 15.30 lakhs for 1960. After taking into account the deficit of Rs 18.29 lakhs and making other adjustments, there is a debit balance of Rs 3.96 lakhs, which is carried forward to next year.

The working of the New Victoria Mills Company Limited, Kanpur, has resulted in a profit of Rs 12.73 lakhs for 1960 as against a loss of Rs 31.40 incurred in the preceding year. There is still a debit balance of Rs 63.55 lakhs, which is carried forward.

The profit of the Burma Lime and Chemical Company Limited has risen from Rs 1.07 lakhs to Rs 1.27 lakhs for the year ended 30 September 1960. The directors have proposed a taxable dividend of 10 per cent.

Sivanada Mills Limited has made a net profit of only Rs 13.81 lakhs for 1960 as against Rs 15.93 lakhs for 1959. The dividend is, however, maintained at 22 per cent, taxable.

WHEN YOU THINK
of Electronic Equipment
think of Bharat Electronics

To meet the vital needs of the country in Electronic Equipment, Bharat Electronics Limited was established by the Government of India in 1954. Equipped with the latest machinery and with a team of experienced technicians, BEL now manufactures General Purpose Receivers, HF Transmitters, Airborne VHF Transmitters, Manpack VHF Transmitters, BELWIN Transmitter, Crystals for HF and VHF equipment etc. BEL Electronic Equipment are now supplied to the Indian Railways, Civil Aviation, Defence and Police Departments.

The famous Statue by RODIN

In the momentous years ahead, BEL will be able to fulfil its specialised role of producing the major portion of the country's need of Electronic Equipment.

INVESTORS' GUIDE

The 1961 Edition of the Calcutta Stock Exchange Official Year Book is just now out. It is India's most up-to-date and comprehensive work of reference on investments. Contains detailed information relating to the securities of all companies quoted on the Calcutta and Bombay Stock Exchanges. Also contains information on economic matters, tax rules and rates, names and addresses of Liquidators of Companies wound up since 1944, preference dividends in arrears. Special features of this Edition: (1) Information relating to all Bombay Companies and (2) List of Companies which accept vernacular signatures on transfer deed.

Copies available from the Stock Exchange, 7, Lyons Range, Calcutta, at a price of Rs. 12.50 nP per copy. Postage Rs. 2/- extra.

a BIRD'S-eye view of service to the economy

The Birds/Heilgers group of companies meet a substantial part of the country's demand for industrial raw materials like iron ore, coal, limestone, manganese ore, refractories... provide tubewells for tea estates and factories... manufacture plants for water treatment... supply paper for a variety of uses... make jute goods and steel castings and structurals...

Birds have today launched on a programme of expansion to increase their output and service facilities... And their laboratories are constantly at work exploring new uses for their products so that they may serve India's industries better.

A symbol of industrial leadership, Birds will continue to play a vital role in helping India attain industrial self-sufficiency.

The Budget and the Plan

"TAXATION in a developing economy plays a vital part. It is more than a mere budgetary device to pay for the cost of administration. It is an instrument of economic policy". This dictum of Mr. Morarji Desai has been a commonplace of 'Public Finance' for about thirty years now. The only qualification that one would perhaps wish to make is to enlarge the scope of the principle to include the whole of budgeting and even economies that are not describable as "developing". But in the context in which Mr. Desai was enunciating it—he was defending in advance the fresh tax proposals he was about to unleash—it is understandable that he should confine his observation to taxation. The complementary remark that "it is no longer a question of trying through taxation to cover the deficit on revenue account from year to year," makes the wider scope of his Budget even clearer. In other words, the compulsions behind the new taxes are set in the context of what has now come to be called a "functional fiscal policy". The evaluation of the budget as a whole and the tax proposals in particular has therefore to be related to our declared economic ends.

This task resolves itself into testing how far the budget proposals are designed to further the consciously formulated aims of the Third Plan and the basic assumptions behind it. It is by now generally conceded that the primary end of fiscal policy as indeed of any economic policy in a developing economy should be the promotion of economic growth. This in its turn leads inevitably to the need for promoting a progressively increasing rate of capital accumulation. Since capital is nothing but savings made available for productive purposes, the main aim of fiscal policies should be to increase the quantum as well as the rate of savings for investment in the economy. For a variety of reasons which it is not necessary to go into here now, the principal stimulus for economic development in a developing economy (and therefore for savings) has to come from the State. Hence the necessity for increasing the budgetary resources, especially tax resources. In India's case, Mr. Desai put the minimum effort at a modest increase from 8.5 per cent to 11 per cent of the national income. But this is only part of the job. There is still a substantial part of the economy for which the developmental impulses have to come from what is known as the private sector. For channelising fruitfully these impulses, this sector has to have its share of saving and an intelligent fiscal policy must take note of this. The two and in some respects competing ends of fiscal policy, are therefore to see first, that the necessary savings for use by Government is available and second, that enough is left for the private sector for its investment in the economy. Judged by these two related criteria, Mr. Morarji Desai's proposals are on the whole acceptable. Some of them like the wide range of excise duties pass the first test and the others like specific incentives for the corporate sector pass the second. Obviously and unfortunately this very virtue may by a slight distortion be used against it. Incentives for the private sector can be politically exploited as a particularly unforgivable lapse

from the duty of mobilising resources. Similarly widening the excise range can be attacked, even by the so called private sector, as an indirect addition to the cost of production and of living with consequential erosion of savings. Perhaps the very fact that the Finance Minister is thus caught in a cross-fire is an indication that he has done his duty courageously. To an impartial observer it is clear that he has done his ingenious best to catch by the horns the dilemma of budgeting for development on a comparatively inelastic shoestring.

In other words, the Third Plan having set the tasks it has, it is hardly reasonable to expect the Finance Minister to act differently. There is a general disposition to evade this aspect of the matter as was evidenced by the pre-budget expectations of the quantum of additional taxes. It is therefore necessary to recall the stern realities of the situation. In the first place, the country expects the Finance Minister at the Centre to raise for the Plan Rs 396 crores as surplus from current revenue. (In the foregoing, as in the other figures that follow, we are confining ourselves to the effort by the Centre.) This expectation is to be placed against the actual performance of the Second Plan in which there was a deficit of about Rs 100 crores from current revenue for the Plan. Secondly, the Centre is to find another Rs 1,100 crores from a head described rather confusingly as "additional taxation, including (sic) measures to increase surpluses of public enterprises." The break-up of this head into its constituent elements has never been satisfactorily given so far. It needs to be remembered that credit is already taken for surpluses from public undertakings other than the Railways on the existing basis at Rs 300 crores. Therefore, the composite head accommodates fresh tax efforts and additional surpluses from State undertakings.

It is worthwhile to examine how well founded the expectations are in this regard. From press summaries of the Finance Minister's speech in the Rajya Sabha, it would appear that he considers pessimism about surpluses from public undertakings premature. It would have been more helpful if the necessary data for this conclusion were more readily available to the public. Mr. Desai himself was inconclusive, quoting some examples of State enterprises which have earned profits in 1959-60 and earlier years. The one source from which we can hope to glean some information on the subject, viz., the explanatory memorandum is scrappy and unhelpful. Some seventy one undertakings are listed, but figures of profits earned are given only for eight. It cannot be assumed that the others have suffered losses. In fact, some of the undertakings for which figures are not given in the memorandum did, according to Mr. Desai make profits in the earlier years. Presumably they continued to do so in the subsequent years. Hindustan Anti-biotics, for instance, which Mr. Desai claimed made a profit of Rs 87 lakhs in 1958-59 and Rs 77 lakhs in 1959-60 is included in the list but no figures of estimated profits for 1960-61 are given. There are other undertakings listed which have been known to have made profits but particulars thereof are not available in

memorandum. The impression given by the data available in the Budget memorandum is that hopes of high surpluses from public undertakings will have to be very cautious. On a total investment of Rs 604 crores at the end of 1960-61, the total profit is put at Rs 3.01 crores, which works out at roughly 0.5 per cent. For the budget year, the total of profits expected is put at Rs 3.64 crores on a total investment of Rs 706 crores which works out to a percentage of 0.51. Of course, these figures are misleading because the entire picture is not there. The results of 63 out of 71 undertakings are not given at all. Though some of them may have made some profits, others are most likely to have suffered losses since they have not gone into full production. It is true that in course of time they may begin to yield handsome returns, but the carry forward of notional losses will wipe out a part of it. Many of these companies—Mr Desai himself instanced Hindustan Aircraft Ltd—are not conceived as primarily profit making. Many others, like the Oil and Natural Gas Commission engaged in investigation and promotional work can hardly be expected to provide sizable surplus for investment in the Plan. An analysis by the Company Law Administration of 12 companies owned exclusively by the Central Government (which twelve, we have no means of knowing,) gives the following analysis for the year 1958-59:

	Rs in crores
Profits before tax ..	6.78
Profits after tax ..	4.33
Dividend ..	1.01
Retained profits ..	3.32

The profit from Reserve Bank is now accounted for in the general revenues under the head currency and mint. And the Post and Telegraphs department which has now achieved a status similar to that of the Railways is expected to have a surplus (after payment of dividend to the general revenues) of Rs 7.05 crores in 1960-61 and of Rs 8.53 crores in the budget year.

The above analysis is admittedly incomplete and somewhat arbitrary. But it is evident that any expectation that the surpluses (including reserves from past profits) from these undertakings would take care of the major portion of the Rs 1,100 crores jointly allotted to new taxation and profits from undertakings, is illusory. Mr Desai's own estimate of the surpluses is only Rs 150 crores for the five year period, which is itself less by Rs 150 crores than the Plan's primary expectations in this regard. It is therefore, necessary to face up to the fact that the tax effort needed for the Third Plan is stupendous, Mr Desai himself putting it at Rs 1,150 crores, in the Rajya Sabha. (This incidentally confirms that he has much more modest hopes about surpluses than the Planning Commission.) That is the reason why he has taken on himself the odium of fresh taxation, despite the fact that the elections are round the corner. In this he has shown greater courage than many State Finance Ministers.

It is true that there is probably an element of under-estimate of receipts. It is also possible that Mr Desai may succeed in effecting savings in non-developmental expenditure. (The performance in this regard during the Second Plan, as reflected by the non-materialisation of expected surplus owing to increase in non-developmental expenditure is unforgivable.) But even after making allowance for better performance in receipts and greater savings in civil expenditure—check over which is to be facilitated by the new method of accounting—tax effort will still have to be considerable.

If this is conceded, then the inescapability of widening the base of the excise levies cannot be seriously disputed. The point

of diminishing returns has already been reached in direct taxation, except for possibilities of marginal adjustments here and there. The mainstay of receipts will have to be greater returns from excise levies already imposed by expansion in production. This means that the theory of excise being consumption-inhibitive and therefore deflationary is not seriously entertained. Actual experience also disproves it except in cases where the articles chosen for the levy have a comparative elasticity of demand. Buyers of luxury and prestige possessions like refrigerators and air-conditioners may conceivably be put

TAX CONCESSIONS

Mr Morarji Desai, the Union Finance Minister, announced in the Lok Sabha, tax concessions of the value of about Rs 4.5 crores. The most important of the concessions relate to a reduction of 50 per cent in the effective incidence of the increase in the excise duty on superior kerosene. He also stated that adequate steps would be taken to release inferior kerosene quickly and to import more of the inferior variety in lieu of superior variety.

A similar reduction of 50 per cent in the incidence of the compounded levy on units of three or four powerlooms which would be paying the excise on cotton cloth for the first time was also announced. In order to avoid a sharp rise in the burden of duty at the transition stage, taxes will be imposed on the slab basis.

Another notable concession is the exemption from duty on yarns of counts one to ten so as to benefit coarse cloth as well as handloom made cotton carpets. As regards woollen carpets, Mr Desai stated that a large part of them was exported and steps would be taken to see that exporters got full drawback on the duty on wool. Duty exemption would be provided to small families working on its own without any use of power or assistance or hired labour.

With regard to inferior coffee, which has no export market for the moment, the Minister expressed his willingness to provide partial exemption if suitable measures could be devised to distinguish such coffee and avoid evasion.

In regard to plastics, glass and glassware, Mr Desai mentioned that the duty would be at one stage only, that is at the stage of powder, granule, or flake in the case of plastics and at the first stage such as sheets and tubes in the case of glass. Other items manufactured out of duty paid plastic powder or glass sheet tube would not in any case be subjected to duty. The other categories in the tax schedule, however, should be retained to ensure that the imported goods falling in those categories bore the countervailing duty.

off by the prospect of excise duty being added But the coffee-addict and the chain-smoker can hardly be expected to deny themselves their little pleasures. Mr Morarji Desai himself concedes that rises are inevitable, but that it is necessary to see that the situation is not exploited by unscrupulous traders.

So far about the Budget and "savings" utilised by the State. What has the Budget done in discharging its complementary function as a stimulator of savings for investment in the private sector? A great deal. Indeed, Mr Morarji Desai's Budget has been remarkable more for this than for anything else. The tax on Bonus Shares for which no one has a kind

word is reduced substantially. It is a typical Desai compromise in which even as something is yielded, an eye is kept on the incidental advantage in this case, the possible revenue yield by a stampede for bonus issues by those who have held their hand. Secondly, a series of inequities and disincentives that particularly irked foreign collaborators have been removed at one stroke. The Supertax on inter-corporate dividends was so far discriminatory against foreign minority shareholders, a circumstance particularly illogical in the context of our wishing to be masters in our houses even when outsiders are let in. The royalties receivable by foreign suppliers of know-how is now to be subject to a much less onerous rate of supertax. Foreign technicians are to have an extended tax-holiday. In their sum, these concessions will provide an excellent talking point for those whose duty it is to convince foreign interests of the excellence of the investment climate in India. They will also facilitate the free flow of skills and special processes needed for a rapidly industrialising country. Hotel industry is to receive a benefaction of considerable dimension. Obviously, the concession, which consists of a tax holiday similar to that enjoyed by other more obviously "industrial undertakings," is conceived as part of the programme of tourism for earning foreign exchange. And foreign exchange earning is the purpose of another rather grudging concession—the reduction of the export duty on tea. All these concessions and rationalisations add up to a coherent attempt at helping the private sector fulfil its role in a developing economy.

The economic survey for 1960-61 accompanying the Budget papers assumes an increasing importance in the light of the functional role assigned to modern budgeting. Such a survey would not have been considered as the Government's duty in the old days. It recapitulates familiar facts about the economy, the most important of which is the increase in the rate of industrial production (11.7 per cent in 1960 over the corresponding period of the preceding year.) Agricultural production for the agricultural year 1959-60 was comparatively poor, though it has since looked up. Rise in prices was a not so flattering feature and the continued pressure on balance of payments was another source of anxiety. Monetary stringency (partly the result of monetary measures devised to curb speculative diversion of funds from productive purposes) and falling deposits have had bankers and monetary authorities worried and more recently set them in search of remedial measures. Though it is too early to assess the performance of the economy in the Second Plan except in a patchy way, it is not incorrect to assume that the decisive break-through of centuries of stagnation has been achieved. The very strains and stresses on the economy are the most tangible evidence of growth. From the fiscal point of view, the Plan has been fulfilled in the sense that the outlay of Rs 4,600 crores has been achieved and the corresponding "savings" envisaged in the form of taxes and loans have been found to accord with expectations. In short, a decade of planning has released new forces and has brought into existence new physical, institutional, technical and human assets. It is difficult to measure their cost in simple terms. No simple correlation like the net capital formation vis-a-vis the total deployment of funds or the relationship between interest-bearing public loans and investments can be usefully made. These figures are no doubt important and offer an effective check on the executive being free with somebody else's money. But no fiscal yard stick has yet been devised to measure the intangibles that planned expenditure has released.

Railway Budget

CONSIDERING how the Deputy Minister for Railways, Mr Shaw Nawaz Khan was only the other day reportedly scaring people about "surprises" in the Railway Budget, the financial proposals for 1961-62 that Mr Jagjivan Ram placed before the Lok Sabha last month came as a merciful anti-climax. Neither in passenger fares nor in freight rates is there to be any increase. Some marginal adjustments in surcharges and uneconomical minimum-distance rules are to be made, but these are of no budgetary significance. The Minister has budgeted for a net surplus of Rs 8.64 crores against the revised estimate of surplus of Rs 14.03 crores for 1960-61. This comparison needs some adjustments to bring out the real extent of the hopes for the year: first, gross traffic receipts (Rs 499.02 crores for 1961-62 against the revised estimate of Rs 458 crores) include the passenger fare tax so far accounted for in the general Budget. Against this are to be put the increased appropriation of Rs 65 crores to the much depleted Depreciation Reserve Fund and the increased rate of dividend (4.25 per cent against 4 per cent as heretofore). This latter is budgeted to account for Rs 65.34 crores against the revised estimate for 1960-61 of Rs 56.66 crores. The Budget has also provided for payment of Rs 12.50 crores to be made over to the State Governments in lieu of the passenger fare tax.

With "surprises" out of the way, the chief point of interest in the Railway Minister's speech shifts, first, to the performance of the Railways in 1960-61 and by extension, during the Second Plan, and second, to the indications that the first year of the Third Plan will give of the pace of realisation of the Third Plan hopes. As regards the first, the most notable feature has been the fall in freight earnings during 1960-61. The revised estimate for the year puts them at Rs 289.59 crores against the Budget estimate for that year of Rs 305 crores. The reason for the shortfall is attributed by Mr Jagjivan Ram to the strike by Central Government employees in July last and to a lesser extent to unprecedented floods in parts of the country. The revised estimate of passenger earnings, however, is put at nearly Rs 131 crores. The Budget estimate for 1961-62 for freight earnings is Rs 316 crores and for passenger earnings, Rs 132.28 crores. The latter is likely to prove an underestimate, though the former may, despite the comparatively poor performance this year, be realised.

Taken as a whole, the performance of the Railways in the Second Plan has been impressive. The Railways expect to fulfil the planned expectations in financial terms. The Second Plan allotment to the Railways was Rs 1,121.5 crores and in the first four years of the Plan, 75 per cent of this amount has been spent. The entire balance is expected, to be spent in the coming year. A particularly satisfactory feature of the performance is the reduction in the anticipated foreign exchange component of the Plan, which has been brought down from Rs 425 crores as originally estimated to Rs 385 crores. This has encouraged planners to reduce the foreign exchange component of the Third Plan to Rs 186 crores only. This is a feature that reflects great credit on the Railways, especially in the context of the overall needs of foreign exchange for the Third Plan. The success of planning has really to be measured in terms such as these. The building into the economy of sources of strength that progressively reduce our dependence on foreign funds and technical assistance is a more meaningful way of fulfilling the Plan than mere quantitative

realisation of goals. In terms of other physical targets like new bridges and lines, electrification and redoubling of tracks, the performance has been, on the whole, satisfactory. Passenger traffic has exceeded phenomenally all expectations, the increase over a five-year period being about 25 per cent against the 15 per cent hoped for. Goods traffic, however, has registered a shortfall of about 8 million tons. This has partly been due to the uneven development of the industrial sector and consequent distortion of the anticipated pattern of commodities to be carried. The interdependence of the various sectors of development has been once again demonstrated in the shortfall in utilisation of the carrying capacity of the railways by the steel plants, which failure is at least partially attributable to the shortfall, until recently, in coal production. Ironically enough, we have more recently had the experience of increased demand by coal on the Railways' carrying capacity. Mr Jagjivan Ram has indicated that in terms of ton-miles (which he, with some justification, considers a better measure of performance than tons of originating traffic), the Railways, despite the reduced demand made by the steel plants on it, will be carrying more than what was planned.

The Third Plan allocation for the Railways of Rs 1,255 crores is based mainly on certain assumptions about goods traffic, which in their turn are dependent on anticipations about industrial production, especially production of coal, steel, cement and iron ore. In terms of originating traffic, the increase over the five-year period is put at 83 million tons over the present 154 million tons. In terms of ton-miles, this increase is expected to be about 72 per cent. The increase in financial allocation for this order of development is only slightly over a hundred crores. Perhaps the Planning Commission will have to consider revising upward this figure, though the overall resources position does not give much room for manoeuvre. But considering the centrality of transport for much else in the Third Plan, readjustments may be inevitable.

The Budget proposals for 1961-62 expect to make a modest beginning towards fulfilling Third Plan ambitions. The Budget provides for this purpose a sum of Rs 260 crores, roughly a fifth of the Third Plan provision for the Railways. The bulk of it (Rs 216 crores) will be towards Works in Progress and the rest for new projects.

In framing his proposals, the Railway Minister has been guided by the far reaching recommendations of the Railway Convention Committee 1960. In fact, the major forecasts for the five-year period made by the Committee together with the Plan estimates will increasingly determine the annual budgeting with corresponding reduction in the element of surprise. Some of the major innovations in the present Budget have been the carrying out of the recommendations of the Committee. The increased allocation to the Depreciation Reserve Fund at Rs 65 crores is the first step in the replenishing of a fund that was being eroded at too alarming a rate for the comfort of a sound financial conscience. Over a five-year period the total appropriation to this fund is expected to be Rs 350 crores, though the balance in this Fund at the end of 1966 may not be very much more than what it is now, since the Draft Outline of the Plan estimates that the Railways will draw Rs 330 crores from this Fund for replacements during the Third Plan period.

The Railway Minister has every reason to congratulate himself on the fact that there were no major accidents in Indian Railways during the year. It is also gratifying to note that efforts being made to improve operational

and productive efficiency are being attended with success. Chittaranjan and Perambur continue to justify our pride in them by continually excelling themselves. New amenities, especially the provision of sleeping facilities for the third class passengers, make a public, harassed in many ways, think kindly and gratefully of the Railway Minister.

STATE BUDGETS

West Bengal

THE chief talking—and thinking—points in the West Bengal Budget for 1961-62 are to be sought more in Dr Roy's speech introducing it than in the figures it contains. The figures themselves follow the now fashionable pattern of underestimated receipts and (to a smaller extent) expenditure, revenue deficit left uncovered, a modest beginning for the Third Plan and no new taxes. The current year's revised estimate of revenue is put at Rs 102 crores against a budgeted figure of slightly over Rs 88 crores. And yet, Dr Roy has estimated only a little over Rs 95 crores as revenue receipts for the coming year. Against the anticipated expenditure of Rs 89 crores on revenue account for the current year, the revised estimate is higher by over Rs 8 crores at Rs 97.66 crores. Against an anticipated deficit on revenue account for the current year of a little over Rs 1 crore, the revised estimate hopes for a sizable surplus of Rs 4.54 crores. It is therefore more than likely that the deficit of Rs 3 crores budgeted for 1961-62 will not materialise, especially in view of the promised plugging of loopholes in the Sales Tax Act. The overall budgetary position is estimated to result in a deficit of nearly nine crores of rupees with a "negative cash balance" at the end of the year. The State hopes to raise a loan of Rs 7 crores from the market apart from a smaller loan contemplated by the State Electricity Board. And though Dr Roy has made a vigorous plea for greater central assistance and a greater share, as of right, of central revenues, he has been conservative in his expectations in actual budgeting. Therefore, the deficit need hold no terrors.

The Third Plan is putting in a rather tentative appearance in the Budget figures. This is inevitable since the formal Plan itself is still to emerge and crucial uncertainties like availability of foreign exchange are still awaiting clearance. The Planning Commission has therefore asked the States to make a beginning with a fifteen per cent allocation of the total outlay. West Bengal, consistent with its stand throughout, has interpreted this to mean 15 per cent of its own estimate of the minimum outlay (Rs 341 crores) and not the Planning Commission's (Rs 250 crores.) Consequently, the outlay on Plan projects for the coming year is put at Rs 50.82 crores. The outlay is mostly on the 'spill-over' projects from the Second Plan and a beginning in solving Calcutta's chronic problems is also provided for. Capital expenditure for the year is estimated at Rs 42.13 crores and among the more important items included herein are provisions for a fertiliser plant in Durgapur (Rs 1.15 crores), the Durgapur complex of coke oven, gas grid and power plants (Rs 6.99 crores) and the greater Calcutta milk scheme (Rs 95 lakhs).

Dr Roy's speech was a sustainably brilliant performance in which he presented West Bengal's case with great persuasiveness. He traced his now familiar argument with the Planning Commission about the size of the State's plan. Though he was cautious in his own budgeting, he pointed to buoyancy in revenues—though the example he chose was

Andhra

THE Budget of Andhra Pradesh for 1961-62 presented to the State Legislature last month, discloses a total deficit of Rs 3.94 crores. Revenue receipts and revenue expenditure being estimated at Rs 85.13 crores and Rs 87.63 crores respectively the deficit in the revenue budget is of the order of Rs 2.50 crores and this has been left uncovered by any new taxes. As compared with revised estimates of revenue receipts for 1960-61 at Rs 87.80 crores, revenue receipts for the budget year reveal a shortfall of Rs 2.67 crores and is explained by Mr Brahmananda Reddi, the State's Finance Minister, as being due to anticipated fall under Income Tax and Central aid for increase in dearness allowance to low-paid Government servants. Revenue expenditure at Rs 87.63 crores for the budget year is however higher by Rs 1.51 crores against revised estimates of revenue expenditure for 1960-61. The revenue expenditure for the budget year includes an amount of Rs 7.50 crores toward the cost of maintenance of schemes completed during the Second Plan period while another amount of Rs 12.51 crores is accounted for by the revenue element of the State Plan outlay for 1961-62.

The capital outlay for the budget year provides for a total expenditure of Rs 34.55 crores which compares with revised estimates of capital expenditure at Rs 32.44 crores for the fiscal year ending 1960-61. The Plan part of the capital outlay works out to Rs 27.44 crores while the balance of Rs 7.11 crores represents allocations for non-Plan schemes like Zamin-dari Compensation, Fertiliser Factory, Ad-dari Compensation, Fertiliser Factory, Administrative Buildings etc. The Budget takes credit for Rs 12 crores by way of fresh public loans while an amount of Rs 2.50 crores is anticipated from small savings. The net result of the transactions in the capital budget will be a deficit of Rs 1.44 crores.

The increase in revenue receipts at Rs 87.80 crores which the revised estimates for 1960-61 disclose against original estimates at Rs 81.72 crores indicates the inherent buoyancy of the State's finances of which more resounding evidence is provided by Second Plan experience. While original calculations fixed the State's ability to raise resources at Rs 48.9 crores, the total contribution is now estimated to amount to Rs 84.13 crores. Improvement has occurred mainly under current revenue surpluses which witnessed windfalls from the recommendations of the Second Finance Commission. Against original estimate of current revenue surplus at Rs 5.10 crores, accruals from this source added up to Rs 24.30 crores. Realisations from additional taxation are also shown to have exceeded expectations and against original estimates at Rs 9.60 crores realisations have amounted to Rs 24.48 crores. Mr Brahmananda Reddi has claimed achievement of the principal objectives of the Second Plan and the economic trends during 1960 would reflect the rising tempo of activity in all spheres. Industries are shown to have registered substantial gains during the year. The increase in production was as high as 43.7 per cent for the paper industry while rayon, cement and coal registered increases in production of the order of 34.4 per cent, 22.5 per cent and 11.8 per cent respectively. The decline in the case of jute, glass and vanaspati was negligible compared with improvements in other industries, but the fall in piecegoods production by 34.7 per cent should be a matter for concern.

With the successful implementation of the Second Plan, the Budget for 1961-62 is necessarily focussed on the schemes connected with the Third Plan which envisages outlay at Rs 305.00 crores against Rs 180.59 crores ex-

pendent during the Second Plan period. The comparative statement of distribution of the Plan outlay reveals substantial increase for agriculture and power development schemes.

Heads	Second Plan (Rs in Crores)	Third Plan
Agricultural Programmes ..	36.58	73.08
Irrigation ..	58.01	76.23
Power ..	34.89	64.94
Industries and Supplies ..	10.44	19.43
Transport ..	5.90	11.86
Social Services ..	32.30	55.51
Miscellaneous ..	2.67	4.25
Total ..	180.59	305.00

The increases provided for various heads of development are only a meagre measure of the scope for progress. Industrial backwardness is particularly glaring. But the Government seems to have preferred to concentrate on irrigation and power and to rely on private sector for progress in industrial development. Even the fertiliser factory at Kothagudem is proposed to be handed over to the private sector which has been assured of valuable incentives such as concessional rates of electric supply, suitable adjustment of sales tax and the making available of land. The State Government's participation in the industrial development would, according to present indications, be limited to expansion of the undertakings in its hands, notable of which is the Government-owned Andhra Paper Mills, and establishment of three Government Corporations namely, the Andhra Pradesh Industrial Development Corporation (for large and medium industries) Small Scale Industrial Development Corporation and the Andhra Pradesh Mineral Development Corporation.

The Budget outlay of Rs 48 crores for the first year of the Third Plan reflects a modest start since the annual average on the basis of Rs 305 crores works out to Rs 80 crores. But considering that the Planning Commission has counselled caution the small outlay for the first year of the Third Plan cannot be taken to indicate a timid approach on the part of the Andhra Pradesh Government in implementing the Third Plan. The successful implementation of the Second Plan schemes, on the contrary, should spell favourable prospects for the execution of the Third Plan also. However, in gearing the State's finance to the Third Plan schemes, it is necessary that the Government bestows early attention to correct the current adverse trend in the ways and means position. The expectations under this head have been belied and 1960-61 is expected to close with a minus cash balance of Rs 7.61 crores. In this context the decision to leave the deficit in the Budget for 1961-62 uncovered appears to be hardly wise.

Bihar

THE State Budgets for 1961-62 have a new importance which is derived from the fact that the end of March 1961 signifies the beginning of the Third Plan endeavours. The Bihar Budget which was presented to the State Legislative Assembly last month, however, does not seem to reflect clearly the implications of an accelerated rate of economic progress that the Third Plan has envisaged. The revenue receipts and expenditure are no doubt marked higher at Rs 84.47 crores and Rs 79.08 crores respectively against Rs 83.89 crores and Rs 75.92 crores respectively for the current year. But the total receipts and expenditure are lower at Rs 146.51 crores and Rs 148.64 crores against Rs 164.48 crores and

Rs 172.27 crores respectively for the current year. What is even more noteworthy is that the outlay for the first year of the Third Plan fixed in the Budget at Rs 49.31 crores is considerably lower than the revised estimates of outlay at Rs 57.89 crores for 1960-61, the last year of the Second Plan. The Third Plan outlay for the State having been fixed at Rs 337 crores, the investment in Plan projects in the first year of the Plan is well below the annual average envisaged. The only relieving feature is the increased allocation made to major heads of development. Thus the total allotment to agriculture has been raised from Rs 4.21 crores in the current year to Rs 4.64 crores for the next financial year while the allocation for irrigation and power constitutes more than one-third of the total. The enlarged allocation to these strategic sectors may prevent the deceleration in the rate of growth that is otherwise inescapable in a reduced Plan outlay.

Compared with the Budget for 1961-62, the revised estimates for 1960-61 make an impressive show and the step up in expenditure against Budget estimates for 1960-61 is particularly remarkable. Particularly satisfactory is the fact that the increased expenditure has percolated to the Plan sector also which for 1960-61 registers a gain in outlay of Rs 5.93 crores. Mr Dip Narayan Sinha, the Finance Minister who presented the Budget has in this connection pointed to the increased investments that have been possible in agriculture, animal husbandry, irrigation, river valley projects, roads etc. But the acceleration of expenditure in the last year of the Second Plan notwithstanding, the over-all achievements of the State under the Second Plan do not, with a few exceptions, appear to be spectacular. Provision of facilities for primary education to 56 per cent of the children in the age group 8-11 and the execution of the schemes for development of road transport constitute two notable instances of Second Plan achievements in Bihar. Demonstrable results have also been obtained in the community development movement and medical care. In assessing the Second Plan achievements, the fact cannot be overlooked that some of the major schemes, particularly in the realm of irrigation and power, in which large investments have been made under the Second Plan, were not scheduled for completion during the Plan period. But, even after making allowance for such inevitable delays in realisation of Plan benefits, the outstanding impression that the results of the Second Plan produce is one of slow progress as compared with other States. The problem of changing the traditional pattern in agriculture is still of overwhelming magnitude. Even after the implementation of two Plans, Bihar has not succeeded, in any marked extent, in relieving the pressure of numbers on the State's backward agriculture. A recent survey by the Bihar Unemployment Committee has brought to light the fact that nearly 83 per cent of the State's population are dependent on agriculture.

For the rectification of this imbalance, the Third Plan offers high hopes. The completion of the major schemes taken up in the Second Plan itself should make a notable contribution to development. The Third Plan also includes schemes which are of momentous significance for acceleration of economic growth. Particularly noteworthy are the Central schemes in the industrial sector such as the Heavy Machine Building and Heavy Foundry Forge Plants near Ranchi, the Heavy Machine Tools Factory at Ranchi, the Steel Plant at Bokaro, and the Oil Refinery at Barauni. The significance of these new schemes for the formation of the industrial base and the potentialities they offer for the

income tax—as indicative of the Planning Commission's chicken-heartedness. He said that the Third Plan estimates were projections from the actuals for the year 1958-59 which, at least as far as West Bengal is concerned, have been far outstripped by the subsequent year's performance. He drew attention to the State's performance in the Second Plan in which, according to him, the State provided, despite increase in its non-Plan expenditure, more than the estimated surplus from current revenues for Plan purposes. Making use of certain telling modes of comparison, he argued that the State is having a rawer deal than other States from the Centre. On the basis of population—which he assailed in the context of sharing of central taxes—West Bengal's Plan outlay at Rs 60 per capita ranks only ninth. In terms of percentage of increase in State's outlay permitted for the Third Plan, West Bengal (with 58.5 per cent) has been relegated to as low a position as fourth from the bottom. In terms of matching central assistance, West Bengal (with Rs 1.78 for each rupee raised by the State) has not had the luck of certain other States. Now arguments of this kind don't carry one very far, for other States will be able to think up other criteria to prove an equally scurvy treatment at the hands of the Centre and the Planning Commission. The six criteria for eligibility for inclusion of projects in the Plan which Dr Roy discussed elaborately in the context of West Bengal's own needs can with equal justice, if not skill, be presented by Finance Ministers of other States for urging their own special needs. In fact, Dr Roy has presented with characteristic vigour and persuasive finality all the arguments that they themselves would want to use. Only all such arguments will cancel each other out and the Centre will be able to smugly point out the impossibility of everyone having a larger share of the limited cake.

This does not mean that Dr Roy's arguments for a larger Plan for West Bengal is special or specious pleading. West Bengal's special claims arise from a variety of causes, economic, political, sociological, and more recently, strategic. The economic reasons are undoubtedly the most persuasive at any rate in the context of planning. In this connection, Dr Roy drew pointed attention to what is surely the most agonising dilemma in planning—the choice between developing comparatively neglected regions and pressing on with the gains already achieved in a relatively developed area. Obviously, "take off" implies a gathering together of momentum already generated for the decisive breakthrough. Too wide a dispersal of developmental impulses will therefore be self-defeating. Though the dream of basic industrialisation is borne by the Centre, the ancillary obligations of a developed region devolving on the State Governments can hardly be shirked. Further, if Dr Roy's anticipations about resources turn out to be correct, the distinction between resources in sight and resources round the corner may not be the transparent evasion that it seems at first blush. The Finance Commission, to whom Dr Roy has provided some very useful pointers, has an invidious job. But it can hardly deny the force of West Bengal's claims.

Madras

THE Madras Budget for 1961-62 presented in the Legislative Assembly last month by the State Finance Minister Mr C. Subramaniam, bears a close family resemblance to most of the State Budgets presented so far. A revenue deficit of Rs 2.85 crores is anticipated,

with receipts and expenditure being put at Rs 87.50 crores and Rs 90.35 crores respectively. It has been explained by Mr Subramaniam that the shortfall is entirely due to withdrawal of the Central assistance for increasing the emoluments of low-paid Government employees. Central assistance for this purpose was being given from 1957 onwards and the State Government has drawn Rs 2.34 crores on this account in the current year. The Union Government has decided to withdraw this assistance from the next financial year onward rejecting the State Government's request to continue it till the recommendations of the Third Finance Commission came into effect. The other adverse factor is the Central Government's decision to withdraw grants in respect of revenue expenditure on Second Plan projects already completed. The deficit of Rs 2.85 lakhs is, however, not covered by the imposition of any new taxes. Perhaps the only tax measure, if it can be called that, is the extension of the facility of compounding in sales tax for small dealers with a turnover of not more than Rs 50,000 year.

The fact that no attempt has been made by Mr Subramaniam to cover the deficit underlines the apparent identity of views among the State Finance Ministers this year in the matter of levying new taxes. One explanation is that the Budgets have been framed with an eye on the coming election. It is generally believed that the real effort for mobilising the internal resources for the Third Plan will begin only with the next year's Budget. There may be other reasons why the Madras Finance Minister did not think it fit to impose additional taxation to fill the gap between receipts and expenditure. It is quite on the cards that when the final accounts are drawn up for 1961-62, there will be a sizable surplus rather than deficit of Rs 2.85 crores as estimated in the Budget. For it would appear that receipts have been consistently under-estimated deliberately or otherwise in the recent past. The Accounts for 1959-60 show that receipts were at Rs 81.11 crores and the expenditure at Rs 80.56 crores leaving a surplus of Rs 53 lakhs. The Budget for 1960-61 estimated the expenditure at Rs 81.21 crores, receipts at Rs 80.87 crores leaving a revenue deficit of Rs 34 lakhs. The revised estimates indicate however that there will be a surplus of Rs 1.23 crores.

The buoyancy of revenue may be expected to become more pronounced in the budget year as a result of increase in production both in industry and agriculture as a direct result of the completion of many Second Plan projects. On the expenditure side there is an increase of Rs 2.29 crores as compared with the current year contributed mainly by the head education. Madras State can justifiably be proud of its achievements in the field of education. An indication of the importance given to this field of activity is the rapid rise in expenditure on education. From Rs 12 crores in 1956-57, expenditure on education is expected to reach a level of Rs 20 crores by 1961-62. From next year, educational concessions will be on the basis of economic backwardness and education will be free up to XI Standard to all poor children irrespective of caste or creed. This is a step in the right direction as the manner in which the announcement was greeted by the members of the State Assembly indicated.

In other ways too, Madras has given a lead in education. To mention only a few: By the end of the current year, every village with a population of more than 300 will have an elementary school. A sum of Rs 1.35 crores is expected to be spent on the midday meals scheme in 1961-62 and one-third of the children have already been covered by the

scheme. This idea has apparently caught on, largely owing to the publicity Mr Nehru gave it and State Governments are following the example. Seventy five per cent of the children in the age-group 6-11 are going to school now, the percentage being only 45 at the beginning of the First Plan. During the Third Plan it is proposed to bring all children in this age group to school.

The Capital Budget for 1961-62 provides for an expenditure of Rs 18.10 crores, a substantial part of which is absorbed by capital outlay on Roads and Buildings (Rs 4.73 crores), Parambikulam project Rs 3.77 crores, Industrial development Rs 3.01 crores and Special Minor Irrigation (Rs 1.48 crores). The revised estimate for capital expenditure in 1960-61 shows an increase of Rs 4.63 crores over the budget figure. Expenditure is now expected to reach Rs 15.49 crores as against Rs 10.86 crores estimated in the Budget. The main items contributing to the increase are Parambikulam project, Zamindari abolition, co-operation and road transport.

Power development occupies the pride of place in capital expenditure having absorbed Rs 14 crores in the current year. The outlay on Power in 1961-62 is fixed at Rs 15.41 crores. Madras has always been in the forefront of power development. In rural electrification the State stands at the top of the list. 10,000 villages are getting electricity now and the average per capita consumption of electricity has risen to 60 units from 12 units in 1951. Even so, supply is not adequate to meet fully the demand which is expected to reach 15,40,000 kilo watts in 1966. As against this, the dependable firm capacity throughout the year is only 9,63,000 kilo watts. The State is now hard put to it to build additional capacity because it has nearly exhausted its hydro-electric resources. The way out is the exploitation of untutilised hydro-electric resources in the Western Ghats. It is in this context of power shortage in the Madras State that the plea for the setting up of one or more Nuclear power stations in this region gains strength. On augmentation of power supply depends the realisation of the State's ambitions in industrialisation.

The need for a rapid development of industry is keenly felt in Madras and the State Government has not been slow in giving concrete expression to the wishes of the people. Abiding interest characterises Government's attitude to industrialisation and Madras is one of the States where the private entrepreneurs, big and small, are getting all the necessary encouragement and assistance. Industrial estates are springing up all over the State. The Guindy industrial estate is already well known even in western countries as an example of an ideal organisation for fostering small industries.

Chief among the major industries in the process of establishment is the Neyveli integrated project with provision for ancillary and subsidiary projects. Other projects are the raw film factory in the Nilgiris, the Surgical instruments factory in Guindy, a teleprinter factory, and a prototype factory. It is expected that a heavy electrical plant will be set up in the State during the Third Plan. Progress by private sector industries has been very impressive indeed. Many major projects are in the offing and a few of them are already well past the planning stage. Among these are the Madras aluminium plant, the Seshasayee paper factory, fertiliser factories at Neyveli, Tuticorin, Madras, Cuddalore and Coimbatore. Such rapid strides in expansion are to be attributed to the ready cooperation the State Government offers the enterprising industrialist in the State.

power of the ancillary and small industries are great.

Mr Sinha rightly points to these new opportunities for all round development that the Third Plan will open up, but he has not minimised the magnitude of the financial efforts required to make them possible. The present position, as reflected in the Budget, is if anything indicative of the growing strains that will be experienced in raising the State's share of the Third Plan outlay. The anticipated buoyancy in revenue for 1961-62 has no element of stability being dependent on sources the behaviour of which is not certain. In this connection, it is to be noted that revenue receipts for the Budget year take into account an amount of Rs 6.96 crores from irrigation including betterment levy and recovery of loans and advances from agriculturists. Also an increase of Rs 1.16 crores is anticipated from sales tax. While sales tax has an inherent elasticity and may realise larger sums, the calculations in respect of betterment levy and recovery of loans and advances are liable to go awry notwithstanding the fact that collections from these sources have been notoriously in arrears. Opportunities for creation of as large a surplus as possible from non-Plan sector for utilisation in the Plan sector should, therefore, be a continuous pre-occupation of the Bihar Government.

Maharashtra

THE first full-fledged Budget of Maharashtra presented to the Legislative Assembly last month by Mr S. K. Wankhede, the State's Finance Minister is noteworthy as the only Budget of the season so far to have come out with proposals for fresh taxation. New taxation measures designed to raise an additional revenue of Rs 1 crore have been put forward by the Finance Minister. This amount will be realised by enhancing the passenger tax from 10 to 15 per cent (expected yield: Rs 60 lakhs), by the withdrawal of the exemption on kerosene oil and by imposing a sales tax of three per cent on it and raising the sales tax on groundnut from 1.5 per cent to 2 per cent (expected yield: Rs 40 lakhs). As the bulk of the additional tax burden falls upon the poorer sections of the people, the new Budget is bound to cause some disappointment.

The Budget estimates for 1961-62 show revenue receipts of Rs 110.62 crores while the revenue expenditure is placed at Rs 110.69 crores, leaving a deficit of Rs 0.7 lakhs. The revenue receipts provided for a payment of Rs 6.14 crores from the State's share of Central taxes to Gujarat. The increase in the revenue receipts for 1961-62 over those of last year was mainly on account of larger collections anticipated under sales tax and larger grants anticipated from the Centre for Plan schemes. The share in the Central taxes, was estimated at Rs 17.61 crores. Other large items of revenue were Rs 6.93 crores under land revenue, Rs 5.3 crores under forests, Rs 5 crores under taxes on vehicles, Rs 31.48 crores under sales tax, Rs 9.02 crores under other taxes and duties.

The revenue expenditure as shown in the estimates did not show any substantial increase over last year's estimates as no provision was included for entirely new Plan schemes proposed to be taken up next year, pending finalisation of their details. The increase, however, under police, medical and public health and civil works is counter-balanced by reduction under land revenue education, industries and stationery and printing. The estimates, however, include a provision of Rs 11.41 crores on continuing Plan schemes which were included in the Third

Five-Year Plan of which Rs 2.79 crores represent expenditure of a capital nature but met from Central grants, sugar cane cess fund, Central road fund reserves and Central road fund allocations.

The Finance Minister, while reviewing the progress made during the last decade, stated that the State has made considerable headway in industrial and agricultural spheres. In the field of agriculture the net increase in the sown area amounted to 6.8 per cent while the production of food grains looked up to 23 per cent from the estimated 21 per cent. In the production of pulses, however, the trend during the past few years has turned out to be disquieting. At a time when the need for stepping up of pulses was growing, the decline in production as well as in acreage is distressing. The authorities will have to pay particular attention to eliminate this downward trend.

There has been satisfactory expansion in irrigation facilities in the State. In the field of minor irrigation, apart from 0.32 million acres of potential created during the past ten years, the works in progress will yield an additional potential of nearly 0.2 million acres. The Finance Minister also pointed out that the banded area increased to 0.22 million acres from 0.18 million acres.

The Community Development programme introduced in 1952 has taken rapid strides in the State and according to the Finance Minister the entire area in the State will be covered by the end of 1963. Another programme which has had a powerful impact on the rural life was the co-operative movement. The number of co-operative societies rose from 18,515 in June 1953 to 28,640 in 1960. It is to be noted that out of the total societies 21,787 were agricultural co-operative societies. The membership of these societies has also increased by 67 per cent and their working capital has shot up to Rs 236.83 crores from Rs 103.16 crores.

Industrial production has also showed an uptrend especially in vegetable products, sugar and diesel engines. The sugar production recorded an increase of 100 per cent while that of diesel engines was to the extent of 300 per cent. Progress made in the sphere of mineral production according to Mr Wankhede was "striking".

In the field of social services also the State's achievement is more pronounced. Notable advancement has been made in providing more educational facilities. Medical facilities which were hitherto concentrated in cities and towns have been extended to far flung areas in the State. The building up of district health organisations to provide proper medical attention to the rural areas have proved to be beneficial to the people and attractions offered for those who work in those areas have to some extent succeeded in enlisting the services of doctors.

The present Budget can be considered tentative to a considerable extent, for the Third Plan for Maharashtra has not yet been finalised and a full picture will be available only when the supplementary demands are presented to the next session of the Legislature. Yet, considering the experience of the First and Second Plans the Finance Minister's buoyant outlook about the Third Plan is not unjustified. The total outlay of the Third Plan is fixed at Rs 390 crores and the fulfilment of the outlay, as pointed out by the Finance Minister, will depend on the ability of the State to raise resources to the tune of Rs 220 crores and the Centre's ability to contribute an amount of Rs 170 crores.

According to present estimates, the State's resources for the next Plan, at existing levels of taxation and capital receipts, will amount

Indian Finance Budget Supplement 1961

only to Rs 168 crores. This amount will be made up of Rs 30.6 crores from public loans, Rs 66.8 crores from the State's share of small savings, Rs 9 crores from unfunded loans, Rs 15.3 crores from balance of miscellaneous capital receipts and Rs 9.4 crores in the form of contributions from public enterprises. The deficit is likely to go up when the new schemes embodied in the Third Plan are launched. The final position of the next Plan will depend on the recommendations of the Third Finance Commission and Mr Wankhede pleaded for a sympathetic consideration of the problems of the State which has large tracts of under-developed and undeveloped area.

The Government's decision to appoint a committee within the Finance Department to revise the pay scales of Government employees will be widely acclaimed by the employees. Their demand for higher pay scales considering the high cost of living naturally deserves sympathetic treatment. The Government has decided to accept the scheme for merging bulk of the dearness allowance with basic pay. The minimum wage will be kept at the existing level of Rs 75 and a further upward revision is rendered impossible as it is likely to affect the entire pay structure and the cost involved will be beyond the resources of the State.

For the successful implementation of the Third Plan a reorganisation of the administrative machinery and simplification of procedures seem inescapable. To ensure maximum efficiency from the staff, the Finance Department will be reorganised in a way that finance officers attached to the administrative department would be in a position to appreciate properly the financial aspects of the proposals in the initial stages of formulation.

Gujarat

INCREASED taxes on motor spirit, kerosene, groundnut, entertainment, electricity and stamp duty characterise Gujarat's Budget for 1961-62. Revenue receipts and revenue expenditure being estimated at Rs 54.25 crores and Rs 58.12 crores respectively, the Budget anticipates a revenue deficit of Rs 3.87 crores. With net capital expenditure in the Budget being estimated at Rs 15.40 crores and with receipts outside the revenue account being placed at Rs 10.37 crores, the overall deficit amounts to Rs 8.90 crores. This contrasts with the small revenue surplus of Rs 13 lakhs revealed in the revised estimates for the eleven months of the current year and the overall deficit of Rs 4.25 crores.

In the light of the distinctly adverse turn in the State's finance indicated in the Budget, justification for the increased taxes, which necessarily will impinge on the purse of the common man, cannot be denied. It has however to be recognised that the tax effort implied in the increased levies which are expected to fetch a revenue of Rs 80 lakhs is as nothing compared to the target of additional taxation at Rs 29 crores prescribed by the Planning Commission for the State for the Third Plan period. In so far as implementation of Second Plan schemes would have brought into being new taxable assets the tax base would have been enlarged. In this context, an assessment of the Second Plan performance for Gujarat reveals notable successes in particular sectors. In both power development and transport and communications, the actual expenditure is claimed to be in excess of Plan target, the excess spending in the case of transport and communications being as much as 43 per cent. The road mileage at the end of the Second Plan is estimated to be 13,200 miles against 10,998 at

Indian Finance Budget Supplement 1961

the beginning of the Second Plan. Co-operation is another field in which notable progress was made during the Second Plan. Dr Jivraj Mehta, the Chief Minister, who is also the Finance Minister, has claimed achievement of Plan targets under all heads. The total Second Plan outlay for Gujarat has been worked out at Rs 145.88 crores. Against this, the Plan expenditure is now estimated to amount to Rs 149.25 crores.

Overlooking the financial limitations, the Budget unfolds new vistas for economic development and among the major aims seeks to give a fillip to industrialisation. The capital expenditure for 1961-62 provides an outlay of Rs 1.53 crores for industrial development, while in the revenue account a provision of Rs 10 lakhs has been made for development of industrial areas and satellite townships. The important schemes included in the Third Plan are a fertiliser factory and a two-million ton oil refinery to be set up in collaboration with the Soviet Union. A wide range of facilities are being offered as incentives to private industrialists to take more active part in the State's industrial development. An area of 750 acres has been earmarked for location of industries. Other facilities offered include sidings, and roads. Besides, exemption from payment of electricity duty for new industries for five years and a further five years' exemption if power is generated by the industry itself has also been promised. The new industries will also get the benefit of exemption from water charges except where the water is supplied by the Government. The range of concessions will further be widened if municipal duties agree to exemption of octroi and other duties on industrial raw materials and machineries. There is already evidence of considerable interest being displayed by local industrialists to take advantage of the opportunities offered by the State. Requests for starting new industries or expanding the existing ones are learned to have been received by the State Government from 226 undertakings.

Great store is set on implementation of power development schemes for accelerating industrial progress. Two important Third Plan projects in this field are the 45,000 KW thermal power house which will form part of the oil refinery and a new thermal power station which will be set up in Cambay. Apart from these, Dr Jivraj Mehta has stated that smaller generating sets to meet the power needs of small industries will also be set up. The oil refinery to be set up during the Third Plan should give rise to a host of new industries based on oil and its by-products. The geological survey proposed to be undertaken during the Third Plan period for assessing the size of the State's mineral wealth should indicate further scope for progress in industrial development.

The provision of Rs 8.75 crores for irrigation in the capital Budget testifies to concern for increasing agricultural production. The Third Plan assigns the highest priority to agriculture and the allocations to agriculture and irrigation amount to 47.4 per cent of the total Plan outlay. By the end of the Second Plan an additional area of 267,000 acres is expected to be brought under irrigation. Increase in foodgrain production has special importance for Gujarat in view of the grave shortfalls in current production. It is a measure of the State's deficiency in this respect that even the Third Plan with its emphasis on agriculture does not envisage self-sufficiency. Apart from research on various crops, emphasis is also laid on setting up co-operative farms. During 1961-62, five experi-

mental cooperative farming centres each covering 50 farming societies are proposed to be started. With 342 cooperatives on the registered list, cooperative farming has already made commendable headway in Gujarat. Apart from Rs 1.38 crores made in the Budget for various schemes of agricultural production, the Budget also includes allocations of Rs 81 lakhs for soil conservation and Rs 83 lakhs for well irrigation.

The State should also benefit considerably from port development which represents an important aspect of Third Plan schemes for Gujarat. With a coastline of about 1,000 miles, Gujarat has 50 intermediate and minor ports. The financial and technical limitations would, however, not permit simultaneous development of all of them. Selective development with reference to existing and potential traffic needs is favoured by Dr Jivraj Mehta also. The capital Budget makes an allocation of Rs 57 lakhs for port development. The Third Plan outlay amounts to Rs 2 crores.

Madhya Pradesh

THE 1961-62 Budget for Madhya Pradesh was presented to the State Vidhan Sabha on 6 March 1961 and estimates revenue receipts and revenue expenditure at Rs 73,79.72 lakhs and Rs 80,26.76 lakhs respectively. While, on this basis, the Budget reveals deficit on revenue account of Rs 6,47.04 lakhs, the overall deficit, after taking into account the effect of the transactions outside the revenue account, will be Rs 5,36.59 lakhs. Mr Mishrilal Gangwal, the State's Finance Minister, has held out hopes of the deficit being wiped out and announced new taxation which is expected to bring in additional revenue of Rs 3 crores. The details of the taxation measures envisaged for the Budget year are not known, and how the balance of deficit, after taking into account Rs 3 crores of new tax realisations, is to be covered has also not been made clear. But, considering that revenue realisations have been consistently underestimated in the last two years, there is the distinct possibility of the estimates of revenue for 1961-62 also being exceeded. "Surplus" receipts for 1959-60 and 1960-61 due to such under-estimate were of the order of Rs 4,95.94 lakhs and Rs 7,42.27 lakhs respectively. It is also noteworthy that an anticipated minus closing balance of Rs 62.95 lakhs for 1960-61 has been converted into a surplus revenue balance of Rs 4,89.70 lakhs though expenditure charged to revenue showed a rise of Rs 1,89.62 lakhs against original estimates.

The satisfactory position of the State's finances is, however, not corroborated by Second Plan implementation and the outlay incurred under the Second Plan discloses a shortfall of Rs 40.85 crores. While the outlay envisaged originally was Rs 190.90 crores, actual expenditure is now estimated to amount to Rs 150.05 crores. The shortfall in expenditure is attributed to administrative dislocation caused by the State's reorganisation scheme as also inadequacy of revenue resources. But physical achievements indicate commendable advance in various directions. Increase in foodgrains production by 1 million tons, rise in irrigation potential by 779,000 acres, completion of the Gandhi Sagar Dam and the Gandhi Sagar Power Station, increase in the installed capacity of power from 78 MW to 147 MW represent some of the notable triumphs of the Second Plan for Madhya Pradesh. Satisfactory progress is also recorded in respect of the three units in the public sector, namely, the Spinning Mill, the Power Alcohol Factory and the Solvent Extraction Factory.

The achievements of the first two Plans, though not spectacular, could be considered to have laid the foundation for accelerated progress under the Third Plan, which envisages an outlay of Rs 300 crores against Rs 199 crores fixed for the Second Plan. The distribution of the Third Plan outlay as revealed in the following table does not show any marked shift in priority as compared with the Second Plan:

	Rs in Crores
Agricultural Programme	.. 53.95
Community Development	.. 22.50
Irrigation	.. 41.80
Power	.. 76.00
Industry and Mining	.. 10.50
Roads and Road Transport	.. 17.80
Social Services	.. 68.65
Miscellaneous	.. 8.80
Total	.. 300.00

The priority accorded to agriculture and irrigation flows from the primacy of agricultural development for industrial progress. The crop-wise targets of additional production for the Third Plan are: foodgrains 1.67 million tons, cotton 184,000 bales, oilseeds 125,000 tons and sugarcane 973,000 tons. The Plan expenditure during 1961-62 on agricultural development is fixed at Rs 2,81.08 lakhs out of which Rs 1,68.82 lakhs has been earmarked for agricultural production and Rs 93.89 lakhs for minor irrigation. Popularisation of improved agricultural implements represents a significant aspect of the Third Plan endeavours in the agricultural sphere and Mr Mishrilal Gangwal has indicated the possibility of some workshops being established for the manufacture of these improved agricultural implements.

In the field of irrigation, the Third Plan schemes envisage raising the potential by 1.97 million acres. The Third Plan schemes for irrigation include two new major projects, namely the Hasdeo project in Bilaspur district and the Halali project. Emphasis in irrigation is on medium and minor projects and the outlay on these two amounts to Rs 26.30 crores out of the total outlay of Rs 40.39 crores.

Power development in the Third Plan will raise the installed capacity by 420 MW. Some of the important Second Plan projects are on the way to completion and prospects of power supply for more rapid industrial development during the Third Plan are bright. The techno-economic survey of Madhya Pradesh conducted by the National Council for Applied Economic Research provides the basis for industrial programmes under the Third Plan. Prospecting for iron ore, bauxite, and coal deposits is one plank of the Third Plan industrial programmes. The licences already issued for the manufacture of sulphuric acid and super phosphate, cement, paper, caustic soda, sugar mill machinery, high tension galvanised steel wire, and straw board and hard board indicate the scope for diversified growth of industries. The fertiliser factory with an outlay of Rs 20 crores, to produce nitrogen, ammonia and urea, which is now under the consideration of the Government is one of the important projects. Development of feeder and ancillary industries around the Bhilai steel and the heavy electrical plants is another significant aspect of the Third Plan programmes for industrial development. The Third Plan schemes also envisage setting up of industrial areas, industrial estates for small industries, rural industrial estates, rural work sheds, financial assistance, surveys, quality control, training and common facility services.

Of the total outlay of Rs 300 crores for the Third Plan, the Centre's share in the shape of loans and grants is placed at Rs 207 crores while the balance of Rs 93 crores is expected to be met from the State's own resources. The estimate of State's resources includes an element of Rs 48 crores to be raised by additional taxation during the next five year period. After taking into account Rs 3 crores expected to be realised from new taxes for 1961-62, the annual average of taxation for the next four years works out to Rs 11 crores.

Punjab

PUNJAB's Budget for 1961-62 presented to the Vidhan Sabha by Dr Gopichand Bhargava, the Finance Minister, discloses a revenue deficit of Rs 96 lakhs at existing levels of revenue and expenditure. The receipts for the Budget year are estimated at Rs 63.77 crores and the expenditure is estimated at Rs 64.73 crores. The deficit is bound to go up further to Rs 1.33 crores with the introduction of free education upto the ninth standard and the enhancement of dearness allowance to Class IV employees by Rs 5 per mensem. The employees will not, however, get the immediate benefit of the additional emoluments, for, the additional amount is to be invested in small savings in the name of each employee.

Fresh taxation announced by the Finance Minister will raise an amount of Rs 1.31 crores. The enhancement of sales tax from four to five per cent and the entertainment tax from 32 nP to 38 nP will fetch an additional revenue of Rs 1.20 crores and Rs 11 lakhs respectively.

On the capital side expenditure is estimated at Rs 19.44 crores. The overall deficit is finally placed at Rs 6.5 crores resulting in the depletion of cash balance which will stand at minus Rs 90 lakhs as against the opening balance of Rs 1.55 crores. It needs to be remarked here that the current year will close with a revenue deficit of Rs 1.55 crores as against the estimated surplus of Rs 1.52 crores, Punjab's experience being somewhat at variance with that of most other States whose Budgets have so far been announced. The heavy expenditure incurred on flood relief works was mainly responsible for converting the surplus into a deficit.

The capital expenditure registered a decline of Rs 7.25 crores to Rs 22.84 crores. Advances and recoveries too recorded great variation. According to the original Budget, advances were placed at Rs 6.04 crores indicating a net debit of Rs 9.35 crores. The estimates place the advances at Rs 20.74 crores and recoveries at Rs 6.5 crores resulting in a net debit of Rs 14.21 crores.

From the explanatory memorandum attached to the Budget it is evident that the strain on resources from 1962-63 onwards is bound to increase because the interest on the loan for the construction of the Bhakra Nangal Project, which at present is being capitalised, will have to be paid from the resources of the State. The need for strengthening the financial position is obvious. Additional taxes will have to be imposed. But much ingenuity will have to be exercised to see that the burden is distributed as widely as possible among the people. This perhaps is the reason that led the Finance Minister to enhance sales tax as well as entertainment taxes for 1961-62.

Expressing satisfaction at the progress of the current Plan, the Finance Minister observed that the final calculation would show that the performance of the Plan was more than 93 per cent of the Rs 192 crores Plan. The progress of the Plan would have been more impressive if the political unrest in the State had not rendered the State's problems even more diffi-

cult of solution. In the industrial sphere Punjab made rapid progress especially in 1960. Big increase in production was registered in sugarcane, cement, paper and cycle industries. Cotton textiles also maintained steady progress. The progress of woollen industry was hampered by persistent paucity of woollen yarn.

Having achieved satisfactory progress in the Second Plan, it is only natural that the Government should confidently launch the Third. The next Plan for the State has already been finalised with a total outlay of Rs 231 crores. Out of this total, Rs 134 crores will be contributed by the Centre and the remaining portion will have to be raised from within the State. In accordance with the Planning Commission's directive to restrict development expenditure in the first year to roughly 15 per cent of the total outlay, the expenditure for the first year has been fixed at Rs 39 crores, of which assistance from the Centre will be of the order of Rs 19 crores.

Rajasthan

THOUGH the Budget estimates for 1961-62 for Rajasthan show a deficit, the fiscal measures announced indicate the possibility of a balance being achieved at the end of the next year. Revenue receipts and revenue expenditure for 1961-62 have been estimated at Rs 46.98 lakhs and Rs 49.48 lakhs respectively. While this leaves a deficit on revenue account of Rs 2.50 lakhs, the over-all deficit, on the basis of capital expenditure and realisations on capital account at Rs 25.00 lakhs and Rs 24.23 lakhs respectively, amounts to Rs 3.27 lakhs. It is noteworthy that greater emphasis is laid on economy measures than on a tax effort for covering the deficit. The new tax measures spread under different heads such as entertainment, non-judicial stamp duties, diesel and hydrogenated oil, motor transport, etc., are expected to bring in additional revenue to the tune of Rs 1.35 lakhs. The economy measures announced in the Budget provide for the abolition of revenue divisions, substantial reduction of Class IV staff, cut in the allocation of travelling allowance, reorganisation of the Industries Department and abolition of the posts of Zonal Development Officers and Panchayat Extension Officers in the Community Development Department. The deficit left after taking into account the effect of the new tax and economy measures is placed at Rs 1.64 lakhs consisting of Rs 37 lakhs on the revenue account and Rs 77 lakhs on capital account. Further austerity measures are envisaged for taking care of this deficit.

Revised estimates of revenue receipts for 1960-61 reveal a shortfall of Rs 29 lakhs and this is contrary to experience in other States. Expenditure on the capital side also shows a shortfall of Rs 2.71 lakhs and is put down to shortfall under the allocation for the Rajasthan canal.

Second Plan implementation has also fallen short of the target to the tune of Rs 8 crores, but achievement in terms of physical targets is claimed to be satisfactory. The Third Plan outlay for the State is Rs 2.36 crores and the outlay for the first year of the Plan has been fixed at Rs 34 crores. The State's share of the Third Plan outlay is Rs 80 crores. This excludes all non-Plan expenditure and spillover expenditure of the Second Plan. Provisional estimate of the State's resources for the Third Plan includes Rs 20 crores from public loans, Rs 10 crores from small savings, and Rs 12 crores from capital receipts. The balance of Rs 32 crores is expected to be met from new taxation as well as economy measures.

Assam

BARRING the additional levy on petrol and deisel oil, the Assam Budget for 1961-62 presented to the Assembly by Mr Fakruddin Ali Ahmed, the State Finance Minister, does not contain any fresh taxation. The Budget discloses an anticipated deficit of Rs 14 lakhs, the revenue receipts being placed at Rs 36.87 crores and expenditure being estimated at Rs 37.01 crores. The obvious reason for the imposition of additional tax on petrol and deisel oil of 2 nP per litre (estimated yield, Rs 14 lakhs) is to wipe out the deficit. The capital expenditure for 1961-62 is placed at Rs 16.22 crores.

The revised estimates for 1960-61 reveal a receipt of Rs 40.41 crores and an expenditure of Rs 40.66 crores. Compared to the revised estimate of Rs 40.41 crores in the current year, the revenue receipts of Rs 36.87 crores for 1961-62 indicate a shortfall of Rs 3.54 crores. The decrease in the revenue receipts for the Budget year was consequent on the deduction of Rs 89 lakhs in grants provided by the Union Government for border relief schemes, an ad hoc increase in the dearness allowance by Rs 18 lakhs, reduction of Rs 2.23 crores in the transfers from contingency fund and minor and counter-balancing variations under other heads.

Adverting to the menacing disturbances in the current year, Mr Ahmed stated that the State was plunged into an embarrassing situation which had hampered and dampened all development activities. He deplored the fissiparous tendencies and narrow-mindedness of citizens who engineered the destructive activities instead of harnessing their energies for the economic development of the State and prosperity of the people. For the rehabilitation of the displaced persons, the Government had to incur an expenditure of Rs 60.2 lakhs and the amount deployed on relief works aggregated Rs 7.5 lakhs. Yet, there is no room for despondency, for, the situation has been brought to normalcy and adequate steps are being taken to remedy the weakness in the administrative machinery which was glaring during the troubles. The authorities and the people can, therefore, concentrate their attention on the building up of a prosperous Assam.

Kerala

ATTRIBUTABLE mainly to the rising tempo of expenditure, the Kerala Budget features a large revenue deficit of Rs 6.76 crores. Revenue receipts for 1961-62 have been estimated at Rs 47.25 crores against Rs 46.21 crores in the revised estimates for 1960-61. Revenue expenditure for 1961-62 is placed higher at Rs 54.01 crores as compared with Rs 47.25 crores revealed in the revised estimates for 1960-61. An element of Rs 4.5 crores in the estimates of revenue expenditure for 1961-62 is represented by committed expenditure on Second Plan schemes. The Budget combines additional taxation with fiscal reliefs and concessions the net effect of which will be to reduce the extent of revenue deficit from Rs 6.76 crores to Rs 5.35 crores. Considering that realisations from new taxation proposals are fixed at Rs 1.98 crores, the value of the tax reliefs and concessions granted in the Budget works out to Rs 57 lakhs. The beneficiaries of the tax reliefs will be small dealers and companies paying super tax on agricultural income at the rate of 37 nP per rupee on income above Rs 20 lakhs. For small dealers the Budget allows compounding of sales tax, while for companies subject to super tax on agricultural income the highest

rate has been fixed at 31 nP in the rupee. A third item of relief included in the Budget relates to the super tax payable by undivided Hindu families the highest rate of super tax payable by them being brought down from 41 nP to 34 nP per rupee. Apart from these tax reliefs, the only concession granted in the Budget is the grant of house rent allowance to non-gazetted officers at the rate of Rs 5 monthly to those drawing a pay not exceeding Rs 150 a month and Rs 7 to other non-gazetted officers.

The tax measures proposed in the Budget include an additional land tax at the rate of Rs 2 per acre subject to the condition that the total land tax including the new tax shall not exceed one fifth of the gross produce from land, increase in the State transport fares from the present 3.44 nP per mile to the rate charged by private transport undertakings, enhancement of the sales tax on foreign liquor from 25 per cent to 40 per cent, a new tax on buildings completed since March 1961 and finally a one per cent single point sales tax on foodgrains except those distributed through fair price shops.

Kashmir

THE Kashmir Budget for 1961-62 presented to the State Assembly by Mr Ghidhari Lal Dogra, the State Finance Minister, is notable for the absence of any fresh levy. The Budget reveals a surplus of Rs 3.36 crores on the revenue side, revenue receipts being estimated at Rs 17.19 crores and the expenditure charged to revenue being put at Rs 13.8 crores. Expenditure not charged to the revenue is estimated at Rs 10.10 crores and after taking into account the anticipated assistance from the Central Government to the tune of Rs 6.5 crores, the Budget shows an overall deficit of Rs 98.97 lakhs. This is proposed to be met by market loans.

The Finance Minister revealed that the State's Third Plan is yet to be finalised. The Planning Commission has cut down the Plan outlay to Rs 75 crores from the outlay of Rs 169 crores demanded by the State authorities. An additional amount of Rs 4 crores might be obtained from the Centre for the implementation of certain schemes. Though the Planning Commission has not yet finalised the State's Third Plan, Mr Dogra stated that provisions made under various heads of development for the first year have been agreed to. The major items of expenditure pertaining to the first year of the next Plan are on agriculture, animal husbandry, irrigation, generation of power and mining. Besides enhancement of educational facilities, the speedy completion of rehabilitation work and the implementation of flood-protection schemes have also been given due attention.

Reviewing the progress of the Second Plan, the Minister stated that despite the devastation caused by floods, the difficulties of obtaining foreign exchange and the troubles engineered by hostile elements the targets in many fields have been achieved.

Uttar Pradesh

THE Uttar Pradesh Budget for 1961-62, which is incidentally the first of its kind for the Third Plan, presented to the Vidhan Sabha by Mr Thakur Jagdish Singh, the Finance Minister, will be a bitter pill to swallow, for it anticipates a deficit of Rs 8.5 crores, the revenue receipts being placed at Rs 145.63 crores and revenue expenditure being put at Rs 154.13 crores. The actuals for 1959-60 as well as the revised estimates for 1960-61

indicate that the State's revenues have been buoyant. The anticipated deficit in 1959-60 has been converted into a small surplus while the Budget gap of Rs 2.33 crores for 1960-61 is likely to be reduced to Rs 29 lakhs. Revenue receipts for the Budget year show an increase of Rs 7.08 crores when compared with the revised figures for 1960-61. The total of the revenue receipts is made up of Centre's subvention for Plan schemes Rs 14 crores and on non Plan schemes Rs 7.79 crores; share in Central taxes Rs 21.83 crores; grant-in-aid from the change made in company taxation Rs 4.40 crores; tax revenue of the State Government (exclusive of land revenue but inclusive of the share of additional duties of excise) Rs 41.21 crores and other receipts Rs 56.40 crores.

The revenue expenditure for the Budget year indicates a rise of Rs 20.90 crores over the estimates for 1960-61. The increase is presumably due to the normal growth of expenditure and provision of new schemes under the Third Plan. The Finance Minister has listed certain measures for raising additional resources to the tune of Rs 5.21 crores in which case the deficit will come down to Rs 3.29 crores. These measures include withdrawal of rebate in irrigation rates, changes in vend fees and rate of duty on country spirit and rum, tightening of sales tax and a levy on diesel oil. Capital expenditure includes Rs 10.90 crores allotted to irrigation works Rs 6.36 crores on electricity schemes, Rs 5.01 crores on agriculture improvements and research, Rs 7.78 crores on industrial development, Rs 6.93 crores on service co-operatives and Rs 10.55 crores on civil works.

It is heartening that the economy measures initiated by the State Government have already resulted in a saving of Rs 52 lakhs per annum and a further saving of Rs 30 lakhs is contemplated by tightening the travelling allowance rules. Particular care has been taken to ensure that the economy measures will not affect the efficiency of Government machinery, and that none of the employees is thrown out of employment.

The Third Plan for the State has been finalised with a capital outlay of Rs 497 crores as against the original demand for an allocation of Rs 724.5 crores. Out of the total the State will have to raise its share of Rs 147 crores. The Plan expenditure for 1961-62 has been fixed at Rs 71.22 crores, out of which Rs 27.41 crores will be on the revenue account and Rs 43.81 crores on the capital side, inclusive of loans. Naturally, great emphasis has been laid on productive schemes not only with a view to catching up with the speed of development of the country but also to keep pace with the other advancing States. Development schemes have been prepared for every village, block and district with the co-operation of the people. Agriculture has been accorded top priority in the Third Plan. A target of 18.29 million tons of foodgrains has been fixed for the next Plan. Agriculture will be treated hereafter as an industry instead of a way of life. With a view to promoting small-scale industries, a number of industrial estates will be set up and for fostering large-scale industries a Large-Scale Industries Corporation will be established. The Plan provides for an outlay of Rs 3.68 crores for heavy industries and Rs 16.37 crores for village and small industries. An ambitious plan for the spread of education has been prepared. It is contemplated to raise the number of schools during the next quinquennium from 39,689 to 63,559 and the percentage of school-going children in the age group of 6-11 years from 43.47 to 63.14. Adequate provision has been made for augmenting educational facilities for the age group of 11 to 14 in order to increase the percentage from 17.91 to 22.84 and for the age

group of 14 to 17 from 9.45 to 12.91. Adequate provision has also been made for higher education with particular emphasis on technical education. Various fringe benefits have been announced for the primary school teachers and certain categories of secondary teachers, the upward revision of pay for PMS II doctors and a special extraordinary pension payable to families of police officials killed in encounters with the dacoits.

Mysore

The Mysore Budget presented to the State Legislature this month discloses a rising trend in revenue receipts as the outstanding feature of the State's finances in recent years. From Rs 58,49.08 lakhs in 1958-59, revenue receipts have gone up to Rs 66,38.55 lakhs in the revised estimates for 1960-61 and is estimated at Rs 66,60.40 lakhs for the Budget year. But the increase in revenue receipts will not avail to meet the growth of expenditure, which estimated at Rs 73.91.92 lakhs, has outpaced revenue receipts considerably. It is significant that the deficit disclosed for the Budget year 1961-62 marks a departure from the earlier pattern of Budgets for the previous years.

The rise in expenditure for the Budget year has been put down to a number of causes. As commitments on account of the Second Plan schemes, debt service charges revision of scales of pay, educational concessions, increase in mileage of roads for maintenance, etc. In the context of the Third Plan schemes, it is to be expected that the upward trend of expenditure should be further accentuated, and for this reason, the state of the finances reflected in the Budget cannot be considered satisfactory. The Mysore Finance Minister has announced new tax measures such as a levy of surcharge on land revenue and an increase in the tax on electricity for certain classes of consumers. These measures will bring in Rs 170 lakhs of additional revenue, and the major part of the deficit of Rs 4.31 lakhs will remain uncovered. This, clearly, does not mark a good beginning for the Third Plan which requires resource mobilisation on a far greater scale than has hitherto been done. The Third Plan fixed the outlay at Rs 2.50 crores, and the State's share is placed at Rs 1.10 crores. (In Rs crores)

Balance from current Revenue	10.00
Loans from the Public	14.70
Small Savings	10.00
Unfunded Debt	4.30
Withdrawals from Reserves	15.00
Contribution from Public enterprises including local bodies	13.00
Additional taxation	43.00
	110.00

Judging from the experience in respect of revenue receipts in the previous years, it is clear that the credit taken for Rs 10.00 crores from current revenue will be fulfilled in more than the expected measure. It may be stated that both in 1959-60 and 1960-61, original estimates of revenue receipts have been proved by revised figures to be gross underestimates. For 1959-60, the revised and actual figures were Rs 55.59.40 lakhs and Rs 58,49.08 lakhs respectively, while for 1960-61, the Budget and revised estimates of revenue receipts were Rs 63.70.97 lakhs and Rs 66,38.55 lakhs respectively.

The target for additional taxation has been fixed at Rs 43.0 crores and how this is going to be fulfilled remains to be seen.

Excise and the Budget

Excise revenue has become increasingly important to the Central Exchequer in the last ten years. From Rs 87.61 crores in 1961-62 the revenue rose steadily to Rs 149.24 crores in 1955-56 and Rs 394.98 crores in 1960-61. The estimate for 1961-62 is Rs 434.84 crores.

What are the factors that have contributed to this sharp increase? They are: (a) The extension of the coverage to more items; (b) increase in the rate of duties and (c) the growth in industrial production. Until the beginning of the first Five-Year Plan, the number of commodities subject to excise was only about twelve. Today the number of such commodities is nearly sixty. The rates of duties have been steeply increased from time to time. The rapid growth in industrial production has also been an important factor. In the first ten months of 1960 the index of production (1951=100) averaged 187.5, representing an increase of nearly 12 per cent over the same period of 1959. A number of new industries has sprung up recently and many of the existing ones such as soda ash, caustic soda, electric motors, rubber tyres, and tubes, cables and wires have made considerable expansion of their installed capacity.

The Finance Minister has taken advantage of these favourable factors in his latest Budget. He has made changes in the rates of duty in respect of 14 commodities already subject to the levy and imposed duty on 18 new commodities. The effect of these proposals is to bring in an additional revenue of nearly Rs 31 crores of which about Rs 2 crores will go to the States as their share.

It will be worth while to analyse the impact of these levies on the different classes of the population. Obviously the higher excise duty on loose tea, tobacco and matches is likely to have an adverse effect on the living costs of the common people. The excise on loose tea has been raised by 5 to 8 nP per kilogram and that on coffee by about 33 per cent. On matches the ceiling rate of duty has been revised from 57 nP per 1000 sticks to 65 nP per 1000 sticks. The increased rate will affect only matches packed in non-standard boxes. The excise on kerosene has been raised steeply but this applies only to the superior variety, the inferior type largely used in rural areas being exempt from the levy.

Among luxury articles, wireless receiving sets, air conditioning machinery and refrigerators have been chosen for excise levy. The duty on Air conditioners and fridges will be at 20 per cent while for wireless receiving sets, a ceiling rate of 20 per cent ad valorem has been proposed for sets valued at more than Rs 300 each while those valued up to Rs 150 each will be completely exempt. The revenue yield is estimated at Rs 83 lakhs though the actual collection may well go up to about Rs 1 crore in view of the steady increase in the demand for radio sets.

Excise on industrial materials is in a different category. Duties have

been levied on soda ash, caustic soda, glycerine, coal tar dyes, cellophane, cotton and woollen yarn, glass and glassware, copper and zinc. Even before the latest budget, excise duties at rather excessive rates were already being levied on a large number of important raw materials and intermediates like steel, cement, coal, tyres, diesel oil, oils and oilseeds, paper and panits, industrial fuel oils and copra. There is no doubt that this type of taxation has added to the costs of production of many industries. Soda ash and caustic soda are essential for a large number of industries which cater to the needs of the masses such as cotton textiles, paper etc. Similarly, paints and varnishes on which the excise has been raised by 25 per cent enter into the production of more industries. Non-ferrous metals like copper and zinc are also vital raw materials and it would have been better to avoid taxing them heavily. The revenue from the excise on industrial raw materials after all, does not appear to be significant; for example, the additional duty on paints will bring in only Rs 30 lakhs and the duty on copper and zinc Rs 80 lakhs while the levy on soda ash, caustic soda and glycerine is estimated to fetch Rs 1.8 crores. But the cumulative effect of these proposals on the cost of production is likely to be substantial.

The Economic Survey for 1961-62 points out that the export angle has to be constantly kept in mind while determining the level of excise duties. But this principle does not appear to have been firmly kept in view. It is not correct to suppose that merely by restricting domestic consumption, exports can be readily stepped up. The world markets are becoming more and more competitive and therefore unless Indian industries are able to keep their production costs down, it will be difficult for them to sell their products abroad successfully.

So far as the ordinary consumer is concerned, it seems fairly certain that the latest excise duties will add to the cost of living. Wholesale prices in India are estimated to have increased by about 25 per cent since the commencement of the Second Five-Year Plan and the all-India working class consumer price index (1949=100) also is stated to have shown a rise of the same order. There has been a good deal of talk in the past few weeks of the determination of the Government to hold the price line during the next five years, but the first Budget of the Third Plan does not hold out much promise in this regard. An analysis of the 60 commodities now subjected to excise shows that except for salt and cereals practically all the other necessities have been brought within the scope of excise. Cotton cloth, sugar, matches, kerosene, vegetable products, coffee, tea, footwear and soap were already subject to excise and the Finance Minister perhaps would have done well not to have enhanced the duties at least on cloth, tea, coffee and matches.

Summing up, it may be said that the latest excise duties will affect the

masses more than the classes and although the levy may have the effect of checking consumption to some extent, it is not likely to prove helpful in increasing exports. It is true that the stern demands of the Plan and the fact that direct taxation offers little scope for further increase, do make recourse to excise levies, inescapable. But the increase in the cost of living and of produc-

tion, does tend to have, at least on a short-run, an adverse impact on the economy. The Finance Minister therefore should carefully watch the trends in the coming months and see to it that no undue hardship is caused to particular section of the population and that the tempo of development is kept up.

The following table shows the trend in excise receipts in recent years:

		(In Lakhs of Rupees)		
		1959-60	1960-61	1961-62

Macneills have been associated with India's commercial and industrial development for almost a century, and with the growth of the country's economy, Macneills' services to commerce and industry have grown.

Macneills today are owners and managers of an important group of companies engaged in the manufacture or sale of Mining and Industrial Machinery, Turbine Pumps, Starters and Switchgear, Ropes, Jute Products, Drums, Containers and Closures and other Light Industrial Products for the home market and for export.

They are important producers of Coal and Tea and also operate the largest system of inland water transport in Asia which maintains its own Shipbuilding and Repair Yard on the river Hooghly.

Managing Agents: KETTLEWELL BULLEN & CO., LTD.

Memo

TO ALL ELECTRICAL CONTRACTORS

We are pleased to advise that GLOSTER CABLES are approved by all GOVERNMENT DEPARTMENTS for use on Government works.

We can supply all popular building wires from ready stocks and contractors are requested to specify GLOSTER CABLES in all their contract jobs TO ENSURE EARLY COMPLETION OF THE JOB.

And remember, when you specify GLOSTER CABLES you get QUALITY CABLES, as each and every reel of GLOSTER CABLE is individually tested and sealed with I. S. I. Certification Mark.

NO PUPPET ON STRINGS

Somebody drops a handkerchief out of the train window, another drops a pen-knife perhaps and a third one remembers too late that an item of his luggage has been left behind. Such are often the occasions for pulling the alarm chain and how frivolous! It is as if some travellers thought that a train was something like a puppet on strings. They do not realise, though they very well might, that each careless pull on the alarm chain means a little hole in the public exchequer, besides inconvenience to other travellers.

EASTERN RAILWAY

*The alarm chain is an emergency device never to be used lightly.

Budget and Foreign Trade

"We have to see that by our tax policies we do not discourage exports", declared Mr Morarji Desai while presenting his Budget for 1961-62. It will be interesting to examine to what extent the Finance Minister will be able to achieve this objective.

So far as imports are concerned, we are already following a severely restrictive policy. Nevertheless, imports on the whole continue to increase. The value of imports rose from Rs 473.1 crores in the first half of 1959-60 to Rs 538.7 crores in the corresponding period of 1960-61. The increase in private imports was from Rs 257.8 crores to Rs 287.5 crores and in Government imports from Rs 215.3 crores to Rs 251.2 crores.

The increase in imports was mainly on account of foodgrains, cotton, iron and steel. Food imports rose from Rs 827.7 crores in the first half of 1959-60 to Rs 114.1 crores in the like period of 1960-61; raw cotton from Rs 19.5 crores to Rs 38.9 crores, raw jute from Rs 0.6 crores to Rs 2.8 crores and iron and steel from Rs 23.6 crores to Rs 38.1 crores. The increase in imports of capital goods was from Rs 139.1 crores to Rs 144.9 crores.

Rs 139.1 Crores

The Budget for 1961-62 has enhanced the customs duty on 41 items such as betel nuts, machinery, spirits and wines, electrical instruments, newspaper, etc. But apart from machinery, the import of other items is relatively negligible and the higher rate of customs duty is not likely to be much helpful from the point of view of saving foreign exchange by lower imports. Machinery is one major item where saving is possible by reducing imports. But for an expanding economy it is extremely difficult to restrict the import of machinery. It is true that the production of indigenous machinery has shown a big increase; nevertheless imports will continue to maintain an upward trend despite enhancement of the import duty. It may therefore be said that while the proposals of the 1961-62 Budget may help to restrict the imports of individual items, the saving of foreign exchange in this account is not likely to be appreciable.

The Finance Minister also spoke about the need to encourage export and for this purpose, the export duty on tea has been reduced by 9 nP per kilogram or 17 per cent resulting in a loss of Rs 2 crores, "Tea" said Mr Desai, "is one of our very good foreign exchange earners" and it has lately been losing ground in the international market. The Government's decision is welcome but one wonders why this measure was not adopted much earlier. As a matter of fact, the tea trade and industry had been urging for the past many years the need to reduce or remove the export duty, but for some reason or the other, Government did not act promptly. Tea export was valued at Rs 149.3 crores in 1956-57 but in 1959-60, it was only Rs 129.8 crores. Reduction in export duty by itself will not help much unless at the same time other measures are adopted.

ed such as intensive publicity, competitive prices, etc.

The Finance Minister said that Government will stand ready to help export industries in every possible way by liberal treatment in the matter of foreign exchange allocations, by speedy refund of internal taxes and duties levied on such products as are exported and in other ways. In fact for the past several years Government has done a great deal for promotion of export, but the result by and large has not been satisfactory. Lack of effective co-ordination among the different ministries and absence of timely steps to reduce

the genuine grievances of trade and industry are among the important obstacles to export promotion.

The latest Economic Survey says: "in the final analysis, the key to increase exports is more production and the acceptance of sacrifices in domestic consumption in the interests of a highly important source, namely, foreign exchange which is a developmental resource par excellence". This is generally true but we cannot go on asking the people to sacrifice for increasing exports. Therefore, efforts should be made to step up production as much as possible so that sufficient surplus is available for

export after fully meeting the domestic requirements. Besides, it is also important to keep down the cost of production. But the enhancement of excise duty on a variety of articles and also the customs duty on machinery are likely to put up costs of production. For example paints and varnishes are used by engineering industries which are increasingly becoming important as earners of foreign exchange. It is, therefore, likely that paints may become costlier on account of the additional levy of excise duty by 25 per cent. Similarly the excise on copper and zinc also may affect the cost of production of many export industries.

New frontiers

From the beginning of time human eyes have looked up into space and wondered, and wondering, desired to possess the moon.

• Today, man has travelled far on the road of knowledge ; today he is about to inherit the moon.

We may not yet know all the details of that first flight which will send him hurtling through space. But of this we are sure, he will need Oxygen to sustain him. And of this too we are sure, that Oxygen will have helped to cut or weld his space-ship and its equipment.

INDIAN OXYGEN LIMITED

Market has greeted the Budget for 1961-62 with a buoyant enthusiasm. The fact that Mr. Morarji Desai has largely fulfilled earlier expectations about the shape of things to come in the Budget. It is true that most estimates of the size of the additional taxation have, in the event, proved to have been wide off the mark. But the disappointment caused in this regard has been more than offset by the almost complete reliance of Mr. Desai on indirect taxation. The upsurge in stock market sentiment is also engendered by the confirmation the Budget has given to Mr. Desai's earlier thesis that there is little scope left for direct taxation. He has further elaborated this point in his reply to the Budget Debate in the Rajya Sabha. Rejecting the suggestion that there should be more direct taxation, particularly on excess profits, he has pointed out that the revenue from income tax and other direct taxes has been on the increase and that it will be very substantial in the next five or ten years. In his opinion, excess profits tax will be tantamount to penalising the more efficient units in industry. He has made it clear that the internal resources to the tune of Rs. 1,150 crores needed for the Third Plan have to be mobilised largely by means of indirect taxation. But there is no gainsaying the heavy incidence of indirect taxation as now dispensed, but the general assumption seems to be that it can be passed on to the consumer. It is as well to mention here, however, that there is a prominent section which does not fully subscribe to this point of view.

By reducing the tax on bonus share issues from 30 per cent to 12½ per cent, Mr. Desai has earned the gratitude of investors. It is due to the heavy rate of this tax that companies with large reserves, which ordinarily would have been distributed to shareholders in the shape of bonus shares, have been forced, as it were, to keep such reserves immobilised. Now that the tax has been substantially reduced, it is argued, there can be no difficulty in issuing bonus shares on the part of all the eligible companies. As a matter of fact a list of companies which have built up large reserves has been made and it is the shares of these companies that have recorded the most remarkable gains during the past few days. There is, however, some disappointment that, after having seemingly taken note of the criticisms about the bonus tax, Mr. Desai should have retained the tax, though at a much reduced rate. Stating the object of the concession, he says that it has been done "both from the revenue point of view and from the point of view of widening the equity base of companies". It is not without a string also, for, he says that "the Controller of Capital Issues will, however, continue to ensure that bonus issues are not sanctioned except after a careful scrutiny of the proposals."

It will be wrong to conclude merely from the smart rise in the share values of companies which are likely to issue bonus shares that the con-

Buoyancy in Stock Markets

By
WATCH-DOG

cession has aroused unmingled enthusiasm. It is pointed out that the reference to the strict vigilance of the Controller of Capital Issues and the revenue aspect of the tax is a clear indication of the substantial checking powers retained by the Government. There are quite a few who think that the 12½ per cent tax will most likely be deemed by companies too exorbitant a price to be paid for returning to the shareholders their rightful due. Anyway, people of this way of thinking seem to believe that the odds are still against a spate of bonus issues. But stock market operators are not worried by these thoughts, and are proceeding on the firm conviction that bonus shares should come sooner or later, and sooner rather than later.

Thus, it may be said that the reduction of the bonus tax and the absence of any substantial increase in direct taxation paved the way for the post-Budget bullish fervour. There are a few other minor but no less significant aspects of the tax proposals. It has been a long-standing complaint that the Government of India, which in spite of its apparent anxiety for securing an increased participation of foreign capital in the industrialisation of the country, is rather lukewarm about creating conditions conducive to an easy flow of foreign capital. In this regard, it was pointed out by Mr. S. P. Chambers, Chairman of the ICI, UK, during his recent visit to this country, that there is discrimination between the taxation of Indian and foreign companies. It is evident that the force of such complaints has gone home. The changes announced in the Budget in respect of super-tax on intercorporate dividends is an instance in point. Now, a uniform rate of 20 per cent has been fixed for super-tax on dividends received by all companies (Indian and foreign) from Indian companies (whether they be subsidiaries or not) formed and registered on or after 1 April, 1961. This no doubt will place both Indian and foreign companies on an equal footing hereafter in this matter, but the discrimination suffered by existing companies will continue. This is not to say the change is without value. For, it will remove the apprehension about discrimination amongst foreign investors. The reduction in the effective rate of super-tax on royalties received by a foreign com-

pany from an Indian concern in pursuance of an agreement made with an Indian concern on or after 1 April 1961 to 30 per cent from the present rate of 43 per cent is evidently done with a view to accelerating foreign collaboration. Closely allied to these is the proposed extension to 36 months of the period of tax exemption to foreign technicians whose contract of service has been approved by the Central Government.

The hotel industry benefits from the Budget as new hotels are now eligible for the five-year tax holiday at present enjoyed by new industrial undertakings. The tea industry's long-standing grievance has been partly redressed. It is now proposed, as a measure of export promotion, to reduce the export duty on tea by 9 p.p. per kg. and that on package. But to compensate the loss in export revenue, the excise duty has been revised upward to yield an estimated gain of Rs. 1.98 lakhs. This concession, which appeared to have enthused operators at first, seems to have become considerably less attractive following the calculation that the net gain to the industry will not be much.

Turning to the other side of the ledger, the first proposal to administer a shock is the increase of surcharge payable in respect of earned income exceeding Rs. 1 lakh from 5 per cent to 10 per cent of the income-tax and super-tax. This is a disincentive to investment. The second adverse measure is the reduction in the development rebate. In respect of new plant and machinery installed on or after 1 April 1961, the development rebate is to be reduced to 20 per cent from the existing 25 per cent. The present rate of 40 per cent will, however, continue in respect of new ships. The development rebate of 25 per cent is a strong point in favour of the corporate sector and at the reduced rate of 20 per cent it will not naturally be as attractive as before. Stock market operators are not unduly concerned over the reduction.

The stock market operator's view that indirect taxation is of no consequence to the corporate sector is not reciprocated by the industrialists. The Federation of Indian Chambers of Commerce and Industry, the central organisation of industrialists and businessmen, while generally welcom-

ing the Budget as a development Budget, has nevertheless averred that some of the indirect taxes will have a deleterious effect on corporate working. The Customs duties on industrial materials like iron and steel manufactures and the excise duties on yarn, chemicals, etc., it has been argued, will increase production costs; consequently, apart from pushing up internal prices, it will also make our export products less competitive, thereby retarding export promotion. The apprehension about the adverse effect of indirect taxation on corporate working cannot be dismissed as alarmist or sheer exaggeration. For, the Budget increases the customs duty on as many as 41 articles and it will be seen that nearly two-thirds of the estimated additional revenue of Rs. 31.27 crores from customs duties is to be obtained from industrial raw materials and capital goods items.

Taken as a whole, however, Mr. Morarji Desai's Budget for 1961-62 is to be deemed to be a very good Budget so far as the stock markets are concerned. Mr. Ashoka Mehta may be exaggerating when he said in the Lok Sabha during the general debate on the Budget that the Budget has imparted confidence to only one section, that which operates on the stock exchange, but it cannot be denied that it has definitely encouraged operators to extend their commitments. The upsurge in prices after the Budget day has no doubt stemmed from the favourable interpretation of the taxation proposals of the Finance Minister. And it is also to be admitted that, once it has become clear that the corporate sector is not going to be penalised, but is to be given some incentives like the reduction in the bonus tax, it is not surprising that confidence has been reinforced. Unless the taxation measures are punitive in character, the rapid industrial development that is taking place in the country is bound increasingly to attract investors to the corporate sector. With demand almost insatiable for almost all types of commodities and manufactures, this is the time for investors to deploy their funds profitably in both established and new companies. Mr. Morarji Desai has once again made it clear that the objective of socialism need not necessarily mean for the Government of India the stifling of the private sector. This is clearly brought about by his refusal to entertain suggestions regarding excess profits tax.

It is another question whether a continued boom in equities should be the order of the day. It may perhaps be correct to say that everybody, not excluding the Government, wants to see equity prices showing a firm trend. This is not the same thing as saying that skyrocketing of prices will be complacently looked upon by the authorities. The Bombay Stock Exchange has already indicated that it will not be an idle spectator of an unbridled boom in shares. It is also on the cards that Government also may not be a passive onlooker beyond a particular point in the present boom. Nevertheless one will not be wrong in saying that steady conditions in stock markets may be expected to continue for a considerable time to come.

INDIA'S first Budget of the Third Five-Year Plan has, on the whole, received a good reception. The Finance Minister has shown skill and caution in devising measures for meeting the revenue deficit of Rs. 60.60 crores for 1961-62. The additional taxation envisaged is expected not only to cover the deficit but to leave a small surplus of Rs. 27 lakhs.

From the point of view of the share market, the Budget has been helpful because it has mitigated to a great extent the hardship caused by the levy of the tax on bonus shares. Expert opinion for the past several years had pointed out on many occasions the disincentive effect of this impost and it is satisfactory to find that Mr. Desai has recognised the need for revising the policy in this regard. In his Budget speech Mr. Desai said: "Capitalisation of reserves and of premium on shares is an important device to ensure that a company does not dissipate its reserves through higher dividends. The super-tax payable by companies on bonus issues has, it would appear from recent experience, discouraged this process. Now that the tax on excess dividends has been abolished, I consider it desirable both from the point of revenue and from the point of view of widening the equity base of companies to reduce the tax on new bonus issues from 30 per cent to 12½ per cent". The Finance Minister added that the Controller of Capital Issues would continue to ensure that bonus issues are not sanctioned except after a careful scrutiny of the proposals. It would have been better, however, if instead of reducing the tax the Finance Minister had completely abolished it.

The reduction in the export duty on tea is also a step in the right direction. Indian tea earned as much as Rs. 149 crores by way of foreign exchange in 1958-59, but in 1959-60 it had dropped to Rs. 130 crores. This reduction of duty will help to increase exports and also improve the prospect of tea shares.

There are, however, certain aspects of the Budget which do not appear to be wholly well-conceived. For example, it has been decided to reduce the development rebate from 25 per cent to 20 per cent in the case of machinery or plant installed after March 1961. The development rebate at 25 per cent was a very helpful factor for accelerating industrial development and it would have been advisable to continue it undisturbed at least during the period of the Third Five-Year Plan.

Similarly, the enhancement of the import duty on machinery and components does not seem to be desirable. It has been proposed, firstly, to raise the statutory rate of duty from 10 per cent ad valorem to 15 per cent ad valorem except in regard to items on which there is a commitment under the General Agreement on Tariff and Trade; and secondly to raise the concessional rate of duty at present applicable to certain types of machinery from 5 per cent

Thoughts on the Budget

C. L. JHUNJHUNWALA

President, Calcutta Stock Exchange

ad valorem to 10 per cent ad valorem. Mr. Desai said that the manufacture of machinery is developing fast in India and that with a view to assisting its growth, it was necessary to raise the import duty on machinery and components. But India still continues to depend on imported machinery to a very large extent. In 1958-59 we imported capital goods worth Rs. 353 crores and indications are that our imports of these goods will continue to rise steadily in the coming years.

The proposals to encourage the flow of foreign equity capital are reasonable. These proposals are the fixation at 20 per cent of the rate of super-tax on dividends paid on intercorporate investment whether Indian or foreign and whether on a majority basis or a minority basis; reduction

in the tax on royalties received from Indian enterprises by foreign companies; and the extension of tax concession for foreign technicians for a uniform period of 36 months. India is already considered to be an attractive field for foreign investment and the latest proposals, it is believed, will help to encourage the further flow of equity capital from abroad.

The Finance Minister has also imposed excise duties so as to fetch an additional amount of about Rs. 31 crores of which Rs. 2.3 crores will go to the State Governments. The commodities chosen for enhancing the excise duty for levying it for the first time include loose tea, coffee, tobacco, superior kerosene, diesel oil, rayon yarn, vegetable product, paints and varnishes, paper, grey cotton fabrics, copper, etc. It may perhaps

be possible for some of these industries to pass on the burden to the consumers. But it is essential to maintain a careful watch on the price level. Already the price level is quite high. Wholesale prices have risen by 25 per cent since 1955-56 and the cost of living has also gone up considerably. Therefore Government should ensure that the additional excise duties do not impose a further burden on the common man.

On the whole, it may be said that the Budget is likely to improve the climate for investment. It may be mentioned that over the whole of 1960, the rise in equity prices was only of the order of 3 per cent as compared to a rise of 17 per cent in 1959 and 14 per cent in 1958. It may be expected that with the commencement of the Third Plan, the prospects for capital formation will become more and more encouraging. If Government continue to adopt realistic fiscal policies it will prove greatly helpful to accelerate the tempo of development and achieve a self-generating economy in a short period.

Machines to produce wealth. But more important, men who can design and make machines and run factories. The production of skill. Dunlop have been doing this ever since they took on a batch of Calcutta University science graduates for their factory at Sahaganj, West Bengal, in 1936. At that time technicians from Birmingham supervised all operations. A different story in 1959, however, when Dunlop opened their second factory at Ambattur, near Madras. Skilled men from Sahaganj played the major part in getting Ambattur under way; in charge of production there is a man who began life as an operative at Sahaganj.

Throwing aside the deadweight of habit. Striking out along new paths with confidence in the future. This is the substance behind the new Dunlop symbol.

THE DUNLOP RUBBER CO. (INDIA) LTD.

THE Second Plan's emphasis on basic industrialisation has laid a great responsibility on the Railways. The heavy industry complex in Eastern India has made the tasks of the railways of this region particularly onerous. The South Eastern Railway, for example, has to serve the major steel plants in the country at Tatanagar, Burnpur, Rourkela and Bhilai, not to mention Durgapur, which it serves indirectly. Besides steel, important industrial goods like cement, aluminium, fertilisers, heavy machinery, ferro-manganese and sugar have made severe demands on the traffic capacity of this railway. Its crucial importance was recognised in the Second Plan's allotment to it of roughly 1/5 of the total railway outlay itself. By the end of the Second Plan, South Eastern Railway is expected to be handling nearly half the entire increase in originating traffic in the country. The Second Plan also envisaged the construction of about over 523 kilometres of new lines, doubling of 933 kilometre of single line and introduction of electric traction of over 536 kilometres. Ancillary expansion as also provision for quicker turnover of wagons—600 wagons daily—were set as additional tasks by the Plan.

South Eastern Railway Delivers the Goods

In the performance of these tasks South Eastern Railway has, on the whole, rendered a good account of itself. Of the proposed new construction of 523 kilometres, 298 kilometres have been completed by the end of 1959-60. Many of these lines are in vital steel belt area and are intended to carry iron ore to the steel plants. During the year 1960-61 many new lines were opened like the branch line from Rourkela to Dumaro and work in the Dandakaranya-Biromhir-Kiruburu area is proceeding apace. The Sambalpur-Bhitarani line is expected to be completed by 1962. Kiruburu is expected to be served by this railway by 1962 making possible quick despatch of iron ore to be mined here with Japanese collaboration. The doubling of the tract between Rourkela and Durg has been completed and that in the Vizianagaram-Gopalapatnam section is progressing satisfactorily. Work on the electrification of Howrah-Kharagpur-Tatanagar, Tatanagar-Rourkela and Asansol-Sini lines are progressing well. In his speech introducing the Budget for 1961-62, the Railway Minister stated that electric traction in the Asansol-Sini-Tatanagar-Sini-Rourkela section line is likely to be commissioned in stages by June 1961.

In the Budget for 1961-62 provision has been made for further expenditure on new lines open works in the South Eastern Railway. New lines works costing more than Rs 20 lakhs each provided for in the Budget for 1961-62 are expected to cost roughly Rs 2 crores. Besides, the Plan has provided for new marshalling yards and other additions and alterations to yard facilities and improvements of workshop facilities. Total provision for projects of this kind in progress costing more than Rs 20 lakhs each comes to cover Rs 8 crores. The most important provision is in respect of the doubling of line in Durg-Kamptee and Durg-Nagpur

sections and additional facilities in the Central India coal fields.

The revised estimate of gross traffic earning for the year 1960-61 of this railway is put down at roughly Rs 66 crores and the net traffic receipts at slightly over Rs 21 crores. For the Budget year 1961-62, gross traffic receipts are nearly Rs 75 crores and the net traffic receipts at roughly Rs 26 crores. The revised estimate of the notional profit for the current year (Rs 12 crores) is less by about Rs 6 crores from the budgeted figure. This is mainly due to estimated fall in traffic receipts during the year to the extent of about Rs 4 crores and increase in working expenses by about Rs 2 crores from the Budget

figures in this regard for the year. This experience, shared also by the Eastern Railway, can be said to have been responsible for the same pattern of the overall Railway Budget. As was explained by the Railway Minister in his speech, there has been a shortfall in the coal movement intended for the steel plants and latterly there has also been other difficulties largely owing to lack of coordination between the production and movement of coal in this region. However, Government has realised the necessity of correcting imbalances between production and transportation of vital commodities in the interest of the planned development of the economy.

The capital at charge in the year 1960-61 was Rs 219 crores against Rs 195 crores in 1959-60. For the Budget year 1961-62 it is expected to increase to Rs 229 crores. The increase in the Budget year is partly attributable to the proposed transfer of the cost of certain new lines to the capital account from the Development Fund in the terms of the accepted recommendations of the Railway Convention Committee. The operating ratio representing the percentage of the working expenditure including appropriation for depreciation to Reserve Fund was 65.33 per cent in 1959-60, 67.28 per cent in 1960-1961 (Revised estimate) and 91.17 per cent in 1955-56. For the year 1961-62, this ratio is expected to be 65.53 per cent. This progressively increasing evidence of operational efficiency is certainly one of the most heartening features of this Railway's record. On the commercial side, progress both in prevention of claims and in expeditious payments of compensations has been an increasingly satisfactory characteristic of this railway. The average time taken in disposing of a claim during 1959-60 has come down to 42 days from 47 days in the preceding year. The amount paid by way of compensation showed an increase of about 5 lakhs in 1959-60 over the figure of nearly Rs 40 lakhs in 1958-59. This may be taken more as sign of expedition than of increase in the quantum of claims, for the number of claims has fallen from about 57,000 in 1958-1959 to 51,000 in 1959-60. Ticketless travel continues to be a serious problem with the number of detection during the year being higher at the staggering figure of over 3,50,000 against slightly over 2,72,000 in the preceding year. The amount of excess realised is also higher at over Rs 9 lakhs against Rs 8 lakhs in the preceding year. This is poor testimony to our national sense of honesty and of personal responsibility for the most important public sector undertaking.

An ore train handled by Electric Locomotive Engine in the Rajkharwan Dangoaposi branch of the S. E. Railway.

Rock-Cutting on the Bondamunda-Barsua New Line Project.

A Decade's Balance Sheet

New Dynamism in the Economy

Third Plan's New Horizons

Part A of Mr Morarji Desai's Budget Speech

Sir,

I rise to present the statement of the estimated receipts and expenditure of the Government of India for the year 1961-62.

2. With the close of the current year, we shall be completing a decade of planned development and we shall be launching on the Third Five Year Plan. Honourable Members will, I am sure, agree that the last 10 years have been a period of striking development in almost all sectors of the economy. Large investments have been made in agriculture, irrigation and power, major as well as medium and small industries, transport and social services. We are perhaps too near these events to be able to assess their full impact or significance. I venture to think that despite various difficulties, we have succeeded in creating a new dynamism in the economy. The public sector has gone forward and has taken on tasks which were entirely new. The private sector also has advanced considerably. All over the country—in the cities and in the towns as also in rural areas—one sees the beginnings of new developments in various directions.

3. The First Five Year Plan was a relatively modest effort, both in its scope and its dimensions. Though the Plan was fulfilled satisfactorily, it became clearer, even as we were proceeding with it, that unless we accelerated the tempo of development, it would not be possible to lift our people out of poverty.

4. The Second Five Year Plan was, in consequence, a bolder and more ambitious one. It aimed at larger increases in production, investment and employment. It was conceived in terms of a long-term strategy of development. Our objective is to develop in the country, at as early a date as possible machine-building capacity on a scale which would enable our development to proceed without dependence on the import of capital goods. To achieve this, progress has to be made over a wide field—in the production of metals, particularly iron and steel, in the establishment of plants intended to produce heavy machinery, as well as in the development of the necessary techniques and skills. Even while we are proceeding with the development of machine-building capacity, we have to strengthen the agricultural base and to provide for the other basic needs of our growing population.

5. Honourable Members are aware that in the course of the implementation of the Second Five Year Plan, we were confronted with major difficulties in regard to resources, particularly external resources. It became necessary for us to make certain adjustments in the Plan and to confine our attention primarily to the fulfilment of what came to be described as the 'core' of the Second Five Year Plan. The target of outlay in the public sector was cut down from Rs 4,800 crores to Rs 4,500 crores. As the Second Five Year Plan draws to a close, we expect to exceed the revised target and to attain an outlay of Rs 4,600 crores.

6. As a result of this effort at developmental planning over the last 10 years, industrial production has increased by about 66% and agricultural production has gone up by about 33 per cent. We have added substantially to the installed capacity for steel and for a number of engineering industries including machine-making. The chemical industries have also grown rapidly. At the same time, we have greatly strengthened the basic services and amenities such as fuel, power, transport and irrigation which provide the foundation for rapid economic growth.

7. During the Second Plan, the total additional taxation has been of the order of Rs 1040 crores of which nearly Rs 800 crores were at the Centre. The resources arranged by mobilisation of private savings, mainly through loans, small savings and provident funds have yielded about Rs 1,400 crores and the extent of deficit financing during the Plan period is expected to be about Rs 1100 crores as compared to Rs 1200 crores originally envisaged. This is satisfactory as far as it goes. We are now embarking on a bigger Plan and we shall have to make a greater effort to direct our resources through channels which lead to greater development and progress.

8. The Third Plan in its final shape is expected to emerge shortly. The House will have ample opportunity to discuss it in due course. I shall, therefore, dwell only on some of its salient features and what it means in terms of the problem of providing adequate resources for it. At the last meeting of the National Development Council, we were confronted with a very difficult choice. On the one hand, our best estimates

of resources that we could hope to mobilise lead us to the conclusion that outlays in the Plan should be limited to Rs 7500 crores. On the other hand, the programmes for which there was necessity and readiness to proceed added up to a higher figure. The Council has decided that for the purposes of physical planning programmes with a ceiling of Rs 8,000 crores should be prepared but the financial limit of Rs 7,500 crores must be adhered to. The fact that we shall have larger programmes worked out will enable us to start on their execution as soon as resources are in sight. At the same time, we cannot and must not take on commitments beyond our resources. Throughout the Third Plan we shall have to be careful to see that reliance on what is popularly described as deficit financing is strictly limited. The size of the Plan, in other words, will depend upon our tax effort and our ability to mobilise savings. No one would be happier than I if we are in fact in a position to raise resources to higher figure than the target of Rs 7500 crores.

9. Our estimate of resources for the Third Plan postulates that the surpluses of various public enterprises should be available for financing the Plan. Besides Railways for which there are separate arrangements, Government have in the last decade invested large sums in various industrial undertakings in the public sector. It is of basic importance that these enterprises should function on sound commercial principles and should make adequate profits which can be ploughed back into further investments.

10. Apart from the limitations regarding internal finance, we have to bear in mind the crucial significance of external finance or foreign exchange in our planning. The requirements of external assistance for the next five years as envisaged in the Draft Outline are of a very substantial order and we do not propose to exceed this limit. It is essential, in this context, that we should reduce expenditure of foreign exchange in every conceivable direction and step up the level of exports. In the detailed phasing of the Plan, we shall have to ensure that the foreign exchange gap in terms of actual outgoings during the Third Plan, which we expect to fill by external aid, does not exceed the estimates set out in the Draft Outline.

11. Developmental activities of this magnitude, with all the limitations which we face, are not an easy task. They call for sacrifices. They necessitate a willingness to go without many things. They involve a restraint on consumption in order that more resources are available for investment. The degree of hardship which this development entails can be alleviated to some extent by external aid. Such aid has been available to us from friendly countries in the Second Plan period and has enabled us to make substantial progress with our 'core' projects, in spite of the acute position in regard to foreign exchange with which we were faced in the middle of the Plan. I am grateful to all those who have helped us. But ultimately it is through our own efforts and our own sacrifices that we can build our future.

REVIEW OF ECONOMIC CONDITIONS

12. Following the usual practice, I now propose to review briefly the economic conditions in the country during the current year. The detailed assessment of the emerging economic trends has been made in the Economic Survey which has been circulated along with the Budget Papers. The Survey also draws attention in broad terms to the considerations and objectives which should guide our fiscal and monetary policies during the coming year. I shall not, therefore, go into the details of the economic situation but shall confine my remarks to the salient features of 1960-61.

13. During the year, the economy advanced in several respects. Investment, both public and private, was at high level and the upward trend in industrial production was accelerated. The agricultural season of 1959-60 was, however, not so favourable. This reduced the domestic availability of foodgrains and raw materials. To an extent, the shortage was met through additional imports. Nevertheless, there was a significant rise in the prices of agricultural raw materials as well as in the overall level of whole-sale prices. The outlook in respect of agricultural and industrial production in the coming year is, however, distinctly better. There is every hope that the upward trend in industrial production will be maintained.

Indian Finance Budget Supplement 1961

PRODUCTION

14. Agricultural production in 1959-60 did not come up to our original expectations owing mainly to adverse climatic conditions. Food production at about 72 million tons was about 5 per cent less than in the previous year. There was also a substantial decline in the output of cotton, raw jute and oilseeds. Sugarcane, however, recorded a welcome increase of 6.6 per cent.

15. For the current agricultural year, the prospects are better. The Kharif crop is expected to be as good as, if not better than the excellent crop of 1958-59, and Rabi sowings have also been satisfactory. The output of cotton this year will also be substantially larger than last year. A further increase in sugarcane production is expected. For jute and oilseeds, however, the outlook is not equally promising.

16. Industrial production in the first ten months of 1960 showed an increase of 11.5 per cent over the corresponding period of 1959. The rate of increase is the highest we have achieved so far. The increase has occurred in almost all industries and it is gratifying that it has been relatively larger in the case of intermediate products and capital goods. Marked increases occurred in iron ore, iron and steel, industrial machinery, paper and paper board, chemicals, cement, general and electrical engineering goods and transport equipment. The output of mill cloth—about 5000 million yards—was also slightly higher than in 1959, in spite of the shortage of supplies of Indian cotton.

17. There has been a substantial addition to production capacity in a number of important industries. Industrial activity in the country is getting diversified, and I am particularly happy to find that a large number of small and medium enterprises are coming up to establish new lines of production and to expand the existing ones. As the House is aware, legislation was undertaken to facilitate the introduction of a scheme of credit guarantee in respect of loans from commercial banks to small scale units under the aegis of the Reserve Bank of India. The scheme is making good progress and about 300 applications have been sanctioned during the last 7 months.

18. The expansion programme of the two steel works in the private sector has been practically completed. The three public sector steel plants have made steady progress and the next few months will see the commissioning of all the blast furnaces, steel melting shops and rolling mills in these plants. The production of finished steel in 1960 was about 2.2 million tons and it is expected to reach 3.5 million tons in 1961. The steel expansion programme, together with the development of mining and transport constitutes the sinews of our industrial deve-

lopment and has been given a very high priority in our Third Plan.

19. The production of coal in 1960 was about 51 million tons as compared to 47 million tons in 1959. Most of the new mines in the public sector are now in production. The Oil and Natural Gas Commission has continued its search for oil in Jwalamukhi and Hoshiarpur areas in the Punjab, in Cambay and Ankleshwar areas in Gujarat and in the Rudrasagar areas in Assam. On the basis of the results of exploration in Gujarat, it has been decided to set up a large refinery, which will be financed from the recent Soviet credit.

20. A notable new field of development, the foundations of which were laid in the Second Plan and which will receive special emphasis in the Third Plan, is machine-building. The first phase of the Heavy Electrical Project at Bhopal has already been completed and orders are now being placed for its second phase by utilising British credit. Other projects in the field of heavy machinery, which will be completed during the Third Five Year Plan, include the Heavy Machinery Plant at Ranchi, the Mining Machinery Plant at Durgapur, both of which are being financed out of Soviet credits, as well as the Foundry Forge which is being set up with Czechoslovak collaboration. The Hindustan Machine Tools Factory at Bangalore has already attained a higher level of production than was originally envisaged and is now engaged in a programme of expansion. Development in machine-building capacity in the private sector is also proceeding at a satisfactory pace and considerable progress has been made with the manufacture of the plant and machinery required by the sugar, paper and cement industries.

MONETARY TRENDS

21. During the year, money supply with the public increased by Rs. 219 crores as compared to an increase of Rs. 171 crores in 1959. A major factor in this expansion was bank credit. Government's indebtedness to the banking system increased much less than in the previous year. The expansionary effect of these developments was countered to a small extent by a decline in the foreign assets of the Reserve Bank.

22. The deposits of scheduled banks rose in 1960 by Rs 65 crores as compared to Rs. 254 crores in the previous year. This large reduction is due in the main to the revised procedure regarding the placement of rupee counterpart funds arising out of P. L. 480 imports. These amounts were, until last year, deposited with the State Bank of India which used to invest them along with their other funds in Treasury Bills or dated Government securities. This arrangement gave a somewhat distorted picture of the volume of deposits in scheduled banks and

their investments in Government securities. It was accordingly decided, in consultation with the American authorities, that these moneys would, with effect from the 12th May 1960, be deposited directly with the Reserve Bank of India who would invest them in special securities of the Government of India. Further it has been arranged that from July 1960, for a limited period, the past accumulations with the State Bank of India would be transferred to Government in monthly instalments of Rs. 12 crores. Even after making allowance for the effect of these revised arrangements, the rise in bank deposits in 1960 was somewhat smaller than in 1959.

23. The expansion of bank credit by the scheduled banks was on the other hand much larger—more than twice the expansion in 1959. In consequence, the credit-deposit ratio went up from 53 per cent at the end of 1959 to 62 per cent at the end of 1960. If P. L. 480 deposits are excluded, the ratio works out to 72 per cent in December 1960 as compared to 63 per cent a year ago. This strain on the resources of commercial banks has resulted in an increase in their borrowings from the Reserve Bank despite a decline in gilt-edged securities in their portfolios.

24. The upward trend in equity prices noticed since 1958 gathered further momentum and a speculative boom developed about the middle of the year. The index of prices of variable dividend securities moved up by about 14 per cent in the course of the first seven months of 1960. Commodity markets were also buoyant. With a view to check these speculative trends the Reserve Bank introduced several measures designed to restrain the total amount of credit creation. The bank rate remained unchanged but penury rates were imposed on borrowings by banks above certain limits. There is no doubt that while the banks must endeavour to meet the legitimate needs of production and trade, every care must be taken to prevent excessive credit creation. There has been a break in share values since July 1960 partly as a result of the tightening of credit, partly in consequence of the steps taken by the stock exchanges themselves by adjusting their margin requirements, and partly through some changes in the working policies of the capital issues control. The index of variable dividend securities which had risen to 182 by the end of July 1960 stood at 165 about the end of the year.

25. In passing I might also refer to the Refinance Corporation which was set up in 1958 to assist banks in financing medium-sized industries. We have during recent months substantially enlarged the scope of its operations by extending the facilities to a larger number of banks as also to State Finance Corporations and selected

State Co-operative Banks, increasing the period of loans from 7 to 10 years, where necessary, and giving a larger discretion to the Corporation in regard to the industries to be assisted. These modifications, helped possibly by the stringency of funds, have resulted in an increase in the loans disbursed from Rs 85 lakhs in 1959 to Rs 141 lakhs in 1960, while the loans advanced in the month of January 1961 exceeded Rs 70 lakhs.

26. The banking sector has a very important role to play in the mobilisation and husbanding of resources for our developmental plans and Government are therefore vitally interested in its health and vitality. The House is aware of the steps that we have taken to safeguard the interests of depositors including the powers to facilitate reconstruction or amalgamation of banks. Recently, we have promulgated an Ordinance to remove certain difficulties experienced in their reconstruction or amalgamation with other banks and to permit amalgamation under the Banking Companies Act with the State Bank of India. These measures will help to strengthen some of the more vulnerable units of the Indian banking system, which, I am convinced, is basically strong and sound. Government are determined to take whatever steps may be necessary for the efficient management of banks and for protecting the interests of the depositors.

PRICES

27. The index of whole-sale prices which was 117.9 at the end of 1959 rose to a peak of 127.4 by the middle of October 1960, but declined to 124.3 at the end of the year. The average for 1960 works out at 6.5 per cent higher than for 1959, the rise in respect of industrial raw materials, mainly oil seeds, raw cotton and raw jute, being 18 per cent, and in manufactures 11 per cent. Rice prices rose by about 7 per cent, while wheat prices declined by 11 per cent; the index of foodgrains, taken as a group, has shown a small fall. We have been keeping a continuous watch over the trend of prices and in the case of specific commodities, such as, cotton, jute and groundnuts taken suitable steps like the introduction of quota system and the enforcement of credit restrictions supplemented by the tightening of margins in the commodity markets. Towards the end of 1960, the price index of rice, however, fell significantly. There was a seasonal rise in the index in the month of January which at the end of the month stood at 126.2 as compared to 119.2 at the end of January last year. The working class cost of living index has shown only a small increase, the index being 124 for December, 1960 as compared to 122 a year earlier.

28. The rising trend in prices has persisted almost throughout

Agra; Ambala Cantt.; Ajmer; Ahmedabad; Ahmednagar; Allahabad; Baroda; Bangalore; Bhilai; Berhampur; Bombay; Bareilly; Calcutta; Cuttack; Coimbatore; Colombo; Dibrugarh; Dhanbad; Gwalior; Gauhati; Imphal; Indore; Jaipur; Jabalpur; Jodhpur; Jalgaon; Jorhat; Jamshedpur; Jullundur City; Jammu; Kanpur; Kolhapur; Kurnool; Lucknow; Madras; Madurai; Mangalore; Meerut; Nagpur; New Delhi; Nepal; Patna; Poona; Pondicherry; Patiala; Palayamcottai; Rajkot; Ranchi; Sambalpur; Shillong; Secunderabad; Silchar; Srirangar; Seta; Tezpur; Tiruchirappalli; Trivandrum; Varanasi; Vijayawada; Vizianagaram.

Tax, but these improvements will be largely counter-balanced by the increase of Rs 36.06 crores in the States' share of taxes. In the net, the revenue will show an increase of Rs. 4.07 crores. The receipts of Rs 163 crores from Customs are at about the same level as estimated in the Budget. Union Excises including Additional Excises will yield Rs 394.96 crores, an increase of Rs 15.37 crores over the original estimate. This increase is spread over most of the items, notably, tobacco, refined diesel oil and motor vehicles, and is attributable to improvement in production and larger clearances during the year. The Taxes on Income including Corporation Tax are expected to increase by Rs 25 crores due mainly to the completion of a larger number of assessments pertaining to earlier years and better realisations than originally anticipated. The share of income-tax payable to the States will at the same time go up by Rs 34.92 crores as a result of larger collections during the year and arrears payable for earlier years. This will, however, be partially neutralised by a reduction of Rs 7.43 crores in the ad hoc grants to the States in lieu of the loss in their share of income-tax following the changes in the Company tax structure, for which provision is made in the expenditure estimates. The surcharge on iron and steel, which is transferred to the Iron and Steel Equalisation Fund, is likely to yield Rs 2.1 crores less, while the grants under P.L. 480 programme will drop by Rs 5 crores.

49. The revenue expenditure this year is now estimated at Rs 957.38 crores against the original estimate of Rs 980.35 crores. Defence Services account for Rs 266.72 crores and Civil Expenditure for Rs 690.66 crores.

50. The saving of Rs 17.43 crores in the Civil Expenditure is the cumulative effect of changes over several heads. Debt services will show a saving of Rs 2.24 crores due chiefly to smaller issues of market loans and treasury bills, partly counter-balanced by larger payment of interest on Post Office Savings Bank deposits and savings certificates. The transfer of the surcharge to the Steel Equalisation Fund and of the grant under P. L. 480 to the Special Development Fund together will account for a fall of Rs 7.1 crores. As I mentioned earlier, the ad hoc grants to the States in lieu of income-tax will drop by Rs 7.43 crores but the grants to States for raising the emoluments of low-paid employees will increase by Rs 2.41 crores.

51. The net expenditure on Defence Services this year is estimated to show a saving of Rs 5.54 crores. This is mainly due to a lower expenditure on the purchase of stores and equipment than was originally anticipated.

FINANCIAL YEAR 1961-62

52. For the coming year, at the same level of taxation, I am

budgeting for a total revenue of Rs 962.92 crores and an expenditure of Rs 1023.52 crores, leaving a deficit of Rs 60.60 crores.

53. The revenue from Customs is expected to show a modest increase of Rs 1 crore over the current year's revised estimate, whereas Union Excises are likely to improve further by Rs 11.26 crores and Taxes on Income and Corporation Tax together by Rs 6 crores. The contribution from Railways is expected to increase by Rs 16.23 crores due mainly to the implementation of the recommendations of the Railway Convention Committee. The rate of dividend will increase from 4 per cent to 4½ per cent. Further, the Railways will be paying an additional annual contribution of Rs 12.5 crores to the General Revenues in lieu of the Tax on Railway Fares, which will be distributed amongst the States by way of grant. The profits of the Reserve Bank will show an increase of Rs 2½ crores over the current year's amount of Rs 40 crores and the grant under P. L. 480 is estimated to go up by Rs 5 crores. The share of Income Tax payable to the States is expected to be lower by Rs 6.19 crores next year mainly on account of smaller payment of arrears in respect of earlier years. These improvements, however, will be partly counter-balanced by decreases under several heads, notably, surcharge on iron and steel which will drop further by Rs 3.4 crores as a result of the provisional increase in the retention price of steel.

54. Civil Expenditure next year shows an increase of Rs 49.94 crores over the current year's revised estimates. In view of the changes in the classification of accounts to which I have referred earlier, the figures for 1961-62 are not quite comparable with the corresponding figures for the current year. I shall however, make allowance for the effect of these changes under the appropriate heads while commenting on some of the important provisions. The growing volume of internal and external borrowings accounts for an increase of Rs 9.55 crores under Debt services. The variations in respect of the surcharge on iron and steel and the grant under P.L. 480 referred to above will also be reflected on the expenditure side. Excluding grants to States, which will now be exhibited separately, and transfer of the surcharge mentioned earlier, Social and Developmental Services are expected to cost Rs 32.88 crores more next year. This increase is spread over almost all the heads and is attributable chiefly to the implementation of the schemes included in the Third Plan. The ad hoc grants payable to the States in lieu of loss in their share of income-tax following the changes made in the Company tax structure will go up by Rs 2.76 crores. Excluding the grants payable as a result of the abolition of the tax

on Railway Fares to which I have referred earlier the grants to the States next year will decrease by Rs 18.35 crores mainly on account of the discontinuance of the grants for raising the emoluments of low-paid employees which were payable only during the Second Plan period. The Third Finance Commission is expected to take this factor into account in assessing the needs of the State Governments for assistance from the Centre.

55. The net expenditure on Defence Services next year shows an increase of Rs 16.2 crores. Army estimates will go up by Rs 9.2 crores, whereas Navy and Air Force together will require Rs. 3.54 crores more. The Non-effective Charges also account for an increase of Rs 3.46 crores attributable chiefly to the recent decision to extend to the military pensioners with retrospective effect the benefit of temporary increase in small pensions admissible from 1st April, 1958 on the Civil side. The overall increase in Defence Estimates is due mainly to the additional commitments of Armed Forces including the expansion of certain establishments and provision for payments to Service Officers on the basis of the recommendations of the Pay Commission.

CAPITAL EXPENDITURE

56. Excluding the adjustment for the transfer of assistance from the United States to the Special Development Fund, which is technically classified as capital expenditure, the current year's budget provided Rs 371 crores for capital outlay. The corresponding figure is now estimated at Rs 416 crores, an increase of Rs 45 crores. On account of larger imports, particularly of wheat, the net expenditure on the purchase of food-grains will increase by Rs 30.48 crores. The requirements for the construction of border roads are likely to exceed the original estimate by Rs 13.5 crores. An additional amount of Rs 7.94 crores will be required for exploration of oil by the Oil and Natural Gas Commission, while payment of Rs 8.27 crores had to be made to the World Bank under the Indus Waters Treaty. These increases will be partly counter-balanced by shortfalls under certain other items of capital expenditure. Detailed explanations for the variations under other heads have, as usual, been given in the notes on the Demands for Grants and in the Explanatory Memorandum.

57. The corresponding provision for capital outlay next year is Rs 454 crores, showing an increase of Rs 38 crores over the current year's revised estimate. This increase is spread over a number of heads and reflects the additional requirements in the first year of the Third Plan. Railways will be spending Rs 36.38 crores more for their capital outlay but the net expenditure on purchase of food-grains will go down by Rs 23 crores. Of the other major increases, mention may be made of

Rs 7.7 crores under border roads, Rs 8.46 crores for industrial development, Rs 5.2 crores for the development of land acquired by the Delhi Administration and Rs 2.83 crores for the construction of food storage godowns.

58. In addition to the direct capital outlay just mentioned, the estimates provide Rs. 358.07 crores this year and Rs 409.22 crores next year for loans to States and Rs 174.37 crores this year and Rs 170.60 crores next year for loans to other parties including Port Trusts, Government-owned Corporations and foreign Governments.

59. Provision has been included in the next year's estimates for a total expenditure of Rs. 943 crores for implementing the Plan of which Rs 181 crores would be on revenue account and the balance of Rs 762 crores as capital outlay including loans. In addition, the Railways will provide Rs 23 crores from their own resources. These estimates include a provision of Rs 352 crores for assistance to States, Rs 90 crores in the Revenue budget and Rs 262 crores in the Capital budget. It is expected that the States will find Rs 200 crores from their own funds, thus making up an outlay of Rs 552 crores for the State plans. The outlay on the Central portion of the Plan will aggregate to Rs 614 crores. In all, the total Plan outlay in the first year of the Third Plan both for the Centre and the States will be of the order of Rs 1166 crores. In making these provisions, we have borne in mind the need for proper and careful phasing. A substantial portion of the provision during the coming year relates to the Second Plan projects which will be carried forward to the Third Plan and a relatively modest provision has been made for the new projects which require much preparatory work.

WAYS AND MEANS

60. The overall deficit for the current year was estimated in the original budget at Rs 153 crores. According to the present assessment, this deficit is now expected to come down to Rs 15 crores. The improvement of Rs 138 crores is the result of a number of factors. The revenue deficit is now expected to go down by Rs 27 crores. The revised procedure regarding the deposit of P.L. 480 funds with the Reserve Bank of India, to which I have alluded earlier, accounts for investments in special securities of Rs 240 crores—Rs 106 crores on account of transfers from the State Bank of India and Rs 1.32 crores due to net fresh accruals. The opening cash balance exceeded the original estimate by Rs 19 crores. This improvement of Rs 286 crores will be partly offset by an increase of Rs 45 crores in capital expenditure mentioned earlier, decline of Rs 64 crores in the net internal and external borrowings and worsening to the extent of Rs 19 crores under other debt heads.

61. The Budget had assumed credit for market loans at Rs 250 crores including Rs 25 crores from Prize Bonds. During the year, two loans were floated: 3½ per cent Bonds, 1966, and 4 per cent Loan, 1980 for a total sum of Rs 175 crores. Conversion facilities were also offered to the holders of 2½ per cent Loan, 1960, 4 per cent Loan, 1960-70 and 2½ per cent Hyderabad Loan, 1955-60 maturing during the year. The total amount subscribed was Rs 180.70 crores including Rs 74.6 crores by way of conversion.

62. The Prize Bonds are expected to yield a sum of Rs 12.5 crores by the end of the year. As Honourable Members are aware, during the first few months of the introduction of the scheme, the sale of these bonds was very brisk but thereafter the demand for them has slackened appreciably. I believe, however, that these bonds have much attraction for a large mass of the people and with more intensive and co-ordinated efforts on the part of both non-official and official organisations, particularly in the States, it should be possible to improve substantially on the recent performance.

63. The House will recall that in pursuance of the decision for the gradual funding of a part of the ad hoc Treasury Bills held in the Issue Department of the Reserve Bank of India, Treasury Bills of the value of Rs 300 crores were converted in 1958-59 and another batch of Rs 150 crores in 1959-60, into dated securities. We have continued this process during the current year by conversion of another batch of Treasury Bills worth Rs 50 crores.

64. Small savings have, during the last three years, shown encouraging results. The net collections last year aggregated to Rs 84 crores. During the first ten months of the current year net collections have exceeded the collections for the corresponding period last year by Rs 19 crores, and we are, for the first time, likely to end the year with a net collection of Rs 100 crores. The co-operation and response which the large masses of people have shown in contributing to the success of the Small Savings movement is very heartening and augurs well for the future. I should like to take this opportunity of expressing my appreciation of the assistance rendered in this direction by non-official agencies—particularly the Advisory Boards at the Centre and the States—and the official organisations under the various Ministries. I hope these encouraging trends will receive further momentum in the Third Plan which places the receipts from this source at Rs 585 crores. It would, however, not be wise to rest on our oars and take the present improvement for granted. A greater intensification of our efforts will be necessary in order to achieve that target. Development involves sacrifice and the essence of democratic planning is

that the sacrifice should be evenly spread and should be forthcoming readily and voluntarily. I invite every citizen to participate in this sacrifice and to save more in order to invest more in the Small Savings Schemes.

65. In the budget for the coming year, I have taken a credit for a gross market borrowing of Rs 235 crores. For small savings, I have taken a net credit of Rs 105 crores, representing an increase of Rs 5 crores over the likely receipts this year. On the basis of our present assessment, the foreign assistance

expected during the coming year is estimated at Rs 421 crores. The net investment of P.L. 480 Funds is likely to be of the order of Rs 96 crores including the transfer of Rs 36 crores from the moneys formerly deposited with the State Bank.

66. I may now state, in brief, the overall budgetary position next year. The revenue deficit at the existing level of taxation is expected to amount to Rs 61 crores. Net capital outlay is estimated at Rs 454 crores, loans to State Governments and others at Rs 580

crores and debt repayments 167 crores. The total outgo Rs 1262 crores will be met to the extent of Rs 235 crores from public borrowings in India, Rs 105 crores from small savings, Rs 421 crores from foreign assistance, Rs 176 crores from loan recoveries, Rs 96 crores from the investment of P.L. 480 Funds and Rs 104 crores from miscellaneous receipts, leaving an overall budgetary deficit of Rs 125 crores.

67. I shall now turn to the taxation proposals for the coming year.

CHEMICALS FOR INDUSTRY

Simon-Carves, in India since 1935, accept contracts for designing and building plants for Sulphuric Acid and Oleum production, Roasting of pyrites and other sulphide ores, Saltcake and Hydrochloric acid, Electrolytic soda and Chlorine, Coal carbonisation and by-product recovery, Ammonia synthesis by the Ammonia Casale process and production of Nitrogenous, Phosphatic and complete fertilisers.

Simon-Carves are currently executing a contract from East India Distilleries & Sugar Factories Ltd., to build a complete compound fertiliser factory in Ennore near Madras. The factory will go into production about the middle of 1962. The contract includes the design and supply of the equipment, the civil engi-

neering work and the erection and commissioning of the plant which will produce approximately 51,000 tons a year of compound fertilisers based on ammonium phosphate. The factory will include an ammonia synthesis plant, sulphuric and phosphoric acid plants and raw material and product storage and handling equipment.

Taxation as Instrument of Policy

Selective Incentives for Capital Formation

Wider Range of Excise Levy

Part-B of Mr Morarji Desai's Budget Speech

68. Taxation in a developing economy plays a vital part. It is more than a mere budgetary device to pay for the cost of Administration. It is an instrument of economic policy.

69. I have already emphasized the importance of our tax effort in raising resources for the Plan. The Third Plan envisages an increase in tax revenue from 8.5 to 11 per cent of the national income. It is no longer a question of trying through taxation to cover the deficit on revenue account from year to year. We have to raise resources for the Plan as a whole. It is clear that every one must contribute towards the task of development on which we have embarked. It has been my endeavour, however, in framing my proposal to see that the tax burden does not fall too heavily on any one section of the community. It has, therefore, been necessary to have a large list of items over which the tax burden is spread. I have also aimed at securing that the incidence of taxation on lower income groups is very small. Finally I have tried to ensure that through our tax system we further our economic objectives.

We have to see that by our tax policies we discourage imports and encourage exports. It is also necessary to discourage consumption and encourage investment.

70. The proposals I am about to present both for direct taxation and for indirect taxation have these objectives in view.

Customs and Union Excises

71. In regard to Customs my proposals envisage the raising of the rates of duty on 41 items. The changes in rates of duties have been explained in detail in the memorandum circulated with the budget papers. I will, however, refer to some of the important changes.

72. I propose to increase the existing duty on betelnuts by 80 nP. per kilogram. This will serve to some extent to mop up the high margin of profit on this commodity. The proposal is estimated to yield an additional revenue of Rs 57 lakhs in a year. It is proposed to step up the existing duty on unmanufactured tobacco by about 50 per cent. This is likely to give Rs 89 lakhs annually. The existing duty of 50 per cent. *ad valorem* on certain textile manufactures will be raised to 100 per cent. *ad valorem*. This will be consistent with the generally higher rates of duty on other textile items. The proposal will bring in additional revenue of Rs 68 lakhs. Similarly, the duty of 35 per cent *ad valorem* on iron and steel manufactures is to be increased to 50 per cent *ad valorem*, the

extra annual yield being Rs 1 crore approximately.

73. Manufacture of machinery is developing fast in the country. As a measure to assist its growth, it is proposed to raise the import duty on machinery and components. My proposal for this item is two-fold, firstly to raise the statutory rate of duty from 10 per cent *ad valorem* to 15 per cent *ad valorem*, except in regard to the items on which there is a commitment under the General Agreement on Tariffs and Trade, and secondly to raise the concessional rate of duty at present applicable to certain types of machinery exempted under executive notification form 5 per cent *ad valorem*. The general policy of the Government has been to keep the duties on capital goods as low as possible. The increase being small should however, make little difference to the cost of production. The proposal is estimated to yield an additional revenue of Rs 7.76 crores.

74. I propose to increase the duty on spirits, wines and malt and to impose a duty on hops and expect as a result an annual yield of Rs 24 lakhs.

The existing duty on electrical and other instruments, apparatus and appliances not otherwise

specified is proposed to be raised by an addition of 10 per cent *ad valorem*. It is also proposed to increase the existing duty on railway material for permanent way and rolling stock and their component parts by 5 per cent *ad valorem*, the estimated extra annual yield from these two changes being Rs 1.48 crores.

The duty on the residuary item of "all other articles not otherwise specified" falling under entry 87 of the Tariff Schedule is to be raised by 10 per cent *ad valorem*, the additional yield being Rs 2.43 crores.

75. I am also proposing a small increase in duty on newsprint. In 1937, the statutory rate of duty on newsprint was 25 per cent. For convenience, however, the duty was fixed by notification at certain specific rates which then worked out to about 25 per cent. The statutory rate of duty on paper including newsprint has since increased to 40 per cent plus excise duty, whereas the specific rates on newsprint have remained almost the same. On the other hand, the price of newsprint has increased considerably in the interval, with the result that the *ad valorem* incidence of the specific rates of duty now works out to less than 5 per cent as against the rate of 25 per cent, when it was originally fixed. It is proposed to raise this duty to about 10 per cent *ad valorem*. The change is being given effect to by a notification. The estimated yield as a result of this change is Rs 38 lakhs a year.

76. Tea which is one of our very good foreign exchange earners has lately been losing ground in the international market. In order to encourage its export, it is proposed to reduce the export duty on tea by 9 nP. per kilogram; that is by about 17 per cent, resulting in a loss of Rs 2 crores.

77. The net effect of these changes will be to increase the Customs revenue by Rs 16.95 crores.

78. Following the changes in excise duties to which I shall refer presently, provision is being made, wherever necessary, for the levy of countervailing import duties so that the indigenous producer is not placed at a disadvantage. The additional revenue resulting from the countervailing

Indian Finance Budget Supplement 1961

duties is expected to be Rs 12.32 crores a year.

79. Turning to Union Excise duties, I propose to make changes in the rates of duty in respect of 14 commodities already subject to the levy and to impose the duty on 18 new commodities.

80. With the object of restraining consumption of tea and assisting its export, I propose to increase the excise duty on loose tea by 5 to 8 nP. per kilogram. The rate on package tea is, at the same time, being reduced by 6 nP. per kilogram, as the present rate of duty is leading to a shift in the customary trade. These measures will yield Rs 1.98 crores. With a similar object, the rate of duty on coffee is also proposed to be increased by about 33 per cent, bringing in Rs 38 lakhs.

Tobacco has been one of our stable revenue earners. Major changes in its tariff structure were made in 1957 but experience has shown the need for some simplification and rationalisation. In order to discourage lower rated tobacco being used as a substitute for tobacco bearing a higher rate, it is necessary to narrow the difference between the two rates. It is also necessary to step up the duty on stalks. The structure of duty on air and flue cured tobacco and on cigarettes and on cigars and cheroots is being simplified. These changes will yield an additional revenue of Rs 2.58 crores.

81. With the improvement in the standards of living, consumption of kerosene has been rising and as the production of kerosene in the country falls short of our requirements, large quantities have to be imported. It is necessary to slow down the rate of increase in use of kerosene, particularly superior kerosene and with this in view I propose to increase duty on it by about 46 per cent, raising the incidence of duty to Rs 95.55 per kilolitre. This, with the existing additional duty of Rs 4.45 will mean a total duty of Rs 100 per kilolitre. Inferior kerosene which is generally used in rural areas, is being exempted from this increase by a notification. Additional revenue from this will be Rs 2.84 crores.

Because of the high difference in duty between refined diesel oil and diesel oil not otherwise specified, there is a growing tendency to use the latter in admixture with the former. Partly to correct this imbalance, I propose to raise the duty on diesel oil not otherwise specified by Rs 28.15 per metric tonne. This will give a revenue of Rs 1.33 crores.

82. The rayon yarn industry is in a buoyant condition and is earning substantial profits. I propose to step up the duty on yarn of all categories and on staple fibre by about two-thirds. This measure is expected to yield an additional revenue of Rs 1.69 crores.

I am also increasing the duty on vegetable product by Rs 2.80 per quintal, that is 100 kilograms. This is expected to yield an additional revenue of Rs 80 lakhs a year.

Paints and varnishes and paper industry are now firmly established and these commodities are in a position to contribute further to the exchequer. I propose to raise the duty on paints and varnishes by about 25 per cent and on paper and paper-boards by 36 per cent to 59 per cent. I do not, however, propose any increase in the duty on printing and writing paper. The additional revenue from paints and varnishes and from paper and paper-boards is estimated at Rs 30 lakhs and Rs 2.37 crores respectively.

83. The large gap in the rates of duty on fine and medium 'A' varieties of cotton fabrics has resulted in a major shift in production from fine to medium 'A' cloth. To correct this to some

extent, I propose to raise the basic duty on medium 'A' grey fabrics by 25 per cent. The excise levy on processed cloth is also being increased by small amounts. These measures are expected to yield Rs 4.72 crores.

The concession which is given at present to small units in the form of total exemption from duty or duty at a reduced rate in respect of units employing less than a specified number of power looms has led to abuses and difficulties in administration. To remedy this, full exemption will be admissible only to such units as do not employ more than 2 looms in respect of cotton, rayon and silk fabrics and one loom in respect of woollen fabrics. The slab rates of compounded levy are also being adjusted suitably.

84. It is in the interest of development of match industry in the country that only one size of match box should be produced for general use and the size considered most suitable is a box of

50 sticks. To encourage standardization through measures rather than compulsion, I propose to make certain changes in the pattern of duty on matches. The ceiling rate of duty is proposed to be revised from 57 nP. per 1000 sticks to 65 nP. per 1000 sticks. The rates of duty on the standard boxes of 50 will, however, be kept almost at the present level and the increased rate will affect only matches packed in non-standard boxes. At the same time, as a measure of encouragement to the cottage sector of the industry which uses bamboo for making splints, the concessional rates are being further liberalised. These proposals are not likely to result in any appreciable change in revenue. To give sufficient time to the industry to adjust itself to the new requirements it is proposed to continue the present concessional rates on boxes of 40s and 60s for a further period of 3 months.

85. Medium and small size factories producing cycle rims which

were mostly dependent on replacement market for disposal of their products are having a difficult time. Consistently with our policy to help smaller units, I propose to grant certain concessions which will give relief to the extent of Rs 10 lakhs a year to them.

86. With the industrial expansion in the country it is now possible to spread the excise net wider. I propose to impose small specific duties on soda ash, caustic soda and glycerine, a duty of 15 per cent *ad valorem* on coal tar dyes, of 10 per cent on patent or proprietary medicines not containing alcohol and of 25 per cent on certain articles of cosmetic and toilet preparations. Patent and proprietary medicines containing alcohol are already subject to duty under the Medicinal and Toilet Preparations (Excise Duties) Act. These items

taken together are expected to yield an annual revenue of Rs 1.8 crores.

Similarly it is proposed to levy a duty of 20 per cent *ad valorem* on cellophane and on plastic powders and other semi-finished plastic material. I expect a revenue of about Rs 50 lakhs from these.

87. It is proposed to levy a small specific duty on mill-made cotton and Woollen yarn and I hope that at least a part of the duty will be absorbed in the cost of manufacture. This step will also bring within the excise net hosiery and certain other fabrics which do not, however, apply to yarn in hanks used in weaving on handlooms such as dhooties, sarees and other common varieties of cloth and to yarn spun from shoddy wool used in the fabrication of coarse articles.

I expect a revenue of Rs 5.55 crores from this levy.

88. My next proposal is to levy excise duties ranging from 5 per cent *ad valorem* to 15 per cent *ad valorem* on glass and glassware and China and porcelainware including crockery. Provision is being made for a lower rate of duty for laboratory glassware used mostly in educational or research institutions. The revenue from these two items taken together is estimated at Rs 1.80 crores.

The House will recall that last year a duty was levied on aluminium in certain forms. I now propose to place two other non-ferrous metals, namely, copper and zinc, which can to some extent substitute aluminium, on the same footing, and am accordingly levying a duty of Rs 300 per metric tonne on sheets and circles

and 10 per cent *ad valorem* on pipes and tubes. I also propose to bring aluminium pipes and tubes in line with those of copper and zinc. This proposal is estimated to yield a revenue of about Rs 80 lakhs.

89. I also propose to levy a duty on wireless receiving sets, air conditioning machinery and refrigerators. The duty on air conditioning machinery and refrigerators is proposed to be levied at 20 per cent. In the case of wireless receiving sets I propose a ceiling rate of 20 per cent *ad valorem* for sets, valued at more than Rs 300 each and concessional rates for cheaper sets, those valued upto Rs 150 each will be completely exempted from duty. I expect a revenue yield of Rs 83 lakhs from these sources.

90. My last proposal under this head is to put an additional excise duty on mill-made silk fabrics in lieu of sales tax levied on such fabrics by the States. The States have agreed to this proposal.

91. The net effect of all these proposals is an additional revenue of Rs 30.90 crores of which Rs 2.3 crores will accrue to the States, as their share.

DIRECT TAXES

92. I am proposing only one change in the rate structure of personal income tax. At present, earned income is taxed at a concessional rate through a scheme of differential rates of surcharges under which earned income above Rs 1 lakh bears a lower surcharge of 5 per cent while the whole of unearned income bears a special surcharge of 15 per cent of the basic income tax and super tax. The maximum slab rate of tax, including surcharge, on unearned income is thus 84 per cent while it is 77 per cent in the case of earned income above Rs 1 lakh. The justification for a differential treatment in favour of earned income, however, diminishes as the income and with it the capacity to pay increase and I consider that earned incomes above Rs 1 lakh should be subjected to tax at a rate nearer to that at which unearned income is taxed. Accordingly, I propose to increase the rate of the present special surcharge of 5 per cent on earned income above Rs 1 lakh to 10 per cent of the basic tax.

93. I have proposed a few changes with regard to the taxation of companies in order to rationalise the present tax structure, and to encourage capital formation. We are encouraging companies to have a wide equity base. Capitalisation of reserves and of premium on shares is an important device to ensure that a company does not dissipate its reserves through higher dividends. The super-tax payable by companies on bonus issues has, it would appear from recent experience, discouraged this process.

Now that the tax on excess dividends has been abolished, I consider it desirable both from the revenue point of view and from the point of view of widening the equity base of companies to reduce the tax on new bonus issues from 30 per cent to 12½ per cent. The Controller of Capital Issues will, however, continue to ensure that bonus issues are not sanctioned except after a careful scrutiny of the proposals.

94. My next proposal relates to the rate of super-tax payable by companies on dividends received by them. Under the law as it stands, there is a concessional rate of super-tax in dividends received by a parent company from its subsidiary, while inter-corporate investment in a minority basis is taxed at a higher rate. I feel that we should not, through our tax laws, encourage the formation of subsidiaries. Consistently with our broad social objectives, our tax laws should help to enlarge rather than restrict the scope for public participation in all joint-stock companies. I have one more consideration in mind. Because of the more favourable treatment given to income derived from subsidiaries, foreign investors in Indian companies are tempted to ask for a majority holding. The tax on a minority share-holding by a foreign company is substantially higher than on an Indian company with a minority investment. The investment of foreign capital can make a major contribution to our programmes of industrial development. We do not, rightly give any tax concessions to the foreign investor as such. At the same time, we should not impose a higher tax on inter-corporate investment from outside which comes in with government's approval than on similar Indian investment. Having regard to all these considerations, I propose that the rate of super-tax on dividends paid on inter-corporate investment, whether Indian or foreign, and whether on a majority basis or a minority basis, should be fixed at 20 per cent. In order that this change does not affect investments already made under different assumptions, the new rate of taxation will apply to investment in companies formed after 1st April, 1961.

95. My other proposal relates to the taxation of royalties received from Indian enterprises by foreign companies. The present rate, inclusive of income-tax and super-tax, comes to 63 per cent, which, it appears, is higher than the rate in any other country. The incidence of this high rate of tax is borne in the last analysis by our own industry because the foreign interest concerned naturally asks for a rate of royalty which would give an adequate return to it after deduction of taxes. In order to enable Indian industry to secure technical collaboration on more favourable terms, I propose to reduce the tax on

royalties payable on agreements approved by the Central Government after the 31st March, 1961, to 50 per cent.

96. During recent years, there has been a growing tendency on the part of companies and their directors and executives to entertain on a lavish scale at the expense of companies. While a certain amount of entertainment is unavoidable and indeed necessary in the interest of the business of the company, such expenditure quite often is out of all proportion to the benefit to the company. This ostentation and extravagance have an unhealthy effect on the society and go ill with the need for economy and our ideal of social equality. This state of affairs is partly facilitated by the fact that such expenses are counted as business expenditure for the purpose of tax. In order to correct the situation, without penalising expenditure on a reasonable scale, I have proposed that entertainment expenses in the case of companies should be admissible within specified limits as expenditure for the purpose of tax.

97. I shall now briefly refer to the more important of the amendments which I have proposed in the Income Tax Act. At present development rebate is allowed at the rate of 40 per cent of the cost in the case of a ship and at the rate of 25 per cent in the case of other plant or machinery. It is proposed to reduce the rate of 25 per cent to 20 per cent in the case of machinery or plant installed after the 31st March 1961. The development rebate of 40 per cent in the case of a ship will continue unaffected. I also propose that where a company is amalgamated with another company or where a firm is converted into a private company and machinery or plant on which development rebate is admissible to the predecessor is transferred, the development rebate already allowed in respect of the asset transferred will not be withdrawn and any unutilised portion of the rebate will be available to the successor company, subject to appropriate conditions.

98. The period of tax exemption for foreign technicians, where contracts of service have been approved by the Central Government, varies between 24 and 36 months at present. It is proposed to make such exemption available for a uniform period of 36 months. Further, if after this period of thirty six months, the technician's services are retained in India and the employer pays tax on the technician's salary, the amount paid as tax by the employer will not be treated as part of the employee's income. This concession is proposed to be given for a period of 24 months after the expiry of the initial tax-free period of 36 months. Both these concessions will apply automatically to technicians whose contracts have been approved under the existing regulation.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

AUTHORISED CAPITAL
ISSUED AND PAID-UP CAPITAL
TOTAL LOANS OUTSTANDING (As on 31-12-60)

Rs. 10,00,00,000
Rs. 5,00,00,000
Rs. 40,17,18,961

AUTHORISED BUSINESS

(a) Granting of medium and long-term loans in Rupees as well as, by arrangement with the Development Loan Fund of the U.S.A. Govt., in foreign currency, to existing public limited companies or registered co-operative societies engaged in, or new ones proposing to engage in the manufacture, preservation or processing of goods, or the generation or distribution of electricity or any other form of power, or mining, or shipping or hotel industry; also subscribing to debentures of such companies and co-operative societies; the Corporation has the option to convert at its discretion the loans granted by it into share capital.

(b) Guaranteeing of loans raised by aforesaid industrial concerns (i) which are floated in the public market and are repayable within a period not exceeding twenty five years and (ii) from scheduled banks or state co-operative banks.

(c) Guaranteeing loans raised from or credit arrangements made with any bank or financial institution in any country outside India by aforesaid industrial concerns in foreign currency.

(d) Underwriting the issue of stock, shares, bonds or debentures by aforesaid industrial concerns;

(e) Subscribing to the stock or shares of aforesaid industrial concerns;

(f) Guaranteeing of deferred payments in respect of import of capital goods from abroad or their purchase in India by aforesaid industrial concerns;

PURPOSES FOR WHICH LOANS ARE SANCTIONED

Purchase of New or second hand machinery, renovation or modernisation or replacement of

worn-out or obsolete machinery, purchase of land for factory site, and construction of factory buildings.

IMPORTANT TERMS AND CONDITIONS OF LOANS

- Security:** First charge of all the fixed assets such as land, buildings, plant and machinery & fixtures. Raw materials, stock-in-process and finished goods will not be mortgaged and will, therefore, be available for raising working capital from elsewhere.
- Margin:** Generally 50% of the value of total assets including those to be acquired with the loan. This margin may be reduced to 40% in case of industrial concerns importing plant and machinery under the U. S. Export-Import Bank Loans or other foreign currency loans (tied credits) taken by Government from foreign governments or financial institutions abroad where the cost of imported plant and machinery is 60% or above of the total capital cost of the project. The margin may be further reduced to 35% in special cases.
- Interest:** 7% per annum with a rebate of ½% for punctual payment of instalments of principal and interest.
- Repayment:** Will be spread over upto 25 years to suit borrower's convenience.

H. V. VENKATASUBBIAH
General Manager.
K. R. MENON
Chairman.

99. Another amendment authorises public financial institutions, approved by Government, which have been set up to promote industrial development by providing long-term finance, to claim as a deduction, appropriations made to a special reserve account, of sums not exceeding 10 per cent of the total income of each year till the amount carried to the reserve account becomes equal to the paid-up capital of the institution.

100. Honourable Members will be interested in another proposal which seeks to extend the benefit of the 5 years' tax holiday provided under section 15 C of the Income Tax Act to newly started hotels which satisfy certain conditions. The object of this conces-

sion is to provide an incentive for the building of hotels which are intended to cater mainly to the tourist traffic earning foreign exchange.

101. In order to stimulate construction of housing for the use of persons in low income group, I propose to provide for a deduction of Rs 600 per annum from the annual value of new residential units completed after 31st March, 1961. This concession will be available for a period of three years only from the date of completion. Further, I propose to provide for an initial depreciation allowance of 20 per cent to business undertakings for premises constructed by them for their employees drawing not more than Rs 200 per month.

102. I shall not take the time of the House in dilating upon the remaining amendments to the Income Tax Act as these are of a minor nature and have no revenue significance.

103. The changes in direct taxes will bring in an additional revenue of Rs 3 crores.

Net effect of the proposals

104. I may briefly state the net result of my proposals. The changes in the Customs duties will yield an additional revenue of Rs 29.27 crores. Excluding the amount of Rs 2.3 crores transferable to the States, Union Excise duties will bring in Rs 28.6 crores. The minor changes in Income Tax and Corporation Tax are expected to yield an income of

Rs 3 crores. As a result of these proposals, an additional revenue of Rs 60.87 crores will accrue to the Centre. This will completely wipe out the revenue deficit and give a nominal revenue surplus of Rs 27 lakhs. The overall deficit will consequently be reduced from Rs 125 crores to Rs 64 crores and will be met by the expansion of Treasury Bills.

Conclusion

105. The taxation proposals which I have just outlined will, no doubt, impose an additional burden on the people, though my aim has been to minimise its incidence on the weaker sections of the community. I would, however, have failed in my duty if, on the threshold of the Third Plan, I had called for a smaller effort. We have set ourselves the onerous task of raising the standard of living of our people and of speedily building up a self-sustaining economy. We are doing this with the willing consent of the people through democratic processes. There can be no respite from sweat and sacrifice.

106. Our efforts in mobilising resources for the Second Plan have been impressive. By raising additional revenue of about Rs 800 crores through fresh taxation we have, over the five year period, not only met entire revenue expenditure from our current income but have also financed capital expenditure to the extent of about Rs 130 crores from current surpluses. In addition, we have assisted the States by way of revenue grants of the order of Rs 700 crores, over and above their share of Income Tax and Union Excise Duties. At the same time, we have kept deficit financing well within the limits originally envisaged. I venture to submit that these are not insignificant achievements.

107. Our objectives and targets during the Third Plan are more ambitious. Throughout the next five years, it must be our endeavour to keep the pressure on prices under check by raising additional revenues and mobilising savings so as to ensure that deficit financing is kept within the limit of Rs 550 crores envisaged in the Draft Outline. We are making a good beginning in this direction in the first year of the Plan.

108. We have chosen for ourselves certain social and economic goals. We must do our utmost to achieve them. This will mean hard work and sacrifices for some time to come. But there is promise of a rich reward in the shape of higher standards of living, more employment opportunities and a better socio-economic system. The tasks that we have undertaken are of great moment for the future of the country. We dare not falter at this crucial stage.

The Finance Bill, 1961

(AS INTRODUCED IN LOK SABHA)

A

BILL

to give effect to the financial proposals of the Central Government for the financial year 1961-62.

Be it enacted by Parliament in the Twelfth Year of the Republic of India as follows:—

1. (1) This Act may be called the Finance Act, 1961.

Short title and commencement.

(2) Save as otherwise provided in this Act, sections 3 to 10 inclusive shall be deemed to have come into force on the first day of April, 1961.

Income-tax and super tax

2. (1) Subject to the provisions of sub-sections (2), (3) and (4), for the year beginning on the 1st day of April, 1961,—

(a) income-tax shall be charged at the rates specified in Part I of the First Schedule, and, in the cases to which Paragraphs A, B and C of that Part apply, shall be increased by a surcharge for purposes of the Union and a special surcharge, calculated in either case the manner provided therein; and

11 of 1922.

(b) super-tax shall, for the purposes of section 55 of the Indian Income-tax Act, 1922 (hereinafter referred to as the Income-tax Act), be charged at the rates specified in Part II of the First Schedule, and, in the cases to which Paragraphs A, B and C of that Part apply, shall be increased by a surcharge for purposes of the Union and a special surcharge, calculated in either case in the manner provided therein.

(2) In making any assessment for the year ending on the 31st day of March, 1962,—

13 of 1960.

(a) where the total income of an assessee, not being a company, includes any income chargeable under the head "Salaries", the income-tax payable by the assessee on that part of his total income which consists of such inclusion shall be an amount bearing to the total amount of income-tax payable according to the rates applicable under the operation of the Finance Act, 1960, on his total income the same proportion as the amount of such inclusion bears to his total income;

(b) where the total income of an assessee, not being a company, includes any income chargeable under the head "Salaries" on which super-tax has been or might have been deducted under the provisions of sub-section (2) of section 18 of the Income-tax Act, the super-tax payable by the assessee on that portion of his total income which consists of

such inclusion shall be an amount bearing to the total amount of super-tax payable according to the rates applicable under the operation of the Finance Act, 1960, on his total income the same proportion as the amount of such inclusion bears to his total income.

13 of 1960.

(3) In making any assessment for the year ending on the 31st day of March, 1962, where the total income of a company, other than the Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956, includes any profits and gains from life insurance business, the super-tax payable by it shall be the aggregate of the tax calculated—

31 of 1956.

(i) on the amount of profits and gains from life insurance business so included, at the rate applicable to the Life Insurance Corporation of India in accordance with Paragraph E of Part II of the First Schedule; and

(ii) on the remaining part of its total income, at the rate applicable to the company on its total income.

(4) In cases to which section 17 of the Income-tax Act applies the tax chargeable shall be determined as provided in that section, and with reference to the rates imposed by sub-section (1).

(5) In cases in which tax has to be deducted under section 18 of the Income-tax Act at the prescribed rates, the deduction shall be made at the rates specified in Part III of the First Schedule.

(6) For the purposes of this section, and of the rates of tax imposed thereby, the expression "total income" means total income as determined for the purposes of income-tax or super-tax, as the case may be, in accordance with the provisions of the Income-tax Act, and the expression "earned income" has the meaning assigned to it in clause (6A) of section 2 of that Act.

Amendment of section 4.

3. In section 4 of the Income-tax Act, in sub-sections (3)—

(i) after clause (ii), the following clause shall be inserted, namely:—

"(iii) Any income of an association or institution established in India having as its object the control, supervision, regulation or encouragement in India of the games of cricket, hockey, football, tennis or such other games or sports as the Central Government may specify in this behalf from time to time by notification in the Official Gazette:

Provided that—

(i) the association or institution applies its income, or accu-

mulates it for application, solely to the objects for which it is established;

(ii) no part of the income of the association or institution is distributed in any manner to its members except as grants to any association or institution affiliated to it; and

(iii) the association or institution is, for the time being, approved for the purpose of this clause by the Central Government by general or special order."

(ii) in clause (xiva), for the second proviso, the following provisos shall be inserted, namely:—

"Provided further that in the case of a person referred to in this clause whose contract of service was approved by the Central Government before the commencement of his service, this clause shall have effect as if for the words "during the financial year in which he arrived in India and the financial year next following", the words "during the thirty-six months commencing from the date of his arrival in India" had been substituted and as if the proviso immediately preceding had been omitted:

Provided also that where a person referred to in the proviso immediately preceding continues to remain in employment in India after the expiry of the thirty-six months commencing from the date of his arrival in India and the tax on his income chargeable under the head "Salaries" is paid by the employer to the Central Government, the tax so paid by the employer for a period not exceeding twenty-four months following the expiry of the said thirty-six months shall not be included in his total income."

(iii) in clause (xvi), after the words "International Bank for Reconstruction and Development", the words "or under a loan agreement between the Central Government and the Development Loan Fund of the United States of America," shall be inserted and after the words "under a loan agreement with the said Bank", the words "or Fund, as the case may be," shall be inserted.

Amendment of section 7

4. In section 7 of the Income-tax Act, in the proviso to Explanation 2, after the words "a Central, State or Provincial Act", the words, letters and figures "or any payment of retiring gratuity received after the 1st day of June, 1953 under the New Pension Code applicable to the members of the Defence Services" shall be inserted and shall be deemed always to have been inserted.

Amendment of section 9.

5. In section 9, in sub-section (2), after the third proviso, the following proviso and Explanation shall be inserted, namely:—

"Provided further that in respect of a building the erection of which is begun and completed after the 1st day of April, 1961, the annual value for a period of three years from the date of

such completion shall be reduced by a sum equal to the aggregate of—

(a) in respect of any residential unit (comprised in the building) whose annual value does not exceed six hundred rupees, by the amount thereof; and

(b) in respect of any residential unit (comprised in the building) whose annual value exceeds six hundred rupees, by an amount of six hundred rupees, so, however, that the income in respect of any residential unit shall in no case be a loss.

Explanation.—Where a residential unit is in the occupation of the owner for the purposes of his own residence, and the annual value thereof is computed in accordance with the first proviso, such computation will be made as if the fourth proviso had been omitted."

Amendment of section 10

6. In section 10, in sub-section (2),—

(i) in clause (vi), after the words "in the case of machinery or plant, to twenty per cent of the cost thereof to the assessee;" and before the proviso, the following paragraph shall be inserted, namely:—

"and where the building have been newly erected after the 31st day of March, 1961, such buildings used solely for the purpose of residence of persons employed in the business and drawing remuneration not exceeding two hundred rupees per mensem, a sum (which shall not be deductible in determining the written down value) equal to twenty per cent. of the actual cost of the building to the assessee in respect of the previous year of erection of the building:"

(ii) in clause (vib),—

(1) for sub-clause (i) and sub-clause (ii), the following sub-clauses shall be inserted, namely:—

"(i) in the case of a ship acquired after the 31st day of December, 1957, forty per cent. and in the case of a ship acquired before the 1st day of January, 1958, twenty-five per cent. of the actual cost of the ship to the assessee; and

(ii) in the case of machinery or plant installed before the 1st day of April, 1961, twenty-five per cent. and in the case of machinery or plant installed after the 31st day of March, 1961, twenty per cent. of the actual cost of the machinery or plant to the assessee."

(2) in the first proviso, after the words "any person other than the Government", the words "or for any consideration not connected with any amalgamation or succession referred to in clause (vic)" shall be inserted;

(iii) after clause (vib), the following clause shall be inserted, namely:—

"(vic) (i) where in a scheme of amalgamation, a company (hereinafter in this sub-clause referred to as the predecessor)

sell or otherwise transfers to the company formed in pursuance of the predecessor's amalgamation with that company (hereinafter in this sub-clause referred to as the successor) any ship, machinery or plant in respect of which development rebate has been allowed to the predecessor under clause (vib).—

(1) the successor shall continue to fulfil the conditions mentioned in the first proviso to clause (vib) in respect of the reserve created by the predecessor and in respect of the period within which such ship, machinery or plant shall not be sold or otherwise transferred and in default of any of these conditions, the provisions of sub-section (11) of section 35 shall apply to the successor as it would have applied to the predecessor had it committed the default;

(2) the balance of development rebate, if any, still outstanding to the predecessor in respect of such ship, machinery or plant shall be allowed to the successor in accordance with Explanations I and II of clause (vib), so, however, that the total period for which the balance of development rebate shall be carried forward in the assessments of the predecessor and the successor shall not exceed the period of eight years specified in Explanation I to clause (vib) and the successor shall be treated as the assessee in respect of such ship, machinery or plant for the purposes of clause (vib) and this sub-clause;

Explanation.—For the purposes of this sub-clause, "amalgamation" means the merger of two companies (each of which is hereinafter, in this Explanation referred to as the amalgamating company) to form one company (hereinafter in this Explanation referred to as the amalgamated company) in such a manner that—

(a) all the property of the amalgamating companies immediately before the amalgamation becomes the property of the amalgamated company by virtue of the amalgamation;

(b) all the liabilities of the amalgamating companies immediately before the amalgamation become the liabilities of the amalgamated company by virtue of the amalgamation; and

(c) all the shareholders of the amalgamating companies immediately before the amalgamation become shareholders of the amalgamated company by virtue of the amalgamation,

otherwise than as a result of the acquisition of property of one company by another company pursuant to the purchase of such property by the other company or as a result of the distribution of such property to the other company after the winding up of the company;

1 of 1956.

(ii) where a firm is succeeded to by a private company, as defined in the Companies Act, 1956,

in the business carried on by it as a result of which the firm sells or otherwise transfers to the private company any ship, machinery or plant, the provisions of sub-clause (i) of this clause shall, so far as may be, apply to the firm and the company;

Explanation.—The provisions of this sub-clause shall apply only where—

(a) all the property of the firm before the succession becomes the property of the company;

(b) all the liabilities of the firm immediately before the succession become the liabilities of the company; and

(c) all the partners of the firm immediately before the succession become shareholders of the company;

(iv) after clause (xiv), the following clause shall be inserted, namely:—

"(xiv) in respect of any special reserve created by a financial corporation which is engaged in providing long term finance for industrial development in India, an amount not exceeding ten per cent. of the total income carried to such reserve account;

Provided that the corporation is for the time being approved by the Central Government for the purposes of this clause;

Provided further that where the aggregate of the amounts carried to such reserve account from time to time exceeds the paid-up share capital (excluding the amounts capitalised from reserves) of the corporation no allowance under this clause shall be made in respect of such excess;"

(v) in clause (xv), the following provisos shall be inserted, namely:—

"Provided that no expenditure in the nature of entertainment expenditure shall be allowed in the case of an assessee other than a company;

Provided further that in the case of a company, no expenditure in the nature of entertainment expenditure shall be allowed which exceeds the aggregate amount computed as hereunder—

(i) on the first Rs. 10,00,000 of the profits and gains of the business (computed before making any allowance under clause (vib) on in respect of entertainment expenditure)

at the rate of 1% or Rs. 5,000 whichever is higher.

(ii) on the next Rs. 40,00,000 of the profits and gains of the business (computed in the manner aforesaid)

—at the rate of 1%

(iii) on the next Rs. 1,20,00,000 of the profits and gains of the business (computed in the manner aforesaid)

—at the rate of 1%

(iv) on the balance of the profits and gains of the business (computed in the manner aforesaid)

—nil."

Amendment of section 15C.

7. In section 15C of the Income-tax Act,—

(a) in sub-section (1), after the word "undertaking" wherever it occurs, the words "or hotel" shall be inserted;

(b) after sub-section (2), the following sub-section shall be inserted, namely:—

"(2A) This section applies to any hotel which—

(a) starts functioning on or after the first day of April, 1961 and is not formed by the splitting up, or the reconstruction of, business already in existence or by the transfer to a new business of building, machinery or plant previously used in any other business;

(b) is owned and run by a company registered in the taxable territories with a paid-up capital of not less than five hundred thousand rupees;

(c) is run in premises which are owned by the company;

(d) has such number and types of guest rooms and provides such amenities as may be prescribed, having regard to the population and the tourist importance of the place in which the hotel is located; and

(e) is for the time being approved for the purposes of this sub-section by the Central Government."

(c) in sub-sections (3) and (5), after the words "industrial undertaking" the words "or a hotel" shall be inserted;

(d) in sub-section (4),—

(i) after the words "industrial undertaking", the words "or a hotel" shall be inserted;

(ii) the following Explanation shall be inserted, namely:—

"Explanation.—The amount of dividend in respect of which the tax is not payable under this sub-section shall be computed in accordance with such rules as may be made in this behalf by the Central Board of Revenue."

(e) in sub-section (6), for the words "shall apply", the words "shall, in relation to an industrial undertaking, apply" shall be substituted;

(f) after sub-section (6), the following sub-section shall be inserted, namely:—

"(7) The provisions of this section shall, in relation to a hotel, apply to the assessment for the financial year next functioning and for the four assessments immediately succeeding."

Amendment of section 23A.

8. In section 23A of the Income-tax Act, in sub-section (1),

(a) in clause (ii), the word "or" shall be added at the end; and

(b) after clause (ii), the following clause shall be inserted and shall be deemed to have been inserted with effect from the 1st day of April, 1960, namely:—

"(iii) that at least 75 per cent. of the share capital of the company is throughout the previous year beneficially held by an institution or fund established in the taxable territories for a charitable purpose the income whereof is exempt under clause (i) of sub-section (3) of section 4."

ble purpose the income whereof is exempt under clause (i) of sub-section (3) of section 4."

Amendment of section 35.

9. In section 35 of the Income-tax Act, in sub-section (11),—

(a) in clause (i), after the words "other than the Government", the words "or for any consideration not connected with amalgamation or succession referred to in clause (vic) of sub-section (2) of section 10", shall be inserted;

(b) the following Explanation shall be inserted, namely:—

"Explanation.—For the purposes of this sub-section, a successor referred to in sub-clause (i) or sub-clause (ii) of clause (vic) of sub-section (2) of section 10 shall be deemed to be the assessee even in respect of an allowance by way of development rebate made to the predecessor, and any tax resulting from the recomputation of the total income for any previous year of the predecessor shall be payable by the successor."

(c) in clause (ii), after the words "or for any consideration not connected with amalgamation or succession referred to in clause (vic) of sub-section (2) of section 10", the following item shall be inserted, namely:—

"(21) Refractories;"

Amendment of section 56A.

10. In section 56A of the Income-tax Act, in clause (i) of sub-section (1), after item (20), the following item shall be inserted, namely:—

"(21) Refractories;"

Amendment of Act 32 of 1934.

11. The Indian Tariff Act, 1934 (hereinafter referred to as the Tariff Act), shall be amended in the manner specified in the Second Schedule.

Amendment of Act 1 of 1959.

12. In the Indian Tariff (Amendment) Act, 1949, in sections 4 and 5, for the figures "1961", the figures "1962" shall be substituted.

Amendment of Act 1 of 1944.

13. In the First Schedule to the Central Excises and Salt Act, 1944,—

(a) in Item No. 2, for the entry in the third column, the entry "Fifty-five rupees per quintal" shall be substituted;

(b) in Item No. 4,—

(i) under "I. Unmanufactured tobacco"

(i) for sub-item (1), the following sub-item shall be substituted, namely:—

"(1) If flue cured and used in the manufacture of cigarettes, twenty rupees and fifty naye paise."

(ii) in sub-item (4), for the entry in the third column, the entry "Two rupees" shall be substituted;

(iii) in sub-item (5), for the entry in the third column, the entry "One rupee and fourteen naye paise" shall be substituted;

(iv) in sub-item (8), for the entry in the third column, the entry "Twenty-two naye paise" shall be substituted;

(2) under "II. Manufactured tobacco"—

(i) for sub-item (1), the following sub-item shall be substituted, namely:—

"(1) Cigars and cheroots of which the value—

(i) exceeds Rs 25 a hundred, —Fifteen rupees.

(ii) exceeds Rs 15 a hundred, but does not exceed Rs 25 a hundred.

—Nine rupees.

(iii) exceeds Rs 5 a hundred, but does not exceed Rs 15 a hundred.

—Three rupees.

(iv) exceeds Rs 1.25 a hundred, but does not exceed Rs 5 a hundred.

—Seventy-five naye paise."

(ii) in sub-item (2),—

(A) for sub-items (2) (i), (2) (iii) and (2) (iv), the following shall be substituted, namely:—

"(i) exceeds Rs 35 a thousand. —Twenty-three rupees and seventy-five naye paise.

(ii) exceeds Rs 30 a thousand, but does not exceed Rs 35 a thousand.

—Twelve rupees and seventy-five naye paise.

(iii) exceeds Rs 25 a thousand, but does not exceed Rs 30 a thousand.

—Eleven rupees and fifty naye paise."

(B) sub-items (2) (v), (2) (vi) (2) (vii), (2) (viii) and (2) (ix) shall, respectively, be renumbered as sub-items (2) (iv), (2) (v), (2) (vi), (2) (vii) and (2) (viii);

(c) in Item No. 7, for the entry in the third column, the entry "Ninety-five rupees and fifty naye paise per kilolitre at fifteen degrees of centigrade thermometer" shall be substituted;

(d) in Item No. 9, for the entry in the third column, the entry "Sixteen per cent. ad valorem, plus ninety-two rupees and ten naye paise per metric tonne" shall be substituted;

(e) in Item No. 13, for the entry in the third column, the entry "Twenty rupees per quintal" shall be substituted;

(f) in Item No. 14, for the entries in the third column against each of the sub-items specified below, the following entries as are set out in the corresponding column against that sub-item shall be substituted, namely:—

"(i) Face cream and snow.

(ii) Face powder.

(iii) Talcum powder.

(iv) Hair lotion, cream and pomade.

(h) after Item No. 15, under the heading Chemicals, the following items shall be inserted, namely:—

"15A PLASTICS, ALL SORTS, —Twenty per cent. ad valorem."

(i) Moulding powders, granules and flakes (thermosetting and thermoplastic).

(ii) Polyethylene films, lay flat tubings and P.V.C. sheets (that is to say, Polyvinyl Chloride sheets).

15B. CELLOPHANE.

Twenty per cent. ad valorem."

(i) in Item No. 17, for the entries in the third column against sub-items (1), (2), (4), (5), (6), (7), (8), (9), and (10), the entries "Fifty naye paise per kilogram", one rupee per kilogram

"Thirty-five naye paise per kilogram", "Fifteen naye paise per kilogram", "Thirty-five naye paise per kilogram", "Thirty-five naye paise per kilogram", and "Fifty naye paise per kilogram" shall, respectively, be substituted;

(j) after Item No. 18, the following items shall be inserted, namely:—

"18A. COTTON TWIST, YARN AND THREAD, ALL SORTS, in or in relation to the manufacture of which any process is ordinarily carried on with the aid of power—

(1) of 35 or more counts; —Fifteen naye paise per kilogram.

(2) of less than 35 counts. —Ten naye paise per kilogram.

Explanation.—For multiple fold yarn, "count" means the count of the basic single yarn.

(j) after Item No. 18, the following items shall be inserted, namely:—

"18A. COTTON TWIST, YARN AND THREAD, ALL SORTS, in or in relation to the manufacture of which any process is ordinarily carried on with the aid of power—

(1) of 35 or more counts; —Fifteen naye paise per kilogram.

(2) of less than 35 counts. —Ten naye paise per kilogram.

Explanation.—For multiple fold yarn, "count" means the count of the basic single yarn.

(g) after Item No. 14, the following items shall be inserted, namely:—

"14A. SODA ASH—Two rupees per quintal.

14B. CAUSTIC SODA—

(i) if in a solid form—Four rupees per quintal.

(ii) if in lye—Four rupees per quintal on the basis of hundred per cent. strength of caustic soda.

14C. GLYCERINE. —Seventeen rupees per quintal.

14D. DYES DERIVED FROM COAL TAR AND COAL TAR DERIVATIVES, USED IN ANY DYEING PROCESS, ALL SORTS.

—Fifteen per cent. ad valorem.

14E. PATENT OR PROPRIETARY MEDICINES AS DEFINED IN CLAUSE (d) OF SECTION 3 OF THE DRUGS ACT, 1940 (23 OF 1940), NOT CONTAINING ALCOHOL. —Ten per cent. ad valorem.

14F. COSMETICS AND TOILET PREPARATIONS, NAMELY:—

(i) Face cream and snow.

(ii) Face powder.

(iii) Talcum powder.

(iv) Hair lotion, cream and pomade.

(h) after Item No. 15, under the heading Chemicals, the following items shall be inserted, namely:—

"15A PLASTICS, ALL SORTS, —Twenty per cent. ad valorem."

(i) Moulding powders, granules and flakes (thermosetting and thermoplastic).

(ii) Polyethylene films, lay flat tubings and P.V.C. sheets (that is to say, Polyvinyl Chloride sheets).

15B. CELLOPHANE.

Twenty per cent. ad valorem."

(i) in Item No. 17, for the entries in the third column against sub-items (1), (2), (4), (5), (6), (7), (8), (9), and (10), the entries "Fifty naye paise per kilogram", one rupee per kilogram

"Thirty-five naye paise per kilogram", "Fifteen naye paise per kilogram", "Thirty-five naye paise per kilogram", "Thirty-five naye paise per kilogram", and "Fifty naye paise per kilogram" shall, respectively, be substituted;

(j) after Item No. 18, the following items shall be inserted, namely:—

"18A. COTTON TWIST, YARN AND THREAD, ALL SORTS, in or in relation to the manufacture of which any process is ordinarily carried on with the aid of power—

(1) of 35 or more counts; —Fifteen naye paise per kilogram.

(2) of less than 35 counts. —Ten naye paise per kilogram.

Explanation.—For multiple fold yarn, "count" means the count of the basic single yarn.

(j) after Item No. 18, the following items shall be inserted, namely:—

"18A. COTTON TWIST, YARN AND THREAD, ALL SORTS, in or in relation to the manufacture of which any process is ordinarily carried on with the aid of power—

(1) of 35 or more counts; —Fifteen naye paise per kilogram.

(2) of less than 35 counts. —Ten naye paise per kilogram.

Explanation.—For multiple fold yarn, "count" means the count of the basic single yarn.

(g) after Item No. 14, the following items shall be inserted, namely:—

"14A. SODA ASH—Two rupees per quintal.

14B. CAUSTIC SODA—

(i) if in a solid form—Four rupees per quintal.

(ii) if in lye—Four rupees per quintal on the basis of hundred per cent. strength of caustic soda.

14C. GLYCERINE. —Seventeen rupees per quintal.

14D. DYES DERIVED FROM COAL TAR AND COAL TAR DERIVATIVES, USED IN ANY DYEING PROCESS, ALL SORTS.

—Fifteen per cent. ad valorem.

14E. PATENT OR PROPRIETARY MEDICINES AS DEFINED IN CLAUSE (d) OF SECTION 3 OF THE DRUGS ACT, 1940 (23 OF 1940), NOT CONTAINING ALCOHOL. —Ten per cent. ad valorem.

14F. COSMETICS AND TOILET PREPARATIONS, NAMELY:—

(i) Face cream and snow.

(ii) Face powder.

(iii) Talcum powder.

(iv) Hair lotion, cream and pomade.

(h) after Item No. 15, under the heading Chemicals, the following items shall be inserted, namely:—

"15A PLASTICS, ALL SORTS, —Twenty per cent. ad valorem."

(i) Moulding powders, granules and flakes (thermosetting and thermoplastic).

(ii) Polyethylene films, lay flat tubings and P.V.C. sheets (that is to say, Polyvinyl Chloride sheets).

15B. CELLOPHANE.

Twenty per cent. ad valorem."

(i) in Item No. 17, for the entries in the third column against sub-items (1), (2), (4), (5), (6), (7), (8), (9), and (10), the entries "Fifty naye paise per kilogram", one rupee per kilogram

"Thirty-five naye paise per kilogram", "Fifteen naye paise per kilogram", "Thirty-five naye paise per kilogram", "Thirty-five naye paise per kilogram", and "Fifty naye paise per kilogram" shall, respectively, be substituted;

(j) after Item No. 18, the following items shall be inserted, namely:—

"18A. COTTON TWIST, YARN AND THREAD, ALL SORTS, in or in relation to the manufacture of which any process is ordinarily carried on with the aid of power—

(1) of 35 or more counts; —Fifteen naye paise per kilogram.

(2) of less than 35 counts. —Ten naye paise per kilogram.

Explanation.—For multiple fold yarn, "count" means the count of the basic single yarn.

—Ten per cent. ad valorem."

(n) after Item No. 29, the following item shall be inserted, namely:—

"29A. AIR CONDITIONING MACHINERY, ALL SORTS. —Twenty per cent. ad valorem."

(o) after Item No. 33, the following item shall be inserted, namely:—

"33A. WIRELESS RECEIVING SETS, ALL SORTS, INCLUDING TRANSISTOR SETS AND RADIOGRAMS, WITH OR WITHOUT LOUDSPEAKER. —Twenty per cent. ad valorem."

(p) in Item No. 38, for the entry in the third column, the entry "Sixty-five naye paise for every 1,000 matches or fraction thereof" shall be substituted;

(q) after Item No. 39, the following item shall be inserted, namely:—

"40. REFRIGERATORS AND PARTS THEREOF, SUCH AS ARE SPECIALLY DESIGNED FOR USE WITH REFRIGERATORS. —Twenty per cent. ad valorem."

Amendment of Act 74 of 1956.

14. In the Central Sales Tax Act, 1956, in section 14,—

(i) in item (iia), for the figures "12", the figures "19" shall be substituted;

(ii) in item (vii), for the figures and letter "12A", the figures "22" shall be substituted;

(iii) in item (viii), for the figure "8", the figure "1" shall be substituted;

(iv) in item (ix), for the figure "9", the figure "4" shall be substituted;

(v) in item (x), for the figures and letter "12B", the figures "21" shall be substituted;

(vi) after item (x), the following items shall be inserted and shall be deemed

(2) under "II. Manufactured tobacco"—

(A) for sub-item (1), the following sub-item shall be substituted, namely:—

"(1) Cigars and cheroots of which the value—

(i) exceeds Rs 25 a hundred. Per hundred.

Three rupees and seventy-five naye paise.

(ii) exceeds Rs 15 a hundred, but does not exceed Rs 25 a hundred.

—Two rupees and twenty-five naye paise.

(iii) exceeds Rs 5 a hundred, but does not exceed Rs 15 a hundred.

—Seventy-five naye paise.

(iv) exceeds Rs 1.25 a hundred, but does not exceed Rs. 5 a hundred.

—Fifteen naye paise."

(B) in sub-item (2), for sub-items (2)(i) and (2)(ii), the following shall be substituted, namely:—

"(2)(i) exceeds Rs 35 a thousand.

—Seven rupees and seventy naye paise."

(C) the sub-items (2) (iii), (iv), (2) (v), (2) (vi), (2) (vii), (2) (viii) and (2) (ix) shall, respectively, be re-numbered as sub-items (2) (ii), (2) (iii), (2) (iv), (2) (v), (2) (vi), (2) (vii) and (2) (viii);

(3) after Item No. 19, the following Item shall be inserted, namely:—

"20. SILK FABRICS.

—Thirty naye paise per square metre."

(d) in the Second Schedule, in Part III,—

(i) in clause (a) of paragraph 5, after the words "cotton fabrics", the words "silk fabrics" shall be inserted; and

(ii) in the proviso to paragraph 6, after the words "cotton fabrics", the words "silk fabrics" shall be inserted.

Amendment of Act 2 of 1899.

16. In Schedule I to the Indian Stamp Act, 1899, in entry 47,—

(a) in sub-entry A(1) (i), in the first column, the words "fifteen naye paise or" shall be omitted; and

(b) in sub-entry E, in the second column, the following proviso shall be inserted, namely:—

"Provided that if the total amount of duty payable is not a multiple of five naye paise, the total amount shall be rounded off to the next higher multiple of five naye paise."

Discontinuance of salt duty, 1 of 1944.

17. For the year beginning on the first day of April, 1961, no duty under the Central Excises and Salt Act, 1944 or the Tariff Act shall be levied in respect of salt manufactured in, or imported into, India.

Declaration under the Provisional Collection of Taxes Act, 1931.

16 of 1931.

It is hereby declared that it is expedient in the public interest that the provisions of clauses 11, 1st 13 and 15 of this Bill shall have immediate effect under the Provisional Collection of Taxes Act, 1931.

Where the individual has no child wholly or mainly dependent on him or where the Hindu undivided family has no minor coparcener.

Where the individual has one child wholly or mainly dependent on him or where the Hindu undivided family has one minor coparcener.

Where the individual has more than one child wholly or mainly dependent on him or where the Hindu undivided family has more than one minor coparcener.

(i) no income-tax shall be payable on a total income which does not exceed the limit specified below;

(ii) the income-tax payable shall in no case exceed half the amount by which the total income exceeds the said limit;

(iii) the income-tax payable by an individual who is married or a Hindu undivided family whose total income exceeds in either case Rs 20,000 shall not exceed the aggregate of—

(a) the income-tax which would have been payable if the total income had been Rs 20,000;

(b) half the amount by which the total income exceeds Rs 20,000;

The limit aforesaid shall be—

(i) Rs 6,000 in the case of every Hindu undivided family which as at the end of the previous year satisfies either of the following conditions, namely:—

(a) that it has at least two members entitled to claim partition who are not less than eighteen years of age; or

(b) that it has at least two members entitled to claim partition who are not lineally descended one from the other and who are not lineally descended from any other living member of the family;

(ii) Rs 3,000 in every other case.

Surcharges on income-tax

The amount of income-tax computed at the rates hereinbefore

THE FIRST SCHEDULE

(See section 2)

PART I

Income-tax and surcharges on income-tax

Paragraph A

(i) In the case of every individual who is not married and every Hindu undivided family whose total income does not exceed Rs.20,000 in either case—

Rates of Income-tax

Where the individual has one child wholly or mainly dependent on him or where the Hindu undivided family has one minor coparcener.

Where the individual has more than one child wholly or mainly dependent on him or where the Hindu undivided family has more than one minor coparcener.

	Rs.	Rs.	Rs.	Nil
(1) On the first 3,000 of total income.	3,000	3,300 of total income.	3,600 of total income.	
(2) On the next 2,000 "	2,000	1,700 "	1,400 "	3%
(3) On the next 2,500 "	2,500	2,500 "	2,500 "	6%
(4) On the next 2,500 "	2,500	2,500 "	2,500 "	9%
(5) On the next 2,500 "	2,500	2,500 "	2,500 "	11%
(6) On the next 2,500 "	2,500	2,500 "	2,500 "	14%
(7) On the next 5,000 "	5,000	5,000 "	5,000 "	18%

in the case of every unregistered firm or other association of persons, not being a case to which any other Paragraph of this Part applies:—

(1) On the first ...	1,000 of total income	Nil
(2) On the next ...	4,000 "	3%
(3) On the next ...	2,500 "	6%
(4) On the next ...	2,500 "	9%

(7) On the next ...	2,500 "	18%
(8) On the balance of total income	5,000 "	25%

specified shall be increased by the aggregate of the surcharges calculated as under:—

(a) A surcharge for purposes of the Union equal to the sum of—

(i) five per cent. of the amount of income-tax; and

(ii) where the earned income included in the total income exceeds Rs 1,00,000, ten per cent. of the difference between the amount of income-tax which would have been payable on the whole of the earned income included in the total income if such earned income had been the total income and the amount of income-tax payable on a total income of Rs 1,00,000;

(b) A special surcharge at fifteen per cent. of the difference between the amount of income-tax on the total income and the amount of income-tax on the whole of the earned income, if any, included in the total income if such earned income had been the total income:

Provided that—

(i) no surcharge for purposes of the Union shall be payable where the total income does not exceed the limit specified below;

(ii) no special surcharge shall be payable in the case of an assessee whose total income does not include any income from dividend on ordinary shares if his total income does not exceed the limit specified below, and where the total income includes any dividends on ordinary shares, such limit shall be increased by

Rs 1,500 or the amount of the said dividends, whichever is less:

Provided further that—

(a) where the total income includes any dividends on ordinary shares, the surcharge for purposes of the Union and the special surcharge shall not in each case exceed half the amount by which the total income exceeds the respective limits applicable in either case;

(b) the surcharge for purposes of the Union and the special surcharge, both together, shall not exceed half the amount by which the total income exceeds the limit specified below;

The limit aforesaid shall be—

(i) Rs.15,000 in the case of every Hindu undivided family which satisfies as at the end of the previous year either of the following conditions, namely:—

(a) that it has at least two members entitled to claim partition who are not less than eighteen years of age; or

(b) that it has at least two members entitled to claim partition who are not lineally descended one from the other and who are not lineally descended from any other living member of the family;

(ii) Rs 7,500 in every other case.

Explanation.—For the purposes of this Paragraph, in the case of every Hindu undivided family governed by the Mitakshara law, a son shall be deemed to be entitled to claim partition of the coparcenary property against his father, or grand-father notwithstanding any custom to the contrary.

Paragraph B

In the case of every local authority.—

Rate of income-tax

On the whole of the total income ... 30%

Surcharge on income-tax

The amount of income-tax computed at the rate hereinbefore specified shall be increased by a surcharge for purposes of the Union of 5 per cent. of the amount of income-tax.

Paragraph C

In every case in which under the provisions of the Income-tax Act, income-tax is to be charged at the maximum rate,—

Rate of income-tax

On the whole of the total income ... 25%

Surcharges on income-tax

The amount of income-tax computed at the rate hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:—

(a) a surcharge for purposes of the Union of five per cent. of the amount of income-tax; and

(b) a special surcharge of fifteen per cent. of the amount of income-tax.

Paragraph D

In the case of every company,—

Rate of income-tax

On the whole of the total income ... 20%

Paragraph E

In the case of every registered firm,—

Rates of income-tax

- (1) On the first Rs 40,000 of total income ... Nil
- (2) On the next Rs 35,000 of total income ... 5%
- (3) On the next Rs 75,000 of total income ... 6%
- (4) On the balance of total income ... 9%

PART II

Super-tax and surcharges on Super-tax

Paragraph A

In the case of every individual, Hindu undivided family, unregistered firm and other association of persons, not being a case to which any other Paragraph of this applies,—

Rates of super-tax

- (1) On the first Rs 20,000 of total income ... Nil
- (2) On the next Rs 5,000 of total income ... 5%
- (3) On the next Rs 5,000 of total income ... 15%
- (4) On the next Rs 10,000 of total income ... 20%
- (5) On the next Rs 10,000 of total income ... 30%
- (6) On the next Rs 10,000 of total income ... 35%
- (7) On the next Rs 10,000 of total income ... 40%
- (8) On the balance of total income ... 45%

Sucharges on super-tax

The amount of super-tax computed at the rates hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:—

(a) A surcharge for purposes of the Union equal to the sum of—

(i) five per cent. of the amount of super-tax; and

(ii) where the earned income included in the total income exceeds Rs 1,00,000, ten per cent. of the difference between the amount of super-tax which would have been payable on the whole of the earned income included in the total income, if such earned income had been the total income and the amount of super-tax payable on a total income of Rs 1,00,000;

(b) A special surcharge at fifteen per cent. of the difference between the amount of super-tax on the total income and the amount of super-tax on the whole of the earned income, if such earned income had been the total income.

Paragraph B

In the case of every local authority.—

Rate of super-tax

On the whole of the total income ... 16%

Surcharge on super-tax

The amount of super-tax computed at the rate hereinbefore specified shall be increased by a surcharge for purposes of the Union of 12½ per cent. of the amount of super-tax.

Paragraph C

In the case of every association of persons being a co-operative society as defined in clause (5B) of section 2 of the Income-tax Act,—

Rates of super-tax

- (1) On the first Rs 25,000 of total income ... Nil
- (2) On the balance of total income ... 16%

Surcharge on super-tax

The amount of super-tax computed at the rates hereinbefore specified shall be increased by a surcharge for purposes of the Union of 12½ per cent. of the amount of super-tax.

Paragraph D

31 of 1956.

In the case of every company, other than the Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956,—

Rates of super-tax

Or, the whole of the total income ... 55%:

Provided that—

(i) a rebate at the rate of 45 per cent. on so much of the total income as consists of dividends from a subsidiary Indian company formed and registered before the 1st day of April, 1961; at the rate of 40 per cent. on so much of the total income as consists of dividends from any other Indian company formed and registered on or after the 1st day of April, 1959; and at the rate of 35 per cent. on the balance of the total income shall be allowed in the case of any company which—

(a) in respect of its profits liable to tax under the Income-tax Act for the year ending on the 31st day of March, 1962, has made the prescribed arrangements for the declaration and payment within India of the dividends payable out of such profits in accordance with the provisions of sub-section (3D) of section 18 of that Act; and

(b) is such a company as is referred to in sub-section (9) of section 23A of the Income-tax Act with a total income not exceeding Rs 25,000;

(ii) a rebate at the rate of 45 per cent. on so much of the total income as consists of dividends from a subsidiary Indian company formed and registered before the 1st day of April, 1961; at the rate of 35 per cent. on so much of the total income as consists of dividends from any other Indian company formed and registered on or after the 1st day of April, 1959; and at the rate of

30 per cent. on the balance of the total income shall be allowed in the case of any Indian company which satisfies condition (a) but not condition (b) of the preceding clause;

(iii) a rebate at the rate of 45 per cent. on so much of the total income as consists of dividends from a subsidiary Indian company formed and registered before the 1st day of April, 1961; at the rate of 22 per cent. on so much of the total income as consists of dividends from a Indian company, not being a subsidiary, formed and registered on or after the 1st day of April, 1959 and before the 1st day of April, 1961; at the rate of 35 per cent. on so much of the total income as consists of dividends from any Indian company formed and registered on or after the 1st day of April, 1961; at the rate of 25 per cent. on so much of the total income as consists of royalties received from an Indian concern in pursuance of an agreement made by it with the Indian concern on or after the 1st day of April 1961 and which has been approved by the Central Government in this behalf; and at the rate of 12 per cent. on the balance of the total income shall be allowed in the case of any company not entitled to a rebate under either of the preceding clauses:

Provided further that—

(i) the amount of the rebate under clause (i) or clause (ii) of the preceding proviso shall be reduced by the sum, if any, equal to the amount or the aggregate of the amounts, as the case may be, computed as hereunder:—

13 OF 1960.

(a) on the aggregate of the sums computed in the manner provided in clause (i) of the second proviso to Paragraph D of Part II of the First Schedule to the Finance Act, 1960 as reduced by the amount, if any, which is deemed to have been taken into account, in accordance with clause (ii) of the said proviso, for the purpose of reducing the rebate mentioned in clause (i) of the said proviso to nil; and—at the rate of 12½%.

(b) on the amount representing the face value of any bonus shares or the amount of any bonus issued to its shareholders during the previous year with a view to increasing the paid-up capital;—

(ii) where the sum arrived at in accordance with clause (i) of this proviso exceeds the amount of the rebate arrived at in accordance with clause (i) or clause (ii), as the case may be, of the preceding proviso, only so much of the amounts of reduction mentioned in sub-clauses (a) and (b) of clause (i) of this proviso as is sufficient, in that order, to reduce the rebate to nil shall be deemed to have been taken into account for the purpose:

Provided further that the super-tax payable by a company, the total income of which exceeds rupees twenty-five thousand, shall not exceed the aggregate of—

(a) the super-tax which have been payable by the company if

THE INDIA MACHINERY COMPANY, LIMITED

'Atlas' Automatic Railway Wagon Weighbridge

Registered and Sales Office:

its total income exceeds rupees twenty-five thousand; and
(b) half the amount by which its total income exceeds rupees, twenty-five thousand.

Explanation.—For the purposes of this Paragraph, where any portion of the profits and gains of a company is not included in its total income by reason of such portion being agricultural income, the amount representing the face value of any bonus shares and the amount of any bonus issued to its shareholders shall each be deemed to be such proportion thereof as the average of the total income of the company in the five previous years in which the company has been in receipt of taxable income immediately preceding the relevant previous year bears to the average of its total profits and gains (excluding capital receipts) for the preceding five years aforesaid, reduced by such allowances as may be admissible under the Income-tax Act which

have not been taken into account by the company in its profit and loss accounts for the preceding five years aforesaid.

PARAGRAPH E 31 of 1956.

In the case of the Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956,—

Rates of super-tax

On the whole of its profits and gains from life insurance business ... 22.5%

PART III

Rates for deduction of tax under section 18 of the Income-tax Act of the prescribed rates.

In every case in which under the provisions of section 18 of the Income-tax Act, tax is to be deducted at the prescribed rates deduction shall be made from the income subject to deduction at the following rates:—

	Income-tax		Super-tax	
	Rate of income-tax	Surcharge for purposes of the Union	Special surcharge	Super-tax Rates of super-tax surcharges
1. In the case of a person other than a company—				
(a) in every case, on the whole income (excluding interest payable on any security of the Central Government issued or declared to be income-tax free), and	25%	1.25%	3.75%	
(b) in addition, where the person is one whom the person responsible for paying the income has no reason to believe to be resident in the taxable territories, on the whole income.				Super-tax and surcharges on super-tax in accordance with the provisions of clause (b) of sub-section (1) of section 17 of the Income-tax Act.
2. In the case of a company—				
(a) in every case—				20%
(i) on the whole income (excluding interest payable on any security of the Central Government issued or declared to be income-tax free); and				
(ii) on the whole income (excluding dividends payable by an Indian company referred to in section 56A of the Income-tax Act); and				10%
(b) in addition, where the company is neither an Indian company nor a company which has made the prescribed arrangements for the declaration and payment of dividends within India,—				
(i) on the income from dividends (excluding dividends payable by any of its subsidiary Indian companies formed and registered before the 1st day of April, 1961, or by an Indian company referred to in section 56A of the Income-tax Act)—				23%
(1) on dividends payable by an Indian company, not being a subsidiary, formed and registered on or after the 1st day of April, 1959 and before the 1st day of April, 1961

(iii) in Item No. 9(5), for the entries in fourth and sixth columns, the entries "Rs 3.07 per kilogram" and "Rs 3.00 per kilogram", respectively, shall be substituted;

(iv) in Item No. 12(4), in the third column, the word "Revenue" shall be inserted, and for the entry in the fourth column, the entry "50 per cent. *ad valorem*" shall be substituted;

(v) in Item No. 22(3), for the entries in the fourth column against sub-items (a) and (b), the entries "Rs 23.50 per litre" and "Rs 14.70 per litre", respectively, shall be substituted;

(vi) in Item No. 22(4),—

(1) for the entry in the fourth column against sub-item (a), the entry "Rs 44.00 per litre" of the strength of London proof or 170 per cent. *ad valorem*, whichever is higher" shall be substituted;

(2) for the entry in the fourth column against sub-item (b) (i), the entry "Rs 58.70 per litre or 170 per cent. *ad valorem*, whichever is higher, plus the excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty" shall be substituted;

(3) for the entry in the fourth column against sub-item (b) (ii), the entry "Rs 44.00 per litre of the strength of London proof or 170 per cent. *ad valorem*, whichever is higher, plus the excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty" shall be substituted;

(vii) in Items Nos. 22(5) (b) (i) and 22(5) (b) (ii), in each of the entries in the fourth, fifth and sixth columns, the words "plus the excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty" shall be added at the end;

(viii) in Item No. 24(3), for the entries in the fourth and sixth columns, the entry "Rs 33.00 per kilogram" shall be substituted;

(ix) in Item No. 28A, in each of the entries in the fourth, fifth and sixth columns, the words "plus the excise duty for the time being leviable on like articles if produced or manufactured in India, and where such

duty is leviable at different rates, the highest duty" shall be added at the end;

(x) in Items Nos. 28(3) and 39, for the entry against each of them in the fourth column, the entry "10 per cent. *ad valorem*" shall be substituted;

(xi) in Items Nos. 28(4), 28(14), 28(30), 28(34) 30(1), 30(13), 30(15), 30(16), 47(3), 47(4), 47(5) 47(6), 48(3), 48(7), 48(8), 48(9) and 70(1), in the entry against each of them in the fourth column, the words "plus the excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty" shall be added at the end;

(xii) in Items Nos. 28(8) and 66(b), for the entry against each of them in the fourth column, the entry "50 per cent. *ad valorem*, plus the excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty" shall be substituted;

(xiii) in Item No. 30, for the figures "40" and "30" in the fourth and fifth columns, the figures "50" and "40", respectively, shall be substituted;

(xiv) in Items Nos. 31, 31(2), 31(3), 45(b), 45(c) and 71(b), for the entry against each of them in the fourth column, the entry "75 per cent. *ad valorem*" shall be substituted;

(xv) in Item No. 31(1), for the entries in the fourth and sixth columns, the entries "75 per cent. *ad valorem*" and "60 per cent. *ad valorem*", respectively, shall be substituted;

(xvi) in Items Nos. 39(1), 39(2), 39(3), 40, 63(28) and 87, for the entry against each of them in the fourth column, the entry "80 per cent. *ad valorem*" shall be substituted;

(xvii) in Item No. 44, for the figures "40" in the fourth column the figures "50" shall be substituted;

(xviii) in Items Nos. 45(a) 53, 80 and 81, for the entry against each of them in the fourth column, the entry "100 per cent. *ad valorem*" shall be substituted;

(xix) in Item Nos. 72, 72(1), 72(2) and 72(3), for the entry against each of them in the fourth column, the entry "15 per cent. *ad valorem*" shall be substituted;

(xx) in Items Nos. 73, 73(1) and 77, for the entries against each of them in the fourth and fifth columns, the entries "50 per cent. *ad valorem*" and "40 per cent. *ad valorem*", respectively, shall be substituted;

(xxi) in Items Nos. 73(21), 73(22) and 75(19), for the entry against each of them in the fourth column, the following entry shall be substituted, namely:—

"The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty

leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.";

(xxii) in Items Nos. 74(2) and 74(3), for the entry against

each of them in the fourth column, the entry "25 per cent. *ad valorem*" shall be substituted; and

(xxiii) in Item No. 75, the figures "75" in the fourth column, the figures "100" shall be substituted.

PART II

Item No.	Name of Article	Nature of duty	Standard rate of duty	Preferential rate of duty if the article is the produce or manufacture of		Duration of protective rates of duty
				The United Kingdom	A British Colony	
1	2	3	4	5	6	7
In the First Schedule to the Tariff Act,—						
(i) after Item No. 12(4), the following Item shall be inserted, namely:—						
"12(4A)	Malt	Revenue	100 per cent. <i>ad valorem</i> .	...	...	...
(ii) after No. 59(8), the following Item shall be inserted, namely:—						
"59(7)	China and Porcelainware, all sorts,— (1) Tableware. (2) Sanitaryware. (3) Glazed tiles. (4) Not otherwise specified.	Revenue	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...
(iii) after Item No. 60(8), the following Item shall be inserted, namely:—						
"60(9)	Glass and glassware,— (1) Sheet glass and Plate glass. (2) Laboratory glassware. (3) Glass shells, glass globes and chimneys for lamps and lanterns. (4) Other glassware including tableware.	Revenue	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...
(iv) after Item No. 63(4), the following Item shall be inserted, namely:—						
"63(14A)	High carbon steel strips of thickness .5 mm. or below.	Preferential Revenue	50 per cent. <i>ad valorem</i> .	40 per cent. <i>ad valorem</i> .	...	...
(v) after Item No. 64(5), the following Item shall be inserted, namely:—						
"64(6)	Copper and copper alloys containing not less than fifty per cent. by weight of copper— (1) Manufactures, the following, namely, plates, sheets, circles, strips and foils in any form or size. (2) Pipes and tubes.	Revenue	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...
(vi) after Item No. 68(4), the following Item shall be inserted, namely:—						
"68(5)	Zinc— (1) Manufactures, the following, namely, plates, sheets, circles, strips and foils in any form or size. (2) Pipes and tubes.	Revenue	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...
(vii) after Item No. 72(40), the following Item shall be inserted, namely:—						
"72(41)	Refrigerators and parts thereof, such as are specially designed for use with refrigerators; and air conditioning machinery, all sorts.	Revenue	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...
(viii) after Item No. 73(4), the following Item shall be inserted, namely:—						
"73(4A)	Wireless receiving sets, all sorts, including transistor sets and radiograms, with or without loudspeaker.	Revenue	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...
(ix) after Item No. 73(22), the following Item shall be inserted, namely:—						
"73(23)	Nichrome and other electrical resistance wires and strips.	Revenue	100 per cent. <i>ad valorem</i> .	...	...	...
(x) after Item No. 82(5), the following Item shall be inserted, namely:—						
"82(6)	(A) Plastics, all sorts— (i) Moulding powders, granules and flakes (thermosetting and thermoplastic). (ii) Polyethylene films, layflat tubings and P.V.C. sheets (that is to say, Polyvinyl Chloride sheets).	Revenue	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...
	(B) Cellophane	Revenue	The excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty; and the duty so leviable shall be in addition to the duty which would have been levied if this entry had not been inserted.	...	...	...

Indian Finance Budget Supplement 1961

Indian Finance Budget Supplement 1961

SUBJECTS AND REASONS
of this Bill is to amend the financial provisions of the Central Government financial year 1961-62 and for certain connected matters. The Notes on Clauses explain the various provisions contained in the Bill.

MORARJI DESAI.

NEW DELHI,
The 28th February, 1961.

Notes on Clauses

Clause 2 prescribes the rates of income-tax and super-tax for purposes of assessment for the financial year 1961-62 and for deduction of tax at source from interest on securities, dividends etc., during the same year. In the cases of assesses other than companies, the only change is that the rate of surcharge on earned income above Rs 1 lakh has been raised from 5 per cent. to 10 per cent. of the amount of income-tax and super-tax.

In the case of companies, (i) the rate of income-tax is the same as in the last year, i.e., 20 per cent. for all companies;

(ii) the effective rate of super-tax applicable to income other than dividends of an Indian company in which the public are substantially interested and whose total income does not exceed Rs 25,000 and of any other Indian company also remains the same as in the last year, i.e., 20 per cent. and 25 per cent. respectively;

(iii) the effective rate of super-tax applicable to income, other than dividends and certain royalties, of such foreign companies as do not declare their dividends in India continues to remain the same as in the last year, i.e., 43 per cent.

(iv) The effective rates of super-tax on dividends received by a company (Indian or foreign) from an Indian company formed and registered before the 1st April, 1961 will be the same as for the financial year 1960-61. In the case of dividends payable by an Indian company formed and registered on or after the 1st April, 1961, the effective rates of super-tax have been fixed at 15 per cent. in the case of an Indian company in which the public are substantially interested and whose income does not exceed Rs 25,000, and at 20 per cent. in the case of all other companies, Indian or foreign;

(v) the effective rate of super-tax on royalties received by a foreign company (which does not declare dividends in India) from an Indian concern in pursuance of an agreement made by the former with the Indian concern on or after the 1st April, 1961 which has been approved by the Central Government, has been fixed at 30 per cent;

(vi) the effective rate at which super-tax is payable with

reference to bonus issues has been reduced from 30 per cent. to 12½ per cent.

The rates for deduction of tax at source remain the same as in the financial year 1960-61 except that in the case of dividends and certain royalties payable to foreign companies which do not declare their dividends in India, the rates have been fixed at the rates corresponding to those mentioned in (iv) and (v) above.

Clause 3 makes the following amendments to sub-section (3) of section 4 of the Income-tax Act:—

Sub-clause (i) inserts a new clause (iia) to provide for exemption from tax in the case of the income of an association of institution established in India wholly for controlling, supervising regulating or encouraging in India the games of cricket, hockey, football, tennis and such other games or sports as may be specified by the Central Government from time to time in the Official Gazette.

Sub-clause (ii) amends clause (xiva) to secure that the exemption from tax in respect of the salary received by a foreign technician whose contract of service has been approved by the Central Government will be available for a period of 36 months from the date of his arrival in India and that if for a further period not exceeding twenty four months, the tax in respect of his salary is paid to the Central Government by his employer, such tax shall not be treated as a part of the technician's total income.

Sub-clause (iii) amends clause (xvi) to extend to the Development Loan Fund of the United States of America the exemption available at present to the International Bank for Reconstruction and Development, in respect of interest received from an industrial undertaking or corporation in certain circumstances.

Clause 4 amends section 7 of the Income-tax Act to provide exemption from tax in respect of retiring gratuity received after the 1st June, 1953 by the members of Defence Services under the New Pension Code.

Clause 5 amends section 9 of the Income-tax Act to provide that in respect of a building erected on or after the 1st day of April, 1961 and which is let on rent to tenants, the annual value of each residential unit shall be reduced by the amount of its annual value or Rs 600, whichever is less, for a period of three years from the completion of the building.

Clause 6 makes the following amendments in sub-section (2) of section 10 of the Income-tax Act:—

Sub-clause (i) amends clause (vi) to secure that in respect of buildings erected after the 31st March, 1961 by an employer for the residence of persons employ-

ed in the business carried on by him and receiving remuneration not exceeding Rs 200 per month, an initial depreciation of 20 per cent. of the actual cost of the buildings will be allowed for the year of their erection.

Sub-clause (ii) makes an amendment to clause (vib) to secure that in respect of new plant or machinery installed on or after the 1st April, 1961, the development rebate will be admissible at the rate of 20 per cent. of the actual cost thereof. In the case of new ships, however, the existing rate of 40 per cent. remains unchanged.

Sub-clause (iii) inserts a new clause (vic) to provide that subject to certain conditions where a company is amalgamated with another company or where a firm is converted into a private company and ship, machinery or plant on which development rebate is admissible to the predecessor is transferred by the predecessor to the successor, the development rebate already allowed in respect of the asset transferred will not be withdrawn and any unutilised portion of the development rebate shall be available to the successor.

Sub-clause (iv) inserts a new clause (xiva) to enable an approved financial corporation engaged in providing long term finance for industrial development to claim as a deduction from its taxable profits, amounts appropriated to a special reserve account, not exceeding 10 per cent. of the total income till the amount carried to the reserve account equals the paid-up capital of the corporation.

Sub-clause (v) amends clause (xvi) to provide that no allowance on account of expenses for entertainment shall be made in the case of an assessee other than a company and, further, that in the case of companies, the amount allowable shall be restricted to certain specified limits.

Clause 7 extends the benefit of the five year tax holiday at present enjoyed by new industrial undertakings under section 15C to new hotels which start functioning on or after the 1st April, 1961 and satisfy certain conditions and also amends sub-section (4) to enable the Central Board of Revenue to prescribe rules for computing the amount of the dividend exempt under the said sub-section.

Clause 8 amends section 23A of the Income-tax Act to secure that the provisions of that section shall not be applicable to a company in which at least 75 per cent. of the share capital is held by charitable institutions or funds income whereof is exempt under clause (i) of sub-section (3) of section 4 of the Income-tax Act.

Clause 9 makes amendments to section 35 of the Income-tax Act, consequential to the amendments proposed in sub-clause (iii) of clause 6.

Clause 10 amends section 56A of the Income-tax Act by extending the application of that section to the dividends paid by an Indian company engaged in the manufacture of refractories.

Clause 11 read with the Second Schedule seeks to increase the import duties on certain items. The principal changes are:—

(i) the duty on betelnuts is proposed to be increased by approximately 36%;

(ii) the duty on tobacco, unmanufactured, is proposed to be increased by approximately 50%;

(iii) the duty on textile manufactures, not otherwise specified, is proposed to be raised from 50% to 100%;

(iv) the duty on iron and steel manufactures, not otherwise specified, is proposed to be raised from 35% to 50%;

(v) the duty on certain items of machinery and their component parts is proposed to be raised from 10% to 15%;

(vi) the duty on electrical as well as certain non-electrical instruments, apparatus and appliances is proposed to be increased by 25% to 33%;

(vii) the duty on certain railway materials is proposed to be raised from 20% to 25%;

(viii) increases in duty are proposed on the residuary tariff item "All other articles not otherwise specified" and no various other less important articles;

(ix) on a number of articles on which Central excise duties have been imposed or are being levied at present, provision is being made for the levy of a countervailing import duty. This is necessary in order that the indigenous producer or manufacturer of these articles is not placed at a disadvantage in comparison with the importer.

Clause 12 seeks to maintain for another year the status quo in regard to commitments under the General Agreement on Tariffs and Trade.

Clause 13—
Sub-clause (a) proposes an increase in the rate of excise duty on coffee.

Sub-clause (b) (1) seeks to substitute the existing rates of excise duty on flue cured tobacco used in the manufacture of cigarettes by a single flat rate of duty and also proposes an increase in the rates of duty on certain forms of other than flue cured tobacco and on stalks.

Sub-clause (b) (2) proposes an increase in the rate of duty on certain high priced cigarettes and also seeks to rationalise the rates of duty on cigars and cheroots.

Sub-clause (c) seeks to increase the rate of excise duty on kerosene.

Sub-clause (d) proposes an increase in the rate of excise duty on diesel oil not otherwise specified.

Sub-clause (e) proposes an increase in the excise duty on vegetable product.

Sub-clause (f) proposes an increase in the rates of excise duties on pigments, colours, paints, enamels, varnishes, blacks and cellulose lacquers.

Sub-clause (g) proposes to levy an excise duty on soda ash, caustic soda, glycerine, coal tar dyes, patent or proprietary medicines not containing alcohol and certain cosmetics and toilet preparations.

Sub-clause (h) proposes to levy an excise duty on plastics and on cellophane.

Sub-clause (i) proposes an increase in the rates of duty on all varieties of paper except printing and writing paper.

Sub-clause (j) proposes to levy an excise duty on cotton yarn and woollen yarn.

Sub-clause (k) proposes to levy an excise duty on glass and glassware and china and porcelainware.

Sub-clause (l) proposes to levy an excise duty on certain manufactures of copper and its alloys and of zinc.

Sub-clause (m) seeks to levy an excise duty on aluminium pipes and tubes.

Sub-clause (n) proposes to levy an excise duty on air conditioning machinery.

Sub-clause (o) proposes to levy an excise duty on wireless receiving sets.

Sub-clause (p) proposes an increase in the permissible limit of the excise duty on matches from 57 to 65 p per 1000 matches or fraction thereof.

Sub-clause (q) proposes to levy an excise duty on refrigerators and parts thereof.

Clause 14 seeks to make certain amendments in the Central Sales

Tax Act, 1956 consequent on the proposal to levy an additional duty of excise in lieu of sales tax on silk fabrics.

Clause 15 proposes to levy an additional duty of excise in lieu of sales tax on silk fabrics and seeks to make consequential amendments in the Additional Duties of Excise (Goods of Special Importance) Act, 1957. It also seeks to make certain changes in the rates of additional excise duty on cigars and cheroots and on cigarettes.

Clause 16 seeks to make certain amendments to the entry relating to policies of insurance in Schedule I to the Indian Stamp Act, 1899, in order to remove certain difficulties which have arisen as a result of the decimalisation of the stamp duty.

Clause 17, like section 23 of the Finance Act, 1960 provides that salt shall be duty free for another year.

FINANCIAL MEMORANDUM

The Bill seeks to levy new excise duties on—

1. Soda ash
2. Caustic soda
3. Glycerine
4. Coal tar dyes.
5. Cosmetics and toilet preparations
6. Patent or proprietary medicines
7. Plastics
8. Cellophane
9. Cotton yarn
10. Woollen yarn
11. China and porcelainware.
12. Glass and glassware
13. Copper and alloys of copper
14. Zinc
15. Aluminium pipes and tubes
16. Wireless receiving sets
17. Air conditioning machinery
18. Refrigerators

These levies will necessitate the employment of some additional staff. The increase in staff together with incidental expenses of administration is estimated to cost Rs 10.55 lakhs per annum.

For the field organisation.

A. Officers—	No.	Annual emoluments Rs.	Cost Rs.
Assistant Collectors ...	2	2 × 8,880	17,760
Superintendents—			
Class I ...	4	4 × 8,880	35,520
Class II ...	6	6 × 7,056	42,336
B. Staff—			
Deputy Superintendents (Executive) ...	40	40 × 5,775	2,31,000
Inspectors ...	60	60 × 3,746	2,24,760
Sub-Inspectors ...	60	60 × 1,832	1,09,920
Dy. Superintendents (Ministerial) ...	2	2 × 4,710	9,420
Head Clerks ...	10	10 × 3,746	37,460
Upper Division Clerks ...	28	28 × 2,548	71,344
Lower Division Clerks ...	30	30 × 1,804	54,120
Stenotypists ...	12	12 × 2,044	24,528
C. Incidental expenses including Class IV staff, contingencies, etc. ...			1,40,000
Total ...			Rs. 9,98,168

or Rs. 10.00 lakhs

For the Office of the Central Board of Revenue.

A. Officers—	No.	Annual emoluments Rs.	Cost Rs.
Under Secretary ...	1	1 × 13,140	13,140
Section Officer ...	1	1 × 7,800	7,800
B. Staff—			
Assistants ...	4	4 × 3,864	15,456
Stenographer ...	1	1 × 13,864	3,864
Upper Division Clerk ...	1	1 × 2,548	2,548
Lower Division Clerks ...	4	4 × 1,804	7,216
C. Incidental expenses including Class IV staff, contingencies, etc. ...			5,000
Total ...			Rs 55,024

or Rs. 55,000.00

LOK SABHA

A

BILL

to give effect to the financial proposals of the Central Government for the financial year 1961-62.

The President has, in pursuance of clauses (1) and (3) of article 117 and clause (1) of article 274 of the Constitution of India, recommended to the Lok Sabha, the introduction and consideration of the Bill.

M. N. Kaul
Secretary

Railways' Planned Development

Excerpts from Railway Minister's Budget Speech

Review of the Railways' Second Five Year Plan

It is a fact not readily appreciated that the Railway Plan and its progress are linked with the developments in the industrial sector. The Second Plan provided, in continuation of the First Plan, for the replacement of assets which were in arrears for over a decade. It also provided for an increase in passenger traffic by 15% by the end of the Plan period, and for specific increases in freight traffic for the three basic industries, viz. coal, steel and cement and a small increase in other miscellaneous goods traffic.

Passenger traffic is likely to exceed the Second Plan target of 15 per cent increase. The increase is expected to be of the order of 25 per cent.

When the Plan was formulated in 1956, it was realised that, with the resources made available for the Railways, the target of

originating goods traffic could only be 162 million tons on certain anticipations of distances over which the principal categories of goods would be moved. In regard to traffic for the steel industry, in particular, the estimate was based on point to point movements of raw materials like coal, ore, limestone, dolomite etc. But the distribution of commodities and the pattern of movements, which the Railways have actually been called upon to handle, vary considerably from what planned. The Railways now expect to carry about 13.5 million tons less traffic for the steel plants, against which there will be a reduction of 2,000 million ton miles as compared to the original Plan. In respect of coal for users other than steel plants, however, the Railways now expect to handle 4 million tons more, involving an additional 4,000 million ton miles. In these two categories alone, therefore,

there will be an increase of about 2,000 million ton miles despite a drop in originating tonnage by 9.5 million tons. Under cement and miscellaneous goods together, the Railways will carry about 1.5 million tons more, with an increase of about 1,000 million ton miles.

In the result, the net ton miles which is the recognised and correct index of transport performance, will increase from 36,000 millions, at the beginning of Second Plan, to 54,000 millions at the end of the Plan. This is an increase of about 50 per cent even though, in terms of total originating traffic, the Railways will lift 8 million tons less than the target of 162 millions; part of the decrease in tonnage lifted has been due to uncontrollable factors already referred to. This increase of 50 per cent in ton miles has been handled with additions only of 29 per cent and 26 per cent in the wagon holdings and in tractive effort of locomotives respectively. This reflects the increasing operational efficiency of the Railways.

The allotment made to the Railways for the Second Plan was Rs 1,121.5 crores, inclusive of a provision up to Rs 15 crores to be made available to Posts and Telegraphs and Power supply authorities in connection with the Railway Electrification Projects. The Railways spent about Rs 855 crores in the first four years of the Plan, representing 76 per cent of the total allocation, and expect to spend practically the entire balance in the current year. The total foreign exchange expenditure in the Second Plan, it is expected, will be limited to about Rs 332 crores, against an original provision of Rs 425 crores—later revised to Rs 385 crores. The saving is due largely to significant developments in the manufacture of railway equipment in India.

The Railways, in their endeavour to achieve the physical targets of the Second Plan, have had to accommodate the increasing costs of labour and material within the Plan provision. At the same time, adjustments have had to be made, to fit in with the varying patterns of traffic. The

Railways have by and large kept pace with the requirements. The contribution of the Railways towards the resources of the Plan has been substantial. The Railways will make a gross contribution of about Rs 480 crores, covering expenditure on open line works revenue and on expenditure chargeable to the Depreciation Reserve Fund and Development Fund.

The target of 800 miles for the construction of new lines in the Second Plan will be fully reached. This represents mainly the requirements of the Steel and Coal Industries and the operational requirements of the Railways themselves. Some of the important New lines constructed to serve the industrial and mining areas are the Chandra-pura-Muri-Ranchi, the Bondamunda-Dumaro and the Barabil-Panposh Gorge lines, aggregating 132 miles. Two other new lines—the Ranchi-Hatia and the Baoridand-Karonji line in the C.I. Coalfields—are nearing completion. Work on the line from Hatia to Nawagaon, which will connect the Bokaro area with Rourkela via Ranchi, is in progress. A significant achievement was the recent opening of the 187 mile Khandwa-Hingoli Metre Gauge line, which links the Northern and Southern Metre Gauge systems.

The Second Plan new lines under construction are

Bondamunda-Nawagaon-Purnani, Baraset-Hasanabad, Bukhtiarpur-Rajgir, Roberts-gani-Garhwa Road, Ghaziabad-Tughlaka-bad including second Yamuna Bridge, Rangapara-North-Lakhimpur, sidings to Korea coalfields, Champa-Korba extension, Sambalpur-Titilagarh and Bimlagarh-Kiriburu. These aggregate to 478 miles. Preliminary action has been taken in hand in respect of some of the Third Plan works also, namely Hatia-Nawagaon, Bailadilla-Kottavalasa, Mdhapur-Kathua and Udaipur Himmatnagar lines, totalling nearly 540 miles. Final locations of Diva-Panvel-Uran, Guna-Shahjapur-Massi, Delhi avoiding Lines-sum-Ring Railway, Hindumalkot-Sriganganagar and Jhund-Kandla lines are in progress.

A Broad gauge line to Siliguri via Tildanga-Farakka and a ferry to Khejuria and onwards via Malda will soon be ready. This involves conversion of the 87 miles Metre Gauge lines to Broad Gauge on the Kumedpur-Borsoi and Kati-har-Sinhabad Sections. The conversion of the Gudivada-Bhimavaram and Vijayawada-Masulipatam Metre Gauge sections to Broad Gauge and the laying of a 16-mile Broad Gauge track between Guntur and Tadepalli are well in hand.

A reconnaissance survey to determine the traffic prospects of an extension of the Madhopur-Kathua line to Jammu, is in

hand. preliminary engineering and traffic survey of a line to join the Singrauli coalfields to the Robertsganj-Garhwa Road line, has also been taken up a survey of new lines in connection with the development of the Singrauli coalfields will be done in 1961-62.

As the House is aware, the three new lines under construction namely, Bimlagarh-Kiriburu, Sambalpur-Titilagarh and Bailadilla-Kottavalasa—the last one being really a Third Plan work (309 miles) taken in hand in advance—are required for the export of iron ore to Japan via Visakhapatnam Port. These lines have to be completed within a tight time schedule. Because of both the urgency and the technical complexity of the task, involving construction through extremely difficult terrain, a separate Administration under the charge of a General Manager has been set up.

Doubling of track over 800 miles is expected to be completed, and substantial progress has been made on another 500 miles. Several large new yards, involving some 200 miles of track, to serve the steel plants and coalfields, have been brought into commission. Works for increasing the capacity of various sections have been completed.

Against an electrification programme for over 1,400 miles which had been drawn up, about 500 miles in the Eastern region,

on routes serving the coal and belts, will be substantially completed in the Second Plan. The sections Rajakharswan-Dangapost and Asansol-Gomoh have already been commissioned. The sections Durgapur-Asansol, Gomoh-Gaya and Asansol-Sini-Tatanagar-Rourkela are expected to be commissioned in stages by June 1961. According to the present expectations of completion of the complementary works to be done by the Posts and Telegraphs Department and the Power Supply Authorities. The works on the electrification of the sections Gaya-Moghalsarai and Tatanagar-Khargpur are also progressing.

As regards the remaining sections, Civil Engineering works are in progress on Sealdha-Ranaghat, Dum Dum-Bongoan and Sealdha South Sections. Tenders have also been invited for erection of overhead equipment for the former two. On the Igtapuri-Bhusaval section, Civil Engineering survey work has been completed. The work on Madras-Tambaram-Villupuram section will be speeded up, now that a decision has been taken to electrify this section on the 25 KV AC system for which technical details are being finalised.

Bridges over the Ganga and the Gandak as the House is aware, have been completed—the former well ahead of schedule—thus facilitating communications across

these rivers. The work on the bridge across the Brahmaputra, which will improve the communications with, and in, the Assam region, is proceeding vigorously. The bridge is likely to be completed in 1962 as programmed.

About 8,000 miles were programmed for track renewal in the Second Plan period. There may be only a relatively small shortfall in this programme. The delay has occurred due mainly to difficulties in the availability of indigenous track materials; these have had to be made good by import of rails which has taken a longer period.

The Rolling Stock fleet has been augmented by some 2190 locomotives, about 8500 coaches and about one lakh of wagons. There will be a shortfall of about 8,000 wagons from the Plan target, due to difficulties in the import of matching steel which it has not been possible to fully make up yet. By recourse to other measures, the effective availability of wagons has been increased, and the target of transport performance has been largely maintained.

Before concluding this review of the Railways' implementation of the Second Plan, I must make mention again of the Railways' dual role as a public utility service and as a commercial enterprise to which I have often referred. The Railways are making an increasing and substantial contribution of an indirect nature to their role as a public utility service. The financial benefit to the nation in the freight bill is only one item of such indirect contribution. In the matter of employment potential, it should be appreciated that large numbers of persons are employed by contractors performing Railway work and by the numerous manufacturers of various types of railway equipment. All these do not figure at present in official statistics. If they are added up, the contribution of the Railways in this respect also is of a large magnitude.

Tentative outline of the Railways' Third Five Year Plan

The tentative allocation for the Railways' Third Five Year Plan is Rs 1,255 crores, including Rs 35 crores for inventories. This is based on an increase in originating traffic from 154 million tons to 235 million tons, but does not include certain projects under consideration which were not originally indicated to the Railways. Even for this increase in tonnage, the work load for the Railways, which is correctly expressed in ton miles, is expected to increase by 72 per cent. The Planning Commission is considering the question of increasing the allocation, to cover the revision in transport targets and the addition of projects as referred to. Of the anticipated increase in goods trafficked during the Third Plan, more than 75 per cent is ac-

counted for by the targets fixed for industrial production of coal, steel, cement, and iron ore. All these, except perhaps for a small portion of cement and coal, have to move by rail. An increase in passenger traffic is provided for to the extent of 15 per cent, only, as was provided in the Second Plan.

The Railways have been set the task carrying an increase in traffic from 54,000 million ton miles to 93,000 million ton miles or about 39,000 million ton miles more annually, which is more than double the increase that was achieved in the Second Plan. For this, the tentative allocation given is Rs 1,255 crores, against the Second Plan provision of Rs 1,121.5 crores. The investment on rolling-stock and line capacity works is being planned keeping in view measures of operational improvement which are progressively in hand. The latter include the acquiring of 70 per cent of the additional requirements of mo-

tive power in the shape of diesel and electric locomotives, running heavy coal trains with bogie wagons, etc. The implementation of the Railways' Third Plan is expected to result in the acquiring of about 1,700 locomotives, 7,800 coaching vehicles and 1,10,000 wagons—including replacement requirements. Double tracking of about 1600 miles is envisaged, also remodelling of yards, opening of new crossing stations, provision of additional loops, etc. There is also provision for centralised Traffic Control on the Siliguri-Amingaon section of the Northeast Frontier Railway. This system will be extended to other section as conditions warrant.

Of the 1100 miles expected to be electrified during the Third Plan, the sections carried over from the Second Plan will be assigned priority. Thereafter, electrification will be expanded to meet the increasing density of traffic on important routes. As

regards arrears in track renewal it is programmed to overtake them fully by the end of the Third Plan. In the matter of construction of new lines, the Planning Commission have so far allotted Rs 120 crores. This will provide for approximately 1160 miles, representing lines essentially required either in connection with the Railways' operational needs or in connection with the development of industries and mineral resources. The latter include 200 miles for development of new coal fields and about 50 miles for a new line to serve the proposed port at Haldia. The provision for new lines is being reviewed in consultation with the Planning Commission. I am hopeful that it will be found possible to make a further allocation of funds, to meet the demands for new lines to be constructed on grounds of political, social and economic development in certain areas, more particularly in the South.

Towards Prosperity

'PLANNING WITH THE PEOPLE'

Planning like Democracy is a joint enterprise: Government of the people, by the people and for the people. But that is not all. Togetherness in ambitions and endeavours can be best achieved by Government with the people. West Bengal has been reconstructing herself out of the economic ruins of the past, with slender resources but plenty of will to bring about a higher standard of living for all the people in all the places. This welfare State within a short span of eleven years has achieved a good deal, which we can be proud of, and a lot more remains to be done, which we are striving for. On this Anniversary of our Republic let us all dedicate ourselves to the task of building a New India and a New Bengal. The dream will soon be fulfilled when we are together — a Government with the people —

to build a
Better Bengal

ISSUED BY THE GOVERNMENT OF WEST BENGAL

Memorandum Explaining the Provisions in the Finance Bill, 1961

(Clauses referred to are clauses in the Bill)

INCOME-TAX AND SUPER-TAX

I. Rates of tax for financial year 1961-62

1. Non-company assessee:

It is proposed that the rates of income-tax and super-tax in force for the financial year 1960-61 be continued for the financial year 1961-62 except that the rate of surcharge payable in respect of earned income exceeding Rs 1 lakh be increased from 5 per cent to 10 per cent of the income-tax and super-tax.

[Clause 2, Parts I and II of First Schedule].

2. Companies:

Income-tax: No change is proposed to be made in the existing rate of income-tax, i.e., 20 per cent.

Super-tax: The basic rate of 55 per cent subject to rebates, depending on certain circumstances relating to each company, will continue. The effective rates applicable to companies (which do not make bonus issues) will also remain the same as for the financial year 1960-61 except in respect of dividends and certain royalties. At present, on dividends received by a company (Indian or foreign) from an Indian subsidiary, super-tax is charged at 10 per cent. On dividends received from any Indian company (other than a subsidiary) formed and registered on or after 1-4-1959, super-tax is charged at 15 per cent on an Indian company in which the public are substantially interested and whose total income does not exceed Rs. 25,000/- at 20 per

cent on any other Indian company and at 33 per cent on a foreign company which does not declare dividends in India. On dividends received from an Indian company (other than a subsidiary) formed and registered before 1-4-1959, super-tax is payable at the rate applicable to the other income of the company, i.e., at the rate of 20 per cent, 25 per cent and 43 per cent respectively in the case of the three classes of companies mentioned above. For the financial year 1961-62, the super-tax rate for dividends received by any company (Indian or foreign) from any Indian company formed and registered before 1-4-1961 will remain the same as for the financial year 1960-61. It is now proposed (subject to a single exception) to fix a uniform rate of 20 per cent for super-tax on dividends received by all companies (Indian or foreign), from Indian companies (whether they be subsidiaries or not) formed and registered on or after 1-4-1961. The exceptional case is that of an Indian company in which the public are substantially interested and whose total income does not exceed Rs 25,000/-. In the case of such a company, the super-tax on the dividends received from an Indian company formed and registered on or after 1-4-1961 is proposed to be fixed at the same rate of 15 per cent which was applicable to dividends received from companies formed and registered on or after 1-4-1959.

The effective rates of super-tax payable on dividends received by various companies are summarised in the table below:

Dividends received from	Rates applicable to companies which have made the prescribed arrangements for declaration and payment of dividends in India.	Rates applicable to companies which have not made the said prescribed arrangements.
	Companies in which public are substantially interested and whose total income does not exceed Rs. 25,000/-.	Other companies.
1	2	3
1. A subsidiary Indian company formed and registered before 1-4-1961.	10	10
2. An Indian company, other than a subsidiary, formed and registered on or after 1-4-1959, but before 1-4-1961.	15	20
3. An Indian company other than a subsidiary, formed and registered before 1-4-1959.	20	25
4. Any Indian company formed and registered on or after 1-4-1961.	15	20

The effective rate of super-tax on royalties received by a foreign company (which does not declare dividends in India) from an Indian concern in pursuance of an agreement made with the Indian concern on or after 1-4-1961 and which has been approved by the Central Government, is proposed to be fixed

at 30 per cent instead of the present rate of 43 per cent.

The effective rate at which super-tax is payable with reference to bonus shares is proposed to be reduced from 30 per cent to 12½ per cent.

[Clause 2, Parts I and II of First Schedule.]

II. Rates for deduction of tax at source from interest on securities etc.

There is no change in the rates for deduction of tax at source during 1961-62 except that in the case of dividends and certain royalties payable to such foreign companies as do not declare their dividends in India.

Rates for deduction of tax at source from incomes of foreign companies which do not declare dividends in India.

	Proposed rates.	
	I.T.	S.T.
	43	43
1. On interest on any security of the Central Government issued or declared to be income-tax free.	...	...
2. On dividends from an Indian company referred to in section 56A of the Income-tax Act.	20	20
3. On dividends from a subsidiary Indian company formed and registered before 1-4-1961.	20	10
4. On dividends from an Indian company, not being a subsidiary, formed and registered on or after 1-4-1959, but before 1-4-1961.	20	33
5. On dividends from an Indian company, not being a subsidiary, formed and registered before 1-4-1959.	20	43
6. On dividends from any Indian company formed and registered on or after 1-4-1961.	20	20
7. On royalties received from an Indian concern in pursuance of an agreement made with it on or after 1-4-1961 which has been approved by the Central Government.	20	30
8. On any other income.	20	43

[Clause 2, Part III of First Schedule].

III. Amendments to the Indian Income Tax Act, 1922.

1. **Sports associations, etc.:** It is proposed to exempt from payment of tax the income of an association or institution established in India solely for the purpose of controlling, supervising, regulating or encouraging in India the games of cricket, hockey, football, tennis and such other games and sports as may be specified by the Central Government from time to time in the official Gazette, provided the association or institution is approved by the Central Government for this purpose and satisfies certain specified conditions.

[Clause 3, sub-clause (i).]

2. **Foreign technicians:** At present, a foreign technician whose contract of service has been approved by the Central Government before the commencement of his service in India is exempt from tax in respect of salaries received by him for the financial year of his arrival in India and the two subsequent financial years. Depending on the time of his arrival in India, the exemption can thus apply for a period of 24 to 36 months. It is proposed that the exemption be available for a period of 36 months from the date of arrival in all such cases and also that if for a further period not exceeding 24 months, the tax in respect of his salary is paid to the Central Government by his employer, such tax shall not be treated as a part of the technician's total income.

[Clause 3, sub-clause (ii).]

3. **New residential buildings:** In respect of new buildings constructed after the 31st March, 1961, for being let out to tenants, it is proposed that the annual value of each residential unit comprised in the building should be reduced by the amount of the

changes have been made for this purpose corresponding to the changes made in the effective rates of tax applicable to such companies for assessment. The proposed rates for deduction of tax at source in the case of such foreign companies are summarised in the following statement:

	Proposed rates.	
	I.T.	S.T.
	43	43
1. On interest on any security of the Central Government issued or declared to be income-tax free.	...	...
2. On dividends from an Indian company referred to in section 56A of the Income-tax Act.	20	20
3. On dividends from a subsidiary Indian company formed and registered before 1-4-1961.	20	10
4. On dividends from an Indian company, not being a subsidiary, formed and registered on or after 1-4-1959, but before 1-4-1961.	20	33
5. On dividends from an Indian company, not being a subsidiary, formed and registered before 1-4-1959.	20	43
6. On dividends from any Indian company formed and registered on or after 1-4-1961.	20	20
7. On royalties received from an Indian concern in pursuance of an agreement made with it on or after 1-4-1961 which has been approved by the Central Government.	20	30
8. On any other income.	20	43

annual value of Rs 600/-, whichever is less, for a period of three years from the completion of the building.

[Clause 5]

4. **Residential quarters built for low paid employees:** It is proposed to allow an initial depreciation allowance of 20 per cent of the actual cost in respect of buildings erected by an employer after the 31st March, 1961, solely for the residence of persons employed by him and receiving remuneration not exceeding Rs 200 per month. This allowance will be admissible in respect of the previous year in which a building is erected. It will not be taken into account for determining the written down value though it will be taken into account for seeing that the aggregate of all depreciation allowances in respect of any building does not exceed the original cost of the building.

[Clause 6, sub-clause (i).]

5. **Development rebate:** It is proposed that in respect of new plant or machinery installed on or after the 1st April, 1961, the development rebate shall be admissible at the reduced rate of 20 per cent of the actual cost thereof. New ships acquired on or after the said date will, however, continue to get the development rebate at the same rate as heretofore, i.e., 40 per cent.

[Clause 6, sub-clause (ii).]

It is further proposed that where a company is amalgamated with another company or where a firm is converted into a private company and machinery or plant on which development rebate is admissible to the predecessor is transferred by the predecessor to the successor, the development rebate already allowed to the predecessor will not be withdrawn and any unutilised portion of the develop-

Indian Finance Budget Supplement 1961

lopment rebate will be available to the successor. The rights, liabilities and obligations of the predecessor in respect of such development rebate have thus been transferred to the successor.

[Clause 6, sub-clause (iii) and Clause 9]

6. **Appropriations to reserves in the case of a financial corporation:** At present, any amount appropriated to a reserve account is not admissible as a deduction while computing the taxable profits. It is now proposed that in the case of an approved financial corporation engaged in providing long-term finance for financial development in India, an amount not exceeding 10 per cent of the total income may be allowed as a deduction if appropriated to a special reserve account. No such deduction will be allowed when the aggregate of the amounts carried to the reserve account from time to time equals the paid-up capital of the institution. For this purpose, amounts capitalised from reserves will be excluded from the paid-up capital.

[Clause 6, sub-clause (iv)]

7. **Entertainment expenses:** It is proposed to provide that no allowance on account of entertainment expenses will be made in the case of an assessee other than a company and that in the case of companies, the amount allowable on this account will be restricted to certain specified limits depending upon the amount of profits of the business. In effect, no company will be allowed a deduction of an amount exceeding Rs 1,00,000/- on this account.

[Clause 6, sub-clause (v)]

8. **Tax holiday for new hotels:** It is proposed that the benefit of the five-year tax holiday at present enjoyed by new industrial undertakings under section 15C of the Income-tax Act be extended to new hotels run by companies and which start functioning on or after the 1st April, 1961, and satisfy certain conditions. The exemption will be available for the previous year in which the hotel starts functioning and the following four previous years. Dividends paid out of such exempt profits will also be exempt in the hands of shareholders.

[Clause 7]

IV. **Other amendments to the Income-tax Act.**

A few other amendments have also been proposed in the Income-tax Act. The purpose underlying these amendments is explained in the Notes on Clauses appended to the Finance Bill.

CUSTOMS.

The proposals in the Bill include the raising of the rates of duty on 41 items and sub-items of the Tariff. Some changes have also been proposed consequential on the imposition of Central Excise duties on certain articles. A countervailing duty equal to the excise duty is being imposed on each of these articles, so that the indigenous producers may not be placed at a disadvantage in comparison with the importers. Details of those proposals which are expected to yield an additional revenue of Rs 10 lakhs or over as a result of changes in basic Customs duties are given in Table I.

The total additional revenue per

annum as a result of all the increases in Customs duty proposed in the Finance Bill (leaving out countervailing duties) is expected to be about Rs 16.57 crores. This would be increased by about Rs 2.38 crores as a result of the modification of the existing concessional rates of duty on newsprint and certain items of

machinery and component parts. As against this should be set off a loss of about Rs 2 crores per annum as a result of the reduction of export duty on tea. (Details of the important changes being made by notifications are given in Table II). The additional revenue from countervailing duties (on existing as well as new

excise) would be about Rs crores per annum. Details of the proposals which are expected to yield an additional revenue of Rs 10 lakhs or over by way of countervailing duty are given in Table III. The net additional revenue taking all the proposals into account is expected to be about Rs 29.27 crores per annum.

TABLE I.

3.	duty already exists.	46(6), 47(2)	Rayon and synthetic fibres and yarn.	401		(8)	kg	15 nP		22 nP		
(There are two proposals, namely—												
4.	I.(xi)	28(4)	Soda ash	27	These mainly fall under item 28A.	(i) to replace the existing tariff for flue cured tobacco used in cigarettes by a single rate which is the weighted average of the existing rates. This proposal is intended to simplify the existing tariff.						
5.	I.(xi)	28(34)	Caustic soda	56		(ii) to raise the duty on air cured tobacco for cigarettes, air cured tobacco in the form of whole leaf, rawa and stems of certain specifications						
6.	I.(xi)	30(1), 30(13), 30(15) & 30(16)	Coal tar dyes	120		and on stalks. The use of the varieties is increasing. In particular the tobacco in whole leaf form and rawa are now being used in admixture with higher rated tobacco. It is proposed to reduce the duty between the higher rated and the lower rated varieties, as well as step up the rates on cigarette tobacco and stalks.						
7.	I(vi)	28A, 22(4)(b) and 22(5) (b)	Patent & proprietary medicines not containing alcohol.	16	These mainly fall under item 28A.	(i) to replace the existing tariff for flue cured tobacco used in cigarettes by a single rate which is the weighted average of the existing rates. This proposal is intended to simplify the existing tariff.						
8.	II(x)	82(6)(A) and 82(6) (B)	Plastics, all sorts and cellophane.	37		(ii) to raise the duty on air cured tobacco for cigarettes, air cured tobacco in the form of whole leaf, rawa and stems of certain specifications						
9.	II(v)	64(6)	Certain manufactures of copper and copper alloys.	11		and on stalks. The use of the varieties is increasing. In particular the tobacco in whole leaf form and rawa are now being used in admixture with higher rated tobacco. It is proposed to reduce the duty between the higher rated and the lower rated varieties, as well as step up the rates on cigarette tobacco and stalks.						
10.	II(vii)	72(41)	(i) Refrigerators and parts thereof. (ii) Air conditioning machinery, all sorts.	28		II. Manufactured tobacco						
(i) Cigars and cheroots—												
The existing tariff is proposed to be rationalised as below:—												

The rate of the countervailing duty in each case is equal to the rate of Central Excise duty on like articles produced or manufactured in India.

CENTRAL EXCISES.

I. Changes proposed in the Bill.

(a) Coffee

Existing rate of duty	...	Rs 41.35 per quintal
Proposed rate of duty	...	Rs 55.0 " "
Estimated revenue	...	Rs 38.0 lakhs

The proposal to increase the rate of duty on coffee by about 33 per cent is intended to keep the incidence of duty on this commodity at more or less the same level as on "Tea" for which an average increase of 33 per cent in the rates is proposed by notification.

(Clause 13(a))

Cigars & cheroots of which the value per 100

Exceeds	Does not exceed	Under the Central Excise Act	Under the Additional duties of Excise (Goods of Special Importance) Act	Total duty burden

(ii) 15.0	25.0	9.0	2.25	11.25
(iii) 5.0	15.0	3.0	0.75	3.75
(iv) 1.25	5.0	0.75	0.15	0.90

The proposal is intended for simplification. It has no revenue significance, the net effect being a nominal gain of Rs. 60 thousand in revenue.

Indian Finance Budget Supplement 1961

(2) Cigarettes—

Cigarettes of which the value per 1000	Exceeds	Does not Exceed	Existing		Total duty burden.	Proposed		Total duty burden.
			Under the Central Excise Act.	Under the Additional duties of Excise (Goods of Special Importance) Act.		Under the Central Excise Act.	Under the Additional duties of Excise (Goods of Special Importance) Act.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
(1) 50	...	Per	21.50	8.60	30.10	23.75	7.70	31.45
(2) 35	50	1000	19.00	7.60	26.60	12.75	4.20	16.95
(3) 30	35		10.50	4.20	14.70	11.50	3.80	15.30
(4) 25	30		9.50	3.80	13.30			

Estimated revenue: Rs 40.00 lakhs.

It is proposed to increase the rates of duty on the costly brands of cigarettes to counter-balance the relief these cigarettes will be getting due to the lowering of the duty on the tobacco content.

(Clauses 13b(2) & 15(c)(2))

(c) Mineral Oils

	Unit.	Existing rate of basic excise duty under the Central Excise and Salt Act.	Proposed rate of basic excise duty under the Central Excise & Salt Act.	Estimated Additional revenue.
1. Kerosene	Kilolitre (at 15° C)	Rs. 64.20	Rs. 95.55	(Rs. lakhs) 284.0
2. Diesel Oil (not otherwise specified).	Metric tonne	16% ad valorem + Rs 63.95	16% ad valorem + Rs 92.10	133.0

It is proposed to increase the rate of duty on Kerosene by Rs 31.35 per kilolitre. There is shortage of kerosene in the country. Apart from yielding additional revenue the proposed increase may, therefore, tend to inhibit consumption and thus help in saving foreign exchange. The proposal to increase the rate of duty on diesel oil, not otherwise specified, besides being a revenue measure, is intended to check the tendency of using this oil as motor fuel in admixture with refined diesel oil. The rates of additional excise duty under the Mineral Oils (Additional Duties of Excise and Customs) Act remain unchanged.

(Clauses 13(c)(d).]

(d) Vegetable Product.

Unit	Existing	Proposed	Estimated revenue (Rs. lakhs)
Quintal	Rs. 17.20	Rs. 20.0	Rs. 80.0

It is proposed to increase the rate of duty by Rs. 2.80 per quintal.

(Clause 13(e)).

(e) Paints and Varnishes.

It is proposed as a revenue measure to increase the rate of duty on paints and varnishes by about 25 per cent. The rates have remained unchanged since this item was first brought under excise in 1955. The additional revenue estimated from the proposed increase is Rs 30 lakhs.

(Clause 13(f)).

(f) Paper.

	Unit	Existing rate of duty	Proposed rate of duty	Estimated revenue (Rs. lakhs)
(i) Blotting paper, toilet paper, coated board, paper and paper-board and other-wise specified etc., falling within sub-items (1), (9) and (10)	Kg.	33 nP	50 nP	
(ii) Cigarette tissue	Kg.	66 nP	Re. 1.00	
(iii) Packing and wrapping paper, duplex and triplex board and corrugated board falling within sub-items (4), (6), (7) and (8)	Kg.	22 nP	35 nP	237.00
(iv) Strawboard other than corrugated board	Kg.	11 nP	15 nP	

In view of the increasing demand of paper and the progress made by the industry, it is proposed to step up the rates as a revenue measure.

(g) Matches.

Existing rate of duty 57 nP for every 1000 matches or fraction thereof

Proposed rate of duty 65 nP for every 1000 matches or fraction thereof

Estimated revenue ... Rs. 3 lakhs

With a view to encourage production of only one type of matches it is proposed to fix by notification concessional rates for matches packed in boxes of 50. These rates will be more or less in the same ratio as the existing rates for 60s. Further concession is proposed for small units using bamboo in making splints.

It is also proposed to introduce by notification slab rates so as to encourage normal development of factories.

(Clause 13(p)).

However, the rate of duty on printing and writing paper is not proposed to be increased. (Clause 13(i)).

(h) Soda ash, Caustic soda, and Glycerine.

	Proposed rate of duty	Estimated revenue (Rs. lakhs)
(1) Soda ash	...	Rs. 2.0 per quintal
(2) Caustic soda	...	Rs. 4.0 per quintal
(i) if in solid form	...	Rs. 4.0 per quintal
(ii) if in lye	...	on the basis of 100% strength
(3) Glycerine	...	Rs. 17.0 per quintal
		7.00
		53.40

These are new excises and are proposed as a revenue measure.

(i) Dyes derived from coal tar.

Proposed rate of duty ... 15% ad valorem
Estimated revenue ... Rs. 67 lakhs
This is a new item proposed to be brought under excise as a revenue measure. The Dye industry has developed under protection.

(Clause 13(g)).

(j) Patent or Proprietary medicines.

Proposed rate of duty ... 10% ad valorem
Estimated revenue ... Rs. 20 lakhs
This is a revenue measure. Ayurvedic and Unani preparation will not be subjected to this levy.

(Clause 13(g)).

(k) Cosmetics and toilet preparations

Proposed rate of duty ... 25% ad valorem
Estimated revenue ... Rs. 40 lakhs
Certain cosmetics and toilet preparations are proposed to be subjected to an excise duty. Small units manufacturing not more than 150 Kgs. per month are proposed to be exempted from duty in respect of the 50 kgs. cleared in a month.

(Clause 13(g)).

(l) Plastics and cellophane

	Proposed rate of duty	Estimated revenue (Rs. lakhs)
Plastics	...	20% ad valorem
Cellophane	...	20% ad valorem
		40.0
		10.0

(m) Cotton yarn and woollen yarn

	Proposed rate of duty	Estimated revenue (Rs. lakhs)
(1) Cotton twist, yarn and thread	...	15 nP per kg.
(i) of 35 counts or more	...	10 nP per kg.
(ii) of less than 35 counts	...	520.0
(2) Woollen yarn	...	10% ad valorem
(i) Worsted yarn	...	5% ad valorem
(ii) Others	...	35.0

With the proposed duty on yarn, even hosiery and knitting wool will contribute something to the exchequer. To give relief to the common varieties of fabrics produced on handloom it is proposed to exempt cotton yarn of counts 11 to 40 if issued in hanks and woollen yarn made from shoddy wool.

(Clause 13(j)).

(n) Glass and glassware, and China and Porcelainware

An excise duty at rates varying from 5% to 15% ad valorem is proposed to be levied on all glass and china and porcelainware. Small units not employing more than five workers are proposed to be exempted. It is also proposed to exempt glass bangles and glass beads from the duty.

Estimated revenue	Rs. lakhs.
(1) Glass and glassware ...	95.0
(2) China and porcelainware ...	65.0
	160.0

[Clause 13(h)]

(c) Copper and copper alloys and zinc

(i) Sheets and circles ...	Proposed rate of duty	Rs. 300 per metric tonne
(ii) Pipes and tubes ...	10% ad valorem	
	Estimated revenue (Rs. lakhs)	
(i) Copper and copper alloys ...	72.20	
(ii) Zinc ...	7.50	
	79.70	

Aluminium was brought under excise last year. It is now proposed to levy excise duty on these two non-ferrous metals also.

[Clause 13(i)]

(p) Aluminium

To keep in line with copper and zinc it is proposed to put an excise duty on aluminium pipes and tubes.

also. The revenue expected is negligible.

[Clause 13(m)]

(q) Wireless receiving sets

Proposed rate of duty	20% ad valorem
Estimated revenue	Rs. 35 lakhs

This is a new excise. The tariff rate of duty will apply only to such sets the value of which exceeds Rs. 300 each. Sets valuing Rs. 150 to Rs. 300 are proposed to be

exempted from half the duty. Complete exemption is proposed for sets whose value does not exceed Rs. 150 each.

[Clause 13 (o)]

(r) Refrigerators and Airconditioning machinery

Proposed rate of duty	Estimated revenue
(1) Refrigerators and parts thereof	20% ad valorem
(2) Air conditioning machinery	20% ad valorem
	Rs. lakhs
	28.00
	20.00
	48.00

These are new excises proposed as a revenue measure.

[Clauses 13 (h) and (q)].

(s) Silk fabrics

An additional duty of excise under the Additional Duties of Excise (Goods of Special Importance) Act

is proposed with the agreement of State Governments in lieu of sales-tax levied by them.

Proposed rate of duty	30 nP per square metre
Estimated revenue	Rs. 8 lakhs

[Clause 15 (c)]

II Changes made by notification:

(i) Tea

As a measure of export promotion, it is proposed to reduce the export duty on tea by 9 nP per kg. It is also proposed to reduce the duty on package tea from 46 nP to 40 nP

Zone	Unit	Existing	Proposed
I	Kg	43 nP	10.0 nP
II	"	9 nP	15.0 nP
IIIA	"	18 nP	25.0 nP
IIIB	"	27 nP	35.0 nP

The net gain in the excise revenue is estimated to be Rs. 198 lakhs, all of which will go to make up the loss in export revenue.

(u) Rayon and synthetic fibre and yarn

Unit	Effective rates		Estimated revenue
	Existing	Proposed	
1. Rayon yarn			Rs. lakhs
(i) below 75 deniers	Rs. 1.80	Rs. 3.00	
(ii) 75 to 100 deniers	Rs. 1.35	Rs. 2.25	169.00
(iii) Above 100 deniers	90 nP	Rs. 1.50	
2. Staple fibre	45 nP	75 nP	

(v) Cotton fabrics

The proposals are—

(i) to raise the basic grey stage duty on Medium A fabrics from 7.2 nP to 9.0 nP per square metre;

(ii) to step the extra levies on processed fabrics by two-thirds of the existing rates;

(iii) to reduce the exemption of looms from 4 to 2; and

(iv) to reduce the number of sales and readjust the rates of compounded levy in the case of powerlooms.

Estimated revenue on account of proposals (i) and (ii) ... on account of proposals (iii) and (iv) ...

Proposal (i) is intended to reduce the duty gap between 'Fine' and 'Medium A' with a view to stop the decline in the production of Fine fabrics. Proposal (ii) is a revenue measure. Proposals (iii) and (iv) are intended to stop deliberate fragmentation of manufacturing units.

(w) Woollen, silk and artsilk fabrics

To stop the misuse of the concession it is proposed to reduce the exemption limit from 4 to 1 loom in the case of woollen fabrics and to 2 looms in the case of silk and art silk fabrics. In the case of the two latter fabrics it is also proposed to revise the rates of compounded levy both in respect of the basic and the additional excise duties.

(1) Woollen fabrics	8.00
(2) Artsilk fabrics	25.00
(3) Silk fabrics	negligible
	33.00

(x) Cycle parts

It is proposed to liberalise the concession given to small manufacturers of cycle rims and fix slab rates for units manufacturing not more than 10 lakh rims in a year. It is estimated that revenue of Rs. 10

lakhs will have to be foregone on this account. This loss, however, has not been taken into account as it is expected to be made up by increased clearances.

or Rs. 30.90 crores.

Tea goes out...exchange comes in helped by TATA-MERCEDES-BENZ trucks

TEA earns India over Rs. 125-crores of foreign exchange a year, and it is significant that on the long roads from the steep, green slopes of Assam and the Nilgiris, you will see more TATA-MERCEDES-BENZ trucks than any others taking this vital cargo to the docks. Taking half the world's tea towards half the world's kitchens is a non-stop job...that's why tea-exporters prefer TATA-MERCEDES-BENZ trucks.

The star that hauls a fortune
