RICH MARKET AROUND YOU

Within easy reach are potential markets for many Engineering goods.

Burma, Thailand, Indonesia, Vietnam, Philippines, Fiji, Australia, New Zealand and a number of other countries in South East Asia . . . Iran, Iraq, Saudi Arabia, Jordan and Egypt in the Middle East . . . East, Central and West Africa and even Central America and Caribbean Islands in the West . . . all offer rich market for Indian goods.

Their proximity to India places us at an advantage over far off exporters.

Here is a golden opportunity to sell abroad and earn foreign exchange.

Information about the potentialities of these markets, their peculiarities, trade practices, import formalities—in short every information that would facilitate your export of Engineering goods can be had from us on application.

Housing Programme

THE Housing Ministers' Conference, which concluded its three-day session in Udaipur on December 30, has recommended higher priority and larger outlays for Housing under the National Development Plan than envisaged in the Draft Outline. The tentative figure of Rs 120 crores has been put forward in the Draft Outline along with the suggestion that this may have to be revised in the light of requirements. A reference to the nation's requirements of houses only serves to highlight the inadequacy of any programme that may be drawn up within the limited resource available for the purpose. The shortage of urban housing in 1961 has been officially estimated at about 7.8 million units. An additional 5.6 million units will be required in the next five years to provide for the increase in population and the rapid growth of urbanisation. As regards rural housing, only a very modest beginning has been made in tackling this problem. When the Second Plan was formulated, it was estimated that a very large number out of the 54 million rural houses were in need of reconditioning or rebuilding. Unofficial estimates place the housing shortage at a much higher figure. For instance, it has been estimated that, for a population of 400 million people, there should be at least 80 million houses. But actually there are only about 15 million pucca houses in the country. On the other hand, new construction has been proceeding at the rate of one lakh houses every year. But, as indicated at the outset, assessment of the requirements will only serve to emphasise the formidable magnitude of the problem and the inadequacy of measures that may be taken to deal with it. It cannot give useful guidance in drawing up a workable programme that could be implemented in the course of the next five years, or in fixing practicable targets of investment. It will be more useful to consider the record of the preceding five years in deciding what proportion of the total resources available for development could be allotted to public outlays on housing programmes.

The Second Plan had originally provided for an outlay of Rs 120 crores on housing schemes, which was reduced to Rs 84 crores when Plan allocations were revised in 1958. The provision related to six programmes of which two, namely the Subsidised Industrial Housing Scheme and the Low Income Group Housing Scheme, had been initiated in the preceding Plan period. The other four programmes, which were included in the Second Plan at different stages, are: Slum Clearance and Improvement; Village Housing; Plantation Labour Housing; and Land Acquisition and Development. Mr K. C. Reddy, the Union Minister for Works, Housing and Supply, in his address to the Conference, has estimated that the total draws by the States under these six programmes during the Second Plan period would come to Rs 80 crores against the allocation of Rs 84 crores. The targets and estimates of draws by the States till the end of 1960-61 are given in the following table:

	(In crores of Rs)	Target	Drawals
Subsidised Industrial Housing	27.00	27.00	25.00
Low Income Group Housing	35.80	35.80	35.00
Slum clearance	13.00	13.00	16.00*
Plantation Labour Housing	0.51	0.51	0.18
Village Housing	5.00	5.00	4.05
Land Acquisition & Development	2.90	2.90	2.90

(*While the limit of expenditure on slum clearance schemes during the Second Plan period was fixed at Rs 13 crores, projects could be sanctioned up to Rs 20 crores. The sum of Rs 16 crores represents the estimated cost of 175 slum clearance projects sanctioned during the Second Plan period.)

Apart from the figures shown above, the States would have drawn Rs 15 crores from the Life Insurance Corporation for two schemes which were not originally included in the Plan, namely the Middle Income Group Housing Scheme and Rental Housing Scheme for State Government Employees. Against the overall provision of Rs 84 crores, the total expenditure on the housing programme would be about Rs 95 crores. The performance during the Second Plan indicates that a programme of larger size than envisaged in the Draft Outline could be implemented during the Third, especially in view of the greater availability of building materials like steel and cement, if only the funds could be spared to finance the larger programme. It may be added that the outlays mentioned above do not include the expenditure on houses constructed for their employees by the Central Government Departments like Railways, Posts and Telegraphs, Rehabilitation, Defence etc. It does not also include the considerable volume of house construction in the private sector.

According to estimates made by the Reserve Bank some time back, the total investment on urban housing was about Rs 500 crores during the First Plan and would be about Rs 600 crores in the Second. The figures indicate a slackening in tempo of house construction in the private sector during the Second Plan period as compared with the First. One of the obvious reasons is the shortage of steel which continued till the end of 1959. Cement was also in short supply in the beginning of the Plan period and when it became plentiful the price was fixed too high. The withdrawal of tax exemption on new houses from 1956 is another important reason.

Mr K. C. Reddy has estimated that the total investment on Housing during the Third Plan would be of the order of Rs 1200 crores, of which Rs 500 crores would be in the public sector and Rs 700 crores in the private sector. The achievement of the target suggested for the private sector will depend on the understanding, on the part of Government, of the various difficulties which hamper private building activity, and timely action to eliminate them. These difficulties have been ventilated in different forums, but have not, so far, elicited helpful response. It is, therefore, refreshing to find that the Union Minister for Housing is aware of the inhibiting effects

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

of Taxation on new house construction and of the role of tax concessions in diverting investment to this essential field of development.

The level of investment envisaged by the Minister will not be attained unless the private sector is enabled to play its proper role in providing houses for the people. The Housing Ministers' Conference has laid great stress on Housing Cooperatives and recommended creation of a strong cooperative structure in each State and extension to cooperative societies of adequate financial and technical assistance as well as supply of building materials. But as Mr K. C. Reddy has pointed out in his address to the plenary session of the Conference, "the history of cooperation in the field of housing was not particularly inspiring". It has been found that cooperative housing societies required continuous assistance at every stage. Under present conditions cooperative housing amounts to little more than extension of the activities of the State and cannot be depended upon to supplement the public sector programmes to any significant extent.

The Conference has also emphasised that the primary responsibility for providing adequate residential accommodation to industrial workers was that of the employers. Many progressive employers would be ready to discharge this obligation if their efforts to do so did not result in an onerous addition to the tax burden. This probably accounts for the fact, to which the Minister had drawn attention, that employers have not been able to make full use of the Subsidised Industrial Housing Scheme. Out of the total number of units put up under the Scheme, only 26 per cent were taken up by private employers. If provision of housing for workers is recognised as a social obligation on the part of the employer, it should not be taxed on the basis of its rateable value. Mr Reddy is keenly aware of this anomaly and has suggested that houses constructed by employers for their workers in the lower income groups should be taxed on the same basis as business assets, under Section 10 of the Income Tax Act, and not on their rateable value. He has also offered the suggestion that the employers' contribution under the Subsidised Industrial Housing Scheme should be treated on the same footing as contribution for medical benefits in the event of sickness, maternity, employment injury etc, and allowed as a deduction in income-tax assessments. The adoption of these suggestions in framing tax policy will give a strong impetus to new house construction and enable the employers to discharge the responsibility cast on them.

Goodbye to 1960

NEW year musings in India too will be conditioned by Mr Hugh Gaitskell's description of 1960 as "a year of difficulties, disappointments and disillusion". The comment is not due entirely to the Scarborough conference, threatening Mr Gaitskell's position in the Labour Party. It is due to the welter of conflicts in the Congo-projected readily into

the UN assembly. There is also the Algerian revolt. The abortive coup in Ethiopia and the intensified struggle in Laos to remind us that peace is elusive.

The new year begins under some unpromising omens even in India because of the Sikh community's refusal to take the bilingual State as the best possible and to ignore the separation of Bombay from Gujarat. India has not overcome her major problem, that of peaceful coexistence with China. The Documents have been examined, but the essential agreement is not foreshadowed. One must, however, remember that it took six years for Burma to settle her boundary differences. Internally the political pot has been kept on the boil. The Bengali minority in Assam was exposed to an outburst of prejudice and the language controversy precipitated a demand for a Hill State from the Khasi Jaintia and other tribes. The evacuee problem reappeared in Bengal and the Opposition made hay owing to the legal argument over Berubari. Another constitutional point cropped up in the outline of the President's functions under the constitution and the impression of differences in high places has not been erased wholly.

The congress party has been forced to deal with splits and the PCC and Ministry has not pulled together either in the Uttar Pradesh or in Mysore. The Kerala coalition, reared after the election in February, stands but the Orissa coalition is due to crack up after March. The party alignment before the elections cast its shadow over the Bhavnagar session. The economic problems have produced new questionings about State Socialism as also labour unrest, heightened by the Government employees' strike. Whitley councils may offer a way out but the stabilisation of prices under conditions of large scale spending remains an intractable problem for the authorities who are casting about for more specific foreign aid from friendly relations. But the latter have got the Canal waters dispute out of the way and the Prime Minister's trip to Karachi opened up a prospect of good neighbourly relations with Pakistan.

The communist world has its own difficulties. China's bad harvest is not one of the major issues now. Yugoslavia's isolation too is not one. Mao's views on party strategy are still not those of Mr Khrushchev and of the failure of the Summit talks at Paris has produced a hardening of the communist arteries (ideologically, it may be added). But Mr Khrushchev concedes that Mr Kennedy has other views: he forgets the U2 incident. But it is not enough to list the shadows. There are patches of sunlight. The promise of a bumper harvest, the assurance of US grain for rupees and the prospect of self-sufficiency in mineral oil after the new find in Rudrapur are enough to put pessimism into its place and the development of heavy industry renders the import cuts tolerable. The advent of a liberal US admini-

Indian Finance

The Minister did not make any mention of the problem relating to the prices of steel. Unless the selling prices are reduced substantially, it is difficult for the consumers to avail themselves of steel in adequate quantities. The surcharge of Rs 115 per ton on steel and Rs 62 per ton on pig iron is excessive and the time has come for Government to consider the removal of these surcharges.

In this connection, it is rather surprising to note the suggestion made recently by the Engineering Export Promotion Council. At its annual meeting held in Calcutta last week, the suggestion was made that "a small" extra excise duty should be levied on steel and pig iron so that the necessary funds are made available for the Council's work. The cost of steel is already heavy and any attempt to add to the burden by way of an additional excise duty will be most undesirable. As Sir Biren Mukherjee pointed out recently, "steel either directly or through the medium of construction or operational costs enters into the final cost to the consumer of practically every commodity and artificial inflation of this cost is certainly no help towards the solving of the urgent problem of effecting a reduction in the cost of living". The Engineering Export Promotion Council should be able to raise its funds through measures other than by an extra excise duty on steel.

The Minister pointed out that foreign exchange worth Rs 100 crores would be saved as a result of steel production during the second Plan period. He added that so far Government had entered into contracts for the export of nearly 3,30,000 tons of pig iron ingots, slabs, blooms and billets valued at about Rs 11.5 crores. He did not however indicate at what prices these exports had been effected. But it should be emphasized that in view of the severe shortage through which we had passed in recent years, great caution is needed before large scale exports of steel take place. Our engineering industries by and large continue to work much below their installed capacity and one major reason for this is the absence of adequate supplies of steel at reasonable prices. In view of the urgent need to step up opportunities for employment, it is essential to ensure that priority is given for supplying steel to indigenous industries rather than for export. It should be noted that even though indigenous production of steel is increasing rapidly imports continue to take place on a fairly large scale particularly of certain special types of steel. Efforts therefore should be made to reduce these imports and thus save foreign exchange.

The proceedings of the Advisory Council as reported in the press did not show what measures Government proposed to adopt in order to remove the various impediments to the production of steel. The chairmen of the Tata Iron And Steel Company and the Indian Iron and Steel Company in their recent speeches forcefully pointed out the various handicaps from which their plants were operating on account of irregular and inadequate supply of raw materials of the right type like coal, iron, etc. The matter has become quite serious and unless prompt and energetic measures are taken by the authorities to remedy the situation, steel production is likely to receive a serious setback.

Health of Banking System

THE suspension of payment (with permission from the authorities) by several banks in recent weeks has provoked considerable anxiety about the health of the banking system. Those who imagined readily that inspection

7 January 1961

and control made banks invulnerable have had some reason to change their views. The nervousness of depositors is not due wholly to the absence of a deposit insurance system on the US model. It is due to the fear that operating results might be affected by curbs on credit, leading to a fall in advances and a rise in the cash ratio. The decline in prices of Government Securities cannot be disregarded in assessing results, and it is not surprising that in spite of an agreement to limit interest paid on deposits, the future of banks is regarded without enthusiasm.

Consolidation of some banks after the partition of India averted a major crisis. The process may be repeated with success in view of the Finance Minister's statement about mergers and reconstruction. The latter will certainly affect shareholders, because some bank shares are partly paid-up. If no guarantee of full payment in respect of deposits is made, mergers or take-overs will be suspect and the clientele of small banks will not care to wait, but will rush to withdraw their money. The Finance Minister's statement is, therefore, not quite helpful for the clients of small banks which in South India have been doing useful service but are now exposed to the strain arising from the Palai Central Bank's failure to meet liabilities. The disclosures in Court have accentuated the original anxiety and it is apparent that clean bills of health for some banks must be given before full confidence is restored. The major banks, of course, are immune from the distemper but their position rests not on Government assurances but their own prudent policy in the past. But their too nurse anxiety about the impending award in respect of staff claims and their working results may be to some extent prejudiced by the limit set to advances, the curtailment of borrowing facilities and the provision of special deposits to be lodged with the Reserve Bank. This imitation of British practice has excited criticism for the radical differences between India and Britain cannot be ignored. The monetary policy that restricts the expansion of credit in a developing economy has been criticised on the ground that enterprises need more credit and it is not yet appreciated in high places that underemployment of resources is a far worse evil than inflation as Prof. Galbraith has said.

The measures to tone up the banking system can be suggested only by the Reserve Bank which has so far kept its own counsel. The legislative amendments are of insufficient value if the only thing that is certain is the preparation of schemes for amalgamation. The absorption of funds held outside the banking system must be facilitated by the guarantee that the vitality of banks today is unimpaired. It is not enough to say that many State-associated Banks have been taken over and their usefulness is assured. The management of banks must be supervised and a trustworthy board of directors on the German model may be provided when and where necessary.

The balance of payments crisis that faces has its parallel here but the banking system, after close scrutiny by the Radcliffe Committee, has thrown off new shoots, for instance, in hire purchase and the easing of credit has been a feature of recent policy. Perhaps this has no special bearing on Indian policy, because the economy here is insulated by controls and regulations. But it is undeniable that a flight into bullion has taken place since 1959 and it may be asked whether the failure of bank deposits to increase at the normal rate is not due to monetary and fiscal policy. The pains of growth felt in the banking system are readily communicated to other sections of the economy and prudence certainly demands some adjustments required by the situation. The year-

end will see probably a clamour for cash and it must be said that the banking position at year-end will show an excess of till money. How far the demand for bank credit is due to the rise in prices, originating from deficient financing resorted to over nine years, may not merit an answer but the price situation is obviously at the bottom of both reduced savings and living on capital to which depositors are prone.

Flow of Foreign Investment

THE International Businessmen's Conference held in Karachi in December 1960 does not appear to have received in India the prominence it deserved. The Conference was the first of its kind to be held in Asia. It was attended by the representatives from thirty-two countries. There were about 550 delegates. The United Nations, the World Bank, the International Finance Corporation and the International Labour Organisation also had sent their representatives to the Conference.

A conference of this type has undoubtedly great value in educating public opinion about the various aspects of economic development, especially in the underdeveloped countries. The resolution adopted at the conference does not contain new points or suggestions but that does not in the least detract from their significance. The very fact that over 500 enlightened businessmen from various parts of the world came together on one platform and arrived at certain conclusions relating to foreign investment, is itself an event of unique importance.

What then were the recommendations adopted at this Conference? One was that nationalisation, if applied at all, should be non-discriminatory and accompanied by prompt, effective and adequate compensation. Concern was expressed at the arbitrary and discriminatory acts of expropriation in certain countries. It was pointed out that such acts undermine confidence everywhere and injure the interests both of the advanced and the underdeveloped countries. The need for attracting capital and technical know-how by the latter countries has never been felt more urgently than now, and therefore in their own interests, they refrain from adopting unfair methods which will scare away foreign capital. Stress was also laid on the need, on the part of the developing countries, to define clearly any conditions that they may attach to foreign investments; simplify administrative procedures, provide the necessary basic services and give reasonable assurances for the remittance of earnings and repatriation of capital. The Conference emphasized the important point that while temporary tax concessions were helpful, a moderate general rate of taxation, coupled with a fair and efficient tax administration, is far more useful. At the same time, it was pointed out that businessmen and Governments of capital-exporting countries should make a deliberate effort to facilitate and encourage the outward flow of investment in all its forms.

These principles are admirable but the question is to what extent the Governments will be prepared to implement them. Take, for example, the case of India. It is well known that we require increasing amounts of foreign capital to carry out our programmes of development. But yet our fiscal policy is not as helpful as it ought to be. This is what the Associated Chambers of Commerce and Industry said in one of the resolutions adopted at their recent annual meeting: "While appreciating the scope of existing incentives to industrial development the Chambers consider their value is largely offset by aspects of the

tax structure and by the degree of regulation and control of corporate enterprise which is in excess of what many potential foreign investors can be expected readily to accept." It was pointed out that the total new, private foreign investment in the whole of India in any year from 1950 to 1958 was far less than the investment contemplated by some individual companies in the United Kingdom for their own development. The Chambers have made a number of specific and constructive suggestions for removing the existing impediments and attracting foreign capital and it is hoped that the Finance Minister will consider them sympathetically during his next budget.

The other important aspects of the International Businessmen's Conference in Karachi were the Group Meetings on Textiles, Primary Products, Machinery and Banking. The Textile Group recommended that a special commission should be set up to consider the possibility of limiting the rising prices of machinery and spare parts which were too expensive for the developing countries. The representatives from the United Kingdom, however, are reported to have opposed this proposal on the ground that there were already other competent organisations dealing with this matter such as the International Cotton Advisory Committee and the International Federation of Cotton and Allied Textiles Industries.

It will be thus seen that the Karachi conference has served a useful purpose in focusing attention on certain important aspects of foreign investment in undeveloped countries. The implementation of its recommendations will of course be difficult because the Governments of many countries are involved. But if enlightened businessmen from various parts of the world assert themselves and raise their voice against impediments to economic expansion, Governments will find it difficult to ignore their opinion.

NATIONAL NOTES

A New Year Gift

A new year gift to India is the amended Companies Act passed in 1960 and operative as from January 1. The Government have acquired more powers over the corporate sector and the Directors' powers are further reduced. The changes include a rule that rights shares can be issued only to existing shareholders except in special cases. A major rule is that no dividend can be paid, unless depreciation, including arrears, is fully provided for. Exemption may be given in some special cases and the rule is not retrospective. One can guess which shares are vulnerable at present if dividends cannot come as before. The payment of dividend in cash alone is permitted. The issue of shares in inter-locking companies as dividends in scrip is barred by the amendments. Bonus shares are another matter. Enterprising managing agents if they wish to pay dividends must find either cash or sell out investments, held in order to do so. Rules in force about books of account, balancesheet changes etc. are meant only for executives but the shareholders will appreciate that profits earned in a year will be reduced by adjustment of prior losses and the management's commission will be pro tanto lower. No managing director can ordinarily draw more

than 5 per cent of a year's net profits as his own commission. So the ceiling idea is now current in a much higher sphere.

The transfer of managing agency must be approved not only by the shareholders of the company taken over, but must get sanction of the Government. This is the precaution applied against takeover which in India does not take the offer of a firm bid for shares to the holders thereof. The Company law administration will know in future more about loans, inter-company investments and the payments made to the managing partners. The law is now more formidable and the incorporated company has definitely more duties to perform in relation to its members. The five-year term to which most managing agents are now legally bound will probably see that full time executives on salary take the place and the trend has been to some extent anticipated by remodelling of control of many a company. The framework of public investment also has changed and shareholders must get accounts (and dividends) within six months of the end of the year. Not all companies follow the rule at present and some keep many guessing about the dividend to come.

New Scheme of Cloth Prices

The new scheme of cloth prices announced in Lok Sabha by the Union Minister of Commerce and Industry on December 21, is designed primarily to meet the demands of the trade, wholesalers and retailers, who were dissatisfied with the scheme of voluntary price regulation adopted last September. Though retail prices had not increased, supplies were unsatisfactory, as wholesalers were not lifting adequate supplies while retailers were also indifferent; and stocks with mills had accumulated to the extent of four lakh bales of cloth. The revised ex-mill prices are expressed in percentage increases over August 1959 prices and reflect a reduction of 5 points in the prices of coarse, lower medium and higher medium categories and of 3 points in the prices of fine and super-fine categories, as compared with the prices fixed in September. The Indian Cotton Mills Federation have also agreed to a further reduction of 3 points in the case of selected varieties of coarse and lower medium categories.

The reduction in ex-mill prices is balanced by an increase in the trade margin from 15 per cent of ex-mill prices to 18 per cent. The net reduction in retail ceiling prices of coarse cloth will be about 1.5 nP per rupee. In the case of fine and superfine grades the ceilings will be almost the same or slightly higher. But these varieties, the Minister said, were being sold in the market below the ceiling prices prescribed by the

Federation. The actual relief to consumer will therefore depend on adequate supplies.

The Minister also told the Lok Sabha that the Federation had agreed to request all mills to work three shifts so as to increase the production by 10 per cent. Some mills are already working three shifts, and others are also expected to introduce the third shift. He was confident that the increased supplies of cotton required for this purpose would be readily available. This year's crop is a good one. The present estimates forecast a crop of between 48 to 50 lakh bales as compared to last year's crop of 37 lakh bales. Government are also continuing efforts to build up a buffer stock of imported cotton.

Tea Exports

The falling trend in India's tea exports that has been visible during the past few years has already caused serious concern to the industry in particular and the country in general. The reasons for the decline are not far to seek. The increase in the cost of Indian common tea and the lack of adequate propaganda in the international consuming centres figure prominently in our minds. The rise in the cost of production has been the result of various factors like the crippling taxation, the obligations imposed by the Plantation Labour Act and other welfare measures. The lethargic attitude that has been adopted by the authorities in giving proper publicity abroad has turned out to be detrimental to India's tea exports. No appreciable propaganda has been done in the UK ever since India came out of the International Tea Market Expansion Board.

The need for stepping up the export of tea, which is the largest single foreign exchange earner especially when the country is on the threshold of the Third Plan cannot be overemphasised. The problem of promoting exports is closely linked up with the problem of stepping up the output, for without a remarkable rise in production the difficulty in providing for larger exports after meeting the internal demands is quite obvious. The solution lies in more effective propaganda abroad for Indian tea and a determined bid to improve the quality as well as quantity of the crop and trying to keep the cost of production to the minimum possible. A more favourable tax policy from the Government is eminently desired to help the trade and industry in meeting the challenge of low cost teas in the international markets.

Export Trade in Manganese

Manganese exports are to be made on a quota basis and all

future exports have to be registered with the State Trading Corporation. Shipments of ore from Bombay will be made by rail without movement quota slips and low grade ore shipped from Visakhapatnam will be moved, if foreign sales contracts are furnished to the railways by mine-owners and shippers. The arrangement will be maintained for three years but all barter deals will be exclusively handled by the STC and the utilisation of current quotas must also be arranged through the STC up to half the tonnage.

The fall in exports has forced the Indian Government to realise the value of firm contracts for long periods. Bulk handling and quick loading are essential conditions. That Russia, Brazil, Ghana and others are rivals of India at present and the USA has many suppliers at call is accepted and pleas made by mine-owners have been given some weight at last. The recent notification indirectly conceded that railway facilities have been inadequate and export trade has suffered. This is valuable, as it meets the point that the Government are largely responsible for the decline in exports. Quicker loading of iron ore at major ports may lead to quicker loading of manganese also. The Indian shipping companies stand to gain somewhat, though foreign buyers may bring their own chartered vessels and the Indian Government cannot insist on freight space being booked by the STC which has no ships of its own. The unhealthy competition from tramp tonnage might wane and Indian shipping may stand to gain from better freight rates and larger tonnage. A depressed industry certainly needs a tonic of sorts: like iron, manganese is a tonic.

STATES NOTES

Fisheries Development

An allocation of Rs 4.5 crores has been made for development of fisheries in Kerala during the Third Plan. This is the largest allocation for fisheries in any State, the allotment to other States such as Madras, Maharashtra, Andhra Pradesh, West Bengal, Orissa, Mysore and Gujarat being Rs 3.2 crores, Rs 2.3 crores, Rs 1.75 crores, Rs 1.68 crores, Rs 1.58 crores, Rs 1.30 crores and Rs 1.23 crores respectively. Kerala has been allotted the largest share in consideration of the immense scope for fisheries development in that State. Already it produces nearly 25 per cent of the entire Indian fish production and about 35 per cent of marine fish.

Progress of fisheries development in the Second Plan in the Kerala State has also been commendably fast. So far nearly Rs 2.5 crores had been spent under the Indo-Norwegian project which had been functioning for the past eight years. The project is now engaged in establishing a large fishing centre at Cochin for the use of all classes of fishing vessels. A boat-building yard and repair facilities including slipways and cold storage, fish meal and other processing plants are other schemes that await execution in the project's schedule.

The fisheries operative centre which is to be set up in Cochin would train high class technicians like naval architects, boat builders, master fishermen, fishery engineers, skippers, processing technicians and electronic engineers. With ambitious programmes, the fisheries Centre is expected to make a substantial contribution to the development of fisheries in the Kerala State.

An important plank in the fisheries programmes to be put into effect during the Third Plan is the mass production of mechanised boats. This scheme is now reported to have received the sanction of the Government.

There is also scope for further increase in fisheries production through extension of survey and exploratory fishing operations to areas that have so far remained out of the scope of such operations. Ponnani, Beypore and Cannanore are instances of areas where such exploratory operations should prove useful.

The allocation of Rs 4.5 crores for fisheries development during the Third Plan does not however represent the limit of expenditure for the Third Plan. Apart from Central grants and loans for ap-

proved schemes, the State's Third Plan would also contain allocation for fisheries development.

Is Khadi Costly?

If khadi was consumed in the areas of production, it would not be costlier than mill cloth.

This is the belief Mr Lal Bahadur Shastri, Union Minister of Industries and Commerce expressed in his opening speech here last week at the All-India Khadi and Village Industries Association Exhibition. As usual this Exhibition is conducted this year also despite the bigger attraction offered by the Southern Indian Chamber of Commerce which is organising an Industrial Exhibition at a cost of a crore of rupees.

Mr Shastri admitted that khadi was costlier, but it should have to be considered from a different angle. He also thanked the Indian Cotton Mill Federation for having cooperated with him in the recent reduction of mill cloth price. He reminded the khadi producers that accumulation was not confined to the khadi producers only but it had affected the mill and handloom textiles too. In this connection he also referred to the fact of rebate being given if khadi stocks got accumulated. Then the stocks got sold out. Mr Shastri was probably thinking whether the mill industry too was prepared to give any such rebate.

In this connection Mr Shastri alluded to the need for developing agro-industries and integrating both agriculture and other industries to solve the problem of unemployment in the rural areas. Something positive in rural areas was wanted by him. It might take twenty or thirty years for all rural areas to get industrialised, Mr Shastri stated, but wanted that the psychology should be created now itself so that every village or group of villages would get industrialised.

Mr Shastri stated that it was agreed to bring about technological improvements in the spinning wheel and utilise power also wherever it was available.

South Neglected

Despite frequent defensive attitude of the Madras Ministry towards the Central allocation for the State in the next Plan, sometimes individual Ministers could not help the feeling that so far as Railway communications in this State are concerned poor attention has been bestowed by the Planning Commission. Dissatisfaction over the railway communication was heard in the Lok Sabha and Rajya Sabha from Madras Members, not to speak of similar complaints from other constituents of the Southern Zone. Probably to assuage those feelings the Prime Minister recently stated in New Delhi that if Madras State needed fresh railway lines they should be met.

Union Deputy Railway Minister Mr S. V. Ramaswamy stated in Madras last week that the Planning Commission had set apart Rs 25 crores for construction of new railway lines in the Third Plan period in areas which have not had any new lines so far.

All the four Southern States certainly have had no new lines so far and whether all of these would get the lines for which they are pressing remains to be seen.

This sum of Rs 25 crores would be in addition to the sum already allotted in the draft Third Five Year Plan, (viz., 1220 crores Mr Ramaswamy said and added that sanction for a 32 mile new project in the new Maharashtra State connecting Dewas with Pannal had been accorded.

Though not categorical, Mr Ramaswamy stated that work relating to the electrification of Tambaram-Villipuram railway line would be begun early in the Third Five Year Plan. The Railway Board are presently scrutinizing specifications of electric locos of 25 K.V. metre gauge A.C., he said.

According to the new break up figures for railway allotment, it is learnt that out of the total outlay of Rs 1,220 crores, Rs 120 crores would be available for the new lines.

Previously the Railway Ministry concentrated on the development of new railway lines around the new steel plants. This served as an excuse to evade the demands from the South. The Central Railway Ministers did not seem to be very much anxious and chose to toe the line of the Planning Commission.

Now that the views of the members of Parliament from the South had been put effectively to the Prime Minister, it is stated that the Prime Minister found himself in a position to agree with the justifiable demand of the Madras members and almost conceded the need to provide the new lines.

War Resisters' Meet

The Triennial War Resisters Internationale held for seven days in Gandhigram, near Madurai, was attended by delegates from about thirty countries abroad. It could have been better played in the Indian Press, but probably due to pressure on their space and due to the deteriorating cold war atmosphere in the world, the War Resisters' appeal got only a moderate publicity.

In his inaugural address the Sarvodaya leader Mr Jayaprakash Narain frankly declared that under certain circumstances he had to defend armed defence of his own country who has been subject to unprovoked aggression. He also explained how both socialism and communism had failed in the world.

Mr R. R. Diwakar of the Gandhi Smarak Nidhi said in his valedic-

tory address that India had attracted attention due to a variety of reasons. Probably this was due to its stable form of democratic Government, or to its neutral attitude without aligning itself with any of the power blocks. Despite many of the pressures of political systems around, India had very well maintained a stable form of Government; but the best of all reasons would be, Mr Diwakar thought, that India was the land of Gandhi and Vinobhaji.

After its week-long deliberations the WRI endorsed the view of Mr Jayaprakash that both the capitalist conception of private ownership and the communist conception of State ownership of means of production and distribution were insufficient where the ideal of non-violence was concerned.

The WRI therefore laid emphasis on decentralisation of political power for achievement of a non-violent society. Major means of production and distribution should be owned by the Community, the WRI said, and added that distribution should assure economic justice and social equality. It wanted that cooperatives, unfettered by any political attachment should plan an active role in the reorganisation of society, though some industries require a degree of decentralisation and certain services could legitimately be owned by a democratic Government.

Naturally the WRI had to commend the Bhoodan movement for

application to many situations in the world outside India. It commended the Bhoodan as fundamentally sound in approach and principles.

The War Resisters Internationale was undoubtedly attracted by the Santi Sena principle of the Sarvodaya. Therefore it decided to establish a World Peace Brigade on the lines of the Shanti Sena and wanted that this Brigade should be an independent one, independent of the United Nations and of all Governments. Practical constructive work should form an integral part of the activities of such a brigade whose volunteers, the WRI stated, should accept a form of non-violent discipline.

The Convention did not view with favour the compulsory introduction of military training and national service in Indian Universities and described this as "growth of military tendencies in India." It suggested that this should be opposed by nonviolent means when such service of compulsion might be introduced.

Another directive which the WRI gave to its adherents all the world over is to work for getting the right of conscientious objection to war and arms recognised universally. It wanted that the Universal Declaration of Human Rights should be amended for this purpose. It also decided to send its resolution on this subject to the United Nations and to the European Court of Human Rights for necessary action.

Self-Sufficiency in Oil

The discovery of another oil-field in Assam may inspire the hope that the country can do without oil imports after 1970 and the new State refineries including one in Gujarat will have plenty of material. The assistance given by Rumania and other countries to the Oil and Natural Gas Commission has helped to locate oil far beyond the old, small field in Assam.

The problems of extraction and disposal will entail borrowing but the public sector will be in a position of vantage as compared with the foreign oil companies which had to be persuaded to make price concessions last year. The creation of an Indian Oil Company to sell oil is not premature and expansion of existing refineries may be expected, with favourable results to the chemical industry also. The offer of Italian technical and financial aid may make all the difference to the development of the oil resources by Government in future. The purchase of tankers may become less important, if the pipelines can be made in India and the saving on coal, if diesel engines replace steam locomotives, cannot be disregarded. The promise of more oil for industry may belong to the future but there is also the promise of more excise to the Centre, for a tax on fuel is a weapon in every fiscal armoury today.

Indian Finance

FOREIGN NOTES

Industrialisation and Pakistan

East Pakistan has a growing jute mill industry and the Punjab's cement industry is much older. The military men who are in charge of the country's industrial development realise that some raw materials must be still imported and the purchase of coke from Iran and coal from China is made under bilateral agreements. In stores policy, etc. Pakistan does not disdain to follow India, and new ventures therefore will find a ready-made market. A recent official report indicates that a new cable factory with US aid is being set up and will be in production in a year. There is one cable factory at Karachi but a second unit to turn out cables and wires is needed to meet home demand. India's expansion may have well inspired a desire for more cable-makers as well as new sugar mills. The rise of a plastics industry started with German aid, technical and financial, is suggestive. Industrial alcohol and resins may help—so will the natural gas and oil found in Pakistan. A drive by Japan to increase trade in return for the purchases of cotton, raw jute, hides and skins made from Karachi is a sign that India is trailing behind. But Japan is prepared to invest in Pakistan as in Malaya and she supplies textile machinery on credit. A rayon mill in East Pakistan is now contemplated. Belgium too is interested in Pakistan's industrial potential, and a chemical industry is planned. Since Belgium buys cotton prints in Pakistan, cotton mills may get a share of the foreign market in which India has no place, according to official reports. Quota restrictions applicable to imports for Japan at present may even help Pakistan to win and keep a market. But it may be said that Belgium is liberal in trade policy as compared with Cambodia which has banned the entry of fish, pepper and crackers as well as cigarettes and matches from foreign countries. The avoidance of trade contacts with South Vietnam is derived from political aims and attitudes of the King who is politically able and adaptable. He has, like others, discovered that neutralism holds definite advantages.

Russia's Foreign Policy

If Mr Khrushchev has relented because of the forthcoming change in the White House, one may even look for adjustments of foreign policy leading to the liquidation of the Cold War soon. Prosperity

in Russia, attested by big spending on consumer goods by the working class, may condition the desire for peaceful co-existence.

The U-2 plane incident passes into history as Mr Khrushchev is not going to raise the question again in the UN Assembly. The Kremlin reception may lead to renewed argument over China's differences with Russia. But for the present, the messages to the Western powers suggest that Mr Khrushchev feels powerful enough to forget the controversy over Algeria, Laos or the Congo. The Russian attitude is also tacitly an invitation to negotiate on Germany and other generations. The NATO Council meeting is now more or less irrelevant. The perseverance of Mr Macmillan over a year is indicated and the world can hope that a Summit meeting held this year will lead to positive results.

The long expected thaw in Russian policy has begun and the control over East European States may be relaxed to the point at which normal trade with Western countries can begin. A dramatic reversal of US policy cannot be predicted, since the American view of China has not changed so far. The end of Chiang's rule on Taiwan must take place before the USA can set a new course in the Pacific.

★

Informal Diplomacy

As a former Governor of New York Mr Harriman has been long prominent in the Democratic party. His wartime record makes him a logical choice for the post of Roving Ambassador and his success in Russia is a point altogether in his favour. There have been Presidents who have relied on informal diplomacy at a high level. Wilson relied on Colonel E. M. House and Roosevelt took soundings in Europe through Mr Hugh Gibson rather than the envoys posted in distant capitals. There is older precedent in the work of both Benjamin Franklin and Thomas Jefferson in Paris during the early revolutionary days and the choice of Mr Kennedy may be justified by new anxiety in the Far East as well as embattled Cuba.

The return of Mr Harriman to public service will certainly please Mr Macmillan who too did a turn in the Middle East to supervise war and diplomacy in North Africa. Mr Kennedy's cabinet is ready before has inauguration and the last choice, that of Mr Harriman, will suggest that the new President means to put more business through the State Department. Mr Harriman is probably expected to deputise for the President in foreign conferences also after effective briefing at home. The memory of Yalta and Potsdam does not encumber the new President, and it may turn out that Mr Kennedy will derive more inspiration from Mr Roosevelt in view of what Mr Gromyko has said about the recognition of Russia and the wartime alliance.

Indian Finance

WORLD OF BUSINESS

Home Science

HAS the study of home science, as a subject in both high school and University classes, progressed in India? This question was answered in the negative by Mrs B. Tarabai, President, Home Science Association of India, in her presidential address to the fifth biennial conference held at Coimbatore last week.

Not only is there dearth of books in this but also dearth of teachers. Furthermore even the attempts made in some colleges in Madras and other States tend to look to this subject more from the Western angle rather than from the standpoint of our own traditional outlook.

There is eagerness on the part of girls to study home science in the colleges. Naturally there is also rush for admission to colleges which teach this subject. Known as Household Arts, the practical methods of teaching this science in our own tradition are very poor attempts in making the pupils understand what they are exactly studying under this subject. A few of the lecturers are now studying Home Science in the Western countries, particularly in American Universities, and on their return to their respective colleges they are expected to spread their learning from the West and teach those principles to their pupils. What the girls could learn from these foreign studied Home Science Teachers should puzzle parents, particularly the mothers!

The three day conference of the Home Science Association of India was inaugurated by Dr K. L. Shrivastava, Union Minister for Education at the Avanashilingam Home Science College, Coimbatore.

In the opinion of Mrs Tarabai, Home Science had gone ahead in no small measure in Indian Universities though it was only eight years since the subject was introduced. Departments of Education, Universities, colleges and schools have become alive to the importance of Home Science. Education and Mrs Tarabai stated all these had included this subject in all levels of education. She was also of the opinion that the standard and content of Home Science were steadily improving. She told the rather bemused audience that Home Science was not mere cooking as some would be imagining.

In 1951 there were only three Universities in India offering a comprehensive course in the subject and four others had it as an

elective subject. At present, she was happy to declare there were twentyeight institutions in the country offering Home Science as an integrated or elective course.

She was of the view that there was much to be done for raising the standard of education. She deplored the tendency to copy the West in an anxiety to bring about progress and development in the country. Traditions and healthy customs which had stood the test of time were apt to be forgotten, she deplored, and reminded the conference that it should not be forgotten that home science was taught by elders in the joint-families of the olden days. Urbanisation and the splitting of families led to the inclusion of Home Science as one of the disciplines in the field of education at present.

Mrs Tarabai felt that the mode of life of people had to change in the fast changing pattern of society, but she pleaded for the preservation of some of the old traditions and customs that would

survive any test of time and which had lived through ages. She passionately pleaded for keeping up the cultural identity without trying to standardise their life in the highly complicated modernised and industrialised society of the present age.

The first problem was that of ensuring good standard books and the next important problem was the need for trained and qualified women teachers. She stated that now home science had come to a stage where it was necessary for the authorities concerned to look ahead and formulate plans for research in different areas of the subject. She suggested a Home Scientist as an Adviser to the Ministry of Education to help in the development of this subject.

It was but appropriate that Mrs Tarabai should appeal for maintaining the Indian concept and identity in regard to the teaching of Home Science. Unfortunately in the Colleges which offer this subject

for girls, (and they are few and far between) the teachers seem to be more alive to the necessity of making up their wards mug up certain prepared notes mostly on Western lines. There is not only lack of good text books with a vivid background of our own culture in the subject but attempts are yet to be made by the colleges that offer this for study, to learn and collate our traditional ideas.

Simply sending staff teachers abroad meagrely equipped with our own background of old home life, would not suit our needs. Home Science should most certainly include elements of art, music, architecture besides, of course the best methods known in the culinary art. The last mentioned is increasingly becoming a forgotten art. The pity of it is that in High Schools where home science is taught to young girls, the methods adopted in making simple recipes verge on the ridiculous with aid of scales and cubic measures.

OUR PROGRESS

In the prosperity of our people lies our progress. Our task is to help our countrymen to save and invest wisely. In the past year, through our increasing number of branches, we furthered our old services and sponsored new to encourage savings and to contribute to better living.

and

NATIONAL AND GRINDLAYS BANK LIMITED

It is announced that, as from the 1st January 1961, the business of the branches of Lloyds Bank Limited in India, Pakistan and Burma has been merged with and is being carried on by National and Grindlays Bank Limited.

The interest of Lloyds Bank Limited in the banking business of the territories concerned is being continued through a substantial shareholding in National and Grindlays Bank Limited and by representation on their Board of Directors.

National and Grindlays Bank Limited

(amalgamating National Bank of India Limited, Grindlays Bank Limited, and the Eastern Branches of Lloyds Bank Limited)

Registered in London under the Companies Act of 1862 on the 23rd March, 1866. The liability of members is limited.

Head Office: 26 Bishopsgate, London, E.C.2

Mrs Tarabai had offered the best advice to the protagonists of Home Science subject in the Universities. It would be a good thing that our own ancient tradition and methods are revived and preserved in books which should form suitable background texts for our youngsters seeking to study home science methodically in any University.

Kolar Gold Mines

Mysore State Chief Minister, Mr B. D. Jatti, told newsmen at

Bangalore on Monday that far from closing down the Kolar Gold Mines, plans have been made to work it continuously.

He informed pressmen that the expansion project was expected to yield substantial gold output.

Mr Jatti also disclosed that the Nundydrug and Champion Reef mines had set up an all time record by mining 24,759 tons in last August and 19,380 tons last September. This record was never obtained in the eighty years of mining history in the State, he declared.

There was no basis for the report that the mining would be closed down if there were no new reefs. The proved ore deposits were enough to continue mining without closure, he said. He also stated that the results of the mining had shown an upward trend.

Quoting figures to prove his contention, Mr Jatti stated that after payment of royalty during 1950 to 1960 to the tune of Rs 36.89 lakhs and a depreciation amount of Rs 15.76 lakhs, a net surplus of Rs 18.20 lakhs was available. Mr

Jatti stated that exploratory work for development of the mines was in progress.

(It has been confirmed that the Central Government would take over the Kolar Mining operations. These were nationalised by Mysore State in 1956. The Union Finance Ministry will work it up. It is also reported that the other mine, the Hati mine still remains to be explored and the Planning Commission had set apart Rs 150 lakhs to step up the mining capacity to 30,000 tons.)

Tea Research

A tea research station in the Anamalais, sixty miles from Coimbatore, would begin functioning ere long. The foundation stone for this was laid last week by Mr Nityananda Kanungo, Minister for Commerce in the Government of India.

The Tea Board and the India Government are giving a capital grant of Rs 14.86 lakhs. Of this Rs 12.56 lakhs will be for erection of buildings in the Anamalais and Rs 2.1 lakhs for the erection of a substation in Central Travancore.

Sanctioned as far back as 1956, the scheme took so long to enter into its first phase because of some correspondence with the Madras State Government over site. The Government of India too could not be easily persuaded to allot increased grant due to increased costs. The Research Station is to be started by the United Planters Association of South India.

Mr H. C. Kothari, the UPASI President, referred to the increasing tea production in the country. This was in the background of the complaint that the tea industry had not done anything to increase the yield or improve quality. He referred to the increasing cost of production while the incidence of taxation was particularly heavy on the plantation industry. In this context, Mr Kothari thought if the Research Station had come up earlier, it would have helped achieve progress and enable a proper study to be made of the question of both increased yield and improved quality.

Mr Kothari laid stress on proper coordination between the Central and State Governments on the question of taxing the plantation industry. He pointed out that this was lacking to such an extent that the industry suffered imposts from both in many ways.

Mr Kothari further referred to India's difficulties in competing in outside market which he stated, had now become buyers' rather than sellers' market. Intense competition would have to be faced by India and it was imperative, that both the State Governments and the Centre should give the tea industry all possible assistance to meet this competition.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

let us analyse briefly here the causes of the present money market tightness.

On the one side, 1960 has proved to be an extremely satisfactory year in that industrial production has shot up considerably. So, a larger volume of productive endeavour had to be financed by the banks. In turn, it will have meant automatically that the quantum of accommodation given to Trade and Commerce will also have risen. Thirdly, the scarce availability of foreign exchange even for import of industrial raw materials may be held to have been responsible for manufacturing industry being disposed to carry larger stocks of raw materials. Furthermore, for want of a component or two, which had to be obtained from abroad, stocks of semi-manufactured goods with industry may also, I fancy, have gone up sharply. Meantime, sugar has had a year of greatly augmented production—stocks have not been small. By the time you added all these up, you found inevitably, as in 1956, that the slack season, like Calcutta's winter, could be reported missing in the appropriate advertisement columns of the Statesman.

On the other side, Bank Deposits have seemed to be static, and the reasons therefor are various. Firstly, presumably because their revenues have been buoyant, Government have, during the first nine months of 1960-61, far from pumping in currency through created money, actually been in a position to cancel ad hoc treasury bills in a very substantial manner. So, if, in recent years, deficit financing on the part of Government contributed to the growth of Deposits, cancellation of ad hocs will have acted this year as a contractionist influence on bank Deposits. Thirdly, the State Bank has suffered a fair-sized reduction in Deposits owing to the arrangements it has reached for the making over of the counterpart funds to the Reserve Bank. Next, we have the fact that the new counterpart funds no longer accrue with the banking system, but are instead made over directly to the Reserve Bank. Again, with the new issue boom that India has been in, the grip of for quite some time now, I would think that the import surplus on private sector account in

1960 has been larger than it has been in recent years. So, the delivery of capital machinery during 1960 to the private sector will certainly have had a contractionist impact on bank Deposits. Lastly, of course, there is a continuance of the new issue boom, evidence of which is abundantly to be found elsewhere in this week's Indian Finance.

Tightness in the money market withal, we are having, as G. M. Pyne's share market review so aptly puts it, "a flush of new issues". The review points out that, "before the Budget jitters appear, a flow of new issues over the coming weeks will be there, obviously to attract capital. With Kothari Sugar, British Paints, Madras Rubber, Travancore Electro-Chemicals and Usha Martin Black—the queue has only just started to form". The inference is that, before February brings towards its end the annual disease called budgetitis, the pressure upon the money market from new issues may well become almost intolerable.

The new issue boom began, if I may try to place it, with the ushering in of 1959. Two years have since elapsed during which it was rare indeed to find an unsuccessful soliciting of the investor. Almost in every case, unofficial quotations on the eve of the marketing of the shares placed them at mouth-watering premia. Again almost without exception, the premia have not been eroded. Some few of the new companies have already started production—and already begun to make money. Not a few investors have booked their profits, and even more have pleasantly in hand a considerable appreciation in the worth of their holdings. The budget proposals of the last two years have failed signally to halt the new issue boom. However, the Reserve Bank's package deal of monetary control measures resulted in the climbing curve of new issue quotations levelling off. But, since then, all placements have continued to be worth-while successes. And I do not see, barring the institution of the most outrageous tax measures by Government, how, in this developing economy of ours, the new issue boom can peter out. Sure, there will be a busy season

and a slack season for offerings, but new company flotation will undoubtedly, steadily and substantially gather momentum. There will be plateaux, but only so that they are the take off point for another bit of mountain climbing. 1961, as I say, has started with a bang and exceedingly good buys for the investor. What more could be asked for?—tax concessions always being excepted, but these are solicitations as unavailing as Oliver Twist's asking for more.

The Industrial Management Pool was I think, created two years ago, and at the time it seemed a very good idea indeed. It was hoped to draw talent from the private and public sectors for the top and middle management stages so that for the manning of the State enterprises you would be able to get personnel well versed in businesslike practices. The IMPs (as perhaps we may call members belonging to the new service) were given the hope that they would be a cadre above the IAS, in the sense both that their starting and ceiling salaries would be higher. If I remember right, some 200 were first selected by the UPSC for the new service; and that was two years ago. The actual number now in position has dwindled to 120 or so. The reason is, the "attractive" terms and conditions that had been promised have failed to materialise. Uncertainty abounds. Then, if the original intention was—as it undoubtedly should have been—to enable State enterprises to be run on business lines, I would have expected that authority and responsibility in suitable measure would have been given to the IMPs. Not so, I gather. Red tape of the governmental sort entwines and shackles the work. The time has come to decide whether the Industrial Management Pool is to do the good which it was hoped it would be able to, or whether the IMPs are something that democratic Government has no room for.

EAVERSDROPPER.

STEEL manufacture at MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58	1958/59	1959/60	
	(Rs. in lacs)			
Capital	51	51	71	Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.
Depreciation provided up to date	32	36	41	
Profits retained in business to date	25	35	45

“India has more acreage under rice than any other country in the world. Yet production is not large enough to meet the demand. Considerable damage to crop is done by the paddy stem borer, the cost of which is estimated at over Rs. 30 crores a year. Shell endrin provides effective control of this deadly insect pest and can thus increase rice yields on affected fields by upto 50 per cent.”

GATEWAY GOSSIP

Need for National Shipping Policy

The need for a rapid development of national shipping has long been accepted but the progress made so far has not been very impressive. It is true considerable headway has been made during the first two Plan period as total tonnage which stood at only 3,91,000 GRT is expected to reach the targeted level of 9,00,000 GRT by 1960-61. But considering the vastness of the country's coastline and its volume of overseas trade, the shipping tonnage is indeed meagre compared to that of other maritime countries. The expectation had been that with a big Third Five Year Plan, the allocation for shipping would be substantially increased. But the hope was belied as the Draft Outline has said that it has been possible to make a provision of only Rs 55 crores. This allocation is against the National Shipping Board's recommendation of a target of 14,20,000 tons consisting of 10,00,000 tons for the overseas trade and 340,000 tons for the coastal trade. The total cost of this programme has been estimated by the Board at Rs 118.8 crores. The Board has since reduced the estimate to Rs 104 crores for a net acquisition of 5,00,000 tons. The allotment of Rs 55 crores will only enable the acquisition of 2,00,000 tons. This is patently inadequate and although the Draft Outline does not completely rule out the possibility of making an additional allotment before the Plan is finalised, there is still no indication to show that a higher target is being considered for shipping.

In his statement circulated to the shareholders of the Great Eastern Shipping Company Limited, Mr A. H. Bhiwandiwalla, Chairman, has pointed out that the proposed financial outlay for shipping would slow down even the present tempo of growth of shipping. During the Second Plan period the net acquisition of shipping has been 3,00,000 tons and the present rate is about 1,00,000 tons per year. Even if large addition are not possible, the aim should atleast be to maintain the present rate of growth. The National Shipping Board's revised recommendation of Rs 104 crores for a target of 14,00,000 tons will just ensure this modest objective. It is unfortunate that at a time when our overseas shipping has a chance of saving considerable amounts of foreign exchange, our shipping programme has received a setback. It has been officially stated that over 50 million dollars have to be paid towards freight to carry half the quantity of foodgrains that have been made available under PL 480. It would ap-

pear that a sizable part of this amount can be saved if a portion of the foodgrains is carried by our ships.

Mr Bhiwandiwalla has also referred to the various disabilities under which shipping companies have been obliged to function, such as high cost of fleet, stores and repairs, and inadequacy of personnel. He is also of the view that another important prerequisite to the rapid growth and prosperity of Indian shipping is also lacking in India. If Indian shipping is to flourish, he thinks, there should be a change in Government's policy relating to shipping.

The controversy over the oil refineries in Gujarat has demonstrated that how even a well-meant scheme if not properly explained can be construed an attempt at denying the rightful share of a region in industrialisation. Mr K. D. Malaviya's announcement in the Lok Sabha that a pipe line project is being contemplated to take the oil from the Cambay oilfields to Bombay has sparked off widespread protests in Gujarat. It has been since demanded that all the oil won in the State should be refined within the State itself. The controversy has been seen by most people outside the State as both unfortunate and meaningless as the oil that is found in Gujarat or for that matter any other place in the country rightfully belongs to the nation as a whole and so there is no point in talking as though the oil is the exclusive property of the people of the region in which it is found. But this argument overlooks the important fact that great expectations had been aroused among the people in Gujarat on the finding of oil at Cambay. It has been taken for granted that the next step would be the setting of refineries and consequently discussions centred on prospects of putting up industrial units in the Cambay region. The reference to a pipe line from Cambay by Mr Malaviya was interpreted to mean that the Central Government were not quite serious about setting up a refinery in Gujarat and it was even alleged that the oil exploration work at Cambay was being deliberately slowed down. The suspicion of the Central Government's intentions as regards Cambay oil had grown to such proportions that nothing except a personal visit of the Union Minister for Mines and Fuel has been considered adequate to clear up the misunderstanding. It would appear that last week's visit to Ahmedabad of Mr Malaviya has achieved its purpose. The people of Gujarat have now been categorically told that their State would have a refinery with a capacity of two million tons and further that if the quantity of oil found warranted it, the Central Government would not hesitate to set up more refineries within the State itself.

Pointing out that the entire unfortunate controversy stemmed from a misunderstanding, Mr

Malaviya admitted that he made a mistake in announcing the proposals to set up a refinery and pipeline project simultaneously. That had been construed to mean that the Central Government were much more interested in the latter than in the former. The Minister has now explained that the underlying purpose of making a mention of the pipe-line project is to get the project included in the Third Plan. Actually Government's intention is to make adequate provision for the full utilisation of the Cambay oil. The Government

of India, Mr Malaviya has assured the people of Gujarat, are anxious as the State's people to hasten the industrialisation of Gujarat and they will therefore take active interest in the building up of oil refineries and other industries based on them. Still the question may arise why begin thinking about a pipe line at this early stage. Mr Malaviya's explanation is that the question of setting up refineries in Cambay has to be studied in the background of the demand and supply position of petroleum products in the next five years.

Plan Problems

WITH hardly ten weeks remaining of the Second Plan period, the National Development Council will be meeting to finalise outlays and priorities for the Third Plan. On the agenda are the following items: consideration of Central and States' outlays; appraisal of the allocations, targets and priorities in the States' plans; agricultural production programmes and employment aspects. Discussions with State Governments on agricultural programmes which had been going on since 10 December concluded this week. The main objective is to maximise the physical targets, without further increase in financial outlays, through better coordination of the activities of the Ministries of Food & Agriculture, Community Development & Cooperation & Irrigation & Power. Representatives of these Ministries were closely associated in these discussions of agricultural programmes and targets.

Increase in the overall allocation for agriculture over the level indicated in the Draft Outline is implicit in the tentative outlays on the State Plans which were agreed upon in the round of meetings with State Government representatives last year. Apart from the increase in the size of the States' plans, the pressure for increasing outlays has been building up in other sectors as well.

The urgent need to increase the outlay on Power was emphasised at the recent meeting of the Iron & Steel Advisory Council which was told of power shortage developing in Durgapur. The Deputy Minister for Railways took the opportunity of a visit to his home State to mollify local sentiment with the announcement that the allocation for development of Railways will be stepped up by Rs 25 crores in order to construct new lines in the South. The inadequacy of the provision for Housing has been highlighted at the

Udaipur Conference of Housing Ministers. The opportunity of concluding long-term agreements with Rumania and Czechoslovakia for substantial exports of iron ore could not be grasped for lack of port facilities on the West Coast. This is a reminder that, as in the case of roads, we have to pay for ports whether we have them or not.

How to increase the outlays in the different sectors without at the same time increasing the total, is the problem now facing the Planning Commission. This reads almost like a Zen koan. It is an interesting coincidence that Dr Suzuki, the foremost world authority on Zen, is also now in town. Some experts who have been wrestling with this problem appear to have attained satori. At any rate they have come out with the answer: "The Plan will be bigger because it will be smaller." They expect, (or is it hope?) that foreign exchange will not be available for a number of projects which will, therefore, have to be held over. The rupee resources that will be released can be straightaway added to the other programmes of development which can be undertaken without expenditure of foreign exchange. But there are also others who believe that all Americans think like Professor Galbraith.

The contents of Professor Galbraith's new report to the Planning Commission which leaked out are being lapped up with avidity by the exponents of the "bigger plan" thesis. His advice is: The bigger plan the greater the quantum of foreign aid. You cannot expect your friends to help you out of a crisis unless you rush into it headlong! An earlier report by the Professor which, the Deputy Minister for Planning treated as a 'classified document' created a furore in the Lok Sabha and was subsequently formally laid on the table at the fag end of the Winter session. But those who were most insistent that it should be declassified are now finding it not exactly to their taste.

But whatever the headaches of the Development Council over

fixing the size of the Third Plan and its component parts, they can take comfort from the record of the year that has just come to a close as regards achievement of Second Plan targets. A year-end review by a spokesman of the Ministry of Commerce and Industry spotlights the achievements during 1960. In many industries the Second Plan production targets have been exceeded and in most industries output in 1960 was at higher levels than in 1959. Production targets have already been exceeded in paper and paper boards, sewing machines, grinding wheels, penicillin, DDT, soap, glucose powder, electrical cables and wires, electric fans, storage batteries, power-driven pumps, motor cycles and scooters, staple fibre etc. Production trends in a number of other industries like radio, electric transformers, paints and varnishes, automobile tyre, cycles etc, indicate that plan targets would be achieved. The most heartening feature is the growth of machine building industries. During the Second Plan period, the output of industrial machinery has increased seven-fold, from Rs 20 crores in 1956 to Rs 140 crores in 1960. New ground was covered in the manufacture of paper making machinery and sugar machinery. Two complete indigenous sugar plants have been set up and will shortly commence production.

The output of electric machines, basic metal industries, glass, cement etc showed appreciable increase, while comparatively modest increases have been recorded by textiles and leather products. Production of a wide range of chemicals, particularly of sulphuric acid, soda ash and caustic soda, was at a higher level during the year, but there has been a setback in the production of fertiliser on account of overhauling of gas generators at Sindri. But apart from Sindri, production in most public sector undertakings shows an upward trend, touching new records. Hindustan Cables and Hindustan Anti-biotics have completed their expansion programmes, and Hindustan Machine Tools has launched its expansion programme for doubling its output to 2,000 machines a year. Towards the end of the year the manufacture of heavy electrical machinery commenced at Bhopal, a development of major significance.

The core of the Second Plan is Steel. The Minister for Steel Mines and Fuel, Sardar Swaran Singh, told the recent meeting of the Iron and Steel Advisory Council that production of steel in 1960 would be of the order of 2.2 million tons as compared with the level of 1.8 million tons reached in 1959. The production of saleable pig iron would be about one million tons in 1960. As a result of increased production, there was hardly any scarcity in many categories of steel and the distribution control

was being gradually simplified. The quota certificate system had been abolished for all categories except sheets and wire. So far contracts have been entered into for export of about 330,000 tons of pig iron, ingots, slabs, blooms, billets etc., valued at about Rs 11.5 crores. But, at the same time, imports of steel were also higher, about one million tons as against 860,000 in 1959. The Minister estimated that expansion of capacity for production of iron and steel had already resulted in foreign exchange saving of over Rs 100 crores.

Total value of exports during the year was estimated by the Commerce Ministry spokesman at around Rs 630 crores. Exports during the first nine months of 1960 amounted to Rs 442 crores against Rs 427 crores in the corresponding period of 1959. Exports of cotton manufactures, jute manufactures and engineering goods would be considerably higher than during 1959. Export of manganese and iron ores is likely to bring in rupees four to five crores more than in the previous year. But there was a fall in the exports of coffee, hides and skins, tanned or dressed and notably tea. Tea export during the first nine months of 1960, at Rs 70 crores, was Rs 6 crores less than the figure for the previous year.

Progress in the industrial field has to rest on a firm base of agriculture. The food front has been strengthened during the year by the conclusion of agreements for substantial imports of food grains from USA under PL 480. The spokesmen of the Food and Agricultural Ministry noted its beneficial impact on prices, especially during the closing months of 1960. But though production prospects are good, the problem of food scarcity still persists, as Mr S. K. Patil declared in his New Year Day broadcast on the Freedom From Hunger Campaign. Along with the quantitative aspects of increasing the production of food grains, the qualitative aspects of the food problem are also being emphasised in the Food Ministry's programmes. The Scientific Food Advisory Panel of the Ministry of Food and Agriculture, which recently met in New Delhi, considered a number of proposals for the production, conservation and effective utilisation of supplementary and protective foods and recommended the results of research that could be taken up on a commercial scale for diversification of the Indian dietary pattern. Among the new types of foods about which Mr Patil was enthusiastic, mention may be made of sugar from wood, protein from leaves as well as from de-oiled cotton-seed and groundnut. Two plants for the production of edible groundnut protein are being put up with UNICEF assistance, one in Maharashtra and the other in Madras. Six more units are proposed to be set up during the Third Plan.

THE PENINSULA

Elected Ministers

THAT the Prime Minister and the State Chief Ministers in India should be elected by the legislature instead of by the majority party is a suggestion put forth by the Lok Sabha Speaker, Mr M. Ananthasayanam Ayyangar at Bangalore last week-end addressing the Conference of the Presiding Officers of the country's legislatures. Mr Ayyangar felt that this experiment should be tried at least in one or two States for a year or two. The Constitution, he said, might not permit such an election. But the need to seek a vote of confidence or approval of the appointments may be established by convention he stated.

According to his view, Mr Ayyangar stated this provided the twin guarantees of stability of Government and the impossibility of the party acting alone to overthrow a ministry.

If the Ministers were to be elected by the legislature, Mr Ayyangar said, it would prevent arbitrary exercise of power by the Chief Minister over his cabinet colleagues.

Mr Ayyangar suggested further that a party leader once elected should not be disturbed so long as that party continued in majority except for gross misconduct. Coalition should be made in places having no absolute majority to contribute to stability of Government, he said. New policies should be approved by legislature not by a simple majority but by a special and higher majority like two-thirds.

Tendencies towards communal or linguistic dictatorship should have to be ruthlessly checked, warned Mr Ayyangar, and the only person in such circumstances who could safeguard the minorities' interest was the presiding officer of the legislature.

For the first time in the conference of presiding officers of the legislatures, matters outside the mere procedural affairs and subjects pertaining to the practice of parliamentary democracy in the country came to be handled by the Speaker of the Lok Sabha. His suggestions implied the necessity for the Ruling party to take note of the fissiparous tendencies under linguistic and communal garbs.

The Speaker urged the officers to note the cause of failure of democracy in some countries and analyse the reasons for it. In Pakistan for instance, he pointed out, there were eight ministries in the course of last nine years. In Burma, he said, the weakness of the Government to quell internal rebellion was the cause of the fall of democracy for a short time. In Indonesia continued civil war was the enemy of democracy, he said.

Stating that affairs in all the States in India were not what they should be Mr Ayyangar said that factions had arisen inside parties in the legislatures themselves and were leading to instability of Governments. He warned that people might become sick of the changes in Governments

caused by the manipulations of support for persons or groups to gain or regain power. The sense of security he was afraid, might consequently disappear from the people's mind leading to establishment of military dictatorships.

On account of such internal disputes, Mr Ayyangar held, the ruling party might get into disrepute, people getting nothing from the government of the day. Therefore he thought when once the leader was elected he ought not to be disturbed so long as that party continued to have a majority in the legislature except for gross misconduct. He affirmed that this convention alone would contribute to the stability of Governments in various States.

To prevent Chief Ministers of States becoming autocratic, Mr Ayyangar's suggestion was the same namely, provision for election by the legislature. In case of absolute majority of a party there was the possibility of Chief Ministers becoming autocratic, and his colleagues having been selected by him would not be able to muster courage to oppose him. In cases where there were no big majorities, coalition would help establishment of stable governments Mr Ayyangar said.

There was the German practice of having the Prime Minister elected by the entire House after Presidential nomination. Other Ministers would be elected by the party to which the Prime Minister belonged.

A sense of security would be given to the Prime Minister by this practice and Mr Ayyangar was certain that party squabbles could not easily upset the Prime Minister. Even in France, he stated, the prevailing system today was only a different version of the election system to which he had referred. If in France the system did not work successfully, it was due to the existence of too many parties not one of them commanding absolute majority he said.

Even though the constitution would not permit of such an election, Mr Ayyangar said the need to seek a vote of confidence or approval of the appointment by the whole House might be established by convention. Mr Ayyangar stated that this system guaranteed stability of government and the party alone could not overthrow the ministry. The contending groups within the ruling party, Mr Ayyangar argued, could not also easily change their leaders since other members of the House would also be called upon to take part in the approval of the appointment of the leader which required their votes. The election of other ministers would lead to avoidance of arbitrary power by the Chief Minister over his colleagues. This would not weaken the cabinet responsibility and the ministers were bound by the party best interests while the Chief Minister could always report against any non-cooperating colleague to the party. Today, the Speaker stated the party which was supposed to rule through its leader had really no effective control over its leader. Government should be not only above corruption but also should appear to be above corruption, he declared.

Mr Ayyangar warned against visible tendencies in many parts, of people once again lapsing into old

caste and communal divisions and bringing these divisions into public and political life. To avoid this he suggested recruitment to public services on an All-India basis by the President and also that the members of the services commission be made on an all India basis both at the Central and State levels. He suggested free discussion of the grievances of the backward classes in the legislatures.

Though there was no effective opposition inside the legislature, Governments in the Centre and States were not left undisturbed, Mr Ayyangar said, and resorting to direct action outside the legislature was done to gain the opposition demands. He believed that if there was a stable opposition which could dislodge the Government of the day, there would not be any resort to direct action. An effective opposition was necessary for the efficient working of democracy, but Mr Ayyangar stated such one could not be created but it would grow by itself and the opposition should work, wait and gain strength.

As at present situated, Mr Ayyangar stated, the voice of opposition

though weak should not be discounted and the Government should accommodate the opposition as far as possible. He stressed on unanimity being made a rule rather than carrying a measure by a simple majority.

Mr Ayyangar favoured decentralisation of power but he prescribed qualifications of age, property education, and experience for being a panchayat member. No member should be a member of more than one panchayat at a time, he said.

Comparing the two systems of countries having democratic governments and the totalitarian governments, India chose the mean path adopting socialistic one, and this according to Mr Ayyangar gave scope for the individual to grow fully. He also believed that India succeeded in both planning and enforcing their schemes democratically.

Mr Ayyangar passed over the views of critics on planning for socialistic pattern merely expressing the belief that India had succeeded fortunately in both planning and democratic execution.

Bank of Baroda Travellers Cheques

safe, convenient, easy to carry

When you convert your money into Bank of Baroda Travellers Cheques...it is as safe as in the bank!

Only you...by counter-signing...can cash your travellers cheques. And you can buy Bank of Baroda Travellers Cheques at any of our 87 offices...cash them at any office of the Bank of Baroda or the State Bank of India.

DIVIDEND AND CAPITAL

The Company in general meeting may on the recommendation of its Board of Directors declare a dividend to be paid to the members according to their right and interest in the profits of the Company and may subject to the provisions of Section 207 of the Companies Act, 1956, fix the time of payment.

No dividend shall be payable except out of the profits of the Company during the year or any other undistributed profits and no dividend shall carry interest as against the Company.

MANAGING DIRECTOR

Shri B. K. Jhawar, a Director, has, subject to the approval, if required, of the Central Government under Section 269 of the Companies Act, 1956, been appointed as a Managing Director of the Company for a period of five years from the sixth day of December, 1960 on such terms as regards remuneration as may be approved by the Company in general meeting and the Central Government.

MANUFACTURING LICENCE.

The Government of India has issued under the Industries (Development and Regulation) Rules, 1952 (as revised), a manufacturing licence No. L/1.A(7)/N-178/60 dated 21.4.1960 for an installed capacity of 7,200 tons per annum of wire and wire ropes.

OBJECTS OF THE COMPANY.

The Company was incorporated on the 1st day of December, 1960 and obtained a certificate that it is entitled to commence business on the 21st day of December, 1960. The object of the Company is principally to carry on the manufacture and sale, distribution, dealership, import, export etc; of all types of steel wire ropes and to carry on business and activities, ancillary or supplemental thereto, and other objects as set out in detail in the Memorandum of Association of the Company.

PLANT SITE.

The Plant will be located near Ranchi in the State of Bihar.

PLANT AND MACHINERY.

It is estimated that the plant and machinery will cost Rs. 55 lacs and of which approximately Rs. 1.60 lacs may be imported reconditioned. Some of this reconditioned machinery of an estimated value of not exceeding Rs. 1.30 lacs, payable in cash, may be purchased, from the foreign collaborators, Martin, Black & Co. (Wire Ropes) Ltd., Coatbridge, Scotland, U.K. The value of such reconditioned machinery which may be purchased, from the foreign collaborators, will be determined by independent Consulting Engineers.

7 January 1961

PROFITABILITY.

The plant and machinery to be installed will form one of the most modern and up to date units in the world specifically designed for the production of high tensile steel wire and steel wire rope and the Board considers that the prospects of profitable working are good.

IMPORT LICENCES.

The Government of India have been kept advised of the organisation of the Company and of the plans for proceeding with and completing the project. It is expected that the Government will issue all required licences and permits. Since Martin, Black & Co. (Wire Ropes) Ltd., is making its subscription to the capital of the Company in foreign exchange and The Industrial Credit & Investment Corporation of India Ltd., Bombay, has agreed to make a loan partially in foreign exchange, the Company's requirements of foreign exchange are assured for the purchase of plant and machinery in the U.K., and elsewhere.

TECHNICAL COLLABORATION AGREEMENT.

The Company with the approval of the Government of India has entered into a Consultants and Technical Advisers' Agreement with Martin, Black & Co. (Wire Ropes) Ltd., for a period covering the design, erection and start-up of the plant and thereafter for eight years certain from the date of the royalty-cum-technical aid fee hereinafter mentioned becomes payable.

Martin, Black & Co. (Wire Ropes) Ltd., will provide the Company with various services including complete process, designing and selection of plant and machinery and permit user by the Company of relative trade names, marks and patents. They will also train Indian engineers in their factory in U.K., and to provide technicians from the U.K. to advise, assist and give such information as may be required respecting the construction, erection, installation, start-up and operation of the plant.

The Company has export rights to all countries except the U.K., Canada and U.S.A.

As consideration for its services, etc., Martin, Black & Co. (Wire Ropes) Ltd., will be paid a fee of not more than 1% calculated on the capital cost of the plant and machinery acquired by the Company for this project and royalty-cum-technical aid fee of 2½% for five years (from the date the production figure reaches 150 tons of wire ropes per month) and for the next three years 1½% based on net sales as defined in the Agreement. On sales of high tensile steel wire sold as such the royalty-cum-technical aid fee is halved. Additionally the Company will bear the cost of the U.K. personnel sent to India, and, subject to the prior approval of the Government of India to remittances, expenses (referred to in clause 12 (b) of the Agreement) incurred by Martin, Black & Co. (Wire Ropes) Ltd., including a proportion of the expenses of investigating, experimenting, testing, developing, patenting and acquiring patents, licences or manufacturing rights in regard to any process or methods which benefit or are of value to the Company in its business.

APPLICATION FOR SHARES AND ALLOTMENT.

Applications for Equity and Preference shares must be for fifty or multiples of fifty shares and five or multiples of five shares respectively.

Applications for Equity and Preference shares must be made on the prescribed form which can be had from the Company's Bankers or Brokers to the issue.

All application forms duly completed must be lodged, together with the amount payable on application (i.e. Rs. 2.50 per share in respect of Equity shares and Rs. 25/- per share in respect of Preference shares) with either of the following Banks, namely:—

- The United Commercial Bank Ltd., 2, India Exchange Place, Calcutta-1.
- Allahabad Bank Limited, 14, India Exchange Place, Calcutta-1.
- The Central Bank of India Ltd., 33, Netaji Subhas Road, Calcutta-1.

Or, with any of their Branch Offices as listed below:—

I. AHMEDABAD.

- The United Commercial Bank Ltd., P. B. No. 174, Karanj Building, Bhadra, Ahmedabad-1.
- The Central Bank of India Ltd., Ahmedabad.
- Allahabad Bank Ltd., Maskati Market, Ahmedabad-2.

II. BOMBAY.

- The United Commercial Bank Ltd., P. B. No. 883, Petit Building, D. N. Road, Bombay-1.
- The Central Bank of India Ltd., Mahatma Gandhi Road, Fort, Bombay-1.
- Allahabad Bank Ltd., Post Box No. 282, 39, Apollo Street, Fort, Bombay-1.

III. DELHI.

- The United Commercial Bank Ltd., P. B. No. 365, Parliament Street, New Delhi-1.
- The Central Bank of India Ltd., 670, Chandni Chowk, Delhi-6.
- Allahabad Bank Ltd., Post Box No. 1027, Chandni Chowk, Delhi-6.

IV. MADRAS.

- The United Commercial Bank Ltd., P. B. No. 276, 310/11, Linghi Chetty Street, Madras-1.
- The Central Bank of India Ltd., 308/309, Linghi Chetty Street, George Town, Madras-1.
- The United Commercial Bank Ltd., and Allahabad Bank Ltd.

AMRITSAR, BANGALORE, HYDERABAD, KANPUR & PATNA.

VI. The United Commercial Bank Limited.

BARODA, JAIPUR, RANCHI, RAJKOT & SURAT.

Cheques or drafts should be drawn in favour of one of the Bankers to the issue "A/C. Usha Martin Black (Wire Ropes) Limited" and should bear the words "Equity Issue" in the case of applications for Preference shares and the words "Preference Issue" in the case of applications for Equity shares. For the applicant's protection, cheques or drafts should be crossed/ "Account Payee Only". A separate cheque or draft must accompany each application. Allotment will be notified by the despatch of an allotment letter, but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part without assigning any reason. Where an application is rejected, or not accepted in full, the whole or any balance of the application money received, after deducting the amount, in the case of Equity shares, if any payable on allotment, will, subject to the provisions of Section 73 of the Companies Act, 1956, be refunded without any interest to the applicant within two months from the closure of the subscription list. Bank commission, if any, will be payable by the applicants.

Raw Jute Production

WHILE it seems to have been generally accepted that raw jute will be in short supply during the current season, the expectation is that in the next season the supply position will show considerable improvement. Unfavourable weather conditions at sowing time or heavy rains at the time of harvesting the crop may upset calculations of crop prospects but it would appear strenuous efforts will be made to minimise the vagaries of the weather too.

An indication of the measures that will be taken by the authorities toward promotion of jute production has been given by Mr S. K. Patil Union Minister for Food and Agriculture. Addressing the annual meeting of the Indian Central Jute Committee last week he has said that Government's policy is to increase the acreage under jute and other allied fibres keeping in view, however, the need for adequate food production in the country. Government's intention is to increase the production of mesta both by increasing its area and yield so that any shortfall in jute can be made up by higher mesta output. Other measures mentioned by him are the supply of adequate fertilizers and improved seeds to cultivators and efficient agricultural practices. The position as regards the supply of fertilizer seems to have considerably improved but Mr Patil has warned that the main problem of distribution still has to be tackled. Mr Ajit Majumdar, Jute Commissioner, has however, indicated that the target for jute and mesta production next season is likely to be placed at 7.2 million bales.

As regards the current crop, the Jute Commissioner is of the view that it will be almost the same as that of the previous season. The delay in issuing the official forecast is due to delayed harvest this season but a fairly reliable picture seems to have already been obtained from available information and that is that the total jute and mesta crop will be approximately the same as last year's.

It is evident that Government do not intend to plan mills' production on insufficient data. The main objective is to ensure the working of mills without much dislocation till the new crop becomes available in sufficient quantities. It has been generally expected that the arrangement by which sealed looms were brought

down to 12 per cent and working hours reduced to 45 per week will have to be revised sooner or later. A further cut in production has been considered inevitable and it has now been decided to achieve this objective by a further reduction in working hours to 42½. The proportion of the sealed looms will continue at 12 per cent. The reduction of working hours to 42½ is to take effect from 30 January 1961. The new arrangement has been arrived at by the Indian Jute Mills Association in consultation with the Union and West Bengal Governments. This is expected to mark the last of the steps calculated to adjust production to availability of raw jute. According to the Jute Commissioner the proposed cut in production is not likely to lead to a shortage of goods. Due to seasonal factors demand for gunny is usually at a low ebb during the first half of the year. Moreover, the permission recently given to the cement industry to use used bags may also be expected to reduce the internal demand for new gunnies. Export demand too may not show much expansion in the next few months on account of consumer resistance at prevailing high prices of goods.

The jute goods market opened the week on a firm note due to buying support and reports of fresh foreign inquiries. Business passing earlier in the week included purchase of 5000 bales of B Twills on account of a Government tender. Reports of sizable enquiries from Russia seemed to have also been responsible for the firm undertone. B Twills were taken at one stage up to Rs 183 with Hessian quoted at Rs 59.75. Subsequently the undertone turned quiet following selling pressure from holders and the increased interest evinced by mills in ready and near delivery sales. Toward close of the week the undertone steadied up partly due to covering business and partly due to rumours of enquiries from Argentina.

The raw jute market ruled comparatively steady. In earlier dealings the undertone was somewhat quiet due to lack of interest shown by mills most of whom were reported to have covered their previous week's quotas. In later dealings prices were well maintained generally largely due to reports of poor arrivals at the upcountry markets.

PRICE TRENDS.

	As on Jan. 2	Low-est Jan. 5	As on Jan. 5

Cotton Futures Steady

Cotton futures displayed quite steady conditions in the Bombay market during the past week after the previous week's steep fall. In the early part of the week the Jarilla April contract hovered around Rs 604, but closed down lower on profit taking.

Conditions in the spot market on the other hand were active and bright. Mills showed keen interest in 197/3,0394, C02 and Moglai Jarilla and the prices of these varieties tended to ride around the official ceilings, Kalyan, Vijai and Digvijai also met with good enquiries. The arrivals of these varieties continued to be on the increase. Their quality also was so far unaffected but reports emanating from a few tracts of Vijay and Kalyan districts narrate that the unpropitious weather in those places is likely to impair the quality. If the demand for these styles in the markets persists there will not be any difficulty in disposing them.

According to the latest estimates available the country's total production of cotton will be around 5 million bales. The aggregate production from Punjab has been shown at 0.68 million bales.

On the import front business was more or less confined to new African crop and Sudan styles. Egyptian and USA growths were rather neglected. On the export front there was some enquiry for Bengal superfine.

Liverpool:

Trading in the Liverpool futures market was calmed to squaring of accounts over the Christmas recess. The local trading is likely to be shelved till the announcement of cotton policy for 1961-62 by the new Secretary of the United States Agricultural Department.

Advices from Liverpool state that the demand for actual cotton during the interval between Christmas and New Year has been quite negligible. Mill enquiries which centred round US cotton for January and February shipments resulted in the sales of 4,800 bales out of the week's total of 6,500 bales. In the staple styles Egyptian offering prices strengthened further due to large sales to the United States.

As usual business in the textile section at this season dwindled into an insignificant trickle. Imports of cloth into the UK reached a new high of 54.4 million square yards.

At the close of the market on Thursday last the various positions were quoted as follows: American contract December 22.70d., July 24.10d., American type contract

December 23d., and July 24.10d. Sudan contract, however, remained unchanged at 35d.

New York:

The appointment of Governor Freeman as the new Secretary of the Department of Agriculture has strengthened the new crop positions in the New York futures market. Near positions were depressed to some extent due to the moderate hedge selling which was absorbed by trade buying. Commission house buying evinced keen interest in new crop positions. At the close on

Wednesday last the March position was quoted at 32.18 cents and October at 33.36 cents.

Piecegoods:

Conditions in the Bombay piece-goods market was a shade better during the week under review. Business at the commencement of the week was rather at a low ebb but as the week progressed the sentiment also improved. Demand from up-country buyers and overseas traders dispelled the apprehension of a possible stalemate in the market. The stabilising influence on the ex-

port front was the result of the announcement that the new prices will operate from the beginning of this month. Some of the upcountry buyers are reported to have transacted business at the new rates. Bihar and UP turned out to be the main consuming centres and they evinced keen interest in sarees, dhoties, shirtings and poplin. Though the offtake was restricted by the stringent monetary conditions and the year ending considerations, according to the consensus of opinion, the demand is likely to look up in the coming weeks and the pressure of stocks on the mills is likely to be lessened.

you have just opened A METAL BOX TUBE!

Your favourite toothpaste comes to you in a Collapsible Tube, a speciality of The Metal Box Company of India Ltd.

Wherever necessary, this tube is given an inner coating of a specially devised, chemically inert lacquer that keeps the toothpaste from reacting with the metal of the tube itself. The tube collapses with reducing contents, thereby protecting the toothpaste from oxidation and dehydration. The Metal Box Collapsible Tube is therefore a functional as well as a convenient package. It is scientifically designed to ensure that the toothpaste remains fresh for months.

Backed by their knowledge and experience drawn from India and abroad, Metal Box are manufacturing a wide range of scientifically designed packages for the consumer goods you use.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.
COMPOSITE CONTAINERS of cardboard & metal COLLAPSIBLE AND RIGID TUBES for toothpaste, ointments, adhesives and pills
CROWN CORKS for carbonated drinks
T. S. PILFER-PROOF AND OTHER CLOSURES for bottled products
COMPONENTS for radio, automobile and electrical industries
PUBLICITY MATERIAL including advertising cabinets and calendars
PLASTIC PRODUCTS including Diethylene bags, foil laminate pockets and injection mouldings
HARDWARE including trays and table mats
MACHINERY Can Closing and Reforming and Bottle Sealing Equipment

This is only an announcement for information and not a prospectus and Applications are invited on the basis of the prospectus copies whereof are available from the Company's Bankers and Brokers mentioned herein.

An application will be made to the Stock Exchange of Madras and Bombay for permission to deal in the shares now being offered and in due course for an official quotation.

PROSPECTUS OF THE TRAVANCORE ELECTRO-CHEMICAL INDUSTRIES LIMITED

(Incorporated on 4th April, 1945 under the Travancore Companies Act IX, of 1114).

HISTORY OF THE COMPANY.

Although the Company was registered in 1945, it started operating as late as in 1952 owing to late delivery of the electrical equipment. The Company's activities were then on a developmental or experimental stage as it had put up a pilot furnace with a capacity of Calcium Carbide upto 1000 tons per year only. The Company in its developmental stage, therefore, made small losses, particularly as the cost of production of Calcium Carbide in a small capacity furnace was high. The Company's experimental activities are of great importance in as much as it proved the advantages of using sea-shells for manufacturing Quick-lime—an important raw material, at very cheap rates and of prescribed purity. The Company in its development stage also proved that it could produce Calcium Carbide of high purity meeting the requirement of the British Standard Specifications, as borne out by the Certificate in this respect of the Technical Development Establishment (M.E.)—Kirkree (Ministry of Defence). The purity of the Company's products has also been confirmed by the Tariff Commission report of 1956.

PROSPECTS OF THE COMPANY

Thanks to the developmental activities of the Company in the past, it is only now that the possibility of commercial production of Calcium Carbide appears to have come.

In 1956 the Company planned to expand its Capacity to 10,000 tons per year. The Company since then have secured the necessary Industrial and Import Licences from the Central Government for raising the production capacity to 10,000 tons per year. The Tariff Commission Report of 1956 commented on the proposed expansion project of the Company thus:—"The existing plant enjoys certain marked locational facilities for procurement of raw materials and electrical energy at economic rates, and expansion at the same spot should seem to afford them a reasonable assurance of success."

ASSISTANCE FROM KERALA GOVERNMENT

The Kerala Government has given the Company co-operation and assistance in this proposed expansion of the capacity of Calcium Carbide plant to 10,000 tons per year. The Government of Kerala have also invested Rs 5 lacs recently in the equity shares of the Company.

ELECTRIC POWER

The cost of Electric Power determines to a substantial extent the cost of production of Calcium Carbide. The Company has the advantage of having Electric Power at cheap rates and on favourable terms from the Kerala Government.

TRANSPORT FACILITIES

The Company is located favourably so as to enjoy good transport facilities by rail as well as by water for the movement of its raw materials and finished products.

SCOPE AND PROSPECTS

Calcium Carbide is a basic chemical which is used in production of many important chemicals and materials such as P.V.C., Calcium Cyanamide etc. It is also used in the manufacture of explosives, in which the Central Government may be interested. At present it is being mainly used in welding and cutting steel. But market for this product is very rapidly growing with the development of steel and chemical industry in India. The statistics published by Government agencies indicate that in the year 1959 the production of Carbide was 4,074 long tons and import was 8,430 long tons. In the recently published Outline of the Third Five Year Plan, the local production of Calcium Carbide in 1960-61 and in 1965-66 are estimated at 20,000 and 60,000 tons respectively. With growing demand, therefore, the Company's entire production of 10,000 tons per year will find a ready market within the country.

ESTIMATE OF PROFITS

The estimated cost of production of Calcium Carbide manufactured by the Company as accepted by the Tariff Commission is Rs. 462/- per ton, and the present ex-factory selling price fixed by the Tariff Commission is Rs. 885/- per ton. Even taking into account some adjustments and contingencies, there is still a good margin of profit in the manufacturing operations of the Company.

SUPPLY OF MACHINERY AND TECHNICAL KNOW-HOW.

The Company has secured collaboration from Messrs. Deutscher Innen-Und Aussenhandel Invest Export, of the German Democratic Republic. The Company has entered into two agreements with the abovenamed firm, one for supply of a complete Carbide Plant of 30 tons daily capacity and the other for supply of technical personnel and of project-true supervision of erection, function tests, trial run and putting into commercial operation the plant. The total purchase price of the plant inclusive of the necessary basic and execution projects, constructional documents etc. amounts to about Rs. 17 lacs. The machinery suppliers have further agreed to charge an interest of only 3% on the outstanding balances. The payment is to be made in Indian Currency. The Company has secured the necessary import licence and permission from the Reserve Bank of India to make the payments.

BROKERAGE

Brokerage at the rate of 1% on the nominal value of each Equity Share will be paid to registered Brokers on recognised Stock Exchanges and Banks on allotment being made in respect of applications bearing the stamp of such Brokers or Banks.

Messrs. Lewis and Jones have been appointed the Managing Brokers to this Issue. They will in addition be entitled to a Brokerage of 1% on the face value of the shares subscribed by the public and a further sum of Rs. 5,000/- as incidental charges.

AUTHORISED CAPITAL:	
1,00,000 Equity Shares of Rs. 100/- each	Rs. 100,00,000.
PAID-UP CAPITAL:	
13,288 Equity Shares Fully Paid-up at Rs. 100/- per Share	Rs. 13,28,800.
1,912 Equity Shares previously forfeited but subsequently re-allotted at Rs. 100/- per Share and now partly paid at Rs. 25/- per Share	Rs. 47,800.
	Rs. 13,76,600.

NOTE:

By a Resolution passed on the 7th of December 1960 the Deferred Shareholders of the Company have given their consent to the conversion of the Deferred Shares issued by the Company into Equity Shares of the Company in the ratio of five Deferred Shares to one Ordinary Share ranking pari passu with the existing Equity Shares.

Capital Now Issued for Public Subscription:	Rs. 10,00,000.
10,000 Equity Shares of Rs. 100/- each	

AMOUNT PAYABLE IN RESPECT OF SHARES

The amount payable in respect of Equity Shares is as follows:
Rs. 25/- per Share on application.
Rs. 25/- per Share on allotment.
and the balance in two equal instalments provided that there shall be an interval of not less than three months each between calls and between the allotment and the first call.

APPLICATION FOR SHARES

Each application must be for a minimum of 5 Shares or in multiples thereof. Where no allotment is made, the Deposit will be returned in full and where a partial allotment is made, the unutilised balance will be adjusted against amount due on allotment.

The Share Certificates will be issued within six months of the date of allotment.

DIRECTORS

1. Shri MURARJI JADAVJI VAIDYA, Industrialist, Chairman, Bombay.
2. Shri S. CHATTANATHA KARAYALAR, M.P., Advocate, Trivandrum.
3. Shri V. P. VARDE, Stock-broker, Bombay.
4. Shri J. L. MEHTA, Businessman, Bombay.
5. Shri RUSSE JAL TARAPOREVALA, Businessman, Bombay.
6. Shri K. P. VISHWANATHAN NAIR, I.A.S., (Nominated by Government of Kerala), Director of Industries, Trivandrum.
7. Shri T. V. KRISHNANKUTTY WARRIER, (Nominated by Government of Kerala), Trivandrum.
8. Shri LIMJEE K. PANDAY, Stock-broker, Bombay.
9. Shri P. E. RAMAN MENON, Landlord, Parur, Kerala.
10. Shri M. S. BHANDARKAR, Engineer, Bombay.

Messrs. MATUBHAI JAMIETRAM & MADAN, Lentin Chambers, Dalal Street, Fort, Bombay-1.

REGISTERED OFFICE.

P.O. CHINGAVANAM, Kottayam, Kerala State.

OBJECTS OF THE COMPANY.

The Company was established to manufacture and deal in Calcium Carbide, Carbon and Graphite in various forms, all types of electro-chemical, electro-thermal and high temperature furnace products like Carbides, abrasives, metal alloys and refractories, and derivatives and bye-products of the above.

Subscription List will open at the Commencement of Banking hours on 4th January, 1961 and will close at the close of the Banking hours on 11th January, 1961.

THIS IS ONLY AN ANNOUNCEMENT—NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue.

A licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking.

A copy of the Prospectus, together with the documents specified therein, has been delivered for registration to the Registrar of Companies, Madras.

An application will be made in due course to the Bombay and Madras Stock Exchanges for a quotation for the shares of the Company and permission to deal in them.

The Subscription list will open at 10 A.M. on 9th January 1961 and will close at 2 P.M. on 16 January 1961 or earlier as soon as subscriptions approximating to the amount issued hereunder to the public have been received, but not earlier than 2 P.M. on 12th January, 1961.

THE MADRAS ALUMINIUM COMPANY LIMITED

(Incorporated under the Companies Act, 1956).

AUTHORISED CAPITAL:

2,50,000 Cumulative Preference Shares of Rs. 100/- each	Rs. 2,50,00,000
7,50,000 Equity Shares of Rs. 100/- each	Rs. 7,50,00,000

ISSUED CAPITAL:

1,50,000 Redeemable Cumulative Preference Shares of Rs. 100/- each	Rs. 1,50,00,000
4,50,000 Equity Shares of Rs. 100/- each	Rs. 4,50,00,000
	Rs. 6,00,00,000

RIGHTS OF PREFERENCE SHAREHOLDERS

The preference shareholders will be entitled to a fixed cumulative dividend of 9.3% per annum (free of Company's Income-tax but subject to deduction of taxes at the prescribed rates), payable in priority to the ordinary Shares. This means the shareholders will get a dividend of 9.3% less a deduction of tax under Section 18-3 (D) of the Indian Income-tax Act, which at present is 30%.

In the event of winding up, the preference shareholders will be entitled in priority to equity shareholders to re-payment of the capital paid-up at par, plus all accrued dividends, whether earned or declared or not declared, and also declared but not paid.

The preference shares will all be redeemed at par, on 1st January 1975, on giving three calendar months' notice, with the option to the Company to redeem the whole or part of the preference capital outstanding at any time, at par, after 1st January 1972, on giving six calendar months' notice. The proposed method of redemption, whether from profits or by fresh issue of capital will be decided by the Directors at the time of giving the notice, taking the then circumstances of the company into consideration.

The voting rights of the preference shareholders will be as per Section 87 of the Companies Act, 1956.

The issued capital is payable as follows:

- (1) Along with application at Rs. 25 per share, whether Equity or Preference.
- (2) The balance of Rs. 75 per share, whether Equity or Preference, will be called up in three calls of Rs. 25 each, with an interval of at least one month between each call, and the first of such calls will not be earlier than three months from the date of allotment of the respective shares.

PREFERENTIAL ALLOTMENTS AND RESERVATION

- (1) The signatories to the Memorandum of Association have subscribed for 1,200 equity shares. The promoters, directors, and their friends, have subscribed for a total of 48,800 equity shares of Rs. 100 each.
- (2) The Government of Madras have agreed to the Madras Industrial Investment Corporation Ltd., Madras, underwriting and subscribing for 70,000 preference shares of Rs. 100 each and 80,000 equity shares of Rs. 100 each.
- (3) The Life Insurance Corporation of India, Bombay, have agreed to underwrite and apply for 10,000 equity shares of Rs. 100 each and 20,000 preference shares of Rs. 100 each and these will be allotted in full.
- (4) There is a specific arrangement with Messrs. Dalal & Co., Madras, for their tendering applications for 35,000 equity shares of Rs. 100 each and these will be allotted in full.
- (5) As per the agreement entered into with Messrs. Montecatini of Italy, 1,20,000 equity shares of Rs. 100 each will be reserved for allotment to them.
- (6) In accordance with the provisions in the underwriting agreement with the Underwriters and Brokers, 28,500 equity shares of Rs. 100 each have been reserved for firm allotment in respect of applications procured and marked for "firm allotment" by them.

PRESENT ISSUE

The balance that is now unconditionally offered for public subscription is as follows:—

60,000 Preference Shares of Rs. 100 each.
1,26,500 Equity Shares of Rs. 100 each.

THE ENTIRE ISSUE OF 60,000 PREFERENCE SHARES AND 1,26,500 EQUITY SHARES HAVE BEEN UNDERWRITTEN BY THE INDUSTRIAL FINANCE CORPORATION OF INDIA, NEW DELHI, AND BY THE VARIOUS PARTIES, AS PER DETAILS HEREIN GIVEN.

DIRECTORS

- (1) Sri R. VENKATASWAMY NAIDU, B.Sc. (Madras), B.Sc. (Tech.) Manchester, Industrialist, 984, Peelamedu, Coimbatore-4.
- (2) Sri V. RAMAKRISHNA, I.C.S. (Retd.), Industrialist, 38, Mount Road, Madras-2.
- (3) Sri T. A. VARGHESE, I.C.S., Secretary to the Government of Madras, 65, IV Main Road, Gandhinagar, Madras-20.
- (4) Sri T. K. PALANIAPPAN, I.A.S., Secretary to the Government of Madras, Department of Industries, Labour & Co-operation, Fort St. George, Madras.
- (5) Sri G. K. DEVARAJULU, Industrialist, 2/239, Avanashi Road, Coimbatore.
- (6) Sri T. S. NARAYANASWAMI, Industrialist, "Dhun Buildings", 175/1, Mount Road, Madras-2.
- (7) Sri D. C. KOTHARI, Businessman, "Oriental Buildings", Armenian Street, Madras-1.
- (8) Sri P. R. RAMAKRISHNAN, M.Sc. (M.I.T.), M.P., Engineer, "Jyothi", 6/36, Race Course Road, Coimbatore.
- (9) Sri M. N. M. VEERABADRA CHETTIAR, Merchant, Bungalow Road, Near Avanashi Road, Tirupur.
- (10) Sri R. K. KANDASWAMY, B.A., B.Sc. (Tech.), A.M.C.T. (Mech.), "Brindavan", Trichy Road, Coimbatore.
- (11) Sri V. N. RAMACHANDRAN, Industrialist, "Asoka", 22, Pantheon Road, Egmore, Madras-8.
- (12) Sri V. RAMASWAMI NAIDU, Landlord, 131, Uppillpalayam, Singanallur, Coimbatore.

OBJECTS

The Company was incorporated on 31st August 1960 for the several purposes set forth in the Memorandum of Association, and in particular to undertake the manufacture of aluminium ingots and alloys, from the bauxite reserves in the Sheveroy Hills. The plant capacity will be 10,000 tons, of which 7,000 tons will be ingots and 3,000 tons alloys, as per the Licence No. L/1B(1)/N-760, dated 6th May, 1960, granted to this Company by the Government of India.

The Company has also applied to the Government of India for a licence to erect a Rolling Mill, as an adjunct to the proposed factory for the manufacture of A.C.S.R., and A.A.C. Cables, extrusion, rods, foils, etc., and the licence is awaited.

The rapid progress made by the aluminium industry can be gauged from the fact that world production of aluminium, which was a little over 7,00,000 tons in 1939, has increased to over 3 million tons at the present time.

The development of a large scale aluminium industry is of particular importance to our industrial economy. Aluminium is the only non-ferrous metal for the manufacture of which, on a scale commensurate with our increasing requirements, adequate natural resources are available in the country. And as indicated above, it is a non-ferrous metal with properties which permit its use as a substitute for several purposes for other non-ferrous metals like copper, lead, zinc, and tin, the indigenous production of which cannot be developed to the required extent because of the very limited resources of the necessary raw materials as far as is known at present. It is in this context that the development of aluminium industry assumes a special significance in our plans for industrial progress.

According to the draft outlines of the Third Five-year Plan, the estimated capacity of the Aluminium Industry in 1960-61 has been placed at 17,500 tons and production at 17,000 tons, against the produc-

tion of 7,300 tons in 1955-56. The 1965-66 targets are estimated at a capacity of 82,500 tons and production of 75,000 tons.

The per capita consumption of aluminium in India is very low at about 0.12 lb. compared to 19 lbs. in U.S.A., 12 lbs. in Canada and 10 lbs. in the United Kingdom. With the growing use of aluminium for industrial purposes, the demand for aluminium is bound to far exceed production for several years to come.

RAW MATERIALS

Bauxite is the basic raw material for the production of alumina, while electric power is also as vital a necessity as bauxite. Bauxite deposits of Sheveroy Hills are considered to be very suitable for the manufacture of aluminium, because it is so soft and easily soluble in caustic soda in the process for the manufacture of alumina. The deposits in Sheveroy Hills are estimated at about 7 million tons.

In view of the advantages of nearness of bauxite, power, water, transport facilities etc, the factory will be located at Mettur on a plot of about 400 acres, reserved for this Company by the Government of Madras. The Madras State Electricity Board have assured adequate power supply at the rate of Rs. 1.55 KWly for the Alumina section and Rs. 1.20 KWly for the Smelter section.

TECHNICAL COLLABORATION

The company has been fortunate in having secured the technical collaboration with Messrs. Montecatini of Italy, who are associated with the Neyveli Project of the Government of India, and who are one of the world known names in the manufacture of aluminium products, designing, erection and successful working of aluminium plants. Under the collaboration, M/s. Montecatini are to supply technical know-how, designs and specifications, procure the required machinery for the Indian Company, attend to erection, to supply required technical personnel and also train Indian technical personnel in their factory.

Government of India have approved the technical collaboration terms under which M/s. Montecatini are to be paid Rs. 45 lakhs for technical know-how, Rs. 40 lakhs for engineering fees drawings, assistance in purchase of plant and other allied services, and Rs. 35 lakhs for cost of foreign experts, contractors and agencies for the construction, supervision and other services, charges etc., and these payments are to be satisfied by the issue of 1,20,000 equity shares of Rs. 100 each. No further technical know-how fees are payable either for expansion of the plant capacity upto 20,000 tons or for the Rolling Section.

COST OF THE PROJECT

The cost of the project, as estimated by Messrs. Montecatini, for a plant capacity of 10,000 tons of aluminium, of which 7,000 tons will be ingots and 3,000 tons alloys, is approximately as follows:—

Foreign Side:	Rs.	Rs.
Plant and Machinery (to be imported) ...	3,40,00,000	
Technical Know-how ...	45,00,000	
Fees for designing, specifications, etc. ...	40,00,000	
For Technical Services ...	35,00,000	
Indian Side:		4,60,00,000
Land and Buildings ...	1,70,00,000	
Fabrication of Machinery ...	1,00,00,000	
Customs Duty, Freight and Insurance ...	75,00,000	
Erection and Implementation Expenses ...	40,00,000	
Pre-operating Expenses (plant trial expenses including raw materials) ...	13,00,000	
Bank Guarantee Commission for 3 Years for Deferred Payment ...	15,00,000	
Preliminary Expenses, Underwriting Commission, Brokerage and Share Issue Expenditure ...	18,00,000	
Working Capital ...	50,00,000	
Contingencies ...	19,00,000	
TOTAL ...		9,60,00,000

The estimated foreign loan requirements (less Montecatini's share participation) of about 5,000 million Italian lire, equivalent to about Rs. 3.80 crores would be financed by a long-term loan under deferred payment arrangements, by "Mediobanca" of Italy, for repayment in nine years commencing from 1st January 1965 in which direction preliminary negotiations have been completed.

The Industrial Finance Corporation of India have agreed to give guarantee for the foreign loan plus interest on the terms and conditions specified by them, one of which is mortgaging all present and future fixed assets in favour of the said Corporation for the duration of guarantee commitment.

ESTIMATE OF PROFITS

Aluminium ingots are now imported to meet the needs of the Rolling Mills in India. Secondly, rolled metal fetches good prices. The Company intends to instal upto-date machinery and equipment and utilise the latest methods in the manufacturing processes. Based on current market conditions, the Directors anticipate that the operation of the factory will yield a satisfactory return on the capital invested.

COMMENCEMENT OF BUSINESS

After incorporation of the Company on 31st August, 1960, in order to facilitate carrying of all the arrangements and entering into early contracts for going ahead with the project, the Company obtained the certificate of Commencement of Business on 26th December 1960 from the Registrar of Companies, Madras, after filing the Statement in lieu of Prospectus.

MANAGING AGENTS

Messrs. Salcoe & Co., a partnership firm consisting of Sri R. Venkataswamy Naidu, Sri P. R. Ramakrishnan, Sri T. S. Narayanaswamy, and Sri V. Radhakrishnan as partners, are proposed to be appointed as the Managing Agents of the Company for a period of ten years, as per the terms and conditions laid down in the draft agreement, with such modifications as may be suggested by the Central Government, and approved by the Board at their meeting held on 20th September, 1960, based on which an application has been made to the Central Government for approval of the appointment of the said Messrs. Salcoe & Co., as the Managing Agents of the Company.

The Managing Agents will be entitled to a remuneration in accordance with the prescribed graded scale of commission on the Company's annual profits to be computed and determined as provided by Sections 349, 350 and 351 of the Companies Act, 1956, subject to a minimum of Rs. 50,000 per annum in the event of absence or inadequacy of profit in any year.

DIRECTORS

The number of Directors shall neither be less than four nor more than twenty-one.

The qualification of a Director, other than the Ex-officio Directors, Italian Directors, if and when appointed by virtue of clause 135 of the Articles of Association, Corporation Director, Government Director, Debenture-holders' Director and Alternate Director shall be the holding of at least fifty Equity Shares of Rs. 100 each in the Company, of the total nominal value of Rs. 5,000.

PAYMENT TO PROMOTERS

No amount of benefit has been paid or given or is intended to be given to any Promoter or Director of the Company, apart from the sitting fees for the Directors and the Managing Agency commission to the three Directors, Sri R. Venkataswamy Naidu, Sri T. S. Narayanaswamy and Sri P. R. Ramakrishnan, as partners of the proposed Managing Agents, Messrs. Salcoe & Co.

UNDERWRITERS

The Industrial Finance Corporation by their Letter No. U.C. 12/60—20357 dated 24th December 1960 have agreed to underwrite 60,000 equity shares of Rs. 100 each and 60,000 Redeemable Cumulative Preference shares of Rs. 100 each, and these 60,000 equity shares and 60,000 cumulative preference shares are offered unconditionally for public subscription.

In addition to the specific underwriting arrangements with the Madras Industrial Investment Corporation Ltd., Life Insurance Corporation of India and Messrs. Dalal and Co., set out in the paragraph under "Preferential Allotments and Reservation" the Company, has entered into underwriting agreements with the following parties, who have agreed to underwrite the number of equity shares set out against each of their names. The number of shares for which they will be tendering applications for full allotment (marked for "firm allotment") has also been shown as a deduction from the number of shares under-

written, in order to give clearly the number of shares offered unconditionally for subscription by the public.

	Number of shares underwritten.	Less firm allotment promised.	Balance offered unconditionally for public subscription.
1. Messrs. Dalal & Co., Madras	12,500	3,750	8,750
2. Messrs. Kothari & Sons, Madras	5,000	1,500	3,500
3. Messrs. Maconochie & Co., Madras	5,000	1,500	3,500
4. Messrs. Somayajulu & Co., Madras	3,000	900	2,100
5. Messrs. Swastik & Co., Madras	3,000	900	2,100
6. The Investment Trust of India Ltd., Madras	5,000	1,500	3,500
7. Messrs. Devkaran Nanjee & Co., Bombay	10,000	3,000	7,000
8. Messrs. Jamnadas Morarjee & Co., Bombay	10,000	3,000	7,000
9. Messrs. Merwanjee Bomanjee Dalal, Bombay	5,000	1,500	3,500
10. Messrs. Harish Chandra Gutt & Co., Bombay	10,000	3,000	7,000
11. Messrs. Ramanbhai Lalbhai Sheth, Bombay	10,000	3,000	7,000
12. Messrs. P. R. Subramanyam, Bombay	5,000	1,500	3,500
13. Messrs. A. B. Pandit & Co., Bombay	5,000	1,500	3,500
14. Messrs. G. M. Pyne, Calcutta	3,500	1,050	2,450
15. Messrs. M. Nanjappaiah Jahgirdar, Bangalore	3,000	900	2,100
TOTAL	95,000	28,500	66,500

The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their respective underwriting obligations.

All the Underwriters will be paid an underwriting commission of 2½% of the nominal value of shares underwritten by each of them.

BROKERAGE

Brokerage at the rate of 1% will be paid on all allotments made in respect of applications bearing the Stamp of any Bank or recognised Broker.

Brokerage on the same basis is payable to the Underwriters, in addition to the underwriting commission, as mentioned in the preceding paragraph, on allotments in respect of shares allotted on applications made or procured by them and bearing their stamps.

APPLICATION FOR SHARES

Copies of the Prospectus and application forms can be had from the Registered Office of the Company, or from the Underwriters or Brokers or from the Bankers of the Company, or from the Branches of such Bankers, at Madras, Bombay, Calcutta, Delhi, Bangalore, Coimbatore or Ahmedabad.

Groundnut oil per candy of 500 lbs ex-Madras godown expeller Ready 3 per cent FFA Rs 446.

January Rs 447/448: (nominal)

February Rs 190 per quintal.

Groundnut kernels per candy of 531 lbs Coromandel 230: Peanut Rs 220/222.

Castor oil per candy of 500 lbs Tirupattur Rs 350 (sellers)

Coconut oil per tin Rs 46.50.

Gingelly oil Rs 31 to Rs 31.8 per maund.

Gingelly seed Rs 105 per bag.

Groundnut cake: Rs 26.50 per bag of 160 lbs.

In the southern markets, though this week's groundnut arrival from Monday is reported to be slightly better at 300 tons, still they are far from normal. Weather conditions also prevented free flow last week. It is expected next week could be better.

★

Hides & Skins

Only meagre business was reported in the tanned skins and hides market. Prices of raw skins were dearer after the New Year opening. In the tanned cow hides section, oftaker was still lower with tanners sticking to higher prices. In the c.i.f. section only deals in semi premium marks at 74d, 64d

and 54d were reported while demand was really poor for quality marks. Tanned cow calf too did not report much business with stocks accumulating due to indifferent inquiries. There was but slight decline in tanned buffalo hides in which there was practically no overseas demand. The position in the tanned buff calf also did not change.

About 2,000 tanned goatskins and 30,000 tanned sheepskins were lifted from the market. About 10,000 tanned goatskins and 45,000 tanned sheepskins were left over.

In this counter also not much business was reported in the c.i.f. section. Better selections had good enquiries.

The following prices ruled for raw skins per hundred:

Bangalore raw goatskins Rs 580 to Rs 635: White wool sheep Rs 475 to Rs 635: Black sheep Rs 380 to Rs 415: Bezvada raw goatskins Rs 550 to Rs 555: He sheep Rs 549 to Rs 550: and she sheep Rs 395 to Rs 400.

The following are the prices for tanned skins per lb:

Tanned cow prime 5½ lb Rs 2.61 to Rs 2.87: 6½ lb Rs 2.62 to Rs 2.75: 8½ lb Rs 2.50 to Rs 2.56: 10/12 lb Rs 2.12 to Rs 2.25 and Buffalo 12/13 lb Rs 1.75 to Rs 1.87.

7 January 1961

The Aluminium Corporation of India Limited

Vast Expansion Programme on Most up-to-date Lines

Sri Singhania's Lucid Survey of the Industry

Presiding at the Twentysecond Annual General Meeting held on Tuesday, the 27th December, 1960, the Chairman, Sri Lakshmi Prasad Singhania said:—

Gentlemen,

I have great pleasure in welcoming you to the Twentysecond Annual General Meeting of the Corporation. You will be no doubt gratified to observe from the audited accounts and Directors' Report which have already been circulated to you, that in spite of higher expenses the Corporation has been able to maintain the level of profits. You will notice from the Directors' Report and Accounts that adequate appropriations have been made towards depreciation and allocation towards General Reserve has also been maintained. The appropriation towards taxation has been reduced by Rs. 2 lacs and this advantage has been passed on to the shareholders. As explained in the Directors' Report the dividend on Preference Shares will be paid after deducting tax but now the Preference Shares (Regulation of Dividends) Bill, 1960, has been passed by the Legislature and as proposed immediately the full details are available whatever further dividend, if any, is due to the holders of the Preference Shares will be paid in due course.

During the year the cost of production has gone up further due to increased cost of labour, stores, spares and raw materials, etc. and also due to heavy expenses for replacement and renovation which have been incurred for the maintenance of the Corporation's plant in up-to-date working conditions as the plant is in continuous operation now for more than 17 years. Besides, there have been fresh impositions by the Government in various spheres including higher railway freight and other charges. In the expanding economy of the country, I do not expect that there will be a downward tendency of these costs. Therefore, future should be viewed with cautious optimism.

FUTURE OF ALUMINIUM INDUSTRY IN INDIA:

As you are all aware, momentous changes are taking place in the country for the development of aluminium industry. I have pointed out before from time to time that aluminium is the only non-ferrous metal which can be produced not only to meet country's requirements but even beyond due to the availability of sufficient physical raw material, i.e. bauxite

which is available in abundance in the country. However, power being still the basic raw material for production of this metal, by its anticipated rapid development as envisaged in the Third Five Year Plan, the production of aluminium metal is expected to rise to a level which was not possible to comprehend before and which is still difficult to judge, in view of the scarcity of raw materials in developing other non-ferrous metals. There are high hopes that this metal may be in a position to help the country in filling the gap of requirements of other non-ferrous metals to a great extent which are likely to be required in this expanding industrial economy. I am very glad that this fact has been realised and there is planning and thinking for higher production of the metal in the country. Although I may be repeating myself, your Corporation has played an important role by first producing this important metal from Indian bauxite in 1944 with Indian capital, Indian Management, Indian labour and on top of that Indian technical 'know-how' and personnel and without any foreign collaboration or help whatsoever in earlier stages. I feel that the services rendered by your Corporation in developing this industry, in the country, would be really realised by the historians at a later date.

In my last year's statement before you, I estimated the expected consumption due to factors available then but due to accelerated industrial advancement, it seems that the earlier thinking regarding pattern of consumption in this country is changing and the consumption probably is going to be much higher than anticipated earlier. For the time being, the Planning Commission has accepted a target of 82,500 tons of metal production as included in the Third Five Year Plan. But the Hon'ble Minister for Industries, Shri Manubhai Shah, declared in the Lok Sabha on 7th September, 1960, that the estimated requirements of the country in 1965-66 would be 150,000 tons of metal per annum. In my opinion, there should be no doubt that this consumption can be achieved in this country and as such production should follow this pattern of requirements. It is, however, possible that there may be a time lag in between the consumption and production when all the new plants come into production and such temporary phase may be disheartening for this industry but ultimately I am con-

vinced that the consumption is going to be higher than production.

At this stage I would like to draw your attention to the imposition of heavy excise duty on aluminium metal and its products announced by the Hon'ble Finance Minister in his budget proposals for 1960-61. This step is rather unfortunate as it will make this metal less competitive in comparison to other non-ferrous metals and may lead to hindrance in increasing the consumption of this metal which is being built up by the Indian producers at a very great sacrifice. The Indian producers have maintained their prices at a lower level without taking full advantage of the Tariff protection. My humble opinion is that the consumption of this metal will rise more if it is left alone to find its own market, at reasonable prices by development in future years. However, I am happy that we have an assurance from the Hon'ble Finance Minister that the position will be watched carefully and if necessary suitable steps will be taken.

During the year, the Tariff Commission has again examined the case of this industry and the recent announcement in the Lok Sabha shows that the Government of India has accepted to continue protection till 31st December, 1964. At present there is surplus capacity in several parts of the world for this metal while there is scarcity in certain parts where the industry has not developed. This is in addition to the fact that some type of protection to this metal is given in particular in every part of the world and in every country. The protection question here has to be judged and watched with great caution in future.

Since the production of aluminium industry is increasing in this country, it is necessary to examine very carefully the availability of other raw materials such as petroleum coke for electrodes and cryolite for electrolysis which are to be imported. Though small quantity in comparison to the cost of the metal itself these play a very important part in the production of the metal. It is necessary that our oil refineries should produce the country's requirement of petroleum coke which is needed not only for aluminium industry but many other industries also. This, in my opinion, can be done without much difficulty. The production of synthetic cryolite should also be given higher priority for investigation and production from indigenous raw materials.

LABOUR is a very important link indeed in any industrial development. There is a disquieting trend of the Trade Union movement becoming more and more political, specially in this State. At the moment, I am more concerned with the area wherein your Corporation's factory is situated. Unfortunately in this State and particularly in the area around Asansol where industrial development is rather quite rapid, there have been certain disturbances rather regularly, specially in the Collieries mainly due to political factions between Trade Unions. The maintenance of the employer-employee relation is becoming more and more difficult and efforts to create a better understanding through Code of Conduct and direct negotiations have no meaning unless and until full co-operation is shown from both sides. I want to mention another danger to employer-employee relations which has taken shape recently. I think I will do better in quoting the recent description by Sir Biren Mukherjee in his own words as follows:—

"There has been for some time an agitation sponsored by some Trade Unions and several of the State Governments to insist on the restriction of jobs to those popularly described as 'sons of the soil'. If this principle is carried to its logical conclusion it will amount virtually to the negation of the right of the citizen as a member of the Union to seek employment in any part of the Union territory, a right which has been virtually guaranteed to him by the Constitution. Also, it is bound to result in retaliation by some States who may be affected by the principle rigidly applied against them by any other State. The mobility of industrial labour which is of benefit both to the workers and their employers, will be seriously impaired and cause no small embarrassment to the management of industrial establishments all over the country".

Such slogans popularly described as job for "sons of the soil" or "children of the State" are rather difficult to understand and in my opinion such a thing is neither in the interests of the State nor in the interests of the Nation. Dr. B. C. Roy, Chief Minister, has correctly defined at a recent meeting of the Legislature that the "sons of soil" are sons of this country. This State of West Bengal at one time a pioneer in industrialisation, is now

MARKETS

Firm Trend in Groundnuts

Oils and Oilseeds

New Year operations in the oils and seeds market in Madras began with a dearer outlook. Arrivals of groundnut and groundnut oil are only fifty per cent of the normal arrival during the corresponding period of last year. The result is that the market has turned out to a seller's one dictating the prices but for the ceiling put on both groundnut and groundnut oil, the prices would go up still higher. Towards the year end, an easy tone prevailed, but it was an illusion when prices of both groundnut oil and groundnut along with other commodities shot up to higher regions.

Daily groundnut arrivals in Madras has now come down to barely fifty tons. This is quickly absorbed by bazar interests and small crushers. The arrival in southern markets is only 300 tons, not twenty-five percent of the normal stock of last year. There seems a grip of apprehension among holders that prices would rule higher and this has made them reticent to unload their stocks. Flow of these commodities from Andhra regions is also small. Groundnut prices also moved up in sympathy. At the prevailing high prices, big dealers were cautious taking up very limited quantities in both nuts and oil. Dealings in forward positions too could not be found to be encouraging with poor deals in both nearby and far deliveries. Soot goods commanded buyers at Rs 433 on 30 December, but the next day the price of groundnut oil per candy went up to Rs 436. Likewise groundnut kernels, Coromandel quality, was quoted at Rs 73 per 30 kgs and today it was much more than that being quoted at Rs 230 per candy of 531 lbs for superior and peanut at Rs 220 to Rs 222.

The following were the closing prices of groundnut oil and groundnut kernels on Wednesday.

getting behind in sharing the industrial progress of the country and employment figures do not reflect a happy position as compared with the position of the employment figures of other States during the last 10 years. More industrial development means more employment in the area where the development takes place but let me be honest, jobs are not charities. These cannot be distributed. The jobs are the right of the people who can make themselves capable for them and the slogan should be that people should make themselves capable of acquiring the jobs and not accepting charity. If this attitude is not adopted, I am sorry to say that there will be more loss to the State where already a condition is created that the people are afraid of putting up new industries and also the existing offices are being transferred. There was a time when Calcutta was considered the principal financial city of the country whereas now it has been noticed that even the main financial offices are away from the city and there is a tendency of more offices being shifted. There must be some reason behind this and

I must emphatically urge the people of this State to examine the position very carefully and for the sake of this State and creation of employment in the State, they should bring about conditions and atmosphere where more employment opportunities are available to the sons of the soil or children of the State. It is my appeal to all parties that this should be adopted for the interest of the State. I would like to emphasise that the first interest of every employer in any State is to see that the people available locally must be employed and all opportunities be offered to those who are living in the vicinity, otherwise there is no object of establishing an industry in that area. As far as the Corporation is concerned, the employment opportunities are open without any restriction of any kind to everyone of those who are suitable for the job.

EXPANSION:

As indicated last year as well as clarified in your Directors' Report, the Corporation has undertaken the expansion programme for trebling the production of the

existing plant. After personal examination of the most modern plants in different parts of the world and in consultation with our technical collaborators, Messrs. Aluminium - Industrie - Aktien-Gesellschaft, Zurich, Switzerland, we have adopted the latest trends in the designs of our plant. We believe that when the plant starts production, it will be one of the most modern technically and will be setting up a new example in the country. The building design of the Cell House again represents the most modern thoughts at present existing in the Aluminium world and this design according to the studies made by various experts and universities, is likely to be most suitable for tropical conditions as existing in our country. I do hope that your Corporation will continue to play the important role of most economic production of the metal in this country as it has done in the past. According to present indications, we hope that the first production from this expansion would start by end of 1961.

As mentioned in the Directors' Report, we will very shortly be coming to you to raise a small

amount of capital by way of equity shares to the extent of Rs. 31.25 lacs out of the requirement of about Rs. 4.5 crores for this expansion programme by offering one equity share at par to the holders of every two existing ordinary shares. The rest of the finance has already been arranged through loans and deferred payments.

The coming years will make a new history in the Corporation's existence. Government was good enough to renew the Managing Agency Agreement for the next 10 years. The Corporation has indeed grown from a very humble start under the able guidance of the Managing Agents and through co-operation and efforts of the humblest worker in the factory to the team of technicians and Directors, and I am sure, they will continue to render services in the same spirit of dedication as before. The Corporation is no doubt proud of the team of technical personnel whom it has trained.

Note: This does not purport to be the proceedings of the Annual General Meeting.

Indian Finance

7 January 1961

subscription list has been opened from 1 January and will be closed on 11 January, 1961.

The proposed plant of the company will have a capacity of 10,000 tons of Calcium Carbide per year. The company will be in a position to produce Calcium Carbide at a much cheaper price than units located in less favourable locations in view of the cheapness of labour and electric power and the availability of raw materials of good quality at the factory site.

The company has been fortunate in securing collaboration from Messrs. Deutscher Innen-Und Aussenhandel Invest Fernort, Berlin, of the German Democratic Republic. The company has entered into two agreements with the above firm, one for the supply of a complete Carbide plant of 30 tons daily capacity and the other for the supply of technical personnel. It is expected that, with development of the Organic Chemical Industries, the demand for Calcium Carbide in the coming years is expected to grow at a rapid pace.

£ RS

New Notes:

Indian Oxygen

In line with the increased demand for industrial gases as envisaged in the Third Plan, the Indian Oxygen Limited has now formulated an expansion scheme for raising the production of industrial gases, electrodes, gas-using equipment, medical equipment and nitrous oxide. The implementation of this expansion scheme will require a large capital outlay which, according to the present estimates, will be in the region of Rs 3.85 crores, spread over the next three financial years. It has accordingly been proposed that the said sum of Rs 3.85 crores be raised partly by the issue of 6 lakh new Ordinary shares of Rs 10 each, at a premium of Rs 8 per share to the existing shareholders, which will yield Rs 1.08 crores. The balance amount will be raised from the internal resources and from the company's bank borrowings.

An outstanding feature of the proposed issue is, that the British Oxygen Company, Limited of the UK, which holds Rs 1.40 crores out of Indian Oxygen's total of Rs 2 crores, is being offered the new shares in the proportion of 3 new shares for every 10 shares instead of 2 new shares for every five shares held in the Indian counterpart. This means, that the participation of Indian capital in Indian Oxygen will be increased in relation to the contribution of the UK company, i.e., from 30 to 40 per cent.

Moreover, the subscription of the UK company will help obtain the necessary foreign exchange required for the expansion. The British counterpart cannot renounce its rights or will be offered any additional shares. In regard to the fractions, a Trustee is likely to be appointed for the sale and distribution of these fractions and the profits arising out of it will be equally distributed to the fraction-holders, the full details of which, we understand, will be made available to the public in a very short time.

Bombay Oxygen:

The Bombay Oxygen Corporation Limited, having obtained the requisite industrial licence, import licence and the sanction of the Controller of Capital Issues, is now ready to enter the market for raising capital. Out of the authorised capital of Rs 3 crores, the present issued capital is Rs 1.50 crores, consisting of 1.50 lakh equity shares of Rs 100 each. The promoters, directors and their friends will take up 51 per cent of the issued capital. The balance of 49 per cent—73,500 equity shares—is to be offered for public subscription. The subscription list will open on 17 January and close on 19 January, 1961.

Belsund Sugar:

The Belsund Sugar Company Limited has proposed to issue 1,29,935 new Ordinary shares of Rs 7.50 each, at par, in the proportion of one new ordinary share for every two existing shares held on 10 January, 1961.

Escorts Limited:

The basis of allotment of the Escorts issue, which was oversubscribed by over 13 times, has been announced. Every fifth application for 50 to 150 shares is to be allotted 25 shares and each application for 200 to 950 shares 25 shares. Applicants for 1,000 to 2,150 shares are to be allotted 50 shares each; those for 2,150 to 5,000 shares 75 shares each and those for over 5,000 shares 100 shares each. As regards preference shares, full allotment will be made in respect of all applications except those of the underwriters who will be allotted proportionately after adjustment of the excess shares applied for.

Hindustan Wires:

The basis of allotment in respect of the recent issue of Hindustan Wires Limited is as follows:—Applications for 50 shares will be given 40 shares each and those for 120 shares 60 shares each. Applicants for shares ranging from 100 to 600 will be allotted 50 per cent. Three hundred shares will be allotted to those who have applied for shares ranging from 650 to 950. In the case of those, who have applied for 1000 shares and above, the allotment will be about 35 per cent.

Madras Rubber Factory:

It is understood that the Madras Rubber Factory Limited will be shortly coming on the market to raise capital for constructing a tyre factory in Madras. This new unit will have capacity for manufacturing 3 lakh sets of tyres and tubes in collaboration with Mansfield Tyre & Rubber Company, USA. Besides participation in the paid-up capital to the extent of 25 per cent by Mansfield, it is stated, that the Madras Rubber Factory will be permitted to export its products to all foreign countries except the USA. The company has a paid-up capital of Rs 25 lakhs. Fresh capital for Rs 1 crore is proposed to be raised in equity shares; but the public will be asked to subscribe for only Rs 50 lakhs. The whole of the issue will be underwritten.

Malabar Iron & Steel:

The Malabar Iron & Steel Works Limited, Palghat (Kerala)—a new

company with an authorised capital of Rs 1 crore—is expected to enter the market or on about 20 January to raise a capital of Rs 50 lakhs. The company has already obtained a licence to manufacture grey iron castings and malleable iron castings. Details of the issue are awaited.

K. C. P. Ltd:

K. C. P. Ltd., Madras, has decided to issue one lakh equity shares of Rs 10 each to the equity shareholders as on 31 January in the proportion of 17 shares for every 100 shares held.

Mysore Kirloskar.

The Mysore Kirloskar Limited has proposed to issue bonus shares in the ratio of one share for every four shares held. The share capital of the company is proposed to be raised by the issue of 15,000 Ordinary shares of Rs 100 each and 25,000 preference shares of Rs 100 each.

£ RS

Investment Notes:

In the case of the Tata Iron and Steel Company, Pig Iron output is better at 143,200 metric tons as also Steel Ingots at 150,600 metric tons as against 139,500 and 141,800 metric tons respectively in November, 1960. The output of saleable steel has improved to 115,800 from 107,000 metric tons, comprising 40,000 metric tons of semis against 38,400 and 75,800 metric tons of finished steel against 68,600.

According to the figures released by the Indian Iron and Steel Company, Limited, production has shown

an around increase last month as compared to November, 1960. The output of Pig Iron has risen to 111,516 from 106,490 metric tons and Steel Ingots to 86,424 from 76,619 metric tons. Saleable Steel has also risen to 61,395 from 59,380 metric tons comprising 20,437 metric tons of semis against 17,144 and 40,958 metric tons of finished steel against 42,236 metric tons. Despatches are also higher at 59,892 against 54,855 metric tons.

INDIA PAPER PULP CO. LTD

The Board of Directors have today declared an interim dividend in respect of the year ending 31st March, 1961 of nP. Fifty per share. Tax will be deducted in accordance with the provisions of the Finance Act, 1960. This dividend will be payable to those members whose names are registered in the books of the Company on the 20th January, 1961.

The Register of members and the Transfer Register of the Company will be closed from 11th to 20th January, 1961, both days inclusive.

By Order of the Board,
INDIA PAPER PULP COMPANY
LIMITED,
ANDREW YULE & COMPANY
LIMITED,
A. S. MACLAREN
Secretary
Managing Agents.

Calcutta,

London, W.C. 2.

FOR THE INVESTOR

Lack of Incentives

Investment Gossip:

Conditions in the stock market have continued to be extremely dull with prices of the more speculative counters tending to be easy. The lack of interest is generally attributed to two main factors: the annual session of the Indian National Congress now being held at Bhavanagar and the proximity of the Central Budget. Since the general election is not far off, the Congress resolutions in Bhavanagar are expected to have more than the usual tinge of socialism. Although the ruling party may win the election, it would appear that it has to make much more strenuous effort than on previous occasions. This need to win the support of the common people may be reflected in the resolutions at Bhavanagar. The Prime Minister's reference some time ago to the inevitability of a growing public sector is also being recalled at this juncture. The general inclination to await the Central Budget is understandable. Coming at an important stage in the planned development of the country, the Central Budget that will be announced in another seven weeks, is naturally construed a very significant factor in the investment situation.

Yet another important restraining influence, however, seems to be the spate of new issues that have already been announced and are in the offing. New issues continue to be popular with investors. It would appear, therefore, that the fact that a number of attractive new issues are on the market is largely responsible for the stagnant conditions noticed on the stock market for the past few days.

£ RS

Investment Special:

Madras Aluminium Company

THE Madras Aluminium Company Limited has offered for public subscription 1,26,500 equity shares of Rs 100 each and 60,000 preference shares of Rs 100 each. The preference shareholders will be entitled to a fixed cumulative dividend of 9.3 per cent per annum (free of company's income-tax, but subject to deduction of taxes at the prescribed rates). The entire public issue has been underwritten. The subscription list will open on 9 January and will be closed on 16 January or earlier, but not earlier than 12 January.

A sum of Rs 25 per share, whether equity or preference, is to be paid along with the application. The balance of Rs 75 per share will be called up in three calls of Rs 25 each, with an interval of at least one month between each call. The first of such calls will not be earlier than three months from the date of allotment.

The authorised capital of the company is Rs 10 crores consisting of 2.50 lakh Cumulative preference shares of Rs 100 each and 7.50 lakh equity shares of Rs 100 each. The issued capital is Rs 6 crores com-

prising 1.50 lakh cumulative redeemable preference shares and 4.50 lakh equity shares.

The company was incorporated in August 1960 with the main object of undertaking the manufacture of aluminium ingots and alloys. The company's factory will be located at Mettur. The plant capacity will be 10,000 tons of which 7,000 tons will be ingots and 3,000 tons alloys. The company has also applied to the Government of India for a licence to erect a rolling mill, as an adjunct to the proposed factory, for the manufacture of A.C.S.R. and A.A.C. cables, extrusion, rods, foils, etc., and the licence is awaited.

Messrs. Montecatini of Italy will collaborate in the venture. The cost of the project, as estimated by Messrs. Montecatini for a plant capacity of 10,000 tons of aluminium, is placed at Rs 9.60 crores. The minimum subscription for the project is estimated at Rs 2.50 crores, i.e. 2.50 lakh shares of Rs 100 each (whether equity or preference or both together).

Usha Martin Black

Usha Martin Black (Wire Ropes) Limited—a new company formed to undertake the manufacture of wire and wire ropes—has come to the market for a capital amounting to Rs 28 lakhs comprising Rs 1.80 lakh equity shares of Rs 10 each and 10,000—9.5 per cent Cumulative Redeemable Preference shares of Rs 100 each. The Industrial Credit and Investment Corporation of India Limited has agreed to subscribe for 30,000 equity shares. The balance of the issue amounting to Rs 25 lakhs consisting of 1.50 lakhs equity shares and 10,000 Preference shares is to be offered, at par, for public subscription. Applications for shares must be for a minimum of 50 shares or multiples of 50 shares in respect of

the equity shares and 5 shares or multiples of 5 shares in respect of preference shares. In the case of equity shares, the terms of payment will be Rs 2.50 per share on application; Rs 2.50 per share on allotment and the balance of Rs 5 per share will be payable on call or calls to be made subsequently, but not earlier than 6 months after allotment. The subscription list will open on 12 January and close on 19 January or earlier at the discretion of the directors of the company, but not earlier than 14 January, 1961.

The plant will be located near Ranchi, Bihar. The company will set up a plant with an installed capacity of 7,200 tons per annum of wire and wire ropes. The most attractive feature of the issue is the quality of the collaboration secured by the Indian partners, Usha Automobile and Engineering Private Limited, of Calcutta. This is to be provided by Martin Black & Company (Wire Ropes) Limited, a British firm of unrivalled standing and reputation as well as unlimited experience in the manufacture of wire ropes and allied products.

Travancore Electro-Chemical

The Travancore Electro-Chemical Industries Limited has offered, for public subscription, 10,000 equity shares of Rs 100 each. The authorised capital of the company is Rs 1 crore divided into 1 lakh equity shares of Rs 100 each, while the paid-up capital is Rs 13,76,800. The amount payable is Rs 25 per share on application; Rs 25 per share on allotment and the balance of Rs 50 in two equal instalments with an interval of not less than three months each between calls and between the allotment and the first call. Each application must be for a minimum of 5 shares or in multiples thereof. The

Markets Open New Year on a Subdued Note

Watch-Dog Writes:

STOCK markets have opened the New Year on a rather subdued note. In the absence of any incentive and fresh buying support as was noticed at the end of 1960, prices have displayed a reactionary tendency. Although feeble attempts at recovery are being made, the overall pattern of trading has not indicated any material change. Thoughts are now centred on what possibilities the next Central Budget will offer at the end of February.

Prices on the Calcutta Stock Exchange drifted lower in featureless trading but they showed a moderate recovery towards the close.

Conditions on the Bombay Stock Exchange were stagnant with small business and narrow price movements.

On the Madras Stock Exchange, operators were just marking time, resulting in a shrinkage in the volume of business.

Calcutta

Calcutta, Friday Evening.

THE turn of the year failed to provide any inspiration for the marketmen. Fresh support was retarded by the uncertain international situation and the uncertainty about the resolutions likely to be passed at the Bhavnagar Congress session. Above all, there was a general disposition to restrict commitments till the announcement of the Central Budget proposals.

Although the condition of the new issue market was basically healthier, the supply of funds was less. This was mainly due to the fact that in-

ORIENT PAPER MILLS LIMITED.

NOTICE is hereby given to all concerned that in exercise of the option vested in the Company, the period of repayment of debentures of Rs. 1 crore issued by the Company in the year 1951 on the terms and conditions as mentioned in an indenture dated the 1st May, 1951, has been extended by another 10 years, i.e. upto the 31st March, 1971, subject to the approval of the Central Government.

By Order of the Board,
B. K. VYAS,
Secretary.

8, India Exchange Place,
Calcutta, the 24th December, 1960.

vestors seemed to be mobilising their resources for subscribing to a number of new issues. It was, therefore, thought that attention would be concentrated more on these than the existing shares. With the result, turnover was poor and price movements were irregular.

The Gilt-edged market was, on the whole, dull with business at a reduced level. Banks, who were busy preparing for the year-end, showed little interest. Enquiry from other sources was also negligible. 5 per cent 1986 Conversion Loan moved narrowly between Rs 74.20 and Rs 74.30, to finish at the former level.

Bank shares, however, remained very steady in anticipation of better working results for last year despite the Reserve Bank's credit restrictions and the increased cost of operations. Punjab National changed hands at Rs 19.44 to Rs 19.50 and United Commercial at Rs 82.50 to Rs 83.75.

Jute shares continued to remain subdued. Investors seemed to be getting worried about the recent decision made by the mills to reduce the working hours. It was feared that the move might accentuate further the production costs of the industry, especially when its profitable working had been seriously impaired by the very high price of the raw material. Howrah continued to be offered at Rs 19.75 to Rs 20.12; National at Rs 22.56 to Rs 22.62 and New Central at Rs 20.75 to Rs 21.12. Union was a steady feature at Rs 159 with Dalhousie having some enquiry up to Rs 109.50 from Rs 106.50.

In an otherwise dull session, Coal shares were selectively bought. This was mainly due to the fact that operators were viewing optimistically the latest trend of discussions of the industry with the World Bank team on the question of securing foreign exchange for the import of mining equipment and spares for increasing the output in the Third Plan. New Beerbhoom had buyers at Rs 23.75 to Rs 24.62; Central India at Rs 11.44 to Rs 11.75 and South Karanpura at Rs 11.62 to Rs 11.75. Burrakur moved irregularly between Rs 18.44 and Rs 18.94, to finish at Rs 18.69.

In the Tea section, there were more sellers than buyers in evidence. It was feared that profits of the various gardens were unlikely to be better in 1960 than in 1959. It was also thought that the gain from higher prices might be more than offset by the decline in production. Dhelakhat changed hands at Rs 21.94 to Rs 22.06; East India at Rs 17.56 to Rs 17.69; Gohpur at Rs 14.25 to Rs 14.31; Killcoth at Rs 17.62 to Rs 17.75 and Tezore at Rs 14.44 to Rs 14.50.

Although dealings were few, Sugar shares remained generally firm on expectation of brighter prospects for the industry during the current season. Darbhanga were enquired up to Rs 17.37; S.K.G. up to Rs 13.44 and Dyer Meakin up to Rs 26.56.

Textile scrips were rather subdued on the apprehension that a further cut in cloth and yarn prices would hamper the profitability of the industry. Dunbar came in for offer at Rs 22.19 from the opening rate for the year of Rs 22.37; Kesoram at Rs 26.75 against Rs 26.87 and J. K. Rayon at Rs 14.12 against Rs 14.69. Jaysree were quoted at Rs 14 and Howrah at Rs 151.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments till Wednesday. After opening the year at Rs 23.16 and improving to Rs 23.17, Indian Irons gradually pushed down to Rs 22.92 at which some bear-covering and replacement buying induced a recovery to Rs 23.40, to close finally at Rs 23.12. In sympathy, TEXMACO were marked down at one time to Rs 22.25 from a high of Rs 22.85, to finish at the former level. Braithwaite met with business at Rs 31.75; Bridge and Roof at Rs 55.12 and Jessop at Rs 19.37.

Miscellaneous issues showed a mixed trend. The following table shows the price trends of a few selected shares:

	Previous Year	New Year	As on Jan. 3
	Rs	Rs	Rs
Orient Paper	40.70	39.70	39.70
Shree Gopal	28.00	27.62	27.75
Titaghar	37.31	35.87	35.87
Rohitas	21.12	20.31	20.37
Dunlop	41.87	40.50	40.50
H. Motor	18.81	18.25	18.31
I. Cable	31.81	31.19	31.37
I. Aluminium	30.12	29.81	30.00
I. Oxygen	38.87	38.87	39.50
I. Steamship	9.62	9.28	9.44
I. Copper	4.52	4.45	4.46
NICCO	28.87	28.87	28.87

Madras

PRICES in the Madras Stock Exchange in the New Year were mainly the continuation of the weariness induced by Bombay. Probably due to an apprehension that the next Five-Year Plan may go in for additional taxation, investors were not prepared to take risk. This was amply reflected in the Stock Exchange transactions which began its New Year operations Monday. Values continued to fall and rallies, if at all, were feeble. The major trend, therefore, is on the downward. Almost all counters in the market shared this downfall. Also there was good evidence of the tightness in the money market and to bear witness to this fact, only short-dated Government loans were fancied.

Plantings: There was quite a small volume of business in this section. Blue Mountain lost 9 nP at Rs 4.06, Chembra gained a little at Rs 5.43, Consolidated Coffee slipped to Rs 22.25 and Coffee Lands was quoted at Rs 18.90. Cottanad was available at Rs 11.25, Kil Kotagiri continued unaltered at Rs 5.30, Lingapur at Rs 6.20, Malabar Industries (xd) was quoted at Rs 11.58 and Manimala was listed at Rs 8.75. Mercara suffered a loss of ten nP at Rs 8.65 and Midland too shared the price decline at Rs 11.70. Mysore Coffee was quoted xd at Rs 5.34. Nonsuch improved to Rs 26.50, Panchura with 40 per cent dividend was quoted at Rs 5.25. Parkside gained four nP at Rs 26.72 while Peermade lost ten nP at Rs 22.50. Periakaramalai remained unchanged at Rs 3.42. Rajgiri with 10 per cent dividend was quoted at Rs 20.25. Travancore Rubber was available at Rs 10.90 and TR & T with an interim 4 per cent dividend was marked at Rs 9.70. Waterfall gained a little at Rs 3.38.

Textiles: No significant developments had taken place in this section most of the scrips being available at almost the same prices when the market closed for Christmas and New Year vacation. Buckingham and the Bangalore Woollen were quoted at Rs 198.00 and Rs 197.25 respectively. Coimbatore Spinning remained at Rs 43.25 and Lakshmi was same at Rs 149.00. Madura suffered a ten nP loss at Rs 34.90. South India Viscose lost two points to be priced at Rs 147.00. Travancore Rayon was unchanged at Rs 33.00.

THE CHAMPDANY JUTE CO.,

Notice is hereby given that an Extraordinary General Meeting of the members of the abovenamed Company will be held on the 24th day of January 1961 at 11.45 a.m. at the Registered Office of the Company, No. 2, Netaji Subhas Road, Calcutta. 1 to consider and if thought fit pass the following Special Resolution:—

"That Mr. J. H. H. Ross be and is hereby appointed a Director of the Company."

By Order of the Board,
JAMES FINLAY & CO.,
LIMITED,
Managing Agents.

2, Netaji Subhas Road,
Calcutta,
29th December, 1960.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and, on a poll, to vote in his stead. Such proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Mr. J. H. Jamieson who was appointed a Director of the Company by Special Resolution of the Shareholders passed at the Annual General Meeting of the Company held on 14th November 1958 has resigned from the Board with effect from 31st December 1960 as a result of his retirement from India. Special notice dated 24th December 1960 of the intention to propose the above resolution as a Special Resolution has been received by the Company. Special notice has been given in order to satisfy the requirements of Sections 190 and 261(1)(f), (2) & (3) of the Companies Act, 1956, as Mr. J. H. H. Ross is an officer in the employment of the Managing Agents.

Interest of Directors & Managing Agents.—The Directors and Managing Agents of the Company are interested to the extent of their shareholdings in the Company as set out below:—

Jute

secret of an industry's success

With a membership of 70 companies, comprising 100 manufacturing units, the IJMA represents almost 95% of the total jute loomage in India.

Providing employment to millions of farmers, traders and mill-workers... earning about Rs. 115 crores annually in foreign exchange... contributing large sums in taxes to the State and Central Exchequers—the Indian jute industry occupies a prominent place in the nation's economy.

Guarding the interests of this nationally important industry and guiding its destiny, is the Indian Jute Mills Association. Founded in 1884, the IJMA—representing almost 95% of India's total jute loomage—protects, forwards and defends the trade of its members. The Association

carries on research... to improve the quality of jute products and to develop new uses of this already versatile material. In the field of export promotion the Association has been active for well over a decade, undertaking publicity and promotional work which has helped make jute goods India's largest dollar-earner. Its labour welfare activities have set standards throughout industry.

The Indian Jute Mills Association looks forward to serving the Indian jute industry in ever-increasing measure in the years to come.

Issued by the Indian Jute Mills Association

Having fun—wish you were here

Puri. Sea's warm, wonderfully refreshing. Lazy hours on superb beach, perfectly peaceful. Acquiring antiques—also smattering of temple architecture. Prolonging week-end by week. (No trouble getting Wills' Gold Flake—really fresh—wherever you go they're good.)

Issued by The Imperial Tobacco Company of India Limited

Unremitting Stringency

THE new year has started with the money market so tight, that the call money rate inched past the recent high of 5.25 per cent to 5.5 per cent. The total of Advances of Scheduled Banks has been merrily leaping upwards, and the Reserve Bank has had perforce to take measures to alleviate the stringency. Belatedly, the additional deposits, representing a quarter of new accruals since around March last year and amounting to less than Rs 20 crores, have now been released to the banking system. But all that this will mean is that the banks, whose borrowings from the Reserve Bank attract the penal rate of 6 per cent, will be able somewhat to reduce indebtedness; and hence will be in a position to have recourse to central banking credit at 5 per cent. But the 1960-61 busy season has barely begun, and if the weeks since the beginning of December show any decisive trend, it is that the seasonal expansion in bank credit will reach record proportions. Already, in 5 weeks' time, the rise in Advances of the banking system works out to something like Rs 80 crores, and at this rate, in the remaining four months of the busy season, the demand imposed on banks may be rather more than has been planned on by the Reserve Bank. While sugar and cotton financing is now in full swing, tea demand has not perceptibly made itself felt as yet. Meantime, industrial production continues to be headed upward, and industrial Advances, too, are rising week by week. It is, we admit, dangerous to speak in terms of specific figures, but, for our part, we cannot see that the busy season expansion in Bank Advances will turn out to be less than Rs 250 crores. And we are afraid that banks are in no wise equipped for coping with such a quantum of demand.

For, there is a pause in new accruals of Deposits, and consequently the seasonal financing has to be met from the existing resources; and the current level of Deposits is used up to the hilt. The position is:

- Borrowings from the Reserve Bank are high enough; limits against usance bills have not been liberally approved, in contrast to the pre-busy season preparation in 1956. Banks will be compelled to borrow against Government securities and at 6 per cent.
- Cash balances are already low; the Rs 20 crores of additional deposits released this week, we repeat, will merely go to reduce the level of borrowings from the Reserve Bank, and new Advances cannot be granted from the present cash balances.
- There has already occurred a considerable extent of disinvestment in gilt-edged. But the Reserve Bank is not in the mood, except for very short maturities, and banks would surely be reluctant to raise resources by selling their holdings at a loss.
- Deposits, as reported, are stagnant, and there is not the prospect, until the last week in March/first week in April, of any considerable accretion to the Deposit resources of the banking system, at the time of governmental payments at the fiscal year-end.

As a result, the pressure on interest rates is upward. We fear, indeed, that, as happened in 1957, the bank rate will prove to be badly out of alignment with the general structure of interest rates. We can only hope that, with the three-tier bank rate, which will presumably exist until some time in May or June, when banks will be in a position to reduce their borrowings from the Reserve Bank so that the quantum of their accommodation does not attract the two penal tiers of the Bank rate, the interest rates ruling at higher levels will prove to be merely a temporary phenomenon. For, if bank rate were to be raised, de jure, the fall in gilt-edged prices will be such as to rule out any possibility of the banks seeking to replenish their resources, for the financing of the busy season, by sale of government securities. In this context, and on the assumption that banks may have to find another, roughly, Rs 175 crores for meeting legitimate busy season needs, what must the Reserve Bank do?

We consider it imperative, firstly, that credit limits be liberally sanctioned against usance bills. Instead of piecemeal approval of particular "parties", the guiding criterion should be the borrowing bank, and limits ought to be fixed for each bank. Banks should as early as possible be possessed of the knowledge that, against the credit they extend to constituents in respect of busy season requirements, they can in turn secure the new resources by means of borrowing from the Reserve Bank.

Secondly, if an increase in bank rate is to be avoided, the Reserve Bank has to come forward and support the gilt-edged market. The central banking institution need not proclaim itself as buyer of anything that banks may offer. It will do if, say, it is made clear that the Reserve Bank will buy reasonable parcels of, if we may suggest a particular loan, the 3½ per cent 1969.

Thirdly, we wonder whether it will be possible to permit banks to borrow against usance bills at bank rate, plus stamp duty, instead of at penal rates. For, otherwise banks may be borrowing from the Reserve Bank at six per cent, and utilising part of the proceeds in lending to prime clients at 5½ per cent. And banks may be reluctant to do so. It may be stipulated that borrowings outstanding after the notional end of the busy season will attract the penal rates of interest.

Whether the Reserve Bank acts or not, what is certain is that the 1960-61 busy season will prove to be the most stringent one on record.

Big Leap Forward in Advances

For the Scheduled Banks, the old year has ended, as shown in the return for 30 December, with a sharp rise of Rs 24.48 crores to Rs 1180.73 crores in the total of Advances. Net Deposits have shown a small rise. Recourse to the Reserve Bank has gone up sharply by Rs 18.67 crores to Rs 61.47 crores. Disinvestment in gilt-edged for Rs 25 crores is mostly on account of the State Bank, as is also the corresponding (more or less) rise in cash balances.

The new year has started with an expansion of Rs 32.27 crores to Rs 1901.25 crores in active note circulation. There has been outflow of Rupee Coin in the unusually large amount of Rs 2.55 crores. Currency has been expanded against Rupee Securities by transfer from Investments in the Banking Department, which shows a drop of Rs 45 crores. The Reserve

Bank has sold securities to the State Bank for Rs 10 crores. In the Banking Department every head of Deposits is shown to have declined, presumably the impact of beginning of the month disbursements. The Other Loans and Advances of the Reserve Bank, reflecting repayment by the State Bank, have fallen by Rs 8 crores. Balances Held Abroad continue to decline the latest week's drop amounting to Rs 4.12 crores.

The State Bank's return for 6 January reveals the impact of continued busy season pressure. The total of Advances has gone up by over Rs 7 crores to Rs 239.80 crores. Deposits are practically unchanged. Cash balances stand depleted owing firstly to reduction of debt to the Reserve Bank and secondly to purchase of securities from the Reserve Bank.

Bank Profits

Subject to audit, the Net Profit of the INDIAN BANK LIMITED, MADRAS, for the year 1960 after providing for contingencies and meeting all expenses together with the sum carried from the previous year's account amounts to Rs 41,03,693 as against Rs 27,45,443.18 for the year 1959. An ad-interim dividend at the rate of 5 per cent and a bonus of 2½ per cent (subject to tax) has been paid. The Directors now propose to recommend to the annual General Meeting payment of a final dividend of 5 per cent and a bonus of 2½ per cent (subject to tax) for the year 1960 thereby making the dividend and bonus for the year amount to 15 per cent.

+

All-time highs in total resources, deposits and loans as well as record earnings for the past year are reported by Bank of America in its 31, December 1960, statement of condition. Loans outstanding at the year-end totalled \$6,699,494,437, as compared with the previous high of \$6,599,668,231 at the close of 1959. Total deposits on 31 December stood at \$10,805,891,450, as against \$10,621,956,182 a year ago. Total resources of the bank announced to \$11,941,981,259 at year end, compared with \$11,669,404,346 on 31, December 1959. Investments in securities totalled \$2,702,508,087, whereas a year earlier they aggregated \$2,725,392,943. Net operating earnings amounted to a record \$93,228,177 or the equivalent of \$3.64 per share on the 25,600,000 shares outstanding. This compared with the previous high of \$86,297,920 or \$3.37 a share, earned in 1959. Transactions in securities showed a net loss of \$3,123,879 resulting from a realignment of the bank's investment portfolio early in the year. A total of \$9,219,000 was transferred to reserves, after tax benefit, leaving \$80,885,306 for dividends and addition to capital funds. Dividends totalling \$49,920,000 were paid to our more than 200,000 shareholders during the year. This included an extra dividend of 10 cents a share and an increase in the regular annual dividend rate from \$1.80 to \$2.00 a share starting with the fourth quarter. Transfer of \$50,000,000 from undivided profits, to surplus at year-end increased combined capital and surplus to \$550,000,000. Total capital funds together with reserve of \$127,631,918 for possible loan losses now amount to \$791,264,208.

+

The Devkar Nanjee Banking Co. Ltd. has reported a net profit of Rs 23.54 lakhs, subject to audit, for the year ended December 1960. The Profit has increased by Rs 10.49 lakhs compared with the previous year. The directors have recommended a final dividend of Rs 2.52 a share, making a total of Rs 4.38 a share, subject to deduction of tax. This is

the same as it was last year. Including Rs 5.69 lakhs brought forward from the previous year, the amount available for appropriation comes to Rs 29.24 lakhs. Reserve fund has been allocated Rs 8 lakhs (against Rs 6 lakhs) and taxation provision gets Rs 9 lakhs (against nil). Dividends absorb Rs 4.38 lakhs. The balance of Rs 7,86,033 has been carried forward. Deposits show a nominal rise of Rs 12,000 at Rs 35.5 crores, while total working funds are up from Rs 40.28 crores to Rs 42 crores. The number of branches has increased from 83 to 96. Against a paid up capital of Rs 50 lakhs, reserve funds amount to Rs 60 lakhs.

Treasury Bills

TENDERS for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 10 January 1961. Total amount offered was Rs 2,60,00,000. Tenders at Rs 99.360 were accepted in full and those at Rs 99.355 allotted approximately 73 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.576 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Nagpur, Madras and New Delhi) up to the close of business on Monday, 16 January 1961. Successful tenderers should make payment on Friday, 20 January 1961. Other conditions are as usual.

During the week ended 6 January 1961 Government of India Treasury Bills for Rs 21,48,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 11 to 14 January 1961 at Rs 99.371 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 4 to 7 January 1961.

Whither Sterling

By Paul Einzig

TOWARDS the turn of the year sterling displayed an unseasonal weakness. Judging by the gold figures for December—which show that the increase was rather less than the net balance of the receipts from the Ford transaction after deduction of capital payments—it seems that the authorities must have lost quite a large amount of dollars through supporting sterling. If so, this indicates new tactics. Originally sterling was usually supported when it declined to the vicinity of the

support point of \$2.78. During the last year or so there was evidence that the authorities intervened whenever sterling declined below par, to prevent its further decline towards support point. Possibly during December they went a step further and intervened to prevent sterling from declining even below par. However this may be, it seems probable that sterling is now subject to adverse pressure on current account.

This adverse pressure may have been due to the repatriation of uncovered funds transferred earlier in the year from New York in anticipation of a Democratic victory. On second thoughts the market is now prepared to give the new Administration the benefit of the doubt, pending the announcement of its policies. There must also have been withdrawals of covered arbitrage funds to meet end-of-year requirements, though in the absence of any significant decline in the profit margin in such arbitrage no large-scale withdrawals are likely.

What may happen is that should the new Administration succeed in allaying dollar devaluation fears the resulting firmness of forward dollars would make it unprofitable to keep covered funds in London. Their withdrawal would necessarily mean a decline in the gold and dollar reserve, which again would be liable to cause pessimism about sterling's prospects. In any case, the resumption of the rise in prices and the accentuation of wage increases will make it difficult for Britain to improve her adverse balance of payments.

To the question of what will happen to sterling in 1961 it is necessary to answer with the question:—What will happen to the dollar in 1961? Last year sterling's strength was due almost entirely to dollar's weakness. Should there be a run on the dollar it would bolster up sterling artificially in face of the adverse balance of payments and other difficulties. On the other hand, in the absence of a run on the dollar sterling would have to face not only the current deficit but also last year's deficit temporarily disguised by the influx of hot money. Losses of gold through the current import surplus would be increased by losses through the withdrawal of arbitrage funds and other forms of balances that found their way to London last year.

In the absence of support for sterling through a run on the dollar it seems doubtful whether the authorities would be able to afford either to lower the Bank rate much further or to liberalise sterling to any noteworthy extent. They will have to resist pressure in favour of "soft money" policy, regardless of local unemployment in certain industries. It is distinctly a case of one man's poison being another man's meat. Even so, it would be distinctly short-sighted to hope and pray for relief to sterling to be achieved at the cost of a dollar crisis.

Allocation for Roads

THE inadequacy of the Third Plan provision for Roads and Road Transport has been exposed on several occasions, but nowhere more lucidly or more comprehensively than in the presidential address of Mr H. P. Sinha in the twenty-fifth session of the Indian Roads Congress at Bhopal last week. Mr Sinha's survey brings together all the arguments and allocation for the nation's life lines. But unfortunately his arguments are not likely to be the more effective for being unanswerable. On the contrary, for that very reason no attempt will be made to answer them. The president of the Indian Road Congress, it may be added in parenthesis, is also joint secretary in the Ministry of Transport & Communication. There is no reason to suppose that the Ministry of Transport has not put forward as strong a case before the Planning Commission as Mr Sinha has done in his address to the Road Congress. And yet the Planning Commission has remained unmoved in its decision not to make a larger provision for roads in the Third Plan than the expenditure incurred on roads development during the Second.

The Planning Commission had also before it the recommendations of the Chief Engineers of Central and State Governments who had been asked to formulate a programme of road development adequate for the requirements of a developing economy. After assessing requirements on the basis of targets of production accepted for various commodities, they had drawn up a twenty-year programme which, they pointed out, could be financed out of the revenues realised from taxation of motor transport. The mileage of surfaced roads at the end of the Second Plan period is estimated at 1,44,000 and to unsurfaced roads at 2,50,000. The development programme recommended by the Chief Engineers envisaged increase of surfaced roads to 2,52,000 miles and of unsurfaced roads to 4,05,000 miles by 1981. For the Third Plan period, they recommended expenditure of Rs 590 crores on road development. As against this the proposed allocation indicated in the Draft Outline is only Rs 250 crores.

When considering the adequacy of the allocation, it is relevant to compare it with the annual revenue derived by Central and State Governments from road transport. The figures for the last five years are given below.

Revenue from Road Transport
(In rupees crores)

Year	Centre	State	Total
1955-56 ..	45.55	25.83	71.38
1956-57 ..	52.31	28.49	80.80
1957-58 ..	63.63	37.78	101.41
1958-59 ..	64.16	45.14	109.25
1959-60 ..	87.60	46.94	134.54

It will be noticed from the above table that revenues from taxation of road transport have been steadily increasing during the Second Plan and this trend will be further accentuated in the Third. On a conservative basis, total revenue from this source during the next five year period has been assessed at Rs 900

crores. Out of this only Rs 250 crores will be available for road development during the Third Plan. Even if revenue does not increase over the level reached last year, it should be possible to finance the programme suggested by the Chief Engineers out of the proceeds.

There are indications that some changes may be made when the Plan is finalised, but these are not likely to be of more than marginal significance. Some small adjustments are likely on the basis of the revised State Plans. Increased allocations for roads in the State Plans are among the items that account for the enhanced total outlays. But the wide gap between requirements as estimated by the experts and the amount the Planning Commission could provide will remain. The Draft Outline has stated categorically that it will not be possible, owing to limitation of resources, to add new route mileage and to undertake development of existing roads in the next five years at the rate envisaged in the 20-year plan. There is no reason to think that the National Development Council will take a radically different view.

The problem now is, therefore, one of ensuring optimum utilisation of the resources available for road development. When the rate of expansion which seems desirable has to be slowed down, the alternative is to devise measures for more intensive and effective use of existing facilities. The Road Congress and its committees might with advantage concentrate their attention on this aspect of the problem.

A recent survey of road transport has drawn attention to the extent of under-utilisation in the road transport industry under the three heads: vehicles, personnel and roads. The last item, namely, under-utilisation of roads, is of particular relevance to the immediate task before Road Engineers. While it may not be possible to establish the norm of utilisation, the survey has indicated, by comparing the degrees of utilisation in different regions, that roads in States such as Bihar, Orissa, Kerala, Rajasthan and Mysore are relatively under-utilised. And even within a State, roads in some districts are not utilised to the same extent as in others. Under-utilisation may arise from absence of strategic links, bridges, or feeder roads from villages to the arterial road system, the bad conditions of the roads and their limited capacity to carry traffic, or the restrictive policies adopted by transport authorities regarding transport of particular commodities. Correction of the deficiencies in this respect can lead to better utilisation so that roads may carry a larger share of the new traffic for a comparatively small investment, and should therefore have priority in the Third Plan road programme. Even the National Highway system, as pointed out by Mr Sinha, is deficient in the following respects at the end of the Second Five Year Plan.

1. Eighty major bridges will remain unbuilt;
2. Four hundred miles of missing links will remain to be constructed;
3. One thousand miles will have a single lane water bound macadam surface;

Indian Finance

"The Wise Man in his attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

4. 11,300 miles have only a single lane asphalted or concrete carriageway, about 2,300 miles only having a two-lane roadway;
5. Hundreds of road-rail level crossings will remain to be replaced by over or under-bridges; and
6. Bypasses around most of the towns will remain to be built.

Conditions are not likely to be better in the State road systems.

The road development programme for removal of deficiencies (which will include the provision of strategic links between different road systems, the widening of carriage ways along main roads, improvement of the surface and strengthening of culverts and bridges to enable them to carry larger loads than is now practicable, provision of feeder roads to railway stations as well as roads linking villages to the road system as well as to each other) will have to be undertaken as part of a coordinated programme. At present road development is undertaken by the Central and State Governments, the District Boards and Municipal bodies, and under the Community Development programmes. There is a negative sort of coordination, as far as the financial allocations are concerned, regarding what cannot be done. But there is no agency for coordinating the programmes that are actually taken up for implementation. For the effective implementation of a programme of balanced development for fuller utilisation of roads, it is essential to have a central organisation. The establishment of a Road Board has already been suggested and it should be constituted without further delay.

Spending on Science

BEFORE the annual conferences of scientists were held it was announced that the Planning Commission had endorsed a scheme for expansion of scientific research. The cost of the programme is put at Rs 55 crores: the object is to further industrial research by expanding institutes and laboratories and to maintain present arrangements for research. To find the staff, to locate the new institutes for mineral oil and biological research and to get going those put under the Second Plan are new tasks while the grant of subsidies for co-operative research institutes is among the objects of the brave new scheme to advance scientific knowledge. Foreign aid is to be secured for some of the new schemes because the Planning Commission means to make the Council of Scientific and Industrial Research the prime mover in industrial development, for instance, in the leather industry.

The results will be awaited with something like anxiety as the existing laboratories and institutes have not done much for putting India ahead of Asian countries like China or Japan. The new programme does not offer much to the universities or the learned societies. The scheme is concerned wholly with official planning, converting scientists into

bureaucrats, as some will say cynically. There may be an answer to the complaint that the Academy of Sciences is a vague body and the Council with the Government behind it is permanent and well-endowed. Yet comments on the state of medical research and relief suggest that the Union Ministry's schemes for developing science are tinged by dissatisfaction. Comparison with the UK may be made by some critics.

The flow of private funds for research in the UK has been substantial and Bristol has been the recipient of large gifts from the Wills family which has turned smoke into big money. The Chamber of Commerce in Manchester has brought industry into close contact with the University and many private foundations have helped post-graduate study. The financing of new inventions is also undertaken by the Council attached to the Department of Industrial and Scientific Research. A member of the Cabinet oversees scientific advance at present, because of the vague feeling that Russia is doing more on her own. Agriculture is not overlooked by the Privy Council which is responsible for the execution of research projects. Spending £61 million even in 1959-64 Great Britain will probably be ahead of India for long but there is no loud talk of a programme with prongs, but only of getting ample contributions from industry to meet the rising costs.

The conservation of natural resources, in the widest sense, is also undertaken by the DSIR and of course, atomic energy looms large, because power development is seen as a possibility and specialised engineering comes into the picture. The Coal Board runs its research under the DSIR while the oil companies carry out their own research. Work done for the Colonies includes the operations against the locust.

That Parliament in the UK has since 1939 taken an active interest in research and technology gets consideration through nominations to the Committee are not surprising because the whole point of the British spending is to make scientific policy yield results for the largest possible area. The Department of Research maintains a lending library and is providing translations.

Major industries always spend on development and research, but much of the money is spent on establishments run by large concerns, because research tends to be connected with making the products of industry cheaper, cutting costs means a rise in exports.

The situation in India after 1966 may be in no way different from today, as the increase in official control of science will continue and the Education Ministry will not have a hand in shaping the policy that will yield the most results in the matter of academic freedom as well as the receipt of aid from organised industry. The prompt provision of road and building research stations has made no large difference to the industries actively connected with the manufacture of machinery and it is certainly taken for granted that the Fertiliser Association is most conscious of agricultural improvement possibilities. Of course, official centres for analysis are wanted, but minor laboratories maintained by Central departments are due for merger, if there is to be consolidation and research is to be made a responsibility of the Union, as envisaged at present. The allocation of manpower should be undertaken by the Union Ministry so that new paper mills or sugar mills will know where to ask in case of needs, as also to get trained men for their own purposes. The usual practical points must be settled before the expansion of research starts, but as all know, expansion means only expense.

Bungling Over Bonus Commission

THE decision of the Government of India to appoint a Bonus Commission has been welcomed in the country both by employers and by labour. Bonus has been a frequent source of dispute in industries and it is high time that the whole question is examined by an expert body and a suitable machinery is evolved to settle bonus claims. But regrettably the Labour Ministry does not appear to have adopted the correct procedure in tackling the problem. In the first place, the Ministry ought not to have formed the Commission without including the representations of employers and labour. The Commission now consists of only three persons Mr. M. R. Meher (Chairman), Prof. B. N. Ganguli and Mr. M. Govinda Reddy, Member of Parliament. The announcement of the personnel of the Commission has understandably caused resentment both among employers and labour. The organisation of employers in particular are reported to have pointed out that it is not correct to appoint as Chairman a person who has already pronounced judgments on the question of bonus and which have been reversed by the Supreme Court.

Secondly, the Ministry should have consulted the organisations of employers and workers before deciding upon the terms of reference of the Commission. The terms of reference as proposed are the following:

- To consider the payment of bonus in all its aspects in relation to industrial employment.
- To determine the extent to which bonus payments should be influenced by the wage level in an industry.
- To determine the conditions under which bonus payments should be based and the method for deciding the prior charges.
- To consider whether the bonus due to workers should be paid beyond a specified amount, in the form of National Savings Certificates or in any other form;
- To suggest the appropriate machinery for the settlement of bonus claims; and
- To make such recommendation regarding the question of bonus as the Commission deems suitable.

The Ministry has now convened a meeting to be held in the last week of January to consider the terms of reference of the Bonus Commission and the representatives of employers and workers have been invited to attend it. It would have been far better had the Ministry taken the employers and workers into confidence before appointing the Commission personnel and drawing up its terms of reference. The Ministry ought not to have created an impression among them that their respective views will not get a fair consideration.

The Planning Commission has pointed out in the draft outline of the Third Five Year Plan that "the recommendations in the Plan in relation to matters concerning labour were the product of joint consultation and were based on agreements arrived at between the representatives of the organisation of workers and employers." The Planning Commission adds that "the policy and programmes for the Third Plan are being evolved on the same lines." But the way in which the Labour Minister (who is also the Minister of Planning) has handled the appointment of Bonus Commission does not appear to augur well for the future. It is to be hoped that the Government will readily agree to enlarge the personnel of the Bonus Commission and decide its terms of reference in consultation with the interests who are vitally concerned in this matter.

Luxury Goods to be Discouraged?

"PRODUCTION of luxury and non-essential articles should not be encouraged," says the resolution on election manifesto adopted by the Congress Working Committee at its recent session at Sardarnagar. It is necessary to examine its implications because if the Congress is seriously going to implement this policy, it will cause a severe set-back to our economic progress. On the one hand, the resolution emphasises the need to increase greatly the living standards of the people; to take full advantage of modern science and techniques and to end the problem of unemployment. On the other hand, the Congress wants to discourage the production of luxury and non-essential articles.

The resolution does not specify what exactly are luxury and non-essential goods. Presumably, these include motor cars, radio receivers, gramophones, cameras, washing machines, refrigerators, air conditioners, telephones, silk fabrics etc. These and similar goods are already being produced in India. Many of the industries producing these goods actually came into existence only in the last ten years, that is, after the commencement of planning. Is the Congress now going to discourage deliberately the further growth of these industries?

It is interesting to see that this policy is directly opposed to the recent decision of the Government of India to undertake the manufacture of baby cars. Not only Government will produce cheap cars but they will also provide facilities for buying them on easy instalment payments. In other words, Government are actually tempting the people in middle or low income groups to purchase cars. And it is fantastic to suppose that once the people buy cars, they will not desire to possess other luxuries.

There is no doubt that if the Congress election manifesto is going to emphasise on this aspect, it will receive little support in the country. The people of India have for the past several decades put up with acute conditions of poverty and it is unlikely that they will reconcile themselves to a situation where they will continue to be deprived of the good things of life. More and more people in India are now going abroad and there is an increasing awareness on their part of the great gap in living standards in India and in the Western countries. The people in these countries are enjoying many amenities and luxuries which have helped them to get rid of methods of drudgery. They enjoy better health, longer life and greater leisure; and there has always been an attempt to achieve still higher living standards.

It will, therefore, be an unpopular and retrograde step if at this stage we in India decide to discourage the development of industries producing luxury goods. At present the availability of these goods in India is extremely limited and every effort should be made to increase their output and make them available to the common people. If this is not done, freedom will have no meaning and planning will fail to evoke popular enthusiasm.

Where exactly India stands now in respect of luxury goods? It has been estimated that in 1957 the UK had 3.7 refrigerators, 9.7 washing machines, 28.5 radio sets, 15.1 television sets and 11 automobiles per 100 persons. In the same year, the USA had 26.5 refrigerators, 23.5 washing machines, 78.8 radio sets, 27.4 television sets and 40 automobiles per 100 persons. But in India there is only 1 radio for 300 persons, 1 gramophone for 650 houses, 1 sewing machine for 100 families of 5 persons each, 1 domestic refrigerator for 100 pucca

houses, 1 motor vehicle for 900 persons, 1 cycle for 100 persons and 1 scooter for 10,000 people. There is one camera for 50,000 persons, 1 watch for 80 persons and 1 cinema for 1 lakh of people. It is clear that it is only by producing more of such goods that it will be possible for India to improve her economy and take her place among the great nations of the world.

The Congress resolution refers to the urgent need to extend the benefits of electricity to the rural areas. This is of course a step in the right direction. But if at the same time the production of luxury goods is to be curbed, then the people in the rural areas will hardly be able to take full advantage of electricity.

The Congress seems to forget that luxury goods also will serve as useful earners of foreign exchange. We have already made a beginning in this direction by exporting radios, gramophones, sewing machines and refrigerators. The neighbouring countries in South East Asia and the Middle East are now engaged in developing their economy rapidly, and if India is able to produce luxury goods at competitive prices it will greatly help us to augment earnings of foreign exchange.

It should also be realised that we cannot create adequate jobs merely by producing the so-called items of necessity like food and cloth. We should undertake the production of as many goods as possible if we are serious in our efforts to put an end to the problem of unemployment.

The Congress appears anxious to discourage luxury goods because of its anxiety to stimulate savings. But this is a wrong approach. Savings have to be encouraged by providing appropriate incentives, fiscal and otherwise, and not by curbing consumption.

Lessons of Belgian Troubles

By PAUL EINZIG

UNTIL a few months ago a very large proportion of Belgian national income was derived from the Belgian Congo. Belgian industries benefited by their access to that market, and Belgian investors earned substantial dividends from their investments in that country. Earnings from the possession of the Congo were largely responsible for the high standard of living of Belgian workers. All this came practically to an end overnight, owing to the circumstances in which Congo achieved its independence. Realistic Belgian investors had to write off most of their investments in the Congo as a dead loss, and Belgian industries had to look round for alternative markets for their exports. As a result of this crushing blow, the Belgium Government felt impelled to adopt austerity measures in order to adjust public and private expenditure to the changed circumstances. These necessary measures encountered the utmost resistance on the part of the Socialist trade unions which did not hesitate to plunge the country into chaos in an attempt to secure exemption for their members from having to bear their share in the burden of the sacrifices made necessary by the loss suffered by the country as a whole.

It seems that these trade unionists seriously imagine that the losses suffered by their country could and should be borne by the wealthy classes, in addition to the losses those classes had already suffered on their invest-

ments in the Congo, and by the middle classes—in one word, by everybody except by the new privileged classes, the industrial workers. Needless to say if the latter's standard of living is sought to be kept up in spite of the change in practice it would mean inflation. Purchasing power would be distributed with no counterpart available so that too much money would be chasing too few goods. But trade unions in Belgium as elsewhere are too short-sighted to realise this. Their sole concern is to press for higher wages, shorter hours and higher social service benefits without regard for the rest of the community. If they were at least intelligently selfish it would not be quite so bad, but in the case of Belgium they are just stupidly selfish. They want to continue to enjoy the benefits of colonial exploitation even though their country is no longer in a position to derive any benefit from the Congo.

This attitude is far from being confined to Belgian trade unionists. We encounter it all over the Free World. Trade unionists show an utter lack of interest in what they put into the community, their sole concern is in what they get out of the community. Their rear-guard action against automation and other forms of increase in industrial efficiency retards progress in the Free World and places democratic countries at a grave disadvantage in their competition with the Communist countries.

It is to be hoped that the Belgian experience, in which trade unionist short-sightedness has manifested itself particularly clearly, will draw attention to the absurdity of this attitude. The idea that organised labour can increase its standard of living regardless of the conditions in the community as a whole, is highly absurd. Yet it seems to inspire the attitude of trade union movements all over the Free World. Now that the Belgian trade unions, with their insistence on continuing to enjoy the benefits of non-existent profits from the exploitation of the Congo, have conclusively proved the absurdity of living in such a fool's paradise, perhaps trade unions in other countries might note the lessons taught by that experience.

—(Copyright).

Labour Review for 1960

By MARY SUR

THE whole emphasis in Government labour policy these days is on the voluntary principle, that is to say codes and conventions agreed at the tripartite Indian Labour Conferences, mutual settlement of differences and voluntary arbitration of unresolved disputes. In reviewing the world of labour in the year just concluded, therefore, it is appropriate to consider first what progress has been made in the application of this voluntary principle.

On the credit side can be quoted the Union Labour Minister's own statement at the Indian Labour Conference in September, 1960, that strikes and lockouts had been "steadily and slowly abating since the adoption of the Code of Discipline", and that "in spite of murmurs and protests from all directions, the performance all round has been improving." References to adjudication have not noticeably lessened, but on the other hand there is no doubt that a large number of disputes are now being settled either through the intervention of Labour Advisers of the employers' associations, or through the efforts of the Government Conciliation Officers.

On the debit side for 1960 we have to place a considerable failure in the public sector, the

three-week strike of State Bank employees, and the long-drawn out dispute and eventual strike of the Central Government employees. Here was a break-down of the principle of mutual settlement, but at least it has had the beneficial effect of driving home the point that industrial relations must be tackled in the same way whether Government or private enterprise is in the position of employer. The long-delayed decision to set up Whitley Councils in Government Departments will now give Government employees the opportunity of taking part in joint consultation, and may, perhaps, give a further stimulus to joint committees in the private sector.

The progress quoted by the Minister in the private sector can partly be attributed to the unspectacular work behind the scenes of the Ministry of Labour's Evaluation and Implementation Division. Each State now has such machinery in the form of tripartite bodies which can investigate complaints of violation of the Code of Discipline or non-implementation of agreements and awards. Such complaints can now be dealt with on a fact-finding basis somewhat removed from the atmosphere of conflict usually surrounding allegations of violation or non-implementation. The appropriate Evaluation and Implementation Committee has to collect the facts and establish whether there is any genuine basis for complaint. If so, then the body concerned, whether the employers' association or the trade union, must take some action to bring pressure on its member to conform.

This method of bringing employers and trade unions into line with agreed national conventions may be slow, but it is sure, and it is a good illustration of the working of the voluntary principle. What is disturbing is the constant demand for sanctions to enforce what has been agreed upon voluntarily. This is a contradiction in terms, and shows that we are still far from a general acceptance of the voluntary principle. Thus we find even the President of the INTUC at their national session in 1960 demanding that the Government should 'blacklist' employers and trade unions which did not accept voluntary arbitration. We find unions during the Bank strike putting up posters declaring "We demand settlement by negotiation" or "We demand voluntary arbitration". The confusion of thought has been very evident in discussions on what sanctions can be introduced to enforce the awards of voluntary arbitrators. But the whole idea of mutually agreeing upon an arbitrator presupposes that the two parties have also agreed to accept his decision. Enforcement of an arbitration award should only arise in the case of minorities which were not parties to the agreement to appoint an arbitrator.

The same problem arose over Wage Boards, which also depend upon mutual agreement. They are constituted to represent both sides of the industry, as well as independent persons. Referring to the unanimous reports of the Wage Boards in the cement and textile industries published in 1960, the Labour Minister said "I was totally unprepared for the nerve-racking struggle which ensued to secure the acceptance and implementation of these recommendations." The resistance was wholly undesirable and unnecessary and brought to light the gaps in the authority exercised by organisations of employers." Lengthy negotiations in the States concerned were necessary before the Wage Board reports could be implemented, and in the textile industry this was not accomplished without several strikes. Yet there is a persistent demand for more Wage Boards from the trade union side, where they are regarded as a

welcome alternative to adjudication. The Sugar Wage Board's report is now before Government, and Wage Boards have also been constituted for the jute and tea industries. Results of this new machinery proved disappointing in 1960, but should act as a warning in the jute and tea industries of the need to ensure industry-wide acceptance of the recommendations of the Wage Boards.

True to his principle of not relying on legislation to achieve his objects, the Labour Minister did not introduce much change in labour law during 1960. The most important change was the enforcement of the Employment Exchange (Compulsory Notification of Vacancies) Act, which aimed at supplying the Employment Directorates with more accurate statistics on employment, and assisting the Employment Exchanges to improve their service to industry. On the other hand, proposals for a new Apprenticeship Act have been under discussion, which would introduce an element of compulsion on employers to provide apprenticeship training. Government have had to admit that the use of voluntary methods to expand in-plant training facilities has failed, and if sufficient numbers of skilled workers are to be available in the Third Plan then legislative action is necessary. Early in the year Government set in motion an investigation to enable it to decide which industries were in a position to bear the additional burden which would result from the enhancement of the Provident Fund contribution (already agreed in principle), but at the end of the year the trade union national bodies were complaining that no conclusions had yet been reached on this question.

The 1960 session of the Indian Labour Conference had various items on its agenda, but spent its whole time on discussion of industrial relations in the public sector, and the right to strike—a direct result of the strike of Central Government employees. Much of Labour's attention in recent months has been concentrated on these problems, and their resentment directed against Government on account of the withdrawal of recognition of the trade unions which took part in the strike, disciplinary action against leading strikers, and Government's proposal to introduce legislation to ban strikes in essential services. On the latter proposal it seems that Government may have had second thoughts; in any case no legislative measure has yet been drafted on this thorny problem.

Government are not satisfied with the progress made with the scheme for workers' participation in management. After about three years there are so far only seven units in the public sector and 17 in the private sector which have introduced joint management councils, and their results to date are not spectacular. A small cell has been set up in the Ministry of Labour and Employment to help further the scheme. Guiding principles for Works Committees have now been evolved in tripartite discussion. The further Code of Efficiency and Welfare, first proposed at the Indian Labour Conference in 1959, has not yet received its final form. Whether it will eventually be ratified is rather doubtful, though it should be noted that it finds a place in the outline of the Third Plan.

Progress in collective agreements has not been in any way remarkable during 1960. Certain companies have renewed agreements which had lapsed, others have entered into agreements for the first time, but the number of general agreements on terms and conditions of service is still very small. More common is the agreement, often reached in conciliation proceedings, to settle an outstanding

point of dispute. Among these many are agreements on bonus, which is still a major cause of dispute. Government have during the year set up a Commission to go into the whole question of bonus, but so far there is no indication of the lines which its report will ultimately take.

Taken all in all perhaps we can say that 1960 has shown some progress in industrial relations, but the year was not without its setbacks. The really disturbing features at present are the increasing unemployment and the growing incidence of accidents in industry. The first is a national problem of such magnitude that it colours the whole attitude of labour towards problems of rationalisation and productivity, and it is disturbing to find that even the planners have no hope of reducing it during the Third Plan. As to accidents, one can expect them to increase with the rapid expansion of industry, and this is a problem which industry should be tackling on its own. While Government have attempted to draw attention to it during 1960, there is as yet little evidence of a response from industry.

FAO Committee on Economic Aspects of Rice

EVER since the establishment of the International Rice Commission under FAO auspices the technological problems of production of rice has been receiving systematic, expert attention on a world basis. The International Rice Commission held its first Session in Bangkok in March 1949. Most of its subsequent Sessions were held in one Asian Capital or other. The economic problems of rice were simultaneously engaging the interest of the FAO Committee on Commodity Problems as well. This Committee at its third special meeting on the Economic Aspects of Rice industry held at Bangkok, in 1955, recommended the establishment of a Consultative Sub-Committee on the Economic Aspects of Rice. The recommendation was immediately accepted by the Committee on Commodity Problems. Soon after a Consultative Sub-Committee was formed and its first Session was held at FAO Head Quarters at Rome in April 1956. Subsequently this Sub-Committee has held three other Sessions. The Fifth Session commences at Vigyan Bhavan, New Delhi on 13th of this month (January 1961).

The functions of this Sub-Committee as its name itself indicates, concentrate on the economic as against the technological aspects of the crop; as for instance improvements in statistics, import requirements and export availabilities, consumers' preferences for different grades, stocks, prices, utilisation of by-products, the marketing structure, methods of trade and international trade. This Sub-Committee is concerned particularly with arrangements for posting the FAO with detailed and up-to-date information on statistics including forecasts of the crop all over the world and methods of reducing instability in international trade in rice. Likewise, it is also devoted to the problem of rice grading and standardisation. One of the items in the agenda for the Fourth Session of the Committee held at Saigon in February 1960, was a Study of the relation between rice and wheat markets in Asia.

The Sub-Committee has already completed a series of economic studies on the structure

of international and domestic markets and the steps taken to improve the flow of basic statistics and trading information. These studies are of great value in providing basic data for further investigations and for measures to put international trade on a more stable basis. Prominent in the Committee's current programme of work, is a study of trends in international trade in rice and the underlying factors influencing these trends. This Sub-Committee has also done much valuable work in formulating models for standard systems of grading and of quality inspection, as well as standard definitions of a large number of rice terms used in international trade. Work on these lines is of a long term character and is likely to continue to occupy the Committee for a number of years.

The present Session will review the world rice situation in 1960 in all its major aspects, take stock of the crop estimates for 1960-61 and trade outlook for 1961, study trends in supply and demand for rice, analyse the fluctuations in international trade and discuss methods of reducing them. Besides, the Session will examine national marketing policies and the marketing problems of rice and its by-products, as also improvements in statistical and economic information regarding rice and its utilisation.

The Committee has an extensive membership from all continents. Australia, Burma, Cambodia, Ceylon, France, India, Indonesia, Germany, Japan, Korea, Laos, Malaya, Pakistan, Philippines, Thailand, UK, USA, Vietnam are among the Members. Besides the FAO international organisations such as International Bank for Reconstruction and Development have also been taking part.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

UP-50-50

BANKING profits are known to have been higher in respect of their working in 1960. But the strange thing is that working results, usually announced in the first two weeks of January, are not being expeditiously made known. Not all the banks have the habit of making known synopses of how they have fared; it depends, I think, on whether or no they declare an interim dividend. In any case, why the diffidence this year? It seems to me a possible explanation may lie in what the life insurance companies, ante nationalisation, used to do. There was a scurry to write in new business as the year got into December; and I am afraid it may sometimes have happened that policies were, for the purpose of boosting the figure of new business, ante-dated. And then, there came the wait, each wanting to know how the other did, before coyly announcing spectacular results. The parallel in the case of the banks is simply that, having had a good year in 1960, they do not know what the published profit should be. There is, first of all, the Reserve Bank's iterated desire that inner reserves be strengthened. For banking health, a very necessary step, but disposable profits would decline. By and large, I feel there is need less worrying about what should be done. Surely, banking profits should always be stable. In a good year, the inner reserves benefit; in a bad year, they are pressed into service to restore the balance. But, over a period of years, the inner reserves become as strong as possible, and meantime the balance of profit slowly increases; dividend hikes are few and far between. This is as it should be, for, stability is the watch-word.

Eight years of the Eisenhower regime are drawing to a close. A week remains, exactly, for President Eisenhower (and Vice-President Nixon) to become private citizens. An era will have ended, and then on to President-elect Kennedy's New Frontiers. What will history make of Mr Eisenhower's two terms in office? That he was a great President? No, I don't think so, because there was so much delegation of authority—almost abdication of duties—that Mr Eisenhower, great as a General and in war, is likely to have been found wanting as President and in peace. And that is a pity, because the goodness of the man there could be no question about. Mr Eisenhower's last State of the Union message, delivered to Congress this week, stresses that his Administration had honoured all the commitments, presumably in respect of campaign promises. Is the implication, I wonder, in the form of a challenge to the President-elect, that he should live up

to his own pledges made in the campaign last year? For, there is now the distinct possibility that Mr Kennedy will tread warily. The margin by which he won, in terms of the popular vote, is pencil-line thin. And so, one school of thought holds that he has no mandate for instituting revolutionary measures. The President-elect's margin, in terms of the electoral vote, is much more flattering. But they say he is already guilty of one gaffe, the appointment of his brother Bobby as the Attorney General. Far from being a gaffe, I think Mr Kennedy's action as most significant: he won, so he has the mandate; and what he promised to do, he will do his best to deliver. He will not allow himself to be deterred by the narrowness of his victory.

There have been indications that the new American ambassadors' identity will not be made known until after Mr Kennedy's formal inauguration. One rumour has it that Professor Galbraith is slated for India. If this is true, then America has kept up its tradition of having a most appropriate man indeed in New Delhi. I shall be very sorry to see Mr Bunker go, for, in his quiet and unassuming way he has been a sterling (or should I say dollar) friend of this country. But American politics being what it is, while Mr Kennedy could keep on a Republican or two in his Administration, the Ambassadors are either career men or party-men. However well, therefore, Mr Bunker may have served both his country and ours, his tenure at New Delhi therefore comes to an end. Mr Galbraith, if it should indeed be he who is next the US Ambassador at New Delhi, will find excellent examples to emulate.

I see Mr Lakshmi Pat Singhania has given public expression to what many non-sons of the soil have long been privately saying about the sons of the soil controversy. Of course, the very phrase is all wrong, because Dr B. C. Roy has made it clear that it denotes citizens of India; children of the State is perhaps what the agitators have in mind who relentlessly ask that jobs be reserved for the Bengali. That such requests are absurd was stated by Sir Biren Mookerjee some time ago, who also at the time warned of the retaliation.

tory reservation of jobs in other States. Patently, jobs will be available only for those equipped for the job. And being a denizen of the State in which the factory or industry is located is not necessarily a qualification. For the labour force, yes; in fact, it is the ready availability of workmen sufficiently skilled which is one of the considerations that the industrialist bears in mind when choosing the site for a new enterprise. By virtue of the lead that West Bengal had in industrialisation, and therefore because it followed that the State would have a better supply of technical skills and semi-skills, we should have expected that, in the new industrialisation, West Bengal would automatically be chosen for a number of new industries. Not so, unfortunately, because of the sons of the soil agitation. Let me quote what Mr Singhania, while on this subject at the recent annual general meeting of the Aluminium of India, had to say:

... jobs are not charities. These cannot be distributed. Jobs are the right of the people who can

make themselves capable for them and the slogan should be that people should make themselves capable of acquiring the jobs and not accepting charity. If this attitude is not adopted, I am sorry to say that there will be more loss to the State, where already a condition is created that the people are afraid of putting up new Industries and also the existing offices are being transferred. There was a time when Calcutta was considered the principal financial city of the country whereas now it has been noticed that even the main financial offices are away from the city and there is a tendency of more offices being shifted. There must be some reason behind this.

This is plain, unvarnished truth. There is, however, the other side to consider. The fact is, West Bengal has had its peculiar difficulties. Unemployment, especially of the educated, is high. And, in the administrative as distinct from the industrial side, job opportunities, particularly for the Bengali, are few and far between. There can be no easy solution; unless again as Sir Biren said some time ago, we begin to have many more self-employed small businessmen. But then, finance would be needed, and the problem really resolves itself into the method by which the small industrialist can be helped into existence.

National Buildings Corporation

THE functions and the immediate programme of the National Buildings Construction Corporation, a new venture in the Public Sector, were explained by Mr K. S. Krishnaswami, Managing Director, at a Press Conference last Monday. The Corporation was registered on November 15, 1960, as a Company under the Companies Act, 1956, with an Authorised Capital of Rs 2 crores. The Paid-Up Capital has been fixed at Rs 50 lakhs to start with, and will be called up according to requirements. The State Governments have been invited to participate in the share capital, but the shares would not be open to subscription by the public.

The Corporation will undertake construction works included in the civil works programmes of various Government Departments, autonomous Corporations and quasi-Government organisations, through competitive open tenders. The works may also be entrusted to the Corporation by the Departments on terms settled by negotiation. In the initial stages the Corporation, it is understood, will be helped to a certain extent by Government farming out contracts at rates which would compare favourably with competitive rates relating to a recent period.

The objective of the Corporation is to speed up construction and re-

duce costs through introduction of new methods and techniques. The Corporation is expected to bring down construction costs in two ways: firstly, by eliminating or reducing considerably the number of middlemen and, secondly, by rationalising the planning and execution of building works. Under the existing system the designing, execution and supervision of such works is spread out over numerous agencies. The responsibility for the construction of office and residential buildings and carrying out other civil works for the various Ministries of the Government of India rests with the Central Public Works Department. The Ministries of Defence and Railways have their own engineering departments. While these departments are responsible for designing, preparation of estimates, issue of contracts, supervision, and payments, very little construction work is carried on departmentally. The system resorted to at the Centre as well as in the States is to call for tenders and generally award the work to the lowest tenderer. Attention has been drawn to the waste of talent and resources involved in these arrangements. Large staffs of engineers have to be employed by the departments concerned supervise the work carried out by the contractors. It has also been found that the system of awarding contracts after calling for open tenders has not always yielded the expected results. Firms of repute and standing who have qualified staff, modern plant and machinery do not ordinarily tender. The work has, therefore, to be carried out through contractors who do not have qualified engineering staff, or equipment. The supervisory organisations are also often subjected to unhealthy influences resulting in sub-standard work and corruption. It has not also been found possible to carry out essential construction works in outlying areas in some of the Union Territories, NEFA, parts of Assam and Andamans through contractors, as there is hardly any contracting agency prepared to undertake work in these areas at reasonable rates. The urgent necessity, on economic, political and strategic grounds, to undertake development of roads and construction of buildings in border areas was an important reason for the establishment of the Corporation.

The question may however arise why the actual construction works could not be undertaken by the Departments themselves which are responsible for the designs and supervision. Even under present rules departmental construction is authorised. Why should it be necessary to establish a new organisation for the purpose? Departmental construction, it is argued, is necessarily slow, as the obtaining of administrative and financial clearances and the building up of an organisation for handling big jobs takes time.

Moreover, the necessity for strict adherence to rules and regulations slows down the pace of work and the delay in construction adds substantially to the costs. Unlike the Departments of the Government, the Corporation, it is claimed, can adopt more flexible arrangements which combine the advantage of departmental construction with the flexibility and speed of private firms. The Corporation, it is also suggested, will be able to ensure satisfactory conditions of service for the workers employed in construction who usually get a raw deal from contractors and their underlings.

The decision to establish the Corporation was taken following criticism by the Prime Minister of the present costly and wasteful arrangements for construction of Government buildings. He had suggested the setting up of a construction corporation and asked the Planning Commission to examine the matter with a view to effecting saving in construction works. The project report for the Corporation was prepared last March by Mr K. S. Krishnaswami, who had retired as Joint Secretary, (Works) in the Ministry of Works, Housing and Supply, and was re-employed in the Ministry as an officer on Special Duty in this connection. He was appointed the first Managing Director when Government approved the formation of the Corporation.

In Mr Krishnaswami the Corporation has an able chief executive with the requisite experience and background relating to works and construction programmes. As Chairman of the 'Vigyan Bhavan Construction Committee', as well as the 'India 1958 Exhibition Construction Committee', he has a first-hand knowledge of problems connected with large construction projects—both in the field and at headquarters. Able engineers and technicians with a flair for designing and executing large construction jobs are not always sufficiently cost conscious. As a Cost Accountant with a long record of service in the Finance Ministry, Mr Krishnaswami should be able to make up for this deficiency and to ensure that the works undertaken by the Corporation are completed within the original estimates.

It is not to be expected, however, that the Corporation will be able to bring down construction costs as soon as it begins to function. But, it should be possible to bring down costs after a large volume of business has been secured and overheads have been suitably absorbed.

The effect that the Corporation will have on the construction industry, and especially the employment prospects in it, is a matter of concern—and not merely to contractors. As against this, it is pointed out, that, taking into consideration the demand for engineering activities, the engineering agencies in the country are hardly adequate. There is room for the Corporation to expand, and

rapidly too, without supplanting any first class engineering firm in the field. In any case, the immediate programme of work of the Corporation, namely lowering the level of subsoil water in Delhi, need not cause any anxiety among the firms engaged in the construction industry.

The production target for machine tools in the Third Plan has been increased from the Rs 30 crores originally suggested by the Planning Commission to Rs 36 crores. To achieve this targets, 41 additional units had been licensed since March 1960 when a liberal licensing period was initiated. All the schemes were in various stages of development and in many cases substantial progress has been made. This was revealed by Mr B. D. Kalelkar, Senior Industrial Advisor to the Government of India, in his presidential address to the Seminar on Machine Tools which was inaugurated last Tuesday by Mr Manubhai Shah, Union Minister for Industry.

As regards production targets Mr Shah went further and said that the country should aim at an annual production target of Rs 45 crores worth machine tools in the Third Plan period. Out of this, he said, Rs 15-16 crores worth would be manufactured in the Public Sector, and the rest in the Private Sector. The demand for machine tools by the end of the Third Plan period is estimated at Rs 50-60 crores. Production of machine tools in 1960 is estimated at Rs 10 crores, Rs 6-7 crores in large scale industry and about Rs 3-4 crores in the small scale sector.

Mr Shah expressed satisfaction, that there was full coordination between the two sectors in the field of machine tool production.

Whether it be lathes, drilling machines or planers, both sectors had been existing in a complementary manner and were trying to assist each other and to the benefit of the whole country. Regarding raw materials, Mr Shah gave the assurance that the needs of the industry would be fully met. This should be taken along with Mr Kalelkar's warning that "while every encouragement would be given for import of raw materials and specialised components that were not manufactured in the country, the entrepreneurs must realise that Government were adverse to mere assembly shops being set up."

The Finance Commission held its first Press Conference in New Delhi last Thursday (January 12, 1961) when the Chairman, Mr A. B. Chanda, explained their programme of work. The present arrangements for the devolution of revenues, based on the recommendations of the last Finance Commission, will remain in force till 1962. These arrangements will be reviewed by the Third Finance Commission which will not consider what modifications or adjustments if any are called for in the principles hitherto followed in the determination of the percentages of taxes to be distributed and/or the basis of distribution among the States. In making its recommendations the Commission will take into account the budgetary position of the Central and State Governments, changes in the structure of taxation, the larger magnitudes of the Third Five-Year Plan involving increased expenditure on revenue account under development heads and other relevant matters which have bearing on the expenditure pattern. The Commission will also consider, in regard to excise duties, whether any alteration should be made in the list of commodities the duties on which are at present distributed, the proportion of the collections that should be so distributed and the basis on which this should be done. Conversion of sales tax on more commodities into Central excise is matter for settlement between Centre and State Governments.

After examining the budgetary position of States and taking into account such contributions as may be urged for the assessment of their needs, the Commission will determine the States which require grants in aid of revenue, the amounts of such grants to be given and their nature, that is to say, whether they should be fixed or progressive, general or specific, conditional or unconditional.

Under the Constitution the Commission has to submit its report in 15 months. But the Commission expect to complete their work within one year. The recommendations will be in force for a period of four years terminating with the Third Five-Year Plan. There is some confusion regarding the role of the Finance Commission in the era of planning when needs are assessed and resources for development allocated by the Planning Commission. Apart from the fact that the Finance Commission is a body independent of Government set up under the Consti-

tution, while the Planning Commission is a limb of the Government, there is the difference that the Finance Commission is only concerned with the revenue aspect of income and expenditure while the Planning Commission deals with capital expenditure also. But there is overlapping to some extent in the work of the two bodies and Mr Chanda stressed the need for close co-ordination. In one respect it may be said that the conclusions of the Planning Commission serve as data for the Finance Commission. For the development plans approved by the former determine the level of committed expenditure in future years to which the Finance Commission's recommendations will be relevant.

The Commission is now awaiting data called for from the States and, in the meantime, propose to visit some development projects in different States to see how they are run, for this will be a relevant factor to be taken into consideration in making allocations.

The need for periodical reallocation of resources arises in every Federal system of Government on account of the lack of correspondence between the functions allotted to the federating units and the resources at their disposal. Needs change, and no rigid pattern which will stand for all time will be possible, said Mr Chanda. Reviewing the practices of different Federations (Switzerland, for instance, is obliged to resort to periodical amendments of the Constitution for purposes of reallocations of revenue resources) Mr Chanda expressed his Preference for the principle enunciated by the Australian Commonwealth Grants Commission, that the main purpose of the system of grants should be to ensure a minimum standard of good government. Mr Chanda indicated that the Commission may have something to say on the proposal in the new Railway Convention, since approved by Parliament, to merge tax on railway fares in the fares themselves, and to make a consolidated payment to State in lieu of the tax.

Apart from holding discussions with State Governments, the Commission will also meet, or receive representations and memoranda from, others interested in giving evidence. The Commission, as the Chairman emphasised, is anxious to get all slants on the questions of allocations of revenues and that too, at an early date. It has been indicated that suggestions in the form of memoranda should reach the Member Secretary of the Commission in New Delhi before the end of February, 1961.

A special meeting of the Board of the Industrial Finance Corporation of India was held in New Delhi on January 12, mainly to consider the expansion of the Corporation's powers under legislation enacted during the last Winter Session of Parliament. Under the new Act, the IFC can stipulate that part of the loans granted by it may be converted into equity holdings. The IFC can also participate in profits in addition to receiving interest as condition of its loans, as is done by the International Finance Corporation. It is learnt that, after prolonged discus-

sions, the Board did not arrive at any firm conclusion on the question of conversion of loans into shares to which there is considerable resistance among its clientele, and a committee has been set up to study the question in greater detail in the light of the practices followed by similar organisations in UK. As regards participation in profits, it is understood that it may be introduced to a small extent in the terms and conditions under which loans are granted in future.

GATEWAY GOSSIP

Land Ceiling Bill

IF the Maharashtra Government's Land Ceiling Bill has aroused much more concern than similar measures in other States, it is perhaps mainly because it seeks to bring sugarcane farms within its purview. The Bill which is coming up before the State Legislature shortly divides irrigated land into three categories for the purpose of fixing a ceiling; perennially irrigated land, double crop seasonally irrigated land and single crop seasonally irrigated land. The ceiling proposed for the first category is 16 acres, the second 24 acres and the third 48 acres. Land in excess of the ceiling is proposed to be acquired by the State Government and distributed among landless cultivators, small holders and co-operative farming societies. Whereas similar laws elsewhere in the country have either exempted sugarcane farms and lands owned by commercial undertakings from the operation of the ceiling laws or have made suitable provisions so as to enable the undertakings to continue to function as efficiently as before, the Maharashtra Bill makes no such arrangement. It covers all lands without distinction and the sugarcane farms are to receive the same treatment as other lands in the State. (Government lands, lands held by local authority, joint farming society provided the extent of land held by any member of such society immediately before the registration of the society does not exceed the ceiling area, lands awarded by Government to individuals etc are exempted from the provisions of the Bill). The Bill however notes that it is essential to ensure the continued supply of raw materials from the commercial lands taken over and this is sought to be achieved by the provision which will enable the Government to either manage the farms as State Farms or give them over to joint farming societies.

The proposed ceilings on various categories of land apply to family units which are taken to consist of five members each. The Bill also defines a member of the family and provides for extra land to be allocated to larger families. The additional land to be allowed in these cases is to be calculated at one-sixth of the ceiling area for each member above five. The total area to be allowed to a large family is however restricted to a maximum of two ceiling areas. As regards compensa-

tion for surplus land that may be taken by Government, the owner will be entitled to receive the value of any structures on the lands such as wells, embankments, permanent fixtures and tree. This will be in addition to the compensation for the land fixed in terms of multiples of assessment.

It is apprehended that the disturbance of the prevailing link between the sugar factories and the sugarcane farms may severely handicap the sugar industry in the State. The present position is that the sugar factories are either having their own farms or have them on long lease. According to Mr F. Edwards, Chairman of the Deccan Sugar Factories Association, member factories of the Association own 33,137 acres and hold 76,443 acres on lease. This way they have effective control over the supply and quality of their raw material. Mr Edwards has pointed out that experience of the factories in Maharashtra has shown that only by having the fullest possible control over the cultivation of cane, a high quality can be maintained. That the present arrangement by which the sugar cane farms are run has proved highly efficacious can be seen from the high position held by the Maharashtra sugar factories in the sugar industry as a whole. Both in the matter of yield of cane and sugar recovery. Maharashtra occupies a place comparable with some of the highly developed sugar industries in the world.

IN his presidential address to the twenty-fifth session of the Indian Road Congress held in Bhopal, Mr H. P. Sinha laid special emphasis on the need for accelerating the pace of road construction in the country. Alleging that the progress being made in this sphere is far below the requirements he pointed out that concerted efforts should be made to expedite the construction activities, failing which, he feared that the road transport will probably precipitate a bottle-neck in the path of the country's industrial growth.

The provision of Rs 250 crores allotted for the road development in the Third Five Year Plan is inadequate, he stated. Judged from the revenue receipts from roads and the big size of the Third Plan the need for a larger allotment for road development and maintenance is quite obvious. Moreover the contemplated programme of linking all the villages in the country by fairly good all weather roads will be affected if a good start is not made.

As indicated by Governor Pataskar the need of the hour is to evolve speedy and cheaper methods of road making. The conventional methods of road construction is rather expensive and disappointingly slow. Some kind of soil stabilisation system will have to be introduced. It may be recalled that many of the roads built under the community project and national extension service schemes are withering away for want of adequate maintenance. The methods of making cheaper and stable road

surfaces adopted in the advanced countries can be profitably introduced in India with proper changes. As suggested by the Road Congress the setting up of a Road Board will be of immense help to make considerable headway in this direction. In any development programme top priority should be accorded to communications for development of a particular region will be unduly delayed without adequate transport facilities.

★
Maharashtra's Third Five Year Plan is expected to involve an outlay of Rs 390 crores. According to the Chief Minister, the Central Government are expected to contribute about Rs 170 crores and the balance is to be found by the State. The criteria followed by the Planning Commission in determining the size of the State Plan were the area, the population, the extent of the backward areas, the size of the Second Plan and the lags in the Development Projects. The Central assistance to the State is guided by the size of its plans and its resources. The figure of Rs 390 crores for the State's Third Plan cannot be deemed to be final because it is to be approved first by the National Development Council and then the Central Government.

THE PENINSULA

Bleeding Madras

A peculiar but distressing situation had arisen over the 16,00,000 yards of stagnant 'Bleeding Madras', a Madras handloom fabric which once enjoyed a brief spell of boom in the American market. This has given rise to despondency among the handloom weavers who took up to this type in preference to other varieties locally vendible. So much of stock had been accumulating that they are not finding a market even internally.

Recently a delegation of three members visited some of the Far Eastern countries to explore the possibilities of selling away Bleeding Madras. How far that mission had been able to goad or persuade those countries remains yet an undisclosed factor, but by the panicky way the Madras Industries Minister is appealing the Central Government to buy the 16,00,000 yards outright from Madras stockists it can be assumed that the delegation's exploratory journeys to those countries like Malaya, Siam and Hongkong should have proved fruitless.

The manufacturers of 'Bleeding Madras' and their agents were heedless of the warning given to them not to sacrifice domestic market and be careful about their temporary boom in this trade.

Why the American market for this product should have shrunk is not known. It might be due to American textile industry imita-

ting this kind of cloth and putting it on their markets at a lower price or it might be due to the Madras quality being not above reproach.

As to why the sale of 'bleeding Madras' was not done by a Central Organisation instead of through middlemen should also have to be explained. A Central Organisation might have dealt with a situation like this in a different manner.

The Madras Government could do very little to get these stagnant stocks sold outside Madras though it has become known here that Malaya and Hong Kong are ready to have these stocks on a ready-made basis.

Loans advanced by the Madras Government to the distressed weavers with so much of stock yet unsold cannot alleviate the distress and, therefore, the SOS has been sent to Mr Lal Bahadur Shastri, Union Minister of Industries and Commerce.

★
Expecting a boom in foreign tourist traffic this year, the Indian Railways have announced the largest ever imaginable concession to the tourists. This concession is said to be the first of its kind in the world in as much as it represents only formal fare enabling the tourists to travel through the length and breadth of this subcontinent in great comfort. This concession follows the recent decision by the United Nations Economic Commission for Asia and FAR EAST and FAR EAST Touring sub-Committee to popularise tourism in SE Asia.

According to the concession, a foreign tourist with necessary documents, can travel in airconditioned coaches with "Travel as you like" ticket for just Rs 495. (The First-Class airconditioned rail coach fare to and from New Delhi to Madras is Rs 505.46.) First class travel is permissible where there are no airconditioned coaches. Children will be allowed half tariff. Travel agents will be permitted to issue such tickets.

The Railway concession for tourists other than the above are that airconditioned class tickets will be issued at 25 per cent below basic fare; combined tickets for airconditioned and first class will be issued for the entire itinerary wherever applicable with concession of 25 per cent basic fare for airconditioned class only.

Circular touring tickets will be issued for internal tourists for itineraries of 1,500 miles or over for all classes at three-fourths fare. This will be available for three months on condition that the total chargeable distance of the tour should be not less than three times the chargeable distance between the originating station and the farthest station therefrom on the itinerary by the direct route.

According to the Railways, foreign tourist traffic in 1961 is expected to be more than in 1960. In 1959, foreign tourists numbered 109,464 earning Rs 20 crores foreign exchange. This excluded

Pakistanis and Tibetans. In 1958 the number was 92,202.

Sponsors of the Golden Jubilee commemoration of the Southern India Chamber of Commerce Industrial Exhibition claim that their current Exhibition is the biggest ever held in this part of India outside New Delhi, after its "India-1958" Exhibition. It is true with certain limitations. If the organisers of this Exhibition had to content themselves with a cross section of the country's industries from both the sectors, the stringency of foreign exchange and other inhibitions deterred them from venturing into really an international exhibition. Being first of its venture, the organisers too did not really count upon certain handicaps, viz., the lack of railway sidings, to attract really heavy machinery exhibits. These had to be unloaded right into the spot necessitating laying of railway lines, and the Islands Grounds though near to the Central Station did not lend itself to such unloading as it became bogged after the heavy November rains. Still the rains off and on plague the promoters of this Exhibition which is already behind schedule by a week or so. Rapid work is going apace inside and within a week the exhibition will be in full swing.

Mr K. Kamaraj, Chief Minister of the State, inaugurated the exhibition last Sunday evening. Businessmen, industrialists and foreign consular representatives were in full attendance. The occasion was utilised by the Chief Minister to lay emphasis on the State Government's desire to go ahead rapidly with industrialisation of the State, without anybody bothering about the private or public sector. He wanted to draw attention of the States entrepreneurs hitherto investment shy, to the fact that this controversy had no meaning when they realised that industrialisation, acknowledged as the supreme need of the State, had to go on as rapidly and in as diversified a manner as possible. In this regard, he promised the fullest help and co-operation of the State. He also desired to congratulate the investors on their readiness to come out with investments towards the industrialisation of the State.

The need for a permanent site to hold such exhibitions as frequently as possible to show to the people the industrial progress of the State and the country as a whole was stressed by Mr M. A. Chidambaram, Chairman of the Exhibition Committee. His stress upon the allocation of a good vacant site was noted by the Ministers present at the function, and it is not unlikely that some extensive plot of about 30 to 40 acres would be long be chosen for holding such permanent exhibitions.

This Exhibition itself should prove exciting and informative to the public. As many as three hundred units from the private sector industries are participating. Every stall is a brick and mortar structure contributing to the harmony of the stalls unlike those usually sheltered under zinc sheds. Some three crores of rupees have been spent by the exhibitors over erection of these pavilions. One finds a variety of designs in attractive colour schemes. The

Government of India Telephone Industries, Neiveli Lignite Corporation and one or two other concerns, the Madras Government's stalls depicting their activities, engineering concerns like the Voltas, Simpsons and others are participating.

★
The tobacco manufacturer in India is now permitted to import US tobacco to the extent of 900 tons to the value of two million dollars. This is made possible by the agricultural commodities agreement but the price paid must be stated and only actual users can import, under permit, and the rupee equivalent of the price must be paid on receipt of the shipping documents. The freight also must be paid (but in rupees) and contracts must be made before June 1961. Under the American regulation only pucca leaf can be shipped from US ports and shipment must be arranged in privately-owned US vessels, because the CCC makes itself liable to pay the seller in dollars. The Indian Government only issue a permit, but the import is made by the manufacturer at the price ruling in the USA.

This may be of advantage to the Indian cigarette-maker but the prices for Indian tobacco must be influenced to some extent by the price paid for imports of a higher grade. Some objections may be voiced, therefore in Andhra Pradesh, but the quantity to be got now is small and needed for blending. The procedure is different from that prescribed for cotton, because the cigarette manufacturers in India are relatively few and affluent. The advantages of payment in rupees hereafter (the Bank of America pays the dollar price to the American exporter) are undeniable and there is no formal tie-up between exports of Indian commodities and imports of US tobacco. That too may be an advantage when the Indian factories can make American style cigarettes also to suit the Indian market. The present import procedure may be retained for a longer term and the saving on foreign exchange may be held an advantage though tobacco firms cannot build up stocks to be held in bond for years on end.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD

NOTICE

The Preference Share Registers of the Company will be closed from the 25th January 1961 to the 3rd February 1961 both days inclusive.

Calcutta Stock Exchange 1960—A Year of Both Boom and Slump

THE curtain was rung down on one of the most hectic years on the local stock exchange. Although marked by intermittent reactions, almost all popular shares enjoyed boomlike conditions during the first nine months of the year. During the last quarter of the year, however, dealings were characterised by a state of uncertainty. The closing tone was fairly steady, thanks to the sudden flair-up in Indian Irons.

Even the most ardent optimists were confounded by the behaviour of the stock markets. While the speculators were responsible to a great extent for the sharp spurt in values of selected shares, the steady absorption of blue chips by investors and the appreciation of the prospects for the various industries had, no doubt, led to a boom in the market. It looked as if the patience of the investors was inexhaustible.

Investors appeared to feel confident that the prospects of doubling or trebling their capital in a short period of few years were so bright that the risk was worth taking and the absence of a return on their investments for some years was immaterial. Thus, investors responded eagerly to the new floatations, whether in the form of right issues by the existing companies or by newly-formed companies.

Naturally, the rapidly developing industrial economy of the country along with the inflationary psychology, the buoyancy of the capital market with a veritable scramble for the new issues, the massive investment support and the grip of the bull operators with largescale accumulation of contracts provided a drive to the market. The result was, there was a shortage of floating stocks which had become acute, as more and more funds entered the market in search of first class investments.

For obvious reasons, from the beginning of the year, the craze for buying infected all the sections of the market which, after enjoying a veritable boom till the first week of March, witnessed a steady decline in values till the end of the month following the announcement of the credit control measures by the Reserve Bank. The market, however, had a promising start in the second quarter due to the revival of activity on the part of the bulls. With plenty of money still chasing about and enquiries spreading from one counter to another, values advanced steadily.

The upward trend in prices gathered further momentum in July when prices touched new peak levels. From August, however, the market gradually turned bearish and operators were inclined to restrict their commitments due to various adverse factors. Apart from the fact that the market was in an over-bought position, the news of the Chinese troops near the Nepal border, a temporary dearth of funds due to locking of funds in the new issues, the anxiety of holders of shares in

new companies to realise profits, the enforcement of restrictions on credit imposed by the banking institutions, rumours of the Government contemplating certain measures to check the runaway boom in equities, induced a steady stream of liquidation, resulting in bulls finding it difficult to keep the trend of prices any more in their favour.

With the result, dealings during the third quarter, were characterised by a state of uncertainty. While general apathy served as a respite to the hectic bullish activity, support from investors was conspicuous by its absence on the thought that the climate in the capital market had got spooled in view of the frequent changes in Government policies. The shortage of funds in view of the acute stringency in the money market, fear of a strict watch being

kept on advances against shares, stricter control over the expansion of the existing enterprises, apprehensions of increased taxation in the forthcoming Central Budget and the disturbed international situation - all these factors left the professional operators as well as investors undecided as to which way they had to turn up. Naturally, in a market bereft of support and beset with various uncertainties, general liquidation was the order of the day. Thanks to the sudden flair-up in Indian Irons on rumours of an early increase in steel retention prices, prices displayed a slightly steadier tendency at the fag-end of the year.

In the dealings during the year, price movements in the forward scrips were considerably influenced by the vicissitudes which Indian Irons were subjected to, and wide

Annual Reviews

fluctuations in prices were recorded on alternate bouts of buying and selling. The highest level was touched in May; but the general weakness of the scrip during June and July was due to selling pressure, indicating that overtrading was being adjusted steadily. Except for wide fluctuations witnessed again in August and September following the announcement of the increased dividend, there was not much activity thereafter. It looked as if the operators were keeping in their minds the words of warning issued by the Chairman of the company with regard to the difficulties generally experienced by the steel industry.

Ease out of that profit squeeze...

Decentralisation and lower profit margins make the profit-and-loss statement the real measure of each plant's efficiency. That's why it is increasingly important for management to study methods to ease out of the profit squeeze. Planned Lubrication gives management such an opportunity for savings.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

CALTEX (INDIA) LIMITED Bombay · New Delhi · Calcutta · Madras
CALTEX (INDIA) LTD.

Annual Reviews

The only section, which was practically neglected throughout the year, was Jute. In view of the disproportionate rise in fibre prices, professional operators as well as investors entertained the feeling that the prospects for the industry were so hazy as not to hazard any opinion on them.

Despite intermittent profit-taking, Coal shares generally displayed a steadier tendency on the expectation of a rise in demand for the commodity. Moreover, with the announced shift in Government's coal policy, there was re-thinking on the part of shareholders, who indulged in slow buying of a few selected shares, especially of those companies producing highgrade coals.

Only limited interest was shown in the Tea section. The steady fall in Northern India crop output in the first few months of the year and a general fear that the shortfall might not be made up during the year induced a feeling that the profitability of the various gardens might be affected.

The substantial rise in production during the 1959-60 season, prospects of increased output during the 1960-61 season and the possibility of exports to the USA—all these factors contributed to the general firmness in the prices of Sugar shares.

In the Textiles section, sentiment was rather jittery. Some misgivings over the prospects for the industry induced generally an easier tendency in prices.

Of all the sections, the Miscellaneous received constant attention in view of the sustained investment support for blue chips due to growth prospects, the release of encouraging corporate news and the scarcity of offerings. The best levels could not, however, be maintained till the close of the year in sympathy with the general trend of the market.

Bank shares remained generally steady during most part of the year, reflecting investors' optimistic ideas about the prospects for this class of equities. It was thought that the rapid expansion of industry and agricultural production, which was to take place in the near future, would imply a steadily increasing demand on banks' resources and their profitable use.

Gilt-edged securities did not fare well due to the credit curbs and tight money conditions. The market especially for State Loan, weakened considerably on offerings. Thanks to the relaxation of the deposit impounding scheme and some purchases made by the LIC, prices showed a slight improvement towards the close of the year.

The hesitancy on the part of professional operators as well as investors has now lent a slow-motion pace to the slumping process. Everyone now seems to have got it into head that the future is anything but bleak. The additional allocation of Rs 1,650 crores must be raised to make the Third Plan go. The

burden of it is to be borne not only by the indirect taxpayer, but also by the direct taxpayer.

The busy season is still ahead and the interest rates may go up further. Again, the Government are inclined to be vigilant over the behaviour of the stock markets. In the circum-

stances, there is little incentive to buy indiscriminately. Observers do not expect any major change in the price levels till such time the Central Budget proposals are announced in February.

Bombay Stock Exchange.

Unusual Boom: Craze for New Issues

THE year, which just ended, was notable for creating a peculiar situation in the history of India's stock exchanges by an extraordinary boom in equities, an unusual expansion in turnover and the number of new issues, as also the phenomenal premiums which some of these issues commanded even before the allotment of shares.

For the Bombay Stock Exchange, 1960 was a year of ups and downs with the close distinctly bearish. Unprecedented bullish activity sent up the prices of popular industrials. Both in the forward list and cash counters, investors, as in the past year, discarded yield considerations and placed reliance on prospects of capital appreciation and quick profits. The prevalent inflationary psychology and the upward momentum of industrialisation were the prime factors, which sustained bullish activity. This acquired feverish pitch after the tax-free Union Budget for 1960-61. The single major factor, which depressed sentiment in the closing months of the year, was the

introduction of a dearer money policy.

While analysing the causes for the boom, one cannot possibly ignore the fantastic craze for new issues, which was admittedly without rhyme or reason. The boom was helped and fostered with the full knowledge that it may take two or three years for a new company to start production and that it may take about four years to declare a dividend, if any. Thus, the main stimulus behind the new issue boom were the prospects of imminent capital appreciation. This led to speculation in firm allotment letters and big fortunes were made.

Though the premia commanded by new issues tended to decline towards the close of the year, the undertone was distinctly firm. Yet, another unhealthy trend was the increasing speculation in what is known as the "cash" section. In actual practice, the "cash" section was converted into a "forward" section, without the limitations and control exercised over the forward section.

Although the boom conditions in 1960 have been generally attributed to sustained speculative fervour, there is no denying the fact that there has been a substantial investment support also, as is evident from the heavy over-subscriptions to the

spate of capital issues and from the unprecedented rise in cash scrips, some of which do not hold promise of a return for even three to four years to come.

Apart from these, the sentiment has been helped by the investment opportunities provided by the Government for the private sector to play an effective role in the development of the country's vast industrial expansion programme. Thanks to a favourable climate, there was a substantial growth in investible funds, which was again due to the pumping in of created money, large-scale foreign aid, measures to boost exports, encouraging corporate results, rising trend of industrial production and, more than anything else, boom in bullion and commodities. The cumulative effect of all these provided a solid base for the boom conditions during the year.

Opening the year on a quiet note, equities met with substantial liquidation on reports that the Central Wage Board for the cotton textile industry had recommended an increase in the basis wages to the workers. Apart from this, there was uncertainty about the Union Budget, while a substantial diversion of funds to the new capital issues had its impact on the price pattern.

When it was learnt that the Central Budget was a status quo one, the market was set for a rise, and buoyancy persisted until the Reserve Bank's announcement of credit restrictions on March 11. Thereafter, a reactionary trend set in which lasted up to March 31. A recovery ensued thereafter, as it was thought that the Reserve Bank's credit restrictions could not have any serious impact on the market activity.

The recovery gathered momentum during April and May, although, following the stringent measures adopted by the stock exchange authorities, the upward trend was arrested in June. July was notable indeed. For, this month recorded the peak level for stock exchange activity as evident from a sharp rise in the All-India Variable Dividend Index, to 182 in the week ended July 23, 1960 before falling to 181.6 in the week ended July 30.

After July, a reactionary trend developed with equity prices tumbling down in August and September. Sentiment was adversely affected by the fears of further stringent measures to curb speculation. There were also persistent rumours of a rise in the Bank Rate. Other bearish factors were the difficult foreign exchange situation, growing difficulties experienced by industries in obtaining their raw materials, the decision of the Indian Cotton Mills' Federation to reduce cloth prices and the delay in the announcement of the steel retention prices.

After Diwali, however, equities staged a modest recovery. But, activity contracted considerably for want of fresh incentives and lack of outside interest. Operators became increasingly aware of the budget uncertainties and preferred to lighten their holdings.

The following table shows the opening, highest, lowest and the closing rates of a few selected shares:

Madras Stock Exchange Buoyant Tone for The Major Part of the Year

THE Madras Stock Exchange was in good form with a generally buoyant tone for the major part of last year. There was a marked expansion in the volume of business, induced by a broadening investment support, reflecting the economic and inflationary trend in the country.

The year opened with poor floating stocks of investment shares. The Life Insurance Corporation was on the market, buying up the limited floating stocks of blue chips which was, so to say, having a suction effect. Thereafter, came the Union Budget which only added to the exuberance, as the market seemed to derive more strength from what the Budget did not contain than what it did.

In such a state of affairs, the credit control measures of the Reserve Bank, with a view to usher in an era of dear money and keep prices down, descended on the market powerfully. Though the market tried to ignore the curbs initially, the effects, on second thoughts, were doleful and prices were marked down all-round. Several disappointing Plantation dividends only added to the onslaught and the price increases since the Budget were wiped out.

Though the Union Finance Minister's utterances that direct taxation had reached its limit and that foreign aid from friendly countries would be forthcoming in a generous measure served to impart a better sentiment and induce some spirited buying, the market seemed to stagnate somewhat in the last few weeks of the year. Section-wise, Bank shares enjoyed good support.

In the Planting section, prices showed a mixed trend. The premium on high quality teas continued and consumers seemed to be prepared to pay a good price for high-grown teas. With the result, the shares of such estates met with good investment support.

Coffee shares were, however, in a bad way as the industry was faced with the challenge of falling foreign prices and increasing cost of production.

Rubber shares were in the doldrums following the Government decision to maintain the price of the raw commodity. However, a change for the better is anticipated in the New Year with new rubber industries coming in for the available supplies of raw rubber.

In the Textiles section, the shares of those companies producing higher counts of yarn met with keen demand due to the continued rise in

the prices of such yarns. In general, share prices throughout the year were more or less stagnant and, on several occasions downward.

Engineering and Transport shares enjoyed active trading conditions.

Cement shares met with a mixed reception due to increasing operating costs. The shares of those companies with expanding potentialities met with good buying for obvious reasons.

Chemical shares, despite their hold on the agricultural sector were under a cloud.

Jute

Speculative Boom

THE markets both for raw jute and jute goods were in a highly sensitive state during the major of the year just ended. Except for a temporary halt at the end of June due to heavy selling pressure, prices of jute goods advanced by leaps and bounds from the beginning of the year on sustained speculative activity. Even the various measures adopted by the Government and the authorities in charge of futures trading from October and the decision made by the IJMA Committee in consultation with the Union and West Bengal Governments at the tag-end of the year to requisition stocks had no effect on sentiment. The markets finished around the highest levels for the year.

The real strength for the jute goods market was derived from the raw jute section. There was a general feeling among traders

Annual Reviews

that a fibre famine was almost certainly during the year, while the steady and sharp rise in Pakistani fibre prices also served to boost up sentiment, accelerating the upward tendency of the market. The advance in prices had been so steep that it created even an emergency, which led to the suspension of all futures trading in jute and jute goods by the East India Jute & Hessian Exchange from the 7th October. The Reserve Bank of India was also compelled to issue a directive to the scheduled banks to restrict the advances against the security documents on both the commodities in order to curb speculative dealings.

In general, price movements were mostly influenced by the speculative activity in the futures market. Despite the imposition of high rates of margins and the lack

AN important feature of the educational facilities at Jamshedpur is the leisure-time training of employees. Instruction provided, after hours, helps steelmen like J. P. Pathak to acquire wider knowledge and new skills.

Pathak, who started his career in Tata Steel as an office boy in 1929, passed his matriculation examination from the Company night school in 1944. Pathak next took up an evening course in basic mechanical drawing at the Jamshedpur Technical Institute. In 1957, he was selected for overseas training, and went to Canada, the U.S.A., West Germany and Holland, to learn techniques of

operating a sinter plant. Today, Pathak is operator-in-charge of the sinter plant added under the two million ton expansion programme.

Notwithstanding initial handicaps, enterprising men like Pathak have the opportunity to better their prospects through further education and training at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

JAMSHEDPUR
THE STEEL CITY

The Tata Iron and Steel Company Limited

Annual Reviews

of sustained interest from overseas buyers, speculators remained very active from the beginning of the year in view of the strong statistical position. The rise in prices, till the end of the first quarter, was more pronounced in sackings than in hessians in view of the fact that the market was confronted with the problem of low stocks of the former category of goods.

As a matter of fact, the market was in a state of unusual excitement during the second quarter when prices showed a further advance due to increasing fear of a fire-supply squeeze in view of the continued hot weather over the jute belt. Even the decision made by the IJMA to unseal 1 per cent of the looms from 22nd May; another 1½ per cent looms from the 1st June and the imposition of new margins on sales had no effect on the market due to a general feeling that the resultant increase in production would make no differ-

rence to the overall supply position. Moreover, the IJMA's decision to extent the voluntary sealing scheme till the end of the year in order to cope with the raw jute shortage, rumours of surplus jute being not available from Pakistan and the scarcity of ready goods, encouraged a good deal of covering by shippers to meet their earlier commitments.

The market was rather excited in October as well as in November when conditions akin to a boom were witnessed, being influenced by several factors. First, there

was a general belief that the total production of jute, during the 1960-61 season would fall short of mills' requirements and there might be little scope of meeting their shortage. The second factor was the expected fall in Pakistani crop. Finally, it was feared that, with the possibility of an acute jute shortage, the supplies of manufactured goods would not be sufficient to meet the growing demand. Thus, the renewed speculative activity continued to have a considerable influence on prices. Even the closure of the futures market from the 7th October, the final decision taken by the FMC to impose special margins to curb excessive speculation on TSD contracts and the decision by the IJMA to seal 5 per cent of the looms from the 17th October and another 5 per cent from the 24th October seemed to have little or no effect on the market.

A state of uncertainty, however, prevailed in the last three weeks of the year. The series of restrictions imposed upon business by means of margin requirements, the decision made by the Reserve Bank to restrict advances against raw jute and jute goods along with the fixation of ceiling limits, the fear of official intervention to bring down the prices in the interest of the export trade and the continued lack of business with overseas buyers, caused a good deal of anxiety as well as nervousness, resulting in a slight setback in prices in the middle of December. This was, however, proved short-lived and the market displayed again a firmer tendency towards the close of the year, thanks to higher advices from the raw jute section. Even the news of the decision made by the Government to vest the Jute Commissioner with the statutory authority to requisition stocks and by the IJMA Committee to adjust production by curtailing the working hours from 45 a week to 42½ from January 30, 1961 with 12 per cent looms sealed, seemed to have no effect on the market, which finished around the highest levels for the year.

RAW JUTE

The Raw Jute section, after ruling quiet till the middle of February in the absence of any buying interest from mills, developed a firmer tendency with prices touching the highest levels in May. Various factors contributed to this state of affairs. Mainly amongst these were the reports of poor imports into most agencies, the lower stock position of some of the mills, the IJMA's decision to unseal a certain percentage of their looms, rumours of a possible shortage of supplies and the steady rise in the prices of manufactured goods.

Thanks to the kindness shown by the weather god, the market displayed a reactionary tendency from the last week of May to the end of July. But, the market turned again firm in August when there were keen buyers for early-

Indian Finance

14 January 1961

delivery jute in view of the strong demand for manufactured goods. As the growers were withholding supplies in an attempt to get higher prices, the quantity on offer was drastically reduced under the influence of shortage scare. At this stage, came the reports that the Pakistani mills themselves were keen to cover their requirements of jute before increased demand from India might cause a shortage.

As a matter of fact, the delay in issuing import licences for Pakistani Cuttings and the sharp rise in Pakistani fibre prices induced the mills to cover their requirements at the advancing levels in the beginning of the third quarter. This, in turn, made sellers to become more reserved than ever. Although the decision made by the IJMA to seal more looms and make purchases only on a quota system, the series of restrictions imposed by the authorities and the directive issued by the Reserve Bank to restrict advances against security documents induced a steady setback till the middle of December, it was proved to be short-lived. Towards the close of the year, the

market again firmed up following the publication of the raw jute arrivals figures for November and the reports of reduced arrivals into the upcountry centres.

Many still believe that a large quantity of jute is still being held by stockists, who are inclined to hold on due to persistent talk of shortages, especially when they are now in a position to meet their financial commitments without liquidating their holdings. It, therefore, does not appear whether the mills will be in a position to raise their production in the near future as they had hoped to. This may probably be the reason that the IJMA Committee has decided to curtail the working hours from the 30th January.

But, it is clear that, unless production is increased, there is little likelihood of any fall in gunny prices and, unless jute goods become considerably cheaper, the competition against substitutes will be more intensive than ever.

The following table shows the opening, highest, lowest and the closing rates for the year:—

	Opening Rs.	Highest Rs.	Lowest Rs.	Closing Rs.

Tea

Better Prices Realised

ON the whole, the North Indian as well as the South Indian Tea estates have had a fairly satisfactory season so far. Two significant and promising aspects were, that the fall in North Indian crop has been partly made up by an increase in output in South India and that the prices realised have been reasonably good, in fact, much better than 1959.

From the very beginning of the year, very satisfactory market conditions prevailed in Calcutta for plain and low medium teas, which encouraged producers to take advantage of the market by prolonging plucking as much as possible. The demand from internal operators was strong for the cheaper teas, while exporters competed for types suitable for the out-markets. The persistent support lent to the market was partly due to the fact that the industry had done better in the 1959-60 season than in 1958-59 and partly to moderate optimism

about the future outlook. Above all, a shortage of quality teas was foreseen as a result of the drought in many districts of Northern India.

The first regular export sale of the 1960-61 season was started in the middle of June when there was a good domestic demand, while Russia also bought fair quantities. Even the prices of plain grades were maintained at a reasonable level due to good enquiries. The main factor, contributing to the improvement in the general level of prices, was the report of a sharp fall in North Indian output in May. Again, the high prices, which were being paid for good teas at the London auctions, suggested that blenders were not sure whether they could obtain enough of these. They were, therefore anxious to cover their requirements as quickly as possible.

July was a difficult month for tea trade, particularly producers. Political trouble in Assam together with the Central Government employees' strike lasting for a week interfered with the smooth movement of tea; and arrivals of tea in

Calcutta were consequently smaller than usual. Moreover, the announcement of a shortfall in crop of 30.7 million pounds up to the end of July caused very strong market. While a good demand was maintained, a slight decline in the price levels for plain teas indicated that buyers were not influenced by statistics especially since the crop in Ceylon and South India counter-balanced the shortfall in North India.

It was, however, interesting to note that, while the average price realised for Assam teas was 51 nP per kilo higher in August than in the corresponding month of 1959, the biggest improvement in price was for Zone I, which suffered least from the severe drought and also where the majority of the estates adopted the CTC type of manufacture. In September, there was a good demand, buyers following quality very closely. Again, with the arrival of the September crop figures, the belief was growing that the demand-supply position in the world as a whole might be delicately balanced and, in India itself, there would be a shortage if exports were maintained.

The drastic shortfall in the North Indian crop, although partially offset by the increase in the South Indian harvest, persuaded the internal operators to feel that there would not be enough to go round in the domestic market. They were, therefore, bidding eagerly, especially for the cheaper varieties. Although buyers abroad thought earlier that there would be a surplus of Common teas, they were not sure and, as such, they too, were buying on a fair scale. Thus, during the month of October, there was a strong market for plain teas with the emphasis being on Fannings grades which met with keen support from buyers for Egypt and other out-markets.

In November, the crop was 54.66 million pounds as against 54.80 million pounds in November, 1959. The fall was less than was feared earlier. The total crop was, therefore, 34.56 million pounds smaller at 513.56 million pounds to the end of November, 1960 as compared with the corresponding period of 1959. Considering that December was usually a poor-producing month and that most of the gardens were closing plucking due to the approach of winter, it was considered certain that the crop shortfall would not be made up.

Annual Reviews

According to the latest figures, export sales up to the end of 21 December 1960 totalled 1,336,163 chests at an average price of Rs 5.58 per kilo as compared with 1,418,105 chests at an average price of Rs 5.25 per kilo for the same period of the previous season. Internal sales at 453,692 chests of Dusts and average price of Rs 5.29 go against 458,177 chests and Rs 4.52 respectively. Sales of other grades for internal consumption totalled 9,914 chests at an average price of Rs 4.41 as against 17,525 chests and Rs 4.08 respectively.

As far as shipments were concerned, they were about 18 million pounds down during the period from 1 July to 15 December 1960 as compared with the corresponding period of 1959. But, it is expected that, with the higher price levels, the total foreign earnings of the industry may not be as unfavourable as originally feared. There have been relatively smaller offerings of Leaf for internal consumption. This situation is likely to continue, as the Government of India have liberalised their export policy by releasing adequate export quotas.

Dust teas have also enjoyed comparatively good prices. With increasing demand, it is likely that this trend will continue for some years. In the light of the good foreign demand, it looks as if there will be less tea left for the domestic market than in 1959. If internal consumption now increases at the rate of 15 million pounds a year, as it is thought to be doing, the possibility of a tighter internal supply cannot be ruled out.

Much of what is lacking from Northern India will be made up in London with larger crops from other producers. Although Pakistan has had less tea than in 1959, all other producing countries are showing an increase. All in all, the world crop is unlikely to be more than about 10 million pounds down on the 1959 season. This can make only a original difference on a total of about 1,200 million pounds. But, with demand fairly good at the auction, it is enough to keep prices firm.

The following table shows the price trends during the past year (prices per kilo):—

No liveried footmen or blazing chandeliers remain to proclaim the grandeur and gaiety that once pervaded the large red brick mansion that still stands in Calcutta's Hastings Street and which Warren Hastings, India's first Governor-General, built for his charming wife as her town house. For many years this fine residence was the scene of glittering assemblies and balls, the entrée to which was considered a high social privilege.

In 1827, No. 7 was acquired for the purpose of its business by the old established engineering firm of Burn & Company which occupied it for almost a century. By reason of its expanding business, Burn & Company found this historic building with its cobbled carriage drive and spacious rooms too small, and in 1925, the Company was forced to sever its link with this house of memories and moved to larger premises in Clive Street, where it joined hands with Martin & Co.

Today, the activities of Martin Burn Ltd. cover a wide range of engineering interests including those brought to it by the renowned firm of Burn & Company all of which are vital to the rapid development of India's industrialisation.

Sugar

Record Output

THE sugar section 1959-60, which has come to an end, has provided a distinctive landmark in the history of sugar production in this country in sharp contrast to the depressing picture of decline in production and scarcity which synchronized with the closing of the 1958-59 season. The closing of the 1959-60 season has witnessed a substantial increase of 5 lakh tons in production beyond all expectations entertained early in the season. An all-time record production of 24.1 lakh tons has been achieved during the season as compared with 19.16 lakh tons in the previous season. This production also exceeds the second Plan target by over 1½ lakh tons.

This happy achievement is due to the Government's sugar policy, providing incentives to the cane-growers and the industry and also the availability of plentiful supply of cane to factories owing to good sugarcane crop. It is doubtless that the industry has definitely turned the corner regarding sugar production and it is on the high road in achieving still further increased production in the coming season due to the continuance of the aforesaid incentives and a satisfactory crop of cane.

The Union Minister for Industry has emphasised the need for stepping the output and raising the target for production, to be reached by 1965-66, to 35 lakh tons from 30 lakh tons. He has suggested that there should be larger production in order to build up a regular export trade. The recent trends in consumption, however, indicate that much larger quantities will be required in the coming years, especially as a larger section of the population is taking to sugar in increasing quantities.

Apart from meeting the increased demand for sugar, it has become possible to think in terms of export. Efforts are being made to send out of the country 1.50 lakh tons of sugar. While the earnings from exports will be helpful, it will have to be made sure that internal requirements are fully met. Fortunately, the industry is now in a position to step up production as, with the existing capacity, it will be possible to produce more than 27 lakh tons, given the availability of regular cane supplies while the required machinery both for erecting new factories and adding to the capacity of the existing factories can be had from indigenous sources. The difficulty, if anything, will relate to the stepping up of the sugarcane output.

The supply position, as on today, is really comfortable with the carryover of stocks at 5.48 lakh

tons with the mills as against 1.75 lakh tons a year ago. With production of 24.10 lakh tons and the carryover of 1.73 lakh tons as on 1 November 1959, the total supply amounted to 25.83 lakh tons during the past season, while consumption is estimated at 20.35 lakh tons during the past season. It is difficult to visualise exactly, during the 1960-61 season, the trend of consumption which will depend mostly on Government's policy of control.

It is expected that production during the 1960-61 season will go up by another 4 lakh tons, resulting in the estimated production of about 28 lakh tons. Against this, the offtake last year was only 20.18 lakh tons and is not likely to exceed 22 lakh tons this year. There will, therefore, be a surplus of about 5 to 6 lakh tons, which may be available for export in 1961. It is felt that, as production will continue to outpace consumption, a permanent export of 5 to 6 lakh tons of sugar, worth about Rs 30 to Rs 36 crores, can be easily made.

In this connection, the Chairman of the Export Agency Division of the Indian Sugar Mills Association, has expressed optimism about the ultimate result regarding a US quota for Indian sugar. He feels that further efforts, both from the Government of India and the Indian sugar industry, at the highest level, will be required for achieving a definite success. The United States' annual requirements are about 96 lakh tons of sugar out of which they import about 45 lakh tons annually from different countries. The Government of India have already made their formal request for the supply of 5 lakh tons of Indian sugar to the USA, which will yield about Rs 30 crores worth of foreign exchange if we are successful in getting this allocation.

According to the latest decision, the Government of India have agreed to the request of the Indian Sugar Mills Association for an extension of the time limit for the export of 50,000 tons of sugar from 31 December 1960 to 31 March 1961. The 50,000-ton quota for export was announced on 17 September 1960. It is understood that already 31,000 tons of sugar had been exported to Ceylon, Malaya and the Middle East countries.

Cotton

Scramble During 1960

BUOYANT conditions prevailed in the Cotton market all over the country last year, thanks to a shortfall in the domestic crop. If the 1958-59 season held out prospects for a good crop of indigenous cotton which ultimately proved to be illusory with the actuals turning out to be no more than 48.5 lakh bales, the 1959-60 season turned out to be even worse with the actual production not more

than 37.5 lakh bales due to the failure of the crop. The result was a scramble for cotton, pushing up the prices to above the ceiling levels.

The shortfall in the crop not only resulted in a serious strain on the available supply, but boosted up the prices of practically all varieties of cotton. Realising the gravity of the situation, the Government issued an order on May 13 imposing stricter control on cotton transactions whereby, beginning from August, sales of cotton were required to be made only to mills nominated by the Textile Commissioner.

Thanks to the very liberal import programme launched by the Government, the anxiety over the raw cotton situation in the country tended to ease towards the end of 1960. The total supply of Indian cotton, during the current season, would be about 58 lakh bales. This may not by itself mean much. But the heavy import of foreign cotton would provide the much-needed cushioning effect. Import quotas, announced during the calendar year 1960, amounted to 12.80 lakh bales. Actual arrivals during the 1959-60 season amounted to 9.05 lakh bales, consisting of 5.54 lakh bales of Sterling Area cotton and 3.54 lakh bales of American cotton.

The Government had to pursue a very restrictive policy for raw cotton during the year, because of the tight supply position in the country. Actual shipments of

Bullion

Feverish Activity in Bullion Market

THE year 1960 turned out to be a very important year for the bullion trade. Active conditions were witnessed and price fluctuations were wide. The market was under a bull grip during most of the year although there was a slackening towards the close. The highest levels were touched in May, Gold touching Rs 118.91 (per 10 grams) and Silver Rs 198.26 (per kg).

The Bullion Board, with the concurrence of the Maharashtra Government, had to take stringent measures to check the sharp rise in prices. Practically, every month in the first half of the year, the Board had to increase the margins on bulls. But the speculators, who had made capital out of the transactions, were not deterred by these margins. At one time, the Board even sought emergency powers from the Maharashtra Government to extend the maturity date of the Baisakh contract. Fearing that the Board might not be able to control the situation, in the month of May, the Maharashtra Government assumed powers to impose, on their

Indian cotton, during the 1959-60 season, amounted to 1.98 lakh bales. The Government announced an export quota of 50,000 bales of Bengal Deshi cotton during the current season.

It is, however, significant to note that the liberal imports planned during the season to meet the domestic shortage, the various restrictive measures announced by the Textile Commissioner and the heavy margins announced by the Forward Markets Commission, failed to halt the upswing of the contract towards the official ceiling rate. In fact, at one time, during the delivery period, it was quoted even at a premium.

The Jharilla August contract opened its career at Rs 743 on the 15th February. After declining to Rs 741—the lowest level recorded by this contract—it steadily advanced to the pre-delivery ceiling of Rs 790. The next stage was reached when it touched Rs 820 on June 25. The situation subsequently became so serious that, in view of the utter lack of offerings, the contract flared up in unofficial dealings, to Rs 845 towards the end of its career. The contract went off the Board on August 25 at the official ceiling rate of Rs 820.

Trading in the new contract Jharilla April commenced on October 16, at Rs 567.25. After declining to Rs 565.5 due to prospects of improved supply position, it rose to Rs 614.50—the highest level recorded so far. Following the price range of each contract during the year:—

own initiative, special margins up to 50 per cent of the values of the metals in any contract.

Incidentally, the bullish fervour of the metal reflected the growing feeling that an inflationary pressure in the country was gathering momentum. The steadily rising prices in commodity and stock markets and developments on the northern border areas gave an impetus to the buying activity. The rise was also aggravated by the depletion of the floating stocks of both the metals.

After May, bullion prices began to react owing to a marked decline in the demand for the ready metal and the stringent measures taken by the authorities. The reactionary trend was also aided by the reports of sale of the Dalai Lama's treasure and rumours of arrivals of large quantities of smuggled gold. Fears about credit restrictions also encouraged bearish activity. But the fall attracted renewed support at the lower levels so that the losses in both the metals were substantially made up. But the progress of this rally received a setback by the Government's determined drive to hold the price line in check. Various measures taken by the authorities to arrest the upward

Indian Finance

14 January 1961

trend in the prices of all essential commodities also created a feeling of nervousness among the operators to follow the up-turn.

Another event of the year was the commencement of trading on the basis of the metric system of weights and measures. Under the new system, the unit of trading in Gold has been fixed at one kilo-

gram and the market rate is for 10 grams. In Silver, the unit of trading is 10 kilograms and the market quotation is for one kilogram. From October, the metric system of weights was introduced.

Following were the price trends in Gold and Silver during the year (figures shown from October being for metric weights):—

		GOLD		SILVER	
		High Rs.	Low Rs.	High Rs.	Low Rs.
January	...	134.62	126.12	215.44	210.75

Oils & Oilseeds

Firmness Despite Curbs

THE markets for Oils and Oilseeds displayed buoyant conditions almost throughout the past year. Technical considerations and seasonal factors, however, brought about a setback. Lower levels again attracted brisk demand. By and large the bullish fervour, noticed at the end of 1959, was well sustained despite official measures to check the boom.

With a substantial rise in internal demand for edible oils and with the Government pursuing a very liberal export policy for vegetable oils, domestic prices shot up steeply. As before, the Forward Markets Commission was asked to do the inevitable job of controlling prices when the Government appeared to produce a contrary effect by its liberal export policy through various export incentive schemes.

Despite the high internal prices, the consequent wide disparity between Indian and world rates, the export performance last year should be considered good. Due to higher prices exports, except those of castor oil, were comparatively lower, notwithstanding the Government decision to export groundnut and groundnut oil even at the cost of internal consumption.

Hedge trading in the April-May 1960 contract in the groundnut oil was started on 24 December, 1959. The Forward Markets Commission had to intervene in the markets by introducing special margins in view of the higher trend of prices. On 29 January 1960, it imposed special margins on trading in groundnut February 1960 and May 1960 hedge contracts at the rate of Rs 106.25 per candy as against the margins of Rs 60 and Rs 97.50 per candy during the non-delivery and delivery periods respectively on the total long position in excess of 1,500 candies in the aggregate whenever the prices of these contracts ruled above Rs 212.50 per candy. Similar stringent margins

were also stipulated in respect of transferable specific delivery contracts in groundnut and groundnut oil. The August 1960 groundnut contract touched the ceiling level of Rs 225 on July 18 as a result of which official trading came to a standstill.

On 5 August, trading in new crop contracts commenced with the FMC contracts commenced with the EMC permission. In groundnut, the contract was for February 1961 and in castorseed and linseed for May 1961. While according permission, the FMC announced some modifications in the margin regulations. There were no margins in castorseed and linseed whereas in respect of groundnut contract, buyers had to pay a special margin at the rate of Rs 20 per 250 kilograms when the closing price exceeded Rs 187 and Rs 60 when the closing rate exceeded Rs 212. The margin for the delivery period was fixed at Rs 106 per 250 kilograms. The final crop estimate of groundnut for 1959-60 was lower at 34.90 lakh tons as against 48.16 lakh tons in 1958-59 and 44.56 lakh tons in 1957-58.

The castorseed crop for the season 1959-60 was estimated at 1.98 lakh tons as compared with 1.11 lakh tons for 1958-59 and 89,000 tons for 1957-58.

The linseed crop for 1959-60 amounted to 4.25 lakh tons, which was 5,000 tons lower than the crop in 1958-59.

Coffee

Outlook Not Promising

BARRING a few exceptions, all other Coffee-producing countries participated in the general upward movement in output in 1960. Improved methods of cultivation were resorted to by some countries, while replanting of many areas with higher-yielding varieties in recent years contributed to the increase in production.

The latest estimate of India's 1960-61 coffee crop, made by the Marketing Committee of the Coffee Board, is a record output of 52,290 metric tons, thanks to the satisfactory blossom showers in all plant-

ing districts except parts of Hassan and North Coorg. If the latest estimated crop were to be realised, it will represent an increase of about 3,000 metric tons over the current season's crop, the receipts of which into the Pool up to 31 October 1960 were of the order of 49,160 metric tons. With this increase, the coffee output in India will have maintained the upward trend for the sixth year in succession and will have more than doubled itself in six years, from 25,025 metric tons in 1954-55, to be precise.

The trend of internal offtake of coffee is not in consonance with that of production. On the contrary, the internal consumption, during the first ten months of 1960, is a shade lower at 24,380 metric tons. The rising trend in internal pro-

duction, in the context of the productions that stocks of coffee with producing countries are likely to grow, makes the outlook for Indian coffee not promising. The Food and Agricultural Organisation of the United Nations has forecast that the world output in the next crop year (1960-61) is likely to be substantially less than the 1959-60 record of 4.5 million metric tons.

Coffee-growers are naturally getting anxious about the industry's future. Paradoxical as it sounds, their anxiety arises from the success of their production

Annual Reviews

efforts. The growers have made vast improvements in production since 1947, mainly because of the attractive price they were getting for their produce. The growers were getting a higher return than the basic price fixed by the Coffee Board, and this was made possible by the higher export earnings. Since the export prices started falling, this premium also had fallen.

A new and rather difficult situation was, therefore, developing in the marketing of Indian coffee. The Board was called upon to

tackle in a big way in maintaining a price line for the commodity in the home market which, while providing a reasonable return to the grower, was also fair to the consumer. With the result, the Coffee Board faced with the problem of how to dispose of the exportable surplus without bringing the final return to the grower below the economic level.

The Coffee Board, which is in sole charge of the distribution of coffee produced in India had been selling coffee in the internal market for over 12 years at considerably less than what it would have fetched in the export market. For instance, when Plantation A was sold in the world market for over Rs 500 per cwt in 1952 the same

type of coffee was made available to the internal consumer at Rs 195 per cwt or about a third of the world market price. It was from the earnings from export that the internal market was subsidized in those years.

The Coffee Board is now faced with a problem just the reverse. The world surplus is becoming so heavy that the price of coffee is falling steadily and the fall cannot be checked unless some more effective measures are taken by the producing countries. Although the World Agreement since 1958 had provided for restraints on exports, most of the increase in crop output occurred during the past three years. The vast accumulation of stocks had naturally affected

the market and, during the past five years, the price of coffee has fallen by about 40 per cent in the world market.

The growers were getting a higher return than the basic price fixed by the Coffee Board and this was made possible by the higher export earnings. Since the export prices have started falling, producers are not likely to get anything more than the retention price from now on. The cost of production, on the other hand, is going up. Without increasing production per acre and the total size of the crop, increase in cost cannot be met. If the world price is lower than the retention price, the producers will have to suffer heavier losses.

★

Rubber

Widening Gap Between Production and Consumption

DESPITE a rise in output, the gap between production and consumption of Rubber continued to widen in 1960. The country could produce only 19,041 tons of natural rubber during January/October when the manufacturers consumed 36,699 tons of natural: 5,158 tons of synthetic and 4,327 tons of reclaimed rubber. This pattern in production and consumption is bound to continue in 1961 also.

The scheme of development of rubber, which has been in force for some years, has not reached a scale on which it can be relied upon to fill the gap in the near future. Although there has been an increase in the planted area during the past few years, the yield per acre from the existing areas has been going down. The slackness in production is due to the predominance of small holdings, most of which are uneconomic and the yield on which is poor.

It is said that about 80 per cent of the total area under rubber in South India now consists of old, low-yielding areas. In more than half of this area, the trees have outlived their economic life and are degenerating rapidly. The larger estates are generally well-organised and well maintained, but most of the medium-sized estates and small holdings are in a neglected condition.

It is, therefore, clear that, unless natural rubber output can be raised over a period, there will be need for many more synthetic plants. With an increase in prices in the international markets recently, imports also will become more costly, especially when there is already a shortage of foreign exchange. A more vigorous policy has, therefore, to be pursued for raising the output within the country, as there is clear evidence that earnings of a number of estates have been adversely affected by increased costs of production.

★

The rubber growers' demand for an upward revision in the statutory price of raw rubber was turned down by the Central Government on the recommendation of the Tariff Commission. The growers were expecting a higher price, not only on account of a rise in costs of production, but also in view of the rise in rubber prices abroad. The Government had been a little more charitable to the industry than the Commission, whose recommendations called in fact for a slight reduction in the price payable to the growers. While keeping the price unchanged at Rs 147.50 per 100 pounds, the Government agreed with the Tariff Commission that help to the industry should be given mainly through a larger subsidy for replanting. To enable the Rubber Board to provide a subsidy of Rs 1,000 per acre for replanting, the Tariff Commission suggested an additional development cess of Rs 7 per 100 pounds to be collected at the manufacturers' end. The net effect of the Government's decision was an increase in the price of raw rubber by Rs 5.50 per 100 pounds for the manufacturing industry. The utility of the new levy will, however, be judged by the extent to which it helps to increase rubber production in the next ten years.

According to the Kerala State Government's latest estimate, at least 2.25 lakh acres can be converted into rubber estates during the next six years. Out of this, about 65,000 acres are likely to become available by conversion of fallow lands or lands at present cultivated with less remunerative crops. The balance of 1.60 lakh acres will have to be found from Government or private forests.

The scheme will involve a capital outlay of Rs 33 crores till all the plantation reach the yielding stage. During the Third Plan period, the outlay will be about Rs 10.5 crores. As capital formation in the State is poor and the savings available with the investing public are small, Kerala Government feel that, to get such a large planting programme going, it may also be necessary for the Government directly to invest in rubber plantations in order to relieve the private sector of the responsibility to find all the capital required. The State Government have, therefore, proposed to set up Corporations in which Government hold majority of shares and Co-operatives of small holders for planting 60,000 acres of Government lands.

★

Pepper

Exports At a Record Level

THE export trade in Black Pepper established a new record with the total shipments during the 1959-60 season, which ended on 31 October 1960, amounting to more than 19,417 tons as against only 12,203 tons in the previous season. Al-

though definite estimates are not available, it is believed that that pepper exports might have fetched for the country foreign exchange worth about Rs 10 crores.

The export trade in the past season was featured by a spectacular rise in world price of the commodity. The US rates, for instance, were as low as 25 cents per pound early in the season; but rose to nearly 35 cents within the first few months. The upward trend gathered fresh momentum later, the highest level touched being about 80 cents per pound. The boom in world markets obviously rendered an additional help to the export trade.

America continued to be the biggest single buyer of Indian pepper, the total shipments amount-

ing to 8,563 tons. The Communist countries including Russia, Rumania and Poland bought 6,153 tons and Italy lifted 1,278 tons. Germany and Canada purchased 764 tons and 714 tons respectively, while Singapore accounted for exports of 504 tons.

An important news of the year was the announcement of the Government of India's decision to establish a second forward market in pepper at Bombay. But the Kerala Government pressed the Union Government to reconsider their decision, bringing to their notice the predominant part played by Kerala in the production and export of pepper and the various disadvantages that would result from the opening of a second trading centre in Bombay.

Annual Reviews

The Centre explained that, as export houses in Bombay accounted for as much as 40 per cent of the total export from India and that with the emergence of the USSR and other East European countries as important buyers of pepper, deals were entered into in big lots to absorb which a second forward in Bombay would be helpful. Traders in Bombay were reported to be unable to make effective use of the Cochin market to any appreciable extent. The Centre also assured the Kerala Government that it would keep an open mind in the matter.

THE BANK OF INDIA LIMITED

Annual Reviews

But, it was largely the Kerala Government's persistent objection that ultimately compelled the Government of India to ask the Forward Markets Commission to review de novo its recommendation to give Bombay also a forward market in pepper. The Commission's recommendations, according to its Chairman, was made on the basis of the need assessed with the

aid of statistical data and in the light of the developing pattern and distribution of pepper exports.

Naturally, pepper futures at Cochin had been showing some disquieting weakness in October. The defenders of the Cochin market attributed it to the "machinations" of those who were disappointed over the decision to drop the proposal to a similar market in Bombay. It was alleged that some Bombay firms had started selling heavily. But the pepper trade in Kerala was happy over the subsequent decision made by the

Centre to drop the proposal of starting a second forward market in Bombay.

Meanwhile, new season's pepper has started moving in larger quantities to Cochin and other terminal markets on the West Coast. Availability of exportable stuff from the new crop is reported to be fairly satisfactory now; but foreign demand is not picking up adequately. Consequently, the prices have shown a tendency to fall.

The new pepper crop is now estimated at about 22,000 tons, representing a fall of 15 per cent over the last season's output. The heavy rains, that were responsible primarily for this setback, had, however, improved the quality of the new pepper.

With regard to export demand, both America and Russia seem reluctant to place bulk. America used to buy heavily during the period from October to March when Indian supplies are normally at their maximum. Forward contracts for shipments during this period used to be made on a large scale. This year, forward contracts have been much less than the normal. The reasons given for this are:—(1) Indian export dealers are reluctant to enter into substantial forward commitments before they get a clear picture about the size of the new Indian crop and the size of the overseas demand. (2) America is reducing her price ideas steadily and the margin between Indian rate and American offer is widening. (3) There are no reliable reports about the possible supplies from Indonesia.

*

INDIA IN 1961

1961 will mark the completion of the Second Plan and the start of the Third, with the emphasis on self-generating industrial economy... It will be a busy year in various fields.

In the three steel works at Rourkela, Bhilai and Durgapur, all blast furnaces and rolling mills will have been commissioned during the year; production of lignite at Neyveli in Madras State will begin; the first unit of the 250,000 kw thermal power station at Neyveli, using lignite as fuel, will start operating.

The construction of the 720-mile pipeline for bringing crude oil from Assam to the refinery in Bihar is expected to be completed; plants to manufacture cement-making and paper-making machinery will go into production.

The Avro-748 plane, in the making by the Indian Air Force, is expected to be ready for flight trial.

1961 will see the commissioning of three major irrigation works forming part of the Hirakud, Chambal and Ghataprabha Projects in Orissa, Rajasthan, Madhya Pradesh and Mysore. Four more in West Bengal, Andhra Pradesh and Kerala will advance rapidly towards completion. Work will

also begin on nine other projects elsewhere.

Three more units of the Bhakra Left Bank Power House will be commissioned.

Fertiliser production will start at the Nangal Factory with an annual capacity of 80,000 tons.

The "package programme" of intensified agricultural production will go into operation in Uttar Pradesh, Punjab and Madhya Pradesh. The campaign is already on in Madras, Andhra Pradesh, Rajasthan and Bihar.

There may be freer food movement to ensure uniform distribution of available supplies and to reduce regional disparities in prices; construction will begin of 22 agricultural warehouses.

70 cooperative farming pilot projects will be launched in April. Orissa and Punjab, and possibly Uttar Pradesh, will put into effect the three-tier system of Panchayati Raj—Panchayats at the village level, Panchayat Samitis at the block level and Zila Parishads at the district level.

Mass production of consumer goods like watches, time-pieces and cheap radio sets will begin; a record number of Industrial Estates will be set up.

In the field of communications, 1961 will see the linking up of the metre-gauge railway systems of the north and south with the opening of the Khandwa-Hingoli line in central India to passenger traffic.

In the Cultural field, 1961 will be the Tagore Year marking the Centenary of the birth of the Poet.

The Census will start on February 10 and continue till the night of February 28. The most comprehensive yet undertaken, it will bring out various aspects of the nation at work, its resources and talents as well as its requirements.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Ordinary Stock at the rate of £3½ per cent net (tax applicable at 7s. 9d. in the £) for the year ending 31st March, 1961. Payments will be made on 15th February, 1961, to those stockholders whose names are registered in the Company's Stock Register on 31st January, 1961.

Applications for transfers received in this Office before 12 O'clock noon on Tuesday, the 31st January, 1961, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

BY ORDER OF THE BOARD
D. H. P. HENDERSON
AGENT.

VICTORIA HOUSE,
CALCUTTA, 12th January, 1961.

THE MADRAS ALUMINIUM COMPANY LIMITED

Registered Office:

	Rs. 10,00,00,000

ISSUED CAPITAL:

1,50,000 Redeemable Cumulative Preference Shares of Rs. 100/- each.	Rs. 1,50,00,000
4,50,000 Equity Shares of Rs. 100/- each.	Rs. 4,50,00,000

The Subscription List opened at 10 A.M. on 9th January, 1961 and will close at 2 P.M. on 16th January, 1961 or earlier as soon as subscriptions approximating to the amount issued to the public have been received, but not earlier than 2 P.M. on 12th January, 1961.

With reference to the last paragraph under the heading TECHNICAL COLLABORATION (Page 11 of the Prospectus) of the announcement published on 7th January '61 about the approval of the Government of India of the terms of the Collaboration agreement with Messrs. Montecatini of Italy, we have to clarify that the Government of India have approved the said collaboration on the following terms:

- I. (1) Allotment of 45,000 shares of Rs. 100 each in the equity share capital of the Madras Aluminium Company Ltd., Coimbatore, to M/s. Montecatini of Italy in consideration of the transfer of the collaborators' technical know-how in the field of the mining of bauxite ores and production of alumina, aluminium ingots and aluminium alloys. It is noted that the collaborator would be agreeable not to charge any additional fees for the supply of technical know-how either in regard to further expansion upto 20,000 tons of aluminium smelter or in regard to manufacture of aluminium fabrications.
- (2) Payment to M/s. Montecatini of Italy of a sum not exceeding Rs. 40 lakhs in Italian lire towards engineering fees, drawings, assistance in purchase of plant and other allied services.
- (3) Payment to M/s. Montecatini of Italy of a sum not exceeding Rs. 35 lakhs in Italian Lire for the cost of foreign experts, contractors and agencies for the construction, supervision and other services, charges, etc. This amount of Rs. 35 lakhs represents the payments in foreign exchange to the technical personnel of Montecatini in India. The rupee expenditure on such personnel, it is understood, is estimated at Rs. 15 lakhs.
- II. It is noted that M/s. Montecatini will, apart from the equity shares to the extent of Rs. 45 lakhs issued to them for the know-how, would also invest a sum of Rs. 75 lakhs in equity capital of the company as and when this sum that is being paid to the Italian collaborator for engineering fees and personnel become due.

The reservation of 1,20,000 shares for allotment to Montecatini in page 2 of the prospectus is to meet the commitments stated above as and when they fall due.

(Sd.) R. VENKATASWAMY,
DIRECTOR.

Dated 5-1-1961.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A copy of the Prospectus has been filed with the Registrar of the Companies, Bihar, Patna, for the purpose of the registration together with the documents mentioned therein as required by Section 60 of the Companies Act, 1956.

Consent of the Central Government has been obtained for this issue. Licence has been obtained from the Central Government for the establishment of this new industrial undertaking.

Applications have been made to the Stock Exchange at Calcutta, Bombay, Delhi and Madras for permission to deal in and for official quotation for the Equity Shares now being offered.

The subscription list will open at the commencement of the Banking hours on the 13th January, 1961 and will close on 23rd January, 1961 at the close of the Banking hours, or earlier, at the discretion of the Directors but not before the Banking hours on the 16th January, 1961.

AUDITORS

Messrs. THAKUR & CO., Chartered Accountants, 2, India Exchange Place, Calcutta-1.

REGISTERED OFFICE: SAMASTIPUR, BIHAR.

OBJECTS

The Company was formed generally for carrying on all or any of the objects mentioned in its Memorandum of Association. The immediate object is to set up a plant for the manufacture of Writing and Printing Paper with a production capacity of 3,600 tons per annum.

PROSPECTS

In view of the industrial advancement of the Country, the demand for writing and printing paper has considerably increased. At the present level of production there is a large gap between production and demand. There is therefore further scope for establishment of new units. The advancement made in recent years has enabled paper to be manufactured not only from the traditional bamboo pulp, but also from other materials like Rice and Wheat straw and Sugarcane Bagasse. The Company proposes to manufacture writing and printing paper from the above materials mixed with long fibre pulp like that of rags, etc. Plants upto 10/15 tons per day production capacity can be worked out not only efficiently, but also economically. Some equipments are being imported for better recovery of pulp and of good quality paper. Application has been made for expansion of the production capacity by 2,700 tons per annum for manufacture of special quality paper.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION
The Capital required to reach the stage of production based upon the feasibility report is estimated as follows:—

Cost of Land, Building and other miscellaneous expenses ..	Rs. 19,00,000
Cost of Machinery, imported or indigenous, including freight, insurance, Transport, Custom Duty, Erection and other engineering acquisition (including Brokerage, underwriting commission and preliminary expenses and other contingencies) ..	Rs. 44,00,000
WORKING Capital (excluding such further sums of money as may be required from time to time which will be financed by borrowing from Banks against hypothecations or running stock) ..	Rs. 7,00,000
This is proposed to be met by:—	Rs. 70,00,000
Share Capital ..	Rs. 40,00,000
Borrowings from the Industrial Finance Corporation of India ..	Rs. 20,00,000
Borrowings from the Bihar State Financial Corporation ..	Rs. 10,00,000
	Rs. 70,00,000

The Industrial Finance Corporation of India has sanctioned a loan of Rs. 20 lakhs. The Bihar State Financial Corporation have sanctioned long-term loan of Rs. 10 lakhs.

ESTIMATE OF WORKING RESULT
Estimating on the basis of present market conditions and cost of production for Paper Industry, the Directors are of opinion that the working result of the Project may yield sufficient profits for a reasonable dividend on Equity Shares.

MANAGING AGENTS
The Company is under the Management of Messrs. Ram Bahadur Thakur & Co., a partnership firm, whose appointment has been approved by the Government of India.

COMMENCEMENT OF PRODUCTION OF THE MILL
The mill is expected to go into production by October, 1961.

SITE
It has been decided to locate the factory at Samastipur by the side of the river Burhi Gandak in the State of Bihar.

PLANT AND MACHINERY
Orders for import of Machinery have been placed with Messrs. Kinsho Mataichi Co., Ltd., Tokyo, Japan, supply whereof is expected to be completed by March 1961.

RAW MATERIALS
Sufficient quantity of raw materials like Rice and Wheat Straw, Waste-paper, Rags, Sugarcane Bagasse are available around the proposed site, which can be procured without any difficulty at economical rates.

UNDERWRITERS
The Company has entered into underwriting contracts with the State Government of Bihar and the Central Bank of India Ltd., under which they have agreed to underwrite the issue to the extent of Rs. 20 lakhs and Rs. 5 lakhs respectively now offered to the public. The Underwriters are entitled to underwriting commission at 1½ per cent. on the face value of the Shares underwritten by them.

BROKERAGE
Brokerage at the rate of 20 nP. per Equity Share will be paid on allotment in respect of application forms bearing the stamp of a Bank or a member of a recognised Stock Exchange.

APPLICATION FOR EQUITY SHARES
Copies of the Prospectus and application forms for Shares will be available from the Underwriters, Brokers, Bankers and Registered Office of the Company. Applications for Equity Shares must be made for a minimum of 25 Shares or multiple of 25 Shares on the application form accompanied by the full amount payable on application.

FOR THE INVESTOR

Equities Continue Dull

Investment Gossip:

BUT for a slight rally toward the close, the stock market has passed another dull period during the past week. The improvement in sentiment has presumably stemmed from the Reserve Bank's announcement on Thursday to the effect that its orders of 11 November for maintenance of additional statutory reserve of 25 per cent by the scheduled banks is withdrawn with effect from Friday. In its directive to the scheduled Banks the RBI has pointed out that the revocation of the additional statutory reserve requirements is in conformity with its policy of operating the credit regulation measures in a flexible manner. The present step is expected to make available to the scheduled banks considerable amounts of the impounded money and consequently the banks may be better able to meet their credit requirements during the current busy season than hitherto. The market has been expecting this relaxation for some time and as is to be expected has greeted the RBI announcement with a mild rally in the more speculative issues.

It is, however, idle to expect any sizable improvement in sentiment atleast till the Central Budget is out of the way. Although the Annual Congress session has not brought any jitters, market men seem to be considerably worried over the shape of things to come in the taxation proposals that will be disclosed by the Finance Minister at the end of next month. The general belief is that there will not be any addition to direct taxation. This view is based on the statements of official spokesmen including the Finance Minister who have indicated that there is little scope for increasing direct taxation. But additional taxation to the tune of about Rs 1600 crores is inevitable during the Third Plan period and this amount has to be mobilised. The alternative is a sizable increase in indirect taxation and market speculation is now centred on how this is going to be achieved by the Finance Minister. In view of the proximity of the General Elections, it is generally held that Government may not find it prudent to levy indirect taxation in a manner that will incur the displeasure of the masses. In this view an additional levy on consumer goods appears improbable. Such

reasoning has revived the apprehension that direct taxation may somehow be made to yield more than at present is got from it. In discussions on the coming Budget the buoyancy of Government revenue is often cited as an argument in support of a relaxation of taxation. But in the context of the continued increase in defence expenditure and the large resource required for the Third Plan, taxation effort is unlikely to be relaxed.

Even without the Budget fears the scant notice that is given to the existing list is not surprising because of the numerous new issues that are presently on the market.

Investment Special:

Thakur Paper Mills

The Thakur Paper Mills Limited is a new company, formed to undertake the manufacture of writing and printing paper. The plant with a capacity of 3,600 tons a year is proposed to be set up in Samastipur in North Bihar. The necessary sanction from the Government for this project has been obtained. A licence for importing the requisite plant and machinery from Japan under Yen credit has also been received.

The company has also made an application to the Government for permission to expand the capacity of the plant by 3,000 tons. If this is sanctioned, the total capacity of the factory will be about 7,000 tons a year. The authorised capital of the company is Rs one crore. Out of this, equity shares of the value of Rs 40 lakhs will be issued. Of the issued capital, the directors, promoters and managing agents are taking up shares worth Rs 15,00,000 and the balance of the issued capital amounting to Rs 25 lakhs is to be offered for public subscription. The subscription will open on 16th January, 1961 and will close on 23rd January, 1961 or earlier at the discretion of the directors, but not earlier than 19th January, 1961.

The entire issue of capital to the public has been underwritten. The Government of Bihar has underwritten to the extent of Rs 20 lakhs and the Central Bank of India Ltd. for shares worth Rs 5 lakhs. The capital outlay on the project is estimated at Rs 70 lakhs. The proceeds of the present issue amount to Rs 40 lakhs. The balance of Rs 30 lakhs is to be secured by way of loans from the Bihar State Finance Corporation and the Industrial Finance Corporation of India, New Delhi. Both these financial institutions have sanctioned the loans aggregating Rs 30 lakhs to the company.

Technical assistance has been arranged with Messrs. Kinsho Mataichi Ltd., Japan, who will also supply the requisite machinery. They have agreed to lend technicians to run the factory for a minimum period of two years. The paper industry using rice-straw as raw material is well developed in Japan. Hence, technical assistance has been obtained from that country.

The company's plant is favourably placed so far as the raw material is concerned. Bamboo, which forms the basic raw material for most of the existing units in the country, will not be utilised in the company's plant. Instead, the company's plant will use mainly rice-straw and to some extent sugarcane bagasse. Bihar is the second largest sugar producing State in the country and is also one of the biggest rice producing States. Hence, the raw material needed by the plant will be easily obtained and at cheaper prices. The cost of production of the company will, therefore, be substantially lower.

New Issue Notes:

General Tyres:

The Tyre project of Messrs. General Tyres Limited is progressing with smoothness and promptness. Four technical experts, who arrived from Czechoslovakia, are now busy in finalising the plan and layout for the tyre factory. Fifty per cent of the plant and machinery required for the tyre factory and valued at about Rs 40 lakhs have already been shipped by the collaborators, Messrs. Technoexport, Praha, Czechoslovakia. The construction of the factory sheds and buildings has been taken in hand and the work is progressing according to the schedule. Allotment of shares and refund of application money have been completed.

British Paints:

British Paints (India), Limited has come on the market for raising additional capital in the form of equity shares of Rs 10 each at a premium of Rs 5 per share. The company is a subsidiary of British Paints (Holdings) Limited, UK. The Indian subsidiary has already a paid-up capital of Rs 28.64 lakhs in equity shares. Out of the new issue of Rs 21.63 lakhs, a sum of Rs 2 lakhs has been reserved for subscription by the directors, their friends and the employees of the company. The present issue has not been underwritten.

Indian Bright Steel:

Indian Bright Steel Company Limited has been formed in particular to manufacture bright bars and shaftings. The factory is to be located in Bombay and the required

machinery will be imported from the USA. The capacity of the plant will be 5,400 tons annually. The issued capital is Rs 30 lakhs in equity shares of Rs 10 each. The directors and their friends have taken up 1.5 lakh shares and the balance of 1.5 lakh shares has been offered for public subscription. The plant is expected to be commissioned by the end of this year.

Investment Notes:

Ashok Leylands Limited has announced that the company has established a new record for the production of heavy-duty diesel trucks and bus chassis in December, 1960. The overall production has risen by 42 per cent during the year.

It is learnt that the West Coast Paper Mills Limited has received an industrial licence from the Government to establish a plant for the manufacture of rayon grade pulp. The capacity of the plant is placed at 50 tons per day. The pulp project is part of the company's integrated scheme of expansion involving the increase in the capacity of the paper plant from 60 tons to 125 tons per day.

In Briefs

Alkali & Chemical Corporation has proposed to raise the Ordinary dividend from 9.5 to 12 per cent, taxable, for the year ended 30 September, 1960.

The Bank of Maharashtra Limited has proposed a taxable dividend of 11 per cent (inclusive of Silver Jubilee Bonus of 2 per cent) for 1960 as against 9 per cent for 1959.

Premier Automobiles Limited has declared a taxable dividend of 9 per cent for the year ended 30 June 1960 the same as previously.

The State Bank of Travancore has announced a dividend of 5 per cent for 1960.

Balance-Sheet Briefs:

The working of the Central India Spinning, Weaving & Manufacturing Company Limited has resulted in a loss of Rs 8.93 lakhs for the year ended 30 June 1960 as against a loss of as much as Rs 52.69 lakhs for the previous year. The dividends, both on the Ordinary and Preference shares, have been passed over.

The working of Bharat Bijlee Limited has resulted in a profit of Rs 72,778 for the year ended 30 June 1960 as against Rs 1.47 lakhs. The dividend is proposed to be passed over.

Indian Bank Limited has been able to report an increase in the net earnings to Rs 40.24 lakhs for 1960 from Rs 36.84 lakhs for 1959. A final dividend of 5 per cent with a bonus of 2½ per cent, taxable, is to be paid. This makes a total of 15 per cent, taxable, for the year (same as previously).

The Nelliampathy Tea & Produce Company Limited has made a higher net profit of Rs 3.69 lakhs for the year ended 30 June 1960 as against Rs 1.77 lakhs for 1958-59. The Ordinary dividend is 10 per cent, taxable

STOCK EXCHANGES

Marked Recovery After Initial Recession

Watch-Dog Writes:

ALTHOUGH stock markets have remained dull and inactive during the major portion of the week, the news of the Reserve Bank having relaxed the restrictions on bank credit has induced a smart recovery in prices towards the close. Turnover, however, remains restricted due to the reluctance on the part of operators to extend commitments in view of the Budget uncertainties.

After initial recession, equities on the Calcutta Stock Exchange staged a smart recovery in values although the undertone remained still hesitant.

Despite scattered realising at the higher levels, the closing tone on the Bombay Stock Exchange was steady.

On the Madras Stock Exchange, business continued to be restricted and buying was of a selective nature.

Madras

CONDITIONS on the local stock exchange remained generally dull during the major portion of last week and, in the absence of any incentive, operators were in no mood to enter to commitments in view of their anxiety with regard to the forthcoming Central Budget. There was a general fear that most of the burden of additional taxation, to be raised during the Third Plan, would have to be borne by the private sector.

It was also thought that, money conditions being tight and the high interest rates now in force, there would be less chance for the speculators to gamble any more with borrowed funds. Again, support from investors was completely lacking as it seemed that the investors were mobilising their resources for subscribing to the spate of new issues which were and are being announced. It was felt that the attention of the investors would be concentrated on the new issues than on the existing shares. With the result, prices tended to ease on steady liquidation. But for the relaxation of restrictions on bank credit, the market would have recorded still lower levels for the week.

Dull conditions continued to prevail in the Gilt-edged market, stringency being partly responsible. Institutional support was totally absent, while interest from other sources was limited to only

short-dated issues. There was, however, a slight recovery towards the close following the Reserve Bank announcement. 3 per cent 1986 Conversion Loan changed hands at Rs 74.47 to Rs 74.70, to finish the week at Rs 74.53.

Bank shares continued to be neglected as it was feared that the recent move to curtail the working hours might accentuate further production costs of the industry, when its profitable working had already been impaired by the very high price ruling for the raw commodity. Howrah were on offer at Rs 19.87 to Rs 20.06; Ganges at Rs 10 to Rs 10.25; Megna at Rs 11.12 to Rs 11.25 and New Central at Rs 19.87 to Rs 20.44. India were, however, enquired up to Rs 15 from Rs 14.56 with Barnagore changing hands at Rs 118 to Rs 119.50.

Coal shares came in for selective enquiry, being influenced by the belief that foreign aid might be offered for expansion plans, especially for those companies aiming at increased production of superior grades of coal. Higher levels could not, however, be retained till the close due to lack of follow-up support. East Indian were at one time taken up to Rs 31.50; Central India up to Rs 11.69 and Burrakur up to Rs 18.81, to finish the week at Rs 31.37; Rs 11.44 and Rs 18.62 respectively. Western Bengal were a steady feature at Rs 7.75 with New Bearbroom having support up to Rs 28.12 from Rs 27.62 following the announcement of a right issue at a premium of Rs 4 per share in the ratio of four shares for every five shares held.

Although dealings in the Tea section were few, selected shares remained generally steady with price movements confined to a narrow range. There was, however, a general disposition to await the profit figures of the various gardens for last year. Dhelakhat changed hands at Rs 21.94 to Rs 22.06; Hasimara at Rs 21.44 to Rs 21.62; Jayshree at Rs 16.25 to Rs 16.44 and Tezpore at Rs 14.50 to Rs 14.62.

In the Sugar section, there was restricted activity. But, prices remained generally firm on expectation of brighter prospects for the industry during the current year. Raza Buland met with business at Rs 13.62 to Rs 13.75 and SKG at Rs 13.06 to Rs 13.19. Dyer Meakin met with persistent support up to Rs 27.06 from Rs 26.94.

Selling in the Textiles section seemed to have abated and most of the shares regained the lost ground, thanks to some replacement buying at the recent low levels. Jayshree were taken up to Rs 14.12 from Rs 13.94; Dunbar up to Rs 22.75 from Rs 22.19; Keroram up to Rs 27 from Rs 26.37 and J.K. Rayon up to Rs 14.37 from Rs 13.93.

In the week's dealings, speculative issues were the worst affected due to sustained selling pressure although the announcement by the Reserve Bank with regard to the relaxation of credit induced a re-

covery in prices at the close of the week. After opening at Rs 23.11, Indian Irons improved to Rs 23.19 at which level sustained selling pressure brought down the scrip at one time to Rs 22.96, to recover at the close to Rs 23.13. In sympathy, TEXMACO touched a low of Rs 22.35 from a high of Rs 22.80, closing better at Rs 22.69, Britannia were done at Rs 12.69 to Rs 13.12; Jessop at Rs 19.25 to Rs 19.37 and Indian Galvanizing at Rs 20.19 to Rs 20.31. Marshalls remained unchanged at Rs 4.50 with Kumardhubi cheaper at Rs 5.87 against Rs 6.12.

Miscellaneous issues showed a mixed trend. While some shares staged a smart recovery from the recent low levels on better corporate news, other remained inert on lack of fresh support. The announcement of the increase in dividend from 9.5 to 12 per cent (taxable) caused Alkali Chemicals to spurt to Rs 34.50 from the recent low of Rs 32.81. Rallis India, after ruling firm at Rs 134.50 on expectation of a maiden dividend, eased off towards the close to Rs 132.75 on profit-taking. Angelo Brothers forged ahead to Rs 21.81 from Rs 21.62 following the firmness of shellac prices. Indian Oxygen met with some selling pressure at Rs 39.50 to Rs 39.62 c.d.c.r. following the announcement of a right issue at a premium of Rs 8 per share. Following were the price trends of other shares:

	High	Low	Week's Closing
	Rs.	Rs.	Rs.
Orient Paper	40.50	39.25	40.10

Madras

The general trend in the Madras Stock Exchange this week was easy. Government Securities continued to be stagnant with enquiries only for shortdated scrips. Banks were steady. There is nothing worthwhile to report in public utilities. Sugars were weak, many shares losing several points. Plantings ruled quiet, with teas and rubbers remaining slightly better. Coffee shares remained still in the doldrums, the uncertain outlook still looming large. Textiles continued again to be featureless, the only highlight being Madura which improved by fifteen nP being quoted at Rs 35.00. Around loss was reported in the industrial and miscellaneous section.

Government Securities: Madras Government 1967 4% Loan was available on inquiries at Rs 97.75. Mysore Government 4% 1953/63 Loan was quoted at Rs 101.35, losing 5 nP. Andhra 1969 Loan 4% was quoted at Rs 97.05. Others remained

at the listed prices.

Banks: Indian Bank shares changed hands at Rs 170.50, having gained a rupee and fifty nP over last closing. Indian Overseas remained at Rs 177.50. Pandyan was at Rs 33 and the Punjab National was quoted unaltered at Rs 19.15.

Electric: For South Madras Electric inquiries were made at the unchanged rate of Rs 9.90. Vellore was quoted at Rs 12.90 and West-Coast at Rs 13.10.

Sugars and Breweries: Cauvery lost a couple of rupees at Rs 141.00. Deccan too lost 5 nP at Rs 14.75, EID shed 15 nP at Rs 39.35, India's quotation of Rs 12.65 was lower today by 5 nP and Travancore lost twenty nP at Rs 10.50. United Breweries continued at Rs 125.00.

Plantings: Alageswar's gain of 3 nP was not significant though transactions at Rs 2.38 took place. Blue Mountain was unchanged at Rs 3.94. Chembra lost from its previous rate of Rs 5.55 to be available at Rs 5.50 today. Coffee Lands was unchanged at Rs 18.90 and Consolidated Coffee was quoted ten nP less at Rs 22.25. Connoor Tea shares remained at Rs 27.25. Haileyburia closed at Rs 13.85, fifteen nP less. Kailas with an interim of 10% continued to be available at Rs 5.19. Lucky Valley was another scrip to lose fifteen nP at Rs 13.85. Mysore Amalgamated remained at Rs 5.90. Mysore Coffee also did not change at Rs 5.34 as also Mysore plantation at Rs 2.25. Nemmeny increased slightly to Rs 20.65. Ouchterlony was featureless at Rs 4.55. Pariakaramalai was available at Rs 3.38. Rajagiri was quoted at Rs 19.75, less by 25 nP. Sangameswar was unattractive at Rs 2.25. Stanes Amalgamated was available at Rs 14.78. Midland was transacted at Rs 11.40. T.R. & T. was quoted xd at Rs 9.45. Twyford continued at Rs 17.75.

Textiles: Bangalore Woollen and Buckingham were of the same price at Rs 196.50 each. Coimbatore Cotton lost over two points at Rs 158.50. Coimbatore Pioneer also lost three rupees at Rs 344.00. Dhana-lakshmi's Rs 216.00 today was less by four rupees than its previous closing. Lakshmi was unchanged at Rs 148.00. Madura was better at Rs 35.00. Pankaja Mills was available a rupee less at Rs 63.00. Rajalakshmi also went down to Rs 72.00. Travancore maintained its rate at Rs 32.50. Vijayakumar's loss was as much as Rs 8.00 being quoted a Rs 82.00.

Miscellaneous: Aluminium Industries was available at Rs 21.95. Ashok Leyland was listed at Rs 7.95. FACTS was unchanged at Rs 9.28. India Cement was weak at Rs 5.83. Indian Steel Rolling was at Rs 10.17 and Mettur Chemical improved slightly to Rs 12.25. Mysore Chemical and Fertiliser was available at Rs 11.85. Dalmia Cement was transacted at Rs 11.25. Rallis was quoted at Rs 131. Seshasayee (Industries) continued at par of Rs 10 and Seshasayee Paper further went down to Rs 4.55. T. Stanes was quoted at Rs 35 and Textool xd was available at Rs 174.50. W. I. Plywoods was available at Rs 244.00 and Tube Investments remained at Rs 291.00.

INVESTOR'S SUPPLEMENT

Equities Easy in December

TRADING on the stock market during December was on an easy note. In earlier dealings however there had been a revival of interest but the recovery proved short-lived. Almost throughout the second half, prices tended to be lower with business passing at a low ebb. The earlier improvement in sentiment was largely due to the reported indication from the Union Finance Minister that Government were not in favour of a dearer money policy and that there would be no increase in the Bank Rate. That was welcome news to the market because it had been apprehended that an increase in Bank Rate would come sooner or later. As a matter of fact rumours of an increase in the Bank Rate were heard at regular intervals during the past few months. Although an earlier belief that an increase in the Bank Rate would come soon after the completion of Government's loan programmes had been falsified, the anxiety in that regard continued to persist. The reported indication from the Union Finance Minister that Government were not considering any increase in the Bank Rate was, therefore, greeted with expansion of activity in the stock market. There was also another factor that was favourably influencing sentiment at that time. That pertained to the recommendation of the Select Committee on the Preference Shares Bill. The Bill proposed that in the case of preference shares which were free of income tax i.e., the stipulated dividend on which was being paid without any deduction on account of income-tax payable by the company the stipulated dividend should be increased by 25 per cent. In the case of preference dividends subject to tax i.e., the stipulated dividend of which was being paid after a deduction therefrom on account of income tax payable by the company, it was proposed that the dividend should be increased by 7 per cent. The Bill was referred to a Select Committee with instructions to report by December 5. The Select Committee recommended that the amount of dividend payable in respect of tax-free preference shares be enhanced from 25 per cent to 30 per cent and the dividend payable in respect of preference shares carrying a taxable dividend from 7 per cent to 11 per cent of the stipulated dividend.

The enthusiasm generated by the favourable news regarding preference dividend and Bank Rate, however, did not last long as the subsequent weeks revealed several adverse influences at work in the investment situation. A redeeming feature during the early part of the second half of the month under review had been the comparative steadiness of the Coal section where many selected shares

continued to change hands at higher prices on the hope that Government might seek the cooperation of the private collieries in attaining the Third Plan coal target. It would appear that the Union Finance Minister's reference to certain restrictions which might be placed on established companies

companies raised fresh capital or started new ventures. Mr. Morarji Desai was further reported to have said that Government were not in favour of one company being in control of a number of units engaged in diverse lines of production. The new restrictions if implemented would considerably di-

when they wanted to raise fresh capital. He was reported to have told the Informal Consultative Committee of Parliament on Finance that it was Government's policy to insist on a premium being charged when established

minish the interest evinced in new issues by investors as also impair investor confidence in old established concerns which were generally in demand due to their expansion of activity not only in their traditional line but in new lines.

Investors also did not derive much encouragement from the Union Finance Minister's speech at the Associated Chambers of Commerce later in the month. There were no startling pronouncements but there was nothing that could engender the hope that there might be some tax relief in the next Central Budget. On the other hand, he had said that the burden of taxation in India was not excessive and had expressed the view that the correct way to assess the burden of taxation would be to consider the rates of taxation together with the various fiscal concessions offered to encourage investment.

What really depressed the stock market in the speech, however, seemed to be something else. Mr. Desai's reference to the foreign exchange position and import of industrial raw materials and components was not conducive to enthusiasm as regards the outlook for equities. The position, according to him, was that for new development the country was dependent on external credits and aid funds while for the supply of raw materials to industry, the country was almost entirely dependent on its own earnings. That amounted to saying that unless export earnings increased sizably the chances of running existing industries to full capacity were slender.

In the absence of fresh incentives and due to a large number of uncertainties in the investment situation, the holidays toward the close of the month and the continued stringency in the money market also exerted their influence on sentiment to make the undertone at the close of the year rather easy.

Sectionwise, jute shares were an easy market in view of the continued complicated situation in the industry. On one hand production had been reduced, while on the other the industry had been greatly handicapped by the continued high prices for raw jute. The RBI decision to reduce the supply of bank credit to the industry was another adverse factor. Earlier in the month some selected shares were in request presumably on the belief that some companies were not much affected by the raw jute shortage by virtue of their good stock position; but by close of the month the entire section became dull as indications were that most of the mills were experiencing acute shortage of the raw material.

Coal shares were a steady market throughout the month. The revival of interest in the section stemmed from the general belief that sooner or later Government would have to invite private collieries to the common task of increasing the supply of high grade coal in the country.

STEEL PRODUCTION SOARS BY 173% AT MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58	1958/59	1959/60	
	(Rs. in lacs)

WORLD OF FINANCE

Results for 1960, and Prospects

GREATLY enlarged profits and higher dividends are highlighting the banking year that has just ended. We cannot hide our sense of dismay in this regard. For, what seems to have been forgotten is that the profits for 1960, in much the same manner as the earnings for 1956, have been enabled by gross over-trading. The absence of the slack season in both the years, it will generally be admitted, is the most important reason why banking profits have shot up. In such a view, the profits are fortuitous profits; in a normal year, when the ratio of Advances to Deposits is not stagnant at a high level, the profit earning capacity of banks has been found, as the period from 1957 to 1959 has clearly showed, to be satisfactory—but by no means sensational.

We admit that, during a period when industrial shares have with scarcely an exception been rising steadily, bank shares have not fared well. We concede the necessity for banks to make their shares more attractive to the investor, so that, in due course, they can approach the market for rights issues of capital in order that the glaring disparity, existing today, as between the paid up capital and the level of Deposits can be corrected. But, surely, the 1960 profits cannot be the yardstick for measuring the bank's earning capacity. Indeed, it may be that the published results, by taking to the accounts the whole of what may have been windfall profits, may amount to a serious misrepresentation of the actual state of banks' profitability. Is there any guarantee—is there even the prospect, that banks will be able to report results that are as good for 1961?

Frankly, we doubt it. For, it has to be borne in mind that the bumper 1960 profits—which we had fully foreseen, but which we had hoped would have been utilised to buttress inner reserves, and not for the payment of higher dividends—were made possible besides by two other factors. Firstly, the inter-bank agreement on maxima of rates of interest payable on Deposits has been in force. Secondly, the Reserve Bank by directive has ensured that banks' earnings on Advances have risen all along the line, from some time in September, by 0.5 per cent. Expenditure has been held down, earning capacity has been improved. No doubt, both these factors should also be at work in the circumstances of 1961. But, in fact, will they? And will banks, as in 1960, find their resources fully extended throughout the year?

As we say, we doubt it. First of all, the pressure on interest rates is upward, and it is always easier to pay more for Deposits than to charge more of constituents. Most important, it is unlikely that the slack season is again reported missing. For, the spurt in industrial production that we have witnessed during 1960, because projects begun during the Second Plan began to pay off in the way of commencing productive operations, is scarcely likely to continue in 1961—at least with the same momentum.

Another reason why it is unpolitic for the banks to have reported profits grossly higher, lies in the impending study of the wages of banking labour by the Tribunal. For, on present and normal and strictly banking profits, banks cannot afford an increase in banks' bills for salaries and wages. The implication of the 1960 results will, unfortunately, be that banks are earning more and can therefore pay more. They can't, the implication is quite wrong, the 1960 profits were adventitious. But will the Tribunal and banks' labour unions be convinced by such arguments?

Inexorable Busy Season Pressure

Busy season pressure continues to be inexorable. The returns of the Reserve Bank for 13 January disclose further expansion of currency; and the latest figures of both the State Bank and of Scheduled Banks reveal a considerable increase in bank credit.

During the week ended 13 January, active Note Circulation has risen by Rs 19.47 crores to Rs 1920.72 crores. There has been an outflow of Rupee Coin for nearly Rs 1 crore. Currency has been expanded for Rs 5 crores against Rupee Securities by transfer from Investments in the Banking Department. In the result, the Reserve Bank's cash in the till has been drawn down from Rs 16.39 crores to Rs 10.93 crores.

The return for the Banking Department suggests payments made by the Centre to the State Governments. The Centre's balances stand reduced by Rs 8.67 crores at Rs 51.04 crores. The State Governments, on the other hand, report an increase of Rs 11.42 crores to Rs 18.42 crores in their Deposits. Reserve Balances of member banks are lower by Rs 6.06 crores at 78.61 crores, and this can be ascribed to the busy season pressure experienced by the banking system.

The Reserve Bank's portfolio of Treasury Bills purchased and discounted is sharply higher by Rs 16 crores, and this may be connected with the disinvestment to the tune of Rs 15 crores reported by the State Bank in the relevant week. Other Loans and Advances are practically unchanged. With Investments lower by Rs 10 crores, it is possible that the Centre may have cancelled ad hoc Treasury Bills for Rs 5 crores. Balances Held Abroad are fractionally lower at Rs 19.47 crores against Rs 19.61 crores.

The return of the State Bank for 13 January reports a sharp rise of Rs 8 crores to Rs 247.80 crores in the total of Advances. It is also possible that the fall of Rs 6.21 crores to Rs 565.86 crores in Deposits is owing to busy season pressure. The State Bank has been compelled to disinvest in gilt-edged for Rs 15 crores. With Borrowings practically unchanged, Cash in hand and with Reserve Bank is lower by Rs 1 crore odd at Rs 18.07 crores.

The return of Scheduled Banks for 6 January is notable for the further sharp expansion in the total of Advances. In the latest week, the rise has exceeded Rs 19 crores, and the total of Advances is now placed a shade under the Rs 1200 crore mark at Rs 1199.85 crores. There has also been a fall in Deposits excluding borrowings from banks, with net Demand Liabilities declining by Rs 3.27 crores and net Time Liabilities by over Rs 5 crores. By running down balances with the Reserve Bank sharply—the relevant item has fallen

from Rs 112.15 crores to Rs 83.93 crores—the Scheduled Banks have been able to reduce indebtedness to the central banking institution by Rs 8.03 crores to Rs 53.45 crores. The gilt-edged portfolio, owing to purchases by the State Bank, is higher by Rs 10 crores.

Bank Profits

STATE BANK RESULTS:

DISTRIBUTION OF PROFITS—1960		Rs.
Net profits for the year	..	217,58,900
Brought forward from last year	..	55,87,500
		273,46,400

Dividend to Shareholders at the rate of Rs. 22.75 per share, subject to deduction of tax (made up of Interim Dividend at the rate of Rs. 10/- per share—Rs. 56,25,000 and Final Dividend at the rate of Rs. 12.75 per share—Rs. 71,71,875)	..	127,96,875
Transferred to Reserve Fund	..	25,00,000
Transferred to Pension Funds	..	7,29,000
Bonus to Staff	..	42,00,000
Transferred to Staff Welfare Fund	..	5,00,000
Transferred to Staff Co-operative Housing Fund	..	10,00,000
Carried forward	..	56,20,525
		273,46,400

The Profit of the Bank of India Limited for the year ended 31 December, 1960, after making the usual provisions for contingencies and subject to audit, including the sum of Rs 12,47,743.19 brought forward, amounts to .. Rs 1,15,84,842.08

Provision for Income Tax and Super Tax will absorb	.. Rs	25,00,000.00
Interim Dividend at the rate of 7.50 per cent subject to deduction of tax at the prescribed rates for the half-year ended 30 June, 1960, absorbed	.. Rs	22,50,000.00
The balance available for distribution is Rs 68,34,842.08.		
The Directors propose to pay a final Dividend at the rate of 12.50 per cent subject to deduction of tax at the prescribed rates making 20 per cent for the year	.. Rs	37,50,000.00
and to Carry Forward, subject to the payment of a bonus to the Staff	.. Rs	30,84,842.08
Total	.. Rs	1,15,84,842.08

The net profit of the United Commercial Bank Ltd for 1960, after taxes, subject to audit, including the sum of Rs 1,04,095.80 brought forward from the previous account amounted to Rs 68,46,870.98. The Directors have transferred Rs. 30,00,000 to the Reserve Fund, raising it to Rs 2,05,00,000 and provided Rs 13,00,000 for bonus to staff. In respect of the balance amount the Directors propose to recommend to the shareholders at the next annual general meeting the payment of a dividend of 12 per cent (i.e. Rs 6 per share) less tax at 30 per cent, which will absorb Rs 24,00,000, and to carry forward to the next account the balance of Rs 1,46,870.98.

Comparative figures for 1960 and 1959 are as under:

	1960 Rs	1959 Rs
Net Profit	67,42,775.18	60,41,998.24
Brought forward from previous account	1,04,095.80	62,097.56
Amount available for disposal	68,46,870.98	61,04,095.80
Appropriations:		
Reserve Fund	30,00,000.00	27,00,000.00
Bonus to Staff	13,00,000.00	11,00,000.00
Proposed Dividend	24,00,000.00	22,00,000.00
	(12 per cent)	(11 per cent)
To be carried forward	1,46,870.98	1,04,095.80

Treasury Bills

TENDERS for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 17 January 1961. Total amount offered was Rs 2,30,00,000. Tenders at Rs 99.355 were allotted approximately 87 per cent. Total amount accepted was Rs 2,00,00,000 the average of accepted tenders being Rs 2.580 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Kanpur, Nagpur, Madras and New Delhi up to the close of business on Monday 23 January 1961 and at Calcutta up to 11 A.M. on Tuesday, 24 January 1961. Successful tenderers should make payment on Friday, 27 January 1961. Other conditions are as usual.

During the week ended 13 January 1961 Government of India Treasury Bills for Rs 236,16,25,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 18 to 21 January 1961 at Rs 99.371 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills during the period 11 to 14 January 1961.

Hire Purchase Restrictions

By Paul Einzig

THERE is a growing pressure on the Government in favour of the removal or relaxation of the restrictions on the terms of hire-purchase agreements. It is argued that such a move would revive the motor industry and other consumer durable goods industries, which are under the weather, and that full activity of such industries would greatly increase the total output and reduce the cost per unit of the output.

The Government does not show so far any signs of yielding to the pressure. It is feared that, since there are indications of increased activities in the capital goods industries, a re-

vival of the demand for consumer durables would mean an inflationary overload on the economy. Moreover, most consumer durable goods are suitable for export, and it stands to reason that continued difficulty in expanding the home market would induce their producers to concentrate on expanding their overseas markets. If we should revert to the "we never had it so good" state of affairs at home, manufacturers would be tempted once more to call off their export drive and take the line of least resistance by selling more at home.

Nor is this all. Recent experience disclosed widespread misuse of hire-purchase facilities. Until recently it has always been argued that the hire-purchase system had withstood the tests of the pre-war depression and post-war recessions remarkably well and the proportion of the defaults was negligible. That argument can no longer be used. Some of the hire purchase finance companies suffered grave losses in recent months as a result of their careless attitude in passing applications without due scrutiny. It is arguable that a period of consolidation should precede any encouragement of a reexpansion of hire-purchase.

Moreover, continued restraint on the motor car industry, and to a less extent on other capital goods industries, is needed in the interests of a sounder re-allocation of labour. Those industries have absorbed an unduly large proportion of manpower, leaving many other sections of the economy short-handed. A prolonged recession in the consumer durable goods industries would divert much-needed manpower to where they are required, instead of being "hoarded" on a three-day week. It is also necessary to make the workers realise that higher earnings in these industries have to be paid for in the form of less security of employment. It is because in recent years the highly paid jobs in the motor industry had come to be regarded as a hundred per cent secure that industries which are unable to pay such high wages were unable to maintain adequate manpower.

Possibly if restrictions continue long enough the trade unions may even realise that when an industry is doing badly they must consider the possibility of a reduction of wages from the high levels to which they had been raised when the industry was bursting with prosperity. Already there is some talk in the motor industry about a downward revision of piece work rates. But it will be long before workers come to realise that they cannot expect boom pay amidst recession. The fact that ship-building employers have just been forced to concede to their employees a 4½ per cent increase, in spite of the depressed state of that industry, shows the need for education in elementary economics. Unfortunately, such education cannot be gained from text books, only through bitter experience.

Third Plan Outlays

THE decisions of the National Development Council on the final shape of the Third Plan outlays, or rather the terms in which these have been presented to the public, appear to have created an impression that, in the course of prolonged discussions that have been going on since last September, the letter "R", standing for rationality, has dropped out of the Draft Outline. The Council, it has been reported, has approved programmes of the States and the Centre, to be included in the Third Plan, entailing a total outlay of Rs 8000 crores. An outlay of this order will satisfy the demands for increasing the size of the individual State Plans to the level agreed to in earlier discussions with the Planning Commission. But, at the same time, it has been made clear that the financial limit at present should be placed at Rs 7500 crores, of which the States' share will be Rs 3725 crores which is Rs 122 crores short of the outlays agreed to in earlier discussions. The parallel sets of physical and financial targets have created confusion which could have been avoided. And unless it is dispelled, it may engender a cynical attitude frustrating all efforts to generate popular enthusiasm necessary to mobilise national resources for planned development.

There will be no room for misunderstanding if it is understood that lack of correspondence between the physical target, that is to say, the sum total of the costs of different development programmes representing the requirements for ensuring a steady rate of development, and the resources presently available is inherent in any scheme of democratic planning. In fact it is this lack of correspondence between requirements and investible resources that justifies resort to the expedient of centralised direction of the development of the national economy. If sufficient resources for development were ready to hand, there would not be the same necessity for centralised planning. Moreover, in planning it is essential, as the Prime Minister emphasised at his latest press conference, to keep in view the long term perspective. Planning is a continuous process and more so in the vital fields of industry, transport, scientific research, technical education, to mention just a few. Many of the projects in what may be called the 'plan core' have long periods of gestation, extending beyond the five year period for which plans are drawn up. For instance, the programme for meeting demand for steel in the Fourth Plan will have to be initiated in the Third. If the cost of the Plan drawn up in this way exceeds the available resources at any period, it will point to the necessity of stretching out the Plan, but not for scrapping it.

Even if the physical plan is drawn up strictly within the limits of resources in sight, the need for this periodical adjustment will remain and will arise when the annual plans come up for clearance. The figure of total resources that has been indicated does not represent any fixed sum like a deposit with a Bank that can be drawn upon at will to finance development programmes. They are just estimates based on present indications and past experience of the behaviour of the national economy.

But the impact of development schemes remains outside the range of calculations. But the very process of development changes the pattern of resources, and, if it proceeds on correct lines, may be expected to augment the funds available for further investment. This important aspect must not be ignored when considering the rationality of a scheme of physical outlays in excess of the resources in sight. At the same time it should be borne in mind that unforeseen developments internal or external can react adversely on the availability of resources for plan expenditure. An increase in defence expenditure over the estimated levels or short fall in foreign aid—neither contingency may be ruled out as unlikely—can work havoc with the most cautious targets outlay. The experience of the Second Plan in its ups and downs should be instructive in this context.

The gap between plan targets and resource estimates is not a feature peculiar to the Third Plan. It was there when the Second Plan was formulated leaving a gap of Rs 400 crores. The gap grew wider as the plan progressed and the original target of outlay of Rs 4800 crores, which was nominally raised by another Rs 300 crores, had to be scaled down to Rs 4200 in the third year of the Plan. From present indications it appears that the total outlays will be of the order of Rs 4600 crores which is more than the estimate of resources with which the Plan started. But while the Third Plan only follows the Second in fixing targets at a higher level than the present estimates of resources there is a significant difference in the terminology adopted in presenting the targets and estimates. When the Second Plan was formulated, the difference between the two sets of figures was referred to as the "resource gap". Now there is talk of physical and financial targets, flexibility and what not. Though there is no difference of substance in the two terminologies, the psychological impact on the public mind is evidently of different types in the two cases. The term used in Second Plan discussions suggested a gap to be bridged, while in the case of the Third Plan what is suggested is an insuperable barrier. While the former directed attention to the total outlay proposed, the latter focusses attention on the smaller figure of the financial plan. It is perhaps not without significance that the Prime Minister himself described the financial plan as fixing the limit of spending at Rs 7500 crores in the next five years. It will, therefore, be realistic to suppose that plan programmes will be actually drawn up on the basis of a total outlay of Rs 7500 crores and this will be the figure that will be relevant to the consideration of the distribution of outlays between the Centre and the States and over the different heads of investment.

As far as the Centre is concerned, so far there is no mention of changes in the outlays for different Ministries proposed last September, except for additional provision of Rs 50 crores for certain essential schemes like provision of rail link to Haldia which was left out in the draft Outline. But it may be mentioned that the Planning Commission has not

yet completed discussions with all the Ministries. And the pattern of foreign exchange that is available will also make a difference to the programmes, for roads, ports and railways. In the case of the States, the outlays totalling Rs 3847 crores, to which the Planning Commission had agreed, will have to be reduced pro rata to allow for the reduction in total resources by Rs 122 crores. The axe is likely to fall on projects under the heads Power, Transport and Communications and Social Services. But these are fields where there is considerable scope for economy on further scrutiny of the projects. For instance, power projects of the States, it has been suggested, have been drawn up without taking into consideration the availability of indigenous equipment, so that the foreign exchange component is higher in the case of State projects as compared with those of the Centre. In the field of social services there is room for economy by elimination of overlapping programmes of different agencies in the field. Moreover, the indication given by the States of their ability to raise additional taxation to the tune of Rs 610 crores, in order to raise their total contribution to Rs 1416 crores, shows their optimistic view of prospects of increased revenues. Though the States contribution to their plans has now been fixed at Rs 1350 crores to the total of Rs 3700 crores, if their appreciation of the buoyancy of the national economy is justified by events, there is nothing to prevent them from raising additional resources to achieve the higher targets of outlay that have been retained in the physical plan.

The Development Wing in 1959-60

THE annual report of the Development Wing of the Ministry of Commerce and Industry for 1959-60, just released, contains a wealth of useful information regarding the various aspects of industrial development. The Development Wing has been in existence since 1951. Its main function has been to assist and advise the Ministry of Commerce and Industry to formulate industrial plans in the private sector and to study and prepare technical data for projects in the public sector. It is the Wing's responsibility to formulate and execute the development plans of all industries other than iron and steel, textiles, sugar and vanaspathi. It assists industries in the procurement of raw materials, essential building materials, capital goods, fuel, electric power, transport facilities etc. Its advice is sought in connection with the formulation of half-yearly import and export policies; applications for loans from Government as well as the Industrial Finance Corporation; tariff protection; regulation of import and export duties and quotas; training of technical personnel overseas; allocation of pig iron, coal and coke to foundries; steel and cement for private industrial development; and compilation of industrial data.

The Development Wing's annual report for 1959-60 gives an interesting and exhaustive account of the industrial development that has

taken place during the year under review. We are told that not only has there been an impressive increase in production as compared to the preceding year but the manufacture of several new items was undertaken for the first time. The number of such items was 40 and some of them are the following: bright steel bars; chain pulley blocks; seamless steel tubes hand sewing needles; demolition tools, barbed wire making machine; photo-flash lamps; box cameras; urea and double salts; vitamin A and Vitamin B 12; polythene moulding powder; grease-proof paper; coloured sheet glass glass syringes anti-pest finishes; rice bran oil; air compressors; food can lacquers etc.

The report contains a chapter showing a list of items which need further development. These items are in the category of machine tools, automobile ancillaries, industrial machinery instruments and electrical equipment industries. In regard to machine tools, the report says that there are "a huge number of items in this line which are either not produced in the country or produced in insufficient quantities". It is pointed out that we shall have to produce by 1965-66 at least Rs 30 crores worth of machine tools per year against our present output of only Rs 6 crores per year if we wish to cross the hurdle of the shortage of foreign exchange. In regard to industrial machinery also, the scope for development is very vast. While some progress has been made in the field of sugar machinery we are very much behind in regard to the production of paper making machinery, plants for the manufacture of sulphuric acid, caustic soda, soda ash and other chemicals, plant for the manufacture of fertilisers, rotary printing presses, industrial type of flour mill machinery and a host of other items.

As regards instruments, the report says that this is perhaps "the most difficult industry" to be organised in the country. Hundreds of different instruments are imported into the country as a part of complete plants. It is estimated that we shall need at least Rs 15 crores worth of instruments per year during the Third Five Year Plan period.

The report also reviews the work of the various Development Councils—there are 16 such Councils at present; describes the foreign technical assistance made available to several industries and mentions briefly the development programmes for different industries under the Third Five Year Plan. Besides, the report contains statistics showing the number of units, installed capacity and actual production of a large number of industries during 1958 and 1959.

It will be thus seen that the report is in many respects an important document which will be of considerable benefit to all those who are interested in India's economic development. It is, however, necessary to invite attention to certain aspects which should be considered by the authorities while preparing the report for the next year. In the first place, there should be no duplication between the report of the Development Wing and the annual report of the Ministry of Commerce and Industry. The latter is published usually at the time of the presentation of the Central Budget. We find that a good deal of the material published, in the Development Wing's Report is exactly the same as was published in the Ministry's annual report. It will be helpful if such duplication is avoided and the Development Wing's report is used to supplement that of the Ministry.

Secondly, while giving statistics for production and installed capacity, it will be useful if the causes for the gap between output and capacity (where it is very wide) are also briefly mentioned.

Thirdly, it will perhaps be desirable to indicate in the report to what extent the Deve-

lopment Wing is assisting the dispersal of industries from the point of view of balanced industrial development.

Fourthly, it is wholly unnecessary to mention in the report the progress made in regard to Hindi teaching for the employees of the Development Wing. Nearly a page is devoted for this purpose showing the number of officers of various categories who have passed examinations in Hindi. The public at large are not interested to know what progress the officers have made in mastering Hindi. It would be far better if the Development Wing's report concentrated on giving only such information as is really useful and which is not available elsewhere.

Rice Production and Trade

The overwhelming bulk of the world's rice crop is grown in Asian countries, China, India, Pakistan, Japan, Burma, Ceylon, Indo-China, Indonesia, Thailand and Malaya, all contributing their quota big or small. Mostly under small scale cultivation and largely exposed to the vagaries of climatic conditions, the rice crop in these countries has its ups and downs in production. The War and immediate post-war years victimised the rice crop in more ways than one, though subsequently there has been almost complete recovery and great strides in development as part of the general development of the national economies.

India contributes nearly one-third to the total world (excluding China and U.S.S.R.) production of milled rice. In 1958-59, India produced over 30 million tons. The other leading producers of rice in this continent are Japan with about 11 million tons, Indonesia with over 7.5 million tons, Pakistan with nearly 4.4 million tons, Thailand with about 4.5 million tons, South Viet-Nam produced about 2.5 million tons, Formosa 1.7 million tons, South Korea about 2.3 million tons and Philippines 2.3 million tons. Outside Asia, mainly Brazil produced about 2.7 million tons, U.S. about 1.4 million tons and Egypt about 0.7 million tons.

Burma is the leading exporter of rice. In 1959, Burma exported nearly 1.7 million tons of rice out of a total world export of 5.3 million tons. In that year Thailand came second with about 1.1 million tons, followed by China (as far as the incomplete returns available show) with about 0.7 million tons. The next major exporter was the US with nearly 0.7 million tons.

Over the last quarter of a century there have been significant changes in the pattern of the Asian region's trade in rice. After the loss of Burma and subsequently partition, India became a leading importer. China which used to import rice, has recently started exporting. In Asia just now, the main importing countries are India and Japan. In 1959, total Asian imports fell by about 10 per cent (35,000 tons) over the previous year, but other countries imported more. In 1960 exports have been substantially higher than the previous year till the end of October, though there has been a trend for the exports to look down in the more recent months.

The outlook for rice production in 1960-61 is almost universally good, in spite of the adverse conditions reported in a few areas in Asia. Only in Europe, particularly Italy and Spain, reduced harvests are reported; but the contribution of these countries to world production is negligible.

In India rice production has increased to more than 30 million tons in 1958-59 from

27.1 million tons in 1955-56. Out of the 7 Districts coming under the Intensive Agricultural District Programme 4 are mainly rice growing. Out of the 700 and odd regulated markets now obtaining in India, about 500 handle rice either as the principal or a major commodity. In the Market Intelligence organisation of the Directorate of Economics and Statistics, Ministry of Food and Agriculture, nearly 500 centres cover rice.

In spite of the increase in production in recent years India's domestic supply still falls short of demand. Her annual imports during the last five years have averaged about 486 thousand tons. In the PL 480 Agreement with the United States signed in May 1960 the latter is committed to supply India one million tons of rice during a period of four years. As the country advances towards the Third Plan target, the imports will naturally dwindle and eventually cease. From the world standpoint, it is fortunate that more than one country is trying to step up exports and to find new markets. In India, alongside efforts to increase production there are also systematic endeavours to switch consumer preference from rice to less costly foodgrains and to synthetic substitutes. The elimination of waste through better storage, packing and transport and the supply of more nutritious grains through handpounding and suitable adjustments in milling, also form part of the country's attempt to bridge the gap between domestic supply and demand for rice.

Perhaps the most outstanding contribution to the development of the rice economy of India comes from the 50 and odd Rice Research Stations dispersed all over the country. The biggest station at Cuttack maintains over 3,000 genetic stocks of rice and has developed innumerable cross breeds, many of which have already found their way to regular cultivation.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

Case for Foreign Aid

Recent comments on India's foreign debt and the consequences of planning by the Swatantra leaders go to explain the address of the Finance Minister to students in Madras. The case for foreign aid must, of course, be addressed to countries in a position now to export but the removal of local prejudice against receipt of foreign aid on a large scale must also be undertaken. There is no need to be apologetic, since the rehabilitation of the railways and posts was accomplished by loans from the World Bank. The productive outlay can be measured by the success of our locomotive plants and the wagon-building industry.

The fact that saving in India is not adequate for massive investment is fully accepted by the Government and it is useful to recall that all countries which have developed a large export trade obtained foreign loans and supplemented domestic capital. Germany in the 19th century like the USA was getting British capital and goods in order to transform the economy. And the industrial exhibition, now held in Madras City under the auspices of the S.I. Chamber of Commerce, proves that India has applied capital to advantage, that collaboration with foreign concerns has helped, and

that India is now able to sell abroad new items made here. The steel industry's rapid expansion illustrates how foreign aid is being used though difficulties in operation may arise.

The economics of underdeveloped countries is a special field of study and the process of self-sustaining growth is analysed only to remind the prosperous nations that aid leads to more trade. After Prof. Rostow's essay, it is quite superfluous to discuss what planning involves for the other nations. But it may be noted that all countries expanding industrially have balance of payments problems and seek outside aid to import on a large scale. The co-operation of the USA with Western Europe is taking shape, because it is felt that the Development Loan Fund requires to be supplemented.

Efforts to raise taxes and borrow at home are part of the planning programme and the States have in the last nine years financed development by loans and additional taxes like the Centre. The growth of the private sector with State assistance is mentioned frequently to prove that opportunities have rapidly increased and the export trade too has undergone a big change in recent years, just as in the case of European countries that wish to sell capital goods in return for ores or spices from India. The Congress insistence on peaceful change towards greater equality (not merely in the rule of one man, one vote) is at the back of planning and the political framework must be always kept in view, though the complaint persists that one political party receives all the benefits.

The outline of the Third Plan has been shaped as much by the foreigners' appreciation of both needs and potential as by the running down of the external reserves till November 1960. The planning that depends on a certain amount of external aid is also based on the experience of European countries assisted by Marshall aid. The move towards West European unity has followed and what has been carried out under the Colombo Plan to bring Japan into the economic framework of the future must also be taken into account. The exposition to the students should help to clear the air and convince the State Government that it is their duty to supplement the fiscal measures of the Centre and raise the credit status of the Government by steps towards economy and decentralisation so that rural development can take place to remove popular discontents. The amount of goodwill abroad may help India to run up a surplus of imports and trust to loans and grants but costs here must be kept in check.

Export of Spices

India as an exporter of spices has grown in importance after the

war, mainly because of Indonesia's troubles. Hence the eagerness to levy export duties on pepper sold to the USA at high prices, the ability of tea companies to make up losses by profits on cardamoms, because the USA became the big buyer. Apart from Kerala and Madras being the main producers of spices, the discovery of new export outlets for spices (ranging now from ginger to minor hill produce) or the need for exchange earnings is being emphasised. While producers are asked to grow more arecanuts and to prevent imports, there is also a call to step up copra production in Kerala and Madras. Export Councils are dominated by the idea of autarchy (of course, in a good cause) and if export licensing is free, there is also a clamour for diversification and the prevention of traders' rings that can put the grower at a disadvantage. The first issue of a spices bulletin, devoted to the export trade mainly, is a hint that the minor products are not dependent on the plantation industry and the system of open auctions (as in the case of tea) is required for keeping prices stable.

The cut in imports has forced up prices of all spices, and home consumption is reduced automatically. The Export Council is keen as mustard (to produce a local substitute for Colman's famous mustard) and hopes to build up a big trade in condiments. But Indian prices are held to be high in the case of chillies, and Burma seems to prefer Singapore to Madras as a centre for purchases. The loss of the Pakistan market must be made good soon, and one must also take note of import restrictions in countries like Iran which are going through an economic crisis like India. The Spices Council does not yet seem to have established close contact with the Kirana merchants who know the trade best and are aware of new rivals like Syria or Morocco. Of course, spices are valuable and India must export some form of home grown food or drink, because she is importing a lot of grains. But the chances of selling more abroad depend on reasonable prices at home even if small growers always want high prices for export items like lemongrass oil for which the demand from drug and perfumery trade is constant. Ceylon will not lag behind India, and one point to bear in mind is that if India buys less from Ceylon or Zanzibar, her own trade in textiles or other manufactures will suffer as experience has shown. Variety is the spice of foreign trade and India cannot lean on the pepper vine or the cardamom creeper.

City Manager

Ratepayers who do not want the right to vote but stick out for efficient administration will approve the plea for a City Manager in Calcutta. The American idea

is fairly old: civic democracy is suspended and elected representatives are replaced by a paid full-time expert. Experience of mud-dle and graft over years forced many U.S. cities into choosing alternatives and Galveston came out with a plan: so did many towns in Wisconsin. All were concerned with the removal of City Councils for the sake of good clean administration and, of course many towns reverted to the old familiar election pattern after the clean-up by the City Manager.

The Citizens Committee in Calcutta realises that supersession of the Corporation is involved in the plea and the only thing is that the City Manager would be picked not by the State Government but by the City Council which goes out or submits to an election held for its own terminations. The idea will appeal to gas and water socialists who know that inquiries have resulted in no raising of standards and have aggravated civic lapses and struggles for power. The plea for a non-partisan expert may lead to higher taxes and strict conventions. That is a risk to be taken if big loans for reforming and improving Calcutta are to go through with U.S. aid as expected by many. The public will be more confident and sensible if a business administration is put in charge, but Calcutta would be a dull place, if efficiency were exalted. The citizens of Calcutta can submit a memorial and hope for the best soon. But what may be needed readily is Government action to abolish civic elections and to raise the level of taxation to suit current needs. But all parties must be ready to put the expert in charge and clean up the staff before the C.M. plan is adopted.

STATES NOTES

Brighter Year for Assam

News of the oil find at Rudrasagar in the Sibsagar district has been received like a new year gift by Assam. This however would seem to be only one of the developments that foreshadow a bright year for the State in the matter of industrialisation.

Among the important schemes for which the new year hold prospects are the industries that would be started utilising the Naharkatiya gas. In an interview with pressmen, Mr B. P. Chaliha, Chief Minister of Assam disclosed that necessary permission has already been given by the Central Government for these industries, which will be started with State participation in share capital. The completion of the Nunmati oil refinery should also open new vistas for industrial advance for the State. The construction works on the refinery and the laying of the Bridge over the Brahmaputra river are reported to be progressing satisfactorily.

Another line of industrial progress would be in the direction of setting up paper mills to utilise the abundant bamboo resources of the State. A bunch of paper mills is already on the approved list and the smaller of them would be completed in the course of 1961. The cement factory that fell through in the middle of the negotiations with the Czechoslovakian Government will be taken up again on the basis of Rumanian cooperation for machinery supply. Negotiations are being carried on with the Rumanian Government on this subject.

What really holds the key for the industrial progress of the State is the supply of power in adequate measure to sustain accelerated growth. Hope is pinned on the completion of the two hydel projects namely, the Umaiam project and the Kopili Valley project. The Umaiam project was inaugurated last year by the Prime Minister and is expected to be completed by the end of the current year.

Oil Pipeline

The construction work of the 720 mile pipeline project linking Upper Assam oilfields with the refineries at Nunmati in Assam and Barauni in Bihar is progressing at a satisfactory pace. Disclosing this at a press conference held in New Delhi early this month, Mr M. J. Condon, the Chairman of the Oil India Limited, stated that the project will be constructed in two stages. The first stage consisting of 270 miles connecting the oilfields and Nun-

mati refinery will be completed by the end of November this year and the second stage is scheduled to be finished by the end of 1962. Mr Condon informed the pressmen that there would be three spreads working simultaneously in three different parts of Assam to lay the pipeline and each spread was capable of completing one and a half miles per day. The first spread would operate to the west from Naharkatiya, the second would work in the east and the third would be from Badulipar to Sekoni in western Assam.

The capacity of the system according to the present calculations will be to convey 2.75 million tons of crude oil per annum from Naharkatiya fields to Nunmati and two million tons from there to Barauni. But the system has been designed in such a way as to allow for further expansion in future when the need arises.

It may be noted that pipes for the construction of first stage have been imported from the United Kingdoms but the requisite pipes for the completion of the second stage will be supplied by the Hindustan Steel from their Rourkela plant.

Undertaken as a joint venture by the Government of India and the Burmah Oil Company the project when completed will be the most modern in this part of the world.

Honour Satisfied

In the Punjab too the Prime Minister's policy seems to have taken precedence over the local Ministry's measures. The stop put to Akali agitation, and even more, the end of Sant Singh's fast proves that Master Tara Singh is ready only to talk with Mr Nehru as representing the Congress. The crack in States' rights can be ignored for serious trouble has been avoided with the Sikhs by an assurance that the Punjab is a unilingual State with a Hindi-speaking minority, mainly in the Ambala division.

The amnesty ordered will give the Akalis scope to campaign for Punjabi without any shred of violence. The problem remains, but the Akalis will be put on to force the pace in the elections and put up their candidates, now that it is known that Sikhs do not draw inspiration from Communist, Swatantra or other parties. Probably, moves against the Kairon ministry will be initiated though the Chief Minister now hopes that bygones will be bygones.

The Bhavanagar Congress holds one result that can give unqualified satisfaction to the Punjab. The fast has succeeded but other cannot copy Fateh Singh's example, for the Akali leader had behind him moral resources denied to most. The Ministry has not been successful in countering the Sikhs or using the SGPC for mastering the Akalis. The usual reflections on religion in politics or communal

antipathy are cut of place, for the historic ties of the Sikhs with their homeland go a long way back. The Congress cannot carry out a purge and the Opposition cannot hope to secure a new alliance, for the Akalis hope to stand on their own legs, and are not angling for either PSP support or Swatantra approval. The Sikhs' problem remains; it is one of adjustment with the Hindus at present, not of getting on with a coalition managed by Muslims as in 1940.

The Akalis will probably dominate the community on their own record since 1923 and it is vain to ask the Akalis to give up politics, because of the partition of the Punjab. The final adjustment cannot be predicted, but Sant Fateh Singh's life has been saved, and the Sikhs will have no grievance against Mr Nehru whose leadership has again proved crucial for the Congress, not only because Mr Nehru sees the new frontier problem in its true proportions but because he recognises that the Sikhs made real sacrifices in 1947, like the Hindus in Bengal.

Sharing of River Waters

AS to why Mysore State should have special claims on the Krishna waters was argued cogently by the State Public Works Minister, Mr H. M. Channabasappa, speaking at the 26th annual meeting of the Mysore branch of the Institution of Engineers (India).

The decision of the India Government to appoint a high level technical committee as a preliminary step in resolving the Krishna and Godavari waters dispute among Mysore, Andhra and Maharashtra States was welcomed by Mr Channabasappa. He wanted to suggest to the Government to lay down well-defined, broad and fair national policy that should govern the distribution and utilisation of inter-State rivers for power and irrigation.

Distribution of inter-State river waters assumed greatest significance after reorganisation of the States. It was regretful, the Mysore Minister stated, that his State having the highest population, drainage and sown areas and the largest extent of the acute famine areas in the Krishna basin, was denied its rightful share of the Krishna waters. Mysore has 18,000 sq. miles of such arid and semi-arid regions forming 58.3 per cent of the total arid area in the basin. Mr Channabasappa pleaded for consideration of the total population, cultivable area, net sown areas and backwardness of irrigation in each State having interest in the basin.

The Krishna and its tributaries drained in the Mysore State an area of 45,000 sq. miles. Mr Channabasappa stated this was 43 per cent of the Krishna valley from its source to its outflow into the sea. In other words, he stated sixty per cent of the whole of Mysore State lay in the Krishna basin. Mysore's prosperity and well-being, the Minister pointed out, and economic development was dependent upon how best Mysore could utilise what he called its rightful share of the Krishna waters.

By utilisation of the Krishna waters, Mr Channabasappa stated sixty per cent of the State stood to gain and the rest of the State would derive the benefits indirectly.

Further giving figures in support of Mysore's claim on the Krishna waters, the Minister said out of the 45,000 sq. miles of the Krishna basin that lay in Mysore State, about 18,000 sq. miles received less than 24 inches of uneven rainfall annually. In Krishna basin, the State's millions lived in distress conditions and poverty, he said. Mysore had 43.4 per cent of the drainage area in the Krishna basin, Maharashtra had 26.0 per cent and Andhra 30.6 per cent, he said, adding that Mysore had 39 per cent of the population living in the basin, Maharashtra had 29 per cent and Andhra 32 per cent. Mysore had 48 per cent of net sown area, Maharashtra 29 per cent and Andhra only 23 per cent.

Cooperative Farming

Shriman Narayan member, Planning Commission, said in Hyderabad recently that the Government of India and the Planning Commission attached the greatest importance to the proper organisation of the 320 pilot co-operative farming units during the Third Plan. Co-operative farming, he declared in his valedictory address at the All-India Seminar on Co-operative Farming at Rajendra Nagar, was not the fad of any one leader or political organisation. It was a rational method, he pointed out, to organised way of maximising agricultural production of the millions of marginal and sub-marginal farms throughout the country.

The fortnight long Seminar was declared open by Mr S. K. Dey, Union Minister for Community Development. Participants in this seminar also included workers at the co-operative level besides officials from States.

Necessary funds would be made available to other existing co-operative farms besides the 320 contemplated in the next Plan. Mr Narayan said and added that the States had been asked to send their realistic estimates for new co-operatives that they proposed to form during the Third Plan. Mr Narayan also declared that after the success of the pilot projects, if co-operative farms were formed with voluntary co-operation of members, these would not be allowed to suffer from want of funds. Hasty formation of such societies should not be encouraged and if initially quality was kept in mind then Mr Narayan thought the co-operatives could carry on without much of State assistance.

Mr Narayan also warned that farmers joining the scheme should not exploit the situation and take advantage of Government financial aid in an unfair manner. It had been brought to the notice of the Government that families split their landholdings to obtain Government help substantially. Only small farmers showing genuine interest in co-operative farming should come together to form co-operative farming. Shriman Narayan wanted to expose bogus co-operative farms which were formed, he believed, just to escape the land reform laws.

FOREIGN NOTES

Trouble in Belgium

Expenditure on social services often becomes an inflammable political issue and British Labour's hostility to the Means Test was a sign that Labour Unions always swear that what they have, they will hold. A parallel situation in Belgium has arisen over M. Eyskens' austerity programme. Increase in direct taxation is a plank, so is an increase in working class contribution to the funds maintained for social welfare on behalf of the State. But for three weeks on end, riots have been staged and the Ministry has been elbowing out by the King who has to placate the Flemings in the north against the French-speaking Walloons in the south. The breakdown of public services in some cities was an occasion for Royal intervention. Only sympathetic donations to the strikers have been offered from abroad and the Belgian crisis has not been internationalised, to adopt a new phrase of our day.

Basic reason for the Catholic-Liberal Ministry's policy is the impoverishment of Belgium after the loss of the Congo. The same may explain the alleged intervention in Katanga's affairs to encourage secession. The fact that Belgium had a royal crisis after the war, forcing Leopold III off the throne may be cited to prove that the tradition of disorder is deeprooted among the miners who are the backbone of the Socialist party in opposition to the Government.

Parliamentary Government is challenged by industrial democracy which forgets that the loss of empire means fewer benefits. And the Common Market will bring fewer gains if the tide of unrest flows strongly, Belgian currency was reformed and the uracity of the Congo helped the small country to get second wind by 1948. But the position is gravely compromised as overseas capital has been liquidated and brought to Swiss and German centres not to Belgium for local investment. Capitalism is not to be held wholly blameless for the Unions might argue that all the money should come home to patch up the economy rapidly. This has not taken place and the difference between Holland and Belgium will not be overlooked by Socialists controlling the big unions.

The civil commotion in a country that is inspired by French ideas of political action may not be peculiar but the danger to major heavy industries now is apparent. The Church cannot do much to

still discontent. The USA will probably be annoyed that the fulcrum of NATO is in danger from strikes and the King cannot easily play the role of a de Gaulle and call for a plebiscite to break the unions and call the parties to heel. The distinction between the Christian Democrats and the Socialists is now made sharper by the events in Belgium, and if one cannot look for a new version of Fascism, there is little chance of the Socialists coming back to power, since Achille van Acker is not there to lead them.

Clear Victory

Gen. de Gaulle's success in the latest referendum was not at all unexpected. Of course, his visit to Algeria was not a triumph but the voting figures are enough to prove that "le grand Charlie" knows the people's mind. The next step is to get in touch with Ferhet Abbas and to secure consideration of the offer of self-government. M. Soustelle is sceptical because he is out of office, but the USA hopes to see the Algerian issue settled soon and the Communist Bloc prevented from establishing a bridgehead in North Africa.

The French President's power is reaffirmed by the people and there will be no crisis to cloud the prospects of a Summit meeting. That is a real gain for Anglo-American entente. Mr Sandys in Delhi might point with satisfaction to the outcome of the French President's offer to Algeria when the French settlers have also made their submission to de Gaulle. The great majority in France look for an end of the prolonged troubles by some arrangement similar to the Anglo Irish Treaty of 1922. There may be bases in Oran or other places, once the FLN agrees to accept the substance of Algerian independence without waiting for a lead from Colonel Nasser.

The safeguards for the settlers should not irk the leaders in exile, mainly because they are mostly the products of Parisian education and Algerian nationalism is derived not from Cairo, but from the Faubourgs. The cultural ties then are likely to help in a settlement if the offer of autonomy is looked at with the unprejudiced eyes of M. Habib Bourguiba. It will not be surprising, if the Tunisian plan for union now is revived to help an Algerian settlement that will tie North Africa to the French Community in commercial and other matters though the freed Syrian republic may have joined Egypt. The problem for France is not one of getting wheat or wine but of controlling oil supplies from the Sahara and Algeria will not be a poor country if the American oil companies pay well for pipeline facilities. The rise of Nigeria to independence may not be without influence on Algeria which might also draw conclusions from unhappy, but not far-off, events in the Congo.

US Economic Developments

It is much too soon to try to deliberate in any detail or with any degree of certainty the economic programme of the incoming Kennedy Administration. Yet, some interesting clues are available in the reports and statements that have come from Mr. Kennedy and his principal advisers in this field in the last few weeks.

One of the elements that seems to stand out markedly in their thinking is the emphasis not merely on short-term but also on long-term economic prospects and policies. In other words, Mr. Kennedy and the men around him are taking a close look at the U.S. economic situation, and not only in terms of what must be done now to help stimulate a renewed upturn in 1961. They also are concerned with ways and means of further strengthening the economic foundations of the nation, and thus contributing to the economy's enduring growth.

This is implicit in the five-point programme Mr. Kennedy outlined recently—a programme for which he indicated he would request Congressional legislation. It embraces a higher minimum wage, housing, medical care for the aged, increased federal aid to education, and aid to the so-called "depressed areas"—those scattered sections of the United States which chronically have lagged behind the nation's general economic advance.

Understandably, Mr. Kennedy seems to be withholding any specific or detailed recommendations in these and other fields until he has taken the reins of the presidency—which will be 20 January. Nor can anyone be sure just how far Congress will go in approving the specific proposals Mr. Kennedy may offer. But it is clear that these five points, by their very nature, go beyond what might be considered chiefly emergency or anti-recessionary action.

Indicative of this general approach are the reports issued in recent weeks by special task forces appointed by Mr. Kennedy to look into and make recommendations on various aspects of the U.S. economy. Subjects covered have included taxation, social security, and the so-called depressed areas.

Fairly typical is the first of the reports to have been made public, that on depressed areas, prepared by a task force headed by the influential Senator Paul Douglas of Illinois, himself an economist of some renown. This report calls not only for public works spending in depressed areas as part of a broad anti-recessionary programme, but also for legislation that would help these areas overcome their basic difficulties. This would involve such steps as financial incentives for industrial expansion and diversification, and the retraining of local workers.

Significantly, the report contains no hint of any move toward protectionism in foreign trade policy in order to safeguard local industry. It does not even list import competition as a basic cause of chronic

regional unemployment, but rather such other factors as changes in technology, consumer demand and government procurement practices.

This is not to say that the incoming administration will in any way be overlooking the more immediate needs of 1961. Far from it, in fact, as is evidenced by the report presented to Mr. Kennedy by the task force headed by Dr. Paul A. Samuelson of the Massachusetts Institute of Technology, specifically on the subject of "prospects and policies for the 1961 American economy."

Again, one must keep in mind that the Samuelson report, like those of the other task forces, is unofficial and does not necessarily portray the precise course of action the Kennedy Administration will follow. But it gains a measure of stature from the reputation of its author and his close association with the President elect. Professor Samuelson holds a high reputation among professional economists—he has just been named head of the American economic association—and has been one of Mr. Kennedy's principal advisers both during and since his successful bid for the presidency.

The Samuelson frame of reference seems to be that the U.S. economy, as fast it could have or should have in recent years. This is an assumption which obviously takes issue with the more optimistic appraisals prevailing in the outgoing Eisenhower Administration.

Yet there is nothing dogmatic or depressing about the Samuelson report. On the contrary, it specifically disavows any recourse to what it calls pushing the "panic button." The present situation, in its view, does not call for a massive programme of hastily devised government measures.

The programmes the Samuelson report recommends reflect to a large extent actions and proposals which have won a wide measure of support in the past. Mentioned, for instance, are increases or improvements in road building, defence outlays, foreign aid, urban development, housing, health and welfare, natural resource development, aid to depressed area, and unemployment compensation.

Only if the anticipated 1961 business upturn does not develop as expected does the Samuelson report call for more vigorous measures notably a temporary cut in taxes.

One of the notable features of the Samuelson approach is its support for long-run surpluses in the government's budget as a general proposition, even while conceding the possible need for temporary deficits in times of economic slack.

United States industry paid an estimated \$18,000 million in 1960 to provide employee pension, welfare and unemployment benefits. The National Industrial Conference Board reports in its weekly "Road Maps of Industry" chart that the 1960 total represents an increase of \$2,100 million over the amount employers paid for employee security in 1959.

XII

WORLD OF BUSINESS

"Bleeding Madras"

Handloom weavers who have unsold goods will get only cold comfort from the analysis of the trade with the USA in Madras goods. The term bleeding tacked on to coloured fabrics in check designs became popular but it is now found that bleeding Madras has to be sold at home and the US demand has dried up. Reasons given are the excessive stocks carried by retailers in the USA and the poor quality of goods shipped last year, particularly the fading of colours and the tendency to fray. The expectation of a slow recovery is based on the US importers' assurance and the inspection of goods meant for shipment.

The rise of powerloom products of standard quality may present a problem but it is possible that cotton goods made on powerlooms (which are durable and pleasing) should have a regular market abroad like furnishings made on powerlooms. The artificial division has spoilt the market and it is well to remember that rayon goods made on powerlooms enjoy a reputation for finish and colour that is denied to handloom goods at present. The handloom export organisation as the STC's agent can do something to prevent abuses and meet foreign consumers' complaints. The Textile Export Council is not likely to take up the task of screening exporters. It is obvious that an export house with a reputation to preserve is required and the individual exporter of sarongs or other cotton goods must hand over his business to an approved body that can satisfy canny foreigners about stuffs dyed in the piece. What is now done for grey goods by Manchester which imports from India and sells to West Africa holds a lesson and the shipper who buys according to the foreign requirements can maintain warehouses and secure new connections which the individual manufacturer cannot. There is more than one branch of the textile industry which must undertake specialisation and the hope of reaching targets rests on the rise of export houses living on small commissions and quick turnover

Growing Demand for Oil

In his presidential address to the geology and geography section of the Indian Science Congress which met at Roorkee last week, Mr W. B. Metre of the Assam Oil Company underlined the need for planning for self-sufficiency in oil. Already there is a growing shift toward oil in preference to coal as the source for fuel in present indus-

trial economy and the demand for oil in India has also registered marked expansion in the course of the last decade. Thanks, however, to the discovery of oil at Naharkatiya and Cambay, prospects for increasing production by the end of the Third Plan have also improved considerably. For refined oil particularly, capacity measuring upto nearly three-fourths of the Third Plan requirements is expected to be got ready by the end of the Third Plan. In the perspective of the growing dependence on oil for meeting energy requirements, however, the outlay on oil exploration will have to be considerably stepped up.

Self-sufficiency in oil however desirable it is, is extremely unpredictable, and can be envisaged only on the basis of substantial expenditure for exploration drilling and other related activities. Mr Metre has estimated the total investments required for attaining self-sufficiency at Rs 10,000 crores upto the end of the Seventh Plan period (1981-86). This would work out to an average of Rs 400 crores per annum beginning from the current year. As Mr Metre has pointed out it is extremely unlikely that an expenditure of this order could be incurred were oil development to be the exclusive concern of the Government. In this light he has put in a plea for associating the foreign oil companies in the development of oil industry. While the Government seem now to have come to recognise the role of foreign participation, it is arguable whether thought has been given to the incentives to attract such capital into the oil industry. A favourable taxation policy and a liberalised set of concession rules are two elements of conditions on which Mr Metre has laid particular emphasis for attracting foreign capital.

Alloy Steel Plant

At Maroli near Mangalore, the foundation was laid for an alloy steel unit by Union Industries and Commerce Minister Mr Lal Bahadur Shastri last week. The Minister pleaded with industrialists to improve quality of their products to maintain standards in the import market. Also he desired at least 25 per cent of production be set apart for export purposes. Mr Shastri also wanted that the industrialist should consult the Standards Institution before they venture upon export of their products.

Mysore State Chief Minister, Mr B. D. Jatti, who was presiding over this function, pleaded for developing Mangalore as an all weather port. He also wanted the construction of Hasan-Mangalore rail link. This demand for the link has been there for quite a time and Mr Jatti only reiterated this need. Transport presented a problem in this area, the Chief Minister said, and stated that if only the transport problem could be made perfect, Mysore would be only half the distance to Bombay. Mr Jatti stressed the importance of the two things, the development of an all weather port at Mangalore and linking up of Hasan with Mangalore which in his view would open up an unlimited avenue for the region's industrial potentialities.

This steel-alloy plant is being erected by the Canara Workshops Limited and is a project of Rs 68 lakhs with Rs 32 lakh foreign exchange content. Under the D.L.F. Loan Agreement, the Government have granted import licence.

Heavy Industry for Andhra

Andhra State was assured by the Union Minister of Commerce and Industry, Mr Lal Bahadur Shastri, that some big industry would be established in that State in the Third Five-Year Plan. Mr Shastri was not able to indicate, however, which type of heavy industry would be located in Andhra. But indications are that in the search for a good location for the second heavy electrical machinery industry next to Bhopal, Andhra may get that place, though States like Madras, Mysore and Kerala are urging to have this in their respective areas.

Admitting that there was good scope for rapid industrialisation in Andhra State, Mr Shastri said that almost every State in the country wanted the location of the heavy electrical industries. It was not left to the Government to make the decision of location, and Mr Shastri cited the instance of the experts who decided on Durgapur for the optical glass factory location. Likewise he said the experts who were now entrusted with the job site selection should decide on the place where this industry could be best raised.

Speaking on subjects relevant to Andhra industrialisation, the Union Minister told the Federation of Andhra Chambers of Commerce and Industry that the Central Government were considering the question of starting of a spinning mill in Andhra in view of the expected yarn shortage. Sugar factories for Andhra were also under consideration, he said. Two fertilizer projects in Andhra, one in Visakhapatnam and the second in Kothagudem were also considered. Regarding the fertilizer factory at Visakhapatnam a decision by the India Government would be reached very soon, he said.

Mr Shastri also indicated that technically experienced people were offering to start the Kothagudem factory. A decision on the grant of licence would be made soon on this also he told the Federation.

For starting of heavy industries, Andhra's hilly terrain was suitable and so he was definite some other heavy industry would be started in Andhra in the Third Plan. He did not indicate what type of heavy industry would be started.

Mr Shastri referred to the point of high prices raised by the Federation particularly of cloth, and told the Federation that he was still dissatisfied with the Millowners' decision to cut prices. He laid stress on increased production of certain varieties of cloth commonly used. What variety should be produced more was a decision between the textile millowners and the Indian Cotton Millowners Federation, but the need for stepping up production particularly of the coarse and lower medium varieties is quite obvious, Mr Shastri said. The Minister's suggestion was that there should be a 8 per cent reduction in the price

of coarse and lower medium varieties, five per cent increase in respect of other varieties and 25 per cent increase in the productions against August 1959. He was under the hope that all attempts would be made to implement these recommendations.

The Minister also complained that there was speculation in the jute market. The consequence was that the jute mills decided to seal their mills and prices went up. He wanted voluntary efforts by the industry to regulate prices and help the consumers.

Mr Shastri repeated the arguments against entrusting private sector with erection of costly heavy industries. Government had to take special interests in such industries like steel that needed not only a hundred crores outlay initially to start with, but required foreign consultants on high cost too. However, Mr Shastri added there was no ban on private industries, like the Tatas, starting steel plants. It was his view that in respect of heavy industries, the Government were able to economise the expenditure. The public sector also got more favourable terms than the private sector.

Explaining the Government's decision to allow private entrepreneurs to start fertilizer factories, Mr Shastri stated that this was because there was big demand for fertilizers in the country and the Third Plan production of one million tons needed as much effort as possible. So far the schemes sanctioned would make only about 7 lakh tons of fertilizers. The Sindhri's capacity had been doubled and Nangal will be commissioned into production in a couple of months. They had one fertilizer factory at Rourkela and they would raise fertilizer plants in Rajasthan, Uttar Pradesh and Assam. In Madhya Pradesh, Rajasthan and Andhra the Government would encourage private enterprise to promote such factories.

Mr Shastri wanted the Government to go as far as they could to put up new industries of all kinds, because time was the essence of the matter. He wanted the industrialisation to be rapid. "Let the Government do their part and let the private industry do theirs."

Central Warehousing Corpn.

The Board of Directors of the Central Warehousing Corporation, have approved the programme of activities and the budget estimates of the Madras, Andhra and West Bengal State Warehousing Corporations for the next financial year. The Madras State Warehousing Corporation has so far opened 14 warehouses in hired accommodation. The Andhra State Corporation would have nineteen warehouses by the end of March, 1961. The West Bengal State Warehousing Corporation would have twenty warehouses by the end of the current financial year. Six more warehouses are to be set up during the next financial year in hired accommodation.

The Corporation is expected to have its own building at the Centre by the end of the current year and construction would be completed next year at three more centres.

THAT truth is stranger than fiction has been amply proved in the course of the last week by l'affaire Haldane. It couldn't have happened, but it did, that the Professor, slighted as he felt by the United States Information Service, has gone on fast for the insult directed not at him but at Indian scientists in general. Press reports do not quite clear up the mystery, but that there has been some manner of misunderstanding there can be no doubt. What amuses me is the fact that all this furore is because of two teenagers. A botanist and a zoologist, young in years but old in wisdom, as is the wont of celebrities these days, are passing hurriedly through India. USIS extended to them its normal courtesy in helping to draw up a programme of engagements. One such was a lunch with the Haldanes. We can infer that the young and vigorous new thought appealed to and found a responsive chord in the Professor's intellect. The botanist, Miss Brown, was under the impression that no engagement had been scheduled for the evening, and so Professor Haldane's invitation to meet some young Indian scientists was accepted. It transpires that Miss Brown was misinformed. In any case, there appears to have been an inadequate indication to the Professor that the impromptu dinner he had arranged stood cancelled. So, at the time appointed, the Professor went to collect his guests. Here is where the real controversy starts. The Professor says that his guests told him that USIS had insisted that they should "ditch" the Professor's party. So, the other invitees that Professor Haldane had called found that they were attending a dinner at which, like a Hamlet without the prince, the guests of honour were absent. Now comes the ludicrous part of it. Whether there was really a slip-up on the part of the USIS, we do not know, but Professor Haldane's decision to go on fast and the failure of USIS to patch up the quarrel caused both to cut ridiculous figures. On the one hand, USIS is held to ransom, and gets the most undesirable sort of publicity. On the other, the betel-chewing Professor undertakes a fast where it would have been much more dignified on his part to have issued a statement drawing attention to the misdemeanour or whatever it was that he held USIS to be guilty of. I still can't fathom the whole truth in this matter, but all that is left is a bit of unpleasantness that we could have well done without.

So the financial target for the Third Plan, owing to the persuasive capacity of the States, is to be, in the public sector, Rs 8,000 crores. There hasn't been any perceptible improvement in the expectation of resources. There is therefore an uncovered gap, just as there was one of Rs. 400 crores in the Second Plan. Our past experience in regard to hoping to spend much more than we had in hand has been good, thanks to the tremendous tax effort that was made in the Second Plan Budgets. Unfortunately, the target for resources to be found by taxation is, for the Third Plan, already pitched high enough, and hence the prospect is that gap will remain uncovered till the bitter end. I am beginning to wonder if the kind of discussion we have recently been having on the Third Plan does not smack of election campaigning. No doubt, by the end of 1962, the Third Plan will need to be revised and reprinted. I am also afraid that, unless foreign assistance is vouchsafed to us in a matter of weeks, the Third Plan may stall even before it starts. Delays may be there not only in the completion but also in the starting of projects. On the other hand, it is undeniable that Government revenues have recently worn an aspect of great buoyancy. Indeed, this may have accounted at least in part for the successful mobilisation of resources for the Second Plan. There is evidence to show that in this, the last year of the Second Plan, Government may be able altogether to avoid recourse to deficit financing. It would follow that Third Plan projects whose foreign exchange component is of negligible proportions can get speedily executed. In turn, this may provide an impetus and momentum to an export drive. This is not being unduly optimistic since, by and large, trends in industrial production, particularly in the private sector, have been most heartening. But here, again, a reservation has to be made in that industries with a high reliance on imports for either components or raw materials may not, even though possessed of the capacity, be in a position to augment output. Be that as it may, for all the high hope that we might have had that, because thought began to be bestowed on it well in time, the Third Plan's formulation would be more precise, we shall actually have to suffer a continuing vagueness.

The new steel retention prices have been announced, but, here, too vagueness is the dominant note. No decision has been taken on the

Clive Street Gossip

Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

representation of the private steel producers that they ought to be compensated for the increase in costs that has occurred over the last five years. Moreover, the present rise of Rs 25 per ton is very much an ad hoc decision, since it is the provisional price for the two year period till 31 March 1962. It is provisional in the sense that the advice of the Tariff Commission has still to be received. Then, as from 1962-63, a new structure of steel prices is supposed to come into being. The considerations behind the ad hoc decision are not hard to find. First of all, the new structure is being deferred until such time as the Government steel plants operate to capacity. Secondly, it is also possible that the heavy charge of Development Rebate in respect of the Government steel plants is sought to be got out of the way before determination of state steel costs. Thirdly, the ad hoc increase of Rs 25 is intended, I suppose, to enable Gov-

ernment to postpone somewhat more their decision on the request of the private steel producers. I hope I am wrong in thinking that the indication of a new structure of steel prices from 1962-63 does not mean the perpetuation of the system of retention prices, with a return to ununiform prices for different producers. For, the system of the retention prices, in its old format, should not be brought back so that the private steel producers, who have for so long subsidised imported steel, will in due course be called upon to subsidise higher costing public sector steel. Instead, I wish that this is a hint that the retention price system is going to be scrapped, since we shall have obviated the need for imports as soon as the public sector plants begin to operate to capacity. The actual report of the higher retention prices has been gratefully greeted by the stock exchanges, but it would be wise to remember that Budget day is less than six weeks hence. I may add that the Budget for 1961-62 will not only be the first for the Third Plan period but also the last before the general election is held. So, if I may stick my neck out a bit, the next Budget will be even more political and less economic than Budgets in recent years have tended to be.

— an industry on the march

Long regarded as the cheapest heavy-duty packaging material, jute is today claiming attention as a fabric with greater possibilities and wider applications.

Laminated with paper or plastic, jute fabrics provide moisture-proof containers for fine or high-grade products. Treated with chemicals, they offer protection against rot, mildew, corrosion and attack by rodents and insects. Scientific experiments have resulted in the production of a hessian membrane for water-proof roofing... hessian in combination with asphalt is finding increasing favour as a material for

canal-lining and a moisture barrier.

These and other discoveries which have dramatically widened the scope of jute usage, stem from the fundamental and applied research carried out at the Indian Jute Mills Association's Research Institute in Calcutta. Side by side, the Institute of Jute Technology—financed by the IJMA—provides facilities for training young men for important supervisory positions in jute mills.

Founded in 1884, the Indian Jute Mills Association seeks to serve India's vital jute industry in ever-increasing measure.

OLYMPUS

Expansion of Education

A MILD protest against the persistent criticism of the present system of education in the country and particularly of the alleged fall in standards was made by Dr Shrimali, Union Minister of Education, in his inaugural address to the 28th meeting of the Central Advisory Board of Education last Monday. The criticism is by no means new. As Dr Shrimali pointed out, "Ever since the turn of the present century, we have been talking of a fall in standards and talking with greater frequency and vehemence as the years pass by. Even at the convocation addresses of universities which are really meant to inspire the young men and women who are about to enter life, they are at times made to feel that they are not good enough." Dr Shrimali felt that "the kind of unhelpful and sweepingly unconstructive criticism which we are having today has done not a little to demoralise the teaching profession and the student community."

The educational progress achieved in the last decade does not justify the gloomy prognostications of the critics. There are heartening indications of rising standards at the primary stage. The improvement is evident in the higher qualifications and emoluments of teachers, improvements in methods of teaching and its content as well as in reduced wastage. Effective action is also being taken to pull up standards at the Secondary and University stages.

Dr Shrimali also reviewed the development of education during the last decade which has been marked by an "unprecedented rate of expansion." Though it has not been possible to implement the directive of the Constitution to introduce universal education in the age group 6 to 14, by 1961, the progress achieved is by no means insignificant. The total additional enrolment during the last ten years in the primary stage is almost equal to the enrolment made during the preceding 150 years. The total enrolment in the age group 6-11 in 1949-50 was 181.93 lakhs or 41.5 per cent of the total population in the age group. This had increased to 251.67 lakhs or 50.8 per cent at the end of the First Plan and is expected to rise to 340 lakhs or 60 per cent by the end of 1960-61. The target for 1965-66 is an enrolment of 510 lakhs or 80 per cent. The enrolment in age group 11-14 has increased from 28.44 lakhs (11.9 per cent) in 1949-50 to 42.93 lakhs (16.7 per cent) at the end of First Plan and will rise to 62 lakhs or 22.8 per cent by the end of the Second Plan, and to 100 lakhs or 30 per cent at the end of the Third. For the age group 6-14 as a whole, the enrolment which was 210.37 lakhs (31 per cent of the total population in the age group) in 1949-50 rose to 294.60 lakhs (39 per cent) in 1955-56 and

is expected to rise to 402 lakhs (49 per cent) in 1960-61 and to 610 lakhs (63 per cent) in 1965-66. The number of Secondary Schools has more than doubled in the last ten years and the increase of enrolment between 1950 and 1965 in the age group 14-17 will be about three and a half times the total enrolment in 1950 which was 10.86 lakhs. Against the target of 20 per cent enrolment in this age group to be achieved in 40 years which was suggested by the Sargent Plan, an enrolment of 16 per cent will be achieved in 16 years. The pace of expansion of university and technical education has been even more rapid. Enrolment in colleges of general education has been trebled during the last ten years and a fourfold expansion in the field of technical education has been achieved in the last twelve years.

The vast increase in the number of students on the rolls of universities has brought up the problem of maintenance of standards in an acute form. The problem is to provide facilities for higher education to all those who desire it without spreading the resources too thin. One of the main topics on the agenda of the meeting is the introduction of a scheme of Correspondence Courses and Evening Colleges in the Third Plan. This is complementary to the proposal for restricting admissions to colleges which has been talked about for years. While the need for restricting the number of students in colleges to manageable dimensions is recognised, the principal difficulty in carrying it out has been the feeling that it would be unfair and unjust to deny for all time every chance of academic improvement to those who for economic reasons could not pursue their educational careers in the normal manner. The selection moreover has to be on the basis of the results of an external examination and, even if the prevalent criticism of examinations is not valid, it cannot be claimed that examinations are infallible means of discovering aptitude for higher studies. Dr Shrimali announced that the Government of India have considered this matter carefully and have decided to launch in the Third Plan a scheme of Correspondence Courses and Evening Colleges. These courses, said the Minister, are intended for those who cannot attend day and fulltime institutions because of necessity to earn a living, or for those who live away from places where colleges and universities are located, or for those whose abilities and achievements do not merit admission in regular day-time institutions but who can nevertheless profit from higher education if it is slower-paced and adapted to their learning tempo. It is proposed to make a modest beginning by providing this facility to 60,000 students, of which 40,000 will be expected to join evening colleges while 20,000 receive instruction through correspondence courses. Of the total number of seats in the evening colleges, 10,000 seats will be reserved for science students while 50,000 will be for students taking arts courses. The scheme is expected to cover 10 universities and 100 colleges spread

over the country. The same teachers who would be teaching the relevant classes in day time institutions will be made responsible for the correspondence courses in order to maintain standards. But there is room for doubt whether the teachers, who are not now able to give individual attention to the students in their classes or to set and correct exercises, will be able to carry the additional burden.

Side by side with the expansion of opportunities for higher education through Correspondence Courses and Evening Colleges, the National Scholarship Scheme, under which 200 scholarships are awarded yearly on the basis of matric results, is to be largely extended. It is now proposed to offer 1500 scholarships per year during the Third Five Year Plan for students of outstanding merit at the conclusion of their School-Leaving, the Intermediate and B.A. stages. The amount of scholarship has also been increased and now ranges from Rs 75 to Rs 200 a month. In addition the scholarship-holders will be given allowances for travelling and buying books. Another feature of the scheme is the provision of a Counselling Service to help, guide and watch the progress of the selected scholars.

The expansion and equalisation of educational opportunities is intimately bound up with the question of examination reform. The programme of reform initiated two years ago with the setting of a Central Evaluation unit and the steps necessary for evolving a co-ordinated plan of action were considered at a Conference of chairman and secretaries of the Boards of Secondary Education which met on January 10. This was followed by the meeting of the All India Council of Secondary Education two days later which also considered this question. Both the meetings were inaugurated by Mr P. N. Kirpal, Secretary Ministry of Education, Government of India. The immediate step to be taken, Mr Kirpal stated, is to establish State Evaluation units, because it is not possible for a Central unit to implement a reform of this magnitude in every State. The Conference of Chairmen and Secretaries of Boards of Secondary Education and the Directors of Education, which concluded its two-day session on January 11, has recommended the setting up of a Federation of Secondary School Boards to ensure greater co-ordination in the task of examination reform, and suggested the acceleration of the pace of reform. A suggestion that examination results should not declare 'pass' or 'fail,' but merely announce the pupil's performance in the external examination and that universities, other institutions and employers could lay down their own criteria for selection was referred for further study to the Examination Sub-committee of the All India Council for Secondary Education. The Conference also emphasised the need for national uniformity in the system of declaration of 'divisions' and 'distinctions' at examinations so as to ensure national standards for

admission to universities and for purposes of employment. The Conference recommended the adoption of 75 per cent marks for 'distinction'; 60 per cent marks for 'first class'; 45 per cent marks for 'second class'; and 35 per cent marks for 'pass'.

The Third Plan programme for the expansion of primary education will involve enrolment of 190 lakhs of girls. It has been indicated in the Third Plan that States where the enrolment of girls in primary schools is markedly below the national average will be given the resources and facilities needed, so that the all India figure may reach about 80 per cent at the end of the Third Plan. The financial assistance required for the purpose was discussed at the meeting of the Central Advisory Board of Education when a number of members are understood to have underlined the need to for making girls education a special responsibility of the Central Government. It was suggested that the funds earmarked for the intensive development of girls education in the less advanced States should preferably be in the Central Sector. It is also understood that the Planning Commission has agreed to review the earlier decision that such funds should be in the States' Sector. This may lead to some alteration in the outlays in the States Sector announced earlier, by inclusion of special schemes for expansion of girls' education in the category of 'centrally sponsored schemes'.

During the discussion the Union Education Minister is understood to have revealed that the Government were negotiating with some foreign countries for the import of good quality paper to launch the scheme for distributing free text books of good quality to children attending primary schools. A suggestion that production of text books for primary schools should either be nationalised or entrusted to a single agency, to ensure uniformity in get up and content is understood to have been made by Mr C. Subramaniam, Madras Education Minister.

CORRECTION.

In the report of Finance Commission's Press Conference published in the issue of January 14, 1961 on page 39, Line No. 31 in Column 1 should read: "Commission which will consider".

BOAC'S RECORD YEAR.

Just on three-quarters of a million passengers flew by BOAC in 1960—the largest number the airline has ever carried, and over 30 per cent higher than in 1959.

Provisional figures for 1960 show that the total number of passengers carried by the airline on its world-wide routes was 748,900 against 569,942 the previous year—an increase of 31.4 per cent. Mail and cargo carrying were also up appreciably.

During the year, BOAC's jet and jet-prop fleet flew over 54 million miles in commercial service, an increase of over 20 per cent, and spent over 159,500 hours in the air on commercial flights—nearly eight per cent more than last year.

GATEWAY GOSSIP

Cotton Textile Industry

ALTHOUGH Government have succeeded in bringing down the price of cotton cloth substantially without taking drastic measures, it is generally known that the reductions have not come readily. The initial response from the industry to the call for lowering cloth prices did not meet with the approval of Authority and further reductions were found necessary before Government could be satisfied. Whether it was openly stated or not the successive reductions in cloth prices left the impression in the public mind that the industry had been profiteering. From the time the first price cut was announced, the mill industry has been repeatedly averring that its financial position would be adversely affected by any reduction in its selling price of cloth.

In his statement issued to the shareholders of the Ahmedabad Advance Mills Limited along with the annual report, Mr Naval H. Tata has pointed out that the charge of profiteering often flung at the cotton mill industry is untenable. In his view the remedy lies not in forcing the mills to reduce their selling price but in taking active steps to increase the supply of cloth. Mr Tata has further averred that the organised mill sector "alone can fully shoulder the responsibility of producing cloth to meet the demand of India's fast growing population."

Referring to the factor on which the demand for a cut in prices had been based by Government, Mr Tata has proved that as far as his company is concerned, the relevant figures show that the difference between cost of production and mill selling price is not big. According to the figures quoted by him the consumers pay 37 per cent more than the ex-mill rate and one half of this is accounted for by excise duty. Mr Tata goes on to show that even of the ex-mill price, at least 88 per cent is composed of items over which the industry has no control. He wants similar statistical data pertaining to other companies to be collected before judgement is pronounced on the cotton textile industry's profitability.

All available information goes to show that the cotton textile industry is not very prosperous. Some of the recent studies on industrial profits made by the Reserve Bank of India do not seem to lend support to the prosperity theory. The proper conclusion to be derived from the finding of these studies is that the cotton textile industry is not making much profit.

Mr Tata has rightly pointed out that in dealing with the cotton textile industry, it should be remembered that the industry faces a big problem in the shape of the urgent need for rehabilitation and modernisation. It is accepted on all hands that if the industry is to function efficiently, it is imperative that its equipment is modernised as early as practicable. It has been estimated that a huge outlay will be necessary to implement a programme of modernisation covering the whole of the industry. A very large number of units in the industry are extremely old-fashioned by modern standards and unless the machinery is brought up to present-day standards obtaining elsewhere in the world, the Indian cotton textile industry will find it increasingly difficult to compete with other cloth manufacturers in overseas markets. It would appear that Government have a fixed idea that whenever there is some trouble with keeping the cotton cloth price level stable, the blame is to be immediately put on the industry. Mr Tata has shown that in 1956 it was a steep increase in excise duty and in 1960 the tactics have been changed. The result in both cases is the same—financial stringency to the industry. It is inconceivable how the industry will be able to mobilise adequate resources for modernising its equipment if Government are determined not to allow it to make adequate profits.

Among the problems which the programme for industrial development has thrown up, that of stepping up power generation in a progressive manner will be admitted to be a formidable one. The country started on its plans with extreme deficiency in this field: Production at the time of Independence being only at a meagre 1.7 million kilowatts. There has been fair progress since then and by the end of the Third Plan, power production is expected to amount to 13.3 million kilowatts. But in relation to the ultimate objective of attaining an industrial stature on a par with the advanced countries, present achievement in the field of power generation pales off into insignificance, and the per capita consumption of electricity continues to be one of the lowest in the world being only 1/30 of France, 1/40 of the UK and 1/70 of the US.

The need for accelerating rate of industrial development implies equal acceleration in the pace of power production. What this would mean in practical terms is indicated by the estimate of probable demand for power at between 55 to 60 million kilowatts by 1980 and 1985. Coal and river water constitute the present sources for energy, but they fall short of future requirements. The hydel power potential of the country has been estimated at 43 million kilowatts but the utilisable potential

is only 20 to 25 million kilowatts. With the reserves of coal also being only of a limited order, the only way of adding to power resources would seem to be to set up atomic plants. The need for setting up atomic plants to serve as future sources for power was stressed by Mr M. N. Chakravarti, Administrator of the Tarapur atomic power project when he addressed the Rotary club of Bombay last week. Mr Chakravarti expressed the opinion that the country would have to set up at least 20 such atomic plants in the course of the next 30 to 35 years if the demand for power was to be met. No doubt the programme may call for considerable investment which seems to be beyond the present resources of the country. Already vehement criticism has been voiced against the Government when they first gave their views in favour of development of atomic power for meeting future demand. However, in the context of the growing demand and the limitations of hydel and thermal sources, development of atomic power becomes inescapable.

THE PENINSULA

Crisis in Coffee

THE deepening crisis in the coffee market has caused concern among the South Indian Coffee growers. The Nilgiri-Wynaad, leading coffee producing area in Madras State, is particularly worried about the situation. They met to consider the situation and passed a special resolution.

The resolution said that in the background of the world market having turned out to be a buyers market, no change had been made in the marketing policy to compensate for the change in marketing conditions. Neither had any action been taken on the report of the Expert Committee on Coffee marketing whose report was submitted eighteen months ago to the Government of India.

The Coffee Board had 14,738 tonnes of last season's crop still unsold on December 1, 1960. It was possible that some of this coffee had deteriorated, the resolution said, and feared that it might become a complete loss. In addition, a record crop of 55,000 tonnes, was anticipated for this season. "On the Board's present policy, it will not be possible to sell a substantial amount of the new crop", the resolution said.

If stated further that growers had to wait more than one year for final payments for their coffee which they had to deliver to the pool. Many producers had to finance the running of estates on an overdraft, thereby incurring extra expenditure. The Board also made payments to growers mainly overdrafts, the permitted maximum of which was Rs 5 crores. The Board charged growers for

marketing their coffee, thus adding still more to their expenditure. Even then, the resolution feared, should the Board fail to sell the unsold surplus from last season, as well as this season's record crop, the unsold coffee would be lost due to deterioration. The resolution stated that with this year's record crop the return to the grower was only just sufficient to balance expenditure.

Stating that next season many growers would harvest a small crop the resolution said: "If prices are also lower as they certainly will be, if the present policy is continued, many units will be involved in enormous losses, and the industry will be ruined within the next two or three years".

Some of the best coffees in the world are produced in India. These coffees, the resolution said, if expert advice of the trade is made use of, would sell at prices which would be remunerative to the grower. As it is, with only two dealers participating in export auctions, they are being sold at less than the internal price and very much less than their value in European markets. The internal market in turn is flooded partly with coffee of export standard. The resolution apprehends that it is likely that much of this will have to be sold at prices which will not cover the growers' expenses.

The coffee market should be made free and should be run on the same lines as the tea market and the resolution feels that superior coffees will regain their good name in the world market and fetch the prices they are worth. This will mean extra foreign exchange while high grade coffee producers would receive a return commensurate with their expenditure.

The resolution feels that the Coffee Board's policy does not tend to the interests of growers or consumers. The Nilgiri-Wynaad growers urge immediate action lest growers should be forced to close down their estates involving loss of foreign exchange and estate unemployment.

Mr H. Sitarama Reddi, Chairman of the Coffee Board, stated at Bangalore last Tuesday, that there was no question of huge coffee surplus lying with the Board. He affirmed that the carryover coffee stocks upto the present were in no way excessive compared to the stock position in the corresponding periods of the previous years.

Mr Sitarama Reddi asserted that there was no problem of over-production of coffee at present in India and that the present offtake of coffee in the country was far from the saturation point.

This assertion which he made at the 51st meeting of the Coffee Board in answer to the Nilgiri-Wynaad Coffee Planters special resolution recently which called attention of the Government of India to what they described as the alarming surplus Indian coffee position and urging the India Government to act belatedly to save the coffee grower from closing many of their estates that might become uneconomical in the event of continued undisposed coffee surplus.

Mr Reddi agreed that recent pronouncements made by those closely connected with the coffee industry

expressing apprehension over stock position had caused deep concern not only outside the industry, but also within. Mr Reddi stated these pronouncements, though made with the best of intentions, acted as bearish factors in the Board's marketing. Foreign buyers were made to feel by these statements he stated, that the Board might be made to part with stock at distress prices because it was faced with surplus stocks.

With difficulty Mr Reddi said he had to dispel this notion from a foreign firm with whom he was negotiating to sell the Indian coffee.

There was about 9,200 tonnes of coffee today against 8,637 and 8,307 tonnes as on January 1, 1960 and 1959 respectively. Mr Reddi added this was notwithstanding the fact that 1959-60 crop of 49,248 tonnes was bigger than the previous year's crop of 44,205 tonnes and the 1958-59 crop of 46,520 tonnes.

Mr Reddi stated that this carry-over was to meet the internal demands from the old crop in the early months of the year so that as much of the freshly cured coffee of the new crop could be made available for export when there was better demand from foreign markets at a better price.

The annual meeting of the Tamil Nad Congress at Vellore reflected the official policy of the Madras Government. This year the meeting was really a showy business. Chief Minister, Mr K. Kamaraj generally unaccustomed to long speeches, took two hours to explain the achievements of his party that had been in power for the past one decade and more and he reminded the Congress members of the necessity to educate public opinion on the benefits of the Congress continuing in power. The Vellore meet was more or less an election campaign inauguration by all party bosses of Tamil Nad.

The question of industrialisation of the State figured prominently in the discussion on the TNCC's resolutions. One of them commended the allocation of Rs 291 crores for the State's Third Plan. There was also an appeal significantly for extension of the existing railway lines to meet the growing trade and commerce in the State. Inclusion of the Tuticorin Port development in the Third Five Year Plan was positively stressed by the resolution. More industries under the Central Plan were asked to be established in the State.

Importance of the development of the Tuticorin Port as well as Mangalore port has come to be realised by the Government of India when it was known that in iron ore export, Japan was willing to pay more if there had been better port facilities at Tuticorin or Mangalore. It is also learnt that Japan was prepared to pay more for the Nilgiris iron ore whose iron content is higher, but the Madras Government have refused to sell the Nilgiris iron ore.

Some of the Coimbatore industrialists are now utilising the Nil-

giris ore with low shaft furnace to get their own steel for casting purposes. Due to paucity of coal in certain seasons their steel output may not be as much as to meet their own requirements.

Mr C. Subramaniam, Finance Minister, was naturally pitched upon to speak on the resolution relating to the Third Five Year Plan of the State. His speech was largely devoted to answering opposition criticisms in the country. He pointed out that India could not stagnate herself merely as an agricultural country. He was of the view that India needed to progress on a mixed-economy basis resorting to medium scale industrialisation. Industries as such, he emphasised, should occupy equal attention as agriculture. Both these were important and one could not be developed at the expense of the other keeping in view also the growing population of the country, he stated.

Industrialisation naturally involved foreign help through machinery and also by loans. Mr Subramaniam stated there was no escape from this and India, he affirmed, undertook to repay loans in due course. One problem was inter-linked with the other and if there was to be industrialisation, they had to resort to borrowing, and having secured foreign aid, there was need for planning which we could not afford to neglect he declared. Therefore all talks that planning was unnecessary and foreign help was also bad did not take into account the need for India to progress soundly on economic lines he said.

Mr Subramaniam, like others of the Tamil Nad Congress did not fail to refer to the Swatantra Party's criticism. He accused the Swatantra Party with the views that it did not want progress but stagnation. (Most of the speakers at this Vellore Conference seemed to have been obsessed with the Swatantra Party propaganda and therefore much of their time was devoted to this party.)

Incidentally Mr Subramaniam ended his speech with an election appeal for the people not to lend their support at all to any opposition parties, if they wanted to avoid chaos and see their country on the road to orderly progress.

Mr O. V. Alagesan, President of the TNCC, stressed home the point that it was the Congress Party alone which was functioning on the right lines for the good of the people.

Devoting most of his address to the Swatantra Party which he described as 'retrograde', Mr Alagesan dismissed it as unsuitable for the country's present conditions. He even went to the extent of injecting a religious attachment to the Congress Party saying that the very idea of doing away with the Congress was 'sinful,' because he thought Congress had immensely sacrificed for the achievement of the people's freedom, he said.

Without any common purpose opposition parties in Madras, as also outside, Mr Alagesan stated, were aligning themselves to gain power. Like Mr Subramaniam he also ended his speech with an election appeal.

Chief Minister, Mr Kamaraj, noted the propaganda made by opposition parties in the State and mentioning the Swatantra, the DMK and the Communist Parties, he stated these were making efforts to disunite the country. He was firm in his declaration that the Congress, at any rate as far as

this part of the country was concerned, was never so strong as it was today.

Mr Kamaraj is essentially a people's man and naturally his reference to the Swatantra Party as representing the capitalists was oddly suited to the occasion. He could not be blamed for the official sanction to the contribution of funds to political parties. This reference to other parties as either capitalist or anti-capitalist comes too soon in the wake of the amendment to the Companies Act.

Prices Touch New High

PRICES in the jute markets scaled new high levels during the past week. Bullish sentiment has been aided mainly by the continued belief that raw jute will be in short supply throughout the current jute season. So far the trend of raw jute arrivals in Calcutta and mill centres is not very encouraging and it would appear that unless the scarcity theory is disproved by a sizable increase in raw jute arrivals, there is little chance of an appreciable decline in prices. The goods market has also considerably firmed up partly in sympathy with raw jute and partly due to fresh foreign enquiries. Business has been reported done during the past week with the US and Australia. Yet another favourable factor has been the news that burlap consumption in US during December has amounted to 72 million yards. The fact that consumption has been well maintained during the past month (consumption amounted to 72 million yards in November also) seems to have imparted renewed strength to sentiment. The inference evidently is that American buyers of burlap have accepted the position that the price rise noticeable in recent months is inevitable in the context of the high prices for raw jute which in their turn have been influenced by a smaller jute crop this season. However, it is to be noted that burlap consumption in 1960 is only 857 million yards as against 895 million yards recorded in 1959.

Despite the considerable difficulty experienced by jute mills during most part of the year, production of jute goods in 1960 has been well maintained. Actually total output is slightly higher at 1,067,100 tons as compared with 1,051,500 tons in 1959. The higher production is due to the fact that

on balance the percentage of sealed looms last year had been lower than in the previous year. Whereas in 1959, the percentage of sealed looms was 12½ upto 1 March, 14 from 2 March to 21 June, 12½ from 22 June to 23 August, 10 from 24 August to the rest of the year, during 1960 mills worked with the percentage of sealed looms at 10 from 1 June to 1 May, 9 from 2 May to 16 October, 14 from 17 October to 23 October and 19 from 24 October to 22 November. From 23 November sealed looms were reduced to 17 per cent. From 26 December a 45 hour working week with 12 per cent sealing of looms came into effect. Of the two main categories of goods, the production of hessian shows a decline to 422,200 tons as compared with 458,000 tons but that of sacking is higher at 540,700 tons as against 503,700 tons in the previous year. The emphasis on the production of heavy goods has been due to the better demand for this category of goods as compared with hessian.

The position is not very encouraging when the figures for despatches are analysed. Total despatches during the 12 months ending December have amounted to 1,038,000 tons as compared with 1,096,400 tons in 1959. The decline is due to reduced despatches for export which are placed at 771,500 tons; in 1959 such despatches were 864,300 tons. It is evident that export demand has been adversely affected by the high prices of goods prevailing especially during the second half of the year. A significant development, however, is the steady increase from year to year in despatches for internal consumption which for 1960 are placed at 266,500 tons as compared with 232,100 tons. The up-trend in internal consumption is likely to continue as demand for jute goods is bound to increase within the country with the rapid progress of industrialisation and development of agriculture. It will be seen that now about one-fourth of mill production is absorbed by internal consumption. The continued growth of internal consumption is to be welcomed but in the present context of the acute shortage of foreign exchange, the emphasis is on maximising of exports even at the cost of internal consumption. Government are anxious to ensure that foreign mar-

kets are not starved of jute goods and have consequently allowed the cement industry to bag cement in used bags with a view to cutting down internal demand for new jute bags.

1960 has closed with total stocks considerably higher (80,300 tons) than at the corresponding time of last year (closing stock of 1959 i.e., total stocks at the end of December 1959 was 58,900 tons). Even so stocks are still below one month's production and in view of the cut in production already implemented and contemplated, the level of stocks will not cause much worry. Actually the slight decline in December-end stocks (at end-November total stocks stood at 82,200 tons) has been interpreted bullishly with the up-trend gathering further momentum following the news that production during December has been higher at 90,700 tons as compared with production in November of 85,900 tons.

Outlook for the New Year

ACCORDING to the figures released this week, Tea production in Northern India is higher by 362,943 pounds at 13.47 million pounds in December 1960 as compared to December 1959. But, total production for the whole year 1960 amounts to only 527.63 million pounds, showing a decline of 34.20 million pounds from the 1959 figure. This reflects the shortfall in production as a result of the drought early in the past year.

The short crop has, however, little effect on the international trend, as the world crop is only 10 million pounds lower than in 1959 and the supplies have been more or less in balance with consumption. As far as India is concerned, the auction trends indicate that quality teas are still in good demand although the outlook for the New Year depends a great deal on the buying of out-markets. While Russia is reported to have stopped buying from January last, the UAR is not showing much interest at current prices. These apart, competition from African teas has increased in overseas markets.

But, prices in India are not expected to slip back in the near future, especially when consumption has been on the increase and the domestic stocks are not adequate. Moreover, it is felt that, as exports have been maintained at a high level, there may not be enough tea for the domestic consumption. As a matter of fact, the export markets have absorbed more than the internal demand in view of the shortfall in crop.

21 January 1961

In the Export Sale held in Calcutta this week, offerings amounted to 73,831 packages. There was a strong and general demand at irregular rates. Only a few of the very best CTC teas came in for good support at firm to dearer rates; but the remainder and medium CTCs were up to 20 nP per kilo lower. Secondary grades were a very irregular feature.

Medium Assam BOPs came in for fair support, but inclined easier except for the brighter liquoring types which were fully firm. Similar CFs with bright liquors were again a strong feature and sold at dearer rates. Medium brokens were about firm. Fan-nings with a clean leaf appearance and brighter liquors were dearer, the remainder being about steady.

Plain brokens and Fannings, although irregular, were 5 nP and occasionally 10 nP easier. Except for a few lines which were about steady, Legg-cut teas were generally 10 nP to 15 nP lower. Well-made leaf grades were about steady, but the poorer stalky types declined further. Darjeeling teas with autumnal liquors were well supported. The very few Tippy teas on offer were sold well. Following were the rates quoted:—Clean Black Pekoe Rs 5.20 to Rs 5.45; Plain Broken Pekoe Rs 4.50 to Rs 4.65; Plain Fannings Rs 4.80 to Rs 5.00; Medium BP Rs 4.70 to Rs 4.85; Medium Fannings Rs 4.90 to Rs 5.15; Best Assam CTC BP Rs 5.50 to Rs 5.90 and Best Assam CTC Fannings Rs 5.80 to Rs 6.30.

In the Internal Sale, offerings were 21,470 packages of Dusts and 510 packages of Leaf grades. There was a good general demand, which strengthened as the sale progressed. Orthodox descriptions were irregular with the smaller and brighter liquoring dusts generally dearer. Legg-cut teas came to a strong market and were sold well.

CTC teas met with useful support at about last rates. The small and bright types were sold at dearer rates. Good CTC types were up to 10 nP per kilo dearer with the best in this category irregularly easier. Darjeeling teas were a strong feature of the sale and were sold well at dearer rates. Following rates were quoted (per kilo):—Plain Orthodox Dust Rs 4.80 to Rs 4.95; Medium Assam Dust Rs 5.00 to Rs 5.30 Medium Assam CTC Dust Rs 5.50 to Rs 5.70; Legg-cut Dust Rs 5.15 to Rs 5.35 and Good Assam CTC Dust Rs 5.90 to Rs 6.40. There was a good general demand for Leaf grades at dearer rates.

According to tea sources in Calcutta, exports of North-East Indian tea declined to 250.67 million pounds during the second half of last year from 276.6 million pounds in the corresponding period of the previous year. While exports to the UK fell from 183.75 million pounds to 174.78 million pounds, those to other destinations at 75.89 million pounds showed a fall of almost 17 million pounds.

Despite a decline in off-take to 13.92 million pounds in July-December 1960 from 14.46 million pounds in the second half of 1959, Russia maintained her position as the second largest customer for North-East Indian tea. Exports to the Irish Republic also fell to 9.22 million pounds from 10.9 million pounds as did those to West Germany to 2.25 million pounds from 2.95 million pounds.

According to tea sources in Colombo, tea production in Ceylon rose to 45.6 million pounds in November 1960 from 39.3 million pounds in November, 1959. In the eleven months ended November 1960, total production was higher at 401 million pounds as against 377.9 million pounds in the corresponding period of 1959.

Production of tea in East Africa was higher at 4.78 million pounds in October 1960 as compared to 4.51 million pounds in October, 1959. In the first ten months of 1960, total production amounts to 39.93 million pounds as against 36.82 million pounds in the corresponding period of 1959.

Tea stocks in London, as on 6 January 1960, totalled 119.06 million poundss as against 117.24 million pounds in the previous week. The quantity to be landed on the same date was 41.16 million pounds. Total afloat was 3.8 million pounds including from Calcutta nil; from Chittagang 1.31 million pounds; from Cochin 6.05 million pounds and from Colombo 907,500 pounds. The average price realised at the auction during the week ended January 6 was 56.84d per pound against 57.91d in the previous week and 53.95d a year ago.

Easy Trends in Futures Market

THE Bombay cotton futures market depicted easy trends due to lack of adequate mill support. During the past week Jarilla April Contract has touched a new low of Rs 588 per three quintals.

Reports emanating from the cotton growing areas narrate that production of cotton this season will be approximately five million bales. The output of cotton in the previous season was only 3.8 million bales.

The arrival of new crop in the market is fast increasing. The commencement of the marketing season in Gujarat naturally brought more of new crop into Bombay. Kandesh and Vidarbha are still

pumping out the new crop at a progressive rate. Good arrivals from Malwa and Moglai are also reported.

Prices in the spot market also fell down in sympathy to the easy trend in the futures market. All the available varieties shed Rs 10 per candy. It appears that most of the mills have exhausted their quotas and are unable to enter the market at present. All the available varieties are now offered at about Rs 30 per candy below the ceiling prices. The daily turn over has dwindled into an insignificant trickle. It is expected that the off-take will broaden when more quotas are issued.

The decision of the Government of India to enhance the floor and ceiling prices of Kalyan and other varieties by about Rs 15 per candy was not greeted by the trade which was anticipating an increase of at least Rs 30 per candy.

It has been decided to convene a conference of cotton interests in February to consider the various problems relating to the growth of cotton and its marketing in the country and abroad. It has been understood that East India Cotton Association will draft a comprehensive memorandum on the trade's grievances and present it to the Union Minister for Commerce and Industry.

No fresh developments were visible in the export and import fronts. Meanwhile the shippers are anxiously awaiting the release of a fresh export quota of 50,000 bales of Bengal Deshi.

Import of foreign cotton into India from 1 September to 24 December in 1960 totalled 349,266 bales. The following table will give a detailed account.

Description	1960	1959
	(In bales)	
American	207,938	18,118
Sudan	27,511	45,510
Egyptian	20,190	41,897
East African	72,744	20,930
Pakistan	2,245	
Other Sorts	18,638	1,257
Total	349,266	125,712

Exports of cotton from India to the foreign countries during the same period amounted to 14,790 bales.

Countries	1960	1959
	(In bales)	
UK	100	1,392
Continent	296	5,643
Hongkong	4,333	2,927
Japan	9,859	66,903
USA	134	5,168
Other Countries	68	1,253
Total	14,790	83,286

Consumption of cotton by the Indian mills last year totalled over 5 million bales. This consisted of about 4.5 million bales of indigenous cotton and the remaining of imported varieties. According to

recent estimates the consumption of cotton this year too will be in the vicinity of last year's total.

LIVERPOOL

Trading in the Liverpool futures market exhibited improved demand for actual cotton during the past week. Some trade covering in the current crop positions pushed the prices up to about 10 points. Shipment offering prices in the long staple varieties have been well maintained. At the close of the market on Thursday last, the various positions were quoted as follows: American contract March 22.95 d., October 23.90 d., American type contract March 23.25 d., and October 24.25 d. Sudan contract, however, remained unaltered at 35 d.

NEW YORK:

Activity in the New York futures market was chiefly confined to switching operations in the March and May positions by spot interests. Registered export sales upto 30 December totalled about 4.7 million bales. At the close of the market on Wednesday last, the March position was quoted at 32.62 cents and the October position at 33.65 cents.

PIECEGOODS:

Trading conditions in the Bombay piecegoods market displayed a marked improvement during the past week. Demand in both the domestic and export sections was on the whole encouraging.

In the domestic section, medium and coarse varieties of cloth met with fairly good enquiries. West Bengal, Bihar and UP figured as the main consuming centres. Madhya Pradesh and Punjab were scared away from the market by the cold season and South after having covered for its requirements for the Pongal festival did not come out in the market.

The unusual delay in the arrival of stamped goods in the market is causing serious concern to the traders and the retailers fear that the delay might cause a scarcity. The announcement of the Textile Commissioner that dealers should dispose of that portion of cloth which bears the price only last was widely appreciated by those concerned particularly the ultimate consumers.

A revival of demand after the Christmas holidays was evident in the export front. Moderate business was done with Sudan in grey sheetings. Only a limited business was done with the United Kingdoms for the want of import licences. A good deal of enquiries from Singapore for gadlapat was reported. East Africa evinced some interest in grey sheetings, gin and gadlapat. Aden which was away from the market for a pretty long time, appeared again on the scene and accounted for a small quantity of gin and gadlapat.

J. K. COTTON SPG. & WVG. MILLS CO. LTD.

KAMLA TOWER, KANPUR.

It is hereby notified for general information that the Scrips for the new 6½ per cent Tax-Free Cumulative Redeemable Preference Shares and Equity Shares issued by the Company vide Prospectus dated 14th April, 1960 and allotted on 3rd June, 1960 are lying ready and are being exchanged for Letters of Allotment duly discharged. This information has already been posted to all the allottees. It is hereby requested that those who have not yet sent their Letters of Allotment duly discharged, should send them to the Company for being exchanged for respective Certificates.

KANPUR,
12th January, 1961.

R. N. GUPTA,
Secretary.

MARKETS

More Sugar for Export

THE Government of India have already announced the release a further quantity of 50,000 tons of sugar for export through the Indian Sugar Mills' Association; and this decision has been taken after taking note of the trend of production, consumption and the supply position. The Government had earlier permitted the export of 50,000 tons. Of the first quota, it is learnt that 39,000 tons have already been exported to Malaya and West Asian countries. The balance and the

additional quota now announced are likely to be exported to the same markets.

Despite the above decision, the general belief in the sugar trade is that the problem of plenty confronting the industry will become more serious in the months to come. Because of the larger cane output this year, the production in 1960-61 is now expected to amount as much as 27 lakh tons, as the diversion of sugarcane to gur and khandsari manufacture has tended to become unprofitable.

With a carryover of 5.49 lakh tons, the total availability, for the season, will be around 32.49 lakh tons against a maximum internal consumption of 22 lakh tons and exports of one lakh tons. It is fairly certain that the season will end with a balance of 8 to 9 lakh tons. Whether the industry will be able to shoulder this heavy burden without a serious strain or not remains to be seen.

It is learnt that the sugar trade will shortly make a fresh plea to the Government to decontrol the com-

modity. But, it is obvious that the country will have a hard time in finding a proper solution to the problem of plenty in the context of the strictly limited possibility of finding an export outlet and grave fears on the part of the manufacturers that total decontrol might administer a severe shock to the industry and the growers on account of the attendant fall in prices.

For obvious reasons, sugar markets have turned weak and prices developed a reactionary tendency due to the release of a further quantity of two lakh tons. The reported decision of the Uttar Pradesh Government to release 50 per cent of their sugar quota of 25,000 tons per month for free sale has also aided the fall in the prices of the commodity. In the Hapur market, the rate is quoted around Rs 109.50 per bag.

Some State Governments have already relaxed control on sugar and, in Uttar Pradesh, the Government have permitted free disposal of unlifted sugar out of the previous quotas. Sugarcane supplies to the

factories are also reported to be heavy. With more units in operation with larger capacity, it is expected that sugar production will touch a new high level this year.

Gur

Gur prices have been depressed, as demand from the main consuming centres of Gujarat and Madhya Pradesh is restricted even at the present low levels. In the Hapur market, Panseera quality is quoted around Rs 13.62 per maund. In Delhi, arrivals average 4,000 maunds and these are lifted by stockists on expectations of an early resumption of loading. The rate for the Panseera quality is quoted at Rs 13.50 to Rs 13.62 per maund.

The 28-day deadlock in Gur Phagun contract is reported to have been resolved in Delhi. At a general meeting of the trading members of the Rajdhani Exchange, which conducts forward trading in Delhi, one of the members is appointed as an arbitrator in the dispute between the bull and bear operators. A majority of the members present at the meeting accepted the rate of Rs 14.40 a maund for the settlement of the outstanding contracts in gur Phagun. Meanwhile, the Exchange is understood to have sought the permission of the FMC to start trading in the new gur Baisakh contract on 21 January, 1961.

Foodgrains

The markets for Foodgrains have been ruling quiet from the beginning of the year. The easy sentiment is attributed to better arrivals and prospects of a good crop following the recent rains. A comfortable stock position and sufficient imports have also contributed to a feeling of confidence. Above, the Union Government's decision to allow the Punjab and Madhya Pradesh Governments to export surplus wheat to other States has been welcomed by the trade, as it will ease the supply position in the deficit areas.

Wheat prices have recorded a fractional fall, to be quoted at Rs 17.37 a maund for the Dara quality and up to Rs 18.50 for the farm produce. Cultivators are steady sellers in view of the good prospects for the "rabl" crop. Supplies in the market are further augmented by sales of wheat and wheat flour through rationshops.

Rice prices have continued to rule steady due to despatches to other States. The supply position, too, is reported to be satisfactory, as the new crop arrivals are good. Prices of other grains are ruling easy due to comfortable stock position.

Coffee

With the rising production and the internal offtake showing signs of stagnation, the Coffee Industry is now facing the problem of disposing of mounting surplus stocks. The Coffee Board is looking for a market to sell about 75,000 tons within the next one year. We are sure of an internal offtake of not more than 30,000 tons. The rest will have to find a market abroad. It is very

Indian Finance

21 January 1961

doubtful whether the world market, which is now overloaded with a heavy surplus, will absorb easily a cent per cent increase in India's exportable coffee. Leaders of the coffee-growing industry are now certain that the Board will not be able to maintain the growers' return at the present level. The growers' position is going to be further worsened by the malady that has affected the coffee plants in Mysore.

Export prices have already gone below the minimum release price fixed by the Board for the internal market. This has naturally caused another concern among the growers, as it will mean a lower price on a lower crop. When even the choicest Plantation coffee is finding it difficult to get a market, there is almost absolutely no scope for getting a market abroad for our Robusta.

Meanwhile, the world coffee crop for the 1960-61 season is expected to show a decline on account of the anticipated shortage in Brazilian output. Latest estimates put the Brazilian crop at 33 million bags over all and 25 million bags exportable against last season's 43.5 million bags and 36.5 million exportable, respectively. Drought is reported to be largely responsible for this sharp fall in Brazilian output. Even at this lower output, several million bags will be left over to be added on to the existing carryover stock.

According to the figures released by the Coffee Board, the receipts of coffee into the 1960-61 Pool have been estimated to total 53,050 tonnes, made up of 31,130 tonnes of Arabica and 21,920 tonnes of Robusta. The total quantity sold for export from the 1959-60 crop, up to the end of December 1960, amounted to 18,542 (15,867) tonnes made up of 11,343 (8,168) tonnes of Plantation; 2,712 (3,100) tonnes of Arabica Cherry and 4,487 (4,599) tonnes of Robusta. Total offtake by the internal market, during the calendar year 1960, amounted to 29,950 (30,105) tonnes comprising 11,997 (11,280) tonnes of Plantation; 4,275 (4,753) tonnes of Arabica Cherry and 13,673 (14,072) tonnes of Robusta. Figures shown in brackets are that of the corresponding period in 1959.

Copra

The outlook for Copra is reported to have undergone a radical change in recent months. Major producers like Penang and Ceylon have witnessed a 15 to 20 per cent fall in prices within a year due to overproduction. The copra from Ceylon has come down from Rs 1,200 to Rs 925 per ton, while that from Penang has lost Rs 200 at Rs 820 per ton. Current world average price at around 165 dollars per ton is practically the lowest during the past five years.

Both large and small consumers in various countries seem to have bought enough copra for January and February. Some shippers, who cannot hold back supplies any longer, are reported to be diverting additional shipments to Europe despite the unsatisfactory state of the market there.

The immediate cause of the fall is the keen desire of Philippine shippers to sell copra, which is already afloat on its way to Europe. In the face of only moderate demand, they have been keeping prices up by restrained selling; but many of them appear to be anxious to increase sales even at the lower levels.

Bangalore Silk

During the week under review, brisk activity was reported in the sale of substantial quantity of fila-

ture raw silk, consequent on the downward revision of prices undertaken by the State Government for the filature silk produced in all the Government-owned units with effect from 2nd January, 1961. Trading in other qualities particularly in Cottage basin silk was bearish. The prices for charka and cottage basin were showing a downward trend. Decline by Rs 1.10 to Rs 1.50 per kilogram in charka and by Rs 2.20 upto Rs 3.85 per kilogram in cottage basin silk was noticed. The week ending quotations were between Rs 80.48

and Rs 83.25 per kilogram for filature silk, Rs 74.80 and Rs 77.00 for cottage basin silk and Rs 52.80 and Rs 72.60 for charka silk. Due to sparse cocoon crops during winter months, the supplies were limited.

In sympathy with the general decline in prices for raw silk, prices for reeling cocoons was also indicative of a downward trend. However, the decline was only slight on account of the low production during winter months. The prices were quoted between Rs 3.85 to Rs 5.00 per kilogram for cocoons from Channapattana

you have just opened

A METAL BOX CONTAINER!

The container in which your favourite vanaspati comes to you is specially designed to protect the contents from spoilage. The container is precision manufactured on specialised machines and the accurately fitting lid and diaphragm ensure that the contents remain free from contamination over long periods. For added protection, vanaspati containers are made pilfer-proof with the now-familiar aluminium foil diaphragm. An unbroken diaphragm is your guarantee that the vanaspati you are buying is genuine.

Manufacturing scientifically designed packages is the business of Metal Box, leaders in the packaging field. A result of years of research abroad and in India, the vanaspati container is another example of a Metal Box package that delivers the best in consumer goods to you.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.
COMPOSITE CONTAINERS of cardboard & metal
COLLAPSIBLE AND RIGID TUBES for toothpaste, ointments, adhesives and pills
CROWN CORKS for carbonated drinks
R. S. PILFER-PROOF AND OTHER CLOSURES for bottled products
COMPONENTS for radio, automobile and electrical industries
PUBLICITY MATERIAL including advertising tablets and calendars
PLASTIC PRODUCTS including Diethylene bags, foil laminate pockets and injection mouldings
HARDWARE including trays and table mats

NEHRU BRIDGE
AT AHMEDABADLIGHTING BY
PHILIPS

For India's latest and widest road bridge over the Sabarmati river at Ahmedabad, the authorities would accept nothing but the best... and, therefore, they specified lighting by Philips.

Philips exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy through maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible plus of Philips' international experience and know-how.

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.

PHILIPS quality lighting for ultimate economy

PHILIPS INDIA LIMITED

area, Rs 4.82 and Rs 4.95 for Sidlaghatta area cocoons and Rs 3.15 and Rs 4.25 for Mugur area cocoons.

Prices for seed cocoons did not indicate any violent fluctuations. The Mysore race seed cocoons remained steady with prices quoted between Rs 4.75 and Rs 5.25 per 1000 as in the previous week, while

foreign race seed cocoons showed a decline by Re 1 and the quotations were between Rs 4 and Rs 10 per 1000 seed cocoons.

Oils & Oilseeds

After opening on a quiet note, prices on the Bombay Oilseeds Ex-

change displayed a firmer tendency towards the close of the week, thanks to higher London advices and better demand in the ready section.

The Groundnut section took a bullish turn from the beginning of the week due to the receipt of groundnut falling short of demand.

Crushers and vanaspati manufacturers emerged as consistent buyers, while the reports from Saurashtra indicated renewed strength in spot groundnut and groundnut oil. Sentiment was also bullishly influenced by a sharp rise of £7 to £120 per ton in the UK prices of groundnut oil. Reports of a drastic decline in the Chinese output of soyabean were also interpreted bullishly. Groundnut Bold quality was quoted at Rs 40 and Groundnut Oil at Rs 19.80.

Conditions in the Castorseed section were, however, far from inspiring with the UK prices of castor oil remaining unremunerative at £120 per ton for commercial quality and £127 for the BSS grade. The outlook for business with the USA also continued depressing and there were also reports of Brazilian offers of castor-bean to the USA. Castor ready was quoted at Rs 34.75 and Castor Oil, commercial quality, at Rs 14.15.

Fluctuations in the Linseed section continued to be shaped by North Indian operators and up-country advices regarding rapeseed. Reports of a fall in the Argentine output of linseed oil were mainly of sentimental value in view of the big disparity between domestic and foreign prices. Linseed Ready was quoted at Rs 36.75 and Linseed Oil at Rs 16.60.

In the Calcutta market, the price of Linseed has increased further to Rs 30.50 a maund for ready delivery. There are shortages of supplies, while crushers are reported to be finding it difficult to obtain their requirements. The price of Linseed Oil has also risen and only small local business is being transacted. Prices of Oilcakes are ruling very steady with sellers rather reserved. Prospects of further exports coupled with increased buying by vanaspati interests have promoted bullishness in Groundnut.

Hides & Skins:

There was better offers for tanned skins in the Madras Skins & Hides market. Prices improved and as many as 2,000 pieces of tanned goat skins and 23,000 tanned sheep skins were bought. Still the market had 11,000 tanned goat and 44,000 tanned sheep skins available. But c.i.f. business did not improve due again to the high prices factor. Certain classes, particularly the middle grades, were offered for lesser rates but this did not give rise to any response. Market was firm for pimesheep and good semiprime skins.

Tanned Cowhides still looked dear from the point of view of overseas buyers. The same applied to c.i.f. section also. Anticipating lower trends next fortnight, outside buyers are not prepared to negotiate deals for these cowhides.

In tanned cow calf there was good arrival and stocks held are much. Bulk offers nevertheless are not found suitable to shippers who are not encouraged to regularise business for big shipments. There has been practically no domestic business in tanned buffalo calf. But in the c.i.f. section 1-3/4 to 2 lb weights were supported at 76d.

21 January 1961

Chairman's Statement

INDIAN OXYGEN LIMITED

Industrial Gases and Electrodes Play Increasingly Important Part in Industrialisation of the Country

Proposed Rights Issue to Finance Large Expansion Programme

The following is a statement by Sir John Douglas Keith Brown, Chairman, Indian Oxygen Limited, issued to the shareholders, together with the Directors' Report and Accounts for the year ended 30th September, 1960 and the Notice of the Company's 26th Annual General Meeting which is to be held on 14th February 1961.

SALES

The Directors' Report and Accounts for the year ended 30th September last are being circulated with this statement. In keeping with the trend in these matters, your directors have felt that the statement which is normally made by the Chairman at the Annual General Meeting, which is attended by only a very small proportion of the shareholders, should be circulated in advance to all members and that this opportunity might be taken to deal at some greater length than previously with the company's trading experience in the year under review, its financial position and its development plans with particular reference to its position in the expanding economy of India.

PROFITS, TAXATION AND DIVIDEND

The profit for the year, after providing Rs. 37,10,806 for depreciation and Rs. 38,85,900 for taxation, amounted to Rs. 62,98,449. This compares with a net profit for the previous year of Rs. 53,07,450 which was arrived at after charging depreciation of Rs. 31,69,459 and taxation of Rs. 34,62,755. As stated in the report of the directors, the profit may be considered satisfactory. Ours is, however, a capital-intensive industry and past experience has demonstrated the necessity continuously to plough back profits to provide for plant replacements at increased cost and for expansion which, as an industry serving other industries, we must always be prepared to carry out in anticipation of demand. I shall refer later in this statement to the expansion which we visualise over the next few years and to the arrangements which are contemplated to finance it. Suffice it to say at this juncture that, for so long as can be foreseen, there will always be the necessity to plough back substantial sums of money each year and it is in these circumstances that your directors have felt it appropriate, notwithstanding the increase in profits, to recommend the same rate of dividend as was paid in respect of the previous year.

DEVELOPMENT AND EXPANSION

Industrial gases and electrodes, which are your company's main products, play an increasingly important part in the industrialisation of the country, and this was appropriately recognised during the year when the Planning Commission called a meeting of the major producers and consumers to discuss the requirements of these

products in the Third Five-Year Plan period. The outcome has been the inclusion of our industry's overall requirements in the draft outline of the Plan published a few months ago.

While the Planning Commission has indicated the country's overall requirements of our major products during the next few years and while this is extremely useful as a basis for planning our own production facilities, these requirements have to be broken down to assess the needs of each region. This is particularly important in the case of industrial oxygen and dissolved acetylene, where extremely high distribution costs limit the frontiers of the market. The whole country, therefore, has to be divided into several regions to be served by carefully sited producing and supply points. Again, each production point has to be of a capacity geared to the needs of the region it serves, and as the state and pace of development varies from region to region, it is obvious that the capacity and size of the various plant units will also vary. In catering for additional oxygen requirements, therefore, we have to consider the alternatives on the one hand of multiplication of plants of similar capacity, and on the other of stepping up the size of each unit as a region progresses industrially, so that benefit may be derived from the economies of larger scale production.

Your company is in a particularly favourable position to fulfil this requirement of regional development, and this is accomplished by transferring oxygen producing plants from one region to another, and installing plants of higher capacity and greater efficiency in regions which, by reason of economic advancement, require such plants. This incidentally results in a significant saving of foreign exchange as the import of one additional plant may, through a number of consequential transfers, help to increase available capacity in more than one region. Thus, during the past year we have succeeded in stepping up oxygen production at Ahmedabad and Madras by transferring plants from Bombay to Madras and from Madras to Ahmedabad. This leaves the oxygen plant capacity at Bombay to be augmented, and we are hopeful that the necessary licence under the Industries (Development and Regulation) Act will be forthcoming in the near future, to enable us to import a plant with adequate capacity against foreign exchange procured by the company.

Oxygen requirements in the Calcutta and Jamshedpur region have been growing apace and an additional 400 M³ oxygen plant was installed in each of the Calcutta and Jamshedpur factories during the year. Another significant development took place at Burnpur, where we installed argon purification and high purity nitrogen production facilities, which were successfully

commissioned during the year with the help of technical assistance received from The British Oxygen Company Limited. In our Burnpur factory we are now equipped to produce and compress argon, high purity nitrogen and argon/nitrogen and argon/oxygen mixtures. The production of these gases for the first time in India will lead to substantial savings in foreign exchange which had hitherto been expended on importing them and the cylinders which contained them. Argon, high purity nitrogen and their mixtures will provide electric lamp manufacturers with an indigenous source of supply, while argon will help in welding and fabricating stainless steel and aluminium and aluminium alloys, which are to be produced in the country in growing quantities in the years to come, and will also fulfil the large requirements of the Government Alloys Steel Plant to be set up at Durgapur.

The present oxygen producing plant in Bombay also produces liquid nitrogen which is essential for the operation of India's atomic reactors. The additional oxygen plant we hope to install there will further augment our supply of this gas, the demand for which is increasing and will continue to increase as India progresses in the field of atomic power generation.

Through the pioneering efforts of your company, liquid oxygen is being more and more used with loxite cartridges as an effective and economical explosive in open-cast mining for coal, iron ore, limestone and manganese. In developing the use of this explosive, we have been closely associated with the National Coal Development Corporation, the Tata Iron and Steel Co. Ltd., and the Indian Iron and Steel Co. Ltd. The loxite cartridge manufacturing plant which was established at Burnpur in May 1959 is producing the additional cartridges required to match developing sales.

The draft outline of the Third Five-Year Plan envisages rapidly increasing requirements of electrodes and our new factory at Khardah, Calcutta, is being equipped to meet the greater demands. The level of production at this factory improved during the year and new types of special electrodes were developed and introduced into the market. Our equipment factory at Calcutta, which two years ago undertook a phased programme of indigenous manufacture of gas-user equipment, is now on 100% local manufacture of the components required. Here again, plans are afoot to raise the level of production in the near future.

At Bangalore construction of a new oxygen and dissolved acetylene factory is progressing on schedule and operations should commence within the current financial year. When complete, this will afford increased production of dissolved acetylene in that growing industrial area.

This expert has won the trust of millions in the label 'Sanforized'

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

Traveling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed everywhere in the world!

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications before it can use the label 'Sanforized'.

Issued by Chitt, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay-2

SAN. 20.1

At Gauhati, we have installed an oxygen plant within the premises of Indian Refineries Ltd., and I think we can claim that we have contributed in no small measure to the progress of erection of the refinery by coming forward with timely supplies of oxygen.

Nitrous oxide, which is an anaesthetic widely used by the medical profession in India and which is also exported, is now produced in our Calcutta factory. A licence for setting up a second producing plant for nitrous oxide at Bombay has recently been obtained and when this plant is in operation, it is hoped to increase substantially both sales generally and in particular exports to the Near and Far East.

With regard to welding rods, miscellaneous gas-user and medical equipment and electric welding plant, it has been our policy to encourage their manufacture through feeder industries, thus reducing our reliance on imports. I am glad to say that in very many cases these feeder industries have been nursed and encouraged to undertake manufacture of these items, not only through the orders we place with them, but with the technical help we render them by drawing on our collaboration arrangements with The British Oxygen Company Limited.

It is obvious that with the increasing pace of industrialisation in the country and in particular having regard to the greatly increased quantities of steel which will become available for fabrication and machine building during the next Five-Year Plan period, the consumption of your company's products must continue to rise. What may not, however, be so widely appreciated is that based on the experience of the industrially developed countries, the rate of expansion of the industrial gases industry is likely to exceed the rate of expansion in the output of steel. Even today, in the United States of America, the consumption of oxygen per ton of steel produced is still increasing and this is a factor which I believe will have to be borne in mind in considering the scale of development required in India if shortages and deficiencies are not going to handicap the steel-using industries in highly competitive years which lie ahead of us.

COMPETITION

Government's policy towards competition, especially with regard to industrial oxygen, has been indicated by the Planning Commission as follows:—

"...It was agreed that while recent entrants into this field and newcomers might be given some weightage in the interest of preventing over-concentration of growth, there could be no question of freezing the capacity of leading producers at current levels and that taking all relevant factors into consideration, an appropriate share of the ex-

pansion should be allowed to them also."

We accept this position which is in line with the declared economic and social objectives of planning in this country. I feel, however, that I should make one comment in this connection and it stems from what I have stated before, namely that by the very nature of its business, oxygen production facilities have to be sited at multiple points each serving a certain optimum area. If, therefore, the country is to reap the benefits of increased production each one of these production points should be allowed to grow to be able to achieve the economies of scale which in this industry are very considerable; indeed, spectacular. A careful eye should, therefore, be kept on this aspect of the problem so that wasteful competition is not allowed to lead merely to unnecessarily high prices to the detriment of our customers and therefore of the nation as a whole through failure to achieve economic cost levels.

FINANCE

The considerable expansion in our production facilities which has already taken place as well as the further expansion which is now visualised, necessarily involves financial commitments which cannot be completely met from cash retentions in the business. Apart from the quantum of the finance required, the necessity at this stage to import plants gives rise to a demand for foreign exchange, and this is being met in various ways. The biggest single item in the past year has been for oxygen and dissolved acetylene cylinders and, for this purpose accommodation was arranged through the United States Export-Import Bank. As a counterpart of this arrangement, the rupee equivalent of the U.S. Dollar cost which could not be met from internal resources was secured by way of additional facilities from our Bankers in Calcutta.

Our capital expenditure in the three years ending 30th September, 1963 is presently estimated at a figure of Rs. 3,85,00,000. Your directors have carefully considered the methods of financing this large expansion programme and in view of the steadily increasing investment in fixed assets have come to the conclusion that the Ordinary Share capital should now be increased. By virtue of The British Oxygen Company Limited's holding in our equity capital this will also yield foreign exchange in our hands through the parent company's subscription towards the new Ordinary Shares to be allotted to them. The consent of the Controller of Capital Issues has, therefore, been sought and obtained, and it is now proposed to make a rights issue of 6,00,000 Ordinary Shares of Rs 10/- each at a premium of Rs. 8/- per share. You will notice that various matters arising out of this issue

of share capital are proposed to be dealt with at the meeting to which this statement is to be submitted and full information is contained in the explanatory statement attached to the notice convening the meeting. I would particularly point out that although on the basis of its current holding of Ordinary Shares, The British Oxygen Company Limited, is entitled to 70% of the rights issue, they have agreed that they should take up only 60% thereof, thus enabling 40% to be offered to members other than The British Oxygen Company Limited, being very largely members of the Indian public.

MANAGEMENT AND PERSONNEL

In an expanding organisation such as ours which by the nature of its production is necessarily widely dispersed throughout the country, the need to provide for the development of senior executives is a continually increasing one. We have taken advantage of the facilities afforded to us by The British Oxygen Company Limited, to send a number of our officers to the United Kingdom for specialised training while nominees of the company have also attended the Administrative Staff College at Hyderabad as well as other specialised courses in sales and administration which have been available in India. We were particularly proud that our Secretary, Mr. A. K. Basak, was selected by the National Productivity Council to lead a Productivity Study Team on stores and inventory control to Japan, the United States of America and West Germany, while we are also pleased that one of our officers has been chosen for inclusion in a Productivity Team on welding which is to go abroad in 1961. The burden on our senior executives is a heavy one and I assure you that we have been well served by them. Our particular gratitude is due to our Managing Director, Mr. A. K. Sen, who has been untiring in his devotion to the company's interests. To him and to the other senior executives as well as to the staffs and work-people at our installations throughout the country I offer on your behalf our grateful thanks.

TECHNICAL COLLABORATIONS

It would be inappropriate to close this statement without a special mention of the help and assistance which we continue to receive from our parent company, The British Oxygen Company Limited. With the increasing tempo of development in India the contact between the personnel of the two companies has continued to grow at all levels and we were particularly pleased to welcome just a few weeks ago Mr. J. S. Hutchison, the Chairman of The British Oxygen Company Limited, who in a crowded programme visited Jamshepur, Calcutta, Delhi and Bombay. On your

behalf I extend to The British Oxygen Company Limited and to its Chairman our appreciation of their valued assistance and of the very real interest which I can assure you they continue to take in our progress.

PROSPECTS

The Company is now embarked on a further expansion programme, the scale of which is substantial even on the basis of its already widespread activities. We are, however, building on a sound foundation and from what I have already stated, shareholders will appreciate that I have no doubts regarding the future demand for our products. Expansion of the steel-using industries constitutes a basic feature of the Third Five-Year Plan just as increased steel production was the central theme of the Second Plan. In these circumstances it is clear that our industry must forge ahead. At the same time I must point out that we have already shouldered substantial liabilities in the shape of foreign exchange loans and the likelihood is that the demands of Indian industry will compel us to consider before long a further stage of expansion, involving fresh financing problems. Having regard to all these considerations it may, I fear, be necessary for shareholders to be prepared to exercise a degree of patience in regard to the expectation of increased returns by way of dividend; but from what I have stated it is only reasonable that you should be able to look forward to a steady growth in the value of your investment in an industry which is vital to the continuing growth of the Indian economy. I have no doubt that, given a steady supply of the necessary raw materials, all industries in this country will bend themselves to the task of achieving what is expected of them under the Third Five-Year Plan and in serving them Indian Oxygen will play its full part.

IRON ORE PRODUCTION IN INDIA

The production of iron ore during November, 1960, was 791,000 tonnes, according to the Indian Bureau of Mines.

This brings the total output during January-November 1960 to 9,726,000 tonnes which was higher by 36 per cent when compared to the output of 7,160,000 tonnes during the corresponding period of the preceding year.

Orissa was the chief producing State with an output of 240,000 tonnes followed by Bihar with 229,000 tonnes. Mysore and Madhya Pradesh recorded an output of 148,000 tonnes and 121,000 tonnes respectively while the output from Maharashtra was 27,000 tonnes.

During the month despatches of iron ore for consumption in the iron and steel plants totalled 623,000 tonnes while the despatches for export were 222,000 tonnes.

FOR THE INVESTOR

Smart Rally

Investment Gossip:

THIS week's recovery in equities is mainly due to indications of favourable developments as regards the steel counters. It was Dalal street which initiated the uptrend and the factor influencing it had been the rumour of an impending announcement regarding steel retention price. The announcement came late on Wednesday and the actual reaction of the market could be seen only in Thursday's trading when Indian Irons at one time were taken to a high of Rs 24. Government have provisionally increased the retention price for steel by Rs 25 per ton. This increase will be effective from 1 April 1960 and will be in force up to 31 March 1962 when the matter will be examined again. The final retention price for the next two years will however be arrived at after the Tariff Commission's recommendations in this respect are considered by Government. Some uncertainty about the steel retention price will still continue because Wednesday's announcement is silent on the demand of the two steel companies for a retrospective increase for the past five years.

The improvement in sentiment has also partly stemmed from current discussions on the shape of things to come in the Central Budget. It is argued that since the Central revenue receipts so far in the current financial year have recorded substantial increase as compared with the corresponding period of the previous financial year, the Union Finance Minister may not find it necessary to administer too many jitters to the market.

It is therefore expected that though there would be some new levies their impact may not be severe on the corporate sector. Such an inference is derived from the belief that while advocating a rapid industrialisation of the country, Government would not initiate steps which will in effect render existing industries inefficient. Even so, there is an under-

current of anxiety and this will continue to influence market sentiment till the Budget is out of the way. It is rather surprising that the revival has come notwithstanding the upward revision of the Third Plan outlays by the National Development Council.

£RS

New Issue Notes:

MAHENDRA ELECTRICALS

Mahendra Electricals Limited has offered for public subscription 23,000 equity shares of Rs 100 each. The subscription list will open on 21 January and close on 28 January or earlier, but not earlier than 24 January. The company has already obtained a licence for setting up a plant for the manufacture of rubber-insulated cables and wires.

SWASTIK RUBBER

Swastik Rubber Products Limited has received the consent of the Controller of Capital Issues to the raise the share capital from Rs 25 lakhs to Rs 50 lakhs. The company, however, intends to issue only 15,500 equity shares of Rs 100 each. The new shares will be offered, in the first instance, to its existing shareholders. Out of the shares not taken by them, the managing agents and their friends have agreed to take up shares worth about Rs 10 lakhs. The balance of the shares will be offered for public subscription. The new capital will be utilised for financing the expansion scheme of the company.

MODI INDUSTRIES

Modi Industries Limited has obtained a licence for setting up a 10-ton rayon acetate plant at Modinagar in Uttar Pradesh. A well-known American firm is likely to collaborate in the project and will invest Rs 1 crore by subscribing to the equity shares of the company besides providing technical know-how. The American firm will also arrange long-term loans in America to cover the cost of the plant. The capital outlay of the project is estimated to be Rs 10 crores.

MOHANWI CORPORATION

An industrial licence has been secured by Mohanwi Corporation Private Limited to set up a factory in Moradabad for the manufacture of spare parts for automobiles and aircraft. The company will produce such spare parts as are not being produced now in the country. Negotiations are in progress for

securing foreign technical and financial collaboration. The capital outlay of the project is estimated at Rs 1 crore. The factory is expected to go into production by the end of 1962 or the beginning of 1963.

DWARKA PAPER MILLS

A new company known as Dwarka Paper Mills Limited will be formed shortly for undertaking the manufacture of glazed newsprint and mechanical printing paper, which are not presently produced in the country. The estimated capital outlay will be Rs 6½ crores. The factory will be set up in Betul district, Madhya Pradesh. The Madhya Pradesh Government have approved the scheme and the requisite licence is expected to be issued shortly.

KOTHARI SUGARS & CHEMICALS

Kothari Sugars & Chemicals Limited has completed allotments in respect of its public issue. In respect of applicants for 100 shares, allotment has been made in full. Applicants for over 100 and up to 500 shares will get 50 per cent of the shares applied for but subject to a minimum of 100 shares and to be rounded off to the nearest 50. Applicants for over 500 shares will get 40 per cent of the shares applied for, subject to a minimum of 250 shares and to be rounded off to the nearest 50.

SOUTHERN INDUSTRIAL CORPORATION

The Southern Industrial Corporation, Madras, will enter the capital market in the middle of February. To meet the cost of the expansion programme, the company will offer to the public Rs 5 lakh equity shares of Rs 10 each.

A sum of Rs 2.50 per share is payable on application; Rs 2.50 on allotment and the balance in two calls at intervals not less than three months between each call. The directors have already taken up 3,000 shares. The company has been manufacturing wood screws, gate hooks, ship chains and machine screws.

£RS

Balance-Sheet Briars:

The working of the Kirloskar Electric Company Limited has resulted in a profit of Rs 4.99 lakhs for the year ended 30 June 1960 as against Rs 5.82 lakhs for the preceding year. The dividend is reduced from 10 to 9 per cent, taxable.

The outh Sugar Mills has made a profit of Rs 50.56 lakhs for the year ended 31 July 1960 as against Rs 45.65 lakhs. An ordinary dividend of Rs 20 per share, taxable, is proposed to be paid.

The net profit of the Bank of India Limited has gone up by Rs 20.69 lakhs to Rs 103.37 lakhs for 1960. A final dividend of 12.5 per cent is proposed. This makes a total of 20 per cent, taxable, as against 16 per cent.

The net profit of the Bank of Baroda has also gone up by Rs 11.77 lakhs to Rs 40.66 lakhs. A final dividend of 10 per cent is proposed, making a total of 17 per cent, taxable, for the year. This compares with 14 per cent paid previously.

The United Commercial Bank Limited has reported a net profit of Rs 67.43 lakhs as against Rs 60.42 lakhs. The dividend is increased from 11 to 12 per cent, taxable. The carry forward is Rs 1.47 lakhs against Rs 1.04 lakhs brought in.

Selected Equities Forge Ahead

Watch-Dog Writes:

THANKS to higher advices from Bombay and the announcement with regard to the provisional increase of Rs 25 per ton in steel retention price, stock markets have given a satisfactory performance this week although the improvement in values varies from counter to counter. There has, however, been no marked expansion in the volume of business due to the cautious attitude adopted by the operators.

Cheerful conditions were noticed on the the Calcutta Stock Exchange and further gains in prices were recorded under the lead of speculative issues.

The Bombay Stock Exchange exhibited a bright sentiment with selected shares moving up further as a sequel to short-covering and stray bull support.

Steady conditions were noticed on the Madras Stock Exchange although business continued to be restricted.

★

Calcutta

Thursday, Evening

SENTIMENT on the local stock exchange appeared to have taken a better shape during the week under report when the improvement in the values of certain shares was distinctly impressive. Apart from the fact that it was the record of corporate performance that induced some buying at the recent low levels, some operators entertained the belief that the forthcoming Central Budget might be a pedestrian one and the Government might not introduce any fresh imposts on consideration of the general election next year. Also, the announcement of a provisional increase of Rs 25 per ton in steel retention price imparted further strength to the market.

There was, however, no marked expansion in turnover due to the cautious attitude adopted by the operators in the absence of any support from investors who had turned their attention to the spate of new issues. Again, monetary stringency and the difficult foreign exchange position made for further hesitation.

Gilt-edged securities ruled generally steady although business continued to be restricted. With monetary conditions tight, banks also showed little interest, while interest from other sources was small. Even so, selected issues were in

demand, either due to the proximity of half-yearly interest or to other conditions. Interest in State Loans was also limited, 3 per cent 1986 Conversion Loan changed hands at Rs 74.40 to Rs 74.65.

The release of encouraging working results for 1960 induced a steadier tendency in the prices of Bank shares. Punjab National hardened to Rs 19.44 from Rs 19.37, while United Commercial were enquired up to Rs 83.37 from Rs 82.75 following the increase in dividend from 11 per cent to 12 per cent, taxable.

Despite firmer advices from the jute goods market, Jute shares continued to be neglected in view of the corresponding rise in raw material prices. There was also a general disposition to await the outcome of the controversy still going on over the proposed cut in the working hours from 1 February. Howrah were the solitary scrip, having advanced to Rs 21.19 from Rs 20.37 due to settlement considerations. Ganges met with business at Rs 10.12 to Rs 10.44; New Central at Rs 19.44 to Rs 20.06; Nuddea at Rs 45 to Rs 45.50 and Birlas at Rs 27.37 to Rs 27.87 and Budget at Rs 125 to Rs 128. National came in for offer at as low as Rs 21 against Rs 22.75.

Coal shares continued to receive selective support on the hope that the industry might obtain financial assistance from abroad for expansion. Burrakur were taken up to Rs 18.81 from Rs 18.62; Equitable up to Rs 28.62 from Rs 28.12; Central India up to Rs 11.81 from Rs 11.44 and Western Bengal up to Rs 7.75 from Rs 7.69.

Sellers continued to dominate the Tea section. This was mainly due to the anxiety that, in spite of the higher average prices obtained for the commodity, the North Indian estates were unlikely to improve their profitability in 1960 in view of the shortfall in production. Brooke Bond changed hands at Rs 15.50 to Rs 15.62; East Indian at Rs 17.75 to Rs 17.81; Hasimara at Rs 21.56 to Rs 21.62; Jayshree at Rs 16.50 to Rs 16.75 and Methoni at Rs 17.50 to Rs 17.56.

Sugar shares, which had been ruling very firm during the past many weeks, developed a reactionary tendency on fears of excessive supplies and a consequent accumulation of stocks in the event of any decline in domestic consumption. Raza Buland came in for offer at Rs 13.37 to Rs 13.50 against Rs 13.69 in the previous week; Bel-sund at Rs 11.66 x.rts. against Rs 11.81 x.rts. and SKG at Rs 13.06 against Rs 13.12. Carew, after a long time, came in for some enquiry up to Rs 9.58 from Rs 9.44. Ramnugger Cane were an exception to the general trend, having forged ahead to Rs 26.69 from Rs 24.87 on reports of good working.

Textile scrips turned slightly active, obviously due to the extension of the export incentive scheme for cloth. Moreover, the mill industry was reported to have not

abandoned its bid for securing a higher Third Plan target of cloth production for the organised sector. Jayshree were enquired up to Rs 15.44 from Rs 14.12 in the previous week; Dunbar up to Rs 23.37 from Rs 22.56; Kesoram up to Rs 28.62 from Rs 28.12 and J. K. Rayon up to Rs 15.19 from Rs 14.50.

Thanks to encouraging advices from Bombay, Engineering shares developed a firmer tendency under the lead of Indian Irons. Although there was a mild setback in prices in mid-week due to settlement considerations, there was a subsequent recovery following the announcement of the provisional increase of Rs 25 per ton in steel retention price. After opening steady at Rs 23.16, Indian Irons advanced steadily to Rs 23.59 to suffer a setback to Rs 23.42 on Wednesday when the settlement rate was fixed at that level. The scrip showed a sharp recovery again towards the close to Rs 24.00. TEXMACO met with business at Rs 22.65 to Rs 22.95, Jessop at Rs 19.12 to Rs 19.25; Britannia at Rs 12.69 to Rs 13.06 and Kumardhubi at Rs 5.87 to Rs 6.09 G. K. Williams were enquired up to Rs 37.50 from Rs 36.19.

Miscellaneous issues, after ruling initially weak, developed a firmer tendency although higher levels could not be retained till the close due to modest profit-taking. Following were the price trends of a few selected shares:—

	Week's Week's Week's		
	High	Low	Closing
	Rs	Rs	Rs

★

Madras

THERE was better activity in the Madras Stock Exchange early this week. Anticipating good profits, Banks had better deals. Though weak, yet buying in sugar shares was good particularly with Deccan which was higher. Plantings had good absorption in tea and coffee shares like Consolidated at higher rates. Textiles proved strong, several among them moving up, with Travancore Rayon and Madura coming in for good inquiries. Also the Miscellaneous section reported good support and turnover with Aluminium Industries going up in value.

Sugars and Breweries: Cauvery improved to Rs 138 by the week beginning but lost a rupee at today's transactions at Rs 137.00. Deccan was higher at Rs 14.80, EID gained 25 nP at Rs 39.25. KCP did not change at Rs 26.00 or Travancore at

Rs 10.40. Two more rupees were gained by the United Breweries at Rs 127.00.

Plantings: Alageswar was quoted better at Rs 2.42. Blue Mountain was better at Rs 3.88. Cochin Malabar moved up to Rs 6.95. Coffee Lands was the same at Rs 18.30, but Consolidated Coffee had better preference at Rs 21.20. Coorg Tea was available at Rs 5.43. Cottanad with 10 per cent dividend was unchanged at Rs 11.25. Kailas did not gain anything at Rs 5.18 with 10 per cent interim. Kil Kotagiri was marked at Rs 5.30. Lucky Valley or Manimala did not also change at Rs 13.75 and Rs 8.75 respectively. Mysore Plantation was the same at Rs 2.23 and Mysore Coffee was available at Rs 5.34. Nelliampathy was fractionally lower at Rs 2.73. Midland lost 10 nP at Rs 11.30.

Oucherlony was in demand slightly at lower level of Rs 4.50. Panchura improved to Rs 5.30. Pariskde was quoted 25 nP better at Rs 27.00. Pullangode was marked at Rs 1.82. Stanes Amalgamated was at Rs 14.78. TR & T xid was quoted at Rs 9.40. Tropical gained 25 nP in the trading at Rs 17.75 and Twyford lost 10 nP at Rs 11.90. Wartyhully was bought 24 nP better at Rs 3.40.

Textiles: Both Bangalore Woollen and Buckingham did not change at Rs 195.00 and Rs 196.50 respectively. Coimbatore Spinning was fancied only 50 nP higher at Rs 42.00 and Dhanalakshmi lost a rupee at Rs 215. Janardhana was quoted at Rs 58.00 and Jawahar was improved to Rs 12.35. Kannapiran gained at Rs 8.50. Lakshmi was unchanged at Rs 148.00 and Madura was fancied at the slightly higher level of Rs 35.37. Premier gained two rupees at Rs 227.00. Radhakrishna's improvement was slight at Rs 28.25. Travancore Rayon gained ten nP at Rs 32.70. Vijayeswari was less by 50 nP today at Rs 113.50.

Indian Finance

21 January 1961

Right Issue by Indian Oxygen

AS a result of discussions, the Planning Commission have recognised the growing importance of industrial gases and electrodes in the industrialisation of the country and have included the overall requirements of these products in the Third Five-Year Plan. With the anticipated increase in demand as envisaged by the Plan, the Indian Oxygen Limited has formulated an expansion scheme for raising the production of industrial gases, electrodes, gas-using equipment, medical equipment, and nitrous oxide.

The implementation of the expansion scheme will require a large capital outlay, which, according to the present estimate, will be in the region of Rs 3.85 crores, spread over the next three financial years ending on 30th September, 1963. In view of the steadily increasing investment in fixed assets, it is felt that the share capital of the company should bear a reasonable relationship to the value of the fixed capital assets.

The directors have, therefore, considered that the share capital should now be increased by the creation of 6 lakh new Ordinary shares of Rs 10 each and the issue thereof to the shareholders for cash at a premium of Rs 8 on each new Ordinary share.

The British Oxygen Company Limited presently holds 70 per cent of the ordinary shares in the company. It is proposed to issue to them 3.6 lakh new ordinary shares of Rs 10 each (which represents only 60 per cent of the new issue) at a premium of Rs 8 per share. While this issue to the British Oxygen Company will reduce their total holding in the company to below 70 per cent of its issued capital, the proceeds of the issue of the British Oxygen Company will be available towards meeting the foreign exchange required for the purchase from the United Kingdom and other parts of the sterling area of plant and machinery required for the expansion project.

The following are the proposals for the issue and offer of 6 lakh new ordinary shares:—3.6 lakh new ordinary shares of Rs 10 each will be issued at a premium of Rs 8 per share to the British Oxygen Company against their present holding of 14 lakh Ordinary shares of Rs 10 each; but the British Oxygen Company shall not be entitled to renounce the shares so offered in favour of any third person or to sell their rights in the open market or otherwise.

The balance of 2.40 new ordinary shares will be offered to the members of the company (other than the British Oxygen Company and/or its nominees) at a premium of Rs 8 per share. The new shares will be offered in the proportion of the new shares for every five existing ordinary shares.

The offer of 2.40 lakh new ordinary shares may result in fractional entitlements. It is proposed that any member, who may be entitled to a fractional share and takes up his rights fully, should be required to pay for such fractional shares (at the rate of Rs 18 for every new ordinary share); but the company will not issue any certificates in respect of fractional shares. The total number of shares representing such fractions will be allotted by the company to two of its directors as nominees of the members entitled to fractional shares and the company will issue in favour of such nominees certificates for the whole shares comprising such fractional shares which will then be sold by the nominees in the open market at the best price ruling on a date to be appointed by the Board of Directors and the net proceeds of the sale will be distributed among the members entitled to fractional shares in accordance with their respective entitlements.

Meanwhile, the company's sales for the year ended 30 September 1960 have gone up to Rs 6.46

crores from Rs 5.54 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 62.98 lakhs as against Rs 53.07 lakhs for the previous year. The Depreciation amount is raised to Rs 37.11 lakhs from Rs 31.69 lakhs; Taxation provision to Rs 38.86 lakhs from Rs 34.63 lakhs; General Reserve to Rs 21 lakhs from Rs 9.50 lakhs and Development Rebate Reserve to Rs 12 lakhs from Rs 9.80 lakhs. The dividend is maintained at 15 per cent, taxable.

ACC Pays Dividend from General Reserve

The working of the Associated Cement Companies Limited, for the year ended 31 July 1960, are not encouraging. This was mainly due to the fact that, despite technical improvements resulting in improved efficiency and higher production, costs have continued to rise steadily. The implementation of the recommendations of the Cement Wage Board would have increased the labour costs still further, but for the acceptance by the Government of the view expressed by the Wage Board concerning the incapacity of the cement industry to bear this additional burden and the consequent need to neutralise it by an appropriate increase in the retention price.

While sales for the year have risen from Rs 25.55 crores to Rs 27.09 crores, the net profit, after providing for Depreciation and Taxation, amounts to Rs 2.16 crores against Rs 2.04 crores for the previous year. Apart from providing a sum of Rs 1.77 lakhs for Amortisation Reserve, the Depre-

ciation amount is raised to Rs 2.34 crores from Rs 2.13 crores and Taxation provision to Rs 1.11 crores from Rs 1.00 crore. The provision for Development Rebate Reserve is, however, lower at Rs 70.04 lakhs against Rs 74.16 lakhs. The directors have proposed a taxable dividend of 12 per cent against 11 per cent previously.

According to the directors' report, the extension of the Shahabad Works, which raised its capacity from 4 lakh tons to 5.65 lakh tons per annum, was completed in June 1960.

The first stage of the modernisation and extension of the Kymore Works was completed early this year. At Chaibasa, the Flotation Plant was commissioned in July 1960. The installation of the Coal Washing Plant at the Novrozabad Colliery was completed at the end of 1959. The second dryprocess kiln at Mancherial was originally scheduled to commence production in March 1960. However, due to prolonged labour unrest at the factory, it was not possible to complete erection work as programmed.

So far, the company has taken up 99,600 equity shares of Rs 100 each in ACC-Vickers-Babcock Limited against payment in cash. The construction of their factory at Durgapur is proceeding satisfactorily.

The sanction of the Controller of Capital Issues to the issue of bonus shares by the capitalisation of Reserves has not been availed.

Medium Section Mill—Bloom reheating furnace and Mill run-in table

Construction and operation proceed side by side at Durgapur Steelworks ISCON's Medium Section and Merchant Mills—the final unit of the Rolling Mills Plant—are now well on the way towards completion. Three Mills were commissioned earlier this year and are in operation. The two new Mills will make a considerable addition to Durgapur's productive range.

Foreign Aid and Nationalism

THIS month when the Third Plan looms large, there has been attack from many quarters on the scale of outlay, the continued foreign borrowing and the acceptance of aid, compromising India's cherished neutralism. The balance of payments difficulties are often mentioned to magnify the burden of progress. As the Smallways family in Wells' novel testified, this progress cannot be stopped, must go on. India was pulled out by two world wars into the jet age and the pains of change have to be borne willingly. Agrarian reform was carried out for the peasants' sake by the Swatantra leaders (when in office) and trade was transformed by the advent of the lorry that levels prices, as some point out.

When India has adopted adult suffrage and discarded the aristocracy drastic economic change became inevitable and inequalities in income had to be modified by taxation for achieving new aims. How industrial development leads to an attack on agricultural inefficiency is obvious from the current clamour for both cheap credit and fertilisers. Industries grow under the tariff umbrella if foreign goods are kept out, but that does not always spell real growth because heavy industries alone make for big markets and lower prices. It is from excises levied on the new, growing industries that revenue is drawn, not from land. Of course, taxes on consumption have their value in broadening the tax base and getting in regular revenue without much of a squeal.

The scarcity of domestic capital for industrial growth renders recourse to world agencies logical. Countries cannot pay for capital goods from the proceeds of agricultural surpluses sold abroad, even if they are available. That is India's present position and the demand for bigger yields from the land is born of the feeling that cotton output has not gone up alongside cloth output. As India is committed to a mixed economy, the agriculturist has to be converted into a capitalist on a small scale, and as India has not got the large resources needed to develop minerals or oil, the offers of foreign aid have to be accepted. It may even be claimed that Mr Nehru is more practical than the business brains of the Swatantra party, because he sees that modern science has mastered the world and the Indian cultivator or artisan must come to terms with new techniques. There is also the fact that countries like Poland and Hungary have slipped out of the shell of arrested development. And India with experience of ten years of the Colombo Plan can argue that supplementary aid has helped to augment power and to bring new industries within reach. The country has escaped from what was called the "poverty of wants." The war made known to millions what Europe was making and consuming, and it came also to be seen that national freedom could be stable only on a foundation of economic strength.

Education did something to act as a catalyst and the local captains of industry grasped new opportunities. It is a pity that those who have benefited substantially by the vast changes after 1947 are now prone to complain that the masses are being pampered, whereas the capitalist did very well and is doing very well out of the accelerated change. But there are limits to gratitude and the only thing that needs to be mentioned is the rise of a chemical industry set up mainly with foreign aid as also the growth of dyestuffs manufacture under conditions quite favourable to native enterprise and prosperous mills.

The way in which foreign capital is secured is not by means of loans to government alone. The private sector does very well out of collaboration agreements, say for making locally synthetic rubber or even pneumatic tyres. And trucks made in India are relatively cheap today because German knowhow and capital has come to help Indian enterprise. Of course, profits made here have to be remitted. Foreigners are not in business for the good of their health. And to make Japanese steel makers buy for a long period iron ore from India in quantity, some conditions have to be fulfilled, if Goa is not to take away all the business offering.

Foreign loans for new ports or opening railway links then appear indispensable and if the Budget Memoranda will give all the data about loans taken, instalments paid or due, the prejudice recently created will not linger. The burden of new debt can be magnified. Much can be repaid in rupees by degrees, and it may be noticed that India is getting capital on better terms than South Africa in the past because the latter needed big money for extractive industries with the attendant risks. The fact that a lot of foreign business has been bought out (nationalised, in another sense) deserves recognition by those who argue that further industrialisation means a permanent mortgage or a limited income. But if idle capacity in engineering persists, it is because there are fuel and other problems and in the case of coal, remedies will be soon forthcoming. The theory that taking loans means a sacrifice of independence is baseless. Japan, like India, borrowed heavily in the past. The Empire could act on its own in every matter. And Japan's credit status was based on the growth of industry, even to the detriment of European trade in Asia. The USA for long had to depend on foreign capital, but the Republic went on developing and the time came when all foreign holdings could be bought out and all loans could be repaid in gold.

The radical change from creditor in 1945 to debtor in 1955 in the case of India has probably touched off anxiety about ends and means. But the foreign aid is got under special agreements and the agency is often a consortium created under foreign auspices. The consortium idea is extended to group of nations. That investment breeds goodwill is apt to be ignored but Durgapur is now as much a landmark as the battlefield of Plassey for the British at any rate. And the Soviet Union effusively points to Bhilai as a memorial to Indo-Soviet good relations. And competition in giving aid has come. Canada is helping in the field of atomic energy and Italy is getting ready to help in the development of oil. The economic policy pursued is not authoritarian. Parliamentary approval for industrial policy, for calling in foreign capital, and for borrowing abroad has been sought, and taken. And the Swatantra party that glibly talks of a crisis due to rapid development certainly ignores the point that India has done far better than either Brazil or Turkey, that India gets aid on her merits and her record.

Guide for Foreign Investors

ON the eve of the inauguration of the Third Plan, the Federation of Indian Chambers of Commerce and Industry has rendered a thoughtful piece of service by issuing a brochure containing valuable information for the guidance of foreign investors. The Third Plan depends to a large extent on foreign capital, and it is therefore appropriate that the

Federation should take the initiative in collecting data on a variety of relevant subjects, like the range of the Indian market, availability of raw materials, Government's industrial policy, tax concessions, procedures for obtaining licences, etc. It points out that India is potentially one of the most important markets for consumer and producer goods in the world. Though India is in the group of countries with the lowest per capita income, it has a fertile soil and is rich in mineral deposits and power resources. Its deposits of iron ore, known to be of the highest quality in the world, are assessed at 21,000 million tons, about one-fourth of the total world resources.

The brochure indicates not only particular lines in which private foreign capital can be of special assistance, but also demarcates areas where we do not feel its need. Thus, we welcome capital for manufacture of industrial machinery, metals; engineering goods; chemicals and fertilisers; but not for trading and financial enterprises. The objective is that foreign investment help us where we are comparatively ill-provided. Secondly, such investment should contribute to strengthening the foreign exchange position of the country through production of commodities which would lead to saving of foreign exchange on imports or to addition to it through increased exports.

Describing the main features of official policy, the brochure points out that there is equality of treatment with domestic capital. There is no hard and fast rule about ownership and control, each case being dealt with on merit. Actually, majority participation by foreign investors has been permitted in several cases. Compensation is paid on a fair and equitable basis in case foreign enterprises are compulsorily acquired. There is no objection to employment of non-Indians if suitable Indians are not available. There is no restriction either on withdrawal of capital or on remittance of profits. Payments in the form of royalty are authorised for the use of know-how, secret processes, patents, trade marks, etc.

On Taxation, too, the brochure is comprehensive. Details regarding double taxation avoidance agreements concluded between India and a number of countries are given. The extensive tax concessions to encourage investment in India are competently summarised.

"The record of India in the payment of foreign debt or in regard to the facilities provided for repatriation of capital and remittance abroad of the profits has been considered to be exemplary by all," says the Federation; and it quotes the opinions of such foreign statesmen and economists as Mr Eisenhower, Mr Eugene R. Black, Mr Per Jacobsson, who have spoken appreciatively of the efforts of the Government to develop the Indian economy rapidly by democratic methods.

The Federation's brochure is timely and it will prove valuable to all those who are interested in this subject. In recent years, there has been a keener interest on the part of foreign businessmen to invest in Indian enterprises. In 1959, approvals given for foreign investment aggregated Rs 19 crores as compared with Rs 13 crores in each of the preceding two years. In the first half of 1960, about 200 offers of foreign collaborations were approved by the Government of India. Nevertheless, it has to be realised that the inflow of foreign capital can be much larger in volume and greater in velocity. This calls for some adjustments in tax policy and a better oiled official machinery for processing new offers expeditiously. For example, the President of the Associated Chambers of Commerce and Industry recently observed that a reduction in the level of corporate taxation and in particular the withdrawal of the differential taxation of

Indian Finance

28 January 1961

certain types of foreign companies would be helpful. He added: "Perhaps the major difficulty the corporate investor encounters is the frustration and delay in dealing with the Government machine, particularly at State level, and the time which elapses before decisions can be obtained."

The Government of India has already done a good deal to facilitate the flow of foreign capital, and if some of the existing deterrents are removed, investment from abroad on an increased scale during the Third Plan will be assured.

The Prospects in 1961

By PAUL EINZIG

THE turn of the year is usually characterised by a wave of optimism. Human nature being what it is, most of us are inclined to hope that the coming year will be better than the one that has just ended. It would be a pity if the psychological effects of this traditional New Year optimism were to be spoilt on the present occasion by the all-too fashionable prophecies of gloom that gained prominence in recent months. Beyond doubt business conditions suffered some reverse in 1960. The tent of the setback has not been spectacular, however, except in certain over-expanded industries. Generally speaking the elements responsible for the prolonged post-War prosperity are still in operation.

The outlook for 1961 is of course obscured by uncertainty about the dollar situation. Even in that respect, however, there is now less cause for pessimism than there appeared to be two months ago. Owing to the exceptional narrowness of the Democratic majority at the Presidential Election, it is now widely assumed that the Democratic Administration will not launch into drastic New Deal legislation that would cause a flight from the dollar. The improvement in the United States balance of payments, and the somewhat belated efforts of the outgoing Administration to curtail military and political expenditure abroad, have gone some way towards restoring confidence in the dollar. The somewhat weaker tendency of sterling in December is one of the indications of the strengthening of the dollar.

It seems possible therefore that the new Administration will be able to afford to pursue mildly expansionary policies without thereby endangering the dollar. The resulting trade revival in the United States will generate an improving trend throughout the free world. The basic elements of post-War prosperity still exist and there is no reason why they should not become more active in 1961.

If, contrary to expectations, the new Washington Administration should take a radical line, the resulting dollar crisis would of course change the outlook to a very considerable extent. Even then, since the American economy no longer dominates the international economy of the free world to the same extent as it did until comparatively recently, it is conceivable that Western Europe would continue to expand. Integration within the two Western European trading groups would work in that direction. There could be, however, no real prosperity in the free world unless and until conditions in the United States have become stable and prosperous.

In the unlikely event of a dollar devaluation followed by an all-round devaluation of most currencies of the free world there would of course be a much more pronounced upward swing in trade. Such an expansion would

assume, however, an unhealthy inflationary character, and would carry within it the seeds of future trouble. On the other hand, restoration of confidence in the dollar at its present parity would be accompanied by a less spectacular but more dependable economic expansion in the free world.

—(Copyright).

Local Taxation

LOCAL and municipal taxation has not risen like State or Central taxation. Many years after the Wattal Committee's report local bodies, anxious to do better work, are eager to see the proposals implemented. Local bodies can ask for reform, but cannot ask for retrenchment. Larger areas demand larger expenditure and resources present a problem to municipal administration. The hint that the statute may be amended to vitalise civil administration has come in time. If no positive answer to the demands made by the Madras Corporation has been offered, it is at least clear that bigger municipalities can plan on the basis of larger revenue, in line with the rise in property values and rents. The levy of Octroi or tolls will be deprecated but the case for town duties on materials other than timber appears very strong, especially, as the State collects sales tax on some perishables also at present. The share in sales tax asked for in the past may not be conceded, but the motor vehicles in the Cities may be taxed on a higher scale to pay for improvement of roads, held to be vital, in view of increasing traffic. The revision of profession tax in the higher brackets may also be readily justified by municipal reformers eager to show results. The revision of salaries for staff entails a search for extra revenue and the municipalities can hope to get efficiency only by offering better terms for their employees. The revision of stamp duty to give municipalities a share in the revenue from share transfers (by means of a surcharge) may be approved in principle and if higher licence fees for objectionable trades or callings including aerated water factories are collected the public will certainly have no reason to complain. The search for extra revenue will tax official ingenuity but the Government has seen the point of the plea advanced by the Madras Corporation which can point now to a rise in revenue and better collection. And mayors in the next conference may compare notes and assemble suggestions before the city budgets are ready.

Technical Training

The Duke of Edinburgh, whose interest in problems of industrial management is well-known, has hit upon the happy idea of a Commonwealth Technical Training Week. During his visit to Australia he saw a State Apprenticeship Week in operation there. He felt that all Commonwealth countries may have similar celebrations and a Commonwealth Technical Training Week may be celebrated. The proposal was discussed at a meeting held in London which was attended by Commonwealth High Commissioners. The meeting welcomed the idea and the High Commissioners undertook to refer it to their Governments. The UK is celebrating the Week from May 29 to June 4, 1961 and an influential Committee with Sir Frederick Handley Page, C.B.E., as Chairman has been set up. The Duke has contributed an interesting Foreword to the brochure titled "Training for Today and Tomorrow" which details the activities in connexion with the celebration.

As the main idea of the week is generally to enhance the status of craftsmen and technicians and to promote production and prosperity, the responsibility for coordinating the planning and organisation of the week has been entrusted to the Ministry of Labour and Employment, Director General of Employment and Training. A Central Coordination Committee has been formed with representatives of the Ministries of Scientific Research and Cultural Affairs, Commerce and Industry, Railways, Defence, Health, Agriculture, Community Development and Cooperation and the Planning Commission for planning and organising the week. The Director General of Employment and Training will be the chairman of this committee.

Because of seasonal differences and variations in the academic year, it is not possible to celebrate the Week simultaneously in all parts of the Commonwealth. In India the Week will be celebrated in September from 25-9-61 to 1-10-61. The State Governments, Central Ministries, Employers' organisations Engineering Associations may organise the week in the manner considered suitable by them. The activities suggested include exhibitions, publicity, in press and radio, window displays, screening of technical films, processions of trainees and apprentices, visits to technical institutions and so on. At the recent meeting of the National Council of Vocational Trades which considered the question of celebrations, the interesting suggestion was made that greater emphasis should be placed on technical films. Mr Nanda, who presided, agreed and suggested that larger number of more comprehensive technical films should be produced and screened so that the knowledge of new and improved techniques may reach a larger circle of workers.

Busy Season: Severest on Record

THE 1960-61 busy season has yet to reach its mid-way mark; signs of monetary stringency are acute; beyond the de-freezing of additional deposits which had been maintained by the banking system, and beyond the indication that it will be prepared to liberalise its loans and advances against usance bills, the Reserve Bank has so far done little to help solve the problem of how the banks are to find the resources for financing what will go on record as the severest busy season that India has yet experienced. This last fact cannot, of course, be "proved", but a comparison of the relevant monetary indicators, with the corresponding figures in respect of the 1956-57 and 1958-59 busy seasons, indicates clearly that the pressure on the banking system—and the economy—has become now almost insupportable.

We need not discuss here the points of similarity in the three busy seasons, for, the figures tell their story unequivocally. But there are important differences, both in the manner that the busy seasons ran their course and in the steps that were taken to ensure that the legitimate financing requirements would be met. We may take, in the first place, the example provided by the period November 1956/April 1957. In 1956, owing to a smart increase in industrial production, and also because the import surplus on private sector account was large, the slack season failed to make its appearance. Thus, on the eve of the busy season, banks were already in an over-extended position. A considerable expansion in Advances was anticipated, and the Reserve Bank, in such knowledge, forearmed suitably the banking system. In simple terms, the banks were told that the Reserve Bank would revivify the bill market scheme, and that it would approve credit lines to the value of Rs 150 crores. In other words the Reserve Bank was willing and able to extend Rs 150 crores' worth of loans and advances, so that banks might be possessed of the resources to meet the busy season pressure. In the event, the banks did not need to utilise such credit lines to the limit, because there was then the phenomenon of new and unexpected accruals to Deposits. The strategy for the 1956-57 busy season was devised precisely because, during the 1956 slack season, new growth of Deposits failed to keep pace with the increased demand for Advances. Hence, to the extent that there happened, in fact, to be a rise in Deposit resources of the banks, the reliance on central banking credit was reduced. But the point to bear in mind is that the Reserve Bank proceeded on the assumption that there would not, or might not, be any significant increase in Deposits, and accordingly approved credit lines for the whole of the expansion in Advances envisaged.

In regard to the 1958-59 busy season, neither the monetary authorities nor the banking system anticipated any stringency. For, 1958 had been a "stagnant" year in production, and hence it was thought that the busy season that

was imminent would be of a pattern with the 1957-58 busy season. But Deposit resources fell; bank Advances were rising sharply, even more steeply than had happened in the 1956-57 busy season. Though the ratio of Advances to Deposits was low, banks did not have "free" resources, because from the middle of 1957 onwards, they had consistently been buying gilt-edged to hedge the "loss" on the Deposits they had "bought" at a time when Advances were not correspondingly rising. So, recourse was had to the Reserve Bank—indeed, indebtedness to the central banking institution, as at 9 January 1959, was almost double the relevant figure on the corresponding date of the 1956-57 busy season. But, by and large, by running down Reserve Balances and with borrowings from the Reserve Bank, the 1958-59 busy season was tidied over.

It has been clear for some many months that the 1960-61 busy season will be unduly severe. However, it got off to a late start, and this might have been responsible for unwarranted complacency. The Reserve Bank acted

—indeed, well before the busy season was notionally to start, it had already suspended the additional deposit requirements, though at the time (in September) it released only a moiety of the accruals under this head. Then, after the busy season had got under way, the balance still lying with the Reserve Bank in the form of additional deposits has been defroze. But the expansion in Advances is already of the order of Rs 85 crores, banks' borrowings from the Reserve Bank and the State Bank have already risen by over Rs 38 crores, and banks have already suffered a fall of Rs 33 crores in Deposits. It would seem, at the moment, that busy season expansion still to be financed, between now and the end of April, may amount to as much as Rs 170 crores.

We cannot see frankly any prospect of such resources being found by the Scheduled Banks, unless the Reserve Bank helps in a big way. First of all, in the first week of April, in the wake of the governmental fiscal year-end disbursements, there may be some element of accruals to Deposits. But, even then, the banks may have to find another Rs 150 crores. We would stress that this amount can come only in one or a combination of the following two ways:

- The Reserve Bank must announce liberal credit limits—say for another Rs 150 crores—against usance bills.
- The Reserve Bank must be prepared to buy spot securities from banks, provided banks enter simultaneously into contracts for forward repurchase.

PROGRESS OF BUSY SEASON

Advances Cross Rs 1200 Crore Mark

The usual pause in currency expansion, even in the midst of the busy season, which occurs around the third week of a month is to be noticed in the returns of the Reserve Bank for 20 January; and the return of Scheduled Banks for the week ended 13 January is noteworthy for the fact that it records the crossing of the Rs 1200 crore mark in the total of Advances. The return of the State Bank for 20 January suggests the making over, in the week, of the January instalment of Rs 12 crores in respect of counterpart funds which are on deposit with that institution.

Active Note circulation has declined by Rs 5.85 crores to Rs 1914.87 crores, and there has been inflow of Rupee Coin for Rs 0.34 crores. In the result, the Reserve Bank's cash in the till has improved by Rs 6.19 crores to Rs 17.11 crores.

In the Banking Department, the rise of Rs 21.71 crores to Rs 152.45 crores in Investments is to be largely ascribed to sales of securities by the State Bank in the relevant

week, though some element of deficit financing by the Central Government is not to be ruled out. The Centre's need for recourse to created money arose because of commitments in regard to payments to the State Governments, whose Deposits have registered a considerable rise of Rs 13.51 crores to Rs 31.93 crores, the while their indebtedness to the Reserve Bank, against ways and means borrowings, stands reduced by Rs 4.49 crores at Rs 40.59 crores. Reserve Balances of member banks are down by just under Rs 2 crores at Rs 76.71 crores, but since the State Bank reported a rise of Rs 10 crores, nearly, in cash in hand and with Reserve Bank, it is clear that other banks have drawn down their Deposits, presumably to reduce debt to the central banking institution; and, in this regard, it is significant that the Reserve Bank's Other Loans and Advances are sizably lower by Rs 12.33 crores at Rs 138.46 crores.

Since Other Deposits are unchanged, despite receipt of the January instalment of counterpart funds in process of being made over to the Reserve Bank, it is possible that, against negotiated projects, the Centre has received some such corresponding amount. Lastly, Balances Held Abroad are practically unchanged at Rs 19.42 crores against Rs 19.47 crores.

28 January 1961

The State Bank's return for 20 January probably reflects the making over of the monthly instalment of Rs 12 crores, against counterpart funds which had accrued with that institution. For, Deposits are lower by Rs 7.85 crores at Rs 558.01 crores, and there has been steep disinvestment (for Rs 19 crores) in gilt-edged. Pause in busy season pressure is responsible for merely a nominal rise of Rs 0.15 crores in the total of Advances, which are now placed at Rs 247.96 crores. With borrowings more or less unchanged, cash in hand and with Reserve Bank has gone up by Rs 9.81 crores to Rs 27.88 crores.

The return of Scheduled Banks for 13 January records a rise of Rs 9.07 crores in the total of Advances, and, in so doing, constitutes a landmark in that the Rs 1200 crore mark has been passed, Advances now being placed at Rs 1208.92 crores. This possibly is a sign of both busy season pressure and the spillover into the second week of beginning of the month disbursements. In any case, the same two reasons may be responsible for the decline in net Deposits, whereunder net Demand Liabilities are down by Rs 5 crores and net Time Liabilities by Rs 10 crores. Consequently, banks other than the State Bank have found it necessary to draw on their balances with the Reserve Bank, an item which is lower by around Rs 6 crores. Borrowings both from the Reserve Bank and State Bank are more or less the same as in the previous week's return. The gilt-edged portfolio is down by over Rs 18 crores, but the bulk, or Rs 16 crores, is as a result of disinvestment in the relevant week by the State Bank.

Americans hoarding Gold Abroad

By Paul Einzig

THE outgoing Eisenhower Administration surprised the world by imposing a ban on American private holdings of gold abroad on the eve of its departure. This unexpected move took the bullion market by surprise and its first reaction was a pronounced setback in the price of gold. Very soon, however, second thoughts began to prevail and there was a partial recovery. This was probably due to the fact that the ban will not become effective for more than five months, and that there is room for two opinions about how effective it is likely to become. Too much time is allowed for American holders to hesitate whether or not to comply with the new regulations and meanwhile the market is left in uncertainty. Beyond doubt, a fairly high proportion of American holders will prove to be sufficiently law-abiding to comply with the law, but it remains to be seen what proportion. Even so, between now and the end of June, there is bound to be a certain amount of American selling of gold.

It remains to be seen, however, whether this tendency will not be offset and more than offset by the effect of dollar devaluation fears. It all depends on the measures to be taken by the new Administration to strengthen confidence in the dollar. If those measures are deemed inadequate and if New Deal legislation should drive American capital abroad, the ban on gold holdings will be largely ineffective, and to the extent to which it will be effective it will simply divert American capital from gold holdings into other forms of hedges against a dollar devaluation.

Since the outgoing Republican Administration has set an example for adopting restric-

tions, possibly the Democratic Administration will proceed further in that direction. It may deem it necessary to place a ban on various forms of long-term investments abroad. Such measures would help against unwarranted dollar scares. In themselves, however, they would not save the dollar in face of a flight due to unsound policies. The fundamental position is therefore still the same as it was before the ban on gold holdings. The international markets will keep a watchful eye on the measures and intentions of the new Administration to decide whether or not to trust the stability of the dollar.

The last-minute efforts of the Republican Administration to strengthen the dollar should go a long way towards forcing the new Administration's hand to proceed in the same direction though not necessarily with the same means. As far as can be judged at the time of the change-over, there is no reason to suppose that President Kennedy does not intend to defend the dollar. Intention in itself is not enough, however. To be able to defend the dollar successfully the Democratic Administration will have to practise self-restraint in the adoption of New Deal policies dear to the hearts of some of the new President's advisers. If it were President Kennedy's intention to devalue the dollar he could afford to listen to such advice. If, however, he is determined to defend the dollar, the New Deal legislation would have to wait until confidence in the dollar has been sufficiently restored to enable the Administration to embark on such measures with impunity.

Bank Profits

The working of the Punjab National Bank Ltd, for the year ended 31 December 1960, has been satisfactory.

Subject to audit, the profit of the Bank for the year 1960, after making payment of Rs 12.77 lakhs to Employees' Gratuity Fund Trust and providing for Contingencies, amounts to Rs 121.18 lakhs including Rs 3.19 lakhs brought in from the previous year's account as against Rs 88.69 lakhs for 1959 including Rs 4.49 lakhs brought forward from previous year's account. A sum of Rs 12.50 lakhs has already been utilised toward payment of ad-interim dividend at Re 1 per share subject to tax, thus leaving a balance of Rs 108.68 lakhs for further appropriations.

The Directors have decided to make the following appropriations:

Provision for Income-tax	Rs 53 lakhs
Transfer to Reserve Fund	11 "
Transfer to Bonus to Staff Account	27 "
Transfer to Charity Account	1 "

IDA & IBRD

Aid Programme

The areas in which the World Bank, and its associate IDA, are interested in extending aid for development were indicated by Mr J. Rucinsky, Director, Department of Operations for South Asia and the Middle East, IBRD, at a press conference last week. At this stage indications of figures of aid cannot be other than speculations, for, as Mr L. K. Jha has pointed out, the size of the loans cannot be determined until the projects have been processed. Incidentally examination of the projects requiring aid is the purpose for which Mr Rucinsky and colleagues have come to India. They will be followed by experts, some of whom have already arrived, to assess the technical aspects of the different projects applying for aid.

The IDA like the World Bank extends assistance only on project basis and not on basis of overall requirements of development. That will be a matter for consideration of the 'consortium' of friendly countries sponsored by the World Bank, which will be meeting in Spring, for which Mr Rucinsky will be preparing a report, apart from survey of individual projects for the World Bank and IDA. The overall size of the Third Plan, its scope and magnitude have been endorsed by the Hoffman Mission which visited India early

last year. Mr Rucinsky's report will make their findings up-to-date in regard to statistical information relating to the Plan. There is also the possibility that the membership of the 'consortium' may be enlarged by the admission of new members. The Netherlands, France and Italy have been approached and are likely to become members, enlarging the base of foreign assistance that may be expected. Approaches have also been made to Sweden to join the 'Aid India Club'.

As regards the Bank's own programme of aid, Mr Rucinsky has indicated continued interest in the expansion programmes of Railways, Power and Ports. The Bank will also extend assistance as necessary to the ICIC to which it has already granted loans. Of great interest to the Eastern region, and especially Calcutta, is the indication given by Mr Rucinsky that the expansion programme of collieries in the Private Sector, as well as the programme for the development of Calcutta Port are under consideration for World Bank aid. As regards Power, he has indicated that aid will be available for expansion in the DVC area and in Bombay.

The IDA, whose programme is complementary to that of the World Bank, is expected to start operations next March with a capital of a billion dollars of which \$750 million will be available for loans. IDA can follow a more flexible policy and can make loans on easier terms for longer periods, and to projects which do not qualify for World Bank assistance by satisfying the exacting criteria required for that purpose. For instance IDA loans will be available for road development (but not for transport industry) for agricultural and community development programmes, rural electrification, etc. IDA loans do not carry interest, but an administration charge will have to be paid. IDA loans will be available not only for meeting foreign currency requirements, but also for expenditure in local currencies. The loans are repayable in convertible currencies.

The IDA has been set up mainly to assist countries which do not pass the World Bank's exacting standards of credit-worthiness. It may also help other developing countries getting World Bank assistance in respect of their programmes which are not eligible for World Bank aid. As the total sum available for IDA loans to all member countries in the next five years is only about \$750 million, the assistance that India can expect to get from IDA for Third Plan projects cannot be very large. But Mr Rucinsky has expressed the hope that the resources of the institution will be augmented in due course.

LABOUR Provident Fund to Rise?

THE technical committee set up to consider enhancement of PF contribution to 8 1/3 per cent during its visit to Madras was informed that any additional burden placed on employers might affect costs especially in export industry. It was made clear that rising costs handicap most trades and the flow of capital might be checked. It was argued also that the compulsory PF was often used as security for taking loans and thrift was not really sustained. Mr Meher and his colleagues were apprised by the Andhra Chamber that subjecting some industries to a higher levy would lead to new burdens on vulnerable industry and present the development of the system gratuities for retired workers. A new plea advanced was that some establishments should be exempt, companies not able to pay 6 per cent dividend stand on a footing different from those able to divide surplus profits with workmen companies not able to operate to installed capacity be termed prosperous enough to withstand an extra burden. It was also argued that when wage awards had already raised the quantum of PF the case for a higher percentage of contribution was not strong.

The Andhra Chamber's view will probably be reinforced by that of other organisations which view the burdens thrown by welfare as inhibiting economy and reducing competitive capacity. The Chamber presented oral evidence to prove its case against an increase. It suggested a comprehensive welfare cess on the lines of the Coal Miners' Welfare Fund and indicated that uniformity in the matter of burdens or liabilities overlooks the differences in age and resources, as also the fact that one concern may have different branches for operational purposes, and if all employees were declared eligible for new benefits, the problem of getting ready cash to pay regular contributions would become almost insuperable for many business houses. Of course, PF contributions help the gilt-edged market to stand up, and withdrawals are negligible as compared with the accretion to funds under official control. But the Treasury's needs are far less important in this connection than the capacity of employers to pay.

★

TRADE Exports Rise— But Imports, Too

India exported goods valued at Rs 569 crores, in the period January to November 1960, and this exceeded the previous year's figure by Rs 19 crores. This fact was given out by the Union Deputy

Minister for Commerce and Industry, Mr Satish Chandra, while presiding over a meeting of the Standing Committee of the Export Promotion Advisory Council recently in Madras.

The Deputy Minister stressed the need for raising resources, both internal and external, and added that it was particularly necessary at a time when we are gathering momentum for the "take-off" stage in our economy.

There is, obviously, need to increase the range and diversity of exports, in terms both of value and quantity. The vital task, thus, is the promotion of exports.

During January-September 1960, of the exported items increases were registered in jute goods, cotton textiles, manganese ore, vegetable oils, unmanufactured tobacco, cashew kernel, spices, raw hides and skins, coir fibre and yarn, lac, iron ore, footwear, seeds and engineering goods. On the other hand, the following items suffered diminution in export during the same period: tea, raw and waste cotton, mica, oil cakes, art-silk fabrics, raw wool, tanned or dressed hides and skins, coffee and fresh or simply preserved fish.

Though the value of exports during first eleven months of 1960 was larger than that in the previous year, the Deputy Minister cautioned against complacency because this higher value was due to only higher prices of the exported items, and not owing to any increase in the volume of exports.

Imports during the first ten months of 1960 were placed at Rs 827 crores, an increase of Rs 47 crores over the corresponding period of the previous year. This showed, that, in spite of all the restrictions on nonessential items,

Indian Finance

28 January 1961

Indian imports are outstripping the exports..

Mr Satish Chandra hoped that the inclusion of sugar in India's exportable goods list, would bring a larger inflow of foreign exchange.

★ FOREIGN AID OK, or—

Madras State's Finance Minister, Mr C. Subramaniam, while defending the assumption of debt by India in the initial stages of economic development, made it clear last week that foreign assistance by itself could not give the necessary strength to the Indian economic system. A certain amount of saving and investment capacity would have to be created.

Mr Subramaniam was inaugurating the first three-day State-level Conference of Planning Forums.

Planning being a continuous process in a developing economy, Mr Subramaniam stated that the targets for specific periods of five

years, as in the case of the country's five year plans, were arrived at with perspective development envisaged during a period of fifteen to twenty years. In the planned programme for regeneration, the present day students should take keen interest, because India's plan was based on the country being one political unit. The lack of such political unity in some of the African countries, Mr Subramaniam said, led to a confused picture like that in the Congo even after its independence was proclaimed.

Mr Subramaniam wanted investment capacity to be built up within the community itself. It was true, the present high cost of living did not enable any kind of saving, but it needed to be realised that, unless saving capacity was created within the community, progress was impossible.

In these circumstances, foreign assistance from friendly countries became necessary. Even countries like Germany had at one time or the other sought foreign aid. In India, population density

also adds to the difficulty of the problem and this was amply reflected in the agricultural sector. Therefore, the only way by which India can achieve industrial and economic progress was through aid.

Annamalai University's Vice-Chancellor, Mr T. M. Narayanaswamy Pillai, who presided, stated that vast scope yet remained for the private sector. He contended that provision of 40 per cent outlay for the private sector in the next plan was not insignificant.

As for the alarm expressed in some quarters over the country's borrowing policy, Mr Narayanaswamy's view was that most of the loans were only from international agencies. Such foreign Governments who loaned to India did so after examining the potentialities of the schemes for which the loans were applied for. Repayment of loans need not be a problem, and he believed the Third Plan had all the symptoms of sound growth on approved development. He pleaded for the acceptance of the services from the Universities who would

be happy to supply trained personnel.

In the course of his speech on the "Difficulties of Democratic Planning" Mr K. Santhanam pointed out that democracy will not survive in India without planning under democracy. A reconciliation had to be made between democracy and planned economic development, but he wanted the real value of money in terms of land, goods or services to be obtained for planning. He agreed that democratic planning tended to become increasingly bureaucratic, but he drew attention to the decentralisation through Panchayat rule and active non-official cooperation as effective checks to centralised bureaucratic planning. Democratic planning could not be as effective as planning under the totalitarian system, but India's plans cannot be implemented on a party basis as in the communist countries. Mr Santhanam stated that, during the past decade, India had merely laid the foundations which were more or less common and acceptable to all. Further development was

THIRD PLAN

Pattern of Outlays & Resources

The National Development Council at its last meeting held in New Delhi on 15 and 16 January have approved of the inclusion in the Third Plan of public sector programmes of an aggregate cost of Rs 8,000 crores including a total outlay of Rs 3,847 crores for the plans of States. Central assistance for States' plans has been estimated at Rs 2,431 crores.

At the same time, the NDC has agreed that, at present, the financial limit should be placed at Rs 7,500 crores of which Rs 3,725 crores would be available to the States. The Central assistance for expenditure of this order on States' plans will be Rs 2,375 crores. The difference between the two sets of figures of outlay is not described as the 'uncovered gap', as in the Second Plan, to make it clear that it is not proposed to fill it, by resort to further deficit financing.

The pattern of the distribution of the outlay of Rs 7,500 crores between the States and Centre and under different heads of development is likely to be on the lines shown in Table I.

While the Planning Commission has completed discussions with the States, talks with the Central Ministries on the level of allocations are still proceeding.

The Draft Outline had classified public sector industrial projects under the following five categories:

A. Projects under execution and carried over from the Second Plan.

- B. New projects for which external credits are already assured.
- C. New projects included in the Plan for which foreign credits have not yet been arranged.
- D. Projects on which preparatory work should continue with a view to decisions in due course.
- E. Projects of a contingent nature.

The cost of projects under categories A, B, and C, originally estimated at Rs 1,535 crores, it is learnt, has now increased to Rs 1,657 crores. The cost of projects in the other two categories will come to about Rs 185 crores. Additional allocations for transport required at the Centre for certain essential projects will be about Rs 100 crores. The programmes of the Ministries of Education and of Health, it is estimated, will call for additional allocations of Rs 239 crores on Social Services.

The total requirements of the Central Ministries are roughly estimated at about Rs 4,367 crores.

The prospect of raising additional revenue to fill the gap is not rated very high by competent authorities. The estimate of Rs 7,500 crores itself, it is emphasised, is rather on the high side.

While the defence estimates, on which the estimates of resources are based, may have to be scaled upwards, the estimate of surpluses of public enterprises is likely to be reduced. The target for

loans as well as for additional taxation have been pitched as high as possible. The price situation does not allow any elbow room in regard to deficit financing, which has to be kept down to the minimum. The estimate of foreign assistance is based mostly on "indications" rather than firm commitments.

TABLE I
Distribution of Outlays

Draft Outline	(Rupees Crores)

likely to be more difficult and though it might be also controversial. In a veiled reference to the present leadership, Mr Santhanam said leadership would have to be purer and more singleminded to obtain even a minimum degree of popular consent.

★

Thumbs Down?

A suggestion to call a halt to taking foreign loans in an unlimited way and to consolidate the economic gains of the country was made

by Mr A. D. Shroff recently at a meeting of the Forum of Free Enterprise in Madras. Mr Shroff repeated his view that unlimited foreign aid would lead to what he called a serious setback in industrial production, creating a big unemployment problem and national wastage.

He also iterated his criticism that the ex-Finance Ministers of the Central Government, Mr T. T. Krishnamachari and Mr C. D. Deshmukh, had not maintained a watchful check on the Commerce Ministry which, he alleged, allowed imports indiscriminately.

Quoting figures in support of his allegation, Mr Shroff said that, in the First Plan imports were of the order of Rs 727 crores yearly and exports amounted only to Rs 622 crores a year: there was an adverse balance of Rs 105 crores. In 1956, again allegedly due to the unrestricted import policy of the Commerce Ministry, imports rose to Rs 1,100 crores and exports remained at Rs 635 crores, with the adverse balance increasing to Rs 465 crores from Rs 105 crores. In 1957, imports again went up, with exports continuing to be stationary. Only when imports came to be

restricted by Government did the gap between imports and exports become narrower. Anyway, the speaker contended that the fact remained that, in the First Plan period, the average balance of payments was Rs 105 crores against India, and in the Second Plan it went up to Rs 451 crores.

Mr Shroff charged that, during the last five years, India has lost Rs 2,000 crores and over of foreign exchange. In 1960-61, the deficit, according to the Reserve Bank's estimate, would be of the order of Rs 500 crores. These statistics themselves told the tale of the foreign exchange crisis of the country.

It was again Mr Shroff's contention that this crisis was never due to the activities of the private sector but due only to those of the public sector. Private imports, he said, accounted for 72 per cent of total imports but this was reduced to 59 per cent during the Second Plan. It would still further go down to 40 per cent during the current year, as per the Reserve Bank's assessment.

In his considered opinion, the expanding public sector had affected the domestic economy as well as the foreign exchange position very seriously.

Unless, within the next three months, substantial foreign aid was available, the foreign exchange balance would come down from Rs 147 crores to Rs 100 crores. The normal working balance for a country of India's size should be about Rs 200 crores, and not lower.

Coming to the Third Plan's needs, Mr Shroff felt that it did not stand to ordinary common sense that they should think of a Third Plan needing Rs 3,200 crores of foreign exchange. The problem before the country was not the borrowing of Rs 3,200 crores for the country's further economic expansion, but one of maintaining the existing economic position. At present, India had not yet reached industrial self-sufficiency. And that being so, every addition to the ventures meant import expenditure on capital and other essential needs. Even now, the industrial capacity of the country was not fully exploited due to lack of raw materials, and Mr Shroff felt that an addition to the existing units would be merely to add to the idle units of industries in the country. This again would result in unemployment and a national wastage of a large magnitude.

As regards the depreciation of the rupee, the speaker said that continuous depreciation would cause repercussions on the value of our currency in the external market. Already commodity prices have gone up by 23 per cent, and Mr Shroff warned that, if the value of the rupee further depreciated indefinitely, it would give rise to doubts about the value of our rupee among foreigners.

Urging that the problem of foreign exchange needed careful thought, next to the nation's food, Mr Shroff said that, unless this

Indian Finance

28 January 1961

was tackled with imagination and forethought, it would undermine the nation's economy and its external credit.

★

—Or Inevitable?

Dr P. S. Lokanathan, the noted Economist, described the projects like those to make watches and baby motor cars in India during the Third Plan as "moonshine" and he would rather have the planners develop only projects which will aid the nation's development with the available foreign exchange. Otherwise, the projects rejected by him would not help the poor man who has no wherewithal to buy a baby car ultimately costing him Rs 10,000.

Anything less than the proposed outlay of Rs 10,200 crores for the Third Plan was considered by Dr Lokanathan as not helpful in raising the standard of living and he thought the outlay and the targets in the next Plan were not to be considered ambitious. Lesser amount than this, he believed, would arrest the progress of the country.

Even this so-called ambitious programme would be able to provide employment only for about 14 to 15 million people during the next five years. The speaker apprehended social revolution in the country, creating more problems with a smaller outlay.

As for the means of raising the resources, Dr Lokanathan felt this was more a political and administrative than an economic problem. If national income rose annually by five per cent, then that rise itself would provide the extra resources.

If the planners bestowed attention on quick return yielding projects, it would be worthwhile. Another suggestion made by him was the toning up of the tax administration.

Dr Lokanathan was one with those strongly defending foreign aid. That was inevitable, and he asserted it was impossible to earn the required foreign exchange merely by exports. It was his tacit belief that foreign exchange should be utilised strictly for what he termed legitimate purposes, and never otherwise, because the foreign exchange presently was hardly adequate even to maintain ordinary import demands.

As for raising domestic resources, the speaker stressed the need for public enterprise to earn what he called legitimate profits and wanted that no avoidable expenditure should be incurred by them. Dr Lokanathan was of the opinion that such earning should be by raising quality rather than by increasing price or profits. It would be possible to increase price of commodities made by them since public sector enterprise, held a monopoly interest in these.

He reiterated the view that the efficiency of the public sector was

still to be achieved. For this, he laid stress on the Government to have "political courage" to tone up the taxation machinery. Lack of adequate and efficient machinery stood in the way of mopping up savings that existed in the country.

Also, he did not like a very steep system of taxation which he said killed the spirit of private enterprise. He stated that the raising of resources by five per cent of total investment through deficit financing was modest and sound. Deficit financing was sound, so long as it guided price levels and balance of payments.

Mr S. V. Ramamurthy, Adviser, Planning Commission, addressing the same Conference, stated that it was proposed to expend Rs 100 crores in the next plan for soil conservation schemes. About ten million acres in the country would get the benefit under the scheme.

The proposal to conserve soil was to use the soil to the maximum capacity, and Mr Ramamurthy declared that in the country presently, only about 25 per cent of the area was irrigated. In about ten or fifteen years of planning, this could be raised to 50 per cent. The primary basis of the soil conservation work was the increase of the irrigated acreage.

Stating that soil conservation was receiving top priority for the first time in the country, Mr Ramamurthy observed that, by the end of the First Plan, the total area conserved was about 700,000 acres. In the Second Plan, Rs 24 crores had been allotted for the same project, and the Second Plan schemes were expected to benefit about two million acres of agricultural lands.

During the Third Plan period, it was proposed to provide schemes for dry farming extension techniques in contour bunded areas, afforestation, soil conservation of river valley project areas and reclamation of saline and alkaline lands.

Mr Ramamurthy did not minimise the importance of people's cooperation in this big task, for, he felt then alone would the plan attain full success. While stressing the importance of the role playable by the Community Development and extension services, he wanted the staff of these organisations to be trained adequately. He thought that bunding and terracing should have to be taken up as public work from which immediate results of higher production could be achieved.

★

IAC Safety First

Great attention paid to the aircraft used by the Indian Airlines Corporation was reflected in the recent suspension of Viscounts for special inspection by the UK manufacturer's technicians. Of the ten Viscounts, five have been

passed for service already, and the fast service has been resumed. The IAC is to be warmly commended for the solicitude for absolute safety it displayed in grounding the Viscounts and putting it through a thorough check-up and the promptitude with which it carried it out. In this it has set a great example.

Air Vice-Marshal Lal recently made mention both of the loss due to this temporary withdrawal and the expansion plans promising air shuttle services between major cities in the South. The continued

use of Dakotas may produce queries, but a lot of D.C. 3's are still in use and have been described as real workhorses in the airlines that retain them. Their replacement is to be postponed because they are cheaper to operate, and anyway the IAC keeps plenty of spares for servicing the Dakotas. Remote areas have to be linked by air in the near future and the Dakotas will prove handy for the purpose. Import of new foreign aircraft is difficult, but the IAC hopes to buy Viscounts for the mail service. US airlines are in difficulties and

This is the hallmark of
QUALITY

This is the certification mark of the Indian Standards Institution. It is given to many consumer and industrial articles manufactured or processed according to relevant Indian standards.

The ISI mark has many advantages. To the manufacturer it means increased demand through customer satisfaction, and protection from unfair competition. To the consumer it offers an assurance of quality of goods and services purchased, and better value for the money spent. The granting of the licence to use the ISI mark is a trust placed with the manufacturer. ISI maintains a constant vigil to see that it is not misused in any way, for the interest of the consumer has to be safeguarded.

they or their mortgagees may sell off surplus planes to India. But that too involves fresh outlay, and IAC's finances may be strained, and air mail surcharges may come into vogue again. The IAC can, however, hope to get a better deal from the P & T Board if it is assured that first class mail will continue to increase and if non-scheduled flights do not compete so as to limit its income from carriage of cargo by air. The growth of air traffic by stages clearly shows that civil aviation has come to stay, and that the monopolistic status created by nationalisation has yielded good results. The employees' grievances, too have been settled in a fashion, and IAC has opened the year with no blot on the record.

STOCKS Efficient Amateurs

Everybody was playing the stock market; that was said in 1927 in the USA. But amateur investors have grown up and a new aid is found in the investment clubs. Small friendly clubs pool savings and buy on the instalment plan both well and wisely. The Mutual Funds (what are called unit trusts) are a big business but the investment clubs direct their own affairs and frame their own policy, backing money by knowledge secured by effort. Common stocks are preferred, because they are a hedge against inflation, ensure participation in economic growth for the outside investor, and give a decent return over a long period. How-

ever Clubs take 2 or 3 years to show a profit. The new clubs help to spread financial democracy. Small firms get a chance to move on, if their Stock is bought by a local club. This is different from speculation but rests on taking a definite view. The Investment Club business has caught on in Canada and Japan and some clubs have started work in Australia and Holland. The element of blind chance is taken out even if buying stocks on the "big board" has to be done only through a regular broker. The amateur need not regret expensive errors, because his guess will usually come right and the employees of some big concerns join up to buy shares for themselves regularly through monthly subscriptions to the Club. The idea may not be easy to adopt in India today but the amateurs organised in the private share dealers' syndicates in the USA do fairly well. An article in SPAN this month tells much that is quite familiar: stock market operations are not a mystery to the amateurs. Investment clubs blend business and pleasure. They help to give the members a real shake in the country as part of a property-owning democracy.

NDIAN OXYGEN Prospects Bright

Both from the point of view of profits earned and sales registered, 1959-60 has proved to be a year of satisfactory working for the Indian Oxygen Limited. The profit for the year at Rs 62,98,449 compares favourably with Rs 53, 07,450 earned for the previous year. Sales have also registered

an overall increase of about 16 per cent exceeding in terms of value sales for the previous year by something like Rs 91 lakhs.

The statement issued by Sir John Douglas Keith Brown, Chairman, to the shareholders was mainly devoted to explaining the programmes now under way for the expansion and diversification of the activities of the Company. Installation of an additional 400 M³ oxygen plant in each of the Calcutta and Jamshedpur factories, installation of argon purification and high purity nitrogen production facilities at Burnpur and the setting up of an oxygen plant at Gauhati figure among the important achievements of the Company during 1959-60. With demand for industrial gases and electrodes being headed upwards, prospects for producers in this field can be reckoned as bright. Particularly the demand from the steel and steel using industries will be considerable and in the light of the expansion programmes envisaged for these industries under the Third Plan the capacity for industrial gases will also need to be stepped up substantially. While appreciating the scope for such expansion, Sir John warns against any wasteful competition being allowed in the planning of future production capacity. It is admitted that high distribution costs would point to regional development of this industry with units being sited at multiple points to serve particular regions as the most economic and desirable. But the capital intensive nature of the industry requires that, within each region, the production points should be allowed to grow to be able to achieve the economies of large-

scale production. It is worth pointing out that in its policy Government has sought to strike a balance between extreme concentration of growth and uneconomic dispersal of production.

Reference may here be made to the fact that, to finance its expansion programme, Indian Oxygen intends to make a rights issue. Sir John has stated that sanction has been received from the Controller of Capital Issues in respect of a rights issue, now proposed to be made, of 600,000 ordinary shares of Rs 10 each at a premium of Rs 8 per share. It is interesting to note that 11.2 British Oxygen Co Ltd, which is entitled to 70 per cent of the rights issue, is waiving the right to 10 per cent, which is being offered to other members who are, in Sir John's words, "very largely members of the Indian public."

WASTELANDS Uppal Committee Reports

The Uppal Committee specially constituted to study the nature of wastelands in the country and to explore the means for their reclamation has already finalised its reports on the utilisation of wastelands in Bihar and Mysore States. According to the estimates of this Committee the total area of wastelands in Bihar and Mysore amount to about 5 million acres and 8.25 million acres respectively. Of them, only 0.14 million acres are fit for immediate reclamation.

During the course of its enquiry, the Committee came to understand that, in Mysore State, most of the wastelands belongs to the Government; and it suggested that these lands should be entrusted to scheduled castes and scheduled tribes, who will, with proper guidance and financial help, be able to convert these unproductive lands to arable lands. This suggestion is likely to get easy acceptance for, by doing so, both the lands and the recipients stand to gain. The expenditure that is to be incurred in this direction is estimated to total about Rs 1.25 crores. And the revenue of the produce from these lands is likely to amount to Rs 67 lakhs.

The total area that is found fit for reclamation in Bihar State, as pointed out by the Committee, comes to about 72,000 acres, the cost of which will exceed Rs 1 crore. Considering the high productive nature of the lands belonging to Darbhanga district, the Committee has recommended that top priority should be assigned to them.

For the successful implementation of the various soil conservation measures, the Committee has recommended the enactment of legislation on the lines of the model act drafted by the Government of India. This act provides for special powers to the State Governments to carry out such measures.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

TWO national anniversaries—15 August and 26 January—may appear to some as too large a ration of high purpose and to others as too extravagant a dissipation of scarce man-hours. But, over the years, these two dates in the national calendar have acquired distinctive characteristics, some of them consciously fostered. 15 August with Mr Nehru on the ramparts of the Red Fort is essentially backward looking, a day for distilling—for many, fast fading—memories. (It is sometimes shocking to realise that Gandhiji is a figure of history to school children today). The Republic Day, on the other hand, on which we permit ourselves a certain amount of solemn joy is a day of thanksgiving for present felicity and of hope tempered by humility for the future. The analogy, which I hope will not be considered sacrilegious, is with Easter and Christmas. Bureaucracy is so often berated that it is pleasant to be able to be nice to it: while politicians have been drowning away about emotional integration without doing anything very much to foster it—indeed the activities of some of them are anything but an example of such endeavour—hard working officials in New Delhi have been spending time and ingenuity in devising practical modes of achieving it. The Republic Day festivities of the last few years have been devised to make possible the sense of common past and destiny by modes that are most persuasive. As any student of the psychology of ritualism will tell you, the best of such modes usually combine a high degree of symbolism with concrete sensuousness. The parade, the tableaux, the folk dances and songs from all parts of the country and the crowds themselves converge on a single emotional focus. Those who austere object to such extravagance in the midst of poverty have never really known—or cared enough for—the poor. It is a poor heart that never rejoices, though such a fleeting good time puts you back a step or two, and I for one would be the last to deny the little colour and drama that the day brings to most of us.

And this year's Republic day celebration has an added touch of viganacy: in the hearts of some at least of the millions that will watch the state drive, republican sentiment will pleasantly war with royalist emotion. I dare say Mr

John Osborne, who once characterised British Royalty as a fatuous industry, will become an even angrier young man if he were to watch it. Some of "our traditional friends" in Britain may be slightly scandalised at this enthusiasm for royalty, particularly British royalty, that republican India has been showing in the last week. The reason, or rather the reasons for this, however, are not very esoteric. Undoubtedly, the mystique of "royalty" is potent even over the most revolutionary heart especially when its incarnation takes the form of a beautiful and young mother. Those who have read the memorable Italian play, The Queen and the Rebel, will see readily the point I am making. I have no doubt chivalry has something to do with it, for, I am sure that a King of England would not have evoked the same degree of affectionate interest. Indo-British association, to which President Rajendra Prasad made a reference, had certainly a great deal to do with it.

As far as the rest of India is concerned, the real reason is the manner and conclusion of the Indo-British struggle, to which the President made a thoughtful reference. More recent instances of transfer of power by erstwhile colonial and imperial powers underline only too pointedly the grace and dignity with which Britain withdrew from India. Without doubt, it was Gandhiji, more than any other single individual, who made this miracle possible. But it is to take nothing from his greatness—which in any case is beyond our power to add to or detract from—to say that no other power than Britain would have made it so easy for him.

What has intrigued me about the fuss over Mr Nehru's interview with the Daily Herald correspondent is that the Indian Press should have provided an eager sounding board for a casual reflective aside. The silly season in England is traditionally associated with kite-flying in Fleet Street about the next Prime Minister. Just now, however, the Indian Press is not bothered by a similar lack of good copy. With Queen Elizabeth just launched on her discovery of India, there is hardly any reason for resuscitating the

rather dreary game of "After Nehru, Who?" Even a perfunctory acquaintance with the facts of Indian political life would have shown how inconceivable it is that Mr Nehru should seriously think of retiring from politics at the moment. With the elections just round the corner and the Third and most crucial Plan about to be put through, is it at all likely that a man of Nehru's temperament and sense of political vocation should get away from it all? Nehru, of course, is news with us,—obsessively so. But even so, was it not necessary to put in proper perspective the wistful longing—quite improbable of fulfilment—of a public man for the quieter felicities of lesser men? Instead, I find political pundits solemnly relating this alleged political death-wish to the Sino-Indian border issue and the Assam riots! And I think that Mr Nehru is also rather to blame. In an interview which was bound to be widely publicised, it was necessary to indicate that his desire—rather than wish—to retire had psychological rather than practical implications. The fact that this was not the first occasion when the question of his retirement has come up before the public should have made him even more careful. His denial of any plans of immediate political Sanyasa was unavoidable in view of the frenzied public discussion the interview had let loose. But one can easily fancy the kind of moral

the author of Panchatantra will draw from the episode.

Well, it was thirty-three years ago today that Indian Finance was born. And so the changed format, the re-arranging of features, the new look. The titles of features in white against a shaded or grey background have been dispensed with; I liked them, but my press manager did not, because while, on newsprint, the shaded portions come off rather well, white printing paper is not quite so absorbent, and a smudge sometimes results. The re-grouping is for greater simplicity. The Notes section, with already enlarged coverage, is in due course to be made more comprehensive still. An excessive use of the first person singular is now sought to be avoided, by the discontinuance of Gateway Gossip and Peninsula; but an enlargement of the Comments section will make good the lost coverage. The markets are lumped together, for facilitating make-up of the pages. The section For the Investor remains, and Watch-dog is reviving the feature in which he applauds particularly good company accounts or developments or performances. All this will take a little time, but not too much, I hope, seeing that I now have the help of an able Associate Editor. N. S. Jagannathan, whom I have known for many years now, has joined this journal. The infusion of this new and considerable writing talent can be relied upon to ensure the quick and facile success of Indian Finance's expansion programme—in time, I hope, for coping with India's Third Plan.

"A Continuing Partnership"

JUST about a month before the Queen's visit, an agreement was signed in New Delhi for a credit of Rs 6.67 crores from the Government of the UK to the Government of India. This will reinforce the depleted foreign exchange reserves of this country during the last three months of the Second Five-Year Plan. This agreement, the fourth of its kind from the Export Credit Guarantee Department of the United Kingdom, is symbolic of the "great and continuous task of economic and industrial co-operation between our two countries" of which Sir Paul Gore-Booth, the British High Commissioner, spoke when he signed it on behalf of the Government of the United Kingdom.

The queen's visit is an appropriate occasion for reckoning the extent in monetary items, of this partnership. To date, the total British assistance, including the credit referred to earlier, comes to Rs 122 crores. In addition the British Government has agreed as an act of initial assistance for the Third Five-Year Plan, to make further loans amounting to Rs 40 crores to finance orders to be placed in the United Kingdom for capital goods required for implementation of the Third Plan. Further discussions are to take place regarding finance to meet the foreign exchange cost of the expansion of the Durgapur Steel plant estimated roughly at about Rs 26.67 crores.

The total credits from the Export Credit Guarantee Department since 1958 amount to Rs 107.33 crores, comprising Rs 20 crores granted in 1958 for the Durgapur Steel Plant, Rs 4 crores in June 1959 for Oil Pipe Line, and four general credit agreements for a total sum of Rs 83.33 crores. These general credits are meant to cover payments for supply of goods which were wholly or mainly produced or manufactured in the United Kingdom or the provision of works or services in India in regard to such goods. These credits are in two parts; the first part is repayable in ten equal consecutive half-yearly instalments and the second part in thirty similar instalments, repayments starting about six years after the date of the respective agreements. The credits carry interest at the rate currently applied by the UK Treasury, on the date of issue of each promissory note, to a loan for a comparable period out of the UK Consolidated Fund plus one quarter of one per cent per annum. In addition to the credits from ECGD mentioned above, India has received a loan of Rs 15.33 crores from Messrs. Lazard Brothers & Co., a syndicate of British Banks, for the construction of steel works at Durgapur. This credit is repayable in five semi-annual instalments beginning on January 1, 1962, and carries an interest at the rate of 1 per cent above the Bank of England rate with a minimum of 4½ per cent per annum. By the end of November last year, all the credits authorised up to that date have been fully drawn.

The credits from the UK account for nearly eight per cent of the total of Rs 2091 crores in loans received by India from all countries up to the end of 1960. But for a proper evaluation of the concrete assistance received from Britain towards India's planned development, certain other elements apart from the loans mentioned above must be taken into consideration. First in importance is Britain's acquiescence in the accelerated withdrawal of sterling balance which enabled this country to with-

stand the foreign exchange crisis three years ago. Withdrawals from sterling balances during the Second Plan period have amounted to nearly Rs 600 crores. Another instance of readiness to come to help, when help is needed most is the advance repayment of surplus pension funds amounting to about Rs 30 crores. No doubt these amounts were in the nature of repayments of money due to India; but the timing of the repayments, and the readiness of the Government of the UK to revise earlier arrangements to suit India's needs, make these in effect, if not in form, an invaluable mode of aid.

Another notable feature of the UK credits is the great flexibility in their utilisation. The general credits, as Mr L. K. Jha has pointed out, are not tied down to particular projects or purposes and can be used by the Government of India at its own

discretion in such manner and for such programmes as it chooses. The form in which the credits have been made available has been particularly helpful; a developing economy needs foreign exchange not only for particular projects, but also for a variety of other purposes not directly linked to the projects.

Direct Government to Government loans do not exhaust the contribution of the United Kingdom toward India's economic development. Private investment, it is now being increasingly recognised, is a less onerous form of foreign assistance. In this field, the UK occupies a pre-eminent position. According to recent estimates, total foreign investments in India in non-banking business institutions as at the end of 1958 amounted to over Rs 570 crores. Out of this UK investments accounted for Rs 398 crores or nearly 80 per cent. The breakdown of this investment according to industry groups is as shown below:

	Direct Investments		(In lakhs of Rupees)	
	Foreign Branches	Controlled Rupee Co's	Portfolio Investments	Total
Petroleum	...	76.78	15	76.93
Manufacturing	21.33	77.28	17.96	116.57
Trading	13.65	6.90	2.21	22.76
Utilities and Transport	32.65	2.48	1.74	36.87
Mining	9.85	92	1.37	12.14
Financial	8	7.59	7.82	15.49
Plantation	89.81	52	4.57	94.90
Miscellaneous	2.95	14.59	4.83	22.37
Total	...	357.38	40.65	398.03

It has sometimes been suggested that British investments in India since Independence have just balanced the liquidation and repatriation of old investments. But actually British investments in India have been nearly doubled during the ten years from 1948 as will be seen from the following table:

As at end of	(In crores of Rupees)	
	UK Investments	Total Foreign Investments
June—		
1948	206.02	255.83
1953	326.42	392.05
1955	376.81	456.00
1956	392.52	492.82
1957	396.79	541.66
1958	396.03	570.64

From the table it will be seen that the trend has been steadily upward, though there was a tendency to level off in 1957-58, on account of payment of compensation for nationalisation of life insurance and gold mining companies. But at the same time it may be pointed out that British Investments have increased at a slower rate than the total foreign investments. British investments in India represent only one-sixth of total of British overseas investments in the post-war period. But with the repeated clarifications about Government's attitude towards foreign investment and liberalisation of procedure for licensing of new joint ventures, the scope for British participation in Indian enterprises has been greatly increased. The figures quoted above relate to period before 1958 and do not take into account considerable new investment made in the last two years.

External assistance in the form of loans can help to set up new industrial projects. But their efficient operation depends on personnel with the requisite training and technical knowledge. The help afforded by UK, both by Government institu-

tions and private firms, in the form of scholarships, facilities for training, as well as equipment and instructors for technical institutions in this country, deserves special mention in this context. Up to end of June 1960 the United Kingdom has supplied a total of 1,106 training places to Indians under the technical Cooperation Scheme of the Colombo Plan. During the same period, 132 technical experts from the UK have come to India under the Colombo Plan Scheme. For the Durgapur steel plant, the UK has provided training facilities for 400 of the supervisory staff and technicians. The value of books and equipment gifted to 12 technical and medical institutions totals Rs 44.65 lakhs.

For a developing country, the importance of trade is as great as that of aid. If not greater. The UK is India's largest export market. In 1959 the value of imports from the UK amounted to Rs 172.72 crores out of total imports of Rs 888.6 crores. Exports to Britain in that year amounted to Rs 172.16 crores out of total exports of Rs 626.1 crores. In the first nine months of last year imports from the UK into India amounted to Rs 148.26 crores and exports to Rs 117.26 crores, while the total imports amounted to Rs 704.7 crores and exports to Rs 457.1 crores.

In his toast to Queen Elizabeth last week, the President gratefully acknowledged the generous help given to us by the Government and people of the United Kingdom. The Queen's reply contains the heartening assurance that the "people of Britain and of other industrially advanced Commonwealth countries are deeply conscious of India's needs and potentialities." The foregoing analysis clearly proves that there was more than post-prandial civility in these admirable sentiments.

28 January 1961

Markets

JUTE Prices Resume Uptrend

Reopening on Tuesday after an extended week-end, jute markets have once again begun to display a firm tone. The quiet tendency that was noticeable in later dealings last week seems to have stemmed from apprehensions of fresh curb measures from the authorities. Rumour had it last week that the fact that prices had continued to rule high would invite harsh Government attention since it has now far-reaching powers consequent to the passing by Parliament, in its winter session, of the amended Forward Markets Bill. But in Tuesday's trading, there was little to indicate any nervousness on the part of operators. On the contrary, there was buying support at steadily advancing price levels. It would appear that operators have been encouraged to extend commitments, because the past few days have passed without Government administering any jitters to the market. Another bullish influence appears to be the fact that some important foreign buyers have been lending support to the Calcutta market during the last few days despite the high prices. Reports from the US indicate that, after waiting for a considerable time in vain for prices to show a substantial decline, consumers in that country have at long last reconciled themselves to paying high prices for their requirements of burlap—at least for the current jute year.

Evidently, foreign consumers of jute goods have come to the conclusion that there is little chance of the remaining part of the current jute season producing any sizable increase to the supply of raw jute. The figures relating to arrivals of raw jute during December have gone only to strengthen the belief that this season's jute crop is much smaller than that of the last season's. Arrivals of raw jute during December have totalled 634,000 bales as compared with 663,200 bales in November and 826,800 bales in the corresponding month of last year. Arrivals of raw jute for the six months ended December 1960 total only 2,700,000 bales as compared with 3,140,000 bales in the corresponding period of last season.

However, some circles continue to maintain that this season's crop has been as large as the last one, notwithstanding the fact that arrivals of raw jute into Calcutta and

mill stations so far have been poor. They are also not much perturbed by the continued paucity of supplies at the upcountry markets. The argument is that, encouraged by the high prices they have been able to get this season, holders are reluctant to part with their stock in the hope of extracting even higher prices from the buyers. But it is hard to believe that the cultivators, traders or whoever it is that are holding back supplies from the market, will be so greedy as to hope for prices to touch further new highs as current prices themselves are exorbitant enough. Government is also not doing much of late to bring down prices. It was expected that, on the basis of earlier indications of a fairly satisfactory jute crop this season, the publication of the official estimate of the crop would help curb speculation in the raw jute market. But, for some unexplained reason the official estimate of the crop has yet to be announced—and nearly seven months of the season to which the estimate relates have already elapsed. Marketmen cannot, therefore, be blamed if they have come to the conclusion that the 1960-61 jute crop is rather smaller.

That raw jute will be in short supply during the current season also seems to be the belief now subscribed to by most foreign buyers. This inference is derivable from the fact that, during the past few days, there have been

fresh foreign enquiries. US burlap consumers are said to be no longer concerned about the high prices but are keen on replenishing their fast-dwindling stocks.

Apart from the firmness of raw jute and the renewed support from markets overseas, the uptrend in goods prices has been accentuated by the fact that mills do not seem to be quite anxious to part with their production even at the higher levels. This is probably because the cost of production is likely to be further increased by the interim increase in the wages of jute workers reported to have been urged by the Wage Board for the jute industry. It is understood that this body has submitted an interim report to the Government recommending an increase in the workers' wages. The increase recommended unanimously by the Board is said to be Rs 5. The final decision is, however, to be made by Government, which is now said to be examining the report. In the meantime, the All India Jute Textile Workers Federation has, in a statement expressed dissatisfaction at the reported interim wage increase.

TEA

Imports into the UK and USA

ACCORDING to the Board of Trade, London, Tea imports into the UK rose to 69.05 million pounds in November 1960 from 54.06 million pounds in the corresponding month of the previous year. This put the total arrivals of tea into Britain, in the first eleven months of 1960, higher at 473.95 million pounds as compared to 448.93 million pounds in the corresponding period of 1959. The increase in tea imports into the UK was entirely due to larger supplies from sources other than the major producing countries excepting Ceylon.

The increase in supplies from Ceylon from 125.86 million pounds in January/November 1959 to 140.62 million pounds during the period under review was offset by the decline in supplies from India from 238.21 million pounds to 223.34 million pounds. Imports from Pakistan, too, fell from 7.39 million pounds to 5.94 million pounds as did those from Indonesia from 9.62 million pounds to 8.37 million pounds.

According to official sources from New York, tea imports into the USA fell slightly to 8.03 million pounds in November 1960 from 8.34 million pounds in the corresponding month of the previous year. Total imports into the USA, in the first eleven months of 1960, are, however, higher at 107.27 million pounds as against 98.6 million pounds in the corresponding period of 1959.

Tea supplies from Ceylon increased sharply from 40.77 million pounds in January/November 1959 to 45.75 million pounds in the eleven months ended November last year as did those from Indo-

nesia from 13.81 million pounds to 14.31 million pounds. Arrivals from British East Africa also increased from 5.48 million pounds to 6.03 million pounds. India, on the other hand, lost substantial ground in the USA tea market and was able to supply only 23.68 million pounds in January/November 1960 as compared to 5.54 million pounds in the similar 1959 period.

No export and internal sales were held in Calcutta this week.

In the Cochin market, 4,35,000 kilograms of Leaf tea was offered for export. The quality generally showed a slight improvement and the demand was good throughout. Plain and low medium broken-grades met with useful support and were steady. Fannings under this category had better support and were dearer. Mediums and good mediums, especially those with improved quality, often were sold at dearer rates.

There was only a limited enquiry for best liquoring highgrown broken; but corresponding fan-

nings were in strong demand and were sold at prices above last week's rates. There was keen competition for clean black leaf fannings, which were the strongest feature of the sale. CTC and leg-cut types were all supported although these were sold at easier rates. Whole Leaf grades continued to be firm, while a small selection of Tippy teas met with a useful demand. Low Medium was quoted at Rs 4.60 to Rs 4.90; Medium at Rs 4.95 to Rs 5.20; Good Medium at Rs 5.25 to Rs 6.00 and Quality at Rs 6.00 to Rs 9.10.

Production of tea in South India was estimated at 11.2 million pounds in December 1960 as against 11 million pounds in the corresponding month of 1959. This puts the total South Indian tea outturn, for the whole of 1960, higher at 169.1 million pounds as compared to 154.9 million pounds in 1959 and 161.9 million pounds in 1958.

In the Colombo market, offerings were 7,173,388 pounds. Although the quality generally improved,

there was less demand at irregularly lower rates. At the opening high-grown broken declined except where there was a marked improvement in quality. Medium-grown broken were generally lower, while low-grown teas were in good demand at a decline of about 5 to 8 cents per pound.

The Ceylon Government is making desperate attempts to save its tea market in West Asia, following a decision by Iran, one of the leading buyers of Ceylon tea from there, to cut off tea purchases from Ceylon from March 21 unless Ceylon entered into a trade agreement with Iran as India and Pakistan had done or would do in the near future. The Ceylon Government has decided to take stock of the whole question of its West Asian tea market, valued at about Rs 100,000,000 a year and particularly the Iranian market as it is in imminent danger of being lost.

In London auction, offerings were again substantial at 77,934 packages. The weight of tea, together with the fact that few top grade invoices are now coming forward, has resulted in prices frequently losing ground. Among Ceylons, for example, low and low medium fell by 1d to 2d per pound, while medium and high-grown sorts frequently recorded declines of 2d to 3d. Teas above 4sh per pound among British Africans were also easier. Plain teas for the most part showed greater resistance to ease. British African types falling within this category were, in fact, a good market.

Tea stocks in London, as on 13 January 1960, were 126.72 million pounds as against 119.06 million pounds in the previous week. The total quantity, to be landed on the same date, was 37.93 million pounds. Total afloat was 15.55 million pounds including from Calcutta 8.02 million pounds; from Chittagong nil; from Cochin 2.54 million pounds; from Ceylon 4.07 million pounds and from other Ports 920,600 pounds. The average price realised, during the week ended 13 January 1960, was 55.33d per pound as against 56.84d in the previous week and 53.61d a year ago.

Tea stocks in London, as on 13 January 1960, were 126.72 million pounds as against 119.06 million pounds in the previous week. COTTON

Futures Easy : Spot Weak

AFTER an initial recovery the Bombay cotton futures market turned easy during the past week. The reasons for the early improvement are not far to seek. The persistent rumours of the release of another instalment of quota to the mills in the near future, the brisk preparations made by the mills to step up the cloth output following the directive of the Textile Commissioner by resorting to third shift working and the revival of support from Ahmedabad and other up-country centres sustained the initial recovery. Strong advices from

the spot market also, to a great extent, fanned the enthusiasm and consequently the price of Jarilla April shot up from Rs 568.50 to Rs 598.

But as the week under review proceeded the initial buoyancy showed signs of decline. The absence of any indications about fresh export quota for Bengal Deshi, which the market was considering imminent, compelled tired bulls to liquidate a part of their holdings. Reports of a further delay in releasing quotas to the indigenous mills and the general apathy to lend support at higher levels on account of seasonal pressure, heavy arrivals of new crop cotton, the possibility of a larger outturn of crop in the current season and the stringent monetary conditions—all these had adverse effects on the market and price of Jarilla April was pushed down to Rs 586.50 before winding up the week at Rs 589.50.

The spot market at Sewri also depicted signs of weakness. Most of the available varieties shed Rs 5 to Rs 10 per candy during the period under review. The turn over has dwindled into an insignificant trickle. Most of the mills were reluctant to enter the market on the anticipation of a further decline in prices in the immediate future. All varieties were offered below ceiling prices by Rs 20 to Rs 25 per candy.

The earlier apprehension of heavy damage to the quality of Vijay cotton seems to have shed thanks to the propitious weather prevailing in that area.

No fresh development was reported in the import front. The demand for East African variety was moderate. A small quantity of Sudan cotton of top "S" grades and Egyptian medium grades, Karnak and Menufi was also transacted. All other varieties remained dull and inactive.

Liverpool:

Listless conditions prevailed in the Liverpool futures market in the absence of any futures trading. Advices from Liverpool narrate that a moderate mill demand has been well maintained throughout the week. Enquiries were chiefly pointed toward US cotton of medium and lower grades in Texas Orleans styles. However, the actual turn over was only in the order of 16,400 bales. About 500 bales of Pakistani choice Sind Deshi were purchased for prompt shipment. A further decline in the offering prices of Egyptian styles was reported. The Egyptian Government has not yet announced its future marketing policy.

At the close of the market on Thursday last, the various positions were quoted as follows: American contract March 22.95 d., October, however, remained unaltered at 23.90 d., American type contract March 22.95 d., and October 24.25 d. Sudan contract shed 25 points and was quoted at 34.75 d.

Indian Finance

28 January 1961

New Yo

Augmented selling developed toward the close of the week in the New York futures market on account of a further increase in the certificated tenderable stock. Improved trade demand and commission house buying for the distant deliveries lent adequate support to the week's trading. At the close of the market on Wednesday last, the near March position was quoted at 32.09 cents and the distant March position was quoted at 34.10 cents.

Piecegoods:

Active conditions prevailed in the Bombay piecegoods market thanks to the mounting demands. Both upcountry and local merchants exhibited keen interest in almost all the varieties available in the domestic sector. Attention was specially directed toward lower and higher medium long cloth, higher medium shirting and lower quality goods. Enquiries for do-rais, voiles and mulmuls were also reported. Buying interest in the fine and superfine styles were on the other hand very restricted.

Uttar Pradesh, Bihar, Delhi Punjab and West Bengal figured as the leading consuming centres during the period under review. Some business with the Southern centres was also done. But the upcountry offtake was rather moderate and was limited to immediate requirements.

Demand on the export front was on the whole satisfactory. A slight rise in the prices of some varieties was noticeable. Despite the resistance from the overseas traders, the offtake was quite encouraging.

Sudan's interest was focussed toward grey sheetings, mulmul, voiles and gadlapat. It appears

that shippers have concluded business with that destination for forward delivery upto March-April. East Africa was satisfied with a small quantity of grey sheetings and gin. Scattered business was done with the UK in the usual varieties. Other destinations were rather inactive.

Kerala's Rubber Plan

According to the latest reports, the Kerala Government do not appear to be able to make available more than 10,000 acres for Rubber cultivation, both in the private and public sectors, during the coming planting season under their ambitious two-lakh acres rubber-planting scheme included in the State Third Plan. This is far short of the target laid down originally. At present, the Kerala Government expect to make ready 4,000 acres for cultivation by landless people during this year. Another 4,000 acres may be available for cultivation in the public sector.

The Plan target is to plant 2 lakh acres. The estimate is, that the Government will be able to make available one lakh acres from their forest and other lands and another one lakh acres will be available with private parties who will be offered financial and other forms of assistance. This scheme has two advantages. First, it will go a long way to make the country self-sufficient in rubber. Secondly, it will solve Kerala's unemployment problem to some extent.

Meanwhile, there are reports that the Planning Commission is not favourably disposed towards the Commerce and Industry Minister's proposal to enhance the replanting sub-

sidy to Rs 1,000 per acre to make it sufficiently attractive to the planters when they were given a replanting subsidy ranging up to Rs 400 per acre. It is understood that the Kerala Government have already taken up the matter with the Union Government and the Planning Commission.

Chemicals & Dyes

The Bombay market for Chemicals and Dyes displayed divergent trends last week. While the Chemicals section was steady, Dyes showed a slight improvement in certain varieties.

The steady conditions in the Chemicals section was attributed to the unwillingness on the part of stockists to part with their holdings in anticipation of an increased demand. While the revival of uncountry demand sustained the market, the fears of a further supply of goods from the State Trading Corporation had a restraining influence on the buying enthusiasm. Camphor has declined to Rs 17.50 from Rs 19 while Menthol was quoted steady at Rs 78. In the case of camphor, traders reported regular arrival of goods from unauthorised sources. The firmness in menthol was attributed to the keen demand in the face of moderate stocks.

The improvement in the prices of Dyes was attributed to the fears that there would be a drastic cut in the import of certain items and the reports that solvents had been dropped from the list of import under the export promotion incentive scheme. Naphthols and vat colours were reported to be in keen demand from indigenous sources.

Yarn

Thanks to heavy speculative support, the Yarn market in Bombay continued to rule firm with prices

recording fresh higher levels on renewed buying by upcountry weavers. Staple-Fibre yarn shot up from Rs 775 to Rs 803 per bale following the news that the Government of India had deferred the scheme of stamping prices. Speculators greeted the news by lending fresh support to the market.

Acetate yarn, too, showed a marked improvement. Nylon yarns, however, remained unchanged. Cotton yarns remained very firm with Finlays gaining Rs 2 at Rs 59 per bundle.

The Textile Commissioner has stated that the availability of Art Silk yarn is rather tight at the moment and will continue to be so for some years to come. Although a number of new plants have been established during the last five years, the position in regard to supplies has not improved; because the demand is on the increase. The Textile Commissioner has added that, while demand from consumers is for a particular denier rayon yarn and a particular quality, the manufacturers are supplying them with different qualities. To remove this, a conference had recently been held. As a result, a programme has been worked out and it must be possible now for the manufacturers to produce the quality of rayon in demand.

The total exports of art silk fabrics from the country in 1960 have amounted to 3.44 crore yards as against 1.73 crore yards in the previous year. It is significant to note that, while the quantity of fabrics exported almost doubled last year in comparison with the performance in 1959, the value of exports declined slightly, thanks to the tightening of measures intended to prevent the abuse of the export promotion scheme. Afghanistan figured as the biggest buyer with shipments to that country amounting to Rs 86.87 lakhs despite the fact that trade with that country

prestressed concrete for
clear space construction

Durgapur Thermal Power Station

Prestressed Concrete Plank Roofing was adopted for the Durgapur Thermal Power Station because of its lightness thus reducing the cost of the foundation and superstructure. It also made rapid construction possible.

A conventional cast-in-situ roof was ruled out because of the unusual height between roof and floor.

The roof area covered was 50,000 sq. ft. The job was completed in about twelve months.

An additional feature is thermal insulation with foam concrete blocks.

remained almost at a standstill for the last five months.

Conditions in the export trade have, however, deteriorated markedly during the past few months with shipments showing a sharp decline. The setback is attributed mainly to a very strict scrutiny of export consignments. While exporters appreciate measures taken to raise the standard of the export trade, it is felt that the authorities should make due allowance for the fact that the prospects of improving quality depend ultimately on the facilities available for modernising machinery.

Pepper

Thanks to fair internal demand, the Pepper market in Cochin has been ruling generally steady with the rate quoted around Rs 425 per quintal. There is, however, a feeling that the present tempo of seasonal demand will taper off after a month or so in view of the steady rise in arrivals, which are averaging about 500 candelas.

Again, looking to the poorer export of Malabar new crop, the position of the market appears to be vulnerable, as the present steadiness at the primary centres seem to be artificial. The money market at Malabar is also tight, as five banks in Kerala are under moratorium by the order of the Reserve Bank of India. As such, loans against pepper are not expected to be available as freely as was the case last year. Above all, there is sluggishness in foreign demand.

Although the rates at Singapore are reported to be almost unchanged, the dealers there are said to be offering daily in competition with India. Same is the case with Indonesia where the exporters are the willing sellers below the replacing parity for attracting buyers. It is, therefore, certain that, without sizable export of Malabar black before the end of April, the present steadiness in the market cannot be sustained for long.

Sugar

Sugar markets have continued to rule quiet in view of the easy supply position. In the Hapur market, the rate is quoted around Rs 109.50 per bag. The factories in Uttar Pradesh are reported to be crushing cane at a high speed with consequent higher production. Cane supplies are adequate as a result of the higher price offered by the factories. The production trend is, therefore, expected to be upward, especially when the installed capacity has increased.

As for exporting the commodity to foreign countries, two representatives of the ISMA, which handles Indian sugar exports, will shortly be in the USA to pursue the question of export to that country. But, supplies to the world markets are now in excess of the demand and the Indian sugar can be sold only at a loss. Trade circles, therefore, feel that the effort to export the quantity may not be of much significance and, if the price is to be made competitive in overseas markets, it is necessary to reduce production costs.

Khandsari

The Khandsari market is ruling quietly steady due to better buying

enquiry from Kanpur side for onward despatch to Assam. Production is being continued in almost all the producing areas. In the Hapur market, the rate for the superior quality is quoted at Rs 31 to Rs 34 per maund, according to quality.

Gur

Although loading facilities are still restricted, ready Gur prices have registered sharp gains due to brisk buying enquiry from the Punjab. Stockists have cleared almost all their stocks. Dispatches have been mostly to Madhya Pradesh and Gujarat. Daily arrivals at the Hapur market are about 4,000 maunds. Total arrivals from the beginning of the season to date are 3.64 lakh maunds as against 5 lakh maunds in the corresponding period of last year. Pansera quality is quoted at Rs 14 to Rs 14.25 per maund.

Foodgrains

Mixed trends in the prices of foodgrains were noticed in the Hapur market. While Wheat prices registered modest gains owing to paucity of stocks, prices of gram and other coarse grains remained depressed. Wheat prices registered fractional gains at Rs 17.62 a maund for the average quality and upto Rs 13 for the farm variety. The price for average Wheat in the corresponding period of last year was Rs 18.25 a maund and Rs 27 in 1958. Shortage of stocks was the main reason for the upward trend in wheat prices although the standing crop conditions were reported to be fairly good.

Rice prices, particularly of the inferior quality, touched lower levels due to the easy supply position as new grains are still reaching the market. According to the consultative sub-committee of the FAO, world paddy production will continue its upward trend during the current season and reach a new record figure. On the basis of provisional crop estimates, the Committee expects the world paddy production to rise to 140 million metric tons during the current season.

Gold & Silver

Prices on the Bombay Bullion Exchange continued to rule firm with prices touching fresh higher levels for the week. In the Silver section, activity was brisk, being influenced by the reports of satisfactory offtake and reduced arrivals. Arrivals amounted to only 30 bars as against an offtake of 112 bars. Unrefined metal receipts totalled 20 bars. The demand for the metal was reported to be growing apace especially in the upcountry centres. The general feeling was that the tempo will be maintained in the current busy season. Silver (below .998) changed hands at Rs 205.80 to Rs 206.10.

Gold touched a new peak level of Rs 120.80 before closing at Rs 120.65. Sentiment was favourably affected by reports regarding the seizure of some contraband gold, gradual increase in the offtake and reduced arrivals. Further impetus to the movement was given by the continued rise in silver prices. Ready rates moved between Rs 120.35 and Rs 120.90, while Sovereign remained very firm at Rs 92.

For the Investor

INVESTMENT GOSSIP Improvement Maintained

THE improvement in sentiment noticed last week continues, though the participants in the upsurge are still limited to the speculative counters, especially to the steel shares.

The revival of interest in steel shares evidently stems from favourable news about the retention price of steel. It was reported last week that the Government had decided to put the new retention price at Rs 25 a ton effective 1 April 1960 for a two year period. The report, however, is still to be officially confirmed.

However, the lack of confirmation seems to have made very little difference to the attitude of market men toward the bellwether of Lyons Range. Indian Iron met with good support on Thursday and although Friday's trading saw no further progress by this scrip, it has been well-maintained around previous levels. Presumably, market circles have no doubt that the quantum of increase specified in last week's report is correct.

It would appear that the news of the new steel retention price has given some much needed impetus to the bulls. The increase in retention price may not swell much the profits of the steel companies with their heavy load of loans and other commitments. In this view, shareholders of steel companies may not be quite justified in feeling jubilant over the new price. But so far as the market men are concerned it is too rare an opportunity to be missed. Moreover, conditions have become propitious for the emergence of a constructive view. Analysts who claim to know the inner working of the mind of the Central Finance Minister seem to be unanimous in their view that the coming Central Budget will not bring any jitters to the stock market. They seem to derive their conclusion from three important points: buoyancy of Government revenue receipts, coming general elections, and the almost non-existent scope for direct taxation—accepted by the Union Finance Minister himself.

INVESTMENT SPECIAL Madras Cements

Madras Cements Limited has offered for public subscription 17,211 equity shares of Rs 100 each and

7,059 Redeemable Cumulative Preference shares of Rs 100 each. The subscription list was opened on 27 January and will be closed on 4 February or earlier, but not earlier than 1 February.

The company is raising additional capital to the tune of Rs 70 lakhs for financing the second stage of its development project. The entire issue is underwritten. Out of the above, the Madras Industrial Investment Corporation Limited has subscribed for 27,500 equity shares and 7,500 Preference shares. The LIC has also underwritten and subscribed for 2,500 Preference shares. The balance of the issued capital, viz., Rs 24.27 lakhs consisting of 17,211 equity shares and 7,059 Preference shares is offered for public subscription, at par. The amount is payable at Rs 50 per share on application and the balance will be called up at the discretion of the Directors not earlier than six months from the date of allotment.

The company has obtained an industrial licence from the Central Government for erecting a factory at Tulukapatti, Ramanathapuram District, Madras State, with a capacity of 600 tons of cement per day, to be executed in two stages. The first stage with a capacity of 200 to 250 tons has been completed and the plant is about to be commissioned.

The total cost of the second stage of the project is estimated at Rs 120 lakhs and this is proposed to be met as follows: Rs 70 lakhs by the issue of share capital and Rs 50 lakhs by way of an additional long-term loan from the Industrial Finance Corporation of India. The requirements of working capital, viz., Rs 20 lakhs, for the second stage will be met out of the earnings of the first stage and borrowings from banks.

NEW ISSUE NOTES Universal Cables

Birlas are understood to have finalised plans for a cable factory with an installed capacity of 650 miles per annum of industrial paper-insulated lead-covered power cables (known to the trade as PILC cables). One of their existing companies will undertake the project under the new name of Universal Cables Limited. Fresh capital to the tune Rs 70 lakhs will shortly be offered, in the first instance, to the existing shareholders and the balance, if any, will be subsequently offered to the public, thus raising the total paid-up equity capital of the company to Rs 105 lakhs. The total outlay on the project will be about Rs 2 crores.

Ultramarine and Pigments

The recent issue of Ultramarine and Pigments Limited has been oversubscribed by just over three times. As far as applicants for 5 shares are concerned, one applicant out of two has been allotted 5 shares, whereas applicants for higher denominations have been allotted from 7½ to 50 per cent of the number of shares applied for.

Rajaramka Pulp & Paper

The Rajaramka Pulp and Paper Mills Limited, Tumsar, Maharashtra State, will shortly be in the market with an equity issue of Rs 12.25 lakhs. The authorised capital of the company is Rs 50 lakhs of which Rs 40 lakhs are in equity shares of Rs 100 each and Rs 10 lakhs in Cumulative Redeemable Preference shares of Rs 25 each. The issued capital is Rs 25 lakhs in equity shares. Of the issued capital, the promoters and their friends have agreed to take 12,750 equity shares, leaving a balance of 12,250 equity shares for public subscription. A sum of Rs 10 is payable with the application; Rs 15 on allotment and the balance of Rs 75 in subsequent calls. The company has obtained a licence for the manufacture of paper and pulp with a capacity of 3,000 tons of writing and printing paper per annum. The estimated

capital outlay on the project is Rs 41.70 lakhs of which Rs 25 lakhs is to be raised by the proposed equity issue and the balance by way of loans and other credit arrangements.

Hindustan Aluminium

The final call of Rs 2.50 each on the equity shares of the Hindustan Aluminium Corporation Limited has been made. The call money is payable on or before 15 March 1961.

Travancore Chemical

The Travancore Chemical Manufacturing Company Limited proposes to issue 20,000 equity shares of Rs 10 each, at par, to the holders of equity shares on 1 March 1961 in the ratio of two new shares for every 13 equity shares held. The new shares will rank for dividend from 1 April 1961.

Enfield India

Subject to Government sanction, Enfield India Limited proposes to raise the share capital by issuing 233,300 equity shares of Rs 10 each. Of the new shares, 33,300 shares are to be issued to Villiers Engineering Company Limited, UK and 200,000 shares offered to the existing equity shareholders on a pro rata basis.

THIS IS ONLY AN ANNOUNCEMENT — NOT A PROSPECTUS.

A copy of the Prospectus has been duly filed with the Registrar of Companies, Madras State, for registration together with the documents specified in the Prospectus, as required by Section 60 of the Companies Act, 1956.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to the public for inspection at the Registered Office of the Company at Rajapalayam. It must be distinctly understood that, in giving the consent, the Central Government, do not take any responsibility for the financial soundness of any scheme or for the correctness of any statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for the establishment of this new industrial undertaking of which a copy is open to the public for inspection at the Registered Office of the Company. It must be distinctly understood that in granting the licence, the Government of India do not take any responsibility for financial soundness of the undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The existing Equity and Preference Shares of the Company are officially listed on the Madras Stock Exchange Limited, Madras. Application will be made in due course to the Madras Stock Exchange Limited for permission to deal in the Equity and Preference Shares now offered.

The Subscription list will open at 10 A.M. on Friday, the 27th January, 1961 and will close at 10 A.M. on Saturday, the 4th February, 1961 or earlier as soon as subscriptions approximating to the amount issued hereunder to the public have been received, but not earlier than 10 A.M. on Wednesday, the 1st February, 1961.

Total	Rs. 70,00,000

RIGHTS OF PREFERENCE SHARES.

The holders of Preference shares shall be entitled to be paid out of profits which the Board of Directors shall determine to distribute by way of dividends, a fixed cumulative preferential dividend at the rate which after deduction of such amount of tax as may be prescribed from time to time under Section 18(3D) of the Indian Income-tax Act, 1922, would entitle the holder of such share to a net dividend of 6½ per cent per annum on the capital paid up for the time being on such shares in respect of 10,000—6½ per cent Tax-free Cumulative Preference shares of Rs. 100/- each and at the rate of 9.3 per cent per annum, free of Company's tax, but subject to deduction of tax at the prescribed rate as required under Section 18(3D) of the Indian Income-tax Act, 1922, on the capital paid up for the time being on such shares in respect of 40,000 Redeemable Cumulative Preference Shares of Rs. 100/- each from the date of allotment and to a right on winding-up to be paid all arrears of preferential dividends, whether earned or declared or not, down to the commencement of the winding-up and also to be repaid the amount of capital paid up or credited as paid up on the Preference Shares held by them respectively in priority to any payment in respect of Equity Shares, but shall not be entitled to any other rights in the profits or assets of the Company; subject as aforesaid and to the rights of the holders of any other shares entitled by the terms of the issue to preferential repayment over the Equity Shares in the event of winding up of the Company, the holders of Equity Shares shall be entitled to be repaid the amount of capital paid-up or credited as paid-up on such shares and all surplus assets thereafter shall belong to Equity shares in proportion to the amount paid-up or credited as paid-up on such Equity shares respectively at the commencement of the winding-up. The holders of Preference shares that have already been issued and that may hereafter be issued shall, unless restricted by the terms of the issue of such shares, rank *pari passu* in the matter of payment of dividends and return of capital.

Any further issue of Redeemable Preference Shares over and above the present issue of 20,000 Redeemable Cumulative Preference Shares of Rs. 100/- each ranking in all respects *pari passu* with the existing 10,000—6½ per cent tax-free Cumulative Preference Shares of Rs. 100/- each and 20,000 Redeemable Cumulative Preference Shares of Rs. 100/- each now being issued under this Prospectus will be made only with the consent of holders of not less than three-fourths of the Preference Shares.

TERMS FOR REDEMPTION OF PREFERENCE SHARES.

The shares will be redeemed at par after 10 years and before 15 years from the date of issue of shares. The Company may, at their option, start redeeming the Preference Shares at par, after six years from the date of issue of such shares. The Redeemable Cumulative Preference Shares, if any,

subscribed for and held by the Industrial Finance Corporation of India, New Delhi, shall be redeemed in the first instance without draw of lots.

The Preference Shares may be redeemed at a time or in instalments. The Preference Shares to be redeemed on each occasion shall be determined by the drawing of lots.

RIGHTS OF THE EQUITY SHARES

The new Equity shares for all purposes shall rank *pari passu* with the existing Equity shares of the Company.

ALLOTMENTS TO SHAREHOLDERS AND FINANCIAL INSTITUTIONS.

Pursuant to Section 81 of the Companies Act, 1956, and as per resolution passed by the Company in General Meeting on 1st October, 1960, authorising the offer of the present issue to the holders of both Equity and Preference Shares of the Company, all the shares under the present issue were offered in the first instance to the existing shareholders of both Equity and Preference Shares of the Company, whose names appeared on the Register of Members of the Company as on 3rd December, 1960, on the basis of one Equity Share of Rs. 100/- each for every Equity or Preference Share of Rs. 100/- each, held by them and two Redeemable Cumulative Preference Shares of Rs. 100/- each for every Five Equity or Preference Shares or a combination of both held by them.

The shareholders of the Company have subscribed for 5,289 Equity shares and 2,941 Redeemable Cumulative Preference shares having a total nominal value of Rs. 8,23,000/- leaving a balance of 44,711 Equity shares of Rs. 100/- each and 17,059 Redeemable Cumulative Preference shares of Rs. 100/- each having a value of Rs. 61,77,000/-.

Out of the above, the Madras Industrial Investment Corporation Ltd., have subscribed for 27,500 Equity shares of Rs. 100/- each and 7,500 Redeemable Cumulative Preference shares of Rs. 100/- each and they have been allotted these shares in full.

The Life Insurance Corporation of India have also underwritten and subscribed for 2,500 Redeemable Cumulative Preference shares of Rs. 100/- each and these shares have been allotted in full.

THE ENTIRE ISSUE OF Rs. 70 LAKHS IS UNDERWRITTEN.

The following underwriting arrangements have been made with the institutions mentioned below in respect of the quantities and classes of shares mentioned against each.

Name of Underwriter	Redeemable Cumulative Preference shares	Equity shares	Total Value. Rs.
Madras Industrial Investment Corporation Ltd.	7,500	27,500	35,00,000
Industrial Finance Corporation of India, New Delhi	10,000	...	10,00,000
Life Insurance Corporation of India, Bombay	2,500	7,500	10,00,000
Indian Overseas Bank Ltd., Madras	...	7,500	7,50,000
Brokers: Jointly.			
(1) M/s. Chitra & Co. Madras	}	7,500	7,50,000
(2) " Maconochie & Co. Madras			
(3) " Somayajulu & Co. Madras			
(4) " Paterson & Co. Madras			
(5) " P. R. Subramanyam, Bombay			
Total	20,000	50,000	70,00,000

In the opinion of the Directors, the resources of the said underwriters are sufficient to discharge their underwriting obligations.

OFFER TO THE PUBLIC.

The balance of the issued capital, namely, Rs. 24,27,000/- consisting of 17,211 Equity shares of Rs. 100/- each and 7,059 Redeemable Cumulative Preference shares of Rs. 100/- each is offered at par for public subscription in terms of the Prospectus and is payable as follows:—

On application	Rs. 50/- per share
On allotment	Nil

The balance of Rs. 50/- per share will be called up at the discretion of the Directors not earlier than six months from the date of allotment. No shares are issued for consideration other than cash.

The Life Insurance Corporation of India have also agreed to send us an open application for Equity shares to the value of Rs. 7,50,000/- which will rank for allotment on a par with other applications received from the public.

BOARD OF DIRECTORS:

CONSENT.

The consent in writing of the abovenamed Bankers, Brokers and Auditors of the Company to act in the respective capacities have been obtained and have been filed with the Registrar of Companies, Madras, and have not been withdrawn.

HISTORY OF THE PROJECT.

The Company was incorporated on the 3rd July, 1957, for the several purposes set forth in the Memorandum of Association and in particular to undertake the manufacture of Portland Cement and other allied products. A factory has been established for this purpose at Tulukkappatti, Ramanathapuram District. An industrial licence has been obtained from the Central Government for erecting a factory with a capacity of 600 tons of Portland Cement per day to be executed in two stages.

Large reserves of suitable limestone are available from quarries within a few miles from the factory. Suitable clay and gypsum are also available in and around the area. Extensive lands for the factory and residential buildings, both for existing and expansion scheme, have been acquired by the Company. Plenty of water is available from Arjuna River nearby. Necessary pipe lines have already been laid from the river bed to the factory site. The supply will be sufficient both for the first and the second stage of the project. The State Electricity Board have sanctioned necessary electric power to meet the requirement of the first stage of the factory and they have already made the power available. They have also assured the sanction in time of the required electric power for the second stage. The factory is located on the Madras-Cape Comorin National Highway and is well served by rail and road transport facilities. Besides, it is very near to the Tuticorin Port.

The Certificate of Commencement of Business was obtained on 31st July, 1957. The licensed capacity of 600 tons per day is to be executed in two stages, namely, the first stage having a capacity of 200/250 tons per day and the second stage having an installed capacity of 350/400 tons per day, making the total of 600 tons per day.

In accordance with the above phased programme, to finance the outlay of the First Stage, a capital issue of Rs. 50 lakhs was made. The original issue of Rs. 50 lakhs was in the form of Rs. 10 lakhs of Preference and Rs. 40 lakhs of Equity shares both of the denomination of Rs. 100/- each. The entire Preference capital of Rs. 10 lakhs and Rs. 30 lakhs of Equity shares out of Rs. 40 lakhs were placed before the investing public without resort to the publication of a Prospectus, using the personal influence of the Chief Promoter, Shri P. A. C. Ramasamy Raja the well known Mill Magnate of Rajapalayam and the Managing Agents of Rajapalayam Mills Ltd., Rajapalayam. The Ramaraju Surgical Cotton Mills Ltd. and Javaram Mills Ltd., Rajapalayam. The balance of Rs. 10 lakhs of Equity shares was taken up by the Madras Government to signify their confidence in the project. Further, a long-term loan of Rs. 40 lakhs was obtained from Industrial Finance Corporation of India, New Delhi, to secure the balance of requirements.

The Company has now completed the first stage of the construction of the 200/250 ton factory. The plant and machinery were supplied by the internationally well known firm of Messrs. Skodas of Czechoslovakia and they were erected under the supervision of their experts. The Directors are glad to state that the first stage of the project is about to be commissioned and the cement produced by the factory will be placed on the market shortly.

EXPANSION SCHEME.

The Company is now issuing additional capital to find the required finance for the second stage of the project. The supply and erection of plant and machinery for the second stage are also in the hands of Skoda, who have made all arrangements for delivery by the end of 1961 and erection of the machinery according to our present schedule.

The Import Licence for the plant and machinery for the expansion scheme has already been granted by the Government of India under Rupee payment terms and it is in accordance with the terms of this licence that we have placed firm orders with Messrs. Skodas.

PLANT AND MACHINERY.

The Company has entered into an agreement on 9-12-1959 with Messrs. Skoda (India) Private Ltd., Bombay, Agents of Messrs. Technoexport of Czechoslovakia, for supply of the expansion plant of 350/400 tons day capacity. The entire plant and machinery including electrical drives are to be supplied by the renowned manufacturers in Czechoslovakia, Messrs. Skodas. These manufacturers of cement-making and other machinery, enjoy a world wide reputation, particularly in the Cement and Sugar lines. They have undertaken the erection and the successful commissioning of the extension plant. The plant and machinery supplied by the above mentioned firm, Skodas, is for the wet process.

CAPITAL REQUIREMENTS.

The total cost of the second stage of the project is estimated as under:—

Plant and machinery	Rs. 76.25 lakhs
Civil Constructions	" 27.00 "
Other Assets	" 9.25 "
Contingencies	" 3.50 "
Expenses for issue of shares	" 4.00 "
Total	Rs. 120.00 "

The requirements of working capital for the Second Stage will be about Rs. 20 lakhs.

SOURCE OF FUNDS.

The total sum will be provided as under:—

By the present issue of share capital	Rs. 70 lakhs
Additional long-term loan from the Industrial Finance Corporation of India, New Delhi (already sanctioned)	" 50 "
Total	Rs. 120 "

The requirements of working capital, namely, Rs. 20 lakhs for the Second Stage will be met out of the earnings of the first stage and borrowing from banks.

PROSPECTS.

It is wellknown that the Cement industry in India has not only seen phenomenal growth in the last twelve years but is looking forward to a period of increasing consumption of cement in the next decade. Apart from a quadrupling of capacity in a little over a decade, the industry has been allotted a target of 14 million tons during the Third Plan period. The capacity of the industry at the end of 1960 was estimated at about 9 million tons. Thus, it is safe to expect that the target will be more than achieved during

the Third Plan period, though it is expected that, by this time, consumption of cement by the house building industry will, apart from the needs of the large projects of the Third Plan, have very considerably increased. Actually, it is expected that, by the first year of the Third Plan, cement consumption will receive a new stimulus with the availability of larger quantities of steel, with the completion and coming into operation of the three steel units in the public sector. The Company's expansion scheme, is therefore, timely.

PROFITS.

The Directors are of opinion that in the absence of any unforeseen circumstances, the Company will earn sufficient profits as to enable the declaration of a reasonable dividend within one year from the date the second plant goes into production.

FINANCIAL INFORMATION.

The Auditors' Report dated 10th January, 1961 in accordance with the provisions of the Companies Act, 1956, has been appended to the Prospectus. The Auditors have given and have not withdrawn their written consent to the inclusion of their reports in the form and context in which it appears.

EXPENSES OF THE ISSUE.

The expenses of the issue, including underwriting commission and brokerage, are estimated not to exceed Rs. 4 lakhs and are payable by the Company.

UNDERWRITING COMMISSION.

Underwriting Commission at the rate of 2½% on the nominal value of both Equity and Preference shares underwritten, will be paid to the underwriters.

BROKERAGE.

Brokerage at the rate of 1% will be paid to the Bankers of the Company and recognised Brokers on all allotments made in respect of applications for Preference and Equity shares bearing the stamp of such Banks or Brokers. Brokerage on the same basis is payable to underwriters in addition to the underwriting commission, on allotments in respect of applications made or procured by them and bearing their respective stamps. However, no brokerage is payable on shares subscribed by the existing shareholders under Section 81 of the Companies Act, 1956 or by the Directors or by the Managing Agents or their associates and by the Madras Industrial Investment Corporation Limited.

DIRECTORS.

The Articles of Association of the Company provide that the number of Directors shall not be less than three and until otherwise determined by the General Meeting, not more than fifteen, including Ex-Officio Directors. The Maximum number of Directors not liable for retirement by rotation shall not exceed one-third of the total strength of the Board. The qualification of every Director, other than the first Directors, Ex-Officio Directors, and alternate Directors, Madras State Government Director, and Industrial Finance Corporation of India Director shall be his holding shares in the capital of the Company of the face value of Rs. 5,000/- and it shall be his duty to comply with the provisions of Sections 270 and 271 of the Act.

Every Director is entitled to receive a sitting fee of Rs. 100/- for every meeting of the Directors or of any Committee of the Directors attended by him and all reasonable travelling, hotel and other expenses incurred within India for attending and returning from meetings of the Board or a Committee thereof or in connection with the business of the Company.

BORROWING POWERS.

The Directors may at their discretion raise or borrow or secure the payment of any sum or sums of money for the purposes of the Company provided that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) shall not at any time, except with the consent of the Company in General Meeting, exceed the aggregate of the paid-up capital of the Company and its free reserves.

INTEREST OF DIRECTORS.

Messrs. P.A.C. Ramasamy Raja and P. R. Ramasubramania Raja, Directors of the Company, are the partners of Messrs. P.A.C. Ramasamy Raja & Co., the Managing Agents of the Company and each of them is interested

in the remuneration payable to the Managing Agents in the following proportion.

1. Shri P. A. C. Ramasamy Raja	...	...	51%
2. Shri P. R. Ramasubramania Raja	...	...	49%

Each of the Directors is interested to the extent of shares subscribed, allotted or to be allotted to him in the Company and in the sitting fee receivable by him for attending the meeting of the Board of Directors.

MANAGING AGENTS.

Messrs. P.A.C. Ramasamy Raja & Co., have been appointed with the approval of the Central Government accorded in their letter No. 41(914)-CMN/57 dated 4th October, 1957, as the Managing Agents of the Company, for a period of 15 years from 30-1-1958 on a remuneration of 10% of the annual net profits of the Company. For this purpose, the net profits are to be computed in accordance with Sections 349 and 350 of the Companies Act, 1956. In the event of inadequacy or absence of profits of the Managing Agents will be paid, as minimum remuneration for every such financial year of the Company, such sum payable in such manner, as the Central Government may hereinafter fix in this behalf.

In the event of any compensation becoming due and payable to the Managing Agents for loss of office, such compensation shall be determined in accordance with Section 366 of the Companies Act, 1956.

The partners of the Managing Agents are well-known industrialists and they are associated with several successful enterprises.

Subject to the provisions of the Companies Act, 1956, and to the supervision and control of the Board of Directors, the Managing Agents shall have the Management of the whole affairs of the Company. The Managing Agents have a right of appointing not more than two Directors where the total number of Directors of the Company exceeds five and one Director, where the total number does not exceed five. Such appointees will be known as Ex-Officio Directors.

VARIATION OF RIGHTS

The rights attached to any class of shares may be varied by complying with provisions of Sections 106 and 107 of the Companies Act, 1956.

INSPECTION

Copies of Memorandum and Articles of Association of the Company, Audited Balance Sheet and Profit and Loss Account for the last three financial years and the Auditors' Report referred to hereinabove, the original consent order of the Controller of Capital Issues, Licence issued by the Government of India for establishment of new industrial undertaking and copies of other contracts, agreements and documents mentioned in the prospectus can be inspected at any time during the usual office hours of the Company at the Registered Office of the Company for a period of 14 days from the date of publication of the PROSPECTUS or until the Subscription List closes whichever is earlier.

APPLICATION AND ALLOTMENT

Applications for Equity and Preference shares must be for a minimum of 5 shares.

All applications must be made on the forms accompanying the Prospectus which can be had from the Registered Office of the Company, the Company's Underwriters, Brokers and Bankers. In respect of Bankers, arrangements have been made with the following offices for receiving applications and remittances.

State Bank of India, Rajapalayam, Madras and Bombay; Indian Bank Ltd., Madras, all their Branches in Madras State, Bombay, Calcutta and New Delhi; Indian Overseas Bank Ltd., Madras, all their Branches in Madras State, Bombay, Calcutta and New Delhi; Central Bank of India Ltd., Rajapalayam, Madras and Bombay and Rajapalayam Commercial Bank Private Ltd., Rajapalayam.

The form of application accompanied by the necessary remittance of Rs. 50/- per Equity or Preference share applied for, should be delivered to the Registered Office of the Company, Company's Underwriters, Brokers and Bankers mentioned in the Prospectus on or before the date of closing of the subscription list.

Cheques or drafts drawn on banks at places other than those mentioned above must include bank charges at 1/8% with a minimum of 75 nP. Cheques or drafts should be made payable to 'Madras Cements Limited' and should be crossed. A separate cheque or draft should accompany each application.

Associated Cement Companies, Limited

Continuous Rising Costs In Production

Uneconomic Retention Price

Unsympathetic Attitude By Government

The Chairman Mr Dharamsey M. Khatau, on inflation.

Speaking at the 24th Annual General Meeting of the Associated Cement Companies Limited held in Bombay on Friday, 20th January, 1961, the Chairman, Shri Dharamsey M. Khatau said:

"After the steady and continuous deterioration in profits over the preceding four years, there has at last occurred some slight improvement in gross profits and net profits. Encouraged by this and by the prospect, or at least the hope, that the Tariff Commission now examining our current and future costs will recommend a fair price and that the benefits accruing hereafter from the increase in installed capacity will not be wholly neutralised by further increases in costs, your Directors have decided to recommend a Dividend at Rs. 12 per share (subject to deduction of tax). This has been done in an endeavour to reach what we consider to be the minimum rate of dividend to which the shareholders are entitled. Your Directors realise that this is by no means yet a fair return on shareholders' capital having regard particularly to the fact that the shareholders have also contributed a very substantial amount of further capital by way of Premium on Shares paid in cash. But it is not possible to go any further in that direction just at present because even the modest dividend now recommended as well as the rate at which it is proposed to pay Bonus to our employees this year, have necessitated the heavy withdrawal of Rs. 84.50 lakhs from General Reserve.

PRODUCTION AND COSTS

"Despite the slight improvement in profits the results of last year's working have been disappointing. In keeping with the Second Plan, the installed capacity of your Company's factories in India rose from 34.42 lakh tons to 37.30 lakh tons, but despatches improved only from 31.47 lakh tons last year to 33.68 lakh tons. This was not due to any lack of demand for cement. On the contrary, the demand improved strongly since the beginning of 1960. But the shortage of railway wagons, especially since the end of May 1960, prevented us from taking full advantage of the improved demand. Moreover, your Company along with many other industrial concerns was adversely affected by the acute shortage of transport for coal, with the result that a num-

ber of our Works were obliged to curtail production for want of coal supplies towards the end of the year under review. The transport situation continues to be grave, though the authorities concerned are doing all they can to ensure for our cement plants at least their minimum requirements of coal and adequate supply of wagons for despatching cement. We are also endeavouring to increase despatches by road transport.

"Apart from these, the increase in gross earnings has been largely offset by further increases in the cost of various materials, enhanced railway freight, a further rise in the cost of coal and power, higher incidence of labour costs etc. The incidence of depreciation was also higher on account of the high capital cost of expansion and rehabilitation projects.

"The implementation of the recommendations of the Cement Wage Board would have increased the labour costs still further but for the Government's acceptance of the Wage Board's finding that the cement industry was incapable of bearing this additional burden, and that consequently there was need to neutralise it by an appropriate increase in the retention price. Unfortunately, in the process of computing this higher labour cost per ton of cement, the installed 'rated' capacity has been taken as the base instead of the actual production which was considerably lower.

"The major increases in costs which have been responsible for the progressive reduction of profits have been due to factors entirely beyond the control of the Company. They have in fact been the direct consequence of Government's own fiscal, monetary, labour and welfare policies in an attempt, on the one hand, to implement the Second Five-Year Plan which many of us regarded as extravagant and on the other, to move nearer to the goal of a socialistic pattern of society which at this juncture, most of us consider impracticable."

TARIFF COMMISSION

"In view of continually rising costs", the Chairman continued,

"your Company was constrained to approach the Government repeatedly since 1959 for some enhancement of the retention price. It was pointed out that the continued decline in the earning capacity of the Company, despite the substantially higher production and increased capital employed, which is amply borne out by our published accounts since 1956 was the direct outcome of increasing costs and the uneconomic retention price. The Government was well aware that your Company has always co-operated in the plans and policies of Government by readily assuming responsibility for its share in the expansion of the country's cement output, and by carrying out expansions and technical improvements with a view to keeping down production costs. Your Company has also participated in establishing a major Heavy Engineering project in the country in collaboration with two leading British Concerns, involving very considerable investment of resources in men and money. In view of all this, one cannot but deprecate the irresponsible attitude of Government in deliberately ignoring the difficulties and needs of this basic controlled industry, and in refusing to re-fix the retention price at a level which would yield a reasonable margin of profit, and also leave something over for ploughing back into the business. Even more reprehensible was the Government's failure to implement the last Tariff Commission's recommendations concerning the retrospective operation of the enhanced retention price fixed in 1958 and the need to alter that price from time to time with every change in the cost of coal.

"In these circumstances, the decision of the Government to refer the whole question once again to the Tariff Commission for a fresh investigation is welcome, though the decision was taken after nearly two years of inaction. In effect, this means that the Cement Industry will have to continue to suffer, without any redress, not only the entire rise in costs which has already occurred since January 1958, but also the further rise which will undoubtedly occur until a new retention price becomes operative. "Meanwhile, almost exactly a month ago, even before the Tariff Commission could make a start

with its formidable task, came an extraordinary edict from Government. They decided, by a stroke of the pen, to compel the industry to use second hand bags for packing cement; and this at a price so low, conceived as an average price for packing in New Bags, and Used Bags, that it makes the whole scheme both impossible of performance and grossly expropriatory.

"I have often wondered,—lately with some anxiety,—what could be the reasons for singling out the Cement Industry for such unsympathetic, if not indeed harsh, treatment. Can it be that, even after all these years, there is as yet no understanding in Government circles of the real needs, or the elementary "economics" of this major, basic, capital-intensive industry? Do they not want a Cement Industry that is buoyant and can grow with freedom and vigour to a point when shortage of cement will be a thing of the past? Or is it, quite simply, that State Trading in cement, though initially highly lucrative, has lately become such an unprofitable adventure, that a desperate attempt is now being made to minimise the liability by passing back the losses in State Trading to the producers? I suspect that this last point is nearest the mark, but whatever may be the true answer, I feel bound to say, with all the emphasis at my command and with a full sense of responsibility, that the recent policies of Government affecting this major industry are fraught with grave consequences to its future and to the early satisfaction of the country's urgent need for cement. I must also add that holding the price line is impossible, with planned inflation on the one hand, and with so many variable factors (of Government's own making) tending towards rising costs, on the other. In such circumstances a rise in the price of cement is an unavoidable necessity if a further increase in cement production is not to be throttled.

"It is with this background that we propose to urge before the Tariff Commission that the 'fair return' on the capital employed in the Cement Industry should be conceived as a 'fair net distributable return' after meeting all items of cost. In particular we shall urge that there can be no justification—legal or equitable—for excluding

from the over-all 'cost' of cement either such items of direct cost as the full charge for packing, whether in New or Used Bags, and the commission payable to stockists, or such large and specific items of overhead costs as Bonus and accruing Gratuity to employees, the remuneration payable to Managing Agents, the statutory Development Rebate Reserve and Company Taxation. To admit, on the one hand, that the industry is entitled to a fair return on capital employed but to insist, at the same time, that from this return itself the industry should in effect meet the cost of the items to which I have just referred is a contradiction in terms. It certainly results in our being left with a net distributable return which can hardly be described as fair."

EXPANSION AND REHABILITATION

The Chairman reported that the Company's various expansion and rehabilitation projects have made satisfactory progress. Giving details, Shri Khatau mentioned the extensions to the Shahabad Works which raised its capacity from 4.00 lakh tons to 5.65 lakh tons per annum; the modernisation and extension of the Kymore Works as a result of which the capacity of the factory has been raised from 3.60 to 5.73 lakh tons per annum; the installation of the floatation plant for the beneficiation of low-grade limestone and the slag-cement plant at Chaibasa; and the slag-granulation plant at Jamshedpur. The Chairman expressed his fears that it may not be possible to commission the recently completed second dry-process kiln at Mancharial immediately due to the inability of the Andhra Government to supply the full requirements of additional power.

NEW CEMENT WORKS AT DURG

Shri Khatau also announced that the Company had decided to start immediately on the building of a Cement Works at Durg in Madhya Pradesh which was held in abeyance due to the glut in the cement market and the shortage of foreign exchange etc. The Government of India has now agreed to give high priority to this project so far as foreign exchange is concerned. This new Cement Works will have an initial capacity of 1.65 lakh tons of cement per annum, and in due course, will produce slag-cement using blast-furnace slag from the Bhilai Steel Plant.

FIREBRICKS AND WHITE CEMENT

The capacity of the refractories factory at Katni was being raised from 17,640 tons to 30,000 tons per annum in view of the adequate demand for this product. The Company also marketed nearly 8,000 metric tonnes of Silivcrete white cement produced at the old Porbandar Works. Since demand continued to be fairly steady despite competition from imported and local white cement, and was likely

to increase in the coming years, the Company has planned to install a new 25,000 ton capacity white cement plant at Kymore.

COLLIERIES

Shri Khatau also said that the Company's Nowrozabad and Kotma Collieries met a good portion of coal requirements at some of the cement works and the modern coal-washing plant at Nowrozabad to improve the quality of the coal produced there, is supplying enriched washed coal to the Kymore Cement Works replacing the more expensive Bengal coal to a large extent.

MACHINERY MANUFACTURE

Continuing, the Chairman stated that in line with the Government policy of encouraging the setting up of a heavy-machinery industry in India, the Company has decided to establish a well-equipped engineering works at Shahabad for the manufacture of machinery required for cement, paper and pulp, chemical industries, etc. Meanwhile, the Company continues to manufacture cement machinery for its own requirements at the existing Central Workshops at Shahabad.

ACC-VICKERS-BABCOCK LTD.

The work on the construction of the Heavy Engineering Works at Durgapur in collaboration with Messrs. Vickers Ltd. and Messrs. Babcock & Wilcox Ltd. is proceeding according to schedule. The new Company is expected to go into production by the end of 1961. ACC-Vickers-Babcock Ltd. have up to now issued 3,00,000 shares of Rs. 100 each and the ACC's share, which is 49.8% of the shares so issued, amounts to Rs. 1,49,40,000/.

PAKISTAN

The Chairman reported that the Company's factories in Pakistan continued to function satisfactorily. Remittance to India of profits earned in Pakistan continued to be banned, but the Company was allowed to remit to India the due proportion of the management and administrative charges incurred at the Head Office. The demand for cement in Pakistan was steadily growing and naturally, the Government of Pakistan were eager to meet this growing demand by increased production within the country. "They, therefore, approached us to expand the capacity of our two plants in Pakistan; but we expressed our inability to do this for want of substantial foreign exchange resources required for the purpose."

The Chairman continued: "As the need for expanding the cement production in Pakistan was undoubted, we have been in negotiation with certain foreign interests—at first British, and now American—to transfer our factories to them on terms mutually agreeable and subject, before completion, to the approval of the Government of Pakistan and the Government of India. The prerequisites of any such transaction must be that we

get a price which is fair, having due regard to all the circumstances, and that the entire sale proceeds together with our cash balances should be received by us in Indian Rupees or in convertible foreign exchange. From the point of view of the Government of Pakistan, such an arrangement would be of great value because it would ensure considerable expansion of production capacity without any burden on the foreign exchange resources of the country either for the acquisition of our factories, or for their further expansion. To the Government of India also the transaction should be welcome as it would enable the release of our resources in Pakistan for investment in further expansion in India. Negotiations are proceeding satisfactorily and before they are finalised the shareholders will be approached for their approval."

BONUS SHARES, MANAGING AGENCY, ETC.

The Chairman stated that the Directors "have been reluctantly compelled to drop the idea of issuing Bonus Shares until such time as Government may deem fit to withdraw this entirely unjust imposition" (of a 30 per cent tax) "the incidence of which your Company cannot bear". Shri Khatau hoped that the Government (in the Company Law Administration Department) will sanction the extension of the duration of the Managing Agency Agreement to ten years and to enhance the terms as to remuneration above the "standard scale."

LABOUR-MANAGEMENT RELATIONS

Commenting on labour-management relations, Shri Khatau observed: "Among the outstanding events of the year under review was the publication of the Report of the Central Wage Board for the Cement Industry."

He said that its main recommendations had been approved by Government and had been voluntarily accepted by us. The Wage Board must be complimented on the competence with which it has worked out a clear, need-based, fair wage pattern for this Industry.

Continuing, Shri Khatau said: "For this very reason your Company, without waiting either for the actual realisation of the revised retention price or the assessment of proper work-loads, went ahead with the implementation of the Wage Board's recommendations at most of our Works and has already paid the new fair wage in consultation with the Unions at those Works. I am confident that, very soon, with the co-operation of the Unions concerned, we shall be in a position to implement the new wage scales at the remaining Works also."

"There are, however, certain aspects of this question to which, I feel, I must draw the pointed attention of the authorities. The Wage Board has for all practical purposes ignored the importance of

fair work-loads as an essential element in any fair wage fixation. This was contrary to the positive stipulation of the Fair Wages Committee, the principles of which the Central Government desired the Wage Board to follow by making a specific provision to that effect in the Terms of Reference.

"I imagine that, by now, we have all come to realise that the productivity of our workers is very much lower than in other industrialised countries. For reasons beyond our control we have to engage a much larger manpower force than is the case elsewhere, even in plants of equal capacity, with identical equipment and the same degree of mechanisation. Raising the wages of workers in this context, unaccompanied by a corresponding assessment of fair work-loads or a rise in productivity, becomes a dubious and some-what self-defeating device because, in our developing economy, its inflationary result detracts from the workers' real income on which alone their standard of living can depend."

"The relegation by Government of work-load studies to a stage of secondary importance is all the more difficult to understand when the Planning Commission as well as the Government have repeatedly made it clear that higher productivity is the only sure basis of prosperity and well-being of the workers."

"However, it is at least some gain that the need for undertaking work-load studies has been accepted in principle. And although we did not succeed in persuading the Central Government to entrust the task of scientific work-load assessment to expert independent agencies having specialised knowledge of this particular type of work, Government has asked the Chief Adviser (Factories) to initiate pilot projects for intensive studies in two or three units in this Industry. We are giving the fullest assistance and co-operation to this team to facilitate and expedite their work."

APPRECIATION

Despite the low level of profits, the Chairman said, the Directors have decided to maintain the rate of bonus to all the Company's employees at the same level as last year, and the large majority of the employees in the lower scales of pay would receive substantially higher amounts of bonus this year in view of the increase in their basic wages due to the implementation of the recommendations of the Central Wage Board for the Cement Industry.

Shri Khatau concluded with an expression of warm appreciation of the sustained hard work and whole-hearted co-operation of all the Company's employees.

NOTE: This does not purport to be a report of the proceedings of the annual general meeting which will be sent separately to shareholders on request.

STOCK EXCHANGES

Selective Buying: Indian Iron in the Forefront

Watch-Dog Writes:

TRADING in stock markets has reflected a mixed sentiment this week. While the speculative and a few selected shares have firmed up further from last week's levels due to renewed support, others have shown little change. There is, however, a general disposition to restrict commitments till the Central Budget is out of the way.

Reopening after the holidays, the Calcutta Stock Exchange displayed a steady trend with Indian Irons in the forefront.

Prices on the Bombay Stock Exchange showed a mixed trend.

Steadier conditions were noticed on the Madras Stock Exchange although most of the business was confined to the Planting shares.

★

CALCUTTA

Calcutta, Friday Evening.

SENTIMENT on the local stock exchange was more cheerful than in last week and, under the lead of Indian Irons, selected equities forged ahead. Some of the rises in prices were, however, limited by obvious readiness to take profits at bulges.

Apart from encouraging Bombay advices, the main contributory factor to the sustained buoyancy of the market was the hope held in certain circles that Government might make the official announcement on the increase in the steel retention prices before the week-end. There was, however, cautious buying as fears were entertained in some circles that the Central Budget could not fail to bring in new levies in view of the increases in the total outlay. Also, support from investors was conspicuous by its absence and the little money that was available with them seemed to be reserved for fresh new issues.

The prevailing tight money conditions were reflected in the Giltedged section where business remained small. Although short-dated loans continued to be in demand, the improvement in prices was negligible. 3 per cent 1986 Conversion Loan changed hands at Rs 74.35 to Rs 74.45, to finish the week at Rs 74.38.

Bank shares attracted increased attention in view of reports of persistently good working results which have been coming in and the rise in dividends that has been announced. Punjab National met with business up to Rs 19.69 from Rs 19.62 with United Commercial remaining very firm at Rs 85.

Jute shares were stagnant. Sellers rather than buyers were in evidence following the crisis in the industry developing more seriously as a result of the steady and sharp rise in fibre prices. The only exception to the general trend was Howrah which were pushed up to Rs 22.25 from Rs 21.25 due to speculative buying. Bally were maintained at Rs 186 with

Birla moving narrowly between Rs 28.50 and Rs 28.87; National between Rs 21 and Rs 21.37 and New Central between Rs 18.81 and Rs 18.87. Megna closed better at Rs 11.06 after touching a low of Rs 10.94.

Coal shares displayed remarkable steadiness on the belief that sooner or later Government will have to provide the necessary facilities to the collieries in the private sector to augment production to achieve the target output for the Third Five-Year Plan period. Burrakur changed hands at Rs 18.62 to Rs 18.87; Western Bengal at Rs 7.56 to Rs 7.62 and Bharat at Rs 4.50 to Rs 4.62. Karanpura Collieries were quoted around Rs 200.

The Tea section failed to respond to the general upturn in values. Professional operators as well as investors could not but be shy until they could properly assess the result of working in respect of the year just ended. Brooke Bond were done at Rs 15.50 to Rs 15.62; Dufflaghur at Rs 33.87 to Rs 34.25; Grob at Rs 11.37 to Rs 11.44; Hoograuli at Rs 23.50 to Rs 23.62 and Jutilbari at Rs 23.44 to Rs 23.50.

Sugar shares were rather sluggish on the view that there might be excessive supplies in the current season. Raza/Buland eased off to Rs 13.25 from Rs 13.37 and Darbhanga to Rs 15.25 from Rs 17.37. Balrampore were quoted at Rs 2.84.

Textile shares came in for selective enquiry on the assumption that profits for the last year would be maintained, if not increased. Dunbar had buyers up to Rs 23.81 from Rs 23.62; Cawnpore up to Rs 6.06 from Rs 5.94 and Jayshree up to Rs 14.81 from Rs 14.50. Kesoram remained firm at Rs 28.56 with J. K. Rayon a shade easier at Rs 14.94 against Rs 15.50.

The most outstanding feature of the week's trading was smart recovery in Indian Irons, reflecting anticipation of an early announcement with regard to the steel retention price. Against the previous week-end closing of Rs 24.45, Indian Irons opened lower at Rs 24.35; but improved steadily to Rs 24.76 on the emergence of bull support, to finish the week at Rs 24.56. In sympathy, TEXMACO improved to Rs 23.20 from a low of Rs 22.95; Jessop to Rs 19.44 from Rs 19 and G. K. Williams to Rs 37.81 from Rs 37.62. Kumardhubi were nearly maintained at Rs 6.12.

Thanks to the favourable corporate rumours, the Miscellaneous section provided several firm features, as will be clear from the following price trends of a few selected shares:

	Week's Low	Week's High	Week's Closing
Orient Paper ...	40.60	41.00	40.60
Sirpur ...	16.37	16.50	16.37

MADRAS

Steady conditions prevailed in the Stock Exchange. Buying was in evidence in all sections, industries particularly being in keen demand. Also investment inquiries in Government loans resulted in some transactions. Banks' shares were sought: Indian Bank, Indian Overseas and Punjab National all had buyers. Sugars showed an improved tone. Among Coffees, Consolidated came in for good support. Cochin Malabar, Midland and Periakaramalai were transacted at higher levels. Textiles were steady. In the Industries section Aluminium Industries, Ashok Leyland and Mysore Paper came for backing at higher levels.

Government Securities: Madras 4 per cent 1964 Loan was quoted at Rs 99.15. Transactions took place in Madras 4 per cent 1969 at Rs 97.15. Madras 4 per cent 1968 loan was higher today by ten nP at Rs 97.55. Andhra 44 per cent 1969 also was transacted, though one nP lower at Rs 97.65. Other scrip remained at listed prices.

Banks: Andhra was quoted at par for its Rs 100 paid shares. Indian Bank came in for inquiry at Rs 169.00 for the Rs 100 paid shares, and Rs 80 paid-up shares were at Rs 143.00. Indian Overseas Bank, with its 14 per cent dividend, was quoted at Rs 183.00. Punjab National Bank was quoted at Rs 19.25.

Electrics: South Madras declined by 10 nP at Rs 9.70. Kumbakonam remained at Rs 9.90. Negapatnam was unchanged at Rs 8.75. Vellore and West Coast were quoted at Rs 12.90 and Rs 13.10 respectively.

Sugars & Breweries: Cauvery was sold at Rs 138.00, a rupee higher. Deccan, with 18½ per cent interim declined slightly to Rs 14.80. EID improved to Rs 40.00. India Sugar was quoted at Rs 12.85. KCP was unchanged at Rs 27.00. Mysore and Kirlampudi were quoted at Rs 59.75 and Rs 77.50 respectively. United Breweries went up to Rs 87.00.

Plantings: Blue Mountain were bought at Rs 3.93. Chembra remained at Rs 5.50. Cochin Maibara, with an interim of 9%, was sold at Rs 7.30. Coffee Lands did not change at Rs 18.30, but Consolidated Coffee improved to Rs 22.20. Conoor Tea was unaltered at Rs 27.25. Arthala was quoted at Rs 4.00. Kadur gained thirteen nP at Rs 2.85. Emerald Valley lost 10 nP at Rs 5.55. Kil Kotagiri changed hands at the higher rate of Rs 5.27. Midland gained three nP at Rs 11.15. Mysore Coffee was available at Rs 5.90. Mysore Plantation was priced at Rs 5.40. Neelamalai was quoted at Rs 4.90. Nilgiri was available at Rs 7.90. Ouchterlony did not change at Rs 4.55. Parkside was transacted ten nP higher at Rs 28.00. Periakaramalai also went up by 7 nP to Rs 3.50. TR & T improved to Rs 9.35. Tropical was quoted at Rs 18.60

and United Nilgiri was priced at Rs 23.25.

Textiles: Though this counter was steady, business transacted was meagre. Buckingham declined by a point to Rs 196.00. Bangalore Woollen remained at Rs 196.00. Coimbatore Spinning moved up to Rs 44.00. Kothari gained fifteen nP at Rs 12.00. Loyal was higher at Rs 37.50. Madura was unchanged at Rs 35.75, and Lakshmi was also unaltered at Rs 151.00. Rajalakshmi gained a rupee at Rs 74.00. South India Viscose improved by two rupees to Rs 153.50. Travancore Rayon was unaltered at Rs 33.10. Venkatesa was at Rs 191.00. Vijayeswari was quoted at Rs 113.50 and Virudhunagar was available at Rs 49.50.

Miscellaneous: Aluminium Industries gained Rs 2.10 at Rs 24.10. Andhra Cement also improved to Rs 10.12. Ashok Leyland was better at Rs 8.65. Central Scientific was quoted at Rs 6.89. Enfield was at Rs 15.25. India Cement was bought at Rs 5.94. Kirloskar Electric was at Rs 13.10. Mettur Chemicals gained 5 nP at Rs 12.90. Mysore Paper was transacted at Rs 24.50. Orissa Cement was lower at Rs 13.80. Seshasayee Papers was at Rs 4.40. Spencer remained unaltered at Rs 22.50. tific was quoted at Rs 6.89. Enfield Standard Motors was listed at Rs 17.00. Textool remained at Rs 173.00. Tube Investments remained at Rs 291.00. United India Fire was quoted at Rs 6.90 and Western India Plywoods at Rs 239.00.

★

INVESTMENT NOTES

The Premier Automobiles Limited has submitted to the Government of India an ambitious scheme for expansion, costing Rs 25 to Rs 30 crores, with a view to stepping up the production of cars and trucks. The expansion programme is to be completed in about three years. The foreign exchange component of the expansion cost is expected to be about 75 per cent of the total outlay. The US Government has already approved a \$7.2 million loan for the company, to be channelized through the Development Loan Fund. The authorised capital is to be raised from Rs 10 crores to Rs 25 crores of which Rs 15 crores will be in equities and the balance in unclassified shares.

Indian Steel Rolling Mills Limited has a programme of expansion for manufacturing wires and wire products. It is proposed to double the capacity for production to 7,200 tons per annum. The necessary licence has been obtained from the Central Government. This part of the expansion programme is estimated to cost about Rs 6 lakhs. It is also proposed to repay on maturity the Debenture loan of Rs 5 crores taken from TISCO. Additional capital is to be raised for Rs 25 lakhs in equity shares.

Medium Section Mill—Bloom reheating furnace and Mill run-in table

Construction and operation proceed side by side at Durgapur Steelworks

ISCON's Medium Section and Merchant Mills—the final unit of the Rolling Mills Plant—are now well on the way towards completion. Three Mills were commissioned earlier last year and are in operation. The two new Mills will make a considerable addition to Durgapur's productive range.

you have just opened A METAL BOX OPEN TOP CAN!

Simple though it looks, the 'Open Top' Can in which processed fruits, vegetables, fish, milk or butter comes to you is a container scientifically designed to protect and preserve perishables over long periods. The Open Top Can allows processing of the contents after they are hermetically sealed, thereby killing all disease-carrying and other germs. Wherever necessary, Open Top Cans have an inner coating of a chemically inert lacquer that effectively prevents interaction with the metal of the container itself. Thus, Open Top Cans prolong the life of perishable products, allow round-the-year selling, encourage wide distribution and thus help to stabilise prices.

Metal Box, leaders in the packaging field, have been supplying Open Top Cans in India for nearly a quarter of a century. This is only one example of their wide range of scientifically designed containers that deliver consumer goods to you.

METAL BOX

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack over Rs. 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products • GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc. • COMPOSITE CONTAINERS of cardboard & metal • COLLAPSIBLE AND RIGID TUBES for toothpaste, ointments, adhesives and pills • CROWN CORKS for carbonated drinks • R. S. PILFER-PROOF AND OTHER CLOSURES for bottled products • COMPONENTS for radio, automobile and electrical industries • PUBLICITY MATERIAL including advertising tablets and calendars • PLASTIC PRODUCTS including Diethylene bags, foil laminate pockets and injection mouldings • HARDWARE including trays and table mats • MACHINERY Can Closing and Reforming and Bottle Sealing Equipment

Banking Prospects

THE high, and indeed record, profitability of the banking system in respect of performance in 1960 has been proved beyond doubt; and, in the sense that banking resources are usefully employed to the full, it seems reasonable to infer that, from the point of view of earning potential, banks have now been greatly strengthened. In fact, the magnitude of profits in 1960 has enabled large-scale transfers to published reserves, and it may not be incorrect to assume that inner reserves have also been buttressed. It would appear, consequently, that prospects are generally rosy.

But it has to be borne in mind that the 1960 profits have the characteristics of a windfall, though it is true that the same money market attributes bid fair to be experienced during the current year as well. One reason is that the return of seasonal funds, in May/October 1960, got obscured by the increased demand for funds occasioned by a steady and substantial rise in industrial production. Meantime, Deposits of banks were by and large stagnant. With the inter-bank agreement on Deposit rates in effective force, the while there was an automatic rein kept on the expenditure of banks, the sustainedly high level of bank Advances resulted in a considerable rise in banks' profits. Furthermore, toward the end of the notional 1960 slack season, the Reserve Bank issued a directive whereunder banks' lending rates all along the line, were raised by 0.5 per cent. This further boosted bank earnings. At the time that such directive was issued, it formed part of a package deal which, it was thought, was intended primarily to arrest the inflationary pressure on the economy. We had, however, immediately interpreted the package deal in the following terms in Indian Finance of 24 September 1960:

"... most important of all, the measures taken in their entirety suggest that their real intention is to strengthen the banking system... Analogous to Regulation Q, a power possessed by the Federal Reserve Board in America, we had been suggesting that the Reserve Bank should prescribe both a floor for Advance rates and a ceiling for Deposit rates... the Palai Central closed down, and its failure must have made the Reserve Bank keenly aware of the need for strengthening the banks. Recently, it may be recalled, legislation was passed for keeping banks' inner reserves outside of the grasp of industrial tribunals. The present move, by ensuring a minimum earning margin for the banks, may be said to be intended to strengthen banking reserves."

In the event, it is heartening to note that transfers to published reserves have by no means been small; the United Commercial Bank is to be credited with the commendable feat of transferring fully Rs 30 lakhs to reserve from the 1960 profits. It is, also, not erroneous conjecture that banks may have found it possible besides to have added to inner reserves. But dividends, too, have been raised. The reason, of course, lies in the fact that 'it has seemed just and proper to restore to the shareholder the loss in effective dividend arising from the changed structure of company taxation, from two years ago. For, in relation

to Deposit liabilities, not only the Reserves but the paid-up capital of the banking system has been unhappily small. There is thus need for banks to attract new capital, and the obvious way of doing it is to enhance bank shares in the eyes of the investor; and hence the dividend hikes.

It is likely that the rise in industrial production will be maintained, for, perhaps, as many years in the future as we care to look forward; and the only limiting factor may be an unavailability of foreign exchange resources for import of raw materials. So, the earnings side of the profit and loss account of banks can safely be relied upon steadily to go up. However, it is by no means certain that banks will be able to secure the new resources which they can use in an extension of Advances. Undoubtedly, one of the reasons why bank Deposits were stagnant in 1960 lay in the fact that, with the closure of the Palai Central and the runs on two large banks, public confidence in banks had been disrupted. Therefore, we consider it imperative that a scheme for the insurance of bank Deposits be introduced since, otherwise, there is real danger that banks' capacity for financing industrial growth will be limited by failure of new Deposits to materialise. Secondly, the recent improved collections under small savings suggest that, conceivably, the higher interest available thereon has offered stern competition to the banks. We are consequently of the view, secondly, that banking interest rates stand in need of realignment. In both these matters, expeditious action by the Reserve Bank, on the one hand, and the Indian Banks Association (and the Exchange banks), on the other, is clearly urgently necessary.

We need have no fear that, during the 1960-61 busy season, productive endeavour will get disturbed for want of banking finance. It is the acknowledged objective of the Reserve Bank that, while money is to be made hard to get for speculative with-holding of stocks, etc., a smooth flow of accommodation is accorded to productive enterprises. It follows that, if banks find difficulty in financing the busy season requirements, they will be able to obtain as much as they need from the Reserve Bank. Presumably, the central banking credit will be against usance bills; certainly, where applicable, the loans will attract the penal interest rate of 6 per cent. But then, the Reserve Bank, by its directive of September 1960, will have added Rs 6 crores to banks' earnings. So, why should the banks now balk at paying a penal rate of interest on something like 10 per cent of the total of their high-earning assets?

In the discharge of its duties as watchdog over the economy, much sterner though the responsibilities have become with industrial growth and planned progress, the Reserve Bank has been both alert and quick to act. It is in the fashioning of the money market that its most important task will lie; for, whether from the point of view of Government borrowings or in respect of banking finance for industrial production, the money market is central to the Indian economy. The Reserve Bank deserves every help in carrying out that onerous responsibility.

External Assistance

THE fourth annual report on External Assistance published by the Finance Ministry does a great deal to dispel the factual and figurative fog that surrounds the subject. Figures published in particular contexts from time to time—and some of them repetitively by the several agencies involved—give an impression of exceptional luck or exceptional providence depending upon the two well-defined opposing attitudes to foreign aid. Facts, soberly recorded here, have a rather different story from both to tell. As will be evident from Table III, total assistance authorised from 16 agencies upto 31 December 1960 is nearly Rs 2728 crores, of which a little over Rs 636 crores is in the form of outright grant. This total does not include certain forms of assistance listed at the foot of the table. This is certainly impressive evidence of friendly interest in Indian development. It is evident therefrom that assistance for the second plan was far greater than what the planners had dared hope at first. Against this is to be set the fact that the estimated total foreign assistance for the third plan is of the order of Rs 3200 crores, which is much more than what we have received over a nine-year period. Whether we shall succeed in getting it is one of the crucial uncertainties of the third plan. But the Finance Minister has been repeatedly emphasising that expectations of assistance on this scale is not too naively sanguine, though he is, as reported by the Economist, in its recent survey of the Indian scene, ready enough to cut his coat according to the cloth.

Not surprisingly, India's largest benefactor has been the U.S. US assistance on a massive scale began in 1951 with the passing of the India Emergency Food Act under which a loan of \$190 million was granted to import two million tons of wheat. This has been followed by other aid programmes administered through various Government agencies. The break up of the total aid is as follows:—

	(In Rs crores)	
	Loan	Grant
Wheat Loan ..	90.31	
T.C.A. Programme ..	71.43	137.41
P.L. 480 ..	510.10	368.27
Development Loan Fund ..	199.71	
U.S. Banks Credit ..	5.90	
Exim Bank ..	97.19	
Total ..	974.64	505.68

Under the Technical Cooperation Agreement (TCA) the US has been providing assistance for a broad range of projects closely coordinated with the Five Year Plans. Up to end of October 1960, over a hundred such agreements had been signed. The economic and technical assistance is provided in the form of demonstration and capital equipment, services of US technicians, facilities for training Indians abroad, as well as allocations of essential commodities, like food grains, cotton, steel, fertilisers and D.D.T. The loans under the TCA are repaid in rupees in half yearly instalments ranging from 73 to 80 and carry interest at 4 per cent.

The DLF loans amounting to a total of Rs 199.71 crores are repayable in rupees and cover twenty agreements entered into at different dates and providing for varying periods for repayment and different rates of interest ranging from 3½ to 5½ per cent. The Exim Bank credit, repayable in dollars, bears an interest of 5½ per cent and is for a term of 15 years. The entire credit, which is available for procurement of capital equipment etc., has been allocated to various development programmes in the public and private sectors. These include public sector projects for irrigation, power, iron and coal mines, roads and bridges, Neyveli and Dandakaranya and, in the private sector, textiles, engineering, chemical, automobile and aluminium industries, as well as manganese and iron ore mines.

The second fact that strikes us on the face of it, is the comparatively poor utilisation of authorised assistance. Of the total assistance authorised, loans and grants unutilised as on 31 March 1960 is about Rs 927 crores. Further authorisations upto end of 2 December 1960 is of the order of Rs 914 crores. This includes authorisation specifically earmarked for the third plan to the tune of Rs 369.57 crores. This means the unspent amount, not reckoning what has been spent during the current financial year, is of the order of Rs 1500 crores. Some allowance will have to be made for the fact that some of these authorisations have yet to be processed, the relative agreements having been concluded only after 1 April 1960. But even so, it is seen that out of the US authorisation upto the end of the financial year 1959-60 of Rs 674 crores, Rs 473 crores remained unutilised. The bulk of such unutilised aid is out of PL 480 authorisation (Rs 314 crores). The reasons for this state of affairs are mainly bureaucratic chocking of free flow, delays involved

TABLE I

Brief particulars of the Public Law 480 agreements signed so far, the value of commodities covered by the agreements and the allocation of rupee proceeds for various purposes are given below:

Agreement	Commodities	Allocation of Rupee Proceeds (\$ million)			
		Value in dollars millions	Loans to Govt. of India	Grants to Govt. of India	Retained for US uses
First PL-480 agreement dated 29-8-56 as subsequently amended.	Wheat, Rice, Cotton Tobacco and Dairy Products	354.556	226.236	54.000	74.300
Supplementary agreement dated 23-6-58.	Wheat, Yellow, Corn and Sorghum	55.277	33.377	...	7.700
Second PL-480 agreement dated 29-9-59.	Wheat, Yellow Corn	259.800	129.700	37.500	27.600
Third PL-480 agreement dated 13-11-59 as amended.	Wheat, Rice, Cotton, Tobacco and Corn	297.870	119.110	119.110	44.740
Fourth PL-480 agreement dated 4-5-60 as amended.	Wheat, Rice, Milo, Corn, Cotton, Tobacco and Soyabean Oil	1,334.700	562.765	576.765	142.415
TOTAL		2,302.203	1,071.208	773.375	296.755
or Rs Crores		1,906.287	510.099	368.274	141.312

TABLE II

The following loans have so far been approved by the Export-Import Bank of USA out of the funds earmarked for loans under the Cooley Amendment with the approval of the Government of India:

Applicant	Amount in Rs lakhs
Otis Elevator Co ..	10
Goodyear Tyre and Rubber Co ..	2.25
Mysore Cements Ltd ..	55
Synthetics & Chemicals Ltd ..	3.92
Hindustan Aluminium Corporation Limited ..	1.00
Merck Sharp & Dhome of India (P) Limited ..	50
Ex-Cell-O Corporation ..	20
Seshasayee Brothers ..	2.00
Premier Tyres Ltd ..	30
Lederle Laboratories India (P) Ltd ..	25
Total ..	11.07

Note: The total amount to the credit of the Cooley Amendment is Rs 76.602 crores.

in processing particular projects to which assistance is tied up, and the reluctance to incur the higher cost involved in the compulsion to purchase in the US. Recent tightening up of 'Buy American' requirement will not wholly account for this lack of interest, since US authorities have agreed to exempt from this condition, assistance to which they were committed earlier. From every point of view, therefore, it would be worth while to have a senior official act as trouble shooter and general expediter of individual projects tied up with these loans. Otherwise, a wholly misleading picture of the pace of utilisation and therefore of the need of foreign assistance will be conveyed. There is some suspicion, especially abroad, that there is deliberate over estimate of the foreign exchange content of the plan for much the same reason that prompts overbudgeting all over the world. The comparative sluggishness in utilisation of aid already vouchsafed has done nothing to allay this suspicion.

The report also shows up another aspect of our failure to get the best out of resources made available by foreign aid. Not only is utilisation of funds tardy, but the subsidiary benefits from the use of counterpart funds are not reaped fast enough. As is well known, the counterpart funds arising out of rupee payments by our government to the US in respect of imports under PL 480 are intended to be utilised in one of three ways: a portion of it is lent or given away as grant, again to Government of India for use on approved projects; a second part is earmarked for use by the US Embassy for its expenditure in India and yet another part is under what is called the Cooley amendment to be lent for projects in the private sector. Table I gives the picture of the allocation of the counterpart funds. It will be evident therefrom that out of Rs 1906 crores Rs 510 crores is to be reloaned and Rs 363 crores is to be given away as grant; Rs 141 crores is to be retained for US embassy uses and Rs 76 crores are to be used for assistance to private enterprise in India under the Cooley Amendment. From the figures available in the report it is found that the amounts drawn for these purposes out of accruals that have already taken place is somewhat disappointing considering the quantum available. Out of the accrued counterpart funds, Rs 150.84 crores (Rs 132.33 crores as loan and Rs 18.51 crores as grants) have already been earmarked for agreed projects both under the public and the private sectors. But out of these only Rs 62.49 crores (Rs 60.76 crores as

4 February 1961

loan and Rs 1.73 crores as grants) has been drawn. (Again, as Table II will show, the utilisation under Cooley amendment is only to the extent of Rs 11.07 crores out of a total availability so far of Rs 76 crores.) This is certainly rather a poor showing, again attributable to avoidable delays in processing. As in the case of utilisation, so in the case of drawing of available funds the impression must not get abroad that more is being grabbed than is likely to be used. The problem is essentially administrative and organisational rather than financial.

Part at least of the difficulty in the way of quick processing is the tie-up of foreign assistance with particular projects. Apparently, the requirement has a certain logic based in different ways on the wisdom behind the proverbs about the man who pays the piper and looking the gift horse in the mouth. But while one appreciates concern on the part of our friends to see that we spend the money wisely, it is necessary to remember that this mode of ordering affairs brings with it its own kinds of foolish expenditure. Priorities are no longer ordered strictly on the urgency of our compe-

ting needs, but on what our friends are likely to approve of. The two views of relative urgency may coincide, but often they may not. So long as our friends are satisfied on the essential soundness of our plans, they should let us have sufficient room for manoeuvre. Otherwise the inevitable rigidity in commitments to particular projects is likely to lead to further waste. The necessity for this relative freedom is more urgent now than ever before because the third plan, unlike the second, starts with practically no foreign exchange reserves to fall back upon.

Third Country Currency Assistance from USA.		Allocations upto 31-3-60.				Disbursement upto 31-3-60.							
		Rs. 2.88 crores.				Rs. 1.90 crores.							

This statement excludes:—

(1) Assistance received in the form of suppliers' credit e.g., from Japan, France, Switzerland. (2) Rockefeller Foundation. (3) Gift Shipments from Private Voluntary Agencies in USA. (4) Assistance under Titles II and III of PL-480. (5) Assistance from Netherlands being mostly in the nature of Technical Assistance. (6) Switzerland aid for Logging equipment valued approximately Rs. 1.6 lakhs.

*This includes:—

(1) The amount of Rs. 31.92 crores representing the rupees equivalent of the dollar value of Agricultural Commodities imported under PL-665. Out of this amount a sum of about Rs. 18.99 crores is expected to be received as a part of the three Development Assistance Loans, and the rest is to be utilised by TCM for meeting rupee expenditure on Technicians and Participants, etc. (2) \$20 million loan for Orissa Iron Ore Project. (3) Excludes amounts obligated towards US technicians, participants and miscellaneous.

†This excludes:—Cooley Funds and amounts retained by the US Government. ‡This excludes amount of \$3.9 million granted direct to Ahmedabad Electricity Co., Ltd. @ Amounts specifically earmarked for Third Plan.

Trends in Industrial Employment

THERE has been a steady increase in industrial production in India in recent years. The rise in output generally should have created more opportunities for employment. It will however, be interesting to analyse how far this is the case. Figures are not available for all industries, but the trends in some selected industries for which figures are available from official sources, are traced in this article.

In the mechanical and general engineering group, the total average daily employment rose from 40,831 in 1958 to 43,194 in 1959, an increase of 5.79 per cent. Notable increase took place in steel pipes and tubes (152.77 per cent); wire ropes (76.11 per cent); zip fasteners (34.96 per cent) and typewriters (40.14 per cent). There was a fall in employment in many industries such as belting (14 per cent); expanded metals (21 per cent) and railway wagons (12.74 per cent).

In industrial machinery, the increase in employment was from 21,459 in 1958 to 25,493 in 1959. The details are shown below:

Industry	Average Daily Employment	1958	1959
Industrial Boilers	..	1366	1735
Locomotive Boilers	..	4755	5220
Earth Moving and Road Making Machinery	..	1053	2946
Jute Mill Machinery	..	3229	3684
Mining Machinery	..	3271	4952
Sugar Mill Machinery	..	5590	5667
Tea Processing Machinery	..	830	300
Weighing Machinery	..	365	389

In the automobile and allied industries, the rise in employment was of the order of 20 per cent as shown here:

	1958	1959
Automobiles	..	14,899
Ancillaries	..	17,297
Motor Cycles, Scooters and Three Wheelers	..	1976
	970	1013

The production of automobiles increased sharply from 26,788 in 1958 to 35,468 in the next year. The demand for automobiles has shown a remarkable increase in recent years and this is one important sphere where there will be considerable scope for opportunities for employment.

In the electrical engineering group, there was an increase in employment from 36,736 to 38,957—a rise of 6.05 per cent. The main increase was in storage batteries from 2124 to 2661; in scientific instruments from 4428 to 5086; in radio receivers from 3277 to 3650; and in electric fans from 6565 to 7032. However, there was a fall in employment in power transformers from 3421 to 3089 and in electric motors from 4647 to 4252.

So far as metallurgical industries are concerned, there was a substantial increase in production in 1959 as compared to the preceding year. The production of aluminium went up from 8181 tons to 17,248 tons; antimony from 527 tons to 662 tons; and lead from 3334 tons to 3896 tons. The output of copper, however, declined slightly from 7841 tons to 7642 tons. The rise in production was accompanied by increased employment in aluminium from 3780 to 4540 and in antimony from 115 to 130. In lead, despite a rise in production, employment fell from 360 to 354 and in copper from 969 to 960.

Among mineral industries notable increase in employment took place in cement from 27,761 to 28,568; ceramics from 14,139 to 16,146; glass and glasswares from 28,518 to 31,100 and in refractories from 15,104 to 17,507.

As regards chemical and allied industries, it may be pointed out that 1959 recorded a big increase in production. The index of production for chemicals and chemical products stood at 214.3 in 1959 as compared to 206.2 in 1958, 181.3 in 1957 and 171.1 in 1956 (1951=100). In a number of items, (such as nicotinic acid, electro-plating salts, magnesium carbonate, methylene blue, industrial explosive etc.) production more than doubled. The rise in employment in 22 industries in this group was from 50,261 to 53,686—an increase of 6.81 per cent. The rise was pronounced in respect of dyestuffs (42.86 per cent), liver extracts (28.43 per cent); activated bleaching earth (24.37 per cent) and zinc oxide including red lead, (22.63 per cent).

Among other industries, mention may be made of paper and paper board where the increase in employment was of the order of 11.07 per cent; Viscose staple fibre 24.38 per cent; cork industry 46.96 per cent; glue 45.67 per cent; solvent extraction of oilcakes 14.02 per cent, linoleum 17.73 per cent and leather cloth 13.28 per cent.

Industrial production in 1960 continued to maintain an upward trend and the figures for employment when available are likely to show a substantial increase as compared to the preceding year. The shortage of foreign exchange and the scarcity of raw materials are, however, important factors which may have an adverse impact on production and employment. In the interests of employment no less than of production the Central and State Governments should see that industries are given the necessary facilities in both these respects to function to the full extent of their capacity.

Alpha Plus for Madras

IN his address to the opening session of the State Legislature, Mr. Bishnuram Medhi, Governor of Madras, highlighted the achievements of the State in the economic sphere. There should be genuine cause for satisfaction at the progress so far made since the record of the State in the implementation of Second Plan schemes is unequalled elsewhere. Madras offers the only instance of a State in which expenditure on Second Plan has exceeded outlay originally fixed. What is noteworthy is that physical achievements have paralleled expenditure incurred in various fields and targets under all heads of development are claimed to have been realised. The benefits of the Plan efforts to the people seem, no doubt, to have been distorted to some extent by the upward pressure on the general level of prices, but the greater momentum imparted to implementation of development schemes will not admit of denial. An analysis of sectorwise progress shows power generation to have made the greatest headway. By March 1961, the installed capacity is expected to reach a level of 572,000 kw against 257,000 kw in 1955-56. This should enable considerable extension of rural electrification.

Agricultural production has maintained a steady uptrend and the introduction of the Japanese method of rice cultivation has enabled notable improvement in the per acre yield of rice so that the Madras State now accounts for the highest per acre yield for rice in the country. Increase in agricultural production has come as the result of a combination of measures taken to stimulate intensive cultivation. Shortage of chemical fertilisers has to some extent detracted from the success in agricultural sphere. But progress of irriga-

tion with accent on major projects for which the Plan allocation amounted to Rs 14 crores has been satisfactory.

In the field of industries, a host of new units has come into being while expansion of old industries has proceeded steadily apace. The chemical unit at Attur, the paper mill of Seshasayee Brothers, the Premier Fertilisers, and Kothari Sugars and Chemicals Ltd, are the recent additions to the industrial sector. Expansion plans are under consideration for the Mettur Chemicals, the Madras Cements, Ashok Leyland and the Standard Motor Products. For progress in the direction of heavy industries, hopes are pinned on the schemes to be taken up in the Third Plan. It may however be noted that the various components of the integrated Neiveli lignite project such as the power station, the fertiliser factory, the briquetting plant and the clay washing unit have been making satisfactory progress.

Such impressive performance should certainly infuse confidence in implementing the Third Plan and the Governor reflected optimism in putting in the efforts to make a success of the Third Plan schemes. The original draft submitted by the State Government to the Planning Commission which fixed total outlay at more than Rs 350 crores has since been pruned by the Planning Commission to a figure of Rs 291 crores. That the reduction of total outlay will not affect targets in major heads of development has been assured by the Governor. Priority inevitably goes to foodgrain production in which sphere the setting up of fertiliser factories should make self-sufficiency possible. The target for additional foodgrain production is fixed at 15 million tons and the outlay earmarked is Rs 80 crores. Parambikulam is the major irrigation project that is slated for completion during the Third Plan and out of the 7 major dams in the Parambikulam-Aliyar project work has already started on 5.

A major aspect of the Third Plan endeavours would be comprised by the schemes to step up electricity generation from 572 Mega Watts at the end of the Second Plan to 1,441 Mega Watt at the end of 1965-66. Complete coverage in respect of rural electrification is one of the stated aims. But even with such substantial addition to power output, adequate supplies to industries by the end of the Plan period is not held feasible. It may be mentioned in this connection that the Madras State is fast reaching the dead end of hydel potentials, and among alternative sources only atomic power seems to hold promise. There is also scope for additions by means of supplies from neighbouring States and a common grid system for the Southern States may tend to the advantage of Madras.

Acceleration of industrial progress should however, be assisted by schemes for the setting up of a small scale steel plant and an aluminium plant utilising the bauxite ores of Salem. The aluminium project has already gathered its necessary capital, while the materialisation of the steel plant is contingent on the success of the experiment presently being conducted into the usability of lignite for smelting iron ore. Much would depend on the early erection of the Neiveli thermal plant with Russian aid. It is gratifying that attempts are being made to step up output with the mining target being raised from 3.5 million tons to 4.5 million tons. The inclusion of other units such as the raw film factory at Ootacamund, a teleprinter factory and a surgical plant unit should help diversification in development while the employment potential should be raised by the expansion of capacity in existing industries and greater attention to small scale and cottage industries. The out-

lay on small scale industries has been fixed at Rs 11 crores. The development of the Tuticorin port as a deep sea harbour is one of the important Third Plan projects though the beneficial effects of this scheme on the State's economy would become evident only in the Fourth Plan. There is also a welcome appreciation of the need for further development of railways in the Madras State on the part of the Railway Ministry and Third Plan may witness some concrete schemes being taken up in this field.

Provision has already been made of a sum of Rs 11 lakhs for the investigation of the iron and steel plant at Salem. Another sum of Rs 3 lakhs under civil works for preparation of plans and estimates in respect of road and bridge works in Plan III has also been sanctioned. Madras is thus embarking on its Third Plan in a spirit of great confidence based on its own past performance.

Privileges for Exporters

THE Union Ministry of Commerce and Industry has at last finalised the scheme for the enrolment of exporters. It has been introduced to develop confidence among foreign importers about Indian goods and build healthy and lasting trading relationships. It envisages enforcement by the enrolling authority of minimum recognised standards for the conduct of business by the exporters. It also enables such exporters to take advantage of special schemes for the promotion of exports introduced from time to time.

The authority to enrol exporters has been vested in the Export Promotion Councils, Commodity Boards and in the Director-General of Commercial Intelligence and Statistics.

The qualifications for enrolment of an exporter have been laid down as follows:

He should be a manufacturer of the commodities proposed to be registered with the Development Wing or other Central Government Agencies or with the Director of Industries of a State. He should have past experience of the export trade and be interested in developing it. He should use standard contract for export; submit the consignment under such pre-shipment inspection arrangements as may be required by the enrolling authority or other appropriate agency nominated by it; follow a code of conduct if and when evolved by the enrolling authority; and abide by the provisions of any scheme evolved for regulating the utilisation of shipping space for export purposes.

It is further laid down that the enrolled exporter should draw up a plan for the export of various products from India to different destinations so as to co-ordinate it with the country's overall plan for export promotion. He should also submit quarterly statements of quantities and value of goods exported.

The scheme offers the following privileges to the enrolled exporters; their names will be supplied to the Indian Trade Commissioners for introduction to the local importers in their respective markets. Their names will be included in the Directory of Exporters. They will be introduced to the visiting overseas buyers. They may be considered for selection as Business Associates of the State Trading Corporation.

The scheme also contains a provision for the cancellation of the enrolment if the enrolling authority has reason to believe that the exporter in question has ceased to fulfil all or any of the basic qualifications or failed to

fulfil effectively their obligations arising out of the provisions of this scheme. On such cancellation, the exporter shall cease to avail himself of any of the exclusive facilities provided for enrolled exporters but shall not be absolved of any penalty to which he would have become liable for contravention of any regulation.

It is not clear to what extent the scheme of enrolment of exporters will be really useful to increase exports and augment earnings of foreign exchange. Businessmen are already complaining that they are obliged to fill in too many forms and to observe too many formalities. One wonders whether they will feel enthusiastic about accepting the new scheme for enrolment of exporters. The Export Promotion Councils and Commodity Boards have been made enrolling authorities; but in doing so there is the danger that these agencies may be neglecting their real work, which is to study market conditions abroad and provide exporters with the latest information about trends in international trade. The working of the Export Promotion Councils, generally speaking, has not been as effective as was originally expected, and it seems unfortunate that they should be burdened with this additional responsibility of enrolling and de-enrolling exporters.

India's export trade by and large continues to be dominated by a few traditional items. The new products which have been manufactured in India in the last ten years have not yet made any significant contribution to the export trade, although a small beginning has been made in some directions. Businessmen generally prefer to sell in the market and avoid as far as possible the distant and difficult markets abroad. Our objective, therefore, should be to encourage the maximum number of businessmen to enter the export trade and this will not be facilitated if they are required to comply with rules and regulations which do not seem quite necessary. It would have been much better if, instead of drawing up an elaborate scheme for enrolment, Government had drawn up a code of conduct for the export trade and enforced it strictly.

The success of the Third Plan calls for vigorous efforts for export promotion. Hitherto, much success has not been achieved because of lack of coordination among the various agencies engaged in the export trade and also because of other impediments. It is time that the Ministry of Commerce and Industry concentrated attention on tackling the real obstacles which have hindered our attempts to promote exports in recent years.

JAPAN

Bank Credit and Credit Control

By "HIROS"

POST-war Japan has made a most remarkable recovery. The traditional industriousness of the Japanese under-scores this progress. The Economic Planning Agency (EPA) reports that there is a general tendency for the mode of living to become modernised. This reflects the rising level of income and the development of mass production, and the adoption of new advertising and sales methods. The country enjoys a comfortable situation in respect of foreign exchange reserves. The reserves swelled by almost 100 per cent, from \$861 million at the end of 1958 to \$1,717 million at the end of October 1960. The Weekly Review of the Bank of Tokyo (of 4 January 1961) reports:

"Principals of stocks and proprietary interests that had been acquired by non-residents before the war and the remittance of dividends that had been permitted since February 8, 1960 under the Ministry of Finance Notification No 28 dated February 6, 1960 may now be repatriated freely. Investors have only to apply to the Bank of Japan for permission to remit."

The policy is a tribute to the present strength of the Japanese economy. What are the problems Japan has faced and overcome?

Post-war inflation has been one of the besetting woes of Japan. The monetary policy to control inflation and regulate the flow of capital and business activity was shaped to the task on hand. During the period of post-war reconstruction, an orthodox monetary policy was not workable because normal market functions were paralysed. Later, during the 1950's, when the Japanese economy was gradually regaining normality, a monetary policy built around the Bank rate weapon began to be practicable. In the past few years, it has been even more effective as a mechanism of economic adjustment for correcting general price rises and foreign exchange crises.

PRE-WAR PERIOD

The rate of growth of commercial banking in Japan during the pre-war period, up to the end of 1936, was rather slow. Poor accumulation of capital among the people was largely responsible for the slow popularisation of credit transactions, i.e., use of cheques and bills. Gradually, an improvement was noticed in the proportion of bank currency to cash currency which was nearly even. The ratio about the same time in the USA was 5:1 and in Britain it was 3:1. During this period, because investments in stocks or corporate bonds by the public were meagre, the securities issue market was left underdeveloped. There were no profession dealers in securities. Banks were reluctant to deal in stocks, although they were willing to extend loans against them. This placed large funds in the hands of speculators, who, rather than investors dominated the stock exchange. The slow development of the securities and stocks market hampered the growth of industries for want of finance. As banks lacked sufficient funds to finance expanding business demands, they had to borrow from the Bank of Japan.

WORLD WAR II

The enormous increase in note issue during and after the War brought about severe inflation, which caused a sharp decline in credit transactions. Another important factor was the widespread black market dealings resulting from post-war economic controls. The economic stabilisation of 1949 led to a recovery in credit transactions. The ratio of bank currency to cash currency (or Government money) was 0.5:1.0 as against 1:1 at the end of 1936. The corresponding ratio was 3:1 in the USA. After the war, enormous war debts of the Government to the banks for financing purchase of munitions were cancelled, and the banks correspondingly were allowed to cancel deposits. The Occupation Authorities further abolished the *Zaibatsu* in order to remove the stranglehold of big business interests on the economy and to democratise it. Stocks were placed on the open market for public subscription. Personnel combinations among the *Zaibatsu* companies were destroyed. Thus, the tie-up between the *Zaibatsu* banks and the affiliated companies that developed during the war was greatly weakened. Post-war inflation separated the two further, because no single bank had enough resources to meet the demands from the big companies; so, banks combined to lend.

POST-WAR

Bank Deposits during the post-war inflationary period went up sharply. However, time Deposits showed no noticeable increase. In ordinary banks, their ratio to total deposits dropped to 14 per cent at the end of 1949 from 32 per cent at the end of 1945. Subsequently, this ratio appreciated to 40 per cent at the end of 1958. Of the total loans and investments of banks, the percentage covered by Government bonds, which showed a considerable rise during the war, went down substantially during the post-war inflationary period. The low official rates were responsible for meagre gilt-edged holdings by banks in the fifties. The ratio of Government bonds, held by all banks, to Deposits was 37 per cent at the end of 1945; then dropped to 15 per cent at the end of 1949 and further decreased to 0.7 per cent at the end of 1958.

AFTER 1949

In the spring of 1949, anti-inflationary measures were adopted to secure large Budget surpluses. Securities and Reconversion Finance Bank debentures were bought by the Bank of Japan in order to relieve the acute stringency. In 1949, bank Deposits totalled 7,920 billion yens against cash currency of 3,572 billion yens (over 2:1). After the stabilisation of the economy, banks assumed respectability in their dealings with the big companies. The ratio of bank Deposits to cash currency moved up to 8:1 in 1959.

The Call and Bill markets, which were weak in the pre-war days, now weakened further. The ratio of call loans dropped from 3 per cent at the end of 1936 to less than 1 per cent at the end of 1942, and was 1 per cent plus at the end of 1958.

In the post-war period, direct investments in enterprises was encouraged by the Government. It advised corporations to repay their borrowings (to banks) by issuing stocks in order to expand their own capital. This resulted in repeated capital increases by various companies. Although this tendency increased, investment by the general public was inconsiderable. Financial institutions still continued to be the main source of funds for investment. Even though the issue amount of industrial and bank bonds increased markedly from 1949, the value of these transactions was negligible. For their funds, the banks continued to depend on the Bank of Japan and their borrowings from the latter tended to increase.

**Tight Money from October 1953

TIGHT MONEY

From 1955 onward, Japan's economy began to grow rapidly. The spurt in demand for imports and for new plant and equipment caused a foreign exchange hunger. Internal prices began to move up. In April 1957, foreign exchange reserve touched a low of \$685 million. To cope with this situation, the Bank rate was successively raised in March and May 1957. Suasion and fiscal retrenchment had a psychological effect. These measures led to a fall in money supply. The surplus on Treasury account had a gnawing effect that began to spread to all parts of the economy. There was consequential pressure on the cash reserves of commercial banks and on Advances from

the Bank of Japan, even though costly, to meet the needs of a fast growing economy. The increase in the Bank of Japan's loans was a sign of the efficiency of its control over the financial sector.

CREDIT CONTROL

Different methods were employed at different times to control the enormous inflation and make the economy manoeuvrable. Broadly speaking, monetary policy had three distinct facets, namely, (1) Repudiation, (2) Selective control and (3) Squeeze. Fiscal measures were also adopted in the spring of 1949.

Generally, open market operations were not in vogue in Japan. In the period immediately after the War, the pressure of inflation was too heavy for any selling operation to be successful in checking it. Later, the rates of Government bonds were pegged low and further dealings in Government paper were with different financial institutions on a mutual basis so that the market was not open, i.e., Government paper was not mobile. Perhaps, there is a touch of irony in the repudiation of War-time debts when it is known that the immediate object of founding the Tokyo Stock Exchange in May, 1878 was to deal in negotiable securities, "principally, the Government bonds, which had been issued in connection with the feudal pensions and currency reform." (Rinichiro Sugiyama in Money and Banking in Japan by Phra Sarasas.) Hence, in the post-war period, when the inflationary pressure was very strong, fiscal measures were also adopted. Subsequently, in the early 1950's, the Bank of Japan resorted to discount rates to control credit.

Owing to the unreliability of open market operations and ineffectiveness of reserve requirements, the Bank of Japan instituted selective control by which it varied the discount rates according to uses of funds and the methods of borrowing. The divisions in the discount rates structure was simplified by 1954; and, in 1955, the tight money era began.

For a more effective control of bank credit, the Bank of Japan resorted to a credit squeeze. Official rates were pegged low. Advances to banks above a specified limit were progressively charged at higher rates of interest. Credit control was now largely by means of squeezing or relaxing this graduated rate system, because the official rates were fixed below the commercial bank rates. But, from the summer of 1955, a certain measure of flexibility was introduced by moving the official rates to meet the needs of changing credit and monetary conditions. In mid-1960, the rate on internal Government bonds was as high as 7.685 per cent per annum. In principle, the application of rates higher than the official rates was reserved for banks with particularly lax management as a penalty.

FUTURE ROLE

In the next decade, the Japanese hope that the national income will double. The object of monetary policy will be to secure employment opportunities for a labour force increasing at an annual rate of 2 per cent. In 1960, the volume of employment has generally been 1½ times what it was in 1955. The second object of the policy will be to secure internal and external stability of the economy.

Internal stability has been achieved by more or less holding the price line. The wholesale price index was 102.3 in November 1960 as compared with the base year of 1955. The tight money policy forced the index well below the base in the years 1957 and 1958.

The vigour of Japan's economy today in respect of external stability is such that it is pressing for more and more freedom in its

foreign trade. The recent GATT agreement with Australia is an instance in point. For 1960, Japan had an export target of \$4,100 million, about the size of India's outlay in the public sector during the First Five Year Plan. The target for 1961 is higher at \$4,545 million, thanks to the "competitive strength" of the exports.

The year 1959 witnessed record progress. The gross national product, national income and per capita income rose by 17.7 per cent, 17.5 per cent and 16 per cent respectively over the previous year. The actual per capita income was 107,515 yens or Rs 1,422 (₹ 75.6 yens per Rupee). The high rate of growth continued in 1960, so much so that that year is sometimes referred to as Japan's "golden" year. In fact, the Bank of Tokyo issued its Semi-Annual Report with a golden jacket. The days of "pegging" were left behind with the mid 1950's. Loans and discounts by banks expanded due to substantial demand for funds for plant, equipment and working capital in industry and trade; this, despite the fact that the liquidity of banks was hedged in by increased reserve requirements and "rapidly-grown" security holdings, the latter obviously due to the more liberal and realistic interest rate policy.

Monetary policy should also help to secure a sustained growth of the economy without such deviations from planned targets as were noticed in 1956 and 1957 (low side) and 1958 (high side).

Lastly, flow of capital and business activity should be so regulated by a wise use of a flexible monetary policy as to reduce business fluctuations in the future. The introduction of the reserve requirements since September 1959 is, in this respect, expected to help in arresting over-expansion of the economy.

They are so neat!

These mechanized Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

“Untied” PL 480 Funds Can Help

THE latest return of the State Bank vouchsafes the information that the amount of US Funds on deposit with that institution is Rs 215.51 crores, as against total Deposits of Rs 554.36 crores. This means that, since July last, the State Bank has made over seven monthly instalments of Rs 12 crores each; and the fact accords with the revelation last year by Mr P. C. Bhattacharyya, the Chairman, at a press conference, that counterpart funds with the State Bank were of the order of Rs 300 crores. Since the busy season notionally began, from the end of October 1960, the State Bank has thus suffered a reduction of Rs 36 crores in Deposits owing to the repayment agreement; however, the net decline, as recorded in the statutory statement of the State Bank, is only Rs 24 crores, and the implication is that there has been other accretion—not being PL 480 counterpart funds—to Deposits of the order of Rs 12 crores over the period. But the fall in the gilt-edged holdings of the State Bank is rather sharper, at just under Rs 68 crores; and the inference is that, to avoid recourse to borrowings from the Reserve Bank, the State Bank has disinvested in gilt-edged. However, as we have often stressed recently in this column, such disinvestment has probably mostly taken the form of presenting Treasury Bills for payment on maturity. In other words, it is reasonable to suggest that the State Bank, for some many months now, has been contra-investing in respect of counterpart funds in Treasury Bills rather than in marketable securities. The purpose in the choice of Treasury Bills may have been twofold: firstly, on maturity the Treasury Bills would readily make available resources for the State Bank to meet the busy season expansion in Advances; secondly, investment in Treasury Bills would safeguard the State Bank from any loss in gilt-edged, in the event that Bank rate had been raised or that gilt-edged prices had fallen sharply. But the current state of the money market and the prospective continued drain on the Deposits of the State Bank are matters that merit the attention and study of the monetary authorities.

For, the banks are already over-extended, as it is; and three months more of the business season remain. Indeed, in the case of the State Bank, if Deposits and contra-investments pertaining to counterpart funds are left out of the reckoning, the Advances/Deposits ratio, as at the end of January 1961, is already at an unusually high 73.5 per cent. The ratio will undoubtedly further mount, both because of the special drain on Deposits and rise in the busy season demand for Advances.

The only method left, other than the rather unlikely possibility of banks emerging as sellers, and the Reserve Bank as buyer, of Government securities, is for the Scheduled Banks to borrow against their busy season needs from the Reserve Bank. As a tempo-

rary expedient, for seeing through the 1960-61 busy season, such recourse to central banking credit might suffice. But, in the long run, there is really no alternative to the banks becoming possessed of new and considerable Deposit resources. In this context, we may review afresh the decision taken as regards the tranche of counterpart funds being generated by the most recent—and biggest—of the Public Law 480 agreements: the amount involved, we may remind ourselves, is Rs 600 crores, of which Rs 200 crores' worth of surplus commodities may not produce counterpart funds if they form buffer stocks for India.

It became known early last year that all accruals thereafter of counterpart funds would no longer be deposited with the State Bank; in the new scheme, special transactions affecting Government, the US Embassy and the Reserve Bank would be carried out. Partly, this decision may have been taken to pacify grouches on the part of the "private sector" banks, that the State Bank was being given a windfall profit. But let us remember that the State Bank, in terms of the arrangement, took a not inconsiderable risk. For, the State Bank was obligated to contra-invest in gilt-edged, and if prior to the return of the funds to a duly specified authority—the US Embassy or the Reserve Bank—Bank rate had been raised or security prices fallen, the State Bank would have been saddled with maybe a sizable loss, and not merely a paper one at that. So, secondly, it is possible that the State Bank itself was not in favour of continued accretions of counterpart funds, so long as the stipulation was there that there had to be contra-investment.

In the event, however, the new counterpart funds are being sterilised, whereas they can be put to good use, particularly in view of the current—and prospectively continuing—stringent money conditions. If the counterpart funds can be deposited with the State Bank, but with no restrictive stipulation, the capacity of the institution to finance private sector—as also State—projects would be greatly enhanced. Indeed, it may be reasoned that it is but fair and just that, in this fashion, the State Bank should be recompensed for the finance it has extended to State projects, in order to enable it to function efficiently as a commercial bank for the private sector.

The objection will again be: why should the State Bank be thus favoured? Why shouldn't counterpart funds be deposited with all commercial banks, seeing that their need of new Deposit resources is as great? We gather that the difficulty lies in a US Government requirement that its funds may be kept only with American owned banks, or in other banks provided that such Deposits are guaranteed by Government, in our case, the Indian Government. Unless, therefore, the Indian Government can or will give guarantees in respect of all commercial banks, the State Bank alone would seem fitted to be repository of counterpart funds; and if, in any case, the commercial banks cannot get a slice of the cake, there is no need to deny the cake altogether to the State Bank.

But the commercial banks will then be able to make out a case for acting as bankers for, if not Government, at least governmental enterprises. There would be no justification

for the public sector accounts, whether relating to Deposits or to Advances, being placed solely with the State Bank, since the prospective "untied" counterpart funds are intended to recompense the State for the public sector financing that it has done.

We would suggest, consequently, that it would be desirable, in order that the money stringency may be somewhat relieved, that future accruals of counterpart funds be deposited with the State Bank without the stipulation that there be contra-investment in respect thereof. Secondly, to render justice to the other banks, the public sector accounts should no longer be the sole preserve of the State Bank but should instead be parcelled out and shared among all commercial banks.

We may, however, add that if, in fact, the US Government does not insist on guarantees in respect of counterpart fund Deposits, then the funds should, in all fairness, be distributed among the scheduled banks generally, and not placed solely with the State Bank.

BANK RETURNS

Pause Again in Busy Season

The returns of the Reserve Bank for 27 January show that there has again been a decline in Active Note Circulation, the relative figure being lower by Rs 5.38 crores at Rs 1909.49 crores. Rupee Coin has also returned from circulation in the amount of Rs 0.40 crores. As a result, the Reserve Bank's cash has improved by Rs 5.78 crores to Rs 22.89 crores. Both Foreign Securities and Rupee Securities, as figuring in the return for the Issue Department, are unchanged.

Investments, in the Banking Department, are practically unaltered at Rs 152.89 crores, but it needs to be noted that, in the same week, the State Bank has purchased Rs 5 crores' worth of securities, without doubt from the Reserve Bank. Hence, the inference is that the Central Government has instituted deficit financing for Rs 5 crores, and this has been obscured by the sale of securities for like amount to the State Bank. The Centre's need for recourse to created money probably arose because of the commitment in respect of maturing Treasury Bills purchased and discounted by the Reserve Bank, a portfolio that, in the latest week, is marked down by Rs 8.34 crores at Rs 56.30 crores. Also, the Centre may have received some element of repayment of loans and advances from the State Governments, whose balances are lower by Rs 10.46 crores at Rs 21.46 crores. However, the States have run down their Deposits with the Reserve Bank partly to reduce indebtedness, ways and means borrowings being down by Rs 4.60 crores at Rs 36.00 crores. Reserve Balances of member banks have improved by Rs 1.56 crores to Rs 78.27 crores, but with the State Bank reporting a decline in cash in hand and with Reserve Bank, the magnitude of rise in other banks' Deposits is seen to be of the order of Rs 4 crores. There is a small rise of Rs 1.82 crores in the Other Loans and Advances of the Reserve Bank, reflecting the continued recourse to central bank credit by Scheduled Banks.

It may be mentioned, finally, that Balances Held Abroad are holding steady, in being fractionally higher by Rs 0.24 crores at Rs 19.66 crores. But it would appear that the Central Government's objective of enlarging foreign exchange reserves to Rs 175 crores by 31 March 1961 is unlikely to be achieved; we are Rs 27 crores short, and only two months remain.

The return of the State Bank for 27 January is largely featureless, except for the footnote advising us that, of the total Deposits of Rs 554.36 crores, US Funds constitute Rs 215.51 crores. Deposits, during the week, have declined by Rs 3.65 crores. The total of Advances has inched up by Rs 1.87 crores to Rs 249.83 crores. There has been an addition of Rs 5 crores to the gilt-edged portfolio, and hence cash in hand and with Reserve Bank has been drawn by Rs 2.26 crores to Rs 25.53 crores. Borrowings are fractionally lower at Rs 1.89 crores.

+

The return of Scheduled Banks for 20 January discloses a fall of Rs 6.32 crores in Time Deposits other than borrowings, and this was wholly due to the State Bank repaying the monthly instalment against counterpart funds in process of being made over to the Reserve Bank. The steep disinvestment of Rs 19 crores in gilt-edged is also wholly on account of the State Bank. But, while the State Bank reported an increase of nearly Rs 10 crores in cash in hand and with Reserve Bank, Scheduled Banks' Balances with the Reserve Bank are practically unchanged at Rs 77.12 crores against Rs 77.95 crores. It is reasonable to suggest, therefore, that Scheduled Banks other than the State Bank have run down Reserve Balances in order to reduce indebtedness to the central banking institution, an item that is lower by Rs 10.84 crores at Rs 42.22 crores. It remains to add that the total of Advances is merrily mounting; in the latest week, the figure has gone up by a shade under Rs 4 crores from Rs 1208.92 crores to Rs 1212.87 crores.

+

BANKS

Moratorium Problems

COMPLAINTS about the extension of the moratorium given to banks and consequent uncertainties and difficulties for depositors shareholders and the staff have become more insistent. In the case of the Indo-Commercial Bank, the amalgamation scheme with the Punjab National seems to hang fire; one reason for the delay is stated to be claim of the ICB employees for treatment admissible to the staff of an A Class bank. Most of these employees have only a few years more to serve and their continuance on employment would help to preserve connections in the event of the larger bank taking over the ICB branches. But there are apparently difficulties despite the fact that the PNB has made better profits in 1960 and maintained its dividend.

There have been representations that the Reserve Bank has not given due weight to all

the interests affected by the moratorium and has not indicated whether liquidation is not preferable in the case of a bank that has suspended business by order. The objections to mergers of uneconomic banks can be ignored, but the public directly concerned should be told what is possible in the light of figures ascertained by inspection. The Palai Central Bank episode has brought home the need for speed in the publication of essential information. Secrecy and delay are to be deprecated on all grounds. And if defects demand positive measures, they should be adopted without regard to political or other susceptibilities.

The rigorous investigation of non-scheduled banks' affairs may be adopted in the case of the banks that have received the concession of a moratorium depriving the depositors of a legal remedy in the absence of a scheme of deposit insurance made available by a special agency on the US model. The moratorium may conserve assets, but the depositors have also to be told of the proportion of bad debts, the directors' obligations and the debts due by officers. There is again the issue of contingent liability on the part of shareholders in the case of the Indo-Commercial and the Travancore Forward. If the shares of both are dormant, the bid by the larger bank acquiring control should be made soon, for shareholders, unlike the management, are the victims.

+

The Cult of High Wages

By Paul Einzig

OW that wage demands can no longer be justified by reference to the rising cost of living or to rising profits, British Left Wing writers had to look round for a new set of arguments. They have succeeded in finding what they wanted. The latest fashion is to argue in favour of bigger wage increases on the ground that this would force employers to introduce labour-saving equipment. It is pointed out that the reason why American industries can afford to pay much higher wages and still remain competitive is that the amount of capital equipment per worker employed is much higher in the United States than in Britain.

On the face of it this argument may sound convincing. If we examine it closely, however, it presents a totally different picture. The truth is that there has never been in the United States such a degree of resistance to automation on the part of trade unions as there is in Britain. In innumerable instances British trade unions forced employers not to dismiss the workers that had become redundant through the installation of labour-saving

equipment. That being so, the beneficial effect of technological progress has been largely wasted.

This attitude provides the utmost discouragement to the progress of automation and other forms of costly modernisation. From the employers' point of view it is of little use to embark on heavy capital expenditure only to find that it does not enable them to reduce the number of hands employed. From this point of view it would hardly be helpful if British wages were to be raised to the level of American wages. It would only mean that even more would have to be paid out to workers who have to be retained in employment although labour-saving equipment has made them superfluous.

These facts are obvious enough. In spite of this Left Wing writers will no doubt be allowed to get away with their arguments. In fact pressure against unwarranted wage increases has greatly abated lately under the influence of the mild recession in some consumer durable industries. It is not popular just now to argue against an increase in consumer purchasing power. Quite recently the body popularly known as the committee of the "Three Wise Men", set up some years ago mainly to study the inflationary effect of wage increases, came out with a statement seeking to whitewash the attitude of the trade unions. It stated that the inflationary trend was not the fault of any particular class or group, seeing that the expansion of profits has not been inferior to that of wages. But this only means that employers do not display sufficient resistance to unwarranted wage claims, seeing that they can pass on the resulting additional costs to the consumer.

In any case, if the "Three Wise Men" were only half as wise as their name implies they would have pointed out that increase of profits is incomparably less inflationary than increase of wages because a much larger proportion of the former is taken away in taxation, saved, reinvested, or spent on goods whose prices do not affect the cost of living. Left Wing writers are guilty of gross inconsistency in advocating both wage increases and increased capital expenditure. If it were possible to induce the workers to save the same proportion of their incomes as is saved by higher income groups, higher wages would not be incompatible with higher rate of investment. But as things are the relaxation of restrictions on higher purchase firms is certain to result in the expenditure of a higher proportion of working class incomes. Which means that even less will be saved and will be made available for non-inflationary investment.

(Copyright).

Bank Profits

The net profit of the Bank of Baroda Limited, for the year 1960 subject to audit after providing for taxes and including the sum of Rs 1,02,800.87 brought forward, amounts to Rs 41,68,551.98 which the Directors have disposed of as under:—

An ad interim dividend was paid for the half year ended 30th June 1960, at the rate of 14 per cent per annum subject to tax which absorbed	Rs 8,75,000.00
--	----------------

The Directors now propose to pay a final dividend for the half year ended 31st December 1960, at the rate of 20 per cent per annum, making 17% per annum for the year, subject to deduction of tax at the prescribed rates, which will absorb Rs 14,74,194.17 and to carry forward the balance of Rs 18,19,357.81 to the next account subject to payment of bonus to staff.

Notes

ECONOMIC CONDUCT Ancient and Modern

Three lectures delivered last week in the Madras University by Dr B. Natarajan attempt to relate the exhortations on economic conduct found in the Tamil classic Thirukkural to the modern world in its present setting. His exposition of the Public Philosophy of Thiruvalluvar is perhaps to be regarded less as a call to order than as an assurance that ancient Tamils held the right views on prices, wages and profits. The Kural is not a handbook of revolution but a guide to correct conduct on the part of both the governed and the governors. Thiruvalluvar's ideal of a moral law governing all activity relegates even the State to the second place. Human agency, including secular Government, is of less importance than the permanent values derived from spiritual life. The exaltation of austerity does not imply that the ancient Tamil poet forgot the issues of ordinary life. But he saw the foundations of economic life embedded in spiritual leadership and Providence was assigned a place higher than civil authority or free enterprise. The teaching of the schoolmen in the Middle Ages may afford a parallel. Stability and continuity of ordinary life were reckoned more important than progress, and

the modern passion for uplift is different from the acceptance in the Kural of the need to banish the hunger that cramped human effort in search of eternal values. The ancient Tamils (as the Kural bears witness) believed that each man is entitled to his due, and that godly discipline is meant to secure a just distribution of income and property. In these respects, the Kural partakes of Socialist teaching, not Marxist but Christian, and the infusion of morality into economics proves that modern thought was anticipated in Valluvar's terse couplets that expounded the whole duty of man.

Increasing recognition of the need to regulate human conduct, to relate ethical doctrine to economic activity in a society that is restlessly increasing wants, confers extra importance on a work that prescribes a higher morality in buying and selling as also in family life. The pursuit of gain has its place, but as medieval European thought also recognised, there is no place for unbridled selfishness. While condemning poverty as a barren ideal, the Kural accepts both the validity of moral ends and the paramountcy of agriculture. The good citizen must not be oppressed by fear of destruction or by ruinous taxation. That the Arthashastra (discovered for modern Indian scholars in the Twenties) anticipated some ideas in the Kural does not detract from the sublimity and simplicity of the doctrine of Thiruvalluvar, who saw plainly that the citizen was more important than the State, and that the satisfaction of everyday wants came before resolute pursuit of power.

The lectures made it clear that the ancient Tamil kingdoms had a guiding star in the Kural and the devotion of surplus income to public purposes by private citizens in village communities was inspired largely by the perennial vogue of the Kural. The Kural treats economics as a part of moral philosophy and is not concerned with formulas but the preservation of the good life as a common end. Spending money on the land to improve it was conceived as the best investment. That view has much to commend it today, when land stands in need of capital, even more than of labour. In its insistence on liberty as against authority, the Kural was a precursor of Adam Smith, whose main object was to damage Mercantalism (to which the Arthashastra inclined). The Kural thinks less of the discontents due to oppression than of the joys of earthly life or the sanctity of the family. The Kural also calls for skill and diligence on the part of labour; it emphasises the need for good work in return for decent wages. It also indicates that rewards are ordinarily based on the effort made and disparities are the consequence of

natural inequality. To that extent Thiruvalluvar, too, is a conservative, but his condemnation of selfishness and exploitation is unambiguous. The Kural does not sanction any predatory enterprise; and in upholding the moral order, the Kural truly encourages the guardians of society. In praising productive labour and calling for the wise use of leisure the Kural is wholly in line with modern doctrine. In this as in much else, the Kural is refreshingly modern, and those who ask for ethics in a business society will find in it a stimulating stand-by.

*

CPI

Letters to Peking

The report that the Communist Party of India is engaged in correspondence with the Government of China on the border disputes and some replies to letters have been received raises important questions. The right of a political party to argue at home is not in doubt. But whether it can engage in argument with a foreign Government is likely to be challenged. There is, of course, Moscow's direction about an amicable settlement, but the CPI must take into account the Government of India's view about the course of negotiations so far and China's refusal to accept extant records as final and authentic. The general principle that a party cannot attempt to negotiate on foreign policy when territorial claims are at stake will be conceded by all. The split in the CPI last year may yet be offered as an explanation. The Maharashtra view is different from that of the Bengal group, which stands for early and complete appeasement of China. The pin-pricks by Peking are ignored by the CPI for the sake of proving that it stands by peaceful settlement. But when Burma's Premier declines to mediate, it is hardly possible for the CPI to play the friendly broker. Whether the CPI thinks that China's influence on world affairs will lead to friendly settlement soon is another matter. No political party can or should engage in affairs that concern the Government which, for a year, has sent its officers to explain and to expostulate. A distinction may be drawn between speeches at home and missions to Peking either to the Government or to the Communist Party. The locus standi will be certainly questioned by Mr Chou-en-Lai unless he hopes to use the power of the CPI to make trouble at home as a talking-point in further negotiations. There have been complaints last year about the attitude of the Indian Communists in the dispute, and the letters, even if one-sided, do not really improve matters. The CPI is only one of the opposition parties here, and it cannot speak for any but its own registered party adherents. It is the Government alone that can discuss territorial matters and conclude agreements, and that,

too, only after consulting State Governments directly like Kashmir or Uttar Pradesh. The Berubari episode offers a guide to future procedure. And it may be added that no party attempted to write to the Pakistan Government about border disputes, because the External Affairs Ministry alone should act in such matters. The CPI will do well to publish the letters sent or received in order to dispel doubts about its own communications on a delicate and dangerous issue. The CPI may or may not have extra-territorial loyalties. But its epistolary exercise does nothing to soften suspicion in this regard.

COMPANY LAW Branch Audit Exemption

The Department of Company Law Administration has formulated rules under which the companies may claim exemption from the provisions contained in the Companies (Amendment) Act with regard to the audit of branch accounts of the companies. According to the Amended Act, a company is required to get the account of every branch audited either by the auditor or any other qualified person appointed by the company unless a branch office has been exempted from this requirement. Under the Companies (Branch Audit Exemption) Rules, where a company carrying on any manufacturing, processing or trading activity, has a branch office "the average quantum of activity" of which during the relevant financial year does not exceed Rs 2 lakhs or two per cent of the total

turnover of the company, whichever is higher, the provisions of Section 228 will not be applicable to that branch.

In all other cases a company will have to put in an application in the prescribed form to the Government of India indicating the grounds on which it can claim exemption. Whenever such an exemption is granted the Government can stipulate the period and conditions in its order. Such conditions may provide that the company should allow access to an auditor to the books of accounts at all times and furnish such information or explanation as he may require. The auditor, should every year prepare a report on the accounts of the branch office and forward it to the Company's auditor. The management of the company is required to attach to the balance sheet a certificate to the effect that no material change has taken place in the arrangement for in-

ternal audit of branch accounts. Provision has also been embodied for enabling a company engaged in any other activity to seek exemption from branch audit by showing that it has made the requisite arrangements for scrutiny and check, at regular intervals, of the accounts of the branch office by a competent and responsible person.

Practical exigencies have naturally dictated these exemptions from too meticulous an audit requirement. Essential safeguards have also been provided. But the rules are also an act of faith, which the exempted companies will do well to justify.

UNIVERSITIES

Medium of Instruction

Perhaps the most important recommendation of the working

group appointed by the University Grants Commission to go into the question of medium of instruction in universities is the fact that it wants the universities themselves to shoulder the entire responsibility involved in the prescription of a particular language as the medium of instruction in their affiliated colleges. The Group thinks that in this matter the universities should be the sole arbiters without any interference from any outsider including the Government. This is a wholesome principle and if accepted and faithfully implemented, it will take proper care of the whole problem of the medium of instruction. One may be sure that once the universities know that there will be no undue interference from the Government, they will not do anything in a hurry.

The working group did not concern itself with the question of whether or not the medium of instruction should be changed. It

was mainly concerned with suggesting the steps that should be taken for an orderly changeover from English to some other medium whenever such a change is decided upon. The group has recommended that the medium of English should continue for the present for post-graduate and professional teaching and for science subjects at the undergraduate stage. Complete prohibition of a new medium for science subjects is not favoured but it is suggested that it should be made clear to the students opting to learn science subjects in the new medium that "the prospect of their being admitted to post-graduate courses will be limited". Change to a new medium should however await the publication of a fair number of books of suitable standard for students and teachers covering the whole degree course.

It is evident that the group is not very hopeful about Hindi becoming the national language in the foreseeable future. It has therefore rightly averred that for competitive examinations either English alone should be the medium or all the languages of India, English being a permitted medium. By the same token, it has recommended that English should continue to be the medium of inter-university communication.

It is gratifying to note that the expert body has made it clear that for the degree stage in science subjects, English should continue, and if its recommendations are accepted it may well be that it will not be an easy matter for any university to change its medium of instruction in a hurry. For an essential prerequisite prescribed is the provision of suitable books in the new medium.

English is one of the few assets we have gained, quite accidentally perhaps, but it is an asset that deserves to be jealously preserved. No other language in the world can lead us to the treasures of science. It will be a national waste, if, in the face of urgent need for technical knowledge, we change the medium of instruction in the Universities.

LAPIDARIES

Thinly Spread

The arrival of European jewellers in Delhi to buy precious stones is perhaps a sign that Indian craftsmanship will command more notice. Import control has reduced the supply of raw materials and synthetic stones have little chance of winning a market abroad. There is a Rangoon diamond industry in Trichy town and the workmanship and finish is known to be good. But the jewellery industry of UK or Germany is largely one of imitation stuff and the tourists are probably interested in buying jewels which are prized not only as representing investments for surplus cash but also

for this craftsmanship. The demand for semi-precious gems may go up if a trade in cut gems is established but much depends on export licensing. The authorities' attitude is crucial in this case, for the export of jewels may amount to the export of capital to which the Government is strongly opposed. The semi-industrial stones may be distinguished and a trade in corundum or beryl as in the days of the Roman empire, may be established with South India. But there is much to be said for specific import for cutting and shipping back and the rise of the Israeli diamond cutting industry is an argument for letting European jewellers open a trade connection which will help lapidaries whose business has dwindled with the fall of the native aristocracy and the rise of a plutocracy that may have the means but lacks the taste to apply wealth to the sustenance of craftsmen in Rajasthan or Madras. The tourist trade will certainly benefit if the jewellers' industry thrives and one may view the coming of the European trade team as a break in the depression caused by the limited supply of raw materials, reflected also in the high prices here. The jeweller's trade is now widely spread but it is also very thinly spread.

SCIENCE

Many Inventions

The report of the National Development Research Corporation for 1959-60 describes many inventions and tests made on them. Laboratory work is put into practical use and patents are taken out promptly. There is a new process for bamboo pulp being tried out by Orient Paper Mills and white cement from felspar is being made on a small scale. A baby food is now being made in Kaira by a co-operative dairy. Of more interest is the work taken up by the National Laboratories, and the plan for making hardboard from fibrous materials or building board from sawdust and waste may have great results in view of the high cost of good timber. The income from royalties is going up but the Corporation is running at a loss. It is, however, a scientific body, not a commercial agency. Diesel traction is being improved and a saving in fuel is expected by a German firm that has shown interest in the Suri system of transmission sponsored by the Indian railways. It is claimed that Research makes import of technical know-how superfluous in several cases and Indian firms should wait before plunging into foreign collaboration. That is a warning conveyed in the report to the Government because money is not to be lost in paying royalties to foreigners, when the NDRC is here to help industry. The channel through which industry gets the National laboratories to work and appraise processes is ready and co-operative research institutes may henceforth try to

rely on the NDRC. Scientific bodies as in the UK are not very forthcoming to help industry in India but leather research is being appreciated and the export trade stands to gain, because larger orders for footwear from Eastern Europe are being filled by small scale manufacturers also at present.

*

AMERICA

The Eight Eisenhower Years

President Dwight D. Eisenhower's final economic report to the Congress and people of the United States, on the eve of his handing over the reins of office to the new President, Mr John F. Kennedy, contains what amounts to a final summation of his underlying attitude toward the American socio-economic system and of the substantial progress it has made in the post-war years.

This summation inevitably involves a review of the Eisenhower Administration's experience in administering the Employment Act of 1946. It is the Act which requires the Annual Economic Report of the Federal Government, and makes it the official responsibility of the Federal Government to help create conditions conducive to the promotion of "maximum employment, production and purchasing power."

Within the context of this mandate, Mr Eisenhower emphasises the major role of private enterprise in the US economy, and restates his faith in the principle of "shared responsibility." This means that private business and state and local Governments must contribute effectively to economic growth and improvement, and should not leave the major burden on the Federal Government alone.

When the Employment Act was passed in 1946, the US economy was completing its successful readjustment from war to peace. Thus, that year can be said to mark the beginning of a new economic era—one which has seen notable advances in

production, in employment, in incomes, and in the personal welfare of the American people.

It is well to remember that the eight years of the Eisenhower Presidency encompassed more than half of that era, and thus more than half of the years during which the Employment Act has been on the books.

Just a few of the many post-war advances detailed in the Eisenhower review need be mentioned here. For example, the Gross National Product (GNP)—the nation's total output of goods and services—expanded from \$234,000 million in 1947 to more than \$500,000 million in 1960. This represents a remarkable gain of better than 100 per cent. Even in real terms, when figured in constant 1960 prices, the gain was a resounding 60 per cent—certainly a notable one for an economy as large and varied as that of the United States.

Again in real terms, business investment since 1946 has totalled \$650,000 million, almost three times the investment of the previous

doing structural jobs

Knowledge gained from nearly half a century of engineering experience covering a wide range of production and the highest standards maintained have kept the name of Britannia as a symbol of reliability and proven skill. This is typified, in no small measure, in the varied type of structural work for which

a much larger capacity has lately been developed at our entirely new unit at Mokameh, Bihar. Lattice type Girders, Pylons, Signal Posts, Tipping Wagons, etc., are but a few of the many items of structural work for which this new unit has been exclusively set up.

Rates are competitive and delivery quick!

Steel girder upon girder, a city for millions rises on the waste lands of yesterday—an architect's vision is transformed from abstraction to the living beauty of edifices in concrete and steel—tons upon tons of steel go into the making of a modern city. Elsewhere, mud hovels yield their place to new housing schemes in the cities and suburbs. All this improvement needs STEEL—all this is ours today and soon will be ours in even greater measure, as there is a little more steel for each of us.

Towards this end, IISCO is working—for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.

THE
INDIAN IRON
AND STEEL
COMPANY
LIMITED

IRON STEEL

HC-60.

15 years. Nearly 20 million homes have been completed since 1946, a number equal to about half the supply of homes available when World War Two ended in 1945.

Increases since the war in the capacity for producing steel, refining petroleum and manufacturing paper range from 60 to 80 per cent. In other industries, such as aluminium, the growth has been even more rapid. Research and development outlays have jumped from less than \$2,000 million in 1946 to about \$13,500 million in 1960. The number of operating businesses has risen since 1946 by nearly 1.5 million, reaching more than 4.7 million in 1960.

Since 1946, the population of the United States has increased nearly 30 per cent, passing the 180 million mark in 1960. In that same period, real personal income, after taxes, rose more than 50 per cent over-all, and about 20 per cent on a per capita basis. A large increase in jobs has been achieved, with total civilian employment rising from 55 million in 1946 to nearly 67 million in 1960.

Means for protecting income and personal financial security have been

greatly strengthened. Comparing 1946 with 1960, the number of life insurance policy holders has grown from 77 million to 118 million, the number of shareowners in corporations from 6.5 million to 12.5 million, the number of workers covered by the Government's social security system from 37 million to 59 million, the number of persons covered by private hospital insurance from 42 million to 132 million.

In the important area of economic stability, the contractions in business activity since the Employment Act was passed have proved to be few and relatively moderate, particularly when compared to some of the dislocations of earlier, pre-war cyclical adjustments. The mildness and brevity of the post-war dips reflect, as the report points out, not only the deliberate steps taken by the Government under the Employment Act to offset the declines, but also the built-in anti-recessionary character of such "automatic" stabilisers as the nation's tax system and unemployment insurance programme.

What lessons have been learned in administering the Employment Act?

Among those cited in this final Eisenhower review are the importance of close surveillance of economic developments, the need to combat inflationary pressures, an awareness that economic growth must be balanced and sustainable and should not be "forced" to the point of jeopardising the future health and progress of the economy.

Implicit in these viewpoints is the Eisenhower appraisal that the Employment Act is, in his words, a "living document adaptable to changing circumstances". Its administration, he suggests, must be flexible and not tied to dogmatic and unrealistic approaches if economic policy is to meet adequately the challenges that are constantly arising in the modern world.

As the Federal Government has met its responsibilities under the Employment Act and has helped to maintain both progress and stability, there has developed an atmosphere of public confidence which itself has helped arrest downward spirals and support the nation's economic activity.

Mr Eisenhower sees this development, plus the remarkable advances in the welfare of the American people, as providing a basis for continued confidence in the future growth of the US economy.

"In sum", concludes this last Eisenhower report, "experience has proved the Employment Act to be a helpful instrument for achieving important common economic goals in a framework of free institutions".

AUSTRALIA A Buoyant Economy

The Information Bulletin released recently by the Department of Finance and Commerce, Australia, narrates the striking growth in the country's economy in recent months. The buoyancy can easily be gauged from the overall rise in employment during the months between June and September in 1960. The industrial production of almost all the products reviewed by the Department looked up. Among the rural production statistics, those relating to milk produce, indicate a substantial rise of about 3.8 million gallons by the first half of 1960 over the total produce of 1959.

The figures for the building industry indicate a rise of 19 per cent over the corresponding period in the previous year. The expected private capital expenditure of the various manufacturing industries from July to December shot up to £14.7 million from £10.86 million in the corresponding period in 1959.

The net amount of new money raised from the investing public by companies incorporated in Australia and listed on the stock exchange during 1959-60 totalled £24.1 million. This compares with £18.82 million raised in 1958-59.

A notable development in the Australian canned foods industry will be the completion of the Campbell Soup Company at Shepparton, Victoria. The cannery is planning to meet the needs of the local markets as well as to export canned foods to Asian and African countries. A sum of £5 million has been earmarked for the establishment of petro-chemical industry. Most of the plants are expected to go into full production within a couple of years.

A replica of a German automatic brick making plant is being constructed at Bankstown, New South Wales, at a cost of £0.365 million. The main advantages of this plant will be the economical mechanical handling of heavy materials and incessant kiln firing. This coupled with temperature control, will reduce fuel costs and ensure uniformity of products. Most companies in the textile manufacturing industry in Australia have registered improved trading.

4 February, 1961

INDUSTRIAL INDIA New Horizons

The inauguration of the carboxy methyl cellulose plant at Bilimoria by Mr Manubhai Shah, the Union Minister for Industry, constitutes an important landmark in the industrialisation of the country. Claimed to be the first of its kind in India, the CMC factory stands as a monument of the industrial enterprise of the Sardesai Brothers, the promoters of the plant, and the successful translation of the fruits of research from one of the research laboratories to commercial production.

In his inaugural address Mr Shah highlighted the remarkable progress registered by the country in the industrial field. He stated that the industrial development of India during the past decade is unparalleled in the history of any backward country in the world. The happy coincidence of the inauguration of the plant with the Golden Jubilee celebrations of the Sardesai Brothers concern, whose contribution to the industrial development of the country is well known, can be rightly considered as a good omen.

The initial capacity of the newly constructed plant is 1,200 tons per annum and the idea of doubling it is under the consideration of the authorities. It may be recalled that carboxy methyl cellulose is utilised by many industries like textiles, paper, jute, plastics, ceramic and rubber. Hitherto our industries have been depending on foreign countries for the requisite quantity of this essential chemical. And the country had to spend every year more than Rs 75 lakhs for importing this material. It is heartening that an earnest start has been made to manufacture this chemical in the country. The new factory in Bilimoria, will, in course of time, be of immense help to the nation in saving a sizable quantum of foreign exchange. Its employment potential is the not the least of its attractions.

CEMENT

Retention Prices

That cement production has not been having a smooth run has been evident for sometime past. One after another, new developments of adverse import to production have been posing problems to producers. Prior to 1960 it was lack of sufficient demand which the producers were worried about. Though, since the beginning of 1960 demand turned favourable, the effect on production was neutralised by transport difficulties. The state of the industry also bears evidence of the adverse effects of the increase in the cost of various materials, enhancement of railway freight, rise in cost of coal and power, incidence of higher wage cost etc. All these have

added up to a heavy burden on cost of production and this has led to questions about the adequacy of the retention prices now permitted by the Government.

The issue has been brought into sharp focus by Mr Dharamsey M. Khatau Chairman of the Associated Cement Companies in the course of his address to the 24th Annual General Meeting of the Company. The question of fair retention prices for cement producers has been a subject of sharp differences of opinion between the Government on the one hand and the cement producers on the other. The issue seemed almost settled when the previous Tariff Commission submitted its report embodying its recommendations on the price to be allowed to the producing units. But Government's refusal to accept the recommendation for an enhanced retention price fixed in 1958 with retrospective effect left the industry high and dry. The question has now been referred to the Tariff Commission for examination and on behalf of the producing units, it has been urged by Mr Khatau that a fair return on capital employed should be conceived as a 'fair net distributable return' after meeting all items of cost. Mr Khatau argues that the overall cost should be estimated on a basis that would exclude such items of direct cost as the full charge for packing whether in New or Used bags, and the commission payable to stockists, or such large items of overhead costs as Bonus and accruing Gratuity to employees, the remuneration payable to Managing Agents, the statutory Development Rebate Reserve and Company Taxation.

The ACC Chairman has made out a strong case for upward revision of the retention prices being paid to cement producers but, the question arises whether such an increase would not lead to rise in the price which the consumer pays for cement. A reconciliation of these conflicting interests is conceivable only if the Government could see its way to sacrifice a part of its revenue which accrues to it in the way of excise duty that is presently being levied on cement.

STEEL

Muddle, and—

The production of finished steel in 1960-61 is estimated by the draft outline of the Third Five Year Plan at 2.6 million tons. This compares with the targeted production at the end of the Second Plan of 4.3 million tons. The trend of production since the publication of the Outline would appear to indicate that actual production that will be attained will be much less. A number of adverse factors have no doubt combined to retard the anticipated rate of production but it is the serious shortage of metallurgical

coal that has constituted the chief handicap. The irony of it is that Government is responsible for bringing about this shortage. Plans for production of metallurgical coal have gone awry and by the time some remedial action has been thought of, the Second Plan has almost run its full course. The private sector collieries will, it has been officially stated, be allowed to expand operations into non-contiguous but proximate areas with a view to augmenting the supply of coking coal. The abnormal delay in the construction of coal washeries has also considerably contributed to the present difficulties faced by the steel industry. Out of the five washeries scheduled for completion during the current Plan period only two have been commissioned so far. Even these are yet to work to full capacity. Of the remaining three, one may be completed some time in the current year and indications are that the other two may take one or two years more to come into operation.

Viewed against this background of an inadequacy of coking coal and of facilities for washing and blending it, the Third Plan target of 9.5 million tons of steel ingots appears too ambitious. Even if all

the needed facilities for embarking on a programme of this magnitude are available, some circles would wish to see the target reduced to manageable proportions. Speaking at the Foundation Day Celebrations of the Indian School of Mines and Applied Geology, Sir Jehangir Ghandy, expressed the view that a target of 8 million tons is about all that is feasible under prevailing conditions in India. He has, however, no objection to a higher target if the additional facilities needed for augmenting steel-making capacity are put up without eating into our meagre resources of foreign exchange. In his view, it will be a profitable arrangement in every way to expand the engineering industry and keep the steel target somewhat lower than that proposed.

Even for realising this more modest target, the lessons of the Second Plan have to be digested. The concession now promised to collieries does go some way but not all towards removing uncertainties over coking coal supplies to the steel industry. The Government will also do well to heed the warning of Sir Jehangir with regard to the supply of lime stone if it wants to avoid a debacle

CENSUS 1961

10 February—5 March

You may find such a number already painted on the wall by your door. Or, perhaps, you will soon find one.

You will be identified and counted in the next census by this number. This number is, therefore, your census number. Please make sure that this number is preserved intact, and help the population census in every way.

Any information that you give is strictly confidential and fully protected.

ISSUED BY GOVERNMENT OF INDIA

DA 60/469

THE INDIAN OVERSEAS BANK LIMITED

has introduced

A RECURRING DEPOSIT SCHEME

to suit the requirements of all classes of people.

Deposits are accepted in multiples of Rs. 5/- with a minimum of Rs. 5/- and a maximum of Rs. 500/

MONTHLY DEPOSIT OF

Rs. 5 Rs. 10 Rs. 50 Rs. 100

WILL GROW TO

In 34 months Rs. 180 Rs. 360 Rs. 1,800 Rs. 3,600

In 46 months Rs. 250 Rs. 500 Rs. 2,500 Rs. 5,000

In 86 months Rs. 500 Rs. 1,000 Rs. 5,000 Rs. 10,000

Please call for full particulars from any of our branches.

M. Ct. MUTHIAH
Chairman

C. P. DORAICANNU
General Manager

similar to the one over coking coal in the 2nd Plan period. His suggestion for the creation of adequate railway facilities in the Sundargarh district of Orissa which has untapped reserves, deserves serious and urgent consideration by Authority.

Considering the audience he was addressing, Sir Jehangir's reference to the fundamental imbalance in our mineral resources is understandable. India has almost an inexhaustible reserve of iron ore—21,000 million tons. It is not, however, so fortunate in regard to coal reserves which are estimated at only 2000 million tons. Since 1½ tons of coal are required to produce 1 ton of steel, Sir Jehangir is rightly concerned about the long-term prospect. Geologists do certainly have their work cut out for them. Another point in his address that should receive the earnest attention of the Government is the good scope for stepping up our exports of iron ore. For a long time this paper has been saying that India can easily export 10 million tons of iron ore a year. Recently it has been suggested by this paper that the foodgrain ships that are coming to our shores at the rate of one ship a day—this rate is to continue for the next four years—may well be utilised for carrying iron ore on their return journey. It is not inconceivable that the US will evince interest in our ore as it has started looking to foreign sources for its supply of iron ore.

More Muddle

Mr P. L. Master, President of the Steel Importers Association of India, also seems to think that the target of 9.5 million tons of steel is rather on the high side. In his view, it will be prudent to settle the target after a thorough examination of the factors that have retarded production during the current Plan and after ensuring that the products that are produced by our steel industry are needed for consumption within the country. Mr Master rightly says that planning steel production on the basis of exports is inadvisable. The main difficulty of the importers of course arises from the fact that steel imports have dwindled due to paucity of foreign exchange. But this is offset to some extent by the permission granted to importers to handle indigenous steel also. The importers may not feel the loss of import trade very much as they are likely to be asked to participate in the export trade also. Mr Master has given a long catalogue of disabilities of the importers and has averred that the problems facing the importers require to be looked into with sympathy and understanding by the authorities concerned.

Paradoxically, it is more on exports than on imports of steel and steel products that the Association will have to concentrate its future attention. The public sector steel plants seem to be confident of en-

tering the export field as they are planning to set up a panel of export houses from amongst the established importers of steel. If the private steel companies also set up some such organisation export promotion in steel products may overcome many a problem that will otherwise have to be tackled individually by the steel producers or exporters. Mr Master has given a number of suggestions to step up the export of steel and steel products. While most of the difficulties can be eliminated by suitable action by Government and other appropriate authorities, the same cannot be said about the handicap

AUTOMOBILES

High Hopes

Addressing the annual meeting of the All-India Automobile and Ancillary Industries Association at Bombay, Mr Manubhai Shah, Union Minister for Industry, spoke in appreciation of the new trend that has set in the production of automobiles. Until 1959, the progress of the automobile industry was fitful and slow. The foreign exchange shortage that loomed large in 1957 particularly cast a shadow on future production. The turn in the fortunes of the industry that has since then occurred was however presaged by the change in Government's policy in respect of automobile production. Particularly after the enquiry of the Jha Committee, there was a wholesome appreciation on the part of the Government of the need for encouraging automobile production, and in this light, Government invited the manufacturing units to submit programmes of manufacture for purposes of foreign exchange allocation so that by the end of 1962 the import of components except those for which there is no immediate scope for developing indigenous manufacture, could be stopped.

On the basis of present progress and programmes that are in the process of implementation, it would be reasonable to expect that the automobile industry would be able to take in its stride the Third Plan targets which envisage a doubling of the

issuing from the ocean freight structure. Mr Master has pointed out some seemingly absurd situations prevailing at the moment. For instance, the freight from Indian ports to continental and other neighbouring ports are much more than the freight from these identical ports to Indian ports. This is a matter that can only be remedied by negotiations with the Conference Lines. It would appear that this is a matter that is to be looked into without loss of time for with such unfavourable freights our steel products, we cannot hope to compete effectively in foreign markets.

capacity for almost all vehicles. In respect of Government policy which affects the industry for good or ill, Mr Manubhai Shah has observed that the efforts already made by the Government so far and which they were continuously making were such as to promote the rapid development of a healthy industry. It is a limitation of the industry that it has to operate with a high cost structure contributed mainly by the low volume of production. While future increases in production should enable costs to be brought down, the extent to which this could be done will depend also on measures related to the development of the ancillary units for automobile components. During 1960 the value of production in the ancillary industry was estimated at Rs 9 crores while for 1959 it has been placed at Rs 7.5 crores. This works out to only a fraction of the total value of production in the automobile industry. As pointed out by Mr Shah, the ancillary industry has a dual role to play in its relation to the automobile industry—to assist the manufacturers to enable them to put more vehicles on the road by reducing their foreign exchange element for imported components, and to meet the demand for the service and maintenance of the evergrowing fleet of vehicles that go on the roads. The leeway that has to be made up is therefore great.

BRITISH OXYGEN

Fresh Challenges

The British Oxygen Co Ltd, which is the parent body of the Indian Oxygen, reports a year of increased profits for 1960. At £9,515,941 the group profit of the Company compares with £8,587,144 for last year. The increase, as Mr J. B. Hutchison, Chairman of the company has disclosed in the statement issued to the shareholders is derived mainly from expansion of overseas sales. Though there has been increased turnover in home trading, this has been offset by higher wages and costs. This is a development that detracts somewhat from the prospects for improving profits in the home front. Demand is estimated to continue at a brisk pace, but anticipated inability of production to meet increasing costs offers no escape from a possible reduction of profit margin. What therefore, Mr Hutchison foresees in the short-term future is vigorous trading and capital development modified in terms of profit.

The Company would thus seem to be left with the alternative of concentrating on overseas markets to maintain profit margins. But prospects are none too good here also, and the Company has to reckon with emerging competition that is being actively fostered by countries trying to set up indigenous capacity for presently imported items. In the context of such competition emerging, Mr Hutchison envisages a fight to maintain and improve the Company's place in the future industrial world. However the fact that the Indian Oxygen, the subsidiary has been going from strength to strength should be a matter of some satisfaction to the parent company. The prospect anyway is challenging and the Company, Mr Hutchison says, should try to meet it. To quote his words, "there are no prerogatives save those that stem from an ability to produce quicker, cheaper and better than one's competitors".

PLANNED PROGRESS

Indian Watches

The laying of the foundation stone of the country's first watch manufacturing plant at Bangalore by Mr Manubhai Shah, the Union Minister for Industries, marks a significant stage in India's industrial development. Costing about Rs 2.5 crores, the project will be completed by Hindustan Machine Tools in collaboration with Japanese Citizens Watch Company. In the initial stages the factory will manufacture 55,000 watches per annum. But the capacity will be raised to 360,000 in the fifth year by introducing multiple shift. The watches to be manufactured initially will be of two models incorporating the latest improvements and fashions in watch designing.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

WHEN a man is great enough to join the select band of Bharat Ratnas, it is the Government that honours itself when it formally confers on him the title. Many, not necessarily in this part of the world, would feel that the gesture has come rather tardily for so versatile and dedicated a patriot as Dr Roy. Dr Roy himself is notoriously unsentimental and is not, unlike another famous Doctor on a memorable occasion, likely to whine that "had it been early, it had been kind". (Yes, I have rather a poor opinion of Johnson's letter to Lord Chesterfield.) Cynics may see a nexus between the timing of the honour and Dr Roy's deft riding of the whirlwind let loose by the Berubari Transfer and may point to the fact that there have been years in which the honour has not been conferred on any one. This reading seems rather far fetched to me. In any event, it is a matter for satisfaction that the formal imprimatur has been given to a status long conceded factually. Leadership in Bengal, especially in the last ten years, can hardly be considered a sinecure. Only idealism of a high order could have seen in it an opportunity, and only an innate strength of character could have withstood the pressure on it, some of it insidiously corrosive and others volcanically eruptive. West Bengal's ills are chronic and intractable and incapable of ministrations merely by an engaging bedside manner. Unlike certain other prolonged ailments—that of India as a whole, for example—West Bengal's have a habit of developing periodic crises. And in dealing with them, Dr Roy has not been helped any by a wide awake and resourceful opposition, which has been alternatively heckling and keening. Dr Roy is sometimes accused of escapism with his Napoleonic schemes for solving West Bengal's and Calcutta's problems. This is hardly fair, since the problems are, as the WHO report on Calcutta shows, of Herculean magnitude.

President Kennedy is certainly buckling down it. Given brains, brawn, plenty of red carpuscles, and a little compassion, we shall lick it yet—that seems to sum up his press conference and the State of the Union Message. Orders are flying about—garrulous generals are to shut up, eligible negroes are to find places in parades, U-2

flights are to stop et al. Deadlines are set for others and himself. Within the next fourteen days, proposals to Congress to tackle unemployment are to be sent by him. A series of "executive orders, legislative requests and co-operative efforts with our allies will get under way" to attract foreign investments and promote American exports and to see that the dollar is "as sound as the dollar". On what he calls the "sore spots on the American scene", messages will be sent to the Congress "within the next two weeks." The sharpening of tools, military, economic, and political are not to be leisurely: The Defence Secretary is to report "preliminary conclusions on the entire defence strategy by the end of February."—a quite impossible feat unless as our leading article argued last week, most of the conclusions have already been reached. Further appointments announced by the President—Ed. Murrow as the head of the USIS for example—confirm earlier impression of fresh air being let in places that had grown musty. Mr Kennedy pulls no punches in his State of the Union message, describing his legacy as "seven months of recession, three and a half years of slack, seven years of diminished economic growth and nine years of falling farm income." He scouts earlier Eisenhower hopes of a small budgetary surplus. (Mr Eisenhower is rather unlucky in his predictions of surpluses. As Walter Lippmann pointed out in a recent article, his earlier prediction of a surplus was for the fiscal year 1959. In the event, the year ended with a budgetary deficit of 12 billion dollars.) Concern about the slow rate of growth of the American economy which was somewhat muted during the last administration, is less inhibited now. On the international aspects of his immediate tasks, Mr Kennedy has very definite views. Of special interest to us is his reaffirmation of the need for a programme analogous to the Marshall plan for assistance to the underprivileged world. The five attributes of the aid programme are admirably summed up by him. They are: "more flexibility for short run emergencies, more commitment to long term development, new attention to education at all levels, greater emphasis on the receiving nation's role, efforts, purpose with greater social justice,

broader distribution and participation and more efficient public administration and tax systems and orderly planning for national and regional development instead of a piece meal approach." These are familiar Kennedy dicta and their reaffirmation should be particularly heartening to us in India.

The Cold War in Fleet Street has involved the Daily Herald in a struggle between newspaper magnates. The steep rise in Odhams shares may have delighted J. S. Elias who rose to be Lord Southwood. The take-over bid of Mr Thomson has been met by another offer made by the Daily Mirror group with an assurance that the Herald will keep its identity. Newspaper shares, long termed risky, have now been endowed with unexpected attractions, and the inquiries of politicians about the dangerous trend towards monopoly make the best shares like the News Of The World look even more tempting to buy for a rise. The TUC has lost control of the Herald: it is logical for Mr Thomson to step forth with a promise of something better for both its readers and shareholders. But a Johnny come lately is bound to cause alarm and the revival of the Harmsworth power under a King made a counter-offer logical.

The appearance of a third party promising to keep up the Herald's colour or colours was equally logical and the three-cornered contest has brought the House of Fraser into a battle that is concerned now with controlling the minds of men as well as their shopping habits. The newspaper proprietors are on the defensive: the printing trades, always trying to keep up a closed shop, may be alarmed by the consequences of their own restrictive practices for the Herald may be swamped by the quality papers of Mr Thomson.

The book publishing business has, of course, undergone many changes but individual firms may escape the clutches of pulp empires. Not so the journalistic enterprises which may remember that the Athenaeum and the Nation as well as the Weekend Review are merged or submerging in the New Statesman. And it is not forgotten that Carmelite House too has closed down papers that cannot bring in a big revenue to meet rising costs. But the struggle has one merit: it is conducted not by quota holders, but by public companies which publish the facts about their operations, resources and profits. In India, of course, newspaper chains hold mysteries that are deepened by the degree of protection offered

—in respect of pages and prices as also that lucrative sideline—the sale of waste newspapers.

The intelligence that American depositors who kept money in a bank in Tangier are now worried about the disappearance of the bank and its directors may be called a moral lesson to those US citizens who keep money abroad and try to buy gold. The bank shifted its domicile to Panama after the take-over of Tangier from the international regime by the Moroccan authorities. The bank's books of account were shifted to Panama, another haven for "funk money" but the directors have done a "bunk". The US depositors have found that about four million dollars of theirs have also migrated and the books of account have vanished: so also the Directors. The discomfited depositors have discovered that the insurance of deposits applies only to native American banks and emigrant funds are not covered by the scheme devised for the safety of both banks and their clients. From Tangier to Panama was a quick step and US citizens perhaps thought that like ships their money could do its work even better under a flag of convenience. The erosion of US privileges and the assertion of local authority in Panama against the extra-territorial privileges claimed for the USA in the Canal zone are developments which could not be anticipated by the most far-sighted and the Directors have probably dispersed after conversion of dollars into the more handy and anonymous form of gold bars. O. Henry could make a mordant story out of the experience of the too clever people who could not trust any but a Tangier bank operating in mystery and unwilling to furnish information to others about the private affairs of nominated clients. The plain moral is that there is no place like home for keeping money—a moral that has its points of interest for others nearer home.

In the passing away of Mr Ramcoowar Bangur, yet another link with Clive Street of old has been snapped. The association of the house of Bangurs with the stock market has been long and inextricable. Mr Ramcoowar Bangur was one of the founders of the Calcutta Stock Exchange Association. The diversification of the Bangur interests and their latterday industrial orientation, owed not a little to the old man's acute sense of the trends of the times. Not all his time was spent on business. Only recently he completed and consecrated a Temple in South Indian style in Calcutta. He had other wise uses for his wealth, acquired, in the manner of his contemporaries, assiduously and unostentatiously. These and the growing Bangur enterprises are a fitting monument to a life usefully spent.

EAVESDROPPER

Olympus

Legislated Apprenticeship

The Third Plan programmes, it has been estimated, will need about 11 lakhs of skilled craftsmen—7,50,000 in the engineering trades and about 3,50,000 in non-engineering trades. At present there are 160 industrial training institutions offering training facilities for 37,000 technicians, as against 59 centres for 10,500 trainees at the beginning of the Second Plan. The Union Minister for Labour and Employment told the last meeting of the National Council for Training in Vocational Trades, that the number of Training Centres will be increased to 300 in another three years, providing facilities for training 1,00,000 craftsmen. The instruction imparted in the training centres has to be reinforced by in-plant training. The Minister emphasised the necessity for providing such training and urged that increased facilities should be made available to the largest number of workers. A comprehensive view should be taken of total

training requirements to see that the arrangements made by various agencies for this purpose were adequate in quality and quantity. The Minister also stressed the need to bring the training programmes now conducted by different agencies in the public and the private sector within the purview of the National Council for Training in Vocational Trades, in order to ensure maintenance of proper standards.

The National Apprenticeship Training Scheme and the legislation foregrounded by its effective implementation were among the main topics discussed at the last meeting of the Council. The Scheme was started with a limited number of Trades in a few centres, and aimed to provide ultimately for the training of 5000 apprentices during the Second Plan period, in trades which are customarily learnt in a practical way through training and work experience on the job. The Council was entrusted with the task of laying down policy and standards as well as coordination of the programme throughout the country. Implementation of the programme was the responsibility of the

Directorate of Training in the Ministry of Labour. At the State level Apprenticeship Committees, tripartite in character, were to be set up to promote and develop the programme. One of the main functions of these committees is to select and post apprentices for training on different industrial establishments through a sub-committee appointed for the purpose. Under the Scheme the employers are expected to provide and maintain practical training facilities or to release apprentices during working hours to attend related instruction at local technical schools. The sub-committee for selecting apprentices would also include the manager of the establishment taking the apprentices, who has the right of veto. The apprentices selected are paid on the same basis as under the existing apprenticeship schemes of the individual establishments in which they are trained. The actual payment made to Government apprentices, plus the value of hostel accommodation and messing, when provided, up to a maximum of Rs 50 per month for the first year and Rs 60 per month thereafter, would be reimbursed by Government. Government also makes a fixed monthly payment depending on the nature of the apprenticeship trade, but not exceeding Rs 15 per month per head, to compensate for consumption of material, use of tools etc., by Government apprentices. At the completion of the course the apprentices are tested jointly by the nominee of the National Council and the nominee of the employer giving the training and successful candidates are awarded certificates of proficiency. Industrial establishments are under no obligation to give subsequent employment to Government apprentices who have completed training in their works and have passed the trade tests nor could they claim any special lien on the services of a Government apprentice by reason of his having been trained at their works. Under this scheme seats were allotted among different States rising from a total of 1,315 seats in 1957-58 to 7,050 seats in 1960-61.

The progress of the scheme during the Second Plan period has not been upto expectations. A Committee set up by the National Council had recommended legislation to provide the legal framework for implementation of a Scheme of larger dimensions on a national scale during the Third Plan. The recommendations of the Committee were endorsed last August at the third meeting of the National Council which called for speedy action, and also suggested that consultations should be held with employers and officials concerned with the scheme to settle the detailed provisions of the proposed legislation.

The fourth meeting of the Council held last week was told that these discussions had been held and that the employers had indicated their agreement in principle. The modified draft of the proposed legislation is now under consideration of the Government. In the course of the discussions at the last meeting, divergent views were expressed on the necessity and advisability of introducing a measure of compulsion for the implementation of the scheme. Em-

ployers' spokesmen were generally against the provision by which industrial establishments would be compelled to take in a specified number of Government apprentices irrespective of the facilities at their command. It was strongly urged that the purposes in view, namely the training of the required number of craftsmen in different trades, could be better achieved by enlisting the co-operation of the employers. Enlightened employers have already done quite a lot in this direction without any prodding from the Government. Tatas, for instance, have apprenticeship training schemes which have been in operation for the last thirty-five years. The annual turnover of trained apprentices is now over 1700.

The difficulties of the engineering establishments under the proposed legislation should also be taken into account. The need for trained craftsmen is greatest in this young and rapidly growing industry. But, as their spokesman told the Council, many of the units are small establishments which do not have adequate accommodation even for their machines, and they would be hard put to discharge their obligations under the proposed law, unless their circumstances were taken into consideration in framing the final proposals. Large and small units cannot be treated on the same basis in respect of their obligations to provide training facilities. There should be provisions under which a number of small units in the industry could co-operate in setting up a common training centre. The problem is more complicated in the case of industries which are widely dispersed in small units, like the building trade, for instance. Special arrangements have to be made in respect of training craftsmen on an adequate scale for this industry which is marked out for large expansion in the Third Plan.

The official viewpoint appears to be that, while some employers have provided for training of apprentices, their number is limited and, unless there is a legal obligation, employers are not likely to come forward in sufficient number to provide in-plant training facilities on the scale necessary to meet the requirements for craftsmen during the Third Plan period. But this is a point which requires further consideration in the light of the practical requirements of effective training. There is need for detailed survey of the industries to assess the training facilities now available, as well as the additional facilities required, and to take steps to fill the gaps in respect of special workshops, recruitment of teachers, their training etc. This is a field in which it should be possible to extend the field of co-operation between Government and industrial establishments. Unless adequate steps are taken in this regard, legislation will remain largely ineffective. It was forcibly brought to the notice of the Council that it should not be necessary to wait for the enactment of legislation for setting up the necessary machinery for its implementation. And it was agreed that preliminary steps for implementing the provisions of the proposed legislation should be taken immediately and a special committee should be set up for this purpose.

Markets

JUTE In Short Supply

Although prices in the jute markets are daily scaling new levels these past few days, not many are found attributing the present firm trend to speculation in raw jute. This is rather strange since till recently almost everyone who had anything to do with the jute markets and industry appeared quite convinced that the sorry plight of the jute goods trade was the result of unbridled speculation. It was generally believed then that if only Government took stringent measures to immobilise speculative tendencies among market men, everything would become normal and smooth. A series of measures had been issuing at frequent intervals during the past few months from various authorities. The matter was first left to be tackled to the best of its ability by the East India Jute and Hessian Exchange and later on the Forward Markets Commission took an active hand in the proceedings. The last to join the fray was the Reserve Bank which placed a ceiling on advances by banks against jute and jute goods. In the meantime, Parliament has conferred on the Forward Markets Commission enlarged powers to enable it to initiate drastic steps to regulate prices.

The Indian Jute Mills Association has also played a notable part in trying to arrest the boom in the jute and gunny markets. Although it also subscribed to the view that speculation in raw jute was partly responsible for the runaway price levels, it had nevertheless initiated measures on the assumption of an insufficient jute crop in the current season. A cut in production by sealing looms and a quota system for the purchase of raw jute were two of the most important among these.

The question arises why then prices have not only not declined but have on the contrary continued to move up. It cannot be maintained that the measures taken by Authority and the steps taken by the IJMA to curb speculation have been ineffective. Whatever might have been the situation some time back, it must be admitted that speculation is playing a very minor part, if at all, in the present uptrend. It is evident that the paucity of raw jute in the market is directly aiding gunny prices. Assam Bottoms was done early this week as high as Rs 85 per maund and it is not surprising that B Twills and Hessian 40"x10 oz were done at Rs 208.00 and Rs 68.25 res-

pectively at the same time. The IJMA's quota system is somewhat effective in bringing down the price levels but the moment it is known quotas have been allotted, prices again resume the uptrend. As has been noted in this column last week, there is no denying the poor arrivals of raw jute so far this season. Now that the sowing time is fast approaching, it is extremely unlikely that cultivators are still holding appreciable stocks of raw jute in the hope of obtaining higher return than what they are able to get at the present juncture. Given favourable weather conditions, sowings next season will be larger and much sooner than usual for the simple reason that cultivators know that demand for jute will continue to be very good next year as there will be little jute left at the end of the current year to be carried forward. The inordinate delay in the publication of the crop estimates by Government is not helping any. On the contrary bulls have used it to reinforce their position. They argue that the reason for the delay is that Government has now found that its earlier estimate was unduly optimistic and since prices have already touched unconscionably high levels it does not want to add fresh fuel to the bullish fervour by publishing the estimate. It is also pointed out that Government is now able to see that there is no point in going on imposing restrictive measures when world prices of jute goods are by no means cheaper than Indian prices.

For the time being atleast, thanks largely to the good work done by the IJMA delegation which visited the US and other buyer countries with a view, among other things, to explaining to the consumers in those countries why jute goods prices had gone up so much this year, overseas buyers including the burlap consumer in America, will willingly pay the present high price, and this change of attitude is already evident in increased foreign enquiries. But it is idle to expect the foreign buyer to continue to pay the present high prices for any length of time. If he has agreed to oblige us now it is largely because he has been given an assurance that once the raw jute supply position improves, prices will come down appreciably. There is every reason to expect that he will not be disappointed. The only uncertainty—it is indeed a very big uncertainty—is the weather. Barring this, it may be expected that strenuous effort will be made to grow as big a crop as possible next year. There is every reason to hope that Pakis-

tan too will programme for harvesting a sizably enlarged crop. It is imperative that the conditions we are today witnessing in the jute markets do not repeat themselves next year—it is idle to attempt to bring down prices before ensuring a sufficient supply of raw jute. The only practicable idea is to be extremely vigilant from the growing period upto harvest time with a view to taking all necessary measures to offset adverse influences, not excluding vagaries of the weather. A sizable increase in productivity of the industry and the yield of raw jute per acre are two other desiderata, but they are obviously longterm ideas.

During the past week, prices of jute goods have been pushed up to giddy heights. Even though the week's high levels have not been found tenable in later dealings, the undertone has continued to be steady. The raw jute section is dictating the pace and indications are that it will continue to do so for a considerable time to come. The fact that a fair amount of foreign enquiries have been received during the week is also helping the firm trend. For obvious reasons mills are not evincing keen interest even at the present high levels, as cost of production is likely to increase due to factors other than the high prices for raw jute. Besides the interim increase in wages recommended by the wage board for jute (now accepted by the Government), cost of production may also go up if the recommendations of the Special committee on jute industry are accepted by the West Bengal Government. Yet another reason for the firm trend in gunnies is that mills have started working 42½ hours a week effective 1 February 1961. This will mean a further reduction in goods production and consequently of their availability to the overseas buyer.

The undertone in the jute markets on Thursday was somewhat quiet presumably due to rumours that Government might impose ceiling on prices of certain varieties of goods. Assam Bottoms February delivery was quoted at Rs 61 per maund; but there was still no indication that fresh quotas had been issued to mills.

In the goods section B Twills ready reacted to Rs 199.50 with Hessian 40"x10 oz changing hands at Rs 65.

TEA

Demand at Irregular Rates

IN the Export Sale held in Calcutta this week, offerings amounted to 73,274 packages. There was a good general demand at irregular rates. The best autumnal teas came in for good support at dearer rates; but the remainder were 10 nP to 20 nP per kilo lower. Medium and secondary grade were very irregular, but generally up to 10 nP lower. Medium Assam BOPs and OFs were easier by 10 nP to 20 nP except for the occasional brighter liquoring types which inclined to be dearer.

Medium BP's were steady, while some Fannings were irregular though some of the better types were sometimes dearer. Black Doors BOPs were a very strong feature and were often dearer, but some Fannings were irregular. Plain Broken's were about steady, while Fannings, particularly the better types, inclined to be dearer. Legg-cut teas were irregular. Stylish leaf grades were sold well, but the poorer stalky types were easier and sometimes difficult to sell.

There was no overall change for the best Darjeelings; but the remainder inclined easier. Tippy teas, though irregular, were sold fairly well. Following rates (per kilo) were quoted:—Clean Block Pekoe Rs 5.20 to Rs 5.45; Plain BP Rs 4.50 to Rs 4.65; Plain Fannings Rs 4.80 to Rs 5.00; Medium BP Rs 4.70 to Rs 4.90; Medium Fannings Rs 4.90 to Rs 5.15; Best Assam CTC BP Rs 5.70 to Rs 6.10 and Best Assam CTC Fannings Rs 5.80 to Rs 6.30.

In the internal sale, offerings consisted of 21,253 packages of Dusts and 545 packages of Leaf grades. There was a good general demand for dusts which strengthened as the sale progressed. Orthodox dusts were often firm with the small bright liquoring sorts a strong feature. Legg-cut dusts followed a similar trend, the smaller kinds again selling well. Darjeeling dusts came to a strong market and were taken up at enhanced prices. Medium CTC types were readily absorbed at around last rates with the brighter lines generally dearer. The best CTC dusts were sold at irregular rates following quality. Following rates were quoted (per kilo):—Plain Orthodox Dust Rs 4.85 to Rs 5.00; Medium Assam Dust Rs 5.95 to Rs 5.35; Legg-cut Dust Rs 5.15 to 5.40; Medium Assam CTC Dust 5.60 to Rs 5.80 and Good Assam CTC Dust Rs 6.00 to Rs 6.40. Leaf grades met with a good demand, the few green teas realising excellent prices.

Production of Tea in India during 1960 declined further to 696.1 million pounds from 716.1 million pounds in the previous year and 717.7 million pounds in 1958. The decline in production was entirely due to the marked fall in output in North East India from 561.2 million pounds in 1959 to 527 million pounds last year. This decline was partly made good by the increase in production in South India from 154.9 million pounds to the new record figure of 169.1 million pounds during the year under review. The shortfall of 20 million pounds in the total Indian output is,

however, unlikely to affect the world market, as the tea outturn in Ceylon alone recorded an increase of 23 million pounds from 413 million pounds to 435.6 million pounds last year.

In the Colombo market, offerings were 7,163,272 pounds. There was good but irregular demand. Dimbula-Dickoya broken orange pekoes with distinctly improved quality were dearer; but others were frequently lower. Better liquoring medium BOPs were also irregularly lower; but poorer sorts were fully firm. Corresponding high and medium-grown BOP Fannings were also lower except for those with distinct improvement in quality. Low-grown teas, suitable for the Middle East market, were in strong demand at firm rates; but small leaf kinds were slightly lower.

In London auction, a total of 30,330 packages including 25,663 packages from Northern India were on offer. After a quiet opening, demand improved and prices for the best sorts and coloury mediums showed little change from last week. Thin liquoring types were irregular and occasionally easier; but plain teas were firm at last rates.

In the Cochin market, 139,000 kilograms of tea Dusts were offered for internal consumption. Against strong and excited demand, the market was irregularly 10 nP to 20 nP per kilo dearer for all sorts.

Exports of tea from South India have fallen to 6.24 million pounds in December 1960 from 8.81 million pounds in the corresponding month of 1959. This reduces the total exports, in the nine months ending December 1960, to 57.96 million pounds from 59.87 million pounds in the corresponding period of 1959.

COTTON Futures Continue Easy

Due to the conspicuous absence of any investment support, the Bombay cotton futures market continued to be easy during the past week. The inordinate delay in releasing fresh quotas to the mills to cover their requirements of Indian cotton was mainly responsible for the easy trend in the market. Many spinners were reported to have kept away from the market as they have utilised their previous quotas. The increasing arrivals of new crop from Gujarat, Malwa, Vidharba and Khandesh have in their wake cast a depressing spell on the market. Upcountry traders too were reluctant to enhance their stocks of cotton apprehending a further decline in prices in the near future.

The current rumours in the trade circles reveal that the Textile Commissioner is inclined to permit mills to purchase indigenous cotton to the extent of 75 per cent of their last season's consumption. Nearly 1.8 million bales of new crop cotton had been marketed so far and an equal quantum is likely to arrive in the market within a few months. In that case there will not be any difficulty to issue quotas to the mills on a liberal scale.

Prices of Vijay, Digvijay and Surtis registered a further decline of Rs 7 to Rs 10 per quintal. Other varieties of cotton also suffered a similar fall in prices. As the arrivals of cotton from South India are to commence very soon, mills have made a strong plea for the release of the third instalment of quotas at an early date. Bengal Deshi cotton is also reported to have suffered tremendously as the long awaited announcement of new export quota has yet to come.

Consumption of cotton by the Indian mills from 1 September to 31 October totalled 841,703 bales.

Description.	1960	1959.

Total ...	362,250	151,862

Export of Indian cotton to foreign countries from 1 September to 7 January aggregated 57,001 bales as against 66,714 bales in the corresponding period in 1959-60.

Liverpool.

In the Liverpool futures market the near position weakened during the first part of the week due to small liquidation orders from the USA and some mill hedging. But as the week progressed prices of all deliveries improved as a result of the advance in New York market. The prospects of a higher new crop loan rate in the United States is likely to hold the new crop firm.

Inquiries during the week under review were mainly confined to US cotton to cover mill requirements for early spring shipment and the sales amounted to 10,200 bales.

This season's Nigerian cotton has turned out to be of good quality and 150,000 bales have already been disposed of. China, Japan, the UK, Belgium, and Holland figured as the leading buyers of this variety.

Shipment offering prices of all the growths have recorded a moderate change in the week under review. Holders of Sudan cotton are reported to have offered this variety at lower prices. The offtake was pronouncedly meagre. Recent purchases by Japan amounted to 98,000 bales.

At the close of the market on Thursday last, the various positions were quoted as follows: American March 23.10d., October 24.20d., American type Contract March 23.40d. and October 24.55d., Sudan contract, however, remained unaltered at 34.75d.

Indian Finance

New York.

Prices of new crop in the New York futures market looked up but near position is being held due to an additional increase in the certificated stock. Opinions of new crop prices have been heightened by stronger conviction that the new Administration will legislate for higher support prices. After a modest profit taking in new crops, the near March closed on Wednesday last at 32.22 cents and the distant March at 34.35 cents.

Piecegoods.

The Bombay piecegoods market depicted active conditions during the past week. Offtake was on the whole encouraging and the prices were a shade better.

Trading in the domestic sector was characterised by the improved demands from upcountry centres. Bleached longcloth, shirting, patto and drills met with fair inquiries. The premium ranged between 8 and 12 percent over the ex-mill prices. The revival of demand was induced by the fact that consumer demand had begun to pick up, though it failed to reach the expected level.

The supply position was unfortunately restricted. The arrivals of stamped goods into the market were disappointingly meagre. On certain occasions some of the popular varieties were not available in the market. Therefore ready business in these goods was limited. Kanpur, Delhi, Amritsar, UP, Calcutta and Bihar figured as the leading consuming centres.

Moderate activity was noticed on the export front. An outstanding feature of this week's trading was the emergence of W. Germany as a buyer of Indian cloth. That destination accounted for a small quantum of grey leopard of super quality. Rumours are also current that Ceylon is likely to impose a total ban on import of cloth from India.

Business with Sudan suffered tremendously due to the disparity in prices. Stray business was done with Mombasa in coating, grey sheeting, gadiapat, gin and leopard. The UK accounted for a small quantity of grey sheetings. Australia and New Zealand made limited purchases against new import licences. Singapore, Hongkong and Bangkok made enquiries for a variety of items.

NON-FERROUS METALS

The Copper market in Bombay appears to be holding very steady during the past few weeks. Wirebars are quoted at Rs 250; Ingots at Rs 235 and Blister at Rs 225. The general opinion is that, if there is a substantial cut in actual user licences and allocations—which appears to be a certainty due to the tight foreign exchange position,—the chances of copper and its products declining do not appear to be bright.

According to the Indian Bureau of Mines, the production of copper ore, during January-November 1960, was 407,854 tonnes, representing an increase of about 9 per cent as compared to the output of 373,078 tonnes in the corresponding period of the previous year. The entire production was reported from Singhbhum district of the Bihar State. The production

4 February 1961

of copper metal, during January-November 1960, was 8,161 tonnes as compared to 7,303 tonnes in the corresponding period of 1959.

Last week's cut in copper production by Anaconda, the US producer, has been quickly followed by a cut by another prominent producer. This means, that all the leading copper producers in the USA and Rhodesia have now reduced output by 10 per cent and a total of 300,000 tons of metal a year has been removed from the world market. Copper prices on the London market have, however, remained unchanged at £220 per ton. This is mainly due to a feeling among the consumers that there may still be a surplus this year, especially if world copper consumption falls.

In respect of other non-ferrous metals, Zinc has been steady around the previous week's rate with nothing fresh report except stray rumours that some actual users have received import licences.

The Lead section remains dull with small trading reported around to 133.85 per quintal.

Despite steady advices from Singapore, Tin is quiet with deals reported done at Rs 115 for ready and Rs 119.50 for January delivery, for 10 kilogrammes.

SUGAR

Sugar production during December 1960 totalled 478,000 tons as against 427,000 tons in the corresponding month of last year. This brings the total production for 1960-61 season up to December to 766,000 tons as against 642,000 tons in the corresponding period of last season. Offtake of sugar from factories, during December 1960, was 163,000 tons as against 171,000 tons. Despatches up to December 1960 totalled 314,000 tons as against 302,000 tons by the same date last season. The closing stock with the factories, as on 31 December 1960, was 994,000 tons as against 482,000 tons on the corresponding date of 1959.

Production in Uttar Pradesh touched a new high last year enabling the sugar mills to crush a record amount of 242,800,000 maunds, producing 1,220,000 tons of sugar.

Thanks to the announcement of a further quota of 50,000 tons released for export for the period ending 31 March 1961, Sugar prices have moved up in the Hapur market, quoting around Rs 111.25 per bag.

KHANDSARI

Khandsari prices have also moved up by about a rupee a maund on better outside demand. Khandsari is being sent to East Uttar Pradesh for onward despatch and also to the Punjab and Rajasthan. The rates for the superior quality are quoting at Rs 31 to Rs 35 a maund, according to quality.

GUR

The market for Gur is ruling quiet, reflecting a slack demand for the commodity. Daily arrivals in the Hapur market are reported to have declined to 3,500 maunds, while the local stock is estimated around 30,000 maunds. Pansera quality is quoted at Rs 13.25 to Rs 13.62 a maund.

FOODGRAINS

Quiet conditions prevailed in the Hapur Foodgrains market following good prospects for the "rabi" crop. Wheat, Gram and other coarse grains were sluggish, while pulses were featureless. After gains inspired by the paucity of stocks, wheat prices declined to the week's opening level of Rs 13.37 a maund for the average quality and to Rs 18.75 for the farm produce. Although the daily arrivals were small, consumer demand was being met by resorting to heavy sales of wheat and wheat flour at ration shops.

The market for Rice and Gram remained unchanged. The crop prospects for gram are considered to be good following rains in early January. Maize prices drifted to lower levels, as stockists were anxious sellers on account of the feeling that the consumer demand would subside by the end of February. The markets for Peas and Arhar were lifeless. Despite a poor stock position, the demand for pulses was dormant. Crop prospects are reported to be bright and harvesting of peas will begin by the end of February. New Urad and Moong were still reaching the market from outside and the prices for these were almost static.

A smart improvement in indigenous Rice provided the main feature of trading in the Bombay market. The improvement in prices was attributed mainly to trade support inspired by a growing feeling that the worst was over, at least for the time being. The outlook for the market turned better following the reports that the prices in Madhya Pradesh, the chief source of supply, had risen by about Rs 2 per quintal with Saurashtra, Gujarat and Kutch figuring as active buyers. Besides, the local demand continued to be fairly good. Most observers are, however, inclined to rule out the possibility of a further rise in prices in view of the local stock being fairly large and of the possibility of further arrivals from Madhya Pradesh.

As the demand was fairly good, Wheat prices looked up by a rupee per quintal on account of relatively small arrivals from upcountry centres. Traders, however, preferred to be cautious in view of the beginning of modest arrivals of new crop from Nasik. Trading in the Coarse grains section was highlighted by a drop of Rs 2 to Rs 3 per quintal in the prices of popular varieties of Jowar. The setback was attributed to selling pressure, induced by modest arrivals of the new crop from Sholapur.

YARN

In the Bombay Yarn market, Staple-Fibre Yarn showed a spectacular rise in prices. While the 2/40 denier February delivery shot up from Rs 798 to Rs 826, the April delivery gained about Rs 29 to quote Rs 822 per bale. Ready prices also went up by about 5 nP to 8 nP per pound. The spurt was largely speculative in character. There were also fears of any shortage of staple-fibre yarn in the near future; but the speculators rigged up prices on reports that the Government of India had deferred the scheme of stamping prices.

The market for Rayon yarn continue to rule steady. Nylon yarns remained almost unchanged.

In the Cotton yarn section, fine and superfine varieties displayed fresh strength. Powerloom factories from Surat, Bilaspur, Benares and Madura were reported to be active buyers of finer counts of yarn even at increasing prices. Among 60s, Finlays went up by a rupee to Rs 67 per bundle, while Madura 40s were placed at Rs 32.

In the Amritsar market, buoyant conditions were noticed in the art silk yarn market. Following heavy fall in import licences resulting in acute shortage of stocks and good seasonal demand by local market, art silk yarn prices advanced further by 6 nP to 12 nP a pound to reach the highest levels touched about four years ago. The demand was also attributed to pre-Id purchases by Delhi and Uttar Pradesh buyers.

The upward trend in Woollen yarn prices was also maintained and prices advanced further by 12 nP to 25 nP a pound to touch the highest level reached last year. The rise was due to a further fall in production by spinning mills in the Punjab on account of a further cut in power-supply and refusal of mills to enter into new commitments.

PEPPER

The absence of foreign demand is keenly felt in the Cochin Pepper market, where the rate is quoted lower at Rs 395 per quintal as against Rs 405 in the previous week. The US is keeping away from the market, as she gets her supplies at lower prices from Singapore. Indian stockists, however, do not seem to be in a mood to reduce their prices at present as they expect Singapore supplies to dry up soon and foreign buyers to turn to India ultimately.

CASHEW

According to the latest figures, India has exported 1,344,624 pounds of cashew kernels, valued at Rs 14.17 crores, during the first nine months of last year as compared to 1,322,985 pounds valued at Rs 11.79 crores in the corresponding period of 1959. The USA with an offtake of 870,307 pounds was the largest importer of Indian cashew kernels, the Soviet Union and the UK coming next in order with 175,551 pounds and 82,896 pounds respectively. Canada, Australia, West Germany, East Germany, Hongkong, Netherlands, Belgium, Singapore, Iraq and Malaya were some of the other big importers of Indian cashew kernel last year.

BANGALORE SILK

During the week under review, fair trading in filature raw silk was reported at the revised prices announced by the Silk Marketing Co-operative Society Ltd, Bangalore, effective from 2 January, 1961. Trading in other qualities particularly in Cottage basin silk continued to be bearish. The prices for charka and cottage basin showed a further decline by Re 1 per kilogram in charka and nP 96 to Rs 3.16 per kilogram in cottage basin. The week-end quotations were between Rs 80.48 and Rs 83.23 per kilogram for filature,

Rs 71.64 and Rs 72.74 for cottage basin silk and Rs 51.80 and 70.54 for charka silk. Due to sparse cocoon crops during winter months, the supplies of silk to the market were limited.

On account of low production during winter months the prices for reeling cocoons continued to be quoted high ranging between Rs 4.50 and Rs 5.50 per kilogram for cocoons from Channapatna area, Rs 4.95 and Rs 5.50 per kilogram for Sidlaghatta area cocoons and Rs 3.25 and Rs 4.25 for Mugur area cocoons.

Prices for seed cocoons maintained steady level. The Mysore race seed cocoons were quoted between Rs 4.50 and Rs 5.50 per 1000, while foreign race seed cocoons were quoted between Rs 9.00 and Rs 14.00 per 1000 seed cocoons.

GOLD & SILVER

Prices on the Bombay Bullion Exchange continued to display a firmer tendency, thanks to renewed speculative support from Delhi operators. Advices from Calcutta were also encouraging. In brief, bulls were in full control of the market and manipulated prices in such a way that bears had to rush to cover.

Since Gold Maha delivery moved up by more than Rs 5 since the start of the settlement, the bullion authorities imposed a special margin at the rate of Rs 6 per 10 grams. Receipts amounted to 10,000 tolas as compared to an offtake of 5,000 tolas. Unrefined metal receipts amounted to 6,000 tolas. Ready gold changed hands at Rs 121 to Rs 121.50, while Sovereign remained very firm at Rs 93.25.

Firm in their conviction and in full control of the market, operators in the Silver section rigged up prices to new high levels. The reports, that spot demand in upcountry centres was broadening, also imparted further strength to the market. Arrivals amounted to 35 bars as against an offtake of 20 bars. Silver (below .996). Unchanged hands offtake of 20 bars at Rs 208.35 to Rs 209.

COCONUTS & ARECANUTS

Lagging pace in the production of coconut and arecanut would seem to have aggravated the difficulties in meeting the internal requirements of these two important commodities. It was revealed at the annual meetings of the Coconut Committee and the Arecanut Committee held in Madras recently that progress in production in these two fields measures upto only 50 per cent of the Second Plan targets. This would call for proper investigation for the reason that the price factor has offered sufficient inducement to growers to step up output. The price factor has in fact swung so much against the consumer that it has been felt necessary by the Central Government to appoint a committee to make recommendations on reasonable prices for these two articles. While some scope for reduction in price may be found, the proper approach should be to aim at a lower free market price on the basis of increased production, in which there is considerable shortfall at present. Total supply of arecanut has suffered a sharp

decline estimated at nearly 400,000 maunds in recent years. Shortfall in internal production of coconut is also a source of heavy drain on foreign exchange which is estimated at Rs 12 crores.

Though increasing the production is recognised to be important, the land ceilings legislation being put through by State Governments would seem make this difficult. The implications of such legislation came for notice and discussion at the meetings. It was not to the State Governments that in the interest of increased production and in the larger interests of the country, it may be necessary to make a different approach in the enforcement of ceilings to these plantations. While complete exemption from the purview of such land ceilings legislation is not asked for, a case for comparative immunity from ceiling legislation was persuasively argued.

Although the new season has started, indigenous supply of coconuts is falling short of expectations of millers and traders. The coconut yield this season is said to be below normal. Imports from Ceylon, which supplement the indigenous supply, have failed to come up to earlier expectations. The demand for coconut oil is, therefore, on the high side, while sellers seem to be reluctant to dispose of their stocks anticipating better prices. In fact, coconut, copra, coconut oil and oilcake have already registered a handsome rise in prices during the past two weeks. Following rates are quoted:—Cochin ready Rs 256.50 (per quintal); Alleppey Rs 770 (per candy) and Madras Rs 46.75 to Rs 47.50 (per tin of 16.5 kilogrammes).

OILS & OILSEEDS

The second conference of oilseeds workers in India was held in Madras on 17/18th January. and Mr H. Sitarama Reddi, Vice-President, Indian Central Oilseeds Committee, presided.

About 64 interesting papers on agronomy, physiology, plant breeding and genetics, plant pathology and entomology, oil chemistry and technology and marketing were placed before the conference.

In 1955-56, the value of oilseeds produced in India, from five major oilseeds crops, were valued at Rs 268 crores. The total value of oilseeds produced forms roughly 8 per cent of the value of the total of Indian agricultural products.

The oils produced are used in edible forms; and industries take them for paints, varnishes, lubricants and greases. Other important uses are for soap-making and hair-oils.

The need for raising edible oil production is greater today in view of the rapidly increasing population and the quick urbanisation of the country. Also, as the standard of life improves, the consumption of edible oils in the country will surely go up.

Mr Sitarama Reddi stated that the total internal consumption of edible oil was about 2.93 million tons. Assuming 30 per cent to be the oil content of the seeds, the total oilseed requirements would be of the order of 10.74 million tons. As seeds qua seeds needed for growing the oilseeds, the additional requirement would be 974,000 tons.

As for the Third Plan oilseeds requirements, Mr Reddi said that originally the estimated need was placed at 12.64 million tons. This represented an increase of 5.09 million tons over the Second Plan target of 7.55 million tons, ie, an increase of 67 per cent. But, this target was considered too high, and after taking into account the technical and organisational resources available in the country, it was refixed at between 9.2 and 9.5 million tons.

That the scope of expanding oilseeds acreage was also limited and that the increase was sought to be achieved through stepping up the yield per acre by resorting to scientific practices was pointed out by Mr Reddi. The average acre-yield in general, particularly in groundnut and castor, was very low in India. The yield could be stepped up considerably through improved methods, improved seed and improved agronomic practices. Provision of better irrigation and protection of the crop from diseases were also necessary.

Mr Reddi recalled how the Indian Central Oilseeds Committee in 1957 liberalised the pattern of financial assistance to State Governments for agricultural research and development schemes. There has, in fact, been a remarkable increase in the number of research and development schemes. Mr Reddi said it was of the utmost importance that the yield per acre should be raised by at least 10 to 15 per cent without any additional expenditure; unfortunately, the area under improved varieties of oilseeds crops in various States was disappointingly low. By distribution of improved seeds alone, an increase of 10 to 15 per cent could be achieved.

In his inaugural address, Mr M. Bhaktavatsalam, Madras State Agricultural Minister, pointed out that India accounted for 23 per cent of the world's oilseed production. India had enjoyed till recently a monopoly in the international market for groundnut and castor—but the situation had now altered. Indian oil exports were diminishing due to higher local consumption, growing population and growth of industries.

Madras State's acreage of oilseeds, is 7.5 per cent of the country's total, and from this acreage 15.5 per cent of the total production was harvested. During the Third Plan, Madras hoped to produce 1.1 million tons, representing an increase of 295,000 tons over the production of oil seeds at the end of the Second Plan.

The week's trading in the Bombay Oils and Oilseeds markets was highlighted by a sharp spurt in the prices of groundnut, following the Government decision to release for export 20,000 tons of HPS groundnut oilcake of the expeller variety. The announcement had a particularly bullish effect on sentiment because of the acute shortage of supplies. With the receipt of the new crop falling short of the internal demand, the market was already experiencing considerable difficulties.

Observers now feel that the latest decision will only aggravate the shortage, especially when crushers and vanaspati interests, have been actively absorbing all the available supplies. Although the inflow of the new crop in Saurashtra and Andhra is reported to be fairly good, most centres appear to have little to spare after meeting their immediate requirements.

So far as the outlook for exports is concerned, the trade is cautiously optimistic about business in HPS groundnut. While the current UK prices of £93½ per ton for bold HPS are stated to be lower than the Indian parity by about £1½ per ton, the Canadian levels are within the range of correction in the near future. There have been enquiries lately from some of the Communist countries, too, and the possibility of business with them is rated high. Developments in the next few weeks are expected to provide a clearer idea of the export opportunity. Meanwhile, groundnut bold quality is quoted at Rs 42.25 and Groundnut Oil at Rs 20.35.

Trading in the Castorseed section was devoid of any fresh influences. The outlook for the export of castor oil continued to be bleak; but some shippers were reported to be covering their requirements of oil against previous commitments. The sustained firmness in groundnut had a favourable effect on the prices although the market lacked strength of its own. Castor ready is quoted at Rs 34.62 and Castor Oil, commercial quality, at Rs 14.05.

The Linseed section, presented a listless appearance, prices moving in line with those of other oilseeds. The possibility of exports of linseed oil continued to be remote and the volume of business was usually small. Linseed ready is quoted at Rs 36.25 and Linseed Oil at Rs 16.35.

There has been a modest reaction in the Calcutta Linseed market this week due to bigger offers of the new crop at cut rates for April/May delivery. The ready price has declined to Rs 29.50 a maund. Although the demand for the commodity is good, crushers are inclined to buy rather cautiously. The Oil section is also quiet as buyers anticipate a further decline in prices. Turnover is limited.

HIDES & SKINS

In view of the prices of tanned cowhides being still high, big deals could not be put through. Receipts of stocks were also moderate. East India tanned cow-hide sellers still seemed to be very costly to UK customers and it was reported that they are trying to look to other

sources of supplies. But light weight hides were dealt with at 68d, 58d and 48d for run, fourths and fifths. Also good inquiry was made for higher weights of 8/8½ lbs Vs 10/12 lbs. However since local prices were more attractive, tanners did not pay attention to c.i.f. side.

Cow calf tanned skins were commanding quick clearance since arrivals were not large. The case with tanned buff calf was different since stocks are accumulating demand being poor. Prices for premium and semi-premium qualities were lower.

Prices were advanced in tanned skins between 12 to 15 nP per lb. For overseas quotations tanned sheep was priced at about 37d. Tanned goat skins were also unchanged in rates tanners asking 17/9d for 11/12 lb run: thirds or fourths were quoted at 17/3d or 14/3d. Vs were to be had at 14/8d.

The following prices prevailed in tanned skins per lb: Tanned cow prime 5/5½ lb Rs 2.81 to Rs 2.97; 6/6½ lb Rs 2.62 to Rs 2.75; 8/8-1/2 lb Rs 2.50 to Rs 2.56; 10/12 lb Rs 2.12 to Rs 2.25; Buffalo 12/13 lb Rs 1.75 to Rs 1.87; cow calf 1½/2 lb Rs 3.87 to Rs 4.00; buff calf 1½/2 lb Rs 2.87 to Rs 3.00; goat prime 8/9 lb Rs 10 to Rs 10.50; sheep ordy 6/7 lb Rs 6.75 to Rs 7.00; Sheep ordy: 5/6 lb Rs 9 to Rs 9.25; sheep prime 6/7 lb Rs 12.50 to Rs 13.00.

STATE BANK OF INDIA

(Camp) Calcutta, the 19th January 1961, 29th Pausa 1882 (Saka)

NOTICE

The Sixth Annual General Meeting of the Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Monday, the 6th March 1961, at 4 P.M. (Standard Time) for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1960 and the Auditors' Report on the Balance Sheet and Accounts.

INVESTMENT GOSSIP

Dull but Steady

AFTER an abortive attempt at pushing up prices earlier in the week, bulls have found it hard to bolster up sentiment especially since they have been proved wrong once again on Monday that the official announcement about the steel retention price closely following an earlier report in this regard, was imminent.

It is rather doubtful whether even confirmed news about steel retention price will have anything but a momentary favourable influence on the stock market. For, it is now generally realised that unless, concerted measures are taken to improve both the quality and quantity of the metallurgical coal supply to the steel companies, steel production may continue to be unsatisfactory.

The steel industry is not the only one to feel the pinch of erratic supply of raw materials. The jute industry is now looking forward eagerly to favourable weather conditions during the jute-sowing season and thereafter till the harvest is out of the fields, to enable it to supply consumers goods at reasonable prices and in adequate quantities. The mills have gone on a 4½ hour week effective from 1 February and the LJMA has said that this will be the last in the series of adjustments initiated since a few months ago to cope with the growing shortage of jute. For the time being at least foreign buyers seem to have reconciled to high prices for jute manufactures required by them. But should jute goods prices continue to be as dear as now for whatever reason, our exports of jute goods will suffer a serious setback. Even now it is doubtful if mills would be able to make much profit considering that they have to pay a high price for their raw material.

Besides these uncertainties relating to some of the major industries which keep interest in them at a meagre level, investors are still largely pre-occupied with new issues. As for speculative interest, it cannot be too venturesome with the prevailing stringency in the money market and the proximity of the Central Budget.

NEW ISSUE NOTES

Ballarpur Paper

More details are now available regarding the decision of Ballarpur Paper and Straw Boards Mills Limited to raise additional capital by the issue of rights shares in the proportion of three new shares for every two existing shares, at par. The cost of the expansion scheme is estimated at Rs 625 lakhs. This will be financed as follows: Rs 85.82 lakhs

from the right issue; Rs 275 lakhs from the existing liquid resources and future resources up to the middle of 1963 and Rs 255 lakhs being the amount of eight deferred payment instalments. The amount required for working capital and other purposes will be found by loans from bankers and managing agents.

Structural Engineering

The Structural Engineering Works Limited has a proposal to issue further capital for carrying out its expansion scheme which covers the manufacture of boilers in consultation with a well-known foreign firm. The company has been granted a licence to import a galvanizing bath with the help of which it will be able to execute big jobs for fabrication of transmission towers.

United Dyestuff

The recent issue of shares to the public by the United Dyestuff Industries Limited has been oversubscribed by nearly 2½ times. The allotment will be so made that every applicant will get some shares.

Blue Mountain Estates

The Blue Mountain Estates Limited has received the sanction from the Controller of Capital Issues for issuing 10,50,000 equity shares of Rs 2 each, at a premium of 45 nP per share.

INVESTMENT NOTES

It is understood that the Orient Paper Mills Limited, whose shares have been in good favour during the past few weeks on reports of the successful conclusion of arrangements for strating a new mill in Madhya Pradesh, has not yet taken a decision in regard to the timing of the issue of new shares. The company has already received the sanction from the Controller of Capital Issues for issuing the right shares at a premium of Rs 12.50 per share in the proportion of one share for every two shares held. There seems to be a feeling that the funds are not immediately required.

The US Government has announced an authorization of \$18.5 million dollars (Rs 9 crores) to the Orient Paper Mills Limited. The loan, channelled through the US Export-Import Bank, will be utilised for the purchase of pulp and paper-making machinery for a big paper mill to be built at Amlai in Madhya Pradesh. Using bamboo as the raw material, the mill will produce over 50,000 tons of paper annually.

Subject to the sanction of the Calcutta High Court, the directors of

the Sendra Coal Company, Limited have under consideration a scheme under which the Churulia Coal Company, Limited will be amalgamated with the former in consideration of the issue by the company to the members of Churulia Coal of one ordinary equity share of Rs 10 each for three Churulia Coal ordinary shares of Rs 4 each. It will, therefore, be necessary to increase the authorised capital of the Sendra Coal Company. It is proposed, subject to Central Government's sanction, to raise the authorised capital from the present Rs 8 lakhs to Rs 15 lakhs by the creation of 70,000 equity shares of Rs 10 each, ranking for dividend and in all other respects *pari passu* with the existing shares of the company. A general meeting of the company will be held in this connection on 21 February, 1961.

The Churulia Coal Company, Limited, which now functions as an investment company and owns 24/60th share in a partnership firm called "The Karanpura Mining Syndicate". Since Sendra Coal holds 4,800 ordinary shares in the company, the exchange of shares so held for its own shares will involve a reduction of the capital of Sendra Coal, which is considered to be neither desirable nor necessary. Such shares will therefore, be excluded from the proposed exchange. The company and Sendra Coal are both members of the above partnership firm. Sendra Coal will, by virtue of the amalgamation, have more than one-half share in the Syndicate as it will require 24/60th share of the company in addition to its 7/60th share. The directors state that, if the amalgamation schemes are carried out, the members of Churulia Coal will participate in an investment, company with much greater resources.

There is a proposal to convert Afsons Industrial Corporation Private Limited into a Public Limited Company with an authorised capital of Rs 1 crore. The company has plans to manufacture special types of paper, particularly highgrade printing and writing paper. The capacity of the plant will be 2,400 tons a year. The factory will be set up in the Maharashtra State.

According to the figures released by the Indian Iron & Steel Company Limited for January, the production of Saleable Steel has increased to 71,540 metric tons from 61,395 metric tons in December 1960, comprising 14,912 metric tons of semis and 56,628 metric tons of finished steel against 20,437 metric tons and 40,958 metric tons respectively. The output of Pig Iron has shown a small rise to 112,649 metric tons from 111,516 metric tons. In contrast, Steel Ingots have declined to 83,787 metric tons from 86,424 metric tons. Despatches of saleable steel are higher at 69,157 metric tons against 59,892 metric tons.

There are reports that Kelvinator of India Limited has started the construction of its factory building at Faridabad in collaboration with Kelvinator International Corporation of the USA. The project is estimated to cost Rs 1 crore. The production target for the first year has been fixed at 4,000 complete domestic refrigerators and the production will

be raised to 10,000 units a year later.

IN BRIEFS

Associated Battery Makers (Eastern) Limited has recommended a final dividend of 10 per cent, taxable, for the year ended 31 August, 1960. The working of the company for the year has resulted in a profit of Rs 52 lakhs after providing for depreciation.

The following jute mills have declared interim dividends (per share) (taxable) for the year ended 31 March, 1961. Auckland Rs 7; Dalhousie Rs 1; Lansdowne nil; Lawrence Rs 7; Northbrook 75 nP; Kinnison Re 1 and Union Rs 5.

Madura Mills Limited has recommended a taxable dividend of 15 per cent for 1960 as against 12½ per cent for the preceding year.

A. V. Thomas (India), Limited has passed the dividend for the year ended 30 June, 1960.

BALANCE-SHEET BRIEFS

The working of the Scindia Steam Navigation Company, Limited has resulted in a decline in the gross profit by Rs 81.45 lakhs to Rs 2.66 crores for the year ended 30 June, 1960. The dividend is reduced from Rs 1.30 to 60 nP per share, subject to deduction of tax.

The Cauvery Sugars & Chemicals Limited has reported a higher at profit of Rs 14.38 lakhs for the year ended 30 June, 1960 as against Rs 13.28 lakhs for 1958-59. The directors have recommended a taxable dividend of 6 per cent on the ordinary shares.

Spencer & Company, Limited, Madras, has shown a net profit of Rs 23.65 lakhs for the same year as against Rs 23.12 lakhs. A final dividend of 12 per cent is recommended, making a total of 18 per cent, taxable, for the year.

Panyam Cements & Mineral Industries Limited has been able to report better results for the year ended 31 August, 1960 with a sharp rise in the net profit from Rs 3.10 lakhs to Rs 17.41 lakhs. No dividend is, however, proposed. The debit balance of Rs 15.59 lakhs brought in from the previous year has been reduced to Rs 7.91 lakhs.

The Jam Shri Ranjitsinghji Spinning & Weaving Mills Company Limited has earned a net profit of Rs 73,180 for the year ended 30 June, 1960 as against a net loss of Rs 1.37 lakhs. The directors have recommended a dividend of Rs 60 per share of Rs 1,000 each, subject to deduction of tax.

Shree Madhusudan Mills Limited has turned the corner. After the lapse of many years, sizable profits have been reported for the year ended 30 June, 1960. On the Stores side, Hall & Anderson Limited has made a net profit of as much as Rs 22.56 lakhs as against only Rs 8.13 lakhs for the preceding year. The cotton mill, too, worked more efficiently. The net profit works out to Rs 14.95 lakhs as against a loss of Rs 6.94 lakhs for 1958-59. The debit balance of Rs 21.89 lakhs has been completely wiped out, leaving a credit balance of Rs 32,888 to be carried forward to next year.

STOCK EXCHANGES

Profit-taking at
Bulges

Watch-Dog Writes:

STOCK markets have witnessed another dull session this week. Buying support has not broadened to the extent expected. This is mainly due to the inordinate delay in the announcement of the steel retention price. Moreover, with just three weeks left for the presentation of the Central Budget, professional operators are cautious in extending their commitments, while the investors seem to be busy in the several new issues which have opened their subscription lists. There is, therefore, a general disposition to book profits at each bulge, which has made it impossible for the most speculative shares to close around the week's best levels.

Apart from a few firm features, conditions in other sections on the local stock exchange remained generally dull owing to lack of buying support.

Values on the Bombay Stock Exchange broke appreciably as concern over the delay in announcing the anticipated increase in the steel retention price unnerved the bulls.

On the Madras Stock Exchange, business was confined to only a few selected shares.

The New York Stock Exchange reached its highest level since last June following President Kennedy's emphasis on increased spending.

★

CALCUTTA

Friday Evening.

PERSISTENCE of rumours relating to the steel retention price once again acted as a bullish force for prices on the local stock market to look up on the opening day of the week under review. But, stray liquidation as also lack of follow-up support at higher levels caused a slightly reactionary tendency in prices. With the result many shares closed a shade lower than their opening ones.

Although the improvement in sentiment that was noticed in the previous week was well maintained, it was not reflected in any increase in the volume of business. This was mainly due to the fact that persistent rumours about the steel retention price were not yet confirmed by an official announcement. Apart from this, the difficulties of the iron and steel industry received renewed emphasis, particularly about the supply of coal and raw materials. It was feared that these might prevent the steel companies from maintaining production at capacity levels and result in a further upsurge in working costs. Above all, there was a general disposition to restrict commitments on the eve of the Central Budget.

The Gilt-edged section was devoid of interest. With the monetary conditions tight, banks kept out of the market, while enquiry from other sources was negligible. There was a drop of 23 nP to Rs 74.15 in 3 per cent 1986 Conversion Loan. Several

State Loans, however, came in for active dealings.

Bank shares attracted some profit-taking at higher levels. United Commercial moved between Rs 84.75 and Rs 85.50, to finish the week at Rs 85, while Punjab National were rather quiet at Rs 19.56.

Thanks to the steady setback in raw commodity prices, Jute shares developed a slightly steadier tendency. The shares, especially of those companies trying to penetrate into new lines of production, had good support. The announcement of satisfactory interim dividends by some of the Bird-Heilgers group of mills was also a contributory factor. Birlas had buyers at Rs 28.75 to Rs 29.37; Ganges at Rs 9.94 to Rs 10.19; Howrah at Rs 22 to Rs 22.12; Megna at Rs 11.12 to Rs 11.25 and New Central at Rs 18.19 to Rs 18.69. Kelvin were enquired upto Rs 143.50 from Rs 136 with Kankannarah well maintained at Rs 75.50. Champdany were better at Rs 102 against Rs 100.

Although there was no marked expansion in the volume of business in the Coal section, prices of most

shares were maintained around the previous week's levels in anticipation of an early aid, proposed to be given by the eWorld Bank. Burrakur were pushed up to Rs 19 from a low of Rs 18.69 and East Indian up to Rs 31.37 from Rs 31.12, to close finally at Rs 18.87 and Rs 31.12 respectively on profit-taking. Bengal old shares changed hands at Rs 316 to Rs 319 and the new at Rs 300 to Rs 301. Western Bengal closed better at Rs 7.56 after touching a low of Rs 7.37 from Rs 7.69.

The week's trading was highlighted by a brisk rally in Indian Irons although higher levels could not be retained till the close in the absence of any official announcement with regard to steel retention price. Even the release of last month's production figures, which were considered satisfactory, had little effect on sentiment. Price movements, till the middle of the week, were subjected to settlement adjustments. Against the previous week-end closing of Rs 24.43, Indian Irons opened higher at Rs 24.61 and advanced further to Rs 24.70 before reacting towards the close to Rs 24.44. The settlement rate was fixed at Rs 24.52 as against last settlement of Rs 23.42.

The Miscellaneous section provided a few firm spots on favourable corporate rumours. Rallis were enquired up to Rs 132 from Rs 129 on the announcement of a maiden dividend of 4 per cent for last year.

★

MADRAS

Firm conditions continued in the Madras Stock Exchange this week also, influenced by better advices from Bombay and Calcutta. Banks attracted attention, particularly Indian Bank, and Indian Overseas Bank. Sustained inquiries were the feature in tea shares, with Periakaramalais drawing good attention. Consolidated Coffee and Blue Mountain remained better while rubber shares continued to be dull. Lakshmi Mills shares were bought at a higher level, the expected 20% dividend did not materialise in Madras whose 15% dividend deduction apparently did not prod buyers to go in for these shares that remained unchanged. Keen buying was seen in Travancore Rayons. Aluminium Industries was the highlight in the industrial section being fancied at Rs 22.60, while Mettur Chemicals also was another scrip which had good inquiries. F.A.C.T.s. also drew attention at an improved rate.

Government Securities: Keraia Loan 4%, 1969 was 85 nP higher at Rs 97.85. Madras Government 4%, 1968 Loan was quoted at Rs 97.55. Other scrips in this section continued to be quoted at the listed prices.

Banks: Though the quotations remained unchanged in this, buyings were witnessed in Indian Bank Rs 80 share at Rs 143.00. The Indian Overseas Bank with 14% dividend attracted at Rs 187. Pandian Bank was quoted at Rs 33 and the Punjab National Bank was priced at Rs 19.40.

Electrics: There is nothing to enthuse over in the Electrics section. Karaikkal (xd) was quoted at Rs 9.05, Negapatnam was at Rs 8.75, South Madras was at Rs 9.85 and West-Coast at Rs 13.25.

Sugars and Breweries: Good turnover was reported in this counter. Cauvery sugar shares gained one point at Rs 139.50, Deccan was bought slightly at a lower rate of Rs 14.80. Jeypore was negotiated fifty nP higher at Rs 17.75 and United Breweries went upto Rs 95.00. K.C.P. remained at Rs 27.00 and Kirlampudi was unaltered at Rs 77.50.

Plantings: Balmadies gained six nP at Rs 2.42 and Blue Mountain was bought at a fractionally higher rate of Rs 3.88. Chadramalai was not changed at Rs 2.91, Cochin Malabar with 9% interim was offered at Rs 7.60 and Coffee Lands was unchanged at Rs 18.50. Consolidated Coffee looked up at Rs 23.15. Kalasa declined to Rs 4.64. Kalpetta was negotiated at Rs 13.12. Kil-Kotagiri was quoted at Rs 5.15. Lucky Valley was better at Rs 13.87. Midland was bought at a higher level of Rs 11.20. Neelimalai was unchanged at Rs 4.65. Nilgiri declined to Rs 7.64. Ossoor was 5 nP higher at Rs 3.35. Ochterlony was quoted at Rs 4.68. Periakaramalai was bought at Rs 3.56. Sangameswar was inquired at Rs 2.20. Tropical was higher by 12 nP at Rs 18.12. Others remained at the marked rates.

Textiles: This counter was steady. Adoni declined to Rs 9.75. Both Buckingham and Bangalore Million continued steady at Rs 195.00 and Rs 195.50 respectively. Coimbatore Spinning was higher at Rs 160.00. Coimbatore Spinning did not change at Rs 44.00. Dhalakshmi also was unchanged at Rs 216.00. Lakshmi changed hands at Rs 154.00. Madura was unaffected at Rs 36.40. South India Viscose continued to be quoted at Rs 150.00. Travancore Rayons was bought at Rs 33.40. Vijayakumar was priced at Rs 75.00.

Miscellaneous: Aluminium Industries improved to Rs 22.60. Andhra Cement was quoted at Rs 10.12. Ashok Leyland declined to Rs 8.70. Enfield was quoted at Rs 15.12. F.A.C.T.s. gained 25 nP at Rs 9.75. Madras Cements, the new share, was listed on par at Rs 100.00. Marikar x.d. went down to Rs 54.70. Mettur Chemical (61% interim) was sought at Rs 12.90. Parrys Confectionery was at Rs 4.95. Rallis was offered at Rs 130.00. Sen-Raleigh continued at Rs 25.75. Seshasayee Industries was on par at Rs 10.00. Spencer was at Rs 22.60, Seshasayee paper gained six nP at Rs 4.41. Standard Motors dropped to Rs 16.85. Textool remained at Rs 173.50, Travancore Cements at Rs 8.60 and W. I. Plywoods at Rs 239.00.

ASHOK LEYLAND.

With a record-breaking month in December, 1960, Ashok Leyland Ltd., Madras, smashed five Indian records for the output of heavy-duty diesel truck and bus chassis.

With an overall increase in production of 42 per cent compared with the year 1959, the company announced that the records broken included the highest monthly production of heavy-duty truck and bus chassis in December 1960, thus creating a record in deliveries and a record in turnover of Rs 1,75,00,000 for the month.

★

INDIA LEADING BUYER OF UK AIRCRAFT IN 1960.

The value of the British aircraft industry's exports during 1960 amounted to £142,300,000, of which £73,700,000—easily a record—was accounted for by the sale of aero-engines and £61,700,000 by aircraft sales.

India, with purchases of aircraft and parts worth £8,567,000, was the leading buyer, followed by the United States (£5,737,000), Argentina (£5,292,000), Canada, and Switzerland.

Indian was fourth on the list of buyers of aero-engines, with purchases worth £5,259,000. The United States was the chief customer, buying £16,687,000 worth, followed by Canada (£10,201,000) and France.

Since the war, the British aircraft industry has exported £1,084,378,000 worth of products, of which £358,000,000 was accounted for by aero-engine sales and half of which has been earned during the last three-and-a-half years.

The total for 1960 was the third-highest ever recorded, and compares with the 1959 record of £156,000,000.

Facts & Figures**WHOLESALE PRICES 1961.**

The official wholesale price index (with the year ended March, 1953 as 100) advanced by 0.2 per cent to 125.3 during the week ended January 11, 1961 as compared with 125.0 for the previous week. The index was higher by 0.8 and 1.9 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

A rise in the prices of milk at Bombay (+36%), potatoes at Mttu-palayam (+15%), rice at Kotma (+12%), betelnuts at Mangalore (+6%), maize at Bhilwara, gram at Patna and oranges (+5% each), mustard oil (+4%), ragi, mung, masur, onions, cashewnuts and fish

(+3% each) and bajra, ural, coconut oil and turmeric (+1% each) were neutralised by declines in the prices of betelnuts at Calcutta (-15%), potatoes at Farrukhabad (-12%), milk at Ludhiana (-11%), rice at Jagdalpur (-9%), at Jeypore (-7%) and at Chiplun (-5%), black pepper at Calcutta (-5%), eggs (-4%), jowar, gur, tea and chillies (-2% each) and arhar, bananas, cardamoms and salt (-1% each) and the index for 'Food Articles' stood unchanged at its earlier week's level of 116.2.

The index for 'Tobacco' also remained stationary at the previous week's level of 109.5.

The index for the 'Fuel, Power, Light and Lubricants' group worked out to 120.2 as against 120.3 for the earlier week.

Higher prices of tanning materials konam bark (+6%) gingellyseed (+5%) raw jute (+3%), lac (2%) and raw wool and rapeseed (1% each) raised the index for 'Industrial Raw Materials' by 0.9 per cent to 153.8. The prices of tanning materials—galmuts (-9%), linseed and cotton seed (-2% each) and raw silk and groundnuts (-1% each), however, moved down.

The index for 'Intermediate Products' advanced by 0.3 per cent to 133.8 due to a rise in the prices of rayon yarn (+2%) and linseed oil, cotton yarn and tin (+1% each), although the price of lead (-2%) showed a decline.

The index for 'Finished Products' also rose by 0.4 per cent to 126.5 as a result of an advance in the prices of jute manufactures (+2%).

ELECTRICITY OUTPUT IN OCTOBER, 1960.

The total electricity produced by the public utility power stations in India in October, 1960, was 1,408.3 million kwh, of which 1,134.7 million kwh were sold to ultimate consumers.

Corresponding figures for October, 1959, were 1,265.0 million kwh, and 1,025.0 million kwh, and for October, 1951, these were 504.9 million kwh, and 412.8 million kwh respectively. These figures indicate an annual increase of about eleven per cent in electricity production.

The statistics for October, 1960, are based on 1,012 returns received from the public electricity supply undertakings.

CURCUMIN AS COLOURING AGENT FOR VANASPATI.

Investigations in progress at the Central Food Technological Research Institute, Mysore, suggest the suitability of curcumin derived from turmeric as a colouring agent for hydrogenated vegetable oil.

When powdered turmeric is extracted with alcohol, curcumin is obtained as a crude extract (7-8 per cent of the dry powder), mixed with the oil of turmeric. Addition of the extract (0.04 per cent on the weight of the fat) to hydrogenated vegetable oil imparts to it a pleasant acceptable colour. When added (even at 10 per cent level) to ghee, the colour is clearly visible and responds to the lime test.

Taking the present market price of turmeric in bulk at Rs 48 per

maund (80 lb) and reckoning the yield of crude curcumin at 8 per cent, the cost of colourization per pound of vanaspati inclusive of the extraction process comes to less than 1 np.

On the basis of average production of vanaspati in the country at 4 lakh tons, the country will need 2,000 tons of turmeric which represents about 1 per cent of the total production of turmeric in the country.

The addition of turmeric colour (at 0.04 per cent level of the extract) may serve as a deterrent for the adulteration of ghee with vanaspati because it acts both as a visible and as a latent colour.

It is considered desirable that the addition of sesame oil should also be continued as it will serve as an additional check. This is not affected by the presence of the turmeric colour in the suggested concentration.

MACHINE TOOLS.

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 19 leading member-firms during the month of December, 1960,

Description of Machine	Quantity	Value
Tools Manufactured		
Lathes	225	26,34,995

Manufacture of Free-Flowing Table Salt.

Optimum conditions have been worked out for preparing free-flowing table-salt from marine salt at the Central Salt Research Institute, Bhavnagar. The process involves purification of salt with lime and soda-ash and crystallisation under controlled conditions so as to produce grains of size and shape conducive to the free-flowing quality.

Cost estimates indicate that a one-ton per day plant would give a 21.5 per cent return on investment.

Ordinary common salt contains certain hygroscopic impurities. Thus, even when powdered to the requisite grain size, it is not free-flowing particularly in humid weather. Even when freed from impurity, the salt

absorbs moisture when the humidity goes beyond a certain limit. It is therefore necessary to incorporate small quantities of certain chemicals (driers) to form a protective coating on the grains so as to preserve the free-flowing quality under varying atmospheric conditions. The free-flowing property is further improved by providing a very thin coat of a non-offensive paraffin wax in addition to small quantities of the usual driers.

Recovery of Pectin from Guava.

Investigations conducted at the Central Food Technological Research Institute, Mysore, have resulted in determining optimum conditions for the recovery of pectin from Guava fruit.

Pectin is the soluble gum-like carbohydrate, the setting agent in jams and jellies.

The need for developing indigenous production of pectin has become imperative in view of restrictions on imports.

Citrus peel and apple pomace form the chief raw material for pectin in other countries. But due to the inadequacy of these materials in India, cheap resources like papaya, guavam etc. have to be tapped. Guava is abundantly available (area under cultivation, 107,251 acres) in India and can be processed to recover 92.5 per cent of the pectin present in it.

Writing and Printing Paper from Balsa Wood.

Writing and printing paper of good quality can be produced from balsa wood, a fast growing tree which has been successfully grown in several parts of the country.

Pulp yields of about 51 per cent have been obtained by the sulphate process at the Forest Research Institute, Dehra Dun using 21 per cent chemicals for cooking and 9 per cent available chlorine for bleaching.

Writing and printing papers constitute 60 per cent of the total production of different varieties of paper and paper boards in India. It is estimated that the consumption of writing and printing papers will be of the order of 184,000 tons in 1962.

Balsa wood which has been successfully grown in plantations in Kannothe in Wynnad forest division of Kerala and Tepsip in South Coimbatore forest division of Madras, is the lightest and softest of all timbers grown in India.

Utilization of Sub-Standard Asbestos Sheets.

Studies carried out at the Central Building Research Institute for utilization of low-strength asbestos sheets have shown that if two sheets are doubled up with a layer of bitumen sandwiched between them, the strength of the combination becomes more than that of a single standard sheet.

Asbestos cement sheets which do not conform to Indian Standards specification as regards transverse strength are unfit for use as roofing material.

The double sheet can easily replace the single sheet for all purposes including roofing. Bitumen gives rigidity to the pair, absorbs shocks and provides a waterproof layer.

VITAL NEWS for every businessman

The management of the Times of India group of publications has decided to change the name of the proposed daily financial newspaper from 'The Financial Times of India' to 'The Economic Times'.

The change is designed to meet certain technical requirements, but the management is happy that the new title with its wider significance accords better with the newspaper's main field of coverage—the economic development of the country.

The newspaper which will consist of eight pages will be published on all days of the week and will be priced at 20 nP. per issue.

The *Economic Times* will contain information vital to every businessman, business house, investor, banker and student of economic affairs. With its comprehensive and objective coverage of economic developments in India and the world over, *The Economic Times* promises to keep its reader better informed than ever before.

"THE ECONOMIC TIMES" WILL CONTAIN:

- Economic news and comment of world-wide and Indian interest
- Complete coverage of all six Indian stock exchanges and those in London and New York
- Spot news on planning and development from regional economic bureaux and news about aid and collaboration from foreign correspondents
- Extensive reports on the hundreds of commodity markets in India; statistics, tables and graphs on economic trends
- Periodic economic newsletters from State capitals
- Exclusive information from India and abroad for the import and export trade
- Investment guidance by experts; critical analysis of company balance sheets
- Articles on current topics by well-known economists; informed leading articles

The Economic Times will be a newspaper that no businessman can afford to do without.

THE ECONOMIC TIMES

SUBSCRIPTION RATES: Local and through authorised agents: Yearly Rs. 73.00, Half-yearly Rs. 36.50, Quarterly Rs. 18.25.
Local and through* authorised agents: Yearly Rs. 91.25, Half-yearly Rs. 45.75, Quarterly Rs. 23.00.
(where agents get supply by air) Yearly Rs. 80.50, Half-yearly Rs. 40.25, Quarterly Rs. 20.25.
By post in India, Pakistan & Ceylon: Yearly Rs. 102.25, Half-yearly Rs. 51.25, Quarterly Rs. 25.50.
By post to Aden, Burma & other countries: Yearly Rs. 102.25, Half-yearly Rs. 51.25, Quarterly Rs. 25.50.

Indian Finance

INVESTOR'S SUPPLEMENT

Revival of Interest in January

THE month of January has been a fairly active period for the stock markets although trading in the early stages showed little promise. The earlier lack of interest is attributable to the apprehensions about some disturbing news issuing from the annual conference of the Indian National Congress then in session. The resolutions were awaited with some concern in view of the Prime Minister's reference some time ago to the inevitability of a growing public sector. Operators were chary of extending commitments before the Congress resolutions were fully studied as they correctly concluded that Government policies would be fashioned largely in accordance with the Bhavanagar decisions. However the Congress session passed without bringing any jitter to the stock marketmen as its main preoccupation seemed to be the coming General election. Operators did not fail to derive the inference that the Party's concern to win the election might be reflected in measures calculated to show the socialistic leanings of the Congress. In other words, there would be more direct taxation.

But there were strong indications to show that much reliance might not be placed in the Central Budget on direct taxation. The view was based on the statements of official spokesmen including the Union Finance Minister who had indicated that there was little scope for increasing direct taxation. However, additional taxation to the tune of about Rs 1600 crores is inevitable during the Third Plan period and this sum has got to be mobilised. If, as generally believed, direct taxation offers little scope for netting such a large amount, the only alternative is indirect taxation. Here again there are people who seem to believe that the Government will not find the raising of internal resources through indirect taxation an easy or even a practicable proposition. For, in the first place, many think that taxing of necessities of the common man will arouse widespread disaffection. Secondly, it is only proper to expect the ruling party to want to continue in power. Heavy indirect taxation will be a sure way of losing the goodwill of the people at a crucial time. It may be said therefore that the market was in an undecided frame of mind during the first half of the month.

The stagnant conditions however did not last long. The Reserve Bank's relation of one of its earlier credit curb measures broke the ice. The Reserve Bank of India announced on 12 January that its orders of 11 November for maintenance of additional statutory reserves of 25 per cent by the

scheduled banks would be withdrawn with effect from 13 January. In its directive the RBI pointed out that the revocation of the additional statutory reserve requirements was in conformity with its policy of operating the credit regulation measures in a

The revival of interest noticed following the RBI credit relaxation continued for the rest of the month. During the third quarter of the month, the principal bullish influence had been rumours of an increase in the steel retention price. An imminent announce-

flexible manner. The step was expected to make available to the commercial banks considerable amounts of impounded money (about Rs 18 crores) and consequently the banks might be better able to meet their credit requirements during the busy season.

ment as regards the steel retention price was the prevailing rumour from early in the third week. Both Dalal Street and Lyons Range were poised, as it were, to leap forward the moment the news came. A report did appear in a Calcutta Daily to the

effect that Government had provisionally increased the retention price for steel by Rs 25 per ton. The report further said that the increase would be effective from 1 April 1960 and would be in force up to 31 March 1962 when the matter would be examined again. It however said that the final retention price would be decided after the receipt of the Tariff Commission's recommendations on the subject. The Calcutta market took the report as good as official announcement and promptly greeted it with a smart rise in Indian Irons. Soon Dalal Street had perforce to follow suit. Though the report was published on the 18 January there was no official confirmation even at the end of the month. Even so, market men continued to behave as though the newspaper report was Government announcement.

The steady undertone noticed most of the time during January has clearly stemmed from the general belief that notwithstanding the need for mobilising large resources, the Union Finance Minister may present a comparatively tame budget. Additional taxation is not considered feasible either in the field of direct taxation or indirect levies. This conclusion has been somewhat helped by the fact that Government revenue receipts have proved buoyant. Bulls, however, have conveniently omitted to take note of the other fact that defence expenditure, if anything, is steadily going up.

Sectionwise, Bank shares began to attract increased attention toward the close of the month presumably on the improved working results for 1960 published by a number of banks. Coal shares too were well maintained with selected scrip is good request. Investors had evidently been impressed by the argument that in the context of the urgent need for augmenting coal production in the country, Government would perforce be obliged to give a larger share than hitherto given to the private collieries in coal production. Sentiment in tea section remained subdued as both operators and investors were chary of extending commitments before knowing the results of last year's working of the companies. Activity in sugar shares was limited presumably in view of the belief that with supplies exceeding demand, profits may suffer a setback. In contrast to tea and sugar, Textiles were a fairly steady counter on hopes of steady profits. Among Engineerings, Indian Iron firmed up on later dealings while the miscellaneous section revealed a number of firm spots.

(a) After transferring Rs 6,26,601 from Depreciation, Renewal and Extension Fund and Rs 80,000 from Reserve Fund.

(c) After transferring Rs 250,000 from Machinery Reserve and Rs 300,000 from Dividend Equalisation Reserve.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 70,000 from Development and Rehabilitation Reserve.

(f) After transferring Rs 234,895 from General Reserve.

(g) After transferring Rs 2,656,522 from General Reserve.

(h) After writing back Rs 360,718 being excess depreciation provided in 1958.

(i) After transferring Rs 1,096,546 from General Reserve No. 1.

(j) After transferring Rs 1,002,174 from General Reserve.

(k) After transferring Rs 1,330,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 297,425 from excess depreciation.

(n) After transferring Rs 120,000 from Dividend Reserve.

(o) After transferring Rs 2,978,000 from General Reserve and Rs 1,000,000 from Dividend Equalisation Reserve.

(p) After transferring Rs 5,27,512 from General Reserve.

(q) After transferring Rs 400,000 from General Reserve.

(r) Includes Rs 100,280 being provisions made in previous years written back.

(s) After transferring Rs 9,22,809 from General Reserve and Rs 78,000 from Depreciation Reserve.

(t) After transferring Rs 9,50,000 from General Reserve.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 80,000 from Dividend Equalisation Reserve.

(w) After writing back Rs 68,747 being excess sales tax and Rs 14,000 being excess Development Rebate.

(x) After transferring Rs 880,580 from General Reserve.

(y) After transferring Rs 255,000 from General Reserve.

(z) After transferring Rs 525,000 from General Reserve.

(a1) After transferring Rs 1,075,000 from General Reserve No. 1.

(a2) After transferring Rs 9,00,000 from Reserve for taxation.

(a3) After transferring Rs 351,429 from General Reserve.

(a4) After transferring Rs 350,000 from General Reserve and Rs 165,000 from Machinery Rehabilitation Reserve.

(a5) After transferring Rs 4 lakhs from Reserve for fall in price.

(a6) After transferring Rs 109,648 from General Reserve.

(a7) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

(a8) After transferring Rs 271,942 from General Reserve.

Defending the Dollar

WITH a quietly confident air, President Kennedy has announced his measures for keeping the dollar "as sound as a dollar". There is again the re-affirmation of the pledge that the dollar price of gold will not be increased. The present crisis, if crisis it can be called, has arisen because there has been for some years a steady balance of payments deficit experienced by America. Mr Kennedy points out that it is not as if America's balance of trade is unfavourable: in fact, the surplus of exports over imports is by no means small. But, when the other foreign exchange transactions are taken into account, the result has been a net outflow to the extent of \$1 billion annually. In the last two years, the net decline in America's gold holding has been rather larger, but, again, not owing to any reduction in the balance of trade surplus. One of the contributing causes was the foreign exchange expenditure implied in the United States programme of economic and military assistance. The apprehension that this fact might provoke the United States Administration to cut back its loan programme has been laid at rest and convincingly so by President Kennedy.

The first thing to be done is to augment export earnings, so that the balance of trade, enlarged thereby, goes a longer way in meeting the deficit on other accounts such as net tourist expenditure and loan disbursements, etc. In this behalf, Mr Kennedy has announced a number of measures which are summarised and published elsewhere in this section. The American President does not intend that any restraint is to be placed on imports into that country, since he sees clearly that such action would be reciprocated and would, therefore, tend further to affect exports from America. But the United States Export-Import Bank will have a greater responsibility in fostering, financing and facilitating exports from that country, particularly of the smaller businessmen.

The President has allayed any fears the underdeveloped countries might have had that depletion in the gold stocks held at Fort Knox might conceivably have the effect of America going slow in its aid programmes. (It is refreshing to find Mr Kennedy referring to such countries as "developing" rather than "underdeveloped".) However, disappointment was expressed that other industrially advanced countries with a relatively strong position in foreign exchange reserves have not heeded the call generously to go to the aid of the developing countries. President Kennedy is counting on other nations realising their responsibility in this matter to take some of the strain off the United States.

The commonly voiced complaint is that, while Americans add generously to the invisible earnings from tourism of the world at large, visitors to America are few and far between. The trouble has been, of course, that America's formalities for receiving even transit passengers are so rigorous that many a would-be holiday maker just shrugs his shoulders and decides instead to have his fun

or do his sight-seeing in a country which is, as it were, more easily accessible. President Kennedy has now promised that these restrictions will be relaxed, in particular the procedure to be gone through by a tourist for securing a visa to visit the United States.

Within America itself, Mr Kennedy will have greatly added to the popular figure he cuts by the repeal of one of the last measures instituted by the Eisenhower Administration, whereunder Americans serving in the overseas military were deprived of their right to keep their dependents with them. On the other hand, he has stood four square behind the Republican Administration's embargo on the holding of overseas gold by America. The American speculator who is betting against the dollar will, according to the President, be betting on a losing proposition.

But it is obvious that despite the best-intentioned or efficient efforts of the Export-Import Bank, America will not be able to increase the sales of its goods abroad unless, internally, the Kennedy Administration takes steps to keep American prices competitive. The President is fully aware of this fact, and has indicated his proposal to set up an Advisory Committee, drawn presumably both from labour and management, "to encourage productivity gains, advance automation and encourage sound wage policies and price stability."

How far Mr Kennedy's plan for curbing gold outflow will succeed, the next few months alone can tell. There is no doubt, as the President has put it, that "powerful resources stand behind the dollar". But let us be clear in our mind that, except in one contingency, America's gain in gold can come only from the loss in exchange reserves of other countries. We can disregard, in this context, the addition of gold stocks comprised by new production. If other industrially advanced countries are to spend more on foreign aid, or if America is to succeed in enlarging its balance of trade surplus, the net effect will be a depletion in the gold and dollar reserves of countries other than America. It may be true that it will be worth it to have some element of weakening of the gold reserves of other countries, if that is the only way whereby the dollar can be strengthened. It would be much better if, instead, strengthening of the dollar were achieved by persuading nations with large dollar reserves to maintain them as such rather than to convert them into gold. Mr Kennedy's plan includes the suggestions that higher rates of interest be paid on the balances of foreign Governments, that special securities at higher rates of interest be issued for the exclusive holding of foreign Governments and monetary authorities, and that the tax treatment accorded the earning assets of foreign Central Banks be unified by legislation. If, in this fashion, confidence in the dollar returns, we may yet find that the outflow of gold from Fort Knox has been dammed; and so, apprehensions that the dollar price of gold will be raised may, with revived confidence in the dollar, disappear.

Having fun—wish you were here

Darjeeling. Bracing climate when it's not raining! Magnificent view when it's not foggy. Charming people—always smiling. Wonderful riding, fishing, hiking. (No trouble getting Wills' Gold Flake—really fresh—wherever you go they're good.)

The Challenge of Calcutta

IT is encouraging to note that on the eve of the commencement of the Third Plan Calcutta is receiving greater attention from the State and Central Governments. The implementation of the First and Second Plans has hardly made any favourable impact on Calcutta. As a result India's largest city continues to suffer from neglect and frustration. Acute unemployment, severe shortage of housing, transport and other basic facilities, poor sanitation and lack of opportunities for proper education—these are some of the grave problems which need immediate attention if Calcutta is to be made safe for democracy.

In her inaugural address to the budget session of the West Bengal Legislature early this month, the Governor made a forceful appeal to the Centre to take note of the crisis confronting Calcutta. "The continued neglect of Calcutta's problems", she said, "is one of the most dangerous weaknesses of the Third Plan". She suggested that the Centre should accept a direct and special financial responsibility in the matter and make adequate provision to alleviate the difficulties facing the city and its hinterland. There can be no serious objection to the plea that the development of Calcutta should be the responsibility not of West Bengal alone but of the country as a whole. The Governor pointed out that the influx of refugees and the consequent breakdown of urban facilities are the direct consequences of the decision taken by the national leaders to partition the country. Apart from this fact, Calcutta has a unique importance because of its strategic location and the concentration of a large number of major industries in West Bengal.

It cannot be said that the Central Government in the past has not been sympathetic to the difficulties confronting Calcutta. In fact, the Centre, by and large, has been quite helpful, particularly in tackling the food situation in the State. The fact however is that the problems facing this city are so manifold and complicated that they cannot be solved effectively in a reasonable time even by the combined resources of the Centre and the State.

It is therefore, gratifying to learn that there are encouraging prospects of securing American assistance for the improvement of Calcutta. It is reported that the Ford Foundation has agreed to provide funds for a scheme designed to improve the water supply, sanitation, sewerage and drainage of Calcutta and its hinterland. Assistance is also expected from the World Bank. The Government of India is stated to be more receptive to the idea of providing funds, though a tie-up with P.L. 480 funds is neither feasible nor necessary. After all, in total planning, there is hardly any necessity for particular tie-ups. All that needs recognition—and this recognition has been readily vouchsafed—is that Calcutta's problems are beyond the financial competence of the local authorities.

It is probably beyond the administering competence too—certainly of the Calcutta Corporation. The WHO which recently reported on the problem suggests an administrative set up that is practical, except that it underestimates the obstructive potentialities of politicians. The citizens as a whole too should take a livelier interest in civic problems. The State Government too should be prepared to run its affairs with greater efficiency and to show a more ready response to the people's needs and difficulties.

It should also be realised that the problems of Calcutta can be solved only with the active and enthusiastic support of the private sector.

The provision of regular and remunerative employment to its population can be made only when the mofussil areas of West Bengal are developed intensively by setting up numerous industries large and small. Some months back it was reported that the West Bengal Government had asked the National Council of Applied Economic Research to undertake a thorough survey of the economic conditions in the State and to suggest proposals for its development. The findings of this survey have not yet been published. It is obvious however that the scope for industrial development in the interior parts of West Bengal is immense and that if only the Government provides the necessary facilities in regard to transport, communications and electricity, there is bound to be a big spurt in industrial activity, generating a large volume of direct and indirect employment. In this context recent reports of a satellite town near Diamond Harbour in which the Private Sector is to co-operate with the public in an integrated development designed to activate the economy and increase opportunities of employment and reduce pressure on Calcutta are full of promise. Here again administrative adequacy rather than money would be the crucial factor.

Prospects of Indo-European Trade

WITH the Third Plan physical targets being pitched at higher levels for all heads and sectors of development, a crucial factor in its smooth progress will be the course and volume of our exports during the next five years. Having regard to the demands for increased capital and machinery which acceleration of economic growth implies it is

11 February, 1961

inescapable that the volume of imports over the five year period should also rise substantially. Not taking into account, the import needs of the Plan itself, imports for 1961-62—1965-66 have been assessed at Rs 3,570 crores in the draft Plan. What impact this level of imports will have on the balance of payments position will clearly depend on the extent of increase in exports. The draft Plan estimates earnings from exports at Rs 3,450 crores and considering that net invisible earnings are estimated to amount to Rs 120 crores the anticipated payments toward imports would seem to be matched by the expected earnings from exports and net invisibles. But account has to be taken of Rs 500 crores that will have to be diverted toward repayment of maturing foreign loans. The export target at Rs 3,450 crores is clearly the minimum below which the country cannot afford to aim if the rate of growth posited by the planners is to be sustained. The question inevitably arises of what prospects there are for our exports to be stepped up to the level indicated in the Plan. The Second Plan experience in exceeding the export target is no doubt encouraging. Further, prospects as indicated by trends in the last two years can be considered bright. The pick-up in exports during 1959-60 has been particularly remarkable. The total realisations from exports during 1959-60 at Rs 645 crores compares very favourably with earnings at Rs 570 crores for 1958-59. Figures for the first eleven months of 1960 also indicate continued improvement in exports, the extent of the increase over the corresponding period for 1959 being estimated at Rs 16 crores. Commodity wise, striking progress has been made in export of cotton piecegoods, jute goods, and engineering goods, realisations from increased exports of cotton piecegoods and yarn alone being as much as Rs 16 crores. The improved performance in all these commodities points to further possibilities in the future while the earnings of Rs 1 crore each realised from new items such as pig iron and cement offer hopeful indications for additional earnings by means of diversification.

In estimating prospects for exports, it is necessary that the scope for increase should be assessed with reference to particular regions and in this regard there are compelling reasons for paying special attention to markets in

Western Europe. Western Europe provides the largest market for Indian exports and the chronic trade deficit with the countries included in this region has been responsible for the perennially adverse position of India's total balance of trade. The deficit which showed a decline from Rs 205 lakhs in 1957 to Rs 143 lakhs in 1958 has, thanks to sharp increase in imports from West Germany gone up to Rs 158 lakhs in 1959.

INDIAN EXPORTS TO WEST GERMANY (Value in Million DM)

	1955.	1956.	1957.	1958.
Tea	19.9	21.2	21.1	19.7
Coffee	22.5	9.7	37.9	21.6
Manganese Ore	18.9	30.4	45.8	24.8
Iron Ore	10.7	1.4	1.8	1.3
Shellac, etc.	12.4	8.8	7.9	5.3

Tobacco	0.4	0.4	0.3	0.9
Groundnut Oil	69.8	11.9		
Total Exports	268.2	189.2	252.2	191.6

In total volume, UK accounts for the major share of India's exports to Western Europe and the substantial improvement that has taken place in our trade with the UK during 1959 should be a cause for satisfaction. But the fact that the improvement has been brought about by a drastic reduction in imports should induce a more guarded appraisal of the prospects offered by UK than would be warranted by the virtual elimination of the trade imbalance with that country. The UK imports a wide range of commodities from India which include tea, mica, manganese ore, hides and skins, leather and leather goods, cotton, wool and hair, fruits and vegetables, cotton fabrics and jute and jute manufactures. India enjoys pre-eminence in respect of tea and leather and leathers manufactures. British imports of Indian tea amounted to 55 per cent of the total tea intake during 1958 and 1959 while in leather and leather manufactures, the share amounted to nearly 50 per cent.

From the point of view of reducing India's deficit with Western Europe, it is trade with West Germany that needs to be improved. The adverse balance which was brought down to Rs 79.12 crores in 1958 from Rs 106.60 crores in 1957 has, thanks to larger imports of capital and machinery, been driven up to Rs 99.11 crores during 1959. A discouraging feature of our exports to West Germany has been the erratic behaviour of the main items. This applies to coffee, manganese ore and shellac. The stabilisation of these exports at increased levels would go a long way toward reducing the present large volume of deficit with this country.

The trade with other countries of Western Europe runs in a uniform pattern of adverse balance against India though the size of the deficit is negligible with some of these countries. That there is scope for increasing Indian exports to all these countries would be borne-out by the actual increase that has taken place during 1959. But a clear analysis of the export prospects at this stage is prevented by the uncertainty about the trade policies of these countries after the formation of the two-trade blocs namely the European Economic Community and the European Free Trade Association. The rules of origin of these trade blocs would not seem to presage a liberal flow of exports from under-developed countries. Greater resistance is to be expected from the ECC than from the EFTA though the constitution of the EFTA also would not afford scope for increased imports into these countries of semi-finished and finished goods. At

the Geneva session of the GATT, the Indian representative raised the problems which the formation of these economic groupings pose for exports from under-developed nations. It is to be hoped that in view of the adverse repercussions on the development of backward countries of possible illiberal trade policies of these economic blocs the plea for liberal policies will be sympathetically considered.

New Deal in Education

THE last general conference of the UNESCO which approved two major educational programmes to be launched this year marks a turning point in the history of the organization. The recent changes in the political landscape of Africa have underlined the problem of economic development of countries which have yet to take the first steps towards industrialisation. The UNESCO now has a membership of 100 of which eighteen are the newly enfranchised States of Africa. At the same time the conviction has grown that programmes of economic development in Asia and Africa are held up by lack of educational facilities at some level or the other. The Indian delegation to the last UNESCO conference, which was led by Dr Shrimati, Union Education Minister, urged the need for according priority to education in UNESCO's programmes. Pursuant to this suggestion the Conference approved two programmes—one for Primary Education in Asia and the other for Secondary Education in Africa. The details of the programme were explained by Dr M. S. Adiseshiah, Assistant Director-General of UNESCO, at a press conference in New Delhi last week.

The Asian programme aims to extend universal, compulsory primary education in Asian countries where facilities have to be provided for 200 million children in the next twenty years, as indicated in the Karachi Plan. For the implementation of the programme the States concerned will have to spend about 50,000 million dollars during the 20-year period. Besides providing one million dollars out of its budget to help Governments initiate the programme in 1961-62, the UNESCO will also enable the countries to discuss means of obtaining help from other sources. A convergence of bilateral and multilateral aid through the UNESCO is envisaged for the implementation of the primary education programme. A number of countries have already indicated their desire to provide assistance.

Referring to India's Third Plan programme for primary education, Dr Adiseshiah mentioned that West Germany would provide a plant for printing textbooks. Scandinavian countries have offered to supply paper for text-books; Australia and New Zealand have also agreed to supply paper for textbooks and in addition would help the mid-day meals programme.

It was also indicated that UNESCO would try to help India to find the foreign exchange for the Third Plan programmes of Technical Education and Scientific Research. The Technical Education programme envisages an outlay of Rs 157 crores with a foreign exchange component of Rs 18 crores, while the Scientific Research programme costing Rs 55 crores will require foreign exchange of Rs 8 crores. During his present visit to this country, UNESCO's Assistant Director-General discussed with the Union Minister of Scientific Research and Cultural Affairs and the Department of Economic Affairs the Government's

KENNEDY

Strengthening the \$

In a message to the Congress early this week, Mr Kennedy outlined the following programme for restoring equilibrium in the U.S. Balance of Payments position:

Short-term Programme, and—

1. Strengthening international monetary institutions, particularly the International Monetary Fund.
2. Using as necessary the drawing rights under the International Monetary Fund to meet deficits in its balance of payments.
3. Amending the Federal Reserve Act to establish authority "to make a maximum competitive effort to attract and hold dollar balances which might otherwise be converted into gold."
4. Maintaining the executive order forbidding the holding of gold abroad by Americans.

Long-term Measures

Long-term measures to correct the basic payments deficit and achieve long-term equilibrium include:

1. Active U.S. participation in the Organization for Economic Cooperation and Development (OECD).
2. "Energetic leadership" by the Department of Commerce for American industry in a drive to develop export markets; a prompt increase in U.S. commercial representatives

abroad; and two new foreign trade centres at London and Bangkok, with an exploration of the possibilities of adding semi-installations in Africa, Latin America and Europe.

3. Competitively priced American goods, with a concerted effort by U.S. Government, business and labour to maintain competitive costs, improve productivity and stabilize or lower prices.

4. A directive to the president of the Export-Import Bank to prepare and submit by April 1 a new programme "to place our exporters on a basis of full equality with their competitors in other countries."

5. A major, new programme to encourage foreign travel in the United States under the direction of the Department of Commerce.

6. A directive to the Secretary of Agriculture to report on "all feasible and internationally desirable means of expanding our exports of farm products, and to emphasize the need for export expansion as a primary objective of our new farm programmes."

7. An intention of the U.S. to discuss with other capital-exporting countries the desirability of instituting common policies for world-wide procurement in the administration of economic development or assistance programmes.

8. The removal of all remaining restrictions against American exports, and the fullest possible measure of tariff reduction by foreign countries.

9. Promotion of foreign investment in the United States, particularly by pressing those Western European countries with strong reserve positions to eliminate the restrictions they still maintain limiting opportunities for their citizens to invest in the U.S.

10. Congressional legislation to prevent the abuse of foreign "tax-havens" by American capital abroad as a means of tax avoidance.

11. Participation by the industrialized countries of the free world in economic aid to less developed countries. Such actions are important to achieve a better balance in international trade and payments and are essential to the continuing and effectiveness of "our common responsibilities for free world security, economic growth and stability."

12. Legislation to reduce customs exemptions for returning American travellers from the current \$500 to the "historic" duty-free allowance of \$100.

13. A centralized review, under the Bureau of the Budget, of total spending—including overseas outlays—by the Departments and Agencies of the U.S. Government. Emphasis will be on projected impact of such outlays on the nation's balance of payments.

14. Rescinding the order limiting the number of military dependents abroad, and a Defence Department review of the possibilities for savings in logistic support of U.S. armed forces, including the combined use of facilities with America's allies. The U.S. will also, where appropriate, urge the purchase of the newer weapons and weapons systems by those of its allies who are financially capable of doing so, and will continue the policy of emphasizing U.S. procurement for its military forces abroad wherever practicable.

India's Balance of Payments with the UK and West European Countries 1957-59. (In Lakhs of Rupees)

Country	Year	Exports	Imports	Adverse Balance of Trade
UK	1957	161.02	236.50	77.48

requirements of these two programmes, with a view to see how far these could be met from the UN Special Fund and the IDA. He is taking back with him concrete proposals on both. Discussions have also been concluded for a UNESCO programme of Inter-Cultural Research at the India International Centre. An agreement was signed last week, by the Assistant-Director General on behalf of the UNESCO and Mr P. N. Kirpal, Secretary, Union Ministry of Education, on behalf of the Government of India, to continue for another four years the work of the Research Centre in Delhi which is undertaking research on problems of social and economic development of South Asia. Of the two seminars for training journalists in Asia which UNESCO proposes to organise in 1961-62, one may be held in India. The UNESCO may also help in setting up the Indian Institute for training journalists which has been suggested by the Government of India.

The UNESCO's programme of Primary Education for Asia comprises the establishment of four projects: An Institute of Educational Administration which may be set up in India; an Institute for School-building Programmes located in Indonesia; a College for Teachers' Education (for instructors of teachers training schools) in the Philippines; and a Bureau of Research and Statistics in Bangkok.

While the programme for Asia is concerned with expansion of Primary Education, UNESCO's African programme lays emphasis on Secondary Education. The difference reflects the varying educational needs of countries in the two continents. Primary Education in Africa has been developed to a remarkable extent by the Colonial Powers, so that African countries are far ahead of many Asian countries in this field. While India expects to enroll eighty per cent of children in the age group 6-11 in primary schools at the end of the Third Plan, (the present figure is 60%), ninety per cent of African children are already enrolled in primary schools against the world average of 70%. But development of Secondary and Technical Education, which has been hitherto neglected, is a problem of the greatest urgency for African countries. Against world average of 30%, the percentage of students of the appropriate age group attending secondary schools is only 5. And as regards University Education, the figure for Africa is only 0.09% against world average of 3%. It is proposed to set up three new teachers' training colleges, but until they turn out the required number of teachers, it will be necessary to recruit personnel from outside to man the secondary and technical schools.

The UNESCO's programme is to help in setting up new Secondary and Technical Schools in the African countries and to provide them with the required number of teachers and text-books. The yearly requirement of teachers able to teach in English is estimated at 300 for the next five years. At the end of this period teachers from the new training colleges are expected to be available in sufficient numbers. The estimate does not include the Congo which will require 500 teachers knowing French.

The help that India can provide for the UNESCO's African programme was discussed with the Indian authorities during the Assistant Director General's recent visit to this country. It is expected that India will be able to send at least ten teachers every year for service in Africa, besides providing certain fellowship facilities through the UNESCO. In addition India will also assist African countries through bilateral and Commonwealth programmes.

Small Business in the USA

AS owners of small businesses the world over know, one of the most serious handicaps to small business, particularly to new enterprises and expanding concerns, is their inability to obtain equity capital and long term loans as distinguished from orthodox short-term commercial loans.

In an effort to aid US small businesses in meeting their almost universal need for long-term (over five years) unsecured loans to finance growth, the United States Congress in 1958 enacted the Small Business Investment Act. This Act authorises the establishment of private investment companies whose initial capital would be provided for partly by private investors and partly by the Federal Government through its Small Business Administration.

After a slow start, the Government's ambitious programme is now beginning to make rapid headway both in numbers and size.

The number of small business investment companies already licensed by the Small Business Administration is now 145 with capital funds exceeding \$142 million. As at 1 November 1960, the number of pending applications for licences for small business investment companies was 270.

The capital requirements of such institutions are set at a minimum of \$300,000, half of which may be borrowed from the Small Business Administration. There are three methods by which these investment companies may supply funds to small businesses. They may make regular bank-type loans of five years or over, acquire stock directly, or purchase debenture bonds convertible into stock of borrowers. There is no limit on the maturity for convertible debentures. A 20-year limit is fixed on bank-type loans but they may be extended for an additional 10 years.

The Federal Government's share of the initial capitalization of the investment companies thus far established averages about 27 per cent.

Since small business investment companies may acquire stock, either directly or through conversion of debentures into stock of companies to which they lend, there is a strong incentive for banks to get into equity investments in a legal way that, before the Act's passage in 1958, had not been open to them. Stock ownership also carries important tax advantages.

It is worth noting that the \$142 million of capital so far put up for financing small business investment companies is by no means a measure of their lending power, for, they are authorized to borrow money in a variety of ways and to participate with other lenders in their financing operations.

The evolving pattern of their operations is to provide long-term money, as well as advice and services, for borrowers which are mainly of the "growth" type. Much of the money lent eventually will become equity capital for the borrowing customers, after the minimum five-year loan period has elapsed.

While the interest rates on money lent by the small business investment companies

average materially above bank rates, small business investment companies tend to rely more upon future equity (stocks) profits than the return earned on loans.

The Small Business Administration recently announced that small business investment companies then in operation began with initial capital of \$58,231,000, of which \$16,004,000 was furnished by the Small Business Administration in exchange for subordinated debentures of licencees.

In addition, the licensed small business investment companies had raised public and private capital of \$88,200,000. At the same time, they had borrowed \$3,230,000 for re-investment in small businesses. This makes a ratio of \$7 of outside capital for every \$1 of Federal Government funds, something of which the Small Business Administration is quite proud.

The growth of small business investment companies naturally takes some of the pressure off the Small Business Administration to make direct government loans under the terms of the Small Business Act of 1953. The direct loans come directly out of this agency's appropriations and add to the public debt of the United States.

Under this older lending procedure, the Small Business Administration has approved, since the programme began seven years ago, a total of more than 21,000 small business loans for more than \$1,000 million, of which 68.8 per cent went to concerns engaged in non-manufacturing industries and 31.2 per cent for concerns engaged in manufacturing.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

ORDINANCE

SBI Enabled for Mergers

THE manner in which the Ordinance to amend the Banking Companies Act was played up by the press seemed to suggest that Government through the Reserve Bank was assuming even greater control over the banking system than it is in fact doing. All that it seeks to do is to rectify a lacuna in the last amendment to the Act, whereunder the Reserve Bank took the power to put through amalgamations, mergers, etc. That there was such a lacuna was brought home to the authorities only recently, when one of the banks in Kerala which is under moratorium orders was sought to be taken over by the State Bank. At that stage, it became apparent that the amended Banking Companies Act could not apply to the State Bank, and hence, under the then existing law, the proposed takeover could not be given effect to. Both because it is a relatively unimportant matter—unless of course the powers are misused by Government—and because the Budget session of Parliament always suffers from a rather onerous agenda, it was decided that the change in law should be put through by means of an Ordinance.

The empowering of the State Bank is not, however, the only purpose of the Ordinance. Provision is made for the status quo being maintained in the salaries and wages of bank employees of a bank taken over by a larger bank; and the period during which the scales of pay of the bigger institution will not apply to such class of employees has been fixed at three years. This is a welcome provision, for, there is no certainty that the earning capacity of the merging banks or of the branches of such banks would be such as to allow the payment of the higher scales that the bigger banks are required to pay to their staff. In due course, naturally, the staff will be fully "absorbed"; but there is to be an interim of marking time, which will be gratefully accepted by the banks which, at the behest of the Reserve Bank, may have to permit sub-standard banks to be merged with them.

There is bound to be conjecture that the empowering of the State Bank in this fashion could well be the precursor of large-scale takeovers by that institution. We devoutly hope not. For, it would be much better if the sub-standard banks are parcelled out, as it were, among all Scheduled Banks. Otherwise, there is the danger that the State Bank, already grown much larger than it was when the Imperial Bank was nationalised, will slowly assume a monopolistic position. We may mention the fact here that the extension of the right kind of facilities and the appropriate amount of accommodation to the small businessman is best done by a relatively small bank. Personal touch and a more intimate knowledge of the would-be borrower are important, if the flow of bank finance for the small businessman is not to slow down to a

trickle. Therefore, while on the one side there is a clear case for sub-standard banks being gradually taken over by the larger institutions, there is equally a sound reason why, through the insurance of bank Deposits, sub-standard banks should be helped slowly to better themselves. Until such time as a scheme for such insurance is introduced and put into effect—and the less time we take to implement it, the better for banking as a whole—there seems no alternative to the Reserve Bank announcing moratoria; but if the suspension of business by particular small banks is so long extended as it has proved to be recently in Kerala, the result in terms of disruption of public confidence in banking could well be disastrous. Let mergers be put through with all possible speed; but, more important, let them be avoided—which could be done if only bank Deposits were insured.

BANK RETURNS

Rise in Deposits After Long Pause

The beginning of the month disbursements have made a considerable impact on the latest banking returns, though, in the Scheduled Banks' return, the continued sharp increase in the total of Advances can be ascribed to busy season pressure.

The returns of the Reserve Bank for 3 February show that Active Note Circulation has increased by Rs 19.76 crores to Rs 1929.25 crores, and that there has been outflow of Rupee Coin in the rather sizable amount of Rs 2.09 crores. Currency has been expanded against Rupee Securities for Rs 10 crores, presumably on account of deficit financing instituted by the Central Government. In the result, the Reserve Bank's cash in the till is denuded by Rs 11.60 crores to be placed at Rs 11.29 crores. Foreign Securities are unchanged at Rs 128.01 crores.

Investments in the Banking Department are lower by roughly Rs 2 crores at Rs 150.93 crores; and the State Bank is known to have sold securities during the week for something like Rs 3½ crores. Hence, the implication is that ad hoc Treasury Bills have been sold in favour of the Reserve Bank for Rs 15 crores. Despite its account being credited with the proceeds, the Centre's balances are fractionally lower by Rs 0.35 crores at Rs 52.70 crores. So, the Centre's net disbursements, owing to beginning of the month payments, have been rather heavy. On the other hand, the States' balances are somewhat higher by Rs 0.58 crores at Rs 22.05 crores, though borrowings are also slightly risen by Rs 0.14 crores to Rs 36.14 crores.

Banks have felt the heavy combination of beginning of the month drawings and busy season pressure. Their Reserve Balances have been marked lower by Rs 6.14 crores at Rs 72.13 crores of which the State Bank accounts for nearly Rs 4 crores; and the banks have besides had considerable recourse to central banking credit, since the Reserve Bank's Other Loans and Advances have risen by nearly Rs 14 crores to Rs 154.25 crores;

Advances against usance bills rose by Rs 3½ crores.

The Reserve Bank's portfolio of Treasury Bills purchased and discounted is lower by Rs 6.78 crores, and this is a maturing liability which the Central Government presumably met from the money it created during the week. Lastly, Balances Held Abroad continue to hold steady, the fall being one of Rs 0.41 crores to Rs 19.25 crores.

The State Bank's return for the week ended 3 February discloses an unusual accretion to Deposits of the order of Rs 4 crores, with the figure now placed at Rs 558.41 crores. The progress of the busy season and the demands occasioned by the beginning of the month disbursements are suggested by the rise of Rs 3.21 crores to Rs 253.03 crores in the total of Advances. Borrowings are slightly higher, and there has been disinvestment in gilt-edged for a little over Rs 3½ crores. Even so, cash in hand and with the Reserve Bank has had to be drawn down by Rs 3.83 crores to Rs 21.70 crores.

The Scheduled Banks' return for 27 January is mainly noteworthy for the heartening sign that Deposits, perhaps, are once again headed upward. Despite the State Bank reporting a loss of Rs 4 crores in Deposits in the relevant week, net Deposits (that is, excluding borrowings) have risen by over Rs 9 crores. But such magnitude of rise in Deposits is still insufficient to take care of the pace of expansion in bank credit. In the latest week, the total of Advances has gone up by Rs 12.76 crores to Rs 1225.63 crores, and only the mid-way mark of the busy season has been reached. Borrowings from the Reserve Bank are slightly higher at Rs 44.49 crores against Rs 42.22 crores. Balances with the Reserve Bank, on account of the State Bank, are shown to be down by Rs 2.58 crores at Rs 74.54 crores. With the State Bank adding to gilt-edged holdings by Rs 5 crores, investments of Scheduled Banks are marked up by Rs 3.74 crores, suggesting small sales by banks other than the State Bank.

CAPITAL MARKET

Is Money Cheap?

Mr S. L. N. Simha, who is on the editorial committee of the Reserve Bank of India Bulletin, recently has written a book on "The Capital Market of India." His credentials for dealing with the subject cannot be questioned, and it is no surprise to find that the volume (published by Vora & Co and priced at Rs 17.50) bids fair to become a standard text. In terse and precise language, various aspects of the capital market are discussed, and the layman in particular will find it easy and useful reading.

One of his most interesting observations is that "on the whole the complex of interest rates ruling in India is by no means very low, as is generally supposed." We are in entire agreement with this view, and it has become necessary, in the current state of the Indian economy, to make clear beyond doubt that India is not enjoying a cheap money era. True, for example, the Bank rate is officially at 4 per cent. But, in the sense that banks seeking central banking credit have mostly to obtain it at penal rates of interest, the de facto Bank rate can be seen to be rather higher at 6 per cent. Again, though the "prime" borrowers were able to get accommodation from the banking system at a half per cent over Bank rate or so, the Reserve Bank directive of last September has enforced a minimum rate of 5 per cent on all Advances. What is

more, the generality of borrowings from banks is paid for at 2½ per cent or more over Bank rate. Then, there is the fact that banking credit in India probably accounts for less than half of the total financing sought and obtained by traders, businessmen, etc. Rates in the "unmonetised" sector are substantially higher. The bazaar bill rate (as recorded in the Reserve Bank of India Bulletin and as relating to the rate at which bills of small traders are said to be discounted by shroffs) is presently 12 per cent in Bombay, ranges between 11.5 and 12.5 per cent in Calcutta and is very nearly 14 per cent in Madras. This is not cheap money.

One of the reasons why, in the eyes of the foreign expert, money in India is held to be cheap is because the Treasury Bills rate hovers around 2½ per cent. What needs to be remembered in this context is that Treasury Bills have a very narrow market in this country: sales through auction are for insignificant amount, and by far the bulk of sales are in favour of the Reserve Bank and represent deficit financing by the Central Government. Now, since the Reserve Bank profit is in any case to be made over to the Centre (credit is taken in the Budget) any increase in its earnings, on the basis of a higher Treasury Bill rate, would merely constitute a book entry; therefore, why any need to put up the rate of Government borrowings?

Deposit rates are not high—but they are not, at the same time, too low; and the inter-bank call rate is left free to find its own level. In view of the fact that the penal Bank rate is now applicable, inter-bank call is quoting above 5½ per cent, and that is by no stretch of the imagination an attribute of cheap money.

Thus, while it is possible to suggest that the structure of interest rates in India is still somewhat chaotic, any impression that India is gallily implementing a cheap money policy would be totally erroneous. Indeed, at the moment, with the extreme stringency of the 1960-61 busy season, the tendency is for money rates further to harden. There was, it is true, a brief period of cheap money in 1957-58, but that was because bank Deposits in those two years grew much faster than did the demand for funds. So long as the industrial demand for banking finance persists, money is unlikely to be cheap; and so long as the banks feel such pressure for funds, money is unlikely to be cheap.

Mr Sinha has thus, on one crucial aspect of the money market, clarified whether or no money is cheap in India. It is proposed, on a future occasion, to review his book in detail and in greater length.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 7 February 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.350

per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.585 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Calcutta, Madras and New Delhi up to the close of business on Monday, 13 February 1961 and at Bombay, Nagpur, Kanpur and Bangalore up to 11 a.m. on Tuesday, 14 February 1961. Successful tenderers should make payment on Friday, 17 February 1961. Other conditions are as usual.

91 days' Intermediate Treasury Bills sold from 1 to 4 February 1961 amounted to Rs 7,00,000.

Bank Profits

The net profit of the Andhra Bank Ltd. for the year 1960 after payment of one month's pay as bonus to staff and before making necessary provisions amounted to Rs 12,00,759 (subject to audit) as against a net profit of Rs 9,63,595 for the year 1959.

Government Securities

Government Promissory Notes of the following loans (Central and State Governments) interest on which falls due for payment during the months of March and April 1961 will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants from 16 February and 16 March 1961 respectively.

Interest Falling Due in March 1961.					
2½ %	Con.	1976	4 %	Saurashtra	1967
3 %	Madras	1961	4 %	U. P.	1967
2½ %	U.P.	1961	4 %	W. Bengal	1967

4 %	M. P.	1967	4 %	Bombay	1970
4 %	Mysore	1967	4½ %	Bombay	1969
			4½ %	Mysore	1969

Interest Falling Due in April 1961.					
3 %		1966-68	4 %	Hyderabad	
3 %		1970-75		State Dev.	1963
3 %	Mysore	1956-61	4½ %	Bihar State	
3½ %	M. P. Loan	1964		Dev. Loan	1970

Holders of the loans are advised to lodge their securities well in advance of the due dates to facilitate delivery of the securities and interest warrants on the due dates. In view of the heavy work involved, the period for delivering securities tendered for payment of interest on the above loans may be extended to six clear working days.

Resistance to Spending

By Paul Einzig

THE imposition of charges on the National Health Service in order to meet its growing expenditure may well prove to be a turning point in the trend of public spending. Ever since the war the heads of the Spending Departments conceived it to be their duty to secure from the Exchequer the largest possible amounts for the improvement of their services. The extent of such costly improvements was the measure of the success of a Minister. No serious attempt was made until now to achieve improvements at the lowest possible cost, let alone to forego improvements if they are beyond the country's immediate means. Unless the Chancellor of the Exchequer was strong enough to resist the demands of the Spending Departments the latter asked for the maximum and received the maximum. Yet the sum total of their demand was inflation.

For the first time in post-war experience it is now the head of a Spending Department, Mr Enoch Powell, the new Minister of Health, who has taken the initiative of curbing the expenditure of his Department by imposing new charges on National Health services, without being pressed to do so by the Treasury. This was consistent with his attitude of three years ago when he resigned because the Prime Minister refused to support Mr Thorneycroft's demand to prevent a rise of public expenditure by £50 million. It is sheer coincidence that the amount Mr Powell hopes to save as a result of his new measures is almost exactly £50 million this year. But the fact that it is possible for a champion of economy to remain a champion of economy even after he has become the head of a Spending Department is of considerable importance.

The effect of Mr Powell's attitude will depend on the response to it in the country. He was bound to be attacked by the Labour Party and by beneficiaries from the National Health Service. The question is whether he will receive sufficient support from taxpayers to offset these attacks. It remains to be seen whether the country has realised the need for self-restraint in applying improvements, however useful and necessary in themselves, if the price has to be paid in the form of inflation or continued taxation at a prohibitive level. The number of those who have come to the conclusion that it is worth while to defer many justified improvements for the sake of sound finance and sound economy is doubtless on the increase. The question is whether it has increased sufficiently to ensure a favourable response to Mr Powell's gesture. If so, other Ministers too may come to realise that spending their way into success is not necessarily the only way to achieving success. If not, Mr Powell's example will not be followed and the trend of unrestricted increase in expenditure will continue unabated.

There can of course be no question of putting the clock back to the rigid retrenchment atmosphere of the Gladstonian era. But there must be a happy medium between that atmosphere and the post-war atmosphere of adopting improvements regardless of cost. Most individuals and firms, when taking decisions whether to spend more on objectives they desire to attain, balance the resulting advantages with their effect on their finances and decide to forego the advantages if they can only be attained at the cost of getting into financial difficulties. There is no reason why the State should pursue a different course, even though its spending power and borrowing power is virtually unlimited. —(Copyright).

Notes

PACKAGE PLAN

Teething Troubles

Among the measures which the Third Plan intends to put into effect for increasing foodgrain production, the "Package Plan" has pride of place. The concept does not perhaps involve any extensive technological innovation, but as a new approach in the implementation of the agricultural schemes it is full of promise. What it implies is merely a planned concentration of efforts along known lines in selected areas for improvement of agricultural yields. As conceived by the Ford Foundation Team and sought to be put into effect under the joint efforts of the Ford Foundation, Government of India and State Governments, the Package Plan aims at achieving maximum production by meeting all the needs of the agriculturists in respect of fertilisers, seeds, implements, etc. Such requirements are to be assessed for every individual holding in the area covered by the Package Plan. The Package Plan will thus be the sum total of the farm plans for all the individual holdings. The institutional framework for the implementation of the plan will be provided by the co-operative societies which, besides meeting the requirements of cultivators in respect of fertilisers, seeds and implements will also build godowns for stocking agricultural produce and offer marketing facilities.

The Third Plan envisages the implementation of the Package Plan in seven districts selected for their immediate potentialities and provides a total outlay of Rs 62 crores. Agricultural planning under the First and Second Plans partook of the nature of a general allocation with aims of improving facilities all round. In view of the meagreness of the allocation, the effects were far from encouraging. The dispersed character of the efforts left considerable room for wastage in expenditure and the too thin spreading of funds made impossible telling results either in particular crops or in particular areas. Since no distinction was made between areas holding high potentials and areas which were chronically backward, the total expenditure incurred appeared highly disproportionate to the increase in production that was achieved. In contrast, the Package Plan is selective both with reference to the crops and areas of development. The chief objective of the Plan is to achieve a substantial increase in foodgrain production and the scheme is therefore being applied to foodgrain producing areas. The selection of the most progressive district for the implementation of the Plan is intended to ensure maximum results.

While the Package Plan is conceived on the right lines, what it achieves will depend mainly on the care taken by the State Governments for its implementation. On the basis of the experience of its working in the Tanjore district of the Madras State, it does not seem that the implementation has been free from difficulties. In two articles in the Hindu, notable for its characteristic curiosity about detail Mr K. Santhanam, has brought to light many defects and deficiencies in the working of the Package Plan in the Tanjore district. Unless these are remedied speedily, they will jeopardise the progress and final results of a well conceived idea. Mr Santhanam particularly draws attention to the difficulties that are being encountered in bringing all the agriculturists within the institution of the co-operative society which holds a central position in the implementation of the Package Plan. The fact that co-operative societies require for formal membership share capital subscription up to 10 per cent of borrowing as well as provision of personal or property security, deters many an agriculturist who is used to getting loans from Revenue authorities through Block development officers. The cooperative principle need not be sacrificed, but a downward revision of the ratio would attract a larger number of agriculturists into the co-operative organisation. Absence of lease deeds for tenants who are cultivating lands on the basis of oral agreement is another defect that

needs to be remedied by the Madras Government formalising the existing relationship by some kind of tenancy certificate. The contemplated legislation on land ceilings has also cast an element of uncertainty on the prospects of successful implementation of the Plan. Considering that it may not be possible to stall this legislation Mr Santhanam suggests that the legislation should be enacted quickly and the owners of surplus lands should be made temporary trustees for the Government or, condition that they implement the Plan on behalf of the Government. The other defects noted by Mr Santhanam are irrational distribution of workload as between personnel in different blocks, exclusion of irrigation channels repair from the scope of the Plan and inadequacy of fertilisers. These are no doubt vital but are perhaps more local than structural. A concerted effort to remove these defects must be made, if the hopes raised by the idea are not to be dashed.

WEST BENGAL

Problems and Prospects

Though no State Government is having an easy time of it, it will be generally admitted that West Bengal has been having more than its share of troubles in unbroken succession since independence. It is, therefore, inevitable that the Governor's addresses year after year should largely deal with the problems confronting the State. This year's address to the Budget session is no exception. But Miss Padmaja Naidu is not without hope. She finds in the Third Plan "a blue print for our prosperity" but she has not omitted to mention that "arduous efforts and heroic sacrifices" will also be needed.

The most recent addition to West Bengal's woes was the Assam riots. The emotional impact of the incident, and uprooting of Bengalis who have known no other home than Assam was terrific. Besides the responsibility for quartering and feeding the refugees, the assuaging of sorrow and moderating of retaliatory anger were added duties of a State already sorely tried. Miss Naidu's mental anguish over the tragedy that thousands of Indians have become refugees in their own country has been widely shared in the country. The fact that there are still 27,000 of these refugees in West Bengal shows that conditions are yet to become conducive to the voluntary return of the displaced persons to their homes in Assam. The thirteen year old problem of the rehabilitation of the refugees from East Pakistan is still very much with West Bengal as there are today 89,000 of them to be taken care of. However, the rehabilitation of the East Pakistan refugees will not deg its steps long if most of them can be persuaded to go to Dandakaranya where already a number of their brethren are settled.

Reference to Calcutta's problems in the address was only to be expected. Miss Naidu emphasised the Centre's responsibilities in the matter. It would appear that the Centre is altogether not unmindful of the needs of Calcutta and the Governor's indications that Central help may be forthcoming were confirmed on details by Dr Roy's statement in the Assembly on Monday. The unemployment problem is also a recurring theme in the Governor's addresses but it needs reiteration as many times as possible on important occasions. Unemployment among the educated is naturally heaviest in the State as the student population in Calcutta is also the biggest for any single city in the country. The situation is pregnant with unpleasant political and sociological possibilities and complacency on this would be suicidal. Although faced with an array of such terrifying problems, Dr B. C. Roy is undaunted. He is quietly planning an integrated attack on Calcutta's civic problems, unemployment and economic growth. He envisages a Rs 400 crore project over a period of years and help from several sources. This is not to be a paper Utopia. The State's Third Plan is to make a serious beginning in this all important project.

As for the State as a whole, the Second Five Year Plan has made commendable progress in many spheres and the improvement in the food situation is really striking. Food prices have come down in recent months. It may be anticipated that the food situation will not cause much anxiety in the coming years as the State's Third Plan gives the highest priority to agriculture and food production. The increased allotment to agriculture is based on the recom-

mentation of the expert committee which has made it clear that an attempt at attaining self-sufficiency will involve the outlay of a large sum. The agricultural plan when completed is expected to increase food production by 1½ million tons by the end of 1965-66. The proposed outlay on agriculture is Rs 67.07 crores and compares with the Second Plan outlay under this head of Rs 8.99 crores.

Power programmes and educational plans are to be given substantially increased allotments. Provision of cheap electricity in rural areas is necessary if the programme of the development of small and cottage industries is to succeed. A major power scheme under the Third Plan is the set-

ting up of a big thermal station with a capacity of 300 mega watts at Bandel at a cost of Rs 29 crores. Education gets an allotment of Rs 48.85 crores as compared with Rs 22.16 crores in the Second Plan. The bulk of the outlay will be absorbed by the free and compulsory education scheme to be extended to all children in the age-group of six to eleven years. The setting up of a fertilizer factory with foreign collaboration and the doubling of the coke oven plant at Durgapur, are some of the important projects to be undertaken under State auspices during the Third Plan. The tar distillation plant and the gas grid for carrying coke-oven gas to Calcutta are expected to be completed during the current year. A cotton spin-

ning mill at Kalyani is fast nearing completion and it is proposed to set up a spun silk mill during the Third Plan. Plans for setting up more industrial estates and subsidiary industries are also included in the Third Plan.

BANK MERGER

Some Marginal Reflections

The ordinance to secure amalgamation (of small banks with the State Bank of India) makes it clear that the private shareholders of the State Bank have no right to be consulted when the annual meeting takes place. That the

Indian Finance

ordinance provides against re-trenchment and imposes a wage-freeze may be commended for certain reasons. The anxiety of bank employees is allayed by the ordinance, but vacancies will not be filled and chances for promotion will be nil after the takeover is carried out. The shareholders' obligations in regard to contingent liability are probably a matter for the Courts. The big bank that takes over an embarrassed bank can make a call on unpaid capital only with permission. The other point calling for notice at present is the value put on premises taken over. The rise in property values justifies the adoption of market value rather than book value in order to get over the gap between realisable assets and the total assets of which frozen assets are a part.

The difference between procedure for amalgamation carried out by the Exchange Banks and that adopted in the case of Indian scheduled banks is striking. Lloyds handed over its Indian business to National and Grindlays which now offers unusual savings bank facilities to depositors. The Mercantile Bank under Hongkong and Shanghai control retains its own identity and the British Bank of the Middle East is another independent wing. The transfer of assets and business, carried out without any fuss with the approval of the shareholders, is far removed from the elaborate procedure adopted last year to confirm the acquisition of the shares of the Travancore Bank by the State Bank under orders from above. The takeover of the Guaranty Trust by J. P. Morgan & Co. was carried out in 1959 expeditiously like the merger of other big New York banks. Banks abroad do seem to order these things much better than we seem to do. Indo-Commercial is yet to coalesce with Punjab National and the Bank of Nagpur is still to discharge its obligations to depositors who may have to wait on the pleasure of the Bank of Maharashtra.

EDUCATION

Crowded

At the recent convocation of the Calcutta University, degrees were conferred on 16,000 youngmen and women. But this event does not seem to have generated much enthusiasm. On the contrary, the fact that the number of students who receive their degrees is increasing from year to year seems to be causing deep concern. Miss Padmaja Naidu, the Governor of West Bengal and Chancellor of the Calcutta University, has said that the growing unemployment among the educated young people in the State is giving her many a sleepless night. Dr Sidhanta who delivered the address on the first day of the convocation dwelt on the immediate problems facing the

11 February 1961

university and the country as a result of the large increase in recent years in the number of students seeking admission into colleges and the consequent increase in the number of degree holders who annually, come out of the universities. One of the remedies suggested by him was restriction of admission to the best and simultaneous arrangements for absorbing the rest in some type of academic activity under the auspices of the universities. But Dr Sidhanta however does not see any early change in the present clamour, in view of the State Government's insistence on the production of some academic certificates for appointment to Government service.

Conditions elsewhere in the country are not very different. Everywhere parents want their wards to have university education partly for snobbish and partly for practical reasons. Apart from the rather excessive importance attached to degrees, students are still too young to take up strenuous work when they complete their secondary school. A situation is created in which a large number of young students pass their secondary schools stage without any specific openings for future career. With the growing emphasis in the country on the establishment of polytechnics, the pressure on the universities may be expected to diminish considerably in coming years. The raising of the college-entering age by a year or two will also help. It will also enable students entering colleges to be better fitted to derive the full benefit of higher education.

The sooner it is realised that the improvement of the standard of higher education is not the sole responsibility of the universities, the better for every one. This is properly a matter which needs the cooperation of all concerned. Government can effectively reduce the pressure on college admissions by insisting on university degrees only for the top posts. For clerical and other routine jobs, Government may have its own tests. Parents too would do well to realise that university education is for those students who show especial aptitude. Once overcrowding is done away with, discipline will cease to be the preoccupation that it has become for the university authorities in recent years.

Progressive

The Indian Institute of Technology, Kharagpur, completes a decade of its existence in August this year. The ten-year period has witnessed the transformation of the Institute from an obscure college for undergraduate studies into an institution for advanced research on engineering problems. The fostered growth of the institution and the fact that it was started with a pre-conceived plan for being developed into an institution for advanced studies would seem to account for the

rapidity of its rise to eminence. It was brought into being, together with three other institutions one each in west, north and south, by the Government of India on the recommendations of the Committee of Technical Education, 1945, headed by the late Nalini Ranjan Sarkar. The Kharagpur Institute has overtaken its counterparts in other regions both in the amplitude of facilities and the quality of teaching it offers. A refreshing feature of the Institute is the direct utility which it seeks to impart to courses of study and the link which it seeks to maintain with industries. The inclusion of a short-term industrial course in modern foundry practice for personnel from industries and Government Departments and the residential study courses for executives in Government Departments and Industries in Management and other subjects bear out the practical bias of training facilities at the Institute.

One may contrast the desolation

which characterised the technological scene at the time of independence with the rich promise which the Kharagpur Institute holds out for the future. The Institute has so far turned out more than 1,805 graduates, 510 post-graduates 13 post-graduate diploma holders and 56 holders of doctorate. This rate of progress is heart-warming. But, as Mr G. L. Mehta pointed out in the course of his convocation address to the Institute last week, the demand for technical personnel far outruns the capacity of existing institutions. Self-reliance in the matter of technical personnel is also far from being achieved and this points to gaps in educational standards. Paucity of teachers is another handicap in the way of expansion. There is also a glaring shortfall in facilities at the post-graduate level and, with only four institutions in the field of which the Kharagpur Institute is one, the need for starting new institutions and for expanding facilities in existing ones is great.

Regressive

The Aligarh Muslim University Enquiry Committee, specially appointed by the University in consultation with the Government of India, to probe into the irregularities of a serious nature brought out in the audit reports and favouritism shown in the matter of promotion and appointment of teachers and admission of students, has recently submitted its report to the Vice-Chancellor. The report shows that many of the charges levelled against the university are not entirely unfounded. The authorities, obviously, did not discharge their duties dispassionately and in a fitting manner. Instances of financial irregularities and communal favouritism both in the appointment of teachers and admission of students, especially in post graduate courses and technical colleges, have been pointed out by the Committee. The Committee, however, was not

Don't throw away parts and money...

It sounds like an impossibility, we know, but it is none the less true. Many hard-to-replace parts costing valuable money are literally thrown away because they have been ruined due to faulty lubrication.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

The Ashoka Hotel

AT NEW DELHI

LIGHTING BY PHILIPS

Occupying an area of 20 acres, the Ashoka Hotel—the largest project of its kind in India—stands out as another shining example of Philips specialised lighting.

The lighting is so essentially a part of the whole conception that it presents an architectural masterpiece which belies the fact that it is achieved by artificial means.

Philips exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy through maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible plus of Philips' international experience and know-how.

FREE : For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau

PHILIPS INDIA LIMITED

quite unmindful of the fact that the Muslim University has been subjected to much unfair criticism, and it has suggested that the authorities should in future be constantly vigilant to avoid any room for suspicion henceforth.

A certain section of the people raised a hue and cry when the Chatterjee Committee was appointed. They even went to the extent of saying that it was a deliberate step to deprive the university of its autonomy. Certainly, universities should be allowed to have a free run of their own affairs—provided they are carried out in the most efficient manner. But when things are not moving in the proper direction, the shortcomings must be rectified. A few years ago, when the UP Government appointed a special committee to enquire into the working of the Allahabad University, it was gratefully greeted by the people. And when things in the Banaras Hindu University went awry, the same thing was done. The vociferous protestation of the "well wishers" of the Muslim University and their denunciation of the institution of the committee are beyond comprehension. If those at the helm of the affairs of the universities are prone to indulge in favouritism and corruption, is there any useful purpose in allowing such universities a carte blanche?

★

PARTY POLITICS House Divided

Prime Minister Nehru came down to Hyderabad with a view to iron out differences amongst congressmen. That the Sanjeeviah Ministry is shaken by opposition threats led by Mr A. C. Subba Reddy, who had to resign some months ago, is a fact which had traversed beyond the regions of speculation long ago and become an actual threat when he had challenged the Congress Legislature Party with another election of the Legislature party leader. Mr Nehru has come down to Hyderabad despite much pressing business at New Delhi. His efforts at patchwork seem forlorn. The problem is apparently beyond the capacity of any outside agency, including the Prime Minister of India unless the local leaders determine to compose their petty differences in the interest of the State. They should forswear personal or group loyalties, jockeying for position and petty intrigues.

The Mysore problem is not dissimilar with Mr B. D. Jatti having to encounter the groups raising their voice against his team. Apparently there is a lull in the affairs of the Mysore Congress Party, but the differences are bound to come up to the surface after the budget session of the Mysore Assembly.

Uneasy Bedfellows

While groupism bedevils the Congress Party in Mysore and Andhra, incompatibility plagues the Kerala Coalition. Chief Minister Pattom Thanu Pillai is accused of utilising the coalition for his own party purposes. An even more serious criticism is that there is no joint consultation by the Chief Minister over communications from the Centre and that the Congress is ignored as a leading partner. The Muslim League, a party to the tripartite coalition, avers strenuously that it would be suicidal to break up the coalition as it would be to the detriment of Kerala's industrial and economic progress. But the Congress Party members, including the Ministers, are sore over what they describe as the partisan way things are done by the Chief Minister. The antics of the Muslim League are assuming the proportions of treason. At a meeting organised by the congress-minded Muslims in this state a couple of weeks ago, some trouble makers from the Muslim League interrupted speakers who said something complimentary about the Muslim League. When they were forced to get out of the hall, they went out shouting 'Pakistan Zindabad.' Muslim League Zindabad."

There is a growing volume of opinion in Kerala today that the Congress-P.S.P. Muslim League Coalition is pulling in different directions. Congressmen say that the PSP is trying to take all the credit for itself at the expense of the Congress. Some procedural palliatives are being attempted to make intra-party consultations more effective. Modification of Cabinet Meeting rules is also sought making it incumbent upon the PSP Chief Minister to consult the congress Deputy Chief Minister on all procedural matters and key appointments. Portfolio changes are also suggested. Whatever the consequence of these attempts, it is unedifying to watch the Ministry in Kerala jogging on as an uneven team, one party baiting the other in public and private meetings.

Revolt Against Big Brother

The resignation of Mr E. V.K. Sampath the leader of the Dravida Munnetra Kazhagam from the central committee of the party has created a split in the DMK party which has so far given the impression of a solid organisation built on unflinching loyalty to party principles and personalities. Behind the split is to be discerned a clash of personalities, for Mr Sampath has stated that it was the dictatorial attitude of Mr C. N. Annadurai which has forced him to lay down his office. Mr Sampath has also got some supporters

Over 800 Offices and Enlarged Service

Perhaps you would like to know how rapidly the State Bank of India is expanding. On 1st July 1955, when the Imperial Bank of India was reconstituted into the State Bank of India, the Bank had only 243 branches. By August 1959, it had 555 fullfledged branches in urban and semi-urban areas. The rate of growth is now about 100 branches a year. The Bank has also 238 sub-offices.

With a net-work of over 800 offices spread all over the country and many more to follow, the State Bank is particularly suited to handle your remittance and collection business.

Thousands of account holders have benefited by the wide range of services offered by the Bank. You too can take advantage of the Bank's services.

Why not contact the nearest Agent of the Bank to talk things over?

in the party press. Some with leftist inclinations in the party who have quarrelled with Annadurai's leadership would point to the existence of ideological differences. How serious the differences are is not known but a final parting of the ways does not seem to be imminent and Mr Sampath and his men continue to be ordinary members of the party.

The rift casts a shadow on the election prospects of the DMK and the understanding with the Swatantra party for election purposes may not avail much. The differences are certain to be exploited by the DK to the advantage of the Congress which however is in a position to appeal to the voters on the basis of its own achievements. The Congress can

particularly point to realisation of Second Plan targets under all heads and the success with social welfare schemes such as mid-day meals. The offer of 10 years of free education for all eligible children may add to the appeal of its propaganda. Further, the sanction given for the development of the Tuticorin port during the Third Plan and the promise of more railway lines may be used to counter DMK charge of neglect of the Madras State by the Centre. One seemingly adverse development which the Congress has to take note of is the hostile posture being adopted by the Tamil Arasu Kazhagam. But this party's differences with the Congress stem mainly from issues related to language and the position of Tamil. The

Arasu Kazhagam is presently engaged in an agitation to have the name of the Madras State changed into Tamilnad. If the Congress could meet the Kazhagam's demand, it may be able to strengthen its position for the elections.

MUNICIPALITIES Lack of Finance

The conference of Municipal Corporations which was held in Bombay last week has served to bring into focus the range and magnitude of problems being faced by municipal administrations in the country. The more important of these are the provision of protected water supply, eradication of communicable diseases like small pox and cholera and slum clearance. It has been estimated that only 50 per cent of the urban areas in the country enjoyed the benefits of protected water supply. The leeway to be made up in the provision of proper sewage system is even greater, more than 85 per cent of the urban areas being without the amenities of a civilized sewage system. The difficulty in putting through schemes for rapid progress is lack of finance and it is doubtful whether even the enhanced provision of Third Plan at Rs 76 crores for urban water supply schemes would enable any tangible improvement to be made at the end of the Plan period. For, after providing for spill over schemes and a sum of Rs 15 crores set apart for corporations, what would remain for new schemes is a bare Rs 40 crores which would hardly suffice to meet the needs of the increase in population. A recent conference of public health engineers held in New Delhi has advanced a suggestion to the Central Government to seek help from the United Nations Special Fund under the Global water supply programme.

At the sixth sitting of the central council of Local Self-Government held in Bangalore; a few months ago, Mr Karmarkar, Union Health Minister referred to a long range scheme for solving the water supply and sanitation problems in the cities that would involve a total expenditure of Rs 1,300 crores over a period of 25 to 30 years. The average annual expenditure under this scheme works out to not less than Rs 40 crores. It is not conceivable how an outlay of this order could be found even with central assistance. With problems multiplying around, it is necessary that municipalities should be assured of elastic sources of revenue. It is unfortunate that no regard has been shown to the recommendations of the Local Finance Enquiry Committee and the Taxation Enquiry Committee. The complaint of general indifference of Central Ministries to the needs of the municipalities voiced at the conference does not therefore appear groundless. Beyond sug-

gesting that the municipalities could usefully launch into commercial enterprises like restaurants etc, there has been no indication of the manner in which the demands for more funds could be met.

BACKWARD CLASSES Vested Interest

The convention of Harijan and tribal M.P.s and M.L.A.s held at Secunderabad is perhaps a means to reduce party differences between new Republicans and old Congressmen. Curiously no reference was made to the measure for

abolishing double-member constituencies or its probable results for Harijan candidates who may have to rely on outside support. The creation of a separate electorate may even alter the political alignment of Harijans in future and the election results may bring in Harijans with diverse labels and with local allegiance. The electoral safeguards are maintained with reference to members but the Harijan candidate will have no contact with the general voter in his constituency and may be called upon to advance sectional interests by a direct mandate. This possibility cannot be dismissed as illusory and one result may be that in Bihar and Orissa

the Adivasis may become more class-conscious.

The contrast between Mr Jagjivan Ram's outline of safeguards and Mr Nehru's objections to a sense of separate identity thus implies that there is lack of identity of views in the Cabinet on the point of safeguards. The fact that caste is crumbling fast, that industrialisation has erased differences and Harijans in cities have new opportunities to acquire new skills deserves notice in the light of Mr Nehru's perfunctory appeal to shed the old mentality of reliance on an official protector of the depressed classes. It was convenient thirty years ago to describe the scheduled castes as a separate,

non-assimilable element in the body politic. Lists of castes were prepared by Executive Councillors to support and sustain the Communal Award in order to mark off Harijans from Hindus. That is hardly valid at present and the economic advance of Harijans, has produced not only a top tier of legislators and officials, but also equality in places of public resort. The abolition of untouchability is a fact that goes against the plea for safeguards now and for ever. The task of national integration to which Congress must devote itself soon, is a real and pressing one, in view of what Harijan spokesmen ask for. It is legitimate to ask for the assignment of waste land or for State grants for housing. But to plead for special grants for private hostels when the Government has earmarked funds for Harijan welfare appears excessive.

The President of the conference unfortunately did not review the results of uplift, the efforts of caste Hindus to help Harijans onwards or the protection given by agrarian, factory or other legislation to the working class. The Harijan problem is obviously one of poverty and there should be no divisions among the poor, as Mr Nehru pointed out forcefully. The ideal of "fair shares" appears enough to most people now and to press claims for advantages on the score of birth is taken only as a sign of an inferiority complex. To speak of unfair competition when recruitment to public services provides for special concessions about age, the fees prescribed, and promotion is unfair.

FAMILY PLANNING No Abortion

Except for an announcement that a factory to produce contraceptives is to be set up in Andhra Pradesh the discussion on Family Planning has yielded no concrete result. But it has served to show that India is not ready to supplement sterilisation by abortion. The Japanese example was commended by Mr P. V. G. Raju, and deprecated by Mr Karmarkar who thinks that guidance to unsuitable parents is now quite adequate and State clinics cannot offer to perform illegal operations, because that would mean a miscarriage of Socialist policy, always gradual and moderate.

The ideal of ultra-rationalists has been rejected partly on the ground that doctors are not plentiful; and that the health of mothers will suffer. The majority view was hence clearly against abortion for moral as well as rational reasons. But to trust to education alone is not felt to be enough and reliance on mechanical contraceptives is seriously considered. Import quotas for contraceptives have been liberal, and soon indigenous possibilities may be explored. Kerala

and Madras are well-placed at present to start manufacture on a large scale of rubber goods and the International Latex Corporation of New York may be trusted to help with an apt advertisement of the speeches made lately at Hyderabad on population control. The best remedy may lie in improved housing, and late marriages but these are not as much stressed, as committees to operate programmes and convert family planning into a part of community development.

MIDDLE EAST

Winds of Change

Kuwait (in the rupee rather than the sterling area) is a small State on the Persian Gulf. It is a haven for expatriate funds and financial operations based on the Gulf are familiar to Europeans with dollars to spend. The Anglo-US oil companies have made Kuwait a financial force and British protection an anachronism. A recent quarrel over the deportation of the discontented persons from Bahrein to St. Helena led to a frank examination of what British interests and claims involve. The States lying between the Saudi Arabian Kingdom and Persia are like the old Indian princely states. The Princes are restive and the local nationalists resent British paternalism. The formation of a local oil company in Kuwait in which the local people can take shares is a sign of the times. The US Oil companies have realised that they should come to terms with Arab nationalism, if President Nasser's growing influence should not jeopardise their projects and even capital. The political changes in Saudi Arabia, the State's claims to extra revenue, and a curb on output to keep up prices point only to the old explosive mixture of oil and politics. The Buraimi Oasis dispute has to be settled and a tactical withdrawal from Muscat may be one way of appeasing Arabia. Britain does no longer stand out as a power in the Middle East. The Suez Canal is now under Egyptian control and the UAR's influence is spreading to the once impermeable Jordan and Iraq where the oil companies are now trying to secure new—and from their point of view, possibly less favourable terms for continued operation.

India has, of course, no desire to turn her fingers by playing with the cauldrons of oil and politics of these Sheikhdoms. But less melodramatic trading opportunities are full of promise. We can improve upon our existing connections, and increase our trade with old ports like Bahrein and new ports like Umsaid. The floating fair sent last year was an indication of Indian exporters' readiness to seek new and potentially valuable markets. The Indian political agency in the Gulf may have to open branches in Kuwait and

the equally rich Sheikhdom of Qatar, to foster the old and new ties. The late Sir Arnold Wilson recognised that the Gulf States with an Arab majority provided new opportunities for British diplomatic skill; even as Sir John Malcolm recognised that Bombay had a more than alliterative interest in Basra. As reversioners of British interests in India, we may have less need to use our diplomatic than our commercial skills. Electric appliances rather than

alides-memoire will be our trump card.

SANTA MARIA A Crack in Tyranny?

A minor but significant incident in the international arena has just been closed. The Santa Maria, the luxury liner, has been return-

YOU SAVE FOR OTHER LUXURIES WHEN YOU INVEST IN AN ECONOMY GLASS TICKET ON B.O.A.C. WORLDWIDE JETLINERS

BRITISH OVERSEAS AIRWAYS CORPORATION
IN ASSOCIATION WITH AIR-INDIA AND QANTAS

11 February 1961

251

ed to its Portuguese owners by the Brazilian authorities but Captain Galvo and his men who took over the ship in mid-ocean some thirteen days back in a dramatic fashion not without bloodshed have been given asylum in Brazil. The owners of Santa Maria describe the seizure as nothing but piracy but Captain Galvo prefers to call the episode the opening phase of the liberation of the people of Portugal and Spain. This latter view seems to be shared by no less a person than the new President of Brazil, Senhor Quadros.

Observers think that since Quadros is known to be sympathetic toward the aspirations of the forces opposed to Salazar, the Portuguese dictator, the incident is perhaps not entirely closed. Both Brazil and Argentina showed quite early in the embroglio where their sympathies lay by enabling General Delgado and Captain Galvo to get out of the clutches of Salazar. Before the final decision of Brazil on the future of Santa Maria was known, there was speculation about the custody or future use of the ship. By returning the ship to its lawful owners, Brazil has shown rare wisdom. Any other would have led to confusion if not actual conflict, in international relations.

It is inconceivable that the possession of one ship by the rebels would have greatly improved their striking power. It would therefore appear that General Delgado's main purpose in engineering the seizure of Santa Maria is to demonstrate to the world at large that forces opposed to Salazar are not without resources. The reported trouble in Angola, a Portuguese colony in Africa, seems to confirm Captain Galvo's hint of plans to begin the struggle at more than one point.

If the focussing of world attention on Portuguese affairs has been his objective, General Delgado has eminently succeeded. Both Britain and the USA, at first appeared to consider the incident as an act of piracy but they have since indicated that their interest in the matter is limited to ensuring the safety of passengers. The episode has received wide publicity and the cause of the rebels has gained many a new sympathiser.

But it is idle to think that Salazar who has managed to be in power for the past 35 years can be made to step down by a few stray incidents outside Portugal, however unduly publicised. He has shown himself to be too clear to be unduly rattled by such minor skirmishes. It is true he is having trouble within the country. Small but influential groups have known to have raised their voice of protest. Salazar however has been able to deal with them effectively so far. It is in the colonies, therefore, that one may have to look for serious challenge to Salazar even though he has not omitted to strengthen his stranglehold on them also. General Delgado's

main plan perhaps is to stir up trouble in the colonies while administering frequent shocks to the Portuguese director by means of incidents like the seizure of Santa Maria. Far from discouraging him the present abortive attempt at appropriating the luxury liner may goad him to undertake similar exploits aimed at damaging the prestige of Salazar, now that he need fear no undue interference from the big powers.

PAKISTAN

New Lease of Life

Pakistan's industries and agriculture have secured a new lease of life with the inauguration of the gigantic multi-purpose Warsak Project. Constructed at a cost of Rs 35 crores, of which the entire external requirements have been covered by Canadian aid, the project comprises a power house

with an initial capacity of 160,000 Kilo Watts, a twenty-six mile long lake and two high level canals.

The immediate benefits to the country, as enumerated by M. Z. A. Bhutto, the Minister for Fuel, Power and Natural Resources, are the power supply to help develop essential industries, the progress of which, during recent years, has been hamstrung by the paucity of power and the conversion of about 120,000 acre of barren land into arable land by irrigating them at regular intervals. Besides, the scope for the commercial exploitation of the vast untapped mineral resources of the Frontier regions with the utilisation of power from this project appears to be bright. The subsidiary advantages that will accrue to the people are the availability of cheap transport by way of navigation over the Warsak lake and the all round development of the tribal areas.

In his inaugural address, Presi-

dent Mohammad Ayub Khan stated that the newly constructed dam will bear eloquent testimony to the Government's eagerness in raising the living standard of the people, particularly of the denizens of the far-flung and hitherto neglected areas. He also lavished encomium on the Canadian Government and Canadian technicians for the financial assistance from the one and the speedy work from the other.

EXPORT PROMOTION

Showrooms Abroad

At Kanpur, Mr Lal Bahadur Shastri asked the Federation of Indian Industry to grow wings and supplement export promotion by setting up showrooms. The Export Councils may be obliged to levy a cess in order to finance any scheme of co-operative trade pro-

CENSUS 1961

10 February—5 March

Between these dates every person will be counted in our country, in cities or in the remote villages, in the hills or in forests, at sea or on shore.

The counting will start on 10 February and end at sunrise on 1 March. To make doubly sure that every one has been included in the Census, there will be a revisional count between 1 and 5 March. Make sure that the entire family is counted, from the oldest to the youngest.

The enumerator has a heavy responsibility. Please help him in his task.

All census information will be strictly confidential and fully protected.

Issued by Government of India

DA60/643

motion. No effort has been made so far to enlist advertising experts to do market research on behalf of Indian exporters. The Indian Society of Advertisers may help to lay down a policy for combined effort as already done in the case of sugar, rayon or biscuits. This is being done at home by trade Federations and the Dundee jute industry has been consistently pushing Daisee into public notice in UK publications.

The chances of Indian tea selling better abroad are now bound up with advertising and the Indian Coffee Board plans to conserve the limited Arabica crop for export mainly and to encourage the local consumer to try the cheaper Robusta. The pattern of consumption is being regulated. On that score the better varieties of cloth must be shipped, and if the excise duty does not limit domestic consumption of superfine cloth, a new policy must be tried in order to encourage the use of coarse cloth at home. Fiscal measures to limit the use of diesel oil have come: also excises to help export of vegetable oils and vanaspati. The pattern of consumption may be changed also if jaggery is made to replace sugar in the home market and the Federation then may have to consider issues relating to costs and competitive capacity. Trade Commissions may be well induced to help by finding show-rooms for Indian manufacturers and not merely passing on enquiries to likely suppliers in India. The exporters' problem is not going to be simplified by exhibits at trade fairs or floating displays.

★

ELECTRIC POWER

Dear or Cheap?

Far from reassuring them Mr Hafiz Mahmud Ibrahim, Union Minister for Irrigation and Power, perhaps only increased the suspicion of the Licensees on electricity undertakings. Many of them wonder whether Government was really interested in their existence, let alone expansion. The Minister said the other day at the annual meeting of the Federation of Electricity Undertakings that electricity rates obtaining in the country generally were "quite fair." Perhaps he was not too sure of his facts, for almost immediately he went on to argue that electricity, being a basic requirement and almost a necessity, should be cheap. At the same time he admitted that electricity undertakings should be enabled to attract larger investments. He pointed out that some State Governments had already recognised the companies' needs by permitting them to treat tax saved under the Finance Act 1960 on a par with capital. He further revealed that the Government of India has under its consideration suitable measures to offset the effect of changes in the Finance Act from

year to year on the earnings of the companies. Mr Ibrahim is evidently satisfied that all is well with the electricity supply companies.

Mr S. M. Zubair, Chairman of the Federation of Electricity Undertakings, is also equally categorical in his assertion that "the rates for electric power supply obtaining in the country in most of the power systems are below cost rates." If Mr Ibrahim has not chosen to explain how he has arrived at his conclusion, Mr Zubair is also not very helpful. Perhaps Mr Zubair thinks that the verdict of the investors contains all the evidence needed to uphold his point. It is undeniable that investors do not fancy nowadays shares of electricity companies as they once used to do. And the reason is obvious: dividends are not as attractive as in most other industries. The dividends are comparatively low and the explanation is that the return the companies get is only 6 per cent, further reduced since last year by 30 per cent representing tax deduction at source on behalf of the shareholders.

There is however one point on which there is agreement between the two spokesmen: increased investments should be attracted by the industry. It is extremely unlikely that the ipsi dixit of a Minister about electricity rates obtaining in the country being fair will create a stampede for shares of electricity companies.

It is time Government realised that electricity supply companies are occupying a vital position in the national economy. They have a long record of service to the community and if Government's ambitious power development programmes are to be crowned with success it is essential that the Licensees' sector is enabled to go ahead with its expansion schemes so that there are adequate facilities for purveying the additional power to the needed points. The argument that cost of a basic requirement should be low cannot be advanced seriously by Government when it has not hesitated to grant price increases in a basic industry like coal. The implied assumption that consumers will protest if the cost of electricity goes up is unwarranted, for consumers, especially industrial consumers, will not be unwilling to pay a little more in return for efficient service.

★

MUSTARD OIL Rising Prices

In the Calcutta market, the price of mustard oil started rising sharply from November last when it was sold at Rs 85 a maund as against Rs 77 quoted at the end of June. The price rose gradually and it was sold at Rs 92 and the seed at Rs 35. On 1 January this year, prices went up

METRIC UNITS IN POST OFFICES

Since February 1st, all Postal Transactions have changed over to the Metric System. Some of the important revised Postage Rates are as follows:

Inland	Foreign
LETTERS	LETTERS
First 15 grammes ... 15 nP	First 20 grammes ... 30 nP
Each additional 15 grammes ... 10 nP	Each additional 20 grammes ... 20 nP
PACKETS	PRINTED MATTER, Etc.
First 50 grammes ... 8 nP	First 50 grammes ... 12 nP
Each additional 25 grammes ... 3 nP	Each additional 50 grammes ... 6 nP
PARCELS	Minimum charges for commercial papers and samples ... 30 nP
Each 400 grammes or part ... 50 nP	
AIR SURCHARGE FOR PACKETS	
For each 10 grammes or part 4 nP	

For details and other rates, please consult any post office

POSTS AND TELEGRAPHS DEPARTMENT

further, oil quoting Rs 96 and the seed Rs 37.25. This upward trend in prices gathered further momentum to quote Rs 98 and Rs 39 at the end of January as against Rs 80 and Rs 32 respectively on the corresponding date of last year.

In the above connection, Mr R. K. Roy, the President of the Mustard Oil Millers' Association, has drawn the attention to many unfortunate circumstances in the oil industry, which require urgent consideration. He states that, as West Bengal is the only State where mustard oil is largely consumed, it has to depend on other States for the supply of the raw material. It is this important factor, which lies at the root of frequent closure of mills, shortages of mustard oil and sharp rise in prices. The problem does not seem to end there. The Indian Production Association, a body of about 200 middlemen, has been enjoying a sort of monopoly in the West Bengal seed market. Although Mr S. Murarka, the Secre-

tary of the Indian Produce Association, has stated that the present shortage is due mainly to non-appearance of new seeds in sufficient quantity in the producing areas, the extent of the present rise in prices is not warranted by the amount of shortage.

One objectionable feature is that transactions in seed take place at the Howrah grains market on the basis of samples; but goods are actually unloaded and kept at Chitpore yard in Calcutta.

This makes verification of seeds with samples impossible and also leads to destruction of some bags. There is, therefore, a strong case for the reconstitution of the Central Oil-seeds Committee to give adequate representation of the mustard oil industry on it. Periodic crises like these will inevitably bring in its wake deterrent correctives like restrictions on borrowings against seeds, control of the distribution and price of seed. After all, the consumer is entitled to some protection.

COTTON TEXTILES

Loom

Requirements

The Tariff Commission which has been engaged by the Government of India to investigate into the question of continuing protection to the cotton textile industry has estimated the industry's requirements of automatic looms during 1961-63 at 18,000. In order to avert the displacement of labour involved, the installation of automatic looms during recent years has been proceeding at a rather slow pace. However, this factor cannot deter the industrialists from adopting modern methods and modernisation of uneconomic units, especially when the industry is confronting seething competition in foreign markets.

Consistent with the imperative need for improving the quality of its products and reducing the cost of production to the minimum, and securing competitive power in foreign markets, the industry made a forceful plea for rationalisation of production, and replacement of old units. To meet these requirements, the Government of India, on the recommendation of the Textile Enquiry Committee, sanctioned, under the export promotion scheme, the installation of 15,000 automatic looms.

Programmes for plant renovation and modernisation have already been initiated by a number of mills all over the country with the co-operation of the Government of India. The financial assistance rendered by the National Development Corporation for rehabilitation purposes has also turned out to be of immense help to the industrialists.

Despite the mounting demands for automatic looms, it is rather disquieting that at present there is only automatic loom manufacturing factory in the country. The present capacity of the plant is estimated at 1,560 per annum on single shift but by the end of this year the capacity will be enhanced to 2,400 with technical collaboration of a Japanese firm. Licences to three more companies have been sanctioned for the manufacture of automatic looms. Even when all these plants go into full production the total output will be far below the requirements. Concerted efforts will have to be made to boost up indigenous production in order to meet the demand.

★

OIL

Pressure Again

The letter reportedly written by the Government of India and calling upon the private oil companies to restore the discount which the Companies had allowed on the prices of crude oil has again brought the question of oil prices

to the focus of controversy. The question of prices to be paid to the companies had been boiling for some time, and the reduction of 7½ per cent over and above the 5 per cent fall in the Persian Gulf prices obtained by the Government from the companies only left the issue open for future negotiations. That the Government was not satisfied by the earlier reductions agreed to by the Companies had been made clear by Mr Malaviya, Union Minister for Oil, on more than one occasion. The shifting attitude of the private companies in respect of the extent of the reduction they could afford prevented a proper understanding of the real factors involved in the issue of oil prices. The oil companies had, for example, at one time agreed to a reduction of 12½ per cent in prices but, for reasons known only to themselves, withdrew the offer. The discount which the Government now wants to restore was also a concession which was in force for sometime

by agreement with the companies, but was later resiled from on the plea of price changes in the world oil market.

The prospect of continued fall in world prices of oil together with Russia's bid to sell oil at cheap prices would seem to put the Government in a vantage position in bargaining for a further reduction in prices. The growing world opinion in favour of the right of the producing countries to fix terms and conditions for foreign participants in the oil industry is an argument which the Government can advance in justification of their stand on the question of oil prices. The attitude of the Government is influenced by what such gain in prices would contribute to resources for the oil exploration programme. In the event of the restoration of the discount, the gain would amount to Rs 4 crores to 5 crores per annum. While the gain may seem substantial, before the Government takes any precipitate move, it has to consi-

der whether any more concessions wrested from the oil companies would affect the progress of the refineries in the private sector. Should the progress of these projects be slowed down for reasons of lack of funds, the gain to the Government from the restoration of the discount is certain to be lost by what the Government may have to spend on imports of refined oil.

★ CONSUMER DEMAND Thompson's Guide

Consumer demand in a developing economy is a growing function of factors notable of which are population and the distribution of purchasing power. As the basis for the formulation of marketing policies and the related aspect of production planning, the assessment of such consumer demand is

NON-FERROUS

CASTINGS FOR

STEELWORKS

IISCO makes all types of standard quality non-ferrous castings required by steelworks. Some of the items on regular production schedule are:

- MILL ROLL NECK BEARINGS
- COPPER BOSH PLATES
- COPPER TUYERES
- COPPER TUYERES COOLERS
- COPPER INTERMEDIATE CINDER NOTCH
- HOT BLAST VALVE SEATS

THE INDIAN IRON & STEEL CO. LTD.

Agents in South India: THE SOUTH INDIAN EXPORT CO. LTD., MADRAS 2

particularly important. Though a neglected field of study, the widening market for consumer goods implicit in the attempts at economic development invests such assessment with a new importance. Such studies as there have been of consumer markets have been so far mainly with reference to specific goods such as sugar, cotton textiles etc. In the circumstances, the "Thompson Consumer Index of Markets" a publication of J. Walter Thompson Company will be welcomed as a conspicuous addition to the exiguous knowledge on the subject of market potentialities in India.

The work is first to be commended as a pioneering endeavour, for what it attempts is a study of market potentialities for consumer goods in general without limiting to particular items. The fact that only urban areas have been included in its scope does not minimise the usefulness of the work. For measuring the consuming capacity of each area a total of twelve economic indicators are used. These include population, population other than factory labour, increase in population, number of literates, number of domestic radio sets, number of private cars, number of banks, number of doctors, number of chemists and druggists, number of cinema seats, and domestic consumption of electricity. Leaving population aside which is the basic factor in the determination of market potentials, the other standards selected are intended to measure the relative prosperity of particular areas. Population alone, it is clear, would be a misleading index of market capacity. Calcutta as the largest urban market is assigned the largest score of 100 to serve as the base and the capacity of the other places is fixed on the basis of scores of individual items calculated in proportion to the base scores.

Many interesting facts have emerged out of this survey. For instance, purchasing power of markets cannot be discerned by comparing population alone. For, whereas Ajmer and Coimbatore have almost equal population of

1.9 lakhs, the latter has a potential which is 133 per cent greater than the former. These and many other findings will interest the curious as well as those who have things to sell.

ROAD TRANSPORT Indispensable

The latest enquiry into road transport is concerned with regulating road-rail competition rather than taxation of motor vehicles. The single point uniform levy on road transport is hardly in the picture. Its warning against long distance express services is addressed to the States that put vehicles on new routes and divert traffic from the railways though such services may afford relief from overcrowding in trains. The Neogy Committee has fully conceded that road transport is indispensable for some interests. That railways' income suffers and the increase in bulk traffic like ores has not helped are obvious. The committee has put forward the case for regulation in a form different from that in the Mitchell-Kirkness report prepared in the Thirties. The States tax vehicles and fuel and the Centre taxes the automobile industry as also fuel. The growth of road transport cannot be deliberately restricted but the Neogy Committee by framing questions about the future has made it clear that co-ordination under the Third Plan must afford more scope for the Railways. The fact that the West German road services are booming and the federal railways operating at a loss cannot be cited in favour of a policy of non-intervention. The Neogy Committee has made it clear that the flow of traffic today is not from port to the interior; also that internal trade has become more important than foreign trade. The issue is, however, not one between the public sector (the Railways) and the private sector (the lorry services). It is really one of making soon the most of the available resources, avoiding waste and cheapening transport.

INDUSTRIAL INDIA East Anglia Plastics

The paramount importance of developing agricultural based industries for the economic development of the people has been brought home by Dr B. C. Roy, the Chief Minister of West Bengal, when he laid the foundation stone of plastic moulding powder manufacturing factory of the East Anglia Plastics (India) Limited at Dum Dum. The Company is really fortunate in having been able to secure the technical collaboration of the East Anglia Private (London) Limited in the setting up of the plant and its operation. The original intention of the Company was to compound the imported flakes, but as desired by the Government of India, this programme will be linked up with the manufacture of cellulose acetate flakes.

It may be recalled that the acetate moulding powder plays a prominent part in the Plastic Industry. The superiority of this particular thermoplastic can be easily gauged from the variety of uses to which the material is put. Its resiliency and great resistance to impact and colourability are too well known to be mentioned here.

As stated by Dr Roy this factory provides a special call for the people of West Bengal. By utilising flakes and compounding materials, small scale industries can be started with limited capital. This will solve not only the problem of unemployment to a considerable extent, but will also form a source of supplementary income.

Mr Ranadeb Chowdhury, the Director of the Company, in his welcome address, stated that the factory will go into production in the middle of this year. To Mr Choudhury the present endeavour is but the beginning of many more to come. Already another factory at a suitable place is under contemplation by the Company.

Instruments Industry

Details of a surgical instruments factory to be set up with Soviet aid at Avadi, near Madras, have been finalised by the Government of India, and the foundation for the factory would be laid this year. This was disclosed recently by Mr Manubhai Shah Union Minister for Industries while inaugurating the three-day seminar on 'Instrumentation' at the A. C. College of Technology.

Along with the surgical instruments factory Soviet aid would also be available for two other projects namely an electronic instruments factory and a hydraulic instruments factory which are to be set up in the public sector.

A fourth one, with French collaboration, would be established at Guindy for the manufacture of precision instruments.

Mr Shah pointed out that these developments represented a major advance towards the rapid development of instruments industry in the country.

Hinting that all possible help would be rendered to other entrepreneurs who ventured further into the instruments industry, Mr Shah stated that manufacturers of large, medium or small scale instruments would get adequate foreign exchange for import of specialised raw materials.

The Government of India, he declared, has accorded topmost priority to this industry.

Mr Shah hoped that as and when the four instruments industries get going, a large part of the country's requirements of industrial, process and control instruments in the Third Plan would be met.

For development of the instruments industry, Mr Shah said, the Central Scientific Instruments Organisation was set up under the auspices of the Council of Scientific and Industrial Research.

An expenditure of about Rs 70 lakhs (nonrecurring) and Rs 50 lakhs (recurring) has been approved by the Central Scientific Instruments Organisation during the Third Plan period.

Head Wrightson India

A new company, Head Wrightson India Limited has been registered to act as a contracting company for Head Wrightson and Company Limited, England. The company will make the fullest use of the rapidly growing manufacturing facilities in India for the class of work with which the parent company is mainly concerned, both in the public and private sectors. Head Wrightson England has been maintaining a close link with India for many years and has been responsible for supplying much of the specialist equipment used in India's basic industries. At present the company is playing a major role in the Durgapur Steel works project as suppliers of all the iron-making plant as also much of the ancillary equipment. For the time being, however, Head Wrightson India will be taking the necessary designs from the parent company but it has plans to train Indian engineers in UK with a view to making the Indian company self-sufficient in all respects. Sir John Wrightson is the chairman of the parent company. Mr Peter Wrightson will be the chairman of Head Wrightson India Limited, Mr Vaughan Pendred, the managing director and Mr M. A. Jenks, manager for India and the Far East.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

HOW topsy turvy things can get! The Soviet Union has thrown aside the big stick and is dangling the carrot in front, while India and Great Britain are slowly strangling the hen that lays the golden egg. (I am mixing my fables and my metaphors, but the occasion excuses it.) No less a person than the Soviet ambassador tells Mr Chambers, Chairman, ICI, London—whose Press Conference in Calcutta last week was the liveliest and the least cliché-ridden I have come by in a long time—that "there should be financial incentives as well for people whose contribution is greater." Fair enough, but not quite "from every one according to his capacity and to everyone according to his needs." In fact nearer "all animals are equal, but some animals are more equal than others." Not exactly the incantation of Stakhonovite shocktroopers with Stalinist terror behind but the more human chant of that arch-reactionary, Belloc:

I am tired of love, I am even more
tired of rhyme,
But money gives me pleasure
every time.

In that managerial and technological paradise, scientists, we hear—with the late Dr Joseph obstinately nagging our conscience—are left with a disposable "earned income" of three and a half lakhs of rupees. How many in India, asked Mr Chambers rhetorically—and in the circumstances quizzically—can boast of such breath-taking luck? We all know the objections. In a closed economy with no free markets and with arbitrary pricing, income tax rates have little meaning. This argument is irrelevant to the point Mr Chambers was making, since what is held up as an example is selective incentives inter se and not a tax-free Eden. And as for pricing making nonsense of tax burden, with our pervasive excises playing havoc with our prices, I don't think we are in a position to throw the first stone. Almost the only thing I find rather upsetting in the Soviet way of ordering these things is the pampering of scientists. I know it is rather an unfashionable view at the moment in India, but I don't know that tax-holidays may not give ideas to these bright young men from Red Brick Universities playing with six-ton sputniks. They may get fancy notions about their place in the scheme of things and may

want to translate science-fiction politics into reality. On the other hand, tax-holidays are supposed by governments all over the world to make people soft. In any event, I dare say Mr Khrushchev knows his business.

Mr Chambers is, with or without the Soviet example, dead right in his diagnosis of the debilitating effect of present rates of personal taxation on savings and investment. The recent study of the National Council of Applied Economic Research points out once again some of the more bizarre of our fiscal absurdities. Among them, the prize must surely go to the fact that under certain circumstance a man is to pay more than what he earns in a year by way of taxes for that year. Mr Chambers found senior civil servants in charge of government industries rather worried about their future because of high taxation. Baiting the bureaucracy has been so much a part of our national sport that it offends as a shock that it has personal problems like you and me. Taxes must be hurting civil servants even more than private sector executives, since such well known cushions against them like the expense account are not there. Mr Chambers also drew attention to some of the difficulties in the way of a readier inflow of foreign investment into India. It is true that a great deal has been done in recent years to mitigate the terrors of Indian taxation, most of them psychological—like the wealth tax on companies—rather than hurtful. There is also evidence that over a period of years, India offers greater tax incentives than what certain other countries do. But there is some substance in the argument that vis-a-vis a domestic company, a foreign company is worse off in the matter of rates of taxation. This certainly needs rectification both on grounds of equity and expediency.

Two other suggestions that Mr Chambers made at his press conference had at least the merit of novelty, though acquiescence to them may be less ready. He is not apparently much impressed either with our professions or performance in the field of exports. Productivity—which he apparently equates with agricultural productivity—is in his opinion the

key to many things, including relative comfort in foreign exchange position. Better and more efficient agriculture based on more extensive use of fertilisers—imported, if necessary,—would save more foreign exchange than is likely to be earned by boost in exports. There is a tie-up in the argument of two rather unrelated things that comes perilously near a logical legerdemain. Productivity has its own inescapable logic that owes nothing to the argument about exports or imports. The choice is not between productivity and exports at all. If the import bill is to go up by increase in imports of fertilisers needed for better agriculture, it is a necessity that I believe the planners are willing to recognise and provide for. It is true that to the extent funds get diverted towards export-oriented investments, there is less money available for paying for fertilisers. But then it is the sort of dilemma that does not admit of an easy grasp by the horns. In any event, the same passion for productivity that ought to characterise our agriculture can animate production for exports with greater return per unit of investment. The logic behind export promotion is really arithmetical, the stark necessity to balance books. And after all, our export ambitions for the third plan are modest enough with an annual average of Rs 690 crores, about the same as the likely actual at the end of two plans.

The other suggestion of Mr Chambers about the use of nitrogenous fertiliser of which there is plentiful supply at the moment is something on which I dare not venture an opinion. Mr Chambers himself refers to it as a risk. The prospect of taking a risk of such magnitude in so vital a matter might well intimidate a more venturesome government, especially with the election round the corner.

Lord Morrison's arrival in India on the same day as Queen Elizabeth's has tended somewhat to put him out of the news. His principal task in India was the delivery of the Dorab Tata Memorial Lectures in Bombay. Though only a year old—the first series was delivered by Sir Oliver Franks last year and readers may recall my discussing it in these columns—they have already assumed the dignity of an institution. The choice of Lord Morrison was justified by the enlargement of the original scope of the lectures to include politics. Given his background, his choice of "Some aspects of the British Parliamentary System" as his

subject was inevitable. Our familiarity with the British Parliamentary system is both extensive and intimate, and we really did not expect to be startled into a new recognition. On the other hand, it is recall of the familiar from one who, in the words of Sir Homi Mody, "has known the game from both the batting and bowling side" that we wanted and which Morrison did in fact provide.

Time has mellowed Morrison and he is perhaps less in sympathy with the Labour party of today than say, with his war-time colleagues. The labour party he helped found and whose dedicated secretary he was for the best part of his working life, had causes to win and to lose, and in any case to fight for. Its very success has deprived his successors of the thrills of battle. Mr Gaitskill, trying to keep together a tired and petulant rabble, may well envy the earlier generation's luck. Lord Morrison himself must be feeling a stranger in his party. Perhaps in India, rather than in Great Britain, Mr Morrison will find a mood that might recall to him his early days.

The Indian Board for Wild Life has reduced the range of choice of the National Bird to the peacock, the Brahmini kite, the gay Indian bustard and the hamsa. The first preference is apparently for the proud peacock. The hamsa or the swan would have been my and perhaps the Board's choice but for the fact that the idea behind the adoption of a national bird is practical. We cannot very well look after a mythical bird, famed though it is in our literature and legend. There is a not unattractive bird waddling about which is pointed to as the swan, but I rather suspect it may turn out to be a goose. Though I have nothing against a goose, verbal association, that great tyrant over the human mind, rules it out. But why not the duck? But it may lend itself to dreadful puns about our cricket which, after a dreary patch, is probably looking up. A duckling,—an ugly duckling, by preference—would be a graceful compliment to a great artist and an indication that our 'art is in the right place. It is easy enough to praise beauty, but more difficult to be compassionate towards the ugly. Any long-haired aesthete can create a blessed Damozel, but a Caliban is a different proposition. But the ugly duckling isn't even in the race, which is a pity. The Brahmini kite is considered a good omen but may be disqualified because there are people down south who may see in its choice a deep laid Aryan plot. The bustard has printing hazards too horrible to contemplate and so we are back to the peacock. Well might it preen itself on its easy victory.

Assistance to Small Industries

Shrimati M. Chandrasekhar, Chairman, The National Small Industries Corporation Ltd, said in the course of an interview, that knowledge of the different schemes of assistance for development of small industries should spread to the largest extent and the programmes of assistance should be expanded to cover the entire field. She felt that in spite of the strenuous efforts of the Corporation and allied organisations, this knowledge has not yet reached the periphery and the smaller units which most needed help have not derived the full benefit of the assistance schemes. The programme is operating mostly in established industrial centres. Even where industrial estates have been established in rural areas, the people concerned have not come forward to avail of the facilities offered. To change this state of affairs and to bring larger numbers of small units all over the country, specially in the underdeveloped regions, within the scope of the development schemes will be one of the principal tasks of the development programme for small industries under the Third Plan for which the Planning Commission has made an allocation of Rs 107 crores.

The activities of the Corporation, said the Chairman, are partly promotional and partly commercial. The

promotional activities include setting up of two Prototype Production and Training Centres, one at Rajkot and the other at Okhla. The Centre at Rajkot has already been set up with the collaboration of the U.S. Technical Co-operation Mission. Construction of the Okhla centre, which is being set up with financial and technical assistance provided by the Government of West Germany, has been completed, and the Centre will be inaugurated before the end of this month. These Centres will design, develop and produce prototypes of machines and pass them on to small scale industries for manufacture on commercial lines. The Centres will also impart training to artisans in the production and operation of the machines.

Besides other forms of marketing assistance, the NISC helps small industries in securing Government contracts. Since the inception of the scheme in 1955-56 till the end of last year, 2,774 contracts of a total value of over Rs 8.30 crores have been secured from the DGS & D by small scale units with the assistance of the Corporation. The Railways also introduced the scheme in May last year and since then, 684 contracts of the total value of Rs 10 lakhs had been secured up to the year end.

The principal trading activity of the Corporation is the supply of machinery to small units on easy

hire-purchase terms. The scheme was introduced in 1956-57. Up to the end of December, 1960, the number of applications finally accepted after processing, and in force, was 3,990 for 14,992 machines valued at about Rs 16 crores. About 4,246 machines, both imported and indigenous, worth over Rs 3.9 crores had been delivered by the end of last year.

Small industries, like others, have faced difficulties in getting imported machinery, on account of the shortage of foreign exchange, though to a smaller extent, as Government has given special attention to their requirements. The position is expected to improve to a marked extent with the DLF credit of \$10 million which has been recently made available to the Corporation for the operation of the Hire Purchase Scheme. A similar Yen credit has also been made available. For the effective utilisation of these credits, the Corporation has, in addition to the normal hire-purchase scheme, introduced two special schemes, namely, Bank Guarantee Scheme and Special Hire-Purchase Scheme. While the usual terms and conditions for supply of machines will apply, these schemes provide for changes in the channelling of applications and mode of repayment. The schemes can be availed of by parties who are in a position to make their own arrangements for selection of machinery, placement of orders transportation, shipping, etc, the Corporation only providing the credit in foreign exchange.

Asked about complaints of delays in processing applications for hire purchase, the Chairman said that the delays in many instances were due to the failure on the part of the applicants to observe the formalities so that applications have to be referred back for further information. In some cases the applicants desire to make changes in the items or specifications of machinery required by them after their applications have been accepted and this involves further scrutiny, quotations and consequent delay. There are also delays in selection and payment of earnest money after quotations have been offered to the applicants. As the quotations from the manufacturers are only valid for limited periods, delay in selection or in making payment of earnest money means that the time-consuming process of calling for quotations, etc, has to be gone over once again. Once an application has been placed, the parties hold the Corporation responsible, but the application has to be processed by different agencies, over which the NSIC has no control. But continuous efforts are made to speed up processing at different stages. The procedures have been streamlined and the staff of the hire purchase division strengthened.

The Chairman also emphasised that, in dealing with public funds they have to exercise the utmost care to ensure that the loans are properly utilised. Applications for machinery worth less than Rs 1 lakh, except in case of a few industries which are over crowded, are disposed of by departmental managers. Applications for over one lakh are sanctioned by the Standing Committee of the Board

which meets twice a month or more often if there is need.

It is learnt that the NSIC has recently carried out a thorough investigation of the procedures in processing and executing the applications. The majority of the applications are accepted within 21 days. Out of 1,135 applications received during March-July, 602 (53 per cent) were accepted within 21 days, 187 (16.5 per cent) within one month, 161 (14.2 per cent) within two months 50 (4.4 per cent) within three months and 25 applications (2.2 per cent) took more than three months. After applications are accepted, quotations are called for from manufacturers and offers are usually passed on within six weeks to the applicants, who are required to deposit 20 per cent of the value of items selected as earnest money. Firm orders are placed on the manufacturers within a fortnight of receipt of advice of payment. Actual dates of delivery depend on the manufacturing schedules of the suppliers. Most of the better known manufacturers are fully booked with orders, so that it is not unusual to have delivery dates one and a half to two years from the placement of the order.

Prospects of increased economic collaboration and trade between India and Italy are highlighted by the arrival of the 25-member Italian Economic Mission in this country last week. Collaboration between Indian enterprise and well-known Italian industrial establishments which already exists in a number of production lines, covering automobiles, teleprinters, tyres and tubes, aluminium, rayon, caustic soda, dyes, chemicals and drugs etc, and the scope for collaboration is expected to be enlarged as a result of the Mission's visit. The Mission includes a large number of prominent Italian industrialists and businessmen. As regards, the prospects of Italian assistance for Third Plan programmes, it will be recalled that Mr Rucinsky, leader of the World Bank Mission, had indicated that Italy was likely to join the "Aid India Club".

The Mission started discussions with officials of the Ministry of Commerce and Industry on 4 February. Earlier they had their first meeting with representatives of the Federation of Indian Chambers of Commerce and Industry on 2 February. The imbalance in trade between the two countries—India's trade deficit with Italy has exceeded Rs 20 crores for the last three years—and the steps that could be taken to encourage the exports of Indian products to Italy were discussed at the meetings. The same topic is also understood to have been raised by Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry, when the leader of the Mission, Senator Emilio Battista accompanied by Dr. Reace Di Falco, Deputy Leader and Dr. J. Giusti del Giardno, the Italian Ambassador in India, called on him last week. Earlier Senator Battista had called on Mr Manubhai Shah, Minister for Industry. The talks in Delhi will be resumed after the return of the Mission from its tour of important centres beginning with Calcutta.

Markets

JUTE Gunny Stocks Rise

PRICES in the jute markets displayed a firm trend from early this week. The somewhat subdued tone noticed toward the close of last week proved shortlived as covering business and fresh enquiries generated renewed enthusiasm. With sellers reluctant even at the steadily rising price levels to enter into commitments, prices moved up sharply. The dominant influence is still raw jute, the meagre availability of which is the main prop of the bullish fervour. It is evident that the raw jute holders are expecting to meet with good demand for their stocks for considerable time to come. It is doubtful if there is even a handful of people in the Indian world of jute who believe that the raw jute supply position will show a sizable improvement before the next crop is in. If it is admitted that this year's crop is smaller than what was earlier estimated, it follows that by the end of the current jute year there will be very little jute to be carried forward into the next year. In this view the scarcity period will extend to another six or seven months. With import prospects also rendered gloomy by the very high prices now prevailing for Pakistani cuttings, no early reduction in prices is anticipated. There is however one silver lining in an otherwise dark horizon. The rains that have fallen during the past few days in West Bengal are expected to encourage early sowing of jute. It is of course a long way from sowing to actual receipt of jute at Calcutta and other Mill stations. Even so, the hope that the next crop may be an early one will have some psychological effect in stabilising price levels.

The present mood of the jute markets has apparently not been affected by the general belief that though there has been a revival of interest in recent weeks, offtake is falling. The figures relating to stocks of jute goods at the end of January seem to indicate that our jute goods did not receive much overseas support during the past month. Total stocks at 84,900 tons show a rise of 4,700 tons over the level at the end of last month. Almost the entire increase has been contributed by sackings whose stocks are up by 4,800 tons to 46,000 tons as against 41,200 tons. Hessian stocks are lower by 800 tons at 28,800 tons while stocks of other varieties are slightly higher by 500 tons at 10,300 tons. At the corresponding date of last year, total stocks stood at 71,800 tons made up of 27,200 tons of hessian, 31,900 tons of sacking and 12,700 tons of other varieties of goods.

Price Trends			
	As on Feb. 2	As on Feb. 6	As on Feb. 8

TOWARDS EVOLVING AN IDEAL JUTE SPECIES

Experiments conducted at the Indian Agricultural Research Institute, New Delhi, bid fair to evolve an ideal variety of jute combining the good qualities of the two species now cultivated in India—Corchorus clitorius and Corchorus capsularis. The former grows on high ground, has a wide range of adaptability and is tolerably resistant to diseases and pests. It has a tall, unbranched stem and produces the strong brown Tossa fibre used commercially. The latter is resistant to floods and drought has a white fibre which is somewhat weak, and is more susceptible to diseases and pests.

If the good qualities of these two species can be combined an ideal jute plant possessing a strong white fibre and adaptability to grow under a wide range of environmental conditions can be evolved. Since 1900 there have been attempts to make this cross. In 1956, a systematic study of the reasons for the failure of the cross was initiated by the Division of Botany of the Indian Agricultural Research Institute under a Second Five Year Plan scheme. It was found that the embryo in a cross between these two species died at a very young stage with the result that no good seed was produced. By grafting the two species upon

each other and by using pollen treated with X-rays, the embryo could however be made to grow normally and give rise to good seeds. Hybrids were thus produced for the first time in 1959 and the progenies of the hybrids were grown during 1960. The hybrids showed various interesting combinations of the characters of the two parents.

A new variety, which marks an improvement over the parent species, may be produced in the near future as a result of the experiments at the IARI. This would be a significant contribution towards solving the shortage of raw material which our jute industry is at present facing.

TEA Outlook

Price trends at the export auctions, held from the beginning of the year, have confirmed that tea is selling at quite satisfactory levels. Among foreign buyers, Britain and Egypt have been prominent in recent weeks although Russia has probably completed its purchases. In addition, the demand from internal operators remains strong.

Non-official estimates place the offtake in 1960 at about 300 million pounds, representing almost 43 per cent of the total Indian output. Indian buyers operated, both in the internal and export sales last year. Their activities were indicative of the Indian market's thirst for this beverage and they demonstrated that they would buy at prices which the world market was not quite prepared to offer.

It cannot be denied that tea at present enjoys the benefit of a closer balance between supply and demand. This close balance was made possible by a fall in production on the one hand and increase in consumption on the other. It is, therefore, expected that all the tea produced last year will have been disposed of by the time the 1961 harvest reaches the market. As there are indications that the export auctions for the current season will end earlier than expected, wholesalers and retailers have been anxious to build up bigger stocks for the interval between the end of the 1960-61 season and the start of the 1961-62 export auction.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 72,389 packages. There was a strong general demand at irregular rates. The best autumnal CTC types came in for good support at firm to dearer rates; but the remainder were generally 10 nP to 20 nP per kilo lower. Mediums and secondary types were very irregular, but sometimes dearer. Medium Assam BOPs and OFs inclined easier except for the occasional brighter liquoring types. Medium BPs were steady at last rates. Similar Fannings, though a little irregular, were about firm.

Doors BOPs were sold at about last rates; but the better OFs were generally easier. Plain broken and Fannings were sold well. Legg-cut teas were irregular and sometimes easier. Well-made Whole Leaf grades came in for good support; but the poorer stalky types declined

further. Tippy teas, though irregular, were sold well. Following rates (per kilo) were quoted:—Clean Black Pekoe Rs 5.20 to Rs 5.45; Plain BP Rs 4.55 to Rs 4.65; Plain Fannings Rs 4.80 to Rs 5.00; Medium BP Rs 4.70 to Rs 4.90; Medium BP Rs 4.70 to Rs 4.90; Medium Fannings Rs 4.90 to Rs 5.10; Best Assam CTC BP Rs 5.80 to Rs 6.20 and Best Assam CTC Fannings Rs 5.80 to Rs 6.40.

In the Internal Sales offerings consisted of 22,988 packages of Dusts and 894 packages of Leaf grades. There was a good general demand for dusts. Orthodox teas of all descriptions were sold readily and prices declined by 5 nP per kilo and sometimes by 10 nP. Legg-cut types opened up to 15 nP easier, but strengthened as the sale progressed. Medium CTC types, though irregular, generally came to a slightly easier market and declined by up to 10 nP except for the brighter liquoring ones, which were firm to dearer. Good CTC teas were well supported with buyers following quality closely. Darjeeling were a strong feature of the sale and were sold above valuations. Following rates were quoted: Plain Orthodox Dust Rs 4.80 to Rs 4.95; Medium Assam Dust Rs 5.00 to Rs 5.30; Legg-Cut Dust Rs 5.15 to Rs 5.40; Medium Assam CTC Dust Rs 5.55 to Rs 5.80 and Good Assam CTC Dust Rs 6.00 to Rs 6.50. There was a good general demand for Leaf grades. The few lines of Green Teas were, however, easier with the top grades receiving little support and difficult of sale.

In London auction, offerings amounted to 78,765 packages. Demand continued to be selective and, apart from Ceylons where prices were steady to dearer, an often easier tendency prevailed. The catalogue contained an abundance of medium grades and not many quality invoices and the price range in consequence narrowed. Plain descriptions were generally held up well. The overall prices range is 3 1/4 sh to 6 1/4 d per pound as compared

COTTON Panicky Conditions in the Market

THE steep fall in prices created panicky conditions in the Bombay cotton market during the past week. Both ready and forward markets remained dull in the absence of any mill and investment support. Jarilla contract touched a new low of Rs 558 per three quintals. The debacle has in its turn created serious concern to growers and traders.

In the ready market all the available varieties lost Rs 50 per candy. Though the arrivals were fast increasing dealers stayed away from the market due to the downtrend in prices. Even the Textile Commissioner's announcement of additional quotas to indigenous mills failed to enthuse the traders.

While the growers were eager to dispose of their cotton, the traders—referred to postpone their purchases—anticipating a further decline in prices. This none too happy condi-

tion will have serious repercussions to the growers all over the country. Reports from the upcountry centres indicate that many of them have approached the banks to pay higher margins on their loans against cotton. The situation has been made complicated by the refusal of the mills to purchase new crop cotton against the quotas recently issued by the Textile Commissioner.

Growers co-operative societies in Gujarat have been particularly hit by the present debacle in cotton. Some of them have approached the

Government for assistance to meet the emergency. They have planned to hold a conference of cotton growers at Baroda on 12 February to chalk out ways and means to extricate themselves from this embarrassing situation. Some markets in Vidarbha are reported to have closed down on account of the lack of buyers.

Various factors have combined together to bring about the precarious conditions in the cotton trade. The upward revision of the crop estimate to 52 lakh bales against the 37 lakh bales of the previous season, the

total absence of buying interest in the markets, the increased pressure on the part of merchants—both local and upcountry—to enlarge their short position, hedge selling against unsold stocks at hand, the increased pressure of arrivals of US cotton and the financial difficulties are the main points that loom large in our minds.

Although the situation is critical, the official circles feel confident that the slump in cotton will not linger for a long time and they claim that it will be over by the end of this month. Taking a panicky view of

the situation, according to them, is thoroughly unwarranted. They are optimistic that financial difficulties will automatically disappear when the market stabilises at lower levels.

In the mean time, cotton traders have put in a strong plea for the release of liberal quota to Bengal Deshi, Kalyan and Katagin. Mills have expressed their helplessness to purchase indigenous cotton as they had already borrowed heavily for buying American cotton, imports of which had been liberally permitted by the authorities.

In view of the revised estimates of the crop this year and the consequent fall in prices, the Board of the East India Cotton Association requested the Textile Commissioner to relax restrictions such as the compulsory surveys and the control over the distribution of indigenous cotton to the mills. The Board feels that considering the steep decline in prices the continuation of compulsory surveys can hardly be justified.

The quality of Kalagin and Wagad is found to be far from satisfactory. If these varieties are allowed to remain unmarketed or without any outlet they are bound to cast a depressing spell on the market.

Piecegoods:

The piecegoods market in Bombay displayed divergent trends during the past week. As the week progressed the demand for different varieties indicated an uptrend in the domestic sector, while the export front remained unaltered due to the overseas resistance at higher levels.

Trading in the market started on a dull tone owing to the absence of any consumer demand. But later the market became very active and the consumer demand looked up to a satisfactory level. The brisk activity witnessed in the market resulted in the enhanced prices of all the varieties which were quoted at a premium of 5 to 15 per cent over the ex-mill prices.

Seasonal buying in fine and super-fine styles was clearly visible and lower medium cloth were also in good demand. Coating dhoties and sarees met with renewed enquiries. Fancy goods were eagerly sought after. Delhi, North India, Saurashtra and Andhra figured as the prominent consuming centres. Inquiries from South India for the approaching Ramzan festival has started on a moderate note.

The supply position, on the other hand, was far from satisfactory especially for certain varieties. Many merchants taking advantage of the short supply sold inferior varieties at higher prices. It is apprehended that the position will still grow worse if the present demand is maintained.

No material improvement was visible on the export front during the period under review. This was due mainly to the higher prices in the domestic market. While the overseas dealers and consumers showed some interest in a variety of goods at cheaper prices, the Indian mills were reluctant to part with their stock at reduced prices.

RUBBER

Growing Demand

ACCORDING to the figures released by the Rubber Board, production of rubber in India was 21,750 tons up to the end of November last year, showing an increase of 1,250 tons over the previous year. Consumption has, however, gone up from just over 34,600 tons for the period January-November 1959 to 40,350 tons for the period under review. Consumption of synthetic and reclaimed rubber was also higher.

In order to bridge the gap which will be to the extent of 25,000 tons by the end of the Second Plan period, a licence has been issued for the manufacture of SBR rubber near Bareilly. The basic design of the plant will be for an annual produc-

tion of 30,000 tons; but immediately production facilities will be arranged for an annual output of 20,000 tons of SBR rubber.

It is further estimated that, by the end of the Third Plan period, the consumption of all varieties of rubber will exceed 100,000 tons per year and the indigenous production of natural rubber will have risen to about 40,000 tons per year. It is likely that, by then, about 15,000 tons of reclaimed rubber will also be produced within the country.

Taking into account the production of 30,000 tons synthetic rubber, there will still be a gap of over 15,000 tons which will have to be met by setting up a second synthetic rubber plant based on indigenously available raw materials. The entire demand of about 6,000 to 7,000 tons for reclaimed rubber is at present met through

imports. Steps are, however, being taken to license adequate capacity to make the country self-sufficient in this item.

COFFEE

The India Coffee Board has released 451,200 kilograms of Coffee for export to bilateral account countries and 903,900 kilograms for export to non-bilateral account countries out of the 1960-61 crop. Following quantities have been released to bilateral account countries:—Plantation A 354,000 kilograms; Plantation B 42,000 kilograms and Plantation Triage 55,200 kilograms. Following quantities are released to non-bilateral account countries:—Plantation A 712,800 kilograms; Plantation B 83,100 kilograms; and Plantation Triage 108,000 kilograms. The last date for tender is fixed for 2 February, 1961.

At the major Pool sale held in Coimbatore recently, a quantity of 1,146 tons of coffee was exposed. The bidding range at the auction was under:—Plantation A Rs 215 to Rs 228; Plantation PB Rs 205 to Rs 212; Plantation Triage Rs 190 to Rs 193; Robusta Flats and PB Rs 150 to Rs 151.

On the London market, the demand for spot coffee during the past few days has remained selective and business somewhat slow. The closing prices ranged from 143 to 149 shillings per cwt. Good quality Kenyas have been reported selling firmly in Nairobi with other qualities irregular. Brazil's support arrangements are said to be maintaining values there and the best qualities have been becoming scarce recently.

Prices in the New York market have continued to show surprising

historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India.

The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.

THE BANK OF INDIA LIMITED

steadiness despite reports of the estimated world surplus of carryover stocks with the producing countries at over 40,000,000 bags at the end of last year. The steadiness is attributed mostly to the export regulations operating in America and Africa. Reports from New York put visible coffee stocks in and afloat to the United States at 1,260,000 bags on 26 January—a significantly higher stock than was reported for the same date a year ago, at 1,078,000 bags.

Estimates for the Kenya coffee have been revised to 31,400 tons or about 534,000 bags. Out of this, about 325,000 bags are reported to have already been sold.

CASHEW

Trade circles in Quilon expect better prospects for Cashew in 1961. The supply position of the commodity is expected to be tighter this year, if the present indications of the rising trend in almond prices prove right. There are reports that African supplies of raw nuts will be lower this year because of cyclone and other difficulties experienced in African cashew-producing countries. A fall of 10,000 to 15,000 tons is likely in the African crop now reaching India.

It is difficult to make any firm forecast now on the size of the Indian crop, which will be late this year. It is also doubtful whether it will be large enough to cover the deficit in African crop.

Processed kernels are now fetching 55 cents per pound. This is higher than the price obtained at this time last year. The demand for kernels is expected to maintain its previous record of showing steady improvement. According to a trade estimate, exports last year touched a new peak of 17,00,000 cases of 50 lbs each, showing an improvement of 2,00,000 cases over the exports in 1959.

FOODGRAINS

Reports of damage to crops in certain areas due to hailstorm failed to have any effect on foodgrains prices in the Hapur market. While the fall in wheat prices was small, coarse grains registered a marked decline in prices. Pulses also sought lower levels. The market for Rice continued to rule quiet due to satisfactory supply position. Maize was sluggish around Rs 12.50 to Rs 13.37 a mound. Stockists were anxious sellers in view of heavy local stocks at about 30,000 maunds and expectations of a drop in seasonal demand soon.

SUGAR

The Government of India have decided to release 200,000 tons of sugar. There will be no release for free sale from the factories in Uttar Pradesh, Bihar and the Punjab except a small quantity which will be released to each factory for sale to its employees. Allotments of sugar to Madhya Pradesh, Rajasthan, Uttar Pradesh, Bihar, West Bengal, Orissa, Madras, Kerala, Maharashtra, Gujarat, Himachal Pradesh, Assam, Manipur, and Tripura from factories in the controlled region will be made only to the nominees of the State Governments. In case of the Punjab

and Jammu and Kashmir, allotment will be made direct to Government or to their nominees. Allotments to Delhi will continue to be made on the existing basis.

Meanwhile, the sugar market at Hapur remains quiet with the rate quoted around Rs 11.75 per bag.

GUR

Trading in the Hapur Gur market has come almost to a standstill because of inclement weather. Arrivals are reported to be negligible, while offtake is small. Stocks are estimated at 37,000 maunds. Pansera quality is quoted at Rs 13.75 to Rs 14.50 a maund for the superior quality.

Sowing for the next sugarcane crop has begun: but large-scale operations will start when weather conditions improve.

KHANDSARI

Khandsari attracted good demand from Madhya Pradesh, Rajasthan, the Punjab and East Uttar Pradesh and consequently prices ruled steady. Production is, however, hampered due to rains. Superior khandsari is quoted at Rs 32 to Rs 35.50 a maund, according to quality.

NON-FERROUS METALS

In spite of no announcement by the authorities about the expected cuts to actual users, the Copper market in Bombay remained steady with demand outstripping supply. Though supplies were better during the past few days, Brass sheets were reported to have moved up to Rs 462 as demand had not been satisfied. Copper conductors were done up to Rs 288. Unless the supply position takes a turn for the better, prospects of any appreciable fall in prices is not bright.

In the London market, copper prices have come under the influence of a number of conflicting forces. On the one hand, the recent world production cutbacks, amounting to about 300,000 short tons a year, have served to limit any further significant price falls. Mr Kennedy's apparent determination to boost the US economy appears to have worked in the same direction. On the other hand, the publication of figures showing a 17 per cent reduction in UK consumption between November and December has lent support to those who fear possible demand deficiencies this year and has, therefore, helped to restrain any rapid price advances.

In spite of the expected status quo in actual user licences, the Indian zinc market improved with ready goods being done at Rs 334.64 per 100 kilograms. Apparently, the supply position was not as easy as had been made out.

After the long downward trend of world zinc prices since the end of October, dealers in London hope that the commodity will now stabilise for a time at a London Metal Exchange equivalent of £75 8sh a ton. There are signs that selling pressure from the United States is slackening a little on expectation of the Kennedy

Administration moves to encourage domestic industry. But, it is too early to say whether this easement will help give the fillip to zinc prices for which the market experts are looking.

The market for Lead is ruling steady with the rate quoted around Rs 134 per quintal.

In London, some people suggest that, when the Lead-Zinc Study Group meets again in March, lead producers will agree to restrict their output.

After last week's dullness, there was some activity in the Tin section where the rate was quoted up to Rs 121.

In contrast, the recent wave of optimism in the tin market in London was given a jolt on reports of a 25 per cent drop in UK consumption between November and December. It was also believed in some quarters that Continental demand, too, had begun to slacken, suggesting that the outlook for the commodity might not be quite as bright as some observers had imagined.

YARN

Staple-Fibre Yarn continued to be in the limelight in the Bombay yarn market. The outlook was considered good in view of increasing export enquiries for cloth woven out of staple-fibre yarn. All varieties, therefore, went up further by about 5 nP to 8 nP per pound. Surat was reported to be an anxious buyer due to good demand all over the country.

Although upcountry weavers showed good interest, prices of Cotton yarn remained almost unchanged. The firmness was attributed to fears of less arrivals of Egyptian and Sudanese cotton this year. Finlay 60s had buyers at Rs 66.66 and Madras 80s at Rs 68 per bundle. Coarse and medium counts were mostly neglected.

The Art Silk yarn section was comparatively quiet. Some varieties suffered to the extent of 5 nP per pound in the absence of buyers.

Trading in Acetate yarn was listless. Nylon yarns also shared the easy trend although there was no fall in prices.

CHEMICALS & DYES

Prices in the Bombay Dyes and Chemicals markets displayed an easier trend. Stringent conditions in the money market, the absence of demand and the prospective arrival of goods from overseas under the export promotion scheme were responsible for the subdued tendency.

The Chemicals section was featured by the decision of the Government to revise upward the ex-factory and ex-works ceiling prices for Caustic Soda and Bleaching Powder. The increase of Rs 30 per ton in the ex-factory price of caustic soda was welcomed by the trade; but it was disappointed that the increase of Rs 5 per 100 kilograms in the ex-works price of bleaching powder was inadequate. These sentiments were reflected in the prices of the imported varieties.

More or less same conditions were witnessed in the Dyes section.

Among Vat colours, the undertone was steady due to the shortage of goods following the delay in the arrivals from Germany. The overall tendency in Naphthols was steady as the market experienced a shortage of goods. Base colours were, on the other hand, quoted lower.

BANGALORE SILK

Prices for filature raw silk remained steady during the week ended 3 February, 1961 at the same levels as in the previous week, with fair demand. The prices for charka silk showed a further decline by about a rupee per kgm, while cottage basin silk showed some slight improvement by 0.90 nP per kgm. There was dull trading in cottage basin silk, while trading in charka silk showed slight improvement with decline in prices. Filature silk of 20/22 dr. was quoted between Rs 80.48 and Rs 83.23 per kgm, the cottage basin silk ruled between Rs 71.65 and Rs 73.65 per kgm. The rates of charka silk ranged between Rs 50.70 and Rs 69.44 per kgm as against Rs 51.80 and Rs 70.54 during the last week. The market received limited supplies due to paucity of cocoon crops.

Prices of reeling cocoons did not evoke active response as was evident from the level of prices quoted as in the last week. The rates were quoted between Rs 3.25 and Rs 4.45 per kgm for Mugur area cocoons, between Rs 4.00 and Rs 5.00 for Channapatna and between Rs 4.00 and Rs 5.95 for Sidlaghatta area cocoons.

Prices of seed cocoons also maintained a steady level. The Mysore race seed cocoons were quoted between Rs 4.25 and Rs 5.50 per 1000 while foreign race seed cocoon displayed a slightly wider fluctuation between Rs 8.00 and Rs 15.00 as against the last week and quotations between Rs 9.00 and Rs 14.00 per 1000.

GOLD & SILVER

Conditions on the Bombay Bullion Exchange continued to remain buoyant and the bullish fervour was such that a new record was established with the price of silver touching Rs 209.30 per kilogram, which is equivalent to about Rs 244 per 100 tolas under the old system of weights. Bulls were virtually in control of the market and the nervous bears had to cover at rising price levels. Silver arrivals amounted to 20 bars; but the offtake was higher. Unrefined metal receipts amounted to 16 bars. Silver (below .996) changed hands at Rs 207.15 and Rs 207.85.

The Gold section also showed remarkable strength. Operators from Delhi were the main buyers, while nervous bear-covering accelerated the upward movement. At one stage, the price touched a new peak level of Rs 121.55 per 10 kilograms, which in terms of the old system of weights, represented Rs 141 per tola. Ready gold changed hands at Rs 120.35 to Rs 120.75. Arrivals amounted to 2,500 tolas as against an offtake of as much as 5,000 tolas. Unrefined metal receipts amounted to 3,000 tolas.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange, after ruling initially weak, displayed slight steadiness towards the close of the week under review. Groundnut receipts amounted to 7,400 bags and that of groundnut oil to 180 tons. Despite these arrivals, rates recovered to close higher. The easy trend in prices early in the week was attributed to the lack of export enquiries for HPS groundnut, the quota for which was announced only recently. Shippers were also not in the market as they were told that the export quota of 20,000 tons of oilcakes had been already exhausted. Bold ready was quoted at Rs 44.75 and Groundnut Oil at Rs 19.80.

With increasing arrivals, Castor prices were losing ground. Also, shippers complained that they were not able to put through fresh business in castor oil during the past few days, as Indian prices were above world parity. Moreover, Brazil emerged as an important competitor to India in the American market. Castor ready was quoted at Rs 32.87 and Castor Oil, commercial quality, at Rs 13.40.

There were no fresh developments in the Linseed section. Ready Bold was quoted at Rs 33.62 and Linseed Oil at Rs 14.75.

MADRAS

Being Budget month, cautiousness on the part of buyers in the Madras oilseeds market has been very well reflected on their overcareful trading. Trading in both groundnut oil and groundnut had been more or less on a very limited scale since last week beginning. The consequence of this cautiousness is a sluggish market impervious to any kind of influence. Naturally, the rates of oil in both ready stock and nearby position had come down. Forward positions remained stagnant in groundnut oil with practically no trading. The same trend is being reflected in other oils, notably castor oil and gingelly oil. Coconut oil, too, remained at lower levels this week. Gingelly seed arrivals had eased, bringing down the seed and oil prices to a small extent. Groundnut oilcake position did not alter.

Groundnut oil ready stock was being quoted at Rs 450 per candy by the middle of last week. But the hand-to-mouth attitude of buyers and vanaspathi interests brought down the ready price by six rupees per candy. Even while such a decline failed to attract buyers, a further decline was recorded in groundnut oil Monday this week when price came down to Rs 440 per candy.

Groundnut arrivals into the City had been steady, but not much around 40 to 50 tons daily. Nor the stocks at either North or South Arcot market centres were encouraging being between 120 to 130 tons daily. These had been absorbed by crushers locally.

HIDES & SKINS

In tanned sheep and goat skins, no radical changes in prices had appeared. Sheepskins of the medium varieties were in good demand

as also average light quality leathers. So far as primes and semi primes are concerned, high prices still are the order of the day due to the tanners' high quotations. It is reported that tanners were averse to sell even at 37 shillings for primes.

In tanned Cow hides, despite improved stocks, prices remain unaltered. It is reported that tanners were willing to deal at even higher prices than the existing levels. Local prices being higher than what

the United Kingdom customers would pay, it was difficult to close dealings with outside dealers. Even with this high rates, there is possibility of trading to be done in view of good demand.

In tanned Cowcalf, there was brisk trading in all weights without the prices changing. Similar was the case with tanned buffalo calf skins and prices here also did not decline. Good business is reported in tanned buffalo skin with U.S.A. and U.K.

The following prices ruled in tanned skins: (per lb):

Tanned Cow prime 5/5½ lb Rs 2.81 to Rs 2.87; 6/6½ lb Rs 2.62 to Rs 2.75; 8/8½ lb Rs 2.50 to Rs 2.56; 10/12 lb Rs 2.12 to Rs 2.25; Buffalo 12/13 lb Rs 1.75 to Rs 1.87; cow calf 1½/2 lb Rs 3.87 to Rs 4; buff calf 1½/2 lb Rs 2.87 to Rs 3; Goat prime 8/8½ lbs Rs 10/10.50 Sheep ordy: 6/7 lbs Rs 6.75 to Rs 7 5/6 lbs Rs 9 to Rs 9.25; Sheep prime 6/7 lbs Rs 12.50 to Rs 24.

STEEL manufacture at MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58	1958/59	1959/60
	(Rs. in lacs)		
Capital	51	51	71
Depreciation provided up to date	32	36	41
Profits retained in business to date	25	35	45
Profit for the year	19	30	32
Dividend for the year	5	5	8

Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.

Mukand provides India's new and growing industries with the quality steel components they must have.

MUKAND

**STEEL
STRENGTHENS
THE NATION**

NEARING ACHIEVEMENT

India's ambitious Durgapur Steelworks project is well on the way to completion. ISCON, the consortium of famous British engineering and electrical manufacturing companies, has been most successful and the end of the job is in sight.

Rolling mills, melting shop, blast furnaces, coke oven batteries and cooling towers have transformed the skyline. The birth of this new industry has already brought new employment to West Bengal. A steel city has been carved from paddy fields and jungle by people of two different nationalities and background, but working as a team with a single purpose. The result is a triumph for British industry and a better tomorrow for the people of India.

BRITISH COMPANIES WORKING FOR INDIA

For the Investor

INVESTMENT GOSSIP No Budgetitis

The fact that the Central Budget is barely twenty days away seems to have been completely ignored by the stock market. Although the undertone is not buoyant, there is no indication that sentiment has been adversely affected by the usual apprehensions about the shape of things to come in the budget. When the budget day was some months away, operators seemed to have been distinctly anxious that the budget for the first year of the all-important Third Plan would bring further increase in taxation. Today they seem to be almost certain that Mr Morarji Desai will show himself on the last day of the month to be a "harmless" man. This conclusion stems from the general opinion about the budget that has crystallised from discussions during the interregnum. For various reasons and especially in view of buoyant Government revenues and the General Election round the corner, it is believed that further taxation will not be resorted to. There is, however, a tendency to skirt round the question how Government will find the internal resources needed for implementing a big Third Plan.

It is perhaps more correct to say that present steadiness is in spite of the uncertainties and apprehensions about the budget. It may not be an exaggeration to say that the investor is reconciled to some increase in the tax burden; that additional taxation is likely to come in the form of indirect taxation rather than a further dose of direct taxation is not considered to be a matter for jubilation for the simple reason that direct or indirect, the additional burden will ultimately devolve on industry in one form or the other. Presumably the investor is confident that in the context of rapid expansion of industry, increased taxation may not adversely affect profits. In this regard the analysis by the Reserve Bank of 460 public limited companies, the accounting periods of which ended during the quarter October-December 1959 has yielded some interesting information. It reveals a remarkable increase in the profits during the year under review. The profitability of equity capital indicated in the ratio of profits after tax to net worth showed a marked improvement from 5.8 per cent in 1958 to 10.4 per cent in 1959.

The steel retention price has almost lost its influence on market sentiment and this was only to be expected after so many false alarms during the past few weeks. Some encouragement is rightly derived from indications of brighter prospects for coal and textile shares. Good corporate news is revealing bright

spots while reports of new projects is helping revival of interest in Indian Irons.

NEW ISSUE NOTES Jay Engineering

The Jay Engineering Works Limited will be issuing 6,07,500 equity shares of Rs 10 each, at a premium of Rs 7.50 per share. The new shares will be offered to the existing shareholders in the proportion of two shares for every three shares held.

Usha Martin Black

The applicants to the recent issue of equity shares by Usha Martin Black (Steel Wires) Limited are being allotted as follows:

For 50 shares 25 shares each; For 100 to 150 shares 50 shares each; For 200 to 450 shares 100 shares each; For 500 to 550 shares 125 shares each; For 600 to 750 shares 150 shares each; For 800 to 950 shares 200 shares each; For 1,000 to 1,200 shares 250 shares each; For 1,250 to 1,500 shares 350 shares each; For 1,550 to 2,000 shares 400 shares each; For 2,050 to 2,500 shares 500 shares each.

The applicants for Preference shares will get the allotment in full.

Minerva Mills

The directors of the Minerva Mills Limited have extended the last date for applying for 9.865-8½ per cent taxable Cumulative Redeemable Preference shares of Rs 100 each, issued at par, to 31 March, 1961.

Kirloskar Oil

The Kirloskar Oil Engines Limited has a proposal to issue 2,50,000-8 per cent Taxable Redeemable Participating Preference shares of Rs 10 each. A public issue is expected to be made in the third week of this month. The shares are redeemable not before 31 March 1975, but not later than 31 March 1980.

South India Viscose

The South India Viscose Limited has decided to issue right shares for Rs 1.40 crores of Rs 100 each in the ratio of two shares for five shares held, at a premium of Rs 5 per share. The factory is expected to start production in May next.

INVESTMENT NOTES

Permanent Magnets Limited has been granted a foreign exchange loan equivalent to Rs 12.5 lakhs for purchasing machinery and equip-

ment from foreign countries by the Industrial Credit and Investment Corporation of India. List for the equity issue was opened on 6 February.

Rallis India Limited has returned to the dividend list after a lapse of eight years. Preliminary figures show that the company has been able to improve its earnings significantly during the year ended 31 August 1960, the net profit rising to Rs 52.13 lakhs from Rs 29.55 lakhs in the previous year. The arrears of dividends on the Preference shares for five years as well as the dividend for the year under review are to be paid in addition to a dividend of 4 per cent on the Ordinary shares.

The Delhi Cloth & General Mills Company Limited has received an industrial licence to manufacture PVC and rayon tyre chord. The PVC plant will be set up at Kotah, Rajasthan, while the plant for tyre chord is likely to be located near Calcutta. The capital outlay in respect of both the schemes is estimated around Rs 9 crores.

It is understood that Synthetics & Chemicals Limited is making satisfactory progress, having received possession of about 1,381 acres of land. Orders for machinery have been placed. Arrangements are being made for the installation of the plant.

A further increase in the output of Saleable Steel has been reported in January 1961 by the Tata Iron & Steel Company, Limited with the total at 117,600 metric tons against 115,800 tons in December, 1960. The share of finished steel is significantly higher at 80,700 metric tons against 75,800 tons with that of semi-finished steel lower at 36,900 metric tons against 40,000 metric tons. Production of Pig Iron has risen by 1,000 metric tons to 144,200 metric tons; but that of Steel Ingots has declined to 149,300 metric tons from 150,000 metric tons.

It is learnt that the Indian Iron & Steel Company, Limited will be getting shortly a licence from the Government of India for setting up a factory in Indore, Madhya Pradesh, for the manufacture of cast iron pipes with foreign collaboration. The installed capacity may be 60,000 tons a year and a portion of the output is likely to be exported.

The Century Spinning & Manufacturing Company, Limited has a proposal to alter the stipulated rate of tax-free cumulative dividend of 6 per cent on the 125,000 preference shares to a cumulative dividend of 8.57 per cent, subject to deduction of tax.

East Anglia Plastics (India), Ltd., has given an account of the plans and development programme it has proposed to undertake in the field of plastics. Last year, the directors thought that the time was opportune and therefore made all necessary arrangements for setting up the factory and issued shares to the public for subscription. The response was very satisfactory. In the meantime, they were advised by the Government of India to integrate their scheme for the manufacture of Cellulose Acetate Flakes, which is the primary raw material for Cellulose Acetate Moulding Powder. They

took up this suggestion, made a comprehensive study of the possibility of the Acetate Flakes manufacture and have come to the obvious decision to take up the scheme and to go in for this larger venture of manufacturing Acetate Flakes in the West Bengal State. The total cost of this integrated Acetate project will be about Rs 10 crores. The company needs a large quantity of molasses or alcohol or acetic acid to produce Acetate Flakes. In this respect, the directors have assurances that there will be no difficulty to get the supplies of molasses to produce their own acetic acid required for the first phase of Flake production or even alcohol, not to speak of the fact that the company is investigating into the possibility of manufacturing acetic acid from other sources. The directors state that, as soon as they receive consent from the Government for the bigger scheme, they shall be able to launch on the second stage of their project i.e., Flake manufacture. Necessary orders for machinery for the Compounding Unit have been placed with the UK collaborators, Messrs East Anglia Plastics Limited. The first shipment is expected to be made in the course of the week.

A new company, promoted by Mr Arvind N. Kilachand, Managing Director of Indmag Private Limited, and Mr M. C. Chhatrapati, will shortly be formed for establishing a continuous process plant for vacuum metallising of paper. This patented German process is of very recent origin and involves a deposition by evaporation of highly lustrous coating of the metal. This will be the first plant of its type in India. The sponsors of this project have been able to obtain the technical collaboration of the process-owners and will shortly be proceeding to Germany for negotiating the purchase of machinery. It is expected that the foreign exchange requirements will be met from loans under negotiations with the ICIC of India.

IN BRIEFS

Sirpur Paper Mills Limited has proposed to maintain the dividend at 65 nP per share, taxable, for the year ended 30 June, 1960.

Shree Chango Sugar Mills Limited has proposed a dividend of Rs 2.50 per share, taxable, for the year ended 30 September, 1960 as against Rs 2.82 per share, taxable, for the previous year.

T. Stanes & Company, Limited has recommended a final dividend of 17½ per cent for the year ended 30 September 1960. A centenary bonus of 5 per cent, taxable, is also recommended. The total distribution for the year works out to 32½ per cent against 27½ per cent, taxable.

Kumergode Estates Limited has maintained the dividend at 20 per cent, subject to deduction of tax, for the year ended 31 October, 1960.

Bababudding Coffee has reduced the dividend from 12½ to 8 per cent, taxable, for the year ended 30 June, 1960.

Phosphate Company, Limited has proposed a taxable dividend of 35 per cent on the increased capital for the year ended 30 June, 1960, against 45 per cent, taxable, for the preceding year.

STOCK EXCHANGES Two-sided Price Flutter

Watch-Dog Writes:

BUT for a significant speculative activity in a few selected counters, trading in stock markets is comparatively a tame affair. Favourable corporate news and the persistent hope that the forthcoming Budget might not contain any harsh proposals, helped to sustain the level of interest. There is, however, a general disposition to book profits at the higher levels.

Past week's session on the Calcutta Stock Exchange witnessed a distinct broadening of enquiry, resulting in handsome gains in prices being recorded in most of the counters.

Conditions on the Bombay Stock Exchange ruled generally steady although follow-up support was lacking.

The absence of adverse rumours about new taxation coupled with satisfactory corporate news brought fresh buying on the Madras Stock Exchange.

CALCUTTA

Friday Evening.

TRADING on the local stock exchange was impressive last week, although price movements were rather irregular due to alternate buying and selling. There was a distinct broadening of enquiry and, encouraged by the firmness of Coal and Textile shares and the revival of speculative buying in Indian Iron on reports of the possibility of the company getting an early licence to manufacture cast iron pipes, the gains in prices spread to most of the sections. The only exceptions to the general trend were Jute and Tea sections.

It was also encouraging to note that no apprehension was visible among operators in regard to the shape of the coming Central Budget.

NEW CENTRAL JUTE MILLS CO. LTD.

NOTICE

The Board of Directors of the Company have decided to issue Right Ordinary Shares of Rs. 10/- each at a premium of Rs. 3.25 nP per share in the capital of the Company and offer the same to the holders of existing Ordinary Shares in the ratio of one new Ordinary Share for every two Ordinary Shares.

The Share Transfer Books and the register of ordinary members of the Company will remain closed from 21st February to 1st March, 1961, both days inclusive.

For NEW CENTRAL JUTE MILLS CO., LTD.,

For SAHU JAIN LTD.,
A. K. JAIN
Managing Director,
Managing Agents.

11, Clive, Row,
Calcutta.
6th February, 1961.

It looked as though they had taken it for granted that the Government might prefer to maintain the status quo. They also felt that any addition in direct taxation could be made only to the period of the economic growth of the country. Even the general disposition to book profits at the higher levels would not have been noticed, but for the disappointment over the inordinate delay in the announcement of the steel retention price.

In the Gilteged section, business continued to be restricted. Some interest was, however, shown in selected issues as a result of which their rates were marked up slightly. Elsewhere, sellers were in evidence with buyers reserved. 3 per cent 1966 Conversion Loan changed hands at Rs 74.05 to Rs 74.25.

Banks shares were remarkably firm following satisfactory working results as revealed by the bigger banks and increased dividends paid by some. Punjab National were taken up to Rs 20 from Rs 19.75, while United Commercial changed hands at Rs 85 to Rs 85.25.

Despite the declaration of satisfactory interim dividends by the Bird-Hellers group and the rise in dividends announced by the McLeod group of mills, Jute shares remained stagnant, indicating little sign of any revival of interest. The growing disparity between the price of raw jute and jute goods, the Labour Union's protest against the recent cut in the mills' working hours and the reports of the increase in stocks with the mills at the end of last month—all these factors continued to cause anxiety among the professional operators as well as investors. However, were on offer at Rs 21.94 to Rs 22.12 and Megna at Rs 11.06 to Rs 11.12. New Central, after touching a low of Rs 17.37 from Rs 18.31, recovered fully towards the close on reports of the company's decision to make a right issue. Kelvin were enquired up to Rs 149 from Rs 143.50 following the increased dividend with Budge-Budge well maintained at Rs 130.

In contrast, Coal shares attracted increasing attention and selected shares changed hands at enhanced levels on the hope that the working of companies would improve in the near future and the industry might soon obtain foreign assistance for expansion. Amalgamated met with business at Rs 21.37 to Rs 22.62; Bengal at Rs 320 to Rs 329; Burrakur at Rs 18.81 to Rs 19.69; East India at Rs 31.75 to Rs 32.06; Central India at Rs 11.37 to Rs 12.62; South Karanpura at Rs 11.69 to Rs 12.50 and Western Bengal at Rs 7.59 to Rs 8.12.

There was evidence of slight support in the Tea section, where a few selected shares changed hands at improved levels. This was mainly due to the satisfactory prices obtained at the recent auctions in view of the strong internal demand. The prospect of an earlier close of the export auctions was also keeping the tea market buoyant. Betjan changed hands at Rs 23.69 to Rs 24; Brooke Bond at Rs 15.75 to Rs 16.25; Bishnauth at Rs 20.31 to Rs 20.44; Hasimara at Rs 21.50 to Rs 21.69; Huldibari at Rs 21.75 to Rs 22.37; and Jayshree at Rs 16.94 to Rs 17.19.

Although sentiment in the Sugar section remained rather depressed

in view of the reports of accumulation of stocks with the factories due to higher production, selected shares were well maintained around last levels. Raza-Buland were done at Rs 13.19 to Rs 13.37; SKG at Rs 13.19 to Rs 13.62; and Dyer Meakin at Rs 26.75 to Rs 26.87. Belsund were better at Rs 11.87 against Rs 11.62 and Balrampore at Rs 3.06 against Rs 2.84.

Brisk activity in the piecegoods market was reflected in the Textiles section where prices continued to display a firmer tendency. Jayshree met with business at Rs 15.06 to Rs 15.75; Dunbar at Rs 25.12 to Rs 25.37; Elgins at Rs 18.44 to Rs 18.62; Kesoram at Rs 28.50 to Rs 29.50 and J. K. Rayon at Rs 15.12 to Rs 15.69.

As in the preceding week, it was again Indian Irons which led the mild flurry of buying. The main inspiration was derived from the reports that the company had proposed to set up a factory for manufacturing cast iron pipes as soon as licence was received from the Government of India. Lack of confirmation of the recent rumours with regard to the steel retention price, however, induced some profit-taking at the close. After opening at Rs 24.44, Indian Iron were marked down at one time to Rs 24.36 at which level renewed bull support pushed up the scrip again to Rs 24.80, to close finally at Rs 24.76. Jessop were enquired up to Rs 20; Dalmia Iron up to Rs 10.12; G. K. Williams up to Rs 38.56 and TEXMACO up to Rs 23. Braithwaite were a steady feature at Rs 31.50 with Kumardhul hovering narrowly around Rs 6.00.

The Miscellaneous section, provided some outstanding features, although higher levels could not be retained till the close due to profit-taking. Following were the price trends of a few selected shares:

PRICE TRENDS

	Week's Week's Week's

BALANCE-SHEET BRIEFS

The Electric Construction and Equipment Company, Limited has reported a substantial rise in the net profit from Rs 79,475 to Rs 9.71 lakhs for the year ended 31 October, 1960. A taxable ordinary dividend of 10 per cent is recommended.

New Victoria Mills Limited has incurred a loss of Rs 31.40 lakhs for 1959 as against Rs 22.31 lakhs. There is still a debit balance of Rs 71.79 lakhs, which is carried forward.

The working of the Deccan Sugar and Abkhari Company, Limited has

resulted in a profit of Rs 16.74 lakhs for the year ended 31 May, 1960 as against Rs 13.57 lakhs. The Ordinary dividend is maintained at 25 per cent, taxable.

Godavari Sugar Mills Limited has reported a net profit of Rs 44.60 lakhs for the year ended 31 May, 1960 as against Rs 19.86 lakhs. The dividend is raised from Rs 20 to Rs 35 per share, subject to deduction of tax.

The Industrial Credit and Investment Corporation of India Limited has reported a net profit after providing for Depreciation and Taxation of Rs 35.67 lacs for 1960 as against Rs 28.22 lacs for 1959. A sum of Rs 9.00 lacs has been placed to General Reserve in terms of Articles of Association. Out of the balance together with the amount brought forward from the previous year and other adjustments, the directors have decided to recommend a dividend of 5.75 per cent subject to tax (5.00 per cent subject to tax last year) on the Ordinary Shares.

SHREE KRISHNA GANODAY SUGAR LIMITED

NOTICE

The Twentysixth Annual General Meeting of the Shareholders of Shree Krishna Ganoday Sugar Limited will be held at the Registered Office of the Company at Dalmianagar on Friday, the 17th March, 1961 at 11-30 A.M. to transact the following business:

- To receive and adopt the Directors' Report and the Audited Accounts for the financial year ended 31st July, 1960.
- To declare additional dividend on Preference Shares for the year ended 31st July, 1959 in compliance with the Preference Dividend Regulation Act, 1960.
- To declare dividends for the year ended 31st July, 1960.
- To elect a Director in place of Shri T. R. Jalan, who retires by rotation under Article 106 of the Articles of Association of the Company but, being eligible, offers himself for re-election.
- To appoint Auditors for the current year and to fix their remuneration. Messrs. Singhi & Co., Chartered Accountants, the retiring auditors, being eligible, offer themselves for re-appointment.

The Share transfer books of the Company will remain closed from 7th March 1961 to 17th March 1961 both days inclusive.

By Order of the Board,

S. K. JAIN,
Secretary.

Calcutta,
4-2-1961.

N.B. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Company Reports

Kelvin Jute Pays More

THE rise in sales from Rs 1.52 crores to Rs 1.81 crores is reflected in the working results of the Kelvin Jute Company Limited, in the managing agency of McLeod & Company, for the year ended 31 May, 1960. The net profit, after providing for Depreciation and Taxation, amounts to Rs 7.86 lakhs as against Rs 6.63 lakhs for the preceding year.

Except for Depreciation which is reduced to Rs 4.59 lakhs from Rs 4.85 lakhs, all other allocations have been increased.—Taxation provision to Rs 5.55 lakhs from Rs 5.35 lakhs; General Reserve to Rs 1.50 lakhs from Rs 1.00 lakh and Development Rebate Reserve to Rs 1.46 lakhs from Rs 56,000. The dividend on the Ordinary shares is raised by 1 per cent to 15 per cent, subject to deduction of tax.

The balance-sheet, as at 31 May 1960, shows a paid-up capital of Rs 38,00,000 divided into 28,000 Ordinary shares and 10,000-7 per cent Cumulative Preference shares, both of Rs 100 each. Against this, General Reserve stands at Rs 47 lakhs; Development Rebate Reserve at Rs 2.56 lakhs and Machinery Renewals Reserve at Rs 2.50 lakhs.

Waverley Jute Follows Kelvin

Although the mill was closed down in June 1957, the loom-hours sold to other mills within the McLeod group have enabled the Waverley Jute Mills Company Limited to show a profit of Rs 2.52 lakhs for the same year as against Rs 2.99 lakhs for the previous year. Revenue by sales of loom-hours is substantially higher at Rs 10.07 lakhs against Rs 7.11 lakhs against Rs 7.11 lakhs.

In respect of allocations, the Depreciation amount is reduced to Rs 1.05 lakhs from Rs 1.14 lakhs, while Taxation provision is raised to Rs 2.50 lakhs from Rs 9,400. The dividend on the Ordinary shares is increased from 25 nP to 30 nP per share, taxable.

Against a paid-up capital of Rs 10 lakhs divided into 2,50,000 Ordinary shares of Re 1 each and 15,000—5 per cent Cumulative Preference shares of Rs 50 each, reserves and surplus amount to Rs 5.20 lakhs.

Bharat Sugar Maintains Distribution

The Bharat Sugar Mills Limited has nearly maintained its profits for the year ended 30 June 1960. While sales are higher at Rs 83.39 lakhs against Rs 71.40 lakhs, the net profit, after providing for depreciation and Taxation, works out to Rs 2.49 lakhs as against Rs 2.51 lakhs for 1958-59.

In respect of allocations, the Depreciation amount is increased to Rs 1.05 lakhs from Rs 1.01 lakhs and Taxation provision to Rs 4.85 lakhs from Rs 2.23 lakhs. The provision for Development Rebate Reserve is, however, lower at Rs 3.165 against Rs 96,000. The dividend on the Ordinary shares is just maintained at Rs 1.50 per share, subject to deduction of tax.

The paid-up capital is shown at Rs 20 lakhs divided into 1,50,000 Ordinary shares of Rs 10 each and 5,000-5 per cent Cumulative Preference of Rs 100 each. Against this, reserves and surplus stand at Rs 14.13 lakhs.

During the year under review, the factory worked for 163 days and crushed 24,98,561 maunds of sugarcane against working of 125 days and crushing of 18,74,945 maunds in the previous year. The recovery was, however, lower at 9.93 per cent against 10.15 per cent. During the current season, a crushing of about 27,50,000 maunds of sugarcane is expected.

The company's farms yielded 58,192 maunds of sugarcane as against 47,123 maunds during the previous year. The average yield of sugarcane per acre was better.

Facts & Figures

PRICES Further Rise

The official wholesale price index (with the year ended March 1953 as 100), rose further by 0.6 per cent to 125.9 during the week ended January 21, 1961 as compared with 125.2 (revised) for the earlier week. The index was higher by 1.0 and 5.5 per cent respectively, when compared with the corresponding week of the previous month and that of a year ago.

The index for 'Food Articles' advanced by 0.4 per cent to 116.6 as compared with 116.1 (revised) for the previous week due to a rise in the prices of jowar at Hubli (+36%) and at Nagpur (+7%), salt (+24%) milk at Calcutta (+14%), oranges (+13%), rice at Hailkandi and at Marcara (+9% each) and at Sainthia (+8%), potatoes (+7%) bananas at Calcutta (+5%), coconut oil (+4%), maize and cashewnuts (+3% each) ragi, onions, eggs and gur (+2% each) and wheat, mung, urad, groundnut oil, fish, tea and coffee (+1% each), although the prices of milk at Bombay (-30%), jowar at Nandyal (-12%) and at Jhalawar (-10%), bananas at Bombay (-9%), rice at Kotma (-9%) and at Balasore (-8%), gingelly oil (-3%) and bajra, arhar mustard oil and black pepper (-1% each) showed declines.

The index for 'Tobacco' increased by 0.3 per cent to 109.8 as a result of a rise in the prices of raw tobacco.

The index for the 'Fuel, Power, Light and Lubricants' group stood unchanged at its previous week's level of 120.2.

Higher prices of Gingellyseed (+5%), raw jute (+4%), groundnuts and linseed (+3% each) and rapeseed and lac (+1% each) raised the index for 'Industrial Raw Materials' by 1.3 per cent to 155.8. The prices of raw hides (-9%), cottonseed (-5%) and raw silk, copra and tanning materials (-1% each), however, moved down.

The index for 'Intermediate Products' advanced by 0.9 per cent to 135.0 as compared with 133.8 for the earlier week. Items which showed variations during the week were: linseed oil (+4%), rayon yarn and lead (+2% each), cotton yarn (+1%) and tin (-1%).

The prices of jute manufactures and silk and rayon manufactures (+3% each) and soap and oil cakes (+1% each) moved up, while those of cotton cloth (mills) (-2%) showed decline and in consequence, the index for 'Finished Products' rose by 0.2 per cent to 126.5 as compared with 126.3 (revised) for the previous week.

Index Number of Wholesale Prices by Group and sub-group of Commodities.

TRADE Larger Deficit in 1960

The provisional figures of India's foreign trade in merchandise by all routes—sea, air and land—on private and Government accounts during December, 1960, according to information available to-date in the Department of Commercial Intelligence and Statistics, Calcutta, are given below:—

	(Rs. lakhs)
Exports	69.21
Re-exports	7.75
Imports	75.55
Balance of trade	-5.59

The figures exclude trade with Tibet, Sikkim and Bhutan and the trade arising in the Andaman and Nicobar Islands and the Laccadive, Minicoy and Amindivi Islands. In the case of Nepal air-borne trade alone is included. The figures are exclusive of the value of certain consignments of private merchandise under reference to the customs for verification and of Government stores awaiting adjustment.

Table I below brings together the provisional figures for December, 1960, along with similar figures for November, 1960, December, 1959 and the revised figures for December, 1959.

TABLE I.

FOODGRAINS Record Indian Rice Crop, and—

Rice (paddy) production in India in 1960-61 is estimated at about 45,500,000 tons—substantially higher than the previous record output in 1958-59—according to the Commonwealth Economic Committee's Rice Bulletin issued in London on January 31.

Preliminary production estimates for Thailand and Formosa also show increases over last season's crop, while in Burma a slight fall is indicated. Thailand expects a crop of more than 7,340,000 tons—some 200,000 tons more than in 1959-60, with improved quality. Burma's crop is estimated at 6,770,000 tons.

Dealing with exports, the report says: "Trade in rice in 1960, so far reported, has been substantially greater than a year earlier. Shipments from Thailand and Burma in January-November were considerably higher than in 1959, although the level of exports from both countries has fallen in recent months. Cambodian exports in the first 10 months of the year were two-thirds higher than a year earlier, despite a sharp fall in October, while those from South Viet-Nam in January-September were nearly double those in the first nine months of 1959."

Burma's exports in October fell to 81,000 tons, the lowest monthly figure for 1960. No shipments were made to India, and there was a sharp drop in those to Indonesia. There was, however, a marked recovery in exports to Ceylon.

For the January-October period, India had imported 325,000 tons of rice from Burma, while the Ceylon figure was 213,000 tons.

The United States, says the report, also has a larger harvest, with a final crop estimate of 2,430,000 tons. Exports showed a marked recovery in October, rising to 83,900 tons.

Second Largest Wheat Crop

The world wheat crop (excluding mainland China) in 1960, estimated at 221,000,000 tons, is expected to be the second-largest on record, says an International Wheat Council (IWC) report, just issued in London, on the situation up to last month. Production is expected to be 6,000,000 tons higher than in the preceding year and 27,000,000 tons above the average of 1954-55 to 1958-59.

The report states that the main problem continues to be one of surplus in excess of effective demand. The Wheat Utilization Committee has already explored the prospects of increased use of wheat in Asian countries and established guide lines for non-commercial transactions. Government assisted programmes for wheat have permitted transfer of the scarce foreign-currency resources to underdeveloped countries to expenditure on capital equipment for industrial development.

The International Wheat Agreement requires IWC to review each year, throughout the world, national production, stocks, prices and trade, including surplus disposals and special transactions. The present report presents information considered and conclusions reached at IWC's second review last month.

It says that the largest rise in production occurred in North America. Production in Europe is below the record level of the preceding year, and the crop is below-average in quality. Stocks carried forward into 1960-61 by the four major producing countries—Australia, Argentina, Canada, and the United States—are estimated at 52,900,000 tons (only 600,000 tons below the 1959 record).

Discussing the trade outlook in 1960-61, the report says there is likely to be an increased import demand of about 2,500,000 tons by Western European countries which are normally net exporters. It is estimated that the total intake into the less-developed areas may rise, and that shipments under government-assisted programmes of the United States, Canada, and Australia may be at least 10,500,000 tons. This world trade in 1960-61 may reach a new record of 37,000,000 tons—1,000,000 tons higher than 1959-60. But although both world trade and total world utilization of wheat and wheat flour are likely to reach new record levels, stocks of wheat at the end of 1960-61 may be as high as 60,000,000 tons.

The excess of supplies results from continuing government intervention in both production and trade; accelerated application of technological developments and divergent trends in consumption in different parts of the world.

Artist's impression of the Worli Dairy nearing completion—the largest in India to handle liquid milk

ANOTHER GIANT DAIRY... AT BOMBAY

BOMBAY will soon get an additional 200,000 litres of milk with the commissioning of the Worli Dairy Project. This giant modern dairy is one of the major projects undertaken by the Maharashtra State Government with UNICEF aid. It will ensure the large-scale supply of wholesome, pasteurised milk for Bombay's millions of men, women and children.

Against world-wide competition, Larsen & Toubro Limited and its Principals have secured the contracts for the supply and erection of the most modern dairy plant and equipment in the world—WRIGHT HARGREAVES Milk Reception and Can Washing Equipment, SILKEBORG Milk Processing Plant, UDEC Bottle Washing and Bottle Filling Equipment, CONTINENTAL Package Steam Boilers, and LAUR. KNUDSEN High Tension and Low Tension Switchgear and Motor Starters. Coordination and erection have been entrusted to Larsen & Toubro Limited.

Pioneers of Dairy Engineering

The Worli Dairy, which will initially supply 200,000 litres of milk a day, is designed to accommodate plant and equipment capable of producing 1,000,000 litres a day at a later stage. The Project will have at its disposal the experience in Dairy Engineering which L&T has accumulated over two decades. A pioneer in the field, Larsen & Toubro Limited has planned and erected over 50 per cent of the dairies in India—some of them among the country's largest!

Local Manufacture

In order to make the country progressively self-sufficient, L&T has been manufacturing at its Powai Works many items of Dairy Equipment which are increasingly forming a part of the plant and machinery being supplied to several schemes.

Hopes and Fears

THE Stock Exchanges do not seem to think that the forthcoming Budget will be too exacting: There is today evidence of robust and even cheerful trading, and none of the nervousness and jitters that, in the planning era, have characterised the behaviour of share prices in the ominous month of February. Is such an attitude justified, and will such optimistic anticipations materialise? While seeking to answer these two questions, we need to understand the basic considerations that will influence Mr Morarji Desai when he draws up his new proposals for 1961-62.

We may first indicate why it is that the general expectation is one of hope. The fact that this will be a pre-election Budget is held to be sufficient reason why Government will be averse, through any considerable number of new imposts, to alienating the voter, whatever the tax-bracket he may belong to. Then, it is thought that the buoyancy of revenues, which has been striking, will have so sated Government, that the edge of its hunger for new and additional realisations from taxes will have been blunted. Thirdly, in order that the Third Plan may get off to an auspicious start, Government will, it is reasoned, strenuously avoid any measure that might affect individual initiative and enterprise. Lastly, there is what is called the practical improbability of Government getting much from new proposals: taxes are already so all-pervading, and rates already so high, that scant scope is left either for innovations in taxes or for increases in rates. Hence, in the sphere of direct taxes, few surprises are expected; and, though there are certain to be indirect taxes, these will be levied more to provoke consumer-resistance than for the sake of adding to governmental revenues. Such are the reasons why a "light" Budget is expected of the Finance Minister at the end of this month.

But at least two of the reasons why a merciful Budget is anticipated may be precisely the reasons why the tax effort may not be small. On the one hand, the imminence of the general election may conceivably provoke Government to put up tax proposals which, though they may not be greatly revenue-productive, will seem to carry one step further the striving for a socialist pattern of society. On the other hand, because the Third Plan starts, a beginning may be made, in the Budget for 1961-62, towards fulfilling the additional tax effort for the five-year period. Besides, the considerable profits being made on the Stock Exchange will not have escaped the eyes of a Government avid for new revenues. Finally, whatever may be the intention, the realisations from excises to be levied or rates to be raised will scarcely be small. It would be naive on our part to hope that, as happened on the last occasion, the major effort will be made after the election. (It may be recalled that Mr Chintaman Deshmukh's Budget for 1956-57 was moderate in the demand it made on the tax-payer, and that the knock-out blow was delivered by Mr T. T. Krishnamachari in the following Budget in May 1957).

Nevertheless, the need for continuing incentive and encouragement for fostering indus-

trial production in the private sector should be an important consideration. Hence it seems to us likely that the next Budget will strive to strike a balance between the two sets of conflicting influences. That is to say, an additional tax effort is inescapable and inevitable; but there is at the same time reasonable prospect of some measure of relief.

In view of the fact that taxes are all-pervading, it is not hard to guess the kind of new proposals that Mr Desai will put up to Parliament. An increase in the Wealth Tax and in the Estate Duty appears likely in order to prove that Government has not given up its ideal of a socialist pattern of society. Furthermore, it is possible that the Finance Minister will seek to divert to the Exchequer part of the profits on shares through some special form of Capital Gains Tax. Excise duties will probably cover an even more extensive area of industrial production. The "luxury" goods and articles whose production falls short of demand may both attract penal excise duties.

It is even possible that Mr Desai, in giving relief in the taxation of capitalisation of reserves, will announce that the proposal is intended to secure larger revenues to the State. For, he will be able to assert that, at the present rate of 30 per cent, tax collections are practically nil, because hardly a single company is willing to issue bonus shares. On the other hand, should the rate be reduced to, say, 20 per cent, prospects are that more bonus issues will be made, with consequent profit to Central coffers; and since an issue of bonus shares is normally greeted with a rise in share values, the Finance Minister may also be hoping to get more from any special Capital Gains Tax that he may introduce. On the same kind of reasoning, some relaxation in the statutory provision for Development Rebate Reserve is possible: a slightly extended period, to set by the Reserve in order to be eligible for the tax relief, will not only increase the size of the disposable surplus of profit with a company, but will also enlarge the quantum of profit that can be assessed to tax.

Mr Desai should be able to prove that the incidence on the individual of his new proposals will be light; and he should be in a position to stress that a dynamic economy is in the process of being created, in the sense that, on the basis of greatly expanded production, tax revenues, at existing rates, have turned buoyant. So, as a sop for the tax-payer, he may be able to go so far as to say that, for internal resources, the tax effort for the Third Plan will have been almost wholly completed in the very first year of the quinquennium.

But of course it will not be politic for Mr Desai so to assert that the last four years of the Third Plan will be relatively free of major tax efforts. All he could do would be to indicate that, against the Third Plan's target from additional taxes to be raised by the Centre, the 1961-62 Budget by itself will contribute a considerable sum. More assurance than this, he cannot give. If in fact Mr Desai presents the kind of Budget that in our view seems possible, the Indian tax-payer will have a great deal to be thankful for.

10 YEARS OF PROGRESS

ACC DOUBLES ITS CEMENT PRODUCTION!

Careful planning and determined effort has enabled the ACC to double its cement production from 17,80,000 tonnes in 1950 to 34,84,000 tonnes in 1960. ACC factories continue to produce larger and yet larger quantities of quality cement for India's urgent needs.

Railway Budget

CONSIDERING how the Deputy Minister for Railways, Mr Shaw Nawaz Khan was only the other day reportedly scarifying people about 'surprises' in the Railway budget, the financial proposals for 1961-62 that Mr Jagjivan Ram placed before the Lok Sabha on Wednesday came as a merciful anti-climax. Neither in passenger fares nor in freight rates is there to be any increase. Some marginal adjustments in surcharges and uneconomical minimum-distance rules are to be made, but these are of no budgetary significance. As the table elsewhere will show, the Railway Minister has budgeted for a net surplus of Rs 8.64 crores against the revised estimate of surplus of Rs 14.03 crores for 1960-61. This comparison needs some adjustments to bring out the real extent of the hopes for the year: first, gross traffic receipts (Rs 499.02 crores for 1961-62 against the revised estimate of Rs 458 crores) include the passenger fare tax so far accounted for in the general budget. Against this are to be put the increased appropriation of Rs 65 crores to the much depleted Depreciation Reserve Fund and the increased rate of dividend (4.25 per cent against 4 per cent as heretofore). This latter is budgeted to account for Rs 65.34 crores against the revised estimate for 1960-61 of Rs 56.66 crores. The budget has also provided for payment of Rs 12.50 crores to be made over to the State Governments in lieu of the passenger fare tax.

With 'surprises' out of the way, the chief point of interest in the Railway Minister's speech shifts, first, to the performance of the railways in 1960-61 and by extension, during the Second Plan, and second, to the indications that the first year of the Third Plan will give of the pace of realisation of the Third Plan hopes. As regards the first, the most notable feature has been the fall in freight earnings during 1960-61. The revised estimate for the year puts them at Rs 289.59 crores against the budget estimate for that year of Rs 305 crores. The reason for the shortfall is attributed by Mr Jagjivan Ram to the strike by Central Government employees in July last and to a lesser extent to unprecedented floods in parts of the country. The revised estimate of passenger earnings, however, is put at nearly Rs 131 crores. The budget estimate for 1961-62 for freight earnings is Rs 316 crores and for passenger earnings,

Rs 132.28 crores. The latter is likely to prove an underestimate, though the former may, despite the comparatively poor performance this year, be realised.

Taken as a whole, the performance of the Railways in the Second Plan has been impressive. The Railways expect to fulfil the planned expectations in financial terms. The Second Plan allotment to the Railways was Rs 1,121.5 crores and in the first four years of the Plan, 75 per cent of this amount has been spent. The entire balance is expected to be spent in the coming year. A particularly satisfactory feature of the performance is the reduction in the anticipated foreign exchange component of the Plan, which has been brought down from Rs 425 crores as originally estimated to Rs 385 crores. This has encouraged planners to reduce the foreign exchange component of the Third Plan to Rs 186 crores only. This is a feature that reflects great credit on the Railways, especially in the context of the overall needs of foreign exchange for the Third Plan. The success of planning has really to be measured in terms such as these. The building into the economy of sources of strength that progressively reduce our dependence on foreign funds and technical assistance is a more meaningful way of fulfilling the Plan than mere quantitative realisation of goals. In terms of other physical targets like new bridges and lines, electrification and redoubling of tracks, the performance has been, on the whole, satisfactory. Passenger traffic has exceeded phenomenally all expectations, the increase over a five-year period being about 25 per cent against the 15 per cent hoped for. Goods traffic, however, has registered a short-fall of about 8 million tons. This has partly been due to the uneven development of the industrial sector and consequent distortion of the anticipated pattern of commodities to be carried. The interdependence of the various sectors of development has been once again demonstrated in the shortfall in utilisation of the carrying capacity of the railways by the steel plants, which failure is at least partially attributable to the shortfall, until recently, in coal production. Ironically enough, we have more recently had the experience of increased demand by coal on the Railways' carrying capacity. Mr Jagjivan Ram has indicated that in terms of ton-miles (which he, with some justification, considers a better measure of performance than tons of originating traffic), the Railways, despite the

reduced demand made by the steel plants on it, will be carrying more than what was planned.

The Third Plan allocation for the Railways of Rs 1,255 crores is based mainly on certain assumptions about goods traffic, which in their turn are dependent on anticipations about industrial production, especially, production of coal, steel, cement and iron ore. In terms of originating traffic, the increase over the five-year period is put at 83 million tons over the present 154 million tons. In terms of ton-miles, this increase is expected to be about 72 per cent. The increase in financial allocation for this order of development is only slightly over a hundred crores. Perhaps the Planning Commission will have to consider revising upward this figure, though the overall resources position does not give much room for manoeuvre. But considering the centrality of transport for much else in the Third Plan, readjustments may be inevitable.

The Budget proposals for 1961-62 expect to make a modest beginning towards fulfilling Third Plan ambitions. The Budget provides for this purpose a sum of Rs 260 crores, roughly a fifth of the Third Plan provision for the Railways. The bulk of it (Rs 216 crores) will be towards Works in Progress and the rest for new projects.

In framing his proposals, the Railway Minister has been guided by the far reaching recommendations of the Railway Convention Committee 1960.* In fact, the major forecasts for the five-year period made by the Committee together with the Plan estimates will increasingly determine the annual budgeting

*The following is a summary of some of the recommendations of the Railway Convention Committee 1960, for the quinquennium 1961-66:

(1) The rate of Dividend payable by the Railways to the General Finance, on the capital-charge, to be raised from 4 per cent to 4.25 per cent, but subject to minor reliefs to the Railway Revenues, in addition to what would accrue from item (6) below:

(2) The present scope of the Railway Development Fund, as defined by the Railway Convention Committee 1949 and 1954, is to be retained so as to cover Railway Users' Amenities, labour welfare works excluding Rs 25,000 in each case and such operating improvements costing more than Rs 3 lakhs each as are essential, but cannot be assessed as being directly remunerative.

(3) The aggregate outstanding liability of the Railway Development Fund to the General Finance as on 31st March, 1961 (estimated at Rs 29.40 crores), on account of such temporary loans obtained from General Finance in the years 1958-61, is to be liquidated in 1961-62. The object is to start the Third Plan period with a clean slate. The liquidation is to be effected by making an ad-hoc write-back adjustment (i.e., transfer) from Development Fund to Capital, of the cost of unremunerative new lines under construction on 1st April, 1955, which was hitherto charged to the Development Fund under the 1949 Convention Committee's recommendations. (The principle adopted, under the 1954 Convention Committee's recommendations, of charging the cost of all new lines to Capital, was applied only to new lines started since 1st April, 1955).

(4) The Allocation for Railway User's amenities, covered by the Railway Development Fund, to continue to be a minimum of Rs 3 crores per year.

(5) The total contribution from Railway Revenues to the Depreciation Reserve Fund during the next quinquennium (1961-66) to be Rs 350 crores, with an appropriation of Rs 65 crores in 1961-62 and increasing by steps in each following year to Rs 75 crores in 1965-66.

(6) The Passenger Fares Tax, which is being levied under the Railway Passenger Fares Tax Act of September 1957 and the collections from which are being made over to the General Finance, for distribution to the State Governments, to be merged in passenger fares from 1st April 1961, but at the same time, the Railway Revenues to give to the States, in the next quinquennium, through the General Finance an annual amount of Rs 12.5 crores which is the average of the collections of the tax in the two complete years 1958-59 and 1959-60 following the introduction of the tax.

with corresponding reduction in the element of surprise. Some of the major innovations in the present budget have been the carrying out of the recommendations of the Committee. The increased allocation to the Depreciation Reserve Fund at Rs 65 crores is the first step in the replenishing of a fund that was being eroded at too alarming a rate for the comfort of a sound financial conscience. Over a five-year period the total appropriation to this fund is expected to be Rs 350 crores, though, the balance in this Fund at the end of 1966 may not be very much more than what it is now, since the draft outline of the Plan estimates that the Railways will draw Rs 330 crores from this Fund for replacements during the Third Plan period.

The Railway Minister has every reason to congratulate himself on the fact that there were no major accidents in Indian Railways during the year. It is also gratifying to note that efforts being made to improve operational and productive efficiency are being attended with success. Chittaranjan and Perambur continue to justify our pride in them by continually excelling themselves. New amenities, especially the provision of sleeping facilities for the third class passengers, make a public, harassed in many ways, think kindly and gratefully of the Railway Minister.

Bihar Budget

THE State Budgets for 1961-62 have a new importance which is derived from the fact that the end of March 1962 signifies the beginning of the Third Plan endeavours. The Bihar Budget which was presented to the State Legislative Assembly last week, however, does not seem to reflect clearly the implications of an accelerated rate of economic progress that the Third Plan has envisaged. The revenue receipts and expenditure are no doubt marked higher at Rs 84.47 crores and Rs 79.08 crores respectively against Rs 83.89 crores and Rs 75.92 crores respectively for the current year. But the total receipts and expenditure are lower at Rs 146.51 crores and Rs 148.64 crores against Rs 164.48 crores and Rs 172.27 crores respectively for the current year. What is even more noteworthy is that the outlay for the first year of the Third Plan fixed in the Budget at Rs 49.31 crores is considerably lower than the revised estimates of outlay at Rs 57.89 crores for 1960-61, the last year of the Second Plan. The Third Plan outlay for the State having been fixed at Rs 337 crores, the investment in Plan projects in the first year of the Plan is well below the annual average envisaged. The only relieving feature is the increased allocation made to major heads of development. Thus the total allotment to agriculture has been raised from Rs 4.21 crores in the current year to Rs 4.64 crores for the next financial year while the allocation for irrigation and power constitutes more than one-third of the total. The enlarged allocation to these strategic sectors may prevent the deceleration in the rate of growth that is otherwise inescapable in a reduced Plan outlay.

Compared with the Budget for 1961-62, the revised estimates for 1960-61 make an impressive show and the step up in expenditure against Budget estimates for 1960-61 is particularly remarkable. Particularly satisfactory is the fact that the increased expenditure has percolated to the Plan sector also which for 1960-61 registers a gain in outlay of Rs 5.33 crores. Mr Dip Narayan Sinha, the Finance Minister who presented the Budget has in this connection pointed to the increased investments that have been possible in agriculture, animal husbandry, irrigation, river

valley projects, roads etc. But the acceleration of expenditure in the last year of the Second Plan notwithstanding, the over all achievements of the State under the Second Plan do not, with a few exceptions, appear to be spectacular. Provisions of facilities for primary education to 56 per cent of the children in the age group 8-11 and the execution of the schemes for development of road transport constitute two notable instances of Second Plan achievements in Bihar. Demonstrable results have also been obtained in the community development movement and medical care. In assessing the Second Plan achievements, the fact cannot be overlooked that some of the major schemes, particularly in the realm of irrigation and power, in which large investments have been made under the Second Plan, were not scheduled for completion during the Plan period. But, even after making allowance for such inevitable delays in realisation of Plan benefits, the outstanding impression that the results of the Second

Plan produce is one of slow progress as compared with other States. The problem of changing the traditional pattern in agriculture is still of overwhelming magnitude. Even after the implementation of two Plans, Bihar has not succeeded, in any marked extent, in relieving the pressure of numbers on the State's backward agriculture. A recent survey by the Bihar Unemployment Committee has brought to light the fact that nearly 83 per cent of the State's population are dependent on agriculture.

For the rectification of this imbalance, the Third Plan offers high hopes. The completion of the major schemes taken up in the Second Plan itself should make a notable contribution to development. The Third Plan also includes

schemes which are of momentous significance for acceleration of economic growth. Particularly noteworthy are the Central schemes in the industrial sector such as the Heavy Machine Building and Heavy Foundry Forge Plants near Ranchi, the Heavy Machine Tools Factory at Ranchi, the Steel Plant at Bokaro, and the Oil Refinery at Barauni. The significance of these new schemes for the formation of the industrial base and the potentialities they offer for the growth of the ancillary and small industries are great.

Mr Sinha rightly points to these new opportunities for all round development that the Third Plan will open up, but he has not minimised the magnitude of the financial efforts required to make them possible. The present position, as reflected in the Budget, is if anything, indicative of the growing strains that will be experienced in raising the State's share of the Third Plan outlay. The anticipated buoyancy in revenue for 1961-62, has no element of stability being dependent on sources, the behaviour of which is not certain. In this connection, it is to be noted that revenue receipts for the budget year take into account an amount of Rs 6.96 crores from irrigation including betterment levy and recovery of loans and advances from agriculturists. Also an increase of Rs 1.16 crores is anticipated from sales tax. While sales tax has an inherent elasticity and may realise larger sums, the calculations in respect of betterment levy and recovery of loans and advances are liable to go awry notwithstanding the fact that collections from these sources have been notoriously in arrears. Opportunities for creation of as large a surplus as possible from non-Plan sector for utilisation in the Plan-sector should, therefore, be a continuous pre-occupation of the Bihar Government.

Buoyancy in Central Revenues

THE revenues of the Government of India in the current fiscal year have been remarkably buoyant. The sharp increase in industrial and agricultural production has helped the Exchequer to realise more revenues than in the preceding year. The total collection in the first eight months of 1960-61 amounted to Rs 508.46 crores as compared to Rs 442.28 crores in the corresponding period of 1959-60. Particularly noteworthy is the rise in excise from Rs 227.56 crores in April-November 1959 to Rs 263.38 crores in the same period of 1960. Excise in recent years has become the largest single source of revenue. In 1958-59 excise contributed Rs 312.94 crores. The items which brought in the biggest revenue under excise are cotton cloth, sugar, motor spirit and tobacco. In 1958-59, cotton cloth provided Rs 57.40 crores by way of excise. In the Budget for 1960-61, however, sugar has emerged as the biggest earner accounting for Rs 46.40 crores (estimated) against Rs 52.27 crores in 1958-59. The estimate from cotton cloth in the current fiscal year is Rs 43 crores.

The revenue from customs in the first eight months of 1960-61 is placed at Rs 108.28 crores against Rs 101.33 crores in the same period of last year. The Budget estimate for the current fiscal year is Rs 160 crores of which Rs 141.12 crores are to come from import duties. Export duties have progressively been losing their importance. In 1958-59 the revenue from export duties was Rs 20.86 crores but the estimate for the current year is lower at Rs 16.28 crores of which only one item, namely tea, accounts for Rs 13.50 crores.

BUDGET AT A GLANCE

		Actuals	(In Crores of Rupees). Budget Estimate	Revised Estimate	Budget Estimate
		1959-60	1960-61	1960-61	1961-62
1 Gross Traffic Receipts	...	422.33	464.50	458.00	499.02†
2. Ordinary Working Expenses	...	289.52	326.90	326.31	332.53
3. Net Miscellaneous Expenditure	...	13.16	16.82	15.91	14.88

†Includes amount after merger of passenger fares tax with passenger fares from 1-4-61.

@Increased contribution to Depreciation Reserve Fund.

*Dividend to General Revenues enhanced from 4 per cent upto 1960-61 to 4.25 per cent in 1961-62.

**Contribution to General Revenues from traffic receipts to be made over to the State Governments.

In accordance with the recommendations of the Convention Committee, 1960.

The revenue from income tax is higher at Rs 68.12 crores in the first eight months of 1960-61 against Rs 66.22 crores in the corresponding period of the preceding year. But the revenue from corporation tax has recorded a big increase in this period from Rs 31.60 crores to Rs 53.36 crores. It is interesting to note that in the first eight months of 1960-61 the revenue from corporation tax was practically the same as in the whole of 1958-59 amounting to Rs 54.33 crores. It has to be remembered that while the corporation tax accrues in its entirety to the Centre the net proceeds of income tax, (exclusive of the tax attributable to Central emoluments and Union territories and Central surcharges, if any) are divisible between the Centre and the States.

Among other sources, the tax on wealth has yielded Rs 2.34 crores (upto October 1960) against Rs 2.79 crores in the corresponding period of the previous year. In 1958-59 the tax on wealth brought in Rs 9.67 crores. The Budget for 1959-60 placed it at Rs 13 crores whereas actual realisation was expected to be Rs 12 crores. The estimate for 1960-61 was Rs 7 crores—the decline of Rs 5 crores being due to abolition of wealth tax on companies.

The revenue from expenditure tax has always been below estimates. In 1958-59 this tax yielded Rs 64 lakhs. The Budget for 1959-60 estimated Rs 1 crore from this source, but the revised figure for that year was lower

TREND IN REVENUE.				
(In Lakhs of Rupees)				
Item	1958-59 (Accounts)	April to November 1959-60	1960-61	
Customs	1,38.29	1,01.33	1,08.28

Opium	3.15	2.60	2.97	
Gift Tax	98	30	34	

*Upto October.

at Rs 80 lakhs. The estimate for 1960-61 was Rs 90 lakhs. The actual collection in the first eight months is Rs 35 lakhs as compared with Rs 29 lakhs during the corresponding period of the previous year.

The gift tax has produced Rs 34 lakhs for the first eight months of this year against Rs 30 lakhs for the same period last year and against Rs 98 lakhs for the whole of 1958-59. The railway passenger fare tax has resulted in Rs 8 crores up to October 1960 against Rs 2.29 crores in the like period of the preceding year and Rs 12.24 crores in the whole of 1958-59. The revenue from opium was Rs 2.97 crores in April-November 1960 against Rs 2.60 crores in the same period of the previous year and Rs 3.15 crores in 1958.

These figures show that, in the current fiscal year, the revenues of the Government of India have been at a substantially higher level than in 1959-60. That does not, however, mean that the Finance Minister will readily agree to provide relief in taxation in his forthcoming Budget. The National Council of Applied Economic Research in its recent study has made a cogent and convincing case for modification of the tax system in certain directions. The main merit of these proposals is that their implementation will not result in any significant loss in revenue but will at the same time help remove some of the anomalies and hardships carried by the present

tax structure. But it should be remembered that we are now on the eve of the Third Plan, and it is doubtful if the Finance Minister will be prepared to forego even an insignificant part of revenue. Moreover, the general election is round the corner, and the ruling party may not be willing to grant concessions in taxation which the opposition may interpret as a retreat from socialism and surrender to big business.

Assistance to Small Industries

THE comprehensive programme for the development of Small Scale Industries, initiated during the First Plan period and further developed during the Second, has now branched out in several directions. Government assistance of different types is made available to small units through a variety of agencies under the Central and State Governments. Technical assistance in the fields of production and management is provided by the Central Small Industries Organisation through a network of Service Institutes and Extension Centres, as well as by the Departments of Industries in the States. Financial assistance is provided by State Governments, State Financial Corporations, State Bank of India and now the Scheduled Banks have also been brought into the picture with the introduction of the Reserve Bank's Credit Guarantee Scheme for Small Industries. The programme for establishment of Industrial Estates is designed to provide the small units with suitable accommodation, equipped with necessary facilities like water and power, where they could carry on production in proper working conditions. The National Small Industries Corporation helps small industries with marketing assistance in internal and overseas markets, supply of raw materials and imported components, and financial assistance for purchase of machinery under its Hire Purchase Scheme. It has also been entrusted with the task of implementing the programme of setting up small units as ancillaries of large industrial undertakings and of development of machinery manufacture in the small scale sector through its two Proto-type Centres, at Rajkot and Okhla.

The Japanese Delegation on Small Industries, which reported in 1959, had observed that the small scale industry policy in India "is worked out with much scrupulousness in various phases," and that "few counterparts can be found in the world in the number of items and in the elaborateness of their contents." At the same time they gathered the impression that the policy was "too thorough-going" in the sense that it might lead to a tendency among small scale industrialists to depend too much upon the Government. And they had suggested that the policy should be reoriented in the direction of "guidance and self-help" to ensure the development of a self-reliant small scale sector.

On the other hand, there also exists a feeling in this country, especially among those who have interested themselves in the small industries development programme, that, though it is thorough and far-reaching in content, it has not yet spread sufficiently wide or reached the really small units. As regards the development of the industries in the underdeveloped areas and districts, on which the Industrial Policy Resolution of 1956 laid particular emphasis, the progress has been disappointing. The Estimates Committee of the Lok Sabha, which reviewed the small industries programme, has noted "the present trend

was that the small scale industries were coming up fast in places where there were largescale industries and that in other places development was very slow." While recognising the difficulties of development in rural areas which lacked power, adequate communications and markets, the committee nevertheless recommended that "the programme for the development of small scale industries should be made largely rural-oriented so as to concentrate efforts towards developing industries in rural areas as distinct from urban localities where the efforts have been primarily directed so far."

There is also a prevalent feeling that the assistance provided by Government is generally availed of by the comparatively larger units that barely satisfy the definition of small industry. For the purpose of Government assistance, small scale industries were, in the beginning, defined as manufacturing units which employed fifty workers with power or hundred workers without power and had a capital investment of less than Rs 5 lakhs. The definition has since been revised so as to include all industrial units with a capital of not more than Rs 5 lakhs, irrespective of the number of persons employed. Capital for the purpose of this definition includes investment in fixed assets like land, buildings, machinery and equipment. Where the units are functioning in rented premises, the capitalised value of such buildings is included in the estimate of fixed assets.

It has been suggested that the definition is too wide and allows scope for misuse of the assistance intended for small units. The definition relates only to fixed capital and does not include working capital and, if the latter is also taken into account, the effective capital limit would be much larger than Rs 5 lakhs. It is also not clear whether the term fixed assets means gross fixed assets or net assets after depreciation. If net value is taken in estimating assets, bigger units could come under the definition and claim special aid. The Estimates Committee was of the opinion that, if capital is restricted to gross and not to net fixed assets, the present limit would be a satisfactory compromise.

In view of the prevailing high level of prices for industrial machinery, reduction of the ceiling limit to one or one and a half lakhs of rupees as suggested in some quarters would be to impose restrictions on development. The main point is not the definition but administration of the aid programmes—whether the small units get the aid intended for them or are elbowed out by the large units masquerading under the label of small industry.

The working of the Hire Purchase Scheme of the National Small Industries Corporation can throw useful light on this disputed point. During last year, it appears that about 65 per cent of applications for hire purchase accepted by the Corporation were for machinery worth Rs 25,000 or less and the majority were from new units. This does not bear out the contention that the aid for small industries is being monopolised by larger units near the ceiling, at least so far as the NSIC is concerned. The financial aid provided by other agencies might also be examined from this point of view by the Small Scale Industries Board.

More small units will be able to derive the benefits of the schemes of assistance offered by Government, if they were aware of the facilities available. The Estimates Committee had observed that most of the small scale industries are not aware of the various governmental agencies set up to assist them and

also of the kind of assistance available to them. It had also suggested that effective measures should be taken to give wide publicity to the assistance offered by Government for development of small scale industries and all modern media of publicity (particularly documentary films) should be employed for this purpose.

The Central Small Industries Organisation has launched an intensive campaign of development in backward areas. But, development of small industries in rural areas, which is the basic tenet of Governmental policy, will be determined by the pace of rural electrification. Non-availability of power is a serious difficulty in establishing industrial units, small or large, in undeveloped areas. Apart from supply of power, the price at which it is made available is also an important consideration. Small scale units are at a great disadvantage in getting power at economic rates. The rates charged under rural electrification schemes are not calculated to encourage the movement of industries to the countryside. The programme for rural industrial estates should also include provision for small power houses in areas not covered by rural electrification schemes.

The handicap of small units in having to pay higher rates for power, as compared with large undertakings which are able to secure concessional rates under the slab system, is advanced as one of the main reasons justifying the price preference, and reservation of certain categories of goods for small industries, in the award of Government contracts. The Japanese Delegation had emphasised the need for eliminating the element of subsidy involved in price differentials and specially low rates of interest on loans. Unless it is possible to make the benefits of Government assistance available to all the small scale industries in the country, the schemes of assistance involving an element of subsidy will continue to favour a minority. It will be easier to replace the system of subsidised prices and interest rates by a more equitable one, if electric power could be made available to small units at the same rates as are paid by large undertakings.

LICENSING PROCEDURE FICCI's Guide

THE impact of taxation on investment and on the psychology of entrepreneurs has received continuous attention and was the subject of a recent expert investigation. But a large number of would-be-industrialists never reach the stage when they will be called upon to grapple with the integrated system of taxes. Many are brought to a halt, at the very beginning of their enterprise, by the complexities of licensing procedure which they will have to pass through, before they could get a licence to start their undertakings. The following categories require licences under the various provisions of the Industries (Development & Regulation) Act, 1951.

1. New undertakings pertaining to the scheduled industries provided they employ more than 100 workers and have fixed assets, i.e. land, building and machinery of not less than Rs 10 lakhs in value.
2. Existing undertakings which propose to effect "substantial expansion" as defined in the Act.
3. The manufacture of "new article" as defined in the Act.
4. Carrying on the business of existing undertakings which for one reason or

another have not been registered or licensed so far under the Act.

5. Shifting of existing industrial undertakings from one location to another.

The applications have to be processed by various authorities according to the nature of the proposals, whether they envisage import of plant and machinery, issue of capital exceeding Rs 10 lakhs, foreign collaboration etc. The authorities concerned include, apart from the Ministry of Commerce & Industry, its Development Wing and Licensing Committee, the Chief Controller of Imports and Exports, the Controller of Capital Issues, the Capital Goods Heavy Electrical Plant Committee, the Foreign Agreements Committee of the Ministry of Commerce, the Central Water & Power Commission, Power Wing, Government of India, and the Reserve Bank of India.

Any industrial project will have to secure the approval of the Government in respect of:

1. Capacity, location etc.
2. Foreign exchange expenditure for import of plant and machinery.
3. Terms of foreign collaboration, if any, in the project.

To guide existing manufacturers and intending entrepreneurs through the labyrinth of licensing procedure, the Federation of Indian Chambers of Commerce & Industry has published a revised and enlarged edition of a useful brochure on the subject titled "Procedures Relating to Industrial Licensing." The first edition, published in March last year, explained the procedures then in force and the arrangements that had been evolved to expedite disposal of applications and suggested how the early disposal could be facilitated by the applicants themselves through strict compliance with the rules.

Changes have been made from time to time to streamline the procedures in order to facilitate quick disposal; and exemptions are allowed in case of selected industries which are not required to pass through the entire procedural gamut. It may be recalled that in February 1960, the Government announced a list of 49 industries in respect of which licences for setting up fresh capacity would be issued freely, that is to say, without reference to the Licensing Committee. Simultaneously a list was also issued of industries in which, for one reason or another, it was not possible to sanction fresh capacity, and in respect of which applications would be rejected straightaway without reference to the Licensing Committee. Both the lists have been recently revised by the Government, and it has been announced that the revised lists will be in force up to 30, September 1961.

The list of industries, where applications will ordinarily be approved, will now consist of 23 engineering and 21 non-engineering industries, a total of 44 industries against 49 in the previous list. The number of industries where applications for licences would be ordinarily rejected is 85 including 40 engineering industries.

In June 1960, Government had announced that, in cases where production could be increased without installing additional plant or machinery, except balancing equipment, the requisite licences should be granted without prior reference to the Licensing Committee. Recently Government has also decided to permit increase in production in manufacturing units beyond the licensed capacity, provided the additional capacity is achieved within their foreign exchange allotment. That is to say, units which are being allotted foreign exchange for import of components or parts or any type of intermediates or chemicals or raw materials will be free to increase their output

within their foreign exchange allotment by producing more components, parts etc, themselves or procuring these from indigenous sources. The foreign exchange thus saved could be used for items which still have to be imported for reaching a higher level of output. When increase in production beyond the licensed capacity has been achieved, the units concerned are required to bring this to the notice of the Ministry of Commerce and Industry and the Development Wing for purposes of regularisation and registration.

As a general rule, industrial undertakings, whether new units or schemes of expansion, which employ less than 100 persons and whose fixed assets will be less than Rs 10 lakhs in value are not required to apply for licence under the Industries Act. But there are restrictions which operate in particular fields. For instance, acquisition, installation and working of spindles and looms for manufacture of cotton and non-cotton textiles require a prior permit from the Textile Commissioner.

The revised brochure gives the present procedures for the grant of licences as well as a broad indication of the limitations circumscribing the grant of import licences for capital goods etc. The annexures contain particulars that have to be furnished when a new company is desired to be established with foreign capital collaboration, when an existing Indian company wishes to increase its capital by issue of shares to non-residents or wishes to enter into technical collaboration agreements with foreign manufacturers involving payment of royalties, technical service charges etc. Manufacturers contemplating expansion of their undertakings or those who wish to start new ones will find timely guidance as well as a wealth of useful information in this brochure which is a bargain at 50 naye paise.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

BUSY SEASON

Half Way Mark

THE expansion in Advances, at the mid-way mark of the 1960-61 busy season, already exceeds Rs 100 crores; and there are no signs of an abatement in the demand for funds. As compared with the corresponding period of 1958-59, which till now has been the busiest busy season, the magnitude of rise in bank credit is already higher by Rs 20 crores. It is safe to predict that the current busy season will prove to have thrown up the greatest demand for funds that banks so far have been called upon to meet.

Banks have clearly risen to the occasion. Their problem, of finding the resources, was aggravated by the fact that they have suffered a depletion in Deposits. They have been obliged consequently to draw upon their Reserve Balances (which are lower by Rs 22 crores) and to avail of borrowings from the State Bank and the Reserve Bank (the relative figure has gone up by Rs 32 crores). Besides, there has been disinvestment in giltedged; but, in this regard, it may be noted that the bulk of the fall in investments of Scheduled Banks is due to the State Bank, which has sold nearly Rs 64 crores of securities; and the latter institution's sales are at least in part due to the making over of counterpart funds which had been lodged with it. Bank other than the State Bank have raised roughly Rs 15 crores by sales of giltedged.

Thus, Scheduled Banks, other than the State Bank, have experienced a rise of Rs 67 crores in Advances and a fall of a little over Rs 1 crore in net Deposits; Rs 30 crores were covered by recourse to borrowings from the State Bank and the Reserve Bank; another Rs 16 crores by sales of giltedged; and the balance by drawing down cash.

The State Bank can be seen to have financed the bulk of the increase in its Advances by disinvestment in giltedged; and there has in recent weeks been evidence to suggest that the State Bank was a large holder of Treasury Bills, which were allowed to mature.

In the remaining three months of the busy season, it is to be anticipated that banks will enormously increase their borrowings from the Reserve Bank and the State Bank. For, while, in the first week of April, banks may expect to have a considerable rise in Deposits, as a result of governmental year-end disbursements, any such accretion will still fall siz-

ably short of the demand for banking finance. And of course it is unlikely that the banks will choose to sell giltedged, the State Bank being in this regard an exception.

In order to facilitate the financing of the current busy season, the Reserve Bank is known to have cancelled the limits for its advances against usance bills. This means that banks will be free to borrow as much as they need under the scheme. Consequently, it is possible that a fair proportion of the balance of expansion in Advances in the next three months will be in the form of inland bills. This would be because such bills could form the "security", as it were, for borrowings against usance bills. The utilisation of the usance bills scheme would follow the pattern set in the 1956-57 busy season.

The prospective record expansion in Advances has an important implication for the banking system. Deposits have not been rising, and other than inter-bank call money, interest rates have not changed—and so the expenditure side of banks' profit and loss accounts will not have unduly risen; though it is necessary to add that, to the extent that borrowings from the Reserve Bank have been higher, and have also had to be paid for at the penal rate of 5 to 6 per cent, there would be some element of increase in banks' expenditure. On the other hand, the record rise in Advances will have greatly added to banks' income. Hence, unless the 1961 slack season witnesses a totally unexpected contraction in Advances, bank profits during the current year should be as good as, if not better than, the level of earnings experienced in 1960.

TREASURY BILLS

Funding Operation?

There has again been a funding operation, and the amount involved may be Rs 50 crores. This is suggested by the fall of Rs 57 crores in the outstandings of Government of India Treasury Bills in the week ended 3 February. On two previous occasions, once in the fiscal year 1959-60 and again in the following year, clear evidence was available in the figures relating to outstandings of Government of India Treasury Bills, though confirmation came later, in the Explanatory Memorandum issued with the Budget.

These operations represent the funding of part of the ad hoc Treasury Bills sold to and held by the Reserve Bank. In 1959-60, a

special issue of Rs 300 crores of 4 per cent 1973 loan was made in cancellation of ad hocs for like amount; but it was specified that the special issue was not marketable, in that the Reserve Bank could not sell any part of it through the tap.

In 1960-61, in the last week of December, a funding operation in an amount of Rs 150 crores was carried out.

It is therefore likely that the reduction in outstandings of Treasury Bills in the week ended 3 February also relates to a similar funding operation. But what the issues are, which have been made over to the Reserve Bank, we shall not know for another two weeks. But it is to be hoped that they represent re-issues of some short-dated loans, since they would otherwise be non-marketable: in the current state of the giltedged market, demand for securities is at a low ebb, and if there should be any resources which gather with the banks, either in the form of a slack season contraction in Advances or by way of a rise in Deposits, interest will be shown by such institutions only in short-dateds.

According to the Second Plan estimates, deficit financing was to be instituted for Rs 1,200 crores over the five-year period. In the event, some Rs 500 crores have now taken the form of higher interest-bearing securities; perhaps Rs 200 crores of this constitute marketable securities; and should the money market in the future again witness conditions similar to the 1957 slack season, some part of the marketable securities may get absorbed by the banking system.

A further implication of the funding operations is that the profitability of the Reserve Bank has thereby been improved. The "margin" on its holdings of Rs 300 crores of 4 per cent 1973 is considerable, though somewhat smaller on the funding operations thereafter. But, because the Reserve Bank profit is in any case to be made over to the Central Government, the higher earnings on marketable securities, as distinct from ad hoc Treasury Bills, will have merely resulted in enlarging the Reserve Bank profit for which credit is taken in the Revenue Budget of the Centre.

Because of buoyant governmental revenues, it appears almost certain that the quantum of deficit financing during the current fiscal year will be much smaller than was estimated by the Finance Minister, Mr Morarji Desai, while presenting his Budget for 1960-61. Indeed, there is even the possibility that Government, owing perhaps to receipt of counterpart funds from the US Embassy on negotiated agreements in respect of Public Law 480 accretions of the past, may be able to avoid altogether any recourse to created money. Present indications are that the Second Plan's reliance on deficit financing will work out to something like Rs 1,000 crores; and half of that, as noted, will be represented by increase in the long-term borrowings of the Government, and half by rise in outstandings of Government of India Treasury Bills.

BANK RETURNS

Foreign balances rise

The Reserve Bank returns for 10 February show that there has been an unexpected accretion of over Rs 5 crores to Balances Held Abroad, and this, it is almost certain, is owing to receipt of special assistance from abroad.

According to the return of the Issue Department, Active Notes continue to expand; in the latest week, the rise registered is one of a high Rs 19.56 crores to Rs 1,948.81 crores. Rupee Coin has also gone out into circulation for Rs 1.55 crores. Hence, the inference is

that the demand for funds was occasioned not only by busy season pressure but also by the spillover into the second week of beginning of the month disbursements. Currency has been expanded against Rupee Securities for Rs 20 crores by transfer from the Banking Department. Foreign Securities continue to be unchanged at Rs 128.01 crores, so that the Reserve Bank's cash in the till has been slightly drawn down by Rs 1.11 crores to Rs 10.17 crores. With the latest week's expansion in currency, Active Notes, in the space of a fortnight, have risen by over Rs 39 crores, and outflow of Rupee Coin has exceeded Rs 3½ crores. This is a measure of the severe busy season we are experiencing.

In the Banking Department, there is no indication of deficit financing, with Investments, as a result of transfer to the Issue Department, being shown lower by Rs 20 crores at Rs 130.84 crores. The Centre has nevertheless been able to improve its balances by Rs 7.17 crores to Rs 59.86 crores. Heavy payments by the States are not, it is patent, responsible for the accretion to the Centre's Deposits: States' balances are actually lower by Rs 0.20 crores at Rs 21.85 crores, and their borrowings are besides higher by Rs 3.08 crores at Rs 39.22 crores.

The pressure upon banks seems to have abated somewhat. Their Reserve Balances are lower only by Rs 1.69 crores, with the State Bank in the relevant week reporting a reduction of Rs 1.31 crores in cash in hand and with Reserve Bank. But the banking system is nonetheless feeling the pressure sufficiently to have additional recourse to central banking credit: the Reserve Bank's Other Loans and Advances, which have been rising almost without pause since the 1960-61 busy season began, are Rs 2.78 crores higher at Rs 157.03 crores. The clincher in this respect lies in the fact that the Reserve Bank's advances against usance bills have been marked up by Rs 1.90 crores at Rs 24.25 crores.

The Reserve Bank's portfolio of Government Treasury Bills purchased and discounted has once again gone up by roughly Rs 12 crores to Rs 62.28 crores. This is doubtless linked up with the disinvestment in giltedged of something like Rs 8 crores reported by the State Bank for the same week. The State Bank is apparently finding the pace of the 1960-61 busy season a trifle hot, and instead of borrowing from the Reserve Bank, it is choosing not to "renew" its holdings of Treasury Bills when they mature; indeed, there seems little doubt that the State Bank is reducing its giltedged holdings (including Treasury Bills) in order that it may meet the demand arising in the busy season. The State Bank's holdings of giltedged have declined by Rs 74.27 crores since the last Friday in October 1960, whereas counterpart funds which have been made over to the Reserve Bank amount only to Rs 36 crores. The implication, irrefutably, is that disinvestment for Rs 38 crores has taken place for expanding the Advances portfolio.

Balances Held Abroad show a satisfactory rise of Rs 5.22 crores to Rs 24.47 crores. Since recent trends have not been such as to hold out the hope that export surplus of such size is within our competence in the period of a week, the inescapable conclusion is that India has been in receipt of fair size untied foreign loans in the week under review.

A sharp rise in the total of Advances is shown in the return of the State Bank for 10 February. The relative figure has risen by the unusually large amount of Rs 9.21 crores to Rs 262.24 crores. However, it is possible that part of the rise is accounted for by in-

creased lending to banks. Nevertheless, the impact of busy season aggravated by beginning of the month disbursements is beyond question. As a result, the State Bank has had to disinvest in giltedged for over Rs 8 crores, and holdings are now down to Rs 260.91 crores. The State Bank is fortunate in that, for the second week running, an addition to Deposits has been experienced. Deposit resources have been added to by Rs 2.07 crores to be placed at Rs 560.41 crores. The consequence, however, is that cash in hand and with Reserve Bank has declined by Rs 1.31 crores to Rs 20.39 crores. Incidentally, Other Assets continue to figure at the somewhat high level of Rs 23.74 crores.

The statutory statement of Scheduled Banks for 3 February shows that bank credit is unremittingly and relentlessly moving upward. The total of Advances, in rising by Rs 13.19 crores, is scaling new peaks and is presently at Rs 1,238.82 crores. (In the relevant week, the State Bank's contribution to the rise in Advances was Rs 3.21 crores). Net Deposits are more or less unchanged, net Demand Deposits being shown at Rs 784.48 crores (or a fall of Rs 1.57 crores) and net Time Deposits at Rs 1,085.26 crores (a rise of Rs 0.36 crores). However, the State Bank in the same week had had a rise of something like Rs 4 crores in Deposits. So, other banks, due presumably to beginning of the month disbursements of constituents, have suffered a drain in Deposits. Owing to the month-early demand for funds, the banks have been compelled to seek the assistance of the Reserve Bank, borrowings from that institution being shown Rs 14.24 crores higher at Rs 58.72 crores. On the other hand, indebtedness to the State Bank is slightly lower at Rs 14.31 crores against Rs 14.90 crores. The fall of Rs 4.22 crores to Rs 605.97 crores in giltedged investments is due to the State Bank.

USA

Defence of the Dollar

By Paul Einzig

THE new Washington Administration has now announced its plans for reinforcing the defence of the dollar. It has reaffirmed its determination not to yield to pressure in favour of a devaluation. Nor has it any intention of defending the dollar by means of exchange or trade restrictions. The official American policy aims at restoring confidence in the dollar largely through a display of the strength of its second line of defence represented by facilities available from the International Monetary Fund, and through the

attraction of foreign short-term and long-term capital to the United States.

The announcement of the intention of the United States to draw, if necessary, on its facilities with the International Monetary Fund should certainly go a long way towards discouraging any short-term speculative movement, seeing that its drawing rights are very substantial. This policy, in order to be effective, would necessitate an increase in the Fund's holdings of currencies of countries with large surpluses, especially D. Marks and Swiss francs. The official American policy also foreshadows an expansion of the scope of the International Monetary Fund presumably on the lines of the old Keynes plan that was revived recently in the United States.

The Washington Administration seems anxious to attract more official reserves of dollars and to that end it is prepared to make concessions to Treasuries and Central Banks in the form of higher interest rates and taxation concessions. It is a pity that such facilities are confined to official dollar holdings. Private funds are only thought to be attracted in the form of long-term investment. The new Administration declares its intention to press European Governments with substantial reserves to remove any remaining restrictions on investment in the United States by their nationals.

Both sets of measures indicated above leave the current balance of payments position untouched. This means that even though the dollar is amply secured against purely speculative attacks, in the long run it would be weakened by a series of import surpluses such as we witnessed in recent years, unless this aspect of the problem receives attention. For a long time such surpluses would be met out of the once-for-all effects of the proposed measures which should be able to prevent a further substantial decline of the gold reserve and might even cause a reversal of the gold flow.

Taking a long view, however, the improvement of the balance of payments is an absolute necessity. To that end there will have to be some hard re-thinking in Washington about external expenditure which cannot be allowed to continue on the same generous scale as it has been proceeding since the war. To some extent the recently imposed ban on gold holdings abroad may also lead to repatriations, though from this point of view it is a pity that the ban has not been reinforced and extended to cover other forms of American flight money abroad. On a long-term view, however, what matters is keeping American costs competitive in the world market. It is policies to be adopted in that respect that will determine whether the new Administration will succeed in restoring the dollar to the position it occupied until recently as the currency which inspires unqualified confidence.

Notes

STATE OF THE UNION The President's Message

With the usual broad sweep that we have come to associate with him, the President reviewed events at home and abroad in his address to the joint session of both houses of the Parliament. On both fronts, there were stresses and strains, but the President was cautiously optimistic about improvement, signs of which were, according to him, already in evidence. Laos and the Congo—the latter in particular—are no doubt full of potentiality for mischief and the President emphasised the need for persevering in efforts to persuade the big powers to secure a basis of agreement on these and the unresolved issue of disarmament. The intransigence of China to settle the boundary question is still a matter for anxiety. But the President was reassuring on the Government's endeavours to safeguard the frontiers against any aggressive designs of our neighbour.

On the domestic economic situation, the President was able to point to tangible progress and favourable prospects. On the credit side are the new industrial units set up, strides in the intro-

duction of Panchayat Raj, improvement in labour situation and extension of the Employees' State Insurance scheme. On the other hand, rising prices are corroding savings and morale. But increase in production especially in agriculture of which we have had heartening news during this year, may make things easier for us and the first year of the Third Plan may get off to a flying start.

TRANSPORT Manipur

The crucial role of transport in fostering the economic growth of underdeveloped regions is clearly brought out in the Techno-Economic Survey of Manipur undertaken by the National Council of Applied Economic Research. Manipur is practically isolated from the rest of India. Internal communications are woefully inadequate. A large part of the territory is inaccessible; there are no railways and the road system, planned to meet military requirements, is not geared to the needs of economic development. The economy of Manipur has remained stagnant. The per capita income in 1956 was as low as Rs 171 against the all India figure of Rs 261. Within the region there are wide differences in development between the plains and hills.

Lack of communications with outside markets has a depressing effect on prices of agricultural commodities, resulting in the very low contribution of the agricultural sector to the total income of the territory. While 63 per cent of the working force is engaged in agriculture and allied activities, this sector accounts for only 17 per cent of the total income. Successful implementation of programmes for increased agricultural productivity through introduction of double cropping and of new crops like sugar and cotton will depend on the provision of adequate road transport for internal and external communications. The NCAER report has urged that transport and communications should receive high priority, and that, immediately, the Administration should concentrate on completing the essential net work of roads stipulated in the 20-Year Plan, by 1975. Improved internal communications are also essential for the development of the tribal areas for the welfare of the tribal population. The large potential of forest wealth which is now wasted and the scope for lac cultivation

and mulberry plantations are also indicated in the survey.

The NCAER report has suggested a number of small and medium industries that could be developed over a decade. Handloom weaving, the traditional household industry in the plains, is expected to provide the basis for a large programme of production of textiles. The ten-year development programme recommended in the report will call for a total outlay of Rs 20.5 crores. The annual growth of per capita income is estimated at not more than 3 per cent. But the report points out that it will not be practicable to plan for a larger rate of increase in view of the inherent weaknesses of the economy and the limited capacity of the administration to perform the tasks of development in a difficult terrain.

The Second Plan provision for Manipur was Rs 6.2 crores and the actual outlay is expected to reach Rs 6.1 crores by March 1961. The total outlay proposed under the Third Plan is Rs 12.8 crores. Considering the expenditure in the Second Plan and the scale of outlay proposed for the Third Plan there should be no difficulty, as far as availability of funds is concerned, in implementing a development programme of Rs 20.5 crores over the next ten years. In fact, the funds allocated can support a larger programme if it is found possible to overcome the physical limitations that hamper rapid progress.

MINOR PORTS Mangalore and Malpe

The recommendations of the Intermediate Ports Committee for the development of Mangalore as an all weather port are reinforced by the Survey of the Traffic Potential of Mangalore and Malpe carried out by NCAER for the Government of Mysore. After the reorganisation of States, Mysore has a long coastline with as many as 21 ports. But none of these is an all weather port or capable of accommodating ocean-going steamers alongside berths. The progress of industry and commerce in the State and the growth potential of iron ore exports to Europe from West Coast ports, emphasise the economies which will flow from the location of a deep sea port on the Mysore Coast.

Mangalore is already an important port handling about 280,000 tons of general cargo, which is expected to increase to 660,000 tons by 1966. A deep sea port at Mangalore can handle Bhadravati's requirements of industrial materials and foodstuffs, the State's needs of salt, kerosene, bitumen, fertilisers, etc., and serve as an outlet for the produce of the hinterland: cashew nuts, coffee, groundnut oil cake, tiles, timber, etc. Iron ore traffic is at present

about 177,000 tons. The STC proposes to export an annual average of 300,000 tons of iron ore through Mangalore during the next five years. With a deep sea port and rail link to Hassan, ore traffic can be stepped up to two million tons per annum in the Fourth Plan period. Owing to lack of adequate ports on the West Coast, India at present is able to export only a fraction of the iron ore requirements of Rumania and Czechoslovakia.

Malpe, situated 36 miles north of Mangalore, is likely to command the same volume and type of traffic. It has also the advantage of a better natural harbour, ample harbour area and land for development. Construction of a deep sea harbour at Malpe may be less costly than at Mangalore. On the other hand, Mangalore, as the report points out, has the advantage of an early start, with developed traffic, port township, and trading and commercial facilities. It has adequate supplies of labour and is provided with good transport links with the hinterland. The cost of a new township, which will have to be constructed at Malpe, can be saved by developing Mangalore.

The National Council has recommended that a deep sea port should be developed at Mangalore if the site is found technically satisfactory for a deep sea harbour. The port should aim at a capacity of one million tons in the first phase of development, which should be increased to three million tons if iron ore traffic increases, as expected, to two million tons per annum in the Fourth Plan period. The construction of a rail link to Hassan is also essential for the full development of the port's traffic potential. As regards Malpe, the report suggests that it could

be developed as a specialised port, for ship repairs, ship building or as a fishing harbour, a recommendation which could be implemented with the progressive development of Mysore.

MADHYA PRADESH New Vistas

Inaugurating the Budget Session of the State Legislature, Mr H. V. Pataskar, the Governor of the Madhya Pradesh, highlighted the achievements of the State during the Second Five Year Plan and briefly outlined the tasks that are to be fulfilled in the next Plan. The most important duty, as indicated by Mr Pataskar, will be the raising of Rs 93 crores, the State's share of the total outlay of Rs 300 crores for the Third Plan.

Added importance has been accorded to the stepping up of food production by at least 1.5 million tons. This target the State proposes to achieve by resorting to intensive as well as extensive cultivation. More than 2.12 million acres of land will be brought under the plough by improving the irrigational facilities in the State. Adoption of better agricultural practices can go a long way towards the fulfilment of this objective.

Power generation programme will receive due attention and the contemplated schemes, when completed, will augment power supply by 750 MW. Naturally the exploitation of the rich mineral resources during the next quinquennium now seems nearer realisation.

The establishment of a new Transport Corporation, the institution of a Corporation to deal with the problems of small scale industries, the separation of the judiciary from the executive and the liquidation of the notorious dacoit gangs of the Chambal areas are among the more important programmes to be implemented.

It is quite encouraging that, despite the fact that the entire administrative machinery of the State had been thrown out of gear by the reorganisation of States in 1956, many of the targets in the Second Plan have been achieved. But considering the comparatively big size of the Third Plan, the tuning up of the administration is essential for the successful implementation of the next Plan.

J & K High Hopes

Yuvraj Karan Singh, Sadar-i-Riyasat, in his address to the Budget Session of the Kashmir State Legislature, struck an optimistic note when he stated that the State stands at present on a firm footing for the establishment of large scale industries. In order to secure for Kashmir a position in the industrial map of the country, the authorities have already finalised projects that will be

implemented during the Third Plan. Large-scale exploitation of minerals like coal, gypsum and lignite offers immense scope for changing the face of the State.

Besides accelerating the pace of industrialisation for the uplift of the people, the successful implementation of the flood protection scheme, the enhancement of educational facilities, and the expediting of rehabilitation works will be accorded due importance.

Regarding the flood protection work, the Yuvraj stated that preliminary works had been completed

and excavation work for widening and deepening the river Jhelum is progressing satisfactorily.

Referring to the expansion of educational facilities in the State, he stated that concerted efforts will be made to enable the children in the age group of six to eleven to avail themselves of these opportunities. The conversion of the secondary educational institutions into higher secondary schools is another matter that requires special mention.

For the rehabilitation of the displaced persons an amount of

Rs 7 lakhs has been spent so far. A large part of this sum has been disbursed by way of rehabilitation loans and grants.

It may be recalled that the State had no trouble in implementing the First Five Year Plan. But the progress of the Second Plan has been hampered by the devastation caused by floods in 1957 and 1959, the paucity of foreign exchange and the difficulties created by the machinations of hostile elements. But there is no room for despondency, for, as claimed by the Yuvraj, the pro-

you have just opened A METAL BOX CONTAINER!

Salted or plain, cashewnuts need to be sealed in a specially designed container in an inert atmosphere. This way they retain their freshness and flavour for long periods. Thanks to the container's protective qualities, India has been able to export large quantities of cashewnuts to distant lands and to earn valuable foreign exchange. The U.S.A. alone buys Rs 11 crores worth every year, making the humble cashewnut India's second largest dollar earner.

In the country's drive to expand the export of consumer goods, Metal Box, leaders in the packaging field, are playing an important role. Already, over Rs 30 crores worth of consumer goods—mostly perishables—are finding their way abroad in Metal Box containers. Scientifically designed for protection and superbly printed for sales appeal, Metal Box containers are showing how correct packaging helps to establish Indian goods in foreign markets.

Metal Box are also taking a direct part in the country's drive to earn foreign exchange by rapidly expanding the export of containers, closures, hardware and publicity media.

METAL BOX

The Metal Box Company of India Ltd

Barlow House, 59C Chowringhee, Calcutta

Factories and Sales Offices
Calcutta Bombay Madras Delhi Mangalore

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.
COMPOSITE CONTAINERS of cardboard & metal COLLAPSIBLE AND RIGID TUBES for toothpaste, ointments, adhesives and pills
CROWN CORKS for carbonated drinks
R. S. PILFER-PROOF AND OTHER CLOSURES for bottled products
COMPONENTS for radio, automobile and electrical industries
PUBLICITY MATERIAL including advertising tablets and calendars
PLASTIC PRODUCTS including Diethylene bags, foil laminate pockets and injection mouldings
HARDWARE including trays and table mats
MACHINERY for Can Closing and Reforming and Bottle Sealing Equipment

gress on the whole is quite encouraging. All these factors, though moderate enough when compared to the achievements of the other States in the Union, will enthuse the authorities to launch the Third Plan on a confident note.

UTTAR PRADESH Poor Show

Addressing the joint session of the State Legislature, Dr B. Ramakrishna Rao, the Governor of Uttar Pradesh, recounted his Government's efforts for the economic development of the State. The general picture is rather depressing. Steps undertaken for the development of small scale industries have yielded satisfactory results and a firm foundation has been laid for further improvements. Intensive development works along the northern border areas, have also shown some signs of progress. Yet, Mr Rao noted with regret, that progress during the Second Plan was far below expectations, and greater

efforts were needed for realising the Third Plan hopes. Top priority has been accorded to stepping up of agricultural production. Next to agriculture, emphasis has been laid on the creation of conditions conducive to accelerating the pace of industrialisation in the State. The main stumbling block in the way of rapid progress of industries in the UP is the inadequate supply of power. Steps will have to be taken in the next Plan to enhance it.

A survey of the border areas has revealed that the scope for exploitation of the mineral resources of these regions, and for development of horticulture, and animal husbandry is vast. For the development of these regions, a sum of Rs 28 crores out of the total outlay of Rs 497 crores has been earmarked. Among other tasks outlined: necessary impetus is to be provided for the small entrepreneurs to start more small scale industries, by the agency of industrial estates. These are to be established at important centres to provide the requisite know-how to small industrialists. The setting up of a heavy

industries committee to advise the Government on the formulation of new projects is bound to improve matters on the heavy industries front.

While formulating proposals for the Third Plan, note has been taken on the State's backwardness in the spheres of health and education, particularly of primary education. The Governor hopes that concrete measures would be adopted to improve things.

With the State's economic problems far from being solved, the spectacle of politicians wasting their energy in jockeying for office is unedifying. Obviously, their priorities are all mixed up and the people of the State are the hapless victims of political manoeuvres.

KERALA Opportunities

At the Kerala Development Conference held in Bombay, last week Mr V. V. Giri, Governor of

Kerala appealed to industrialists from outside Kerala to participate in the development of the State. Existing disparities in development between different regions are a hangover from the indifferent growth of industries in the past and the relative preference of capital for fields in developed regions. Kerala's backwardness is mainly due to the scarcity of entrepreneurial skill in the State, for material resources in terms of mineral and forest wealth are abundant. Whether hostile labour has been a deterring factor in the growth of new industries is not capable of being affirmed with certainty. But Mr Giri has sought to dispel the general impression of Kerala being notorious for labour troubles. While the number of disputes is admitted to be large, it is the inclusion of "small and frivolous" differences which, according to Mr Giri, inflates the figure. Though trade unions are as numerous as they were previously, and though communists are still a strong force, Mr Giri speaks of a new attitude of responsiveness on the part of labour in settling disputes with management. It may also be observed that in the problem-ridden Kerala State with its high rate of literacy and unemployment, it is economic frustration which drives people generally to political extremism. Industrialisation will relieve the present economic pressures and would tend to create a healthier political climate in the State.

Implicit in the appeal of the Governor to the private industrialists from other States, is the inability of the Government itself to make good the lack. But in a mixed economy development is not the exclusive concern of the Government. Mr Giri has coupled his appeal with offer of attractive conditions in respect of land, supply of cheap electricity, assistance to obtain licences and to import of machinery. These incentives certainly testify to the keenness of the Government to promote new industries in the State.

TARIFF INQUIRY Calcium Carbide

The Tariff protection to the calcium carbide industry is due to expire on 31 December 1961 and the question of its continuance is presently under inquiry by the Tariff Commission. This is a nascent industry, having come into existence only some six or seven years ago. Till about a couple of years ago, there was only one unit engaged in the commercial production of this important chemical. Another unit commenced production toward the end of 1959. Calcium carbide is generally used as an agent for gas welding, heating and lighting. It has, however, other important uses and is used in the production of synthesized products like polyvinyl chloride and isoprene

and chemicals like calcium cyanamide.

The industry has made remarkable progress during the past few years. The two existing units—one in West Bengal and the other in Madras—have at present a rated capacity of 16,939 tonnes. The rated capacity of the industry in 1958 was only 4,116 tonnes. In the course of the next few years, more units are expected to go into commission: one with a capacity of 14,228 is said to be almost ready to go into production in Bombay while two more units—one in Delhi and another in Kerala—have been licensed. When all these units are completed, total capacity is expected to reach a figure of 56,537 tonnes.

Actual production in 1960 is, however, estimated at only 8,964 tonnes which is a long way from meeting the demand in full. The draft outline of the Third Plan puts the demand in 1960-61 at 20,321 tonnes and the demand in 1965-66 at 60,963 tonnes. This estimate does not coincide with those made by the Development Wing, the producers and importers. On the basis of sales and imports the consumption can be estimated at 13,064 tonnes in 1958. 12,399

tonnes in 1959 and about 14,800 tonnes in 1960. The Chairman of the Tariff Commission, Mr K. R. P. Aiyangar, in his speech in opening the public inquiry, has pointed out that the estimated demand of about 14,800 tonnes in 1960 does not take into account unsatisfied demand and potential increase in demand. Imports have been gradually restricted since 1953. The quota for established importers which was 25 per cent in October 1958 has been successively reduced and in the current period it is nil. Actual users and dissolved acetylene manufacturers can, however, get import licences on an ad hoc basis.

Tariff protection and import restriction have certainly been responsible for the rapid expansion of the indigenous industry. Demand for calcium carbide is steadily increasing and the pace of expansion has to be further quickened if dependence on imports is to be completely eliminated. An even more urgent task to which the industry should address itself is the improvement of the quality of its product. Most consumers of indigenous calcium carbide seem to be dissatisfied and the DGS & D is meeting most of its

requirements from imports as the indigenous product has been found to be of a low gas yield. It is, however, gratifying to note that one of the units now engaged in the commercial production of calcium carbide is stated to be manufacturing according to quality "A" of the ISS. One of the reasons for the indifferent success of the indigenous product is the poor quality of the raw material used in its manufacture. But as Mr K. R. P. Aiyangar has pointed out with rapid industrialisation there is a progressively expanding market for calcium carbide. The domestic industry will do well to be prepared for meeting the increased demand. In order to do this it must not only expand its installed capacity and actual production but also ensure marked improvement in quality.

STEEL Looking Ahead

Delivering the Sir M. Visveswaraya Lecture at the Institution of Engineers, Bombay, Dr M. N. Dastur has visualised steel consumption in India at 110 million tons a year by the year 2000 A.D. This may sound

rather fantastic to us in the sixties when the consumption is still at a meagre level. But Dr Dastur's forecast is no piece of wishful thinking on his part. It is based on what he calls the end-use method of computing future consumption. According to this computation, steel requirements are expected to reach 12 million tons by 1965-66, 19 million tons by 1970, 28 million tons by 1975 and 110 million tons by the end of the century.

Supposing requirements rise as estimated by Dr Dastur, the question arises whether it is practicable to produce all this quantity of steel. Dr Dastur is fully confident that internal production can very well cope with the demand. But, in respect of other essential raw materials like coking coal, limestone etc., the position is not merely unsatisfactory, but critical from a long range point of view. Dr Dastur, however, is not much perturbed by this, for he thinks that fresh technological developments may substantially reduce the present quantum of fuel consumption in steel production. Moreover, he hopes intensive geological survey will lead to the opening of new coal deposits. We are also yet fully to utilize the lignite deposits in parts of the country other than Neyveli.

Dr Dastur expects that the bulk of the production will come from a few

saving the city's water supply

On 1st October 1959, as rain and cyclone lashed Jamshedpur, a small group of Tata Steel workers hurried to a reservoir adjoining the Subarnarekha to save the city of Jamshedpur from a major disaster.

A raft, cut adrift by storm, stood poised on the very brink of a dam separating the reservoir and the river... threatening to hurtle down with the swelling current any moment and smash the water main running along a bridge over the river.

As catastrophe seemed imminent, 27-year old Shamsuddin Khan jumped into the swirling water. Fighting his way to the raft, he managed to pull it away. His colleagues gave him a hero's welcome and Tata Steel gave a reward of Rs. 500 and a permanent job to this brave son of an ex-employee.

Risking life from a sense of duty is a tradition that worker heroes like Shamsuddin are setting up in Jamshedpur, where industry is not merely a source of livelihood but a way of life.

JAMSHEDPUR
THE STEEL CITY

TTN 4086

The Tata Iron and Steel Company Limited

A new company has been formed to handle Head Wrightson's expanding interests in India. It will act as a contracting organisation for the supply as far as possible from Indian sources of the specialist heavy engineering equipment designed by Head Wrightson in England.

For full information on this new development please contact
The General Manager,

HEAD WRIGHTSON INDIA LIMITED

21 Netaji Subhas Road, Calcutta 1. Telephone: Calcutta 22-6871 Thornaby on Tees—Middlesbrough—Sheffield—London

really big factories. In his view, big steel works with a 10 to 11 million-ton capacity will have to be set up in sites that are near ore deposits and coking coal fields. At the same time, he visualises ample room for several small units serving regional needs and using lignite or low grade coal.

Such a stupendous rate of development will, of course, not be an easy task. The whole programme has to be implemented with courage and vision. The first priority is to be given to ensuring an even supply of the necessary raw materials. Next in importance is the streamlining of the administration entrusted with the task of building the public sector steel plants. Dr Dastur's suggestion that steel development should be treated as a continuing process and that we should be planning far ahead deserves to be noted carefully by Government. Costly waste such as the disbanding of trained staff referred to by Dr Dastur soon after the completion of a particular programme when similar programmes are definitely in the offing, is to be avoided.

Dr Dastur does not deem it unrealistic to compare India and China in the matter of steel production. Even allowing for exaggeration for purposes of propaganda, it is undeniable that China has taken long strides in steel production during the past few years. India's progress on the other hand during the same period has been halting and comparatively insignificant.

Dr Dastur's estimates of steel consumption in the next forty years may be considered on the high side by those who base their calculations on present trends in consumption and other similar criteria. But if it is agreed that real improvement in living standards is possible only by rapid industrialisation, then steel consumption must necessarily be of a high order or at least much more than the current rate. It is, however, wrong to imagine that the seemingly high targets for steel production visualised by Dr Dastur will bring us on a par with the US or the UK in industrialisation. When consumption reaches the level of 12 million tons, we will be just bracketed with some of the Latin American countries and with consumption at 110 million tons we will reach a position similar to that of Japan in per capita consumption of steel.

Forecasts at the present juncture of future demand for steel in the country must necessarily be tentative as there is a marked paucity of essential data. The very fact that steel consumption during the Third Plan period has been variously estimated by different expert bodies shows that there is serious difference of opinion about the principles that should govern such estimates. That apart, one cannot say at present if such a high rate of consumption will be within our capacity. Perhaps the economy will be reaching the take-off stage in a few years from now. Even so, it is doubtful if it can stand the strain of building steel capacity to sustain consumption of the order of 110 million tons by the end of the century. But estimates of future steel con-

sumption are not the only striking feature of Dr Dastur's learned lecture. He has made many valuable suggestions pertaining to the efficient use of our not-too-plentiful resources of coking coal, construction of future steel works, administration and allied matters. These deserve to be carefully studied by those concerned with steel industry in our country.

Looking Back

One of the reasons why grave doubts are expressed about the country's ability to carry out production schedules successfully in steel is the uncoordinated manner in which the entire programme has been handled during the Second Plan period. Although the bulk of the steel production is still accounted for by the private sector works, the ultimate responsibility rests with Government. Without its active help, private steel works will be rendered ineffective, as has happened during the past one or two years.

Till a few months ago Government spokesmen were talking as though the required steel production would be there, the moment the necessary steel making capacity was put up. That steel production depends on the smooth supply of raw materials seemed to have simply not occurred to the authorities. The warning of the private companies were ignored, if not treated with contempt. Only when production began to lag far behind expectations has Government realised that all is not well on the steel front. It is, however, gratifying to find that serious thought is now being bestowed on the supply and movement of essential prerequisites to steel production. Speaking in Calcutta the other day, Sardar Swaran Singh allayed fears about continued unsatisfactory raw material supply position. Government has now appointed a Raw Materials Committee, which will be in continuous touch with both short-term and long-term problems relating to production, supply and movement of raw materials to the steel industry. It will also advise Government on measures necessary to ensure an adequate supply of such materials. Referring to shortage of coal, he has pointed out that the Second Plan target of 60 million tons per year has nearly been reached. Tremendous headway has been made in recent months by the National Coal Development Corporation which has now reached a rate of production that works out to an annual rate of 12½ million tons. Sustained attention is also being given to the supply of washed coal for the steel plants. The same have been taken to expedite the establishment of the remaining coal washeries scheduled for the Second Plan period, measures have been initiated to meet the requirements of superior grades of coking coal. If such action had issued from the authorities in time, much valuable foreign exchange spent on imports would have been saved. But there is no point in crying over spilt milk. The experience on the steel front during the Second Plan period should serve as an object lesson and complaints about raw

material shortage should be promptly examined and suitable remedial action taken.

Looming Shortage

Like Dr Dastur Mr R. L. Rajgarhia, President of the Engineering Association of India thinks that consumption of steel will be higher than what has been assumed by the draft outline of the Third Plan. So far, steel supplies have been much below demand and this gap has had to be bridged by imports, the value of which in the first ten months of 1960 is Rs 197.8 crores. With the quickened tempo of development in the Third Plan period, we must be prepared for a sizable increase in steel consumption. And Mr Rajgarhia is doubtful whether even by 1966, the engineering industry will be able to get quantities and categories of steel it needs.

Inadequate quantum of steel supplies is not the only handicap of the engineering industry. Such supply as there is, is irregular and often the industry has to make do with off-grade pig iron. This drawback should be remedied if our engineering exports are to make headway, since products made of substandard iron and steel will have a deleterious effect on our exports in the long run. Another apprehended difficulty is the adverse effect that any drastic cut in maintenance imports may have on production. The principle that maintenance import will have to be financed from the export earnings of the industry concerned will have only one result in the case of the engineering industry, that of retarding production. Though engineering goods exports are steadily looking up, they are not yet large enough to take care of all the maintenance imports needed. It is meaningless to harp on the need for rapid industrialisation if obstacles are put in the way of keeping engaged the productive capacity already built up.

Mr Rajgarhia has made two valuable suggestions. One is for utilizing idle capacity still available even when raw material supply is satisfactory and the other for reducing the cost of new plant. He thinks that a large number of items of equipment required by various industrial users can be produced by the engineering units utilizing their idle capacity and working in close co-operation. In his view, the establishment of independent servicing units will not only bring down cost per plant, but also accelerate the growth of new factories. With prospects of reduced outlay and availability of servicing facilities, entrepreneurs will be encouraged to embark on new ventures with confidence. These suggestions deserve further examination and implementation in practice.

TEACHERS And Shortage Again

The figures pertaining to the progress of technological education given by Sir Jehangir Ghandy at

the 20th meeting of the Eastern Regional Committee of the All India Council of Technical Education make impressive reading. Since the Council was established in 1946 facilities for technical education have sizably increased. The number of engineering colleges has increased to 97 in 1960 from 38 in 1946 while that of polytechnics has increased to 193 from 53. The Third Plan envisages an increase in intake at the graduate level by a further 6,000 and of diploma institutions by 15,000. When all the requisite facilities are created, it is hoped, the supply of engineering graduates will be enough to take care of the demand for that category of technical personnel, but a shortfall in respect of diploma holders will still be left at the end of 1966.

The present programmes of technical education are, however, not comprehensive. They have been devised with a view to meeting the demand of engineering graduates and diploma holders only. As Sir Jehangir conceded, priority has rightly been given to the most urgent problem of supplying adequately qualified and trained workers for the wide variety of industries whose number is daily growing. For various reasons, of which finance is perhaps the most important, creation of adequate facilities for imparting technical education to cope with the ever-widening demand has to wait its turn.

As in so many other sectors, the mere opening of colleges and polytechnics will not produce the desired result. Sir Jehangir has pointed out that technical education is not progressing as it should in Bihar and Orissa. The difficulties are lack of adequately trained staff, paucity of equipment and absence of physical facilities for practical work. Presumably, the initial enthusiasm has not lasted beyond building or renting buildings and assembling inadequately trained staff. At least in Orissa, the problem has been identified as one of insufficient emolument to the teachers. It is strange that Orissa whose needs of technically trained people is daily growing, should be reluctant to adopt the improved scales of pay for staff recommended by the Central Government. Orissa is an extreme case, but it can by no means be said that teachers in general in our country are paid well compared to members of other professions. It is a long standing complaint that standards of education, both in science and the humanities, are deteriorating. But it is forgotten that the teaching profession does not attract many brilliant people for the simple reason that better emoluments are available elsewhere. It should be realised that teachers perform the most important service to the community and as such should be properly looked after.

It is also time that it is realised that education in general, and

technical education in particular, should know no barriers. Speaking in Coimbatore a few days ago, Mr C. Subramaniam, Minister for Finance, Madras, said that his State produces more engineering graduates than it can absorb. At the same meeting Dr V.K.R.V. Rao quoted the report on technical education as saying that one of the problems planners were facing was paucity of teachers in technical institutions. The anomaly is too glaring to need elaboration.

COAL

Mixed-up Mineral

With allegations of wagon shortage for movement of coal by industrial interests and the denial of the same by the authorities, the situation in respect of wagon supplies is to say the least confusing. Differences between the Railway Ministry and the Ministry for Steel Fuel and Mining over the same question have only made the confusion worse confounded. What apparently cannot be denied in this controversy is the acute shortage of coal at points where they are needed most. In West Bengal, industrial units are reported to be facing suspension of production for want of adequate supplies. In other States also acute coal shortage is being experienced. In Andhra Pradesh, some units in the moulding industry, have already closed, while in Gujarat for want of sufficient supplies, industries have switched over to costlier oil for keeping up production.

Whether or not the coal shortage is the result of the inadequate wagon availability is a question that does not admit of a definite answer. In a statement recently issued, Mr Karnail Singh Chairman, Railway Board, has pointed out that during 1960-61 railways would have moved nearly 42 million tons of coal which according to him is in excess of the Plan target by one million tons. This claim of Mr Karnail Singh has been contested by the Indian Mining Association, which in a statement points out that the calculation of the Plan target by Mr Karnail Singh leaves out of account the fall in demand for coal for the steel mills. But how reduced wagon demand by the public sector steel projects will affect movement to other industries is not clear. What is plausible is that there could have been lack of co-ordination between production of coal and wagon allotment. The accumulation of coal in pitheads may be pointed out to prove the existence of such lack of co-ordination. Mr Karnail Singh has pointed to rise in demand as one of the reasons for the shortage of coal. Considering the claim that the railways have exceeded their target for coal movement by one million tons, the fact of such unanticipated rise in demand gains plausibility.

CENTRE

Mining Gold

Nobody has yet mentioned the rise in bullion prices during 1960 and after in connection with the prospects of the Kolar Gold Fields under the Centre's auspices. The Centre's takeover from the Mysore Government is logical since minerals like coal are in its sphere. The exclusive purchase of the present output for the Reserve Bank's Reserves is an added reason for the transfer. Operational, as distinct from ideological and monetary reasons were also in favour of the Centre's taking over. The KGF has to maintain the standards of operating efficiency set by the British Companies. The structure of the quartz Reef or its extension into AP is a matter for mining experts. The proportion of pay dirt to the tonnage milled is also a subject for experts. But one may suggest that exploration for gold, even for alluvial gold, may start under the aegis of the Union Government.

The fact that the Singareni Collieries have virtually passed under the Union Government's control at present may be offered as a reason for the arrangement by which gold and silver would come to the Union.

One point that may arise in the case of a transfer of control or interests is the imposition of an excise. In the past, an excise duty on gold was levied by the Mysore Government in view of the disparity between the price in India and the price ruling abroad. Such a claim would have much support from the State Legislature which would consider the profit from gold a reinforcement for the State's inelastic revenues. The collection of an excise on other metals, as also coal, would provide a talking point for Mr Jatti who will have to consider the requirements of the KGF Sanitary Board, the revenue of the Electricity Board and the probable life of the mines in pressing for an excise that would accrue to the State. The fiscal argument would cer-

tainly recur as in the Forties and the Union Government cannot ignore the argument put forward by South Africa for revision of the price of gold or access to the free market. The gold rush last autumn has increased the importance of the KGF's assets and revenue so that Mysore may feel that its bargaining strength is great. The mines will be best administered by a statutory board, independent of official pressures, which should ensure a fair dividend on the capital. The Port Trusts provide a pattern. The Reserve Bank may also be usefully associated with the control of the Kolar Mines.

PUBLIC ENTERPRISES

Golden Mean

In his Tata Memorial Lecture delivered in the first week of February, Mr Herbert Morrison, spoke on the subject of public control and accountability to Parliament of public sector industries.

STEEL CASTINGS

Steel Castings up to 3 tons are produced to B.S.S., I.S.S., or customer's specification in the most modern and mechanized steel foundry at the Kulti Works of the Company.

THE INDIAN IRON & STEEL COMPANY LTD.

WORKS: BURNPUR & KULTI
SALES OFFICE: 11, MISSION ROW, CALCUTTA 1

MANAGING AGENTS: MARTIN BURN LTD.

MARTIN BURN HOUSE, 12, MISSION ROW, CALCUTTA 1 BRANCHES: NEW DELHI BOMBAY KANPUR

Though the subject was dealt with only in the background of the working of public industries in Britain, some of the points he made in the course of his lecture have relevance to the working of public sector undertakings in India. Mr Morrison particularly pointed to the conflict between the elements of autonomy and public accountability which are two accepted principles in the working of public sector projects. The extent of autonomy depends on the form of organisation given to public sector projects. In the case of departmental management, autonomy is reduced to the minimum, but in the case of public undertakings that partake the character of commercial enterprises departmental administration is ruinous to efficient working. In Britain public Corporations have been instituted widely by the Labour Government after they came to power in 1945. But in India the company form seems to have been preferred by the Congress Sub-Committee which inquired into the working of the public sector undertakings in the country. And the company form, in terms of the Indian Companies Act 1956, is subject to more rigorous scrutiny than the public corporation.

Public accountability is a logical sequel to the character of public undertakings, but the manner in which this is secured affects considerably the working of the public undertakings. Professor Galbraith in his report on the working of public sector undertakings in India has pointed to the embarrassing results of parliamentary questions on the working of public sector undertakings. Such questions, in his view, force the Minister to protect himself with advance knowledge and approval of all decisions and go to destroy the effectiveness of the undertakings. On the other side, it can be argued whether the denial of such opportunities for parliamentary discussion would lead to undesirable results. The tendency to greater control of public undertakings is one which is evident in Britain also. In this connection Mr Morrison points to the attempts made even by conservative MPs to persuade the Government to interfere with the public corporations through questions in Parliament. It is necessary to strike a balance between an excessively fussy parliamentary curiosity and a reasonable exercise of the power of scrutiny on behalf of the public.

CD PROGRAMME Counting Gains

The Community Development programme was first introduced in the country in October 1952 as a part of planned development to inculcate in the rural people an urge "for better life and show the way of satisfying this urge predominantly by means of self help". The Development and Planning Division of the Economic Depart-

ment of the Reserve Bank of India recently undertook a study to find the impact of the programme on the rural people and rural economy on the basis of some of the available data. The latest issue of the Reserve Bank of India Bulletin contains a summary of the results of the investigation. The main conclusion of the study is that progress of the programme is on right lines, but slow.

The earlier pattern of phasing of the programme into National Extension Service, Community Development Proper and Post-intensive Period was, on the recommendation of the Balwantry Mehta Committee altered in 1958. Under the present set up the programme is divided into two stages of five years each and increased emphasis is laid on agricultural production. The tendency previously was to lay more stress on welfare activities than on development, especially of agriculture. Village level workers are now directed to devote nearly 80 per cent of their time to agricultural programmes to convince the people of the immense advantages they would derive by adopting better methods of agriculture.

The review has indicated that the village industries sector was the weakest spot in the CD programme. It is disheartening that no endeavour has so far been made to evolve a comprehensive programme for village industries in relation to local resources, skills and employment needs. The recent directive of the Government of India to the State Governments to accord priority to CD blocks while allocating funds for the development of small scale industries is likely to improve matters.

The co-operative societies have also not made much headway. The study team, after probing into the affairs of seven successful societies, have come to the conclusion that more emphasis was laid on the number of societies disregarding the qualitative aspect. Another distressing aspect of the movement is that most of the benefits were reaped by the well-placed people and the poorer section tended to get neglected. Concerted efforts are needed to make the movement broad-based and enlarge the class of credit-worthy persons.

The progress of the programme would have been more rapid had the rural population evinced a more lively interest in them. But throwing the entire blame on the people for the lethargic pace is unjust. The administration must take its share in this matter. The fixation of a minimum for peoples' contribution as a condition for matching grants from the Government has already created resentment among the people. Many of the programmes carried out by the CD blocks can certainly evoke more interest in the people if they are designed specially for the betterment of the rural population concerned. The introduction of democratic decentralisation or Panchayat Raj is likely to gene-

rate greater enthusiasm among the people. The movement seeks to introduce the simplest form of self reliance helping the people to manage their own local affairs. Though it will be rash to draw any firm conclusion at this stage, it can be reasonably anticipated that the patient work of the people with proper guidance from above can go a long way toward the development of villages. The study team quotes from the Seventh Evaluation Report to the effect that the general impression is one of "an inadequately co-ordinated endeavour, governmental rather than popular in character and sustained more by hope than achievement". It, however, adds that reports emanating from the areas covered by the Panchayat Raj indicate that change for the better had already taken place and people would definitely adopt a positive attitude toward the programme.

CENSUS Counting Heads

The second 'big count' of independent India started on 10 February and the first results of the census will be published around 25 March. The data collected during the previous counts have thrown up valuable information relating to population pressure, dispersal of technical personnel, income, religion, health and the like. But the wider significance of the present census lies in the fact that the information collected will be of even greater assistance than before to the authorities in drafting plans and formulating policies. Nearly 1 million enumerators all over the country will approach the people with a questionnaire which comprises thirteen questions. Out of the thirteen questions five relate to demographic, three to cultural and social, and the rest to economic data.

One of the salient features of the 1961 census is the inclusion of the household schedule. The practice previously was to collect information purely on the basis of individuals, which, more often than not, tended to be misleading from the point of view of the state of the economy. The household schedule, which was specially designed for gathering information in regard to the main economic activities of the households in the country, is bound to give more meaningful data. The special arrangements for gathering details about scientific and technical personnel is another useful innovation. The success of the census hinges to a considerable extent on the spontaneous co-operation of the citizens of the country in helping the enumerators to discharge their duties in the most efficient manner. Any misrepresentation of facts, and withholding of correct information will distort the real picture of the economic conditions of the people. Temptation, for linguistic and parochial reasons, to misrepresent facts should be firmly resisted. Considering the huge expenditure involved in the present census, which, according to estimates, is likely to amount to Rs 1.8 crores, unstinted co-operation from the people is a national duty.

BASTAR End of An Episode

The Bastar episode has been closed by a fiat from the Home Ministry: The deprivation of the Ruler's privileges, and the nomination of his younger brother as the successor to the ex-Ruler's rights have a good precedent in what happened ten years ago to the ex-Ruler of Baroda. Former kings are present Commoners: they too are exposed to the Preventive Detention Act even if overt acts have not taken place and only hot air has been let off. But the potentiality for trouble in Bastar perhaps did warrant drastic measures. Such a step was perhaps necessary for other reasons too. The rather anachronistic display of vanished pomp in Rajasthan during the visit of Queen Elizabeth had political implications that were not wholly welcome. However, though without princely privileges, the ex-prince has the commoner's rights. The usual legal procedure will provide safeguards and the courts can, if the need arises, examine the grounds of detention. The danger of a trial uprising may have been removed, but the Congress Party in Madhya Pradesh will have to do a lot of explaining in justification of the ways of Government. Preventive Detention, even of a princeling, needs special pleading. Readers of Mulk Raj Anand's novel—the Private Life of an Indian Prince—may be relieved to find that the actual autocracy of the Government is a foil to the presumed absolutism of the prince and lurid fiction may be said to have even anticipated history, coloured by the extravagance of the wayward prince.

NEIGHBOURS Beginning of an Era

Steps are now being taken to emphasise treaty conditions, between India and Bhutan, affirming, in particular, India's control over defence and foreign policy. The protectorate is consolidated by an offer of aid for development, just as was done in the case of Sikkim. Pre-emptive claims on the part of India may well be justified by the present relations between Delhi and Peking. The Indian view of Bhutan has been clarified and sharpened by China's interest in the Himalayan kingdoms.

China's attempt to negotiate with Pakistan in respect of demarcation of boundary with Azad Kashmir has led to an Indian protest to Rawalpindi. It might more properly have been addressed to Peking which has not followed Russia's example in

recognising India's authority over Kashmir. In view of Pakistan's effort to get Chinese approval for its stand on Kashmir, it is quite possible that the Ayub regime may declare that a corridor to Sinkiang through Ladakh does not connote aggression. The Rangoon talks have led to no agreement on either maps or documents, and it looks as if China is trying to make good a claim to settle the future of Kashmir.

A point to consider here is whether India's new interest in Bhutan and Sikkim will not involve subsidies to these kingdoms. To convert them into tributary States is expedient but expensive. Bhutanese Ministers who have drawn up development plans probably expect regular contributions from India if formal independence is to be abridged by agreement. The supply of essential goods by land must be ensured and Bhutan may try to impose customs duties like Nepal under a new pact. The Chinese view of India's ties with Bhutan may render it necessary to define precisely what aid should be given, and how.

It appears inevitable that from now on India's defence charges will include both economic aid and military assistance to the Himalayan States. One hopes that during the Budget session, what may be called the new, non-effective charges would be explained and accounted for. Investment in Bhutan or Sikkim for strategic purposes would be like expenditure on opening up the North East Frontier Agency. Approval of India's Parliament would be certainly forthcoming, if it is made plain that security demands additional outlay on roads and new military stations. The theory that India's real external frontier is the ocean and that its defence problem is merely one of coastal defence, (as it was during the last war), is certainly undermined by the new continental problem. The radical difference between Canada and the USA or the USA and Mexico living as good neighbours for a century will certainly not be missed by foreigners who were the first to point to the growing power of China as the new element in a situation transformed by the passing of both the British and Japanese empires.

BUREAUCRACY Proliferating

The necessity to control non-Plan expenditure was stressed by Mr H. C. Dasappa, M. P., Chairman, Lok Sabha Estimates Committee, while addressing the Madras branch of the Society for International Development last week. He regretted that the proliferation of an increasingly expensive bureaucracy is being fatalistically acquiesced in by both the public and the Government. Mr Dasappa

said that planning has come to stay and there was need to utilise resources effectively. But expenditure on civil administration has shot up whether such expenditure is worthwhile or not. Mr Dasappa also deplored the costly buildings and structures that were going up under Government auspices.

Mr Dasappa pointed out much of the massive tax effort of the Second Plan was neutralised by non-Plan expenditure. In the words of the Estimates Committee "in view of the phenomenal rise in non-Plan expenditure, it would be most desirable for the Planning Commission to have a special study made of the disproportionate rise and make suitable suggestions to see that such expenditure is kept under control and does not expand in the Third Plan as it has done during the Second." Periodic appraisals of the rate of growth in non-Plan expenditure are necessary both at the Centre and States. Steps should be taken for stream-

lining the administration and rationalising the administrative machinery to eliminate redundant staff and stop fresh recruitment. It would be a species of misappropriation if taxes collected in the name of the Plan are diverted to non-essential purposes.

THE BRITISH PRESS A Structural Probe

Not the performance of the British Press but its structure changing under the pressure of economic force, will be investigated by a new Commission. Sir William Rose and his colleagues in 1946 had a simpler task than what is ahead of the new Commission over which Lord Monckton or Lord Birkett may be invited to preside. The change in the company law to regulate bids and take-overs may help and the Jenkins com-

mittee on company law may frame special rules about mergers of newspapers, because monopoly is frowned upon—not least by the Restrictive Practices court. The Press Council can hardly advise on matters like advertisement revenue or television interests that clash with the Press. A general review of costs in the industry must take note of current practices in the printing trades, especially in London. Both Booth and Llewelyn Smith discovered that the workers in the London printing trades adopted restrictive practices. They not only discouraged dilution but forced employers to accept the exclusive rules of the printers' chapel.

The latest attempt at clearing the Newspaper jungle may pave the way for the formation of Trusts like The Times or the Observer Trusts which put public interest above proprietors' profits. In any case, the conservative Government finds that the situation has been precipitated by the

emergence of a new kind of Press barons whose object is not political influence as in the past, but pursuit of profits as an end in itself. Newsprint control is gone and the big metropolitan papers are set for a circulation struggle—not by coupons but by the financial jugglery that gives power to the tail to wag the dog.

Diversity of ownership and control aimed at by Mr Macmillan on grounds of public policy is not an improper aim, but production costs have made take-overs as common in Newspapers as in the boot and shoe trade in the UK. But the Press, as an industry, is sui generis, as the prewar PEP survey insisted, partly because two-thirds of the revenue comes from advertising which is a by-product of publication.

Trends in the West German or French Press are different, where opposition is nourished by some independent papers. Even in Britain, publishing empires are still held in check by the vigour of regional interests or opinions. The same conditions may be said to obtain in India. But the view that the octopus of monopoly must be restrained and new ventures, made possible solely by possession of large private resources, should be curbed cannot be dismissed as 'irrational' in the economic sense. The present solicitude for the survival of small industries must be reflected in an equal concern for small or independent papers whose aims go beyond the pure (or impure) chase of monetary gains. Since Government recognises that intrusion of Big Business into the Newspaper world may conceivably lead to suppression of inconvenient news or views, it should go over suggestions made from time to time for a vital and independent Press in India and implement them. Neither olympian indifference nor a sanctimonious holding of the scales even is a becoming attitude.

USA

Shot in the Arm

The Kennedy administration is wasting no time in shaping its economic programme for the US. Just a few days ago the President, in office for barely two weeks, took the occasion of his second news conference to announce several immediate actions to help counter the current recession and stimulate a business upturn.

The President disclosed four basic moves to bolster the economy:

He has ordered the federal housing administration to reduce from 5.75 per cent to 5.5 per cent the maximum interest rate on home mortgages it insures. This liberalization of housing credit could prove a boon to residential construction.

He will ask Congress to enact a programme of temporary federal

help for extended unemployment compensation to jobless workers who have exhausted their benefits available from the various States. He will follow this at a later date with a special request for congressional action to improve the unemployment compensation system on a permanent basis.

He has asked the veterans administration to pay out to veterans of the US armed forces in the next few months some \$250 million in life insurance dividends that otherwise would have been spread throughout 1961.

He indicated that a food stamp programme would be started in about a half-dozen centres of heavy unemployment. This would give needy families stamps entitling them to extra government-financed food allowances, with grocers turning the stamps back to the Government for cash.

With it all, Mr Kennedy confirmed his strong stand in favour of prudent budgeting. He indicated, for instance, that additional sources of revenue would be sought to offset the increased costs of new spending plans he may deem necessary.

In this regard, the President also indicated that he might go along with a number of the requests for new revenue contained in the last Budget the former Eisenhower administration recommended to Congress a month ago.

In that Budget, Mr Eisenhower asked for continuation of the present 52 per cent corporate tax rate and the present excise taxes on autos, liquor, tobacco and other items, which otherwise would automatically drop under existing law. Mr Eisenhower's recommendations included such other measures as higher postage rates and gasoline taxes.

President Kennedy also indicated that he is by no means unaware of inflationary dangers. He noted that his spending programmes would "pay due care to the problem of preventing any stimulations of the economy resulting in an excessive increase in the cost of living."

This is not to say that Mr Kennedy will thereby follow the opposite course of allowing his whole economic programme to be shaped by a fear, real or imagined, of inflationary trends. "I am not satisfied," he declared, "to have the cost of living remain constant only by having the economy restrained."

One must be careful, in appraising the President's position not to exaggerate beyond all semblance of reality the extent or depth of the current recession. Certainly, as Mr Kennedy has pointed out on many occasions and as he reiterated at his news conference, the state of the economy is far from satisfactory and obvious improvements are required. At the same time, he took pains to point out that his concern with the 5.5 million persons who are un-

employed should not obscure the fact that more than 60 million—the actual figure is about 65 million—are gainfully employed.

In this vein, Mr Kennedy went on to say that he did not consider the current business slump serious enough to justify a tax cut at this time. However, the economic situation is under constant review, and if a tax cut seems called for in the months ahead he will be prepared to ask for it.

Actually, Government officials are hopeful that a noticeable domestic economic pick-up in 1961, in which the Kennedy anti-recession moves could play an important part, will help reduce the balance of payments deficit.

Trade Surplus

With all the preliminary data now in, it appears that the US did even better with its merchandise trade last year than earlier estimates had indicated. The trade surplus—the excess of commercial exports over imports—is now revealed to have come close to the \$5,000 million mark.

The figure of more than \$4,900 million is derived from the fact that commercial merchandise exports—exclusive of Government were around \$19,550 million, while imports approximated \$14,600 million. These figures are subject to later correction and revision, of course, but the final data are not expected to change them very much.

Comparing these results with past years, it is significant that the 1960 performance represents the second highest trade surplus ever chalked up by the United States. It is exceeded only by the \$6,500 million surplus in 1957.

In several important respects, moreover, the 1960 achievement is even more impressive than that of 1957, a year in which US exports were boosted abnormally by certain unforeseen and important influences. One was the generally poor harvest in Europe, which led to rather heavy demand for some US farm products. Another—by far, the major factor—was the severe dislocation engendered in world trade patterns by the Suez situation.

No such major trade abnormalities were visible in 1960. Even though agricultural exports were bolstered somewhat by special US Government programmes, the large commercial export total was based on a broad increase affecting a wide variety of products.

As a matter of fact, US commercial exports in 1960 set a new all-time high, rising some 19 per cent above the \$16,300 million of 1959, and exceeding even the 1957 total by the small margin of \$5 million.

With mutual security shipments included, the 1960 export total came to \$20,500 million, falling some \$300 million below the record \$20,800 million export total of 1957. In a way, this may well add lustre to the 1960 commercial export rise, which evidently was achieved at a time of declining military shipments abroad by the US Government.

Indian Finance

Given the record commercial export total of 1960, one may wonder why the trade surplus still fell well below the 1957 level. For the answer, one must look at the import side of the trade ledger.

At \$14,600 million US merchandise imports last year were more than 12 per cent higher than the \$13,000 million of 1957. This tends to confirm the view that over the years, a growing US economy, with an essentially liberal trade orientation, offers an expanding market and burgeoning trade opportunities for the rest of the world.

The record of the decade of the 1950's, showing 1959 imports some 70 per cent higher than those of 1950, certainly bears out this appraisal, even though the upward import trend may be temporarily interrupted from time to time. Such a time was last year, when imports declined moderately from the 1959's all-time high of \$15,200 million.

Even this decline is not without its redeeming features, according to US Department of Commerce officials, the chief contributing factor to the modest 1960 import drop was the slow-down in the domestic US economy during the second half of the year.

Another way of looking at the situation, then is this: Despite the onset of a mild economic recession, US imports in 1960 were the second highest in history and not much—only about 4 per cent—below the 1959 peak.

By this same reasoning, it is logical to expect another pick-up in US imports, when the US economy starts to move upward again—a development which is expected some time this year, perhaps as early as the second quarter.

BUDGET SESSION

Heavy Agenda

The Budget session of Parliament, which began on 14 February, has to get through a heavy agenda of legislative business. Apart from the General Budget and the Railway Budget, there are sixteen bills pending from the last session, including the Criminal Law (Amendment) Bill and the Double Member Constituency (Abolition) Bill. Among the 28 new bills that will be placed before the session, the President mentioned the following in his inaugural address: The Income-tax (Amendment) Bill, The Extradition Bill, The Indian Patents and Designs Bill, The Essential Commodities (Amendment) Bill, The Sugar Export Promotion (Amendment) Bill, The Narcotics Bill, The Apprenticeship Trading Bill, The Himachal Pradesh Abolition of Big Landed Estates and Land Reforms (Amendment) Bill. The President's address also indicated that a joint session of Parliament will be convened for consideration of the Dowry Prohibition Bill over which the two Houses have differed in regard to some provisions. The President's address contains ample indication that foreign affairs will dominate the debate on the address. The Draft Outline of the Third Plan is likely to be taken up only towards the end of April after completion of financial business.

18 February 1961

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

CHANCE took me to Chowringhee last evening and I must say that Calcutta is doing the Queen proud. Red Road, was, of course, a fairy-land, but Raj Bhavan and the business houses along Chowringhee and Old Court House Street have been transformed too, at least, so they seemed from a distance. Elizabeth, the First, liked to be compared to the Fairie Queene and many of her poets paid her, with greater or lesser sincerity, the compliment. Calcutta, especially after sunset, did seem palpably sincere in a like tribute to Queen Elizabeth, the Second. Even the weather is behaving. The festive air is infective and I am finding it difficult to get on with my work. The Bengal Chamber, which austere started with 'business as usual', has been obliged to suggest that "members who are in a position to do so should work their city offices with a skeleton staff." The skeleton, I am told by a colleague, has been cut to the bare bone of a Dak Babu in most offices. Calcutta has had a face-lift and a perm: the stretch of Jessore Road from Dum Dum to the city, which had all these days been the despair of those who wanted foreigners to think kindly of Calcutta, has been made presentable. And when the Queen arrives this evening, she will have millions of warm hearts cheering her with enthusiasm. One needn't fall over backwards being more royalist than the Queen as I have seen some people doing. But Job Charnock's town has special reasons to go gay in welcoming British Royalty. There are still people in Calcutta who are sore about the shifting of the Indian Capital from here to Delhi in 1911. In fact, they date the beginning of the Decline and Fall of the British Empire from that event. Every now and then, The Statesman carries letters that lovingly rescue from oblivion some memory of those spacious days. I think it is true to say that, of all the Indian cities, Calcutta is the most consciously anglophile and this is so, despite the fact that most of its citizens seem to vote Communist. There are historical reasons for this, the most important of which, of course, is the fact that the British power in India until 1911, had its situs here. But the importance of Calcutta and Bengal in the context of Indo-British relationship today is no less obvious. I dare say that the fact that the Queen's first engage-

ment in Bengal was at Durgapur had something to do with the exigencies of itinerary. But it is also incidentally symbolic. It is a commonplace that Calcutta has the largest contingent of UK citizens in India. What is more important is that it is also the city in which Indo-British relationship, has been least inhibited and awkward, and most enriching intellectually. The Queen, with the gruelling schedule arranged for her, will have only a glimpse of this. But of popular enthusiasm she will have abundant evidence. The twelve miles from Dum Dum to Raj Bhavan will, in every sense, be a triumphal progress. Incidentally, if the crowds I saw last night are any indication, the pace of this progress will have to be nearer what the Queen is reported to have wished than what the rehearsal is stated to have clocked.

First the moon and now Venus. But why Venus? Why not Mars, which has been talked about longer as earth's most hospitable neighbour in space? The scientist may be ready enough with his reasons for the Russian choice but they will be mere rationalisations. I, for one, think that the preference of Venus to Mars is further evidence of the great thaw about which doubts are raised from time to time. Stalin, had he been alive, would never have allowed this to happen. His preference would, I need hardly say, have been for Mars. Scientists would have been ready enough with their reasons then too. In fact, he would have supplied them. But consider the evidence, astrological, rather than astronomical. Ptolemy, whom we would all back against Copernicus, if we weren't such cowards, is credited with the view that "Under Mars is born nyght walkers and quarrell pykers, bosters, mockers, and skoffers; and these men of Mars causeth warre and murder, and batayle. They will be gladly smythes or workers of yron... he is red and angry—a great walker, and a maker of swordes and knyfes, and sheder of mannes blode... and good to be a barbour and a blode letter and drawe tethe." And what about Venus? She, according to authority, "signifieth white men or browne... joyfull laughter, liberrall pleasures, dauncers, entertayners of women, players, perfumers, musitions and messengers of love." What further evidence do

you want of the change that has come over the Soviet Union since the Twentieth Congress? That knowledgeable dame, the Wife of Bath said, "Venus loveth ryot and dispense", and Soviet poetry itself has greeted the rocket racing through space to meet Venus in May as "the first Soviet Envoy to Venus"—a poetic convention much used in Sanskrit poetry. Whatever others may say, I believe that the latest Soviet rocket is the objective correlative of Soviet conversion to the cult of Venus. Professor Rostov has now another piece of evidence for his theory of Soviet Union catching up with the affluent society. If more evidence is needed, I should refer to the Tass report about Soviet Union entering two horses for the Derby. Khrushchev bids fair to put the late Aga Khan into shade. Even such is life.

Politics, especially African politics, is not for the squeamish, but the brutal murder of Patrice Lumumba and his two associates will make even Harlem hoodlums sick. I wonder what kind of a man Mr Godefroid Munongo, of Katanga is. He is not only making excuses for the alleged murderers, but has actually announced a reward for the village where Lumumba's body was discovered. And even before anyone says anything, he answers hypothetical accusations of his being implicated in the deed by asking for proof. For once the Russians had the mot juste: "Bloody". And to think that only less than eight months ago, we were patting each other's back on the pace of African emancipation. Lumumba, Kasa-

vubu, Tshombe, Mobutu and now Munongo are names that evoke nothing but a sickly feeling in decent stomachs. Why is this so? Can it be that there is something in the theory about some people not being ready for self-government? I should hate to think so and on the whole I find I don't have to. The real villains are not the illiterate murderers, not even Kasavubu and the rest, but the callous outsiders who are playing a murderous game in the Congo. I shall never feel the same way about Belgians again.

But the Russian attempt at converting these developments in the Congo into an excuse for needling Mr Hammarskjöld again is, to say the least, irresponsible. It is probably true that the Tshombe faction has been frightened by the possibility of the US and the Soviet Union coming to an understanding on the Congo. The murder has almost certainly been planned to queer the pitch against this. If that is so, Russian truculence would be merely playing into Tshombe's hands. The trouble about the UN role in the Congo has not been that the Secretary-General was playing a lone hand, but that he has been tied hand and foot by an Assembly that has its own scores against each other to settle. Mr Nehru, with whom Mr Kennedy agrees, feels that it will be disastrous to make the UN leave the Congo now. But it is equally evident that unless the mandate of the UN authority in the Congo is widened and deepened, it will continue to be a helpless onlooker, with immature politicians going for each other. Meantime, the agony of the Congo, with refugees living, as Mr Richie Calder recently testified, on a ration of "three dried rats and a caterpillar three inches long" will remain unassuaged.

Relaying the Good News

THE programme for immediate extension of the medium wave broadcasting service was explained by Dr B. V. Keskar at a press conference in New Delhi last week. The draft outline of the Third Plan had briefly indicated that provision was being made for making internal coverage more effective through expansion of medium wave broadcast service. During the First Plan, each language area was provided with at least one transmitting station. There were 26 stations at the end

of the First Plan and the number has been increased to 28 during the Second. The aim in the Second Plan was to extend the available services to as wide an area as practicable and to strengthen the external services. This programme will be continued during the Third Plan, with emphasis on medium wave transmissions.

Medium wave broadcasts provide better listening, round the clock, throughout the year. But as their range is limited, it is necessary to set up new relay stations to provide satisfactory coverage. At present medium wave transmitters cover 37 per cent of the total area

of the country. The programmes carried by these transmitters can be heard by about 55 per cent of the population. The present Rs 3.39-crore programme for the installation of additional transmitters aims at increasing the coverage from 37 to 61 per cent of the area and from 55 to 74 per cent of the population.

Of the 34 additional transmitters, 32 will be medium wave transmitters in the power range 1 KW to 100 KW depending on topography and other technical considerations. Two will be short wave transmitters of 20 and 2 KW at Trivandrum and Kurseong respectively for Kerala and the Darjeeling-Sikkim area. On account of their peculiar topography, these regions cannot be served through medium wave channels. Of the new transmitters, 31 will function as satellite transmitters relaying, or re-broadcasting previously recorded programmes from the existing principal stations. No new studios are being constructed except at Imphal, Port Blair and Kurseong. The decision to expand the coverage of medium wave transmission through satellite transmitters instead of new studios was justified in view of the difficulty experienced by existing studios in drawing up adequate programmes. The new transmitters will be located at the following centres:

Hyderabad, Cuddapah, Visakhapatnam, Jorhat, Shillong, Bhagalpur, Ranchi, Delhi, Rajkot, Trivandrum (S.W.), Kozhikode, Jabalpur, Raipur, Gwalior, Bhopal, Tirunelveli, Sangli, Parbhani, Poona, Gulbarga, Bhadravati, Dharwar, Sambalpur, Jeyapore, Ajmer, Bikaner, Udaipur, Agartala, Varanasi, Rampur, Siliguri, Kurseong, (S.W.) Port Blair, and Imphal.

Under the expansion programme, there will be four new transmitters each for Madhya Pradesh and Maharashtra, three each for Andhra and Rajasthan, two each for Assam, Bihar, Kerala, Mysore, Orissa, Uttar Pradesh and West Bengal and one each for the States of Gujarat and Madras as well as for the Union Territories of Delhi, Tripura, Andamans and Manipur. Selection of the locations has been made on technical considerations such as the extent of coverage, terrain, topography, frequency and power allocations and other facilities. Large and sprawling States like Maharashtra or Madhya Pradesh require more transmitters to ensure adequate coverage than States with a compact shape and area.

In addition to the satellite transmitters mentioned above it is also proposed to provide an alternative medium wave channel for the light programme (Vividh Bharati) which now can be heard only on the short wave lengths in most places. Transmitters of one KW each, for relaying this programme, will be set up at all the

28 existing stations and a few other urban centres.

The foreign exchange component of the expansion programme will amount to about Rs 1.54 crores out of the total cost of Rs 3.39 crores. The equipment is being purchased through Bharat Electronics Ltd, who are collaborating with Japanese manufacturers. It is expected that eventually the equipment required will be made in this country with the collaboration of the foreign suppliers.

Dr Keskar indicated that the new transmitters will be set up by May. Some sites have been selected in co-operation with State Governments. The first instalment of equipment is expected to be received between March and April 1961 and arrangements are also being made for early delivery of the remaining equipment. Early action to set up the transmitters is necessary in order to utilise the broadcasting channels allotted to India by the ITU. If the allotments of wavelengths are not utilised by the prescribed deadline, they may be cancelled and allotted to other countries. The locations and the power range of the transmitters are also governed by the registration with the ITU at Geneva.

Overseas Communications

The External Radio Communication Service has made spectacular progress in the short period since independence. The service was started on a small scale in 1927 with the wireless telegraph service between India and the UK. The exigencies of War resulted in some degree of expansion. At the end of the War, India was linked to the UK from Delhi and Bombay, to the USA through two services, (the Radio Corporation of America and Mackay Radio Telegraph Company) to China (first with Chungking and later with Shanghai) and to Australia. As on 1 January 1947 there were five direct radio-telegraph circuits, and one direct radio telephone circuit, while restricted photo telegraph services were available to the United Kingdom and the United States. As on 1 January 1961, India has direct radio contact with 29 countries of the world, through 26 radio-telegraph, 25 radio-telephone and nine radio photo-telegraph services. These services are handled through four gateway stations—Bombay, New Delhi, Calcutta and Madras. This expansion, it is gratifying to learn, was planned and executed by entirely Indian personnel. The admirable efficiency with which this up and coming branch of the Communications Service and its Delhi Centre have been functioning was highlighted during the visit of President Eisenhower and, more recently, during the Queen's visit, when the service had to deal with unprecedented volume of traffic.

Markets

JUTE Bull Pressure Quietens

THE jute and gunny markets are ruling quiet for the past few days as sentiment seems to have been considerably subdued by rumours that drastic action from the authorities is imminent with a view to bringing down price levels. Press reports last week-end referred to serious concern in New Delhi over the continuous rise in prices of both raw jute and jute goods during the past few weeks and indicated that the remedial measures were in the process of being designed. The reports had an immediate sobering effect on the market and price levels all along the line fell considerably and in the succeeding days' trading sentiment has been quiet.

It is believed that if further corrective steps are decided upon, they will be mainly in directions such as fixation of ceiling on the price of both raw jute and jute goods, and requisitioning of stocks of raw jute and even of gunnies. It is also possible that the Forward Markets Commission may come with its own set of curb measures, now that it has been given wide powers of regulating markets.

The reported concern of Government presumably stems from the assumption that the recent up-trend in prices is due to unbridled speculation. This in its turn assumes that there is enough raw jute to meet the reduced level of consumption and that there is little in the shape of fresh foreign enquiries. The contention that there is no actual shortage of raw jute is to be viewed against the falling rate of raw jute arrivals at Calcutta and mill stations. It is also not clear why Government is inordinately delaying the publication of the official jute crop estimate. An estimate which shows the crop to be fairly large will have acted as an effective deterrent to a scramble. Government also cannot deny that since the turn of the year there has been a pick-up in foreign buying of gunnies. Sacking has been in good demand and latest indications are that overseas consumers will continue to show interest in our heavy goods notwithstanding the increase in prices. In this regard it may be noted that it is not as though only our jute goods are quoting at high prices in foreign markets. Pakistan is not, by any reckoning selling jute goods cheap.

Consumers are apparently obliged to pay as much, if not more, for their supplies from elsewhere. In this view, it is somewhat difficult to maintain that unalloyed speculation is holding sway over the jute and gunny markets once again. But this is not to say that we can afford to have our jute goods quoted at exorbitant prices, especially in overseas markets, for any length of time.

The jute goods market ruled quiet during the past week following press reports of fresh curb measures. B Twills Ready which was quoted at Rs 216.50 on 9 February came down sharply to quote at Rs 207.50 by close on Wednesday. Hessian 40" x 10 oz Ready was also easier at Rs 66.50. At the lower levels, however, there has been some support and in later dealings on Wednesday there was considerable activity by local operators. While there is no denying the nervousness in the market, due to apprehensions of far-reaching steps to counter speculation, it would appear that the rather gloomy prospect of an increase in mill production in the immediate future coupled with continued enquiries from overseas is arresting further decline in prices. The effect of the reduction in the weekly working hours is reflected in the figures for production of jute goods by IJMA mills during January. Output last month of all categories of jute goods totalled 86,200 tons comprising 30,900 tons hessian, 46,900 tons sacking and 8,400 tons other varieties. Production in December and in the corresponding month of the previous year amounted to 90,700 tons and 86,700 tons respectively. The lower production in January this year is due to the fact that mills have worked only 189 hours. The output in the current month will be further lower as it is a short month and that mill working has been disturbed by the token strike by a very large number of workers on Monday this week as a protest against the "unilateral action of the Indian Jute Mills Association in curtailing the weekly working hours". The workers demand restoration of the full working hours as the shorter working hours are said to have resulted in loss in wages. It would appear that production may also be further adversely affected by the reported power shortage in particular industrial regions in West Bengal.

In the raw jute section also prices have declined sizably during the past few days and the reason for this is to be found in the

rumour about impending Government action to bring down prices. But here also the lower levels have found support and there is no panicky selling. Although mills have been issued quotas, they are not showing much interest at prevailing levels presumably on the hope that prices will go down further. There is, however, no indication of any sizable increase in supplies as arrivals continue to be meagre.

Price Trends

TEA Strong General Demand

IN the Export Sale held in Calcutta this week, offerings were 73,064 packages. There was a strong general demand. The autumnal CTC types received good enquiry and were firm to dealer; but the more ordinary kinds were upto 15 nP per kilo easier. The fibrous and secondary grades were irregular and sometimes up to 10 nP easier.

Medium Assam BOPs and OFs were fairly well supported, especially the brighter liquoring kinds which were at times dearer. Medium BPs were firm at about last rates, while similar Fannings were at times dearer.

Black Dooars Broken were the strongest feature of the sale, being

sold at firm to dearer rates; but plain Fannings were generally 10 nP easier. "Teas for price" were about steady, while plain broken were sold well at about last rates. Stylish Whole Leaf grades again received a good enquiry and there was also more demand for the more ordinary sorts. Some of the staidier descriptions were, however, easier.

There was an improved demand for Darjeeling teas, but generally at lower rates. The following rates were quoted:—Clean Black Pekoe Rs 5.20 to Rs 5.50; Plain BP Rs 4.60 to Rs 4.70; Plain Fannings Rs 4.70 to Rs 4.90; Medium BP Rs 4.70 to Rs 4.90; Medium Fannings Rs 4.90 to Rs 5.10; Best Assam CTC BP Rs 5.80 to Rs 6.20 and Best Assam CTC Fannings Rs 5.80 to Rs 6.30.

Pending declaration of export allotment for the year 1960-61, the Government of India have authorised the Tea Board to make a final release of export quota to the tea estates to the extent of 5 per cent, thus bringing the total so far released to 65 per cent of the crop basis.

In the Internal Sale, offerings consisted of 21,867 packages of Dusts and 769 packages of Leaf grades. There was a fair general demand for Dusts and the market eased towards the close. Orthodox exportable descriptions were taken up at 10 nP below last rates, while the smaller types met with better support. Legg-cut Dooars Dusts followed the general trend and were 15 nP and sometimes 20 nP easier. Towards the close, however, they were difficult of sale. The brighter kinds in this category were sold well.

Medium CTC types were irregular, the smaller and brighter lines being a strong feature. The more fibrous kinds were virtually neglected at the close of the sale. Good CTC dusts met with keen competition and were readily absorbed at generally dearer rates. Following rates (per kilo) were quoted:—Plain orthodox Dust Rs 4.75 to Rs 4.90; Medium Assam Dust Rs 4.90 to Rs 5.25; Legg-cut Dust Rs 5.05 to Rs 5.40; Medium Assam CTC Dust Rs 5.55 to Rs 5.80 and Good Assam CTC Dust Rs 6.10 to Rs 6.60. Leaf grades were sold at irregular rates.

In the Cochin market, offerings were 395,000 kilograms of Leaf grades. There was good demand at lower rates. Plain, Low Medium and Medium types were 10 nP to 15 nP per kilo easier. Good Medium sorts were 20 nP to 30 nP lower. Best liquoring teas had, however, a fair demand at lower rates.

In the Colombo market, offerings were 7,180,782 pounds. Quality was slightly improved and there was strong general demand. Dimbula-Dickoya Broken were generally dearer according to quality. Medium broken and bright liquoring Uva teas were in strong demand at an advance of about 5 to 10 cents per pound. Low-grown teas were in good demand at about last rates.

According to a report from Nairobi, production of tea in East Africa was lower at 4.67 million pounds in December 1960 as against 4.84 million pounds in the corresponding month of 1959. During the whole of

a leaking roof- or flooded floor...

...will drive business from your door

Certainly there is no need for this to be so. In fact, why live or work under damp, miserable conditions—why allow your property to deteriorate around you? Have it protected from dampness of ceiling, walls and floors, from acid and alkali action, by Shalimar Tar bituminous based protective materials.

The Bombay Company Private Ltd., Madras-I
Agents: R. C. Abrol & Co. Private Ltd., New Delhi-I

1960, however, the East African tea outturn was higher at 48.87 million pounds as compared to 45.77 million pounds in 1959.

Despite the large quantity of tea again catalogued for sale, 78,544 packages, demand in London auction was generally good and prices, in some instances, were dearer. Best liquoring high-growns and useful coloury mediums among Ceylons, for example, advanced, especially for the Broken Orange Pekoe Fannings, which gained 1d to 3d per pound. African descriptions, too, were sometimes dearer. Poor liquoring invoices

contained in the offerings were, however, easier.

Offerings of African teas have recently been on the small side; but heavier arrivals are expected in a few weeks' time. Until then, the next two weeks or so will probably see a reduction in the total offerings in the Mincing Lane auctions. For the week beginning 20 February, they may not be much more than 70,000 packages. Allowing for any price-easing on considerations of quality, the smaller offerings are expected to impart some steadiness to the market.

COTTON Bear Pressures Still

TRADING conditions in the Bombay cotton market continued to be bearish during the past week and Jarilla April touched a new low of Rs 556.60. The bearish trend was accentuated by the possibility of arrivals of further US cotton under PL 480 agreement. The import of US cotton in the current season is likely to amount to 0.3 million bales (of 400 lbs each).

But as the week advanced Jarilla contract indicated a moderate improvement to Rs 563 per three quintals on investment support at lower levels. Ready rates at many of the upcountry centres also increased by about Rs 5 to 7 per candy.

The overall picture, however, appeared to be gloomy. With the heavy arrivals of new crop in the market spinners kept away from the market on the expectation of a further decline in prices, and the business put through was very restricted. The market was subject to speculative influences on account of the reports of unfavourable weather in the cotton growing centres.

Mill demand was mainly directed toward Vijay, Digvijay, Surti, Kandesh and Kalyan varieties of cotton. Interest in the imported styles was conspicuously absent.

The Government of India's announcement of the release of export quota for 50,000 bales of Bengal Deshi led to a moderate improvement in the price of that variety. Even before the official announcement shippers were found active buyers of this growth even at higher prices on the expectation of an immediate issue of quota. In a press release the authorities have clearly specified that the quota was issued for "fine" and above in grade for export on a "first-come-first-served" basis, to all permissible destinations except Tibet and Portuguese pockets in India.

Out of the 50,000 bales 2,500 bales will be allocated for co-operative societies, 19,000 bales will be reserved for shippers who have already exported from the quota under conditions announced in December last and 28,500 will be made available to other shippers on a "first-come-first-served" basis. Those shippers who have participated in the quota under the conditions announced in December will be eligible for further export to the extent of 40 per cent of the cotton actually delivered by them to the indigenous consumers as required under the earlier orders.

The press note further explained that each shipper falling under this category will be entitled to participate in respect of the total

export quota issued so far at least to the extent of 1,500 bales. Those exporters who have not exported any quantity so far will also be permitted to a portion subject to a maximum of 1,500 bales per shipper out of the balance of 28,500 bales.

Consumption of cotton by Indian mills from 1 September to 30 November totalled 1,276,587 bales.

Description	1960	1959

The Bombay piecegoods market displayed divergent conditions during the past week. With improved demand the domestic sector appeared cheerful and the business was active. But the export front, on the other hand, was subdued and overseas enquiries were few.

Almost all the varieties in the market met with persistent demand. The main consuming centres were Gujarat, Bihar, Saurashtra and Southern States. But the supply of goods was far short of the demand. The stocks with the mills dwindled to a great extent and in January the fall of 5,000 bales was reported.

On the export front Ethiopia accounted for a substantial quantity of sheetings for February March shipments. Despite fair enquiries from Sudan and the UK the offtake was restricted. Ceylon also showed some interest in the Indian goods and other destinations were quiet.

Cess on Rubber Production

The Government of India have now announced that, with effect from 1 April 1961, a cess at 30 nP per kilogram will be levied on all rubber produced in India and collected by the Rubber Board. The cess, at present Rs 6.25 per 100 pounds, will be raised to Rs 13.75 (estimated) per 100 pounds.

While in respect of Sole Crepe the cess will continue to be collected from the producer, the manufacturer will be liable for the cess on all other grades of rubber on the basis of quantities purchased or otherwise required by him from 1 April 1961. From that date, the producer will receive only the present controlled price less Rs 6.25 per 100 pounds and that is the present cess of one anna per pound.

The cess has been raised for the purpose of financing the rubber replanting scheme, which commences in Kerala from 1 April. While the rubber industry does not mind paying the higher price for its raw material, it deplors that the cess collected during the past eight years has remained unutilised. The industry feels that the authorities should have first utilised the amount on replanting scheme before they contemplated additional cess.

It is reported that the Chairman of the Rubber Board will meet the representatives of the industry and planters this month, when the question of refunding to the industry the difference between the import price and the domestic price of rubber will be taken up. The price difference has now widened to Rs 25 per 100 pounds, thanks to a marked fall in the price of imported rubber.

Meanwhile, production during the year 1960-61 is estimated to be 24,500 tons, while the demand has gone up to 60,000 tons including 5,000 tons for reclaimed rubber and 6,000 tons for synthetic. This suggests that the supply of indigenous natural rubber is hardly 50 per cent of the industry's requirements. In 1961-62, the demand for all types of rubber is likely to go up to 75,000 tons as a result of expansion in tyre production. The Firestone, CEAT, Dunlop and Good Year are expected to require about 10,000 tons more of rubber next year.

COFFEE

The Coffee Board's Marketing Committee has decided to allocate a quantity of 21,500 metric tonnes of coffee for export out of the 1960-61 season's crop. The export allocation is made up of 11,000 metric tonnes of Plantation; 3,500 tonnes of Arabica Cherry A variety and 7,000 tons of Robusta varieties.

Up to the end of January 1961, the total receipts of coffee into the 1960-61 Pool amounted to 21,072 tonnes comprising 18,744 tonnes of Plantation; 1,485 tonnes of Arabica Cherry and 843 tonnes of Robusta, showing a substantial increase over the receipts on the same date last year. The release of coffee in the internal

market, during January, amounted to 2,851 tonnes.

According to the latest reports, coffee plants in Coorg and Mysore areas are extensively affected by an unidentified malady. Due to this infection, crop prospects for the coming season are not considered to be satisfactory. The Coffee Board has taken up the question of controlling this disease. The current season's crop will, however, be the largest on record. Present estimates are, that it will amount to well over 50,000 tonnes.

It is estimated that the coffee stocks in the producing countries, towards the end of 1960, totalled 40 million bags. This is a pretty large stock capable of clouding the prospects for the current year. The International Coffee Study Group forecast a world production of 64.5 million bags in 1964-65. Consumption is expected to rise from the present 53.5 million bags to 72.7 million bags in 1970.

PEPPER

In the London market, Black Pepper prices have fallen by about a per cent over the past month and White pepper by about 14 per cent. Singapore dealers have been forced to sell the commodity, because of the pressure on their financial resources caused by the fall in the demand for natural rubber.

At the same time, growers in Sarawak, who last year were provided with storage facilities and loans by the Government to encourage orderly marketing, have now built up large stocks, estimated at 2,000 tons. The new Sarawak crop is only a few months away and the Government is now encouraging growers to liquidate.

It is, however, clear that prices for Black pepper have been ruling firmer than that for White pepper, because of a large Communist purchase of Malabar pepper. Demand for black pepper in the USA is, however, weak and the big Malabar crop is only just beginning.

FOODGRAINS

Quiet conditions were witnessed in the Hapur Foodgrains market. Wheat prices sought lower levels following the sale of the commodity by the Uttar Pradesh Government at Rs 16.15 a maund, which was being resold in the open market at Rs 16.50. Superior Wheat imported from the Punjab under permit was sold up to Rs 18.50.

Conditions in the Rice market remained generally steady. The supply position was reported to be satisfactory and the local stock was put at 8,000 mands.

The easy trend in Gram prices continued. Good reports about the crop in the Punjab and other producing areas following the recent rain were the main contributory factors. Maize prices were stationary and the stockists were reported to be anxious sellers. The market for Bajra remained dull, while Jowar prices sought lower levels. In the Pulses section, Peas and Arhar prices registered a fall despite meagre stocks with the trade. Lack of support coupled with good crop prospects were the main influencing factors.

Over 888 Offices and Enlarged Service

Perhaps you would like to know how rapidly the State Bank of India is expanding. On 1st July 1955, when the Imperial Bank of India was reconstituted into the State Bank of India, the Bank had only 243 branches. By August 1959, it had 555 fullfledged branches in urban and semi-urban areas. The rate of growth is now about 100 branches a year. The Bank has also 238 sub-offices.

With a net-work of over 888 offices spread all over the country and many more to follow, the State Bank is particularly suited to handle your remittance and collection business.

Thousands of account holders have benefited by the wide range of services offered by the Bank. You too can take advantage of the Bank's services.

Why not contact the nearest Agent of the Bank to talk things over?

INDIA'S LEADING BANK

SI/STA/5-88-22-R

SUGAR

Conditions in the Hapur Sugar market remained generally quiet with the rate quoted around Rs 111.75 per bag as against the controlled rate of Rs 108.50. The supply position of the commodity is comfortable. Although a part of the releases of the past two months has not yet been lifted, early expectations of export have kept the undertone of the market steady.

CHEMICALS & DYES

Dull conditions prevailed in the Bombay Dyes and Chemicals markets. While the upcountry demand was at a low ebb in view of the acute stringency in the money market and the comfortable supply position, stockists were also anxious to liquidate their

holdings before the prices sought lower levels.

In the Chemicals section, the supply position is reported to have improved due to imports by the State Trading Corporation. There are also reports that the indigenous manufacturers are now in a position to supply the goods at lower rates. The prices of imported varieties have naturally moved down. For instance, Bleaching powders have lost about Rs 2 to Rs 3 with the big packing quoting at Rs 63. Camphor has also moved down, to be placed around Rs 17.50 on account of the arrival of unauthorised goods.

Sentiment in the Dyes section remains subdued due to the fears that more goods will be arriving in the country as a result of a barter deal with Italy and against rupee pay-

ment from the East European countries. Stockists have, therefore, turned out to be sellers in a market where the demand is very poor.

YARN

Conditions in the Bombay Yarn market were quiet with prices moving within narrow limits. The only exception to the general trend was Rayon Yarn, which showed speculative strength on rumours that quotas to the consumers might not be given. A section of the trade, however, was feeling that the rumours were baseless. Rumours about the State Trading Corporation handling all imports of yarn in future were also considered baseless.

A halt was cried to the spectacular rise in the prices of Staple-Fibre yarn, noticed in recent weeks. The rate for 2/40 denier was quoted down to Rs 832 per bale from Rs 850 in the previous week.

In the Cotton Yarn section, prices remained almost unchanged although the demand, particularly for coarse and medium counts was good. Finlay 60s was placed at Rs 66.66; 80s at Rs 81.81 and Modern 40s at Rs 32.

BANGALORE SILK

Prices for flature raw silk remained steady during the week ended 10 February, 1961 at the same levels as in the previous week, with fair demand. While flature silk of 20/22 Dr. was quoted between Rs 80.48 and Rs 83.23 per kgm, the cottage basin silk ruled between Rs 71.65 and Rs 73.65 per kgm. The rates of charka

silk ranged between Rs 50.70 and Rs 69.44 per kgm as in the last week. Supplies of raw silk to the market were limited due to paucity of cocoon crops.

Prices of reeling cocoons registered a further rise by 10 to 30 nP per kgm during the week. The rates were quoted between Rs 3.35 and Rs 4.55 per kgm for Mugur area cocoons, between Rs 4.95 and Rs 5.50 for Channapatna and between Rs 4.85 and Rs 5.80 for Sidlaghatta area cocoons.

Prices of seed cocoons also maintained a steady level. The Mysore race seed cocoons were quoted between Rs 4.50 and Rs 5.50 per 1000 while foreign race seed cocoons declined by about a rupee when quoted between Rs 7.00 and Rs 14.00 as against the last week-end quotations between Rs 8.00 and Rs 15.00 per 1000.

GOLD & SILVER

Conditions on the Bombay Bullion Exchange were generally quiet. After a subdued start, Gold yielded further ground under liquidation, being influenced by the reports of increased arrivals. Arrivals and off-take were estimated around 8,000 and 4,000 tolas respectively. Spot rates moved between Rs 122.15 and Rs 122.35 and the forward rates between Rs 121.75 and Rs 122.05. Sovereign remained very firm at Rs 93.50.

Silver also tended to ease in the early part of the week, but profit-covering eventually aided a partial recovery towards the close. Arrivals

and off-take were estimated at 33 and 10 bars respectively. Spot rates moved between Rs 207.60 and Rs 207.80 and the forward rates between Rs 207.20 and Rs 207.40.

OILS & OILSEEDS

Barring Castorseed, prices on the Bombay Oilseeds Exchange remained generally steady. Sentiment in the Castorseed section was depressed, reflecting the continued absence of overseas business. There were no fresh developments on the export front except the news that Brazil's castor crop was expected to be unusually high this season. Castor ready was quoted at Rs 33.37 and Castor Oil, commercial quality, at Rs 13.80.

The Groundnut section ruled generally steady and the Reserve Bank's directive to modify bank advances against groundnut fell flat on the market. Contrary to expectations, prices looked up further on good investment support. The firmness in prices was attributed to general fears in the country about the shortage of edible oils this year. Although the production of groundnut was expected to be higher than that of last year, the requirements of the vanaspathi industry were stated to be fast increasing. The Government of India's policy of encouraging exports of HPS groundnut and cake had also a stimulating effect on the market. Groundnut Bold quality was quoted at Rs 47 and Groundnut Oil at Rs 20.40.

Prices in the Linseed section remained firm and this was attributed to a spurt in prices of rapeseed and mustard seed in North India markets. Linseed ready was quoted at Rs 33.69 and Linseed Oil at Rs 14.60.

In the Calcutta market, the price of linseed has again improved to Rs 29.50 a maund for ready delivery on reports of damage following unfavourable weather conditions. Arrivals are also reported to have declined with crushers facing shortages of seed supplies. The oil market has been ruling firm in sympathy with rises in the prices of groundnut and mustard oil. Business with the local mills is limited due to shortages of stocks. The price of Linseed Oilcake has, however, softened in the absence of foreign demand.

Steady conditions prevail in oils and seed market throughout the week and are likely to be so for a while. Calcutta interests are reluctant buyers while sellers are reluctant in the groundnut oil market. A slight firm-up of the groundnut oil price since last week-end has been due to outside buying and also due to local and Southern side oil offerings being very small. This small rise in groundnut oil price is also ascribed to small groundnut arrivals in the City. The average receipt of kernels in Madras is between 50 to 60 tons daily. In South Arcot markets the average daily arrivals had not risen above 100/150 tons. This export quota release of 20,000 tons of groundnut oil cake and 20,000 tons of HPS groundnuts did not also produce any impression in the market.

The groundnut oil which was selling at Rs 444 per candy of 500 lbs on Thursday last week, gained six

rupees by the week end. Last evening there was a further gain of a rupee in oil. But Calcutta was buying at the same rate till to Wednesday and the price went up to Rs 452 per candy by close.

There was no trading in forward positions and therefore nothing happened to report. As regards kernels the coromandel variety was remaining at the price of Rs 75 to 75/50 per kgs and it rose by a rupee by last Saturday forenoon. Today the gain is not much and the candy rate was Rs 232 to Rs 233 for coromandel variety and Rs 225/226 for peanut variety.

Castor oil per candy of 500 lbs Tirupattur was sold at Rs 350. Coconut oil per tin Rs 45. Gingelly oil per maund Rs 31. Gingelly seed per bag Rs 100. Groundnut cake per bag of 160 lbs Rs 26.8.

The price of groundnut kernels in South Arcot market was Rs 75 per 80 kgs.

As regards the southern markets in groundnut kernels and oil, both South and North Arcot districts reported lesser arrival this time of the year at 100 to 150 tons daily. Local crushers had demand for all this. But in the Guntur-Bezawada area price levels of kernels continued higher for oil in the region of Rs 455 to Rs 460 per candy.

HIDES & SKINS

It is again a week of high prices in tanned hides and skins here. Despite good cowhides arrival in the City, the price still seems to be higher and shippers are not able to confirm deals on account of this. It is said that this week's price of cowhides is nearly 2d higher per lb and this is not assented to by UK buyers.

5/5½ lb inferiors had been bought on the basis of 46d and the heavier 10/10½ lb on 41d. Inferior fifties in this could not be dealt with due to high prices.

In tanned cowcalf skins, meagre stocks are reported along with good outside inquiries, particularly from UK.

Tanned buffalo calf skins are in good demand from USA and arrivals are fair. In view of the demand, price of this had also increased.

Both tanned goat and sheep skins were in good demand, light and heavy weights being well absorbed.

INVESTMENT GOSSIP Bulls to the Fore

As the Budget day draws nearer and nearer, bulls seem to be getting bolder and bolder. This is not strange considering the fact that what may be called the indicators of the shape of things to come at the end of the month have so far been rather encouraging. The first Budget of the season—the Bihar State Budget has not brought any new levy. The second in the series, the Railway Budget, has also proved to be quite satisfactory from the point of view of the stock market although it is feared in certain quarters that the increase in coal freight on short distance loads may have some adverse effect on production costs of industries especially those situate in and near the coal region. The third to come, the Maharashtra Budget, has, however, imposed some new levies; but they are of a variety that will not have a deleterious repercussion on corporate working. It is not, therefore, without some seeming justification that operators have chosen to take an optimistic view of the Central Budget. Two points are emphasised by the bulls: first, it is now generally accepted that there is little or no scope for an increase in direct taxation; second, Government has perforce to be extremely careful in imposing fresh taxation because of the coming general election. Buoyancy of Government revenue may also make the task of the Union Finance Minister somewhat less irksome.

But the more sober of the bullishly inclined marketmen have certainly not omitted to note that with the needs of Third Plan looming large before him, Mr Morarji Desai cannot be expected to fix his gaze only on the next year's elections. The large internal resources needed have to come from the people. The proximity of the general elections may not perhaps give Mr Desai as large a field to operate as he possibly may

need; but it would appear that he has to be content with what he can get from this direction.

There are also some who entertain the hope that the bonus tax may be abolished and their optimism in this regard has been strengthened by the report on taxation published by the National Council of Applied Economic Research. There is also the underlying hope that the Central Budget cannot heap further burdens on industry at the present crucial stage in the industrial development of the country.

NEW ISSUE NOTES New Central Jute

The New Central Jute Mills Company, Limited has proposed to issue new Ordinary shares of Rs 10 each, at a premium of Rs 3.25 per share. The new shares will be offered to the existing shareholders of the company in the proportion of one share for every two shares held. Transfer Books will be closed from 21 February to 1 March, 1961.

Permanent Magnets

The list for the equity issue of Permanent Magnets Limited, which opened on 6 February, closed on 8 February with the issue over-subscribed by more than four times. The issue on offer was 10,290 shares totalling Rs 10.29 lakhs. It is learnt that, according to advices received so far, subscriptions total around Rs 42 lakhs. The directors have proposed to proceed with the allotment of shares soon in consultation with the Bombay Stock Exchange authorities.

United Dyestuff

The directors of the United Dyestuff Industries Limited have allotted shares to the individual appliances in the ratio of two shares in respect of applications for five shares; three shares in respect of applications for ten shares and five shares in respect of applications for 15 and 20 shares. For applications from 20 to 100 shares, allotment will be 25 per cent; for 105 to 250 shares 23 per cent and for 255 and over 20 per cent of the shares applied for. These allotments are being made in consultation with the Ahmedabad and Bombay Stock Exchange authorities and the listing applications of the company have been accepted by them.

General Industrial Society

A new company with an authorised capital of Rs 2.25 crores has been formed under the name of the General Industrial Society Limited to manu-
