There is no point of competition between inferior and superior commodities, for the former will peter out, but the race of competition will still prevail among the different grades of persuaders. The familiar assumption here is that all competitive commodities in a given line are similar in their primary economic function customarily associated with quality, reliability, service price and the like. It is the secondary function or "added value" of the commodity that makes all the difference. It is the concern of the sales personnel to widen and harp on the difference of the goods, to make the consumers powerless to resist their persuasion.

Despite uniform rates of price for the competitive commodities, the consumer has a wide range of choice. The merchandisers have to clamour for the buyers' attention to compete for the consumers' purchasing power. The way to succeed in that competition lies in the intensity of selling schemes. The traditional means of planned promotion—personal approach, publicity, displays, special offers, samples, premiums, contests, "give away" demonstrations etc., are the human-relations approach. These media are known to every manufacturer and they will be effective, if the consumers are rational.

It is a moot question whether distinction between rational, conscious and economic motives on the one hand and irrational, unconscious and non-economic motives on the other is meaningful. In a broad perspective, the distinction is sometimes inclined to be more apparent than real. Whatever motives the consumers may have, the goods should be socially acceptable. What is socially acceptable is constantly in flux. That is why the market researchers should be alert to keep in line with the changing consumers' preferences.

The study of unconscious motives of consumers, it is believed, offers a clue as to how psychology, has been applied to market research, and thereby, "researchers are able to devise methods whereby mysterious and miraculous marketing results are produced". We are told that the motivation research tends to render the consumers helpless and that they become victims to "the principles of modern dynamic psychology" which prompt them to buy without knowing why.

Whatever immediate results may be obtained in playing upon the unconscious motives of buyers, eventually all these blatant persuasive appeals will only land in "backfire". Strong stressing persuasive appeals cannot be taken to be a posi-

tive technique of sales promotion. Persuasion has its limits and an extra dose of it may create incredulity in the buyer and stultify for the technique. Buyers are quite conceivably develop resistance to these "jet propelled" persuasion.

It is not, however, suggested that subliminal advertising has a better scope for increasing business. Though increasingly relied on opinion is still divided on its efficacy.

Usually increased rates of turn-over do not depend upon a specified type of promotional activity but it does reflect upon many schemes of sales efforts. In this connection, it must be pointed out, however, that there is no direct correlation between the selling costs (costs incurred on sales efforts) and business turnover of a firm. It is hardly possible to appraise the volume of business in terms of selling costs—as the costs necessary to persuade a buyer to buy one product rather than another, or to buy from one seller rather than another".

As regards advertisements, a word of counsel may be in order. Fitting to the changing times, the format of advertisements should adopt itself to a "new look." Advertisements, it is said, have a profound effect upon the eyes and ears. Modern theory on communication has given expression to the fact that our emotions gear our feelings. There is no doubt, that the emotive components are to be pleasing to the eye and the ear. Nevertheless, it is not essential that all the ad messages should portray only appealing things. Objectivity and a ring of truth will certainly make the message all the more presentable both to the eye and the ear. How true is the saying, "an honest tale speaks best being plainly told".

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

Notes

CENSUS

Sex-ratio Changes

Not the rise in population or the margin of error in census figures claims so much notice as the variations in the sex-ratio. This may be due to migration, and an analysis of internal migration is required because of the persistence of the refugee problem. The linguistic minorities question will also require analysis in the light of the data now secured, and it may be added that reorganisation of States has altered the population picture to some extent. Whether climate and food supply determine the rate of natural increase and whether literacy has an influence on the birth rate are points only for speculation at present. The age distribution is a more significant point for expert notice. A longer life means more old people who cannot ordinarily work and the burden of the aged on the earning people may require special attention. A careful review of figures may yield conclusions about the efforts of irrigation in Orissa or Rajasthan. It may also contain a clue to mortality tables. The LIC may be then induced to apply revised premium rates and encourage the life insurance habit partly because children are increasing and marriage is still universal.

The usual measurement of social phenomena may lead to pleas for a resolute check on the rise in numbers, a call for eugenics and a ban on polygamy in view of the sex-ratio outside Kerala alone. The increase will be even viewed by some as a success for public health measures aided by the WHO. It will also be taken as a reason for getting a move on in domestic food production. The years ahead may demand more food, and the census is essentially a signal for crop-planning and careful use of irrigation facilities plus the extensive use of fertilisers. The figures certainly point to the new geography of hunger in this land.

ELECTIONS

Civic as Augury for the General

Civic elections in Bombay City and Calcutta have given the Congress a majority. This may be taken as an augury for the general election next year by some pollsters who might think that the downfall of the Samiti in Bombay means the restoration of Congress prestige. As for Calcutta, the Congress must prove itself by performance, and not by promises. That Howrah like Calcutta has demonstrated its confidence in Congress may be said to offset the strike by sweepers. The decline of the Leftists may be interpreted as due to several factors unconnected with local affairs. However, the result of the poll may help many to think that the Congress is ahead, and that Dr Roy's pre-eminence and plans are enough to put the rival groups out of the running.

The election results may lead to better civic administration and prevent suppression. That is a guarded hope at present, for the new City Council must take care to prevent lapses on its own part. Indeed, the return of many sitting Councillors may prove that the electors in most wards go by names only and the prospect of reform is not very bright. All the same, the voters have returned to the old allegiance and the Communist party may have to consider party strategy for 1962 seriously after the reverse in a City that did not love Congress too much. The situation in Bombay may be different, for the Opposition groups were divided before the election and the City has long enjoyed vigorous administration. The courage to tax, for which Mr K. Kamraj, has pleaded, may come not from electoral success but from positive planning for improvement. The elections will certainly lead to the hope of more

schools for the poor who need free education, and improvement in City hospitals cannot be deferred. The success of the Congress may inspire a belief that in Madras too, the Congress party will regain soon a majority and the pattern of improvement in Delhi may be the same, if the refugee element shares the aims of the old residents. The civic election results may furnish the Congress parliamentary board with data on voters' current preferences and prejudices. To that extent, it may help the selection committees to do some fine picking and secure the advent of new men and new ideas.

RURAL CREDIT

Usury Dominates

Timely and adequate provision of co-operative credit is one of the recognised means of increasing agricultural production on which the Draft Outline of the Third Plan has laid considerable emphasis. Rural indebtedness in India is proverbial and is of colossal magnitude presenting problems which can be tackled only over a long time. However, as a first step it is essential that the quantum of credit available from institutional sources should be increased, for, the worst feature of the rural indebtedness of India is the predominant hold of the village money-lender and the non-agricultural sections in the financing of agricultural operations. A case study of rural indebtedness in the village of "Pandit Nagla" made by Dr K. L. Widhani and Mr Santosh Kumar Agarwal and published in the AICC Economic Review of 7 March brings out that non-agricultural money lenders constituted the source for nearly 57 per cent of the total loans in the village. The usurious rate of interest charged by the village money-lenders and the non-agricultural money-lenders has been the crux of the problem of rural indebtedness and provides the most powerful reason for strengthening the co-operative credit structure. It is significant that in the study of the Pandit Nagla village, the rate of interest charged by co-operative institutions was 6 per cent while the rate charged by the non-agricultural money-lenders ranged from 35 to 70 per cent. One of the important findings of the study was the lack of access to co-operative societies for the landless agriculturists on the one hand and the non-dependence of the more prosperous agriculturists on the co-operatives for their financial requirements, on the other. The lack of access to the landless is the result of the present insistence on the furnishing of tangible sureties for provision of co-operative credit. Whether such insistence is in consonance with the needs of agricultural production is a matter that will be debated. With the organisation of village panchayats and their functions for village development on the basis of a village plan, it should be possible to seek a gradual relaxation of this principle. Personal faith should be the cornerstone of the co-operative movement, and village panchayats should certainly be in a position to assess personal worth of people living in their villages. The non-dependence of the more prosperous cultivators

in the co-operative societies points to the leeway the co-operative movement has to make in carrying the entire agricultural population for its progress.

TRADE

Continuing Protection

After the increase in import duties over a wide range, import policy is concerned apparently with expansion of exports so as to realise a total of Rs 650 crores in one year. But maintaining volume in the export trade is more important than value and keeping export prices low is the more urgent problem. The total ban on some minor imports is made in order to encourage home output. A promise of maintenance imports has been made but actual users will have to accept goods from any source because of the foreign exchange shortage. By demanding export performance from certain industries when imports are provided for their benefit, the Government has evidently made sure of increased exports of oil as well as textiles. The ban on many consumer items excludes newsprint. This may occasion comment because Nepa's expansion is taken for granted at present.

The policy announcement abolishes the difference between dollar area and sterling area. This is due perhaps to the gold crisis of 1960, the depreciation of the dollar, and the flight of US funds to Europe. Whether dollars can be got in Zurich for rupees may appear doubtful but the present object may be to plead that UK import policy is followed here also that sterling is convertible after the European monetary agreement and it is better for India to buy more from the sterling (soft) area. The ban on trade with South Africa is

Indian Finance

8 April 1961

only of academic interest. Some trade via Mozambique or Rhodesia will always go on. Full protection for auto accessories is ensured and programmes for expansion may be encouraged. The curtailment of spice imports is meant perhaps to put down luxury expenditure but betenut prices will stay up and the higher import duty will help only the local grower. Agricultural protection is now built into the tariff and may render price support superfluous in the case of grains or pulses. The fiscal policy haltingly pursued over a decade has gone far beyond discriminating protection to the imposition of Buy Indian on developing industries and this too might well claim the notice of countries committed to helping India. The demand that imports should be paid for in rupees may savour of very little liberation when exports fetch foreign exchange and there is a desire to obtain more by selling more. Higher prices at home for oils and oilseeds may have to be dealt with soon. The outlook for tea may be good but prices of jute manufactures must be reduced. That may involve an arrangement with Pakistan going beyond the limited agreement in force. The import cuts will be viewed now as a reminder to the friendly countries to give more attention to pressing needs and India's further development will have to be paid for by deferred payment. The exporters will seek guarantees from their own governments and that may entail a review of collaboration agreements on the part of Italy, and West Germany. But import restrictions may also blunt the keenness of competition in giving aid to India as an under-developed country that may cut into the market for Belgian steel or chemicals as well as Japanese engineering products.

TAX

Pay As You See

A clue to the state of the film trade in Andhra Pradesh is found in the analysis of Entertainment Tax collections in the State. In the first quarter of 1960-61, the proceeds of Entertainment Tax amounted to over Rs 21.29 lakhs and the bulk of the revenue came, as may be guessed, from people buying cinema tickets priced below Rs 1.50. The trend of revenue in 1960-61 was rising, since total revenue under Entertainment for 1959 was only Rs 70.25 lakhs. The poor showing made by Rayalaseema is due not to lack of cinemas or films, but the poverty of the region. Collections in the Circars topped the revenue got in Telengana and the regional economic disparity is reflected in both cinema collections and tax realised. The lack of flourishing film industry is, however, no obstacle to a growth of revenue in Hyderabad. Commercial tax officers collect the tax which is going up in Guntur as well as Vizagapatnam.

That urbanisation has its effect on the entertainment business is patent, and it is significant that Adoni reports bigger revenue than Warrangal at present. The entertainment tax in Madras State produces a larger revenue than that now realised in

Andhra Pradesh, one reason being the strength of the cinema habit in the South and the better theatres that sustain the habit. The spread of electricity to villages also is a factor that must be taken into account. A more important development is the reduction in length of films and the wide adherence to the 15,000 feet ceiling is a result of the excise duty on processed film. The studios are now reconciled to films that are not too long, and fans too are not opposed to entertainments that last only three hours. The latest trend is the extensive dubbing of Hindi films in local languages as a cheaper way of exploiting the success of North Indian film hits. The South Indian producer, too, is enabled to reach Ceylon and Malayan markets by this arrangement for reproduction. The bilingual productions of local stars who are able to act in Tamil and Telugu films are supplemented by the Hindi translations. Of course, successful Tamil films are produced in Hindi versions and the growing reciprocal rivalry is now attested also by Hindi film producers coming to the South to produce films in Madras, because

the cost of production is lower. Cultural exchange is now rooted in obvious economic advantages.

INSTANT BEER

Trouble Brewing

The excise authorities in Washington are set a problem by the advent of Instant Beer—concentrated but diluted with water for drinking. Instant coffee and tea followed Instant Postum, but the new beverage sets a problem for tax-gatherers, even more than brewers, who are organising against the new drink though root-beer and near-beer were gifts of the suppressed industry to the public during the Prohibition era. Union Carbide, now well set in the chemical industry, is associated with the scheme for dehydrating beer. Perhaps, crystals would come out of a blend of malt yeast and hopes, and the versatility of Union Carbide would be demonstrated beyond production of schemes or plastics. The measurement of alcoholic content and the calculation of gallonage fees

would be admittedly difficult if Instant Beer goes on the market as the ultimate in light beers, unknown to the big brewers of Milwaukee. There is certainly trouble brewing, but not for drinkers if the UCC gets into the beer business by taking the water out. For, water could be readily put in and taken out: the most valuable natural asset of old established brewers—good water that goes well with malt—would cease to count as an advantage and this may prove to be a blow to Solan as well as Burton-on-Trent—the base (or is it, Bass) of big British brewers. The invention is, of course, a feather in the cap of UCC (not a municipal group in Calcutta) and the next step may even be a take-over bid by Union Carbide for a brewery, for, an industry exposed to the winds of chance brewing, especially in the UK, provides an example of more and more mergers, with courage mixed up with Barclay and Watney added to a Mann. The lower yield offering on brewery shares after the combination movement started is an index of abounding and abiding prosperity. But dehydrated beer, perhaps more potent

HINDUSTAN SHIPYARD AT VISAKHAPATNAM

LIGHTING BY PHILIPS

An area covering more than 67,000 sq. ft. in India's only shipbuilding yard at Visakhapatnam, a project of national importance, has been installed with Philips lighting to ensure round-the-clock, working efficiently and speedily. And, this has been found so satisfactory that Philips fluorescent lighting will shortly be introduced in the rest of the establishment.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and

gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the ever-growing demands of better lightings. And hand-in-hand with Philips' unrivalled quality goes the invisible plus of Philips' international experience and know-how.

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.

PHILIPS

quality lighting
for ultimate economy

PHILIPS INDIA LIMITED

JWTP 4442A

than beer in cans spells danger to the tied houses, improved often into hotels by the bigger English brewers, and it may be noted that the embattled US brewers smell a challenge to their interests in the chemical compound. Coopers will be certainly hit, and bottle-makers, too. Canners will not go under, but custom will be lost, if beer comes in cartons for convenience.

★

REFRACTORIES

Too Much, Too Fast?

The rapid development of the refractories industry during the past decade reflects the high tempo of industrialisation in the country during the period. Refractories of various types are needed by basic industries like iron and steel besides a wide variety of other industrial units. Even as early as ten years ago, production of refractories in the country was almost negligible. During the two plan periods, however, production has increased quite sizably, output having been estimated in 1960-61 at 600,000 tons against 280,000 tons in 1955-56. The installed capacity at present is estimated around 870,000 tons. The Third Plan envisages a tremendous flip to industrialisation and the Draft Outline has estimated the demand for all types of refractories to reach a level of 1.6 million tons by 1965-66. To attain this level of production, installed capacity of 2 million tons has been envisaged.

But Mr A. Banerji, Chairman of the Indian Refractory Makers Association, is not in agreement with the Draft Outline's estimate both as regards the demand and the quantity of the various types of refractories required during the Third Plan. In his view, the estimates are on the high side and he points to the fact that, already, production is running ahead of demand in support of his contention. He goes on to argue that the present level of demand may be considerably reduced in case the steel industry carries out its proposed changeover to an all basis practice. In this view, therefore, it will be prudent to slow down the pace of expansion of the industry. It is, however, to be noted that the statement that the industry's production is already ahead of demand does not make the position quite clear. For, there appears to be a shortage in regard to certain specialised items. It would appear that, in order to attain self sufficiency in these items, new plants have to be established by importing both machinery and know-how from abroad. But Mr Banerji believes that the demand for all kinds of refractories can be fully met from indigenous production. In the first place, he wants a fresh and realistic assessment of the potential demand for specialised refractories items. This, he is confident, will reveal that the future requirements will not be as large as estimated by the Draft Outline. Secondly, by making known the requirements of the various kinds of refractories sufficiently in advance, the indigenous refractories will be enabled to adjust their production programmes in such a way as to keep the markets

supplied with the right kind of refractories and the correct quantity from time to time.

Like many an industry, the refractory industry has also been obliged to put up with transport bottlenecks and coal shortage, two of the common handicaps in the industrial scene of today. The refractories industry has another obstacle in the unhealthy competition offered by middlemen in obtaining leases for suitable properties.

★

CIT

Too Little, Too Slow

The annual report on the operations of the Calcutta Improvement Trust for 1959-60 outlines the various development programmes it carried out. The progress in housing schemes is impressive. The Trust has so far constructed 29 three-room flats, 332 two-room flats, 154 one-room flats for the general public, 660 one-room flats for individual workers, 800 one-room flats for bustee dwellers and 2 big hostels for working women living singly and requiring cheap and well protected accommodation in healthy surroundings. Besides, 880 flats for bustee dwellers and 840 for industrial workers are nearing completion. The total expenditure on land acquisition for these buildings amounted to Rs 5,08.74 lakhs and on engineering works Rs 4,08.45 lakhs.

One notable feature in the development activities of the Trust is the shift of emphasis from exclusive pre-occupation with roads, sewers, and development of land for sale to other activities on which attention paid hitherto was niggardly. Of late, the responsibility for providing alternative accommodation to the evicted persons has been assumed by the Trust. Another extension of activity is the provision made for increasing the facilities for sports—the construction of a stadium is an instance in point—and other centres for healthy recreation. The Trust is also thinking of building a gymnasium, a few public tennis courts, swimming pools, and if possible an indoor stadium and a boxing ring. The change introduced in the method of approach in framing the schemes is another useful innovation by which the essential requirements of bustee areas are ascertained. Almost a fifth of the bustees in Calcutta has been covered by the survey so far.

The new policy adopted by the Trustees in disposing land by lease in lieu of outright sale has proved advantageous in more than one respect. In addition to checking the reappearance of squalid conditions, it helps the people belonging to low and medium income groups to acquire lands for house construction without recourse to competitive bidding which invariably relegated them to the background.

Praiseworthy though the schemes formulated by the Trust are, due to the non-availability of adequate funds many of them will have to be shelved. The Budget estimates of the Trust for 1961-62 discloses a deficit of Rs 1,22,000, the revenue receipts being placed at Rs 92,17,000 and expenditure at Rs 93,33,055. The

revenue receipts for the Budget year indicate a shortfall of Rs 7,59,000 from the revised estimates for 1960-61. It is to be noted that the requirements for the improvement of the City are enormous but the resources at the disposal of the Trust are unfortunately limited. In order to meet the capital expenditure for the Budget year the Trust has decided to float a debenture loan of Rs 50,00,000. As for capital receipts, apart from loan and some subsidy for housing schemes, the only source from which receipts in any substantial amount can be expected is the revenue from the sale of land. All the available land has been disposed of, and fresh land will be available only after the completion of engineering works, but the receipts from this source will not be sizeable.

★

OIL

Also, Trouble Brewing

Sales of Soviet oil abroad since 1959 are up, because a rising output at home with a promise of 50 per cent increase in the next 5 years demands new outlets. Competition by price-cutting proves a threat to the Middle Eastern producers who live mainly by oil exports. In Latin America the arrival of oil from the USSR is hailed, as surplus goods like coffee or cocoa are shipped to the Soviet Union in exchange. A deal made with Italy ensures supply of synthetic rubber and steel pipes. The latter are needed for pipelines across the Ukraine to the Baltic from Baku. The US oil companies are worried because in Asian markets Russia can offer lower prices and take mineral ores or raw materials instead of cash. The help offered in locating and exploiting local oil resources also makes for Russian popularity.

A possible result of the Russian trade drive may be the further decline of coal consumption in Eastern Europe, creating a problem for Poland. The USSR may have more coal to spare, but expansion of steel output will curtail the surplus. The Russian entry into Asian markets and like Pakistan may force the major oil companies to think of lower bulk prices. Higher taxes on oil may prevent any fall in retail price, but in future exploration can be financed by the higher revenue. The recent entry of Russian oil into Ceylon is due to the Ministry's desire for more trade with the Communist bloc, and the breach made in the old monopoly is also a sign that Ceylon's rubber is wanted by Russia. References to jumping by Russia miss the point that oil is taken from the bowels of the earth and shipped, and Russia is not investing heavily for developing new oilfields. There is also the fact that the major Anglo-US companies have secured already all the oil and markets available and Russia has to make an entry by trying to sell to Ghana or Ceylon. In any case, over 50 years in Europe, the big companies have made big profits and the entry of Russian oil has only anticipated the entry of oil from the Sahara into European markets. The Algerian peace will perhaps pose a bigger threat to Royal Dutch-Shell interests.

Indian Finance

COTTON MILLS

Too Old and Rickety

Never before in the history of the Indian cotton textile industry has the importance of modernisation been so keenly felt as it now is. Many a Committee has been appointed since independence to enquire into the working of the industry and to evolve suitable measures for the complete renovation of plant and machinery. But the effects on the industry were pronouncedly insignificant and the position is that much still remains to be desired. In 1959, another Committee was appointed, by the Government of India on the recommendation of the National Industrial Development Corporation. The nine-member Working Group, headed by Mr D. S. Joshi, has submitted its report to the Government. Most of the recommendations were accepted by the Government. The response from the manufacturing units to the questionnaire of the Group was not quite helpful. Nevertheless, the Group has estimated the cost needed for the renovation of the industry at Rs 180 crores.

It has been revealed by the Group that, barring a few units, the industry on the whole was quite unimindful of its part in the modernisation programme. The Government's attitude, as alleged by the representatives of the industry, also acted as a disincentive. Whatever may be the causes for this none too happy position, the problem of renovating the industry cannot brook any delay, especially in the context of the major role the industry plays in earning much needed foreign exchange.

The Working Group, in its report, has strongly emphasised the fact that the problem of renovation of the industry has assumed its present huge dimensions largely due to the outmoded machinery installed in the majority of the mills and the neglect of them during the war and post-war years. As the Group remarks, modernisation "is not merely a question of installing the latest machinery and equipment but it is a multiphased problem which should be conditioned by the availability of finance, the degree of labour displacement and the need to ensure a maximum standard of efficiency in all units." It becomes, therefore, apparent that failure to effect timely modernisation will leave the industry including labour in a position "of great disadvantage." In this context, the Group's recommendation to liberalise NIDC's terms and conditions for loans will be widely appreciated by the industry. It has also been suggested that it would be advisable for the NIDC and public financing agencies to issue sizeable amounts by way of equity capital to mills which are in need of rehabilitation and modernisation.

The Working Group has also drawn the attention of the Government to the inevitability of a certain amount of rationalisation in the process of modernisation. Since the problem of rationalisation is bound to vary from mill to mill, it is desirable to appoint a suitable machinery which would analyse and help

8 April 1961

resolve the problems of each individual unit. The Government should also assume adequate responsibility in the implementation of the recommendations of the Working Group, falling which the process of modernisation is likely to be spasmodic.

★

CONFECTIONERY

A Sweet Tooth Wanted

During the Second Plan period, the confectionery industry in India made considerable headway in both production and quality. The production target of 10,000 tons has not only been exceeded but was achieved as early as 1957. Production by the organised units in the last year of the Plan amounted to 13,000 tons. The output from the sundry branded units is expected to total 3,000 tons. The improvement in the sugar supply position was one of the contributing factors for the enhanced output, while the growing demand for quality confectionery was another matter of equal importance. And if the current trend persists, the industry will not fall behind to reach the ambitious target of 25,000 tons fixed for the Third Plan.

It will be misleading, however, to deem that every thing on the confectionery industrial front was quiet. One of the disquieting features was that nearly 75 per cent of the installed capacity was left idle. The utilisation of the full capacity can be made possible only if the demand for the industry's products improves both internally and in the export markets. The prevailing high prices pose a serious impediment. Only a drastic reduction in the cost of production can produce any substantial result. The prices of raw materials are ruling at high rates. For example, the sugar price in India is ruling at Rs 40 per maund as against approximately Rs 15 prevailing in the world markets. In countries like Australia, sugar is supplied for industrial purposes at subsidised prices. The adoption of a similar policy in India will be of immense benefit to the confectionery industry. The principle underlying this proposal is already being acted upon by the Government of India in the case of a number of excisable commodities like power alcohol, cotton fabrics and tea waste. If the industry offers its products at reduced prices, the scope for enhancing internal consumption appears to be bright. Another factor that contributes toward the comparatively low demand for quality confectionery in India is the unhealthy and unfair competition which the organised sector of the industry has to face from cheap hand-made confectionery, manufactured under unhygienic conditions with ingredients of doubtful quality. The enactment of the Prevention of Food Adulteration Act in 1954 was a salutary measure to check the production of spurious and impure brands of confectionery, but the failure of the State Governments to enforce the Act rigorously left its objective unfulfilled. Only the strict enforcement of the Act can rectify this malady.

Another manner by which the in-

dustry can utilise more of the idle capacity is the establishment of a stable and permanent market abroad. In spite of the high quality of confectionery produced in India, its competitive ability in the world markets has been whittled down by the high prices.

★

NCAER

Solid Achievement

The Rs 11 lakh building of the NCAER, which was formally inaugurated by Rashtrapati Rajendra Prasad recently, is symbolic of the solid achievements of this organisation since he inaugurated the Council four years ago. During this period, as Mr V. T. Krishnamachari, the Chairman of the Council, recounted, the NCAER had completed no less than 62 projects sponsored by State Governments and Central Government departments as well as by public bodies and industrial and other organisations in the private sector. These include techno-economic surveys, taxation studies, demand forecasts for consumer and capital goods, studies of managing agency system, replacements costs, etc. The recent survey of Taxation and Private Investment is an outstanding exposition of the case for readjustment of the system of direct taxation, towards which a considerable step has been taken in the latest Budget.

Apart from sponsored projects, the Council has also undertaken research projects on its own—as for instance survey of savings in Delhi—and has in hand a sample survey of savings and incomes of urban households and all over the country. But what it can do in this field is limited by the funds at its disposal, and as the Director General has pointed out, the Council are ruling at high rates. For example, the sugar price in India is ruling at Rs 40 per maund as against approximately Rs 15 prevailing in the world markets. In countries like Australia, sugar is supplied for industrial purposes at subsidised prices. The adoption of a similar policy in India will be of immense benefit to the confectionery industry. The principle underlying this proposal is already being acted upon by the Government of India in the case of a number of excisable commodities like power alcohol, cotton fabrics and tea waste. If the industry offers its products at reduced prices, the scope for enhancing internal consumption appears to be bright. Another factor that contributes toward the comparatively low demand for quality confectionery in India is the unhealthy and unfair competition which the organised sector of the industry has to face from cheap hand-made confectionery, manufactured under unhygienic conditions with ingredients of doubtful quality. The enactment of the Prevention of Food Adulteration Act in 1954 was a salutary measure to check the production of spurious and impure brands of confectionery, but the failure of the State Governments to enforce the Act rigorously left its objective unfulfilled. Only the strict enforcement of the Act can rectify this malady.

Another manner by which the in-

dustry can utilise more of the idle capacity is the establishment of a stable and permanent market abroad. In spite of the high quality of confectionery produced in India, its competitive ability in the world markets has been whittled down by the high prices.

UTTAR PRADESH

Little Progress, Dim Prospects

The presidential address of Mr H. L. Khanna to the 73rd annual general meeting of the Upper India Chamber of Commerce provides an interesting study of the problems relating to the industrial development of

Uttar Pradesh. The focus of the speech was on the relative industrial backwardness of the State and the steps necessary to intensify development. Though two five year plans have been implemented, UP has made no great progress in catching up with more advanced States in industrial development. It is significant that the Heavy Industries Committee of UP has estimated that while per capita investment figure for the whole country was likely to increase from 20 in 1952 to 57 in 1961, for UP it is likely to go up from 11.5 to 20.6 only. This provides a measure of the leeway that the State has to make in stepping up investment. The case for strong measures to sustain more rapid industrialisation of the State has acquired a new urgency in the context of the higher rate of increase in population which the latest census results have indicated for the last decade. While in the decade 1941-51 the population increased by 12 per cent the latest census has shown a further increase in the rate of growth at 16 per cent. It may be admitted that in the matter of effecting a radical break through in industrial development, the State is handicapped by shortage of developed power supplies. Apart from the disadvantage of being situated away from the coal belt, development of alternative sources of power has not been enough to meet industrial requirements.

In this background, the task of industrialising the State is seen to assume grave dimensions. The problem, according to Mr Khanna, is not one of lack of potentials, for, the report of the Heavy Industries Committee appointed by the Government has indicated scope for the development of such industries as paper and pulp, ceramics, plastics, heavy chemicals and fertilisers and electrical and light engineering industries.

Along with the evident improvement in the domestic economy of the US has come a notable improvement in its international balance of payments.

To quote the US Department of Commerce, the US balance of payments position has "improved considerably" during the early months of 1961. What is more, the Department also is able to report that the outflow of gold slowed markedly in February and for "some weeks now has stopped entirely". The gold price in London, it notes, has returned to the normal range and speculation has been noticeably dampened.

As a matter of fact, if the Department's report had been prepared just a little later than it was, it would have been able to point out that the US actually gained \$11 million in gold reserves a week ago. This was the first increase in the gold stock, except for transactions with the International Monetary Fund, since July 1959, and the largest gain since December 1958.

Last year, the US experienced a \$3,800 million deficit in its balance of payments, which means that US spending, giving and lending abroad exceeded income from exports and other foreign transactions by that amount. Of the total, other countries took \$2,100 million in dollars and other short-term assets and \$1,700 million in gold.

It now appears that \$1,200 million of 1960's deficit of \$3,800 million occurred in the final quarter of the year. No definitive figures are yet available as to the extent of the improvement in the first quarter of 1961, but there is reason to believe that the deficit may have dropped to or below the \$600 million of the first quarter of 1960.

Many experts here believe that actions of the Kennedy administration have contributed markedly to this favourable trend. President Kennedy, they recall, made it quite clear soon after his inauguration on 20 January that the dollar would not be devalued, and that one of his basic aims would be to end the imbalance in the payments position.

In addition, the Kennedy administration has followed a policy that discourages further declines in short-term interest in rates in relation to rates abroad. Such interest rate declines in 1960 contributed to the movement of funds out of the country, and hence to the large balance of payments deficit.

Now, some officials are said to suspect that not only has this movement stopped, but that some of the money may even have started to return to the United States. For substantiation of this view, they point to the recent \$11 million rise in gold reserves, following two weeks in which the gold stock held level.

Just how much of an improvement the United States will achieve in its balance of payments position this year will depend not only on the movement of funds, but also on the trade trends with the rest of the world. Last year, despite the adverse payments balance, the United States actually chalked up a substantial trade surplus—an excess of exports over imports—of close to \$5,000 million.

This surplus, which is indicative of the ability to compete in world markets, is a further source of con-

fidence in the international position of the United States. And now an important official of the Department of Commerce—Rowland Burnstein, Assistant Secretary for International Affairs—is on record as forecasting further increases in both exports and imports. Addressing a meeting in New York of the International Executive Association, he expressed confidence that American business, backed by a thriving domestic economy and rising productivity, can capture a larger share of the world's expanding trade.

Similar confidence in the situation has been expressed by a distinguished foreign banker. According to Dr Marcus Wallenberg, Vice President of the Enskilda Banken of Stockholm, Sweden's largest private commercial bank, the position of the US dollar is virtually impregnable. In an address in New York to the Swedish Chamber of Commerce in the USA, Dr Wallenberg noted that "American industry can hold its own qualitatively and quantitatively, both at home and abroad." He pointed out that the United States has gold reserves, plus drawing rights on the International Monetary Fund, that aggregate a substantial \$22,000 million. But even these resources do not entirely state the case, he observed, since they do not take into account the enormous productive capacity and expansionary forces of the US economy which also bulwark the dollar.

Since the US dollar is held widely and in large amounts around the world, and is such an important support for international commerce, it is Dr Wallenberg's conclusion that it is in the interest of other countries to help keep its position strong. "The most important objective in the field of international currency policy," he noted, "is to try to restore the equilibrium in the American balance of payments."

BELGIUM

Communists Eclipsed

The grave riots in December forced an election on Belgium suddenly. The Congo crisis became a factor in the recent poll which has thrown the Catholics out of their stride. But the Socialists who condemned the austerity measures are not in a majority and the Liberals may join a coalition to keep M. Spaak out of power. That may well lead to trouble, if labour is militant as before. The King, of course, has powers to deal with a crisis and the risk of a regional conflict between the North and South is probably absent. The elections may lead not to a sudden return of fugitive capital, but to the restoration of order in the coal mines. The economic situation will have to be dealt with: and the UN warnings about meddling in Katanga will have to be taken to heart soon. The Gaullist solution is ruled out in Belgium, for, the Catholic party outside the Left will prefer to ally itself with the Liberals in the hope of continuing

a foreign policy that till 1960 looked promising. The NATO powers will assume that like Italy one of the partners is undecided despite the Catholic left remaining the biggest party. Whether the election results will affect thinking in West Germany is not one of the issues raised at present. But the old men in Bonn will see that the party system and proportional representation do not hamper the socialists too much. The eclipse of the Communists was expected, as there is no Royal question to exploit and the Senate is a bulwark of tradition required by the partition in 1830. For, it is necessary to recall here that, like India, the Low Countries were partitioned on the basis mainly of religion and a solution was devised chiefly to prevent absorption by France whose influence in culture is still a factor in politics. The friendly Great Powers during the essential interval will perhaps give advice to the new ex-Colonialist power, and Mr Kennedy may be a better adviser since he is a Catholic (of the secular variety, it may be added).

AUSTRALIA

Progress and Prospects

In spite of the rise of many new industries based on minerals, it is usually said that Australia is underdeveloped. It needs more people as well as funds and some now expect that British immigrants from Natal may come over in numbers. Australia's eagerness to sell wool and wheat to Japan is a sign that the war is forgotten, also that Australia does not look to the UK for trade and aid. That Australia's population problem is the reverse of India's present problem is a commonplace. The home market for paper or sugar can be small at best and if housing calls for more outlay, taxes will go up even under a non-Socialist Government. The rate of investment in Australia in recent years has been over 25 per cent of national income. A country that does not plan shows far bigger results than India and external aid has been negligible, as Sir Douglas Copland has pointed out. The public sector invests only in public works, while the vigorous private sector makes maximum use of reserves built up from profits. There is perhaps a lesson for India, as also in the fact that budgetary surpluses have been invested in the power programme and irrigation or forests. The borrowings is minimal: so is deficit financing. The borrowing might increase further, for the present generation cannot bear more taxes, as Sir Douglas notes, and this too may make for some liberality in import policy.

Australia's new lines of production include cotton drill made at home, machine tools and even lager beer. This will only indicate that scope for Indian exports is very limited, whether exports are in the form of raw materials or manufactured goods.

Indian Finance

A feature of Australian manufacturing activity is the link with foreign firms preserved by local enterprises in the case of electrical goods or plastics. A point to remember is that Australian has gold plus other minerals and the Commonwealth's coal output in 1960 exceeded 33.5 million tons. The home market rests to some extent on hire purchase facilities and credit curbs affect demand though strict credit policy means more capital for the debentures issued by public enterprises since 1958. Full employment is a result of secondary industries' growth after the war and Australia now makes cement, boots and shoes as also newsprint. Iron and steel output at 6 million tons a year puts Australia far ahead of India and the Australian standard of living described as the true sovereign can be measured by the numbers of cars and trucks used—over 2.5 million.

SOUTH AFRICA

Deprotected?

What happens after 31 May to the three British protectorates left in South Africa is in a way settled. The Union cannot annex them, but their development may call for a big effort. Not Bechuanaland but the smaller Swaziland appears promising to go by an economic survey. Development requires capital, and the South African ports are needed for ending isolation. Asbestos is the major asset offered for shipment and chipboard on a small scale is now made, because of the local forestry programme. European settlement in Swaziland hereafter may be deliberately encouraged and ranchers may find the high veld suitable. Rich iron ore for export may help to supplement resources. The limited rapid irrigation hampers increase in food production but Swaziland, if it is to escape economic pressure, will have to grow maize not oranges. The new decimal currency (of Rand=10 sh and cents) links the three Protectorates with South Africa and Portuguese East Africa may help to preserve communications. If South Africa is the only market for surplus labour and vegetables or fruit grown in Swaziland, the major asset is iron ore, wanted now for the State steel works in Transvaal. In theory, paper can be made with local pulp and bagasse got from Natal, but Swaziland is one orphan whose future depends on South African attitudes to the Commonwealth. The usual analysis of possibilities only shows that the protectorates cannot exist without Pretoria's approval. The UK High Commissioner may plan reforms and expanded Councils but the South African Government controls harbours and railways. And the future of Swaziland or any other area depends on Britain treating South Africa just like Eire, a country that has left the Commonwealth owing to historical reasons. The ardour for Apartheid today is only one of the reasons for the break. The expansion of British Colonies at the expense of the Boers or the irruption of an alien capitalism may be mentioned by those who look to the root of disputes.

8 April 1961

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IT is characteristic that the Bombay Chamber of Commerce should have celebrated its 125th anniversary with an extraordinary lack of fuss. The PROs and the general noise-makers have been firmly held in check. The only "brochure"—a word, by the way, that gets my goat because of its overtones of glossy vapidness—that the occasion has produced is the thoughtfully utilitarian one on Investment in India, a factual survey prepared by Mr Barry Barker. An extremely competent piece of work, it is not, nor was meant to be, anything so pretentious as a foreign investor's Baedeker. But intending entrepreneurs will find in it the equivalent of a good airline's tourist guide designed to tell you where to stay and where to shop and what forms to fill—among other contingencies, when you want a liquor permit. I am glad to see that more investment meteorologists are veering round to the view I canvassed in these columns sometime ago: opportunities rather than incentives need emphasis. This is evident from the fact that Mr Barker does not set out to answer the question whether it is worth while to invest in India but what should be done once the decision to do so is taken. The industrial policy resolution (usefully quoted in full) and other relevant legislative and administrative data are discussed less in terms of their absolute merits and demerits than in terms of their practical import. Tax laws and foreign exchange are discussed more in terms of a hypothetical Mr Brown wanting to fill a return for the tax department or the Exchange Controller than in those of a sales talk (or a scare ad) to an intending investor. Mr Barker provides expert guidance through the maze of licensing procedure, company law pitfalls and other procedural snares for which the foreign investor will be grateful. Mr Barker makes a valid point that we, in our anxiety about attracting investors, are sometimes apt to forget: Bureaucracy is not our exclusive misfortune and governments all over the world have injured us to the terrors of form-filling. So our procedures are not, by themselves, likely to scare people away, but they must be told what to do and where to sign. The severely practical purpose of the publication is to be seen in such data that it gives as "Targets for India-

nisation", list of industries that enjoy tariff protection, list of holidays and modes of calculating dearness allowance, etc. The information provided is upto the minute, including as it does the provisions of the latest finance bill.

The Government of India is reported to be abandoning, at any rate for the present, the idea of public participation in the share capital of public undertakings. I consider this a great pity for here was a form of socialism that had much to commend it. As far as I know, the first serious attempt to examine the implications of the idea at a political level was made by Mr Hugh Gaitskell, in the pages of the Socialist Commentary before he became the leader of the British Labour Party. If his party had secured a parliamentary majority in the last election, we might even have seen some practical examples of the idea. As Mr Gaitskell conceived it, it was a more acceptable alternative to nationalisation—Clause Four had not become the contentious issue it became later. He linked the idea with the collection of death duty in kind and Government going into the real property business in a big way. This was to secure the twin-result of avoiding distress selling for paying duty in cash and the painless extension of socialism. Interestingly, Gaitskell wanted a minority holding of about 49 per cent for the Government. He argued in effect that Government should be rather like the dumb shareholder who would normally be content to sign the proxy form and let the city men run the show so long as he got his dividend. Such self-effacement in an avowed socialist would surprise many socialists here, because of our comparative immaturity of our own brand of socialism. But the practical good sense of the idea will be evident to anyone who is neither as suspicious nor as self-sufficient as our socialist theoreticians. Decentralisation is almost always discussed in our country only in the context of Panchayat Raj and other sacred cows of that ilk. But, I cannot see any reason why Government should not have the best of both the worlds by having just enough power to keep the management in good behaviour and at the same time not be bothered with the day-to-day, res-

ponsibility of running a business. Here is division of labour and devolution of power par excellence. In fact, the LIC, both in its original intentions and in its actual working is an excellent example of the Gaitskellian infiltration of socialism. The LIC is probably the biggest real property owner in the country today. And though its earlier ventures as a shareholder were rather unfortunate, it is perhaps the most assiduously wooed investor today. Mr Gaitskell also had visualised the stabilisation of the stock market by the kind of open market operations that originally formed part of the operational technique of the LIC.

It is true there are practical and psychological difficulties in government being a minority shareholder in a company in India. The whole basis of our socialism is that government has entrepreneurial ambitions and scorns the role of a lazy gatherer of unearned income. (If enthusiasm for profits from State enterprises that is currently evinced endures long enough, we may even see the end of what many will consider the least earned in- come of government, viz, tax). At the practical level, sound entrepreneurial traditions are not entrenched firmly enough in India as they are in Great Britain for government to be a passive shareholder.

But even the idea of a symbolic association of the public with public undertakings is now being given up for reasons that are not very flattering to the Government. The truth is, Government which is often loftily contemptuous about managements, is in effect funkling the ordeal of an Annual General Meeting. It is also shying away from the rough and tumble of the stock market and is afraid that the shares it has to offer may find no buyers. This last fear seems to me to be exaggerated, especially since it seems to be founded on the current low profitability of many of the Government companies. As Government must be aware, many shares with growth potentialities are readily enough bought on the Stock Market though they have no immediate returns to offer. There is no reason why similar considerations should not operate in the case of shares offered by Government for sale. Indeed, it would be poor advertisement for socialism if it is to be tacitly conceded that these shares have no future, because their present is bad. Government has certain advantages associated with its prestige and automatic right to demand, on grounds of patriotism, all support for it from the public. On the whole I am inclined to think that Government has been more chicken-hearted than it need have been on the possibilities of the idea. It is worth while to have second thoughts on the subject, if only because of the great potentiality the idea has for breaking new grounds in socialist forms of organisation.

The United Commercial Bank Limited

Success of Third Plan Depends on Mobilisation of Resources
for the Banking System

Stringent Credit Conditions Continue

Deposits Decline but Profit Maintained

Mr G D Birla the Chairman, on Credit Curbs

The following is the statement of Shri G. D. Birla, Chairman, circulated to the Members at the Eighteenth Annual General Meeting held on Wednesday, the 5th April, 1961:—

Gentlemen,

You will notice from the Directors' Report and the Accounts of the Bank for the past year now before you that while the profits have maintained their upward trend and show a satisfactory expansion, our deposits were somewhat down after the rapid increases of the past years.

DEPOSITS

The deposits at the end of 1960 at Rs. 88.94 crores showed a decline of Rs. 7.74 crores against a rise of Rs. 18.40 crores in 1959. The fall is attributable to withdrawals of funds for business purposes, the sustained demand for bank credit and continued stringency of money practically throughout the year. The deposits of the Bank, however, have started going up since the date of the Balance Sheet.

ency of money practically throughout the year. The deposits of the Bank, however, have started going up since the date of the Balance Sheet.

CASH AND SECURITIES

Cash on hand and with banks and money at call and short notice were Rs. 9.57 crores and represented 10.8 per cent of the deposit liability. In 1958 and 1959 we made substantial purchases of Government Securities with a view profitably to invest funds which would otherwise have remained idle, but during the year under review we reversed the process in order to make funds available for advances to our customers. As a result of the realisation of part of our investments, our portfolio of Government Securities, Shares and Debentures declined from Rs. 40.79 crores to Rs. 33.88 crores. There was a further vigorous demand

for funds towards the close of the year which was met by resort to loans from the Reserve Bank of India against Government Securities and Bills.

ADVANCES AND BILLS

Our advances rose over the year from Rs. 36.57 crores to Rs. 42.47 crores while our bills discounted and purchased showed a small reduction from Rs. 19.68 crores to Rs. 18.91 crores.

The Bank has been providing credit facilities to various types of Small Scale Industries. The number of industrial units to which credit facilities have been made available is over 650 of which individuals and partnership firms number nearly 550 and joint stock companies make up the remainder. The total of limits sanctioned is of the order of Rs. 4 crores and the actual availments exceed Rs. 2.50 crores.

LIQUIDITY

Our quick assets, viz. cash and free Government Securities amounting to Rs. 35.00 crores formed 39.4 per cent of our total deposits. The total of our liquid assets consisting of cash on hand and with banks, money at call and short notice, unencumbered Government Securities and Bills amounted to Rs. 53.91 crores and represented 60.6 per cent of our deposit liability as compared to 67 per cent twelve months ago.

PROFIT & LOSS ACCOUNT

The year's working has resulted in a further rise in profits. This is due in a large measure to the higher average total of our advances and bill throughout the year, the operation for a full year of the reduction in interest rates on deposits which took effect from 1st September 1959 and the increase in the lending rate brought into

8 April 1961

effect under direction from the Reserve Bank of India in October last. The improvement of profits attributable to these influences was partially offset by the lock-up of funds in special accounts with the Reserve Bank of India which could otherwise have been used to liquidate the higher-interest-bearing loans from the Central Banking Institution.

The small rise in charges for interest on deposits and borrowings is due to the higher average level of borrowings from the Reserve Bank of India over the greater part of the year while working expenses like salaries and other operating costs have continued to rise.

The increased profits have enabled the Board to transfer Rs. 30 lacs to the Reserve Fund and thereby raise it to Rs. 2.05 crores, which is Rs. 5 lacs more than the paid-up capital of the Bank, and at the same time it has been possible to increase the rate of dividend to share-holders from 11 per cent to 12 per cent per annum, subject to tax. The amount allocated for bonus to staff has also risen from Rs. 11 lacs to Rs. 13 lacs.

RESERVE FUND

The year 1960 will be remembered as a landmark in the Bank's history, as at the close of this year, the Bank's Reserve Fund exceeded its paid-up capital. This Reserve Fund is built up entirely out of the profits within 18 years of the Bank's existence—that too in spite of heavy taxation. It is always the policy of the Directors to strengthen the Reserves of the Bank to safeguard the interests of the depositors. I am thankful to the shareholders for their restraint in being content with modest dividends in the early years of the Bank's career to enable the Bank to build up the Reserves in order to strengthen its financial position. This is not to say that the shareholders have been starved of reasonable dividends because with growing prosperity, the Bank has paid progressively higher dividends.

INDUSTRIAL GROWTH

During the year under review industrial production grew at an accelerated rate. In the first ten months of 1960 industrial production showed a rise of 11.5 per cent as compared with 8.7 per cent in 1959 and 1.7 per cent in 1958. The basis of calculation of these index figures themselves requires to be re-cast inasmuch as it is felt that the weightage given to some of the older industries is not justified in the present circumstances and that the many new industries which have come into existence have not been assigned the importance that is rightly due to them. A provisional re-calculation by foreign experts of the index on a more rational basis would appear to indicate that the increase in production in the first ten months was not 11.5 per cent but 15 per cent.

MONEY SUPPLY

Money supply with the public at the end of 1960 was Rs. 2630 crores made up of Rs. 1885 crores of currency with the public and Rs. 745 crores of deposit money, i.e. demand deposits of the public with all the commercial banks. The increase in currency was Rs. 144 crores while the increase in deposit money was only of the order of Rs. 70 crores. Analysing the expansion of money supply in terms of bank credit, there was a sharp rise of Rs. 236 crores in the public's net indebtedness to banks which contrasts with a sizeable decline of Rs. 107 crores in 1959. The rise in bank credit to Government was only Rs. 43 crores in 1960 as compared with Rs. 246 crores in 1959. The gold and foreign exchange reserves, inclusive of the balances of Government of India abroad, declined in 1960 from Rs. 387.54 crores to Rs. 319.05 crores. The contractionist effect of the reduction in bank credit to Government and the decline in foreign balances has been severe and is reflected in the reduced liquidity of the banking system.

MONEY MARKET

The monetary climate in 1960 was far from comfortable and for the best part of the year the banking system had to operate under various restraints. Credit conditions were stringent, unrelieved by even occasional ease, and there was no sign of any downward tendency in advances during the second half of the year which, by tradition and past experience, is considered as the slack season. Bank credit rose rapidly, as usual, during the first four months of the year and thereafter the volume of credit continued, without contraction, at the peak figure of the year right up to the middle of December when the new season's demand made itself felt and advances, once again, resumed their upward trend. The increase in bank credit during January–April 1960 amounted to Rs. 165.89 crores while during the same period the deposit resources of the banks failed to grow to a corresponding extent but rose only by Rs. 102.56 crores. Whereas in 1959 bank credit shrank by Rs. 97.5 crores in the slack season there was no such contraction in the slack season of 1960; the return of funds from agricultural and other seasonal advances was obscured by the intervening increase in industrial advances. The exhortation addressed to banks by the Reserve Bank of India in April 1960 to bring about a reduction of Rs. 110 crores in advances by the following October proved impossible of fulfilment by most banks. Borrowings from the Reserve Bank of India and the State Bank of India reached the peak figure of Rs. 96.26 crores in March 1960 against Rs. 76.65 crores in March 1959. But, whereas in 1959 the banks were practically out of debt with

the Central Banking Institution by June, the experience of 1960 was quite otherwise. During the slack season of 1960 the average borrowings of the scheduled banks from the Reserve Bank of India and the State Bank of India were Rs. 46.90 crores against Rs. 10 crores in 1959.

CREDIT CURBS

Early in March 1960, the Reserve Bank of India, presumably somewhat anxious about the size of the expansion in advances during 1959–60 busy season, came to the conclusion that there was excess liquidity with the banking system. Consequently, banks were required to maintain with the Reserve Bank of India special deposits amounting to 25 per cent of new deposit resources accruing with them after the specified date. Two months later, in May, the additional deposit requirements were raised to 50 per cent of new accruals. The selective credit controls of the Reserve Bank by directive ensured that banking finance was not available, only upto specified limits, against particular commodities. At the same time the Reserve Bank of India made it clear that the object of the new measures was by no means to deny bank finance for legitimate productive enterprises. Since industrial production, in fact, grew stridently during the year, the expansion in the advances of the banking system can be seen to have been fully justified. But, with the accrual of deposits slowing down or ceasing altogether to take place, the fact that advances were sustained at a high level imposed a considerable strain on banks under conditions of restricted liquidity.

By September 1960 it was clear that the banks would be quite unable to bring about a contraction of advances of the order of Rs. 110 crores as desired by the Reserve Bank of India. Indeed, bank credit, which had gone up to Rs. 1130.38 crores on the last Friday of April, rose still higher to Rs. 1135.82 crores on the last Friday of September. In this knowledge and with the 1960–61 busy season not far off, the Reserve Bank introduced a fresh set of monetary measures. Banks were directed, with a view, no doubt, to inducing some voluntary restraint on would-be borrowers, that they should raise the average rate charged for their advances by half per cent and prescribed a minimum of 5 per cent for advances. Secondly, on the analogy of regulation Q of the Federal Reserve Board's rules to which I have in earlier years made reference, the Reserve Bank of India set a ceiling on the rates of interest that banks could pay on very short deposits for periods of less than 21 days or repayable at 21 days' notice or less. Thirdly, the Reserve Bank of India also fixed quotas upto a maximum of which alone banks would be permitted

to borrow at the bank rate of 4 per cent. Thereafter, in two slabs, the rate of interest payable on borrowings from the Reserve Bank of India was raised to 5 per cent and 6 per cent. This, in effect, set up a three-tier bank rate. Hence, with the level of commercial banks' borrowings from the Reserve Bank of India relatively high for the season, the new regulations induced a fresh wave of disinvestment in Government Securities accentuating the weakness in the gilt-edged market already brought about by the mass of State Loans pressed for sale on an unwilling market. The investment of scheduled banks in Government Securities declined from Rs. 787.52 crores in December 1959 to Rs. 744.86 crores in May in the first phase of disinvestment followed by a further decline to Rs. 633.47 crores in the second phase following the credit curbs. The running down of investments to a low level in relation to deposits would by itself act as a brake on the willingness of banks to sustain the continued up swing of advances expected to the extent that the bill market scheme affords relief.

Since the turn of the year, in view of the pressure upon the resources of the banking system, the Reserve Bank has defroze the special deposits which had been maintained. However, all that this meant was that, in the relevant week, banks were enabled to reduce their indebtedness to the Reserve Bank of India.

TREND OF DEPOSITS

The fact of the matter is that the deposits of commercial banks are not rising as fast as they should to meet the growing needs of an expanding economy. In fact, of late they are tending to become stagnant. In this situation the banks are stretching themselves to their utmost to meet legitimate demands, seasonal and otherwise, of industry and commerce and in so doing are allowing liquidity steadily to go down. Between 31st March 1955 and 31st March 1959 currency in circulation increased by Rs. 424.10 crores while demand and time liabilities of scheduled banks rose by Rs. 692.41 crores without making allowance for the distortion introduced by the impact of P. L. 480 funds which upto May 1960 flowed into the State Bank of India and which thereafter has not only ceased to flow in but past accretions of which are being diverted to Reserve Bank of India in agreed instalments. Through this fast growth of deposits, the ratio of deposits to notes in circulation went up to 100 per cent. In fact, in June 1959, for the first time in Indian Banking history, the total deposits of scheduled banks at Rs. 1737 crores exceeded the currency in circulation of Rs. 1714 crores. The trend, however, has now been reversed and the pace of increase in deposits is slower than that of note-circulation.

There have been normal deflationary factors at work. Firstly, agricultural production in 1959-60 was down owing to climatic conditions. The production of food-grains was about 5% less than in the previous year while the out-turn of cash crops like cotton, raw jute and oilseeds declined substantially. This set-back in the income of the agricultural sector has its inevitable repercussion on deposits.

Secondly, the adverse movement in our balance of payment position gives room for thought; the growth of our exports, in spite of programmes of export promotion, is disappointing while imports continue to rise. The contractionist influence of a balance of trade deficit is felt, not through a drop in active notes in circulation, but through a decline in bank deposits and a chain of changes in Government deposits and Reserve Bank's holding of Government Securities in the Issue or Banking departments. It seems probable that such an influence was indeed felt during 1960, and that this was the second reason why bank deposits failed to grow at a rate corresponding to the expansion in advances.

In the third place, Central Government revenues have proved buoyant. The revised estimates for 1960-61 disclose a considerable increase in Government's revenue, union excise duties being expected to fetch Rs. 15 crores more and taxes on income going up by Rs. 22 crores. Such perceptibly heavier tax collections, it is not to be doubted, will prove to be an additional drain on deposits.

In the fourth place, the very buoyancy of Central Government revenues enabled a reduction in the quantum of deficit financing. Thus, while Government expenditure itself should normally be expected to provide a fillip to bank deposits, the manner of financing of the disbursements was such as to greatly reduced the impact of governmental payments on the rise in Deposits.

Lastly, it may be permissible to suggest that the various measures of credit control instituted by the Reserve Bank of India may well have had the effect of diverting financial resources from the organised money market into the unorganised non-banking sector of finance. There are reasons to believe that upto a year ago the non-banking sector was losing ground and the organised institutions gaining in strength and influence but it would appear that this trend has now been reversed with detriment to the deposits of the banking system. Neither the Government nor the Reserve Bank of India would welcome such a diversion of resources to the non-banking sector, for to the extent that the non-banking sector, gains in strength the credit measures of the Government or the Reserve

Bank of India will prove even less effective than they have been in recent years.

MOBILISATION OF RESOURCES

Everyone realises the vital need to provide not only working capital to industry but also its reasonable medium-term requirements of credit but the resources of the banking system are inadequate and resort to central bank credit, which can never be a substitute for bank deposits, is discouraged through penal rates of interest and anti-inflationary credit-curbs. Demand for bank credits is running at a high level and has outstripped money supply. Lending rates of banks may, therefore, well rise rather than be held at present levels. Banks are being asked not to restrict lending for productive purposes but, clearly, there is a limit, dictated by considerations of liquidity and prudence, to their ability to go on expanding advances in the absence of a sustained rise in deposits.

So, if Industry is to develop to the full extent and stature visualised in the Third Five-Year Plan, it will be necessary to take steps to mobilise resources and channel them into the banking system. A solid basis for growth of deposits over a period is increased agricultural, industrial and mineral production. But, apart from this long-term objective, the existing resources should be mobilised. From the response to the new capital issues made in 1960 and on a sample analysis of the applications made, it would appear that a new class of investors is taking interest in new floatations, and this would point to the existence of a considerable amount of untapped resources in the country. This should be gathered and not allowed to go into the non-banking sector or be diverted in the form of direct deposits with industrial concerns or non-banking financial institutions.

One way of attracting money into the banking system is to bring down money rates in the non-banking section. Through liberal credits to banks by the Central Bank under the bill market scheme and a liberal lending policy by commercial banks, money rates in the unofficial markets could be brought down, and thereby the diversion of funds into the unorganised market could be stopped and the flow of funds there reversed. At the same time interest rates on fixed deposits with the banks should be raised to wean away funds from the unorganised sector and attract fresh funds from the public.

INNER RESERVES

In the recent budget of the Central Government, the Finance Minister has made a valuable concession in favour of public financial institutions providing long-

term finance whereby they are enabled to claim a reduction in respect of transfers to a special reserve account of sums not exceeding 10% of the total income of each year till the amount carried to the Reserve Fund becomes equal to the Paid-up Capital of the institution. I strongly urge an extension of this concession to commercial banks so that they may be enabled to strengthen their inner reserves. This will have the effect of making banking institutions impregnable.

Favourable conditions such as elimination of double taxation of dividends should be created for the establishment of Unit Trusts as a medium of saving so that small savings could be attracted into the capital market and a broader basis of ownership created for industry and finance.

THE THIRD PLAN

The Third Plan has got a tremendous task before it. The total investment is expected to be about Rs. 10,000 crores, out of which Rs. 4,000 crores is assigned to the private sector.

In order that the private sector may be able to accomplish this assignment it is essential that there should be availability of adequate finance for the purpose of new investment. The rate of interest is important but not as much as the quantum of available finance. I would, therefore, suggest that we take all necessary fiscal and monetary measures to hold the price-line, bearing in mind always that anything that constitutes an obstacle to production is not going to help us in fighting inflation. The pivot of the whole question, thus, is increased production. This requires investment and adequate finance. Scarcity of finance ultimately must lead to restricted production and consequently to higher prices.

It would be prudent to keep all these important points before us because sometimes, in our zeal, we adopt a remedy which defeats its own object.

I would, therefore, state that while the credit restriction policy in the beginning was wise, latterly it was overdone. And the time has now come when we should review the whole position.

Sufficient finance could not be supplied by banks to industry unless it has got adequate deposits. I have a feeling that the inflow of money into the banks' coffers will be encouraged only by the liberal outflow of it—a well-regulated outflow for productive purposes.

The question, therefore, is which step—lending with a view to attract deposits of waiting for deposits before lending—is to be taken first. In the present circumstances the only way is for the Reserve Bank to liberalise the policy of accommodating the commercial banks in respect of bills and allow

them to lend freely for industrial purposes. This, in the ultimate analysis, will bring in new deposits. Assistance by the Reserve Bank under the Bill Market Scheme, inter alia, will enable the banks to meet the growing demand of funds for industrial development. This may put up the advance-deposit ratio of the banks but would keep their liquidity intact.

Secondly, if the rate of interest on deposits is raised reasonably, this will help the banks in getting more money.

Thirdly, it is necessary to open more branches. And in this respect a planned policy by commercial banks in consultation with the Reserve Bank for at least two years ahead would be very wise.

Fourthly, it is essential to tap the agricultural resources which can only be done by opening small branches in rural areas. There are difficulties about it. These difficulties have to be tackled.

The Plan, in order to become a success, has to be supported by all sections of the economy, that is rural, urban, commercial, financial and so forth. The banks have to play an important part in making the Plan a success and the means suggested above, if adopted, would go a long way to create a more balanced and healthy situation.

NOTE: This does not purport to be a record of the proceedings at the Annual General Meeting.

THE INDIAN IRON AND STEEL COMPANY LIMITED

Notice is hereby given that the Board of Directors of the Company has declared additional dividends on preference shares in the company in accordance with the Preference Shares (Regulation of Dividends) Act 1960 in respect of the years ended on 31st March 1960 and 31st March 1961, and sanctioned payment of dividend on the same for the half year ended 31st March 1961.

The dividends will be paid on or after the 1st May 1961 to those shareholders whose names appear on the Register of Preference Shares on the 17th April, 1961.

The Preference Share Register and Transfer Books of the Company will be closed for this purpose from the 13th April 1961 to the 17th April 1961, both days inclusive.

For The Indian Iron and Steel Co. Ltd.,

The East India Distilleries and Sugar Factories Ltd

Group Assets Exceed £1.56 Million

Steady Progress; Maintained on all Fronts

Expansion in the Field of Fertilisers and Chemicals

Mr C. R. Srinivasan, the Chairman, on price fixation

Presiding over the Sixty-third Annual General Meeting of the Shareholders of the East India Distilleries and Sugar Factories Ltd., held at Madras on Thursday the 30th March 1961, Mr C. R. Srinivasan, Chairman, said:

"Gentlemen,

It is with much pleasure that I welcome you to this the Sixty-third Annual General Meeting of the Shareholders of this Company. The Accounts for the year ended 30th September 1960, together with the Directors Report thereon, have been in your hands for the statutory period, and with your permission I will take them as read. You will have observed that during the year under review there have been no spectacular advances, but steady progress has been maintained on all fronts. Equally, during the year in which we now are, 1960/61, and in 1961/62 I do not foresee more than steady and sustained progress. In effect it may well be reckoned as a period of consolidation if it is borne in mind that we shall be paying interest on the loans raised to finance our Ammonium Phosphate factory at Ennore and it will only be in the latter part of 1961/62 that we may expect to start receiving compensating revenue coming in from this project.

I think it would be appropriate if I take this opportunity of reviewing the progress your Company has made since the war, and more particularly since 1956. Over this period, the Company's growth has certainly been considerable. In 1948, the year in which the management and control were transferred to India, our capital and reserves totalled £706,736 and our total assets were £1.6 million. At the end of the financial year 1955/56, during which the purchase of the Ordinary shares of Parry & Company Ltd., took place, the consolidated capital and reserves of the Group rose to £1.8 million and the total assets to £5.2 million. On the 30th of September last these figures were £3.28 million and £7.4 million respectively. During the same period the Group excess of current assets over current liabilities has risen from £304,000 in 1948 to £1.56 million on the 30th of September 1960.

Despite the surplus of sugar available, we have the anomaly

These figures tell their own story of expansion and needless to say that shareholders' interests have benefited accordingly. Bonus issues have been made and the dividend has been maintained at a satisfactory level. Progressively the emphasis on the Group's expansion has been on the industrial sector and, more and more, the pattern of our business is changing. As a result of this policy, we have been forced with great regret to dispense with some of our agency representations in order to concentrate more of our finance and management resources on the administrative problems which are tied to the Group's industrial progress.

Today we own a large and efficient sugar factory at Nellikuppam, crushing over 2,000 tons of cane per crop day and producing, over a season, more than 30,000 tons of white sugar. I am proud to say that the factory is as efficient as any other in India, and continues to show us a satisfactory return on our capital employed there. It is perhaps desirable to draw your attention to the problems which face the sugar industry in this country and South India in particular. The Government of India in its present phase of expanding economy is naturally most concerned about the exchange earning potentials of every industry. The potentials of this industry have not been overlooked, especially after our experiences in 1956 and 1957 under fortuitous conditions. Today, we have an excess of production over consumption of the order of 500,000 tons per annum. Many of you, I expect, will be familiar with the economics of exporting this surplus to foreign countries willing to pay only current world prices; in other words, to pay prices that will yield about Rs. 400/- per ton ex-factory. I hope the representatives of the industry currently negotiating for the sale on favourable terms to the United States of America will be able to report some success. Whatever the measure of success, let it be remembered that it involves a large measure of sacrifice also—sacrifice to Government revenues, to factory profit and to consumer

that control over price and distribution continues. To the extent that this control restricts sales, this continuation is bad, but one must, in fairness, recognize that the complete removal of control will increase the problems of arranging export of the surplus stocks and might well lead to forced sales at low prices by the financially weak units.

Government's task is to retain control without allowing it to restrict offtake in any way. Furthermore, for the exports even under adverse conditions to be maintained to the extent of 5,00,000 tons per annum, some control of production will have to be exercised. It may not generally be realised that the cane for the 1961/62 season is already in the ground. The earliest that action taken this year can be effective will be in the 1962/63 season and delay beyond the end of this calendar year would mean one more year's delay with heavily increasing stocks. That the internal offtake may well catch up during the course of the Third Five Year Plan is not beyond the bounds of reason, but until it does, the industry will have this difficulty to face.

Sugar producers in the South have benefited from the fact that their total production has been less than the demand and the price has been generally fixed by the cost of the sugar procured from North India; in other words, there has been a freight advantage which must inevitably disappear when the production in the South equals consumption. In common with other factories in South India, this Company has shared the freight advantage with the cane growers so that it is only a relatively small part of the reduction in price that I anticipate will fall on this Company. The balance, I am afraid, will fall on the cane growers in terms of a reduced bonus on the cane price.

Finally, the whole question of sugar price is at present before the Tariff Commission. A report was published in April 1960 which divided the country into four regions, the Southern region comprising the States of Andhra Pradesh, Madras, Mysore and Kerala. The Tariff Commission states that a fair return for the

industry is 12% on employed capital within which to meet commitments under bonus and gratuity, interest on borrowed capital units in all the regions to declare dividend on Preference Shares, Managing Agents' commission and income-tax and, to quote the Commission's words, "finally leave a residue to a large majority of the units in all the regions to declare reasonable dividends". Obviously there is no margin with which Directors of sugar companies can rehabilitate their plant at costs which will absorb depreciation allowances four or five times over. It is precisely this point, namely the refusal of the Tariff Commission to take this in, that urged manufacturers to prevail on Government to make a second reference. I can only hope that the Tariff Commission will see facts as they are. Meantime, dependent on the price fixed, we have a contingent liability on the cane crushed since November 1958 under the Price Linking Formula announced earlier and still hanging in mid-air. For this, provision has been made in the accounts, but there is no means of knowing if this provision is adequate, for we do not know the extent of the ultimate liability, should it eventuate.

Our Pottery & Chemical Works at Ranipet which represent the other part of our old established industrial business continues to expand and, in pottery particularly, expansion has been considerable over the last few years. Development has been particularly significant in the case of sanitaryware for which, against the background of India's constantly improving standard of living, there is a growing and I believe—stable market. We are now in the process of arranging for the installation of yet a third kiln in our Pottery Works involving an outlay of about Rs. 22 lakhs and I hope shortly to be able to announce to you also the conclusion of an agreement for technical co-operation with a British manufacturer of sanitaryware, whose name enjoys world-wide repute.

But our largest expansion in recent years has undoubtedly been in the field of fertilisers. Up to date, the bulk of our trade has been the preparation and selling of conventional mixtures suited to

particular soils and crops, and of straight superphosphate, and while I believe our business in these lines will continue, we have, in order to keep abreast of the times and maintain our leading position, to ensure the availability of compound fertilisers which, in the more advanced countries, have virtually replaced the ordinary mixtures.

As I told you last year with these thoughts in mind, we ordered a complete Ammonium Phosphate Factory from Messrs. Simon-Carves of Stockport, England, and this is now under construction at Ennore, about 8 miles north of Madras. The situation is excellent, work is progressing according to plan, and I have every reason to believe that, subject to no unforeseen obstacles cropping up, the factory will be in production by the middle of 1962. In its first stage it will produce about 50,000 tons of fertilisers. By modern standards this is a relatively small output but it would be as well to compare it with our present annual turnover in fertilisers of all description, including Superphosphate from our subsidiary, Andhra Fertilisers Private Limited, which is in the neighbourhood of 160,000 tons per year. From this you will see that the Ennore Factory will make quite a substantial contribution to our turnover but there is no doubt that it would be in the best interests of the Company if the size of this plant, and its output, could be doubled. With this object in mind, the plant has been laid out in such a way that the additional equipment required to double the capacity can be installed with the minimum inconvenience and your Directors have already started to consider ways and means by which this expansion may be undertaken.

Additionally, we have just been advised, along with two very well-known American collaborators, of the issue of a licence from the Government of India to erect a fertiliser factory at Visakhapatnam in the State of Andhra Pradesh, to produce more than 300,000 tons of fertiliser per year. In this case, a substantial part of the capital is being found by our American friends, International Minerals & Chemical Corporation of Skokie, Illinois, and California Chemical Co. of San Francisco so that our own contribution, although considerable to us, will be small relative to the total capital required. A new Company will be promoted in India for the purpose and the public will be invited to participate in the issue in ample measure. Our association in the new Company will be clear cut and we bring to the consortium a readymade fertiliser sales organisation which, suitably expanded, will be available to market the new factory's output. Negotiations with our American friends—to whom I would like to pay this tribute, that they have been most co-operative and understanding—

have also been based on our having adequate representation on the Board of the new Company. The new Company will be Director managed. This new enterprise marks a great step forward, and I am sure Shareholders will share the satisfaction of the Board that we have, in these various ways, been able to consolidate our leading position, in the private sector,

The Commonwealth Development Finance Co., Ltd. . . .	£ 600,000	=	Rs. 80,00,000/-
The State Bank of India . . .		=	Rs. 180,00,000/-
Simon-Carves Limited . . .	£ 275,157	=	Rs. 36,68,760/-

These four items of finance were required specifically for our own new fertiliser factory at Ennore and we are confident that the contribution of equity capital which we have to make to the new Visakhapatnam Fertiliser Factory to which I have referred to above, will be provided from our own resources.

To complete the picture of our fertiliser activities, I would mention that the acid and superphosphate plant of our subsidiary, Andhra Fertilisers Private Limited, at Tadepalle in Andhra State, came into production in November 1960. This plant is designed to produce 50,000 tons of superphosphate per year, for which there is a ready sale in Andhra. While we have experienced the usual teething troubles, the plant can stand comparison, for design and efficiency, with any other similar plant in India. I have been surprised recently to note that remarks have been made in some quarters to the effect that Andhra is being neglected by industrial companies whose Head Offices may be in other States and, in particular, we appear to be regarded almost as if we were foreigners! I very much deprecate these examples of parochialism. I would remind our good friends in Andhra that this Company and its subsidiary, Parry & Company Ltd., were established with a Head Office in Madras long before Andhra and Madras became separate States. We have always regarded Andhra, Madras, Kerala and Mysore as the main areas of our operation and the fact that Parry & Co. Ltd has for many years managed a sugar factory at Samalkot, the fact that we have now established a superphosphate factory at Tadepalle, and finally the fact that we are partners in the enterprise to set up a very much larger fertiliser factory at Visakhapatnam should, apart from the existence for very many years of branch offices in the main cities in Andhra, convince any reasonable person that we are very far from failing to play our part in the industrial development of Andhra.

It is customary for me to include in this speech some remarks regarding the budget. I am happy to note the Budget has generally been well received and while necessarily austere, has on the whole distributed the burden of

in the manufacture and sale of fertilisers.

All these items of expansion have required, or will require, further finance and as you know a successful 'Rights' issue of Ordinary Shares was made last September and is reflected in the Balance Sheet now before you. In addition we have arranged the following loans which are being drawn upon as required:—

The Commonwealth Development Finance Co., Ltd. . . .	£ 600,000	=	Rs. 80,00,000/-
The State Bank of India . . .		=	Rs. 180,00,000/-
Simon-Carves Limited . . .	£ 275,157	=	Rs. 36,68,760/-

additional taxation in even measure. The real test is its reaction on the price level and a lapse of time is necessary to be reassured on this point. Meanwhile I welcome the adjustments made in taxation of inter-Company dividends and the reduction of the tax on royalties payable to foreigners, which will surely encourage the inflow of outside capital which is sorely needed if we are to achieve the targets of the Third Five Year Plan. The tax concession to short term technical personnel is also welcome. I further welcome the reduction of the rate of tax on Bonus Shares and express the hope that next year it may be possible for the Finance Minister to take one further step forward and abolish the tax altogether.

The industrial pace in India today is faster than anything we have previously experienced. We shall, however, always strive to keep in step and, if possible, one step ahead. It follows, therefore—

THE TITAGHUR PAPER MILLS CO., LTD.

NOTICE OF INTERIM DIVIDENDS.

The Board of Directors have declared on the 29th March, 1961, the following Dividends subject to tax deduction before payment under Section 18(3D) of the Income Tax Act.

Interim Dividends for the year ending 31st March, 1961:

On First Cumulative Preference Shares @ Rs. 4% increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, i.e. making a total of Rs. 5.2%.

On Second Cumulative Preference Shares @ Rs. 2.25% increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, i.e. making a total of Rs. 2.925%.

On Preferred Ordinary Shares @ 12 nP per share, increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, i.e. making a total of 15.6 nP per share.

and here I am looking well into the future—that as soon as we have achieved some measure of consolidation after our two recent fertiliser developments, we shall almost certainly have to consider further programmes of expansion which will again require additional capital and one of which I have already mentioned, namely the doubling of the capacity of the Ennore Factory and when that time comes I am confident that the goodwill and co-operation of Shareholders will be forthcoming in ample measure.

I conclude these remarks by expressing the sincerest appreciation of the Board of Directors of the excellent work put in during the year under review by all members of the staff and labour, and I personally wish to add to this my thanks to my Co-Directors who have sustained me with excellent advice and co-operation.

The Directors' Report and the Accounts for the year ended 30th September 1960 were adopted and a Final Dividend on the increased Ordinary Share Capital of the Company at the rate of 14 2/7% subject to deduction of Indian Tax was declared for the year ended 30th September 1960 payable on 30th March 1961.

Messrs. C. R. Srinivasan, T. S. Krishna and A.M.M. Murugappa Chettiar were re-elected to the Board and the Auditors, Messrs. Lovelock & Lewes were re-appointed.

N.B.—This does not purport to be a report of the proceedings of the General Meeting.

On 'A' and 'B' Ordinary Shares—Rs. 1/- per share.

Additional Dividends for the year ended 31st March, 1960, pursuant to the provisions of the Preference Shares (Regulation of Dividends) Act, 1960:

On First Cumulative Preference Shares @ Rs. 2.4% per annum.

On Second Cumulative Preference Shares @ Rs. 1.35% per annum.

On Preferred Ordinary Shares @ 7.5 nP per share.

These Dividends will be paid on or after 5th May, 1961, to those shareholders (or their mandatees) whose names appear in the Company's books on 22nd April, 1961, as the Registered Holders of the above shares.

The Share Transfer Registers of the Company will be closed from 8th to 22nd April 1961, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO.
(PRIVATE) LTD.,
Managing Agents.

Chartered Bank Buildings,
Calcutta: 30th March, 1961.

Olympus

New Import Policy

THE import policy for the licensing period April-September 1961 does not indicate any change in the general pattern. This policy, it has been explained, is geared to the needs of development. It is claimed that, while the import policy continues to be restrictive in various directions, an attempt has been made to sustain industrial activity and to ensure adequate utilisation of industrial potential within limitations of foreign exchange available. In doing so, the process of the 'dis-establishment' of Established Importers has been carried one step further. Quotas for Established Importers have been reduced or banned altogether in respect of as many as 147 items. In drawing up this list, the progress made by the indigenous industries, the stock position, the availability of goods from rupee sources and under loan programmes have been taken into account.

The savings in foreign exchange expenditure as a result of these new import cuts is estimated at about only three crores of rupees. The cuts, it has been explained, apply only to Established Importers' quotas. And the licences issued to this category of importers amounted to only Rs 59 crores out of the total value of Rs 433 crores licensed by the Chief Controller of Imports and Exports during the half year April to September 1960. During previous licensing periods the proportion was about ten per cent or less. The licences issued to Actual Users, under the Capital Goods and Heavy Electrical Plant scheme and rupee payment sources and others account for the bulk of the value of the licences issued.

The savings effected in the Established Importers' quotas will not therefore mean that the total value of licences issued during the current licensing period will be less than during the previous period. It may very well be more. For, as the spokesman of the Ministry explained, the import bill will progressively increase with the growth of industrialisation. And Actual Users' licences, especially from rupee payment sources or against special loan arrangements, will be freely issued to enable the maximum use of productive capacity. The list of items for which Actual Users will be granted licences has been expanded. Items like German silver and nickel silver scrap, industrial sewing machines, and electro

medical apparatus have been added to the list.

At the same time the list of items, the import of which is allowed under the Export Promotion Scheme, has also been expanded. The impact of these liberalisations under A. U. licences and Export Promotion Scheme on the total import Bill cannot be assessed in advance, as the total value of imports will depend on the arrangements to be made after individual examinations of the requirements of particular industries and industrial units which are now under way. The list of new items brought under the Export Promotion Scheme are; ivory against export of manufactures of

Salient Features

Foreign exchange allotments to industries which could export more but were not doing so because of the high prices ruling at home would be linked to their export performance.

The formal distinction between the dollar and soft currency areas for the purpose of licensing has been removed.

Import licences will be issued as valid for "general area" covering all countries except certain ones issued for capital goods, heavy electrical plant schemes and export promotion schemes.

The scheme of "repeat licensing" introduced during the last licensing period for established importers would be continued during the April-September period.

ivory; stamping foils, pigment dyestuffs, ferrules, china clay, paint raw, materials (like N. C. Chips, methyl alcohol) against export of pencils; red phosphorus, refined sulphur, yellow poster paper and phodamine dye against export of safety matches.

The manner in which the Export Promotion Scheme regarding the licensing of imports will be worked so as to act as an incentive to increased exports was explained by the spokesmen of the Ministry in the following terms: While every actual user will get a certain basic quota, additional availability of imported materials will depend on the extent to which either the unit or the industry is able to export. The basic quota for parti-

cular industries may vary between 70 and 90 per cent of the total requirements depending on circumstances. Utilisation of the full manufacturing capacity of the industries included under the Scheme it appears, will depend on the success achieved in exporting the products in order to qualify for extra quota, or in the alternative development of indigenous sources of the materials.

It was also explained that in framing the import policy the need to give relief wherever urgently necessary has also been kept in view. The licences for import of newsprint will be issued with a cut of 10 per cent on the entitlement instead of 20 per cent as in the last period. The provision for licensing of emergency spare parts required on an immediate basis to overcome an emergency breakdown of any production machinery has been increased from Rs 750 to Rs 2,500 in an individual case. The basic period for certain items has been extended, while the period of validity in respect of a few items has also been increased.

An important change incorporated in the new policy is that the formal distinction between the dollar and soft currency area for the purpose of licensing has been removed and licenses will be issued as valid for General Area covering all countries, except that certain licences issued under Capital Goods, Heavy Electrical Plant Schemes and Export Promotion Schemes may be restricted to specific country or countries. The change only amounts to formal recognition of an existing practice which has been followed for the past two or three licensing periods.

Along with the new import policy it has also been announced that applications for import from USA under DLF Loan No. 157, of Garage Equipment falling under S. No. 275(b)/IV of the ITC Schedule and of Agricultural Tractors of sizes below 50 DBHP falling under S. No. 74(i)/V, will be considered ad hoc. The licences will be available for import of tractors or garage equipment of USA origin from USA only. Licences for import of tractors under DLF loan will be issued subject to the conditions that a minimum of 15 per cent of the licence should be utilised by the licence-holder for the import of spare parts and components of the agricultural tractors sought to be imported against the licence. The conditions for the consideration of applications for ad hoc licences and other relevant details have been notified in Gazette of India Extraordinary (Part I Section I) under Public Notice No. 33-ITC(PN)/61 in respect of tractors and No. 32-ITC (PN)/61 in respect of Garage Equipment, both dated 1 April, 1961.

The diplomatic activity must revive after the Cabinet portfolios are reshuffled and the Russian view of Tibet's status is ascertained. It must be remembered by the Jan Sangh, too, that the restoration of Chinese authority in Sinkiang presents Moscow with a problem, and the news from Tartary is also of great consequence to the planners and controllers of military bases in Pakistan. The fact that Moscow does not expect a war and has sent off the American pilots home will perhaps be given weight by this country in examining prospects of further discussions in the light of Nepal's assertion of independence and the closer ties established with Bhutan and Sikkim lately. The bill for aid will be substantial, so that it may be necessary to do some rethinking about the erosion of territory in Ladakh. To persuade Kashmir that it is gone for ever is only the first part of the job. The border must be delimited firmly and fully with Russian assistance. Ladakh is the point where three empires once met and still meet as republics.

Missing Links

It is learnt that the Planning Commission has provided a sum of Rs 47.5 crores in the Draft Outline of the Third Five-year Plan for expenditure on National Highways. A large part of this is expected to be utilised for the works in progress at the end of the Second Plan and carried over to the Third Plan. The balance will be used for construction of about 250 miles of new roads on the missing links and

some other works which have been given high priority. According to the present position no missing links are expected to remain in the existing National Highway System by the end of the Third Plan except those on the three new national highways, namely, Agra—Jaipur—Bikaner, Jabalpur—Bhopal—Biaora and Sholapur—Chitradurg.

Bye-Election Surprise

The New Delhi bye-election result is a surprise—not least for the Swatantra party whose lady candidate lost her deposit. The Congress party's view of communal parties has made no impression on the electors who prefer the Jan Sangh. The failure of Congress in the capital may lead to some strenuous self-examination on the part of all concerned. The Jan Sangh may consider that its views appeal to the City, if not the Government, whose influence has been eclipsed by a direct appeal to the Rightist middle class. The failure of the Swatantra party may be an indication of its future and, to that extent, the Congress High Command should now feel quite pleased. The policy towards China, Pakistan or Laos will not change if a bye-election is lost, but the real issue is whether a settlement before the general election with China is not necessary. The Peace Council may even be justified in holding that India should end the cold war in the north because of the burdens of defence in a time of distress.

While it may be plausibly urged that the lack of vigour or enterprise on the Indian side hampers a surrender on the part of Peking, it is clear that non-alignment has made it difficult for India to look for outside help. The expulsion of Ladakh's Muslims from Tibet proves that China means to stay in complete control of Tibet and there is no chance of a compromise except on the terms that suit Peking. Marshal Chen Yi may feel that, having got round Burma, Pakistan and Indonesia, there is nothing at stake and India will come round in time to appreciate that China will accept the Mc Mahon line as the boundary only on certain conditions.

The diplomatic activity must revive after the Cabinet portfolios are reshuffled and the Russian view of Tibet's status is ascertained. It must be remembered by the Jan Sangh, too, that the restoration of Chinese authority in Sinkiang presents Moscow with a problem, and the news from Tartary is also of great consequence to the planners and controllers of military bases in Pakistan. The fact that Moscow does not expect a war and has sent off the American pilots home will perhaps be given weight by this country in examining prospects of further discussions in the light of Nepal's assertion of independence and the closer ties established with Bhutan and Sikkim lately. The bill for aid will be substantial, so that it may be necessary to do some rethinking about the erosion of territory in Ladakh. To persuade Kashmir that it is gone for ever is only the first part of the job. The border must be delimited firmly and fully with Russian assistance. Ladakh is the point where three empires once met and still meet as republics.

THE PRAGA TOOLS CORPORATION LIMITED

Mr S Ranganathan, ICS the Chairman, on Increase in the output of Machine Tools

Speech of Shri S. Ranganathan, I.C.S., Secretary, Ministry of Commerce & Industry, Government of India and Chairman of the Board of Directors at the Sixteenth Annual General Meeting of the Shareholders held on March 27, 1961 at Hyderabad.

Gentlemen,

Since we met last on September 19, 1960, another year—really 9 months—of the Company's working is now ready for review. This period ended on 31st March 1960. Under the amended Company law the Annual General Meeting of the Shareholders of the Company should be held within a period of 6 months from the close of the accounting period. Our office will have to be strengthened to meet this new situation and this is being done. As a Government Company our accounts have also to be audited by the Auditor General and this again requires to be done within this short period. We are suggesting to the Auditor General as well as to the Company's Statutory Auditors that they should consider undertaking concurrent audit in order to save time.

The audited statement of accounts together with the Directors' Report thereon have been with you for some time. This year, as suggested by the Government of India, we have also sent you a simplified Balance Sheet and Profit and Loss Account, so that those who are very busy and cannot find the time to go through the complete balance sheet could gain a clear picture of the Company from the simplified data we have given. With your permission I shall take the accounts and the report as read.

When I addressed you on the occasion of the last Annual General Meeting held on September 19, 1960, I referred briefly to the details of the expansion scheme which your Company was planning. We are glad to report that technical collaboration agreements have been signed with three British firms. The first is with Messrs Kearney & Trecker—C. V. A. Ltd., of Hove, Sussex, for the manufacture of their well-known range of drill chucks in India. The second is with Messrs F. Pratt & Co., Ltd., Halifax, for the manufacture in India of their range of lathe chucks, pneumatic chucks, magnetic chucks and pneumatic vices. This is a range which should prove very useful to the steel processing industry, as without these appliances the machine tools by themselves would not be adequately useful. The third agreement is with Messrs. A. A. Jones & Shipman of Leicester, for the manufacture of their

Cutter and Tool Grinders in India by your Company. This is a new item to be taken up by the machine tool industry in India and your Company would be the first in the field.

As you may have read in the press, the Polish Government have offered a credit to the Indian Government of Rs 14.3 crores and out of this the Government of India has earmarked one crore for your Company for the purpose of equipping a complete machine tool plant. You would have seen from statistics given that only 20 per cent of our production relates to machine tools; it is the Government of India's intention that our Company should increase the output of machine tools from its present level of about Rs 12 lacs per annum to Rs 120 lacs per annum. For this huge expansion, the Polish Government would be supplying a major portion of the plant on credit.

As a first step in this collaboration with the Poles, they have been asked to prepare a complete Project Report for a machine tool plant, capable of turning out a certain quantum of machine tools per annum. Negotiations have been going on with CEKOP, an organisation in Poland which undertakes the design and supply of complete plants, and I am glad to report that on 24th March 1961 i.e. last Friday, our General Manager signed on behalf of our Company an agreement with CEKOP for the supply of this Project Report at a cost of Rs 2.5 lacs. We expect the Project Report to be in our hands by about September next, but in the meanwhile discussions are going on between the respective technicians to enable your Company to book firm capacity in Poland against their 1962 production for the supply of certain general purpose machine tools required for the machine tool plant.

The Working Results for the 9 months period ending March 31, 1960 have not been as encouraging as we had expected. The average production per month does not measure up to last year's performance. As indicated in the Directors' Report this is largely due to the unsettled labour conditions that prevailed in the factory. I had mentioned on the last occasion, the rioting which took place inside the factory on 27th November 1959 and again in May 1960. In May 1960, some officers of the Company were actually assaulted. I would have preferred not to bring back to memory these unpleasant occurrences. I do so however, as I feel that the labour has not yet quite settled down and there is still talk of strikes etc. I shall be the

last person to say that labour should not ask for, in an appropriate manner, or be given what is their legitimate due, having regard to all relevant factors. But to create a state of uncertainty in regard to continued and increasing production or about peaceful conditions being available to work in, is not the best way of setting about this business. I do hope that labour will pay heed to this advice and recognise that in this Board of a Govt. Company, there is really no interest which would wish to deny them their fair share, out of their own production. Having said this, I shall not go into the details of the demands that have been pressed for from time to time, some times, in open flouting of previously mutually accepted settlements, the methods adopted to capture power by rival Unions etc. I shall mention only that your Board has appointed a Sub-Committee to go into certain demands now made. This Sub-Committee has met several times and is now currently discussing this subject with the Union. I hope the Board will soon have proposals that will be acceptable to labour, that will be within the Company's means and finally that the proposals will ensure a fairly long period of settled conditions which could be utilised to maximise production and take in hand the large expansion schemes with confidence.

After making the necessary adjustments for depreciation, development rebate etc., the Balance Sheet shows a surplus of Rs. 3,72,867/-. Your Directors have proposed that this surplus should be carried forward and I feel sure

you would find this proposal acceptable.

The Comptroller and Auditor General in his comments has again invited our attention to the necessity to revise the method of evaluating the stock of finished goods. This has not been possible in the year under review but the revised method is being adopted in the accounts of 1960-61 and consequent on this a certain amount of write-off is expected. In the circumstances your Board of Directors feel that it would be a prudent step not to distribute the very small surplus the present Balance Sheet discloses; it would be more appropriate to get the revaluation of finished goods done on the proper basis in 1960-61 before considering any distribution of dividends. Although, the financial position is thus only of a marginal balance having been reached, I feel optimistic about the trends and given the whole hearted support by labour, the Company should be able to register a leap forward in the next year or two.

Before I conclude, I wish to thank my colleagues on the Board for their active co-operation and guidance in all our deliberations. I also wish to express my appreciation to the officers and staff of the Corporation particularly those loyal workers who strove to restore a sense of responsibility in the organisation during a difficult period.

N.B The above does not purport to be the report of the proceedings of the 16th Annual General Meeting of the Company held on March 27, 1961.

Markets

JUTE Crop Prospects Depressed Prices

BUT for a slight improvement in sentiment in later dealings, the jute and gunny markets continue to rule generally subdued. While mills are showing little interest in raw jute, buyers are scarce in the gunny market also. At the moment, rates seem to be stabilising at the lower levels and this is presumably due to the fact that this is the time of the month, when figures that will reveal the statistical position of the industry at the end of last month will be made available to the public. Bull operators are likely to use the threat of shortage of electric power in the Calcutta industrial area to bolster up their spirits. It may be recalled that, a few weeks ago, there was a report that one or two jute mills had been forced to cut down working time due to curtailment of power supply in their area. It is no longer a secret that power shortage is a reality and

that the situation has been kept in hand only with the co-operation of the industrial units. It is hoped that a compulsory power cut may not become necessary as it is expected that the power supply position will steadily improve in the immediate future.

But these are considered to be only minor factors and the main factor governing the behaviour of the jute markets is the next jute crop. It would appear that the uniformly encouraging reports from the growing areas are beginning to have their effect on those both in the upcountry centres and elsewhere who have stocks of raw jute still left with them. The recent increased arrivals in the upcountry markets seem to lend support to the theory that there is much more jute still to come to the markets than has been generally thought probable hitherto. Be that as it may, there is no mistaking the anxiety of the holders to dispose of their stocks at prevailing rates. Their efforts are not meeting with much success as mills are in no hurry to take their allotted quota. Even though this week the allotment to mills totals

600,000 maunds, buying interest continues to be limited and sellers' indications of rates are not accepted readily. A probable explanation for the leisurely attitude of mills in filling their quotas is the belief that arrivals will increase in coming weeks now that holders have realised that buyers are not much worried over supplies.

The strengthening optimism of the mills and the increasing anxiety of holders of raw jute would become intelligible for anyone who follows the steady stream of news from the growing areas. So far, the weather has been quite good with adequate rainfall and sowings are reported to be progressing very well in India. Reports from Pakistan seem to indicate that many there believe that the target of 7.4 million bales may even be considerably exceeded. From present indications it is not improbable that new crop jute will start moving into the markets quite early in the season, at least as far as Pakistan is concerned.

The jute goods market started the week under review on a quiet note with both hessian and sacking declining sharply in the absence of buying interest. Sentiment improved somewhat when the market reopened on Monday after the extended holiday. In earlier dealings, however, the undertone was quiet following news of fresh rainfall in growing areas in India. By close of transactions for the day, prices steadied up, presumably on the calculation that production of jute goods would be further reduced in case the electric power supply position in the Calcutta industrial area deteriorated further. The improvement in sentiment proved shortlived when on the following day there were reports of further beneficial rainfall in Assam and other jute growing areas coupled with reports of growing optimism in Pakistan about a bumper jute crop there which was also expected to be available quite early in the new season.

In the raw jute market, prices ruled quiet mostly due to expectations of a big crop in the coming season. Although mills were allotted a sizable quota for the week, buying continued to be at a slow pace indicating the growing confidence among mills interests that a little waiting would prove to be profitable, especially in view of the indications of the steadily increasing arrivals and holders' willingness to discount rates whenever sizable business was in prospect.

TEA

Exports from South India

According to trade sources in Cochin, Tea shipments from the Cochin Port in February were slightly higher at 6.51 million pounds as compared to 5.78 million pounds in the corresponding month of last year. Total shipments from South India, in the eleven months ending February 1961, are, however, lower at 70.63 million pounds as against 72.57 million pounds in the corresponding period ending February last year.

Shipments to the UK declined from 43.49 million pounds in the first eleven months of 1959-60 to 42.34 million pounds during the period under review, as did those to the USA and Canada from 5.55 million and 5.75 million pounds to 4.28 and 4.98 million pounds respectively. Australia, too, reduced its offtake from 6.1 million pounds to 4.34 million pounds and Holland from 1.6 million pounds to 1.29 million pounds.

Exports to Russia, on the other hand, increased from 5.76 million pounds to 6.64 million pounds. Egypt and Sudan also increased their offtake from 1.55 million and 1.53 million pounds to 1.9 million and 1.53 million pounds respectively. Shipments to New Zealand, at 911,700 pounds, showed an increase of about 100,000 pounds.

In the internal sale held in Calcutta this week, offerings were 22,251 packages of dusts. There was a good and general demand. Orthodox descriptions once again declined by 10 p through the smaller and brighter lines met with better support. Legg-cut dusts were sold well at above last rates with improved quality teas in better demand. Medium CTC teas were keenly competed for, particularly the powdery types; but prices were irregular. Fibrous descriptions were, however, easier and sometimes difficult of sale. Good CTC teas were a strong feature and were sold at enhanced rates. Following rates were quoted (per kilo):—Plain Orthodox Dust Rs 4.35 to Rs 4.55; Medium Assam Dust Rs 4.45 to Rs 4.75; Medium Assam CTC Dust Rs 5.55 to Rs 6.20. Good Assam CTC Dust Rs 6.40 to Rs 7.00 and Legg-cut Dust Rs 4.70 to Rs 5.20. There was a good demand for the 508 packages of leaf grades offered.

Export sales at Calcutta up to 21 February were about 10 million pounds less and internal sales about 4 million pounds less as compared to the previous year. This seems to indicate the possibility that the gardens would be empty earlier this year and that the Calcutta auctions would offer a much smaller weight of tea between now and the new season.

Ceylon has produced 30.54 million pounds of tea in February as compared with 31.45 million pounds in the corresponding month of last year. Production for the first two months of this year totalled 64.72 million pounds as against 66.56 million pounds in the corresponding period of last year.

Pakistan's crop for the new season is expected to be in the region of 55 million pounds which, it is understood, is a very modest estimate as the season has started off very well. The prospects of a good tea crop has prompted the Department of Planning to lift controls on tea.

East Africa maintained its annual rate of 5 million pounds' increase in 1960, reaching 75 million pounds. Political changes are likely to upset the affairs of the industry. According to one African report, 1.25 million of the best highland acres have been put up for sale by their British owners.

In London, tea auctions for the pre-Easter week were confined to two days selling and the offerings were on a reduced scale, totalling some 55,428 packages as against 72,646 packages in the previous week. There was a good demand throughout despite the fact that the quality of the Ceylons on offer was generally less attractive.

Generally speaking, Ceylon teas fetched lower prices and this was especially evident among the lighter liquoring high-growns, which continued to show irregularity and often declined by 1d to 3d a pound, while BOP Fannings were an easier feature. Among the North India teas, too, the light liquoring teas were irregular and often lower, especially where appearance was poor. Assams and colour well-made descriptions were, however, maintained in price. No tea sale will be held this week; and the auction will commence on 10 April.

COTTON Smart Rally in Futures

The Bombay cotton futures market continued to be irregular on alternate bouts of selling and buying. The Jarilla April contract, which closed at Rs 586 per three quintals last week, came down to Rs 577 during the early part of the week on the anticipation of heavy tenders. But as the week advanced, the contract gained ground and rallied to Rs 584, deriving inspiration from the fact that tenders against the maturing contract on the first day amounted only to 200 bales. The difference of about Rs 75 per candy in the ready and forward prices of cotton was presumably the main reason for the low tenders and as the ready rates ruled high sellers preferred not to tender cotton.

Demand in the spot market once again hovered around Kalyan, CO2, and L147 styles of cotton. More mills are expected to enter the market as their anxiety about the tenders seems to have been shed. The activity in the spot market is, therefore, likely to broaden in the near future.

The export section continued to exhibit listless conditions. The trade is anxiously waiting for the announcement of a fresh export quota for 50,000 bales of cotton. Rumours are afloat in the market that the announcement will be made within a short period.

No fresh development was reported on the import front. The Government of India's policy regarding the allocation of American cotton has not yet been made available. The spinners are believed to have clarified their attitude toward American cotton and it is stated that they are reluctant to enhance their stock of that variety which is equivalent to the varieties that are available from indigenous sources.

LIVERPOOL

The intervention of Easter holidays had a dampening effect on the Liverpool futures market and spinners' enquiry was reported to have been very poor. Fresh enterprise was also restricted by the influence of the holidays. Futures drifted lower during the period under review.

NEW YORK

According to the Department of Agriculture, Washington, total purchases from fourteen spot markets amounted to 190,800 bales. Good demand for most of the medium and lower varieties was reported. Offerings were, however, restricted in volume. Domestic mill demand for the new crop indicated an uptrend.

EGYPT

Sales of Egyptian cotton officially registered for export since the commencement of the season upto 22 March declined to 672,006 bales from 938,187 bales of the previous season.

Attributable mainly to the higher support price and export subsidy announced by the Government of the United States, a generally firmer tone was visible in the international cotton market. The Liverpool spot price of the American 1" Middling indicated a rise of 65 points during the month since the announcement. The immediate effect of the US policy announcement was the rise in the support price paid to growers by just over 3 cents a pound and the export subsidy by 2.5 cents. The consensus of opinion in the market was that the cotton bought now for shipment in August must be cheaper than the new crop cotton purchased later in the year. Consequently, spot and near delivery prices, particularly of short and lower grade staples, advanced further.

As a result of the expanding world textile trade, production and consumption of cotton have been coming into equilibrium of late. Stocks in both the producing and consuming countries allow only a comparatively small carry-over for this year. The Commodity Credit Corporation, which is the main buyer and seller of American cotton, is reported to have disposed of most of its stocks. Consumer stocks, too, appear to be dwindling. According to a recent estimate, the stocks in the United Kingdom amount only to 0.2 million bales which works out to only half of the stock the country held in 1959.

PIECEGOODS

Moderate activity was visible in the piecegoods market at Bombay during the period under review.

Despite the renewed inquiries from both local merchants and upcountry centres, the turnover was far below the expectations. Fresh business with Delhi and Calcutta was reported. Uttar Pradesh, Madhya Pradesh, Gujarat and Punjab were active in the market. Demand was on the whole confined to seasonal goods like mulmul, cambric, lawn, veil, dhoti and sari. Quality goods also met with increased attention. The supply position was on the whole satisfactory. The premia of most of the varieties went down by an appreciable extent.

The export front continued to be listless. The main contributory factors were the disparity in prices and the keen competition from countries like China and Hongkong which adversely affected Indian shipments. Besides, the prevailing levels in the domestic market were so attractive that very few mills were prepared to sell their stock abroad.

The Government of India's decision to reduce the import quota for printed piecegoods, printed fabrics, fabrics made of Italian or satin weave and velvet and velveteen to 14 per cent was welcomed by the Bombay Piecegoods Merchants Mahajan. This would provide incentive for consuming greater quantum of similar indigenous products.

Sugarcane Prices Unchanged

The Government has decided to retain the 1960-61 prices for sugarcane to be crushed by vacuum pan factories during the 1961-62 season at Rs 1.62 per maund for delivery at the gate of the factory and Rs 1.50 per maund for delivery at the out-station purchasing centres connected by rail.

The demand for a rise in prices had been made from time to time by the cane-growers in Uttar Pradesh and Bihar, while the respective State Governments had also lent their support to the demand. But, the Government of India has always viewed the present minimum price as fair and is against raising it as that will render production costlier. It is stated that, at a time when the Government is thinking in terms of reducing production costs and exploring possibilities of export, any increase in the price of sugarcane will upset all official calculations.

Meanwhile, sugar production in the four months ended February this year is expected to be about 1.79 million tons as against 1.61 million tons in the corresponding period of the last season. At this rate, the total output in the current season is estimated at 2.75 million tons.

Stocks with the factories, which were 550,000 tons at the beginning of the current season, are expected to reach the unmanageable figure of 1.3 million tons by the end of the season. Again, consumption, which had declined from 2,066,000 tons in the 1958-59 season to 2,024,000 tons in 1959-60, is running behind the last season.

In the four months ended February 1961, internal offtake was only 610,000

tons as against 629,000 tons in the corresponding period of the 1959-60 season. At this rate, the total consumption for the current season will be 1.84 million tons. Even with the most liberal estimates for the remaining eight months, the total consumption is not expected to be higher than 2.05 million tons.

Thus, with the mounting stocks of the commodity, the position is getting so serious that it may not be possible for the industry, or at least quite a good number of units in it, to start next year's crushing operations in time due to lack of storage facilities and financial resources. It is, therefore, necessary that something should be done to reduce the burden of stocks.

While exports can be helpful in the above direction, they involve considerable losses. Besides, it is not clear at this stage how much sugar can be exported. In the circumstances, it is desirable to encourage internal consumption, which is running behind the estimates of the Planning Commission. Trade circles feel that the Government should relax the rigid control over the movement and distribution of the commodity in order to increase internal consumption and thereby reduce the burden of mounting stocks.

For obvious reasons, sugar markets have continued to remain depressed due to an easy supply position and poor demand. It is reported that production of sugar in factories in West Uttar Pradesh is being continued as cane supplies remain adequate although some factories are faced with an acute coal shortage. In the Hapur market, the rate is quoted at Rs 108 to Rs 108.50 per bag.

GUR

Gur prices have recorded modest gains, being quoted at Rs 13.75 to Rs 14 for the Pansera quality and Rs 13.37 for the inferior stuff. In the Hapur market, stocks are estimated at 76,000 maunds.

KHANDSARI

The market for Khandsari ruled quiet due to lack of demand. Production is being continued at some centres but many units have closed their season for want of cane supplies at Rs 1.25 a maund as against Rs 1.62 paid by the factories. Production is reported to be much lower than last year.

FOODGRAINS

Quiet conditions prevailed in the Hapur Foodgrains market, thanks to the increased arrivals of new "rabi" crop. Heavy stocks with the Government also aided the easy sentiment.

Wheat prices recorded a fractional fall. The commodity from the Punjab was quoted at Rs 16.50 to Rs 17; the supply sold by the Uttar Pradesh Government at Rs 15.75 and the inferior red quality at Rs 14.25 a maund. Harvesting of wheat has begun and the new crop will reach the market by the middle of this month.

The Rice section continued to rule quiet, while Gram prices recorded a

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 909 offices waiting to serve you throughout India.

STATE BANK OF INDIA
INDIA'S LEADING BANK.

SISTA'S-58-47

Fall of about a rupee a maund. Anxiety of stockists to sell stocks on account of the expectations of a bumper crop in the Punjab and elsewhere aided the bearish trend. Barley and Bejhar prices also eased fractionally, as the new produce began to reach the market. The Pulses section was quiet.

YARN

The Bombay Yarn market seemed to have been disappointed over the import policy for yarn remaining unchanged for the April/September period. Some operators had expected liberalisation of imports in view of an acute shortage of rayon yarn during the past few months.

The "ceilings" fixed by the market authorities for Cupressa Bamberg and 40 JP yarns were removed during the past week in view of the fact

that the uncertainty over the counter-vailing import duties on rayon yarns ended. The authorities, however, doubled the margin on over-trading to Rs 200 per case of 100 kilograms. The free limit for trading was kept at 25 cases of Cupressa Bamberg and 25 cases of 40 JP Bamberg yarn.

There were no special developments in the Stapple-Yarn section.

In the Cotton Yarn section, prices remained mostly unchanged.

CHEMICALS & DYES

Prices on the Bombay Chemicals and Dyes market moved both ways on conflicting ideas about the new import policy. While stockists were unwilling to dispose of their stocks at the prevailing prices on the expectation that there would be further cuts in the quotas for various items, con-

sumers kept away from the market in the hope that the Government would not disturb the raw material position of indigenous industries.

After the announcement of the policy, there was slight profit-taking in certain items and the top levels were not maintained till the close.

NON-FERROUS METALS

The main feature of trading on the London Metal Exchange was the impact on prices of the decisions reached at the International Lead-Zinc Study Group meeting, which ended last week-end. Under the pressure exerted by the existence of heavy unsold stocks of the metal, producers agreed to reduce lead supplies in 1961 to a level about 2 per cent below the estimated world consumption. At the same time, the USA offered to relieve other producers of part of their excess stocks in exchange for surplus agricultural produce. No specific action was taken to reduce zinc output.

The size of the agreed cutback in lead production disappointed the market. It was felt that stocks of the metal would continue to exert a depressing effect on prices. Hopes of greater cutbacks had helped to raise prices prior to the meeting. But, as a result of the disappointment, prices have now begun to fall away again. Although Zinc prices fell initially following the Group's failure to take any direct action to reduce output, they have since regained a part of their loss.

PEPPER

The export performance by Pepper is lagging behind that of the last season. Total exports from Bombay, Alleppey, Calicut and Cochin amounted to only 1,272,506 kgs in January 1961 as against 3,855,269 kgs in the corresponding month of the previous year. Exports in the current season, from November 1960 to January 1961, amounted to 4,107,073 kgs against 12,10,317 kgs in the corresponding period of last season.

Of the total export of 1,272,506 kgs during January 1961, Cochin alone accounted for about 689,482 kgs. Next came Alleppey with 371,770 kgs. Bombay's contribution amounted to 17,000 tons. Next in range were India stood last, it fared well with an export of 35,262 kgs in January 1961 as against 6,707 kgs in January last year.

The estimated world pepper consumption in 1960 totalled 59,100 tons of which the USA alone consumed 17,000 tons. Next in range were India and Pakistan with the consumption of 11,000 tons. The share of the Communist countries (excluding China) amounted to 6,000 tons, while that of West Europe to 7,000 tons. The UK accounted for 3,000 tons; Far East for 1,500 tons; Canada for 1,300 tons and Australia and New Zealand for 800 tons.

BANGALORE SILK

The Bangalore Silk market maintained a steady trend in the prices of flature and cottage basin raw silk during the week ended 31 March. The prices for flature silk 20/22 dr continued to be quoted between Rs 80.48 and Rs 83.23 per kgm and those of cottage basin silk ruled between

Rs 73.85 and Rs 76.06 per kgm as in the last week. Charka raw silk also maintained the previous week's level and the rates were quoted between Rs 54.01 and Rs 72.75 per kgm. There was moderate demand for all qualities of raw silk and the supplies were also limited.

Reeling cocoons showed a slightly upward trend and the rates were being quoted between Rs 3.20 and Rs 4.20 in Mugur area, between Rs 4.40 and Rs 5.00 in Channapatna area and between Rs 4.00 and Rs 4.50 per kgm in Sidlaghatta area. Cocoon production was limited.

Mysore race seed cocoons maintained a steady level, rates being quoted Rs 4.00 and Rs 5.00 per 1,000 as in the last week. Foreign race seed cocoons also maintained a steady level and the rates were quoted between Rs 4.00 and Rs 10.00 per 1,000 as in the previous week.

GOLD & SILVER

The bullion market in Bombay continued to rule weak due to lower advices from Delhi and Calcutta. Heavy selling by local bulls following increased receipts of both the metals

was also a contributory factor. Silver arrivals amounted to as much as 18 bars as against an offtake of only 11 bars. Silver (below .996) moved between Rs 201.95 and Rs 202.30. Gold receipts were also higher at 8,000 tolas as against an offtake of 6,000 tolas. Ready rates moved between Rs 119.50 and Rs 119.75 with Sovereign ruling steady at Rs 94.

OILS & OILSEEDS

Conditions on the Bombay Oils and Oilseeds Exchange remained generally quiet following lower advices from

MARTIN BURN LIMITED

MANAGING AGENTS, SECRETARIES AND TREASURERS

Head Office: MARTIN BURN HOUSE 12, Mission Row, Calcutta

Branches: New Delhi, Bombay, Kanpur

London Office: MARTIN BURN HOUSE 12, Austin Friars, London, E.C. 2.

632

the upcountry markets. Trading in Groundnut reflected a limited activity with crushers and vanaspathi manufacturers buying cautiously. Ready Bold was quoted at Rs 53.75 and Groundnut Oil at Rs 22.85.

In the Castorseed section, shippers were reported to have bought nearly 800 tons of castor oil, commercial quality, at Rs 15.80 to Rs 15.90 per 10 kgs and the BSS variety at Rs 16.80. The bulk of demand represented purchases made against outstanding export commitments. Unconfirmed reports claimed a sizable business with Russia; but there was little demand from the UK and the Continent. The outlook for exports to the USA also remained obscure. Ready Castor was quoted at Rs 35.75 and Castor Oil, commercial quality, at Rs 15.85.

Linseed prices were hit hard by the slump in rapeseed in North India. Hopes that the inflow of the new crop would increase soon induced the operators to press sales. Ready was quoted at Rs 37 and Linseed Oil at Rs 16.35.

Trading in the Cottonseed section was largely speculative in character with prices moving in sympathy with other oilseeds.

Slack demand from Calcutta interests has depressed the price of groundnut oil in Madras this week. Arrivals of groundnut kernels are also meagre into the city, while summer crops are expected in the Southern market centres by the middle of next month. About 50 tons of kernels are being received and they are of summer harvest and this is quickly absorbed by rotatory crushing interests.

Buyers' resistance for higher levels was evidenced from the beginning of this week in view of the better offerings of mustard oil at Calcutta. From last week, dealers were hesitant to commit themselves beyond their immediate needs. Also the factories and others preferred to work on a handtomouth basis. This week oil should have lost ground at the rate of about Rs 80 per ton and groundnuts too at the rate of about Rs 30 per ton.

Only weak holders thought of unloading their meagre stocks which did not affect the sliding price trend. Local bazar and wholesalers were content to remain without doing large deals and this also contributed to the lowering of groundnut oil prices. Down South, the vanaspathi dealers negotiated for large accounts but that did not last long.

The forward positions remained only at nominal ceilings.

The following are the closing rates at the Seeds and Oil Exchange:

- Groundnut oil per candy of 500 lbs ex-Madras ex-godown expeller ready 3 per cent l.f.f. Rs 483;
- Kernels per candy of 531 lbs Coromandel Rs 245;
- Peanut Rs 232-235.
- Castoroil per candy of 500 lbs Tirupattur Rs 360.
- Cocnutoil per tin Rs 42.
- Gingelly oil per maund Rs 31.50.
- Gingelly seed per bag Rs 109/110.
- Groundnut cake per bag of 160 lbs Rs 25/4.

Groundnut oil began to move down in prices from Friday last from Rs

485 per candy to Rs 483. It maintained the same level till the end of the last week. On Monday also the unofficial rate ruled at Rs 486 (since the market was closed due to the demise of a member of the Exchange), but buyers proved reluctant to go in for lots and the price came down to Rs 483.

Groundnut kernels kept steady around Rs 83.25 per 80 kgs for coromandel variety and lost a rupee by last weekend to be quoted at Rs 82.50. Peanut quality was lower at Rs 79.50 per 80 kgs.

Practically no groundnut kernels were received in Southern market centres during the last two weeks. No significant activities were therefore also reported. Within about two weeks time summer crops are expected to be received in these places.

HIDES & SKINS

Tanned goat skins had good demand in the market, particularly of the 8/9 and 11/12 lb averages. For run the price range was 20 sh and thirds and fourths it was 20/3d. For inferior fifths the demand was practically poor. The prices asked by Madras for these had been reported to be higher than the UK buyers offers. Firm conditions were reported

in the market for prime quality tanned sheepskins. The price of these was quoted at 38/6d. European markets are showing interest in 7/8 lb averages run and fifths.

Tanned cowhides had continued demand with the result prices advanced to some extent. Premium marks of top quality were negotiated at 82½d, 72½d and 58d.

Higher quotations were made for lightweight inferior fifths due to persistent foreign demands.

Tanned cow calf remained unaffected with continued demands.

The price of tanned buffalo calf also remained unaffected. The following prices were quoted per tanned skins lb:

- Tanned cow price 5/5½ lb Rs 3.12 to Rs 3.25; 6/6½ lb Rs 2.81 to Rs 2.94; 8/8½ lb Rs 2.50 to Rs 2.62; 10/12 lbs Rs 2.25 to Rs 2.31; Tanned cow inferior fifths 4/4½ lbs Rs 2.75 to Rs 2.81; 5/5½ lb Rs 2.53 to Rs 2.58; Tanned buffalo 12/13 lb Rs 1.88 to Rs 2; Tanned cow calf 1½/2 lb Rs 4 to Rs 4.25; Tanned buff calf 1½/2 lb Rs 2.88 to Rs 3.00; Tanned goat prime 8/9 lb Rs 10 to Rs 10.50; Tanned sheep ordy: 6/7 lbs Rs 6.75 to Rs 7; 5/6 lbs Rs 9 to Rs 9.50. Tanned sheep prime 6/7 lb Rs 11.50 to Rs 13.

NEW ISSUE NOTES
Chemicals & Fibres

Chemicals and Fibres of India Limited, a new ICI Company, was registered in Bombay last week with an authorised capital of Rs 10 crores. It will be a Public Company in which the Indian public will be invited to participate in due course. The Company has been formed to take care of the ICI manufacturing projects intended for the West Coast of India. Negotiations are in progress for the acquisition of a large site near Bombay. It is expected that the new Company will manufacture a wide variety of chemicals and related products which will make available to Indian industries raw materials which have had to be imported hitherto as well as new materials which have not been available in India in adequate quantities so far. The enterprise will result in a large saving of foreign exchange. Its Board of Directors will be under the Chairmanship of Mr J. M. Lall, Chairman of ICI (India) Private Limited, and includes two well-known Indian industrialists, Mr Neville Wadia, Chairman of Bombay Dyeing and other Companies and Sir Raghavan Pillai, Managing Director of Martin Burn. Full development of the site will be phased over a number of years.

Lynx Machinery

Lynx Machinery Limited will shortly enter the market with a public issue of equity capital worth Rs 30 lakhs. The authorised capital is Rs 2.50 crores comprising 2,00,00,000 equity shares of Rs 10 each and 50,00,000 preference shares of Rs 100 each. The issued capital will be Rs 60,00,000 of equity shares of which Rs 30,00,000 is being subscribed by the promoters, directors, their friends and associates. The balance of Rs 30,00,000 is now offered for public subscription, at par. The subscription list will open on 18 April and close on 20 April. A sum of Rs 5 is payable on application and the balance will be called up later, but not before December, 1961.

Good Year

It is learnt that Goodyear India Limited will be entering the market shortly for raising new capital. The company is expected to offer, for public subscription, 4,00,000 Ordinary shares of Rs 10 each, at a premium of Rs 7 per share. The authorised capital of the company is said to be Rs 2 crores. The factory will be situated at Balabgarh in East Punjab. Production is expected to start in the latter half of 1961.

Baroda Electric

A new company, known as the Baroda Electric Meters Limited, has been formed for undertaking the manufacture of domestic and industrial meters. The plant is proposed to be located at Anand or at Baroda. The authorised capital of the company is Rs 1 crore, while the issued capital will be Rs 40 lakhs comprising 40,000 ordinary shares of Rs 100 each. The

3 April 1961

promoters, directors and their friends will subscribe for shares worth Rs 20 lakhs and the balance will be offered for public subscription.

Indian Firebricks

The Indian Firebricks and Insulation Company Limited will issue, for public subscription, 4,75,000 equity shares of Rs 10 each and 7½ per cent Cumulative Redeemable Preference shares of Rs 100 each. The issued capital is Rs 1,00,00,000 comprising Rs 75,00,000 in equity shares and Rs 25,00,000 in preference shares. Of this, the directors and their friends have taken up 2,50,000 equity shares. Messrs Thomas Marshall & Company, UK, the technical collaborators, will be allotted 25,000 equity shares and 10,000 preference shares. The entire public issue has been underwritten. The company proposes to manufacture all kinds of refractories. The factory will be located in the villages of Merar and Hesla near Ranchi in Hazaribagh district. The subscription list will open on 18 April and close on 28 April, but not before 21 April, 1961.

Vijayalakshmi Mills

The Vijayalakshmi Mills Limited, Coimbatore, has proposed to raise an additional capital of Rs 6,91,500 by the issue of new equity shares of Rs 100 each, at par, to the existing shareholders in the ratio of two shares for every three shares held. The balance within 30 days from the date of allotment.

Fuel Injections

Fuel Injections Limited, Bombay, will shortly issue 10,000 equity shares of Rs 100 each, at par, to the existing shareholders in the ratio of two shares for every three shares held.

Gujarat Steel

A new plant for the manufacture of galvanized steel pipes is proposed to be set up near Ahmedabad. The company will have an authorised capital of Rs 3 crores and the issued capital is Rs 1 crore in equity shares. The promoters and their friends will be taking up equity shares for Rs 51 lakhs. The balance of Rs 49 lakhs

will be offered for public subscription. The tube mill will be supplied by a West German firm and the required raw material will be obtained from Rourkela.

Benani Metal

Benani Metal Works Limited will soon come on the capital market for raising Rs 21.5 lakhs in 215,000 equity shares of Rs 10 each, at par. Out of this, 19,000 shares will be allotted to the directors and their friends. The balance of 196,000 shares will be offered for public subscription. The entire issue has been underwritten. The additional capital is raised to finance the substantial expansion programme of the company.

INVESTMENT NOTES
TISCO

According to the figures released by the Tata Iron & Steel Company Limited, the output of pig iron has gone up from 126,100 metric tons in February to 141,600 metric tons in March and steel ingots from 126,300 metric tons to 142,300 metric tons. The production of saleable steel amounted to 114,900 metric tons against 94,300 metric tons. Premier Construction

The directors of the Premier Construction Company Limited have stated that the scheme for the con-

version of promoters shares into ordinary shares and also capitalisa- tion of reserves by the issue of bonus shares has been approved by the High Court of Maharashtra. The scheme comes into operation from 1 January, 1961.

Bonus Shares

The following textile mills have decided to issue bonus shares on the following basis:—Standard Mills 2:5 and New Shorrock 2:5 subject to Government sanction.

BALANCE-SHEET BRIEFS

The Dunlop Rubber Company (India), Limited has reported a net profit of Rs 1.25 crores for 1960 as against Rs 1.18 crores for the previous year. The dividend is maintained at 21.5 per cent, taxable.

The net profit of the Cawnpore Textiles Limited has risen from Rs 8.72 lakhs to Rs 19.70 lakhs for 1960. A taxable dividend of 36 nP per share is recommended as against nil.

The Cawnpore Sugar Works Ltd. has made a higher net profit of Rs 13.37 lakhs for the year ended 31 October 1960 as against Rs 6.78 lakhs. The dividend is, however, passed.

The working of the British India Corporation Limited has resulted in a substantial rise in the net profit from Rs 63.09 lakhs to Rs 90.93 lakhs for 1960. After a lapse of three years, the directors have recommended a taxable dividend of 20 nP per share.

Killick Industries Limited has reported a net profit of Rs 8.63 lakhs for the year ended 30 November 1960 as against Rs 8.81 lakhs. The directors have reduced the dividend from Rs 9 to Rs 8 per share, taxable.

The Premier Construction Company Limited has earned a profit of Rs 16.38 lakhs for 1960 against Rs 21.09 lakhs. The dividend is proposed to be reduced from Rs 18.00 to Rs 13.50 per share, subject to deduction of tax.

The Automobile Products of India Limited has turned the corner. The working has resulted in profit of nearly Rs 16 lakhs for the year ended 31 July 1960 against Rs 10.07 lakhs. No dividend is, however, proposed.

The net profit of the Associated Battery Makers (Eastern) Limited has declined from Rs 65.93 lakhs to Rs 59.86 lakhs for the year ended 31 August, 1960. Total distribution for the year works out to 16.36 per cent, taxable, on the increased capital.

The following textile mills have announced the results for 1960:— Standard net profit Rs 133.31 lakhs (Rs 93.89 lakhs for 1959) Dividend Rs 30 per share (Rs 29); Mafatlal Fine profit Rs 63.46 lakhs (Rs 57.45 lakhs) dividend Rs 30 (Rs 29); Sassoon Spinning net profit Rs 46.69 lakhs (Rs 31.77 lakhs) dividend Rs 1.70 on the increased capital (Rs 2.50 on the original capital); Gokak dividend Rs 14 (Rs 6.00); Finlay net profit Rs 16.88 lakhs (Rs 21.14 lakhs) dividend Rs 23 lakhs (Rs 23); and Swan net profit Rs 18.22 lakhs (Rs 20.10 lakhs) dividend Rs 35 (Rs 36).

STOCK EXCHANGES

Lull in Activity

Watch-Dog Writes:

TRADING in stock markets has generally been dull during the week under review. Except for a small price flutter in a few selected shares, the market performance has been far from impressive, as stray liquidation has kept the price levels rather depressed.

While it is an admitted fact that the present phase of profit-taking is mainly brought about by a technical correction, stringent money conditions have acted as a propeller. Moreover, operators seem to be busy in mobilising their resources for subscribing to the several new issues now being announced.

The past week's session on the Calcutta Stock Exchange witnessed a slight recession in the speculative issues. Conditions elsewhere were, however, quietly steady with a few firm features developing here and there.

On the Bombay Stock Exchange, settlement considerations loomed large with the operators. The close was mixed, but with declines in a majority.

Selective support continued to be the feature of trading on the Madras Stock Exchange.

CALCUTTA

REOPENING after the Easter holidays, the local stock exchange witnessed slight recession in equity values due to a general disposition on the part of the professional operators to book profits at the recent high levels before entering into fresh commitments. Also, investors preferred to wait for a recession in prices before picking up stocks of companies with sound and statistical position, not to speak of their desire to mobilise their resources for a number of new issues, which are being announced.

It was, of course, lack of any fresh incentives and tired feeling on the part of the bulls which were responsible for the current state of the market. Most operators felt that there was very little incentive ahead to warrant any further big rise in values. Although bear-covering and a little fresh buying helped to induce a modest recovery towards the close of the week, investment support was totally absent. The only relieving feature was a small price flutter in a few selected shares.

The Giltedged section displayed remarkable firmness. The demand for short and medium-dated issues was well maintained. State Loans were also in demand, but sellers were reserved. Thus, the volume of business remained restricted. 3 per cent 1986 Conversion Loan opened lower at Rs. 73.80 and, after touching a fresh low of Rs 73.65, recovered gradually towards the close to Rs 74.15.

Bank shares continued to remain steady. United Commercial scored three points at Rs 90.50 following the

encouragement derived from the chairman's speech at the annual meeting. Punjab National hardened to Rs 22 from Rs 21.37.

In the Jute section, selected Jute shares continued to enjoy popularity, notwithstanding the current difficulties of the industry. Prospects of a favourable crop and the possibility of the industry recouping its losses were the main considerations. Birlas were taken up to Rs 39.50 from Rs 35.75 due to diversification of its activities, to close finally at Rs 37.62. Fort William were wanted up to Rs 27.25 from Rs 26.50; Lawrence up to Rs 171 from Rs 153; Nuddea up to Rs 54.75 from Rs 53.75 and New Central up to Rs 20.25 from Rs 19.50. Anglo-India and Kelvin were almost maintained at Rs 222 and Rs 160 respectively with Ganges hardening to Rs 11.87 from Rs 11.06. Howrah, however, moved narrowly between Rs 22.25 and Rs 22.37.

After ruling initially quiet, Coal shares displayed a steadier tendency due to the emergence of support on prospects of getting foreign exchange at an early date for the expansion of the industry. Bengal changed hands at Rs 349 to Rs 354; East Indian at Rs 34.81 to Rs 35.50; Equitable at Rs 32.12 to Rs 32.50; Central India at Rs 13.56 to Rs 13.75 and Western Bengal at Rs 9.25 to Rs 9.75. Burrakur were on offer at the close at Rs 20.06 after touching a high of Rs 20.37.

Tea shares were selectively supported on hopes of bonus issues. Scrip of good dividend-payers and those of companies with disposable reserves attracted the best of attention. Top levels were not, however, maintained till the close of the week due to profit-taking. Baghmari met with business at Rs 27 to Rs 29.75; Bharkawa at Rs 24.69 to Rs 25.12; Bishnauth at Rs 25.12 to Rs 25.25; Hasimara at Rs 28.37 to Rs 29.25; Huldibari at Rs 29.25 to Rs 29.62; Jayshree at Rs 22.50 to Rs 23 and Telojian at Rs 33.87 to Rs 33.56.

Sugar shares were selectively firm on prospects of exports of the commodity to the USA. Cawnpore were enquired up to Rs 14.62 from Rs 12.62 following the publication of satisfactory working results. Ramnugger Cand had buyers up to Rs 28.19 from Rs 27 and so also Carew up to Rs 13.81 from Rs 13.44. SKG were, however, quiet at Rs 12.75 against Rs 13; Dyer Meakin at Rs 32 against Rs 33 and Champaran at Rs 18.06 against Rs 18.87. Belsund were well maintained at Rs 12.19.

Of all the sections, Textile was the most active with impressive rise in prices being recorded. The encouraging results released by the Bombay mills for 1960, the announcement of bonus issues by some of them, availability of sufficient raw cotton supplies and the brisk offtake of cloth all these factors induced a general feeling that the industry would make equally good showing during the current year. Bowreah touched a fresh high of Rs 219 from Rs 208 (Rs 213); Dunbar Rs 30.25 from Rs 28.94 (Rs 29.44); Elgins Rs 21 from Rs 19.37 (Rs 20.62); Kesoram Rs 34.75 from Rs 32.62 (Rs 34.12) and J. K. Rayon Rs 20.87 from Rs 19.84 (Rs 20.00). The announcement of a dividend for last year as against

nil induced Cawnpore to spurt to Rs 9.56 from Rs 7.69, closing finally at Rs 9.25. Figures shown within brackets were the week's closing rates.

In the Engineering section, price movements were rather irregular due to alternate buying and selling. Indian Irons spurred by the excellent showing of production figures for the year ended 31 March 1961. Against the previous week-end closing of Rs 26.87, Indian Irons opened higher at Rs 27.42 and, after advancing further to Rs 27.75, receded at one time to Rs 27.51 on selling pressure, to finish the week at Rs 27.67. The only weak spot of the section were TEXMACO which met with more sellers than buyers. The scrip was offered further lower at Rs 22.15 from Rs 22.75 on rumours of the possibility of the dividend being passed for last year. Guest, Keen, Williams were a firm feature, having buyers up to Rs 45.87 from Rs 44.12 following the announcement of a total distribution of Rs 1.60 per share on the capital increased by the right issue as against Rs 2.40 per share on the original capital. Ropes were also entertained with regard to a bonus issue at an early date. Braithwaite were dealt at Rs 36.37 to Rs 37.19; Burn at Rs 519 to Rs 525; Jessop at Rs 22.62 to Rs 23.75; J. K. Steel at Rs 26.75 to Rs 27.25; Dalmia Iron at Rs 10.56 to Rs 10.87 and Britannia at Rs 14.75 to Rs 15.12.

The Miscellaneous section was sprinkled with handsome gains. Prospects of bonus or right issues by some companies and the flow of encouraging corporate news kept up sentiment in the section. Profit-taking, however, erased some of the extreme gains towards the close, as will be clear from the following price trends of a few selected shares:

	As on	High	As on
	30 Mar.	30 Mar.	7 Apr.

IN BRIEFS

Thanks to a gross profit of Rs 15.57 lakhs, the Bharat Vijay Mills Limited has resumed the payment of dividend on the ordinary shares, after a lapse of 8 years, at the rate of Rs 6 per share, subject to deduction of tax.

The Buckingham & Carnatic Company Limited has shown a net profit of Rs 58.28 lakhs for 1960 as against Rs 43.65 lakhs. The total distribu-

tion is maintained at 10 per cent, taxable.

The Bangalore Woollen, Cotton & Silk Mills Company Limited has reported a net profit of Rs 23.49 lakhs against Rs 29.82 lakhs. The dividend is maintained at 10 per cent, free of tax.

The Trichinopoly Mills Limited has shown a higher profit of Rs 5.13 lakhs for the year ended 31 March 1960 as against Rs 3.93 lakhs. The dividend is, however, maintained at 12½ per cent, taxable. A special Silver Jubilee bonus of 1 per cent, taxable, is also proposed.

The Ochterlony Valley Estates Limited has shown an increase in net earnings from Rs 5.20 lakhs to Rs 9.18 lakhs for the year ended 31 October, 1960. The dividend is, how-

ever, reduced from 15 to 13 per cent, taxable.

The response to the recent public issue of the Fit Tight Nuts Limited is said to have been very encouraging. It is over-subscribed several times.

Kothari Sugar has announced that the final call of Rs 5 per equity share is payable on or before 25 May, 1961.

The equity shares of Permanent Magnets Limited are placed on the non-cleared securities list of the Bombay Stock Exchange. The unit of trading is 5 shares. The company states that its share numbers 1 to 3,230, allotted to the vendors, will be deemed to be on the official list with effect from 5 October, 1961 before which date the members are not entitled to deal in these shares.

Facts & Figures

FOODGRAINS

Stock of Foodgrains

There were 1,943,000 metric tons of foodgrains in the Central Reserve stock at the end of 1960. This consisted of wheat 1,239,000 metric tons, rice 678,000 metric tons, and other foodgrains 28,000 metric tons.

During 1960, 5,137,000 metric tons of foodgrains valued at Rs 216.7 crores (including incidental expenditure incurred in the country) were imported. Of this 4,386,000 metric tons was wheat valued at Rs 176 crores, 699,000 metric tons rice valued at Rs 39 crores and 5,000 metric tons other foodgrains valued at Rs 17 crores. Of the total quantity of 5,137 million metric tons of foodgrains, about 4,366 million metric tons valued at about Rs 183.2 crores were imported under P.L. 410 and other aid programme.

About 4.85 million metric tons of foodgrains were issued from the central stocks during 1960. This consisted of 3,529 million metric tons wheat, 9,30,000 metric tons rice and 6,000 metric tons of other foodgrains.

The value of the quantity of wheat issued at Rs 14 per maund was approximately Rs 132 crores and that of Milo issued at Rs 11 per maund about Rs 1 crore. It was not possible at this stage to give a correct estimate of the value of rice issued from Central stocks as the issue prices of rice vary from Rs 16 to Rs 30 per maund according to the quality of rice. This information was given by A. M. Thomas, Deputy Minister of Food, in a written reply to a question in the Lok Sabha.

CENSUS

UK's Sixteenth

Britain's 16th census (the first was in 1801) is to be taken on April 23. It is expected to show a total population of 53,000,000—an increase of over 3,000,000 over the last census figure, recorded in 1951. The census, which is carried out under the authority of Parliament, and in which everyone is obliged by law to answer a list of questions, will be directed by the Registrar-General, Mr Michael Firth.

The questions to the population will be contained in schedules distributed to every home and habitation in the United Kingdom. But while in the previous census everybody was asked the same questions, this time "sample" enumeration is to be introduced. Ninety per cent will be asked fewer questions, but the remaining 10 per cent will have the full range of questions.

The cost of the operation is expected to be around £3,000,000, and it is estimated that final figures will be available in about 2½ to 3 years' limit. After the last census it took five years to reach the final totals, but this time the use of computers will save time.

PLYWOOD

Good Progress

During the last twelve years, Plywood Industry has made considerable progress. The number of units increased from 43 in 1947 to 73 in 1960. Thirty-one units manufacture plywood for tea-chest, 3 manufacture commercial plywood only and 39 manufacture both tea-chest and commercial plywood. Capacity of the industry is assessed at 150.51 million sq. ft. on single shift basis. Units are authorised to manufacture annually tea-chest plywood to the extent of 203.10 million sq. ft. and commercial plywood to the extent of 124.17 million sq. ft. Production of plywood for tea-chest has gone up from 28.55 million sq. ft. in 1947 to 98.15 million sq. ft. in 1959. And the production of commercial plywood has increased from 29.85 million sq. ft. in 1957 to 43.58 million sq. ft. in 1959. Exports of plywood and tea-chest are freely allowed.

Exports of tea-chest plywood in panels of six pieces were made. The quantities exported were 1,30,024 sets in 1957, 40,390 sets in 1958, 14,000 sets in 1959 and 10,700 sets during January-March, 1960. Exports of commercial and other plywood have increased from 2,143 cwt. in 1958 to 3,088 cwt. in 1959 and 1,056 cwt. during the quarter January-March, 1960.

THE three-tier bank rate, which was brought into existence when the Reserve Bank announ-
ced that credit would be made available to
banks at differing rates for different slabs, has
now been in force for half a year. During this
period, surprisingly, the gilt-edged market has
not turned unduly easy, probably because the
Reserve Bank's open market operations have
kept it in good trim; this is despite the fact
that, for most part of that period, the effective
borrowing rate for the bulk of the Scheduled
Banks was the penal one of 6 per cent. The
inference is that the prospect of Government
borrowings in 1961-62 has not been blighted;
but the fact remains that the net absorption
of gilt-edged by the public is likely to be
disappointing, in that banks will scarcely
prove to have the resources, even if they
should have the inclination, for investment in
the new loan. Nor can we expect that the
banks will be good customers at the Reserve
Bank tap; though there is an important qua-
lification, the experience in 1960-61 was one
of net disinvestment by the banking system.
Nevertheless, on available evidence, which
has been marshalled in the latest issue of the
Reserve Bank of India Bulletin, the borrowing
effort for the Second Plan can be seen to have
been more of a success than the planners
themselves had thought possible.

In the Second Plan period, the net receipts
of the Central and State Governments are
placed at Rs 747 crores; and to this, however,
we have presumably to add the Rs 50 crores
of marketable securities taken up by the
Reserve Bank in cancellation of Treasury Bills
for like amount during the last fiscal year.
For, while the Bulletin refers to the market-
able loans created by the funding operation of
1959-60, as also to the special issue of non-
marketable securities for Rs 300 crores in
1958-59 (which, incidentally, is an amount
excluded from the calculations as regards net
absorption of Government loans), there is no
mention of the funding operation carried out
in 1960-61. Hence, borrowings of the Centre
and the States have amounted to just under
Rs 800 crores, against the Plan target of a
little over Rs 700 crores.

Furthermore, it may be noted that, in 1960-61,
the State Bank was a considerable seller of
Government securities, since counterpart funds
were in process of being made over to the
Reserve Bank. While it is true that the pro-
ceeds therefrom, as also the accruals since
May 1960, have been invested by the Reserve
Bank in behalf of the American Embassy in
special, non-negotiable securities, it also needs
to be borne in mind that such investment
(amounting to Rs 240 crores in 1960-61) has
also been left out of the purview of the net
receipts by the Centre and the States against
their borrowing programmes.

Of course, to the extent that banks have
sold gilt-edged, holdings on its own account of
the Reserve Bank should have correspondingly
risen. But the sales against return of counter-
part funds by the State Bank, as has been
noted, have been made good by the Reserve
Bank's purchase of non-negotiable securities.
It is the remnant sales, particularly by banks
other than the State Bank, which would have

gone to swell Reserve Bank's holdings of
marketable loans. In fact, between the end
of 1957 and March-end of 1960, the Reserve
Bank's portfolio of marketable loans has gone
up by Rs 155 crores; and, against this, the bulk
of the rise—or Rs 150 crores—can be ascribed
to the funding operation of 1959-60. Thus, till
the end of March 1960, the Reserve Bank
figured, as from the beginning of the Second
Plan, as but a nominal purchaser of Govern-
ment Securities. In 1960-61, however, the
disinvestment by banks has been considerable,
and transfer in this behalf to the ownership
of the Reserve Bank may have exceeded Rs 60
crores. In brief, therefore, the inference
seems to be that the Reserve Bank absorption
of marketable securities, including the two
funding operations amounting to Rs 200 crores,
is around Rs 265 crores during the Second
Plan, as against a total of Rs 800 crores received
by the Centre and the States.

This is by no means a disheartening picture.
And therefore it would seem that the Third
Plan target of Rs 850 crores is chicken-hearted.
But we have to make allowance for the fact
that the Third Plan's Draft Outline was drawn
up at a time of acute monetary stringency, a
time when Government's borrowing effort
failed signally and when banks were unloading
gilt-edged in sizable parcels. On the face of it,
indeed, and in the then current circumstances,
even Rs 850 crores may have seemed an
ambitious target. Fortunately, as we remarked
at the beginning of this article, the climate in
the gilt-edged market has not been spoilt as a
result of the operation of the three-tier bank
rate.

Consequently, the success or otherwise of
Government's borrowing programme will
depend upon the state of the money market.
So long as stringency continues, the scope for
borrowing from the public will be restricted.
If money should become easy again, there
would be a better support accorded to the new
loan programme. As we see it, monetary
stringency will be relieved if Deposits should
start accruing in a more substantial manner
and/or if the rate of expansion in Advances
should somewhat abate. With Government's
determined efforts of late, and banks' own an-
xiety to induce growth of Deposits, we are
hopeful that banks will soon begin to expe-
rience a considerable increase in resources. On
the other side, with the rate of growth of in-
dustrial production inhibited by such factors as
inadequacy of foreign exchange for purchase
of raw materials and power shortage, there
is the distinct possibility that industrial
production will prove to rise less spectacularly
in 1961-62. Our conclusion, therefore, is that
Government's borrowing programme this year
can be made a modest success, with the pros-
pect that, next year, a more ambitious target
can be set—and hit.

But of course it is important that a raise in
the de jure bank rate is avoided. For, a
raising of bank rate will seriously affect the
borrowing programme for the Third Plan.
In the sense that despite the three-tier bank
rate, gilt-edged prices have kept steady there is
reasonable hope of status quo in bank rate—
and success in the borrowing programme.

The Plan Under Preparation

THE National Development Council will meet on May 30/31 to consider the draft report on the Third Plan which is now under preparation. While extensive rewriting of the earlier draft has become necessary because of the results of the 1961 Census, there will be no change in the financial and physical targets approved by the NDC in January. The total public sector outlay of Rs 7500 crores will include Rs 1200 crores of current outlay and Rs 6300 crores of investment expenditure. Together with private sector investment of Rs 4100 crores, total investment in the Third Plan will amount to Rs 10,400 crores as against Rs 10,200 in the Draft Outline. No changes have been effected in the distribution outlays under the major heads of development which is as reported earlier in these columns (See Indian Finance of January 28, 1961).

The programmes for agriculture and employment as well as allocations for some Central Ministries had not been considered by the last meeting of the NDC. The targets for principal agricultural commodities that have been worked out are: Foodgrains 100m. tons; Sugarcane 10 m. tons (gur); Oil-seeds 9.7 m. tons; Cotton 7m. bales and Jute 6.5 m. bales (excluding mesta). The targets for the main development programmes for agriculture are as given below:

Irrigation		million acres
Major & medium	..	12.6
Minor	..	13.3
Total	..	26.1
Soil Conservation, land reclamation etc.		
Soil conservation	..	10
Dry farming	..	22

Irrigation		million acres
Land reclamation	..	3.3
Reclamation of Saline and Alkaline lands	..	0.2
Flood control, drainage and anti-water-logging	..	5
Area under improved seed		
By end of 1960-61	..	55
By end of 1965-66	..	151
Consumption of chemical fertilisers		

		million tons
Nitrogenous (N)	..	1.01*
Phosphate (P205)	..	0.4
Organic and green manure		
Urban compost	..	5
Rural compost	..	148
Green manure	..	39

*Requirements of plantations, estimated at 0.04 million tons (N) are in addition to this figure.

The target for short and medium term credit through cooperative agencies is about Rs 500 crores and for long term loans (that is loans outstanding by end of the Plan) is about Rs 140 crores.

POWER: Generating capacity is proposed to be increased from 5.7 million kW at the end of the Second Plan to about 12.6 million kW at the end of the Third Plan. The increase envisaged in the Draft Outline was 6 million kW. Electricity generated by end of Third Plan is now estimated at 45 billion kWh. as against 42.25 billion kWh. in the Draft Outline. The target of villages and towns electrified is now 43,000 as against 34,000 in the Draft Outline.

INDUSTRY: There are no significant changes in the major industrial targets. In

several directions progress is being made in drawing up detailed plans, e.g. in steel, coal, fertilisers etc.

ROADS: As a result of discussions with States, the additional mileage of surfaced roads is now estimated at 25,000 miles as against 20,000 miles envisaged in the Draft Outline.

EMPLOYMENT: Reliance is placed on works programmes for the utilisation of rural manpower to deal with the problem of unemployment whose magnitude is now seen to be much larger than was estimated before the Census. A scheme of pilot projects has been introduced under which 34 projects have been accepted for implementation in the first year. The scheme provides for certain supplementary works programmes to be undertaken in addition to agricultural, irrigation, road development and other programmes included under the State plans and the Community development programme. A provision of Rs 2 lakhs has been suggested for each project for the period ending March 1962. The works programmes which have been drawn up include irrigation, afforestation, soil conservation and other schemes. The scheme envisages that wages should be paid at the seasonal rates for the locality. On the basis of the first year's experience it is hoped to extend the programme to many other areas where there is wide-spread under-employment. But the essence of a pilot project, it is also pointed out, consists, not in the provision of supplementary works programme, which will by itself provide only a limited amount of additional employment, as in the effort to utilise fully the manpower resources of the selected areas and to reorient the working of the entire development programme so as to achieve this central object.

Adventure in Cooperation

THE discussions at the seventeenth session of ECAFE which was held in New Delhi last month covered a wide range of topics, from an overall appraisal of the economic situation in Asia and proposals for greater regional economic cooperation to specific problems in the fields of planning, industry, transport, trade, water resources development and statistics. The conference adopted three resolutions dealing with Asian Highway, Community Development and decentralisation of the economic and social activities of the United Nations. While discussions on the reports of the various committees, working parties and study groups, which had been set up in terms of resolutions adopted at earlier sessions, focus attention of the proposal for regional economic cooperation which was the principal topic on the agenda, the Annual Survey, which brings out the wide disparities in economic development, populations, resources, national income, consumption levels and trade relations, offers a necessary corrective to an idealistic approach to the problems.

In fact it is only by contrast with the rest of the world, and especially the industrialised West, that it is possible to discern any common feature among the countries that make up the ECAFE region. Even in the case of fall in prices of primary commodities which is regarded as a common problem, the fluctuations in price and supply of particular commodities do not have the same impact on individual national economies of the region. A fall in the price of rice, for instance, which will be disastrous for rice exporting countries,

may be regarded as a welcome development by the rice importing countries. Similar divergence of interest can be noticed in the case of other primary commodities which may be of vital interest to a particular country or group of countries in the region.

Intra-regional trade and diversification of production have not proceeded far enough to create an awareness of common interest in the economic fortunes of the region as a whole, strong enough to have an impact on practical policies. The emergence of powerful economic groups in Europe has induced a transient interest in the development of intra-regional trade in ECAFE. A preliminary study prepared by the ECAFE secretariat examines the forms of cooperation like an economic union, customs union, free trade area and preferential tariff and trading arrangements as well as the structure of economic integration in Europe and Latin America. But the most notable feature of the discussions on the report of the Committee on Trade was the obvious satisfaction with which the delegates received the assurance conveyed by the representatives of EEC and EFTA that these groups and their policies were not intended to restrict trade with the rest of the world.

Any incentive that exists to the formation of analogous regional groupings in the ECAFE region could be easily neutralised by the industrial countries of the West if they take action in time to maintain the level of prices and off-take of primary commodities. And it is difficult to see how the position could be otherwise so long as the region as a whole, as well as most of the countries in it, look to the West for guidance and technical and financial assistance for their programmes of economic development.

While most of the delegates who participated in the discussion on regional coopera-

tion were content to talk round the topic, the representative of Pakistan went to the heart of the matter by drawing attention to certain significant facts which stood in the way of greater regional cooperation. He pointed out that an Asian economy as such just did not exist, for the countries of the region differed widely not only in their economic characteristics like size, population, natural resources and degree of development, but also in their historical and political associations. After the establishment of new independent states, the trend, if any, had been towards disintegration. In the field of trade and industry, he said, a number of obstacles would arise, and as national resources were necessarily limited, priorities would have to be established between regional and national projects with resulting conflict of interest.

While the facts of life in the ECAFE region leave little room for doubt that it is premature to think in terms of grandiose schemes of economic integration on a regional basis, it does not mean there is no room for cooperative action. The scope for fruitful joint effort will be revealed if the sights are lowered to bring limited objectives on to the line of vision. In surveying the fields where joint effort could function effectively and in initiating action in suitable cases, the ECAFE secretariat, working quietly behind the scenes, has rendered invaluable service. Attention has been drawn in this context to joint geological surveys of border areas, the preparation of the first geological map of Asia and the Far East, bilateral agreements for development of mineral resources, and suggestions for rationalisation of customs procedures and inter-communication of power and water resources.

The Asian Highway and the Mekong Project are striking instances of successful coopera-

15 April 1961

tive endeavour sponsored by ECAFE. Eleven countries and ten UN agencies other than the four directly involved namely, Laos, Cambodia, Thailand and Viet Nam, are cooperating on the gigantic project for the development of the lower Mekong basin, which, as at present envisaged, will comprise eight multipurpose projects and a ninth for improvement of navigation. The last session of ECAFE elicited additional offers of assistance from six Governments and two private agencies amounting to \$3,313,000 bringing the overall total of assets earmarked to the project to \$12,443,908. The new offers of assistance were made by France, India, Japan, New Zealand, the Philippines and the United States. The Ford Foundation offered to carry out an integrated economic survey of the Mekong Basin while the Pan-Pacific South East Asia Women's Association promised to undertake studies connected with the project. As announced by President Rajendra Prasad on the opening day, India has offered to undertake the preparation of a comprehensive project report on the Tonle Sap dam site in Cambodia, an undertaking which is expected to cost \$250,000.

The resolution on the Asian Highway, which will span the Asian continent from Singapore and Saigon to Istanbul and Ankara, linking the important centres of commerce and culture, met with unanimous approval. But the discussions also made it clear that considerable technical and financial assistance from the advanced countries would be required to see the project through. It is also clear that the full benefits of the scheme would not be realised without simultaneous relaxation of customs regulations at the frontier posts. In fact both the Mekong Project and the Asian Highway which depend for their successful execution on heavy doses of external assistance, suggest the thought that cooperative action in ECAFE region will have to be conceived in the larger framework of global cooperation. And in this adventure, the ECAFE, which was entering the operational field of its activities, eminently deserves to succeed.

Export Limitations

AN appraisal of the export trade in recent years may suggest that the scope for increase is limited. Taken together with the complaint that Indian textiles and sugar too dear for foreign buyers, the question is whether the country can export raw materials like short staple cotton or oilseeds to make up the slack, the rise in steel imports last year offset the fall under foodgrains. The means to pay was, and remains, limited. The Tata Quarterly in its latest issue, calls attention to the historic factors in export trade. Of course, an industrial revolution can alter both the content and course of exports, as it did in the case of Britain, replacing woollen goods by coal and cotton textiles. But the last two traditional items have been displaced fully after the war by motors and machinery in the trade returns.

Whether the same changes are in progress in India's external trade, with machinery exports rising alongside imports of essential raw materials from cotton to rubber, may call for scrutiny by the experts in export promotion. The export of capital to pay for imports is ruled out. Restrictions are more than a symptom of the economic growth, reflected in rising imports by an underdeveloped country at present.

The limits to fiscal policy are underlined by the showing of jute manufactures. There is no export duty either on jute manufactures or coffee, but the rivals of India have still an edge in Europe over India. The cost inflation due to agricultural protection, wage awards and taxes has been mentioned more than once as a deterrent to the growth of exports. There is no item—not manganese nor mica—in which India appeals on the score of relative cheapness. Iron ore shipments might rise, but India cannot sell pig iron or steel, as the most expert observers insist. The growth of manufacturing industry sets a limit to the export of materials like oilseeds or cotton. The limited quota allowed in its own way raises prices, and hampers exports. The stability in tea exports may be termed unusual, but it is linked with the presence of foreign capital in the planting industry.

Frequent injunctions, to diversify and enhance exports, to stimulate inter-regional trade, and to reserve quality goods for export markets constitute an embarrassing admission of failure during the last decade. The increase in India's external debt, the fall in sterling reserves and the Government's patent anxiety to secure regularly more foreign capital coincide with the stagnation of trade in major exports like jute and cotton textiles. Increase under pepper or cashew is not so relevant as the decline under oilseeds or oils. New schemes for linking imports are thought up, but the results do not appear impressive so far.

The real crux is the failure of agriculture to develop as rapidly as industry. Under the two Plans, rising agricultural output has been absorbed by the increase in India's population. In any event, agriculture, unlike the secondary industries, has made little headway and it may be noted here that in 1960 the prices of industrial raw materials like jute rose more than foodgrains or oilseeds. Stability in trade with the UK or rise in exports to Russia or Eastern Europe can cause little satisfaction in the present situation.

Advice from advertising experts about potential markets should be available, and it is known that an offer was made by a Toronto firm to help the Indian Government last year push rapidly exports of Indian origin in the Canadian market. The market research needed is a specialist job and officials cannot do it, as Madison Avenue will argue. The decline of trade, due to new political factors, may extend from China to Nepal. The bearing of foreign policy on trade with Pakistan requires no detailed description here. The advantages of a return to normal trade will be stressed by many at present as the Pakistan rupee and Indian currency are in line. That Ceylon and Indonesia are trade rivals, and that Burma prefers Japan or Siam to India as a source of imports will only suggest that competitive capacity does not exist, and the future may lie in the export of special items like light engineering goods or food products like jams and confectionery to adjacent countries like Malaya. Subsidies, as in the case of sugar, may invite stringent criticism. But Australia's experience may well suggest that the steady inflow of foreign capital may weigh heavily against the decline in major exports. But Australia is industrially mature, and one Company produces more paper (over 300,000 tons) than the dozen paper mills now operating in India. The refund of excises or drawbacks given in regard to imported items used in textile or other exports may be described as a poor palliative for the malady, due as much to home demand as the rise of economic national-

ism in all countries, from Ghana to the Sudan. The fact that Ceylon, Burma or Malaya puts up tariffs and offers incentives for new local enterprises launched by foreign interests must be taken into account by habitual optimists.

The Tata Quarterly thinks that India, like Japan, can ship more manufactured goods in future to meet the over-rising import bill. Initial success in selling plastics or plywood or even oil engines must not blind one to the fact that Japan as an ally of the USA, retains some advantages denied to India and also that heavy industrial equipment must be backed by service after sales in foreign countries. And the advantages held, for instance, in paint, cement or other industries are neutralised by the lack of resources for further development to achieve a low-cost surplus. That is, of course, possible through the full use of installed capacity in every industry and by means of mergers of export firms. The cotton industry consists of many disparate units. The concentration noted in Lancashire, during and after the war, is yet to come here. What the jute industry may really need is one large firm in which all the units are merged, the marginal establishments scrapped, and surplus labour turned over to new lines like plywood or chemicals.

The transformation of management (which usually raises selling costs) is also required and foreign experts may be called in to advise on the reorganisation of the engineering industry in which large composite units jostle small firms. The lack of a precise efficient pattern in contrast to the efficient mergers in Germany created for example by Mannesmann Tube is a consequence of our planners not having looked at what may be called the Executive Suite. The replacement of managing agents with capital by directors with brains may be demanded by the circumstance that British Railways are now put in charge of a new chief, formerly a Director of the ICI, and the competence of the full-time professional as against the amateur acquiring control by birth is the cardinal fact of current economic development. This means that the Planning Commission must promote takeover bids, stimulate mergers and secure one big export firm to deal with customers abroad. The trend towards bigger and better firms in chemicals, rubber, etc., is truly inescapable and company law in future must concern itself with the encouragement of extra resources by contrived combination. That is one of the implicit conclusions to which analysis leads at present.

Cotton Textile Industry—Sick Man of Indian Economy

INDIA'S foreign exchange earnings from cotton textile exports in 1960-61, the last year of the Second Five Year Plan, are officially estimated at Rs 53 crores as compared to Rs 57.35 crores in the preceding year. In terms of quantity the export in 1960-61 was 678 million yards against 846 million yards in 1959-60. It is thus clear that the cotton textile industry has not been able to achieve the export target of 1,000 million yards fixed under the Second Five Year Plan.

These figures should cause considerable concern. Next to tea and jute goods, cotton tex-

tiles are the most important earner of foreign exchange. It is essential therefore to find out why the industry is unable to make headway in foreign markets. One reason for the fall in export is, of course, the intense competition that we have to face from other countries like Japan, the UK, Russia and to some extent Pakistan. Secondly, many countries which formerly used to import cotton cloth in large quantities have in recent years gradually established their own textile industries. But these factors do not certainly provide an adequate explanation for the decline in our cloth export. The basic cause appears to be the uncompetitive prices of Indian cloth. Japan and other competitors have been able to oust Indian cloth from our traditional markets in West Asia and South East Asia chiefly because they have been able to offer their goods at cheaper prices and, moreover, they have been successful in adjusting themselves to the changing fashions and requirements of the consumer. But so far as India is concerned, the cotton textile industry has not been able to make notable progress in equipping itself with the latest machinery. The industry is now more than hundred years old and although from time to time various committees have forcefully drawn attention to the urgent need to expedite the programme of modernisation, the progress made till now has been absolutely inadequate. The proportion of automatic looms in our textile mills at present is only about 8 per cent against 100 per cent in the United States and 61 per cent in Pakistan. It has been estimated that a sum of Rs 180 crores will be required by the industry during the Third Five Year Plan to carry out its programme of rehabilitation and modernisation; but in view of the low profitability, the industry has been finding it difficult to attract new capital. The Cotton Mills Federation has pointed out, on the basis of the studies undertaken by the Reserve Bank of India, that cotton textiles are among the enterprises that occupy the lowest rung of the ladder. Gross profits as percentage of total capital employed stood at 4.5 per cent in 1958, the latest year for which statistics are available, as compared to 9.7 per cent in engineering, 6.0 in steel, 7.6 in cement, 9.3 in sugar and 9.4 in tea plantations.

Another factor responsible for the high cost of production is the shortage of raw cotton as well as its high prices. In the last three years the consumption of foreign cotton by Indian mills has recorded sharp increase and that of Indian cotton has declined as shown in the following data given by the Cotton Mills Federation:

Period.	Indian.	Foreign.	Total
Monthly average 1958	369,965	43,653	413,618
" " 1959	386,609	38,030	424,639
" " 1960	368,276	57,148	425,424

The Federation has pointed out that there was "an abnormal rise in the prices of Indian cotton which exceeded world parity, thus aggravating the cost rigidity of the industry."

The steep increase in the wage bill is another factor which has contributed to the high cost of Indian cloth. The share of wages is as much as 25 to 32 per cent in the production cost of cloth. Since January 1960, the industry has had to bear an additional burden of Rs 14 crores per year on account of the recommendations of the Central Wage Board. Further, the rise in dearness allowance has also contributed to a higher wage bill.

As a result of these circumstances, the production of mill cloth has not shown a steady

increase as will be clear from the following figures:

	Cloth Production.
1956	.. 5,306 Million Yards
1957	.. 5,317 Million Yards
1958	.. 4,927 Million Yards
1959	.. 4,925 Million Yards
1960	.. 5,044 Million Yards

Thus at a time when there is an imperative need to maximise production we find that last year the industry produced substantially less cloth than in 1957 and 1958. Clearly, we cannot afford to permit this state of affairs to continue. The industry is one of the best among the organised industries in India. There is hardly an aspect of it about which full data are not available. Moreover, unlike other industries, the cotton mills have their own central organisation—the Indian Cotton Mills Federation—which enables the industry to speak with one voice. There is, therefore, no reason why this vital industry should remain the sick man of the Indian economy—with obsolete machinery and subjected to periodical crises. With greater co-operation from Government and greater efficiency on the part of management and labour, surely it should be possible for the industry to function on healthy lines, performing its role effectively as an earner of foreign exchange, as a provider of employment to several millions and as a supplier of cloth which, next to food, is the most important need of man.

LIVING STANDARDS

The Differential Widens

By Paul Einzig

IT has been the perennial complaint of under-developed countries since the War that, although their standard of living has improved, that improvement has failed to keep pace with that of advanced countries, with the result that the differential, instead of contracting, has widened further. Admittedly, what really matters is not the differential but the absolute standard of living of the backward peoples, and if it shows an improvement it constitutes progress in the right direction. Nevertheless, human nature being what it is, the backward peoples cannot help comparing their progress with that of more fortunate peoples, and it does not make for good feeling between the "have" and "have not" nations if there is an increase of their inequality.

From this point of view, the successful resistance of the United States Congress to an attempt to increase minimum wages in the United States was undoubtedly a welcome event. Had their attempt been successful—and it would be as yet premature to rejoice over its initial setback which may not be the last word on the subject—it would have greatly reduced the ability of the United States to assist under-developed countries. Moreover, the resulting wage inflation would not have remained confined to the United States but would have gradually spread over all industrial countries of the free world whose capacity to contribute towards assisting backward countries would in turn have been reduced.

It should be the aim of all countries of the free world to reduce gradually the differential between standards of living. The Governments of under-developed countries could contribute towards attaining this end by pursuing policies encouraging the influx of

private capital and enterprise. What is even more important, trade unions or other organisations representing industrial labour in backward countries should exert themselves in an effort to influence the attitude of corresponding organisations in advanced countries. It is for a spokesman of workers in backward countries to persuade their fellow-workers in advanced countries to be content for the time being with what they have got, or at any rate with a moderate increase in their standards of living, for the sake of making it possible to improve that of the backward countries.

The myth that it is sufficient for Governments and Parliaments to decide to increase their contributions towards economic assistance to under-developed countries, dies hard. How are the workers in advanced countries to be expected to realise that the welfare of their fellow-workers in backward countries depends on their self-restraint if no efforts are made from backward countries to make them realise it? Each time working hours are reduced in some important industry in an advanced country, and each time some substantial wage increase is enforced, there should be an outcry of protest on the part of workers in backward countries whose prospects of improvement are thereby correspondingly reduced. It is true, world opinion has been made aware of the need for assisting backward countries towards a higher standard of living. What is yet to be realised is that this end can only be attained at a cost of sacrifices on the part of the workers in advanced countries—sacrifices in a negative sense at any rate—consisting of renouncing the full benefits of their increase in output. It is for the workers in backward countries to make world opinion aware of this obvious but almost generally overlooked fact.

BANKS

Chasing One's Own Tail

THERE is more than topical interest attached to Dr N. N. Law's reasoned criticism of recent increases by banks of interest rates on Deposits. Others besides Dr Law—Mr A. V. Grantham of The Chartered Bank, for example—have felt that an increase in interest rates on Deposits is self-defeating. There is a certain amount of naivete in the assumption that so obvious and so inadequate a bait as minimal increases in interest on Deposits will make for a larger haul of depositors. From the point of view of the depositor, confidence in the banking system and in the particular bank he patronises, the intangible personal relationship the Bank establishes with him and the timely help and advice he gets from his Bank manager are more likely to influence his decision than a larger return on his Deposits. If he were merely in search of greater yield, he has other competing contenders for his nest-egg. Even if considerations of safety weighed with him, he has the post office and other agencies of national savings that siphon funds into Government tills. On the other hand, if he did not have basic confidence in the bank, even a rate of 10 per cent on his Deposits is sure to leave him cold. What the banking situation needs is not pandering to the cupidity but strengthening the confidence of the prospective depositor.

From the bank's point of view, the increase in expenditure involved in a higher interest rate will make further dents into profits unless lending rates are correspondingly raised. This kind of chasing one's own tail will leave the bank exactly where it was before, if not slightly worse off. It certainly seems more sensible, as Dr Law has suggested, to spend the money earmarked for additional interest on "opening branches in unbanked areas and improving the quality and diversifying the range of service" and stimulating the banking habit in people who either don't have it or are suspicious of it. From this point of view, the importance of the Deposit insurance scheme often canvassed by us and more recently accepted in principle by the conference of bankers in Delhi, is obvious. Early practical steps should be taken to make the idea a reality.

Dr Law, like other bankers who have spoken during the current "balance sheet season", is understandably worried about the liquidity position of the banks. We are glad to note Dr Law is unsqueamish enough to relate the low liquidity to the need for increased profits. Indeed, he considers it as probably the most important reason. For some reason, it is considered bad form to refer to this aspect. Dr Law thus formally dissociates himself with much of the cant that generally clouds this issue. Higher profits are possible only by "reducing the incidence of expenses where possible and rationalising the rates of charges and finding out newer sources of revenue." Dr Law referred in this connection

to tax concessions and in particular made the suggestion of a rebate on profits used for building up reserves. It is worth recalling that the recent Finance Bill has provided for deduction from taxable income of any special reserves created by any approved financial corporation engaged in providing long-term finance for industrial development in India of an amount not exceeding ten per cent of the total income, under certain conditions. In the context of the undoubted need to increase the inner strength of the banks both for practical and psychological reasons, it is worth while considering whether ordinary commercial banks should not also be encouraged to create such special reserves. After all, part of the banking system's present difficulties stems from its being obliged to play the role of corporations of the sort singled out for this benefit. The commercial banks, as de facto long-term financial corporations, certainly deserve the same consideration.

BANKING RETURNS Record Currency Expansion

THE detailed analysis of the Reserve Bank returns for 7 April is being deferred until the next week because inferences that are drawn without regard for the Scheduled Bank figures for the same week are apt to be misleading and even erroneous. For example, the Other Loans and Advances of the Reserve Bank have fallen by Rs 40 crores, the implication being that Scheduled Banks are largely responsible for the reduction in debt. But that would mean that the addition to the resources of the banking system in that week must have been very large indeed. We shall, therefore, wait till the next week before we attempt our interpretation of the banking returns.

In the week under review, there has been a record expansion of over Rs 55 crores to Rs 2,039.91 crores in Active Note Circulation. The Central Government has apparently exercised its right to tender Rupee Coin for Rs 5 crores and to receive credit therefor from the Reserve Bank. For, Rupee Coin is higher by Rs 2.11 crores, and, far from any contraction, there is likely to have been outflow of Rupee Coin for Rs 2.89 crores. Currency has been expanded against Rupee Securities

PUNJAB NATIONAL BANK

*Net of provision of Rs 17.50 lakhs in 1959 and Rs 53 lakhs in 1960 for tax.

for Rs 55 crores by transfer from the Banking Department. Resultantly, Notes held are higher by Rs 2 crores odd at Rs 9.88 crores. It is obvious that the record currency expansion is due mainly to the impact upon banking returns of governmental year-end disbursements.

Month-early disbursements have caused a fall in the balances of both the Central and State Governments. Balances Held Abroad are again lower by nearly Rs 2 crores at Rs 11.31 crores.

The return of the State Bank shows that Deposits are lower by Rs 5.70 crores at Rs 567.51 crores. The Giltedged portfolio is lower by Rs 8 crores, presumably reflecting Treasury Bills discounted with the Reserve Bank. The total of Advances is higher by Rs 1.30 crores at Rs 282.59 crores. Cash in hand and with Reserve Bank has improved by Rs 1.99 crores to Rs 19.90 crores. Other Assets continue to be at an unusually high figure.

The return of the Scheduled Banks for 31 March reveals that Deposits have improved by nearly Rs 21 crores of which only Rs 12 crores are ascribable to the State Bank. The total of Advances has again jumped sharply by Rs 15.72 crores to Rs 1,333.77 crores. Borrowings from the Reserve Bank are higher by nearly Rs 12 crores at Rs 94.53 crores.

PUNJAB NATIONAL

Advances Rise, Gilts Fall Sharply in 1960

Punjab National Bank Limited has, aside from the State Bank, the largest amount of disinvestment in giltedged to show in the 1960 accounts. The stagnancy in Deposits and the sustained demand for bank credit made it inevitable for Punjab National thus to seek to enlarge its resources.

Deposits and other accounts have, in the 1960 balance-sheet, declined by Rs 1.68 crores (or just 1.2 per cent) to Rs 139.48 crores. Advances, on the other hand, have jumped up sharply from Rs 72.51 crores to Rs 93.53 crores—a rise of 29.0 per cent. Hence, giltedged holdings have been reduced by like amount—Rs 20.08 crores—to Rs 40.74 crores; as a consequence, the credit ratio has gone up from 51.4 per cent to 67.1 per cent, whereas the ratio of giltedged to Deposits has declined from 43.1 per cent to 29.2 per cent. Cash balances, at Rs 12.75 crores, show a drop of 4.4 per cent, and the cash ratio is slightly marked down at 9.1 per cent against 9.4 per cent.

Gross income has increased by 9.2 per cent, or Rs 73.61 lakhs, to Rs 8,71.16 lakhs. This is a remarkable achievement if regard is had for the fact that, in 1959, net profit on sale

of investments, etc., contributed Rs 20.44 lakhs and other receipts accounted for Rs 25.77 lakhs; in 1960, the relative figures for the two heads are Rs 2.13 lakhs and Rs 8.49 lakhs respectively. Thus, interest and discount have fetched impressively more at Rs 6,97.12 lakhs against Rs 6,29.36 lakhs—an improvement of 10.8 per cent; and commission, exchange and brokerage are marked up by Rs 39.96 lakhs (representing a rise of 37.0 per cent) at Rs 1,47.87 lakhs. The ratio of gross income to Deposits is better at 6.2 per cent against 5.6 per cent.

However, interest paid has absorbed Rs 14.07 lakhs more at Rs 3,51.38 lakhs, while salaries and allowances have cost Rs 23.78 lakhs more at Rs 3,05.75 lakhs. As a result, the balance of profit, net of the tax provision, is somewhat reduced by Rs 1.66 lakhs at Rs 65.04 lakhs.

The tax provision is sharply raised from Rs 17.50 lakhs to Rs 53 lakhs. Staff Bonus gets Rs 2 lakhs more at Rs 27 lakhs. The transfer to Reserve is pruned from Rs 17 lakhs to Rs 11 lakhs. The Charity account, as before, gets Rs 1 lakh. The dividend is maintained, and absorbs Rs 25 lakhs.

INDIAN OVERSEAS

Profit Higher by 23.9 Per Cent

Indian Overseas Bank Limited has reported a very satisfactory year of working. Remunerative use of resources, presumably sustained over the period under review, as well as a tight rein over expenses have contributed to such improved results.

The Deposits of the Bank, in common with the experience of the banking system generally during the last year, have fallen somewhat by Rs 1.20 crores to Rs 29.29 crores. Cash balances are slightly higher at Rs 2.18 crores against Rs 2.06 crores, but, because of the decline in Deposits, the cash ratio is shown better at 7.4 per cent of Deposits against 6.8 per cent in 1959. Similarly, a small drop in gilt-edged holdings from Rs 9.55 crores to Rs 9.26 crores is nevertheless accompanied by a rise from 31.3 per cent to 31.6 per cent in the gilts/Deposits ratio. Even so, though Advances have been marked up only by 1.5 per cent over the 1959 figure (Rs 19.33 crores against Rs 19.04 crores), the credit ratio has jumped up from 62.4 per cent to 66.0 per cent.

The income by interest and discount is marked up by 12.5 per cent (or Rs 17.68 lakhs) at Rs 1,59.61 lakhs. Commission, exchange and brokerage are higher by Rs 7.40 lakhs, or 12.6 per cent. As a result, the gross income is better by 12.7 per cent at Rs 2,26.63 lakhs, and the ratio of gross income to Deposits is

Balance-sheet: (In Rs Crores)	31-12-1959	31-12-1960	Change	Change percentage
Deposits	30.49	29.29	- 1.20	- 3.9
Cash including call money	2.06	2.18	+ 0.12	+ 5.8
Cash as percentage of Deposits	6.8	7.4	—	—
Gilt Investments	9.55	9.26	- 0.29	- 3.0
Gilts as percentage of Deposits	31.3	31.6	—	—
Advances	19.04	19.33	+ 0.29	+ 1.5
Advances as percentage of Deposits	62.4	66.0	—	—
Profit and Loss: (In Rs Lakhs)				
Interest and Discount	1,41.93	1,59.61	+ 17.68	+ 12.5
Commission Exchange and Brokerage	58.67	66.07	+ 7.40	+ 12.6
Gross Income	2,01.12	2,26.63	+ 25.51	+ 12.7
Gross Income as Percentage of Deposits	6.6	7.8	—	—
Interest Paid	86.31	87.02	+ 0.71	+ 0.8
Salaries and Allowances	56.18	65.29	+ 9.11	+ 16.2
Balance of Profit*	21.11	26.16	+ 5.05	+ 23.9

*Net of Rs 12.50 lakhs in 1959 and Rs 18.50 lakhs in 1960 for tax.

perceptibly improved to 7.8 per cent from 6.6 per cent.

On the expenditure side, interest paid is fractionally more at Rs 87.02 lakhs—the increase over the previous year is a scant 0.8 per cent. But salaries and allowances have absorbed fully Rs 9.11 lakhs more (an increase of 16.2 per cent) at Rs 65.29 lakhs. As an end result, the balance of profit, net of the provision for tax, is measurably better by 23.9 per cent, or Rs 5.05 lakhs, at Rs 26.16 lakhs.

From 1959 profits, an additional transfer of Rs 50,000 has been made to reserve. The transfer this year is Rs 9 lakhs against the comparable figure of Rs 6.75 lakhs (including Rs 6.25 lakhs first transferred) in 1959. Bonus to staff gets half a lakh more at Rs 5.50 lakhs. Development Rebate Reserve received Rs 75,000 in 1959, and gets Rs 50,000 in 1960. The tax provision goes up by Rs 6 lakhs to Rs 18.50 lakhs. The higher dividend at 14 per cent subject to tax absorbs Rs 10.50 lakhs against Rs 9.38 lakhs set apart for distribution in 1959.

Mr Selwyn Lloyd's Dilemma

By Paul Einzig

ON the eve of his Budget statement the Chancellor of the Exchequer, Mr Selwyn Lloyd, is certain to be having sleepless nights. He is confronted with a more than usually awkward dilemma. He is pressed by his supporters to produce a Budget containing concessions to the middle classes. On the other hand, in view of the unpromising outlook for sterling he may feel that he could ill afford to make such concessions. It is true he could easily find the actual amount involved by simply budgeting for an increase in the yield of taxation through the expansion of production. But the budgetary problem is of relatively small importance compared with the problem that would arise from reactions of

trade unions to such concessions. They would provide a good excuse for bigger and better wage demands. Whether these demands are met or whether they lead to major strikes, it would be bad for the balance of payments.

Whether or not Mr Selwyn Lloyd will feel justified in taking a calculated risk will probably depend largely on the view his advisers take on the prospects of a major improvement in the balance of payments this year. If the March figures should be encouraging he might take the plunge. It is true even if the trade deficit were eliminated there would remain the problem of paying for last year's deficit, the counterpart of which was accumulated in the form of "hot money" in London. For the present the withdrawal of hot money is being discouraged by means of bolstering up forward sterling so as to make it profitable for arbitrageurs abroad to leave their money in London. In the long run, however, there are only two ways in which this floating debt can be dealt with. The one is to improve the balance of payments to such an extent as to create a substantial surplus of visible and invisible exports. The other is to raise money abroad by means of a long-term loan or by means of selling industrial assets to investors outside the Sterling Area. Prospects for the former solution are none too good. The latter solution would entail grave disadvantages and is bound to be subject to much criticism. Nevertheless, it is very tempting to resort to it for the sake of being able to expand production without endangering sterling.

Possibly the Government may prefer to mark time, relying on its substantial drawing rights with the International Monetary Fund, to defend sterling against the effect of withdrawals of hot money and of a speculative exaggeration of that effect. Moreover, there is always a possibility that a revival of a dollar scare might divert pressure on sterling. At present this does not appear likely, because the new Washington Administration has been well advised in avoiding any action that would lead to a revival of a dollar scare. The only mistake it tried to make was the proposed increase in minimum wages and that was prevented for the moment by resistance on the part of Congress. However, there is always a possibility that New Deal elements might gain the upper hand. In the absence of a dollar scare the prospects of sterling are closely linked with the development of the balance of payments this year. The figures for March are awaited, therefore, with more than usual interest. In the absence of a substantial improvement within the next few months the deficit would have to be financed by a further accumulation of short-term indebtedness or by capital transactions indicated above. The third alternative, that of a devaluation, has been rejected by the Government and may safely be disregarded from a practical point of view.

Notes

FARRAKA

Saving Calcutta

The volte-face of President Ayub Khan over the Farraka Barrage issue is perhaps an indication of his declining power. There have been instances in recent weeks of growing defiance of the Government in Pakistan. Such flouting of authority for the present seems to be confined to some cities, but considering the fact that disturbances have continued now for a fairly long period, it would appear that this is not a passing phenomenon that can be quickly suppressed. It was reported that, at their meeting in London during the Common-wealth Conference both President Ayub Khan and Prime Minister Nehru had agreed that the Farraka Barrage would benefit both the countries. On the basis of this report, it was believed that preparations were already afoot in both the countries for discussions on a ministerial level to settle other outstanding points. The Farraka Barrage is vital to India and it is not as though the project has been thought up only recently. The idea of building a barrage at Farraka over the Ganga in order to prevent the silting of the Hooghly, thus protecting the port of Calcutta, had been conceived by

an eminent British engineer nearly a hundred years ago. Unfortunately, nothing has come of it even though every year that passed since then brought the danger of silting of the Hooghly that much nearer in period of time.

In the past hundred years, the port of Calcutta has grown big and it today occupies a preeminent position among the ports of the country. It is serving a vast hinterland which is rapidly growing industrially. An efficient Calcutta port is therefore of vital importance to the whole of the region, and for that matter to the whole country. Teams of both Indian and foreign experts who have studied the problems of the Calcutta port have come to the conclusion that the only answer is the construction of a barrage at Farraka. Pakistan's fear that the barrage will result in diminishing the flow of water down the Ganga into East Pakistan is unfounded because there is surplus water in Ganga even during the summer months. Moreover, the whole world knows—if Pakistan chooses to ignore it, it is its own business—that only recently India has gone more than halfway to conclude an agreement on the sharing of the waters of the rivers in the Indus basin, an agreement which paved the way for loans for the development of the region from various international bodies including the World Bank.

India has made it clear that it will see to it that the barrage harms the interests of Pakistan in no way and there is no reason why the latter should not be satisfied with such assurance. It is, however, out of the question to abandon or delay the project because Pakistan has entered a protest which in any case cannot stand close scrutiny. Government is to be congratulated on its firm stand and the assurance that project will be taken up as scheduled despite Pakistan's protest will allay fears about Government's attitude in the context of the fresh impediment in the way. It may also be mentioned in this connection that we in India also cannot blame Pakistan too much for its unreasonable attitude; for are we not seeing equally unreasonable postures taken by our own people in regard to the utilisation of the waters of rivers?

AUTOS

In Top Gear

Inaugurating the first annual general meeting of the Association

the Indian Automobile Manufacturers, Mr Manubhai Shah, Union Minister for Industry, commended the rapid strides made by the automobile industry and observed that the industry's performance during 1960 was the best as compared to all other groups of industries in the country. Production of automobile vehicles during 1960 was put at 52,115 as compared with 36,368 during the previous year, while in the case of motor cycles, scooters and three-wheelers, there was a phenomenal increase of nearly 100 per cent. It is noteworthy that the increase in the production of automobile vehicles during 1960 was achieved with the same amount of foreign exchange as during 1959. In respect of indigenous components, the percentage presently ranges from 50 per cent in the case of Standard to 80 per cent in the case of Dodge Truck.

While, in the light of this achievement, the industry could be considered to have turned the corner, there is room, as Mr Shah has pointed out, for further substantial progress both in respect of total production and in increasing indigenous components. A large part of the country is still without the facility of mechanised transport and it is, therefore, essential that the automobile industry should be given proper encouragement to step up production. It is heartening that the new policy toward the automobile industry enunciated in January 1961 marks a welcome change and provides for greater freedom with reference to selection of models by the manufacturers as also in regard to expansion of capacity. The industry has also been given the assurance by the Government in respect of provision of the foreign exchange element of the capital needed to implement the Third Plan schemes for the industry. However, there is one aspect of the Government's policy with reference to the automobile industry which is hard to reconcile with the need for encouraging production. This refers to the effects of the new duties imposed in the latest Budget on the raw materials and components used by the automobile industry. It has been pointed out by Mr Lalchand Hirachand, President of the Association, that the proposal to increase the duty on iron and steel manufactures from 35 per cent to 50 per cent and the duty on machinery from 10 per cent to 15 per cent will result in an increase in the landed cost of the finished and semi-finished components and in that of the finished product. Without the facility of indigenous sources for supply of all the indigenous components, etc., imposition of such taxes would inevitably raise the cost of production in the automobile industry. Such increase resulting from the fiscal levies in the latest Budget is clearly at variance with the declared objective of the Government in

bringing down costs of production in the automobile industry.

COTTON TEXTILES

Face-lift—or wishful thinking?

The decision of the Government of India to bring forward legislation with a view to compelling the textile units to implement the recommendations of the Wage Board will not be a surprise to those who have been closely observing the affairs of the cotton textile industry in the country. The reluctance of a section of the industry in implementing the recommendations is a well enough known fact.

It may be recalled that the Wage Board has broadly classified the industry into two categories and recommended a flat increase at the average rate of Rs 8 per mensem for all employees belonging to the first category from 1 January 1960 and a further increase of Rs 2 from 1 January 1962 whereas, in the second category, the increases are to be Rs 6 and Rs 2 respectively. It also recommended that three quarters of the dearness allowance should be merged into the basic pay of the employees on the basis of seventy five per cent of the average allowance received in the first half of 1959. The remaining twenty five per cent will remain as dearness allowance, which will be linked with the cost of living index in all areas where such figures are maintained and, where there is no such index, with the index of the nearest centre.

There has been a welcome shift of late to the settlement of dis-

putes by negotiation rather than by adjudication. The Wage Board forms part of the machinery of industrial relations with the primary objective of settling disputes on a voluntary basis instead of taking up the matter before a court of law. And the Board has firmly established that no claims for further revision of minimum wages within a period of five years can be raised. This is certainly no mean achievement. In this context, the gross indifference of certain employers in accepting the decisions of their industry's representatives is beyond comprehension. The necessity of placing Wage Boards on a statutory footing has not been felt at the time of their inception. There was some sort of understanding that both the labour and management would abide by the joint recommendations of their representatives. But the statement of the Labour Minister in the Lok Sabha that he would resort to legislation

for the implementation of the Board's recommendations has proved beyond doubt that the expectations have been belied. If such things are to continue on the industrial front, the endeavour to give a face-lift to the industry by constituting Wage Boards will prove to be mere wishful thinking.

★

SUGAR Saturation Point

The sugar industry is now known to be facing a problem in disposing of the excess stocks of sugar that have accumulated with the factories consequent on the overproduction of sugar during the 1959-60 season. Sugar stocks are now estimated to amount to 600,000 tons and the sugar factories, ill provided with finances, are being hard put to it to carry such an abnormally high level of stocks. The Indian Sugar Mills'

association is reported to have served notice on cane-growers, their societies and the State and Central Governments that the industry would not be in a position to pay dues unless effective steps were taken by the Government to enable the industry to dispose of the huge surplus now held by the Government. It is further clear that carryover of this year's stocks to the next year would aggravate the marketing problem for sugar during the next year. It has now been estimated that total production during the 1960-61 season will be of the order of 2.8 million tons and with the present carryover of stocks being added to it, the total supply of sugar in the country will reach a level of 3.4 million tons. Exports offer very little prospect and the difference between the Indian and world price of sugar is such as would entail heavy losses on sugar exports. World price is at Rs 9 per maund of sugar whereas

the Indian cost of sugar production, even excluding taxes paid by the industry, works to Rs 25 per maund. With a rigid cost structure, which has been considerably inflated after the Tariff Commission's recommendations and the new wage rates fixed for the industry under the sugar wage board award, the sugar factories will not be in a position to bear a loss of Rs 16 per maund.

The cry for help by the sugar factories is one which the Government cannot afford to be heedless of if regard is had to the need for enabling the sugar factories to remain in working condition. The sugar industry in UP, the premier sugar producing State, has been gravely exercised about the drift in Government's policy and Mr Sitaram Bhawsinka, President of the Indian Sugar Mills Association, Uttar Pradesh, has put in a plea for suspending issue of licences for setting up of new factories. The impact of the adverse effects flowing from the present developments would be particularly severe on the factories situated in the Uttar Pradesh since, in point of quality of cane and freight, factories in this State are at a disadvantage as compared with factories situated in the Bombay and Madras States. The Sugar industry in the State, it has been observed by Mr Bhawsinka, will cave in under the weight of overproduction if prompt measures are not taken by the Government to clear stocks. One means suggested by Mr Bhawsinka to facilitate release of stocks from the mills is the removal of the present control exercised by the Government over the movement and distribution of sugar. With excess production of sugar, controls have clearly outlived their purpose and in view of the fact that consumption has been static around 2 million tons during the last few years, it deserves to be considered whether removal of controls will not lead to greater intake within the country.

Indian Finance

15 April 1961

and American capital, and of course M. Nearchos, are all eager to make something out of the few minerals that Greece can offer.

Recovery in Greece during the Fifties helped expatriate capital to come back home and electrification in the peninsula is the big achievement that the public sector can point to at present. The old city of Megalopolis, destroyed in the Classical period, has been resurrected for a high-power plant and Greece is now able to export energy to Yugoslavia and Turkey. The existence of lignite at Megalopolis confirms the source of power for the aluminium industry. It is surprising that India has made no effort so far to see what Greece is doing now, though experts and officials will probably rate Greece superior as a tourist attraction. The use made of lignite may hold a lesson for the Madras Aluminium Company. At the party given to the Chairman last week, none made a reference to the way in which Greece is setting foreign aid for a local company in all ways and putting up the Electricity Board that has acquired all small companies in the way of development. A fertiliser factory at Ptolemais, using lignite for producing electricity, is projected and the value of both lignite and bauxite is established by German help. This may be called belated amends for the damage done by Hitler to Greece. The Greek power schemes mentioned some months ago have not won much attention here, perhaps because there is no shipping magnate abroad to whom the Neyveli project administration can readily turn for help. The recent developments in Greece should, however, interest the Madras Industries Minister who spoke at length on 29 March about the way in which foreign capital can use the improved economic climate in India to the advantage of local labour and capital alike.

★

PAPER Impressive,

The saying that everything begins on paper may enhance the essential importance of the paper-making industry. One may note that expansion in recent years has been followed by the rise of new units—from Madras to Bihar. The industry's performance may be regarded with wide approval for it has reached the point at which paper-making machinery also may be forthcoming. What the Tariff Board said when the industry asked for protection in 1925 does not matter at all. But there is still a problem of materials, though the supply of essential chemicals is vastly enlarged.

The paper industry organised into two trade associations—paper-makers and paper mills—

has units of assorted age and size. The Titagur Paper Mills set up in 1884 is known as the original claimant for tariff assistance. Its original plant at Kankannur and Titagur produce 50,000 tons of printing paper including cover paper while the new unit at Chowdwar in Orissa created out of the reserves produces many varieties including Kraft. The 10-rupee shares of Titagur Paper are regarded as safe and sound, because of the 25 per cent dividend forthcoming every year. The India Paper Pulp Co. with a mill at Naitihati was started in 1922 and its rated capacity of 15,000 represents an increase in production financed by a rights issue some years ago. The Bengal Paper Mill located at Raghunath was started in 1889 and has enjoyed prosperous times reflected in the present quotations of Rs 92 for the Rs 25 paid-up shares. In Bengal today, there are in addition two special mills. The Tribeni Tissues produces at its mill in Hooghly District both cigarette and tissue paper, while the Western India Match Co. runs since 1959 a mill to produce labels and packing paper.

The expansion of Star Paper Mills to produce Kraft and other varieties may help output in the UP to go up. The oldest mill Upper India Couper in Lucknow has long been the orphan of the flourishing industry. On the other hand, Star Paper at Saharanpur has made a better showing and is now so to say getting up starch for expansion. The largest unit, with diverse lines like bond paper and art board in its total output of 60,000 tons a year is Rohtas Industries in Bihar. As a prewar enterprise, the Company has been growing steadily and its ability to raise extra capital rested on its own dividend record. The shares of the Orient Paper Mills are more popular, because the Company with its mill in Sambalpur commands raw materials and has lately made sure of external aid for its development programme. Sri Gopal Paper which took over the earlier Indian Pulp and Paper that had failed is the single large concern in the Punjab. The mill at Jagadhri produces typewriting and manifold paper also. The ten-rupee shares are now in the forward list in Calcutta along with Orient and Rohtas but by comparison may be called sluggish. Of equal age but smaller capacity is Mysore Paper whose careful borrowing has enhanced output at Bhadravati. Since a rights issue for Rs 1 crore is proposed it is clear that the Company means to expand further owing to the increased demand in the region. The real postwar entrant into the industry is West Coast whose first dividend payment was supported by handsome earnings.

Though paper is not regarded as an industry with special growth potential, the dynamism of West Coast Paper with a big plant at Dandeli, designed already for extensions, has been recognised as the 100-rupee shares are quoting over 200 in spite of many blank years. An official account of the existing units refers to the commissioning of two small units in 1960 at Faridabad. The trend towards decentralisation is now well established and new enterprises launched since 1959 have not been big like Straw Products' project in Orissa. The new schemes to open mills in Madras and Mysore are yet to bear fruit but in the Kerala State there is the Punalur Mill set up in 1931 and sponsored by A. & F. Harvey for producing brown paper as well as coloured printing paper. The interest of Madras Mills precludes public participation in the capital. The same observation applies to Andhra Paper Mill at Rajahmundry. This is the only unit in the public sector. The chequered history deserves to be forgotten. There is a big expansion programme to raise output far above the present level of 3,000 tons to meet Government requirements. The Sirpur Paper mill is certainly larger and better known, because its yearly output is now put at 36,000 tons and the 10-rupee shares have a wide following among investors. The expansion of Ballarpur paper mill will raise its output far above the previous capacity of 12,600 tons a year. The 25-rupee shares are familiar to Calcutta. Not all the existing concerns are public companies reared on subscribed capital. Small scale units to produce specialities have come into being but Gujarat Paper set up in 1935 and producing 6,000 tons a year falls into a different category. The Deccan Paper Mills of Poona is much older but it is not to the fore, and investors have no knowledge of any except those mentioned above.

★ But....

Progress made by the Paper industry in India during the Second Five Year Plan makes impressive reading. Within the space of five years, the industry's output has risen smartly by 90 per cent

from 187,000 tons produced by the end of the First Plan. The installed capacity also shot up to 410,000 tons though it was 4,000 tons short of the target fixed for the Second Plan.

A noteworthy feature in the working of the industry was the leading part played by the already installed units which accounted for four-fifths of the increased production during the period under review. Besides, all the expansion programmes of the manufacturing units were financed out of their own resources. Considerable headway has been made by the paper machinery manufacturing industry. Manufacturers of small scale plants are already in the course of completing the fabrication of the first units of 3-5 tons capacity and the manufacturers of large scale plants expect to fabricate and supply plants of 50 tons capacity by the end of next year.

Nevertheless, it will be misleading to think that the industry has had smooth sailing. As complained by Mr P. J. Egan, the Chairman of the Indian Paper Makers Association, the industry was confronted by a host of problems. The scarcity of wagons had adverse impacts on the movement of coal, raw materials and even finished products. On many occasions, the manufacturers had to resort to road transport for the movement of coal and raw materials. Another problem that caused grave concern to the industry was the shortage of electrical power, especially in West Bengal. Consequently, the completion of the expansion programmes in the affected mills had been delayed and the rate of production also slowed down to a considerable extent. A serious development during the Second Plan period was the enhanced cost of production consequent on the increased railway freights, the rise in prices of raw materials and the additional expenditure the industry had to incur on road transport. In this context, Mr Egan's demand for an upward revision of paper prices with a view to providing an adequate return on the capital employed by the industry can be fully supported.

The Third Plan targets fixed for the paper industry envisage a doubling of both capacity and production. Taking into account the rate of industrial growth and the increased emphasis laid on free and compulsory education, the raising of capacity to 900,000 tons and production to 700,000 tons may require an upward revision. In doubling the production, the reliance on new units warrants caution, for the capital outlay per ton of capacity will be greater than is required for the expansion of the existing units. The industry's capacity to fulfil the great task required of it during the current Plan will not be doubted if necessary incentives are provided.

CHOOSE Electronik STRIP CHART CONTROLLERS for detailed, long-term records... and a complete selection of control forms.

CHOOSE Electronik CIRCULAR CHART CONTROLLERS for ease of scale reading... convenient daily charts; in a full range of electric and pneumatic control forms.

CHOOSE Electronik CIRCULAR SCALE CONTROLLERS where you want readability and control check at extreme distances... without need for a record.

CHOOSE THE PROTECT-O-VANE SAFETY CUT-OFF for simple dependable excess temperature protection... can be used with any temperature control to prevent furnace shut downs and loss of production.

PSBS-H31/60

Whatever your furnace needs for control...

There's good reason why more heat-treating furnaces everywhere are controlled by Brown instruments. First, of course, is performance...sensitive, precise control. And equally important is versatility. In this varied line of instrumentation you'll find just about everything a furnace could possibly need in the way of control.

CHOOSE PYR-O-VANE CONTROLLERS where you don't need a record but do need precise vane type snap action electric control by a millivoltmeter instrument... also available with pulse-type time proportioning action, in both vertical and horizontal models.

IMPORTS

Cut to the Bone And—

Although the import policy in recent years has been made progressively restrictive, it still seems worthwhile to enquire whether there is not scope for effecting further reduction particularly in respect of consumer goods. Apart from food the import of which cost Rs 155.2 crores in 1959-60, there were other consumer goods whose import amounted to Rs 65.5 crores in that year as compared to Rs 63.9 crores in the preceding year. It is significant that the total value of non-developmental goods stood at Rs 386.3

crores in 1958-59, Rs 348.9 crores in 1959-60 and Rs 202.2 crores in the first half of 1960-61. Surely, there should be scope for some substantial reduction in this category. It is particularly important to maintain a careful check on Government imports which have shown a big rise from Rs 138.9 crores in 1955-56 to Rs 416.4 crores in 1959-60 and Rs 251.3 crores in the first half of 1960-61.

(See Table at end of Note)

The Government of India has appointed a Committee under the Chairmanship of Sir A. Ramaswami Mudaliar to examine the working of the Import and Export Trade Organisation and also to consider the system of priorities for imports in the context of the

prevailing foreign exchange situation. The full terms of reference of this Committee have not been published so far. It is to be hoped that the Committee will thoroughly examine the various aspects of the problem and submit its report expeditiously. It is not known whether the Committee will also study the role of the State Trading Corporation particularly with reference to the import trends. It was alleged at the last meeting of the import Advisory Council that the STC did not exercise adequate care regarding price and quality while importing bulk commodities like industrial raw materials. It was stated that the prices of certain goods imported by the Corporation such as camphor and mercury were

Indian Finance

exorbitant. This aspect should also be looked into carefully.

	Imports on Government Account		
	1955-56	1959-60	1960-61
Foodgrain	28.9	155.2	114.1
Capital equipment for public sector	30.3	98.2	46.8
Iron & Steel	12.1	15.7	10.7
Railway Stores	22.7	17.0	14.0
Communication stores	13.4	17.6	9.1
Other items	31.5	112.7	56.6
Total	138.9	416.4	251.3

★

Stick with the Old

Between the drastic cut in imports and Government's seeming preference for diverting what import that is allowed direct to the actual users, the import trade seems to be fast squeezed out of existence. The minimisation of import is a necessity forced upon us by the acute shortage of foreign exchange. The country simply cannot afford large imports especially since exports are not making much headway. But this is not to say that imports can be stopped completely. This also we cannot afford to do as many of our development programmes still depend on a considerable quantum of imports for their successful implementation. The position has been sought to be met by cutting down what may be called unproductive imports such as consumer goods, etc, and even in regard to industrial raw materials and essential spare parts, a system of priority has to be adopted. It is, however, gratifying to note that Government has assured industry that everything possible will be done to facilitate an even flow of maintenance imports so as to enable industrial units to continue to work without interruption.

It will be seen, therefore, that to plead for an increase in imports will be tantamount to asking for something that is not simply there. There, however, seems to be much room for improvement as regards the manner in which the small quantum of import that is still allowed is being handled. One would have thought that, with a large body of experienced importers in the country, the licences would be granted to them. But what seems to be happening is that the authorities have deemed it a satisfactory arrangement to issue licences direct to actual users or those for whom some amount of import is essential. It would appear that this procedure has been adopted with a view to making available imported materials to actual users at reasonable prices as it is thought that importers are prone to profiteer. But it is doubtful if the alternative

15 April 1961

chosen has proved any better. Speaking at the annual general meeting of the All India Importers' Association in Bombay the other day, Mr R. C. Shah, the vice-president of that body, has pointed out that "quite a number of such licences (actual users' licences) have found their way in the open market." It is also alleged that actual users' licences are sold at high premia. Mr J. H. Forman, Chairman of the Calcutta Import Trade Association, has also entered a plea for utilising the services of the established importers for an economic and efficient use of the small amount of foreign exchange now available for import. According to him, the fact that consumers themselves want the expert services of the importers needs to be brought to the notice of Government. Established importers have long experience of the import trade and they can render valuable service to the community even at times when imports have necessarily to be small. They will also do well to diversify their activity by taking to the export trade which is now getting much Government support.

EXPORTS

Try out the New

The prospects for increasing the export of engineering goods in the West Asian and European countries have been found immensely bright by the seven member delegation headed by Mr B. S. Bugga which toured that part of the world in quest of markets for our engineering products. The delegation visited the Lebanon, the UAR, Iran, Greece, Italy, Yugoslavia, England and Spain. The visit has confirmed beyond doubt the earlier expectation that Indian engineering industries can successfully enter these markets. This fact has been highlighted by the tremendous amount of goodwill shown by the host countries and their keenness for developing trade with India. Their satisfaction at the quality of our products and their prices also lends adequate support to this view. Among the countries visited by the delegation, Yugoslavia, the United Kingdom, Iran and the UAR offer immense scope for a wide range of engineering goods.

For availing ourselves of this golden opportunity, the need for adopting adequate steps to secure a competent place for our goods in those markets hardly requires any special emphasis. The necessity for propaganda and publicity through participation in trade fairs, organisation of exhibitions, mailing of catalogues and literature to chambers of commerce and prospective importers looms large in our minds. That much leeway has to be made in this sphere has been well evidenced by the comparative unawareness in many places toured by the delegation of the rapid strides made by the country in the field of engineering industries.

In addition to these, it will be beneficial if frequent visits are conducted by the representatives of the industry for studying the markets and for establishing and renewing personal contacts. The appointment of local agents for publicity purposes and furnishing relevant information to the importers can go a long way toward the fulfilment of our objective. The delegation firmly holds the view that our exports to these countries can be stepped up to Rs 8 to Rs 10 crores from the present level of Rs 1.5 crores in the immediate future if an earnest attempt is made.

★ EAST INDIA DISTILLERIES

Gratifying Progress

It was a success story of gratifying dimensions that Mr C. R. Srinivasan recounted to the shareholders of the East India Distilleries and Sugar Factories Ltd. Ever since the control and management of the Company was transferred to India in 1948, the financial position of the company has improved steadily until today the group's current assets exceed its current liability by about £1.56 million. Shareholders' have participated in this prosperity in the form of bonus issues and a satisfactory level of dividends. During the year, though progress was steady on all fronts, it was spectacular in the field of fertilisers. The company is branching into new endeavours and a new ammonium phosphate factory is to be commissioned in the middle of 1962 with the rated capacity of about 50,000 tons. Full details of the expansion programme have been given by the chairman who made it clear that the company had every intention of participating in the rapid development of the economy of the country. The traditional activity of the company, namely production of sugar, has also made progress. In this connection Mr Srinivasan has referred to the Tariff Board inquiry into sugar prices and pleaded for a realistic fixation of prices.

★ USA

Recession Eases Into Recovery

The average factory work week in the United States has begun to lengthen now—and a better indicator of rises in employment and general economic activity is hard to find.

Officially defined by the Bureau of Labour Statistics as the "average weekly hours of production workers on manufacturing payrolls," this reliable barometer has a consistent record for calling the turn of economic trends well in advance of actual developments. It has

displayed a notable tendency to signal the swing from recession to recovery at least two months ahead of time.

It is of no little significance, then, that the average factory work week, according to the most recent statistics, rose to 39 hours in February. While this meant a rather small rise over January, it also represented the second consecutive—monthly advance—something which had not happened in more than a year. Last December, the work week averaged 38.3 hours.

Of particular interest is the fact that the February rise was due entirely to an increase in time worked in durable goods industries—such as automobiles, appliances, steel, and others. These industries constitute an especially dynamic sector of the US economy, one that is notably susceptible to shifts in the general business climate.

On the basis of past experience, these developments could presage a discernible improvement in the employment situation, although the impact may be delayed. Shortening or lengthening the work week on the basis of orders on hand or received enables manufacturers to make adjustments in production before the underlying business trend becomes clear, and thus before they deem it necessary to lay off or take on workers.

In this way, the work week may be lengthened for some time in response to improving business before workers are recalled or hired in appreciable numbers. This means that in an early stage of economic recovery, employment tends to lag behind production, with the result that the level of unemployment may remain relatively high for several months after the upturn has become evident.

Indicating that the rise in the work week was anything but accidental is a Commerce Department report, published just a few days ago, that manufacturers' new sales and orders both rose in February, for the first such increases since last summer. This followed an earlier report showing an increase during the month in orders for durable goods.

At the same time, the Department reported a continued and welcome slackening in the rate of inventory liquidation during February, as factory stocks were reduced by less than \$100 million. This was about the same as in January, but substantially below the rate during the latter part of last year, when inventory liquidation was the most potent of the recessionary influences.

When inventories are being reduced at a rapid pace, it means that many sales are being made from past production. But when the rate of reduction is slow, it indicates that more business is being done from present production. And when this is combined with a rise in new orders, as now, it tends to foreshadow a significant

production increase to meet the growing demand for goods.

It is interesting to note, in this connection, that production schedules are being raised in a variety of industries. Along with this have come the first scattered signs of a general build-up in industrial employment.

Production and employment increases are seen in such industries as automobiles, steel, construction, electronics, and a number of others. This could become the nucleus of a widening circle of improvement. For instance, automobile gains can be expected to have a favourable impact on the production of tyres, metals, glass, textiles and other supplying industries. By the same token, such industries as coal, transportation and machinery to enjoy better business when steel production rises.

It remains to be seen whether these still-modes advances will accelerate sufficiently to make for a marked decline in joblessness in the near future. Statistically, they may have come along too late to be reflected in the employment data for March, which will be published soon on the basis of conditions during the middle of the month.

In addition, the tendency for companies to lengthen the work week before embarking on ambitious hiring plans may hold employment increases—and unemployment decreases—within moderate bounds for a while. This normal lag between production and employment trends should be taken into account when appraising the unemployment statistics of the next few months.

One might also take note of an interesting point being made by several companies seeking to rebuild their work forces at the present time. It is to the effect that they may actually be running into a shortage of qualified personnel, as many of the skilled workers they laid off in past months have since moved on to jobs with other companies.

This, too, is something to consider, recession in postwar United States is hardly to be equated with stagnation. Even during its brief and transitory periods of moderate business slowdown, the modern US economy maintains an underlying strength and resiliency.

★ ALGERIA

Talks at Evian Watered Down?

The talks at Melun last summer broke down. The discussions between the French Government and the Algerian leaders now arranged at Evian where the medicinal waters might produce bottled friendship, are held with the Swiss looking on and Tunisia acting as the friendly broker. General de Gaulle has won a referendum, but knows full well that Arabs stick out for more because Russia

Ease out of that profit squeeze...

Decentralisation and lower profit margins make the profit-and-loss statement the real measure of each plant's efficiency. That's why it is increasingly important for management to study methods to ease out of the profit squeeze. Planned Lubrication gives management such an opportunity for savings.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

PLANNED LUBRICATION—A VITAL FACTOR IN COST CONTROL

CALTEX (INDIA) LIMITED Bombay • New Delhi • Calcutta • Madras
CALTEX 61.1.1.

is interested. Tito's visit to Cassablanca by yacht is a move that will draw Morocco into the talks as an interested party and the Mediterranean problem will be solved perhaps by a diplomatic accord going far beyond the pact of Algeria. Mr Johnson's visit to Spain may lead to active neutrality on the part of Franco who will consider an independent Algeria a target for friendship. Franco is friendly to the Moors, long after they left Spain, and the negotiations, marred only by the sudden

violent death of the Mayor, M. Blanc may end in a settlement that promises peace with honour. The Algerian problem is now less one of settling the settlers' claims than of saving the Sahara's oil for France, and the big oil companies may be interested in the outcome, though they cannot put forward their views. Neutrality for Laos may lead to a similar promise for Algeria and the French may, by keeping the Communist Block out, hope that a free Algeria, like Iraq, might get

along with the Western Bloc. The FLN may be reconciled to the position if the French minority does not press for safeguards and de Gaulle may consider that a settlement is now vital for reinforcing the French position in Europe. The implications for the Common Market vis-a-vis the European Free Trade Association may not be measured in ore shipments or wine imports, but, in the future, the minerals of North Africa as also the phosphate will be at the call of the Common

Market; French currency, not the Egyptian pound, will be the medium of foreign trade. The difference between the involved diplomatic talks on Laos and those relating to Algeria may be put down to the Geneva conference of 1954 forcing France out of Indo-China. The continued French presence in Algeria is a material factor for the friendly Powers, but Mr Kennedy's view on the necessity for Algeria's liberation is a factor behind, or beyond the talks now in progress.

DEMAG FOR ENGINEERING EFFICIENCY

ANNOUNCING ANOTHER PROJECT

We are proud to announce that the Mysore Iron and Steel Works have selected for their expansion project a complete integrated DEMAG L. D. Steel Plant, valued at over Rs. 3 crores and with a capacity of 100,000 tons of steel and 80,000 tons of rolled sections. This is another example of DEMAG's participation in India's industrial development.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I AM glad to find from the papers that the law relating to income tax is to get at long last the facelift it so badly needs. Indeed it is to be more than a mere facelift: a brand new functional edifice with all the latest gimmicks is to come into being and it is time it did. The present Act is a magnificent statutory ruin. The stately domes of 1922 endure, but basic structural changes made in 1939 and later have left it rather like the Pallava temples after Victorian restorers have had a go at them. Since independence, the winds of change have corroded its more baroque features like, for example, that strange griffin, "resident but not ordinarily resident." Meantime, courts have been naughty and thrown pebbles at the stained glass windows and sometimes the broken panes have been hastily replaced by local glass. No wonder everybody feels that the time has come to pull down the old pile and put something more presentable in its place. The semblance of an excuse for putting off the job disappeared after 1956 when the transitional arrangements in respect of the former (and largely untaxed) princely states came to an end. Now that even Jammu and Kashmir is part of the "taxable territory", the task of enacting a new code should be put through expeditiously.

While comments on details will have to await the publication of the bill, one or two general observations may be in order. It is, I think, safe to assume that all the procedural deadwood and other vestigial accidents cluttering up the present Act will be hacked off. Similarly, embarrassments caused by hasty drafting, especially breaks in continuity caused by piecemeal amendments, will also disappear. (I think it will be a prudent course for the draftsman to avoid the pitfalls of the proviso even at the risk of swelling the number of substantive provisions.) But the most important thing is the need to articulate clearly the vast conceptual changes that have taken place in the last thirty years even in respect of familiar ideas like income and capital, their source and situs and so forth. Tax-hungry administrations all over the world have made nonsense of familiar and intelligible distinctions that Adam Smith and others had made in a

less complicated age. So much so, Lord Macmillan was once reduced to the desperation of asking his fellow peers in the House of Lords to remember that income tax was a tax on "income". Their Lordships were, of course, only too willing to make the necessary mnemonic effort, if only they knew what income was. The Privy Council, grappling with the notion, could produce nothing better than "anything which can properly be described as income is taxable unless it is expressly exempted." These philosophical uncertainties have not, however, prevented the categories of income from multiplying: indeed they were once described as endless by a judge and to-day it is possible to quote the highest judicial authority for the proposition that almost anything that comes your way is income. But I think the new act can help if it can, without in any way tying itself up in knots, indicate Authority's mind in certain doubtful cases. I know the arguments against such a procedure, but it has the merit of letting a tax-payer in a hurry know where he stands, or where he is running to.

Other conceptual changes too need a new articulation. The present position is unsatisfactory because these changes are now sought to be accommodated within the language of the original enactment by a variety of devices, judicial and administrative, none of them wholly satisfactory. Take for example an expression like "Business connection". I was told the other day that the administration feels that it is a perfectly intelligible expression and if only lawyers will leave it well alone, the tax-payer and the tax department will work the idea to their mutual satisfaction! But only last week I read an American interpretation of the expression that will chill the spines of intending American investors in India! Or take again a notion like manufacturing profits being embedded in trading profits and their severability. At the time the parent Act was conceived, ideas on the subject were vastly different from what they became later. Indeed the minority view that arose in a case then to the effect that they were inherently severable and are not the result of a legal fiction had to wait nearly twenty years before it could get the highest judicial

recognition in a famous case before the Supreme Court. And yet even today the position is obscured by the existence of provisions in the Act that imply that such a severance is possible only by the aid of a legal fiction. Since the Act itself is silent on this point and people are not sure whether in particular cases the aid of the legal fiction will be available, they dare not take advantage of the recognition by courts of the inherent severability of the two classes of profits. The new Act can, with advantage, put the matter beyond doubt. Such clarity is particularly necessary because of the fact that these are precisely the provisions that affect foreign investors anxious to help us in our efforts at industrialisation.

The examination season this year has been rather disappointing from the point of view of the man on the look-out for vicarious thrills. No chairs have been broken, though a headmaster in Midnapur had his head clouted by an irate Chemistry professor who was upset because his wife, a candidate, complained of excessive attention, though strictly professional, from the invigilators in the hall. Other professors have been, in their absent-minded way, mislaying answer books in roadside tea-shops, but that is nothing unusual. At least one candidate was polite enough to ask for permission from the invigilator for external assistance. When, contrary to the spirit of the times it was denied, he relieved his feelings less politely by tearing the answer book. But the palm must go to the examiner in Hindi in the Punjab who is reported to have asked the young hopefuls for academic honours to attempt two letters: The first was to one's boy or girl friend as the case may be, informing the other of parental opposition to their getting married. Alternatively, the candidates were to write to a friend complaining about the high-handedness of the head master. Both questions were withdrawn but only after protest. But what beats me—as it did the correspondent in a Delhi paper who rightly complained of the utter lack of responsibility on the part of the examiner—is how these things are passed by the authorities in the first instance. What are the head examiners and the host of other officials doing, apart from collecting honoraria? Complaints about questions outside the syllabus are not always lazy, especially when there are set-pieces to study. Surely, it is somebody's job to see that the man who gets paid, however poorly, for setting the questions performs his task with a minimum degree of conscientiousness. I

don't hold with rioting examinees, but I think it is a little hard that they should sweat their guts out only to find out on the fateful day that they have been reading the wrong books. Other hazards are the postponement of examinations because someone has been smart and nabbed the question paper from the press even before the examinations started. Even less excusably, the wrong paper has been sent to the examination centre or, as happened in Orissa recently, it has not been sent at all. The appalling waste involved in such inefficiency drives me to despair sometimes.

The Russians have done it again and it is a poor heart that does not thrill to the news of the safe return of Yuri Gagarin, the first real spaceman. Spontaneous congratulation is pouring into the Soviet Union from all parts of the world, especially from the US, where enthusiasm on similar occasions in the past was notably muted. Mr Kennedy has struck the right note hailing the Soviet success as "an outstanding technical achievement". The announcement does not exactly come as a surprise: ever since last August when Strelka and Belka brought news of outer space, other passengers have ventured forth: two simian visitors, Abel and Baker and later a nearer relative of man, a chimp by the name of Ham, bought return tickets to space; and unlike poor Laika's, the return halves were used. Even so, Mr Gagarin's little outing has made Homo Sapiens preen itself with justifiable pride. Americans are reported to have early plans of sending another passenger into space and in course of time, space stations will be as numerous as filling stations are today and cosmonauts as familiar as aeronauts. Inter-stellar silences will presumably no longer hold the same terror they did for Pascal, what with space-ships roaring about very much as viscounts are doing today. And yet one cannot be too sure. Man's terrors and loneliness have nothing to do with silences and noises. One can be as lonely in the market place as in the depths of the forest. And every new cosmos he conquers may, not inconceivably, make man feel even lonelier and more terrified. Moreover, man's unconquerable mind may win victories that his undeveloped heart will recklessly throw away. For a moment, the sheer grandeur of the achievement will keep us breathless with awe. But we shall pick up soon enough the threads of our petty quarrels from where we left them. There is something symbolic in the accident that the name of the first-ever spaceman is the Russian equivalent of "Wild Duck." I wonder what Herbert Spencer would have said of this, had he been alive today.

EAVESDROPPER

Olympus

Shipping: Plans and Progress

"SO far as shipping is concerned, I think we have really come to the stage of take off" declared Mr Raj Bahadur, Minister for Shipping, during the debate on the Budget demands of the Ministry of Transport and Communications last week. What exactly he meant by the aeronautical metaphor, which he used in connection with the formation of three new shipping companies in the private sector, is not quite clear. But apart from the use of this rather over-worked Rostowian cliché, the Minister also gave a factual account of the progress achieved by Indian Shipping since Independence, which sustains his confident estimate of future prospects.

The debate on the demand for grants ranged over a wide field and shipping is only one of the departments for which this omnibus Ministry is responsible; perhaps that explains why the developments highlighted by Mr Raj

Bahadur in his comprehensive speech have not been adequately reported in the daily papers. Though Indian ships even now carry less than ten per cent of India's overseas trade, the progress achieved since Independence has been steady if unspectacular. In 1947 there was a tonnage of 2.49 lakhs G.R.T. to start with, which increased to 3.9 lakh GRT by the beginning of the First Plan. Out of the First Plan target of six lakh tons, 4.8 lakh GRT were registered at the start of the Second Plan and the balance was on order. Including additions during the Second Plan, we have now 8.5 lakh GRT in operation against the Second Plan target of 9 lakh tons, and vessels totalling 65,000 tons are on order. According to the Lloyd's Register, India's total shipping tonnage even now adds up to 915,973 GRT. But this figure includes all vessels over 100 GRT while Government's computations relate to vessels over 300 GRT. Total expenditure on Shipping amounted to Rs 54 crores during the Second Plan against expenditure of Rs 18.7 crores during the First Plan.

Among the promotional steps taken by the Government, Mr Raj Bahadur listed grant of Development Rebate at the special rate of 40 per cent and concessional rate of interest of 3 per cent on loans for purchase of ships. Government's contribution to the Shipping Development Fund amounts to Rs 12 crores. A sum of Rs 2.87 crores was distributed as loans in 1959-60 and Rs 5.94 crores in 1960-61, leading to an addition of 56,000 GRT.

A recent development, to which the Minister referred with evident satisfaction as evidence of inflow of fresh capital into the field, was the registration of three new shipping companies within the last twelve months. Of these, two companies have already acquired ships and are operating both coastal and overseas services. One of them, the Surendra Overseas Limited, has acquired four ships of 30,000 GRT. The Ratnakur Shipping Co. has finalised arrangements for purchase of nine new ships each of 7000 to 8000 GRT. The third, the Jayanti Shipping Company which has been registered with authorised capital of Rs 5 crores, has signed a contract with the Mitsubishi Shipping Co of Japan for building four single screw, diesel driven bulk cargo ships of 30,500 GRT each. The contract is however subject to approval of Government in regard to price, specifications etc. Jayanti is also negotiating for tankers of 30,000 dwt as well as on charter. This company may acquire more tankers and the addition is expected to take place within the first half of the Third Plan. The decision to allow tanker expansion to take place in the private sector is a significant indicator of Government's flexible policy in regard to shipping development.

Mr Raj Bahadur has also given the breakdown of the Third Plan allocation of Rs 55 crores for Shipping. Out of this total, Rs 35 crores has been allotted to the Development Fund. Of this Rs 15 crores will be allotted for the purchase of tramp fleet, Rs 10 crores for tankers, and Rs 8 to 10 crores for purchase of other types of ships including passenger ships. The public sector will have at its disposal Rs 15 crores for the expansion of its fleet. But Mr Raj Bahadur also made it clear that sectoral allocations are only rough indications and that Government would be following a flexible policy in making funds available for expansion in the private sector. A sum of one crore has been set apart for sailing vessels. Not much progress has been registered in this field during the Second Plan. Now that Registration Rules under the Indian Merchant Shipping Act, which came into force in 1958, have been finalised, the backlog of development is expected to be soon overcome. Programmes have been drawn up to render assistance for new construc-

tion as well as for mechanisation of existing vessels; a naval expert has been appointed to draw up specifications; and training centres are to be set up at Bhavnagar, Kakinada, Tuticorin and Karwar.

While the target for overseas shipping tonnage has been exceeded, Mr Raj Bahadur admitted that coastal shipping had lagged behind. Against target of 488,000 the achievement is of the order of 299,000 GRT. The main reason for the retarded progress of coastal shipping is want of sufficient cargo. The position in this respect is expected to improve with the implementation of the plans now being worked out for transport of coal by sea to destinations in Southern and Western India.

At present one million tons of coal from West Bengal and Bihar are being moved to the South Indian ports of Madras, Cuddalore Tuticorin and Cochin by the sea route. The bottleneck at Moghalsra Junction, through which bulk of the coal for consuming centres in Northern and Western India has to pass, has induced the Ministries concerned to draw up plans for transport by sea of an additional one million tons which were being moved by rail route to Bombay and Saurashtra region. In order to move two million tons of coal per year, there should be a minimum of thirty sailings per month from Calcutta. According to the tentative programme drawn up, the thirty sailings, it is learnt, will be distributed among the different ports as under:

Ships	Tons
Madras .. 6	33,500
Cuddalore .. 2	11,000
Tuticorin .. 5	28,000
Cochin .. 6	33,500
Bombay .. 5	28,000
Bhavnagar .. 2	11,000
Porbander .. 2	11,000
Sika .. 2	11,000

Transport of coal by the sea route depends not only on the availability of shipping space, but also on the readiness of the Railways to make adequate arrangements for transport of coal to loading ports and from the discharging ports to consuming centres. The Railway Board, it is learnt, has agreed to provide the required number of wagons at both loading ports and discharge ports and it is hoped that they will be as good as their word. The Indian coastal conference have agreed to provide 42 ships to begin with, which is considered sufficient to carry the two million tons provided the discharge ports are able to maintain a daily rate of 750 to 1000 tons. Shipowners have agreed to provide additional ships if found necessary.

The scheme is expected to be brought into force from May 1, 1961 and the details regarding the programme of sailings are being worked out in consultation with the Indian Coastal Conference.

Markets

JUTE Steadier Trend

A STEADIER trend has been noticeable in the jute and gunny markets since Monday following the publication of the figures for stocks of jute goods at the end of March 1961. Total stocks are up by 1,300 tons at 85,100 tons as compared with a level of 83,800 tons as at the end of February. At the corresponding date of a year ago, total stocks were at 71,900 tons comprising 27,900 tons hessian, 29,400 tons sacking and 14,000 tons other varieties. The stock position at the end of March this year shows total stocks at 85,100 tons comprising 24,800 tons hessian, 46,400 tons sacking and 13,900 tons other varieties.

The general belief had been that, in view of the high prices prevailing during March, the outgo of goods would have been rather poor and that the unsatisfactory performance would be reflected in a large increase in stocks as at the end of the month. In other words, the market expected the rise to be heftier than has actually been the case. The overall increase amounts to only 1,300 tons with one of the principal groups—sacking—showing a decline to the tune of 1,300 tons. Hessian is higher by 800 tons while other varieties are up by 1,800 tons.

The small rise in sacking is to be welcomed because the stocks of this category of goods have been rising steadily since last December. At the corresponding date of a year ago, sacking stocks were only 29,400 tons. They are about the same size as a month's production. The decline is perhaps partly due to the reported shifting of some sacking looms to hessian production. Hessian stocks at 24,800 tons at the end of March, even though they have risen by 800 tons as compared with the previous month, are still smaller than the stocks the corresponding date of the last year, when hessian stocks stood at 27,900 tons. The trend in hessian stocks, it may be mentioned here, during the past six months, has been quite the opposite of that of sacking. Hessian stocks are showing a steady decline since last October, but it has been reversed in March. The increase in stocks is perhaps partly to be attributed to the reported increase in the hessian looms in commission.

The improvement in sentiment round sacking, especially during the last two or three days, is evidently due to the belief that,

with mills shifting the emphasis in production on to hessian output, coupled with the prospects of output being adversely affected by the current power shortage in the Calcutta industrial area, there will not be much of sacking goods available in the coming months. As against the factors that may accentuate the bullish sentiment in jute goods, there are of course a number of factors which have an opposite effect.

The first of these adverse factors is the lack of overseas interest in both categories of goods. This is partly due to the fact that this is usually the slack period for the outgo of jute goods overseas. Perhaps a more powerful influence that is keeping down buying at a meagre level is the growing optimism among foreign consumers that the time when jute goods will be available once again at reasonable prices is not far off. Once buyers are convinced that they need have to wait only for another three or four months to witness a welcome change to take place in the primary jute goods markets, the tendency will be to get on during the intervening period with the minimum possible use of jute goods and that too by eating into the stocks.

TEA Production Outlook

THERE is a general feeling that, despite a general fall in production, some tea gardens have maintained the output in 1960. It is reported that selected gardens in Dooars have produced a bigger crop and realised higher prices.

The future outlook is viewed optimistically. Because of good weather, an earlier crop is expected. In North India, the preliminary Darjeeling tea sale auction is likely to be held by the middle of May. The regular export auction for the new season tea may start in June. Considering that the carryover stocks from the 1960-61 season are small, the new season will get off to a good start.

Meanwhile, The Economist of London, in its current issue, warns of an impending export battle involving India, Pakistan and Ceylon with the low-cost producers in China and Africa unless international tea agreements are reviewed. Existing foreign consumers are not sufficiently imbued with the tea habit to consume all prospective surplus production.

By 1960, the United Nations Food and Agricultural Organisation forecasts a surplus of 100,000,000 pounds. The Economist, therefore, says that, unless internal tea agreements are revived, a vigorous export race may be joined, as China threatens with much larger exports; the South American countries are sending more tea to Britain and the African production is expanding rapidly. These countries have the advantage of cost, which is aggravated by wage legislation in India.

Production of tea in British East Africa got off to a bad start this year. The outturn in January 1961 fell to 8.1 million pounds from 9.5 million and 9.2 million pounds in the corresponding months of 1960 and 1959 respectively.

Plans are going ahead in Uganda for the planting of 50,000 acres of tea and the building of a factory for producing soluble tea on a commercial scale. A statement says that the soluble tea produced will provide a strong colour and generally attractive beverage, which will assist the African tea grower to obtain a larger remunerative market for his product.

Tea production in Malaya has increased by about 2,250,000 pounds from 3,250,000 to nearly 5,500,000 pounds in the past ten years. Of the total of 5,483,885 pounds produced last year, 2,579,620 pounds were from the highland tea estates and 2,904,265 pounds from the lowlands. This shows an increase of 279,181 pounds over the previous year's production of 5,204,691 pounds.

In the Internal Sale held in Calcutta this week, offerings were

22,500 packages of dusts. There was a good general demand. Orthodox descriptions once again depreciated in value by up to 15 nP with the smaller and brighter lines receiving better support. Legg cut teas showed a decline of up to 15 nP except for the brighter lines which were sold well. Good and medium CTC teas with a clean leaf appearance were a strong feature and sold at considerably enhanced levels. Fibrous CTC teas were, however, easier and difficult of sale. Following rates were quoted: Plain Orthodox Dust Rs 4.30 to Rs 4.75; Medium Assam Dust Rs 4.40 to Rs 4.75; Legg cut Dust Rs 4.60 to Rs 5.20; Medium Assam CTC Dust Rs 5.70 to Rs 6.20 and Good Assam CTC Dust Rs 6.50 to Rs 7.10. There was a good and general demand for the 705 packages of leaf grades offered.

In the Cochin market, 220,000 kgs of tea dusts were offered for internal auction. Against good but irregular demand, residuals, low medium and medium teas were 20 nP to 30 nP a kilo lower. Good medium sorts were 10 nP to 20 nP easier. The best CTC types were strong.

In the Colombo market, offerings were 7,031,428 pounds. Best liquoring highgrown BOPs from the Western districts, although slightly inferior in quality, were fully firm and those below the best were considerably dearer. Corresponding BOP Fannings were, however, generally lower. Medium teas and those from Uva districts were also in strong demand and about 5 to 10 cents per pound dearer. Low-grown teas were in good demand at steady rates.

After the Easter break, tea sales in London were resumed this week. A total of 28,721 packages of Northern India and other miscellaneous growths was catalogued for sale and most found a good demand. Best liquoring Assams were generally fully steady at rates ruling before the Eastern recess; but prices for other descriptions were irregular and easier, particularly for African teas which showed a decline of a penny to two pence per pound.

COTTON Long Liquidation

THE cotton futures market in Bombay developed a sagging tendency during the past week due to long liquidation and the absence of investment support. Consequently, both forward and ready sections dropped Rs 8 to Rs 10 per candy. The weakness was largely attributed to the reluctance of the bulls to weigh over cotton in the maturing delivery. The listless conditions prevailing in the spot section also adversely affected the sentiment.

THE CENTRAL BANK OF INDIA LIMITED

(Established—December, 1911.)

Head Office:—MAHATMA GANDHI ROAD, FORT, BOMBAY—1.

THE INDIAN OVERSEAS BANK LIMITED, MADRAS

To be submitted to the Shareholders at the Twenty-Fourth Annual General Meeting to be held at the Registered Office of the Company, 151, Mount Road, Madras-2, on Monday the 17th April, 1961 at 3.30 p.m.

DIRECTORS' REPORT FOR THE YEAR ENDED 31ST DECEMBER, 1960

The Directors have pleasure in submitting herewith the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1960 together with the Auditors' Report.

PROFITS AND THEIR DISTRIBUTION

1959 Rs.	1960 Rs.
33,60,870.72	Net Profit for the year 44,66,422.74
2,03,141.06	Brought forward from last year Rs. 1,76,011.78
	Less further amount transferred to Reserve Fund Rs. 50,000.00

Out of this sum the Directors have made the following provisions:

12,50,000.00	Provision for contingencies
6,25,000.00	Transfer to Reserve Fund
75,000.00	Transfer to Development
5,00,000.00	Provision for Bonus
24,50,000.00	The Directors recommend that the balance be disposed of as under:—
9,38,000.00	Payable to shareholders at the rate of 14% per annum subject to tax
1,76,011.78	Carry forward to next year

2. The Bank's business and profits continue to show good progress. During the year, branches were opened at Amritsar, Ludhiana, Mohali, Tirupitane and New Delhi-Karol Bagh. Subsequent to the date of the Balance Sheet, a branch has been opened at Wellington Island-Corbin.

3. In terms of Section 25g of the Companies Act, 1956 Messrs. V. S. Nataraja Mudaliar, O. Rm. M. Sp. Sv. M. Meiyappa Chettiar and M. Ct. Pethachi retire and being eligible offer themselves for re-election.

4. The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration. Messrs. Suri & Co., the retiring Auditors are eligible for re-appointment.

BY ORDER OF THE BOARD,

MADRAS, 6th March, 1961. M. Ct. MUTHIAH, Chairman.

BALANCE SHEET AS AT 31st DECEMBER, 1960

CAPITAL AND LIABILITIES	
Rs.	nP.
1. CAPITAL:	
Authorised Capital:	
1,00,000 Shares of Rs. 100 each	1,00,00,000.00

Mills showed practically no interest in the spot market at Sewri. Non-availability of quotas for indigenous growths and the downturn in futures trading created nervousness in the purchasers. Despite the restricted arrivals of new crop, cotton prices went down further.

Prospects for producing more cloth and yarn by the industry appears to be black. Industrial circles firmly believe that the output during March will in no case surpass that of the previous month. The reasons for this none too happy position are, inadequate supply of coal and electricity, old and rickety machinery, financial difficulties and the like. Operators in cotton were, therefore, not prepared to lend any fresh support to the market. Sellers were disinclined to offer cotton freely as the room-rates fixed were much below the ruling prices for those varieties in the ready markets.

The inordinate delay in releasing fresh export quota for Bengal Deshi has caused frustration to cotton shippers. According to the Cotton Buyers' Association more than 1,00,000 bales of Bengal Deshi are lying unsold and their prices are reported to be slipping down fast.

In the import section, moderate activity was visible with spinners' interest mostly confined to Sudan and African styles, due to the comparatively cheaper prices in relation to those of equivalent Egyptian varieties. Rumours were current that the US cotton imported under the PL 480 programme would soon be distributed to the spinners.

Consumption of cotton by the Indian mills from 1 September to 31 December 1960 amounted to 1,735,242 bales.

Others	2,007	12,421
Total	1,743,260	1,735,242

NEW YORK

During the past two weeks, business on the futures market in New York turned out to be a tame affair on account of the absence of fresh factors to stimulate trading. The weekly weather report narrates that planting in the Lower Rio Grand Valley and South Texas and coastal bed areas was almost completed and in the South Central area nearly 60 per cent of the planting was over.

EAST AFRICA

Sales of Uganda/Kenya cotton for the period ending 31 March amounted to 282,600 bales as against the estimated crop of 347,400 bales. In the next auction

11,500 bales of AR and 2,656 bales of BR qualities will be offered.

ALEXANDRIA

Small fluctuations were reported in the long staple Karnak May contract while Ashmouni contract moved within narrow ranges. Demand from overseas purchasers was comparatively low. Export sales up to 15 March totalled 672,066 bales against 938,187 bales in the corresponding period of the previous season. The Egyptian Ministry of Agriculture has estimated the crop for 1960-61 season at 1,492,300 bales.

SUDAN

Sudan cotton sold during the current season till 31 March amounted to 8,775 bales comprising mostly G2S Bar, Domain G3S Bar, G2L and a small quantum of XG31. The balance of crop unsold is estimated at 19,439 bales. In the auction held on 8 April a small quantity of Nuba Mountains 1A and 1B was sold.

PIECEGOODS

Moderate business was transacted in the domestic sector of the piecegoods market in Bombay during the last week. The export front has not yet regained its usual liveliness.

Seasonal goods like voiles, mulmul, longcloth, bleached and printed lawn attracted the attention of upcountry centres and good business was done with those destinations. Fancy goods, particularly printed fabrics, were eagerly sought after. Stringent credit conditions continued to restrain the offtake. The main consuming centres were Madhya Pradesh and the Southern States. Quality goods remained in short supply so much so that premia on certain styles were maintained around 3 to 5 per cent. A section of the trade feel that the stamping of prices did not bring about the desired result.

No appreciable change was visible on the export front. In spite of fair inquiries and occasional business, the leading overseas purchasers remained quiet for practically the major part of the period under review. For instance, the UK accounted only for a small quantum of grey sheetings owing to the intervention of Easter holidays and the shortage of licences. Business with Sudan was confined to superfine voiles and the offtake was negligible.

West Africa purchased a small quantity of grey bafts. Restricted business was transacted with Singapore in the usual styles. Small business was done with Australia in gadlapat. Denmark accounted for a small quantum of printed and plain white sheetings. Germany focussed its attention on plain and herring-bone (will). Holland, USA and Yugoslavia showed some interest in terry cloth, grey cloth, and second and fents of grey sheetings.

Sharp Fall in Yarn Prices

THE Yarn market in Bombay suffered a sharp setback last week. The premium commanded by import licences for Art Silk yarn has declined sharply from nearly 170 per cent to 152 per cent during the past few days and business has become difficult even at the lower level. Prices of indigenous as well as foreign yarn have also fallen sharply for the first time after the spurt that followed the enhancement of excise and customs duties in the 1961-62 Budget.

This all-round setback is a technical correction to the preceding upward trend which had pushed up prices disproportionately. But certain new factors have also aided the downward tendency. The recent reports that the Government is about to issue to actual users import licences worth about Rs 1 crore for the October/March period on the basis of supplies worth 65 nP per loom per shift has been an important bearish factor.

There are also strong reports that the Government of India is considering barter proposals involving export of surplus commodities such as sugar against import of rayon yarn. There is again a move to import yarn on rupee payments basis. In these conditions the scramble for yarn has tended to subside with buyers awaiting lower prices.

Stocks of Rayon yarn are reported to be heavy in the market. The changed outlook for the supply of yarn together with poor demand for cloth has brought down the price of ready Cupressa 60 Bam-

THE DUNLOP RUBBER CO. (INDIA) LTD.

Notice is hereby given that the Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 25th April, 1961 to 8th May, 1961, both days inclusive, instead of from 17th April, 1961 to 30th May, 1961 as notified in the Notice of the 35th Annual General Meeting dated 30th March, 1961. As any dividends that may be declared at the Annual General Meeting aforesaid will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 25th April, 1961.

United Bank of India Limited

Peak Deposits of Pre-merger Period Crossed

Greater Credit Requirements Essential for Economic Progress

Dr N. N. Law, the Chairman, on Monetary trends during the year under review

Abstracts from the Speech addressed by Dr. N. N. Law, Chairman of the Board of Directors, United Bank of India Ltd., Calcutta, to the shareholders of the Bank at its Annual General Meeting held on 10th April '61.

Gentlemen,

It is my happy privilege to welcome you to this meeting. Last year your Bank has completed the first ten years of its united existence. It is heartening to note that during this period our basic progress has been satisfactory. We have been able to cross the aggregate peak deposits of the pre-merger period. We have closed 55 over-lapping branches and opened 24 new branches, a number of which are in previously unbanked areas.

Coming now to our operations during the last year, the balance sheet has been in your hands for some time and you would not have failed to notice that despite the tendency of deceleration which marked the growth of bank deposits last year, we have been able to achieve an increase of Rs. 4.68 crores in our deposits, a rise of 8.5% over 1959. Our advances portfolio has also registered an increase of 14.7% over that of 1959.

MONETARY POLICY

The past year has been a significant one for Indian Banking. On the one hand, it witnessed efforts on the part of the monetary authority in playing its role actively in an attempt to control the effects of various adjustments that were taking place in the economy. On the other, there were certain developments in the country inhibiting banking progress. In the monetary field, by and large, the Reserve Bank showed its alertness and did all that was within its powers to keep the situation under control.

In a situation where there is a narrow profit margin and a low capital structure of banks, (to which I shall be referring again later in this statement), the directive of the Reserve Bank in prescribing minimum lending rates and limiting the rate of interest on short-term deposits was most appropriate and timely. I have not yet been able to reconcile myself to the appropriateness of the removal thereafter of the ceiling on short term deposit interest

rates, particularly at a time when introduction of a Deposit Insurance Scheme will call for a rigid control in this regard.

DEPOSIT INSURANCE

In order to strengthen public confidence in banking, which was adversely affected during the past year, The Reserve Bank by sponsoring a scheme of Deposit Insurance is removing an important lacuna in the Indian money market mechanism. We now learn with a sense of satisfaction that the Government has, at last, made up its mind to give effect to the scheme. The Governor of the Reserve Bank is to be congratulated for having taken this right step for better development and growth of Indian banking. It is hoped that an appropriate scheme, suiting the needs of the situation, will be given effect to without further loss of time.

You would no doubt recall that as early as 1954, your Managing Director gave shape to his earlier suggestion, first made in 1948, that a scheme for Deposit Insurance be evolved and that over the past few years I have been advocating the establishment of an agency for Deposit Insurance as well as for rehabilitation of substandard units. The importance of Deposit Insurance lies not only in covering depositors' loss in case of bank failure, but more in its ability, as a tranquilliser, to bring about a general climate of confidence. However, this is not the end in itself. It is only a means to achieve the objectives of a healthy expansion and development of the banking system for sustaining the growth of the economy. Any scheme for Deposit Insurance, therefore, to be successful, will have to be designed with a view to taking care of the liabilities side of the banking balance sheet, the Reserve Bank taking care of the assets side.

The most important thing, in the present context, is to provide a better margin of safety for the depositors. This can only be done by having an adequate capital structure for the Deposit Insurance agency itself as well as generating operating conditions conducive to gradual growth of the capital structure of the individual banks, and also by ensuring that an amount of liquidity is maintained in the commercial banking system.

CAPITAL STRUCTURE:

Increased capital funds can be achieved in two ways, by augmentation of reserves from profits and by issue of fresh capital. I may point out, as the indices of variable dividend securities clearly show that bank shares are not thought to have growth prospects. In such circumstances it becomes ruinously expensive—and uneconomic too—for banks to secure capital on the only terms on which such issues can be successful. In other words, the strength secured from an addition to capital is dissipated by the higher quantum of distribution required thereon. It would follow that whether for augmentation of reserves or for issue of fresh capital on equitable terms, the profit margins of bank operations must be enhanced.

Again, the liquidity position which the banks are required to maintain has an important influence on the profit levels which can be reached. Thus, capital funds, liquidity and profitability of a banking institution are mutually the cause and effect of one another.

LIQUIDITY:

Under compulsion of circumstances liquidity is drifting downward. It is true that the liquidity position of banks in any country, at any point of time, would be a reflection of the state of activity of its national economy, extent of banking habit and coverage and pressure of legitimate demand for credit; the liquidity of banks, in the conventional sense, will reflect the degree of development and integration of the overall economic fabric of the country. In a developing economy like ours with a limited banking habit, banking liquidity will naturally tend to be lower and the pattern comparatively rigid. More so, when massive planned efforts are being made to increase the tempo of economic activities. It is also true that in these days of advanced central banking, immediate liquidity problem no longer has the significance it had in the past. Yet the basic need for liquidity in banking business cannot be ignored or its importance minimised.

Admittedly, economic expansion calls for greater credit requirements for industry and trade. But that should not eventually lead to bank finance replacing, even partly, the functions of owner

capital. In so far as high taxation and low saving force this distortion, the phenomenon calls for immediate attention; this is important for the basic need for institutional growth. It seems that the low capital structure in the industry is being sought to be supplemented, to a noticeable extent, with bank funds. In so far as this tendency is responsible for the present expansion of bank advances, pushing up the advances-deposit ratio further, it could be said to be unrealistic and even disturbing; unless of course this is considered to be only a transitory phase.

PROFITABILITY:

Another reason, may be the most important one, for the liquidity being placed low is the need for increased profits. The profit margins of the banks are already very narrow. With a number of major banks the profit, after deduction of taxes and bonus to the staff, for 1960, as ratio to deposits, ranges between 0.17 per cent and 0.30 per cent. To match the mounting operating costs; therefore, banks tend to seek better earnings through larger advances. Any increase in the quantum of profit has, thus, been the result of "double shift" in advances. This can neither be regarded as normal nor be looked upon with complacency. That even such profit has evidently failed to allow for ploughing back and make up for the decline in the investment values, is all the more a matter for concern. There is an urgent need for a study of the structure of operating costs and operating earnings with a view to achieving a better differential.

It is surprising to note that while the advances-deposit ratio has been continuing to take an upward turn, the banks have thought it fit further to raise the rates of interest on short and other term deposits. We have been expressing our views against raising of interest rates and we still believe that the recent upward revisions has been an extremely undesirable step.

INTEREST RATES:

Over the years it has been our confirmed conviction that by and large the growth of deposits does not depend so much on the rate of interest as on the confidence which the banking system inspires,

availability of banking facilities and the quality of services rendered to the community. While most of the people still live at or below the subsistence level, it would seem incorrect to assume that a feasible rise in interest rates will stimulate savings as the base for bank deposits by curtailment of consumption, particularly when the value of the Rupee is declining. The step, on the other hand, will further add to the increasing expenses of the banks. If the increased expenditure were, instead, spent on opening branches in unbanked areas and improving the quality and diversifying the range of services, the banking habit would have been further stimulated resulting in mobilisation of fresh deposits; that would have been a useful investment in the future.

The influence of rising deposit rates on the relationship between short-term and long-term rates of interest needs more consideration than it has received so far. Any increase in the short-term rates of interest in the organised sector of the money market will, sooner or later, lead to an increase in the long-term rates of interest. The short-term rates in this sense are the rates offered on bank deposits

berg from Rs 12.56 to Rs 12.12 per pound. The 40 JP ready has also declined from Rs 13.84 to Rs 12.84 per lb.

The Staple-Fibre section has also presented an easy appearance with 2/40 Kohinoor coming down from Rs 4.90 to Rs 4.78 and 2/60 Mahendra from Rs 6.10 to Rs 6.00 per pound. Imported yarns have also suffered. While the manufacturers are trying to impress on the Textile Commissioner that it will not be possible for them to absorb every increase in the cost of manufacture of rayon yarn, the authorities are reported to be insisting that the manufacturers of yarn should absorb the latest excise duty.

Listless conditions prevailed in the Cotton yarn section. Prices turned easy following the Government concessions in excise duty on cotton yarn.

CHEMICALS & DYES

Active conditions with restricted business characterised the trading on the Chemicals and Dyes markets in Bombay. The import policy for the current licensing period imparted life to the market and pushed up the prices of most of the items by about 10 to 15 per cent following the drastic cut in their import quotas. But, in the absence of follow-through support and tight money conditions, the market could not maintain the early gains.

Apart from the cut in the import quota and the consumer resistance at higher levels, the reports of a reduction in the prices of the

and the long-term rates are those offered on public bonds. The higher rates of interest paid on bank deposits may tend to push the bond rate upward in regard to the future borrowings of the Government. This will cumulatively add to the burden of servicing charges, which will, for obvious reasons, have to be met by progressive increase in taxation. Any disturbance on this account is likely to reflect itself by further complicating the difficult funding problem. In order, therefore, to prevent the servicing cost of the public debt from rising sharply, the interest rates prevailing elsewhere in the economy, particularly on bank deposits, will need to be kept under close control. The policy of varying the minimum lending rates of the banks, already initiated by the Reserve Bank, can effectively take care of the adjustments in the economy.

PEG THE RATES:

In this connection, I would also point to the danger of uncertainty about the future course of interest rates. It is our considered view that in the interest of present investment and also in order to bring about a healthy growth of future investment, proper steps should

French material affected prices in the Chemicals section. The Government decision to increase the ceiling price of Soda Ash by Rs 10 per ton did not, however, have any material effect on the imported varieties.

There was a marked rise in the prices of Dyes after the announcement of the new import Policy, which was almost maintained. Among base dyes, red KB German shot up to Rs 14, while red RC crystal was better around Rs 12.12.

SUGAR

Conditions in the Sugar markets have continued to remain quiet. The supply position is comfortable following a fresh release by the Government. In the Hapur market, the rate for the commodity is lower at Rs 107.50 per bag.

The Indian Sugar Mills Association has informed the cane-growers, their societies and the Central and State Governments that the industry will not be able to pay the dues unless effective steps are taken by the Government to dispose of the huge stocks held by the mills. The Chairman of the Association has stated that the industry can tide over the crisis only if the internal ex-factory price is raised by Rs 5.51 per maund to make up for increased production costs and export losses.

Total available supply of sugar this year is estimated at 3,550,000 tons. Allowing for internal consumption at 2,100,000 tons and a carryover of 500,000 tons at the

be taken to remove any fears of capital depreciation. To quote Keynes, "the Monetary Policy which strikes public opinion as being experimental in character or easily liable to change, may fail in its objective."

I therefore suggest that the desirability of following the U.S. method of imposing a reasonable limit on interest rates on medium term and long term public debt should be seriously considered. It may not be necessary, however, to adopt the American method of legislative provision; a stipulation as to the maximum rate of interest to be offered incorporated in the National Plans, may, perhaps, serve the purpose equally effectively.

TAX CONCESSION NECESSARY:

Returning to the question of profitability, I think that by increasing the rates of interest on deposits, the banks have again postponed the opportunity of raising their low profitability. It is high time that banks took a more realistic view of the situation, kept interest rates under control and tried other methods of improving their resources and profitability. While undoubtedly banks will have to make their own efforts

end of the season, the industry will have an exportable surplus of 950,000 tons.

The Chairman of the ISMA has stated that the export of sugar involves considerable losses and has to be subsidized by suitable adjustments in internal prices. While conceding that the increase in the internal price demanded by the industry will cause some hardship to the domestic consumer, he points out that Indian prices will still not be as high as in certain other exporting countries.

He explains that the increase of Rs 5.51 per maund, sought by the industry, includes 64 nP on account of the wage board burden, Rs 1.05 on account of increases in production costs and an export subsidy of Rs 3.82. The subsidy in the case of the US market may be about Rs 3 per maund, and efforts are being made

in this regard, it is also our view that the banking system should receive apposite assistance from the concerned authorities. Tax concessions on that part of profits, which is utilised to build up reserves and thus to strengthen the capital structure, should, for example, be seriously considered by the Government.

CONCLUSION

Indian banking needs a major reorganisation and the urgency of a close study of the whole matter cannot be overemphasised. In this connection, I am glad to mention that, your Managing Director, Sri B. K. Dutt, has given a timely lead. He was invited by Calcutta University to deliver a series of lectures as Prof. Benoy Kumar Sarker Memorial Lecturer for 1960. He selected "Monetary Discipline and Indian Banking" as the subject of his lectures. In these lectures, which are now available in book form, he has analysed in detail the prevailing situation in the Indian banking system and has put forward a number of ideas for its progressive development.

(NOTE:—This does not purport to be a record of the proceedings of the Annual General Meeting.)

to reduce the export loss further by special freight rates.

Meanwhile, the shipment period for the export quota of 50,000 tons of sugar, released on 27 January 1961, has been extended to 31 May 1961. The shipment period of a similar quota of 50,000 tons released on 28 October 1960 has been extended to 30 April 1961.

The expected announcement about US sugar import quotas has been made this week; but it does not answer the questions which the sugar trade has been asking. The US Government has simply announced basic quotas for this year of 6.7 million tons, an increase of 500,000 tons on 1960. There is no indication, however, as to the countries to which the Cuban quota will be allocated. Faced with this uncertainty, the sugar market in London has been quiet around the previous levels.

THE PUNJAB NATIONAL BANK LIMITED

Director's 114th Report to the Shareholders for the Year Ended 31st December, 1960

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960.

The transactions for the year under report have resulted in a profit of Rs. 1,21,23,141.75 (including Rs. 3,18,830.32 brought forward from the previous year's account) after contributing Rs. 12,81,429.00 to the Employees' Gratuity Fund Trust. The following amounts have been appropriated for the under-mentioned purposes:—

1. Transferred to Provision for Taxation ...	Rs. nP.
2. Transferred to Reserve Fund ...	53,00,000.00
3. Transferred to Bonus to Staff Account ...	11,00,000.00
4. Transferred to Charitable Account ...	27,00,000.00
5. Ad-interim Dividend at Re. 1.00 per share paid ...	1,00,000.00
	12,50,000.00
	1,04,50,000.00

The Directors recommend that the balance of Rs. 16,73,141.75 be disposed of as follows:—

(a) Final Dividend at Re. 1.00 per share making the total at 20 per cent. per annum (Gross) ...	Rs. nP.
(b) Carry forward to the next year's account ...	12,50,000.00
	4,23,141.75

The Directors consider that the working of the Bank has been satisfactory.

During the year 16 new offices were opened at various centres and one office was closed.

The Reserve Bank of India in exercise of the powers conferred by section 45(4) of the Banking Companies Act, 1949 prepared a scheme for the reconstruction and amalgamation of the Indo-Commercial Bank Ltd., with our Bank which was sanctioned by the Central Government under Section 45(7) of the said Act. Branches of the Indo-Commercial Bank Ltd., have been functioning as our branches under the above scheme with effect from 25th March, 1961.

The Directors retiring by rotation at this meeting are Shri Ramnath Goenka, Pandit J. N. Bhan and Shri Shital Prasad Jain, who being eligible, offer themselves for re-appointment.

Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the General Board of Directors,
R. N. GOENKA
Chairman

March 27, 1961.

AUDITORS' REPORT

To THE SHAREHOLDERS,
THE PUNJAB NATIONAL BANK LTD., NEW DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Limited, as at 31st December, 1960, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, with the books and accounts kept at the Head Office in New Delhi, in which are incorporated the unaudited returns of the Bank's branches in Indian Union, Pakistan and Burma none of which were visited by us. Under Rule 4 of the Companies (Branch Audit Exemption) Rules, 1961, the Central Government by an Order dated 4th February, 1961, has exempted all the branch offices of the Bank from the provisions of Sub-sections (1) and (2) of Section 228 of the Companies Act, 1956 in respect of the year ended 31st December, 1960.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- (a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- (b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- (c) in our opinion, proper books of account, as required by law, have been kept by the Bank, and as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- (d) the Bank's Balance-sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;
- (e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and, on such basis, the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

For the Investor

INVESTMENT GOSSIP Some Adverse Factors

The stock market continues to be in two minds about prospects in the immediate future. While the uniformly encouraging corporate news is not allowing selling pressure to gather momentum, bullish fervour is being curbed rather effectively by persistent reports of imminence of restrictive measures from Government. Lyons range is particularly depressed by the alarming reports about the power supply situation in the Calcutta industrial area. It is reported that even though concerted measures are being taken by all concerned to improve electric power supply in this region, indications are that the period of shortage will be a fairly long one. There are daily reports of interruption of working due to power failure and it would appear that the position is much more serious than it has been made out so far. As a matter of fact responsible spokesmen of Government no longer mince words but admit that it would be wrong to expect an early improvement in the situation. This means that industrial production will be adversely affected for some time at least. This cannot be construed a bull factor by any manner of reckoning.

The fact that there are still no indication that bonus share issues will be coming in quick succession is not conducive to a broadening of activity. Although shares with bonus issues prospects continue to meet with support, interest in these counters does not seem to be as sustained as before.

The stringency in the money market is not a new phenomenon but since there is no indication that the position will show improvement in the near future, operators are not very keen to extend commitments. On their part investors have reason to be quite discriminating in the deployment of their funds as some attractive new issues are in the offing in coming weeks. They are naturally anxious to have enough funds with them for participating in them.

INVESTMENT EXCLUSIVE Madras Rubber Poised for Expansion

The rubber exhibition, arranged in Madras by the Madras Rubber Factory which is now a public company bent on expansion for producing tyres

with the help of the Mansfield Tyre Company, may be a local event, but is meant to establish that India now consumes more rubber than she produces, needs synthetic rubber and chemicals as well as reclaimed rubber as a raw material. The raison d'être of the rubber factory for long was comeback for retreading tyres and the private company's contribution to economy in the use of tyres stands out in an era of shortage and controlled sales. How the industry started in 1946 on a small scale has grown will be obvious when the prospectus, in which the investing public has already shown much interest, comes out. But the main impression left is that another tyre company is really wanted, because the Third Plan envisages a steady demand for tyres needed by half a million motor vehicles and the present output is just about half the quantity required. So a new tyre factory based on a running enterprise will meet a real, urgent need. But MRF has other lines at present. Surgical goods, foam upholstery and industrial rubber items represent an apt contribution to efficiency and comfort. That turnover from year to year is up and the Madras Rubber Factory has evoked appreciation from Mr R. Venkataraman for building up new industry which has already secured an export market. The evolution of rubber, chemicals and the wide application of rubber in industries, as different as printing and tanning, is emphasised vividly enough by the exhibition in Madras. As a curtain raiser to the development programme, the effective exhibition has its points and the goodwill that has been created by fifteen years of successful growth is not the least important aspect of the profitable enterprise built up by the late Mr Mammen Mappillai and his sons whose interests range from rubber-growing to the manufacture of rubber toys, affording a classic example now at home of vertical integration. The collaboration agreement reached last year with a US firm that will give continuous technical aid for a specified percentage of the proceeds of sales is a good sign that Madras' improved economic climate impresses foreign capitalists who are welcomed because there is both technical skill at call and a tradition of political and economic stability.

5,000,000 preference shares of Rs 100 each. The issued capital will be 6,000,000 equity shares of which a little over Rs 30 lakhs is being subscribed by the promoters, directors, their friends and associates. The subscription list will open on 18 April and close on 20 April. A sum of Rs 5 is payable on application and the balance will be called up later, but not before December 1961.

The issued capital of Rs 60,00,000 will be utilised toward the purchase price of Lynx Machinery Company as a going concern and for the import of plant and machinery for the proposed expansion for which the company has obtained approval from the Government of India. The company has acquired all the fixed assets, including plant, machinery, equipment, buildings, factories, at Rs 14,00,000 from the partnership firm.

It would be recalled that Lynx Machinery Company was established on 1 June 1957 since when it has been carrying on business as manufacturers of concrete vibrators, concrete mixers, rolled pan-mixers and other equipments used in the building and construction trade. The progress made by the company from its very inception has been so consistent and so satisfactory that its products now enjoy a good reputation in the market.

The firm also feels it necessary to expand the range of its production. It has, therefore, decided to undertake the manufacture of other items like engines, cranes of all types, grinders and tools, etc., in view of the increasing demand and the necessity for indigenous production.

The company has entered into technical collaboration agreement with reputed foreign machinery manufacturers. These collaborations extend to making available to the company blue-prints and technical know-how in the manufacture of their respective products in India and the use of their established brand names. Most of the collaboration agreements provide for export rights and the indigenous production of these items will not only help to save foreign exchange to an appreciable extent, but will also earn foreign exchange by way of exports to the neighbouring countries. With this background, the profit potential of the company may be expected to increase as production increases.

NEW ISSUE NOTES Goodyear

More details with regard to the proposed issue by Goodyear India are now available. A special feature of this issue is that no reservation of shares or firm allotments have been made to any of the firm's directors or friends, so that the entire issue of 400,000 equity shares will be made available to the public.

United Wire Ropes

A new company, based on the United Wire Ropes Ltd., has been formed to manufacture the much-needed rope for the Indian market. The plant, which is proposed to be located at

Thana, will have an installed capacity of 3,600 tons per annum. The factory is expected to go into production by the end of 1962. The company is expected to enter the market in May with the issue of 25,000 equity shares and 10,000-9½ per cent taxable Preference shares, both of Rs 100 each. The entire public issue is proposed to be underwritten.

Kothari Sugars

The Kothari Sugars & Chemicals Limited has decided to make the final call of Rs 5 per share. The amount is payable on or before 25 May 1961.

Madras Rubber

More details are now available about the proposed issue of capital by the Madras Rubber Factory Limited. The company proposes to offer, for public subscription, 500,000 equity shares of Rs 10 each. A sum Rs 2.50 per share is payable on application and Rs 2.50 on allotment. The balance of Rs 5 is payable in two equal instalments of Rs 2.50 each. The subscription list will open on 24 April and close on 29 April or earlier, but not before 26 April, 1961.

Industrial Cables

The Industrial Cables (India) Limited is to enter the market on 17 April to raise capital for financing its Rs 70-lakh cable project at Rajpura in the Punjab. The public issue is understood to have been fully underwritten.

Walchandnagar Rights

The directors of the Walchandnagar Industries Limited have accepted the suggestion of the Controller of Capital Issues for issuing new equity shares of Rs 100 each at a premium of Rs 30 per share. The shareholders will have to pay Rs 80 on application inclusive of the premium of Rs 30. The balance of Rs 50 will have to be paid on allotment. The company has decided to close its books for this purpose from 2 to 15 May 1961.

Mysore Paper

The Mysore Paper Mills Limited has proposed to issue 1,000,000 shares of Rs 10 each at a premium of Rs 2 per share instead of at par. Government sanction is awaited.

Parrys Confectionery

Parrys Confectionery Limited has a proposal to issue right shares in the proportion of one for two shares held, at a premium of Re 1 per share.

Aeronautical Services

Aeronautical Services Limited proposes to issue 100,000 equity shares of Rs 10 each at par. The directors and their friends are to be allotted 15,000 shares, while 25,000 shares are reserved for the existing shareholders. The balance of the issue amounting to Rs 10 lakhs in 100,000 equity shares will be offered to the public.

IN BRIEF

The Industrial Investment Trust Limited, Bombay, has recommended a taxable dividend of Rs 6.20 per share for 1960 as against Rs 6.00 previously.

Kothari Textiles Limited has maintained the dividend at 10 per cent, taxable, for 1960.

Ogale Glass Works Limited has raised the dividend from 8 to 10 per cent, subject to deduction of tax, for 1960.

Andhra Bank Limited has recommended a final dividend of 4½ per cent, making a total of 8 per cent, taxable, for 1960, the same as previously.

★

BALANCE-SHEET BRIEFS

The Chitavalsah Jute Mills Company Limited has reported a substantial decline in the net profit from Rs 10.05 lakhs to Rs 1.25 lakhs for the year ended 31 July 1960. The Ordinary dividend is lowered from Rs 1.50 to Rs 0.50 nP per share, subject to deduction of tax.

The Empire Jute Company Limited has maintained the dividend at Rs 1.25 per share, taxable, for the same year despite a higher net profit of Rs 4.18 lakhs against Rs 3.51 lakhs.

The Nellimaria Jute Mills Company Limited has made a net profit of only Rs 95,447 as against as much as Rs 7.96 lakhs for the preceding year. The dividend is reduced from Rs 1.40 to 40 nP per share, taxable.

★

STOCK EXCHANGES

Subdued Sentiment

Watch-Dog Writes:

THE easier tendency in equity prices, that was noticed towards the previous week-end, has been more pronounced during the week under review. While the professional operators are making their best endeavours to bag as much profits as possible, investors have a desire to mobilise their resources for subscribing to a number of new issues. Again, the growing feeling that the tight conditions prevailing in the money market will continue sometime with very little prospect of easing has enabled the bear operators to have a slight advantage over the bulls. Above all, it is feared that there may be a possible dislocation of industrial production due to the power shortage.

Prices on the Calcutta Stock Exchange were on the downswing due to fresh offerings, although desperate attempts were made to reverse the trend.

Barring a small flutter in a scrip or two, activity on the Bombay Stock Exchange was unimpressive.

The general tone of the Madras Stock Exchange reflected caution born out of "wait and see" attitude.

CALCUTTA

Friday Evening.

ALTHOUGH prices opened fairly steady on the local stock exchange, sentiment was demoralised by increased selling pressure all round. Apart from the fact that some caution was evident owing to fears of possible dislocation of industrial production in view of the power shortage, it was thought that the possibility of a substantial amount of investible funds being locked up following the release of the new issues might encourage a quiet phase in the stock market in the next few weeks.

Again, conditions in the money market continued to remain tight. Operators thought that the siphoning out of large funds by the Centre through its ambitious borrowing programme would add to the already acute monetary stringency. Sentiment was also affected by unconfirmed rumours about fresh measures from the Government to curb excessive speculative activity. Thus, the tendency for prices was to sag slowly, although the bulls seemed to be trying to re-establish their hold at every opportunity.

The Giltedged section, displayed a firmer tendency. More interest was shown in the shorter maturities; but sellers were reserved. Small sellers were, however, seen in the long-dated issues. But, with buyers scarce, prices showed hardly any variations. 3 per cent 1986 Conversion Loan changed hands at Rs 73.60 to Rs 73.85, to finish the week at Rs 73.65.

Bank shares remained steady, United Commercial turned ex-dividend at Rs 86.25, while Punjab National were nominally quoted at Rs 22.

Jute shares recorded only a very moderate volume of business without any spectacular alteration of trend. This was due to a general disposition to await further developments in the raw jute situation. The only scrip, which was keenly sought after at enhanced levels, were Birlas which touched a fresh high of Rs 37.62 against Rs 37.06 on rumours of the possibility of a bonus issue. Bangalore were well maintained at Rs 138, while Anglo-India turned quiet at Rs 214 against Rs 218; Port William at Rs 26.44 against Rs 27; Megna at Rs 12.87 against Rs 13.12 and New Central at Rs 19 against Rs 19.50. Howrah were sticky at Rs 22.

The Coal section was mostly marked by maintenance of values with stray rises here and there. Operators were generally inclined to restrict commitments, pending the wagon shortage for the movement of the commodity being relieved. Amalgamated had buyers at Rs 24.94 to Rs 25.06; Bengal at Rs 349 to Rs 352; Burrakur at Rs 19.44 to Rs 19.75; Central India at Rs 13.06 to Rs 13.25 and Western Bengal at Rs 9.25 to Rs 9.50.

In the Tea section, the picture was not very different. A few selected shares advanced rapidly on investment support, while others recorded little variations in prices. Bishnauth came in for business at Rs 24.75 to Rs 25.00; Hasimara at Rs 27.50 to Rs 28.50; Hantapara at Rs 139 to Rs 143; BIC

Jutlibari at Rs 29.75 to Rs 30.19 and Telojian at Rs 34.50 to Rs 34.62.

After initial firmness, Textile shares met with some realising pressure. The initial firmness was inspired partly by the improved working conditions of the industry and partly by the flood of bonus issues proposed by certain Bombay and Ahmedabad textile mills. Cawnpore were easily absorbed upto Rs 9.12 from Rs 8.87 following the news of a dividend of 36 nP per share for last year as against nil previously. Bowreah were, however, marked back to Rs 204 from a high of Rs 212; Kesaram to Rs 32.87 from Rs 33.62; Elgin to Rs 19.62 from Rs 20.12 and J. K. Rayon to Rs 19.62 from Rs 19.81. Jayshree closed better at Rs 17.69 after touching a low of Rs 17.44 from Rs 17.50.

If there was any section that could be considered to have been totally neglected and subdued, it was sugar. This was mainly due to the fact that the problem of surplus sugar stocks was causing anxiety. Raza/Buland were on offer at Rs 12 against Rs 12.31; Balrampore at Rs 2.75 against Rs 2.95; Carew at Rs 13.06 against Rs 13.25; Cawnpore at Rs 13.50 against Rs 14.12 and SKG at Rs 12 against Rs 13.

Engineering shares remained generally quiet on lack of fresh support, while the price movements in the speculative shares—Indian Iron and TEXMACO—were influenced by the settlement considerations. After opening steady at Rs 27.12, Indian Irons were subjected to heavy selling pressure, resulting in the scrip slipping down to Rs 26.82. There was, however, a partial recovery at the close to Rs 26.85. In sympathy, TEXMACO closed better at Rs 22 after touching a new low of Rs 21.90. Guest, Keen, Williams were on offer at Rs 44.87 to Rs 45.25; J. K. Steel at Rs 25.62 to Rs 26.25; Jay Engineering at Rs 29 to Rs 29.25 and Braithwaite at Rs 36 to Rs 36.25. Jessop lost another half point at Rs 22.12 with Escorts well maintained at Rs 21.25.

Miscellaneous issues suffered heavy losses due to general liquidation, although some bear-covering induced a minor recovery towards the close. Following were the price trends of a few selected shares:

	Week's High	Week's Low	Week's Closing
Orient Paper	41.60	40.80	41.00
Shree Gopal	26.50	26.00	26.50

A VILLAGE TRANSFORMED

ISCON
INDIAN STEELWORKS CONSTRUCTION CO. LTD.

Once an obscure village, set amidst field and forest... today, a mighty steel town. In a little over two years, Durgapur is making world news! Pig-iron for foundries, forging blooms and billets for re-rollers, sections for industry and sleepers for the railways are already being produced at Durgapur. More will follow as the construction of this giant steelworks nears the fourth and final stage.

It's Always Possible to MAKE YOUR TRUCK TYRES LAST LONGER!

All Users of truck and bus tyres are now aware that the Tyre Industry in India does not yet have sufficient manufacturing capacity to meet the demands of all parties.

It is not a matter of distribution. More than 100 Tyre Dealer Associations and Syndicates covering a network of approximately 5000 Tyre Dealers have set up controls so that such supplies as become available are allotted at the recognized retail price to those Tyre Users whose need is both imperative and proven.

It will be some time before the new tyre factories, now in the course of construction, commence to produce tyres. The expansion programmes of the present manufacturers cannot be implemented overnight.

In the meantime, what—?

WE BELIEVE that this prolonged tyre scarcity condition can be attacked if everyone who has anything to do with trucks and buses does his utmost to see that the USEFUL LIFE of each and every tyre is extended as far as possible by CAREFUL REGULAR INSPECTION AND MAINTENANCE. Here is one way to achieve long life and maximum service.

MINOR CUTS MUST BE REPAIRED— OTHERWISE THIS MAY HAPPEN

This tyre is now a complete loss. Water has entered through cuts in the tread which were neglected and allowed to develop as the tyre continued in service. Had this tyre been removed and repaired it would not have "died young" like this.

WATCH OUT FOR MORE TYRE SAVING INFORMATION FROM

Firestone

Process of Final Revision

THERE is now afoot the process of final revision of ideas about the Third Plan which calls for attention and careful study for the reasons behind this revision and the consequences of possible changes have both great significance for the future.

The process of finalisation however is much more complex than one would think, because unlike the Second Five Year Plan, in which the uncertainty about foreign exchange availability was to be revealed in alarming clarity only at a later stage, the Third Five Year Plan has suffered all along from a haziness of outline and also much uncertainty about the exact sources of income and the extent of yield from each of them.

For this, the changes in the conditions of the country and in the nature of each five year plan are both equally a cause. In the First Plan, we had the advantage of a substantial surplus accumulation made both at the Centre and in the States during a period in which there was both an increase in revenue and a difficulty of effecting immediate increase in expenditure. There were also the accumulated sterling balances, the benefits of which were in fact expected to last to the end of the Second Five Year Plan. In the Second Plan, while there was no revenue surplus, there was a fair certainty about the sources of new taxation that would be available and the extent to which they could be tapped. At the same time, there was less trepidation both in the press and among the public about the risks of deficit financing, the reason being that it was felt that the danger limit of deficit financing was still far away. For these reasons, the first two five year plans were not deemed to suffer from uncertainty on the resources side of the budget.

As we move into the Third Plan, not only are there no surpluses such as we had ten years ago, but the State Governments have announced, without any noticeable compunction, budgets which are mostly on the wrong side of the account. The surplus at the Centre is the result of a painful process of straining to the limit available sources of taxation. Foreign exchange resources, which seemed large enough at least on paper five years ago, are today well below the safety levels. The level of prices is such that we cannot contemplate deficit financing with anything like the complacency of the olden days—the Governor of the Reserve Bank uttered more than one warning in this regard. In these conditions, it would perhaps be unfair to cavil at the hazy outlines of the financial part of the Plan.

Strangely enough, this worsening of the financial position has not stood in the way of either the Government or the public planning on an even larger scale than before. This must be attributed in the main to the increase, in quality and quantity, in our capacity to increase production and productivity. It is thought that such contrast as there may be between the physical and the financial positions should be regarded as a call for a change in the methods of acquiring plan finances or mobilising the resources of the nation, rather than as an excuse for reducing the targets in the various spheres. It is

this feeling that explains the apparently strange fact that, while the Second Plan was criticised as an ambitious one at the time of its inception, there is no similar criticism heard of the Third Plan in spite of the conditions prevailing in the financial sphere today. Even more surprising is the fact that proposals for increasing the total outlay by about Rs 200 to Rs 500 crores have been made and have met with influential support.

The consequences of these developments must be of two kinds. One is the attempt to scrape the utmost out of available resources, so as to raise the yield above the levels of previous anticipations and the other, and the more important, is the beginning of a tendency to give future productivity a greater importance than immediate yields.

It is the attempt to scrape the pot harder that is now in evidence. For the immediate effect of the present tendency is the flow of reports about the contributions which the public enterprises started in the planning period may be expected to make towards the Third Five Year Plan. These reports bear a striking contrast to the silence of earlier stages and the paltry sums shown in the official papers as the profits of most of these concerns. In this context, one cannot but recall the somewhat disingenuous attempt made in the Draft Outline of the Third Plan to cover up this question of the profits of public enterprises by lumping them together with expectations from new taxations. The separation of these two heads, which was proceeding but slowly since the publication of the Draft Outline, is not only being speeded up now, but is also leading to bigger figures under the head of profits of public enterprises.

Obviously, all these undertakings are not on the same footing, some are on a frankly non-profit basis. Nevertheless, no Plan would be workable if an outlay of Rs 605 crores, (exclusive of the Railways, the P & T, and the DVC. (Rs 36 crores)) should be freed of obligation to help the financing of the next Plan. The pressure to yield profits which was not there formerly must make a big difference.

What measures are contemplated for putting up the yields of new taxation are not so easily indicated. It is obvious that taxes that increase costs and push up prices will cause inflation and plan finance will flounder on this rock. The incompatible objectives of high taxes and low prices can be reconciled only by a radical revision of the ideas that rule in the whole sphere of taxation. The new budget has revealed the conflict in an arresting and distressing form and the concessions so far made only touch the fringes of the problem. What is more, persistence in this policy will endanger small savings, institutional and of other kinds, on which more and more reliance will have to be placed in a society set on the reduction of inequalities of income. A more open mind, deeper thinking and a readiness to wait for results can alone render possible the revision of the tax structure, such as will yield the requisite revenues without a chain reaction on prices and inflation.

Deposits has improved from 7.0 per cent to 8.3 per cent. Interest paid has absorbed Rs 2.93 lakhs more at Rs 25.38 lakhs, but there is a welcome and unusual drop of Rs 1.94 lakhs—or 6.4 per cent—to Rs 28.15 lakhs in salaries and allowances. In the result, there is a balance of profit of Rs 2.29 lakhs as contrasted with a loss of Rs 6.78 lakhs in 1959.

EASTERN BANK

Magnitude of Loss Reduced in 1960

In its rupee balance-sheet for 1960, The Eastern Bank shows largely fractional changes, but the net impact of the working for the year is a reduction in the size of the loss.

Deposit resources are lower by 6.3 per cent at Rs 5.80 crores. Giltedged holdings have fallen by 5.9 per cent to Rs 1.28 crores. The total of Advances has risen by 2.2 per cent to Rs 5.39 crores. The cash ratio has improved sharply from 10.7 per cent of Deposits to 18.1 per cent. The credit ratio works out to 92.9 per cent against 89 per cent in 1959.

The income by interest and discount is higher by 8.7 per cent at Rs 24.48 lakhs, and commission, exchange and brokerage are better by 1.8 per cent at Rs 14.05 lakhs. The gross income has marked a rise of Rs 2.13 lakhs to Rs 46.76 lakhs, and the ratio to Deposits has gone up from 7.3 per cent to 8.1 per cent. Interest paid has cost Rs 3.61 lakhs more at Rs 19.10 lakhs, but Eastern Bank is another institution to report a fall, of 3.5 per cent, to Rs 20.10 lakhs in salaries and allowances. Consequently, the loss for the year is shown, at Rs 5.22 lakhs, to be less than the relative figure for 1959 by Rs 2.21 lakhs.

BANK RETURNS

Steep Rise in Deposits

The year-end transactions of the Central and State Governments, as can be gauged from the banking returns for 7 April, have clearly resulted in:

(a) An unprecedented rise of over Rs 55 crores in Active Note Circulation, and outflow of Rupee Coin for Rs 2.80 crores.

(b) A reduction of nearly Rs 22 crores in the balances of the Central Government, on top of credit being received for Rs 5 crores from the Reserve Bank in respect of Rupee Coin tendered for such amount.

(c) A fall of Rs 20.67 crores in the Depo-

sits of State Governments and a steep rise of Rs 31.67 crores in the ways and means borrowings of the States.

(Of course, the net disbursements of Governments may also be partly due to beginning of the month expenditures; but, as will be evident from figures relating to Scheduled Banks, the main reason for heavy expenses is fiscal year-end payments).

(d) It is evident that banks' Deposits have benefited by the governmental expenditure. For, the Other Loans and Advances of the Reserve Bank have moved down sharply by Rs 38.71 crores.

(e) The such was the case is confirmed by the return of Scheduled Banks for 7 April, in which net Deposits are seen to have risen by over Rs 25 crores; and since the State Bank in the same week experienced a fall of Rs 6 crores in Deposits, it is clear that accruals with other banks exceeded Rs 31 crores.

(f) Banks were consequently in a position to reduce indebtedness to the Reserve Bank by Rs 34 crores; the implication is that other entities entitled to borrow from the Reserve Bank, and shown under the head of Other Loans and Advances, have been able to liquidate debt, also consequent on receipts from Government, by Rs 5 crores.

(g) Lastly, it may be noted that constituents of banks in receipt of Government payments, reducing their borrowings from Scheduled Banks, are responsible for the total of Advances of Scheduled Banks declining, despite month early pressure and busy season, requirements, by nearly Rs 5 crores to Rs 1,328.81 crores.

There has been some speculation that the recent improvement in bank Deposits is owing to the higher rates being paid on Deposits by banks. But it is noteworthy that, of the rise of Rs 43 crores in Deposits in the last two weeks, over Rs 20 crores is in respect of demand Deposits.

The returns of the Reserve Bank are notable for the further disquieting fall of Rs 6.33 crores in the foreign exchange reserves—the total in the two departments is now a shade under Rs 120 crores—and inter-governmental transactions whereby the Centre, with balances marked up by over Rs 14 crores, has obviously received payment from the States, which, in addition to running down balances by Rs 4.32 crores, have borrowed Rs 17.48 crores more in the form of ways and means advances.

Deposits in Foreign Currencies

By Paul Einzig

THE vocabulary of financial journalism has recently been enriched by two new terms

Indian Finance

"Euro-dollars" and "Euro-sterlings"—horrible terms, indicating dollar and sterling deposits respectively, offered and taken as deposits outside the United States and the United Kingdom respectively. Actually the newly-developed practice is not confined to Europe nor is it confined to the two Anglo-Saxon currencies. There is a market not only in dollar and sterling deposits, whether held by Europeans or other, but also in Swiss franc and D. mark deposits and to a lesser extent the deposits in some other continental currencies. The essential characteristic of the traffic is that it is concerned with deposits in terms of currencies other than those of the place of residence of the banks who accept them from their holders.

For a long time the very existence of such deposits escaped attention even though the turnover in their market was expanding rapidly ever since 1957. Even now there are only occasional references to it in financial columns, and the general public ignores it, owing to the highly technical character of the subject. It is doubtful whether even the monetary authorities have grasped the actual and potential significance of the practice. For instance, although British banks have to declare in their monthly returns to the Bank of England the amounts of the foreign currency deposits they hold, these amounts are outside the limit fixed by the Bank of England for their holdings of covered balances abroad. This discrimination between dollars acquired through swap transactions and in the form of deposits means that London banks are in a position to accept unlimited amount of the latter while the amounts of the former are strictly limited. Yet the only difference between the two types of transactions is that outward arbitrage is initiated by the London banks while transactions in foreign currency deposits are supposed to be initiated by non-British holders of such deposits. Even this difference has largely disappeared with the development of any active market in such deposits.

The expansion of the new practice entails three major disadvantages. It frustrates the efforts by the Western Germany monetary authorities to discourage the influx of unwanted short-term funds by placing a ban on interest payments to foreign depositors. Holders of Swiss francs or D. marks can earn a high yield by offering their deposits outside Switzerland or West Germany. The other disadvantage is that the possibility of swapping the foreign currency deposits for national currencies on a large scale greatly relaxes the discipline enforced by the monetary authorities in the domestic money market. It is possible to expand credit quite considerably in defiance of the official monetary policy by acquiring foreign currency deposits and swapping them for national currency. This was done on a large scale in Japan last year, much to the dismay of the Japanese monetary authorities.

Last but by no means least, all these foreign currency deposits constitute a source of potential selling pressure on the currencies concerned. Such pressure can develop either through the swap transactions referred to above or through speculative sale of the foreign currencies obtained as deposits. Considerable as the extent of such potential pressure is at present, it is likely to increase further as and when the practice comes to be adopted even more widely. The only remedy against it is the payment of proper deposit rates determined by supply and demand, instead of trying to ban or reduce artificially the rates paid on deposits.

Notes

CALCUTTA

Partial Black Out

Calcutta has been passing through an unprecedented power famine for nearly a month following the breakdown of the three generator sets of the Cossipore station of the Calcutta Electric Supply Corporation. The normal working of industries in and around the city has been gravely threatened and production has been running 15 to 20 per cent below normal capacity. Heavy losses in production have been reported by some industrial firms consequent on reduced production rendered inevitable by the power cut. A big steel foundry and machine shop with a monthly production of 250,000 reported 20 per cent loss in output since the end of the third week of March owing to power shortage. A well known textile mill affected by its power shortage has estimated its loss in production for three weeks at Rs 3 lakhs. Industry has been called upon to adjust itself to the situation by staggering working hours to reduce pressure upon supplies during peak hours. It was the view of the CESC spokesmen that if industrial units as well as small consumers effected reduction in their quota of power consumption during peak hours, the power shortage could be passed

over without any untoward effects on industrial working. In this light, the CESC appealed to industrial units to accept a reduction of nearly 40 per cent in their quota. But such appeal for voluntary sacrifices having failed to evoke any encouraging results, the West Bengal Government has decided to intervene and enforce cuts in supplies under the powers conferred upon the Government by the Electricity Rules. It is now learnt that the Government would issue orders restricting the use of power by bulk consumers big and small at specified hours.

Though arrangements are being made for quick despatch of machinery parts from England for the units now out of commission, there is no prospect of any return to normal supplies for a couple of months. The present demand of CESC is 410 mw of which DVC was capable of meeting only 85 mw. The balance of 330 mw was being met from the CESC's new generating station that is now out of commission. In view of the fact that the CESC's other stations could carry this load only to the extent of 220 to 230 mw, the breakdown of the generating sets at Cossipore has resulted in a shortfall in generating capacity of nearly 230 mw. While the power shortage underlines the failure of the CESC to provide for emergency replacement of machinery and spare parts, it also highlights the fact of the DVC's failure to achieve its target for power generation. One important consequence of the power shortage is that it has brought home the need for long term planning of the power needs of the city in the light of the prospective growth of industries in the area.

FERTILISERS

Optimum Use

Increased use of fertilisers constitutes an important plank in the programmes which the Third Plan envisages for stepping up agricultural production. Though agriculture at present is greatly deficient in fertiliser application, the Second Plan schemes for agricultural production have set up a great demand for fertilisers and it is recognised that the failure of the foodgrain production in the early years of the Second Plan stemmed in a large measure from fertiliser shortage. The Third Plan target fixed at 1 million tons (in terms of nitrogen) and 400,000 to 500,000

tons in terms of P₂O₅ for phosphates. (The actuals at the end of the Second Plan were 360,000 tons and 67,000 tons respectively.) In view of the pronounced nitrogen deficiency of the Indian soil, priority for the production of this fertiliser in the manufacturing programmes can hardly be denied. The present capacity of the five operating units manufacturing nitrogenous fertilisers is of the order of 168,000 tons per annum. The attainment of the Third Plan target of one million tons of nitrogenous fertilisers would, therefore, represent a big step forward in ensuring better returns from the land. The Third Plan programmes originally envisaged the setting up of a fertiliser plant in every State by the end of 1965-66. Some preparatory work in the investigation of sites for projects has been done by the Technical Committee set up by the Government of India. More recently, the Fertiliser Industry Survey Mission sent by the UN Technical Assistance Board to India has examined the question of setting up new units from the point of immediate scope and feasibility. In its report, the Committee has recommended the setting up of four new fertiliser projects each with a capacity of 85,000 tons and has suggested Gorakhpur, Ankleswar, Ennore or Tuticorin and Mangalore as prospective sites.

It has to be understood that consumption of one million tons of nitrogen by the end of the Third Plan is possible only on the assumption that more fertilisers are used in areas where they are not used and also that they are introduced in areas where they are not in use now. The long-term economic arguments in favour of larger use of fertilisers are obvious enough. In the short-run, delicate balancing of factors vis-a-vis other factors of increased production is necessary. Also the marginal response to its use for particular crops needs close study from the point of view of optimum utilisation of scarce resources. Researches carried on by the Indian Council of Agricultural Research have proved that response of yield is greater for fertilisers than for other means of increasing production such as irrigation and also that it involves less in costs. A mass campaign to educate agriculturists in the economics of fertiliser utilisation is, therefore, essential. The UN Fertiliser Mission has suggested that factories in both the public and private sectors should take a big share in this campaigning. In this connection, the importance of a clear-cut price policy for fertilisers as emphasised by the UN Mission cannot be ignored. Indian fertilisers are high cost products as compared to imported ones, and it has to be examined how far this circumstance would operate as a factor against the extended application of fertilisers in the country. On this question of fertiliser prices, it would be relevant to recall the

remark of the Fertiliser Distribution Inquiry Committee about the distribution charges of fertilisers in the country. The Committee had observed that while on reasonable calculation the distribution charges should work out to only Rs 30 per ton, the actual charges, mainly on account of Central and State taxes, came to Rs 90 per ton. This was an anomaly which the Committee wanted to be rectified. On the side of production, the correlation between costs and size may point to the desirability of large plants for economical working providing scope for reduction in costs. In the interest of popularising fertilisers, it is necessary that such reduction in costs as is possible should be coupled with assurance of minimum prices for crops. The FAO report on the Fertiliser Economy of Asia and the Far East region has pointed out that stabilisation of producer prices even at certain minimum levels would increase incentives for fertiliser use by reducing cultivators' uncertainty as to probable return.

MAHARASHTRA

Targets Hit—And Missed

The Estimates Committee of the Maharashtra Legislature has brought to light grave shortfalls in the implementation and effects of the first two plans in the Maharashtra State. In its twenty-third report, presented to the State Legislature last week, the Committee has expressed the view that while financial targets of the first two plans have been fulfilled there has not been any material improvement in the standard of living

of the people. The Committee was highly critical of the achievements in the agricultural and industrial spheres in which performance is shown to have fallen short of targets. The backlog in agricultural production about which a serious view has been taken by the Committee is attributed to the paucity of irrigation facilities in the State, it being pointed out that only 5.8 per cent of the gross area under crop was irrigated in Maharashtra as against about 18 per cent in the country as a whole in the

year 1957-58. The Committee has therefore suggested that special and speedy measures should be taken by the Government to bring more land under irrigation. The Committee has also recommended a sample survey to find out whether the productivity of land is directly related to the size of the holding in view of the differences of opinion expressed on this subject. Underlining the need for a scientific study of the question relating to improvements in agriculture the Committee observes "un-

less agriculture becomes self-generating and rewarding, it would not be correct to expect any substantial increase in agricultural production."

The Committee has also taken a grave view of the decline in some of the established industries in the State and has ordered an inquiry for tracing the causes for this disquieting development. Growth of industries in the public sector is shown to be comparatively slow in the Maharashtra State and the Committee has recommended to the Government to undertake an inquiry to find out how in this respect, the State compares with other States. The Committee takes the Government to task for failure to evolve a plan for the integrated industrial development of the various regions of the State as envisaged in the Draft Outline of Third Plan.

Another count on which the Committee criticises the planning and administrative machinery of the State Government is for failure to provide basic amenities in the urban areas in the State. Though the extent of urbanisation in the Maharashtra State is high being 25 per cent, the progress in the provision of urban amenities is shown to be very poor and the Committee has recommended the appointment of a study group to suggest how much amenities can be provided quickly.

OIL
Politics or
Economics?

The public sector in the oil industry in India is to develop like the coal mines run by the Government. The fuel supplies will be controlled and rationed perhaps in time of scarcity, for Mr Malaviya, apart from relying on the industrial policy resolution, looks to the growth of output and independent refineries to apply price regulation and to make profits. Only a dim view of the future can be had, if collaboration is to be secured on the Government's terms. But the East European countries give aid: so Government can be independent of the private oil companies. That view may be related to emergent socialism but the companies will probably hope for rising consumption to offset the higher taxes and the competition envisaged in coastal regions. Supplies from Russia for rupees afford a guarantee of profits for the Government and the first thing that Parliament can now ask for is an accounting of what has been done so far by the Government in the oil business. The lack of tankers does not seem to deter the Government, because of hope that Cambay will help greatly to augment supplies and the State transport undertakings will ensure an outlet.

While the end of monopoly appears to please the Government some Congress MPs feel that the companies can help to locate new sources and help also in development. The Minister's view, however, is different, and the reason may be that the new refineries may put the Government at an advantage, especially, if the three private refineries are not allowed to expand, as desired. The surplus of oil in the Middle East may also give the Government an edge: so will the offer of Italian help to start an officially controlled oil industry that would limit dependence on imported oil and save foreign exchange. How India's trade with Iraq or Indonesia would fare, if oil imports are kept down may not call for immediate notice, but it is fairly certain that the reduction of oil imports a major item at present, would hurt exports of tea, spices and textiles and attempts must be made to regulate supplies to markets like Iran or Aden. The idea of autarchy is attractive enough but the cost must be reckoned, for a fall in takings of oil or rice from Burma has already led to a fall in exports, with Japan steadily getting a bigger share of Burma's import trade. Whether a petro-chemical industry can be raised without foreign aid may be debated also. But the danger to export markets for manufactures may be mentioned as a more forbidding factor, in case the oil companies are forced to cut back import of crude oil and take Government oil for refining, if and when pipelines are ready. The claim that Government should control a strategic industry is impressive enough: the cost will be high if the expense of exploration and extraction is considered and if the import of equipment for a political industry, even if it is got on credit will entail a drain on exchange, limiting the essential imports for essential, running industries.

ORISSA ELECTIONS

What Odds for
the Future?

Orissa celebrated on 1 April its jubilee as a separate State but nothing was said about the O'Donnell Commission's contribution to the formation of an Oriya-speaking State or to the subsequent troubles in the Eastern States Agency. The Governor and the ci-devant Ministers preserved a complete silence about the Telugu minority problem or about the claim to Seraikella and Kharasawan. That may be due to the outbreak of election fever in view of the Centre's decision to hold mid-term elections.

Dr Mahtab's indifference to the preparations suggests that the Congress Party is divided, that the

FCC has got a quarrel with the late Ministry and the progress of Hiraakud or other projects is not felt to be enough to commend the Congress cause to the electors. The return of certain Congress politicians to the campaign may not have much influence on the selection of candidates. As for the manifesto, the promises may not impress a backward electorate and the local Ganatantra Party may gain actually from the tribal unrest in Bastar. The latent resemblance between Swatantra and Parishad views may not impress many today whereas previous princely power may help in many districts. The Parishad speaks out against monopoly in industry, because outside capital is dominant in Orissa and local enterprise is absent. The record of the late coalition is hardly the issue.

It is rather the attitude to Prohibition and forest leases that will greatly weigh with many urban voters. The Ganatantra Parishad realises that distilleries help the State to export, and if the party opposes rice exports, it may gain even extra strength. The absence of cities equal even to Kharagpur or Bhopal may spoil Congress's chances to some extent. The poor shape of Cuttack as a major municipality may not be disregarded by voters who feel that the backwardness of Orissa is due to Congress' failure to develop both resources and the coastal towns of Balasore and Puri.

The sudden resignation of the coalition ministry may be cited by the PSP as an argument for giving the Left a chance but a party of the Right is the major opponent of the Congress at present. Politics in Orissa does not run on lines parallel with the rest of India and the migrant labour from Orissa advertises the ineffectiveness of planning. The plea for socialism will not make much impression when organised labour is not a force to be used against the feudal elements which can appeal to the past instead of the future.

COMMUNISTS
Patched up Front

Vijayawada where the Indian Communist party engaged in a careful review of its programme did not reveal the rifts in the lute. The visit of M. Suslov made no difference to the school that is careful not to offend China by open condemnation. The parliamentary wing is still undamaged by deep discussion. The general elections are likely to attract the Communists and stimulate alliances in some States. The rift in Andhra Congress party ranks may help, so will the open PSP—Congress clash in Kerala. That Mr E.M.S. Namboodiripad, the only leader with experience of office, will take over as General Secretary may provoke guesses about

OPPORTUNITIES

Madras Calling Entrepreneurs

The Madras Government in 1946 put out a list of industries that seemed desirable or promising. It was very big and comprehensive, but it was exposed to criticism as there seemed little likelihood of anyone coming forward to start these industries. Cable-making plants then seemed as remote as cigarette factories or newsprint mills. But planned development in 14 years has been followed up by a precise survey of resources and the Government sensing the better climate for investment in Madras reflected in the advent of foreign aid for local enterprises has got ready a list that will encourage private planners to think of automobile springs, tyres and tubes owing to import control and rising domestic consumption. The making of cycle parts, in spite of a big, modern factory that has started to make chains, lamps and saddles is also held feasible. There is no hope for large independent soap factory or vanaspathi plant but more glycerine to be exported is held desirable and the crushing of cotton-seed may afford a supply of raw materials. The estimated demand for typewriters as well as plastics explains the official view that there is scope now for increased local production. While no new enterprises to produce dry batteries will be approved, it is urged that there is scope for expansion. The shortage of copper and the prospect of aluminium supply locally has influenced a recommendation for making cables and wires. Two large units are being set up, but

extra capacity may be needed and hence licensed. Government is prepared to approve both the manufacture of meters and electric lamps. The limited growth of paints and varnishes accounts for the view that Madras should also encourage local output since the Plan target is set at 1,90,000 tons. Another useful suggestion is for reconditioning oil barrels. There is not much likelihood of pharmaceutical manufacture on a large scale or even of sewing machines. The outline is based on the achievements to date, for instance, under switchgear and transformers but it seems difficult to expect a large increase under electric fans, since the electricity tariff is known to be high. As the Government in its review of prospects dealt with paper, rayon and aluminium enterprises, and already expects half a million tons a year from the Salem steel plant, the outline may not seem unrealistic. There has been a steady expansion of industries as also in the flow of outside capital. The growth of heavy chemical industry is an index of the industrial advance.

According to a list prepared by the Madras Government, opportunities for new units and additional capacity in existing industries are available in the State in the following industries:—

Industrial Chemicals

Glycerine; styrene monomer and polystyrene and its co-polymers;

Barium chemical compounds; Salts of Glycerophosphoric; Malathien; Benzene Hexachloride; Zinc Phosphide; Dichlorophenox acetic acid; Orange mercurials; Methanol; Mixed fatty acid from cottonseed; Urea and formaldehyde moulding powder.

Electrical Equipment

HRC fuse, fuse bases and triple pole fuse isolators; Welding generators; Loudspeakers; Microphones; Dry batteries; Tape recorders; Silicon rectifier devices; Semi conductor elements; Paper insulated power cables; Brass lamp caps; Electric fans.

Underground Cables

Aluminium underground cables; Enamel covered winding wires; Paper, cotton and rayon wires; Power and distribution transformers; Capacitors; Electric metres; Safety fuse; Detonators; Blasting powder; Acetate rayon yarn; Viscose staple fibre.

Miscellaneous Goods

Laminated springs for automobiles and railways and automobile leaf springs; Automobile tyres and automobile tubes; Bicycles parts, rims, hubs, saddles, fork head fittings, and BB fittings; Furnaces for the ceramic and chemical industries.

Wired glass and figured glass; Refrigeration compressors and industrial refrigeration accessories; Lead sheets; Brass lamp caps; Paints enamels and varnishes; Newsprint; Sewing machines; Bolts, nuts etc; Reconditioning barrels; Typewriters.

ling alliances or adventures nourished by the quarrel with China. In a sense the coming election in Orissa may provide a test for the Communists who are now resolved to conceal internal differences carefully and to see what Congress means to do about its programme and candidates. As a small party, with able propagandists at call always, it can afford to take the field late and concentrate on votes rather than seats. The percolation of Communist views is the immediate goal, and not capture of power, for that would be possible only if economic and moral collapse were around the corner.

RAILWAYS
Expansion in the
South

The demand for new railway lines in the South, especially, that from Hassan to Mangalore is likely to be met as the State Governments have endorsed the old, familiar plea for connections that would complete rail communications. The

Salem-Bangalore line is regarded as necessary as also one from Tirunelveli to Cape Comorin. If the ceiling of Rs 25 crores on new constructions is kept in view, the chances of World Bank aid appear bright after the investigation of needs and resources by a visiting team of experts. The promise of railway links or electrification over a larger stretch than presumed may be set down to the election ahead by the cynics. But the fact that the Southern Railway shows a deficit has not been cited over again and the argument that ore shipments from Cuddalore port will increase has been mentioned to prove that the balance of advantage lies in laying down new lines, as was done in 1956 to link Quilon with Ernakulam. The increase in the Third Plan outlay may explain the proposal to provide rail links in the Tamil districts, because of the need to open up the interior served by Tuticorin port as also to give the South the feeling that the extensions made about 1926 for connecting Trichy with Dhanuskodi do not really represent the limit of railway development.

The IAC
FRIENDSHIP
ARRIVES

- * A turbo-prop aircraft flying at over 4 miles a minute
- * Powered by 2 Rolls-Royce engines of the type mounted on Viscounts
- * Equipped with storm-warning radar
- * Pressurised and air-conditioned
- * Foam rubber seats that recline full length
- * High wing configuration - shields cabin from sunlight, allows unobstructed view

THE FRIENDSHIP WILL BE INITIALLY INTRODUCED ON SOME OF
IAC'S REGIONAL ROUTES ORIGINATING FROM CALCUTTA

INDIAN AIRLINES

BANKS

Merger Problems

At the Indian Bank's annual meeting on 11 April a reference was made to the competition for deposits by agencies other than banks and the strain of rising advances. The efficiency of service performed is also a factor like the security offered for deposits. But the critical view of amalgamations under pressure was also put forward. The mergers carried out are few, but they have posed problems. Small banks in the countryside have their uses. Caution is advisable, according to the President of the S I Chamber who is now Chairman of the Indian Bank.

Whether inflation has created a prejudice in favour of assets other than cash and led to a limited increase in bank deposits is an issue that may be usefully dealt with by Bank Chairmen in future. It is well to recall that disinvestment by banks has been noted by observers who see that advances are still rising. And advances are wanted also on account of the rise in the price-level. The credit controls do not operate against the rise in prices, though they set a limit to the banks' advances and hence limit profits in a business that is a public service. Whether this trend should continue may be arguable. But the Reserve Bank's own profits continue to rise, and not only from paper currency and token coinage. The Government, of course, gains thereby while the Reserve Bank's employees derive advantages denied to the staff of other banks. All this may engender jealousy at some time, and it is well to remember that an award is pending as to the claims of bank employees for higher pay and allowances.

The difficulties of merger are only discreetly stressed for the present. The imposition of moratorium—not by Court order but by executive decision—as a prelude to a merger may seem questionable to lawyers, for the Reserve Bank cannot be called a judicial body that relates the claim of creditors to those of the shareholders. The law has been amended to facilitate mergers—not only of State-associated banks but those of joint stock banks whose shareholders have apparently no voice in deciding the future. And depositors do not get the full satisfaction of their claims to repayment of money held. This will seem rough justice to many who may argue that protection afforded to staff endangers the interest of shareholders who may be asked to meet calls on unpaid capital. So far, no bank seems to have moved in the direction of raising extra capital. If due provision is to be made for deposit insurance by annual earnings additional reserves are needed and the banks should become bigger by pointing to their enhanced capital. The advantages of large capital and reserves in a business in which competition is keen cannot be de-

nied. Fusion is not the only means to improve present capital and future resources. And marginal units in other industries, including insurance, may ask for early mergers to ensure their future.

INDUSTRIES

Locational Problems

Investment under the Third Plan will lead to a dispersal of the heavy industries owned and run by the Government. The pattern of growth (and of costs also) will be different in future because of Mr Shah's promise that the engineering industry should be developed in each State. Transport requirements are likely to be substantially greater, if new large enterprises are set up to meet regional claims on the score of previous stagnation or neglect. Whether skilled labour in volume can be got may be doubted, but one may presume that metal industries will not grow in Bihar or Bengal in view of a declaration that UP or Madras should (or would) hereafter receive more consideration in the interests of large-scale employment.

The question whether location should be rearranged in view of the States reorganisation may be answered by a reference to the reorganisation of British steel-making—under both Government and private auspices after the war. But the point to note is that coal resources in India are irregularly distributed and the present inadequacy of washeries is a handicap. If Mr Manubhai Shah has spoken of the need to remove regional tension or jealousy, he has not quite made out a case for altering the distribution of factories in the private sector which must consider access to export outlets as well as the entry of essential imports for efficient operation in the case of batteries, chemicals or rubber. There has so far been no review of the location of industry on the lines of the Barlow Commission in Britain and there has been no need to restore depressed areas to economic health such as was necessary in Britain. But a defence may be offered by reference to the USA where the needs of the Southern States assume great importance for political or other resources. The plea that the industrial complex in each State should be developed may be justified by a reference to the creation of new seaports or the establishment of minor enterprises using skill.

PLAN FINANCE

Confusing Picture

For all the tremendous interest it had earlier created, the Third Five Year Plan has had a feeble start. The lack of public enthusiasm is perhaps due to the fact

that a number of important points are yet to be made. Moreover, the shock created by the wide disparity between its estimate of the country's population and that of the Census is yet to be absorbed. Some of the basic requirements like foodgrains and cloth have been calculated on the basis of a figure that is sizably smaller than the 438 million which we now know are the population of the country. The determining of resources to be mobilised is thus in a confusing state.

The present position is somewhat like this: As a result of the meeting of the National Development Council, the outlay in respect of the public sector has been raised to Rs 7,500 crores from an indication given in the Draft Outline of Rs 7,250 crores. The increase has been made possible by the revision of resources that are expected to be available by Rs 250 crores. This amount is to be contributed by the Central and State Plans.

But the problem of filling the gap of Rs 500 crores between the financial and physical limits, left untackled at the January meeting must be met squarely at the NDC's coming meeting at the end of next month. The task does not promise to be easy even with the reported indication given by the Life Insurance Corporation to increase its contribution to Government loans from Rs 350 crores to Rs 500 crores during the five year period. But all this increase of Rs 150 crores under the head loans cannot be taken as effective increase, as the receipts under Prize Bonds has now been estimated to amount only to half of the original estimate. Taking into account the increased receipts from small savings, the additional resources that may thus be found roughly amount to only Rs 200 crores. There will still be a gap of about Rs 300 crores for the filling of which no indication is as yet available.

Even with regard to some of the items of resources which seem to have been taken as certain by the Planning Commission doubts have come to be expressed lately. The break-up of the surplus of Rs 300 crores from Public sector undertakings shows that as much as Rs 111 crores are expected from the steel plants. It is doubtful if such a huge surplus can be obtained from these enterprises.

IND. CO-OPS

Financial Problems

The three-day seminar on industrial cooperatives held in New Delhi last week and which was presided over by Mr Manubhai Shah, Union Minister for Industry, discussed the various problems facing these cooperatives. Industrial cooperatives have a recognised role for increasing indus-

trial production though their present importance is limited by reason of their small number. It has been estimated that by the end of the Third Plan, there would be 40,000 industrial cooperatives societies with 3 million members and a share capital of Rs 20 crores. There has been a gratifying trend evident recently for small producers to organise themselves into industrial cooperatives with common facility services like tool rooms, assembly plants, processing plants and industrial estates on a cooperative basis. The Seminar has recognised that the membership of these societies should be open to all small industrial units and to workers employed in the societies' workshops. What, however, would provide the impetus to further growth of these societies is the provision of finance in respect of which considerable difficulties are experienced at present. The Reserve Bank is reported to have offered to take a lead in this matter. It is important that the cooperative banks which are the channelling agency for credit should be helped to enlarge their resources. For this it is necessary that the Government should lend its support to the industrial cooperative banks and make available to them all the facilities that are available to the other cooperative banks. The Seminar has recommended a selective approach with certain districts in the States being selected for concentration of efforts on the basis of integrated credit provided by the cooperative banks and the State Bank. This would ensure better utilisation of the limited resources which the financing agencies and the Government could spare for the development of industrial cooperative societies.

Another problem faced by industrial cooperatives for which a solution has to be found relates to marketing of the goods turned out by the industrial cooperatives. The Seminar has suggested the setting up of marketing unions or federations in each State.

SOUTH AFRICA

Yellow is not Black

The report that South Africa may develop trade with Japan cannot excite surprise, for sterling realised by sale of gold will always give South Africa the means to pay for a variety of imports. She can also sell hides and wool to Japan in return for textiles or machinery. The racial bias applied against residents does not affect dealings with Japan and it is certain that Japan will probably find in South Africa a base for whaling operations in the Antarctic. Japan may be disposed to sell readily as the trade of the Union with the Commonwealth may shrink to some extent, and it may be good business for her to ignore the present views of Ghana

Indian Finance

22 April 1961

or Nigeria about present South African attitude. That the Japanese cannot supply capital needed for developing new mines may not be a bar to greater trade with East Asia and the Japanese unable to reach China may find in South Africa new opportunities simplified by the offer of minerals that Japan requires.

The ECAFE region must be reckoned inferior to South Africa and even if the Whites in South Africa are relatively few, the national income has been rising since 1939 and the tradition of paternal regulation may well lead to an increase of trade with Japan. The Boer view is that foreign capitalists cannot lay down policy and South Africa may find in Japan a trading partner who can now get ships as well as sealing wax for it. The supply of heavy railway equipment, such as is now made available to Latin America, may be arranged on easy terms and the South African republic may deliberately turn east, for Japan may provide a market for coal from Natal as well as sugar. Significant changes in policy implying that Japanese are not Asiatics have been mentioned but it is well to note that Japan has long been viewed as different from other Asian countries in the same way as Lebanon, an Arab country that has been assimilated by the Mediterranean countries not on account of the Christian element but because of wealth. The Japanese will certainly have a revenge on Europe if South Africa chooses to increase trade in textiles and machinery. The threat to secondary industries may be small but the European or the Asian trader will see that Japanese competition cannot be resisted easily. The middle class White may by reason of necessity accept Japanese goods just like the Americans, and the East African markets may also be inclined to buy more of Japan for the simple reason that the quality of postwar goods is high and Japanese supplies can offer capital goods needed for the plantation industry as well as cheap consumer goods like cycles and rubber shoes. The native standard of living may be raised: that alone can be said to justify the South African move, though it may be argued that pique, not policy, is at the bottom of a new friendship.

USA

Business Advisory Council

The businessmen who advise the Commerce Department on economic trends and prospects are now officially on record as agreeing that the recession has about hit bottom, and an upturn in economic activity is under way.

Members of this group, who represent some of the most important companies in the country, arrived at this conclusion at a meeting last week with Secretary

of Commerce Luther B. Hodges and other key government officials.

The consensus of this top business group seems to be that US economic activity, as measured by the Gross National Product (GNP) the total output of goods and service—will rise moderately during the second and third quarters of this year, and will gather momentum during the fourth quarter.

Their expectation is that by the fourth quarter, the GNP will be running at an annual rate of about \$520,000 million. This would compare with an estimated rate of slightly less than \$500,000 million during the first quarter, just ended, although no official figures have yet been published for this period. The peak period so far has been the second quarter of 1960, when the GNP reached an annual rate of \$505,000 million.

On the basis of a fourth quarter rate of \$529,000 million, it would appear that the 1961 GNP would average out at about \$510,000 million. This is just about what the Kennedy administration has been predicting, and would represent a new annual high. The existing record is last year's \$503,000 million, which was achieved despite the onset of the recession shortly before mid-year.

This was the first meeting of the business advisory council since the inauguration of President Kennedy, and it is significant that several important changes in its organization and procedures were introduced. These changes, proposed by Secretary Hodges after consultation with the President, were approved unanimously by the council members.

In essence, they boil down to a

widening of the council's membership, closer Commerce Department surveillance of its activities, and more open deliberations.

The council accepted Secretary Hodges as a "general chairman", with authority in effect superceding that of the elected Chairman, Roger M. Blough, head of the US Steel Corporation. It also gave Mr Hodges authority to select new members from a slate of nominees and to review the membership periodically.

At the same time, the council agreed to increase and "diversify" its membership, raising the number of active participants from 60 to 65. The new members, by and large, would come from the ranks of small business, giving an enlarged voice in council deliberations to this important segment of the business community.

Finally, in a notable break with past practice, the council agreed to open its meetings to the press when government officials speak. In recent years, Mr Hodges indicated, the group's value as a source of economic advice has been limited by the narrowness of its membership and its practice of holding meetings behind closed doors.

The business advisory council was formed in the early 1930's during the administration of Franklin D. Roosevelt, to advise the Secretary of Commerce on business matters. The net result of the new changes in its make-up and procedures could be to make it a more effective liaison with the government. In commenting on the changes, Chairman Blough said the Council members are "not only accepting but welcoming" them.

SOUTHERN STRUCTURALS

A Hundred Wagons a Day

The rolling stock position of the Southern Railway is sure to be eased by the inception of wagon building at Pattabhiram, near Madras under the auspices of Southern Structurals which has a paid-up capital of Rs 60 lakhs. The Southern Railway will get 100 wagons a day built in the neighbourhood of the Perambur Railway workshop that can carry out effective inspection of equipment delivered. The enterprise launched in 1956 has come of age and instead of mere assembly, a complete 22 tons wagon is got ready in its shops that now receive the frame on wheels and send them out as covered wagons. If the labour force of 600 is modest, its dependence on imported steel plates will soon end. Both the layout and operating efficiency suggest that instead of attempting to create new plants elsewhere, the promising new enterprise in Madras should be given ample opportunities to grow. The lack of enough work at present explains the undertaking of general engineering work for others including the Neyveli project and it has to be borne in mind that tools and machines from many countries have been got and put to work so that the usual problems of getting on to a start does not arise. An arrangement with a leading UK firm will probably help to remove difficulties encountered.

T. D. KANSARA
General Manager

COAL Conditions of Success

It is a tremendous task that awaits the coal industry during the Third Plan period. Production is sought to be raised from the present level of 45 million tons to 97 million tons. This will mean that the private sector collieries have to step up their production to 62 mil-

lion tons per annum by 1965-66. It is not as though the reaching of the target is automatic once the quantum is stipulated. Far from that. The private collieries require some important facilities if they are to be enabled to carry out their part of the task satisfactorily. There is first the question of the region of operation and although there seems to have been a change in Government policy in this regard, firm indications are yet to come. It is only when the private collieries know that their sphere

of operation is not unduly restricted they will be encouraged to embark upon expansion programme without which they cannot hope to achieve the rate of production expected of them. Expansion programmes inevitably mean new machinery and at present they have to come from abroad. Unless, therefore, import licences are made available to them in time, the needed additional production from the private sector may be delayed.

Mr N. Stenhouse, Chairman of the Bengal Coal Company Limited, has told the recent annual meeting of the shareholders of the company that though Bengal coal has already raised additional funds to the tune of Rs 1 crore, through rights shares and debentures the actual implementation of the expansion programme would still depend on Government's policies. Mr Stenhouse has also emphasised the need for ensuring increased supplies of electric power to the coal companies because much of the extra coal production will have to come from increased mechanisation of mines. According to him, however, the present electric power shortage will continue to be experienced throughout the Third Plan period because the additional generating capacity proposed is far short of the potential demand.

SEN-RALEIGH More Wheels on The Road

Few industries have such a fine record as the bicycle industry. In the course of the past ten years it has taken long strides and production of cycles today is placed at 1.5 million whereas as early as 1950-51 the country was producing only about 100,000 bicycles. In recent years the installed capacity of the industry has sizably increased to reach the level of 2.2 million at present. No further addition to installed capacity seems likely during the Third Plan period as the Draft Outline of the Third Plan puts the target for capacity for 1965-66 at only 2.2 million. Production is estimated at 2 million showing a rise of 500,000 above the estimated output at the end of the Second Plan period. The target for bicycle production is put at 2.5 million and it is indicated in the Draft Outline that an additional 500,000 bicycle are expected to be produced by the small scale sector.

Such commendable progress has not come without tears. The industry has been hard put to it to get steel of suitable quality in sufficient quantities and the drastic import cut, inevitable though it is, has put further obstacles in the way of getting some of the essential raw materials. While reviewing the working of the company during the last accounting year, Mr Abhijit Sen, Chairman of the Sen Raleigh Industries, has referred to other difficulties also. Plans for the future expansion of

the company are clouded, he says, by the present shortage of power and water at Asansol. Sen Raleigh's expansion plans however are under active consideration. Efforts at developing exports are to continue and with the incentives now made available by Government the company should be able to show good results on the export front also. Mr Sen makes a valid point when he says that the distinction made by the Finance Bill 1961 between foreign associates of Indian enterprises before and after April 1961 is invidious. Such benefit as has now been given should first be made available to those who have collaborated with Indian entrepreneurs in the early years when conditions were rather uncertain.

HINDUSTAN LEVER The Consumer's Pulse

The predominant part played by successful marketing Research in promoting sales of consumer goods has been highlighted by the working results of the Hindustan Lever Limited. At the annual general meeting of the company Mr P. L. Tandon, the Vice-Chairman, states that "successful marketing is our life blood... Marketing to us is a total operation, more than mere selling. It has a wide band of activity from product development to consumer satisfaction." The marketing research of the Company operates in a variety of fields. The conventional research, popularly known as quantitative research, has brought forth excellent surface bearings. But more often than not the results obtained from such research have turned out to be quite divergent from the true index of consumer attitudes. For the elimination of this anomaly, the Company leans heavily on motivation research, by which certain conclusions are arrived at after analysing the beliefs and actions of the people. Motivation research has proved more advantageous in places where the emotional content looms large.

Rural surveys are another device by which the Company feels the pulse of the consumers. The changing habits of the people, especially of the denizens of the mofussil areas, are taken into account before finalising sales promotion programmes. For conducting these surveys on a successful scale, the Company is equipped with a bevy of specially trained, well educated and energetic young ladies whose visits are considered by the housewives as occasions of rare import. Test marketing is yet another feature introduced by the Company. These measures have yielded rich dividends. After gauging their impact on the consumers, requisite steps are adopted by the Company for improving the quality of its products which ultimately lead to enhanced sales.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE boxing at Lumumbanagar was anything but shadowy, though the discreet revelation of indiscretions would make one easily fall into this error. True enough, in all the half a million words reportedly spoken in the course of twelve days, Chinese aggression rated only a passing reference. But this curious evasion was the result of the most intense manoeuvring. Besides Mr Ajoy Ghosh's more-in-sorrow-than-in-anger reference in his report to Chinese comrades' convenient deafness, there were three resolutions of various shades of ideological red—the Maharashtra draft barely identifiable as red at all. The rightist faction would have dearly loved to have this, the weakest spot of the left exploited, but the left refused to consider such an important issue at "a late hour". After this, the right was continually on the defensive and was in constant danger of being routed. Indeed, the jargon dished up for public consumption about the "tactical line" to liquidate the right reaction hides what was perhaps the most determined effort to liquidate the right in the party itself. In retrospect it appears that the effort was barely foiled. It is an open question whether a different denouement would not have resulted if the general elections had not been round the corner and the present balance in Sino-Russian ideological bout was not in the inconclusive stage it is. The left, momentarily thrown back, did nevertheless try very hard indeed. The crucial struggle was for the capture of the National Council whose membership has now been expanded from 101 to 110. At one stage Mr Ranadive had the hardihood to insist on the acceptance of a panel in which the Ghosh-Dange group had no place at all. This was hardly likely to have been accepted without splitting the party. The left, which was playing a cool hand for high stakes took a calculated risk and threatened a walk-out, when the middle-of-the-road (or the cat-on-the-wall) faction took a hand. The fact was that if a vote had been forced, the right would have won, but that would have been a Pyrrhic victory. The left would have walked out and that would have been the end of the Communist party as we know it today. The National Council ultimately elected has a technical rightist predominance, but the leftists are far

from defeated. Though a tired Mr Ghosh, announced a party "more-than-ever-united", Mr Ramamurthi conceded that everything was exactly where it was before the Party Congress met.

I must say that the American stand on the Cuban rebels' insurrection against the Castro regime sounds perilously like a piece of disingenuous technicality to me. Everyone knows from past experience that there are many forms of intervention and the US assertion that there will be no "US intervention under any conditions" seems to cover only the most blatant form of sending one's own troops. At the UN, Mr Stevenson who scored a debating point against the Cuban Foreign Minister Dr Raul Roa by quoting his (Dr Roa's) colourful denunciation of Soviet Russia's intervention in Hungary, was uneasily aware of the equivocation in the US attitude. Long before the actual operations started, there were detailed reports in the US Press, of plans to use Miami and Guatemala as spring boards for action against Cuba. That is why he added, almost parenthetically, that "we are opposed to the use of our territory for mounting an offensive against any foreign government." What practical steps his government would take to ensure this, he did not elaborate. The fact that the rebel leader Dr Jose Miro Cardona has been ostentatiously hobnobbing with the State Department and that the training of rebel forces took place, among other places, in Florida—a fact mentioned by Mr Nehru in the Rajya Sabha last Thursday—have their own sorry tale to tell. After this, the slanging match that the actual landings set off hardly came as a surprise. Mr Kennedy's invocation of the Eisenhower version of the Monroe doctrine was the retort courteous to Mr Khrushchev's battle cry "Hands off Cuba". The Cuban crisis differs from the Laotian and the Congolese in that both the parties have permitted themselves in their latest clash a kind of language that they may feel obliged to make good for reasons of prestige. That way lies annihilation.

Mr J. M. Lall's sudden passing away last week at the age of 48 has come as a profound shock to me. Death was the last thing I associated with him when I last

met him. He was then so full of energy and enthusiasm, talking about the ICI plans of further expansion, especially of Chemicals and Fibres of India Limited recently floated in Bombay. Earlier in February, he made some telling points about Indian taxation at a Press Conference which was also addressed by Mr Chambers of ICI London. Taxation indeed was something of a speciality with Mr Lall since the day he joined the ICI in 1939 in its Calcutta regional office in the accounts department after winning the Whinney Prize of the Institute of Chartered Accountants. During the war years, he grappled with the intricacies of the Excess Profits Tax. Since then, his horizons widened and he became successively, the first Indian to join the Board of Directors and its Chairman. Like so much else in India, Indian economy accommodates the widest extremes. The bullock cart coexists with the jet plane in transport, and in the sphere of management, we run the whole gamut from the self-employed tradesman to the most sophisticated executive suit. Mr Lall was a very accomplished member of this latter band and his nimble and acute mind had a comprehen-

sive grasp as well as a sure eye for detail. He had great faith in the future of Indian economy and worked for its development with rare devotion. By his death, the meagre stock of leadership of the kind we sorely need is further diminished. It is a loss we can ill-afford.

Death has been busy among the young last week in Calcutta. Besides Mr Lall, it has claimed as its victim Mr Bimal Chandra Sinha, the Land and Land Revenue Minister of the West Bengal Government at the age of 43. Unlike an earlier generation of leaders, the younger set has to win its battles in the secretariat and legislative assemblies instead of in the maidan. It also lacks the psychological compensations of mass adulation that was readily given to those who had the halo of martyrdom around their heads. Mr Sinha was by all accounts proving his mettle in this, and in some respects more difficult, school of leadership. I also understand that, unlike certain other politicians, Mr Sinha's interests ranged wider than what the duties of his office and party dictated and that he was a litterateur of merit. The country is notoriously ill-provided with the second line of leadership which, in the fullness of time will take over from the veterans. Mr Sinha's death is a serious blow to hopes in this regard.

UNITED BANK OF INDIA LIMITED, BALANCE SHEET—(Contd.)

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1960 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated, the Returns from the Branches audited by other Auditors. The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- we have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the bank which have come to our notice, have been within the powers of the Bank;
- in our opinion, proper books of account as required by law, have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;
- the Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

Record Production

Expansion Programme During III Plan Period

Mr N. Stenhouse, the Chairman, on Power and Transport

The following is the statement of Mr. N. Stenhouse, the Chairman of the Bengal Coal Company Limited, circulated with the Annual Report and Accounts to the shareholders of the company:

I have pleasure in reporting to the members of The Bengal Coal Co., Ltd. on the operations of their Company during the year ended 31st October, 1960.

THE YEAR'S TRADING

The income from coal sales increased by Rs. 53 lakhs to Rs. 6,89,00,000. As a result of a general increase in output, there has been a satisfactory improvement in the trading results, the profit before taxation being Rs. 16 lakhs higher than for the previous year.

After providing Rs. 41,50,000 for taxation and transferring Rs. 21,00,000 to Reserves, the Board are recommending a final dividend of Rs. 15 per share less tax

on the Ordinary Shares, making Rs. 25 per share less tax for the year and thus maintaining the same dividend as for the previous year. Calculated on the Capital employed in the Company, the dividend for the year represents a gross return of under 7.5% per annum.

Costs, however, continue to rise: safety measures, stores and spare parts—in a hazardous industry such as mining, there can be no question of providing anything but the best available. In spite of the high standard of mechanisation at many of your collieries, there has been a further increase of over Rs. 20 lakhs in "Salaries and Wages", the total expenditure under this heading amounting to some Rs. 3,33,00,000 or approximately Rs. 11 per tonne of coal raised.

PRODUCTION

You will observe that the words "tonnes" and "tons" are used in

this Statement. The reason for this is that, although the coal industry has now gone over to the metric system of weightment, the total output of coal in the country is still officially referred to in tons and not tonnes. One tonne= 0.9842 of a ton.

Raisings during the year increased by over 215,000 tonnes to a level of 3,096,500 tonnes, which constitutes a record in the long history of the Company. Mainly as a result of increased mechanisation, the Company's Poniati and Dishergarh collieries have recorded most satisfactory increases in their production. The only decline in output has been at Chanch Colliery; the installation of the sand stowing plant is, however, nearing completion, and this will result in increased raisings from the colliery.

In the context of the need for increased output of Selected "A" grade coal, which is so urgently required for the Steel Plants, the

Railways and other high priority consumers, it is interesting to note that the Company produces almost 30% of the all-India output of Selected "A" coal. In addition to our large production of this grade of coal, we have also been developing seams of other grades, conscious of the need of Selected "B" and Grade I coals by industrial consumers throughout the country. For instance, sinking to the Hatnal Seam at Sodepore 9 and 10 pits has been completed and, although raisings from this seam during the year under review amounted to less than 2,000 tonnes, I am glad to be able to report that we are currently raising over 7,000 tonnes monthly from this new development, and production will increase steadily over the coming months.

In my Statement last year I referred to the introduction of a Cess to assist deep, difficult and gassy mines. Unfortunately, we have not yet received any payment

against our claims for assistance submitted some months ago, and it is now almost 2½ years since the introduction of this assistance was recommended by the Coal Prices Revision Committee. We believe, however, that payments will commence shortly, and we shall welcome this assistance. The Company operates many "deep, difficult and gassy mines", four of which are working either at a loss or making a negligible profit of under 50 nP per tonne.

The quantum of sand stowed at the Company's collieries showed a most satisfactory increase from last year's figure of 772,000 tonnes to 1,122,000 tonnes. The increased level of stowing assistance received was applicable to the whole of the year under review, and consequently the gap between the total cost of stowing and the assistance which we received from the Coal Board narrowed to Rs. 6 lakhs compared with Rs. 9 lakhs in the previous year.

THIRD FIVE-YEAR PLAN

The Third Five-Year Plan period commenced on 1st April, 1961. The all-India coal target has been fixed at 97 million tons per annum, of which 62 million tons are planned to be raised by the private sector of the coal industry by 1965/66. This will mean increased raisings of 17 million tons per annum over the next five years by the private sector, the present annual level of production being approximately 45 million tons. In the light of this very substantial increase in the all-India production, we have submitted details to Government of plans to raise output at our existing collieries by at least one million tons per annum. This greatly increased output is, of course, largely dependent upon our receiving import licences for the necessary plant and machinery and on other factors which are at present the subject of discussion between the Industry and Government. We are also planning the sinking of new shafts, the output from which, provided no obstacles occur, should materially increase still further the total raisings of the Company by the end of the Third Plan.

FINANCE

These very considerable expansion plans have necessitated the Company raising initially a total sum of Rs. 1,00,00,000 by way of the issue of 20,000 Rights Ordinary Shares of Rs. 100 at a premium of Rs. 100 per share and Rs. 60,00,000 Debentures. It is satisfactory to record that these issues were oversubscribed, and the response from our shareholders to the Rights issue and from the public to the issue of Debentures has given great encouragement to the Board and to all connected with the Company.

POWER SUPPLY

For too long, Industry, particularly in West Bengal, has been working in conditions of electric

power shortage. As new generating capacity in the area has come into operation the demand from Industry has taken up all additional energy available and there is still a very large demand for power which just cannot be met. A result of this shortage has been the overloading of existing capacity with the recurrent breakdowns which must be expected from overworked plant. The output of the proposed new units to come into operation during the Third Five-Year Plan period will be more than required to meet the ever-increasing railway electrification, industrial and domestic demand, and we must anticipate that throughout the period electric power will continue to be in short supply. This is a situation which gives rise to serious concern and has inhibited and will inhibit the growth of industrial expansion so vital to the country.

Planning to provide the power required as and when demand arises is not sufficient, and what is needed is a far-seeing policy to provide ample power well before demand materialises so that potential users may themselves make their plans in confidence. During the next five years generating capacity must be planned to meet the estimated demands of 10 or 15 years hence.

The Third Five-Year Plan depends to a very large extent on the increased output of coal. Much of the extra coal production will come from increased mechanisation of existing mines and, for this alone, increased supplies of electric power will be required over the next five years. I cannot stress too strongly the necessity for meeting the power requirements of the basic coal industry.

LABOUR & WELFARE

In my Statement last year I referred to the improved amenities which were being provided for our workers by way of new quarters, water supply, the extension of schools and Co-operative Societies, as well as medical amenities. We are at the same time increasing the recreational facilities by the provision of club rooms and sports grounds. These facilities are, I am sure, appreciated by the Company's employees, and it is satisfactory to report that labour relations during the year have been satisfactory.

TRAINING

To obtain the increased coal production now planned for the country, a very large number of additional technical personnel of all grades will be required to work in the mines. The Company attaches great importance to its training schemes which have been in existence for many years. Not only are we providing technical courses for 106 Mining Trainees, but we also hold classes for Overmen and Sirdars in our Technical School at Sanctoria. In addition, we have under training at present at our two Central Workshops,

TRANSPORT

Stocks at the end of the year under review increased by almost 40,000 tonnes to a level of 94,000 tonnes, and the overall rail transport position has since deteriorated still further. The Company's collieries, however, have not suffered as badly as many others in the industry by reason of the fact that with the installation of modern screening plants, overhead bunkers etc., we are in a position to load large numbers of wagons in the form of block rakes in accordance with the present transport policy of Government. In spite of this, however, it is necessary to restrict raisings from time to time when stocks at individual collieries reach unmanageable proportions.

In the absence of any definite assurance regarding the ability of the Railways to meet the ever-increasing demands for coal transport, we have decided to increase considerably the despatches of coal by lorry to meet the demands of consumers situated within reasonable distance of our collieries. Our first large lorry weigh-bridge has been installed at Poidih Colliery to cope with despatches by road from this and four of our other collieries.

In addition to the new sidings which will be required to serve new pits, the capacity of old existing sidings has to be increased as and when additional output makes this necessary. I regret to state, however, that difficulties have been experienced in getting such work undertaken by the Railways. In particular, the alterations to Pabelia Siding have still to be completed, although application for the extension was made some four years ago. Because of this Colliery's limited available space for receiving, loading and marshalling wagons, the output continues to be affected to the extent of about 20,000 tonnes per month.

STAFF

A very great deal of the credit for the satisfactory results in the past year is due to the staff at all levels in our coalfields organisation. In addition to the very competent mining staff, we have well qualified teams of electrical and mechanical engineers and surveyors, and we are also fortunate to have men of high calibre in charge of the Medical, Labour, Legal, and other Departments of the Company.

Our Chief Mining Engineer, Mr. F. G. Massmann, has had a

most successful first year in his appointment, and I thank him, and Mr. L. D. Hughes, the Deputy Chief Mining Engineer, and the other senior members of the staff, for all their hard work; they shoulder very heavy responsibility and their conscientious devotion to the interests of the Company and its 21,000 employees is an inspiration to us all.

15th April, 1961.

BURN AND COMPANY LIMITED.

Notice is hereby given that the Board of Directors has declared additional dividends on 6% and 7% Preference Shares in the Company in respect of the accounting years 1959/60 and 1960/61 as required under the Preference Shares (Regulation of Dividends) Act 1960, and sanctioned payment of dividend on the same for the four months ending on 30th April 1961.

The dividends will be paid on or after 10th May 1961 to those shareholders whose names appear on the Company's respective Registers of Preference Shareholders on 1st May 1961 or to their mandatees.

The Preference Share Registers and Transfer Books of the Company will be closed for this purpose from 24th April, 1961 to 1st May 1961, both days inclusive.

NIDC—Variegated Functions

Mr MANUBHAI SHAH'S intervention in the Lok Sabha discussion on his Ministry's budget demands was marked by a remarkably comprehensive and enthusiastic review of the many-sided industrial progress achieved by the country in the public and private sectors, especially in the former. Mr Shah, who spoke for more than an hour and answered interruptions with poise and assurance, also dealt extensively with the performance of the National Industrial Development Corporation. This organisation in the public sector was set up in October 1954 with an authorised capital of Rs 1 crore of which shares worth Rs 10 lakhs were issued and fully paid up by the President and his nominees. The issued capital has since been increased to Rs 35 lakhs. The main functions of the Corporation are: to promote, establish and execute industries, projects or enterprises for the manufacture and production of plants, machine tools etc., and for that purpose prepare and/or get prepared project reports, blue prints etc., as well as to establish companies or associations for the prosecution or execution of industrial undertakings. In addition to its promotional activities in the industrial field, the Corporation also acts as the agency of the Government of India for the grant of loans to cotton textile and jute industries for the purpose of rehabilitation and modernisation of their machinery as well as for the grant of loans to the machine tool industry to modernise, install balancing plant or otherwise expand production of light and medium-sized machine tools of general application.

Criticisms generally advanced against the working of the NIDC—among others, by the Estimates Committee—appear to be based on inadequate appreciation of its variegated functions and of its actual performance. Explaining the historical background of the establishment of the organisation, Mr Manubhai Shah said that it was Mr T. T. Krishnamachari, the then Minister of Commerce and Industry, who thought of it and added: "We are grateful to him that he conceived of this instrument specifically, on the one hand, to prepare projects for the public sector undertakings and secondly, for modernisation/rehabilitation of the cotton and jute textile industries." In the latter field, the NIDC does not, as is some times said, merely duplicate the functions of other

credit institutions like the Industrial Finance Corporation. It renders a distinct service, which the IFC, for instance, cannot, on account of the limitations imposed by its statute regarding the terms and conditions under which it may make loans. The IFC cannot make loans except as a first charge and the amount is limited to fifty per cent of the block. But the National Industrial Development Corporation gives loans to units which do not qualify for IFC loans, almost up to 80 per cent of the value of the fixed assets and in some cases loans are given as a second charge.

The annual report of the Corporation which was presented to Parliament last week along with Government's review of its working, gives details of its performance during the two and a half years of its active existence both in rendering financial assistance to the textile industry, as well as in promoting industrial development in the public sector. The report covers the period of 15 months from 1 January 1959 to the end of March 1960. As on 15 March 1961, the Corporation had received 193 applications from cotton and jute textile mills for total assistance of Rs 67.95 crores. Of these 86 applications for a total sum of Rs 19.6 crores had been sanctioned by the Corporation. Thirty-eight loan applications for Rs 15.64 crores were rejected, while 13 applications for Rs 4.79 crores were under consideration.

The Short-term Rental Scheme, under which the Corporation provides machinery on hire-purchase basis, has also made progress. Five applications for a total of nearly Rs 30 lakhs have been sanctioned, and four other loan applications for a total sum of Rs 33 lakhs were under consideration. The Corporation has formulated another short-term scheme for assistance to cotton textile and jute mills, which aims at providing loans on short-term basis against guarantees and collateral security for the installation of imported machinery. As regards the loan scheme for machine tool industry, the Corporation had, as on 15 March 1961, sanctioned two applications for Rs 35 lakhs while two applications for loans totalling Rs 21 lakhs were under consideration.

The Corporation had also made notable progress in what is intended to be the main fields of its activities, namely promotion of new industrial undertakings in the public sector. The NIDC during the period under review had undertaken preliminary studies in respect of eighteen projects, namely: Organic Chemicals and In-

termediates; Sulphur from Pyrites; Raw Films; Heavy Electricals (II & III); Foundry Forge; Heavy Machine Building; Coal Mining Machinery; Ophthalmic Glass; Heavy Machine Tools; Drugs; Heavy Structural Fabricating Works; Heavy Plate & Vessel Works; Phosphorus from rock phosphate; Aluminium; Precision Instruments; Bio-gas/Fertiliser (Pilot Plants); Newsprint from Bagasse; Rayon Grade Pulp.

Of these, the first nine projects have been already finalised as a result of the work undertaken by the Corporation and, subsequently, these projects have been established in the public sector under different Corporations. The fact that, when a project has been finalised, further work of implementation is entrusted to a different organisation specially set up for the purpose, has apparently disabled its critics from appreciating the amount of work put in by the NIDC. In regard to the tenth item above, namely Drugs, it was announced by Mr Manubhai Shah in the Lok Sabha on 14 April that a new Company by the name of "Indian Drugs and Pharmaceuticals Ltd." had been registered in New Delhi to implement the four Drug Projects to be set up with the assistance of the USSR Government. The authorised capital of the Company would be Rs 15 crores. A detailed project report from the Soviet experts on all the four projects was expected to be received shortly. The implementation of these projects as well as the establishment of the drug farms would be processed by this Company.

The Bio-gas project is already being carried out in the public sector on a pilot basis. The project for newsprint from bagasse was given up because no technologically and economically satisfactory results were available as a result of the trial experiment, while the Rayon Pulp project was dropped because several units for this item were coming up in the private sector. As regards the other items, namely, Heavy Structural Fabricating Works, Heavy Plate & Vessel Works, Phosphorus from Rock Phosphates, Aluminium, and Precision Instruments, these were being further processed, and it was expected that undertakings in the public sector would be constituted soon to implement these projects.

Another important activity started by the NIDC is provision of consultancy service for public sector undertakings. The nucleus of a Technological Consultancy Bureau has been set up. The functions of the Bureau would include preparation of preliminary studies, investigation and selection of sites, preparation of detailed project reports and the designing of structures. For the present the work of the Bureau will be confined to public sector projects of the NIDC and the Ministry of Commerce & Industry.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained for this issue by Order No. R. 361-CC1/60 dated 6-1-1961 a complete copy of which is open to inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them. Licence No. L/30(1)(4)-NA/CH(1)/60 dated 15-9-1960 has been obtained from the Central Government for the establishment of this new Industrial undertaking in Madras State. copy of which is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the Prospectus having attached thereto the documents specified therein has been delivered for registration to the Registrar of Companies, Madras, as required by Section 60 of the Companies Act, 1956.

Application will be made to the Madras Stock Exchange for permission to deal in and for an official quotation of the Company's shares. THE SUBSCRIPTION LISTS WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 24th APRIL 1961 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 29th APRIL 1961 OR EARLIER AS SOON AS SUBSCRIPTIONS APPROXIMATING TO THE AMOUNT ISSUED TO THE PUBLIC HAVE BEEN RECEIVED BUT NOT EARLIER THAN 26th APRIL 1961.

OBJECTS

The Company was formed generally for the purpose set forth in the Memorandum of Association, a copy of which is attached to the prospectus and in particular to enable the company to expand its business in the line of manufacture of automobile tyres and tubes in collaboration with the Mansfield Tire & Rubber Co., Mansfield, Ohio, U.S. America.

PROSPECTS OF BUSINESS

The annual production programme at present envisaged by the Company is as follows:—

	Tyres
I. (A) Heavy Truck and Bus Tyres ..	2,04,000
(B) Car, Delivery Van and Motor Cycle Tyres ..	96,000
	3,00,000
	Tubes
II. (A) Heavy Truck & Bus Tubes ..	2,04,000
(B) Car, Delivery Van and Motor Cycle Tubes ..	96,000
	3,00,000
III. (A) Camelback and Tread Rubber ..	1,00,00,000 Lbs.

The total installed capacity of all automobile tyre factories in India, including those in existence and those licenced and coming into production in the next two or three years amount to only 2.5 million tyres. At 80% effective capacity, the actual production from these units may be only about two million tyres.

There are at present, over 5,00,000 motor vehicles in India and in the next five years, this figure is expected to reach a million mark with the enormous increase in the demand for automobiles, consequent on the increase in the Road Transport Industry. Taking into account the number of old vehicles that may go out of the road and of the probable short-fall in the production in the 3rd Five-Year Plan, it can confidently be estimated that there will be at least 7,50,000 vehicles, by the end of the 3rd Five-Year Plan. Estimating the annual requirements of these vehicles at 1.5 tyres per car, delivery van, jeeps, etc., and 5.5 tyres per truck and 0.5 tyre per motor cycle, the minimum yearly requirements at the end of the 3rd Five-Year Plan may be of the order of 4 million tyres and tubes. Laying the cornerstone of Goodyear Tyre Factory in Delhi the Union Minister of Industries, Sri Manubhai Shah said on 12-11-1960 that demand of tyres in India will increase manifold and will reach 4.5 million by the end of the 3rd Five-Year Plan and therefore many more tyre factories will have to be

erected. So there will be a substantial gap between supply and need and the Madras Rubber Factory is attempting to manufacture only 0.3 million tyres and tubes out of a total shortfall of nearly 2 millions. Though the production and installed capacity of tyres at the Madras Rubber Factory will be one of the largest among the new factories that had been licenced, it is clear that there will be no difficulty of marketing this production as the gap between supply and demand is still very great.

U.S. COLLABORATION

The Company had been fortunate to secure the collaboration from one of the leading international tyre manufacturing companies of America viz. 'The Mansfield Tire & Rubber Company,' on very favourable terms. They are subscribing for 1/4 of the present issue of the Equity Capital of the Indian Company. They will give the complete know-how and also station their experienced staff in India and meet their salaries for the erection and working of the tyre factory so that the quality of the tyre production in India will be equal to the international standards. They will also train all the necessary technical personnel from India and will meet all the expenditure of our staff in America when sent for training. In addition, the Mansfield Tire and Rubber Company have given permission to the Madras Rubber Factory to export to all world markets except the United States of America and Canada, tyres having 'MANSFIELD' trade mark and name. This is a very valuable and unique concession extended to this Factory.

The Mansfield Tire and Rubber Company was established in 1912 and today, it is one of the oldest and leading tyre manufacturers of America. Their main factory at

MANSFIELD tyres and tubes will be manufactured by the Madras Rubber Factory.

Mansfield has a capacity of produce 14,000 Tyres per day which is more than double the total production of tyres in India today.

Mr. James H. Hoffman, a leading business magnate and President of the Mansfield Tire & Rubber Com-

pany, has agreed to become a Director of the Indian Company.

BRIEF HISTORY

The firm Madras Rubber Factory (MRF) was founded in the year 1946 and today, has become one of Indian's leading Rubber Factories and is the largest manufacturer of tyre rubber (tread rubber and camelback) in India. It had in 1959-60 a production worth about Rs. 1,00,00,000/- and the production exceeded Rs. 1-1/2 crores in 1960-61. The Factory has received licence for substantial expansion from the Government and in 1961-62 it is anticipated that the production will exceed Rs. 2,00,00,000. Likewise the profits were over Rs. 6 lakhs in 1959-60 and has been Rs. 10 lakhs in 1960-61 and is expected to be over Rs. 15 lakhs in 1961-62.

The Madras Rubber Factory, located in the heart of the Industrial area of the city, has over 11 acres of vacant land attached to the factory. It has already a team of chemists, engineers and technologists experienced in rubber manufacture. They have also a well equipped laboratory and the quality of 'MRF' Tread Rubber has established a fine reputation, not only in India but also in fourteen neighbouring countries where 'MRF' Tread Rubber is being exported. The Factory is even now unable to meet the full demand and hence, production is being stepped up every month. The Company has also a net work of branches and Sales Depots spread throughout India, and in particular in all the important centres like Bombay, Calcutta, Delhi, Bangalore, Coimbatore etc etc.

SPECIAL ADVANTAGES

The first and foremost advantage is that the Madras Factory is already an established rubber factory with large production facilities. It is already earning substantial profits enough to declare a dividend even for the increased capital, from the very first year of working of the Company even before the commencement of production of tyres. The company has sufficient spare land for putting up the tyre factory for further expansion.

The technical collaborators, viz. the Mansfield Tire & Rubber Company have agreed to take 1/4 of the present issue of Equity Capital of the Company and have offered very valuable concessions especially in the matter of technical fees to be given to them.

The earnings from the tyre factory are expected to be more than 100% of the Equity Capital of the Company.

The Directors and the Managing Agents have long experience in all aspects of the Rubber Industry and business management and are connected with a large number of rubber plantation companies and rubber factories.

Indian Finance

ESTIMATE OF PROFITS

Even before tyre production starts, a turnover of over Rs. 2 crores and a net profit of over Rs. 15 lakhs can be expected from the existing business of the Company from the first year of the Company's working. When the tyre factory goes into full production a turnover of Rs. 10 crores is expected giving a net return of over 1-1/4 crores of rupees. Thus the company can earn a reasonable profit even in the first year of its working and very substantial profits after attaining full production of tyres.

CAPITAL ALLOCATION

The estimated additional capital requirements of the Company are as follows:—

	Rs.
Additional Buildings	15,00,000/-
Machinery and installation	1,50,00,000/-
Preliminary expenses	50,000/-
Expenses for this issue	3,50,000/-
Working Capital	31,00,000/-
	2,00,00,000/-

It is proposed to meet the above capital expenditure in the following way:—

Rupees One crore by issue of further Equity Capital. The balance of rupees One crore as well as any increase if any in the actual cost of plant, machinery and facilities will be raised, to the extent required, by loans from Bankers and other financial institutions and if necessary from other sources.

No Promotion Expenses—No payments are to be made to the promoters or Managing Agents for expenses incurred or for their services in the promotion of the company. The entire expense thereof has been met by the promoters.

ACQUISITION OF BUSINESS OF MADRAS RUBBER FACTORY AS A GOING CONCERN:—

The Company has been promoted by partners of Madras Rubber Factory. The Partners had equal shares in the partnership. Their names appear in the prospectus as signatories of the Memorandum of Association of the Company.

The entire business of the firm of Madras Rubber Factory has been acquired as a going concern by Madras Rubber Factory Private Ltd., for a consideration of Rs. 24,96,500/-

APPLICATION FOR SHARES

Application for 50 Equity shares or multiples thereof will only be considered and must be submitted on the printed form attached to the prospectus or a printed copy thereof and delivered with the amount payable on application

22 April 1961

MADRAS RUBBER FACTORY LIMITED, ANNOUNCEMENT—(Contd.)

before the date of the closing of the subscription list to:—

- The Registered Office of the Company at Madras or its Bombay, or Bangalore Offices.
- The Head Offices or any of the branches of the Bankers of the Company mentioned herein or
- The office of any of the Company's brokers mentioned in the prospectus.

Remittances should include Bank charges at 15 nP per cent subject to a minimum of 65 nP

in cases they are by cheques or drafts on places, not covered by the Bank offices mentioned herein.

Cheques or drafts should be

crossed—A/c Madras Rubber Factory Ltd.

Copies of the Application forms and Prospectus may be obtained from the Registered Office of the

Company, its brokers and underwriters or Bankers mentioned in the Prospectus. Separate remittance should accompany each application.

Marketing in Hindustan Lever

MARKETING RESEARCH

Marketing research tries to find out what the consumers, the men and women who constitute the market, think and want. It keeps us in touch with the consumers' minds and to study their changing likes and dislikes and habits.

Marketing research operates in a variety of fields. There is conventional research, known as quantitative research, where, with the aid of questionnaires, we find out what products of interest to us people use; how much they buy and how often; who in the family use them; what the qualities are that they look for and what is their opinion of the brands they buy. This type of research gives us excellent surface bearings, but sometimes, what people say is not always why they do it. Quite un- consciously there can be a difference between people's spoken and unspoken attitudes. This is an area where the newly developed techniques of motivation research can help to bring us closer to people's thinking.

Motivation research, instead of relying upon direct questioning, goes deeper into what motivates people's actions and beliefs, especially in areas where there is a good deal of emotional content. That is particularly so with products where the social connotation is equally as important as personal satisfaction. When it comes to finding out women's views on beauty and adornment, direct questions are unlikely to bring out the real answers. But get them together in a group and the discussion will be revealing to the trained ear of our psychologist, who will pick up nuances that are otherwise likely to be missed.

Our marketing research also operates in a variety of other fields. It conducts rural surveys to find out about habits of people in the countryside and the changes that are taking place. It operates consumer panels in towns where housewives are visited regularly

for budgetary enquiries. It also conducts surveys of more general, sociological interest to study the growth that is characteristic of our society today.

All this may sound an imposition on the housewife, but it is not. She, in fact, enjoys greatly to being called upon by our market research girls and discussing domestic matters with them. These young ladies are well educated, mostly graduates, from good homes, and they are carefully trained by their senior managers, also women. They are therefore very acceptable to the housewives; in fact, their problem often is how to get away from an interview.

We firmly believe in marketing research and we use it extensively. Altogether, we interviewed over 1 lakh people in 1960. We consider it cheaper than making mistakes. We go a stage further and test-market the new product when it is ready for marketing but before we feel it can be launched on a national scale. Both marketing research and market-testing help us by bringing forth ideas for improving the products.

TEST-MARKETING

In test-marketing we select one or more towns or an area and try out the product under live conditions. Test markets are selected for their representativeness, either of the country or the problem. An area or town may be doing well in the sale of a type of product but not so well for our own brand. When we bring out an improved product this might be just the area to find out how far we can increase our share of the market. If we succeed here we are sure to do well elsewhere. Test-marketing can also help us to try out an advertising approach or a sales promotion scheme on a pilot scale at a small cost.

Yet another form of test-marketing is sampling, where our girls will leave samples of the pro-

duct and return after a while to ask what the family thought of it in use; how does it compare with other brands they use; and would they buy it when it is available. The opinions we received can be very helpful, particularly when they lead to a modification of the product.

During test-marketing our marketing research can also help. It may come in with enquiries before and after the launch of the product to study its impact.

At the end of all this, I should like to emphasize, we are using our judgment, and the whole problem is to create men of adequate judgment. These are tools and aids which, well employed, assist their judgment and decisions. Hunches are good if they are more often right than wrong; and backed by information they are more likely to be right.

PRICE

While the product is being thus tested, our accounts will be busy discussing with marketing people the likely price and profit margins. Accounting is so much part of our marketing thinking, but our accounting approach here is a little different from the conventional one. We do not go in for a detailed and elaborate allocation of overhead costs in an arbitrary manner, but rely instead upon each product group taking its share of overheads in block.

There are two points about price which I should mention here. The first is price and quality. The widespread impression that India is a price market is no longer wholly true, because there are growing sections of population which demand quality. This is becoming more important as the country's economy and living standards improve. Therefore, to cut quality or packaging in a consumer product and to think only of cheapness would prove a false economy, at least in sections of the market that demand something better. Secondly, advertising

and sales promotion are necessary parts of the product price to achieve good demand which, in turn, will lead to high volume of production and a consequent reduction in price. This point, I feel, deserves further attention and I will return to it.

After the product has been successfully developed and tested, both in our research and development laboratories and in the homes of potential consumers, we are now ready to launch it. The first stage is distribution, backed by a selling effort.

DISTRIBUTION

Our distribution goes deep into the country. Having adequately covered the urban areas, our promotion efforts are constantly directed at taking our products into more and more small towns and villages. In 1954, our distribution covered 1,400 markets with a total population of 38 million. Today, we cover over 6,500 markets with a population of over 91 million, and beyond that is the still wider distribution that is done by the enterprising traders in small villages that we do not reach ourselves. It would be fair to say that there would be very few villages in India where Sunlight Soap does not reach. Interestingly enough, our sales increase in the smaller markets, especially in the rural areas, have been most gratifying. In the last five years the average annual growth of some of our popular products in the rural areas has been more than four times that of the all-India expansion. This is but natural in a growing economy in which there is vastly more room for improvement in the villages than in the towns. Wide distribution, too, helps to keep prices low by increasing sales volume by creating competition among retailers.

And now a few words about our distribution system in general, and how we reach the villages.

The central point of our distribution system is our chain of wholesalers throughout the country. From our five factories, goods are despatched to 60 stock depots which are the primary distribution points scattered over the country. From here they go to our wholesalers. In each one of the 6,500 markets we shall cover in 1961, we have one or more wholesalers for each group of our products.

Our wholesalers are local people who will always know local conditions better than we can. Being neighbours, their contacts with the retailers are close. As our representatives in the towns and as men of substance, their importance as our associates is good for their business and for us. They buy the goods from us outright for cash, warehouse them, distribute them with almost clock-work regularity, and extend credit to the retailers. All this saves us working capital. Belonging to

the community, they form an effective and intimate link between us and the thousands of retailers who stock our products, and they do the whole operation smoothly and profitably for themselves and economically for us. They are loyal to us and rarely leave; we, in turn, treat them with respect and keep their interests always before us. Most of our vanaspati and soap wholesalers who began with us over 20 years ago are still with us. And our bad debts in the past have not amounted to even a thousandth of one per cent of turnover.

SELLING

At the back of our wholesalers is our own large sales force, which today comprises 511 salesmen and supervisors. They have a set of specific and clear-cut functions. The first is, of course, selling. They visit every market at periodic intervals ranging from 4 to 8 weeks, depending upon the type of product and size of the market. Upon their visit, they discuss local conditions and problems with the wholesalers and then go out in the market to sell alongside them. This stimulates the wholesalers and their salesmen and brings us into direct contact with the retailers. At the same time, they arrange display of point-of-sale advertising material and of our products to attract the consumer's attention when he or she enters the shop. The salesmen have, besides, other functions like inspecting the quality of our goods, their packaging and contents and withdrawing anything which in their opinion is not in a prime condition. Fortunately, our speedy turnover and distribution methods make sure that our goods are fresh in the market.

I have spoken already about our penetration into the countryside, and our spearhead here is a fleet of 45 motor vans spread over the country. These vans do a pioneering job, mainly covering small towns and nearby villages, working their way progressively deeper into the rural areas. They call at all worthwhile retail outlets; appoint wholesalers in new places where there is a sufficient volume of business to justify it; interest new retailers in stocking our products; and display advertising material and our goods. As soon as a market responds to this pioneering treatment and develops regular sales, it is put on the permanent journey plan of a regular salesman.

At the back of the rural work is another fleet of 12 cinema and 7 demonstration vans which combine the functions of propaganda and consumer sale. They give cinema shows in the villages at which large audiences happily see our advertising films coupled with an entertainment film. In addition, we show a suitable Government of India information film for broad educational purposes.

ADVERTISING

Wide though our distribution is, by itself it cannot sell. It has to be taken to its next logical stage which is persuading the consumer to buy it. Distribution merely makes the product available, the consumer has to want it before the real sale takes place. Between distribution and consumption, therefore, there is the vital area of demand, created by consumer persuasion through advertising.

There is some confused thinking about advertising. It seems to be regarded by some in India as unnecessary and by others as a case of the chicken and the egg; which comes first? Some go even further and argue that advertising is an economic waste and a luxury. We differ from this view.

We believe that by creating and expanding consumer demand, advertising promotes volume which alone can effectively bring down costs. We do not believe in cutting quality to save cost, but to look for saving through increasing sales. Advertising in a free society therefore performs a vital economic function and at a surprisingly small cost. Our own advertising costs us only two rupees and eighty paise for every hundred rupees of sale.

Advertising in fact is not even a cost to the consumer, for by the high volume of sales it brings, it actually means a saving to him. It also ensures a regular demand which, in turn, enables our factories to operate with minimum fluctuations. There are other savings too. For instance, the reduction in working capital that accrues from the rapidity with which advertising helps to move the products from our factories, the wholesalers' godowns and the retailers' shelves. This speedy turnover of stocks helps the trade to operate on smaller margins than they would be willing to accept on slow-moving goods.

All told, advertising helps us in many ways. It introduces our products to millions of homes; it gives an assurance of quality to the consumers; and it helps reduce costs and the working capital employed.

With the household products of wide appeal that we sell, our advertising has to be spread over a large area. As it has to reach millions of homes in towns and countryside, we have to use as many available media as possible, and it takes two forms—direct and indirect. In direct advertising, we go straight to the consumer and make a personal approach by sampling and demonstration, while, in indirect advertising, we use media like the press and cinema to carry our message.

Our advertising thus aims to reach the consumer, usually the housewife, in three ways; by meeting her and explaining to her about our product and how to use it; by reminding her through the daily newspaper and

whenever she goes to the pictures; and by the last-minute appeal when she enters the shop and sees our showcards attracting her attention to the goods displayed on the shelves.

It is important that our advertising, while trying to attract, should, at all times, be sincere and correct. We go to considerable trouble to make sure that the claims we make for our products are justified. For this purpose, all written advertising is submitted to both our legal and technical departments who scrutinise each copy to make certain that all claims are tenable. Advertising creativeness has to be given freedom but only up to the point of truth, and no further.

It is not possible to evaluate advertising expenditure as we can our capital expenditure. The effect of advertising cannot be measured as closely as the effect of spending money on new production facilities. Nonetheless, it is very important, when we are spending large sums on advertising, to develop some means of evaluation, and these we are trying to create through our operations statistics department, who are experimenting with the new techniques in measurability of advertising; through our market research who pre-test virtually every new campaign; and through sales analyses.

STAFF

And now I come to the most important area in our marketing operations—that of the men and women who run it. I have made a particular reference to women because they are playing a growing part in our organisation. There are 41 women working today in marketing and marketing research, mostly in the latter, and they are trained in a variety of disciplines; one has done a doctorate in psychology, another in social sciences, and a third in nutrition chemistry; there are two who have graduated in domestic science; and of the remaining 36, 27 are graduates in arts and sciences.

We keenly appreciate that although for its vitality and success our marketing will require the use of latest methods and techniques, in the ultimate analysis, we depend upon the calibre of the men and women we employ, upon their proper selection and training. Total efficiency of the operation must be a sum of the jobs well done.

For selection we look far and wide, and process the applications through a carefully designed multi-tiered procedure which aims at ruling out anything other than ability. It looks for those qualities of mind and manner which make for a good marketing type, possessing initiative and yet objectively analytical, resourceful, and with a mind that will grasp a situation quickly and meet it with energy and courage.

Indian Finance

For promotion, we attach great importance to developing our own employees at all levels so that as many of them as possible can rise. Among our marketing managers today, 40 per cent joined the Company as salesmen and clerks; 20 per cent joined us as trainees, and 40 per cent were recruited directly from outside. While we are satisfied that our selection and promotion procedures work well, we have to be absolutely sure that we do not allow standards at any level to fall. If that happens, efficiency and morale will deteriorate and that will be injurious not to the organisation, but to the individual whose well-being and future is so intimately bound with it. Training in the Company is a

continual process. Training during probation must first make sure that the person employed is in fact cut out for the job and is capable of making a career with us; and then teach him the job. After confirmation, we are strong believers in developing the individual through devolution of responsibility and training. It takes various forms. We organise courses at our Training Centre in Bombay to which employees from all levels are brought for one-week to three-week courses. These are designed with two purposes in mind: a broader understanding of the Company's objectives and policies; and the inculcation of skills and techniques. Salesmen and supervisors have quarterly conferences with their area

sales managers; branch conferences are held twice a year and bring together all levels in branch marketing; annual conferences are held at all-India management level; and special conventions are organised every year at all-India or branch levels for all staff whenever we launch an important new product.

We encourage our managers to attend and participate in outside marketing and management conferences and seminars, and we also send men regularly to the Administrative Staff College at Hyderabad. In addition, we make use of the considerable training opportunities provided by Unilever. A few have been to the U.S. and Australia, and many to Britain and Europe. Our own

training facilities have developed so far that Unilever are using them for sending men from their associate companies from Africa to the Philippines.

This, then, is a brief account of our marketing; the thinking and philosophy behind it; the tools and aids that are made available to the men and women who run it, and of the men and women themselves. It is an operation that has run well, but we are constantly watchful of complacency creeping in. We are always studying change and trying to adapt ourselves to the new.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

Indian Paper Makers Association

Existing Units' Production Up By 80%

Lack of Rail Transport — A Handicap

Mr. P. J. Egan on Development During III Plan Period

The following are extracts from the Speech delivered by the Chairman, Mr. P. J. Egan, at the Annual General Meeting of the Indian Paper Makers Association held in Calcutta on 11th April 1961.

The Second Five Year Plan envisaged a target capacity by the end of 1960/61 of 450,000 tons of paper and board a year and an annual production of 350,000 tons; against this the actual installed capacity achieved to date amounts to 410,000 tons, while production for 1960 was 345,000 tons or only 5000 tons short of the production target. Within the space of five years, the Industry has increased its output by nearly 90%.

2. An important feature of this achievement on the part of the Industry was the predominant part played by existing units, which between them accounted for approximately four-fifths of the increased production in the Second Plan. Another feature is the extent to which expansion of existing mills' production was financed out of their own resources. The increase in production was in no small measure due to the Industry's restraint in the declaration of dividends and to its policy of ploughing back its resources.

3. The Third Plan sets the Industry targets of 900,000 tons and 700,000 tons for capacity and production respectively, and whereas in the Second Plan four-fifths of the increased production resulted from the expansion of existing units, for the Third Plan, new units are required to provide four-fifths of the expansion envisaged. A point which this at once raises is that capital outlay per ton of

capacity is much greater for the setting up of entirely new units than for the expansion of existing units and consequently the cost of servicing capital and depreciation per ton of production is higher in the case of new units.

4. Another feature of the Third Plan is the development of capacity through the medium of small scale paper units, which are expected to produce 30 per cent of the total increase in installed capacity. Given a combination of cheap labour, cheap local raw materials, and proximity to markets these small units may be an economic proposition but their manufacturing costs will always be considerably higher than the costs of the larger units. In view of the vital part which new and small scale units are being called upon to play in the Third Plan, and, as present prices are largely based on the costs of the bigger, older established, and therefore the more efficient low cost units, of the Industry an immediate revision of prices to make them more representative of the Industry as a whole is surely necessary.

5. Although paper production during 1960 amounted to 345,000 tons representing a rise of 50,000 tons over 1959, the Industry was faced with an increasing number of problems as the year progressed. In July, 1960, the Paper Industry was downgraded from selected grades to Grade 1 for its requirements of coal, resulting in increased consumption and grave difficulties for some mills in maintaining the required pressure of steam. Moreover, the supply position of railway wagons has deteriorated to

such an extent that some mills have had to resort to road movement of coal.

6. Shortage of rail transport is even more serious in relation to supplies of raw materials. Despite strong representations which resulted in the Railways deciding to make regular allocations of block rakes for bamboo movement, the Railways have been unable to do so with the result that, while thousands of tons of bamboos are accumulating at the railheads, stocks at the Mills are reducing at an alarming rate. China clay and lime supplies, as also despatches of finished paper, have been seriously affected by wagon shortage.

7. If even at the present level of production, the Industry is being handicapped by lack of rail transport I cannot see how it will be able to fulfil its obligations under the Third Plan, unless a vast improvement is made in wagon availability.

8. Another problem which is causing some mills concern is the serious shortage of electrical power in West Bengal. If the shortage persists it will undoubtedly impede the much needed expansion of the Paper Industry apart from slowing down the present rate of production.

9. Last year this Association in its Memorandum requested Government to grant an increase in the price structure which came into effect on 1st January, 1960. At a conference held in May, 1960, the Union Minister for Commerce & Industries accepted that a case had been made out in the Indus-

try's favour on certain points which deserved looking into, but considered that there should be a reasonable lapse of time before prices were reviewed. A review of the price structure is now long overdue.

10. Since the Tariff Commission's investigations Mills' production costs have steadily increased and Government itself is directly responsible for part of Mills' increased costs. I refer in particular to the 5 per cent Railway freight surcharge which came into effect from 1st April, 1960, to increases in railway freight as a result of alterations in the minimum weight conditions for transport of bamboos and other raw materials from November, 1960 and to the new excise duty on Caustic Soda and Soda Ash levied from 1st March of this year.

11. The prices of raw materials and chemicals have increased considerably and packing costs have soared due to the inordinate increase in the price of gunnies. The price of coal has gone up, and due to wagon shortage Mills are now incurring additional expenditure on road transport. In addition, coal bills have shown an all round increase due to the downgrading of coal for the Paper Industry. Moreover, labour costs have increased as a result of Tribunal Awards.

12. The 5 per cent contingency allowance provided by the Tariff Commission in the price structure recommended by them has long since been absorbed. On the consideration of costs alone therefore an increase in paper prices is now well overdue.

13. At the recent Rate Contract meeting, the Industry asked for a price increase to offset the increase in production costs. Although Government is still of the opinion that it is premature to revise paper prices, they have agreed to reconsider the matter as soon as they receive from the Industry details of increases in Mills' costs.

14. I trust that when Government are re-examining paper prices they will not confine themselves to the question of cost increases alone, but will also take into consideration the necessity for an adequate return to the Industry on employed capital. The return of 12 per cent provided by the Tariff Commission which is intended to cover a wide variety of payments including labour

bonus and managerial remuneration both of which are items of cost, taxation, transfer to reserves, interest on working capital, debenture and loan interest, as well as dividends is wholly insufficient. Moreover the necessity for a suitable rehabilitation allowance to enable Mills to make up the disparity between their depreciation provisions and replacement costs is just as much in the Paper Industry as in any other industry.

15. Scarcity of raw materials is another problem which is facing the Industry today. I hope that State Governments now are awakening to the realisation that the policy of granting annual contracts, although possibly a source of immediately increased revenue, has been the cause of the gradual wasting away of forest resources.

To ensure scientific exploitation and development of the forests it is essential that leases of at least 20 years are given to Paper Mills to enable them to undertake widespread plantation of bamboos, grass and other fast growing cellulose raw materials. As such development work involves a considerable outlay spread over a period of years it would only be warranted if the lessee has the assurance of a long security of tenure. The necessity for widespread planting of bamboos has become all the more now that it is proposed to make use of bamboo for the manufacture of rayon grade pulp for which schemes totalling 280,000 tons have already been approved by Government. To ensure that the requirements of existing paper mills are not

jeopardised it is very essential that raw materials resources are carefully surveyed.

16. Bagasse is becoming extremely important as a raw material for the manufacture of paper and in order that it can be made available for the expansion of the Paper Industry it is essential that Sugar Mills are given early assurance of a regular supply of an alternative fuel.

17. The urgent necessity for building up a substantial export market for paper has been engaging the close attention of the Industry.

18. Considerable progress has been made in India's paper machinery manufacturing industry and already the fabrication of the first units of 3-5 tons capacity is in course of completion.

Sen-Raleigh Industries of India Limited

The 11th Annual General Meeting of the Sen-Raleigh Industries of India Ltd., was held in Calcutta on the 17th April, 1961. Below are extracts from the speech of Mr Abhijit Sen, Chairman of the Company:

Your Directors have felt that from this year the Chairman's Statement should be circulated in advance so that all members, irrespective of whether they can attend the Annual General Meeting or not, may share the information contained in the Statement.

The profit for the year after providing Rs 20,00,730/- for depreciation amounts to Rs 24,49,361/-. Your Directors recommend that the dividend on the Ordinary Shares be maintained at 8% as in the previous year and that the dividend on the Preference Shares be stepped up to 6.5% in order to comply with the provisions of the Preference Shares (Regulation & Dividends) Act 1960.

Past experience has shown that the capacities installed and worked to at the end of each Plan period are only stepping stones to further expansions in the succeeding Plans and so the Company's policy of retaining a major portion of the profits in the business should be taken as a necessary adjunct to an expanding economy.

Increasingly greater use of indigenous raw materials, wherever available, did allow bicycle production to record a slight increase over the previous year, but this increase was hardly of the order where it could make itself felt in the face of rising demand for our products. Marked increases in production were also recorded in some friction parts where a freer release of raw materials made operation at near capacity levels possible.

Demand in general for your Company's products continued to outstrip the increase in production but this satisfactory position may not long continue in one or two of the components we make, in which saturation point may be reached

* Chairman's Review

in the foreseeable future as licensing of industrial capacity for these items has been more liberal than wise. In the competition that is bound to develop, it is felt that our early entry into these lines will stand us in good stead, as our range of products have established a reputation for quality and service.

The biggest single factor limiting production still continues to be the lack of suitable steel in sufficient quantity. Can we hope that the indigenous steel processing plants would be able to rush into production and alleviate the steel shortage from 1962 onwards so that the industry could face the future with greater confidence.

The import licensing policy for steel continued to be on an annual basis but the benefits of this policy were rather lost on the industry as licences were switched in two successive periods to two different currency areas namely the Rupee Payment area (consisting of the Eastern European countries) and the United States of America (against DLF loans).

Foreign exchange problems still dog our footsteps and will continue to do so on an ever-increasing scale both for raw material and for plant requirements in the future. Government policy now appears to favour only such new schemes or major expansions where foreign investment matches the requirement of plant import and as this may very well become the pattern for the day in the 3rd Five Year Plan, your Company may have to consider this feature as a determining factor in undertaking some of its future expansions.

For the present industrial licences have been received for substantial expansions in chain manufacture and for manufacture of a new item—Dynamo Lamps. In the case of the chain expansion, import licences have also been

received and plant is now being ordered.

Your Company naturally expects to play its due part in raising the country's bicycle production to 2.5 million in the 3rd Five Year Plan. Schemes for expansion are now under consideration and construction of buildings to accommodate expansions have already begun.

Plans for our future expansions are rather clouded by present shortages of power and water at Asansol. Notwithstanding the fact that our factory is situated in the heart of the Ruhr of West Bengal, and in the midst of various Multipurpose Projects, power is already on ration and no serious consideration seems to have been given to a rapidly growing industrial area—not to speak of supply to rural areas about which the Union Government is so concerned today. An Assansol/Ranigunge water supply scheme has been in the offing from 1945 onwards, but, two successive Plans have passed it by and residents of Asansol town still have to buy water by the bucket in summer, and industries fear to expand for lack of water.

Considering the important part Asansol plays in the industrial and economic life of the State—if not the nation—it does appear to be the most neglected town in India as far as the planners of the country are concerned. Unless Asansol receives some attention from the planners in the 3rd Five Year Plan not only will it rapidly deteriorate into the second nightmare city of the State, but industries will hesitate to venture into further investment in this area.

Last year, I mentioned the need for your Company to consider diversification of interests within the Light Engineering range. After careful thought your Directors have now applied for and obtained Industrial sanction for manufacture of Electric House

Service Meters. They are satisfied that there will be a continuing demand for such Meters in this country for some years to come, and this is a line where the experience gained by your Company can be profitably utilised.

With the growing shortage of foreign exchange there is a likelihood of imports of materials being linked with export performance. Your Company has been exploring the possibilities of obtaining a wider export market for some time. Although the export performance in bicycles has not been very good for the industry as a whole in 1960, our saddles have gone out to many new markets and we now await the reaction from the importing countries. Efforts to develop bicycle exports are continuing and it is hoped that 1961 will show better results in this direction than the past year.

I cannot conclude without a passing reference to the provisions of the present Finance Bill in as much as these concern foreign collaboration. To us it appears that an invidious distinction has been drawn between foreign Associates who have helped in developing the industries of the country in the uncertain stages of the First and Second Five Year Plans and those associates who intend to come in after April, 1961 when the country's economy has become relatively more stable. All the benefits in the way of lower taxes on inter-corporate investment and on royalty remittances have been made applicable to arrangements entered into after April 1961 whilst older arrangements remain liable to tax at the higher rates.

Before I close I would like to thank my colleagues, the staff and the workers of the Company, and our foreign associates for the work they have put in to conclude one more successful year of operation.

NOTE: This does not purport to be a record of the Proceedings of The Annual General Meeting.

Markets

JUTE Earlier Steadiness Not Maintained

After ruling steadier in earlier dealings the jute and gunny markets are once again displaying a quieter trend. The uptrend noticed in the first part of the period under review was largely due to the rather unfavourable weather conditions reported from the jute growing areas both in India and Pakistan. With new crop prospect thus somewhat adversely assessed, holders became reserved and with mills showing some interest, raw jute prices were pushed up. It would however appear that the steadier trend could only be a passing phase for the simple reason that the progress of the new crop has been quite satisfactory till a few days ago and any temporary hot spell will not have much adverse effect on the crop if the weather shows improvement subsequently. That is exactly what has happened now. It is reported from Pakistan that beneficial rainfall has been received in the growing regions and that raw jute prices are tending to be easier. A similar trend is also noticeable in the Calcutta jute and gunny markets. It is to be expected that similar fluctuations will continue to characterise trading during the next few months as adverse weather may be reported from the growing regions now and then. The fact that supplies of old crop jute continue to be meagre will be pressed into service by bulls whenever there is an adverse report about the new crop. Even so it is unlikely that prices will touch the previous high levels again because both mills and overseas buyers of our jute goods are not likely to show any extraordinary interest as before.

As has been noted last week, the jute mill industry along with other numerous industrial units in the Calcutta industrial region is now faced with the problem of power shortage. There is now some sort of power rationing in force and no hope is held out for an early improvement in the situation. Production will have to be curtailed and mills may not be very much anxious to obtain raw jute at the maximum prices. It is not improbable that jute goods prices are rigged up what with mills already working short time and the power shortage, but the odds are against such a development. This is the time of the year when overseas buying is not active. The additional factor this year is the general tendency on the part of the overseas buyer to eat into his stock rather than enter into fresh commitments in view of the general belief that prices are most likely to come down within the next three or four months when new crop jute will become

available to the jute mills in quantity.

The jute goods market opened the week on a steady note following local buying interest. Figures released as to production of jute goods by the IJMA that day revealed that output during March was higher than during the previous month. Production in March amounted to 87,500 tons comprising 29,000 tons hessian, 46,200 sacking and 11,900 tons other varieties. The higher production is due to the fact that during March mills have worked 187 hours while during February they had worked only 161.5 hours. Apart from February being a short month, mills' working hours had been further reduced by 8.5 hours lost due to the strike on 13 instant. During the corresponding month of last year production amounted to 91,100 tons and mills had worked during the month for 208 hours.

By Monday sentiment showed considerable improvement although overseas buying continued to be meagre. The main support for the market came from local buyers and by close of the day's transaction hessian 40"×10 oz ready was done up to Rs 61.50 while B Twills ready advanced briskly to Rs 181. In the raw jute section, sellers became reserved and Assam Bottoms was quoted up to Rs 60.50. The steadier trend however proved shortlived and following reports of rainfall in the growing regions prices in both the sections reacted to be finally placed on Wednesday as follows: Hessian 40"×10 oz ready Rs 59.00; B Twills Ready Rs 174 and Assam Bottoms Rs 59.

Outlook for New Season

THE latest monthly report, issued by Messrs Carrit Moran & Company Private Limited, states that the world tea consumption increased by about 20 to 30 million pounds during 1960, while world crops showed little variation from the previous year. India's domestic consumption has increased by about 7 per cent or 15 million pounds. In addition, the Middle Eastern countries seem to be drinking more tea, while off-take in the UK has recovered from the setback it suffered in 1959.

Regarding the prospects for the 1961-62 season, the report adds that the new marketing season will get off to a good start. The argument is that stocks in the UK now are about as big as they were at this time last year, while stocks in India are a good deal smaller. If India and Ceylon particularly, produce bigger crops this year, the outlook can change. But, since consumption last year appears to have exceeded production, Carrit Moran thinks that there is room for an increase in world crops of 30 to 40 million pounds without bringing the market into grave imbalance.

According to the latest reports, the weather in the tea-growing areas has been quite favourable so far. As things are, the earliest teas will probably be ready for shipment very soon. Their arrival is likely to be welcomed in the markets, especially by internal buyers, who may have stocks to replenish. But, the trends in world production will remain the dominant factor for deciding the scale of overseas demand.

Meanwhile, it is learnt that the impact of excise duty on the economic health of the tea industry is now being examined by the Central Excise Reorganisation Committee. The Committee has issued a questionnaire to associations of the tea trade and industry seeking their views on this subject. Information is sought about the effect of splitting up the tea excise duty into separate rates of duty for package tea and tea other than package tea and the economic health of the industry, particularly the blending and packaging industry. Other questions relate to the use of differential excise duty rates as a balancing factor to improve the competitive capacity of low grade teas in the home and export markets.

In the Internal Sale held in Calcutta this week, offerings were 23,512 packages of Dusts and 789 packages of Leaf grades. There was a good general demand for Dusts. Orthodox types continued to decline in value except for the few small and bright teas which received much better support. Legg-cut Dooars were irregular and eased as the sale progressed. Bright lines were sold well. There was keen competition for all clean medium and good CTC grades and these registered a considerable advance; but the fibrous teas of this category were much easier and diffi-

cult of sale. Following rates were quoted (per kilo):—Plain Orthodox Dust Rs 4.30 to Rs 4.40; Medium Assam Dust Rs 4.40 to Rs 4.75 Legg-cut Dooars Rs 4.50 to Rs 5.20; Medium Assam CTC Dust Rs 5.80 to Rs 6.30; and Good Assam CTC Dust Rs 6.60 to Rs 7.10. There was a good demand for Leaf grades.

In the Cochin market, offerings were 750,000 kilogrammes of Leaf grades. Against good general demand at lower rates, plain and low medium teas were 5 nP to 15 nP per kilo lower than last week's rates. Medium, good medium and Nilgiri types were 20 nP to 30 nP a kilo easier.

According to tea sources in Calcutta, exports of North-East Indian tea were slightly higher at 17.78 million pounds in March as against 15.21 million pounds in the corresponding month of last year. Total exports in the nine months ended March 1961 were, however, lower at 328.15 million pounds as against 346.72 million pounds in the corresponding period of 1959-60.

Production of tea in Ceylon declined to 30.5 million pounds in February 1961 from 31.5 million pounds in the corresponding month of last year. Preliminary estimates for the March crop indicate a decrease of about 10 per cent as compared to last year, which gives a figure of about 41 million pounds.

Production has also declined in British East Africa from 5.09 million to 3.71 million pounds in January this year. The decline was shared by all areas with the output falling to 2.46 million pounds in Kenya; to 645,100 pounds in Uganda and to 607,700 pounds in Tanganyika in the month under review from 3.19 million; 834,400 pounds and 1.06 million pounds respectively in January last year.

In London auction, some 74,814 packages were offered. Although prices overall were a little irregular, they did not show a great deal of change. The rate for quality was quoted at 4sh 10d to 6sh per pound as compared with 4sh 10d to 5sh 7d before Easter. Plain tea was quoted at 3sh 5d to 3sh 9d against 3sh 5d to 3sh 10d. The best feature of the sale was the South Indian teas, which encountered an improved demand. Although the North Indian and other miscellaneous growths on offer met with a good demand, prices for the thin and plainer liquoring Africans showed a seasonal decline of one pence to two pence a pound. Ceylon teas met with a good off-take and prices generally showed little change although some of the lighter liquoring BOPs were occasionally easier.

Tea stocks in London, as on 7 April were 154.37 million pounds. Total afloat was 17.37 million pounds including from Calcutta 9.35 million pounds; from Chittagong nil; from Cochin 2.01 million pounds; from Ceylon 3.33 million pounds and from other Ports 2.68 million pounds. The average realised was 51.13d as against 47.97d in the corresponding period of last year.

COTTON Import Quota

THE Government of India has decided to allocate to mills about 300,000 bales of American cotton stapling 1" and below, but not less than 13/16" under the PL 480 programme. To ensure the import of this cotton, the mills are required to execute a bank guarantee at the rate of Rs 50 per bale and send it to the Joint Chief Controller of Imports and Exports, Bombay, within 20 days from the date of the quota letter which is being issued. On receipt of such bank guarantee, the Textile Commissioner will issue the last instalment of Indian cotton quota for the season, which will be for a quantity equivalent to 25 per cent of the Indian cotton consumption of each mill during the last season less the quantities of 1" below cottons allocated during this season under PL 480.

Compulsory imports of American cotton have made the trade nervous, because such a step is bound to react

adversely on the consumption of indigenous cotton in the coming months. Many mills are stated to be reluctant to enter the market till the implications of compulsory imports are known. A section of the trade, therefore, feels a fresh break in ready cotton prices.

Imports are compulsory in the sense that, in case of failure, mills will have to forfeit the guarantee amount and also sacrifice next year's quota of indigenous cotton. The industry is thus compelled to import American cotton despite the fact that it is costlier than equivalent indigenous growths by about Rs 150 per candy.

Again, the Government announcement allocating the last quota of indigenous cotton to the mills has also failed to impress the market. The last instalment of Indian cotton quota comes to only about 510,000 bales (rough estimate). In addition, mills have been given special quotas for starting a third shift. On the basis of last season's consumption of 4,400,000 bales, the indigenous cotton allocated to mills comes to about

3,810,000 bales this season, leaving about 1,400,000 bales in the hands of the trade. Traders, who were expecting the last instalment of about 1,100,000 bales, were very much disappointed and feared that they would not be able to dispose of their stocks.

For obvious reasons, easy conditions have continued to prevail in the cotton market where Jharilla August contract has touched a new low of Rs 563 due to a fresh wave of selling. Ready prices have also declined by about Rs 10 to Rs 15 per candy.

On the export front, shippers were found to be very anxious to participate in the quota of 60,000 bales of Bengal Deshi cotton, recently announced by the Government. Many of them were reported to have done substantial business with Japan and other buyers. It was believed that the quota would be exhausted within a short time.

Exports by rail from 1 September 1960 to 6 April 1961 were 174,853 bales. Estimated mill consumption in Bombay during the same period was

745,467 bales as against 746,889 bales in the corresponding period of last year. Estimated stock of raw cotton held by exporters, dealers and mills in Bombay on 6 April 1961 was 703,590 bales as against 405,461 bales on the corresponding date of last year.

The actual arrivals of foreign cotton into this country during the seven months September to March of the current season with the quantity licensed for import mentioned in brackets are as follows:—Egyptian 41,099 bales (49,380); Sudan 37,655 bales (35,080); East African 83,008 bales (39,288) and other varieties 27,066 bales (30,113). The arrivals of American cotton are estimated at 468,630 bales. The quantity licensed under PL 480 is calculated on the basis of value.

★

World Production

According to the reports released from London, world cotton production is soaring outside non-Communist countries. About 32,500,000 bales are expected to be produced this season compared with 31,100,000 bales last season. It is said that the increase will not adversely affect the relationship between supply and demand. Stocks, at the beginning of the season, were 1,300,000 bales less than at the beginning of 1959-60 and were, in fact, the smallest for several years.

Production in Russia and China has tended to fall off, in some areas quite seriously, and any surplus in the West will be eagerly required by these two countries alone. The International Cotton Advisory Committee reports that, while the US consumption is lagging behind, last season's expansion continues in most of the other large textile-producing countries. In Canada, there are signs of emergence from the recession last year. More plentiful supplies are available for Indian mills, which are making efforts to increase their output of textiles further. Japan is almost certain to achieve a new high this season.

★

Cloth and Piecegoods

Easy conditions prevailed in the Bombay Piecegoods market. Offtake was at a low ebb, presumably due to tight conditions prevailing in the money market.

In the domestic sector, hopes of fresh demand, usual at this time of the year, had not materialised. The demand from upcountry centres was also negligible. Whatever demand there was, was confined to seasonal goods. Mills were reported to have shown willingness even to enter into forward business.

On the export front, there was no improvement. Enquiries from major overseas customs, such as the UK and Sudan, were very meagre. Business with other destinations was also restricted. Reports from Cambodia indicate that the authorities there have announced the release of foreign exchange worth about Rs 4 millions for the import of textiles during the first half of 1961. There were only few enquiries from New Zealand.

Indian Finance

22 April 1961

Export Enquiry for Cashewnut

EXPORT enquiry for Cashewnut has broadened appreciably during the past few weeks. Russia has bought recently about 7,000 cases for prompt shipments at 53 cents a pound. The USA, which was keeping away from the Indian market when the prices were hovering around 51 cents, has returned and bought about 5,000 cases at 53 cents for April/May shipments and at 54 cents for shipment in subsequent months.

There are further enquiries for bulk quantities at 54 cents for delivery in October. US peak purchases are expected to begin only after a month or so. Canada, Australia and the Middle East countries as well as the UK are also expected to take more than what they did last year. Shippers are, therefore, optimistic to the extent that the entire output of cashew kernel this year can be sold by August-September.

The Indian crop, which is now available in the market in fairly large quantities, is likely to go down by 15 per cent. The total availability of both Indian and African nuts is estimated by the processors at about 170,000 tons. The Indian season is in full swing now. Indigenous nuts are now available at Rs 260 a candy or at about Rs 870 a ton. African nuts are steady at Rs 880 a ton.

Imports have also been fairly regular during the past few months. So far, India has bought from Africa about 100,000 tons out of the available stocks of 130,000 tons. The balance will be reaching the country before the end of June next.

★

PEPPER

The slight improvement in the price of black Pepper, after a long period of dullness, has failed to impress the trade. In Bombay, ready pepper has moved up to Rs 206 per 50 kilograms only to slip down to Rs 204. In Cochin, the May position is quoted at Rs 399 per quintal after touching Rs 408. Advice from New York also suggest that the spot material has been done lower at 47 cents a pound.

In fact, the rise in prices has come as a surprise to most of the exporters, as the current period is one of slack demand from the USA—the main consumer of black pepper. A section of the trade, however, attributes it to the fact that "shorts" in New York has been covering their sales from India on the fear that adequate stocks will not be available in Singapore on account of the recent move on the part of the Indonesian Government to suspend the release of its stocks.

World supply position in the coming months is also expected to be better. In addition to the supplies from India, the international market may receive about 7,000 tons of black pepper from Sarawak in May-June against 3,000 tons last year. Lampong is reported to be nursing a large stock of this variety, which is expected to reach the market in July-August. The new crop from India will start moving into the market in November.

RUBBER

According to the figures released by the Rubber Board, production and consumption of natural rubber in the country has declined sharply to 2,527 metric tons and 4,084 metric tons in January from 3,100 metric tons and 4,976 metric tons respectively in the previous month. Imports were also lower at 1,600 metric tons against 4,127 metric tons.

Stocks of natural and synthetic rubber fell from 16,277 metric tons at the end of December, 1960 to 15,427 metric tons at the close of January 1961. While natural rubber stocks rose from 12,993 metric tons to 13,036 metric tons, synthetic rubber stocks fell from 3,234 metric tons to 2,391 metric tons.

Many London rubber dealers say that the price of their commodity is likely to firm up for a while at least, because of speculation coming from outside the market. Despite quite trading, the price has moved up since Easter and, at about 25½d a pound nominal, it is half-way between the 1961 high and low, though still 9d below a year ago.

The firming up of prices is unexpected in view of Malaysian production turning out to be larger than expected, big Singapore stocks and a general price level which permits sales from Government stocks. Many London marketmen say that the improvement in prices stems from uncertainty about the foreign exchange market. This appears to have worked to produce increased turnover, more movement and, for the time being, firmer prices in the rubber market.

★

COFFEE

According to the Coffee Board, the receipts of coffee into the 1960-61 Pool up to the end of March 1961 amounted to 53,159 (37,743) tonnes, made up of 28,331 (24,154) tons of Plantation variety; 7,842 (4,714) tonnes of Arabica Cherry and 16,986 (8,875) tonnes of Robusta. The figures shown within brackets were the pool receipts for the same period last year.

The release of coffee in the internal market during March 1961 amounted to 2,568 (2,172) tonnes made up of 1,118 tonnes of Plantation; 223 tonnes of Arabica Cherry and 1,227 tonnes of Robusta, bringing the total release for the first quarter ending March 1961 to 8,131 (7,268) tonnes made up of 3,223 tonnes of Plantation; 814 tonnes of Arabica Cherry and 4,094 tonnes of Robusta.

The total quantity sold up to the end of March was 5,990 tonnes as against 2,857 tonnes in the corresponding period of last year. The overall average prices secured in the Pool sales during March 1961 are as follows:—Plantation PB Rs 230.08; Plantation A Rs 223.13; Arabica Cherry Flats Rs 182.22 and Robusta Cherry Flats Rs 158.32 (rates per 50 kilos).

★

RICE

The all-India final estimate of Rice for 1960-61 puts the current year's area and production of the crop at 83,335,000 acres and 33,700,000 tons respectively. This is an all-time record. As compared with the

partially-revised estimate of 82,829,000 acres and 30,963,000 tons for 1959-60, the estimates for 1960-61 show an increase of 506,000 acres in area and 2,737,000 tons in production. The yield per acre for the current year for the country as a whole works out at 906 lbs—an increase of 8.2 per cent over the revised yield rate for 1959-60.

The bulletin, just issued from London by the Commonwealth Economic Committee, states that production of rice in the 1960-61 season now promises to reach a new high level. India expects a record crop, while the estimate of Pakistani production shows some increase over the previous record output in 1959-60. India's output of rice is expected to reach 31,000,000 tons (47,000,000 tons in paddy equivalent)—substantially more than the heavy crop of 1958-59. In Pakistan, the second estimate puts production at 14,500,000 tons of paddy as compared with the previous record of 13,900,000 tons in the final estimate for last season.

★

SUGAR

It is expected that the Reserve Bank may likely relax the selective credit control on the sugar industry. There are indications that the margin in respect of sugar advances may be reduced to 10 per cent from the present level of 25 per cent. This is believed to be in response to the representation made by the industry that the present credit policy is one of the main factors for the inability of the industry to hold its huge stocks.

While a decision on an increase in the internal sugar price is still to be taken, it is clear that there will be no reduction in the price of sugarcane, which recently was fixed at Rs 1.62 per maund, same as in last season. The industry has suggested that, in

case the Government cannot agree to the full extent of the price increase on sugar, the price of cane may have to be reduced to the original level of Rs 1.42 per maund.

It is also clear that the Government has not favoured the decontrol of sugar as a remedy to ease the current crisis of surplus facing the industry. Instead of easing the situation, it is feared that decontrol will have some adverse effects. It will lower the price of sugar compelling some of the factories to suspend production and reduce its labour strength. Short of decontrol steps are, however, likely to be taken to liberalise some of the restrictions on the release of sugar. Meanwhile, the rate for the sweet commodity is presently quoted at Rs 109 per bag in the Hapur market.

★

BANGALORE SILK

The Bangalore Silk market maintained a steady trend in the prices of filature and cottage basin raw silk during the week ended 14 April. The prices for filature raw silk 20/22 Dr. continued to be quoted between Rs 80.43 and Rs 83.23 per kgm and those of cottage basin silk ruled between Rs 73.85 and Rs 77.16 per kgm as in the last week. Charka raw silk also maintained the previous week's level and the rates were quoted between Rs 54.01 and Rs 72.75 per kgm. There was moderate demand for all qualities of raw silk and the supplies were also limited.

Supply of reeling cocoons in the market was uncertain. Channapatta reeling cocoons were not transacted in the market during the week. However, reeling cocoons from Mugur area ruled between Rs 3.25 and Rs 4.00 per kgm and those of Sidlaghatta area were quoted between Rs 4.40 and Rs 5.40 per kgm.

Ashok Leyland AT MADRAS

LIGHTING BY PHILIPS

Economy and efficiency were the factors which prompted Ashok Leyland, one of India's major automobile manufacturers, to instal Philips fluorescent lighting in their several workshops, and to choose Philips lighting equipment for their Administrative buildings. Ashok Leyland have found, by experience, that Philips lighting gives added efficiency and is economical in the long run.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible plus of Philips' international experience and know-how.

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.

Perhaps the Estimates committee's recommendation would not have created much disturbance if there had been other powerful forces on the side of the bulls. As a matter of fact conditions were propitious for any scare news to induce selling, what with the continued stringency in the money market, and the growing apprehension that industrial production in the Calcutta region would be seriously affected by the power

in 2,50,000 equity shares is offered, at par, for public subscription. Of the public issue, a preferential allotment will be made to the people of Assam. The Assam Government has underwritten 50,000 equity shares on the above condition. The entire public

issue has been underwritten. The subscription list will open on 28 April and close on 6 May or earlier, but not before 3 May, 1961.

Urmi Cheese

It is understood that the Urmi Cheese and Chemicals Limited will offer shares worth Rs 25 lakhs to the public out of the total issue of Rs 50 lakhs. The promoters, directors and their associates will subscribe Rs 25 lakhs. The entire issue of 250,000 shares has been underwritten. A sum of Rs 2.50 per share will be payable on application and Rs 2.50 on allotment. The balance of Rs 5 per share will be payable on calls.

Rayon Pulp

A new company, known as Rayon Pulp Manufacturing Company, Ltd., with an authorised capital of Rs 50 lakhs, has been formed for undertaking the manufacture of rayon grade pulp. The plant, which will have an annual capacity of 4,500 tons, is proposed to be located either at Kalyan or at Roha in Kolaba district. The capital outlay is estimated at Rs 75 lakhs. According to current indications, the company will raise capital amounting to Rs 45 lakhs, consisting of Rs 35 lakhs of equity shares and Rs 10 lakhs of preference shares. The directors, promoters and their friends are expected to take up equity shares of the value of Rs 15 lakhs. The balance of the issue amounting to Rs 30 lakhs will be offered for public subscription. Negotiations for foreign collaboration are in progress. The plant is expected to go into production by the end of 1962.

Pesticides

Pesticides Limited has decided the basis of allotment. Full allotment will be made in respect of applications for 50 shares, and 100 shares will be given to those who applied for shares ranging from 100 to 200. Following are the details of allotment in respect of other categories, the number of shares applied for being given in brackets:—150 (250/300); 200 (350/400); 250 (450/550); 300 (600); 350 (700/750); 500 (1000/1050); 650 (200); 750 (2,800); and 1,100 (5,000).

INVESTMENT NOTES

Polychem's New Plant

Polychem Ltd. Bombay, have proposals for setting up a new plant to produce "styrene monomer" the basic raw material for producing polystyrene powder. This was disclosed by Mr P. B. Bhatt, the Executive Director of Polychem Ltd. in the course of Press conference held in Calcutta last week. The project is estimated to cost Rs 3 crores and will produce about 15 million pounds of "styrene monomer". Foreign collaboration will be provided by the Dow Chemical Company of the USA which will jointly bear the cost with the Polychem of the raw material plant. The plant is expected to be commissioned by the end of 1962. Mr Bhatt has ex-

pressed the hope that when the plant attains full production capacity, India will be able to export a part of the raw material.

Tata A.G.

In order to assist in the development of India's foreign trade and with a view to earning foreign exchange for the country, Tatas have formed, with the approval of the Government of India and the Reserve Bank of India, a small subsidiary company in Switzerland called "Tata A. G." The company has been established in Zug near Zurich and is expected shortly to undertake exports from India of various products and commodities, some of which may be further processed in Europe before being marketed.

Trianthrene Dyes

Trianthrene Dyes, Drugs and Organics Limited has now been registered with the main object of producing vat dyes as per Mr T. R. Sath's scheme. The authorised capital is Rs 1 crore and the issued capital is Rs 10 lakhs, made up of equity shares of Rs 100 each.

Chase Bright Steel

It is learnt that the entire plant and machinery of the company has been installed at the factory premises at Thana. A part of the unit has already been put into commission with satisfactory results.

Mukand Iron

The shares of Mukand Iron have been a firm feature at Rs 27.25 during the past few days. The firmness is attributed to the news that the company has in hand a major expansion project to set up a wire-rod mill in Thana at a cost of Rs 2.75 crores.

Synthetics & Chemicals

With a view to accommodating the shareholders in the prevailing tight money conditions, the directors of Synthetics and Chemicals Limited have extended the date for payment of the second call of Rs 25 per share from 15 April to 29 April, 1961.

STOCK EXCHANGES

Recovery After A Landslide

Watch-Dog Writes:

AFTER ruling initially weak, stock markets have staged a modest recovery towards the close of the week under review.

The report of the Estimates Committee's recommendations to the Government regarding the taking over of the LIC's investible funds had a depressing effect on sentiment and, in the absence of any support coupled with fresh offerings, prices suffered a sharp setback on Tuesday. But for

the tax concessions announced by the Union Finance Minister and the resultant short-covering, the market would have finished at the lowest levels for the week.

Equities on the Calcutta Stock Exchange recorded a handsome recovery from initial low levels, thanks to some replacement buying.

The Bombay Stock Exchange ruled generally quiet due to approaching settlement.

There was a general fall in equity values on the Madras Stock Exchange.

CALCUTTA

Friday, Evening.

ALTHOUGH the local stock exchange started the week on a steady note due to rumours of the possibility of the LIC accepting offers of a sizable parcel of Indian Irons, heavy selling touched off by the recommendations of the Estimates Committee that the entire investible funds should be taken over by the Government, found buyers few and far between. Thanks to second thoughts and the announcement of concession in tax reliefs, scattered short-covering coupled with some replacement buying induced a modest recovery in prices towards the close of the week.

In general, the weaker trend of the market, noticed during the past two weeks, gathered momentum, especially when there was little prospect of easing in money conditions. It was also thought that, with several new issues entering the market in the coming weeks, substantial funds would be diverted for this purpose and thus the hoarding ability of the bull operators would seriously be limited. The power shortage was also causing much anxiety especially since reports had appeared that many industry units had to cut their production quite drastically. In the circumstances, the tendency for prices was to sag slowly although scattered support was lent at lower levels.

As in the previous weeks, the demand in the Gilt-edged market was mainly for short-dated issues, mostly from institutional investors. Near-dated issues were well maintained due to the absence of offerings, while long-dated loans continued to be neglected. 3 per cent 1986 Conversion Loan changed hands at Rs 73.70 to Rs 73.80.

Bank shares were fairly steady with United Commercial showing a recovery to Rs 88 from the recent low level of Rs 86.25. Punjab National moved narrowly between Rs 20.62 and Rs 21.19.

Enquiry for Jute shares slackened, resulting in most of them shedding a part of gains stored recently. Operators were found to be cautious in extending commitments in view of the indecisive trends of jute goods prices. While the foreign demand remained poor, they also seemed to be worried that the present power shortage in the Calcutta area might seriously affect the working of the mills. The only two steady features were Barnagore at Rs 138 and New Central having sustained

support up to Rs 19.62 from Rs 19. Howrah, after touching a low of Rs 21.75, recovered to Rs 22.25 on speculative support, while Birlas were marked back to Rs 36.62 from the recent high of Rs 37.62; Chitavalasah to Rs 12.44 from Rs 12.94; Ganges to Rs 11 from Rs 11.44 and India to Rs 16 from Rs 17.

Except Bengal which met with good support up to Rs 351 on reports of the company's Debenture issue being over-subscribed. Coal shares were generally dull. Operators showed some anxiety with regard to the accumulation of stocks at various pit-heads. Burrakur were on offer at Rs 19.94 against Rs 20.19 quoted early in the week, while New Beer-bloom met with some enquiry up to Rs 22.69 from Rs 22.19. Equitable were on offer at Rs 31.75 against Rs 32.19 and Western Bengal at Rs 8.91 against Rs 9.31.

In the Tea section, prices generally displayed a reactionary tendency especially when anxiety was shown by certain circles over the reports of surplus of Common teas available in the London market. Dealings were, therefore, restricted. Brooke Bond had sellers at Rs 17.37 against Rs 17.81 quoted in the previous week; Hasimara at Rs 26.37 against Rs 27.19 and Telojan at Rs 34.12 against Rs 34.62. Jay Shree, however, recovered to Rs 22.75 from the recent low level of Rs 22.06.

Engineering shares developed a reactionary tendency due to selling pressure in the speculative issues. After opening better at Rs 27.16 and improving further to Rs 27.17, Indian Irons slipped down gradually to Rs 26.20, to recover towards the close to Rs 27.05. In sympathy, TEXMACO moved down to Rs 21.60 from Rs 22.15; Guest, Keen, Williams to Rs 44.12 from Rs 45; J. K. Steel to Rs 24.94 from Rs 26.12 and Braithwaite to Rs 32.25 from Rs 33.62, to close finally at Rs 21.65; Rs 44.12; Rs 25.56 and Rs 33.50 respectively. Indian Standard wagon remained steady at Rs 103 with Jessop quoting better at Rs 21.94 against Rs 21.87. Dalmia Iron were quiet at Rs 10.19 against Rs 10.37.

In the Miscellaneous section, certain shares were held up well, while others suffered a sharp decline from the previous week's levels, as will be clear from the following price trends:

New power in industry

On a 600-acre site at Durgapur, amidst intense activity, the scene is being set for yet another vitally important contribution to India's industrial growth—a contribution made possible through the vast technical knowledge of ACC-VICKERS-BABCOCK LTD. (A.V.B.), a new and powerful industrial group formed by The Associated Cement Companies Limited, Vickers Limited and Babcock & Wilcox Limited.

Already, considerable progress has been made in erecting this new Industrial Plant. Workshops are rapidly taking shape and foundations are being prepared for some of the most up-to-date machinery in the world. Very soon now the A.V.B. Plant will be ready to make its contribution to Indian industry, and to help Indian engineers overcome some of the difficulties which have faced them for so long.

MODERN EQUIPMENT

Some of the most up-to-date industrial equipment of its kind in the world is being installed in the new A.V.B. Plant from the radio-active cobalt X-ray equipment capable of X-raying steel plates up to a thickness of 6" to the vast 3,000-ton hydraulic press, the largest in Asia, designed to bend steel plates of up to 5" thickness. The workshops of A.V.B. are thus fully equipped to manufacture machinery for the cement-making and mining industries, thermal power plant and industrial steam-raising equipment equal to the best in the world.

VITAL ROLES

THERMAL POWER: A.V.B. have the technical knowledge, the men and the machinery to participate in the supply of vital plant to be installed in Thermal Power Stations throughout India. They will make a notable contribution towards the target set by the Government of erecting boiler plant and thermal power plant to the value of Rs. 34 crores per year by the end of the Third Five Year Plan.

CEMENT-MAKING MACHINERY: A.V.B. are already discussing projects which will enable them to supply machinery to help increase the output of cement for which the Government's target is 13 million tons per year at the end of the Third Five Year Plan. Not only will A.V.B. help to meet the

exigencies of industrial expansion but they will ultimately contribute towards the earning of valuable foreign exchange through export.

SITE STRATEGICALLY LOCATED

A.V.B. have shown considerable foresight in the location of Durgapur as their base for operation. Close to the now well-known Durgapur Steel Project, they are within what is fast developing into the industrial heart of India. They are within easy reach of India's coal and general mining centres. The Port of Calcutta is only a hundred miles away, a factor which is of tremendous advantage for the import of special raw materials.

EFFICIENT STAFF

The new company has adopted a far-sighted policy regarding the housing of the staff at Durgapur. Resulting from this the AVB housing colony which is situated but a short distance from the factory site is one of the finest in India. The houses are modern and the colony itself will be completely self-contained with its own dispensary and its own shops, parks and playgrounds. Here will live the workers of the A.V.B. group from the man of the shop floor to the skilled engineers and advanced technicians, a team that will keep a close watch on this modern plant which will harness such a vital and powerful new force to Indian industry.

Foreign Aid Requirements and Prospects

THE need for a change in the pattern of foreign assistance or in the strategy of planning is emphasised by the latest appraisal of requirements and prospects which was undertaken on the eve of the "Aid India Club" meeting in Washington. India's Commissioner-General for Economic Affairs, Mr B. K. Nehru, who was in New Delhi for consultations with the Government of India, left for Washington, with the Government's views on the subject.

While a clear picture of the minimum requirements, regarding quantum, type and period of assistance, has emerged out of the appraisal, the outline of the prospects still remains hazy.

The estimate of total requirements for the Third Plan remains unaltered at Rs 2,600 crores, (excluding PL 480 loan). Out of this about Rs 600 crores will be required for debt repayments. The total requirement of \$5,500 million (Rs 2,600 crores) includes aid already committed. The estimate of Rs 750 crores for the latter, which was given by the Finance Minister on his return from his foreign tour about six months ago, has to be scaled down, as it has been possible to achieve a higher rate of utilisation during the remaining period of the Second Plan. At the start of the Third Plan on 1 April 1961, the amount of aid committed in respect of continuing Second Plan projects and for new projects in the Third Plan is estimated at about Rs 660 crores (\$1,350 million). This figure does not, however, include recent arrangements with W. Germany and the UK.

After taking the unutilised aid into account, the balance of payments deficit is estimated at about Rs 300 crores (\$638 million) for the first year of the Third Plan and, out of this, about Rs 40 crores will be in respect of new projects for which foreign exchange has not yet been arranged. The deficit for the second year will be \$884 million.

External assistance already committed is mostly tied down to specific projects. New aid that is forthcoming will not help India to meet the payment obligations, unless the bulk of it is "untied". Unlike the Second Plan, which India started with about Rs 750 crores of, sterling balances to draw upon to meet requirements for free foreign exchange, India is entering the Third Plan with sterling balances drawn down to the barest minimum. This has aggravated the problem of finding free exchange for maintenance imports and to meet repayment obligations.

Unless there is an assurance that substantial amounts of the aid decided upon at the Washington meeting are untied project wise or country wise, it will not be possible to plan ahead with confidence or to place orders for machinery and equipment which has to be done in the first year if the projects are to come up according to schedule. Forward planning will also need an indication of the total quantum of aid that will be forthcoming. The period of the loans is also relevant in this context. There is now greater appreciation of the fact that developing countries will not be helped by foreign loans unless the period of repayment is spread out over a long period. Short-term loans with

their heavy amortisation charges will only add to their burden. India has suggested that development loans in future should be for a period of fifty years, repayments starting at the end of the first ten years and that no interest should be charged.

On all the three points set out in the preceding para, the prospects are uncertain. While the willingness of friendly countries to help India's Third Plan will be reaffirmed, it is not likely that a clear picture of the pattern of aid will emerge out of the Washington meeting. The United States is said to have a clear and sympathetic understanding of India's requirements and is willing to go ahead. But the US Government, which is the biggest source of assistance, will not be in a position to make firm commitments before the foreign aid programme is approved by Congress. Other participating Governments are reluctant to enter into commitments for periods extending beyond their annual budgets. As for untied loans, the US Administration understands India's difficulties but here again the type of US assistance depends on the approval of Congress. West Germany, it has been indicated, will be prepared to make untied loans. But this will not go very far, as India's payments to West Germany in respect of import of equipment and repayments of earlier credits are far in excess of current assistance received from that country. The UK Government is said to be willing to consider the proposal, whereas Japan is not very enthusiastic. The World Bank for its part makes loans only to particular projects which have been processed by its teams of experts. The free loan made to Australia a few years ago was an exception, and it is said to be the first and last of the type.

The expectation that more countries will join the Consortium this year has not materialised. Netherlands and Italy, which sent observers in the past, have dropped out. Italy, it is understood, would prefer bilateral arrangements for the aid it is able to offer.

More of foreign private investment is expected during the Third Plan, but it is possible to exaggerate its contribution to relieving the pressure on foreign exchange. The total is not likely to exceed 5 per cent of overall requirements. In this connection it is emphasised that, while India is already providing all reasonable incentives and can do little more in that line, the main factor determining inflow of private capital is not incentive provided by Government, but the assessment by foreign investors of the prospects of economic and political stability. The greater interest shown by foreign investors in India can therefore be regarded as a favourable trend. The impact of Government's oil policy remains an indeterminate factor in the assessment of foreign assistance.

The assessment of foreign exchange requirements and aid prospects has again underlined the need for stepping up the country's exports. In this context, attention has also been drawn to the experience of India's representatives abroad who find that it is easier to secure loans than relaxation of the import restrictions.

Staff Cost of Indian Banks

By P. K. SEN

IN his presidential address at the last Annual General meeting of the Indian Banks Association held in March, 1961, Mr C. H. Bhabha has made a pertinent reference to the lower output and lesser number of working hours of bank employees in India, compared to their counterparts in other advanced countries of the world, particularly the USA. This has brought forth controversies, and questions have been raised in some quarters. Are the Indian bank employees inefficient? Are the conditions in the USA and India comparable? Mr Bhabha's intention was perhaps not to assert the inefficiency as such, but to bring home the truth that there existed an imbalance in the relationship between the emoluments of bank employees (in this country) and their productivity, pointing to the need for correction, and that there was considerable scope for improvement all round.

GLARING FACTS:

Admittedly, a correct comparison on the basis of an accurate common measure is possible only through a detailed investigation into and study of the whole matter. But there are certain glaring facts which are adequate to point to this imbalance. It is true, conditions in the USA and in India are not identical. Yet it is possible to find out common grounds where a comparative assessment can be useful. For instance, Mr Bhabha has pointed out that the number of employees needed to service \$ 1 million of bank assets in the USA is 2.38, against 19 needed to service Rs 1 million in bank assets in this country. This, by itself, need not mean that the productivity in this country is low or that the cost of bank operation is high. But the fact is undoubtedly a pointer to the need for study in this regard.

LOAD OF RETAIL BANKING:

There is a common mis-conception in this country that owing to a larger number of small accounts, the volume of work for servicing a certain level of deposits is more in this country than that in the American banks for a similar level of deposits. A critic has quoted that deposits per account in a particular bank in India, having a total deposits of Rs 35 crores, is Rs 1,750, which points to the fact that the bulk of the accounts of the bank must be carrying an average balance of a few hundred rupees. According to him, the position would be quite different in the USA. In actual fact, however, the American banks are in no better position in this respect. As an illustration, the case of the Bank of America, the largest bank in the world, can be cited. According to the Annual Report of the bank for the year 1960, the average deposit per account amounts to \$81,444. (In the relative positions in the respective countries, a level of \$1,440 in the USA would be comparable with a level of Rs 1,440/- in India). The average would be much lower if allowance is made for very large accounts maintained by correspondent banks, State and Federal Governments, etc. The evidence does not support the view that the Indian banks are alone in cashing small accounts. Indeed, the present trend in American banking emphasises expansion of what they call "retail banking", and have to cope with the whole range of activity that flows from it.

"ACTIVITY" COMPARED

The average deposit per account is not a true index of staff requirement for servicing a given level of deposits. It is the volume and frequency of activity relating to bank accounts that determine the staff required for servicing deposits, rather than the value of the account. Without going into an elaborate and detailed study, it will be sufficient for the present purpose, to indicate the relationship of the number of cheque clearances to the amount of deposits in the two countries. This would at least give a rough indication of the quantum and frequency of activity reflected in the banking accounts in the respective countries.

In 1959, such ratio in the USA was around 0.4 per cent against nearly 0.2 per cent in India. In this sphere, therefore, activity in the USA is about double that in this country. With the same rate of output (of labour) in both these countries, the ratio of staff requirement (to service a comparable level of deposits) as between the USA and India should be 2: 1. That is to say, the level of deposits which can be serviced by 2 persons in the USA should be serviced by 1 person in this country. But if in actual operation it requires more persons to do the job in India it would then point to a lower output compared to the USA.

MACHINE OPERATION:

Again, in the matter of machine operation, a private study notes the fact that, with a similar working system and identical machines, the output per man hour in American banks is nearly 100 per cent higher than that obtained in this country. With an Accounting Machine, an operator in a bank in the USA posts, on an average, about 1000 entries in a day of nearly 8 working hours. On a similar job with a similar machine, an operator in an Indian bank does not normally make more than 400 entries in a day of 6½ working hours. That is to say, whereas a machine operator in the USA makes nearly 200 postings per hour, an operator in India does only 62.

There is, however, a difference in that the American process is that of continuous posting whereas in India the postings are made as and when the activity occurs during the day. But, on the other hand, an operator in the USA sorts his own vouchers and picks the ledger cards himself, whereas in India, to have the said output, sorting and picking has to be done by another person. It would, therefore, not be far wrong if by giving weightage for continuous posting, after setting off for the operation of sorting and picking, the figure of output per hour in India is raised to 100 to bring it on a comparable basis with the operation in the USA. The output still would be 100 per cent lower in this country.

DISSIMILAR CONDITIONS:

As already mentioned the purpose here is only to give broad indications. Certainly, these should be properly investigated into and all relevant factors duly considered before an accurate conclusion can be drawn. Broadly speaking however, two major questions can be posed at this stage. Firstly, the productivity in these two countries is not strictly comparable in as much as banking operation in the USA is highly mechanised while it is mostly manual in this country. This is of course true. But it must also be remembered that the level and quality of mechanisation in the USA is not such as would give a ratio, with regard to number of employees needed to service a similar level of

Indian Finance

bank assets, of 2.38: 19, against India, as pointed out by Mr Bhabha.

Again, while the operations in the USA are mechanised, there are various other activities attached to the servicing of bank accounts in that country which are absent in India. For instance, the Credit Departments, or the Instalment Loans Departments, in the US banks are very elaborately set up and have to perform various functions which are not done in this country. Every account in an American bank is analysed daily and in great detail for the purpose of assessing the cost involved in servicing a particular account. This is not done in this country. Therefore, the gains with regard to requirements of staff that the American banks have over the Indian banks, on account of mechanised operation, is to an appreciable extent set off by their requirements with regard to the activities just mentioned (and similar others) which do not occur in this country.

The other point that may be raised is the influence of climatic conditions of productivity. But generally speaking, climatic conditions in the USA are not any more pleasant than they are in India. A large part of the country has extreme climates (more extreme than in India) and the summer months are more sticky than in this country generally. A good number of bank offices are not air-conditioned. Thus, bank personnel in the USA do not work under any more congenial climatic conditions than their Indian counterparts work in.

STAFF COST:

The question of output is more important, particularly in the present state of profitability of Indian banks, from the point of view of the resultant staff cost. Including one month's bonus (but excluding gratuity provision) the average emoluments of a clerical bank employee in India would be around Rs 350 per month (in 1960). In the USA, the average monthly emoluments of a "non-officer" bank employee amounts to \$270* (vide Annual Report of the FDIC, 1959). It must be mentioned here that in the category of "non-officer" staff in the USA are included employees who, by Indian standards, would come under the category of officers. In the absence of a suitable break up, the average monthly emoluments of such of the employees in the USA as correspond to the Indian clerical cadre cannot be calculated, but it would be even lower. On the basis of Mr Bhabha's calculation, the cost by way of emoluments for servicing \$1 million worth of bank assets in the USA (staff requirement 2.38) would come to around \$650 per month as against the cost of Rs 7,600 per month (on 19 employees), needed to service Rs 1 million of bank assets in this country. For the year 1959, the ratio of staff expenditure to deposits for some of the larger American banks varied between 1.01 per cent and 1.40 per cent; such ratio for a number of major Indian banks, for that year, varied between 1.16 per cent and 2.68 per cent.

SOME INHIBITING FACTORS

Thus, the technique of management in Indian banks needs reorientation. There is ample scope for improvement and progress in this regard. It is true that the improvement in the quality of management will contribute towards raising the productivity of bank employees. At the same time, it must be remembered that the situation demands

* On the basis of internal prices, an income of Rs 350/- in India would not be unfavourable compared to an income of \$270 in the USA.

29 April 1961

much more than this. There is need for appreciation of the correct situation and for efforts on the part of the employees themselves, and the concerned authority, towards removing the limitations.

It is worth mentioning here that, in the USA, there is no imposition of time scale of grades, comparable to what has been enforced on the Indian banks. The rates of emoluments in the USA are determined on the basis of job evaluation by relating to it the efficiency of the particular incumbent. Such a system provides scope for encouraging and rewarding efficiency and it acts as a stimulant. On the other hand, the imposition of time scale grades, as is found in this country, seriously restricts the scope and ability of Indian banks to reward efficiency on the basis of proven merit.

Again, the facility of "hiring and firing" enjoyed by the American banks, puts them in a more advantageous position than the Indian banks; it enables them to effect quicker improvements in efficiency and productivity, both generally as well as by adoption of new methodology. Any reorganisation of methods and systems of banking operation, with a view to achieving higher efficiency and productivity, is bound to call for a degree of staff turn-over and adjustment. The situation in India, in this regard, can still be improved if bank employees readily respond to the need for mobility and adaptability.

For instance, by a change in the method and system of a particular operation, it is possible to reduce the work-load. The benefit, however, will be lost if the staff so released from the concerned operation cannot be transferred to meet the requirements for extension of banking services elsewhere, say, for extension of banking service to unbanked areas. Further, the success of any change in operational procedure would, to a large measure, depend on the adaptability of the staff. The "teller" system is an example. The need for prompt and efficient service is being generally felt. But its introduction would call for adaptability on the part of the staff towards such an innovation. The customs and habits of work, which have been handed from the past, put checks on the introduction of new systems and methods. Many of these "sacred cows" will have to be sacrificed in the interest of progress.

CONCLUSION

The problem has to be approached from an objective and practical perspective and tackled jointly by the management and the employees themselves, and with support from the Government. We need not bother about who is to be blamed. The issue is: is there a problem? If so, what is the magnitude? And how are we to tackle it? There is need for analysis and study and the will to achieve progress. In this respect, Mr Bhabha has done good service to Indian banking by posing the problem, which merits the urgent attention of all concerned.

Imbalances in Development

AGAINST the background of a comprehensive and enthusiastic review of the progress of planned development in India, the President's address to this year's annual conference of the All India Manufacturers' Organisation has pinpointed the inadequacies of allocations and achievements. Mr G. V. Puranik has covered a wide ground and made constructive suggestions on a variety of subjects including sectoral allocations in the

Third Plan, taxation and export promotion, to mention a few of the more important topics touched by him. The suggestions made by him in his speech have been precisely formulated in the resolutions adopted by the Conference during its two-day session. And the AIMO can have the satisfaction that its resolutions will not be treated as just so much seasonal verbiage. The Prime Minister who inaugurated the Conference referred more than once to the importance of the points raised by the President's address and gave the categorical assurance that they would receive the fullest consideration of his Government.

Mr Puranik has referred in passing to the crucial problem of the growing imbalance in growth rates between investment and national income, without however suggesting any way of rectifying it. The imbalance between imports and exports, to which also he has referred, like the inflationary pressures in the economy and the growing burden of taxation, only reflects the fundamental imbalance in planned development. While investment in the national economy has increased by 200 per cent during the last one decade of planned effort, per capita income, said Mr. Puranik, has only increased by 12.3 per cent during the last nine years. In fact the latest estimates released by the Central Statistical Organisation show that the in-

Year	Net national output (in Rs 100 crores)		Per capita net output (in Rs)	
	At current prices.	At 1948-49 prices.	based on 1941 and 1951 census data.	based on 1941, 1951 and 1961 census data.
1951-52	...	99.7	274.0	250.3
1952-53	...	98.2	266.4	255.7
1953-54	...	104.8	280.7	266.2
1954-55	...	96.1	254.2	267.8
1955-56	...	99.8	260.6	267.8
1956-57	...	113.1	291.5	275.6
1957-58	...	113.9	269.8	267.4
1958-59	...	126.0	316.5	280.2
1959-60 (preliminary)	...	128.4	318.4	276.9

While national income in real terms has registered a rise of 18.4 per cent during the First Plan period, the increase during the Second Plan (first four years) is only 12.2 per cent despite a much higher level of investment. Total investment during the two plan periods is about Rs 10,000 crores in the public and private sectors taken together. Of this total, a sum of Rs 3,360 crores is estimated to have been invested during the First Plan.

Though the President of the AIMO has not himself made the suggestion in so many words, the lack of correspondence between the rates of growth of investment and incomes underlines the need for a re-examination of the assumptions regarding capital investment ratios which govern the allocations of investments made by the Planning Commission. The unforeseen increase in population revealed by the last census raises the question whether the country can afford to sustain for another five years a programme of heavy investment which is not capable of yielding quick results in the form of increased employment and incomes for the mass of the population. The question at issue is whether, in pursuit of a higher rate of growth in the future, indicated by theoretical considerations, it will be advisable to seek to depress living standards in the present and immediate future.

Delays in the execution of projects which account for the bulk of the investment in the public sector, and difficulties in utilising capacities already laid down, partly explain why growth of income lags so far behind the growth of investment. Mr Puranik has drawn attention to procedural delays which hold up execution of projects; even where project reports are ready, considerable delays

crease in per capita income is even less than the figure mentioned by the President of the AIMO.

The National Income (at 1948-49 prices) has registered only a marginal increase of Rs 110 crores during 1959-60 over the previous year. And per capita income, based on 1961 census data, has actually declined from Rs 280.2 in 1958-59 to Rs 276.9 in 1959-60. The fall in overall estimates of national output and per capita incomes confirms the findings of the Agricultural Labour Enquiry regarding deterioration in earnings and employment of all categories of agricultural workers. The enquiry has revealed that casual adult male workers were unemployed for 128 days in 1956-57 as compared with 90 days in 1950-51. And the average daily wage rate of adult male workers decreased from 105 nP. in 1950-51 to 96 nP. in 1956-57. The earnings and employment of adult female workers and children also show similar decline. If the increase in prices and the cost of living is also taken into account, it will be possible to arrive at a statistical estimate of the deterioration of the levels of living of the masses, which, the Prime Minister told the AIMO, is the ultimate test of the reality of economic progress.

The trend in national output at current prices and 1948-49 prices during the last nine years is shown in the table given below.

'occur in subsequent stages of implementation like inviting tenders, erecting factories and so on.

Apart from these delays in implementation of projects, the allocation of resources among different heads of development based on wrong assessment of requirements of different items of manufacture, and the policy of licensing industries without sufficient examination of important requirements has also contributed to the disappointing results of the investment effort. The imports of raw materials required by new industries have been underestimated. The trend of imports during the Second Plan has not fulfilled the expectation that, after reaching a peak of Rs 990 crores in the third year imports would decline to the same level as at the start of the Plan. On the other hand, imports are running at the level of Rs 1,000 crores and are still on the upgrade. The analysis of import trade statistics made by Mr Puranik shows how imports of raw materials have tended to rise faster than imports of capital goods. When shortage of foreign exchange forces the imposition of drastic import restrictions, manufacturing capacity set up at great cost, in the expectation that raw materials and intermediate products would be freely available, perforce remains idle. According to a recent estimate made by the Indian Statistical Institute, idle capacity in industry is of the order of Rs 300 crores in value. The trend of imports with raw materials and intermediates forming the biggest item, is an insistent reminder of the need to give high priority to the development of basic raw materials, agricultural, industrial and mineral.

The severe foreign exchange crisis the country has been passing through has induc-

ed in some quarters an uncritical acceptance of joint ventures as the simplest and surest solution of our troubles. Quite apart from the fact that private foreign capital, at the most grievances estimate, is not expected to amount to more than five per cent of total foreign exchange requirements of the Third Plan, establishment of industries with foreign collaboration, far from reducing the requirements of maintenance imports, only aggravates the position, as many of these industries cannot carry on without imported materials and components, and are also reluctant to utilise indigenous substitutes. Mr Puranik has given a timely warning that every joint venture is not likely to be helpful to a country in the throes of development. There is no justification for inviting or encouraging foreign collaboration in the manufacture of non-essential consumer goods for which there are quite a number of Indian firms in the field. In many cases, as Mr Puranik has pointed out collaboration amounts to little more than the use of foreign trade marks by indigenous manufacturers and processors.

Perils of Deficit Financing

THE role of deficit financing in planning has been the subject of lively discussion in India during the last ten years. The Planning Commission, the Taxation Enquiry Commission, the Reserve Bank, the Financial Press as well as individual economists have made valuable contributions to this debate. And now, the Associated Chambers of Commerce and Industry have made available to us the views of Sir Theodore Gregory on this important question.

Sir Theodore Gregory, it will be recalled, was Economic Adviser to the Government of India for about 8 years between 1938 and 1946. In 1959, the Associated Chambers of Commerce and Industry invited him to come to India and study the economic problems of this country in relation to planning. One of the terms of reference was to discuss the general principles of planning and to assess the progress so far achieved; and to examine particularly the results of deficit financing undertaken hitherto. Sir Theodore's study is based on the discussions he had with the officials of the Planning Commission, the Reserve Bank, leading Chambers of Commerce and eminent economists.

"Deficit Financing," according to Sir Theodore, "is a term of art". It does not in general terms refer to that portion of a possible overall deficit met by borrowing from sources other than the central bank. It refers only to that portion of the deficit whether incurred on revenue or capital account or both, which is met by a reduction in Government balances at the central bank, and by ad hoc borrowing, in whatever form, that is, whether against treasury bills or ways and means advances, from the central bank.

Sir Theodore points out that although from the beginning of the First Plan, the expediency of deficit financing was treated with "great circumspection", in practice the authorities were not able to keep it within safe limits. For the period of the First Plan originally Rs 290 crores out of a total expenditure of Rs 2,069 crores was to be provided by deficit financing but actually out of the revised figure of Rs 2,398 crores, Rs 532 crores were provided in this way, or 26 per cent of the total. The Second Plan contemplated an original total expenditure of Rs 4,800 crores of which one quarter or Rs 1,200 crores was to be provided by deficit

financing. But deficit financing to the end of 1959-60, that is, in a four-year period, was estimated to reach Rs 1,245 crores. "Thus," says Sir Theodore, "in spite of the moderation of official language and the explicit recognition of the danger of over-reliance on deficit financing, not only did the absolute amount of deficit financing contemplated officially greatly increase but the actual rate of increase was greater even than that originally envisaged." The result has been a sharp increase in prices. Between 1953-54 and 1959-60, wholesale prices rose by 11½ per cent and the cost of living by about 15 per cent while the money supply with the public over the whole of the planning period has risen by about 36 per cent.

Commenting on these figures, Sir Theodore says: "The inference to be drawn is not that there is no quantitative casual relationship between money supply and the rise in the price level but that the increase in money supply has been offset in part by changes in liquidity preference; the extension in the money using habits of the community and the decline in the sterling balances. It is now generally agreed that the level of the sterling balances is such that they no longer constitute an effective long-term buffer against further gross monetary expansion and that an end must be put to a cumulative resort to deficit financing over the next plan period."

Sir Theodore submitted his report to the Associated Chambers of Commerce before the Draft Third Plan was made available to the public. That does not, however, detract in the least from the importance of his suggestion regarding the danger of deficit finance when over-done. The Third Plan as at present envisages deficit financing only to the extent of Rs 550 crores but how far the Government will be able to stick to this limit depends on a number of factors over which the authorities cannot have control. Having committed the country to a big and bold Plan and raised the expectations of the masses, it will be very difficult for the Government at a later stage to cut down its size if adequate resources are not forthcoming. In such a situation there is the danger of exceeding what is now considered the safe limit to deficit financing. In this connection, we would do well to heed the wise words of Sir Theodore:

"Nothing is more striking, in the modern world, than the growing disfavour into which the gilt-edged market is falling and in a country like India, where large-scale borrowing by Government is inevitable and where the saving habit ought to be encouraged, a continuous watering down of the real value of savings deposits, long-term stocks, insurance policies and the like through prolonged price rises is not a matter to be taken lightly. It may in the end prove fatal to the prestige of Government Now-a-days a reasonable stability in the value of money has become socially and politically an absolute necessity, and is increasingly recognised to be such; in this respect, India should profit from the experience of the rest of the western world."

IIC

Investment Brains Trust

The Indian Investment Centre which was inaugurated by the Finance Minister, Mr. Morarji R. Desai, on 16 February 1961 has

started functioning at New Delhi. As is by now well known, the Centre acts as a clearing house for investment ideas. It collects information on Government policies, laws, and terms and conditions of foreign investment and on procedures for licensing, import of capital goods, control of capital issue, and terms of collaboration etc. It also maintains up-to-date data on industrial capacity, current production, trade, markets, labour, communications, available industrial sites, power supply and other utilities.

The Centre has now a complement of officers and technical experts to handle inquiries. Several inquiries have been received from both Indian and foreign entrepreneurs and are being processed. The enquiries from foreign firms relate to the investment climate in general and specific requests for collaboration. The inquiries from Indian firms refer to specific projects for which the parties seek foreign participation/collaboration. The Centre is making arrangements in principal capital-exporting countries whereby inquiries emanating from Indian entrepreneurs and those received from foreign investors will have prompt attention.

The Centre will advise and assist Indian and foreign industrialists at all stages of proposals for joint ventures. Entrepreneurs who wish to expand their productive capacity or to establish a new undertaking may approach the Centre for assistance in building up their proposals up to a project stage. The Centre has prepared a Check-List of information required for proposals for foreign technical or financial collaboration which entrepreneurs will find useful. It will be worth to intending industrialists to formulate their proposals on the basis of this Check-List in as comprehensive a manner as possible so that the Centre would be able to assist them effectively.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

MONEY MARKET

Easy Conditions in the Offing?

IN the last week of March and the first week of April the banking returns disclosed, after months of stagnancy, a spectacular rise in Deposit resources. The cause of this sudden affluence was, in certain circles, held to be the lure inherent in the higher rates that were being offered by the banking system on their Deposits. But the fact that the bulk of the rise was in respect of Demand Liabilities proved that some other factor provoked the new accretions. In fact, this journal had long been expecting such a phenomenon at just this time; in recent years, the spate of governmental disbursements at the end of the fiscal year has usually made its unmistakable impress felt upon the resources of the banking system. Consequently, since these receipts were exceptional, and could be expected to occur only once a year, the inference is — or was — that Deposits of the banking system would again turn stagnant. But we suggest there is reason to believe that the banking system may now be in sight of some relief from the sustained stringent monetary conditions that have been witnessed almost without break since the beginning of the 1959-60 busy season.

For, it is significant that, in the return for the second Friday in April, a further rise has been registered in Deposits; and the increase is wholly under the head of Time Liabilities—there is even the suggestion, with the fall in Demand Liabilities, that there may be a switch from current accounts to time deposits, howsoever short a notice at which the money might have been placed. While the higher interest rates are proving to be an inducement, it would be wrong to believe that they alone are the reason for a change in trend which, in our view, is likely to prevail at least for the currency of the 1961 slack season.

With the Palai Central failure fading from the memory, and with the Reserve Bank no longer zealously—too zealously, perhaps—announcing moratoria, it would appear that public confidence in banking is in process of being restored. Furthermore, the knowledge that in due course insurance of bank Deposits will be put into effect may be expected to give fresh impetus to the spread of the banking habit.

We have also to consider the fact that private sector projects in behalf of the Second Plan have long since been executed; the added production is contributing to expansion in Deposits; and the foreign exchange scarcity is preventing an erosion of Deposits through import of capital equipment, as happened in 1956.

Hence, the first year of the Third Plan seems assured of emerging with an expansion in Deposits which can compare favourably with Deposit expansion, net of accruals

of PL 480 funds with the State Bank, in the second and third years of the Second Plan.

On the other side, it is possible that 1961-62 will offer a parallel with 1958; in the latter year, it may be recalled, there was a striking fall in bank credit, owing partly no doubt to the relatively lower rate of growth of industrial production. Lack of foreign exchange, insufficient transport capacity, shortage of raw materials and power cuts may together cause a slowing down in the rate of growth of the economy during 1961-62. Falls in the total of Advances of Scheduled Banks in the first and second week of April, despite the demand for funds owing to month early disbursements, suggest not so much that the busy season is tapering off earlier this year in regard to agricultural or crop financing, but that industrial demand for funds has perceptibly slackened. The qualifying statement needs to be made that marginal industrial borrowers may now be tending to rely less on banking finance because it has been made so much more costly.

It may be argued that a three-week period is far too short to draw any definitive conclusions. We agree that a wait-and-watch policy needs to be adopted for the next month or two. But we have felt it necessary to focus attention on the already available indicators, so that alertness will be present, when the time comes for taking corrective action. We have in mind the fact that well into 1958, and from around May 1957, banks "bought" Deposits that they had no use for at the time. It would be unfortunate if there were to be a recurrence of that phenomenon in 1961. For, should bank credit show vigorous signs of contracting, high-cost Deposits may greatly affect banks' earnings. This article is therefore intended to ensure vigilance and alertness as to the emerging money market conditions.

INTEREST RATES

Goodyear and the Money Market

One of the important implications of the spectacular over-subscription of the Good-year Rubber new issue is that short-term money rates, particularly in Calcutta, may turn and stay easy for a month or two. Normally, such would not have been the case, for, one bank's gain would have merely been another bank's loss, and the Deposits of the banking system as a whole would have been unchanged. But there comes an issue, once in a while, which attracts money not only from those with bank accounts but also from the non-banking sector. The Goodyear issue is a case in point. Though no official figures are as yet available, it is thought possible that, against Rs 68 lakhs worth of shares on offer, subscriptions may possibly aggregate Rs 20 crores. While, correspondingly, Deposits with one of the exchange banks will show a bountiful rise, it is by no means certain that other banks will have experienced a drain on their Deposits of similar magnitude.

For, it would not be erroneous to believe that subscriptions in cash were not inconsiderable. It would be interesting if the break-down as between cash and cheque subscriptions could be made available.

BANK RETURNS

Currency Contracts, Deposits Rise Again

AFTER the record expansion in currency in the week ended 7 April, when the governmental year-end disbursements caused a rise of some Rs 55 crores in Active Note Circulation, it was to be expected that there would be return of funds as and when funds were deposited with banks. In the week ended 14 April, currency contraction was nominal; in the returns of the Reserve Bank for 21 April, it is to be noted that Active Note Circulation is sharply lower by Rs 30.86 crores at Rs 2,007.65 crores. Furthermore, there has been inflow of Rupee Coin in an amount of Rs 0.66 crores. Currency has been contracted against Rupee Securities for Rs 20 crores by transfer to Investments in the Banking Department. The Reserve Bank's cash in the till, as a result, is marked up by Rs 11.50 crores at Rs 22.28 crores.

That the governmental disbursements continue favourably to make their impress felt upon the position of Scheduled Banks is suggested in the return for the Banking Department. In the first place, the Other Loans and Advances of the Reserve Bank have fallen further by Rs 16.34 crores to Rs 126.27 crores; in the second place, the Reserve Bank's advances to Scheduled Banks against usance bills are lower by about Rs 7½ crores at Rs 25.81 crores; and, in the third place, the Reserve Balances of member banks have registered an improvement of Rs 13.35 crores to Rs 87.06 crores. It may be inferred that continued receipts of new Deposits have enabled Scheduled Banks not only to reduce their indebtedness to the Reserve Bank but also to augment balances with that institution. It may be noted that the State Bank accounted for roughly Rs 9½ crores of the rise in Reserve Balances. Nevertheless, it is obvious that accruals with other banks may have been of the order of Rs 15 crores.

With cheques being presented for payment, the Centre's balances have come down by Rs 4.76 crores to Rs 63.91 crores. Similarly, although States' Deposits are seen to be slightly higher by Rs 0.31 crores at Rs 4.30 crores, it is significant that their ways and means borrowings from the Reserve Bank have risen further by Rs 5.28 crores to Rs 93.45 crores.

There is a rise of Rs 13.76 crores in Other Deposits, which may conceivably relate to the payment made during the week by the State Bank in respect of the monthly instalment of Rs 12 crores of counterpart funds; and, on this account, the State Bank sold Government securities for Rs 20 crores, the balance of the sale having gone to swell the bank's cash in hand and with Reserve Bank. The Investment portfolio is higher by Rs 31.50 crores, of which Rs 20 crores was by transfer from the Issue Department. Since the Reserve Bank moreover relieved the State Bank of Rs 20 crores of securities, it would appear that the Central Government was in a position to cancel ad hoc Treasury Bills for something like Rs 10 crores.

Lastly, Balances Held 'Abroad are higher by Rs 0.81 crores at Rs 10.79 crores—but the total in the two Departments is still below Rs 130 crores.

The return of the State Bank for 21 April reflects the payment of the April instalment of Rs 12 crores against counterpart funds being made over to the Reserve Bank. Deposit resources have fallen by Rs 9.84 crores to Rs 550.98 crores. Giltedged has been sold for Rs 20 crores. Cash in hand and with Reserve Bank is higher by Rs 9.52 crores at Rs 29.62 crores. The total of Advances shows small upward change at Rs 280.55 crores.

The return of Scheduled Banks for 14 April discloses a spectacular increase in Deposits for the third week in a row; and prospects are that the next return will have similar good news to tell. But there is also the suggestion that the lure of higher interest rates is responsible for a switch-over from Demand to Time Deposits. For, net Demand Deposits (that is, excluding borrowings) have fallen by Rs 4.20 crores to Rs 828.37 crores, while the apposite figure for Time Deposits has gone up by Rs 7.02 crores. Regard needs to be had for the fact that, in the relevant week, the State Bank reported a loss of Rs 7 crores in Deposits. Hence, other Scheduled Banks have actually experienced a rise of nearly Rs 10 crores by way of new accretions. With governmental disbursements also having a contractionist impact on bank credit, the total of Advances has, despite the fact that the 1961-62 busy season has still some time to go, declined by Rs 8.85 crores to Rs 1,319.96 crores. The rise of Rs 9 crores in giltedged holdings reflects purchases to the tune of Rs 11½ crores by the State Bank in that week. With Deposits rising and Advances falling, indebtedness to the Reserve Bank has been reduced by Rs 3.55 crores to Rs 56.90 crores, while borrowings from the State Bank are lower by Rs 1 crore; besides, the banks (other than the State Bank) have added to their Reserve Balances by an amount exceeding Rs 7 crores.

BAREILLY CORPN.

Deposits Fall, Profit Higher

Deposits of The Bareilly Corporation (Bank) Ltd have, in the balance-sheet as at the end of 1960, dropped by Rs 0.87 lakhs to Rs 1,28.03 lakhs. On the other hand, cash balances have been further raised by Rs 2.50 lakhs to Rs 32.59 lakhs, so that the cash ratio has marked a rise from 23.3 per cent to 25.5 per cent of Deposits. Holdings of Government loans show a slight fall from Rs 44.56 lakhs to Rs 44.31 lakhs, but the ratio to Deposits is unchanged at 34.6 per cent. With a view presumably to keeping a liquid position, Advances have been marked

BAREILLY CORPORATION (BANK) LTD.					
Balance-sheet: (In Rs Lakhs)	31-12-1959	31-12-1960	Change	Change percentage	
Deposits	1,28.90	1,28.03	- 0.87	- 0.7	
Cash including call money	30.09	32.59	+ 2.50	+ 8.9	
Cash as percentage of Deposits	23.3	25.5	...	...	
Gilt Investments	44.56	44.31	- 0.25	- 0.6	
Gilts as percentage of Deposits	34.6	34.6	...	...	
Advances	66.23	63.01	- 3.22	- 4.9	
Advances as percentage of Deposits	51.4	49.2	...	...	
Profit and Loss:					
Interest and Discount	6.84	7.21	+ 0.37	+ 5.4	
Commission Exchange and Brokerage	1.38	1.51	+ 0.13	+ 9.4	
Gross Income	8.49	8.98	+ 0.49	+ 5.8	
Gross Income as Percentage of Deposits	6.6	7.0	...	...	
Interest Paid	3.81	3.92	+ 0.11	+ 2.9	
Salaries and Allowances	2.71	2.75	+ 0.04	+ 1.5	
Balance of Profit*	0.57	0.80	+ 0.23	+ 40.4	
*Net of provision of Rs 53,000 in 1959 and Rs 54,000 in 1960 for tax.					

down by Rs 3.22 lakhs to Rs 63.01 lakhs, with the result that the credit ratio has most commendably come down from a low 51.4 per cent to 49.2 per cent.

The Bank's gross income shows an improvement of 5.8 per cent to Rs 8.98 lakhs, with the ratio to Deposits rising to 7.0 per cent from 6.6 per cent. In this respect, the rise in the income by interest and discount is about three times the increase in the amount fetched by commission, exchange and brokerage. A tight rein has been kept on expenses. Interest paid is higher only by 2.9 per cent at Rs 3.92 lakhs, while the rise in the case of salaries and allowances is a nominal one of 1.5 per cent to Rs 2.75 lakhs. Consequently, the bank's balance of profit, net of the provision for tax, has risen sharply by Rs 0.23 lakhs to Rs 0.80 lakhs.

The appropriation account shows that the provision for tax is Rs 54,000 against Rs 53,000 in 1959. The dividend for 1960 is at 9 per cent, and absorbs Rs 33,439.50.

UK BUDGET

A Flexible Fiscal Device

By Paul Einzig

THE first Budget of the new Chancellor of the Exchequer, Mr Selwyn Lloyd, had a favourable reception among Conservatives, owing to the imagination and courage it displayed. Instead of patching up existing devices, it embarked on an entirely new method of wielding the fiscal weapon in the service of monetary policy. The use of that weapon for the purpose of stimulating or dampening economic activity is of comparative recent origin. It consisted of a deliberate increase or reduction of Budgetary deficits or surpluses in order to regulate the volume of consumer purchasing power and of capital investment. Because the Budget is an annual event, the application of that device has been clumsy and cumbersome. To improve

Indian Finance

this, Mr Lloyd is adopting a device under which he is authorised to impose a surcharge or allow a rebate up to a maximum of 10 per cent of existing charges on Customs and Excise duties, and to impose a surcharge of up to four shillings per employee on the employer's share of the National Insurance contributions. The changes under the new device can be made any time during the fiscal year and can be made if necessary in relatively frequent intervals.

The device is admittedly ingenuous. It has a distinctly Keynesian flavour. But it remains to be seen how it will operate in practice. It is a pity that, having decided to depart from orthodoxy, it has been adopted in an essentially orthodox form by upholding the principle of indiscriminate application so dear to the heart of all conventional economists, politicians and administrators. Selectivity is a dirty word to the minds of Conservatives. Yet the new device provides a good scope for it. Why should it be necessary to apply the surcharge indiscriminately to all Customs and Excise and Purchase Tax charges thereby penalising deserving and undeserving industries alike? The same is true about the payroll tax represented by the surcharge on National Insurance contributions. If the Government is anxious to induce industry to make more efficient use of the limited manpower, why penalise firms or industries which are using the maximum of labour-saving equipment? If the object is to induce over-developed industries to release their surplus manpower for the benefit of expanding industries why impose the same surcharge on both?

From a purely fiscal point of view, too, the new measure is open to criticism. If, as a result of inflation, there is an expansion of taxation receipts and a decline of the deficit or even the development of a revenue surplus, the Budgetary situation is further improved by the imposition of surcharges. If, on the other hand, as a result of a recession the yield of taxation falls short of expectations it is further reduced by deliberate action through the removal of surcharges and the granting of rebates. From a purely fiscal point of view, this is sheer absurdity, even though it has justification from a general economic point of view.

In spite of this and other points of legitimate criticism, the new experiment has undoubtedly a great deal to commend it, always provided that it is not adopted in substitution for more orthodox devices. Surcharges should not be adopted instead of high Bank rate and credit squeeze but in reinforcement of those devices. It will long be remembered how the bubble of the speculative attack against sterling in 1957 was pricked by the 7 per cent Bank rate. The authorities would incur grave risk in gambling on the possibility of achieving a similar result with the aid of surcharge increases alone.

Notes

IDB

A Beginning is Made

It is only fitting that the first report of the Inter-American Development Bank (IDB) should have been issued on 12 April. For, that put it within the scope of Pan American week, the period which is not aside each year to celebrate the co-operation which has long been the hallmark of relations between the US and other nations of the Western hemisphere.

IDB is an outstanding example of that co-operation. Its avowed aim is to contribute substantially and effectively to the economic growth of Latin America. The United States and all the other American republics, with the exception of Cuba, are members. Its authorised capital totals \$1,000 million, although its actual resources amount to slightly less than that because of the Cuban abstention. While the United States is by far the largest single contributor, Latin American nations are putting up, in the aggregate, more than half of the capital.

But the Bank's role in promoting Latin American economic growth, as the report observes, should not be viewed merely in terms of available financial resources. It should be considered also in terms of what it means for Latin Americans to have

a regional organisation to help channel financial assistance to the area.

IDB has had an auspicious start. Obviously, a good deal of organisational work had to be done during its first year, relating to such activities as recruiting a competent staff, arranging relations with member countries, international agencies and private financial circles; and drawing up basic operating policies.

By October of last year, it was ready to begin formal operations. By the end of the year, it had received 194 applications for loans and 174 inquiries, dealing with industrial, social, agricultural, mining, transportation, electrical power and other projects.

By February 1961, IDB was able to make its first loans. At the latest count, it had authorised loans of about \$50 million, spread over eight republics. Among the projects that have received IDB financial support are water supply and sewage systems in Peru; a pulp mill in Brazil; and loans to development agencies in Paraguay, Bolivia, Nicaragua, Chile, Colombia and Haiti. All told, about 500 applications have been received, of which more than 100 are under active consideration.

In granting its credits, IDB generally is following a policy of commerce. "We want good risks who intend to develop specific projects. This will hold true", says Mr Herrera, "for both 'hard' and 'soft' loans". The former, to be repaid in the currency lent—usually the US dollar—are drawn from an \$850 million fund. The latter are being made available from a special \$150 million fund, with loans repayable in local currencies.

The thinking seems to be that banking principles will not be as strict when it comes to administering the inter-American fund for social progress. This refers to the \$500 million US programme, which already has been authorised by the US Congress, under the Act of Bogota. Of this total, some \$394 million would be handled through the IDB.

The Bank will expect, however, that the borrowers under the social development programme will make their own self-help efforts to introduce needed reforms. Emphasis will be on improving those aspects of social conditions which have been hampering economic growth.

IDB also plans to carry out a broad programme of technical assistance. It will help prepare, finance and implement development plans and projects in borrowing countries, and will help instruct local personnel in administering these activities.

In addition, IDB missions will be working with the inter-American economic and social council of the

Organisation of American States and with the UN Economic Commission for Latin America in undertaking country-by-country studies.

As quoted in the Journal of Commerce, Mr Herrera sees the Bank playing a vital role in hemispheric co-operation and in advancing the health and prosperity of Latin American economies. But he does not view the Bank as a panacea for all Latin American economic and social problems. There also must be, he notes, a prosperous international trade, expanded public and private investment, increased economic integration among the Latin American states, and fuller development of Latin American resources.

In all this, he sees self-help, no less than outside assistance, as a basic guideline to progress.

LIC

Controversy over Investment Policy

The Estimates Committee has offered daring and novel suggestions about the disposal of LIC's funds. Perhaps it is imagined that the parliamentary steamroller can get over the Insurance Act clauses about investment and make the LIC an agent for subscribing to the loans raised for the Plan. Policyholders who are likely to express alarm, as no bonus will come when the yield goes down, may be inclined to protest, if the aim is to take away the LIC funds and give in return a non-terminable loan, of course in the name of the Third Plan. The idea that the investment committee will be spared trouble by renouncing investment in stock exchange securities, drop underwriting and other means of aiding development has been put forward seriously and the public or at any rate the policyholders can only register dismay at the further result of nationalisation. However, the Estimates Committee's views are not likely to be endorsed by the Cabinet and it is quite likely that if the LIC board keeps mum from discretion, the World Bank or other outside agency may offer timely advice about the future disposal of funds.

Whether the LIC's business in future would suffer the offhand expression of opinion need not be examined, but it is certain that the claims advanced for massive investment in the public sector will not be acceptable to those who imagine that the LIC would continue to follow the example of the best insurers. The theory that the LIC has only to issue policies and hand over all proceeds to the Ministry of Finance savours of crude financial totalitarianism and to that extent, may create some prejudice abroad. The question that arises is not whether the LIC's autonomy will be preserved but whether the premium rates would remain high in spite of favourable claim experience and policyholders would have to put up with forced loans accepted by the LIC for the sake of avoiding argument. The suggestion may, however, fall flat on others because the

resources for the Plan must come from surpluses not from collections from the thrifty who take out life policies. The compulsion of the few for the benefit of the many will seem strange if due regard is had to the fact that provident funds are growing and the Government now has other resources and deposits at its call. The States may approve for their own reasons but the policyholders are not likely to be enthusiastic over the plan of Mr Dasappa to put the Third Plan through. The avoidance of deficit financing may be easier but the issue is not one of maintaining faith in contracts made in the past, but of extending the scope of insurance under the State monopoly. If that is compromised, as feared, now the Estimates Committee will have missed its mark and can only create a controversy about the aims and results of the takeover in 1956 especially when due compensation for all companies has not been paid.

INDUSTRIAL INDIA

Endless Vistas

The output of forgings and castings for new engineering enterprises described as essential all over India today is perhaps a consequence of the accelerated industrial growth under the Second Plan. Electric equipment is also being produced in quantity. Sanctioned licences may not lead always to actual production, as some schemes do not bear fruit but it may be safely assumed that Phillips Elec. or Indian Oxygen will go through with plans and International General Elec. is now authorised to produce lightning arresters. Texmaco's diversification may not call for special notice but Maneklal has got a

licence for blowers at the rate of 100 a year in the final stage as also wide ring pumps. Programmes for making heavy chemicals, indicated in the Journal of Industry and Trade for March cover the superphosphate capacity of Anil Starch and Century Rayon as also Atul Products. Photographic chemicals find a place as also resins for making plastics. Simpson & Co. Madras is now licensed to make 1500 tons of various synthetic resins per annum, while Indian Plastics of Bombay is now equipped with a licence to turn out 1000 tons resins of phenolic types on a three-shift basis.

The Indian Explosives Co. in which the Central Government has a share is authorised to expand substantially to produce safety fuse, military powder and fuse. The production of pesticides by Tata Fison is bound to rise with the substantial expansion allowed in November last but market men will see more possibilities in the permission given to DCM. and J.K. Cotton Mills alike to raise sulphuric acid output further. The manufacture of laxative tablets by TCF. will appeal to Ralli shareholders more than any one else.

The scheduled industries include paper and West Coast Paper has got sanction to make 27,000 tons of rayon grade pulp. The mixed fabrics for export promised by Bombay Dyeing (on looms diverted from cotton) are part of the company's programme to maintain exports. A lot of cashew factories are now equipped to treat large quantities and South India Corporation is now in the line owing to its branches in Kerala. The licence given to open a solvent extraction plant in Guntakal or in Veraval signify little as compared with the expansion of output by National Rubber Manufacturing. Another industry poised for rapid expansion is the making of refractories. The cement industry is also growing and Bagalkot Cement and the ACC plant at Madukarai are now being extended. The Satna plant of Birla Jute is to produce 274290 tons a year.

The list of licences contain much information about collaboration. Pressed Steel of U.K. is to help Hyderabad Allwyn to make refrigerators and Pratt of Halifax is to help Praga to make more tools. The entry of Wilmot Breeden into local manufacture by an agreement with the Usha Auto Engineering of Calcutta is as noteworthy as the programme of East Asiatic to make power-tillers by taking a British firm's help. The famous German firm of Klocner means to help Herman and Mohatta to make wire drawing and wire rope plant. The manufacture of H. T. insulators by Bharat Potteries also means only the extension of competition. And Elec. Constn. has made an agreement with Toshiba for making many items of equipment. New Central Jute will go on to make

chemical plant with German aid. The prospectuses appearing in recent months have thrown much light on the industrial expansion schemes but the plans of Shaw Wallace to make urea formaldehyde glue with Dutch help has not been mentioned so far. And the Garlick plan to make road-rollers with Japanese aid proves that India is now a field for more and more foreign firms to cultivate.

PRINTING INDUSTRY Growing Pains

The general public may not adequately appreciate the difficulties experienced by the printing industry. The higher price people are obliged to pay for textbooks and other publications will probably be taken as part of the general price increase and many are likely to go away with the impression that with the tremendous fillip given to education from the primary stage upwards, the printing industry is a most lucrative avenue. It is not to be denied that the printing industry is quite busy with many a printing press not in a position to accept work for some time in the future. Increased activity, however, is not, always equivalent to increased profits. For, in recent years costs have considerably increased.

Perhaps the difficulties of the industry have been accentuated by its own shortcomings. For an industry which is quite old, it is still largely dependent on foreign countries for its machinery. Only in recent years an attempt has been made for the indigenous manufacture of some large printing machines which are in much demand. It looks as though the industry has perforce to continue to depend on foreign manufacturers for the more complicated types of machines.

The second important limiting factor is the shortage of paper. Publication and printing are greatly hampered by the non-availability and/or the high cost of printing paper for the simple reason paper production in the country is not sufficient to meet the demand. The large number of paper and board mills licensed during the Second Plan period is bound to increase the availability of paper in the not distant future. This however will only augment somewhat the supply of the more generally used printing paper. Quality papers like art paper which are required for high class colour printing jobs may continue to be dear for some considerable time to come since no serious attempt has yet been made for the local production of these categories of paper. Paper prices in the country are a controversial subject with the manufacturers complaining that the Tariff Commission has fixed uneconomic price levels for the different kinds of paper and the printing trade ac-

cusing the manufacturers of not making available paper at the stipulated prices.

The problems of the industry were discussed by Mr A. P. Bhargava, the President of the Association of Master Printers of West Bengal, the other day (the Association is now celebrating its silver jubilee). He has pointed out that although much is expected from the industry during the Third Plan nobody seems to have bothered about how it was going to cope with the increased demand. Even Dr B. C. Roy who has admitted the need for manufacturing all the needed machinery within the country does not seem to have indicated how the desired result can be achieved.

HANDLOOMS ‘Bleeding’ Stauched

A solution had now been found to dispose of a bulk of the stagnant ‘bleeding Madras’, the handloom fabric that, having caught the imagination of the American public during 1958 to 1959 suddenly went out of fashion leaving the producers high and dry. This was a problem for the State Government whose handloom weavers found themselves stranded after a temporary boom.

After prolonged correspondence between the Union Government and the Madras Government, the Export Promotion Council of Handloom Textile had decided to buy a part of the stagnant stock estimated between 7,00,000 to 15,00,000 yards, on the basis of standard and substandard qualities. The standard variety approved by the Council will be paid Rs 1.50 per yard and the substandard would be paid less on approval.

The method of disposal was explained by Mr S. Rathnam, Director, Handloom Export Organisation, at a press conference recently in Madras. The ‘bleeding Madras’ is known to be actually bleeding on soaking in water and every wash would give it a new colour. This cloth is not fancied in European markets. But Mr Rathnam stated a West German firm bought some of this ‘bleeding Madras’, superprinted it again and produced a fast colour completely different from its parent origin. This reprocessed textile was fancied in West Germany.

It was also pointed out at the Conference by Mr. Rathnam that after relaxation of Indian textile import restrictions in France, a spate of orders was coming from France. Therefore it was that after processing the ‘bleeding Madras’ to the satisfaction of these new European customers, much of the stock is expected to move out. Even American consumers, it was added by Mr Rathnam, liked this new fabric.

The State Trading Corporation is expected to spend about Rs 25 lakhs in the process of converting the ‘bleeding Madras’, including the cost price of Rs 1.5 a yard.

PHARMACEUTICALS Price Prospects

The important need to develop the pharmaceutical industry with a view to attaining self-sufficiency in the foreseeable future was stressed by Mr Lal Bahadur Shastri, Union Home Minister, when he inaugurated the Alembic Antibiotic plant at Baroda last week. Though in terms of gross sales value, pharmaceutical production increased from Rs 10 crores in 1948 to Rs 70 crores in 1960, dependence on imports for meeting the country's requirements has not been eliminated. Even in respect of penicillin for the production of which the Pimpri factory was started in the public sector, imports have ranged from Rs 30 to Rs 40 lakhs. However, with the expansion of the Alembic plant and the scheme for starting a new factory in Calcutta for the production of penicillin, the penicillin requirements of the country could be expected to be met without involving imports from abroad.

The Third Plan schemes for the pharmaceutical industry envisage the creation of new capacity so as to reach a sales value of Rs 150 crores by 1965-66. Four major projects are planned in the public sector, namely, an antibiotic plant at Rishikesh, a synthetic drugs plant at Hyderabad, a Phytochemical plant in the Kerala State and a surgical instruments plant in Madras State. Foreign collaboration for the execution of these schemes has been promised by Soviet Russia with whom the Government of India has already signed the necessary agreement. The total cost including townships of these four plants is estimated at Rs 36 crores and the estimated value of production would be Rs 35 to Rs 40 crores per annum. The four plants are likely to go into production in about three years time.

In his inaugural address, Mr Shastri emphasised the need for bringing down the cost of production particularly of penicillin in the country. It has been a noteworthy achievement of the industry that it has been able, mainly through increased production, to maintain prices for pharmaceutical products manufactured in the country at steady levels. How far the schemes for the expansion of the industry in the course of the Third Plan period would lead to further fall in prices would remain a matter of conjecture. Much would depend upon the progress of the chemical industry which provides the essential raw materials for pharmaceutical production. But cause for apprehension of possible rise in prices of pharmaceutical products exists in the levies imposed by the latest Budget on a number of pharmaceutical products as well as on the raw materials used in the industry. A meeting of the Pharmaceutical Producers' Association held in Calcutta some time ago expressed

concern at the adverse implications of the levies for future production. Special attention was drawn to the difficulties that might be created in the process of administering and collecting the levies. Proper integration and rationalisation of the tax system as it affects the pharmaceutical industry would minimise hardships and eliminate uncertainty in the minds of producers.

ICMA STC Raises Prices

Delivering the presidential address of the Indian Chemical Merchants' Association, Mr B. L. Kajarla dealt with the hardships caused to established importers by the restrictive policy of the Government in respect of issuing licences for import of chemicals. It was pointed out that import licences issued to established importers were for small values while licences for higher amounts were granted to large manufacturers. The State Trading Corporation particularly has been making increasing inroads into the import of chemicals. Originally, the STC accounted for only a fraction of the total chemical imports, caustic soda and soda ash being the only items entrusted to the STC. But in recent years the STC has been given licences for import of numerous chemicals, and this has cut into the share of the established importers. This extension of the activities of the STC has not only created difficulties for the established importers but has also upset the price balance for many of the chemical products and in certain cases the entry of the STC has been the cause for sudden increase in prices. Camphor and mercury offer two notable instances. When camphor import was in the hands of the established importers prices ruled below Rs 10 per pound. But no sooner did the STC assume the responsibility for import than the price went up and the article is now being sold for Rs 15 per pound. In respect of mercury also, the price has shot up to Rs 1,800 per flask from Rs 1,000 after the STC entered into the import business. Thus, in view of the effects on prices, criticism of the role of the STC is not entirely unreasonable. Justification lies only in cases where the STC has to implement agreements entered into by the Government of India. This has been the argument advanced by the Government of India to put off the demands of the established importers for revision of the import policy. Established importers are being displaced in many a field by the Government's policy which, of late, seems to have placed greater reliance on the State Trading Corporation. In view of the harmful effects of this policy which has disrupted the normal sources and routes of supplies and also carries the threat of unemployment to established importers without any countervailing benefit to the country, it is necessary that the Government review its policy and restore a greater share of the import trade to established importers. As Mr Kajarla has pointed out, established importers are in the trade since

decades and have gained wide experience of foreign trade after long strenuous working and even at the cost of big losses and expenses due to keen competition. The utilisation of this experience would ensure efficient and wider distribution of the goods.

CEYLON Again, a Language Problem

The proclamation of an emergency in Ceylon to deal with unrest among Tamils over the language policy has touched off anxiety. The position of Indians who are not citizens but who are necessary for economic activity in the planting industry remains in doubt at present. Whether a strike will come in response to a call from Jaffna is the main issue at present. The Indian Government cannot tender advice on the need to obey laws or flout them. That Tamil leaders in

Madras are in favour of backing the Federal Party's claims may not really influence the Indian Government's view of happenings. The appeal to UN cannot be sponsored by India for the reason that negotiations on citizenship may become impossible. Any move that India may make will lead to support for Ceylon from Burma or Nepal and damage India's prestige among the Asian peoples.

The estate strike, if it takes place, will certainly lead to reprisals. Rations may be cut and the move to repatriate all temporary residents will certainly come quickly. Ceylonisation will be effected in a sudden, swift manner. And India cannot find work for them though Indian tea may fare better in export markets, if Ceylon does not find it easy to ship more tea to Australia or Iran. The price of rubber may go up, but Indian growers will not gain thereby. All this belongs to the future but the present troubles in Ceylon may be set down to the passive resistance copied from India, and Ceylon may well cherish some prejudice on that score.

The question is one of internal disturbances, arising from the official desire to impose Sinhalese on the Tamils. It is open to Ceylon to argue that the anti-Hindi agitation in India offers a parallel and the Ceylon Government has never commented on events in India. And India cannot afford to risk a misunderstanding, when Pakistan has already made much of communal riots in some places. The problem is one for Ceylon and the minority must negotiate for safeguards though the Europeans or Burghers may not do so. The Ceylon Government can apply economic pressure by stopping rice imports and curtailment of food will hit Indian exporters of fish and other items. The danger to trade is patent and a fresh rise in coconut oil prices may raise prices of all oilseeds and oils, spoiling Indian export prospects further. The risks of intervention, even if diplomatic, must be readily understood and it would be better perhaps for Britain to tell Ceylon what course should be adopted to allay the misgivings of the Tamils. The Commonwealth connection gives

the UK an opening and it is just possible that London may be able to do better than Delhi in pointing out that Ceylon's exports would be affected, and there is no chance at all of getting rid of the Tamils or even Indians who are needed to keep the plantations going.

HALDIA Well-Anchored

The results of the working of the Haldia Anchorage scheme, which has now been in operation for two seasons, are now available. The scheme was devised for handling deep drafted vessels carrying foodgrains for the Eastern region. On account of draft limitations these ships could proceed to Calcutta only after shedding the bulk of their cargo at Vishakhapatnam or Madras and the grain was carried by rail to Calcutta. The cost to the Ministry of Food & Agriculture, including railway freight from discharging port to Calcutta, worked out to Rs 41.43 per ton for grain unloaded at Vishakhapatnam and Rs 53.95 per ton for foodgrain discharged at Madras. The anchorage scheme was devised to enable the ships to proceed with full load up to Haldia where part of the cargo would be loaded into barges which were then towed to the main port at Calcutta for unloading. The scheme which could be worked, for reasons of safety to shipping and inland craft, only during fairweather months of November to February, was first put into operation in November 1959. During the first season from November 1959 to February 1960, the cargo handling operations were entrusted to private contractors, and the unloaded cargo was transported to Calcutta by the Calcutta river transport association under another contract with the Port Commissioners. During this season a total of 42,000 tons of grain from 16 ships were unloaded at Haldia. For the next season it was decided that the handling operations at Haldia would be carried out by Calcutta stevedores and Registered Dock Labour of Calcutta, transport to Calcutta being looked after by the Calcutta River Transport Association. However, owing to delays in finalising working arrangements for employment of Registered Dockworkers, work could be started only from the middle of December 1960. During the second season which was restricted to less than two and a half months, a total of 32,677 tons of foodgrains from ten ships were offloaded at Haldia.

Though the cost of handling at Haldia has increased as a result of employing Registered Dock Labour with high wage rates and payment of wages to local labour at rates at par with their counterparts in Calcutta, the overall result was better as far as the Port Commis-

sioners were concerned. Unlike in the first season, no loss was suffered in the second, though overhead charges were still not fully covered. The Ministry of Food and Agriculture had agreed to the enhanced rate of Rs 36 per ton instead of Rs 30 last season.

The working of the scheme for two seasons has established that the anchorage at Haldia is a safe one and that work could be carried on from middle of October to the third week of February. There were only a few accidents and out of seven during the last season only two were of a serious nature requiring hospitalisation. The workers are covered by insurance against accidents and for payment of compensation. From next season onwards it is proposed to work two ships simultaneously. It is expected that the scheme will be in operation for another five or six years, till a deepwater port is established and starts working at Haldia.

CUBA Again, a Civil War

Cuba has been invaded by private forces and a civil war has broken out. The previous example of Castro need not be cited here but the UN will have to note that the USA has been charged with open intervention. The revolution has been interrupted, because Cuba has increasingly turned to the Communist Bloc for aid and advice. There will, however, be no repetition of the Guatemalan episode for, Cubans are alone mixed up in the war that may end only with the fall of the Castro regime. Of course, many things would be easier in future—sugar exports will be resumed and Cuba will get help for rehabilitation, if the Church asks openly for help.

The State Department has issued a disclaimer, but it is patent that Cuba exiles in the USA have got essential material for the attack mounted on the Castro regime. The Latin American view of Cuba's affairs may not be unfavourable to the US attitude of indifference, real or assumed. The change in the White House may help to preserve a balanced view of the consequences of Castro's rule, disastrous to alien capital. The events of 1898 need not be recalled here, for, the USA is not directly involved and the revolt of the liberals against Castro can be described as a spontaneous outbreak that could be called inevitable. If Castro were to get Soviet military aid for saving his regime, then the UN will have to deal with an infraction of the Monroe Doctrine which may be invoked by many countries other than the USA. The OAS, may soon sound a warning about European intervention in the New World. The UN will soon have to turn from the Congo to Cuba, but there will be no need to keep order in the island by sending out a force. The Cuban regime, even if it falls,

will have accomplished much. Agrarian reforms, housing plans and secular control of education will survive Dr Castro. And the USA even if it avoids Cuba as a major tourist centre, will probably have to leave Cuba in full control of its economic destiny. That may mean more trade with East Europe in basic materials in return for sugar, rum or tobacco shipped by Cuba, and the USA will have then to accept the fact that a naval base will not make Cuba a field for US enterprise alone in future. The lesson will probably be accepted by Mr Kennedy who, by a new policy towards Cuba as a neighbour, can reinstate the Rooseveltian aims of friendship and aid.

UK New Fiscal Devices

With the electrical tide flowing in favour of the Tories, the UK Government can afford to apply new fiscal devices. The idea of varying excise and customs duties by notification is not due wholly to Indian example. The notion of a surcharge to modify prices ruling at home may be one of the ideas thought up in the Thirties. The 10 per cent variation in excise or customs may affect tobacco rather than tea, may hit beer rather than wine. Anyway, the commodity tax is meant to alter the volume or pattern of consumption, and, Mr Lloyd owes his inspiration to Cripps, not Churchill. The Economist's own idea of relief under surtax has restored incentives for the rich executive class. Relief for the rich is meant to encourage higher efficiency and, perhaps saving. Higher taxes on cars, diesel oil or profits tax may cause less argument than a duty on advertisement on television. The new branch of popular entertainment is hit and television shares like Granada may lose their appeal for those who fancied that TV may get ahead of newspapers as an advertising medium.

The taxation of employers may not be derived from the old practice of taxing rich men who employed domestic servants wearing livery. It is really meant to limit the wage bill by diverting surplus labour to other trades and to put in devices for efficiency. Productivity will be forced on the employer by means of a new tax that will perhaps lead to an abatement of wage claims. The threat of retrenchment on the score of redundancy may force motor industry workers or others to submit to schemes designed for economy and efficiency. Such a tax may not appeal to India where massive unemployment persists, but it will certainly help nations that have overfull employment and assist normal or natural growth, though it may savour of paternalistic interference. That inflation has hit Britain and export trade is not really fun has been underlined by the biggest Budget which, by means of the rise in profits tax, will brake the stock exchange boom in Home Industrials limit the take-over bids even in the

brewing business on chemicals, and compel the prosperous trades to pay out for the relief of those industries which are to be helped by a lighter purchase tax. The Government is certainly committed to economic controls, indirect as they appear, because of inflationary pressure which hits export trade like that in cars even more than the hire purchase rules. The big bankers will probably approve the elastic excises as a counterpart of variations in interest rates today but the Harold Wilson school will argue that Defence absorbs more money even now and the Polaris base does not lead to a cut in the bill for the RAF.

DUNLOPS Expansion Ahead?

Mr John Luckham, Chairman of Dunlops, has reported all round expansion in the sales of the Company for the year 1960-61. For most of the products of the Company demand is shown to have outstripped the production capacity of the Company which in some cases was increased to meet anticipated rise in demand. In respect of tyres, for example, it has been stated by Mr Luckham that even after the expansion of the Company's Sahaganj factory and the attainment of full production capacity in the Ambattur plant of the Company, there were shortfalls in supplies due to the increasing demands of Government, vehicle manufacturers and transport operators. Rise in bicycle production during 1960 is stated to have put up the demand for cycle tyres, and though the Company had difficulties in meeting the entire demand, Mr Luckham has reported expansion in sales to the South East Asian countries, which in view of the need to earn more foreign exchange could be considered an encouraging development.

In these circumstances, the decision of the Dunlop Directors to effect further major expansion of the Company's business will be appreciated. The expansion plans, subject to the approval of the Government, are expected to be implemented with the assistance of the Dunlop Rubber Company Limited, London, which has offered to provide sterling finance in the form of a loan to be later converted to equity capital.

In a reference to the effect of the Budget proposals, Mr Luckham observes that the increase in the excise duties payable by the Company on some of its products and the raw materials used in the Company's manufactures would affect the costs adversely. Excise duty is shown to be Rs 1,72,00,000 higher than in 1959 which is attributed to the new duties on cycle rims and the increased volume of sales. But that the effect of the new taxes on earnings was more than offset by the increase in sales is evident from the fact that profit after providing for depreciation, interest and taxation was higher at Rs 1,24,56,228 against Rs 1,18,04,533 for 1959.

29 April 1961

Activities

ATOMIC ENERGY Encouraging Results

The annual report of the Department of Atomic Energy is a catalogue of achievements whose significance may not always be understood by laymen. But no one will miss the importance of the Canada India Reactor (CIR) which was formally inaugurated by the Prime Minister on 16 January, along with the third atomic reactor Zerlina, which was entirely designed and built by the Trombay establishment, and the related facilities, the Uranium Metal Plant, the Fuel Fabrication Facility and the Heavy Water Re-concentration Plant. The CIR, with a 40 MW heat output, is a research and isotope producing reactor and is not designed to produce power. But both CIR and Zerlina will contribute significantly to the development of power reactors to meet India's special needs. In this connexion it may be noted that the contract for the main work on the nuclear power station at Tarapur is expected to be awarded by end of 1961, and work on the main project will probably commence early in 1962.

It is also satisfactory to note that the progress in processing of atomic minerals is in step with the programme for nuclear power, so that the country will be practically self-sufficient in its requirements of nuclear fuel when the reactors start functioning. During the year under report, sufficient nuclear grade uranium was produced, and fuel elements made for Zerlina and half the first order for CIR, saving a considerable amount of foreign exchange.

The industrial operations of the Department also show encouraging results. During 1959-60, the Indian Rare Earths Ltd. earned foreign exchange worth about Rs 18.82 lakhs by sale of rare earth chloride abroad. Following revival of foreign demand, the company was not only able to dispose of its accumulated stock but had also committed its entire rare earth chloride production till the end of 1961. The company was also able to export Rs 2.30 lakhs worth of Thorium Nitrate during 1959-60, besides meeting the entire internal demand from the gas mantle industry. The accounts of Travancore Minerals Ltd., which was registered in 1956 with an authorised capital of Rs one crore, show a profit of Rs 16.43

lakhs in 1959-60 after providing for royalty and taxation. The company earned foreign exchange to the extent of Rs 1,04.10 lakhs during the year under review.

CDP 368,000 Villages Covered

The Community Development programme in this country was started on 1 October, 1952. During the eight years of its operation, the total expenditure on developmental and promotional activities amounted to Rs 294 crores of which people's contribution was nearly one third. Government expenditure in the first four years of the Second Plan was Rs 137.73 crores; the anticipated expenditure during 1960-61 is Rs 52.61 crores bringing the estimated total expenditure during the Second Plan to Rs 191.45 crores. People's contribution during the first four years amounted to Rs 63.61 crores. There are now 3,110 blocks in the country covering 368,200 villages with a total population of 203 million. The success of a programme of this type has to be judged by the extent to which it can be continued on a self-sustaining basis after the withdrawal of governmental assistance, direction and control. This will depend on the economic developments sparked off by the programme in the areas of its operation. While the annual report of the Department for 1960-61 has drawn attention to the satisfactory progress in the field of Health and other welfare activities, it also points out that the Village and Small Industries programme continued to remain a difficult field in rural development and "visible progress could not, therefore, be registered."

This position has persisted in spite of the fact that increasing stress was laid during the year on the "production programme" as compared with the "amenities programme."

The main task of the Block Agency during the year was concerned with increasing agricultural production. The annual report of the Department notes the progressive increase in the distribution of improved seeds, chemical fertilisers, implements, etc. An important development was the increasing interest taken by village communities in implementing minor irrigation programmes. The expenditure during 1959-60 was Rs 10.35 crores against Rs 4.57 crores

during 1956-57. While expenditure under this head formed only 20 per cent of the total expenditure during 1956-57, it went up to 28 per cent during 1959-60. In four States, the Panchayats have been entrusted with the responsibility for the construction and maintenance of minor irrigation works. A beginning was also made during the year in the preparation of village production plans, which are expected to ensure a greater degree of popular participation. Although external assistance in the shape of funds for irrigation, soil conservation and land reclamation and supply of fertilisers and credit is to be taken into account in preparing these plans, greater emphasis, says the Report, will be laid on the exploitation and fuller utilisation of local resources like multiplication of seeds, optimum use of available irrigational facilities, production of compost, green manuring and adoption of improved agricultural practices. The Department has devoted special attention to the training of workers and supply of books for their study kits as well as for village libraries. During the year, 62 publications were brought out in English and other languages while 11 were under preparation. Seven films were completed and nine were under production.

The Third Five Year Plan of the Ministry, which was finalised during the year, envisages a total outlay of Rs 297 crores on Community Development programmes. The outstanding achievement of the year, says the Report, was the acceptance of the concept of Panchayati Raj which is now being implemented in six States. The main task of the Ministry in the Third Plan will be to assist the progress of Panchayati Raj throughout the country. The programme envisages the establishment of a net-work of self-governing institutions from the village upwards, federated at the Block and District levels and organically linked up to form a new administrative set-up. One of the main responsibilities of the Panchayat Raj institutions will be the formulation and implementation of specific programmes for the welfare of weaker sections of the community. A Study Group, with Mr Jaya Prakash Narayan as Chairman, has been set up to study the problem in all its aspects and to recommend measures through which the Panchayat Raj institutions at different levels can promote the economic development of the weaker sections of the community. With the adoption of the Panchayat Raj, the responsibility for local development in all its aspects will be transferred to the representatives of the people. When that task is successfully accomplished without detriment to economic progress, the Community Development programme would have fulfilled the hopes raised by its inauguration in this country eight years ago.

CIVIL WORKS Construction Proceeds Apace

The latest report of the Union Ministry of Works, Housing and Supply reviews the Ministry's activities in regard to civil works, Government estates, housing schemes, supply of Government's requirements and printing and stationery during 1960-61. Total expenditure on various housing schemes implemented by the Ministry amounted approximately to Rs 95 crores—Rs 80 crores for Plan schemes and Rs 15 crores for non-Plan schemes.

Referring to the activities of the Central Public Works Department, the report states that most important completed works in New Delhi are the buildings of the National Museum (Phase I), the multi-storied office buildings on the sites of "K" and "N" Blocks, the trunk sewer laid along the Najafgarh Road, and the new runway constructed at the Palam airport for the operation of jet aircraft. Other works completed during the period under review in New Delhi are the 1,072 residential quarters for accommodating Government employees, an office building for the Posts and Telegraphs, five new blocks in the Safdarjang Hospital, the Irwin Hospital, the Maulana Azad Medical College, rooms and administrative block in the Bal Bhavan, 640 single-roomed subsidised houses in the industrial area, 384 tenements for displaced persons, and the laying of filtered water supply line at Ramesh Nagar.

The construction of the Gangtok-Nathula Road, the eastern tube of Jawahar Tunnel Project in Jammu and Kashmir, and the north Sikkim Road (up to Singhik) are the conspicuous works executed outside the Capital.

Among the works in progress, the most important listed in the report are the Mahatma Gandhi Memorial at Rajghat, about 5,000 residential quarters of different categories in the General Pool, the building for the Regional Office of the WHO, the multi-storied office building for the State Insurance Corporation, the office building for the University Grants Commission, the Medical College and Hospital in Pandicherry, development of the Indraprastha Estate, the bridge at the Wazirabad Barrage, foodgrains godowns at Bhopal, Bikaner, Raipur, Ajmer, Jaipur, the Huen Tsang Memorial at Nalanda and the like.

Summarising the progress of the Second Plan housing schemes the report adds that under the subsidised industrial housing programme the construction of 136,466 houses was taken up, out of which 93,010 houses had been completed by the end of 1960. The scheme has been suitably amended with a view to enabling the State Govern-

ments to construct dormitory or hostel type of accommodation at cheap rents for housing genuine non-family workers whose financial positions would not allow them to go in for separate houses.

The low income housing scheme registered satisfactory progress. The State Governments sanctioned construction of 81,075 houses till the end of December 1960, out of which more than 49,000 houses have been completed.

The plantation labour housing scheme, introduced in April 1956 did not however, show any appreciable progress chiefly due to the insufficient response from the planters. The Government of India has issued necessary instructions to the State Governments to induce the planters to lend adequate support to the successful implementation of the scheme.

The bulk of purchases on behalf of the various Government Departments was undertaken by the Central Purchase Organisation through its three wings, the Directorate-General of Supplies and Disposals, New Delhi, with its Regional Supply and Inspection Offices in Bombay, Calcutta and Madras, India Store Department

Year.	Kilometres flown.	Passengers carried.	Freight carried.	Mails carried.	Capacity tonnes-kilometres offered.	Revenue tonne-kilometre.
1956 ...	37,788,184	558,625	43,642,216	5,753,389	151,741,766	99,085,104
1957 ...	37,812,238	615,321	38,862,147	5,932,251	163,359,727	107,986,155
1958 ...	39,553,498	696,175	42,467,081	6,171,545	182,958,669	117,610,852
1959 ...	39,817,000	736,160	33,504,096	6,825,047	197,754,024	125,277,067
1960 ...	40,324,900	824,500	35,583,000	6,630,000	226,700,400	137,117,400

For the IAC, 1960 marked a turning point in as much as for the first time, the Corporation reported a modest profit of Rs 7.81 lakhs. For AII, the financial results of working during 1960 reveal a net surplus of Rs 26.93 lakhs. Air India International has become an important foreign exchange earner and it is estimated that the net foreign exchange earnings averaged a little over Rs 3 crores approximately during the last 2 or 3 years. With the expansion of its Boeing fleet to 4 as is now envisaged, a further increase in foreign exchange earnings by AII looks feasible. Presently the operating fleet of AII consists of 3 inter-continental Boeing 707s and 9 Super Constellation 1049s. The inauguration of the Boeing 707 inter-continental on the India/UK route by the AII marked its entry into the jet age. A notable facility offered by the Corporation to improve traffic in India is the "Pay Later Plan" introduced in collaboration with the Bank of India. In this connection, it is stated that, as at the end of October 1960, a total number of 618 applications have been approved valued at Rs 11.80 lakhs.

As on 9 December 1960, the operational fleet of the Indian Airlines Corporation is shown to consist of 54 Dakotas, 5 Skymasters, and 10 Viscounts. Purchase

London, for purchases in the UK and the Continent, and the India Supply Mission, Washington.

The activities of the Printing and Stationery Department exhibited a tendency to keep pace with the tempo of other activities of the Government of India. During the year under review, a new printing press was started in Gangtok (Sikkim). Besides, the Government of India has sanctioned the construction of two more presses in South India, one in Coimbatore and the other in Koratti in Kerala.

CIVIL AVIATION AII and IAC Both Prosper

The report of the Departments of Communications and Civil Aviation for 1960-61 indicates noteworthy improvement in the performance of the Air India International and the Indian Airlines Corporation during 1960. For both these Corporations, an increase in kilometres logged and rise in passengers flown on scheduled services are reported.

of additional Viscounts is indicated as likely as a step to meet the growing traffic demand.

On the side of international relations, the most important event of 1960 was the signing of an agreement by AII with BOAC of England and QEA of the Commonwealth of Australia providing for the operation of air services by the three airlines in co-operation. Under the agreement, the three airlines will pool their resources on certain routes operated by them and share them on an agreed basis.

During 1960, the number of major accidents in India is shown to be 28 which involved 21 Indian registered aircraft, 4 foreign registered aircraft and 4 gliders. Nine of these accidents were fatal resulting in the death of 22 lives.

COMMERCE & INDUSTRY High Rate of Growth in 1960

The growth of industrial production during the last year of the Second Plan, which is highlighted by the annual report of the Ministry of Commerce & Industry, is only partially reflected in the monthly index. The average of monthly indices of production for

the first eleven months of 1960 has increased to 168 from the average of 150 for the corresponding period of the previous year. The increase of 18 points in the overall index has been achieved in spite of stagnation in cotton textiles and set-back in the output of tea which together have been allotted total weight of 42 in the computation of monthly indices. Apart from these industries and a few others like plywood, paints and varnishes, enamelware, conduit pipes and ammonium sulphate which have registered slight declines in production, practically all the other industries have contributed to increased and diversified output, exceeding plan targets in a number of sectors.

The progress achieved in the field of machine building industries, and the developments under way, are of particular significance in stepping up the rate of industrial production in future. Output of machine tools, tea processing machinery, and sugar mill machinery among others has recorded heartening increase. Further progress has been made in important public sector projects under construction, such as heavy electricals, heavy machine building plant, foundry forge, coal mining machinery and heavy machine tool plants. Progress is also reported in regard to the establishment of heavy plate and vessel works, heavy structural fabricating works and ophthalmic glass project. Project reports have been pressed for the first two projects and negotiations are in progress for securing suitable terms of collaboration. Work is also proceeding in connection with the expansion of the Hindustan Machine Tools Ltd. The same undertaking has been entrusted with the project for manufacture of wrist watches with Japanese collaboration.

Apart from these projects in the public sector, a number of new schemes in the private sector have been licensed during 1960 in the field of heavy engineering and machinery manufacture. The new schemes relate to the production of such items as wire ropes, bright bars and shaftings, bolts, nuts and rivets, structurals, cranes and steel pipes and tubes. The production of tea processing machinery during the year is expected to rise from Rs 90 lakhs in 1959 to Rs 121 lakhs in 1960; chemical and pharmaceutical machinery from Rs 96 lakhs to Rs 1.20 lakhs; mining machinery from Rs 12 lakhs to Rs 20 lakhs; cement machinery from Rs 51 to Rs 55 lakhs; sugar mill machinery from Rs 2.86 to Rs 3.25 lakhs; constructional machinery from Rs 75 to Rs 1.02 lakhs; industrial boilers from Rs 8 to Rs 37 lakhs. In several of the items mentioned above such as tea or sugar machinery, besides meeting the entire local demand, there will be surplus available for export. In the field of textile machinery, schemes have been

sanctioned for manufacture of items such as automatic looms, textile pins, knitting machinery, various Augusta systems, mercerising range, electric yarn balling presses, warping machines, high speed sizing machines, automatic reaching machines, jet air stenter, hot flue and stenter clips. Manufacture of new items of textile machinery such as blow room lines, soapers, calendar, bowls, continuous washing machines, ring travellers, pneumatic mangles, inspection machines, dyeing sleeves, etc., has been established. During the year Government decided to liberalise the grant of licences for manufacture of machine tools in view of the large gap between demand and production. Some of the new items of machine tools manufactured in the country for the first time are pneumatic power hammers, cylindrical grinders, wire drawing and wire-nail making machines, impregnated type diamond drills and diamond grinding and lapping wheels. A beginning has been made in manufacture of printing machinery and, in addition to the two firms already in the field, two more firms have been granted permission to manufacture printing machinery. Sixteen firms have so far been licensed for paper making machinery which aggregate capacity of 1.5 8.36 crores per annum. Jute mill machinery manufacture has almost reached the Second Plan target of Rs 2.5 crores per annum.

Light engineering industries, both mechanical and electrical, have achieved significant progress both in output as well as in the range of products. The first step for the manufacture in India of basic chemicals and intermediates has been taken with the establishment of Hindustan Organic Chemicals Limited, while the manufacture of photo films by the Hindustan Photo Films Manufacturing Co. Ltd., is expected to start in December 1962. While the output of nitrogenous fertiliser registered a decline during the year, the report offers the comforting assurance that considerable expansion of manufacturing capacity is already under way. In addition to the fertiliser plants at Sindri, Nangal and Trombay, new plants are to be put up at Kamrup in Assam, Kothagudem in UP. Fertiliser units in the private sector are also proposed to be established in Hanumangarh in Rajasthan, a suitable site in Madhya Pradesh; and Vishakhapatnam in Andhra Pradesh.

The pattern of development has ensured that the increase in industrial output has been accompanied by an increase in imports and widening of the trade deficit. While exports at Rs 636 crores show an increase over the previous year, part of the increase is the result of higher prices. Larger imports of raw cotton, jute and machinery have contributed to the rise in the import bill from Rs

940 crores in 1959 to over Rs 1,000 crores in 1960. Any hope of relaxation of import restrictions for the trade disappeared in the yawning trade gap. The general pattern of import policies has remained much the same as in previous year and has been geared to the development needs of the plan. While trade with the Soviet bloc and some other countries in Europe and Asia has increased following the introduction of a new pattern of trade in 1959, according to which the trade is conducted in non-convertible rupees, the imbalance in trade with West European countries continued to give anxiety. The results of the export promotion efforts, trade delegations and trade agreements would suggest that, while these efforts have to be continued on a broad front, the problem of imbalance in trade cannot be dealt with effectively unless it is tackled at the source, by alterations in the pattern of industrial development. The norms that have been set up for licensing of new industrial undertakings or expansion of capacity will have to be scrutinised with reference to their recurring import requirements.

COOPERATION Essays in Targetmanship

Achievements and aspirations in the sphere of cooperative development are set out in the second Annual Report of the Department of Cooperation which was formed in December 1958. The year under review was a period of fruitful activity for the Department in framing policies and programmes. Important policy decisions regarding the pattern of cooperative credit societies, cooperative farming and other organisational matters were adopted and announced during the year. The National Federation of Cooperative Sugar Factories and a National Cooperative Farming Advisory Board were also set up during the year. The National Cooperative Development and Warehousing Board appointed two sub-committees—one on processing and the other on consumers' cooperatives—to study the problems involved and to suggest measures for their sound development. With a view to promoting non-official leadership at all levels of the cooperative movement, a decision was taken towards the end of last year, that ministers and officials in the Central and State Governments should not hold office in cooperative organisations. This decision, says the Report, is in different stages of implementation in various States and a number of ministers and officials have withdrawn from offices in cooperative institutions.

Programmes for cooperative development in the Third Plan were also formulated during the year. The main features of the programme, which if successfully implemented should establish the cooperative movement as a large and powerful sector of the national economy, are also described in the Report. The progress achieved during the Second Plan are relevant to consideration of the programmes for the Third. But in this respect the Report unfortunately is not of much assistance. Statistical information is not available even for the year 1959-60. Data is available only up to 30 June 1959, and the figures mentioned for subsequent periods are just hopeful essays in targetmanship.

On a general survey of the movement up to the middle of the Second Plan, the Report considers that the progress has been fairly satisfactory; but it has not been uniform throughout the country. The percentage of rural population covered by primary agricultural societies is well below the all India figure of 19 per cent, in respect of Assam, Bihar, Madhya Pradesh, Orissa, Rajasthan, Uttar Pradesh, West Bengal and the Union Territories. While in some States, cooperative marketing societies have made satisfactory progress and have been able to handle more than ten per cent of the marketable surplus, for the country as a whole, the share of these societies in handling agricultural produce still remains insignificant. The Report also points out that of late the consumer cooperative movement has suffered a set-back. This is rather dispiriting, for it suggests that the urban population is getting disillusioned with the Cooperative Movement.

In processing, the most striking advance has been made by cooperative sugar factories, of which 39 had been licensed as on 1 April 1960. The production of sugar cooperatives has increased from 0.11 per cent of the total sugar output in 1955-56 to 2.88 per cent in 1956-57, 7.5 per cent in 1957-58, 9.3 per cent in 1958-59 and 11.4 per cent in 1959-60. The progress of the cooperative sector of the sugar industry has been sustained by substantial loans from the Industrial Finance Corporation which totalled Rs 18.87 crores up to 31 December 1960, against total share capital of Rs 12.46 crores, of which Government's share was Rs 5.47 crores. The State Governments are assisted to participate in the share capital of sugar cooperatives with long-term advances from the National Cooperative Development and Warehousing Board. These loans amounted as on 31 March 1960 to Rs 4.15 crores.

Government's policy of favouring cooperatives in the matter of issuing permits, licences, etc., has yielded striking results in the establishment of a large number of processing units besides sugar factories. Against the target of 48 cotton ginning and pressing societies and 118 other units, a total of 243 processing units were set up in the first four years of

the Second Plan and the commodities processed by them are cotton, paddy, groundnut and other oilseeds, etc. Another 136 units would have been set up in 1960-61. The Department has been paying special attention to the training of the members and office bearers of cooperative institutions and has continued to provide training facilities under the Colombo Plan to trainees from South and South East Asian countries.

EDUCATION Rs 400 Crores for Third Plan

Education is primarily the responsibility of the States; but the Central Government too plays an important role in the development of education in the country. The Union Ministry of Education is responsible for the Central Universities and also for a few central institutions established for the development of special educational fields. The co-ordination and determination of standards in institutions of higher education is the responsibility of the Ministry and it is discharged through the University Grants Commission. All education except technical education in the Union Territories and the Centrally administered areas also comes under its purview. Although the development of education in the States is the look-out of the respective Governments, the Union Ministry of education is discharging some essential functions, such as giving financial assistance to schemes included in the State sector, looking after all programmes of international collaboration in education and the UNESCO general co-ordination and collection and supply of educational information for the country as a whole, etc.

The report of the Ministry of Education for 1960-61 gives a detailed review of the activity of the Ministry with particular reference to the progress made during last year. Perhaps the most important development during the period under review is the finalisation of the Third Plan for education. The working groups set up in the previous year for the preparation of the Plans, both at the Centre and in the States, submitted their Plans and these were discussed. Although the total amount asked for was large, the provisional allocations were only about Rs 400 crores—Rs 328 crores in the State sector and Rs 72 crores in the Central sector.

Primary education has made steady progress during the Second Plan period. The Government of India assisted the State Governments generally on a 50 per cent basis for implementing the scheme for primary education included in the State sector. It is expected that the total enrolment in Classes I to V (primary schools) will be 33.8 million at the end of the Second Plan. This implies an additional enrolment of 8.6 million (from 25.2 million in 1955-56) in the Second Plan as against the additional enrolment of 6.1 million (from 19.1 million in 1950-51 to 25.2 million in 1955-56) in the First Plan. Targets have been

adopted for the Third Plan and three further steps were taken during the last year toward the implementation of the compulsory education programme in the Third Plan. As regards secondary education, the estimated enrolment is 3.16 million by the end of 1960-61 and it is estimated to go up by 1.5 million and reach 4.66 million by 1965-66. A sum of Rs 51 crores has been allocated for the development of secondary education during the Second Plan. During the Third Plan, a central organisation for the improvement of science teaching is proposed to be set up. Progress has also been made in the direction of training and remuneration of teachers. The percentage of trained teachers in Secondary schools has increased from 53 in 1950-51 to 59 in 1955-56 and it is expected to go up to 68 per cent by the end of the Second Plan. It is expected that 75 per cent of the teachers in Secondary schools will be trained by the end of the Third Plan.

In the field of higher education, besides the management of the Central Universities and institutions, and the supervision in particular of the maintenance of standards through the UGC, the Ministry operates several programmes and conducts significant pilot projects all directed toward bringing about an improvement in higher education. The implementation of the scheme of the three-year degree course is now the responsibility of the UGC. The programmes for the promotion of development and enrichment of the Hindi language conducted by the Ministry are progressing satisfactorily and an important development is the completion of the printing of the first volume of the ten-volume Hindi encyclopedia. The second volume is nearing completion. Other steps for the enrichment of Hindi are being taken such as the constitution of a Standing Commission for Scientific and Technical Terminology. Twenty-four lists of Technical Terms in Hindi are now available and during the year four more have been finalised. Work has started on the preparation of a dictionary of scientific and technical terms.

EXTERNAL AFFAIRS Cordial Relations

India's foreign relations after the achievement of independence have been marked by growing friendship with most countries. In a large measure, this has been made possible by the policy of neutrality adopted by the Government in respect of matters relating to cold war issues. Especially among the major powers, India enjoys a high degree of goodwill which has been evidenced in the interest evinced in and the assistance being rendered by these countries for economic development. The strengthening of the friendly and cordial relations with these countries during 1960 is underlined in the report of the External Affairs Ministry for the year 1960-61. With the United States and the Soviet Union particularly new ties were forged during 1960. The signing of the PL 480 Agreement by President Eisenhower with the

Union Minister for Food and Agriculture on 4 May 1960, for the purchase by India of 17 million tons of wheat and rice worth 1,276 million dollars marked a significant event in the growing cordiality of relations between the USA and India. The agreement provides that the rupee equivalent of not more than 538 million dollars representing about 42.1 per cent of the rupee accruing to the US Government because of purchases by India will be given as loan to the Government of India for financing such projects to promote economic development as may be mutually agreed. The USSR also signed a long term trade agreement on 25 October providing for Soviet technical collaboration and assistance for a number of development projects in the public sector. With both these countries, ties of friendship were strengthened by exchanges of cultural and official visits. The President of India for instance paid a State visit to the Soviet Union from 20 June to 5 July 1960. The cultural and official exchanges of visits between India and the US were climaxed by the visit of President Eisenhower to India and of the Indian Prime Minister to the United Nations in September-October 1960. Growing cordiality also marked the relations of India with other countries of Europe and with the Commonwealth countries. With most of the countries of Europe, India concluded trade agreements during 1960 which envisage greater flow of mutual trade. Friendly relations with the United Kingdom were strengthened by the visit in January-February 1961 of Queen Elizabeth and the Duke of Edinburgh.

The most gratifying feature of the report is the improvement that is recorded in the relations between India and Pakistan. The signing of the Indus Water Treaty by the Government of India on 19 September 1960, eliminated a major source of strain in the relations between the two countries. The fruitful discussions that were carried on in respect of disputed border areas and the adjustments that were agreed to, provided further evidence of a changed outlook on the part of Pakistan to its relations with India.

To this trend of growing friendship with foreign countries, Chinese intransigence on the question of border areas with India provided the only exception. Though the leaders of the two countries agreed to settle the matter through discussions, China has shown itself unwilling to accept the report of the Indian official team which has proved with an array of historical and cultural facts the untenability of the Chinese claim to the disputed areas. The External Affairs Ministry's report, in this connection, points to instances of violations of Indian air space and territory by Chinese forces, but provides the assurance that necessary precautions were taken to strengthen the security of the border and to prevent any incursions into Indian territory.

With other countries of Asia and Africa, India's relations during 1960 developed on cordial lines. In the United Nations Assembly, India associated itself with the cause of the colonially exploited peoples and spon-

sored a resolution for the abolition of colonialism. In the UN discussions on disarmament and nuclear test abolition also, India played a notable part.

FINANCE

Data on Tax

The annual report of the Union Ministry of Finance does not generally receive the importance it deserves. This may be partly due to the fact that, unlike the Economic Survey and the Explanatory Memorandum, the annual report is issued some weeks after the presentation of the Central Budget. Moreover, the report appears almost simultaneously

Number of assessments completed	1957-58	1958-59	1959-60
Number of assessments completed ...	1,445,178	1,588,103	1,672,790
Balance pending at the end of the year ...	1,003,134	1,131,533	1,163,515

It will be seen that the number of assessments completed each year has shown a steady increase.

As regards collections, there has been an increase from Rs 220.27 crores in 1957-58 to Rs 228.30 crores in 1958-59 and Rs 253.77 crores in 1959-60. Collections up to the end of October 1960 reached Rs 108.19 crores as against Rs 87.98 crores in the corresponding period of the preceding year.

Special attention is paid to the quick disposal of appeals by the Appellate Assistant Commissioners and the following figures are given to show that the Department has succeeded in arresting the accumulation of appeals:—

	1957-58	1958-59	1959-60
Arrear appeals at the beginning of the year	100,637	83,230	82,914
Appeals filed during the year	104,069	119,198	113,846
Appeals disposed of	130,476	119,514	114,497
Pendency at the end of the year	83,230	82,914	82,263

Dealing with the new taxes, the report points out that the total number of Wealth-tax cases for disposal during the year including the cases brought forward from the preceding year was 44,268 at the end of October 1960 of which 11,955 cases had already been disposed of till that date. The total number of Expenditure tax cases including those brought forward from the preceding year was 6,800 out of which 4,310 cases were disposed of during the year. For Gift Tax, the number of assessments completed up to the end of October 1960 was 3,031. The trend in the revenues of these three taxes in recent years is as follows:—

	(In Lakhs of Rupees)		
	1958-60	1960-61	1961-62
	(Acts)	(Revised)	(Estimated)
Wealth Tax	12.11	7.50	7.00
Expenditure Tax	79	90	80
Gift Tax	80	80	80

In the sphere of indirect taxation the report refers to the changes introduced in excise and

with the similar reports of the other Ministries of the Government of India with the result that the former is given inadequate attention. This is a pity because this report contains a good deal of interesting and useful information about the working of this important Ministry.

The Ministry has three Departments: Revenue, Expenditure and Economic Affairs, each under a Secretary. The report for 1960-61 describes in detail the achievements of each of these Departments. So far as the Department of Revenue is concerned, the report gives the following data about the number of income-tax assessments completed in recent years:

	1957-58	1958-59	1959-60
Number of assessments completed	1,445,178	1,588,103	1,672,790
Balance pending at the end of the year	1,003,134	1,131,533	1,163,515

customs duties and the measures adopted to prevent smuggling. It is stated that in the first ten months of 1960 total seizures of smuggled goods amounted to Rs 1.89 lakhs—gold worth Rs 1.09 lakhs, diamond and precious stones Rs 19 lakhs, currency Rs 5 lakhs and consumer goods Rs 56 lakhs.

The Department of Expenditure also appears to have done useful work. The Central Economy Board, for instance, concentrated its attention on the following aspects:—

(a) To find out from the critics of the administration their concrete grievances and try to remedy them to the extent possible;

(b) Internal examination of selected sectors of administrations;

(c) Revision and simplification of rules and regulations;

(d) Location and avoidance of extravagant expenditure; and

(e) Improvement in management of records.

Special steps are also being taken to study the position about the existence of surplus staff and to suggest ways and means for effecting greater economy and efficiency. A preliminary analysis has revealed the following facts:—

(a) Administration and personnel management in the Secretariat and other offices give rise, by and large, to standard types of work but it is entrusted in different offices to personnel of varying status. Rationalisation in such work, besides securing greater equity among personnel doing equally responsible work, is likely to result in economy. House-keeping accounts for nearly 200 sections in Delhi alone.

(b) Staffing pattern at present is related to the status given to an office, namely whether it is Secretariat, Attached or Subordinate Office. It is not always linked to the nature and

content of work. A great deal of rationalisation is possible and it is a source of fruitful economies.

(c) Registration, preparation of documents and communication of decisions are taking, in many cases, more time than the making of decisions. Studies are necessary to determine the minimum work content of any ancillary jobs in relation to main work in order to reduce the time taken to perform them.

(d) Several pressures, beyond the control of officials, are distorting the distribution of their time to major objectives of their jobs. An activity sampling of the senior and middle level jobs is likely to disclose several factors, which, if taken care of will lead to better utilisation of time in proportion to the importance of the objectives. Activity sampling is being undertaken in a few instances to demonstrate its utility. Important economies can result from it in the utilisation of senior experienced personnel particularly among technical officials.

(e) Meetings also occupy a large part of the time of senior and middle level officials. The cost of meetings relevant to the decisions taken cannot be judged during the course of work studies. Since meetings are becoming an important feature of Government machinery, a study of their utilisation may have important results.

The section in the report dealing with the work of the Department of Economic Affairs describes the loan operations of the Government, banking legislation, savings movement etc. The following figures are given about the trend in receipts from small savings:—

Year	Net Collection
1956-57 ..	Rs. 61.52
1957-58 ..	69.56
1958-59 ..	78.45
1959-60 ..	84.31
1960-61 (R. E.) ..	100.00
Total ..	Rs. 393.84

The report also contains many interesting items of information. We are told, for instance, that the three mints at Alipore, Bombay and Hyderabad worked in 1960 at the rate of 48 hours per week as against the normal working hours of 37½ per week. The total output of coins from the mints in 1960 was about 752 million pieces valued at about Rs 50 million. Similarly the Security Presses also worked overtime. About 2,367 million pieces of currency and bank-notes valued at about Rs. 10,492 million were printed during 1960. In order to cope with the increasing demand for notes, a new Currency Note Press is being set up at Nasik. The new Press will go into production in 1961.

Indian Finance

29 April 1961

FOOD Rs 192.84 Crores of Imports in 1960

In the report of the Ministry of Food and Agriculture, it is stated that 5.05 million tons of grains costing Rs 192.84 crores (including freight) were imported in 1960. The imports exceeded those in previous years, but as much as 4.3 million tons came under public Law 480 and by way of aid. India's imports for cash in 1960 totalled 330,000 tons of wheat and 430,000 tons of rice. The reduction in imports from Burma under the 1956 agreement and that of 1959 stands out. But an agreement to import 200,000 tons of rice in 1961 resulted from the visit of a Burmese trade mission. The fall in Indo-Burmese trade is a result of the new agreement to obtain rice from the UAR and the USA.

There is a total ban on export of all foodgrains since 1956 but no indication is available about exports of wheat flour; mainly because the milling industry may find many outlets, it may be argued that special exports should be allowed. The Government's food reserves at the end of 1960 mounted to 1.91 million tons against 0.78 million tons owing to the US food supplies arranged for by Mr S. K. Patil. Storage capacity has been improved and a silo is being built in Calcutta. The freight for US grains (higher because US ships are employed) is paid for in rupees at a lower rate than usual. But Indian ships are used for import of grain from Canada and Australia and rice from Burma is brought in Indian ships. The outlook for shipping may be called good in view of the guaranteed imports.

The sugar output is up owing to the higher cane price—Rs 1.62 per maund—and the tax relief available since 1959. The industry is able to produce 2.5 million tons because of new mills commissioned and the Third Plan target is now up to 3.5 million tons. Shipments of sugar in January 1961 totalled 50,000 tons through the Export Agency. Whether it is the STC or an ad hoc agency organised by mills is not known, and how losses will be apportioned is not known. The Ministry's report makes no mention of distillery products or malt liquor shipped by India in 1960. There is a good chance of selling beer as well as rum abroad and the export line may become important owing to high prices at home further raised by excises. Vanaspati exports rose to 6,322 tons in 1960 but excess of productive capacity and the high prices of edible oils are retarding factors at present. The vanaspati industry, except for a very few prosperous units, may be regarded as a pocket of persistent depression.

IRRIGATION & POWER One target hit, the other missed

The development of irrigation and power is primarily the responsibility of the State Governments. But most of the major multipurpose projects are being financed almost entirely by loans from the Centre, so that the Union Ministry has a direct interest in their efficient, economical and early execution. Besides laying down the general policy, the Union Ministry has the following functions: watching the progress of execution of projects and of costs against estimates; examination of schemes formulated by States; study of international aspects of utilisation of water resources; optimum utilisation of plant and machinery available with State Governments project authorities; formulation of measures to ensure efficiency and economy in the execution of River Valley projects; and arranging for foreign exchange requirements of the projects. The report of the Ministry of Irrigation and Power for the last year of the Second Plan invites a comparison of the targets and anticipated achievements.

The Second Plan as originally formulated envisaged an increase of 3.5 million kw in the installed generating capacity of power plants in the country. Shortage of foreign exchange forced a reappraisal and the target of additional capacity was reduced to 2.3 million kw. During the first four years of the Second Plan, installed capacity has been increased by about 1,387,300 kw and another 8,95,500 kw is likely to be added during the year making a total of 2,282,800 kw for the plan period.

While the revised target for power has been achieved, the position regarding irrigation is rather confused. According to the figures given in the annual report, which are the same as in the Third Plan Outline, potential at channel outlets from major and medium irrigation projects under the two plans has increased from 6.5 million acres in 1955-56 to 9.6 million acres by 1958-59. The anticipated figure for 1960-61 is 14 million acres. The Second Five Year Plan estimated the anticipated increase in irrigated area during the First Plan at about 6.3 million acres and during the Second Plan at 12 million acres. It appears that the area brought under irrigation during the First Plan was 3 million acres and for the Second Plan will be of the order of 7.5 million acres in terms of potential so that the shortfall over the two plan periods is more than four million acres. The reasons for the failure to reach the targets envisaged when the Plan was formulated are nowhere explained and the questions it raises are yet to be faced and answered. If instead of irrigation potential at channel outlets,

the figures of utilisation are taken into account, the gap between targets and achievement is much greater. The figures of anticipated utilisation, for 1960-61 are 10.5 million acres (gross) and 9 million acres (net). This means that benefits of irrigation projects have accrued to half the acreage they were intended to serve. As it has nowhere been suggested that shortage of foreign exchange proved a serious hindrance to the execution of irrigation projects, it is permissible to assume that defective planning and tardy execution are the main factors responsible for the failure to reach targets. It may be mentioned in this context that the Ministry's report points out that "the need for careful coordination in planning and execution of the various stages for timely utilisation of irrigation benefits has been impressed on the State Governments from time to time."

As regards the major river valley projects, the important events of the year were the inauguration of the Gandhi Sagar Dam and powerhouse and the Kotha barrage of the Chambal project; commissioning of the two units of 90,000 kw each in the Left Bank Power House at Bhakra; and the inauguration of the Kundah Power House II and the Kundah Hydro Electric Extension Scheme. Another important event of great significance for the development of Punjab and Rajasthan was the signing of the Indus Waters Treaty on 19 September 1961.

In view of the chronic shortage of power experienced all over the country, the indication given in the report that the Third Plan outlay on power development was likely to be increased from Rs 975 crores in the Draft Outline to Rs 1,112 crores will be received with widespread satisfaction. The outlay on irrigation will be likewise increased from Rs 650 crores to Rs 656 crores. The increased allocation for power is expected to raise the total generating capacity in the country to 13.3 million kw at the end of the Third Plan. Of the additional capacity planned, 2.8 million kw will be from schemes continuing from the First and Second Plans and the remaining from new schemes.

INFORMATION

AIR to be Lighter

As far as the general public is concerned, the I & B Ministry is identified with the AIR, though the All India Radio is only one of the many constituent units which the Ministry operates as channels for publicising Government policies and activities. These include besides the AIR, the Directorate of Advertising and Visual Publicity, the Press Information Bureau, the Films Division, the Publications Division, Field Publicity and the Song and Drama

Division. But AIR, the oldest member of the I & B family, remains pre-eminent and has to take the rap when the entertainment dished out is not to somebody's liking. The most significant development of the year for AIR has been the finalisation of a plan for the installation of 55 medium wave relay transmitters and two shortwave transmitters for extension of broadcast coverage of the country and provision of an additional light programme channel at most of the existing stations. The Ministry's annual report points out that this plan is being implemented on the highest priority. Other development programmes of the AIR, such as the setting up of 50 kw mw transmitter at Trichy, construction of permanent studios at Poona and Bhopal, and expansion of studio facilities at Trivandrum, made headway during the year. To the list of 7,000 approved classical music artists, a further 500 were added during the year. The AIR has also rendered a great service to posterity having completed the work of processing, on long playing microgroove records, the various recorded prayer addresses of Mahatma Gandhi.

Along with other units under the Ministry, the Directorate of Visual Publicity also expanded the range of its activities. The publicity work of 85 autonomous bodies of Government was handled by the Directorate last year as against 58 in 1959. The report also draws attention to the increasing use of Indian language papers for press advertising. And the PIB with services in 13 languages functioned as the essential link between the Government and public through the Press.

The celebration of the India Plan Week in January 1961, was one of the important activities of the year designed to focus public interest in the progress of planning. The annual report gives the tantalising information that the Research and Reference Division of the Ministry conducted a survey to assess public reactions to programmes of publicity for the Plan. While details are given of the number and percentage of persons (classified as officials and non-officials) who responded to the questionnaire, and it is said that the survey elicited response sufficient for broad inferences, the Ministry is apparently not yet ready to share the findings with the public.

LAW

Delegation of Powers

The report of the Ministry of Law, Government of India, contains a comprehensive picture of the working of the Ministry. The main functions of the Ministry are to advise other Ministries and Departments of the Government

on legal matters, to draft Central Bills, Ordinances and Regulations, and follow them up in their various stages up to their enactment and promulgation, to draft Bills and Ordinances for States, whenever such occasions arise, to scrutinise statutory rules and orders from the legal and drafting point of view and to make arrangements for the publication of Central enactments as and when required in a convenient form. Apart from these, the Ministry is also responsible for legislative and other actions pertaining to subjects allotted to it, including elections to the Parliament, Legislatures of States, and the offices of the President, and the Vice-President.

The functions of the Ministry are carried out by two separate departments, viz., the Legislative Department and the Department of Legal Affairs. The Department of Legal Affairs is classified into five distinct sections, namely, the Advice Section, the Litigation Section, the Judicial Section, the Central Agency Section and the Election Section.

The Advice Section of the Ministry advises all the Ministries and Departments on all legal matters including the interpretations of the provisions of statutes and statutory rules, regulations, orders, bye-laws notifications and the like.

The Litigation Section functions as a liaison office between the Government Counsel at Delhi and the various Departments of the Central Government and briefs the Counsel after collection and scrutiny of the relevant materials and renders assistance in the proper conduct of the cases.

The Judicial Section deals with the work relating to the engagement of law officers of the Government, the arrangement to be made with the State Governments with a view to enlisting the services of the State Law Officers on behalf of the Union Government, the making of reciprocal arrangements with foreign Governments for the execution of civil decrees, enforcement of maintenance orders, services of summonses and other processes in civil matters and the examination of witnesses in foreign countries on commissions.

The constitution of Central Agency System has proved beneficial in more than one way. Those that require special mention are the greater co-ordination brought about between the Central Government and the State Governments on several matters brought before the Supreme Court and the greater economy and efficiency attained with the functioning of this Section. The Election Section is associated with all matters pertaining to election law and election expenditure, the administrative matters concerning the Election Commission and the delimitation of Constituencies.

The Legislative Department, on the other hand, deals with the

work relating to the drafting of Bills, Ordinances, and Regulations and the scrutiny of statutory rules, orders, notifications, etc. The responsibility of implementing the recommendations of the Law Commission, and the printing, publication and translation of Central laws, is entrusted with this Department.

POSTS & TELEGRAPHS Targets Hit

The Posts and Telegraphs Department of the Ministry of Transport and Communications reports continuing progress in all spheres of activities during 1960-61. With the Second Plan almost at its end, the report holds out fair chances for achieving the Second Plan targets in respect of opening of new post offices. The Second Plan fixed the target for new post offices throughout the country at 20,000. Against this, 15,455 new post offices are revealed to have been opened in the first four years. During the last financial year, 3,464 more post offices were opened upto 31 December 1960, which leaves a balance of 1,081 post offices to achieve the Second Plan target. Considering that over 2,000 more post offices were proposed to be opened during the remaining period of the last financial year, prospects can be reckoned bright for the Second Plan target having been exceeded. In judging the performance in this field, account has to be taken of the initial handicaps in the nature of the imposition of the ban in June 1957 on all new constructions costing more than Rs 20,000 which remained operative up to February 1959 and the reduction in the allotment of funds as a result of the curtailment of the Plan provision in September 1958. That, in spite of these early limitations, the Second Plan schemes for opening new post offices should be fulfilled is exceedingly gratifying.

Apart from the expansion of new offices, the postal department's achievements during 1960-61 included introduction of new services, one to New York and three services for despatch of mails to the West. Another improvement effected was the extension of the air parcel service, insured air mail letter service and insured air parcel service to several foreign countries.

In respect of telegraphs, the liberalised policy adopted by the Post and Telegraph Department

envisaged the extension of such facilities to District, Sub-divisional and Tehsil towns. The report takes credit for the provision of telegraph offices in all the district towns by the end of December 1960. In respect of sub-divisional head-quarters, 535 are shown to have been provided with telegraph offices which leaves a balance of only 13 without the facility of telegraph offices.

In respect of telephones, it is stated that the liberalised policy of providing telephone facilities at district and sub-divisional head-quarters continued to be operative during 1960-61. Only 19 district headquarters are shown to be without telephone exchanges at the end of December 1960. The number of sub-divisional towns without telephone facilities by the end of December 1960 is shown at 36. The number of telephones in the country also shows an impressive rise by 30,070 to 449,070 between 31 March and December 1960.

TRANSPORT Shipping, Ports

Transport programmes under the Second Plan were mainly directed to the development of railways with shipping and road transport being relegated to minor roles. While presenting the Railway Budget last month, Mr Jagjivan Ram, the Railway Minister, took credit for satisfactory performance of the railways during the Second Plan. In respect of shipping and road transport also, gratifying progress is revealed in the report of the Department of Transport and Communications for 1960-61. The tonnage target for shipping under the Second Plan was 900,000 GRT. Against this, the Indian tonnage owned as on 1 December 1960 is shown to be 852,000 gross tons. Though this reveals a slight shortfall against the targeted tonnage, considering that some ships are under construction, and also that there are proposals to purchase a few second hand ships, chances for realising the Second Plan for shipping tonnage are bright.

The central weakness of the Indian shipping industry arises from the undeveloped capacity for shipbuilding in the country. The Hindusthan shipyard at Visakhapatnam is being developed to

come a modern shipbuilding centre. It is a measure of the progress made by this shipbuilding yard that the value of production has gone up from Rs 125.36 lakhs in 1952-53 to Rs 4,01.48 lakhs in 1959-60. The shipyard has so far delivered 24 ocean going ships and two small crafts in addition to a mooring vessel, aggregating 116,943 gross registered tons. The net profit at Rs 68.873 for the year ended 3 March 1960 shows satisfactory financial working and may be compared with the net loss reported for the previous financial year. The development of the shipyard has to be further intensified to step up capacity for ship building, and the Third Plan provides an outlay of Rs 244 lakhs toward this end.

Development of a second shipyard at Cochin in the Kerala State is another pivotal programme for the shipping industry under the Third Plan. An allocation of Rs 20 crores has been sought in the Third Plan for this project. Barring the inclusion of this scheme, the Third Plan for the shipping industry is open to the criticism of trying to soft pedal development. It is notable that, while the National Shipping Board recommended a target of 1.42 million tons to be achieved at the end of the Third Plan period at a total cost of about Rs 118 crores, the Planning Commission has fixed the ceiling on outlay at Rs 55 crores for the expansion of Indian tonnage. The allocation made by the Planning Commission will permit an expansion of tonnage of only 180,000 GRT.

Port development in the Second Plan is shown to have lagged behind and the expenditure incurred in the first four years reveals grave shortfalls. While the Second Plan provision for major ports was Rs 99 crores, expenditure in the first four years was only Rs 32.72 crores. All the same, it is noteworthy that some of the important schemes included under the Second Plan have been completed. The construction of the four additional berths at Cochin, the wet dock scheme at Madras, the dredging of the Fulta Point at Calcutta and the electrification of cranes at the Alexandra Dock in Bombay are the important Second Plan landmarks in port development. For the Third Plan, the Planning Commission has fixed the outlay for major ports at Rs 75 crores of which Rs 28.55 crores and Rs 25.61 crores have been allocated for the Calcutta and Bombay ports respectively. A notable feature of the Third Plan schemes for port development is the greater emphasis laid on the development of minor ports. Outlay for minor port development has been increased from Rs 5 crores under the Second Plan to Rs 10 crores in the Third Plan. The report of the Intermediate Port Development Committee has provided the basis for planning minor port development in the Third Plan.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THERE are moments when even the journalistic beast in us stops looking for the ridiculousness of the sublime. This, President de Gaulle's, if not France's, finest hour, is one such. "La France, C'est Moi". At any other time this assumption of President de Gaulle's, at once vaguely mystical and narrowly legalistic, would have sounded faintly absurd. But when he invoked it last Sunday and called upon every Frenchman and every Frenchwoman to "help him", he seemed to be stating the obvious. On this occasion, he certainly had a more firm basis for his claim that he was the only legitimate power in France than when, during the war years, he quarrelled with President Roosevelt by implying that he was the only legal repository of France's usurped power. Now that the "odious and stupid Algerian adventure" has come to an inglorious end, it is proper to recognise that only President de Gaulle's faith in his and France's destiny could have saved the Fifth Republic. Last November General Raoul Salan, had said, "If it should be that Algeria does not remain French, I would go to fight anywhere that was necessary". "Fighting" apparently did not exclude fighting Frenchmen nor "anywhere" exclude the French soil. In the complacency of a foiled coup and a captured ringleader, it is likely that we may forget how perilously near civil war France was. And the rebels are far from spent. The present coup is a logical sequel to that of January, 1960. Challe, Salan, Zeller and Jouhaud merely took over from where Ortis and Lagailard left off. So far only Challe has been captured and the others are stated to be trying to escape to Spain and obtain political asylum. If they succeed, they may yet be able to create trouble. Over the Algerian question, President de Gaulle has shown an amount of patience and understanding that deserves to succeed. In this context, it is heartening to find the FLN (whose absence at Evian is now explained as due to fears of the kind of revolt that did eventually take place) has also shown admirable restraint.

The lunatic fringe in politics has always been part of the democratic landscape and generally speaking, the goings-on in this region have added to the meagre stock

of the gaiety of the nations. But the John Birch Society, about which Mr Kennedy was asked at his press conference on Friday last, is madder than most other such eccentric groups and not so funny. And that was why Mr Kennedy's reply to questions about it had sombre overtones. One Robert Welch, a Massachusetts candy manufacturer is reputedly its founder and it is named after one John Birch, a missionary from Georgia, who is claimed to be the first casualty of the Third World War, which, of course, is already on. Mr Birch, who, by the way, is said to have been born in India, is reported to have been killed by the Chinese communists ten days after the V-J day. The Society's list of betes noires is long and variegated. Among these are foreign aid, United Nations, NATO desegregation, incometax, Earl Warren, Eisenhower and of course President Kennedy and his new Frontiersmen. For those who feel baffled by finding Eisenhower in this motley array of hatreds, it is necessary to explain that Mr Welch thinks that Mr Eisenhower has been "a dedicated, conscious agent of the communist conspiracy!" A rather sad come-down for Ike whom everybody liked until the other day and if some don't today, it is for reasons other than those of Mr Welch! Support both tacit and open, is apparently extended to this Society by some influential people. On its governing body are Emeritus Professors and ex-Judges; and Major General Edwin A. Walker stationed in West Germany who has just been suspended pending inquiry into charges of anti-communist indoctrination of troops is alleged to be a sympathiser. The New York Times recently carried reports that such indoctrination has been in operation for about six months and copies of Robert Welch's "Life of John Birch" have been distributed. Despite these disclosures of neo-isolationist tendencies, it is unlikely that the influence of Welch is at all extensive. For the moment, however, the American administration's stand on Cuba may provide a convenient sounding board for the Society's ideas. But as Mr Kennedy remarked at his press conference, the John Birch Society is not "wrestling with the real problems which are created by the communist advance around the world". Mr Kennedy detailed some of these problems

and hoped that "all those who are concerned about the advance of Communism would face these problems and not concern themselves with the loyalty of President Eisenhower or President Truman or Mrs Roosevelt or myself or someone else." But the John Birch Society which feels that the US Government has been "the greatest single force supporting the communist advance while pretending to oppose it" is hardly likely to heed such advice from such quarters.

Perhaps it is a little late in the day to bring up this complaint, but I did think at the time our census was on that its curiosity was remarkably limited. I bring it up at all now because I find that the British census recently concluded has used a far wider range of questions. As it was, the gentleman who came to my place had no more than half a dozen questions to ask and his preoccupation, if I remember right, was principally numerical and linguistic. The British census on the other hand, has asked for such details as when one left school, professional and other qualifications, eating habits and whether the house one had was rented, owned or mortgaged, and a whole lot of other things. Considering the amount of money we spent on our census, we might also have asked a few more questions, questions of some value to our planners. For instance, there is a much publicised desire to know the destination of the disbursements of over Rs 10,000 crores under the two plans. Had the census enumerator been less of a gentleman and asked me about my emoluments, I might have murmured at first, but would not have really minded letting him know. I know that there are others who would be less ready with the information for notorious reasons, despite the promised inviolability of the information given. But the attempt would have been worth making, for the Mahalanobis committee would then have had some factual basis to go on, though large allowances would still have to be made for errors. Likewise, speculation about rural indebtedness is rife and the Reserve Bank's survey is far from complete. If every rural household had been asked as part of the census programme how steeped in debt it was, we might have made a beginning in the compilation of a very important species of statistics. Again, there have been complaints that the report of the Second Agricultural Wages Inquiry Commission suffers from defects inevitable in the present state of statistics. Had the census collected data on rural wages the next inquiry will have some data to go on. Indeed,

the census could, to the extent possible, have reduced the merely statistical part of the work of many future commissions. I know the objection that it would have made the work of the census commissioners too unwieldy. But the point is that the collecting itself could not have taken much time, and the processing could have been done at leisure. As it is, all that the census has done by its too exclusive preoccupation with numbers and languages is to let loose quarrels about both among politicians.

I have never had much luck with taxis and am not therefore surprised that I am yet to meet the self-effacing owner of WBT 1795. Ever since the Statesman reported this young man's New Year resolution to be courteous and considerate to his fares, I have been wanting to make his acquaintance, but so far without success. Nor can I, I regret to say, find any evidence that his example has inspired his confreres to any considerable extent. But then, I suppose, taxi drivers and their fares are natural enemies, whether they live in Calcutta or Bombay, Paris or London. The language of the Parisian baulked of his tip or his right of way is, I am assured, unprintable, and mercifully for foreigners, incomprehensible. And recently, London cabmen whom a fickle public threw over in favour of the competing (somewhat unfairly) mini-cabmen, complained to Time: "That is the public for you. If all the ten thousand of us went to hell, they wouldn't care. But I ask you: if there is a more efficient and courteous taxi service in the world, you name it. It takes New Yorkers to appreciate us." Not to be outdone in transatlantic courtesy, Time added in a foot note that New Yorkers did appreciate. Similar kind thoughts about taxis in towns other than the one you happen to be in are not uncommon, but they cancel each other out. However, I made another discovery recently. The institution of "private taxi", fairly well-known in Madras, has made its appearance in Calcutta also. Waiting forlornly for a taxi in Chowringhee the other evening, I was asked to step in what looked like the car of somebody temporarily out of town. And the kindly man who took pity on me appeared to my nasty mind as a domestic chauffeur without his uniform. Though smitten by qualms, I was sorely tempted to accept the offer. But just then came a regular taxi to save me from what I am sure are several offences in the IPC. The Sardarji at the wheel after satisfying himself that a good five miles separated me from my destination, asked me to hop in, which I did. Now I shall never know who the good Samaritan was and what is more important whose car it was that was being so unostentatiously useful in an otherwise unfeeling city.

Foreign Assistance

QUESTIONS on Cuba, Laos and other hot, international political issues have practically blotted out the important indications regarding new thinking in Washington on assistance to India, given by Ambassador Galbraith at his first press conference in Delhi last week. So it may be worth while to reiterate here the main points made by the US Ambassador.

Mr Galbraith declared that it was clearly seen in Washington that India offers one of the most challenging efforts to escape from poverty through solid, self-sustaining goals. The new approach to developmental aid to India is governed by these considerations:

That the Indian Government is the best judge of what projects need priority assistance.

That the ruling consideration from now on would be to accept India's best judgment.

That there is strong desire in the United States to approve projects on practical as distinct from any theoretical or ideological grounds.

That there is no doubt in the minds of those who are associated with the problem of assistance that India would need more steel in the Third Five-Year Plan period. "The United States is discussing possible participation in India's fourth steel plant at Bokaro.

That there should be a single agency to co-ordinate assistance programmes which hitherto were the divided responsibility of a number of agencies.

That long-range assistance be provided to India. A Bill is before the US Congress asking authorisation of funds on long-term basis.

That friends of India do not regret the fact that the Soviet Union is participating in the task of providing assistance to India.

New Delhi has for some time been aware of the readiness of the new US Administration to view India's problems of external assistance from the Indian point of view. But officials here are not sure how far the US Administration will be in a position to enter into firm commitments at the World Bank Consortium meeting this week, in advance of Congressional approval of the foreign aid programme.

If the US Government, however, is able to give even a rough indication of the aid it is prepared to extend to India over the Third Plan period, the uncertainties regarding implementation of several vital projects will be largely dispelled. The reference to US interest in the fourth steel plant has been noted here with great satisfaction.

Export Promotion Convention

While it is recognised that the Third Plan cannot even get started without a massive dose of foreign assistance, it is also being increasingly realised that it cannot proceed very much further, unless exports are stepped up to a level adequate to meet the bill for maintenance imports as well as repayment obligations. In a brilliant address to the Export Convention held last week, Professor J. J. Anjaria explained the theoretical and policy approach to export promotion. The convention was held under the joint auspices of the All-India Manufacturers' Organisation, the All-India Exporters' Chamber, and the Indian Council of Foreign Trade. The approach of Development Planning in India to questions of foreign trade has undergone a revolutionary change in the course of one decade of planning. It has moved from isolationism, through import substitution for attainment of self-sufficiency to active promotion of exports to meet the growing import bill. The experience of planning in India has been that rise in the tempo of development is accompanied by increased import with the consequent need to step up exports. It will be a mistake to think that once modern productive apparatus is set up, imports will begin to fall off. On the contrary, the trend is for maintenance imports to exceed imports of capital equipment and that will continue. Professor Anjaria suggested that it may be necessary to scale up the export targets suggested for the Third Plan. Referring to the fear that increased exports without corresponding increase in production would set up inflationary pressures, Professor Anjaria said export even at a sacrifice was an effective way of mobilising resources for development, and holding inflation under control.

Professor Anjaria spoke after the Union Deputy Minister for Commerce and Industry, Mr Satish Chandra had dealt with the points raised by Mr Murarji J. Vaidya in his address to the Convention. Mr Satish Chandra referred to the basic problem of the tendency of imports in a developing economy to rise faster than exports. This is further aggravated by the existence of a large domestic market in which the short-term interests of industrialists stand in the way of increased exports. He made it clear that while Government was prepared to extend incentives, industrialists and exporters cannot claim them as a matter of right, but will have to prove the necessity for incentives in each case. He regretted that the response to the scheme of Export Houses was far from encouraging and said that the STC will have to be brought increasingly into the picture. Regarding export targets, he said that, while there was some possibility of upward revision of targets in the Third Plan over the yearly

average of Rs 690 crores suggested in the Draft Outline, the figure of Rs 1,600 crores a year proposed by some experts, to which Mr Vaidya had referred, was not practical, and could not be achieved without corresponding expansion of the productive equipment.

While the Minister dealt with most of the points raised by Mr Vaidya, he passed over in silence the reference made by Mr Vaidya to the delay in concluding a Treaty of Friendship, Commerce and Navigation with the USA. Mr Vaidya emphasised that the USA, as the most prosperous nation in the world, was the largest potential market for our exportable goods and signing of a Treaty of Friendship, Commerce and Navigation between the two great democracies is essential even purely from the point of view of Export Promotion. In the absence of such a treaty, he pointed out, the citizens of both countries suffer certain disadvantages and are precluded from enjoying certain privileges in the matter of trade, residence, visa facilities, citizenship, etc., as compared to the citizens of other countries which have concluded treaties.

Bicycle Exports

The question of exports also figured prominently in the speeches at the annual conference of the All-India Manufacturers' Organisation inaugurated by the Prime Minister last Saturday. Mr Nehru referred to the awakening in the country regarding the importance of exports which were no longer confined to a few traditional items. While the Prime Minister referred with satisfaction to the number of bicycles in villages as a reliable indicator of progress achieved by rural India during one decade of planning, it is relevant to point out that this humble vehicle is now being exported on a really significant scale. The completion of the despatch of the first consignment of 11,000 cycles to Egypt by a local firm of bicycle manufacturers, the Pearl Cycle Industries Ltd, was celebrated at a function last week; Mr Manubhai Shah, Minister for Industry, presided. This is not the first time cycles have been exported from India. But the significance of the occasion which justified the celebration consists in the fact that this is the first time that such a large consignment of cycles is being exported to a single destination by one company and that, too, a new entrant to the field of cycle manufacture. Started as a Private Limited Company in 1955, the Pearl Cycle Company converted itself into a Public Limited Company in 1960. Its output is 85,000 cycles with indigenous content of 97.8 per cent, which the Company expects to raise to 100 per cent in a few months when the expansion programme will be completed and its modern factory, erected at a cost of Rs 80,00,000 at Ballabgarh, 21 miles from Delhi, goes into production. Its capacity will be 500,000 sets of components and 150,000 complete cycles. The component wing will produce precision components like Bottom Brackets, Axles, Cups, Chains, Hubs, etc. In the context of the export drive, it is heartening to note that the Managing Director of the firm, Mr S. Kumar,

who concluded the contract for the export of the present consignment during his recent tour of the Middle East, regards this as only a beginning. Mr Kumar envisages larger and larger exports of Indian cycles in the near future.

While the annual conference of the Timber Dryers' and Preservers' Association which was inaugurated by the Union Minister of Agriculture last week focussed attention on the problem of economic utilisation of timber, the techniques of preservation and processing developed by the Forest Research Institute, Dehra Dun, and other agencies, were demonstrated at an exhibition opened by Mr K. C. Reddy, Union Minister for Commerce and Industry. Fireproofing of bamboo, thatch, ropes, etc., was the most spectacular of the demonstrations. If the fireproofing and preservative treatment of these cheap building materials, like bamboo and grass which are much growing and readily available in most parts of the country, is found practicable at reasonable cost, it will, for the first time, become a practical proposition to draw up and implement a programme for the provision of satisfactory low-cost growing population. The exhibits also included low cost bamboo (treated) reinforced mud walls.

Another interesting demonstration was pencil manufacture with hand tools. The Forest Research Institute has developed a set of hand tools for making pencils on a cottage industry basis. The tools consist of a plan for grooving the pencil slats, a half round cutting plane for rounding and cutting rough pencils, and a smoothing and finishing plane for final finishing of pencils. In addition a simple carpenter's hand plane and a simple wooden press are required. It is estimated that the investment required is about Rs 100 per working unit. The output is estimated at about 100 pencils per person per day, and the cost is said to compare favourably with the price of factory made pencils. Slats and leads will have to be purchased from outside and the Forest Research Institute has published lists of the sources. Pencil making by hand tools appears to be a suitable industry for development in villages under the CD programme.

BRITISH INDIA ELECTRIC CONSTRUCTION CO. LTD.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Dividend of 45 per cent for the year ended 31st December, 1960.

ARTIST'S IMPRESSION of the administrative building of ACC-VICKERS-BABCOCK LTD. in Durgapur

New Power in Industry

NERVE-CENTRE of ACC-VICKERS-BABCOCK LTD. in Durgapur

MARK THIS administrative building of ACC-VICKERS-BABCOCK LTD. which is fast nearing completion in Durgapur. Very soon busy design engineers, led by experienced men from AVB's overseas collaborators, will occupy the largest portion of it... giving initial shape to the power that AVB will add to Indian industry from its plant nearby.

This building will be the nerve-centre of AVB. Here the finest engineering minds will study, design and draw up plans that will 'tailor-make' mining and cement-making machinery, and vital steam-raising

plant for the many thermal power stations to be installed in the country during the Third Five Year Plan.

To ensure that steam-raising and industrial boiler plants give optimum performance, it is imperative that they be 'tailor-made' to suit varying local conditions and requirements. Here at this nerve-centre, all the advanced technical knowledge of AVB will be utilised to the fullest extent, to ensure that each project is designed for the finest possible performance.

...a Powerful Partnership for Progress

ACC-VICKERS-BABCOCK LTD.

16, Queen's Road Estate, Bombay 1.

THE BAREILLY CORPORATION (BANK), LIMITED

Thirty-third Annual Report of the Board of Directors to the Shareholders

The Directors beg to submit to the shareholders the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1960. The Auditors' report is also annexed thereto.

The Net Profit for the year including Rs. 271.62 brought forward from the previous year amounts to ... Rs. 1,34,688.77

The Directors recommend that the following appropriations be made out of the aforesaid profit:

1. To General Reserve ... Rs. 14,562.50
2. " Provision for Income-tax ... Rs. 54,000.00
3. " Bonus to staff ... Rs. 15,000.00
4. " Payment of dividends at 6% p.a. subject to income-tax and surcharge @ 30% on Cumulative Preference 'A' Shares Rs. 6,000.00
5. " " free income-tax on Cumulative Preference 'B' Shares Rs. 8,571.00
6. " " subject to income-tax and surcharge @ 30% on Ordinary Shares ... Rs. 33,439.50
7. " " subject to income-tax and surcharge @ 30% on Deferred Shares ... Rs. 3,021.00
8. " " charge @ 30% on next year's account ... Rs. 94.77

5. To be carried forward to next year's account ... Rs. 1,34,688.77

The working and earnings of the Bank continued to be satisfactory during the year. Keeping in view the welfare of their employees the directors are pleased to provide a sum of Rs. 15,000/- for payment of bonus to them.

This year the statutory Reserve Fund under Section 17 of the Banking Companies Act, 1949, has been separately shown in the Balance Sheet and Property Depreciation Fund of Rs. 82,191.50 has been excluded from the figure of 'Other Reserves' and shown under 'Other Liabilities' to comply with the directions of Reserve Bank of India.

Due to the fall in the market price of Govt. Securities there is a depreciation of about Rs. 20,891/- in the Bank's holdings therein based on the actual market quotations as on 31st December, 1960. The Bank has got ample reserve to meet the said depreciation.

In granting advances the directors always give due regard to liquidity. Almost all our advances are repayable on demand. The percentage of our unsecured advances is negligible, being about 2.4% of the total advances. Thus we keep the interests of our depositors above all other considerations.

During the year Shri Harish Kumar resigned from the Board of Directors. This was done out of deference to the suggestions of Reserve Bank of India as in their opinion his directorship was not consistent with his employment on an office of profit as Deputy

Managing Director. He is now serving as the Secretary of the Company.

In accordance with Article 113 of the Company's Articles of Association of our Directors namely Shri Balram Sharma and Shri Nawal Kishore retire by rotation from the Board and, being eligible, they offer themselves for reappointment.

The Directors are thankful to the shareholders and constituents of the Bank for their continued patronage and confidence.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

BALRAM SHARMA
Chairman.

NAWAL KISHORE
NARAIN PRASAD
DWARAKA NATH KAPOOR
D. C. SHARMA
GIRISH KUMAR CAPOOR,
Managing Director.

Jessop and Company Limited

Remarkable Achievement Inspite of Many Difficulties

Sir B. P. Singh Roy, the Chairman, on the company's Financial position

The following is the speech delivered by Sir B. P. Singh Roy, the Chairman of Jessop & Company Ltd to the shareholders at the 29th Annual General Meeting held on 20th April, 1961:—

Gentlemen,

It is with pleasure that I welcome you today at the Twenty-Ninth Annual General Meeting of your Company. For want of suitable and comfortable accommodation in your Head Office, it was decided to hold the Meeting in the Room of the Bengal Chamber of Commerce. I hope this meets with your approval.

As it will appear from the Board of Management's Report, the year ended 31-10-1960 was not free from difficulties. The early part of the year was badly affected by shortages of steel. Things are no doubt better now but we have a long leeway to make things really satisfactory. Though the availability of steel has improved, we find ourselves hampered by shortage of transport facilities both in bringing materials to our Works and in removing finished products. The shortage of foreign exchange also affects us as many other concerns.

A factor which affected the working of the year under review

was the prolonged delay in establishing manufacture of the new BOX wagon which replaced the old four-wheel covered goods wagon which was one of our chief lines of production. Because of the shortage of certain components, which the Railways had contracted to supply, the outturn of these wagons in the year ended 31-10-1960 was only 145, representing sales value of about Rs. 61 lakhs. At such a rate of output production was uneconomical. It should be realised that these wagons replace an older type of which we had thirty years manufacturing experience so that production ran at over 2,500 a year, or about Rs. 300 lakhs. The effect on the working of the Company is therefore obvious. The position has since improved, and is still improving, but it has a long way to go before the old level can be reached.

Another factor affecting the year's working was the contract for Electric Multiple Unit coaches. This was an entirely new venture and like all new ventures, relatively unremunerative in its early stages when all the teething troubles must be overcome. With the rapid industrialisation of the country, a company like yours is expected to make its contribution

to the development of our industries and in that connection the undertaking of new lines of manufacture by this company is not only desirable but essential.

We expect to complete delivery of the 18 Electric Multiple Units (3 coach) for Bombay in June, 1961. After some considerable delay we were given in June, 1960 a further order for 21 E.M. Units (3 coach) with two spare Motor coaches and 35 Special Trailers for Bombay. I regret to state that the import licence for the special electrical and mechanical equipment required has not yet been issued in spite of sustained efforts on our part. Until the import licence has been received it is not possible for us to place orders for the equipment abroad and this means that there will be a gap in production of E.M.U. coaches of approximately 7 to 9 months. Apart from the dislocation this must inevitably cause in our Works due to break in continuity of manufacture, this shortfall in E.M.U. production is even more regrettable at this time when there is a pressing demand for such coaches.

In order to fill the gap in production the Coach Works will take up the manufacture of Broad Gauge Motor and Parcels vans and

Broad Gauge Well wagons. The expansion to the Coach Works which I mentioned in my address last year, is now nearing completion.

Much of the essential plant for the new Bogie Works, which has been set up to manufacture the all-welded bogie for the BOX wagons, has now arrived and is being installed. Although further plant has yet to be received, we are now transferring manufacture of the BOX bogies to this Works and this should ease the load on the Structural Works where this work is at present carried out.

The demand for our diesel road rollers continues unabated and we are making strenuous efforts to raise production beyond the target of 200 rollers per annum. With this end in view we are setting up a new Works on our own land in Dum Dum, which will specialise on the manufacture of road rollers and allied equipment. Apart from freeing capacity in the existing Structural and Mechanical Works where our road rollers are at present built, the new Works will be better equipped to meet the growing demand which will rise further with the tremendous increase in road building in the Third Five Year Plan.

29 April 1961

We have now finalised arrangements with our collaborators, Messrs. Aveling-Barford Ltd., England, to manufacture the transmission for our road rollers and the necessary amendment to our manufacturing licence has already been obtained from the Government of India. All the special purpose plants have been ordered from abroad and when these are finally received towards the end of the year, we shall be able to take up the production of the transmission and will then have achieved almost 100% indigenous content as the engine is now made in Madras.

We are experiencing the greatest difficulty in recruiting skilled craftsmen for our Works. The shortage of skilled workmen is a factor which must retard expansion of the Engineering industry unless immediate steps are taken to train our young men along the right lines to meet the growing demand. This matter has been given the fullest consideration by your Board and it has been decided to extend the present Apprentice Training Scheme by setting up a Training School on land we have in Dum Dum.

You will have seen from the published accounts and the Board of Management's report that the Works' output during the year under review was Rs. 906 lakhs as compared to Rs. 648 lakhs during the previous year. This represents an increase of 40% which, I hope you will agree, is a remarkable achievement in the course of one year. Owing to the still uncertain supply position of matching steel and of components, particularly those which have to be imported, it is rather hazardous to make a

forecast of output during the current year 1960-61, but the trend of production in the first few months indicate that the year's output will probably increase by about 30% over that of 1959-60. Our order book is excellent and the demand for our products continues to be good.

As you will have read in the daily press, there is an acute shortage of electric power prevailing at present and should the position deteriorate any further, severe cut in the supply to our Works may be imposed with most serious results. Your Board is watching the position anxiously.

Since my address was printed there has been further deterioration in the supply of electric power due to the closing down of the Cossipore Generating Station. We have now been advised by the Calcutta Electric Supply Corporation that from the 17th April 1961 they have arranged to let us have our maximum power demand between the hours of 8-30 a.m. and 5-30 p.m. but no industrial power will be made available to us outside this period. This means that those sections of your Works which operated on both day and night shifts will be restricted to working on a single shift only. This will necessitate the laying off of several hundred workmen while output will be seriously affected.

I understand that while the immediate power crisis is likely to be relieved by the 8th May 1961 no real improvement can be expected for a further 6/8 weeks.

I hope that no efforts would be spared to remedy this serious situation which would affect production not only of your Company but

industrial output in general in this region.

As you must have noticed, the company's financial position has improved considerably in the last two years, but the continued rise in production and the need for expansion and rehabilitation are creating ever-increasing demand for additional finance. If, in addition, any important new line is taken up, demand for capital will be still greater. Your Board has, so far, avoided raising further share capital, which understandably would place additional burden on you, but I am afraid this cannot be postponed indefinitely. We have recently had the limit of our borrowing from bank increased by Rs 50 lakhs. Our securities may be adequate for getting some more accommodation from the bank and we may succeed in doing so but this will be too inadequate for our needs. Moreover, it is not only desirable but essential to maintain a proper balance between share capital and our borrowing.

In the Board of Management's Report the circumstances leading to the decision to buy over Jessops—Calcutta Ltd., London, and to convert it into a wholly-owned subsidiary of your company have been fully explained. The London company has become a wholly-owned subsidiary with effect from 27-3-1961. I need only mention here that the purchase of that company has been effected on very favourable and satisfactory terms.

The enactment of a law towards the close of 1960 regulating the payment of dividend on Preference shares has since set at rest the unfortunate controversy in this regard created by the Finance Act of the same year, although the

solution is not wholly satisfactory from the point of view of the shareholders affected. For the financial year 1958-59 they received a gross dividend of 7.14% and a nett dividend of 5% after deduction of income tax, whereas from 1959-60 onwards these figures will be 6.50% and 4.55% respectively.

Gentlemen, I would like to make mention of the most valuable asset your company possesses. I refer to the team of Staff and Workmen built up over the years and whose loyalty and hard work have enabled your company to prosper and grow to its present size inspite of some serious difficulties it had to face in recent past due to reasons well known to you. I am sure you would wish me to express our sincere thanks to all those in the company's employ who have contributed to the excellent results shown in the accounts before you. We are now about to complete the preliminary work necessary for the introduction of the incentive system at our Works, to which I referred in my address last year. As I then explained, this requires the most careful consideration as we handle a wide range of products.

Finally, I cannot close without referring to the retirement at the end of March this year of Mr S. S. H. Sitwell, a Member of the Board. Mr Sitwell has been in the company's employ for over 32 years and we will greatly miss his wide experience and guidance.

Note: This does not purport to be a record of the Proceedings of the Annual General Meeting.

The Bangalore Woollen, Cotton & Silk Mills Co. Ltd.

Heavy Excise Duty Affects Consumers

End of A Long and Fruitful Association with Binnys as Managing Agents

Mr E. F. G. Hunter, the Chairman, on Export Markets

Presiding at the Seventy-eighth Annual General Meeting of the Shareholders held at the Company's Office, Agraharam Road, Bangalore City on Tuesday, the 25th April, 1961, Mr. E. F. G. Hunter said:—

Gentlemen,

It is my privilege and pleasure to welcome you to this Annual General Meeting of the Bangalore Woollen, Cotton & Silk Mills Co. Ltd. and I propose, with your permission, to take as read the Directors' Report and the Accounts and Balance Sheet for the year 1960.

Trading conditions in Textiles during the year under review improved considerably and your

Company was again able to dispose of its full production at satisfactory margins. I particularly wish to mention the continued popularity of our union fabrics, 'Cotswol' and 'Angola' which we are, with encouraging success, beginning to establish in overseas markets. We continue to receive substantial orders for Angola from the Government of India for supply to the Defence Services. Unfortunately, difficulty in obtaining import licences for wool makes it impossible to satisfy the demand for these fabrics in the home market.

It is because of the shortage of imported wools and the concentration of the heavy woollen industry in North India, the chief

consuming market, that your Directors decided to discontinue manufacturing superior Rugs and Blankets.

The manufacture of Coarse Woollen Rugs has been uneconomic for some time due to falling demand and competition from handloom weavers. This fact caused your Directors to decide to stop manufacture and the Coarse Section was finally closed in December 1960.

The shortage of spun silk continued to be acute and in consequence the demand for filature silk fabrics increased. Production in the filature department is steadily increasing and we were able, during the year, to start up a number of looms which had been out of

commission for some time. It is hoped that during the coming year, we will be able to commission more looms in the Silk Section but this depends on high quality Mysore Filature Silk being available at reasonable rates.

Shortage of cotton during the year, due to the failure of the 1959-60 Indian cotton crop, was a source of considerable anxiety to both Government and the industry. Rationing and the imposition of ceiling prices were two measures introduced to meet the situation. Imports of short staple American cotton were made for the first time and imports of long staple cotton were increased. The larger quantities of long staple varieties which thus became avail-

able, enabled your Company to step up its production of fine shirts etc. I am pleased to say that there is every promise that the 1960-61 Indian cotton crop will be satisfactory. However, Government has, with a view to improving the stock position, decided to continue, for the time being, the controls imposed, and to import more short staple American cotton. It will indeed be encouraging if the "carry over" at the end of the cotton year in August is normal.

In December 1960 agreements were signed with the workpeople's representatives and with those of the clerical grades, implementing with effect from the 1st January 1960, the recommendations of the Central Wage Board for the Cotton Textile Industry. The agreements reached resulted in substantial increases in wages being given and a further increase to workpeople will become due on the 1st January 1962. Both agreements are to remain in force until 31st December, 1964.

The rationalisation measures introduced in accordance with the agreement signed in 1959, resulted, after an initial set back due to a large number of long service workers taking advantage of the Service Gratuity, in improved efficiency. The agreement signed in December 1960 and referred to earlier provides for the appointment of joint committees to consider further rationalisation in pursuance of the recommendations of the Central Wage Board. I have every hope that further progress will be made during the current year.

The new trend in revenue raising by indirect taxation, which was taken a step further by the Finance Minister in his budget of this year, is, despite the failure to give other reliefs, most welcome as it will spread over the whole community the cost of India's development. In my opinion, however, it is unfortunate that in doing so the Finance Minister has increased the already heavy levies of excise duty imposed on cotton textile goods. This increase which must affect the price to the consumer is the more difficult to comprehend when another Government Department is urging the cotton textile industry to reduce prices. In response to Government's plea, the industry has already voluntarily agreed to regulate prices and these had to be fixed after taking into account the substantial increase in the cost of cotton and the burden of higher wages which the industry must bear as a result of the implementation of the Wage Board recommendations. Meantime the Central Government has referred to a Tariff Commission the question of fair prices for cotton textiles and yarn.

Your Mills are particularly affected by the new excise levy on automatic loom production, which is subject to relief according to

export performance. It is the opinion of your Directors that insufficient thought was given to the effect of this levy before it was introduced and in any case, any form of penalty which does not apply equally to all mills can only be considered discriminatory. This levy will retard progress and modernisation.

Your Mills for a variety of reasons have not been large exporters of cotton piecegoods, but their 1960 performance showed an improvement. If they are to increase their exports, they must continue to enjoy the full benefit of the Government's incentive schemes. It, therefore, came as a great disappointment to learn that mills will now only be entitled to use 65 per cent of their hard earned dyestuff incentive import licences. This means that mills, such as yours which do not sell grey cloth, will have to buy the major part of their dyestuffs and chemicals at high prices from other import licence holders, thus increasing costs and making it more difficult to compete in overseas markets. Incidentally, the effect of the scheme, which is designed to benefit indigenous dyestuff producers, will be to cause them to pay higher prices for their raw materials.

This matter has been drawn to the attention of the authorities so that they are aware of effect this decision will have on the country's export endeavours, and I very much hope that an exception will be made in the case of mills such as yours who utilise fully, for their own purpose, any dyestuff licences they can earn.

In accordance with the terms of The Preference Shares (Regulation of Dividends) Act, 1960, which received the assent of the President of India on the 28th December last, the dividend on the Company's 6 per cent Cumulative Preference Shares has been amended to a dividend of 7.8%, from which the Company is obliged to deduct tax pursuant to Section 18(3D) of the Indian income-tax Act. An additional dividend of 1.8% was declared and was paid on the 17th February, 1961 to adjust the dividend already paid in respect of the year 1960. Henceforth the Preference Dividend will be paid by two instalments each of Rs 3.90 per share less tax, on the 1st January and the 1st July of each year.

The Companies (Amendment) Act, 1960 also received the assent of the President of India on 28th December, 1960 and was brought into effect from that date and the accounts before you have been drawn up in accordance with the Companies Act, 1956, as amended by the new Act. Many new restrictions have been imposed on companies, and many of the new provisions, for example those affecting inter-corporate investment, the payment of dividends, special audits etc, have no parallel in any other country in the world and must further inhibit good manage-

ment and enterprise. Many of the two hundred and eighteen clauses of the new Act will mean more paper work and time wasting form filling, which besides adding to cost must result in a diversion of effort and create new difficulties for administration.

It was mainly because of the various restrictions on Managing Agents imposed by the Companies Act, 1956 and the further restrictions which were at the time contemplated by the Amending Bill, since enacted, that Binny & Co. (Madras) Ltd. decided in 1959, after consultation with your Directors, to relinquish the office of Managing Agents of your Company which they did by tendering their resignation with effect from 31st December, 1960.

The resignation of the Managing Agents was provisionally accepted by the Board of Directors but in accordance with the provisions of Section 342 of the Companies Act, 1956, will not be effective until accepted by the Company in general meeting and as you will have seen from the notice convening this meeting, the Managing Agents' resignation is the subject of a resolution to be considered later.

With the approval of the Government of India, Managing Directors were appointed to take over the management of the Company from 1st January, 1961. The Managing Directors appointed have all had long experience in the management and business of your Company, and in this way continuity has been ensured. Officers and staff who had previously been engaged as employees of Binny & Co., (Madras) Ltd. on the business of your Company, also accepted employment with the Company from the 1st January, 1961 and I am pleased to report that the transfer of the management, which had been carefully planned, took place without any hitch and caused no disturbance whatever to your Company's business.

I am sure you will wish to join the Directors in expressing thanks to the retiring Managing Agents, Binny & Co. (Madras) Ltd., and their staff for the valuable services rendered to your Company since the Managing Agency Company was incorporated in 1920 and under whose management your Company has indeed expanded and prospered.

On your behalf I would also like to record appreciation of the services of the Mill Manager and the officers, staff and the workpeople at the Mill for their loyalty and for their efforts in 1960.

In conclusion I should like to express my appreciation to my colleagues on the Board for their close help and co-operation at all times and also to pay tribute to the valuable services rendered to your Company by Mr. E. J. M. Leigh, who during the thirty-two years he was associated with your Company, made a valuable contribution to its progress and pros-

perity. Mr. Leigh resigned from the Board at the end of 1960 prior to retirement.

Note:—This document does not purport to be a report of the proceedings of the General Meeting.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of a Final Dividend on the Company's Preference Stock for the year ended 31st March 1961 at the rate of £2-14-8.16/49d. per cent less Income Tax at 7s. 9d. in the pound equal to £1-13-6d. per cent. Payment will be made on 25th May, 1961 to those stockholders whose names are registered in the Company's Stock Register on 5th May, 1961.

Applications for transfers received in this office before 12 O'clock noon on Friday, the 5th May, 1961, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

BY ORDER OF THE BOARD:
H. C. BOWKER
AGENT.

VICTORIA HOUSE,
CALCUTTA, the 20th April, 1961.

THE BENGAL FLOUR MILLS COMPANY LIMITED.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the one hundred and twenty-seventh Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 19th May, 1961, at noon, to consider the Accounts of the Company for the year ended 31st December, 1960, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 5th May 1961 to 19th May 1961 both days inclusive.

By Order of the Board,
BALMAR LAWRIE & CO. LTD.
D. Manson.,
SECRETARY
Managing Agents.

21, Netaji Subhas Road,
CALCUTTA, 21st April, 1961.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

MANAGING DIRECTOR'S SPEECH

The Dunlop Rubber Company (India) Limited

Mr. John Luckham's Review

The 35th Annual General Meeting of The Dunlop Rubber Co. (India) Ltd., was held in Calcutta on the 27th April 1961. Mr John Luckham, Managing Director, said:—

Gentlemen,

The Directors' Report and Accounts have been in your hands for some time, and with your permission I will take them as read.

THE YEAR'S TRADING

Our Ambattur plant reached full production during the year and even with higher output from Sahaganj, we were still unable to meet the demand for our products. With the increasing demands of Government, vehicle manufacturers and transport operators, a difficult situation arose in the Replacement market for truck and bus tyres. In consultation with the Government of India we took a leading part in moves by the Tyre Industry to encourage the formation of Tyre Dealers' Associations to ensure equitable distribution of the sizes in short supply at list prices, and I am glad to say that the majority of these Associations have functioned efficiently and to the satisfaction of both Government and truck operators. The manner in which this task was carried out reflects great credit on both tyre dealers and consumers.

Our tyres continued to find ready acceptance with consumers and we were able to make increased supplies of our Highway truck and bus tyres, which proved extremely popular. Our car tyre remains the first choice of the discriminating motorist.

There was a further increase in bicycle production during 1960 and it became difficult to meet all the demands made on us for cycle tyres and rims. However, I am glad to say that we were able to step up our exports of cycle tyres to South East Asian markets and thus make a contribution to Government's export drive.

Sales of Industrial Rubber Products increased partly as a result of additional output from the Vee Belt expansion, mentioned in my speech last year. The equipment for an expansion of Conveyor Belting manufacture has been installed and trial production is in progress. With the increasing demand for this product during the Third Five Year Plan, we are confident of utilising this capacity in full.

Dunlopillo sales showed a further gain but despite the sub-

stantially higher output achieved through increased productivity, we were still unable to meet the demand. The requirements of the car manufacturers show an upward trend and the fulfilment of the targets of the Third Five Year Plan for vehicle production will necessitate an increase in our manufacturing capacity.

EXPANSION PLANS

You will see from the above that there is still a big demand for many of the Company's products which cannot be met, and the Directors have in hand a further major expansion of the Company's business, particularly in respect of our factory at Ambattur. This will require a substantial amount of foreign exchange and in order to arrange this a short visit to the U.K. was recently undertaken by myself and your Finance Director. I am pleased to say that, subject to Government approval, we are able to report that Dunlop Rubber Company Limited, London, are prepared to put the necessary sterling at our disposal initially in the form of a loan to be converted to equity capital at a later date. Negotiations and discussions with Government are now in progress but the Directors are not yet in a position to put forward their recommendations regarding capital reorganisation.

RAW MATERIALS

The consumption of natural rubber in India has been rising at a faster rate than production, and we are therefore increasingly dependent on imports. However, there are signs that long-term steps are being taken to improve production. Moreover the opening of the Government sponsored synthetic rubber factory in 1962 and the development of plans to produce locally other important raw materials such as rayon, rim strip, carbon black and certain rubber chemicals will greatly reduce the industry's import requirements, and so save foreign exchange.

FINANCE BILL, 1961

The recent Budget proposals did not change the rate of company taxation but they did enhance the amount of tax payable by companies through reducing the allowance in respect of Development Rebate from 25% to 20%. However, the increase in certain customs duties will have an adverse effect on costs whilst the relief in respect of excise duty on cycle rims will not benefit our Company. The introduction of a slab system for charging excise on cycle rims

on the same principle as cycle tyres, would have been more equitable.

The reduction of the tax on bonus issues from 30% to 12½% is a step in the right direction but we are of the opinion that this tax should not be applied to Reserves created on account of Share Premiums.

PROFIT AND LOSS ACCOUNT

The profit for the year after providing for depreciation, interest and taxation was Rs 1,24,56,228 compared with Rs 1,18,04,533 for 1959. As you will have seen from the Directors' Report, the profit after tax as a percentage to sales declined from 4.56% last year to 4.08%. This was almost entirely due to the high cost during 1960 of imported natural rubber, which we were not able to recover fully in our selling prices.

Excise duty is almost Rs 1,72,00,000 higher than 1959 due to the higher volume of sales on the one hand, and the new levy of excise duty on cycle rims which was effective from 1st March, 1960, which accounted for approximately Rs 59,00,000 of the increase. It is relevant at this stage to mention that the high excise duties leviable on our products absorb a considerable amount of working capital which earns nothing for the Company. This is a matter which is constantly under consideration by your Directors, and was represented to the Reorganisation Committee for Central Excise Duty when they visited Sahaganj recently.

The Tyre industry has borne a major burden of excise duty for many years and now the net has spread from the finished article to include certain raw materials, and has also been imposed on certain process materials inside the factories. The administrative difficulties and additional work which these latter extensions involve are considerable.

The amount of Bank Overdraft Interest this year has also substantially increased due to the higher working capital requirements arising from our increased trading activities and the increase in the rate of interest from 5½% to 6% from 1st October, 1960.

As you will have already observed, a sum of Rs 17,00,000 has been transferred to Development Rebate Reserve and a sum of Rs 37,50,000 is appropriated to General Reserve.

The Directors are recommending an ordinary dividend for 1960 at the rate of 21.5% subject to tax, which is the same rate as last year.

BALANCE SHEET

The net increase in Fixed Assets during the year was approximately Rs 22,00,000, principally on account of Plant and Machinery. Stock Inventories increased by Rs 84,00,000 on account of the higher level of output and sales, coupled with the increased cost of raw materials previously mentioned.

Investments have risen by approximately Rs 2,00,000 due to increased deposits with the Madras Electricity System and the Railways.

Sundry Debtors have increased in line with the larger volume of sales, as have also the current balances with the Customs, Railways and other authorities.

On the liabilities side, the larger borrowings through bank overdrafts, usance promissory notes and acceptances have been necessary to finance the larger working capital required for the greater volume of output from both our factories.

INDIANISATION AND MANAGEMENT TRAINING

In pursuance of our policy of progressive Indianisation of the Management cadre we continue to pay special attention to training which we regard as being of vital importance. Our staff must be kept fully conversant with the latest techniques and methods of manufacture and with future technical and production developments in the Dunlop Group. We are fortunate in being able to send selected personnel to our associated factories in the United Kingdom, Germany and France, and in recent months eleven senior employees from our factories have been overseas for this purpose. It is hoped that foreign exchange restrictions will not prevent us from continuing this policy.

There are also growing facilities for normal management training within this country and in particular I would like to express our appreciation for the good work which has been done by the Administrative Staff College at Hyderabad. We are taking full advantage of the opportunities which that institution offers and several of our Managers have already completed a course there.

EMPLOYEE RELATIONS

Last year I mentioned in my review the labour unrest early in 1960 at the Sahaganj Factory. Since then I can report that labour relations there have been satisfactory. Established negotiating procedures have been followed, go-slow tactics have been discontinued, and discussions between Management and workers have

been fruitful, particularly in respect of increased productivity, with greater reward to our workers. I am hopeful that our relationships with our employees in both factories will continue to be good, and that our future problems can be satisfactorily solved in the constitutional framework that exists.

We have worked towards building up a team spirit throughout our factory organisations, which will stand us in good stead in the future. Working and living conditions for our employees are regularly considered, and improvements have been made in welfare facilities and factory working conditions.

I believe there is a growing realisation that the Company's achievements are attributable to everyone concerned—shareholders, management and employees, whether in the factory or the office. All are inter-dependent and the success and welfare of the Company relies on the contribution each one makes.

I am sure that you will wish to join the Directors in extending their sincere thanks to all who have continued to give staunch and loyal service.

Note: This does not purport to be a record of the proceedings of The Annual General Meeting.

Markets

JUTE Quiet Trend

THE quiet trend that has come to characterise trading in the jute and gunny markets during the last two or three days seems to be due to a general lack of buying interest. While overseas buyers continue to keep to the sidelines in the hope of getting their requirements few months hence at reasonable prices, mills are not at all keen even to complete their quota of raw jute at the prevailing prices. The mills' position is simple enough to understand. With foreign buyers not prepared to pay high prices and with raw jute prices still at an uneconomic level, continued buying of raw jute at current levels will only entail loss. The position of some mills is said to be quite unenviable as regards stock of raw jute. These mills, it would appear, have perforce to buy raw jute if they want to avert a total shut down. It is this situation that has led to the speculation that the industry as a whole may approach the Government for permission for a total close down of all mills for a specific period with a view to ensure that the available quantity of raw jute is evenly spread over the period between now and the arrival in bulk of the next jute crop. In the meantime, the electric power supply position is, if anything, worsening. It is feared that industrial production in general in the Calcutta industrial area will show a sizable decline. The jute mills will also be obliged to work on a restricted scale. Thus proposal for complete close down for a few weeks may be linked with the power shortage problem and a solution may be worked out.

The prospect of a decline in production of jute goods in the next two or three months for one reason or another has had little effect on the overseas buyer. It is evident that consumers abroad prefer to follow their policy of buying as little as possible to meet their requirements, eating into their stocks, and restricting consumption. This is to be seen in the figures for burlap consumption in US during last month. During March, hessian consumption in US declined to 70 million yards from 72.9 million yards in the previous month. During March last year consumption was much higher at 80.6 million yards. The

present reaction of the US consumer to the high price levels of hessian is brought out by the reduced level of consumption so far in the current year. In the first three months of 1961, consumption has totalled only 216.2 million yards as against 226.8 million yards during the corresponding period of last year.

Although raw jute prices are somewhat quiet during the past two or three days, they were quite steady earlier. The fact that mills are not showing much interest is not bothering the holder much, for the simple reason that unless some drastic steps are taken with the sanction of the Government, mills will perforce have to take raw jute at the prevailing prices. The continued small arrivals at the upcountry markets and the growing belief that there is very little of the crop still to be disposed of are factors that are mainly responsible for the raw jute holders' confidence in their ability to continue to get high prices for their stocks. The current reports from the growing areas are also of a sort that is not very helpful to those who have been forecasting a bumper jute crop which would be available earlier. The continued hot and dry climate, although it has not so far adversely affected the standing crop is said to be delaying sowings in some regions. It is believed that unless showers arrive soon, there may be a setback to the crop.

TEA Subdued Optimism

TEA trade circles view the prospects for the new season with subdued optimism. With the weather conditions in North-East India remaining favourable for the crop, production has begun in many districts. It is hoped that the first export sale for the new season consisting of teas from all districts will be held on 15 May, 1961. This is almost a month earlier than last season when the first regular sale was held on 13 June, 1960.

Owing to the decline in the crop and good demand in the last season the sale of exportable teas was virtually concluded on 13 March, 1961 and only a small clearing-up sale was held at the end of last month. The sale of Dust teas has been proceeding smoothly and it is estimated that the final Dust sale will take place in the first week of June, 1961, thus enabling the new season to start without any carry forward of old season's production.

In the Internal Sale held in Calcutta this week, offerings were 23,322 packages of Dusts. There was once again a strong demand at dearer rates for all CTC grades with clean leaf appearance. Some of the bright lines realised extremely useful prices. The very fibrous types of this category were, however, neglected. Orthodox types were irregular and generally easier. Legg-cut Doars Dusts followed a similar trend except for the few bright lines which were sold well. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.25 to Rs 4.40; Medium Assam Dust Rs 4.35 to Rs 4.80; Legg-Cut Dust Rs 4.50 to Rs 5.20; Medium Assam CTC Dust Rs 6.00 to Rs 6.40 and Good Assam CTC Dust Rs 6.80 to Rs 7.40. Also 691 packages of Leaf grades were offered. These were sold at irregular rates.

In the Cochin market, a total of 395,000 kg of Leaf tea was offered for export. Against good but irregular demand, plain and low medium sorts were 5 nP per kilo easier. Medium and good medium teas were 10 nP to 20 nP lower, while Nilgiri teas were irregular.

Arrivals of tea have been good, as producers are anxious to take advantage of high prices obtaining for tea in the world market. As far as stocks are concerned, they were reduced to 389,088 chests at the end of last month from 453,041 chests at the end of March last year. Out of the

total stocks at the end of March 1961, public warehouses accounted for 239,226 chests and private warehouses for 149,862 chests against 285,929 chests and 167,112 chests respectively on the corresponding date of last year.

In the London auction, offerings were 75,429 packages. Ceylon teas came in for a stronger demand and prices for all descriptions were fully steady to dearer with better liquoring Dimbula BOP Fannings the strongest feature. It was not, however, that the good tone of this section of the market was connected with developments in Ceylon where a state of emergency had been declared. Trade quarters point out that there is no unrest in the tea-growing areas.

The North Indian and other miscellaneous teas met with a very good demand and, except for some CTC teas with poor appearance which were irregular, prices were fully steady with any change in seller's favour. African teas, in particular, were rather dearer. Price indications, however, showed very little change. Plain teas being quoted at 3sh 6d to 3sh 10d a pound against 3sh 5d to 3sh 9d in the previous week.

According to the Board of Trade return in London, imports of tea into the UK were higher at 51.4 million pounds in February as against 41.07 million pounds in the corresponding month of last year. Total imports in the first two months of 1961 were also higher at 121.28 million pounds against 106.16 million pounds in the corresponding period of 1960. The marked rise in imports was wholly due to India which increased its share from 60.9 million pounds in January-February 1960 to 76.62 million pounds in the period under review. The increase in imports from other sources was more than offset by the fall in supplies from Pakistan and China. Supplies from Rhodesia and Nyasaland were also lower.

Total tea supplies to the USA in the first two months of the current year were lower at 17.64 million pounds as against 21.8 million pounds in the corresponding period of last year. Tea supplies from Ceylon fell from 9.06 million pounds to 5.28 million pounds as did those from India from 6.0 million to 4.98 million pounds. On the other hand, tea imports into the USA from Indonesia and British East Africa were higher.

Malaya produced 5,400,000 pounds of tea last year as compared with 5,300,000 pounds in 1959. Imports were 1,000,000 pounds less, at 13,900,000 pounds and exports 3,900,000 pounds less, at 9,500,000 pounds.

29 April 1961

COTTON Turnover Dwindles

Easy conditions prevailed in the Bombay cotton futures market during the past week. On account of the absence of investment and mill support both ready and forward sections declined further. Turnover too dwindled into an insignificant trickle.

Kalagin and Wagad varieties, however, proved to be glaring exceptions to this general trend. Kalagin gained Rs 25 to Rs 720 per candy while Wagad shot up by Rs 20 to Rs 740. The enthusiasm was fanned by the rumours that the Government of India will release export quota for 50,000 bales for those styles. Despite the issue of export quota, Bengal Deshi lost ground. The export ceiling of this growth was reached in a day. As the entire quota was already sold in the market and prices de- to Japan, shippers did not evince any interest by about Rs 25 per candy.

In the futures section, Jarilla April contract went down to a new low of Rs 554 but offered resistance at low levels and the contract gained ground as the week advanced. As many of the operators preferred to switch over to August contract, no substantial business was done in the April contract. The August contract was also pushed up thanks to renewed short-covering, active commission house support and fresh bull buying. After being quoted at Rs 561, the contract looked up and at the close on Tuesday last it shot up to Rs 574.50. Yet the overall picture was gloomy as the traders were unwilling to lend fresh support to the market till the outlook for cloth and cotton becomes clear.

Reports that emanated from up-country markets were also unpropitious. Heavy accumulation of cotton stocks with the traders of Gujarat and Saurashtra has already created panicky conditions. The situation also was aggravated by the reluctance of mills to increase their stocks and financial difficulties.

The paucity of coal in Gujarat, Rajasthan and Madhya Pradesh has already created enough worry to the textile mills in those areas and mills belonging to the Madras State are threatened with reduction in power supply.

Consumption of cotton by the Indian mills from 1 September to 31 December in 1960 showed a slight decline from the relevant figures in the corresponding period in the previous year.

Description	1959	1960
Indian	1,583,502	1,276,595
Pakistan	...	11,639
American	34,128	277,053

Pakistan	11,894	2,624
Others	9,913	24,693
Total	337,564	683,208

NEW YORK

According to reliable sources the consumption of US cotton, the world over, in 1960-61 season was of the order of 14,268,000 bales. The relevant figure in the previous season was 13,268,000 bales. Total consumption of cotton by the mills all over the world amounted to 45.8 million bales compared with 42.8 million bales in the previous season. At the commencement of the season the world stock of cotton stood approximately at 10,187,000 bales.

ALEXANDRIA

Export sales till the end of March were placed at 170,493 bales. Export shipments till 29 March 1961 aggregated 462,362 bales as against 700,725 bales in 1960.

EAST AFRICA

In the last auction held on 6 April, the Lint Marketing Board sold only a small quantum of cotton as the reserve prices remained unchanged. In the next auction 11,750 bales of AR and 2,302 bales of BR will be offered for sale.

PIECEGOODS

The Bombay cotton piecegoods market depicted easy conditions during the week under review. The inordinate delay in the payment of outstanding bills created by the stringency in the money market was responsible for the small volume of business. It was reported that the mills had done business for forward delivery even at reduced prices.

UP, Delhi and Punjab accounted for a great deal of seasonal goods. Enquiries for medium, fine and superfine varieties of cloth were also not lacking. Despite the comfortable supply of all kinds of cloth, the supply of high priced goods was reported to have been far short of the demand.

The volume of business on the export front once again turned out to be meagre. In the absence of fresh import licences business transacted with the United Kingdom was negligible. Africa made a few enquiries but on account of the seething competition from Pakistan and Formosa no substantial business was done with

that destination. All the other destinations, for all practical purposes, remained inactive.

* Fall in Export Prices

According to reports from Cochin, Coffee exports are being speeded up this year, both as a measure to relieve congested warehouses and to implement the decision to carry out the major part of the export programme before the rains. It is, however, interesting to note that the prices fetched in exports during March are well below those obtained last year, as will be clear from the comparative figures (price per 50 kilos) given below:—

	1961 Rs	1960 Rs
Plantation "A"	164.04	243.22
Plantation "B"	153.59	231.42
Plantation Triage	138.64	191.75
Ar. Cherry Flats	139.44	193.93
Robusta	72.86	...

The Coffee Board has released a quantity of 1,314,900 kilograms of coffee for export to any destination out of the 1960-61 crop. The last date for the tender is 5 May 1961. The lots, consist of 961,800 kilograms of Plantation A; 116,700 kilograms of Plantation B; 143,400 of Plantation Triage; 6,000 kilograms of Cherry Flats; 3,000 kilograms of Robusta Parchment PB; 57,000 kilograms of Robusta Cherry "A" and 27,000 kilograms of Robusta Cherry Flats.

Coffee received into the Pool has made a new record with 53,159 tonnes up to the end of March. The corresponding figures for last year was 37,743 tonnes. If the same quantity of coffee, which came into the Pool after March 1960, were to come this year also, the 1960-61 crop may be a heavy 64,000 tonnes and over 20,000 tonnes of it may be Robusta.

Internal sales have tended to improve, the quantities for the first two comparable quarters being as follows (figures in tonnes):—

	1961	1960
January	2,854	2,448
February	2,709	2,609
March	2,368	2,172
Total	8,131	7,177

* SUGAR

Thanks to the efforts made by the Union Government to export the commodity, conditions in the Sugar market have developed a slightly steadier tendency. The news of the Reserve Bank having withdrawn the margin requirements on advances against the commodity, has also aided the better trend. In the Hapur market, the rate is quoted at Rs 108.87 per quintal.

Again, in order to assist the sugar factories to tide over their present difficulty of finding adequate financial resources to pay the dues to cane-growers, the Government of India has agreed to allow sugar factories to defer the payment of excise duty up to a maximum period of

three months. The grant of this extraordinary facility will be limited only to actual clearances made on or before 30 September 1961 and will not in any case be extended beyond that date. Necessary procedures giving effect to this decision and providing simultaneously for the safeguards considered essential in the interest of the revenue administration are expected to be issued shortly.

In the London market, raw sugar prices have risen by about £1 per ton to around £29 following the news of the invasion of Cuba counter revolutionaries. A month ago, the market was only about £26. No interruption has so far been reported; but dealers have been taking no chances and have been covering their positions. From the market's point of view, the invasion could not have come at a worse time. For, only recently Cuba has been the only major seller on the market as other producing countries have been holding off in the hope of an increase in their US import quota under which the price paid is about double the current open market level.

According to certain circles in London, steadier to firmer conditions are likely to continue over the remainder of the crop season under the influence of Cuban political developments and the reallocation of Cuba's share of the United States market in the months to come. The market has now had time to digest the news of heavy European beet crops and the only crops to take into account for the future are the cane crops. Responsible broker opinion in London inclines to the view that the Cuban crop should be nearer the six millions claimed by the Cubans than the four million estimated by some United States market quarters.

* YARN

Easy conditions continues to prevail in the Bombay Yarn market. Both Cupressa Bamberg and 40 JP declined further in the absence of support. Staple-Fibre and Cotton yarn prices were, however, steady. Although no official announcement was made, it was learnt that indigenous manufacturers of Rayon yarn were prepared to absorb 60 per cent of the current excise duty. The remaining 40 per cent was to be absorbed by weavers. The distribution of the duty was to be effective from 1 April, 1961. Reports were current that the authorities were planning to reserve 30 per cent of the indigenous rayon yarn for the export promotion of rayon fabrics. No details of the scheme were, however, available.

The Government of India has decided that the allocation of indigenous art silk yarn to art silk powerloom weaving units for the April-June 1961 quarter will be made on the basis of the number of looms shifts worked on art-silk yarn in such units during October-December 1960 quarter. The rate of allocation will be 0.65 kgs per loom per shift in the case of such units, who are submitting monthly returns in the prescribed form regularly to the Office of the Textile Commissioner, Bombay. In the case of units which are not submitting the monthly returns regu-

NEW INDIA INVESTMENT CORPORATION LTD.

NOTICE is hereby given that the Twentyfourth ordinary General Meeting of the Shareholders of New India Investment Corporation Ltd. will be held at the registered office of the Company at 9, Bra-bourne Road, Calcutta, at 4.00 P.M. on Thursday the 25th May, 1961, to transact the following business:—

- (1) To receive and adopt the Directors' report and audited Profit & Loss Accounts and Balance sheet for the year ended 31.12.60.
- (2) To declare dividends recommended by the Directors.
- (3) (a) To appoint a Director in place of Sir Walter Michelmor who retires by rotation and being eligible offers himself for re-election.

(b) To appoint a Director in place of Mr. Keshav Prasad Goenka, who retires by rotation, but being an associate of Messrs. Ramdutt Ramkissendass, Secretaries & Treasurers of the Company his appointment needs a special resolution U/S 261 of the Companies Act, 1956.

In this connection to consider & if thought fit to pass the following resolution of which special notice as required by Section 173 of the said Act.

To be proposed as a Special Resolution:

"Resolved that Mr. Keshav Prasad Goenka, who is an associate of Messrs. Ram-

dutt Ramkissendass, Secretaries & Treasurers of the Company, be and is hereby re-elected a Director of the Company".

- (4) To appoint Auditors & fix their remuneration.
- (5) To transact any other ordinary business of the Company.

The share transfer register of the Company will be closed from 22nd to 25th May, 1961.

By order of the Board
RAMDUTT RAMKISSENDASS
Secretaries & Treasurers.

Calcutta,
25th April, 1961.

Note:—(a) A member entitled to attend & vote is entitled to appoint a proxy to attend & vote instead of himself & a proxy need not be a member.

(b) The dividends if declared will be paid on or after 10.6.61, to those shareholders whose names appear on Company's books on 25.5.61, or to their mandatees. No application for dividend warrants will be necessary.

Explanatory statement u/s.173

In the special notice given to the Company of the resolution under item 3(b) of the above it has been stated that during his association with the Company, Mr. Keshav Prasad Goenka has rendered very valuable services by this guidance & advice have been of considerable benefit to the Company. As it is in the interest of the members that the Company should continue to receive the benefit of his advice as a member of the Board, and it is desirable that he be re-appointed a Director.

larly, the rate of allocation will be 0.4 kgs per loom per shift provided such units submit the returns immediately and in any case not later than 30 April, 1961. In order to ensure the supplies of art silk yarn against allocation cards, issued by the Office of the Textile Commissioner in the current quarter, the names of the spinners, who will supply the yarn, will be indicated in the allocation cards.

*

CHEMICALS & DYES

Conditions in the Bombay Chemicals and Dyes market remained dull, as demand was at a low ebb. Stringency in the money market was mainly responsible for the meagre volume of business. Inquiries from upcountry centres were few and far between. Prices, therefore, tended to move to lower levels.

Lack of support at higher levels accounted for the quietly steady trend in Menthol. The Chinese quality was talked around Rs 118 and the French around Rs 116. Camphor was sticky around Rs 19 due to the continued arrival of smuggled goods.

In the Dyes section, Vat colours were slightly better on shortage of supplies and support from Ahmedabad. Very little change in prices was noted in the base colours.

*

TIN

Tin, after slipping back to £836 a ton at the end of last week, because of sales by the Tin Council's Buffer Stock Manager, has moved up again to £846. A runaway price still seems a strong possibility in the coming months. The market's behaviour has emphasised the tight balance between supply and demand in the world's tin-producing and consuming industries. Although it was apparent earlier this year that consumption was likely to put a squeeze on available supplies, it was only recently that the flush Spring demand from the United States canning industry and elsewhere added its weight on a market that has been gradually digesting lower output estimates. The reduction in Congo supplies and the seasonal slowing down of movements to the Malayan market have been two of the factors that have coincided with a more buoyant outlook from tin-plating industries, particularly in the United States.

*

BANGALORE SILK

The Bangalore Silk market maintained a steady trend in the prices of filature and cottage basin raw silk during the week ended 21 April, 1961 identical to those during the previous week. While filature raw silk 20/22 dr continued to be quoted between Rs 80.43 and Rs 83.23 per kgm and those of cottage basin silk ruled between Rs 73.85 and Rs 77.16 per kgm. No change was noticed in the prices of Charka raw silk which continued to be quoted between Rs 54.01 and Rs 72.75 per kgm. There was moderate demand for all qualities of raw silk and the supplies were limited.

Reeling cocoons showed a slightly upward trend particularly in the rain-fed areas of Mugur and the rates were quoted between Rs 3.75 and Rs 4.25 in Mugur area, between Rs 3.85 and Rs 5.00 in Channapatna area and between Rs 4.50 and Rs 5.50 per kgm in Sidlaghatta area.

There were slight fluctuations in the prices of Mysore race seed cocoons which were quoted between Rs 4.75 and Rs 6.25 per 1,000, while Foreign Race seed cocoons registered an upward trend, rates being quoted between Rs 6.00 and Rs 14.00 per 1,000.

*

GOLD & SILVER

Prices on the Bombay Bullion Exchange showed a mixed trend. Silver ruled very firm due to higher advices from Jodhpur and Rajasthan markets, while Gold was easy due to bull liquidation.

A feature of the week's trading was the official announcement of business in silver second Jeth settlement. As the difference between the current and the new contract exceeded one rupee, the Association imposed a margin on bulls for first Jeth settlement at the rate of Rs 300 per bar. The rate for silver (below 998) moved between Rs 202.30 and Rs 202.80.

In the Gold section, prices developed an easier tendency due to discouraging advices from various centres. Although there were reports regarding improved offtake of the metal, Adhik Jeth contract gave way to continued selling. Ready rates moved narrowly between Rs 121.25 and Rs 121.30, while Sovereign remained firm at Rs 94.25.

*

OILS & OILSEEDS

Trading on the Bombay Oilseeds Exchange was generally dull with prices registered a modest recession on bull unloading. With only a few days left for the offerings against the maturing contracts to start, there was little inclination on the part of the operators to extend commitments. The bulk of the business was, therefore, of a squaring-up nature.

The outlook for Castorseed caused a measure of uneasiness. The demand for castor oil from abroad remained negligible with the USA and the Communist countries keeping out of the market. Business was confined to stray deals involving small quantities. The inflow of the new crop from the major producing centres was also reported to be fairly good. Castor ready was quoted at Rs 34.75 and Castor Oil, commercial quality, at Rs 15.35.

Trading in Groundnut and Groundnut Oil was of a routine nature with crushers and vanaspathi interests making periodical purchases. Arrivals continued to be fairly good. Groundnut Bold ready was quoted at Rs 53.50 and Groundnut Oil at Rs 21.75.

Trading in the Linseed section was devoid of fresh incentives. Lower North Indian advices in respect of rapeseed induced selling pressure. Linseed ready was quoted at Rs 36.37 and Linseed Oil at Rs 15.65.

29 April 1961

Groundnut oil and seeds in Madras steadied at lower levels from the beginning of this week. In the middle of last week due to the purchase of large quantities from the market by Hindustan Lever, groundnut oil price went upto Rs 490 and even to Rs 491. About three hundred candies were bought by this firm and when they left the market the price came down to Rs 481. Wednesday's rates steadied at Rs 481/482 per candy.

Summer groundnut kernel crop arrivals into the City are also good. About 150 tons are being received daily.

Bombay, Bangalore and Calcutta are now interested buyers of this kernels. In the southern centres, summer crop receipt is also reported to be fair. Each of the producing centres in North Arcot is getting daily about 60/70 tons, while still further down the arrivals is at 30 tons daily. These are quickly absorbed. Nevertheless, there is no prospect of the price of groundnut oil showing wide fluctuations.

Due to expected power cut from May next, the movement of groundnut oil to Calcutta from Madras would be restricted in the next few weeks. Non-guarantee oil in the bazar continued to be taken up at a discount of about Rs 6 per candy over the guaranteed qualities. Vanaspathi interests from the southern side are continuing to show good interest at about Rs 485 per candy.

Only on two days, April 22 and 24 the groundnut oil price stood at Rs 488/491 per candy. No transactions occurred in forward positions.

As far as groundnut kernels are concerned, the price remained quietly steady at Rs 240 per candy for coromandel and Rs 232 for peanut. Earlier the price of groundnut kernels was steady at Rs 80.25 to Rs 80.50 for coromandel variety, and Rs 78.25 to Rs 78.50 of peanut per 80 kgs.

In the Southern side also the price was steady around Rs 80/81 per bag of 80 kgs.

In the Pollachi and Coimbatore area sowings had not begun due to lack of rains. After one or two showers, they may be begun. In view of the late sowings, supplies during the months of July and August would not be normal. The same would be applicable to groundnut oil also.

*

HIDES & SKINS

There was good clearance of tanned cowhides which arrived in fair quantities in the Madras market. No improvement was reported from the shippers' side in view of the stiff prices demanded. Locally the demand position strengthened the quotation of Re 1.00, making a total of Rs 1.60 per share, taxable, same as in the previous year.

No change was observed in tanned cow calf, while in buffalo calf the prices remained very firm. Both domestic clearance and overseas demand were good in buffalo hides. As for tanned buffalo calf with small arrivals, prices continued to be unchanged.

Tanned goatskins had been well supported from overseas buyers. Particularly 8/9 and 11/12 prime marks were in good demand. Top marks were very much sold along with 17/18 lbs and 22/24 lbs averages. In tanned sheep skins, quality goods were not much received. Tanners for top marks were quoting 39/9d to 40d and in view of the quick clearance of the stocks, prices sharply

advanced by 6d and even to 9d. Export demand was good with the stations at the higher levels. It was reported that 8/8½ lbs were done at result that secondary marks too were quickly sold. 7/8 lb run was negotiated at 14/3d and 6/7 lb were sold at 14/6d.

The following were the quotations of tanned hides per lb: Tanned cow prime 5/5½ lb Rs 3.12 to Rs 3.25;

6/6½ lb Rs 2.81 to Rs 2.93; 8/8½ lb Rs 2.50 to Rs 2.62; 10/12 lb Rs 2.25 to Rs 2.31; Inferior fifths: 4/4½ lbs Rs 2.75 to Rs 2.81; 5/5½ lbs Rs 2.53 to Rs 2.56; Buffalo 12/13 lb Rs 2.06 to Rs 2.12; Cow calf 1½/2 lb Rs 4.25 to Rs 4.50; Buf calf 1½/2 lb Rs 3 to Rs 3.25; Goat Prime 8/9 lb Rs 10 to Rs 10.50; Sheep Ordy 6/7 lb Rs 7 to Rs 7.25; 5/6 lb Rs 9 to Rs 10.25; Sheep Prime 6/7 lb Rs 11.50 to Rs 13,

Company Reports

Excellent Results of Bengal Coal

It would be recalled that an offer of 20,000 Ordinary shares of Rs 100 each as right shares was made to the shareholders on 8 December 1960 at a premium of Rs 100 per share. The issue was thus for a sum of Rs 40 lakhs and was over-subscribed. In addition, applications were invited for subscription to Rs 60 lakhs of 6½ per cent Debenture Stock 1964/75 and this, too, was more than fully subscribed. The proceeds of the two issues will go to finance the bulk of the capital expenditure of the company on increasing raisings from the existing collieries during the Third Plan.

Raisings at 3,096,576 tonnes for the year ended 31 October 1960 as against 2,880,896 tonnes for the preceding year constitute a new record in the history of the company. Despatches are also higher at 3,213,541 tonnes against 3,062,662 tonnes.

The net profit for the year, after providing for Depreciation and Taxation, is higher at Rs 47.46 lakhs as against Rs 40.14 lakhs. All allocations have been raised: Depreciation from Rs 19.50 lakhs to Rs 23.00 lakhs; Taxation from Rs 34.37 lakhs to Rs 41.50 lakhs; Development Rebate Reserve from Rs 6.42 lakhs to Rs 7.37 lakhs and General Reserve from Rs 8 lakhs to Rs 14 lakhs. The directors have recommended a final dividend of Rs 15, making a total of Rs 25 per share, taxable, same as in the previous year.

New Beerbhoom Coal Maintains Earnings

The net profit of the New Beerbhoom Coal Company is nearly maintained at Rs 6.65 lakhs for the year ended 31 October 1960 as against Rs 6.73 lakhs for the preceding amount is raised to Rs 5.05 lakhs crores from Rs 1.33 crores. In respect of allocations, the Depreciation amount is raised to Rs 5.05 lakhs from Rs 3.74 lakhs; Taxation to Rs 5.40 lakhs from Rs 4.51 lakhs and General Reserve to Rs 2.00 lakhs from Rs 1.87 lakhs. The provision for Development Rebate Reserve is, however, lower at Rs 1.64 lakhs against Rs 2.05 lakhs. A final dividend of Re 1.00, making a total of Rs 1.60 per share, taxable, is recommended as against Rs 1.50 per share previously.

Raisings for the year were 714,376

tonnes as against 656,767 tonnes. Despatches amount to 716,944 tonnes against 646,381 tonnes. The raisings constitute a record in the history of the company and, in particular, there was a very satisfactory increase in the output of Selected "A" coking coal at Victoria and Victoria West Collieries.

Dunlop Rubber Reports Rise in Sales

Thanks to a marked rise in sales from Rs 25.87 crores to Rs 30.47 crores, the Dunlop Rubber Company (India), Limited has shown a net profit of as much as Rs 1.25 crores for 1960 as against Rs 1.18 crores for the previous year, after maintaining Development Rebate Reserve at Rs 17 lakhs, the Depreciation amount is raised to Rs 58.71 lakhs from Rs 50.99 lakhs; Taxation provision to Rs 81.37 lakhs from Rs 74.76 lakhs and General Reserve to Rs 37.50 lakhs from Rs 30 lakhs. The dividend on the Ordinary shares is maintained at Rs 21.50 per cent, subject to deduction of tax.

Chitavalshah Jute Pays Less

Following a decline in sales from Rs 1.57 crores to Rs 1.40 crores and in net profit from Rs 10.05 lakhs to Rs 1.24 lakhs, the Chitavalshah Jute Mills Company, Limited has reduced the Ordinary dividend from Rs 1.50 to Rs 0.50 per share, taxable, for the year ended 31 July 1960.

In respect of allocations, the Depreciation amount is increased to Rs 6.81 lakhs from Rs 4.93 lakhs, while Taxation provision is lower at Rs 50,000 from Rs 3.10 lakhs. After transferring a sum of Rs 1.00 lakh from General Reserve, the directors have allocated Rs 2.11 lakhs (Rs 3.56 lakhs) to Development Rebate Reserve. No provision is made for General Reserve against Rs 14 lakhs and this was made possible by transferring the amount from Machinery and Renewals Reserve.

Empire Jute Repeats

Despite a decline in sales from Rs 1.29 crores to Rs 1.21 crores, the Empire Jute Company Limited has reported a higher net profit of Rs 4.18 lakhs for the year ended 31 July 1960 as against Rs 3.51 lakhs for 1958-59. The Depreciation amount is raised from Rs 2.75 lakhs. After transferring a sum of Rs 2.05 lakhs from Reserves, the directors have pro-

vided Rs 1.42 lakhs (Rs 1.31 lakhs) for Development Rebate Reserve. The dividend on the Ordinary shares is maintained at Rs 1.25 per share, taxable.

The directors state that the prospects for the current year are not encouraging.

Lower Profits for Nellimarla Jute

The Nellimarla Jute Mills Company Limited has earned a profit of only Rs 95,447 for the year ended 31 July 1960 as against as much as Rs 7.96 lakhs for the previous year despite the fact that the sales have been nearly maintained at Rs 1.17 crores against Rs 1.16 crores. The Depreciation amount is raised to Rs 5.27 lakhs. After transferring a sum of Rs 1.00 lakh from General Reserve, the directors have provided Rs 1.64 lakhs (Rs 4.13 lakhs) for Development Rebate Reserve. No provisions are made for Taxation and General Reserve against Rs 1.20 lakhs and Rs 9.00 lakhs respectively made in the previous year. Larger allocations were possible in the previous year following a transfer of Rs 9.75 lakhs from Machinery Renewals Reserve. A taxable dividend of 30 p per share is recommended against Rs 1.40.

Higher Freight Income for B.A. Steamship

The increase in freight earnings from Rs 22.79 lakhs to Rs 33.57 lakhs is reflected in the working results of the Bengal Assam Steamship Company Limited for the year ended 31 October, 1960. The net profit, after providing for depreciation and taxation, has risen to Rs 4.33 lakhs from Rs 64,419.

In respect of allocations, the Depreciation amount is raised to Rs 1.38 lakhs from Rs 1.02 lakhs. After transferring a sum of Rs 1.75 lakhs from General Reserve and Rs 5,637 from Development Rebate Reserve, the directors have provided Rs 3.76 lakhs (nil) for taxation; Rs 1.20 lakhs (Rs 40,299) for Capital Reserve and Rs 3.14 lakhs (Rs 5,637) for Development Rebate Reserve. The dividend on the Ordinary shares is raised from Rs 3.00 to Rs 7.50 per share, subject to deduction of tax.

The directors state that, with the progressive development of industry in Assam, the demand for shipping space to Calcutta is good and the prospects for the current year are satisfactory.

THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS

A copy of the Prospectus having attached thereto the documents required by Section 60 of the Companies Act, 1956 for Registration, has been delivered to the Registrar of Companies, Bihar, Patna.

Certificate of Commencement of business has been obtained on the 31st January, 1961.

An application is being made to the Calcutta Stock Exchange Association Ltd. for enlisting the name of this company for official quotation of the shares of the company.

The Subscription list will be open at the commencement of the banking hours on the 1st day of May, 1961 and will close at the close of the Banking hours on the 10th day of May, 1961 or sooner or later as the directors may decide but not earlier than the close of banking hours on 4th day of May, 1961.

BIHAR CABLE & WIRE INDUSTRIES LIMITED

(Incorporated on the 13th October '60 under Companies Act, 1956)

SHARE CAPITAL		
Authorised Share Capital	..	Rs. 25,00,000
Divided into:—		
1,50,000 Equity shares of Rs. 10/- each	Rs. 15,00,000	
10,000 Preference share of Rs. 100/- each	Rs. 10,00,000	
	Rs. 25,00,000	
Issued Share Capital	..	Rs. 10,00,000
70,000 Equity shares of Rs. 10/- each	Rs. 7,00,000	
3,000 — 7% All tax free cumulative redeemable Preference shares of Rs. 100/- each	Rs. 3,00,000	
	Rs. 10,00,000	
Subscribed & Paid-up Capital	..	Rs. 2,19,080
(i) 18,400 Equity Shares of Rs. 10/- each fully paid up (issued to the Vendors of two industrial units purchased being the consideration money paid)	Rs. 1,84,000	
(ii) 3,508 Equity Shares of Rs. 10/- each (issued to promoters, Directors their friends and relations at par, against full payment in cash.	Rs. 35,080	
	Rs. 2,19,080	
Present Issue	..	Rs. 7,80,920
48,092 Equity shares of Rs 10/- each.	Rs. 4,80,920

DIRECTORS QUALIFICATION

The qualification of Directors shall be holding of one Equity share in the capital of the company.

OBJECTS OF THE COMPANY

The company was incorporated on 13th day of October, 1960. The main object of the company is to carry on business as manufacturers and dealers in nail-wires, wire drawing and galvanising, stranded wires, barbed wires, wood screws, bolt and nuts, rivets and all other kinds of wires whether steel or otherwise and wire products and also to carry on the business as manufacturers of, dealers in, importers, exporters and contractors of all kinds of cables, apparatus, insulated materials required for electricity and telephone or are capable of being used in connection with generation, distribution, supply accumulation and employment of electricity.

HISTORY OF THE COMPANY

The company has taken over two industrial units viz. Khemka Cable Works and Bihar Wire Industries on and from 18-10-60 as running concerns with all their assets and liabilities, goodwill, trade marks, permits, licences, advantages etc., including rights on all immovable properties including those held under lease partly or fully constructed or acquired by the Vendors including plant and machinery, office furniture, implements, raw-materials created by the Vendors as on 18-10-60 in terms of the agreement dated 15-11-60, with the partners of the said two Vendors.

(1) The Unit Khemka Cable Works has a scheme to produce per annum 24 million yards of Rubber insulated cables upto 660 volts of various grades required for domestic and industrial electrification and the manufacture of 0.6 million yards of welding cables required for the installation of heavy and light steel structural constructions in both private and public sector. The cables to be manufactured by the company will conform strictly to relative Indian Standard Specifications prescribed. The Unit has already acquired its Plant and Machinery which are likely to be delivered to the company within another about three months and has also completed the major part of construction of factory sheds and buildings.

(2) The Unit Bihar Wire Industries has two schemes—the first is to manufacture 1,500 tons of galvanised steel wires per annum and the second scheme is to manufacture 700 tons of barbed wire and wire nails per annum. This unit for making barbed wire and wire nails is likely to go into production in another about three months time since the machineries and raw materials have already been acquired and are likely to be delivered at factory site very shortly. The unit for manufacturing galvanised wire will go into production by January 1962 when all the Plant and Machinery is likely to be delivered to the Company.

BUSINESS PROSPECTS

Under the present phase of industrialisation, electrification and economic development in the country, the manufacture of electrical cables has an important and major role. With the advent of Third Five Year Plan and the progressive expansions of the existing Industries and various programmes of rural electrifications, the cable and wire industry has a very bright prospects. Inspite of manifold increase in the production of low tension distribution cables which has been raised by over 100% between the year 1954-1958 from 62.84 million yards in 1954 to 127.00 million yards in 1958, the indigenous production has not been able to meet the demand for these cables. The demand for these cables at the end of Third Five Year Plan is estimated to exceed 500 million Core Yards against the country's production of 214 million in the year 1959-60 which is less than half of the target set for 1965-66. The yearly increase in demand of 20% leaves a wide gap between the demand and supply and thus assures this proposed factory a good market for its products and further increase in the production from time to time.

The demand for hard Bright Wires, Concrete Reinforcement Wires, Galvanised wires used for stay wires, telegraphic transmission etc., Signal Wires etc., are largely imported as the indigenous production is not sufficient to meet the demand. In view of great industrialisation and expansion programmes undertaken in all phase of development in the country, the demand for such wires is likely to increase in the Third Five Year Plan. The company's plant for manufacturing of 1,500 tons per year will be helpful in reducing import and with the increased production of steel in the country, there is a good scope to increase the production of the wires by the company. The company proposes to increase its wire drawing and galvanising capacity from 1,500 tons per year to 12,000 tons per year and for this it is already in negotiation with the Central Government for grant of Industrial Licence and the company is also in touch with foreign firms for technical collaboration.

MANUFACTURING LICENCES RAW MATERIALS AND TECHNICAL PERSONNEL

With a view to boost small industries, the Government of India have decided that industrial undertakings, which employ less than 100 persons and whose fixed assets are less than Rs. 10 lacs in value, can proceed without applying for licence under the Industries (Development and Regulation) Act. Since the fixed assets of the company's each industrial unit will be below 10 lacs the company does not need any manufacturing licence under the said act. The company has however received full support from State Director of Industries who has recommended the setting up of the company's industrial

Units in Bihar and has issued required Essentiality Certificates for the import of Plant and Machinery and raw materials.

The company has already been granted most of the import licences for import of Plant and Machinery and raw materials which have also been imported to some extent. Other Plant and machinery as required for the second stage of production schedule will be imported very shortly.

Raw materials to run the Barbed wire and wire nail units has already been imported and this will be sufficient for about three months consumption. Other import licences for raw materials are expected shortly. With the increased production of steel in the country, the company does not foresee any difficulty in running its wire drawing and galvanising plant.

The company has secured the services of fully qualified technicians with previous experience of working in similar units. This would enable the company to bring the units into full production within the scheduled period.

LOCATION OF FACTORY SITE AND POWER

The present two industrial units of the company are located at Digha, Patna on Leasehold land. The construction of the factory shed and Office building for cable factory is nearing completion. Negotiation for the out-right purchase of other plot of land is under progress with the owners of the said land which is expected to materialise very shortly. From the point of view of road and rail transport, the present site is very convenient. Adequate supply of electric power has already been sanctioned by Patna Electric Supply Co. Ltd.

CAPITAL OUTLAY AND SOURCES

CAPITAL OUTLAY AND WORKING CAPITAL

The estimate of requirements are as follows:

(1) Cost of erecting factory shed, office buildings and plant and machinery inclusive of transport custom duty, erection at site, cost of land and preparation of site etc.	10.45 lakhs
(2) Other fixed assets	1.05 "
(3) Preliminary and development expenses including expenses on this issue and brokerage payable	1.50 "
(4) Working capital including accommodation from Bankers	26.50 "
(5) Any other expenditure	NIL
	39.50 lakhs

(A portion of the above expenditure can be deferred)

This amount will be made from the sources as follows:

(1) Subscription by the Directors and their friends including the Vendors shares issued	2.80 lakhs
(2) Subscription of 42,000 equity shares and 3,000 Preference shares offered for public subscription	7.20 "
(3) Other Credits and advances	3.00 "
(4) Loan from Bihar State Financial Corporation against mortgage of immovable assets	5.75 "
(5) Bank accommodation against stocks, bills etc.	20.75 "
	39.50 lakhs

(To arrange Bank Accommodation of 20.75 lakhs a margin of 4.75 lakhs have been provided. Moreover the entire banking accommodation is not required immediately since the other units will come into production later in early 1962 by which time the company would have earned from other units going into production much earlier).

MINIMUM SUBSCRIPTION

The minimum amount which in the opinion of the Directors must be raised by the issue of shares in order to provide the sum required to be provided as per para (5) of scheduled II of the companies Act, 1956, in accordance with which the Directors would proceed to allot by this Prospectus is the subscription of shares of the nominal value of Rs. 4,50,000/- payable in cash.

PROFIT

On the basis of existing prices and after allowing costs, depreciation and other foreseeable contingencies, in so far as those items can at present be estimated the directors are of the opinion that, in the absence of any unforeseen circumstances, the company should be in a position to pay reasonable dividends on the issue of Equity Shares, possible in the very first year of the Company's working. The other similar large factories are making excellent profits and are paying good dividends.

The company will be entitled to get the advantages of the development rebate and exemption from Income Tax under Section 15 (C) of the Income-Tax Act and the share holders will also be exempt from Wealth Tax on their holdings for a period of five years under Clause XX of Sub-section 1 of Section 5 of Wealth Tax Act.

The company will also be entitled to sell its products at a higher rate to Government consumers as allowed under the act for the benefit and encouragement to small scale industrial units.

UNDERWRITING COMMISSION

The underwriting commission @ 2½% of the nominal value of the Equity shares now offered for public subscription is payable to the said underwriters.

BROKERAGE AND COMMISSION

The brokerage will be paid by the company to the members of any recognised Stock Exchange and to the Bankers at Re. 1.20 nP. per share in respect of Preference shares and 12nP per share in respect of Equity shares allotted in respect of application bearing their stamps. Brokerage on the same basis will be paid to the underwriters in addition to the underwriting commission on the shares allotted in respect of application bearing their stamps. Brokerage will also be paid by the company to the Managing Brokers @ 7nP per Equity share and @ 50 nP per Preference share on shares allotted to public.

INSPECTION OF DOCUMENTS

Copies of the Memorandum and Articles of Association of the Company and copies of other documents and Agreements can be inspected at the Registered Office of the company during the usual business hours until 14 days after opening of the subscription list.

For the Investor

INVESTMENT GOSSIP Money Market Easier: So Interest Revives

Mr Morarji Desai's statement in the Lok Sabha last week has no doubt helped reassure the market that the kind of development envisaged by the Estimates Committee, that is to say, divesting the Life Insurance Corporation of the responsibility of dealing with its investible funds, is not round the corner; but it looks as though the effect of the shock will be felt for quite some time as the Finance Minister's statement seems to imply that there is no knowing what would be the Government's attitude when the recommendations of the Estimates Committee have been carefully studied. But Mr Desai has made a number of other observations which can be considered as helpful. He has pointed out why it is necessary to make clear to the foreign investor that his holdings in India are safe. In regard to the ever-recurring demand of nationalisation, his reply is that nationalisation is not an end in itself but is only to be resorted to whenever there is need for such a course.

The revival of interest last week-end has also stemmed from the reported purchase of some prominent scrip by the LIC. Presumably, this has been taken to mean that there may be no early change in the LIC's investment policy. It is also said that the LIC Chairman has not been correctly reported when he last referred to the matter.

Bonus issue coupled with encouraging corporate news is helping sentiment revive, and lately Indian Irons has led the advance in Lyons Range following reports of proposals for an extension of its activities. It is significant that fresh buying interest has manifested itself at a time when it has been reported that a very large amount of money has been temporarily immobilised by the Goodyear issue which is said to have been subscribed thirty times over. Another issue which was on the market this week, Madras Rubber, having been reportedly oversubscribed eight or nine times, has been closed earlier than expected. The slight easing in the conditions in the money market and the fact that there will be fewer new issues for some time

in view of the coming Government loan programme may be expected to keep interest in equities at a fair level.

But any considerable broadening of buying on the stock market seems improbable because of some uncertainties in the investment situation. The acute power shortage in the Calcutta industrial area and the threatened power cuts elsewhere in the country, coming on the top of coal shortage and the inadequacy of some essential imports, are bound to affect adversely industrial production. A further unsettling factor is the delay that now seems inevitable in the decisions of the "Aid India Club".

INVESTMENT SPECIAL Bihar Cable and Wire

THE Bihar Cable & Wire Industries Limited will shortly be in the market with a public issue of Rs 7.20 lakhs in both equity and Preference shares. The authorised capital of the company is Rs 25 lakhs, divided into 150,000 equity shares of Rs 10 each and 10,000—7 per cent tax free Cumulative Preference shares of Rs 100 each. The issued capital is Rs 10 lakhs comprising 70,000 equity shares and 3,000 preference shares. Of this, 18,400 equity shares have been issued to the vendors of two industrial units—Khemka Cable Works and Bihar Wire Industries—taken over as running concerns with all their assets and liabilities, goodwill, etc. being the purchase price. The promoters, directors and their friends have taken up 3,508 equity shares. The present issue is for Rs 7.80 lakhs, consisting of 48,092 equity shares and 3,000 preference shares. The preference shares are redeemable at the end of 7 years.

The actual issue for the public is Rs 7.20 lakhs, while the entire issue of 42,000 equity shares has been underwritten. The two units, which the company has taken over, have already their scheme of producing cables and wires. The Khemka Cable Works hopes to produce 24 million yards of rubber-insulated cables up to 660 volts and 0.6 million yards of welding cables. This unit has already acquired its plant and machinery, which are expected to be delivered in about three months, while the major part of the construction of the factory has been completed.

The Bihar Wire Industries have two schemes—one for the manufacture of 1,500 tons of galvanized wire per annum and another for the manu-

facture of 700 tons of barbed wire and wire nails per annum. The unit for making barbed wire and wire nails is expected to go into production in about three months, while the unit for the manufacture of galvanized wire is expected to go into production in January 1962.

The company is already negotiating with the Central Government for the grant of an industrial licence and in touch with foreign firms for technical collaboration. All the units are located at Digha, Patna, Bihar State. The capital outlay on the entire project is estimated at Rs 39.50 lakhs, which is to be met partly from public subscription, partly through credit institutions and a loan of Rs 5.75 lakhs from the Bihar State Financial Corporation.

NEW ISSUE NOTES Good Year

The response to the issue of equity shares by Goodyear India Limited at a premium of Rs 7 per share is reported to be spectacular. The issue is expected to be very heavily oversubscribed. The shares are unofficially quoted around Rs 37.

Madras Rubber

The public issue by the Madras Rubber Factory Limited is believed to have had an overwhelming response. The subscription list was closed on 26 April itself. Market circles think that the issue will be oversubscribed by more than eight to ten times.

Polychem

The Polychem Limited has received the consent of the Controller of Capital Issues for the issue of 32,000 equity shares of the face value of Rs 50 each, at a premium of Rs 75 a share. The issue, amounting to Rs 40 lakhs, will be offered to the existing shareholders in the ratio of two shares for every five held by them. The issue is being made to finance the expansion programme of the company. The plant is expected to go into production by the third quarter of 1962.

Escorts

Escorts Limited has decided to raise fresh capital to finance its new projects. Subject to the sanction of the Controller of Capital Issues, the company will be issuing rights shares in the ratio of one share for one held, at a premium of Rs 3 a share. The company will further issue 9 per cent preference shares to the extent of Rs 8 lakhs, most of which is expected to be allotted to its foreign collaborators.

Dr Paul Lohmann

Another new issue in the offing is that of Dr Paul Lohmann (India) Limited. This company has been formed with a view to the manufacture of chemicals and fine chemicals (required in a wide range of Indian industries). The issue will be for Rs 30 lakhs, of which the promoters, directors and their friends

will take up Rs 6 lakhs. The West German firm of Dr Paul Lohmann Chemische Febrrik will be allotted Rs 4 lakhs worth of equity shares against plant and equipment to be supplied to the company. Both the terms of the technical collaboration and the allotment of such shares to the West German firm have received the approval of the Government. The company's products will be distributed by Monsanto, India.

Amar Dye-Chem

Amar Dye-Chem Limited has decided to raise the share capital by Rs 10 lakhs by issuing 10,000 new equity shares of Rs 100 each, at par on a rights basis. The company has secured a licence from the Government to manufacture 250 tons of pigment colours and 2,155 tons a year of intermediates.

Lynx Machinery

The recent issue of shares to the public by Lynx Machinery Limited is reported to have been oversubscribed.

Hindustan Glass

The Hindustan Wired Glass Manufacturing Company Limited has proposed to enter the market shortly for raising new capital. The company has received permission from the Government for the issue of equity capital, amounting to Rs 60 lakhs in equity shares of Rs 100 each. The directors and their friends will take up shares of the value of Rs 24 lakhs, while the technical and financial collaborators will subscribe for shares worth Rs 12 lakhs. The balance of the issue amounting to Rs 24 lakhs is to be offered for public subscription.

Binani Metal

The recent issue to the public by the Binani Metal Works Limited has been oversubscribed. The directors have proposed to take every possible step to expedite the allotments and arrange refunds after consultation with the Calcutta Stock Exchange authorities.

Cooper Engineering

The Cooper Engineering Limited has proposed to issue one equity right share for every share held, at a premium of Rs 25 a share.

Ogale Glass

Ogale Glass Works Limited has a proposal to issue the unsubscribed part of the capital to the existing shareholders at one new share for every four shares held. The last date for the receipt of applications together with the full amount of Rs 5 per share is 22 May, 1961.

INVESTMENT NOTES

Indo-Commercial Bank

It would be recalled that the Indo-Commercial Bank Limited was taken over by the Punjab National Bank and the branches of the former began functioning as from 25 March, 1961. All the depositors having balances in

their accounts of Rs 250 and less were paid in full, while those having larger balances got additionally a dividend of 37 per cent of the amount in excess of Rs 250. It is expected that some further payments will be made as time passed by.

New Citizen Bank

Another institution similarly affected is the New Citizen Bank of India Limited. This bank has been taken over by the Bank of Baroda Limited and it has been announced that the branches of the New Citizen will function as the branches of the Bank of Baroda as from 29 April. All the constituents having deposits with New Citizen Bank of Rs 250 and less will be paid off in full, while others having over Rs 250 will be paid 65 per cent of the remaining balance in excess of Rs 250. The amount due after the above credits will be transferred to a collection account and paid on a pro rata basis if and to the extent the "not readily realisable assets" are salvaged.

Vikram Mills

The Vikram Mills Limited, Ahmedabad, will be issuing bonus shares in the ratio of one share for every ordinary share held by capitalising reserves. This is subject to the sanction of the Government.

Philips India

Philips India has been granted licences for undertaking the manufacture of certain new items as also to expand the production of some of the existing lines. The company has been licensed to manufacture 60 million metres per annum of tungsten wire electric lamps and 2,400 kg per annum of Molybdenum wire. The company has also received a licence for the manufacture of burners of gaseous discharge lamps to the extent of 120,000 units a year.

Fit Tight Nuts

The recent public issue by Fit Tight Nuts and Bolts Limited has been over-subscribed by nearly six times the offer made. Details of the applications are still in the process of being received from the company's bankers. It is said that some time will elapse before the necessary allotments are made.

STOCK EXCHANGES Trading Lacks Stamina

Watch-Dog Writes:

ONCE again, stock markets have had a very bad time. Lack of any support coupled with scattered liquidation caused a further decline in equity values although desperate attempts at a recovery were made towards the close, thanks to the release of the encouraging corporate news.

After a severe shake-out early in the week, the Calcutta Stock Exchange staged a remarkable recovery towards the close.

The Bombay Stock Exchange finished the week's trading on a generally steady note.

On the Madras Stock Exchange, business continued to be restricted and the general tone of the market was hesitant.

*

CALCUTTA

Friday, Evening.

THE local stock exchange started the week on an exceedingly dull note and, with renewed offerings in the speculative issues, prices in all other sections toppled down to despondent levels. Thanks to shortcovering coupled with some replacement buying being influenced by the encouraging corporate news, the closing tone was better.

Apart from the imbalance in the technical position of the market, sentiment was much disturbed by a great deal of concern about the growing power shortage. It was feared that its impact would be reflected in reduced profits during the current year. The stringency of bank credit was also a contributory factor, not to speak of the substantial funds had already been mopped up by the new issues. But for the emergence of support to a few selected shares on rumours of bonus or right issues, the market would have witnessed a veritable landslide.

Conditions in the Giltedged section remained steady although business continued to be restricted

in the absence of sellers. The demand for short and medium-dated issues could not be satisfied due to lack of offers. 3 per cent 1986 Conversion Loan hovered narrowly around Rs 73.75.

The Banking section was steady with Punjab National changing hands at Rs 22 to Rs 22.50 and United Commercial at Rs 87.37 to Rs 87.50.

Jute shares were traded cautiously due to fibre shortage. The reports, that the industry might be forced to close down for a short period in order to conserve raw jute made operators hesitant to enter into any commitments. The only exception to the general trend of the prices were Birla Jute which touched a new peak level of Rs 40.56 from Rs 37.25 on rumours of the possibility of a bonus issue. Barnagore were, however, on offer at Rs 131 against Rs 139; Anglo-India at Rs 198 against Rs 214; Howrah at Rs 21.75 against Rs 22 and Lawrence at Rs 163 against Rs 169. New Central were done up to Rs 20.69 from a low of Rs 19.75, to close finally at Rs 20.44.

In the Coal section, there was discriminate buying as operators were inclined to await definite news concerning the grant of foreign financial assistance for the expansion of the industry. Bengal were a firm feature at Rs 354 and so also Equitable at Rs 31.75. New Beerhouse were enquired up to Rs 23.12 from Rs 22.94 and Central India up to Rs 13.40 from Rs 13.06. Western Bengal were rather quiet at Rs 8.94.

Tea shares came in for restricted enquiry, which was confined to the shares of the Doorga gardens due to dividend prospects. Bishnauth were at Rs 24 to Rs 24.25; Hanta-para at Rs 133 to Rs 135; Jaysree at Rs 22.62 to Rs 22.81 and Killcott at Rs 20.50 to Rs 20.62. Brooke Bond met with some enquiry at Rs 16.62 to Rs 17.

Textile scripts showed a mixed trend. Kesoram were firm at Rs 34.37 against Rs 32.37. Jay Shree were quiet at Rs 15.94 against Rs 16.81. Dunbar had buyers up to Rs 30.50 from Rs 29.62 following the news of the dividend being doubled to 20 per cent for 1960 and the company's decision to issue right shares at par. Bowreah shot up to Rs 213 from Rs 200 following the news of 10 per cent dividend on the ordinary shares after a lapse of many years. Cawnpore changed hands at Rs 8.87 to Rs 9.00 and J. K. Rayon at Rs 18.62 to Rs 19.

Sugar shares were rather depressed as operators were not inclined to take a definite view about the outlook for the industry. The only steady feature were Belsund, which met with business up to Rs 12.37 from Rs 12.19. Carew were slightly easier at Rs 12.94 against Rs 13 with Ramnugger better at Rs 29.06 against Rs 28.69. SKG were unchanged at Rs 12.

Indian Finance

29 April 1961

Among Engineering scrips, Jay Engineering met with good demand up to Rs 29.50 from Rs 29.12 on reports of the company's proposal to open a new factory in Hyderabad for expanding production. Jessop turned ex-dividend and changed hands at Rs 21.31 to Rs 21.56. Escorts were enquired up to Rs 23.37 from Rs 21.19 on reports of the company's decision to raise capital for expanding production. In Indian Irons, price movements were influenced by settlement considerations till Wednesday after which the scrip staged a remarkable recovery due to higher Bombay advices. After opening lower at Rs 27.07, Indian Irons slipped down at one time to Rs 26.75 at which level short-covering induced a smart recovery to Rs 27.30, to close finally at Rs 27.29. TEXMACO closed better at Rs 20.45 after touching a new low of Rs 19.65 from Rs 21.15. There are rumours that the company has proposed a taxable dividend of 7½ per cent as against 20 per cent; but confirmation is lacking. Guest, Keen, Williams were a narrow-market, moving between Rs 43.12 and Rs 43.37.

Although there was an appreciable decline in interest in Miscellaneous section, the prices of a few selected shares recovered a major portion of their losses due to the emergence of bull support on rumours of bonus or right issues by certain companies. Following were the price trends.

PRICE TRENDS.

MADRAS

DESPITE limited turnover today in the Madras Stock Exchange, enquiries were fairly good. Selling was noticed at all prices. Sugar shares were steady. In the plantings counter, tea and rubber got better support. Coffee shares recovered a bit after the recent Union Government announcement of excise duty reduction. Bangalore Woollen and Buckingham were the best of the day in the textile section which on the whole remained steady. Continued support was forthcoming for chemical shares, while industrials, too, had similar

support with a spate of new issues in the offing next few weeks.

Government Securities: Sentiment in this counter was not much altered this week. Business turnover was poor. 4½% Madras 1970 was quoted at Rs 100.60 and the 4% Madras 1971 was available at Rs 98.52. 4% Mysore 1971 was offered at Rs 98.00. 4½% Kerala 1971 was listed at Rs 97.75. 4½% Andhra 1971 was marked at Rs 100.25.

Banks: There was no change in this section. Indian Bank Rs 100 paid was available at Rs 166.00 and the Indian Overseas was quoted at Rs 177.20. Pandyan was offered at Rs 30.25 and Punjab National was listed at Rs 21.25.

Electrics: This section was steady. Kumbakonam was lower by 10 nP at Rs 19.20. Negapatnam was below par at Rs 8.65. South Madras was marked at Rs 9.80. Tinnevely-Tuticorin at Rs 11.80 and West Coast was at Rs 14.00.

Sugar and Breweries: Cauvery had buyers at Rs 130.00 and EID at Rs 43.50. Deccan with 7½% interim was quoted at Rs 14.08. India Sugars was unchanged at Rs 12.90. KCP continued at Rs 23.48. Kothari had offers at Rs 4.75, while United Breweries continued to be sold at Rs 115.50.

Plantings: There were no fresh enquiries in this counter. Blue Mountain was the same at Rs 3.15. Chembra improved by a single nP at Rs 3.83. Cochin Malabar rose to Rs 7.75. Coffee Lands continued to be quoted at the previous closing of Rs 19.50 while Consolidated Coffee went down by 10 nP at Rs 23.00. Coonoor was unaffected at Rs 28.12. Devashola was offered at Rs 30.30. Highland was on offer at Rs 16.00. Kallias at Rs 12.75 and Lucky Valley, with 10% dividend, was quoted at Rs 13.25. Mysore Plantations was at Rs 2.22. Neelamalai was lower at Rs 4.45 as well as Nelliampathy at Rs 2.48. Nilgiri was quoted at Rs 8.50. Nonsuch, with 10% interim, was listed at Rs 28.50. Oucherlony with 13% dividend, was quoted at Rs 4.38. Periakaramalai was available at Rs 4.04. Talayar was four nP higher at Rs 1.81. Travancore Rubber was quoted at Rs 10.70. United Nilgiri was rated at Rs 24.75. Woodland was available at Rs 8.00. Wartyhully with an interim dividend of 5%, was quoted at Rs 5.70.

Textiles: There was not much business with the quotations remaining without appreciable change. Enquiries for Buckinghams were made at Rs 216.00 and for Bangalore Woollens at Rs 205.00, both of them carrying 6% dividend. The Rs 70 paid share of Balasubramania was better at Rs 115.50. Coimbatore Spinning was available at Rs 56.00. With 12% dividend, Coimbatore Cotton was quoted at Rs 180.00. Dhanalakshmi was unchanged at Rs 212.00, Kasthuri was at Rs 22.50. Lakshmi was at Rs 165.00 with 10% dividend. The smaller Lakshmi share was quoted at Rs 83.00 carrying a similar dividend as on the bigger share. Madura improved by Rs 3 to Rs 162.00. Travancore Rayon went down by 50 nP at Rs 37.50.

Miscellaneous: Aluminium Industries went up by 5 nP to Rs 22.80. Ashok Leyland was marked at Rs

92.00. Binny with 8½% final tax free dividend improved to Rs 220.00, four rupees higher than the last closing. FACTS was offered at Rs 10.55. Indian Steel Rolling was at Rs 10.30. Madras Aluminium was quoted at Rs 23.00, while Madras Cement was priced at Rs 91.00. Mettur Chemical was at Rs 14.12. Mysore Chemical Mfgs. was offered at Rs 25.00, Mysore Paper improved to Rs 24.65. Mysore Tobacco was at Rs 10.62. Parrys Confectionery improved to Rs 6.55. Rallis was offered at Rs 136.00, Seshasayee Industries was quoted at Rs 12.50 while Seshasayee Paper improved to Rs 7.12. Spencer was lower at Rs 24.25. Textool was available at Rs 179.00. Travancore Cements was quoted at Rs 8.45 with 6% dividend. Tube Investments was at Rs 284.00. W. I. Plywoods was quoted at Rs 246.00.

IN BRIEFS

The Coimbatore, Murugan Mills maintained the dividend at 10 cent, taxable, for 1960.

Tropical Plantations have repeated the dividend at 8 per cent, taxable, for 1960.

Travancore Cements Limited has proposed a taxable dividend of 6 per cent 1960, the same as in the previous year.

Jyoti Limited has proposed to maintain the dividend at 12 per cent, taxable, for 1960. Transfer Books are closed from 12 to 20 May 1961.

Gokul Rubber has raised the dividend from 9 to 10 per cent, taxable, for 1960.

Jawahar Mills Limited has repeated the dividend at 15 per cent, subject to deduction of tax, for 1960.

FACTS have maintained the dividend at 6 per cent, taxable, for 1960.

*

BALANCE-SHEET BRIEFS

The Bengal Coal Company Limited has reported excellent working results for the year ended 31 October 1960, the net profit having risen to Rs 47.47 lakhs from Rs 40.14 lakhs. The directors have recommended a final dividend of Rs 15 on the Ordinary shares, making a total of Rs 25, taxable, same as in the previous year.

The working of the Hindustan General Electrical Corporation Limited has resulted in a profit of Rs 2,225 for the year ended 31 July 1960 as against a loss of Rs 10.23 lakhs. There is still a debit balance of Rs 16.96 lakhs, which is carried forward.

The Sirsilk Limited has reported a gross profit of Rs 17.72 lakhs for the year ended 30 September 1960 against Rs 14.99 lakhs. The dividend is skipped.

Rohit Mills Limited, Ahmedabad, has shown a net profit of Rs 3.95 lakhs for 1960 against Rs 2.20 lakhs. The dividend is maintained at Rs 10 per share, taxable.

The National Rayon Corporation Limited has reported a net profit of Rs 78.96 lakhs for 1960 against Rs 69.86 lakhs. The Ordinary

dividend is maintained at Rs 22 per share, subject to deduction of tax.

The net profit of the WIMCO for 1960 is lower at Rs 52.43 lakhs against Rs 62.57 lakhs. The dividend is, however, maintained at 16 per cent, taxable.

The Jaswant Sugar Mills Limited has maintained the dividend at 22½ per cent, taxable, for the year ended 31 May, 1960.

INDEX NUMBER OF WHOLESALE PRICES IN INDIA

The official wholesale price index (with the year ended March 1953 as 100) worked out to 125.9 during the week ended April 8, 1961 as against 126.0 (revised) for the earlier week. The index was lower by 1.5 per cent when compared with the corresponding week of the previous month, but was higher by 5.1 per cent than that of a year ago.

The prices of Oranges (+14%), Rice at Nagpur (+10%), Wheat at Delhi (+10%), at Kanpur (+7%) and at Arohar (+6%), Jowar at Surat (+8%) and at Nagpur (+7%), Milk and Fish (+6% each), Maize at Dohad (+5%), Potatoes, Gur and Betelnuts (+4% each), Eggs (+3%), Barley, Cashewnuts and Meat (+2% each) and Urad, Bananas and Mustard oil (+1% each) were marked up, while those of Wheat at Kotah and Chandansi (—9% each), at Dhanduka (—8%) and at Khagaria (—3%), Maize at Khagaria (—8%), Jowar at Nandyal (—7%), Rice at Tirunelveli (—6%) and at Jamshedpur (—5%), Onions (—6%), Turmeric (—4%), Arhar, Coconut oil and Chillies (—2% each) and Gram, Mung, Masur and Tea (—1% each) showed declines and the index for 'Food Articles' advanced by 1.0 per cent to 118.1 as compared with 116.9 (revised) for the earlier week.

The index for 'Tobacco' remained stationary at the previous week's revised level of 110.0.

The index for the 'Fuel, Power, Light and Lubricants' group stood unchanged at its earlier week's level of 120.8.

The index for 'Industrial Raw Materials' declined by 1.5 per cent to 153.2 due to a fall in the prices of raw Hemp and Rapeseed (at Calcutta) (—21% each), Tanning Materials (—7%), Lac (—5%), raw Jute, Linseed and raw Skins (—4% each) and Copra (—2%). The prices of Rapeseed at Delhi (+6%), Castorseed (+4%), raw Wool and Groundnuts (+3% each) and raw Silk (—2%), however, moved up.

Lower prices of Linseed oil (—4%), Rayon yarn (—3%), Lead (—2%) and Coir yarn (—1%) brought down the index for 'Intermediate Products' by 0.7 per cent to 135.0, although the prices of Brass (+2%) and Copper and Tin (1% each) showed advances.

The index for 'Finished Products' receded by 0.8 per cent to 125.3 as a result of a decline in the prices of Jute manufactures (—5%). There was, however, a rise in the prices of Oil cake (+2%).

A VILLAGE TRANSFORMED

ISCON

INDIAN STEELWORKS CONSTRUCTION CO. LTD.

Once an obscure village, set amidst field and forest... today, a mighty steel town. In a little over two years, Durgapur is making world news! Pig-iron for foundries, forging blooms and billets for re-rollers, sections for industry and sleepers for the railways are already being produced at Durgapur. More will follow as the construction of this giant steelworks nears the fourth and final stage.

The Income Tax Bill

ONE of the last legislative acts of the present
Parliament will be to give the country a new
income tax code. The Law Commission,
justly appalled by the fact that "there
was hardly any Act on the Indian Sta-
tute Book which was so complicated,
so illogical in its arrangements, and in some
respects, so obscure as the Indian Income tax
Act", attempted a draft enactment consisting
of 329 clauses. The present bill with its
294 clauses divided into twenty three chap-
ters follows in the main the draft of the Law
Commission. The Tyagi Committee on Direct
Taxation Administration, with its slightly
different preoccupation—it was less overtly
concerned with technicalities—had a great deal
of useful guidance to offer on administration,
procedure, and modes of tackling evasion.
The bill has leaned heavily on this Committee's
report in regard to these matters.

Presenting it in Parliament, Mr Morarji
Desai said that the basic structure and notions
relating to the taxation of income and even
the language, where possible, of the earlier
enactment have been kept intact. The changes
introduced were classified by him under three
broad heads: (i) those that aimed at remov-
ing difficulties of assesses (ii) those designed
to provide a better procedure and administra-
tion of the act and (iii) those that deal with
tax avoidance and evasion. In the first cate-
gory, he put the exemption from taxation of
remittances from abroad of earlier profits.
The present law, itself somewhat liberalised
in 1953, made the non-taxability of such
remittances contingent on its being, in effect,
utilised for payment of taxes. At a still
earlier stage, part of the remittance was re-
quired to be invested in government securities
in order to qualify for exemption. This anoma-
ly is now sought to be removed. This is
sure to encourage Indians who have made good
abroad to make their contribution more readily
to Indian development. Another important
change, not mentioned by Mr Desai, is the
mitigation of the inequities of the present law
on the allowance of bad debts. Technical
stands about the year in which a genuine bad
debt should be claimed or allowed as a deduc-
tion were creating a lot of bad blood between
the department and the tax-payer. The new
law will remove one of the commonest sources
of vexation. Likewise, the law relating to
registration of firms for income tax purposes
was a veritable booby-trap of technicality.
Compliance with the elaborate procedure
prescribed was considered essential since the
consequence of registration was a substantial
reduction in tax. However, the more humane
attitude envisaged in the bill will cut down
both paper-work and hardship. Specific
statutory provision has also now been made
to make possible what was always the
intention of authorities—a liberal attitude to-
wards technical breaches. Other features of
the bill for which assesses will feel grateful
include payment of interest on refunds de-
layed, clearer indications of the limits of
retrospective assessments and allowance as
deduction of contributions towards a gratuity
fund. However, the anomaly of exempting
the government employees' gratuity from tax
while taxing similar receipts of other em-

ployees (subject to the small mercy of provi-
sion for averaging it over three years) re-
mains. The equity or logic of this provision
has eluded impartial observers and it is
unlikely to survive constitutional challenge.

Procedural changes, some of them sweeping,
largely intended to reduce and penalise delays
have been incorporated in the bill. On one
crucial point on which the Law Commission
and the Tyagi Committee differed—the useful-
ness of the Appellate Tribunal—Authority
has chosen to side with the latter. The
Appellate Tribunals, despite frequent criticism
from the High Courts—some of it pretty
scathing—have served a very useful purpose
in the present set-up. The congestion in the
High Courts has also influenced Govern-
ment decision against a direct line of appeal from
the Appellate Assistant Commissioner to the
High Court. However, a sensible provision
that has been introduced by the bill is the
possibility of a direct reference to the Supreme
Court by the Tribunal of questions of law on
which there is a conflict of opinion among the
High Courts. The other important change
relating to procedure is connected with recov-
ery of taxes levied and an attempt has been
made to ensure uniformity of procedure
throughout India. Other proposals relate to
submission of returns by the tax-payer him-
self within (in most cases) the end of June
every year without waiting for any notice
from the Department and the levy of interest
on delayed returns and payments of taxes.

The third and possibly the most contro-
versial category of provisions relate to attempts
to plug loopholes in the Act that enable tax
avoidance and even evasion. In this category
are also to be included clauses that seek
to give effect (or nullify) previous judi-
cial pronouncements on problems that have
come up time and again in the course of the
last thirty years. Thus, the taxation of the
income of religious and charitable trusts has
a long and interesting legal history beginning
with the famous Tribune Trust case. Some
recent decisions have given point to the new
provision that the business income of such
trusts can qualify for exemption only if the
business is carried on in the carrying out of the
primary purposes of the institution. Further,
the familiar practice of trusts funding exempted
profits for use in a supposed future that never
seems to arrive is to be discouraged by ensur-
ing, on pain of taxation in the alternative, a
more continuous evidence of charitable inten-
tions. Moreover, the base of charity is to be
enlarged: Though it proverbially begins at
home, it should, if it desires to qualify for
exemption, travel further. Charity that
has as its beneficiaries close relations, will
be more expensive from now on.

These are some of the examples chosen at
random from the bill and it is evident that,
by and large, they are conceived on right
lines. We shall have opportunity to comment
in detail in the course of the next few months.
Meantime, we welcome it as a largely accept-
able attempt to bring about a much-needed
tidiness in an enactment that has become a
tangle of deadwood and wild overgrowth.

Rabindranath Tagore

By KEDARNATH CHATTERJEE

RABINDRANATH Tagore, poet, novelist, educationist, philosopher, ardent advocate of humanism and the universality of the human spirit, seer who foresaw the crisis of civilization consequent on the vicious growth of nationalism and one of the creators of modern India, has been interpreted in hundreds of ways by eminent writers and thinkers, in India and abroad. He wrote and set to tune just about 2000 songs over a vast range of musical modes, starting from the classical North Indian Dhrupad to the adapted tunes of the folk musicians of India. His music now accepted as a class by itself, had right through an old-established basis, though he ranged far and wide in his variations. A noted music critic has said that though the classical forms of Malhar are only eight, Rabindranath's songs of the rains give forty distinct forms.

By nothing is Tagore so well remembered as by his contributions to literature. His creative powers were employed in the production of all the conceivable modes of literary efforts: occasional verse, epigrammatic stanzas, short lyrics (in which he was supreme), long pieces, short stories, novels, prose-romances, plays, operas, Kirtons, and prose pieces of a philosophical and reflective nature. His poetry can be compared to a flooded river that irrigated the entire field of Indian literature, though the main stream was confined to Bengali. The published poems including the lyrics of his songs must approach almost four thousand in number, and even today, twenty years after his passing, unpublished poems are coming to light. They range over the entire expanse of human conception and sentiment, and in rhythm, emotional content and expression too, they are truly all encompassing. It is impossible to describe their quality within the space of an article: but just to show that the expression of his muse could surmount even the barriers of language, I would quote the opinion of Maurice Maeterlinck, the famed Belgian poet, dramatist and Nobel-prizeman who wrote in 1931 as follows:

"Je considere certaines pages du GITANJALI comme les plus hautes, les plus profondes les plus divinement humaines qu'on ait ecrites jusqu'a ce jour." ("I consider certain pages of GITANJALI as being the most elevated, the most profound, and the most divinely humane of all that has been written till to-day.")

There is a certain class of writer whose tendencies are well described by the Sanskrit proverb, MAKSHIKA BRANAM ICHCHANTI. Much has been made by them of certain criticisms of Tagore by W. B. Yeats, the Irish poet. Indeed one Bombay paper ran such an article proclaiming the "debunking" of Tagore by a scribe of the MAKSHIKA type, in which Yeats was quoted. Those, who like the writer of this article, have had some personal knowledge of Yeats with his changeful moods and eccentricities, know well the reason for those adverse comments. Yeats himself evidently did not feel happy after calmer consideration, as the following extract from a published letter, written late in 1931, would show:—

Dear Tagore,

"They wrote me sometime ago to ask me to contribute to your GOLDEN BOOK. I forgot and then Rothenstein wrote to me, but his letter, delayed in post, only reached me two days ago. I have been travelling about, and shall be for some days yet and when I am settled enough to think, it may be too late. I,

therefore, want to tell you that I am still your most loyal student and admirer. Your poems, as you know came to me as a great excitement; and of recent years I have found wisdom and beauty, in your prose—the Home and the World, your short stories and your Reminiscences".

Quotations galore can be given from numberless great men who admired Tagore, and looked upon him as a prophet and a seer. There are many amongst us who still cherish the memories of the days when Tagore cast his spell on numberless people through his writings and his speeches.

Tagore wrote eight great novels and about 30 short stories. He was the first short story writer in any Indian language, his first two being written and published about 1895. He had written a longish story, BHIKARINI (the Beggar maid) about 1877, but that was in a different style.

Tagore wrote about forty-two plays, starting from his early youth. Besides those which received the shape of drama, operatic presentation (Geeta-Natya) and dance drama in which dance, music and acting were combined in a most unusual synthesis of ancient Indian tradition with some of the rarest elements of modern Western stage-craft, there are a number of tales, romantic stories and poems from

Where the mind is without fear and the head is held high;
Where knowledge is free;
Where the world has not been broken up into fragments by narrow domestic walls;
Where words come out from the depth of truth;
Where tireless striving stretches its arms towards perfection;
Where the clear stream of reason has not lost its way into the dreary desert sand of dead habit;
Where the mind is led forward by thee into ever-widening thought and action—
Into that heaven of freedom, my Father,
let my country awake.

—Gitanjali

his prolific pen, that contain the seeds of drama. Many of them are being presented in dramatised form during the Centenary celebrations.

The plays of Rabindranath, all of which were directed and produced by him in person, and in many of which he himself appeared as an artiste, differed greatly from the pieces that were being presented on the stage of the Indian Theatre of his time, which had persisted in following the stage-craft of early and mid-Victorian melodrama, with its over-acting in emotional parts, megaphonic elocution and violently exaggerated movements. The dramas of those days were stereotyped stage-plays in which broad jests, over-emphasised love scenes in which the amorous dialogues almost approximated on the crude and vulgar mock-heroics, and tragedy of the Grand Guignol variety abounded in plenty.

But Rabindranath's plays and dramas were things apart. Like the great playwrights of the occident, he left an unmistakable stamp of his personality on the play, be it a tragedy like "Visarjan" (the Sacrifice) a comedy like "Chirakumar Sabha" or a trenchant satire, with bizarre apparel, stage-craft and decor as in a fantasia, like "Tasher-Desh" (Kingdom of Cards).

It is because of this departure from the current practice of the day (in which the dramatist acted as the impersonal vendor of comestibles, sweet, sour or bitter, and the producer, the chef who finally served up the dishes) that Rabindranath's plays were looked askance at by the critics and treated as unfamiliar material by the players and play-directors, with the inevitable result of failure on the stage. It is to be noted that where Rabindranath himself or his great nephew Dinendranath, selected the cast and directed the rehearsals and stage-movements etc., as in "Chirakumar Sabha", it attained a fair amount of success.

It is because of this very same departure from the beaten track that Rabindranath has been variously compared with western dramatists, notably Maurice Maeterlinck. It is to be emphasised here that all of Tagore's plays and dramas, tragedies, comedies, satires or the purely allegoric drama, were intensely Indian in their creation and stage-conception, though some of the themes were basically universal in their character, and as such they may resemble the presentation of the same human yearnings by some of the great Western dramatists. Indeed some of his dramas like "Visarjan" and "Achalayatan", cannot be conceived in any other perspective than that of Hindu India.

There is a general impression that his own countrymen were slow to recognise his greatness and they joined the chorus of praise only when the west discovered him and conferred the Nobel Prize on him. This is entirely erroneous. When he completed fifty years, representatives of cultural organisations of diverse sorts joined in the homage paid to him in the Calcutta Town Hall in a way for which there is no precedent. He certainly had his detractors, who were unsympathetic to the range and sweep of his humanism and would fain have confined him within the narrow grooves of conventional religion.

Tagore's politics was not of the sort that gets published in a sensational form. It is well-known that he was not in sympathy with much of the thinking behind the Non-cooperation movement started by Gandhiji. And his philosophic and meditative habit of mind was able to see the wider implications of nationalism. He was able to see how a narrow nationalistic outlook may degenerate into the kind of politics that Hitler came to typify later. But on crucial occasions, he has given the clearest indications of his sympathy for the cause of liberation of the motherland. Moreover, he conceived the tasks of patriotism on a long-term basis of character-building. Freedom to him meant more than mere self-government: it is the liberation of the spirit from the trammels of ignorance, superstition and conventional cruelties inflicted in the name of religion and faith that interested him most. Quite early in his life, he conceived that the real tasks of nation-building were educational and therefore founded the Visva Bharati, which is an abiding monument to his educational ideals.

Lastly, about Rabindranath Tagore the man, Mahatma Gandhi, wrote on the occasion of the celebration of the completion of seventy-first birthday, the following tribute which was printed in the **Golden Book of Tagore**:

"In common with thousands of his countrymen I owe much to one who by his poetic genius and singular purity of life has raised India in the estimation of the world. But I owe also more. Did he not harbour in Santiniketan the inmates of my Ashram who had preceded me from South Africa? The other ties and memories are too sacred to bear mention in a public tribute."

6 May 1961

As for my own memories of that radiant vision that was Rabindranath Tagore, what am I to say? I saw him first on a winter day in 1896 when I was a child of five years, in the splendour of his manhood. I remember him when the elite of Bengal paid him tributes in a public meeting in the Town Hall of Calcutta. I saw him in London in the autumn of 1913, when the decision to award him the Nobel Prize had become known, although the actual publication of the news came about a month later, and I remember the astonished and admiring looks with which the frequenters of the artists' colony in Chelsea, London, used to watch him walking along the Thames Embankment and I remember their enquiries as to who he was and their effusive remarks about his wondrous personality. I remember the tributes that came pouring from the four corners of the earth on the occasion (1931) of his seventy-first birthday celebrations. I remember the vast crowds in Iran, Iraq and who used to throng to see him and listen with rapt attention to his speeches and their translation. And lastly I remember his passing.

How can I write? My mind is too full of poignant memories, too overcome by the thought of that glorious vision that is no more. I can only bow my head down, for—in the words of Thomas Moore.

"I feel like one,
Who treads alone
Some banquet hall deserted,
Whose lights are dead
Whose garlands dead
And all but he departed."

Foreign Aid and the Cold War

THE fluent society in India calls for help from the affluent society in the USA, and the expectations of aid are now pitched in relation to the advice given by Professor Galbraith to the rich nations to meet the needs of development in Asia. Marshall aid and other aid Plans have led to a declaration of aims in relation to claims, and the problem is now viewed, not as one of competing with Russia (which in India has given less than the USA) but as one of finding others to support India's plan. The balance of payments problem in Ceylon, Arabia and other countries is one reason for taking a hard look. The other reason is that the USA has a surplus of food owing to continuous rise in output and the disposal problem makes it convenient to link up aid with the problem of the new world that needs relief.

The Corporations that dispense charity or promote study cannot but rely on the Government to see that economic growth is accelerated outside the USA. Labour Unions are by no means unaware of what development abroad means and even if the debate on deserts, demands, and even if the debate on deserts, instead of clamant needs, will recur, the USA has been reminded that abundance at home calls for a new effort to help others out. Budgets contain special provision for aid and India has not omitted to help others, though aid for Nepal or Sikkim may be conditioned by Defence requirements.

The political changes in Africa have altered the dimensions of the problem. South Africa may not need help, but East Africa has put in a claim for well spread aid in capital and skill and the Congo's problems of recovery from a political crisis are such as to make the White nations blench. The Imperialism that took out oil or minerals has been eclipsed by two world wars and there is now a plea that rich Brunei should help other

parts of Borneo to develop. There is also a theory that Kuwait should soon help Syria to rise to the level of Egypt. But the striving is not inspired only by the impulse to economic unity in Europe. It is due to a feeling that the aid from abroad will grow only as domestic efforts for development increase and the rise in population in Asia is viewed as a decisive consideration. Migration is not safe or easy, and the ardent nationalism of Malaya or Ceylon is an obstacle—but not to the movement of capital or enterprise which will bring jobs to people who want them. Preparing them for a new life—in industry not in agriculture—is, of course, a part of the task, and it is fairly certain that in the new era of big business education is undertaken by the big company for its own purposes, as may be inferred from training schools for staff set up by big concerns.

The disparities among regions may call for treatment, but at present the differences between Europe and Asia are viewed as the problem peculiarly of North America which has to think not only of South America but of other regions in thinking of economic progress that will yield only a limited return as compared with outlay at home. This is the new 20th century problem. For, one thing is certain: the big firm that invests abroad asks for guarantees of its own Government as well as the recipient of foreign capital. That is not merely because of Abadan or Suez, but because the Government and not the corporation is in the foreground of development, first because big sums are involved as in the case of fertiliser plants or aluminium plants and secondly because no hint of outside exploitation must emerge.

Discontent in the West Indies about British sugar companies or US oil companies operating there may convey an apt warning about the real intricacies of investments today to the USA or any creditor nation. And India must be aware that moneylenders in the past earned for this country a bad name in Burma or Malaya and trade prospects are still clouded by memories of debt relief and emigration alike. That small nations like Israel are interested in Africa's needs and problems may stimulate in the USA or Germany a desire to do more than before, but there are at the moment difficulties due to the Cuban developments. A small island that could have been bought easily from Spain in 1820 has now become a problem for the ten republics, as also the USA. Cuba apparently divides Latin American opinion as also US opinion, and if one hopes that, like Mexico, the island will settle down, its sugar surplus is going to create difficulties for exporters in other islands like Mauritius. The reference to Communist infiltration is a sign that the cold war has come very near the USA, also that the Soviet Union means to keep one eye on the new world where poverty lingers after a century of independence.

The ten-year plan of Chile now in hand is proof that previous schemes have achieved much less than expected. The success attained by Mexico has yet no parallel in Brazil and the USA will doubtless put Latin America before Asia for several compelling reasons. That means the European nations, including Germany, will have to devote more money

and time to Asian problems, and experience of colonial rule is no qualification for handling them. That is why Sweden has been lately drawn into the discussions, because emergent Socialism in Asia is not to be ignored and the nations ready to do good have to think of altered local conditions.

One suggestion is that the European nations may increase takings of raw materials like hides and some manufactures like cotton textiles from the under-developed nations. There is no need to replace jute bags by paper when substitute for wool when the natural stuff is available always at a reasonable price. The USA may be justified in buying more manganese from Brazil than from India, but there is no need to replace jute bags by paper when India's economic health depends largely on the maintenance of exports of jute fabrics in return for US capital goods. The military alliances also bring in problems. Pakistan asks for more and the encouragement of Thailand, rather than Burma, has become a guiding principle of US foreign policy. But reorientation is more likely after the discussion on what went wrong in Cuba or Laos. And failure in one direction may compel the USA to settle the issue of long-term aid.

The immediate prospect is obscured not least by Britain's economic problems and new ties, and the need for the international agencies to define the issue may be greater, because of Germany's present preoccupation with elections or French alarm over the eruption in Algeria. But it will be agreed that delay will help India also to define its needs and to clarify its policy about oil exploration, coal washeries and transport requirements—quite soon, it may be hoped.

The Drying Divisible Pool

THE shrinkage in the size of the divisible pool of income tax has been naturally causing concern to State Governments. This has been brought about by the Finance Act of 1959 which amended the Income Tax Act and deleted the procedure for grossing of dividends. The Finance Minister assured the State Governments in 1959 that this amendment would not affect them adversely because, pending the recommendation of the Third Finance Commission, the States would continue to receive grants equivalent to the amount they were getting before. This assurance, however, does not appear to have satisfied the States many of whom have understood to have strongly urged that the Centre should have consulted them before introducing amendments of this type which vitally affect their resources. Now that the question is being examined by the Finance Commission, it is only to be expected that State Governments should put in their claims vigorously for getting a share of the corporation tax.

It is significant to note that while the revenue from corporation tax has increased sharply from Rs 50.8 crores in 1956-57 to Rs 135 crores in 1960-61 (estimated), the divisible income tax collection has declined from Rs 145.2 crores to Rs 100.5 crores in the same period. The trend in receipts in recent years is shown in the table given below:

Year	Corporation Tax		(In Rs Crores)			
	Amount	Percentage of Total Collection	Surcharge for Central Purposes	Amount	Percentage	Total Collection
1956-57	50.8	25.2	5.5	145.2	72.1	201.5
1957-58	56.4	25.6	6.9	156.9	71.3	202.2
1958-59	54.7	24.2	8.4	163.2	72.1	226.3
1959-60	116.1	45.8	8.5	129.0	50.9	253.6
1960-61	135.0	56.2	4.5	100.5	41.9	240.0

In the coming years the corporate sector is bound to show a steady and spectacular expansion. Several thousands of new companies are going to be floated in different parts of the country. The growth of companies also does involve increasing responsibilities on the State Governments for providing various types of services. As the Government of West Bengal has pointed out, "a company strains the resources of a State Government in the same manner as a private individual or a firm does, but to a greater degree, relatable to the size of the company. These are the identical problems of maintaining law and order, providing communications for the movement of goods, maintenance of power supplies and facilities for sewerage, water supply and conservancy for the employees of a company or of a small firm. The corporate sector, however, contributes nothing to the divisible pool."

If this suggestion is to be accepted, it will involve an amendment to the Constitution. In the meanwhile, it has been pointed out that the Third Finance Commission should make a specific grant-in-aid to the States equivalent to 50 per cent of the total corporation tax. The West Bengal Government has recommended that the appointment of this grant-in-aid should be made according to the total number of workers in the registered factories. While the State's claim for a share of the corporation tax seems justified, the basis for allocation as suggested by the West Bengal Government, namely, the total number of workers employed, does not appear to be satisfactory. Such a policy perhaps may be disincentive to States to permit factories to carry out their programmes of rationalisation and retrench surplus labour. The West Bengal Government has also suggested that the amount of corporation tax allotted to States should be spent specifically for the maintenance and improvement of administrative, police, health and educational services in the urban areas where factories are located and for the improvement of civic amenities in those areas like housing, water supply and sanitation. While there can be no two opinions about the need to develop the urban areas, it is doubtful whether it is advisable to earmark the proceeds specifically for the improvement of areas where the factories are located. The developmental needs of the different States are not identical and, therefore, it seems better not to lay down any provision earmarking the proceeds from the corporation tax to specific purposes. It should be left to the discretion of the States to use the resources in the manner which they consider to be in the best of their interest.

A Steady Career in the Right Orbit

By POTHAN JOSEPH

BY rights of long professional association and family-friendship I was entitled to fill the role of a pall-bearer to the late Sorabji Kapadia of Bombay whom we shall miss for decades to come in the ranks of journalism. For forty years he held his place unpretentiously tending the fortunes of **Bombay Samachar** through several vicissitudes in proprietorship. The late Syed Abdullah Brelvi served only one journal from beginning to end, and it was a favourite jest with G. L. Mehta, once his aide in the **Bombay Chronicle**, that his constancy would still find him as Editor if by any chance it became the **Bombay Gazette**.

Sorabji was at the helm of his paper with a century-old standing and the curious part of his career is that while he had the prestige for mobilising credit and building up a nationalist institution for himself, he was content to devote his talent for the preservation of many publicity-organs, some of them in precarious condition calling for rare skill and stamina in rescue-operations. He was acquainted with many remarkable personalities in his time. If I am asked for a short tribute, I would describe him as a Western India Liberal of old vintage, and a true practitioner of Zoroastrian principles. An enthusiastic believer in khadi, he was by the time I was introduced to him, a weaver of homespun, but he retained his orthodox headgear unlike B. F. Bharucha who donned a white cap, night and day, and carried a **takli** inside the wallet in which he preserved cuttings of Letters to the Editor regularly published for the advancement of the national cause, letters in which the name of the late Mr L. R. Tairsee would appear as consignatory. They were simple, pep-thoughts, not epistles of political erudition which marked Sapru-Jayakar letters. Sorabji could read the mind of K. F. Nariman as lucidly as he could explain the recoil of Vallabhbhai Patel in a crucial turn of Bombay politics.

HEART IN THE JOB

Sorabji knew everybody worth knowing in the political amphitheatre of the Bombay Presidency. He could, without emotional partisanship mirror contrary opinions, though editorially he would not defect from the judicial, and also judicious, path during a period of repressive laws. We must never forget that when in technical terms Sorabji Kapadia was deputising for the Proprietor, he figured both as manager and editor, not to mention legal adviser. If the advertisement-manager came across any problems of business in Bombay or the suburbs, Sorabji was there with his expertise to solve the difficulties of the day by the time he reached Church Gate Station from his place in Santa Cruz by 8-15 a.m. Somehow his fidelity to the morning-edition was so keen that he would occasionally stay overnight and have a nap on a bare table after seeing the newspaper "put to bed" first (sub-editors know the process).

The late N. H. Belgamwala was attracted by Sorabji's diligence and dispatch, and nothing would separate them until the last, in newspaper enterprise. As second-in-command there was no one in Bombay who could match Sorabji, and he was an adept in the marshalling of resources to meet emergencies. The **Indian Daily Mail** which they acquired, represented a credit-feat which had to be later redeemed in the time of Sir Sorabji Pochkhanwala. Journalist Sorabji knew very little about the Cotton market, but the Chief had a large portfolio of diverse interests and flossy specimens. N.H.B. had a great respect for the mind; and he would personally go canvassing for articles from learned people like the late Mr K. Natarajan and Professor K. T. Shah for exclusives. Sorabji had a wiry constitution which the demands of several papers at a time could not undermine, but as a Naturopath, he had his own discipline and even some advice to spare for Mahatma Gandhi in his dietic experiments and the use of mudplaster in the maintenance of normal health.

The popular belief is that a newspaperman who seeks credit has a cold reception in a bank known for stability, but I have known two exceptions, Sorabji Kapadia and S. Sadanand who knew how to charm bank-officials and release newsprint under demurrage in three hours, just in time for the next edition.

SUNNY TEMPER

Whatever aid he could lend for a lame dog lingering near the stile, Sorabji could be trusted to give. Although he trimmed his facial appearance to resemble Leon Trotsky, there was nothing sinister about the entry of Sorabji Kapadia into a Director's room for an important conference. In his temperament and adaptability, he was almost unique. For instance, the stable methodism of Mr. Cama who came into the ownership of several syndicated papers was not of the Belgamwala type of mercurial enterprise. Since the institution was all in all to him, Sorabji Kapadia as usual put his shoulders to the wheel.

During this period journalism was changing, not to mention the variety of journalists in the Camera-age, and the quest for front-page stunts. It would be very difficult to get hold of a photograph in which Sorabji is found gate-crashing or pushing his way to the front to figure beside some Eminent Worthy, cheek by jowl, as the local celebrity of the coddling accustomed to the title, "Doyen of the profession" setting an example to the younger flock during press conferences.

Sorabji Kapadia had no itch for publicity nor was he worried about any short-cut to wealth. As a matter of fact his purse was useful to him only for keeping a few visiting cards frayed at the edge, his quarterly railway pass and some loose change for charity. As he was aging, his eyes were turned towards the sunset and he passed away under the ministrations of his own family and the consolations of his faith. So they are all going, the old, old, familiar faces.

In his fade-out, one could well exclaim "Behold a true Zoroastrian in whom there was no guile."

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings. Individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

UK LOANS

Helpful Pattern

The loan agreements signed last Monday (1 May), for a total credit of Rs 53 crores (£40 million) from the United Kingdom, were agreed to in principle at a meeting between Mr Morarji Desai and Mr Selwyn Lloyd when India's Finance Minister visited London in September last. The details of the agreements now concluded show that they conform very largely to the pattern of aid that is most useful to India. Two points that are being stressed in this connection is that the loans for development will not serve the purpose unless they are for fairly long periods, and, secondly, as much as possible of external assistance should be in the form of untied loans, that is to say, they should not be linked to particular projects. Tying up of loans countrywise is not considered as great a handicap as tying up projectwise, unless the country happens to be a high price market.

Both the loans are repayable over twenty years, including grace period of seven years in the case of the first loan of £30 million and five in the other. Moreover, half of the first loan of £30 million and the whole of the second loan of £10 million are free loans, and may be used to pay for imports from Britain other than those required for particular projects. The individual projects tied to the first loan are expansion of Bhopal Heavy Electrical Plant, fertiliser factory at Naharkatiya, a new security paper mill at Hoshangabad in Madhya Pradesh and expansion of Hindustan Cables, Rupnarayanpur.

In this connexion it may be mentioned that the major portion of previous loans from the UK, (£62.5 million out of a total of £80.5 million) was in the form of untied loans for general balance of payments aid. The tied loans were for the Durgapur project and for the pipeline project. When the £20 million credit for Durgapur extension scheme is finalised, the total of British Government loans for India's development plans will amount to just over Rs 186 crores (£140 million). Out of this, Rs 80 crores will be the amount available for the Third Plan.

PUNJAB NATIONAL

No Ostrich-like Approach

Mr Ramnath Goenka is to be congratulated on his speech as Chairman of Punjab National Bank Limited for his refusal to be ostrich-like, when it came to analysing the reasons for stagnancy in bank Deposits during the last year. The disruption of confidence which occurred has tended, in the Chairmen's speeches so far made public, to be glossed over; there has been the insinuation that developments were unfavourable or the like. Mr Goenka comes straight out, and says "the failure of the Palai Central Bank and its effect on the bank-

ing system may have acted as a contributory factor", the implication of course being a sudden emergence of distrust. Consequently, he hails the decisions to introduce the insurance of bank Deposits—"although the big banks may have to bear the greater part of the cost of the scheme"—and to bring about the amalgamation of smaller and weaker units with bigger and stronger ones.

But, at best, this is only a negative and corrective approach. Much more that is positive needs to be done, if the banks are to be confident that resources will steadily gather with them such that they are enabled to provide for the increased industrial—and trading and commercial—demand for bank credit. In this regard, again from the negative viewpoint, Mr Goenka decries the use of blanket controls, since there is a large money market outside the purview of any measures that Reserve Bank may institute. Nor does he refer here to "what is called black money", but instead to "the money in the hands of the agricultural and fixed income groups" that just does not get banked. Hence, blanket controls are not very effective "in dealing with either problems of inflation generally or of checking commodity prices specifically." In the context of the development envisaged for the Third Plan, Mr Goenka wants that the Reserve Bank policy should revert to its attitude during the 1956-57 busy season, one of "expanding the credit base . . . by making the Reserve Bank's rediscounting facilities liberal and its attitude cooperative so that industrial development is not retarded for reasons of tight money conditions."

The PNB Chairman means business, about what should be done to get new Deposits. The banks, he says,

. . . by broadening and strengthening the banking structure and with the added safety that may be provided to the public by the introduction of deposit insurance, could encourage and foster the banking habit by an organised drive to get people to keep their money with banks.

Mr Goenka would have the banking system, like the State Bank, ferret out savings in the rural, non-banked areas. He would want, however, that the commercial banks, again like the State Bank, should have some cover against losses therefrom.

BANK RETURNS

Sharp Currency Contraction Again

Very large payments that had to be made to the State Governments, as also a maturing liability in respect of Treasury Bills purchased and discounted by the Reserve Bank, have compelled the Central Government to institute deficit financing in a very considerable sum during the week ended 28 April, as disclosed in the latest returns of the central banking institution.

The "formal" end of the 1960-61 busy season is heralded by a continued contraction in cur-

rency. Active Note Circulation has fallen sharply by Rs 25.21 crores to Rs 1,982.43 crores, and there has been inflow of Rupee Coin, although in the nominal sum of Rs 0.14 crore. For buttressing Balances Held Abroad, there is a transfer of Rs 5 crores from Foreign Securities in the Banking Department; currency has been contracted against Rupee Securities for Rs 10 crores, and, in the result, the Reserve Bank's cash in the till has improved by Rs 10.27 crores to Rs 32.55 crores.

With the transfer from the Issue Department, Investments, in the Banking Department, might have been expected to be placed Rs 10 crores higher. In fact, the rise is of the order of Rs 20 crores. Besides, it is known that, during the week, the State Bank figured as a purchaser of giltedged for Rs 20 crores. Hence, it is permissible to infer that created money may have been for an amount around Rs 30 crores. In fact, however, although confirmation in this respect will not be available until the next week, the amount involved may be higher still.

For, the State Governments have reported a net improvement in their position to the tune of over Rs 23 crores: on the one hand, their Deposits have been marked up by Rs 14.01 crores at Rs 18.31 crores; on the other, the ways and means indebtedness of the States to the Reserve Bank has been reduced by Rs 9.45 crores to Rs 84.00 crores. Then, the Reserve Bank's portfolio of Treasury Bills purchased and discounted is steeply lower by Rs 19.44 crores at Rs 40.76 crores. So, in round figures, the commitments under these two heads, as far as the Centre is concerned, will have been of the order of Rs 45 crores. Consequently, even after replenishment of resources through deficit financing, the Centre's balances are seen to have gone down by Rs 12.28 crores to Rs 51.63 crores; and the Rs 30 crores of deficit financing plus the running down of balances are more or less equal to the two commitments we have mentioned. But what about the rise of Rs 7.19 crores to Rs 115.41 crores in Other Deposits? It would appear that this, too, is a book entry where—under the Centre's balances have been debited—and a particular head credited under "Other Deposits". Hence our view that deficit financing may have exceeded Rs 30 crores.

On the face of it, banks appear to have felt some strain: for, their Reserve Balances are lower by Rs 8.90 crores at Rs 78.16 crores. But we must remember that the State Bank's purchase of securities resulted in a drop of over Rs 8 crores in cash in hand and with Reserve Bank. So, the balances maintained by other banks with the Reserve Bank do not seem to have changed materially. Similarly, while the Other Loans and Advances of the central banking institution have dropped only nominally by Rs 0.80 crores, the fall of nearly Rs 5 crores—Rs 4.72 crores, to be exact—in the Reserve Bank's advances against usance bills would suggest that liquidation of debt by Scheduled Banks has been offset by increase in borrowings of State Cooperative banks, etc. It is not unlikely, consequently, that the indebtedness of Scheduled Banks is found, in the return for 28 April, to have gone down to Rs 35 crores—or even less.

Lastly, it is most disheartening to find that Balances Held Abroad, despite transfer of Rs 5 crores from the Issue Department, are lower by Rs 0.48 crore at Rs 10.32 crores. The foreign exchange reserves held by the Reserve Bank now barely exceed Rs 123 crores, and the net outgo in the latest week has amounted to more than Rs 5 crores. At this rate, unless the untied loan from the UK is soon credited, we have the prospect that the foreign exchange reserves of this country,

within the month, may fall below the Rs 100 crores mark.

The return of the State Bank for 28 April vouchsafes the interesting information that, after payment of the monthly instalment in April, Deposits at Rs 549.70 crores (a drop of Rs 1.28 crores over the week) include Rs 177.47 crores of US counterpart funds. This means that, when the two further instalments of Rs 12 crores each, for which the Central Budget takes credit, are made over, some Rs 150 crores of PL 480 funds will remain with the State Bank. There is no indication when this balance is to be paid over to the Reserve Bank. But, for the time being, and almost certainly for the rest of the current fiscal year, the State Bank will benefit by having this Rs 150 crores of windfall Deposits. However, it may not be an unmixed blessing. The early end of the 1960-61 busy season, and signs that the 1961 slack season may conceivably witness easy money conditions, make it likely that the 1961 slack season may parallel conditions in the 1957 slack season. In that event, the State Bank may prove to suffer from an embarras de richesse. In any case, with the total of Advances declining by Rs 4.22 crores to Rs 276.33 crores, the State Bank has decided to add to its gilt-edged portfolio. Cash in hand and with Reserve Bank has been run down by Rs 8.11 crores to Rs 21.50 crores, and Other Assets are shown lower by Rs 10.57 crores at Rs 28.67 crores, so that Rs 21.36 crores of gilt-edged securities could be purchased; the portfolio now stands at Rs 237.47 crores.

It would appear, from the return of Scheduled Banks for 21 April, that a decline has been registered in the Deposits of the banking system: not so, quite: for in that week, there is the suggestion that the State Bank made over the April instalment of Rs 12 crores of counterpart funds, and accordingly the Deposit resources of that institution fell by just under Rs 10 crores. Since the net Deposits of Scheduled Banks have fallen only a little over Rs 4 crores, the inference is clear that banks other than the State Bank experience a rise in their Deposits amounting to perhaps Rs 6 crores. Clear signs of easier money conditions are to be found in the fall of Rs 8.67 crores to Rs 1,311.29 crores in the total of Advances. This double addition to resources—rise in Deposits and fall in bank credit—has enabled the banking system to reduce borrowings from the Reserve Bank by the large sum of Rs 15.55 crores to Rs 41.35 crores; and indebtedness to the State Bank has also gone down by Rs 1.58 crores. Balances with the Reserve Bank are higher by Rs 5.40 crores, but this is wholly on account of the State Bank which sold gilt-edged for Rs 20 crores: this has gone partly to "pay" for Deposits handed over to the Reserve Bank and partly to add to cash in hand and with Reserve Bank.

BUSY SEASON

A Tame End After An Exciting Start

With the end of April, it may be said that the 1960-61 busy season has officially drawn to its close. It is true, the first week in May traditionally calls for second thoughts in this regard; but it is the beginning of the month disbursements that cause both an expansion in currency and a rise in bank Advances. Thus, we may assume that, also officially, the 1961 slack season has started. While an interpretation of the busy season just ended must wait till the next week—when the figures relating to Scheduled Banks for the last Friday in April will become available—the evidence already on hand suggests that, during the course of the period, the demand thrown up for funds exceeded any that we have had in previous years. However, the growth resources with the banking system, consequent on governmental end of fiscal year disbursements, greatly reduced the strain toward the tail-end of the busy season. In a very real sense, the 1960-61 busy season offers, as we had suggested it would at the beginning of it, a parallel to the 1956-57 busy season. The next week's study should make this parallel crystal clear.

BOYLE'S LAW

The New Monetary Policy

By Paul Einzig

IT is now quite clear that the Government intends to apply the new devices announced by Mr Selwyn Lloyd in his Budget statement—the surcharges on indirect taxes and on employers' contribution to National Insurance—not to reinforce conventional monetary policy devices but to replace them. Henceforth, the weapons of Bank rate changes and credit squeezes are intended to be used sparingly only. The Government hopes that an increase in the surcharges would be at least as effective in checking an inflationary boom as an increase of the Bank rate to crisis level, without causing as much harm to trade. It seems, however, that the Chancellor of the Exchequer and his advisers allowed themselves to be carried away by their enthusiasm for their innovation. It is entirely wrong to imagine that an increase of the surcharges even to their maximum limit of 10 per cent in the case of indirect taxes, and 4 shillings per head in the case of insurance contributions, would be as effective a brake on un-

wanted expansion as a 7 per cent Bank rate accompanied by a credit squeeze. The two devices are liable to produce exactly the opposite effect on costs and prices as the conventional weapons. The chances are that the application of the increase of surcharges will lead to additional wage demands and manufacturers will add their higher costs to their selling prices. Instead of stimulating exports, the application of the new devices would therefore further handicap them.

Where the Government's economic advisers went wrong was in respect of their general static conception of prices. They appear to imagine that if one set of prices is raised, then, in the absence of an expansion of consumer purchasing power, there would be a curtailment of demand and other prices would decline. This theory inspired some of the Conservative Government's earlier measures and it came to be known as "Boyle's Law", because Sir Edward Boyle, the present Financial Secretary to the Treasury, expressed years ago the view that one way of stopping inflation is to raise prices.

In reality, this conception is utterly fallacious. It is only valid in practice in the complete absence of any inflationary trend. When conditions are static or declining, then an increase in one group of prices is not likely to lead to an increase in the average price level. When, however, there is a rising trend, any increase in one group of prices is liable to trigger off chain reactions in the form of all-round wage demands and price increases.

The gravity of the erroneous theoretical foundations of the new monetary policy is likely to be discovered as soon as it is put to the test. Judging by the acceleration of the pace of wage demands, the Government is certain to feel before long the need for applying the brake by introducing the surcharges. It will then be found that this move will not mitigate the scarcity of labour in the least and will not in any way weaken the bargaining power of the trade unions, nor the willingness of the employers to concede their wage demands. Even the industries that would be affected unfavourably by the surcharge would be inclined to continue to hoard labour, especially as now they have been given the assurance that there would be no repetition of the large-scale credit squeeze applied on previous occasions. The Government will have to learn it the hard way that while the newly invented gadgets could be useful for reinforcing conventional monetary policy devices, they are worse than useless if applied in isolation.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 2 May 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.310 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.750 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to 11 A.M. on Tuesday, 9 May 1961. Successful tenderers should make payment on Friday, 12 May 1961. Other conditions are as usual.

During the week ended the 28 April 1961 Government of India Treasury Bills for Rs 72,67,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 26 to 29 April 1961 amounted to Rs 2,55,00,000.

Notes

TAX

Codification to Come

In the last lap of the Budget session of the Parliament that will end its life comes a Bill to codify the law on incometax. Approved in advance by experts and aimed at getting extra revenue, the code will help the administrative officials, though their own opportunities after retirement will be curtailed. There is no novelty in the law or the tax, and US practice or proposals go far to justify the approach. But tax exemption privileges are being drastically limited whereas American usage errs on the side of liberality because organised charity is a major industry in the USA.

The Finance Minister's promise to improve the working of the tax laws, check evasion and curb corruption may be implicit in the Bill. Stock market operators are dealt with like family trusts in order to ensure better tax revenue. Perquisites are taxed and allowances are limited quite strictly. To that extent, Professor Kaldor's proposals have borne fruit, and if Rs 20 to Rs 30 crores are added to revenue every year, rebates and refunds may be easier to obtain. Owing to the new procedure pres-

cribed for recovery, realisation of arrears may also be easy in future. Repatriation of capital from abroad will be also facilitated by a change in law and double taxation relief is extended. The payment of interest on sums overdue is justified on all counts but in case of advance payment, assessee may be entitled to claim higher rate in line with bank charges.

Punishment of consultants who engage in abetting evasion is not peculiar. When auditors are asked to adopt a high code of conduct and to advise management to improve their own morals and methods, there is need to prescribe penalties for lapses. Whether tax officials appointed as full-time directors will be voted out of office is an issue raised by the Bill. The ban on private practice may be extended to employment, and it is just possible that very able men may decline to enter the Department, if they cannot get on to the higher bracket of the private sector. Sir James Grigg and Mr S. P. Chambers are important directors of very important companies. But, in India, officials cannot in future hope to enter big business in a big way and that too might be regarded as destroying incentives. The new law may, however, provide for special cases and distinguish between the lawyer or accountant who can return to a profession and the official who, by receipt of pension, cannot seek employment. The control extended over provident funds and pension funds will help employees against employers who use the funds for their own business and this will be widely welcomed, because it will ensure payments due and help investment in approved securities. The new definition of dividend includes a partial refund of capital which may be exposed to tax. The rule laid down about payment in cash only is now supplemented by a rule about shares in new, subsidiary firms which may be treated as dividends.

MONOPOLIES

Loosening the Strangle-hold

It is perhaps a justifiable apprehension that, with the rapid growth of industries in the private sector, economic power may tend to concentrate in a few hands thereby defeating the basic principles of the nation. Such a danger has long ago been foreseen and remedial measures initiated. No new

enterprise of large dimensions can be started without the approval of Government and the licensing system is a safeguard against the growth of undesirable tendencies in the industrial sphere. It is, however, feared that in certain quarters in spite of these deterrents, monopolies are growing and that concentration of economic power is going on apace in the country. And it is not as though those who express such fears are only the so-called laymen. The Estimates Committee in its recent report on the Ministry of Commerce and Industry (Development Wing) has spoken of the need for checking the growth of monopolistic tendencies and what it calls industrial empires. In its opinion, "something more concrete and positive should be done than hitherto" and in this regard has recommended that "the form of application for licenses should be devised so as to make it obligatory on the part of the applicant to declare the particulars of the firms, companies or groups of industries wherein he held an interest as also particulars of licences pending utilisation". This is to enable the Development Wing to weed out the applicant who have already under their control a number of enterprises and grant licences only to comparatively smaller entrepreneurs, other things being equal. It is contended that this procedure will help realise Government's policy of broad-basing the industrial sector.

It would appear that the Estimates Committee is not quite clear in its mind about what it wants to do away with, monopoly, the concentration of economic power or both. In its recommendations both the terms are used interchangeably. While monopoly may include concentration of economic power, the concept of industrial empire need not necessarily include monopoly. The committee's suggestion for entering the particulars of the applicant's other industrial interests in the application for licence may go some way toward checking the growth of industrial empires especially when it becomes feasible for the Development Wing to grant licences only to newcomers or small entrepreneurs. But this remedy is not likely to be of much use. For, the committee has itself made it clear that, in the scrutiny of the applications, it should be borne in mind that industrial growth is not retarded by the licensing procedure. This is an important exception to the rule and most likely to be resorted to quite frequently. This will open the back door to the industrial empires as preference will inevitably be given to the applicant who has proved to be an efficient entrepreneur and whose record is good. In this view the growth of industrial empires is perhaps something that cannot be avoided especially if one of the important objectives is going to be rapid industrialisation. It may so happen

in actual working of the policy that groups that are already running a number of enterprises will be found to be much better-fitted than a new entrant to embark on newer and newer projects with courage and confidence.

The fear of monopolies, however, seems to be largely imaginary, what with the near crippling of the managing agency system and the steps taken by authority to break monopolies in certain consumers goods. Mr Manubhai Shah, Union Minister of Industry, has made it clear in the Lok Sabha during the recent debate on Demands for Grants of the Commerce and Industry Ministry, that Government has long since started taking steps to break monopolies. By following a deliberate policy of encouraging new entrants, Government has succeeded in curtailing the share of three companies who earlier had a virtual monopoly in commodities like containers, cement and matches. One unit still is having a virtual monopoly in the production of industrial gases, but the position may soon change as Government has granted licences to as many as 18 new units.

FOOD

Storage and Shortage

About one-third of the total output of foodgrains in India is estimated as the quantity entering into the market channels. Since the bulk of the marketable surplus is handled by private traders, no precise estimates of losses in storage are available. But it is generally believed that quite a

large proportion of foodgrains is lost on account of defects of storage. The Union Food Minister told the National Seminar on Foodgrain Storage, which he inaugurated on 20 April, that the gap between our own production and demand is more or less equal to what is estimated as storage losses.

Experience of Government in the storage of foodgrains suggests that the percentage of loss can be reduced to a very small figure through application of modern scientific knowledge and techniques in the construction and maintenance of storage facilities by private traders. The problem is to disseminate the tested information about storage facilities and pest control to the hundreds of thousands of traders spread all over the country and to persuade them that it will be worth their while to adopt improved techniques.

As Mr Patil pointed out in his inaugural address, adoption of modern techniques does not mean that conventional methods of storage adopted by our traders and agriculturists should be given up. Some of the old methods with suitable modifications could still be considered satisfactory. But some special attention will have to be paid to the construction of storage facilities as well as to the methods of treating the grain, so that grain may be stored for long periods without impairment of its nutritional quality. Special training will also be necessary in the use of pesticides to ensure that their lethal action is confined to pests. The Food Department has set up a Grain Storage Research and Training Centre at Hapur, which runs course not only for the employees of Central and State Governments but also for those in the trade.

For the last two decades the Government has been the largest stockist in the country. And the dimensions of the problem have been radically altered by the decision to build up a reserve stock of five million tons of grain. The building up and circulation of this quantity of grain, from imports and internal procurement, will require a much larger volume of storage accommodation than is at present envisaged. Apart from Government's own programme of construction, which has provision for silos, flat storage and conventional bagged storage, there is scope for private enterprise in providing adequate and up-to-date storage facilities.

LEADERSHIP

Professors—or Patronage?

The outline of qualifications for Chairmen and Directors of State-owned companies presented by a committee of officials leans to the current practice of appointing part-time Chairmen and diverges from the formula presented by the

Menon Committee to the Congress party. Perhaps the choice of Dr Beeching of the ICI for the British Railway Executive has already impressed the Committee, which does not want "rankers" to come up. The practice of joint-stock companies to go in for full-time salaried directors may not have much weight, but Mr A. D. Gorbala in examining the Mysore practice suggested that independent Chairmen should be picked and retired officials or public men should be preferred for top posts. There is no director of directors in India to indicate how or when Company executives should be raised to the Board of Companies. There is also no guidance regarding the practice of US Corporations in regard to promotions, though the avoidance of conflict of interest is a well-meant rule.

Since the hope or aim is to remove any temptation for officials to migrate to the private sector on retirement, the prospects must be improved and a fair field ensured for talent and experience. The practice of managing agency houses in the past or present must not be taken as a real guide for appointments in future. The practice obtaining under the Reserve Bank, LIC or State Bank Acts may not be called crucial or decisive, for, the steel or oil industry may require different qualifications and temper. There will certainly be labour problems, but tapping the open market may not be easy, for, the private sector may draw in the best by offering better terms to competent directors. The over-aged may also be retained by special resolution, while the State-owned company might like to change its executives after a specified period. The State-owned company also may not care to draw in brokers or bankers and may rely largely on politicians out of office. This may not be an advantage, for, in the State Trading Corporation or the oil refineries, and it is better for Parliament to decide how the top posts in the new nationalised industries should be filled.

What the Railway Board did or does may convey no meaning to some at present. And versatility may be an advantage, for, it may be recalled that Sir Hugh Beaver, who made Guinness so good for the shareholders, was a civil engineer. Ex-civil servants make adequate directors in most cases but British practice in regard to the posts in the British Petroleum Board may not be described as binding. In any case, there is a field for patronage and the avoidance of criticism in future is of special importance, as any hint of jobbery must be avoided.

The problems posed in the novel by Cameron Hawley the Executive—suite—about picking a new chief for a big busy enterprise may occur to the mind of many at present, and it may be necessary for the Government to look to the States also as a reservoir of business experience. State transport

corporations may provide competent executives for promotion to the board of all-India companies. And good scientists or engineers may furnish a new field of selection. The Army's practice in regard to ordnance establishments may, however, signify little at present, but there must be no prejudice against raising military men for civilian undertakings producing cables or coal. There may be a definite advantage also in preferring trained accountants to look over costs carefully and, in fact, the new State-owned companies may fare better under engineers or accountants as directors than under civil servants entangled in red tape. That two committees could not agree may not evoke surprise, but the success of retired civil servants or even Professors in the business world may be cited as a reason for laying down flexible principles for a higher economic civil service.

ASHOKA HOTEL Haste Makes Waste

The latest report of the Estimates Committee on the Ashoka Hotel Limited is a mine of information. As against the run of unpropitious years in the initial stages, the Company has at last turned the corner and earned a profit of about Rs 9.67 lakhs in 1959-60, and the profit for the current year is estimated to amount approximately to Rs 20 lakhs. A careful study of the Committee's report will reveal that the loss incurred in the early years was the result of a combination of factors, some avoidable and some unavoidable. Among those falling under the first category, lack of planning on the part of the Government and the mismanagement by the authorities loom large.

It is evident that the Government had originally no intention to take any substantial part in the management. But, due to adverse circumstances, the Government was compelled to assume greater responsibility. That, too, was done in a hasty manner, without ascertaining fully the financial implications and other details. It is true, the construction of the hotel had to be expedited in view of the UNESCO conference held in New Delhi in October 1956. Instead of hurrying a more cautious approach would have been better. For, haste made waste. Even in the appointment of directors, an unusually liberal policy was adopted. Besides, the hotel is, as indicated by the Estimates Committee, overstaffed and the ratio of staff to beds is higher than in other deluxe hotels in India and abroad. The enormous expenditure that has to be incurred on this count is therefore, quite obvious. Even the policy followed in recruiting the staff is disputable. The high ratio of hands to beds

will naturally create an impression that most of the employees are not adequately trained.

Even in the matter of purchases, much remains to be desired. It is obvious from the report that, barring a few items like egg, meat, fish, fruits and vegetables, all other commodities are procured by the Company without inviting tenders. Considering the large consumption of stores in the hotel (value of provisions and stores alone being Rs 5.57 lakhs in 1959-60) the need for entering into contracts with leading suppliers after inviting quotations for supply of such items requires hardly any special emphasis. If the affairs of the hotel are allowed to drift unchecked, the very purpose of running such establishments will be defeated.

TOURISM Cadging for Dollars

At a time when an ECAFE Seminar in New Delhi is busy considering how a larger slice of tourist revenue may be diverted to this region, it may seem ungracious to cast doubts on the value of tourism to a developing country straining every nerve to build up its industries. Anything that promises to bring in foreign exchange has attraction for a country struggling to close the gap in its balance of payments. But a traveller in the desert is prone to see a mirage everywhere. It has not been clearly established that the policy of encouraging tourism has been approved after including in the reckoning all items of cost, both direct and indirect.

The mere possession of tourist attractions, it is obvious, is not sufficient to ensure a steady stream of paying tourists. It is also necessary to publicise them and provide them with the facilities of easy access, accommodation etc. The provision of these facilities, which make up a long list, and the necessary publicity abroad, would consume a good proportion of the foreign exchange brought in by tourists. The pattern of life in Asian countries which is different from that of the West adds to the difficulty and cost of providing these facilities.

Tourism when pursued with vigour is also likely to upset the established priorities of planning. The tourists will have to be provided with the consumer goods to which they are accustomed, ranging from whisky to contraceptives. That means relaxation of import restrictions, even at the risk of the Minister for Commerce and Industry getting a fit of apoplexy. And goods in short supply, specially imported for tourists, have a knack of finding their way to the open market.

As the Minister for Transport observed, it is not practicable to provide facilities exclusively for

6 May 1961

tourists. Local tourism must also be catered to, to prevent outbreaks of xenophobia. That means encouragement of railway travel at a time when the Railways are hard put to transport the coal for essential industries. Every one may not agree that there is something undignified about cadging for tourist dollars; but even those who do not share this austere view will agree that Government should go slow on its programme for tourism until the country has at least solved the problem of beggars and slums.

TANJORE First Year of Package Plan

The first year of the Ford Foundation aided Package Programme in deltaic Tanjore district has now ended. Madras State's Food Commissioner, Mr P. P. I. Vaidyanathan, told Indian Finance that he was generally satisfied with the progress of the programme. But he could not commit himself to any statistical data on the paddy production side, since that related to a complicated gathering together of information which, however, would be available very soon.

A State level Co-ordination Committee on Plan implementation was held in Tanjore last week, and was also attended by two Ford Foundation experts. The Committee's task was to get rid of the hump of credit facilities to all members of the co-operative societies. The Madras Government would underwrite about 10 per cent of any loss in loans that may be irrecoverable, but Mr Vaidyanathan hopes that no such contingency will arise and that all amounts could be recovered without much difficulty.

The Plan during its first year prepared farm plans for 36,183 holdings. This is to be increased to 52,000 in the current year. Sixty-two per cent of the families (holdings) were members of co-operative societies, while the rest were non-members getting help from the State under the intensive manuring scheme. Co-operatives through which such credit facilities were extended were asked to liberalise their rules and the entire plan area should be covered by co-operatives by 1962; and then the takkavi loans would be discontinued. That means all the holdings in the area would have become willy nilly members of the co-operatives.

Fertiliser supplies during the current period would be continuous in the district, and Mr Vaidyanathan stated that there would be no difficulties for farmers. With the increase of fertiliser supplies, Madras State got 180,000 tons, and this is expected to yield a substantial increase in food production.

During the current period, the package plan would also be extended to growing of groundnuts without restricting its application to mere paddy. Sugarcane, bananas and

tobacco will also get facilities for increased production now.

The meeting of the Indian Council of Agriculture at Tanjore has decided to spend Rs 30 crores for increased production of paddy in paddy growing areas of India. This important Conference, held in the famous paddy-rich town, suffered from lack of knowledge about the proceedings because it was stated that the high officials in the Central Government did not want much publicity. But a truncated report was made available about experimenting with increased yield strains and other aspects of paddy cultivation. Interest in these experiments in the paddy growing areas of India is great, and if the Government should decide to intensify the study and extension of application of the methods of growing more paddy, the South as well as other parts with rice as staple food would certainly be greatly interested.

Also in Tanjore, an *ad hoc* committee of the Indian Central Oilseeds Committee considered steps for increasing production of oilseeds under the Third Plan. Groundnut crop grown in six States as major crops in India would be cultivated in an area of 25,000 acres in each of the six States, including Madras. Each State would be granted Rs 2 lakhs for a five-year period for operation of the scheme to meet with the staff and equipment expenses. The State Government would supply the fertilizers and other needed help.

Tanjore district also grows sugarcane and bananas, to both of which the package programme is applicable.

Application of methods under the Package Plan in Tanjore District is expected to increase the yield by fifty per cent at the end of the five-year period of the plan.

Tanjore was chosen because it has irrigation facilities with 1,400,000 acres of paddy-growing land and producing 25 per cent of the State's total production. Furthermore, the per acre output of paddy is not low being at 2,000 lbs against 4,000 lbs per acre which was secured in the well-known Auduthurai Agricultural Farm.

There are twenty-three blocks in the district, and, in the first year, only 20 per cent of the cultivated area has been brought under the plan. Every year, there would be a further extension of 10 per cent, and in the last and fifth-year, 15 per cent would be added. The plan would cover 35 per cent of the ryots in the district by the end of the period. Total agricultural production in this area is expected to go up by 50 per cent, taking production in 1958-59 as base.

What has been done in the first year under the package plan in Tanjore looks impressive. Tanjore is one of the seven districts in India chosen for experimenting with the plan. By all accounts, this district leads in scrupulously adhering to the advice tendered by the experts. Mr Vaidyanathan told *Indian Finance*, as if to testify to this fact, that other States like Kerala came over to study the Tanjore experiment. Even the Union Agricultural Ministry's representative spent some time for study of

Tanjore Plan, which seems to point the way for others.

In the first year, work covered an area of 228,870 acres in 36,813 holdings in 317 villages in 23 development blocs.

The Package Plan distributed a total quantity of 220 tons of primary seeds of paddy, 298 tons of green manure seeds, 5,660 tons of nitrogenous fertilizers and 4,360 tons of superphosphate.

There was shortage of fertilizers to adhere to the use of the targetted 150 lbs per acre, but 165,000 tons of farm yard manures and 65,275 tons of compost manure were used. Pesticides used amounted 278 tons and the agriculturists were given 4,027 pieces of implements, like borse ploughs, rotary interculturators, Burmese settons, sprayers, dusters, etc, during the year.

As for credit facilities, Rs 29 lakhs were available as short-term loans and Rs 16 lakhs as medium-term loans in addition to the amounts got through co-operatives under the Intensive Manuring Scheme. Per acre credit has been estimated at Rs 120, and in future all credit facilities would be through co-operatives; when the finance scheme so operates, the Revenue Department would withdraw.

The package plan also envisages bringing under its credit system those tenants who, while tilling land, possess no land of their own. These ryots would be given a loan up to Rs 250 on the security of his crop. A small fund is to be created for covering any losses against such credit.

MAHARASHTRA Happy (First) Birthday

During the first year of its existence, the State of Maharashtra has registered extensive all-round progress. Though normally one year is too short a span to assess the progress made by a State, from the point of view of development, particularly in industry, education, agriculture, public health and the like, it won't be inappropriate to gauge how far the high hopes and aspirations of the people have materialised. And the achievements attained by unflinching determination and devotional service of the people and planning present a gratifying picture. Having realised their long cherished ambition of a unilingual State of their own, the Maharashtrians, with proper guidance from the Government, were not slow to build up a sound foundation on which the superstructure can be erected.

The first year of the State was incidentally the final year of the Second Plan, and the shortfall precipitated in Plan expenditure during the first four years was fortunately more than compensated by the intense tempo of development activities with the result that the target set up for the Plan period was exceeded to

some extent. The experience learnt from the short period has enabled the authorities to draft the Third Plan against the background of the State's special requirements and resources.

On the industrial front, considerable changes took place. In evolving a congenial industrial policy, the authorities had due regard to the imbalanced industrial growth of the State. Nearly fifty per cent of the State's industrial undertakings are clustered in Greater Bombay and the underdeveloped and undeveloped regions did not receive much attention. With a view to eliminating this disparity, a balanced industrial development policy was ushered in, attaching greater emphasis to the development of industrial estates which are destined to play a predominant role in giving those regions a face-lift. As a preliminary step, a Board of Industrial Development was constituted in order to co-ordinate the various industrial undertakings. Government also set up an Advisory Council of Industries comprising eminent industrialists and economists. A large-scale intermediate dye plant, with German collaboration, is being constructed in the district of Kolaba. With the completion of this project, and the biggest power project at Koyana, the Konkan region is expected to secure a new lease of life by starting new industries.

Great progress was registered in the community development programme. The programme was extended to some more areas during the year under review and the response from the people has been enthusiastic throughout, their cash contributions totalling over Rs 5 crores.

The Small Savings movement also recorded rapid strides. During the period under review, the movement realised Rs 26 crores as against the target of Rs 19 crores.

Notable innovations were introduced in the educational field. Education was made cheaper, especially for the poorer section, and a majority of students in the mofussil areas were made eligible for free education at all stages. Facilities for technical training were expanded to a great extent. The State at present possesses five engineering colleges and eight polytechnics. Four new industrial training centres were opened during this period.

In pursuance of the Government's declared policy of "land to the tiller", the land ceiling bill was passed during the Budget session of the Legislature and is awaiting the assent of the President. This bill aims at a more equitable distribution of land among the peasants by applying a ceiling on holdings. The surplus land will be made available to landless tenants, displaced persons and agricultural labourers.

A two-pronged programme was launched to tackle the food problem. The formation of one food zone comprising Gujarat, Maha-

rashtra and MP was helpful to meet immediate requirements. At the same time, to step up the production of foodgrains, both intensive and extensive cultivation was resorted to.

The Government's endeavour to extend medical facilities to the remotest areas in the State also met with partial success. The number of beds in hospitals has been increased and many rural medical centres were opened. The blood bank campaign has so far realised 500,000 ccs of blood. Family planning, too, was pushed through with the co-operation of the public. A State Advisory Board for controlling the spread of tuberculosis was set up.

GUJARAT Also Impressive

The State of Gujarat, too, made impressive progress. Though the State had to begin with several obstacles like financial deficit, inadequate staff and make-shift capital, all the initial difficulties were tided over by efficient administration. Among the achievements that stand to its credit are the steps adopted by the Government for the speedy industrialisation of the State, generation of more electric power, promotion of education and streamlining of the administrative machinery.

The State is fortunately blessed with various natural advantages for rapid industrialisation. The rich deposits of high grade bauxite, gypsum, lime-stone, manganese, coal, lignite and oil, and large availability of cotton, and tobacco may be mentioned. In order to encourage the setting up of new industries, all encouragement is provided.

For promoting the establishment of small-scale industries, the Government is providing loans on favourable terms, subsidies on power consumption, procurement of machinery on hire-purchase agreement and assistance in securing raw materials.

Being a deficit area in foodgrains, it was only natural that the Government was compelled to resort to a number of measures for enhancing agricultural production by modern means. For the distribution of improved seeds, more than 125 farms were started and 30 more will be set up in the immediate future. To protect soil against the ravages of erosion, soil conservation work has been undertaken. A package scheme for the intensive development of agriculture has been introduced in Surat. Another agricultural college was started to meet the shortage of agricultural staff.

Notable progress was also achieved in the spheres of education, social welfare, public health, labour welfare, housing, road construction, development of ports,

flood control and medical facilities.

RAJASTHAN A Mineral Paradise?

The Rajasthani Businessmen's Convention held at Jaipur in the second week of April has spotlighted attention on the industrial backwardness of the State and on the need for urgent measures to stimulate greater growth of industries. Though aspirations for more rapid industrialisation may be viewed with sympathy, the attempt to read irony into the present industrial backwardness of the State in the light of the traditional business enterprise of the Marwari businessmen and of the part they have played in the industrial development of other States appears somewhat unwarranted and distorted. For, shortage of capital or business talent have been minor problems in the way of Rajasthan's industrial growth as compared with undeveloped communications and shortage of power. The existence of these disabilities did not go unrecognised, and most hearteningly the assurances of the State's Chief Minister, Mr Mohanlal Sukhadia, concerned this very aspect of power development. Mr Sukhadia observed that, after the construction of the Kotah Dam, the Mahi Dam and the Pong Dam during the Third Plan, larger power supplies would be available during the Fourth Plan.

In his speech, Mr Sukhadia gave an assessment of potentialities that indicate bright prospects for the future industrial growth of the State. The Chief Minister stated that Rajasthan was the only region in India where survey and investigations indicated the presence of copper, lead and zinc in large quantities. While these should provide the basis for the establishment of mineral-based industries, the existence of salt sources at Sambar, Panghpadra and Didwana in the State should provide the basis for many chemical industries. Sources of petroleum are also supposed to exist in the State, though actual exploration work has yet to be undertaken to prove such sources. An exhaustive survey of the mineral and industrial wealth of the State would indicate further possibilities for industrial progress. The fact that Rajasthan is surplus in foodgrains production should also enable the Government to concentrate on industrial growth. Though the respective roles of the private and public sectors figured as a controversial subject at the proceedings of the Convention, the numerous concessions announced by the Chief Minister in respect of land, supply of power, and octroi and sales tax, offer proof of the Government's desire to associate the private sector in the State's industrialisation.

BHOPAL HEPL on the Map

After the Bhopal plant was commissioned formally by Mr Nehru in November 1960 appears a report of the Heavy Electricals for 1959-60. It is surprising that a formal report is offered, though the private investor has no stake as in the Hindustan Shipyard, and the capital invested now must be well over Rs 15.6 crores. However, it is good to find that annual output will be valued Rs 25 crores when the plant is working fully and in 1961-62 itself the company will put its products on the market. Hope of an export market may depend largely on what the AEI decides about prices and production, and if expenses on training employees represent an investment the Company may be praised for remodelling the provision made every year, for depreciation. The current cost of renewals must be kept in view by a big business concern.

New companies setting up factories will perhaps do well to emulate the Government-owned undertaking by telling those who have put up capital about contracts, costs, and labour relations. That similar reports have not come from Hindustan Steel may be explained easily, but one reason is that AEI has to be told and Morgan, Grenfell must be informed about the security available for the loan. The Chairman's report throws much light on the problems of purchase. It is clear that the usual procedure by tender will not do and some imports must be arranged in advance through AEI to secure efficient operation. Like the ICF, the new, big Government undertaking will help small-scale manufacture and local suppliers. Confidence in the future is underlined by a report that promises much for power development under the Third Plan. The benefits to AEI when export trade is not brisk may not require notice, but it is patent that Lord Chandos has done much to put Bhopal on the map.

USA Stimulating Capital Investment

Modernisation and expansion of US productive facilities would receive a substantial stimulus under the new tax programme just presented to Congress by President Kennedy. At the same time, the President has recommended other measures which, it is estimated, would bring in as much revenue as would be lost by the special treatment accorded to capital investment.

The outlays for plant and equipment would be encouraged by a new incentive tax-credit system. In essence, it would permit business firms to cut their tax bills as much as 30 per cent in any one year if they stepped up their plant and equipment spending by certain amounts. This approach is new as far as the US is concerned although similar programmes are in use in some other countries.

Present US law permits businessmen to deduct a portion of the cost of new investment from taxable income each year. In the past, when the Government has wanted to spur investment, it has increased the deductible portion, or depreciation allowance. Mr Kennedy maintains, however, that his approach would generate the greatest amount of new investment for the least immediate revenue loss to the Government.

That revenue loss is estimated at about \$1,700 million a year. But this would be made up by other revenue-producing proposals. Involved are recommendations to make the subsidiaries of US Corporations in industrialised foreign lands and Americans living abroad pay the same taxes, in effect, as do domestic American Corporations and Americans at home. Also, the President has suggested several steps to eliminate some of favourable tax treatment accorded to certain types of domestic income, including dividends, interest and business expense-account outlays.

The balancing of the increased revenue with the losses in receipts from the investment tax credit would not occur immediately. This is because the proposed tax increases would not take effect until next year, while the investment credit would be retroactive to the beginning of this year. However, the hope is that the investment incentives will stimulate general economic activity sufficiently so that resultant higher corporate and individual income tax payments would cover the earlier revenue losses.

As the President pointed out in this message, his new tax programme would help meet desired goals both at home and abroad. To the extent that it leads to additional expenditures on plant and equipment, it would immediately create more jobs in construction, lumber, steel, cement, machinery and related capital goods industries.

After that, the staffing of the new and modernised plants would require additional employees. Finally, the wages of these workers would be translated into increased spending, and would help create still more jobs in consumer goods and service industries. The administration's estimate is that the increase in jobs resulting from a full year's operation of the investment incentive plan would be about half a million.

In the process, of course, new and more modern facilities also

would enhance the competitive position of US industry in world markets. And this, in turn, would aid US exports, and contribute to the improvement of the US balance of international payments.

Modernisation, no less than expansion of facilities, is a prime aim of the administration's programme. The average age of capital equipment in the United States has been rising—a trend which the administration would like to reverse.

Government data show that in 1946, for instance, 38 per cent of all machine tools in the United States were ten or more years old; by 1953, the figures was 56 per cent. By 1958, when, the most recent survey was taken, it had risen to 60 per cent. In the meantime, other industrial countries have all but completely modernised their plants since World War II, aided in no small measure by US economic assistance.

Changes in the treatment of income earned abroad also would aid the balance of payments situation, in so far as it brought some funds back to the United States. It is interesting to note, in this connection, that American earnings in developing countries, by and large, would not be taxed to the same extent as in the developed countries. This would help keep US private capital flowing most strongly to those lands where it is most urgently needed for development purposes.

The President's tax programme must now go to Congress for consideration and approval. Its first port of call will be the powerful ways and means committee of the House of Representatives where hearings will begin shortly. Final Congressional action, of course, will come later. No one is predicting at this point just what that action will be, or how far Congress will go in meeting the President's requests.

It should be noted that this is a special programme, and is not designed to be a comprehensive review or overhaul of the nation's tax structure. Government officials now are busily at work on such a comprehensive programme, and the President may be able to bring up recommendations along these lines some time next year.

SIERRA LEONE After 27 April, Freedom

Sierra Leone, another colony made free is a reminder that West Africa is ahead of East Africa. The abolitionists of the last century hoped to make a free country on the sickly coast. For many, Sierra Leone is mainly a supplier of diamonds and troubles in regularising traffic have loomed large in recent years. The export duties, as in Malaya for long, sustained the Colonial administration that has handed over power on 27 April to African leaders. After Nigeria's acces-

sion to independence, it was easy for the leaders of Sierra Leone to ask for more. A small country that will be ruled by a governor-general, Sierra Leone has got over the problem of bringing the chiefs into line with the people. In Ghana steamroller tactics were applied to overcome the tradition of Ashanti Kings but in Sierra Leone gentler measures were tried to persuade the chief to try constitutional advance. The break-away of South Africa has made no difference to the time table of political change. As Sierra Leone

sells vegetable oil and coffee in addition to iron ore, it is well to recognise a rival to India in the emancipated colony that can undoubtedly compete because of the efficiency of cheap land and the tropical agriculture. Travellers through the Four Gineas could do better than most because no throw-back to pagan days would arise in future and regional or insular rivalries as in the West Indies could not crop up in Sierra Leone. With its neighbour Liberia coming along fast under US aid, Sierra Leone can count on British min-

ing enterprises to help develop both plantations and minerals. It is not unlikely that rubber planting, even as in Nigeria, will be stimulated by special efforts. Big company reserves would find a good use.

SOUTH WEST AFRICA After 31 May, What?

What is to be South West Africa's position after 31 May?

A NEW
SYMBOL

FOR
SIMON
ENGINEERING

This is the new symbol of Simon Engineering Limited, a Company which was formed in November 1960, of which Simon-Carves Limited is a Member Company.

Simon Engineering Limited is a new Company, but it represents an organisation which was founded nearly a century ago and whose activities today extend nearly to all parts of the world where engineering knowledge and technology have contributed to a better life.

It is our belief, our faith that the new symbol will be carried forward to all parts of India and the world as a symbol of engineering progress.

Simon-Carves Ltd

Incorporated in England. The liability of the members is limited.

SIMON ENGINEERING LTD

The theory that the UN can ask for proper performance by South Africa has been put forward, but a point that arises is whether the mandate survives and whether South Africa has formally accepted obligations. The Germans in South Africa who value self-determination accept South African rule, and the fifth province of the Union is a fact that critics cannot blink at. The three Protectorates can retain tribal ways, but South West Africa, large and thinly peopled, is a model colony for the Boers, and the Commonwealth cannot argue about what goes on as South Africa is out and Britain needs South African gold or diamonds more than Cape wines or wool.

The South West African problem is settled by self-determination applied by the Whites who in relation to the tribesmen are not a minority. Why so much argument recurs over a desert on which the coast alone gives a chance for expensive fishing may be hard to explain, but India can be expected to take up the issue though all the Mandatees are gone from the Cameroons to Iraq and there is no point at all in talking about a mandated territory and the administering power when the new African nations do not give much attention. It is futile to hope for unrest in Angola to create opportunities for UN action in South West Africa and the next South African boycott may only lead to vain expostulations.

TRADE Wasted Opportunity

An official report about India's trade with Aden makes it quite clear that Aden is now selling some cotton in return for cloth needed for Yemen and Somalia as also Aden. The requirements of sugar are now filled by many countries including Turkey and the Malagasy republic. Prices ruling in Aden indicate that Formosan sugar is dearer and Indian sugar commands a ready market. A complaint about irregular supplies to Aden in December last may provoke a feeling that opportunities are missed. Aden's imports of sugar are rising, as the Indian Trade Journal notes, and beet sugar, too, finds a place. The complaint about shipping facilities and arrangements with Indian shippers by importers in Aden may go far to suggest that outlook for sugar exports can improve easily if the Government relies on surplus sugar from Bombay for despatch to the Middle East and replenish stocks by supplies from UP factories. The early overhaul of the export trade, because Ceylon is buying sugar from Poland and Hungary too, is indicated by the note on Aden's present trade in tobacco. One other point calls for notice. The Indian rupee has been replaced by the East African shil-

ling in Aden. Since Ceylon is raising the level of import duties and curtailing licences to save foreign exchange, it may be noted that Aden is more promising. Of some interest today is the intelligence that Ceylon means to start a tyre factory with Russian help. The project is a big one and Ceylon will become a major exporter to Asian countries if the Kalaniya factory is set up at a cost of Rs 4.1 crores to produce 360,000 tyres and an equal number of tubes. This is a warning against undue hopes for Indian tyre manufacturers regarding the distant future—for, Ceylon has enough rubber and may get chemicals easily from Russia for making tyres. The industrial programme has hit Indian exports of handloom goods because licensing has been strict and Ceylon may buy only yarn in future, not cotton goods from India. This is perhaps inevitable in view of experience in Burma and Indonesia.

Steady Rise in Mica Exports

The problems confronting the mica industry came for examination at the fourth annual general meeting of the Mica Export Promotion Council. India enjoys a near monopoly in the export of this vital material, accounting for nearly 80 per cent of the total world exports. This has enabled the country to achieve a steady increase in the quantity exported in recent years. Exports, which were valued at Rs 8.77 crores in 1956, have risen to a new record of Rs 11.14 crores in 1959, though a fall in the purchase by the US during 1960 brought about a reduction in total export value to Rs 10.64 crores. An encouraging feature of exports has been the diversification in destinations, and it is noteworthy that Communist countries have increased their off-take from Rs 2.1 crores to Rs 2.3 crores. The increase in exports has come as a result of the endeavours of the Export Promotion Council, while the new uses found for mica have also enlarged demand for the product. The fact that mica is indispensable for space travel may open up new potentialities and markets for the product. To take maximum advantage of these opportunities, it is essential that the export trade is properly organised with particular attention being paid to meet the qualitative specifications of the foreign importers. The decision to start a research centre to achieve standardisation of the mica produced in the country would therefore be welcomed. Inspection of the consignments of mica before these are sent abroad, on which stress was laid by Mr S. D. Joshi, Additional Secretary to the Government of India should enable the industry to keep up markets in the foreign countries. It may

be pointed out that the complaints of the American purchasers of Indian mica concern these very points of unreliability of supply and variations in standards.

An important problem which faces the industry is to secure a price commensurate with the monopolistic position of India in the export of mica. It has been observed in this connection that though India supplied the bulk of the world's demand for mica, the price paid for the product was dictated by the foreign purchasers. The bargaining strength of the foreign purchasers, it is clear, is derived principally from the lack of unity among the Indian exporters of mica and the unhealthy practices such as rate cutting resorted to by them for securing larger foreign demand for the product. With a view to putting the indigenous industry in a more advantageous position for securing reasonable prices for exports, Mr S. K. Sen, Chairman of the Mica Export Promotion Council, has formulated certain canons for observance by the exporters in the mica industry. These relate to the need for unity among exporters, avoidance of scramble for foreign orders and underquoting and effecting supplies according to samples. Canalisation of exports through one agency may provide the answer to the many defects that are noticeable in the present arrangements.

TIMBER Cradle to Coffin

The economic necessity of eking out our dwindling forest resources, through the adoption of adequate techniques of preservation and utilisation, was highlighted at the annual meeting of the Timber Dryers' and Preservers Association of India, inaugurated by the Union Minister for Agriculture, Dr Punjabrao Deshmukh, in New Delhi last week. The estimated current gap of 41 million cubic feet between the demand and supply of timber, is expected to widen to 89 million cubic feet by 1970 and to 120 million cubic feet by 1975. The continued existence of wood-based industries depends on timely action to conserve supplies of timber both before and after felling. In India not more than five per cent of the timber extracted is being treated or seasoned, so that losses after felling, due to deterioration—decay, splitting and warping—are very high. The plywood and other timber-using industries have to foot the bill in the form of high prices for timber suitable for use. Those who have devoted thought to the subject are convinced that treatment with preservatives of large categories of timber and proper seasoning should be made mandatory as is the case in countries like Sweden and Japan which are much richer than India in timber resources.

The following suggestions for action put forward in the report presented by Dr Purushottam, the enthusiastic Secretary of the Association, deserve the careful consideration of the different agencies engaged in the extraction, processing and utilisation of timber:

1. Prophylactic treatment of all timbers to prevent wastage from decay and insect attack during transit and storage.
2. Utilisation of all timbers belonging to major and minor species without rejections during conversion, either in the forests or at the saw mills by employing modern timber engineering processes wherein small dimensioned members are utilised to build up structures of any size and strength.
3. Modernisation of saw mills to ensure maximum possible conversion.
4. Protection of timber structures from early mechanical or biological failure as also fire damage, by seasoning and preservation processes.
5. Establishment of a large net-work of composite factories consisting of saw mills, timber engineering workshops, and seasoning and preservation plants, both of fixed and mobile structures at key points to cut down cost of processing, of which transport forms a very large element.
6. Organisation of timber depots on modern scientific basis, stocking seasoned and treated timber of standard dimensions, at all important places.

As Dr Purushottam has pointed out, a human being requires timber from the cradle to the grave. The adoption of the methods suggested by Dr Purushottam should, with some little care, ensure that we do not go short of this essential commodity in the interval between the points of entry and departure.

PEOPLE'S CAR Renault Preferred

The report that the French Renault is preferred by the Paunde Committee is confirmed. That the car was commended for local manufacture by a Bombay firm previously in 1959 requires mention, for the committee in picking the Dauphinoise has only followed many a US buyer who liked the car as being efficient and sturdy. That the Dutch model Daf was not picked and the Fiat 600 was not approved for local manufacture, may be due to over-riding exchange requirements as also the fact that the Renault is made by a State-owned factory and the extensive use of locally made components will be authorised by the collaborators. The choice of a four-door model able to carry four

6 May 1961

passengers may be dictated by the requirements of taxi-owners in future. It is not known when or where the project will start, but the proposed investment of Rs 10 crores may not be adequate, if integrated production on the lines of Ford is envisaged. The choice of tyres, batteries and other equipment as standard may be decided by the tender system, but not only the import of Renault may be wholly banned but spares for existing Renault vehicles may be withheld to push the sales of the new model. The volume of production will not be over-large in view of the capital at charge out it is certain that sales of other makes of four-cylinder passenger cars will be hit by the entry of a cheaper model—claiming to be 75 per cent Swadeshi.

OIL

“Own Initiative, Control, Technique”

The statements of Mr K. D. Malavia, Union Minister for Fuel and Oil, regarding the Government's oil policy, in the course of the Lok Sabha discussion on the Finance Bill, should put the Government's attitude in a more appreciative light. Both the Stanvac Oil Company and the Burmah-Shell Oil Company have been told that they could get their crude oil from whatever source they liked. It may be recalled that the Government was trying to persuade the private sector refineries to use the crude oil supplied by the Government in their refineries. While the Stanvac Company seemed willing, Burmah Shell was reported to have sought to link the issue of the use of the oil supplied by the Government with the question of expansion of their refinery capacity. The Government's refusal of permission for expansion of private sector refineries was attributed to the ideological approach. In his speech, Mr Malavia has provided economic reasons, namely, lack of need for expansion, for exclusion of scope for further expansion of private sector refineries during the Third Plan period. It has been pointed out that, while the internal demand for petroleum and petroleum products by the end of the Third Plan would be of the order of 13 million tons, the capacity of the existing refineries in the private sector and of the refineries being set up in the public sector would amount to 11 million tons. With the scheme for marginal import of nearly 1½ million tons essential even under conditions of self-sufficiency for meeting imbalances between internal production and demand, the need for expansion of refinery capacity in the Third Plan is shown to be superfluous. On

this question of refinery expansion, Mr Malavia has expressed the view that any country which has enough oil must develop its own technique, its own initiative, its own control in order to make the oil industry prosperous. Naturally, it is to the question of exploration and prospecting to discover new oil sources that Mr Malavia attaches more importance. His statement in respect of the terms for foreign participation in oil exploration will be welcomed as indicating a new element of flexibility in the Government's oil policy. Though negotiations have been going on between the Government and the foreign companies, differences over the questions of capital participation, refining and marketing rights and ratio of profits were holding up agreements. Mr Malavia has stated that the Government would come down from some of its rigid conditions subject to the initiative and control of the oil industry remaining with it.

INDIAN ALUMINIUM The Voice of Prudence

With everyone convinced that the only way to national prosperity is through rapid industrialisation, it is not surprising that the establishment of every new factory, small, medium-sized and large-scale, is greeted with joy. But it is equally important to pay heed to the voice of prudence. In the anxiety to force the pace of industrialisation, it will be extremely wasteful to ignore the probability that capacity in particular industries may outpace requirements or that certain industrial units will become obsolete after a short time. The second contingency is to be given special consideration in these days of rapid technological improvements. Mr K. C. Mahindra, Chairman of the Indian Aluminium Company Limi-

ted has therefore rightly drawn attention to the risks of uncontrolled and uncoordinated expansion of an industry like the aluminium industry.

Aluminium production in India is around 52,500 tons now and the provisional target for the Third Plan is 87,500 tons. Recent indications however show that the target may be revised upward to about 200,000 tons. This will mean a five-fold increase in the course of the next five years. Mr Mahindra finds little substance in the argument that if the production turns out to be in excess of domestic consumption, the quantity that is in excess can be exported, for the simple reason that at our cost of production and in the present context of world aluminium prices, aluminium from India will find the going in the export field extremely difficult. Moreover, it is also not quite clear where all the new units will be able to get their raw material at reasonable

NON-FERROUS

CASTINGS FOR

STEELWORKS

IISCO makes all types of standard quality non-ferrous castings required by steelworks. Some of the items on regular production schedule are:

- MILL ROLL NECK BEARINGS
- COPPER BOSH PLATES
- COPPER TUYERES
- COPPER TUYERES COOLERS
- COPPER INTERMEDIATE CINDER NOZZLES
- HOT BLAST VALVE SEATS

THE INDIAN IRON & STEEL CO. LTD.

Agents in South India : THE SOUTH INDIAN EXPORT CO. LTD., MADRAS 2

price or whether they are assured of power. In the aluminium industry, power is not just an adjunct but is classified as raw material in view of the enormous amount of power needed by an aluminium plant. The power crisis at present in many parts of the country should be a warning to make sure of the power supply before a project is embarked upon. As far as the Indian Aluminium Company is concerned, progress last year has been quite satisfactory and proposals are under consideration for further expansion of its activities.

BANGALORE WOOLLEN The Wage Board Burden

The failure of cotton crop in India during 1959-60 season had serious repercussion on the working of the textile industry throughout the country. But that crisis has to a great extent been tided over by introducing various measures like introducing control, rationing and adopting a liberal policy for importing short staple American cotton. The supply position having thus looked up, the working of the textile mills also showed signs of improvement. But the marked improvement in the trading conditions did not materially benefit the textile units. The implementation of the recommendation of the Wage Board, has in its wake, entailed heavy expenditure on the mills. The favourable trading conditions coupled with the improvement in demand for cloth proved beneficial to the industry to meet the heavier burden it has to shoulder after the implementation of the Wage Board recommendations. A mere revival of demand is not enough to place the industry in a comfortable position. The cost of production of the textile units is comparatively higher than that of other countries. If the industry wants to prosper efforts should be made to step up the output. This naturally calls forth rapid modernisation of the industry instead of depending on the rickety and outmoded machinery which has turned out to be unremunerative in many cases. The recent imposition of excise duty on cotton textile by the Finance Minister in his latest Budget is yet another burden on the cotton mills. Mr E. F. G. Hunter, Chairman of the Bangalore Woollen, Cotton & Silk Mills Company Limited and the Buckingham Carnatic Company Limited, traced in detail the implications of these levies in his speeches to the annual general meetings. He welcomed the gesture shown by the Finance Minister in compounding the proposed duty on yarn into a duty on cloth, but pointed out that the excise levy on automatic loom production, (subject to relief on export), will only retard the progress of the industry and stand in the way of modernisation programme. At a time when foreign competition is becoming keener, these problems of the industry assume a grave significance.

JESSOP Record Output

The most important point in the speech of Sir B. P. Singh Roy, Chairman of the Jessop and Company Limited delivered on the occasion of the 29th annual general meeting of the Company is the record output registered by the Company during the working year 1959-60. The value of the output of the Company during the year under review is put at Rs 9,06 lakhs and represents an increase of 40 per cent as compared with Rs 6,48 lakhs for the preceding year. This is a remarkable achievement considering the many difficulties experienced by the Company in respect of adequate supplies of steel, transport facilities both in bringing materials to the Company's Works and in removing finished products. Another important fact about the working of Jessops during 1959-60 was the entry of the Company into new lines of manufacture. The Box wagon replaced the four-wheel covered goods wagon in the manufacturing programme and the Company also took up contract for production of Electric Multiple Unit Coaches. It is worth mentioning that in changing over to Box type wagons, the Company was giving up a line in which it had more than thirty years experience and knowledge. The effects on the Company's working wrought by this switchover could be gauged from the fact that while production of the four wheel covered goods wagon was running at over 2,500 a year valued at Rs 3,00 lakhs, the outturn of the Box wagons during 1959-60 was only 145 representing a sales value of Rs 61 lakhs. Similarly delay in the issue of licences for the special electrical and mechanical equipment required for the production of the EM Unit coaches has left a gap in the production of these wagons and in order to cover this gap, Sir B. P. Singh Roy has stated that the Company would begin production of Broad Gauge Motor and Parcels Vans at the Company's Coach Works.

Sir B. P. Singh Roy referred to a scheme for setting up a new works in Dum Dum for the manufacture of road rollers. This is being done to meet the strident demand for the diesel road rollers of the Company. Sir Singh Roy also referred to the finalisation of the arrangement with their collaborators Messers Aveling-Barford Ltd. England, for manufacture of transmission for the Company's road rollers. The Company is planning for 100 per cent indigenous content in this and all the special purpose plants required are reported to have been ordered.

In common with other industries situated in the Calcutta region, Jessop also faces the problem posed by the recent cut in electricity supply. In this circumstance whether the 30 per cent increase in production revealed for the first few months of the current year could be sustained remains rather uncertain. But to carry out the expansion plans that have been taken on hand by the Company it has perforce to find sources of new funds. The Company is shown to have almost reached the tether-end in Bank credit. Sir B.

P. Singh Roy has hinted at the possibility of meeting the financial deficiency by raising further share capital.

NEW VISTAS Refinery Gas as Raw Material

The Fertiliser Corporation of India has recently entered into an agreement with Burmah-Shell for the supply of 50,000 tons of refinery gas per annum for the manufacture of nitrogenous fertilisers. The Trombay Fertiliser Plant, administered by the Fertiliser Corporation, will be the first of its kind in India to utilise refinery gas for the production of fertilisers. Production of nitrogenous fertilisers in this factory is expected to commence by the beginning of 1964, if not earlier. The annual production of fertilisers in the initial stages will be around 350,000 tons (equivalent to 90,000 tons of nitrogen and 40,000 tons of phosphates). The renowned Shell gasification process will be adopted for the conversion of refinery gas into fertilisers. The advantage of this process lies in the fact that any type of petroleum feedstock can be utilised for the manufacture of fertilisers. Apart from the recent contract signed with Shell, the Corporation is reported to be contemplating a similar deal with Stanvac for the supply of petroleum naphtha. The proposal to start the production of town gas in this plant is under the consideration of the authorities.

Brass and Copper Pipes and Tubes

The decision of the Kamani Tubes Private Limited, a member of the reputed Kamani group of industries, to start the production of brass and copper pipes and tubes by the end of this year will be a welcome boon to those industries like sugar, airconditioning, railways, automobile, shipbuilding, chemical plants, cycle and electrical engineering. Kamani Tubes is fortunate in having secured the technical collaboration of the noted Yorkshire Imperial Metals Limited whose products have a reputation of their own. The annual production of tubes and pipes by Kamani Tubes in the initial stages will be of the order of 1,000 tons but it will be subsequently enhanced to 2,000 tons before the end of 1962. The capacity will be further increased after taking into consideration the indigenous demand for the production.

The range of manufacture of tubes will comprise copper ones from 3/16" diameter to meet the requirements of the refrigerator and airconditioning industry to alloy tubes of 4" diameter to meet the demands of the sugar indus-

try. Apart from these types, the plant will also produce other sorts of tubes and pipes of special sizes after taking stock of the demand for such products.

The factory is at present engaged in the production of extruded rods and sections and the production of tubes and pipes will constitute the second phase of the project.

It is understood that, in addition to Kamani Tubes, licences have been granted to three other concerns for the manufacture of tubes and pipes. It is anticipated that the entire requirements of the country will be met by these four units by the end of the Third Plan. Apart from providing considerable employment opportunities, these units will help save the country sizeable foreign exchange.

RCC Poles

The testing of equipment by the Electricity department is now supplemented by the manufacture of poles needed for expanding the electricity network in Madras. Apart from towers, the Madras State Electricity Board produces line materials and tower materials. A question that may be asked is why cables and wires are not produced under State auspices. But at present substations are equipped with switches made departmentally and heavy transformer trucks are also made by the Board for its own use. Line supports are furnished by RCC poles and rural electrification has certainly been aided. Private contractors also supply RCC poles and coal ash is used in Madras as substitute for cement. The Department used 60,000 poles in 1958-59 and supplemented the supply of wooden poles treated at the special wood seasoning plants by getting RCC poles. How much is saved and how much cement is used for the job is not known, but other States will perhaps copy Madras in producing RCC poles.

CORRIGENDUM Printer's Devil

What Mr P. K. Sen did to arouse the wrath of the Printer's Devil, we do not know. But that personage insinuated himself into his last week's article on "Staff Cost of Indian Banks" with devastating effect. On the one hand, he was purported to say that the average deposit per account, in an American bank, was \$81,444; whereas, of course, as the next sentence made clear, the imp had inflated the true figure by \$80,000—the average amount being only \$1,444. The Printer's Devil, by his own code, is nothing if not fair: inflation here was offset by deflation, when Mr Sen was indicating the number of entries an operator on an accounting machine in America was capable of: Mr Sen wrote 1,600, the imp demurred—and so it appeared as 1,000.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE most outstanding fact about Rabindranath was, of course, that he was a poet. Everything else, his amazing vitality, his creative prodigality, his passionate faith in man, his indignation at all that did violence to the human spirit flowed from his poetic vision of life. He was for ever pitting the "Everlasting Yea", the positive affirmation of Life against the devious or strident negations of it by power, money, organisation or anything that tended to cramp the human spirit. Power and its subsidiary inhumanities he castigated time and again as a desert that was for ever encroaching upon such pasture of love, laughter and beauty as are still left us. "The green of the woods, the gold of the sun and the intoxication of the wind" he celebrated again and again and the tragedy of men and women who were like "cane-sticks that had no leaves, no roots, and no sap" was a sad refrain in many of his songs, poems and plays. Tagore has often been compared to the Renaissance Man, with an omnivorous hunger for experience and versatility of interests. Perhaps a nearer comparison would be with Goethe to whom Tagore shared a subtle speculative turn of mind and a creative fecundity that is simply fantastic. Poems, plays, songs, of which alone he is reputed to have composed and set to music some 2,500), essays, novels, and short-stories and books for children poured forth in a steady stream from his pen. Late in his life he took to painting, and though I am no judge of these things, I am quite assured that they show a remarkable intuitive perception of what has been called "the stupefying terror of being in this world". (This, a German criticism might have been coloured by the timing of the Exhibition in Germany in the fateful thirties.) In between he managed to found the Visva Bharati where, at least during his life time, there was a spirit of high adventure among educational ideas.

Tagore's reputation in the West has been subject to the vicissitudes of the winds of fashion. But there was in Europe from the beginning a certain amount of misunderstanding of the true sources of his greatness. Yeats, who read the Gitanjali in the dimness of the Celtic Twilight, worked himself into enthusiasms that he found embarrassing in the light of his own latter-day development. Dis-

cerning Indian admiration for Tagore has always been unclouded by such misunderstanding and we principally salute him what for lack of better word, we have to call his "humanism" and his profound understanding of the stirrings of the human heart.

Tagore was not a politician or a statesman in any sense of the term and, of course, he seems to have cared very little for economics. But he was more deeply involved in the political fortunes (or misfortunes) of his times and country than many of his countrymen think. It is known that he threw up his knighthood because of Jalianwallah Bagh, but it is not so well-known that he actually tried to persuade Gandhiji and C. R. Das that he should join them in some specific form of protest like defying the ban on entry into the Punjab. Gandhiji, who understood these things better, advised him against it because he knew that Tagore should not desert his vocation for the sake of a gesture. (These two, in many ways antithetical, had a profound admiration for each other.) With Mr Nehru, Rabindranath was in readier sympathy and some of the most intimate letters received by Mr Nehru were from him. It is interesting that in 1938 when Tagore was troubled by events in Bengal, he wrote to Nehru about "how present conditions puzzled him and made him despair... I know her (Bengal's) weaknesses but I cannot maintain my detachment of mind and passively acquiesce in her doom of perdition. But I am quite willing to settle down to my own special work and leave to your Congress organisation to deal with her as it thinks fit. But I myself believe in some personal force tightening the screws that are loose and sawing off parts that obstruct, a headworker, who may not be perfect as a man, but an expert mechanic". Anil Chanda who was Tagore's secretary then, amplified this letter and said that Dr Saha's idea of "rational planning" appealed to Tagore and that he wanted Mr Nehru not to allow other preoccupations to interfere with his work on the national Planning Committee. I wonder what Tagore would have had to say about the fruits of planning and indeed about much that is happening around us. Much in the events of the last twenty years might have heartened him, but a great deal more might have angered him or filled him with disgust. He

may even be put off by the rather excessive ballyhoo that has accompanied the celebration of his birthday. But of the generous impulses that are at work shaping India's destiny, he would have approved, though he might not much like the particular forms they sometimes take. He would have particularly been saddened by the spiritual slums that are springing up everywhere even as we are trying to clear the physical ones.

Pandit Motilal Nehru whose birth centenary falls on the same day as Tagore's, shared some of the latter's aristocracy of the soul. Motilal Nehru whom his more famous son has somewhat eclipsed, was a grand, rather than, a great man. In temperament and outlook he was nearer to the eighteenth century "gentleman" than to any latter-day species. (Indeed, there is more than mere surface analogy in the famous-son-of-a-famous-father relationship of the Nehrus and the Pitts.) There is a certain amount of historic irony in the fact that one whose training and outlook was more suited to spacious parliamentarianism than to the rough and tumble of revolutionary politics should have died before he could have savoured in full the opportunities of the former. And yet, I feel—and here I am treading on unsure grounds—that the kind of parliamentarianism that Motilal Nehru would have cared for has perhaps disappeared. I wonder what he would have thought of the

kind of India that his son is shaping today. Much of it he might reluctantly approve on general grounds in much the same way as he approved of his son's politics in the early twenties and indeed adopted with characteristic qualifications of his own. But the noise and the din, the pervasive vulgarity, the pettiness and the squabble—there is a blistering passage in one of his letters to Jawaharlal in 1926 about communalists who smeared him as a beef-eater in league with Mussalmans—the glitter of the nouveau riche and the new power elite he would have scorned. His was the milieu of the good life and the grand manner, the spacious world of gourmets and connoisseurs of wine, wit and Urdu poetry. (Very early in his association with the Congress he got into trouble with some humourless puritans by quoting a Urdu couplet about even a Qazi drinking when it was free!) And yet, he was no soft sybarite. When the logic of his convictions led him to follow Gandhiji into gaol and much worse, he did it with the calm fortitude of a Roman Patrician, whom he resembled in many ways. (One of the more popular photographs of his with a shawl flung diagonally on his chest, bears a striking resemblance to pictures of Roman Senators in text books of history.) The well-chiselled face with slightly distended nostrils, bears witness to his most outstanding quality—a certain spiritual fastidiousness. It was this that made him sense the moral untenability of the British Empire, with which he was personally on back-slapping terms and drove him inexorably towards Gandhiji. It is this fastidiousness that we sorely lack today.

Olympus

Railways in the Third Plan

The three-day meeting of Railway General Managers which concluded last Saturday has emphasised the need for timely action to forestall the sort of transport crisis that caught the Railways unprepared in the concluding year of the Second Plan. The Railway Administration has been continuously under fire for the last six months for alleged failure to provide sufficient wagons for the traffic offering, especially for transport of coal from Bengal-Bihar coal-fields to consuming centres in Northern and Western India. The explanations offered by the Railways' spokesmen, involving complicated technical details, have not been able to catch up with the criticisms, especially in the face of the shortfall in the total goods traffic actually carried in 1960-61 as compared with Plan estimates.

When the Second Plan was drawn up, the traffic was estimated to increase from 114 million tons in 1955-56 to 168 million tons by 1960-61. This estimate was later scaled down to 162 million tons. As against these estimates only 154 million tons were actually carried by the Railways last year. In the Draft Outline of the Third Plan originating goods traffic has been estimated at 235 million tons; but, according to latest assessments, Railways are likely to be called upon to move a larger volume which may total up to 244 million tons, an increase of ninety million tons over the five year period.

The development programmes for the Third Plan were being formulated on the basis of traffic reaching about 235 million tons in 1965-66; and the proposed outlay of Rs 1,220 crores (including Rs 330 crores from the Railway Depreciation Reserve Fund) is based on this estimate of traffic. There is so far no indication that the total outlay will be stepped up in keeping with revised estimates of the traffic.

The larger volume of traffic is expected to be handled by more intensive use of locomotives, track and wagon capacity. The meeting decided to step up the loading of wagons by about ten per cent during the current year. This, it is pointed out, would entail an additional loading of nearly 2000 wagons per day over all the zonal Railways. It was also decided that efforts should be made to persuade trade and industry to load an additional ton or two in each wagon—a step which would enable Railways to lift nearly four million tons extra with the existing rolling stock. It was revealed at the meeting that during the past six months loading on broad gauge had increased by 6.6 per cent and on the metre gauge by 2.7 per cent as compared with corresponding period of the previous year.

During the general discussions, emphasis was laid on the need for improved turn-round of wagons, larger engine mileage per day and frequent meetings between operating chiefs of adjacent Railways. The meeting discussed at some length technical problems regarding better use of engines, larger workshop production through extension of the incentive scheme, fuel economy, intensive utilisation of goods stock, re-commissioning of condemned wagons etc.

Stress was also laid on expeditious expansion of line capacity on various routes. The meeting agreed on highest priority for doubling of tracks already undertaken or programmed, including Baoridand-Anuppur, Anuppur-Katini, Nergundi-Khurda Road, Dornakal-Vijayawada and Ratlam-Nagda sections. Extension of loops, and strengthening of track, where necessary, it was agreed, should also be undertaken for the purpose of running Box wagons trains. Heavy trains of 3600 tons would be worked by double-headed steam locos until diesel locos were available.

The Railway Minister is understood to have made the interesting suggestion that General Managers might occasionally travel incognito in Third Class with a view to gathering personal knowledge of the conditions of coaches and the requirements of lower class passengers. But few of the Railway General Managers feel that they are cut out for the role of Haroun-al-Raschid.

New Pattern of Govt. Accounts

The Department of Economic Affairs of the Ministry of Finance says its annual report, has rationalised and recast the structure of Government accounts in consultation with the Comptroller and Auditor-General of India. These changes may be phased over a period of two years commencing from April 1, 1961. The following important changes have been made with effect from the current financial year:

- (1) The group head "Civil Administration" has been split up into two sections, namely, "Administrative Services" and "Social and Developmental Services". The latter also includes expenditure on Community Development Projects, National Extension Services, and Local Development Works which is at present accounted for in the Section "Extraordinary Charges".
- (2) With the exception of statutory grants, the other grants-in-aid by the Central Government to the State Governments were hitherto booked under the Major Heads of accounts to which the grants related and were taken as receipts under the relevant heads

in the State section of accounts. This arrangement not only inflated the receipts of the State Governments under the major head concerned but also gave a grossly inflated picture of the total expenditure of the Central and State Governments together in any particular field. It was therefore decided that all grants from the Centre to the States should be adjusted under a single major head. It was also decided that the provision for all grants to States should be included in a composite demand under the control of the Ministry of Finance.

- (3) The arrangement of adjusting the States' share of Union Excise Duties and payment to local bodies of certain duties such as Terminal Taxes, Entertainment Taxes, Taxes on Motor Vehicles etc., as part of the expenditure on collection of taxes, duties and other principal sources of Government revenue was not considered appropriate. It was decided that these payments should be transferred to the section "Contributions and Miscellaneous Adjustments."
- (4) With the decision to draw a distinction between the administrative expenditure on social and developmental services, it was decided to abolish the head "Tribal Areas" and exhibit the expenditure subject-wise under the major heads to which it pertains.
- (5) In view of the importance of "Labour" and "Employment", it has been decided to record the expenditure on these subjects under a separate new major head "46-Labour and Employment" from April 1, 1961.

Land for Landless Labour

The Planning Commission has been seriously concerned about rural unemployment ever since the report of the Second Labour Enquiry published last December, drew attention to the deterioration in conditions since 1951. The dimensions of the problem have been further magnified by the results of the last Census. It is estimated that landless labour, together with marginal cultivators constitute about one-fifth of the country's population. The Central Advisory Committee of Agricultural Labour was recently set up by the Planning Commission, (Chairman Mr Shriram Narayan), to advise on settlement of landless workers on land and on measures to solve their other problems. The Committee which held its first meeting on April 29-30 found that the class of landless labour and marginal cultivators stood at the lowest rung of the economic ladder and that the development plans of the country had not resulted in any visible improvement in their condition. After surveying the availability of lands out of Government culturable waste lands, the surplus lands obtained as a result of the imposition of ceilings on holdings and the Bhoodan lands, the Committee came to the conclusion that a programme of settling seven lakh families of landless labour on 50 lakh acres should be taken up in the Third Plan. The landless labour

would include such holders of land as defined in the Bhoodan Acts of various States. The Committee also recommended that wherever sizable compact block of land is available, it should be given to the cooperative farming society of landless labour. Isolated small plots should be distributed expeditiously on individual basis. Reclamation of these lands, where necessary, being left as far as possible to the beneficiaries.

The Committee also recommended a programme for the provision of house sites to 50 lakh families free of cost out of available Government lands or sites specially acquired for this purpose at a cost of Rs 10 crores. Assistance has been recommended for the construction of houses, where necessary, at the rate of 150 per family, one-fourth of which will be subsidy and the rest a loan.

The Committee laid great emphasis on augmenting special work programmes for providing employment to the unemployed and under-employed in the rural areas, and decided to set up a sub-committee to study the programme for the utilisation of rural manpower.

ORIENT PAPER MILLS LIMITED.

Regd. Office:

Brajrajnagar, Dist. Sambalpur, (Orissa)

NOTICE TO DEBENTURE-HOLDERS

Redemption of debentures of Rs. 1 crore issued in denomination of Rs. 1000/- or fraction thereof in the year 1951.

The Company, as already notified, had, in exercise of the option vested in its under the terms of issue of the said debentures, decided to extend the date of redemption of debentures from the 31st March, 1961 to 31st March, 1971, subject to the sanction of the Central Government. The Central Government has declined to accord sanction to the same but has, however, allowed the Company to postpone the redemption of debentures till the 30th June, 1961.

Notice is hereby given that the above debentures will accordingly be redeemed on the 30th June, 1961 on which date the principal with interest up to that date will be paid to the registered holders of debentures on presentation and surrender of the debentures duly discharged at the office of the Company at "Eastern House", 14, Radha Bazar Lane, Calcutta. The debentures will cease to bear any interest after the said date.

The Debenture Transfer Books of the Company will be closed from the 19th to 30th June, 1961, both days inclusive.

By Order of the Board,

B. K. VYAS,
Secretary.

8, India Exchange Place,
Calcutta, the 28th April, 1961.

6 May 1961

CHAIRMAN'S SPEECH

Indian Aluminium Company, Limited

*

The following is the text of the speech delivered by Mr. K. C. Mahindra, Chairman, Indian Aluminium Company, Limited, at the Annual General Meeting of the Company held at Calcutta on 27 April, 1961.

I have pleasure in welcoming you to our 23rd Annual General Meeting.

The Directors' Report submitted to you along with the audited accounts for the year 1960 provides information on the year's operations. I am happy to report that production and sales again reached new high levels in 1960. The steady progress which your company has been making over past years is reflected in the financial accounts which are before you now for your consideration.

During 1960 your company earned a net profit of Rs 12 million as compared to Rs. 8 million in the previous year. A large part of this increase was due to the much smaller provision for development rebate in 1960. Nevertheless, you will agree that the financial results are gratifying. This has enabled your directors to recommend the payment of a higher dividend this year at Rs. 1.50 per ordinary share. Dividend on the preference shares has been recommended in accordance with the Preference Shares (Regulation of Dividends) Act 1960, and the company's Articles of Association. The Directors have proposed a transfer of Rs. 5 million to the General Reserve and a carry forward of Rs. 4.99 million under surplus account. You will no doubt appreciate that in a capital intensive industry like aluminium, it is prudent as well as necessary to plough back a portion of our surplus so as to meet the requirements of a growing industry like ours.

For the last few years, the corporate shareholders of this company have been enjoying—in respect of the ordinary shares issued in late 1956 and those issued upon conversion of Loan Stock since 1957—the benefits of Section 56A of the Indian Income Tax Act, that is, exemption from super tax on dividends. It now gives me considerable pleasure to announce that the benefits of Section 15C of the Indian Income Tax Act, which provides for five years' tax holiday for newly established industrial undertakings for which your new smelter at Hirakud qualifies, will be available to all shareholders both ordinary and preferred. For the year 1960, Income Tax Officer has authorised your company not to deduct tax on 12% of dividends and we pro-

pose to act accordingly. The percentage of 12% has been fixed on a provisional basis and the shareholders will have to wait until the company's tax assessment for the year 1960 is completed before the full and final estimate of this benefit is obtained and on the basis of which tax relief, if any, may be claimed by the shareholders in their own assessments.

Because of our plants being located in different parts of the country, a very serious problem which we have to face is that of transport. The uncertainty of wagon availability forces the company to increase its inventories thereby tying up extra capital and also compelling the company to utilise more costly road transport.

Coal is a commodity most seriously affected and it appears there is no remedy for the immediate future. The Railways claim that they are carrying all the traffic that they are supposed to according to the Second Plan estimates. Various remedial measures are being discussed by the Government especially for the high priority industries, e.g. steel, public utilities, etc. But for industries like aluminium, which enjoy no special priority, the prospect of improvement in transport bottlenecks do not appear to be hopeful. The company is pursuing this matter with the Government in the hope that some action may be taken to solve our difficulties in this regard.

Last year I spoke to you about the new excise duty levied on aluminium products. During the year 1960 we have faithfully collected Rs. 5.5 million as excise duty from our customers and paid this amount over to the Central Government. We are, however, worried about the way in which excise officials are interpreting the duty regulations. Excise duty is normally payable on shipments to customers, but not so in the case of aluminium. The officials have ruled that duty must be paid on all shipments of ingot from our smelters to our fabricating plants. Thus, excise duty must be paid on all aluminium in the pipeline and in our fabricating plants. From our annual statements you will see that we have so far paid no less than Rupees one million on this account. The requirements of working capital for this capital intensive industry are thereby further increased, and so also is the debit for interest. In addition, duty paid on ingot which is ultimately wasted in fabricating plants as 'melt loss' is never recovered. Thus you get an amazing result: the producer of aluminium is paying excise duty on something

which is non-existent and can be shipped to nobody.

In our opinion the above difficulty and the unwarranted expenses arising therefrom, can be easily and sensibly eliminated by allowing us to move ingot and fabricate it 'in bond'. Such a procedure is not very uncommon, but so far it has not been possible to persuade the excise officials to see our point of view. Our losses on this score will multiply as our current expansion projects are put into commission, and it is desirable that the Central Board of Revenue take steps to remove this unfair burden at an early date.

Under the 1961-62 budget proposals the Government has extended the scope of excise duty to include aluminium pipes and tubes. Further burdens have been imposed on your industry by way of increased customs duty on imported machinery and reduction of tax concession in the form of development rebate. These proposals will have the effect of further increasing our cash requirements.

As to the company's expansion programme, satisfactory progress is being made at all locations. Barring any untoward happening, it is expected that the second extension press at Alupuram and the additional potline at Hirakud will be ready to go into operation before the end of the year. Expanded facilities at Belur and Muri are likely to be ready by the middle of next year. Your directors are anxious that your company continue to play its leading part in the development of aluminium industry in India and with this in view proposals for further expansion of the company's activities are under constant review.

1960 has been a good year for India and a particularly eventful one for the aluminium industry. The last 12 months have witnessed a more than ordinary increase in the tempo of economic activity. A high level of industrial output especially in steel, buoyant central revenues, a slight improvement in export earning despite initial setbacks, are some of the significant gains recorded. The year ended on an optimistic note and the outlook for 1961 is heartening.

Last year from this Forum I extended a hand of welcome and cooperation to new entrants in the aluminium industry. I did not know then, nor did I anticipate, the wild scramble which has since ensued amongst the top flight producers of the world to stake a claim in the developing market in India. It does appear strange and perhaps ironic to me that international groups would take a leaf out of the Indian book of experience—a book which ruefully reveals our short horizons, our quest for the

quick rupee, our inability to learn the long and tedious track to true industrialisation. There may have been justification 20 years ago for such mental attitudes, in as much as the protectorate or colonial era in India deprived the nationals of the country of learning by experience the vicissitudes of industrialisation. With the withdrawal of the British the hitherto financial and the trading classes in India plunged into the industrial vortex hurry scurry in many directions, but still with an eye for a quick rupee. They did not stop to take a long term view; they did not stay to learn from the industrial revolution in Europe of the mid-19th century or even from the later hot-house developments in U.S.S.R. Last quinquennium has however showed a welcome change and long term investments have become fashionable. It is therefore doubly strange that in the specialist field in which your company has pioneered the way, there should emerge a movement reminiscent of the old, old colonial days and ways. Crude and half-baked schemes, based on little or no field investigations or market surveys, and not even presuming to be economically viable, are presented to the public in India, endorsed by reputed concerns of international renown.

The deposits of bauxite ore on which the schemes are based have not been thoroughly field-tested for quality or reserves. Availability of firm and continuous power nor the ultimate costs thereof have been assured. Costs of production, in some cases based on questionable exchanges of metal for raw materials and/or equipment, have not been spelt out and are bound to be unnecessarily high. We in India should look at these proposed new schemes carefully before supporting them, and we should look at them through the factual eyes of experience and viability and not be carried away by mere enthusiasm for expansion.

But why this sudden display of interest in the Indian markets? We know that aluminium industry in the West and in North America has had a bad two years; there is a glut of primary metal and smelters have been working on restricted production. In Europe where smelter operations do not match the requirements of the fabrication units, conditions are not so depressing, and North American groups have moved en masse into the European markets. India is slowly emerging as perhaps a desirable non-aligned area and may be, quick rupees can be made. It surprises me, however, that when our own planning techniques are being remodelled and reshaped in the light of experience

over a decade, a throw-back emerges as a gift from the West. Alignments of resources with projections of demand become awry and we have begun to wonder if there has not been gross under-estimation of what country has in physical resources for aluminium development and what the country can consume. Our friends from the West did not perhaps reckon with the one obvious consequence of such a presentation, namely, the overall socialistic thinking of the planners. If the development of a basic commodity like aluminium is such a gold mine, Government would not like to be left out. Offer of plant and techniques from a communist has provided the opportunity for a Minister to say that a new aluminium unit will be set up in the public sector—a consequence which, I am sure, will be irksome to many of the new aspirants.

Rational misjudgements do occur in every large effort but where there are scarcities of resources and of technical knowledge, where the purchasing power of the market is phenomenally low and therefore will take time for the upward geometrical stage, there is critical need for prolonged and deep look into the purposes and end products of investments and of potential investors. Aluminium industry is voracious in its appetite for capital. To produce a ton of primary aluminium one needs an investment in capital equipment and facilities almost ten times what it would need to produce a ton of steel. Let us look at the picture-projections for the next 5 years.

The demand for all non-ferrous metals during the Third Plan

period is expected to go up and since aluminium is the only non-ferrous metal which can be indigenously produced, in adequate quantities, considerable thought is being given to its development. The draft outline of the Plan has set the target at 87,500 tons by 1965/66. Out of this 52,500 tons is already in production or under construction while work on the balance of 35,000 tons is expected to start shortly. As against this the country is currently consuming around 44,000 tons of metal.

Recently, however, there has been talk of raising the target for aluminium production to 150,000 tons, and if I am to add up the pending proposals supply target would be nearer 200,000 tons—a five times jump over current consumption within 5 years. That exports will take care of oversupply is a mirage, for India cannot hope to compete in the world market on level terms with strong international groups. We know that with our scattered deposits of ore, expensive power and comparably more expensive costs of installation, India will remain a high cost producer. Oversupply has its own quick nemesis and while I favour planning on an ambitious scale, I would nevertheless counsel prudence in weighing the adverse effects which might result from commitments which are premature for the stage of development which the industry has reached in this country. There is no surer way to discourage investment than to encourage over-optimistic growth and invite idle capacity—a fact that has been amply demonstrated even in highly

developed economies. Moreover, India is currently power hungry, and its bauxite resources, though apparently considerable, are far from being proven in quantity and quality sufficient to sustain a prodigal rate of growth. The economic supply of these major raw materials is vitally important to the health of the aluminium industry, and, in my view, the country cannot afford to embark too hastily or too lavishly upon new and grandiose schemes, without the most careful thought for the prudent utilisation of these resources.

A noteworthy development, which also suggests the wisdom of temperate planning, and which is of great potential importance to the nascent industry of this country, is the announcement made by our Canadian associates, Aluminium Limited, that a basically new process—the first major technological change in the method of manufacturing aluminium—is about to be put into semi-commercial operation in Canada. The process, if fully successful, will not appreciably reduce the large power requirements of the existing process, or its dependence upon bauxite, but it does give promise of considerable savings in other elements of production cost, and particularly of substantial reduction in capital costs. The new experimental plant will be completed early in 1962, with a production capacity of six to eight thousand tons of aluminium per year. It is expected that operation on this scale for a couple of years or so will be required to determine whether the estimated savings in capital and operating costs can be realised in large scale operations.

tions for power are running ahead of services connected. The Surat Electricity Co., in common with the rest of the Licenses in South Gujarat, has been subject to control on new connections and its diesel plant is being called upon to bear an increasing burden to sustain the interests of the South Gujarat Grid. The Ahmedabad station is more than fully loaded and in fact steps are being taken by the Government to effect measures to bring about some form of rationing of power. This is most unfortunate but absolutely necessary. The silver lining in the cloud, however, is that 60 MW of new plant is scheduled to be brought into commission—30 MW by March 1962 and the balance one year thereafter.

The Shivrajpur Syndicate Ltd. increased its sales of Manganese Ore in the last year but, I am afraid, this increase was mainly due to the fact that during the year Manganese Ore exports were permitted against Barter transactions by the Government. Otherwise, Indian Manganese Ore continues to be uncompetitive, generally speaking, in the international market. It is well known

In the light of these impressive possibilities, which we are watching with interest and care, the risks inherent in over-expansion take even clearer form. However, there are many factors to be considered in the formulation of future plans, and all are receiving the constant and critical attention of your management. We do not intend to keep static, but neither will we lose touch with realities and sound business principles, and I express the hope that Government, in its planning, will continue to maintain a similar outlook.

We have lost during the year the able direction of Mr. Vance Echols, who retired from India for family reasons. His contribution to the Company's progress was dynamic and we were sorry to lose his services. Pending the appointment of a new Managing Director the Board entrusted the charge to Dr. Horwood who has been with the Company for some years, but unfortunately he is also due to leave shortly. Your Board realises that quick changes in top management are not healthy, but in specialised fields where talent is very scarce it is inevitable that movement of skilled personnel must go on until we are able to develop such resources indigenously and in plenty.

Once again I am sure that shareholders would wish me to convey their thanks to the Company's able management team and to workers and staff who have served the Company well during the past year.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

Indian Finance

6 May 1961

that given stable conditions and trouble free working, this factory can make considerable profits.

Turning to the affairs of the Company's Subsidiaries, you will notice that the working results of Killick, Nixon & Co. Ltd., show a considerable improvement compared to the previous year. From a loss of Rs 2 lakhs for the year 1958/59, the Company has shown a reasonable profit of Rs 1½ lakhs for the year 1959/60. There have been some setbacks during the current year, but every effort is being made to rectify the position.

Stamco Industries continue to show a loss, but I believe that the measures now being undertaken will reverse this tendency. I am very pleased to report that consequent to the visit to the Stamco

factory by two Directors of Caribonum Ltd., Leyton, U.K., which is one of the major manufacturers and suppliers of carbon paper and stationery products throughout many markets of the world, that Company has agreed to provide financial and technical assistance to develop our production and sales. While no spectacular results should be expected in the near future, I believe that this Company will eventually take its rightful place in the industry in India today.

Although our new Subsidiary, A. R. Haseler Ltd., shows a loss up to 30th September 1960, the date of acquisition by Killick Industries Ltd., the working since that date has shown an improvement, which I hope will continue.

We expect to receive a handsome return during the current year on our investment in Snowcem India Ltd., which Company is now developing a considerable demand for its products and hopes to continue to increase its range of cement speciality products.

What of the future? In the immediate years ahead, your Company will continue to have great responsibilities as Managing Agents of large-scale industrial undertakings. I have always believed and continue to believe that the good Managing Agents serve a most useful function and I trust that Government will continue to recognise their usefulness. Nevertheless, in the circumstances obtaining today, I think you will agree that it is only prudent that

your Company takes steps to broaden the range of its activities by investing in industrial undertakings either directly or through subsidiary Companies. Although at the moment the industrial potential of Killick Industries Limited and the Subsidiary Companies is not all that I could wish, I believe that this diversity of business will in due course not only contribute to the country's expanding economy but will directly benefit you all as shareholders of this Company.

Note: This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

The Buckingham & Carnatic Company Limited

Record Sales in 1960

American Short Staple Cotton Looks Costly

Binnys Retire as Managing Agents After 40 Years of Good Service

Mr E. F. G. Hunter, the Chairman, on 1961 Budget & Taxation

Presiding at the Fortieth Annual General Meeting of the Shareholders held at the Company's Office at Madras on Friday, 28th April, 1961, Mr. E. F. G. Hunter, the Chairman said:—

Gentlemen,

It is my privilege and pleasure to welcome you to this Annual General Meeting of The Buckingham & Carnatic Co. Ltd., and with your permission I propose to take as read the Directors' Report and the Accounts and Balance Sheet for the year 1960.

Trading conditions showed a marked improvement during the year under review. That better conditions prevailed in 1960 was indeed fortunate, as your Company along with others in the cotton textile industry had to meet a substantially higher wage bill as a result of the implementation of the recommendations of the Central Wage Board for the Cotton Textile Industry. The improvement in the demand for cloth experienced in 1960 and so far maintained in 1961, it is hoped will continue in order that the industry may retain the capacity to meet the heavier burden. But demand alone is insufficient and if the industry is to remain capable of paying higher wages—to be increased again in 1962 in accordance with the Wage Board recommendations—and to continue to prosper, it will also be necessary to increase production, by implementing

rationalisation as soon as possible" which the Central Wage Board stressed in their recommendations. You will be pleased to learn that negotiations have commenced with the Labour Union to implement the Wage Board's recommendations in respect of rationalisation and agreement has been reached on the procedure to be followed. I most sincerely trust that tangible results will be achieved during the current year.

As stated by the Chairman in his speech last year, the textile industry then faced a serious crisis owing to the failure of the Indian cotton crop during the 1959/60 season. However, by strict controls, rationing and the import of short staple American cotton, Government was able to keep the industry supplied, though mills had to pay much higher prices. Also larger allocations of long staple foreign cotton were made to mills to enable them to spin finer counts and to reduce consumption of Indian cotton.

Despite these measures the carry over of Indian cotton at the beginning of the current cotton year was as low as 9,98,000 bales, i.e. approximately 46% less than at the beginning of the previous season. Fortunately the 1960/61 cotton crop is promising and a total yield of 52½ lac bales is expected. Rationing and other controls are still in force and to improve the stock position Government has decided to import more

short staple American varieties. Prices, however, continue at a high level and it is feared that Mills will have to pay inordinately high prices for the short staple American cotton to be imported.

Although as noted in the Directors' Report your Company's sales reached a record figure, yardage of cloth produced was, due to finer production, lower by comparison with the previous year. However, the improvement in your Company's exports was against the trend of India's export of textiles during 1960 and reflects the resolution with which this particular aspect of your Company's business was pursued. The incentives offered to those who make this effort in the overseas markets, where conditions and competition are getting increasingly difficult, serve as a great encouragement and it is hoped that Government's present tendency to water down these incentives will be reversed.

For the satisfactory sales of your Company's products in India we have much to thank the wholesale and retail dealers throughout the country and shareholders will be interested to know that at the instance of a number of the larger retailers in Madras, an All-India Binny Group Dealers' Conference was held in Madras early in February 1961. Over one thousand dealers from all over India, representing all the territories of our Guarantors, attended. The conference, which was held in the

Rajaji Hall and Gardens, which were kindly loaned by the Government of Madras, was a great success in every way and gave your Sales organisation an excellent opportunity of dealing with day to day problems and difficulties. Mr. Kanungo, the Union Minister for Commerce, very kindly attended the opening session.

The policy of extending indirect taxation by the application in the Budget of 1961 of further Excise Duties, will have the effect of spreading the collection of tax over the community as a whole, and in my view is to be welcomed, even though the new duties have not been accompanied by any proposals for reducing direct taxation or for providing incentives. However, one would have thought that the levies by way of excise duty and handloom cess already borne by the cotton textile mill industry, which on the sales of your Company in 1960 together amounted to over Rs 54 lacs, were heavy enough and that the fresh imposts on cotton textiles proposed in the 1961 budget were unjustifiable and, in the light of the concern expressed by Government over cotton textile prices, illogical. It is particularly unfortunate that the proposals for additional Excise Duties on cloth and the new Excise Duty on yarn were not framed so as to make their impact and the manner of their collection quite clear, as following their announcement the industry was

Killick Industries Limited

Chairman, Mr. A. N. Haksar, on importance of Managing Agency System

The following is the text of the speech delivered by the Chairman, Mr. A. N. Haksar, at its 13th Annual General Meeting held on 28th April 1961:

Gentlemen,

The Report and Accounts for the year are not as satisfactory as I would have liked them to be. Although I have no wish to make any excuses, I would like the shareholders to appreciate that during the year under review, we were subject to certain strains and stresses and were forced to incur certain expenditure which I sincerely hope is not of a recurring nature. Overall, I can hope that 1961 will show a modest improvement over the current year. The Managing Agency side of the business will, I think, definitely show better results. I cannot be so sanguine regarding our subsidiaries, Killick Nixon & Co., Ltd., and

Stamco Industries Ltd., but I believe that these Companies will eventually become useful earning members of the Group though it will take some time.

The Kohinoor Mills has, one can hope, turned the corner. New machinery has been installed and improvements in working are already evident. The results for 1960 are substantially better than those of 1959 and would have been better still if large amounts had not been paid out in retrenchment and other compensation.

The Electricity Companies continue to enlarge their service to their respective communities. The enormous expansion in demand for power for industry and homes in the Bombay Suburban area has created difficulties over the procurement of materials. In turn this has meant that applica-

thrown into considerable confusion.

The subsequent decision to compound the proposed duty on yarn into a duty on cloth was welcomed by mills, but the introduction of an excise levy on automatic loom production, subject to relief on export performance, is unwarranted. Any form of penalty which does not apply equally to all mills can only be considered discriminatory and this levy is certainly no incentive to progress or to modernisation.

The B. & C. Mills which have a high proportion of automatic looms have always done their best to earn foreign exchange by exporting. As I mentioned earlier, your Company's exports improved in 1960 and this improvement was against the trend of the country's textile exports. How then, can it be said to be equitable if Government, while encouraging mills to export on the one hand, dampens their enthusiasm by introducing such an unfair impost.

Your Mills do not export grey cloth. The exports are all dyed and finished products which require large quantities of indigenously and imported dyes and chemicals. Under the export promotion scheme, according to their exports, your Mills are entitled to licences for dyestuffs and chemicals and so when it was recently announced that import entitlements so earned could only be used to 65% of their face value, one began to wonder whether Government really appreciates the effect of some of its decisions on mills such as yours which, over the years, have a record for exporting of which they are justly proud.

I can assure you that representations have been made in the proper quarters and I hope that wiser counsels will prevail so that those mills, such as yours, which utilise all their import licences for dyestuffs for their own purposes, will not have to surrender 35% of their value to indigenously dyestuff manufacturers.

The artificial limitation of production of cotton textiles by the Mill Industry, effected by the control of looms and spindles installed, has produced in India's expanding economy the conditions which could lead to an inflationary rise in cotton textile prices, especially as Third Plan Targets appear now to be outdated having in mind the provisional figures of the recent census. But the textile industry, conscious of the need to maintain a stable economy, and in response to Government's appeal, has voluntarily regulated its prices. Meantime, the Government of India has appointed a Tariff Commission to enquire into fair prices for cotton textiles and yarn.

As Members will have seen from the souvenir booklet issued with the Annual Accounts, your Mills were honoured, on the 20th February 1961, by a visit from His Royal

Highness, The Prince Philip, Duke of Edinburgh. It was my privilege and that of some of my colleagues on the Board, to conduct His Royal Highness around the Mills, and I gained a strong feeling that he was most impressed by everything he saw. It was a most memorable occasion and it was indeed a great distinction for your Company to be selected for the visit.

Turning now to the dividend, the rate recommended by the Directors will bring the total distribution for the year 1960 to more than 50% of the assessable income, less the tax thereon, and the provisions of Section 23A of the Indian Income-tax Act which apply to this Company, will, therefore, be met by the declaration of the final dividend proposed.

In accordance with the terms of The Preference Shares (Regulation of Dividends) Act, 1960, which received the assent of the President of India on the 28th December last, the dividend on the Company's 7½% Cumulative Preference Shares has been amended to a dividend of 9.75%, from which the Company is obliged to deduct tax pursuant to Section 18 (3D) of the Indian Income-tax Act. An additional dividend of 2.25% was declared and was paid on the 17th February, 1961, to adjust the dividend already paid in respect of the year 1960. Henceforth the Preference Dividend will be paid by two instalments each of Rs 4.875 per share less tax, on the 1st January and the 1st July of each year.

The Companies (Amendment) Act, 1960, also received the assent of the President of India on 28th December, 1960, and was brought into effect from that date, and the Accounts before you have been drawn up in accordance with the Companies Act, 1956, as amended by the new Act. Many new restrictions have been imposed on Companies, and many of the new provisions, for example those affecting inter-corporate investment, the payment of dividends, special audits etc., have no parallel in any other country in the world, and must further inhibit good management and enterprise. Many of the two hundred and eighteen clauses of the new Act will mean more paper work and time wasting form filling, which besides adding to cost, must result in a diversion of effort and create new difficulties for administration.

It was mainly because of the various restrictions on Managing Agents imposed by the Companies Act, 1956, and the further restrictions which were at the time contemplated by the Amending Bill, since enacted, that Binny & Co. (Madras) Ltd. decided in 1959, after consultation with your Directors, to relinquish the office of Managing Agents of your Company which they did with effect from 31st December, 1960. With the approval of the Government of India, Managing Directors were appointed to take over the manage-

ment of the Company from 1st January, 1961. The Managing Directors appointed have all had long experience in the management and business of your Company, and in this way continuity has been ensured. Officers and staff who had previously been engaged, as employees of Binny & Co. (Madras) Ltd., on the business of your Company, also accepted employment with the Company from the 1st January, 1961 and I am pleased to report that the transfer of the management, which had been carefully planned, took place without any hitch and caused no disturbance whatever to your Company's business.

I am sure you will wish to join the Directors in expressing thanks to the retiring Managing Agents, Binny & Co. (Madras) Ltd., and their staff, for the valuable services rendered to your Company since the present Company was incorporated in 1920, and under whose management your Company has indeed expanded and prospered.

On your behalf I would also like to record appreciation of the services of the Mill Manager, Mr. Molyneux, who was appointed a Managing Director with effect from 1st January, 1961, to his officers, staff and the workpeople at the Mill, whose efforts in 1960 have contributed to the satisfactory results recorded in the Accounts before you.

I should be failing in my duty if I did not express my gratitude to my colleagues on the Board of

your Company for their unstinted help and co-operation at all times. Before concluding I would also like to refer to the valuable services rendered to the Company by Mr. E. J. M. Leigh who had been associated with your Company for over 32 years, and was your Chairman from 1958 up to the end of 1960. Mr. Leigh retired from India in February 1961.

NOTE:—This document does not purport to be a report of the proceedings of the General Meeting.

STATE BANK OF INDIA

NOTICE IS HEREBY GIVEN that a Local Meeting of the Shareholders of the State Bank of India on the Branch Register of Shareholders kept at the Calcutta Local Head Office of the Bank will be held at the Calcutta Local Head Office, No. 3, Strand Road, Calcutta, on Wednesday, the 21st day of June 1961, at 4-00 P.M. (Standard Time) for the purpose of electing one person to be a Member of the Local Board at Calcutta in pursuance of Regulation 48 of the State Bank of India General Regulations, 1955, in place of Shri Suresh Chandra Roy, a Member of the Local Board, whose term of office will expire on the 30th June 1961.

D. G. KARVE,
Vice-Chairman.

Bombay, 26th April 1961.

COMPANY REPORT

THE STERLING GENERAL INSURANCE COMPANY LIMITED

ANOTHER SUCCESSFUL YEAR

PREMIUM EXCEEDS RS. 1 CRORE 37 LACS

ASSETS EXCEED RS. 1 CRORE 9 LACS

THE seventeenth Annual General Meeting of the Sterling General Insurance Company Limited was held on April 29, 1961. The following is an extract from the Directors' Report and Accounts.

During 1960, the year under report, the premium of the Company showed a further marked increase to Rs 1,37,16,103 as against Rs 1,20,13,846 in 1959. Due to heavier reinsurances, however, the net premium income of the Company was Rs 38,72,471 as compared to Rs 44,80,619 in the previous year. The reserves in the Fire & Miscellaneous Departments have been maintained at 50% as before, being the maximum rate required under the Code of Conduct. The reserves in the Marine Department are maintained at 100% for Hull and 88% for Cargo, giving an average of 90% (78% in 1959).

After payment of claims and providing necessary reserves for outstanding claims, and writing off of bad debts, and making necessary provision for depreciation in investment, the profit including the small amount brought forward amounts to Rs 2,97,455 (compared to Rs 2,20,287 in 1959). The company has declared a dividend of 9% subject to tax on the equity capital, the same as in 1959.

NEW CAPITAL ISSUE

The Company has received permission from the Controller of Capital Issues for issue of Cumulative Preference Shares 10% subject to tax and it is likely that this issue will shortly be placed in the market.

Markets

JUTE New Crop Reports Depress Sentiment

THANKS to the rainfall during the past two or three days in West Bengal and other growing areas, the outlook for the new jute crop has considerably brightened. The prolonged dry spell prevailing up to the last weekend had given rise to the apprehension that the new crop might not be available as early as expected. Indeed there was even a lurking fear of a poor crop once again. Rainfall has been widespread since our last report and it is asserted now with confidence that the new crop will be early and large. The very high price that the cultivator is getting this season has already influenced him in dividing his land between jute and paddy and indications are that most cultivators have sizably increased the share of jute. The weather has been very helpful so far and assistance to the cultivator in a generous measure has been forthcoming from the State and Central Governments.

But this encouraging development cannot solve the problem of raw jute supply of the mills till the new crop becomes available. There seems to be a consensus that the next three months are going to be an extremely difficult period for the industry as far as the supply of raw jute is concerned. The Indian Jute Mills Association is reported to be favouring the block closure of mills for a specified period, reportedly about two weeks, with a view to overcoming the shortage of raw jute. As far as could be assessed now, a fairly large number of mills are likely to reach soon enough a position wherein complete cessation of work will be the only alternative left. The IJMA is evidently of the view that a block closure of mills for a specified period is a solution that will be quite satisfactory. But as the outcome of last week's Delhi meeting between the representatives of the IJMA and Government has shown, it is not easy to obtain official sanction for a proposal of this type.

It is reported that Government thinks it too early to contemplate any such move as suggested by the IJMA and the matter can wait till the end of the current month. Although the trend of arrivals of raw jute into the markets seems to leave no room for doubt as to the supply position, Government is not yet prepared to accept the theory

that if mills continue their working unchanged there will be no jute left to feed the mills for some considerable time toward the close of the current season. Perhaps some mills will be able to go on working unhampered but most mills will be facing a shut down for a long period. It is evident that it is not an easy matter for Government to accept the proposal for a block closure because of its impact on labour. Already the West Bengal Minister for Labour is reported to have said that the aim should be to find a solution which does not adversely affect the position of labour.

The power shortage has already curtailed mills' production. Consequently such of the mills as have been affected should have been consuming less raw jute than they would otherwise have consumed. It would appear that about 15 mills have had to bear the power cut. It is claimed in Delhi that the power-cut will be fully restored by the middle of June but few nearer the affected region are prepared to take the indications emanating from Delhi seriously. Knowledgeable circles seem to think that the power shortage will continue for a considerable time yet. If it should, the problem of shortage of raw jute may not loom as large as it does now.

The jute goods market has turned easy during the past few days following the fall of rain in the growing regions. Although raw jute prices have not declined much, prices in the goods section have recovered heavy losses. Earlier in the week there were reports of some US enquiries but as the week progressed, sentiment deteriorated and a sharp decline in prices ensued. With reports of good progress of the new crop, foreign buyers are naturally in no mood to extend commitments at prevailing levels.

TEA Internal Consumption

According to trade sources in Calcutta, tea available for consumption in India out of the 1960 crop is estimated between 260 and 270 million pounds in view of satisfactory exports and big shortfall in crop. The high prices ruling in the 1960 season encouraged the internal trade to lower its inventories.

There has been a considerable switch, particularly in North India, from orthodox manufacture to the CTC variety; and the internal market is showing an increasing preference for the latter, particularly in the case of dusts. The reason for this is, that considerably more cups can be obtained from a pound of CTC tea than from a similar quality of orthodox manufacture.

It, therefore, follows that, calculated by cups, the increase in consumption in India has been much faster than was indicated by the extra poundage lifted from the market. Although the trend for producers to change over to CTC manufacture will continue, there may come a time when the grower will be unable, simply by altering his manufacturing methods, to produce an increased cup crop. In this event, the annual internal offtake by weight may rise sharply in order to maintain the increased rate of consumption.

On the other hand, in the short term, it may well be that the producer will increase the crop in terms of cups as quickly as consumers increase the number of cups they drink and this may lead to some irregularity in the weight of tea required annually for internal consumption. Broadly speaking, however, the internal market remains the producer's best hope of profitably disposing of the larger crops planned in the years ahead.

In the Internal Sale held in Calcutta this week, offerings were 23,551 packages of dusts and 385 packages of Leaf grades. There was less demand than of recent weeks for clean CTC dusts and prices were irregular, but mostly lower. The good CTCs can, however, be quoted as being generally firm. The fibrous teas were once again neglected and proved difficult of sale.

The steady decline of orthodox types in the previous weeks was finally checked and the clean dusts came to a better market, the few bright lines selling well. Legg-cut teas were irregular, but often easier except for the bright teas which realised satisfactory prices. Following rates were quoted:—Plain Orthodox Dust Rs 4.25 to Rs 4.45; Medium Assam Dust Rs 4.40 to Rs 4.80; Legg-cut Dust Rs 4.50 to Rs 5.20; Medium Assam CTC Dust Rs 5.90 to Rs 6.30 and Good Assam CTC Dust Rs 6.80 to Rs 7.20. There was a good and general demand for Leaf grades.

Direct exports of North-East Indian tea to the UK were higher at 6.43 million pounds in February as compared to 2.26 million pounds in February last year. While shipments to London auctions declined sharply

from 155.03 million pounds in the eight months ended February 1960 to 143.03 million pounds during the period under review, those against private sales and forward contracts rose from 11.17 million pounds to 12.64 million pounds.

In the Cochin market, 240,000 kilograms of Dusts were offered for internal consumption. Against useful demand at considerably lower rates, residuals were sometimes 50 nP a kilo below last week's rates. Other types ruled 20 nP to 30 nP lower than last week's prices, except useful coloury mediums which were firm.

A total of 505,000 kgs of Leaf tea was offered for export at the auction held in Cochin. Against good general demand, plain and low medium teas were steady and sometimes dearer. Medium and good medium sorts were 5 nP to 10 nP a kilo easier, while Nilgiris were irregular and occasionally dearer following quality.

In the Colombo market, offerings totalled 6,562,206 pounds. There was a strong general demand. Dimbula/Dickoya BOPs were irregular; But Uva sorts were generally about 5 to 8 cents per pound dearer. Better liquoring medium teas were generally dearer. Poorer sorts were also fully firm to dearer. Low-grown teas were in good demand at firm to occasionally dearer rates.

It is learnt that Pakistan intends to increase the acreage under tea cultivation from the present 79,000 to 100,000 by 1965. It is expected that production will go up to 80,000,000 pounds by 1970—nearly twice last year's output. Progressive extension of the acreage under tea at the rate of 3 per cent a year in the next five years has been proposed with the ultimate object of bringing additional 22,000 acres under tea.

The total area possessed by the tea estates in Pakistan is estimated at 300,000 acres and the present average yield is ten and a half maunds in the agency house and tea gardens and about six maunds per acre in the case of proprietary control. Authentic crop figures show last year's production of tea at 41.9 million pounds, a decline of 14.9 million pounds from 1959 as compared to India's total of 694.2 million pounds last year.

In London auction, 15,790 packages of Ceylon teas, which were on offer, encountered a strong and general demand at mostly higher prices, particularly for the better liquoring invoices. Low-grown and low medium kinds were often ½d to 1d per pound dearer. There was strong demand for the 6,929 packages of South Indian growths offered and prices were generally higher, often showing advances of 1d to 2d per pound above last week's rates.

* COTTON Erratic Fluctuations in Futures

MOVEMENTS in the cotton futures market during the past week showed an irregular pattern. Spinners did not appear to be anxious buyers of cotton presumably due

For the Investor

INVESTMENT GOSSIP Relapse After Cheerfulness

The stock market has relapsed into a subdued mood after being quite cheerful in earlier dealings. The initial enthusiasm was evidently due to the announcement in the Lok Sabha by the Minister of Steel, Mines and Fuel, Sardar Swaran Singh, that the question of the retention price for steel for the period 1960-62 has been referred to the Tariff Commission and that the Commission has been asked to take into consideration particularly the interest and loan repayment obligations of the two steel companies. It may be recalled that a provisional increase in retention price of Rs 45 had been announced some time ago and the very fact that it has been termed provisional indicated that the final decision of Government was yet to come. The present announcement with the indication that the companies' loan obligations will be given due weightage in the Tariff Board enquiry has renewed the hope that an equitable rate will be worked out. Although this has resulted in renewed support for the steel shares, there are quite a few who believe that the prospect of an increase in retention price is of no immediate or even short-term interest for the simple reason that by the time the Government's decision comes, a long time would have elapsed.

That the news of the retention price had no overwhelming influence over sentiment was revealed quickly enough when the figures for IISCO production in April were announced. Output has markedly declined in all departments and this has had a depressing effect on the market. A similar trend is expected to be revealed in the figures for production of TISCO also. It may perhaps be wrong to draw any conclusion as to production for the whole year from

the figures for one month and that, too, April which is usually not a peak period for output at the steel plants; but the market men have their own views in such matters.

It is evident that the failure of the attempts at rally is mainly due to the continued absence of investor support for the general run of equities. Investors are still preoccupied with the new issues several of which have made their appearance in recent weeks and more issues seem to be in the offing. What with the subscription to new issues, right shares, etc., investible funds in the hands of the public have considerably shrunk. The power shortage in many parts of the country is another inhibiting factor.

From a long-term point of view, however, the outlook for equities is indeed good. It would appear that, despite the fact that the last meeting of the "Aid India Club" has ended inconclusively, aid prospects have since brightened. The United Kingdom has paved the way with the announcement of a long-term loan and it is reported that the US has expressed its willingness to grant India a loan of one billion dollars for the first two years of the Third Plan, provided the other members of the Club among themselves make up a matching loan. It is believed that, at the next meeting of the Club at the end of the current month, the matter will be finalised in a manner that will be very favourable to India.

★

NEW ISSUE NOTES Birla Jute

THE Birla Jute Manufacturing Company, Limited has decided to make a rights issue of 456,300 new ordinary shares of Rs 10 each at a premium of Rs 6 a share in the ratio of one new share for every two held. It has also been decided to capitalise a part of the reserve funds by the issue of 228,150 fully paid ordinary shares in the ratio of one for every four shares held. The necessary applications for the approval of the issues have been made to the Government.

Orient Paper

The Orient Paper Mills Limited has decided to issue right shares at a premium of Rs 12 per share to the shareholders registered as on 27 May 1961 in the ratio of three such shares for every ten held. Money on these shares is payable at Rs 5.50 a share (representing Rs 2.50 on account of nominal value and Rs 3 on account of premium) on application and the balance of Rs 16.50 shall be payable in one or more instalments as and when called for. These right shares will not be entitled to participate in

any dividend, interim or final, that may be declared in respect of the year ended 31 March, 1961.

Tensile Steel

A new company for the manufacture of high tensile steel wire for prestressed concrete construction with a production capacity of 10,000 tons per annum has been promoted by the Shah Construction Company, Limited. The company, Tensile Steel Limited, will have an authorised capital of Rs 1 crore. The issued capital is Rs 45 lakhs in equity shares of Rs 100 each. The issue may be made in the last week of this month with a public offer of Rs 14.73 lakhs. Of the total proposed issue, a sum of Rs 15.50 lakhs has been taken up by promoters, directors and their friends, while Rs 14.77 lakhs are being taken by the Japanese collaborators. The entire issue is being underwritten. The factory will be located in Baroda.

JK Synthetics

JK Synthetics Limited proposes to enter the market shortly for raising capital. The company proposes to offer, for public subscription, 523,750 equity shares of Rs 10 each, at par. The authorised capital is Rs 5 crores and the subscribed and paid-up capital is Rs 72,62,500 in 726,250 equity shares of Rs 10 each. With the new issue, the issued capital will increase to Rs 1.25 crores. The new capital will be utilised to finance its scheme to manufacture synthetic yarn. In this connection, it may be added that the name of JK Investment Trust Limited has been changed into JK Synthetics Limited.

Sahayak Finance

The Sahayak Finance and Investment Corporation Limited, proposes to offer, for public subscription, 77,700 equity shares of Rs 10 each, at par. The subscription list will open on 15 May and close on 31 May or later at the discretion of the directors.

Khandelwal Udyog

Khandelwal Udyog Limited will shortly enter the market to raise new capital. It proposed to issue to the public 20,000 Ordinary shares of Rs 100 each and 20,000 Preference shares of Rs 100 each. The preference issue has been underwritten. The company is manufacturing cranes, con-

struction machinery, etc. and is engaged in structural engineering work.

Universal Cables

The Universal Cables Limited, previously known as Hindustan Woolen Mills Limited, proposes to raise new capital amounting to Rs 70 lakhs in 700,000 equity shares of Rs 10 each. The proceeds of the issue will be utilised for financing its project of cable manufacture. Of the new issue, about Rs 34.97 lakhs will be offered to the existing shareholders in the ratio of one share for every share held. The balance of the issue amounting to about Rs 35.02 lakhs is to be offered for public subscription. The public issue is likely to be made in the near future.

Mysore Kirloskar

The Mysore Kirloskar Limited has announced the issue of 15,000 equity shares and 25,000 redeemable cumulative participating preference shares, both of Rs 100 each. Applications are to be made for a minimum of 8 shares or multiples thereof, each lot of shares made up of 3 equity and 5 preference shares. The subscription list will open on 15 May and close on 17 May or later at the discretion of the directors. The proceeds of the issue will be utilised for financing the company's expansion programme.

Kothari Textiles

The Kothari Textiles Limited proposes to raise the present authorised capital from Rs 1 crore to Rs 2 crores. A special resolution to this effect will be moved at the next annual general meeting of the company, to be held on 18 May, 1961. It is proposed that, out of 1,000,000 shares of Rs 10 each, now created, 200,000 shares shall be preference shares and the balance of 800,000 shares shall be equity shares.

★

INVESTMENT NOTES IISCO

According to the figures released by the Indian Iron & Steel Company, Limited for last month, production of all categories has shown a decline as compared to the previous month, probably due to power shortage. The output of Pig Iron is shown lower at 99,381 tonnes against 106,122 tonnes; Steel Ingots at 69,710 tonnes against 82,583 tonnes; semi-finished steel at 10,898 tonnes against 19,469

tonnes and finished steel at 40,246 tonnes against 61,321 tonnes. Dispatches have also declined to 53,283 tonnes from 95,564 tonnes.

Ultramarine & Pigments

The Chairman of Ultramarine & Pigments Limited has stated that a licence for the import of machinery and equipment has been received by the company. Orders have been placed for machinery needed for the first phase of production with foreign manufacturers. Steps have been taken to expedite the completion of the factory and start production as early as possible.

Wire Rope Plant

Seshasayee Brothers (Travancore), Limited has plans to manufacture wire ropes and has sought Government permission to set up a plant with a capacity of 3,400 tons a year on a three-shift basis. The Government is reported to be in favour of allowing the company to establish a plant with a capacity of 3,000 tons of wire ropes a year if the import of capital equipment and terms of foreign collaboration are suitably settled.

★

BALANCE-SHEET BRIEFS

The Hukumchand Jute Mills Limited has reported a substantial rise in the net profit from Rs 1.56 lakhs to Rs 34.37 lakhs for 1960. The directors have recommended a taxable dividend of Rs 7.50 per share as against nil for 1959.

Thanks to the rise in the net profit from Rs 63.59 lakhs to Rs 1.01 crores, the Indo-Burma Petroleum Company, Limited has been able to pay a special dividend of 50 nP in addition to the dividend being maintained at Rs 2.50 per share for 1960.

The working of Mahindra & Mahindra Limited has suffered a modest setback with the gross profit declining from Rs 57.41 lakhs to Rs 54.06 lakhs for the year ended 31 October 1960. The dividend on the Ordinary shares is, however, maintained at Rs 1.25 per share, subject to deduction of tax.

The Adoni Spinning & Weaving Company Limited has reported a net profit of as much as Rs 10.34 lakhs for 1960 as against only Rs 9,026. After paying off all the arrears of dividends on the preference shares, the company has proposed a maiden dividend of 8 per cent on the ordinary shares.

The Lucky Vally (Nilgiri Hills) Tea Estates Limited has earned a profit of Rs 1.01 lakhs for 1960 as against Rs 90,510. The dividend is maintained at one rupee per share, subject to deduction of tax.

The Vasanta Mills Limited, Coimbatore, has shown a net profit of Rs 21.54 lakhs as against Rs 12.59 lakhs for 1959. A taxable dividend of 20 per cent is recommended as against 16 per cent previously.

Company Reports

Dividend Doubled by Rewa Coalfields

THANKS to a substantial rise in earnings, the Rewa Coalfields Limited has been able to double the dividend to 20 per cent for the year ended 31 December 1960. Sales are higher at Rs 1.05 crores against Rs 84.64 lakhs, while the net profit, after providing for Depreciation and Taxation, has risen to Rs 8.04 lakhs from Rs 2.36 lakhs.

All allocations have been raised:— Depreciation from Rs 1.74 lakhs to Rs 2.20 lakhs; Taxation from Rs 1.31 lakhs to Rs 5.56 lakhs; General Reserve from Rs 50,000 to Rs 4.30 lakhs and Development Rebate Reserve from Rs 53,750 to Rs 1.12 lakhs. Even after these increased allocations, the directors have found it possible to recommend the higher dividend.

Raisings are higher at 475,177 tonnes against 434,248 tonnes and despatches at 469,496 tonnes against 432,485 tonnes.

Shree Sitaram Sugar Pays More

The Shree Sitaram Sugar Company Limited has reported a higher net profit of Rs 3.42 lakhs for the year ended 31 August 1960 as against Rs 2.83 lakhs for the preceding year, following a rise in sales from Rs 1.06 crores to Rs 1.24 crores.

In respect of allocations, the Depreciation amount is maintained at Rs 1.22 lakhs, while Taxation provision is raised to Rs 2.20 lakhs from

dividend of Rs 5 per share on the Ordinary and "B" Ordinary shares for 1960 as against Rs 15 per share previously. The dividends are payable on or after 15 June 1961. Transfer Books are closed from the 24 May to 7 June 1961.

The Murphulani (Assam) Tea Company Limited has recommended an additional dividend of 0.63 per cent for 1959 on the Preferred Ordinary shares, making a total of 25.63 per cent for the year. The company has now recommended a dividend of 10.63 per cent for 1960. In the case of the Ordinary shares, the directors have proposed a taxable dividend of 50 nP per share for 1960.

The Bharat Suryodays Mills Company Limited has raised the dividend from Rs 6 to Rs 8 per share, subject to tax, for 1960.

Pudukottah Textiles Limited has not recommended any dividend for 1960.

Ashok Leyland has maintained the dividend at 8 per cent, taxable, for 1960.

Rs 1.10 lakhs and General Reserve to Rs 1.50 lakhs from Rs 25,000. The provision for Development Rebate Reserve is lowered to Rs 10,724 from Rs 31,976. The directors have recommended a taxable dividend of Re 1.00 per Ordinary shares as against 90 nP previously.

The quantity of cane crushed is higher at 3,441,794 maunds against 3,139,737 maunds although the recovery percentage is lower at 9.46 against 9.60 per cent.

Bengal Flour Reduces Dividend

Following a slightly lower net profit of Rs 7.17 lakhs against Rs 8.71 lakhs, the Bengal Flour Mills Company Limited has recommended a final dividend of 25 per cent, making a total of 40 per cent, taxable, for the year ended 31 December 1960 as against 45 per cent. Sales are shown higher at Rs 2.40 crores against Rs 2.16 crores.

The Depreciation amount is raised to Rs 1.68 lakhs from Rs 1.47 lakhs and Development Rebate Reserve to Rs 18,758 from Rs 10,137. The provision for Taxation is lower at Rs 6.52 lakhs against Rs 7.62 lakhs and General Reserve at Rs 2.50 lakhs against Rs 3.21 lakhs.

Lower Profits for Presidency Jute

The decline in sales from Rs 1.14 crores to Rs 1.04 crores is reflected in the profit of the Presidency Jute

Mills Company Limited for the year ended 31 July 1960. The net profit, after providing for depreciation and taxation, works out to Rs 2.73 lakhs as against Rs 5.05 lakhs.

The Depreciation amount is raised to Rs 3.32 lakhs from Rs 2.57 lakhs, while Taxation provision is lower at Rs 1.16 lakhs against Rs 2.55 lakhs and Development Rebate Reserve at Rs 1.18 lakhs against Rs 1.43 lakhs. The directors have recommended a taxable dividend of 40 nP per share as against 50 nP per share previously.

The directors state that the prospects for the current year are not encouraging and the working will be adversely affected by the increase in overhead costs which will arise through the lower level of production.

Sendra Coal Reports Better Results

It would be recalled that the scheme of amalgamation of the Sendra Coal Company with the Churulia Coal Company had already been approved at the annual general meeting held on 21 February 1961. This is being referred to the Calcutta High Court and the Central Government for their approval.

Meanwhile, the company's working has resulted in a higher profit of Rs 50,660 for 1960 as against Rs 17,096 for 1959. After providing a sum of Rs 304 for Depreciation, the Taxation provision is reduced to Rs 44,517 from Rs 58,055. The directors have recommended a taxable dividend of 5 per cent against 34 per cent.

STOCK EXCHANGES

Lack of Sustained Support

Watch-Dog Writes:

AFTER a somewhat promising start, stock markets have reacted moderately towards the close. In general, the performance during most part of the week has been one of stone-walling tactics, as neither the bulls nor the bears seemed to be aggressive.

Except Coal shares which met with some buying interest, conditions in other sections on the Calcutta Stock Exchange remained dull.

Trading on the Bombay Stock Exchange was dull and featureless.

On the Madras Stock Exchange, business was restricted in the absence of any improvement in sentiment.

CALCUTTA

Friday Evening.

ACTIVITY on the local stock exchange remained restricted during the week under report. Although sentiment was initially helped by the possibility of an early improvement in the power supply position and a more realistic approach by the Tariff Commission in regard to the question of steel retention prices, the news of a sharp fall in last month's production of the Indian Iron & Steel Company accounted for a slight setback in prices towards the close of the week. Another factor contributing to the reduced volume of business was the complete absence of support from investors, who were diverting their attention to the fresh issues, not to speak of the fact that a substantial portion of their funds had already been absorbed by the recent new issues. In an otherwise dull session, Coal shares behaved better.

There was no change in the complexion of the Giltedged market. Short-dated issues were generally in demand, while medium and long-

Managing Director.

dated issues were neglected. State Loans were steady. 3 per cent 1986 Conversion Loan moved narrowly around Rs 73.60.

Bank shares presented a steady front; but activity was confined to only a few shares. Hopes of an early bonus issue caused Punjab National to move up to Rs 22.06, to finish the week at Rs 21.50 on profit-taking. United Commercial met with business at Rs 87.50.

Jute shares were practically neglected due to fears that the working of the mills might be greatly affected in view of the fibre shortage coupled with interrupted supplies of electric power. There was also a disposition to await the final decision of the mills with regard to the proposal for a block closure. The only exceptional feature were Birlas, which were in demand up to Rs 38.37 following the news of the bonus issue. The closing rate was, however, lower at Rs 37.50 in view of the company's decision also to make a right issue at a premium. Ganges were on offer at Rs 10.44 against Rs 10.75; Howrah at Rs 21.37 against Rs 21.75 and New Central at Rs 20.87 against Rs 21.75. Megna were fairly steady at Rs 11.94.

In an otherwise dull session, Coal shares gave an encouraging performance, thanks to the prospects of expansion and an increase in production. The shares of those companies producing high grade coal met with good support at enhanced levels on the view that these companies might do better in the future. Amalgamated had buyers at Rs 25.19 to Rs 26.12; Burrakur at Rs 19.81 to Rs 20.56; East Indian at Rs 33.37 to Rs 36.50; New Beerboom at Rs 23.12 to Rs 23.37 exdividend; Central India at Rs 13.44 to Rs 13.62 and Western Bengal at Rs 9.06 to Rs 9.50. Equitable remained, however, practically unchanged at Rs 31.50.

It looked as if Tea shares had settled down at the recent low levels on the prospect that the marketing season for the new crop would start earlier. Operators were inclined to watch carefully the response which would be given to the new season's tea. Baghmari changed hands at Rs 25.50 to Rs 25.62; Brooke Bond at Rs 16.69 to Rs 16.75; Bishnauth at Rs 24.06 to Rs 24.31; Dhunseri at Rs 16.25 to Rs 16.56; Grob at Rs 11.19 to Rs 11.50; Jayshree at Rs 22.87 to Rs 23.31 and Killcott at Rs 20.56 to Rs 20.62.

Sugar shares remained depressed, as operators were reluctant to enter into any commitments, being anxious to know how the losses in exports would be compensated for. Raza/Buland were done at Rs 12.00; Belsund at Rs 12.19; Champarun at Rs 17.56 and SKG at Rs 12.06.

Textile shares displayed a slightly easier tendency due to profit-taking at the recent high levels; but support was given at every setback in prices on the belief that production would be increased to meet cloth shortages. Jay Shree met with business at Rs 15.94 to Rs 16.25; Kesoram at Rs 35.37 to Rs 34.00; Dunbar at Rs 29.56 to Rs 29 and J K Rayon at Rs 18.62 to Rs 19.00.

Price movements in the engineering section were rather irregular on

alternate bouts of buying and selling. After initial firmness, prices suffered a setback in mid-week in sympathy with Indian Irons on reports of a sharp fall in last month's production. The subsequent recovery was induced by short-covering. Indian Irons touched a low of Rs 27.39 and a high of Rs 27.80, to close finally at Rs 27.54. TEXMACO changed hands at Rs 20.15 to Rs 20.75 (Rs 20.30); Guest, Keen, Williams at Rs 43.25 to Rs 43.75 (Rs 43.35); Britannia at Rs 13.69 to Rs 14.12 (Rs 13.69); Jessop at Rs 22.19 to Rs 22.81 (Rs 22.50) and J K Steel at Rs 25.94 to Rs 26.12 (Rs 26.12). Marshalls were dull, hovering idly around Rs 4.62 with Escorts a steady feature at Rs 23.25. Figures shown within brackets were the week's closing rates.

Miscellaneous issues were generally quiet on lack of fresh support and the entire list emerged with fair losses on balance, as will be clear from the following price trends:

	Week's High	Week's Low	Week's Closing
Orient Paper	40.60	39.35	39.45
Shree Gopal	26.75	26.25	26.25
Titaghur	35.56	35.19	35.25
Rohtas	20.62	20.12	20.12
Dunlop	51.75	50.94	51.06
H. Motor	20.22	19.87	20.12
Alkali Chemical	38.06	37.62	37.81
NICCO	37.12	36.87	37.12
Philips India	33.62	33.50	33.56
Phillips Carbon	17.75	17.62	17.62
I. Cable	38.00	37.19	37.19
I. Aluminium	33.31	32.56	32.56
I. Steamship	8.75	8.62	8.62
I. Copper	5.66	5.50	5.50
BIC	9.00	8.69	8.75
General Tyres	6.50	6.12	6.25
Usha Martin	6.12	5.78	5.78

Following were the closing rates on Friday of the shares on the forward list:—Indian Irons Rs 27.54; TEXMACO Rs 20.30; Burrakur Coal Rs 20.19; Howrah Jute Rs 21.00; Dunlop Rubber Rs 50.75; Hindustan Motor Rs 19.87; Indian Aluminium Rs 32.25; Indian Cable Rs 37.06; Indian Copper Rs 5.49; Rohtas Rs 19.94 and Orient Paper Rs 39.30.

MADRAS

Like last week, there was lack of interest in the Stock Exchange here and business continued to be dull and negligible. Thin attention was paid to plantings while sugars ruled quiet. Speculative scrip in textiles were offered, and the Anglo-French shares were seller-ridden due to delay in dividend announcement. Miscellaneous were steady.

Govt. Securities: Madras 4 per cent 1964 was lower at Rs 99.70 and Madras 4½ per cent 1970 was quoted at Rs 100.40. Mysore 4 per cent 1971 was quoted at Rs 98.00. Kerala 1971 was quoted at Rs 97.75. Andhra 4 per cent was marked at Rs 98.00.

Banks: There was no change in this section. Punjab National gained at Rs 22.00. Indian Bank was quoted at Rs 166 for Rs 100 paid shares and the Rs 80 paid shares were done at Rs 141.00. Pandyan was quoted at Rs 30.25.

Electrics: There was no change in this counter. Ellore was available at Rs 16.55. Kumbakonam was at Rs 10.20. Salem-Erode was marked at Rs 12.25 and South Madras was below par at Rs 9.80. Vellore was at Rs 13.50 and West-Coast was at Rs 14.00.

Sugars and Breweries: This section was quiet though EID lost 25 nP at Rs 43.50. Cauvery was unchanged at Rs 130.00, Deccan with 7½ per cent interim was available at Rs 14.10. Kothari was at Rs 4.75 and Travancore was sold at Rs 10.60. Mysore with 30 per cent dividend was quoted at Rs 59.00.

Plantings: Amalgamated was lower by 43 nP at Rs 12.37 and Anaparthi with 20 per cent dividend was at Rs 4.70. Be Be was at Rs 2.48. Blue Mountain was ten nP lower at Rs 2.90 and Chandramalai was fractionally lower at Rs 3.05. Chembra was at Rs 3.80 and Cochin Malabar was at Rs 7.67. Coffee Lands was quoted at Rs 19.00 and Consolidated Coffee was unchanged at Rs 22.70. Cottanad was quoted at Rs 5.60. Gokul with 10 per cent dividend was quoted at Rs 1.05. Halleyburia had offers at Rs 14.75. Highland was at Rs 16.00. Kailas lost two nP at Rs 5.03. Kalasa was at Rs 4.73. Kil Kotagiri xd was at Rs 4.91. Lucky Valley with 10 per cent dividend had offers at Rs 13.25. Mercara with 20 per cent dividend was offered at Rs 8.80. Midland was at Rs 11.75. Mysore Coffee was quoted at Rs 5.55. Nelliampathy was lower at Rs 2.45. Nonsuch with 10 per cent interim dividend was available at Rs 27.80. Ossoor with 5 per cent interim was quoted at Rs 3.30. Parkside was lower at Rs 28.47. Periakaramalai was slightly higher at Rs 3.98. Travancore declared a 13 per cent dividend, and its price was unchanged at Rs 10.70. Tropical was quoted at Rs 20.50. Wartyhully with 5 per cent interim dividend was priced at Rs 3.25.

Textiles: Anglo-French was on the selling line at Rs 138.00. Bangalore Woollen was quoted at Rs 200 while Buckingham was quoted a rupee higher at Rs 211 xd. Cannanore was at Rs 152, and Coimbatore Spinning was at Rs 56.00. Kothari was quoted at Rs 13.00. Lakshmi was available at Rs 164.00, and Madura was lower at Rs 39.75. Rajalakshmi was quoted at Rs 79.00 and Ranga Vilas with 6 per cent dividend was priced at Rs 48.00. Sivananda with 22 per cent dividend was on the list at Rs 28.25 and South India Viscose was quoted at Rs 161.00. Travancore Rayon was better today at Rs 37.75. Trichinopoly was available at Rs 11.55.

Miscellaneous: Aluminium Industries was the same at Rs 22.80. Ashik Leyland was 5 nP lower at Rs 9.10. Binny xd was today available at Rs 211.50. Dalmia Cement went up to Rs 12.00. Enfield was at offer at Rs 12.56. FACTs was at Rs 10.55. India Cement was at the same at Rs 6.05. Jeevanlal continued to be at Rs 8.08. Madras Aluminium was listed at Rs 23.00, and Madras Cements was at Rs 91.00. McDowell was available at Rs 34.62. Mysore Chemical Mfgs. was at Rs 25

and Mysore Chemical Fertilisers was at Rs 11.25. Ogale Glass was at Rs 5.90. Orissa Cement was quoted at Rs 14.50. Rallis was unchanged at Rs 136.00. Seshasayee Industries improved to Rs 12.37 and Seshasayee Paper was at Rs 7.12. Textool was better by a couple of rupees at Rs 182.00.

★ Index Number of Wholesale Prices

The official wholesale price index (with the year ended March 1953 as 100) declined by 0.3 per cent to 125.6 during the week ended Apr 15, 1961 as compared with 125.8 (revised) for the earlier week. The index was lower by 1.3 per cent when compared with the corresponding week of the previous month, but was higher by 4.2 per cent than that of a year ago.

The index for 'Food Articles' receded by 0.3 per cent to 117.7 as against 118.0 (revised) for the previous week due to a fall in the prices of Oranges (—1½%), Jowar at Surat (—7%) and at Mohal (—5%), Rise at Varanasi (—5%), Gram (—4%), Groundnut oil and Gur (—3% each), Coconut oil, Meat and Chillies (—2% each) and Wheat, Barley, Arhar, Urad, Mustard oil and Black Pepper (—1% each), although the prices of Jowar at Nandyal (+7%), Rice at Badali and Potatoes (+6% each), Onions (+3%), Cashewnuts, Milk and Tea (+2% each) and Mung, Maize, Masur, Eggs and Cardamoms (+1% each) showed advances.

A decline in the prices of Raw Tobacco (—1%) brought down the index for 'Tobacco' by 0.5 per cent to 109.5 during the week under review.

The index for the 'Fuel, Power, and Lubricants' group worked out to 120.9 as compared with 120.8 for the earlier week. There was a rise in the prices of Castor oil (+1%).

The prices of Groundnuts, Rapeseed and Copra (—2% each) and raw Cotton and raw Silk (—1% each) moved down, while those of Bamboos (+24%), Tanning Materials (+6%) and Cottonseed and Lac (+1% each) moved up and the index for 'Industrial Raw Materials' fell by 0.5 per cent to 152.1 as compared with 152.8 (revised) for the previous week.

The index for 'Intermediate Products' rose by 0.6 per cent to 136.1 as compared with 135.3 (revised) (+1%). The prices of Cotton yarn, for the earlier week as a result of an advance in the prices of rayon yarn (+5%), Copper and Tin (+3% each), Brass (+2%) and Linseed oil (+1%). The prices of Cotton yarn, Coir yarn and Zinc (—1% each) however, moved down.

A rise in the prices of Jute manufactures (+1%) was almost neutralised by a decline in the prices of Silk and Rayon manufactures (—2%) and General Chemicals (—1%) and the index for 'Finished Products' stood at 125.0 as against 124.9 (revised) for the earlier week.

(For table see page 786)

Facts & Figures

UNION TERRITORIES

Increased Expenditure

The Centre has spent in Himachal Pradesh, Manipur and Tripura 4 times of their income since they became the Union Territories.

Figures collated for the period between 1956-57 to 1960-61 show that the three territories earned Rs 18 crores while the Centre contributed Rs 78 crores to the total expenditure of Rs 96 crores. In the current year, the Centre's allocation is Rs 26 crores against the estimated receipt of Rs 5 crores.

DELHI'S EXPENDITURE

During the same period, the Centre's contribution to the Delhi Territory's expenditure was Rs 13 crores, and the territory's income Rs 41 crores. The proposed allocation by the Centre for 1961-62 is Rs 11 crores.

Taking all the Union Territories together, the Centre's share in 1956-57 in their expenditure was Rs 12 crores, in 1957-58, Rs 16 crores—an increase of 33 per cent, in 1958-59, Rs 18 crores—an increase of 50 per cent, in 1959-60, Rs 26 crores—an increase of 117 per cent, and in 1960-61 (revised estimates) Rs 30 crores—an increase of 150 per cent. According to budget estimates of 1961-62, the Centre's contribution will be Rs 41 crores—an increase of 242 per cent.

The four territories, Himachal Pradesh, Delhi, Manipur and Tripura equal to Ceylon in area, 24,148 sq. miles, and to Ghana in population.

NEW COMPANIES

238 in Eastern Region

Two hundred and thirty-eight new companies with a total authorised capital of over Rs 36 crores were registered under the Companies Act, 1956 in the Eastern Region, Calcutta, comprising West Bengal, Bihar, Assam and Orissa during the half-year ended March 31, 1961.

Of these, 26 were public limited companies with an authorised capital of Rs 26,78,20,000, 210 private companies having an authorised capital of Rs 9,72,04,000 and two were companies limited by guarantee.

Forty-five public and private companies with a total paid up capital of Rs 88,82,412 went into liquidation while 51 companies with total paid up capital of Rs 1,47,08,514 were finally dissolved. The names of 725 companies having total paid up capital of Rs 43,10,739 were finally struck off under Section 560 of the Act, 1956.

The following is the State-wise review of the working of the Companies in the Eastern Region.

WEST BENGAL

In West Bengal 215 companies with a total authorised capital of Rs 33,42,04,000 were registered during this half year as against 222 companies with a total authorised capital of over Rs 26 crores in the first half of 1960-61 and 204 companies with a total authorised capital of over Rs 20 crores in the second half of 1959-60. Of these, 24 were public companies with an authorised capital of Rs 24,53,20,000, 189 private companies having an authorised capital of Rs 8,86,84,000 and two companies limited by guarantee.

During the period under review, 39 companies with a total paid up capital of Rs 84,43,412 went into liquidation. Of these, 13 were public companies and 26 private companies. Forty-nine companies having total paid up capital of Rs 1,45,86,574 were finally dissolved. The names of 693 companies with a total paid up capital of Rs 38,62,739 were struck off under Section 560 of the Act, 1956 against 749 companies with paid up capital of Rs 41,76,000 in the first half of 1960-61 and 521 companies with total paid up capital of Rs 87,97,000 in the second half of 1959-60.

PROSECUTION

During the period 1,466 cases were instituted under various provisions of the Companies Act, 1956 against the management of different companies. The number of companies involved in these prosecutions was 189. Of these, 378 cases were for not filing the annual returns, 211 cases for not holding the annual general meeting, 617 cases for not filing the balance-sheets and 245 cases for not adopting the balance-sheets in the annual general meeting of the companies. Of the cases disposed, in 1,354 cases the accused were convicted and the aggregate of fines levied on them amounted to Rs 44,514.

BIHAR

In Bihar two public companies and nine private companies were incorporated having authorised capital of Rs 2,25,00,000 and Rs 52,00,000 respectively as against ten private companies in first half of 1960-61 and one public and five private companies in second half year of 1959-60. Six companies with total paid up capital of Rs 4,39,000 (approximately) went into liquidation during the period.

Forty-three cases of prosecutions under different provisions of the Companies Act were launched against the companies as well as their managements during the period.

Of the cases disposed, in 87 cases the accused were convicted. Most of the offences related to defaults for non-filing of statutory returns.

ASSAM

Only two private companies having an authorised capital of Rs 10,00,000 were registered in Assam as against one public and two private companies in the first half-year of 1960-61 and one public and four private companies in the second half of 1959-60.

Twenty-seven cases of prosecutions were launched against the companies and their management under different provisions of the Act. Of the cases disposed in 23 cases, the accused were convicted.

ORISSA

In Orissa, ten private companies having authorised capital of Rs 23,20,000 were incorporated during the period as against one public company and nine private companies in the first half of 1960-61 and eighteen private companies and one limited by guarantee in the second half of 1959-60. Two companies with total paid up capital of Rs 1,22,000 were finally dissolved during the period. One hundred and thirteen cases of prosecutions were launched under different provisions of the Companies Act. Of the cases disposed in 12 cases, the accused were convicted.

NARCOTICS DEPT.

Higher Production

According to the Annual Report on the operations of the Narcotics Department for the year ended September, 1960, the two Government Opium Factories at Ghazipur and Neemuch showed a net profit of Rs 109 lakhs—an increase of Rs 28 lakhs over the previous year.

There was improvement in other directions as well. Production and export of opium during the year were higher than in 1958-59. The area under poppy cultivation was 105,250 acres as against 74,205 acres in the previous year. The production figure also rose to 24,491 maunds as against 20,422 maunds in the previous year.

Export of opium amounted to 624 tons, valued at Rs 4.59 crores—an increase of 104 tons valued at Rs 77 lakhs, over the export of 1958-59. The total sale of alkaloids in the year rose to 4,553 lbs from 3,775 lbs in the previous year.

The purchase price of opium was fixed on a sliding scale ranging from Rs 33.50 to Rs 38.50 per seer. Payment made to the cultivators amounted to Rs 3.4 crores as against 2.7 crores in the previous year.

ELECTRICITY

Increase in Output

The total electricity produced by the public utility power stations in India in January, 1961, was 1,461.8 million kwh, of which 1,216.1 million kwh were sold to ultimate consumers.

Corresponding figures for January, 1960, were 1,295.5 million kwh, and 1,053.5 million kwh, and for January, 1951, these were 473.0 million kwh, and 374.3 million kwh, respectively.

These figures indicate an annual increase of over 10 per cent in electricity production.

The statistics for January, 1961, are based on 1,013 returns received from the public electricity supply undertakings.

RICE PRODUCTION

Final Estimate

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the All-India Final Estimate of rice for 1960-61 puts the current year's area and production of the crop at 83,335,000 acres and 33,700,000 tons respectively. This is an all-time record.

As compared with the partially revised estimate of 82,829,100 acres and 30,963,000 tons for 1959-60, the estimates for 1960-61 show an increase of 506,000 acres or 0.6 per cent in area and 2,737,000 tons or 8.8 per cent in production.

The yield per acre for the current year for the country as a whole works out at 906 lbs.—an increase of 8.2 per cent over the revised yield rate for 1959-60.

The increase in area has occurred mostly in the case of the winter crop and is shared mainly by Bihar, West Bengal and Assam. This is attributed largely to favourable weather conditions at the time of sowing. In Andhra Pradesh, Mysore and Orissa, there has been a considerable decrease in area generally as a result of unfavourable weather conditions at the time of sowing.

The increase in rice production, reported mostly under winter crop, has occurred mainly in West Bengal, Bihar, Uttar Pradesh and Madhya Pradesh and to a lesser extent in Madras and Maharashtra States. This has been due to favourable climatic conditions. In the States of Andhra Pradesh, Gujarat, Mysore and Rajasthan, there has been a fall in production due to untimely and insufficient rainfall which considerably affected some of the important rice-growing districts in these States. In Madhya Pradesh also, the crop was affected to some extent in the rice-growing districts of Jabalpur, Mandla, Drug, Bastar, Rewa, Satna and Shahdol for want of rain in September, 1960.

The final estimate of rice, 1959-60 released last year placed the all-India area and production of rice for 1959-60 at 81,343,000 acres and 29,338,000 tons. Data for 1959-60 have now undergone revision in respect of a number of States particularly Orissa. In Orissa, the State Government has, for the first time, adopted the results of random sample crop cutting surveys for estimating area and production of rice and this alone accounts for a revision of 1.01 million acres in area and 1.52 million tons in production for 1959-60. The total upward revision in all-India estimates for 1959-60 is 1.57 million acres in area and 1.67 million tons in production.

A glorious past, a striving present and a future bright with hope—this is India's destiny. As the sands run out and run out again, there is a new India emerging.

To help achieve this transformation, the A.C.C. now provides India with 35,00,000 tonnes of cement per annum and is stepping up production still further.

INVESTOR'S SUPPLEMENT

Market Cautious in April

A cautious mood characterised trading in the stock markets during April although at times there were more buyers than sellers. In the Calcutta stock market, equities made a promising start under the leadership of Indian Irons, which following the publication of the figures of production for March, met with renewed support. This is not, however, to say that buying interest had been widespread: investors were quite discriminating in their choice, generally picking up shares with bonus prospects. The general belief seemed to be that there would be a spate of bonus issues sooner than later. There renewed optimism stemmed from the indication that once Government was satisfied that a bonus issue proposal satisfied certain well accepted principles, sanction would not be long delayed. The earlier expectation had been that the time-lag between the reference of the issue to the Controller of Capital Issues and the final sanction would be long. Besides bonus expectations, investors were encouraged by the bright prospects of the corporate sector where many a company had already completed expansion plans or was on the point of embarking on new programmes. The earlier apprehension that industries would be starved of essential raw materials due to the severe restrictions on imports also had given place to the optimism that sufficient import of raw materials with a view to keeping up the accelerated tempo of industrial progress in the country would be allowed.

The initial steadiness could not be maintained for long as some adverse factors in the investment situation manifested themselves. The first of these was the power shortage. Operators and investors were quite naturally depressed by the rather alarming reports of the power shortage in the Calcutta industrial area. The situation on the power front was far from reassuring as no one could be sure when normal supply was likely to be restored. It was pointed out that the power shortage in the Calcutta area and many other places in the country was a fore-taste of things to come during the Third Plan. A continued shortage of power throughout the next five years was forecast by some knowledgeable circles as they believed that steps so far taken and contemplated in the direction of augmenting power supply were far from adequate. Be that as it may, the present shortage is real and is slowing down production. It is expected that industrial production in the Calcutta region would show a marked decline.

Perhaps the most powerful bear factor during the month under review was the publication of the

Estimates Committee's recommendations pertaining to the deployment of the investible funds of the Life Insurance Corporation. The Committee's main recommendation is that all the investible funds of the LIC should be taken over by the Government and utilised for investment in projects under the

with the passage of time business of the LIC will increase to such an extent that it may not be able to devote sufficient time and care for assuring the most advantageous investment of the large funds at its disposal without affecting its main work, namely, procurement of new business and servicing of

Five Year Plans. Elaborating the point the Committee has said that it would be in the interests of the country and the Plan programmes if the Government itself took over the entire investible funds of the LIC as an unfunded debt on which interest can be predetermined periodically in consultation with the Corporation to give an adequate return to meet its liabilities. The Committee further felt that

policies. If the LIC is freed from this distracting work, it can find the time and energy needed to write new business and efficiently service policies.

Although the recommendations of the Estimates Committee are by no means equivalent to a similar change in Government policy, the stock market took the rather sweeping changes recommended quite seriously. The result was a

steep fall in equity values all along the list and the undertone became nervous. The withdrawal of the LIC support to the stock market would certainly be a severe blow as the institution as the biggest single investor in equities is playing an important role at present. It has become a regular feature now of steadiness in the market whenever there is buying by the LIC. More than Rs 80 crores have been invested by the LIC in shares and debentures and the withdrawal of an amount of this magnitude and the denial of any further inflow of funds from the LIC to the stock market would undermine investor confidence in equities. Presumably marketmen were disturbed by the recommendations of the Estimates Committee mainly because of the fact that Government has time and again reiterated the assurance that a portion of the LIC's investible funds would be made available for investment in the stock market. It is also probable that the reported statement of the LIC Chairman that freedom from the responsibility of investment of its funds would enable the LIC to concentrate on its main task was interpreted to mean that the recommendations had powerful support.

With the statement in the Lok Sabha by the Union Finance Minister to the effect that action if any on the recommendations of the Estimates Committee would be taken only after the recommendations had been carefully studied, confidence somewhat returned. The market pundits, who have immense faith in the hard-headed realism of the Finance Minister, argued that it was unlikely that practical implications of the idea would escape Mr. Desai. They also argued that a more forthright rejection of the idea could hardly be expected in view of the radical nature of the proposal of the Estimates Committee. An appearance of rejecting the idea out of hand would be as inexpedient politically, as it would be indefensible rationally. Hence, according to marketmen, the temporising of Mr. Desai.

But there was also a lurking fear that the ultimate decision of the Government may also turn out to be not so favourable to the stock market. Thanks to some helpful pronouncements of the Finance Minister like the one on nationalisation of general insurance (which he said was not an end in itself) sentiment improved. At the same time there were reports of LIC buying of some pivotal shares and this revival of interest in equities by the LIC was taken as a confirmation of the general belief that no change in the LIC's investment policy was imminent.

(a) After transferring Rs 6,26,601 from Depreciation, Renewal and Extension Fund and Rs 80,000 from Reserve Fund.

(b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.

(c) After transferring Rs 250,000 from Machinery Reserve and Rs 300,000 from Dividend Equalisation Reserve.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 70,000 from Development and Rehabilitation Reserve.

(f) After transferring Rs 234,695 from General Reserve.

(g) After transferring Rs 2,656,622 from General Reserve.

(h) After writing back Rs 390,718 being excess depreciation provided in 1958.

(i) After transferring Rs 1,066,546 from General Reserve No. 1.

(j) After transferring Rs 1,002,174 from General Reserve.

(k) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 297,425 from excess depreciation.

(m) After transferring Rs 119,825 from Development Reserve.

(n) After transferring Rs 120,000 from Dividend Reserve.

(o) After transferring Rs 3,978,000 from General Reserve and Rs 1,000,000 from Dividend Equalisation Reserve.

(p) After transferring Rs 5,27,512 from General Reserve.

(q) After transferring Rs 400,000 from General Reserve.

(r) Includes Rs 100,230 being provisions made in previous years written back.

(s) After transferring Rs 3,22,500 from General Reserve and Rs 78,000 from Depreciation Reserve.

(t) After transferring Rs 9,80,000 from General Reserve.

(u) After transferring Rs 300,000 from General Reserve.

(v) After transferring Rs 80,000 from Dividend Equalisation Reserve.

(w) After writing back Rs 66,747 being excess sales tax and Rs 14,000 being excess Development Rebate.

(x) After transferring Rs 390,580 from General Reserve.

(y) After transferring Rs 250,000 from General Reserve.

(z) After transferring Rs 825,000 from General Reserve.

(a1) After transferring Rs 1,075,000 from General Reserve No. 1.

(a2) After transferring Rs 9,00,000 from Reserve for taxation.

(a3) After transferring Rs 351,420 from General Reserve.

(a4) After transferring Rs 350,000 from General Reserve and Rs 165,000 from Machinery Rehabilitation Reserve.

(a5) After transferring Rs 4 lakhs from Reserve for fall in price.

(a6) After transferring Rs 100,848 from General Reserve.

(a7) After transferring Rs 750,000 from General Reserve and Rs 45,000 from excess provision for Bonus.

(a8) After transferring Rs 271,942 from General Reserve.

CLOSER
CONTROL OF
FLOW AND
LIQUID LEVEL

...with Honeywell's Differential Converter

USE THIS mercuryless remote transmitter for practically any application requiring precise high-speed measurement of flow or liquid level.

Accurate to within 1%, it's equally fast in response up the scale or down.
Range is continually adjustable in the field.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings.

Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry.

Precision electronic instruments and control systems for aircraft and missiles.

For information on any control or instrumentation problem, contact

Foreign Aid Prospects

THOSE who prematurely linked up the postponement of the "Aid India Club" meeting with American chagrin at India's stand on Cuba have been put to shame by the actual terms of the US proposals to the Consortium. By its reported offer of a billion dollars for the first two years and its implied challenge to other members of the Club to match the amount collectively, the US Administration has shown that the sails of its foreign aid programme is not trimmed to the wayward winds of cold war politics—much less of ruffled amour propre. Over the years, President Kennedy has evolved a very definite economic and political philosophy of foreign aid programme and has repeatedly spelt it out—most recently in his message to the Congress on the subject soon after he took office. There was another significant—from the point of view of timing—attempt by the US secretary of State, Mr Dean Rusk, at explaining it in a speech to the US Chamber of Commerce in Washington last week. In the view of the Administration, "Foreign aid should be regarded as a national necessity and the US Government should accept it as a long-term commitment in the struggle to break the bonds of mass misery and promote economic development of the backward nations." Quoting John Marshall, he said that the purpose of the aid programme should be "the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist." As Mr Kennedy conceives it, the aid programme is one of "aid to end all aids." In the words of Mr Rusk, foreign aid of the sixties should aim at "fostering long-term development and the attainment of self-sustaining growth which will free nations of the need for outside assistance." In other words, given a sufficient quantum of aid over a period of years, —the quantum and the period differs from recipient to recipient—developing countries can, in the near future, reach the stage of economic adulthood.

But there are certain conditions for the success of such a programme and these conditions have been distilled out of the experience of the last two decades of aid programme. The first of these was listed by Mr Rusk as the need for aid being linked with the priorities of a well-planned programme and not with "the needs and pressures of the moment." Secondly and flowing from the first these programmes should be freed from the incubus of yearly authorisations and ad hoc allocations. Nor should they normally be tied to specific projects. As Professor Galbraith put it at his news conference at Delhi recently, the competing urgencies of the situation are best assessed by the country using the aid. The third lesson was that the countries that are in special need of aid in the sixties have needs different from those of the Marshall-aid beneficiaries. What is now to be promoted is "total development", the simultaneous creation of several impulses of development.

It is no secret that President Kennedy considers Indian development as the crucial test of the validity of these ideas. That is why the lazy and cynical assumption about

Cuba making a difference to prospects of US aid to India was egregiously unfair to the President's moral and intellectual toughness.

It is however true that it is premature to imagine that aid on the scale envisaged by the Administration is assured. The US Congress will still have its say in the matter and it is admittedly less overtly committed to all the implications of Mr Kennedy's imaginative programme. But these uncertainties have nothing to do with recent developments. The Congress is more concerned with the scale of assistance at the expense of the taxpayer, the implied abdication of its powers of annual scrutiny, of the duration of commitments in advance and of possible improvidence and wasteful use by others of their hard-earned money. Only the most undeserving of the recipient countries would feel that such considerations are irrelevant and pettyfoggery. Considering the existence of groups like John Birch Society and the Daughters of the Revolution whose illiberalism can take such plausible form like freedom from crushing taxation, it is amazing that the Congress is at all able to do what it does. And there is in the Congress and the US enough understanding of the long-term implications for the stability of the world economy of the President's programme to make him hopeful of getting the substance of his programme endorsed.

Other uncertainties are the willingness and ability of the other members of the Club to extend aid on the scale proposed by the US. The essence of the President's idea is the multi-lateral flow of aid. There have been reports that West Germany is less ready than others to fall in with the scale of assistance suggested by the US, but these have been denied. A more plausible explanation is that those who attended the meeting in Washington were not prepared for anything so concrete as proposals of firm commitments like the one sprung by the US. (It is not perhaps far-fetched to imagine that some of them expected the Cuban interlude to make some difference to US attitude and were in the event taken by surprise by the fact that it did not.) Hence the postponement to 31 May.

If the US proposals should go through on 31 May India would be assured of the scale of assistance written into the Plan. With the two billion dollars contributed by the members of the Club supplemented by the World Bank and IDA assistance, India can have at call a total of Rs 1,200 crores for the first two years of the Third Plan. Taking into account the PL 480 assistance already available, and assuming similar assistance for the other three years, foreign assistance works out to an average that will see us comfortably through the Plan. It is no exaggeration to say that this assurance makes all the difference between the success and the failure of the Third Plan. It is upto us to deserve this piece of good fortune, first, by tight foreign exchange budgeting and secondly, expeditious utilisation thereof and finally by a matching effort at mobilising internal resources. We owe it to our self-respect to do this last, especially when some of us deplore the reported reluctance to make such matching gestures in others.

The Study Team has recommended that, while Cooperative Training Centres may continue to be financed by the Government of India or the Reserve Bank as at present, the responsibility of managing these Centres may be delegated at the State level on an agency basis; the agency to which administration of these centres may be entrusted may, in a few cases, be the State Cooperative Unions where they are strong and well established, and in other cases, it may be the State Government in whose territory the

Mr Ryan has also raised the question whether the entire cost of the decentralised scheme could be met by the Reserve Bank, or the Government of India, if the administration is handed over to the State Governments. In the first place it is doubtful if the Reserve Bank could legally leave any part of its funds to be administered by State Governments. Apart from the question of legality there is also the question of propriety: Would it be proper as a matter of policy for the Reserve Bank which is the Banker of Governments to leave its own funds to be administered by State Governments? It may be asked why the Reserve Bank, which has many other onerous functions, should be saddled with the responsibility for training staff for co-operative institutions. But the Reserve Bank which has advanced large amounts to co-operative institutions and State Governments has a stake in the proper development of the movement. The credit limits sanctioned for short term loans for agricultural purposes is now of the order of Rs 108 crores and for weavers' societies Rs 2.96 crores. Medium term loans for agricultural purposes amount to Rs 7.96 crores and, in addition, State Governments have borrowed Rs 19.95 crores from the Reserve Bank for contributing to the share capital of co-operative institutions. Under Section 54 of the Reserve Bank of India Act, the Bank is required to create an Agricultural Credit department to function as the adviser of the Central Government, the State Governments, the Cooperative and other Banks, as well to coordinate the operations of the Bank in relation to cooperative and other credit institutions in the field of agricultural credit. It is for discharging this responsibility that the Bank has been obliged to initiate a programme for training cooperative staff, just as it has opened a Bankers' Training College in pursuance of its functions as a Central Bank.

If the production of structural steel as well as sewing machines went up, it was not because of the increase in the number of units but because the demand for construction material increased sharply and more women took to sewing. Of the consuming industry, the manufacturers of screws, umbrella ribs and furniture were able to achieve better results owing to improved trade conditions. But fluctuations in demand for machine tools hampered domestic production, and the four manufacturers of electric lifts were handicapped to a greater extent than others because of the shortage in imported components. On the other hand, improved conditions in the transport industry helped to enlarge the demand for leaf springs, and the production by the seven concerns engaged in the line exceeded the target. In the case of a minor protected industry conditions were certainly favourable, and it is not surprising to find that expansion programmes are under way, mainly because the age of running vehicles has to be prolonged by prompt replacements and the condition of roads contributes easily to a greater degree of wear and tear. However, the point to consider is the growth of machinery manufacture in India, particularly the manufacture of cement machinery, plant needed for chemical and pharmaceutical manufacture and dairy machinery. The limited number of manufacturers in the field coincided with improved offtake in the case of road rollers and jute mill machinery. The beginning made in regard to printing machinery manufacture is due largely to the successful inauguration of the Britania Engineering Company's programme.

A change of some interest is the increase in the demand for radio sets although production in this case was below capacity. If the imposition of a new duty on radio receivers this year is partly attributable to the increase in production to over 253,000 sets in 1960, the

While the woollen industry in 1960 failed to report a rise in output or sales because of the fall in import of tops, the rayon industry again made good progress and the cotton mill industry could also get more staple fibre from the available domestic sources. There are

The present output of mills ranges from cloth for bed-linen, umbrellas and tapestry. It is important to remember that in 1960, a difficult year, the mills accepted a rise in wages and avoided retrenchment, in spite of sporadic trouble with workers. The proportion of yarn made available for export has been smaller in recent years, but competition from Pakistan is a point to consider. The fall in cotton output entailed large imports but details of supply from Pakistan are lacking in the official review. However, the increase in supply of East African and Sudanese cotton stands out, as also the rise in India's consumption of US cotton. Some cotton was drawn from the Belgian Congo but none from either Iraq or Persia. The reasons for the change in trade may be hard to discover but it may be noted here that stocks at the end of December were comfortable.

World of Finance

NEW LOAN

Announcement Imminent?

A BORROWING effort by the Central Government may be said to be imminent, in that the 3½ per cent 1961 matures on 1 June. Outstandings of this loan are placed at Rs 75.29 crores, and rather than pay out cash in such an amount, the Centre will doubtless put through a refinancing operation. Normally, it would be expected that the new loan to be announced should be on a cash-cum-conversion basis, but the state of the money market is such that, except for purchases by the Reserve Bank, no cash will be attracted at the present juncture. Since there is a second loan maturing this year—the 2½ per cent 1961 for Rs 57.01 crores on 1 August—it is safe to suggest that a second tranche of the new loan will be issued in July. For, the lower interest coupon on the 2½ per cent 1961 precludes conversion facilities being offered in advance. Hence we believe that the first tranche, to be announced in the next week or two, will be a pure conversion affair—subscriptions in cash should not be invited.

The success of the refinancing loan can be taken for granted, since undoubtedly the Reserve Bank holds the bulk of the maturing loan. But if the loan is to be a success in the sense that in due course it gets largely absorbed by the market, instead of lying sterily with the Reserve Bank, the monetary authorities need to have a nice regard for the kind of loan that alone can prove alluring—provided always that free resources do get built up with the banking system. The redemption yields on short-dated range from 3.39 on the 3½ per cent 1962 to 3.83 on the 3½ per cent 1965. Therefore a 3½ per cent loan should prove sufficiently attractive.

In earlier years, a certain amount of guesswork about the maturity that the loan would bear was possible; this was because certain years were “free” or relatively “free”. But such free years no longer exist; maturities are either very heavy or somewhat heavy in each of the years up to 1969. We can rule out the possibility of Government coming out with a loan with a maturity of less than 5 years. In 1966, there is a 3½ per cent loan outstanding for Rs 82.66 crores. In the next year, there are two loans maturing in a total amount of over Rs 120 crores. The year 1968 is relatively light, with only Rs 64 crores odd of maturing loans—if the 3 per cent 1966-68 is redeemed in the earlier year. But, in that case, 1968 is almost intolerably heavy—outstandings of the 3½ per cent and the 3 per cent 1966-68 amount to over Rs 192 crores. The 3½ per cent 1969's outstandings are placed at Rs 102.91 crores.

It would be demeaning for Government not to redeem a loan on the earlier date of maturity. So, we must expect that 1966 will be ruled out. Logically, therefore, the best possible year is 1967. We should think a reissue of the 3½ per cent 1967 (with out-

standing of Rs 63.81 crores) would, in the present circumstances, be an ideal conversion offer. In that event, there is the distinct possibility that, should the money market be easier, banks would begin to buy 3½ per cent 1967 from the Reserve Bank tap; and which is precisely what the monetary authorities should be having as their aim.

BUSY SEASON

Tided over with Little Difficulty

The first point of similarity between the 1956-57 and 1960-61 busy seasons is that, at their threshold, it was each time believed that the monetary stringency that would arise would be exceedingly severe, and that banks would find it very difficult to finance the demand for money that would be witnessed. The second point of similarity is that, in the event, the busy season was tided over without undue pressure being felt by the banking system, although the demand for funds was fully as considerable as had been anticipated. The third point is that, in both the seasons, there was a pleasant surprise in the form of a sizable accretion to the Deposit resources of the banking system. In fact, it was the upsurge in Deposits which, in the two busy seasons, was mainly responsible for ameliorating the strain.

In 1956, during the slack season, the total of Advances failed to contract, because of the rising trend in industrial production; and, at the same time, owing to the hefty import surplus on private sector account, a contractionist impact was felt by Deposits; these appeared to be stagnant, the while Advances continued to rise. What was overlooked was the fact that Deposits ruled unchanged after a considerable diminution as a result of the payment for capital imports by the private sector. In view of the severe import restrictions imposed in that year, we had reasoned that, at the time, Deposits would begin perceptibly to grow with the banking system; and so it proved to be. The State Bank's

Advances rose by Rs 53.62 crores during the 1956-57 busy season—but its Deposits rose rather faster by Rs 69.55 crores. Advances of other Scheduled Banks expanded by Rs 94.18 crores—but this was covered to the extent of Rs 58.45 crores by way of new Deposits. Hence, the State Bank disinvested in giltedged only for Rs 2 crores odd, and it actually reduced borrowings from the Reserve Bank by Rs 8.49 crores. As far as other Scheduled Banks were concerned, disinvestment added to resources by a shade under Rs 25 crores, and recourse was had to Reserve Bank credit for a further Rs 23.39 crores; but it is noteworthy that, at the same time, the Reserve Balances of member banks rose by Rs 12.89 crores. In such fashion was the 1956-57 busy season financed—it held far less terror than had been feared.

At the eve of the 1960-61 busy season, it was known that expansion in Advances over the next six month period would exceed Rs 200 crores; and but for a contraction in the four weeks of April, such indeed would have been the case. As it is, the State Bank has reported a rise of Rs 60.27 crores in Advances, and the rise in the credit extended by other Scheduled Banks is as high as Rs 137.46 crores.

The State Bank appears to have lost Deposits; they are lower by Rs 33.47 crores; but it must be borne in mind that, over the six month period, the State Bank has made over Rs 72 crores of counterpart funds to the Reserve Bank. Hence, the State Bank has actually experienced a net rise of some Rs 39 crores. Nevertheless, it was compelled to meet the busy season needs wholly from disinvestment—which is placed at the considerable figure of Rs 97.91 crores. On the other hand, new Deposits with other Scheduled Banks were placed at Rs 49.08 crores, the rest of the expansion in Advances being financed by disinvestment and by borrowings from the Reserve Bank.

The rise in Active Note Circulation has this year been rather steeper, suggesting that governmental disbursements were much heavier. Also, of course, there has been much less running down of foreign balances during the last busy season, and the absence of this contractionist influence has caused the expansion in note circulation to be larger than it would otherwise have been.

It is interesting to note that the increase in borrowings from the Reserve Bank has been smaller in the 1960-61 busy season than in the 1956-57 busy season, the State Bank being left out of the consideration. The reason for this, of course, was that the additional deposits maintained by Scheduled Banks by the Reserve Bank, in pursuance of the credit squeeze instituted by the central banking

THE "BUSIEST" BUSY SEASONS

13 May 1961

institution early last year, were released early this year. As a result, banks were able to run down their balances with the Reserve Bank by Rs 22.40 crores, as contrasted with an addition, in the 1956-57 busy season, amounting to Rs 16.21 crores.

BANK RETURNS

Currency Expands, Reserves Rise

THE beginning of the month disbursements have distorted banking figures even before evidence could gather of the growing momentum of the 1961 slack season; and it is heartening to record that the latest returns of the Reserve Bank reveal a fair-sized rise in the country's foreign exchange reserves.

Active Note Circulation has gone up steeply by a shade under Rs 20 crores—Rs 19.95 crores—to Rs 2,002.38 crores. Outflow of Rupee Coin is in the unusually large amount of Rs 3.22 crores. With both Rupee Securities and Foreign Securities, in the Issue Department, unchanged at Rs 1,661.97 crores and Rs 113.61 crores respectively, the Reserve Bank's cash in the till has been depleted by Rs 22.77 crores to be placed at Rs 9.38 crores.

It would appear that month-early expenditure has, for the Central Government, involved deficit financing of the order of Rs 20 crores. For, though Investments in the Banking Department are higher only by some Rs 5 crores at Rs 177.58 crores, it is known that the State Bank, in the week under review, has disposed of giltedged in an amount of Rs 12½ crores. In the event, the Centre's balances are higher by Rs 1.49 crores at Rs 53.13 crores. State Governments have similarly felt the strain. Their Deposits have been drawn down by Rs 3.24 crores to Rs 15.07 crores; and their ways and means borrowings from the Reserve Bank have risen by Rs 2.30 crores to Rs 86.30 crores.

It is the demand for money in the first week of the month which, again, is presumably responsible for member banks enlarging their indebtedness to the Reserve Bank. For, the Other Loans and Advances of the central banking institution have been marked higher by Rs 3.02 crores at Rs 128.49 crores. The smallness of the rise may be due to the banks continuing to receive new Deposits. It may be noted, however, that the Reserve Balances of member banks have risen by Rs 3.64 crores to Rs 81.80 crores; and, in that week, the State Bank's cash in hand and with Reserve Bank fell by over Rs 1 crore; it would therefore appear that other banks have been enabled to increase their balances with the central banking institution.

As noted, foreign exchange reserves have improved, in rising by Rs 7.44 crores; and, with the increase, the Reserve Bank's holdings of Rupee Securities are once more above the Rs 130 crore mark, at Rs 130.69 crores.

It is unlikely that the fall of Rs 6.80 crores to Rs 542.80 crores in the Deposits of the State Bank, as at the week ended 5 May, reflects the making over of the May instalment of Rs 12 crores of counterpart funds. The more probable explanation is that constituents, in respect of their payments at the beginning of the month, have drawn upon their balances. In any case, the month early demand is not indicated in the Advances portfolio, which in fact is lower by Rs 0.75 crores at Rs 275.58 crores. The pressure for funds has caused the State Bank to disinvest in giltedged for Rs 12½ crores, the portfolio now standing at Rs 224.97 crores. With Other Assets rising strangely by Rs 7 crores (indicating repur-

chase of securities from the Reserve Bank?) the State Bank's cash in hand and with Reserve Bank is lower by Rs 1.28 crores at Rs 20.23 crores.

The Scheduled Banks' return for 28 April appears to bear the impress of the subscriptions received for the Goodyear issue. For, net Demand Liabilities (that is, excluding borrowings from banks) have risen by Rs 6.19 crores to Rs 834.03 crores; and, besides, money at call and short notice has improved rather significantly by Rs 6.75 crores to Rs 44.19 crores. Both these, it is possible, are the consequences of the Goodyear issue. Particular note may be taken of the rise in money at call: this may suggest that cash receipts in respect of the issue were considerable. There has besides been the continuing trend of new accretions to Deposits, with net Time Liabilities going up by Rs 3.31 crores to Rs 1,082.71 crores. With the State Bank in that week experiencing a loss of over Rs 1 crore in Deposits, the accrual with other Scheduled Banks is seen to have exceeded Rs 10 crores. The sharp rise of over Rs 24 crores, to Rs 562.46 crores, in Investments is mostly on account of the State Bank; the balance of Rs 3 crores, for which the State Bank is not responsible, may be due to purchase of Treasury Bills by the bank which enjoyed the windfall of Goodyear receipts. The total of Advances has come down, again, by Rs 2.38 crores to Rs 1,308.91 crores; but the State Bank in the week under review reported a fall of Rs 4.22 crores, so that the assumption must be that other Scheduled Banks experienced an increase in the demand for funds. Nevertheless, the rise in Deposits has enabled banks to reduce indebtedness to the Reserve Bank by Rs 3.19 crores to Rs 38.16 crores. In the result, balances with the Reserve Bank are shown lower by Rs 6.39 crores at Rs 73.59 crores—but the State Bank had a fall of Rs 8.11 crores in cash in hand and with Reserve Bank, so that it follows that other banks added to their Reserve Balances.

SAFETY IN NUMBERS

International Currency

By Paul Einzig

IT seems that the rivalry between sterling and the dollar for the position of serving as the international currency is drawing near its end, as a result of the realisation that the possession of such a currency is more trouble than it is worth. The British and US representatives on the International Monetary Fund cheerfully gave their approval to the innovation under which the Fund is to diversify

the means of payment in which member Governments can draw on its facilities. Actually, in a recent instance Australia drew the assistance of \$175 million granted by the Fund in the form of seven different currencies, and the largest amount was drawn neither in sterling nor in dollars but in D. marks. This is going to be the system of the future. Instead of trying to confine international transactions to one or two currencies, the strong currencies of all countries with a favourable balance of payments or with a net capital influx will serve as international currencies. Safety lies in numbers. The stability of the international monetary system will rest more safely assured if it rests on the international use of the largest possible number of currencies.

What is perhaps even more important, the new practice tends to dispose of the misplaced consideration of prestige under which sterling was sought to be maintained as an international currency regardless of whether Britain could afford it or not. During periods of adverse pressure this role of sterling was bound to add to the pressure. The dollar, too, suffered in recent years through its too exclusive use as an international currency. That ungrateful role should now be spread among all the currencies of surplus countries, as a means of diverting short-term funds to countries which need it at the moment.

This does not necessarily mean that less use will be made of sterling for financing international trade and financial transactions. After all, there is nothing to prevent Australia from converting its D. marks, dollars, French francs, Italian lire, Dutch guilders and Canadian dollars into sterling if its trade and financial transactions necessitate payment in sterling. But the chances are that the monetary authorities of countries receiving support in such a diversified form will retain their drawing rights in a diversified form instead of converting them into any particular currency before the actual need for drawing on the facilities arise.

The diversification of Central Banks' foreign exchange reserves will make further progress as a result of another recent arrangement—the agreement by a number of Central Banks to acquire and hold a number of currencies instead of holding their reserves in one or two currencies only. The object of this system is to ensure that countries which gain through speculative or quasi-speculative movements of funds re-lend their gains to countries which lose through such movements. It is as yet premature to form an opinion how far either practice will contribute towards mitigating the damaging effect of the periodically recurrent attacks on currencies. But provided that the arrangements are not misused for avoiding much-needed domestic measures of defending currencies, their adoption is distinctly a step in the right direction.

Notes

POWER

West Bengal Starved

Nothing perhaps, has revealed more glaringly the weakness of Indian planning than the power famine that now prevails in most parts of the country. What is, however, even more curious is that West Bengal, one of the most highly industrialised States, should feel the power shortage most acutely. West Bengal is the home of many major industries. It is also confronted with a serious problem of unemployment. The provision of regular, adequate and cheap electricity to West Bengal should, therefore, have received top priority. But what is the actual position? The following table shows that the increase in installed capacity during the Second Plan was much lower in West Bengal than in Madras and Maharashtra.

	(Megawatts)
Madras ..	415
Maharashtra ..	280
West Bengal ..	256
Punjab ..	225

Even during the Third Five Year Plan, the increase envisaged in

installed capacity in West Bengal is small as compared to other States. This will be clear from the following statement.

PROGRAMMES FOR POWER DEVELOPMENT

(Installed Generating Capacity MW)	1960-61	1965-66
Andhra Pradesh	272.92	708.84
Assam ..	29.70	154.13
Bihar ..	620.55	1,488.50
Gujarat ..	316.20	601.10
Jammu and Kashmir ..	25.29	41.73
Kerala ..	168.90	552.90
Madhya Pradesh	300.00	789.00
Madras ..	571.00	1,441.00
Maharashtra ..	756.00	1,621.00
Mysore ..	210.70	877.50
Orissa ..	301.40	650.90
Punjab ..	652.00	1,229.00
Rajasthan ..	108.00	344.00
Uttar Pradesh ..	438.30	1,180.94
West Bengal ..	920.00	1,540.00
Total ..	5,691.56	13,221.14

It will perhaps come as a surprise to many to be told that there are at present only 631 towns and villages with electricity in West Bengal. And what is even more surprising is that by the end of the Third Plan this number is to be increased only to 691. In this respect, West Bengal lags very much behind other States like Madras, Uttar Pradesh, Mysore etc. The position will be clear from the following table.

Number of electrified towns and villages in 1965-66	
Madras ..	18,009
Uttar Pradesh ..	9,928
Mysore ..	4,760
Punjab ..	4,600
Andhra ..	3,725
Bihar ..	3,461
Maharashtra ..	1,700
West Bengal ..	691

It is significant that, at present in the whole country, the number of electrified towns and villages is only 31,389, which five years hence is going to be increased to 53,344.

It is clear that the programme of expansion of this order is utterly inadequate. The Planning Commission, therefore, should consider the power programme and provide for a more generous expansion. No argument about the shortage of foreign exchange should be allowed to stand in the way. Much less should ideological considerations be permitted to influence policy in regard to development of power. In view of the chronic shortage felt all over the country, the public sector and the private sector should work together with the utmost efficiency and the closest cooperation in implementing this vital programme.

Madras too Feels the Pinch

Shortage of fuel coal has been widespread and acute in the South, especially in the industrial Coimbatore district for some time now. At long last, and due, probably, to the insistence of the local government, arrangements have been finalised by which coal will be carried on a ship a day basis from Calcutta to Madras. A million tons of coal from Calcutta port would be moved to ports in west coast. About thirty sailings would be made to carry the million tons, and shipments are to commence almost immediately.

The decision of the Union Transport Ministry to quicken the coal movement to Madras from Calcutta comes in the wake of an impending decision by the Madras Electricity Board to cut power supply from the Kundah and Mettur sources in view of the low level of water at the dams. Representations to the Government by the local Chambers and also by the Coimbatore textile industry have been made in time and vigorously too. The textile industry in Coimbatore had gone to the extent of pointing out that power cut would lead to the closure of the textile section. The only consolation that the Government has been able to offer is suggestion to use the enforced idleness for a task that has long been neglected—the overhauling of machinery.

Power-cuts have become an annual feature in this State. They highlight the need to have other sources of supply. Mr Kamaraj has time and again pointed out to the need for harnessing the rivers of the adjoining States of Andhra and Mysore, more particularly the Krishna and Godavari rivers, the exploitation of which would give unlimited scope for hydel power to be shared with the deficit Madras State which is fast developing industrially. Meantime, it is proposed that power production from the Neyveli Thermal Station (now being erected with Soviet aid) should commence by October next. Heavy equipment are being moved quickly to Neyveli from Russian ports and the Neyveli Lignite Corporation authorities are giving their entire attention to the quickening of the tempo of the work in this connection. During the last few weeks, bridges in Madras have been strengthened to bear the stress of heavy equipment passing over them.

BANKS

Shotgun weddings

The solution devised for the 1960 banking crisis in Kerala is not revolutionary or original. Much of what was said after the Kerala banking enquiry conducted in 1955-56 by Mr K. Ramunni Menon and his colleagues remains valid, and the merger formula is derived from the

comments on wages and costs in the banks in the region. The State Bank of Travancore, by taking over three small banks that were compelled to accept a moratorium, acquires a stronger position relatively and the merger gives the biggest bank in Kerala connections with Kottayam that may help the planting industry. The entry of the Canara Bank into Kerala by the acquisition of two small banks may help the former to think of expansion in Kerala rather than Mysore where the State Bank of Mysore is endowed with more opportunities. Regional banking is not deprecated: it is guided, but the principle of communal banking based on a single locality is undermined by the merger which leads one to expect that, in Tamil Nad also, the local or district banks may be induced to think of consolidation instead of competition in the future. The freezing of wages may help to reduce operating expenses, now raised by the leveraging up of interest rates. There is little doubt that the growth of Deposits may be affected by the keener demand for Deposits on the part of the bigger banks whose branch extension may have to be restrained for some years, because the take-over of moribund or ailing institutions will naturally lead to a claim by the new, larger institutions for safeguards.

The position of shareholders of the banks does not seem to have received any attention. Whether a moratorium or a merger effected without formal approval can be defended in Court before a Judge is not the issue. It is rather the possibility of a call on partly-paid shares of the merged bank by a new institution that takes over assets and liabilities which include the share capital. The Palai Central Bank case led to a justification of the Reserve Bank's action as conducive to the creditors, including the depositors. Nothing was said of the members' liability or interests

Indian Finance

13 May 1961

and that may require judicial clarification, if more mergers on the same pattern are going to take place. The exchange of shares may be regarded as convenient, but other shareholders than those of the Travancore Forward must consent. In the case of the State Bank of Travancore, it is easy to get approval but the Canara Bank's shareholders may have definite views on the consequences of a merger, unless liability in regard to depositors in the Bank of Kerala is reduced by a formula that helps the Canara Bank.

The arrangements undertaken largely savour of a composition without the incidence of insolvency, and it is still doubtful whether the pattern is derived from developments in Scottish banking in the last decade or in New York State. But one thing must be noted: the difference is the gap between Deposits due and the gap between Deposits due and the realisable assets, and the arrangements probably entail the extinction of share capital and reserves, leaving the shareholders with certificates that have only a problematic value. That mergers enforced by necessity can only approximate to rough justice is a conclusion already enforced by the take-over of the Indo-Commercial, for, depositors, too, have to abate claims and the bigger bank gets premises and dead stock, sales, etc. at advantageous prices. No banker has commented on the new type of take-over without any reference to shareholders. The Jenkins Committee in the UK fortunately has no such problem to consider.

Small and Successful

Whatever may be the strain on banking in Kerala, banks in other parts of South India appear to be well placed. The diamond jubilee of the Tanjore Permanent Bank entrenched in the delta has been hailed as a sign of the vitality of the small regional banks and the fact that deposits exceeded Rs 2 crores at the end of 1960 is taken to be an indication that well-managed banks operating in a single district or two have reasonably good prospects in spite of competition. The Tanjore Bank's balance sheet is regarded as very clean and to that extent must dispel prejudice about the future of smaller institutions.

Other banks appear to be equally well placed: the strong position held by the Salem Bank, is reflected in the annual report for 1960 which shows that the bank has been able to add Rs 55,000 to reserve after providing Rs 15,000 for investment depreciation. That a bank which has only four branches outside Salem district has been able to secure deposits exceeding Rs 140 lakhs and maintain a normal degree of liquidity by reducing advances to some extent while acquiring additional deposits in a year in which the bigger banks have lost ground needs mention. That the bank is fortunate in its staff and connections is mentioned in the report for the year. But what really matters is that the Bank has not sought assistance from other banking companies in 1960 and has made no investments except in Government

Securities. The improvement in the year's income more than offsets the increase in salaries allowance, etc. and the rise in net profit indicates clearly that a small bank is not hampered too greatly by the inevitable rise in its operating expenditure.

A similar conclusion may be warranted by a look at the results of the Vysya Bank with its headquarters in Bangalore. That the dividend is modest at 4 per cent only does not detract from the value of the Bank's achievement in its 30th year. The age and standing may correspond to that of the Salem Bank, but the capital is much larger as also the reserves. With total deposits exceeding Rs 2 crores the Vysya Bank also

recorded an increase in deposits, reflected also in the better profits for 1960. While investments rose, the bank's advances also rose and to that extent, the Bank could afford an increase in wages for employees. The rise in interest rates paid on deposits may have contributed to the improved results for the year and the only other point that needs mention is that the Bank owing to its special connections maintains branches in both Hyderabad and Madras. While bigger banks have not fared so well as the smaller institutions mentioned above, the presumption that only the big five are likely to shape better stands in need of modification.

IBRD

Reserves Rise

The reserves of the International Bank for Reconstruction and Development have risen by \$72.8 million in the first nine months of the current fiscal year to a total of \$579.3 million.

The additions to reserves in the nine-month period ending 31 March, 1961 are made up of net earnings of \$48 million which were placed in the Supplemental Reserve against losses on loans and guarantees, and loan commissions of \$21.5 million which were credited to the Special Reserve. Another \$3.3 million was added to the Supplemental Reserve representing net profit resulting from revaluation of the Bank's holdings of Canadian dollars, German marks and Netherlands guilders. On 31 March, the Supplemental Reserve totalled \$393 million and the Special Reserve was \$186.3 million.

Gross income, exclusive of loan commissions, was \$124.5 million. Expenses totalled \$76.5 million and included \$65.3 million for interest on the Bank's funded debt, bond issuance and other financial expenses.

During the period, the Bank made 18 loans totalling \$380.6 million in Burma, Colombia, Costa Rica, El Salvador, India (2 loans), Israel, Japan (3 loans), Mexico (2 loans), Norway, Pakistan, Panama, Peru, Uganda and Yugoslavia. This brought the total number of loans to 283 in 55 countries or territories and raised the gross total of commitments to \$5,561.3 million. By 31 March, as a result of cancellations, repayments and sales of loans, the portions of loans signed still retained by the Bank had been reduced to \$4,059.5 million.

Disbursements on loans were \$279.1 million, making total disbursements \$4,200.3 million on 31 March.

The Bank sold or agreed to sell the equivalent of \$154 million principal amounts of loans. At 31 March, the total amount of such sales was \$965.1 million, of which all except \$69 million was without the Bank's guarantee.

Repayments of principal received by the Bank amounted to \$77.3 million. Total principal repayments amounted to \$796.9 million on 31 March, this included \$415.2 million repaid to the Bank, and \$381.7 million to the purchasers of borrowers' obligations sold by the Bank.

The outstanding funded debt of the Bank amounted to \$2,182 million on 31 March, 1961, reflecting a net increase of \$109 million over the past nine months. In this period there was a gross increase in funded debt of \$597.6 million consisting of a public bond issue in Swiss francs equivalent to \$14 million; the private placement of bonds and notes equivalent to \$538.5 million, partly to raise new funds and partly as refunding operations (\$388 million in US dollars, \$142.8 million in Deutsche marks and \$7.7 million in Swiss francs); the delivery of \$6.8 million of dollar bonds and \$23.8 million in Deutsche mark notes of issues sold previously subject to delayed delivery arrangements; and \$14.5 million equivalent which was added to the funded debt as a result of the revaluation of outstanding Netherlands guilder, Canadian dollar and Deutsche mark bonds and notes. The gross decrease in funded debt was \$488.6 million and resulted from funded debt maturing in the amount of \$115 million; sinking fund and purchase fund transactions amounting to \$12.7 million; and the refunding of privately placed issues equivalent to \$360.9 million.

Pursuant to the increase in the authorized capital of the Bank from \$10 billion to \$21 billion on 15 September, 1959, 61 members have doubled their subscriptions and 28 members have subscribed to \$1,366.9 million in addition to their 100 per cent increase. During the past quarter Portugal and Nigeria became members of the Bank with capital subscriptions of \$80 million and \$66.7 million respectively, bringing total membership to 68. The subscribed capital of the Bank amounted to \$20,062.9 million on 31 March, 1961.

MANAGEMENT

Basic Weakness

At a recent seminar at Coonoor on Advance Management under the auspices of the National Productivity Council, Dr P. S. Lokanathan expressed the view that the basic weakness of Indian industry was lack of managerial skill in sufficient quantity and of sufficient quality and the wholly inadequate facilities for training in management techniques. The lack was partially obscured by the fact of high profitability in a sellers market, internally. Business, even when inefficient, was earning enough profit and incentives for reduction of cost by greater productive efficiency were not present. Though Indian wages were among the lowest in the world, Indian prices were not competitive in international markets. Indian labour was comparable in skill and willingness to work to any in the world, and yet there is the unenviable situation of inefficient use of, among other things, labour.

In fixing priorities in development, investment in educational and health programmes rated a high position. The State's special duty lay in providing basic technical education in a sufficient number of technical and engineering institutions. There is a great danger of under utilisation of material and human resources that do not appear in obvious guises. Resources of leadership, skill and management are to be developed by training programmes devised to bring these innate resources into full play. The Indian businessman has yet to grasp the opportunities of development implied in the intangible assets of skills and training in productive endeavours and managerial responsibility. The preoccupation with obvious forms of capital—namely finance—is a sign of underdevelopment no less conclusive than a low per-capita income.

B. & C.

Calculated to Impress

In his speech to shareholders of Buckingham & Carnatic Mills Ltd., Mr E. F. G. Hunter mentioned the rise in sales during 1960, but noted also that total yardage was lower due to finer production, enforced also by a reduction in cotton supplies, reflected in higher prices. B. & C's export performance can be measured by the benefit drawn from the incentives scheme. Mr Hunter, however, argued that import licenses for dyes, chemicals, etc. must be available to ensure satisfactory results and the changeover to automatic looms must be assisted, as Mr Hunter insists, for companies that make quality goods must get some benefit, especially, if they are to raise productivity in line with the higher wages paid.

The main point made is that the mills are being hampered in further expansion. The handloom industry is officially favoured, and the increase in population is disregarded. So is the change in demand pattern, proved by the fact that trousers have replaced dhoties in many parts of India.

Price control imposed by the mills to help consumers has been approved by dealers and the conference of retail merchants, held in Madras in February, praised Binny & Co. for a just policy of distribution. That B. & C. shares rose to Rs 216 after the report was not due to the 10 per cent tax-free dividend maintained for the year, but to the fact that the company's record is more than ever calculated to impress investors who see how the debenture issue has helped to renew and improve the Madras plant, inspected with approval by Prince Philip during his visit on 20 February. The position of B. & C. among the textile units in India is not due to diversification of its interests as in the case of Century or D. C. M. but to the close attention given to materials and

methods. If the Bangalore Mill of Binny has found it hard to get wool or silk to expand output, it has also performed well up to expectations, as Mr Hunter pointed out at the other company meeting. The last point that needs mention here is that the managing agency is gone and Binny is merely a holding Company and B. & C. is managed by full-time salaried directors. The changeover has been smooth and the essential continuity of management has been ensured.

CPM SYNDICATE Nationalisation Inexpedient

The Government's attitude regarding the renewal of the leases held by the Central Provinces Mining Syndicate is presumed to be in doubt because of a demand from members of the Congress Party for the nationalisation of the large mining properties in Chhatta, Bhan-

dara Drug and other districts. While the re-organisation of State may make the present title of the company unsuitable, the advantages of preserving the connection between the big British company and India are obvious, mainly because the United Kingdom will retain its specific interest in importing Indian manganese in future. Competition in the field of export has increased and new suppliers have entered the American market. That is one reason for arguing that nationalisation would be inexpedient, apart from the question of payment for plant and equipment taken over from the large and prosperous company whose prosperity in the past has resulted in substantial additional investment in the mines. When sterling reserves are limited, payment would ordinarily prevent a problem and for that reason the Government of India may entertain second thoughts in spite of what was said last month about a decision to terminate the leases and secure for the Government a direct interest in the mining of manganese, not merely in the handling of exports by the State Trading Corporation with which the Central Provinces Mining Syndicate has, in the past, maintained cordial relations.

Another reason may be advanced against nationalisation. It is that mines are not like railways or public utilities which are subject to takeover when the franchise expires and the terms of purchase are implicit in the agreement itself. In the case of the Kolar Gold Field Company, nationalisation has not been attended with very happy results and there is already a move to replace the State Government and bring in the Centre to manage the gold fields whose operating results have not conformed to anticipations. It may be added that in the case of the Singareni Collieries taken over by the Nizam's Government and now vested in the Andhra Pradesh Government, the Centre has tried to buy the controlling interest in order to ensure efficiency of management and larger output. However, these two instances or the operation of the National Coal Development Corporation may not be such a convincing reason as the need to keep up export connections through an old and familiar company, and if the European market for Indian manganese is going to be widened, it must be through the C P M Syndicate. Further, the Madhya Pradesh Government may enter claim to royalty or compensation and it would be obviously difficult to resist the claims. Other mining companies would probably get nervous in the event of nationalisation of a large and prosperous company, and inevitably foreign capital may develop an attitude of caution towards India which, at the moment, is urgently in need of foreign capital. It is necessary to recall in this connection Mr Nehru's statements about Government's unwillingness to take over existing undertakings and to confine, as far as possible, State management to new enterprises. No attempt should be made to distinguish manganese from coal in which the private sector as in the case of copper, remains dominant.

MADRAS

Leeway to Make

Reviewing the progress of industries in the Madras State, Mr R. Venkataraman, Industries Minister, told the State Industries Development Committee that despite much recent progress it was not still comparable with those of Maharashtra or West Bengal. According to him, the future development of industries in Tamil Nad will have to be along three main lines: salt-based chemical industries, lignite briquetting and carbonising and industries based on petroleum chemicals which are also by-products of lignite. Each of these categories was entrusted to a sub-committee. Mr T. S. Narayanaswami of India Cements was named the convenor of salt-based industries, Mr S. Ramaswamy of the Mettur Chemicals and Industries for Industries based on the by-products from lignite carbonising and briquetting and Mr D. C. Kothari for petro-chemical based industries.

Reviewing the general industrial progress, the Minister stated that the buildings for the raw film factory was getting ready, and a programme has been drawn up for Indian technicians to be trained in France. A detailed project from the Soviet Union for the surgical instruments factory to be started at Guindy is expected shortly. Land acquisition for starting a teleprinter factory at Guindy was proceeding. The French Government has offered to start a prototype factory in Madras and the list of items to be manufactured by them was getting finalised. A French team of experts had been here towards the end of 1960, and they had proposed to set up plants for making lathes, drills and such other machine tools.

It is encouraging to be informed that the thermal station at Neyveli now being got up with Soviet collaboration would be pressed into commission next October. 20,000 kw of energy would be utilised for the Neyveli township and 30,000 kw would be diverted into the Madras Grid.

SHARAVATHY PROJECT
US Assistance

The decision of the US Government to finance the second stage of the Sharavathy hydro-electric project in Mysore has been announced last week by Prof. John Kenneth Galbraith, the American ambassador. The financial assistance for the completion of the second phase of the project will amount to \$57,775,000. Out of the total amount, \$21.5 million will be made available from the US Development Loan Fund and the balance will be met by a loan from the sales proceeds of the American agricultural commodities supplied to the country. It may be recalled in this connection that the US Government has previously provided \$23 million for the construction of the first stage of the project which included the building up of the dam and reservoir, a power plant with 89,100 kw generators and 238 miles of transmission lines.

The second stage of the Sharavathy project comprises the construction of the dam to its maximum height, the extension of the power house, the installation of five additional generators and the construction of additional 401 miles of 220 kw transmission lines dotted with appurtenant substations. The engineering and construction supervision for the second phase will be a continuation of the arrangements existing for the completion of the first stage of the project.

Despite the fact that the Mysore State possesses about four million kilowatts of hydro-electric power-potential, the slow pace of power development in the State has been a heart-breaking stumbling block to rapid industrialisation. The demand for power has been much greater than its supply. Viewed in this context, the completion of the Sharavathy project has great significance in the industrial development of the Mysore State. The supply of power from this project will go a long way in ameliorating this none too happy situation.

It needs to be remarked here that the recent agreement is not the first of its kind entered into by the USA and India. The US Government has in recent months entered into similar agreements for the construction of seven power projects in this country and when completed these projects will boost up India's generating capacity by well over one million kilowatts.

COLLABORATION
Scope Defined

The recent policy statement issued by the Union Ministry of Commerce and Industry indicating the directions in which private capital participations in the national development would be particularly welcome is a document of great practical importance. In the first place, it sets at rest apprehensions that were lingering in the minds of foreign capitalists about the Government of India's attitude toward foreign private capital. A second refreshing feature of the new policy is its remarkable flexibility. About twenty industries are listed as selected fields in which such participation is welcome. These are: iron and steel structural; iron and steel castings and forgings; iron and steel pipes; special steels; non-ferrous metals and alloys; boilers and steam generating plants; equipment for transmission and distribution of electricity; furnaces; marine diesel engines; industrial machinery, including major items of specialised equipment used in specific industries and general items of machinery used in several industries such as equipment required for various unit processes; ball, roller and taper bearings; speed reduction units; machine tools; tractors; earth-moving and construction machinery; plastics; industrial and scientific instruments; fertilisers; organic chemicals, fine chemicals and intermediates; industrial explosives;

industrial gases; agricultural chemicals such as insecticides; dyestuffs and drugs, including the production of basic intermediates; newsprint and pulp. It has been elucidated that the list is only illustrative and not exhaustive.

The fields in which collaboration is to be discouraged include banking, insurance, trading and commercial activities and plantations. Generally private capital, foreign or Indian, is not being allowed in the industries listed in the Schedule "A" of the Indus-

tries Policy Resolution of 1956. Nevertheless, the Government has expressed its willingness to permit, in special cases, investment of private capital, which were hitherto been the monopoly of public sector, for the public interest.

The assurance given by the authorities for providing all incentives, though not enumerated, is likely to accelerate the flow of foreign private capital into the country to an encouraging level. Yet it will be premature to draw

any conclusion about the quantum of private investment that will be forthcoming at this stage.

Another noteworthy feature of the statement is the absence of any specified standard in relation to the ratio of foreign capital to Indian capital in the joint enterprises. This can be fixed on each occasion after evaluating the quantum of technical assistance offered and assessing the requirements of foreign investment and on the merit of each case. The emphasis laid on the need for providing

7 HASTINGS STREET
A House of Memories

BURN & CO

No liveried footmen or blazing chandeliers remain to proclaim the grandeur and gaiety that once pervaded the large red brick mansion that still stands in Calcutta's Hastings Street and which Warren Hastings, India's first Governor-General, built for his charming wife as her town house. For many years this fine residence was the scene of glittering assemblies and balls, the entrée to which was considered a high social privilege.

In 1827, No. 7 was acquired for the purpose of its business by the old established engineering firm of Burn & Company which occupied it for almost a century. By reason of its expanding business, Burn & Company found this historic building with its cobbled carriage drive and spacious rooms too small, and in 1925, the Company was forced to sever its link with this house of memories and moved to larger premises in Clive Street, where it joined hands with Martin & Co.

Today, the activities of Martin Burn Ltd. cover a wide range of engineering interests including those brought to it by the renowned firm of Burn & Company all of which are vital to the rapid development of India's industrialisation.

adequate training facilities for the Indian technicians, priority accorded to rapid building up of indigenous production and the export potential of the enterprises are other features that merit mention.

DOWRY

Differences Erased

The joint session meant to erase differences between the Houses of Parliament on the Dowry Bill has passed the Bill with certain amendments. The social reform to which the legal reform inclines is meant to strike at custom and has probably the purpose of sumptuary legislation. It is, therefore, not without economic implications, though it is concerned with affording relief to the middle classes that look for help to end practices that are detrimental. That education has failed to end the custom is obvious, and the universality of marriage in India is perhaps one reason for its survival. While the payment of bride price also is to be opposed, the demand for dowry is more vigorously condemned. Opinion in the ruling party seems divided and to that extent Mr Nehru had to explain how a measure like the Sarda Act is now called for. The system of arranged marriage is not peculiar to India. It is not unknown to Europe, but the problem of property and succession has been settled by the reform of Hindu law and now that the daughter has a share in property, there is even less justification for the dowry.

Conventions vary from place to place, and from caste to caste, but the whole object of reformers is to end the practice by punishment. Whether the States will approve and enforce the law is not the issue at present. It is whether the practice will die out gradually by a declaration of Parliament's intentions. The willingness of courts to follow directions is not in doubt at all but what matters is the sanction of public opinion and the separation of gifts for a new household from a cash contribution for the purpose of marriage. That the measure comes towards the end of the life of the present Parliament is one reason for arguing that the reform may figure in the electioneering campaign. But women voters may consider the Bill helpful and the swing of the pendulum may help the Congress to pick up extra votes. The opposition parties are not likely to lose votes by attacking the measure under consideration and it is quite certain that exemption for non-Hindus will be provided. The problem has arisen as an economic consequence of inflation. What was innocuous is now a sore burden and the Government has recognised that relief by legislation is due, even if the Congress is not hearty about social reform.

USA

Sights Raised

One of the surest signs of an economic upturn in the United States has just come to light with publica-

tion of the findings of the latest survey of business investment plans. They indicate that US industry has "raised its sights" noticeably on its planned outlays for new plant and equipment.

Conducted by the McGraw-Hill Company, a leading publisher of business journals and a pioneer in capital investment studies, the survey discloses that businessmen now intend to spend \$35,350 million on new and modern facilities in 1961, only one per cent less than the amount spent last year. A similar survey made last October by McGraw-Hill, had indicated that businessmen would be spending three per cent less this year than last.

This points to a welcome rise in one of the most carefully watched of the "lagging" indicators—so called because it tends to rise only after a general upturn has become evident in the economy. This latest development, then, tends to confirm the widely held view that an upward movement already is under way, and it underscores what appears to be a growing sense of confidence on the part of the nation's business community.

Also, capital spending programmes have an importance that goes beyond the mere reflection of current business trends. They also contribute, in themselves, to the burgeoning of economic activity in that they create a widening circle of demand for the production, the materials and the man-power to put them into effect. This means increased job opportunities and higher operating levels in a variety of industries.

One of the interesting sidelights about plant and equipment spending is its tendency to rise above projected levels during periods of economic upturn. This is understandable, as businessmen may still be a little cautious about their investment programmes during the early stages of a business recovery, and it takes time to translate plans into actual outlays.

An added, though still indeterminate, element this year could be President Kennedy's tax-incentive programme aimed at encouraging businessmen to raise their capital spending goals. This programme has yet to be approved by Congress, of course, but it is interesting in any case to note that the investment upturn disclosed in this latest McGraw-Hill survey is based on business schedules drawn up before the President's recommendations were made public last week.

With these factors in mind, it would not be at all surprising to find plant and equipment expenditure turning up even more sharply than is indicated in this survey.

Highly significant, in this connection, is the survey's disclosure of advance plans indicating that capital spending in the years 1962-64 will be almost as high as that projected for 1961. This is considered a particularly bright omen because company projections that far into the future usually are not only tentative but also incomplete. As McGraw-Hill points out, "the fact that plans beyond 1961 are now at a very high level would indicate that actual spending may turn out to be considerably higher".

A particularly significant trend uncovered by the survey is the plan of manufacturers, as a group, to devote some 70 per cent of their 1961 expenditures to modernization rather than expansion of plant and equipment. This is the highest percentage on record in the 14 years that McGraw-Hill has been conducting these surveys. Apparently, it reflects the determination of American industry to reverse the trend toward obsolescence and to put its facilities in better shape to meet intensified competition at home and abroad.

Actually, there appears to be no great pressure to expand facilities right now, as the survey found that manufacturers were operating at an average rate of 77 per cent of capacity at the end of 1960. Nevertheless, as the survey also shows, they intend to increase their capacity at a rate of slightly more than three per cent a year in the course of the next four years. The situation could change, however, and the need to expand plant, facilities may become greater in the years ahead. According to the survey, manufacturers expect their unit sales to rise about three per cent this year, and they see a 20 per cent increase during the following three years—a rate that in effect is double the planned increase in capacity.

The survey also underscores the continued vitality to American industry in advancing its technology and bringing new and better products to the market. Expenditures on research and development, which have been rising steadily, are expected to hit a new annual high of \$10,500 million this year. And even at this early date, they are projected at \$11,700 million a year by 1964. Manufacturers now estimate that some 14 per cent of their 1964 sales will be in new products—products which, to all intents and purposes, are unknown to the 1961 economy.

FRANCE

The Aftermath

After the brief foray of paratroop generals into French politics, there is a hint of NATO being no longer a happy family. The Saharan oil perhaps spurred US interest in the ambitions of the Generals now in custody. After Petain's unhappy experiment in politics, the astuteness of the Generals was not obviously equal to their ambitions to create a new State of Algeria. That Napoleon created new Kingdoms and new Republics is part of the Bonapartist mystique, and the Generals may have tried to use mass communication to secure support in metropolitan France. That was not forthcoming, and now begins the work of the Deuxieme Bureau to unravel the contacts of the Generals who made diplomatic connections—without results, it may be added.

Since Mr Kennedy made an offer to General de Gaulle to help in quelling the revolt in Algeria, the present Administration is perhaps exonerated in US eyes. But doubts have arisen about Mr Allen Dulles' part in the fiasco, and the USA, after the sorry episode in Cuba will call for a scapegoat. The cooling off of

Franco-German relations is now expected as a consequence of the implications and complications in Algeria. If the talks with the Arab nationalists begin, the French may even get additional material for the dossier. Unexpectedly, the Algerian rising has been internationalised and questions about the part of big capital are being put. If the heavy industry—through its organ, the *comite de Forges*—has been the unseen hand, the General in Paris will get massive support from the Left which dislike both domestic capitalists and the US alliance. There is no unknown man like Basil Zaharoff to be accused but the big oil companies which think of politics may be put in the dock. And one possible result may be that Mr Khrushchev may pay a visit to Paris to see General de Gaulle and to emphasise the supremacy of civilians in politics. The strain on France may lead to a new turn in politics in Africa mainly, and the General will perhaps get a popular mandate to order self-determination for Algeria. This signifies little in the material sense, for, France now looks to Europe mainly, just like Holland, which is a link between the USA and Germany. The revolt that failed is going to be a big factor in European affairs for long, and European nationalism may assert itself against US intervention to the point that the Western Union may take its own line with Moscow. The bigger US investment in Europe in recent years may have engendered unofficial ambitions to reorder European regimes. But one result may be that Union Miniere with its Parisian connections may be discredited in Katanga too.

COTTON TEXTILES

Shortage Ahead

If one of the main aims of planned economic development is the smooth and adequate supply of at least the essential commodities, our planners cannot claim much credit. For, all through the two Five Year Plans there have been shortages of one commodity or another and of course there is no dearth of explanations of how the shortages have occurred. But past experience seems to have yielded no lessons to our planners when they draw up the next Plan. Targets set are either too small or too ambitious and more often than not, no provision is made for unforeseen developments.

It looks as though cloth is going to be another commodity that is going to be in short supply during the Third Plan. The Planning Commission has provisionally fixed the target of cloth production at 9300 million yards. Out of this quantity the mill industry is allotted 5800 million yards and the balance to be accounted for by the decentralised sectors, handloom and power-loom. This estimate of 9300 million yards has been made on a lower estimate of the population during the Third Plan period and the Census recently concluded has shown how wide off

Indian Finance

13 May 1961

the mark is the Planning Commission's assumptions about the rate of growth of population. And experience has shown that the decentralised sector is not capable of delivering the goods. Mr Jaykrishna Harivallabhadas, President of the Ahmedabad Mill Owners' Association has pointed out that it is necessary to take early steps to enable the mill industry to reach its target. The intensive utilisation of existing capacity can only meet part of the additional output of the mill sector. In order to reach the target of 5800 million yards, therefore, additional spindles and looms should be allocated to deserving mills.

The cotton textile industry's export performance continues to be disappointing and the figures for the last year of the Second Five Year Plan are far behind the target of 1000 million yards. Exports in 1960-61 were 678 million yards as against 846 million yards in the previous year. Though the disparity in terms of foreign exchange earned is not so glaring because of the general rise in world cloth prices, this fall in quantitative terms is unfortunate at a time when the country is in dire need of foreign exchange. Government too has afforded some incentives for maximising exports of cloth but it is evident from the performance on the export front that much more needs to be done if the desired results are to ensue. Mr M. L. Shah, President of the Bengal Millowners' Association has rightly pointed out that Government should realise that while the export of new manufactures has to be encouraged, it has to depend, at least in the immediate future mainly on the traditional exports like cotton textiles, jute goods and tea for foreign exchange accrual. It follows, therefore, that it will be a correct procedure to take all possible measures to promote the export of the traditional exports. The overseas market for our cotton textiles is filled with powerful competitors and if our products are to make headway the first requisite is competitive price. As price is a factor which is not under the control of the industry, it is only with Government's active assistance that our cotton textile can hope to sell well in the overseas markets. As well in the overseas markets. As Mr Shah has pointed out one way of going about this task is to study the incentives given by some of the foreign countries to their cotton textile industries for export promotion and adopt them.

COAL

A Year's Record

Coal was one of the those important items which had priority of development among industrial schemes in the Second Plan. Production of coal which had reached a level of 38 million tons at the end of the First Plan was proposed to be raised to 60 million tons

during the Second Plan. The target of additional production of 22 million tons was distributed between the public and private sectors in the proportion of 12 million tons and 10 million tons respectively. Assessing the progress made by the coal industry in 1960-61 the section on Coal in the annual report for 1960-61 of the Ministry of Steel, Fuel and Mines states that the industry has already achieved an annual rate of production of just over 60 million tons. It is interesting that the report takes claim only for a rate of production of 60 million tons and not actual production of 60 million tons though it may be mentioned that the target only envisaged attainment of a rate of production of 60 million tons in the last quarter of the last year of the Second Plan period.

The private sector has achieved its target and its current rate of production is shown to be 45 million tons a year. In the public sector the Singareni group of collieries are shown to have attained the rate of production fixed for them. For the NCDC, the rate of production shown at 12.48 million tons reveals a shortfall of 1.2 million tons. In assessing the performance of the public sector and particularly of the NCDC account has to be taken of the fact that the Corporation was expected to raise 10 million tons of additional production from new collieries to be opened by it. It may be stated that the Corporation has opened up and developed nearly 12 new mines. These are the Korba Mines, the New Dursia Mines, and the Korea Mines, in Madhya Pradesh, the Kathara Mines, the Gidi "A" Mines, the Saunda Mines, the Bachra Mines, the New Bhurkunda 11 Mines, the Gidi "C" Mines and the Sayal "D" Mines in Bihar, and the South Balanda Mines in Orissa. All these new mines have started commercial production of coal. In this connection the report points out that orders for the procurement of plant and machinery needed by the NCDC during the Second Plan period have been placed and about 90 per cent of the machinery has already been received while another 5 per cent is expected to be received by the end of the financial year.

The report also records the attempts being made by the Ministry to implement some of the recommendations of the Coal Price Revision Committee. Grant of financial assistance to collieries handicapped by adverse factors was one of the recommendations accepted by the Government. It is observed that this scheme of special assistance has been introduced from September 1960. The adverse factors declared by the Government as qualifying for assistance are gassy nature of coal mines, depth of shafts, inclination of seams, high pumping cost, thinness of seams and high transportation cost from pit-head to rail head. Another recommendation of

the Committee which is being implemented in a modified form is discontinuance of control over distribution and price of hard coke. Instead of total decontrol forthwith, Government has gone for gradual relaxation of control and has in this sense, introduced "ceiling" prices for hard coke with effect from 1960. Also consumers have been given the choice to select cokeries and to enter into contractual arrangements for supplies.

An important achievement in the coal industry in the Second Plan was the development of the coal washery at Kargali. This project was taken up to supply high quality coking coal to the Bhilai and Rourkela steel plants. The annual optimum capacity of the washery is placed at 1.6 million tons. Though the washery had to contend with operational difficulties in the early years, it is stated to be steadily increasing its output of washed coal. Production of washed coal during 1960 amounted to 8,52,427 tons against 7,02,806 tons in 1959.

Dealing with the Third Plan target for the coal industry, the report observes that the target of 97 million tons has been approved by the Coal Council. This target represents an increase of 37 million tons over the target of 60 million tons set for the Second Plan. The capacity of the private sector to raise additional production is assessed at 17 million tons. The balance of 20 million tons has been assigned to the public sector, out of which 17 million tons falls to the share of the NCDC and 3 million tons to the Singareni collieries. The target for additional production of coal in the Third Plan is recognised as calling for the opening of a number of

new mines in virgin areas. In this connection the report says that the Corporation has already undertaken a programme of drilling in the coal fields which it proposes to exploit during the Third Plan.

Coal production in the Third Plan also raises a number of allied problems related to the provision of transport capacity, preservation of the metallurgical coals, and production according to schedules of type, size and quality on the basis of a system of consumer priorities. For conservation of the good quality coal, the setting up of washeries to beneficiate both coking and non-coking coal has become necessary. Development of the outlying coalfields in the Bihar-Bengal region, and the exploitation of seams at greater depth are the suggestions made by the Committee on Assessment of Resources of the Coal Council to help conservation of good quality coal. In respect of transport, requirements could be assessed only after finalisation of the field-wise programme of production of coal in the Third Plan. But as a general measure to meet the transport requirements, the Coal Council has underlined the need for examination of alternative modes of transport other than railways such as road transport, pipelines, water ways and coastal shipping. The recent decision of the Government to carry an additional one million tons of coal through coastal shipping will be welcomed as a measure that would relieve the strains on the railways.

B. L. SETHI,
General Manager.

1960-61 has revealed a mixed trend. While there was an increase in the production of iron ore from nearly 8 million tons in 1959 to 10.6 million

Minerals	Unit of quantity	1958	1959	1960
Iron Ore ...	Tonnes	6,129,706	7,982,000	10,596,000
Manganese Ore ...	Tonnes	1,276,095	1,187,433	1,150,000
Copper Ore ...	Tonnes	411,471	403,711	448,000
Lead Concentrates ...	Tonnes	5,341	5,488	6,245
Zinc Concentrates ...	Tonnes	71,391	9,978	9,787
Gold ...	Kilograms	5,291	5,144	4,995

The fall in the production of manganese ore has been explained by the Ministry of Steel, Mines and Fuel as being due to the lack of external demand, while alterations in the mills at Zawar Mines are stated to have contributed to the decline in the production of lead concentrates and zinc concentrates. Gold production was affected by mechanical difficulties in two of the mines and rock bursts in the Mysore mine in June 1960. However, on the basis of the improvement that has been noted latterly, the Ministry has forecast a rise in production during the current year. In respect of manganese ore, there is already an installed capacity of 2.5 million tons, and demand turning favourable, it should not be difficult to achieve a substantial increase in production. In this context, the scheme for the setting up of beneficiation plants in different parts of the country during the Third Plan will be welcomed as a measure that should lead to increased foreign off-take of manganese ore from the country. Low grade ores have no market at present and beneficiation should make them marketable.

The increase registered in the production of iron ore was due to the impetus provided by the setting up of steel plants in the public sector and increasing external demand. One of the welcome developments in respect of external trade in iron ore has been the interest displayed by Japan for import of Indian iron ore. Under an agreement for supply of two million tons of iron ore to Japan on a long term basis from 1964 onwards, the National Mineral Development Corporation has undertaken the development of the Kirikuru Iron Ore Mines in the Bonai Range of Keonjhar and Singhbhum districts in Orissa and Bihar. In pursuance of another agreement between the Governments of India and Japan for supply to Japan of iron ore of approximately 4 million tons per annum from 1966 for a period of 15 years in the first instance, a project for the development of the Bailadila Iron Ore deposits in Madhya Pradesh has been included in the Third Plan. The other important development projects now receiving attention are the Panna Diamond Project, and the Khetri-Darbo Copper Projects. The Orissa Mining Corporation set up in May 1956 has also started two mines in 1957 while a third mine is also stated to have been started in January 1960. The setting up of the Sikkim Mining Corporation for developing deposits of copper, lead, zinc and other minerals in Bhotang and other places of Sikkim was an event of more than national significance. The Corporation is stated to have already commenced work for

tons during 1960, a decline was discernible in the output of manganese ore, lead concentrates, zinc concentrates and of gold.

the exploitation of the copper-lead-zinc deposits in Bhotang. The production at the rate of 100 tons of ore per day and processed upto the stage of marketable concentrates is expected to start from December 1961. On the administration and research side, the Indian Bureau of Mines is stated to have continued its work relating to the inspection of mines, mineral exploration and beneficiation, research, and analysis, compilation and publication of mineral statistic and advising Government and private agencies in regard to various matters pertaining to the mining industry.

WHEAT

China Buys From Canada

A Chinese trade mission to Canada in March advertised, discreetly enough, the famine that forced Peking to buy grain abroad. The surplus crop in Canada is not due to higher acreage and 1960 wheat crop was just average. But a stock of 490 million bushels means that exports must be increased, especially as domestic demand is put at 160 million bushels. The increasing agricultural output of Ontario is perhaps of less consequence to the judges of the current recession than the decline noted in farmers' cash income since 1957. This means that Canada has a farm problem, accentuated perhaps by US export policy, conditioned by the price support programme leaving the Commodity Credit Corporation with large stocks that must be disposed of even as gifts to needy nations.

The Canadian wheat acreage over a decade has stood at 23.5 million acres but higher yields on bigger farms of late create a marketing problem and the increase in hired labour on the farm entails an rise in costs. This goes far to explain the agreement announced by Mr Hamilton. The Progressive Conservative Ministry has no hesitation in concluding an agreement to sell wheat, flour and barley to China over a long period. If Canada is now a competitor with Australia in the Far East, the disposable quantity is put at 200 million bushels. The price secured may be better than expected, because China lacks an alternative source as the other three big exporters, Argentina, Australia and the USA, might decline to consider China an eligible

customer though the price mentioned, 1½ dollars a bushel, appears fairly high.

The means of payment is left in doubt but it may be surmised that a transaction of this type involves payment in kind as well as cash and Chinese metals like antimony and tungsten may be shipped while a part of the payment may be made in sterling. If that were so, China may not be eager to buy rubber abroad and may be disposed to sell more tin to Europe through Russia to secure foreign currency. It is easy now to speculate on both the proximate and remote results of the deal which proves that even if Canada has no trade representative in Peking today the necessity to trade with China is recognised and the USA's present predilections or prejudices do not stand in the way of a big deal which, accordingly, differs from supplies under the Colombo Plan. The rule of cash and carry is applied, not only because Canada has its own views on foreign policy and puts humanity above anti-Communist doctrine, but because the wheat surplus must be reduced and the home market for manufacturing industries restored, so that the business upturn may take place as expected. The transaction is not one between an advanced country and a backward or undeveloped nation. It is undoubtedly a sign of Canada's maturity, for, it is able to look across the Pacific and recognise that East Asia means, not Taiwan, but the People's Republic.

NEW VISTAS

Ceramics in Neyveli

The Madras Government has decided to locate an industrial estate for Ceramics at Vriddachalam, near Neyveli to utilise the clay find, a by-product of lignite mining. The State Government has sanctioned Rs 51 lakhs to provide service facilities for opening an institute during the Third Plan. The Centre will have a laboratory for research work, a pilot plant for undertaking trial works and testing under semi-commercial conditions and a work centre for semi-educated unemployed persons. About 30 trainees would be admitted in this Centre next May. The estate will have a 35-unit kiln, each with a different capacity. Private industrialists have plans to set up ceramic factories and have come forward to make the best use of the estate.

Meantime there are proposals to expand the Government Ceramics Centre at a cost of Rs 10 lakhs by the installation of a modern tunnel kiln and raising the output from one to three tons daily. Since last year the Centre has been producing sanitary wares using the Kerala white clay. When lignite from Neyveli becomes available, the Neyveli clay would be utilised for the manufacture of these sanitary wares. A proposal is also being considered for

setting up a salt-glazed pipe factory with 20 tons daily capacity at a cost of Rs 8 lakhs. The necessary machinery and equipment for the project is expected to be imported from West Germany.

Rayon Pulp at Kalsur

The laying of the foundation stone of the Rs 10 crore rayon pulp plant at Kalsur in North Kanara by Mr Manubhai Shah, the Union Minister for Industries, constitutes another important milestone in the country's march toward self-sufficiency. Addressing the gathering, the Union Minister reminded the industrialists who enter into collaboration with foreign firms of the paramount importance of providing adequate arrangements for imparting technical training to Indian personnel. Mr Shah also referred to the Government's decision to introduce a bill in Parliament so that the industries belonging to both the private and public sectors can be compelled to make enough arrangements for training their staff.

An Indo-French venture, the new plant will start the production of rayon grade dissolving pulp in the first half of 1963. The daily production of the plant in the initial period will amount to 110 metric tons of pulp, but there is also provision for augmenting this to 350 metric tons within a few years.

It needs to be remarked in this connection that at present India is depending on imports for two-thirds of our requirements of rayon pulp. The need for stepping up indigenous production of rayon pulp is, therefore, obvious. This is all the more true at a time when the foreign exchange reserve of the country is at its nadir. The new plant's output during the first two years, as stated by Mr S. V. Viswanathan, the promoter, in his welcome address, will help save the country's foreign exchange to the tune of nearly Rs 5 crores per annum. Its employment potential is not the least of its attractions.

MOUNTAINEERING

A Himalayan Achievement

The conquest of Annapurna 111 by Lieut Kohli and two other members of the Indian expedition will rank as one of the rare mountaineering feats accomplished by our countrymen. After Tensing Norkey and Edmund Hilary scaled the heights of Everest, the supposedly inaccessible peaks of the Himalayas have drawn team after team of mountaineers, both Indian and foreign. Inclement weather deprived Brig. Gyan Singh and his men of the honour of repeating Tensing's feat of reaching Everest last year. Lieut Kohli's expedition was a pioneering one and his success was as much due to the thoroughness of the preparations as to the team-spirit with which it was conducted. Special praise is due to the armed services which have been trying to foster and encourage mountaineering enterprise in their ranks.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

HOW absurd can we get? The National Book Trust, I find from the papers, has commissioned a Sanskrit translation of Mr Nehru's Azad Memorial Lectures on the Indian Ethos. This, if true, is a sickening piece of sycophancy. (I only hope that Mr Nehru doesn't get to hear of it.) The National Book Trust, in case you don't know, was constituted by the Government in 1957 "to encourage the production of good literature and to make such works available at moderate prices to the public." It is also to "publish standard works on education, science, culture and the humanities. Classical Indian literature, the translation of foreign classics and the translation of Indian classics from one regional language into another was to receive special attention." It was also the intention that the Trust should chiefly concern itself with books not likely to be otherwise readily obtainable. Its record in the pursuit of these admittedly admirable ideals has been dismal. Against the anticipated twenty-four titles a year, it has produced thirteen in three years, and this includes a Hindi version of the work now proposed to be translated into Sanskrit. Few of the books published qualify either in terms of inaccessibility or of their absolute worth in the light of the avowed special aims. Rajaji, for instance, could have been better represented either as a literary or scientific author than by his miscellaneous reflections on the nuclear bombs. And as for the proposed translation into Sanskrit, it barely qualifies for the attention of the Trust by coming under its translation tasks. But why Sanskrit and why Mr Nehru's book? The whole idea behind the programme of translation is that a man who knows only one or two languages should not be deprived of the treasures in other languages. Now, I doubt whether there is any man in the world who knows no language other than Sanskrit. (The trouble is the other way about: not enough people, more shame to them, know it.) If it is the man interested in Sanskrit that the Trust was trying to please, I am sure that he would much rather that the Trust had published some inaccessible original in Sanskrit. If it were the man interested in Indian culture that the Trust was having in mind, surely it could have translated the book in languages in which it was likely to be read. And without disrespect to Mr Nehru, the man who has enough Sanskrit to read the pro-

posed translation is sure to have access to more original sources of enlightenment on Indian Culture.

My theory that the whole project has been conceived in a nauseating spirit of subservience is supported by the fact that of the thirteen books (in several languages) it has published in three years, six are by Mr Nehru and two by Dr Radhakrishnan. Considering that the task of the Trust is to publish books unlikely to be otherwise readily obtainable—and by extension, in the case of modern authors, unlikely to get ready publishers—this shows a queer sense of priority. And as for the public to whom this Trust was expected to open up the realms of gold of world literature, they are being served up with indifferent fare which they can, if they thought the trouble worth taking, get elsewhere. I understand that the Trust feels that it is being treated cavalierly by officialdom—it has had its brush with the Publication Division, which is its publisher, its quota of paper was cut, et al. Considering what it wanted the paper for, I can't say I am disposed to offer my shoulder to cry on. And as for "carping" criticism of which also it complains, I for one, am amazed at my moderation.

*

A short note in last week's issue of the Economist reports a piece of news that should interest income tax authorities in India. Though the details given are scanty, it would appear that the Court of Appeal in England has decided in favour of Revenue a tax case of obvious relevance in India. In that case, Jack Hawkins, the well-known film star, was an employee on a weekly salary of a company "controlled on behalf of his children." The company itself got paid a sum of £25,000, for his performance in a film. The issue was whether the dividends on shares in the company were taxable in the hands of the children or of the father. The Court of Appeal reversed the decision of the lower court which had held that the dividends were the children's and that they were therefore entitled to certain statutory reliefs. In India, the question may not arise in precisely this form, because, in that form, the stakes are negligible either way. But it is well known that the high level of personal taxation has made it expedient for film stars with a fabulous market value for their (in most cases, exiguous) talents

to arrange their affairs in ways somewhat similar to the one described. The modus, I understand, is quite simple. A limited company with "friends and relations" as share-holders is formed. The matinee idol himself is a mere employee of the company, and it is the company that farms out, for a consideration, the services of its employee-actor. Though not the essence of the idea, I understand that it is not unusual for the company to enter into arrangements for being paid in the shape of distribution rights. (This refinement has, of course, interesting possibilities.) Meantime, the "poor player" slaves away on a beggarly salary of a few hundreds a month. Even if he were a share-holder in the employer-company and the dividends on the shares in it were to drift his way, he and the company would still be paying only a fraction of the tax that he would have had to pay, had he entered into direct arrangements with the producer. And if no dividends were declared and penal supertax for non-distribution of dividends were to be levied (for such companies are bound to be "Section 23-A companies"), the total tax effect can still conceivably favour him. (Under the old law, he was even better off: for if the shares were, as in the Hawkins case, registered in somebody else's name, then the dividends "deemed to have been distributed" cannot be treated as his, even if it were conceded that he was the beneficial owner of the shares. In such cases, the application of Section 23-A may even be found to result in a net refund from Revenue!). Rather a neat arrangement and one that appeared legally irrefragable, (unless of course, Revenue proved that the whole arrangement was in fact a piece of sham—a rather difficult task) until this case came along. It must be an interesting judgment. I must add that leave for appeal to the House of Lords has been granted and the issue is open.

*

We moderns sate easily and, therefore, I am not sure that the next cosmonaut will rate more than a paragraph in the back page. But as of now, we have not ceased to thrill to news of space conquest. Allan Shepard's achievement, close on the heels of Yuri Gagarin's, has drawn world-wide acclaim. It is idle to deny that a certain adventitious piquancy attaches to the American achievement consequent on cold-war rivalry. Commander Shepard himself implied at his news conference at Washington on Monday that the race for reaching outer space first was neck and neck and that he could have beaten Gagarin to it, or in his own words, "the

US technology was advanced enough for that." However that may be, the boost to American morale that Mercury-Redstone Flight No 3 has given is something electric. On the other hand, Khrushchev could not, even while congratulating the US, hide his complacency on the fact that the Russian orbited the earth whereas the American only went "some place" in space and came back quick. Americans are modest enough to concede the essential justice, though not the good taste, of this assertion. But they point out that though Shepard may not be the first spaceman, he was certainly the first space pilot. Shepard himself said that he "actually controlled the vehicle and its position during the retro-firing"—a feat reportedly not attempted by Gagarin. What I find most remarkable about the whole business is not the actual flight, but the glare of publicity in which the entire operation was carried out. As a psychological fact, I find the contrast between the extreme secretiveness of the Russian programme and the almost exhibitionistic launching of the American spaceman extremely interesting. Mr Kennedy along with millions of viewers watched the flight on the Television and there must have been agonising moments both when the rocket shot off and came back into view in the television screen. It was a terrible risk to have taken, for had the operation not been successful, the effect would have been shattering. The obscure impulses behind this particular piece of recklessness constitute to my mind, something quintessential in the American spirit. Considering how the world has roared in the past to much ill-considered (and often ill-natured) jests about damp American squibs and rockets that refuse to take off, none would have considered an unpublished first flight in space as morbidly secretive. And yet they did not think of it. Commander Shepard feels that this piece of obstinacy can be "rationalised with the thought that the free democratic society that produced us, and which produced Project Mercury flight, had a right to be presented in such a fashion." In the sense in which he uses it, "rationalisation" is hardly the mot juste for the occasion. But were one to rationalise the Russian secretiveness at the same level of truth, one would find the result more disreputable than what Commander Shepard has come out with his little exercise in psycho-analysis about American exhibitionism. The heartening fact is that he and his fellow-scientists were less afraid of becoming the laughing stock of the world by possible failure than they were (pardonably) mindful of the thrill that, again possible, success would give millions of Americans. I salute the former and I don't have it in my heart to be censorious about the latter.

EAVESDROPPER

Olympus

Coal Transport By Sea

THE programme for the transport of coal by sea, inaugurated early this month, has been designed to relieve the pressure on Railways; but it may also increase the price of coal for consumers all over the country by as much as Rs 3 per ton. The Lok Sabha, on 3 May adopted a Bill introduced by the Minister for Mines, Steel and Fuel, which seeks to raise the limit of excise duty on coal from Re 1 to Rs 4 per ton. The proceeds of the increased duty will be used, partly, to provide the Coal Board with the finance for its ropeway scheme to transport sand for stowing operations; and, partly to reduce the cost of transport to consumers who are supplied coal by the sea route.

It is proposed to transport two million tons of coal by sea from Calcutta to ports in the South and in the West Coast, at the rate of one ship per day. Already thirty-six ships are in service and it is expected that Indian shipping companies will divert six more ships now plying on overseas routes to the coastal route, to make up the 42 ships necessary to maintain the schedule of sailings.

The Minister for Mines, Fuel and Power made it clear that there was no question of subsidising the coastal shipping companies. As a matter of fact, it is hoped that, as a result of increased and assured traffic, it would be possible, or at any rate should be possible, for coastal shipping to reduce their freight. The Ministry of Transport are carrying on discussions with coastal shipping interests with a view to bringing down their tariff rates. But ever after the Ministry of Transport succeed in their efforts to get the tariff reduced, cost of carriage by sea will still be higher as compared with carriage by rail, for there is an element of subsidy in the telescopic rates charged by Railways on long leads. Above a certain distance Railways charge the same freight for transport of coal irrespective of the distance, even though the rate charged may be less than the cost incurred by the Railways.

The new scheme, which the Minister described as the most practical approach, has been undertaken to ensure that the consumers who are supplied their requirements of coal by the sea route in the present emergency, are not required to pay more by way of transport charges than they would otherwise have paid if the coal were transported by rail.

If the objective is to compensate for the disadvantage of consumers at great distances from coalfields, the obvious course would be to enforce a uniform price for coal at all railheads as is done in the case of steel. This suggestion was forcibly urged during the debate by some members. But the proposal when it was first mooted last year provoked great opposition in the coal-mining States. And in view of the conflict of interests between different regions, the Minister pointed out, it was not practicable to go the whole hog in making the price of coal uniform at all railheads. At the same time he added, the proposed measure to levy additional excise duty to subsidise transport of coal by sea was a step in that direction. The Minister also made the point that it was not open to those who advocated a uniform price for coal, to criticise the proposal for subsidising the cost of transport by sea.

The result of the proposal will be to maintain the present price differential as between different centres, while prices for all will be increased to the extent of the additional excise duty. The Minister however indicated that there was no proposal to raise the excise duty immediately to the new ceiling.

The need for encouraging road haulage to supplement transport of coal by rail was also pressed during the debate. At present it is estimated that about 1.5 to 2 million tons of coal are transported by road to centres in Bihar, Bengal and parts of Orissa. The question of transporting larger quantities by road, the Minister said, was engaging the attention of the authorities concerned. At the same time he also drew attention to the limiting factors, such as the capacity of the road system and the capacity of the road transport system. The present state of the roads, the availability of trucks, the condition of bridges, the overcrowding that exists in certain stretches of road are factors which set a limit to the quantity that could be carried by road. Nevertheless, there is now quite a sizable transport of coal by road. But in the case of a commodity where coal, movement by road over long distances is not feasible, as the cost will be prohibitive, and any attempt to introduce an element of subsidy will lead to difficulties for the industry and the consumers. Government, the Minister said, has tried to help movement by road as much as possible within the limitations set out above. If there were some restrictions on the operation of

road transport in coal fields, they were imposed mainly to prevent evasion to excise duties. Efforts, however, are being made to simplify the procedures so that colliery owners may purchase their coupons for excise which they could issue to the carriers when the trucks are loaded. Even when such difficulties are eliminated, added the Minister, there will still be limitations in regard to transport by road, particularly over long distances. As regards water transport which could be a cheaper alternative to road and rail transport for movement of bulky commodities like coal, Mr Swaran Singh said that the country has to pay the price for past neglect.

★ Speaking at the inauguration of the Indian Investment Centre in February last, Mr G. L. Mehta, the Chairman of the Centre, referred to the time-consuming procedures in processing applications for licences involving foreign collaboration, and expressed the hope that it would be possible to bring about better coordination whereby the time taken in various formalities could be reduced. The hope has been partially fulfilled, perhaps earlier than Mr Mehta expected. The Ministry of Commerce and Industry has moved quickly in the matter and announced measures to streamline procedures as well as to provide a unified agency to undertake co-ordinated consideration of all aspects of Third Plan projects in the private sector, such as Industries Act licensing, capital issues, terms of foreign collaboration import licensing of capital goods etc. A senior officer has been placed on special duty in the Commerce and Industry for the purpose. This officer will give prompt and reliable guidance to foreign investors interested in participating in important Third Plan schemes. He will also be primarily responsible for speedy processing of important collaboration projects involving large foreign investment, technical know-how and skills of special significance.

Government policy regarding foreign investments would be to attract private foreign capital in those fields in which the country needs to develop in pursuance of Plan targets. If any project is approved in the private sector and, if imported plant and machinery are required, foreign capital would ordinarily be welcome as a form of financing the project. Where a phased programme of manufacture is proposed, emphasis will be on the rapid build-up of indigenous production. Long term assembling and formulations and production based on imported materials have to be avoided. A new slant to the policy hitherto followed has been given by the relaxation of requirements regarding the extent of foreign holdings. While Indian majority holding will be generally welcomed, the ratio of foreign capital to Indian capital in joint enterprises, the extent of

foreign share holding that is to be permitted in any case etc, would be judged on merits, after evaluating the technical skills offered and after weighing the requirements of foreign exchange for the purchase of equipment abroad and the desire of Indian collaborators to play an effective part in the company's management.

The fields in which foreign investment is not ordinarily needed, as well the industries in which foreign capital would ordinarily be welcome, have also been indicated. Banking, insurance, commercial activity and plantation are the fields in which foreign capital is not needed. Private capital, foreign or Indian, as a rule is not being allowed in the industries listed in Schedule A of the Industrial Policy Resolution of 1956, but exceptions may be made in special circumstances where this would be in public interest.

★ An order for the first Lighthouse Ship to be built for the Union Lighthouse Department has been placed with Tito Shipyard in Yugoslavia, in terms of a contract signed here last week. The vessel which will cost Rs 150 lakhs is expected to be delivered early in 1963. The design and specifications of the tender have been specially developed over a period of years in collaboration with the various lighthouse authorities of the world and, when completed, it will be the most modern lighthouse tender of its capacity afloat. It is very likely that the next lighthouse ship may be built in India with the experience gained in designing this one.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

5% RUPEE DEBENTURE STOCK 1970

INTEREST FOR THE HALF-YEAR ENDING 30th JUNE 1961

Notice is hereby given that interest at the rate of Rs. 25/- (less Indian Income Tax) per Rs. 1,000/- of Stock will be paid on 1st July, 1961 to Debenture Stockholders registered in the books of the Company on 23rd June, 1961. Applications for transfers received at the Company's Office at Victoria House, Post Box 304, Chowringhee Sq., Calcutta, upto 23rd June, 1961 will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 24th June, 1961 to 30th June 1961 both dates inclusive.

By Order of the Board,
H. C. BOWKER

Agent

JUTE Prospects for Raw Jute Supply

AT long last, all, including Government, seem to be agreed that raw jute supply during the current jute year will not be sufficient to keep the mills running even at the present curtailed rate of working (42½ hours a week with 12 per cent of looms sealed) till the new crop becomes available. The Indian Jute Mills Association has therefore proposed that a block closure of mills for a total period of a fortnight will enable the industry to overcome the crisis. At the joint meeting of the representatives of the IJMA and the Ministry of Commerce and Industry in New Delhi in the last week of April, both sides felt that a final decision could be taken only after reviewing further the raw jute supply position in the latter half of May when the stock position of raw jute as well as the prospects of the next season's crop would be known more definitely. Since that meeting, the question has been taken up by the West Bengal State Government who in their turn has arranged for a discussion amongst the parties concerned, the Indian Jute Mills Association and the representatives of labour. This meeting also has not been able to arrive at an agreed solution although there is said to be an unanimity of opinion as regards the manner of tackling the problem of raw jute shortage. Just as the Government has realised that the only alternative is the course proposed by the IJMA, a block closure of mills for a specified period. Labour too finds it the only way out. With this rider, that its position should in no way be jeopardised in the bargain. It is reported that a final decision will emerge soon enough as the three parties, the State Government, IJMA and the representatives of labour are expected to meet again shortly to continue their discussion. As far as marketmen are concerned, they have taken as granted a decision for a block closure of mills as proposed by the IJMA and are proceeding on such an assumption. This perhaps explains the frequent rumour during the past few days that a decision on block closure had already been taken and an announcement in that connection was imminent.

While there is some anxiety still as regards raw jute supply in the next three or four months, there is, however, growing optimism that the next jute year will herald a new era in the supply of raw jute to the industry. Weather conditions have been very favourable so far for the growth of the crop and sowings both in India and Pakistan are reported to be about 40 per cent higher than at the same time last year. While the Pakistani crop is expected to come up to 7 million bales, reports from the jute growing areas in India indicate that the crop will be a bumper one. From present indications it is quite on the cards that new crop jute will become available from early August, if not earlier. Although it is said that in view of the meagre stock position of Pakistani jute mills, a sizable portion of the early arrivals of the Pakistani new crop may not be available for outside buyers, the indication from the Government of India that adequate facilities will be provided for our industry to import Pakistani new crop jute in time has reinforced the confidence regarding raw jute supply next season.

Perhaps it is too early to assume that the next crop will be early and large. Indications so far no doubt point to a bumper crop but in the next three or four months that will be required for the full growth of the jute plant, there may be upsetting developments, like, for instance, the devastating cyclone in East Pakistan a few days ago. It is reported that the cyclone has caused damage to the jute crop in some areas in Pakistan. In the past, heavy monsoon rains have been known to cause considerable damage to the jute crop both in India and Pakistan.

When everything else is all right, transport bottlenecks may suddenly develop and hold up jute supplies from reaching mills in adequate quantities.

Even so, the outlook for jute supply to the industry from a long term point of view seems to be quite good beginning from next season. The intensive efforts made by the Governments of the main jute growing countries are bound to be reflected in a sizably increased world supply of raw jute. In India efforts this year have been intensified to secure an increased area under jute and mesta and a higher output of these fibres by the distribution of fertilizers and improved seeds. The IJMA has drawn up a scheme for the establishment of a buffer stock. Thus, the new efforts may be expected to help minimise considerably the periodic uncertainty as regards supply of raw jute to the industry.

It has now been made clear that forward trading in jute and jute goods will not be allowed to be resumed before 12 June. The East India Jute and Hessian Exchange had asked for permission to resume from 9 May, trading in jute goods for November 1961 delivery and in raw jute for December 1961 delivery. In rejecting the proposal, the Forward Markets Commission has pointed out that a large section of genuine operators consider that the commencement of trading in the new contracts in May would be premature. The Commission has however indicated that it will be prepared to concur in the commencement of trading in these contracts from 12 June or any date thereafter. The ELJHE's proposal has also been opposed by the IJMA on the ground that without adequate safeguards against excessive bear pressure, resumption of

forward trading would be detrimental to all interests concerned.

TEA

Exports from Cochin & Ceylon

ACCORDING to tea sources from Cochin, exports were slightly higher at 6.53 million pounds in March as compared to 6.24 million pounds in the corresponding month of last year.

T. D. KANSARA
General Manager

Total exports are, however, lower at 77.16 million pounds in the fiscal year ended March 31, 1961 as against 78.81 million pounds in the previous year.

Tea exports to the UK declined from 46.3 million pounds in 1959-60 to 45.98 million pounds during the year under review as did those to the USA from 6.36 million to 4.33 million pounds. Canada and Australia, too, reduced their offtakes. Russia, on the other hand, increased her offtake of South Indian tea from 6.23 million to 6.64 million pounds. There was also substantial improvement in South Indian tea shipments to the Middle East area. Exports to all other destinations were negligible.

As far as exports from Ceylon are concerned, they were higher at 36.9 million pounds in January, 1961 as compared with 33.02 million pounds in the corresponding month of last year. With the exception of the Continental countries and Egypt which reduced their offtake in the month under review, shipments to all other destinations recorded an increase.

In the Internal Sale held in Calcutta this week, offerings were 22,721 packages of Dusts. There was a good general demand. Orthodox descriptions registered a decline of up to 15 nP per kilo, though the small and bright lines received better support. Legg-cut teas were readily absorbed at irregular but generally easier rates with the brighter lines selling well.

Clean CTCs were well supported and sold at irregular rates with the good varieties showing an easier tendency. Fibrous descriptions were generally easier, but received better support than of recent weeks. Following rates were quoted:—Plain Orthodox Dust Rs 4.20 to Rs 4.40; Medium Assam Dust Rs 4.35 to Rs 4.80; Legg-cut Dust Rs 4.40 to Rs 5.20; Medium Assam CTC Dust Rs 5.90 to Rs 6.30 and Good Assam CTC, Dust Rs 6.30 to Rs 7.00. There was a good demand for the 815 chests of Leaf grades on offer.

In the Cochin market, 600,000 kilogrammes of Leaf tea was offered for export. Against good demand, low medium and medium teas were irregularly 5 nP a kilo easier, while good mediums were irregular and easier.

Production of tea in South India is estimated at 12.8 million pounds in March as against 11.1 million pounds in the corresponding month of last year. Total production, in the first quarter of the current year, is also higher at 35.8 million pounds as compared with 30.9 million pounds in the corresponding period of last year.

In the Colombo market, offerings were 6,621,235 pounds which met with strong general demand. Although the quality from western districts was inferior, there was active competition for the best liquoring sorts at substantially dearer rates; but plainer liquoring kinds were lower. Better liquoring Uva teas were firm to dearer; but plainer sorts were lower. There was less demand for medium broken, which declined by 5 to 10 cents per pound. Low-grown teas were in good demand at about previous rates.

The quality of the 13,449 packages of Ceylon tea catalogued for sale in Mining Lane this week often showed

an improvement and there was a very strong and active demand. Low-grown teas were fully steady and sometimes dearer, while many of the better liquoring sorts showed marked advances ranging from 2d to 6d per pound as compared with last prices.

A very strong demand prevailed for the 5,700 packages of South Indian growths offered. Prices were generally higher, particularly where quality showed an improvement. Fannings were a strong feature.

Tea stocks in London, as on April 28, were 148.19 million pounds as against 150.69 millions in the previous week. The total quantity, to be landed on the same date was 13.83 million pounds. Total afloat was 15.75 million pounds including from Calcutta 6.88 million pounds; from Chittagong nil; from Cochin 653.910 pounds; from Ceylon 4.32 million pounds and from other Ports 3.89 million pounds.

COTTON Smart Rise in Futures

An outstanding feature of trading in the Bombay cotton market was the smart rise of about Rs 50 per candy in Kala Gin and Wagad. The enthusiasm was fanned by the announcement of the Government of India of an export quota of 50,000 bales of indigenous cotton of 23/32" staple and below, but other than Bengal Deshi. The export quota would be issued on a "first-come first-served" basis, subject to a maximum of 2,000 bales. It was also announced that the co-operative societies situated in the areas growing such cotton would get quota for 2,500 bales. Shipment bills will be accepted from 12 May onwards.

The announcement of export quota was gratefully greeted by the traders, who were facing heavy accumulation of stocks, and the growers of such cotton especially those in Gujarat. The co-operative societies who were perturbed by the reluctance of the textile industry to buy indigenous growth can also have a sigh of relief.

But how far the latest announcement will improve the trading conditions in the cotton market no one can predict. The rise in Kala Gin and Waged was considered as merely speculative and the other staple growths did not evince any encouraging results. The sentiment in the futures section looked up to some extent and the Jarilla August contract spurted up to Rs 575 from Rs 567 per three quintals and on Wednesday last it was quoted at Rs 576.

The demand in the ready market revived with interest confined mainly on Digvijay, Vijay, Surti, L 147, and Laxmi. But the revival proved short-lived and the demand for these styles slackened with prices showing further weakness. Interest has since shifted to American cotton of staple 1" and below and the daily offtake was fairly good. The Textile Commission has stated that no concession would be permitted to the

mills seeking exemption from lifting compulsory allocation of US cotton. The export demand for Indian lower staple cotton was fairly good and Japan figured as the main buyer.

There was also fair enquiry for East African cotton, prices of which firmed up considerably, deriving inspiration from the restricted offerings. Sudan cotton met with only very few buyers. No sales were reported in Egyptian cotton.

New York:

Trading conditions in the New York cotton futures market firmed up with slight changes in the contracts. The total USA 1960 cotton crop ginnings amounted to 14,265,038 running bales. Planting of 1961 cotton crop is reported to move steadily in the Western half of

cotton belt. Considerable planting progress is also being made in Eastern and Central portions of cotton belt.

Alexandria:

The fluctuations in Karnak and Ashmouni contracts during period under review were wide. May Karnak spurted up to 72.10 tallaris and June Ashmouni to 84.95 tallaris. The prices, however, fell down as the week progressed and at the end of the week the tone remained listless.

Piecegoods:

A noteworthy feature in the Bombay piecegoods market during the last week was the moderate activity witnessed in the export section. Business on the domestic

sector, however, continued to be listless presumably due to the stringency in the monetary market. The turnover during the period under review was only nominal and demand from the upcountry centres was at a low ebb. The major consuming centres remained inactive through out the week and remittances for goods already lifted were unduly delayed. Stray business in the seasonal goods like mulmul dorais, lawn and voiles, was reported to have transacted with some of the South Indian consuming centres. Saris and dhoties also met with fair enquiries from those destinations.

Quality goods were worst affected due to the poor demand and the premium on those styles registered a sharp decline. Some mills were stated to have concluded forward business even at the reduced prices. Local merchants were reluctant to credit selling as the upcountry purchasers failed to make prompt payments. Despite the moderate activity on the export section, the performance on the whole was not quite encouraging. The United Kingdom accounted for only a negligible quantum of goods mainly due to the lack of licences for imports. Bookings from that destination were, therefore, confined to the usual qualities in order to cover its immediate requirements. It is reported that some of the leading shippers in Bombay have formed an association with a view to increasing the shipments to Great Britain. Sudan was practically quiet during the whole period.

Moderate business in processed goods and grey sheetings was transacted with East Africa. Casablanca accounted for a small quantum of cotton grey sheetings. In spite of the fair enquiries from that destination, business failed to materialise on a substantial scale due to the disparity in prices. Holland focussed its attention on grey cloth. Singapore was satisfied with a small quantum of bleached and grey sheetings. A good quantity of bleached long cloth has been shipped to Indonesia. Iran evinced keen interest in mercerised poplins, prints and pyjama shirtings. Australia was satisfied with a small offtake of seasonal goods.

Inquiries from Burma were comparatively fair but the disparity in prices stood in the way of concluding any business. According to the consensus of opinion business with that destination is likely to be struck in the coming weeks.

Coffee Marketing Problem

WITH the new crop arrivals crossing the 50,000-ton mark, the Indian Coffee Board is reported to be facing a big problem of storage and marketing. According to the latest report, the receipts in the Board's Pool have reached well over 53,000 tons as against 37,743 tons during the corresponding period of the previous season. To minimise the pressure on storage facilities and the chances of deterioration, the Board is expediting exports.

But, the export market is now showing a weaker trend as it does

elsewhere in the world, but also foregoing the high premium it formerly enjoyed over the domestic price level to the extent of incurring actually a heavy discount at present. For instance, Plantation 'A' grade, which was selling for Rs 400 per 50 kilos in 1953, could realise only Rs 164 in the export sale held on 23 March. This compares with the internal price of over Rs 220 per 50 kilos.

The growers, who were complaining that the minimum release price fixed by the Coffee Board was not sufficient to meet their production cost, were compensated for through a share in the export premium. This formula cannot work in a situation in which such a premium has been a thing of the past. The problem of marketing is thus getting complicated more and more. A reorientation of the Coffee Board's marketing policy is now more necessary than ever before.

FOODGRAINS

Quietly steady conditions were noticed in the Hapur Foodgrains market during the past week. Wheat prices recorded fractional gains, to be quoted at Rs 14.25 to Rs 14.75 a maund for the average quality and Rs 15.50 to Rs 16.25 for the farm produce. Gram prices improved slightly, to quote at Rs 12.87 for the Punjab variety. In the Pulses section, Peas continued to attract support from the stockists although loading continued to be restricted.

In the Bombay market, prices of almost all popular varieties of indigenous rice declined by about Rs 2 per quintal. The setback was at-

tributed to speculative selling, induced by the belief that the procedure for the import of rice from Madhya Pradesh would be liberalised in the near future on account of the need to dispose of the accumulated stocks in that State. Moreover, financial stringency and the existence of a fairly satisfactory stock in the City aided the downward tendency in prices.

Indigenous wheat displayed a marked weak behaviour following reports that a large quantity was on its way to the City from Madhya Pradesh. Arrivals of the new crop from the Punjab also induced traders to be cautious. In the Coarse grains section, Jowar and Bajra registered an improvement of a rupee or two per quintal.

In the Punjab and Delhi markets, however, wheat prices developed a rising tendency. Though the crop this year was estimated to be larger, arrivals in Delhi were meagre. Apart from wagon shortages, the abolition of zonal restrictions on the movement of the commodity also affected the prices. Above all, the Punjab Government wants to continue State trading in foodgrains. At the same time, it does not want any drastic change in its present price support policy under which it buys wheat if the price falls below Rs 14 a maund.

SUGAR

Thanks to the release of a fresh quota of 200,000 maunds and the easy supply position, Sugar prices have developed a downward tendency. In

the Hapur market, the rate is quoted at Rs 107 per bag.

GUR

In the Hapur market, Gur prices are ruling steady, being quoted at Rs 15.75 a maund. Daily arrivals of gur and shakkar are poor, at about 50 maunds. Stocks are estimated at 60,000 maunds. The cane crop is reported to have been affected by pest in some areas.

CHEMICALS & DYES

Although the turnover in the Bombay market for Dyes and Chemicals is small on account of the tight money conditions, there is liveliness in certain popular items.

In the Chemicals section, Hydro-sulphate has been in the lime-light, because of the announcement of a cut in the price of a British product for a long period. It is evident it is learnt that the price of the Manox brand has been reduced from £173 10sh to £160 a ton. Though the new price has no immediate effect on the market, it is said that it will bring down the price level in the long run.

In the Dyes section, blue RSN Japanese is firm around Rs 35. In scarlet RC, the German variety is slightly better at Rs 11 and the Japanese variety at Rs 10.25.

YARN

In the Bombay Yarn market, indigenous Rayon yarn has shot up to new highs and this is attributed to

BANKING OF EVERY DESCRIPTION INCLUDING FOREIGN EXCHANGE IS UNDERTAKEN.

"In view of the higher profits that had been made," Sir Homi Mody said, "the Directors have proposed an increase over the dividend paid to Shareholders last year. The interim dividend of Rs. 2.10 per share, subject to tax, already paid for the half-year ended 30th June, together with the final dividend of Rs. 2.50 per share, subject to tax, now recommended for the second half of the

year, would make a total dividend of Rs. 4.60 per share, subject to tax, equivalent to Rs. 3.22 net per share. This works out to 12.88% net for the whole year. In addition, it was proposed to give the Shareholders a Jubilee Bonus of 50 p.p. per share, subject to tax."

Before concluding his speech, Sir Homi Mody thanked the Vice

Chairman, Mr. C. H. Bhabha, the General Manager, Mr. N. K. Karanjia, and the Deputy Managers, Mr. F. C. Cooper and Mr. V. C. Patel, and the other Officers at the Head Office and Branches and the members of the clerical and subordinate staff throughout the country. He also thanked the Local Advisory Committees at the various centres for the co-operation

and guidance they had always extended to the Bank.

Finally, Sir Homi Mody expressed the hope that as the years rolled by, it would be the good fortune of the Bank to serve the interests of the industrial and business community even more efficiently than in the past. He looked forward with confidence to

greater and greater efforts on the part of one and all connected with the Bank to enhance the prestige, position and prosperity of the great Institution with which all had the privilege to be associated.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

The Kohinoor Mills Company Limited

Better Working Results

Higher Efficiency and Production

Mr A. N. Haksar, the Chairman, on export programme

The following is the text of the speech delivered by Mr A. N. Haksar, Chairman of the Kohinoor Mills Co Ltd, at its Annual General Meeting held on 10th May, 1961:—

Gentlemen,

I am glad to report that the year under review has definitely been an improved one for your Company. The working in all sectors of the Mill was better than last year and higher efficiency and production were achieved. Your Company increased the production of fine and super-fine fabrics to suit consumer demand. New bleached and dyed sorts in both men and women's wear were introduced and some of these have been popularised in the market. The Company progressively started 45,500 spindles by introducing a third shift in the spinning section of No. 2 Mill. This was done without additions to preparatory machinery. In your No. 3 Mill, screen printing was introduced and is running satisfactorily now.

Cotton: The Cotton Year 1960 was a most difficult one. Untimely rains in most cotton producing districts adversely affected the crop quality and quantity. Early estimates of a 48 lac bales crop had to be revised to 38 lacs resulting in an acute scarcity of desirable qualities and a sharp advance in prices. Despite liberal imports and restrictive measures taken by the Textile Commissioner in the form of quality controls and Mill Quotas, cotton prices continued to advance. By the end of December, an extremely tight supply position was evident and at January end the situation was alarming. To overcome this shortage and enable Mills to maintain their production, Government was forced to step up imports of foreign cotton, especially of short staples from America. Even so, stocks in mills were reduced to a minimum at the commencement of the new crop. Fortunately, the quality of the new

crop was good and first estimates forecast 50 lac bales. To stabilise the market, however, the Textile Commissioner continued the system of Mill Quotas and Quality Control. These measures assisted by a larger crop, had the desired effect of bringing down prices and the position was much improved by the new cotton year. Your Company, like other textile units, suffered from higher prices both for Indian and imported cotton for the year under review.

CLOTH

During the first half of the year, cloth movement was good and the stocks carried by the Company were reasonably low. In the second half, however, Government made it known that a reduction in cloth prices was desired. This caused uncertainty in the market and the movement of cloth became extremely sluggish. Negotiations took place between Government and the Indian Cotton Mills Federation and it was agreed to start stamping prices on cloth from 10th September 1960, on a formula based on August 1959 cloth prices. Even after this agreement was reached, Government required still further reduction in cloth prices and, therefore, uncertainty in the market continued. The final formula applicable from 1st January 1961, resulted in a still further reduction. This price reduction will obviously bring down the profit margin of all mills. It will be the endeavour of your management to make up this shortfall in profit by improving working efficiency. Until the formula was agreed, movement of cloth was nominal and, therefore, stocks at the end of the year were higher than had been expected.

In our endeavour to earn foreign exchange both for the country's and your Company's benefit, we stepped up our exports from Rs 22.37 lacs last year to Rs 34.97 lacs. Even though we sell in the export markets at marginal profit

levels, your management considers it beneficial to export with a view to earning machinery licences to modernise your Mills and to obtain licences for the import of extra quantities of Cotton. In the coming year we hope to maintain and, if possible, to step up our export programme. This would, of course, depend upon market tendencies.

YARN

We had no problems in the marketing of sewing thread and its movement was well maintained through the year. We ventured into certain new and more paying counts of yarn, and a part of this benefit was felt during 1960. Our yarn exports for 1960 were Rs 15.51 lacs against Rs 7.44 lacs last year.

SALES AND STOCKS

Our sales for both cloth and yarn continued smoothly. I have explained above the reason for an increase in stocks in December, but as the trade finally settled down in January 1961, stocks moved extremely well. I am glad to report that today our total stocks of finished products constitute only about three weeks production. This is a very satisfactory position. It will be our endeavour to maintain low stocks and reduce them further if possible. Our thanks are due to your Selling Agents who have done very well throughout this period.

LABOUR

By the Central Wage Board Award 1959, the basic wages of textile workers were enhanced by an average of Rs 8/- per worker. This was the first step in a two-phased programme which was intended to give a total benefit of Rs 10/- per worker. The additional Rs 2/- will be levied in 1962. Whereas this was a benefit to the labour force in the textile industry, it was a tremendous drain on the profitability of Mill units. This Award, however, re-

cognised rationalisation as a part of the total scheme. This, I feel, is a step in the right direction as the Indian textile industry can only become competitive in world markets by linking up the utilisation of rationalised labour with high production machines.

Our relations with the Rashtriya Mill Mazdoor Sangh, which is the recognised Labour Union for our Mill, were most cordial, and with their help rationalisation and standardisation measures were introduced in various sections. In all 785 posts were reduced and this without any deterioration in our labour relations. Out of this, retrenchment compensation and gratuity was paid to 547 persons and we took advantage of national wastage to abolish the balance 238 posts. The R.M.M.S. gave us their full co-operation during this period and assured us of their complete assistance in future. In our No. 3 Mill, the four-loom-to-a-weaver system was introduced in half the Weaving Shed and to avoid unemployment and the payment of retrenchment compensation and gratuity, a second shift was started in the whole Weaving shed in the middle of the year.

MACHINERY

A comprehensive programme of maintenance and rehabilitation was carried out throughout the year. New machinery of the value of Rs 37.68 lacs was installed in your Mill and we have further orders on hand for machinery worth Rs 46 lacs. New N.M.M. Ring Frames were received from the month of March onwards and these are being progressively erected to replace old ones. A new set of Whitin Combers were erected and are in production. The Company also installed the latest type of hot air stenter from Germany and automatic pirn winders from Holland. Most humidification systems were renovated and these have greatly improved working

13 May 1961

conditions. We have still to receive a number of modern machines which will improve the quality of your mill production. The 48 automatic looms which we had been allotted some while ago are now on order, but unfortunately no further allotments have been made. I trust, however, that in due course we will receive further licences to enable us to have a full shed of this machine. Your Management is seeking all avenues to modernise in the best and quickest manner possible.

No. 3 MILL

For your No. 3 Mill which is a Silk and Art Silk Unit, we have been facing the problem of non-availability of raw material. There is a great shortage of synthetic yarn in the country and sometimes very high premiums have to be paid for yarn vitally needed to keep the Unit working. To solve this problem, your Management has decided on the policy of export for earning licences for the direct import of the required yarn. This policy will certainly bear fruit and we hope that accounts of No. 3 Mill will show a marked improvement in 1961.

PROFIT & LOSS ACCOUNT

From this you will notice that we have shown a gross profit of Rs 32.18 lacs after adding back to the net profits Depreciation, Taxation, Managing Agents' Remuneration and Development Rebate totalling Rs 24,41,572/-. This profit has been arrived at after payment of certain non-recurring charges which absorbed Rs 15.91 lacs. These constituted mainly of retrenchment compensation and gratuity paid (Rs 6.49 lacs and Rs 4.50 lacs respectively), and the payment of staggering compensation for the year 1952 amounting to Rs 4.92 lacs. Although these measures have reduced the profits in the year under review, there is no doubt that in the years to come these losses will be more than recouped and the Company will stand to benefit. You will appreciate that the actual working profit for this year was more than double that of the preceding one. This, I submit, is a reasonable achievement. I can only hope that this improvement will be maintained.

There were a few other additional burdens the Company had to bear over and above last year. Like all other Mills, we paid an additional average of Rs 8/- per worker which totalled Rs 7 lacs for the year. Dearness allowance was higher by Rs 11.75 lacs. The bonus for 1958 was also paid which amounted to Rs 2.96 lacs.

Note: This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

THE INDO-BURMA PETROLEUM COMPANY LIMITED

Registered Office:

Gillander House, Netaji Subhas Rd. Calcutta-1

NOTICE is hereby given that the Fifty-third Annual General Meeting of the Members will be held at the Registered Office of the Company on Friday the 9th June, 1961 at 10 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960.
2. To sanction the declaration of a dividend.
3. To consider and, if thought fit, to pass the following Resolution for which a Notice as required by Section 257(1) of the Companies Act, 1956, has been received by the Company.

As an Ordinary Resolution

"That Mr. S. M. Wahi be and is hereby appointed a Director of the Company".

4. To consider and, if thought fit, to pass the following Special Resolution for which Special Notice required under Section 261(2) has been received by the Company for the re-election of Mr. J. N. C. Killick who is an employee of the Managing Agents and who retires by rotation and, being eligible, offers himself for re-appointment.

As a Special Resolution

"That Mr. J. N. C. Killick who is an employee of Messrs. Steel Brothers and Company Limited, the Managing Agents, be and is hereby re-elected a Director".

5. To appoint Auditors including Branch Auditors for the year ending 31st December, 1961 and to fix their remuneration.

Notice is further given that the Ordinary Register of Members of the Company will be closed from the 15th May 1961 to 9th June 1961, both days inclusive.

By Order of the Board

STEEL BROTHERS AND COMPANY LIMITED,
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta-1.
27th April, 1961.

N.B. 1. A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and, on a poll, to vote in his stead. Such proxy need not be a member.

2. An explanatory statement concerning items 3 and 4 as required by Section 173(2) of the Companies Act, 1956, has been posted to members.

INDIAN COPPER CORPORATION LIMITED.

(Incorporated in England).

DIVIDEND NO. 35.

NOTICE IS HEREBY GIVEN that at the Thirty-seventh Annual General Meeting to be held in Committee Room No. 2 of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta, on Wednesday, the 9th August, 1961 at 11-30 A.M. the Directors will recommend payment of a Dividend (No. 35) for the year ended 31st December, 1960 of 27% (6.48 pence i.e. 36 Naye Paise per unit of stock) subject to deduction of Tax, in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 31st August, 1961 to all members registered in the books of the Company at the close of business on the 10th June, 1961.

The Registers of Members will be closed from the 12th June, 1961 to the 1st July, 1961, both days inclusive.

The profit for the year ended 31st December, 1960 was £1,307,982 (against £1,202,253

for previous year), out of which have been provided £175,000 for depreciation (£175,000 last year), £500,477 for Taxation (against £439,949), £50,625 for Development Rebate Reserve (against £56,250) and £200,000 for General Reserve (against £125,000) leaving a net profit of £381,880 (against £406,060). With £107,121 brought in from 1959, the balance available is £489,001 (against £477,372) and after providing £370,251 for the abovementioned proposed Dividend of 27% subject to deduction of Tax (Dividend No. 34 of 27% subject to deduction of tax last year—£370,251) the balance carried forward is £117,750 (against £107,121 brought in from previous year).

By Order of the Board,

G. A. CARVER,
Secretary.

Gillander House,
Netaji Subhas Road,
Calcutta-1.
Dated the 10th May, 1961.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

For the Investor

INVESTMENT GOSSIP Stagnant Conditions

Although the principal stock markets in the country have not displayed a uniform trend this week, Dalal Street has been alternatively cheerful and subdued while the dullness of Lyons Range has been unbroken—the general undertone has been unmistakable. It is clear that investors are in no mood to figure either as buyers or sellers just now, and perhaps advisedly. If they are reluctant to dispose of their holdings of equities, it is mainly because of the belief that prices, despite the present reduced yield pattern, may not suffer much depreciation in view of the fact that most companies are in the process of diversifying or expanding their activities. Moreover, corporate working is quite satisfactory. Fresh buying, however, does not ensue as a consequence for the simple reason that funds in the hands of investors are far from adequate even to meet earlier commitments. Subscription to new issues in the past one or two months has absorbed a very large portion of the available money as will be evident from the tremendous response to the Goodyear issue. Investors also need to keep ready cash for meeting the calls on some of the already subscribed issues. The offer of right shares by some prominent companies is another factor that tends to divert funds from the existing shares.

With investors continuing to be thus preoccupied, bull operators perceive have to move cautiously. The Government's loan programme is not far off and consequently institutional interest in equities can only be expected to be at a meagre ebb till the Government loans are out of the way.

The cumulative effect of the imminence of the Government loan programme, the fact that investors are rather heavily committed by way of earlier subscription to new issues, and the immobilization of large amount of money by some of the recently floated new issues is reflected in the present stagnant conditions in the stock market. It is true that at least in Dalal Street bulls have been trying, though ineffectually so far, to push up the market on the ground of the present better technical position; but it seems unlikely that they will succeed for some time to come in view of the renewed reports about the authorities toying again with the idea of curbing speculation in stock markets. In this connection it may be noted that there is already a report to the effect that Government is seriously considering the banning of the publication of kerb rates. Bear operators may continue to sound

convincing as regards a serious decline in industrial production as power shortage in important regions of the country looks like continuing for some time yet. And nobody is prepared to say when coal supply to industries will be normalised.

NEW ISSUE NOTES Western India Chemicals

THE Western India Chemicals (Private) Limited is soon to be converted into a public limited company. The company is already engaged in the manufacture of 20 tons of superphosphate per day and the factory is situated at Poona. It is proposed to expand the present capacity to 100 tons a day. The company has received the necessary licence from the Government for the purpose. The capital outlay on this project is estimated at Rs 40 lakhs and the expansion programme is to be completed in about two years. The company has applied to the Controller Capital Issues for a public issue of Rs 50 lakhs. Of proposed issue, about Rs 35 lakhs will be offered for public subscription. The promoters are expected to be in the market as soon as the sanction is obtained from the Government.

Motor & Machinery

The Motor & Machinery Manufacturers Limited, Calcutta, has plans to expand the capacity of its existing lines of production and undertake the manufacture of certain new items. It has obtained the permission of the Government to raise the production of electric motors from 36,000 h.p. to 66,000 h.p. a year. The capital outlay in respect of the above programme is estimated at Rs 40 lakhs. The company is said to have obtained the sanction from the Government for raising its capital from Rs 13 lakhs to Rs 50 lakhs consisting of 10 lakhs preference shares and Rs 40 lakhs of equity shares. The new shares will be issued at par. The company has not taken any decision with regard to the quantum of the new capital that is to be offered to the public.

Aditya Mills

Aditya Mills Limited will shortly be in the market with a public issue of about Rs 25 lakhs. The company has been granted a licence to set up a textile plant consisting of 25,000 spindles and 500 looms at Kishangarh in Rajasthan. The initial project cost will

be Rs 1.10 crores. The Industrial Finance Corporation of India have granted a loan of Rs 50 lakhs and the balance of about Rs 10 lakhs will be raised by capital issue, of which the Rajasthan Government has agreed to take up shares worth Rs 15 lakhs. Approximately Rs 25 lakhs worth of shares will be offered to the public for subscription.

INVESTMENT NOTES Indian Copper

The shares of Indian Copper Corporation have suffered a sharp setback to Rs 5.28 from Rs 5.59—the highest level touched last week. This is mainly due to the disappointment over the maintenance of the dividend at 27 per cent for 1960 and the absence of any announcement with regard to the bonus issue which had been eagerly awaited by market circles. The trading profit for last year is £1,307,982 as against £1,202,259 for the previous year. Out of this, a sum of £175,000 (£175,000) is provided for Depreciation; £500,477 (£439,949) for taxation; £50,625 (£56,250) for Development Rebate Reserve and £200,000 (£125,000) for General Reserve, leaving a net profit of £381,880 against £406,060. After paying the dividend, the balance carried forward is £118,750 against £107,121. The dividend is payable on or after 31 August to those shareholders who are registered as on 10 June 1961. Transfer Books will be closed from 12 June to 1 July 1961.

Indu Mills

It is reported that 550,000 equity shares of India United Mills have been acquired from the existing minority interests by a Calcutta party at a price of Rs 18 per share. As a result of this change in shareholdings, it is expected that there may be some change in the company's directorate.

TISCO

The overall production of the Tata Iron & Steel Company Limited is lower last month as compared to the previous month. The output of saleable steel has declined to 106,000 metric tons from 114,900 tons in March, mainly due to a drop in finished steel output from 81,700 metric tons to 69,000 metric tons. The semi-finished steel production has, however, improved from 33,200 metric tons to 37,000 tons. The output of pig iron is also lower at 135,700 metric tons against 141,600 tons and steel ingots at 126,000 tons against 142,300 tons.

Phillips Carbon Black

The Phillips Carbon Black Limited has made a call of Rs 2.50 per share on the 1,250,000 equity shares recently issued to the public. The amount of the call is payable on or before 31 May 1961. Any amount unpaid

on 31 May will bear interest at the rate of 12 per cent per annum from the above date till the date of payment.

IN BRIEFS

Philips India Limited has maintained the dividend at 12 per cent, taxable, for 1960.

The Dufflaghur Tea Company Limited has proposed an interim dividend of 10 per cent, taxable, for 1960. The dividend is payable on or after 25 May 1961 to those shareholders who are registered as on 25 May. Transfer Books will remain closed from 19 to 25 May 1961.

The Soom Tea Company Limited has declared an interim dividend of 25 per cent taxable, for 1960, payable on or after 22 May to those shareholders who are registered as on 22 May 1961. Transfer Books will remain closed from 17 to 22 May 1961.

Dalmia Cement (Bharat) Limited has proposed to maintain the dividend at 12 per cent, taxable, for 1960.

Madras Cements Limited has obtained the permission from the Government to pay interest at 8 per cent per annum on the paid-up equity share capital for the period from 1 January 1959 to 31 December 1959 to holders as on 24 May 1961.

BALANCE-SHEET BRIEFS

The working of the Dalmia Iron & Steel Company has resulted in a net profit of Rs 19.86 lakhs for the year ended 30 September, 1960 as against a net profit of Rs 2.88 lakhs. After transferring Rs 33,532 lakhs from the Dividend Equalisation Fund, the directors have recommended a taxable dividend of 35 nP per share or 3.5 per cent. This compares with 11.25 per cent paid for the previous year.

ORIENT PAPER MILLS LTD. Regd. Office: Brajrajnagar, Dist. Sambalpur (Orissa).

Pursuant to the decision of the Board of Directors of the Company, 4,40,475 Ordinary Shares of Rs. 10/- each are being issued for cash at a premium of Rs. 12/- per share and the same will be offered in the first instance to the holders of the Ordinary Shares, whose names appear in the Register of Members as on the 27th May, 1961, in the ratio of 3 new Ordinary Shares for every 10 existing Ordinary Shares, ignoring fractions, with liberty to renounce the shares either in whole or part in favour of others and to apply for additional shares. The application money has been fixed at Rs. 5.50 nP. (Rs. 2.50 nP. towards nominal value and Rs. 3.00 towards premium) per share and the balance Rs. 16.50 nP. shall be payable as and when called for.

Notice is hereby given that the Share Transfer Books in respect of the Ordinary Shares will be closed from the 23rd to 27th May, 1961—both days inclusive.

By Order of the Board,
B. K. VYAS,
Secretary.

8, India Exchange Place,
Calcutta, the 4th May, 1961.

13 May 1961

wiping out the debit balance brought in from the previous accounts, an interim dividend of Re 1 per share, taxable, has already been paid. No further dividend is proposed.

Polsons Limited has reported a net profit of Rs 6.30 lakhs for 1960 as against Rs 5.65 lakhs. The dividend on the Ordinary shares is maintained at Rs 15 per share, subject to deduction of tax.

The gross profit of the Podar Mills Limited has gone up from Rs 12.87 lakhs to Rs 24.95 lakhs for 1960. The directors have maintained the distribution at 12 per cent, made up of 10 per cent dividend and 2 per cent by way of special bonus.

The working of the Elphinstone Spinning & Weaving Mills Company Limited has resulted in a profit of Rs 20.13 lakhs for 1960 as against Rs 15.35 lakhs. The dividend is proposed to be increased from Rs 7 to Rs 9 per share, subject to tax.

The New Great Insurance Company Limited has made a net profit of Rs 2.75 lakhs for 1960. The directors propose to maintain the dividend at Rs 2.50 a share, taxable.

Despite a lower net profit of Rs 3.85 lakhs against Rs 4.67 lakhs, the Belsund Sugar Company Limited has maintained the dividend at Rs 1.40 per share, subject to deduction of tax.

The Deoria Sugar Mills Limited has incurred a net loss of Rs 37.780 for the year ended 31 August 1960 as against a net profit of Rs 2.88 lakhs. After transferring Rs 33,532 lakhs from the Dividend Equalisation Fund, the directors have recommended a taxable dividend of 35 nP per share or 3.5 per cent. This compares with 11.25 per cent paid for the previous year.

STOCK EXCHANGES Activity Slackens

Watch-Dog Writes:

BUSINESS in stock markets continued to be on a restricted scale as leading operators are in a cautious mood. There has been a small overall decline in equity prices, due more to the absence of any support than to selling pressure. Sentiment, however, remains intact.

Dull conditions persisted on the Calcutta Stock Exchange where prices drifted to lower levels on liquidation by weak holders.

Trading on the Bombay Stock Exchange was on a quiet note, resulting in a moderate turnover.

On the Madras Stock Exchange scattered business was done.

Although business was at a high level, price movements on the London Stock Exchange were irregular.

CALCUTTA Friday Evening.

THE local stock exchange was in a subdued mood during the week under report and, with activity restricted, prices developed a downward tendency due to persistent liquidation in the absence of any incentive. While professional operators were inclined to be cautious in their commitments, investors did not show any interest, especially when their funds had

already been tied up in the recent new issues.

A number of unfavourable developments had caused the market to enter into a quiet phase. The outlook for the jute industry was considered to be obscure in view of the fibre shortage. In the case of the coal industry, some collieries were reported to have been forced to restrict output due to wagon shortage. The sugar industry was faced with the problem of accumulation of stocks. Thus, the tendency for equity prices was to weaken gradually in spite of stray attempts to keep up the morale of the market.

In the Giltedged section, trading was listless. Although the announcement of the Central loan programme is imminent, there was no sign of liveliness in the market. Institutional investors seemed to have withdrawn their support, presumably to accommodate the new loans. 3 per cent 1986 Conversion Loan was marked down to Rs 73.40 from Rs 73.54 quoted in the previous week.

Jute shares continued to remain depressed with more sellers than buyers in evidence. Apart from the uncertainty concerning the working of the mills due to fibre shortage, it was feared that the mills could not make any profit on simultaneous business. The news of a steady increase in stocks of jute goods with the mills was also a contributory factor. Howrah were on offer at as low as Rs 20.37 against Rs 21; Ganges at Rs 10.19 against Rs 10.50; Fort William at Rs 25.25 against Rs 25.50 and New Central at Rs 19.75 against Rs 20.50.

In an otherwise dull session, Coal shares ruled comparatively steady on hopes of higher output and the transport shortage being relieved by the movement of the commodity through coastal traffic in large quantities. Equitable changed hands at Rs 31.37 to Rs 31.50; New Beerbhoom at Rs 23.12 to Rs 23.44 and Central India at Rs 13 to Rs 13.12. Western Bengal were unchanged at Rs 9.31, while Burrakur were marked down to Rs 19.87 from as 20.25 on settlement considerations.

Tea shares appeared to have settled down at the recent low levels on the prospect that the marketing season for the new North Indian crop would start earlier. Nevertheless, there was a general disposition to watch carefully the response which would be given to the new season's tea. Baghmari met with business at Rs 25.37 to Rs 25.56; Huldibari at Rs 29.25 to Rs 29.31 and Methoni at Rs 19.25 to Rs 19.31.

Sugar shares were practically neglected on reports of accumulation of stocks with the mills. The only steady feature were Carew, which met with some enquiry up to Rs 12.75 from Rs 12.62. Champarun were on offer at Rs 17.12 against Rs 17.56; Ramnugger Cane at Rs 29.06 against Rs 29.25 and SKG at Rs 11.25 against Rs 11.81.

Textile shares were conspicuous with fair losses in many of the counters, mainly due to lack of fresh support. The only bright spot were J. K. Rayon, which met with sustained support up to Rs 18.50 from Rs 18.12. Jav Shree were a steady feature at Rs 15.94 on diversification prospects, while Kesoram were offered

at Rs 31.75 to Rs 31.81 against Rs 32.50 and Dunbar at Rs 29 to Rs 29.19 against Rs 29.50.

The news to the effect that the Tariff Commission would perhaps give due consideration to the extra burdens that the company would have to bear in connection with the repayment and servicing of its loan capital at the time of determining the retention price of steel this year, had only a temporary effect on Indian Irons. Apart from settlement considerations, the scrip was gradually marked down due to an overbought position. After opening the week at Rs 27.45 and improving at one time to Rs 27.59, Indian Irons moved down gradually to finish the week at the lowest level of Rs 27.15. In sympathy, TEXMACO was offered at as low as Rs 19.60 against Rs 20.20, not to speak of an anxiety with regard to the working results for last year and the size of the dividend that would be recommended.

Among other engineering shares, the news of the maiden dividend of Re 1 per share had no effect on Dalmia Iron, which were quiet at Rs 10.16. Guest, Keen, Williams were stagnant at Rs 43.50 on reports of a decline in net earnings for last year. Jessop changed hands at Rs 22 to Rs 22.25; Britannia at Rs 13.75 to Rs 13.94. Jay Engineering at Rs 28.87 to Rs 29.25 and Kumardhubi at Rs 6.50 to Rs 6.81.

Miscellaneous issues moved in sympathy with the general trade of the market. The setback in Indian Copper was pronounced following the disappointment over the maintenance of the dividend at 35 nP per unit of stock for last year and the absence of any news with regard to the bonus issue as was generally expected. Following were the price trends of a few selected shares:

	As on 6 May	Low- est	As on 11 May
	Rs.	Rs.	Rs.
Orient Paper	39.20	35.60*	35.85*
Shree Gopal	22.25	25.50	25.50
Sirpur	16.37	16.06	16.25
Rohtas	19.94	19.37	19.37
Dunlop Rubber	50.81	48.94*	48.94*
H. Motor	19.94	19.91	20.37
Phillips Carbon	17.62	17.44	17.75
Union Carbide	55.00	54.37	54.37
Isaac Holden	11.94	11.62	11.62
British Paints	24.87	24.75	24.75
Karanpura Development	16.87	16.87	16.62
IBP	28.25	28.12	28.19
I. Cable	37.06	36.44	36.12
I. Aluminium	32.00	31.44	31.12
I. Steamship	8.37	8.37	8.53
Indian Copper	5.57	5.33	5.30
BIC	8.69	8.31	8.44
General Tyres	6.25	6.10	6.16
Usha Martin	5.56	5.56	5.65

*=Xrts.

+=Xd.

MADRAS MADRAS, MAY 1.

DUE to a rising tendency and withdrawal of sellers, poor business was reported in the Madras Stock Exchange. This was due to better sentiments obtained in other centres. There was moderate turnover in banks; plantings were quiet having no effect on the dividends declared. Travancore Rayons was the best seller in the textile counter while industrials were steady, with Ashok Leyland leading.

Electrics:

Vellore was lower at Rs 13.35, Tinnevely-Tuticorin at Rs 11.80.

Salem-Erode was available at Rs 12.25, West Coast was quoted at Rs 14.00.

Sugars and Breweries:

Deccan xd was lower at Rs 13.80, EID was available at Rs 43.60. KCP improved to Rs 23.57. Kirlampudi was continuing at Rs 77.50, Mothari was offered at Rs 4.75. Mysore sugar with 30 per cent dividend was quoted at Rs 59.00. Travancore was 10 nP lower at Rs 10.50. United Breweries was also 50 nP lower at Rs 115.00.

Plantings:

Be Be was on the list at Rs 2.90. Blue Mountain improved to Rs 3.10. Cochin Malabar was at Rs 7.67. Coffee Lands was available at Rs 18.50 and Consolidated Coffee was marked at Rs 22.55. Coorg had declared a 20 per cent dividend to be priced at the same rate of Rs 5.70. Cottanad was at Rs 11.40. Emerald Valley was quoted at Rs 6.00. Haileyburia was priced at Rs 14.50. Highland, was offered at Rs 16.00 and Kil Kotagiri improved to Rs 5.02. Mercara xd went down to Rs 8.20. Mysore Coffee was quoted at Rs 5.90. Mysore plantations was unchanged at Rs 5.55. Nelliampathy went down by 3 nP to Rs 2.42. Nemmeny was available at Rs 20.65. Ossoor went down to Rs 3.23. Peermade was xd at Rs 23.30. Periakaramalai was also xd but quoted 2 nP higher at Rs 4.00. Pullangode gained 3 nP at Rs 1.79. Puthutotam declined by 10 nP at Rs 2.67. Sheveroy was available at Rs 1.55. Thamarapally had declared a 30 per cent dividend and quoted the same at Rs 28.00. Tirumbadi was lower at Rs 1.56. Wartyhully xd lost 7 nP at Rs 3.18. Textiles:

Offer was made in Anglo French at Rs 135.00. Bangalore Woollen xd was the same at Rs 200 and Buckingham xd was also unchanged at Rs 213.00. Coimbatore Cotton was lower at Rs 164.00. Kasthuri was available at Rs 22.50. Kothari moved up to Rs 13.05. Lakshmi was lower xd at 161.00. Madura was unchanged at Rs 35.80. Rajalakshmi improved to Rs 81.00. Ranga Vilas declined to Rs 45.90. Travancore Rayon improved to Rs 38.25. South India Viscose was better at Rs 161.25. Vijayalakshmi was offered at Rs 105. Virudhunagar remained at Rs 51.00. Tiruchinopoly was unchanged at Rs Rs 11.55. Venkatesa was quoted at Rs 197.00.

Miscellaneous:

Aluminium Industries was at Rs 22.80. Ashok Leyland was better at Rs 9.15. Binny was quoted xd at Rs 213.00. Enfield was lower at Rs 12.00. FACTS improved by 5 nP to Rs 10.65. India Cement was unchanged at Rs 6.05. Indian Steel Rolling remained at Rs 10.15. Madras Aluminium was quoted at Rs 22.75. Madras Cements was rated at Rs 91. Mettur Chemical was quoted at Rs 14.12. Mysore Chemicals Ferts. was quoted at Rs 11.25. Orissa Cement was quoted at Rs 14.50. Seshasayee Paper was at 7.07 and Seshasayee Industries at Rs 11.75. Spencer with 6 per cent dividend was quoted at Rs 24.25. Textool went down to Rs 181.00. Travancore Cements was available at Rs 6.45. Tube Investment was unchanged at Rs 283.00. Western India Plywoods was quoted at Rs 244.00.

Company Reports

Guest, Keen, Williams Repeat

IT would be recalled that Guest, Keen, Williams Limited made a rights issue of 20,00,000 equity shares of Rs 10 each at a premium of Rs 18.50 per share and the issue was fully subscribed. Terms of the rights issue included a provision whereby Guest, Keen & Nettlefolds Limited, the principal shareholders in the company, would subscribe for part of their rights entitlements by the transfer to the company of their shareholding in Sankey Electrical Stampings Limited. This transfer of shares was effected and Sankey Electrical Stampings Limited (formerly Sankey Electrical Stampings Private Limited) is now a subsidiary of the company.

Meanwhile, the company's accounts for 52 weeks ended 31 December 1960 reveal a decline in the net profit, after providing for Depreciation and Taxation, from Rs 86.70 lakhs to Rs 66.54 lakhs, mainly due to the rise in operating costs. The Depreciation amount is raised to Rs 45.43 lakhs from Rs 30.62 lakhs, while taxation provision is reduced to Rs 26.06 lakhs from Rs 36.84 lakhs.

After transferring a sum of Rs 6.04 lakhs from General Reserve Development Rebate Reserve is provided Rs 24.57 lakhs against Rs 33.01 lakhs. The directors have recommended a final dividend of 80 nP per share, taxable, on the capital raised by the right issue. This, with the interim of 80 nP paid on the original capital, makes a total of Rs 1.60 per, taxable, for the year, the same as in the previous year.

According to the directors' report, the installation of the new Rolling Mills was completed towards the end of 1960; but the revenue-earning stage was not reached, as commission of the mills was only partly achieved by the end of that year. Difficulties in obtaining adequate good quality steel billets were experienced throughout the year. Increasing competition was also experienced in most of the company's traditional lines; but, in general, production departments maintained the same level of output as that of the previous year.

Delta Jute had a Difficult Year

The difficult trading conditions generally experienced by the jute industry is reflected in the working results of the Delta Jute Mills Company Limited for the year ended 30 November, 1960. Despite a rise in sales from Rs 1.28 crores to Rs 1.44 crores, the net profit for the year, after providing for Depreciation and Taxation, amounts to only

Rs 5.92 lakhs as against Rs 7.21 lakhs for the previous year.

The provision for Taxation is raised to Rs 2.40 lakhs from Rs 40,000, while the Depreciation amount is reduced to Rs 3.07 lakhs from Rs 3.81 lakhs and Development Rebate Reserve to Rs 46,101 from Rs 1.31 lakhs. The dividend on the Ordinary shares is reduced from Rs 14 to Rs 7.50, subject to deduction of tax.

The directors state that the prospects for the current year are difficult to predict. The lower level of production ensuing from the restrictions in working has inevitably increased overhead costs. In addition, production has been further upset by frequent interruptions of power supply.

The Board of Directors of this company as well as of the Belvedere Jute Mills Company Limited are of the opinion that the profitability of both companies will be increased by concentrating the working of the two mills in Delta Jute. The scheme of arrangement by which it is proposed to carry out this amalgamation has also been intimated to the shareholders and further circulars will be issued from time to time as the scheme progresses.

South Karanpura Coal Reports Lower Profits

The South Karanpura Coal Company Limited has reported a decline in sales from Rs 38.25 lakhs to Rs 37.73 lakhs for the year ended 31 August 1960. The net profit is substantially lower at Rs 97,343 against Rs 2.22 lakhs for the preceding year. The directors have set apart Rs 1.34 lakhs (Rs 1.38 lakhs) for Depreciation; Rs 56,000 (Rs 1.65 lakhs) for Taxation and Rs 53,200 (Rs 5,800) for Statutory Development Rebate Reserve. The directors have proposed a taxable dividend of only 24 per cent on the Ordinary shares as against 9 per cent paid for 1958-59.

Raisings are higher at 192,482 tonnes against 190,350 tonnes, while despatches are lower at 191,226 tonnes against 203,054 tonnes. The directors state that the raisings will have to be restricted as the wagon position has deteriorated considerably since the close of the year under review.

Hukumchand Mills Resume Distribution

A significant increase in earnings has been reported by Hukumchand Mills Limited for the year 1960. On account of brisker cloth and yarn markets, there is an increase in sales to Rs 3.23 crores from Rs 2.87 crores. The net profit has shown a substantial rise to Rs 34.37 lakhs from Rs 1.56 lakhs.

Apart from providing Rs 20 lakhs for General Reserve No. 1 and Rs 4.40 lakhs for General Reserve No. 2, Depreciation is raised to Rs 6.66 lakhs from Rs 6.48 lakhs and Development Rebate Reserve to Rs 56,521 from Rs 55,195. The directors have proposed a taxable dividend of Rs 7.50 per share as against nil for the previous year. As the company has a considerable unabsorbed depreciation, it has not been considered necessary to provide any sum towards taxation.

The company is engaged in a modernisation programme and the first loan of Rs 30 lakhs was secured from the National Industrial Development Corporation. Negotiations are being carried on to obtain a second loan for Rs 25 lakhs.

Better Showing by Shivrajpur Syndicate

The Shivrajpur Syndicate Limited has done much better during year ended 30 November 1960, thanks to the increase in output as well as in deliveries of manganese ore. There is, therefore, a rise in sales from Rs 68.39 lakhs to Rs 1.24 crores.

The net profit, before providing for Depreciation and Taxation, is sharply higher at Rs 27.67 lakhs as against Rs 7.46 lakhs for the preceding year. The provision for Depreciation is Rs 5.54 lakhs (Rs 5.16 lakhs) and Development Rebate Reserve Rs 1.30 lakhs (Rs 1.85 lakhs). A sum of Rs 50,000 is transferred to Retiring Gratuity Reserve and Rs 3 lakhs to Dividend Equalisation Reserve. Mines Prospecting and Development Reserve gets Rs 1.43 lakhs (nil). A dividend of Rs 5 per share and a bonus of Rs 3 per share, taxable, is to be paid. The new shares will receive a proportionate dividend.

Kirlampudi Sugar Wipes Out Debit Balance

The increase in the quantity of cane crushed from 110,573 tons to

118,160 tons and in the amount of sugar manufactured from 9,657 to 108,110 bags is reflected in the working results of the Kirlampudi Sugar Mills Limited for the year ended 30 June 1960. Although sales are lower at Rs 1.04 crores against Rs 1.44 crores, the net profit for the year has risen to Rs 11.51 lakhs from Rs 8.54 lakhs.

The amount set aside to Depreciation is Rs 4.13 lakhs (Rs 4.35 lakhs) and Development Rebate Reserve Rs 37,034 (Rs 25,932). After providing for miscellaneous expenses, the debit balance of Rs 6.15 lakhs brought in has been wiped out. A credit balance of Rs 40,774 has been carried forward.

As a result of various adjustments and redemption of Debentures, there is only Rs 12 lakhs of loan capital outstanding at the end of the year. Even here, the company holds Rs 9.5 lakhs worth of Debentures. With the result, the amount due to outsiders is to the extent of only Rs 2.5 lakhs.

Coimbatore Pioneer Reduces Dividend

The Coimbatore Pioneer Mills Limited has reported a decline in sales from Rs 1.36 crores to Rs 1.25 crores for 1960. As a result, the net profit has declined to Rs 20.33 lakhs from Rs 22.90 lakhs in the previous year. It is stated that the higher prices for raw cotton and the cut in the prices of yarn are responsible for the lower earnings.

The amount provided for Depreciation is Rs 5.36 lakhs (same) and Development Rebate Reserve Rs 33,409 (Rs 2.53 lakhs). The provision for Taxation is lowered to Rs 7.50 lakhs from Rs 8.45 lakhs. A sum of Rs 4 lakhs is transferred to General Reserve. There is obviously a desire to conserve available resources. The dividend on the Ordinary shares has been reduced from 25 per cent to 16 per cent, subject to deduction of tax.

The company has a scheme for undertaking the manufacture of ball and roller bearings with an outlay of Rs 1.20 crores in three stages. As it will be necessary to raise additional capital for the purpose, it is proposed to issue the balance of Rs 30 lakhs out of the authorised capital after receiving the necessary sanction from the Controller of Capital Issues.

New power in industry

On a 600-acre site at Durgapur, amidst intense activity, the scene is being set for yet another vitally important contribution to India's industrial growth—a contribution made possible through the vast technical knowledge of ACC-VICKERS-BABCOCK LTD. (A.V.B.), a new and powerful industrial group formed by The Associated Cement Companies Limited, Vickers Limited and Babcock & Wilcox Limited.

Already, considerable progress has been made in erecting this new Industrial Plant. Workshops are rapidly taking shape and foundations are being prepared for some of the most up-to-date machinery in the world. Very soon now the A.V.B. Plant will be ready to make its contribution to Indian industry, and to help Indian engineers overcome some of the difficulties which have faced them for so long.

MODERN EQUIPMENT

Some of the most up-to-date industrial equipment of its kind in the world is being installed in the new A.V.B. Plant from the radio-active cobalt X-ray equipment capable of X-raying steel plates up to a thickness of 6" to the vast 3,000-ton hydraulic press, the largest in Asia, designed to bend steel plates of up to 5" thickness. The workshops of A.V.B. are thus fully equipped to manufacture machinery for the cement-making and mining industries, thermal power plant and industrial steam-raising equipment equal to the best in the world.

VITAL ROLES

THERMAL POWER: A.V.B. have the technical knowledge, the men and the machinery to participate in the supply of vital plant to be installed in Thermal Power Stations throughout India. They will make a notable contribution towards the target set by the Government of erecting boiler plant and thermal power plant to the value of Rs. 34 crores per year by the end of the Third Five Year Plan.

CEMENT-MAKING MACHINERY: A.V.B. are already discussing projects which will enable them to supply machinery to help increase the output of cement for which the Government's target is 13 million tons per year at the end of the Third Five Year Plan. Not only will A.V.B. help to meet the

exigencies of industrial expansion but they will ultimately contribute towards the earning of valuable foreign exchange through export.

SITE STRATEGICALLY LOCATED

A.V.B. have shown considerable foresight in the location of Durgapur as their base for operation. Close to the now well-known Durgapur Steel Project, they are within what is fast developing into the industrial heart of India. They are within easy reach of India's coal and general mining centres. The Port of Calcutta is only a hundred miles away, a factor which is of tremendous advantage for the import of special raw materials.

EFFICIENT STAFF

The new company has adopted a far-sighted policy regarding the housing of the staff at Durgapur. Resulting from this the AVB housing colony which is situated but a short distance from the factory site is one of the finest in India. The houses are modern and the colony itself will be completely self-contained with its own dispensary and its own shops, parks and playgrounds. Here will live the workers of the A.V.B. group from the man of the shop floor to the skilled engineers and advanced technicians, a team that will keep a close watch on this modern plant which will harness such a vital and powerful new force to Indian industry.

NEHRU BRIDGE AT AHMEDABAD

LIGHTING BY PHILIPS

For India's latest and widest road bridge
over the Sabarmati river at Ahmedabad,
the authorities would accept nothing
but the best... and, therefore, they
specified lighting by Philips.

Philips exclusive lighting consisting
of lamps, fittings and accessories ensures
ultimate economy through maximum
illumination level at lowest running

cost and gives longer, trouble-free
performance. Philips' scientifically
designed equipment is the result of
experience, research and development
to meet the ever-growing demands of
better lighting. And hand-in-hand with
Philips' unrivalled quality goes the
invisible plus of Philips' international
experience and know-how.

FREE: For planned light-
ing, designed economically
to suit your specific need
—whether it is industrial,
commercial or any other
specialised application—
consult Philips Lighting
Service Bureau.

PHILIPS quality lighting for ultimate economy

West Bengal's Case

THE cumulative weight of the reasoning of
the closely argued memorandum of the West
Bengal Government to the third Finance Com-
mission is impressive. Tracing the history of
the attempts of successive Finance Commissions
to devise a fair and equitable mode of sharing
the divisible pool of Centre's revenues, the
memorandum has built a case for West Bengal
that appears, on the face of it, difficult to
resist. It has not only attacked the general
principles of fair-sharing that have governed
past awards, but also forcefully presented the
special considerations that ought to govern
West Bengal's share of the cake. While
arguments about the former can be endless,
the latter does not admit of serious challenge.

Taking the general principles first, the
tendency of successive Commissions has
been to let population become an increas-
ingly important and almost all-exclusive
criterion of division of the cake. Thus, the
first Finance Commission—to go back no
farther—fixed the divisible pool at 55 per cent
of the total collections, and suggested that the
divisible pool should be shared on the basis of
population to the extent of 80 per cent and
on the basis of "collection" to the extent of
the remaining 20 per cent. The Second
Finance Commission increased the percentage
of States' share as a whole by five per cent
to 60 per cent but gave a further weightage
of 10 per cent to population holding that 90
per cent of the divisible pool should be shared
by the States on the basis of population. The
consequence has been that the undivided
Bengal's share of 20 per cent of the pool under
the Neimeyer award was whittled down to
West Bengal's 11.25 per cent under the first
and to 10.08 per cent under the second
Finance Commission's awards. Moreover, re-
cent changes in the mode of corporate taxa-
tion has sharply reduced the quantum of the
divisible pool and ad hoc arrangements are in
operation pending the Finance Commission's
recommendations.

Arguments about the equitable bases of divi-
sion are part of the history of Indian public
finance and have been inconclusively carried
on from time to time. On a subject like that
it is possible to indulge in logic chopping,
constitutional niceties and subtleties of theories
of public finance without anyone being the
wiser for it. Dr. Roy propounded in his
budget speech the theory that the Centre was
merely a collecting agency for the States even
in respect of taxes that are constitutionally
assigned to it. The constitutional validity of
this contention is yet to be tested; but on that
basis, the "source of collection" criterion
canvassed by States like West Bengal and
Maharashtra acquires greater plausibility. But
as the Neogy Commission pointed out, if the
"source of income" is to be the criterion, then
"the bases of income-creation are far more
diversified and widely spread over the coun-
try than the facts of collection seem to sug-
gest." Thus it is always a nice question
whether the tax collected from a company
registered in Calcutta, but having its factories
in, say, Bihar, is more equitably turned over
to West Bengal or to Bihar.

The criterion of population has several
things to recommend it: Its simplicity, its
Benthamite overtones of the greatest happiness
of the greatest number, and its plausible guise
of universal benevolence are its strong attrac-
tions. And yet, in its present form and in
terms of specific expectations from modern
governments, it is rather a crude measure of
equitable distribution. From this point of
view, the perceptive distinction made by the
West Bengal Government between the res-
ponsibilities of States with greater concentra-
tion of populations in relatively small areas
like West Bengal and those with absolute
largeness of population spread thinly over a
large area like the UP, assumes great and
almost conclusive importance. In the words
of the memorandum, "Per capita cost of social
overheads and services is much higher in
concentrated centres of population and in
densely populated States than in predomi-
nantly remote and low density areas." It is
to be hoped that this very necessary further
refinement in the concept of the population
criterion will be made by the Finance Com-
mission in making its recommendation.

But income tax is likely to be replaced by
excise in the coming years as a bone of con-
tention in the context of tax-sharing. The
most equitable basis for sharing the latter and
West Bengal's generally valid arguments on
the subject have been discussed in a note in
last week's issue. The criterion of consump-
tion is particularly apposite in the case
of excise which is widely discussed in fiscal
contexts as a levy to regulate consumption.
In this as in the case of income tax sharing,
more refined conceptual tools than mere popu-
lation would certainly lead to greater equity.

Finally, West Bengal's—especially Calcutta's
—problems have now generally come to be
accepted as belonging to a category that
deserve special treatment. The passage in the
memorandum detailing the socio-economic—
and more recently, strategic—factors that
make West Bengal specially vulnerable to
political and other instability is worth quoting:

"The dislocation of the normal economic life
due to close proximity to the war-front, the
paralysing effect of the 1943 famine, the
politico-communal turmoil culminating in
partition, the day-to-day problems of main-
taining law and order along its extensive
international frontier running upto 1,300 miles,
and above all the State's economic malaise in
the form of acute unemployment and a
chronic maladjustment in the distribution of
the available employment potential" etc.
This is a formidable and essentially valid list
of woes that need to be taken into account in
any arrangements for sharing central revenues.

The Finance Commission's task is certainly
unenviable in that it has to accommodate com-
peting special pleadings. In every State
Capital it visits, the Commission is sure to be
flooded with memoranda giving vent to a
feeling of being scurvily treated by the Centre
in the matter of tax sharing. But the able
presentation of West Bengal's case in the
memorandum under discussion is sure to
provide the Commission with excellent think-
ing points.

Savings Survey

A study of saving in India,* the result of three years' effort by the NCAER, throws welcome light on the trend of savings over the period 1948-49 to 1957-58. The NCAER has completed an all-India survey of Urban Savings and the preliminary report on the findings is expected to be published in a short time. The Council has also started a Pilot Survey of Rural Savings to be followed up by an all-India Survey in the last quarter of the current year. The results embodied in the study are, however, based not on the surveys of savings conducted by the NCAER, but are arrived at by processing data available from different sources, such as the Reserve Bank of India, the Company Law Administration, Central Statistical Organisation, Commissioner of the Employees' Provident Fund, Controller of Insurance etc. While the survey approach is expected to provide distributional and motivational data for savings by individuals, the non-survey approach based on time series data which has been adopted in the monograph released last Tuesday, provides the most reliable estimates for the economy as a whole as well as in the three major sectors: Governments, Corporations and Individuals.

Two methods have been employed in estimating savings: (1) The indirect or investment method, which arrives at a measure of savings from data relating to total domestic investment and net foreign investment; and (2) the direct or institutional method which presents the estimates of savings derived independently from a wide variety of institutional data. A third method, called the product method, which derives savings by subtracting consumption expenditure from disposable income, has also been used for purposes of checking.

The estimates derived by the first method are higher than those arrived at by the institutional method. The difference indicates the need for further research and refinement of methods of estimating investment, especially in the individual sector. While according to the first method, annual savings of all sectors of the economy increased from about Rs 600 crores in 1949-50 to Rs 1200 crores in 1957-58, according to the second method, savings have increased from Rs 446 crores to Rs 1063 crores over the same period.

The pattern of distribution of the total savings over the three sectors is illuminating. The individual sector, representing non-corporate business enterprises and all other households including individuals, is the most important in the economy, accounting for over 80 per cent of total savings. The Government sector's share is about 15 per cent, while the Corporate sector accounted for less than five per cent of the total. In estimating savings in the corporate sector, the NCAER study has made an important contribution on the theoretical plane by making an adjustment for inventory valuations, with a view to eliminate gains and losses due to changes in prices.

The following table gives the savings of the three sectors for the years 1950/51, 1955/56 and 1957-58.

	NCAER'S Saving Estimates (Rupees in Crores)		
	1950-51	1955-56	1957-58
Individuals	472	990	1048
Corporate sector*	16	32	21
Government	136	113	142
Total	624	1135	1211

(*After inventory valuation adjustment).
The study indicates that the rate of saving (Savings Income ratio) has increased from

about 6 per cent in 1948-49 to 8 per cent during the First Plan and to 10 per cent during the first two years of the Second Plan. The marginal propensity to save, i.e. the proportion of additional income that is saved, appears to be of the order of 20 per cent, which is as high as in many advanced countries.

Attention has naturally fastened on the substantial difference in the savings/income ratio according to the NCAER survey and the rate of eight per cent estimated by the Planning Commission in the Draft Outline of the Third Plan. From this point it is tempting to jump to the conclusion that the rate of savings in the country as revealed by the NCAER study could sustain a much bigger Plan than envisaged and that there is no point in retaining the confusing distinction between financial and physical targets for the public sector, as the higher level of savings could be tapped to fill the gap between the two targets. This is a claim which the authors of the survey themselves will not seriously care to put forward. In this context it is perhaps necessary to stress the obvious fact that statistics do not always provide certain guidance for practical action. The Director-General of the NCAER has himself pointed out that, though the estimates presented in the study are believed to be reasonable, they are unavoidably subject to a considerable margin of error and so should be used with caution. It is necessary to draw out the implications with care, making allowance for the limitations inherent in conclusions arrived at by processing inadequate data. For the most important sector, the sector of individuals, data is woefully inadequate and a lot of conceptual ingenuity has been used to arrive at some working estimates. Moreover, it should be remembered that the NCAER estimates cannot be compared with the estimate of the Planning Commission, as the Planning Commission has not disclosed the basis on which it has made its estimate. The NCAER Survey, as it stands, does not provide additional data, for it is based not on independent survey of savings, but on processing data from various sources, mostly governmental. It is only reasonable to suppose that the data available to NCAER were also available to the Planning Commission. The differences in the estimates of savings could therefore arise only because of different approaches to the evaluation of savings in particular sectors. Such differences are inevitable, especially in the hazy region of individual savings. This sector accounts for eighty per cent of total savings; and sixty-five per cent of savings in this sector are represented by investments in physical assets such as farm improvements, buildings etc. Estimates in this field are beset by conceptual difficulties apart from inadequacy of basic data.

The statistical validity of the method adopted in the NCAER study for arriving at estimates for the total population by "blow-up" of figures derived from selected samples, requires further elucidation than is available in the NCAER study. For instance, estimates of individual investment in rural assets are made by taking the average expenditure per family under different heads, such as land improvement, irrigation, agricultural implements etc from the Rural Credit Survey of the Reserve Bank and multiplying these figures by the total number of rural families to arrive at gross estimates for the year 1951-52. Figures for subsequent years are estimated by applying to the net sown area in these years the ratio of gross investment to net sown area in 1951-52. Apart from the fact that changes in sown area are not necessarily reflected by corresponding changes in the different cate-

gories of investment mentioned above, it may be mentioned that Dr Lokanathan himself, in a very illuminating address to the Conference of Agricultural Statisticians held last January, had drawn pointed attention to the very grave shortcomings of agricultural statistics in this country.

Even granting that the Planning Commission has underestimated savings, and that the NCAER estimate is closer to the facts of the situation, before it can be used to "blow up" the Plan it will be necessary to know how much of the larger savings will be available for the public sector or any other form of investment which has significance for development. As the differences between the two estimates appear to pertain to the rather nebulous region of investment by individuals in physical assets such as farm improvements, house construction etc., the result of adopting the higher estimate of saving will be a corresponding increase in the estimate of private investment in these fields for incorporation in the overall Plan. No part of the extra savings will be available for filling the gap between the physical and financial targets of the public sector plan or for investment in industries in the private sector, unless the customary investment in agriculture, which is very much below the minimum level, is to be further depressed as a matter of policy.

Though in indicating a higher level of savings, the NCAER survey will not be of much help to those who clamour for a larger Plan, it has rendered signal service by establishing a point of reference for evaluating future progress. It will be more difficult in future to claim fulfilment, or over-fulfilment, of targets of investment, by just revising the estimates for the non-man's land represented by the Individual Sector. It may not be out of place to mention in this context that the increase in investment in the private sector during the Second Plan, for which spokesmen of the private sector are glad to take credit, is largely the result of just this sort of statistical sleight of hand by which investment in agriculture has been increased from Rs 275 crores in the original plan to 675 crores according to revised estimates given in the Draft Outline of the Third Plan.

Export Promotion at Leisure

ON 30 March 1961, the Government of India announced the appointment of a committee to review the general import control and export promotion policy. The committee consists of nine members with Dr A. Ramaswamy Muddaliar as Chairman and it has been asked to submit its report to Government by the end of July 1961. But even though about two months have passed since the committee was set up, it has not issued its questionnaire. The Federation of Indian Chambers of Commerce and Industry has requested its constituents to forward their views on the committee's terms of reference by the end of May so that they may be considered while preparing the questionnaire. This means that the questionnaire is not likely to be issued to the public before the end of June. In other words, judging from the rather leisurely way in which work is proceeding, the committee will hardly be able to submit its report by the end of July as required by the Government.

Apart from this delay in commencing its work, one wonders whether the appointment

of this committee was really necessary at all. Its terms of reference are mainly three: (a) to enquire into the working of Import Trade Control with particular reference to the procedures followed in the formulation of import policy and methods followed in dealing with applications for import licences to different categories of applicants, (b) to examine questions relating to allocations for import of raw materials and capital goods with special reference to the requirements of the Third Five Year Plan, and (c) to review the efficacy of the existing export promotion measures and to make recommendations with regard to measures necessary to step up exports in the Third Plan period.

So far as the first item, namely, the formulation of import policy is concerned, it is well known that this is discussed in detail at least twice every year at the meetings of the Import Advisory Council which consists of representatives of the different interests connected with the import trade.

The second item in the terms of reference is the allocation for the import of raw materials and capital goods for the Third Plan. It is surprising that this matter should be taken up for discussion after the commencement of the Third Plan. One would have thought that so important a matter like this would have been carefully examined by the Planning Commission before preparing the Draft Outline of the Third Plan. The Planning Commission has a foreign trade section with an expert staff and one wonders why this question was not considered by it long ago.

As regards measures for export promotion which is the third item in the terms of reference, the committee is unlikely to receive any fresh suggestion. In the last few years, so many trade delegations have gone abroad under official and private auspices and submitted their reports on various aspects of export promotion. Besides, the chambers of commerce and trade associations have also been making representations from time to time on export promotion. The Government Trade Commissioners abroad have been sending every month detailed reports regarding the commercial and economic conditions in foreign countries and these reports contain a good deal of information which is of considerable value in our efforts to promote exports. Moreover in 1957 the Government of India set up an Export Promotion Committee. This committee studied the problems in all its aspects, took evidence from various commercial bodies and prominent individuals and submitted its report incorporating 85 recommendations. But many of these still remain unimplemented.

It would have been better for the Government, instead of appointing another committee, to examine the various recommendations made before by trade delegations, trade associations and other official bodies and to consider how far these could be implemented. There has never been any dearth of ideas for promoting exports. And if today exports have shown a tendency to stagnate, it is largely due to the failure to display sufficient vigour and vigilance on the part of the Government and the trade. However now that another committee has been set up, it is hoped that it will do its job thoroughly and quickly. Its Chairman Dr Ramaswamy Muddaliar is a person with wide experience of administration both in the public sector and in the private sector. The other members too are men of ability and experience in their respective fields. If a quick reappraisal of available ideas leads to concrete suggestions and these are adopted without giving way to ideological pressure, the delay may yet have been worth while.

RICE

Record Production in 1960-61

THE Grain Bulletin for April published by the Commonwealth Economic Committee of Britain has described an encouraging situation for a record production of rice in the world in 1960-61. Most of the major producing countries have registered increased production and India figures among them as a notable case. The Second estimate of 1960-61 acreage under paddy in India is given as 79.1 million acres as compared with 78.6 million acres in the corresponding estimate for 1959-60, while output is estimated to have reached about 32 million tons (in terms of milled rice) which is well above the previous record level of 1958-59. South Vietnam has also bettered the record production of 1959, while produc-

tion in Turkey was higher at 95,000 tons of paddy against 91,000 tons in 1959-60. Among other countries, Venezuela has stepped up production from 38,000 tons to an estimated 71,000 tons mainly through 50 per cent increase in acreage, while in Sierra Leone, rice output is estimated to have gone up by about 25,000 tons. Prospects for higher production are also rated high in other countries of Africa like Nyasaland and Kenya.

China is the notable case of a country which has experienced reduction in exports during 1960. Total Chinese exports outside the Soviet Bloc is placed at 557,000 tons which is appreciably below the comparable levels a year ago. It is also worth noting that Argentina has not regained her export position which it had maintained in the fifties. Owing to sharp decline in production in 1958-59, the domestic supply position of rice in 1959-60 tended to become unfavourable. Thus, while the effects of the increased rice production on the domestic economies of the primary producing countries should be gratifying, the prospects from the point of view of the balance of payments position can hardly be considered encouraging.

a Provisional. †Second estimate. ‡Estimated. §Converted from Padisawah (rice in stalk) at 6:5. ‡Sown area; official forecast.

Corresponding to the rise in production, world exports of rice have also recorded increase in 1960. The Bulletin has estimated that despite the falling off in the third and final quarters of the year, total exports during 1960 were at least 450,000 tons higher than during 1959. Countrywise exports reveal that Cambodia, South Vietnam, the United States and Egypt have achieved fairly substantial increases while Burma and Thailand had only slight increases in exports. There has also been diversion of exports from traditional markets, for some countries. For example exports of rice from Thailand to Japan, one of its principal buyers have dwindled to insignificance in the first two months of 1961. Similarly, US shipments of rice to Cuba has also practically ceased in view of the estranged political relations between the two countries. Cuba however made up her supplies from imports from British Guiana. Displacement of traditional markets was also evident in the rice exports of Pakistan. While in previous years, Iraq has offered the largest market for Pakistan rice, it was the other Arabian countries which accounted for the greater part of Pakistan's exports in 1960. The increased off-take by these countries also offset the sharp decline in Pakistan shipments to markets in other countries such as Ceylon, East Africa and the Union of South Africa.

The increase in US exports during 1960

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

BANK RETURNS

Slack Season In Full Swing?

CLEAR and irrefutable evidence that the 1961 slack season is in full swing is offered in the latest banking returns. Active Note Circulation, in the week ended 19 May, has contracted by no less than Rs 21.76 crores to be placed at Rs 1,985.50 crores, and there has been inflow of Rupee Coin for Rs 0.30 crores. Currency has been contracted against Rupee Securities for Rs 20 crores by transfer to Investments in the Banking Department, and the cash in the till is higher by Rs 2.06 crores.

In the return of the Banking Department, it is noteworthy that the Other Loans and Advances of the Reserve Bank are sharply lower by a little under Rs 12 crores at Rs 121.92 crores. This undoubtedly largely relates to reduction of indebtedness by banks; and that would mean that central banking credit taken by member banks has gone down to around Rs 30 crores as at 19 May. There is a moderate fall of Rs 1.85 crores to Rs 76.43 crores in Reserve Balances of member banks. The Centre's Deposits have improved by Rs 12.48 crores, but not on account of deficit financing, although there is that suggestion in that Investments (credited with a transfer of Rs 20 crores from Issue Department) are higher by Rs 30 crores. But the State Bank is known to have sold giltedged for Rs 10 crores, and so we may take it that there has not been recourse to created money. State Governments, too, report a slight improvement in balances: higher by Rs 1.02 crores at Rs 15.22 crores. Lastly, it is satisfactory that Balances Held Abroad should have risen again, although only by the nominal amount of Rs 0.92 crores to Rs 22.86 crores.

The return of the State Bank for 19 May shows that the month's instalment of Rs 12 crores of counterpart funds being made over to the Reserve Bank has been paid during the week. Deposits are shown to be lower by Rs 13.40 crores at Rs 529.60 crores, and the State Bank has accordingly disinvested in giltedged for Rs 10 crores. Indicative of the gathering momentum of the 1961 slack season is the fall of Rs 3.58 crores to Rs 266.82 crores in the total of Advances. Cash balances are more or less unchanged, the disinvestment and contraction in Advances being about equal to the fall in Deposits during the week under review.

The return of Scheduled Banks for 12 May suggests the spillover of month-early disbursements into the second week, with the total of Advances falling only modestly by Rs 3.40 crores to Rs 1,306.89 crores and with net Deposits registering a decline owing to drawings by constituents. It is interesting that there is a switch-over to Time Deposits. Net Demand Deposits are lower by Rs 14.59 crores at Rs 815.41 crores, whereas net Time Deposits have risen by Rs 11.47 crores to Rs 1,094.39 crores. Reserve Balances are lower by Rs 3.70

crores, and borrowings from the Reserve Bank are higher by Rs 3.69 crores. It is intriguing to find the investment portfolio moving up by Rs 5½ crores—the State Bank accounts only for Rs 2½ crores of this, and so other Scheduled Bank have apparently started to buy through the Reserve Bank tap.

NEW LOAN

Banks Reluctant to Convert?

ALTHOUGH outstandings of the 3½ per cent 1961 and the 2½ per cent 1961 are held mostly with Reserve Bank and in portfolios which Government controls, it is of course obvious that banks may be having small parcels thereof. Present indications are that the banking system is not at all keen to convert, and that it would prefer to receive cash. That banks are not attracted by a 3½ per cent 1967 is, on the face of it, incredible. But the fact is that the three-tier bank rate has in its working induced great caution. During the best part of the last six months and more, the exception rather than the rule was the bank which could still secure central banking credit at 4 per cent—or even 5 per cent. The penal rate of 6 per cent was more often than not applicable. Uncertain of the demand for money in the near future, banks may be reasoning that Treasury Bills would be a much better investment; as least, in 91 days' time, they would be able to get their cash back, which they could use, should the demand arise, in extending advances; and they could avoid recourse to the ruinously costly Reserve Bank assistance. What is unfortunate is that, even if the Reserve Bank should now repeal the three-tier system, the apprehension that it might be re-imposed would act as a psychological barrier in the way of banks participating in any worth while manner in support of new loans.

The prospect therefore seems to be bleak for governmental borrowing this year. The first tranche, which is to be pure conversion, is likely to be taken up almost wholly by the Reserve Bank, in the hope that, in due course, it can be passed on to the banking system. The second tranche, in our view, is apt to constitute a 3½ per cent 1971 issued at a modest discount or even perhaps at par. Banks, it is certain, will show no interest in a 3½ per cent 1971. Whether they will be purchasers of 3½ per cent 1967 from the Reserve Bank tap depends on two factors.

Firstly, will Deposits rise? Secondly, will Advances contract? It is only an embarrassment of riches, caused by new and freed resources accumulating on large scale, that will compel banks to seek to set off part of the cost of the Deposits by investment in giltedged. We think it highly probable that in fact new Deposits should accrue, and that Advances should decline. We believe consequently that the Reserve Bank will be a considerable seller through the tap. But the implication of this analysis is that at the present juncture banks

Indian Finance

will not convert into 3½ per cent 1967: cash payments may not be too small.

ANDHRA BANK

Deposits and Profits Rise

Deposits of the Andhra Bank Limited, as shown in the balance sheet as at 31 December 1960, have improved over the previous year by 14.7 per cent and are now placed at Rs 14.79 crores. It is one of the few institutions to have added to the giltedged portfolio, which is better by 2.5 per cent at Rs 5.25 crores. Nevertheless, the rise is not proportionate to the increase in Deposits, and therefore the ratio to Deposits has come down from 39.7 per cent to 35.5 per cent. On the other hand, cash balances are higher by 35.1 per cent at Rs 2.35 crores, and the ratio to Deposits has gone up perceptibly from 13.5 per cent to 15.9 per cent. There is a nominal fall of 2.7 per cent in Advances to Rs 8.86 crores, but, with the receipt of new Deposits, the credit ratio has come down sharply from 70.6 per cent to 59.9 per cent.

The profit and loss account discloses a rise of 20.7 per cent in the gross income, which, at Rs 1,01.81 lakhs, is now just above the Rs 1 crore mark. Wholly responsible for this improvement is the increase of Rs 17.80 lakhs to Rs 87.89 lakhs in the income by interest and discount; commission, exchange and brokerage have in fact fetched somewhat less at Rs 12.10 lakhs against Rs 12.20 lakhs. The ratio of gross income to Deposits has staged a rise from 6.5 per cent to 6.9 per cent.

The bulk of increased earnings has been absorbed by higher expenditure. Interest paid has cost Rs 8.78 lakhs more, and salaries and allowances are higher by Rs 5.29 lakhs. In the result, the balance of profit (subject to tax) has improved satisfactorily by 20 per cent to Rs 11.57 lakhs.

Appropriations from profits in the latest year are: Rs 4.90 lakhs for tax, Rs 3.35 lakhs for Reserve Fund, Rs 5,000 transferred to Gratuity Fund and a dividend at 8 per cent which absorbs Rs 3.33 lakhs.

27 May 1961

The US Federal Reserve (Bank) System

(The first instalment of these Excerpts from "The Federal Reserve System," appeared in last week's issue)

AT mid-1960 the U.S. Federal Reserve System had 6,217 member banks. Of these, 4,542 were national banks and 1,675 were State-chartered banks. In all 50 States and the District of Columbia, banks with national charters are required to belong to the System. Banks with State charters may join the System if qualified for membership and if accepted by the Federal Reserve.

Member banks hold about 85 per cent of the demand deposits of all banks, which along with currency, serve as a means of payment. Consequently, Federal Reserve policies have a direct influence on institutions holding nearly nine-tenths of the bank deposits that contribute the major component of the country's active money supply.

By becoming members of the Federal Reserve System, banks become eligible to use all of the System's facilities. In return, these banks undertake to abide by certain rules, prescribed by law or developed by regulation in accordance with the law, for the protection of the public interest.

Banks that become members of the Federal Reserve System must assume several important obligations.

They must maintain legal reserves on deposit without interest at the Reserve Bank (except for reserves held as vault cash by the member bank); remit at par for checks drawn against them when presented by a Reserve Bank for payment; and comply with various Federal laws, regulations, and conditions of membership regarding the adequacy of capital, mergers with other banking institutions, establishment of branches, relations with holding company affiliates and bank holding companies, interlocking directorates, loan and investment limitations, and other matters.

In return, member banks are entitled to the following principal privileges, among others:

- (1) To borrow from the Federal Reserve Banks, subject to criteria for discounting set by statute and regulation, when temporarily in need of additional funds;
- (2) To use Federal Reserve facilities for collecting checks, settling clearing balances, and transferring funds to other cities;
- (3) To obtain currency whenever required;
- (4) To share in the informational facilities provided by the System;
- (5) To participate in the election of six of the nine directors of the Federal Reserve Bank for their district; and
- (6) To receive a cumulative statutory dividend of 6 per cent on the paid-in capital stock of the Federal Reserve Bank.

For purposes of administering the Federal Reserve System the country is divided into 12 districts. There is a Federal Reserve Bank in each district and most of the Reserve Banks have branches.

Each of the 12 Federal Reserve Banks is a corporation organized and operated for public service. The Federal Reserve Banks differ essentially from privately managed banks in that profits are not the object of their operations and in that their shareholders, the member banks of the Federal Reserve System, do not have the proprietorship rights, powers, and privileges that customarily belong

to stockholders of privately managed corporations.

Each Federal Reserve Bank has nine directors. Three of them are known as Class A directors, three as Class B directors, and three as Class C directors. Class A and Class B directors are elected by member banks, one director of each class being elected by small banks, one of each class by banks of medium size, and one of each class by large banks.

The three Class A directors may be bankers. The three Class B directors must be actively engaged in the district in commerce, agriculture, or some other industrial pursuit, and must not be officers, directors, or employees of any bank. The three Class C directors are designated by the Board of Governors of the Federal Reserve System. They must not be officers, directors, employees, or stockholders of any bank.

Under this arrangement, businessmen and others who are not bankers constitute a majority of the directors of each Federal Reserve Bank. The directors are responsible for the conduct of the affairs of the Reserve Bank in the public interest, subject to the supervision of the Board of Governors. Each branch of a Federal Reserve Bank also has its own board of directors.

From the point of view of credit policy, the Federal Reserve Banks make the decisions regarding what loans and discounts to individual member banks will be in harmony with the objectives and regulations of the Federal Reserve System. The Reserve Banks establish their own discount rates, subject to review and determination by the Board of Governors.

To conclude, the Federal Reserve System is a unique reserve banking mechanism, essential to a dynamic, private enterprise economy like ours. It is especially adapted to a banking system with many independent unit banks, today numbering some 14,000, of which more than 6,000 are System member banks. Through its 12 Reserve Banks and their coordination through the Board of Governors in Washington, the System is designed to combine private and public interests in an organization that serves public welfare efficiently.

The New American Monetary Policy

By Paul Einzig

THE United States Government adopted recently two important innovations in its monetary policy. It decided to suspend the rule under which it was hitherto necessary to tie down the bulk of the gold stock as reserve for the domestic currency and credit structure. As a result of the operation of that rule, each gold outflow narrowed down the

so-called "free" reserve available for international purposes. With the suspension of the rule the whole gigantic gold reserve has been made available for defending the stability of the dollar. This should go a long way towards strengthening confidence in the stability of the dollar in face of any revival of adverse pressure. The decision was a wise one, for it eliminated an anachronistic and illogical situation. Although theoretically the gold was earmarked for domestic requirements, no gold was released for such requirements since 1933, and no responsible American quarters paid the slightest heed to the agitation by currency cranks in favour of a return to convertibility for domestic purposes.

The dollar is convertible for international purposes, and the willingness of the United States authorities to pay out gold to foreign monetary authorities holding dollars has hitherto been the only direct means by which the international stability of the dollar has hitherto been maintained. While most other monetary authorities intervene in the foreign exchange market from time to time to support the national currency, this was not done by the United States authorities since the interventions by the Exchange Stabilisation Fund in the 'thirties. But now the new Washington Administration has decided to depart also from this rule. The United States Treasury has adopted a policy of intervention in the foreign exchange market, in the form of selling forward D. marks. The object of these operations is to reduce the premium on forward D. marks in order to discourage the transfer of funds from New York to Frankfurt through covered outward interest arbitrage. Such operations have been profitable as a result of the wide premium on forward D. marks. The German authorities did intervene to moderate the influx of arbitrage funds, but the scope of their intervention was too limited to be really effective. So now the United States authorities, too, have taken a hand.

The United States Treasury is not running up a short position in D. marks. It possesses a substantial amount of D. marks as a result of receiving them in part repayment of West Germany's debt to the United States. But in any case the American authorities would be in a position to meet their forward commitments on maturity through a sale of gold. The nature and extent of the operations is shrouded in secrecy. Its effectiveness depends in the long run on the extent to which the basic situation responsible for the premium on forward D. marks is corrected. The new technique merely provides the monetary authorities of the countries concerned with a breathing space during which to take the steps required for correcting the situation. Although it is a useful device, it would be a mistake to shelter behind it and abstain from dealing with the fundamental problems involved.

Notes

SUGAR Surfeit

Even as attempts are being made to secure disposal of the surplus sugar stocks accumulated during the current season, primarily through exports to US, present trends in production point to sombre prospects next year. While production during the last year was of the order of 2.4 million tons, production upto April in the current season has already reached a level of 2.7 million tons and with the crushing season not yet over it appears more than likely that the season will end with a total production of nearly 3 million tons. As the most important sugar producing State which has had to bear the brunt of the adverse conditions stemming from the excess production of sugar during last year, Uttar Pradesh has cause for feeling perturbed at what threatens to become a repetition of the phenomenon of excess production in a more serious scale during the next year. Delivering the Presidential address of the annual general meeting of the Indian Sugar Mills' Association UP, Mr Sita Ram Bhawsingka, has pointed out that in view of the extended duration of crushing in the UP during the current season, production of sugar in the State

will be stepped up from 1.2 million tons during the last year to 1.4 million tons during the current season. A large part of the sugar produced in the UP is generally marketed outside the State and the fact that the sugar industry has been fast developing in the other States particularly in the Peninsular region would make the problem of marketing this production extremely difficult for the sugar industry in the UP. The Government's attitude to the question of relaxation of controls or movement and distribution of sugar has not been much helpful in facilitating larger internal offtake. What the sugar interests in UP find difficult to appreciate in the attitude of the Government is that control should be imposed only on sugar distribution and movement in UP, Bihar and Punjab while other producing States are left outside the scope of such control. This distinction has borne rather harshly on the sugar industry in UP and figures of despatches of sugar from the different States reveal that as a result of the discriminatory nature of the control machinery despatches of sugar from UP has been of proportionately lower order than from other regions. The resultant accumulation in the factory is also of a proportionately larger order in the UP and with the limitations placed by the Reserve Bank on bank advances against sugar, the difficulties experienced by the mills in financing stocks have been aggravated. Mr Bhawsingka has in this connection stated that the adverse financial position of sugar mills brought about by the accumulation of stocks has already in a few cases resulted in non-payment of sugarcane prices, purchase tax and other financial dues by the industry. In view of the more strident accumulation of sugar that is expected during the next year, it is necessary that the banks should increase the limits of various sugar factories and also reduce the margins so that the sugar factories may be enabled to reduce their arrears. Further the fact that sugar production is already around 3 million tons and that against this consumption has remained static at around 2.1 million tons underlines the need to restrict further expansion of the industry by issue of additional licensing capacity. With export prospects being extremely limited by the high cost of production of Indian sugar, there is clearly a case for a more rational approach to sugar production on the basis of a proper and better coordination

between production capacity and consumption potential. The weakness of the Indian sugar industry in comparison with the other sugar producing nations arises mainly from the low yield and sucrose content of sugarcane grown in India, and in this respect progress in UP has been unsatisfactory as compared with other States such as Madras, the Bombay Deccan etc. This is one circumstance that has led to the gradual losing of its dominant position by the UP in sugar production in recent years. Though climatically, the peninsular area enjoys definite advantages in terms of higher yield and better quality cane, it would be true to say that the present disparity in yields is mainly due to the apathy shown by the State Government to the question of improving cane yields on the basis of sound developmental schemes. Mr Bhawsingka has observed that the State Government was spending very little money on sugar cane development and that out of every rupee of even this meagre expenditure, only 37 paise went to the cane grower. This is a situation that calls for immediate remedy if sugarcane growing in UP is to be raised to a level that would be on a par with sugarcane cultivation in other States.

MAHARASHTRA Agro-Industrial Societies

It is to be expected that vigorous efforts will be made in the States during the next five year period toward taking big strides in industrial development. For it is now realised that if the people are to become prosperous, there should be around development. In this view States like Maharashtra have still a considerable leeway to be made up. Even after a decade of planned development, the greater part of Maharashtra has continued to depend mainly on agriculture with industrial development confined to Greater Bombay. Mr Y. B. Chavan, Chief Minister of Maharashtra, has therefore rightly stressed in the course of his address to the Maharashtra Economic Council the need for industrialising the rural parts of the States.

The method of achieving the desired objective as outlined by Mr Chavan envisages the establishment of an agro-industrial society. He would however like to entrust the task to cooperative societies, but is realistic enough to admit that if quick results are wanted, the cooperation of private enterprise will have to be sought. He calls this joint working of the two sectors, private enterprise undertaking the main responsibility with Government giving all possible assistance to the private sector, "joint sector". Madras has already demonstrated what the private sector when encouraged

and helped by Government can achieve.

The provision made in the Maharashtra Plan for promoting a balanced development in all the regions of the State through the establishment of regional development boards or by legislative fiat, if necessary, will leave no room for complaints of partiality. The interest of the backward region is also adequately served by the provision for allocating specific amounts for such areas in the State. The fear that in the shifting of the emphasis to the industrialisation of the rural regions, the interest of the already developed region like Greater Bombay will be ignored is unwarranted. Mr Chavan has said that the idea is to expand the city of Bombay so that more industrial units may continue to be established in the region.

NEW ZEALAND Imports Restricted

The advent of a new ministry replacing the labour party in New Zealand has not made for any great change in the economic situation and like India that country has been driven to tighten import control. However, New Zealand's economic policy is influenced largely by that of Australia which, in recent years, has accepted austerity and applied a dear money policy to keep inflation in check. What has been done in New Zealand to regulate imports is clearly due to the shortage of foreign exchange and the procedure outlined for 1961 indicates that if special concessions are available in some cases, imports after April are going to be strictly controlled, curtailment of imports of grain and pulse as well as spices and nuts will be carried out and New Zealand means

to limit imports of sports equipment as well as textile goods.

The comprehensive ban on imports will affect sewing machines as well as safety razor blades and cycles and it is impossible for India to look for any improvement in offtake. However, New Zealand will permit essential imports on individual applications and these include coffee and tea as well as glass and printed books. Some imports of spare parts for installed machinery will be continued and if New Zealand is prepared to accept drugs and machines, there is little prospect of her increasing imports of commercial vehicles. When, and where stocks are held, imports will be terminated, but when overseas suppliers have received part payment, the import of goods ordered previously would be sanctioned. What is now important is that a country dependent on agricultural exports is as much handicapped as India and is compelled to cut down imports because New Zealand does not qualify for foreign aid on any scale and is on the other hand assisting others under the Colombo Plan. In Australia too, tariff changes have taken place after March but some reductions have been noted in regard to particular items as in the case of watch cases whereas the duty on movements has been enhanced. The system of preferential duties is maintained and the import of British tools and implements will be encouraged by lower import duties applied as before in the name of Preference.

SOUTH KOREA The New Headache

A revolution in Korea comes as a reminder that there are areas of discontent to which the USA must give attention if only to make sure of firm alliances. After the fall of Syngman Rhee, Korea had elections but discontent lingered and the peasants even more than the students were alarmed by high prices and growing shortages. The restoration of Parliamentary Government as early as possible is the declared purpose of the US administration, but the army which is now in control will probably seek guarantees for its own continuance with pay and privileges. Identification with army rule will not help South Korea to propose unification to the Communist controlled north and just as in Indo-China, unification is made difficult by a pro-American regime that looks for large-scale help for an indefinite period even while its failure to remove popular discontent is reflected in successful rebellion.

The next step in East Asia will, therefore, present difficulties to the US administration and though the establishment of a truce in Laos is the immediate object of policy, it is fairly certain that Mr Lyndon Johnson may be called upon soon to make a trip to South Korea to ascertain what went wrong and how. The Republic of Korea cannot count on a large surplus of rice to carry it through difficulties and it has so far failed to establish good relations with Japan which, ordinarily speaking,

should be more successful in providing supplies and absorbing what South Korea can sell. No specific accusation of Communist intrigue can be levelled this time and the American Government will probably realise that in South Korea 10 years of dictatorship have caused irreparable damage and it is Mr Eisenhower who might be blamed for creating a situation in which the USA gets the blame.

The weakness of parliamentary government in South Korea is again proved by the recent happenings but it is also clear that the UN after military intervention cannot take a

hand in the affairs of Korea. China will probably see in the situation an opportunity to secure advantages for herself and some complicated manoeuvres may follow but at the moment China is involved in Laos and Tibet and cannot encourage North Korea to intervene in the South.

DIPLOMACY

Code of Practice

A conference held in Vienna last month succeeded in evolving a new code of diplomatic practice. Today

there is a large number of new nations to whom diplomatic usage is unfamiliar and the law of privilege and immunity has to be defined in terms of changed conditions. That India was represented at Vienna which is definitely a neutral centre with a traditional culture will not be overlooked by those who have probably regarded India as a new comer in the diplomatic world. That India has figured in some incidents due to ignorance of diplomatic practice is probably forgotten but the Vienna agreement lays down rules for serving diplomats and for the Governments which receive or despatch

'ENGLISH ELECTRIC'

HIGH RUPTURING CAPACITY HEAVY DUTY FUSEGEAR

H. R. C. CARTRIDGE FUSE-LINKS

Hermetically sealed construction—Non-deteriorating—ASTA certified for 35 MVA rupturing capacity—Visible indication of operation—Ratings up to 300 amps.

COMBINATION FUSE-SWITCHES

Ratings from 30 to 750 amps—Rugged construction, fully shrouded and interlocked—Type tested for 35 MVA rupturing capacity.

COMBINATION FUSE-SWITCHBOARDS

Incorporating Combination Fuse Switches upto 750 amps—Robust and compact construction—Readily modified and extended—Type tested for 35 MVA rupturing capacity.

DISTRIBUTION FUSE-BOARDS

Robust, dust and moisture proof construction—Type tested for 35 MVA rupturing capacity—Ratings from 15 to 100 amps.

Flexibility of power distribution—Can be installed without disturbing existing layout or production—Avoids charring of floors for ducting—Approved by Fire Insurance Authorities.

OVERHEAD BUSBAR EQUIPMENT

A complete range of distribution equipment manufactured at the Madras Works of The English Electric Company of India (Private) Ltd.

diplomatic missions. The multiplication of establishments is probably one reason for urging that the law should be clear and precise in regard to Government servants posted abroad and it is clear that the rise of many Communist states entails new risks and some extra obligations for those actively engaged in diplomacy.

That diplomacy rests on compromise and the working rule of reciprocity must always be applied has been borne home by the recent Congress which may not have evolved new dances but has come round to the view that even if, the United Nations is accustomed to the excesses of open diplomacy, the professional diplomat is bound by a code of conduct that goes back to classical usage applicable to heralds.

New rules about passports, about duty-free baggage and about the protection of consular premises have been evolved by consideration of the best practices of training in the past. While extra-territorial concessions with China and other countries have disappeared completely, diplomacy is still based on the maintenance of certain privileges for diplomats and new conventions have been evolved so that no awkward incidents involving diplomats would arise. It is agreed that diplomacy must present an imperturbable public face and a hundred nations are now called upon to acquire the manners, if not the brains of the 19th century diplomat who found in post-Napoleonic Europe, a fine field for trained intelligence and polished manners.

★

PLYWOOD

Gratifying Picture

The official survey which reports on the progress of the plywood industry in India during recent

years presents a gratifying picture. The number of units engaged in the manufacture of plywood and tea chest has shot up to 71 and the installed capacity is placed at 326 million square feet per annum. Apart from the already existing units, licences have been granted for three more factories in the Andamans islands with a total capacity of 23.28 million square feet of plywood. A refreshing feature pointed out by the survey is that the entire requirements of the country for flush doors, black boards, thick plywood, water resistance plywood and massive plywood is met by the indigenous production. In addition to these types of goods the industry is also producing some particular varieties of aircraft plywood.

Another relieving feature highlighted by the survey is the entry of the country into the international markets. India has made a modest start in exporting plywood goods and the headway made during the past few years, on all counts, is quite satisfactory. The cost of production of the indigenous goods, which is higher than that ruling in the other exporting countries, is corroding into the competitive ability of the industry, but for which more fields would have been captured. The inroad made by the industry in the US markets for commercial and decorative plywood, which was a traditional market for Japan, is an achievement of great significance. The scope for stimulating our exports appears to be bright provided the cost of production is whittled down to a considerable extent, thus enabling our goods to enter international markets with renewed competitive ability.

Indian Finance

It will be misleading to deem that the industry had a smooth run throughout. The paucity of timber was a serious stumbling block to the rapid progress of the industry. As a preliminary step to eliminate this none too happy position, the Government of India has recently constituted a Forest Product Allocation Board for the proper allocation of timber-based industries in the country. It is anticipated that as soon as the Board starts functioning, the distribution of plywood logs to the industry will be further rationalised. Judged from its past performance the industry's capacity to step into rapid strides seems promising.

★

COMMODITIES

Dim Prospects

World trends in the commodity markets in 1960-61, described in the "Commodity Review 1961" published by the Food and Agricultural Organisation will be viewed with concern by the agricultural exporting countries. The Review has observed that while production of agricultural commodities and the value and volume of international trade in them were higher in 1960 than in 1959, prices declined and that the terms of trade of agricultural exporting countries reached a new low point in 1960. The commodity developments during 1960 were affected mainly by three factors namely, the basic tendency of supplies of some commodities (such as grains, coffee, sugar, dairy products and cocoa) to grow faster than consumption, the fluctuations of agricultural output in exporting and importing countries, and the slowing down in the course of the year of economic expansion in major industrial countries. A further aggravating factor was the unpredictable and violent swings in the trade of the Sino-Soviet area which the Review states, had unsettling effects on exports of other countries. On the side of supply, the most outstanding fact was the increased production achieved in respect of sugar, cocoa, dairy products, wheat, tobacco, oil and oil products, cotton and forestry products. Though in response to this increase production, international trade in agricultural products rose to larger volumes, a distinct trend toward lower prices for these products has become evident at the end of 1960. The Review says that in the second half of 1960, the prices of wool and rubber have fallen sharply and that this has brought down the price index for raw materials by about 12 per cent within six months. There was also a gradual fall in the prices of foodstuffs and some beverages. On top of this a further decline has been registered in the first quarter of 1961 in food and beverage prices. In the circumstances, there is valid ground for pessimism about prospects for

exports from primary producing countries in the remaining period of 1961. The conclusion of the Review itself is that "there is little prospect that agricultural prices as a whole will recover substantially or even return to the level reached in 1959, still less that they will recoup the ground lost in recent years." The current conditions underlying the demand for raw materials are slightly less favourable than a year ago. Further the emergence of Asia as the largest wheat importing region during 1960 even exceeding wheat imports by the European countries is a development the significance of which for the balance of payments position of the countries encompassed in the Asian continent is not very pleasing.

★

CAUSTIC SODA

Bright Outlook

An official account of the manufacture of caustic soda calls attention to the absolute decline in imports following the steady increase in production in the country. The increase is attributed to the growth of domestic demand in recent years, and a further increase is now anticipated. It is calculated that investment of only Rs 1,000 is required to secure a ton of caustic soda but the cost of imported caustic soda is Rs 500 so that expansion at home is fully justified. It is presumed that about Rs 12 crores has been invested so far to step up caustic soda production and further expansion by major units is under way, mainly because supplies of common salt, the raw material needed, are abundant and the generation of electricity is helpful to a degree. The increase in output in the last five years from 40,000 tons to 96,000 tons has not been wholly due to the inception of new units but to the increase in the installed capacity of the 18 units engaged in production. The largest unit producing 80 tons a day is going to expand further, although the stock market has not registered great optimism regarding the proposals of Dhrangadhra Chemicals to enlarge its output. A direct result of the increase in output is the successful application of price-control through the imposition of ceilings. And whatever imports have been brought in by the State Trading Corporation, the ceiling prices are applicable and supplies are regulated in relation to demand.

A steady demand for the by-product chlorine has been created because of the growth of the paper industry and the rise of chemical industries producing ammonium chloride and bleaching powder. It is expected that the manufacture of plastics will lead to a larger demand for chlorine and it is expected that output this year will rise to 40,000 tons because 85 per cent of the available supply is now being used up.

27 May 1961

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I DON'T have the figures ready, but for a civilised nation, ours is probably the most shameful record for police firing. In saying this, I am not indulging in the familiar pastime of police-baiting, for I deplore no less the mob behaviour that gives such extreme measures a semblance of respectability. To me the touchstone of real freedom is the faith that no police firing is ever justified. The rights and wrongs of the Silchar firing are the subject matter of a judicial inquiry; but even a finding that the police were justified in resorting to firing would not make me change my mind. And the Assam Government has weakened its position further by not publishing the findings of an earlier inquiry. Events in Assam in the last ten months and more particularly last week's turmoil at Silchar have made me wonder whether we are not going to pieces as a nation. At the rate things are moving, Assam as we know it now will cease to exist, at least in the minds of the people living there. I for one cannot look on with complacency a situation in which the hill-people and Bengali-speaking citizens of Assam are allowed to drift into deep estrangement with the Assamese. And to think that all this is the consequence, at least nominally, of a desire to have an additional official language, makes me feel exasperated with the political primitiveness of man. And when I find that all this is happening in an area in which, for obvious reasons, we have the need for the greatest unity of purpose and sense of national solidarity, I have the gloomiest forebodings about our future as a nation.

★

Living on the expense account has been a fact of life for so long now that the look of shocked horror on the faces of Finance Ministers at its "discovery" is a piece of humbug. And yet when you are about to crack it, the ritualistic motions seem to be in order. The more exotic blooms of expense-account-living are rare in India—our tax-dodgers have no patience, except in matters of accountancy, with undue refinements. Even so, Mr Desai felt obliged to make a beginning at clipping the wings of such life in the current year's Finance Act. But the country where you have the most extravagant and ingenious variations on the theme is the US. The dumb blonde on expense ac-

count is as much a denizen of the twilight world of fact and mythology as Davy Crockett or Will Rogers. Peter Arno's New Yorker cartoon—"I used to see your expense accounts, Mr Hofsetter, but Gee, I never dreamed I'd be in it"—hits off beautifully both the dumbness of the blonde and the elasticity of the term "business expenditure." At the Ways and Means Committee of the US Congress last week, Mr Douglas Dillon, the Treasury Secretary, unfolded a few more examples of the bizzarrie of the expense account. An undertaker (or Mortician as he probably prefers to call himself), wanted to deduct the expenses of maintaining a yacht because it was necessary for the purposes of his business to entertain clergymen aboard it. Another man combined business with pleasure—with business, according to him, barely tolerating pleasure—and claimed as deduction a sum of \$16,943 for expenses on a yacht used "to demonstrate to customers the value of sneakers with nonskid soles". A dairy owner claimed as a deduction the cost of an African Safari for self and wife under the head advertisement! Mr Dillon built up a formidable case by showing that the deductions claimed included club dues (\$5.7 millions) theatre tickets \$2 millions, yachts, hunting lodges and fishing camps expenses (\$3.6 millions) and business gifts (\$11.5 millions). Anticipating a saving of about \$250 million dollars by his recommendations to drastically prune the wilder claims, Mr Dillon hopes that the saving thus effected would afford tax-relief for increasing production. Mr Dillon's recommendations include \$10 limit to business gifts, a \$7 limit for business lunches and severe reduction in deductible personal expenditure while on business trips. The Affluent Society is already squealing at the jabs that the administration is taking at the traditional cushions against high taxation. And those whose own affluence is bound up with the credit card are angrier than others. But Mr Kennedy's stern adjuration against the phrase "it is deductible" finds a ready response from most people—especially those without the expense account. "It all comes off income tax" is likely to evoke less sympathy and more scepticism in future.

★

Is a new style in summitry in the offing? The timing and the

casualness of the Vienna meeting between Mr Kennedy and Mr Khrushchev and the deliberate emptying of the mystique of the Great Encounter from it would seem to suggest it. No doubt the collapse of earlier summits has something to do with it. But the marked contrast to the omen-seeking, elaborate preliminary preparations and high-powered salesmanship that accompanied the earlier and ill-fated assaults on the international political Everest owes something, at least on the American side, to the personalities involved. Political realism takes different people differently. Mr Dulles was a political realist—of a sort. So is Mr Kennedy—of an entirely different sort. There is an element of ruthlessness in the unsentimental way in which he has recently dropped Cuba: "it was a mistake and let us cut the losses and get on to other things" seems to sum up his present attitude. If Mr Dulles had been around, he would not have left it at the inconclusive stage it is. In any event, a hand-shake with communism at the highest level would have been the last thing that he would have considered as the next item on the agenda.

★

The truth is Mr Dulles was unwittingly investing the summit with a sort of glamour that was the last thing he wanted to endow it with. First came his reluctance to let it take place at all, which

was in itself enough to give it a certain amount of importance. And then came his insistence on get-togethers of lesser men at lesser peaks for settling the preliminaries. If after all these alarms and excursions, the great men did meet, the public can hardly be blamed if it expected a miracle from their momentous encounter. Mr Kennedy, on the other hand, has apparently decided to cut the summit to size. If a meeting between Mr Khrushchev and Mr Kennedy rated for no more public notice than, say, that between Mr Macmillan and Mr Kennedy or even that between Mr Macmillan and Mr Khrushchev, then a big step will have been taken in the normalisation of East-West relationship. It is the deep-calling (or-not-calling) to-the-deep and Jove-nodding (or-not-nodding) to-Jove-business that sets us all on edge. Both Mr Khrushchev and Mr Kennedy are sure to have a keener appreciation of each other's burdens than any of us can have. And if they unbend so far, they may even tell each other about them. Chairman Khrushchev may come out with the fact that there was more to the wrecking of the last summit than his indignation at the U-2 spying and that he is finding Chairman Mao a pain in the neck. Mr Kennedy may have similar confidences to make. More seriously, they may devise a mode of progressively retracing the wrong steps that both have taken in the recent past; and finally tell each other, with or without a nudge in the rib; that they must learn to live together if they are not to die together.

A Bulkier Third Plan

THE draft report of the Third Plan, in the form in which it will be presented to the National Development Council scheduled to meet next Tuesday, is understood to be ready and under scrutiny of the Central Government. The hope once entertained, that the Third Plan report would be a short and succinct document, had to be given up when it came to the stage of rewriting the chapters. There is an inner dynamic in the process of planning which gathers verbiage as it goes along. By all indications the Third Plan will not be an unworthy successor of its predecessors in bulk. When its soporific qualities become overpowering, it can be conveniently used as a pillow.

A bulky report does not however mean a larger plan. So far, the financial ceiling for public sector outlays, and the estimates of investment for the public sector and the private sector, remain unaltered in spite of extensive rewriting of almost every chapter in the report. The pressure to inflate the estimates of resources has been countered by the firm stand of the Finance Ministry in favour of cautious estimates which will provide a cushion against future mishaps.

The significant changes in the latest draft as compared with the draft outline, it is learnt, are in respect of the estimates of growth of income and employment. The Draft Outline had suggested that national income, during the Third Plan would increase at an annual rate of five per cent. The latest trends in National Income, as revealed by CSO estimates, underline the need for caution in estimating the likely increase in national income. The Planning Commission seems to have got over the difficulty by avoiding commitment to any specific figure relevant to the next five year period. Instead, the hope is expressed that, during the next fifteen years, it may be possible to sustain a rate of growth of about six per cent per annum. This also disposes of the ticklish problem of estimating the increase in per capita income expected during the Third Five-Year Plan.

As regards employment, the Census has made a review of the estimates inescapable. On the basis of the investment envisaged, the Draft Outline estimated that additional employment likely to be created would be of the order of 3.5 million in agriculture and 10.5 million outside agriculture. As the number of new entrants to the labour force during the next five years was estimated at 15 millions, it was also stated that another one million additional jobs would be required to keep the back-

log of unemployment at the same level at the end of the Third Plan as at the beginning, namely about seven millions.

The backlog of unemployment is now estimated, on the basis of the last Census, at nine millions and the number of new entrants to the labour force at 17 millions. The target for additional employment opportunities has also been increased to 17 million, though it is not clear how this will be achieved with a total outlay of Rs 7500 crores in public sector and investment of Rs 4100 crores in the private sector, that is an additional investment of about Rs 350 crores in all, which is the difference between the figures mentioned in the Draft Outline and those now under consideration.

Within the limit of the Rs 7500 crores for public sector outlays which was approved at the last NDC meeting, the Planning Commission, it is learnt, has made only marginal and minor changes in the pattern of distribution of the outlays then envisaged. The total allocation for "Agriculture" will be Rs 1068 crores instead of Rs 1082 crores, while the allocation for "Village Industries" will be increased from Rs 256 to Rs 264 crores. The outlays on "Industries and Minerals" and on "Transport & Communication" will amount in total to Rs 3006 crores instead of Rs 3001 crores; on "Irrigation and Power" to Rs 1662 crores instead of Rs 1675 crores; and on "Social Services" and "Miscellaneous" to Rs 1300 crores instead of Rs 1296 crores. But the total outlay remains unaltered at Rs 7500 crores.

But according to an influential school of thought, which includes many State and Central Ministers and which is also represented in the Planning Commission, the resources available for the Plan have been underestimated and an extra Rs 500 crores may be made available for implementation of Third Plan programmes from additional yields of taxes, savings and Government undertakings. The more hopeful outlook regarding external resources has made the dispute over the estimates of internal resources more acrimonious. It is no longer possible to rest on the assumption that availability of foreign exchange would put an automatic limit to the practicable level of investment and so keep it within safe limits.

The view that resources have been underestimated has derived added support from the findings of the NCAER on the trend of savings in India. This view is also understood to have been pressed strongly at the last meeting of the Savings sub-committee of the NDC, by several State Ministers. And it is not merely the State Governments that are eager to raise that financial ceiling. Most of the Central Ministries, other than Finance, are also in the same category. The inadequacy of the pro-

visions for Power and Transport have been repeatedly emphasised. The increased availability of foreign exchange for power development is a strong argument for stepping up the programmes for electric power. The prospects of getting IDA funds for roads development—a delegation led by the Secretary of the Ministry of Transport left for USA last week for negotiations with the World Bank and the IDA—improves the chances of a larger Roads programme. And the increased target of employment, 17 millions against 14 millions, will appear unconvincing unless matched by increased investment, or drastic reallocation of outlays under different heads in order to maximise employment opportunities.

On the other hand, it is argued that the considerations which obliged the Planning Commission to approve physical targets of about Rs 8000 crores subject to a financial ceiling of Rs 7500 crores, continue to be valid. There is first of all, the general limitation which applies to all estimates based on the assumption that production increases steadily at a certain rate from year to year and that these increases are reflected more or less proportionately in increased availability of resources for investment. While the hypothesis is useful in forecasting long-term trends, it is not very helpful in drawing up programmes for the immediate future, as any shortfalls could create serious difficulties. The tax effort made by the States in their Budgets for the current year does little to dispel the impression that the estimate of Rs 1710 crores from additional taxation is on the high side. The total defence outlay has been estimated at Rs 1700 crores to be met from revenue surpluses. Indications are that this figure may have to be revised upwards. The steady upward trend in prices is an insistent warning against increased deficit financing. There is as yet no indication that a firm and effective policy will be adopted for keeping prices under control. Measures which have been suggested in this context, such as enforcement of floor prices for primary commodities, do not appear to take into account the administrative difficulties and inadequacies. As regards prices, the Planning Commission is content with expressing the hope that, as need arises, we shall have the requisite machinery with the power to control prices of essential commodities.

The Planning Commission's report is, therefore, based on a conservative estimate of resources of round about Rs 7500 crores. It will be for the National Development Council to decide whether the ceiling for financial outlays should be raised, taking into account the divergent views on the outlook for resources.

Even if the NDC prefers the higher limit of Rs 8000 crores, the gap between physical and financial targets will remain. The total requirements of the Central and State Governments, as estimated last January amounted to Rs 8385 crores of which States' Plans accounted for Rs 3847 crores. But the gap between the financial and physical targets will be more in the sphere of Central Government outlays than in that of the States. If the NDC agrees with the

higher estimates of resources now talked about, the full requirements of the State Plans as approved last January, are likely to be met and the gap of Rs 122 crores between the physical and financial targets will be eliminated in so far as the States' Plans are concerned. As a consequence the outlays are likely to be increased under the following heads of development over which the shortfall was distributed:

	Rs
Power	44 crores
Transport	22 "
Social Services	17 "
Miscellaneous	39 "

In this context it may be noted that the inclusion of a steel plant for the South in the Third Plan will amount to something more than a gesture. There are now indications for a change in the US attitude to development of the steel industry in the public sector. The impression produced by Bhilai on the US steel experts who accompanied the DLF chief when he visited this country is said to be one of the factors bringing about this change. American assistance, it is expected, will be forthcoming not only for the Bokaro Plant but also for development of the steel industry in the South. On the other hand, the prospects of rapid progress for the Second Shipyard for which a token provision has been made in the Plan will depend on success in securing foreign collaboration with capital participation. The prospects of shipbuilding all over the world does not make it an attractive field for investment of foreign capital. The "Small Car", by the way, has not been able to find parking space in the Third Plan.

THE NEW SAMANBAGH TEA COMPANY, LIMITED.

Notice is hereby given that the Fifty-eighth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Tuesday the 20th June, 1961, at 3-30 P.M., for the following purposes:—

- To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1960.
- To declare Dividends.
- To elect a Director.
- To appoint Auditors and to fix their remuneration. The Transfer Register will be closed from the 13th June, 1961 to 20th June, 1961, both days inclusive.

N.B.:—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

Markets

JUTE

Raw Jute Easy: Gunny Quiet

RAW jute basis Assam Bottoms May/June delivery was quoting Rs 55 per maund on Tuesday. This is one rupee less than the revised maximum rate brought into effect from 22 May. The Indian Jute Mills Association's earlier maximum price had been fixed at Rs 62 per maund at the beginning of March but the ruling price has since declined steadily to stand at around the present maximum. The revised rate is therefore in line with the market trend. A repetition of a similar decline in the price of raw jute in coming weeks will depend on whether or not there is still a sizable quantity of jute to reach the market. The general belief is no doubt that there is very little jute left in the hands of traders and cultivators. But it is not as though there is a consensus here. The Jute Balers Association, Calcutta, has pointed

out that a block closure of mills will not be necessary because there is enough jute available to keep the mills at the present rate of working till the new crop moves in bulk into the market. The continued delay in accepting the IJMA plea for a block closure of mills for a couple of weeks or so seems to indicate that Government may be still hoping that the raw jute crisis can be tided over without the need to resort to such an extreme step as a block closure of mills. Now that the maximum price has been revised downward to Rs 56 from Rs 62 per maund basis Assam Bottoms, the hoard theory will be put to a severe test.

909

With the prospect of a cut in production by means of a block closure of mills rather uncertain, the jute goods market has been generally quiet. Whenever there have been indications of fresh business, however, prices have tended to steady up; but such improvement in sentiment has so far proved shortlived. Early during the week under review, the market had been influenced by reports of Government tender for B Twills, some buying by China and scattered business from US. A quiet trend returned since Tuesday with

mills figuring as sellers. The downward revision of the maximum price of raw jute also seems to have adversely affected sentiment. Attempts at rigging up jute goods prices are not likely to succeed in the present context of an easier trend in raw jute and the continued absence of any sizable offtake of jute goods. It is now clear that the rise in April-end stocks of jute goods is due to a sharp fall in despatches. Jute goods production in April has declined to 79,200 tons from 87,500 tons in the previous month. The

INDIAN AIRLINES

UNITED INDUSTRIAL BANK LIMITED

TWENTY-FIRST REPORT

Directors' Report for the year ended 31st December, 1960.

GENTLEMEN,

The Directors beg to submit to the Shareholders the Balance Sheet as at the 31st December, 1960, and the Profit and Loss Account for the year ended 31st December, 1960. The Auditors' Report is also annexed.

2. There has been a small profit of Rs. 1,878-47 nP. in the working of the Bank for the year as against a loss of Rs. 92,984-93 nP. incurred during the previous year. The entire profit figure, as aforesaid, has been transferred to the Statutory Reserve Fund. No provision

3. The following Directors retire under the Articles, but being eligible, offer themselves for re-election.

(i) Sri Krishna Das Roy.
(ii) Sri Baij Nath Tapuriah.

5. Sri Priya Nath Roy, Director, being out of station, could not sign the Balance Sheet.

5. Sri Priya Nath Roy, Director, being out of station, could not sign the Balance Sheet.

For and on behalf of
Board of Directors,
JADU NATH ROY,
Chairman

BALANCE SHEET AS AT 31st DECEMBER, 1960.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit and have found them to be satisfactory. In our opinion proper books of account have been kept by the Bank as required by law so far as appears from our examination of those books. We have visited all the Indian Branches and proper returns adequate for the purposes of our audit have been received from these Branches as well as from the Naraingunge Branch, Pakistan, which has not been visited by us. The Pakistan Branch accounts have been audited by other auditors and the report on the accounts of this Branch has been considered in preparing this report.

We have examined the Balance Sheet of the United Industrial Bank Limited, as at 31st December, 1960, and the annexed Profit and Loss Account for the year ended on that date, which are in agreement with the books of account and returns.

The transactions of the Bank which have come to our notice have been within the powers of the Bank.

The transactions of the Bank which have come to our notice have been within the powers of the Bank. In our opinion and to the best of our information and according to the explanations given to us, the accounts of the Bank are properly drawn up so as to disclose, in the case of the Balance Sheet, a true and fair view of the state of the Bank's affairs as at 31st December, 1960, and in the case of the Profit and Loss Account, a true and fair view of the profit for the year ended on that date so far as is required by the provisions of the Companies Act 1956 and the Banking Companies Act 1949.

Calcutta, 1961.

B. N. TAPURIAH.

fall in output is to be attributed to the fact that hours worked by mills during the month were only 170 whereas in March mills had worked for 187 hours. Power shortage has certainly contributed a sizable share to the reduction in working hours. Gunny despatches during the month are sharply down at 72,800 tons as compared with 88,000 tons in March. Despatches for export are placed at 51,900 tons against 54,900 tons in the previous months, hessian solely accounting for the decline. There has been a sharp fall in despatches for internal consumption also to 20,900 tons from 31,100 tons in March. The price factor should have played a large part in the decline in internal offtake of jute goods. Part of the fall may be due to the fact that the cement industry has been permitted to use second hand bags. The very low consumption of burlap in US during April (59 million yards as against 72 million yards in March) is indicative of the reaction

of the foreign consumer to the prevailing high price of jute goods. It will not be surprising if jute goods despatches continue their April trend for some more months. What with the brightening prospects for the new crop, foreign buyers may not be in a hurry to increase their offtake till goods prices begin to record a substantial decline under the impact of a bumper jute crop.

The jute goods market steadied up somewhat in later dealings last Thursday following reports of a Government tender and some business with US. B Twills May closed at Rs 165.50 with Hessian 40" x 10 Oz at Rs 55.75. A quiet trend prevailed on Friday in the absence of fresh business with the quotations for B Twills May at Rs 164 and Hessian 40" x 10 Oz at Rs 55.25. With rumours of business done with China, sentiment improved on Saturday with prices somewhat better at close as follows: B Twills Rs 165.50 and Hessian 40" x 10 oz

Rs 55.50. Trading on Monday in early dealings was enlivened by reports of further Government purchases and that the Chinese enquiries referred to ready and near deliveries. Toward close however presumably due to the fact that the IJMA had fixed the minimum price for raw jute at the lower level of Rs 56 per maund sentiment was adversely affected resulting in selling pressure. Even so the closing was better on balance with B Twills May at Rs 166. Hessian however was lower at Rs 55. Selling pressure continued to characterise trading on Tuesday most of the time but lower levels attracted some buying toward close. The day's closing prices were as follows: B Twills Rs 164.50 and Hessian Rs 54.25.

The raw jute market ruled quietly steady with Assam Bottoms at Rs 57 during the first half of the week under review. Following the revision of the maximum price to Rs 56 sentiment deteriorated and on Tuesday the rate de-

Indian Finance

lined by a rupee to Rs 55 with buyers still showing no interest in the market.

Reports from the jute growing areas in India go to show that the new crop is progressing well and the recent rains are expected to be quite beneficial for the rapid growth of the plant. From present indications it is believed that if nothing untoward happens in the next few weeks, the new crop may become available much sooner than earlier expected. The news from Pakistan is also very encouraging and it would appear that the cyclone damage may not make any marked difference to the size of the crop which has been earlier estimated at 7.2 million bales.

TEA Export Prospects

The prospects for the export of Indian Tea to Russia are considered to be bright although the Soviet Union is likely to make purchases from Ceylon and Indonesia during the current year. Last year, Russia increased her offtake of Indian tea to 12,000 tons from 11,300 tons in 1959. Principal suppliers of tea to the USSR are India and China. There have been small purchases from Ceylon and the Democratic Republic of Vietnam.

The grades of tea supplied by India are understood to be as follows:—good medium 10 per cent; medium 50 per cent; low medium 30 per cent and common teas and Fannings 10 per cent. Already Russia is reported to have evinced keen interest in the Calcutta market and has made substantial purchases.

Meanwhile, the Chairman of the Central Tea Board has stated that, as the consumption of tea in India has slowly increased during the past four or five years, the Government of India is not going to carry on any further internal propaganda and will be trying to export more quantities for export in order to earn foreign exchange. Tea Advisers have been appointed in New York, London, Cairo and Sydney to step up exports to Canada, USA, UK, the Scandinavian countries, UAR, New Zealand and Australia. There is also a proposal to appoint a Tea Adviser in Baghdad to look after the West Asian countries.

Asked whether there is any scheme to increase tea production in the country, the Chairman of the Tea Board has stated that the Government have made a bulk grant of Rs 2 crores to the Tea Board to be disbursed to the factories to renovate machines and purchase new machines under a hire purchase scheme, now being implemented. There is also a scheme under consideration for giving financial aid for the extension of tea gardens and replantation.

27 May 1961

In the Cochin market, offerings were 247,000 kgs of Dusts were offered for internal consumption. Against good demand, the prices were fully firm and sometimes dearer. Residuals were again weak, while high-growns were easier.

According to trade sources in Colombo, tea exports from Ceylon declined sharply to 27.83 million pounds in February from 34.22 million pounds in the corresponding month of last year. This reduces the total exports in the first two months of the current year to 64.73 million pounds from 67.24 million pounds in the corresponding period of last year.

Production of tea in East Pakistan was 3.01 million pounds in April as against 836,460 pounds in the corresponding month of last year. The quantity of tea despatched to West Pakistan during the month under review was 1.91 million pounds as against 1.28 million pounds in April 1960.

The effects of the recent dock strike are still apparent in the amount of tea finally put up for sale at the Mincing Lane auction last week, although offerings were higher at 69,426 packages as against 61,131 packages in the previous week. The North Indian and other miscellaneous teas encouraged good competition. Although prices showed a certain amount of irregularity at times, they were, on balance, little changed from the previous week's levels.

COTTON Futures Easy

THE Bombay cotton futures market depicted easy conditions during the past week. The absence of fresh mill and investment buying resulted in losses to both the ready and forward sections to the tune of Rs 8 per candy. The Jarilla August contract slipped down to Rs 565 from Rs 573 per three quintals following the reports from New Delhi that no additional export quota would be released for cotton in the near future.

In the ready section both Wagad and Kalagin shed Rs 15 per candy. Similarly Kalyan also lost Rs 10 per candy. The demand for other varieties was restricted without effecting any change in their prices.

The entry of the Indian Cotton Mill's Federation into the market failed to bring the desired improvement in the trading conditions. Though actual figures regarding the Federation's purchases are not available it is estimated that total purchases will not exceed 5,000 bales.

It is reported that the Federation has no definite plans to purchase cotton. Reliable sources indicate that the Federation's entry was not a voluntary act but was the result of compulsion from the part of the Government, and

it may withdraw at any time from the market on the improvement of trading conditions. The Federation has so far purchased only good quality of cotton of 24/32" and above. This has led to the presumption that the Federation is planning to build a buffer stock of good quality of cotton and it appears that it has made financial arrangements for buying a large quantum of those varieties. Besides, the Federation will only buy cotton in the absence of other buyers and that its purchases would be strictly confined to cotton grown in Gujarat. The Federation's purchases of Vijay, Digvijay, and Surti varieties has provided welcome relief to the cotton growers of Gujarat who were worried over the unsold cotton that has accumulated on a large scale. This sort of preference shown to Gujarat cotton has provoked cotton growers in South India who also are faced with similar problems.

Demand in the import section showed signs of improvement. Business transacted in Sudan cotton was negligible while in East African cotton only BP 52 quality met with some demand. No transaction was reported in Egyptian varieties.

The import statistics state that the quantity licenced for imports during the first eight months of the current season totalled 0.605 million bales. Actual arrivals during the period under review amounted to 0.735 million bales.

Consumption of cotton, both indigenous and imported, during the first seven months of the current season amounted to 3.35 million bales. Stocks with the Indian mills of Indian cotton at the end of March have been placed at 1.4 million bales. Similarly stocks of foreign cotton held at the end of March has shot up by 28,000 bales over the previous month.

The estimated supply and distribution of both Indian and imported varieties during the current season would indicate a carryover of 2.16 million bales at the end of the current season. Supply of both indigenous and foreign cotton during the season is estimated to total 7.7 million bales.

In its annual review of the world cotton situation during 1960-61 published on 19 May, the International Cotton Advisory Committee estimates that the season has marked a turning point in the cotton situation. Production during the period under review reached a new high. The increase in production has more than offset the decline in opening stocks and supply is estimated to be higher than in any of the three previous seasons.

Consumption of cotton during 1960-61 aggregated 30.5 million bales as against 31 million bales in 1959-60 season. Despite the high

AUSTRALIA, the land of kangaroos and cricketers, is one of the 50 countries importing BINNY's textiles.

BINNY's fabrics are made from yarns spun only from cotton of the best quality and are dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. Rigid Quality Control* ensures maximum durability and perfect finish.

*Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is

laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

BINNY - a great name in textiles

BINNY's manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings • Khaki Drills • Bleached & Dyed Drills • Towels
Anticrease Suits • Tussore • Union Fabrics • Silk Sarrees
etc. etc.

THE BUCKINGHAM & CARNATIC COMPANY LIMITED

Subsidiaries of BINNY & CO. (MADRAS) LTD.

Buy your requirements of BINNY'S fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

She thought
she was
a thrifty housewife

Like every good housewife, she worked on a budget making her husband's pay go a long way. But she grew careless one day, and did not bother to see that the cotton cloth she bought was stamped with the label 'Sanforized'.

Now look at her lovely new choli—shrunk after the first wash!

Don't take anybody's word for it. Make certain you get the full measure of value of the material you buy—

Look for
SANFORIZED
on the label

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service,
95 Marine Drive, Bombay 2

m22, SAN.177

level of consumption of cotton in net importing countries, exports showed a slight decline.

Actual shipments of cotton so far are running under last season's rate presumably due to the sharp decline in the export of Egyptian types from Egypt and Sudan. Exports of American type have been well maintained and most of the countries will not find it difficult to dispose of the bulk of their export availabilities.

The cotton situation in Eastern Europe, China and the USSR indicated certain changes during the period under review. The marked decline in production in both China and USSR affected the supply position.

PIECEGOODS

The cotton piecegoods market in Bombay displayed divergent trends during the past week. The domestic section continued to be listless while in the export front signs of improvement were visible. Demand in the domestic section was on the whole meagre. Consequently the premia of all varieties declined. The offer of a substantial discount failed to revive the trading conditions.

However as the week advanced demand from upcountry centres poured in deriving inspiration from the improvement in credit conditions in some of the North Indian centres and the timely remittance of payments. The enquiries from the upcountry consuming centres were mostly confined to goods like flannels and shawls. Punjab and South India showed some interest in some of the seasonal goods.

On the export front there was a broadening of enquiries. Sudan accounted for a small quantum of grey sheetings and business was put through for July, August, and September shipments, though at considerably lower rates. Ethiopia focussed its attention in grey chaddars and Morocco concentrated its attention on art silk goods and grey sheetings. Fair inquiries for turkish towel from West Africa was reported. East Africa accounted for a small quantity of sheetings, coatings, and printed saris. The recent

enhancement of import duty on grey sheetings by the East African Government will adversely affect our exports to that destination.

UK was satisfied with small quantum of grey sheetings. Moderate business was done with Australia in white sheetings. Singapore evinced some interest in bleached longcloth.

Record Coffee Sale

ACCORDING to the figures released by the Coffee Board, the total quantity of Coffee sold for export out of the 1960-61 crop up to 5 May, touched a record. A total quantity of 14,271 tonnes was sold for export as against 5,686 tonnes sold for export for the period ended April 1960. Out of the total coffee sold for export, Plantation accounted for the largest quantity, being 12,806 tonnes.

The receipts of coffee into the 1960-61 Pool up to the end of April 1961 amounted to 61,591 (45,755) tonnes, made up of 28,775 (24,860) tonnes of Plantation; 9,235 (6,080) tonnes of Arabica Cherry and 23,581 (14,815) tonnes Robusta. The figures shown within brackets indicate pool receipts for the same period last year.

The releases of coffee in the internal market, for the first four months of the year, amounted to 10,888 tonnes, made up of 4,308 tonnes of Plantation; 1,180 tonnes of Arabica Cherry and 5,400 tonnes of Robusta. The corresponding figure for total releases in the internal market last year was 9,253 tonnes.

The latest estimates of 1960-61 crop are 63,300 tonnes comprising of 29,500 tonnes of Plantation; 9,500 tonnes of Arabica Cherry and 24,300 tonnes of Robusta. This is a record crop.

SUGAR

Sugar production has risen to 410,000 tons in April from 266,000 tons in the corresponding month of last year. This brings the total production for the season 1960-61 up to April to 2,700,000 tons as against 2,323,000 tons produced last season by this date. The offtake of sugar from the factories during April 1961 was 179,000 tons as against 162,000 tons. Total despatches, including des-

patches for exports up to April 1961, were 1,058,000 tons against 943,000 tons in the corresponding period of last year. The closing stock with the factories, as on 31 April 1961, was 2,183,000 tons as against 1,519,000 tons on the corresponding date of last year.

The Indian Sugar Mills Association, Uttar Pradesh branch, in a resolution, has stated that the sugar industry in the State is faced with a crisis of the unprecedented surplus, caused by the opening of new factories in other States. The resolution says that the financial resources and bank credit of the factories are practically exhausted. In spite of the Reserve Bank's directive to the scheduled banks, the banks have not raised the cash credit limits of the factories, as a result of which they are left with no resources to pay the cane prices and other dues. In this connection, the Uttar Pradesh Government is expected to announce certain decisions regarding purchase tax and payments for the sugar industry to encourage maximum crushing of standing sugarcane crop.

Meanwhile, conditions in the sugar market have continued to rule quiet. In the Hapur market, the rate for the sweet commodity is quoted at Rs 106.75 per bag.

FOODGRAINS

Steadier conditions were noticed in the Hapur Foodgrains market, thanks to brisk demand from consumers in the face of modest arrivals of new rabi crops. Wheat registered fractional gains, to be quoted at Rs 15 a maund for the average quality. Although daily arrivals were slightly better at an average of 1,000 to 1,200 maunds, the pressure of arrivals was not perceptible due to brisk consumers' demand and stockists' support as a sequel to the withdrawal of curbs on bank advances against wheat. The market for Rice remained unchanged. Despite better arrivals at an average of about 1,500 maunds a day, Gram ruled steady on firmer advices from the Punjab. Jowar was also steady on good demand. The market for Pulses remained unchanged.

In the above connection, it may be added that the restrictions on banks' advances against Wheat have been withdrawn by the Reserve Bank. Announcing this, the Reserve Bank

has stated that, in view of the improvement in the supply and the price situation in the commodity and in conformity with its policy of operating selective credit controls in a flexible manner, it is no longer considered necessary to keep in force the restrictions on advances against wheat.

In a letter to the scheduled banks, the Reserve Bank has stated that the wheat crop for 1960-61 is expected to be higher than the record level of 19.8 million tons achieved in 1958-59. Substantial supplies are also assured under the PL 480 programme. Accordingly, the regulations relating to advances against wheat contained in the foodgrains directive, issued on 8 February, 1961, have been withdrawn with immediate effect.

NON-FERROUS METALS

On the London Metal Exchange, Copper has risen to £245 a ton. Figures published over the week-end show that copper production fell in April, while deliveries to consumers have again risen. Producers, most of whom are only using 90 per cent of their capacity at present, may step up their output soon.

As regards Lead, the effects of voluntary cutbacks in production this year coupled with United States barter deals to relieve the pressure of surplus stocks, should help the lead market and bring a moderate increase in prices. Cutbacks alone are expected to reduce world output by 70,000 tons, while the effect of barter deals may reduce lead stocks outside the United States by a further 75,000 to 100,000 tons. This should be some relief to an industry, which has been producing well in excess of world consumption of about 253,000 tons each year.

One of the unknown factors is Soviet Russia's intentions in the world lead market. Russia is a significant producer and has not given any official indication of the line she will take. But, observers say that she will honour the spirit of the cutback agreements, as it is not in her interests to see prices go lower. There is already a precedent for this in the case of tin.

No further news has been heard of the release of Tin by the US Government, which was reported last week; but the International Tin Council is due to meet in London this week and an announcement may be made then.

Company Reports

Excellent Results of IBP

THE Indo-Burma Petroleum Company Limited has produced excellent working results for 1960, thanks to the rise in sales from Rs 1.61 crores to Rs 1.77 crores. The net profit, after providing for depreciation and taxation, amounts to as much as Rs 64.02 lakhs as against Rs 40.45 lakhs for the preceding year.

Except for Dividend Equalisation Reserve which is maintained at Rs 5.00 lakhs, all other allocations have been increased.—Depreciation from Rs 4.07 lakhs to Rs 4.51 lakhs; Taxation from Rs 31.40 lakhs to Rs 43.26 lakhs; General Reserve from Rs 4.00 lakhs to Rs 22.50 lakhs and Development Rebate Reserve from Rs 75,399 to Rs 85,015. Even after these increased allocations, the directors have found it possible to raise the Ordinary distribution from Rs 2.50 to Rs 3.00 per share (including a special distribution of 50 nP), subject to deduction of tax.

During the year, the Government of the Union of Burma completed purchase of control in the Burma Oil Company (1954) Limited by paying the amounts still then due account their original 33 1/3 per cent shareholding and thereafter purchasing the additional 17 3/2 per cent shareholding necessary to give them the 51 per cent holding in that company. These developments resulted in the disposal of part of IBP's shareholding in the BOC (1954) Ltd.

Jeewanlal Fares Well

The demand for the company's fabricated products being continued to exceed the supply is fully reflected in the working results of Jeewanlal (1929) Limited for 1960. While sales have risen to Rs 2.24 crores from Rs 1.99 crores, the net profit is substantially higher at Rs 9.05 lakhs as against Rs 4.19 lakhs.

In respect of allocations, the Depreciation amount is raised to Rs 1.56 lakhs from Rs 1.13 lakhs; Taxation to Rs 7.41 lakhs from Rs 3.14 lakhs; General Reserve to Rs 5.76 lakhs from Rs 64,000 and Development Rebate Reserve to Rs 58,591 from Rs 9,984. The directors have recommended a final dividend of 10 nP, making a total of 45 nP as against 25 nP per share previously.

The Government of India has granted the company a licence to set up Rolling Mills for an installed capacity of 3,860 metric tonnes

per annum. Out of this tonnage, the company intends to export 2,000 tons per year in semi-fabricated or fabricated forms out of imported ingot, which will be available at international price. The site for the Rolling Mills has been selected and the lands have been purchased at Tiruvottiyur in Madras. Production is expected to start before the end of 1962.

Godfrey Phillips Pays More

Thanks to the rise in sales from Rs 3.54 crores to Rs 4.14 crores as well as in the net profit from Rs 13.38 lakhs to Rs 20.97 lakhs, Godfrey Phillips India Limited has been able to raise the dividend on the Ordinary shares from 26 to 40 per cent, taxable, for the year.

The amount set aside for Depreciation is higher at Rs 5.41 lakhs against Rs 5.04 lakhs; Taxation at Rs 19.10 lakhs against Rs 12.75 lakhs and Development Rebate Reserve at Rs 35,000 against Rs 33,500.

Bowreah Cotton Resumes Distribution

Despite the strike which lasted 51 days, the Bowreah Cotton Mills Limited has reported encouraging results for 1960. Although sales have declined from Rs 2.14 crores to Rs 1.98 crores, the net profit, after providing for Depreciation and Taxation, is higher at Rs 13.73 lakhs as against Rs 7.97 lakhs for the preceding year. The Depreciation amount is raised to Rs 11.99 lakhs from Rs 9.66 lakhs; General Reserve to Rs 5.00 lakhs from Rs 1.00 lakh and Development Rebate Reserve to Rs 4.00 lakhs from Rs 2.65 lakhs. The directors have proposed a taxable ordinary dividend of Rs 10 per share as against nil previously.

According to the directors' report, a mercerising Range is under erection, while a cloth singeing machine is also being installed. The spinning preparatory is also in the process of modernisation.

Sharp Rise in Sales of Standard Motor

The sales of Standard Motor Products of India Limited have shown a sharp rise to Rs 3.90 crores for 1960 from Rs 2.14 crores for the previous year, thanks to the increased output. The net profit, before providing for Depreciation and Taxation, has also risen significantly to Rs 28.62 lakhs from Rs 18.14 lakhs.

The amount set aside towards Depreciation is Rs 9.50 lakhs (Rs 6.79 lakhs); Taxation Rs 6.60 lakhs (Rs 3.50 lakhs) and Development Rebate Reserve Rs 3.75 lakhs (Rs 3.00 lakhs). The ordinary dividend is maintained at 9 per cent, taxable; but as a result of larger capital ranking for whole year, the amount required is higher at Rs 4.23 lakhs against Rs 2.30 lakhs.

The directors state that arrangements have been completed for stepping up output to 4,500 vehicles annually; but the further expansion in output to 7,500 units by 1963 depends on the issue of the required licences by the Central Government. The company's application to import capital goods is pending before the authorities. The new model is expected to be on the market by the middle of this year.

Arvind Mills Report Higher Profits

The profit of the Arvind Mills Limited has gone up from Rs 29.79 lakhs to Rs 40.02 lakhs for 1960 after providing Rs 8.92 lakhs for managing agents' remuneration (Rs 7.55 lakhs); Rs 22.36 lakhs for Depreciation and Development Rebate (Rs 21.65 lakhs) and Rs 38 lakhs for Taxation (Rs 33.89 lakhs). The directors have recommended a final dividend of Rs 30, making a total of Rs 45 per share, subject to tax. The company declared a dividend of Rs 40 per share subject to tax, for the preceding year.

Sales of cloth, yarn and waste have moved up from Rs 3.42 crores to Rs 3.73 crores and the closing stocks from Rs 35.73 lakhs to Rs 49.69 lakhs. The allocation to General Reserve has been stepped up from Rs 3 lakhs to Rs 11 lakhs.

The company proposes to issue bonus shares in the proportion of two shares for every three ordinary shares held. It is reported that the Government has accorded sanction to the company in this respect. The directors state that an additional plant of 192 automatic looms is under erection. It is hoped that this new plant will go into production by June 1961.

J. K. Cotton's Plan for Expansion

The J. K. Cotton Spinning & Weaving Mills Company Limited has an ambitious programme of expansion. The company will put a plant for the manufacture of sodium sulphate to be recovered as a by-product from the rayon plant. Orders have been placed for the import of the requisite plant and machinery from West Germany.

The company has obtained licences for the expansion of the existing

rayon plant from 5 to 10 tons per day; for producing yarn grade pulp from cotton linters with 10 tons per day capacity and for setting up a fertilizer plant for the manufacture of superphosphate with capacity of 40,000 tons per annum.

Meanwhile, the company's net profit for 1960 amounts to Rs 19.61 lakhs against Rs 6.97 lakhs for the previous year; and these figures are arrived at after providing for depreciation. The Depreciation amount is raised substantially to Rs 72.62 lakhs from only Rs 11.00 lakhs, while a sum of Rs 10 lakhs is set apart for Development Rebate Reserve. After adding Rs 31.97 lakhs being the excess depreciation in previous years being written back, the directors have been able to provide Rs 8.30 lakhs for Taxation (nil) and Rs 15.85 lakhs (nil) for General Reserve. A taxable dividend of Rs 1.25 per equity share has been recommended on the capital of Rs 1.25 crores increased from Rs 63 lakhs. In this connection, the company floated new shares in April 1960.

Encouraging Results of Calico Mills

The working results of the Ahmedabad Manufacturing and Calico Printing Company Limited (Calico Mills) have been encouraging. The gross profit has gone up by Rs 52.85 lakhs to Rs 2.34 crores. Allocations included Rs 12.66 lakhs for managing agents' remuneration (Rs 15.36 lakhs); Rs 67.31 lakhs for Taxation (Rs 59.03 lakhs) and Rs 54.42 lakhs for Depreciation (Rs 25.65 lakhs). The statutory Development Rebate Reserve absorbs Rs 22.43 lakhs (Rs 6.22 lakhs) and the Rehabilitation and Development Reserve Rs 7.47 lakhs (Rs 2.07 lakhs). The General Reserve claims Rs 21.44 lakhs (nil).

The directors have recommended a final dividend of Rs 20 per share, making a total of Rs 34 per share, taxable. The net dividend works out to Rs 25 per share against Rs 22 in the previous year.

INDU Pays Dividend

After a number of years, India United Mills Limited has reported a substantial increase in earnings for 1960. It has also been possible for the company to wipe out the earlier deficits and resume the payment of dividends on both ordinary and deferred shares. The net profit, before providing for depreciation and taxation, for the year is Rs 110.23 lakhs as against only Rs 27.91 lakhs for 1959.

In respect of allocations, the provision for Depreciation is Rs 11.76 lakhs (nil) and Development Rebate Rs 3.91 lakhs (nil). A further amount of Rs 21.44 lakhs is set apart towards arrears of depreciation and Rs 13 lakhs in respect of bonus for previous years. There is also a provision of Rs 8.47 lakhs for lay-off compensation on account of 1951-52. After wiping out the debit balance of Rs 19.79 lakhs brought in, a dividend of 80 nP per share, taxable, on the ordinary capital and 13.25 nP per share, taxable on the deferred capital are recommended.

lakhs will be fixed capital and Rs 25 lakhs will be working capital. The company has been negotiating with foreign firms for technical and financial participation in this project. In the proposed capital of Rs 65 lakhs, Rs 40 lakhs will be in the form of equity capital and Rs 25 lakhs in

HERCULES INSURANCE COMPANY, LIMITED.

(Incorporated in India)

NOTICE IS HEREBY GIVEN that the TWENTY SIXTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta on Friday the Sixteenth June 1961 at 3 P.M. for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1960.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring.
4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. Sanctioning the payment of Rs. 31,400 to the Directors as their fees for services rendered during the year ended 31st December, 1960.
6. To appoint a Director in the place of Mr. D. C. Kothari who holds office as a Director of the Company only up to the date of this general meeting. The Company has received notice under Sec. 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution:—"Resolved that Mr. D. C. Kothari be and is hereby appointed a Director of the Company."

The Share Transfer Books will be closed from the 9th June 1961 to the 16th June 1961, inclusive.

By Order of the Board

E. K. SRINIVASAN,
Managing Director.
Calcutta, 22nd May, 1961.

Note:—

1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.
2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 16th June 1961.

Explanatory statement as required by Sec. 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

the form of loans. The foreign collaborators will provide Rs 12 lakhs out of Rs 40 lakhs and Rs 28 lakhs will be raised by Messrs Kothari and Sons. In the Rs 25 lakhs loan, Rs 8 lakhs will be in the shape of a sterling loan and Rs 17 lakhs in the shape of a rupee loan.

INVESTMENT NOTES

Hindustan Aluminium

It is learnt that the Hindustan Aluminium has submitted a proposal to the Central Government for a further increase in the installed capacity by 30,000 tons per annum. If the Government agree to the new scheme, the capacity will be raised to as much as 50,000 tons. It is expected that the 20,000-ton plant will go on stream early next year. In the event of a further increase in capacity, it is proposed to erect a thermal plant in the Rihand Dam area in order to meet the increased demand for power. The expansion programme as well as the setting up of the thermal plant will cost the company Rs 20 crores.

Ceat Tyres

The directors of Ceat Tyres of India Limited have stated that the first production programme of the factory, envisaged in the prospectus, has been attained and that the tyres have given satisfactory performance. After due consideration, it has been decided to accelerate the manufacturing programme in order to reach as early as possible the production of 1,000 metric tons per month of tyres and tubes. Provided the licences for the import of capital equipment are granted as per schedule, the directors anticipate to attain the target production in a shorter time than the one contemplated in the prospectus.

STOCK EXCHANGES

Revival of Buying Interest

Watch-Dog Writes:

THE sagging trend of equity prices, that has been noticed during the past two weeks, has been arrested and, in some cases, it is even reversed. This is mainly attributed to a revival of buying interest at the recent low levels following the continuous report of the industrial performance being maintained at a very encouraging level. Higher advices from Bombay are also a contributory factor.

Prices on the Calcutta Stock Exchange displayed a steadier tendency although activity was confined to only a few selected shares.

On the Bombay Stock Exchange, popular counters scored handsome gains on balance due to renewed bull support coupled with short-covering.

Steadier conditions prevailed on the Madras Stock Exchange where Textile shares were in the lime-light.

CALCUTTA

FRIDAY

THE pattern of the week's trading in the local stock market indicated a progressive improvement in sentiment, initiated by the string of encouraging corporate results. While a section of the operators were cautiously awaiting a technical correction in the speculative counters, the return to more active trading conditions was generally welcomed, thanks to encouraging Bombay advices. Even the initial disappointment over the dividend being halved by the TEXMACO was overcome, as this possibility had already been discounted. Turnover, however, remained restricted in view of the market being closed for two days during the week.

Conditions in the Giltedged section were listless. Demand was only confined to short-dated issues. Even here, the volume of business reported was not sizable. There were some enquiries in State Loans. 3 per cent 1986 Conversion Loan was on offer at Rs 73.10 against Rs 73.25 quoted in the previous week.

Bank shares were a steady feature with Punjab National having buyers upto Rs 21.25 and United Commercial up to Rs 89.50.

In the Jute section, there were more sellers than buyers. The recent reports of Kamarhaty and Kankarnah companies were viewed with concern, as these might well set the pattern of future reports. There was also a general fear that the working results of most of the mills for the current year were likely to be more unsatisfactory than was thought earlier. The only two exceptional features were Birlas and Ganges having sustained up to Rs 38 and Rs 10.37 respectively. Howrah were, however, offered further lower at Rs 20 against Rs 20.37; Barnagore at Rs 125 against Rs 128 and New Central at Rs 20.12 against Rs 20.31.

Coal shares came in for selective buying on prospects of expansion. Bengal were enquired up to Rs 375 from Rs 370; Burra-kur up to Rs 20.50 from Rs 20.06 and New Beerhoom up to Rs 23.37 from Rs 23. Central India and Western Bengal were, however, narrow markets moving around Rs 13.25 and Rs 9.25 respectively.

In the Tea section, buying interest was highly selective, being confined to such issues that promised capital appreciation. Betjan changed hands at Rs 33.12 to Rs 33.50; Bishnauth at Rs 25.19 to Rs 25.62; Hasimara at Rs 28.12 to Rs 28.37; Huldibari at Rs 28.75 to Rs 28.87 and Killcott at Rs 20.75 to Rs 21.00.

Sugar shares were dull and subdued, as production was expected

to touch a new record during the current season, not to speak of the anxiety with regard to the disposal of stocks. Raza/Buland met with business at Rs 11.44 to Rs 11.50; Cawnpore at Rs 12.75 to Rs 12.94 and Ramnugger Cane at Rs 29.50. Belsund were on offer at Rs 12.25 against Rs 12.37 with Darbhanga slightly better at Rs 14.25 against Rs 14.

Textile shares were in the lime-light, thanks to encouraging Bombay advices. Dunbar were marked up to Rs 30.50 from Rs 29.63; Kesoram up to Rs 34.12 from Rs 32.50 and J. K. Rayon up to Rs 20.56 from Rs 19.12. Jay Shree were, however, quiet at Rs 15.75 against Rs 15.94 on lack of support.

After ruling initially quiet, Engineering shares firmed up under the lead of Indian Irons. Despite settlement considerations, the scrip was pushed up to finish at the highest level for the week at Rs 27.80 from the lowest level of Rs 27.26. Jay Engineering met with some enquiry up to Rs 28.62 from Rs 27.87, while Dalmia Iron moved narrowly between Rs 10.06 and Rs 10.25 and Jessop between Rs 20.75 and Rs 21.06. TEXMACO, after touching a fresh lower level of Rs 19.05 on the announcement of the dividend being halved to 10 per cent for 1960, improved towards the close to Rs 19.60. Guest, Keen, Williams were fairly maintained at Rs 42 with Braithwaite turning a shade quieter at Rs 32.75 against Rs 33.12.

It was the Miscellaneous section that provided some life to the market. Following were the price trends of few selected shares:—

	As on 20 May	High-As on 25 May	Low-As on 25 May

Skilled hands working with the touch of steel—steel weaving in and out of fabric, making a pattern or sewing together, steel fashions the clothes we wear.

Fine needle to giant machinery in modern cloth mills, much of the textile industry's equipment is shaped from steel—tons of steel are required to produce the fabrics which clothe our millions. Soon we shall know abundance in an even greater measure—the finest textile at a price all can afford. Soon all this will be ours as there is a little more steel for each of us. Towards this end, **IISCO** is working—for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.

STEEL IS MORE CLOTHES FOR YOU

The Green Signal

THE National Development Council in session in Delhi this week will give its blessing to the final draft of the Third Plan. According to present indications, copies of the Third Plan will be available to the public by the middle of July after the Planning Commission has incorporated the results of the discussions in the NDC meeting. Reports emanating from Delhi indicate that, apart from the marginal revisions in allocations reported in these columns in the recent past, there is no likelihood of drastic changes from the tentative decisions taken by the NDC in its January meeting. The two sets of targets of public sector outlay somewhat euphemistically described as "physical" and "financial," are to be retained in the final draft. Optimism about the level of savings in the country recently expressed by the Savings Sub-Committee of the NDC, supported also by the findings of the NCAER study has apparently been allowed, at Mr Nehru's instance, to make only a psychological difference. Chief Ministers of States would have liked a more tangible use of the findings on savings in the form of enlarged allocations. But they have apparently been told that it may be premature to build too eagerly on these findings. As Mr Nehru put it, if the circumstances in the coming years warranted it, there should be no psychological or other objections to revising upward the outlay. On the other hand, if too large drafts on hopes are made even now and commitments are written into the plan, and if the hopes turn out to have been unfounded, the psychological, physical and financial waste may well be disastrous.

There is another advantage in the maintaining of the differential: it is that, if properly directed, it can be an instrument of greater efficiency in the use of resources. The effort to achieve the physical equivalent of an outlay of Rs 8,000 crores by the use of only Rs 7,500 crores would involve a deeper concern with productivity, less wasteful utilisation of resources and a greater anxiety to get the maximum return for every rupee spent. The besetting sin of every kind of large outlay is the "blunting of the edge of husbandry" and a psychology of grandiosity. Where we are to make do with less we may start thinking about how best we can do it. Evidence of wasteful planning is large enough for us not to consider this particular aid to better performance superfluous. It may be urged that, logically, a variance between the two targets means slack planning. But such an objection is purely theoretical and takes no note of practical experience. Of course, the findings of a favourable climate for savings may already be nullifying the effects of a situation in which one had to make a little go a long way. If that happens, then it would be a pity.

Reports indicate that Dr B. C. Roy urged upon the NDC the proposition that the States should be free to make their own plans if they could find the resources for them or alternatively they should have a right to rearrange the priorities fixed by the Planning Commission. The suggestion is not entirely surprising in the light of Dr Roy's known views on the

subject. But it is difficult to see how the first of the two alternatives suggested by Dr Roy could be implemented in any meaningful way without making nonsense of the whole concept of total planning. In an elementary sense, the States even now make their own Plans. The schemes included in the Plan are the result of "planning from below"—that is to say, the States make their proposals and the Planning Commission fits the multitude of proposals in one unified whole, which again is submitted to the NDC for approval. Moreover, if each State is to be allowed to make its own arrangements about resources outside the Plan, then the estimates of resources within the Plan would obviously be incomplete. Dr Roy's suggestion for greater freedom for fixing priorities at the State level is a valid enough plea, especially in view of the wide-spread feeling that the Planning Commission tends to create extra-constitutional situations. If there can be an assurance that priorities will be fixed on a rational basis solely on economic considerations and the temptation to meet particular importunities or to satisfy particular vanities will be firmly resisted, there is everything to be said in favour of States' arranging their own planning within the broad framework designed by the Centre.

At the time of writing, the NDC is still considering in detail the question of resources. It is likely that the results of the Aid-India Club meeting held on 31 May will be available in some rough form for the NDC before it concludes its session. But recent indications have been to the effect that American initiative in assuring India of two billion dollars for the first two years of the Third Plan will be crowned with success. Recent studies made by the Planning Commission itself have shown that the draft outline had greatly under-estimated the quantum of maintenance imports. The latest estimates of such imports are put at Rs 3,650 crores for the five-year period. The importance of these imports to the full utilisation of capacities and assets already created by planning can hardly be over-estimated. Indeed the comparative ineffectiveness of the earlier decade of planning has been the result of under-utilisation of created assets. The promised untied assistance from abroad used with the greatest possible care to get the maximum out of imports needed to keep existing assets in full working capacity can make an enormous difference to the entire Plan. For it will not only fulfil the Plan's physical targets but also generate new resources in the form of taxes and other forms of savings.

Mr Nehru who has obviously been heartened by the findings on Savings, spoke in impassioned terms about the need for a flaming and even ferocious sense of urgency for development. Impatience and even anger were prescribed by him for getting over obstacles. He expressed himself disappointed that his own sense of being at a historic turning point was not reflected in the public mind at all. One reason, among others, for this undoubted apathy for development may be that people's minds are filled with other urgencies. Some of them, like linguistic and communal passion, may yet prove our undoing.

Thoughts on Exports

MANY suggestions for increasing exports from India steadily within a short period have appeared of late. The location of promising markets is still the difficulty and it must be understood that adjacent markets like Ceylon are applying import control, and countries that would buy many Indian manufactures like the United Arab Republic are hampered by an adverse balance of trade. The less developed countries, dependent on export of raw materials which are regarded as the most likely buyers of Indian manufactures are in the same position as India, and the Indian Trade Commissioners in recent months have pointed out that balance of payments difficulties are likely to limit trade prospects, for instance, in Latin America.

In the case of many manufacturing industries, the present excess of installed capacity and the prospect of raising production upto capacity may create conditions suitable for exports. But then, much depends on the supply of power and the availability of raw materials, and on these two points, no assurance is

forthcoming at present. However, the expansion of machinery manufacture which would reduce imports and perhaps enlarge exports is now regarded as more desirable than the manufacture of consumer goods for which the market is uncertain.

That is why the planners are now more concerned with heavy industries than with light industries, but the export trade will rest on light engineering and figures regarding production of screws, fans, hurricane lanterns, razor blades and sewing machines may suggest that the surplus available for marketing abroad is increasing and there are at least areas like East Africa where only modest revenue duties are applied and current agricultural prosperity is reflected in increased demand for simple imported goods.

There remains, however, the problem of prices. High cost goods that sell well in the home market encounter sales-resistance in markets abroad but in the case of cast iron pipes or sanitary ware India's chances are regarded very bright, especially, in a country like Malaya whose foreign trade is expanding. It may be that some lines for example pharmaceuticals or beer are closed today because local manufacture under foreign auspices has started already in Malaya. But builders' hardware, glass and cellophane paper are

finding a ready market in Malaya. How exporters should combine to advertise is probably a question for experts at present. But it has been discovered that lack of publicity and inability to furnish rates or pay for tender forms has stood in the way of getting essential information about the Chilean railway programme last year.

It is known that Japan's sales (known to be large in the Fifties) of railway equipment in South East Asia have now given place to large sales to Latin America and the chances of competing with Japan must be assessed precisely by a reference to the customers' immediate requirements. Because Japan has privately owned railways in addition to State lines and the railways themselves are manufacturers of locomotives and other items, a big trade has been built up already and to compete with Japan, the locomotive factory or the coach factory in India would have to offer terms equally advantageous. In the case of some Latin American countries, the means of payments may be secured in copper or other metals, of which India is woefully short, but a closer knowledge of Japanese methods in export trade may be required of export promotion councils which might have to keep permanent representatives to keep distant customers satisfied and remind the

Indian Finance

3 June 1961

foreign buyer that the Indian supplier is permanently in business.

The prospect of increasing trade with Pakistan has been mentioned in connection with the restoration of the open general licence for a short period, but from recent reports it is evident that the sale of sugar to countries other than the USA will be extremely difficult. Many Asian countries are now developing beet-root cultivation and even Latin American countries like Chile want to produce beet sugar in order to avoid the import of cane sugar from Cuba or Peru. This may hold a lesson for India at present although, it may be noted in passing, that in items like shellac or mica the old supremacy is maintained out in regard to light engineering the missions that have gone out in recent years will have discovered that Japanese competition is a very important factor. In fact, the future of Indo-Japanese trade will have to be considered in relation to competition in Asian markets for manufactured goods, not only in textiles, and the growth of the Japanese steel industry at a more rapid rate will probably put an end to the hopes of India becoming an exporter of steel to countries like Burma or Ceylon.

While Russian rivalry in textile goods in the Malayan market might be met easily, the persistence of Japanese competition will have to be taken note of in any evaluation of the future of sales of Indian goods to Ethiopia or the Philippines. While great faith is placed in the liberalisation of German import trade, it is clear that in markets like Indo-China or the Middle East, the major and immediate rival is Japan. But if there is extensive collaboration by Japanese firms in Indian industry with the major cartels like Mitsui coming in here as active allies of Indian capital, the export problem may alter both in character and dimensions.

Staff Cost of Indian Banks—II

By P. K. SEN

SOME aspects of the staff cost of Indian banks were discussed in an earlier article in these columns (Issue of 29.4.61). Besides the direct cost involved on emoluments of the staff engaged on a particular job, there are also other factors which exert influence on the overall costing and therefore deserve consideration.

It has been noted that whereas the average emoluments of a 'non-officer' bank employee in the USA amounts to about \$270 per month, it is about Rs 350/- per month in this country (on the basis of internal prices both these figures would be comparable, when earned and spent in the respective countries). But a bank employee in the USA not only has to work longer hours per week than his counterpart in India, the leave to which he is entitled during a year is very much less. Sri C. H. Bhabha quoting statistics with regard to privilege leave earned by bank clerks in different countries has shown that, whereas in the USA a bank clerk is entitled to 14 days leave in a year and in the UK 18 days, a bank clerk in India is entitled to 30 days' leave in a year. He has further shown that whereas the bank holidays, in a year, are 11 days in the USA and range between 8 and 16 in the European countries, India has 25 public holidays. The implications of these for costing is obvious.

Another banker, belonging to a well known Indian bank, points out that in India, unlike anywhere else in the world, a bank clerk is allowed to earn a full year's salary for almost half-year's work. According to his calculation

the privilege leave, holidays, casual and other leave, would add upto 105 days in a year and if to this is added two months, for which bonus is paid, the total number of days of "non-work" for which an employee has to be paid at full rate, comes to 165 days out of nearly 315 days (excluding Sundays). Sri Bhabha has shown that ignoring casual leave, while a bank employee works 1920 hours in the USA and 1950 hours in the UK in a year, a bank employee in India works only 1610 hours in a year.

Absenteeism, which is a common feature, further aggravates the situation. In the absence of suitable data, it can be said from experience that if a study is made, it will be seen that by and large absenteeism (besides absence on leave) would range between 15 and 20 per cent, on an average, throughout the year. Total expenses of Indian scheduled banks on staff in 1959 were nearly Rs 26 crores; a 20 per cent of this would be about Rs 5 crores. But the implication of absenteeism extends beyond the actual salary cost. It also results in loss of output. A rough estimate of such loss of output can be made on the basis of total current operating earnings, which, in the case of Indian scheduled banks, in 1959, were nearly Rs 83 crores. If the loss in output is quantified on that basis, (admittedly this is but a very rough assessment), it will be found that the loss was to the tune of about Rs 5 crores. The total loss in 1959 by absenteeism therefore would come to about Rs 10 crores, or about 12 per cent of the current operating earnings.

Yet another broad aspect of staff cost would be the wastage inherent in the systems and methods of operation. Over a number of years, various checks and cross-checks have come down to be regarded as indispensable measures of safety for banking operation. But if a proper assessment is made, it will be seen that much of this checking can safely be either eliminated or built-in into the system. There would also be found certain minor risks, which it would be more economical to carry than to try to prevent through an elaborate checking procedure. Such a step would result both in reduction of staff cost and in bringing about promptness in service, which may considerably be improved. But the major difficulty in such reorganisation, is mental resistance, both on the part of the staff as well as the management,—customs and habits, die hard.

Again the method of extending Bank credit would appear to allow for reorganisation with a view to bringing about operational efficiency and economy. By adopting the American method of extending loans, operational disturbances and resultant wastage, inherent in the method of extending Cash Credit and Overdraft, can be avoided; this may further assist in improving productivity in other departments by ensuring a better flow of operation than at present.

Proper delegation of authority to various levels is yet another important step worth considering in improving the productivity and reducing the incidence of staff cost. Unless delegation is commensurate with the needs of operation, bottle-necks are bound to be created at various stages; and it is common knowledge that bottle-necks result in wastage. Here, however, there are problems. The problem of equipping the staff to discharge effectively delegated authority and responsibility; the problem of willingness on the part of the staff to shoulder responsibility; and the problems of assessing the exact requirement of authority needed at different levels. But these problems will have to be faced and efforts will have to be made to prevent over-centralisation.

The most important step in the matter of improving productivity of staff would appear to be the assessment and standardisation of minimum norms of output at various jobs and levels. Success of any such attempt, however, will depend largely on the attitude of the staff to co-operate in the matter of improving efficiency, and productivity, on a scientific basis. There is need for better job definition and evolution, study of operational rhythms, and quantification of minimum output per hour. At the same time too much compartmentalisation must be destroyed. There are many jobs where the rhythm of operation is subject to wide fluctuations during the day and this calls for adjustment by detailing employees from other jobs for short periods. The present rigidity in the approach of the staff—each to his own one-type job only—has to go. An amount of flexibility, in this regard, will go a long way in improving the operational efficiency at lesser cost.

There is thus a difficult problem facing Indian banking—the problem of productivity and staff cost. This is already engaging the attention of bank management and efforts are being made here and there. The present situation however demands a total effort and in this the approach of the entire 'team'—both the management and the staff—will be an important deciding factor. Willingness to improve and change can be stated to be the pre-condition. Admittedly, maximisation of efficiency will require maximum possible ease of operation. But the operational ease must not be confused with the ease and comfort of feather-bedding. At the present stage of economic development in the country, if the banking system is to be equipped for discharging its obligations, there is need for maximum effort on the part of each individual member of the banks' staff.

Steady Progress in General Insurance

The latest insurance year book published last week deals with general insurance business in 1959. The usefulness of this publication giving facts and figures pertaining to a period which is as much as about one and a half years old may not be rated high but then this is the only reliable source available for making up a comprehensive picture of general insurance in India. There is however no reason why the Year Book should not be brought more up to date.

The year 1959 has been quite satisfactory for general insurance as will be evident from the fact that the index number recorded a rise of 10.5 points for 1959 as against a rise of 6.4 points in 1958. The net premium income in India in all classes of general insurance business of Indian insurers was up by nearly Rs 2 crores to Rs 15.02 crores from Rs 12.98 crores in 1958. The break up of the 1959 total is Rs 5.14 crores in Fire insurance, Rs 2.62 crores from Marine insurance and Rs 7.26 crores from miscellaneous insurance business. A heartening development is the steady growth of business outside India written by Indian insurers. The net premium income outside India of Indian insurers amounted to Rs 13.32 crores in 1959, of which Rs 7.28 crores were earned from Fire insurance, Rs 2.49 crores from Marine insurance and Rs 3.55 crores from miscellaneous insurance business. The gross premium written direct in India during the year under review in all classes of fire, marine and miscellaneous insurance business was Rs 23.01 crores for Indian insurers. Thus it will be seen

that the share of Indian insurers in the total gross premium as well as net premium income in India rose further during 1959 in all classes of general insurance business. The break up of the figures however shows that there is a slight fall in their shares of the Marine net premium income in India as compared to the previous year.

In the case of non-Indian insurers also the experience during the year 1959 has been of a similar kind. The net premium income in India of this category of companies was also higher in 1959 than in 1958 with the total at Rs 7.45 crores of which Rs 3.19 crores related to Fire, Rs 1.81 crores to Marine and Rs 2.45 crores to Miscellaneous insurance business. The gross premium written direct in India during 1959 amounted to Rs 10.18 crores and this is larger than the gross premium written in the previous year.

While the figures relating to their business in 1959 no doubt indicate that general insurers, especially Indian insurers, are steadily increasing their business, it is rather difficult to believe that with economic and kindred activity in the country at the present accelerated tempo, the rate of growth of general insurance even in 1959 could not have been much higher than what has actually been recorded. The scope of general insurance has vastly increased during the past few years and perhaps one may expect the index number of general insurance to record a further substantial increase in 1960, on the assumption that improvement has come to be well pronounced only since 1959. For the index

number has shown a rise of 10.5 in the year 1959 as against a rise of 6.4 in the year 1958 and a rise of only 0.5 in the year 1957. This is not however to say that all is well with general insurance in

India. Our insurers have certainly to put their house in order and perhaps the most urgent reform is the elimination of the unhealthy competition among them.

Class or classes of general insurance business for which the 166 insurers were registered on 31 December, 1960.

Class or classes for which registered	Indian Insurers	Non-Indian Insurers	Total

BANKS

Easy Conditions in the Offing?

THERE is now clear enough indication, although it is only three weeks old, that the 1961 slack season will witness easier money conditions than we have had for some years. Contraction in Advances, in fact, started as early as in the last month of the 1960-61 busy season; and the decline has picked up further momentum in the first three weeks of May. Meantime, Deposits too show every sign of gathering in considerable amount with the banking system. It is almost certain now that this journal's expectation, emphatically iterated some weeks ago, of a two-fold accrual of free resources with banks will materialise. The impact of such easier conditions on the money market is already apparent: interest rates have moved down, there is scarcely a bank which is obliged to pay more than 4 per cent for central banking credit and there is even the prospect that the inter-bank call money rate will fall below the level of the bank rate. What, if any, are the other implications? And how has there occurred this sharp reversal of the trend in the World of Finance, whereby a busy season which recorded the steepest yet expansion in Advances is being followed by a state of ease unparalleled in recent years?

To find the answers for these questions, we need first to appreciate the reasons why, in the last two years, the slack season got obliterated. Both in 1959 and in 1960 the rise in industrial production was smart; while, in the slack season, there was the return of funds from the mofussil, the reduction in Advances against it was almost wholly offset by enlarged demand for money consequent upon a higher level of industrial production. It is again the growth of industrial production which, when super-imposed upon the seasonal demand for funds, caused the busy season expansion in Advances to assume an extraordinarily large size. A larger output of goods in turn meant that trade and commercial demand upon the banking system was greater. It was not, therefore, the failure of seasonal finance to return which prevented Advances from contracting during the notional period of the slack season; it was, rather, the diminishing importance of seasonal finance as a whole, and the inflated industrial and trade demand for bank accommodation, which caused the demand for money to be sustained throughout the year.

The situation has now changed more than somewhat. On the one side, there is every reason to believe that, since the beginning of 1961, the rate of growth of industrial production has slackened. Partly, this is owing to raw material shortages of various sorts; partly, the general shortage of power in the country is compelling sub-capacity working; and of course the inadequacy of transport and coal has also affected production in industrial establishments generally. On the other side, in the wake of a year of record agricultural

crops, the mopping up of resources from the mofussil, through consumer goods of various sorts, is possibly in larger quantum than in recent years. Then, also, such expansion of plant capacity as there has been during the Second Plan, and which was financed by bank loans secured as short-term accommodation, can be presumed to be now in production; in fact, with the private sector expansion largely "ordered" for in 1956, when the bulk of plant and machinery were purchased, such new output was certainly reflected in the growth of production in 1959 and 1960. Hence it is possible that the medium-term Advances are in process of being liquidated. These, then, are the reasons why the trend in Advances, since the beginning of April, is categorically downward.

On the other hand, during 1960, bank Deposits tended to be stagnant. An important source of new Deposits was shut out, with the fresh arrangement as regards US counterpart funds which, since May last year, are accruing directly with the Reserve Bank; indeed, the banking system on this account experienced a net drain of Deposits, with the State Bank under commitment to repay Rs 108 crores of counterpart funds by 31 March 1961, and a further Rs 36 crores by 30 June 1961. Then, there was the disruption of confidence in banking with the closure of the Palai Central Bank and the extended and prolonged moratoria announced by the Reserve Bank in respect of various small banks. The Palai Central failure halted the spread of the banking habit, and therefore interrupted the steady growth of Deposits with banks. Moreover, we have reason to believe that the private sector ordered out a good deal of plant and machinery from abroad during 1960; that is the inference that we can allow ourselves to make from the size of the import surplus on private sector account last year. A private sector import surplus of course was a powerful contractionist influence on Deposits.

In respect of Deposits, too, there is an appreciable change in the situation. The Palai Central affair has blown over, and confidence has been restored by the official intention to implement a scheme for the insurance of bank Deposits. Besides, although it may not be a major factor, banks' decision to raise the rates of interest they pay on Deposits may have induced new money to seek sanctuary in a bank account, rather than in small savings or some other form of locking up money. We may presume that the size of the private sector import surplus, in view of the large orders inferentially placed last year, is now smaller, and that therefore the contractionist influence on Deposits is less pronounced. Then, the new issue boom in the equity market has helped channel money into the banking system which otherwise would have stayed outside or strayed elsewhere; a case in point is the Goodyear issue, cash subscriptions for which are believed to have been sizable. Only one more instalment of Rs 12 crores (for June) remains to be paid by the State Bank in respect of counterpart funds being made over to the Reserve Bank. The record agricultural crop is itself helping to mop up resources. Government

Indian Finance

expenditures continue to be high, and they are perhaps (after the usual time-lag) getting reflected in the growth of bank Deposits. Against all this must be set the much smaller reliance on deficit financing and the buoyant trend in Government revenues; both these factors will adversely affect rise in Deposits.

The operation of these changed factors in the money market is, we believe, responsible for the emerging easy money conditions. As it is, since the beginning of 1961, bank Deposits have risen by Rs 18.25 crores, despite payment of Rs 60 crores of counterpart funds by the State Bank; and bank Advances, notwithstanding record expansion in credit during the 1960-61 busy season, are lower at Rs 1,293.81 crores on 19 May 1961, as compared with the figure of Rs 1,333.77 crores on 31 March 1961.

The implications of a return to easy money conditions are manifold. Firstly, banks will be having more Deposits, and on which (at present interest rates) they will be incurring greater expenditure. At the same time, secondly, banks experience a reduction in Advances, and will hence hold less by way of higher-earning assets. A downward adjustment in interest rates would then become inevitable. Longing eyes will be cast at gilt-edged.

It would be eminently proper for the Reserve Bank to announce at that stage the repeal of the three-tier bank rate. For, it is the continued existence of the three-tier system, which discourages banks from investing in gilt-edged. For, if (in the 1961-62 busy season, for example) stringent monetary conditions should again emerge, banks would then have no resources to meet the enlarged demand for funds. They would have the uneasy alternatives of selling Government securities at a loss, or borrowing from the Reserve Bank at a penal rate of interest. As such, in present circumstances, banks would prefer Treasury Bills to dated loans; and of course the Treasury Bill rate can also be expected to go down. If the monetary authorities wish to direct the "freed" resources of banks into gilt-edged, an announcement to the effect that the three-tier bank rate is being discarded is mandatory. In any case, with banks hardly figuring as borrowers, there should be no difficulty about such an announcement.

Thus, the most interesting possibility, as a result of easiness in the money market, is that, properly directed and planned, Government's borrowing programme in 1961-62 can be much more than merely a modest success. It is even likely, always provided that the preparatory measures are instituted by the monetary authorities, that we should see this year, as we did in 1957, a week-by-week hankering after securities on the part of the banking system.

BANK RETURNS

Bank Credit Below

Rs 1,300 Crore Mark

Slack season contraction of currency has been sharp during the week ended 26 May, and there has been a sizable dip in bank Advances as shown in the return of Scheduled Banks for 19 May.

Active note circulation fell by Rs 22.26 crores and is placed at Rs 1,963.24 crores according to the returns of the Reserve Bank for 26 May. There has been inflow of Rupee Coin for Rs 0.62 crores. Currency has been contracted against Rupee Securities for Rs 10 crores by transfer to Investments in the

3 June 1961

Banking Department. Cash in the till is consequently higher by Rs 12.88 crores at Rs 28.32 crores.

There is some evidence of payment being made by the Centre to the States, as also of deficit financing being instituted for this purpose. Investments are higher by Rs 19 crores at Rs 213.42 crores, as a result of the transfer from the Issue Department. But the Reserve Bank is known to have sold Rs 7 crores of securities to the State Bank, and this extent of created money is therefore concealed thereby. The Centre's balances are higher by Rs 0.74 crores at Rs 68.75 crores, while those of the States have improved by Rs 5.13 crores to Rs 20.55 crores. State Governments' indebtedness to the Reserve Bank is slightly lower at Rs 80.72 crores. Reserve Balances of member banks are higher by Rs 0.57 crores at Rs 77.02 crores, but this is wholly on account of the State Bank. Balances Held Abroad are again higher by Rs 0.25 crores at Rs 23.11 crores. Other Deposits have risen unusually by Rs 9 crores to Rs 123.24 crores.

The return of the State Bank for the week ended 26 May discloses a rise of Rs 1.07 crores to Rs 530.68 crores in Deposits. There is a slack season fall of Rs 3.44 crores to Rs 263.38 crores in Advances. Gilt-edged holdings are higher by Rs 7 crores at Rs 224.30 crores. In the result, cash in hand and with Reserve Bank has improved by Rs 3.84 crores to Rs 24.26 crores. The figure of counterpart funds as on the last Friday in May is not yet available, but it should be around Rs 163 crores.

The return of Scheduled Banks for 19 May apparently shows a sharp fall in Deposits: net Demand Deposits are lower by Rs 8.60 crores at Rs 806.81 crores, and net Time Deposits slightly higher by Rs 0.45 crores at Rs 1,094.74 crores. But it has to be borne in mind that, in the relevant week, the State Bank experienced a decline of Rs 13.40 crores in Deposits; hence it is obvious that other Scheduled Banks added to their Deposits by over Rs 5 crores. The total of Advances, in true slack season fashion, has dropped by Rs 13.09 crores to below the Rs 1,300 crore mark, at Rs 1,293.81 crores. Such release of resources has enabled indebtedness to the Reserve Bank being reduced by Rs 12.65 crores to Rs 30.12 crores; and, moreover, borrowings from the State Bank have gone down by Rs 2.19 crores to Rs 11.83 crores. Reserve Balances are slightly lower, by Rs 1.07 crores, at Rs 71.08 crores. The gilt-edged portfolio is marked down by Rs 9.34 crores at Rs 543.31 crores, but this is wholly on account of the State Bank.

The return of Scheduled Banks for 26 May will presumably reveal a further rise in Deposits and yet another decline in Advances. Borrowings from the Reserve Bank should fall below the Rs 25 crore mark. In the return for the first Friday in June, it is possible that, in the event that banks choose not to convert their holdings of the 3½ per cent 1961, indebtedness to the Reserve Bank should decline to a negligible figure.

UNITED INDUSTRIAL BANK

Nominal Profits

The United Industrial Bank Ltd, reports improved working for the year ended 31-12-'60. Total Deposits have increased by an amount of Rs 2.95 lakhs from Rs 1,43.16 lakhs as at the end of 31 December 1959 to Rs 1,46.11 lakhs. There is a striking increase in the cash holdings of the Bank which have gone up by nearly 88.7 per cent to Rs 26.00 lakhs. In the result, cash as percentage of Deposits has

gone up from 9.6 per cent as at the end of 1959 to 17.8 per cent as at the end of 1960. Another significant change relates to the decline in Advances which are marked down by Rs 7.70 lakhs to Rs 1,00.21 lakhs from Rs 1,07.91 lakhs and this has pushed down the ratio of Advances to Deposits from 75.4 per cent as at the end of 1959 to 68.6 per cent. In this situation, the Bank has added to its gilt-edged portfolio which is shown to have gone up by Rs 1.82 lakhs from Rs 38.45 lakhs to Rs 40.27 lakhs, an increase of 4.7 per cent.

Though expenditure under the heads of interest paid and salaries and allowances have gone up by Rs 0.03 lakhs and Rs 0.11 lakhs respectively, the Bank has been able to add to its incomes also. Gross income shows a small rise of Rs 0.33 lakhs from Rs 8.42 lakhs to Rs 8.75 lakhs and the ratio of gross income to Deposits stands at 6.0 per cent against 5.9 per cent in 1959. The Bank shows a nominal profit of Rs 1,878 which may be compared with the considerable loss of Rs 92,984 reported for the last year. This must be considered a striking improvement.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 30 May 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.310 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.750 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday 5 June 1961. Successful tenderers should make payment on Friday, 9 June 1961. Other conditions are as usual.

During the week ended 26 May 1961 Government of India Treasury Bills for Rs 23,11,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 24 to 27 May 1961 amounted to Rs 33,00,000.

UK

Commonwealth and Common Market

By Paul Einzig

RECENT reports about the alleged decision of the British Government to join the Common Market have proved to be premature and/or grossly exaggerated. Fundamentally the

British attitude has remained the same as it has been ever since the conclusion of the Rome Treaty. Britain is prepared to join the Common Market provided she can do so without having to throw the Commonwealth, the European Free Trade Association and British agriculture to the wolves. According to recent statements made by Mr Macmillan and other Ministers, both in public and in private, this principle is still upheld even though Britain is now prepared to bring more active pressure on her partners in the Commonwealth and in the EFTA and on British agricultural interests to induce them to make voluntary concessions in the interests of an acceptable solution.

It would indeed be politically impossible for a Conservative Government to be party to an agreement that would inflict such losses on the major members of the Commonwealth as to jeopardise the continued existence of the Commonwealth. Any major Commonwealth country would be able to veto an arrangement that would be unacceptable to it, by threatening to withdraw from the Commonwealth unless its interests are duly safeguarded.

It would be a pity, however, if the Commonwealth Governments adopted a purely negative attitude. They could and should go further if they wanted to counteract the pressure brought to bear on the British Government on the part of the United States and other interests in favour of going too far to meet conditions of Britain's admission insisted upon by France. One of the reasons why there is strong pressure from many quarters in Britain to induce the Government to give way is that British exports to Commonwealth countries have been encountering increasing difficulties. In fact, in many Commonwealth countries the proportion of goods imported from the United Kingdom to total imports has declined considerably.

This enables supporters of unconditional adherence to the Common Market to argue that it is not worth Britain's while to sacrifice the prospects of her expanding trade within the Commonwealth. The answer to that argument should be given by Commonwealth Governments in no uncertain terms. Now is the time for Commonwealth Governments to go right to the extreme limits of possibilities in encouraging imports from the United Kingdom by every means at their disposal. In doing so they would strengthen Britain's bargaining power in relation to the Common Market and would ensure that if an agreement is reached it would duly safeguard Commonwealth interests. In view of the virtual certainty that the negotiations between Britain and the Common Market will drag on for at least twelve months there is ample opportunity for the Commonwealth to prove that, after all, it is not a declining but an expanding market for British goods.

Notes

COOPERATION

This Picture—

Speaking at the sixteenth Tamilnad Co-operative Conference recently, Mr H. V. R. Iengar, Governor of the Reserve Bank, has made a comparison between the co-operative movements in India and Japan. Co-operation in Japan has made tremendous advance, much of the progress having been accomplished as early as some fifty years ago. The success of co-operation primarily depends on the ready willingness of people to work together for common profit. Coming together alone will not suffice. Having come together, people should work together and continue to do so. Above all people should believe in co-operation which is another way of saying that people should believe in the efficacy of joint endeavour. These qualities are found in good measure in the Japanese and this explains the pre-eminent position of the movement in their country.

The facts and figures given by Mr Iengar about the co-operative movement in Japan serve to indicate the enormous scope for co-operation in India. The coverage of population in Japan is 100 per cent and this remarkable progress has been made in spite of the fact that the average of cultivated land

per household is less than 2.2 acres. The following details about three co-operative societies at different levels will serve to illustrate the popularity of the co-operative movement in Japan. The Okubu Primary Agricultural Multipurpose society has 289 members, a capital of more than a lakh of rupees and deposits of Rs 15.58 lakhs. Of this only Rs 92,000 are loaned to members. Deposits with others including other co-operative institutions amounted to Rs 11.22 lakhs. Kanawara Prefectural Credit Federation of Agricultural Co-operatives has a paid up capital of Rs 27 lakhs; deposits amount to Rs 17.55 crores. It has no outside borrowing and loans to member societies are only to the tune of Rs 1.90 crores. The bulk of its resources is utilised in investments. The Central Co-operative Bank for Agriculture and Forestry as at the end of February 1961 has capital and reserves amounting to Rs 13.3 crores and deposits of Rs 287.9 crores. Here too the bulk of the reserves is loaned to co-operative and other institutions outside the agricultural credit sector. Its investments include government securities, for about Rs 70 crores. Thus this sector in Japan is not only not dependent on other sectors of the economy but is sustaining them by diverting its surpluses to them. Besides the natural bent of the Japanese for working jointly, the success of the movement is largely due to the fact that agricultural productivity is very high. The average yield of rice per acre in Japan is 4243 lbs. as compared with the paltry average of 906 lbs. in India.

Mr Iengar rightly concludes that so long as agriculture continues on a subsistence level, it is idle to look for any marked improvement in the co-operative movement in India. There is also need for imbibing new ideas in working. The movement in our country has almost come to believe that it will be unethical to increase interest rates. The usual interest charged by a co-operative society in Japan is around 10 per cent and hardly anyone objects that the rate is high or exorbitant. The real criterion in co-operative credit should not be a lower rate of interest but should be the time's grant of loans to the farmer.

When it is said that some of the essential prerequisites for the vigorous growth of the co-operative movement are absent in India or if present they are not strong enough, it is not meant that co-operation has no future. The

movement is making steady headway in recent years. Much still remains to be done in order to quicken the pace of progress and the task will become easier with increased productivity in the agricultural sector consequent on the great attention now being bestowed on agriculture.

—And That

According to official sources, during the year ended 30 June 1959, the co-operative movement in West Bengal registered all-round improvement. The movement during this period was extended to cover nearly 32 per cent of the State's total population. The number of societies also increased to 19,771. Their membership and working capital also looked up and are placed at 1,698,000 and Rs 45.59 crores respectively.

A feature of the movement was the notable achievement made in the field of credit which during the period under review registered a moderate increase to Rs 26.95 crores from Rs 25.43 crores of the preceding year. The agricultural credit societies covered more than 55 per cent of the villages in West Bengal and nearly 20 per cent of the agricultural population was brought within the co-operative fold.

Progress was well maintained in the field of non-agricultural credit, the number of such societies totalled 583 with a membership of 640,000. Loans granted by these societies were to the tune of Rs 19.27 crores.

Co-operative farming is making slow and somewhat painful progress. Co-operative farming societies numbering 239 commanded nearly 9,530 acres of arable land.

Marketing societies, during the period under review, increased to 260, advanced marketing loans of the order of Rs 4.87 lakhs, marketed agricultural products worth Rs 49.5 lakhs and supplied fertilisers, manures and seeds to the extent of Rs 16 lakhs.

The processing co-operative societies which totalled 208 sold different processed goods worth Rs 4.22 lakhs. The dairy and milk societies registered increases in number, membership and working capital.

The number of weavers' societies registered during 1958-59 amounted to 1,093. The working capital of these societies amounted to Rs 82.07 lakhs and their membership were placed at 104,000. The proceeds from the sales of handloom goods during the period augmented slightly to Rs 2.55 crores from Rs 2.05 crores in the previous year.

PORTS Siltin

The Third Plan for the port development, it is now known, envisages an increase in the cargo

handling capacity of the major ports from 33 million tons in 1960-61 to 49 million tons by the end of the Plan period, and toward this, the Draft Plan has fixed an outlay of Rs 75 crores. At the end of 1959-60, the six major ports in the country accounted for a total traffic of 31 million tons of which more than two-thirds went to the combined share of the Calcutta and Bombay ports. During the Third Plan period greater volume of export trade particularly in iron ore to countries like Japan, Rumania and Czechoslovakia is expected to make heavy demands on port facilities at Vishakhapatnam and Madras. While the development programmes for these ports provide for additional coal and ore yards and mechanical handling equipments to cope with the anticipated increase in the volume of traffic, it is the development of the Bombay and Calcutta ports which calls for greater attention in view of their predominant share in the total volume of traffic and the difficult problems presented by their development. Of these two, the Bombay port is faced with the problem of providing sufficient accommodation for the increasing number of larger vessels visiting the port in recent years, and the problem constituted by the silting of the main harbour channel. Silting has assumed even graver aspect in the Hooghly river particularly at the Beumout's Gut and the Balari Bar, with the result that the Calcutta port has been rendered practically unfit for deep draft vessels. It is now recognised that the problems facing Calcutta port will not be solved unless the schemes for the desilting of the Hooghly by the construction of the Farraka Barrage and the develop-

ment of the Haldia port as a subsidiary one to Calcutta for the handling of the bulk cargoes like foodgrains, coal and ores, are implemented. In respect of both these schemes, the Third Plan will only mark the beginning. For the Haldia port, the Third Plan allocation is only Rs 7 crores against the expenditure of Rs 25 crores estimated as required for its development. The construction of the Farraka Barrage will be spread over nine years and while the total estimated expenditure is Rs 56 crores, the Third Plan provision is only of the order of Rs 28 crores. Port development during the Third Plan will to a large extent be comprised by schemes that have been carried over from the Second Plan. It is significant that in the sum of Rs 75 crores fixed as the ceiling for port development by the Planning Commission a sum of Rs 35 crores is accounted for by carry-over schemes from the Second Plan.

MANGANESE

Languishing

In the course of a recent appraisal of the position of the mineral industry, the Planning Commission has recognised that mineral production should receive more attention than has been the case in the past. The problems in this field are compounded of the inadequacy of present production of some of the important base metals on the one hand and of the adverse conditions that have set in the production and profitable marketing of some others. During 1960-61, there has been a decline in the production of copper, lead and zinc concentrates and though the factors that contributed to the fall in the production of these minerals, may have only a temporary significance, the limited resources of the country in some of them should not be overlooked. The fall in the production of manganese ore recorded during the same year has, however, grave import and has focussed attention to the shortcomings in the policy of the Government toward the industry. Addressing the 10th annual general meeting of the Mineral Industry Association at Nagpur, Mr J. B. Thaker, the outgoing chairman explained how the combination of uneconomic prices and rising costs threaten the continued working of many mines in the industry. While increased freight rates, royalty and excise duties have inflated the cost structure in the industry, owing to this very rise in costs, the country's hold on foreign markets for these products has been gradually slipping. The fall in production witnessed during 1960-61 flowed in a large measure from reduced foreign offtake. Considering that nearly two-thirds of the manganese production is utilised for exports, the impact of an adverse turn with respect to exports on the internal

strength of the industry should be obvious. In this connection, it may be mentioned that the Manganese Ore Committee of the Mineral Advisory Board have in a recent study of the industry drawn similar conclusion regarding the deleterious effects of the high level of freight, royalty rates and excise duties on the competitive ability of the Indian manganese ore industry, and have stressed the need for reducing the high level of costs by proper fiscal reliefs. Remoteness from ports of the manganese ore mines is a particularly serious handicap which has led to a situation in which the Indian industry has to include a disproportionate share of rail freight in the cost structure as compared with the manganese industry in other countries. While scope should be found for reducing the share of freight rates in cost of production, it is also worth considering whether it would not be possible to give incentives to export on the basis of reduced prices for exports the loss in which being made up by a corresponding increase in the internal price. The Mineral Advisory Board has taken a well-advised decision to set up a standing Committee to keep under constant review the problems of production, transport and marketing of minerals. The problems of the manganese industry cannot brook any delay.

TEA

Drink Less Sell More

The declaration by the Chairman of the Central Tea Board at

Madras that propaganda for tea is unnecessary in India at present and the Tea Board should concentrate hereafter on efforts to build up export trade may be in line with the Finance Minister's declaration that less tea should be consumed at home and more should be exported in order to earn foreign exchange. Since a smaller crop last year led to reduced exports, it is only natural that export promotion should assume great importance and the Chairman of the Tea Board only reflects outside opinion about the need to raise export target in spite of the competition offered by Ceylon, now the second largest producer of tea in the world. Direct shipment to Ireland is latterly regarded as a possibility and more trade with Europe and the Middle East is anticipated by those who advocate a vigorous export campaign. However, Ceylon has gained ground in recent years not only in Australia and New Zealand but in the Middle East, and it is quite possible that new trade treaties will help Ceylon to sell more tea in Russia and Eastern Europe. Competition from Chinese green tea can be regarded as considerable, but African supplies are likely to increase in the future and the tea industry will be called upon to keep down its costs at home in order to sell more abroad. But this may be difficult and tax adjustments in India may be required by the changing circumstances of the world trade in tea. Latin America too is now shipping some tea to London and it is scarcely likely that India will be able to sell either tea or coffee to Latin American countries in spite of the hopes expressed in India

about selling coffee to Argentina. If exports are to increase prices in India for export teas should be kept down and that may involve an increase in the price of tea sold for internal consumption. This is implicit in the outline of proposals accepted by the Tea Board for pushing tea in foreign markets. Since Ceylon has made agreements for selling tea to Iran, Iraq and United Arab Republic in return for imports from those countries, India too will have to think of bilateral agreements with countries like Afghanistan or Sudan. Since the surplus of tea this year is expected to be larger owing to an early monsoon, the chances of extending tea cultivation in India are definitely compromised and it may be said that internal consumption cannot increase beyond a limit owing to the present excise and the disparity in price between tea sold in bulk and tea sold in packages. The hardening of prices realised at sales for internal consumption will probably continue if tea exports are encouraged, and it may be noted that the sales averages last month at Cochin indicated that the gap between export and internal prices had narrowed considerably.

COFFEE

Drink More, Sell More

The present coffee crisis, arising from an excess of production and the low level of prices abroad, confers added interest on an off-

cial notice of the export trade in coffee. The supremacy of Latin America is unquestioned; so also, the dominance of Western Europe among the importing countries. It has been noticed that in 1960 coffee exports from India improved to 16,400 tonnes and the exports to West Germany especially showed improvement, as compared with the previous year. Larger offtake by Belgium, Holland and France offset the decline in shipments to Italy, but the value was lower as compared with 1959 and the further downswing in prices is the main reason for the pessimism manifest in speeches made at the meetings of coffee-growing companies. The fall in shipments to the UK is probably due to present system of exports by auctions without reference to estate marks which command a premium. A review of the present Pool arrangements is advocated by the chairmen of planting companies who feel that the price realised at home would not compensate for the loss incurred on exports. India's traditional export to Norway has been maintained and a new market has been found in Yugoslavia for Indian coffee, but there remains the problem of a surplus of robusta coffee and an adjustment of excise is no guarantee that domestic consumption would match the increase in production anticipated. Appeals to export more have fallen flat, and it is realised that new rivals to Indian coffee have emerged in Ethiopia as well as East Africa which are likely to make headway in the Middle East by means of larger trade via Aden. While India dominates tea production, in regard to coffee, at present it compares badly with Central America, producing mild coffee, and East Africa where the plantation industry has the advantage of scientific assistance and co-operative organisation. It is not likely that the disturbances in Angola would create any specific advantages for Indian coffee in the near future, and the present distaste for coffee shares is a symptom of the industry's difficulties, illustrated by the lower dividend payments announced by coffee companies for 1960.

★

CONGRESS

The Gramophone Press?

A suggestion made at the AICC meeting that the Congress Party should start its own newspapers found favour with the President who is going to set up a sub-committee. The appearance of two daily papers, one in English and the other in Hindi, will not affect the established Press but the question arises whether a paper with a specific party label would be able to take root and flourish. The experience

of the DAILY HERALD as the organ of the British Labour Party might convey a warning to some. Mr Sanjiva Dreddi's declaration that it is absolutely necessary for the Congress Party to have its own newspapers was coupled with the surprising statement that Congress is not a favourite of the capitalist today. This seems rather a sweeping judgment in view of the fact that the majority of newspapers are inclined to favour the ruling party rather than the opposition groups.

The problems of starting and managing of newspapers may be beyond the Congress Working Committee, and if the idea is to extend official patronage in ample measure, to what would be described inevitably as the gramophone press, the Press as a whole is bound to register a protest. Some may detect in the prescription for the Press, the influence of happenings in Ceylon where the Government is critical of the Press, instead of the Press being critical of the Government. How far the Congress Party would be justified now in launching newspapers when the newspaper industry is dependent on import of raw material, import of machinery and ink, and import even of office equipment while even part of the news handled is not Indian, may not be a question that requires an immediate answer. But the experience of newspapers that do not work as true business enterprises should be deterrent. Of course, it is possible for the Congress Party to start ad hoc newspapers for the election to carry the message of Congress to the voters, but this too will entail heavy expenditure on newsprint at a time when the Press as a whole has been asked to curtail consumption. Competition by the Congress newspapers to be started may not hurt the Press in regard to circulation but it is quite possible that the Congress Party may make promises to advertisers, and even set up its own advertising agency, not to secure clients but to sell space. How the Congress Press, proposed so casually, will work in practice may appear difficult to predict, but it should be remembered that the Congress has already got its own ideas in the AICC Economic Review, published once a fortnight from Delhi.

★

PUNJAB

Small But Self-Reliant

While small scale industries in Andhra Pradesh or Mysore may not show much growth, in the Punjab there has been substantial expansion in the last decade and it is presumed that 25,000 units employing over 1.2 million workers constitute the backbone of organised small industries. The manufacture of bicycle parts, sur-

gical instruments, domestic utensils and hosiery marks of flourishing small scale industry in the Punjab and it has been ascertained that 89 per cent of the registered factories fall in the category of small scale industries, employing less than Rs 5 lakhs as capital.

Undoubtedly the oldest and best known of the small scale industries is the hosiery industry of Ludhiana and though woollen yarn has to be imported from outside the industry has established its claim to permanency. A beginning in export trade has also been made and knitted goods from the Punjab find a large market in all parts of India. The protection given to the bicycle industry has helped to launch the successful manufacture of bicycle parts in small establishments and the annual output of components and spares is put at Rs 4.21 crores. A beginning has been made in regard to the manufacture of automobile parts, radio components and light steel structurals. The manufacture of sewing machine parts needed for replacement has also developed after 1947 and the production of water pipe fittings, machine tools and agricultural implements stand out as features of a diversified light engineering industry. After the loss of the western districts the influx of skilled labour to Amritsar and other places has been the factor in development. This is reflected in the rise of the sports goods industry in Jullunder and Bataia. Over 2,000 persons are employed in the manufacture of sports equipment for which a market abroad undoubtedly exists because Indian-made sports goods are known to be both efficient and inexpensive. Steady improvement in the quality of the products of small scale industries has been achieved by getting advice and khaki cotton vests supplied to Government stores were improved by special process adopted on the advice of the small industries service at Ludhiana. Self-reliance has always characterised the small industrialist in the Punjab and borrowed capital used on the industrial estate at Ludhiana was only 8 per cent and 92 per cent of the capital employed was represented by private savings. That is to say, small industries in the Punjab do not look for financial assistance either from banks or Government institutions.

★

ANDHRA PRADESH

Cheaper Power

In order to encourage industrial development, the Andhra Pradesh Government accepted the advice of the Industrial Advisory Board that the State Electricity Board should extend concessions in respect of power supply. It has also accepted the principle that the power tariff should be reduced by

25 to 50 per cent not only for small industries, but for medium and large scale industries requiring power in bulk. The loss sustained by the Electricity Board is to be made good by a special grant to the Industries Department and the power subsidy offered to industries will help not only to equalise electricity charges as between Madras and Andhra Pradesh, but will help to attract industries, now offered advantages in regard to the acquisition of sites.

The lower power tariff will apply for a period of five years from the time a new enterprise is started and among industries that are eligible for concessions are chemicals, ferro-alloys and established industries like cement and paper. The accelerated development of industries in the State is desired specially because it has been recognised that the load would develop only through a revision of rates in the thermal areas and the new industries by increasing employment in certain localities would contribute indirectly to the revenue of the State so that what is lost by Electricity Board would be compensated for by the increase in the yield of other taxes. A Committee to examine all applications for electricity concessions has been set up. The AP Government is now committed to helping by special rates the establishment of the manufacture of calcium carbide and ferro-alloys as well as heavy chemicals in Andhra Pradesh. It is noteworthy that in the list prepared explosives find a place but no mention is made of fertiliser production which will probably be treated as a branch of the heavy chemical industry. Prospects of an increased supply of electricity after the Srisailem project is commissioned may go far to explain the concessions offered now but the more important fact is that under the Second Plan industrial progress has been limited in AP and that is a good reason to cite.

★

NATIONAL INTEGRATION

The Economic Factor

The National Integration Committee which has dealt fully with communal antipathy, sectional rivalry, and regional differences has made no mention of the economic aspects of the problem. No reference to internal migration for the sake of employment or the regular flow of investment has found a place in the report of the Committee. It is surprising that the AICC at Durgapur in endorsing the report failed to mention the economic aspect of integration. This is all the more surprising, in view of the differences between the Assam Government and the Bengali minority in the State,

Indian Finance

3 June 1961

although the presence of the Bengali community is due wholly to economic reasons, as powerful in the present as in the past. The future development of Assam may lead to inflow of both capital and labour, in case the Government's plans for the development of oil go through smoothly and the vast forest wealth of Assam is developed rapidly to produce raw materials for growing industries, in and outside Assam. The imperfect integration effected before the Constitution came into being may be widely blamed for several reasons, but far more important is the failure to realise that from the investment point of view, India at present is a single entity and shareholders in Assam tea companies might be found not only in Bengal, but in Madras. And as for the steel industry in Bengal, the national status of the industry is hardly questioned, and Indian Iron by its very title emphasises the act and fact of integration. The composition of the Indian capital market, the nature of the banking system, and the working of the stock exchanges contradict the presumption that integration has not been achieved so far. But, of course, Mrs. Indira Gandhi and others are concerned over the deficiencies noted in the integration to date and the persistence of communal jealousy. For this, of course, the right remedy will be the maintenance of minority rights under majority rule, along with the implicit acceptance of the fundamentals of democracy by the minorities themselves. If the semi-federal structure of government has stood in the way of the evolution of a single loyalty, steps may provide another indication of the failure of external aid to pull up the backward kingdom. It may be added that some assistance has been given by Thailand in training students from Laos but there is no doubt that Japan may do much more if there is a guarantee of political stability in the kingdom.

★

LAOS

The Economic Angle

Plans for making Laos both neutral and independent are being examined by an international conference at Geneva. It may not be generally known that the kingdom is covered by the Colombo Plan but expenditure, as in Nepal, has been limited by the geographical position and the limited opportunities available. In 1959-60 the development expenditure in Laos was small like that in Nepal, another land-locked kingdom. Economic difficulties in recent years have been due to political unrest and American aid, mainly military, has not helped. The revaluation of the currency, the kip, in October 1958 helped to bring down the cost of imported articles but there was an adverse balance of trade and the budgetary position remains critical. There are two banks in addi-

tion to the Bank of Indo-China and the supply of paper money even in a remote kingdom increased. A fall in the rice crop necessitated imports after 1958 and it may be argued that the troubles reported since June last are in part due to the food situation. The production of maize, tobacco and cotton is on a very small scale but some interest attaches to the successful experiments in the cultivation of robusta coffee for which the hills are suited. The lack of roads has hampered the development of forests and the reliance on charcoal for fuel is a clear indication of the economic backwardness. There is however a promise of a hydro electric station in the vicinity of Vientiane. The tin production is small and the only large-scale industrial establishment devoted to the manufacture of cigarettes. There is a five-year plan even in Laos but private capital is very scarce. It is considered that irrigation and drainage schemes may help Laos and some small dams are being built. The protection of plants from pests is also part of the agricultural development scheme, but it is in the forest that the kingdom must rely and scientific conservation has just made a beginning. Exploration for oil is being conducted but it has been difficult to attract foreign capital. Roads are being only slowly improved; bridges are few even today and this backward kingdom is dependent on air communications mainly. Both Japanese and French aid for development has been received in recent years and some bridges have been built—thanks to foreign aid. The depreciation of the kip, originally worth 200 kip to the £ sterling may provide another indication of the failure of external aid to pull up the backward kingdom. It may be added that some assistance has been given by Thailand in training students from Laos but there is no doubt that Japan may do much more if there is a guarantee of political stability in the kingdom.

★

USA

A Sharp Pick-up

One of the distinguishing statistical features of an economic upturn is the tendency for later revisions of tentative data to rise above the earlier estimates.

This feature is very much in evidence now, as the US Government has had to raise its original measurement of US business activity during the first quarter of 1961. The estimate for the Gross National Product (GNP)—the total output of goods and services—has now been boosted \$300 million to an annual rate of \$499,800 million.

In publishing this revision, the US Department of Commerce noted that "demand firmed in March after having declined in the two previous months." This just

about makes official the view of many experts that March marked the turning point from recession to recovery.

As a matter of fact, another significant judgement also seems to be gaining general acceptance. This is the view that the upturn is somewhat livelier than originally anticipated. Already, a number of government experts seem to have lifted their sights on the economy's 1961 performance, and some are beginning to talk openly and confidently of a fairly strong recovery.

Treasury Secretary D. Douglas Dillon thinks the GNP may rise throughout the year to an annual rate of close to \$530,000 million in the fourth quarter. Walter V. Heller, Chairman of President Kennedy's Council of Economic Advisers, says the GNP will climb to a rate of \$525,000 million by the end of the year. Yet it was not very long ago that government officials were still talking about a 1961 year-end rate in the neighbourhood of \$520,000 million.

Perhaps the surest sign that the recovery pace was quickened is the sharp pick-up in industrial production. Usually a slow-moving measurement, the US Federal Reserve Board's industrial production index shot up two and a half points in April to 105 per cent of the 1947-49 average. With the one move, the index returned to the level of five months earlier. Throughout the recession, it should be noted, the index never lost more than 1.7 points in any one month.

Contribution to the April increase were widespread production gains, including advances of 30 per cent in automobile assemblies and 15 per cent in steel output. What is more, another good climb could be registered in May, with the continuing expansion in both metals and automobiles. Already, with more than a month still to go in the second quarter, the index probably has reached a level not expected by most earlier forecasts until the third quarter of the year.

Lending support to the expectation of continued production increases is the Commerce Department's report that both new orders and sales of durable goods rose four per cent in April over March, continuing a trend of several months' duration. This lifted backlogs of unfilled orders at durable goods plants to \$43.103 million, the highest point since last November.

These gains were paralleled by employment and income advances. During April, more than 200,000 workers were added to construction payrolls. Double the normal seasonal gain. Service establishments added another 110,000 employees.

The most encouraging upturn however, occurred in the durable goods area, where employment had been in a down trend for some five months. The April increase of 11,000 durable goods jobs, while

small, thus represented a significant turn around. Moreover, most of this gain centred in metals, machinery and lumber, fields in which the late recession first became evident in the spring of 1960.

Also registering a small gain during April was the average work week in manufacturing. This is particularly heartening, in that this sensitive barometer often may dip a bit at this time of year.

With the job improvement have come notable increases in income. The total personal income of all Americans reached an annual rate in April of \$410,300 million, an all-time high.

The general anticipation of steadily rising economic activity during the course of this year was further reinforced by the views of economists and businessmen who attended the annual convention in New York last week of the National Industrial Conference Board, a leading private research organization. One after another, these experts noted that the economy was strong and getting stronger.

On the whole, the outlook for rising steel output and automobile sales, record petroleum production, and substantial increases in such other fields as construction, chemicals and retail sales seem bright.

★

RACE RELATIONS

Trouble in Alabama

The riots in Alabama remind one that the 100th anniversary of the American Civil War is not being celebrated merely in pageants and tableaux. The serious form taken by the obstruction offered by the Whites proves that even if the phrase "massive resistance" has not been used this time, the organisation of the troubles by the Klan shows that not all the southern States are reconciled to Court orders about the abolition of separate schools for coloured children. Though none can predict that the trouble will not spread to other States, the vigorous action by the Federal Government has disposed of any doubts about the rights belonging to the States. The Federal power has been used vigorously and the Governor and the Legislature of Alabama are convinced because Michigan was told in 1937 that the responsibility for law and order is not vested entirely in the State Government.

The virtual imposition of martial law in the State may not affect cotton supplies or prices but the Soviet Bloc is likely to make propaganda use of the incidents in Alabama. However, the US Attorney-General has emerged as the strong man of the present administration and the operations of night riders are likely to be interrupted promptly. By comparison, the trouble in New Orleans early this year will pale into

insignificance but the administration has to carry out in States traditionally Democratic, an apt educational campaign to enforce civil rights. If business recovery helps the Government, there is no doubt that the domestic trouble, rising so sharply and unexpectedly, will affect the employment available for Negroes in the South and the grants for relief may increase unexpectedly. But in view of Mr. Eisenhower's success in compelling a reluctant State like Arkansas to follow the directions of the Federal Government, it is obvious that even Alabama will be disciplined fairly soon and no attempt would be made by means of sit-in strikes at restaurants to assert the claims of US Negroes to full equality in places of public resort. By taking a stand on the maintenance of the Constitutional amendments, the present Administration has given a pledge to Negroes. But opinion in Congress is likely to be divided and the Opposition Republican party may get support from political rebels who have declined to assume that the end of segregation is both natural and inevitable.

ALGERIA

Calm at Evian

The Franco-Algerian talks have made progress but its nature can only be conjectured. The preservation of secrecy about the course of negotiations might well be due to a desire to prevent outside influence. The suspension of hostilities in Algeria is, of course, a favourable factor, and as the nationalists insist on the impossibility of partitioning Algeria, the main problem for France would be the acceptance of Frenchmen who returned from Algeria. Some would probably find a place in Tunisia easily and it is not impossible to foresee some expatriate officials continuing in service

after the transfer of power to which events point now.

The major problem is not the future of the officials but the control of oil found in the Sahara and meant for transhipment across the Mediterranean. American and British oil companies are probably as much interested in the effective exploitation and disposal of the oil from the Sahara and Port facilities as well as wayleave for the pipe line would have to be ensured by an inter-governmental arrangement. There would also be hard bargaining over royalties, once the quantum of output is established, but the formula applied in Saudi Arabia could be adapted with advantage, if an initial payment in advance is made. In any case, Algeria would not be in the position of Guinea, compelled to seek assistance from the Communist bloc, although the market for wheat and wine cannot be located outside France. If Algeria were separate, ready access to the European common market would become difficult and the existing market for mineral ores from North Africa would also disappear. A trade treaty is, therefore, a basic requirement for any agreement and the Algerian leaders will probably realise that Egypt can only extend sympathy and cannot furnish the means of development or even a market for commodities that Algeria could export. However, a free Algeria, like the rest of Africa, might provide opportunities for both Germany and Italy, and the political situation in Europe is bound to have its own effect on the plans of two countries which are in a position to export capital and skill as well as commodities to Africa. The excess of imports envisaged in the case of Algeria might enforce continuance in the French currency area, but a currency reserve might have to be secured from sources other than France which has paid heavily

for seven years of warfare against the insurgents.

ICI Expanding Empire

The report of Imperial Chemical Industries for 1960 points to record in profits and output, accompanied by a reduction in selling prices despite a rise in wages and salaries. What is significant, of course, is the rise in assets between 1951 and 1960 from £216 millions to £517 millions by way of physical assets alone. What is more significant is that the ordinary capital of Imperial Chemicals in 1960 was only £251.59 millions and over £169 millions by way of capital reserves and over £100.5 millions by way of revenue reserves were employed in the business. This only means that the growth of reserves between 1951-61 was as pronounced as the increase in capital, partly attributable to the successful conversion of the debenture stock on terms entirely favourable to the debenture-holders. It may be mentioned that the fibre division and the metal division are increasing in importance and Imperial Chemical is now engaged in the manufacture of refrigerants as well as dyes and plastics.

Manufacture abroad has to some extent reduced the group's export sales but in 1960 about 10.5 per cent of the Company's exports went to India, Pakistan and Ceylon. An increase in trade with Russia was a feature of the year in which installed capacity was further extended for development of production. Some imposing figures regarding depreciation and taxation are furnished in the report for 1960. The first required over £29 million and the second required about £33.4 million. Under the profit-sharing scheme, ICI employees were enabled to buy ordinary stock but they paid a premium which amounted to over £3.5 million. There was also a rights issue at 55sh. per 1£ share in the proportion of 1 for 20 held. The addition of £49 million for fixed capital and investments and the outflow of £20 million for repayment of debentures was financed without recourse to borrowing, and the only addition to capital was that made in respect of £5 million in shares sold to employees under the Bonus scheme. The increase in the dividend from 2sh. 3d. to 2sh. 9d. is perhaps of less interest than the company's investment of £15 million in development and research.

ICI's favourable figures are supplemented by some striking statements about labour conditions. A reduction in hours was secured and improvements were made in allowances and wage differentials. The basic rates for craftsmen and general workers were raised by about 4½ per cent. The time lost during the last five years on account of industrial disputes was

only .01 per cent of the time worked. This is far better than the national average for manufacturing industry, and ICI is also able to claim increased productivity through industrial peace. A remarkable increase in educated manpower at the disposal of the Company is also recorded in the last report. Of the Company's managerial staff 70 per cent of those below 45 have a university degree as compared with 34 per cent of those aged 45 and over. This may well imply that the relations between science and industry are becoming closer, and ICI employees find a career for their children in the company itself after they finish higher education.

WHOLESALE PRICES Slight Rise

The official wholesale price Index (with the year ended March 1953 as 100) rose by 0.2 per cent to 125.7 during the week ended May 13, 1961 as compared with 125.5 (revised) for the earlier week. The index was lower by 0.2 per cent when compared with the corresponding week of the previous month but was higher by 1.7 per cent than that of a year ago.

The prices of Bananas at Nagpur (—18%), Milk at Patna (+5%), Barley and Groundnut oil (+3%) each, Gram and Mung (+2%) each and Rice, Wheat, Jowar, Bajra, Urad, Mustard oil, Eggs, Gur, Black Pepper and Salt (+1% each) showed advances, while those of Onions (—13%), Milk at Bombay (—12%), Arhar at Bombay (—8%), Bananas at Calcutta (—5%), Potatoes and Tea (—4% each), Ragi (—3%), Cashew-nuts, Fish and Meat (—2% each) and Masur and Gingelly oil (—1% each) moved down and the index for 'Food Articles' advanced by 0.2 per cent to 117.6 as compared with 117.4 (revised) for the earlier week.

The index for 'Tobacco' receded by 1.9 per cent to 105.4 due to a fall in the prices of raw Tobacco (—2%).

The index for the 'Fuel, Power, Light and Lubricants' group remained stationary at the previous week's level of 122.3.

Higher prices of Groundnuts and Rapeseed (+2% each) and raw Jute, Linseed, Gingellyseed, Copra and Tanning Materials (1% each) raised the index for 'Industrial Raw Materials' by 0.7 per cent to 153.8. The prices of Seed Lac (Balsaki) at Calcutta (—5%) and raw Silk and Cottonseed (—2% each), however, moved down.

The index for 'Intermediate Products' worked out to 136.9 as against 136.7 for the earlier week. Items which showed variations during the week were: Tin (+5%), Linseed oil at Bombay (+7%), Rayon yarn (+2%), Zinc (+1%), Linseed oil at Kanpur (—6%) and Coir yarn and Lead (1% each).

The index for 'Finished Products' rose by 0.2 per cent to 124.7 as a result of an advance in the prices of Jute manufactures, Bricks & Tiles and Glass (+1% each).

Book Reviews

INDIAN ECONOMIC POLICY AND DEVELOPMENT: by P. T. Bauer. Published by George Allen and Unwin Ltd., Price 16sh.

Professor Bauer is an academic economist and is presumably aware of the snares of value judgements and symbolically and emotionally loaded words. And yet the cardinal sin of this book is its open invitation to its readers to fall into such traps strewn all over its 146 pages. This is a particularly grievous transgression in a book that seeks to expose the errors of a policy stemming from an emotional commitment to the "Socialist Pattern of Society." Expressions like Totalitarianism, Soviet-type Planning, Private Sector, and Public Sector appear often in these pages in guises that can hardly be called descriptive. According to Professor Bauer, foreign aid to India "serves to underpin policies resolutely pursued which cannot be interpreted reasonably as according either with the aim of raising the standard of living of the masses or with the aim of promoting a society resistant to totalitarian influences." One might have one's reservations about a policy of massive foreign aid to India and yet see, if one has the slightest acquaintance with the facts of Indian life, that the word "totalitarian" in the context is unfairly loaded. Again, the Second Plan is described as modelled in certain fundamentals on the Soviet Plan and yet it transpires a few sentences later that the expression means nothing more than that it is a "heavy-industry plan." Now, there is an arguable case—and Prof. Bauer himself presents it with a certain unacademic fervour in this book—against forcing the pace of basic industrialisation: but it hardly makes for clarity to blur the issue by ploys intended to evoke stock responses to highly emotive words. Prof. Bauer makes a point about the error implicit in the official Indian view that co-operative movement and cottage industries are part of the private sector. They should, according to him, "be more appropriately regarded as functioning in the public sector." This rather odd view—especially in relation to cottage industries—makes nonsense of well-known criteria of demarcation of these sectors.

By a parity of reasoning based on government loans, guarantees and guidance, even the Tatas can be brought under the public sector! But the reasons for this odd view are less significant than the fact that such an assigning of situs should have at all been considered important. It is perhaps unfair to conclude from this that Professor Bauer has been assiduously in search of areas of failure in Indian planning and thereafter found arguments for assigning them to the

public sector. But one cannot help feeling that Professor Bauer has in many places leaned over backwards to prove the failure of the socialist pattern.

Now what precisely is this socialist pattern? Professor Bauer quotes Mr Nehru's assertion in a party political context that "for us there is no other way except that we plan in a socialist way." From this, he draws the inference that we are well set on our way to Moscow, if not to Peking. And yet he himself says a few pages later that "Mr Nehru's published statements on the concept of a socialist pattern of society are indeed somewhat nebulous." Indeed, what strikes Mr Bauer most forcibly about Indian formulations of the concept of socialism is their extreme vagueness. He does not draw from this the inference that there are elements in the situation that defy such labelling. Instead he tries to impose a pattern on it by selective quotations. For instance, he quotes extensively from some papers submitted to the Planning Commission by certain academic economists. He thinks that "these opinions indicate the directions of the influence exercised by those who have definite views and are in a position to mould policy." Without any disrespect to either the eminent economists quoted or to Professor Bauer, it is permissible to consider this conclusion a piece of academic naivete. Professors tend to exaggerate the importance of professors: the opinions quoted are certainly definite, but the extent they have moulded official policy can easily be exaggerated. Professor Bauer is apparently having visions of New Dealing Brains, trustees or the more recently recruited New Frontiersmen from Harvard. The suggestion that academic economists exert significant political pressure in India—for these reflections of Professor Bauer appear in a chapter that purports to analyse the political implications of Indian planning—is a measure of the political innocence of Professor Bauer. The kind of political reality that moulds planning in this country is to be seen in the quarrels over regional disparities the scramble for stationing certain projects in one's own region, the lobbying over sharing of waters, the squabbles over census figures and sharing of Centre's revenues, and the very real difference that personality makes to the course of events. Compared to the distortion of the central purposes of planning that these pressures have, the opinions of economists are feather weight.

There is one simple way of verifying the truth of the assertion of the earlier paragraph: It is to examine the concrete suggestions made by the economists in the passages

quoted by Professor Bauer and see how many of them have been actually adopted in practice in the period in which planning has been in operation. Among the suggestions are State Trading in food grains and cloth, raw cotton and sugar (!), an All India Transport Corporation, nationalisation of plantations, covering tea, coffee, rubber and sugar factories, compulsory loans on non-transferable conditions, organisation of vast land armies etc. None of these has any early chance of being implemented: and in so far as official declarations have any value—after all Professor Bauer himself quotes them when they support his case—the anxiety not to get involved in nationalising existing, and in many cases wasting, private assets, has been repeatedly expressed officially.

Professor Bauer's examination of the actual manifestations of policies is as selective as his examination of avowals. He has not apparently taken note of the phenomenal expansion of the private sector industry and the buoyant capital market. Nor has he been struck by the institutional and organisational innovations in the matter of technical and financial aid to the private sector that have come into being in the last decade. Nor has he taken note of the conscious efforts at decentralisation—their comparative lack of success is another matter and is a failure of performance rather than of policy—by such agencies as the community development projects and cooperative movement. Professor Bauer, who seems to consider the cooperative movement in India as one of the chosen instruments of socialism in the pejorative sense, has apparently not heard of Mr Nehru's brush with the authors of the Rural Credit Survey and of his oft-repeated statement that cooperatives should be left alone by officials, even when they (the cooperatives) were not making a go of it.

The compulsions behind Indian Planning and the forms it has taken have been stated often enough and indeed, Professor Bauer himself recognises some of them. Formal gestures and statements notwithstanding, its ideological bark is worse than its practical bite. Like all human decisions, it is compounded three quarters of coming to terms with facts, one quarter of our efforts to impose on facts a pattern of what we would like them to be and of what we would like others to think them to be. Comparisons with Germany or Japan on the one hand and with China on the other are entirely pointless. The total situation of our competing urgencies, scarce resources, historical and political factors are not quite what they were in the other cases. Above all the course of the last ten years imposes its own pattern and obligations and these patterns and obligations are not such as to make it inevitable that we should repudiate what is called freedom or walk inexorably into what is called totalitarianism. Mistakes have certainly been made in Indian planning, but they are not those that stem from a disregard of the human being.

JASON.

LECTURES ON MONETARY ECONOMICS: by C. R. Whittlesey, Published by T. V. Chidambaram, Registrar, University of Bombay. Publishers: Vora & Co., Publishers Private Ltd., 3, Round Building, Bombay-2.

During his tenure as Visiting Professor of the Department of Economics, University of Bombay in 1960, Mr C. R. Whittlesey, Professor of Finance and Economics, University of Pennsylvania, delivered a series of lectures on some important aspects of central banking. These lectures have now been printed in book form by the Bombay University. Though it is the Federal Reserve System of the US which furnishes the focus for discussion, the observations on central banking principles and policy have a general validity and application. For this reason, the book merits close study.

The rationale of central banking is traced to the effects of the introduction of money and the need it gave rise to for effective monetary management for orderly economic behaviour. Mr Whittlesey recalls the pithy statement of Walter Bagehot, that "money will not manage itself" and observes that "a central bank comes into existence in order that the monetary system may be enabled to operate more acceptably than would be possible in the absence of a central bank". But the functions of the central bank in the early days were conceived in very narrow and limited terms. For, so long as the Gold Standard held the field, the need for an extraneous mechanism for management of money was not keenly felt. The breakdown of the Gold Standard which seemed to represent monetary automatism in its pristine purity, gave the death-blow to arguments for leaving money to manage itself. Even after the break with the Gold Standard, central banking policy, more specifically, monetary policy, remained in comparative eclipse, being overshadowed in importance as an effective economic weapon by fiscal policy which was bolstered up against monetary policy by John Maynard Keynes and his followers. But the fifties have witnessed the "rediscovery of money" and since then monetary policy has come into its own. Mr Whittlesey attributes this new-found charm for monetary policy to the belief that monetary policies are more fully compatible with the essential freedoms than are alternative methods of economic policy such as were in favour earlier.

The functions of central banks today are a far cry from their essential pre-occupations a decade ago. As Mr Whittlesey puts it "from a policy of controlling the money unit, monetary policy has extended to a policy of controlling the economy as a whole". The more specific aims of central banking policy according to Mr Whittlesey differ between countries depending upon the differences of forms of Government and reflecting the major economic goals accepted by the countries, such as full employment or economic development. Illustrative of the goals of central bank policy are those recommended by the Radcliffe Committee in England which include a high and stable level of employment, reason-

THE ANDHRA BANK LTD.

Head Office :
MASULIPATNAM.

Applications are invited for posts of **INSPECTORS OF BRANCHES** from Chartered Accountants in the grade of Rs. 300-25-650, with Dearness and House Rent Allowance as per rules in force. Candidates having good personality, banking experience and C.A.I.B., qualification will be preferred.

APPLICATIONS stating age qualifications, experience, etc. should reach the General Manager, on or before the 15th JUNE 1961. The selected candidates will have to execute a contract to serve the Bank for a period of 5 years.

AB/Chari

able stability of the internal purchasing power of money, steady economic growth and improvement of the standard of living, some contribution to the economic development of the outside world and a strengthening of London's international reserves. The plurality of aims and more importantly, the inherent conflicts between some of them introduce some complication in the working of central banking policy. Central banking policy in such contexts, has to proceed on the basis of a system of priorities. The problem in such circumstances, Mr Whittlesey points out "is not so much that of choosing one stability over another, as it is of effecting some sort of balance among them".

The most important part of the Lectures is that which deals with the impact of monetary policy. Mr Whittlesey discusses this problem in terms of control points in the banking system. Such control points are of two varieties, namely direct and indirect. Selective credit controls, which are intended to act directly upon particular types of credit, belong to the direct type, whereas control points for indirect influences are furnished by the obligations regarding reserve position and liquidity position of the commercial banks. Mr Whittlesey also mentions two alternative ways of looking at the impact of monetary policy namely, the effects on incentives and liquidity. Manipulation of interest rates with a view to retarding investment or stimulating saving, represents the incentive aspect of monetary policy. But in as much as interest rates remain the crucial factor affecting liquidity there is an amount of overlapping between the two aspects of the impact of monetary policy. The liquidity factor is analysed in terms of both the supply and demand sides. Mr Whittlesey defines a change in liquidity "as an increase or decrease in the anticipated ease of acquiring cash relative to the amount of cash that people desire to hold ready for spending". A refreshing feature of the discussion of the liquidity factor is that Mr Whittlesey directs attention to the demand side of it which tended to be overlooked in previous discussions of the subject. Mr Whittlesey explains that concentration on supply aspects, obscures the fact that the demand for liquidity is highly variable, largely because of shifts in psychological attitudes. In respect of the supply aspect, Mr Whittlesey raises the pertinent question, whether attention could be confined to the realm of security markets. For, at a time of rising prices, all those commodities which share the rising tendency meet the test of liquidity—ease of conversion into cash without loss—in the same way that securities do.

The discussion of the relationship of the central banks with the private sector is interesting in the light of the particular policy adopted till lately by the Federal Reserve System of the US in favour of free markets. The Bills-only policy, whereby the Federal Reserve Banks kept aloof from dealings in long-term securities confining itself to Treasury discount bills having a maturity at the time of issue of ninety days only, was the obvious manifestation of this

free market attitude. Mr Whittlesey is rather critical of the effects that have followed the pursuit of this policy by the Federal Reserve Banks and the recent abandonment of this policy goes to vindicate his view regarding the admitted failure of the policy in preventing inflation in the United States.

Mr Whittlesey's observations in respect of the future of monetary policy are extremely relevant and unambiguous. According to him, "the combination of monetary policy, fiscal policy and debt management has forged an instrument vastly more powerful than non-totalitarian countries have ever before had at their command in times of peace". He considers monetary policy in very broad terms as including all methods at the disposal of the central bank for controlling credit. Conceived in this way, the success of monetary policy would depend on the adequacy of powers in the hands of the central bank and the flexibility in the use of the means at its disposal. Mr Whittlesey also adds a third, namely participation of trained professional in the administration of fiscal and monetary affairs. This is a trend that is inescapable in the context of the growing complexity and diversity of problems faced by Central Banks.

INFLATION IN A DEVELOPING ECONOMY: Published by the Indian Merchants' Chamber Economic Research and Training Foundation, Bombay.

This study, sponsored by the Indian Merchants' Chamber Economic Research and Training Foundation, aims at presenting a clear picture of the nature and role of the inflationary process at work in India's mixed economy. Inflation is a concept that does not seem to lend itself to precise definition. This is because there are varieties of inflation, often operating simultaneously, at one or more points. Moreover, though the term has been most constantly used in discussions on monetary policy, it is often used to convey different meanings, some of them not strictly admissible. In its effort to clear much confusion in current thinking, the study isolates four major types of inflation: the classical type of inflation where there is an excess of money supply in relation to the supply of goods and services available; second, the type of inflation which emerges out of the operation of the factors of cost, evidenced by a more or less constant rise in cost of production which tends to be passed on to the consumers without reference to the relationship existing between supply and purchase of the goods affected; third, the type of inflation induced by Governmental deficits which tend over a period of time to add to the money supply; and fourth, the type of inflation that is descriptive of a stage in the relationship between money supply and goods where there is a flight from the currency i.e., from the securities, etc.

The question: "Is the Indian economy under inflation?" is answered in the affirmative by the study. The type of inflation is identified as cost inflation which is now said to have been built into the economy due to

factors like deficit financing. It is pointed out that the presence of inflationary pressure has been recognised by the Planning Commission itself as is evident from its emphasis on the need for a clear and effective price policy during the Third Plan. The study, however, thinks that even if price control is effective, inflation would not be removed would become repressed instead of being open as it is now. The argument that creeping inflation will stimulate development is not held to be valid in view of the frittering away of the additional resources in non-developmental expenditure.

A salient feature of the study is a separate analysis of the impact of inflation on the middle class. The raison d'être for this approach is that the growth of the middle class is one of the reliable indices of a growing economy. The middle class is much worse off than the working class in that it not only seems to be unable to save out of current income but actually draws upon its past savings or borrow in order to maintain existing standards. With the middle class in such a sorry plight, it is only to be expected that the overall investment of the community will be at an unsatisfactory level. There is therefore added reason why inflation is to be contained if our hopes from planning are to be realised. A number of statistical tables basic to the study of inflation are given at the end of the book.

RESOURCES FOR THE THIRD FIVE YEAR PLAN: Published by the Indian Merchants' Chamber Economic Research and Training Foundation, Bombay. Price Rs 5.

This study, a companion volume to "Inflation in a developing economy" reviewed above, deals in some detail with the important problem of resources for the Third Plan. The need for a Third Plan of the size envisaged now is generally accepted on grounds of minimum needs of the situation. But when one poses the question how the necessary resources are to be mobilised, one is confronted with perplexing answers. The enormous amount of foreign exchange (about a third of the total outlay) required is inevitably to come from friendly foreign countries in the shape of loans and the prospects on the eve of the publication of the final draft of the Third Plan appear good. The task of mobilising the internal resources, however, does not seem to be simple what with the already high level direct and indirect taxation. The study avers categorically that the conditions for additional taxation effort for the Third Plan do not exist, but nevertheless admits that there could be some manoeuvrability for adjusting the various taxes to yield higher revenues and scope for larger funds by more efficient tax collection. It also indicates that the rural sector may prove to be a mere fertile field for the future tax collector. With its share of nearly 70 per cent in the national income, its contribution is not commensurate. Though some of the inferences—especially the quantitative ones—of the study may not win

acceptance, there is no doubt that it will fulfil the expectation of its sponsors that it will prove useful in stimulating thought on the subject. Like its companion study, this also contains a number of statistical tables which may be useful for an independent assessment of the resources position of the Third Plan.

AGRICULTURAL MARKETING IN INDIA AND ABROAD: by R. S. Srivastava, M.A., L.L.B., B.L.I.T.T. (Oxon). Published by Vora & Co., Publishers Private Limited, 3, Round Building, Bombay 2. Price Rs 12.50.

This book is a revised edition of a thesis by Mr Srivastava entitled "Some Aspects of Agricultural Marketing in India with special reference to developments in Western marketing systems." Though the author has retained in the present volume the main structure and pattern of his thesis, the chapters have been extensively revised and largely rewritten with a view to making the statistical data up-to-date. He has also incorporated the developments that took place since the submission of the thesis and has made the whole text in a presentable form to the general public.

Marketing constitutes the "crux of the whole food and agricultural problem." The recognition of this important aspect has in fact influenced recent agricultural policies in many countries and led them to make improvements in marketing efficiency an integral part of their policies and programmes oriented toward the stepping up of agricultural output. In the first three chapters the author discusses at length the socio-economic structure of India and the economics of marketing structure. These chapters serve to provide the reader a suitable background and perspective for a clear appraisal of the subject. In the subsequent chapter the author deals with some aspects bearing on the standard and performance of agricultural markets in our country. The comparative data on factors which influence the standard and efficiency of agricultural markets prove beyond doubt that the standards of performance in this country compare very unfavourably with their counterparts in other foreign countries. In factors like Transport, market intelligence storage ware-housing and scientific marketing, we are ill-provided indeed.

In later chapters Mr Srivastava examines the efficiency of the prevailing marketing system and the mechanism for the marketing of the various agricultural products. The book also contains comments on agricultural markets, marketing channels, the state of transport and storage. Apart from these, the author has dealt in great detail with some of the well-known measures for reform and reorganisation such as standardisation of weights and measures, the scope for co-operative movement and legislation in the last three chapters. The author's endeavour to cover a wide range of aspects pertaining to agricultural marketing in a comparative small book like this is really commendable.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

MY introduction to the incredible Dr Dichter, the father of Motivational Research was through the scarifying pages of Mr Vance Packard's "Hidden Persuaders". I shall always remain grateful to Mr Packard for gathering compendiously the more delicious extravaganzas (including his own) of the sociology of affluence. Dr Dichter has now come out with a book meant to answer Mr Packard's criticism of the moral implications of subliminal advertising. Dr Dichter's book entitled, with a nice regard to his own teachings, "The Strategy of Desire" must be a collector's dream. I am indebted to Marganita Laski's review in the Spectator, London, for the following samples of Dr Dichter's thinking: "In modern America, the brand of merchandise purchased has almost become a substitute for nobility and family tree." "Eighty-three per cent of people questioned thought grapefruits more intellectual than oranges." "Evaporated milk is associated in people's mind with mother's milk: so they won't use it in coffee but will in mayonnaise." "Motor cars (a) are phallic symbols and so shouldn't have blunt bonnets (b) stand for mistresses or wives according as whether they are open or coupes." "A person passing a bad cheque was more likely to chew gum."

How seriously is one to take Dr Dichter? He himself has no doubts on the question and if he is to be believed many others share his opinion. Churches, he says, ask him what sermons they should preach in order to attract more people. This is high tribute indeed, since the Church has been in the game of persuasion for centuries. My own attitude to Dr Dichter is, in all honesty, somewhat ambiguous. My first and almost irresistible impulse is to treat Motivational Research as an elaborate hoax; or alternatively and since Dr Dichter is so solemn about it all, to treat him as a case of a man falling for his own hocus-pocus. In either case, the impulse is to laugh and you must agree that Dr Dichter's dicta, whatever their other merits, are exceedingly amusing. But I can also see in them a certain amount of shrewd insight into human nature. And I am also struck by the fact that American businessmen spend a lot of money on this kind of research and they were not, as they are fond of saying, born yesterday. I know that a businessman can be incredibly naïve and there is also the kind

of consideration that often enters into a businessman's decision-making based on the possibility that there may be something in all this smart patter in which case one would look a fool if one missed out. All said and done, there apparently is an area in the human psyche that is vulnerable to the kind of assault that Dr Dichter's Strategy of Desire is planning all the time. In other words, you can sometimes sell things (including presidential candidates) by listening to Dr Dichter. For the rest, I shouldn't take Dr Dichter too seriously. The level, for example, at which Dr Dichter discusses the ethical and intellectual implications of his research is barely above that of an idiot-child's. Here is a sample: "Most western religions suffer from the defect that they try to make people rational. Zen Buddhism appeals today because it talks about enjoying each day, accepting life and oneself in its tangible reality rather than living in the future." I suggest that Dr Dichter stick to motor cars and phallic symbols and leave Zen Buddhism well alone.

But it is not the ethics but the semantics of Dr Dichter's research that troubles me. I don't mean the jargon,—the phallic symbol and the mother's womb and so forth. He is welcome to them. But a sentence like "the consumer must be taught that salvation lies in true technological advancements" offends me. The whoring of language implied in the use of "salvation" in such context angers me. Words rich in overtones of history and feeling are emptied of their intensity and incantatory quality by this kind of indiscriminate use. If I am told that they are used in such contexts precisely for these qualities, in order that selling may be aided by such adventitious aids, I would say that it is an even more grievous sin than thoughtless use of dead metaphors. Words are tricky things and exercise a tyranny wholly unrelated to their literal meaning. Here is an example. I have not checked up with the New English Bible, but years ago, a scholar-friend of mine told me that the famous passage in the Lord's Prayer, "Give us this day our daily bread" was a mistranslation. It should read, he said, "Give us this day the bread of tomorrow." Though he tried to explain that the full metaphysical depth of the passage can be

plumbed only by the latter translation, I was dashed. It not only lacked the music of the authorised version but also the immediacy and completeness of dependence on the Lord.

An example nearer home of the kind of use of language I deplore is the motto that the LIC has chosen for itself: Yogaksheman Vahamyaham. As is probably well-known, the expression occurs in the Gita. In its context, it is of rare poetic intensity in which Lord Krishna calls upon a weary mankind to abandon all else and surrender itself completely to Him and assures it complete protection. For the LIC to use it in relation to its policy-holders seems to me to be about as justified as a maker of foam-mattresses telling his prospects: "Come unto me all ye that labour and are heavy laden, and I will give thee rest."

Incidentally, I sometimes feel sorry for the American public which is being pushed around by symbol-makers of all sorts. (The phraseology, as you see, is catching.) They bully it into seeing in itself hidden persuaders and

their victims, status-seekers, waste-makers, organisation-men (in grey-flannel suits) lonely crowds and executive suites and a whole lot of other things thought up by a heated sociological imagination. After Dr Dichter's obiter dicta, no one will be able to chew gum without feeling obliged to pass a dud cheque and you cannot cast longing eyes on an open car without your wife setting a private detective on you. Years ago, I saw an American cartoon, (which, by the way, is probably the only defence still left a harassed public) in which an industrial psychologist was doing a routine interview with the staff. He was sternly asking a shrinking employee "Mr Jones, Your records show that you have not asked for a rise these last three years. Exactly what are you up to?" The idea is that the management should beware of bottled-up aggressiveness masquerading as meekness. And despite all this, I may be wasting my sympathy. As Thurber has taught us, the little man has his built-in defences against the kind of assaults on his supposed dumbness. He sure is dumb, but not in the sense many imagine. Throughout history, the little man has survived because, like his heroes, his jokes are also private. For all we know he may be silently laughing in his sleeves at the dumbness of the expert.

A Ninth Foot for the Octopus?

The formal publication of the revised memorandum of association of the State Trading Corporation will excite comment, because, on the face of it, it appears to be trying to reach out to new fields. And yet such fears may be exaggerated, since many of the changes are officially described as designed to meet and in some cases forestall audit objections. Under the Company law, the Memorandum and Articles are the "charter of the company" and unless comprehensive powers are taken in advance, awkward questions of vires may subsequently arise. In a famous tax case, Lord Sands once described this precautionary zeal on the part of promoters in language that has become classical: "A company formed to construct a bridge over the waters of Leith at Balerno will probably take powers wide enough to cover the bridging of Phosphorus." Much of the powers nominally possessed by companies are hardly exercised regularly. Therefore, an automatic inference of the spreading tentacles of State Trading may be unjustified.

But the details that have appeared do certainly sound menacing. The Corporation is apparently trying to set up foreign subsidiaries or affiliates to transact its business abroad. There is also hint that the Corporation is prepared to engage in banking business by accepting deposits from Governments or individuals and to raise money by debentures for financing its operations. This may not provoke so much alarm, as the hint that the Corporation would issue, discount and accept bills of exchange or other negotiable instruments. This omnibus scheme of commercial activity is accompanied by a hint that the Corporation would sponsor the issue of debentures by other companies, lend money on security, and furnish guarantees. That is to say, the Corporation is now looking beyond normal commercial activity, to engaging in financial activities of diverse kinds and, to that extent may threaten the interests of those already engaged in such business.

Some alarm will also be occasioned by the clauses that the State Trading Corporation intends to act as an insurer of property and to accept the insurance of marine risks. This seems like

going back on the pledge given against nationalisation of general insurance and it is also apparent that the State Trading Corporation by acting as underwriter in the course of its business may compromise the prospects of all those with legitimate expectation of securing business from the State Trading Corporation in respect of cargoes imported or exported. Coupled with the declaration that the Corporation is prepared to work or repair barges and lighters stevedoring too is within its reach. It may be inferred that the Corporation is now prepared to venture far out beyond trading and is thinking already in terms of vertical integration, a possibility not too remote because of the Corporation's connections at present and its vast resources.

The cost involved in developing a shipbuilding industry, right from scratch, is high-lighted in the latest report of the Estimates Committee on the working of the Hindustan Shipyard. The total investment of Government in the Shipyard amounted to Rs 457 lakhs up to the end of 1959-60, including Rs 443.57 lakhs out of the total share capital of Rs 547.82 lakhs. The balance of shares worth Rs 104.25 lakhs held by Scindias have now been bought over by Government. It may be recalled that it was Scindias who took the initiative in establishing the shipyard which started functioning in 1946. The Accounts of 1959-60 show a nominal profit of Rs 69,000 but the cumulative loss up to the end of the year amounted to Rs 9.13 lakhs. This figure, as the Estimates Committee has emphasised, does not represent the full extent of the loss suffered by the shipyard. To arrive at an estimate of the total deficit, the subsidy received from Government to compensate the loss incurred in selling at market price has also to be taken into account. Total subsidy paid by Government up to end of 1959-60 amounts to Rs 456 lakhs. So far the shipyard has built and delivered 24 ocean going ships, two small craft and a mooring vessel, aggregating 116,943 GRT. The subsidy works out

to Rs 390 per ton of gross registered tonnage.

The Committee has also drawn attention to the fact that shipbuilding is subsidised in all countries except the United Kingdom and that "it is not possible for the shipyard to function efficiently without a subsidy in one form or another for some time". The Committee has also noted that "the difficulties in the way of private enterprise developing this somewhat uneconomic venture" and the national importance of shipbuilding were among the main reasons which led Government to take over the management of the shipyard in March 1952. The quantum of subsidy, which amounts to nearly one-third of the market price, however, underlines the need for constant review of the economics of ship construction.

The high cost of ships built at the Hindustan Shipyard is attributed to the following reasons. (1) low productivity and inadequacy of trained personnel; (2) importation of machinery and equipment which form the bulk of materials used; (3) the need for holding large stocks of steel in standard sizes and (4) the high incidence of overheads.

The Directors' report for 1959-60 claims steady improvement in terms of manhours per ton of steel handled

3 June 1961

and of manhours per hundred rupees worth of other materials. The labour materials ratio has also recorded steady improvement. But overheads continue at a high level. The percentage of overheads to total cost of production moved up from 25.11 in 1956-57 to 27.3 in 1958-59 and came down to 23.22 in 1959-60. The comparable figure for shipyards in UK is about 20 per cent.

The high incidence of overheads is explained by the fact that throughout these years, the shipyard has been working well below its rated capacity. Against capacity of 20,000 dwt, the average annual production during the last four years does not exceed 15,000 dwt. The capacity is expected to be raised to 50-60 thousand tons by 1963-64. But taking into consideration the past performance as well as recent improvements, the Committee is sceptical of the shipyard's ability to step up production to the rated capacity by that date.

Various difficulties—changes in the basic design of ships built at the shipyard, the taking over by Indian personnel from the foreign technicians, delay in completion of the first phase of the development programme, shortage of materials and inadequate allocation of foreign exchange—have contributed to the shortfall in production. More recently, the principal

headache has been the shortage of orders, which is naturally viewed by the Committee with great concern. In view of the facts that two shipping corporations (now merged into one) are owned by Government and private shipowners cannot obtain their requirements without Government approval, the Committee does not see "why Government should not be able to ensure that the Hindustan Shipyard is kept supplied with sufficient orders". But the suggestion that, if necessary, restrictions may be imposed on facilities for purchasing ships from abroad, does not appear to have taken into account all the relevant considerations.

Since 80 per cent of the materials, including steel have to be imported, the saving in foreign exchange may not be adequate in all cases to balance the disadvantages resulting from handicapping the growth of the Indian shipping industry in this manner. Operating in a highly competitive market, Indian ships have just started to get a larger share of the overseas cargo handled by Indian ports. Total overseas cargo carried by Indian ships has increased from 10,34,838 deadweight tons in 1955 to 16,88,624 deadweight tons in 1959, exclusive of tramp cargo. Including tramp cargo, the increase is from 14.98 lakhs tons in 1957 to 18.53 lakhs

tons in 1959. In the latter year, roughly 9.10 per cent of foreign trade cargo handled by the six major and some intermediate ports was lifted by Indian ships, as compared with 7.6 per cent in 1957. The expansion of shipping which has made it feasible for Indian shipping companies to get a larger share of the country's overseas trade would not have been possible, if purchase of ships had been restricted to the Hindustan Shipyard. And, surprisingly, the report of the Committee has nothing to say about the quality of the ships built at the Hindustan shipyard. In view of the complaints that have sometimes achieved wide publicity, this is a matter on which there is need for reassurance.

The outlook for orders for the current year is, however, understood to be better than in the last one. The shipyard needs orders for four vessels for 1961. Two of these have already been secured and two others are expected shortly. Eight more orders are expected to be placed in the course of the year, six by the Government Corporation and two by private shipping companies, and these would cover the requirements of the shipyard up to the end of 1963. And no difficulty is anticipated in securing orders for the rest of the Third Plan period.

Since it is claimed, in official quarters, that the Shipyard would be booked to full capacity during the Third Plan period, the time is opportune to review the elements that inflate the cost with a view to effecting a progressive reduction in the amount of subsidy. The Estimates Committee has suggested revision of the present formula for fixing prices which is linked to UK prices.

★

In spite of statements regarding wagon shortage and the consequences for both power supply and industrial production in recent months, the figures in the Railway Board's communique of 27 April, suggest that in 1960-61 wagon-loadings were definitely higher on both the broad gauge and the metre gauge as compared with the previous year. Apart from the increase in revenue earned from goods traffic, the number of four-wheelers loaded on the broad gauge rose by 4.25 per cent and on the metre gauge by 3.16 per cent. In the analysis of revenue-earning traffic it is noted that in addition to increased traffic in sugar and sugarcane last year, there was an increase under coal and coke on the broad gauge by 11.9 per cent and on the metre gauge by 7.42 per cent. While the Railway Minister in February emphasised that the railways are not bound to accept all traffic offerings and priority could not be claimed for traffic in mineral ore, the figures certainly indicate that the railways carried larger quantities of iron ore and limestone. It was only under smalls (now subject to higher freight rates) that the increase in traffic was negligible. The car-loading figures will, however, be dismissed as of limited significance, because India's mineral production has increased and the demand of the industry for raw materials has grown at a more rapid rate than expected. The railways succeeded in carrying more coal for their own use while reducing on the broad gauge the volume of stores carried. The available figures may strengthen the claim of the Railway Board that it has performed as well as can be expected under difficult conditions and complaints by the Ministry of Fuel about failure to provide wagons for coal are of no consequence. The reduced supplies of jute and cotton last year were reflected in the wagon-loading figures on both the broad gauge and the metre gauge, while the reduction in the volume of grains and pulses carried might be attributed to an improved food position in most States with the result of reducing supplies drawn from outside. In any case, the Railway Board has now secured a new talking point in the car-loading figures but as is widely known, it was the failure to secure the requisite number of new wagons owing to shortage of steel that is at the root of the trouble on the railways.

Citizens of Tomorrow

A lesson in geography for the citizens of tomorrow—men and women who will make and keep the new India great.

They study today in a modern school, a far cry from the village schools of yesterday. A large proportion of India's new schools and colleges are built to last with ACC Cement.

Cement is the strongest and most durable of all building materials.

Further Decline In Prices

THERE has been a further substantial fall in prices in the jute and gunny markets during the past week and this seems to be mainly due to lack of buying support. Raw jute basis Assam Bottoms was quoted at close of business on Wednesday at Rs 48 per maund, eight rupees below the LJMA maximum price. Even at this low level, buyers are showing no interest. It is to be presumed that mills are expecting the price level to be further reduced. This perhaps explains the reported reluctance of mills to lift even a part of their recently allotted quotas for raw jute. Another possible reason for the lack of interest even at current low levels is that jute goods prices have during the past week declined sharply, such decline being much more in that section than in raw jute. The result of this disproportionate decline in prices in goods is that the loss in simultaneous business has become much heavier now than a week or two ago. It is small wonder that mills are in no hurry to buy raw jute to incur a loss.

It would appear that the expectation that a reduction in the prescribed maximum price of raw jute will result in the unearthing of hoarded stocks of raw jute is yet to materialise. Far from there being an increase, arrivals of raw jute continue to be at meagre levels from day to day. Even so, mills are showing no anxiety to buy, probably because they are sure that Government's approval of the LJMA proposal for a block closure of mills will be received sooner than later. As a matter of fact there is a persistent rumour that an announcement allowing the industry to close all mills for a fortnight or so during the current month is imminent. It is generally believed

that the delay in approving the LJMA proposal is due to Government's anxiety to make absolutely sure that there is a real shortage in raw jute or that such shortage is so acute as to necessitate a block closure of mills. If this analysis is correct, the position should have become clear to Government by now. The fact that the expected approval has not been given so far is being interpreted by some as an indication that Government is not in favour of a block closure of mills at all.

It was noted in this column that there is no consensus in the Indian world of jute as regard raw jute availability during the current jute

BLOCK CLOSURE OF MILLS FOR 2 WEEKS

The West Bengal Government has approved the LJMA proposal for block closure of mills for two periods of seven days each, the first commencing from the 26th June and the second from the 24th July, 1961. In a Press Note issued on Thursday evening, the State Government says that after having examined the raw jute position carefully, it has come to the conclusion that further economy in jute usage is necessary to achieve equilibrium between consumption and supply and that the block closure proposed is the only way of stopping piecemeal closure of jute mills which is likely to lead to greater hardship to labour. The proposal has also been agreed to by the Government of India. The Press Note further says that the situation will, however, be kept continually under watch and the LJMA will be prepared to make such changes in this decision as may be warranted in the light of the jute supply position. During the period of closure, the workers affected will receive lay-off compensation as admissible under the Industrial Disputes Act.

The representatives of workers who had walked out of Thursday's tripartite meeting do not agree with the view that a block closure is inevitable. They strongly feel that the present crisis was artificial and has been brought about by "hoarding, speculation and the employers' desire to boost up prices of goods."

year. Opposing the move for a block closure of mills, the Jute Balers Association has pointed out that even under the prevailing difficult conditions in regard to raw jute supply, an extreme remedy as a block closure of mills will not be necessary. According to its calculation, there will be as much as 9.50 lakhs bales of raw jute at the end of June and what is more the industry will be able to get new crop jute quite early in the season. It is pointed out that since prices are quite favourable the tendency will

be to bring new crop jute to the markets as early as possible. Another way by which adequate raw jute supply to mills could be ensured during June and July would be to license freely both mills and traders to import jute from Pakistan.

Prospects for the new crop in Pakistan are said to be good in spite of two cyclones that visited East Pakistan within short intervals. It is generally believed that some damage had been caused by the first cyclone to jute in the low lands but its extent is not considered to be such as to make any sizable difference to the crop as a whole. Although it is believed that the second cyclone has not adversely affected the crop, there are rumours that the Pakistani jute crop would not be as big as expected earlier in view of the reported damage to the crop in parts of North Pakistan due to drought and the cyclone havoc in the low lands. The Calcutta market however has so far ignored these rumours.

As far as the Indian crop is concerned, there is growing optimism that the new crop will be both big and early. At a meeting of the Central Supervisory Body for Jute held in Calcutta this week it has been indicated that already sowings of jute and mesta have exceeded the 1960-61 acreage by 7 per cent. It is expected by the time sowings are completed, the acreage under jute and mesta will go up 20 per cent to 25 per cent over that for the preceding jute year. The progress of the growing crop is reported to be generally satisfactory in all the States. It is pointed out that provided the present favourable weather continues, there is every reason to expect to obtain a harvest which will be adequate to meet the requirements of mills as well as to leave a fair quantity to be carried over into the next season.

TEA

A General Decline in Prices

IN the Export Sale held in Calcutta this week, offerings were 27,140 packages. The general trend of the market was easier. The quality of the Darjeeling offerings, which comprised about half the sale, generally showed a decline and prices moved accordingly; but

the few invoices with flavour were well supported. The main interest was, however, centred on the plainer descriptions; but many of the leaf grades were difficult of sale.

There was a good enquiry for the remaining orthodox descriptions, which were irregular and generally easier particularly the Fannings grades, which were a weak feature. A few useful liquoring well-made invoices were sold at firm to dearer rates. Legg-cut Dooars were firm except for the poorest sorts, which were easier.

Assam CTC descriptions met with good competition. Although prices were a little irregular, they were generally firm to dearer, particularly for BPs. Whole Leaf grades were easier except for the most stylish kinds. Following rates were quoted (per kilo):—Clean Plain Pekoe Rs 5.10; Plain BP Rs 4.70 to Rs 4.75 and Plain Fannings Rs 4.5 to Rs 4.60.

In the Internal Sale, offerings were 23,007 packages of Dusts and 67 packages of Leaf grades. There was only a fair demand for Dusts at considerably easier rates. Medium CTC descriptions were irregularly easier by up to 60 nP with the good CTCs following a similar trend. Orthodox descriptions were generally sold at a considerable discount and were up to 30 nP easier. There was, however, a better demand for the few bright lines on offer. Legg-cut types also showed a decline; but were readily absorbed at about 20 nP below last rates. Following rates were quoted:—Plain Orthodox Dust Rs 3.85 to Rs 4.20; Medium Assam Dust Rs 4.05 to Rs 4.60; Legg-cut Dust Rs 4.20 to Rs 5.00; Medium Assam CTC Dust Rs 5.40 to Rs 5.90 and Good Assam CTC Dust Rs 6.20 to Rs 7.00 (nominal). There was a good demand for Leaf grades.

Meanwhile, arrivals of tea in the Calcutta Port fell to 24,912 chests in April from 36,458 chests in the corresponding month of last year. Arrivals by rail declined from 16,214 chests in April 1960 to 7,509 chests last month as did those by air and road from 4,088 chests and 15,064 chests to 3,188 chests and 10,676 chests respectively. Arrivals by river, however, increased from 1,092 chests to 3,539 chests.

In the Colombo market, offerings were 7,888,307 pounds. There was a strong general demand. At the opening, Dimbula Dickoya Brokens were irregularly lower, while medium brokens from western districts declined by about 3 to 5 cents per pound. There was an improved demand for Uva teas, which advanced by about 5 cents. Low-grown teas were in good demand at slightly lower rates.

In Mincing Lane, London, buying was more selective and there was less demand for the 18,522 packages of Ceylon tea offered. Low mediums were generally steady; but the better liquoring

Indian Finance

3 June 1961

mediums and high-grown, except the best, were irregular and often easier by a penny to two pence per pound. The demand for the 8,532 packages of South Indian growths was only fair and prices were generally lower.

COTTON

Futures Listless

THE cotton futures market in Bombay exhibited listless conditions during the past week. Prices during the period under review fluctuated within a narrow range on account of the absence of any fresh investment and mill support. Consequently, the turnover in both the forward and ready sections was pronouncedly meagre.

In the futures section, the Jarilla August contract hovered around Rs 570 per three quintals. At one time the contract met with sharp resistance at lower levels and was pushed up to the week's high of Rs 574, deriving inspiration from the short covering induced by renewed rumours of the issue of export quota for cotton staple stapling 25/32". The enthusiasm was also fanned by the reports that the authorities would issue quotas on a liberal scale to the mills for indigenous cotton. However, the spurt in prices proved short lived and in the absence of any follow-up support the contract receded to Rs 569 and on Tuesday last was quoted at Rs 569.75.

The spot market at Sewri, on the other hand, displayed better conditions. The main feature of trading in the spot market was revival of demand for Vijay and Kalyan. It was reported that, in addition to large scale purchasing by the Ahmedabad mills, local mills also accounted for 5,000 bales of these growths. Only moderate interest was shown in L 147, CO 2, Khandesh, Kalagin and Wagad.

The import section was on the whole featureless and no fresh development was visible in the trading. Mills showed keen interest in the American cotton. Some of these mills purchased East African and Sudanese cotton on a restricted scale. Fresh business put through in the imported cotton was limited. The reported information that the Government had decided to reduce the acreage under cotton caused grave concern among the trade circles.

Reports that emanated from South India reveal that the marketing season in Madras State has already been started. Arrivals of Laxmi and Jaydhar were heavy in Andhra and Mysore States. The cotton growers in Madhya Pradesh, Vidarbha and Punjab are making feverish preparations to commence the sowing in the coming season. Shippers, who were anxiously awaiting the announcement of an additional export quota were sorely disappointed for the Government was silent on this matter. It is

anticipated that the matter will be taken up by the authorities immediately after the return of the Textile commissioner from Tokyo.

The main topic of discussion in the market was the entry of the Indian Cotton Mills' Federation into the market. The Federation's purchases so far amounted to 10,000 bales and the earlier report that it was interested in building up a buffer stock seems to be unfounded.

Consumption of cotton by the Indian mills from 1 September to 28 February amounted to 2,604,297 bales as against 2,593,378 bales in the corresponding period in the previous year.

Description	1959-60	1960-61
Indian	2,345,411	1,985,193
Pakistan	212	15,238

PIECEGOODS

Dull trading conditions prevailed in the Bombay piecegoods market. The demand for piecegoods, during the past week, was at a low ebb. Naturally, turnover was meagre but the prices remained unchanged.

As the hot season is drawing to a close the demand for cotton piecegoods showed signs of decline. Consequently, the premia on most of the varieties disappeared. Business on a small scale was transacted in cambric, dorais, mulmul, poplins and longcloth. Upcountry buyers were disinclined to do any appreciable business.

The demand for grey goods on the contrary was slightly better. The prices of bleached longcloth moved downward. It was reported that a few varieties of higher medium poplins were sold below ex-mill prices.

Trading in the export section too was far from satisfactory. The
